SHINASI (derived from the Persian shi, the root of shnshin, to know), poetical name of a number of Turkish poets (five in Hammer). See Index to Gibb, A History of Ottoman Poetry and to Hammer, Geschichte der osmanischen Dichtkunst; cf. Kien, Cantal, British Museum, p. 101.

The best known of the writers bearing this name is Ibrahim Shnasi Efenzi, who is according to some the father and according to others one of the first pioneers of modern Turkish literature (given new life as a result of the Tarih). The son of an artillery captain, a native of Bolu; Shnasi was born at Constantinople in 1242 (1826-1827) and soon afterwards lost his father, who was killed in the Russo-Turkish war of 1828-1829. His mother became an invalid and him admitted as a clerk in the General Artillery Office (Teşkiri-i 'amiri), where he attracted the attention of his superiors by his poems, yasidas in honour of the grand vizier. Rashid Pasha and other statesmen and his chronogram (tarih), more or less complicated (bism, wâ'ifurebber and yi) for monuments, for fountains and other monuments. A French officer, the Count of Chasteneuf, who was later to become a Muslim under the name of Nînî Bey, taught him the elements of the French language. The young civil servant poet thus found himself chosen among the first students who were sent to France. In his petition addressed to Marshall Fatih Pasha (Teşkiri-i mülkiyyet) Shnasi asked to be sent to Paris in order to perfect himself in the study of the French language (hâfi-i 'açab al-hayât-i fransawi), and asked for a pension to be paid to his mother during his absence. The decision of the Council of Ministers (mudafe-â-i wakil), approved by Rashid Pasha, which gave him 5,000 piastres for his travelling expenses and a pension of 500 piastres monthly for his mother, is dated the end of the month Rahî al-awwal 1265 (January 1849) but may have appeared after a certain delay. Tradition has it that Shnasi took a very active part in the Revolution of 1848, by holding the Republican flag on the Pantheon, and that he associated with scholars and men of letters such as Silvestre de Sacy, Renan and Lamartine. He stayed abroad for five years.

On his return to Constantinople, Shnasi was appointed a member of the first Council of Public Instruction, created in accordance with the plan which he had brought back from Paris. He worked also on the Finance Commissions with the object of elaborating certain administrative reforms, but having lost his protector Mustafa Rashid Pasha (who died in 1874) and being in bad odour with the bureaucrat, who even reproached him for not wearing a beard, he quit the government service and took up journalism.

He began by collaborating in the Terşîn-i şâmi, the first non-official Turkish newspaper, which appeared on the 35 Rahî al-hisâb 1265 (October 22, 1860) by Agâh Efendi, muvaffaqiyet of İsmi. Shnasi was the chief editor of this organ. But soon afterwards he was able to found a journal under his own name, the Taşvir-i Efkar, which, thanks to the energy of Shnasi's successors, Abu l-Ziya Tawfik and his son, was to survive with slight changes of title (Taşvir-i Efkar, Tehsin-i Efkar) until the recent suppression by the government of Angora (March 6, 1925). Shnasi's paper which, according to its sub-title, was an organ for information and public instruction appeared at first in a very modest and impersonal form; the first number alone contained a preface of several lines, signed by the author. Appearing twice weekly and printed on four pages, in a reduced format, the Taşvir-i Efkar had four rubrics: Home news (hâwikdar-i akhbariyye) mostly official appointments, foreign news (Akhbar-i akhbariyye), advertisements (Fâ'ihî) and a feuilleton (hayât-i Efkar) In these feuilletons were published the works of Subhi Bey (one of which is on numismatics), lectures by Ahmad Wafiq on the philosophy of history, and other works such as the Ma'sul al-âbâ' of Kutib Celbî. They also contained translations from Buffon, by Abu l-Ghabit (Shâhâr-i ürûd). The Taşvir supported the
In dramatic art Shinasi was also a pioneer, writing the first comedy or rather the first Turkish vaudeville, under the title "A Vie de voix:" an A'Poet's Marriage." Feecile in itself, this work has independently of the merit of novelty, that of criticizing the old-fashioned matrimonial customs; it deals with a fraudulent attempt to substitute in the place of a veiled bride, an uglger sister. It has been translated into German by Vehn. 

Shinasi, besides, collected in 1255 (1851-1852), about 2,000 Turkish proverbs to which he added some Arabic, Persian and French equivalents. This collection appeared under the title "Turk-"b"- "m'mal-xi-i amurkâ-y, at the Tayw. Efr. press in 1280 (1865) and in 1287 (1870-1871). Finally in 1301 (1881/84), "Abu 'l-Ziya brought out a third edition, which he enlarged by bringing it up to 4,004 proverbs (ed. J. A., 1863, ii. 299, 143 and 1871, ii. 147, 22).

The influence which Shinasi exerted on the development of Turkish literary movements cannot be compared to that of his young rival and postige, Namzi Kemen, but his part was considered in the restoration of the language; he contributed a great deal to simplifying the language by bringing it nearer to the spoken language and by combating scholastic influence of Arabic and Persian.

J. DEY

SHINTARA (or Shantara), Arabic name of the modern Cînatra, a little town in Portugal, at a height of 700 feet above sea-level, 16 miles N.W. of Lisbon. It was quite prosperous under Muslim rule and the Arab geographers remark on the fertility of the country round; its apples were universally famous. Cînatra always shared the desrities of its great neighbour Lisbon as long as it was in the hands of the Muslims; it was reconquered in 1147 by Alfonso Henriques, king of Portugal. After it had become Christian again, it was the favourite residence of the Portuguese kings; it was in the palace of Cînatra that Dom Sebastian decided in 1578 upon the expedition against Morocco which ended disastrously on the banks of the Wadi 'I-Makhzin near al-Asrâr al-Kabîr. The modern Cînatra is dominated by the ruins of an old stronghold of the Muslim period. Of this fortress now called Castello dei Mouros built at a height of 1400 feet, there only remain two masses of masonry with the remains of a chapel and baths.

SHIR. [See ASAD.]

SHIR (a.), poetry. The earliest literature of the Arabs is poetical but the most ancient poems are not older than 500 A.D. We know nothing about its origin. We are told the name of the man who made the first ĥashîdan, but in matters historical the Arabs abhorred a vacuum. Throughout the pre-Islamic period poetry is governed by the same set of conventions, the stereotyped beginning, conventional epithets, stock similes, a limited and arbitrary choice of subjects. There is a long previous history. Indeed one poet complains that his predecessors have left him nothing to say. On the other hand, the words: "Let us weep as Abî Humân wept", suggest that the poet was following a new fashion in his art. It is obvious that poetry is closely connected with the rhymed prose (rubâ) of impassioned speech and it is probable that some of its measures had their origin in the song of the camel-driver or horsemen. There was something unsanny about poetry, as the name shows. The poet was ûzûhrî, the man of extraordinary knowledge, who knew things hid from common men, was in the council of unseen powers, had a familiar spirit. This comes out most clearly in the branch of the art called ṣūfî, commonly but badly translated satie. This was in origin a spiritual attack on one's enemies, supplementing the material assault of sword and lance, an attempt to destroy them by the use of supernatural powers. The declaration of such verse was accompanied by symbolic actions. This is another link with ruṣûq, the speech of soothsayers and wizards. Though in historical times the belief in the magical power of poetry was largely lost, yet verses that seem to us pointless had a shaking effect on those at whom they were directed.

Formally, Arabic poetry consists of metre and rhyme. With one exception, ruṣûq, all metres consist of a double line with the rhyme at the end only. Metre is quantitative and considerable freedom is allowed in the substitution of long for short syllables and vice versa. Indeed it is better to say that certain syllables are fixed long or short and the others are allowed to vary. In two metres the classic rule that two short syllables equal one long is followed. Pre-Islamic poets used 15 metres and another was added later. They did not use the ruṣûq for long poems. There was a feeling that it was doggerel not rising to the dignity of poetry and it was chiefly used in extemporâne verse. In addition to these, poets sometimes experimented with other metres but they did not find favour and are treated as irregularities. The rhyme may include as many as three syllables. Throughout a poem all the double lines have the same rhyme and the opening line has also in the single line. Only one poetic form was known, the ṭashî'dan; a poem with one rhyme and one metre, from 700 to 120 lines long. No satisfactory explanation of this name is known. Many fragments of ṭashî'dan's exist and it is probable that they were never more than fragments. At first the ṭashî'dan had no fixed plan save that it nearly always began in a desert camping ground which the poet recognized as the scene of a passage of love with some fair one (the mastûb). On this may follow a description of his camel of a journey — preferably by night — through the desert, an antelope hunt or indeed almost anything the poet chooses. His own warlike prowess or that of his tribe is a common theme. Often it is hard to say that the poem has any purpose. The poet speaks because he must. Later the ṭashî'dan was bound by fixed rules. The regular sequence of subjects was the amatory Prelude, the description of a camel, the journey and finally the main subject; usually the praise of some great man with a view to increasing his pocket. Two aspects of life are shown. A frivolous side where they drink, gamble away their goods and give presents to the girl who fills the wine-cup and sings, thus upholding the fame of their tribe for generosity and a serious side where the chief spends his substance in feeding the needy and all are ready to rush to arms to defend their honour. Although an Arab was always ready to fight, he was not necessarily in a hurry to be killed, and said so without shame. The poets were fond of commonplace moralising on the uncertainty of life and the certainty of death. Arab theory recognized the elegy (ruṣûq) as a special branch of the art but without sufficient reason. The form was the same but for the omission of the erotic introduction which was felt to be unsuitable. While but for the lamentation over the dead and the call
to vengeance (if he had died a violent death),
the subject-matter is very like that of other poems.
Very often women composed elegies; some poet-
exesses were famous. It seems that religion had very
little place in the life of the Arabs. A mild fatalism is
the limit of their experience.

Each line of verse had to be complete in itself.
So Arab poetry is essentially atomic; a string of
isolated statements which might be accumulated
but could not be combined. Sustained narrative
and speculation are both alien to it. It is de-
scriptive but the description is a thumbnail sketch;
it is the sightful but the result is aphoristic.
The poet looks on the world through a microscope.
Minute peculiarities of places and animals catch
his attention and make his poetry versified geology
and anatomy; untranslatable and dull. Forceful
speech is his aim and the result is — to Western
minds — often grotesque or even repulsive.

The comparison of women's fingers to the twigs of
a tree, or to caterpillars, are examples. There is
little connexion between the lines or parts of a
poem. The only bond of union is the personality
of the poet. Indeed it is the poet rather than the
poetry who is admired. A freeman among his
peers, he enjoys life to the full, often coldly
calculating, yet, when his narrow code of honour
calls, ready to risk all for a friend or the stranger
who has claimed his protection. Behind all is the
constant shadow of starvation and death; but they
cast no permanent gloom on the picture. Most of
the poets so described were Bedouin but there were
others known as town-dwellers. As a class they
differed from the Bedouin type. They show signs
of acquaintance with books, prefer other mates
to the favourites of the Bedouin and their subject-
matter includes fables and historical tradition.

Their language, too, inclined more to prose; a sentence
might run into two or even three lines of verse.
The men of Mazina were held to be the best of
these poets. Both Jews and Christians were poets
and their verses are often indistinguishable from
the work of the pagans. The homes of the various
Arab kings — especially Hira — were centres
of poetic activity. Thither came the Bedouin eager
to get something from the patrons of literature.

They also met at the several fairs where matches
of oral poets took place.

Bedouin poetry was preserved by oral tradition.
The poet declaimed his own verses and was
followed by a professional reciter (rāwās) who learned
and declaimed them. Many a poet began as rāwās
of another. This raises the question of the genu-
ineness of Arab poetry. It is generally assumed
that it was not written down till one hundred years
A.H. In that time the natural infirmity of human
memory and the peculiar character of Arabic make
great changes probable. The lack of connections
inside a poem help. Often different versions of a
poem exist and it is impossible to tell which
is the original. We cannot be certain what were
the exact words of a poem, all we can say is that
the philologists who collected the remains of pre-
Islamic literature during the second century read
a certain text. We know too that there was at least
some forgery. The conclusion is that the great
mass of the poems are genuine or at least ancient,
though it may not be possible to prove this con-
clusively for any one poem. (It has recently been
argued that writing was much more common than
is generally believed, that the poets were acquainted
with that art and that some variant readings can
only be explained on the hypothesis of written
copies.) A few dialectical variations are preserved
but for the most part poets used one language
throughout the peninsula. Possibly the wealth of
vocabulary is due to the inclusion of words from
the many dialects, though their origin is now
forgotten. There are some signs that the language
of everyday was dropping the inflections used in
poetry; had begun the series of changes that pro-
duced the vernaculars of to-day. When scholars
began to take an interest in poetry for its own
sake they gathered the remnants into diwans “col-
lected works” of individuals or tribes or in antholo-
gies some of which contained complete poems and
others fragments.

Islam made a great change; partly due to reli-
gion, for poetry was the devil's Kūr'ān; but chiefly
through the change of circumstances. The centre
of interest had moved outside Arabia and desert
life had not the same appeal. It is almost im-
desirable for one who does not live the life of the
desert to appreciate its poetry. Some kept up the
old tradition, finishing their poems with praise of
the caliph or some other great man whose patronage
was desired. Some kept the anatoly, premise and
then went straight to the business in hand. Others
broke from tradition and composed fragments
(šāfi'a, q. v.) treating of one subject only, it might
be love, religion or philosophy. In some of the
later poets we can admire the verbal skill that
fills a volume with extravagant and sometimes
blasphemous adulation, with scarcely a repetition;
but the utter emptiness and lack of ideas is re-
voltin. The rule of one poem one rhyme is still
observed, no new form is invented. A mystical
stanzas contains over 700 lines with the same rhyme.
It took several centuries for these changes to be
made. Another innovation was that the desired
rāyūs metre was used for long poems; the authors
using all their skill in the handling of words to
counterbalance the simplicity of the metre, with
the result that they are often unintelligible. Tra-
dition says that in the time of Hārūn a slave girl
started the fashion of making verse (pedants did
not consider it poetry) in the language of the
people. This style was called ḥajīn. In Spain it
was raised to literary rank in the sanjīl, a short
poem in stanzas. A variety of this but in fully
inflected speech was the mawṣūlah. At first this
was a poem in four or five line stanzas the last
line uniting the stanzas by a common rhyme. Each
stanzas had its own rhyme and one metre
was used throughout. The next step was the use
of more than one rhyme and metre in each
stanzas. Sometimes the bounding line was the
laḥān. For the most part however Spanish poets followed
the older custom; though they tried various ex-
periments in rhime. In subject-matter they broke
away from tradition and their work is much more
generic to Europeans than that of the poets
of Arabia. Perhaps the most interesting features
are a conception of love that suggests the
romances of chivalry and an almost modern sen-
sibility to natural beauty.

The early poets knew nothing of the theory of
metrical. This was discovered by Khallāb b. Ṭahmāb
[q. v.]. It is said that the idea came to him as he heard
a smith working with his hammer. The critics
hardly thought of a poem as a whole; for them
it was a string of detached beauties. It is true
that poets were praised for their skill in certain branches of their art; e.g., for the description of the cinnamon, but as a rule criticism dealt with details and words only. It tended to be finicking.

One is praised for his skill in managing the transition from the nastāt to the description of the camel and another is blamed for putting words of ill omen in the opening verse of a poem. In other ways also criticism ran wild. Some held that the pre-Islamic poets were—by that fact alone—raised high above all others. It was men of this type who denied to Mutanabbī and others the title of poet because they did not observe the early conventions. With no critical principles to guide and a tendency to imitate the old, modern Arabic poetry is not inviting; especially as it is written in what is essentially a dead language.

It would be absurd to attempt even an outline history of Persian poetry in the space available. The utmost possible is a description of the forms of poetry. The Persians borrowed their metres from the Arabs, and they have other favours. They also borrowed the auspicious and auspicious, about which it is not necessary to say more. The ghasal is really a ḥafī of a dozen lines or so with complete freedom in the choice and treatment of subject. It has less continuity and a looser connection of ideas than the ḥafī, though it is usually a love poem. Of native forms the chief are the mahmud and rūdšt or dāh-bāt. The former consists of two long lines in the metre named ramād trimeter catalectic rhyming at the end of the double verse, a sort of heroic couplet. It is the form used for long poems whatever their subject may be. The dāh-bāt is two long lines with the first second and fourth half-lines rhyming and occasionally the third. The metre used is one of the many variants of the hāsafī. A dāh-bāt is always independent, they are never combined into a longer poem.

The same desire as was felt in the west produced variants of the monothematic form which are all classified as mathnāwī. These consist of stanza of anything from four to ten lines in the same metre, each stanza having its own rhyme. Some forms have a refrain with a separate rhyme. The earliest Persian poetry dates from shortly after 900 A.D. and since then the language and the forms of verse have changed very little. Fashions have changed, now simplicity has been in vogue and now fantastic conceits, but the outward form remains the same.

Turkish and Urdu poetry are little more than imitations of the Persian. Urdu, however, does show some signs of Indian influence both in form and subject-matter; to a small extent in earlier times and to a much larger extent during the last few years.

(A. S. Taitton)

SHIR 'ALI, IRAKZAI, Amir of Afghanistan, was the third son of the Amir Dost Muhammad and succeeded his father, in accordance with his will, on June 9, 1863. His overtures to the Government of India on his accession were, unfortunately, coldly received. The Amir found it necessary to march, almost immediately, into the Kurrum district to compel his brother 'Azm Khan to swear allegiance to him and early in the following year both 'Azm Khan in Kurram and Afral Khan, the eldest brother, in Balkh, rebelled. Muhammad Rahmān, the Amir's most able officer, defeated the former and compelled him to flee to India, and the latter submitted to Shir 'Ali and was pardoned and restored to his post, but his son, Affāl al-Rahmān, fled to Bukhara, whereupon Shir 'Ali imprisoned Afral Khan. Early in 1865 Sharif Khan and Afral Khan, two other brothers, rose in rebellion at Kandahār and 'Azm Khan returned from India to Kurram. Muhammad Rahmān again expelled him and Shir 'Ali marched towards Kandahār. He met and defeated the rebels near Kailāt-i Ghrizā, but was subdued with grief at the loss of his eldest son, Muhammad 'Ali, slain by Afral Khan, who was also killed. He pardoned Sharif and was roused from his lingering by the news that 'Abd al-Rahmān had returned from Bukhara, tortured the state officials in Balkh and Muhammad Rahmān, and, having been joined by 'Azm, entered Kābul on March 2, 1865. Shir 'Ali marched against him, but was defeated, and fled with no more than 500 horse. The governor of Ghazni refused to admit him, and released Afral Khan, who joined his son and was proclaimed Amir Kābul. The Government of India recognized him as ruler of Kābul, but he died almost immediately and was succeeded by his brother, 'Azm Khan. In January 1868, however, Shir 'Ali returned from Afghanistan, entered Herat, and in June was received as a deliverer in Kandahār. His army marched on Kābul and compelled 'Azm to flee once more to India, where he died in exile. In January, 1869, 'Abd al-Rahmān was defeated and expelled, and Shir 'Ali re-established himself as Amir of Afghanistan. In 1869 he met the Viceroy, Lord Mayo, at Ambāla, but received nothing beyond vague expressions of goodwill, instead of the offensive and defensive alliance which he sought. Again, in 1873, alarmed by the Russian conquest of Khiwa, he sought an alliance from the Viceroy, Lord Northbrook, and on receiving another rebuff rejected proffered subsidies and entered secretly into relations with Russia. In 1876 Lord Lytton was authorized to offer Shir 'Ali the alliance which he had sought, but the offer came too late. The Amir ostentatiously received a Russian envoy and, though warned that war would be the result, turned Sir Neville Chamberlain, who was accredited as British envoy, back from his frontier. On November 20, 1878, the British Government, after vainly awaiting an apology, declared war, and on February 21, 1879, Shir 'Ali
died, and was succeeded by his son, Ya'kūb Khān.

(T. W. HAD)
those walls were repaired in the middle of the viith (sixth) century by Mamun Shih al-Imad, the rival of the Maghafirin. In 795 (1393) Timur arrived in the form of the town and was attacked by the Sultans of the Maghafirin, who lost his life there. It was taken by the Mongols in 1137 (1724). Karim Khan Zand (q.v.) made it his capital surrounded with town walls and ditches, paved its streets and erected fine buildings there, notably the great bazaar. It was laid in ruins by the earthquakes of 1813 and 1824. It had at one time an ancient citadel called Shish-Mohabat (Istakhri, p. 116). In the early centuries of Islam, it still retained two Zoroastrian fire-altars, one called Karmynian and the other Homran; there was also a third outside its gates called Masjahan in the village of Barskan (Istakhri, p. 115).

The wine of Shiraz is famous; it comes from the village of Khvall or Khullar, also noted for its honey and its milk cheese. Water is brought to it by the Rukhabd canal, sung by Hafiz and built by Rukh al-Dawla the Bledy, father of Anad al-Dawla and by the canal from the tomb of Sa'd. The city has three principal mosques: 1. Djemii Atik, built by Alam b. Lailat in the second half of the third century; 2. the new Mosque built by the Salghurid Atibeg Sa'd b. Zangi, in the second half of the fifth century; 3. Masjid Şokor, built by the first Atibeg of the Salghurids. There are also many saints' tombs which have earned for this city the name of Bursa al-Awliya "citadel of the saints," notably that of the "Ulul Ahmad b. Muhammad b. Mansur al-Karim, and those of the mystic poets Sa'd and Hafiz, to the north of the city. There are the gardens of Dilgush and Hafftan. The city manufacturing industry includes matam-kari, dress materials, goose, brolades, silk-floss. It was the birthplace of the poets Abur called Shaffi, Abur, Boushah (Abu Iskak Halabi), Hafiz, Sa'd, "Urs, Hulus Fighani, Muzaf, Madjar (Din Hamper, and of the religious reformer Al-Mahmud called the Bahr.

There is also a village of the same name on the north of Samarkand 4 parasangs, about 16 miles from it (Quatremere, N.E., iv. 400; J.A., Jan. 1852, p. 83; Burns, Voyage à Bouchara, ii. 207).

(From Huart)

Shirazi, Abi Iskak ibn-Ismail b. "Ali b. Yusef al-Firuzxari, a Shaffi jurist, born in Fruzn in 933 (1503). To study Fikhl he went to Shiraz in 410, then to Basra and in Shavwâl 415 (Dec. 1024) reached Baghdad, where he completed his studies in the Ulema with Abu Hâmid al-Kaswini (d. 440) and in the Fakhr in 430 (1038/9) he began to teach in Baghdad (Subhi, iii. 177); the fame of his learning soon became so great that students sat at his feet from all over the Muslim world. Many of his pupils held offices as Khâli and preachers in the east of the Caliph’s empire. In 459 (1067) the vizier Nasr al-Mulk appointed him to open the first public Madrassa founded by him in Baghdad, the Nashiriyate. But as Shirazi did not appear, it was opened by Ibn al-Sabbagh; when his pupils threatened to go over to the latter, he finally accepted the chair. Here he taught till his death (Ibn al-Sab’i in Ibn Khalilân, i. 304). When the dispute between Abi Nasr b. al-Khusraw (d. 514) and the Hâfiz in Baghdad over the teachings of Al-Ashârī came to such a pitch that blood was shed, Shirazi energetically took the side of the Ashârîs and persuaded the vizier to incorporate the Hâfiz Shahîk (Ibn al-Athir, x. 71, Subhi, iii. 96 sqq.; iv. 251). His journey to Nashiriyât on a mission from the caliph in Dhu ’l-Hijjah 475 (May 1083) is evidence of his great prestige; it was like a triumphal procession. At Nashiriyat the Imâm al-Harâmain came out to receive him and carried his cloak. He held disputations with him, in which the Imâm al-Harâmain recognized the superiority of his opponent. Shirazi died soon after his return to Baghdad on Dhumâd 2, 21, 476 (Nov. 1083) and was buried in the cemetery at the Bib Abrâz with great honour — the caliph pronounced the burial prayer. The Nashiriyât was closed for a whole year by its founder’s command, as a sign of mourning. The vizier Tadj al-Mulk (d. 486) had a turbe built and a madrasa near it (Ibn al-Athir, x. 147).

His principal writings are: 1) Kitâb al-Tawābr f. l’Ishâ, written in the year 458/453; ed. Juyboli, Leiden 1879, a legal compendium on which commentaries have been frequently written; 2) the comprehensive Kitâb al-wadadhâb f. l’Majâhid, composed in 455-456, still in manuscript, ed. Yaqut, Mufid, iii. 214; 3) Kitâb al-Ma’ali b. al-Madda, an Ishârâ work in several volumes on the teachings of the Hanâfite and the Shâfi’î who has apparently not survived. Hâfiz Khalifa, No. 2648; 4) Ṣabaqat al-Subhi, short biographies of jurists of the first two centuries and of the four Madhâbih and to his own day, a work often cited by the later biographers, e.g. al-Nawawi, al-Subhi, Ibn Khalilân, al-Karashi, as well as many times copied without mentioning the source (I am preparing an edition).

Shirazi, Abi ‘I-Husain Abi al-Mulk R. Muhammad, a mathematician, who flourished about the middle of the twelfth century. He studied Greek mathematics and astronomy. In his time there was already available a good Arabic version of one of the Comit Sections (sawda) of Apollonius of Perga by Hilal b. Abi Hilal al-Hijri (d. 883/884) and al-Ishaq b. Karr al-Harrani (1186-901). With the help of this he prepared a synopsis of the contents of the sawda, the Arabic version of which...
is in Oxford (Bohl. 913, 987, 988). There is also attributed to him a compendious version (Mukhtāsr) of the Almāgesist of Ptolemy, from which Kāb al-Dīn al-Shirāzi (1236-1311) [q.v.] prepared a Persian translation of the Magiḏ. The Arabic versions of the Celestial Sections of Apollonius are of great value for the history of mathematics because the three last of the seven books of this important work only survive in Arabic, while the eighth book of the Arabic (Mukhtāsr) had already disappeared from knowledge by the time of the Arab translator.

(AL-SHIRAZI, ṢADR AL-DIN (d. 1640) is one of the great unknown men in the history of human thought. Holding a humble and poorly paid post as a teacher he found time and energy to build up his own philosophy, ordering and shaping the whole knowledge of his time from new points of view. The great problems, which the older philosophers had handled down to his period were solved by him in his own way. His world-system is a theory of being. The real things of the world around us are "individuals of being," similarly limited sections of an endless prordial being, emanating from God as the primonial light like individual rays. From this fundamental principle, Shirāzī thinks out the whole arrangement of reality in a new fashion: what we take for "entity" in things is the separation of the individual rays of the "being" and what we take for "existence" in them is the presence of this ray. This gives a new solution of the age-long great problem of being and existence, each being a different aspect and side of the same metaphysical reality.

The idea of the transmigration of souls was still quite alive in his time. He transformed it according to his own metaphysics of existence; according to his originality, the soul of man attains to a higher stage of existence, likeness to God and union with God. The principle of this evolution is according to him, gnosis, the higher form of knowledge which by the creation of its content in man supplies the defects and wants of his being and thus makes for perfection. The cognition of our mind is an act which is influenced by the active intelligence and possesses relationship in essence with the creative activity of God. God is not only the prordial being but also the centre of values. The reflection of these prordial values are the things of creation. If we therefore find in the world and its confusing multiplicity reflections of truth, goodness, beauty and lovleness, these are the reflection of God, which shines upon us and points the way to God. The path to ethical perfection is thus at the same time indicated.

The three great intellectual aspects of Islam converge in Shirāzī for he is at once theologian, philosopher and mystic, taking up and equating the ideas of these movements. His special tendency, however, is the typical Persian mysticism of "Illumination" (Ishqāq) as Shahwari d developed it, which he based on Aristotelian proofs through Ibn Sinā and al-Fārābī; he developed the system further (in the doctrine of entities whose immutability he disputes). The objections of the Indian monistic type of Muslim mysticism, he also overcomes by his thesis of the emanations of being. That philosophy did not die out in Islam after 1100 but still flourished at a late period is proved by the existence of Shirāzī. He gathered together the higher culture of the brilliant epoch of Shah Ḥāfez into a synthesis planned on a large scale.

(M. HORTEN)

AL-SHIRBINI, YUSUF B. MUHAMMAD B. 'ABD AL-DAWAAD A. KHUDO, an Egyptian writer of the xix (xviii) century and author of a work entitled Hasr al-Khulṣ bi-Shahr Ḥāfidi Abī Shāhīfī. "The tossing of heads in the commentary of the poem of Abī Shāhīfī," No biographer devotes a notice to him. Al-Shirbini tells us incidentally that in 1075 (1664/1665) he was on the road from the Nile (Sa'd) to al-Ḳosar (al-Ḳaṣr) on the Red Sea (cf. the commentary on verse 13, 30, dunaf, Bulāq, 1308, p. 152).

Among his teachers he mentions Shihāb al-Dīn Ahmad b. Ahmad b. Sa'dīka al-Kalutī (d. end of Shawaḥil 1069/1659) and Ahmad b. 'Ali al-Sandūbī, who is said to have engaged him to compose the poem and to write a commentary on it afterwards (cf. p. 215).

In the first which is a kind of introduction, the author describes the fālītā (peasants) of the Nile valley and gives anecdotes in which he records their coarse customs, speaks of their food which no man to any degree civilised can smell or touch, describes the marriage ceremony among them etc. The last part ends in an urduīs in literary language in which he sums up the various customs of the fālītā which he has just described. The second part is a poem of 47 verses (and not 42 or 52) in the Egyptian dialect attributed to an imaginary Abī Shāhīfī in which each verse is followed by a full commentary in the classical language, spiced with facetious digressions sometimes fairly long, anecdotes very often sarcastic, quotations in verse and prose of those in the spoken language are more numerous than those in the literary language.

Al-Shirbini, a moralist in his own way and a highly educated man as well as a poet (cf. his Muwāṣṣihā, p. 193), describes from careful observation the customs, especially the bad ones, and particularly the vices not only of the peasants of the Nile valley but of his contemporaries in the cities; his gaulolistics suggest a comparison with Brahimī. His book has been lithographed in Cairo without indication of place and date, and at Alexandria in 1289 and printed at Bulāq in 1274 and 1308 and Cairo in 1322.

(M. BEN CHENE)

SHIRK (also Ishqāq, a.), association, especially associating a companion to God — honouring another besides God, polytheism. In the oldest strata of the Korān, during the so-called first Mecca period, the conceptions shirk and muṣḥirda do not occur. Muḥammad was probably at first exclusively concerned with his own fate, being
completely under the ban of the imminent Last Judgment, and only with the increasing hostility on the part of the unbelievers did he begin to take an interest in them. In the latter parts of the Qur‘ān they are often mentioned, and regular disquisitions with the Mushrikūn sometimes occur; in particular they are continually threatened with the Last Judgment; the mushrikūn will then receive their punishment (Sūra, xxviii. 62 sqq.). They think their idols will intercede for them with Allāh, but these cannot do this (Sūra, vi. 94; x. 19; xxxi. 12; xxxix. 4 and 39); quite the contrary, for they will accuse their worshippers on the Last Day (Sūra, xix. 84 sq.; x. 29 sq.) and they will become fuel for hell with them (Sūra, xxi. 98 sq.). The mushrikūn are not grateful to God for saving them from the perils of the sea (Sūra, xxi. 65). The believers are to keep away from them and not to marry the mushrikūn (Sūra, ii. 220) but they are not to revile the unbelievers but endure them unless the latter in their turn attack and molest (Sūra, ii. 109). In the year 9, however, Muḥammad finally casts off the mushrikūn (Sūra, ix. 3, cf. however earlier Sūra, xx. 94 sq.); the mushrikūn are anuncle (Sūra, ix. 28). The believers are not to pray for them, even if they are their nearest relatives (Sūra, ix. 114 sq.). Muḥammad had already earlier expressly declared shirk to be the sin for which God has no forgiveness (Sūra, vi. 51, 116; xxxi. 12) and rejected it as absurd (Sūra, xxi. 22).

This development is very similar to that of the conception of the kāfs [q.v.] in the Qur‘ān. Kāfs is the most usual term for the unbelievers, and comprises both mushrikūn and the “people of a book.” Thus Sūra xxii. 5, says “those who are unbelievers, the possessors of a scripture as well as the servants of idols will dwell eternally in Fire”! The commentators on this passage differ in their views. Some hold the view that the people of “a book” are to be included among the mushrikūn; and others have the narrower term used first, and then the more comprehensive one. Other commentators have distinguished the people of a book from the idolaters in the narrower sense and this corresponds to the use of the phrase which later became predominant. But everywhere in the Qur‘ān shirk is used in direct contrast to the possession of the oneness of God, which has been given its most pregnant expression in Sūra xxii. (Sīrat al-Tawḥīd or Sīrat al-ʿAllāh) and according to one but rather artificial explanation, a definite variety of shirk is made impossible by each single verse of this sura.

In the Hādīth literature, Shirk has usually the same meaning of “an external obscuring the belief in the oneness of God”. The mushrikūn are — as in the above mentioned Kur‘ānic passage — ungrateful to God and say in their vain boasting, “if we had not our dogs we would be robbed”, and so on.

For the rest, the hostile feeling against the mushrikūn in the period of the great conquests is reflected in the rest of the Hādīth literature. Before the battle the mushrikūn received the demand to adopt Islam; on one occasion Muḥammad even prays to God for right guidance for them; on another he curses them and calls down fire on their houses and tombs, and wishes for plunder and earthquakes. According to one hadith the believer very rarely fails before the shirk, and the Prophet says, full of confidence, “Shirk is in my community more difficult to find than a black seed on a hard rock in the darkest night” — or he says to ʿAbd Allāh, “I will tell a word to thee, the utterance of which protects thee against any shirk: O, God, I take refuge with Thee, lest I unwittingly give thee a companion, and beseech Thy pardon if I have done it unwittingly”.

In the Fīh books, mushrik is the proper legal term for unbeliever, although kāfs is often also found. The unbeliever according to the Fīh is in general regarded as an outlaw and of little value. Unbelievers, especially if hostile, can be killed without punishment, while on no account can a believer be put to death for the sake of an unbeliever. On this point in general, cf. the article ḲĀṬĪH and on special points ṬHĪKH and DĀR AL-QĀHĪ for the laws of warfare, and the articles ḲHIMMA, ḲHĀṬĪB and ṬHĪYĀ for the constitutional law. On some points the unbelievers are allowed to make legal arrangements among themselves, as for example in the law of marriage: — Unbelievers are at liberty to arrange the marriage of their children as they please; unbelievers can be witnesses at a marriage between believers; unbeliefing husband and wife must be divorced if one of the two adopts Islam. L. A. W. O F I N H E R I T A N C E : — Bequests from one unbeliever to another, even of different religions are quite as valid as in the case when either the testator or legatee is a Muslim; but in no case can anything be bequeathed to an enemy unbeliever. The Ḳāfī has to prevent the appointment of an unbeliever as executor to a will. On the law of slaves of the articles ʿAARB and ṭUṬTARĀ; and the article ṬHĪYĀ on the cases of urgent necessity in which a believer is permitted to conceal his faith.

The broadening of the Muslim outlook in the war of conquest had naturally quite early brought about a recognition of the fact that all mushrikūn are not the same and are not to be treated alike. In the books on Milāt wa-Nīḥkāl we find more or less full accounts of the different foreign religious systems, which term includes also the philosophers, star-worshippers and atheists, and in the apologetic literature, we occasionally find systematic expositions of the various foreign religions. Attempts are not wanting which explain psychologically the origin of idolatry. From such considerations the conception of shirk came to be divided into many varieties, with which we cannot deal here. But these researches had a practical legal significance inseparable as through the centuries the oaths came to be formulated, by which members of strange religions were sworn, to get a binding promise from them, especially in the case of recognition of the authority of Muslim State. An interesting collection of such formulas for oaths for the Mamlūk period is given by Kāṭbā Ḳanfūdī, Sīrat-āʾ Allāh, iii. 200 sqq.

In the course of the dogmatic development of Islam the conception of shirk received a considerable extension through the circumstance that the adherents of many sects had no compunction about reproaching their Muslim opponents with shirk, as soon as they saw in them any obscuring of monotheism, although only in some particular respect specially emphasised by themselves, and in the later systematised dogmatic works, which, as a rule in connection with tawḥīd, go into its
opposite shirk, one can trace in almost any sentence what sectarian view is referred to or refuted, and then trace the path by which the present formulation has come about. Shirk nowadays is no longer simply a term for the unbelief prevailing outside of Islam, but has become a reproach hurled by one Muslim against another inside of Islam.

The Mu'tazilis, for example, called their opponents muhrākun in as much as they, by adopting eternal attributes of the Deity, postulated their existence as eternal existence beside God. The attributes rather, they say, do no exist for themselves, but are inseparably one with God and not different from Him, and expressions like "God is all-knowing", "God is mighty", "God is living", simply mean "God is".

Quite in the same spirit, the Almohads, whose special program was the tawhīd, accused their opponents of shirk, because they held the doctrine of the non-creation of the Kur'an and their tawhīd includes the demand to recognize its miraculousness; only in this way is it possible to exclude the Kur'an from being a second eternal being besides God. Muhrākun to them also are the anthropomorphists who make God possess physical human qualities and thus affect the wujūdātānayn. According to their strict view, they alone are professors of the oneness of God (mu'āshūqūn) in the true sense, the whole of the rest of the Muslim world is muhrākun to them and the Christians Ahl al-Kufr. (The Isma'ilis also were fond of calling themselves mu'āshūqūn but this was not a distinctive name for them; for them every one who associates another with His Isma'il, is like one who associates another with God or the Prophet, i.e. is unclean.

The shirk theory of the Wahhābis went to the greatest extreme. Their hostility is directed against shirk which in their view infects the whole of orthodoxy. Islam in the form of the cult of prophets, saints and tombs. Besides, there have not been wanting in orthodoxy and elsewhere (cf. e.g. Goldscheider, ZKHIITEN, p. 353; cf. Struthmann, Kalim der Seiditen, p. 67 f.) those who condemn the cult of saints for reasons of tawhīd, and at bottom it is only tolerated as a concession to the overwhelming practice of the people. The Wahhābis also consider themselves the only mu'āshūqūn, all other Muslims are muhrākun and they alone are called to the ilāhān al-sunnah. The old sunna and the picture of the character of the Prophet and therefore the very heart of Islam has indeed been falsified by the worship of saints. Therefore they attack the very holiest places of Islam in the Sahā and Shari'a, because these in their area are regular strongholds of idolatry.

According to the theorists of the Wahhābis, they directed the opposition in detail against 1. shirk al-silm: prophets and saints have no 'ilm al-gaib except when it is revealed to them by God, who alone possesses it. It is shirk to credit or ascribe knowledge to them or to wooth re astrologers and interpreters of dreams. 2. shirk al-taqarrūf is the assumption that any one except God has power. Whoever then regards a saint as an intercessor with God commits shirk, even if it only, he thinks, serves to bring him nearer to God. Any kind of intervention (sha'rāt, q.v.) is therefore rejected on the authority of Sura xxxix. 45; the Prophet himself will only receive from God permission to intervene on the Last Day and not before. 3. shirk al-Sihād: the reverencing of any created thing, the grave of the Prophet, the tomb of a saint, by prostration, circumambulation, giving of money, vows, fasting, pilgrimage, mentioning the name of a saint, praying at his grave, kissing certain stones, etc. 4. Shirk al-adāt: superstitious customs like istihzām, belief in omens, in good or bad days, etc., in personal names like 'Abd al-Nabī, asking soothsayers for advice, etc. 5. Shirk fī al-'adāt: swearing in the name of the Prophet, of Ali, of the Imams, or Piras.

Shirk is a special meaning in Muslim ethics, notably in al-Ghazā'ī. To the refined ethical conscience "every kind of worship of God which is not absolutely disinterested" is shirk. Thus the hypocritical practice of religion which is performed for the sake of reward, i.e. to gain the admiration or applause of men, is shirk, because it associates consideration for men with the thought of God. Similarly arrogance and egoism are a kind of shirk.

Numerous grades of this shirk are further distinguished, and it is called also shirk fī al-ṣinā'ah or shirk al-ejāh in contrast to crude and obvious polytheism, shirk 'asirī; the ethical value of an action is based on the degree of admixture or omission that clouds the pure intention, iktībā'.

Just as the term 'ābi'īt for the Śūfis now has the meaning "exclusive devotion to God", so shirk has for them come to have the meaning "being prevented by something from exclusive devotion to Him". For example the mere illusion of the soul (nafsa) that it has something good in it and has a certain worth is a secret idolatry (shirk 'aṣirī). It is the same with the assertion "I know God", because here we have an admission of the duality between the subject, which knows and the object of knowledge. For the Śūfis seeking union with the deity, difference of rites and religions loss all significance, and this does not exclude Islam, and the following bold saying is ascribed to Tūlūnī, a pupil of Ibn 'Arabi, that "the Kur'an is absolute shirk; profession of oneness is found only in our (i.e. Śūfī) speech" (Goldscheider, Vorlesungen, p. 171).

persons in common in such a way that each one had ownership in every smallest part of it in proportion to the shares allotted to him. This idea seems to be a general Semitic one. It is found similarly in the Talmudic *Naráh*, cf. L. Auerbach, *Jüd. Obligationenrecht*, § 45. Like this conception *širkā* was also later transferred to the different forms of trading companies. The jurists therefore understand primarily by *širkā* common property (*širkāt al-amā'īk*) which arises for example through inheritance, gift or indissoluble combination. One joint owner can only deal with his share with the approval of the others; the second kind of *širkā* is the company which is based on contract i.e. on offer and acceptance (*širkāt al-`alām*).

The conditions for its foundation are ability to give and undertake a commission (waṣili) or money or goods representing it. The *širkā* is a trading company; the profits are divided either into equal parts or in proportion to the shares. The relations of one company to another is a relation of confidence (amūnā). The company is dissolved (1) by the declaration of the wish of a member (renuntiatio), (2) by succession from Išām or departure into the *Dār al-farq* (cf. capitia diminutio) and (3) through death or mental disease (cf. *Dīg.* 17, 2, 41; 17, 2, 63; 10; *Basil.* xii, 1, 4). The heir can only continue the company through a new contract of association (cf. *Dīg.* 17, 2, 35, 36, 37 = *Basil.* xii, 1, 35, 36, 37).

The Hanafīs know four kinds of companies: (1) *širkāt al-muṣawā'ah*, when the shareholders are equal in respect of capital, right to disposal, shares in profit and loss, if every shareholder is not only "authorised agent" of the others but is also "surety" for them. *Muṣawā'ah* with slaves and unbelievers is not permitted. The *Mālikīs* do not recognise this form; by muṣawā'ah they understand a company in which the shareholders are only general agents for each other; profit and loss are divided among them in proportion to the amount of their shares. (2) *širkāt al-`inān*, capital and profits in indefinite shares; the quota of profit may be greater than the quota of capital in recompense for the work of management. Each member is responsible for his own transactions only and has only the right to demand from the other shareholders their share. This corresponds to what the *Mālikīs* call muṣawā', while by `inān* they mean a company in which the right of the shareholders to dispose of the capital is limited. (3) *širkāt al-ṣan`at* (or *šā. al-`aḥād* or *šā. al-Tālābīh*) when artisans combine on a common task. All the members are bound to carry out the work. Even if only one works, the other yet have a share in the profit. Among the *Mālikīs* however illness of some shareholders makes their contract invalid. (4) *širkāt al-`awdāh* (or *šā. al-Dīnām* or *šā. al-Mu`āfilī*) only permitted among the *Hannafi* members without capital and sell on credit.

The *Ṣābi`is* only recognise the *šā. al-`inān* but they only allow this company in the case of indissolubly combined things (e.g. money, cereals) and allow the distribution of profit and loss only in proportion to the shares in the company. Historically it is probable that this *šā. al-`inān* is the older form; there is evidence of it in the pagan period from the poet al-Nābihga al-`Bardh. On the other hand the *šā. al-Muṣawā'ah* (societas quaeaut) seems to have been taken over from Roman-Byzantine law. It is vigorously condemned by al-Shā`īrī (*Umma*, iv, 206) and disowned by Abū Hanifa also; on the other hand it is recognised by Ibn Abī Laila, al-Shāhīnī, and Abū Yusuf. Sūyūn al-Ḥawwī (in *Sarakht*, *Muhārī*, x, 153) is unique in making even a legacy to one of the shareholders become the property of the company (lucrum ex foris) which suggests the *societas omnium honorum* (cf. *Dīg.* 17, 2, 3, 1; *Basil.* xii, 1, 3, 1). The classification and doctrine of the *Hannafi* have been bodily adopted in the Turkish civil law (*Meqelle*, art. 1045, 1046 sqq.; 1329 sqq.).

On the other forms of companies see the separate articles: *muṣamāt, muṣīrāa, munākَt.

HEFFERNING

SHIRKū, ABU 'l-HĀKIT ANÁD AL-DIN, son of Shāḥīd, and brother of Ayyūb b. Shāḥīd, the father of Salādīn. At first a general of Nur al-Dīn, prince of Aleppo and of Damascus, he became vizier of the last Fatimid Caliph al-`Adīd, and in the last capacity bore the honorary title of Malik Manṣūr.

We first met with Shirkū at Takrit, where his brother Ayyūb was governor in the name of the `Abbāsīd Caliph, and it was after a murder committed by Shirkū that the whole family had to abandon the town, and offer its services to the prince of Aleppo, Zankt, who accepted them. Shirkū remained at the court of the son of Zankt, Nur al-Dīn Maḥmūd, and at his command, went to take Damascus which his brother Ayyūb was defending in the name of the Būrid princes. The matter was arranged without a blow being struck; Ayyūb kept Damascus, but on behalf of Nur al-Dīn who gave the territory of Hims to Shirkū as an appanage. Such was the origin of the Ayyūbid principality of Hims, which later passed to his descendants.

When in the year 558 (1163) Nur al-Dīn was asked by Shā`wār [q.v.] to assist him in gaining the vizierate, Shirkū was put at the head of the Syrian expeditionary force. With an army very inferior in number to the forces gathered by the vizier Dīrghām, Shā`wār and Shirkū obtained a brilliant victory near Tell Baṣṭa. Whatever may have been at first the designs of Shirkū with respect to Shā`wār, this battle marks an important point in the relations of the two men; Shirkū seemed afraid of the spirit of intrigue which animated Shā`wār. The assurance, verified in the result, which was given by Shā`wār that he had means of information in the army of Dīrghām was disturbing. With the installation of Shā`wār in the vizierate the quarrel broke out openly; Shirkū was unwilling to quit Egypt before the execution of the agreement concluded with Nur al-Dīn. Fighting resulted on several occasions and the different encounters which took place in the suburbs of Cairo, went against Shā`wār, who appealed for help to the Franks. Shirkū, besieged in Bilbais, had to capitulate. Before the end of the year 559 (Nov. 1164) he returned to Damascus.
In the year 562 (1167) Shirkuh again invaded Egypt to fight Shabar for a second time; the latter was still allied with the Franks. He won the battle of Bihain, which had been forced upon him by his adversaries. This very bloody victory did not lead to any final decision. Shirkuh found a base at Alexandria which he occupied with ease and where he installed his nephew Saladin as governor. This whole effort proved useless, because Shabar succeeded in recapturing the town after a long siege and brought about the departure of Shirkuh.

He had to be recalled two years later by the Caliph al-Ażīd when the Franks besieged Cairo; the third expedition was to prove decisive. After the departure of the Franks, Shirkuh threw in his lot with Egypt and refused to yield to the pressing appeals of Nūr al-Dīn, who was unwilling to be deprived of his services. After the assassination of Shabar, he accepted the office of visier to the caliph al-Ażīd, but it is not known if in his heart he was considering a dynasty of his own. The contrary can be believed, and it may be supposed that the idea of it came to Nūr al-Dīn, who determined to strike a double blow, to bring back his officers to his allegiance and whilst bringing them back to the Sunna, to reign in Egypt, which he would annex to his Syrian kingdom. Because of his relationship with Saladin, the question ought to be raised in an article on Shirkuh but there is nothing to indicate a definite attitude on the part of the latter.

His attainment of power coincided with a rising of the populace of Cairo, which pillaged even the offices of the visierate. Shirkuh, according to the account of William of Tyre was “viel, patte de cors et mont gras” joined his nephew Saladin. Historians praise his ability; although a Sunni, he wisely allowed the Egyptians, to remain faithful to their own religious opinions. His power was, moreover, of too short a duration to give a new political system to the Empire. Shirkuh died very suddenly after being visier for a little more than two months, on the 22 Djamād II, 564 (March 23, 1169). He died, the victim of his violent appetite, which was the cause of frequent indigestion accompanied by suffocation; as is generally the case in the East, poison was also spoken of. In accordance with his expressed desire his remains were transported to Medina, but not until sixteen years later. His successors included a certain number of Mamluks, who were known at the beginning of the Ayyubid régime under the name of Assalīya. The same niqab was used by the mamluks which he had built at Aleppo and at Damascus.

Shīrwān, also written Shīrwan and Sharwan (e.g. in Yāḥū, iii. 282), according to al-Samāʿānī, ed. Margoliouth, p. 335), a district on the western shore of the Caspian Sea, east of the Kura, originally a part of the ancient Albania or the Arzān [q. v.] of the early middle ages. According to Iṣṭārkhī, p. 192 = Yāḥū, iii. 317, the road from Bardaghā [q. v.] led via Shīrwān and Şamāḵḫīya (in Yāḥū: Şamāḵḫī) to Derbend [q. v.]. The distance between Şamāḵḫīya and "Shīrwān" [according to Iṣṭārkhī], was three days' journey; in some MSS. and in Yāḥū we have "Şāḥbārān for "Shīrwān"; in the anonymous Ṣanūfī al-Maktab, f. 331, Shāhīrān (three written Shāhīrān) is described as the capital (ḵūna) of Shīrwān. This road as well as the town on it did not lose their importance until the Transcaucasian railway had been built. Şāḥbārān is still mentioned as a town as late as 1575 in the report of Tarkish conquests of that year (v. Hamann, G.O.R., ii. 485). In the seventeenth century a new town Kuba or Kubā appears as the capital of the Khān of this region, about fifteen miles N.W. of Şāḥbārān; by 1770 Gneisenau only found "miserable" ruins in Şāḥbārān of the old, now completely deserted town (S. G. Gneisenau, Reise durch Russland zur Untersuchung der drej Naturersicht, iii. 36); its importance as a trade centre had passed to Kuba. As late as 1851, the governor of Derbend, Wontschow, travelled to Tiflis via Kuba, Şemakhə and Gandja (Arkiv: Kaspira Vorontsova, pl. 405).

Şamāḵḫīya, Russian Shamakhi, the later capital of Shīrwān, is said to have been founded in the Muslim period and to have taken its name (Balḥān, p. 210) from Şamāḵḵī b. Shūkī, king of Shīrwān, during the governorship of Saʿūd b. Salim (the contemporary of the Caliph Hārūn al-Rashīd, cf. Yaḥū, Tārīkh, ii. 317, 395, and al-Ṭabarī, ii. 648). As the territory of the Shīrwānīs (see below) Shīrwān included the lands from the Kura to Derbend; the same frontiers are given in the Mongol period for Shīrwān (in Hamd Allah Kaşwini, Nūṣhū al-Kūnī, ed. Le Strange, p. 92-7). The capital Şemāḵxa was then as later of importance, especially as a centre of silk manufacture and of the silk trade.

After the abolition of the Shīrwānīs by the Sāfawīs, Shīrwān formed a province of Persia and was usually governed by a Khān, who is often called Ruyerbe or Emir al-Umarī; the inhabitants several times rebelled against the Shīrwī dynasty and as Sunnis appealed for help to the Sultan of Turkey. With other Caucasian lands Shīrwān was taken by the Turks in 1578, held after a series of battles with varying results, and finally ceded to the Sultan by the peace of 1590. Under Turkish rule Shīrwān was divided into fourteen sandjakas. It included Şakti in the north-west and Kubi in the south-east, i.e. practically the whole of medio-southern Shīrwān. Derbend, which had long been separated from Shīrwān, formed a separate governorship. Persian rule was not definitive restored till 1607. In the seventeenth century, Kubā and Şālūn were given as a separate principality to the Kaitak, which submitted to the Safawīs (cf. i, p. 989-997). In 1722 the Khān of Kubā, Husain Alt, submitted to Peter the Great and was confirmed in his dignity. By the treaty between Russia
and Turkey of the year 1724, the coast-territory with Bâkut, now occupied by the Russians, was for the first time politically separated from the rest of Shirwan, which was left to the Turks with Shemakha as capital. This division was retained as regards administration even after both parts were reunited to Persia. By the treaty of 1732 the coast lands north of Kura still remained to the Russians and the other parts of Shirwan and Daghhestan to the Turks; but only after Nadir Shah had taken their conquests from the Turks by force of arms (capture of Shemakha, Oct. 22, 1734) that the coast lands were ceded to him voluntarily by the Russians (treaty of Gandja, March 10/21, 1735). After the death of Nadir Shah, Persian rule could no longer be enforced in these regions; several independent principalities arose; the name Shirwan was now limited to the territory of the Khan of Shemakha, which was later under Russian rule divided into three administrative districts (Shemakha, Gökçai and Djiawd). Fath 'Ali Khan of Kuba (1758–1786) succeeded in bringing Derbend as well as Shemakha under his sway, so that, as Dorn observes, "a true Shirwânshah arose in him". During the last years of his reign, Fath 'Ali humbled himself with the idea of bringing Persia itself under his sway and ascending the throne as the true successor of the rulers of Iran. When the Kájárs had succeeded in restoring the unity of Persia, the sons of the Kájrál were no more able to maintain their independence than the other Caucasian chiefs and had to choose between Russia and Persia. General Zubow, who had been despatched by Catherine II., had already reached the Kura below Djiawd (1796) when he and his army were recalled by the Emperor Paul. The Khan of Shirwan (Shemakha), Mustafa, who had already entered into negotiations with Zubow, submitted to the Russians in 1805, who occupied Derbend and Bâkut next year (1806), but soon afterwards he made overtures to the Persians and sought help from them. By the peace of Gulistan (October 12/24, 1813), Persia gave up all claim to Derbend; Kuba, Shirwan and Bâkut. Nevertheless Mustafa continued to have secret dealings with Persia. It was not till 1820 that his territory was occupied by Russian troops. The Khan fled to Persia and Shemakha was incorporated in Russian territory. The outbreak of hostilities again in 1826 was taken advantage of by Mustafa and by an earlier Khan of Bâkut, Hussain, for an attempt to stir up their subjects against Russia, but without success. Since 1820 the former territory of the Khan of Shirwan has been united with Kuba and Bâkut to form one administrative area (at first the "Caspian territory"); from 1846 the "government of Shemakha"; from 1859, after the destruction of Shemakha by one of the earthquakes frequent there, the "government of Bâkut".

At present the ancient Shirwan forms a part of the Soviet republic of Aqsherbadjian with the capital Bâkut; the division into "governments" is abolished, but that into "circles" retained. The old capital of Shirwan, as late as the middle of the nineteenth century, had a larger population than Bâkut; according to Kriter's "Geographie-Statistisches Lexicon", 1864–1865, Shemakha had 41,550 and Bâkut 10,000 inhabitants. In the eighties the relationship was reversed (E. Weidemann, "Panorama" p. 406; Tiffen, 1888, p. 342 and 366; Bâkut 45,679. Shemakha 28,545). Shemakha is now quite a small town compared with Bâkut (1917: Bâkut 231,000; Shemakha 27,800).

SHIRWANSHAH, a title of the rulers of Shirwan, probably dating from the pre-Muhammadan period (Balâghir, p. 196 infra). In the history of the conquest this ruler is called simply king (kâhânu) or lord (kâhânu) of Shirwan (ibid., 204 and 209). Yazid b. Uzaid al-Sulami, governor of Armenia under the Caliph Mamûs, took possession of the naphtha-wells (nâfûs) and saltworks of Shirwan (mâlârí) the eastern part of the land was therefore at that date of greater importance than the western (cf. what is said above on Shâr-bân as the capital of Shirwan). The title Shirwânshah is said to have been afterwards assumed by the descendants of the Arab governor Yazid b. Mazyad al-Shâihad. Yazid himself died in 857 (857–859) and when and why his descendants moved their residence to Shirwan is not known; according to a later source (Shâhirjâde, Mâtâh al-Tawârîkh, written in 1173 (1759), quoted in Dorn, "Schirwanshaher", p. 544, cf. now Brockelmann, i. 429) one of them, Halâhim b. Khâlid, declared himself independent during the troubles that followed the death of the Caliph Mutawakkil in 247 (861) and assumed the title of Shirwânshah. His dynasty (usually called Mâzyad) is said by the same source to have ruled till 460 (1067/1068). Contrary to this, Mas'ud al-Murîdî, ii. 69 says that in his time, i.e. shortly before 332 (943–944) after the death of the Shirwânshah 'Ali Hâmidî, the king of the Irânshâh (according to Marquart, Erânshâh, p. 119, this is the reading, i.e. "lord of Arâin in the narrow sense"); the manuscripts usually have Irânshâh) Muhammad b. Yazid, a descendant of the Sâsânis, seized the land of Shirwan and assumed the title of Shirwânshah; he is said to have held Derbend (Murîdî, ii. 5) and thus united the whole of the ancient Albania into a political unit once more.

Contrary to what was stated above, i., p. 460 sq., that Mas'ud's statements are confirmed by no other source, we can now quote the Hâmidî al-Akham (written in 327 = 982–983), i. 334, according to which the three lands Shirwan, Khurâsh and Khaan were at that time under the rule of one sovereign who had the titles of Shirwânshah and Khurâshâh (in Balkâhî, p. 196 infra, called Djurnâshah, as king of the Lake, i.e. of the Legion), viz. above i., p. 887 sq., and Irânshâh. His capital was the camp of his armies (seraâsh-bâd), far away from Shamakhi. The dynasty of the Khurâshâns was probably founded by Muhammad b. Yazid (Hâmidî Khurâshâh) and the centre of the Khurâshân principality transferred to Shamakhi, which later always appears as the capital of the Shirwânshahs. The rule of this house was perhaps interrupted for a short time by the Muhammad b. Ahmad al-Andali mentioned as Shirwânshah by Ibn Hawqal (p. 250, ii. 18), in no other literary sources is this name mentioned, but it is found on undated coins which from the epigraphy must belong to the fourth (tenth) century.

The next historical references to the Khurâshâns refer to their relations with the Seldjûk Sultân (Husnîzâ, Rûnîl el textes relatifs à l'histoire des Seldjûcides, ii. 139 sqq.). In the reign of
Malikșah (465-485 = 1072-1092) Fariburz is mentioned as king, lord of Shīrwān (al-Malek Şikh Şarşūr), and we still have coins struck by him. When Malikșah was in Arḡān, Fariburz, after some resistance paid homage to him and pledged himself to pay a tribute of 70,000 dinars; but at the negotiations this tribute was reduced to 40,000 dinars. On the death of the above-mentioned Muhammad b. Ahmad al-ʿArabī he paid the ruler of Adharbājān Marzbān b. Muhammad b. Mustawwī (who was a million dirhams). Under Sultan Mahmūd (511-523 = 1115-1127) Shīrwān was occupied by the Sultān's troops; the Sultān was asked by the leaders to come there himself; after his arrival the Shīrwānīkh (his name is not known) went to him and hoped to obtain justice from him but was imprisoned. The people of Shīrwān with whom the prince was very popular tried to procure his release but without success. This state of affairs encouraged the Georgians to invade Shīrwān but they were driven out by Mahmūd. The population suffered very much from the occupation of their country and these events became known as the "devastation" (ţohārī) of Shīrwān. The campaign took place in the first and last years of the vizier Shams al-Mulk, who was put to death by the Sultān's orders in Rabi' I, 517 (April 29-May 28, 1122-1123) in Ballākā, (probably on the way back to Persia from Shīrwān).

The same campaign appears in quite another light in Ibn al-ʿArīfī, x, 453 ʿah (cf. above i, p. 943). The campaign is said to have been caused by the invasions of the Georgians and the complaints of the people, especially of the town of Derbend. Soon after the arrival of the Sultān in Shamakhtī a large Georgian army appeared before the town, which terrified the Sultān; soon afterwards however a quarrel broke out between the Georgians and their allies, the Kipākhs, as a result of which the enemy had to retire "as if defeated" (ţuchīna t-munhasīmīn; they had therefore not actually been defeated). The Sultān remained for some time in Shīrwān and returned in Dhu‘ al-Dirāhī, 517 July 27-August 24, 1123) to Hamālān.

Neither the Minār nor the Georgian sources (in Broset, Histoire de la Géorgie, l, 368) give us any definite information regarding the name of the Shīrwānīkh concerned. According to Fariburz, the name of his son Manṣūrī is still apparent on the coins under the Caliph Mustazharī, i.e. before 512 (1118); the next ruler Fariburz, probably a brother of his predecessor (no coins of his are known), is said by Georgian sources to have fallen about 1120 in a war between Shīrwān and Derbend; he is referred to as a "martyr" (ţahārī) by the poet Khāštī. His son Manṣūrī II was according to his coins a contemporary of the Caliph Muḥtafī (530-555 = 1135-1160) and is said by Khāštī (in抗衡ow, Min. Asiai, d, 122) to have reigned for thirty years, so that he cannot have been dethroned in 517 (1123).

The dynasty's greatest period was under Manṣūrī II and his successors. Manṣūrī took the title not only of Shīrwānīkh but also "Great Khāštī" (Khatābī-Khāštī); from this title is taken the title Khalīlūllāh of his panegyrist Khāštī. But the Shīrwānīkh continues to appear on his coins simply as a vassal of the Seljūq of the Irbak; it is only after the death of this dynasty (Toghrūl b. Arslān, d. 590=1194) that we find on coins and inscriptions only the name of the Caliph as suzerain mentioned in addition to the name of the Shīrwānīkh (usually with high-sounding titles). Shīrwān at that time was actually completely dependent on the Georgian kings, who took the title Shīrwānīkh themselves. Marital alliances were several times concluded between the K ersānids and the Georgian royal house. The son and successor of Manṣūrī II, Aḥṣānī (no doubt owed to his powerful relative, ally and suzerain, King Georgius III, his victory over a Muslim fleet at Bākū and the reconquest of Shīrwān in 1127 [q.v.]). On the other hand the lands of Shakhī, Kuba and Mīkān, were later taken from the Shīrwānīkh by the Georgians (Nasawi, Strav Sultanī, Dżallāi al-Dīn; ed. Paris, p. 145 and 174). Political conditions in the first half of the xiiith century are not quite clear; neither the Shīrwānīkh Raşīdī mentioned by Ibn al-ʿArīfī under the year 619 (xii, 264 ʿah)nor the Shīrwānīkh Aḥṣānī b. Fariburz mentioned by Nasawi (p. 175), under 623 A. H., are known from coins; in place of these we find on coins as contemporary of the Caliph Nāṣir (575=622 = 1180-1225) Fariburz b. Aḥṣānī b. Manṣūrī and, following him under the same Caliph Farrāhūdī b. Manṣūrī and Garshāpb b. Farraḥūdī. In contradiction to the above accounts Nasawi says that the Shīrwānīkh paid Sultan Mahmūd a tribute of 100,000 dinars; the Khāʾirīshīkh Dżallāi al-Dīn therefore demanded the same sum from the Shīrwānīkh when he appeared in Adharbājān. According to Nasawi, the reply given him was that conditions were no longer the same as before, as a large part of the country was now in the possession of the Georgians. It was agreed to pay 50,000 dinars, but even of this 20,000 were remitted. Shortly before the Khāʾirīshīkh had driven the officers of the Shīrwānīkh out of the land of Gushkāstī at the junction of the Kura and Aras and forced out this territory for 200,000 dinars; on the other hand he restored to prince Shīrwānīkh, Mīkān, which had been ceded by his father to the Georgians (on the occasion of the marriage of the prince with a Georgian princess, daughter of Queen Ramsūn, 1223-1247). After the subjection of Shīrwān by the Mongols, coins were struck in the name of the Mongol Great Khāzān; the name of the Shīrwānīkh also appears, but without a title. Under the rule of the İkhāns [q.v.] no coins were struck in Shīrwān; the country belonged sometimes to their empire and sometimes to that of the Golden Horde; as a province in the empire of the İkhnāshī Khwarizmshāh brought the state treasury 11 timāns (the timān was 10,000 dinars) and 3,000 dinars (the dinar was not now a gold coin but a silver coin of 3, later 2 mithāls); cf. W. Barthold, Periods of the Timurids, p. 185. Gushkāstī had remained separate and paid 118,500 dinars. The Kersānīkh dynasty remained in existence; under the Kersānīkh of the İkhnāshī, the Shīrwānīkh Kal Khāzān and his son Khwāzī were again able to play the part of independent rulers (their coins were anonymous like the coins of several dynasties of this period); but soon afterwards Khwāzī had to submit to the Timurids [q.v.] and strike coins in their name. Khwāzī is said to have died according to Fath (in Dorn, p. 560) in 2775 (1373-1377); his son Hūšang was murdered by his subjects after reigning ten years and with his death the dynasty of the
Maxims which are said to have been left by him are quoted (Mirkhond, Rawdat al-Šifā, Bombay 1277, i. 12 sqq.).

Tabari, Annales, writes Shīth and Shāth (I. 153) and says that Shāth is a Syriac form (šīraqa). The name signifies "in place of, gift (of God)" because he was given in place of Abel (Gen., iv. 25).

Al-Maṣṣūma" [q. v.] holds that the name of the god Shāth was transferred from Adam to Seth (Murshid b. Tahār al-Maṣṣūma, Livre de la Création, vi. 90).

This idea comes from a Gnostic sect, the Sethites who were found in Egypt from the fourth century, and who possessed "a Paraphrase of Seth", to be more precise, seven books by this patriarch and seven others by his children, whom they called the "Strangers" (Epiphanes, Hær., xxxix. 5).

The Gnostics possessed the books of Jaldabaoth, the Demiurge, attributed to Seth (Epiphanes, op. cit., xxvi. 8). The Sahib of Harrān had several writings attributed to Seth, and the latter was associated with Adam by the Manichaeans (Prosper Alfric, Les Écritures manichaéennes, Paris 1918, p. 6, 9, 10). Seth is always associated with Adam by the Druids (Philipp Wolff, Drüen, Leipzig 1845: p. 151, 193, 372 sqq.).

(C. Huart)

SHĪTH, the name of a very old Persian fire-temple, is said to be the native place of Zoroaster. According to A. V. W. Jackson the name is said to be derived from the Avestan name of Lake Urmīya, Čāčasta; according to Yākuti it is an Arabic corruption of Lūm or Lūm i. e. Kusānaka or Gwāna of the classical writers or Ḥanjāk of the Pehlevi texts. The older geographers consider the two names distinct. A comparison of the description given by Yākuti from Mas'ur b. Muhallil (about 940) with the names which are now called Taḥšt-i Salmānī shows the two places to be identical. According to Mas'ur the town lay among hills in which gold, quicksilver, lead, silver, arsenic and amethyst were found. Within the walled town was a pond of unfathomable depth, the water of which turned everything to stone. There was also a large ancient fire-temple there, which was held in great honour from which all the sacred fires in Persia were lit.

The fire had already burned 700 years without leaving ashes. The Persian kings used to bestow gifts on the temple, so that it collected vast treasures. Mas'ur b. Muhallil went there specially to find hidden treasure. H. Rawlinson's photographs of Taḥšt-i Salmānī show the position of the town and the ruins of the temple.

(S. Joy)

SHORFĀ. This is the dialectic plural form used throughout the Magrib in place of the classical shorfa; the singular is shirf (class. Encyclopédie de l'Islam, IV.)
sherif, n. v.). Morocco is the country of the Muslim world in which are found the largest number, in proportion to the number of inhabitants, of authentic sharifs or those regarding themselves as such. Their groups have played a considerable political and social role in the country since the end of the middle ages; two of them in succession succeeded to the old Berber dynasties, the Almoravids, Almohads, and Marinids; and even before these medieval dynasties the consolidation and

sharif, hitherto overshadowed by the medieval dynasties, began to play a foremost role. The result was the fall of the Marinid dynasty and their Wattusid successors and the rise of the Saadian princes.

Henceforth Morocco became the chosen land of the Sharifs. The empire became the Sharifite empire, al-Syiafat al-Sharifat; the groups, originally constituted without any recognition from the central power, were given an imperial consecration

unity of the Maghribi empire had been brought about by a Sharifite family, the Idrisids. At the end of the middle ages the Sharifite movement in Morocco seems to be closely associated with the development of the cult of saints and the growth of the religious brotherhoods. At this period there was a revival of the Muslim faith in the country and the religious aristocracy acquired a predominating position. Maghribi Islam in the sixteenth century assumed the original form, although nominally orthodox, which it has retained to the present day. To resist the Christian peril and the designs of Spain and Portugal on Morocco, it appealed for leaders in a holy war and the

of nobility; each Sultan on his succession renewed their grants of privileges and fiscal immunities and granted them rescripts (ghibr) which became in each family a kind of "grant of arms". It was for example by a Sharifite rescript that the saib (q.v. and the article SHARIF) of each group was appointed. In the hierarchy of the Maghribi they occupy the first place. The Sharifs of Morocco are found especially in the towns but even in the country they are very numerous. It is not always easy to distinguish between the Sharifs of the genuine nobility and those who cannot prove their descent from the Prophet. There has gradually arisen a difficulty in distinguishing between the
Descendants of 'Ali b. Muhammad b. Idris. They are divided into branches which are found throughout the northern part of Morocco; among them we may mention the Sh. Shafkhawanyyun whose ancestor 'Ali b. Raghid founded the town of Shafkhawan (q.v.); the Sh. Liya'iyun and the Shorfa WXzzaniyyun (on the activities of this important branch of the article WXzzani: the Sh. Raisuniyyun and the Sh. Rahmaniyyun.

II. Kadarid branch. The Kadaris of Morocco claim descent from Mūsā al-Djawn, son of 'Abd Allah al-Kamil through the intermediary of the celebrated 'Abd al-Kadir al-Djilani. Their settlement in Morocco only dates from the end of the middle ages when they had to abandon Spain where they had hitherto lived. They finally settled in Fas at the end of the ninth century A.D. (14th A.D.) and since then have been one of the most important Sharfi groups of the Moroccan capital.

III. Sa'dian and Filali branches. These two branches each succeeded to power in Morocco after the fall of the old Berber dynasties. Both claim direct descent from Muhammad al-Nafs al-Zakri son of 'Abd Allah al-Kamil. They had a common ancestry down to the thirteenth descendant of Muhammad al-Nafs al-Zakri as may be seen from the following table:

For the circumstances of their accession to power see the article MOROCCO, History.

Jusuanid Groups. Two Sharfi groups of Morocco, of much diminished importance claim descent from al-Jusuan b. 'Ali through Mūsā b. Dja'far al-Sādiq b. Muhammad b. 'Ali b. Zain al-Abidin b. al-Husain. They are the Shorfa Saljuqiyyun (for Ṣaljuqiyyun = Sicilians), who are descended from 'Ali al-Raṣūl b. Mūsā al-Kasim, and the Shorfa Irakīyyun who are descended from his brother Ibrahim al-Murjad. They are found principally in Fas and some of them in the last century went and settled in Cairo. If one realises the special importance of the Sharfi groups in the Maghrib, one will not be surprised to find that it has resulted in a special
literature dealing with genealogy and biography. The first notable works on these subjects were undertaken by a Kādirīdī Shāfi of Fās, Abī Muḥammad ʿAḥbār al-Salām b. al-Tayyib al-Kādirī, born in 1058/1648 and died in 1110/1698 (cf. the writer's Histoire des Chorfa, p. 276—309). In addition to three monographs on hagiography, he wrote several works dealing with the Sharfīt groups of Morocco, first a general study of Sharifism in the Moroccan capital, al-Durr al-samīr fī badr man ʿaḥb al-ṣināwī al-massāli, which, in spite of its title, also includes the Ḥusainī branches; on account of the period in which he was writing, he deliberately left out the ʿUṣūrians, who in any case were to disappear very quickly for lack of descendants. This work was lithographed at Fās in 1305 and 1308 A.H. Al-Kādirī's other treatises deal with a. the Kādirī Shāfiʿī (al-ʿUrf al-qādirī fī man al-Durr al-samīr min abī al-ṣināwī al-Ḥusainī, and b. the Shāfiʿī ʿIrākīyīn (Maṣūṣ al-ʿIrākī fī ʿIrākīyīn min al-ʿIrāq). At the end of the sixteenth century and beginning of the seventeenth, two other treatises on genealogy were compiled in Morocco; one devoted to the Alawi Shāfiʿī of Ṣidjīlimānī was written by Abū l-ʿAbbās Abū Ṣafī al-Māliḳ al-Shāfiʿī al-Ṣidjīlimānī, and entitled al-Amāq al-samāʿī fī mušāḥ ṣināwī al-masālih; the other is entitled Shāfiʿī al-ṣināwī fī ʿIrāq nasaʾal, which was a sort of work of the Shāfiʿī of the Ḍrūlā al-ʿAlām, al-Tihāmi b. Muḥammad b. Abū Ṣafī ibn Rājīmī, who composed it in 1103/1693—1694.

In 1217/1755 a descendant of the marabout family of the ʿazwīyāt of Dīkā, Abū Ṣafī al-Māliḳ al-Shāfiʿī al-Ṣidjīlimānī, composed a new treatise on the hagiography of the Kādirīs, Kitāb al-ṣināwī fī ṣināwī al-masālih, which was published at Tunis in 1296 and Fās 1309, partially transl. by Weir, The first part of the Nuzhat al-Tuḥāqī, Edinburgh, 1901. A monograph was a little later devoted to the Shāfiʿī ʿIrākīyīn of Fās by a Kādirī, grandson of the author of the Al-Durr al-samīr, Muḥammad b. al-Tayyib al-Kādirī, d. 1137/1723: this is the Maktub al-badāʾijī fī al-ṣināwī al-masālih, which was published at Tunis in 1296 and Fās 1309. The composition of the Kitāb al-ṣināwī fī ṣināwī al-masālih, which the genealogists of Fās consider apocryphal, is attributed to Abū Ṣafī b. Muḥammad ʿAḥbār al-Māliḳ al-Ṣidjīlimānī, also dates from the end of the sixteenth century: we may mention the Tabāṣ fī al-ṣināwī al-masālih, 1300, by Hāmmūn al-Tahārī al-ʿĀṣirī (d. 1194/1777), lithographed at Fās in 1324 A.H.

The composition of the Kitāb al-ṣināwī fī ṣināwī al-masālih, which the genealogists of Fās consider apocryphal, is attributed to Abū Ṣafī b. Muḥammad ʿAḥbār al-Māliḳ al-Ṣidjīlimānī, also dates from the end of the sixteenth century: we may mention the Tabāṣ fī al-ṣināwī al-masālih, 1300, by Hāmmūn al-Tahārī al-ʿĀṣirī (d. 1194/1777), lithographed at Fās in 1324 A.H.

Finally we may mention of modern works, in addition to the information collected in the valuable Ṣaḥāb al-ṣināwī al-maṣūṣ of Muḥammad b. Ḥanbal al-Kātībī [see al-Kātībī], two works relating to the Sharfīt branches of Morocco. The first is the work of Muḥammad b. al-Ḥāfīz al-Maḍāni Gānūf, entitled al-Durr al-samīr fī mušāḥ ṣināwī al-masālih; the other, more important, is entitled al-Durr al-samīr fī mušāḥ ṣināwī al-masālih, which was lithographed at Fās in 1314. This book which is the work of Abū l-ʿĀṣirī Ḥanbal al-Maḍāni, died in 1316/1898-1899, is an excellent collection with much unpublished information, clearly presented.

SHOTT, Arabic Shāʾt [q. v.]. The principal Shāʾt are, on the high plateaus, the Tigri Shāʾt in the Moroccan territory; the Shāʾt Gharra formed by two basins, the Shāʾt of the Hāmaya to the East and the Shāʾt of Mahaya to the West, and the Shāʾt Ṣariq situated to the South of Saida. In the central district between the Tell Atlit and the mountains of the Üled Na'll, the Zahr al-Shāʾt and the Zahr al-Ṣariq, more to the East the Shāʾt of the Hodna was in the centre of the depression of the same name; other small Shāʾt form the bottom of the basin of El-Beida and of El-Tar. Lastly to the South of the Saharan Atlas a string of Shōt runs from West to East from the meridian of 83° far as the Gulf of Gades over a stretch of about 250 miles: Shōt Melghir, entirely in Algerian territory; Shōt Gharra, on both sides of the Algerian-Tunisian frontier; Shōt el-Ljerdi, the largest of all those which is a continuation towards the East of the Shōt El-Fedjel. The two Shōt further West lie 70—100 feet below the level of the Mediterranean. This peculiarity which was believed to be common to the most eastern Shōt, had suggested about the year 1898, the idea that it might be possible to create across the South of Algeria and Tunisia an inland sea by piercing the shore of Gades with the object of diverting into the Shōt the waters of the Mediterranean. Further investigation showed that this project could not be realised and it was abandoned.

Bibliography: See the Bibliography to the article SERRA.
SHUGHNÁN (SHUGHNÁN), a district on the upper Osus (Pandj); the part on the left bank now belongs to Afgan Badakhshán [q. v.], and that on the right to the Russian Pímar. The districts of Ghárin and Rúshán, the one above and the other below Shughnán, are also divided into two by the political frontier. Afgan Shughnán has fifteen villages with four hundred houses and six thousand inhabitants, its administrative centre is at Vawurdu in the little valley of Uydar. Russian Shughnán consists mainly of the valley of Ghand and Shahk-dara on the western face of the Pímar. The Ghand rises in Lake Veškhal-kul but the territory of Shughnán only begins at the village of Sardim (below the junction of the Ghand and its left tributary the Tó Qurúl-bolak). The Shughnán range (with a pass 14,000 feet high) separates the valley of Ghand from its more southern tributary, Shahk-dara, which in its turn is separated from the Wakhón [q. v.] by another chain.

The cultivated lands of the Tá-jíka begin near Sardim, at a height of about 10,500 feet. The lowest points in Shughnán (on the Pandj) are not below 6,000 feet. The population is industrious but remains poor and scattered. About 1897-1898 it was not over 512 houses with 3,400 inhabitants, but the Afgan statistics of 1923 gave 359 houses to Ghand and 340 to Shahk-dara. The administrative centre of Russian Shughnán is at Khárakh (Kharoq) near the confluence of the Ghand and Pandj.

The irrigated provinces of Shughnán speak the Shíghí dialect which belongs to the group of Iranian dialects of the Pímar and is more closely connected with the dialects of Rúshán, Vázqátán and Sarí-köl (Sarkol). This last valley is in China and on the sources of the làk-bundaryá towards the east of the Pímar. According to the traditions of the Sarí-kolins collected in 1873 by the Forsyth mission (Report on the Mission to Yarkand, Calcutta 1875, p. 53, 223), their ancestors in the seventh generation had come from Shughnán, the territory of which seems to have been larger in the past. Like the majority of the Tá-jíkas of the Pímar, the people of Shughnán profess Shíh Ismá'ilí doctrines. Their pír under whom are khásífis, as H. H. the Aghá Khán [q. v.] of Bombay is their head (cf. i., p. 169 and ii., p. 551). One of the striking features of the popular religion of the Ismá'ilis of the Pímar is their belief in metempsychosis, including the passage of the soul into animals. A large number of Ismá'il manuscripts coming mainly from Shughnán are preserved in the Asiatic Museum in Leningrad (including Unán al-Kitáb, Vázqát-i Din, Kúlam-i Pir, etc.). It is curious to note that the Dabítán [q. v.] speaks of the "Alt-Illíth (Ismá'ilí) living in the eastern mountains (Al-illíth-i woshíl) in proximity to (kmúríyn) the savage Umayyad of Yázdíya. Some whose town is Shwás. This name must correspond to Shughnán.

The Chinese writers call Shughnán She-kí-ní or (R. Chavannes, Documents sur les Tou-kías occidentaux, St. Petersbourg 1903, p. 152) "the kingdom of the five Shees (gorges)" which seems to refer to all the region of the Pandj ("the five rivers"). According to Huien Thang (630-644) the kingdom of She-kí-ní was 3,000 li in circumference (about 20 days' journey) while the circumference of the capital (K'ou-han?) was 5-6 li. The inhabitants were rough looking. The writing
resembled that of the Tokhtris but "their spoken language was different". In 846 envy of the She-k'ni visited the court of China. In 718 the brother of the king (yadgha) of Tokhtris confirmed the Chinese that the sovereignty of the yadgha extended over, amongst others, the king of Shughnan who had 50,000 men at his command. In 747 the general Kho-sien-ki crossed the land of She-ni, the inhabitants of which lived scattered among the gorges.

The Arab geographers refer to Shughnan by the names Shikinan, Shikinan, Shikina and Shikina. Ibn Khardadhbih, p. 37, and Ya'kabii, p. 292, make Shughnan dependent on Tokhtristan, for in enumerating the revenues of this last district they say that Shikinan paid 40,000 (7,400) dirhams in taxes and Wakhan 20,000 (7,000). This may explain an obscure passage in Ibn Khardadhbih, p. 175, where he speaks of a ford on the Dzisalan by which the merchants of Khottalin (a district between the Panj and the Wakhshan) entered "the land of the Turks (sic) which is called Shikina". As the writer places the mouth of the Akhthwa (the river of Kalat, Khi-Sarkhab) below this ford, the Shikina must have lived on the left bank of the Panj above the Afghan Darawz (cf. above i., p. 844). On the other hand according to Ya'kabii (p. 292) Shikinan and Badakshshen (lying between Khottal and upper Tokhtristan) were separated by a large valley (that of the Panj). The Araba (Ibn Khardadhbih, p. 173; Ibn Rusta, p. 89) further make the Indus (Mihran) rise in the mountains of Shikinan. Al-Biruni (ed. Sachau, p. 101) puts to the west of Kaghmir, first the lands of the Bolor-shah and then (those of the) Shikinan-shah (sic) and of the Wakhshan-shah which stretch to the frontier of Badakshshen. This order of enumeration suggests a direct control between Shughnan and the lands of the upper Indus.

According to Ya'kabii, p. 304, in the time of Harnin al-Rashid the Barmaeides Faqil conquered Shikinan. Al-Istakhri however (p. 267) asserts that people of this district as well as those of Karran (Darawz?) were non-Muslims.

Marco Polo (Yule and Cordier, i. 151) mentions the mountain of Syghnan which produces "balas" rubies, but the ancient mines now abandoned are in the adjoining district of Ghuraz.

The local historian of Shughnan begins with Chinese rule of which he quotes several memorials, for example a black stone in the valley Ghund bearing a Persian inscription weekly Khasian-27i. Such monuments must certainly relate to later expeditions (cf. Torebki-27i Rakhsh, ed. Elin and Ross, 1895, p. 94; Yule in his preface to Wood, Travels, p. xxxiii, mentions the Chinese expedition of 1759 to Badakshshen). After the Chinese, the "fire-worshippers" ruled over Shughnan. The inhabitants appear to identify these infidels with the "Siyaahpooh" of Kfaristan [q.v.] to whom are attributed numerous buildings, especially at Wakhan (Olufsen, Through the Unknown Pamir, London 1904, p. 172-174). Sir Aurel Stein however (Geogr. Journ., Aug.-Sept., 1916) does not believe that the Siyaahpooh were capable of building these monuments and attributes their origin to the Indo-Sctitic or Sasanian period. It is probable that the "infidels" were simply local non-Muslims (cf. Grierson, Jhikhsani, Zhahii and Yaqubshani, London 1940, p. 7). The principal centre of these "infidels" was Wiyar on the left bank of the Panj and their best known chief was Farhad Raw.

He was overthrown by a certain Saiyid Shah Malang sent from Khorasan by the Grand-Master of the Isma'ili. Shah Malang was followed by another missionary Shah Khambish from Shiraz. For three years he put his date at 865 = 1266. The descendents of these pirs governed Shughnan as hereditary muns. Shah Amir Beg has left an inscription at Khoragh dated 1193 (1779). His son Shah Wandji Khan expelled all the non-Isma'ilis of Shughnan and the "fire-worshippers" had to leave for Yatkan. According to Kuskhali, p. 187, this prince had extended his sway up to Badakshshen and Curit. The son of Wandi Khan, Kubad Khan, persecuted the Isma'ilis but was driven out by his brother; Visut. "Ali Shah grandson of Kubad, ruled both banks of the Panj but the Amir of Afghanistan, Shtr. "Ali Khan also tried to bring this area under his sway. In the reign of "Abd al-Rahman Khan the Afghans, objecting to the hospitality given to the Russian traveller Regel, by Visut "Ali, deported the latter to Khabi (c. 1300 = 1822) and established their rule over Shughnan (Kuskhali, p. 182-185). The inhabitants sent envoy to Bakhsh and to the Russian authorities in Turkestan. After long pourparlers and an encounter between a Russian force under Colonel Ionow with the Afghans near Yeşhis-Kul (in 1892), an exchange of views between the Russian and British governments took place in London on March 11, 1895. The Afghans had to evacuate the right bank of the Panj and the Amir of Bakhsh to give up his possessions on the left bank (Darawz).

Eastern Shughnan was restored to Bakhsh but its administration gradually passed into the hands of the Russian authorities of the Pâmir (the station of Khoragh was created at Shughnan in 1895). In 1918-1920 the waves of Russian revolution reached even Shughnan. In November 1920 the Soviet forces re-occupied the Pâmir and re-established all the military posts. [The following additions are due to the kindness of Mr. A. Semenow. The inhabitants of Shughnan call themselves Shughneen. Shughnan belongs at present to the Soviet Republic of Tadzhikistan, which possesses self-government. The tomb of Shah Khambish is at Kalta, Sarpuqand (cf. Troplin in Geogr. Magazine, ii., 1857, p. 10). Shah Wandi Khan died in 1314-1319. Visut "Ali Shah's government was tyrannical, which was the cause of the conscription instituted by the Afghans. The Wandi Khan has been published at Berlin (Kawiani-office, 1343), cf. Semenow, K. dogmatik paixamshag ismaelism (Tashkent 1929) where the latest works of the author are mentioned.]

Musakai, Turkestanische Reisen, St. Petersburg 1913, p. 861 and passim; Olufsen, The Empire of Bokhara and his country, London 1911, p. 98 sqq. A. Semenow, Istoriya Shughnana, Probalaal Turkestan, kardin Rabiatleyi archeologii, Tashkent 1917, xli. 1-22 (based on the manuscript of Saiyid Haidarpooh of Shughnan and Russian official documents); Burhan al Din Kuskhali, Kuskhali-i Badakshshen, Tashkent 1926, p. 170-198 (Russian text, translated by A. Semenow, of an important Afghan publication based on the materials collected by the special mission of Moulzammad Nadir Khan).

SHUL, A country in China. According to Kudama (ed. de Goeje, p. 284) Alexander the Great conquered it and built there two towns, Shul and Khundun. This latter has been identified (de Goeje, Tomasevic, Yule) with Si-nan-fu. In Shul Marquart (Osteuropatische Streifzüge (Leipzig 1903) p. 90, and Erdreise (Berlin 1901) p. 316) sees the 'Turkish word Ceit which he translates by "sand" (desert), seeing in it a translation of the Chinese Shu-shan, "sandy districts". According to Bretschneider (Medieval Researches, ii, 1878) Shaou-shan, "sand city" (Marco Polo: Sachau) was taken in 622 A.D. As an alternative, Marquart admits a misunderstanding Shul instead of Shuk = Shuk-shan (Sn. 284).

It remains to be ascertained if this Shul does not rather refer to some colony of the Sogdian (cf. the Sogdian Sutk from "Soghdis, Tibetan Shukl, Russian Shulk, German Soglian, Sogdien, 1923, p. 46). 2. A tribe in Persia (Movahhyz).

SHULISTAN, "Country of the Shul", a district (buluk) in the province of Fars.

Three epochs must be distinguished in the history of the district: one before the arrival of the Shul, the period of their rule (from the vith/viiith centuries), and the period of its occupation by the Mamassan Lurs about the beginning of the xix/xvith century.

During the Sasanid period the district was included in the kura of Shapur-khura. The founding of its capital Nawbandjan (Nawbandjan) is attributed to Shapur I. This important town situated on the road from Fars to Khišistan was taken by Ullman b. Ahi l-Ay in 21/643 (Ibn al-Athir, ili, 37); it is often mentioned by Arabic historians and geographers. The district is watered by the river system which finally forms the river Zohra, which flows through Zaidan and Hindiyeh. In the old Fars-nama (p. 131) the river of Nawbandjan bears the name Khālidan. The river system is described in detail in Fars-nama-yi Nādirī, ii, 326. The principal water-course comes from the direction of Ardakan and is now called Ab-i Fahiljīn or Ab-i shir. The valley of Shul-bāwān situated about ten miles to the north of Nawbandjan, is considered, on account of its climate and the richness of its vegetation, to be among the four earthily paradises (Fars-nama, p. 147; Bode, i, 233). Another notable feature of the district is the fortress Kāl-i Safil, occupying (like Kāl-i Nūrī [q.v.]) an extensive terrace (four miles in circumference) on the summit of an almost inaccessible mountain; the Persians identify the place with the Safīl-dīx mentioned in the Šah-nama (Mohl, ii, 92; Vullers, i, 448); it was taken by Turmār in 795 (1393).

Sometimes the district of Nawbandjan bears the name of Anbarūn, but the Nushāt al-Kullāh makes the town of Anbarūn a dependency of Nawbandjan. Nawbandjan flourished until the interregnum which followed the fall of the Būyids [q.v.], when Abī Sa'id, the leader of a section of the Shabānbār [q.v.], destroyed the town. It revived under the Agābēg Čā'ull (died in 510) who governed Fars on behalf of the Sh洗sak, but finally fell into ruins.

The description of Fars (Fars-nama) composed in the life-time of Čā'ull does not yet give the expression, Shulistan, that is to say "the country of the Shul". This last tribe at first inhabited the territory of the Sāmānids, of which the half was under its rule about 300 (912). The great chief (čā'ull) of the Shul was Saif al-Din Mākūn Rūshītān, whose ancestors had governed the district from the time of the Sāmānids. We may here mention that the Rūshītān figure among the Lur tribes. At the same time as this čā'ull, Ḥamd Allāh Mustawfi mentions a governor (ḥākim) of the wāliyyat of the Shul, who was called Nadīm al-Dīn. From the year 500 (1106) the Kurd tribes and others from Djarāb al-Sumā' (in Syria) began to move into Lūrīstān. From these Kurds the dynasty of the Čā'úbegs of the Great Lur is sprung. Under the Čā'ūbeg Hashrau (560—565 = 1260—1262) the new comers drove the Shul back into Fars.

Towards the end of the thirteenth century, Marco Polo (Yule-Cordier, i, 83—85) mentions amongst the eight "kingdoms" of Persia, Shūlistan, which may refer to the new territory around Nawbandjan occupied by the Shul. The old Chinese map studied by Bretschneider (Medieval Researches, ii, 127) marks a Shu-la-tsu between Shūrak and Kūrān, which must correspond to Shūlīstān. Although the Muslim historians were ignorant of the Shul dynasty, the tribe in the time of Mustawfi had hereditary governors, the descendants (nawīn-dabān) of Nadīm al-Dīn Akbar. A new administrative centre replaces Nawbandjan: during the campaign of 795 Timur halted at Makūn Shul ("the estate") of the Atraves of the Shul being thus distinguished from Makūn = Idrāhjī: the position of this place between two water-courses, corresponds to Fahiljīn which is now the capital of the district.

The Shul must form an ethnically distinct unit. The history of the Kurds by Sharaf al-Dīn only
mentions them, incidentally perhaps because the author excluded them from his category of "Kurds." Ibn Battūta (Defremery, ii. 88), who in 748 (1347) met Shīl at Shīhrah and on his first stage on the road from Shīhrah to Kāhrūn (Dašt-i Arjān?) calls them "a Persian tribe (min al-aṣḥāf) inhabiting the desert and including devout people." The Persian dictionaries mention a peculiar dialect Shīlī (Vullers, ii. 451: *a kind of Rāmavand and Shākhi which is spoken in Fars*). Shīlī al-Dīn al-Umārī (who died in 749/1348) states that the Shīlī have very considerable affinities with the Shāhānšāhī (q. v.) and assert their generosity and hospitality. Their warlike character is evident from the remark of Raḥīl al-Dīn, who, in speaking of the Tārīfs, capable of killing one another "for a few words," compares them to the Kurds, the Shīlī, and the Franks (Bérénice, vi. 62). In 617 the Atābeg of Lurāstān, Hāzhāpād, advised Muḥammad Khwārizmshāh to entrench himself beneath the chain of Tangī-Talū (Balút: "oak") and to mobilise there against the Mongols, 100,000 Lurās, Shīlī, the people of Fars and Shāhānšāhī (Djouwānī, Gibb Memorial, xiv/2, 114). Raḥīl al-Dīn (Quatremer, p. 380) mentions amongst the valiant defenders of Māwsī in 659 (1260): "the Kurds, the Turkomans and the Shīlī". Established on the great road, the Shīlī nomads were themselves also invaders; the Atābeg of Lurāstān, Vizāfī Shīlī (673-687) attacked them and killed the brother of their chief Nadīm al-Dīn (Teʾrīkh-i Gāvada, p. 543); in 735 the Murqaffar Shīlī al-Shāh chastised them severely when they attacked Shīhrah (ibid., p. 660); in 795 ʿUmar Shāhī marching in the rear-guard of his father Timūr pillaged on his way all the unnminded "Lūrs, Kurds and Shīlī" (Zafar-nāma, p. 515).

The nomad (or semi-nomad) state and the warlike character of the Shīlī, the similarity of their speech to Persian, the invasions of their neighbours, all these factors must have contributed on the one hand to the dispersion of the Shīlī and on the other to their assimilation and final absorption. At the present day, traces of them are only found in the toponymy of the Fars: Shīlī Gāp, a mountain to the north of Būhīr; Darvāzī, namely, a section of the Turkish tribe Ḳaḳāhī (q. v.); Ḳaḳāhī, a village near Dālīkī and another village to the N. N. W. of Shīhrah. This last Shīlī, situated to the east and outside the dūlah of Shīlīstān might represent the last bulwark of the tribe, which has disappeared. Herford, who emphasizes the special character of the buildings of this village, says that its inhabitants are of Persian origin and seem to have kept the pure Persian type. According to Bode, the river Aḥ-ī Shīrī ("bitter water") is called also Shīkārīb ("sourer water"); this contradiction can only be explained by the confusion between the words Shīrī and Shīh, and besides, one of the most important tributaries of this river is called Raḥīlī-kī Shīlī: Kāmāfīrūz in Fārs-nāmah Nāṣīrī (Wells, *The South stream*).

At the time of the last Safavīs (Fārs-nāmah Nāṣīrī, ii. 302) or after the rise of Nādir (Bode, i. 266) Shīlīstān was occupied by new invaders, the Māmān Lūrs, after whom the district is now called bāltī Memāsūn. Its extent is now about 100 X 60 miles, between the following boundaries: to the east Kāmāfīrūz and Ardākūn; to the north and to the west Ranzīd and the country of the Khūsh-Gālīs (Khūsh-Gūlīya Lūrs; to the south Kāhrūn and the mountain of Mārām-Shīgīf (the northern slopes of the Maravek in Dašt-i Arjān). Of the six cantons of the district four (Ḏarābūn) bear the names of Memāsūn cantons: Bākšt, Džīwōd, Dūzhanmīzīnāt and Rustūm. In these cantons there are fifty-eight villages and five thousand families. The cantons are governed by their hereditary bāltīrās. The Memāsūn claim to possess the amals of their tribe and say they came from Sūstān (J. Morier, *J. R. G. S.,* 1837, p. 232-242): this legend must have attached itself to the name of Rustūm, the name of one of the four cantons. The language of the Memāsūn is a Lūrt dialect.

Of the two other cantons: Kāhrūn (to the north) was bought by the Kaghālī Turk of the Kaghāšī (q. v.) tribe; and Fahlīyan, with seven villages dependent on it, is still the administrative centre of the dūlah. In the time of the Safawīs this town is said to have numbered five thousand houses of which in the year 1840 no more than sixty-seventy remained (in Persp. Saiyids).

**SHURĀT** (as šahrk, the name which the extreme Khāβdasī [q. v.] give themselves. This name of a religious denomination is taken from the Kurān (iv. 76) and means, "those who sell their life to God" by vowing to fight to the death against his enemies.

The first Shūrāt were exterminated by ʿAlī at
the battle of Nukhaila. The most celebrated of their martyrs was Abu Bihli Mirza b. Djawar, of the Rabia tribe. They swore to fight, even when hope had gone, for the cause of justice "until only three amongst them should remain".

This state of extreme political feeling or ʿirāq is contrasted in Kūrdish terminology to the state of "triumph" (esign), or "defence" (ṣaf) and of "secret" (kistān).

The name of Shūrāt has been applied by extension to a group of Kūrīdī jurists, natives of Ūmam, Sīlaḏ, Allahsirdār, Shahrūnī, and Ḍabār, like Dībār b. Ǧansūb and Kāṭāli, who have written in justification of the attitude of ʿirāq.

The Malay custom of ʿamār sometimes takes the form of ʿirāq among Muslim Filipinos.

**SHURTA, police, police-officer.** The word ʿirāq (more rarely ʿirāf) in the plural ʿirāf, originally means "picked men who open the battle", "bodyguard" and then comes to be used in the sense of "police, gendarmerie"; an individual police officer is likewise called ʿirāf or ʿirāf (ṣaf). The title ʿajāb al-ʿirāf, "mender of the bodyguard" was at first given to the governor of a province or a town who settled all questions, religious as well as secular, but in the ʿAbbāsid period was reserved for a special official who was responsible for order and public security and whose duties therefore corresponded with those of our chief constables. Under the ʿAbbāsids, the Spanish Umayyads, and the Fāṭimids in the Maghrib and Egypt the ʿajāb al-ʿirāf had greater power than the ʿajāf, insomuch as he was empowered to take action on mere suspicion and to threaten any one with punishment even before proof was brought. Not all citizens however were under his power, but only the lower classes, particularly all suspicious individuals and those of evil repute. In Spain however a distinction was made between al-ʿirāf al-ḥābiḥ ("great ʿirāf") and al-ʿirāf al-ṭalḥī ("little ʿirāf"); the representative of the former could take legal proceedings even against high officials, if he had been guilty of anything, while the latter dealt exclusively with the lower classes. In the time of Ibn Khalīd, the ʿajāb al-ʿirāf in Spain was called ʿajāb al-marāṭa, in Tunisia ḥaġām, and among the Mamlūks of Egypt ṣafātī.

From the meaning of "policeman", "constable", developed in Spanish Arabic that of "hangman" and in the ʿarabic "night" we find ʿṣafītī used along with ʿajāfī in the meaning of "rogue, rascal" etc. In modern Egyptian ʿṣafītī means "pickpocket".

**SHUSHTAR.** [See Shīrāz.]

**SHUSHI, a mystic poet of Andalusia, a disciple of Ibn Sahib [q. v.], author of masnawihā in vulgar Arabic.**

Born at Yordar near Guzidan (Wādī Ābī) about 600 (1205), he died at Sīnā near Damietta on 17th Sāfar 668 (October 16, 1268). Shusharti first studied under Ibn Surāta of Jīzār, who expounded to him the "Aswārī al-Muṭarrīf, of Shuwarwardī al-

Mardānī, he seems at this period to have joined the Madarij order. He then lived at Rābāt and the Mekeles (which he mentions in his poems) - a shahīd of the land of Meknes - Goes singing through the park - What do men want with me? - What do I want with them? -" and Fās. He then set out for the east. In 650 (1252) he was at Damascus with a remarkable poet, Nadīm b. ʿisārī (d. 676 = 1277) of the order of Rībīʿyya Fartihyya (Dīnārīn at Constantionople, Aya Sofia MS, N. 1644).

Finally in 654 (1253) he settled in Mecce; there he met Ibn Sahīb, then already famous at the age of thirty-eight; although his senior, he became his pupil and received his khīrī al-ṣāliḥīn (of which we know from Ibn Taimiyya that its dīwān was lāli Ṭālīa and that its lamāʾīa relied on the authority of Hallaj among other impious men, e. g. Socrates). When Ibn Sahīb was persecuted and put under police surveillance, Shusharti, taking his place at the head of the mawdūjārāna, brought to Egypt, before he died, about 400 adepts including Ibn Yāḥyā b. Mubahali, the hermit of the Bib Ūzawīla (Cairo).

Maʿṣūr enumerated five prose works by him; but there survives only a Khāliqa tabībīya on the poverty (Eucarp, MS. 168, f. 750–760). If its name is still known, it is owing to his Dīnārīn collection of masnawihā in vulgar Arabic; short, poignant poems quite modern in tone, for which music was at once provided, according to Ibn ʿAbbād Rundī. To this day to end the "shāhīd" in the sennets of the Shāhīlyān in Syria they sing his "Alī son tabībī son ar-rat al-ṣāliḥī - Hā'īn ar-rat al-ṣāliḥī...". Ibn Adja also annotated - Shusharti also wrote some ṣanas in the classical style; the best known is the Sāliya izāriyya, on which Nābulisi wrote a commentary.

**SHUSHI, SAYID NURE ALI B., SHARĪR MAṢĀRĪ, an original Shīʿa writer who defended imāmism against Sunni polemicists and at the same time mysticism against the anti-mysticists of the majority of the Imāmī doctors. Kāẓim of Lahore, he was condemned as a heretic by orders of Ḥāfiz and whipped to death in 1019 (1610). He is the third martyr (ajāb al-ṭarīq) of the Imāmī. He left two important works, in Persian the Moṭṭālī al-Muʿminīn (finished at Lahore in 1073 = 1664), a very fully documented biographical collection on the principal martyrs of Imāmī and mystic Islam; and in Arabic the Iḥāṣ al-ḥaṣab, a treatise on Imāmī apologetics.

**SHUTRƯ or SHUSTER, a town in the Persian province of Arabistan, the ancient Khāṣtān, situated in
about 49° East Long. and 32° N. Lat. It stands on a cliff to the west of which runs the river Kärün [q. v.], the middle course of which begins a few miles north of the town. This position gives the town considerable commercial and strategic importance and has made possible the construction of various waterworks for which the town has long been famous. The main features of these constructions are: (1) the canal called Aḥ-ḥ-i Gerger (in the middle ages Murādšāh) which is led from the left bank of the river about 500 yards north of the town; it runs southwards along the east side of the cliffs of Shuster and rejoins the Kärün at Band-i Kār, the site of the ancient ʿAskar Mūnām; (2) the great barrage called Band-i Kajast, which is thrown across the principal arm of the river (here called Shustaf or Nahri-i Shuster) east of the town and is about 440 yards long; this barrage supports a bridge intended to connect the town with the west bank but now a considerable gap is broken in it; (3) the canal called Mināw (from Mīyān-āb) which begins above the barrage in the form of a tunnel cut out of the rock on the western side of the town; the citadel is above this part; the Mināw turns southwards and is intended to irrigate the land south of the town.

Shuster along with these canals was already in existence in pre-Muhammadan times. Pīrī knows a town called Sostra (xii. 78) and it appears as Šuhstār in the Liste géographique des villes d’Iran, publ. by Blochet (Recueil de travaux relatifs à la phalèse et à l’archéologie égyptienne et osyrien, 1895, xvii. No. 46); it is found in Syriac literature as a Nestorian bishopric (cf. Marquart, Ermland, p. 27). Persian tradition also regards Shuster as a very old town (e.g. Abu Ḭ-fīḍa, ed. Reinach, p. 315). This tradition is found in the Arab historians and geographers and most fully in the Tarifi-i Šuhstār of Aḥō Allāh al-Shahtart (cf. Bibliography). The story goes that the town was founded by the mythical king Ḥāshang after the foundation of Shāh (Susa). Shuster is said to be comparative from Shāh because its name is more beautiful "in reference to the site of the town (Marquart, note, etc. also regards it as a derivative from Shāh with the suffix of indication). The Arabic form Tustār is generally explained as an arabisation of Shustār (e.g. Hānsa al-Idfahāni and Yākūt, l. 848). Several sources record that the town was built in the form of a horse. Tradition also says that the Mināw canal, formerly called Nahri Dârriyān, was built by Dârâ the Great and that it was the Sāmān Ardāghti I who began to construct the barrage in the river below the mouth of the canal, after the latter had dried up because the bed of the river had sunk through erosion by the force of the current. The work was only completed however under Shāhī II by his Roman prisoners under Valerian II (cf. also Taḥarı, l. 827; Makātib Mūsā al-Mūṣāb, ii. 184). The Aḥ-ḥ-i Gerger was first dug simply to divert the volume of water. The Band-i Kajast was next constructed and called after the emperor and the bed of the river above the barrage was paved with huge slabs of stone bound with iron so as to prevent any further erosion. This paving was called Shikdr̲wān, a term which was also applied to the barrage itself. Ultimately a new barrage is said to have been across the Gerger.

From the xivth century the Aḥ-ḥ-i Gerger was called Dū-Dārīn and the Nahri-i Shuster Cāhār-Dārīn, because they contained respectively two- and four-sixths of the quantity of water in the Kärün. Muslim authors number these great waterworks among the wonders of the world (e.g. Hamza al-Idfahāni and Ibn Başṭāta). Although the authenticity of the tradition quoted could be for the most part disputed, it is not improbable that Roman prisoners of war took part in the construction of the barrage (cf. Nöckel, Geschichte der Perser und Araber, p. 37); local tradition further attributes to Roman colonists the introduction of a number of industries e.g. the manufacture of brocade (dībāq) and certain popular customs.

In the caliphate of ʿUmar the town was conquered by al-Baṣrī b. Mālik, whose tomb used to be pointed out in the centuries following. Tradition also says that the coffin of the prophet Dānīyāl was found there, which later on was brought to Shāhī. In the Umayyad period the town became one of the strongholds of the Kharijīs; the Kharijīs Ṣahīb made it his capital but after his death al-Ḥadhdhidād seized it; it was then that the great bridge over the barrage was destroyed. Under the Caliphs, Shuster was the capital of one of the seven provinces (sometimes a larger number is given, cf. Maqrizi, p. 404), into which Khūzistān was divided. When Baghdad became the centre of the empire, Shuster gradually became influenced by its proximity to the capital. One quarter of Baghdad, for example in the tenth century was called Māḥsilat al-Tustārīyān; it was the residence of the merchants and refugees from Khūzistān. The oldest mosque was built under the ʿAbbāsidas; begun in the reign of al-Muʿtāz (866-869), it was only finished under the Caliph al-Mustarshid (1118-1135). There was however a fire-altar at Shuster in the time of al-Halladī (Maqṣūmīn, La passion d’al-Halladī, i. 92).

Shuster along with Alwās has always been the chief town in Khūzistān; Ḥamd Allāh Mustawfī calls it the capital of this province. It was conquered by Timūr and remained in the hands of the Timurids till the year 820/1414, when it fell to a Ṣūfī dynasty of Sāyiids under the suzerainty of the Ṣafawīs and became a centre of Sīfī propaganda. Several governors have founded little dynasties there. The town enjoyed most prosperity in the reign of Wāḥīḥī Khān (1632-1667) whose descendants kept the governorship till the end of the Ṣafawīs. In the beginning of the sixteenth century it was among the provinces governed by Muḥammad ʿAlī Mirzā, son of Fath ʿAll Shah, who restored, for example, the barrage and the bridge. At this period it is said to have had a population of 45,000, but the number has certainly diminished a great deal since, for Ravilison in 1836 puts it at 15,000 and Curzon in 1890 at 8,000. The area covered by the town is out of all proportion to the population. Sykes also calls Shuster the most ruined town in Persia; this description applies also to the water works. The houses are built of stone and brick; they contain cellars, here called hirvāsad, in which the inhabitants shelter in the excessive heat of somerest.

As to the inhabitants themselves, they are a mixture of Arab and Iranian or proto-Iranian elements. In the middle of the sixteenth century there were still a considerable number of Mandaeans here; Layard counted 300-400 families of them.
in 1840 (cf. also the description of them given by ‘Abd Allīh al-Shuṣhtārī on p. 24 of his local history). They have probably now disappeared. Modern travellers (Curnon and Sykes) describe the character of the present inhabitants as disagreeable and wantonly. Among the Persians the devotionalness of the inhabitants has earned the town the honorific title of Dūr al-Mu‘minin. On the other hand we find Shuster included among the Persian towns celebrated for the suavity of its inhabitants (Christensen in Storia Orientale, iii. 51). They live for the most part by commerce; the present state of the population seems however to justify the ancient tradition that Shuster is fated always to remain a poor town. Since the end of last century Shuster has succeeded Dirulf as the capital of ‘Abdārābīn.

For the extensive bibliography relating to the barrages and irrigation works cf. the article KĀRT and the bibliography given there.

(J. H. KRAMER)

SHUBIYA. Shūbīya, of the Kurān teaches the brotherhood and equality of all Muslims and verse 13 reads, “and We made you šubīya and šambūl in order that ye may know” — “each know the other” explains Bāduwī in loco (ed. Fleischer, ii. 276, 17), “not for prudential why with one another in ancestors and tribes”. Apparently šubīya was used in Arabic for non-Arab tribes (al-adjam) as distinguished from šambūl for Arab tribes (Lūm, i. 482, 43) and therefore this passage was used by those non-Arab who objected to the pride of the Arabs towards them. The Shubīya then, was the sect which either so objected or which exalted the non-Arab the Arabs or which, in general, despised and depreciated the Arabs (Lūm, i. 482, 43 sqqq.; Lane, p. 1557E). A member of this sect was a shubīl. This attitude showed itself in different forms. In the East on the part of the Persians and the Khūridjīs it was dynamic and political, and for the Persians also religious, involving heresy and Zandīgīm. It connected with the Shī‘a and other messianic. On the part of the Naháteans it was the conflict of the cultivated soil and its pasturage against the desert. It was thus a more or less successful attempt on the part of the different subjecting races to hold their own and to distinguish, at least, between Arabism and Islam. In Persia this meant even the restoration of Persian as the language of literature and the limitation of the use of Arabic (al-arabiya) and on its Islamic orthodoxy, but rejected the claims to superiority of the Arab race. The movement had therefore a certain kinship with the nationalism within Islam of the present day.

SIK SRI INDRAPURA, a self-governing district (Sultanate) belonging to the administrative area of Bengkalis in the government Oostkust van Sumatra, on the east coast of Central Sumatra and practically equivalent to the valley of the river Siak; a few islands off the coast also belong to it. The boundaries of the Sultan’s territory are inadequately defined in the agreement concluded in 1916 between the government of the Dutch East Indies and the native Government of Siak Sri Indrapura, published in the Kroniek 1917 von het Oostkust van Sumatra-Instituut. It consists of a very wide fertile alluvial strip of coast, swampy in places, intersected by many streams large and small; the ground rises only very gradually to the west and is for the most part still covered with forest. The most important of these are the leaves of the nipa palm which are used for roofing material; they grow rich, almost exclusively on dry fields, but the harvest is far from sufficient even for their own needs; considerable quantities of rice are imported from Singapore and cocomuts from Malacca; the Chinese alone grow vegetables.

Two main elements may be clearly distinguished in the population: (a) A few tribes who may be regarded as descendants of the original inhabitants of the east coast of Sumatra; (b) Another section usually given the name “Malays”. To the first group belong: (1) The Orang Talang on the Mandau river and in the forest country between Siak and Kampar; they are divided into four groups and are said to be descendants of subjects of the once powerful kingdom of Gasip, which lay on the river of the same name and according to tradition was destroyed by the Atchinese; (2) The Orang Mau on the upper Mandau River, also in the adjoining Rokan territory; (3) The Orang Akut, who are gradually dying out; (4) The Orang Utan and Orang Rawa; on the islands at the mouth of the Siak and Kampar rivers. These tribes are still very primitive. Physically they are different from the Malays and it is reported of the Orang Akut in particular that they have a negro type and show a striking similarity to the Semang of the Malay Peninsula. Sometimes lead a more or less wandering life; agriculture is little or not at all pursued; they live by fishing and on all that the forest yields them. The Orang Talang and the Sakai are said to have adopted Islam; but
their knowledge of this religion is only very slight and like the other tribes already mentioned they are still strongly attached to heathen customs. In family law and law of inheritance they follow the Minangkabau matriarchal custom. The other portion of the population, the Malays, is now very mixed in composition. They are descended from immigrants from the west coast (in the greater part of the country Minangkabau is the vernacular) and from Djohor on the other side of the straits of Malacca. It was no doubt with them that Islam came to this region.

There are said to be very old relations between Siak and Minangkabau; at the beginning of the sixteenth century Siak was under the suzerainty of the Mahara of Minangkabau who had however granted it a sultan of the Sultan of Djohor. Thus it came about that when in 1589 the Dutch East India Company opened a factory for the first time in this region, they did it on authority of a treaty with the latter Sultan. Siak may be said to have become independent in 1721 when Radja Ketjil (according to a chronicle a son of Sultan Mahmud of Djohor, according to another a Minangkabau adventurer) who, coming from Siak had at first succeeded in dethroning the reigning Sultan of Djo- hor, but was later forced to flee back to Siak where he was able to resist there against Djo- hor. Janggandaan Basar Shariff Ksaim 'Abd al-Jalil Salil Din whom since 1915 rules the country under the suzerainty of the Dutch East India Company is an indirect descendant of this Radja Ketjil.

(W. H. Rassers)

SIAM. Islam has made no converts in Siam. The Siamese of Thai (i.e. the mass of the population), Laotian, Birman and Mon origin who were long ago converted to Buddhism have remained impervious to it. Unlike what has happened in Western Indonesia, it seems that in the valley of the Mekong there is an incompatibility between the Buddhist faith and the doctrine preached by the prophet Mahammad. The Muslims in Siam consist of Malays, immigrants from Java, Afghanis and in larger numbers, Muslims from India. The majority live in Bangkok. The Muslims are the descendants of prisoners of war taken in the north in course of numerous campaigns of the Thai in the Malay Peninsula. We know that the first expedition dates from the end of the sixteenth century and is recorded in the famous inscription of Rama Katheng (cf. G. Coedès, Recueil des inscriptions du Siam, part i.; inscriptions de Sukhothai, Bangkok 1924, p. 48). Many expeditions followed and secured a considerable number of prisoners to the victors who had conquered the whole Malay Peninsula. A nautical Arabic text of the first half of the sixteenth century indeed tells us that "Singapore is the last land of Siam in the South" (cf. Gabriel Ferrand, Instructions Nautiques et Routiers Arabes et Portugais des XVIIe et XVIIIe Siecles, vol. ii., Paris 1925, folio 71 recto, l. 6).

The Javaneses, the Afghanis and other Muslims from India came to Siam to trade. In 1870 the Siam Directory mentions an appreciable number of "Muslim merchants", which had considerably increased thirty years later (cf. The Directory for Bangkok and Siam for 1898). In addition to these foreign Muslims there are a few Arabs from Basra (on the latter see the standard work by L. W. C. van den Berg, La Hagiographie et les colonies arabes dans l'archipel indien, Batavia 1886).

The Sunnis are in a minority. The majority of the Muslims in Siam follow the Shi'a. The procession of the 'Aghurra' on the 10th Muharram, in commemoration of the death of Hassan and Husain is annually celebrated. The procession of the "Aghurra" is preceded, as in Persia, by representations during the first nine days of Muharram, recalling the events that preceded the death of Husain (cf. the articles 'Ashura' and Muharram). The place where these spectacles are presented is called as in India 'ali or 'Ali (q.v.), the enclosure of the Imam.

The Muslims settled in Siam fast or rather claim to fast during the month of Ramadán, but this fast is far from being as strict as in the lands of Islam. At Bangkok the main features are the rejoicings which take place each night starting at sunset. On these occasions dates are specially eaten in memory of the Prophet, whose favourite dish they are said to have been.

The festival of 'Id-ul-Fitr or 'Id-ul-Az'ahir (q.v.) which closes the fast of Ramadán gives occasion for great feasts and rejoicings, the elements of which are borrowed from local sacrifices. The 'Id-ul-Aụshā or feast of sacrifices which takes place on the 10th Oμ 'l-Hijjâj (cf. 'Id-ul-Adha) is also celebrated with great solemnity and numerous sacrifices of animals.

The mosque of Bangkok is of comparatively recent construction. It is small, badly equipped and situated in the low quarter of the town.

The Muslims who live in Siam — one cannot talk of Muslim Siamese, since except for Malays from the Peninsula who are Siamese subjects, no one, as far as I know, has ever heard of the conversion of a Siamese Buddhist to Islam — the Siamese Muslims have become Siamesed so to speak, instead of having converted the Thai, Laotian, Birman and Mon among whom they live. In 1898, I happened to meet in Bangkok an envoy of the Shaikh al-Islam in Constantinople whose mission it was to visit all the Muslim communities of the Far East. It was the period of Sultan 'Abd al-Hamid's pan-Islamic policy and the Turkish Caliph wished to be exactly informed of the reception of the Islamic propaganda in Siam, Indo-China and China had received. The envoy arrived from China completely disillusioned and he did not conceal from me that his pretended
co-religionists in Bangkok were only Muslims in name. *Even those who profess to be Sunnis*, he added, *are regular infidels*. Indeed Islam has neither past nor present in Siam and probably no future.

The above notes are based on personal recollection and information kindly supplied to me by two confreres, Messrs. C. Otto Blagden and B. O. Cartwright, teachers of Malay and Siamese respectively at the School of Oriental Studies. So far as I know, neither old narratives nor modern works make any reference to Muslims strictly Siamese. In a letter from Fernão Mendes Pinto addressed to the Fathers of the Company of Jesus in Portugal, written at Malacca and dated December 3, 1554, he says: *But, my dear brothers, there are in this city of Sião (= Siam), the reference is to Ayuthia, the old capital* seven mosques of which the ministers (caisim) are Turks and Arabs and thirty thousand families (trinta mil fogos) of Muslims in the town which is a great shame on the soldiers of Christ!* (cf. Peregrinagem de Fernão Mendes Pinto, ed. J. J. de Brito, Lisbon, vol. iv., Lisbon 1910, p. 161). In vol. iii. of the same edition (1909, p. 37) there is also a reference to a certain Heredim Mafameido, i.e. Khaïr-al-Dîn Muhammad, a Turkish captain, who left Suez in 1538 on the Egyptian fleet sent against the Portuguese in the Indies, whose ship lost the way and landed in Tenasserim. Khaïr-al-Dîn entered the Siamese service and was employed on the Laoûds (probably Laoûs) frontier with an annual salary of 12,000 cruzados. Both these are cases of foreign Muslims who had come to Siam. It is obvious that the figure of 30,000 Muslim families living in Ayuthia in the xvi century cannot be taken literally. We shall not deal here with the Muslims from the Malay Peninsula who belong from the ethnographic, linguistic and religious point of view, if not the political, to the Malay Federated States. They should therefore be dealt with along with the latter.

(GABRIEL FERNANDO)

SIBAWAII was the personal name of the prominent grammarian of the Buddhist School whose proper name was Abu Bâhir *Amr b. 'Uthmân b. Kanbar; he was a client (muwâd) of the Arab tribe of al-Hârith b. Ka'b. This name is explained by Arabic philologists as meaning "scent of an apple", but we cannot accept this explanation as the name is never stated to have been pronounced with a diphthong, and from the analogy of many earlier names of Persians containing the end-syllable "ee" we must assert with much probability that the word was pronounced Sibâî and was a term of endearment meaning "little apple, Applechen". There is a great amount of uncertainty in the chronology of his birth and death, as well as regarding the place where he was born and died. From the most trustworthy authorities it appears that he was born in al-Balâdis, a place in the district of Shâris in the province of Fârs. He came as a youth to al-Basra and studied under the chief scholars in that city among whom al-Khalil b. Ahmad was one of the most remarkable, a man whose value to Arabic science has hardly been realised to the present day. Al-Khalil died in the year 775/791 and the earlier date given for the death of Sibawaihi is the year 777 A.D., when he is said to have been only 33 years of age, so that it may be possible that he enjoyed the teaching of al-Khalil during the last ten years of the latter's life. Ibn Khallîkân and others however have a large array of other dates. Ibn Kâmiî gives a date as early as 166 which is impossible, while other dates are 188 and 180, and Ibn al-Djawâr gives the year 194 and fixes his age at 33 years, a date which is also impossible on account of the known date of the death of al-Khalil. As regards the place where he died also a certain amount of confusion prevails, but the best authorities name the town of Sibawaih. According to the Tâhirîh Baghdîdî of al-Khalil it is stated that Ibn Duraiid asserted that he died at Shâris and that his grave is there. As Ibn Duraiid resided many years in Fârs and is by far the greatest transmitter of the sciences of the Başrians we may be safe to assume that his statement is the correct one. Sibawaihi was a most remarkable figure in Arabic learning if only for the simple reason that the work of a man who attained no great age should have been found such general acceptance, because Arabic scholars have always attached undue value to the works of men who have attained a great age. It must have been after the death of al-Khalil when Sibawaihi had his learned conference with al-Kisâiî (q.v.) in the presence of the Wâiz Yâhû b. Khalîl al-Hârithî (d. 182) on the Zurnûbiyya question in which al-Kisâiî got the better of Sibawaihi through the judgment of a Beduin, who probably was submitted for the purpose by the unscrupulous opponent. Sibawaihi received a handsome present from Yâhû, but the mortification at his defeat in the dispute was so great that he returned to his native country and never came back to 'Irâq. He is said to have died of grief.

The result of his studies Sibawaihi laid down in a large work on Arabic grammar (estimated at a thousand leaves by early biographers) which is not only the largest work of its kind which has come down to us of the activity of the Başrian school, but has ever since been the basis of all native studies in the subject and is known by the honorific title of al-Kisâiî the Booker). As stated Sibawaihi had studied under al-Khalil, but he also profited by the lectures of Yûnus b. Hâbîb, 'Ishâ b. 'Umar and Abu 'l-Kâthîr b. al-Khâfiî. Further the grammarian Abî Zâid al-Ansâri is said to have claimed that it is he whom Sibawaihi refers to when in his book he states that he learned a certain explanation from *a man on whom I can rely*. General opinion however associates with this person generally al-Khalil, and we cannot but give this general opinion more credence than isolated statements to the contrary by biographers. It proves however that the most prominent scholars were only too anxious to have their name associated with the Book. It is also fairly certain that Sibawaihi had no opportunity of teaching from his own work nor of reading it to pupils. This task was left to his teacher al-Khâfiî who after Sibawaihi's death undertook a thorough revision of the work. It was not alone among the Başrians that the Book was eagerly studied but we learn from a curious story that al-Djâhîn presented the Wâiz Ibn al-Khalîlî to a copy, which was in the hand-writing of the Wâiz of the grammarian al-Fârâbî, compared by al-Kisâiî and finally revised by the donor himself and was considered a priceless treasure. If Sibawaihi himself in speaking Arabic did so with a decided foreign accent his Book has
always been considered as a standard of good Arabic. As one of the earliest books in Arabic literature, it is in its style frequently very redundant and tiring by its prolix arguments, but it is filled with innumerable examples taken from the Koran and contains over a thousand verses taken from ancient poetry, fifty of which are by unknown poets, but they figure in later grammatical works as valid proofs on the great authority of the Book. These verses found a commendable commentator in the person of Abū Sa'īd al-Husayn b. 'Abd Allāh al-Sirafi (died 368 A.H.), who commented in a similar way on a number of the most celebrated works of the Bayanian school. After this time, commentaries on the books become very numerous and there is hardly one among the scholars who followed the Basarian school who has not either commented or added to the contents of the work. It will suffice to mention here some of the names of prominent scholars who devoted their energies upon elucidating the work: al-Mutarrad (d. 284); 'All b. Sulaiman al-Akhfash (d. 315); al-Rumami (d. 354); Iltu al-Sarrāj (d. 316); al-Zamakhshtari (d. 538); Illu al-Halidji (d. 646); Abū 'l-'Ala' al-Marjari (d. 449); and many more. The Book was studied in Spain with much eagerness and the Spaniard Abū Bakr al-Zaidati (d. 379) composed a short work al-Iltiṣar on additions of grammatical forms omitted by Shabawiti (edited by Guidi, Rome 1890); the commentary by al-'Alam has also been preserved. While in the East the Book was superseded by later and more compendious grammars, the study of Shabawiti appears to have continued in the Maghrib and though some biographers of Maghribiells tell us that al-Makki'di (d. 501) was the last who taught the Book of Shabawiti in Fāṣ, there is evidence from the lithographed editions of grammatical works of later authors in Fāṣ that the work was still eagerly studied there at a much later date and copies have been preserved in the libraries of the intellectual capital of the West.

We possess three printed editions of the work, besides fragments elucidated by European scholars, and a translation into German, of which the Cairo edition with the Commentaries of Sirafi and al-'Alam is perhaps the best, and the edition of Deroenbr dic (Les livres de Shabawiti, Paris 1853 pp.), the Calcutta edition of 1887 and the German translation by Jahn, Berlin 1894 pp., are far from being free of errors.

Bibliography: Fihrist, p. 51; Ibn Khallikān, Cairo 1310, l. 355; Zubaydī, Tabaṣṣaf; Anbardi, Nasāti, p. 71—81; Sayyūj, Baghdad, Cairo 1326, p. 356 and many other works of biography; Hādji b. Khaṣṣ al-Zanūn, Constantinople, ii. 221—283 where many commentaries are enumerated as also in Brockelmann, G. A. L., l. 100—102; Flügel, Gramm. Schulen, p. 42—45. (F. Krenkow)

SIBIR, wa-Ibir, a name for Siberia in the Mongol-period; in this form in Shihāb al-Dīn al-‘Omari (cf. Brockelmann, G. A. L., ii. 143), text in W. Tiesenhoven, Sbornik materialn., atomnykh Nakhnya i itori' Zolotoj Ordī, p. 317 at top; the same source has also Rastī Shīr or al-Sibīr (ibid., l. 6 and 221 below). More frequently Ibr-Sibīr, e.g. Rāhjī al-Dīn, Qāsim al-Tawārīkh, ed. Berezin, in Treurs Vest. Oth. Arch. Oktb., xvi. 168 (Ibr Sibīr, mentioned in connection with the Kirgiz people and the river Angara) and the Chinese Yīnshī (lit. Sibīr, quoted in Bretschneider, Med. Renaissance etc., ii. 88; cf. also ibid., p. 37). The same expression was heard in the beginning of the xvth century by Johann Schiltberger, who reproduces it in the form Bišibar or Bišibar (Montags und Travels; Hakluyt Society, London 1879, p. 174). The texts in which this expression occurs, are collected by Quatremère (Histoire des Mongols de la Perse par Rashid-al-Dīn, p. 413 sqq.), who sees in it (probably wrongly) an echo of the old names of two peoples, the Avar (Avars) and Sahīr (in Ma’sūfī, Ta’ārikh, ed. de Goeje, p. 53, 16; Sahīr; this is said to be the same the Khamars gave themselves).

SIBERIA. [See den AL-BAWAWI, AL-MĀHSUDĪ, AL-TAWĀRĪKH.]

SICILY. In the history of Sicily is to be found in miniature the story of Western civilisation. It lies at the heart of the Mediterranean, and it lies likewise at the heart of medieval warfare, commerce and culture. The great movements of Phoenicians, Greeks, Romans, and Muslims met and fought their battles there, and there all of them have perished. The earliest days are clouded in the fusion of Sicels and Sicani, in the settlements of the merchants of Phoenicia on the promontories and along the sea-coast. A new era dawns when the Greek City States stretch forth their hands for new territory and settle at Naxus (735 B.C.), Corycyra and Syracuse (734). The process of colonisation was steadily forward for centuries, and the Greek element in the island became strong. At the opening of the Peloponnesian War (427) it seemed that Athens’ dream of Sicilian conquest was to be. The result, however, was neither the victory of Athens, nor the tyranny of Corinth, but the spread of classic culture. Meanwhile Hannibal was displaying his Phoenician prowess. In 406 he reduced Selinus and Himera and returned to his base at Catathage. Thus that rivalry began between Greece and Carthage, which alone was to signalise the story of the island for several centuries. Dionsius I and II, Dion, Timoleon and Agathocles, Pyrrhus and Hiero II, were all to rule under the constant terror of Semitic onslaughts, and not until Rome dealt the death-blow to African rivalry did Sicily enjoy peace. And yet through all this long period the genius of civilisation was displayed in the harbours of Syracuse, the amaranths of Tauromenium, the temples of Selinus, and the boculges of Theocritus. And even when Greece and Carthage had gone down before Rome, there still fed Sicily the Hellenic spirit. Although the yoke of Rome was not oppressive, yet the slave element in the island was so large, partly through her unique history and partly through the Roman demand for corn from her fields, that revolts broke out in 153 and 102 B.C. Rome, however, fell before Vandal and Goth, and Sicily was doomed to taste alike the barbarism of the one and the unexpected toleration of the other. Yet Bellarius was still to appear and restore Roman power and with the levithy of Roman decadence.

Meanwhile a great movement had been afoot in Arabia, which, if heralded by religious crises, was to lead to the overflow of a racial basin, and the bursting of the banks of an ethnic river. Muhammad died in 632, but his politically-religious crusade went on. In Syria under the sway of Mawiyah the Muslim arms penetrated to Alexandria, where the Byzantine navy was crushed (654), and maritime power was placed in Arab hands. In the same year
was launched the first attack on Sicily, and although no Arabic historian has recorded it, the testimony of Theophanes is enough. The Exarch Olympus defended the island, but the plunderers secured their booty, and sailed off for Damascuse, with ships laden with treasures of flesh and blood, silver and gold. They returned to taste the sweets of Syracuse, which they ravaged and sacked. These, however, were merely sporadic efforts out of the plenitude of martarian strength. There was nothing determined or political in them. The days of Umaiyyad strength passed and it was from another quarter than Syria that the power of Islam spoke; and yet the instincts of Arab and Berber found a new outlet in the islands of the Mediterranean. From the days of Mass onwards the Corsairs harassed all these parts, and cast a paralyzing fear over the islands of Corinca, SarDIM and Sicily. In 705 Syracuse was again plundered, this time by Africans, who time and again throughout the century returned to their quarry and made definite efforts on the island. So troublesome did these become that the patrician Gregory thought he did well in securing a treaty with the Saracens in 813 for ten years, which pact they honourably observed. But the prize was far too glittering. The request for help which came from Euphemius of Syracuse against Michael the Stammerer in 827 was a timely pretext for a thorough invasion. Ziyadat Allah, the Aghlabid of Kairawan, sent off his hundred vessels from Susa on the thirteenth of June, and the real conquest of Sicily began. Euphemius disappears from the scene, and the Saracen alone leads the pageant of the next few centuries.

A'ad a Bethor commanded a motley expedition. The unamiable spirits of the Kairawan court were driven into squads drawn from Venece and Khorasan, from Syria and Maghrib, soldiers of fortune all. They attacked and reduced the first town on the island, Mazara. Then they tested their strength against Syracuse, but pestilence wrought its havoc and robbed them even of their commander. Affairs at home were in real peril. No Khalid appeared among them to inspire victory. The siege had to be abandoned. Their gloom turned to despair, however, when they saw their escape cut off by the Greek fleet, and they had to make off for the mountains and fortify themselves in the town of Mineo. There they remained until a fleet of Spanish adventurers appeared and supplied them with provisions and the needs of war. But the court at Kairawan was now secure and still unsatisfied with conquest, sent off a great fleet of three hundred ships, with 20,000 men. Led by Asbagh, they besieged and captured Ghalgullia, where plague again achieved what Sicilian arms found impossible. Other enterprises, however, succeeded on the island. A division concentrated on Palermo and brought it to surrender. This with many smaller towns marked a real advance in Muslim conquest. It gave a very important vantage point for further subjugation. It provided a seat for the Amr. It definitely established the hold of the Saracens over Sicily. Indeed it made the attackers feel so sure of their new possession that they turned to challenging themselves, and that story of Sicilian schism begins which haunts the Islam administration to the very end. The Spanish and African elements in the adventure maintained a constant friction, and even this was vitiated by the distinction of Yemenite and Umaiyyad, Persian and Berber. By 840 a third of the island was under Muslim rule. Soon Napoleon asked aid, and the Arabian war-cry echoed on the slopes of Vesuvius, the plains of Calabria and the waters of the Adriatic. In 846 even Rome was threatened by the squadron of the Muslim, and its gates were menaced by plunderers, who, unable to penetrate, gave what remained without to the sword and violence and sacrilege. The churches of Saint Peter and Saint Paul were not only destroyed but desecrated. But another expedition was still to come from Kairawan. In 875 Djalfar led a well-equipped force against Syracuse, and after a three years' siege and civilisation's past, fell to the invader. The same tale of pillage follows, and follows also the passion and the jealousy, the faction and the dissension. Yet this victory gave a new charter to the plunderer, nor were the dukes of Spoleto and Tuscany innocent of sharing in the spoil. So complete in fact was the mastery of the Aghlabid that Pope John VIII deemed it wiser to pay tribute for two years. The Crescent had indeed eclipsed the Cross.

There still remained a few towns that had not bowed the knee. Along the coast the power of the Saracens was unable to subdue every place, and even within the large centres such as Palermo rebellion raised its head. In 900 serious insurrections troubled the peace of the capital. But darker still were the signs within the Muslim camp. What before had only been loud murmurers or covert moves, became now civil wars. Idrishim appeared himself in Sicily to vindicate his name, and under the spell of his presence Taurumien and Rametta fell (908), but his death only heralded another internecine strife and prevented the settlement of Eastern Sicily. It was with a sigh of relief that the Muslims completed their treaty with the emperor Constantine Porphyrogennitus in 936, and when they had retaken Taurumien in 953 and Rametta in 993, the race of the Muhammadan in Sicily had been run. For 138 years he had been struggling for the mastery of the island, and for 73 more he was to enjoy it. Throughout all this period there streamed into Sicilian minds and hearts the culture of the East, and blended there with the precious heritage of Greeks and Romans. The clash of mind with mind produced a type of life unparalleled in history. There was here all the mysticism of the East, all the beauty of the Greek and all the urge and activity of the Latin. Toleration was the only path to peace, and the Sicilian march if along no other road was certainly along the path of toleration.

After seventeen years of quiet the enemy knocked again at Sicilian gates, but Otto II, with a Western Empire behind him, had to retire discomfited from the fight. Only when the Eastern Emperor Basil II called his scattered forces together in 1027, for a final rush on the harassing landlords of his dominions, did success come within sight. Although he saw not the end of his work, his subordinates Manasses carried forward the scheme of conquest. Profiting by the disaffection of Abu 'T-Afar, he carried victory at every step for four years, and by 1042 Messana, Syracuse and many other cities were under Christian overlordship. Recalled however to satisfy domestic fears, Manasses had to leave his work uncompleted, and soon the Muslim had recovered ground. It seemed that the Empire could not rise
to the challenge of the invader. But in 1069 the hour struck and the man appeared. Messana still struggling against the doom of Saracen capture, appealed to the Norman Count Roger of Hauteville. Strong in the possession of Italy, the Norman had been but waiting his time for seizing the island beyond. He responded to the call of the citizens, captured the city, and constituted it the capital of his kingdom. By 1071 Palermo had fallen, and in 1072 Taranto was wrenched from Muslim hands. In 1085 Syracuse was won. Malta which had been taken by the Saracens in 570 was retaken by Roger in 1090, and thus was completed in a few years the whole conquest of Sicily. Norman rule prevailed over the whole island. Norman lords occupied the palaces, Norman troops commanded the forts. It seemed that all the glory that had been won was gone.

And yet right at the heart of the Norman conquest the Arab culture found its life-blood. Hitherto in the welter of bloodshed and unchecked rapine, they had forgotten the finer arts of peace, but now when events drove them in upon themselves they discovered the treasures of their literature and poetry, their law and their science. Not only were they now freed from fighting; they were definitely protected by Roger, who, unperturbed even in his Christianity, encouraged the men of Islam to cultivate their arts if not to advance their faith. He was even accused of being a Muslim himself. Being himself uncultured he saw the greatness of Arabian genius and learning with unsealed eyes, and he refused to crush its spirit. He gave full liberty to the Muhammadans to follow their religion, and even permitted Christians proselytizing among them. Under the Norman feudal system he made the yoke rest lightly on their necks. He maintained the Muslim system of administration, and even the same Muslim officials continued to act under him. The merchants of Palermo are said to have been mainly Muhammadan under Norman domination, and his best financiers were certainly of that faith. The land was entirely under the cultivation of the Moors, who in Spain had shown how skilfully they could make the land yield its best fruits. Papyrus, sugar-cane, flax, olives were all grown in abundance on the island. Where water was scarce great irrigating systems were laid down, and every part of the island utilized. It is said that in the Valley of Mazara no fewer than two million people lived at this period. The science of Medicine was cultivated also and the court of Roger was notable no less for the skill than for the number of its physicians. The Arabic language flourished there as the principal means of communication, and it was also the official tongue. There the Golden Odes and Romances, redolent of Arabian deserts, resounded with delight and charm in the ear of Greek and Norman. There the masterpieces of Plato and Aristotle were translated. There the Arab ideals of chivalry, permeating as they do every one of their romances, set Roger's court along a new line of European adventure, destined to add lustre to his name and dynasty.

None saw more clearly than Roger the greatness of his Sicilian prize, and well did he guard it both from political intrigue and religious rivalry, but the day soon dawned when his sons despised their birthright, and gradually Muslim thought, language, science and culture sank into disrepute and finally into oblivion. Yet so long as Greek and Saracen were protected and favoured, so long was Sicily the most brilliant of European kingdoms.

Biography: The best modern authority is Michele Amari, Storia dei Musulmani di Sicilia, 1854, 3 vols., and Biblioteca arabo-sicula nella roccolta di testi arabi che incompa la geografia, storia, biografia e la bibliografia della Sicilia, 1857—Consult also Gibbon's Decline and Fall of the Roman Empire, vol. vi, Bayly's Edition; S. V. Scott, History of the Moris Empire in Europa, 1904, 3 vols.; Idris, Nof al-Maghrib, ed. and transl. by Dory and de Boeze, 1866; Ibn al-Atlir, al-Kamil, ed. Tornberg and also Fargan's selection of the occidental passages; Ibn Battuta, Paris, 1912 (C. Crouzine Cazou)

**At-Sid**, Spanish el-Cid, the Cid, the name by which the most celebrated and the most popular of the heroes of Castilian chivalry is known. He played a preponderating political part in Muslim Spain of the second half of the eleventh century, and we can now gain an idea of his real personality by removing all the legendary matter that has grown up around his life and his exploits. It is to the Dutch scholar R. Dory, that the honour is due of having established, as a result of his examination in 1844 of the manuscript of the Lhobhar of Ibn Bassam preserved in Zigha, that the story of the Cronica General of Alphonso the Wise relating to the Cid, which up till then had been considered a pure invention, is really translated from the Arabic, and probably from a copy of the Valencian Muhammad b. Khalid b. 'Alkama 428—508). The Cid is called the Bayam al-dawlah b. l-mawlos al-fiddah (cf. also F. Pons Boigues, Ensayo bio-bibliografico p. 176, No. 140) and that it is contemporary with the Cid. This historian was thus able to base his reconstruction of the biography of the Cid on solid and authentic foundations and to show, by a series of careful deductions, how all the romantic alterations in his story had arisen which had long been considered worthy of belief and had given birth to the legendary Cid of poetry and of the theatre.

This knight who was called Rodrigo Diaz da Vivar, was descended from a noble Castilian family and was born at Burgos during the first half of the 11th century. It has not been possible to fix the exact year in which he was born, but it was in 1026 according to some, 1040 according to others. It is known that in 1064 he distinguished himself on the side of Sancho II of Castile in a war which this sovereign waged against Sancho of Navarre. He defeated at this time a knight of Navarre in single combat and the success stood him in good stead in the Castilian army, whose commander-in-chief he became (or the "Standard-bearer of the King") with the title of Campeador (Latin Comitator written by the Arabs as abhambagyar, the equivalent of the Spanish Arabic mugher or barray, "the champion who comes out of the ranks, when two armies are ranged against one another, to challenge an enemy to single combat"). A short time afterwards he was taken to the counsels of Rodrigo Diaz, Sancho II made himself master of the Kingdom of Leon by taking his own brother Alphonso prisoner at Burgos. The latter was able to flee to the Muslim king,
of Toledo al-Mu'tamid, of the dynasty of the Banu Dhu 'l-Nu'man. On October 7, 1077, Sancho of Castile was killed before Zamora, which he was besieging. The principal Castilian knights then assembled at Burgos in order to elect a new sovereign. Reluctantly their choice fell upon Alfonso, King of León, the refugee at Toledo, but they determined to make him take an oath that he had had no share in the murder of Sancho. It was Rodrigo Diaz who took this oath from Alfonso VI in the Church of Santa Agueda or Gadea of Burgos. The new king of Castile always secretly felt a grudge against his human master, but swore this oath, but in order to conciliate the knights, then very influential, and to attach them to him he gave him his cousin Jimena (Chimene) Diaz, the daughter of the Count of Oviedo, in marriage (1074). Some years later Alfonso VI sent him to the 'Abbasid dynasty of Seville, al-Mu'tamid (see the article SEVILLE), in order to collect the tribute, which this Muslim prince paid in return for a nominal alliance with Castile. He was not able to prevent an encounter between the 'Abbasid troops and those of the Zirid king of Granada 'Abd Allah b. Badis; the battle took place at Cabrera. Rodrigo took an effective part and made several Christian knights prisoners, allies of the Zirid prince, amongst them a prince of the blood, Count García Ordóñez, whom soon after he restored his liberty. He himself returned to Castile, after successfully attaining the real aim of his mission. Alfonso VI, probably at the instigation of García Ordóñez, then accused Rodrigo Diaz of having appropriated a part of the presents which had been given to him at Seville to bring to the king, and he took advantage of the first opportunity — the expedition against the Muslims of Toledo undertaken without his consent — to disgrace him and to banish him from his dominions (1081).

It is from this time that the life of a "condottiere" led by the Castilian knight dates, that he began to fight, as occasion arose, the Muslims or his own co-religionists, on behalf of a third person or on his own behalf.

After an unsuccessful attempt to be taken into the service of the Count of Barcelona, Rodrigo Diaz offered his services to the Húdíd dynasty of Saragossa [q.v.], Ahmad b. Sulaimán al-Mu'tamid. The latter agreed to take him into his army with his mercenaries. He died in the same year and his son Yúsuf al-Mu'tamid succeeded him at Saragossa, while his other son al-Mundhir received Denia, Tortosa and Lerida. The two brothers lost no time in going to war with one another. Rodrigo Diaz continued in the service of al-Mu'tamid while al-Mundhir made an alliance with the King of Aragon, Sancho Ramirés, and with the Count of Barcelona, Ramon Berenguer II. Rodrigo Diaz soon won a great victory over the enemies of his master in spite of their numerical superiority, near the stronghold of Altamor, somehow in the north-west of Lerida, took rich plunder and made prisoner the Count of Barcelona, whose liberty he granted restored soon after. He made a triumphal entrance into Saragossa where the Húdíd ruler overwhelmed him with presents and with honours. He had acquired at one stroke prestige and an ascendancy without parallel among his Muslim soldiers who from this time began to call him "my master", sayyid, vizig. Sp. abd, which was translated into Spanish in the form of "el Cid" (the famous poem of the Cid was originally called "El Cantar de mio Cid"); and soon this name prevailed (with or without the employment of the possessive). Rodrigo Diaz, thanks to his military talents, had become in the eyes of the Muslims of Spain a champion and an irresistible leader in war, el Cid Campeador.

In 1084, after an ephemeral reconciliation with Alfonso VI, the Cid covered himself with glory once more in Aragon in the service of al-Mu'tamid. When this prince died in the following year, he passed into the services of his son and successor Almu'ad al-Mu'tamid II and from that date he decided to conquer the Muslim kingdom of Valencia.

This independent principality which the grandson of the celebrated hajjaj, al-Mansur, the 'Amirid 'Abd al-'Aziz, had founded on the fall of the Umayyad Caliphate of Cordova, had been united in 1065 to the kingdom of Toledo. When the Dhu'l-Nu'man prince Yahya b. Isma'il al-Kairir in the year 1074 ascended the throne in succession to his grandfather al-Mu'umin, he appointed Abu Bakr b. 'Abd al-'Aziz governor of Valencia, who almost immediately declared his independence and allied himself with Alfonso II of Castile. But in the year 1085, the latter without scruple sold Valencia to al-Kairir who had been deprived of it ten years before and now gave his capital Toledo to the Christian king in exchange. The Muslim prince aided by a body of Castilian troops under the command of the General Alvar Faíes was able to make his entry into Valencia without striking a blow but he very soon alienated the whole population of the town. When the Almoravid Sultan Yúsuf b. Tâhfin landed in Spain to fight against the Christians and put them to rout at Zallâga (October 23, 1086) Alfonso VI recalled Alvar Faíes from Valencia; and al-Kairir before the repeated attacks of al-Mundhir, prince of Tortosa, had to appeal for help to the King of Castile, and to al-Mu'tamid of Saragossa. The latter saw in this a good opportunity to deprive al-Kairir of his kingdom, and secretly entered into an agreement with the Cid to seize the town, all the booty to go to the condottiere. But the latter, mindful of the gifts which al-Kairir had bestowed upon him, refused to touch the town and sent a new token of his vassalage to Alfonso. Therefore with his army he made incursions into the whole district of Valencia, and in the year 1089, returned to Castile where he was received with honour by his sovereign. Then he regained the east of Andalucía with his army, numbering 7,000 men.

Profiting by the absence of the Cid, al-Mu'tamid of Saragossa had made an alliance with Berenguer of Barcelona, who was besieging Valencia. The Count of Barcelona retreated before the Cid, who promised al-Kairir, in return for a payment of ten thousand dinars a month, to hold but not put to flight against all enemy attempts. A short time afterwards Alfonso asked the Cid to come to his assistance against Yúsuf b. Tâhfin, and finding that his vassal did not hasten to join him, he quarrelled with him once more. Then the Cid, like a regular independent bandit chief, ravaged with fire and sword the whole eastern country from Orthaelsa to Játiva, marched against Tortosa, defeated the Count of Barcelona, and concluded a treaty with
him. Soon afterwards the Muslim princes of Tortosa once more sought his protection. He granted it in return for the payment of regular tribute. At this time, besides the sums which he received from the Court of Barcelona and the Muslim princes of Tortosa and Valencia, the Cid had also amongst his tributaries the Arab lords of Alfaracín (al-Sahla), of Alpuente (al-Dini), of Murviendo (Marbajar too-day called Segunto), of Segorfa (Shuribr), of Jerica (Shitika) and of Almenara.

However the quarrel between the Cid and Alfonso VI became more bitter and the King of Castile to put an end to the growing influence of his too powerful vassal, decided to deprive him of Valencia. Strong in the alliance of the Pisana and the Genoese, he came to besiege the town by land and by sea, while the Cid was engaged in helping the Muslim King of Saragossa against the Christian King of Aragon. Informed of what was taking place the Cid left Saragossa with his army and laid waste the country of Najera and of Calahorra, the particular chief of his sworn enemy García Ordóñez. The town of Logroño in the Rioja was completely destroyed by him and Alfonso VI had to raise the siege of Valencia without attaining any success.

During his absence, the Cid left at Valencia a Muslim lieutenant, Ibn al-Farajji, at the court of al-Kadi. The latter, in November 1092, was killed after a rising of the population incited by the kadi Ibn Djahhaf, who placed himself at the head of the city as president of the Valencian republic (dimmat), with a purely nominal representative of the Almoravid government at his side. Some months later, in July 1093, the Cid marched on the capital with the whole of his army, seized without difficulty the suburbs of Villanueva and of al-Kadiya, and agreed to make terms with Ibn Djahhaf, while maintaining a strict blockade of the town. Valencia now endured the most terrible privations and famine soon decimated the inhabitants. Compelled by these circumstances, the chief of the Valencian republic was forced to surrender the town to the Cid on the 15th June 1094. The Cid then took no harm to the population, which gave him proof of the respect which it had for him, and showed a real respect for its master. But the latter did not hesitate to burn alive a short time after the former president, Ibn Djahhaf, as a punishment.

From this time the Cid was absolute master of Valencia. After having, by a decisive sortie, put an end to an attempted siege by an Almoravid army, he henceforth thought only of extending his domains. In the year 1098 he had conquered Almenara and Murviendo. But he was growing old and felt that his career was coming to an end. He could hardly desire anything more. He had turned into a church the great mosque of Valencia and restored the bishopric of the town, which he gave to Jerome of Perigord. At last he was quite resigned. Alfonso VI of Castile, and he was allied to two royal houses of the Peninsula, through the marriages of his daughters, Maria with Ramon Berenguer III, and Christina with the son of Navarre Ramiro. He then tried to take Jativa (Shitika, q.v.) from the Almoravids but his army was routed. The Cid full of wrath and broken-hearted by this disaster succumbed not long after in the middle of 1099.

After the death of the Cid, his widow Jimena resisted, for about two years, the incessant attacks of the Almoravids. Valencia was besieged at the end of the year 1101 by the Lantul general al-Mahdali. It sustained the siege for seven months but on the advice of Alfonso VI, who had come to relieve it, Jimena decided to evacuate Valencia, which she ordered to be burned on her departure. When the Almoravid troops entered it, on the 28th May 1102, they found nothing but ruins. Jimena transported the body of the Cid to Castile; it was buried near Burgos, in the convent of San Pedro de Cardeña. Jimena herself buried there when she died five years later in the year 1104.

A complete European bibliography of the Cid is found in B. Sanchez Alonso, Encyclopédie de la history espagnole, Madrid, 1919, Nos. 648 to 683. Cf. also the recent work of A. González Palacios, Historia de la España musulmana, Barcelona 1925, p. 75—77.

E. LEVI-Provençal.

AL-SHIDIK (probably the Aramaic 'âydî), surname of the first cafîl Abû Bâkî, means "the eminently veracious" and he "who always accepts, or confirms, the truth". According to Ibn Ishaq, Abû Bâkî received this surname because when the Muslims' faith in Muhammad had been shaken by his account of the murâqâ, Abû Bakr testified that the Prophet's description of Jerusalem was strictly truthful, thereby restoring their belief in him. Another tradition relates that Muhammad had complained to Gabriel of his people's lack of faith; the Archangel replied: "Abû Bâkî believes in thee (yusul-'îdabaka), for he is al-shidîk".

The saying: mu-la-ilâha éfi'a Îbî, wâlî-muqaddasa 'ibî, in Sâma., 35, which has been rendered: "But he who brought the truth and he who accepted it as the truth", is referred, in a tradition attributed to 'Ali b. Abî Tâlib, to Muhammad and Abû Bakr respectively; this explanation seems to owe something to the last-named's surname.

In the Qur'ân the epithet al-shidîk is given only to Joseph (xii. 46), in the sense of veracious. Shidîk, in conjunction with muqadda, is applied to Idris (xix. 57) and Abraham (xx. 42); the virgin Mary is called sîdîka (v. 79), and true belivers in general are called al-shidîkân (xiii. 18 and iv. 18).

Those who claim descent from Abû Bakr are usually styled al-Bakri al-shidîk; when only one
of these assāl is used for brevity's sake, al-Šiddīqī is preferred.

šiddīq Hasan Ḵān, al-Kanawdji, Sayyid Abū ʿl-Ṭayyib, Nawwāb Amir al-Mulk wa-l-Dīn Bihādīr, an Indian scholar, born at Barāʾ (Barailly) U.P. on Sunday, 19th Dhu al-Muḥādhir 1, 1248 (14th October 1832), the youngest son of Sayyid Awdīl Ḵān Ḵān of Kanawdji U.P. and his wife Nadīr bint al-Ḵayr of Barailly. He was a descendent of Ḥīṣāl al-Dīn Ḫānān Ḫānān (d. 755 = 1354), whose grandfather Sayyid Bihādīr came to India from Bihādīr and settled in the city of Barailly. When a young man he entered the Civil Service of Bihādīr and married the daughter of the then Minister of Bihādīr, Djamāl al-Dīn Ḵān (1821); he became the second husband of the Bāgum of Bihādīr (1870) and took part in the government of the State. He was active in furthering Arabic and Muslim studies and published a large number of works. His son Nawwāb Sayyid ʿAbdul Ḵān published a full biography of the scholar entitled, Maʿṭākh-i Sīddīqī in which (Part iv., appendix) he gives a list of 222 works (74 in Arabic, 45 in Persian, 103 in Urdu; they include 25 not yet published. Van Dyke's attack on him is not justified, Ṣīdīq Ḵān died in Bihādīr on the 20th February 1890.

(A. Siddiqi)

šiddīqī, a mysterious word in the Kurʾān, Sūra xx. 104: "The day in which we shall fold the sky as al-ṣīdīqī to the books." Derived from sigillum through σίγλην, the word is used in Arabic for written statements of contracts, records of a sīl in which his sentences are written, and, in general, writing, scroll or roll for writing upon or written upon. Lexicographers and commentators of the Kurʾān, while recognizing the word as foreign, have ascribed it either to Abyssinian or to Persian, one or both of these languages being usually made responsible for such like strange words; they have also tried to deduce its meaning from the Kurʾānic context, thus interpreting it as the name of an angel, who folds the written statements of men's works, or of a scribe of Muhammad's, or of mean men in general in the Abyssinian language. Such scribes or angels, al-Ṭabarī observes, are not mentioned anywhere, while sigillum in the sense of written document is well known in Arabic. The words that follow: ʿl-ḥurūb stand, according to al-Ṭabarī, for ʿala ʿl-kurūb.

(Al-Vacca)
SIDJILMÄSA (the forms SidiJal- and -malas are also found), an ancient town of Morocco now in ruins, which was the capital of Tafillalt. It was built about 200 miles S.S.E. of Fas, on the outskirts of the Saharan, on the left bank of the Wadi Zir, 34° 80' N. Latitude N. and 7° 31' West Long.

Sidjilmása was probably founded in ancient times. It is not however necessary to heed the local tradition recorded by Leo Africanus, according to which the town was founded by Alexander (s= Tho I-Karmain) as a home for the sick and crippled in his army. But in the same author has preserved another tradition attributing its foundation to a Roman general who, starting from Mauritania, conquered the whole of Numidia and pushed on as far as Masa, a town of Sis on the Atlantic; it was at this time that he founded the town of Sidjillum more (≈ Massae), thus called because it was the seal of his victory. In this legend we have a distant memory of the Roman expeditions of Suetonius Paulinus and of Hasidus Geta (in the year 41 A.D. to the South of the Moroccan Atlas).

It is possible that it may even, if the town had actually an earlier existence it was completely in ruins at the time of the arrival of the Muslims, since al-Bakri tells us that Sidjilmása was founded in the year 140 (757—758) and that its development brought about the decline of the neighbouring towns of Tadgha and of Ziz. Its foundation was the work of the rebel Miknas Berbers who had adopted the heretical customs of the Sufiyas [q.v.] and had made themselves independent of the Arab governors of al-Kairawán.

Beginning with 155 (771—772), the town and its territory were governed by the Miknas dynasty of the Banu Midrā; the latter attained its apogee with Muhammad b. al-Fath b. Mainim b. Midrā, named sultan al-Shakkir Il Ithāth who returned to orthodoxy, took the title of Amir al-Muminin, and had coins struck in his own name (H. Lavoix, Cat. des Manusc. Muséum. de la Bibl. Nat., 1891, p. 401—402). He was made prisoner by the Ubaidi, general Djawhar, when in the year 347 (958—959) the latter besieged and captured Sidjilmása. In the course of time other Banu Midrā regained the government of the town, but in the year 366 (976—977) they were finally dispossessed by Kharrūn b. Falfal al-Maghrawi who, at the head of the Zanāta Berbers, was fighting on behalf of the Umayyad sovereign of Cordova.

Kharūn and after him his descendants were at first simply the governors of Sidjilmása on behalf of the Umayyads of Cordova; then after the downfall of the latter they declared themselves independent and founded the dynasty of the Banu Kharūn. But their tyranny and their impiety forced the inhabitants of the town to call to their aid Abd Allāh b. Yāṣun, the promoter of the Almoravid movement, who in the year 447 (1055—1056) seized Sidjilmása; where he massacred all the Maghrībis whom he found there.

This was the end of the independence of Sidjilmása and henceforth the town and its territory were always, theoretically at least, a dependency of the empire of Morocco; but on account of its eccentric situation on the edge of the desert, it was at all times a hotbed of sedition and of revolts provoked, sometimes by the local governments desirous of making themselves independent, sometimes by the turbulent Arab tribes of the neighbourhood, sometimes even by the inhabitants weary of the exactions of the central power and always ready to support its enemies, the kings of Tlemcen or pretenders belonging to the reigning family.

In 541 (1146—1147) on the fall of the Almoravid dynasty, the inhabitants of Sidjilmása took the side of the agitator Muhammad b. Hādī al-Khālī who had already stirred up the Šāhs and the Darā; but he was crushed by the Almohad chief Abū Ḥaṣan who then took possession of the town.

In the year 640 (1242—1245) the Almohad governor of Sidjilmása, Abū Allāh b. Zakārīya al-Khaṣrājī delivered over the town to the Ḥafid princes Abū Ḥaṣan, who had just seized Tlemcen, but the Almohad Sulṭan Abūl Saʿīd recaptured the place.

In the year 653 (1255—1256) the Marinid prince Abū Yaḥyā b. Abū al-Hāṣik took possession of Sidjilmása. But as early as 655 (1257—1258) a section of the inhabitants asked the Abū al-Wād of Tlemcen, Yaghmūrūsān to come and occupy it. Abū Yaḥyā, warned in time, came and took possession of the place which Yaghmūrūsān could only besiege without result.

In the year 657 (1258—1259) the Marinid governor al-Kīrīnī made himself independent; but the people rebelled against him and appealed to the Almohads.

In the year 660 (1261—1262) the Marinid troops came to besiege Sidjilmása without success. Later, under the pressure of the Arab tribe of the Munābbat, the inhabitants recognised the authority of Yaghmūrūsān. But when the Sulṭan Yaḥyā b. Abū al-Hāṣik had won the whole of the Magrib for the Marinids he went to attack Sidjilmása, at the siege of which artillery was employed for the first time in Morocco; the town was taken in Safar 673 (August—September 1274). The Abū al-Wād of Tlemcen, the garrison as well as the chiefs of the Munābbat, were massacred and the inhabitants reduced to slavery.

From this event dates the decline of Sidjilmása. Its name is often found mentioned in the history of the civil wars of Morocco and it seems to have had to suffer greatly from the oppression of the neighboring Arab tribes, especially those of the Abūlāh. Ibn Būṭās, who visited Sidjilmása in 752 (1351—1352) says that it is amongst the most beautiful of towns. But Leo Africanus, who spent six months in this district in the first part of the 14th century says that after a raiding of the people, who had killed the governor, the town was entirely destroyed and the inhabitants retreated into the country or into castles (<b>ajūr</b>) where they lived, some of them independent, others tributaries of the Arabs. Thus we must not be led astray by modern Moroccan historians who frequently use Sidjilmása for the "district of Sidjilmása" or of "Tafillalt".

For the last times Sidjilmása appeared in history when in the first half of the 16th century on account of the fall of the Almoravid dynasty of the Saṭāras, the Shurafa' made themselves independent and founded the present dynasty of the Alawīs or Fīlās (cf. Fīlās, SHORR). The Arab geographers have given us a glowing picture of the Sidjilmása of the Middle Ages. Situated in the middle of a plain, fertile because
well watered, it was surrounded by gardens and orchards which stretched along the Wādī Zīr for more than four parasangs from the town. There grew in abundance the most delicious varieties of grapes and dates which alone furnished the bulk of the food of the inhabitants; cereals grew very well there and gave harvests for three consecutive years without the necessity of removing. The crops of the neighbourhood included in addition cotton, emir, caraway, and ḍanā' which were exported into the whole of the Maghrib. As peculiar to the town, the Arab authors point out that flies are not found there, but dogs are eaten as well as a kind of fat lizard (būrdān) and that the inhabitants for the most part suffered from opthalmia. The only notable industry was the preparation of a magnificent material made from a very fine wool which the women excel in knitting. The town, well peopled and very extensive, was composed of strong castles, buildings and of houses each built in the middle of a garden. Its situation at the gate of the Jāfarīh made Siqīlima a very suitable starting point for caravans going to the land of the negroes, especially to Qādis or returning from there. Dates were the principal article of export; slaves were brought from the Sādān, gold dust, ivory and hides.

The people of the town did not content themselves with doing a thriving trade at home; they went themselves to the Sādān and showed great hardihood in their journeys. From Siqīlima several routes led to the chief centres of North Africa, Dar'a, Aghmīr Warika, Fās, Tāhābīr (part of the Nadānīm district), Ujdā, Timelcn and even to Cairo, by the desert and the Bāhās. Siqīlima with Fās was one of the two great centres for Moroccan pilgrims to assemble, going to the Hijāz and their inhabitants often supplied the amir rikāb al-qādiri. This is how it came about that one of them, at the beginning of the Mamlūk dynasty, having had occasion to go this country several times to the Hijāz became acquainted with the amir al-Hassan b. Khāsim at Yārib al-Nakhl b. Ḥasanid sharif, whom he asked to return with him to Siqīlima so that by the help of his baraka the fruit of the palm-trees of the town could attain maturity. The sharif accepted, arrived at Siqīlima in 664 (1265-1266) and became the ancestor of the ‘Aṣyrīs [q. v.] siqīlimisīyūn, who gave Morocco the dynasty which reigned from 1075 (1664).

At the present day the ruins of Siqīlima, visited by René Callièr in 1828, then by Rohlfis in 1864 and by W. Harris in 1893-1894, are euphemistically called by the natives al-masad ʿDīmāra, “the inhabited town”, and lie along the east bank of the Wādī Zīr for about 5 parasangs; there is nothing left but one minaret still standing, in a bridge across the Zīr, and enormous masses of clay walls everywhere somewhat ruined.

SIDON, the celebrated town of ancient Phoenicia, the name of which is found as early as the Tell Amarna tablets in the form Sūdūn, played only a modest part in the Muslim world. The Arabs call it Sādā. According to Bahāqārī, it was taken without difficulty by Yazūb b. Abī Safyūr; the future Caliph Mu‘āwiya commanding the advance-guard on this occasion. This text must have been about 637 A.D. The Arab geographers tell us very little about Sādā. They mention that it belonged to the administrative district of Damascus, Khāṣma observes that it was the military harbour of this region and Muṣḥaṣdaš also mentions that it was fortified. Iblī Khordādībīh says that the road from Antioch to Gaza touched the town. According to Ibn al-Fakhrī, Sādā was one of the most marvellous towns and noble provinces; this verdict is probably based entirely on literary tradition. Muṣḥaṣdaš condemns the language of the inhabitants as particularly “barbarous”.

The town only became a little more prominent in the Crusading period. Among the Crusaders the name appears as Sagitta (Sagettis, Seyette), a translation of the Arabic Sādā. According to Yāqūt, the town was also called Irībīl. The histories of the Crusaders record that the siege of the town was raised in 1107 on payment of a sum of money. According to the Arab version Baldwin retreated in 501 (1107/1108) when his fleet was destroyed by the Egyptians and a Muslim army was approaching from Damascus to relieve it. According to the French accounts, the town was taken on December 19, 1111 (Ibn al-Ajdār gives: 20th Dji-mādā' 1, 504, which corresponds to December 4, 1110). The siege lasted forty-seven days; sixty Frank ships (Norman and Venetian) surrounded the town on the sea side, and Baldwin advanced by land from Jerusalem. The town surrendered under favourable conditions, which were observed at first, but Baldwin later levied an indemnity of 20,000 dinars on the inhabitants, who remained in the town, which departed its prosperity. In 1157, Salahīd occupied Sidon (according to Ibn al-Ajdār on 29th Dji-mādā' 583, i.e. July 30, 1157); the Crusaders had left it without striking a blow and Salahīd had most of the fortifications destroyed. In October 1197 (Dhū 'l-Hijād 593, a.H.), there was a fierce encounter at Sādā' between Crusaders and Muslims, which lasted into the night and remained undecided, Abū al-Malik al-Adīl then had the remains of the defences destroyed. In 625 (1228) Sādā was taken by the Crusaders and again fortified. In 1249, it was taken by Ayyūb, in 1253 occupied and fortified by Louis IX of France, in 1256 sacked by the Mongols, in the same year; again taken by the Templars, who remained here till 1291 in which year it was taken by the Muslims for the last time and its defences raised by al-Ashraf. At a later period a great deal was done for the town by the Druze ruler Fakhr al-Dīn (1595—1654). His castle is now in ruins but the market erected by him for the European traders still exists as
the Khān Fransāwī. Unfortunately his fear lest the Turkish fleet might choose Sāidī as a base induced him to make the Southern (the so-called Egyptian) harbour useless. In 1271 Idrīsī praised the French merchants from the town. In 1280 it was bombarded by English and Armenian warships.

The modern town occupies the site of the ancient Sīdīn, but it stretches a little farther inland. A peninsula runs out from the shore under a shelter of which is the large south harbour, now useless, and the smaller north harbour still used by small ships. The latter is also protected by a ledge of rocks against the waves. Near the entrance is a little island, the Kāfṣat al-Bahr, which is connected with the mainland by a stone bridge. Further north-west is a larger island opposite the main island, called al-Djezire. South of the town, on an artificial mound is the citadel Kāfṣat al-Mūzan. The chief mosque was once the Church of the Knights of St. John and the mosque of Abū Naḥkil, a church of St. Michael. On the little island are the ruins of the Château de St. Louis which was partly destroyed in the bombardment of 1280. The town has about 12,000 inhabitants including 7,000 Muslims and Meṭwīlī, 5,000 Greek Catholics and Maronites and 500 Jews.

The Roman Catholic Church, the American Mission and the Alliance Israelite maintain schools here. Large gardens surround the town on the land side. Oranges, lemons, pomegranates, figs, almonds and pears flourish here. The commercial importance of the town is small. Grapes, corn, cotton and gall-apples are however exported. It is evidence of the intellectual life of the town that in 1221 the epistology of the Arab philosopher al-Farābī, the Kāfṣat al-Uṯūm, was first published in the columns of a newspaper, the 'Iṣfān.

The Sāidī mentioned in Nāgāha al-Dhubyānī (ed. Ahlwardt, i. 6) has been sought in the Ḥawrān.

(P. SCHWARZ)

SĪFĀ does not occur in the Kūrān but the infinitive mawfūṭ is used once and the impf. of the 1. stem 13 times in the meanings: "to ascribe or assert as a description, to attribute" and always with an implication of falsehood. Thus of Allah in Kūrān 100; xxiii. 93; xxxvii. 159, 180; xlix. 82 — all similar, fixed phrases; this standing implication is used in the Masūfārat of Kāfṣat al-Ishābān (p. 546, s. v.) to suggest that all descriptions of Allah are unsound. (a) In grammar sīfā means an epithet noun (on the epithet noun as opposed to the adjective noun; see Lasmān’s Arabic Grammar, p. 260 sqq.) and is defined in the Aṣīfa (ed. Dieterici, p. 225, a) as “a thing which indicates an idea (masūn) along with an essence or substance (ḏārāt)” and in the Mufṣalāt (ed. Broc, p. 45, 9) as “a noun which indicates one of the states (ṣawād) of a dārāt.” At the widest it covers the active and passive participles, the epithets assimilated to these (al-ṣīfāt al-amālāt ilāhāt, Wright, i, 135 sqq.; Mufṣalāt, 101, 5 sqq.), the wāsfi, of comparison and, doubtfully, the māta’; on the last see Mufṣalāt, p. 457, 77. When the active participle loses its temporary character and hardens into a substantive it becomes a sīfā al-ḏārāt (Baladhuri on Kūr, xxvii. 777; ed. Fleischer, ii. 747, 9). In syntax the qualifying clause to which the antecedent is undetermined and with which no relative is used, is not regarded by the native grammarians as a ḍārāt but only as a descriptive, a sīfā. (b) On the doctrine of the logical analysis of qualities and descriptors in philosophy and scholastic theology there is an elaborate discussion in the Dict. of ethics, terms, pp. 1489—95 (under wāsfi), giving classifications according to different orthodox and heretical schools. (c) The sīfāt of Allah are to be distinguished from his Names (ʿanān). The Names are the epithets, like the sīfāt above, applied to him as descriptive in the Kūrān, following the wide use of such epithets in the old poetry. On these Names see especially al-Ghazālī, al-maṣḥṣaʿ il-maṣūn. But his sīfāt are strictly the abstract qualities which lie behind these epithets, as ḍārāt behind ḍārāt and ḍārāt behind ḍārāt. A very important problem in theology is the relation of these sīfāt to his sīfāt. The resultant orthodox statement, after long controversy, is that they are eternal, subsisting in his essence, and that they are not He, nor are they other than He (fa huwa wa-l-la ḍārāt). See Tahāštān on Nasafi’s sīfāt with super-commentaries, Cairo 1821, pp. 67 sqq. and the commentary of Djeurjī on the Masūfārat al-Isbāṣ, Bulāq 1266, pp. 479 sqq. The struggle was, in part, to maintain the internal unity of the personality of Allah; in part, to do justice to the Kūrānic descriptives of him; in part, to determine what were primary and necessary of these and what could be regarded as merely relations and connectives of these with the material world. It was a struggle with unbelieving philosophers, with Muʿtazilite heretics and, within orthodox Islam, between Ashʿarites and Māturīdites; see Louis Massignon, La Passion d’al-Halaj, pp. 568, 571 and especially 645 sqq. and the translations from Nasafi al-Ghazālī’s Daqāʾiq in Macdonald, Development of Muslim Theology, pp. 399, 319 sqq. Also Sanūti’s Prolégomènes Théologiques, ed. and transl. by Luciani, pp. 162—216. Through it all ran the position of the Masūfārat [see above] that descriptions of Allah must be, at the best, inadequate and misleading, and, at the worst, impossible. On Allah’s mystical manifestation of himself by means of his sīfāt see Massignon, p. 514 and R. A. Nicholson, Studies in Islamic Mysticism, pp. 90, 98.

Bibliography has been given above.

(D. B. MACDONALD)

SĪFFIN, in Theophanes, Chronographia, 347: Sappho, was a Sinar inscription of the beginning of the ninth century C.E. (Chabot in J.A., 1900, p. 254), a place not far from the right bank of the Euphrates, west of Raṣṣā, between it and Bābīs, separated from the river by a strip of marshland an arrowhead broad (according to B.G.A., vii. 25, 50; 500 cyp) and two parseangs long, overgrown with dense willows and Euphrates palms, full of waterholes, through which a single paved road led to the Euphrates. The place was made famous by the great battle fought there in 37 (657) between Ali and Maʿnawi. When Ali arrived on his march from Kūfah, the Sýrians
were already encamped in the ruins of the city, which dated from the Roman period, and a detachment of troops under Abu 'I-Awar held the road to the Ephrizes. In spite of his representations and his insistence that he had not come to fight but to come to an arrangement with Mu'awiyah, the latter did not give way, although his wise councillor 'Amr b. al-As' advised him to do so. 'Ali then ordered his troops to attack and they succeeded in driving back the Syrians in spite of the reinforcements they sent them and gained the approach to the river. 'Ali then gave a new proof of his chivalry by allowing the Syrian water-carriers to get water alongside of his own men, which resulted in the latter fratriciding in harmless fashion with the Syrians. Some time was spent in negotiations, which came to nothing, as Mu'awiyah stubbornly insisted that the Caliph should hand over the assassins of 'Uthmān, which he neither would nor could do. The negotiations were however continued and when a quarrel threatened to break out, the peace-lovers on either side managed to prevent it. According to Dinawari, p. 180, this state of things lasted throughout the two months Rabī' II and Dhu'l-Qa'dah of the year 36. This would however give much too long a time for the preliminaries of the battle which, according to Ya'qūbī (Tanākht, p. 295; Ta'ārikh, ii. 219), began at the beginning of Sa'far and is corrected by Ya'qūbī's statement that the battle itself the approach to the water took place. Ubu 'I-Hudayja is probably also wrong when Ṭabarī, i. 227, says that 'Ali and Mu'awiyah in this month repeatedly — sometimes twice a day — sent out prominent men with foot-soldiers and horsemen to fight each other, which however did not result in a general battle, as both parties were afraid of the fatal consequences of it. As Wellhausen suggests, we must here have a duplication of the fighting that took place later. To keep open every possibility of coming to terms, it was agreed to observe a truce in the traditional sacred month of peace, Muḥarram of the year 37 (June 19—July 18, 657). But even this did not succeed, and war was finally declared at the beginning of Sa'far and the battle of Siffin began. To obtain a clear idea of its course is not easy, as the narrators record a mass of single combats which do not give a general survey and serve only to glorify the individual tribes. They also give very divergent figures for the size of the armies and the positions of the divisions and their leaders. The fighting was conducted in accordance with ancient custom and each tribe operated for itself, so that it was a clever move on 'Ali's part to place the parts of the various tribes in his army so that they were opposite their fellow-tribesmen. The fighting, which was continually renewed and increased in extent, was by all accounts bloody and various notable men met their death in it, such as on 'Ali's side 'Ammar b. Ya'qūb and Ḥāshim b. 'Urṭa, on Mu'awiyah's side Umar's son 'Ubadalāh (cf. the laudation on him in Ya'qūbī, iii. 403); 'Ali had great assistance from the brave and experienced al-Aṣhtar (q. v.) who had procured the Irāk troops free access to the water and now distinguished himself in several hand-to-hand fights.

The following is the account given of the issue of the battle. After fighting had gone on for a time without a decision being reached, al-Aṣhtar succeeded in the night known as Ṭailat al-karim (from ṭahir, "to whine"); cf. Yaḥyā, iv. 970) i.e. the night before Friday 10th Sa'far = July 28 (see Ahlwardt's Anonymus Chronik, p. 349, 3: according to Ṭabarī, ii. 727, 11 the night before the Thursday and on the following morning in driving the Syrians into such straits that Mu'awiyah lost heart and thought of flight, from which he was restrained by the memory of certain lines Ibn al-Itsāh (Yaḥyā, ed. Wright, p. 35, 573; Ṭabarī, i. 3300, 5).

In this dangerous position, the witty 'Amr b. al-As' advised him to fasten a few manuscripts of the Kurān to lance-heads to express symbolically that the fighting should cease and the decision be left to the book of Allāh, in contrast to 'Ali who sought Allāh's verdict in the outcome of the battle (Ṭabarī, i. 3322, 2). 'Amr's calculation that this proposal would produce a split among 'Ali's followers proved correct. A considerable number of them declared that such an appeal to the decision of Allāh could not be rejected; and thus 'Ali, who thought he had already won, was forced to call back al-Aṣhtar vigorously protesting, whereupon the battle ceased. The majority in his army also agreed to Mu'awiyah's proposal that each of the contending parties should choose one of two arbitrators, who were to meet a later date and come to a verdict according to the words of the Kurān. The Syrians chose 'Amr, as much to be expected, while the Caliph had forced upon him Abū Mūsā (q. v.), who was not favourably disposed to him. The agreement was signed, according to Ṭabarī, i. 3340 on the 13th Sa'far 37 (July 31, 657), according to Dinawari, p. 210, not till the 17th Sa'far and 'Ali remembering Muhammad's example of self-restraint at Hudaybiyya refrained from signing as Caliph. The armies then separated and went home, 'Ali's troops in deep dejection so that although undefeated they gave the impression of having suffered a reverse.

However attractive this story, with its good points and its sharp characterisation of the persons appearing in it, may be, it is doubtful whether it can be considered historical without further examination. All the accounts at our disposal betray a preference for 'Ali and an antipathy to Mu'awiyah and particularly to 'Amr, who is readily credited with everything wicked; and we therefore very much feel the want of an account of the battle from the other side, which could be used as a check. But even without this we can indicate several points, which make it probable that there is a certain amount of bias present, as is certainly the case with the story of the arbitration in Adhrib (q. v.) and particularly that much too important a part is credited to Mu'awiyah's evil genius, 'Amr. Even if we assume that it was he who proposed the demonstration with the Kurān, and that the necessary number of manuscripts was available in the Syrian army — according to Dinawari, p. 201; even the standard oscillator of the Kurān (cf. q. v.) kept in Damascus was one of them which was carried by five men on five lance-heads — it is evident that this means could only be effective if there was a receptive spirit present, so that it only gave expression to what many felt in their hearts. That this was actually the case is evident from several hints. Not only had 'Ali endeavoured to avoid the fatal war, in which believers fought one another and
members of the same tribe, even near relatives like father and son (Dinawar, p. 184); but the majority of the troops felt that it was unnatural and disastrous. This was why it was so long before the fighting actually began and why as a last resource they concluded a truce in Muharram. In this connection Dinawar records several features which supplement Mikhail's story in Tabarz on essential points. While in the latter the Kur'ān, Kur'ān-reciters form a separate body with their own leaders fighting ardently (Tabarz, l. 3273; s. 3283, 91; 3286; s. 3292, v. 3298, s. 3304, 91 and 3329, 91), and there is very little reference to Kur'ān-reciters in the Syrian army (3329, 91), in Dinawar these deviating men (e.g. Goldbauer, Verteilungen, über den Islam, p. 189) are eager advocates of peace who on one occasion succeed in stopping a battle which is about to begin (Dinawar, p. 181, s. 99). They were at once prepared to proceed to the appeal to the Kur'ān; and it was mainly owing to their influence that the fighting was stopped so quickly (ibid., p. 204) and when they agreed on the appeal to the Kur'ān, they negotiated with the Syrian Kur'ān-reciters before the two armies and recommended the choice of two referees (ibid., p. 205). If 'Amr really proposed the demonstration of the Kur'ān (a similar use of the Kur'ān is recorded in the battle of the Camel, Tabarz, l. 3186, 3188 sq.) he was only expressing an idea that was shared by many and therefore found ready support. It is also very possible that the striking point in the tradition, that 'Ali had already the victory in his hands, when 'Amr deprived himself of it by his diabolical plan, is one of the embellishments with which admirers of 'Ali later explained the unsuccessful issue of the battle. But on the other hand it is quite evident that Mu'āwiyah had everything to gain by the appeal to the Kur'ān, while it meant a severe blow for 'Ali, so that it was no wonder that far-seen men like him and 'Amr were eager for it, especially if they were afraid that the battle might result unfavourably for them. We must in particular remember that the battle had nothing to do with the question which of the two opponents should become Caliph. That Mu'āwiyah cherished far-reaching ambitions is very possible, but 'Ali was much too wise to let them be revealed at so early a stage. He kept strictly to his role as the avenger of 'Uthmān and declared himself ready to pay homage to 'Ali if he would hand over the murderers of the Caliph. This made him seem to be on the side of right and morality and, at the same time, as 'Ali could not satisfy his demands, it was a good means of preventing the conclusion of a peace. For 'Ali the appeal to the Kur'ān was absolutely annihilating; for the sacred book was to be consulted to ascertain whether his action in regard to the assassination of 'Uthmān made him unworthy of being Caliph so that he was de facto deposed at least for the time, while Mu'āwiyah's position was left unaffected by the result of the verdict. Finally we have to remember that from several indications, 'Ali's position among his own followers in spite of all personal sympathy for him had become rather weak, as the serious charges brought against him had made an impression, even on people unfavourably disposed to him, so that they must have come to wish that some higher authority should clear up the question. If right and wrong had been so simply and clearly appertained between the two opponents, as the narratives make it appear, the sons of Abū Bakr and 'Umar would hardly have kept on good terms with Mu'āwiyah. The move we put forward is confirmed in a welcome fashion by a very temperate tradition which goes back to al-Zuhair in Ibn Sa'd (lvi. 3), in which we are told that the two armies were tired of war and reluctant to shed more blood, which induced 'Amr to propose to Mu'āwiyah to have the Kur'ān displayed, and to summon the tracts to the book of Allāh, and thus effect a split among them. When 'Ali saw the apathy of his followers, he acceded to the demand of Mu'āwiyah and it was in reply to his question who was to decide by the Kur'ān, that Mu'āwiyah proposed the choice of two referees. The dramatic section in the usual story is completely lacking here. It was quite to be expected that apart from the rule credited to 'Amr, an explanation of the unsuccessful turn the battle took for 'Ali should also be found in the assertion that treachery was committed. The charge was made against al-Abābī (q.v.) whose post might certainly lend some support to the suggestion. All sources agree that he interceded vigorously for the appeal. According to Dinawar (p. 204) he feared that a continuation of the fighting might result in the enmities of the Arab empire invading all sides, a view supported by Mu'āwiyah when he heard of it. According to Tabarz, l. 3332 sq., he offered to go to Mu'āwiyah to ascertain his further proposals and 'Ali approved. On the other hand Ya'qūb says (l. 220) that Mu'āwiyah corresponded with him to bring him over to his side and that he threatened to abandon 'Ali if the latter rejected the appeal, whereby the Caliph was forced to accede, as all al-Abābī's Yanami fellow-tribesmen declared their readiness to follow him. After all that has been recorded above, such an explanation of what happened is superfluous and the fact that al-Abābī remained continually in 'Ali's service is decisive against it. How far someone could go in their efforts to explain the unfortunate result of the battle for 'Ali is seen from Tabarz, l. 3346 sq., where 'Ali is made to stop the fighting because he did not dare to risk the lives of the two grandsons of the Prophet. Bibliography: B.G.A.I., l. 23, 76: Yākūn, Mu'āqam, ed. Wüstenfeld, iii. 402 sq.; Anonymous arabisch chronik, ed. Alwardt, p. 349, 91; Tabarz, ed. de Goeje, l. 3265—3333, al-Ya'qūbī, Tārīkh, ed. Houtsma, ii. 218 sq.; Dinawar, ed. Guirgis, p. 175—205; Mas'ūdī, Tonb, ed. de Goeje, p. 295; Muḥāfīz, ed. Barbier de Meynard, iv. 3297—345, Ibn Sa'd, ed. Sachau, vyf, 5 sq.; Ibn 'Abd Rabbih, al-Ḫalīfa as-ṣawād, Cairo 1917, ii. 202; A. Müller, Der Islam im Morgen- und Abendland, l. 349—342; Muir, Amule of the early Caliphs, 1885, p. 376 sq.; Wellhausen, Das arabisch Reich, 45—51 sq.; Die religion-politischen Oppositionen im Mittleren Islam (Abh. Ges. Wiss. Göttingen, Neuf Ser., v., Nr. 2), p. 3 sqq. (F. Blum), al-SIFR (A.), the empty translation of the Sanskrit smāra in Hindu-Arabic arithmetic, the same for zero, and the origin of the Western words cipher, cifra, cipher, chiffre and zero with their derivatives (decipher, etc.). The question of the introduction or invention of the figures and of the zero has in spite of all palaeographical
research and study of the history of mathematics not yet been satisfactorily explained. In the oldest documents known to us, the Arabs, when they do not write out the numbers in full, use Greek numerals. Only at a later date do we find the "Arabic" numerals coming into use. The Arab mathematicians were made acquainted with the Hindu numerals and method of counting in the time of al-Ma'mun by the Eastern Persian Muhammad b. Musa al-Khwārizmī (q.v.); the earliest Arabic zero is found in the date 260 of a papyrus document (≈ 773/774 A.D.). The oldest absolutely certain reference to Hindu arithmetic with the 9 numerals was found by F. Nau in the Syrian Sermon of Sabokli (c. 662). It should not be concluded therefore that the zero, that fundamental advance in numerical notation, was not then in use, for even later than the nine numerals which we now call ciphers are distinguished from the special signs for showing that a space is left blank; we further know that Brahmagupta, the Indian astronomer (born 598), expressly prepared rules for calculating with the zero. On the connections with the abacus and the feud between the abacists and algorithmists cf. the literature mentioned below. The form of the zero is a circle among Hindus and Western Arabs, among eastern Arabs a point, presumably also in the Persian-Hindu tradition. The subscript zeroes like differential points in the Bhārtī, i. 18 st. are remarkable.

SIHR, glamour, magic. In the vexed folklore question of the relation between magic and religion the verdict of Islam is undoubtedly with the position of R. R. Marett that "religion and magic are two forms of a social phenomenon originally one and indivisible; primitive man had an institution which dealt with the supernatural, and in this institution were the germs of both magic and religion, which were gradually differentiated; magic and religion differ in respectability; religion is always the higher, the accepted cult; but between what is definitely religious and what is definitely magical lies a mass of indeterminate elements, such as "white-magic", which do not attain to the public recognition of religion, nor suffer the condemnation meted out to that which is unmistakably magical" (Sure, Zeitung, ed. xi. xvii. 36). For the magic of the masses in Islam and of what may be broadly called orthodox Islam Islam is a system of frank supernaturalism; for it there is our material world of the senses and behind that a world of spirits, in relation with which we can enter by means of either magic or religion. When we attempt to define the exact nature of that world of spirits, theories appear and bring the split between magic and religion. What is the origin and nature of these spirits? How do they differ among themselves? What is their independence of action? In what way can they be reached and controlled? Does such intercourse with them affect our relation to Allah and imperil our eternal salvation? For in Islam the orthodox and heretical, everything centres round Allah and our relation to him.

So in the Arabia of Muhammad's time, the original habitat of Islam, if we leave out the elements affected by Christianity and Judaism, the spirit-world consisted of Allah, the tribal gods and the djinn; and the links between men and them were khalim's (cf. above, ii. 624 sqq.), magicians and soothsayers, poets and madmen; the theory as to all these being one of unlimited "possession" by different kinds of spirits, in the sense of that term in modern spiritualism. "Magic", therefore, as a term of modern folklore is distinctly broader than the Arabic sihr, literally "glamour", when sihr is exactly limited; but clarity as to the facts of the case requires as to take sihr in the broad sense, and Islam itself has very often, indeed generally, done the same. Murtaḍa al-Zabidi in his commentary on the Ḥadīth (i. 217 foot) quotes Tādż al-Dīn al-Suhbī as saying, "Sīhr and astrology and sinīya are all of the same wādī". Further, when Islam spread out of Arabia it entered into contacts with all the supernatural beliefs and magical arts and rituals of the different races and countries which it conquered; these were blended with the KhOr. and Syrian concepts and usages and formed an amalgam of the most heterogeneous character as to vocabulary, ritual, attitudes and even fundamental conceptions. This was thoroughly recognized by the Muslims themselves who, as we shall see, traced different kinds of magic to different races. And the confusion worked in two directions: (L) the superstitions and nomenclature of Arabia were imposed on non-Arab and even non-Semitic peoples and (ii.) even fundamental Islam was deeply affected by completely alien beliefs. On all this see above the articles BUKHĀRĪ, IBN SĪNĀ, IBN TĀRĪKH, KĀDI, KHOZĪ, KHAJJA, and bibilography to these.

But sihr in its exact etymology suggests the limited form of magic called "glamour". The lexicons assert that it is the turning ( translates "1. 15 sqq.

" into something else which is unreal or a mere appearance (khayāt); tākhlīs is often applied to this, based on Kūr. xx. 69, and it might be what we now call *hypnotism*; but the more rationalistic tried to reduce it to simple jugglery (kāshī, "the magician"), chancing the eye (al-tākhlīsīyya wa-lākhīsī hī-l-Dā'ūr) by lightness of hand and flowery speech. So it comes to suggest the subtlety of working in nature, as of food in the body (this is traced even to imr al-Isān in Ḥadīth, vi. 12 foot, but the meaning there seems more the fundamental and beauty of utterance, as we speak of the magic of words (Sīhā, n. v.; Muḥarrama of Rāghūl al-Isbāhānī, p. 224 sqq. in Ḥadīth, vi. 11–13). Lane, 1516 sqq.). In the Kurān, however, the reference are much too definite to yield to such treatment. For the mind of Muhammad and for his environment sihr was a real thing, although the message given in and through it might, in great part, be false. On the psychological side, the first-hand phenomena strongly suggest hypnotism and, on the religious, the attitude of Muhammad was almost exactly that of the modern Roman Church towards spiritism. In the Karān situation the background was the spirit-world of the djinn and the shaitān's — evidently unbelieving and evil
**dżinn.** By far the most important Qur'anic verse for the whole subject is 96, which may be rendered: "And they [unbelievers in general and Jews in particular] followed what the shaitān’s used to recite in the reign of Sulaimān [or against the reign of Sulaimān] - and Sulaimān never was an unbeliever but the shaitān’s were unbelievably teaching mankind magic (ṣīh); and they followed what was revealed to [or by means of] the two angels in Bihāl, Hārūt and Mārūt; and they do not teach any one until they say to him: We are only a temptation (jinn); so do not disbelieve. So they [the learners] learn from the two that by which they may divide a man from his wife, but they do not harm by it any one except by the permission of Allāh. They learn that which harms them and does not aid them, having knowledge, indeed, that he who purchases it has no portion in the world to come. Evil, indeed, is that for which they sell themselves, if they had known it."

The construction of this passage is very loose and the points in the translation which are uncertain; more than indicated here. In spite of Baidawi’s compact style his position occupies more than a page (Fluscher’s ed., i. 76, and ii. 77). There is a page and a half in the Kanz al-Din of al-Zanahhari (Leets’ ed., l. 93-95). In the greater commentary it is treated at length as the leonus classici on magic; thus Tabaqat Tafsīr, i. 334-353 and Fakhr al-Dīn al-Rāzī’s Muṣūf, i. 427-440, in ed. Cairo 1307. But the general drift is unmistakable. The shaitān’s, say these commentators, are the source of magic; they listened at the walls of heaven (see below) and added lies to what they heard there; they brought this to the jinn’s and made books of it; they taught these books to mankind, reciting them. This was widespread in the time of Sulaimān, to such an extent that it was said to have been the source of his knowledge and of his control over nature and the dżimm. The Jews even said that Sulaimān was not a prophet but a magician (Kāzi, p. 428). This verse is as answer to them. For Hārūt and Mārūt see article above and also more below. Elsewhere in the Kur’ān (xxvii. 6; xii. 11; xxviii. 5, Ixii. 8, 9, 34, 35; Ixvi. 2, 3) we are told that the dżinn used to sit beside (būn na’ām) the nearer sky (al-‘aṣwāf) and listen (istawā’u, istawā’u al-ʾāmm) to there the Heavenly Host (al-muṣāla al-ʾāmm) and that they are chased away from it by lamps (maqāṣib, tālāb) set it in for adornment but thrown at them as missiles (rīʿd dżimm) by the angels on guard (jāra, raqā, ḥāfīz). They used to listen thus regularly but now (al-ṣabāḥ, Ixii. 9) — apparently since Muhammad was sent — they have found the angels especially violent against them. See a full discussion in the Kanz al-Din (p. 1535) on Ixii. 9, where old verses are quoted and tradition cited on the ideas of the Arabs on this in the Dīghilya. These Arabs had known such shooting-stars and had their own views about them. But with the birth of Muhammad the vigilance of the angels was greatly increased. Yet this could have been only for a time; for the whole after-history of magic represents the dżinn as continuing to listen and to bring information to the jinn’s and magicians. Further, the dżimm (xxviii. 13) do not know the Unseen (al-ghaṣālt) at least accurately, although they dżimm inspire and lead astray the enemies of the prophets (vii. 112). In Kur’ān xxvi. 221-225 is a significant passage telling how the shaitān’s come down (zamānala) to every great liar (ṣaffāt) and that these receive what the shaitān’s have heard and that the most of them (the great liars of mankind or of the shaitān’s) are liars, or that the most of the information is lies. The straying poets, too, follow them (apparently the shaitān’s), wandering in every wādī and never doing what they say. This is connected by the commentators (Baidawi, xxli. 61, 62; even fuller and better in the Kanz al-Din, li. 1012-1014), and evidently rightly, with the dżinn listening to the talk of the angels, perverting it and mixing it with lies; but bringing it down to the jinn’s and false prophets and poets. On poetry as thus inspired by the dżimm see Goldziher, Abhandlungen sur arab. Philologie, i. pp. 1-121 and on this passage especially, p. 27, note 2.

It is only in Kur’ān ii. 96 that the word sīh occurs in connection with Sulaimān, but there are several passages (xxvi. 81, 82; xxvii. 15-45; xxviii. 11-13; xxviii. 29-39) which deal at length with his wisdom, knowledge and control of the world and later Islam traced all licit, or “white”, magic back to him. The other occurrences of sīh and its cognates are connected with the stories of Muṣā, Iṣār and Muhammad himself. To the memory of Muṣā and his contests with the magicians of Pharaoh belong almost all references in certain Sūras. Thus vii. 109, 110, 117, 129; x. 77, 78, 80, 81 (but verse 2 of Muṣūf); xvi. 103 (but v. 50 of Muṣūf); xx. 59, 60, 66, 69, 72-74; xxvi. 33, 34, 36, 37, 39, 40, 45, 48 (but verses 153, 185 of Muṣūf); xxvii. 13, xxviii. 36, 48; xl. 25; xxliii. 48 (but v. 29 of Muṣūf); li. 39. Only in v. 110 is magic connected with Iṣār. With Muhammad it is connected in vii. 2; x. 2; xi. 10; xv. 15; xvii. 50; xxi. 3; xxii. 91; xxvi. 9; xxvii. 153, 185; xxviii. 42; xxvii. 15; xxviii. 33; xxliii. 29; xlvi. 6; li. 15; lv. 2; lx. 6; lixiv. 24. There are certain significant phrases and usages: sīh is opposed to al-ḥām, “in reality,” in xx. 77, 78; xxliii. 29; xlvi. 6, and to the reality of Hell (al-mār), in li. 15. — “In the Fire they will be asked: "Is this glamour"?" — eyes are enchanted in vii. 113 (Muṣā) and similarly in xvii. 15. The pick of the looks (ahmaran) are made drunken (ṣubheru) and we are an enchanted (musthār) people”, i.e. we are gladdened, hypnotized, by them (Meccans); Muṣūf is “a man enchanted” (xxvii. 50; xxvi. 9) and Muṣā (xxvii. 103); Muṣūf is “deeply enchanted” (musthauṣ) in xxvii. 153, 185; in the story of Muṣā an appearance is produced (ṣhayā’ala) by sīh (xx. 69); in xxv. 3 qāf various accusations are brought against Muhammad — that his message is sīh; that it is "bundles of dreams (bayṣajad ṣubba), i.e. confused and untrue dreams; that he invented it (iftarāhu); that he is poet (ṣifār); he is required to produce a sign (ṣayf) like the former prophets; in xxvii. 3 Muhammad is a “lying magician” (ṣifār ḥaṣabuḥu) and Muṣā is the same in xl. 25; in li. 39 Muṣā is a sīh and musthār, possessed of a dżimm; sīh is called “plain” (mala) very often, musthār, “invented”; in xxvii. 36 and unnuṣnyar, “enduring, firm” or “continuous, consecutive" or “feeling" in li. 2; in lixiv. 24 (quite the oldest occurrence in the Kur’ān) the message of Muṣūf is called sīh yirṣūr, “a magic derived or learned” from some one else; in xxvi. 36 saḥūr seems to mean an “expert, professional magician” (story of Muṣā).
The passages connecting magic with Muhammad will bear closer examination and throw much light upon the ideas of his time and upon his own situation in it. The traditional interpretation of lxxv. 24 in the Sira (see Wustenfeld's Ibn Hisham, p. 171 sq.; Ba'adhwi, ed. Fleischer, ii. 308, 13 sq.; Kaka'sfayf, ed. Lees, ii. 1548 sq.) labours to distinguish between the kahim, the muqabim, the sibhur and the sibhir, evidently using for the definition of sibhir, K. ii. 96, but it is plain from the actual Kuranic usages that such distinctions are impossible and that these four classes were closely connected qua links between the spirit-world and our world. Kaha occurs only twice in the Kuran, in both places applied by the Meccans to Muhammad, once (lxxi. 29) joined with muqabim and once (lxxix. 42) joined with sibhir. Muhammad is called a sibhir in x. 2, xx. 3 sq. and xxxviii. 3; he is "enraptured" (masahhir) in xvii. 50 and xxv. 9 and "deeply enchanted" (masahhir) in xxxvi. 153, 185. The two last expressions as used of Muhammad were evidently disliked, for the commentators give alternate meanings, "one possessing lungs," i.e. an ordinary human being. Several times the Kuran, its message and proofs are called magic—xi. 10; xxxiv. 42; xlii. 29; lxi. 6; lxi. 2; lxii. 6; lxxiv. 4. And Muhammad did not show any other signs of being a magician. He was not a wonder-worker like Mi'raj, Sulaiman and Idris. In xxiv. 9 he is only "a man enchanted"; no angel is sent to go with him, nor is a treasury (kasam) thrown to him, nor has he a magic garden of which he can eat, i.e. objectively existing. In xxi. 3 sq. he does not work an a'ra in this sense. In vi. 17 if an actual book on a'risus which could be handled had been sent to them they would have called even it sibhir, i.e. they would have had such signs. In the case of these passages in this context of enchantment (masahhir) in the commentator, e.g. Zama'khshari and Ba'adhwi, are quite sure that the reference is to miracles (ammir bi'shira li 'l-fafa'), but the whole drift of the Kuran and even the passages themselves show that the reference is to the revelations which the Meccans thought proceeded from magic. The sibhir in the case, then, must have been connected with the way in which the revelations came. In xxi. 3 the Meccans assert that they are confused and untrue dreams; and there are passages in the Kuran which show that they, at least sometimes, came in what we now call "automatic speech". In xx. 13 and lxxv. 16 the Prophet is warned that he must not try to hasten the utterance of the Kuran when it is being revealed by conscious singing of his tongue; i.e. he must completely yield his speech-over to it and let it come at its own speed (cf. Sibhir of Bukhari, part i. p. 152 sq. of ed. Bulayk 1315 = Kitab al-uwa'idh). In v. 105 the bystanders and listeners when revelation is coming through are warned not to throw in sudden questions to the Prophet, as though he were an ordinary soothsayer. Being in the state of automatic speech he will certainly answer them, and truly, and they may not like the answers. See a mass of traditions bearing on this in Tabari's Tafsir, vii. 48-52 and a very clear statement in Baidawi, i. 275 ult. to p. 276, 11; the more rationalistic commentators, such as Zama'khshari and Razi, evidently did not like the subject. For automatic speech in later Islam see article FISRA above and references there; Islam has fully accepted and described the phenomenon.

From all this it is plain that to understand these passages in the Kuran we must combine the evident meaning of the text with what we know now of abnormal psychology. The phenomena above can be abundantly verified by any one in contact with a case of the very common automatism, "automatic writing", and they hold exactly of the much rarer automatic speech. But it was necessary for the early Muslim interpreters to make as firm a distinction as possible between the phenomena of Muhammad and those of the other links with the spirit-world. This they did by emphasizing revelation through Djibril as opposed to automatic speech through a possessing spirit. Probably many other references exist in the Kuran, as undoubtedly in the Old Testament, to such phenomena, which have been similarly obscured. Sibhir, then, on one side, was glamour and unreal, but on another, it was very real. For Muhammad it was heathen revelation, coming from the spirit-world and in so far real, but perverted and amplified by its intermediaries, spirit and human, and in so far false. In the Sahih of Muslim, part viii. pp. 229-231 of ed. of Constantineople 1333 (Kitab al-Zuhd, trad. 73), there is a long story of a heathen king, his magician (sibhir), an ascetic (inshir) and a jinn. The point is that heathenism is sibhir and jinn, just as Baidawi on Kuran ii. 96 (i. 76, 7) equates sibhir and jinn and lumps them in with kahtim.

In the traditions on the subject it is impossible to say what goes back to Muhammad and what arose in later controversy; much seems incompatible with his usual strong common sense. Reference may be made to a most miscellaneous farrago in the Sahih of Muslim (Kitab al-salat), part vii. pp. 13-41, on medicine (inshir) and spells (inshir), lawful and unlawful, magic, poisons, sha'tan, kahim, tabur, sar, all jumbled together. In part i., p. 59, if any one says, muqrawa bayn al-muqawwila, "we receive rain by such a star", he is an unbeliever, and on pp. 136-138 the 70,000 Muslims who will enter Paradise without reckoning or punishment are those who have put their trust in Allah and have not used cautery or spells or observed the flight of birds. Medicine, etc., is dealt with in Bukhari, chapter 328, part xii. 122-149, and the interpretation of dreams, Tabhir al-Kura', etc., in part ix. 29 sqq. On seeing the Prophet in dreams and on dreaming generally see Muslim, part vii. 50 sqq. All these subjects were, and are, in close association in the Muslim mind.

But though Muhammad was perfectly assured as to the reality of these phenomena, whether as glamour or as perverted revelation from unbelieving mediums, the early rationalistic theologians (al-Maw'ul al-salihin, alin salim; see article above, ii. 670-697) had many doubts. This comes out very clearly in the book of Ibn Kathira (i. 276 = 889) Mawal al-bad'ith (Cairo 1326, p. 220-235); see on it Goldziher, Med. Stud. ii. 136 sqq. The Mu'tazilites attacked, on grounds of reason and reflection (alj, mutif), the traditions which tell that Muhammad was bewitched; that was impossible in a prophet who was under the protection of Allah (muqawwila). Also, the magic spoken of in the Kuran e.g. in the story of Musa, was nothing but juggling (lakhsheji); the two angels in Kuran ii. 96 were two men called Malik and the verse was to be understood differently. Against
that, Ibn Katafa brings the universal testimony of all Scriptures and prophets and the unanimous belief in magic of the most diverse peoples; also the explicit testimony of Kuryan (kulli, c. v.), the two Mu'tamaddim also certain further traditions, especially a curious story about a woman who went to Bihari to learn magic from Hariri and Murtiri, thereafter sought the Prophet at Madina in presence, found him dead and made confession to Ali, telling her the whole story. It is a very strange story with folk-lore elements about the preparation of magic sandalwood remains of the Arabian Nights "Story of Badi Basiin and the Khawafa of Muhammad b. Salama (The Earlier History of the Arabic Nights, in J.R. A.S., July 1924, p. 374—379). A fuller form of the same tradition is in the Tafsir of Tabari (d. 920), i. 347, 348 to 348, 18, also in the Kitab al-Mabsuva of Ibn al-Bishr (d. 1036), p. 30, 160; vol. ed. Cairo 1314; in the Mu'adith of Rasu (d. 1209), vol. ed. Cairo 1314, p. 434, 29—30; there is such a sophisticated and philosophized form of the same story. And, otherwise, all the narratives vary greatly; the different forms were evidently adjusted to the magic known to each writer and current in his time. Sharabi (q. v.), tells it, too, in his commentary on the Ma'adith of Hariri, i. 134, has anything on Hariri and Murtiri and this story is not there (letter from A. J. Wensinck).

In the Fihrist (written between 372 and 400 = 987—1010) we find the magical system fully developed and with a rich literature behind it. The principal passage is in the Second Fann of the Eighth Maganta (ed. Fluegel, p. 308 sqq.). The position of Muhammad b. Iskand, the author, who was apparently a Sh'ite and, therefore, at least tinged with Mu'tassolin (cf. Kariim, vol. ii., p. 6732 above), appears in his statement. Magicians, have ways, licit and illicit, all assert that magic is worked by the obedience of spirits to the magician. Licit magician, whom he calls ma'uzim (from sa'ima, "spell"); the word is not in the Karan, nor the root in this connection, assert that they constrain the spirits by obeying and supplicating Allah, by abandoning fleshly lusts and practicing devotion and by bringing adjurations by Allah to bear upon the spirits; the spirits then obey, either out of obedience to Allah because of the adjurations, or out of fear, because in the peculiar property (bawiyat) of the divine Names there is something which subdues them. Illicit magician, whom he calls mas'imatim (from sa'ima, "spell"); the word is not in the Karan, nor the root in this connection, assert that they constrain the spirits by offerings (zaharat) and by evil deeds, displeasing to Allah, either omission of the ritual law or actual forbidden actions, such as shedding of blood, marriage with near kin, etc. This is openly practised (shahata) in Egypt and the adjoining countries, and there are many books existing upon it. The basis of the magicians is in Egypt; Ibn Iskand had been told of it by one who had been there and had seen actual survivors (bashirta), magicians male and female, there. It is to be remembered that he was probably writing in Baghda; this is still the attitude of the rest of the Muslim East towards Egypt. All these, licit and illicit, assert that they use seals (bawwara), various kinds of spells (maz'at, ruja', bashara), magic circles (mawwiid), fumigation (da'at), etc. A party of the philosophers and star-worshippers assert, he goes on, that they make talismans for all manner of purposes by watching the stars; these are engraved on stones, gems, stones in rings (safar). This is a widely spreading science among philosophers; Indians believe in it and do wonderful things by it; the Chinese have artefacts (zha'at) and a magic of their own; the Indians have especially "hypnotism" (Hindu-waak Bam; cf. J.R. A.S. for Oct. 1922, Waam in Arabic and its cognates, p. 316), Indian books on which have been translated into Arabic; the Turks have a science of magic and Ibn Iskand had been assured by a trustworthy person that they did wonderful things of a physical kind, defeating armies, slaying enemies, passing over rivers, going great distances in a short time, etc. The talismans in Egypt and Syria are numerous and plain for all to see; but the working has been stultified by the passage of time.

Licit magic, which the Fihrist calls "the praise-worthy method" (al-farzi al-mahamud), is traced back to Sulaiman b. Daws who was the first to enslave the spirits (al-salim w a'hayt) and make them serve him; the same is said for Persian magic of Djamshid. On Djamshid as a founder of knowledge and a controller of the gisim see Fihrist, p. 12, 47 sqq., p. 238, and for a fuller account of his place in Persian myth and of his confusion with Solomon see especially E. G. Browne's Literary History of Persia, i. 112—114. There was evidently an extensive magical literature ascribed to Sulaiman in Hebrew and Persian and due to that confusion; the names of three of his secretaries who compiled the books are given and there are further details on the names of these books in the long quotation from Djamshid's Kitab al-khod al-a'yur (first half of viii. cent. A.D.), Z.D.M.G., xx. 486 sqq., in de Goeje's article on the same, Gawarna's "Entdeckte Geheimnisse"; cf. also Fleischer in Z.D.M.G., xx. 274. A small part of this text was printed at Cairo (32 pp.; no year; Mau'ad al-muqash), omitting the introduction and extending only to Buh vi. in Fajr, iv., evidently with other omissions. There is also a complete edition, no printer or place but dated Djamshid 1130. Cf., further, the technical, non-philological study of the book, based on a printed text and several MSS., by E. Wiedemann in Beitr. zur Gesch. der Naturwissenschaften, xxv., p. 206—232. The Fihrist then gives a list of 70 names of spirits (nafsir) who entered the presence of Sulaiman and upon whom he imposed covenants (rashid, wati'at) using the Names of Allah. These nafsir continue to play a great part. A tiny, undated, Cairene lithograph of 16 pp. has them as an amulet; Hiddah al-khod al-nafsir al-mulaimidina li-sayidina Sulaiman b. Dawud. Another list of seven is also given, especially connected with the days of the week. This can be expanded from the account given in Kawauni's Ali conjunciation, ed. Wustenfeld, pp. 371 sqq., which also puts the name of Allah in Sulaiman's control. Further lists and descriptions are in Damiri's Hayat al-bayan, ed. Cairo 1313, i. 127—157; Jayakar's translation, i. 484—480. The Fihrist then gives the names of some individual magicians and titles of their works, from the Greeks down to his own time. This can be controlled and expanded in some points from Djamshid's list. All of these, even the
Greek Arios son of Stephanos, ascertently connected himself with the Sulaimanic system and controlled spirits by means of his treaties with these. The last is an Ablâ' Amr Uthmân b. Abl Rasûla, a man of high reputation among his fellows, the author of many books and the doer of wonderful works, whom Ibn Isâhâk had personally known and to whom he said once: "I wish you were close to anything and do anything with this affair" (yana'inden râ'â'â' 'l-'âsâ''u l-bûlâhâ'ī 'l-'âsâ'î), to which the magician: "For so odd years if I had not known this that it was really I would have abandoned it; but I have no doubt", and Ibn Isâhâk could only reply: "By Allah, mayest thou not prosper" — apparently in his magic.

I illicit magic, "the blasphemous method" (al-jâhiz al-mawdûd), or the method of the 'abara, is traced similarly to Iblis through his daughter's daughter, Baidîkhâh (see Hujjâ, above). She has a throne (al-â'ajj) upon the water (al-'âzâ'î); cf. the âjîb of Iblis upon al-âlîkhe in the Sahîh of 'Abd al-'Azâ', ed., Constantinople, part vi., p. 190, and the âjîb of Allah, al-âlî 'zâ'î in Kur'ân xi. 9, with the treatment of the âjîb in Bahâ'î, ed. Bilâl 1325; part ii., p. 124. When the postulant in magic (murâd, as though he were a sâlir neophyte) has done for her whatever he will, she makes him to serve him, whomsoever he wills and accomplishes his needs, and he is not separated from her by any barrier (âjîfâh), whoever makes sacrifices to her, animal, and man, although he abandons the absolute requirements of the canon law and practices what is ratione abominable. [The disjointed character of this statement is probably due to Ibn Isâhâk's having thrown together several statements made to him]. Others say that Baidîkhâh is Iblis himself. Others that she sits upon her throne and that the murâd is brought to her to obey her and that he worships her. One of these 'abara had said to Ibn Isâhâk that he, when asleep had seen her sitting as he had seen her when awake and that he saw round her people like the Nabateans of the Sawd, bare-footed and with cloven hoofs (mu'âa'âfâf 'l-ka'âs); he even recognized a certain individual among them. He (Ibn Isâhâk's informant; apparently) was one of the greatest of the 'abara, of recent date, and used to speak from underneath a basin (kâma-yâ'âfâf min yâ'âfî yâ'âfî; cf. kâma yâ'âfî, p. 310, 15). Individuals follow of and follow from some books by them, one is a Yamanite who professed to derive from a certain witch al-Zâ'ârâf (the Yamanite princess Taraffât; cf. above, ii. 625, 6 foot); another is Ibn Wâshâyâh (see above article, ii. 472) who professed to connect with ancient Chaldæan magic and certainly did so with Nabatean. The Fihrist calls him a Şâfi and says he claimed to be a šâbîr, working with Ũluma. A section follows (p. 312, 11-15) on simple jugglers (al-sulâbâ). Then there is a return to magic, taking in Callisthenes, Apollonius of Tyane, Horus, Hermes, and representatives of the magic of India. For the meaning of "artifices" (hijâl) above, the section on mathematicians and engineers may be consulted (p. 265, 15; p. 274, 3). Further books on magic, mostly anonymous, are given in the Fihrist of miscellaneous; p. 314, 7-15; p. 317, 18; p. 318, 4. As Isâlîn has always ascribed a great part of illicit magic and astrology to Chaldæan tradition, the first Fihrist of the ninth Maûtâla (p. 312, 15). on the Harrânian Chaldæans who called themselves al-Sibîlîn is of importance in the history of magic, and especially the story of the head which answered questions as to the future (p. 324, 12 foot) of the same holds of the tenth Maûtâla on alchemy where we again find a long notice of Ibn Wâshâyâh (p. 345) and his fellows. As Ibn Khâlîfî pointed out long ago, Shi'i, Shi'ism, Sufism, philosophy, astrology, alchemy, magic, all touch one another; cf. in the Fihrist (p. 354, 2) the different assertions as to the šâfîr b. Hâyiân, the names given to him and the affiliations ascribed to him (article upon him above, i. 957).

If the author of the Fihrist was in evident doubt as to there being any real magic and simply recorded biographical and bibliographical facts as he found them, al-/nsâhî (d. 595/1111) had no such doubts. From the spirit-world was very real to him; throughout the Isâ'â he enters on full details as to the dijinm and the shânâm and their activities (Macdonald, Religion Attitude ... in Islam, p. 274, 5); in his Munkâfîd (ed. Cairo 1303, p. 46) he gives the magic square Budîdî as of tested efficacy and it has since been called by his name: he wrote on the interpretation of the gems (al-sulâb fi 'rûm al-tawir, Aleppo, Mubâsîr, 1328: 30 pages). Kazwînî in his Akhîr al-âlîdî (ed. Wustenfeld, p. 272) records that he prevailed on a celebrated occultist, al-Tâbâsî (d. 482/1093; G.A.L., l. 496), to raise the djinn for him. He saw them like shadows on a wall and when he desired to speak with them al-Tâbâsî replied that that was the limit of possibility for him — al-Ghazâlî. See, further, for this side of al-Ghazâlî and for its development in legend Goldthorpe's introduction to his Šurû al-'Ilm Tramont, Alger 1903, p. 15 end. This means that his philosophical pragmatism led him to accept all those workings in nature and in man for which he found good evidence. The Budîdî square had "worked"; therefore he accepted it and all that it implied. The world was full of mystery and this was only a bit of it. But as a moral philosopher he had to consider and classify the practice of magic. This he does early in the Isâ'â (ed. Cairo 1334, i. 15, 26; ed. with commentary of Murtâdâ al-Zâ'âfî, who d. 1205 = 1795, i. 146, 216 end). On p. 15 he is considering the moral classification of the sciences (al-'ilmûn); they either go back to the prophets or they do not. Those that do not (derived from reason, experiment, or picked up from hearing or language) are either praiseworthy (mu'âsîr) or blameworthy (mu'âsîr), and the example of the blameworthy is the twin sciences of magic, including talismans, and juggling. On p. 26 he enters in further detail to explain how a "science" can be blameworthy, seeing that the act (hijâl) is knowledge of a thing as it is and is one of the qualities (iflâm) of Allah. It is blameworthy, he explains, not for itself (li 'ilmîh) but with respect to men for one or other of three cases: (i) it leads to hurt either in the practiser or in some one else example, example, example, magic; (ii) it is mostly (fî 'ilmîh al-'asr) hurtful for the practiser or it example, astronomy; (iii.) if he who busies himself with it can not draw any real scientific advantage from it example, scholastic theology or medicine to one who is a layman in these sciences. This is evidently the basis of that Muslim utilitarianism to which so very widely interested an investigator as Ibn Khâlîfî
fell a victim (Religious Attitudes, p. 119 sqq.) It is based on the tradition: "It is part of the beauty of a man’s Islam to let alone what does not concern him. (Mun ’umul islàm al-mar’i tukkahu wa lla’mah; Goldziher, Muk. Stud., ii. 157). Magic, though it is real (hijkah), as both Kur’ân and traditions show, should be let alone. Further, al-Ghazâlî describes magic as a science which makes use of the properties of substances (guru’dhir) and numbers under certain astrological conditions; it makes of the substances a magical figure (kašribat; cf. Dosey, Suppl., ii. 775); the word seems to indicate Jewish origin for this form of magic) in the person of the person to be enchanted; an astrological situation is awaited and words, evil and involving unbelief (lamr), are pronounced over it, by which the assistance of her’shi’s are secured, from all this there result strange effects (a’wâl gurûdhr) on the person to be enchanted "by Allah’s influencing the custom of things" (il-ahâm tâ‘rîf al-lîlâ ‘l-falâh). The commentary of Murta’d al-Zahabi on this is worth consulting. His great authority is evidenced by Fâhî al-Din al-Râzî whom he scholiasticizes still further. His quotations from his Malekshâhâh and his Sîr al-es‘lâm al-‘ahwâl which are still in MS. (G.A.L., i. 507), also from Maslama al-Maqrî’i (d. 598 = 1067; G.A.L., i. 243), Ghu’far (al-Nikba’l) al-birût which also is still in MS. But however even al-Ghazâlî, with all the weight of his influence, might draw up a strict scheme of life to purify and safeguard the soul — his Iklwy is constructed entirely from that point of view, the masses of Islam would have none of it. The position, which is quite clear in the Fihrist, of licit and illicit magic, was left unchanged and licit magicians could protest that their art, derived from Sulaimân, the Prophet of Allah, was orthodox and even pious. The boundary lines, too, between the licit and the illicit were, and are, very vague; as vague as the status of spirits in Islam (article dhîn, supra, p. 1045), in which a mass of the dhîn are "believers", the relation of the ghushûn’s to the dhîn is uncertain, and there is even record of a descending belief of Ibâs. Further, even the scholiasts found difficulty in the Ghazâlîan position. It was pointed out that, on the one hand, it was only the practice of magic for evil purposes which could be called blameworthy, and, on another, that a knowledge of magic was essential to any one who had to distinguish between the results of magic and the evidentiary miracles (mu’jâhid) of prophets and, still more, the qa’isâmawâ, kahâm[see article above] of the saints (Baizâwâ, ed. Fleischer, i. 75; Râzî, Mu’âfi’t, Cairo 1307, i. 434-7 from below, sqq.) The only printed materials we have for the position of Fâhî al-Din al-Râzî (d. 606 = 1209), apart from his stray references as by Murta’d al-Zahabi above, are in his Kur’ân commentary, Mu’âfi’t al-giha’, where he treats the subject at length in dealing with the Kur’ânic verses elicted of, ii. 96. He had been strongly affected by Mu’âfi’t’s positions and had come to accept some of them, retaining in the end Sunnite orthodoxy, coloured with scholastic intellectualism and a fondness for analyzed, systematic statements (Goldziher in Der Islam, iii, pp. 235 sqq.; Karmam Kutlug, pp. 123, 203 and by index under Mu’âfi’t). His essential position upon magic is shown by his treatment of the story of the woman who went to Hûsî and Mu’âfi’t in Hâbil to learn magic from them. After her "faith" (lîmûn) has gone visibly forth from her and ascended to the heavens, they say to her: "You will never will a thing so as to picture it in your imagination but it will happen" (Mun ’umul islàm al-mar’i tukkahu wa lla’mah; Goldziher, Muk. Stud., ii. 157). Magic, therefore, is essentially a psychological working with physical effects; whatever the magician images to himself in his wukûn comes about. On pp. 129—134 Râzî enumerates eight categories (sârîn) to which the term sîr he has applied. (ii) Ancient Chaldean magic, based on the worship and influence of the stars. This is added to a statement and a refutation of the Mu’âfi’t’s position on magic. (ii) Psychological magic (sihâr aqâb al-a’wâl al-imârah wa l-la’mah al-falâh) is the magical use of these are discussed. (iii) The same by means of the earth-spirt (al-arwâl al-arif), i.e. the dhîn. This kind, see the fict magic of the Fihrist above, is called arwâl wa’l-mahall tâ‘rûf al-’dîn. (iv) Gaining by holding and directing the eyes of the onlookers (ar-râja’lul wa l-’adâlah al-falâh) (v.) Wonderful operations by means of machines, automata and various scientific devices. (vi) Using properties of drugs and perfumes to stupefy, (vii) Gaining the foolish by large claims of possessing the Most Great Name and commanding the dhîn. (vii.) By slander (nâmâ) and secret exciting of discord. In the statement in the Dictionary of technical terms — a modern compilation — pp. 648—653, which is based almost entirely on Râzî, only the first four of these are given, and it is said that the Mu’âfi’t’s rejected all but the fourth. In the Cairo text of Râzî (p. 434-5 sqq.) the Mu’âfi’t’s are said to have rejected all but iv., vi., viii. Did they deny v. and vii.? In Ibn Khaldûn (d. 808 = 1406) the psychological position of Râzî is still further developed and clarified until it practically coincides with the modern psychological doctrine of automatism; he is the first to give a full description of the rationales of crystal-gazing, or "scrying", essentially in modern terms (Ibn Khaldûn, ed. Quatremère, i. 191—195). With Ibn Khaldûn’s description and explanations should be taken Theodore Besterman’s Crystal-Gazing: a study in the history, distribution, theory and practice of scrying, London 1924; also W. H. Worzel, Die, oil and mirror gazing ceremonies in modern Egypt, in F.A.O.S., xxxvii. 37—53. So Ibn Khaldûn had moved far beyond Râzî as to Râzî’s second and third classes of magic. But although a devout Muslim, holding by Kur’ân and Sunna, he went strictly by what he had himself experienced and tested. Soothsayers and magicians of various kinds he had known, tried and accepted; he had dreams and found them valuable of the miracles of the saints he was firmly convinced. But he had never known either dhîn or individual angels, although he felt compelled to admit the existence of a vague entity, the Holy one (al-mula’ al-dîn) with celestial — and satanic — influences upon the souls of men. So he entered all the Kur’ânic references which gave him trouble, either intellectually or because he had no experience of the facts to which they referred, among the mu’ajâhid verses, those of obscure interpretation, opposed to the mu’ajâhid
verses, those of firmly fixed meaning, following the interpretation of Kur'an iii. 5 which asserts that no one but Allah knows the meaning of these (ed. Quatremère, ill. 47; article Kahi in above, i. 6739). Thus the essential force of magic lay in the nafs of the magician; a magician was being made. He might aid his own power by drawing on mysterious powers outside, whether or not powers in the proportion of things or of numbers or in other spiritual, non-material existences. For philosophers, says Ibn Khalidin, the difference between pure magic and the art of talismans is that pure magic is worked by the soul of the magician without any helper (mutla) but in talismans he draws upon the help of the spiritualities of the stars and the secrets of numbers and the properties of substances and the situations of the heavenly sphere which affect the world of the elements our world (ed. Quatremère, iii. 133). Apparently Ibn Khalidin himself was in broad accord with this distinction, so far as he could control it by the facts he had himself known (Quatremère, i. 129 ss.). But he also considered that the apparatus of magic, as in geometry in which the operator makes dots and lines in sand and constructs figures out of them, to divine the future, are simply a means for the manipulation an internal state in the magician in which the physical senses are blunted and the spiritual world is directly reached. If the magician does not show signs of such an hypnotic state he is an impostor (Quatremère, i. 209). Further an attempt had been made by al-Buni (d. 622 = 1225; see article above), following the methods of some extreme Sufis (al-qulub, al-taṣawwuf), to draw up a system of licit magic, based on the powers of the letters in divine names and constructing from these magic squares and talismans. This was called Simita, mawla (Dozy, Suppt. i. 708). like the Jewish Kabbalas of the alphabetic and theosophic type connected with the Divine Names (cf. C. D. Ginsburg, The Kabbalah, ii. ed., London 1902, p. 127 sqq.) but in Ibn Khalidin’s opinion it was simply magic, because it professed to derive its forces from natural powers and not from Allah, although using his names, and so came under the condemnation of magic (ed. Quatremère, iii. 137 sqq., especially p. 143 sqq.). The great book of this al-Buni, Sama al-mawla’ (G. L., i. 497), is the prototype of all the numberless Muslims at the present day who study magic. The two authorities on magic to whom Ibn Khalidin refers are Džahir b. Haiyân and Maslama al-Madżrittj; on both see above.

It is plain from Ibn Khalidin’s theory that he was faced by the necessity of distinguishing, not only legally but also psychologically, between the working of magic and that of the powers inhering in saints and prophets. What was the difference between the prophetic, the saintly and the magical naṣf? It was easy to rule, as he did (ed. Quatremère, iii. 134, 140), that the one is worked by a good man for good purposes and the other by a evil man for evil purposes, with an essential kinship between the naṣf and this external power which added it — that was the old legal distinction; see Bajši against Kurän ii. 96, vol. i., p. 76, 8. Also that the saint in his wonders and the prophet in his evidential miracles did everything in and by the assistance of Allah alone, without recourse to any other helper — whether spirit or natural force. But there were the extreme Sufis who claimed control of the natural world; descendants, apparently, of the thaumaturgic wing of the neo-platonists. And there was the great multitude of folk-lore saints, really animists, who, under a Muslim disguise, continued the divining and miracle-working of the old faiths and usages. This held, and holds, especially of Morocco with its hereditary saintship. His own theory, too, of the magical naṣf brought back the confusion of old Arabia between the kahin and the wali. Thus the way was open for the continuance among orthodox Muslims of the study and even the practice of magic and for the very complete confusion which exists at the present day between licit and illicit magic.

For further details on Ibn Khalidin’s attitude to religion and magic, reference may be made to the present writer’s Religious Attitude and Life in Islam, lectures ii.—vi. For some on magic in Islam see E. Douté, Les Magiciens, Paris 1906, Les Astuces, Châlons 1906. Magic et Religion dans l’Afrique du Nord, Alger 1909 (the basic treatise on magic in modern Islam); E. Westerberg, The Moorish conception of holiness, Helsingfors 1916; T. H. Weir, The Shaitâns of Morocco, Edinburgh 1904; Emily, Shareef of Wazan, My Life Story, London 1911. Another of the many by which magic has survived among the Muslim masses has lain in the numerous popular stories in which unbelieving djinn and the magic and talismans of unbelieving magicians are overcome by the stronger talismans handed down from the early prophets. Two good examples of this type of story have been translated by Well, from a Gotha MS, in his later recasting of his Tausend und Eine Nacht.—Adventures of Ali and Zaher of Damascus and Adventures of the Tausend und Djuander, vol. iv. of ed. Bonn 1897, p. 194—112.

The Spiritual Life of the Man Who Is also of this type. By these stories, perhaps above all else, the equation, sikr = naṣf, has been stamped on the Muslim mind, with a loop-hole left by the fact that the orthodox talismans are, in essence, as much sikr as those of the unbelievers. Again, another of these means lies in the popular classification of philosophers as magicians. This universal tendency has been very strong in Islam and especially so in the case of Ibn Sinâ [q.v.]. There is in wide circulation an apocryphal Life of him as a magician (Hilâyât Abû ‘Ali ibn Sinâ, Ottoman Turkish lithograph, A. I. 1215 [?]; Arzabîighi, Kârân 1881; Arabic from the Turkish by Mustâf Efendi Mukhârî, Cairo 1305; and others, e.g., Potsch in Katalog der turk. Hzs. in Berlin, p. 466; Chauvin, Bild. ar., v. 143). In consequence there exists under his name (Cairo Mathâb al-madâfûn, no date, p. 32) a little magical treatise on the simina side, Al-kunz el-madân and ‘abîr el-mâjin, professing to be the result of his studies in the enchanted cave in the Mağrib which the apocryphal Life describes.

Thus in Kurân and Sunna, in orthodox theology, in mystical theology of all phases stretching to pantheistic theosophy, in philosophy and natural science of all kinds from almost experimental psychology to the speculations of the pseudo-Ibn Sinâ, in primitive animistic devotion, the existence of magic as a reality, though it may be a dangerous one, has been perpetuated.

The present status of magic in the Muslim world
can be illustrated by a little magical library formed by the present writer in Egypt in 1908 and since.

(1) The foundation is still the Shawa al-Ma'sirif of al-Bun' (large lithograph in 4 parts and 442 pp., written by Mirzâ Husain al-\"Ir\'isi, various dates from 1322 to 1324), recommended to me as such a foundation by a native scholar, professor in a government training college for teachers, who had been a pupil of Djamal al-Din al-Afghani [q.v.]. (2) Another universal treatise is the Al-\'Arsh al-Darajat, in 7 books (Cairo 1327 = 1909; pp. 252), by Ahmad Mîst al-Zajjâwi. This book by a contemporary magician was published by subscription with an imposing list of subscribers; it covers the whole field from astrology and astronomy to geomancy, magic squares and acrally. The author has embraced the position that the earth moves, which he knows as the Pythagorean, and has proved it from the Karan. In this and in other ways he is far beyond the childish sinâyat of al-Bun'. I have also a small calendar (nawiiqya) by him in its tenth year, dated 1326 = 1908, with astrological and magical appendices. (3) Two treatises on sinâyat of the minfi-rural, "tested", type were published together, Cairo 1324 = 1906; Hâfiz al-malik al-majid by Ahmad al-Darâîn (d. 1151 = 1738; J. A. L., ii. 323) and al-Munfi-rural by Muhammad b. Yâsuf al-Sânî (d. 1292 = 1876; J. A. L., ii. 252). The first of these must be very popular for I have also two editions of it separately, Cairo 1323, 1325. (4) Also of the sinâyat type is Kitiha al-\'awwâd, Cairo 1321, by Ahmad b. Abd al-Latif al-Sharîq al-\'Aamîn (d. 1292 = 1410; J. A. L., ii. 190) — a very popular third year. (5) A more practical and picturesque and less verbose pious book is Sinâyat al-\'armâl wa l-\'amîn al-arâf (at least two editions, Cairo 1322, 1325) by Ibn al-\'AbdAllâh al-Timânsî (d. 1237 = 1820; J. A. L., ii. 83); cf. Goldscher in Z. D. P. S., xxviii. 115-121. (6) Two books by a certain Muhammad al-Rahâwi (al-\'Ashâr al-majmû' fi l-\'ilm al-fa\'in al-minfi-rural wa Ghaybat al-sani'at fi l\'-\'ilm al-rahâlah) Cairo, no date, are of the same calistical type and the author names his predecessors or al-Ghâasînî, al-Bu\'i, Muyyî al-Din Ibn al-\'Arabi (d. 638 = 1240; J. A. L., i. 441 sqq.; cf. for this edition of Ibn al-\'Arabi the study of his Kleine Schriften by H. S. Nyberg, Leiden 1919), Shâhâb al-Din al-Kalâmi (J. A. L. i. 130) and al-Sharâ'îni [q.v.]. (7) Another contemporary Egyptian magician has three little treatises. He is Yâsuf Muhammad al-Awghânâshî (al-\'Afsâ'atî), known as al-Hindi, of the island of Shandawil in the Seul, but giving as Cairo a address the abode of (\"law\") of \"Ali Efendî al-Nâ\'î, N. S. Darb al-Dhulûb, in the Afât al-Shâhiq Mursîlî, over against the Mosque of al-Sulâ\'înî. There he is, or was, prepared to instruct in his art and give permission to exercise it to those who, after being tested, prove worthy. His books are: Al-ghaybar al-majbût fi hawwâl al-mun\'adh al-
Ghâasînî (see above on the Ghâssillian magic square); Al-as\'aset al-arabâniyâ fi tashkîl al-\'amîn al-\'rahîbat (on the subjugating of the djinn); Al-hayyat al-\'rabâniyâ fi mu\'ahhadat al-
Wâlî al-\'amînî (on the same subject). Only the last book has a date, 1325 = 1907. (8) Kitiha al-\'aqid al-\'amârah, Cairo, no date, is another treatise on the Ghâssillian square by Ahmad al-
Dinmûntî (d. 1192 = 1778; J. A. L., ii. 371, under the title \"Li\'f al-\'arawâ\"). (9) Muhammad ibn al-Bâmûntî al-Zâ\'afarî, Abû\'l\'Arabi al-\'Uyâfiyâ fi l-

Khan Lodi, the governor of the province. The Nawab appointed him storekeeper to his household, and he performed his official duties for several years to the satisfaction of his employer. In his leisure hours he retired to the jungles for meditation, and tradition says that in one of these devotional excursions he was taken in a vision to the Divine Presence and there received his mission to preach to the world that "there is but one God whose name is True, the Creator, devoid of fear and enmity, immortal, unborn, self-existent, great and bountiful." Nanak now left the service of the Nawab and became (at the age of 30) a public preacher. He began a series of tours in the course of which he visited all parts of India, particularly in the sacred places of the Hindus and shrines of Muhummadanism. Wherever he went he held controversies with priests and shadaks, demonstrated the fatality of their belief in dogmas and rituals, and taught the necessity of self-denial, morality and truth. He is also said to have travelled through Persia and to have visited Mecca and Baghdad.

In Persia and Afghanistan he gained converts and even established dioceses (mandir), notably at Bukhara and Kâbul (Sewaram Singh, Life of Guru Nanak, p. 73). It is not stated, however, whether he knew enough Persian or Arabic to be able to preach to the people of these Islamic countries. The statement of the Siyâr al-Muta‘akkhirin that Nanak studied Persian and Muslim theology with one Saiyid Hassan has been rejected by the modern Hindu and Sikh critics. "This," says one of them, "appears to be an error on the part of a Muslim writer who did not understand the true meaning of Nanak's concepts; and, in addition, this tradition has not been transmitted to the teachings of Islam." (G. C. Nanang, The Transformation of Sikhism, p. 9.)

Macauliffe, however, is inclined to accept that Nanak was "a fair Persian scholar" (The Sikh Religion, i. 15), but does not mention the source whence he received his instruction in that language.

For the last ten years of his life Nanak settled at Kartarpur, a village founded in his honour by a millionaire on the bank of the Rawal, where he continued to preach his new religion to the numerous visitors whom his piety attracted from far and wide. He died at the age of 70 in 1539, leaving behind him a fairly large number of disciples (sihr) and two sons, one of whom named Shri Chand founded the Udasi sect (see infra).

Shortly before his death, Nanak nominated one of his devoted followers named Angad (a Khatri like himself) to succeed him as guru (apostle) of the Sikhs. After performing the ceremony of nomination he declared that Angad was as himself and that his own spirit would dwell in him. Nanak had already preached the doctrine of metempsychothis, but this particular declaration gave rise to the belief among the Sikhs that the spirit of Nanak was transmitted to each succeeding guru in turn, and this is why all of them adopted Nanak as their soor de placme in their compositions. Guru Angad occupied the office of apostle for 13 years until his death in 1552. Tradition ascribes to him the invention of the Gurmukhi characters in which the sacred writings of the Sikhs have been preserved, but it has been pointed out, notably by Grierson and Rose, that the Gurmukhi alphabet is of a different and earlier origin (J.R.A.S. 1916, p. 671; A Glossary of the Tribes and Castes of the Punjab, i. 672). The tradition may have arisen from the fact that Guru Angad adopted the script in recording the life and compositions of Nanak.

Amar Das, the third guru of the Sikhs, was nominated by Angad himself. His ministry lasted 22 years (1552-1574), and he marked this time by the taking the first steps towards a religious and social organization of the Sikhs. Missionary work was undertaken by him in a systematic manner; over twenty dioceses (mandir) were established in various parts of the country, where some of his zealous disciples preached the gospel of Sikhism. In order to promote feelings of equality and brotherhood among the increasing number of Sikhs, he maintained a public refectory (langar) where all ate together without distinction of caste or creed. Amar Das cultivated friendly relations with the Emperor Akbar who visited him at his own residence in Gobindwali (on the Beas) and granted him a large estate. This very much enhanced his prestige and helped to increase the number of fresh converts. He kept up the spirit of Nanak in his own ethical teaching and announced the superstitions common to the Hindus, particularly the practice of widow-burning (sat), and enjoined re-marriage of widows.

Amar Das was succeeded by his favourite disciple and son-in-law Râm Das, who propagated the tenets of Sikhism with a still larger measure of success. He had the good fortune to find in the Emperor Akbar a warm admirer who was ever keen to do him favour. The Emperor granted him (in 1577) a large plot of land in which he began the excavation of the sacred tank (meant for the devotional ablutions of the Sikhs) which was afterwards named amrit sar "the pool of nectar." Around the tank the Guru founded a small town which he called after himself Râmâñpur and which subsequently grew into the new flourishing city of Amritsar. The construction of the tank was completed by his son Arjan, the 4th guru, who, in the midst of it, founded the Har Mandir, the temple dedicated to God as a common place of worship for the Sikhs. To Europeans it is now known as "the Golden Temple of Amritsar." The Guru declared that: "by bathing in the tank of Râm Das, all the sins that man COMMITTED shall be done away, and he shall become pure by his ablutions" (Macauliffe, op. cit., iii. 15.) Thus was created a Mecca for the Sikhs — a centre for their national life.

Arjan succeeded his father in 1574, and henceforward the office of Guru became hereditary. Arjan took further steps to organise the Sikhs as a community. The greatest service that he rendered to the cause of Sikhism was the compilation of the Granth, the bible of the Sikhs. Guru Angad had already committed to writing the life and compositions of Nanak; Arjan carried the work further and added thereto the hymns of the next three Gurus, which he carefully collected. To these he added his own numerous compositions along with considerable extracts from the writings of several Hindu and Muhammadans saints anterior to Nanak. "It was one of the Guru's objects to show the world that there was no superstition in the Sikh religion, and that every good man, no matter of what caste or creed, was worthy of honour and reverence" (Macauliffe, op. cit., iii. 61.). The volume thus compiled by Guru Arjan (completed in 1604 after some years of labour) is called the Adi Granth ("the ancient scripture"), as
distinguished from the Dastan Granth or the Granth of the tenth Guru (see below).

Ardjan was an ambitious and enterprising leader. He combined business with spiritual guidance and deputed Mazuds (collectors or agents) to various districts of the country to realize the Guru’s desires, which so far were only voluntarily offered by the disciples. This brought him wealth and with it pomp and show. He styled himself maulvi gāndāhī *the true King*, which clearly marks his ambition for political power. He encouraged commerce among his disciples and sent them not only to various parts of India but also to Afghanistan and Central Asia for purposes of trade and propagation of the Sikh faith. In 1606, Ardjan financially helped Prince Khuruan who had rebelled against his father, the Emperor Dhañgār. After the defeat of the Prince, the Guru was imprisoned, by the Emperor’s command, at Lahore where he shortly afterwards died.

During the Guruship of Ardjan’s son and successor Hargovind (1606–1643), Sikhism made a great advance. The first four Gurus were peaceful teachers of quietism and self-denial, but Ardjan initiated the policy of secular aggrandisement, while Hargovind openly adopted active resistance, which marks the beginning of the military career of the Sikhs. He was by nature a soldier, passionately devoted to the chase and manly games. Systematic collection of tithe and offerings had made him extremely rich and he was now able to assume kingly authority. He cherished a hatred of Dhañgār to whom he ascribed the death of his father; a desire for revenge was certainly one of the causes of his resorting to arms. He enlisted, in his service, a number of outlaws, malcontents and freeloaders, *built the stronghold of Hargovind* on the Bās and thence harried the plunder. He had a stable of 500 horses; three hundred mounted followers were constantly in attendance upon him, and a guard of sixty matchlock-men secured the safety of his person” (Cunningham, History of the Sikhs, p. 56). The alarming reports of the Gurus’ military organisation reached the Emperor, who summoned him to his court and ordered his interment in the fort of Gwāilā. He was released after some time, but the imprisonment gave him a further cause of resentment. Soon after the death of Dhañgār and the accession to the throne of the Emperor Shab-djhān, Hargovind assumed a defiant attitude and took up arms against the government. In the course of six years he thrice defeated the troops sent against him by the governor of Lahore. But he feared vengeance on the part of Shab-djhān and retired to the hills where he lived unmolested until his death in 1645.

Under Hargovind, the Sikh faith was greatly transformed. They ceased to be mere recluse, and their Guru was no longer a mere spiritual guide, but a military leader as well. They felt their strength and saw the possibility of future political power.

Hargovind was succeeded by his grandson Harr Rai, who was, unlike his grandfather, of a retiring nature. He had intimate friendly relations with Dārī Sahīk, the eldest son of Shab-djhān, and in 1628 when Dārī wandered in exile pursued by the hostile troops of his younger brother Awrangzēb, Harr Rai assisted him in crossing the Bās and reaching a comparatively safe locality. Of course he incurred the displeasure of Awrangzēb who summoned him to Delhi to answer for this affront. He sent on his own behalf his son Rām Rai who was detained at the imperial court as a hostage to insure the peaceful conduct of his father. Harr Rai died in 1650 and his younger son Har Kīshān (a child of six) succeeded him. His right to the Guruship was disputed by Rām Rai who laid his own case before Awrangzēb. The infant apostle was invited to Delhi to settle the dispute with his brother. There he was attacked with small-pox and died (1664).

There followed a struggle for succession after the death of Har Kīshān, and it was after much opposition that Tegh Bahādur, son of Hargovind, was acknowledged as Guru from among a score of candidates for the pontifical throne. His opponents continued to assert their claims, and some of them were even set up as rival Gurus. Tegh Bahādur retired, in some bitterness to the Siwaliks and there founded Anandpur, a town which played a part of some importance in the subsequent annals of the Sikhs. Further, he set out on an extensive tour in India, visiting the Deccan and the Eastern Beqal where bishoprics of the Sikh Church already existed. In the course of his travels he resided for some time at Patna, the seat of one of the archbishoprics (tehā,q), where his son Govind Rai, the future Guru and the real founder of the political power of the Sikhs, was born (1666). Tegh Bahādur’s influence as Guru extended as far as Ceylon in the south and Assam in the east. After a time he returned to the Punjhāb where he “maintained himself and his disciples by plunder”. He “gave a ready asylum to all fugitives and his power interfered with the prosperity of the country” (Cunningham, op. cit., p. 64). The imperial troops marched against him and he was made prisoner and brought to Delhi where he was put to death by the order of Awrangzēb (1675). The popular story is related in the Gurnkhi chronicles that while in the presence of the Emperor, the Guru prophesied the coming of the English and destruction of the Mughal power at their hands. The words uttered, by him on this occasion, became the battle-cry of the Sikhs in the assault on Delhi in 1857 under General John Nicholson and thus the prophecy of the 9th Guru was gloriously fulfilled” (Mackenzie, iv. 381).

The figure of Tegh Bahādur’s son Govind Rai, who was saluted as Guru after the execution of his father in 1675, is perhaps the most prominent in the history of the Sikhs. He succeeded to the apostleship as a mere boy, but ended his career by completely transforming a community of mere devotees into a nation of warriors who were destined to rule the Punjāb for nearly a century. The violent death of his father seemed to have left a lasting impression on his young mind, and he cherished a bitter hatred towards Awrangzēb. But the power of the latter was too great to allow the possibility of revenge. He was therefore compelled to retire to the hills in order to be left in peace and receive the training necessary to befit him for the task of leadership. For twenty years he lived there, occupying himself in hunting and acquiring a knowledge of the sacred languages of the Muhammadans and Hindus and their religions. He nurtured his feeling of vengeance and formed his plans for the future with a view to destroying the power of the Mughals. He set about the task of uniting the Sikhs into a
nation by promoting among them feelings of democratic equality. He admitted both high and low into his fold and conducted a vigorous war against the caste system. In order to create uniformity in spirit as well as in form, he instituted the ceremony of initiation or baptism called *pahul* to be performed in the following manner:

The initiate, after bathing and donning clean clothes, sits in the midst of an assembly generally summoned for the purpose, some sugar is mixed with water in an iron basin and five Sikhs in turn stir it with a double-edged dagger chanting certain verses of the Granth. After this, some of the solution is sprinkled over the hair and body of the initiate and some of it is given him to drink. The *rahat* or rules of Sikh conduct are also explained to him. The solution is called *arivit* (nectar) which is supposed to confer immortality on the initiate, to make him a "Singh" (lion) and a true *Kabiriya" (Rose, *Tristes and Castes of the Punjab*, I, 696). After receiving the *pahul*, every Sikh was to leave his locks unshorn, to wear by way of uniform the 5 K's, i.e., 5 things whose name begin with a K, viz.: (1) *Kak\* or short drawers, (2) *Kirpan*, a dagger, (3) *Kara*, an iron bracelet, (4) *Kesh*, long hair, and (5) *Kangha*, a comb. The prefix "Singh" was to be added to the name of every baptised Sikh, the Guru himself to be called in future Govind Singh. He denominated his initiated disciples the *khalsa* (the pure, elect, liberated) or *khalsa* (from the Arabic root *khulqa* or khelusa). Govind Singh struck the keynote of his policy by thus addressing the Sikhs:

"Since the time of Baba Nanak *tarnangpahul* hath been customary. Men drank the water in which the Gurus had washed their feet, a custom which led to great humility; but the Khalsa can now only be maintained as a nation by bravery and skill in arms. Therefore I now institute the custom of baptism by water stirred with a dagger, and change my followers from Sikhs to Singhs or lions. They who accept the nectar of the *pahul* shall be changed before your very eyes from jackals into lions and shall obtain empire in this world and bliss hereafter." (Mauzulif, v. 93). *Abolition of caste, equality of privileges with one another and with the Guru, common worship, common baptism for all classes and lastly, common external appearance — these were the means, besides common leadership and community of aspirations, which Govind employed to bring about unity among his followers, and by which he bound them together into a compact mass before they were hurled against the legions of the great Moghuls" (Naranj, *op. cit.*, p. 82).

By his prolonged residence in the hills, Govind Singh wanted, besides carrying on his proselytising activities uninterupted, to secure the assistance of the numerous hill chiefs against what he called the tyranny of the Mahambad rule. But in these objects he was defeated, for the hill rajás whose dynasties had ruled independently since time immemorial, generally resented the principles of democracy being taught to their subjects and they unanimously resisted the religious propaganda of Govind. Failing to secure their alliance by friendly means, he tried the experiment of force. From his retreat at Anandpur he led marauding expeditions into their territories carrying away all that he could lay his hands on. The * Kadpur* chiefs of Bilaspur, Katol, Handir, Ejarotes and Niltagarh united to attack the Guru with an army of 10,000. He opposed them at the head of 2,000 of his followers, including 500 Pathans whom he kept in his service, and won his victory at Bhangaí chiefly through the help of Salyd Bhatti Shah, chief of Sadhora. Govind's power now increased; he had a number of retreats in the hills and his depredations in the adjoining territories grew more frequent and violent. The Khalsa jointly appealed for help to Awrangbe, who despatched orders to the governor of Sarhind to effect an alliance with them and attack the Guru. In the battle that ensued he was defeated and took refuge in the fortress of Anampur (1701). Here he was besieged by the imperial forces and the siege was prolonged. Provisions ran short and his followers deserted him. His family, including his mother, wives and young boys, effected their escape to Sarhind where they were betrayed and the two children were put to death. Govind himself escaped in disguise, and with a few faithful followers fled to the fortress of Camkaur (in the present district of Amhala) hotly pursued by the enemy. He was forced to leave Camkaur and again fly for his life. He wandered in disguise from place to place until he reached the wastes of Bhotinda, halfway between Ferozepur and Delhi. His disciples again rallied round him and he succeeded in repulsing his pursuers at a place since called *Muktsar* or the Pool of Salvation, constructed in commemoration of the Sikhs who fell in the action. For some time he settled at a place called Damdama "halfway between Hausi and Ferozepur", where he occupied himself in preaching and composing the *Daram Granth* (see below), which is regarded by the Sikhs as supplement to the Adi Granth compiled by Guru Arjan. Meanwhile Awrangbe died and was succeeded by his son Bahadur Shah, who, contrary to the policy of his father, sought to conciliate the Guru. He conferred upon him, the military command of the Deccan whether he proceeded to assume his charge. But shortly after his arrival there, he was stabbed by one of his Afghan servants for some private grievance, and he died at Nader on the banks of the Godlewari (Oct. 1708). On his deathbed he refused to nominate anyone to succeed him, but enjoined upon his disciples to look upon the Granth as their future Guru, and upon God as their sole protector, thus putting an end to the apostolic succession. Govind's end came before his object had been achieved, "but his spirit survived to animate the Sikhs with courage." Govind Singh was succeeded, not as a Guru but as a military leader of the Sikhs, by Banda, a Rupjut of Kashmir belonging to the Bairagi order. Meeting Govind in the Deccan, he was converted to Sikhism and styled himself "Banda," or "slave" (of the Guru). Banda was charged by Govind to return to the Punjáb and urge the Sikhs to avenge the murder of his children and unite to destroy the Mahambad despotism. The Sikhs "flocked to him, ready to fight and die under his banner." At heart Banda was ambitious, and under the pretext of carrying out the orders of the Guru he sought to attain to political power. He began his operations in the Punjab by committing highway robberies, freely distributing the spoils among his adherents. This attracted many criminals — scavengers, leather-dressers and such like persons who were very numerous among the Sikhs — to his person. The Moghul power, after
the death of Aawrangzüb was fast declining; constant struggle among his sons and grandsons for the throne left the Sikhs free to increase their power, and the criminal activities of Banda went unchecked. He proceeded, with an army of lawless freebooters, from town to town in the very neighbourhood of Delhi, plundering and mercilessly slaughtering the Muhammadans in thousands. Prospects of plunder and the sacred duty of avenging the death of the Guru’s children swelled the number of Banda’s followers. The accursed town of Sarhind, where the children were done to death, was stormed by them in May 1710 and freely given to plunder. The Sikhs perpetrated horrible atrocities on the Muslim inhabitants of the town, whom they butchered without distinction of age or sex. They extended their destructive activities to the very walls of Delhi. The Emperor Bahádur Shâh, who was away in the Deccan, was alarmed on hearing the reports of these outrages and forthwith hastened to the Pandjâb to make redress. The imperial troops defeated Banda, but he escaped to the adjoining hills. The death of Bahádur Shâh in 1712 was followed by a war of succession among his sons, from which Djahânsâd Shâh came out successful. He was however murdered, after a short reign of eleven months, by his nephew Farrukhshiyar, who now ascended the degraded throne of Delhi. These commotions were favourable to the Sikhs, who once more began to ravage the country under the notorious Banda. Farrukhshiyar charged ‘Abd al-Šamad Khán, governor of the Pandjâb, to put a stop to the atrocities of the Sikhs. With a large army he pursued Banda who was at last besieged in the fortress of Girânpur on the Kéwi. Finally he was seized, made prisoner and brought to Delhi where he was tortured to death (1716).

Banda’s character is by no means amiable. Even from the Sikh standpoint, he does not deserve reverence, for his motives were selfish and his means unscrupulous. Besides assuming sovereign authority, he aimed at creating a distinct sect of his own, and contrary to the dying injunctions of Govind Singh, he claimed to be acknowledged as the eleventh Guru. Moreover, he made certain other alterations in the Sikh beliefs and rituals — facts which led the more ardent followers of Govind Singh to revolt against his authority. However, there is no doubt that the stormy career through which the Sikhs passed under his leadership gave them a good deal of martial training.

The defeat and death of Banda was followed by a general reaction and a severe persecution of the Sikhs in the reign of Farrukhshiyar. They were declared outlaws; many of them abandoned their faith, but the more loyal among them were forced to take shelter in the hills and forests. Successive governors of the Pandjâb, notably the Mufti al-Mulk, better known as Mir Mammâ, carried out the repressive policy of Farrukhshiyar, and for a time it seemed that the Sikh nation would become extinct. But the Moghal power was rapidly decaying, and in the Pandjâb it was more notably weakened by the frequent invasions of Ahmad Shâh Abdalî. The distracted state of the province was favourable to the Sikhs who began gradually to reappear and reorganise themselves. They built several fortresses and acquired wealth by freely plundering the defenceless towns. The centre of their national activities was Amritsar, which they greatly enriched and fortified. Prince Timûr, who governed the Pandjâb in the name of his father Ahmad Shâh Durrânî was hostile to the Sikhs. In 1756, he attacked Amritsar, demolished the Har Mandar and filled the sacred tank with the debris. The Sikhs mobilised in large numbers to avenge this outrage and succeeded in driving the Prince out of Lahore, which they temporarily occupied. Their military leader Djasâ Singh Kalâl (the “brewer”) struck coin in his own name with a Persian inscription. But the advent of the Mahrattas under Ragboba (in 1758) made them retire from Lahore, and brought the ferocious Ahmad Shâh for the fifth time to the Pandjâb. He inflicted a crushing defeat on the Mahrattas in the memorable battle of Pânjpat (1761). The Sikhs became active as soon as he left the Pandjâb and regained their lost power. He therefore came back with the definite object of breaking their power and recover his territories. In a desperate battle fought near Ludhîna (1762) he totally defeated them with heavy carnage, but he had soon to leave the Pandjâb in order to suppress a rebellion at Kandhâr. The Sikhs recovered soon and in 1763 they defeated Zain Khân, the Afghan governor of Sarhind, which they sacked and destroyed. Once more they took possession of Lahore, and this time their hold was more permanent. They assembled at Amritsar and proclaimed the regime of the Khâla as supreme in the Pandjâb (1764). The sovereign authority was vested in a national council called the Gurmukh. The coin of the Sikh commonwealth bore the Persian inscription:

Dig u tigh u fath u muret bi dirang
Yaft at Nânak Gurî Govînd Singh

“Guru Govînd Singh received from Nânak
The Sword, the Bowl and Victory unailing”

(Khânzâd Singh, History of the Sikh Religion, p. 264).

Now that the common danger which confronted the Sikhs was removed, they became disintegrated and divided into a number of states or confederacies called Misal. These Misals were 12 in number, governed independently of each other by their respective chiefs (Sârbâr, q. v.), who were under no supreme authority and had nothing in common with one another except their religion. “They were almost constantly engaged in civil war, grouping and regrouping in the struggle for pre-eminence.” They were “loosely organised and varied from time to time in power and even in designation.” After thirty years of this variable rule in the Pandjâb, there appeared on the scene a strong man who united these jarring confederacies into a compact sovereignty. This was Randjît Singh.

Randjît Singh’s father Mahâ Singh was the chief of the Sakechakia Misal with its headquarters at Gadjarânwâla, 40 miles to the north of Lahore. At the age of 12 (in 1722) he succeeded to the barony of his father. He gradually rose to power through his personal character and genius with which he was gifted by nature. In 1799 he acquired possession of Lahore through a royal investiture granted to him by Zâmân Shâh (grandson of Ahmad Shâh Abdalî), who was still looked upon as virtual owner of the Pandjâb. Amritsar was reduced by Randjît Singh in 1802. The possession of Lahore and Amritsar, the two most important towns of the Pandjâb, made his personality conspicuous and enlarged his prestige. He assumed the title of Maharâdja and continued to
extend his possessions until gradually he annexed all the Mislis to his dominions. With the English, whose territories now extended to the Sutlej, Randjitt Singh had friendly relations. A treaty of alliance was concluded between the two powers in 1809 which Randjitt Singh very faithfully observed. He organised a powerful military force trained by some of the European generals, notably French, who had previously served under Napoleon, and after Waterloo came to the Pundjab to enter the service of the Maharaja. With this force he was able to reduce the whole of the Pundjab, annex Kashmir (in 1819) and Peshawar (in 1834). He died in 1839, leaving behind him a consolidated kingdom extending from the Sutlej to the Hindu Kosh, but no one among his heirs was capable enough to manage it. Three of his sons ascended the throne in rapid succession; conspiracies were rife and led to assassinations, civil war and enormous bloodshed. The army had become uncontrollable and spread terror throughout the country. The court at last found an outlet for its activities by inciting the army leaders to cross the Sutlej and invade the British territory. This led to the first Sikh war (Dec. 1845), in the course of which the Sikhs were defeated by the English general Sir Hugh (afterwards Lord) Gough in four successive battles fought at Ferozshah and Mudki (in the present district of Ferozepur) and Altwal and Sobraon near Ludhiana (Jan.–Feb. 1846). "The victory opened the way to Lahore which was promptly occupied by the Governor-General" (Sir Henry Hardinge). The Sikh Durbar accepted the British resident (Sir Henry Lawrence) to act as President of the Council of Regency to the minor Maharaja Dalip Singh, son of Randjitt Singh. The revolt of Daud Mubrâd, governor of Multân, against the government at Lahore (in 1848) tempted the Sikhs again to take up arms against the English. War was consequently declared and Lord Gough inflicted two heavy defeats on the Sikh army, first at Chillianwala and then at Gujrat (early 1849). The Pundjab was declared annexed to the British dominions and the Sikh rule came to an end.

Religion

Sikhism aimed at purifying the religious beliefs of the Hindus. The aims of the founders were therefore mainly negative. He strongly protested against caste restrictions and superstitious beliefs. He preached absolute equality of mankind; he taught that mechanical worship and pilgrimage do not elevate the human soul; that spirit and not the form of devotion was the real thing. No salvation is possible without a true love of God and good deeds in this world. Sikhism, like Islam, condemns idolatry and teaches strict monotheism. Its God is the God of all mankind and of all religions, "whose name is true, the Creator, immortal, unborn, self-existent, great and beneficent" (Dîrghît by Guru Nînak).

Reverence for the Guru is much emphasized, for although "God is with man, but can only be seen by means of the Guru." (Macauliffe, ii. 347). Sikhism also believes in the doctrine of Karma and Metempsychosis.

The theology of Nînak was not formal; his sole object was to bring about a social and moral reform. Sikhism remained a pacific and tolerant cult until the social tyranny of the Hindus and political friction with Muhammadans transformed it into a militant creed. Govind Singh made Sikh theology more formal and prescribed rules for guidance in private and social affairs. He forbade the use of tobacco and wine, though the latter is now more freely indulged in by the Sikhs.

The sacred book of the Sikhs is the Granth, which is held by them in great reverence. The first portion of it, called the Adi Granth was compiled, as mentioned above, by the fifth Guru Arjan. It includes the hymns of the first five Gurus together with selections from the compositions of saints and reformers anterior to Nînak, notably Kalârî, Namdev, Dâjî Dev, Râmânand and Shâhî Firdos. The Granth is composed wholly in verse with different metres. The bulk of it is in archaic Hindi written in Gurmukhi characters; other portions are in various other Indian dialects and languages including Sanskrit, together with a few verses and tales in Persian (written in Gurmukhi script). The second portion, called the Dâwan Granth (or Granth of the 10th Guru) was compiled by Govind Singh and includes, in the main, his own writings. The major part of it consists, like the Adi Granth, of hymns in praise of God, but it also comprises the autobiography of Govind Singh, called the Vichitra Nînak ("the wonderful drama") along with other miscellaneous compositions by the Hindu poets whom he kept in his service. The entire Granth usually forms a quarto volume of about 1,200 pages. Some of its chapters are used by the Sikhs as Divine Services and are repeated by them privately in the morning, evening, and at bedtime. Such are: (1) the Dînrît by Guru Nînak (see Macauliffe, i. 195–217); (2) Anâ Kî Fêr by the characteristics in 218 verses; (3) the Dîrghît by Guru Govind (op. cit., v. 261); (4) the Rohârî (op. cit., i. 250–257); (5) Sahib (ibid., 258–260) and (6) the Sikhsânit by Guru Arjan (op. cit., iii. 197 sqq.). They are also recited at the administration of the pahul or baptism.

The cosmopolitan views of Nînak were acceptable to both Hindus and Muhammadans; moreover, he did not prescribe any particular forms of worship, hence it is not surprising that he gained converts from both religions. But it was undoubtedly Hindoul — the fault of his own parents — whose social system he wanted to reform, therefore naturally his teachings were addressed to the Hindus rather than the Muhammadans. The majority of his disciples was derived from the Dîjâ, Arora and Khatri castes; to the last of them belonged all the Gurus excepting Nînak himself. To the Brahmins and Râjputs, whose social status was very high, the democratic tenets of Sikhism were less acceptable.

The sects and sub-sects of the Sikhs are numerous, but the main divisions are two: (1) the Keshâhârîs, otherwise called "Singhs", and (2) the Sahihârîs. The former represent the baptized and therefore more orthodox followers of Guru Govind Singh, while the latter were originally those who refused to accept his baptism and join the militant Keshâhârîs. Other important sects are: (1) the Nînakârâns, "known roughly as Sikhs who were not Singhs, followers of the earlier Gurus, who do not think it necessary to follow the ceremonial and social observances insculpted by Guru Govind Singh. Their characteristics are therefore, mainly negative; they do not forbid smoking; they do not insist on long hair; they are not
baptized with the \textit{pakul} and so forth\textsuperscript{1}. In other words, they belong to the \textit{Sahajdhāri} division. (2) \textit{Gurdāsī} (the remonstrants) are also, like the \textit{Nānakpāntī}, included in the \textit{Sahajdhāri} division. They represent the ascetic order founded by Sri Ānd, son of Nānak. They remain celibate and their tenets are very much tainted with the Hindu ascetic beliefs. (3) the \textit{Akhālsī} (worshippers of \textit{Ākāl}, the Immortal, Timeless God) differ essentially from all other Sikh orders in being a militant organization founded by Govind Singh. They are more orthodox than most of the Sikhs and still retain their characteristic militant spirit. (4) the \textit{Banda}s or \textit{Bandīpāntī} i.e. those who accepted Banda as the eleventh Guru, while the \textit{Līlā Khāla}s are strict adherents to the doctrines of Govind in opposition to the innovations of Banda. (5) the \textit{Mastkhās} (prom. \textit{Mastī}) represent members of the scavenger class converted to Sikhism by taking the \textit{pakul}, while the same \textit{Kīmūtī} (followers of Guru Rām Darā, by whom they were first initiated) is applied to \textit{Cāmūr} (leatherworkers) who have taken the \textit{pakul}. The Sikh shrines are scattered over the greater part of the Punjab, but the better known among them are to be found in the districts of Amritsar, Gurdāspur and Ferozepur — the holiest of them being the Golden Temple of Amritsar and Nānaknā Sarāb (near Lahore) the birthplace of Nānak, where annual fairs, attended by a very large number of Sikhs, are held.

According to the census returns of 1931, the total Sikh population is 3,238,803; of which 3,110,000 (all but 4\% of the Punjāb, the chief centres being the districts of Amritsar, Līlā Khāla and Ferozepur, and the native states of Patāla, Nānaknā Sarāb, and Ferozepur. The strength of the chief sects is as follows:

- Keōdhārs 2,876,320
- Sahajdārs 226,600
- Līlā Khāla 531,500
- Nānakpāntī 22,500

Ever since the English conquest of the Punjab (in 1849) the Sikhs have remained loyal subjects of the British Crown. As a community they are prosperous, physically they are superior to the rest of the Punjāb. Military service is one of their favourite occupations and they are justly looked upon as among the finest soldiers of the East. Sikh regiments rendered excellent service to the cause of the Allies in the great European war.

The Sikhs have made considerable progress during the last 40 years. There now exist several organized bodies working systematically for their social and educational advancement. The "Singh Sabha" was founded 30 years ago with the object of propagating the religious doctrines of the Khāla with its headquarters at Amritsar. Another body, called the "Chief Khālā Diwān" has undertaken the work of social reformation and spread of education. It has its branches in all districts and Sikh states. The "Sahomānt Gurudwārā Pārbandhak Committee" is another institution very recently established with the purpose of taking into their hands the management of the Sikh shrines which were formerly controlled by hereditary Hindu mahants. The Committee chiefly represents the Akālī sects but has received support from Sikhs in its campaign for the control of shrines in which it has attained a considerable measure of success. The Sikhs now form a distinct community entirely separate from the Hindus. Their ceremonies of birth, marriage and death are no longer presided over by the Brahmins, but by the Gyāns, the professional interpreters of the Granth. Like Hindus they burn their dead, but unlike they marry late and their widows freely re-marry. The Sikhs are also progressing numerically owing partially to the influx of converts from the Hindu depressed classes. The centre of all religious and social activities of the Sikhs is Amritsar where they maintain a large educational institution called the Khālsa College affiliated to the University of Lahore. Another similar institution exists at Gujranwālā, while their communal schools are scattered over the whole province.

\textit{Sikka} (from \textit{sakh}, die, coinage, currency, coin in general; \textit{sa} = mint). In the coin-legends of the Sulṭāns of Delhi of the
thirteenth (sixth) century, al-sikka is used only of the gold coins, the corresponding word on the silver coins being al-ṣafid. From 1250 to 1350, after which the formula was no longer used, sikka is applied to both gold and silver. Except for a sporadic occurrence of the denomination sikka moharrak on a rare coin of Humayyun, the name is not found again till the reign of the Moghul Shah Alam Bahadur (1707–1712 = 1119–1124), who introduced on his coins the formula, sikka or sikka moharrak followed by his titles, which remained usual till the end of the dynasty. The Persian verb sikka sad however regularly occurs in the couplets of the Emperors from Dazhnag onwards. The word sikka (pica) came for some reason quite certainly quite early in the xvith century. A.D. to be particularly associated with the rupee by the English in India and was applied to a recently struck rupee, not yet liable to discount for depreciation. The new rupee, issued by the East India Co. in 1793 to abolish the monetary confusion then existing, was known as the “19 san sikka” because it was dated in the 19th year of Shah Alam II and remained the unit of British Indian currency for 40 years.

Through Egypt and Italy (scaccino) the Arabic sikka has given us the word “sequin”, which found its way also into the Anglo-Indian vocabulary in the forms “chicken” and “chick”. (J. Allan)

SILKARI-DAR (A. V., “bearer of arms”), an officer of the Mamluk court, each of whom carried one of the pieces of the Sultan’s equipment and presented it to him when he required it. There were several of them; their chief, called the amir silkari, was in charge of the arsenal (silkari-khana) and of all that was used in it, or went in or out of it. He ranked among the amirs of a hundred (amir mi‘a) and had the title qānūn kārin.”

The Ottoman Turks retained the same title under its Persian form silk-dar. The silt-i-dar-agha and the hāl-i-dar-agha were the two chief officers in the Sultan’s chamber; at the mosque they thrice presented him with rose-water and perfume of wood of aloes. At the ceremony of khāt-i sharif [q. v.] the silt-i-dar-agha stood beside the relic; each time that it was kissed, he wiped it with a muslin handkerchief which he then presented to the individual who had just kissed it. Beside him stood an officer in charge of all these handkerchiefs. On the last day of Ramadan, after the midday prayer, the Sultan went to the apartments of this official, and from a raised kiosk witnessed the spout of tomak-qilt (tilling).

The silkadores were a cavalry corps as old as the Janissaries; they numbered 8,000 men under Muhammad II and 12,000 under Ahmed III. Its chief was called the silti-dar-agha like the Sultan’s sword-bearer, but did not enjoy the same privileges.

SILVES, in Arabic al-Silw (ethnic: Silh), a small town in southern Portugal, the former capital of the province of Algarve (Ar. al-qādrā) and important metropolis of the (qādrā) al-Andalus under Arab rule. It was part of the district of al-Shāmīn, in the time of al-Idris. It was surrounded by gardens and orchards, and there were many water-mills. It had a harbour on the river, with timber-yards, where the wood of the forests of the region was prepared for exportation. Its figs were renowned. Its population, which claimed to be of Yaman origin, talked a very pure Arabic and had a reputation for its taste in literature and in poetry. The town was celebrated by a poem of the Abbāsid dynasty, al-Mu’tamid (ed. R. Dozy, Script. Ar. levi de Abbasid, i., p. 391).

After the downfall of the Umayyad caliphate of Spain, Silves, like many of the small capitals of the Peninsula, became the capital of a very small independent state, under the ephemeral dynasty of the Banū Muzaffar, on which the recent discovery of a fragment of history has enabled definite facts to be produced for the first time. In 1046 to 1049 the ḳāfi of the town declared himself an independent sovereign; he named himself Abu ‘I-l-Mu’talish iṣā b. Abī Bakr Muhammad b. Sā’ud b. Djamāl b. Sa‘d (author of a commentary on the Muqaddimah of al-Ma‘arik b. Abū ‘I-l-Mu’talish. He took the honorary title of al-Mu’aṣaffar and organised his state with a watchful eye on his powerful neighbour, the prince of Seville al-Mu’tafid (q. v.) of the dynasty of the Abbāsids. But this sovereign did not hesitate to attack him and ended by killing him in the course of a battle, at the end of April 1052. The son of Abu ‘I-l-Mu’talish, Abū ‘I-l-Mu’talish Muhammad b. Ibrāhim b. Abū ‘I-l-Mu’tafid. He, like his grandfather, was without doubt attacked by al-Mu’aṣaffar. He, blockaded him in Silves and cut off every means of communication. The town was besieged and its ramparts destroyed by means of siege-artillery and saps. The prince of Silves was beheaded by the victor in his own palace in Shawwāl 455 (October 1053). The little dynasty of the Banū Muzaffar was extinguished with him, after maintaining itself for only fifteen years.

At the end of the Almoravid dynasty, Silves was the starting point of two revolts: that of Abu ‘I-l-Kāsim Abīmad b. Abī-Husayn ibn Kāsim (Kasī) and that of Abu ‘I-l-Wali Muhammad b. ʿUmār ibn al-Muqaddith. At last in 1190 (1094) the king of Portugal, Sancho I, seized Silves, which was retaken a little later by the Almohad Abī Yusuf Yaḥṣūb. Some years afterwards, it passed definitely under Portuguese rule.

(E. Lévi-Provençal)
AL-SIMAK, "the prominent", the name of the brightest star in the constellation of the Virgin (magnitude I. 2). Virgin (al-
ṣathā) has from early times been represented as a woman holding an ear of corn (sumbula) in the left hand. The constellation is also called Sumbula. Al-Simak (Greek σπίκα, Latin spica) is close to her right hand. The Arabic word al-Simak was corrupted in the west to Asimac, or Efteimac. As it was thought that al-Simak was connected with Arcurus in Boötes by being placed opposite it, a distinction was made between al-Simak al-
ṣaṭīl (the unarmored Simak = Spica) and al-Simak al-ṣāmil (the Simak with the lance = Arcurus [magnitude I. 2]). From the adjective part of the Arabic name for Arcurus, al-ṣāmil, came the Aramean of the west. The dual forms al-Simakān and al-Anharān (the day-light and the rain-bringing) occur as general names of both stars. Al-Simak is the fourteenth moon-station.

Our constellation of Virgo was represented in Babylonian by the ideogram AR.SIM (= štāb, corn standing in the stalk). Spica alone had the same name. The stars ζ, ρ Virgins were allotted by the Babylonians to Leo. The constellation of the Virgin belonged to the Goddess Shala (wife of the weather-god Adad) along with Shubultu (ear of corn).

SIMANCAS, a small town in Northern Spain, situated eight miles south-east of Valladolid and now famous for its site where are preserved the archives of the kingdom of Spain.

The site is transcribed in Arabic as Simant Mānāh, in the Kitāb al-
Jabar of Ibn Khaldūn. It was near Simancas that in 327 (939) the armies of the Umayyad Caliph Ābū al-Rahmān III were severely defeated by the Christian king Ramiro II. This battle itself was only the prelude to a still more bloody encounter, the "battle of the ditch" (waqaf al-khandab), or battle of Alhandega, which took place soon after the fall of Salamanca, on the banks of the river Tormes.

SIMAW, a town in Asia Minor, 85 miles S. E. of Kutahia, 110 miles south of Brusa, the residence of a ḥākim-maṣjadi, capital of the baqa of the same name. Simaw has now about 6,000 inhabitants mainly Muslims, and has a neglected appearance. It played a considerable part as an earlier period. It is the site of the ancients, of which many traces still exist (ruins, inscriptions etc.). In the Byzantine period, Simaw was the seat of a bishop. In 783 (1381/1382) Simaw was conquered by Murād I and incorporated in the Ottoman Empire; cf. Ashū善于, Turāk, Istanbul 1332, p. 57; Simaw, which possesses nine large and three small mosques, four madras and a dervish monastery was the birthplace of several men of importance in the history of the Muslim religion, e. g. Shaikī Abū al-
Abī al-
Makāni (d. 896 a. H.), Kārā Simān al-
Makāni, Dīn (cf. Ewliyā, Şe'bebiyāt, iii, 377) and notably Shaikh Bād ar-Dīn Makāmillād famous for his rebellion, the "Son of the Ḥāfi of Simaw" (cf. Ibn Ḥanī Simaw, p. 416; F. Bahaier in Itil., xi, 1921, p. 1 sqq.; xii, 1921, p. 103 sqq.). Simaw has been visited and described in modern times by various European travellers, such as W. J. Hamilton, A. D. Mordtmann Sen, K. Buresch, Th. Wiegand, and Philippus et. al. The remains of the old defences which, in addition to the citadel commanding the town which was afterwards transformed, there are still ruins on a low mound not far from the town, would be worthy of fuller investigation, as well as the ancient inscriptions built into the mosques. Simaw which now lies off the line of traffic, will soon be opened up by the Balkan-Sri-Ushak (wrongly 'Ushak) railway. Near it is the Simaw-Göl, or Lake of Simaw.

(Franz Babinger)

SIMIYA, in form like šihrīyā, belongs to old Arabic beside šimā, šimā' (Kurān, lw. 23 etc.; Baldawi, ed. Flisheh, i, 264 sqq., 1513), in the sense "mark, sign, badge" (Lane, p. 1470; Şe'bebiyāt, xvi., ii, 200 of ed. Bâlûk 1282; Hambâla, ed. Freytag, p. 696; Iṣârâ, xv., 205). But the word, as a name for certain departments of magic, had a quite different derivation; in that sense it is from ša'mūs, through the Syriac ša'mūsa and means "signs, letters of the alphabet" (Dorsey, Suppl., i, 708 sqq. and references there; Payne Smith, Thesaurus Syriac, ii., col. 2614). In the Syriac-Arabic lexicon the Syriac word is regularly rendered by the Arabic al-
la'īn; šimiyā was taken over, apparently, in a technical sense. Payne Smith, following apparatus by Bruns, gives as the predominant technical meaning "chirography"; in Boëchor, Dictionnaire françois-arabe (l. 1543), under Chirographie, šimīyā is given as one of three Arabic renderings. By Barthelmaeus (d. 685/1286) the Syriac and Arabic forms are used together (Chron. Syr., ed. Paris, p. 14, 7; Mahātab, ed. Pococke, p. 33); according to these passages the science (ilm) was "invented" in the time of Moses by a certain šamā' (šimmā'), which Bruns and Kirsch rendered "Eunymus", but he seems to be quite unknown. The Muḥāf al-
Muḥāf (l. 1032) suggests a derivation from ʿalā, "name of Allah", and the Names of Allah certainly play a large part in šimmā' (Doutté, Magie et Religion, p. 344, who also suggests, p.
the elemental world and the ʿādīnā in it can be controlled by these names and allocations when used by spiritual souls (nawwāb rūḥānīyyāt). That is the doctrine of al-Būnī [q.v.], Ibn Ṭāmir [q.v.], and their followers. As to the nature and origin of this secret power in letters there is dispute. Some assign it to an elemental nature or constitution (mināḥij) and divide letters into four classes according to the four elements. Others ascribe it to a numerical relationship (mināḥ ʿuddālīya) based on the value of the letters as numbers (abjad). Ibn Khaldūn admits that there does exist such control of the material world but it is by divine grace in the hawâ mất [q.v.] and when those who lack that divine grace and insight endeavour to exert the same control by means of these names and allocations they are in the same class as the workers of magic by means of talismans, except that they have not the scientific training and system of these magicians. They may produce effects through the influence of the human imagination (al-ḥalîf) which for Ibn Khaldūn is the basis of all such working, licit and illicit—but these effects are contemptible beside those of the professional magicians Ibn Khaldūn, therefore, disapproves of this attempt by al-Būnī and others to produce a pious and licit magic; but there is no question that al-Būnī has imposed his system upon Islam.

There are many examples of this form of magic in Muslim literature; e.g. several references in the longer recension of “The Forty Veils,” transl. by Petis de la Croix (Histoire de la Sultane de Perse et des Vicissits), see especially an extended exposition, p. 186 sqq. of ed. Amsterdam, 1707.

The best description and a sympathetic exposition of this state of mind which sees in letters relations to the universe and a science of the universe is in Louis Massignon’s Al-Hallaj, p. 588 sqq.; cf. too, Doutté, p. 172 sqq. It is evident that this is a sister phase of thought to the Jewish Kabballah of the alphabetic and anthropomorphic type connected with the divine names, teaching that the science of letters is the science of the essences of things and that by letters God created and controls the world and that men by suitable knowledge of these can control material things (cf. C. D. Ginsburg, The Kabballah, p. 127 sqq.; article KABBALA by H. Loewe in Hastings’s Encyclopaedia of Rel. and Ethics, v. 622–628).

Bibliography has been given in the article.

(D. B. Macdonald)
the seed of all plants. It cannot be established from the Avestan text, what precisely is the relation of the salma to the tree; it may be, that, as in the Pahlavi Mn̄kila-bhreat, there is implied, that the dwelling-place of the bird is on that tree (comp. Sacred Books of the East, v. p. 89, note 1). In any case, in this fifth Yasht, the salma must be a mythical figure. The Bundāšāniya states, that the male of two kinds (i. e. aspects, awnāki) was the first of birds, but she is not a chief (veqa) of birds, for that dignity belongs to the bārghīšt-bird (Pahlavi Text Series, ill. 121). The Persian epic gives a more vivid notion of the Simorgh, less affected by Zoroastrian theology and cosmology. In the heroic tradition of Iran there are two Simurghs, viz. the bird-shaped guardian genius of Zal and Rustam, and, secondly, a monstrous bird, killed by Isandiyār. The first Simorgh, according to the Saβənāman, lives on the mountain Alburz, far from the dwelling-places of men; its nest has columns of ebony and sandal-wood; aloë-wood also belongs to the material of this building. The nest is once even called šāhā; to the impressive bird (huast-i murvâ) the awful nest (huast-i šanmān) is suited. When the Simorgh comes near, the air is darkened; the bird is like a cloud "whose rain are corals." Zal, the son of Sâm, who was after his birth exposed by order of his father, was found by the Simorgh, who bore him to her nest, where she educated the child. A heavenly voice announced to the bird the future glory of the race of Zal. The Simorgh has the gift of speech, like men; so she could teach the young Zal to speak. Later on, the bird delivered the youth to his father Sâm. She had given to Zal the name Dastān-i Zand. When parting, the Simorgh gave the young man one of her feathers; if he should happen to want the bird's help in times of distress and peril, he had only to burn (part of) it, to see the glorious being approach (baktiš hum amandar samān fasht). Afterwards, the Simorgh, being called by that feather-magic, gave counsel at the occasion of the birth of Zal's son, the famous Rustam, to the effect that the mother should be intoxicated and her side opened; she mentioned also the herb, which the mother must wash with milk and musk, would cure the wound; after that, the scar had to be rubbed with a feather of the bird. The second and last time the Simorgh was called upon, was on the occasion of the fight of Rustam with Isandiyār; the bird extracted the arrows from the bodies of Rustam and his horse, Rakshā, and cured his wounds, this time also by means of her feathers. Then she warned the hero, that whoever should kill Isandiyār, must be miserably in this world and the next. Rustam, however, insisted upon obtaining the means to conquer his antagonist. So the Simorgh conveyed him within the space of a single night to the place, where the fatal tree grew, from a branch of which the arrow was to be made, with which Isandiyār could be slain (Saβənāman ed. Vullers-Landauer, pp. 135, etc. 1705, 1707 etc.). In contra-distinction to this good Simorgh, which is called šāh-i sargalū (cp. cit. 139, 191) and farvārma (222, 1868; 1706, 1707), and which knows the mystery of fate (razi-i zipta, viz. the fact, that he, who slays Isandiyār, will be damned: 1705, 1706 etc.), the other Simorgh, killed by Isandiyār in the course of his seven adventures, is a noxious monster. It lives on a mountain, and resembles a flying mountain or a black cloud; with its claw it can lift crocodiles, panthers, even an elephant. It has two young ones, as large as itself; if they fly, they cast an enormous shadow. Isandiyār slew this being by a stratagem, using a kind of chariot (gurdūn), which was all set over with sharp weapons. The corpse of the monster covered a whole plain (Saβənāman, ed. Vullers-Landauer, p. 1597, etc.). Once, also this bird is called farvārmad (1959, 195). Except the name, there is no great resemblance between the Avestan salma and the Simorgh of the epic, although they have some features in common. Both dwell far from the inhabited world (on the relation of the Wourakahs to the Alibars see av. 638 [ii. 659, col. 0]); with the healing power of the epic bird, the relation of the salma to the medicinal tree may be compared; in turn, the Simorgh itself has a connection with the fatal, far-off tree at the sea of Cīn, where the baneful twigs grows, which can slay Isandiyār. Feather-magic is known to the Avesta, but not in connection with the salma. Yasht, xiv. 34 etc. a feather-magic is taught against enemies: it consists of rubbing the body with a feather of the bird of prey baṣtarnāgan; the wearing of such a feather as an amulet is also mentioned. In the same Yasht (45 and 46), to secure victory in battle, it is recommended to let fly four feathers, while uttering an appropriate spell, which helps also in mortal dangers. The difference here is great: the feathers are not those of the salma, they are not burned, and the procedure does not aim at summoning some one. The Avestan bird belongs to the good (non-Ahriman) creation, although it is not chief (veqa) of birds. That the epic Simorgh is called bašt-i murgān is nothing but a poetical conflation. The Simorgh, which appears in the story of Zal and his son may be considered as a kind of good genius (comp. also Noldeke, Das Iranische Nationalpoesie, p. 10, 29). If the malignant Simorgh in the adventure of Isandiyār is not merely an addition to the older epic tradition (for it is supposed, with much reason, that the series of Isandiyār's adventures is an imitation of Rustam's seven exploits), perhaps the statement of the Bundāšāniya, that this bird is of two aspects (kinds) would be compared, so that also in Zoroastrian lore there would have been a difference between two kinds of salma (sīm). The Yasht statement, however, is too indistinct, to be made use of in this respect. The role of the Simorgh as a guardian genius of heroes (on a possible parallel in: Achaemenian dynastic tradition comp. Noldeke, op. cit., p. 4) is not reflected in the Avesta. As it is very probable, that the cycle of Rustam and his family originally did not belong to Zoroastrian tradition (Noldeke, op. cit., p. 9 etc.), this principal feature of the epic Simorgh must also be due to a non-Zoroastrian origin. It may be then, that two different mythical conceptions have been subsumed under one name. The Avestan salma may, originally, correspond to one of the bird-shaped or antelope-shaped Aryan mythology. We may, however, suppose, that it has lost most of its characteristics in being accommodated to Zoroastrian cosmology. There are a few resemblances between the Iranian conceptions and some features of Indian bird-mythology: the salma lives far off on the tree in the sea, Wourakahs, and a king of birds (pākπir, is
Garuğa meant?) lives also far off in the varga Ḥiraṃmayā (Mahābhārata, vi, viii, 5 ef.). The sin, according to the Kāraṇṭ, when sitting at his nest, breaks off thousand twigs of the medicinal tree, and the story of Garuğa, tearing off and bearing away a branch of the Raahita-tree is well known (Mahābh., i, xxii, 39, etc.; cf. E. W. Hopkins, Epic Mythology, p. 21). One might also consider the fact, that, as the habāna stands in a certain relation to the healing herbs, so Garuğa to the varga, the drink of immortality, and the yavana, mentioned in the Arama, iv. 26 and 27, to the Sona. But these faint resemblances may be due to accident at any rate, they are insufficient to justify a comparison between Indian and Indian myth in this case. On a possible explanation of the sin as a sun-bird comp. A. J. Weeasineck, Tree and Bird as Cosmological Symbols in Western Asia, 1921, p. 42.

On the other hand, the principal characteristic of the epic Simurgh is its protection of the exiled child Zal, and, later on, its function as tutelary genius of Zal and Rustam. It must therefore be classed with the various guardian-animals we meet in the stories of the youth of some heroes or mythical heroes, as Cyrus, Romulus, etc. It is never true, that this Simurgh shows also features of a more fierce kind.

Thā'lība in his history of the Persian kings, renders the word Simurgh by 'Amīn [q. v.]. In non-epic Persian literature, the dwelling-place of the Simurgh is the fabulous mountain Kād (which originally may be the same as the Ahūr; on this question comp. sph. kār, p. 95g; Weniņček, p. c.). A more rationalistic view is, e. g., that of the Īmāk Mustawfi (Naḥbat, ed. Le Strange, i, 232; ii, 229) who says that on the isle of Rāmūn (Sinmār) the nest of the Simurgh is found.

In mystical literature, the Simurgh as a symbol of the deity is well-known from 'Aṭāf's Maṣūf al-Tūrī. The name of the bird, moreover, appears in Persian literature, very often in poetical similes. A few instances out of many are: Rāmūn, Mathūn, ed. Nicholson, i, vs. 1444; 2755; 2062; Rücker, Grammatik, I, 206, 271, 263, 206; Poestl, p. 21, as quoted in Ḥaft, Labbā, i, 99, where the synonym Amīn is used.

(V. F. BUCHNER)

SIN, twelfth letter of the Arabic alphabet, with the numerical value 60. For palaeographical details see above i, 390 and Arabia, plate i. Sin corresponds to: a) anthropic sin, Assyrian šē, Hebrew and Aramaic ש, whereas šē corresponds to Aeth. san, to Hebrew ס and Aramaic ס. Bibliography: W. Wright, Lectures on the Comparative Grammar of the Semitic languages, Cambridge 1890, p. 57 sqq.; C. Brockelmann, Granderichter vergl. Grammatik der semitischen Sprachen, Berlin 1908, i, 128 sqq.

SINĀN, usually called KūFA MīMĀN SINĀN, the greatest architect of the Ottomans. Sinān came from Kaşariya [q. v.] in Anatolia where he was born on the 9th Radjād 859 (April 15, 1559) the son of Christian Greeks. His father was later called 'Abd al-Mennān but his real name is not known. His non-Turkish origin (müktefî) is beyond question and is never in dispute, either among his contemporaries or among all serious Turkish scholars. The young Sinān came into the Senn in Stamboul with the levy of youths (devrûgme, q. v.), became a Janissary, distinguished himself in the campaigns against Belgrade (1521) and Rhodes (1522) by his bravery and was promoted to sânberdehî, i.e. chief firework-operator. In the Persian war (1527) he showed special ingenuity when he devised ferries for crossing Lake Van, which proved particularly effective. He continued to rise in rank and was ultimately appointed Șahzâdî (police magistrate). When Selim I advanced on Wallachia Sinān was in his train. He built a bridge across the Danube, which aroused further admiration and laid the foundations of his fame. Henceforth he was exclusively engaged in building mosques and palaces, commissions from the Sultan and grandees of the Empire. That, as is often stated, he began the building of the Selimîye immediately after Selim's 1st death, — the mosque which stands on the top of the fifth hill in Stamboul and which was finished in 1522, — is impossible even on chronological grounds; in dizzingly rapid succession from the end of the thirties arose the further creations of this master, which were built in parts all of the century, mainly by command of Selim the Great. Only the largest mosques can be mentioned here: in 1550 the Mosque of Roxelane (Khâseksi Khāram), in 1548 the princes' Mosque, in 1550/1556 the Selimîye, in 1541/1574 the Selimîye at Adrianople, built under command of Selim II. These are his finest efforts. In addition he built a countless number of small mosques, palaces, schools, bridges, baths, etc. The poet, Muṣṭafâ Sâ's biographer, gives 81 mosques, 50 chapels, 55 schools, 7 Kûrân schools, 16 poor-kitchens ('imḳer), 3 infirmaries, 7 aqueducts, 8 bridges, 34 palaces, 13 rest-houses, 3 storehouses, 33 baths, 19 domed tombs (türke), in all 343 buildings. Sinān was working for three-quarters of a century everywhere from Bosnia to Mecca. As Corn. Gurlitt points out, Sinān displayed an incomparable lightness of touch in his use of the dome. On a square, hexagonal or octagonal base he developed his interiors, always striving at the effect of a great ceremonial hall, a uniform architecture enclosing the worshipping rulers and their hosts. He is predominantly concerned with the interior and readily neglects the exterior for it. But everywhere, Gurlitt says, appears the peculiarity of the Turkish character, everywhere he creates models which are as little Byzantine as they are Persian, as little Syrian as they are Seldjûk, but are all the more Turkish (cf. C. Gurlitt, Konstantinopel, Berlin 1909, p. 94). Sinān had numerous pupils to assist him, including Ahmad Aghâ, Kamât al-Dîn, Dâwûd Aghâ, who was executed for free-thinking (cf. Ḥaftul-qawwām, i, 105), Yâtim Bâb 'Ali, Yûfû and the younger Sinâ, who is frequently confused with him, and to distinguish him from the latter he was later called Ḍâfû the "old." Yûfû, his favourite pupil, is said to have been the architect of the palace in Lahore, Delhi, and Agra, which were built by the Emperors Akbar and Jahângîr. This: Michael Angelo of the Turks died when nearly 90 (herein also resembling him) on the 12th Dûmâd 1, 986 (July 17, 1578). He was buried behind his masterpiece, the Selimânum Mosque, close to the offices of the Shaikh al-Islâm, beside a chapel, school, and well, built and endowed by him. The chronogram (tâ'rîkî) gives the year of his death without any possibility of doubt as 986 (cf.
I. MOSQUES (Zditar):

II. SMALL MOSQUES (Zditar):

of Mustfa Hâmid Efendi, at Azâhal-âmam, Stamboul; 33) Ch. at the türfenc-khâna, outside the walls (şehir); 34) Ch. of Serif-i aghâ Aga, at the Adrianople gate, Stamboul; 35) Ch. of the superintendent of the metalcasters (dokme-giller kâtipâ), in Aliyûb, Stamboul; 36) Ch. of the ağa-bashi, Aliyûb; 37) Ch. of the physician Kâsinürde, in Sülihdâre, Stamboul; 38) Ch. of the snow seller (bârâq) Salâmân, in Aliyûb; 39) Ch. of the snow seller (bârâq) Salâmân, in Stamboul; 40) Ch. of Ahmed Celebi, in Kirendiklî; 41) Ch. of Vâhiyân kâlia, in the Kâsîm Pasha quarter, Stamboul; 42) Ch. of Şakur iyevi (superior of the city) Hasân Celebi, ibid.; 43) Ch. of Şahîl Bây, Topkâna, Stamboul; 44) Ch. of Ilyászâde, ibid.; 45) Ch. of Hasan bâghi Memi kâlia, in Scutari; 46) Ch. of Mehemâd Pasha, ibid.; 47) Ch. of Hâmid Pasha, in Scutari; 48) Ch. of Murât-kâna, in Khâski, Stamboul; 49) Ch. of the şarraf, outside the Topkapu, Stamboul; 50) Ch. of the maqâm-i Ābdi Celebi in Şulu monastir.

III. SCHOOLS (Madrassa):
1) Sch. of Sultan Sâlîman, in Meckka; 2) Six schools, built by command of Sultan Sâlîman, in Stamboul; 3) Sch. of Sultan Selim I (beside the Kâşîk-i Âhmed-i Âlgâr, carpet-makers); 4) Sch. of Sultan Selim II, Adrianopol; 5) Sch. of Sultan Selim II, Corlu; 6) Sch. of Prince Mehemâd, in Stamboul; 7) Sch. of Khaşışi Khurram, on the women's market (sâvi-i hâsâris), Stamboul; 8) the school called Kâhiyâ of the Khaşışi Khurram, in Sultan Selim, Stamboul; 9) Sch. of the Sultan mother, in Scutari; 10) Sch. of Princess Mahrû-i Mihâ, in Scutari; 11) Sch. of Princess Mahrû-i Mihâ, at Adrianoupol, Stamboul; 12) Sch. of Mehemâd Paşa, K adîrîa liyami; 13) Sch. of Mehemâd Paşa, in Aliyûb; 14) Sch. of the mother of Oghmân Şâh, Ali serai, Stamboul; 15) Sch. of Rustam Paşa, Stamboul; 16) Sch. of All Paşa, Stamboul; 17) Sch. of the executed Mehemâd Paşa, Topkapu, Stamboul; 18) Sch. of Sulî Mehemâd Paşa, inARENTa, Stamboul; 19) Sch. of İbrahim Paşa, Stamboul; 20) Sch. of Sinân Paşa, in Stamboul; 21) Sch. of İkander Paşa, in Scutari; 22) Sch. of 'Ali Paşa, in Scutari; 23) Sch. of the Egyptian Muşaffî Paşa, in Gebîse; 24) Sch. of 'Abd al-Âhad Paşa, in İniyî; 25) Sch. of Kâzîm Paşa, in Scutari; 26) Sch. of 'Ibrahim Paşa, at the âda-e Gate, Stamboul; 27) Sch. of Shamsi 'Abd al-Âhad Paşa, in Scutari; 28) Sch. of Şahîl Kânî al-Din, in Scutari; 29) Sch. of the Mufti Hâmid Efendi, in Stamboul; 30) Sch. of the military judge Pirzâ Aghâ, in Stamboul; 31) Sch. of Khâsîık, in Stamboul; 32) Sch. of Aghara, in Stamboul; 33) Sch. of the Mufti Hâmid Efendi, in Stamboul; 34) Sch. of the military judge Pirzâ Aghâ, in Stamboul; 35) Sch. of Khâsîık, in Stamboul; 36) Sch of Aghara, in Stamboul; 37) Sch. of Vâhiyân Efendi, in Stamboul; 38) Sch. of the Dîrderdar 'Abd es-Salâm Bey, in Scutari; 39) Sch. of Tûfî Kâdi, in Stamboul; 40) Sch. of the physician Mehemâd Celebi, in Stamboul; 41) Sch. of 'Hasan Celebi, in Scutari; 42) Sch. of

XII. PALACES (Serai):

XIII. BATHS (Hasamsi):

Bibliography: No monograph dealing exhaustively with the life and artistic activities of Sinan has yet appeared nor is there any architectural survey of his buildings yet in existence. The main source so far is Müaffe Bâbi’s work, Tuchkheht al-Bihayrî, which contains a short bibliography of Sinan, of which there are two editions: one without date and place of publication (Stambul, middle of the sixteenth century), 16 p., small 8°; entitled Tuchkheht al-Ahlaviya; the second, Stambul 1515, II, press, 72 p. 8°. The two editions give lists of Sinan’s buildings which differ from one another in many points. Ewliya Celebi, Seyyede, seems to have known Sinan’s work. The following are references to Sinan in Ewliya Celebi: i. 147 (Trzit, i. 1 p. 69); ii. 147; (Trzit, i. 1 p. 72); i. 150 (Trzit, i. 1 p. 73); i. 155 (Trzit, i. 1 p. 79); ii. 159 (Trzit, i. 1 p. 81); i. 163 (Trzit, i. 1 p. 82 sq.); ii. 307 (lacking in Trzit); i. 308 (Trzit, i. 1 p. 167); ii. 309 (Trzit, i. 1 p. 168); iii. 310 (Trzit, i. 1 p. 169); iii. 311 (Trzit, i. 1 p. 169); a list of all his mosques in Constantinople is given on i. p. 313 sq. (Trzit, i. 1 p. 170 sq.): building
In Brussel (Caravanserai of 'Ali Pasha; not in Mustafa); II. 19; buildings in Ismid; II. 64 = Travels, II. 31. Almost all the Constantinople mosques built by Siinan are fully described in Hafiz Husain Efendi of Awansera (flourished in the second half of the xvth century), Gardens of the Mosques (Hadżāl al-Dżamā'ī), with additions by 'Ali Saiti, printed at Stambul 1281; Extracts from it were given by J. v. Hammer, G. O. R., Perst 1833, ii. p. 47-144 (Mosques), i. 148 sqq. (Schools, Mosques); Retracts zur Kenntnis des Orients, ed. by H. Grothe, Halle 1914, vol. xi. p. 67 sqq. (F. Babinger); Ilii, Strassburg 1919, vol. xii. p. 247 sqq. (F. Babinger); Yeni madrassa, Stambul 1917, vol. 13, p. 249-252 and vol. 14, p. 269-279 (AHMAD Rafik Bey; with pictures). On SIinan's pupils, cf. Quellen zur wissenschaftlichen Kunstgeschichte in Jahrhuch der asiesischen Kunst, Leipzig 1924, i. p. 35 sqq. — The two above-mentioned Tadikār's are as MSS in Cairo, National Library (cf. 'Ali Efendi Hilmi al-Dżehestani, Fihrist [Cairo 1306], 231 [listed in an old madrasa]).

**FINAN PAŠHA, name of several viziers of the Ottoman empire, mostly of Christian origin (as the name SIinan [al-Din Yüsuf] suggests; cf. Isl. xi. 20, note 1 and J. v. Hammer, G. O. R., ii. 536, note a). The most important are:**

1. Khodja SIinan Paša, vizier under Mahmed II the Conqueror. Molla SIinan al-Din Yüsuf Paša was a son of the famous Molla Khirdar Beg, who, as a son of the hāji of Siwri Ħāṣir Džalal al-Din, traced his descent from the celebrated Khodja Naqš al-Din. His father who died in 863 (1458/1459) was the first hāji of Stambul (cf. the title Khodja hāji). SIinan Paša was born in Brussel probably about 1438, was taught in his youth by his father, afterwards entered the train of Mahmed II whose teacher and counsellor he became. According to one story, probably erroneous, after the second deposition of the famous grand vizier Mahmod Paša [q.v.] he succeeded him but fell into disfavour about 881 (1476/1477) and was only later appointed mustišer in Siwri Ħāṣir and in Adrianople after a remarkable cure which the Sultan made him take (cf. J. v. Hammer, G. O. R., ii. 241). Sultan Bayzid who had taken a fancy to him granted him an ample allowance. In 887 (1482/1483) he retired, but a year later we find him acting as minister of Gallipoli. He died on Şafr 24, 894 (March 1, 1486) at Gallipoli where he was buried in a fakri restan by Mahmod II in 1247/1248 (1831). His two brothers also earned the title of Paša, namely Ahmad Paša and Yağkid Paša (cf. Tashkizāzade-Madjid, i. 196, 197). Molla SIinan Paša, called simply Khodja Paša by his contemporaries, was an important scholar and the author of several works on mathematics, metaphysics, astronomy, ethics and legends of the saints. He wrote a commentary on the astronomical works of Gaγhmun (Gâγhmu), and a commentary on al-Džāfīr's Mawâdhit fi 'ilm al-Kalam. His Mollâ 53 leaves with ethics and under the title Tadikār of a book he wrote a 'legend of the saints' (original manuscript in the New Otomaniya library at Stambul). A discourse on prayer from his pen entitled Mawâdhit was printed at Stambul (Abu l-Dīya Press).

**BIBLIOGRAPHY:** Tadikār al-Džamā'ī, i. 193-195, Stambul 1281; following him, 'Ali, Khudaj al-Madžid (part not yet printed) and Sâd al-Din, Tadikār al-Dżamā'ī, ii. 498-500, Brussel Mehmend Tahir, Oframāl Mül'eller, ii. 223 sqq. (thorough); Sâd al-Din, tüzāmī, iii. 101 sqq.; Sâd al-Din of Edirne of 1310; Regarding the tomb of Sîna Paša there are two different statements. The tomb (megra) is however still in existence in Gallipoli, according J. H. Montgomery; cf. also Ewliya, Sûhûdituri, i. 418 (monastery, mosque), 419 (poor kitchen, subutet), 420 (tomb), but see Brussel Mehmend Tahir, ef. cit., ii. 224, note 1. II. Khâdîm Sîna Paša, grand vizier under Selim I, Sîna al-Din Yüsuf Paša was probably of Christian descent; he was the chief of all governor of Rumelia and then of Anatolia. In the battle of Callidran (Aug. 23, 1574), he commanded with success the right wing of the victorious Ottoman army and when Herekekoglu Ahmad Paša, four times grand vizier, was suddenly dismissed on Ramaşan 9, 920 (October 28, 1514) he became his successor. Pei fer Bella Sîna un suo ricevo quasi era imbranò (e.g. emerber, master of the horse) e aveva 7 aspri eoli, e il biglieteghe di Notilia nuovo, reports the Venetian Bailo Antonio Giustinian, under date March i, 1516. In the campaign against Syria and Egypt, Sîna Paša was made commander-in-chief. On 29th Dha 'l-Hijja 923 (January 23, 1517) he commanded the Ottoman troops in the battle of Ridaniya, but was killed in personal combat with Sultan Tûman Bîy. His successor in the grand vizierate was Yûnis Paša [q.v.].

**BIBLIOGRAPHY:** J. v. Hammer, G. O. R., ii. 447, 466, 494, 496, 662; Sâd al-Din, tüzāmī, i. 107. The Italian sources mentioned in Jorge, G. O. R., ii. 330, note 1; Målûk al-Dżamā'ī, 214. III. Kordja Sîna Paša, five times grand vizier of the Ottoman empire. Sîna Paša was of Albanian descent; he was the son of a peasant in Dihr (Dubna) or according to others in Deltino (cf. Jorge, G. O. R., iii. 170, no authority given; note venir a Divinon all incontro di Corfo, according to Bello Matteo Zune in 1594; cf. H. Allberi, Relazioni, iii. 3, p. 420, Florence 1895). He entered the Serai through the levy of youths (daghîrmeh, q. v.); under Suleiman became Samâgirtt hâsch, chief captain, was later promoted to be mür-i fuwâ of Malaija, Kaşapmûnî, Ghazâa, Tarâbulûs (Tripolis in Syria), Erzerum and Halab, and in the spring of 1588 became governor of Egypt (cf. J. v. Hammer, G. O. R., 351). From here he undertook campaigns against the Venetians, which he conquered and the entire Ottoman empire. The Ottoman poet Nihâli celebrated this event in a poem entitled Fethâname. Venetian (MS., perhaps autograph in the Vienna National Library, cf. G. Flugel, Catalogue, l. 640 sqq.) and the Arab historian Mahmod Kağh al-Din al-Makkî describes fully in this and the following campaigns in a work dedicated to Sîna and entitled al-Bâk al-Yaânî f 'î Fath al' Oframâl (cf. S. de Sacy, N. E., iv. 4735; part ed. with Portuguese translation by L. Lopar, Lisbon 1892). For further panegyristos of Sîna Paša, cf. J. v. Hammer, G. O. R., iii. 560, 779 from 'Ali, Khudaj al-Madžid. In 1571/1572 Sîna Paša was again appointed governor of Egypt and in the spring of 1574, in the campaign against Tunis he was given supreme command.
of the Ottoman land forces. Goletta (Hit al-Wadil) was stormed after a month's siege and Tunis incorporated in the Ottoman empire. Sinan Pasha who had become six vizier in 980 (1572/1573) was promoted two years later to be vizier of the cupola (ra'bad esiri). In the spring of 1556 he led the Ottoman army against Georgia and took the town of Karabac 985 (August 5, 1556) and was appointed grand vizier in succession to Ahmed Pasha who had died. Georgia was conquered but not subdued so that almost immediately after the conclusion of the campaign, difficulties arose which resulted on the 20th Dhu'l-Qa'da 900 (December 5, 1582) in Sinan Pasha's dismissal and banishment to Dimetoka, later to Malagha (i.e. Melikyeh Kazer) (cf. Selimkâ, Ta'rîh-i, p. 170; Gio. Tom. Minnado da Revigo, Historia della guerra fra Turchi e Persiani, Turin 1588 and Venice 1594, in which the writer describes the Persian campaign from his own experience). Through harem influence and a present of 100,000 ducats, however, he soon succeeded in exchanging his exile in Malagha for the governorship of Damasc (cf. Selimkâ, p. 215; G. O. O., iv. 183, from which he returned to Constantinople in Djamâdâ II, 997 (April 1589) as grand vizier. The vast wealth which he already possessed and which later assumed fabulous proportions, enabled him to make remarkable gifts (e.g. a grand admiral's flagship and seven galleys) and to erect splendid buildings. The handsomely fitted kôşgâh of the Serai on the shore of the Golden Horn which bore his name and was not destroyed till 1827 (cf. J. von Hammer, G. O. R., iv. 387 note d), owed its origin to him. He also took up the old plan of connecting the Black Sea with the Gulf of Nicomedia by digging a canal from the sea of Sâbadja (q.v.) to the Gulf of Nicomedia for which he hoped to utilise the skill of Sinân the architect (q.v.). This great undertaking seems to have fallen through as a result of the wars (cf. also Hâjsîdî Khalfa, Dîshân-Numa, p. 666 and the literature quoted under Sâbadja). On the 11th Shawwâl 999 (August 2, 1591) Sinân Pasha again fell from favour and was dismissed, but by the 25th Rabi' II, 1001 (January 29, 1593) a rising of the janissaries caused him to be sent out to fill the grand vizierate for a third time. Henceforth all his energies were concentrated on winning military laurels in the west, especially in Hungary. In the spring of 1593, he therefore assumed in person supreme command of the army in the Hungarian campaign, which he concluded with the capture of numerous castles and strongholds. A month after the death of Murât III on the 6th Djumâdâ II, 1003 (February 16, 1595), he had again to surrender the imperial seal and go into exile at Malagha, only for a few months however. On the 20th Shawwâl 1003 (July 7, 1595) he replaced his rival and relative Ferhad Pasha and a few weeks later began a campaign against Wallachia, which had rebelled. The rather inglorious close of this campaign and the loss of Gran, which was ascribed to the inactivity of his son Mehemmed Pasha, Beglerbeg of Rumelia (cf. the documents mentioned in J. von Hammer, G. O. O., iv. 445 sq.), brought about his dismissal and banishment to Malagha in the 16th Rabi' I, 1004 (November 19, 1595). But when his successor Lala Mehemmed Pasha died on the third day after his appointment, the imperial seal was again for a fifth time entrusted to Sinân Pasha. He was just engaged on plans for capturing Erzurum in Hungary when he died on the 4th Shawwâl 1005 (April 3, 1596). He was buried in his own turbe in the Söfîler quarter of Stambul. Sinân Pasha was an unusually cruel, stubborn, selfish man at the same time ignorant, man as to whose character Ottoman (notably "Ahi") and western chroniclers are entirely in agreement. He was feared among the European envoys at the Porte. Not all of them dared reply so sharply and to the point as the Austrian envoy Dr. Barthold Perzen (cf. Die Freiherren von Wratislaw merkwürdige Gesand schaftsreise nach Constantinopel, Leipzig 1787, p. 138; Engl. ed. London 1862, ed. by A. H. Wratislaw). The Venetian bâilti all agree in their descriptions of this powerful man, for example: Constant. Garzoni (1575, in Alberi, Relationi, iii. 1, p. 411), Antonio Tiepolo (1576, in Alberi, op. cit., iii. 2, p. 153 sq.), Lom. Bernardo (1592, in Alberi, op. cit., iii. 2, p. 355: fu fatto mansu [e.g. xeseli, depozed] per causa della calceatin [e.g. xaya dachtun], Paolo Costarini (1583, in Alberi, op. cit., iii. 3, p. 240), Girol. Moro (1590, in Alberi, op. cit., iii. 3, p. 326, 374 sq.), Mauro Zane (1594, in Alberi, op. cit., iii. 3, p. 45 sq.). He is described (1595) as "un giovane principe con una barba nera, e baffi a spazzole" (in A. M. L. S., p. 240) and "un giovane principe con una barba nera, e baffi a spazzole" (in A. M. L. S., p. 240). Sinân Pasha was immensely rich; his estate is fully described in H. F. v. Dier, Denkwürdigkeiten von Asien, Berlin 1811, part i, p. 101 sqq.; cf. Persich, Türk. Hist. Berlin, p. 79: MS. 39, fol. 1058; also J. von Hammer, G. O. R., iv. 358 sq. A biography of Sinân Pasha was the Beglerbeg Ayas Pascha (d. 1568) executed by order of Sulaimân the Great, who left two sons Mahüm Pasha (cf. Sîfîlî-e 'efâmî, iv. 314) and Muğafî Pasha (ibid., iv. 386). On Ayas Pascha, not to be confused with the grand vizier of the same name, who also was an Albanian (from Valona) cf. Sîfîlî-e 'efâmî, i. 447.

Bibliography (in addition to works already mentioned): the Ottoman historians most of whom have been used by J. von Hammer, also Haşdif al-Wanara, p. 35 sqq.; Hâjsîdî Khalfa, Fröhl. Ant. 76 sqq., followed word for word in Sîfîlî-e 'efâmî, iii. 103 sq. — An Arabic biography of Sinân Pasha is in the MS. Weststein 499 (Ashwardi, viii. No. 8471) on fol. 135b. — On Sinân's son, the Beglerbeg Mehemmed Pasha, cf. J. von Hammer, G. O. R., x. 587 below (Index s.v.) and Sîfîlî-e 'efâmî, i. 139; he died in Djamâdâ I, 1014 (September-October 1605). Among Sinân Pasha's relatives was the grand vizier Ferhad Pasha, who again was related to Pertew Pasha (cf. Marchantino Domini [1562] in Alberi, Relationi, iii. 3, p. 185 at the top; questo Pertew passa gia anni 55; è abitante e parente del magnifico Ferhad Pasha, vivono maritato nella madre di sua moglie) (Franz Buchinger).

SIND, consists of the lower valley and delta of the river Indus (Sindiah) from which the province takes its name, and lies between 20° 35' and 28° 39' N. and 66° 40' and 71° 10' E. The Aryans were settled on the Indus before 1000 B.C. and about 500 B.C. Darius Hystaspes conquered the valley, but Persian rule in Sind had passed away when Alexander the Great traversed...
the country in 325 B.C. After his departure it was included first in the Mauryan empire and then in that of the Bactrian Greeks. From the first century before, until the seventh century after, Christ India was invaded by various hordes from Central Asia, of whom the Ephthalites, or White Huns, settled in Sind and established the Kši dynasty, which was terminated by the usurpation of the Brahman minister Cā, whose son Dāhir was reigning when Sind was invaded by the Arabs. In A.D. 711 Mūhammad b. Kāšīnū Šakhī, invaded the country, by the order of the Kšišīfat al-Walīd, in order to avenge the maltreatment of some Muslim merchants who had failed to obtain redress, captured the seaport of Dāhibu, the town ofNERANKOT (the modern ƏHırdārābd), and Kārāw, where he defeated and slew Dāhir, and finally took the capital, Aror or Alor, and, in 713, Multān, where much treasure fell into his hands. He had barely had time to organize his conquest when he was superseded by Sulaimān, who succeeded al-Walīd in 715, and, as a protégé of the ƏHırdārābd, whose cruelty had made many enemies, was put to death with torture at Wāstā, on the Tigris.

A succession of Muslim governors ruled Sind, leaving the administration chiefly in the hands of the most prominent of whom enjoyed the free exercise of their religion; but the hold of the Kšišīfa on the province gradually weakened, and in 871 was entirely relaxed. Two Arab chiefs founded independent states in Multān and Mashāra, but when Māhmūd of Bāsra led his raids into India, Abu 'l-Fath Dāhir, governor of Multān and Sind, still maintained the fiction of allegiance to the Kšišīfa. His adherence to the ƏKıntārī heresy cost him his throne, and Māhmūd placed a governor of his own in Multān. In 1053 the Sumras, a Rāpjūt tribe, cast off the yoke of Farrukhābd and established their authority in Lower Sind, but the upper province remained subject to the Ghaznavids and was conquered, with the rest of their dominions, by Muṭīa al-Dīn Mūhammad b. Sām. His lieutenant, Nāţīr al-Dīn Kābāta, submitted to Kāth al-Dīn Aiḥak of Dīhi, but was defeated by Shams al-Dīn Itūtūn, whose authority he refused to recognize. At the beginning of the fourteenth century the troops of 'Abbās al-Dīn Khālid overthrew the Sumras and destroyed their capital, but in 1333 the Sāmīs, a Rāpjūt tribe converted to Islam, seized the reins of government, and set up a ruler of their own with the title of Dīm, Mūhammad b. Tughlāk of Dīhi died in March, 1351, on the banks of the Indus, while in pursuit of a rebel whom the Sāmīs had harboured, and Sind continued successfully with the imperial arms until the Sāmīs were reduced to obedience and vassalage by Firūz, Mūhammad's successor. With the decline of the power of Dīhil that of the Sāmīs revived, the greatest of their line being Dīm Nanda, or Nīzām al-Dīn, who reigned for forty-six years and died in 1509. In 1520 Sind was invaded by Shāh Beg Arūznīn, who, having been driven from Khandār by Bābur, succeeded in establishing himself in Sind. Dīm Firūz, the last of the Sāmīs, was driven out of Godārā in the year 1352, but was compelled to flee into Persia. On the death of Shāh ƏHısan, the last of the Aghāhāns, in 1554, the Tārkāhāns, another short-lived dynasty, became rulers of Sind, and witnessed the sack of Thatha by the Portuguese in 1555, but in 1592 Akbār defeated Mīrāz ƏDīn Beg Tārkāhān, and annexed Sind, which was incorporated in the Ṣubā of Multān. The province was a part of the empire, but owing to its remoteness local affairs remained much in native hands. The Dāḍūpūtrās were powerful in Lower Sind in the seventeenth century, and were succeeded by the Kalhoras, who in 1701 ousted them from Shāhkūrār and obtained from AḤmad Shāh a large grant of land. For the next forty years the Kalhoras increased their power, but in 1740 Nūr Mūhammad Kālhorā incurred the displeasure of Nādir Shāh, to whom that part of Sind lying to the west of the Indus had been ceded, and was compelled to surrender Shāhkūrār and Sītū and to pay a heavy tribute. In 1754 Ahmad Shāh Durrānī (Abdāl), to whom Sind had passed on the death of Nādir Shāh, drove Nūr Mūhammad to Dājālsalmer, where he died, but his son, Mūhammad Murād Yār Kāhān, appeased the Afgān and retained the kingdom. In 1768 his brother and successor, Ḥulām Shāh, founded Ḥīrdārābd on the site of Nerankot. The relations of the Kalhoras with the English East India Company, which in 1772 opened a factory at Thatha, were the reverse of friendly, and the factory was closed in 1775. Some years later Mīr Bidār, a chief of the Tālpūr tribe of the Balāfī rose in rebellion, and the Kalhorās compromised the matter by appointing him minister, but he was assassinated in 1781 after defeating an Afgān army near Shākjūrār, and his son 'Abbās-Allāh Khān Tālpūr drove 'Abbās al-Nāţī, the last of the Kalhorās, to Kālāt. 'Abbās al-Nāţī regained his throne and put 'Abbās Allāh to death, but the latter's kinsman, Mīr Fāṭḥ 'Abbās, defeated him and finally compelled him to take refuge in Dījōlpūr, where his descendants still hold distinguished rank. In 1783 Fāṭḥ 'Abbās, the first of the Tālpūr Mīrs, established himself as Ra'sī of Sind. The history of the country under its new rulers is bewildering, owing to its partition among different members of the family — (1) the Ḥīrdārābd Shāhī or Shāhīdūrābd branch, ruling in Central Sind, (2) the Mirpurī or ƏMmānī branch, seated at Mirpur, and (3) the Subāhīdī branch, ruling at Kāhārūr.

The early relations of the English East India Company with the Mīrs of Sind were unsatisfactory, and difficulties in connection with the passage of British troops through the province on the outbreak of the first Afgān war in 1838 led to the introduction of some degree of British control. The Mīrs were now amenable, but their army rose against the British, and in 1843 was defeated by Sir Charles Napier at Mānnī. Mīr 'Abbās Murād, the Subhābī branch, remained faithful to the British, and was permitted to retain his principality of Kāhārūr, but the rest of Sind was annexed, and has since been a British province. Under the administration of Sir Bartle Frere it remained tranquil during the Mutiny of 1857, and the only British regiment in the province was set free for the suppression of the revolt elsewhere.

(T. W. Hain)
SINDIBAD-NĀME (Syntipas), a widely
known collection of stories, which since
the time of Péris de la Croix has been much
studied by folklorists. The general theme is as
follows: A king entrusts the education of his son
to the sage Sindibād. The prince is ordered by
his tutor to keep silence for seven days; during
this time he is calumniated by the favourite queen
and the king is on the point of putting him to death.
Seven viziers, by each telling one or two stories
succeed in postponing his execution and on the
eighth day the prince, who has recovered the
use of his speech, is proved innocent. This cycle
is also known as the history of the seven
viziers. In another cycle (the history of the
ten viziers, Bakhtiyār-nāma), ten viziers are
invited to a banquet, and all but one, who
is kept behind to guard the door, are killed by the
drunken prince, who then goes out to rob the
doorman of his purse and the prince defends himself by relat-
ing these stories. The Tātī-Nāme studied by
Pertsch is another similar collection.
The book of Sindibād is referred to by Masʿūdi
ten cent.) alongside of The Thousand and One
Nights; at a later date it became incorporated in the
root Nights, but also retained an independent
existence. It is found in the Oriental literatures,
Syria, Hebrew, Greek, Pehlevi, Persian, Arabic,
Turkish and it entered the mediaeval literatures
of the West; French, Latin, Italian, Catalan,
Slavonic, Armenian and German versions are known.
India has stories of the same genre and Benfey
has attempted to derive the Syntipas from an
Indian prototype Siddhākṣati, which we do not
however possess; its Indian descent has however
not been rigorously established. It may be noted
on the other hand that the moral of these stories
and characteristic feature of the trial by silence
would recall Phrygian tradition.

SINDJĀB (Sendjāb), a Kūrd tribe in the
Persian province of Kirmānshāb. In summer the Sindjābī pitch their tents in the
plain of Māhdājāt and in the district of Dīwānā,
in winter they move to the lands south of the
Alwānd (in Kūrdish: Halawān from the older Hal-
wān, cf. Sarīn), a left bank tributary of the
Diyāla which it joins near Kānīnān. Here the
pasturages of the Sindjābī stretch from Sarīn
up to the mountains of Agh-dagh, Bighaṭ and Kāfār
(south of Kānīnān) and in the south stretch as
far as Ḫalāwij. The delimitation of the Turco-
Persian frontier in 1913 left a part of those winter-
quarters of the tribe on the Turkish side but the
convenience of this division was officially re-
cognised. On the left bank of the Alwānd the
Sindjābī occupy a narrow strip to the north and
west of Ḫaṣ-ḳī Shīrīn [q. v.] up to the present
frontier between Persia and the Ṭū̄fān; they have
some ten villages there.
The tribe consists of twelve clans (Calāb, Ḫalāwij,
Salmenevar, Shākh-i Nārīḵān, etc.). The number of families cannot
be over 2,500, of which not more than 500 are pure
Sindjābī; the remainder consists of incorporated clans: Lūrā (Arkawāz), Wātakwāz, Dījīf (Barzā)
and Gūrān (Tufangā). About 1,500 families of the
Sindjābī agglomeration winter on the Alwānd.
According to Soane they speak Kūrdi, i.e. the
dialect which does not belong to the Kirmānshāb
group.
The chieftains of the Sindjābī have often acted as
governors of the frontier district of Ḫaṣ-ḳī Shīrīn.
The tribe provided the government with a contingent of 200 irregular horsemen.
The Shācref-nāme does not mention the Sindjābī.
According to themselves they once lived in Bayāt
near Ḫaṣ-ḳī whence their chief Bakhṭīyār Kān
brought them into the province of Kirmānshāb
where they lived with the Gūrān for some time. This
may explain their conversion to the religion of
the Ahl-i Ḥaḳḳ (cf. ‘All-lāh), although they often
profess themselves outwardly *Twelve Shīrīs*
(*ithnaw-sahāri*). Under Ḥasan Kān Calāb, son of
Bakhṭīyār Kān, the Sindjābī formed themselves
into a separate tribe. The son of Ḥasan Kān,
Shīr Kān Ṣamān al-Mannikālī, became chief in
1903 and died an octogenarian in 1915. His sons
Kāsin Kān, Ali Abī Kān etc. played a certain part
in the military operations of 1916—1918;
being on the side of the Turks, they adopted a
hostile attitude to the English and Russians.

SINDJĀR, the name of the capital of a
district in Diyar Bahri [q. v.] (Balād Sindjār)
and of the ranges running north of it (Bujbal
Sindjār). The town, which is identical with the
ancient Sīngha is situated a very little east of
42° East. Long. (Greenwich) and in 36° 22' N.
Lat. in a valley of the Tawk (now pronounced
Ṭog) range which is south of and parallel to the
Bujbal Sindjār, through which the Nahr Tharthūr
flows with the steppes on the south. On the alleged
navigability of the river in the middle ages cf.
Serre-Hersfeld (Bibl.), i. 193 sq. As the walls show,
the town was at one time much larger than now.
It was bound to be prosperous from its favourable
geographical situation and the fact that it lay on
a fertile slope surrounded by desert. According to
Ibn Ḥawkāl it was partly irrigated artificially so
that all kinds of fruits grew there. As a stage on
one of the two great roads from Mōsul to Beled
(Balāt, Eski Mōsul, see eski), to Ḫaṣ-ḳī [q. v.]

and on to Ra‘is al-'Ain, Sindjär was able to carry on an extensive trade in its own products. Now the conditions are entirely changed. Sarre and Herzfeld point out especially that in contrast to what the geographers say, namely that date-palms were extensively cultivated in Sindjär, there is not a single palm-tree there now, and the limit of fruit bearing by the date-palm lies much farther south. Sachau (Bibli.) however talks of fertile fields in the neighbourhood of the town. — The people of the Džabal Sindjär and of the town are Kurds, who belong to the sect of the Yazidis. The district was already Yazidi in the middle ages.

Bibliography: The ancient history of Singara is outlined in Sarre-Herzfeld, Archäologische Reise im Euphrat- und Tigris-Gebiet, 1911 pp. i. 203. The statements of the mediaeval geographers are collected in Le Strange, The Lands of the Eastern Caliphate, 1905, p. 98 sq.; all the necessary references to the sources are given there and in Sarre-Herzfeld, i. 204. For the history of the town under Islam what is said under Sankü holds good. Al-Sam‘ānī, (G.M.S., xx, 1912), f. 312a-5, gives a few beads to the rise of the Sīnjaris in Sindjär. Modern conditions in Džabal and B. Sindjär are fully described by E. Sachau, Reise in Syrien und Mesopotamien, 1883, p. 322 sqq. and there are a number of notes in M. v. Oppenheim, Von Mittelmessur zum Persischen Golf, 1899 (Index s. v. Beled [does not distinguish the different places of this name] and Gebel Singär). The above account is mainly based on the full description of the mountains, town and monuments (with sources and bibliography) in Sarre-Herzfeld, index s. v. Džabal Sindjär, Nahr Tharthār and Sindjär (in the quotations from vol. ii. 355. 7) where further references are given. — Maps in the works just mentioned. General view of the town in Sarre-Herzfeld, ii., plate bxxiv. — On the Yazidi of Sindjär cf. Pognon, Sur les Yazidis de Sindjär, R. O. C., x., 1915/1917, part 3 (reference by Struthmann in Id., xiiii., 1923, p. 371); Pauli-Wisowa, Realens., s. v. Singara and Sínjar. (M. Plessner)

SINF (A.), pl. sinf; — synonyms ħifṣa; ḥār, pl. kārīṭ; šerṣa in Morocco.

Historical. The organisation of labour and the grouping of workers into corporations in Muslim cities dates from the ninth century of our era and is closely connected with a movement half religious and half social, socialist in origin, that of the Karmaţians [q.v.]. At this period, industrial development and the growth of urban populations produced serious crises under the 'Abdulid Caliphate. The servile war of the Qin id (q.v.) at Baṣra, riots in Baghdād in the first thirty years of the tenth century and lastly the anti-Arab nationalist (Shu‘ubiya, q.v.) reaction in the provinces.

The custom, Karmaţian in origin, of organising into gilds attained its zenith in the Muslim countries subjected to the new state which arose as a result of the propaganda of the Karmaţians, namely the Fātimid caliphate of Cairo (tenth-eleventh century). Then, in 1171, the reconquest of Egypt for Sunni orthodoxy affected it seriously. The gilds were subjected to strict police control and gradually lost all their privileges. Their organisation survived in very humble forms especially in the Ottoman empire, in the Pāndjāb, in Persia and in Turkestān, down to the last years of the sixteenth century (Kūdī described those of Damascus in 1883).

Since 1917 the ancient Muslim gilds have tended to become ṭa‘āb or syndicates for the new professions, dependent on the Third International (Moscow). This change was noticed in Java in 1920, then in Bağhdād, in Teherān, in Egypt and finally in Damascus since 1925.

Organisation. The earliest sketch of the organisation of the Muslim guild is found — unfortunately in too concise form — in the eighth of the Kasida (i.dh.) al-Safā (eleventh century) mixed with Hellenistic conceptions which suggest that they are Byzantine survivals.

From the xvth century we have (in manuscripts) a series of catechisms of initiation into the gild, called ḥusāb al-fatuwwa (q.v.; in Turkish ḥusāb al-fatuwu; in Persian ḥusāb al-fatuwu). They enable us to construct the hierarchy of the grades — ṭa‘āb (syn. ṭa‘īr, ṭa‘īf, amin). They describe the ceremony of initiation (ṣo‘d; q.v.); but they do not give any details regarding the regular working of the gild tribunal and the degree of its competence. We can only gather these details from historical and legal texts and from the narratives of travellers like Ibn Džabair and Ibn Baṭṭūṭa.

The master-craftsman is called mu‘ullaš, his journeyman ḥabīb, the apprentice wuqālīn, the labourer ḥanť. The members of each gild are pledged to guard the secrets of manufacture and to supply good work at a fair price; the whole body of traditional customs of the gild, orally transmitted, is called ḥusāb, a word which has become well-known since 1908 with the meaning "political constitution" and has been in use among the artisans from a remote period.

Since the ninth century the following have been organised into gilds, the Islamised clients (ma‘āall), enfranchised and converted, but not the Arab conquerors nor their mercenaries, nor their slaves. Alongside of the clients there have been constituted under their seign, certain Jew ish and Christian corporations, since it is to them alone that Muslim states permit trading in and working in precious metals and drugs.

Since for ten centuries, there has been no revolution in the technical processes employed by the Muslim artisans, the study of the distribution of the different gilds in the Muslim cities, Fez or Baghdād, Damascus or Cairo, shows that as a general principle there was a fixed topographical distribution of the trade gilds in any particular Muslim city. The principal fixed points were the offices of the money-changers beside the mint, the public market and the tribunal of the mu‘āštah: the ḥaṣīṣiyah (q.v.) at once general shops and the piece-goods exchange; the thread market; lastly the university, organised into a corporation from its origin (Karmaţian propaganda). We know of other centres, economic in origin, the specialised markets, the sale of goods brought to the town from the country or from abroad — the great caravanserāis (khan, eshāk).

A certain number of conditions, specifically Muslim in origin, affect labour in practice, the distribution of tools and the recruiting of labourers. Firstly there is the institution of ḥusa‘ or ṭawṣa‘, insaluble public property such as irrigation, canals, mills, baths, gardens, bridges, drains; the administration of the ḥusa‘ also affects the gilds,
through the shops, nearly all the fixtures of which are žďáří. Then there is the institution of the žďáří or control of the markets entrusted to a muhtasib. This institution, purely canonical in the early centuries, and fallen into disuse in the tenth to twelfth centuries in the great period of liberty for the gilds, was revived by the state from the twelfth century as a police office with the object of keeping a close watch on the gilds, which were suspected, especially in Egypt, Syria and Turkey, of Karmatian and revolutionary sympathies. The manuals for the žďáří by Nibrāwī and others show this; in Morocco, for example, the muhtasib ultimately established a compulsory weekly court. When, according to the law, he ought on the contrary to have prohibited the gilds from fixing compulsory rates (tučto) for provisions.

There arose a whole collection of moral problems in connection with the gilds. Muslim literature is rich in documents referring to the gilds of charlatans, rogues, immoral and criminal associations, and the theologians and jurists have handed down to us collections of cases of conscience and mental reservations (kiyāl), the importance of which has recently been shown by Schacht.

Bibliography: There is a general bibliography of the history of labour in the Muslim world in ch. 3 of vol. viii. of the K. M. M. and a summary chronology in vol. iii., p. 19-21. The connections with the Third International have been exposed in the same Revue, vol. ii., iii. and ivii.

Additional reference will be found in the Bibliography to the article SHADD.

(Louis Massingham)

SINGAPORE (from the Sanskrit Sīhākura, "the lion city") is the name of an island and a city thereon, situated in 1° 17' N., 103° 50' E. (Gr.), at the southern end of the Malay Peninsula, from which it is separated by a narrow strait recently bridged by a causeway which carries the line of railway running to Bangkok. In the Middle Ages Singapore was a port of call for the trade between India and China, and its native name Tēmaēek is recorded in Chinese, Javanese and Malay sources. Originally part of the South Sumatran empire of Sri Vijaya (Palembang), it enjoyed a brief period of practical independence (from circa 1250). In the early part of the 14th century it was unsuccessfully besieged by the Siamese. It is claimed in the Javanese poem Varākṛtīvīgama (1365) under the name of Tumamur under the name of Tumamur and was destroyed by the Javanese circa 1377. After that event it was superseded by Malacca, and dwindled into a comparatively unimportant place, though still occasionally visited by passing ships for wood, water and other provisions, and having a žďářímandar (port officer) under the Muslim Sultans of Malacca (down to 1511) and subsequently under their successors, the Sultans of Johor. On February 6, 1819 a British settlement was founded at Singapore by Sir Thomas Stamford Raffles on behalf of the East India Company. It was on the site of the old medieval port town and included only a small part of the island; but by a treaty made in 1824 the whole island with its adjacent islets was ceded to Great Britain in full sovereignty.

At the time of the British occupation the inhabitants numbered only a few hundred, partly Muslims (Malays) and partly wandering sea gypsies (Orang Laut) living mainly in their boats. The growth of the town was rapid. The trade is mainly in the hands of European and Chinese merchants, though other races, such as Indians and Arabs, also share in it. Three-fourths of the inhabitants are Chinese. In 1921 the population within municipal limits was 350,355, that of the island generally 418,358. Of this last number about 64,000 to 65,000 were Muslims, the bulk, viz. 53,595, being classed as Malays (though this latter figure included only 75,184 real Malays, 13,348 Javanese, 6,582 Boyanese, 1,142 Bugis and 349 Banjarneze, and a few others). The remaining Muslims comprised some 9,000 Indians and about 1,200 Arabs. The great majority are Sunni. The school of Shiite being in touch with the Muslims of Arabia and India on the one hand and with those of the Malay Peninsula and the Dutch East Indies on the other, Singapore, though mainly non-Muslim in population, is an important link in the chain of Muslim propaganda and in the pilgrim traffic to Mecca.

ŞiN-I KALAN (literally Great China), Arabic and Persian name (the Arabic şin is of course from the Persian šin) for the seaport of Canton in the Mongol period; it is known especially from the travels of Ibn Baṭṭūṭa [q. v.] (ed. Defremery and Sanguineti, iv. 271 sq.) but is used by other Muslims (Rašīd al-Dīn, Wāsāf) and also by Western writers (Odocone de Pordenone, Marignolli, also in the Carta Catalana; cf. the quotations in Yule, Cathay and the Way Thither, London 1866, p. 105, and Rašīd al-Dīn, Ḫāmus al-Tamārīk, ed. Blochel, 1911, p. 493). For ŞiN-I Kalan Ibn Baṭṭūṭa also has Şin-i-Şin; this latter name is according to Yule, taken from idrist [q. v.] who describes in the extreme east of the Chinese empire a large trading town under the name Şiniya-Şini (Geographie d'Édrisi, transl. A. Jaubert, Paris 1836—1840, i. 193 sq.). (W. Bartfield)

SİNÜB, a town and seaport on the north coast of Asia Minor between the mouths of the Sakarya [q. v.] and the Khastrı Mrak [q. v.] and about equidistant from the ports of Şamusun and Ineboli, 75 miles N.E. of Kastambol [q. v.]. It is the celebrated Seats of the ancients and has retained this name from Muhammadan authors know it by the name of Şinub (Ahu-T-Fidby, p. 392 and Ibn Faḏi Aḥlāf al-Umari, Milād il-Ādār, N.E., xii. 367). Şinub (Ibn Baṭṭūṭa, ii. 348). Şinub (Anon. Giese, p. 34: vol. i. and I. Beg, ed. Babinger, p. 73). Sinub (‘Ashq Pasha Zade, and, following him, all the Turkish historians and other writers). The town lies on an isthmus running N.E. from the mainland to
which it joins the peninsula of Bar Tepe Adast. This position gives the town two harbours but only that on the south, the safer of the two, has remained in use since ancient times. The strip of coast behind Sinûb is bounded by the great range, which borders the Central Anatolian plateau, and is particularly difficult to cross directly south of the town.

The history of Sinope goes back to a remote period. It was already an important port for trade with caravans from Mesopotamia and Cilicia, before it became a Greek colony of Miletus, in the 6th century B.C. Herodotus, Xenophon and Strabo describe it, but in the time of the latter it was no longer the great terminal port for continental trade (cf. Ramsay, *Historical Topography of Asia Minor*, London 1890, p. 27). The town however retained its importance; in the second century B.C., it was the capital of Mithridates of Pontus and after its capture by Lucullus in 70 B.C., it knew several centuries of prosperity as a Roman colony under the name of Colonia Julia Felix. When, under the Byzantine empire, the interior of Asia Minor gradually lost its Hellenism, Sinope remained a commercial centre, and with the rearward migration of Asia Minor by the Sarmatians in A.D. 832 had as one result that Themophobos, commander of the "Persian" auxiliary troops of the emperor, was proclaimed king of Sinope for a brief period; this episode is related by the Byzantine sources, Symeon Magister and Theophanes Continuatus.

As the conquest of Asia Minor by the Saldjûks was confined for the first century of the peninsula, Sinope remained Byzantine, but also served as a port for the merchants of the Saldjûk empire, who embarked there for the Crimea (Heyd, *Histoire du Commerce du Levant*, p. 298). At the beginning of the 12th century the town passed into the hands of the empire of Trebizond. The Saldjûk Sultan 'Abâd al-Din Kâlûbbâd took the town from them, Ibn Bibî, who gives a detailed account of its capture (Recueil des historiens des Seljoucides, ed. Houtana, iv. 54 sqq.) gives as the date of the capture the 26th Djuamâd II, 611, corresponding to the Nov. 2, 1214 (this day was a Sunday while Ibn Bibî talks of a Saturday). The Saldjûk Sultan had taken advantage of the discord between the two Greek empires, but the immediate pretext for attacking the town was the entry of the lord of Sinope (in Ibn Bibî and Barhebræus, *Chronicon*, ed. Bedjan, p. 429, called Eir Aleks, i.e. Kyn Alexis Commeneros, cf. Fallmerayer, *Geisch des Kaiserreichs Trapezunt*, Munich 1827, p. 94) had made its way into Turkish territory. Abu 'I-Fidâî seemed also to allude to this conquest (Tarttî, Constantinople 1256, ii. 122 under 611 A.H., cf. Fallmerayer, op. cit., p. 96); in any case Barhebræus is wrong in saying that Alexis was killed by the Saldjûks. The Byzantine historians do not mention the taking of Sinope.

The town was given a Saldjûk garrison and the church turned into a mosque. Some time afterwards, the town was given as a hereditary fief to the celebrated vizard Mu'min al-Din Sulaimân Perwâne, who built a fortress there, which is described by Ibn Battûta. It was about the same time that William of Rubruck passed through the town, which he calls Sinopolis, on his way to Russia. According to Mânedjdim Bahîl (iii. 34), Perwâne was succeeded at Sinûb by his son Mu'min al-Din Muhammad (676-696) then by his other son Mu'izz al-Din Mas'ûd, on whose death in 700 A.H. his lands passed to the lords of Kastamûn. But another authority (Ali, *Kâm al-Ahkâm*, v. 22, quoting Râbi') says that after the deposition of the Sultan 'Alî al-Din (in 1307) Ghâzân Khân granted all the lands in the north and northwest of Asia Minor to Ghiyâṡ Celebi, son of the Saldjûk Sultan Mas'ûd. This Ghâzân Khân is well known in history especially for his bravery in his acts of piracy (for example he dived under the water to destroy the keels of enemy vessels) which he committed against the Genoese and the Greeks of Trebizond, whence his ally he had sometime been. Ibn Battûta (loc. cit.) and probably Abu 'l-Fidâî (*Târîkh al-Buldân*, ed. Reinard and de Slane, p. 393) however make Ghâzân Celebi a descendant of Perwâne. After his death, Sinûb was taken by Sinûb al-Din Sulaimân Paşa, lord of Kastamûn (cf. Ifsênîdîrî Oghlî); it was shortly after this event that Ibn Battûta visited the town (c. 1340). During the 14th century, the town retained its importance as a commercial centre, connected with the road to Trabûn and Bârias (Taeschner, *Das anatolische Wegen*, i. 196). Trade was mainly in the hands of the Genoese, who probably had a consulate there since 1351; there was also a Genoese colony (Heyd, op. cit., i. 550). Sinûb was the last refuge of the Ifsênîdîrî Oghlî, when the Ottoman Sultan Sulaimân Bâyârî I had attacked them and in the end they abandoned the town to him in 797 (1394-1395), according to the old Ottoman chronicles (Ağâh Paşa Zâde, p. 72; Anon. Giess, p. 34). After the restoration of this dynasty by Timûr in 805 A.H. Sinûb again passed under their rule; it was the seaport by which the rebels against the Ottomans, like Shakîb Badr al-Dîn (cf. Bahânger, in *Ibul*, xi. 60) were able to escape under the protection of the Ifsênîdîrî Oghlî. It was however only in the year 1458 that Muhammad II definitely incorporated the town in his territory by a treaty with the Ifsênîdîrî Oghlî İsmâ'il Beg, who received in exchange fiefs in Rûm III. This event is recorded by all the Turkish historians and by the Byzantine Ducas and Chalcondylas; the latter mention the formidable defences, that had been erected in the town.

Under Ottoman rule the town never again became a seaport of importance. In 1614, it suffered from an invasion of the Don Cossacks (Nâmûn, i. 298), which resulted in energetic measures of defence being taken. Ewliya Celebi (ii. 73) says that it was forbidden to the commandant to go more than a cannon-shot from the citadel and that the attacks of the Cossacks stopped in the reign of Murât IV. The only serious event since that date was the naval battle fought on Nov. 30, 1853 between the Russians and a Turkish fleet in the roadstead of Sinûb; the Turks were completely defeated and the town was partly destroyed by the bombardment. This event was one of the immediate causes of the Crimean war (von Rosen, *Geschichte der Türk*, Leipzig 1867, ii. 192). Under the administrative reforms in the Turkish Empire, Sinûb became the capital of a sancak (district) of the vilayet of Kastamûn; the other sancaks are Boyûltûd and İstefan. Cuviet gives the population of the town as 8,749 of whom
5.041 are Muslims. From the description the town has barely changed in the last few centuries. The citadel is in the eastern part of the town and is surrounded by enormous walls of the Byzantine period; seen from the peninsula of Boz Tepe, the citadel looks like the bridge of a ship, according to Ewliya. Citiun mentions others remain of earlier edifices. The quarters inhabited by the Greek Christians were outside the walls of the town, on the Boz Tepe side. It was this part that suffered most in the bombardment of 1853. Among the mosques Ewliya gives pride of place to the Sultan 'Ali al-Din Djam'; he gives a detailed description of the minbar which was a marvel of art built of marble. According to Hâdîjî Khalîfâ, Sulaimân I wanted to transport the throne from Constantinople for the Sulaimânîya Mosque but when they attempted to move it, it cracked so that the Sultan abandoned his plan. The town has many other old mosques and türbes (including that of Sâyiid Ibrahim Bâllî and that of Sultan Kâttûn), the study of which will throw much light on the history of the town. The industry for which Sinûbis is more particularly noted is that of goldsmiths' work (especially filigree work). The yards of Sinûbis used to build the large Turkish warships of wood from the mountains to the south. Towards the end of the sixteenth century, the traffic at the port of Sinûbis was less important than that of Şamûn and Izebel. An attempt to revive the trade of the town has been made by building a road for vehicular traffic from Sinûbis to Amassia, but it is only finished as far as Boyfüdd.

(S. H. Kazemetz)

SIPÂHÎ, SIPÂHÎ, SIPÂH SALAR. [See SIPH.]

SIPIH, "celestial sphere", noun de plume (kasbâhî) of the Persian historian and man of letters, Mirzâ Muhammad Tahtî of Khâgân. After a studious youth spent in his native town he was settled definitely in Thrâna, where he found a patron in the poet-laureate (muhalî al-khâzîn) of Fath 'Ali Khân. On his accession (1250 = 1834) Muhammad Shâh appointed him his private pamphletist (maddâb-i khatîsâ) and secretary and accountant in the treasury (mângû wa-munânîy yâ dîvânî). The same Shâh entrusted him with the composition of a universal history. Nâsir al-Dîn Shâh also encouraged him in this enterprise and in 1272 (1855) conferred on him the title of Lâdin al-Muâlî ("Tongue of the State"). Sîph died about 1496 (1878). Gobineau who had known him speaks of his "gravité docte et administrative" in contrast to the "façons légère et riante" of his colleague Râhî Khân Hidâyât. The book entitled Barâkâh al-Adîm finished by Sîph in 1251 deals with Persian prosody; it is illustrated by examples from the Persian classical poets. The Divân of Sîph does not seem to have been published; his verses quoted in anthologies (Mâdhûbâ al-Fanâbî) while showing technical skill lack originality and taste. Sîphî's history, with the pretentious title of Nâsîkh al-Tawârikh ("Effacement of the Chronicles") according to the Indian catalogues, consists of fourteen volumes of which the last stops at the period of the 6th Shî'î Imam Muhammad Bâkîr (d. 113 = 731). Its style is evidently appreciated in India where extracts from it have been published, as texts for examinations in Persian, but the present-day Persians criticize it severely and say it is full of inaccuracies and anachronisms. Of more importance is volume v. (l) which, anticipating the full scope of the work contains the official history of the Kâdîjî [q.v.] dynasty. It consists of three parts coming down to 1267 (1851) with a later supplement dealing with events down to 1273 (1857). This chronicle has been much used by the historians of the Bâbî movement [q.v.], Gobineau, Kažembe and Browne. The latter pays a tribute to Sîphî's candour and accuracy ("scarcely surpassed by the witty and sarcastic de Gobineau") with which he depicts on the one hand the faults of certain representative Persian officials and on the other the courage and heroism of the adepts of the sect.

(V. Minorsky)

SIÎRA (A.), the traditional biography of Muhammad. The word seems to be used for the first time as the name of a separate branch of study in the title of Ibn Hibbân's work (ed. Wüstenfeld, p. 3. al-haddî fi tâlîb wa-râ'id ilâhî) but there is other testimony to its use to mean biography of Muhammad; it is already found in this sense in al-Wâhidí (Ibn Sa'd, Tâhâbî, 11/18, man râ'id 'ibrâna) and in his pupil Ibn Sa'd (ibid. 11/12. 152; hå'llîy an sam'î ha 'ls-rafî wa'mâhghis min gharîbîn). Besides, the word 'ira' at this time already had the sense of biography in general; it is known that a Siîra Mu'allîya waslânî Umaiyya by 'Awâna al-Kalîbî (d. 147 or 158 a. H.) or by Madîbî b. al-Fârîshî (al-Tamîmî, d. 231) existed (Fihrist, p. 91, 98).

The meaning of "biography" comes in its turn from that of "condottiere", "manner of living", which the word 'ira' had and which is a natural development from the root 3-r-7 to "betake oneself", "to travel" (ira' is found in the Kûrâ, 22. 22) in the meaning of "manner of being", "form". It
seems that at first the plural form, *sijar*, was used by preference in connection with the biography of the Prophet, having been probably applied to the narratives of the life of Muhammad in the style of the *al-madhhab* of Pekeli origin, with which the Arabs were acquainted at the rise of Islam (cf. Nöldeke, *Gesch. der Peper u. Araber*, p. siv.-xviii.). This term *sijar*, in the majority of references which we possess to the early productions of Arab literature relating to the biography of Muhammad, is constantly found associated with the term *mihqāl* “military expeditions” (cf. A. Fischer, in Nöldeke-Schwally, *Gesch. d. Qorān*, ii. 241) and the association of these two words helps to enlighten us as to the composite origin of the *Sira*.

I.

**The Origin and Character of the *Sira***

The idea of piecing together into a consecutive and organic narrative the story of the life of the Prophet from his birth to his death was not an early nor a spontaneous one in the community of Islam. If it is natural that the deeds and sayings of the founder of the new faith should have at once attracted the interest of and have recommended themselves to the memory of his contemporaries and still more to the believers of the second generation, it is not the less true that the character of this interest was anything but historical, in the sense in which we understand the word. It was rather concerned, on the one hand with fixing the regular practice of worship and religious law according to the teaching and example of the Prophet and on the other with celebrating, after the fashion of pre-Islamic Arabia, the warlike exploits of the Muslims under the conduct of their chief, who was regarded by the majority of his followers as an amīr, whose wisdom and bravery, favoured by divine assistance, had gained him the most dazzling successes but who did not differ markedly in character from the amīrs of the Diḥliyya. It was the former of these two motives which, as we know, gave the stimulus to the process of formation of the *sunna*, under the typical form of the narrative *hadīth* (i. 200—206), which, although presented as a collection of biographical data, in reality is quite different in aim and character. The second motif, in its turn, has given rise to an abundant crop of stories relating to the Medinan period in the career of Muhammad, completely filled with military exploits. These narratives are simply the continuation or development of the literature of the *ayīn al-ʿArab* (i. 270—281), the characteristic features of which had already become fixed at a period antecedent to Islam; they have in common with the latter the naïve freshness of style, the tendency to break up the narrative into a number of episodes only very slightly connected with one another, and the abundance of poetical quotations (cf. J. Horovitz in *Islamica*, ii., 1926, p. 308—312), which often must have actually formed the kernel around which the prose story later established itself. One cannot deny to this kind of production a historiographical character, but one must remember that we are not here dealing with history placed in a chronological framework but arranged on any definite plan and that we have rather to deal with a series of “war memoirs” in which the faithful reproduction (although often subjective) and the realistic description of one episode are found alongside of an inaccurate and distorted description of another, and in which, in particular, the linking up of incidents and a synthetic survey of the course of events are completely lacking.

Of quite another kind are the origins of the biography of the Prophet properly so called. The latter owes its origin to the transformation undergone by the personality of Muhammad, the religious consciousness of Islam and to the decisive influence which certain heterogeneous elements have exercised on this transformation. It was above all contact with Judaism and Christianity and the desire to set up in successful contrast to the figures of the founders of these two religions, that of the founder of Islam which encouraged the development of the legend with which the person of Muhammad has been surrounded and which has completely transformed and altered the nature of his character from his childhood (or even before his birth) to his death. The Prophet, who had so definitely declared during his mortal career, that he only considered himself a man of like nature who ultimately came to represent the visible manifestation of divine perfections: his life, becoming a kind of copy of that of Moses and of Christ, was given the stamp of the supernatural in its smallest details (cf. the fundamental work of T. Andre, *Die Person Muhammad's in Lehre und Glaube seiner Gemeinde, Stockholm 1918 [Archives d'Études Orientales, xvii.], especially ch. I.).

How are we to conceive the elaboration of this process, which appears completed in its main lines barely a century after the death of Muhammad? Does the actual narrative, which is its result, contain alongside of elements the fictitious and fabulous character of which cannot be doubted, statements which are based on a tradition more worthy of credence, in which the tendencies, corruptions and the panegyristic amplifications may perhaps contain a kernel of historical fact? Here we have a problem of historical criticism which, first raised by the great Eastern scholars of Islam in the second half of the last century, is still far from a definite solution, and one which, besides, belongs rather to the study of the personality of Muhammad and of the origins of Islam, than to that of the origins and editing in literary form of the *Sira* which forms the subject of this article. It will be sufficient to recall here that the influence of Jewish and Christian tradition (either in the form of imitations of stories from the Old and New Testament or in that of borrowings from the ṭāhir and ṭayyāra on the one hand, and the apocryphal gospels and Christian hagiography on the other) was long ago suspected by Schwally and that Nöldeke (Z. d.M.G., 1858, ii. 30—33) was the first to point out, by analyzing the stories of the conversion of the first believers, that very often the *Sira*, far from reflecting an authentic tradition only represents an anticipation, presented with a show of a historical documentation, of a state of affairs much later than the events related. The history of the beginnings of Islam was adapted and idealized for the greater glory of the families and individuals who played the leading parts in the history of the Arab empire. It was however Goldscheider's brilliant essay on the character of the narrative *hadīth* (Men. Stud., i. 1906, p. 169, which marked a decisive turning-point in the critical study of the *Sira*. It was recognised that the *Sira* in the literary form, in which it
has come down to us is simply a collection of narrative hadiths which do not differ substantially in their mode of formation from the more strictly doctrinal hadiths. In the case as in the other, the hadith gives no guarantee of historical". In its remaining lines: In the one as in the other, the text contains a formulation of doctrine in a polemical point rather than a historical statement (cf. Caetani, Amali dell' Islama, i, 28-58). The analysis of the literary processes that formed the Sira has been carried out to its extreme by Père H. Lammens in a series of articles in which the learned Jesuit has set out to prove that the whole structure of Muslim tradition regarding the life of the Prophet, at least for the phase preceding the Hijra, is quite without foundation. Every incident related by the Sira, each alleged historical detail is only the result of a subjective exegesis of a verse of the Koran, out of which the Medina school (where religious zeal for the memory of the Prophet was maintained with the greatest vigour) deduced by a process of "pious fraud" with the use of all sorts of learned combinations and foreign elements, the course which the life of Muhammad "must have taken" without the existence of any support in historical tradition for the reality of the incidents related. The Sira would thus be in substance only a great "Kuranic midrash", completely fabricated with the object of glorifying the Prophet and sustaining this or that other religious or political thesis. The rationalism of Caetani and of Lammens, which extends even to the apparently inconsequential details of the life of Muhammad, including his name and parentage, has seemed extreme to many scholars (cf. de Go ge, in Centenario Amalvi, Palermo 1910, i, 151-158; Noldeke, in W. Z. K. M., 1906, xxxi. 297-312; t., 1913, iv, 205-212; t. 1914, v. 160-170; Becker, in I. t., 1913, iv, 263-269: Islamstudien, Leipzig 1924, i, 520-527; a popular account of the question in my Storia e religioni nell Orientali sentite, Rome 1924, p. 138); nevertheless, if they have not succeeded in definitely triumphing over the views of those who think that even in that part of the Sira which relates to the life of Muhammad before the Hijra a number of statements retain a historical value, the cardinal principle which has guided them has proved extremely fertile. Detailed investigation has revealed from particular passages of the Sira, the midrash-like method which governed its formation (cf. especially Schrieke, in I., 1915, vi, 1-30; Bevan, in Beitrage zur Zeitgeschichte, ii, all. Ett. Wiss., 1914, xxvii. 51-61; Horovitz, in I., 1914, v, 41-53; 1919, ix, 159-153; 1922, all. 184-185); it may even be said that the character of learned combination seems to extend not only to the whole story of the Medina period at least to some of its episodes (cf. Horovitz in I., 1922, xii, 175-185; Vacca, in R.S.O., 1923, a. p. 87-109).

The formation of the Sira down to the period of its reduction to its "canonical" form seems to have taken place along the following lines: the continually increasing veneration for the person of Maham mad provoked the growth around his figure of a legend of hagiographical character in which alongside of more or less corrupt historical memories there gathered episodes modelled on Jewish or Christian religious tradition (perhaps also Iranian, although to a much less degree).

This material became organised and systematised in the schools of the Medina musulmind in, through a midrash, subacute and full of combinations, of passages from the Koran in which excesses had delighted to discover allusions to very definite events in the life of the Prophet. It was in this way that the history of the Medina period was formed. Religious pragmatism also seared upon stories relating to the Medina period and modified their character, often quite profoundly, but in this field it encountered more precise historical statements, which had already been elaborated after the custom and style of dealing with stories relating to pre-Islamic military expeditions. From the combination of these varied elements resulted the Sira in its vulgar form, which we find already fixed in its essential features by the beginning of the second century of the Hijra.

II.

The Reduction of the Sira to its Literary Form.

It was the Bayt al-Maghâbi of Wâhâb b. Mana bih (34-410 A. H.), the name of which is due particularly to works relating to Biblical and South Arabian history. But it was especially at Medina, as we have already seen, that the study of the Sira was cultivated in deliberate fashion alongside of religious tradition. The oldest author of a book on the biography of Muhammad, 'Urwa b. al-Zubair (d. 94), is well known as a jurist as a historian. The son of the famous companion of the Prophet took only a very slight part in the political activity of his brothers 'Abdâllah and Mas'ûd; early reconciled to the victorious Umayyads, he sent to the Caliph 'Abd al-Malik, at the latter's request, numerous explanatory notes on points relative to the beginnings of Islam (quotations in Tahtab, cf. Caetani, Amali, i, index to vols. i. and ii.; Fock [see Bibliography], p. 8, note 22). His biographical activity was, however, not confined to this, his correspondence for he also communicated his pupils some information collected by him, according to the practice of oral transmission guaranteed by the inmâd, which henceforth constituted the method of the Sira as well as of Hadith.

We see that the same rule was adopted by a contemporary of 'Urwa, Abâ b. al-'Uthmân (23-105), the son of the Caliph, who also was settled at Mecca; his teaching regarding the life of the Prophet was collected into a book by his pupil 'Abd al-Rahmân b. al-Mughîra (d. before 125). These earliest literary productions to the two names just mentioned, is added that of Shu'ârâ, Abâ b. Sa'd (d. 122) whose influence seems to have been slight) are given the same maghâbi, which, as we have seen, remained classical till a late date and suggests (as
This explains why in his work the use of the term was corrupted in such a way that the scholastic tradition of the *ilm al-hadith* was deeply shocked by it and unanimously refused him the title of a *muhađid*, worthy of credence (cf. the texts collected by Wüstenfeld, Ibn Hisham II, introduction). This verdict (which was pronounced even in the lifetime of Ibn Iṣhāq by no other than the great jurist Mālik b. Anas) was a result of which Ibn Iṣhāq found himself forced to give up teaching in Medina and to settle in the Ṣaṟaṯ. This is all the more important as it marks the clear separation between historical, and purely doctrinal hadith. It goes without saying that, in the collection of hadith in the strict sense like those of al-Bukhārī, Muslim, etc., we find biographical information of the first order (especially in the books devoted to the *mughāṣṣ and to the mubāqṣa*) but the fact of containing material in common only serves to accentuate still more the difference between the two literary genres.

The abundance and the variety of material collected by Ibn Iṣhāq forced him to enlarge the circle of his authorities and to accept a number of insufficiently supported traditions. He even takes steps to give the source, not always particularly clear, of some of his information, as we have seen, as is often the case, it goes back to Jewish or Christian sources. He does not neglect, contrary to what seems to have been the case with his predecessors, to use poetry to supplement his sources (he has even been accused of having collected a number of apocryphal verses) and he precedes the narrative of the life of the Prophet with abundant genealogical and antiquarian notes. To sum up, the character of Ibn Iṣhāq in comparison with the authors who preceded him is that of a real historian and in him we have the final fusion of biography of the religious type of the *muḥaddith* with that of the epic-legendary type of the *ṣayyid*. It is this original and personal character of the work of Ibn Iṣhāq, which, while it explains the hostility of the schools of tradition, justifies the immense success which it has enjoyed through the centuries, a success which has not only overshadowed similar previous works and some which closely followed him (like the *mughāṣṣ* of Abū Maʿṣūr [d. 170] [ii. 106] and of Yaḥyā b. Saʿd[. d. 194]) but made him a decisive influence on the future development of the *Ṣira*. In addition to Ibn Hisham's recension, Ibn Iṣhāq's biography was reproduced for the most part by al-Tabari in his two great compilations, the *Ṭawāṣṣ* and the *Ṭāfsir* and through the intermediacy of these two writers it has become the principle source of later historiography.

Only one other writer has a position alongside of Ibn Iṣhāq of hardly less importance, namely Muḥammad b. Umar al-Waṣāṣ (130–207) whose work as a biographer of the Prophet has come down to us by three different channels, the *Khitāb al-Mughāṣṣ* (abridged translation by Wellhausen, Berlin 1882: unfortunately we do not yet possess a complete edition of the text) which was transmitted by Muḥammad b. Shuqayl b. Ṭalḥīl (181–261): the *ṣira* which precedes the *Ṭabāṣṣ* of his pupil and secretary Muḥammad b. Saʿd (d. 230) (Ibn Saʿd, ed. Sahau, vol. 1 and ii.) in which, along with traditions going back to al-Waṣāṣ, we have others of different origin; lastly the *Ṭabāṣṣ himself*, especially in vol. iii. and
iv. for all that deals with the relations of Muhammad with his companions and with the part the latter played in the history of Islam before the death of the Prophet. With al-Wâkidî the Sîra loses this unity and this combination with universal history which Ibn Ishaq had given it, although he also, after the model of the latter no doubt, composed a Kitâb al-Tariqîd wa l-Madkhal 'il-Magâzi (Fihrist, 95 end): it rather assumes the form of a collection of detached monographs, of which the most elaborate are those devoted to the public life of Muhammad, his expeditions, his correspondence, the emmissaries which he received or sent. In comparison with Ibn Ishaq, al-Wâkidî shows little taste for poetry. On the contrary he had a great talent for chronology, the systematic treatment of which, as we know, goes back to him. On the other hand, in collecting the statements of tradition regarding the companions of the Prophet, al-Wâkidî founded through Ibn Sa'd, who arranged and added to the material supplied by his master, a new branch of the study subsidiary to the 'ilm al-hadîth, the development of which has been quite extraordinary viz. the 'ilm al-risâl, the biography and criticism of the traditions.

After al-Wâkidî (the regular source with Ibn Ishaq) of successive historians beginning with al-Baladhuri (q.v.) whose Sîra incorporated in his Anbâ' al-Ash'âr and goes back almost in its entirety to him (cf. de Goeje in Z. D. G. M., xxvini. 1884, p. 387—390), the sîra is no longer dealt with for some centuries in works of great importance (we know relatively little about those which al-Madâ'inî, the famous historian [d. 225], devoted to it, Fihrist, p. 101). The attention of the historians became attracted to the datâ'il al-mubnawâwâ and to the ǧâmâ'il (cf. Andrae, Die Person Muhammad's, p. 57 sqq.), a branch which broke off from the Sîra to assume a development of its own, while historical biography is restored, following the example of Tabari and in general after him, to the great works on universal history. The countless collections of biographies of the companions of the Prophet sometimes contain historical references to the Sîra differing from those that are taken from the well known sources of Ibn Ishaq and al-Wâkidî and some of which go back to a remote antiquity. A study, which has still to be undertaken of such works as the Ja'reb of Ibn 'Abd al-Barr, the Usd al-Ghâsba of Ibn al-Athir, the izba of Ibn al-Hasar, etc., aiming at identifying and collecting these statements might yield appreciable results; but in any case we have only scattered and fragmentary material. Still more meagre is the spoil that might be obtained in the comments on the Sîra of Ibn Hisâm of which the most known is the Rawf al-Schalli (508—581; cf. Brockelmann, G. A. L., I, 135, 413). The colossal compilations of more recent date supply an incredible mass of notices, which their authors, urged by their scholarly zeal to exhaust in the completest manner possible all the sources to which they have patronally piled up; as regards matter they give no more than is contained in Ibn Ishaq and al-Wâkidî; the most that one finds in them is only some legend of late origin, the importance of which is no doubt considerable for the history of the formation and development of the cult of the personality of Muhammad, but the value of which for his actual life-story is absolutely nothing; or they are simply variants of stories already known. Among these compilations, a list of which would immeasurably prolong this article it is sufficient to mention the 'Uyûn al-Aṣghar of Ibn Saiyid al-Nâsir (661 or 672—734); Brockelmann, G. A. L., II, 71; the al-Mawâbûl al-laduniyya by al-Kastallî (851—923); Brockelmann, ii, 73; the al-Sīrat al-Shâmiyya by Shams al-Din al-Shâmi (d. 942 or 974); Brockelmann, ii, 304), the al-Sīrat al-Hadîthiya of Nâr al-Din al-Ḥâlîî (975—1044); Brockelmann, ii, 307) and the commentaries on the two first works Nâr al-Nibrâ by Sîbî Ibn al-Âdjamî (d. 841; Brockelmann, ii, 67) and Shâbîr al-Mawâbûl by al-Zarkâlî (d. 1122; Brockelmann, ii, 319). The résumés and the versifications of the Sîra, in which Arabic literature is so rich, are of course of no historical value.

(5. LEVI DELLA VIDA)

SIRADJ AL-KUTRUB (a.), "the gnome's lamp," or according to Idrisi, "the glow-worm's lamp," (for other meanings of šîtrub see Lane, vi. 2543), the name for the mandragora (mandragora officinalis, l.), one of the Solanaceae indigenous to the whole Mediterranean area, with a turnip-shaped root often in two parts, thickly covered with root-fibres, bearing a clump of large, egg-shaped, sinuate leaves, between which grow the axillary petiolated bell-shaped flowers. The fruit is a reddish yellow berry about the size of a cherry which from ancient times has been used for medicinal and magical purposes, as a poison, narcotic or love potion, as early, for example, as the Old Testament under the name dâdâ'ân (Gen. xxx. 14). According to al-Tamâmî, the plant is also called yabadû al-mawâbî and bâdî'ar al-sanam. It is the queen of the seven mandragoras and according to Herme's the herb which Solomon wore under his signet which gave him power over the djinn. The plant is therefore also valuable against all illnesses caused by evil spirits, such as lameness, cramps, epilepsy, loss of memory, etc. According to Ibn Sinâ mandragora is given to a patient to destroy his sensitiveness to pain during severe operations. The most important for magical purposes are: the roots known as alrâmûs, the digging of which curious stories are told even in classical authors (Plinius, Hist. nat., xxv. 94; Josephus, B. J. Jud., vii. 6).
SIRAF, a town in Persia, on the Persian Gulf, once a commercial port of great importance (17th/18th century). The houses in several stories were built of brick and other woods brought from Zanghār; it was supplied with water from springs tapped in the mountain of Djamm which dominates it from close at hand. The creation of an emporium on the island of Kaiz [q.v.] ruined it by taking away its Indian trade. It had not a harbour properly speaking and the ships used to moor in an arm of the sea eight miles off, to be sheltered from the wind. The sailors who set out from it went to Maskat, Kalam, the Nicobar Islands, and as far as Kalah in the Malay Peninsula, whence they reached Canton in a month. The trade consisted mainly in the exportation of striped cloth for bath-towels (soldā), pearls, silks, balances, and in the exportation of hērēbār (Indian spices, B. G. A., iv. 187). The inhabitants were engaged in sea-trade and were sometimes absent for years; they had amassed great wealth by dealing in spices and other merchants. They had built sumptuous houses but they were noted for their voluptuousness and lack of serious thought. It was also the warmest place in the district, so hot that one could not take a siesta there. Under the 'Abbāsids it was the principal town of the district of Ardashir-Khurra; it began to decline under the Būyids; destroyed by an earthquake which lasted seven days in 366 or 367 (977) it was afterwards rebuilt. Its ruins may be seen at Bandar Tāhiri (Le Strange, transit of Nuzhat, p. 116, n. 2).

A legend says that the mythical king Kal-Kāzus when he tried to ascend to heaven, fell down in this country and asked for water and milk to be brought him; this story has been invented to justify a popular etymology (Pers. ṣārām, "milk", ṣār, "water"). According to Yāкūt, the merchants pronounced its name ǧhālām, which is connected with the above etymology. Mention is also made of a spring of fresh water here at the bottom of the sea.

Sīrāf, Aḥū Saʿādu ʿAlīās Aḥsan b. ʿĀd Allāh b. al-Mubakkar was born before the year 900 (1489) in the small town of Sīrāf [q.v.] on the Persian Gulf; the waṣīʿ Allāh b. Tās gave the year 280 as the exact date (Yāкуt, Ḫūṣraw, iii. 123). He made his first studies in grammar and law in his native town, but when he was twenty he crossed the sea to ʿOmrān where he devoted his time to ʿAḥsan law. Later he returned to Sirāf and went from there to al-ʿAṣqār, where he studied Arabic grammar under Mahrāmān (cf. Zubālī, Ṭabāḥī, No. 44; Sayyūl, Baghīyar, p. 74). Later he went to Baḡdād and studied there principally under Aḥū Bakr ibn Durādīr and became one of the principal pupils of this eminent scholar and propagator of his works. However he did not confine himself to linguistic studies but became an authority in all branches of learning then practised. He studied the sciences of the ʿUṣūl and ʿĀḥsan under Aḥū Bakr b. Muḥiṭ, grammar under Aḥū Bakr b. al-Sarrāj and mathematics under Mahrāmān, mentioned above, tradition under Aḥū Bakr b. Ẓiyād al-Nisābūrī and Muhāmmad b. Aḥū b. Aṣkār. He was reputed to have been a Muʿtazilī, but this cannot be proved from his writings. For over forty years he gave legal advice (jāzīb) in the Rūṣāf mosque at Baḡdād and the Chief Judge Aḥū Muhāmmad b. Muʾrif appointed him on more than one occasion his lieutenant on the Eastern side of the city of Baḡdād. He was also invited to assume a post in the Secretariat of State, but declined the offer. Most biographers describe him as a very pious man, devoting his time to prayers and fasting, refusing any gifts from the great, and we are told that he used to copy each day ten leaves of manuscript which he sold for ten dirhems which sufficed for his livelihood. Against this Yākuṭ tells us that he was accused of borrowing valuable manuscripts from two booksellers and, being too mean or too poor, he caused his pupils to make copies of them. At the end of these he wrote that the work had been read over to him, and such copies later commanded a higher price than the originals, on account of the reputation of al-Sīrāfī. Though a lawyer of the ʿAḥsan school his personal opinion was highly valued and the account of such a personal advice on intoxicating drink is given by Yākuṭ; and though against some of the accepted principles of ʿAḥsan law the words quoted on the subject are sound advice for any creed. His reputation as a scholar was so great that he frequently received letters from monarchs and ministers from various parts of the Muslim world. The Sāmānī prince Nuṣr b. ʿAbṣār sent him a letter containing over 400 questions and addressed him as Imām, while the ruler of Dālam in a similar letter called him Shaikh al-Islām; other letters were from the Egyptian waṣīʿ Ibn Khūzāb etc. of the ten works which are named by title by his biographers only his commentary on the "Book" of Sbawaihī is easily accessible, but this work enjoyed a great reputation even during his life-time and his contemporary Aḥū ʿĀlī al-Fārisī, also an eminent scholar of the ʿĀḥsan school, displayed his envy openly. He and his followers tried for a long time to get possession of a copy with the intention of finding in it errors which they could point out publicly. When Aḥū ʿĀlī in the year 368 was able to buy a copy for two thousand dinars he did not find the errors he had wished and it was late to meet Sirāfī, as he died the same year on Monday the third day of Raḏjab in Baḡdād and was buried in the Khairūrān cemetery. As stated above, his biographers attribute to him ten separate works: 1) A commentary on the "Book" of Sbawaihī which has been printed in Cairo 1317 and used for the translation of the "Book" by Jahān (Berlin 1894).
of Arab history and includes a wealth of older traditions. The story, in the Kitâb al-Âzâhâr of bow 'Antar, the son of a slave-girl, was adopted into the tribe of Banû 'Abas for saving them at a time of great crisis already bears the stamp of a flourishing but already legendary tradition. The Strät 'Antar far transcends the unconscious development of a legend. By a bold stroke 'Antar, the solitary hero, is raised to be the representative of all that is Arab, 'Antar the pagan is made the champion of Islam. The romance thus comes to reflect the vicissitudes of the Arabs and Islam through half a millennium; the tribal feuds of the old Arabs; the wars against Ethiopian rule in Arabia; the subjection of Arabia and especially of Iraq to Persian suzerainty; the victories of the rising Islam over Persia; the remarkable historical position of the Jews in Arabia down to the seventh century; the conquests from Christianity by the Arabs, especially in Syria; the continuous wars of the Persian and later of the Muslim East against Byzantium; the victorious advance of Islam in North Africa and in Europe; the influence of the Crusades is also undeniable. The contacts between East and West are numerous. The romance is written in smooth rhymer prose into which some have been interwoven some 10,000 verses. The editions printed in the East since 1296 A.H. divide the Sîrat into 32 little volumes, none of which, like the separate nights of the 1001 Nights, ever ends at the conclusion of a tale.

Contents. The romance brings us through numerous legendary stories from early times down to the period when King Zuhair is ruling over the Banû 'Abas. The 'Abîd hero Shaddâd on a raid captures the negro slave-girl Zabîha (not till the xvith book do we get the denouement that she is a king's daughter, who had been carried off from the Sû'dân), who becomes the mother of 'Antar. As an infant, 'Antar tears the strongest swaddling clothes, at two years old pulls down the tent, at four slays a large dog, at nine a wolf and as a young shepherd a lion. Soon he comes to the rescue of his oppressed tribe, for which he is acknowledged by his father and adopted into his tribe. He seeks 'Abîa, his uncle's daughter, in marriage; the latter promises her to him in an hour of need; but after 'Antar has averted the danger, he imposes the most dangerous conditions to be carried out before the marriage. 'Antar fulfills them all but is only allowed to marry 'Abîa after ten volumes of wonderful exploits. The area of his exploits widens continually. In his own tribe 'Antar has first to overcome the resistance of his father, then the hostility of 'Abîa's relatives, to win over his rivals, including the poet 'Urwa b. al-Ward, to put an end to the feuds of the Banû Ziyâd, Ramî and 'Umâra. In the feuds between the sister-tribes of 'Abîa and Fadîhîra, 'Antar proves himself the saviour of the Banû 'Abas; outside of his tribe, he fights and overthrows the strongest heroes and makes them his friends; such are Durâid b. al-Simmâ, Mî'âb b. Ga'âmî, Hani b. Masîid, the victor over the Persians at Dhî 'Ktar, 'Amir b. Mâdîkarib, 'Amir b. al-Tûsfâl, 'Amir b. Wûdî, the knight of the Harâm, Rabî's b. Ma'âshâm, the pattern of Arab chivalry and many others. He fastens up his mu'âlalâs in the Haram of Mecca after defeating the other mu'âlalâ-poets in a competition, overcoming all his rivals in duels and passing an examination in
Arab synonyms from Amru 'l-Kais. From Mecca he goes to Khaibar and destroys the town of the Jews. But 'Antar is also taken beyond the bounds of Arabia. The Sira does not lack and does not lack detail. This 'Abib's father demands a 'asif-camel as a bridal gift, which are only bred by Muthhir, King of Hira. This takes 'Antar to the 'Irak. From there he is summoned to Persia to fight the Greek champion Badrāmī. Next we find him in constant association with the kings of the 'Irāq, Mundhir, Nu'mān, Aswar, 'Amr b. Hind, Iyās b. Kabiṣa and their vixiers notably 'Amr b. Bukāila. He has also constant dealings with the Shāhs, Khusraw Anāṣhārān, Khudākand (no shah of this name is found in Shāhī history), Kawadd (probably Kawad Shīrō), sometimes as a dreaded opponent, sometimes as a most welcome ally. The son of the king of Syria woos the promised bride of a friend of 'Antar. The latter goes to Syria, kills his friend's rival, defeats King Hārith al-Wabhār (Aretas), beheads his friend and with the death of Aretas at the request of the princess Halima becomes guardian of the new king 'Amr b. Hārith, who is still a minor, and as such ruler of Syria. Here 'Antar comes into contact with the Franks, sometimes as an enemy and sometimes as their ally against the Persians. Syria is under Byzantine suzerainty. For the services which 'Antar renders the Christians here, he is invited to Constantinople and entertained and honoured. Lailāmān, the king of the Franks, objects to this and demands that the emperor should hand over 'Antar to him. 'Antar along with Heraclius, the emperor's son, then leads the Byzantine army into the land of the Franks, subjects them to the emperor, reaches Spain, defeats King Santiago, pursues his victorious march through his provinces in North Africa from Morocco to Egypt. When he returns from these conquests on behalf of Byzantium to Constantinople, an equestrian statue of him is erected out of gratitude; the statue of his two brothers, who had accompanied him to Byzantium, are placed on either side of his. Shortly before his death, 'Antar comes to Rome. The king of Rome, Balbām b. Markas, is hard pressed by Bohemund; 'Antar kills Bohemund and liberates Rome. On a campaign of reprisal against the Sūdānese, 'Antar goes from kingdom to kingdom deeper into Africa till he reaches the land of the Negus. Here he discovers in the Negus the grandson of his mother Zabība. Even more fantastic are the campaigns against Hind-Sind, against the Christian king Lailāmān in the land of Bajla, in the land of the demons. 'Antar's death is brought about by Wizar b. Dabīr called Asad al-Rahiṣ. 'Antar had repeatedly defeated him in battle and taken him prisoner but always set him free again. Wizar feels humiliated by this magnanimity and continually renew his attack. Finally 'Antar blinds him. Though blinded, Wizar learns to shoot birds and gazelles with bow and arrow from their sound. 'Antar is struck by one of his poisoned arrows, but Wizar dies before 'Antar under the delusion that he has missed. While dying, and indeed when dead, still sitting on his steed Abūjjar, 'Antar still wars the enemy off from his people. 'Antar's marriage with 'Āliya was childless but from his secret marriages and love-affairs, several children were born including two Christians, and indeed Crusaders, Ghadinār, Coen-de-Lion, son of 'Antar and the sister of the king of Rome whom 'Antar had married in Rome and left in Constantinople, and Djufrān (i.e. Godefroi, Godfrey), the son of 'Antar and a Frankish princes. 'Antar's children are exactly what and what they are and the death of their heroic father. Ghadanfar and Djufrān then return to Europe. 'Abīs also becomes a convert to Islam.

Analysis: The following are the main elements that have contributed to the growth of the Sira:

1. Arab paganism; 2. Islam; 3. Persian history and epic; 4. The Crusades. 1. To Arab paganism it owes the chivalrous and knightly Bedouin spirit of the work, the majority of the characters in it, who often have historical features, the feuds between the sister tribes of 'Abs and Fadhāra; in connection with the race between Dābīs and Ḥabara, the most powerful of the Ahhār-al-'Arab, like king Zuhair's marriage with Tumādir, Zuhair's death, Mālik b. Zuhair's death, Ḥārīth and Luma, Djaīda and Ḥālīd, anecdotes of Ḥātim Tātī, the splendid figure of Rabi'a b. Mūsāmād etc. 2. To Islam belong the introduction with a long midrash of Abraham, repeated legends of Muhammad and Ali, the conclusion of the work with Ayyub's transition to Islam; the tendency of the book, to make 'Antar really prepare the way for Islam; 'Antar's victorious campaigns through Arabia, Persia, Syria, North Africa and Spain are modelled on the conquests of Islam. Certain details give the Sira a slightly Shī'a colouring. 3. Persian influence is found in the knowledge of Persian history and the Persian epic, in places of the Persian language, in the conception of kingship by grace of God, in the knowledge of Persian court life and ceremonial (throne, crown, imperial carpet), court-hunts (falcons, cheetahs), pigeon-post, Persian offices and ranks (vizier, mōbedān, mōbed, māzāgān, pehlēwān, eyes and ears of the Shāh) even the zaḥārīja (écuyers tranchants). 4. Christianity and the Crusades. The Sira knows of Christians in the Syria of the Sūdānese, in Byzantium and among the Franks. The Franks appear as Crusaders (the romance even mentions the cross worn on the breast), fighting for Shīlohe and Jerusalem. Djufrān (Godfrey) besieges Damascus and sends troops against Antioch. The Sira mentions the cross, the dress of the priests and friars, the girdle of the order (which in the Sira is the most important symbol of Christianity next to the cross), the crozier, the bell (clapper), incense, holy water, prayers for the dead, unction, sacrament and of holy-days, Christmas, Palm-Sunday, is aware that among the Franks the clergy are first in Church and state, that marriages between consuls are illegal, seems also to know of excommunication. 5. The Sira describes a Spanish place of pilgrimage and day of pilgrimage. The Christians swear by Jesus, Mary, the Gospels, John the Baptist (Mānī b. Ḥabīb al-Ma'mādī, Vokhna), by Luke (Lībi), Thomas (Mar Tōma) and Simon. The Emperor Radjīm rules in Byzantium and his son is called Heraclius; Balbām b. Markas is king of Rome. The Christian rulers of North Africa have names which end with the -ī, common in Greek and Latin, e.g. Martos, Kardus, Hermes, Ibn al-'Urūsī, Kindaryas b. Kīrmās, Sindarīs, Thedoros. The king of Spain is called Santiago; of the names of Frankish kings and princes that of Bohemund alone is certain. The names of his brothers Mübīrt, Sīhert, Kīhert and that of the prince Sīhīrt of the Sea show what is perhaps the commonest ending
in personal names in Old French. 'Antar's son by the Frankish princess is called Djurfan, which conceals the old French form Jofroi, Jefroi, Geoffroi) of the name of Godfrey of Bouillon. As the romance of 'Antar knows nothing of Europe, but a good deal about Europeans, the author must have become acquainted with them outside of Europe, of course at the period of the Crusades; Bohemund is slain by 'Antar. Godfrey is the son of 'Antar, who comes as a Crusader to Asia, learns his paternity there, avenges the death of his father and then returns to Europe. Even the name of Tafur of the king of the beggars in the army of Peter of Armenia, seems to be preserved in the Sira: Djafur is the name of the usurper who drives the infant prince 'Amr from the throne of Syria but is overthrown by 'Antar. In regard to intelligent sympathy with and toleration of Christianity, the picture we get from the Sira 'Antar is far in advance of that which the mediaeval Christian epic reveals of Islam, where the Muslims are made to worship idols, like Apollo, Cahu, Gomelkin, Jupiter, Margos, Malquiendant, Tervagant etc. The romance of 'Antar regards the Crusades not without sympathy and admiration. It is true that Crusaders are mentioned, who go to the Holy Land to seek plunder and to escape punishment; but the Franks are fighting for God the Father, for the Son and for the spread of religion.

Folklore and literary parallels. There is remarkably little folklore in the Sira 'Antar but it includes several noteworthy features: a splendid witches' kitchen, fine examples of allegorical speech, of omens, life-token. Most of the agreements with other narrative poetry may be regarded as commonplaces of the epic; the strength and growth of the hero, his exploits, the killing of a lion, mu'ammara (longevity) is as common in the 'Antar as in the Şâhân-Şâma), dreams, visions, Amasa, fights between father and son, the Gudrun motif of the bride's fidelity, the motif of the stupid man. There are very few borrowings: Nu'man's lucky and unlucky day, Khusraw's bell of justice (the motif of the legend of the Emperor Charles and the snake), a flight to heaven in a box borne by eagles, several African traditions (probably taken from geographical works on Africa). There are also links with European legends. The marvellous signs at the birth of Charlemagne (in Pseudo-Turpin) resemble those recorded in our romance at the birth of Muhammad, but Pseudo-Turpin undoubtedly borrowed from an older source. Artificial birds made of metal, which sing in various tunes by means of bells and organ pipes are described in French and German epics and also in the Sira 'Antar. But here we have to deal with the historical marvel of the Chrysotriklinum in Constantinople, and with a similar thing in the Ctesiphon of the Sassanids and also in the capital of the Tatar Khans. Some coincidences are very striking. Harith al-Zailim beats his sword Dhu l-Hiyaj against a rock, so that it may not fall into the enemy's hands; the rock is broken but the sword is uninjured, just as in the case with Roland's Durandal. 'Antar instructs his son Ghalib, who wishes to slay Khusraw and seize the power for himself, on the subject of kingship by God's grace just as, Girard de Viane does his nephew Aimeri who wants to kill Charlemagne. 'Antar's horse Abdjar takes flight to the desert after 'Antar's death, so that he may not serve another master, just as Renaud de Montauban's Baisart escapes to the forests of the Ardennes. Very remarkable is the parallel between the duel between Roland and Oliver and that of 'Antar and Rab'bi b. Mu'addam; the sword of the one combatant breaks in two and his magnificent opponent gets him another; the duellists are reconciled and become brothers-in-law. But such poetical developments have their origin in a similar chivalrous outlook, the relations of the knight to his sword, to his horse, to his lord and to his opponent.

Chivalry in the Sira 'Antar. The Sira is rightly recognised to be a romance of chivalry. In the pagan period among the Arabs the ideal of masculine virtue was mu'ammara, futurama; alongside of this we have more frequently in the Sira 'Antar furusiya along with furawa and tefarra. The knight is called fâris. 'Antar is called "a father of knights," Abu 'l-Fawwâris, sometimes Abu l-Fursân, Abû l-Fursân, Fâris al-Fursân, Afrâmus. Not everyone who rides a horse is a knight. The knight's qualities are courage, fidelity, love of truth, protection of widows, orphans, and the poor (Antar arranges special meals for them), magnanimity, reverence for women (Antar begins and ends his heroic career protecting women; he swears by 'Abia, by 'Abia's eye, conquers in 'Abia's name), liberalty, especially to poets. The knights are also poets, especially poets of the Hijâj, who are found in hundreds in the Sira 'Antar. The Sira also knows the institutions of chivalry. We meet pages and squires, not only the mutâhâra (of Ctesiphon) 'Antar himself trains several thousand squires. The Sira even describes tournaments on a great scale, in the Hijāj, in Hira, in Ctesiphon, the most splendid in Byzantium where 'Antar's lance strikes the ring 476 times. These tourneys have many features in common with those of Europe, fighting with blunted weapons, tilting at the ring, decorating and befogging the lists, the presence of ladies and girls. These agreements have been explained in the most diverse ways. On the one hand Deléncluze saw in 'Antar the model of the European knight, in the Sira 'Antar, the source from which Europe had obtained all its ideas of chivalry, while on the other hand Reinard simply found European ideas, customs and institutions imitated in the Sira (J. A., 1833, i. 102-105). In this some have seen the starting point for the study of the question of the origin of the Sira 'Antar.

Origin. The Sira 'Antar itself frequently and readily talks about itself and its origin. It professes to have been composed by al-Asma'i in the time of the Caliph Harûn al-Rashîd as his court in Bagdad; Asma'i lived for 670 years, of which 400 were in the Dîhiliya; he was personally acquainted with 'Antar and his contemporaries, concluded the composition in the year 473 (1080) and recorded traditions from the mouths of 'Antar, Hamsa, Abû Tâlib, Hâtim Tâyi, Amru 'l-Kais, Hâni b. Mas'ûd, Hâzim of Mecca, 'Ubâdî, Amr b. Wudd, Durâd b. al-Shûma, Anîr b. al-Tamîl. In fact we have a regular romance regarding the origin of the romance. The repeatedly mentioned râsul, nâhil, mutâhâra, şâhân-şâma, şâhân-şâma, Asma'i and other authorities have the same significance for the Sira 'Antar as the Dîhîsû, Pehlevi books and the hoary authorities in Firdawsi, or as the chronicles of St. Denis for the French epic. It is
simply fiction, when the Strat 'Anfar tells us that it exists in two versions, one for the Hindja and the other for the 'Iraq. The invention of a Hindja recension is intended to make it believed that 'Aṣma'ī collected the information in the Hindja from 'Anfar and his companions, which was utilised in the romance. The Hindja as the home of the romance is a pure invention. On the other hand 'Iraq may really have made a considerable contribution to the composition of the Strat 'Anfar. For the date of origin of the Strat 'Anfar we have the following clues: 1. In a religious dialogue between a monk and a Muslim (Das Religionsgespräch von Jerusalem um 100 A.D. aus dem Arabischen übersetzt von K. Völlers, Ztschr. f. Kirchengeschichte, xxix. 19) the monk mentions the exploits of 'Anfar. 2. About the middle of the xiiith century the Jew Samaw'āl b. Yahyā al-Maghribi, a convert to Islam, describes his career and mentions that in his youth he was fond of long tales like that of 'Anfar (M.G.W. F., 1898, iii. 127, 418). 3. The evidence contained in the book itself. The appearance of Bohemund, Djiufri (Godfrey of Bouillon), perhaps also of the king of the beggars, Tafar, brings us to the period after the first Crusade, that is at the earliest in the first half of the xiiith century. The composition of histories of 'Anfar must therefore have already been begun in the viiith century — on the evidence of the religious dialogue above mentioned. According to Samaw'āl b. Yahyā a book of 'Anfar of considerable size was actually in existence in the middle of the xiiith century and if Bohemund and Djiufri already appeared in it, it must have been completed at the beginning of the xiiith century. At the same time the mediadha may have continued to add a great deal to it and in particular continued its Islamisation. The midrash of Abraham which is quite an inorganic addition and the legends of Muhammad and 'Ali could belong to any period. An original 'Anfar can be reconstructed with philological probability. In vol. xxxi., the dying 'Anfar reviews his heroic career in his swan-song. He proudly recalls his victories in Arabia, 'Iraq, Persia and Syria. But he mentions neither Byzantium nor Spain, nor Fes, Tunis, Barks, nor Egypt, nor Hind-Sind, the Sūdān nor Ethiopia. This original 'Anfar may have arisen in the 'Iraq (under Persian influence or perhaps in emulation of Persian epic poetry). The swan-song makes no mention of chimaera, and knows of only one love of 'Anfar's. This original 'Anfar therefore should be called 'Anfar and 'Abba. Following a genealogical stimulus, the later epic made royal ancestors be found in the Sūdān and royal descendants in Arabia, Byzantium, Rome and the land of the Franks. The Crusades next found an echo and a reaction in the 'Anfar. The Crusaders came from the land of the Franks via Byzantium to Syria. 'Anfar goes in a kind of reversed crusade from Syria via Byzantium to the land of the Franks and brings about the victory, if not yet of Islam, at least of Arab ideals and culture over European Christianity. The whole geographical area and historical range of the novel is filled with the exploits of 'Anfar.

The romance of 'Anfar seems to be first mentioned in Europe in 1777 in the Bibliothèque Universelle des Romains (J.A., 1834, iii. 256); it was first introduced to European scholarship in 1819 by Hammer-Parganst and to comparative literature in 1831 by Dumlop-Liebrecht (Geschichte der Prosaerzählungen, iii.—xiv.). The study of the problem of scholarship raised by the Strat 'Anfar was begun by Goldziher (mainly in his Hungarian works). The Strat 'Anfar was for long a favourite subject of study in France. In the Journal Asiatique the work was often discussed and partly translated. Lamartine went into raptures of admiration and enthusiasm for 'Anfar (Voyages en Orient; Vie des grands hommes I: Premières Méditations Politiques, Premiere Préface). Taine places 'Anfar beside the greatest epic heroes — Siegfried, Roland, the Cid, Rustam, Odysseus and Achilles (Philosophie de l'Art, ii. 397). These tributes are not unmerited. The Strat 'Anfar unfolds before us the ever changing, glowing panorama of a particularly attractive period with an extravagant power of imagination, a skill in narration which never fails throughout the 32 volumes, and a poetical style of inextinguishable richness.

Bibliography: A very full collection of references to the manuscripts, editions, translations and treasuries on the Strat 'Anfar is given in V. Chauvin, Bibliographie des ouvrages arabes ou relatifs aux Arabes, etc., ill; Louvain et les fabulistes. Barham 'Anfar et les Romans de chevalerie, Lütz. Leipzig 1898, p. 113—126. Cf. also: I. Heller, Der arabische 'Anfarroman, Ungarische Mundart, v. 83—107; do., Az arab Antartegy, Budapest 1918; do., Der arabische 'Anfarroman, ein Beitrag zur vergleichenden Litteraturgeschichte, Hanover 1923.

(bernhard heller)

SIR-DARYA, a large river in Central Asia, flowing like its sister stream, the Amu-Darya [q.v.], into the Sea of Aral [q.v.]. European geographers now regard its source as the Narin which flows through the territory of Djatl-Su (formerly Semirech'ye) and the north-eastern part of Farghāna [q.v.]; the native population has always (in the middle ages and at the present day) considered the Karī-Daryā in the southern part of Farghāna as the upper course of the Sir-Daryā. After the junction of the two rivers which form it, the Karī-Kul'da and the Tar, the Karī-Daryā flows past the town (now a mere village) of Udzund, whence it is sometimes called 'rivers of Uzdung'. The district between the Karī-Daryā and the Narin is called in Persian Miyan-Injil, in Turkish Iki-Şu-Aral; the length of the Karī-Daryā from the confluence of the Karī-Daryā and the Narin is over 1,750 miles. In Farghāna it runs southwest at first and then for the most part northwest. Numerous tributaries flow to the Sir-Daryā; both from east and west (in Farghāna north and south) from the neighbouring mountains of which only three now reach the main stream (the Čurb, Keles and Arfa). The Arab geographers mention further tributaries in Farghāna, which now for the most part enter the great Şah-i Kūhn canal which runs south of the Sir-Daryā; the canal was only led from the Karī-Daryā like the Yangi-Aflī from the Narin in the xiiith century. Whether any canals of any size were led in the middle ages out of the Sir-Daryā itself to water, for example, the so-called "Hungry Steppes"
The Encyclopaedia of Islam, IV

between Clunus and Djanak cannot be ascertained. Makadda's mention (only in the Constantinople manuscript, B.G.A., iii. 222) of an arm or canal (khabij) said to be 140 farsoks long, between Khodjand and Usvahan, is not confirmed by any other sources. The tributaries of the Sīr-Dāyrā have always been of incomparably greater importance than the main stream. Nor, unlike the Amū-Dāyrā, has the Sīr-Dāyrā— at least in the historical period—had any oasis of importance in its delta.

In Western Europe the Sīr-Dāyrā is frequently called by its old Greek name of Jaxartes; a Pathian form fanghār is assumed and explained by J. Marquart (Die Chronologie der alttürkischen Inschriften, Leipzig 1898, p. 6) as yakhcha arba "true, genuine pearl". Against this explanation is the fact that in the numerous personal and geographical names compounded with arba, this component is always found at the beginning of the word. Yet the word yakhcha "pearl" seems actually to be contained in the name; the Chinese (Cas-su-ko) and Old Turkish (Yelin-agüs) names of the river have the same meaning. The Chinese transcription of the native name is given as Yau-ch'a (E. Bretschneider, Med. Researches from Eastern Asia, London 1888, p. 75), Yau-ch'a (F. Hirth, Nachweise zur Inschrift des Tonjuk, p. 81, in W. Kadiroff, Die alttürkischen Inschriften der Mongolen, second series, St. Petersburg 1899) or Yau-ch'a (E. Chavannes, Documents sur les Turcs [Turco] occidentaux, St. Petersburg 1903).

In the Muslim period the initial sṭ was probably as in the land itself; the Arabic (Kīman Ma'sīlāt) of Birnāt, in A. Sprenger, Forschungen an den Ætnlichen Geographien, Hamburg 1877, p. 77, is connected with the word Aṭr although this latter, a Turkish name, cannot be found before the xvith century. The geographical name (B.C.A., vi. 1764, v. 1764) is mentioned in the name Khañart, which also appears in the Chinese name (Ch'ang-t'ai) and was used probably in the central course of the river only: cf. Dāyrā Gāng from Firdawsi in G. J. Pje, ii. 445. The Arabs introduced the name Sḥāba for the Sīr-Dāyrā like Djanak for the Amū-Dāyrā (cf. the names Djanak and Sḥāba in the south-eastern frontiers of Asia Minor). The Naukat (Naukat al-Kalāb) of Hāmid Allah Kazimi (ed. Le Strange, 217, n. 27, transl. and note ibid., ii. 210) appears the Guli Dāyrā which seems to occur nowhere else. Blochet explains this word (in Le Strange, i. 276, n. 276) as the Mongol guli zaričun = "cold river", probably wrongly, as the order of words should be reversed. The river is usually called in Arabic and Persian sources after towns and districts on its bank, most frequently "river of Khodjand" (Khodjand is now the only town situated immediately on the bank of the Sīr-Dāyrā). This name also was adopted by the Mongols (E. Bretschneider, Med. Researches, loc. cit., in Chinese transcriptions Ho-kwan-mu-lin, for Mongol mūrān, "river"). Other names: river of Banket, or Fanakat (in Yākūt, Mu'ājlān, i. 740: Banket) after the town on the right bank near the mouth of the Augren said to have been destroyed by Cingir Kahan (this destruction is not recorded by contemporaries); river of Shahrushiya after the town built by Timur in 794 (1392) on the site of the destroyed Banket (Zafar-Nāma, Calcutta ed. 1886, ii. 636); river of Akkhat (ibid., i. 441; cf. Guli) or river of Cūr or Shāhāb after the great oasis of Chūlūk. The last town on the Sīr-Dāyrā, Arabic al-Karadj al-Ḥadūthus, Persian Dīb-i Nāw (Gardev in Barthold, Obret o poladkhār v Srednyey Azii, p. 83), Turkish Yangikent, later sometimes Shahr- kent in historical works (Turk-χiki Ličhān Guliča, i. 69 below) and on coins, was one farsakh from the bank of the river and two days' journey from its mouth (now the ruins of Dījkent). The ruins were explored in 1867 by P. Lorch and the coins found there are of the viith (xvith) century. The river is said to have altered its course about this time and no longer entered the Sea of Aral but according to some was lost in the desert, or to others joined the Amū-Dāyrā; on these stories cf. above, i. 341 ff., 4194 on the other hand Abu l-Ghāzī in the xviith (xvith) century mentions the Sea of Aral the "Sea of Sīr" (Sīr Tehfīr) and knows nothing of the river ever having not reached the sea.

In the xvth (xvith) century the Sīr-Dāyrā is mentioned as a navigable river along with the Amū-Dāyrā (B.G.A., iii. 343, i.), in "times of peace or of truce"; food supplies were brought to Karadj al-Ḥadūthus by water (ibid., ii. 393, i.). Navigation is now interrupted by the rapids of Begowat which begin at the village of Koš-Teğermen, fifteen miles below Khodjand; these rapids seem to be nowhere mentioned in Muslim sources; Dhwaint's story (Turk-χiki Ličhān Guliča, i. 71 sq.) of the siege of Khodjand by the Mongols in 1220, and the adventurous flight of the commander Timur Malik presupposes an uninterrupted passage by water from Khodjand to the towns on the lower course of the Sīr-Dāyrā (cf. e. g. d'Ossian, Histoire des Mongols, i. 225 sq.). After the foundation of Russian rule on the lower course of the Sīr-Dāyrā (since 1747) an attempt was made to introduce steam navigation on the river; the steamers of the Aral fleet went up the Sīr-Dāyrā also and had their most important anchorage at the town of Kazalinsk founded by the Russians. After this service ceased in 1882, no further such attempts have been made, although several times proposed; traffic on the Sīr-Dāyrā is maintained solely by boats of native construction (bajīb).
and was the capital of Kirmân. The streets are broad, the gardens well irrigated, the climate healthy and temperate. The palace and mosque were built by the Buyid 'Aḥd al-Dawla. The canals which water it were dug by the Ṣaffarids 'Amr and Ẓahir b. Lālīth. Wood being scarce, all the houses are covered with brick vaulting. It had eight gates, two markets, the old and the new, with the mosque between the two. The minaret was surmounted by a lampholder of carved wood built by 'Aḥd al-Dawla who had also built a palace near the Bāb Ḥakim gate. Corn was grown, cotton and dates, cotton manufactured and kūrštī desks as at Kumm, but not so fine.

It was the capital of Kirmân in the time of the ʿAbbāsids down to the period of the Buyids, when the Buyid governor moved his residence to Bābdīst (the modern Kirmân). Owned by the Muṣaffārīds at the beginning of the eighth (xvii) century, it did not recognise the authority of Timūr and was unsuccessfully besieged by Ṣāḥib Shāhīk in 796 (1394); but, under pressure of famine, it surrendered at the end of two years. Since then it has been in ruins, and the site is still marked by the debris discovered in 1900 at Kašīr Sang by Sir Percy Sykes (Ten Thousand Miles in Persia, London 1902, p. 431), at 5 miles east of Saʿād Abād, the modern capital.

**SĪRṔN, Wādī, the name of a valley in North Arabia, which runs from the south end of the Ḥawāran south-eastwards for a length of 160 miles with a breadth of two to twelve miles. Its north end is marked by the fort of al-Āzarq and its southern extremity by the wells of Muṣṭafā. This whole valley is very rich in water and suitable for settlement. At al-Āzarq, there is even a large permanent pond, the only one in the whole of North Arabia. If the life and property of the inhabitants are secured, the ten large and small villages in this wādī, which are still inhabited, may be further increased. But under present conditions the inhabitants suffer a great deal from the nomads, for Wādī Sīrān is their natural road to Syria. The trading caravans, which used to go from Gerra and Babylon to Syria, used the road through this valley, the history of which as a caravan route can be traced back still further; for the Assyrian kings had tried to control this important trade route and even found themselves occasionally forced to use armed force. The army of King Assurbanipal undertook a campaign against the Bāṣara and Kharût who lived in Wādī Sīrān, the Bitz and Ḥadz of the Bible (Gen. xxii. 24; Job xxxii. 2; Jer. xxxv. 23) whose oases are still recalled by the place-names Bit and Ḥopqwa. In the Nabataean period Wādī Sīrān formed the eastern frontier between the Nabataeans and the nomads and was called "Syr-oian pellion". In the Muslim period the Wādī Sīrān was the much contested frontier between the tribes of al-Ḳaṣīn and Kalb and was called Bāṭa al-Sīr and was also used as the natural route of communication between al-Ḥira and al-Khaṣa and Syria. The pilgrim-caravans followed it and came to Medina via Taʾmīs. The Sīrān Wādī now belongs to the tribe of Rawāla of the "Amrē and forms the boundary between their lands and those of the Aḥl al-Shemal (Bani Ṣaqr and Ḥewīt b. Dāj). By section i. of the treaty of Ḥadda of November 1925, almost four fifths of the Wādī Sīrān fell to the Sūlān of Najd, while the northeast corner fell to Transjordan.

**SĪRṔN, the name of two ruined towns in South Arabia.**

1. A large ruined site in the land of the Ben Djebr (Khawāṣen), a day's journey west of Mārib in the Wādī Ḥaḳka. The castle of this town, which E. Glaser considered the oldest foundation of the Sabaeans, is mentioned in the Sabean inscription Bibl. Nat., No. 2, along with the two ancient castles of Ṣalmān and Ḥaqqan. The town of Sīrān (ṣāḥiba Sīrān) is mentioned in the inscriptions Glaser, 904, 15, 1571, 4; there is also a reference to it in the late Sabean inscription on the bursting of the dam of Mārib (Glaser, 618, 24) so that it must still have been of some importance in the fifth century A.D. although it could no longer have rivaled Mārib. The most important building among the ruins is the great temple of al-Maḳṣūdah built by the priest-king Yākhil Dhāḥir, which like that of Mārib is elliptical in shape. In the centre of the temple stands a stone prism seventy feet long, 35 inches high and eighteen inches thick, the two larger surfaces of which are covered with the famous Sabean inscription, Glaser No. 1,000, over 1,000 words in length, J. Halévy, when he visited the ruined site, still found numerous monolithic pillars, some upright and others overthrown bearing long inscriptions. The main group of columns like that at Mārib is now called Arāb Bilīq (throne of Bilīq). Opposite the temple ruins on a mound is the old citadel of Sīrān, part of which still existed in al-Hamdānī's time. A large number of legends have grown up around it. It is said that the djinn built it for Dūl Bata; others say it was built by command of Solomon by the demons
SIRWAH — SIRWÄL

for Bilkis, the queen of Saba. According to the learned South Arabian, Nashwan al-Himyari, 'Arn Dhill Sirwah al-Malik b. al-Harith b. Malik b. Zaid b. Sadaa b. Himyar al-Aghhar, one of the eight princes, built it. But this is probably more speculation by South Arabian genealogists. The Arab philologists connected the name Sirwah with zerbi, "high, commanding building", and interpreted it as "castell, palace". E. Oslander and following him H. v. Kremer correctly connected it with the Ethiopic zerbi "citadel". At Sirwah there were gold-washings, which were still being worked when Halévy visited them. Al-Hamdini already knew that gold was found there.

2. A ruined site in the land of the Beni Arhab, N.E. of Nariq in the vicinity of Medīn ʿAbd al-ʿArib. The best part of the ruins is the old temple which is now known as the masjid (mosque) and stands in the centre of the extensive area of ruins, 27 paces long and 19 broad. The walls of the temple run from south-west to north-east and are 4 feet thick. The outer wall has however fallen in and only survives to a height of 3 to 5 feet. The stones are very carefully hewn. This enclosing wall is pierced by two gateways, one 3 feet broad in the west front and another, 5 feet broad, in the east front. On the south side a niche 3 feet wide has been left in the outside of the wall, corresponding to a somewhat smaller niche in the inner side of the north wall. A sanctuary enclosed by pillars fills the inner chamber in the upper half and there is a basin also surrounded by pillars in front of it. The pillars of the sanctuary are all destroyed except two, which are 8 feet high, 16 sided, thickening at the top; the capital consists of six parts and is rounded off, and fluted in keeping with the shaft of the columns. The pillars around the cistern are octagonal and are also destroyed. To the west of the temple the old town probably lay. Mounds of ruins 20 to 24 feet high now lie there out of which rise great walls forming chambers. The ruins, called Ḥadjar Arhab by the Beduins, formed the gathering place of the whole tribe of Arhab for the discussion and decision of important matters. This custom may be a memory of ancient times in which the temple probably played an important part in the worship and legislation of the people.

On 2. J. Halévy, Rapport sur une mission archéologique dans le Yémen, p. 17; E. Glaser, Meine Reise durch Arabien und Hāschād, Petermanns Mittheilungen, 1884, xxx., p. 172, 182; do., Geographische Forschungen im Yémen 1884 (manuscript), fol. 103. (ADOLF GROHMANN)

SIRWĀL (a.), trousers. Trousers are not originally an Arab garment but were introduced, probably from Persia. From quite early times, other people have copied the thing and the name from the Persians and it almost looks as if Persia were the original home of trousers (cf. Nöldeke, Geschichte der Perser und Araber zur Zeit der Sasaniden, p. 136). The Greek παράβαξα or παράβαλλα, Latin sarabula (perhaps also Arabic sarballa), Daniel iii. 21; cf. Syriac sarabilla) and the Arabic sirwāl are all derived from old Persian širwārā, the modern Persian širvār (which is explained as from šīr = leg, with a suffix -vār) to sirwāl in turn may be traced the corresponding word among the Hungarians, Polos, Russians, Tartars, Siberians and Kalunks in the east and the Spanish and Portuguese in the west. The form sirwāl has probably been influenced by the word sirvāl meaning garment in general (explained as a development of the root v-s-l and an originally Semitic word). This occurs in the early Arabic poetry and in the Kūrān, but not sirwāl.

The Arab grammarians retained a memory of the Persian origin of the word. As frequently with loanwords, sirwāl shows several formations in Arabic, sing.: sirwāl(a), sirwāl(a), sirwāl, dialectic širwāl, modern also sharwāl and the question is continually discussed whether it is trisotite or dipotite; plur.: sarwāl and double pl. sarwālāt both also with š- and dialectic dipotite only but usually (like the word from trousers in many other languages) used with singular meaning and varying in sex between masc. and fem.: dimin. surwālāl, plur. sarwālāt; (fa)šarwālā has been formed as a denominative verb.

When the word entered Arabic and the thing was adopted by Muslims is not exactly known,
but the Muslims must have become acquainted with trousers in the very early days of Islam, at the latest during the conquest of Persia. Tradition usually traces them to the Prophet Muhammad and even credits pre-Islamic prophets with wearing them. A hadith says: "the first to wear trousers was the prophet Abraham, wherefore he will be the first to be clothed on the day of judgment". Another hadith tells us that Moses was wearing trousers of wool on the day on which God spoke with him. It is related in one tradition of the Prophet Muhammad that he bought trousers from the linen-drapers, but it is uncertain whether he actually wore them; on one occasion he replied to the question whether he wore them: "Yes, when travelling and at home, by day and night; I was commanded to cover myself and I know no covering really better than these". According to another hadith, he recommends the wearing of trousers in the words: "be different from the people of the book, who do wear neither trousers nor shawls". But other stories deny positively that he wore them and it is also disputed whether the Caliph 'Othman wore them. The intermediate view is that it is permitted to wear trousers, habba, la ba'a biki.

In contrast to the men, to whom all that has been said so far applies, the wearing of trousers is recommended for women in all hadiths. It is said for example: "Put on trousers, for they are the garments that cover one's body and protect your women with them when they go out" or "God has mercy upon the women who wear trousers" (yar-rama 'itkhla 'in-mustasawirilahi min al-mish) — or "a woman came past riding one day and fell off. The Prophet turned aside in order not to see her and was only put at his ease when he was told that she was mustasawila". Other hadiths fix the length of the trousers: — to the ankles, not longer; as a concession, as a protection against insects, they may be a little longer but must not trail on the ground.

The muhaffir is forbidden to wear trousers (along with certain other garments). But even the qa'it in trousers was makruh according to the strictest view and must be repeated; trousers are also considered unfitting for the mu'madhabin.

In actual practice, little attention has been paid to all such restrictions and numerous passages in historical and geographical literature, in books of travel and in adab-books show that trousers have probably been worn in most Muslim lands since the early centuries of the Hijra. It is quite exceptional to find the statement that in one region a so-called fiita was worn in place of trousers (e.g. in India). The word fiita is of Indian origin and means a simple cloth without a seam, which was fastened in front and behind to the girdle. A fiita of this kind — these from the Yemen were particularly noted — was also worn in regions, where trousers were usually worn by women in negligé, in the house instead of trousers (cf. Ibn al-Hajji, Kitab al-Mudhkal, Cairo 1320, p. 1138).

Oriental trousers differ very much in different countries. They are of all possible widths, from wide pantaloons, which are only drawn together at the bottom over the feet, to close-fitting shapes which look more like drawers and indeed are so-called by European travellers. They are also of very different lengths, from knee-breaches, especially for soldiers, to long trousers coming to below the feet. Colours were dependent not only on fashion (sometimes only natural colours were considered the thing, as a rule artificial colours never) but also on political considerations; the 'Abbasid colour for example was black and that of the Fatimids white. As regards material, a famous Persian speciality was silk trousers; in Egypt and the adjoining lands the white Egyptian linen was popular, trousers of red leather are mentioned as the dress of the women in the market of lights of Cairo, and so on.

In contrast to the European fashion, trousers in the east are worn next to the bare body under the other garments (cf. Djilali, Kitab al-Thajib, ed. Zeki Pasha, p. 154 below: the shirt and the trousers are siwar, the other garments dihtar are worn above) and are supported not by braces but by a special girdle tied round the body, called the tikka (modern dikka). Although the dikka were covered by the other garments and could not be seen they were the objects of a particular extravagance, being adorned with inscriptions, usually of an erotic nature; the most famous and valuable were the tikka made in Armenia of Persian silk. The prohibition against wearing them issued by the jihat had scarcely any effect. A thousand pairs of trousers of brocade with a thousand trouser bands of silk from Armenia (siwar satbitha bi-siwar tikka xarit arment) were, according to Makrizi, ii. 4, part of the estate of an Egyptian noble (cf. Ibn Khallikân, Babk 1299, l. 116); a thousand jewelled dikka's were given to the daughter of Khumrâwarâl b. Al'mâd b. Tallim on her wedding; the tikka was also used as a love-token sent by a lady to her admirer.

For practical reasons, trousers formed part of a soldier's dress. Tahât records that even the Umayyad soldiers already wore sarwâli made of a coarse cloth called mësh. Under the latter, they wore very short drawers called tubbah, which were made of hair. When Islam adopted the old Oriental custom of granting robes of honour, trousers were included among them; indeed they were sometimes regarded as the most valuable part of the gift, which, it has been suggested, is connected with the phallic worship of paganism. Originally the garments of honour given were not new, but had been worn by the donor; he ought to have worn them at least once.

As a kind of uniform and a garment of honour, the trousers play a very special part in the Muslim fawwaw organisations. In the ceremonial reception of a new member into the guild, an essential feature of the initiation ceremony (jâhah, q.v.), the putting on of the sarwâli al-fawwaw, often briefly called fawwaw. Here also stress is laid on the point that the kâfûr must have either previously worn them himself or at least gone into far enough to touch them with his knees. The sarwâli had occasionally a similar importance for the jâyân, like the kibûna [q. v.] for the Sîfs. An oath was taken on the sarwâli (this oath is however invalid according to Ibn Taimiyya); they could also be put on a coat of arms with a cup ku'i.

The putting on of the sarwâli al-fawwaw assumed a certain political significance under the 'reformer of the fawwaw', the 'Abdulaziz al-Qâir, about whose grants of sarwâli al-fawwaw old stories have been preserved by the historians. He sent embassies to the petty dynasts of Syria, Persia and India with the demand that they and
their nobles should put on the saruwál al-futuwwa for the Caliph. This was done with solemn ceremony and they thereby placed themselves under the protection of the Caliph as overlord of the jirān. The same Nāṣir seems to have limited the right of investiture to a very few and his successors also claimed the right for themselves. But others did it, for example the Sultān Ashraf of Egypt two centuries after Nāṣir.

When the futuwwa-gilds declined, other organizations with political or other aims adopted their external ceremonies, and laid special stress on the putting on of trousers. The gild of thieves in Baghdād for example under Muktāf and a secret Sunnī association in Damascus called the Nahwāl with anti-Sha'ī tendencies, mentioned by Ibn Djihār. But with the disappearance of the futuwwa, the original significance of the saruwál as a badge of chivalry was no longer understood and they became combined with the hirāc of the Sīsī into the hirāc al-futuwwa.

For the expression saruwál al-futuw wa also find ḥiṣā al-futuwwa with the same meaning "trousers" and in Egyptian Arabic, ḥiṣā (cf. Lane) acquired the general meaning of "drawers" (i.e. for men; for those of women there is a new foreign word ḥiṣirī). This circumstance is a circumstance for ascertaining the Egyptian texts in the 1870-100 Nights; they replace the word saruwál of the non-Egyptian texts without exception by ḥiṣā.

In many expressions saruwál is used metaphorically. Thus, munṣuruw is a pigeon with feathered legs, a horse with white legs or a tree with branches down on the trunk. Širwāl al-ʿābīn "rogue's trousers" and saruwál al-jukhš (cuckoo-trousers) (linaria elatice) are the names of plants (on the other hand saruwál or Širwāl or saruwál for "cypress" is formed of the well known word saruwál with the article behind it and has nothing to do with saruwál).

SIS, a town in Asia Minor, also called Sisī, (middle-)Latin Sisīa and Sīs; in French sources of the Middle Ages, besides the usual forms, also Assīs and Oussīs are found. The most obvious explanation of these last mentioned forms would be from al (the Arabic article) + Sī: however, attention must be paid to the fact that in the Arabic sources the name seems to occur more often without the article, than accompanied by it (for another explanation of these forms see Rec. des Hist. des Crusades; Dec. Arm., ii, p. xii). Sis is the ancient capital of the Cilician-Armenian kingdom, 65 K.M. N.E. from Adana, 290 M. above sea-level. The town lies against the slope of an isolated mountain, which belongs to the Taurus-system. The river of Sis rises in the Anitaurus; after uniting with another water-course, the Deli Şīa, it falls in the Delişān (Pyramus).

Before the Middle Ages, nothing is known about this town; the attempted identifications with antique localities (some have thought of flavias, others of Pindeniassus) are very doubtful.

In the Byzantine period we hear of the Arabs besieging in vain vē Šarābān kōrpē in Cilicia, in the 6th year of the reign of the emperor Tiberius III Apsimaros = 703 (Theophanes, Chronographia, ed. de Boor, i. 372). In the Latin text of Annalais' Chronographia Tripartita (Theophanes, ed. de Boor, ii. 237) we find expugnamosque Sinul cœtusum, where the form of the name of the locality is to be noted, as also the fact, that expugnamos is a wrong interpretation for the word ṣawrēn, as in the text of Theophanes.

In 'Abīsās' time, however, Sis belonged to the Muslim empire: it was reckoned among the ḥawār al-Sharmīya. It was rebuilt during the reign of al-Mutawakkil, under the direction of 'Alī b. Yahya al-Arman, but afterwards laid waste by the Byzantines (al-Balāḏūri, ed. Goeje, p. 170). There is also a tradition, going back to al-Wākīdī, of an emigration of the inhabitants of Sis to the al-šūrā in the years 194 or 195 (809/810 or 808/809), which event may stand in relation to the loss of the locality by the Greeks, in the interval: between the times of Apsimaros and al-Mutawakkil (al-Balāḏūri, loc. cit.; cf. Yūnīs, Muḥammad, ed. Wüstenfeld, ill. 217, where the years erroneously are given as 94 or 95). A further mention of Sis is found during the wars of the Ḥamdūnī Saif al-Dawla [q.v.] with the Byzantines. That prince, after rebuilding 'Ain Zarba (Anazarba), sent his bājāt with an army, which ravaged the Byzantine territory; the Greeks, in revenge, then took the stronghold of Sis (bhūn Sīsīa), in the year 551 (962) (Ibn al-Aṯīr, ed. Thornberg, viii. 404). It appears, then, that in the early Middle Ages Sis has been a fortified frontier-town.

The continuous history of Sis begins about the end of the 8th century of the Christian era, when it had become the royal residence of the Armenian kings of Cilicia (the Rubenids and the
Lusignans). But already before that time it is sometimes mentioned in the annals of the Cilician kingdom. It is numbercd among the places, conquered by the Armenian princes Thoros and Stephanius (Chronicle of Kirakos of Ganjak under 563 Armenian aera = 1113/1114); moreover, Sis belonged to the towns which suffered from the earthquake of the year 1114 (Chronicle of Matheuw of Edessa under 563 Armenian aera). Nerses of Lambron, writing in the year 1177, complains, that in the royal residence (tēkkānametē) Sis, there is no bishop, nor are there suitable churches. It is surprising to find the town mentioned as a royal residence as early as 1177, for it must have been Leo II (1187-1219), who transferred the royal residence for strategic and political reasons, from Anazarba to Sis. Since the time of this ruler, the kingdom of Cilicia is called, by Muslim authors, not only blūd al-Arman, but also blūd Sīs; an Armenian geographer (xith century?) cited by Saint Martin, ii. 436 sq. also identifies the names Cilicia and Sis.

Leo II caused many new buildings to be erected in the town. The chronicle of the connittōbe Šemmba speaks already under the year 624 Armenian aera = 1175/1176 of the new-built (nerāgīhu) town of Sis, in connection with the murder of the Rubenid prince Mich (dated in Hethum’s Chronicon erroneously under 613 Armenian aera = 1164; Sis is also here mentioned as the place, where that event did happen). If the, tolerably late, chronicle of Šembat is right in using the term “new-built” here, then there must already have been extensive renovations before the time of Leo II.

This prince, who in 1198 was crowned king (he himself before, and the older Rubenids only wore the title of baron) transferred, as stated above, the royal residence to Sis. His coronation must have been at Tarsus (a later chronicler, Jehan Dardel, erroneously pretends that it was at Sis), but the town of Sis is already called the “new-built” of Leo in a poem on the taking of Jerusalem by Salih al-Din, written by the Katholikos Grigor IV (†1189); in this poem the form, Sīsman is to be noted: Re. Hist. des Croisades; Doc. Arm., i. 301. In the year 1212 it was at Sis, that the coronation of Leo’s grand-nephew and co-regent Ruben took place. This ceremony was witnessed by Willbrand of Oldenburg, who in his Peregrinatio gives a short account of the town: “It was the capital of the king (capitanea civitas domini regis), with many and rich inhabitants. It had no walls, unde postis iam villam quam civitatem munimentum. But there was an Armenian archbishop, and also a Greek patriarch. Then the traveller mentions the stronghold of Sis (castrum... super se situm in monte valde munimentum); the town rises amphitheatrically against the mountain. The locality belonged in ancient time to Darius, who was vanquished by Alexander". This singular item may be due to a reminiscence of Alexander’s victory at the (Cilician) Issus. It is remarkable, that in the elegy of Grigor, cited above, after the mention of Sis, it is said that on that spot also the warriors of Alexander defeated Darius. In the neighbourhood of the town, Willbrand continues, the king had caused a pleasure garden of indescribable beauty to be laid out.

It is surprising that the town had no wall; it seems that the stronghold was deemed sufficient for defence. Still in 1375, when Sis was taken by the Egyptians, there was no town-wall; the royal palace, together with some other buildings, were enclosed with a wall; it seems to be this complex which is called by Jehan Dardel the “bouy”; and it must be distinguished from the castle on the mountain.

The kings of Cilicia, moreover, had a summer-residence in the Taurus, to the North of Sis, Ghebr, which was also their treasure-house. Likewise, in modern times, the inhabitants of Sis, during the summer, leave the unhealthy town, to take summer habitations (sayyākā) in the mountains.

The political history of Sis is, of course, intimately connected with the general history of the Cilician-Armenian kingdom. The chief feature of that history consists in the struggle for existence which this kingdom had to carry on against the sultanate of Egypt; it is therefore not surprising, that the chief events connected with the town are attacks of the Mamluk armies and ravages wrought by them. Other foes were of minor consequence: an attack of a Turkoman chief in the year of the accession of Leo II (1187) was repelled by that prince, but the Turkomans during the reign of the following kings remained a menace to the Cilician kingdom. These nomads, whenever a strong government was lacking, availed themselves of the opportunity to seize on pasture-grounds; we shall find them in the actual possession of the territory of Sis in the first half of the sixteenth century. On the occasion of the Egyptian attack of 1266, the town of Sis, with its cathedral, was burnt down and the royal tombs were desecrated. Other Egyptian incursions in the district of Sis occurred in the years 1275, 1276, 1298 and 1303: in the last named year, the city itself was plundered by the enemy. In 1321 the environs again suffered from hostile attack; this time it was the Mongol governor of Rûm, Timurğâ, who, on the instigation, as it seems, of the Egyptian sultan al-Malik al-Nâšir, carried his ravages in the district of Sis. A similar incursion was made by the then officiating governor of Aleppo, by order of the same sultan in the year 1340; the incursions from the amir of Aleppo were repeated in 1359 and 1369; both times the town was taken. In the meantime, Sis had suffered from the great epidemic, which in Europe, during that same time, is known under the name of the “Black Death” (1348).

However, the end of the Cilician kingdom was imminent: the last king, Leo VI (de Lusignan) was reduced to his capital, Sis; after the retreat of the Egyptians, the Turkomans fell upon the land; then, in the years 1374 and 1375 came the catastrophe. The sieges of Sis during these years by the Egyptians, and the final taking of the town, wherein the enemy was assisted by the treason of some nobles and of the Katholikos, are described in detail in the chronicle of Jehan Dardel, who had been chaplain to king Leo VI since 1377. Leo being then a prisoner at Cairo.

From the ecclesiastical history of Sis during the time of the Cilician kingdom, the following facts may be mentioned. Soon after the time when Nerses of Lambron complained about the desolate state of spiritual affairs in the town, we find Sis (since 1198, when the first archbishop is mentioned) an archbishopric, but depending on the see of Anazarba. There had also been some
church-councils at Sis, e.g. in 1238, under the reign of Hethum I, when the dogma of the processus Spiritus Sancti according to the Greek doctrine was accepted; in 1307 (March 19) another council aimed at unification with Rome, but obedience to its resolutions could only be compelled within the limits of the town of Sis itself. Two years later (1309) another church-council, not summoned by the king, was convened at Sis, to take stand against the innovations of 1307, but the king Awhin dispersed it, and had the ecclesiastics who had been convened, imprisoned. Another synod was held at Sis in 1342, under the reign of Constantine IV.

The patriarchs of the Cilician-Armenian kingdom fixed their seat at Sis in 1202. On June 29 of that year, Rûm Kâfa, which was the former seat of this patriarchate, had been taken by the Egyptians; so the new patriarch (Grigor VII) came to reside at Sis. There his successors have remained even after the fall of the kingdom, and after the renunciation of the patriarchal see of Edjinacîn (1441), which caused, of course, a schism in the Armenian church. The chief relic preserved by the patriarchs of Sis was the right hand of St. Grigor, the apostle of the Armenians, which, in 1295, was redeemed, with other relics, from the idolatry of King Hethum II.

After the Egyptian conquest, the patriarchs, at first, had no fixed residence; they came only to the town of Sis to perform some ecclesiastical duties, e.g. the benediction of the sacred oil (myron). Under the rule of the Rubenids and Langnaans the habitation of the patriarchs had been within the court of the royal dwellings. After the period of their wandering about, the patriarchs obtained from the Egyptian government permission to reside in the town. First, this residence of the patriarch was an ordinary house; in 1734, long after the Turkish conquest, a monastery was founded by the patriarch Lucas, which seems to have been the seat of the patriarchate until 1810, when the patriarch Kirakos founded another monastery, in which the patriarchate was established when V. Langlois visited Sis (1853). A little before 1874, the monastery was acquired by Sis, and migrated to 'Ain Tchab.

But if the ecclesiastical history of the town continued until modern times, politically Sis soon became insignificant. Immediately after the Egyptian conquest, Sis remained the capital of a new province, which included Ayas, Tarsus, Adana, Mersîta and Ramalâtnîya, the whole being dependent on Aleppo. In 893 (1488) Sis was taken by the Ottoman Turks, during the war between Bayazid II and Egypt. Afterwards, the town belonged to the realm of the Turkoman dynasty of the Ramâdnagûnî, whose members, however, since the time of the fifth prince, Kâhûl b. Mahmûd, were vassals to the Forte. Kâhûlî Kâhûlî, in the Dîkhamnûnî contrasts the once flourishing condition of the district of Sis with its uncultivated state in its time.

Under Ottoman administration, Sis belonged to the millet of Adana, and the nashirî of Kosan. When Langlois visited the locality, he found it to be a village, consisting of ± 200 houses, inhabited by Turks and Armenians. There was a masjid and a hadjû; the Turkoman beg of the Kosanagûnî tribe was virtually the ruler, for the pashû of Adana had no authority whatever in Sis. The village moreover paid no tribute to the Porte. There were several remains of old times, but the palace of the Cilician-Armenian kings was ruined; on its site was the monastery, where the patriarch resided. The church, belonging to that monastery, is consecrated to St. Grigor Illuminator and the Descensus Filii Unigeniti; the treasure of that church contains among other relics the right hand of St. Grigor, and two chapels from the sixth century of the Christian era. The archives and the library of the patriarchate, Langlois found to be in a deplorable state. Other churches of Sis, partly restored after the Middle-Ages, are consecrated to St. Sophia (the Çahîl hîlitê), to St. Sergius, to St. Peter and Paul (wholly ruined), to the Holy Virgin, to St. James (ruined). The mountain-stronghold of Sis, built by Leo II (Sis Kâ'a'-inî) was in a tolerable state of preservation.

According to a statement of 1894 (Sâmît Bey Fraszer) Sis then had ± 3,500 inhabitants, 2 masjids, 3 churches and 3 medreses. Its territory, though fertile, is insufficiently cultivated, but in its neighbourhood there are many gardens.

(V. F. Bûcherer)

SISAM. [See Samos.]

SISAR, a town in Persian Kurdistân, bounded by Hamadân, Dinawar and âdharbâdjan. The Arab geographers place Sisar on the Dinawar-Marâfghâ road 20-22 farsaks (3 stages) north of Dinawar (ibn Kâhûldîbîh, p. 119-121; Kûdûmât, p. 212; Mu'abbadis, p. 382). According to Badhûrî (ed. de Goeje, p. 310), Sisar occupied a depression (kâhûlûk) surrounded by 30 mounds, whence its Persian name "30 summits." For greater accuracy it was called Sisar of Sâdîghînîyâ (wâlibûn Sîsar bâd 'Aâd Sâdîghînîyû) which Badhûrî correctly explains as Sisar of the hundred springs; Kâhîlî in Persian (Kâhîlî in Kurdis) does mean spring; on the other hand the geographer (ibn Kürdrûlbîh, p. 175; ibn Rusta, p. 89) states the sources of the Sâdat (Kâhûlûk or Kûtûlûk) "at the gate" or "in the ravine" (kâhûlûk) as Sisar (Masîbîdî, Kit. al-Tawbûl, p. 62: in the nâbûzâ of S.). Finally Masîbîdî (ibid., p. 52), speaking of the Dîyûlûq (q.v.), makes it come from the mountains of Armenia (?) and talks of Sisar as belonging to âdharbâdjan.

These quotations show that the site of Sisar lay near the watershed between the Kûzîl-Uzûn (southern arm) and the Gâwârî (Dîyûlûq) i.e. near the col of Kargâbâd, where numerous streams rise flowing in different directions. According to the ingenious hypothesis of G. Hoffmann, the name of the town of Senna [q.v.] might be a contraction of the old form Sâdîghînîyâ. There is
not sufficient evidence however to show that the site of the modern Şennâ is identical with that of the town of Sisar.

It should be noted that while Ibn Khurdâdhbih and Kudzâma give the distance between Dinawar and Sisar as 50—52 faraskh, the whole distance between Dinawar and Mârjâ is put sometimes at 50—52 faraskh (same writers), sometimes at 60 faraskh (Mukaddât, p. 384; Ilekhât, p. 194).

If an error of 8—10 faraskh could be made on the stretch Dinawar—Sisar, the latter place might be put further north on the line of the watershed between the northern waters of the Sirwân (Diyâsla) and those of the Kirkûzan; at the present day names like Chîl-Chashma (‘mountain of the 49 springs’), Hatîr-Kânân (‘village of the 1,000 springs’) are common in this district.

In the district of Sisar (Baîdhûrî, p. 130), there were at first only the grazing-grounds of the Caliph Mahdi (153—160). This intermediate zone (‘badâ) between three great provinces soon became a refuge for caravans (al-gâdîk wa l-gâdîr) and the Caliph ordered his superintendents to build a town. The estates formed a separate district (khirà) which was extended by the addition of the following cantons (raštîb): 1. Mârippâr, detached from Dinawar; 2. Dîjlshâma (?), detached from the khera of Bara in Âdharbâjanî and 3. Khandîr (?). Harûn al-Rashîd stationed a garrison of 1,000 men at Sisar. Sisar was later the scene of battles between a certain Murra al-Rudaini al-Ijdi and the Khûrdis under ‘Uthâma al-Awli (Yâkût, ii. 215). The Caliph al-Ma’mûn made Hamân b. Hâni al’Abdi governor of Sisar.

In the viith (xiiith) century Yâkût is able to add very little to the information given by Baîdhûrî. In the viith (xviith) century Hamâdîth Mustâfî no longer mentions Sisar. On the other hand he talks of the “mountain of Sisar” forming the boundary of Âdharbâjanî and the “pass of Sisar” in the mountains of Kurdestân in which was the source of the Taghit. The Ljîhân-nâma, while marking correctly on the map the exact place and correct name of Taghatti, gives in the text the wrong reading n-f-sow which Norberg in his translation (Lund 1818, i. 547) renders by Nefta. Quatremère introduced the reading Naghatti found in an edition of Mirghondî. G. Hoffmann admits the identity of this river with the Khôrkhôra (a right bank tributary of the Dîjghattî). But there is no proof of the actual existence of the name Naghatti and the text of Mustâfî may simply indicate that in his day the frontier between Âdharbâjanî and Sisar was marked by the watershed between the Taghit (cf. Sîwaj Bâlûq) and Bûna. This last district had long been a dependency of Şennâ. In this way since the viith (xvith) century the name Sisar (Sînâ, Sîna) has become substituted for that of Sisar and its later history will be found in the article Şennà. As to the date of origin of this town, it may be noted that in 630 Khûrsâw Pâgha destroyed Hamânâtib which was the capital of the princes of Ardiân (von Hammer, G.O.R., 2, 1840, ii. 87). Only forty years later, Tâvârîsh (Lîn Sîc Yâsîm, Paris 1692, i. 197) speaks of his visits to Sulâmaîn Khân at Sînâ (Sennà).

The name Sisar on Hausachnecht’s map (G. Hoffmann, cf. cit., p. 256) has nothing to do with Sirâ, it refers to the pass to the south of Sennâ, the real Kurdish name of which is Sîn-â (“wearing out shoes”). There is at the present time a village of Sisar near Sardaşht and another south of Bûna, on the slopes of Sîrêkân (cf. Sîwaj Dîjeshä). This only shows how frequent such names are, and explains why the Arabs were obliged to define their Sisar by the addition of Şâlîschînya.

It may be added that the popular etymology of Şâlîsh ( freezes), according to Baîdhûrî, does not preclude the identification of Sisar (or of one of the Sisars) with Şîsîrî (Şîsîrî) of the Assyrian period. Şîsîrî was a fortress of the land of Khûrdis (cf. the name of the river Khôrkôr to the north of Sennà) on the frontier of the land of Ellîp. There are considerable diffrerences in the identification of all these names proposed by Billebsck, Das Sendebuch Sûlûmanîa, Leipzig 1898, p. 127, 133, 158; Justi, Grundriss d. iran. Phil., ii, p. 404; de Morgan, Mission scientifique, iv, p. 404; Streck, Z. A., xiv. 138—139; xx. 349, 379; Thureau-Dangin, La bibliothèque campagne de Sûrûn, Paris 1912, map; Forrer, Die Provinzialuntersuchung d. assyrischen Reichs, Leipzig 1921, p. 90, 92—93, 95, 102, 130. The identification of Şîsîrî with the capital of the Ma’mânas Isîrî (Streck, xiv, p. 139) is still only a hypothesis. In principle there is no difficulty in the equation Şîsîrî—Sisar, which would give Assyriologists a fixed point in a region, where all is still uncertain.

(V. Minorsky)

SÎSÎN, or SÎÎSÎN (from Sâkastâ, land of the Sakae, cf. its classical name Saka-ne), also called Nîmû “midday” — southland, south of Kurdistân; this name occurs often in the Sâkastân, and also on the coins of the Kayast chief (mâhîr Sîsîn; cf. F. R., C.S., 1904, p. 669), border district between Persia and Afghânistân. Its area covers 7,006 square miles, 2,847 of them being Persian, and 4,159 Afghan territory; its population being 205,000 persons (for 1906, cf. MacMahon in Geogr. Journal, xvi, 215).

The land is divided between the two countries by the (theoretical) boundary-line fixed by the Sisân Mission of 1872; this line runs “from the Band-i Sîsîn on the Helmand to the Kûl-i Malik Sîth, a hill to ‘the West of the Gawd-i Zârîsh” (Vâzîr, Khurramân and Sîsîn, p. 92). F. J. Goldsmid, the head of the Mission, distinguished “Sîsîn Proper” from “Outer Sîsîn”; the first may be said to correspond to the part, belonging to Persia. It is the more important portion of Sisân; its boundaries are according to Goldsmid: on the North and the West the Nairûr and the Hûmân; on the East, the old course of the Helmand; and on the South a line which includes the portion watered by the main Sisân canal. So, this country is enclosed by water on three sides, and can, to a certain extent, be called a
The depressions (Hāmūn) in which the rivers discharge themselves, may be described as follows: there are two lagoons, formed respectively by the Harūd Rūd and the Farāb Rūd (both coming from the North) and by the Hīlmand and the Khāshūrūd (coming resp. from the South and the East). To the South of these lakes extends the Nāizīr, a tract of country, covered with reeds. At the time when the Hīlmand is in flood, the two lagoons become united, and the inundation covers the Nāizīr also. A tract, stretching from North to South, reckoned from the Western of the two lagoons (the Hāmūn-i Farāb), then also becomes overflowed, so that a great lake is formed, which, lastly, discharges its redundant water through a course, called the Shāhī, in a third depression, the Gāw-d-i Zarīb [the vocalisation of Zarīb is not altogether sure, modern travellers write also Zīrāb. In the Shahinīnī (ed. Vallers-Landauer, 1373, 1977) the name rhymes with girīsh]. Cf. the articles AFPARID-ESHTIÂN (I. 1564), HĀMŪN and HĪL-MAND, and specially Sykes, Ten Thousand Miles in Persia, p. 364 etc.

The water-supply, and, in consequence, the cultivation of Sīstān, depends chiefly on the Hīlmand. Therefore, the distribution of its water has been, from ancient times, regulated by a system of dams and canals. The river has altered its course several times: this, and the fact that during Timūr's invasion of Sīstān many dams and canals must have been ruined (e.g. the Band-i Rustam is reported to have been destroyed by him), explain the reason why there are found in Sīstān so many ruined localities, towns and villages, now deserted because cultivation has ceased in their environs. The principal hydraulic work of later times is the great Band-i Sīstān (or Band-i Amīr), a permanent construction, near Kūhāk. The amir of Kūhāk, under whose authority the governor of Persian Sīstān stood, had ordered this dam to be built, some six or seven years before the time when Goldsmid was in Sīstān. A description of this dam is given in Eastern Persia, I. 281 sq.

The soil of Sīstān is alluvial, and consists chiefly of sand, mixed with clay. A part of the surface shows moving sands; the land is flat, but there are some low hills. The highest elevation of the soil is the Kūh-i Khwādja (1,500 feet high), which lies in the tract between the Hāmūn-i Farāb and the Gāw-d-i Zarīb; at times of complete inundation the hill lies in the midst of the water. It bears this name because the sanctuary of a local saint is situated at the Northern end of its flat surface. At the vernal equinox (Nawūrūs), the population celebrates a primitive feast, to the honour, as it seems, of this Khwādja; Sykes thinks, that in its ceremonies there are preserved pre-Muhammadan rites. The Kūh-i Khwādja is fortified.

Sīstān is fertilized by the deposit, left by the inundations of the Hīlmand and the canal system. The most important production of the land is grain, but also beans, cotton, oil-seeds and melons grow there. There is plenty of fodder for the cattle; in Sīstān cows are bred in large numbers as well as horses, though the country is notorious for horse-diseases and poisonous flies. Of wild-growing plants, the tamarisk is to be mentioned: the banks of one of the canals, the Mādār-i Ab, are covered with it in abundance; Sykes says of it: "one of the few jungles I have seen in Persia". There are not many trees in Sīstān, except in the Miyān Kangī, the district between the Rūd-i Pārīyān (the main bed through which the Hīlmand discharges itself into the Hāmūn) and the Sikār (a tributary stream to the Rūd-i Pārīyān; cf. the map of Sīstān belonging to MacMahon's articles in the Geogr. Journ., xxviii.).

In former times, the date-tree, which is no longer found, must have existed in Sīstān (Yate, Khwarazm and Sistan, p. 94). On the kinds of serpents (for the frequency of vipers in Sīstān cf. also al-Halabī, ed. de Goeje, p. 400, 402) and birds to be met with in this country, cf. Eastern Persia, I. 273. Of the climate not much good has been said by European travellers. The winter is cool, but not unhealthy; then, between March and August, there blows a North-Western wind, the so-called šāzā-ghūr or šāzā-šūr (the wind of 120 days), which clears the air from the misams, produced by the stagnating marsh-water, which in the other seasons cause fevers. Summer is hot and disagreeable. Rawlinson says, in respect to the climate, that "Sīstān is, in its present aspect, a wretchedly unhealthy country, only habitable for a few months in the year".

The population of Sīstān consists chiefly of Tajiks; there are also Balūdīs and Khāns, who have established themselves in the land; moreover, Mursh Shāh forced some nomad tribes of Shābāt to emigrate to Sīstān. Genealogical data about some Sīstānī families (e.g. the historical important Kayānīs who claimed descent from the mythical Iranian kings), and some Balūdī-clans resident in Sīstān are to be found in Eastern Persia, I. 415 sqq.

The Siyādīs (fishermen and fowlers), who live to the South of the Hāmūn and the Nāizīr, and speak a language of their own, are considered, by some authors, to belong to the aborigines of the country. They earn their livelihood on the lake, by fishing during the summer, and by catching wild fowl during the winter. To each group of families of them (mahadā), a piece of water is assigned (Yate, Khwarazm and Sistan, p. 94). In their neighborhood, but distinct from them, there is a class of men called Gāwadūs’s (cow-keepers). Sykes (Ten Thousand Miles, p. 367) supposes, that one Sīstānī tribe, that of the Sarbadis is connected with the Brahī; and therefore may be aboriginal; but, first, the question of the racial constitution of the Brahī is a very complicated one (cf. the article BALOČIŠTANI, I. 655, sqq.), and, secondly, there is reason to assume, that the Sarbadis (as also the Shāhrahis) are immigrants from Western Iran.

The language of Sīstān is described as "a species of debased Persian, somewhat similar to that spoken in Khurasān" (Eastern Persia, I. 259). On local names, important from a linguistic point of view cf. Beller, From the Indus to the Tigris, p. 269 sq. The people lives in a state of economic misery, all land and water belonging to the Government; as regards trade, it is chiefly carried on by caravans, which are sent by the different villages in common to Quetta and Bāndār ‘Abbāb, and bring back in return articles lacking in Sīstān, such as tea, indigo, sugar, etc. (cf. Yate, Khwarazm and Sistan, p. 85 etc.).

The original chief town of Persian Sīstān, Shīkhu, is cast into the shadow by Nāṣrat-šāh (built ± 1870). Shīkhuša is said to have contained (1872) ± 1,200 mud huts, of which Curzon,
in the year 1892, found no more than half the number inhabited. The town of נזרת (which, in Goeldin's time, was called נזרת) was founded by the amir of ק'ס'ין, there being wanted a residence for the Persian Government in סיסטן. The "new city" (شهر-ィなし) of the town, has gradually shut in the village of حسین-یاد, near which the building of נזרת begun. The "new town" is populated by ק'ס'ינים and people from ק'ס'יאן, but حسین-یاد retains its original سیستان inhabitants. The fort of نزارت is called شهر-ィなし ("the old city"). The town has a garrison, and it is the administrative centre of سیستان. Another name for نزارت is شهر-ィستان; this name is used almost exclusively among the inhabitants themselves. The remaining villages of سیستان are of little importance. The land, in the second half of the sixteenth century, was governed by a deputy of the amir of ک'س'ین, the title of the governor of (Persian) سیستان being حافظ کلیع. He was responsible to the Government for a payment of 12,000 dinars, while the revenue of سیستان (mostly in kind) was fixed at 24,000 خرwi (a 9.69 lb.) of grain a year, in addition to which, 2,600 dinars' worth (in cash) were levied (Yate, Khorasan and سیستان, p. 33).

Afghan سیستان, with its capital خشاکی in the Khash district, comprises the land on the left bank of the هندود, and East to the more eastern of the two lagoons (میناب-ی پا) up to the district of دیوان in the North. Also, the tract extending from the left bank of the هندود to the boundary of لاهیجان belongs to افغان سیستان. In this part of the country lies the مخلوط-ی زاراک. Cultivation is found in the district of خشاکی and along the banks of the هندود. The population here is similar to that of فارس سیستان, except that there are here, of course, also Afghans among them. In the tract east of the هندود, MacMahon found a great number of ruins, and also traces of ancient canal-systems and rivulets. He supposes, that "this must have been, not only a former delta of the هندود, but the delta, used by the هندود in, as far as existing ruins testify, one of the most prosperous times of سیستان history" (Geogr. Journ., xxvii. 219). For all detail there should be made reference to MacMahon's paper itself.

Historical outline. In antiquity, the land at the lower course of the هندود (آمیدان) was known as دریانگیا. This word has been compared with the old Persian word for "lake, sea," Avestan درایاه, old-Persian درایاه, but, as this etymology is not entirely certain, we can only say that the land has its name from the people of the دریانگی (other forms: زارانگی, زارانگیل, زارانگی; old-Persian: درایاه). The name سائکان (or پاراکان) belongs, according to خسروی of خرک, to the borderland of the middle-course of the هندود. It must be remembered, that the word سائکان is not found before the time of خسروی, and it is generally accepted, that this name has risen from the fact, that the سائکان conquered this land about 128 B.C. F. W. Thomas (J. R. A. S., 1906, p. 181 sqq.) has attempted to show, that the سائکان were found in these tracts already in Achaeonian times, and that the late occurrence of the name سائکان is to be explained by their becoming politically powerful not before the

Persian epoch (cf. the articles DRANGI, SAKAI, SAKASTAN, CARCÔ in Pauli-Wissowa, Realens., 2; Bartholomae, Altir. Wörterbuch, s.v. شهیرال).

The Avesta knows the هندود under the form هَازیم ("abounding in dams"), and also the lake خسروی, which is formed by the river. This lake, therefore, must be the هندود-system. In it, according to Zoroastrian tradition, the seed of Zoroaster lies concealed, from which in the future three sons will be born, the third of whom will be the saviour (پسال. ساکانی). It is also in the environs of this lake, that tradition places the origin of the mythical Kawa-dynasty (Kayānīs). All this leads us to suppose, that سیستان, in antiquity, was a principal seat of the Zoroastrian religion. On its relation to İranian epic tradition see below.

For the ancient history of the Sakai cf. the article SAKASTAN (i. 168 sqq.), and the articles SAIKAI and SAKASTAN in Pauli-Wissowa's Realens. 2.

The name سائکان (Sakastan, سیدجیان) in ancient and mediaeval times, denoted a greater area than the modern districts of فارس and سائکان (cf. al-Tabari, i. 7905; fa-کانس Saitan, اپن وس Saghān); this is already evident from the fact, that the name originally signifies the سائکان-state on the middle-سیستان. It is not possible, to define exactly, which districts at various times have been assigned to سیستان. It seems that a great area to the East, up to خندلک, was sometimes included under the name also.

Ardashir, the founder of the سائکان dynasty, among his other conquests, subjugated سائکان. The tie to the Persian empire cannot have been very firm, for the سائکان appear in the history of the سائکان epoch rather as allies than subjects. We find, accordingly, a second conquest of the land by Bahram II, who appointed his son, the future king Bahram III, governor of the district with the royal title of ساکانی. But during the reign of خسرو II, the سائکان once more appear as allies, not as subjects. In the سائکان period Christianity, in its Nestorian form, had made progress in سائکان, which even became the see of a bishop (Pauli-Wissowa, Realens., 1.A. 1812). At the time of the Muslim conquest of فارس, Ya'qubidjird III, after having been driven away from خسرو, turned to سائکان, whose king at first accorded to his protection, but the سائکانian having tacitly alluded to arrears of tax, the king withdrew his protection from him (al-Baladhuri, ed. de Goeje, p. 315). It is, however, not possible to find out: whether the "king" of سائکان at that time was a سائکان governor with the title ساکانی, or a national ruler, who only owed tribute to the Persian government.

The Arab conquest of سائکان began in 23 (643-44), when 'Asim b. 'Amir and 'Abdallah b. 'Umar made an incursion into the land and besieged زاردی (the old capital of سائکان, now ruined); finally the سائکانia concluded a treaty with the Arabs, to the effect that they should pay the خسروی. In the year 30 (650-51), the commander of a Muslim army, encamped in خسروی, sent to رابی b. Ziyād al-Harithi to سائکان. رابی traversed the desert between خسروی and سیستان (the داغ-ィ لین) and reached زلیک, which is described as a fortress, 5 farahāq distant from the frontiers of سیستان; the stronghold was taken,
and on his further march, al-Ra'id reduced two other localities, Karkāya and Ḥisūn (or, acc. to Ẓāhil: Ḥisūn — vocalisation uncertain), without bloodshed. After returning to Ẓāhil, he set out anew to take Zarandj. Before reaching that town, some minor localities, Ẓāhil, Nashīrūd and Sharwād were taken with much fighting; the marzūdat Aparwāt, who commanded at Zarandj, defended the town vigorously, but at last was obliged to surrender it to the Muslims. However, the city of Zarandj proved to be no secure possession to the conquerors, as two years after its capture, the inhabitants drove out the Arab garrison. The town was retaken by the new governor of Sistān, Abād al-Raḥmān b. Samura. This general also reduced Bust (which during the Middle Ages was included in Sistān), and Zābul. At the end of the khilafat of Ẓāhil, when Abād al-Raḥmān was replaced by another governor, a new rebellion of Zarandj took place. During the khilafat of ʿAli, the condition of Sistān remained turbulent; thereupon, in the reign of Muḥammad, the governor of ʿBayrān sent Abād al-Raḥmān b. Samura to Sistān once more. This energetic general subdued the land, and penetrated as far as Ḥarmul; he subjugated also Zābulāstān, which had revolted. This achievements caused the khilafat to appoint Abād al-Raḥmān as his immediate lieutenant in Sistān; he remained there, till Ziyād b. Abī Suḥayl nominated Abād al-Raḥmān b. Ziyād al-MMārāhī in his stead. Abād al-Raḥmān died at al-Bayra in 570H. After leaving Sistān, the king of Kābul drove the Muslims out of his land, and the new governor of Sistān had to make head against the Iranian prince Rūbout (this is no proper name, but a title, like Ḥibālī, and the like) who conquered Zābulāstān and Rukhkhdād (then included in Sistān), and penetrated as far as Bust; there he was defeated by al-Ra'id. This latter being also deposed by Ziyād b. Suḥayl, the following governor of Sistān made peace with Rūbout. But this prince remained a turbulent element till his death, which occurred while Abād al-ʿAṣir b. ʿAbdallassāh b. ʿAmir was wali of Sistān. Another Rūbout (son of the former?) held his own against the Muslims in Sistān and Zābulāstān, from the time of the khilafat of Abād al-MMārāhī. Sometimes, however, the Iranian paid tribute, which payment he stopped altogether during the last years of the Umayyad rule. In the reign of al-MMāsrūr the Muslim government adopted vigorous measures against him; but the princes of Sistān paid, as it seems, none the less, their tribute to the ʿAmīrs of al-MMāhdi and al-MMārid, though rather irregularly.

Under al-MMāmūn the tribute (jāmā) was doubled; during his khilafat the king of Kābul embraced Islam, and, also in al-MMāmūn’s reign, Kābul (and of course also Sistān) obtained connection with the governmental post-routes. (For the history of the conquest, and the Umayyad and “Abbasid governors of Sistān cf. al-MMārāhī, i. 2705 ff.; al-MMā fashionable, p. 392 etc.)

In the Middle Ages, Sistān in a wider sense included also the districts of Zābulāstān, Dāvar and Rukhkhdād. Among its cities were Fašt (q.v.), Djuvalīn (q.v.), Bust (q.v.), and Ghausa (q.v.). The boundary to the East cannot be precisely defined; to the North it bordered on Khurāsān, to the West on Khiṣhtān and the great desert of Kirmān, to the South on Makrān. But the name does not always imply this greater area: al-MMāṣūsddast, e.g. says, that some authorities include Bust and Ghausa under the name Khurāsān, not assigning them to Sistān. Amongst the localities of Sistān, al-MMāṣūsddast cites Zarandj, Kuvain, Ẓāhil, Karmin, Karwādān, etc. The capital was Zarandj, near the Sanārā canal, an important city, containing not only buildings of the two first ʿAbbāsid princes, Yaʿqūb and ʿAmr, but also of the Sassanian Ar-Raḥēr and Khusrāw I (al-MMāṣūsddast, p. 300). Zarandj was taken and destroyed by Tahirī (785/1383), and has remained ruined ever since (cf. Le Strange, The Lands of the Eastern Caliphate, p. 335, note 1).

The only time Sistān has played an important part in medieval history has been during the reign of the ʿAbbāsid dynasty, whose founder, Yaʿqūb b. ʿAmr b. Ẓāhil, was himself a Sistānī (born at Kābul). Sistān was, of course, the central land of this dynasty (cf. ʿAbbāsīs, ʿAMR B. AL-MMĀRĀH). After the downfall of the ʿAbbāsīs, Sistān belonged successively to the empire of the Sāmānids and the Ghausawīs (coins of Sabuktig and Maḥmūd have been found in Sistān, cf. J. R. A. S., 1904, p. 681). The land had, however, its own native rulers (malīk) under the suzerainty of the greater dynasties. By the Sāmānīs Nāṣr b. Abūrād was the ʿAbbāsīs’ viceroy of his native country, Sistān (500 = 912/922). Nāṣr was succeeded by his son Khālah, who was dispossessed from Sistān by Maḥmūd the Ghausawī, who conferred the land on his (Maḥmūd’s) brother Nāṣr. Afterwards, during the Salīḥī period, a descendant of Khālah, named Tahirī, obtained the rulership of Sistān from the Salīḥī government. It is this Tahirī, whom the ʿAbūlqaysī Nāṣirī seem to regard as the first ʿAbbāsī malīk of Sistān. For this text says: “These Maliks claimed descent from the race of Kai Kāṭā’ān”.

It is, however, doubtful, whether they are from the same stock as the Kayānī family which ruled in Sistān during the epoch of the ʿAbbāsīs, and later. The relation in which the ʿAbbāsī family stands to these medival Sassanians is also very obscure: it is very doubtful whether the line from which Tahirī descends, really originates from al-MMārāhī, the father of the great Yaʿqūb. Tahirī died in 480 (1087). The following list of his successors, up to the time of the invasion of the hordes of ʿAbūlqaysī, is given after the ʿAbūlqaysī Nāṣirī. The chronology is very doubtful and rather improbable; for all detail reference should be made to the ʿAbūlqaysī themselves:

Tādī al-MMānī I Abū l-MMāri 480/1087 — 559/1163.
Shams al-MMānī Muḥammad 559/1163 — ?
Tādī al-MMānī II al-MMālik al-MMārid 614/1215 (cf. the article ʿAffūzīs, ii. 171f).
Bahrām Sābūsī al-MMālik al-MMārāhī 612/1215 — 618/1221.

After Bahrām’s death, his sons Rukh al-MMānī and Nyārat al-MMānī contended for the kingdom. At last, the former was victorious, but both brothers were killed in the massacres wrought by the Mongols. It appears, then, that the ʿAbūlqaysī ʿAbdiyyūn Giyūṣī (1118), uses a less appropriate phraseology, when it seems to imply that the Mongol invasion did not afflict Sistān as much as other countries, but that the Mongol ravages reached only the frontiers of the land. Djuvalīn, which in the Middle Ages was included in Sistān, the author of the ʿAbūlqaysī
Djâhistân Guškâš explicitly states to have been taken by the Mongols (loc. cit.); the Tâbašt-i Nâzîvâr (trans. by Raverty, p. 195) say that Sistân was ravaged by them in a barbarous manner. This is not to be wandered at, as the Sistân ruler Bâhrâm Shâh was an ally of the Khârijân Shâh.

After the departure of the Mongols from Sistân, its history becomes confused. Several persons pretended to the supremacy; finally we find the land included in the estates of the Harawi ruler Shams al-Dîn Muhammad Kûrt. But there have been, also, in the later Middle Ages, native Sistânî princes (on their coin, cf. F. R. A. S., 1904, p. 669. There exists a genealogy of them in manuscript, the Shâfi'âyat al-Mulâhîn.

After suffering from an invasion of the Čaghatâi (700 = 1300/1301), Sistân once more sustained fearful damages at the hands of Timûr. It was this conqueror who ruined Zârânj and took prisoner the mulâk Khuth al-Dîn Kayânî (785/1383); he destroyed also the canal system of the country. But up to the epoch of the Şāfawî Sistân had its internal tranquillity and also a turbulent nobility; the mulâk Mu'izz al-Dîn Husain, for instance, was murdered by the aristocracy (1359/1455).

The Şāfawî Shâh Ismâ'îl conquered Sistân in the year 914 (1508/1509), and the princes of Sistân remained vassals to the Persian empire, till the Afghan invasion of Mir Mahmûd, about 1134 (1722). The Kayânî Muhammad, by means of a disloyal treaty with the Afghân, secured for himself the possession of Sistân and part of Khusâsân, and in consequence thereof dethroned the reigning king, his kinsman Asad Allâh Kayânî, Nâdir Kûlî Kûhân, the general of Shâh Tahmûsp, put to death Muhammâd, but permitted the succession of the former king, Asad Allâh, to the throne of Sistân. This mulâk however died very soon, and was succeeded by his son Husain. This latter revolted against Nâdir, whose forces besieged him and his brothers Fatî and La'îf. 'Ali and La'îf 'Ali for several years in the fortress of the Kûh-i Khâdîja. After their submission, they remained vassals to Nâdir. This last, still being in the service of Shâh Tahmûsp, was by that monarch formally placed in the possession of Sistân, together with Khusâsân, Mazan-dârân and Kirmân (1143/1730). After the death of Nâdir (since 1148/1736 Shâh of Persia), Sistân came under the suzerainty of Ahmad Shâh, the Durrân ruler of Afghânistan. This prince married the daughter of the then reigning Sistânî mulâk Sulaimân Kayânî, son and successor of Husain. Sulaimân's successor, Bâhrâm, vexed by the Sardâbî and Shahrahi tribes, which Nâdir had imported from Persia in Sistân as colonists, called to his aid a Balûch chieftain; these doings caused Timûr Shâh, the successor of Ahmad Shâh, to depose the Kayânî, and to appoint a Shahrahi chieftain as ruler in Sistân. This man being killed (about 1191/1777), Bâhrâm was restored to the government, but under the control of the Afghân governor of Kûh. Troubles went on in Sistân without ceasing. The last Kayânî who had some power was Bâhrâm's successor Djâhistân al-Dîn. This latter was expelled by the Sardâbîs (1838). The authority in Sistân since then was exercised by the local chiefs, and the land became a bone of contention between Habât and Kandahâr, until the Sardâbî chief 'Ali Khân allied himself with the Persian government, hoisted the Persian flag on the fortress of Shikhte and sent his sons as hostages to Maghânî (1853).

'Ali became in fact a Persian governor in Sistân; his rule was, however, disliked by the Sistânîs who revolted. 'Ali Khân perished on the occasion of a night attack on Shikhte, and was succeeded by his nephew Tâdij Muhammad, who ruled at first independently of Persia (1858). Soon, however, he made overtures to the Persian government, and 1862 he declared himself a Persian subject, being in fear of the progress of the aims of Afghânistan, Dâšt Muhammad Khân, in the direction of Herât. Dâšt Muhammad Khân died 1863 and was succeeded by Shâr 'Ali Khân. With the beginning of this reign coincides a disagreement between Tâdij Muhammad the Sistânî and the officers, the Persian government had sent from Târânân; this caused the Sistânîs to incline towards Afghânistan. But as Shâr 'Ali had enough to do with his own affairs, and could not lend effectual aid to the people of Sistân, Tâdij Muhammad again applied to Persia. Finally, the Shâh's army took possession of Sistân (1865); two years later, Tâdij Muhammad was deposed, and Sistân was placed under the authority of a Persian governor with the title of Hâshmat al-Mulk. These complications between Persia and Afghânistan finally led to the British arbitration and the delimitation of the border by the Sistânî-Commission of 1872, which was conducted by Sir Frederick J. Goldsmid. The Persian forces, in consequence of this regulation, evacuated the part of Sistân they had occupied on the right bank of the Helmand, and the borders were fixed, leaving what was called 'Sistân Proper' to Persia. As the whole border was not marked off entirely, the border-work had to be completed by the MacMahon Mission (1903–1905).

Sistân in Iranian epic tradition. Sistân is the home of the greatest Iranian epic hero, Rustam, and of his family. Originally, Rustam does not belong to the cycle of Avestan heroic legend; but he is connected with it by an artificially composed genealogy, which makes his father Zal descend, through the medium of Avestan heroes, from Dâmad Pîrâmî (Vima). This theory, put forth by Noldke, Das Iranische Nationalge5, 9 sqq. is more probable, than the opposite view, which identifies Rustam with the Avestan hero Kâršâsâpa (cf. G. Hüsinger, Kyranâsî im Schlangentrieb, p. 2, and the authorities cited there), and would accordingly include him in the Avestan cycle. The legend of Rustam might belong to the old inhabitants of Drangiana, not to the Sakae (if, indeed, that people did not appear in the Helmand-country before 128 B.C.); cf. Noldke, loc. cit. The Shâhâmûsâ (ed. Fellers-Landauer, p. 1537, 495) represents Rustam as reigning in Zâhâtulân, Bust, Ghasîn and Kâbûlistan, i.e. in Sistân in its widest sense. He refuses obedience to the Iranian king Gauštâp, whom he regards as an upstart (Shâhâmûsâ, p. 1537, 495 etc.). But he is not, in Ferdowsí's epic, represented as being an infidel; this idea only occurring in al-Dinawarî, and seemingly representing a rationalistic view of the old tradition, which only knows of a conflict between Rustam and the special champion of Zoroastrian faith, Išâfîyâr.

Already in early times, we find names and facts of the Rustam legend localised in Sistân. The Arab conquerors found in the locality al-Karistân the stable of the horse of Rustam (al-Balîdhûrî, ed. de Goeje, p. 394); in Karkâya, north of Zârânj,
in medieval times there was a fire temple, whose cupola's were said to have been built by Rustam (Fauly-Wissowa, Reauleau,2, u. v. Carcoe). Such data are of more value for the history of epic tradition, than those of the same kind, noted by modern travellers, as these latter suppose a tradition among the people, in most cases not differing from the actual one extant in the Shâh-nâmâ; indeed, these localizations are very likely to have been borrowed from the Shâh-nâmâ itself. Among these are, e. g., the fact, that the Sîtanâs call the Kâhid Khwâja by another name Kâhid Rustam, and identify its fortress with the stronghold of the robber-knight Kâhid Kâhidshâh, which was, according to a spurious episode of the Shâh-nâmâ, taken by Rustam (Yate, Khurraman and Sîtanâ, p. 86; Sykes, Ten Thousand Miles in Persia, p. 278 sq.). This would even suppose a tradition borrowed from an interpolated recension of the Shâh-nâmâ. A ruined fortress Kâhid Sîm exists between Dowlattabad and Sîhkâla (Sykes, op. cit., p. 230): Sîm is the grandfather of Rustam, but belongs to the artificial genealogy of this latter, which the Shâh-nâmâ traces. There was also a dam made by Gârshâp, and later on destroyed by the order of Shâhrukh, the son of Timûr (Eastern Persia, i. 236). Gârshâp (the Avestan Khêráshpa) is also a forefather of Rustam, but, again, belonging to the artificial genealogy. Localizations of this kind, therefore, can tell us nothing of an earlier form of the legend than that which is known by literary tradition. The following case, however, seems to be an exception: the locality Hawaldâg dâr is said to be the spot, where the dead body of Firûmuz, the son of Rustam, was impaled upon a stake by his enemy Bahram (read: Bahman), the son of Isfandiyâr" (Eastern Persia, i. 256). Here is a difference with the tradition preserved in the Shâh-nâmâ, for according to that text, Firûmuz was taken prisoner, hung upside down and killed with arrows (1573, 97 sq.), but later on, the king (Bahman) permitted his body to be buried (1575, 113).

Finally, regarding topographical matters in general, there may be noted, that the Shâh-nâmâ seems to know the Gewd-dâ Zarih: Kai Khursaw crosses the Ab-e Zarih, when pursuing Afrâsiyâb, but it appears, that Firdušt, or rather his source, had no notion whatever of the real state of things, as Khursaw, according to the text, has to sail on it for several months (1573, 97 sq.). For the rest, the Shâh-nâmâ also knows the Helmand (under the form Hirmand: 1750, 36).

she brought back stability and order to the state, filled the treasury and organised the army. Her rule was severe but salutary, and she won the respect of her subjects. Unscrupulous state officials were impartially punished and she was swift to quench any outbursts of sedition in Egypt or in the provinces. By intrigue she captured Abd al-Rahman, the rebellious governor of Damascus, whom al-Hakim had appointed as his successor (Wa'il 'l-Ahd). She had him imprisoned in Cairo. Then when she became ill and knew there was no hope of recovery she ordered him to be slain.

Three days later she died (425/1414).

(J. Walker)

SIWA, a group of oases in the north of the desert of Libya. From its situation at the intersection of the two great western roads of the Libyan desert, Siwa is the key to Egypt. To the south the line of oases Bahariya, Farafra, Dakhla, Kharga, connects it with the ancient Thebes. To the north, a track now taken by automobiles puts it in rapid communication with the Mediterranean coast, at Marsa Matrīth, the Parothonium of the ancients. It is the central stage in the desert route from Awdjila to Egypt via Jalo, Djaghlib, on the one side, Magharra and Kerdaa on the other. It is 200 miles from the sea, 260 from Awdjila, 80 from Djaghlib, 270 from the Delta and 200 from Bahariya. Siwa marks the limit of Egypt on the west and the beginning of Barbary.

Siwa and the various oasis grouped together under this name occupy the bottom of a depression running from west to east at 60 feet above sea level, 35 miles in the length from Magharra to Zaydin, its bounds are not well defined except on the south where the Marmaric cliff marks the geological boundary. The sand invades it on the south, below it begins the Libyan Erg, the largest of the known ergs. The bottom of the basin is not uniformly level; gūra like islands rise out from among the palm groves. Two of them shelter the gūra's at present inhabited, Siwa and Aghurmī, which lie two miles apart.

Barely a quarter of the depression is cultivated. The remainder is desert or occupied by salt lakes. The two largest lie, one to the west of Siwa and the other to the east of Aghurmī. Magnesian or sulphurous water, perfectly limpid is abundantly supplied by numerous springs fed by a deep subterranean pool. The most important, rif mounazi, which seems to have been dug by the Romans, still shows beautifully worked stones around it. The soil, strongly impregnated with salt, nourishes a prickly plant, asfar; the asfa grows in the sands.

The total number of inhabitants scattered among the oases or collected in the gūra of Siwa and Aghurmī is estimated at about 4,000. This includes the people of Gars, Umm al-Qadwd, the "Mother of the Little Ones", the name of a wretched village which is regularly included in the Siwa group although it lies some 65 miles to the east. Siwa itself has over 3,000 including the many Südänese, who are mainly occupied in agriculture.

The town of Siwa, for the most part in ruins, is built on a long and narrow gūra lying along the line of the Marmaric. The walls of its houses, built along the cliff, make a rampart of red earth, which has a very picturesque effect, rising to a height of 200 feet at the east end and partly demolished on the northern front. The interior is a labyrinth of narrow tortuous dark streets often covered by a roof of palm tree trunks, which is used as a foundation for erections above them. Almost entirely abandoned by the present Ktarians who are building other more accessible dwellings at the foot of the cliff and near the gardens, the high town recalls the not very remote period when the prime consideration of building was defensibility.

Aghurmī, closely built on a rocky plateau, dominates the palms on all sides. The little village has retained its Berber name: aghrum or ihkern means a gūra, a town and the diminutive eigkremn, common among Morroccan Berbers, means a stronghold, a fortress, a country-house defended by towers at the corners, with walls pierced with loopholes. Aghurmī contains all that is left of a temple of Jupiter-Ammon, a few pieces of walls of huge stones incorporated in the miserable native houses.

The Ktarians of Siwa, who are settled and are gardeners, live in houses, as a rule roomy with flat roofs and made of the salt clay, mriq of stone. There are several types, from the one made habitable to the modern country house and the oldest houses, several stories high. The ground floor is used as a stable, the first a granary and the second contains the living rooms. The feature of the architecture is the pyramidal appearance of all the buildings, broad at the base and narrower at the top.

The chief object of cultivation is the date-palm. There are over 160,000 of them. The dates are harvested in October and they are spread out in a kind of granary in the open air, called bawed, of which each farmer has a share in proportion to the importance of his crop. The ground is tilled with the hoe. The Ktarians are not acquainted with the use of the spade; they use the ass which is of a fine breed and not the camel, which is rare in the country.

The date is the basis of their food supply together with bread made of barley-flower. They also eat rice, couscous on feast days, camel-meat, and exceptionally mutton. Tea which they call jābala is their favourite beverage and palm-wino of which they drink a great deal on days of festivals and cleaning of wells. Barley is subject to a kind of tabu. Every year in October they spend a week in the gardens; during the first few days, they live almost entirely on garlic but they do not eat it for the rest of the year.

Industry is of the most rudimentary nature. The men make baskets, mats, other woven articles of asfa and palm leaves with designs in colours. The negroes make a valued oil with the help of mills and crushers. A woman at Aghurmī makes
pottery and decorates it in black and red by the archaic process still in use in the Berber world as far as Tangier. The women weave, but little, a few blouses with designs in colour, coloured *djabbê*, which form the essential part of the native dress.

The other parts of the dress the *khiik, akharam* and the double white and red shirts come from Tripoli; the trousers and shoes from Alexandria. The women also wear trousers, a black blouse (*ahbar*) trimmed with coloured embroidery and a long veil of cotton, in which they wrap themselves up completely when they go out. The most curious of their silver jewellery is a heavy collar (*aghraa*) which young women wear up to their marriage day and which is sometimes formerly to be attached a little round ornament called "the disc of virginity". The women are not tattooed, they do not load themselves with anklets—they are worn only by little girls—not do they hang a *ring* or button on the nose like the Nubians and the Beduins of the coast. They use henna less than the Maghrabis but, use a great deal of *kohl* and *znakh* to brighten their lips and vermillion to colour their cheeks.

The Islâm of the people of Siwa seems somewhat barbarous and sectarian. Some are attached to the San斐iya and others to the Medâni sect. They hold their local saints in great esteem; they celebrate them every year in the course of ceremonies called *swâled*, the most important of which is that of Sidi Shimal the patron saint of the town. This individual is said to have lived at Siwa in the 10th century but was originally a member of the tribe of the Banî Shimal of the Hijaz. The importance of the ceremony is shown by the belief that the worst calamities would fall upon the country if it were not celebrated every year with great splendour. It is of an undoubtedly agrarian and even in origin at least of a licentious character. It is celebrated at the end of the harvest, lasts three days and takes place partly beside the tomb of Sidi Shimal. The felâna eat on the treshing floors of the gardens a sheep, whose throat has been cut the night before in the *fâr* and intoxicate themselves on palm-wine. They go there in groups to the sound of flutes escorting a young boy dressed as a girl. They return in the evening by torchlight after submitting to ritual aspersions at the spring of Tmîsât.

The two canonical feasts are celebrated at Siwa as throughout the whole of Islâm. The rich alone kill on their roof the sheep of *Id Kabir*, the skin of which they eat chopped into minute pieces. Following a custom observed everywhere in Barbary they retain—contrary to orthodox rites—a part of the victim which they eat at *Asghiria*. The last festival, the most popular of the year perpetuates the ancient festival of the summer solstice. On this day the houses are covered with long palms. The children go about singing all the night with lighted torches and little erections (*seghâba*) ornamented with rags soaked in oil.

The different events in family life, birth, circumcision, marriage, and funeral, are accompanied by rites which are magical in their origin. The third and seventh days after the birth of a child are marked by important ceremonies. The seventh in particular is the day of purification and for giving a name. The hair is cut for the first time immediately if the child is the first born.

The girls are married, before they reach the age of puberty, at 8 or 9 years of age. The amount of the dowry in no case exceeds 120 Egyptian piastres but the fiance is bound to give to his future wife, jewels and clothes, the number and value of which are the subject of bargaining during the preliminaries of marriage. On the marriage day at sunset the bride is led in great pomp to the Tmîsât spring, into which formerly she threw the disk of virginity which hung on her heavy silver collar. She is then taken back to her home where a professional hairdresser attends to her nuptial toilet. Next morning at dawn the women and relatives of the bride come for her and pretend to fight with the members of her family after which she is taken to her new home carried on the shoulder of a negress. Polygamy is nominally unknown but the men divorce their wives with such ease and so frequently in the course of their lives that there is not a clearly marked line between marriage and prostitution.

It is the custom for all the men to have to attend the funeral of every dead man. While they are at the cemetery, the women take the widow to the spring of the Tmîsât where they wash her and clothe her in mourning dress. They then shut her up in her house. She is then regarded a *ghila* or ogress. No one except her nearest relatives can go near her during the legal period of her retirement. On the evening of the last day, the public crier announces the ghila intends to go out. He also indicates the route she will take to go to the spring which is the goal of her first visit. For fear of meeting her, the men go to the gardens and do not come back till the evening. Cleansed by her bath of all the evils that attached to her, she resumes her place in society and may re-marry at once, if the opportunity occurs.

The Kâsîrians have beliefs about treasures hidden in the caves and in towns buried in the lakes or sand of the desert. They people the subterranean world with *djîlis*, with *afrit*, who sometimes assume the forms of men or animals or disappear in whirlwinds of dust. They attribute to the evil eye all the ills that befall them, their cattle and their crops. They preserve themselves from it by covering themselves with amulets and by hanging amulets or pots blackened in the fire to the walls of their houses and to the trunks of their palm-trees. They say that the ostrich understands human speech. They also think that when a dog howls at the moon or the owl hoots it means that a death is imminent.

Language: Like their brethren the Tûyreg, Kabyls or Barbâs, the popular literature consisting of stories, legends and songs written in Berber is so far only known from very few specimens. Arabic is in practice the language spoken and understood in the oasis along with Berber which is still the native tongue. Berber is spoken not only at Siwa, Aghurmi and Gara but also at Mânhîyat al-Agâza, in the oasis of Bahariya, which marks the extreme eastern limit of Berber territory.

The words and the few phrases recorded by travellers who have visited Siwa in the last century are not sufficient to enable us to characterise the dialect of Siwa.

The Orientalists, Hanoteau, Stammes and notably R. Basset who have studied them have been able to connect a certain number with Berber roots
still in use. Horneman was the first European to identify them with the language of the Tuareg and of the people of Twa, i.e., Berber. But the Arab writers, al-Maqrizi first of all, had already remarked the Berber origin of the people of Sen-
tarya and even connected their dialect with the Zenata group.

The arabisation of the dialect, unknown to an
equal degree in any other Berber dialect, consti-
tutes the most marked characteristic of the dialect.
The vocabulary is very much affected. It would be
difficult to quote several hundred Berber words from it. Even the morphology seems in some
cases to have been affected. The phonetics on the
other hand, have remained Berber in their essential
features and offer points of resemblance to the
dialects of Tripolitania and Southern Tunisia.

Certain grammatical forms and syntactical pecul-

iaritys regarded as common to most dialects can
no longer be found in Siwa. There is no longer
any trace of the participial form or of the passive
in a, nor of the particles d and n. The feminine
forms of the imperative and aorist, except that of
the third person singular, have also disappeared.
Negation does not affect any vocalic modification
in certain verbal roots conjugated in the pretérite
and does not affect the pronouns direct and
indirect. The latter retain in all cases a definite
place following the verb. The initial vowel of the
noun undergoes no modification whether the noun
be governed by a preposition or be the subject
of a verb and placed after it.

The study of the dialect of Siwa on account of
its so marked arabisation is of obvious interest;
but it is clear that it can only be made by a
comparison with the dialects which offered a stronger
resistance to the Arabic invasion. One can foresee
its disappearance at no remote period. The estab-
lishment of a school where the teaching is given in
Arabic by Egyptian masters on modern methods
can only precipitate its extinction.

History: Siwa is the historical centre of the
Eastern Sahara. The Egyptians called it Sehri-
mit, "the camp of the palm-trees", the Greek
and Romans, Ammonium, the early Arab was
Sentarya. The present name seems to correspond
to the Sua of al-Ya'qobi and the Timu of Ibn
Khalid, both derived from the names of the Berber
tribe of Banu 'I-Waswa, who according to al-Maqriz
were Lwûta of the province of Mantiq.

The ancient Siwa owed its extraordinary pro-

sperity to a ram-headed deity Ammon, whom the
Egyptians identified with their great Theban deity
Ammon-Ra, when at a comparatively late date in
the middle of the sixth century B.C. they effectively
occupied the Libyan oases. By this time the fame of
the Libyan Ammon was solidly established. For
nearly a thousand years, people of note came
from all parts of the ancient world to consult
him. He was an oracular deity who unveiled the
future. In 351 B.C. Alexander the Great landed
at Paroecithi with an army, which was saved
from thirst by a shower that fell unexpectedly in
the desert, thus learned with satisfaction that
he was really the son of Zeus. The colonists of
Cyrene and the Greeks of Athens held him in
great veneration. They assimilated him to Zeus
just as they had assimilated the king of gods, the
Theban Ammon, to their great divinity. The
Phoenician and Carchagian colonies also gave
him a place in their Pantheon, very soon identi-

fying him with their own Ba'al Hammon as a
result of a quite fortuitous resemblance of name,
according to M. Gaët. It is to the oracular god
of the Great Oasis that the Romans refer, when
they speak of Jupiter Ammon.

As to the original nature of the Libyan Ammon
we are reduced to conjectures. Oric Bates thinks
that the primitive oracle was an oracle of the
dead. It is however almost certain that the ram
was, in ancient times, a deity protecting the Libyan
herds, whose character may have developed, in
course of time. He had solar attributes at the
period when he first appears in history. The cult
with which he was honoured and the manner
in which he uttered the oracles were at this time
essentially Egyptian.

Relics of these days still exist; besides the
ruins of Agurumi, there are the remains of an
other little temple situated a few hundred yards
from the modern village and called by the natives
Oman al-hida; they consist of a piece of wall
standing in the midst of an area covered with
large stones, completely covered with cartouches,
their characters and figures of the gods of Egypt.
As far as one can judge the monument belongs to
the Ptolemaic-Roman period. Farther south the
hills of Tafrir are riduled with tombs regularly
cut out of the chalk; some still have the fine
framework of stone of the same period which
marked the entrance. The adjoining girs and the
flanks of the Marmarie also contain such tombs
by hundreds. Siwa was a vast necropolis. One of
its girs even has a half-Arabic half-Berber name of
ad-dar 'lamu, "the hill of the dead", and thousands
of bones still litter the soil there.

The Romans occupied the Great Oasis. Under
Augustus they made it a place of banishment
for political prisoners. About the fourth cen-
tury, Christianity reached the oasis. A little later,
no doubt, its inhabitants joined with the Mazikes of
the coast (Imazighen) in attacking the Byzantine
world which was everywhere threatened. When
about 640, Egypt was invaded by the Muslim
armies, the people of Siwa seem to have been
free and independent.

It is not known how the Muslims conquered
the Libyan oases. The Arab historians and geo-
ographers on this subject only record stories or
legends of no great interest. Siwa was too remote
from the main route of invasion which led the
conquering armies and migrating tribes to Magrib
al-Aṣṣ. We may suppose that small bodies of
Arabs came and settled in the oasis and then
became mixed with the population, which has
remained Berber to our day.

In the beginning of the xviii century civil
war broke out between the Ghariyûn or "people
of the west" and the Sharqiyyûn or "people of the
east". These feuds which are barely settled
to-day led in 1820 to the occupation of the
country by the Turks.

European travellers began to visit Siva at the
end of the xviii century and especially at the
beginning of the xixth. They were first visited in
1792; Horneman followed six years later, Caillaud
in 1829, Bricheotti-Robecchi, Baron de Minstoli,
in 1820-1821, then Scholz, Bayle St. John,
Pachyn, Hamilton in 1852 etc. All or almost all
complain of the hostile attitude of the people
towards them.

About 1836 Muhammad al-Sanûz made a stay
of several months at Siwa. He preached his doctrine there and made several converts. The cave which he used as an oratory is still shown at Ḫasr al-Hattina.

In the course of the Great War, Siwa and the line of oases regained their strategic importance. The chief of the Sanūtūs, Sāidī Ahmād, went to war with the Anglo-Egyptian forces. In 1915 he occupied Sellūm which the English had evacuated, but defeated before Maṣrīḥ he took refuge in Siwa, from which he organised a new line of attack on Egypt, at Dakhla and Kharga. He returned to Siwa in the early days of 1917. His last forces were surprised at Girba by English troops brought up in motor cars. He was then forced to take to flight. He reached the coast with difficulty whence a submarine took him to Constantinople. His cousin Sīdī Muhammad Isrāʾīl, grandson of the great Sanūtūs succeeded him and with his accession peace reigned once more in the Libyan desert.

SIWĀS, Turkish wilāyāt, was, up to the new administrative partition of Turkey, the largest wilāyāt of Anatolia (Sāmī Bey Frāshērg, Khāmis al-Aʿlām, i. 2794). Situated between 38° 30' and 41° N., 35° 30' and 39° E., it corresponds to part of ancient Cappadocia; on the N. its boundaries are the wilāyāts of Kaşantum and Trebizond, on the E. those of Erzĕrüm and Maʿmūret al-Aʿzīz, on the S. those of Aleppo and Adana, on the W. those of Angora and Kaşantum.

Its entire surface covered about 30,000 square miles, its population, at the end of the sixt century 11,086,015, divided as follows: 89% Moslems, 279,834 of whom were Siwās, especially Kašl-bāshī, 29,134 Greeks, 30,433 Protestant Armenians; 10,477 Catholics; 76,068 Orthodox Greeks.

The wilāyāt was divided in 4 sandājs: Siwās, Toḵād [q. v.], Amāna [q. v.], Ḫara Ḡisr Sharṭā, subdivided into ḫasas and māḏiyas; its capital was the town of Siwās (Sebastā)
A new epoch of progress will dawn with the construction of the Angor–Siwás & Šamun–Siwás railways, already progressing thanks to the Kemalistic Republic's government.

**Bibliography:** besides the sources quoted above, see: Cunet, *La Turquie d'Asie*, i. 613—779; 'Ali Djevd, Constantinople 1314, ii. 404—473; Ewliya Celebi, *Seyahetnâmesi*, iii. 195 sqq.; M. van Berchem and Khalil Edhem in *M.I.F.P.A.O.*, vol. xxxix. (E. Rossit)

**SIWRI HÎŞAR,** also written **Sivri Hıçısar**, *i.e.* strong castle (cf. Ahmed Wefik, *Letheti Oğlumânı*, p. 459), the name of two places in Asia Minor.

1. A little town lying in the centre of the plateau bounded on south and east by the upper course of the Sağırı and in the north by the Pursaık, c. 85 miles southwest of Angora. Siwri Hıçısar is on the northern slope of the Ginesis Dagı; the citadel of the town was built on this mountain. The town does not date beyond the Satılık period and has no remains of archaeological interest. But it was already known as a strong place to Karzîn (Geography, ed. Wüstenfeld, p. 359) and to Hammad Allah Mustawfi (ed. Le Strange, p. 99). In the xivth century it formed part of the possessions of the Karamut-oglu, who occupied it again after Timur's conquest. The latter had his headquarters there for a time. But under Muharram I, Siwri Hıçı̇sar was annexed to the Ottoman dominions (cf. e. g. Aşık Paşa Zade, *Tanzih-i Alî Oğlumânı*, ed. Giese and *Alî, Kunû al-Akbar*, v. 177). In the xvith century the town belonged to the sandjak of Khudukwendiğüz (Hādji) Khâfis, *Liţan-nunûn*, p. 656 but in the new system of administrative division, it became the capital of a *kaşâ* in the sandjak of Angora. Toward the end of the xviith century it had about 11,000 inhabitants of whom 4,000 were Armenians (Sāmî). There is a mosque there attributed to the Satılık vizier Aμn al-Dīn MiKhâl, with a library of 1,500 volumes. The principal industries are goldsmith's work and weaving.

Siwri Hıçı̇sar does not lie on any of the main routes of Anatolia — but since the construction of the railway to Angora which runs along the Pursaık, the north part of the kası which has received a new economic stimulus — but near it there are relics of important centres of classical and Byzantine times. These are the ruins of Pessinus, near the village of Billa Hıçı̇sar, four hours S.E. of Siwri Hıçı̇sar (Textier, *Description de l'Asie Mineure*, ii. pl. Isii); and towards the south, on the other banks of the Sağırı, near Hâdiag Hanım, the remains of the Byzantine town of Amorium, known to Orientalists as *Amultiyya* (cf. AMORIUM).

*J. H. Kramer*

**SIYÄLĶÜT,** officially spelt SİLLİKT, is a town in the Pândjâb situated in 32° 30' N. and 74° 32' E., the fortress of which is attributed by legend to Râjâ Sîllî, the uncle of the Pâna-daws, and its restoration to Râjâ Silwîhan, in the time of Wirkan-dînîyâ. SİLLİKT had two sons, Pâran, killed by the instrumentality of a wicked step-mother, and thrown into a well, still resort of pilgrims, near the town, and Kâsil, the mythical hero of Pândjâb folk-tales, who is said to have reigned at SİLLİKT. In 1190 the fort and city were destroyed by Kaşâr Nâzârî with the help of the Ghânzâris of the Vândzâr country, and the fort was not restored until it was rebuilt by Muṣîz al-Dîn Mûhammad b. Sām to overawe the turbulent Khokars, who preferred the feeble rule of the later Ghânzâris to the more energetic domination of their conquerors. Under Akbar Siyâlkî became the headquarters of a *sârî*, or fiscal district, and in the middle of the seventeenth century it fell into the hands of the Râjdîû princely house of Djamâlî. The mound in the centre of the town, crowned with the ruins of a fort, is popularly supposed to mark the site of SILIMÎN's stronghold, but it is in fact all that is left of the fort of Mûhammad b. Sâm. Siyâlkî also contains the shrine of Hâfiî Nâzâk, the first Sikh guru, where an annual fair is held. In 1849 the district passed, with the rest of the Pândjâb, into the hands of the British, and the old fort, now dismantled, was gallantly defended by a handful of Europeans in the Munshi of 1857.

*W. H. Hajo*

**SKANDERBEG** is the name by which the national hero of Albania is generally known in Europe. It is based on an Italianised form of the name Iskander Beg, which was given him in his youth when he was serving at the Ottoman court; the name contains an allusion to that of Alexander the Great. His real name was George Kastriot, of the family of the Kastriotis of Serbian origin, who had once ruled Epirus and Southern Albania. Born about 1404, he and his three elder brothers were given as hostages to Sultan Murad II, so that he was brought up in the Muslim religion as âl oğlu. His ability won him the office of sandjâgbeg at quite an early age. He played no part in the campaigns of 1435 and 1436 when the Ottoman generals 'Ali and Tarâkahîn effected a partial submission of the Albanians. From this time Skanderbeg lived at Dibra in Central Albania and showed himself a more or less faithful vassal of the Turks, although he was already negotiating with the Venetians and Hungarians. His first rebellion against Turkish rule took place in 1443 after the defeat suffered by the Turks at the hands of the Hungarians at Nish; he captured Kroya (Turkish Ağa Hıçı̇sâr) by a ruse; it is in the mountains not far from the coast between Durazzo and Alesio. It was here that the Albanian chiefs of clans came to join him and he made it the centre of his power. He had by now returned to
Christianity and this marked a very definite change of attitude to the Turks. A Turkish army under İsa Beg failed to take the town. Skanderbeg also attacked the Venetian possessions on the coast but in 1448 a peace was concluded between him, the Sultan and Venice but it did not last long. Murad II commanded in person the expeditions against Albania in 1449 and 1450. The Turks took Dibra and Setigrad among other places. Skanderbeg was able to hold out, however, thanks to the mountainous nature of the country and in spite of the temporary desertion of his nephew Hamza who had joined the Turks during this period. He made an alliance with the king of Naples whose suzerainty he recognised. He was also supported by the Pope and by the Hungarians so that when hostilities again broke out in 1455, he was usually able to resist the Turkish generals. In 1466 however, Muhammad II forced Skanderbeg to conclude a truce by which he agreed to pay a tribute. The Albanian chief then went to Istanbul where he sought for the King of Naples. Soon afterwards he returned to his native land where, supported by Venice and other Christian powers, he resumed a guerilla warfare against the Turks. At last in 1466 Muhammad II began his second Albanian campaign. He succeeded in subduing the country and built it in the centre the fortified town of Ilihasan (il hasan, i.e. "dominating the country"). Next year Skanderbeg died at Alessio (Jan. 18, 1467).

The history of Skanderbeg has been much studied in Europe since the very circumstantial but not always reliable biography written by Barleisio of Scodra in the second half of the xvth century. Other sources are the Byzantine historians Chalecocondylas, Phrantzes and Cretoboulos, and Venetian documents (publ. by Ljubić in Monumenta spectat...). The Turkish sources are on the other hand, the chroniclers of the empire (e.g. "Ashay" Fehan Zade, p. 124, 133, 169 and the Tabiblik Al-i-Othman, ed. Gjes, pp. 66, 70, 73, 113) and the later historians (e.g. Mündiféli Bašbi, iii. 352, 361, 383) are not at all explicit and, as to dates, they do not agree with the western sources. The Turkish histories only mention the first revolt of the Khil'in Iskandar in 846 (1442/4443), the campaign of Sultan Murad in 851 (1447/4448) and the last campaign of Muhammad II in 871 (1466/4667).

Within ten years of the death of Skanderbeg, all Albania was subjected to Muhammad II. Nevertheless the memory of the greatest national hero of the Albanians has remained alive among Turks as well as Albanians. It is after him that the Turks named Scodra Iskenderya. Towards the end of the xviith century, the Albanian Muslim name of Skanderbeg Frishërti (brother of Sasi Beg, q.v.) devoted a great Albanian epic to him entitled Skander Beg, pub. at Bucharest in 1868.

SKUTARI. [See SKUDOBA]

SLAVS. The Arabic word for "Slav", شاهب, more rarely ضابط (also ضابط) or ضابط, pl. ضابط is probably taken from the Greek Σπαλαδας, Σπαλαδας. Slav mercenaries had been settled in the eastern frontier provinces of the Byzantine empire in the seventh century A. D. so that the Arabs must have made the acquaintance of the Slavs in their very earliest battles with the Byzantines. During his campaign against Constantinople (715-717) Maslama is said to have taken a "town of the Slavs" (madinan al-Salbika) immediately after crossing the Byzantine border (Fragm. hist. Arab., ed. de Goeje, l. 25, 1). The Slavs found a refuge in the mountains of the Khasars (between the Caucasus and the lower course of the Volga). During the reign of the Caliph Hâlid (724-743) Marwân b. Muhammad (afterwards the Caliph Marwan II) is said to have transported 20,000 Slavs from the land of the Khasars and settled them in Khokheta (Khâkhat); there *they killed their emir and fled, whereupon he (Marwan) pursued and slew them* (Baladhuri, p. 208 at the top); but these Slavs are still mentioned under the Caliph Marwân (754-775) among the colonists settled on the Byzantine frontier in Cilicia (ibid., p. 166). The red (or reddish) hair and complexion of the Slavs is always emphasised, for example as early as the first century A. H. in the Divan of Akhtal [q. v.], ed. Shâbili, Bairût 1891, p. 18, 15. In spite of this physical characteristic, the Slavs were chased with the Turks as descendants of Japhet (Arab: Fâdhah). Each of the three sons of Noah is said to have had three sons in their turn; Wahb b. Munabbih (in Tabari, i. 211, 1) gives as the sons of Japhet, Türk, Gog and Magog, while soon afterwards, Sa'id b. Musayib (d. 95 = 713/714) gives the descendants of Japhet as the Turks and Slavs and Gog and Magog united into one people (al-Baki in Kunik and Rosen, p. 18), as do Ibn Isâk (Tabari, i. 211 sqq.) and Gardizi (in Barthold, Ostet, etc., p. 80) on the authority of Ibn al-Muqaffa' [q. v.]. Sa'id b. Musayib adds that all three sons of Shem (the ancestors of the Arabs, Persians and Greeks) were well brought up while those of Japhet and Ham were good for nothing. The Slav master of the Muqaffa' al-Tamurîkh, who wrote under Turkish rule in the ninth (ixth) century (text in Barthold, Turkestam, etc., p. 19) makes an exception for Türk and Kazar among the sons of Japhet. They were intelligent but there were nothing good about their brothers. According to a story told by Ibn al-Muqaffa', Japhet's son Şahhâb was brought up on bitch's milk; this is connected with a Persian etymology شاب, dog, šab, šap (Gardizi in Barthold, Ostet, p. 85). In the same source (ibid., p. 86) the Kirges are described as descendants of the Slavs on account of their "red hair and white skin". The ruler of the Bulgars on the Volga is called "King of the Slavs" by Ibn Fadlan [q. v.]. not
only in Văcăț (Mu'āṣām, i.e. 723, 11); but, as is now certain, also in the original Răița (Răițețin de l'Acad., etc., 1924, p. 244); the story of the raids of the Khwarazmians on Bulgârâ and Slavs in Izn Ħawjāl (B. G. A., ii. 281, 13) is to be similarly explained. It is also probable that these Slavs were subjects of the king of the Bulgârâ. It is perhaps to the same ruler that Ya'qūibu’s (ed. Houtou, p. 598) story of the “lord” (qābiḥ) of the Slavs refers, for whose assistance a Caucasian people appealed against the Arabs about 850 (855/855) at the same time asking for the help of the “ruler of the Greeks” and the “ruler of the Khazars” (another explanation in J. Marquart, Osteuropäische und osteuropäische Streifzüge, Leipzig 1903, p. 200). On the other hand Tāfarī’s story (iii. 2132) under 853 (896) of the campaign of the “King of the Slavs” against Constantinople refers to the war between the Cæs of the Danube Bulgârâ Simeon (890–927) and the Emperor Leo VI in 903. The name “Slavs” for the people of the modern Southern Russia has been gradually ousted by that of “Russians”. The Don, the course of which was thought to be an arm of the Volga, was first called “River of the Slavs” (Nahr al-Saṣāḥilâ, B. G. A., v. 271, 31; vi. 154, 12) and later “River of the Russians” (Nahr al-Khâṣî) (ibid., ii. p. 276, 16, and also by the anonymous author of the Persian Ḥudud al-ʿAlâm, cf. Zâr, x. 137).

The connection between the Slavs and the peoples of the west seems to have been first noticed by Ibn al-Kalbî (Ḥiḥâm b. Muhammad, cf. ii., p. 609). According to Văcăț (Mu'āṣām, iii. 405) it describes the Slavs as brothers of the Armenians, Greeks and Franks and descendants of Yūfān b. ‘Uṣayf, giving his father as his authority. More accurate information regarding the Slavs as neighbours of the Greeks seems to have been contained in the works of Muslim b. Abī Muslim al-Djarmî who was released in 845 after being eight years a prisoner among the Byzantines; on the authority of Muslim, Ibn Khordâdbeh (B. G. A., vi. 105, 13) mentions a “land of the Slavs” (Būṭtīd al-Saṣāḥilâ) west of Macedonia. In Mawrådī (Mu'āṣām, ii. 66) the Franks, Slavs, Longobards, Spaniards, Gog, Magog, Turks, Khazars, Burgджąn (q.v.), Alans and the (Spanish) Djâlīlâ (Galîrâns) appear as descendants of Yūfān. In another passage (iv. 38 sq.) the lands of these peoples are dealt with in geographical succession from east to west; the land of ‘Uṣalam of the Slavs is placed between that of the Burgджân and the land of the Greeks. A reddish colour (qānīrā) is mentioned as the characteristic feature of the Slavs and Greeks (iii. 133). The Bulgârâ and Slavs for the most part adopted Christianity and submitted to the lord (qābiḥ) of Rome, the capital of the Franks (B. G. A., viii. 181 sq.). The banks of the Danube are mentioned as the abode of a large section of these peoples (ibid., p. 183 infra; cf. the still more obscure passages in the Ḥudud al-ʿAlâm; in the manuscript we have Dīnā for Dīnā, nor Kīrā as in Zâr., x. 133 sq.). The Greeks, Romans, Slavs, Franks and their neighbours on the north spoke a common language and formed a joint empire (A. N. R. T., viii. 83, 9). The latest notices of the Slavs in Europe are found in the travels of the Spanish Jew Ibrahim b. Ya'qūb in 965, translated by al-Bakrī (cf. i., p. 606 sq.); in it Slavs are mentioned on the Adriatic Sea, as well as in the frontierland of the Slavs, in the northeast, the land of the Polish prince Mieszko (Muḥḥi) about 900–902, the neighbour of the Russians and Poles. On the other hand, Idrisi only mentions a land of the Slavs (Bīḥād al-Saṣāḥilâ) on the Balkan Peninsula in connection with Venice (Geographie d’Edrisi, transal. A. Janbert, Paris 1836–1840, ii. 286); in the description of the Slav lands from Bohemia to Poland (q.v. ci., ii., p. 375 sqq.) no reference is made to the common Slav origin of the population of these lands. From that date the words Saṣāḥilâ and Saṣāḥilâ gradually disappear from Muslim literature and are used only in quotations from older works. The word “Slavs” for example never occurs in Djuwainī’s (G. M. S., vi. 224 sqq.) and Ragîd al-Dîn’s (ibid., xviii. 43 sqq.) accounts of the European campaigns of the Mongols. The modern Turkish Dîlamî is borrowed from modern European scientific usage, probably from the French.

Like the Turks, the Slavs were sometimes introduced into Muslim lands as slaves, especially as white eunuchs (cf. B. G. A., iii. 424 sq.; v. 84, vi. 92, 3). Special regiments were formed of Slav troops, as of Turks, and their leaders were sometimes able under favourable circumstances to rise to found dynasties. On Slavs in the service of the Fātimids in Egypt cf. e.g. K. Inostrancev in Zâr., xvii. 29 and 86; on Slavs in Spain, e.g. Doyz, Recherches, etc., Paris-Leiden 1881, i. 227 sqq. (Prince Khārîn al-Amarîa, cf. i., p. 373 sqq.) and 235 sqq. (the Slavs as allies of the Arabs against the Berbers).

stationed at first at al-Dar al-baidha" (Casablanca) from 1292–1293 (1875–1876) and made two stays at Marrakesh, were he was employed in the financial administration of the imperial household. He then lived some time at al-Djadidah (Mazagan) where he was attached to the customs service. He next spent some time in Tangier and Fas and towards the end of his life returned to his native town where he devoted himself to teaching. On his death he was buried in the cemetery at Saâd outside the Bab Ma'allika Gate. Al-Nâṣiri al-Slâwî was a minor civil servant who was also a man of letters and a historian. In addition to his historical work, which gained him a certain reputation even outside of Morocco, he left other works which would alone have sufficed to attract attention to him and secure him an honourable position among modern Maghribi men of letters. These are, in addition to the six little books detailed in my Historien des Chorfa (p. 353, note 1): 1. A commentary on the Shumâkah-mâzâya, a poem by Ibn al-Wannân which he called Zahr al-Afânîn min Hâditht Ibn al-Wannân (lith. at Fas in 1534 A.H., vols. 2); 2. A survey of the heresies and schisms in Islam entitled Ta'zîm al-Minna bi-Nuyrât al-Summa (Rabat MSS. No. 66; cf. my Catalogue, i. p. 23); 3. A monograph on the family of the Nâṣiri dynasty to which he himself belonged: Ta'zîm al-Nasyîrî bi 'l-Nasîb al-agâfî (lith. at Fas, 2 vols., a French synopsis has been given by M. Bodin, La Zâwiya de Tâmgirt, in Archives Berbères, 1918). This work, which the author finished in 1309 (1881), is a good work of the Zâwiya of Tâmgirt, with much interesting information, which compensates for all the discussions in which the historian tries to prove the authenticity of his family genealogy, with the help of somewhat unconvincing arguments.

Ahmad al-Nâṣiri al-Slâwî's great work is the Kitâb al-İstîqâh li-Ahâlîr Dâwal al-Magribî al-Âzîzî. Its publication was an event unparalleled in Maghribi historiography. The author produced not a limited chronicle but a general history of his country. Welcomed by European orientalists on its publication, it was not long in attracting the attention of the historians of North Africa, for whose work it became a much consulted document, especially as a French translation in the Archives Marocaines soon made the last quarter — the history of the 'Alawi dynasty — accessible even to non-Arabists.

It was soon recognised that this chronicle was like all the other products of western Arab historiography: it was only a compilation, the most appreciable merit of which was to have collected in a continuous narrative, items of political history scattered about the chronicles or biographical collections written in the country. But it must be confessed that al-Slâwî was the first of his compatriots to attempt to exhaust a subject of which his predecessors had only dealt with parts of it, but not this in particular. Not his primary object: I have shown elsewhere (p. 357–356) that the starting point in the compilation of the Kitâb al-İstîqâh was a work of some length on the Marinid dynasty of Morocco, based mainly on the historical works of Ibn Abî Zarî and Ibn Khalîdîn, to which he had given the title Kâshf al-Arin fi Layâlk Basi Marîn. His residences in the different capitals of Morocco, having enabled him to get access to sources for other dynasties also, he had the idea of composing a complete history of Morocco. He finished his work on 15th Djamâd I, 1298 (May, 15, 1881) before the end of the reign of the 'Alawi Sultan Mâwîlî al-Îsâni to whom he dedicated it. But he was poorly recompensed for this act. On the death of this ruler, the author decided to have his chronicle printed in Cairo, after continuing it down to the year of accession of Sultan Mâwîlî 'Abî al-Îsâni. The Istîqâh thus appeared in Cairo in 4 volumes in 1312 (1894).

The reader may be referred to the work quoted above for an examination of the Arabic sources of the history of al-Nâṣiri al-Slâwî, and for a list of works from which he adopted or quoted textually passages. Here we shall simply point out that the chronicler was the first Moroccan writer to use European as well as Arabic sources; he only learned of them by chance; these were the history of Mazagan (Ar. al-Djadidâh) under Portuguese rule entitled Memórias para historia da praça de Mazagão, by Luís Maria do Conto da Albuquerque da Cunha, Lisbon 1864; and the Descripción histórica de Marruecos y breve review de sus dinastías, by Manuel P. Castellanos, Santiago 1878; Orihuela 1884; Tangier 1898.

In the arrangement of his chronicle al-Slâwî does not differ from the other historians of his country. But he sometimes gives evidence of a critical sense; we have a feeling that he is a historian by accident and a literary man by vocation. He sometimes gives evidence of considerable independence of spirit and of some breadth of view. As to his style, it is clear and chastened and only rarely resorts to metaphors and rhymed prose. The writer seems to be the modern Moroccan historian who writes with most facility and elegance.

Bibliography: A full study of the life and work of al-Nâṣiri al-Slâwî has been made by E. Lévi-Provençal, Les Historiens des Chorfa: essai sur la littérature historique et biographique au Maroc du XVIIè au XXème siècle, Paris 1923, pp. 350–368. The full bibliography of this author is given in the notes.

(LEVI-PROVENCAL)

SMALA. 1. French form for samâla, in the Algerian dialect of Arabic, "camp of a tribe or of an important personage, containing his family and his servants, as well as the beasts of burden". The word passed into the French language as a result of the fame of the samâla of 'Abî al-Kâdir b. Mubîyî l-Dîn [q.v.] the capture of which made a great stir in 1843.

2. In Algeria under Turkish rule, the name samâla (plur. samâli) was given to some tribes forming a kind of mounted police (cf. the articles DÎWÎN and ZMÂLA.

(G. S. COLIN)

SMYRNA. [See IZMIR.]

SOFÂLA, a district and town in East Africa in the southern part of the Portuguese colony of Mozambique. — The name Sofâla is generally connected with the Arabic root sofâla "to be low-lying" and in support of this etymology the pas-
sage in Mas‘ūdī (Marwānī, i., 331—332) is quoted, where it is stated that wherever a mountain stretches for some distance below the sea, it is given in the Mediterranean name al-sofāla”. Apart from the question of a submarine mountain this interpretation is not tenable; the district of Sofāla as a matter of fact consists of low-lying ground. But it should not be forgotten that the name of the ancient Indian port of Surparaka, near Bombay, has likewise become Sofāla in Arabic and that there is no question of low-lying ground here. It is therefore not impossible that Sofāla may represent an original Bantu place-name, which however has not been recorded in Oriental texts or in western travellers. As the Arab geographers know two ports of Sofāla both situated in the Indian Ocean and relatively close to one another, according to the Ptolemaic conception of the Indian Ocean which they had adopted, they were differentiated as Sofāla of India, the ancient Surparaka and Sofāla of Zeng (Zenj) or “golden” Sofāla, its homonym on the east coast of Africa.

Mas‘ūdī (945) tells us in the Marwānī, i., 253, that the land of Sofāla lies at the utmost end of the land of Zeng (cf. Zenj) and in the lowest (i.e., most southerly) parts of the sea of Zeng. It adjoins the country of Wākōṭak. In vol. iii. of the same work (p. 6) we are told that the Zengs were settled in Eastern Africa as far as Sofāla, which is the extreme limit of the territory they inhabit and the limit of navigation for ships from ‘Omān and Siraf. The sea of Zeng ends at the land of Sofāla and of Wākōṭa. It is a land which produces gold in abundance and other marvels. The climate is warm and the soil fertile. It was there that the Zengs built their capital; then they chose a king whom they called ṣafāliʿi (read ṣafāliʿi; “whose name is in their language sofāla-e; “kings”, in the singular sofāla-i”) — the text has wrongly for ṣafāliʿi and ṣafāliʿi — which shows that in the tenth century the eastern coast of Africa south of the equator was already inhabited by Bantu negroes.

In his Book of the Wonders of India, the seacaptain Buẓur b. Shahrīyar of Rām-Harmūs tells how a captain of Ṣamāl called Ishāq-al-tawāsa was twice driven by the tempest to Sofāla of Zeng (the first occasion in 310 = 922; the second a few years later), which was inhabited by cannibal negroes (p. 51 sq., 177). There are in this land birds which seize beasts in their beaks, or claws, carry them off in the air and then let them fall to kill and crush them (p. 64, evidently an allusion to the gigantic bird, the rādāf); one man said he had seen there an animal in the shape of a lizard the male of which had two persons and the female two vaminals; its bite was incomparable; snakes and vipers swarm there (p. 173). In 334 (945) the Wākōṭak (sic) plundered many towns and villages of Sofāla of Zeng (p. 175). A bird of the country the name of which Buẓur’s informant could not remember captured and tore to pieces an elephant which ḥa was busy devouring when captured (p. 178). The story also recalls the legend of the rādāf.

“She thought” says al-Biruni (c. 1030 A.D.) in his Indica (ed. and transl. Sachau p. 100 of the text and vol. i., p. 204 of the transl.) that the gāpard was the same animal as the ḍarbardān (chincoros, from the Sanskrit ḍardāndana, “sword-toothed”) until some one who had visited Sofāla of Zeng told me that the ḍarbardān (or ḍarbardān), the horn of which is used to make knife-handles, better answers the description. In the language of Zeng (i.e., Bantu) the ḍarbardān is called impala (more accurate impala; cf. Sushilī gora, Makua pela)’.

On p. 125 of the text (i.e., 370 of the transl.) we are told that one cannot sail on the sea which is beyond Sofāla of Zeng. No one that ever tried this foolish venture has ever returned to tell what he had seen. Farther on (p. 253 of the text i., 104 of the transl.), al-Biruni says that if Somanath in Kashiwara has become so celebrated it is because it is much frequented by sailors and is the starting-point for those who make frequent voyages between Sofāla of Zeng and China.

According to Idrisi (1154) there are in the land of Sofāla famous iron mines, and gold is found in abundance there (transl. Jaubert, i., 65, 66, 75 and 79). Among the towns of this region the Sicilian geographer mentions those of Dhabasta and Daghila but the readings are not certain and they have not been identified.

According to al-Wāṣqa (Marwānī, iii., 96) Sofāla is the last known town of the Zeng. The same stories are told of it as of the land of gold of the southern Maghrib. Merchants bring their goods there and leave them. They then go away a short distance, wait a certain time and come back. The natives have in the meanwhile put beside each article its equivalent in the products of the country (this is the practice known as secret trading, which is known among many peoples). The gold of Sofāla is known to the merchants who trade to Zeng.

Manuscript 2234 of the Arabic collection of the Bibliothèque Nationale in Paris is entitled: *The Book collected and arranged by Abū b. Sa‘d al-Maghribi al-Analaut of the Book of the Geography (of Ptolemy), in seven climes and he has added the exact latitudes and longitudes from the Book of Ibn Fārisā*’. Ibn Sa‘d (twelfth century) says that the names of the towns of Sofāla are not known. The capital is Sayluna (It is undoubtedly the Selwān of Barros, Des. ii., Bk. i., Ch. iii., p. 22 [1777] which the Portuguese historian locates between Malevdi and Monbarsa), which is 99° Long. and 2° 30’ Lat. in the sixth section of the inhabited world, below the equator.

In this town dwells the king of the Sofālānis. They and the Zeng worship idols and stones which they anoint with the fat of large fish. Their principal resources are gold and iron. They wear the skins of panthers. Horses do not live in their country. Their army consists of foot-soldiers’. Farther on in the same section the writer says the mountains of the town of Repentance (al-‘Adaya) on the north coast and in the channel of Kom (Mozambique Straits) is the town of Daghila. It is the last town of Sofāla and the last of the inhabited places in the lands adjacent to this Indian Sea. It is in 109° Long. and 12° Lat. (South) (cf. Relations de voyages et textes géographiques arabes, persans et turcs relatifs à l’Extrême-Orient, ii., Paris 1914, p. 325 and 327*).

In his Kitāb al-Buldān (p. 29) Kāzwinī (1203—1283) records that Sofāla is the last known town of the land of Zeng, that there are mines of gold there and secret trading is practised. He mentioned a bird called the āmūr, which speaks
better than the parrot and does not live more than a year (on p. 20 of the same book at the end of the notice of Zabag [wrongly written Zânag] i.e. Samatra there is a reference to the same bird on the authority of Zakariyâ2 b. Muḥammad b. Khâthîn, the name of which is written ā Hawaiî, smaller than the pigeon, with a white belly, black wings, red claws, and a yellow beak, it speaks better than the parrot3). He also mentions white, red (or yellow) and green parrots. Muḥammad b. al-Djaḥm says on the subject of Sofâla, "I have seen men eating flies, they believe that that prevents ophthalmia and as a matter of fact they are not at all affected by diseases of the eyes".

Abû 'l-Firdâs (1275-1311) only devotes a few lines to the subject of Sofâla. According to the Khânûn al-Maṣfûdî of al-Bīrûnî,4 he says, "It lies in 50° Long. and 20° Lat. south of the equator. Sofâla is in the land of Zeng. According to the author of the Khânûn, the people, who inhabit it, are Musulmânîn. Abû 'l-Firdâs also gives some information taken from Mas'ûdî and Ibn Sa'îd and ends by saying, "I may note that Sofâla is also a country in India." (Geography of Abû 'l-Firdâs, 11, 1122-223)."

Shîhâb al-Dîn Abû Abdallâh Muḥammad al-Dimishqî (c. 1325) thrice mentions Sofâla. In chapter ii., sect. 4, which deals with precious stones, he gives the following, citing Aristotlè as his authority.5 "The oil stone is red with a bluish light; touched by oil, it is changed for the worse, the oil going right to the centre. It comes from Sofâla of Zeng. When it is rubbed over a garment stained with oil, it completely removes all trace."

In his Nasbaat al-Kalûhî, Hammâdhî Mustawfî records that there is in Sofâla of Zeng a cavern measuring nearly 500 parasangs in every direction. On account of the mass of shifting sands in this country and the heat and aridity, it is not thickly inhabited. (C. Huart, Documents persans sur l'Afrique in Recueil de mémoires orientaux publié par les professeurs de l'École des langues orientales à l'occasion du XIVe congrès international des orientalistes réuni à Alger, Paris 1905, p. 95-95. This passage is not found in the edition and translation of this Persian text by Guy Le Strange, G. M. S., vol. xxii. 1 and 2)."

"(golden Sofâla), says Ibn al-Wardî (c. 1340) (Cairo 1328, p. 51 infra), "adjoins the land of Zeng. It is a vast country with mountains containing deposits of iron which the people of the country work. The Indians come to them and buy the iron at a high price, although they have iron-mines in their own country; but the iron of the mines of Sofâla is better, purer and more malleable. The Indians smelt this iron and make steel of it (with which they make tools and weapons with fine cutting edges). It is in this country (India) that Indian swords and other things are made in abundance. One of the wonders of the land of Sofâla is that there are found under the soil, nuggets of gold in great numbers; the weight of each is 2 or 3 miskhâls or even more. In spite of this the people of the country only wear ornaments of copper which they esteem more highly than gold. The land of Sofâla adjoins that of Wâkâ." Ibn Bâjitâ (c. 1355, Ribâla, ii. 192) only says that Sofâla of Zeng is situated half a day's journey south of Kalâb (read Kilwa).

Ibn Khâlidî (c. 1375) in his Prolegomena (i. 119 of translation) is hardly more explicit. "Further to the east (south) of Ḡoḳālah (Meydânu) is the land of Sofâla which lies on the southern (western) shore of the sea of India, in the seventh section of the first clime. Then to the east (south) of Sofâla on the same southern (western) shore is the land of Wâkâ.

According to Bâkıwî (beginning of the 14th century, in N. E., 1789, ii. p. 401), Sofâla is a town of the land of Zeng, famous for its gold mines. The gold of this country is much sought after by merchants. There is a kind of bird that speaks better than a parrot (it is the Hawaiî mentioned above in the extract from Khâzîn).

In his al-'Umâd al-mahriyya fi Qâqâ al-Ulûm al-bâ'yûsî (Gabriel Ferrand, Instructions nautiques et routières arabes et portugais des XVth et XVIth siècles, vol. ii.: Le pilote des mers de l'Inde, de la Chine et de l'Indonésie, Paris 1925, p. 29 verso), the ma'allûm or sailing-master Sulaimân al-Mahriti (first half of the 16th century) places the harbour of Sofâla, 6 ìpsî from the Great Bear or about 18° south — the exact latitude is 18° 13' — but, which is peculiar, the text says that Sofâla is opposite the Timor islands of Indonesia which are 16° further north.

About 1490 Sofâla was visited by Pedro de Covilhão. But he was not the first European traveller to visit south-eastern Africa, for the ma'allûm Ibn Māḥjīd definitely says in two verses of a nautical treatise dated 1506 Ibn al-Hûdîfîs 866 = September 13, 1402, "It is said that in former days the ships of the Franks came to Madagascar and to the coast of Zeng and Western India, according to what the Franks say". The same verses seem to allude to the voyage of Pedro de Covilhão.

But the question will be treated in detail later (vide infra Zengs)."

On May 18, 1506, Pero d'Anhaya or da Nhaya left Lisbon with six ships to go and build a fortress at Sofâla, Castanheira (Bk. ii., Ch. x., p. 34. of the edition 1833) gives an account of the reception which was given him by the king Çufe (Çufîfî). But this ruler belonged to the royal family of Kilwa and his entourage consisted of Moors, i.e. Muslims, which tells us nothing of the natives of the country.

Barros (Dec. 1, Bk. x., Ch. i., p. 372-388) says that the great kingdom of Sofâla lies on an island between the two arms of the river Kusma and the sea and is over 650 leagues in circumference. It is so thickly populated that the elephants are leaving it. The natives say that every year 4 or 5,000 die, which explains why so great a quantity of ivory is sent to India. The nearest gold mines are at Manica which is about 50 leagues west of Sofâla. The gold which is gathered there is gold dust (or nuggets) which is found at 6 or 7 palms' depth (c. 5-6 feet). The most distant mines are 100-200 leagues from Sofâla. There are others also in the land of Toros which is also called the kingdom of Butabu. There is a fortress built of hewn stones, very well built of stones of astonishing size, joined without cement. The wall of the fortress is over 28 palms (23
feet) thick and its height is not proportionate to its width. On the gate of this building is an inscription which several educated Muslim merchants have seen, but they could not read it, nor say in what alphabet it was written (this is probably not accurate as no inscriptions have been discovered in this region). Around this building on eminences are others built in similar fashion; one of them is a tower of over 12 stories. All these erections are called by the natives simbabe (read simhahabu) which they say means house (royal residence: simba-bwe literally means stone house and in eastern Bantu this name is given to any house of the king or chief).

In the xvth century, Sofala was the only port in this region that exported gold. Gradually the merchants began to go north to Quelimane, north of the Zambesi, and about the middle of the xvth century, the annual exports from Sofala amounted to only 500 patares (c. 350 lbs) whereas that of Quelimane was over 3,000 patares (c. 2050 lbs). A century later Sofala had practically ceased to exist.

The early Portuguese narratives and certain European scholars located at Sofala the biblical Ophir from which the fleets of Solomon and of Hiram brought back every three years cargoes of gold, silver, ivory, apes and peacocks (I Kings, x. 22; II Chronicles, ix. 21). In a short but solid study, Sylvain Lévi (Autor do Búzurca-fustáu, in Annaire de l'École pratique des Hautes-Études, Paris 1913—1914) has shown that Ophir is not to be sought in India. Nothing so far makes it likely that it can possibly be located at Sofala.

The old town of Sofala seems to have been very important, if we may judge by its ruins of commodious houses which are evidence of the wealth of its inhabitants in the xvth century. It was abandoned later and rebuilt in the vicinity.

The new Sofala was described as a little town in 1764. It lay in 20° 13' Lat. and 34° 45' Long. It was 252 fathoms long, 60 broad and included 35 houses, one of stone and lime and a of wood with thatched roofs and 32 of wood covered with thatched roofs. The famous mediaeval emporium lost its importance at the end of the xvth century. In 1883 João de Andrade Corvo speaks of the old kingdom of Sofala which was so rich under Arab rule. In 1889 the authors of the Elementos para un diccionario chorographic de la província de Moçambique write the melancholy words: "The district of Sofala, so rich in historical memories, is now poverty-stricken and abandoned".

(Gabriel Ferrand)
SOTA, a popular pronunciation of the perf. pass. sükkä from the Persian verb sükhūn, to burn, to set on fire; literally then one afire, in flames, i.e. consumed by the love of God or learning. Sota in Turkish is particularly applied to students (At. pālī), especially the beginner in the sciences or in theology. After his first courses, the student is usually called dənənəddom. Raisings of the Sota's, who used to rebel en masse have repeatedly played a dangerous part in Ottoman history.

SOGHĐ, Al-Soghđ or Al-Soghđ, a district in Central Asia. The same name (Old. Pers. Suguda, late Avestan Sughda, Greek Sogdiak or Sogdianoi [the people] and Sogdiane [the country]) was applied in ancient times to a people of Iranian origin subject to the Persians (at least from the time of Darıš, 422-446 B.C.), whose lands were stretched from the Oxus (cf. Xvū-DARYȳ) to the Yaizarës (cf. śrā-DARYȳ), according to the Greek sources. The language and especially the terms relating to the calendar and the festivals of the Sogdian Zoroastrians are very fully dealt with in the Muslim period by al-Birūnī in his Chronology of Ancient Nations, ed. Sachau, Leipzig 1878, cf. p. 46 sq., 233 sqq. and transl. London 1879, p. 56 sq., 220 sqq. From al-Birūnī's information, modern Iranists (notably F. C. Andreas and F. W. K. Müller) have been able to identify as Sogdian the language of numerous fragments of manuscripts found in Chinese Turkestan (commercial documents, Buddhist, Manichean and Christian texts).

As in classical times the Sogdians still appear in al-Birūnī (cf. cit., p. 45, sqq.) along with the Khwarizmians as an indigenous people with a Zoroastrian civilisation in Má Warā al-Nahr. References to pre-Muhammadan Sogdian colonies in remote regions are found, not only in China, but also in Muslim sources, cf. Hadd al-Ālam (unique Tumansky MS. now in the Asiatic Museum in Leipzig) in W. Barthold, Die historische Bedeutung der alttürkischen Inschriften, p. 4, note 1, appendix to W. Rudloff, Die alttürkischen Inschriften der Mongolen, New Series, St. Petersburg 1897, on the Sogdians in the land of the Tughurghus (cf. Shuču) and Maḥmūd Kāgārā (Diyān Lūghat al-Turk, Constantinople 1333, i. 31 and 301 sqq.) on the Sogdian settlers (Soguš, as in the Orkhon inscription) in Bāšağlın [q.v.] who had adopted "Turkish dress and customs" and on the Sogdian and Turkish speaking peoples from Bāšağlın to Lāndšt or Stáfrú (on the name of "white town" given to the latter, cf. ibid., iii. 132 sqq.) The fact proved by R. Gaëtjot that the Uighurs borrowed their alphabet from the Sogdians seems to have been known in Muslim times, cf. Pāhk al-Din Māhrak Shāh (beginning of the sixteenth century) in E. D. Ross in 'Adijā Nūma, A Volume of Oriental Studies presented to E. G. Browne, Cambridge 1922, p. 405. Turkish Kent meaning "village, town" is already described as a Sogdian loan-word in the Kândayça text (in W. Barthold, Türkistan v epochu mongolskogo namhestvia, i, Petersburg 1898, p. 48).

As the name of a country Soghd had a much narrower application in the Muslim period than in antiquity, according to Īṣākhā (B. G. A., i. 316) Soghd proper comprised the lands east of that of Bukhārā from Daḥšāya to Samarkand; he also says that others also included Bukhārā, Kūshā (Kāsh, q.v.) and Nesef in Soghd. Kāsh sometimes appears as the capital of Soghd, e.g. B. G. A., vii., 299, i4 (Yāḵhū); it is possible that the oldest Chinese name for the region of Kāsh, Sa-hōi (old pronunciation Su-gi) is a reproduction of the name Soghd; it is so taken by J. Marquart, Chronik der altslawischen Inschriften, Leipzig 1898, p. 37. In another passage (B. G. A., vii. 293) Yāḵhū describes Samarkand as the capital of Soghd; Kāsh and Nesef are included in Soghd but Bukhārā is separated. It is not known what geographical connotation Soghd had for al-Birūnī; whenever he associates a Soghdian festival with a particular district, it is always some village in the territory of Bukhārā. Nerskhāyī (ed. Schefer, p. 47) quotes a few expressions in the dialect of Soghd and these are explained as Soghdian by F. Rosenberg (Prále Linguistiques, ocharwamte J. Badiner'sen de Courtenay, Cracow 1921, p. 94 sqq.). According to Īṣākhā (p. 314), they were spoken in Bukhārā. According to Mahmūd Kāgārā (i. 39 sqq.), Soghd is the land between Bukhārā and Samarkand. In modern native toponymy Soghd is only a part of the territory of Samarkand and a distinction is made between "Half-Soghd" (Nim Sughdu) on the island between the two arms of the Zarafshān (Aḵ Dārā and Kārā Dārāy), and "Great Soghd" (Sughd-i Kalīn) north of the Aḵ Dārā. The language of the Sogdians seems to have disappeared earlier than that of the Kūshārians, ousted like other Iranian dialects, partly by the Perāzīan literary language and partly (especially in the colonies) by Turkish. The language called "Middle Sogdian" by F. C. Andreas still survives in a single modern Soghdian dialect, the isolated Yakhnobī (cf. Grundris d. trans. Phil., i, Pt. ii. p. 291).

(W. Barthold)

SOGŪD, a little town, capital of a kaḏā of the same name in the sandjak of Ertogrul, belonging to the wilayet of Khudawendgār in Asia Minor. It lies to the south of Sakariya between Lefke and Sskā Sāhr and is a day's journey from each of these places (Qhehā-nūmā). Sogūd lies at the mouth of a mountain gorge, very deep and very narrow, and is built in an amphitheatre. The country round the town forms part of the fertile region which forms the transition between the Central Plain of Anatolia on the
south and the lands on either side of the lower course of the Sakarya to the north. It was the country of Sultan Ollu, and is famed in Ottoman history as having been the cradle of power of the Ottoman dynasty. According to the unanimous tradition of the Turkish historians, Ertogrul, father of Oghuz, received this district as a fief from the Seljuk Sultan Alaaddin al-Din; the mountains of Taurus and Ermenc were the yilul of the tribe of Ertogrul and Oghuz were their vart (צב多种形式 פaska 3že, p. 4 and Uruḍj Bey, ed. Babinger, p. 7, 83). The türbe of Ertogrul is at Söğüt; this tomb has a little cupola and lies two leagues from the town, a little to the left of the road to Lefke. Tradition still tells that one of the brothers of Oğuzman, Saryat or Sowla is buried beside his father; Oğuzman himself is also said to be buried in this türbe and not at Brusa (Ritter).

As regards the pre-Ottoman period we find in the Tağziw al-Tawwarik of Hâdisî Khalîfa the legend that the Caliph Hârûn al-Rashîd conquered Söğüt in 1057 (977). The name Söğüt is pure Turkish and means "willow"; the oldest form seems to have been Sûgûdtyk or Sûgûdtyk (thus Tawwarik, Ali Oğuzman, ed. Giese, Uruḍj Bey, and as late as the xvii century, Mehmet Edin, cf. also Taeckner, Das anatolische Weltgesetz, l. 101). The modern pronunciation is rather Sûwîd.

One of the four çives of Söğüt is attributed to Ertogrul and another to Sultan Muhammad I. After the capture of Constantinople the town was situated on the main route of pilgrimage to Mecca. It was never large; in the xvth century Ewliya counted 700 Turkish houses there and at the beginning of the xvi century the number had hardly risen (cf. the traveller's records in Ritter). Towards the end of this century Sâmi gave 5,000 as the population. The product for which the country round Söğüt has always been noted is a preserve made of grapes cut up and steeped in vinegar (عین شوگی). Silk worms are also grown and there is some weaving in the town.

J. H. KRAMERS

ŞOHAR. [See ŞEHREH.]

ŞOKOLLU, MUHAMMAD PASA, surnamed "Ta’wil", "the Tall", one of the most famous of Turkish grand viziers. He was born in the early years of the xvi century in the village of Sokol in Bosnia. His family was called Sokolévitche, of which Şokollu is the Turkish form. According to the panegyrical biography written about 1570 entitled Qemâshir al-Mahalik (cf. T. O. E. M., No. 29, p. 257 sqq.), which is regarded as the best authority for the youth of Şokollu, Sokol means "falcon's nest". He was the eldest son and was taken from his parents under the devshirme in the early years of Suleiman I's reign. His remarkable abilities gained him important posts on the staff of the Seray where he finally reached and held for a long time the responsible post of Çapulçagi Rüâyat. At this period he brought his parents to Constantinople and his two brothers, who died soon afterwards, and also a cousin who later became Mustafa Pasa, Beglerbeg of Buda.

In 1553 (1546) Şokollu left the Seray to become Kâpîdan Pasha in succession to Khair al-Din Pasha Barbarossa, which was an exceptional promotion. In this capacity he conducted expeditions into Tripolitania. Three years later he was appointed Beglerbeg of Rum-Il. He there took part in several campaigns. In 1559 (1554) he took Temeswar towards Hungary, but in 1561 (1554) he accompanied Sultan Suleiman in his campaign against Persia (capture of Nakhîrwan) after which he obtained the rank of vezir-i tâlibî. When the struggle began between the two princes, Selim and Bâyazid, in 1553, Şokollu was in command of the troops assisting Selim against his brother. Henceforth he was associated by close ties with Selim whose daughter Esmaîhân he married in 1563. When he was 40 years his junior. After being vezir-i tâlibî, he was finally appointed grand vizier in June 1568 on the death of Ahmâd Pasa.

Şokollu held this office till his death in 1579 so that he was grand vizier for the last 15 months of Sulaiman's reign, the whole of that of Selim II, and the first four years of Murad III. For the greater part of this period Şokollu was the real master of the empire (masâdik-i mevni, cf. Peçevi, i. 44) especially during the reign of Selim II [q.v.] who hardly took any interest in the affairs of state. By his experience and sagacity, Şokollu was the obvious man to consolidate the glorious traditions of the time of Sulaiman. His efforts were mainly directed to the maintenance of peace abroad and order at home. Although we know of nothing very brilliant done by him, he was nevertheless the moving spirit in all the great events of his time. Very characteristic of him was the manner in which he kept secret the death of Sulaiman before Sâiget until the new sovereign had had time to reach the army, and again when Selim II refused to give the accession gifts, against Şokollu's advice, the latter only intervened at the last moment to pacify the mutinous Janissaries. After his return from the Sigrîj campaign the grand vizier took no further part in military expeditions. The fact that none of the documents of his time however show that he was active in all branches of administration. During his grand vizierate the empire was especially the capital, passed through the richest and most glorious period in its history, while the old simple traditions were still strong enough to check the moral decadence, which was already beginning to appear. The only opposition that Şokollu encountered in his domestic and foreign policy was that of the coterie led by the Jew Yisrâf Nâsi, the favourite of Selim II and by the latter's Jewess favourite. The Jewish bankers had control of the customs and had a grip on the whole economic life of the state and Şokollu was not able completely to counteract their influence, which showed itself for example in the deterioration of the coinage. In the foreign policy of Şokollu we have probably to recognize a pan-Islamic tendency. Up to the last year of his grand vizierate, the peace with Persia (concluded at Amasya in 1561 — 1554) was not broken, while the empire endeavoured to assist Muslim rulers in India and Further India against Portuguese attacks (on the expedition to Atcheh cf. T. O. E. M., No. 10) and the Khans of Transoxiana against the Russians. Şokollu's European policy was likewise peaceful: he was con-
continuously on his guard against Russia, under Ivan the Terrible, against Austria and Spain, and he hoped to hold these powers in check with the support of the friendship of France and Poland. He was however unable to prevent the occupation of Cyprus and the naval war with Venice and the other powers which resulted from it. The occupation of Cyprus was mainly due to the influence of Yiğit Nasi and his friends with the Sultan. But once the decision had been taken, the grand vizier did his utmost to secure the success of the expedition. It was likewise entirely due to his energy that a new fleet was built in less than a year after the destruction of the Turkish fleet in the battle of Lepanto (Oct. 7, 1571). Şokolli was less fortunate in other more peaceful enterprises, like the digging of a canal between the Volga and Don and the piercing of the isthmus of Sam. He was further very skilled in the field of diplomatic negotiations, which he conducted with courtesy (he had his portrait painted for the Venetian Museum, which later was in the collection of the Archduke Ferdinand of Austria). His finesse but sometimes with harshness. The peace concluded with Venice (March 7, 1573) left the island of Cyprus to Turkey; it was as if the battle of Lepanto had never been fought.

The personal position of Şokolli was remarkable. He was neither unusually popular with the people, nor a particular favourite of the Sultan, but everyone respected him. In keeping with his character, he was not a patron of literature and poetry (Gibb, History of Ottoman Poetry, iii. 7); nevertheless the poet Baski celebrates him in his başdak. In his palace in Stambul (later bought by Ahmet I) to build a mosque on the site) Şokolli maintained a vast suite. Through his great influence he was able to rid himself of his enemies, without, however, having any real friends. He was able to prevent difficulties that might have arisen from other influential men of his time like Lala Mustafa Paşa and Sinan Pasha (q. v.). His most intimate confidants were his secretary Feridun Bey (q. v.), later Rü'ü' al-Kutzhâ and his Kâyâ Djafer Agha. Şokolli is further depicted as a religious and incorruptible man. The latter quality did not prevent him from accepting huge presents, which, added to his own income, made him one of the richest of men. Western sources accuse him of avarice, but he built many public buildings in the provinces, especially karâvanserâys, besides two mosques in the capital, a mosque and tekke in the Kaifirgha quarter and a mosque and medrese at Arab Kapâ (cf. Hâdiât al-İâzâmî, I. 193). He is also accused with some justice of having favoured too much his numerous relations and compatriots whom he brought from Bosnia, many of whom occupied important positions. The historian Ecewîlî İbâhîm was the son of a female cousin of Şokolli.

After the accession of Murad II, Şokolli's great influence began to diminish. The favourites of the new Sultan, like Shams Paşa obtained the offices from which Şokolli's privileges were dismuted. But before the dismissal of the grand vizier himself — which seemed to have become inevitable — Şokolli was murdered on Oct. 17, 1579. An individual, disguised as a beggar, came up to him as he was leaving the diwân and stabbed him. He was buried in a hürâhe which he had built at Aiyûb (cf. Ecewîlî Celebi, Şeyhâhatâvâr, I. 408).

Bibliography. The principal sources for the life of Şo kolli are the Taríkîh of Peçewî, Selanîk and of 'Ali (Kumâl al-Abharî, part still unprinted) and the Tuğfâl al-Kilâr of Hadjiî Hâliî. There are other biographies of him in Münâdîdîm Bâshî, Şahîrfî al-Abhârî, III. 332 sqq.; Othmân Zâle, Hâdiât al-İerwârâ, Constantinople 1271, p. 32 sqq.; Thireiîa Efendi, Sicûliîa- Othmânî, iv. 122; Hâfiz Hüsain al-İâznîrîî, Hâdiât al-İâzâmî, Constantinople 1251, i. 193. Among western contemporary sources the most important are the Tagebuch of Gerlach, Frankfort 1674, and the Relazioni of the Venetian Alberi. All these sources have been used by the modern historians like von Hammer, G. O. R., ill. and iv.; Jorga, Gesch. des Osm. Reiches, iii. (especially p. 165 sqq.); Brosch, Geschichten aus dem Leben dreier Grossweizers, Gotha 1893; Ahmet Reftî, Şo kolli, Constantinople 1924 (an important appreciation of Şo kolli and his period partly based on original documents, the provenance of which however is rarely mentioned). On the genealogy of Şo kolli, cf. von Knorrika-Gießenhorst in Mitteilungen der Osmanischen Geschichts, 1925-1926, ii. p. 261.

(J. H. Kramer)

SOKOTO or SAKATU is the name of a town in the western part of the Haussa country, situated on a left bank tributary of the Niger called Gulbi-n-Sokoto, which means in Hausa the river of Sokoto. The town seems to have been of little importance before the sixteenth century; in any case it was much less known than the other towns of the Haussa, such as Zafura, Gober or Tessa wa, Katsina, Zinder, Kano and Zegleg or Zaria. It formed part of the kingdom of Gober, which like the other Haussa states then contained very few Muhammadans, almost all foreigners. There were a few colonies of Pal or Fulbe among the native population, which, as at the present day, lived mainly by agriculture and commerce. It was in 1801 or 1802 that Sokoto became the capital of a kind of empire founded by a Tuculor Shaikh from Futa-Toro (Senegal) belonging to the Tundoube caste (singular Turodo). This conqueror was called Usmanu (Ulmân), and was the son of a certain Muhammad surnamed Fodjo, i.e. "the wise, the jurist". The Shaikh "Usmanu having left his native land to go on the pilgrimage to Mecca was in Gober, where he was preaching Islam in 1801 when he received a deputation from the Fulbe, seeking his protection against the king of Tessa wa, against whom some shepherds had a complaint. Usmanu, who was only waiting a pretext to declare a holy war, took up the cause of these men, whom he regarded as compatriots because Fulbe and Tuculor, although of very different stocks, spoke the same language. Having collected an army of followers, he took the field against Yunfa, the king of Tessa wa, and conquered him. Continuing his conquests, he was not long in becoming master of several other Haussa provinces (Liptako, Kebbi, Vauri, Nupe, Korofou, Bautghi, Adamawa), imposing Islam on the inhabitants by force and placing at the head of each kingdom or province a kind of governor called amaru, chosen from the members of his family or caste. Thus there was created for the benefit of a small Tuculor aristocracy of the Turodo caste, an empire, military in character, including almost all the lands to the south of the Sahara between the eastern course of the Niger (which it reached in the west also in Liptako),
Bengu, Logone, and Chad, with the exception however of Bornu, which, although invaded in its turn by Usman's hands, succeeded in recovering its independence in 1810. The general name of empire of Sokoto is given to these conquests because it was in the eastern quarter of Sokoto, at Wurno, that Shalik Usmanu took up his permanent residence, and his successors lived.

But on the death of Usman (1816 or 1818) the empire broke up into three all-powerful nations: in the west that of Gando, including the Kebbi, the Yauri, the Nupe and Liptako; in the east that of Yola, comprising Korofina and Adamawa and in the centre that of Sokoto including all the Hausa country and Bauta. Abdullahi, brother of Usmanu, became king of Gando, Modibba Adamu of Yola, which he gave his name (Adamawa) and Muhammad Bello, son of Usmanu, succeeded his father at Sokoto where he reigned from 1816 or 1818 to 1837.

He had a difficult task to maintain his authority. The natives everywhere abjured Islam and rebelled, supported in their rebellion by the Fula and the Sulfin of Bornu. After suffering several reverses, Muhammad Bello's troops finally established him in power. A rather poor soldier, reluctant to take part personally in battle, this prince was on the other hand a distinguished writer. In Arabic he composed a considerable number of works in prose and verse, one of them a history of the Suddin which is not without value. He was the patron of men of letters, gave a good reception to the explorer Clapperton (1828) and exercised a strict control over the doings of his judges, who feared his enquiries and censure.

His brother and successor Atiku (1837-1847) claimed to be a reformer of morals and made himself very unpopular by prohibiting music and dancing. His puritanism did not prevent his governors committing all kinds of excesses and depredations, which resulted in the rebellion of the provinces of Gober and Katsena.

In the reign of Aliyu, son of Muhammad Bello (1843-1860) who received the explorers Overweg (1851) and Barth (1852 and 1854) at Sokoto, civil troubles and risings increased in extent. Gradually the authority of the emperor was lost and usurped by various pretenders to the throne. The five last sovereigns of the Tornado dynasty—Ahmadu, son of Atiku (1860-1866), Aliyankarami, son of Bello (1866-1867), Ahmadu Raffiu (1867-1872), Alubakari (1872-1877) and Moyasu (1877-1904) —showed themselves incapable of efficiently governing an empire, which was too large and too badly organised, and collapsed at once in 1904, simply on the entry of Sir Frederick Lugard's troops into Sokoto.

At the present day the town of Sokota forms part of the British colony of Nigeria, while the rest of Gober and his capital Tessana are included in the French colony of the Niger. (MAURICE DELAFOSSE)

SOKOTA (Socotra), an island in the Indian Ocean on the east side of the Gulf of Aden, about 550 miles from Ras Isfar (Cap Gorfudai) with the smaller islands of the group, notably Abd al-Kuri, the "brothers", Sembja and Dersi, and Sambiya (Sambia; Saboyla of the older maps since Wellsted) and the Farin rocks, the geographical and geological continuation of the coast of North Somaliland. It is 75 miles long (from Ras Shoaib in the west to Ras Rededsea in the east), and has a maximum breadth of 20 miles and an area of 1,520 square miles. The elongated shape of its horizontal section gives it its characteristic configuration (the figure "about 240 miles" for the distance from Cape Guardafui in Theodore Bent, Southern Arabia, London 1900, p. 345, who gives the length and breadth of the island county as 72 and 17 miles, is a misprint). Sokotra was known in classical antiquity as the island of Dioscorides, Σωκότρα, < Διοσκορίδης καλόγραφος in the Peripitus maris Erythraei, 30 (the MS. has διοσκόριδης; C. Müller, Geographi Gratiæ minores, i. 280 in the text Διοσκόριδης, but see his note; Fabricius in his edition, Leipzig 1853, gives διοσκορίδης) after the mention of the Sallachian Sea (coast of Shey, east of Ras al-Kehb) and of the promontory of Syagros (Ras al-Fartak); it is mentioned as a territory of the king of the land of frankincense, Elesaros, who lived in Σαβιδίμα (Shabwat) (27; on the genitive form of the name Elesaros, found in manuscripts, of the kind known from inscriptions as P'ax, which Fabricius, wrongly following C. Müller on § 26, altered to Elesaros, see the articles ELEASAR and ELEB in Pauly-Wissowa's Realencyklopädie der klass. Altertumswiss. [henceforth quoted as R.E.]); also Elesaros, in Ptolemaeus, viii. 22, 17 and Διοσκοριδής in πόλεως, v. 7, 45 (vari Διοσκορίδης, πόλεως), the oldest and the only classical reference to the capital of Sokota, η πόλεως καὶ καλόγραφος in Cosmas Indopen, p. 178 (for the form of the name cf. Διοσκορίδης in Stephanus Byzantinicus).

The island is called by Flinny, Nat. Hist., vii. 153: "clara (insula) in Asania mari Dioscuridaria" (similarly also Amm. Marc., xxiii. 6, 47) and is referred to by ecclesiastical historians (see below). Agatharchides (§ 103) (preserved in extracts in Diodoros and Photios; see the article SAHA, p. 7) refers to the whole group; after describing the land of Saba' he remarks that near the coast lie the νησιά κτλιμαντ, the earliest reference to Sokota and the adjoining islands, which he considers to belong to South Arabia. It may be assumed that Sokota is included in the frankincense islands of Arabia mentioned by Theophroclus, Hist. Plant. ix. 4, 10. On the identity of the island with the Bantu island of Sokota cf. Ritter, Erdkunde, Berlin 1845, xii. 64, 336 (following Vincent, etc.); C. Müller, op. cit., 190 etc. Bochart (Geographia sacra, Leiden 1692, f. 456) had already derived the name, which is found in the form Sukātṟa among the Arabs (Yakkāt, Mudījarum, quotes besides the regular form, iii. 101 also Sukātırā, i. 543, also Sukāţara, Ibn Rusta, B. G. A., vii. 82, Sukāţara; on the other form Uskātī, see Kūmir, i. 381 and Tāḏī al-'Arab, iii. 273) from the Sanskrit uskāṭa, 'fortunate isle' and this explanation of the name which agrees best with the name in Agatharchides (cf. Edośvām, 'Aspāfra) has been adopted by Bohlen, Das alte Indien, Königshofen 1830, ii. 129; Beney in Ersch-Grüber's Enzyklopädie, sect. ii., vol. vii., p. 20; C. Müller, op. cit., i. 280 (cf. Ritter, op. cit.) and more recent writers (Bent, op. cit., p. 391 was not acquainted with the literature before Schweinfurth). The Greek name arose, like many other Greek corruptions of Oriental names by a popular etymology, connecting the foreign name with some mythological figure familiar to the Greek circle of ideas. The
name Δυσκότρα λιμ. (Ptolemy. iv. 7, 5) a harbour on the west coast of the Red Sea, is similar in origin. This corruption was all the easier in this case as it was facilitated by the Greek idea that the appearance of the constellation of the Dioscuri (Gemini) was a good omen for navigators. The Indian origin of the name is supported by the statement in the Periplos (30) that the island included Indians amongst its inhabitants (there are still Hindus on Sokötra), that sailors from India there bring rice, a cereal that does not grow on the islands, Indian cotton and slave-girls and receiving turtles (31) and by the note of Agatharchides (Diodorus, lli. 47) that Indian merchants traded with the जोको त्रितमुन्ने. In ancient times Sokötra, specially noted for its frankincense was of importance as a centre of sea commerce between India, Arabia and East Africa (Azania, the coast between Ras 'Asir and Zanzibar), as a result of its situation at the entrance to the Red Sea and in spite of its lack of proper harbours. Bent's idea (op. cit., p. 391) that Sök (the name still survives for the ruined site of the ancient capital) the Zoko of the 17th-century Portuguese, is a survival of the original Sanskrit form of the name, has little to commend it. Sprenger's suggestion (Die alte Geographie Arabiens, Bern 1875, p. 88) that the name Sokötra is perhaps derived from जोली, the popular name for the resin of the dragon-blood tree, is untenable on philological grounds.

F. Hommel's assumption (Grundriss der Geographie und Geschichte des alten Orients, Munich 1904, p. 312, note 2), that Sokötra is in some way connected with Skudur = Thrace and that the island might have received its name from Graeco-Thracian colonists, cannot be defended at all.

W. Golenishev connected with Sokötra the magic island of A-a-penenska or Pa-anca (island of the genius) the abode of the king of the frankincense country, of which we are told in the old Egyptian fairy tale in a papyrus in St. Petersburg (French translation by Golenishev in the Verhandlungen d. V. Orientalistenkongresses, Berlin 1882) of the period of the middle kingdom (about the beginning of the second millennium B.C.). G. Schweinfurth agreed with this on the whole and accepted identification first in a lecture to the geolog. Versammlung deutscher Naturforscher at Freiburg i. B. (Ein Besuch auf Sokötra, Freib. i. B. 1884), then in Erinnerungen von einer Fahrt nach Sokötra (K. Westermann's Monatliche, 1891, xxxiv. p. 603 sqq., xxxv. 29 sqq.); cf also E. Glaser, Schätze der Geschichte und Geographie Arabiens, Berlin 1890, ii. 182 sqq., and Das Weinrauchland und Sokötra, reprint from the addition to the Allgemeinen Zeitung, No. [1] 120 and 121, Munich 1899, p. 4, 11, Hommel [9 below]. Glaser (Weinrauchland, p. 4 and Punt, M. V. A. G., iv. 1899, p. 43) said that the island of Pàxàna (also called 'Ià'pà) described by Diodorus, v. 41 sq. (from Euhemerus) was identical with the frankincense island of Pa-anca, and therefore with Sokötra. Ritter, op. cit., p. 364 had previously discussed the possibility that the legendary frankincense island of Panchaia, mentioned by Strabo, Pliny, Roman poets and others, should be located in the vicinity of Sokötra. The similarity of the names Pa-anca and Sokötra is certainly worthy of note; the plants mentioned in the fairy tale are in keeping with the flora of Sokötra (cf. Glaser, Weinrauchland, p. 3 sq.). But Glaser's hypothesis (ibid., p. 20 sq., 23) that the old Egyptian name of Sokötra was really not Pa-anca but Pancha or Ponech, i.e. "the Punic island" and that this is the root meaning of Panchaia, is untenable, as is its effort to support by it his main thesis that the original inhabitants of South Arabia and Sokötra were Phoenicians and Habasha (ibid., p. 12 sqq.), the South Indian and Sokötra men no less than the African were direct descendants of the Phoenicians or of the people of Punt (cf. his Schätze, ii., p. 250, 297 sqq.; Punt, p. 1, 31, 65) and that the language of Sokötra was Habasha, a descendant of Phoenician. In spite of the fictitious character of the story of Euhemerus about Panchaia, there is no doubt that a definite island forms a real background for the scenery. Among the common features in the various descriptions of the islands is further the fact that Diodorus, v. 41, speaks of the wealth of Panchaia in frankincense, myrrh trees of excellent quality and all other kinds of spices, which agrees with modern reports on Sokötra. Diodorus, v. 43 (vii. 1) speaks highly of the rich vegetation of Panchaia (on the particular charms of the flora of Sokötra see Wellent, Repert [see below], p. 145 sqq.; Schweinfurth, op. cit., p. 614, 620 sqq., 38, 42 sqq.; Bent, op. cit., p. 367 sqq.; on the multitude of palm-trees, Vákey, op. cit., ii. 102; quoting Jamdami [Sifat, p. 53, see below], Tadj, loc. cit.) Among the features common to the various ramifications of the traditions about the island, which, taken together, form an important factor in the varying identifications, is the fact that according to the Periplos 30 there are very many snakes on the island of Dioscorides and the Egyptian story makes the royal genius of the magic islands assume the form of a snake. Pliny, vi. 169 (also Mela, iii. 8) mentions among the people of Troglodyte the Panchaei, quos Ophiophagos vocant, serpentinus vasiti adhibit, a people who bore the same name as the inhabitants of Panchaia. In the legendary description of the two islands adjoining Panchaia (Diodorus, v. 41 sqq.) the reference is to the islands near Sokötra, similar to Agatharchides' statement on the जोको त्रितमुन्ने. Hommel, who made use of the Greek idea of Panchaia for his Die Insel der Seligen (Munich 1901), which deals with the history of the idea of the island of the blessed in the different literatures of antiquity (p. 1, 14 sq., 32) identified the idea (p. 15) "the small rocky island 150 feet high" described by Schweinfurth with the little island 7 stadia from Panchaia described by Diodorus. As Panchaia as a legendary duplicate of the island of Dioscorides gradually became separated from the latter in the geography of the ancient, it is no wonder that many writers like Diodorus and Pliny mention them as two separate islands. The identification recommended by Glaser, Schätze, p. 337, 432; Weinrauchland, p. 11 and Bent, op. cit., p. 345 of Sokötra with the Iskudura of the Naq-si Rastam inscription of Darius has nothing to recommend it, but a similarity of name. There is no real evidence that the Sutru (often read 'To-Nutra "land of the gods") of the ancient Egyptian monuments, a name of the land of Punt, rich in spices and usually referred to South Arabia, can refer to Sokötra, as Mariette Bey (in Bent, op. cit., p. 345) thought, although it may be granted that the island was already known to the ancient Egyptians as a land of frankincense. The identification of Sokötra with Σακάσια in
Pausanias, vi. 26, 9 (Hommel, Grundzüge [Ethnologie], Munich 1926, p. 650), lacks any foundation.

Among the names in literature for the legendary fortunate frankincense island, Hommel (op. cit.) included also the island of the Phaeceans of the Odyssey and (p. 23 sq.) the land of the blessed in the x. and xi. book of the Babylonian epic of Gilgamesh. While very much in what he says about the part played by Sokötrā as an island of Paradise in the very earliest mythology among Babylonians and Egyptians (see his Glossen und Exkurse, iv. Neue krit. Ztschr., ii. 1892, p. 281 sqq., 290 sqq.) can only be described as fanciful hypothesis, including his etymology identifying the Egyptian name of the island "Island of the Spirits," θεονομική, from θεονομική, his suggestion of the similarity of the real name of the island of the Phaeceans Στρυπί to Shilh [q.v.] (Sāḥil), the old name of the Ḥaframawt frankincense coast is worthy of serious consideration, especially as Στρυπί cannot be satisfactorily explained as regards form and meaning from the Greek. Continuing this line of research, I have sought in Paul Wisowa, R. E., n. v. Sāḥa, col. 1405 sqq. by quoting the etymological meaning of the name Soḳōtrā, which is in keeping with the fundamental idea of the poetical conception of the island of the Phaeceans, and to the agreement in substance of almost every sentence of the Egyptian fairy story, of the sailor thrown upon the island of the spirits and the mythical matter of the adventure of Odysseus on the island of the Phaeceans, to make it probable that Soḳōtrā was the real prototype which suggested the chief features of the epic idea of the island of the Phaeceans, later developed by legend and poetry, which, as is well known, shows Oriental colouring.

Among Arab geographers, al-Ḥamḍānī, Sīfat Liqā'at al-Arāb (ed. D. H. Müller, Leiden 1884, p. 53) gives brief notes on the nationality and religion of the people of Soḳōtrā, saying that on the island there are representatives of all the Mahra tribes and the number of meo able to bear arms is about 10,000; they were Christians; Kīṣat (Khasraw) transplanted a number of Byzantines there; Mahra tribes then settled beside them, upon whom some adopted Christianity. Yāḥṣūb, Muḥamm (ed. Wüstenfeld), iii. 102, 3 gives a similar story (word for word the same as Ḥamdanī, op. cit., p. 54, v. 55, 6, cf. al-Kaṣāwī, Komographie, ed. Wüstenfeld, Göttingen 1848, ii. 54), but, agreeing with the opinion held by the people of 'Aden, that no Byzantines came to the island, he considers the people of Soḳōtrā to be Greeks of the time of Alexander the Great, who lived without marrying after the introduction of Christianity and died out, whereupon Mahra tribes took their places. With these statements on the origin of the people of the island may be compared the older story in the Periplus (30) that the few inhabitants of the island were immigrants, a mixture of Arabs, Indians and Greeks who came there to trade, the similar statement in Diodorus v. 42, that on the island of Panchaia there were Indians, Scythians and Cretans (Greeks) in addition to the natives and with Agatharchides (103) says about the sea-trade to the west coast, Persia, Caramania and the rest of the adjoining mainland. At the present day Soḳōtrā still has a mixed population, which on the north coast includes besides native Arabs, Somalis, Swahili and Indian elements. According to the above mentioned passage in Cosmas, who rightly traces the Helleneism of Soḳōtrā to colonisation by the Ptolemies, the Greeks had retained their language and were Christians, who got their priests from Persia. Glaser's suggestion, Skizz, p. 184 (1858) that one or other of the three Greek cities of Arabia, Arethusa, Lauria, Chalkis, mentioned by Pliny, Nat. Hist., vi. 159, should be sought on Soḳōtrā is without foundation. Idrisi, who knew about the traffic by sea between Soḳōtrā and the Mahra coast, connects (l. 48, Jauberi, Paris 1836) the story of Alexander's campaign into Arabia on account of its wealth of frankincense, with Soḳōtrā, which was colonised with Greeks on the advice of Aristotle on account of the excellent arches growing there (similarly in Taqī al-Arāb, loc. cit.). The Christianisation of the island may have been effected by the Abyssinian rulers who conquered Arabia for a time. On the notices of Christianity there in Africano, Theodoret, al-Mas'uddī, Abu 'l-Fida and his contemporary Marco Polo, see Bent, op. cit., p. 344. When Persian civilization gained the upper hand in Arabia and after it Islam, Christianity was gradually driven out of the island. The final disappearance of the church was comparatively late; the last traces are found in the beginning of the xviii. century (according to the Carmelite monk Vincenzo, cit. Bent, p. 355).

It is significant for the conditions of navigation to Soḳōtrā that al-Ḥamḍānī, op. cit. (cf. Yāḥṣūb, op. cit.), says that one who sails from 'Aden to the land of al-Zinjī (opposite the Zanjībar coast, the land of the Sawāhīlī) first shapes his course for 'Omān and leaves the island of Soḳōtrā on his right and then sails around it into the sea of al-Zinjī until he has the island behind him. Sprenger (p. 57) rightly observes that this circuit is caused by the prevalence of south winds on the East African coast, and not as al-Ḥamḍānī, op. cit., p. 52, thought, by the fact that the Gulf of 'Aden is enclosed by a barrier of the sea of al-Zinjī (on this see also Yāḥṣūb, op. cit.). According to the Kūmūs and the Taqī, loc. cit., Soḳōtrā is on the left on the voyage from al-Zinjī. He who wishes to go to Soḳōtrā from 'Aden sails to Rās al-Fartak along the Arabian coast (Sprenger, op. cit.). This may be the reason why, in ancient times, the position of the island was defined with respect to this cape, as in the Periplus, 30, according to which the island lay between Syagros and the African cape Aromata (Cape Guardafui) but nearer the former (in reality the contrary is true) and in Pliny, iv. 53, who gives the distance of the "a monturium Syagros" fairly correctly at 280 miles. The direction of the sailing route eastwards round the island may explain the fact that it seems to be placed in Ptolemy's map too far west of the promontory of Syagros. The calculation given in the Taqī, loc. cit., is based on a direct voyage, according to which Soḳōtrā is three days and nights distant from Mokhā. The length of the island is given too long in Ptolemy (cf. Sprenger, op. cit.) and also in al-Ḥamḍānī, at 80 parasangs; it is barely a third of that.

Among the statements in Greek literature about the island of Soḳōtrā which have been confirmed and explained by modern research is that of the Periplus, 30, that the few inhabitants of the island are to be found on the north side; even at the
present day, the largest and most numerous settlements, including the capital Tamarind ('date-town'); the native name is: Hadibo) are on the north coast; the west coast is less accessible and the other coasts are also thinly populated. The white cattle mentioned in Agatharchides (103) whose cows have no horns are explained as zebras (Ritter, op. cit., p. 249; cf. Bent, op. cit., p. 367 for harmless cows).

The first more accurate information about Sokotra was obtained on the voyage of the ship Palmarius from the South Arabian coast to the island in 1834 under Captain Haines, who was sent by the East Indian Company to survey the coast and collect material for a chart. Lt. J. R. Wellsted produced the first topographical account of the interior, which was naturally very incomplete. He published the geographical and scientific results of his exploration of the island in his Report on the Island of Socotra, J. A. S. B., iv., 1835, p. 153 sqq., Memoir on the Island of Socotra, J. R. G. S., v., London 1835, p. 129 sqq. and in shorter form in Travels to the City of the Caliph, ii., London 1840. The island, which as even this first report showed, seemed a promising field for the natural historian, was studied from the botanical, zoological, and geological point of view by J. H. Balfour (On the Island of Socotra, Rept. Brit. Assoc. for the Advancement of Science, 1881, p. 486 sqq.); and the petrological material brought back by him was published by T. G. Bonney, On a Collection of Rock Specimens from the Island of Socotra, Philos. Transactions of the Roy. Soc., clxxiv., London 1883, p. 273 sqq. In 1881 the Riebeck expedition, one of its members being G. Schweinfurth (see Das Volk von Trucan, Onser Zeit, 1813, his lecture of 1883 already mentioned and his Erinnerungen [cf. p. 477]), explored the country round Tamarind for about five weeks (cf. the picture in Western Monatsh., xxxv., 1883, p. 33, and p. 34 and 49) and the adjoining parts of the Hageri hills. Schweinfurth's botanical notes were worked up by Balfour (cf. his Botany of Socotra, Transactions of the Royal Society of Edinburgh, xxxi., 1888) and his geological by Sauer, Zeit. deutsch. geol. Gesells., 31, 1888, p. 138 sqq.). In the winter of 1897 Th. Bent spent two months on the island with his wife, devoting two observations mainly to archaeology. His Travels, published by his wife after his death, includes a good map of Sokotra. His companion, the zoologist Bennett was, we believe, the first to ascend the summit of Hageri (being followed in 1899 by the two Viennese, O. Simony and F. Kosmat). In November 1898, the Vienna Academy of Sciences sent out an expedition on the Swedish steamer Gottfried, to investigate the archaeology, ethnology and natural history of South Arabia and Socotra. The expedition (Landberg, D. H. Müller, Simony, Kosmat, Jahn and Piaulay) were joined in 'Aden by W. A. Bury and O. Forbes and W. R. Ogilvie-Grant, who were to collect botanical and zoological specimens for the Liverpool and British Museum. After the unexpected break-down of the expedition in South Arabia, the majority of the Vienna explorers went to Socotra in January 1899 where they spent two months, investigating the hitherto insufficiently known south and west of the island; in January they also went to Semla and 'Abd al-Kuri. The scientific results were published in vol. ixi. of the Denkschriften der Akad. Wien, math.-naturn. Kl. 1907 (see Bibliography) and in H. O. Forbes, The Natural History of Socotra and 'Abd el-Kuri, Liverpool 1903. D. H. Müller published specimens of the language taken down from the lips of natives in Die Melih- und Socotri Sprachen, Schriften der sudarabischen Expedition, 1905, 1906, 1907, 1908. The first edition of Bent's book was augmented by the second edition. The first account of the occurrence of frankincense on the island (Pflüg. xii. 32). The frankincense is thus confirmed (cf. previously Glaser, Schier, p. 185), and Bent also speaks (op. cit., 344) of three excellent kinds of frankincense, several varieties of myrrh etc., and (p. 380 sqq.) of valleys of frankincense, myrrh and other spices, while Glaser, Weinrauchland, p. 4, had said "Socotra has no myrrh". Ch. I. Cruttenden's statement (Narratives of a Journey from Makka to Sa'da, J. R. G. S., viii., 1838, p. 278 sqq.) about the occurrence of the frankincense tree in Socotra is obscure because he called it zakhir or zahir but this (pahic [q.v.], zubr) means "aloes". Diodorus' remark (see above, p. 477) about the quantity of frankincense on Panchaia thus becomes intelligible. According to the authorities, Sokotra has only two kinds of frankincense tree, Boswellia Socotrana and Boswellia Ameero Balfour fil. (For details of the localities where they are found, see Vierhapper in the article quoted below in the Bibliographia, p. 374 sq. of the collected volume already mentioned). The Sokotran name for frankincense is soro hom al-dhahr. Al-Hamdiání speaks (op. cit., p. 51, 53) of the Socotran species of myrrh as does Mu'addas, B.G.A., ii. 98 (cf. Bent, op. cit., p. 380, 384). Al-Hamdiání reports that the aloe is plentiful (p. 53); the Suri frankincense is said to be the best of all and was a special article of commerce (of course also Kaikin and Täfif, q.v.; on similar testimony of al-Nuwaiti, Ibn Sina, etc., cf. E. Wiedemann, Beiträge, S.B.P.M.S. Erl., 1916, slvii., p. 20). The native name for the aloe socotrana according to Wellsted is bayof, more correctly tafi in Bent, p. 381; tafif in Glaser, Weinrauchland, p. 4, i.e. tafi according to D. H. Müller, the Arabic abtal. Bent saw a very fine quality in great quantities (p. 344, 377; cf. Wellsted, Report, p. 143, etc.); on localities where the aloe Ferruyi Bak. grows, see Vierhapper, op. cit., p. 336; on the method of getting the resin Bent, p. 381 (cf. Wiedemann from al-Nuwaiti, op. cit.). Aloes are still exported from Socotra, although not to so great an extent as before (Bent, op. cit.; cf. Wellsted, op. cit., p. 143; Schweinfurth, op. cit., p. 421; A. Grabmann, Südarabien als Wirtschaftsgebiet, Vienna 1917, p. 165 sq.; cf. also C. Niebuhr, Beschreibung von Arabien, Copenhagen 1772, p. 284). The finding on Sokotra of the dragon-tree, Draca Kissambki, from the resin of which dragon's blood is obtained, as is mentioned by Pflüg. (15, 7; 33, 115 sq.), recalls the testimony of the Periplus, p. 30, that on the island, the so-called Indian dragon's blood (moluk in the regional dialect) flourishes, which is collected on the trees in the
form of tears. On the dragon's blood in Soçoťa, which is mentioned for example by al-Hamdānī, p. 53 (also the Ḳānūn and Tādīq), see Wellsted, Repert., p. 144; Cruttenden, op. cit.; Schweinfurth, p. 624, 56; Bent, p. 344, 379, 384 (see the picture at p. 387); Glaser, Wehr durchs Land, p. 43; especially accurate in Vierhapper, p. 336 sqq. With illustrations the better is the description in al-Di'ār al-malakī is given in the Tādīq), the Soçoťa itah (i.e. Wellsted, loc. cit. [who gives dam khalil as the Arabic name]; Bent, p. 379; cf. al-Hamdānī, p. 53; i.e. idāfah in Müller and al-Hamdānī, vi., p. 34 sqq., on further names in Nuwairit, see Wiedemann, op. cit., p. 22. The description "tear of an Indian tree" from Alū di'ār al-Dīnawārī (ibid.) recalls the Ḳānūn of the Periplus (see above) and the Ḳānūn of the frankincense on Panchala in Diodorus, v. 21 (cf. Dioscorides, i. 23). On the gathering of the resin, see Bent, p. 381 sqq. The export of dragon's blood from Soçoťa (on which see also the Ḳānūn and the Tādīq) has decreased very much in modern times, as it is found also in India and Hafrāmawī (see the summary of the earlier notices in Grünmann, op. cit., p. 121).

The population of Soçoťa is estimated at 13,000 Muḥammadans. The people along the coast on the north devote some attention to agriculture; the Periplus, 30, records that there is no corn and no wine-grapes on the island; Wellsted, op. cit., p. 146 and Schweinfurth, op. cit., p. 620 mention only wild grapes on Soçoťa. With Hamdānī's story (p. 53) that 'anbar is washed upon the coast of Soçoťa, may be compared the account of the gathering of 'anbar in al-Mas'ūdī and in Marco Polo (see Bent p. 344) (on amber on Soçoťa cf. Wellsted, op. cit., p. 160; D. H. Müller, op. cit., vi., 109 sqq.). Of the three towns mentioned in the Tādīq, Minēsá (described as the residence of the king of the al-Zindjā) can be found on the maps (Minasá in Bent). Bent describes the customs of the native (p. 347 sqq.). That trade relations existed in early times is evident from the scanty reference in classical authors (Periplus and Agatharchides; see above) and the references in the Ḳānūn and Tādīq. Bent (p. 346, 557) mentions that Soçoťa was butter, now almost the only article of export, is esteemed in the markets of the Arabian coast (Mās'āṣ) and East Africa (Zanzibar). We have already mentioned that the export of spices has declined. One obstacle to traffic is the fact that the island, which is exposed to the monsoons, has no bay which would form a safe anchorage all the year round. For this reason and in consequence of its general situation, Soçoťa is shut off from the main traffic-routes of the world and is only used for provisioning by Indian traders and whale-fishers: Tamerjda has still the best roadstead; east of it is Bender Delōgha. The rest of the island, which is watered and has a more vigorous vegetation. It is true that this part of the statement refers in the Periplus, that the island is rich in water and has (perennial) rivers. In the Tādīq there also the existence of streams is mentioned. Ruins in the east, e.g. at Rās Momi show that there was once a higher culture here.

The Soçoťa language occupies a singular position, a result of the ethnological mixture in the population and is not easy to fit into a linguistic genealogical table. The statement of Philostorgius (Glaser, Wahr durchs Land, p. 25) that the people of Soçoťa speak Syriac is due to an intelligible misunderstanding, and has nothing to do with the fact that Soçoťa has phonetical analogues with Armenian. It is connected on the one hand with the two other Mahra languages Mehill and Shḥarīn and on the other with the Yemen Arabic; but is also markedly different from both. Ibn al-Majdīsī says that the Mahra used to live in Soçoťa and had a language of their own, which no foreigner would understand (Sprenger, op. cit., p. 91). The contacts with Ethiopia are noteworthy (cf. Hommel, Grundzüge, p. 153; Glaser, Wahr durchs Land, p. 18). Glaser's suggestions, already mentioned (p. 477) according to which the language is "Habashi" (op. cit., p. 12), a hypothesis first put forward by him, which means to him sometimes a single language and sometimes a group of languages, are untenable. He even mentions the possibility (p. 24) that the Minasēna, Sabseans and Kāthārīans may be descendents of the Phoenicians and explains the Hālābat language allegedly to survive in Soçoťa as a direct descendant of Phoenician. The language of the Hālābat is quite different from the Hālābat.

D. H. Müller's explanation that Mehill and Soçoťa are descendents of the old Minaeo Sabsean language, attacked by Glaser (p. 18) or that Soçoťa has evolved from Mehill (op. cit., vi., p. 372) certainly requires modification. There is a wealth of linguistic material in M. Bittner's monograph: Charakteristik der Sprache der Insel Σοκοτρα, in Am. Wien, 1918, 8th., viii.; Vorstudien zur Grammatik und zum Wörterbuch der Σοκοτρα-Sprache, i., S. B. A. K., Wien, cxviiii. 4, 1933; ii., ibid., cxxxi. 4, 1918; (also studies on Mehill and Shḥarīn, ibid., cxxii., 1909 sqq. [in greater detail in his Charakteristik, p. 48, note 2]). He characterises Soçoťa as a sister of the two other Mahra languages (cf. D. H. Müller, op. cit., vi., p. 2.), Soçoťa, as spoken by the Beduins, who have lived among the hills from early times, may be the form in which the dialect of the original inhabitants has survived, which, probably, is coming from South Arabia, in contrast to the contemporary forms of Mehill and Shḥarīn and formed a linguistic group with these alongside of which may be placed the Minaeo-Sabsean as a sister language in South Arabia. The combination of original elements, of the strictly Soçoťan with the Mahri and Arabic to form a single language, may also however be interpreted as an isolated trace of the migration of an old language from South Arabia to Abyssinia.

Small fragments of inscriptions had already been noticed by Wellsted; Riebeck and Schweinfurth (in his diary) had copied some (those of Eriogh) (see Glaser, Skizze, p. 184). A rock inscription at Kālınniya was said by Bent (p. 351) to be late Finyār or Ethioptic; the reproduction of his copy (Pl. vi. of the "Appendices") clearly shows Sabsean letters. Traces of the graffiti at Eriogh, which Riebeck had thought Greek is, according to Bent (p. 354), Ethioptic. The camel- brands which he copied (also reproduced in the Appendix) are obviously Sabsean.

Geographically Soçoťa belongs to North East Africa, but politically it has always gone with Arabia. In this respect the island has changed little in the course of centuries (Bent, p. 345, 392).

The linguistic conditions suggest close connections
SOKOTRÅ — SOLAK.

with Mahra. In the time of the Periplus (see saba, p. 9) it was dependent on the king of Ḥḍramawt, the lord of the land of frankincense (see above, p. 496b). Sabatha, its capital (= Shab-wat) was wrongly explained by C. Landberg, Arabica, Leiden 1898, v. p. 239, as Saḥa in the Wâdi Djerdan; M. Hartmann's assertion (Die arabischen Reiseberichte. In Der islamische Orient, ii., Berlin 1900, p. 434) "The statement in § 31 of the Periplus that Soḵotra, like Arabia, is subject to Charibæus is significant", is incorrect as the unambiguous language of the Periplus shows in what respect the dependence of Arabia on Charibæus is compared with the dependence of Soḵotra on Eleazar. C. Müller was also wrong in his note on Soḵotra (map xi. and xii. of his Atlas to the Geographia Orientis Minore); "Charibæus subjecta". On the relation of Eleazar to the Sabaean-Hamitic kingdom, it may be deduced from the Periplus that Eleazar reigned independently in Ḥḍramawt, the kingdom adjoining Saba. In modern times it has again been erroneously deduced from the statements of Pliny, v. 154; xii. 32, supported by an erroneous textual emendation, Saba for Saba in Pliny (cf. saba, p. 6) that Ḥḍramawt, which according to the inscriptions of Saba was independent, soon lost its independence; for in Pliny the Atraimacæi (i.e. Ḥḍramūtātāi) are described as a province of the Sabaeans. The truth is just the reverse. From the time of Juba, Ḥḍramawt was liberated from Sabean suzerainty and in the Periplus Ḥḍramawt is under its own king, who acted independently, on equality with the king of the Ḥimyar (cf. the article saba in R.E., col. 1475). Eleazar had, according to Periplus 31, formed out the revenues of the island and placed a garrison on it, perhaps against the Himyari (Glaser, Saba, p. 152)."-

Arab merchants were still, as in the days of the Periplus, busy on Soḵotra and also in Zambīb. Yâḳūtī like the Periplus, talks of Arab predominance in the island, and we can say the island, was under the influence of Arabian culture down to the xviith century. The island was little known down to modern times on account of its position and lack of harbours. In the middle ages, it was notorious as a nest of pirates (cf. also Ibn-Bāṭīzī quoted in Bent, p. 344). The first contact with Europe was the Portuguese occupation in 1507 but this was not permanent. The Imām of Māskat for a long period extended his suzerainty over the island and later the Sūṭan of Ḥīṃla. In the xviiith century Christian missionaries were working there. At the beginning of the xviith century the Waḥšāī movement swept over the peaceful island also. As late as 1834, P. Roberts (Embassy to the Eastern Courts etc., New York, 1837, p. 361) agreeing with Wellsted, translated in p. 51, testifies to the political and economic dependence of Soḵotra on the Imām of Ḥīṃla. In 1835 English influence was felt for a short period when the East India Company erected a coaling-station here. This was abandoned when the English occupied ʿAden in 1838. In 1876 for political reasons, English interest in the island was revived and the British government made a treaty with the successor of the island, the Sūṭan of Ḥīṃla, securing it as a sphere of influence. The Sūṭan living on the island was a relative of the Sūṭan of Ḥīṃla. In 1886, Soḵotra became an English protectorate as a dependency of ʿAden and belongs to the Indian province of Bombay.

Bibliography: The names of the principal books and pamphlets (Wellsted, Bent, Schweinfurt, D. H. Müller, Glaser, Bittner, Kossmat, Forbes) are, along with the scattered references in the Arabic geographers and lexicons, given with detailed references in the text of the article. There is also for the earliest information: Yule. Marco Polo, 1903, p. 406 sqq.; for the Portuguese period. Commentarios de grande Affonso d'Albuquerque [1557], (Commentaries... translated by) W. de G. Birch, London 1875—1884, passion; for the period at the beginning of the xviiith century, the account of the French expedition to Yemen in 1708 in Viaggio nell' Arabia Felice, Venice 1721 (J. de la Rocque, Voyage de l'Arabie heureuse, Paris 1716, p. 222 sqq.). A good bibliography down to his day is given by J. Jackson, Socrat, Notes bibliographiques, Paris 1892. We may also mention the section Nieuw eikana of the article saba in Pauly-Wissowa, R.E., s.v., col. 1402 sqq., and in addition to the purely geological literature: F. Kossmat, Vorläufiger Bericht der geologischen Untersuchungen in Sohkra, S. B. Abh. Wien, mathem.-naturw. K., lxxxix. 9, 1894, p. 73 sqq.; H. O. Forbes, The English Expedition to Soekía, in The Geogr. Journal, London 1899, xiii. 6, p. 633 sqq.; J. W. Gregory, A Note on the Geology of Socrat, in Geogr. Magazine, London 1899, vol. vi., p. 529 sqq.—Of the already mentioned collected volume lxxi. of the Denkmäulheiten Ab. Wien (presented 1901—1906) the following articles deal with Soḵotra: F. Kossmat, Geologie der Insel Sohkrat, p. 1 sqq. (with map, the topography of which is based on the Admiralty chart founded on Haines and Wellsted's observations and Balfour's map, but the orography of which is based on the author's own observations); A. Pelikan, Petrographische Untersuchungen, p. 65 sqq.; L. Steiner, Bearbeitung der... auf Sokrat... gefundenen Felszen, p. 93 sqq.; F. Kohl, Hymenopteren auf Sokrat, p. 123 sqq.; F. Vierhappes, Beiträge zur Kenntnis der Flora Südarabiens und der Insel Sohkrat, Semna und Ādāl al-Kūbā, p. 321 sqq. In this connection may be mentioned Wettstein in Vegetationsbilder, ser. 3, part v., Jena 1906. The article SOKOTRA in the Encyclopædia Britannica, ed. 11, 1911, with special reference to physical, geological, climatological, zoological and botanical conditions, is based for the most part on Forbes. — The Pilot of the Gulf of Aden contains accurate geographical details (on it and on A. Juhn's Tinorar, see Kossmat, op. cit., p. 9). Finally see also the article MAHRA.

(J. Tratsch)

SOLAK was the name, in the old military organisation of the Ottoman Empire, of the archers of the Sultan's bodyguard. The word solak is an old Turkish word meaning "left-handed". The relation of this meaning to that of archer is not quite clear. The solaks belonged to the Janissaries, of which they formed four iva of the 60th—63rd, each of 100 men under the command of a Solak ızâbi, and two lieutenants (ezvâr solakâ). They were, however, used exclusively as bodyguards, a duty they shared with the ızâbi of [q.v.]. They had the same uniform as the Janissaries, except that they wore a cap (ażâb) with a long plume on the top. The solaks always went on foot and surrounded the sovereign whom they also accompanied to war.
SHOLAKZADE, an Ottoman historian. His real name was Mehmed and his nickname HEMD MENT. He seems to have been the son of a sheikh and was born in Sinjir. Not much is known of his life. He probably adopted an official career. He is said to have died in 1068 (1657/1658). On account of his musical abilities he was called "miştah (also miştah)." He was a kind of shepherd's pipe; cf. Eyllih, Seyyedetnuma, i. 446, 509, 636 (passages, of which the second at least must refer to the historian).

Mehmed Sholakzade was the author of a condensed history of the Ottoman empire, which he wrote during the reign of Sultan Mehmed IV. The existing manuscripts as a rule come down to 1654. The work was originally called "Fihrist-i Şahân." It had a wide circulation on account of its succinct and very luscious style and is still a popular book. It cannot however claim to be valuable as an independent historical source except for the reign of Murad IV. Continuations were made by Serrl Efendi (d. 1124 = 1729) and by Mufid Pasha. The book was printed at Sinjir in 1297 (1870), 6 + 12 + 773 p. In an earlier lithographed edition (1271 = 1854) was never completed. On the manuscripts of the work see F. Balinger, Die Geschichtsschreiber der Osmanen (Leipzig 1937), p. 207 sq.

SOLMAN. [See SULAMAN.]

ŞOMAL, a Kurdish district in Erzurum near the Turkish frontiers. In Kurdistan, Şamal means "view" (cf. in Persian Shom, "terminus, finis, scopus"), Vullers, ii. 534). To the north Şomal is separated from the basin of the Zohar (Şepinrû, Samû, q.v.) by the mountains of Brez-din, Undî-ı, Aghur, and Aghur, on the east the canton of Anzal separates it from Lake Urmi; to the southeast lies the Shahr-Balad range, to the south the canton of Bardost; to the south, the peak of Koltû, towards the west the ravine of Bânegh runs into the interior of Turkish territory (the Turkish cantons of Bâširgân and Gewer). Şamal is sometimes used to include the cantons of Şepinrû and Anzal-i Illâh.

Şamal is watered by the northern tributaries of the Nîkûzû, several of which drain the main valley and one (Hasan, Bardûk) comes from the ravine of Bânegh. They unite east of Bardûk, flow towards Bardost, where they are joined by the tributary from the valley of Bâširgân and then, joining the Nîkûzû, enter the lake north-east of the plain of Urmi. [q.v.]

According to the Shahrûnûn, Şamal and Bardost were at first governed by secoons of the Kurdish dynasty (Hassanîvîhâd) who had taken refuge in the north after the death which the Bûyûk Şamal-d-din had inflicted in 405 (1014) on Hûlûi b. Ilâhê [q.v.]. At the beginning of the 18th century, the Shahrûnûn mentioned a member of the family, Nîkûzû b. Sulûn Ahmed, who for his exploits was granted by Shah Isma'il the cantons of Şamal, Targar, and Dast, but later went over to Sulûn Zalma. His descendants, who were under the will of Wân, broke up into various branches. The last mir of Şamal mentioned by the Shahrûnûn is Âwîlî Beg (from 985 = 1577).

When in 1605 (1654) Eyvâli Celebi [q.v.] visited the country between Wân and Urmi the strongest castle of Şehr-Keçûn still stood on a cliff commanding the plain of Urmi, while the western part of Şamal was occupied by the Pîyânî tribe (whence now lives in Turkish territory in the Kâdî of Gever and Albaş). The lord of Bardost was called Colik ("the one armed") Mir 'Aziz; the strong castle stood some distance below (șez-ğalû) Kar flî Pîyânîsh, which may be identified with Bânegh (3—4 miles above Bardost).

It is not very clear whether the mirs of Şamal who, shortly after the visit of Eyvâli Celebi, erected several curious monuments were of the same tribe of Pîyânîsh. At Bardost is a mosque of white and black stone and a cemetery with the tomb of Nigar Beg, son of Gîhêl Beg (d. 1077 = 1667). His son Sulûn 'Ali Sulûn, whose title shows that he had consolidated the power — for Kâlûn means a chief for which one has received investiture — built the very imposing and picturesque castle near Bânegh. A reconstruction of the old Kâlû Pîyânîsh probably also dates from this time (1078 = 1667). On a rock at the entrance to the tower can still be seen the remains of a rudely carved inscription şez akîd- Sulûn Murad bin Sulûn — (?). Below the fort is an "Sârî-Şâhûn" built by a certain Zaflî Ali (1103 = 1693) and a mosque. The style of these buildings recalls that of the castle of Maḣmûdî (Kâshûh) cast of Wân (cf. Jûndâr, p. 126—128).

In 1536 (1736) the hereditary chief of the šâlûk of Şamal, 'Abdun Khan, is a rainy for his hosts, driven from the Ottoman government the adjacent cantons of Salâma [q.v.], Kerâbâzâlê (?), Karabâğh and Anaz [cf. v. Hammer, G. O. R., i. 211].

In the 16th century the Shahrûn [q.v.], encouraged by the Persians gradually occupied Şamal. According to Darwâz Pasha, Bânegh was destroyed by 'Ali Agha-Shâhêk (about 1627 = 1841).

In 1651 Çelebî was still able to speak of a "hereditary ruler of Şamal," Parru Khan, who had also seized Bânegh. In 1643 the Shâhêk killed At Ghanî the last representative of the family of mirs, a certain Koltû Khan.

Among the antiquities of Şamal may be mentioned: 1. the citadel of Zendji-jâfà (between Şamal and Salamû, q.v.) which must correspond to the "Shahrûnûn" building of Karûn-valîsh, mentioned by Eyvâli Celebi (iv. 281) the name of which (alas Farîd-i-kapû) is found in Bânego, Peters, Mift., 1803, p. 201—210; 2. a chamber carved out of the rock on Mount Koltû; 3. similar chambers where the Nîkûzû enters the plain of Urmi. All these monuments must date from the Varaman period (cf. Minorsky, Kitâbî, in the Zâli, 1917, xxiv. p. 190).

SOMALILAND, a large country in east Africa inhabited by the Somalis.

a. Geographical outline. Somaliland comprises the borders of the Ethiopian plateau declining eastward to the Gulf of Aden and southward to the Indian Ocean.

In the basin of the Gulf of Aden in front of the eastern edge of the plateau at a short distance from the shore there is a range of rocky and barren hills (the highest elevation of the range seems to be about 6,000 feet); among them is the small island called Ras Alsabsa, beyond which lies the fresh water stream called the Ras bin Jane. Beyond this range of hills it rises gradually to the Ethiopian plateau, which further is in its southern portion furrowed by the upper valleys of the Shebelle and Djib rivers. The country, owing to its features, is divided by the natives into three regions: the gaban (literally: burnt land) that is the region of the sand-banks and dunes on the coast with a torrid climate, only fit for pasturage for a few months during and after the rains; the djo (literally: upper land) that is the region of the aforesaid hills with a more temperate climate, but still of more little value for agricultural purposes; the region of the tag (Torrens) that is the valley between the hills and the plateau, into which flow the streams springing from both sides of the depression and form thus northward the Tag Dhe the deep torrent and southward the Tag Niguli. This is the best zone of Northern Somaliland particularly fit for cattle and horse-rearing. Even more to the interior, westwards of the Tag zone, the Somali portion of the Ethiopian plateau is inhabited by the Ogaden, a tribe whose name probably means etymologically 'those of the plateau'. On the side of the Indian Ocean, however, the country is very different from the northern regions; the plateau in its southern portion does not fall rapidly towards the sea but slopes gradually and its furthest spurs are 200—300 miles from the coast; then its waters do not form short torrents but great rivers which flow, not only in some seasons, but throughout the whole year although with a variable level.

The Somali natives distinguish four regions, which are found in the following order by the traveller going from the coast of the Indian Ocean to the interior: firstly the moveable sandhanks (Somali: loo'ud) on the shore; then the hills or short plains of white and hardly consolidated sand (Somali: arra la 'white land'); next the finest red sand covered with jungle, in the most part perfect (Somali: arra crocul *red land'); then along the rivers the strip of alluvial ground (Somali: arra mada *black land'), comparatively rich in fertile humus, a country particularly suitable for agriculture.

In the region between the Djib and the great lower bend of the Shabelle there is, after the aforesaid "black land", another vast zone of "red land", called by the natives day), which is the most rich in pasturages in Southern Somaliland. Across the Ery from North East to West runs a range of granite hills which from the borders of the Shabelle's basin reaches to Buir Meddaq to the borders of Djib's valley. Beyond the day even more in the inland, are found the "black land" regions of Buir Hakkaha and the Bajowa plateau (1,500 feet). Through the ground rises gradually as far as the zone of Bokkel wells near the boundaries of Ogaden.

River system. The high flood of both Somali great rivers and the average volume of their waters depend closely on the rains falling on Ethiopian plateau and are only very slightly influenced by local rains of Somaliland. High floods take place twice in the year according to the light and heavy rainy seasons in southern Abyssinia. This is a favourable circumstance to agriculture, because Abyssinian heavy rains fall during the months June 15—September 15, which are on the contrary the most severe dry seasons in Somaliland; and in this way the high flood and sometimes the overflowing of the rivers can be considered, at least by some tribes, as a compensation for the damages of the Somali summer.

The river known as Juba in European maps and as Djib by the Arabs is called by the Somali Webi Gimmis, which is really a double name: the gomis or gomel means precisely river in Galla Barana dialect and in some Sidama languages (the name is grammatically a plural according to the common rule ofKushitic languages that all the names of liquid substances may used only as plural).

The other Somali river, called Shabbi in European maps, is known by the neighbouring natives as Wëbi-ga: "the river". The name Shabbi was given to this river probably because the Ogaden natives designated it to the first travellers coming from the coast of the Gulf of Aden as Webi Shabilla "the river of the Shabelle region" that is the river passing through Shabilla, the most wealthy and best known country founded by this river in its upper valley. Then the usual translation of the name "the river of the leopards" must be corrected to "the river of the leopards country" (Shabilla means literally: where there are leopards).

The most common kind of vegetation is the jungle of thorny acacias, less dense in white lands than in red lands; high trees, especially sycamores, are found on the rivers and form sometimes little forests in a stretch of about one mile on both sides of the rivers. Sorghum durra (Somali: minto) and Indian corn (dallug) are cultivated in black lands; dura, millet (masaba) in red and white lands; sesame and In. few districts sweet (American) potatoes (Somali: bata) and manioc (Somali: ngugi); cotton and sugar-cane in European settlements (the most important of these are the S.A.S. settlements founded by H. R. H. the Duke of the Abruzzi, Luigi di Savoy and the Djinalla settlements established by Count De Vecchi). The general physical formation of Somaliland described above has been in past times very useful to defend the natives against foreign invaders, because one must pass, before reaching the only zone economically
valuable, that is the black lands, through the sandy desert of the coast and then the jungle of the red lands, where the characteristic Redousia akinitching by sultan and ruse is strongly helped by the same natural feature of the ground.

v)Political divisions. Somaliland is now divided into:

I.French Somaliland, officially known as Gnte Frances des Somalies (5,790 square miles; 65,000 inhabitants), is administered by a civil governor. Its boundaries are determined: with Italian Eritrea under the Franco-Italian protocol of January 24, 1900, and July 10, 1901; with British Somaliland by the Anglo-French agreement of February 2 and 9, 1885; with Abyssinia by the Franco-Abyssinian convention of March 20, 1897. In spite of its name only the southern portion of the Colony is inhabited by Somalis, the northern regions being inhabited by Danakil. The capital is Djibuti (8,500 inhabitants), a port of considerable traffic, especially on account of the French railway Dji-

II.British Somaliland Protectorate (68,000 square miles; 300,000 inhabitants) administered by a civil Governor. Its boundaries are determined: with French Somaliland by the aforesaid agreement; with Abyssinia by the British-Abyssinian protocols of May 14 and June 4, 1897; with Italian Somaliland by the Anglo-Italian arrangement of May 5, 1894. The capital is Berbera (30,000 inhabitants).

III. Italian Somaliland (140,000 square miles; 650,000 inhabitants). The Colony, administered by a civil Governor, is divided into: Northern Italian Somaliland, viz. the protectorates of the two Somali sultanates of the Madjértrans and Hobyt, and Southern Somaliland, formerly known as Bandar. The boundaries with British Somaliland are determined by the aforesaid agreement; with Abyssinia by the Italo-Ethiopian treaty of May 16, 1908; with Italian Oltre-Giuba by the river Diras: The capital is Makabola (21,000 inhabitants).

IV. Italian Oltre-Giuba: "Beyond the Diras" (25,000 square miles; 60,000 inhabitants). This is the territory granted by Great Britain to Italy under the treaty of July 25, 1924. The capital is Kimhali (12,000 inhabitants). But this territory has now been annexed wholly to the Colony of Italian Somaliland and has been administered by the same governor since June 30, 1926.

V. Abyssinian Somaliland, that is Ogaden. It is divided in two feiks: the former comprises the upper valley of the Shabellaha and depends on the feudaltry of Harari (which is actually Eba Tafari, the heir Apparent of the Abyssinian throne); the latter comprises the basin of the Djib and depends on the feudaltry of Konso territory, who actually is Fidikul Habiya Gigiroya.

VI. Kenya Colony: The districts of Tanaaland and Northern Frontier and that portion of the late Jubaaland that has not been granted to Italy have a Somali nomadic population of shearers.

vii) Ethnography. The Somaliland may be divided in three groups: Northern Somali, who are called by the others Edji; Hawiya; Sab. The northern Somali, the greatest group, are divided into I: 1st, Dir, Dárdá, The Dir, who according to the tradition should be the first Northern Somali group inhabitants in the region actually called Somaliland, are now dispersed in the whole Somali territory, probably as they were driven out by successive invaders. The Dir have sent forth to the following tribes: the Lë in French Somaliland, the Banâl in Italian Somaliland, the Fakir Muhammad in the middle valley of the Shabellaha near the boundaries between Italian Somaliland and Ogaden. Besides those tribes, little groups of Dir families living with more numerous tribes of other origins are found in Ogaden, in Italian Northern Somaliland, in Oltre-Giuba. The latter inhabit the western portion of British Somaliland and the market-places on that coast: Zeila (Arabic: Zalla); Somali: Awdal; Galla: Afdaal), Berbers and Bulahâr. Their principal tribes are the Habar Awal, Habar Yûnis, Habar Dîjib, Habar Garanqîa. The groups live also in Oltre-Giuba, especially retired clerks of the British colonial Administration with their families; another larger group is in 'Aden, where they are for the most part workmen or boatmen in the port.

The Dârâd, traditionally enemies of the Ibs, are the most numerous Somali group. They inhabit the eastern portion of British Somaliland; northern Italian Somaliland: "Oltre-Giuba": the Somali districts in Kenya Colony, and almost the whole Somaliland coast of the Ethipic plateau. The principal Dârâd groups are: 1) the Kakallahìa, who are divided into Kooma and Kûma. The former comprises the Geri Kimba tribe, living in the neighbourhood of Harar, and the ancient federation of the Harari tribes that is the Madjértrans, who inhabit the whole Northern Italian Somaliland; and the Dâhîla, who live with the Madjértrans. The Kûma comprise, besides the little groups Galimoa, Wààsû, Ràjá and Djidwik, the great tribe of Ogaden, and then occupy the most part of Abyssinian Somaliland and the central regions of Oltre-Giuba. 2) Another Dârâd group is the Sidda, whose principal tribe is the Marefahân inhabiting a portion of Northern Italian Somaliland and the northern regions of Oltre-Giuba. Dârâd families (Madjértrans have occasioned the little inhabitants Abdi and Abdi Gubba in Italian Dunkali (Kirero). The Hawiya inhabit the whole valley of the Shabellaha, in Italian and Abyssinian Somaliland. According to the local tradition, the Hawiya were preceded in their present territory by the Adaxa, a tribe of kindred origin, who probably were the first group to migrate towards the river. The Adaxa are now dispersed and divided into four principal groups: the first living with their flocks and at the Capyrans, the boundaries between Italian and Italian Somaliland; the second in the low valley of the Shabellaha, South of Afgoy; the third near the Djib in the territory of Bitufhra; the fourth in Kenya Colony, Northern Frontier district. The region inhabited by the first group is called Shabellaha (see above); as the Adaxa are there proportionately few in number the most part of the tribe being former slaves or freedmen, the Ogaden often call this group the Adda, viz. the slaves, who have been incorrectly considered by some ethnologists as a Bantu tribe or a Bantu-speaking people. The other principal Hawiya groups are: the Gurgundjabe, who comprise the tribes Egida, Djadibé, Ida, Adda, Gaaljaal, who inhabit South of Shabellaha region as far as Mahadjik in Italian Southern Somaliland; the Gurgato, who comprise the tribes Habar Gide, Aabul (a very numerous group of tribes, as the Wa're, the Awaal, the Ebi, the Mantin, the
Yais, the Agon-yar, the Warengali Abgal, the Mollàn, the Wa’dàan, the Hillib; they occupy the zone from the southern boundaries of Gunggàfàbe as far as the Ocean and the Sab territory.

The Sab who inhabit the territory between Wàhiyya territory and the Djinb are divided into the different Somali tribes which are none other than the name of Digil, who was probably the common ancestor of both. The Digil comprise the following principal tribes: Djinb, Tumë, 'Irrola, Daliara. The Rahanwàn comprise two groups of tribes: the Sjìyyà ("the right") and the Sàggì ("the nine"); the principal tribes are the Eylli, the Liànà, the Haryà, the Haddìmo, the Lübà, the Galàdi, the Geélà. While the other Somali tribes are formed on the principle of a common origin from the same ancestor, whose name is generally the name of the tribe, the Rahanwàn tribes are formed, besides a very small group of descendants of Rahanwàn, by families or sections of different origins, federated in one common language. Besides the last great groups and some tribes of uncertain origin, viz.: Garra, living separately in Southern Somaliland, in Kenya Colony (Northern Frontier district) and in Abyssinian Somaliland (it is to be noted that the two last groups at quite a recent date spoke both Somali and Gallà), we must mention the freedmen, the outcast groups and the population of the towns on the coast. The slaves, for the most part of Bantu origin but now entirely somalized, delivered or escaped from their masters, have formed in some regions tribes like the Shille in the middle valley of Shábèlla; the Elày freedmen on the plateau of Ràjìfà, independent from their late masters but still living in black lands of big Hakkah; and the so-called Wàgàghà in the low valley of the Djinb. The outcast groups, that is the groups considered as impure on account of their trades, live with the high caste tribes to whom they are subjected. In Northern Somaliland the low castes have the general name of Sah, which, as we have seen above, is on the contrary in Southern Somaliland the name of a group of tribes. They comprise: the Yìbir, magicians; the Midgà, hunters; the Tumàl, smiths. Among the Hùwiya the low castes have the general name of Bon, which is really the name of a Bantu population in Kenya Colony and comprise: the Elà, hunters; the Madàràala and the Gàggàb, tanners; the Darfàwà, weavers; the Yàhà, magicians; the Tumàl and Kàlmàgàbà, smiths. By the Sah the low castes are: the Rìbì, hunters; the Waràbày, smiths.

The towns on the coast are inhabited by groups of the Somali tribes of the inland and by families now somalized but of the most varied origins, for the most part Arab immigrants to Somaliland or Bantu; some families would claim Persian origin and there are traditions on the origin from Madagascar of other few families.

Language. Somali is a language belonging to the Cushitic family, to the group called by Keuléb "low Cushitic" and thus akin to Sudani. "After the Jidàwà and Gallà languages, Somali, which during its history has been less influenced than Gallà by non-Cushitic languages, has not received in its phonetic system the typical consonant sounds followed by glottal occlusion, the true consonant diphthongs which are common to Gallà, to some Sudani dialects and have been admitted although in a different measure — in the modern Semitic languages of Abyssinia. It is therefore in Somali a velar explosive pronounced as in Arabic; ñ is praesencaminíal and is dialectically liable to be changed into r. It is also to be remarked that there is in Somali a very wide tendency to palatalisation from the influence not only of the Turkic but also of the liquid ñ, as in the case of the feminine article -à and, the suffix of the reflexive form -t, which are palatalised in -nà or -ñà when preceded by t final of the nouns or verbs (jëbà, jëb being successively changed in jëbà, jëb by assimilation). While other Somali dialects have kept the laryngeal ñ, the Sab dialect has changed ñ in ñ and ñ in ñ. As to morphology, there are found in Somali both kinds of conjugations used in Kushitic, viz. by prefixes and suffixes or by suffixes only, while on the contrary Gallà has kept only the second kind. But on the other side it appears by comparing Somali and Afsar-Saho that in the latter language the conjugation by prefixes and suffixes is more frequent than the other (perhaps on account of the strong influence of the neighbouring Semitic languages), while Somali has kept typically the aorismoid conjugation by prefixes and suffixes only in five verbs (which, however, express the most common ideas) that is: to be, to be there, to know, to come, to say. It is noteworthy that already in Hùwiya and Sab dialects two of those verbs are found used in both kinds of conjugation. Somali syntax (as there is not a declension of the nouns and especially on account of the use of the prepositions which are not placed before or after the noun, but are all placed in the verb itself) gives to the language peculiar characters and causes it to be in some degree difficult to foreigners. For instance our phrase: "the camel and the horse were bound with this rope" is translated: kàrèggàn ràttìgà iyyà fàrašà. Ì là ìì bà là ììàrì, that is literally: "this rope the camel and the horse they were with-from-by bound" (the group from-by expressing the idea that the two animals were not bound together, but every one with a bit of the rope in question). The genitive case, which is translated in Sao-Afar by placing the word meaning the possessed thing before the word meaning the possessor and in Gallà, on the contrary, by placing the word meaning the possessor before that meaning the possessed thing, is translated in Somali by the same way as in Gallà or more frequently by placing before firstly the name of the thing followed by the master's name with the possessive adjective; for instance: "Umar's house" may be translated literally: the house Umar or Umar his house.

The Somalí dialects are distinguished, according to the ethnic divisions, in the groups: Dàròk, Hùwìya, Sab. 1àk dialects have kept the originary ñ praesencaminíal; they form the durative verbs with the suffix -yn; they distinguish in the pronoun the first plural person inim "inclusive" used in which speaks both who hears and who exclusive (that is: who speaks and another person). Dàròk dialects change ñ praesencaminíal when placed between two vowels in ñ (Ogàdèn dialect) or ñ (Madjaríen dialect); their durative verbs are formed with the suffix -yn; they have also kept the aorismoid two "we". Hùwiya dialects change ñ intervocalic in ñ; they form their durative verbs with the infinitive mood followed by the verb ñ; they have not
the double "a". Sab dialects have changed, as we have said above, ąż into ą and in i; they have kept the modal relatives in -are, which has been changed in the jussive in -a in other Somali dialects; the negative imperative is formed by the prefix -ax- followed by the verb with the suffix -ay (in the other dialects it is used in this case the prefix ax- followed by the verb with the suffix -ax).

As to vocabulary, Somali has been very little influenced by Arabic, and even Arabic loanwords, when received, have been wholly assimilated according to Somali phonetical rules; neither had Gallal, if we consider the common origin, a great influence on Somali, except perhaps Sab dialects; we may, however, find in the Somali lexicon some evidence that the Somali and the Sidama were neighbours before the great Gallal invasion.

History. Although the native legends may have Islamicized Somali history by tracing their origin from 'Aql b. Abū Tālīb, cousin of the Prophet, and whatever may be thought — on the other side — about the question whether Hamitic populations may have come in Africa from Asia, there is however no doubt that the Somali occupied their present territory by various and subsequent invasions of groups following and pushing on each other, but all starting from the African coast of the Gulf of Aden. Thence came the Dir, expelled by other Somali invaders, and a portion of them through Ogaden and the region between Djib and Shabelle reached the low valley of the latter river giving origin to the Bimah tribe. From the Gulf of Aden came the Sab, who went first to the valley of the Djib and going down from the plateau along the valley of the Web advanced abruptly to East from the neighbourhood of Mogadishu and invaded their present countries, fighting against the Wardaj that is a Gallal tribe. From the aforesaid Northern coast departed Isak and Dārcāl to conquer their seats by driving away the Dir and the Gallal. From northern regions came the Hawiya, who at first stopped North of Harāb; while their brothers Adjaran subdued the Shabelle's valley against Gallal and Djēddu; but then the same Hawiya advanced to the river and scattered the Adjaran. Therefore we may distinguish in the history of the occupation of the Somali territory two periods: the wars against the Gallal, and then the wars among the Somalis. But a most interesting written tradition (of which I have been able to get a MS. in Arabic) tells of the war that was fought before those told in Somali legends; that is the war between the Gallal and the Wardaj (the Bantu populations) inhabiting the basin of the Djib. The series of the occupiers of Somaliland may be, of course, thus traced: Negroses (Bantu) then Kughites Gallala; then Kughites Somalial.

While these tribes successively occupied the interior, the cone along the seashore has been many centuries in close commercial relations with Arabia; this trade, which had already begun with the commercial colonies of the South Arabian kingdom (see Ḥimyar) became even more intensive in the Muslim period. Results of this Arabic colonisation were the two little states of Zaila and Maqslaha, formed and ruled generally by local dynasties of somalized Arabs or Somali strongly influenced by Arabic culture. The kingdom of Zaila, which was prospering from the ninth century A.D. could live and thrive on account of the trade of the inland, where it was supported by the many Muslim states of the Southern Abyssinia, till its strength was exhausted during the great war fought against Abyssinia under the command of Garīb (q.v.; cf. also Abūsīnīa; Harar; Zaila). Maqslaha, however, had only a short period of prosperity in the eleventh century A.D.; then almost rapidly began its decline, as its population was not able to overcome the resistance of the Somali Beduins inhabiting the interior. Through various vicissitudes Maqslaha continued to be independent under the dynasty of the Maqslaha till the sixteenth century; in the seventeenth century it was occupied by the Imam of 'Oman, who, after several years left the whole coast called Bankul with Maqslaha to its inhabitants, insisting only that they recognize him as their sovereign. When the state of Maqslaha was divided into the Sultanate of 'Oman and the Sultanate of Zanzibar (that is at the beginnings of the sixteenth century), Maqslaha was allotted to Zanzibar, and then the Salāms tried to get a more real dominion there by establishing a warm with garrisons of soldiers in Maqslaha, Marks, Bwa; but after a short period of rule (sixty years about) Zanzibar sold those towns to Italy.

Nevertheless in the interior the Somali tribes had during many centuries enjoyed a full independence. Somali traditions have not kept any remembrance of the great Gallal invasion in Abyssinia, which divided in the sixteenth century the Somali from the Sidama and separated them from those little centres of culture. There is however to be considered the hypothesis that vestiges of a culture superior to the present Somali culture which are found in some inland regions and are referred by the natives to the Adjaran or the Madinil, may have been rather the work of Somali already in close touch with the Arabs of the Southern coast rather than of natives influenced by the culture of the Sidama states of the North.

The interior of Somaliland remained thus independent till the end of the sixteenth century, when France (in 1854), Britain (in 1854), and Italy (in 1895) occupied their present Colonies.

Islam. The Somali are all Muslims and follow the madhhab of Shāhī. Neither the Imam of Maskāh nor the Salāms of Zanzibar during their short rule on the Somali coast had in any way propagated their Ibadite views among Somali peoples; therefore since the Salām's willi retired from Somaliland there has not been any reign of Ibadism. Among the Arabs recently migrated to Somaliland as soldiers (tarkāli) or workmen in European settlements there may be found a few Zaidites, who, however, generally do not publicly profess their faith.

The diversity of formation and historical vicissitudes between the populations of the seashore and those of the interior has caused also a different influence of Islam on them. The towns on the coast many centuries in touch with the Arabian centres of Islamic culture and organised as communities of tradesmen, bound together by ties of citizenship, and not by tribal relations, have been naturally more easily assimilated than the tribes of the interior independent, hostile and distrustful of the populations of the seashore, and firmly united in their large territory with the bonds of the common origin; Islamic propaganda has been
The Somali names of the Heaven-God (Eebba and Haa) are now applied to Allah; even the heathen genius’ name (gul; Galla; balle; Amharic: gol) is used in modern dialects to mean “fortune”.

An even more strong reluctance has been opposed to Islam by Somali customary law, which is based on a social stage very similar to pre-Islamic Arabian life and is therefore often in evident contrast to the Muslim law. We may quote here the characteristic precepts about the levirate and the price to be paid by the widow to the late husband’s relatives if she desires to marry again with a man other than the brother of the dead (it is, however, to be remarked that, by the Somali, the sons of the second husband, brother of the dead, are not considered as sons of the first and continuation of his progeny as is the case with the Semites; but on the contrary the first husband’s offspring is regarded as sons of the second); the marriage by rape; the blood-money conceived in the Somali mind as a price of redemption of the killer from a right that the crime causes the killed man’s relatives to have on the killer’s person ex delicto; the women excluded from hereditary rights; the outcast groups into which one cannot marry or come in any way in contact with, as they are said to be in a perpetual condition of ritual impurity (miliga) (note the skilful imitation of the ancient custom); customs which may be still found in Northern tribes and the remarkable traces of marriages concluded between two tribes rather than single persons.

On the coast, however, in the centres of Muslim culture, particularly after the recent increase of trade in the second half of the sixteenth century, Muslim scholars’ works formed a little local literature written in Arabic specially on mystic subjects. The principal printed works are: al-Majmu’a al-Mudrabah by Sheikh Abdallah b. Yusauf, a native of the Shakah group, who has had his work printed in Cairo; and the Majmu’a al-Ka’id by Sheikh Khais b. Mahdi ‘I-Din, a native of Brava (Barawa). The latter work is only a collection of poems of many Somali authors; al-Majmu’a al-Mudrabah however is formed by five treatises by Sheikh Abdallahi about the fanumus, but its real interest is placed in the third and fourth treatises entitled the former. al-Silkin al-Dhabihah ala ‘I-Kitab al-Nabiha, “the knife that slaughters the barking dogs”, and the latter Nasr al-Munimin ala ‘I-Murad al-Muhillin, “Victory of the believers on the rebellion of the heretics”, which contain violent polemics against the Tantuq Shiiyita. Another distinguished Somali scholar was Shihgh Aweis [Uways] Muhammad al-Baraw, who besides two poems published in the aforesaid Majmu’a al-Ka’id composed five poems in Somali language which he was the only one to write in the Arabic alphabet; one of these poems is directed against the Mad Malla’s followers. We must also mention Sheikh Abd al-Rahman al-Zaali, who wrote many mystic poems in Arabic (the most diffuse is the Siraj al-Takfi wa l-Siraj al-Tawassul bi-Shaikh ‘Abd al-‘Abdurrahman b. ‘Abdallahi, a native of the Shashu group in Maghribi and commonly known as Shikh Siit; he is the author of the Shahjara al-Yaftin, “the tree of the certitude” or al-Nubahah.)
al-yâhun fû Maqâmih bâhur al-Bâriyya, "the certain portion of the miracles of the Best, among the creatures", published in al-Madîrijûna al-Mudârâka and very popular in Somali schools of mysticism.

A MS. found in Brawa contains a translation of the Ḥamīṣta by al-Bûṣrî in Sahālii verses. It is very probable that further researches may cause other more ancient MS. or Arabo-Somali documents to be found.

Four Muslim brotherhoods are found in Somaliland: the Kâdiriya (see 'ABD AL-KADEM AL-DULÎ or GILÊN); the Ahmadiyya, that is the followers of the mystic rule of Ahmad b. Idris, died in the first half of the sixteenth century at Šâbâ in 'Asir; the Šâlîyya, which is a more recent branch of the Ahmadiyya (its founder and leader was Muḥammad Šâlîb, who had his seat in Makka and had been a disciple of the Sudanese mystic İbrahîm al-Raḫîrî, disciple of Ahmad b. Idris); the Rifâyta following the precepts of Sayyid Ahmad al-Rifâyî. The Kâdiriya, which has among its adherents almost all the scholars mentioned above as authors of mystic works, is the most learned and modernized Somali brotherhood; it has only few settlements and has no economic organisation, but it is more devoted to teaching than to agriculture. The Kâdiriya in Somaliland have been for many years separated from the Šâlîyya by a schism; firstly the polemics had been directed by the Kâdiriya against the Mad Mulla, who had begun his campaigns by proclaiming himself to be a true follower of Muḥammad Šâlîb (see the art. MUḤAMMAD B. 'ABDALLAH HAŠÇAN); and caused Šâlîb Awdâ b. Muḥammad al-Barîstî to be killed by the Mulla's followers in 1327 (1999). The polemics began again, although in a less rough way, after the publication of Šâlîb Ibn 'Abd'allah's book (al-Madîrijûna al-Mudârâka) and a poem of Šâlîb Khâim Mahły ʿI-Dîn al-Barîstî, where the Šâlîyya were offended by the refrain lâkum dinukum maw-tî dîtî! The Šâlîyya, on the contrary, have been particularly occupied with obtaining political influence over the tribes and forming, specially on the banks of the rivers, an organisation of agricultural communities. The Mulla's movement, the rebellion of Sayyid Muḥammad Yâsen against Abyssinia in Wel's valley in 1917 were led by Šâlîyya leaders. On the other side the "black lands" along the Sha'bâ's valley, the best for agriculture but formerly undervalued by Somali Bedouins only applied to cattle rearing; were in many territories the goal of the Šâlîyya's aim and they were skillful enough to take advantage of contests between the tribes or other political circumstances and thus they have tried to get granted to them by the tribes the best zones for agriculture. The Ahmadiyya are less numerous and have been directed like the Šâlîyya to acquire lands, although they generally take more interest in teaching than the Šâlîyya. While the Kâdiriya and the Ahmadiyya have not a true hierarchical organisation, the Šâlîyya are in Italian Somaliland led by the chief of the Šâlîyya Miṣrâb (in the middle of Sha'bâ's valley), who is the vicer of Muḥammad Šâlîb in the whole region.

the same name was retained to describe the kingdom thus enlarged and all its inhabitants, as well as the language spoken by the majority of them, the language of Dyenné, of Timbuktu, of Gao, of Dendi and of the land of the Zerma or Djerrma.

The state of Songhay is said to have been founded in the 11th century A.D. by an individual of Berber origin, whose dynasty ruled at first at Gungiya or Kukiya in the island of Bentia, 100 miles below Gao until about the year 1000, then at Gao itself or Gagoting. The princes of the dynasty bore the title *gu* or *ga* until 1335, and then that of *sonni*, *jami*, *kair*, or *lo*. It is said that the founder of the dynasty, called Alyamada, was a Christian. The first of his successors to adopt Islam was the *gu* Kosoy or Kosay, who reigned in the 12th century, about the time when the capital was transferred to Gao.

In 1325 Songhay was annexed to the Mandingo or Mali empire, the ruler of which at that time was celebrated Gogone MUSA or Kankan MUSA. The latter, returning in this year from his pilgrimage to Mecca, went to Gao and there received the homage of his new vassal, the *gu* Assiyou or Alhaby, whose two sons he brought back to his court as hostages. One of the latter, Ali-Kolun, later escaped from the Mali capital and returning to Gao had himself proclaimed king there with the title of *sonni* (1335).

In 1464 (or 1465) there came to the throne another *sonni*. Ali, called *Ali Ber* (Ali the Great), who delivered Songhay from Mandingo suzerainty and considerably extended its boundaries below and especially above Gao, capturing Timbuktu in 1468 and Dyenné in 1473. We may regard him as the original founder of the enlarged Songhay which through him rose from a little vassal kingdom to a powerful empire. But he did not leave a good reputation behind him in the country; the chroniclers of Timbuktu accuse him of having been cruel, impious and a libertine, and of having persecuted men of learning and religion, although, nominally at least, a Muslim himself. He died in 1492, being accidentally drowned in a torrent. With his son and successor Bakari or Baré, who only reigned a few months, the line of al-Yaman died out in 1493, after having been on the throne for about nine centuries.

Ali Ber's best general, a Sarakolle of the Silla faction named Muhammad Ture, seized the throne in 1493 and founded a new dynasty, that of the *askiya*. It was in his reign, a particularly brilliant one, that Songhay attained its apogee. Superficially a convert to Islam but tolerant to those who were still pagans, the *askiya* Muhammad made the pilgrimage to Mecca in 1496/1497; in the course of his journey he made the acquaintance of people of eminence like al-Suyuti, whose advice he sought and in the holy city, on the proposal of the *Abbasid* Caliph of Egypt, made a pilgrimage to Mecca in 1496/1497. On his return to Gao he was received by the Grand Shariif Mulay al-'Abbas as investiture as *khilafa* for the lands of Takrir (i.e. of the Sudân). The Grand Shariif even sent to Gao one of his nephews named Ahmed al-Sakhat. The celebrated reformation of Tlemcen, al-Meghassy, was in constant correspondence with the *askiya* Muhammad, whom he even went to visit at Gao in 1502. This prince by a series of successful expeditions extended his conquests to the lower Senegal, in the west to Air, and to the frontiers of Bornu in the east, and to Segu in the south; Songhay assumed the place previously occupied in the western Sudân by the Mali empire. At the same time he organised his country in a remarkable way, creating a permanent army, a flotilla of supply-ships on the Niger, a system of taxation and payments in kind to fill the public treasury, and instituting military, political and administrative offices with well defined spheres of activity, provincial governments, magistrates and a police. With all his power and by every means, he protected scholars and learned men, heaping favours and honours upon them and encouraged the opening of schools in Timbuktu, which became a real intellectual centre and a noted home of Muslim culture.

Unfortunately this able sovereign's successors were mediocrés and sometimes detestable. Becoming blind, he was dethroned in 1528 or 1529 by his own son MUSA, later interned by his nephew Benga Koria in 1531 on an island in the Niger, and died miserably in 1535. Eight rulers occupied the throne of Gao from 1528 or 1529 to 1653. They were for the most part cruel, selfish and debauched, occupied in murdering one another or in satisfying their cupidity and passions; they soon allowed the great work accomplished by the founder of their dynasty to fall to pieces. Only one, the *askiya Daoud* (1549—1553) one of the sons of Muhammad, tried to stop the decline begun by his brothers and cousins. It only became more rapid after him.

On this, the Saltan of Morocco, Ahmad al-Mansur al-Dhahabi, desirous of gaining possession of the salt-mines of Taghasa, then the property of Songhay, and of gaining the gold of the Sudân and his treasure, sent against Gao in 1550 an expedition of 3,000 men, mostly Spanish renegades, under the Pasha Djiedere. This expedition lost on the way from hunger, thirst and exhaustion two thirds of its effectives; but with the thousand soldiers that remained, who had the advantage of fire-arms, Djiedere defeated without difficulty on March 12, 1551 at Tondibi, a little north of Gao some 40,000 infantry and foot-soldiers, armed only with javelins, arrows, sword and lances, who formed the army of the last *askiya*, Ishayi. Djiedere then entered Gao without striking a blow, made his headquarters at Timbuktu where he installed an *askiya*, chosen by himself who was a mere puppet in his hands. The region below Gao, which the Moroccan troops could not subdue, remained independent and formed a little kingdom called Dendi, governed by *askiya*'s of the line of Mahammod. But the state of Songhay had ceased to exist. If we reckon its definite foundation to date from the *sonni* Ali Ber, it had lasted 127 years (1465—1591).

(MAURICE DELAFOSSE)

SOSO — or *Soo* according to the Malinke pronunciation — is the name of a place in the French Sudân, 125 miles N. N. E. of Bamako, once the capital of a kingdom inhabited and ruled by Sarakolles. The kingdom of *Soo* was originally a dependency of the famous Ghana empire. It became independent, towards the end of the 16th century, this empire broke up after its capital had been taken by the Almoravids (1076). The dynasty, then ruling at *Soo*, belonged to the Sarakolle Muslim family, that of the Djariss. It was overthrown about 1180 by a soldier, also a Sarakolle but a pagan, a member of the caste.
of smiths called Djàra Kante. His successor, called Sumanguru (Sumahoro) Kante, considerably increased the hitherto slight prestige of the kingdom of Soso, by adding to it several provinces, north and south of its old frontiers, notably Wagadu and Baghane, which contained Kumbu, the capital of the old Ghana empire and Manding or Mali, lying on either side of the Upper Niger above Bamako. It was in 1203, according to Ibn Khaldun, that the Soso army took the capital of Ghana. An erroneous interpretation of the text of Ibn Khaldun, has sometimes attributed this conquest to the people of Soso or Soso, who have always lived in Futa-Djallon [q.v.] or on its western slopes, at least 350 miles S.W. of Soso and who have nothing in common with this town except a quite fortuitous similarity of name. The king of Soso, who was a pagan, persecuted the Muslims of Ghana; the latter to escape his exactions migrated about 1224 to Fura or Walla, which they made a centre of Muslim life. It was after taking Kumbu that Sumanguru Kante undertook and achieved the conquest of Manding. A tradition records that he put to death, almost as soon as they succeeded to the throne, eleven kings of Manding from 1224 to about 1230. But he met with fierce opposition, from the twelfth, called Mari-Djata by Ibn Khaldun and known throughout the western Sudan under the name of Sun-Djata or Son-Djata, who belonged to the family of the Keyta. This prince succeeded in raising numerous followers not only in Manding, but also in the adjoining provinces, which like his own country, were eager to escape the sanguinary tyranny of the king of Soso and he marched against the latter. The two armies met near the Niger at Kita, not far from Kullikoro, about 1235. According to the story, Sun-Djata disposed of his adversary by shooting him with an arrow pointed with the spur of a white cock, the tome (tumbe) of Sumanguru. The latter, pierced by the arrow, vanished from sight or was turned into a rock, which is still pointed out, commanding the village of Kullikoro. In any case, Sun-Djata liberated the Manding from the bondage of Soso, conquered the town, and all the country of which it was the capital, and extended his conquests northwards, as far as the ancient capital of Ghana, which he captured about 1240 and destroyed completely; he thus substituted the hegemony of Manding or Mali for the ephemeral hegemony of the state of Soso.

(Maurice Delafosse)

SPAHL. [See Sepoy.]
SPARTEL, a cape forming the extreme N.W. point of Morocco and of Africa, 7° or 8° S. the west of Tangier. Al-Idrisi does not mention it; al-Bakri knows of it as a hill jutting out into the sea, 39 miles from Arrilla and 4 from Tangier, which has springs of fresh water and a mosque and is called a ribat. Opposite it on the coast of Andalusia is the mountain of al-Agharr (Turf al-Agharr > Tafalgar). The name Ishhartal (probably connected with the Latin spartael = places overgrown with esparto) given by al-Bakri is not known to the natives.

(G. S. Colin)

ŚRI WIDJAYA. [See Wàdcag.]
ŚU (v.), water; fluid; a decoction, e.g. of aloes.

SUAHILI. [See Zanzibar.]
SU is an Arabic substantival from the verbal root suha, yahuha ("it poured forth"); meaning primarily a collection, or heap of wheat, dates, earth, etc. In the reign of Akbar it was adopted as the official description of the great provinces of India, to which historians had previously applied such words as zebib, kâtipa, etc. Akbar's empire consisted at first of twelve and finally of fifteen suhar, named either from their capitals, as in the case of Dihl, Agra, and Khásahd, or from the old names of the tracts which they covered, as in the case of the Pandh, Bangâl, Barâ, Malwa, and Gondârat. After Awrangzib's conquest of Bidjâpur and Gulkunda, when the empire of the Timurids reached its greatest extent, other suhars were added. By the English the word has often been wrongly applied to the governor of a suha. The error seems to have arisen from the designation dhib, meaning "lord of a province", and synonymous with suhar (q.v.), in which the first word has apparently been mistaken for a purely honorific title.

SÚBADÁR, the governor of a province, or suha (q.v.). It was Akbar who first regularly divided the empire into provinces, styled suhatar, but in his reign the title suhador was not in use, and the governor of a province is styled suhatar (commander-in-chief) in the Akbari.

His successors employed the term suhador or suhâr al-suha (lord of a province), but the use of these titles was neither uniform nor consistent. The governor or viceroy of the Dakkan is usually styled suhador, but the governors of Awadh and Bengal are more often styled nawâr ahad and mowâdah-nagin in the eighteenth century. Europeans, as Orme, himself an offender, remarks, once called a suhador; the error is undoubtedly the form zebib-suha, the first part of which was mistaken for a purely honorific title. The title suhador seems also to have been applied by Europeans to inferior officials, such as the governors of towns or districts (zarkhâr).

The title suhadar has also been applied, since the formation of a native army in India, to the chief Indian officer of a company of sepoyos (q.v.) or a troop of regular, but not irregular, cavalry; under the original constitution of such companies or troops its actual captain. This use of the title, and its former application to civil officials, are perhaps due to the habit of mind, common in India, which seeks to please by conferring complimentary titles upon inconsiderable persons, but etymologically zhaba may be as correctly applied to a company as to a province.

SUBAṬILA (Šešṭla or Šeaṭšla, ancient Sefutula), a town in Tunisia at a distance of 81 miles southwest of Kairouan and 57 miles southeast of Tebessa, in the centre of a large plain on a plateau to the east of which lies Wādī Šešṭila. The ancient town has been often described, notably by Guérin, Tissot, Diehl and Merlin. In the history of Muslim Africa it is only mentioned in the period of the conquest and its importance cannot be ascertained sufficiently. In A.H. 26 (646/647) an army of 20,000 soldiers commanded by Abū ʿAbd Allāh b. Saʿd marched by Byzantine patrikios Djuḏurj (Gregorios) at the head of 120,000 men before Subaṭila. According to al-Baladūrī, however, the battle took place at Aṯrūb. The year before, Djuḏurj had declared himself independent from the Emperor of Constantinople (Theophanes, ed. Bout, i. 525) and, according to some authors, he had chosen Subaṭila as his capital. The battle was won by the Muslims; Djuḏurj was killed and Subaṭila sacked or placed under a Muslim governor.

The detailed accounts of the Arabic authors, especially those of Ibn Ḥubbār and Nawair, are full of legendary features; Djuḏurj’s daughter appears unveiled at the top of a tower and is promised to him who will kill Ibn Saʿd. The role described to Abū ʿAbd Allāh b. al-Zubair seems to have been intentionally accentuated. It is he who takes the direction of the battle; fortuitously he kills Djuḏurj with his own hand; with great discretion he conceals his gallant deed and is chosen to report the tidings to the caliph. It is equally improbable that the patrikios should have chosen Subaṭila instead of Carthage as his capital. The Muslim chroniclers, who did not possess reliable sources for the history of North Africa, are inclined to represent the capital of the country to have surrendered at the first blow. It may be admitted, however, that the patrikios had occupied, on the first appearance of the Muslim troops, this important point at one of the main ways from the South, in order to come in touch with the native populations whom he sought to win (Diehl) as well as to protect Tunisia, then a fertile and populous country. It is certain that at the end of the 7th century Subaṭila was a very fortified post. It was defended by a number of fortifications built around a central point, which was formed itself by the enclosure of the three temples of the Capitol.

SU BASHI, ancient military title in countries of Turkish civilization. Although later popular etymology has always regarded the first element as the word με, “water,” this interpretation is probably erroneous. In old Eastern Turkish this word was very possibly taken from Chinese signified army “water,” and so “su-bashi” therefore meant commander of the army (cf. Maḥmūd Kāshghari, Divān Lughaṭ al-Turk, iii. 156; Houtsma, Ein türkisch-arabisches Glossar, Leyden 1884, p. 14, 30). It is not surprising, however, that this title has been connected with the word designating water, because in practice the responsibility for keeping the waters for irrigation in repair was often in the hands of a very influential functionary (cf. al-Maqrīzī, p. 330 who says that the amir having charge of the waters of Merw had 10,000 men in his service). And in Turkestan, as in Asia Minor, there have always been officials in control of the irrigation (see Skrine and Ross, The Heart of Asia, London, 1899, p. 337; and for Asia Minor Ahmad Raki, Sebili, Constantinople 1924, p. 108). But these functionaries have always called themselves mir-i-ah and never mu-bashi. There is also an Arab expansion of the title, deriving it from the Arabic word ibīr “evil.” Thus Muḥammad Ḥāfṣ, in his al-Durar al-ma’nāthibat al-mantuhāra fî tātib al-ghalibat al-ma-zāhirā, p. 260, declares mu-bashi to be a translation of the Persian ser-bakh (see also von Hammer, Staatsverfassung, l. 121).

Su Bashi became a very well known military and police title in the Ottoman empire, but it was found in Asia Minor as early as the times of the Seljūqs. In the 11th century Ibn Bibi (Houtsma, Recueil de l. ref. à l’hist. des Selj., v. 210) speaks of a mu-bashi of the town of Kharpūt [q.v.], who was probably under the sultan of Konya. Every town of any importance had a mu-bashi; when Ḫūṣān took possession of his first capital Karaja Hijār, one of his first acts was to appoint as mu-bashi his cousin Alp Gündüz (Tanzūrî-ki-i ʿeh-līn, ed. Giese, p. 7; Uṣūl Ḳeg, ed. Babinger, p. 12).

As the Ottoman supremacy became confirmed, a differentiation of the functions and the position of the mu-bashi in the provinces and in the capital was introduced. In the provinces they obtained a position in the feudal organisation, which also proved the military origin of their functions. The mu-bashi had their own ûsil (fīrūz) and they exercised police control over the other sipahi and the inhabitants of the district under their charge. Administratively they were under the authority of an alay-beg, who again was subject to the Sanjak-Beg [see. SINDI]. These su-bashís had many privileges, which varied according to the different provinces: they had the right to a certain amount of the imposts and the fines extorted from the people (see Kāraba-nâm-i ʿeh-līn, ed. Arfī Bey, Constantinople 1330, appendix to Nūm. 13 and 14 of T. O. E. M., p. 28).

In the capital the su-bashi became one of the chief officers of police, who assisted the Ǧaḥn Bashi, whose function is most likely that of minister of Police. With the Muḥirr (Muḥīr) Aga and the ʿAss Bashi he was responsible for the carrying out of all the judicial sentences and in general for obedience to the police regulations in the capital. Besides this title of su-bashi is used to designate a certain military rank in the cavalry corps of the ʿUffādālī.

SUBHĀ (S., also pronounced ṣubha), also pronounced ṣubha, the rosary, which at present is used by nearly all classes of Muslims, except the Wahhabis who disapprove of it as a ḫidr. There is evidence for its having been used at first in ṣūfī circles and among the lower classes (Goldziher, Rosairt, p. 296); opposition against it made itself heard as late as the xvi century A.D. when Sayyid composed an apology for it (Goldziher, Verleihungen über den Islam, 1st ed., p. 165). At present it is usually carried by the pilgrims (cf. Met, Die Renaissance des Islam, p. 441) and the darwishes.

The rosary consists of three groups of beads made of wood, bone, mother of pearl, etc. The groups are separated by two transversal beads of a larger size (imān), while a much larger piece serves as a kind of handle (yad); Snouck Hurgronic in Int. Arch. f. Ethnographie, 1884, p. 154 and plate xiv No. 12). The number of beads within each group varies (e.g. 33 + 33 + 34 or 33 + 33 + 34); in the latter case the imān and the yad are reckoned as beads. The total number of a hundred is in accordance with the number of Allah and his 99 beautiful names. The rosary serves for the enumeration of these names; but it is also used for the counting of eulogies, ḥikāʾs and the formulas at the end of the ṣalāt. Lane (Manners and Customs, Register) makes mention of a ṣubha consisting of a thousand beads used in funeral ceremonies for the thrice one thousand repetitions of the formula Lā ilāha illa 'llāh. 

Masāḥib (plur. of masahaba) are mentioned as early as the year 800 A.D. (cf. A. Met, Die Renaissance des Islam, p. 318). Goldziher (Verleihungen, p. 165) thinks it certain that the rosary came from India to Western Asia. Still, Goldziher himself has pointed to traditions mentioning the use of small stones, date-kernels, etc. for counting eulogies such as ṣābhir, ṣābhir, ṣubha.

From such traditions the following may be mentioned: *on the authority of Saʿd b. Abī Waqās ... that he accompanied the Apostle of Allāh who went to visit a woman, who counted her eulogies by means of kernels or small stones lying before her. He said to her: Shall I tell you what is easier and more profitable? "Glory to Allāh" according to the number of what he has created in the earth; "glory to Allāh" according to what he has created in the heaven; "glory to Allāh" according to the number of what is between these; "glory to Allāh" according to what he will create. And in the same way Allāh akbar, al-hamdu lillāh and *there is no might nor power except in Allāh* (Abū Dāūd, Waṭr, bāh 24; Tirmidhi, Deʿawāt, bāh 113)." 

The tendency of this tradition is elucidated by the following one: Ṣafiya said: the Apostle of Allāh entered while there were before me four thousand kernels which I used in reciting eulogies. I said: I use them in reciting eulogies. He answered: I will teach thee a still larger number. Say: "Glory to Allāh" according to the number of what he has created (Tirmidhi, Deʿawāt, bāh 103). To a different practice points the tradition according to which the Apostle of Allāh *counted the taḥālīf* (Naṣār, Sahī, bāh 97). The verb used here is *aḥāda*; its being translated *to count* is based upon the fact that the lexicons give it among others this meaning. Probably this is based in its turn upon traditions like the one just mentioned, and like the following: *The Apostle of Allāh said to us (the women of al-Madina): Pray five taḥālīf, taḥālīf and taḥālīf, and count these eulogies on your fingers, for these will count to give account!* (Abū Dāūd, Waṭr, bāh 24; Tirmidhi, Deʿawāt, bāh 120). According to Goldziher, in these traditions the counting of eulogies on the fingers is contrasted with their being counted by means of stones etc. There is, however, a tradition that makes it a matter of doubt whether Allāh in connections like those mentioned has always the meaning of counting and not its proper sense of tying. I have in view a tradition preserved by Ibn Saʿd (viii. 348) according to which Fātimah bint Ḥusain used to say eulogies aided by threads in which she made knots (bī-khāyāl māʿūn fī ṣūḥ). The term ṣubha does not occur in classical tradition in the meaning of rosary; it is often used in the sense of supererogatory ṣalāt, e.g. wāḥidat al-ṣubha (Muslim, Mutawāfūrūn, trad. 81). Al-Nawawī explains the term by nāḥā (Commentary on Muslim's Sahih, Cairo 1285, ii. 204). Ibn al-Athīr, Niḥaysa, s.v. asks how it is that the ideas of nāḥā and ṣubha coincide. He answers: Eulogies (taḥālīf) are supererogatory additions to the obligatory ṣalāt's. So supererogatory ṣalāt's came to be called ṣubha.

If Ibn al-Athīr's opinion is right, the semiological evolution of ṣubha took two directions:

- supererogatory eulogies in ṣalāt
- supererogatory ṣalāt

(A. J. Wensinck)

**SUBHĀN ALLĀH** (Ar. *praise to Allāh*), a religious formula, frequent in the Qurʾān. It is an accusative of exclamation from a root which does not occur in Arabic (the verb sabha is rightly explained by the grammarians as derived from the noun), but which goes back as a loan-word to Aramaic and was also adopted in Hebrew and Ethiopic, viz.: ṣebaḥ "to praise." Muḥammad probably found the expression somewhere among the possessors of a scripture*, as it is not probable that he himself should have created such a form from a non-Arabic verb. It is also evidence of an extensive use of the word that subḥān is found in a verse of al-ʾAʾrān without a genitive with a following min as an exclamation of surprise (Ibn Yāqīn, ed. Jahn, p. 43, p. 148, etc.). As a regular formula in the Qurʾān it is placed in the mouth of Moses (vii. 140), Jesus (v. 116), the blessed in Paradise (x. 10) and the angels (li. 30; cf. xxvii. 38). It is used on different occasions to express the impression made upon the speaker by Allāh's overwhelming greatness and His wonderful deeds. Thus: *Praise be to him who made his servant travel in the night* (xvii. 1),
"Praise be to Him, who has subjected all this to us" (xlii. 12), "who created the pairs" (xxxvi. 36), "in whose hand is rule over everything" (xxxvi. 83), "Praise be to Allah (i.e. praise ye him) morning and evening" (xxx. 16); when the pious hear the recital of the Qur'an they fall upon their faces and say "Praise our Lord!" (xlvii. 108); it is also found in a confession of wrongdoing: "Praise be to Allah, we have done wrong" (Ixxvii. 17). As an expression of Allah's absolute superiority and perfection, it is specially used, when anything is rejected than which Allah is greater, and which would injure his nature (cf. xvii. 45 where it is connected with ta'allu'um). The thing rejected is often introduced with tawٰ (xvi. 22; xxix. 67; lii. 43; lxxvi. 23). Thus Muhammad is fond of using the formula when in the meccan Suras he is combatting the worship of other gods than Allah as blasphemous (ix. 31; xii. 108; xvi. 5; xxvii. 45 etc.) or when he is filled with horror at the idea that God should have a son (ii. 110; iv. 169; v. 116; xxxiv. 6; xliii. 82) or sons and daughters (vi. 100; xvi. 59; lxxvii. 157, 180). It is in a similar connection that the pious say "Thou hast not created the world in vain (sabilu'um), subhanaka (how much thou art raised above it! lit. 188) or that Musa recognizes that God cannot be seen (vii. 140) or that Muhammad turns aside the demand of his countrymen for miracles by saying he is only a man and a messenger (xxvii. 95). In this way the expression may be weakened to mean almost "God forbid!" (xlvii. 13).

The derivative suhba^kha early came to mean "to pray", especially of the supererogatory prayers: suhba^k for e.g. Hasan b. Thabit in Detectus, Ixxvii. 14 (not in Hirschfeld); cf. Lane, Lexicon.

(F. H. Buhl)

SUBHÎ MUHAMMAD, Turkish historiographer. He was born at the beginning of the xvth century (the date is unknown) as son of Beyhâkî Khalîf Fehmi Efendi. He entered upon a long administrative career, beginning with the office of âdwan kâtibî. Soon after, before 1150/1737, he was appointed wa^f a-wurâs as successor to Shâkir Husein Bey and he combined this position with other functions till the end of the year 1156 (Feb. 1744) when he was appointed beyhâkî. The wa^f a-wurâs was then given into the charge of Sulaimân İzzat [q. v.]; Subhi Efendi died in Safr 1183 (June 1769). His Tu'rîs was printed in Constantinople, together with those of his two predecessors Sûrî and Shâkir in 1198/1785; the last year of which he wrote the chronicle was 1196. His Turkish biographers commend him for his style and his poems.

(J. H. Kramers)

AL-SUBKI, Nîsha from the place Subhî in the district of the mamlîk, district of Mamîs, Memphis ("Ali Pasha Mûbârak, al-Khît aÂlîjia, Imla 1195, xii. 7).

A. The ūlî family of scholars al-Subkî (the numbers beside certain persons in the family tree refer to the descriptions which follow) for the whole cf. F. Wüstefeld, Die Academien der Araber und ihre Lehrer, p. 119).

1. Sâdr al-Dîn Abû Zakariya Yâhûdî, Khâtîf of al-Mâqâm and later Professor at Cairo, died 725 (Academic, No. 183).

2. Ta'āfi al-Dîn Abû l-Fâlîh Mûhammad, b. 704, Professor at Cairo and Damascus, d. 744; wrote a Tu'rîs; his correspondence Ahlwardt, No. 8471, 24 (Academic, No. 97; al-Khît aÂlîjia, xii. 8).

3. Bahâ' al-Dîn Abû l-Bakrî Mûhammad, b. 708, Professor, Khâtîf and Hakim in Damascus and Cairo, Wâlî of the Sa'dîn and Khâtîf of the Umairiy mosque in Damascus, d. 777; three unfinished writings (Academic, No. 52; al-Khît aÂlîjia, xii. 8).

4. Wâlî al-Dîn Abû Dâr 'Abdallâh, b. 735,

Professor, Khâtîf, Khâtîf and financial officer in Damascus, d. 785 (Academic, No. 98).

5. Bâd al-Dîn Abû 'Abdallâh Mûhammad, b. 747, Professor, Muftî and Khâtîf at Cairo, Damascus etc., Khâtîf at the Umairiy mosque; unpopular on account of the influence he allowed his son Djalal al-Dîn to exercise over his affairs, d. 802 or 803 (Academic, No. 531; al-Khît aÂlîjia, xii. 8).

6. Shâhî l-Islâm Ta'âfi al-Dîn Abû l-Hassan 'Ali, b. 683, studied in Cairo principally, Professor, Muftî and Khâtîf at Cairo and Damascus, Hakim at Damascus, Khâtîf at the Umairiy mosque, d. 756; produced more than 150 works, of which the following may be mentioned with a view to corrections to the list of those still extant by Brockelmann, G. L. E., ii. 87 sq.: 3) printed at Halâdashî 1315, Bulât l1318; 12) also Ahlwardt, No. 9599; 16) that of a Kitâb also in Ahlwardt, No. 8482, fol. 41v; 18) Answers to legal questions, Ahlwardt, No. 5026, 1: 19) al-Durr al-nâmî as Taťâr al-Kâ'nî al-aÂlîjia (unfinished); 20) Taťâr as uayhâ 'l-Rasulîn ku lî min al-Târijîlî as sîyâh (Kûnî, xxii. 53); 21) al-târîkhîs as Shârî Mînkâhî (Brockelmann, l. c. 395, l. 12 [not quite correct] unfinished; cf. below, No. 7, 22) a commentary on al-Mukhâshâh of al-Shirâzî unfinished; cf. Brockelmann, l. c. 387, 9, 1); 23) al-Râjî as-lâri as Shârî Mûhînî as-Tîrijî (Brockelmann, l. c. 393, 24); 24) Raj as Shâhî as Malâkat al-Târijî; 25) 26) al-Dur as-dâdat as Shâhî as-Mâmîs, al-Kâ al-Târijî; 26) 27) al-Dur as-dâdat as Shâhî as-Mâmîs; 27) Mu'ayn at-Fâlîs as mû'ah Dânî l-Wâlîs; 28) al-iyâd as-âlîjia as-umâd al-Hâris; 29) al-Sâkî al ra'îsî as bâd Dânî al-Ghârib; 30) al-Ghârib mish Mîhîrî as-Mâqâm; 31) ar-Râjî as-Mûhînî as part al-dâdat u'l-pîmâl; 32) al-Kâ al-Târijî as-Târijî; 33) al-Kâ al-Nâmî al-sanûfî as l-Mukhâshâ as-Mînkâhî; 34) al-Tarîkî as-ru'fî as l-Mukhâshâ as-Mînkâhî; 35) al-Nurmî as l-Kâ'ashî as-wâdîjîn as-Tâmâbî; 36) al-Târijî as-dâdat as l-Nâmî; 37) al-Kâ al-mahîmâ as-Tâmâbî as-ru'fî as-Tâmâbî; 38) as-ru'fî as-shâ'arî as Bâlîkî; 39) al-Târijî as-lâmî as-dâdat al-Ismâî; 40) Hakâm as-ru'fî as-lâmî as-dâdat al-Ismâî; 41) al-Târijî as-ru'fî as-mâmîs; 42) al-Fâlî al-Tâmâbî; 43) al-Dur as-dâdat al-Ismâî as-Tâmâbî; 44) al-iyâd as-âlîjia as-umâd al-Hâris; 45) jîlî as-Nâmî as-sâlî as-râjî as-Tâmâbî; 46) many of his shorter writings are in the collection of his Fu'ad (Academic, No. 49; al-Khît aÂlîjia, xii. 7); Hâdji Khalîfî, ed. Flügel, Index, No. 8265; Brockelmann, ii. 86, 9 in which there is an even longer list of literature; complete biography in the Tabakh of his son [here No. 9].
7. Baha' al-Din Abu Hmaid Almrad, b. 719, Professor, Mufti and Kadi in Cairo and Damascus, d. in Mecca 7731; wrote 1) an unfinished commentary on al-MMadi di al-Kawin (cf. Brockleman, i. 394, 29, i); 2) a supplement to the unfinished commentary on the Minhadii-commentary of his father (see above, No. 6, 21); 3) Dhar al-Tanind (or al-Munhsndard) (Hadjjl Khalifa, ed. Flugel, vi. 157); 4) Arus al-Afrab fi Sharh Tahtat al-Misn (cf. Brockelman, i. 295, 10); 5) an unfinished commentary on Muhshirat of the K'diya of Ibn al-Hadji from al-Baaijawi (cf. Brockleman, i. 305, 6); 6) a Kadda on the meaning of the word 'Amin (Ahwardi, No. 7065, 1 as also in 6973, 3 and in 7334); 7) a niddle-poem on the Nile (with the answer of Shalih al-Din al-Safad [Brockleman, ii. 31, 3] thereupon: Ahwardi, No. 7866, 1 also in 6114); 8) another poem by him Ahwardi, No. 8471, 28; 9) writings addressed to him Ahwardi, No. 7869 and 8471; 24 (Academi, No. 50; al-Khafat al-didata, xii. 8; Hadjl Khalifa, ed. Flugel, Index, No. 1899).

8. Ijma'il al-Din Abu 'l-Tayib al-Husain, b. 722, Professor in Cairo and Damascus, in the latter previously also deputy Kadi; d. 755, probably to his father; wrote a book on people with the name of al-Husain b. 'Ali (Hadjjl Khalifa, ed. Flugel, v. 159); his correspondence Ahwardi, No. 8471, 24 (Academii, No. 73; Ahwardi, al-Khafat al-didata, xii. 8).

9. Tadj al-Din Abu Nasr 'Abd al-Wahhab, b. 727 (or 728 or 729), Professor, Mufti, Kadi and Hakin in Damascus and Cairo, Khatib of the Umaiyyad mosque; in 769 he was thrown into prison for about 60 days, but was able to re-habilitate himself; d. 771 of the plague. To Brockelmann's list of his surviving works, ii. 89 sq., should be added: 1) Ahwardi, No. 4401 is autograph from 762; the commentary of al-Zarkaht also Ahwardi, No. 4402; printed with the commentary by al-Mahalli and the super-commentary by al-Buni also Bultak 1297 and 1801, with the same commentary and the Tahtat of 'Abd al-Rahman al-Sharbatay (Cairo 1309 and 1318); ed. D. W. Mynheer, Luzac Smith & Test Series, London 1908, xviii; abridged and translated from the Arabic by O. Rescher, Constantinople 1925; 88).

B. Shihab al-Din (or Sharaf al-Din) Ahmad b. Khalil b. al-Habib al-Masri al-Shahri, d. 1032, at the age of 93; wrote 1) a gloss to Kitab al-Shikha of al-Kafi 'Iyyad (Brockleman, i. 369, 5, 1, b.); 2) Fatih al-Mubut fi Sharh Tahtat imd al-Tahtat (Brockleman, ii. 151, 150); 3) Fatih al-Ishaffar fi Mansunaat al-Kubira (ibid. 1); 4) Fatih al-Mubut bi-Sharh Mansunaat Ibn Thani al-Din (cf. Brockleman, ii. 94, 4); perhaps erroneously attributed to him, cf. [Pertoch, No. 1080]; 5) Hadjl al-Din ibn Masulit al-Lehmi 11, b. 1140; 6) Manush al-Hadjl al-Musmit; 7) al-Paghirra; 8) besides these he collected the Fatwa of al-Ramli (cf. Brockleman, ii. 321, 13) (al-Khafat al-didata, xii. 8 sq.; Biography also Ahwardi, No. 8471, 15).

C. For the modern Egyptian Ahmad Bey al-Subki b. Ahmad b. Sulaiman al-Tujjai, cf. al-Khafat al-didata, xii. 9. (JOSEPH SCHACHT)

SUEDA, a town in the Yemen in South Arabia. It is built on a rocky ridge running S.W. to N.E. with a peak in the centre. The citadel (kisra) stands in the centre of the town which is also its highest part, a strong lofty building reached by a kind of staircase on the
The expression *Bilad el-Sudan* properly means "land of the negroes." It would appear then that the word Sudan which comes from it ought to mean all the parts of Africa inhabited by negroes. Among Arabs, as well as Europeans, it has become the custom to restrict the application to the northern part of these regions or in a more general way to the area of *sub-Sahara* Africa which has been penetrated by Islam. In practice this area is divided into three parts: Western Sudan, containing the basin of the Senegal, the Gambia, the upper Volta and the middle Niger; Central Sudan including the basin of Lake Chad and Eastern Sudan or the Egyptian Sudan, confined to the basin of the upper Nile. It may be mentioned that the English use the word Sudan alone to mean the Egyptian Sudan and that the French officially apply the name "Somme Francaise" to one of their colonies, which really corresponds only to a small fraction of the large Sudanese area which they occupy. In this article we shall take the Sudan to include all the lands lying south of the deserts of the Sahara and of Libyan, from the Atlantic in the west to the western frontiers of Ethiopia in the east, the southern limit following roughly the 10th of North Latitude.

It is probable that from the earliest times there were relations between the Sudan and Mediterranean Africa. The ancient Egyptians obtained slaves by making expeditions into the land of the negroes and they had also commercial relations with it. Caravans setting out from the Phoenician colonies, especially Carthage, used to buy in the Sudan, gold, ivory, and slaves, in exchange for cloths, copper and tools. This intercourse then took place via the Nile or across the Sahara continued in the Greek and Roman period and later after the conquest and conversion to Islam of North Africa, it was continued by the Arabs. By the end of the seventh century a.d. Muslims of Egypt, Ifriqiya and the Maghrib were attending the great markets of the Sudan. Some were even settled there as correspondents and agents for their governors on the shores of the Mediterraean. But according to the Arab authors who give the earliest notices of the land of the negroes, it is evident that these Muslims were only interested in commerce and did not proselytise and it was only in the 10th century that Islam began to spread among the Sudanese. Several traditions, it is true, make the conqueror 'Oghba b. Nafi' come to the Sudan but they do not appear worthy of credence.

We should not however deduce that before the 10th century there was no civilisation or political organisation worthy of the name in these regions. While many of the princes who have ruled various parts of Sudanese territory from the 10th century have professed Islam, it was not always nor everywhere thus. Indeed several of the Sudanese states, including the most important were well governed before the beginning of the conversion of their country to Islam and had already attained a power and fame, in some cases considerable, and possessed institutions which Muslim rulers of a later date were pleased to adopt and which still exist to-day. In those kingdoms that have remained pagan, like the Musi of the Upper Volta, such as are described in the 10th century by al-Ikhni when he tells of the pagan kingdom of Ghana.

The religion formerly professed by all the Sudanese was the same, apparently, as that which is found at the present day among those of them who have not been affected by Islam, i.e. a form of Animism based on the worship of ancestors and of the spirits of nature.

Christianity had penetrated into several parts of the Sudan; it was predominant in Nuba from the 11th to the 16th century and it is said that the princes reputed to be Berber origin, who founded the kingdom of Songhay (q.v.) in the 16th century were Christians.

Islam must have spread very early among the Nuba or Nubians of the valley of the Nile, but it appears that it took a long time to reach the provinces of the eastern Sudan which lie at some distance from the main branch of the river, when it was only introduced towards the 18th century by tribes of Arab origin who at this period pushed south-westwards and came into contact with the negroes of this region. It was on the western part of the Sudan that a deep and lasting impression was first made by the teaching of Muhammad. It reached there, not through the Arabs, but through Berbers of the Saharan, who at this time launched the Almoravid movement.

At this time the Ghana empire was flourishing in the Western Sudan, founded at an unknown date by princes who were said to have belonged to a white stock, but whose rulers at the time were negroes of the Sarakelle tribe (allas Soninke, or Wakooy or Marka), who lived at Kumbi, S.S. W. of Wilata, in the province called Waggagou or Bagha, and who bore titles of tunka, kayanagha, and ghana. It is this last term extended from the ruler to the town that the Arab writers use for the town of Kumbi. The Ghana extended his sway beyond the proper limits of his kingdom over the greater part of the Western Sudan, and notably over the goldmines of the left bank of the Upper Senegal, as well as over the majority of the Berber tribes of the Sahara and in particular over that of the Lemtuna and over their capital Awdaghoost, probably situated at some distance to the S. W. of Tighit (Titchi).
In 1043, the Berber reformer 'Abdallâh b. Yâsin, left the rûqûb or monastery which he had conducted on an island of the Lower Senegal and began to preach Islam to the Berbers of the Adara and Tagant, and to the negroes of Takrit (Futa-Tooro), ancestors of the Tukorof or Tuculor of our day and to several other Sudanese peoples, then more or less vassals of the Ghana. His preaching was all the more successful at it was addressed to people, black or white, anxious to cast off the yoke of the suzerainty of the Sarkin of Kumbi, who were also a bulwark of paganism. The king of Takrit and his family—the first of the negroes without doubt to do so—adopted Islam and even supplied contingents to the Almoravid army. The king of Manding or Mali, who lived on the Upper Niger soon became a convert also and the conversion of the king of Songhay in the region of Gao on the middle Niger is put about the same date. Awdaghost which remained faithful to the Ghana, was attacked and taken in 1054 by 'Abdallâh b. Yâsin and about 1076 by Yusuf b. Tashfin at the head of the Mali body of the Almoravids was conquering Morocco and preparing to invade Spain, his cousin Abû Bakr b. 'Omar of the Leentuma tribe with the Almoravids came and established on the threshold of the Sudan, seized Kumbi and put an end to the long period of Ghana domination. Compelled by force to adopt the new religion, the Sarakole became converted to Islam en masse and began to spread it in the different kingdoms which they still ruled and which had taken advantage of the fall of the Ghana their suzerain to declare themselves independent: kingdoms or provinces of Dûna or Kanyaga (near the modern Nyoro), of Gumbu (south of Kumbi), of Sûr (between Gumbu and Bamako), of Djakha or Bô (western Mâina) etc. The death of Abû Bakr b. 'Omar in 1087 and the departure for the north of the last Almoravid forces which had supported him, did not prevent the propagation of Islam from going on and at the end of the 12th century some Muslim Djelas converted by the Sarakole of Djakha, carried the new faith up to the dense forests of the Gold Coast, to which they used to go to buy kola-nuts.

Progress was then checked for a period, then about 1224 a religious and commercial centre was organised at Walata and soon Timbuktu and more particularly Djenné were reached. In the following century Timbuktu became the Muslim metropolis of the western Sudan. The Mandingo empire, the hegemony of which had succeeded to that of the Ghana, was then at its zenith. In 1325 its ruler, who at this time was the famous Gongon-Mian (popular Kankan-Mâin) had mosques built in Gao and Timbuktu by an Arab of a Granada family whom he had brought from Meccâ; these mosques had flat roofs, and pyramidal minarets and introduced to the Sudan an architectural style which spread rapidly there; the éclat which he gave the Muslim religion contributed to consolidate Gongon-Mian's authority over the other countries. It was under his successor that regular diplomatic relations began between the Sudan and Morocco.

The progress of Islam became still more rapid at the end of the xiiith and beginning of the xiiiith centuries as a result of the policy of the greatest prince of Songhay, the sultân Muhammadu Tûre. On the other hand it suffered a considerable setback in the middle of the xiiiith century in Senagal, as a result of the conquest of Takrit or Futa-Tooro by Fal and Manding hordes from Koli-Tengelle and the establishment in this country of a Fal pagan monarchy which held power from 1559 to 1776. Contrary to what one would have expected, the conquest of Songhay and of Timbuktu by a Moroccan expedition in 1591, was a further signal for a decline in the Muslim faith, on the middle Niger and for the beginning of the decline of Timbuktu as an intellectual and religious centre.

It must however be thought that Islam had ever won over all the Sudanese. According to the Arab geographers and historians and to the local chronicles, the new religion had made its converts mainly among the kings and high dignitaries; except in the case of a few tribes like the Tuculor, the Sarakole, the Djela and Songhay, the mass of the population except in the large towns had remained pagan.

It was in the xviith and xixith centuries that Islam made most progress in the Western Sudan and a progress more marked than it had ever since the Almoravid period. The original temperament of the Tuculor caste of the Toreibo (sing. Toreibo) of Takrit was the main factor in this movement. It had begun about 1720 with the creation at Futa-Djallon (q.v.) of a kind of theocratic monarchy. It was strengthened in 1776 by the foundation at Futa-Tooro of a similar theocracy as a result of the victory which the Muslim Tuculors then inflicted on the Fal, who still remained pagan and of whom the majority were now forced to adopt Islam. Gradually the Wolof of Lower Senegal were also converted to Islam. Prophets soon arose among the Toreibo of Futa-Tooro and among the Fal of Mâina. The first was the Tuculor Usmanu Fônjo who preached the holy war between the Niger and the Chad, converted a section of the Haussa, and founded the empire of Sokoto (1802). He was followed by the Ful Sekü Humunu Bâ, who secured the supremacy of Islam in Mâina and built a capital there which he called: Hamâllâh (1810). Then the Tuculor al-Hajj 'Omar, who in the course of his pilgrimage to Mecca (1820) had been invested with the title of Khalifa of the Tijânites for the Sudan, began in 1838 a series of missionary and military campaigns which made him master of Manding (1845), Kaara (1844), Ségou (1861) and finally of Mâina (1862). At his death (1864) he left a vast empire in which Islam was a sort of official religion but it was to collapse before the French conquest (1890-1893). A little later in 1898, an attempt to set up another Muslim empire between the Senegal and the Upper Volta began by the conquering Mandingo Samûl Tûre was definitely checked by the defeat of the latter, who was captured by the French troops.

In the Central Sudan, Islam had made its first appearance in the xviith century. It had been introduced to Kémè in the reign of Umar whose dynasty, which remained faithful to paganism, was overthrown in 1394 by a Muslim dynasty of native origin, that of the Mar, which transferred its capital to Bornu at the end of the xviith century. But it was only at this latter date that the Muslim faith took firm root in these regions by establishing itself solidly on both sides of Lake Chad. It was only at the end of the next century in the reign of the Mbang 'Abdallâh (1661-1667) that it reached Bagirmi and it was only at the beginning...
of the xviith century that the prophet Sulayh, said to have been of Arab origin, brought Islam to Wasit, where it was not firmly established till 1635 onwards. Very much later Islam spread southwards under the stimulus of the adventures of Rabih (1878-1900).

In the Eastern Sudan, the Nuba formed almost the only native Muslim population down to the xvith century. At this period Darfur, after long being like Wasit and Kordofan under the authority of the Idalomas, Tandjar princes, said to have been of Asiatic origin, was partly converted to Islam by the founder of a new dynasty named Sulun-Sulun. One of his successors, Tharawil, conquered Kordofan and converted the Koraiti of the Karlo it is said, to Islam. The rest of the Eastern Sudan made more rapid progress towards the end of the sixtith century under the influence of the Mahdi Muhammad 'Abd Allah [q.v.] who belonged to a Nubian family of Dongola and who conquered Kordofan, Darfur, Bayal al-Ghazal, Semnun [q.v.] and finally Khatrinn (1851-1885) and under his Khalifa 'Abd Allah, one of a tribe of Bagdara of Darfur, who extended his conquests into the province of Equatoria (1892), to be finally driven from Khatrinn by Kitchener in 1898. Around 1850 the broad 'Al shat and 'Al jay'a in 1859, by a force under Colonel Wingate. At the present time (1925) the Sudan as a whole has a population, that may be approximately estimated at 25 or 30 millions, composed of Muslims and Animists in about equal parts. The former predominate in the larger centres but are relatively less numerous outside the towns. Some tribes between are all or for the most part Muslims; these are from West to East the Wolof, the Tukulor, the Senoufo, the Songhay, the Kanuri and Kanem, the Tsu of Tiou, the Mafa, the Koura, the Kordofan, the Nuba and a few others of minor importance. Some are partly pagan like the Ful or Fulbe, the Mansinga or Malinke, the Serer of Buss, the Hades, the Bagirimi, etc.; and lastly many are entirely or for the most part Animists, like the Serer, the Djola or Fula, the Bamari and Konougu, the Mambas, the Bobo, the Dogon or Tombo, the Seno, the Mafa, the Garunai, the Lobi, the Ungaré, the Senoufu, the Baname, the Gurma, the Berba, the Kanem, the Bauri, the Mandara, the Masai, the Mounda and the number of the Central and Eastern Sudan grouped together by the Muslims as Kafiri, Kirdi, Ferti, Dajukhan, etc.

Arabic as a spoken language has made very little progress in the Sudan; it has only enriched the dialects of the Sudanese Muslims with words relating to religion. These dialects, like those of the Sud fantastic Animists, all belong to the African Negro family. On the other hand, Arabic is the written language for all the Muslims of the Sudan who have any education and there has existed since the xviith century a regular Sudanese literature in the Arabic language. Sometimes, at least as far as the Ful and Hausa are concerned, the characters of the Arabic alphabet are used to write the native languages.

Selim I (1517) it revived as a naval station. At this time the water from the Bêr Suez, a league and a quarter distant on the road to Cairo, was brought to the town by an aqueduct, traces of which still remain. This water according to 'Ali Bey (1706, ii. 30) was brackish. Water was also brought (about 8 miles) from the Walls of Moses (Cayûn Mîna), celebrated in legend (Ibn al-Wardî, Paries des Merveilles, in N.E., ii. 31). "All Bey declares that the wells yielded a disagreeable and fetid kind of water." In modern times, however, a fresh-water canal was cut in 1863 between Cairo and Suez. By the beginning of the 19th century the town had once more fallen into decay and insignificance ("Ali Bey, Hist., ii. 29). But it revived again when the overland mail route was opened in 1837 between England and India, and still moves after the construction of the Canal.

An etymology of the name Suez can be found in Deor. d' l'I'q. i. 87. Yâkîr mentions, on the authority of al-Mahallî, the presence in the neighborhood of magnetic rock (mugâhîrîn) whose powers is decreased or increased according as it is rubbed with garlic or vinegar.

An ancient canal, called Ammi 'Iraqam, although much older than the Roman occupation, once existed between the Nile and the Red Sea. One of its terminus was at Kâmu’in. Amr b. al-As b. re-opened this ancient waterway to enable grain supplies to be shipped direct to the Haramain (Butler, The Arab Conquest of Egypt, p. 345 sq.); soon afterwards it was filled up again until restored under the Mamlûks (c. 780 A.D.). In the year 977 A.H. Hasan the Karmajani captured the city. During the middle ages the commerce of the Indies passed steadily through the town. Caravans from Farm (Phumus) took four days; from Cairo, three (see J. M. Hartmann, Edrisi, Africâ, p. 449; Yâkîr, Mu‘jam, u. v.).

(J. Walker)

ṢUFIYAH. [See TÂRÂWÎ.] AL-ṢUFIYIH, one of the principal branches of the Khârijîyâ [q. v.]. Historiographic tradition, established as early as the middle of the 7th century by Abu ‘Abd Allâh al-Mâlikî (al-Ṭabarî, Annali, i. 517 sqq.), places its rise in 65, when the ‘Imami ‘Abd Allâh b. al-Ṣaffâr, a Khârijî of al-Basra, broke away from his colleague Nâsîr b. al-‘Arakî on the question of the strây (the murder of adversaries and their families), propounded by the latter, and subsequently from ‘Abd Allâh b. Ibâdî, who maintained that non-Khârijî Muslims should not be regarded as polytheists. The account of Abu ‘Abd Allâh shows, as it has been aptly remarked by Wellhausen, a spirit of pragmatism, which regards the three great branches of the Khârijîyâ, the ‘Alawîyâ, the Azârîyâ (l. 563/564) and the Adbîâ or Abîkâ (l. 34/37, 137/137), as the simultaneous product of a conflict of principles. Another historian, Nâṣr al-Mardhûfi, ed. Al-Àhidârî, p. 82—83, names as founder of the Sufiyâ ‘Ubaïida b. Kâbi’; theological sources on the other hand, assign this role to Ziyâd b. al-Àsaf, after whom the Sufiyah have also received the name of Ziyâdîyâ (al-Baghdâdî, Fârîq, p. 70; al-Shahrustânî, ed. Cucuteni, p. 102; al-Khârijî, Mu‘galî, ed. van Vloten, p. 251; al-Samâni, Anûbî, vol. 354а) or to al-Ànumî (Câbrîn, Eliftî, i. 354 below) ed. iv. 178, below); all of whom a few persons are equally obscure. In reality the Sufiyah began to take part in the Khârijî movement in the month of Safar 76, when the great revolt raised by ‘Abîl b. Mâlik b. Mâlik (or Muhammad b. Mâlik, ed. Tabbârî, i. 881, note E) broke out, after his death led by Shâbl b. Yarîd al-Shâbîlî [see above, p. 261—262]. Shâbl b. Musarrîh, who was regarded by his followers as a saint, and whose tomb remained an object of veneration for a long time (Ibn Kûtâba, Mu‘alîfî, ed. Wüstenfeld, p. 209 = Ibn Dârusî, ‘Abîkâ, ed. Wüstenfeld, p. 133), represents the type of devotee with ascetic tendencies who becomes a propagandist and ends by being engulfed in the turmoil of a bloody war in spite of his pacific temperament; he is represented in the account of a contemporary, who in all probability writes with authority (Tabari, i. 885) as opposed to the anthropomorphic methods of the Azârîyâ, a point which has invariably constituted a characteristic of the Sufi theory, although its adaptors have not always observed it in practice.

After the defeat of Shâbl b. Yarîd b. Shâbl b. Yarîd b. Shâbl b. Yarîd b. Yâ’qûb [q. v.] towards the end of the Umayyad period. At the same epoch they are found spread over the whole of the Islamic world; they are mentioned in the Maghrib from the year 117 (Ibn al-Àhidîh, Kâmî, ed. Tomberg, v. 143 below), where, a few years later, guided by their chief Abu ‘Abd Allâh b. ‘Abd al-Karîm, they established the town of Sidjillâna [see above, p. 432—433], where they long maintained their independence (Ibn al-Àhidîh, Bayân al-Maghrîb, ed. Dory, i. 35 sqq.; Ibn al-Àhidîh, vi. 499 sqq.), they joined the Ikhsâni in the general rising of the Berbers, and ended by being absorbed by the former, who in North Africa as elsewhere became dominant. Another conflict between ‘Abîkâ and the Sufiyah, where the latter were overthrown, took place in ‘Umâra, in which the Sufiyah had taken refuge in 134, after having been defeated by the ‘Abdâl Khâriq b. Kharîma (Tabarti, i. 37 sqq.).

It is principally as exponents of Khârijîyâ...
that the Sufiyya are of importance; they seem to have been the first to attempt a systematic exposition of their religious principles, and one of their very earliest imāmas, the poet ʿIṣṭāḥ ʿAli b. ʿAbd ʿAl-Rahmān b. Ṣaʿīd Ḧafṣ (d. 140), also known as poet and lexicographer (cf. Wattenfeld, Gencocheatsschreber, N° 20, where the patronymic is incorrect; Ibn Daud, p. 193; Ṣahib, i. 193; ʿAlīb, Hayyānī, l. 152; Ibn ʿAbd Allāh, Tadhkīrāt al-Tadhkīrāt, l. 310, etc.), al-Kāsim b. ʿAbd ʿAl-Rahmān b. Ṣaʿīd Ṣaʿīd, Mūsā, etc. The principal themes which divided the Sufiyya from the extremist Azīrī, though not quite squaring the moderation of the Iṣṭāson, are, according to the systematic tract by ʿAbd al-ʿAlī b. Ḧafṣ al-Ṣaʿīdīh and al-Shahrastānī, the admission of the sect (temporary) submission (al-taḥawwul), the admission of the children of infidels. In moral doctrine also the strictness of the Khārijīs is somewhat modified by the Sufiyya; one of their subdivisions maintains that sins do not produce in the sinner the quality of an infidel (kāfir) nor of a polytheist (mujāhīd) as long as it concerns infractions of righteousness for which the religious law provides a definite punishment (ḥadd), this expression has not been included in the translation of al-Shahrastānī by Hašrī, which, only in those cases in which there is no punishment in the law. Other peculiarities of the Sufiyya refer to questions of ritual and equity.

The Sufiyya, as a religious school, seems to have especially pre-dominated, in the eastern half of the Islamic world, where they maintained themselves up to a comparatively recent period. Ibn Ḥasan (d. in 456) affirms that they were the only branch of the Khārijīs who existed in his time, besides the ʿAlībīs (al-ʿAzīzī & al-ʿĀrifī, l. 190) to which only, he says, it appears there was a gradual absorption of the other schools of Khārijīs into that of the Sufiyya, which seems to be confirmed by the fact that Ibn Ḥasan ranges with the Sufiyya the schools of Ṣaʿīdīh, ʿAṣīrād (l. 149; l. 381), Baḥshīyā (l. 617) with their subdivisions, while ʿAbd al-ʿAlī b. Ḧafṣ al-Ṣaʿīdīh and al-Shahrastānī consider them as independent schools.

The origin of the name Sufiyya is greatly disputed, the etymologies that are derived from the supposed founders (Ibn ʿAbd al-Ṣaʿīd, ʿAlīf ʿAbd al-Sarīf) seem somewhat artificial; it is a term, possibly, of slight elevation, due to the celebrated philologist al-ʿAḍna b. al-Jāmī, that is the one which, admitting the vocalisation ʿSūfiyya, attaches it to the word ġfr *zero* and supports it by an anecdote according to which an imprisoned Sūfī was accused by one of his companions in captivity with the words: "You count for no more than zero in religion!" (Laud al-ʿArab, vi. 135 = Tadhkīr al-ʿArab, iii. 337). A third etymology deserves more credit, although it is not entirely beyond doubt: it is that which derives the name from ʿSūfī, the "yellow cloak", which their faces had assumed in consequence of their devotional practices (al-Baladhūrī, ed. Aldward, p. 82-83; al-Mubarrad, Kāmil, p. 604, 615-616; cf. Ṣahib, i. 881, 84, where he says of ʿAlī b. Masarious, that he was a man of "yellow countenance" [ṣaffar al-ʿawdah]). This etymological uncertainty is the consequence of the obscurity that covers the origin of the movement itself: ʿAlī b. Masarious, who as we have seen, seems to have been the original starter, is not recognized as such by the later Sufiyya, who name as their first īmāma Īmān b. Ḧafṣ (al-Baghdādī, Fīrāq, p. 71); al-Baghdādī, p. 89, hesitates to attribute to Īmān the denomination of Sufi and al-Shahrastānī, p. 95, in mentioning the school of the Sūfiyya says that they do not enter into any of the known categories of the Khārijīs.

According to al-Muʿīzī (Kūfī, 2nd ed., 179) the Sufiyya also bore the name of ʿAlībūyān, "the deniers" because they reproved (like all the other Khārijīs) a part of the conduct of ʿUmmān, ʿAll and ʿAbdul; but the passages quoted by Dey, Supplement, ii. 224, which shows that it is an insulating appellation applied to Khārijīs in general.

Bibliography: see article Kharījī.

(G. LEVI DELLA VITA)

SUFIRY (vulg. Sofārī, ʿAbū: Sofārī), a small town to the north of Morocco, 33 km. S.E. of Fès (Fas), 500 metres above sea level, at the foot of the northern spur of the Middle Atlas. The town, watered by the Wādī ʿSufrī, is surrounded by beautiful orchards, principally cherry. The quarters are N. Tāzhābī and Shubbābī, E. the ʿAṣīr in fort. S. Meṣḥābī and Zemrit, surrounding the Mellāb or Jews' quarter on all sides. The town is protected by a high wall restored in the sixteenth century by the Sultan Mawlay Sulaimān, who also built a mosque and a hamman. The population exceeds 5,000, of whom more than 3,000 are Jews.

The principal sanctuaries of Sufiyya are those of Sādī al-Bīn-Saghir, Sādī al-Bīn-Aṭīr and Sādī al-Bīn-Mādī in Haydān. The last is the most important; at the end of the summer a spring near to the sanctuary is the object of a water-cult; it has the virtue of curing madness and idiocy. These sacred spots were visited in 1179 (1765-1766) by the Sultan Fāṫūn b. Sulaimān who came from Marrākesh to Fès for the express purpose of visiting these sanctuaries.

It was in the environs of ʿSufrī, that in the Berber tribe of the Ait Vünters the learned and versatile ʿAllāḥ b. Mābūl al-Vünter (d. 1102/1691) was born; his tomb is at the aṭwārī called Sādī Lahabīn in the S.W. of the town; he is still greatly venerated by the Ait Vünter, who hold a mawārin there every year.

Nothing is known of the date at which Sufiyya was founded. Leo Africanus (who calls it Sofret) says that it was built by the "Africans", which means that for him its origin is lost in antiquity. It would seem to have been in existence at this time of the foundation of Fès (1037 A.H.); he was not slow to enter into conflict with the inhabitants of the region of Sufiyya and al-Baladhūrī, who, in the religion seems to have been strongly impregnated by Judaism, and conversed them to Islam. The memory of an ancient Jewish population is preserved in the name of wādī l-Yahsīb (the name of the lower part of wādī Sufiyya) and by that of the grotto called Kaf al-Yahsīb, which
among the Jews in the town is the centre of a true naturalist cult.

The importance rapidly attained by Fès, the new and adjacent capital, accelerated the decline of the ancient Berber city. Scruffy, however, as a necessary point of passage for the caravans bound for Siújilama, always retained a certain vitality; it was, moreover, the natural depot for the products of the Middle Atlas, destined for Fès: fruits, wood, skins and cedar wood.

In 1070 (1661-1662) on the east side of the Unaiyad xilijate of Cordova, Scruffy, which was a fief of the lord of Fès, al-Mu'izz b. Ziri, was taken by him from Wànàdùn b. Kharrùn al-Magrùr, lord of Siújilama and of Dam'a. In 1055 (1662) Ysuf b. Tàshùfù took Scruffy by assault and massacred all the Maghùrin who had shut themselves up in it. In 1141 (1736) Scruffy was seized by 'Abd al-Mu'min for the Almoravids.

Speaking of Scruffy in the 13th century, al-Bakri only says that it is on the route from Fès to Siújilama and that it is a city surrounded by numerous watercourses and trees. In the 12th century al-Idrisi describes it as says that it is a small and secluded civilised town, where there are not many markets. Its inhabitants are mostly agriculturists, who cultivate a quantity of cereals; there are also a large number of large and small cattle. The waters of the land are sweet and abundant.

Scruffy suffered greatly during the civil wars which devastated the region of Fès during the dynasty of the Banàl Wàtînà and of the Sàdîdàs. After the accession of the Alàwîs, it was again the city which was waged by these subdus against the rebel Berber of the Middle Atlas.

In 1806 (1682-1683) Mawliy Isâmiyu passed through Scruffy upon an expedition against the tribes of the Middle Atlas and the High Molouya. In 1736, the inhabitants of the town and the neighbourhood were massacred by the Sultan Mawliy Muhammad b. Isâmiyu, called Ibn 'Arabîyya, infuriated by the protection which the Berbers of the district had given to his rebellious brother 'Abd Allàb; their heads were transported to Fès. In 1811, in the course of the great revolt of the Berbers they came as far as Scruffy to surround an army that was sent against them; they pillaged the camp and sacked the whole region. In 1835 (1819-1820) the Sultan Mawliy Sulaimûn had three hundred men of the rebellious neighbouring tribe of the Ait Yûsî assassinated in Scruffy.

(S. G. S. Colyn)

SÛFYÂN AL-TÀHWÀRÌ, Abù 'Abd Allàh Sâfûyân b. Sa'd (according to some Sa'd b. Hammàd al-TÀHWÀRÌ al-Khàtî, a celebrated theologian, traditionist and ascetic of the second century A.D. His name al-Thawri is derived, according to the view generally held by the biographers, from Thawr b. 'Abd Mannûf... b. al-Yàs b. Madâr, who was among his ancestors (cf. Wüstenfeld, Register de den genan, Tabellen d. arab. Stämme u. Familien, 1852, p. 452; Ibn al-Dairàd, Tàhath al-Moràúa, ed. Wüstenfeld, 1854, p. 113; Samà'ân, 'Abûnàd, G. M. S., xx, fol. 1171); Ibn Khallikàn, Wàfayàt, ed. Wüstenfeld, Nî. 265 (transl. by de Slane, 1842, 1, p. 576 sqq.) gives as the date of his birth 951, 956 or 974. On the other hand, all the other sources agree in giving 977 (1175-1176) as the date (Caustiani, Chronographia Islamica, i. 5, p. 1120, Nî. 26 puts the date of Safûyân's birth as 960, on the authority of a unique manuscript). Sûfyân received his first instruction in hadith from his father, a learned Kûfî, who died in 126 (according to others in 128, cf. Caustani, loc. cit., p. 1607, Nî. 73) and is quoted among his authorities by different names in the bibliographical dictionaries to be mentioned below. Sûfyân was one of the old school of pious men, who showed their dislike of the new regime by declining to accept offices in the government; and as the wrath of the court upon their heads, Ibn Sa'd, Tàhât, ed. Zetterstèen, 1909, 1, p. 238, says that Sûfyân on one occasion accepted money and gifts from a Wolff but ever afterwards refused them. In 150, he left Kûfû and went, like so many others (cf. Meas, De Reformatione des Islam, 1922, p. 200) beyond the bounds of 126 to escape appointment as jàdî. He went to the Yemen and made a living as a merchant by giving other merchants goods to dispose of on commission and settling up with them annually; so that he finally possessed a fortune of about 200 dinàrs (according to Ibn Kutaühà, Mûsafrî, ed. Wüstenfeld, 1856, 1, p. 250 his estate at his death amounted to 150 dinàrs in goods). But even there, he was not safe from persecution by the Baghûd court. He was sought out but went to Mecca. The amir of Mecca, Muhammad b. Ibrahim, was ordered by the Caliph in the year 158 (the year in which al-Mahdi succeeded al-Mangûr; therefore the sources vary as to which Caliph gave the order) to find him (safûyân, most sources; in al-Nawasî, Tàhât al-ísm, ed. Wüstenfeld, 1844-1847, p. 287, and Ibn al-Hasan, Tàhât al-Tàhât, 1345, iv, p. 114, however some wood merchants who were coming to Mecca are ordered by al-Mangûr to crucify him, fa-zûlûkân, which is certainly not only a copyist's mistake, but it suggests another story). The governor, however, did not carry out his orders; according to Ibn Sa'd, loc. cit., he warned Sûfyân so that he was able to go promptly into hiding. While al-Tabari, ill. 385 sqq., says that he had already taken Sûfyân prisoner but then set him free again. The whole story is embellished in the different versions with details of interest to the student of the life of the time. It seems certain in any case that Sûfyân was actually forced to seek refuge from his pursuers in the Kûfû (Ibn Sa'd, p. 250). In the end however, Mecca also became too hot for him and he went to Baghûd to Yahyâ b. Sa'id, where many learned jurists came to study hadith under him. In Baghûd also he had to change his abode for the sake of safety. Hammàd b. Zàld advised him to make peace with the court. Sûfyân began negotiations by correspondence, which led to a satisfactory result, but before he could set out for Baghûd
he became Ill and died at the age of 64, in Sufyân ibn al-Thawrī. His burial was recorded in Ibn Khallīkin's biography of Sufyân from al-Masâ'ibī, Mūsâ ibn al-Thalâthī, 1325, No. 3206: "Sufyân an-Nafeq. At the same time, he is credited with other "qualifications of the first rank", as collected in Goldscheider, Mākāmum Stud., ii, 142. He is occasionally rated higher than Mālik b. Anas. The only reproach made against him is that of tudlī, that he used to trace traditions directly to recognized authorities, although he had only received them indirectly or from transmitters of less authority (cf. Gāthā, s.v. and Goldscheider, loc. cit., p. 48, and the passages there quoted from Ibn Khallīkin). Ibn Hadžal, Tuḥbaṣ al-Mudallilīn, Cairo 1322, p. 9 places him in the second rank of the mudallilīn i.e. those whose tudlī the Imāms have tolerated, because they were such important personalities and their tudlī amounted to very little (kullā tudlīkā) and gives as his authority al-Nasā'i (Broekelmann, G. A. L., ii, 199) and al-Bukhārī (s.v.). Sufyân’s tudlī however does not prevent the biographers vying with one another in telling stories to his credit. He was one of the first to commit to writing the wealth of traditions stored in his memory: cf. Abu ‘l-Mahāsin, Anwâr, ed. Jouyboll, l, 1895, p. 387 sq. and Hājī Khalīfa, ed. Flagel, l, 86 sq. The Fīhirīṣ ed. Flagel, l, p. 225, for example, gives a number of examples of his authority: 1) al-Dīnārī al-habīb; 2) al-Qūṣhī al-ma‘ṣūrī; 3) Kālid ibn al-Kalid and 4) and 5) two epitaphs of the subject of which is not recorded. Then there is his commentary on the Kūfī Tafsīr, which according to Hājī Khalīfa, No. 3248 is quoted by Thalāthī. These works however have not survived; several bio-

graphical record that on his deathbed Sufyân commissioned a friend whose name is not given (cf. Fīhirīṣ, ii, p. 98, note 5, on p. 225) to burn them, which was done. The reason for this action is said by Hājī Khalīfa (l, 126) to have been that he felt remorse at the traditions with weak authority which he had admitted into his books; the reproach of tudlī already mentioned therefore does not seem to have been made against him unjustly. The most comprehensive list of his authorities and pupils is given by Ibn Hadžal (loc. cit., p. 111 sq.) but names not included here are given in other biographical sources. Al-Nawawī and Ibn Hadžal give as the best Kufī Tafsīr: Sufyân from Manṣūr b. al-Muhāmar, see Nawawī, p. 578; from Ibn Khathīr al-Nakha‘ī, see Nawawī, p. 135 from ‘Alī ibn al-A‘rāfi, see Nawawī, p. 433 from Ibn Ma‘ālikid (s.v.).

As a faqīḥ he was the founder of a madhhab which however later disappeared (cf. Mzec loc. cit., p. 202 sq. He was a strict follower of the Ašrī al-Hadīthī (s.v.) and as regards theology belonged to the Shāfi‘ī i.e. he recognised the qualifications of Alī and'Ibrāhīm, the two Karans as existing in the literal sense and peculiar to him; cf. al-Shahbāzī, Masal, ed. Carron, l, 65, 160 (transl, by Harbrücker, l, 92, 242). That he was a Sunnī is proved, if it were necessary, from the profession of faith which he is said to have dictated to Sulābī b. Dārīcr, cf. al-Dhahābī, Taḥdīrāt al-Hufuf, l, Hādirāhād, 1333, p. 193. In this, after speaking of the uncreated substances of the Karan, he says that bātūl, awāl and nilās (see also al-Tarjān) constitute theImām (rah), that it can increase and decrease (cf. Goldscheider, Vorlesungen, ed. 2, 1913, p. 311), that pre-eminences (i.e. over ‘Ali, cf. van Arendonk, De opkomst van het middeleeuwse inmaat in Yemen, 1919, index, s.v. bātūl, da heidelc is due to the two shaykhs (Abū Bakr and ‘Umar), that in the minor nihār (masīl) the washing of the foot-covering is permitted in place of the feet (al-maṣūkh al-kaḥfus) (cf. Goldscheider, loc. cit., p. 369), that it is better to recite the bismilla in a low voice than as a loud one (cf. Goldscheider, Brunsvig, Litteraturgeschichte der Sū‘, S B. V., lxxviii, 1874, p. 435 sq. 457), that one must believe in predestination (see Al-Dābās), that one may pray on Friday and at the two festivals behind any imām, but at other times must choose one in whose piety one has confidence and of whom one knows that he is a Sunnī and finally that the Shī‘a will exist to the day of judgment (see Hughes, Dict. of Islam, 1885, p. 244sq.) and that one should obey every person in authority, whether he is just or unjust. It is easy to see that the majority of these articles represent well-known points of difference between Sunna and Shī‘a, which are all decided according to the Sunnī view. Nevertheless Sufyân is credited with an inclination to the Shī‘a; thus the Tuḥbaṣ al-Hufuf, loc. cit., mentions among his authorities the imām al-Mu‘īn al-Stāwī (s.v.; Ibn Kātība, Maṣā‘īf, p. 301 mentions him in a list of Shī‘is, and al-Tahāb, iii, 2516, gives a story according to which he was a Shī‘ī but met two scholars in Bāṣra who persuaded him to change. He has, however, also been claimed as a Shī‘ī, cf. Fīhirīṣ, p. 178, and, thereon van Arendonk, loc. cit., and, in the above mentioned index s.v. “Corpus Isra’s” al-Zaid ibn al-A‘rāfi, ed. Griffini, 1919, p. clxxiv. with note 3 and index s.v.
These are doubtless inventions. Massignon, La Parition d'Al-Hallâj, 1922, p. 72, sees their origin in the fact that for men like Sufyân, al-Ṣufâ‘î etc. reverence for the Prophet implied reverence for his works which, in consequence, included the Ahl. The explanation given by Bergmann in his review of the Corpus Juris, O. L. Z., 1922, col. 122 sqq. seems to me much more illuminating, namely that the Corpus in many cases is in conformity with the jurists of the Ḥarîrî-‘ābî whom Sufyân was one. As it thus comes about that he often taught the same as the Corpus (except that in reality it was the latter that borrowed), he might be claimed as a Zâdî. It must have been similar with his Shî‘îs. — The above-mentioned requirement of aṣâbî as an essential of islaâm is directed against the Mur’dâbî; cf. thereon Goldscheider, Vorlesungen, p. 351, where it is related (on the authority of Ibn Sa‘d) how Sufyân refused to take part in the funeral of a mur’dâbî.

That Sufyân was an ascetic is beyond doubt. Here also the biographers cannot quote too many stories about him. The best evidence of his asceticism is however that he is claimed by the Sûfi as one of their fore-runners. Fârîd al-Dîn ‘Aṭîq, Taḏdhib ar-Râ‘îlî al-Musulmânî (ed. Nicholson, i., 1905, p. 185 sqq.), devotes an article of nearly 9 pages to him, which however contains nothing characteristic and of which H. H. Schasch’s remark (Iṣlâm, xiv., p. 1) on the biographies of the devout men of the past in general in ‘Aṭîq’s book, namely that they are "very much modelled on a single pattern of mystical piety" Sufyân is however mentioned by the Fûhrer, i. 183, in a list of ascetics who wore the šaykh and Abu Nasr al-Sarrâj, Luma‘î, ed. Nicholson (G. M. S., xvii., 1914), p. 32 actually quotes him as evidence of the antiquity of the Sufiyya. His relations with al-Djûnayd (q.v.) are several times discussed, although the two could not have known one another; cf. e.g. al-Hudjwîrî, Kâdhîf al-Makhtûsî, transl. Nicholson (G. M. S., x., 1911), p. 158. The reference is apparently only to intellectual kinship; it is difficult to understand it otherwise when Abu ‘Abd al-Makhtûsî (loc. cit., ii. 213) says that al-Hallâj (q.v.) was acquainted with Sufyân (lukhâya). On the other hand, one need not doubt the truth of the story recorded by the same author (l. 424) that Sufyân was on friendly terms with the ascetic Shâhîb al-Râ‘î (d. 158) who lived the life of a hermit in Lebanon.

These remarks on Sufyân viewed from different angles, corresponding to different currents in the intellectual history of Iṣlâm, are of course nothing more than grotesques; they cannot take the place of a monograph on him, the necessity of which must be evident from the manifold variety of what we have said above. Bibliography: On the sources it should first of all be noted that al-Djâhâlî’s Taḏdhib ar-Râ‘î al-Sufâ‘î, i., p. 102, depends on his own great historical work in which he dealt at great length with Sufyân. The volume, in which the article must have been, is however not quoted among the manuscripts of the separate volumes mentioned in Brockelmann, G. A. F., ii. 47. Al-Djâhâlî also refers to a book on the Maṣâ‘ulî of Sufyân by Ibn al-Ḍawârî (q.v.) but this has not survived. — The bibliographical, historical, and geographical works quoted in the article almost all contain articles on Sufyân, which have been utilised here. So far as they have appeared in European editions, the indices should be consulted, i.e. Sufyân, for scattered references to his life and teaching. The reader may also be referred to the story of his meeting with Ma‘âmî’s, Allah in al-Kiffî, Talîkâî, ed. Târîkh, p. 387, to his refusal of the office of kiffî, as it is told in al-Hudjwîrî, i., p. 93 and to his meeting with al-Musâfrî (Ibn ‘Abd Rabbihi, Ḭadîd, Cairo 1331 (i.e. p. 108). — The indices of the European works should also be consulted for passages not quoted here. There is further Goldscheider, Die Richtungen der islamischen Karonenlegung, 1920 (in: Muḥ. Stud., ii., the reference in p. 58 is not in the Index — on it cf. D. B. Macdonald, Development of Muslim Theology, 1903, p. 97 sqq.), Browne, Lit. Hist. of Persia, 1909, l. 424—426 (p. 434 he adopts the already mentioned story of Sufyân’s meeting with al-Hallâj). — (M. Plessner)

AL-SUFYANî, [See AL-MERARI]

SUGHD. [See SOGHDI]

SUGHD, once a great seaport, now a little town in the Crimea, Greek Zevola or Zovi, also Zovyola, Latin and Italian Soldaia or Solduzia, Old Russian Surod; the Arabic form Sholţâja in Idrisi (transl. Jouaher, ii. 395) is probably connected with the Italian form. The name is connected with Sugd (q.v.), the name of a country in Central Asia and explained as Iranian; its foundation is therefore ascribed to the Alans (see ALANA). The Alans are mentioned in the region (east of the Tauric Chersonese) as late as the seventh and eighth centuries. Like the Greek cities, Sugdâia had an era of its own, according to which the year of its foundation was 213 B.C.; but the name is not found in Pliny nor in any other geographer of antiquity. It is first mentioned in the viith century by the Anonymous writer of Ravenna (Romanae Anonymi Cosmographiae, ed. Finder and Farthey, Berlin 1860, p. 175 sqq.; Sugdâban). At that time the town had a Greek bishop although it was not under Byzantine but Khażar rule. It was only after the destruction of the Khażar empire and of the Russian principality of Tmutarakan that the whole southern shore of the Crimea passed to Russia. During Latin rule in Constantinople this region belonged to the kingdom of Trebizond. Twice, in 1223 and 1328, Sugdâban was sacked by Tatars. It is to the intervening period that the very full but undated account in Ibn Birš (q.v.; Houtsma, Recueil de textes relatifs à l’histoire des Slaves cèdètes, iii. 329 sqq.; iv. 134 sqq.) of the invasion by Turks from Asia Minor belongs; Husân al-Dîn Čôban the commander sent by ‘Ali al-Dîn Kağîdubâd (1616—634 = 1219—1269), succeeded in defeating the Greeks in Sugdâban and their allies, the Russians and Kipchaks. In Sugdâban the bells were broken in pieces, a large mosque built in less than a fortnight, a murderer, a khaftî and a kajî appointed and a garrison left; but the Turks seem (op. cit., iii. 355; iv. 138 sqq.) to have been very soon driven out again. In 1249 the Tatars were forced to leave Sugdâban whereupon the Greek governor (Schoutte) had the population counted. The total was only 8,300, which probably refers only to male adults. In spite of its small population Sugdâban was then of great importance for sea-trade, especially for trade with Venice, as is evident from Venetian documents.
and from Marco Polo (ed. Vule-Stidio, i. 2 sq.). Sughdak suffered a heavy blow in the reign of Ozbek, Khan of the Golden Horde (712–744 = 1322–1350); on Aug. 8, 1322, the town was occupied without resistance by Kara-Bulat, sent by Ozbek, all the bells were carried off, all images of saints and crucifixes smashed, and all the churches closed. In spring 1327 Ozbek ordered his governor Tolaktemir to destroy the citadel and several churches. When Ibn Battuta [q.v.], visited "Sardak" (for Sughdak) it looked like a Turkish and Muslim city; only a few Greek artisans were left. The harbour is described by Ibn Battuta as "one of the largest and best. The causeways were mainly of wood and slabs, Paris, ii. 414 sq.). The Christian population soon came back again. The conquest of Sughdak by the Genoese in 1365 and the treaty between them and the Tatars of 1380 were important events in the history of the town. The district of Sughdak in those days extended as far as Alajhata and included 18 villages, almost the same number as the corresponding Turkish kayli in 1774 (19); they must have been the same villages, as the most westerly one, Alajhata (Arab. Shabihata), did not belong in the Genoese period to the district of Sughdak. Sughdak, henceforth, down to the Turkish conquest of 1475, belonged to the Genoese colony of Gazur or Gazaria and was administered by a separate commissary subordinate to the consular of Kaf. In the sources dealing with the Turkish conquest only the fighting round Kaf is fully described; no details of the fall of Sughdak are known. Unlike Kaf, Sughdak experienced no revival under Turkish, nor later under Russian rule. Broniewski (1578) describes Sughdak as a town in ruins. The present ruins (pictures e.g. in Marco Polo, ed. Vule-Stidio, i. 3; Yu. Kulakovsky, Prehistor. Taverci, Kiew 1914, p. 130; L. Kolli, Ist. Taur. Arkh. Komitit, xxiv., p. 4) date mainly from the Genoese period.

AL-SUHAIL, i.e. the Kawsheq (Canopus) of the ancients, the star Ḟāsī in modern star catalogues and 8 Tauri in the heavens (magnitude = 0.9), is always mentioned as the brightest star in the heavens north of 37° of Latitude; for it has a declination of δ = 52° 38’ 54”’ while its right ascension is h = 6° 24’ 18”. In the northern Muslim lands, therefore it scarcely rises above the horizon and for example about the year 2000 n.C. in Babylon its altitude of culmination was only 3° 47’. It was therefore the southernmost of the fixed stars marked on the spider (al-ansūh) of the Arab astrolabes.

The name Suhail was given by the Arabs to several stars in the southern heavens; but suhail al-Yaman, suhail Ṣabur, suhail al-waw, or suhail alone, always meant Canopus i.e. the bright large star in the south of the southern hem in the constellation of al-sagia (the ship). As in the northern parts of the Indian Ocean, Canopus rises in the S.S.E. and sets in the S.W., in the nautical language of the Arabs, according to G. Ferrand, S.S.E. is indicated by muftāl al-suha’il, S. by Ḟasī al-suha’il and S.S.W. with muṣgrib al-suha’il. In Central Arabia Canopus is called Ḟasī al-suha’il; it is used to find the south. According to J. J. Hess, the Bédouin of Central Arabia says: un rātib Ḟasī al-suha’il fī waqfahkh (‘when thou diest, Canopus is in thy face’).

Various suggestions have been made regarding the derivation and meaning of the word suha’il. Ideer points out that suha’il can be explained as diminutive of ṣālīh, ‘level’, but finds Battuta’s explanation the least forced, that al-suha’il received this and the two names Ḟasīr and al-awas because it only rises a little above the horizon in the lands where these names are given it; it is therefore called ‘the heavy’, ‘the earthly’, Ḟasīr from the earth and ṣālīh from the plain, above which it rises very little. Eratothenes tells us that it was called Ḟasīr, ‘terrestrial’ for this reason by the ancients.

According to F. X. Kugler the Babylonians placed Canopus in the constellation of Nuni, = Eritha (= constellation of Erithu i.e. Vela + Southern Foppus + Canopus). On the Greek name Kawsheq the following may be noted. Kawsheq was the steersman of the ship which was to bring Menelaus back to Greece. A storm drove the ship on to the Libyan coast. Kawsheq died here of a snake-bite. Menelaus, deeply mourning the death of his excellent friend had a splendid memorial built in his name and called the settlement of Spartiates that arose here Kawsheq in honour of Kawsheq. It lay on the western mouth of the Nile, a few geographical minutes north of the site of Alexandria (cf. also Tafrihi Aun, ii. 60: ‘Condidere id [uppidinam Canopun] Spartani, ob sepulcrum illius rectorem navis, Canopum, qua tempestat Menelaeus, Graecum repetens, diversam ad mare terramque Libyam delectatis est’).

The Egyptian name for Canopus is not yet certainly known. In the Deian list (cf. Brugsch, Thebanum inscriptionum Egyptiacarum, Leipzig, p. 148, 173), there is the name of a dekan Ḟasī Ḟasī (= he in the boat) but that is a steersman, not alone the steersman Kawsheq, cannot be proved, on the contrary it is improbable that the dekan star is to be sought in the vicinity of the ecliptic.

According to Athanasius Kircher, Canopus was the god of moisture and of fertility and as, he had his abode in the Nile, in Egypt; he was the god of water generally, comparable to Poseidon and Neptune. He was therefore naturally credited with influences relating to seafaring in astrology, i.e. in the horoscope of a new born infant. The following reference to this is found in Hieronymus Vitalis (Lexicon Mathematicum, Turin 1668, p. 63): ‘Argo Navis sidus in caelo ad Australis plagam stellas contineat secundum commanum, namebro, at secundum Beyer, 53. Omnes fere de natura Sainzur, partem Jovis, intra qua una fulgenter in Canopo existas primae magnitudinis, armine Rubali(!). Haeo in Horoscopo, inquit Pontanus in Uramia (cf. Pontanus, Giovanni Giovanni da Caresto, De vegn inuolfibus, lib. xiv., Florenta 1530), facit Nauremon et praeest fortissim in navigationibus, praeerit si Venetis benigno radio fulcitar: at in occasum cum Saturno partiliter reperta, portendit mortem in aqua’.

The treatment of the Arab astronomers and court physician Sinait b. Thabit b. Ḥura Abā Sa’d.
Suhar, a seaport on the coast of Uman. By 24° 37' N. Lat. and 50° 45' East Long., with about 7,500 inhabitants. The harbour has a good roadstead and excellent anchorage and is well protected in the north and west by the promontory of Fanja and from the south by Cape Sawwaha. The most important building is the palace of the lord of the town, which is richly ornamented, having pointed arches, slender round pillars, coved vaulting, projecting balconies and turrets. The palace stands upon a little eminence within the town and is approached by a triple wall and a ditch, which is crossed by a bridge leading to the inner gateway. On the wall are old field guns and four great cannons before the entrance. The palace lies on an open square planted with trees which stretches to the walls on the south. The town is defended by walls on which a few old guns still stand and is guarded by a ditch against the land side. The market-place is large and has a busy trade. The market-hall called Kalajar (q.v.) is vaulted with great swing-doors and is long and spacious; most of the artizans are weavers, smiths, gold and silver-smiths or copper-smiths, and are masters of their crafts. The town is picturesque.

The two or three storied houses are often connected by archways over the narrow streets. The town is probably about two miles round; it is connected by a broad road with neighbouring towns like Maskat; the hinterland is very fertile, well watered, and thickly populated. Fishing is very much followed, and it plays an important part in providing the food supply of the population.

Although A. Sprenger's identification of Suhar with the Oman of Phrae cannot be maintained, there can be no doubt that we have a very old settlement here, which cannot be traced back to the pre-Islamic period at least. How ancient the town is in the eyes of Arab scholars may be seen from the legend which traces its foundation to Suhar, the son of Sama, Nuf. The Persians who were at one time supreme in the gulf called after Yemen were probably the first rulers of this town. The old name of the town, Masin, which the older Arab writers mention, is also Persian. Suhar first appears in history in the year 3 (629/30) when the envoy of the Prophet Muhammad, 'Amr b. al-'As al-Samumi and Abu Zailah al-Ausri, landed the Prophet's message to the two princes of the town, Gallefrey and Abd (or 'Abbadh). They accepted Muhammad's offer and adopted Islam; the first mentioned of the Prophet's envoys remained as resident in 'Uman. The number of the town was again mentioned in the accounts of the burial of Muhammad where it is recorded that the corpse of the Prophet was wrapped in two robes of Suhar manufacture (other texts give Suhit); the textile industry of the town was even then apparently highly developed, which may have been due to Persian influence. The general unrest which ensued the whole of Arabia after the death of the Prophet also affected 'Uman and particularly Suhar. In the war against the leader of the pagan party in 'Uman, Dhu-l-Taqi Lahab b. Malik al-Azdi, in which the leaders of the Muslim party were the two brothers 'Abbad and Dijlah of the al-Djeldjana family, the latter had for a time to abandon Suhar and take refuge in the mountains. But they apparently surrendered in returning to Suhar and handing the resistance against the pagan party there under the two brothers. 'Abbad was taken prisoner in 12 (631/32) but like the rest of 'Uman it was only very loosely attached to the Muslim empire. The situation was altered when the notorious Umayyad governor Hadjajib b. Yumam conquered 'Uman and united it to al-Itak in 751 A.D. the land again became independent and chose a ruler for itself in the person of al-Djeldjana. B. Mau'd al-Azdi, the first imam of 'Uman. The capital however was not Suhar but Nuseyra. By the tenth century A.D. Suhar had attained considerable prosperity. It was considered the most important town of 'Uman and the most beautiful of all Arabia, being a perfect example of a town regular and busy, more important than either Suhur or Nuseyra, healthy, with wonderful markets and pleasant surroundings. The fine houses were built of brick and earthen. The great Friday mosque was built by the sea; the splendid building with a lofty minaret stood on the spot where the Prophet's camel had knelt down. The suhara had a winding staircase which presented different colours, yellow, green and red, from different sides. A small chapel (sajzilat) lay in the centre of a palm-grove. Springs with good water and canals of fresh water provided the town's water-supply and its climate was considered excellent. The caravans from the east and the planks were also of importance for the trade of Yemen. It had an advantageous position for trade with the east. The harbour which was always busy with ships entering or leaving was a parascan in length and breadth. The language of business was Persian, as al-Muhaddi expressly tells us. Merchants from all parts of the world met here. There was constant intercourse with Yemen and China for which expeditions were equipped here. The rich land which produced dates, grains, figs, pomegranates, quinces, and other fruits attained wealth and prosperity. There was also constant intercourse with al-Balqim for which a road ran from Suhar along the coast over the mountains to Dijlah, but its decline soon set in. In the campaign of the Caliph androidx al-Rashid and that of al-Muwaffik the latter of whom tried with more success to gain 'Uman for the Caliphate, do not seem to have seriously affected Suhar. Suhar was destroyed in the Karmatian troubles but rebuilt again. In 362 (972/373) there was an encounter before Suhar between Abu Harb b. 'Adai d al-Dawla's general and the Zindji who had occupied 'Uman. Abu Harb was victorious and seized Suhar, the population of which had to take refuge. In 433 (1042) the Persian king of Kufra sent a Persian army by sea to 'Uman which had risen against him. The fleet anchored before Suhar, occupied the town and brought the people to submission. But neither the Byzantines nor the Seljuk
ruled of Persia, who had succeeded to the inheritance of the Caliphs of Baghdad did anything to revive the prosperity of Shahar. About the middle of the twelfth century A.D. the trade of Shahar with the Par East was ended, when a governor of Yemen by a clever coup seized control of the Persian Gulf and not only strangled traffic by sea but also plundered the coast so that trade went more and more to 'Aden. According to Ibn al-Muqaddasi, who is well informed, Shahar was already destroyed in the first quarter of the seventh century A.D., but its trade had passed to the Persian empire of Hormuz, and to the Arabian harbour of Khadh. Shahar seems to have revived again later and to have been rebuilt for Marco Polo mentions it under the name 'Scor' and says that it traded in horses with Malabar. Ibn Battuta also mentions Shahar in his Observations. On Sept. 16, 1506 a Portuguese fleet, which was conducting an attack on Hormuz from Sokotra, passed for the first time before the town, which the Portuguese called 'Scor'. The town and also the fortress were occupied by them. In 1528, they built a new fort which was restored at the beginning of the sixteenth century, and was surrounded for a circumference of 8 miles with tamarisks and fields of corn and vegetables. The yield from taxation and other revenues was not unimportant and amounted to 1,500 Xerati. When the Ya'rubid Najar b. Murshid b. Sulaim, who had gained a following in the towns in the interior attacked the Portuguese possessions in Umran, the Portuguese could only hold the fortified coast towns of Shahar, Masqat, al-Matraq and Karyat. Their influence on land in any case had never been important. In order to take Shahar, Najar b. Murshid had a fort built on the coast and threatened the city; this attack was so far successful that the Portuguese were only able to hold the citadel of Shahar and also lost Karyat. They were able to retain the fortified market-place for a time on payment of tribute to the Imam; about 1650 they were finally driven out. In 1724, Shahar was taken by Khalil b. Muhirak the rival of Muhammad b. Najar but later surrendered to the Ya'rubid Saif b. Sulaim. In 1738 Shahar was besieged by the Persians, who after the conquest of Masqat had been defeated at Shahar by its governor Ahmud b. Sa'id, but returned to attempt the capture of the town. The stubborn defence under Ahmud foiled all their efforts. The town must have suffered severely — its important commerce had already been ruined by the Portuguese — for according to C. Niebuhr it was of so great importance. A heavy blow to it was the raids by pirates who had settled in the stronghold of Shinak at the beginning of the sixteenth century. Slight relief was brought by English intervention, which led in 1819 to a naval battle between the pirates and ships of the English navy off Shahar. J. K. Wellsted, who visited the town in 1836 describes Shahar as the most important and by far the largest town on the thickly populated Umran coast between Shinak and Birzana, and next in importance to Masqat as a commercial centre. It had 40 large bazaars and maintained a considerable trade with Persia and India. The number of inhabitants including those of the adjoining small villages is put by Wellsted at 9,000, including 20 families of Jews who had a small synagogue and made a living by money-lending. It is evidence of the importance of the trade of Shahar at this time, that the Shah of the town drew a revenue of 10,000 dollars annually from harbour dues and in 1825 the tribute paid by Shahar to the Imam of 'Umran amounted to 24,000 dollars. The treaty concluded by England on Jan. 8, 1820, with the pirates guaranteed for a brief period peace and security in the waters of the Persian Gulf so that the trade and commerce of the ports prospered. But while the then Imam of 'Umran, Saiyid Sa'id, was intent on extending his possessions in East Africa, his authority was undermined in his absence, piracy was again revived and the pirate chief Hamid b. 'Arash seized Shahar and Rasht. The Imam Sa'id could not do much against this and in 1834 was forced to recognise his rival. Two years later he went with the help of the Wahhabis to drive Hamid out of Shahar. The town was blockaded by land and sea but the siege led to no decisive result as Sa'id was afraid that if they took the town it would fall not to him but to the Wahhabis. Sa'id was forced from his dilemma by an English warship which brought Hamid to Masqat, where he was forced to sign a treaty handing over the town to Shahar for his son Sa'id. As the latter did not fulfil the pledges made to his father, and refused him his due share of the revenues, Hamid had his son murdered in 1839 and assumed power himself, but with the approval of England was seized and imprisoned by Sa'id. His brother Sai'ib b. 'Arash succeeded him in Shahar but had to hand over the town in 1852 to Saiyid Sa'id under superior military pressure and to be content with ruling over Rasht. From that date Shahar has again formed part of the imamate of 'Umran, which now for the most part belongs to the kingdom of Ibn Sa'id.

SUHRAWARI

SUHRAWARDI, SHIHAB AL-DIN AND HAFS 'UMAR B. ABUALLI, A SUIFI AND THEOLOGIAN OF THE SHAFI'I SCHOOL, was born in 539 (1145) at Suhrawardi in the province of Dihlab in Persia. He pursued his first studies of mysticism under his uncle Abu'l-Nadjiht, whom he often quotes in his 'Amurâr al-Mâsi'irf — and under the celebrated Shatkh 'Abd al-Kadr al-Dufi. He settled in Baghbad, where he was received at the court of the Caliph al-Nâsir. There he became chief of the Sufis and died at a great age in 632 (1234). Šâdi, when he stayed in Baghbad, studied under Suhrawardi of whom he relates an anecdote in the Bustân (ed. Graf, p. 150). Suhrawardi, who performed the hajj on several occasions, met the poet Ibn al-Farîd during a pilgrimage to Mecca in 1231. On this occasion the two sons of the poet were invested with the khirka ('q.v.) by the celebrated Suhrawardi. 'Umar Suhrawardi is a representative of orthodox Sufism. His best known books are the 'Amurâr al-Mâsi'irf and the Kâjîh al-Nâdjiht al-Šâfi'îya wa-Kâjîh al-Fâdîkh al-Šâfi'îya both dedicated to the Caliph al-Nâsir. The first is one of the most popular treatises on Sufism. It was published in Cairo on the margin of the Isha' of Ghasâli, and translated into English by H. Williborde Clarke (from a Persian version) as an appendix to his translation of Ḥâfi. It is more particularly a treatise on ethics and practical mysticism, but it at the same time contains interesting historical notes and is of value for our knowledge of the Sufi terminology. The Kâjîh al-Nâdiht is a polemical and critical work on the study of Greek philosophy. In it Suhrawardi gives, on the model of the Kâtîf and of Ghasâli, a criticism of the hellenizing philosophers but reveals a much inferior comprehension of philosophy to that of the author of the Táhijât. A curious feature of the book is that in it the Caliph al-Nâsir, who himself taught, is frequently cited as an authority in support of traditions.

Al-Suhrawardi, Shihâb al-Dîn anâ Hâfiz 'Umar b. Abu'Allû, a Sûfî and theologian of the Shafî'i school, was born in 539 (1145) at Suhraward in the province of Dihlab in Persia. He pursued his first studies of mysticism under his uncle Abu'l-Nadjiht, whom he often quotes in his 'Amurâr al-Mâsi'irf — and under the celebrated Shatkh 'Abd al-Kadr al-Dufi. He settled in Baghbad, where he was received at the court of the Caliph al-Nâsir. There he became chief of the Sufis and died at a great age in 632 (1234). Šâdi, when he stayed in Baghbad, studied under Suhrawardi of whom he relates an anecdote in the Bustân (ed. Graf, p. 150). Suhrawardi, who performed the hajj on several occasions, met the poet Ibn al-Farîd during a pilgrimage to Mecca in 1231. On this occasion the two sons of the poet were invested with the khirka ('q.v.) by the celebrated Suhrawardi. 'Umar Suhrawardi is a representative of orthodox Sufism. His best known books are the 'Amurâr al-Mâsi'irf and the Kâjîh al-Nâdjiht al-Šâfi'îya wa-Kâjîh al-Fâdîkh al-Šâfi'îya both dedicated to the Caliph al-Nâsir. The first is one of the most popular treatises on Sufism. It was published in Cairo on the margin of the Isha' of Ghasâli, and translated into English by H. Williborde Clarke (from a Persian version) as an appendix to his translation of Ḥâfi. It is more particularly a treatise on ethics and practical mysticism, but it at the same time contains interesting historical notes and is of value for our knowledge of the Sufi terminology. Al-Suhrawardi, Shihâb al-Dîn anâ Hâfiz 'Umar b.
Abu'Allû, known as al-Mâshî, was born in the middle of the 11th century. He studied law at Marâsh and becoming a philosopher and Sufi lived in Isfahan, then in Baghbad and Aleppo. It appears that at Aleppo the viceroy al-Malik al-Zâhir, son of Šâh al-Dîn, at first granted him his patronage but when his mysticism rendered him suspect to true believers and the orthodox party demanded his execution, al-Malik had him put to death in 578 (1181). He was then 36 or 38. He was called al-Mâshî to show that
he was not to be considered a martyr (ṣīḥā). 

Suhrawardi declared himself a Peripatetic and a Shī ṣī, in his interpretation of Aristotle, he is influenced by Ibn Sīnā. While Ibn Sīnā, just like the Greek commentators on Aristotle by whom he is inspired, does not, as a rule, make use of mysticism except to supplement or extend Aristotle's thought by certain Neo-Platonic theories when in his view presents lacunae, or to develop mystic tendencies which he thinks are already implicit in the work of the master, one finds in Suhrawardi alongside of Peripatetic ideas all that mystical philosophy which Ḩasan obtained from Hellenistic syncretism, that mixture of Neo-Platonic doctrines and Hermetic traditions, occult sciences, Coptic traditions and Neo-Pythagorean elements. For Suhrawardi and other Muslim mystics, as had been the case with Hellenistic syncretism, the Neo-Platonic Asclepiades, for example, had composed a treatise "On the Agreement of all Religions"—all philosophical systems and all religions express only one single truth and he claims as his masters Agathodaemon, Hermes and the "five greatest philosophers of Greece", Empedocles, Pythagoras, Socrates, Plato and Aristotle and at the same time Dāmmāq and Buzurgmīr. With patriotic pride he regards the latter as the true precursor of the Greek thinkers (the Jewish historian Aramaeans first century a. c.,) had already (in the sense that Moses was the teacher of Orpheus and was known to the Greeks as Musaeus) and according to him it was they who — far from being dualists were the first to express the truth of absolute Being and contingent Being under the symbols of Light and Darkness. But, although he professes agreement with Aristotle and Plato, he gives in his principal work, Kitāb ʿIkmāt al-Ṭahrār (lithogr. Tehrān 1316 = 1898) a prominent place to an attack on Aristotle. The extreme liberalism of his ideas even allows him, while teaching in other passages the theories criticized, to repeat the criticisms which the Kālīlm had formulated against certain fundamental theories of the logic and metaphysics of Aristotle, e.g. against the theory of the definition of essence (by the argument, of sceptical origin, that we could only find the universal by complete induction from the particular cases which are infinite in number), and against the doctrine of matter (by the argument — of Stoic origin — that the possible has no objective existence, if this were not the case, it would be at once potential and actual). As a rule we find, quite frequently in him, those theories and arguments of the Sceptics and Stoics which the Kālīlm had taken up; he teaches for example the theory of the Stoics — revived by Leibniz — of the identity of the indivisibles and the theory of the Stoics in the sense of the Sceptics, of the subjectivity or the impossibility of relations and he shares with the Kālīlm the optimism of Stoic (or Neo-Platonic) theology — revived by Leibniz — "that everything is for the best in the best in the possible worlds".

But what is most characteristic of his work is his metaphysics of light, of illumination (ṭahrār). It is the Neo-Platonic theory of light, a spiritual light which serves as a symbol of emanation but at the same time is regarded as the fundamental reality of things. We find this theory, which has played a great part in Christian and Muslim philosophy and mysticism, in most of the Arab philosophers, especially in Fārābī, Ibn Sīnā and Ghazālī, but no one, I believe, has made so much use of this symbol as Suhrawardi. Necessity and contingency, being and non-being, substance and accident, cause and effect, thought and sensation, body and soul, are all explained by his doctrine of ʿahlā ṭahrār; he regards all that lives, or moves or has its being as light and even his proof of the existence of God is based upon this symbol. It is particularly for his metaphysics of light that he is known to posterity; he was the founder of a sect, whose name al-ṭahrārīyān is derived from ʿahlā ṭahrār and the order of dervishes, who trace their foundation to him, are similarly called Nūrākhhāyya.

SUHUF. [See SUFI.]

SUFI (A.), market, frequent in street- and place-names. The word in this sense is, according to Fraenkel, Die arab. Fremdwörter im Arab., Leiden 1886, p. 187, borrowed from the Aramaic. Fraenkel was especially induced to come to this opinion by the consideration that "market in this sense must have been unknown to the earliest Arabs". This may be true for the early period during which the word may be presumed to have been borrowed from the Aramaic; but it is certain that regular markets were already in existence among the Arabs before Islam; on this the most recent reference is H. Lammens, Le Marché et la ville de l'Hisn (M. L. F. A. O., 8, 3, 1924), p. 57—58 (153—154), from whose quotations it is evident that suh was used not only in the meaning of "market-place" but also in that of "market".

The whole complex of social, economic, and legal problems of the Muslim world associated with the conception of "market" can only be hinted at here. Preliminary studies dealing with special aspects of these questions do not exist; on the other hand, in many works of the most varied nature there are occasional notes which still have to be submitted to a systematic examination. The most important thing to remember in such a study is that Islam, in a very short time conquered an enormous territory, and the separate parts of which, being early independent kingdoms, with very different economic and legal histories, at once formed into one state with a uniform government with a system of law based on a single canon and administered by organs of the central authority and not by an independent local authority. The importance of this lies in the fact that Islam by its whole structure prevented the growth of
civic communities, possessing the right of making laws of their own, and able to use them in the local market, as was the case in the west during the middle ages. At the same time, it is recognised that in Islam the existence of a market with much more independent of the protection of the town, in which it was situated than was the case in the west, in legal theory at least, and probably in fact also. The historian of the market in the Dar al-I’imam will thus have to trace back to pre-Muhammadan times the local history of the markets in the different regions and to ascertain to what degree the Muslim conquest interfered with their development, and finally will have to ask whether typical developments were found after a study of many different cases as far apart geographically as possible, which are characteristic of different parts of the empire and whether and how these types differ from the markets of these towns, which were only founded by the conquerors or at any rate after the conquest. Such an investigation would be very important not only from the point of view of social, economic, and legal history, but it would be to a very special degree throw light on the relation between shar’ia and practice, and on the question whether the difference between the sects and the madhahib in the different parts of the world of Islam favoured a varying development of this relation in certain fields, for example, on that of the history of the market, which is not to be traced to the fact that the regions in question belonged to different kingdoms before Islam.

The Bibliography which would be required to study this problem is almost boundless; it is easier to mention Muslim works which are valuable for our subject than those that are. There is the whole theological, historical, geographical and adab literature, as well as applied philosophy and a part of the poetry. Only philology, metaphysics, mathematics and some natural sciences can be dropped, in so far as they do not deal with valuable goods.

There is much economic material in modern travel, etc.; but these do not deal with questions of historical development. A few observations might serve as starting points are to be found in Max Weber, Wirtschaft und Gesellschaft (Grundriss der Socialkonomie, 3rd ed., 1922, p. 599) and in the posthumous Wirtschaftsgeschichte der same writer (1923), Index s. V. Vorderer Orient (Jünger’s Perioden).

Special mention should be made of al-Dinshah, K. al-Isa’ar ila Muhajir bi Tahrir; cf. H. Ritter, Ein arabisches Handbuch der Handelswissenschaft (Leipzig, 1892), p. 529 sqq. (cf. I. H. Schaeder in Ital., xiv. 1925, p. 5 sqq.) and in the posthumous Wirtschaftsgeschichte of the same writer (1923), Index s. V. Vorderer Orient (Jünger’s Perioden).

SUK. A small town in Iraq on the right bank of the Euphrates, about 25 miles to the east of N'Gyapa, opposite the mouth of the canal al-Bâdi'a, an arm of the Shatt al-Haiyeh. The distance to Basra as the crow flies is about 100 miles. The town is surrounded by date-groves extending along the river bank, but the marshy country, that extends into Basra, makes the air very unhealthy. Suk’ al-Shuyukh was founded in the first half of the twelfth century as a market-place (sâq) of the confederation of the Musafik [q. v.]. Azabu, 4 hours to the east there was formerly the residence of the chief Shifâ of the Suk’; called Kit’ al-Shuyukh; the plural shuyukh designates the members of the clan of this chief. To the end of the eighth century Suk was a small town with a mosque, surrounded by earthen walls (muqaba) and in the beginning of the ninth century it is described as an extremely dirty town, inhabited by 6,000 families and having a lively commercial intercourse with Basra and even with Baghdad and Bâbîyûn. According to Frézer the Suk’ Shifâ was established to live in the town, but in Petermann’s time (1854) he had a house there; the last-mentioned traveller estimates the number of the population at 3,000. At the end of the sixth century the number 12,000 is given (Cânet), of whom 2,250 were Samani, possessing two mosques (qâbiyya) and 3,770 Shifâs with one sanctuary (masjid).

The population also included of 250 Jews and 700 Mandaeanas or Shobâ. The latter lived for the greater part in the suburb Sabûkû on the opposite bank of the Euphrates. Before 953 the Mandaeanan population had numbered 260 families, but the oppression of the Musafik had caused 200 families to emigrate to Amâra. The German orientalist Petermann in the year 1854 visited in Suk’ al-Shuyukh the high priest of the Mandaeanas, Shifâ Yâbûs. As these people are here silversmiths; they are also builders of a special type of boats.

Under Turkish administration Suk’ al-Shuyukh became the capital of a hâshîa of the same name in the sanâ’iyyat of Mandaeanas. The tribes living on both sides of the town (Bâdî’ and Bânt Asal) are Shifâs. The number of the population of the hâshîa is given as 50,000 (Cânet).

SUKAINA, daughter of al-Husain b. ‘Abî Tâlib and of Rabab bint ‘Abd al-‘Iqal b. ‘Abî ‘Abd. The poetess, who gave her daughter the name of Sukaina (sometimes called Sakina, but the Kamûs has Sukaina). Her real name was Ummâna (according to Ibn al-Kalbi quoted by Ibn Sa’d and the Kamûs) or Ummâna but more probably Amâna or Aminah (according to the Kamûs). The date of her birth is not known; but she was a little girl at the time of her father’s death (definitely stated by ‘Abu Tâlib, ib. 234 sqq., and by Ibn al-A‘thâr in telling of the death of ‘Abd al-Mu’inn, ib. 73; the same writer says that she had the survivors of the day of Kerbela—of whom Sukaina was one—brought to Medina under a strong guard, and that her father’s mother died of grief a year later (ibid., iv. 76/74). Sukaina is particularly famous for her successive marriages; very contradictory statements are given regarding their number and order. According to the Kitab al-Aghani, a proposed marriage with her cousin Hassan b. al-Husain b. ‘Abî ‘Abd
to nothing and the latter married Sukaina's sister Fátima. Ibn Kutaba and Ibn Sa’id give lists; the
former three lists in which the order varies, the
second two lists; the Ágāhí gives six contra-
dictory lists. It is best in the circumstances to
accept the oldest order, on which Kutaba and
Ibn Sa’id are almost in agreement; the order adopted
by Ibn Khallíkán. His first husband, slavery when
this, was Muṣa‘ab b. al-Zubair b. al-Mughíl b. Anbíá (d. in
70 or 71 in a battle fought against Abú al-Mallik
b. Marwán; cf. Ibn al-Aš’ír, iv. 263 sqq.) Muṣa‘ab
gave Sukaina a considerable dowry when she was
given him by her brother Ali (cf. the satirical
verse in Thálibí, La’áfí, p. 53); they had a
dughter whom Sukaina gave her mother's
done; this daughter married the brother of Muṣa‘ab
and died young. The second husband of Sukaina
seems to have been Abdalláh b. Uthmán, nephew
of Muṣa‘ab b. al-Zubair; from this union was born
Uthmán called Kurání (and according to Ibn Sa’d,
two other children Hákím and Raḥím), a union
not always peaceful (according to the Ágāhí). The
third husband was, according to Ibn Sa’d,
Zaid b. Amr b. Uthmán b. Ḥafṣ; the Ágāhí
describes him as unreliable and unreliable and speaks
of continual quarrels with Sukaina, who survived
him. According to Al-Ash’írî, b. Abú-l-Atlâ b. Marwán (d. 360),
brother of Umar b. ’Abd al-As’î and governor of
Egypt from 75 A.H., married the divorced Sukaina
without ever consummating the union (too much
stress need not be laid on the differences of
the biographers on this question; while Ibn Kutaba,
followed by Ibn Khallíkán and Sa’dí makes al-
Aṣbagh the third husband of Sukaina, Ibn Sa’d
and a verse quoted by the Ágāhí makes it
her fourth husband). According to Ibn Sa’d, besides,
Sukaina married, immediately after Zaid b. Amr,
Ibráhím b. Abú-k-Rá’ám b. ’Áfí al-Zanjírí with
whom she lived three months; they were divorced,
and it is said by orders of Hákím b. Abú al-Mallik,
which is not at all probable; according to Ibn
Khallíkán and Ibn Kutab (Ma’aráf) Ibráhím died in
76, aged 75; the marriage must therefore have been
earlier. Ibn Kutaba further records, without
giving an authority, that Sukaina married Amr
b. Hákím b. Ḥasán. The statements of the Ágāhí
about a marriage between Sukaina and her cousin
Abdalláh b. ’Ásín b. All may be rejected. Sukaina
was generally recognised to have been of the
most remarkable women of her time. One of the
authorities quoted by the Ágāhí (xiv.) describes
her as chaste, fastidious, full of a dignity which
did not exclude a fondness for cudgelling (jest
and hoaxes quoted, xiv. and xvii., p. 94, 97, 101).
The length of her hair was celebrated; she had
a particular method of arranging it; at a later period
Umar b. ’Abd al-As’î strictly prohibited
this coiffure. She was very proud, not only of
her beauty but of her ancestors (Ágāhí, xiv. 164)
and of her daughter whom she liked to cover with
jewels. She also gave evidence of the possession
of courage, if we may believe Ágāhí (xiv.) in
the stoicism with which she submitted to an
operation on the eye. She was also a woman of
wit, devoted to poetry and some numerous anecdotes
(Ágāhí). She spent her life in the region of
the sacred cities and died at Madinah on Thursday
5 A.H. (April 7, 735). Her burial was postponed
for several hours because the governor ordered that they should wait till he could arrive.

Bibliography: Táhir, Ibn Al-Ashír, Ágāhí,
a reed produces honey "without bees" and Maga-
athenes, who went to India several times as an
ambassador, about 300 B.C. tells a similar story.
Theophrastus speaks of ἀμπέλος [nature un-
known, the translation "reed honey" is doubtful];
later writers hardly add anything new. Pliny never
mentions the sugar-cane; on the other hand the
word σάμπαρης is found first in him and in Dios-
cutides, applied to a kind of "liquid honey from
India and Vasia" which is found in a reed and
looks like sait". In the Periplus (c. 77 A.D.) a
"reed-honey" called σάμπαρης (see above) is men-
tioned as an article of export from Banygaza (the
modern Barouch). Galen quotes Dioscutides, but
hardly makes any use of the scarce stuff which
was difficult to obtain. According to E. O. von
Lippmann, σάμπαρης is not a product of the
sugar-cane and should not be identified with our
sugar. In Sanskrit the word means something
friable, of the constitution of sand or grains of
corn. The purification of sugar was first known
in India about 350 A.D.; the first certain European
mention is in 627 A.D. in connection with the
conquest of Damascus, the capital of the Persian
king Khosrov II, when sugar is mentioned among
the Indian treasures of the Persian king. It may
be assumed that the manufacture of sugar and the
cultivation of the sugar-cane reached Persia at the
same time, as the flat and moist low-lying lands of southern Mesopotamia and Kūtāista
afforded excellent conditions for its cultivation.
At first cultivated only to a small extent for
medical purposes or as a valuable sweet, the
sugar-cane was very rapidly spread by the Arabs
after the conquest of Persia, anywhere that the
climatic conditions were suitable to the plant,
notably Egypt, along the north coast of Africa
as far as Morocco (Sa'a-at-Alia), Spain and Sicily.
India and Persia however still remained the main
centres of production.

All the sources for the history of the sugar-cane
and sugar, including Oriental ones, as far as available
up to 1890, were utilized by E. O. von Lippmann in his Geschichte des Zuckerbaus, Leipzig 1890. A new
work on the subject which will take note of the
new literature of the last 40 years is desirable in
the near future. Below are given also a few works
dealing with the narrower field of Islam and Persia.

Der Zucker. Ein Kapitel aus der Flora der

AL-SUKKAR, AL-HASAN B. AL-HUSAYN B.
Ubaidallah Abu Salih, an Arabic philo-
logist, pupil of Abu l-Fadl al-Riyahi, the pupil
of al-Ash'at, who is also sometimes wrongly
mentioned as one of his teachers, although this
is impossible on chronological grounds alone, and
of Muhammad b. al-Hajjih and of Abu Hāmid al-
Sidqiyya, born 212 (830), died 275 (888). His
activities were almost entirely devoted to the
collection and editing of old Arabic poems. Of the
Divan of various tribes collected by him, only that
of the Hasha'is has survived but is incomplete.
That he had the help of other collections for this
edition (see Goldhaff, D. L. Z., 1895, p. 1455) is
very probable; but when Abu al-Kasir al-Baghdadi
in the Kitab al-Adab, ii. 317, speaks of a
copy of the year 200 A.H. the quotation cannot be
from the commentary of al-Suwaiti, that is to say
here a certain manuscript in the possession of the
Divan. Besides the editions by Rügmen, Well-
hausen and Heil we have also Suqar's commentary
edited by E. B. H. Mehdi and published by the
Commission pour l'encyclopédie d'al-Suqar,
Académie Osmenne, 1923. Of his still frec-
quently quoted Abu'l-Hasan al-Latibi only the
Divan of Tirmidi, ed. W. Wright in Osmume arabica,
Leiden 1858, 76-95, survives. Of his editions of
the Divan of various poets we presently possess
only the Divan of Imm al-Alaik in the Leyden MS.
Warn, 901 (1, Catalogus cod. ex. bibl. ac.
Art. Bibl., 7 ed. i. 347, No. 55), and perhaps
that of Kais b. Kinahin, see ed. Koemel, xxxvi.
His only share in the surviving recension of the
Nawfah of Abu 'Ali al-Ash'at was that of a transmitter
from his teacher Muhammad b. al-Hajjih. Quotations
from other works are given in G. L., i. 105.

p. 78, 20-27; Ibn al-Anabi, Nishat al-Alba'id,
p. 274-275; Yalbugh, Irshad al-Azhar, ed. Mar-
goloschitz, ii. 82-94; al-Suyuti, Bughyat
al-Wafa', p. 200-203; Flügel, Die grammatisch-
schulischen Schriften der Araber, p. 89.
(C. Brockelmann)

SUQMAN (SUQMAN) B. OTTO, MH., AL-
Dawla, lord of Hīmān Kaftā. After the death
of his father Ottok in 484 (1094/1095) Suqman,
jointly with his brother Tīghitā [q. v.] received
the city of Jerusalem as a fief from the Saldūkī
Sultan Tustābac b. Alp Arslan. But by Šukbān
489 (July-Aug. 1069) it, according to another
theless reliable statement, in 491 (1098), it was
taken from them by the Pātīmis. The two brothers
then went first to Damascus from which Tīghitā
went to al-Ṭarrīk and Suqman sought refuge in
Edessa. After the inhabitants of this town, who
were mainly Armenians, had called in the Franks
and given them rule over the town, Suqman
collected an army with which he went to al-Ṭarrīk.
He was successful in taking the town of Sābīrāt
but when he met the enemy soon after
it was defeated and had to take to flight
(Rabī' 1, 494 = Jan. 1101), whereupon the victors
wrote a fearful massacre among the people of
the town. After some time Hīmān Kaftā was taken
by Suqman. The amr Kūri كتابq. v.] who lived
in al-Mawṣull died in Abu l-Fadl al-Riyahi, 495
(Aug.-Sept. 1102) and when his governor in Hīmān Kaftā, Mūsā al-Turkmānī, quarrelled with Dājkārī, the
lord of Dājkārī Ibn 'Omar, his troops abandoned him
and went over to Dājkārī, whereupon Mūsā
in desperate straits sought help from Suq-
man, who was then in Dīyār Bakr, and had to
give him Hīmān Kaftā in return. In time Suqman
succeeded in bringing Mūsā and under his rule.
In Rabī' 1, 496 (Dec. 1102), Sultan Bāṣrīyāqūd
[q. v.] appointed Gümüştekin al-Kaṣārī governor
of Baghdad, although Tīghitā had already been
given this office by Bāṣrīyāqūd's rival, his brother
Muhammad. With the help of his brother Suqman
and the lord of al-Hilla, şāñakah b. Manṣūr [q. v.],
Tīghitā was soon able to dispose of Gümüştekin.
When the Franks attacked Harrān in 497 (1104),
the old enemy Suqman and Dājkārī, who were
just preparing to attack one another, made
up their quarrel. The people of Harrān were

already negotiating their surrender to the Franks, when the two amirs, who had met on the Khâbûr, arrived in time to relieve the town. A battle was fought on the Ballûh, a tributary of the Euphrates, and the Franks were completely defeated. Count Baldwin of Edessa and Pescocin were taken prisoners, while Boemund and Tancred succeeded in reaching Edessa with great difficulty. In spite of the brilliant victory it wanted little to arouse once more the old jealousy between the two Muslim leaders, as the rich booty which fell to Sukman's men aroused the envy of their allies and only Sukman's skillful diplomacy enabled the threatening danger to be averted from the victors. After the resistance of the Franks had been temporarily broken, Djkermish took possession of Harran and then turned his attention to Edessa. There Tancred commanded, while Boemund remained in Antioch. The latter was at once sent for, but as difficult roads delayed his march, Tancred resolved to risk all on one throw and made a bold sortie early one morning. He succeeded in surprising the besiegers and put them to flight. Soon afterwards Ibn 'Ammâr, lord of Tripoli, appealed to Sukman for help against the Franks. Sukman declared himself ready to assist and set him out for Damascus, but died on the way (beginning of Şafar 498 = Oct. 1104). In Hîşan Kâsit he was succeeded by his son Ibrahim, and in Mâridm by his brother Ikhâzî.

**SULAHFÎT, the tortoise, or turtle.** Land (tortoise) and sea (turtle) varieties are distinguished as al-barnât and al-khâbût. Al-Damîrî and al-Kawrî give practically the same names about their habits. The turtle attains the size of an island. As it cannot hatch its eggs on account of the hardness and coldness of the shell on its belly, it looks after the eggs until God allows the young ones to come out. If the eggs fall into water, turtles are born from them. Magical qualities are attributed to them by the Kitâb al-Khâbûtî of Bâlânûn and healing properties are mentioned by al-Kawrî and al-Damîrî. Combs are made from the shell. The stupidity of the tortoise is proverbial.

Sulahfît is also the Arabic name of the constellation of Lyra, compared to the Greek glâρides, and al-Kawrî, Al-Masâbîrî, al-Damîrî, al-Harîrî, al-Ḥayâwânî, transl. Jayakar, ii. 55; L. Ideler, Sctenaen, p. 68. (J. RUEKA)

**SULAHIB.** The generic and proper name of this Arab pariah tribe living in Central Arabia and the adjoining territory, usually called Sulahib (pronounced Şîlib), is (according to a letter from the Carmelite father A. M. de St. Élie) Sulahîa (pronounced Şîba). The collective form is derived from the singular Sulahib (pronounced Şîbîy), fem.

Sulahîya. The plural al-Sulahîs is also found (in Wetzstein, Z. d. d. Ges., xlii. 125). Hess only knows the term Şîba. The diminutive form, which is commonly used in Arabia with a contemptuous sense, from Sulahib is Sulahîb, or sg. in Sulahî or Sulahîba. The combination with šâli and šâliy is also occasionally found but is probably not correct, as in Arabic geographical proper names no essential alteration took place in the oldest recorded form of the name in the form or combination of these names from the period of the oldest tradition. This applies even to the use of the Arabic article al-.

The most varied explanations are given of the meaning and origio of their name. Those who connect the word Sulahib with totemism have most in their favour, of all the explanations given in Pieper's work (p. 65—69); for the same [q.v.] of that tribe is said by some (St. Élie in Mackriq, Wetzstein and Palgrave) to be the cross eš-šâli (q.v.j.; but Huber (197) gives their tribal badge as another symbol, a short stroke with a semispherical knob at the end (mezqâ); according to Massignac, Ammérieur du Monde Musulman, p. 93: eš-mêka); probably a parrying-shield such as is known by the people of the Upper Nile and the Dinka. Another tribal mark is eš-šâliem, which looks like a "K" and is branded on the left shoulder of their animals, while the mezqâ is put on leg, neck, and upper cheek (Massignac, loc. cit., p. 75). The other less probable interpretation, which, according to Doughty (L. 283) and Pelly (189), is the Bedouin etymology, derives the tribal name from the expression yâbûl al-ʿ Arab (= the Arab's stock, from the back of the Arabs = the dregs of the Arabs). On the other hand the Arab derivation from yâbûl (= hard, hardened, steadfast, i.e. in faith; St. Élie in Mackriq, p. 674) is only to be adopted with some misgiving as perhaps illuminating but hardly scientific in my opinion. A connection of the name Sulahib with Greek gods of agriculture, according to St. Élie (loc. cit., p. 674) were called "Sulèves" may on the other hand be at once rejected as it is little probable that the Sulahib, being in the main hunters, should have formerly worshipped agricultural deities. Nor can the name be derived from names of places, e.g. from Sulahib (Şolîb; St. Élie, loc. cit., p. 674). Their name does not seem to be a patronymic, not simply because the compound name Banû Sulahib is hardly to be found and is incorrect but also because neither in the Arab legends so far known nor in the scanty references of the Arab historians and geographers is there any mention of the name of a possible ancestor from which the name of their tribe could be derived (their legendary ancestor Dahân does not come into question here). The suggestion that they are descended from the Crusaders (Şolîbî, Şolîbya; cf. St. Élie, loc. cit., p. 613, first made in the Paris periodical Le Reveil de Marie, 1864) is very improbable for practical reasons and because historical references suggesting such a thing are entirely wanting.

Their origin and descent is obscure because they have already remarked, the historical sources give negligible information about them and their important points in particular, which may be due not only to their small numbers and slight importance, but particularly to their low social status as a despised and barely tolerated pariah tribe among the
Beduins: In the earlier Arabic literature they are not called by their proper name Sulabh, Sulab, etc., but are called al-Za'abah (according to a letter from St. Elie). So far as I know there are no genealogies of them in existence, nor even fictitious ones. Their legends and those of the Arabs form only a very poor substitute for this deficiency. Common to them — and this is very significant — is the statement that the ancestors of the Sulabah once held a much higher social and economic position than they do now (St. Elie, loc. cit., p. 675; Doughty, l. 283), which however they forfeited through arrogance etc. (until of the Fall; a Christian survival). Felly (p. 189) says that an Arab once had sexual intercourse with his mother and the Sulabah are the descendants of this act of incest. Quite apart from the fact that it is the regular custom in Arabia to discharge the descent of one's enemies or people one holds in contempt — even beyond the bounds of truth — the story given by Felly recalls a significant statement in Strabo (xvi. 4, 93); according to him the Nabataeans recognize marriage with the widowed mother of the death of a father, a peculiar degeneration of the true Semitic institution of the levirate marriage. Wright, p. 43, records another legend, which may be important for dating the age of this people. Their ancestors are said to have left Husain b. 'Ali and his followers and companions 'in the lunch at the battle of Kerbelah' (61 = 650) and thus contributed to the guilt of their massacre. This is unusual as it suggests the Zufah and a connection with Mesopotamia. More positive facts however throw light on the present position of the Sulabah, their customs, ideas, and social position with regard to the other Arabs. It is decisive for their whole existence and peculiarities that they, like the Himyar (pronounced Hatim or H'tim), Al-Az, Arab and Arab gypsies (Nawar, sing. Nūrī) — are a race of pariahs. The area over which they are found is the whole of the interior of the northern and central part of the Arabian peninsula. The southern frontier of the country over which they wander corresponds roughly with the Tropic of Cancer on the southern boundary of the fertile zone of Najd. Assertions to the contrary by Felly, p. 189 and Doughty, l. 282, are not so very important in my opinion, as there had been no previous mention of them in South Arabia and Yemen by Europeans who had travelled there, which would be remarkable in the case of a people of such striking appearance as the Sulabah. This does not of course mean that we deny their occasional appearance in these regions. A further argument in favour of this assertion is that the Sulabah are reckoned with the Ahl al-Shemal (cf. Curtius, p. 46, note 2). The large towns on the borders of the steppes and deserts are only occasionally visited by the desert Sulabah to buy provisions, arms (Wettstein in Z. D. M. G., xl. 492) and nutritions and other necessaries or to sell their manufactures and booty of the chase. On the other hand some of them are settled in the fertile parts of Mesopotamia, Syria, Palestine and Transjordania. Within the area above defined, especially in the steppes district, the desert Sulabah wander northwards or southwards, according to the season, following the movements of the game, their chief source of food, which depends on the growth and decline of vegetation. They, like the Beduins, are not settled. The few Sulabah in the more fertile zones on the edge of the Arabian deserts need hardly be taken into account, especially as they are also for the most part half nomad. Their unsettled and migratory form of life is connected with their way of living. Unlike the Beduins, they live for the most part by hunting or handicraft. This also causes them to split up into very small groups whether settled or migratory — here again unlike the Beduins. They are found, according to Raymond and Martinet, p. 30—35, in little groups of two or three families, but it sometimes happens although rarely, that larger bodies are found wandering or camping together. This is all the more remarkable as in Arabia the tribes acquire all the more prestige and are less exposed to hostilities the greater their numbers. The Sulabah share this peculiarity with the other wandering pariah tribes of Arabia. But in particular places in Arabia the Sulabah are said to be found in larger bodies. According to Doughty, l. 283, this is particularly the case in the oases of Taimk and Wejifa. The fact that they are so thinly distributed makes it difficult to estimate their numbers and the estimates vary very much. St. Elie, loc. cit., p. 675) at the end of 1898 (?) puts their strength at over 700 tents which, as a mean, is probably nearest the truth, for Curtius, p. 46 note 1, gives 400 and Huber, p. 496, 1,000 tents for al-Hudayr or al-Hudayra alone. The latter figure can only be taken with scepticism. They are divided into different small tribes and these again into classes. According to Raymond and Martinet, p. 30—35, supplemented by the publications of St. Elie, the best living authority on this people, and letters from him to me, the Sulabah have been divided since the last century into three sub-tribes as follows:

1. Sulah (Sulab), who are divided into the sub-tribes of:
   1. al-Malēh;
   2. al-Tümil [Tumeil] (the shameless);
   3. al-Madjid in Lower Mesopotamia or filial al-Munafik [dial. also: al-Mayyad];
   4. al-Durairī [Duraib] (the nimble, alert, active);
   5. al-Kalibāwâ (the faithful, reliable) [dial. al-Gabâin];
   6. al-Benâ'îk [dial. al-Banâ'î] (those who hunt partridge with extraordinary skill);
   7. al-Nâ'îm;
   8. al-Tarîs;
   9. al-Ḥazīm and
      and Martinet, loc. cit., wrongly called:
      Shelpat).

II. Sub-tribe of al-Ṣāridin; clan: al-Amiru and

III. Sub-tribe of al-Ghumuri or al-Ghumin, also wrongly called: Barfi Ghumarni [Bani Gh'amar].

Another division on a geographical basis is given (in a letter) by St. Elie. I. Sub-tribe of desert-Sulab or Khaliwiyâ [Khaliwiyâ], sgl.: Khalawî [Khelawi] or Khalawa [Khelaw], who are divided into the following clans:
   1. al-Majdī in Nakha Banu Khalid in Najd;
   2. al-Rashīdīa;
   3. al-Awâsîm: Rashîdīa and 'Awâsim meet in the hinterland of al-Kuwait;
   4. al-Ḥizm at Nukẖāth [Nukhbat], at Tobūl Tathal and at al-Salām, i.e. in the land between Lower Mesopotamia and Najd;
of Sulaba, so far as I know, are the little sketch by Euting in the second volume of his Travels and the group (the only picture to some extent satisfactory) in v. Oppenheim, i. 220, which however is not sufficient for any far-reaching deductions. In any case from all the evidence available, this people seems, according to Christian (Staats-Ber. Wien. Anthrop. Ges., 1923/1924) and Littman (cf. Pieper, p. 75), to belong to the Mediterranean branch of the human race and also to be of Semitic stock.

As to their character, the Sulaba are readily distinguished to their advantage by their universal cheerful and open nature. Although the lower and always suspicious Beduins. They are not ungracious, musical and poetically, whence they can earn a living in the tents of the Beduins, and are kindly, peaceful, of gentle and amiable disposition and hospitable like all Orientals. According to a letter from St. Elie they are on the other hand not very liberal on the match or on their passages through the desert so that travellers who want anything from them have to threaten them. Their moral standard, as with all parish peoples, does not seem to be very high.

Much more important for ascertaining their racial connections are their mode of life, customs, ideas and particularly their position with regard to the people among whom they live. It is this that marks them as pariahs. As to their mode of life it has already been mentioned that they make a living in quite a Semitic fashion (Christian, op. cit.) for the true Semite of these lands earns his livelihood either as a cattle-rearing nomad or as a trader, sometimes also as an artisan and soldier—mainly by the chase. Their main booty is the gazelle (gazella dorcas), the saber antelope or hajjar waqif (oryx elgazl, Pall.), the wild goat (capra hircus nubiana-sinaitica, Hempr. Ad rhueb.), and of ground game the desert fowl or the black bird (perdiculae exulata, L.), bustards, e.g. the habar (Houbara obsidulata, J. scq.) ostriches (struthio camelus, L.) in spite of their statements to the contrary by several travellers (e.g. Musil, iii. 19), are no longer hunted as they have been driven away or by the south. Besides these wild creatures, anything else that is at all possible is eaten by them as being pariahs, they have no prohibitions regarding food either from custom or belief. They even eat the vulture and the dog, despised by the Arabs as unclean (Huber, p. 192; Doughty, i. 281; Pelly, p. 189). Pieper, p. 31-34 gives a detailed account of a Sulaba hunt, which is conducted either on foot by stalking or from the back of an ass. Another main business of the desert Sulaba with whom we are mainly concerned here, is the rearing and sale of the Sulaba ass, highly esteemed for its excellent qualities, also called Sulahit (Stall). Their strength and endurance and appearance are described by Musil, op. cit., iii. 291, and Butler, p. 524. As a rule they are light, almost white in colour, Huber, p. 588; however (cf. Wright, p. 59) says that a clan of Sulaba on the Djebel "Awdjik" about 1850 also bred dark coloured asses. According to Musil, op. cit., the Sulaba catch wild asses (equus asinus aferrem, Fitz.) and use them for breeding whereby the strength of their asses is maintained at a high level. On account of their excellence these animals are very highly esteemed by the citizens and soldiery of the lands bordering on the Arabian deserts who do not share the prejudice of the

THE ENCYCLOPÆDIA OF ISLAM, IV.
Beduins against the ass, and exported even to Europe under the name Baghdadi or Moroccan ass. At the same time that only rarely — this must be emphasised — individual Šulabs, e.g. those parts of this people who lived under the rule of the enlightened and vigorous amir of Ḥa'il, the well known opponent of the Wahhabi, Muḥammad b. Rashid, also rear camels (camelus dromedarius, L.). Each family among them has on an average three or four camels. But this must be considered exceptional. As a general rule if the Šulabs were to accumulate or possess wealth to any considerable degree in the larger domestic animals, desired by the robber Beduins (with the exception of the ass which they detest), they would no longer enjoy protection and security from their attacks. This immaturity has also a material foundation: the Šulab pay their hosts a tribute, the so-called "brotherhood tax" (ḫawwara; cf. in Raynau and Martinet, p. 32, the list of their 9 ḫawwara) for permission to graze and sojourn among them. Huber, p. 197 and Butler, p. 524, however, say that they are attacked and persecuted by several Beduin tribes, e.g. the "Aḏjašt, and on religious grounds by the Ḧijjāt also, according to Huber and according to Butler, out of covetousness by the robber "Anze [q.v.] as soon as they become prosperous. They also keep — although not in such large numbers as the Beduins — sheep and goats, less for their meat than for their wool, milk, and milk products. The Šulab further work as day-labourers among the fellahin of Ta'īma and other oases during the date-harvest (Huber, p. 588) or work as smiths and carpenters. The latter may be evidence in favour of a great antiquity for this people (cf. Eisler, for Wirtschaftsgrünen, Freiburg, 1919, p. 741). They are, like the (Arabian) gipsies, with whom they have nothing racial in common, as the latter's origin has been established beyond all doubt by de Goeje (Bijdr. tot de geschied. d. Zigeunen, and Mém. sur les migrations d. Triganes, etc.), skillful tinsmiths, make and repair weapons, sickles, domestic utensils of brass (šabbı al-khīlawiya) etc. and wooden frames for the saddles of pack-camels, wooden screws, wooden vessels, etc. They are thus indispensable to the Beduins — a further ground for their immunity. They are well known and welcome for their medical practice on men and animals (St. Élie in Mackenzie, p. 680 sq.) which consists partly of cauterisation (hāy) and partly of argents, manipulations which follow definite rules, known only to the experts. Their fortune-telling is also mentioned (Blunt, ii. 110) and their begging (Dooghy, i. 284; Barckhardt, p. 14). Their dress and dwellings are most primitive. They wear a garment of skins (farwa) made of 15—20 gazelle-hides dried in the sun and sewn together with the hair outside (cf. the picture in von Oppenheim, i. 220). Unlike the "uṣūd" of the Beduins it is not open the whole length in front but has an opening at the neck (ud-ghaḥ) through which it is slipped on. The sleeves reach to the roots of the fingers and contract at the wrists. The garment has a hood which suggests Hamitic north African influence. The farwa is held together with a girdle of dried lamb-skin. To wear a shirt (thākā) below this garment or a cloak above it is considered by them to be a luxury. The two sexes dress practically alike. The Šulab usually go bare-footed but they sometimes wear sandals (abd-ḥahā) as a protection against thorns and sharp stones. The Šulab wear a head-cloth (kaftār) and veil (ṣāfāt) in the same way as the other Beduins of Arabia. Their garment of skins is further remarkable, as it is either a survival from an earlier period of development or an adaptation to the special circumstances under which they are forced to live; perhaps it may prove to be of use in eventually ascertaining their origin. The farwa is convenient because it wears better than woven material and by its desert colour suits the conditions of light and ground in the desert, which is very useful in hunting and enables the game to be successfully stalked.

The arms are old fashioned carbines with six chambers which therefore get the Persian name of ḥālīb-ḵōn (St. Élie, op. cit., p. 677 sq.), and the meqīb, a parrying-stick (Christian, op. cit.) which has already been mentioned, and as clubs the mīzĪr which consists of a rather short wooden handle with a knob of asphalt as a head, those made entirely of iron mainly in al-Kaṭif (cf. the pictures in v. Oppenheimer, ii. 103). The Šulabs are still said to use also the bow and arrow (Pieper, p. 22 and 32). But they do not seem to be armed to the same degree as the Beduins. As they are extremely peace-loving and do not allow themselves to be involved in the feuds of the Arab tribes nor have any of their own, it is probably hardly necessary for them to be so well armed.

They live like the Beduins in tents (ḥālīb, ḫiyūl) which are made either of mats, of goat's hair (ṣaffārīyeh), or like their dress from the skins of the victims of the chase. These are of varying size: Burchhardt, p. 24, once saw a Šulab tent which according to him could shelter 20—30 families. The cleanliness in and around their habitations is not very great (Wright, p. 51). They also use caves to shelter themselves and indeed, being children of nature with no wants, they often spend the night in the middle of the ḥālīb when on a hunting expedition.

Their customs show traces of ancient Christian and Sabaean elements. Nominally they are Moslems. According to St. Élie (in a letter to the writer) the Christian survivals only began to disappear in the last century; till then the Šulab had remained true to the faith of their forefathers. He tells me for example that polygamy, divorce or repudiation, circumcision etc. only began to be adopted by them in the second half of last century. Whether this development is directly or indirectly due to the Wahhabi movement; as was the case with the Murrekēde and Merrekēde Arabs (cf. Burchhardt, p. 145—146) awaits further investigation. In any case their long adherence to Christian beliefs and customs seems to have been not without influence on their position as outcasts among the Beduins. We find undoubted reminiscences of Christianity in their religious beliefs and usages, for example the use of the cross on such special occasions, baptism on the tenth or fortieth day after birth in addition to circumcision which they also practise. According to Pelly, p. 189, at baptism they dip the child seven times into the water, which is the practice of the Johannisites or Mandaeans. The Šulab also believe in the existence of a supreme being. In praying they stretch their arms out sideways so as to form a cross. According to Pelly, p. 189 sq., the Šulab have a place
of pilgrimage and a holy town in Harrân and their kinsmen living there have older and purer forms of prayers and psalms composed in Chaldaean or Assyrian (probably Eastern Aramaic); but this, like the whole of Pelly's account, is very much to be questioned as, according to other authorities (St. Eile, Curtiss, Littmann), they have no special language of their own but speak a bedouinised Arabic. According to Pelly they still adhere to the old Arabian star-worship. They worship the Pole-Star and a star in the constellation of the Ram. Like the Jews, they pray three times a day, at sunrise, at midday and at sunset. They have priests and priestesses. Doughty p. 281 mentions a patriarch of all the Şulahe. The priestesses enjoy special reverence and according to Curtiss, p. 63, 268, are called fekira (female anchorites). They heal the sick by the laying on of hands. It is still an open question whether the Şulahe may not still be crypto-Christians. Old Semitic ideas are also apparent in their conception of sacrifice (Curtiss, p. 37, 107). Peyer, p. 59—56 in his account of the Şulahe describes their festivities and dances, the morals of their women, marriage, divorce, funeral customs etc., which cannot be gone into here for lack of space. But it may just be mentioned that they tolerate polygamy, although it is rare among them on account of their poverty.

The alpha and omega of the study of this people, one of the most remarkable and most interesting of the peoples among the peoples of Eastern Asia is and will be, as already mentioned, the question of their ethnology. Peyer, p. 67, 70, 74 sq. thinks that till the question is definitely settled they must be regarded as Semites. For several important reasons it is very difficult to uphold this view at the present time. The rigid way in which they are cut off from the other Arabs of the peninsula, who would never marry a Şulahe woman and consider themselves as high as the heaviest among these pariahs, is in my opinion evidence of non-Arab origin. Occasional exceptions to this statement about mixed marriages are found but very rarely (Doughty, ii. 461; Curtiss, p. 34, 46). According to St. Eile (in a letter to me) they are undoubtedly pure-bred Arabs. Peyer might be right in so far as they, if they were not originally Semites, might have very much arabicised their mode of living by intermarriage, although only to a very small degree, for hundreds and perhaps thousands of years. The view held by Blunt and v. Oppenheim that the Şulahe are gipsies is rightly rejected by Peyer (p. 69—73). From what has been said above it will be seen that there is much more probability in the hypothesis that they might originally have been a fragment of some, perhaps of Hamitic, people which had become a way into Arabia; for we find Hamitic memories in their skin-dress with hood, and the parrying-shield and their living by hunting. As St. Eile claims to have found clans of the Şulahe in Palestine and even in the Sinai Peninsula, and on the frontiers of Palestine and Egypt, e.g. the Tarabin, al-Khantadir and Ma'ara, we cannot see why Hamitic tribes, reversing the direction of the Arab immigration into North Africa, should not have entered Arabia and Palestine by the old route through the Sinai peninsula. The last link in this chain of argument, historical tradition, is however lacking. Careful investigation of their somatic qualities etc. by the methods of ethnology might provide some compensation for this historical material which will barely be obtainable. In this connection, reference needs to Müller's essay (Die Agitzer und ihre lebendigen Nachfahren, Z. D. M. G., 1924, lixvii. p. 45—59) particularly to the Thunmah there mentioned, who according to Müller show in many respects a really striking similarity to the Şulahe. The present position of the Şulahe, their customs, etc. suggest in my opinion, that they are the victims of some great and catastrophic war or nations.

of Mazar in the mountains of Ḥarās to the West of the city of Ṣan'a'. They were quickly besieged by a large triumvirate, but with the utmost speed fortified the village in such a way that its capture was very difficult. 'Alī appears to have made very little material progress at the beginning of his career and the small kingdoms formed after the disruption of the Ziyādī dynasty more than held their own while the kingdom founded by the Abyssinian slave al-Nadjarī in the lowlands (Ṭihmā) of Yaman was always a serious obstacle to the Sulayhī becoming rulers of the whole of Yaman. 'Ali obtained the sovereignty over the Ṭihmā and the city of Ṣabīl in the year 453 (1061) by having al-Nadjarī poisoned by a slave girl whom he sent to him. This event probably (though the historians are silent as to the grounds) led the Zaidī Imām al-Kāsim b. 'Alī to send an army against 'Ali under the command of his son Dā'īzar. 'Ali however surprised this army and in the month of Sha'bān of the same year, he routed Dīzar's army and the latter is killed. After this he attacked the strongholds of the Zaidī Imām and took the castle of Yānū of mount Ḥādir. After defeating Ibn Abī Hājīdī near the village Sa'wī he proceeded to Ṣan'a' which he took in 455 (1063). After this he devoted his attention to the conquest of the city of Ṣabīl in the Ṭihmā over which he appointed in the following year his brother-in-law As'ad b. Sīhātī and one year later he took possession of 'Adan, where he allowed the two sons of the late ruler al-Karam, al-'Abbās and Mas'id to remain rulers as vassals, because they had assisted him in the conquest of Ṣabīl. They agreed to pay to his daughter-in-law Suyūṭī an annual tribute which amounted to approximately 100,000 dinars, which tribute was regularly paid till the death of 'Alī. How great the power of 'Alī had become by this time is proved by the fact that in the year 455 he was able to install as ruler of Mecca Abī Ḥājīm Muḥammad. He also sent from this time annually the covering of the Ka'ba and restored the treasures which had been carried to the Yaman by the Ḥasanīs. Some smaller principalities still remained to be subdued and in the year 460 (1068) when one Ibn Ṭārī who ruled in Zarbīb having invoked the help of the Abyssinians rebelled, he and his allies were defeated and this mountainous district was conquered. After this event 'Alī returned to Ṣan'a' which he did not leave for the next twelve years. The various districts of Yaman were administered by trusty governors and he took the precaution of keeping in his entourage the princes whose dominions he had conquered, a system followed by the rulers of Yaman to this day.

In the year 473 the rulers of Mecca abandoned the mention of the Fāṭimid caliphs in the public prayers and returned to the mention of the 'Abbāsid caliphs of Bagdād and it was probably this which induced 'Alī to leave Ṣan'a' and proceed towards Mecca as if wishing to perform the pilgrimage. He took with him the princes whom he had with him at his capital, leaving his son al-Mukarram in charge of the capital. When they reached the district of al-Mahjūm in the Northern Ṭihmā he pitched his camp near a well named Umm al-Duhaim. While they were off their guard the camp was attacked by followers of Sa'īd, the son of al-Nadjarī, who murdered 'Alī and his brother 'Abd Allāh and consternation reigned throughout the camp. Sa'īd spared some of the princes who were with 'Alī, as hostages, but most of the army were massacred. Among the captured was the queen Asmā', daughter of Sīhātī and mother of king al-Mukarram, whom he took with him to the capital of his father, Zubayd, which now opened its gates to Sa'īd.

Asmā' was kept closely guarded by Sa'īd and it was not till the year 475 (1082/1083) that she was able to send her son a letter in which she stated that she was with child by Sa'īd. She wrote this to incite al-Mukarram to rescue her with all possible speed. The power of al-Mukarram had diminished considerably, because most of the vassal principalities had declared themselves independent like the rulers of 'Aden. He urged his followers at Ṣan'a' to avenge the honour of their tribe and king. They marched against Zubayd which was defended by 20,000 Abyssinians, while the army of al-Mukarram is stated to have numbered only 6,000. He himself took command of the centre while his brother-in-law As'ad b. Sīhātī and an uncle of the queen led the wings. After a fierce battle the city was taken by storm and al-Mukarram with two followers was the first to reach the place where his mother stood. He ordered the head of his father and uncle which had been put up on poles to be taken down and buried honourably. Then, after appointing his brother-in-law As'ad b. Sīhātī governor of the Ṭihmā, he departed with his mother to Ṣan'a'. Asmā' died in Ṣan'a' in 479 (1086) and in the same year al-Mukarram instituted a new coinage called Malikī Dinār which monetary standard remained in force for a long time afterwards. However the sons of al-Nadjarī, who had fled to the islands of the Red Sea returned to Zubayd in the same year, drove out As'ad and made themselves masters of the city and the Ṭihmā. Al-Mukarram retook the city and Sa'īd, the son of al-Nadjarī, was killed under the walls of the city in the year 481 (1088) while his brother al-Dāīyū, had gone with his wastes to India by the way of 'Adan. They remained there for six months only, then returned to Yaman and again gained possession of the city of Zubayd.

Al-Mukarram appears to have been an incapable ruler and we find the singular spectacle in Islamic history of a woman, his queen Suyūṭi, taking the most prominent part in the management of the affairs of State. She was born in 444 and was brought up under the care of the late queen Asmā'. She was married to al-Mukarram in 461 and bore him four children, two sons and two daughters. After the death of his mother, al-Mukarram gave himself up to wine and pleasures and handed the cares of the State to his wife who demanded from him full freedom of action. One of her first actions was that she left Sana'a and took up her residence at Uḥūb Dībāla, a place which had been founded by 'Abd Allāh b. Muḥammad al-Sulayhī, who was slain with king Ṣan'a' at al-Mahjūm, in the year 458. The capital of the country was henceforth transferred to Uḥūb Dībāla and a palace and chief mosque erected in which queen Suyūṭi was subsequently buried. It was due to her that the death of Sa'īd b. Nadjarī was brought about. Al-Mukarram died in 484 (1091) and having no surviving sons the office of Dīr was bequeathed by him upon Sana'a, son of 'Abd Allāh b. al-Muṣaffar b. 'Alī, the Sulayhī. He however
did not gain possession of Dhī Djjība where the queen Saiyida resigned with the consent of the nobles and populace. Saba' therefore first turned his attention to the conquest of the Thīmā and the city of Zabīd, but was attacked unaware by the troops of Dāsiṣṭah and barely escaped to his stronghold of Ta'kār with his life. He then corresponded with the Fātimid caliph al-Mustanjir and from him received a letter in which Saiyida was instructed to marry Saba'. This letter was conveyed to her to Dhī Djjība and after much hesitation she consented to the marriage and a dowry was fixed. Saba' came personally to her capital to contract the marriage, but her majesty and other causes prevented him from completing the marriage contract and after the first night he departed again to his residence without consummating the marriage.

After this the queen placed her reliance principally upon al-Mufaḍḍal, son of Abū 'l-Barakat to whom she had granted the castle of Ta'kār which lay on one of the highest mountains overlooking the Thīmā. There the treasures of the Sulāḥīs were stored and the queen was in the habit of making it a place of residence during summer, returning to Dhī Djjība for the winter. It was through Muḍaffal that she regained the revenues of 'Adan and a partial submission of the lowlands. In 504 (1110/1111) Muḍaffal laid siege to the city of Zabīd and his absence was used by men of the tribe of Khwālān to get possession of his fortress. Muḍaffal returned but died under the walls of the castle. Then the queen herself marched with her troops from Dhī Djjība and by a ruse again got possession of the fortress, in the following year (12th Rabī' I, 505). As the Khwālānīs however did not act with justice towards the inhabitants of the district she ordered 'Amr b. Urfūţta al-Djambī to drive them out. Though not actual ruler of the country the queen managed to exercise during the following years a kind of suzerainty over the various small principalities which had sprung up in all parts of the country till the arrival in Yaman in 513 (1119) of Ibn Naḍīb al-Dawla, who was sent as an emissary by the Fātimid caliph and who for the next six years waged war against the smaller principalities reducing them gradually to obedience. The queen having aged, he made in 519 the attempt to wrest the power from her and wished to place her in seclusion, but she received such strong support from the various princes of the country that he was forced to desist from his design. As Ibn Naḍīb al-Dawla began to intrigue in the Yaman in favour of the anti-caliph Nizār, he was arrested at the request of the caliph al-'Amir and sent in letters to 'Adan to be shipped back to Egypt and though the queen repented and was desirous to have him back, his keepers left. 'Adan by ship for Sawki (Suqīm) but the ship was wrecked on the voyage and all on board drowned. After the fall of Ibn Naḍīb al-Dawla the queen appointed one Ibrahim b. al-Ŷusin al-Ḥamīdī, but learning of the death of the caliph al-'Amir she replaced him by Saba' b. Abī Sa'dīd, the first ruler of the Zaurā'ī dynasty [q.v.] who were the successors of the Sulāḥīs until the conquest of the country by Tūrānīs. The queen survived for some years and died in the year 532 (1138) when the dynasty of the Sulāḥīs came to an end. Some of the princes held isolated fortresses and as late as 569 we find a prince 'Arwa, daughter of Abī b. Abī Allāh b. Muḥammad, in possession of the castle of Dhī Djjība.

It would be wrong to assume that the Sulāḥīs, except under the first ruler, were in possession of the whole of the Yemen. The Abyssinian dynasty of the Banū 'l-Naḍībīs was practically the whole time in possession of Zabīd and the lowlands, while 'Adan and other important points of the country were ruled partly and independently, partly in semi-independence by various smaller princes. The historians do not give many details about the Zaidī Imāms who had their headquarters in the town of Sa'da, but they too seem to have enjoyed unrestricted rule. Though the Sulāḥīs were the actual representatives of the Fātimid Shī'a caliphs of Egypt, there remained a large following of the Sunnī doctrines as is exemplified by the temporary seizure of the fortress of Ta'kār by the Shī'a tribesman of Khwālān. The chief historian of the dynasty, 'Umār, is unfortunately far from lucid in his account, Wafayāt al-'Ayān, and the later chroniclers follow mostly in his footsteps. The account given by Ibn Khaldūn is as so often with him, very fragmentary and full of errors.

Bibliography: Yemen and its early History by 'Omāro al-Hakam, ed. Kay, London 1892; Ibn Khallīkān, Cairo 1370, i, 368; Eşāqī, Salīh, MS, Paris 2127; and the manuscripts enumerated by Kay in the Introduction of the History of 'Omāra. There is in the John Rylands Library in Manchester a large history of the Yemen by a Zaidī Imām which may throw further light upon this period but I have unfortunately not been able to make use of it.

SULAIM B. MANGUR. This powerful and energetic tribe belonged to the group of Ka'ās or Ka'ās-Allāh [q.v.]. It does not appear in Arab history until the middle of the 7th century A.D. Its lands lay along the frontiers of Najd and the Hijāz and were bordered on the north by the territory of Medina and on the south by that of Mecca. On the east its neighbours were its relations, the tribes of Ghatafa, Hawzain and Hillī. Down to the end of the Umayyad period the district of the Sulaimān area seems to have enjoyed very considerable prosperity. It was a succession of volcanic fārs, of mining centres and wooded hills and of oases which were intelligently exploited. Some of these were al-Radhāsī (famous for Abū Dhiyān [q.v.]) sojourn there, Farīn, Ma'din al-Bahr, So'ain, Sawāirīya, etc. The last two named still exist. The oasis of Sawāirīya stretched for a length of several days' journey with its banana and pomegranate-trees, and vines, not to speak of palm-groves. The Sulaimān had numerous horses, which in the desert is another sign of prosperity. They were on good terms with the Jews of Medina. In Mecca the Kurāsh financiers and business men early realised the necessity of cultivating the friendship of the Sulaimān, who possessed mineral resources and commanded the road to Medina as well as access to Najd and the Persian Gulf. Many Meccan families had joined them as their lords and jointly with the Sulaimān exploited the agricultural and mineral wealth of the country. Evidence of the latter is found in the richness of the name Ma'din (mine) in Sulaimān place-names. Their main mineral wealth lay in gold and silver. Tradition asserts that a Sulaimān "companion" used to send Muhammad a tithe of the precious metals extracted from his mine. In the mining district of Sulaimān we find in the caliphate of Abū Bakr a resumption of activity and the mines continued to be exploited under the Omayyads whose treasury derived an appreciable revenue from them. The Sulaimān held in reverence a stone or beryl called Ẓāmūr. Having common interests with Mecca, they were at first hostile to the Prophet, but when they saw that the triumph of Islam was assured, these politically-minded Bedouins professed it ostentatiously. In the year 8 (629/630) a strong Sulaimān contingent took part in the easy conquest of Mecca after the battle of Ḥumaym. Their chiefs after the victory claimed as the price of their assistance among others the poet Abū b. Mirdās [q.v.], son of the poetess al-Khansā' [q.v.].

During the troubles which marked the reign of the third caliph, the Sulaimān as a rule took the side of 'Uthmān. This attitude earned them the favour of the Caliph Mu'āwiyah I, who numbered among his best lieutenants the Sulaimān Abu 'l-Awar [q.v.]. It was part of the policy of the Omayyads to conciliate this proud tribe, settled along the route of the pilgrimages and in the neighbourhood of the holy cities, the rebellious populations of which they could keep a watch upon. This sentiment lasted until the death of Mu'āwiyah II. Along with the other Ka'ās, the Sulaimān refused to recognise his successor Marwān I and proclaimed for the anti-Caliph 'Abdallāh b. al-Zubair. The defeat of the Khāzim at Marjāl Rāḥi [q.v.] provoked the definite split between Yemen and Ka'ās and opened a war, so the death between these two sections of the Arab race. Two Sulaimāns, Umar b. al-Hābīb and Djiāhīf b. Ḥākaim, distinguished themselves in it for their ferocity rather than their valour. The poems of Abījad [q.v.] preserve the memory of this merciless feud.

After the Hijārā a part of the tribe settled in western Mesopotamia. In 109 (727) a hundred Sulaimān families were allowed to go to Egypt and they soon multiplied there. In 530 (744/45) the Sulaimān of Arabia along with their cousins of Hillī sacked the town of Medina and brought a bloody retribution upon their heads. In the time of the Fāṭimīds Caliphs of Egypt, they took the side of the Karmātians and attacked the pilgrim caravans. This was the beginning of a period of anarchy in which the Sulaimān part of Arabia suffered a great deal. In Egypt their Karmātian sympathies embittered them with the Caliph of Cairo. In 944 (1052) the Fāṭimīd Caliph al-Manṣūr, anxious to get rid of these troublesome Beduins, sent them with the Hillī to the conquest of North Africa where many of the tribes were connected with the Sulaimān. For a long time fighting in which they were engaged, cf. the article HILĪ. Sulaimān was born in the year 60 (769/760); his mother was Wallūda bint Abūl-Abbas b. Dijāz. After the death of 'Abd al-'Azīz b. Marwān [q.v.], his brother, the caliph 'Abd al-Malik, had homage paid to his sons al-Walid and Sulaimān as heirs-apparent. Towards the end of his reign, al-Walid wished to make an arrangement with al-Ḥājlīdān b. Ṭāṣuf [q.v.] and Khātib b. Muslim [q.v.] governor of Khordāz to exclude Sulaimān from the succession in favour of his own son 'Abd al-'Azīz, but he died before the necessary steps had been taken, so that Sulaimān succeeded him in Djuḏma'īn II, 96 (end of February 715) as Commander of the Faithful. When Sulaimān heard of his brother's death, he was in al-Raml, which he himself had founded when commanding the Muslim troops in Palestine and which was continued to be his headquarters. As soon as he had assumed the reins of government, the supporters of al-Ḥājlīdān, now dead, had to pay for the enmity between him and the new Caliph. In the very same year, Ummānī b. Ḥajāj b. al-Murrī, the governor of Medina was dismissed and the same fate threatened the devout Khutaba b. Muslim. Relying on the fidelity of his troops, he tried to persuade them to rise against Sulaimān; but the daring plan came to nothing and Khutaba was surprised and killed. Yāfar b. al-Mahallāb
SULAIMÂN B. AL-'ASH'AL. [See 'Abd Dawûd.]

SULAIMÂN B. DAWût, the biblical King Solomon, is an outstanding personality in Muhammadan legends. There were, as in Arab histories recount, four great world-movers, two of whom were infidels, Nimrod and Nebuchadnezzar; and two of whom were believers, Alexander the Great and Solomon. Of these the last was the most resplendent figure. Special emphasis was placed on his wonderful powers of magic and divination. The most puzzling riddles and the most abstruse subjects were within his ken. Perspicacity and discernment dwelt in his eye; wisdom and justice were gravestone on his forehead. His knowledge was deeper than the Jordan Valley. In the Qur'an itself he is frequently mentioned, and along with Alexander enjoys the distinction of being designated a true Apostle of Allah, a divine messenger and prototype of Muhammad. The Qur'anic passages tell how at an early age he even surpassed his father David in skilful administration of justice (xxi. 78, 79). And when David died Solomon was chosen from amongst the other sons as successor (xxvii. 16). He had admirable endowments. God had granted him esoteric knowledge. He was acquainted with the speech of birds and animals (xxvii. 16, 19), a tradition based on I Kings iv. 32. A strong wind was subjected to him (xxi. 81; xxxviii. 36). It blew in the morning for a month, and in the evening for a month, while a fountain of molten brass was made to flow for his benefit (xxxiv. 12). At his command were legions of satans to do whatever he wished. They were employed, for example, in diving for pearls (xxxi. 52); and (xxxviii. 36). The djinn were forced to work his will. If they disobeyed they were threatened with the pains of hell (xxxiv. 12). They constructed for him shrines and statues and costly vessels (ibid. 13). His armies were recruited from men and djinn and birds. The hoopoe (hujâhab) was the first to bring him tidings of the kingdom of Saba and of its illustrious queen, Bilqis (q. v.). Solomon, as a prophet, corresponded with her and summoned her to Islam. And after an exhibition of his strength and wisdom, she submitted (xxvii. 20–44). The devils frequently sought to convict him of infidelity, but in vain (ii. 101). On a certain occasion he failed in the observance of his religious duties, and that was when his admiration for his stud of horses led him to forget his prayers. In atonement he sacrificed the birds, cutting their legs and necks (xxxviii. 31–33). For a time he seems to have lapsed into idolatry. As a punishment he lost his kingdom, his throne being occupied by some one in his own likeness. When he had asked forgiveness, he was restored to his place, and promised divine favour in Paradise (xxxviii. 34, 35, 40). When he died he was resting on his staff, and no one knew of his death until a worm bored its way through the prop and the body collapsed. Then the djinn were released from their labours (xxxiv. 14).

Later legendary lore has magnified all this material, which is chiefly Rabbinic in origin. Solomon's control over the djinn and his use of them in his building operations are derived from the Midrash on Ecclesiastes, ii. 8. His kingdom is even made universal, perhaps after the analogy of that of the 40 (or 72) kings of the Pre-Adamite djinnen, who were each named Solomon (Lane, Arabian Nights, Introd., note 21; d'Herboulot,

(K. V. Zettersten)
Bibliothèque Orientale, v. 372). His renowned wisdom included "the wisdom" for which Egypt was famous, i.e. occult science. Pythagoras is said to have received his knowledge from Solomon in Egypt (Šuyūṭī, Ḥaṣīm al-Mubādara fi Ḥakīmāt i. 27). Solomon is said to have been the pupil of Mambres the Egyptian Theurgist (G. R. S. Mead, Three Great Orientals, ii. 285, note). Hence his reputation in tales as a magician. This magic power of his was effected by means of a talismanic ring engraved with "the most great name" of God. Permission to use this was also vouchsafed to his wars, Šašā D. Barḥiyya (q.v.), who transported the throne of Biliaks from Sheba to Jerusalem in the twining of an eye. Solomon was in the habit, when he performed his ablutions, of laying aside this ring from his finger, and entrusting it to one of his wives, Amina, Šāhīr, one of the Satanic spirits, assumed the form of the king, parodied the magic seal, and for forty days ruled, while Solomon was forced to wander as an outcast. The demon, however, lost the ring in the sea, whence Solomon recovered it when he cut open a fish which had swallowed it. Thus he regained his throne. It is said he was punished in this way, because of the idolatry of the royal consort, Ḏarānda, the daughter of the king of the Sidonians. Some say the counterfeit body that occupied his throne was his son who died. The 13th of the month is regarded as unlucky because on that day Solomon was exiled by God. The Persian Nawrūz festival and its customs are said to date from the restoration of Solomon to his kingdom (al-Bīrūnī, Chronology, ed. Schau, p. 199). Because he boasted that 1,000 wives would bear him 1,000 warriors, he had one son only who was misshapen, with one hand, one eye, one ear, and one foot. Then in humility he prayed to God, and his son was made whole. In his capacity of warrior, he conquered many kingdoms (Baidawī, v. 19).

Some of the marvellous works of Solomon may be briefly mentioned. Shortly after his accession he was in a valley between Hebron and Jerusalem, when he received his authority over winds, waters, demons and animals from the four guardian angels in charge of these spheres. Each one gave him a jewel which he placed in a ring composed partly of brass and iron. With the brass he sealed his orders for the good qīnūm, while with the iron he sealed his orders for the evil qīnūm. The seal is said to have held a mandrake (Frazer, Folk-Lore in the Old Testament, ii. 390). Solomon's seal (Khaṭūm Sulaymān) is a common charm, in the form of a six-pointed star, often inscribed on drinking cups. The Table of Solomon (Muṣūdat Sulaymān) and other marvellous relics, according to legend, found their way to Spain where they were discovered by Ṭārīk at the capture of Toledo. They had been taken from Jerusalem as booty (Ibn al-Athir, Annalles du Maghreb, ed. Fagnan, p. 37 sqq.; Ṭabari, Chronique, ed. Zobenbarg, iv. 183; Dory, Recherches, i. 52). The Table was made of green beryl, had 360 legs, and was inlaid with pearls and rubies. There was also a magic mirror which revealed all places in the world (Carr de Vaux, Abrégé des Merveilles, p. 122).

The blocks of stone for the building of the Temple were hewn by means of the miraculous pebble-Samur (Šaṃur) which the demon Ṣāḥīr procured from the sea-eagle. Solomon sheltered himself from the heat of the sun under a canopy composed of all the birds of the air. A magic carpet of green silk for aerial transportation was woven for him. On this he could leave Syria with all his equipment in the morning, and reach Afghanistan by evening. Untold wealth of precious stones and gold and silver was accumulated with the help of the servile qīnūm. They also assisted him in erecting palaces, fortresses, baths and reservoirs. Various relics of these operations are pointed out in Palestine, Arabia and elsewhere (Revue des traditions populaires, ix. 190; Naṣīr-i Khosrow, Seyf-Šāhīn, p. 56, 76, 84, 85). He had 1,000 glass-roofed houses containing 300 couches and 700 wives (Thaṭlabi, Kiṣāt, p. 204). Besides the building of the Temple, during which he outwitted the qīnūm, the Farrār Mosque is likewise claimed as his work (Mīrkhōnd, Rūsafa al-Saʿfa, ii. i. 76). He is even credited with founding a mosque in Alexandria (Šuyūṭī, op. cit., i. 37). Part of his leisure time was spent in acquiring the art of basket-weaving, that he might have some means of earning a livelihood if the need arose (Mīrkhōnd, op. cit., p. 79). The tradition seems Rabbinic in character. His throne was constructed of pure gold. The whole natural world was so completely under his sway that on one occasion the sun stood still to enable him to say his evening prayers. The evil qīnūm he imprisoned in vessels of lead (cf. Zechariah, v. 8). Ṭāhārīb, on the Red Sea, was assigned by him as a place of incarceration for the demons (Naṣīr-i Khosrow, op. cit., p. 297). His knowledge of the speech of the animal world enabled him at times to display his clemency. Once he turned aside his armed hosts in order to avoid smashing the eggs of a bird; while on another occasion, he had compassion on a colony of ants (Bīrūnī, op. cit., p. 199; Sura xxvii. 17, 18).

A claim is put forward that he invented the Arabic and Syriac scripts, and that he was the author of many Arabic treatises on magic. He is compared with Dżḥakhir, and there were, undoubtedly, Iranian influences at work in the Solomon Sage. His personal appearance is variously given, e.g. as "a large-headed man riding on a horse" (Mīrkhōnd, op. cit., ii. i. 83), and as being "fair, well-built, of lastrous beauty, with a plentiful supply of hair, and clothed in white garments" (Thaṭlabi, op. cit., p. 254). When he died he was aged 53, having reigned for forty years. The exact location of his tomb is uncertain. Some place it in Jerusalem, in the Kabhāt al-Šahīr; others, near the Sea of Tiberias. The Prophet said (according to Ṭabari, Chronique, i. 66) it was "in the midst of the sea... in a palace excavated in a rock. This palace contains a throne on which Solomon is seated with the royal ring on his finger appearing as though he were alive, protected by twelve guardians, night and day. No one hath arrived at his tomb except two persons, Ṭāfān and Ḫāliya." (Lam, op. cit., xx. 96; see Mīrkhōnd, op. cit., p. 102-103). The tomb is placed also in the Andaman Islands (Les Merveilles de l'Inde, p. 154). Solomon has found his way into Malayan folk-lore. Poultry use his name for nipping pigeons (Frazer, Golden Bough, ii. 418; Folk-Lore in the Old Test., ii. 476 sq.). Regarding Solomon and the EvilEye, see W. B. Stevenson in Studia Semitica et Orientallia, Glasgow 1920, p. 104 sq., and the references therein. The Ethiopic Legends of Solomon
and Mekedik, Queen of 'Aẓb, may be found in Bezdol, Kobra Negast, and in Wallis Budge, The Queen of Sheba and her only Son Menyulik (see art. antiq.). Examples of the Solomonic riddles may be seen in Th'labi, op. cit., p. 202; Jacques de Vlères, P. P. T. 3, p. 17.

**SULAIMAN b. KUTULUMSASI, ancestor of the Saldjiks in Asia Minor.** After Kutulumsasi had fallen in 456 (1065/1064), his son Sulaiman became chief of the Saldjiks of Asia Minor and in a few years succeeded in founding an independent kingdom. Malik Shah who had succeeded his father Alp Arslan in 465 (1074) entrusted him with the conduct of the war against the Byzantines and he was given the supreme command of all the Saldjik troops in Asia Minor. Here a considerable part of the poor parasity in Asia Minor had come completely under the power of the rich landowners and many estates were worked by slaves. Sulaiman declared them freemen on payment of a certain tax and he thereby won their active sympathy while misfortune followed the Byzantines. Their general Isac Commens was weakened by a mutiny of his Norman mercenaries and then defeated and captured by the Saldjiks near Caesarea. When his successor Caesar Ducas tried to deal with the Norman mutineers, they took for Nicolao. They then won him over to their side and persuaded him to rebel at their head against his nephew, the Emperor Michael VII. There was nothing left for the latter but to appeal for assistance to the Saldjiks and in 1074 (466/467) he concluded a treaty, approved by Malik Shah, with Sulaiman, who promised to send forces to assist the Emperor and in return was given the Byzantine provinces at that time in Saldjik occupation. Ducas was captured by the Saldjik auxiliaries; but a few years later Michael abducted and retired to a monastery. In 1079 (471/472) Niccephoros Malisemos rebelled. To strengthen his position, he made an alliance with Sulaiman and concluded a treaty with him by the terms of which Sulaiman, in return for troops, was to receive the half of any towns and provinces taken in the war against the Emperor Niccephoros III. Cysicus and Nicsea fell to the Saldjiks at the beginning of the year 1081 (473). Sulaiman chose the latter as his residence. In 1084 (1085), he also took the city of Anfaktiya. The Greek governor, Philaretos, who paid tribute to the Ukullid Muslim b. Kuraigh, had gone on a journey and in his absence his son, whom he had thrown into prison, came to an arrangement with his deputy and opened the city gates to the Saldjiks. Sulaiman then came into conflict with Muslim about the payment of tribute and there was a certain amount of raiding on either side. Finally in Safar 478 (June 1085) there was a battle near Antioch in which Muslim fell. Sulaiman then advanced on Aleppo and laid siege to it but had to return after a few weeks without attaining any success. After some time he again demanded that the governor there, Ibn al-Hutat, took 'Abbad to surrender the town to him; but the latter delayed replying, under the pretext that he wanted to get Malik Shah's approval, until the lord of Damascus Tutush b. Alp Arslan and the Emir Orto b. Akasbe were able to come up. When Sulaiman met them, his troops took to flight and he himself perished (479 = 1086). Whether he was slain by the enemy, or as some say, killed himself with his dagger, is uncertain.

**SULAIMAN b. MIHR, [See Al-Masli].**

**SULAIMAN b. ŠUAD AL-KHAUCHI, a Shī'ī.** He was originally called Vasid; but when he adopted Islam he received from the Prophet the name Sulaiman. He enjoyed great prestige in his tribe and when the Muslims began to settle in Kufa, Sulaiman also migrated thither. In the battle of the Camel and at Siffin, he fought on the side of 'Alī. After the death of Mu'awiya in Rashīq 60 (April 680) he showed himself again one of the most ardent supporters of Ḥusain (q. v.) but he did not maintain his first enthusiasm. He was one of those who invited Ḥusain to come to Kufa to lend them against the Umayyads but when Ḥusain was approaching the town in answer to the invitation, Sulaiman did nothing to help him. After Ḥusain had fallen at Kerbela on 10th Muharram 61 (Oct. 10, 680) the Kufans who had enticed him from Mecca regretted their cowardice and inactivity and considered themselves sinners, whose guilt could only be wiped out by avenging his murder so that they received the name al-Tawleṣa núm the penitents. After some time they organised themselves and chose Sulaiman as their commander-in-chief. None of the party was under 60 years of age; they had not agreed upon any definite measures and "vengence for Ḥusain" was simply a rather obscure aim which they never clearly visualised. Sulaiman wrote to Sa'd b. Ḥudhayfa b. al-Yamān in al-Madī'in and al-Muthanna b. Mūktarib b. al-'Abdī in Baṣra and secured their cooperation. But as long as Vasid was alive however, they worked in secrecy; it was only after his death in
Rabi' II, 64 (Nov. 683) that the movement sought wider scope. But when Sulaimän’s followers wanted to displace the Kufi Amr b. Huraiṯ al-Mukhtar b. Ziyād who lived in Basra, Sulaimän refused to allow it and advised caution. Nevertheless Amr b. Huraiṯ was expelled by the Kufans. They then paid homage to Abū Allāh b. al-Zubair as Caliph, whereupon he appointed Abū Allāh b. Yazīd al-Amārī as governor of Kufa. In Ramaḍān 64 (May 684), the latter arrived in Kufa, but al-Mukhtar b. Abī Ubaid [q.v.] had already entered the town a few days earlier. The latter wished to expel Sulaimān and he was suspected by the Shīʾa on account of his inactivity. Many left Sulaimān and joined al-Mukhtar. When Sulaimān finally came out openly and asked his followers to take the field against Abū Ubaid Allāh b. Ziyād, who was in Syria with a large army, the governor Abū Allāh b. Yazīd placed no obstacles in his way and even promised to support the Shīʾa; but no active cooperation took place between Sulaimān and the governor. The Shīʾa proved less enthusiastic than Sulaimān had hoped. When he appeared on 5th Rabi' II, 65 (Nov. 15, 684), in al-Nakhaʾ near Kufa, instead of the 16,000 men who had promised to follow him there were only 4,000. Messengers were at once sent to all the Shīʾa who had promised their help and gradually reinforcements came in. On the 5th Rabi' II (19 Nov.) they set out. They spent 24 hours in Karbalāʾ at Ḥusain’s tomb, confessing their guilt and giving evidence of their penitence. They then continued their march. Reaching Karbalaʾ they were supplied with provisions by Zufar b. al-Hāthic al-Kilāsit, who was in command there and obtained information regarding the movements of Ubaid Allāh, who was in al-Kaʾkā. Sulaimān then continued his march till he met the enemy at Arīn al-Wardā under the command of Ḥusain b. Numair. The battle began on 22nd Dhuʾ al-Ḥijja I, 65 (Jan. 4, 685) and lasted three days. Sulaimān fell on the third day; at the age of 93 and the fiercely contested battle ended in the complete rout of the Šīʾa. Their supporters from al-Madāʾin and Basra, who did not arrive in time, had to go back without striking a blow for the cause.

(S. V. Zettersten)

SULAIMĀN b. WABI b. SAʿID b. ABī AYĪN, an Abhāsād vizier, belonged to a family which had originally been Christian but had later gone over to Islam. His father had been in the service of the Barmecide Liʿfar b. Yahyā [q.v.] and later in that of ʿAbd al-Faqīr b. Sahl [q.v.]. On the latter’s death he was given the governorship of Fāra and Kirman. At the age of 14 Sulaimān became secretary to the Caliph al-Muʿtaḍid; he later entered the service of the generals Ṣaḥḥ and Aḥsān, the former of whom held several important offices in the reign of al-Muṭawakkil but finally was sacrificed to the cruelty of the Caliph. We find Sulaimān mentioned as vizier as early as al-Muḥtaḍid (255–266 = 869–870) and in Dhu l-Maʿṣūm 263 (Aug. 877) al-Muṭamid gave him the same office. But he did not hold this office long, being dismissed in Dhu l-ʿAṣaʾ 269 (Aug. 878). Sulaimān died in prison in Saʿfar 272 (Aug. 885); according to another statement he died in the preceding year.

2. The son of the preceding, ʿUbaid Allāh b. SULAIMĀN, who also began his career in the public service as a secretary, was promoted to be vizier of the Caliph al-Muʿtaḍid in Saʿfar 278 (June 891) and filled the office in the reign of al-Muṣṭaḥfiz also. He died in 288 (900–901).

3. Sulaimān’s grandson Abū ʿI-Husayn al-Kāsim, succeeded his father ʿUbaid Allāh as vizier and took the title of Wali al-Dawla, “administrator of the kingdom”. Even before the death of al-Muṣṭaḥfiz in 289 (902) al-Kāsim was conspiring against his son, the heir-apparent al-Muqtasid, and on the latter’s accession he had the governor of Fāra, a freedman named Badr, put to death because he had been a confidant of his and he was afraid he might betray him. Al-Kāsim died in 291 (903–904).

SULAIMĀN I, the tenth and the greatest of the Ottoman Sultan, reigned from 1520 to 1566. The Turks call him ʿAḡaʾuni SULAIN, and western authors SOLIMAN the Magnificent. Some Western historians like Lechevalier and more recently, Jorga call him Sulaimān II, the first Sultan having been, according to them, the son of Baysard I who lived at Adrianople. In Turkey however the opinion that Sulaimān the Legislator is the first of the name has prevailed; he is always called Sulaimān ʿAḡaʾuni and the ten ʿA.sha of the four sultans of the Sultanate mosque signify, according to the ʿA.sha al-Qaram (p. 16) that Sulaimān is the tenth Sultan. A very special symbolic significance has even been credited to the number ten in the life of the Sultan (G.O.K., ii. 4) and the name Sulaimān was also regarded as a national and religious symbol; in the documents issued by Sulaimān we frequently find allusion to passages in the Kūrʾān where the royal prophet Solomon (Sulaimān) is mentioned.

Sulaimān was born in 900 (1494/1495), the son of Sulaimān Sahib and ʿAsha Sulaimān (d. 940 = 1533, cf. Sulaimān Ṣawāri, i. 49), daughter of Mengli Giray, Khan of the Crimea, celebrated for her beauty. In the reign of his grandfather Baysard, Sulaimān had held the sanjak of Kaffa and under
Salim I he had lived in Maghānā as governor, without playing any important part in the state. No doubt therefore had any idea what to expect of the new sovereign when he arrived in the capital on Sept. 30, 1520, eight days after his father's death.

The most striking feature in the career of the Sultan, by nature peace-loving according to the Venetian reports, is that he took part in person in thirteen great campaigns — ten in Europe and three in Asia — which were so many stages in the extension of the power and territory of the Ottoman empire: so that their enumeration coincides for the most part with the very important military history of the empire in his reign. The first campaign was that of Belgrade which was provoked by the ill-treatment inflicted by the king of Hungary on the Turkish envoys who had come to demand the payment of tribute by him. The capture of Belgrade by the grand vizier Piri Paša (Aug. 29, 1521) was preceded by the taking of Szolnok (Turkish: Bőgdulâen) on the Danube and was accompanied by the devastation of Syrmia by the Turkish troops. On Aug. 30 the Sultan made his entry into the conquered city which received a garrison under a Sandjak-beg. In the following year took place the conquest of the island of Rhodes from the Knights of St. John, who had long been a menace to Ottoman power because they supported the Christian corsairs. Sulaimān left Constantinople on June 15, 1522 and crossed Asia Minor to the port of Marmara; the fleet sailed under the vizier Mustafa Paša and was reinforced by an Egyptian contingent sent by Khair Bey of Egypt. The siege inflicted great hardships on the Turkish troops and towards the end of October the fleet had to take refuge in Marmara. But in December the Grand Master of the Order, Villiers de l'Isle Adam (called by the Turks Migâl Masûlû, from the Greek Megalomastros), capitulated and soon afterwards left the island. A son of Djem, brother of Kızâ, was in the Christian army was killed. Shortly after the return of the Sultan to Constantinople, he deposed the grand vizier Piri Paša and replaced him by his favourite İbrahim Paša (q.v.) (June 27, 1524), who remained the faithful companion of Sulaimān on all his campaigns until his sudden execution in 1536. The bond between the two was strengthened in 1524 by İbrahim's marriage to the Sultan's sister. In 1525 new military preparations were made, without their object being revealed; negotiations with Poland and France, guerilla warfare in Croatia, Slavonia and Dalmatia (especially the exploits of the Paša of Bosnia who tried in vain to take the town of Jajce) and a mutiny of the Janissaries of the capital had been further indications of a great military enterprise. In April 1526 Sulaimān set out with İbrahim; they arrived at Belgrade on July 15, while a fleet had also gone by the Danube. On July 30, Ibrahim took Peterwardein (in Turkish: Varadin). The army then crossed the Drave at Essek and met the Hungarian army, weakened by the number and quarrels of its commanders at Mohács. Here on August 28 was fought the battle which cost Louis of Hungary his life and destroyed the power of Hungary to resist further, so that it was henceforth open to Turkish invasion. The Sultan and Ibrahim immediately resumed their advance and on Sept. 11 occupied the capital Buda (in Turkish: Budin or Budun) which became a prey to the flames in spite of orders to the contrary. This occupation of the capital was however only temporary. The Turkish army crossed the Danube and returned by Seegedin, laying waste the country and crushing the resistance offered by several forces that met them. In November Sulaimān was back in Constantinople, where he had to deal with trouble in Asia Minor. For the two and half years that elapsed before the second Hungarian campaign, the war continued in Bosnia, Dalmatia and Slavonia; at the same time broke out the rivalry between Ferdinand the "Roman King" and John Zápolya, the voivod of Transylvania (Erdei Rûn) for the Hungarian crown. Both sent an ambassador to Constantinople. Zápolya's envoy was able to secure the goodwill of the Sultan who set out in May 1529 for his new campaign, the Vienna campaign. On Aug. 10 they reached Mohács, where Zápolya, recognised by Sulaimān as king of Hungary (Királyánca), came to pay homage to his suzerain. İbrahim Paša was now appointed ser-asker and the Sultan set out to install his new vassal in his capital which was occupied by Ferdinand's troops. On Sept. 8 Buda capitulated and Sulaimān had Zápolya installed as king of Hungary without himself being present at the ceremony. On Sept. 27, the Turkish army began the famous siege of Vienna but was forced to raise the siege on Oct. 15 and to begin to retreat, not without ravaging the environs of the town. In the two years following, the war with Austria continued and the various embassies from king Ferdinand had no success. In 1532, Sulaimān had undertaken what the Turkish sources call "the German campaign against the king of Spain" i.e. Charles V, who claimed the "țarâh-bîriurile" (Chronicle of Rastam Paša). The most remarkable event of this campaign was the taking of Güns (Turkish: Kösek) after a long siege (Aug. 21). During the next few months Sulaimān was in Styria, where his armies ravaged the country without meeting an army of the emperor. The Sultan's return to Constantinople in November was soon followed by an armistice with Austria, concluded on Jan. 14, 1533. Sulaiman's sixth campaign was directed against Persia. It was caused by the Turkish claims to possession of Bitlis (the governor of which, Ulama, had abandoned the Turks) and Baghdād. The grand vizier İbrahim occupied Tabriz in July 1534 while the Sultan himself entered it in September. From Tabriz the army set out for Baghdād by way of Hamadan without Shah Tahmâsp offering any resistance. Baghdād was left defenceless; İbrahim occupied the town and a few days later Sulaimān made his ceremonial entry into it on Nov. 30, 1534. During the four months that he spent there he built the mausoleum of Abû Hanifa and the sources mention a large number of holy places which the Sultan visited at Baghdād, Nishàf, Kāfa and Kerbēla. As the Persians had regained the greater part of the Turkish conquests, Sulaimān set out for Persia again, this time by Arbil and Marāḡa to Tabriz. The Shah continued to avoid a battle and the Turks were able to take the strongholds of Ardâbâlād and İrak-i A'dam. The only fighting was during the return march when the rearguard had occasionally to fight the Persians, for example at Wān. On Jan. 17, 1536, the Sultan was back in Constantinople and two months later (March 15)
there took place the disgrace and death of İbrahim, grand vizier and intimate favourite of the Sultan and up till then this companion on all his campaigns. His place was taken by Ayâş Paşa. In 1537 the Pâdişâh accompanied the expedition against Corfu but stayed himself at Walona. The Turks were forced to raise the siege of the citadel of the island which was defended by the Venetians on Sept. 7. This campaign is specially remembered for the raids made on the coast of Apulia led by Lüfti Paşa [g. v.]. In the following year a rebellion by the voivod of Moldavia forced the Sultan to military intervention which he also took part; it ended in the capture of the capital Suceava; after the installation of a new voivod and a new delimitation of his frontiers Sulaimân returned to Adrianople. The two following campaigns, those of 1541 and 1543, took him again into Hungary where the war had broken out again after the death of Zâpolya in 1540.

The widow of the latter was incapable of defending the rights of her infant son against the claims of Ferdinand of Austria. Sulaimân arriving before Buda — which had just been besieged in vain by the Hungarian Peter Ferenci — in August 1541, annexed it along with the kingdom of Zâpolya with the exception of Transylvania which was to be left to the queen dowager Isabella; henceforth Buda was the residence of a beglerbeg and Turkish administration was introduced into Hungary. Ferdinand's claims were of no avail and his attempt to take Pest in 1542 also failed. Sulaimân's campaign in 1543 brought a number of conquests, Valplo, Sihlós, Fünfkirchen (Pécs) and other towns. The Pâdişâh then went to Buda, after which Gran (Esztergom, in Turkish Ustârugân) and Stuhlweissenberg (Ustrin-Belgrad) were taken in September. The Sultan returned to Buda, where he crossed the Danube and returned to Constantinople on Nov. 11. This last campaign was followed by a pause of five years in the military activity of Sulaimân. The grand vizier Sulaimân Paşa, who had succeeded Lüfti Paşa in 1544, who had in turn succeeded Ayâş Paşa (d. 1539), was displaced and replaced by Rustam Paşa who had married Mihrâb Mihâ, daughter of Sulaimân and Khurram Sulţân; it is from this time that harem influence begins to be active in politics. As a result of this, relations with Persia became more actively hostile, while the Hungarian war was terminated by a treaty making a seven years' truce with Ferdinand of Austria, who promised to pay an annual tribute of 30,000 ducats. The campaign of 1548-49 of Sulaimân against Persia was provoked by Elânî Mirezâ, brother of Shah Tahmasp, a refugee at the Ottoman court. The Sultan went to Erzerum and then to Tabriz without the Sâbit offering any resistance. But circumstances forced the Turkish army to retire to Diyar Bakr, while the Persian army ravaged the frontier towns. Sulaimân spent the winter at Aleppo and passed the following year in inactivity also; the vizier A Bu made some conquests in Georgia. In December Sulaimân was back in Constantinople. The following years were occupied with military operations provoked by Austrian intervention in Transylvania, the only part of Hungary which so far had never seen a Turkish army. The Sultan took no part in these operations, the control of which was taken by Şokollu Paşa [g. v.], beglerbeg of Rum and future grand vizier (taking of Temesvár in 1551). Sulaimân had not intended to take part in the new Persian campaign of 1553 either; Rustam Paşa had been appointed Serasker for it. But the rumour which reached him — through the intermediary of Rustam — of a rebellion said to have been organised by prince Muşafâr, the governor of Amsa, decided the Sultan to rejoin the army in person. He set out on Aug. 18, 1553, accompanied by prince Salim. At Ereğli in Amsa Sulaimân took place the sudden and tragic execution of a prince Mustafa who had come to greet his father (Oct. 16). One result of this act of violence, inspired by harem intrigues, was the temporary replacement of Rustam Paşa by Ahmad Paşa (until his execution on Sept. 28, 1555). Military operations on a large scale did not begin till 1554 and resulted in the destruction of Naqheh-ân, Eriwa and Karâ Bagh (in July). In September negotiations for peace began at Erzerûm but it was not till May 29, 1555 that a treaty — the first Persian peace — was concluded at Amsa. In this last town the Sultan received the famous Austrian embassy under Busbecq which could only obtain an armistice. In August, Sulaimân returned to Constantinople. Ten years passed before his thirteenth and last campaign, that of Szigeth. In spite of the uninterrupted negotiations of Busbecq, the war in Austria went on because the Turks insisted on their claims, notably for recognition by the West in vain; in 1566 the grand vizier Rustam proved a particularly difficult person to negotiate with. It was only after his death (1561), that peace was concluded by his more amenable successor 'Ali Paşa in 1562. Austria had to abandon Transylvania and after the death of Ferdinand (1562) this peace was renewed by Maximilian. The last years of Sulaimân's life were darkened by the death of Khurram Sulţân (April 1558) and by the war between the princes Salim and Bayazid, which ended in the execution of the latter (cf. Sélim II). In 1565 hostilities with Austria were resumed and the Christians gained some successes. This gave the aged Sulţân a reason for taking the field once more at the head of his armies. He left Constantinople on May 15, 1566, with the new grand vizier Mehmèd Şôkolli (appointed in June 1565 after the death of 'Ali). At Zemlin, John Sigismund, son of Zâpolya, received with remarkable honours. Although the original plan had been to attack Erzû, the information he received decided the Sultan to lay siege to Szigeth (Signetvar) defended by Nicholas Zrinyi. The siege began on Aug. 2 and on Sept. 8 the town fell before the Turkish assault but the great Sulţân, who had died on the night of Sept. 5/6, did not live to witness its capture. The death of Sulaimân was kept secret by Şôkolli for three weeks to prevent trouble in the army and to give Sûlim II time to gain possession of the throne. Salim met the army near Belgrad; the body of Sulaimân (his heart was buried in the mausoleum near Szigeth, cf. Jacob, Aus Ungarns Türkensait, p. 24) was sent in advance of the army to Constantinople, where it was buried in his hürdl in the Sulaimânîya mosque.

This résumé of the campaigns of Sulaimân I reveals the extraordinary energy of this, the greatest, Sultan of the Ottoman Empire but does not give a complete picture of his personality. Unfortunately the sources do not supply us with sufficient data to reconstruct this personality. The Turkish sources
rarely contain anything but exaggerated praises, while the European sources, although more critical, are less well informed and often biased. There is however no lack of brief personal touches, such as the short but fervid prayer which Sulaimān uttered before the battle of Mohacs (G. O. R. ii. 59) the humility with which he assisted the bearers of the bier of Gül Baba after the occupation of Buda in 1526 (Evelyn, vi. 248). His piety is shown by the eight copies of the Kur'ān copied by Sulaimān himself and kept in the Salāmānyas, while his Muslim orthodoxy is evident from several ghāzal in the Dīwān composed by him. The chroniclers further describe him as an ardent lover of the chase. In its case Sulaimān must have been a born ruler, of remarkable dignity, a striking figure in the midst of his brilliant court, on such occasions of ceremony as the festivals of the circumcision of his sons as in 1530 or the marriages of the princesses, his sisters. His great affections were in his youth for İbrahim Paşa and for his favourite Khurram Sultan [q.v.], whose influence made itself felt in politics, but it was not the latter's children that Sulaimān loved best (the princes Sultan, Bayazid, and the princess Mühr-numâ). It was rather prince Muhammed, who accompanied him on several campaigns and of whose death he learned (Nov. 6, 1543) on his return from the campaign, who was his favourite son. In memory of this prince he built the Şah-şadet Džami in Stambul (financed in 1553). In memory of his prince Djalālzad [d. in 1553 soon after the execution of his brother Mustafa also buried in the Şah-şadet Džami] another mosque was built on the banks of the Top-khāne.

In the history of the Ottoman empire the name of Sulaimān is greater than that of any of the other sultans; the name marks an epoch, the epoch during which the empire became an undisputed power, in the Christian world as well as that of Islam, and one which left its stamp upon later political and cultural developments. The part played by Sulaimān himself in this development is difficult to determine; we may note however that during his reign Turkey possessed a large number of able and remarkable men, like the Kapudan Paşa Khair al-Din [q.v.] Barbarossa, the muhafiz Kemāl Paşa-Şahe [q.v.], the architect Sinān [q.v.] and many others, but that much of them seems to have played their part in his own proper sphere. There seems to have been a lack of great personalities in the immediate entourage of the Sultan, with the possible exception of the grand-virer İbrahim Paşa.

On the other hand, the development of the Ottoman empire under Sulaimān may perhaps be largely explained by the internal political system of the state. The foundation of this development has been laid by earlier sultans but under Sulaimān the state institutions had been perfected to such a pitch that we may with justice speak of a system. Following the principle of his predecessors, Sulaimān elaborated this system by the promulgation of the Kānān [q.v.] which were later collected into the different Kānān-nīmes (cf. the Bibliography).

It is this legislative activity which has gained him the epithet Kānān. The Kānān dealt mainly with the organisation of the army and military feuds, the laws of landed property, the police and the feudal code; one of the principles of the "system" was the exploiting of the Christian element in the empire through the Dowkhirūn and conferring of high offices of state to renegades. This was not without influence on the cultural developments which were the result.

The elaboration of the new ideal of the Ottoman state was not realised, however, without a certain amount of opposition from representatives of the old order of things, in the newly acquired provinces as well as in Asia Minor. Among these demonstrations which broke out mainly at the beginning of the reign may be mentioned the last remnant of independence shown by the 1200 't-Kurşunghil, suppressed by Farhād Paşa in 1526, and the rising in 1527 in It Ili and the rebellion of Ka-landeroghil in the same year put down by İbrahim Paşa; the mutiny of the Janissaries in 1525 in Constantinople falls into the same category. In the provinces peace was broken in 1527 by Ghaşlī, governor of Syria, and in Egypt by the attempt to regain independence under Kânsî and later in 1524 under the governor Ahmâd Paşa. The government further had to intervene on several occasions in the dynastic troubles in the Crimean and in the principalities of the Danube.

The enormous expansion that the empire underwent under Sulaimān was also a result of the system, especially of its military side. For, as contemporary writers (e.g. Demouchman) make him say, permanent peace is an impossibility; one of the country would have had nothing to support itself upon or to pay the Janissaries and the other turbulent soldiery. At the same time the great victories brought about a fundamental change in the place of the empire in international affairs. The Christian states had lost all hope of driving the Turks out of Europe; it was in the reign of Sulaimān that the famous alliance with Francis I of France was concluded which led to negotiations when he was in Italy as a prisoner of Charles V. One of the consequences of this alliance was the famous capitulation of 1535 which settled the privileges of the French in the Empire, notably consular jurisdiction.

This capitulation is the starting point for the capitulations between the Christian states and Turkey in the centuries following, although similar privileges had already been granted by Ottoman Sultan, notably to Venice. Another consequence of the French alliance was the great naval activity of the Turkish fleet in the Mediterranean against the Spanish fleet under Andrea Doria and against the African, Italian and Dalmatian coasts especially after Khair al-Din Barbarossa had become Kapudan Paşa (1536—1546); it was under him that the Franco-Turkish expedition against Nice took place in 1543. In the Red Sea and Indian Ocean, a Turkish fleet under Sulaimān Paşa waged war on the Portuguese (sieve of Dū in 1538). This expedition secured to Turkey possession of Aden and the Yemen. From 1550 it was the Kapudan Pîyale Paşa [q.v.], Torghud Re's and Sâlih Re's who spread the fame of the Ottomans in the Mediterranean especially in the ports of the Maghrib. In 1565 took place the large expedition against Malta in which Torghud Re's was killed. The Turkish fleet did not succeed in taking the island. To the same period belong the expeditions and adventures of Pir Re's and Sidi Re's in the Indian Ocean.

Alongside of these political developments at home and abroad, the Empire experienced a cultural
advance which may be said to be more independent than that of preceding centuries. Ottoman civilisation gained its own special character in the field of literature as well as that of art. Sultān Sulaimān played a part in the literary life of his time as a poet under the taḥlīlīyat of Maḥjubī and as a patron of the great poets of his time. In another way he and his glorious reign contributed to the development of literature by inspiring poets like Bāqī to write panegyric καθισά and various šāh-nāma, and prose-writers to write histories (cf. the Bibliography). But it is in the field of architecture especially that Turkish culture owes much to the initiative of Sulaimān. Of the mosques which he built in the capital first place must be given to the Sulaimānīya built between 1550 and 1556 and containing the türbe of Sulaimān (Sulaimānī II and Aḥmad II are also buried here); next comes the Salımdye built in memory of Salım I and finished in 1522; the Şahzade Daǰārī built between 1547 and 1548 in memory of prince Muḥammad, also contained the tomb of the prince Daǰāhīr; the mosque founded in memory of the last of Topkāhān is now destroyed; the Şahsavan Daǰārī was built in 1534 in memory of Şahram Salımdye; lastly may be mentioned two mosques built, one at Şambil and the other at Skutari, in memory of princess Mihr-ān-Şah, wife of Rustam Paşa. Great except the除外 the Sulaimānīya all these mosques are the work of the architect Salım Şahin [q.v.] who also built a large number of other mosques in the capital and elsewhere, for the grandees of the empire who followed the Şah’s example. Among other buildings of Şahin for Sulaimān are the aqueducts of the capital and the palace at Skutari.

Of the edifices erected throughout the provinces in large numbers by Sulaimān’s orders, the most remarkable are the tomb of Aḥū Ḥanīf at Baghānid; the mosque over the tomb of Daǰāl al-Dīn Rūmī at Kōnī, the restoration of the walls of Jerusalem (cf. al-Kūnīs), the restoration of the Kab’ah (after authorization by a farād of Abu l-Suṭūd, q.v.) and of the aqueducts of Mecca.

Bibliography: The contemporary Turkish sources which have been printed or translated are the Chronicle of Mahbūl ‘I-Lidin which forms the last part of the Taравīkh-i 3eli ʻOṣūmal, publ. by Giese, Breslau 1922, p. 136–153 (to 980 A.H. [1573]); Kemāl Paşa Žāde, ʻOṣūmal Muhāż or Muḥāž-nāma, publ. and transl. by Pavet de Courteilles, Paris 1859; Rustam Paşa, Taγrīk-i 3eli ʻOṣūmal, transl. by L. Forrer, Die osmanischen Chronik des Rüstem Paşa (to 1561) in Türkische Bibliothek, Leipzig 1923, vol. 21; the last years of the reign are described in Şahıc, Taʔrīk, Constantinople 1281 (from Şahīc 563) the Journal of Sulaimān describing day by day the last eight campaigns is printed in Ferdih, Münhağa-ishi-sfāha, Constantinople 1275, i. 567 (Belgrade campaign), p. 529 (Rhodes), p. 554 (Moháda), p. 567 (Vienna), p. 567 (Vienna), p. 524 (Tabriz and Baghānid), p. 597 (Walona), p. 602 (Moldavia); the Vienna campaign was published and transl. by F. A. Behzad, Sultān des Gezegeteh Tugebuch auf seinem Feldlarge nach Wien, Vienna 1828; the Munfażhār of Ferdih also contain many documents of the reign of Sulaimān (i. 500–ii. 86). There seems to be more complete collection in MS. No. 327 of the National Library of Vienna (Flügel, p. 293): Munfażhār we-suʔa wa-da`t-i Sulaimān Sulaimān Kāhin, which von Hammer considered the eleventh work, of the original compilation by Ferdih (cf. Şahind, p. 133). Other contemporary sources not yet published are the Ta tarafīkh of Lufti Paşa (only MS. in Europe at Vienna; Flügel, No. 1010; the last part of A’il, Awa al-aďār; Dājdī Zāde Muṣṭafā Čelebi, Taʔrīk al-mühāžlī wa-derazḏāt al-mālūk (to 962 [1554]; No. 1010; Ferdi, Taʔrīk Sulīm Sulaimān (to 949 [1552]; Flügel, No. 998; several Ta tarafīkh of Ruđačok (von Hammer knows those of Rāmaṇ and of Wasi, cf. also Flügel, No. 1067); Ghawīn-e rua mawwāl-e Ḡaḏrāh, by Šahīn Čahān (also von Hammer, cf. Flügel, No. 1006); finally several Ta tarafīkh, or which von Hammer cites those of Šahān, Aḥmad Pasawar-zāde and Maḥran. Another Ṣahān-nāma is that of Hūǧāta (quoted by Aḥmad Reği in Şahīc) and a poem Ḡānīm al-mawṣūmāt in the Library of Leyden (Cod. iii. 26); a Ta tarafīkh Sulīm Sulaimān at Vienna (Flügel, No. 1006) is rather legendary in its matter and belongs to the 18th century. The most important contemporary writers since the death of Sulaimān are: Peştāwī, Taʔrīk, Constantinople 1284; Kuṭa Čelebi Zāde, Sulaimān-nāma (written as a continuation of the Ta tarafīkh of Sa’d al-Dīn), Bilāk 1248, and by the same author, Rauat al-aďār, Bilāk 1248; Merah, Fatn-nāma-i Šāhévar, G. O. K., iii., p. vi. and Flügel, No. 1002; finally the historical works of Šahān Zāde, Ḡāḏrā, Kuṭa, Nuṣāḥ, Dājava, Kuṭa, etc. Wiliyāh Čelebi is also sometimes a source for the life of Sulaimān.

For state institutions in the time of Sulaimān a important source is the ʻAṣaf-nāma of Lufti Paşa, publ. and transl. by R. Tschudi in Türkische Bibliothek, No. 12, Berlin 1910 and the ʻAṣaf-nāma of Sulaimān. These ʻAṣaf-nāma, which have been collected are edited at different times and found in large numbers in the Libraries of Constantinople; edition are: Aṭif Bey, ʻAṣaf-nāma-i ʻA’ll-i ʻOṣūmal (iḥādi) ed. by the Nisbātī Sīrī Beg, in T. O. E. M., No. 15–19 (Aug. 1912–April 1913) and ʻOṣūmal ʻAṣaf-nāmal (ed. by Abu l-Suṭūl and the Nisbātī Rāmaṇ-Zāde Muḥāzam) in Millī teknebâb madżmūnāt-i, Constantinople 1334; translations in A. L. M. Petis de la Croix, Cano du Sultan Selim IV, reprinted at Sultan Muḥam IV pour son instruction, ou état politique et militaire tiré des archives les plus secrets des princes ottomans et qui servent pour bien gouverner leur empire, Paris 1735; Cano du Sultan Selim conservant la police de l’Egypte in Digeon, Nouveaux censures turcs et aravés, Paris 1781; partially in von Hammer, Die Osmanischen Reiches Staatserforschung, Vienna 1815, i. 384–427; other documents in Aḥmad Reği, Cemal b. Ḡādirī Nisbāt İstanbul hāyāl, Constantinople 1333.

The Turkish poems of Sulaimān (Mûḥāżīb) were printed at Constantinople in 1308 under the title Da’āwāl Mûḥāżīb. A commentary which contains an appreciation of the great qualities of Sulaimān, was written by Aḥmad b. Abd Allah Pašri, entitled Aḥāzāl-i Sulaimānī (Flügel, No. 665); G. Jacob, Sultan Selim des Großen Iran in einer Auswahl, herausgegeben, Berlin 1903.

Among contemporary western sources first place should be given to the Relazioni of the
Venetian ambassadors publ. by Alberi, then the narratives of other envoys like Busbecq, accessible in Forster and Danieli, *The Life and Letters of Ogier Ghiselin de Busbecq*, London 1881; the Tagebuch of his companion Hans Den
cschwam, ed. Balinger, Munich and Leipzig 1913, is very useful for its description of Turkey in the
in time of Sulaiman; Lewenklaw, in *Neue Chronika Türkischer Nation*, Francfort 1590,
gives in the appendix an important document (e.g. on page 418 the stages of the second
campaign in Persia); Bussard, *Vita et fama Sultani*orum Turcium*, Francfort 1596; 

The modern historians beginning with von Hammer have also used, sometimes most exclu-
only, western sources (Hungarian, Austrian, Kosman, etc.): von Hammer, *G. O. R.*, iii.
1—495; Zinkein, *Geschichte des Osmanischen Reiches* in *Europa*, Gotha 1854, ii. 611—936;
iii. 1—380; Kapulies, *Die Kämpfe Österreichs mit den Osmanen von Jahre 1525—1537*, Vienn
1899; Jorga, *Geschichte des Osmanischen Reiches*, Gotha 1909, ii. iii. Modern Turkish works are:
Thurayia Efendi, *Sidilli-i Ώθωμανί/, in. 143; 
Nami Kamal, *'Όθωμανί/, Constantinople 1396—1398; Khair Allah, *Derweli Ώθω-
μανί/, Constantinople 1292, vol. ii., monographs by the historian Ahmed Raffik: 
dekder*, Constantinople 1336.

A. H. Likeyer, *The Government of the Magnificent, Empire in the time of Sulaiman the Magnifctent,
1—9; 
ii. 72, 100, 186. 

**SULAIMAN II, twenty first Ottoman Sultan**, reigned from 1597 to 1619. He was born
in 1593 (1642) (on 15th Muharram = April 15, according to von Hammer, *G. O. R.,* the
Sidilli-i Ώθωμανί gives the 25th Safar = May 25), and was the son of Sulaiman I.; from the
accession of his brother Muhammed IV he lived the life of a prisoner in the palace with his
brother Ahmad. On the deposition of Muhammed IV, the result of the defeat of the Turkish armý
at Mohács, Sulaiman was placed on the throne on
Nov. 8, 1637, mainly through the efforts of the *Fâtim-STAR/ım* Köprülü Muştafa Paşa. In the
precarious position of the empire, great hopes were placed upon a second Sulaiman, but the latter
had not the necessary qualities. He is described as
being of a resolute, warlike character, and indeed he twice took the field at the head of the
army; a weak constitution however prevented him
from carrying out his good intentions. Soon after his
accession the mutinous army returned from Hungary and invaded the capital and committed un-
precedented excesses in which the grand

**SULAIMAN, MAWLâY ARU'L-RÂBI b. MUHAM-
MAD, 'Alawîd Sultân of Morocco, reigned from
Radjab 1306 (March 1792) to 13th Rabi' I
1338 (Nov. 28, 1822). The son of Sulaiman Muhammad IV b. 'Abd Allah b. Ismaiîl and a free woman of the
Arab tribe of Ablâfî, he spent his youth in Sidjilmass where he devoted himself to study without
taking part in politics. When on the death of his father in Radjab 1306 (March—April 1792) the
power passed to his brother Yânis, Sulaiman came
from al-Tafihlibi escorted by the Arab and Berber tribes of the Sahara to bring him the submission of the people of Sijilmasa. After the death of Mawlyy Vazid, killed near Marrakesh (end of Djamnana II 1306 = Feb 1792) fighting against Mawlyy Hisham, one of his brothers who had rebelled against him, Morocco fell into anarchy. The people of al-Haws of Marrakesh remained faithful to Mawlyy Hisham but those of al-Hilu and al-Djbal proclaimed Mawlyy Mausuma, another brother of Mawlyy Vazid.

The people of Fes, the tribes around the capital and the 'Abid, Watafay and Berbers proclaimed Mawlyy Sulaiman whose learning and piety particularly distinguished him. Soon afterwards the 'Abid of Mikanas and the Berbers of the region joined them and the new Sultan received their oath of allegiance in the sanctuary of Mawlyy Idris, on Monday 17th Rajab 1306 (March 12, 1792). Later he was also recognised by the Banu Hasan and the other tribes of al-Gharb, as well as by the people of Sale and Rabat.

He had hardly been proclaimed, when M. Sulaiman had to fight his brother and rival, M. Muslama, who was soon defeated and went to live in the south. At the end of 1306 (1792) M. Sulaiman made an unsuccessful expedition with the object of chastising the Angul, an Arab tribe around Ugda, which plundered caravans and convoys of pilgrims. In al-Haw of Marrakesh however M. Hisham was still supreme. At the end of 1307 (1793) M. Sulaiman sent his brother M. al-Tayyib against the Shawaiba but he was defeated. In 1308 (1793—1794) the Djabala, the tribes inhabiting the mountainous massif of the northwest (Akhnas, Banu Yadar, Banu Gurufi, Gharawi etc.) rebelled on the invitation of a faqih, Muhammad b. 'Abd al-Salam Zaizan al-Khamst. After his defeat in the first encounter, the troops of M. Sulaiman ultimately crushed the rebels and Zaizan, captured and pardoned, was appointed governor of the tribe and became one of the strongest supporters of the government.

M. Hisham was always powerful in al-Haw of Marrakesh, where the tribes of Dukkalla, 'Abda, Akmara, Shyadhima, Hatha and Rahaima followed him; but discord was not long in breaking out among them and M. Sulaiman seized his opportunity. He began by attacking a section of the Shawaiba whom he defeated. In 1320 (1795—1796) the Rahaima sent him a deputation inviting him to march on Marrakesh and he took the field against the Shawaiba whom he routed, then invaded the territory of the Dukkalla and took Azzemir in 1321 (1796—1797).

He then turned his attention to Marrakesh; on his approach, M. Hisham fled from the town to the Atlas. M. Sulaiman occupied the capital of the south and extended his authority over the tribes of al-Hawa, al-Dair, al-Sitt, the Hatha and the town of Mogadore. A little later, the 'Abda, 'Abd al-Rahman b. Nasir who had been one of the most faithful auxiliaries of M. Hisham submitted to the Sultan and M. Hisham now alone, soon followed his example. M. Sulaiman was now undisputed sovereign of all Morocco.

His authority once well established, M. Sulaiman undertook several secondary expeditions to assure the security of the frontiers of his empire. The Turks and the Algers had seized Ugda and extended their authority over the tribes in the neighbourhood of this town. In 1321 (1796—1797) M. Sulaiman sent troops who reconquered the territory without difficulty. In 1323 (1798—1799) there was an expedition to al-Sis, in 1325 (1800—1801) the unfortunate campaign against the Berber tribe of Alt-Umali, in 1326 (1801—1802) an expedition against the land of Dar'a (Deira) and in 1327 (1802—1803) against the Rif to collect taxes. In 1328 (1803—1804) there was the campaign against the Alt Irhman of the Central Atlas and against the tribes of the Sahara (Tungha, Farka, Ghais and Taifillian).

The power of M. Sulaiman had now reached its zenith and Morocco enjoyed several years of peace and prosperity. This period unfortunately did not last and the Sultan had to spend the last years of his reign in almost annual expeditions. In 1322 (1807—1808) there was an expedition against the Tada and the Gurina; in 1325 (1808—1809) a new campaign against the Alt Umali, who were forced on this occasion to pay tribute; in 1324 (1809—1810) there was an expedition against the Tada and against the Alt Isri; in 1325 (1810—1811) there was an expedition against the Rif.

Very soon afterwards the situation changed. The nationalist rising of the Berbers in the Central Atlas, exasperated by the oppression of the central absolutist power impoverished the empire and brought Morocco to the verge of anarchy. In 1326 (1811—1812) the Garwan and the Alt Umali rebelled under the chief Amhass; the first expedition sent against them was routed at Asri. In 1327 (1812—1813) the Sultan sent to the Rif an expedition to punish several eastern tribes notably the Gallya, who, in spite of his prohibition, were selling wheat to the Christians. This campaign was crowned with success but had no permanent results so that the very next year in 1328 (1813—1814) the Sultan, accompanied by Arab contingents from the Banu Malik and the Sufian had to go in person to the Rif which he ravaged with fire and sword. In 1329 (1814—1815) there was an expedition to the region of Marrakesh to punish the turbulent tribes of Dukkalla, 'Abda and Shyadhima. In 1331 (1815—1816) the Sultan sent his son M. Ibrahim to punish various Arab and Berber tribes of the Sahara, the Shaha and the Alt ‘Aqiq who had seized fortresses (kasbah) built in their land by M. Ismail; the expedition was a failure and the Sultan had to undertake a second one in person which was quite successful.

But the enemy who caused the greatest trouble to Sulaiman was the Berber bloc of the Central Atlas, which rebelled on several occasions against the Arab yoke, frequently threatening the town of Mikanas. The Sultan never succeeded in taming them and their stubborn resistance was the cause of the internal dissensions which troubled the close of his reign. The Sanadhja of the Central Atlas and especially the confederation of the Alt Umali of Fasko refused to submit to the central power. In 1334 (1818—1819) the Sultan decided to subordinate them, with Arab and Berber contingents (Zanmait, Garuwa and Alt Irhman), but as a result of the defection of the Zanmait, the Sultan's son M. Ibrahim was mortally wounded and the Sultan himself was captured by a Berber who however ultimately released him. This success inflamed the national ardour of the Berbers who rose under a local mursit Muhammed U-Nasir Amhass, to fight against the whole Arabic speaking element in Morocco. The checks suffered by M.
Suilamân had destroyed his prestige and the end of his reign was simply a series of risings which he had great difficulty in putting down. While the Sulîman was at Mîrân defending it against the Berbers, the people of Fâr rose against his governor, al-Êsîfâr. He therefore returned to Fâr and on the way his army was attacked by the Berbers. In 2335/36 (1859-60) he went to pacify al-Hilâl and then to Marrakesh. During his absence the Wâdâyda plundered Fâr, disorder broke out among the people of the town who ultimately asked the help of the Berbers against the Wâdâyda. Soon the people of Fâr by arrangement with the Berbers abandoned M. Suleïman and chose as ruler M. Ilâmî b. Yastîl, who was also recognised by a part of the people of N. W. Morocco, notably the inhabitants of Tétouan; returning to the town, M. Ilâmî died and his brother M. Sûdî was proclaimed in his stead. The Sulîman M. Suleïman then left Marrakesh and laid siege to Fâr. The siege lasted till Raglîl 2337 (March—April 1852). During this period the Sulîman sent an expedition to attack Tétouan.

Having retaken Fâr and settled the situation in the north M. Suleïman set out for the south where he had to fight against the Arab tribe of the Shahrazîd, who lived near Marrakesh. Wearing with ruling M. Suleïman was thinking of abdicating in favour of his nephew M. Abû al-Rahîm b. Hâshim, when he died on 12th Rabi‘ 1, 1238 (Nov. 28, 1822) at Marrakesh, where he was buried.

In spite of his unfortunate reign, M. Suleïman left a great reputation for piety, justice and benevolence; for example he abolished the non-Islamic taxes (mûdhrûq). He was also a great builder.

Hôndas, text, p. 92; transl., p. 109; Muhammed Akânî, al-Qutbî al-tarîkhî, lihî, Fâr 1336, l. 181; Aymad M. el-Ma‘rîzî, al-hiṣâb, ll. 129—172; transl. in Arch. Maghreb., iii. 384—399, s. 1—105. — Suleïman al-Harîrî wrote poems in praise of Mawlay Suleïman, but the collection, of no historical value, is still in manuscript.

(Sonnino S. Cony.)

Suilamân, al-Ma‘rîzî, a sailing-master (mûsîâm al-Êa‘bîy) and author of "Sailing Instructions" in the first half of the xvíth century.

MS. No. 2559 of the Arabic collection of the Bibliothèque Nationale contains several nautical treatises in prose and verse on the Indian Ocean, the seas of Western China and the seas of the great Asiatic Archipelago. The treatises in verse are by the mûsîâm Ibn Ma‘zîdî (see Suilamân al-Êatîn). The five treatises in prose have been prepared by another sailing-master called Suilamân b. Aymad al-Ma‘rîzî al-Muhâmîn (fol. 593) or Suleïman b. Aymad b. Suleïman al-Ma‘rîzî (fol. 1554, here wrongly written al-Ma‘rîzî). In either case he would be son or grandson of Mabîrî, i.e. a member of the tribe of the Malafrân of South Arabia. Suilamân is otherwise unknown. The "Sailing Instructions", of which he is the author contain no biographical information. His Turkish translator, the admiral Sîbu‘î Ali who wrote the Mabîrî in 1554, mentions that he was dead by then (cf. T. A. E. N., Nov. 1844, p. 548). One of the nautical treatises is dated 1511; it is therefore probable that the texts in question were prepared in the first half of the xvíth century.

MS. 2559 is a small 4° of 215 × 150, 187 folios with 15 lines to a page. The five treatises by Suilamân contained in it are as follows:

1. Kitab tarîkhû al-ma‘rûzî wa-‘îsârîy fî al-ma‘rûzî, folio 16 to 50. At the beginning of the text we: "The object of this epistle is to make known the different kinds of known years and their use for all the world; these years are the lunar, solar, Byzantine (famûsîa), Coptic and Persian. The epistle contains a short introduction of 10 lines and 6 fâzûl or sections. The first deals with the lunar year, the second with the basin of the solar years; the third with the solar year; the fourth with the Byzantine years; the fifth with the Coptic year and the sixth with the Persian year."

Not dated. On folio 10, where the titles of the treatises contained in the manuscript are given in another hand, this text is entitled: "Epistle dealing with the science of eras, i. e. with the knowledge of the principle of years, the use of which is found throughout the world."

2. Kitab fâzîlât al-ma‘rûzî, from folio 51a to 100b inclusive. Onto this this the "Epistle of the gift to men of energy to facilitate the knowledge of the principles of astronomical-naval science." This treatise is divided into 4 lines of introduction, 7 chapters and a conclusion. Chapter 1 deals with the description of the spheres and the stars which they contain; chapter ii, treats of the division of the circle which those learned in nautical astronomy are agreed to divide into 36 parts called âshâms ("celestial" rumûb), by analogy with the rumûb of navigation. Chapter iii, deals with zâmî = 3 hours sailing at sea; chapter iv, with the two kinds of sailing at sea, i.e. following the coast line or crossing the high seas; chapter v, with the altitudes of the stars to determine the latitude of a port; chapter vi. with the distances between two ports estimated in zâmî; chapter viii. with the winds. The conclusion of this treatise is as follows: the art of navigation is based on a double foundation, good sense and perseverance.

This text is not dated but it is later than iv. which is quoted on folio 79, line i and than iii. which is mentioned in folio 58, line 11 which puts its date after 1512.

Folios 103 and 110 are blank in the MS.

3. Al-Êa‘bîy al-ma‘rûzîy fî fâzîlât al-ma‘rûzî al-Êa‘bîy, from folio 111 to 599 inclusive. It is divided into 7 chapters which are subdivided into sections.

Chapter i. deals with the principles of nautical astronomy. It contains the following sections: (a) To know the rumûb; (b) to know the distance of the stars at the equator; (c) to know the parallels (madârîs) of the stars expressed in degrees; (d) to know the stars which are in horizontality (fâzîlât) (observed on a single planchette); (e) to know the zâmî; (f) to know the guide to the next number of zâmî between the rumûb; (g) to know the exact number of fâzîlât (co-efficient indicating the length of the voyage to be covered to a given cape to get the same displacement in latitude sailing straight north); (h) to know the basis (for calculation) of the altitude of a star; (â) to know the distances.

Chapter ii. deals with the names of the stars and allied matters. It has two sections (a) to know the number of fâzîlât = 1° 37' that are one between the North Pole and the gûl or Pole Star, the great fâzîlât or Ê of Ursa Major, the small...
The monsoons of the second class of the first category are the monsoons from Mecca (i.e. from Jeddah), Sawakh, Zaila, Aden, Shahr, Madhâs, Zaila and Kalâhât to the west coast of India. The monsoon blowing towards the land "under the wind" (i.e. to the east of Cape Comorin) are the monsoons from 'Aden, Shahr, Madhâs, Gujarat, the Konkan, Sumatra, Tenasserim, Malabar and Bengal; the monsoon from Bengal to the west coast of the Malay Peninsula; the monsoon from the east coast of Africa to the Maldives; the monsoon of the Sawâhîl to the south Arabian coast.

The second category of monsoons includes the monsoons from Gujarat, the Konkan and Hormuz to the coast of Arabia; from Gujarat to the east coast of Africa, from Bengal, Malacca and Tenasserim, Martaban and Sumatra to Mecca (i.e. Jeddah), 'Aden and Hormuz; from Sumatra to Bengal; from the Maldives to 'Aden and the whole Arabian coast; from Dyiyl in Sind to the Arabian coast; from Malâh in East Africa to Madagascar; from Kiwâ to Sufálah and from Sufálah to Kiwâ.

Chapter vii. deals with the monsoons of the Indian Ocean, the dates of which are expressed in the Persian reckoning. The monsoons are divided into two categories. The first is divided into two classes. The first of these is called "head of the wind" and includes the following monsoons: monsoon of Aden which takes one to the west coast of India, the monsoon of Shahr [q.v.] for the same destination; monsoon of Zaila, monsoon of the Sawâhîl or of the eastern equatorial coast of Africa for the same destination; monsoon of the Sawâhîl to the south coast of Arabia; monsoons of Gujarat, of the Konkan, of Malabar, of Malâh in Shahr, of Zaila, from Masâk to Malacca, Sumatra, Tenasserim and Bengal. Monsoon from Zaila and Berbera to the south Arabian coast; monsoon from 'Aden to Hormuz.

This treatise is dated in figures, 238th Râbi' II, 961 = March 27, 1554; from according to the Mabîr of Sufi. All, it was compiled in 917 (1511-1512) (cf. F. S. S., No. 1834, p. 548), and this is the date which should be adopted as correct. The Turkish admiral actually collected the Arabic documents which he translated during his sojourn on the Persian Gulf in 1553. The date given in MS. No. 2559 is no doubt that when the copy was made as Sulaimân was already dead in 1554.

IV. Khâlit al-minhâj al-sikhtî fî 'ilm al-hâj al-shâhîr, from fol. 52a to 93b, l. 3. It is divided into an introduction, 7 chapters and a conclusion. The introduction deals with the sea routes on the coast of Arabia, Makrân, Sind, Gujarat, the Konkan, Tulun, Malâh; on the Somali coast and the east coast of Africa; the east coast of India, Bengal and Sumatra (= west coast of Malay Peninsula); and of Malacca; on the west coast of the Malay
Punamula, Indu-China, Western Chias, and some routes on the high seas.

Chapter ii. dealing with the latitudes (रेखा, lit. "measure") of the ports on known and inhabited coasts: "Know", says the author, "that as regards the observation of the Polar Star, there is a difference between the people under the wind and those of the islands in the wind of Cape Comorin, as far as certain capes are concerned. The result is differences between the people of Western India (किल्ले, this is how we must take it in nautical terminology) and the Arabs as regards the fundamental measure (i.e. the measure of the height of the Pole Star)."

In my book entitled al-ʿUmāda (cf. above col. 2) [the latitudes given] are in conformity with those of the Colas; in the present book, I have reproduced the opinion of the older masters of navigation for all the coasts because [as to these latitudes] I have verified them from certain capes which I supposed to have been situated above their true latitude ... Then come the sections where they are indicated: (a) a great number of latitudes furnished by observation of the Pole Star, (b) of the farṣbadin (ʿγυ of Uras Minor), (c) of the nāzār ʿayyāl of Uras Major, (d) the altitudes of the known stars.

Chapter iii. contains the description of the coasts of the large known inhabited islands: Madagascar, the Seychelles, Sokotra, the Laccadives, the Maldives, Ceylon, the Andaman and Nicobar Islands, the Takwa Islands on the west coast of the Malay Peninsula, Sumatra, Java and the northeastern islands (Timor, the Sandalwood Islands, Banda, the Moluccas, the island of Līkīkī [Arabic transcription of the Chinese Lifu-Kien also called ḇākū — north of Formosa], Giolo, Fariyli, [?] Borneo and Macassar = Celebes).

Chapter iv. deals with the distances between Arabistan and Western India, the ports of the Bay of Bengal, the east coast of Africa and certain ports of Sumatra, Java and Bali.

Chapter v. deals with the winds, cyclones and the dangers to which ships are exposed. Chapter vi. treats of the landings and landmarks of Western India, the Arabian coast and the east coast of Africa. Chapter vii. deals with the entrance of the sun and moon into the signs of the Zodiac. The conclusion contains the following detailed itineraries: from Dīn to Malacca, from Malacca to the Maldives, from Dīn to the west coast of Sumatra and back to Maritime and Teessimir and to Bengal.

This text is not dated but it mentions al-ʿUmāda (ill.) in folio 64a, l. 13; it is therefore later than 1514. It also mentions ill. which is quoted on folio 608, l. 6.

Folios 93b to 151a contain nautical treatises in verse by Ibn Majīd, which have already been discussed (cf. above, p. 356 ff.). Folios 1518 to 1544 are blank.

V. Kitāb ʿarbaʿ sukūt afṣanah fi tābiʿt al-ṣuʿāʾ: from folios 1552 to 1578 and last. At the end of several lines of introductory matter the author says: "I have extracted [the substance] of this book from different scholios and collected the contents [by borrowing] from my own works and those of my brethren [of the brotherhood of sailing masters] (folio 1552, l. 3 infr.)"

Chapter i. deals with the description of the celestial spheres and the stars which they contain (spheres of the moon, of Mercury, Venus, the sun, Mars, Jupiter, Saturn and the fixed stars), the loadstone and the compass. Chapter ii. deals with the division of the circle. *I say*, says the author (l. 1614, l. 3) "that this chapter ii. of this book contains the description of the circle. The word ʿarbaʿ here means the circle of the horizon divided into 360 parts, each part of which is considered a degree by observers i.e. astronomers. I say that those learned in nautical science are agreed to divide the circle (of the horizon) into 32 parts. I say that the masters of navigation of the ocean of Western India agree. There are the Arabs, the people of Hormuz, the people of Western India, the Colas and the Zenge (or Zendjānī). It is the same for masters of navigation of the west, like the Maghābbīs, the Franks, the Byzantines (Iṭṭīya); also the Franks also divide the circle into 32 parts. As to the Chinese and Javaneses — these are the people of the islands of the south — they divide the circle into 24 parts. It is the same with the people of the non-Arab countries like Khūrāsān and the non-Arab lands adjoining it and the masters of navigation have called each of these parts ʿāṣān by analogy with the ʿāṣān (or rumb) of navigation."

The same chapter then deals with the ḫibā (lit. finger = 1° 37') (Chapter iii. is devoted to the same; chapter iv. to the routes along the coasts and on the high seas; chapter v. to the altitudes of the stars; chapter vi. to the distances between two points; chapter vii. to the winds. The book ends with a general concluding chapter.

This last nautical treatise which is not dated is later than the Kitāb al-ṣināḥliḥ (ll.) quoted in l. 1759, l. 8 and 1858 l. 14; and than the al-ʿUmāda (ill.) mentioned in folio 1565a, l. 5; 1565b, l. 5; 1565, l. 13—l. 14. The Catalogue des Manuscrits Arabes de Paris wrongly says that the text of this treatise is written in red ink; the titles of the chapter, sections, and paragraphs alone are written in red ink; the text itself is written in black ink like the rest of the manuscript.

Without going into details we may here mention the main rules used by Arab seafarers in the xivth—xvith centuries. According to the nautical texts of Ibn Majīd and Sulaimān al-Māhrī the latitudes of the parts of the Indian Ocean are given in the wide sense, i.e. the ports of all the coasts between the Southern Africa and the Chinese province of Pau-Kien (coasts of the mainland and islands of the Indian Ocean in the strict sense, of the Red Sea, the Persian Gulf, the sea of ʿOman, the Bay of Bengal, the Sea of Western China, and the Sea of the Great Asiatic Archipelago), are determined by observation of three stars or groups of northern stars: ʿāṣān = Pole Star; the Guards, in Arabic al-farṣbadin, *the two calves* = ʿγ of Uras Minor; the tomb, in Arabic al-ʿayyāl ʿayyāl = ʿγ of Uras Major. The latitude of the harbours between the parallels of 32° 48′ N. = 17° ḫibā and 6° north = about 1 ḫibā from the ʿāṣān is determined by the observation of the Pole Star; that of the ports situated between the parallels of 5° 21′ south = about 1 ḫibā from the farṣbadin by observation of the Guards of Uras Minor; and that of the ports between the parallels of 6° N. = 1 ḫibā from the ʿāṣān or 8 ḫibā from the farṣbadin and of 5° 21′ south = 1 ḫibā from the farṣbadin or 13 ḫibā from the ʿayyāl and about 25° 16′ south = 2 ḫibā from the ʿayyāl, by observation of al-ʿayyāl of Uras Major. The result of these observations has been laid down in the Sailing Instructions in the following from Ibn Majīd and Sulaimān al-Māhrī give first
of all the parallel in question and then mention all the points which are found on this latitude, the one from east to west and the other from west to east. For example, in [fol. 649, L. 8 of MS. 2559] we are told:

"[There where] the $pâh$ is 11 $i$ $pâh$ [above the horizon = about 21° 14' N. are]: the harbour of Kawsh (arabish form of the Chinese 昆脚) as modern Hanouf in Tonkin which is in China (sic), this is the port of the Sui-fu (of the country). Then Shaitam = Chittagong in Eastern Bengal (= west coast of Burmah); then Râs al-Kandar on the west coast of the Bay of Bengal (= east coast of India); then Kântâma (in the bay of this name, on the west coast of India); then Râs Djaj (the west point of the peninsula of the Kathiawar); then Râs al-Hadd (south-east point of Arabia); then al-Kânjân (a cape) on the west coast of the Hijaz (to this cape is a reef [called] al-Bîn; then [cape] Dawârî on the African coast [of the Red Sea] ...]."
The list goes on by 4 $i$ $pâh$'s from north to south to 1 $i$ $pâh$ from the Pole Star which section ends in the parallel of 6° N. Lat.

The next section is entitled "Section dealing with the altitude of the farãbadain of the place where the Pole Star is at 1 $i$ $pâh$ to the end of the observations made with the two stars". Practically a $i$ $pâh$ from the Pole Star = 8 $i$ $pâh$ from the Guardians (of the Urs Minor); these two expressions are interchangeable. It is at this parallel of 8 $i$ $pâh$ = 6° N. that the section begins:

"[There where] the farãbadain are at 8 $i$ $pâh$ [above the horizon are]: Këlânâna in China (read: on the east coast of the Malay Peninsula); then Kâdâsh on the east coast (of the Bay of Bengal) = west coast of the Malay Peninsula); then the island of Persq (off the preceding harbour); then the islands of开关 and Cûmî-fûala and the north-west cape of Sumatra; then Afâm on the east coast (lit. on the back) of Ceylon; then Taqalân on the west coast of Ceylon; then the island of Kandikal on the Maldives; then the beginning of Saiî-âl-Tâwil (lit. the long bank) on the east coast of Africa. ..."
The enumeration continues by 4 $i$ $pâh$'s to 5 $i$ $pâh$; then following the parallels of 4 5 3 2 1 $i$ $pâh$, the section ends at 1 $i$ $pâh$ = 21° 14' N. Lat.

The next section is entitled: "Section dealing with the altitude of the naâbê in the Southern Isles [of Indenmena], Madagascar and on the coast of Zeng (or Zandj)". 13 $i$ $pâh$'s from Urs Major = 1 $i$ $pâh$ from the Guards. The text of this section does not begin till the following parallel:

"[There where] the naâbê are at 12 $i$ $pâh$ [above the horizon = 7° South are]: the port of Sunabaya which is on the west coast. (this is an error for north) of the island of Java; then [the island of] Sumabaya [which produces] sandalwood and is situated west (read: east) of Java; then Monâka (the Mafi of the cart maps) on the coast of the Zeng ..."

The enumeration goes on by $i$ $pâh$ (Java being always inaccurately orientated N.E. instead of E.W.); to 4 $i$ $pâh$ and alternately 4 $i$ $pâh$ = about 25° 10' south. On the parallel of 4 $i$ $pâh$ the text says:

"[There where] the naâbê are 1 $i$ $pâh$ [above the horizon are]: the harbour of Kitâ (lit. the harbour) on the east coast of Madagascar; then the bay of Kûf (lit. the coast of the same island; then the port of al-Shadjara (or part of the tree) on the east coast of Africa); and the author adds: "According to the early (i.e. writers on navigation) [this port is the last of the islands (sic) of the coast of Zeng; but the Franks say that the [west] coast [of Africa] runs to the north and] continues to the place where the naâbê are 7 $i$ $pâh$ in the water (21° 15' south). But Allah knows best!" The Madjid expresses himself more clearly in this connection in section 9 of the Hârnâna, a poem on navigation dated September 15, 1462 (MSS. 2292, fol. 1182), where he says: "... the harbour of al-Shadjara which is well known lies 7 $i$ $pâh$ from the naâbê. The learned give this as the position of this port. There are no others having a name. ... And there is nothing south of these lands, for it is there the land of Zeng ends (on the east coast of Africa) and there is the strand (that leads) to the land of the west and of the Franks. There is nothing to the south [of Africa] except reefs and darkness which the Creator [alone] knows. Some say that there are islands and that the extreme end of the coast is 5 $i$ $pâh$ (21° 30' S.). — O thou, the best informed! But the stories of the authorities do not agree. We ask Allah to pardon our errors."

This passage in the 7. A. for Oct.—Nov. 1927 (p. 307—309) and came to the conclusion that the harbour of al-Shadjara must be identified with Lorenzo Marques.

We have seen that several sections aim at making known the distances between two fixed points. The following on fol. 834, L. 8 sqq. is particularly important: because it deals with ports situated at the two ends of the Indian Ocean and with the navigation of the high seas from end to end without altering one's course:

"Section dealing with the distances [between the ports whose altitude is known] by observation of the farãbadain (ports which are situated) on the coast of Zeng (on the one hand) and in the island of Java and Sumatra (on the other):

"By 7 $i$ $pâh$ from the farãbadain = 4° 27' N. of the atoll (fughe) of Muñîl (on the African coast) to Makûfiong (the Musôfa of the early Portuguese travellers; cf. Barros, Dec. iii., Bk. vi., Ch. 11 on the west coast of Sumatra), it is 234 ñm = 39 days 6 hours.

"By 6 $i$ $pâh$ from the farãbadain = 2° 47' N. from Murtî (on the African coast) to Pânûrî (lit. Fençur or Baros on the west coast of Sumatra), it is 248 ñm = 31 days.

"By 5 $i$ $pâh$ from the farãbadain = 1° 10' N. from Dâwâra (or Dâwâra) of the African coast to the harbour of Pîranôm (on Sumatra), it is 264 ñm = 33 days.

"By 4 $i$ $pâh$ from the farãbadain = 0° 30' south from Malânî (on the coast of Africa) to Indrapura (on Sumatra), it is 278 ñm = 34 days 24 hours.

"By 3 $i$ $pâh$ from the farãbadain = 2° 07' south from Kîtîkwa (on the African coast = Qitñas in Barros, Dec. ii., Bk. 1., Ch. ii.) to Sunda-hêt (lit. the straits of Sunda or of Soend), it is 292 ñm = 36 days 12 hours.

"By 2 $i$ $pâh$ from the farãbadain = 3° 44' south from Mambása (on the African coast) to Sunda (west coast of Java), it is 308 ñm = 38 days 6 hours.

"By 1 $i$ $pâh$ from the farãbadain = 5° 21' south from the Green Island (Arabic name for Pemba on the coast of Africa) to the island of Bîi (east of Java), it is 317 ñm = 39 days 15 hours."

The "Sailing Instructions" of Sulaimân al-Majâli contain a certain number of detailed itineraries which are remarkably accurate. We give as an
example the itinerary from Dhu to Malacca (fol. 88a, l. 15 to fol. 89a, l. 3) translating the Arabic nautical terms in the text by their English equivalents; *Voyage from Dhu to Malacca. When you leave Dhu steer on the pole of Canopus, i.e. to the south for 2 alms (= 6 hours sailing); then to sunrise (al-farha = to the east), keeping 8 alms (= 24 hours sailing) from the west coast of India. Keep your course towards Canopus (= south) until you reach 9 (sic) alms from the farhadain (= 27° 37' N. lat.). Then steer for the rising of the Scorpion (S.E.,) until you reach a point a little less than 74° 15' from the farhadain (= 35° 19' N.). Then steer to the fundamental rising (nutila at-alfi = due east) for 12 alms (= 36 hours), then to the rising of al-qishkhat (= E.N.E.) until you arrive at 8 4 alms (= 24 hours) from the island of Singal (lit. the archipelago of the Nicobars). When you arrive land, have the island on the left (i.e. on the north) and when you have passed it, steer for the rising of al-tir (= E.S.E.) for 4 alms (= 12 hours); then steer for the rising of al-shubaa (= S.E.,) until you reach 7 am (= 21 hours) from the island of Polo Singal. When you arrive steer a course due eastward until you are in sight of the island of Polo Pintang. If the tide is not running north and if you see the flood tide, steer from there to the rising of al-tir (= E.S.E.) and you will reach Pintang which is an elongated island of which the two coasts are identical; it is black and is seen from afar. When you are near it steer for the rising of Canopus (= S.E.) up to the island (read: islands) [called] Polo Sembilan which in Malay means the *nine islands*. You will [then] distinguish on the coast two mountains which resemble the island of Pintang and which might be taken for two islands. They lie between the island of Pintang and the islands of Dingding and the two mountains are called Fanz-krem. After those two mountains you reach Dingding. They are the great elongated islands of the same size. After those the island of Tumbakar which is a little round island.

*Know that the island of Pintang and [those] of Dingding lie near the mainland and there is a reef there. After Dingding you come to the islands of Sembilan which are islands with high mountains; some of these islands are small. When you arrive there, when you have taken water in the vessel and resumed the voyage, steer for the pole of Canopus (= south) for 5 alms (= 15 hours) and you will arrive at the island [called] Polo Djumar. Between the islands of Sembilan and Djumar the sounding indicates 35 fathoms until you come to the island of Djumar where there are great depths. The depth is near to 40 or 50 fathoms. When you are near Djumar you see the part of the land on the coast of the river which you do not see the [adjacent] coast of Sumatra. In other weather you see the outline of the coast of Sumatra (= west coast of the Malay Peninsula) and the mountains [from which] tin is obtained. When you approach Djumar, coasting along the island steer for the rising of al-shubaa (= E.N.E.) for 7 alms (= 21 hours); then towards the rising of al-tir (= E.S.E.), know that at the rising of the Scorpion (= S.E.) from the island of Djumar lies a reef on which the waves break. Keep your course E.S.E. the depth diminishes to 18 fathoms roughly. Continue to steer E.S.E. When you are far from the island of Djumar and it appears to you level with the surface of the sea, you have before you [lit. in front of the ship] the mountains of the island of Malacca (= Galeh): E.S.E. The sounding then gives 16 to 17 fathoms. When the sounding is less than 15 fathoms turn to the right (i.e. to the west). If it becomes more than 18 fathoms turn to the left (i.e. to the east). Such is the route that you must follow. Take care of the tide if you have the flood against you with a greash wind (.= whirlwind); otherwise the flood tide will carry you on the reef. When you are near the island of Pasiar and land appears to the south turn towards the reef for 9, 7, 6 fathoms of depth. The sounding sometimes gives about 9 fathoms. The point for which you are making is in this place. There is the bank of Kafaq (= Capitollari of the Commercial House of Albian-Querque, Vol. III., Ch. xvi. and xlii.; Barrow, D. II., Book VI., Ch. ii.) and [there are] rocks. When you are on this route continue in the same direction keeping the zambak (here *small boat*) in front of you [to show the way], from the time you leave Djumar; and keep on taking soundings. I mean that when you reach the place where the reef lies — where the sounding gives about 7 to 8 fathoms — and when you follow the route already indicated, then after having doubled the reef, sounding increases to 15, 20, 25 fathoms. Know that [all] danger has now disappeared and that you are near the land. Then follow the route along the coast and steer towards the rising of the Scorpion (= S.E.) in 33 fathoms. Sometimes the sounding gives 30 fathoms, sometimes 35, 40. It diminishes or increases at each sounding from 5 to 6 fathoms. I think that the bottom varies in level on this route. When the tide turns against you with a greash wind, slacken sail. [When you resume the voyage] follow the route [already indicated] until you reach Malacca; opposite this point lie the islands of Polo Sint and the island of Polo Ani; [the name is written without dialectical points — it is perhaps the Polo Amol of our maps 84 miles from Malacca]. The zambakk will come to meet you. Make your arrangements for entering.

Chapter III. of the same Kith al-Minahidi (iii.) contains the description of the principal islands of the Indian Ocean. The island of Sumatra for example is thus described (fol. 78a, l. 10 to 79b, l. 6): *Section to make known the island of Sumatra. Sumatra begins in the north where the farbadain are a little less than 8° 15' in altitude (= a little less than 6° north). The island of Gãnsu is west of this cape. Near this cape lies the north cape of Sumatra, the island of Msã-fula. These are and small islands. As to the southern latitude of the island of Sumatra there are several opinions which I have given in [the work entitled] al-Dimma (iii., l. 27b, l. 6—399). The most popular belief is that the island ends at the place where the farbadain are 30° 15' in altitude (= 1° 17' south, which is inaccurate, the south part is about 6° south). This is the route to follow on the west coast, from Gãnsu-fula to Makãfil; towards the rising of Canopus (= S.E.,) from Makãfil to Panãr (or Baros) towards the rising of al-ahmiyati (= S. E., 45 S.; from Paniar to the...
south end of the island, towards the rising of the Scorpion (≈ S. E.). This is the route to be followed on the east coast: from våmufala to Måfala, due east; from Måfala to the port of Sumatra (also called port of Pask; cf. Carlos de Alfonso de Albuquerque, Vol. i, p. 45); the rising of al-
ghamal (≈ E. 1 S. E.); from the port of Sumatra to Pulo Barufala, towards the rising of al-ibkil (≈ E. 1 3/4 S. E.) — the farbakdön are there 7 ibps in latitude (≈ 4° 24' N.) — from Pulo Barufala to the island of Djamur also towards the rising of al-ibkil (≈ S. E. 1 3/4 E.). This route is called the route across: the route along the east coast to this island is as follows: from the port of Sumatra to 4' Artif (sic) where the farbakdön are 0' 6' in latitude (≈ 3° 34' N.) towards the rising of the Scorpion (≈ S. E.); from Artif to the neighbourhood of Rikam to the rising of alghamal (≈ E. 1 3/4 S. E.) — the farbakdön here are 2 3/4 ibps in latitude (≈ 3° 0' N.). From Rikam the land runs in the direction of the [south] pole, from there to the end of the island. This is said, but other statements are also made.

The known harbours of the west coast of the island are: The harbour of Pançar (or Baros); this is the port for camphor (al-bajw) (sic), gold and other products; the harbour of Friman, famous among men, which lies in the land of Munkasws (≈ Munkanglaw); 2' is the port for gold-dust and aloes; the harbour of Indrapus which is now no longer known (i.e. at the beginning of the xvii century) but which was at one time famous.

The harbours of the east coast are: the harbour of Feidr under Munuf Lammrit; it is the port for pepper; the port of Sumatra (≈ Pask); it is the most famous of the harbours of the island. It is a large town. It is the port for pepper, silk and gold; it is a busy harbour; the harbour of 4' Artif, it is a little port; the harbour of Rikam, also small. The port of Palamhang is also small. Among these small harbours are those for benzoin, and other products of these regions. As to the latitudes of these ports, I have given them in the chapter on latitudes and there is no need to return to the subject here.

Nota bene! (this is written in red ink to call special attention to the passage, just as it is printed in heavy type for the same reason in our modern Sailing Instructions). Know that on the coast of Sumatra which faces the high seas, the west coast, there is a series of islands. [This is] the route along them: from våmufala to the islands of Indrapus which are the first and beginning at the north [the route is] towards the setting of Canopus (≈ S. S. E.); these islands are opposite Minkafing; the distance between these two points is 8 ibps (≈ 24 hours). Then to the south a large island with large (read: numerous) creeks and harbours called Minkafing are the farbakdön are 6' 6' in latitude (≈ 4° N.) in altitude. This is the land to which belong the cannibal Batak. We seek pardon and safety from Allah! — Between this island and the west coast of Sumatra is also 8 ibps (≈ 24 hours). If from this island you sail towards the rising of al-qamal (≈ E. 1 3/4 S. E.) you arrive at a group of islands which include: Pulo Bani (read: Banyak), Pulo Lumbul, Pulo Lhid, the island of Talifghi and the desert islands close to the coast. On the coast is found the harbour of Shikat (sic) where the farbakdön are 6' 6' in latitude (≈ 3° 34' N.) in altitude. This is a place with reefs of rock. After these islands sailing towards the south lies an island opposite Pançar (or Baros) — between these two points there are about 8 ibps (≈ 24 hours); sailing this island is called Mankafirg (sic). Know that the route from Mankafirg (sic) to Pançar is towards the rising of al-fird (≈ E. S. E.); but take good care of the unhealthy parts of these regions.

*Among the known islands [of the region of Sumatra are the following]: the island of Nias which lies to the south of the [lit. below] the harbour of Pançar (or Baros); the island of Paksaw which is to the south of the [of] island of Pançar (same name as the preceding harbour on the east coast). In this island there are streams of water which never dries up. But how many other islands and reefs exist besides those we have mentioned?"*

We see from certain latitudes that the coast of Sumatra and especially the south side of the island was not well known by Arab sailors. Sulaiman refers to the direction which he has given in al-2' Umida (iii.) on the subject of the south point. It is evident that he did not himself visit this region and that he is content to reproduce information from other sources contrary and inaccurate. *The island of Sumatra, he says (fol. 37b, l. 7 sqq.), ends in the south at Taks-surw (tuk-surw?). Opinions differ regarding the latitude of this place; some say that it is 4' 6' from the farbakdön (≈ 3° 50' S.) — this is the opinion of the majority of the people of Western India — others say a little less than 4' 6' — this is the view of the Arabs and Colas — and others again who have verified this latitude say 3' 1/2 1/bps (≈ 1° 16' S.). Some say that the south end of Sumatra is 3' 1/bps (≈ 2° 4' 30' S.).*

On several occasions the author mentions the opinion of the Colas about the latitudes of certain harbours. He had in mind the Sailing Instructions of Coromandel, more or less identical with his own. None of the Indians or Hindus whom I have consulted in this respect knew of any such document in existence or having existed. It would be extremely useful if a search could be made in India to try to find these documents the existence of which is proved for the xvii century (cf. particularly 64p, l. 13 sqq.).

In fol. 58a, l. 1, the author says that the circle of 360° is divided into 244 1/bps, which gives 1' 37' for the 1/bps, 3' 1/4' for a 1/bps and so on. In the last treatise (fol. 162a, l. 1), we are told on the contrary that the circle is divided into 210 1/bps or 1' 42' for the 1/bps. Sulaiman also says that the first division into 224 1/bps is that of the ancients but that in his time, i.e. at the beginning of the xvii century, this division was reduced to 210 1/bps. The first division is thus justified by Shihab al-Din b. Madij: "there are", says this musallam, 47 1/bps from one rumb to the other and 8 1/bps from one lunar mansion to the other", which gives the figure 224 for the circumference: 7 × 32 rumb = 8 × 28 lunar mansions = 224 1/bps = 360°. This conversion is thus perfectly coherent but we do not see on what basis the division of the circle was latterly reduced to 210 1/bps. All the latitudes in 1/bps mentioned in the present article have been converted into degrees at the rate of 1° 57' = 1 1/bps.

Bibliography: Hammer, Extracts from the Mokht, that is the Ocean, a Turkish work on Navigation in the Indian Sea, in J. A. S. B., 1834, p. 545—553; 1836, p. 441—468; 1837,
SULAIMÂN — SULAIMÂN ČELEBI

SULAIMÂN ČELEBI (Emir), son of YI-DIRimin BAYAZÎD I, was ruler of Sarukhan and Karaf; after the defeat at Angora he came to Adrianople. He was ruler of Turkey in Europe and in 1403 concluded treaties with the Emperor of Byzantium and with Venice. From 1406 he was engaged in Anatolia fighting his brother Mêlêm-Čelebi and in Turkey in Europe fighting his brother Miṣâl Čelebi. Abandoned by his followers he was killed on Feb. 17, 1411 in the village of Dogançilar. His brother Miṣâl had brought him to Bursa, where he was honourably buried beside his father. Although he ruled for seven years in the European part of the empire, he is not reckoned among the Ottoman Sultans.

(SYDOR KOSS)

SULAIMÂN ČELEBI also called SULAIMÂN DÎRÎM is the earliest Ottoman poet of whom an original poem written in Turkish has survived and who is still known and popular at the present day. Turkish poems of earlier date are either translations like the Şoheîl u-Newhâhirî of Mevlâna Ahmed b. Ahmed (viii-th century a. d.) published by Morfiman in 1925, or they seem to have been completely lost, like those of Mevlâna Nizârî and those of the grandfather of our poet Shahîq Mahâmd Efendi, who wrote a lutçüyan (congregatory poem) for the Shekhzade Sulaimân Paşa b. Orkhan on the conquest of Rumelia.

Little is known of the life of Sulaimân Čelebi. He flourished in the time of Sultan Bayazit Yildîrîm (d. 805 = 1403); he was born in Brusa, as son of Ahmed Paşa, Murât's vizier and was Khélîa to the celebrated Khašwî Shahîr Amir Sulmn (d. 833 = 1429). Later he was instau to the imperial Ælînî under Bayazîd and after his death became İmâm at the great Bayazîd mosque in Brusa. He died in the year 825 (chronogram rûhây-i Ermîlî) and was buried outside the town on the road to Çeşme.

His only known work is the Mevîbî-iti Nehî or Mevîbî-Esiçehbî, called Wâsilî al-Nâfi. It is the oldest Ottoman example of this kind of panegyric in Muhammed, and in the course of the next five centuries had almost countless (over a hundred are mentioned) imitations according to the unanimous opinion of the Turks all fall a long way behind this, the oldest, Mevîbî. It is therefore almost exclusively recited at all wâsîîîl festivals on 12th Rabi' 1 (cf. MAWLI). The sources tell a story about the origin of this poem which, while not without legendary features, is interesting for the difference between Arabs and Turks in those days. A khâtib in Brusa expounded Sûra III. 385, to mean that God did not prefer one prophet to another, not for example Muhammed to Jesus. This was fiercely refuted, namely by an Arab from Syria who did not rest till he got a fênaî against it from hâne and finally killed the Brusa khâtib. This conflict is said to have been the cause of first a verse, then of a whole poem, the leading idea of which is the unique position of Muhammed.

The poem written in muallûm verse, contains about 600 couplets and is divided into 18 sections. It describes not only the birth of the Prophet but in a prologue, after the usual esorodion, develops the theory of light of the migration of the divine light from Adam through the whole series of prophets to Muhammed. The main part deals with the marvels which foretold the birth of Muhammed, the joy of the angels, the birth itself, Muhammed's parents, etc., the popular miracles wrought by him, such as the clearing of the moon, the fact that his body threw no shadow, that roses grew where his breath fell. The ascent to heaven (sîrâyî) is then fully dealt with and finally his last illness and death.

The style is very simple and for this reason attractive and very effective; the language is pure Ottoman in the Brusa dialect. There exist numerous manuscripts, in European libraries also, but unfortunately there seems to be none very old, which might form a sound basis for linguistic study. There are also translations of the poem, which are listed by Tâhir (see below) in a Munich, a Greek, two different Albanian and one Circassian.

(WALTHER BJÖRKHOLM)
SULAI\MN PASHA (1316-1359), the eldest son of the second Ottoman Sultan, Orkhan (1282-1359), and of Nilfler (Dénilfer), daughter of the Greek lord of Yur Hisar. His younger brother was Murad Khan afterwards Sultan. Only Greek sources record a third brother Kishur and his romantic abduction by a Greek denier (cf. J. J. Hadji Efendi, "Nikânîlê Kislâmîn Sagnîkîski, Revue Historique," L. N. 7, p. 339; L. N. 7, p. 318; Constantinople 1328-1339). The title Pasha which he bore, according to ancient custom, marks him as the elder brother, as the case also with 'Ali al-Din Pasha (in old chronicles often called simply 'Ali Pasha) who has the title Pasha in contrast to his younger brother Orghân (Nâmîlê Kenâl, "Orghânî Türkîî, Constantinople 1326, L. 370; Ahmed Dâwâd, Tâbilîşî 'Ashkiîlî 'Orâmîî, Constantinople 1399, p. 5).

According to the usual tradition Sulaimân Pasha was the second grand vizier of the rising Ottoman kingdom, succeeding on the death of the first grand vizier his uncle, the above mentioned 'Ali al-Din Pasha, who had resigned his claim to the title Sultan, and as a result was exiled by the latter to the island of Lesbos. He obtained his title of vizier from his father's Orders on account of his unrivalled temperance and inclination for the contemplative life of a dervish, and of his express refusal of the vizierate which was then offered to him. The reforms recorded by the chroniclers as suggested by him in the army, dress and coinage, may readily be attributed to proposals of the older brother.

In any case the alleged grand vizierate of Sulaimân Pasha is not at all in keeping with the later conception of this office. From the very first his father gave him a share in the development and expansion of the kingdom in keeping with his military inclinations and abilities, especially as a leader in the field in military operations, as they became necessary — there was yet no past the latter traditional objection to the Sultan's sons filling important offices — from the taking of Irnik and Imli (Nicaea) in 1332 to the inclusion of the European coast of the Dardanelles in the Ottoman sphere of influence. Sulaimân is said to have been the first to hold the title 'Askar. He led the Ottoman forces independently, especially as Orghân latter never took the field at all.

As to be derived from the absence of any reference to military operations, after the voluntary alliance of Orghân by treaties and matrimonial links with the Greek ruling house, there seems to have been a pause for about 10 or 15 years in the policy of conquest, which was used for consolidation in internal affairs until Sulaimân Pasha put an end to this stagnation and by a bold coup resumed the expansion of Ottoman power, skilfully taking advantage of the discord in the Greek empire in which three claimants were fighting for the throne, and giving as an excuse the combination of the Byzantines with the Genoese and Venetians.

At his father's suggestion in 1358 (1359), Sulaimân with only 50 followers (including Ewremios Bag, Hajiçhlije Iliche, Adje Bag, Caire Fâzîl Bag), crossed for want of boats, on rafts from the peninsula of Cyzicus (Kapu dağlı) to the European shore of the Dardanelles and took by surprise the fortress of Cemrhi (Taymûr), the modern Wiranje Hâşî. After some fierce Turkish raids in the Balkans, this was the first campaign with permanent results. Sulaimân at once sent for troops and Muslim settlers from Asia Minor and occupied his success by taking further strongholds, notably that of Gallipoli, the key to the Dardanelles, and the whole of Rumelia, which was surrendered to him after a battle with the Greeks, Magnaura, Ipala, (Kypaçe), Bulair, Tezkir daglı (Redostî), etc. The Byzantine story of an earthquake destroying the walls and rendering the fortresses defenceless is obviously an attempt to conceal the disastrous results of Greek policy.

Sulaimân took up his residence in Bulair where he built a mosque and a palace (he had also erected mosques in Brussels and Inalîk). But before he could set in motion his further extensive plans for the conquest of Rumelia, he was suddenly carried off by death in 1359 (1360); while he was out hunting near Bulair his horse fell and he was mortally injured (Nezirolu, "Nezîrolu"
, and Kâdir Celebi, Tâbilîşî al-Tawarihî, Constantinople 1516, p. 94 gives the year 760, while the anonymous chronicler ed. by Giese and Leunclavius 759 and Osmanîî Tâbil Ahmed, Hüdâkat al-Wazarîî, Constantinople 1271, p. 5 gives the year 761).

In keeping with a wish he is said to have expressed in his lifetime, Sulaimân was buried in Bulair, being the first Ottoman prince to be interred on European soil. This was a symbol of the firm resolve never again to abandon the new won ground. The existence of his tomb made impossible the idea of going back to Asia Minor which arose in the minds of several of his comrades-in-arms immediately after his death. They successfully drove off the attacks of the combined Christian forces.

Sulaimân's tomb has penetrated to the very soul of the Turkish people; it was and still is one of the holiest places of national pilgrimage that found particular expression, when the national hero of the Turkish liberation movement, Nâmîlê Kenâl [q.v.], was interred here.

The tomb of a daughter of Sulaimân is in Ağshirî (Ahmad Tewfîk in the Revue Historique, Constantinople 1907, N. 44, p. 106).

SULAIMAN PASHA, known as Kâzım, the ‘cunning’, a Turkish general and statesman of the time of Sulaiman the Great. He began his career in the Imperial Harem, which he left with the rank of muhid to take over the government of Syria. As Mir-i-Hasan, he was then summoned to the important office of governor of Egypt, which he held for ten years (931-941 = 1524-1534) with vigour and comprehension. He was the first to send to the Porte the yearly revenue from Egypt, the so-called Egyptian tribute, later so important for Turkey.

In reply to the appeal of the Sultan of Gurgur, he was ordered by Sulaimán to equip a considerable fleet at Suez and to strengthen Turkish power in the Red Sea and to drive the Portuguese out of India. This was the period when Khair al-Din Barabarea [q. v.] was extending Turkish power in the Mediterranean. Sulaimán Pasha succeeded in adding ‘Aden and the whole of Yemen to the Ottoman Empire. He appointed Mustafa Beg, son of Bıyıklı Mehmed Pasha, first governor of Yemen. But his efforts in India proved fruitless as he was not properly supported by the Indian rulers.

Returning to Constantinople, he became a member of the Council of Viziers which consisted of four viziers and governed the country (Luft Pasha, Sulaimán Pasha, Mehmed Pasha and Rustam Pasha). After the fall of Luft Pasha he became grand vizier. He filled this office in an important period (Hungarian campaign), for four years (948-951 = 1541-1544) until he came into conflict with the vizier Khozov Pasha over a faultless page. The mutual reproaches about various derivations of duty ended in both being deposed and an investigation ordered. Sulaimán Pasha was banished to Malatya where he died in 955 (1548).

He was able, vigorous and just, which contradicts the low opinion usually held of a eunuch.

SULAIMAN PASHA, MALATIÁLí ERKEMÎ, a Turkish general and statesman under Mehmed IV (1648—1683). A native of Malatía, of Armenian origin, he rose from page to admirir al-Malatiá became governor of Erzurum and Siwâl with the rank of muhid. He married Ḑâvûlî Şâhâl Sulaimân. In 1665 (1638) he was appointed grand vizier in succession to Murad Pasha but he only held office for ten months on account of the confusion in the empire as a result of the mutinies in the army and the complete financial ruin. He was several times banished and again recalled to high office. In 1668 (1667) he died in Scutari at the age of 80 and was buried there.

SULAIMÂNIYA (SULÂMÜN), a town and district in southern Kurdistan. A distinction must be made between the ‘Ammâr of Sulaimâniya proper (the canton of Sar-ṣînâr) and the territory formerly ruled first by hereditary pahlâbs and later by the Ottoman mutasâbin of Sulaimâniya.

The historical region of Sulaimâniya lies between the Persian frontier, the Dîyâla [q. v.], the lands that go with Kîrîkîk [q. v.] and the little Zah and occupies the group of mountains from which flow rivers to the east (Strîwân; cf. SLÂMîn), the south (‘Aḏâm, q. v.) and the north and northwest (left bank tributaries of the Little Zah; cf. SLÂMÜN-SULÂK).

Orography. The mountains chains which separate these three basins of the left bank tributaries of the Tigâr, rise gradually from the Mesopotamian plain and have the general direction N.W. to S.E. like all the ranges of western Iran. Different summits in the southern basin are called Nâsîn, ‘Aṣārîn, Segirîn, Kervan-ṣâr and Pîr-Kâlîn. To the S.W. of this line on the upper waters of the ‘Aḏâm lie the districts of ‘Abūnî (this is also the name of the district in Persia which includes Bâlūšîn, Ribâṭ, etc. The second range of mountains includes peaks like Torkman, Tâshlûţ, Darâmûnlî [Gilhâr] etc. Between the first and second chains lie to the west the upper waters of the Ta‘būr-ζâl and to the east the plateau of Naw-kopt, the canton of Kervan-ṣâr, etc. which are watered by the Awwi-dîwân, which flows into the Dîyâla (Strîwân). The third chain includes Amûr, Gwânî etc. It forks towards the west (along the little Zâb); on the southern arm of the latter is the summit Pir-Omâr-Gûdûn (two feet) which is visible from a long way off and seems to form the centre of all this mountainous region. The area between the second and third barrier is drained towards the west by the Tîhûn (Sula-ârîl), which runs into the little Zâb and to the east by the Tândjâr-ζâl (Tahj-Rûl) which flows into the Strûwân. On the upper waters of the Tîhûn which rises behind Pir-Omâr-Gûdûn lies the canton of Sûrûdâsh; the Tandjâr-ζâl waters the canton of Sar-ṣînâr in which lies the town of Sulaimâniya. The chain of Amûr sends out spurs to the east, the Kuri-Ṣârîân, Kûl-Ṣârîân etc. which join the Awwi-ζâr chain (cf. SÂNE). To the south of this spur lies Shûhrâz [q. v.] in the strict sense of the word. To the north of Amûr lie the cantons of ‘Ardîkî and Shûhrâz [Kervan-ζâl (Kervan-sulân)]. The river of the latter (Gâwâszîr) rises in the depths of Awwi-ζâr (in the valley of Purān) and receives on its left bank the waters of Sérêjîk and on the right the waters of ‘Arûdzîjî. This latter river rises north of the mountain (Sar-Sîr) which rises from the right bank of the Kervan-ζâl. Its administrative centre is Péndjavî from which one can reach Persian territory. Before reaching the Kervan-ζâl, the river of Kervan-ζâl receives on the right bank the river Tâznâ, which drains the cantons of Sâbe(528,793),(647,890) [Tarâmî] which lies inside the curve here made by the Persian frontier, and the waters of the canton of Stîwel, the administrative centre
of which is Shiwa-kul. Contrary to the indications of the maps, the combined waters of the Karasu-kul and the Khanilja flow into the little Zab in the canton of Mawat (a short distance below Teyet; cf. Čirikov, p. 556; Khurshid Esfand, p. 308; cf. )), the part of the territory of Sulaimaniya lying between the left bank of the Karasu-kul and the chain of Aasir (the district of Saragu, Marga) is not yet well known. The little Zab forms the natural frontier between Sulaimaniya and Kol-sandjak but the canton of Pashar (Kaf-i-Djar) lying on the right bank of the little Zab (between Kauliya and the Kandil range) regularly formed part of Sulaimaniya. The Baha'i Persias also often seized the adjoining canton (Khurshid Esfand, p. 246) the canton of Abdi-djar, Asir, etc. went with Kol-sandjak) and sent governors to Kol-sandjak etc. (Rich, l. 157, 315, 384).

History. The district of Sulaimaniya is known from the earliest times. Mount Nisir (in Lulla; Khilab), where according to the Babylonic epic the ship of Gilgamesh rested during the Deluge, can only be Pār-Omar-Gurdi. The region of Sulaimaniya corresponds to the land of Shuma occupied by the Lulli people, the southern frontier of which was on the side of Babila (the modern Karkheh). In 880 a. c. Assur-gašip, king of all the kings of Assyria, a stele found at Darband-i Gauw, north of Kawa-djar, seems to belong to a Lulla king. Between, mentions another ancient bilingual at the entrance to the desert of Deribah through which the little Zab forces a passage, to the extreme northwest of the territory of Sulaimaniya. Herfeld (fifth, x. 127) mentions ruins at Sitak in the canton of Surči. In 745 B.C. Tišulti Pileser III transplanted to Maxama (Māš-Zamāra) Forrer, p. 43) Ammonians who had lived in northern Mesopotamia. In the Sasanian period we have in the extreme S.W. of the territory of Sulaimaniya the famous monument of Pal-kši (cf. iin). In the history of the Syrian church the district of Sulaimaniya formed part of the diocese of Babi Garmah (Hoffmann, 224, p. 253).

In the Muslim period the history of the region was at first involved with that of Shahristan. Sulaimaniya had a more or less autonomous existence from the end of the 6th (sixth) century to 1287 (1850). The local dynasty was called Babi. According to the Šāshau-nāma (i. 280-288) the first chief and the eponym of this family was Pār Babel. Babel (probably about 1500). The house of this tribe seems to have been to the west of Kandil (cf. ). The direct descendants of Babel were soon supplanted by their subordinates but the second line disappeared also and about 1505 (1900) a new tribe had no recognised chief. A new line (of the clan Saği) of the tribe of Babet; Rich, l. 272) came from the village of Derishmarsha to the canton of Pashar; it had a continuous genealogy claiming descent from a young "Frank" woman called Kaghşan, whom her ancestor had taken prisoner in a battle. The two founders of this third dynasty, Baba Sulaiman, came to the front 1588 (1677) and in 1611 (1690) took service at the Ottoman court. Rich (i. 381-386) gives a list of his descendants, who include 17 Babi Pashas. The representatives of this local dynasty seem to have maintained their position between the two rival powers, Turkey and Persia, but they were really under the Pashas of Baghdad, who themselves held a very subordinate position with respect to the Sublime Porte. Mahâmad Pâsha who received Rich on his memorable journey through Kurdistan and in whom Rich (i. 343) tried to place the Kur national pride finally submitted to the Persians. The latter invaded Sulaimaniya in 1842 to re-establish Mahâmad Pâsha but by the treaty of 1847 Persia withdrew all claim on the town and sandjak of Sulaimaniya in favour of the Turks (cf. Čirikov, p. 631). The last ruler of the family of Bab, Abd Allâh Pâsha, was deposed by the Turks in 1867 (1850) (Khurshid Esfand, p. 209).

It may be mentioned that the Babi family was simply a conquering and warrior caste. Alongside of the Babi and under their suzerainty lived several other warrior tribes (agārat) of which lists are given by Rich, l. 280 and Khurshid Esfand, p. 217. The principal of these tribes was 1545 (cf. 224, 280). Later on we may mention the turbulent tribe of Ham wand of Hasandil which claimed to have come from Persian Kurdistan (its name resembles those of the Lur tribes). The Ham wand in the course of their razzias used to come down as far as the banks of the Tigre (Cholet, Arabian, Kurdî, and Mesopotamian, Paris 1852, p. 205-211). Beside the clans which had kept their tribal organisation there were in Sulaimaniya as elsewhere in Kurdistan, the peasants (sûr, behruz-e "white caps"). according to Rich, l. 380).

At first the capital of the Babi was at Shahr Bâbâ (Shahr-i Bâbâ) in the first valley conquered by Pār Babel. But Ishâq Pâsha moved his residence to the canton of Sar-e-Čins, where he founded about 1899 (1784). (Rich, l. 387) the town of Sulaimaniya on the site of the village of Malik-Hindi (Malik-Kendi) built around an ancient mound which had to be cleared away on the occasion. The town was called after Bayîk Sulaiman Pâsha (the family of Georgian Marlik), governor of Baghdad in 1780-1802 (Humm, Histoire de Bagdad, Paris 1901, p. 159). Towards 1820 the town had 2,000 households of Meshkis, 150 of Jews, 9 of Chaldean Catholics (who had a little church) and 5 of Armenians in all 10,000 souls. There were 5 mosques in Sulaimaniya. In 1868 Lycklama estimated the population at 6,000 Kurds, 30 families of Chaldeans and 15 of Jews.

Under Ottoman rule Sulaimaniya remained the nursery of an indefinite Kurdish movement. The local Kurds supplied Turkey with a large number of officials and particularly army officers. Several Babas became distinguished in Constantinople, like Isma'îl Haşî Pâsha, ambassador minister and diplomat in 1905-1914. After the deposition of the Bab, a great part in politics was played by the family of religious Vedak of the family of Barandja, whose ancestor Hadji Ali Kaka Ahmad enjoyed a great reputation for sanctity and is buried at Sulaimaniya.

Although the conquerors in 1819 had only talked of independence for Arabs and Armenians at first, the idea of Kurd emancipation made wide progress between 1917 and 1920. Sulaimaniya was eventually to be included in "Southern Kurdistan" the autonomy of which was provided for in Articles 62-64 of the treaty of Sevres (Aug. 10, 1920). However, as a result of long negotiations with the "Council of Mâjilis, this latter territory including the sandjak of Sulaimaniya was
SULAIIMÂNĪYA — SULDÜZ

definitely included in the new state of Iraq. By the same decision of the Council of the League of Nations of Dec. 26, 1925 a certain local autonomy was granted to the Kurds (administrative officers of Kurdish origin, official use of the Kurdish language and Kurdish schools). The official negotiations were accompanied by considerable local complications. Not only did Sulaimanāsī in Jan. 1921 refrain from taking part in the plebiscite for the election of King Faisal but numerous disturbances broke out in the district. The principal instigator of the insurrectionsary movement was Muslim in character and obviously aiming at the creation of a Kurdish state. He was Sheikh Mahmūd. He rebelled on May 21, 1919 and was supported by the chief of his band (cf. n. 218). By June 13, Sulaimanāsī was reoccupied by British troops and Sheikh Mahmūd departed for India. However when under the threat of rising in Cambīzān and Kānīsā, Sulaimanāsī had to be abandoned on Sept. 2, 1922, Sheikh Mahmūd was permitted to return. In October he proclaimed himself "Hakimāsī" of all the Kurds of the Iraq. His suspicious attitude caused Sulaimanāsī to be bombarded from the air on March 3, 1923 and Sheikh Mahmūd then retired to Suldūz. Re-occupied on May 26, 1923, Sulaimanāsī was again evacuated and on July 11, Sheikh Mahmūd returned for the third time and was recognised by the authorities at Baghdad. An attempt on his part to occupy a detached position of Sulaimanāsī provoked new air raids (Aug. 16, Oct. 25, 1923 and March 25, 1924). Sheikh Mahmūd was then destroyed and he himself driven back on the Persian frontier. As a result of these events the rural population of Sulaimanāsī in July 1924 had been reduced to 700 persons but by November it had risen again to 20,000. The towns of Sulaimanāsī consisting of 6 kūlas viz.: Sulaimanāsī, Cambīzān, Ĥalābūdja, Kāfī-Dīkā (Pūkhū), Karā-dagh and Shūrakak — which are again divided into 17 mālās — had in 1924 a total population of 189,900 Kurds, 1,550 Jews and 75 Arabs.

V. MINORSEY

SULDÜZ (Sulduz). n. A tribe in Mongolia. According to Bérend, the Mongol form of the name would be Sudos (plural of suudo, "good fortune"). L. Ligeri (Die Herbume des Persia nom.) Kergis, Kūrd-Soum Archiv, Budapest 1925, l. sees in the ending of Suldūz, as in that of Kērkū the remains of an ancient Turanian plural suffix (cf. hēs, *we*, sin, "you"); etc.) and as a hypothetical singular quotes the name of a Kūrfišt clan: Sull, Sult, Kargišt etc. claims the Suldūz among the dūrūk Mongols, i.e. of "common" origin, in contrast to the "pure" (adīna), who however were descended from the dūrūk through Alān-Geō, the miraculous grandmother of Čingis-Ḵān.

Sīrghān-Shirā Sulduz is one day saved the life of Čingis-Ḵān while the latter was fighting with the Tūdār. This exploit gained the Sulduz great prestige with Čingis-Ḵān and his successors.

Sīrghān-Shirā

Dījīaghān

Sodū-Noyon (Sodūn)

Tūdār

Malik

Čobān

The children of Sodū came to Persia with Hūlaqū-Ḵān whose wife Yūsūnīn (mother of Abāghū) was a Sulduz. Malik is said to have conquered the Persian Kūrdistan. In 688 (1289), under the Hūlaqū Arghūlu, an act of bravery brought to the front Čobān, son of Malik (cf. l., p. 104?) and he afterwards distinguished himself in the reigns of Čhārān and Uldūš. The history of the latter written by Kāshānī (Bibl. Nat., Suppl. Pers. 1419, fol. 6) in a list of the Amir mentions Čobān (Amir-i bāzargān-i Thāqīh wa-Ṭūrūk) in the second place next to Khālah-qāh Ṭāqī but adds that in ability he is superior to all. There is a letter from Pope John XIX, dated Avignon, November, 12, 1321 addressed to "Zogān Begsūn" (Čobān). In spite of the Šia šeleviyya of Uldūš, Čobān remained Sunni. When the young Abī Saʿd (716 = 1316) (cf. l., p. 105?) ascended the throne Čobān became regent and in 719 (1319) married Sarībēg, daughter of Uldūš-Ḵān. The increasing influence of the family of Čobān and the evil conduct of some of its members aroused the monarch against
them. A series of persecutions began. Čobán took refuge in Herát and was killed there in 728 (1327) by Ghiyath al-Din Kari.

A dynasty with a short but stirring life descended from Čobán (the Čobáni) arose in the period of troubles that marked the end of the line of Čagatî in Persia. Among the 18 children of Čobán the following are the best known: (1) Āmīr Ḥassân; (2) Dimishk-Khwāja, executed by Ābū Sa‘īd in 727 (1327); (3) Tūmūr-Tash, from 718 governor in Asia Minor, rebelled in 722, struck a coin in his own name and even claimed to be the Mahdí; his father brought him back to obedience but after the death of Čobán, Tūmūr-Tash, went to Egypt where the Mamluk Nâṣr, fearing his popularity and to please Ābū Sa‘īd had him executed in 728; (4) the beautiful Baghdaḍ-Khâṭûn, wife first of Ḥasan Barûr Djâlîr [q. v.] and next of Ābû Sa‘īd; suspected of having poisoned the latter she was executed after the accession of the Ikłâdîr Arap. Ābû Ḥasan Kâlek, son of Tūmūr-Tash, who ruled between 739 and 744 at Tabrîz, Ṣulṭâna, Ḥamadân, Kûr, Kābûn, Ṣulṭânit, Wâzârân, Farârân and Karâ, cf. II, p. 280, His brother Malik Ashraf succeeded him. His oppressions provoked the migration of the Khádî Muḥyî ‘l-Dîn from Kirda’s to Dâjân-Beg, Kháf of the Western Kipčâk. Dâjân-Beg without delay attacked Malik Ḥasan who was defeated, captured and executed in Tabrîz in 756.

The Sulûdûs (Ṣulûdû) after this are only occasionally mentioned by the historians. Under 697 (1040) Murghâbâd mentions the instructions given by Tūmūr to the Khâlajû of Sâwâ to reinforce the troops under Pâr ‘Āli Sulûdû in Rayâ. At the present day there is still a body of Sulûdûs in this region among the Shâh-šervân [q. v.] of Sâwâ.

Several women of the Čobáni have had remarkable careers. Besides Baghdaḍ-Khâṭûn we may mention: (1) Sâdî-beg widow of Čobán, who was first the wife of the Ikłâdîr Arap and in 739 was herself placed on the throne by the grandson of her first husband, Ḥasan Kâlek. Finally the latter married her to the new pretender Sulîhânum who reigned from 740 to 744. (2) Dilshad-Khâṭûn, daughter of Dimishk-Khwâja first of all married Ābû Sa‘īd (at the same time as her aunt Baghdaḍ-Khâṭûn) and then Hasan Barûr Djâlîr. (3) Malîk ‘Izzât, wife of Ḥasan Kâlek, whom she killed in an indescribable and atrociously cruel fashion. She was executed by her husband’s relatives. They cut her into pieces which they ate.

In Ṣulûdû through the cing of the encampments and even the Sulûdû seem to have been left off from the river Onon. But in the time of Rashîd al-Dîn the yort of the Sulûdû was near the forests inhabited by the forest-dwelling Ūrâlîk. The Chinese list of Ṣulûdû encampments published in 1867 (Mong-gi-yam-ti, Russ. transl. by F. Popov, St. Petersburg 1895) no longer mentions the Sulûdû. In Turkestan the Sulûdû with their subdivisions (Nukur and Tama’dur, are mentioned among the troops of Shâlûn [q. v.] at the beginning of the 18th century. Later the Sulûdû rejoined Bîhûr (Shâlûn-Nâmâ, ed. Melianaki, St. Petersburg 1908, p. 137, 176; cf. the Schrcchendie of N. Vambéry, Vienna 1885, p. 273, 356). According to information given me personally by Zekî Wahîd ‘Orbî genealogies (Zâdîgra) mention the Sulûdû among the 92 ‘Orbî clans; the people of the canton of Alfu-kul in Fergânâ [q. v.] are Sulûdû and there must be some in Khiwâ (Khiwarî) along side of the Nukur.

Other references to the article ḤARûn-BAZûRûG, i. 297 and E. G. Browne, A History of Persian Literature under Târât Dîn, 1920, p. 34, 170. Later eastern writers recall the Sulûdû origin of the Čobâni: Türk. transl. of Mamad-Jamîr-Bîshîl (Constantinople 1855), ii. 6: Askâriyû ‘Abû ‘I-Ghâzi (ed. Grammàns, St. Petersburg 1871), i. 166; Sulûdû. — According to Vladimirskî, Na’ân Namûn in Mongol: “le génie-protecteur habitant le drapayn”.

2. A district in Ḥâdîr-Bîshîl, to the south-west of Lake Urma, on the lower course of the Gâdir-Cay, which here receives on its right bank the Bâlûs and Mamad-gûh and flows into the Lake. To the west it is bordered by Ushân which lies on the upper course of the Gâdir from which it is separated by the Darbân gorge through which the river runs; to the north it is bounded by the little district of Dâîl (cf. Dâîl Bârêk in the Shârâf-nâmê, i. 283) belonging to Urma; to the south and the east by the cantons of Paswa and Shâhîr-ârin which go with Sâwâ-Bulâh [q. v.].

Sulûdû is a fertile plain producing much wheat. It is often flooded by the waters of the Gâdir, which near its mouth forms marshes and salt beds (yîf). On the south side Sulûdû is bordered by the heights of Fârîst at the foot of which are numerous springs impregnated with lime. The crest Bahramûl separating Sulûdû from Shâhîr-ârin is also of limestone formation.

We know that in 703 (1303) Ḥâsân distributed the land in fêns. It is possible that it was at this time that the name of the tribe (Sulûdû, in Kurdish: Sundûa) replaced the old name of the district now lost.

According to the Shârâf-nâmê in the time of the Turkman dynasties (about the xvth century), e. long after the Čobâni had disappeared, the Mûrî Kûrîs occupied the district the old inhabitants of which were probably reduced to servitude. The same authority (i. 280) in a sentence now mutilated in the MS., and undated, says that Pîr Bâdûk of the Kûrî tribe of Bâbân (babû) took Sulûdû from the Kirîshbî which may refer to one of these sudden outbursts of fighting on the frontier in the time of the Shâfawîs.

In 1828 ‘Abbûs-Mirāf gave Sulûdû as fês to 800 families of Kârâ-papâk [q. v.]. The newcomers were allowed to levy and collect the taxes (12,000 tomãns a year) and in return had to maintain 400 horsemen at the disposal of the government. At this period there were in Sulûdû 4-5,000 families of Kûrds and Mûkâddâm Turks by then gradually the lands passed into the hands of new Shaft masters.

The divisions of the Kârâ-papâk are as follows: Tarkawûn, ‘Arîb, ‘Abûpl, Dîn-Ahmadî, Câkkhîlî and Ublîlî. Each has retained its hereditary chief. The principal division is the Tarkawûn to which the Khuin belong. Mahdi-Khân, son of Nâkîkhân, had brought the Kârâ-papâk to Sulûdû. His grandson Nadjaf-Khân was the chief
of the tribe before 1914 but another Khan actually exercised the functions of government. The division of Tarkawin also included a family of Agha, inferior to that of the Khans but quite important; Aras-Agha was lord of a banded horsemanship.

There are at present 312 villages and small towns in Sulduz with 8,000 families. The chief is the Khan (Nahhas; Rawlinson writes: Nakhoda) with a thousand households. This little town lies on the bank of the Baskiya around an ancient artificial mound. Another important centre is Baskiya (Baskiya) where there is a great bridge over the Gaidir which provides communication between Urusi and Sawal-Buluk.

The village of Khaliflu is inhabited by Sunnis Kazaks who also came there in 1828 from the neighbourhood of Tiflis.

The south-east corner of the district is occupied by the canton of Mamad-Shaikh the name of which is mentioned in the Shahr-Nameh (i. 290). The present inhabitants are Shamsuddin Turk. With their chief Murtaza Bey they came into Persia at the same time as the Kazaks and received from the Abbasi Mira 3 villages with 100 families of Kurd peasants (ruyats).

The Sunni Kurds of the tribes of Mamash, Zarrs, and Akhter number 2,000 families, or a quarter of the present total of the population. They entirely occupy 10 villages (Ghulwan, Wazan, etc., and 11 others (Ghura, Naghda, Mammoud, etc.) they share with the Kara-papakh.

Sulduz like Ushun is mentioned among the Nestorian bishops (Assemann, iv. 423; Hoffmann, Abergel der syrischen Aktion, 1850, p. 204; Saldus, Sulduz) but in 1914 there were only 80 Christian families left in Naghda. The Jews are more numerous (120 families in Naghda) and are probably the oldest element in the present population of the district.

Under the Turkish occupation of 1908-1912, the Shafii Kara-papakh suffered considerably as the Turks regarded them as Persian agents. The Turks, without success however, tried to destroy the tribal organisation and to emancipate the ruysers. During the Great War the village of Haidar-khan (on lake Urmia) became a Russian naval base and a light railroad was built through the district. Sulduz changed hands several times but since the departure of the Russians and Turks it has been able since 1919 to regain its status quo ante.

SULH, composition, settlement, which is recommended as early as Kura, iv. 127, is a contract of sale (kas) with the object of averting a dispute (cf. the Roman-Byzantine transactio, balkure: Cod., 2, 4, 21; also Dig., 2, 15, 1). The rules of tari had held for it, especially tari and tari. There are three kinds of settlements: the defendant either acknowledges the disputed point to be justified (jibr) or he disputes it (inzhr) or he says nothing (inkh). The older jurists differ on the admissibility of these three kinds: al-Hariri and Ibn Abi Laila demand definite acknowledgment, while Abu Hanifa denies the possibility of a sulh in the case of jibr (al-Shafii, K. al-Qada', iii. 203) and addsuce the principal of Roman law: conquerors are pro indigente habitem (Dig., 42, 2, 3; cf. Cod., 2, 4, 32). As to the competence to negotiate of the two parties (milah) the usual rules hold but it is essential that they should have attained their majority (milah) or be freemen. The thing which gives rise to the settlement (milah) must be a mal, i.e. something about which an agreement of sale can be concluded, whether it is a thing, a claim or a usufruct. The disputed legal point (milah) is raised by the settlement may concern a thing (milah) or a legal claim arising out of killing or wounding (saya and shegar), but a law Ali is, e.g. the hada punishment for theft or incontinence, can never be settled in this way (cf. Cod., 2, 4, 18).—The settlement is reached 1) by the will of the parties; 2) by giving back the thing given for the settlement on account of defects (hayyr al-min), and 3) if circumstances unknown at the time of the settlement afterwards show that the legal position could not be disputed (e.g. discovery of a bond).—The Shafii divide the settlement into tari al-tari, which is considered as a donation (huda) (cf. Dig., 2, 15, 1) and tari al-mawla, which in place of the object claimed another one.

The Code Civil Ottoman, art. 1531-1571 is practically the Hanafi teaching on the subject.
van der Linde, Das erste Jahrtausend der Schachliteratur, 948). From the time he defeated Ma-wang-wu he was a courtier (mudrun) of the caliphs. He was a special intimate with his former pupil Al-Rādi (322–330 = 934–940) (al-Masudi, Murādī, viii. 311, 339; al-Tanukhi, Niḥāwār, p. 145; cf. Mec, Die Renaissance des Islam, p. 152). But in the last year of his life he had to take refuge in Baghda when he was prosecuted for a remark about 'Alt (al-Fihrist, p. 150, 12)'; there he died in hiding.

As a historian al-Suli is best known for his 'Abbadī history, Kitāb al-Albāb fī Abhāb Al-'Abbas wa-Anantasīrīn; the first part was arranged chronologically and the second gave a selection of the poetical works of members of the house of caliphs and of several others. The work which filled at least five or six volumes was never completed (al-Fihrist, p. 150, 121, 6) and is so far only known in a few fragments. There are manuscripts of the first part in Leningrad (Pahl. Libr., years 227–246, Zapiiski, xxi. 101–102), Cairo (Arsh. Turīkā, N. 443, years 295–318, Zapiiski, ibid., p. 99–100), Constantinople (part iii., Rescher in M. F. O. R., 1912, vīf., p. 532) and Paris (Rihāl. Nat., Fonds Arabes 4856, years 322–329); of the second in Cairo (Royal Libr., Turīkā, N. 594; Barthold in Zapiiski, xv. 0148–0153 = Arsh., Adda, N. 487, Zapiiski, xxi. 98–99) and Leningrad (Zapiiski, xxi. 102–110). Only a few parts of the Kitāb al-Awārī have been published: e.g. Abhāb al-Hallājī (Zapiiski, xxi. 0137–0141; fully analysed in L. Manisgnun, La passion d'al-Hallaj, passim); some of the Abhāb Ābān al-Dābāqī (A. Krimskij, Abān al-Ludūrī, etc., Moscow 1913, p. 1–43) and Abhāb Ībān al-Musīrā (Zapiiski, xxi. 104–112). No less famous was the Kitāb al-Wusūrī of al-Suli, so far only known from quotations (several times mentioned by himself in al-Awārī; cf. also Yaqlūb, Iṣbādī, ili. 131–132; v. 320; cf. Amur, al-Fihrist, Archives Marcocci, xvi. p. xx. 237). Of his other works the Adda al-Kutubī was recently published in Cairo by Muhammad Bahdjar from a Baghda manuscript (1351 = 1922). The book was written in the reign of al-Rādi (p. 163) and is a handbook for the guidance of clerks in the chancelleries, a kind of literature which later became very popular and attained its apotheosis in the monumental Šahāb al-'Abed of Kaşghāndi (it is noteworthy that Kaşghāndi, although he knows al-Suli well, never quotes this book).

In pure literature al-Suli made a name by his edition of the dīwān of 'Abbadī poets. Like al-Sukkari with the old poets, al-Suli dealt with the Muḥāsinīn. His Abhāb al-Maftūm exists in manuscript in Constantinople (Rescher in M. F. O. R., vīf. 501–502). Among his editions of the dīwān may be mentioned those of Abāb Nāwūs (E. M. Wechow, Die literarische Tätigkeit Hama al-Iṣbādī, Berlin 1909, 425); Muslim b. al-Walīd (De Goeje's edition, p. viii.), Ibn al-Maftūr (Brockelmann, G. A. L., i. 81), al-Bahri (q. v.), Ibn al-Rūmi (extr. publ. in Cairo, 1924), al-'Abbāb b. al-Aṣfār (Aghānī, viii. 15–25; xv. 141–144), al-Sanwari (Mec, Die Renaissance des Islam, p. 250). Among many others (al-Fihrist, p. 151, 121, 136), his Abhāb 'Abdārī Marīn is quoted by Yaqlūb (Iṣbādī, ili. 5, 415–416; v. 454). He also wrote a dozen other works of which as is often the case we only know the names (al-Fihrist, p. 151, 121, 136). Ibn Khallīkān, ed. Müstenfeld, 659, p. 51; Ḥādījī Khallīkān, ili. 598, 6095; ili. 144; al-Suli, Adda al-Kutubī, p. 155; Abu l-'Alīa, Nihāl al-Dawrānī, p. 147, 6; Āl-Suli was not particularly renowned as a poet, but his verses are often quoted (specimens are given by M. Bahdjar, ed. cit., p. 14–15).

Not a very favourable verdict is given on al-Suli's honesty. The ironic verses on his literary work are well known (Ibn Khallīkān, ed. cit., p. 54); they show that all his learning was regarded by some of his contemporaries as merely a knowledge of other people's books. The Fihrist (p. 129, vīf., 151, 6–7) and Yaqlūb (Iṣbādī, ili. 58) regarded his al-Awārī as a plagiarism from the Abhāb al-'Aṣfār of al-Marqūsī (so he too leads in Fihrist, p. 151, 6 instead of al-Maqādi; but cf. the more favourable verdict in al-Maṣūdī, Murādī, i. 16–17). Yaqlūb calls him a liar (Iṣbādī, ili. 10) and the Fihrist thinks his Abhāb k. Hārma a failure (152, 6). His vanity and his bad taste are several times pilloried (e.g. al-Lajmi, al-Wusūrī, p. 260; Ibn al-Athīr, al-Maghil al-wāsīr, p. 289). His boasting is also known to Persian literature of the 10th century (Abu l-'Adlī Bahdjar in Barhīl, Zapiiski, xviii. 0131). A large number of verdicts upon him have recently been analysed by L. Manisgnun (La passion d'al-Hallaj, ili. 92 and passim). This all goes to show that al-Suli cannot be considered an historian of outstanding merit. He was only an industrious compiler, not always able to distinguish his own work from that of others. But this did not affect his influence on literature; among his immediate pupils are mentioned al-Daraqqūtī, Ibn Khallīkān, al-Marrāshīdī, etc.; he is still more important as a source used by many Arabic historians and literary critics. Even his younger contemporary al-'Arūf (q.v.) several times copies him word for word. All al-Iṣbādī quotes him over 240 times as a particularly valuable source for the history of the 'Abbadī poets (not noted in Guidī's Tables alphabeticæ, as all ināmad).

On al-Suli as a chess-player, see especially the works of Antonius van der Linde, Geschichte und Literatur des Schachspiels, Berlin 1874, i. 97–98, 166–107; Quellenstudien zur Geschichte des Schachspiels, Berlin 1881, p. 21–24, 333–337, 354–381; Das erste Jahrtausend der Schachliteratur, p. 83 and 948; H. J. K. Murray,
SULTÁN (A.), a. a title which first appears in the fourth (ixth) century in the sense of a powerful ruler, an independent sovereign of a certain territory.

The word is of frequent occurrence in the Korán, most often with the meaning of a moral or magical authority supported by proofs or miracles which afford the right to make a statement of religious import. The prophets received this sultán from Alláh (cf. e.g. Sura xiv. 12, 13) and the idolators are often invited to produce a sultán in support of their beliefs. Thus the dictionaries (like the Táj al-'Arúṣ, v. 159) explain the word as synonymous with khulūya and burkān. There are also six passages in the Korán where sultán has the meaning of "power"; but it is always the spiritual power which IDbs exercises over men (Sura xii. 65; xvi. 103, 104; xvi. 67; xxix. 20). Now it is this meaning of power or rather of governmental power which is attached to the word sultán in the early centuries of Islam. The word and its meaning were undoubtedly borrowed from the Sýríc shulīn, which has the meaning of power, and, although rarely, also of that of the wielder of power (Payne-Smith, Thesaurus Syriacus, col. 4170; Noldeke, Beiträge zur syrischen Sprachwissenschaft, Strassburg 1910, p. 39). The Koránic sense of the word may probably also to be derived from the meaning of power (some lexicographers try to explain it as the plural of sult, olive oil). Later an attempt was made to connect the title sultán with the meaning of argument, and it was paraphrased as sūlāt ḫulūya (Táj al-'Arúṣ, loc. cit.).

In the literature of Ḥadîth, sultán has exclusively the sense of power, usually governmental power ("the sultán is the wali for him who has no other wali"/al-Tirmídhí, i. 204) but the word also means sometimes the power of Alláh. The best known tradition however is that which begins with the words al-sultán ill Alláh ʿāʾrý, "Governmental power is the shadow of Alláh upon earth" (cf. Goldscheider, Muhammadanische Studien, ii. 61 and Le sens des expressions abbas de Dios, i. 153. See also, in K. H. K., xxx. 331 999.). Al-Utbi quotes this tradition at the beginning of the Kifl al-Yamiit and his commentator al-Mantúni says that it was transmitted by al-Tirmídhí and others as going back to Ibn ʿUmar (Sharh al-Yamiit, Cairo 1286, p. 21). This tradition later played a part in the theories of the Sultánate because an allusion to the title was wrongly seen in it. Apart from Ḥadîth, Arabic literature to the end of the fourth century only knows the word sultán in the sense of governmental power (among the many examples, cf. e.g. Yaḥṣáh, Kitáb al-Bulūn, p. 346, 349; Ibn ʿAbd al-Ḥakám, Fírīč al-Múṣir, ed. Torrey, p. 185, where it is said that at some times the residence of the Sultán of Ifríjíya was Carthage and Ibn Hawkáj, p. 145 where al-Mawûl is called the residence of the sultán and of the diwâna of al-Djaddár, or of the person who at a particular time is the personification of the personal governmental power, as opposed to amir which is rather in the nature of a title. This last meaning, which is sometimes more completely rendered by Dār ʿal-Sultán (e.g. in Ḥadîth), and is totally different from the first is found as early as the Egyptian papyri of the first century (for the governor of Egypt, cf. Becker, Anleitung zur Geschichte Aegyptens, p. 90, note 6) and in the following centuries sometimes also for the Caliphs (the Caliph al-Manṣúr is called Sultán Alláh in a hikhy, Tabari, iii. 426); the Caliph al-Mawâfiq is called Sultán (Tabari, iii. 1894; and again in 907 the Caliph al-Kádir, al-Utbi, op. cit., p. 265). This practice of designating a person by the word which indicates his dignity has parallels in all languages (cf. e.g. for the Turkish official language: H. Ritter, in Diccionario, ii. 473); it even appears that the Assyrian form šilhun was applied to foreign sovereigns (according to Ravaïse in E. D. M. G., iv. 330). The meaning of power, of government, has been maintained in Arabic literature to the present day.

The transition in meaning from an impersonal representative of political power to a personal title is a development, the stages of which are difficult to follow. Authorities writing later than this development make statements which can only be accepted with reserve. Thus Ibn Khaldún (Prolegomena, ii. 8 in N. E. xvii) says that the Barmécide Qâfar was called sultán, because he held the most powerful position in the state and that later, the great usurpers of the power of the Caliph obtained ḥakâb like Amr al-sànaa and sultán. The same thing is recorded of the Byûids (A. Müller, Der Islam in Morgen- und Abendland, i. 568) and of the Ghaznavids. Ibn al-Athír (ix. 92) says that Mahmúd al-Ghazna obtained the title of sultán from the Caliph al-Kâdir. This statement is not confirmed by al-Utbi who, in giving the various alâhī conferred on Mahmúd by the Caliph (op. cit., p. 317), makes no mention of this title. It is however true that al-Utbi himself always calls Mahmúd al-Sultán, giving in explanation the fact that Mahmúd had become an independent sovereign (op. cit., p. 311); but al-ʿUtbi sultán cannot yet have been an official title since he gives the same epithet to the Caliph (cf. above). The first Ghaznavid on whose coins the title appears is Ibráhím (1053-1099). We find the Fâtimids using the epithet Sultán al-İslám, Ibn Yûnis, Leyden MS.) and in the same period we find the ḥakâb of Sulân al-Dawla among the Byûids of Fârs (Sultan al-Dawla Abû Shujâ`, 1012-1024). The same ḥakâb was borne by the last Byûid al-Malik al-Râhim at Baghdir at the time when the usurping Sultân Tughril-Beg received from the Caliph in 1054 the ḥakâb al-Sultán Rûkhn al-Dawla (al-Râwand, Râba al-Ṣâdîr, G. M. S., i. 105; cf. also Ibn Taghribirdi, ed. Popper, p. 235).

Tughril-Beg was also the first Muslim ruler whose coins bear the epithet or rather title Sultán and in that the combination al-Sultán al-Mu`azzam" (S. Lane- Poole, Cat. of Oriental Coins in the Brit. Mus., ii. 25 sp.). This fact makes it very probable that the Sultán was the first for whom Sultán had become a regular title for a ruler; the qualification by al-Mu`âazzam was necessary to lift the word definitely out of its use as a more or less impersonal common noun; this development would at the same time explain why the word Sultán immediately became the highest title that a Muslim prince could obtain, while in the centuries preceding any representative of authority could be so designated. The adjective al-Mu`âazzam, essential for the title, was soon omitted.
SULTAN

in unofficial language. Thus, with the Saljûqîs, Suljân became a regular sovereign title. Neither the provincial dynasties of the Saljûqs (among whom however we find the proper name Sulân-Salîh) nor the Asîhs after them bore the title suljân; they were content with titles like malik and qudd. It was only after the end of the Great Saljûq in the middle of the xiiith century that the Khwârimshâhs assumed it. The Caliph al-Nâhir was however able to take advantage of the weakness of Djalâl al-Dîn Khwârimshâh to refuse to recognize his claim to this title (Nawaw, Vie de Djalâl ed-dîn Manbîkhî, ed. Houdas, p. 417). Soon the Saljûqs of Rûm also called themselves Suljân (on coins from Khâlid Arslân II). Almost at the same time the title is applied in literature to the first Ayûbîd Sulân al-Dîn (Ibn Djâbir, Rûbûl, ed. Weigl and de Goër, p. 40), although Suljân never appears on the coins of the Ayûbîds, whose official titles were all combined with al-Malîh. By the literature of the xiiith century Suljân had become a title indicating the most absolute political independence. Ibn al-Ahîr (xi. 169) speaks of Baghdad and its environs as the territory where the Caliph reigned without a Suljân. It is not certain if in the last period of the Abbâsids in Baghdad, the Caliph was already regarded as the only authority who could confer the title suljân. We see however that after the fall of the Caliphate an increasing number of Muslim potentates arrogated the title to themselves. In official use, the title was very often followed by an adjective like al-Abâm, al-Abîl etc. (a complete list is given in O. Codrington, A Manual of Musulman Numismatics, London 1904, p. 81-83). During the xiiith-xvith centuries the Suljân of Egypt added the greatest lustre to the title of Suljân; after them came the Ottoman Suljân.

Sultans, having thus become potentates whose absolute independence was generally recognised, jurists and historians set themselves to construct theories to find a justification in law for the existence of such potentates, for whom there had been no place in the old conception of the Muslim caliphate (cf. Khâyînâ). We find these theories as early as al-Mâwardî (who wrote in the time of the Hûyûs) for whom suljân had not yet any other meaning than governmental power, as is evident from the title of his book al-Akhnâm al-suljânîya. Al-Mâwardî says (ed. Enger, Bonn 1853, p. 30-51) that the Caliph may remain in office even if he is dominated by one of his subordinates provided that the latter's actions are in conformity with the principles of religion. Al-Üthârî, who quotes the tradition that the suljân is the shadow of Allâh on earth (cf. above), does so very probably to justify the independent position of Mujâhid of Ghazna to whom he always gives the epithet al-suljân; but this allusion to the well-known tradition is perhaps rather a play upon words than the theory of a jurist. To al-Ghazânî the "Sultans of his age" of whom he has a very low opinion (Geschichte, Streitgeschicht der Gains gegen die Itâfis, Leipzig 1870, p. 93) are in general the representatives of temporal power. It is only under the Manûlik Suljans of Egypt that a definite theory is laid down by Khâlid al-Zâhirî (Zadât al-khâs al-mâmainî, ed. Ravaiss, p. 89-90) who says that it is only the Caliph who has the right to grant the title of suljân and that in consequence this title only belongs in reality to the Suljân of Egypt. The Manûlik called themselves in their inscriptions Suljân al-Islâm wa'l-Mulsâmân (van Berchem, Inschriften aus Syrien, Mesopotamien und Kleinasien). About the same time Ibn 'Arâshâhî in the biography of Suljân Djalâmî (T.R.A.S., 1897, p. 295 sqq.) calls the Suljân the Khalifâ of Allâh on earth in affairs of government while the 'ulâmâ' are the heirs of the Prophet in matters of religion; this statement contains, like that of al-Üthârî, an apt allusion to the tradition (in another form). Lastly al-Sâ'idî (Fusûn al-Muâlîkî, ii. 91 sqq.) gives a definition of the titles of suljân (he in whose possessions there are malikâ) of al-Suljân al-Abâm and of Suljân al-Suljân, which is the highest title. In the time of the Manîlik there were actually quite a number of Muslim potentates who called themselves Suljân; some of these, in keeping with al-Zâhirî's theory, had even asked the permission of the Caliph in Cairo to bear the title.

From the beginning of the era of the title we may say that all the great rulers who have borne it have been Sunnis, except the Khwârimshâhs. It is therefore not a mere coincidence that this development went parallel with the religious revival in Islam in the period of the Crusades; the great Suljân became at the same time the defenders of Sunni Islam and the Mongol rulers, after having embraced this form of Islam, assumed this very title. This Sunni significance of the title is specially noticeable in the Ottoman suljânîte. It appears that some coins of Crîshân already bear the title suljân (S. Lane-Poole, Cat. Of Coins, viii. 41) although the first Ottoman princes were generally regarded as sunnî (Ibn Battûtâ, ii. 321). Beyârâî is said to have been the first to obtain from the Caliph in Cairo the right to call himself Suljân (von Humann, G.O.R., i. 233). After the taking of Constantinople, Muhammâd II assumed the title of Suljân al-khârîzân wa'l-abûzân (G.O.R., i. 88) but even in the Ottoman empire this title as the title of the sovereign it has never been as popular as those of Khânâbâd and of Fâdîshân. In official protocol on the other hand, it occupies an important place, e.g. in the formula al-Suljân ibn al-Suljân, etc. before the names of the rulers. After the extinction of the Manûlik Suljânite by the conquest of Selim I, Ottoman rulers had become indisputably the greatest Suljân in Islam. The Safawîs of Persia were called Shâh and the opposition Suljân-Shâh henceforth corresponded to that between Sunnis and Shiîs. It is true that officially the Safawîs also called themselves Suljân, e.g. on their coins (R. S. Poole, Catalogue of the Coins of the Shâhs of Persia in the British Museum, London 1887, Index, p. 313), but they were only known by the title of Shâh.

In Turkey Suljân has always been an elevated title. In addition to rulers, it was borne by princes and one of the causes, why the grand vizier and favourite of Sulaimân I Ibrahim Pasha, was disgraced is said to have been that he had taken the title of Serî'asker Suljân (G.O.R., ii. 160). In the time of 'Abd al-Hamîd II the petty chiefs who were appointed suljân in their own country (e.g. in Hâşînawî) were not allowed to use the title when they visited Constantinople (information given me by Mr. Smock Hurgronje). In Turkish the title suljân is always placed before the name of the sovereign or of the prince, which shows its foreign origin. The real popular use of the word.
in Turkish is with the meaning of princess (cf. e.g. the story, Soltun Sultan in Jacobi, Hillefisch, ii., p. 59 and the use of the word in erotic poetry and in it is impossible to study the history of the title Sultan completely without using the wealth of material in the inscriptions, it is to be hoped that the systematic publication of this material will not be long delayed.

J. H. Krämer

SULTAN AL-DAWLA ALI SHUfaq BABA AL-DAWLA, a BAYID. After the death of Bahá' al-Dawla on 7 Junnd 1252 (= Dec. 22, 1012) in Arradjad, his son Sultan al-Dawla succeeded him as amir of Fars and al-Irak. He at once left Arradjad for Shiráz and appointed his brother Djalal al-Dawla (q.v.) governor of Bagdad and his other brother Abu 'I'Fawrís governor of Kirmán. The latter was persuaded by the Dailami troops to rebel against Sultan al-Dawla; he went to Fars and entered Shiráz but was immediately driven out of the town and had to retire to Kirmán. He then went to Khurásan and asked help from Sultan Mahmad b. Sabuktegin, who was then in Bahr. The latter placed an amir Abd al-Táhir at his disposal. Abu 'I'Fawrís occupied Kirmán, then turned his attention to Fars and entered Shiráz while Sultan al-Dawla was in Baghgad. On the latter's return a battle was fought in which Abu 'I'Fawrís was defeated; he fled to Kirmán (408 = 1017/18) pursued by Sultan al-Dawla's troops, who soon conquered the province, while Abu 'I'Fawrís sought refuge first with Shah al-Dawla b. Fakhr al-Dawla (q.v.) and then with Mahmad-díb al-Dawla, lord of al-Batfa. After long negotiations an agreement was reached in 409 (1018/1019), by which Abu 'I'Fawrís was to retain the governorship of Kirmán while he bound himself to obedience to his brother. In the same year Ibn Sahlan was appointed governor of al-Irak. As he made himself much hated by the Turks, the latter complained to Sultan al-Dawla, who endeavoured to appease them and summoned Ibn Sahlan to him. Instead of appearing before his overlord he fled to al-Batfa and when Sultan al-Dawla demanded that he should be handed over, the lord of al-Batfa, al-Husain b. Bakr al-Sharih refused to do so. Sultan al-Dawla then sent an army against him; al-Sharih was defeated and Ibn Sahlan fled to Bagdad to Djalal al-Dawla. As the troops were discontented with Sultan al-Dawla and showed themselves inclined to recognise his brother Muhsarrif al-Dawla as their lord, the two brothers agreed that the latter should receive the governorship of al-Irak and neither should take Ibn Sahlan into his service. But after Sultan al-Dawla had gone to Tustar, in spite of the agreement he appointed Ibn Sahlan his vizier, which roused the wrath of Muhsarrif al-Dawla. Sultan al-Dawla then equipped an army and commissioned Ibn Sahlan to drive Muhsarrif al-Dawla out of al-Irak. But the latter took the field to meet him; Ibn Sahlan was defeated and fled to Wasiq where after a long siege he had to surrender in 411 (1021). After this victory Muhsarrif al-Dawla took the honorary title of Kház'ángah "king of kings" and in Muhsarrif 412 (May 1021) he dropped his brother's name from the Jánba and replaced it by his own. In the same year Ibn Sahlan was seized and blinded by order of Djalal al-Dawla.
and Mugharif al-Daula. In spite of Sultan al-Daula's defeat in the war involving al-Ahwāz declared for him, so he sent his son Abū Kuliqār [q.v.] thither to take possession of this province. In 413 (1022/1023) peace was made, the terms being that Fars and Kirman should be ruled by Sultan al-Daula and all 'Iraq by Mugharif al-Daula. Sultan al-Daula, according to the usual statement, died in Shiraz in Shawwal 415 (Dec. 1024/Jun. 1025) but according to one source he did not die till Shawwal 416 (Sept./Oct. 1025).

(K. V. ZETTERSTEN)

SULTAN ISHAK (more frequently S. Sahk, S. Sahk) was the last and most important personage in the history of the Al-‘Ali Ḥājjī sect, which had disappeared by the end of the 14th century. The Al-‘Ali Ḥājjī was a historical personage. The Al-‘Ali Ḥājjī put him in the 16th century. He is said to have been a son of a certain Shishk Iskandar Khatun Duyira (Dayaraq), daughter of Hasan Beg Ḥājjī. By his wife Khurshid-waṣir he had seven sons whom he called ḥaqīq (to distinguish him from another nephew called ḥaqīq tawānī). Like each of the seven fundamental avatars Sultan Sahk has a retina of four (five) angels: Ben-yānoun, Dowlad, Mafṣī, Dawdān, Pir Ṣādiq (and Khānun Duyira) each of whom has his special duties.

An analysis of the proper and geographical names in the religious work known as the Sīrat al-Daud shows that the area of Sultan Sahk's activity was the part of Kurdistan between the Zagros (Dilah) and the river Sirwan (Diyala). According to the Turkish hymn called șehīb-i-nāmeh, Sultan Ḥājjī spoke the Greek language which is still that of the inhabitants of this region, who, although Iranian by race, are not true Kurds from the linguistic nor probably from the ethnological point of view. The tomb of Sultan Sahk and his companions is at Pardwar on the right bank of the Sirwan in the Awarma-Lutuin (cf. SENNA).

The polemical M.S. in the O. Mann collection (Preussische Staatsbibliothek, Acc. M.S. 1904, No. 50, fol. 8) calls Sultan Sahk șīyoma-yi Ḥājjī “incarnation (dress) of God” and Ṣahāni-pān-I Ṣahāni-pān (“legislator of the law of the ḥājjī”). In fact it is to him that the majority of the rites of the sect are traced as for example the “recommendation of the head” to a pir (sur ‘aṣfar dān) which symbolizes the contract which the divinity (the “King of the World”) had made with Benyānoun before appearing on earth in the form of Sultan Ḥājjī. Benyānoun was to assume the role of pir and the “King of the World” that of fāhib, for he declared that the fāhib must obey the orders of his pir, one may execute the orders but, if I become the pir and thou the fāhib, thou wouldst not be able to execute what I tell thee”. This seems to be an echo of Ismaili beliefs, according to which God is without attributes and creation retains to “universal intelligence” (al-Muḥak al-Ṭalāb, 3 al-Ṭalāb); cf. Cuyard. Fragments relatifs à la doctrine des Ismaïlis, Paris 1874, p. 43, 162.

Sultan Sahk is occasionally recognized as one of the leaders of his sect, who do not agree regarding later manifestations.

(V. MINORSKY)

SULTAN ÖNU, the ancient name of the part of Phrygia in Asia Minor, situated to the north in the Dardanelles, for it was mentioned in the Chronicle of Ibn Butn (Houtman, Recueil de textes relatifs à l'histoire des Seljoukides, iii. 217) as a frontier district of the Seljuk Empire, the protection of which was entrusted to the sultans of the Seljuk Empire, the protection of which was entrusted to the sultans of the Seljuq princes of Bey (sultān) such as Ertogru. Among the early ottoman historians Neghri (ed. Nöelleke, Z.D.M.G., xiii. 190) mentions Sultan Önu as the place where Ertogru and his little tribe went, after their stay in the Karadas Dag near Amorga.

Bur Negri as well as Ibn Butn writes: Sultan Önu (dative case). Hence the name is probably to be explained at the Sultan's tumulus (ṣūr or ʿaṣif) and not as the Sultan's front, as was suggested by the later spelling ʿāṣif (comp. Lenzl, Historiae Musulminum Turcorum, col. 107); moreover Ibn Butn (ii. 324, 342) mentions two persons with the title Sultan Önu and J. H. Mordtmann takes it that the place name in Önu, which occurs in the same region was originally in Oyu; the local name Boğa-Öynük is formed in the same way (Taschner, Der osmanische Weggeweiss, i. 122, note 1). The story told by von Hammer (G. O. K., i. 45) about the reason why Sultan 'Ali al-Din called the region Sultan Önu does not seem to occur in any early historical work. In Ertogru's time, the towns of this part of the country were still held by Christian lords, but after these towns had been brought under the immediate rule of his successor Ötheman, the region was made a sanjak under the name of Irin Önu and with Karadag Hisar as capital. This sanjak was given to Örkhan and, afterwards, by Örkhan to his son Murad (ʿAshik Pasha Zade, ed. Constantiopolis, p. 20, 38; Turwurğâ-ı Ali Ötkmên, ed. Gieson, p. 7, 73; Ordul Beg, ed. Babinger, p. 15, 57, 189; Neghri, ed. Nöelleke, Z. D. M. G., xiii. 211). It seems that already in these chronicles, even as in later times, the place name in Önu was often used instead of the regional name Sultan Önu (the latter name only twice in the Turwurğâ, but both times in a poem; comp. also Taschner, loc. cit.). In later centuries the sanjak of Sultan Önu bordered according to Hadiji Khüta, Dilbhumuna, p. 631, to the S.E., upon the sanjak of Kara Hisar Sabhi, and, to the N.W., upon that of Kühdwanidjâr; it contained, besides, the capital Eski Shehir [q.v.].
show an attempt at writing Turkish in the roman metre in which the *Mathnavi* of Mawlana was written. The language is archaic and represents an old form of the dialect of the Oghuz.

The 13 Greek tales of the Rabîb-nâma have been published from the MSS. in St. Petersburg, Budapest and Oxford (those in Munich and in Gotha do not contain them) by G. Meyer, *Die griechischen Verse im Erkbi-nâme, in Byzantinische Zeitschrift*, 1895, iv., p. 401 sqq.

**SULTAN WALAD, eldest son of Djâlal al-Din Rûmî** and his second successor as head of the Mawlawi order, was born in Lâranda (cf. *qašâ*) in 623 (1226) before Djâlal al-Din’s family had settled in Konya. He was called after Djâlal al-Din’s father, Bahâ’ al-Din Walad, known as Sultan al-Ulumâ. He was brought up among the Sûfîs who surrounded his father and seems to have been particularly intimate with Shams al-Dîn Tabrîzî, while his younger brother Cîlebi ‘Ali al-Dîn was rather hostile to the latter’s influence. Sultan Walad married the daughter of another of his father’s disciples, the goldsmith Şâhî al-Dîn Ferîdûn of Konya. After the death of Djâlal al-Dîn, Sultan Walad did not at once succeed him but insisted on Cîlebi Hasan al-Dîn, hitherto the waklât of the master, assuming control. Eleven years later Hasan al-Dîn died and Sultan Walad succeeded and held office till his death on 10th Rabi‘ II, 712 (Nov. 11, 1312). He was followed by his son Djâlal al-Dîn Amir ‘Arîf.

Sultan Walad does not seem to have been a dominating personality like his father. Pious traditions about his life reveal him to us as a contemplative mystic; a certain manner of performing the whirling dance has been called after him, Sultan Walad Devînî (Brown, *The Dervishes*, ed. Rose, Oxford 1927, p. 252 sq.). He was also the author of a large *Mathnawi* called *Walad-nâma* and dedicated to the Mongol Sultan Ulujiît Kühân in three parts *khišâ-nâma, hastâ-nâma* and *Rabîb-nâma*, a voluminous *Divâmâna* and a work in prose called *Mârîfî*. The *Mathnawi* contains many data of importance for the biography of Djâlal al-Dîn Rûmî and may be regarded as a kind of commentary on the *Mathnawi*-e *Ma’dâni*. The works of Sultan Walad, none of which have been printed, are written in Persian. They have a special interest because they include verses written in Turkish and Greek. The Turkish verses are in the *Totikh-nâma*, the *Rabîb-nâma* and the *Devâmâna*; their importance lies in the fact that they are the first literary documents in Turkish written in Asia Minor and for this reason the language has been called the language of the *Sâlîfî* Turks. The 156 harî’s in Turkish from the *Rabîb-nâma* are all that have been published and studied so far (from the Vienna MSS., written in 767 [1366] and the St. Petersburg one, later in date) by von Hammer, Wickerbauer, Behrens, Radloff, Salemann, Kühn, Smirnoff, Behrens, *et al.* (cf. Bibliography). According to Köprüli Zâde Faîl Bey’s *Bylîl Müsabihel-i Mevhib* (p. 266 sqq.), the influence of Mawlânâ Djâlal al-Dîn Rûmî on western Turkish literature begins with Sultan Walad. The latter is said to have been at the same time the first representative of the school of Turkish poetry under Persian influence, while the other category, that of popular mystic poets (*tâbûkh* as opposed to *tâbûr*), is represented about the same time by Yûsuf Emre. The Turkish verses of the *Rabîb-nâma* already
The cantons of al-‘Irāq are as follows: 1. Fārāhān (Zulfābdād and Mughbābdād) with 144 villages forms the central plain, the scanty waters of which (Karāsh-rūd) flow into the salt lake without outlet which in the Mongol period was called Tashgamma-ur = the white lake'. The old capital of Fārāhān is Sādūf, situated 25 miles N.W. of Sultānābād. Fārāhān is an old Shīa centre: 2. Shāhrān (Carrshah); 3. Hūzātu and 4. Wāfā with 42, 52 and 12 villages respectively lie W. and N.W. of Fārāhān; 5. Tafrīsh and 6. Aghtyān with 16 and 3 villages respectively lie to the north of Fārāhān. Tafrīsh is a hollow surrounded by mountains on all sides. Aghtyān and Garaḵān are noted as the birthplaces of many Persian holy men and statesmen; 7. Rūdābār with 47 villages lies N.W. of Fārāhān; 8. Khālaḏī̄stān with 90 villages lies in the direction of Ḥumān and Sāwā; 9. Kūzást with 150 villages lies south of Sultānābād on the fan-shaped upper waters of the Kārṣu and on those of the Karāsh-rūd (Kara-Kahirt). The important canton encroaching on the environs of Sultānābād seems to be identical with the Kārāsh al-Dīl of the Arab geographers (Le Strange, Tār Ḭaṃdi, etc., p. 103 and Manṣūr al-Ḵᵛādāb, p. 69); the mountain Rāmsand is the modern Rāshmūn (Rashmān) (although Mustawfīt seems to give this name to the Kūh-i Shāh-Zinda which continues the Rāshband range northwards); the stronghold of Fartūn of Dīyaḏuḏ-gūr in M. M. S., xvi/2, p. 116: Fartūn must be on the mountain of Fartūn (north of Tūla); finally the name of the "spring of Kāh-Khurān" which rises on Rāmsand is explained by the local legend which tells how Kāh-Khurān disappeared on the mountain of Shāh-Zinda (Cittik, p. 186; cf. Shāhūn-ḵan, ed. Mohi, iv, p. 266); 10. Sarābānd, with 130 villages to the S.W. of Kūzāst on the Bāzdīr road; the canton is watered by the upper waters of the Karḵāt (Ab-i Kūlān, etc.). In addition to the cantons above enumerated, the following have at times formed part of al-‘Irāq: Darājā (Daraḵšt) on the left bank of the Kārṣu to the north of Wāfs and south of the Hamadān-Kārṣu road; Aḥshā Ḵhor, a dependency of Bāzdīr; Kāmārā and Nīm waṣt (on the Anār-rūd) both now merged in the district of Māhālāt. The total number of inhabited villages, etc. in al-‘Irāq is 686. Before 1914 it paid to the treasury a māhrāt of 80,000 tumans and 16,000 ḡarrāwārs of corn. Five regiments in the province.

The province, agriculturally rich, is especially noted for its famous carpets (Sārḵāh, Sultānābād) exported by the European and Persian houses established in Sultānābād. The importance of al-‘Irāq will increase if the Mohammān-Bāzdīr-Tehrān railway (still only a proposal) is completed through the province. The population for the most part is pure Persian. In K̄hālaḏī̄stān are K̄hâl al-Turk speaking a very curious dialect (cf. the article Šāḵa; this region also has a K̄hâlaḏī̄stān [near K̄hâḵk in the Tebriz-Hamadān road] where however a central Irānian dialect is also spoken; cf. Brugsch, Reise d. k. preuss. Ge- sandt., 1, 337–338 and Justi, Kurdische Grammatik, p. xxv). In K̄uzaţ there are 13 Armenian villages the inhabitants of which (564 houses, 2,050 souls in 1916) were settled here by the Šafawāds. At K̄amārā there are Armenians and Georgians and also Turks repatriated from Syria by Tirmaghir language is said to be connected with Cargaghān (?).

For particulars of Karaj Aḥi Imlaš, see P. Schwartz, Persien in Mittelalter, 1925, v. p. 574–82. The position of Fartūn (Fartūn) settles the site of Karaj on the Karṣa and according to Yāḵūḏ, Fartūn was at the gate (in the defile) of Karaj. The hypothesis of Hourm-Schindler (Zeitschr. d. Gesellschaft f. Erdk., 1879, xv, p. 60) that Karaj was to be located on the river Karṣa which waters Gulpoyān (= Diar-Baḵdān, 1) cannot therefore be accepted. Burdū also (io faraḵšā east of Karaj) is to be sought west of Gulpoyān (at Diar-Baḵdān or Bubbūrūd).

3. Name of several villages in Persia for example, the capital of the canton of Turghān (q.v.) in K̄hālaḏī̄stān. (M. Vosoukāy)

SULTĀNĪYA, a town in Persian ʿIrāq, about ten miles west of the watershed between the Zendān (q.v.), which runs to the Klīz-ʿAbār and the Abhar, which loses itself in the direction of Tebriz. The old Persian name of the canton of Sultānābād was Shāhīrāz. It was originally a dependency of ʿUḏḏulī. The Mongols called this district ʿAsgūn-ʿOlīgūr (="the prairie of the Ałçasus"); there is still a village called "ʿOlgūr" S.E. of Sultānīya. Sultānīya is about 5,000–5,500 feet above sea-level. The coolness of its climate in summer and the richness of the high plateau in pastoral and game must have had a special attraction for the Mongols. Asghūn began the construction of a town, the wall of which (sūrā) was 12,000 paces in circumference. His successor ʿUḏḏulī, to celebrate the birth of his son Aḥi Sādī, began in 705 to enlarge the new town (up to 30,000 paces in circumference) and made it the capital of his kingdom. The sovereign and his ministers vied with one another in embellishing Sultānīya. The vizier ʿAbī al-Dīn alone built a quarter of 4,000 houses (d’Ossieu, iv, 486; Hammer, Geschichts d. Ichane, ii. 184–186). The building of the town was finished in 713 (1313) and was solemnly celebrated. After his conversion to the Shīa, ʿUḏḏulī thought of bringing to Sultānīya the remains of the Caliph ʿAlī and of the Imam ʿAbū. Hamd Allāh Mustawfī says that nowhere except Tahrīb could so many splendid buildings be seen as in Sultānīya and he makes the great roads (al-ʿIrāq) radiate from Sultānīya as the centre of Iran (Taḵt-e Iran-Zamīn). The exaggeration in the last statement is apparent; the site "so inconvenient" (P. della Valle) of the town was the main cause of its decline. ʿUḏḏulī died in
SULTANIYA — SULUK

Sultaniya was and was buried in the famous mausoleum there. The ka'bah of Ali was held in Sultaniya, but the fact that ‘Ali-Shah, the ruler’s minister, began to build a magnificent mosque in Tabriz seems to indicate that pride of place was returning to the old capital.

After the fall of the Mongols, Sultaniya often changed hands, and its possession was disputed between the Sultus [q.v.], the Djilallir [q.v.], and the Muqaffarids. A former captain of Shahr Uwaiz Djilallir called Sard Tv' Adil fortified himself in Sultaniya in 751. He inflicted a defeat upon the Muqaffarid Shah Shudja but finally submitted to him and kept his position. A little later Sard Tv' Adil proclaimed Sultun Bayzard Djilallir at Sultaniya; his brother Sultan Ahmad complained of this to Shah Shudja', who removed Sard Tv' Adil from Sultaniya. Timur’s troops took Sultaniya from the sons of Sultan Ahmad in 786. At the same time Timur re-established Sard Tv' Adil as governor there and seems to have respected the tomb of Uldjait (cf. Olearius). Among the villages built by Timur around Samarkand with the names of celebrated towns, there was one called Sultaniya (Barthold, Ulez-beg, p. 32). In 795 Sultaniya formed part of “the field of Illigaul” confirmed by Timur on his son Miran-Shah, Zafar-nama, i. 388, 399, 425. Clavijo, who visited Sultaniya in 1405, saw that Miran-Shah (from 785-9) afflicted with madness which showed itself in the destruction of monuments, Zafar-nama, ii. 221), had plundered the town and citadel (aivan) and had smashed the tomb of Uldjait (‘the Caballero that yest ererrado mandou echar fuera’). In this, the ambassador of Henry III of Castile adds that the town had many inhabitants and that its trade was greater than that of Tabriz. Under Tahmash I the mausoleum was restored and P. della Valle and Olearius found it in good preservation. Trade however gradually went back to Tabriz and the removal of the political centre to Ishkhan completed the ruin of the old capital of Uldjait and caused it to become forgotten. It only experienced a brief revival of favour when, in the reign of Fath ‘Ali Shah, when the court followed the old custom of moving to a summer residence, a hunting-palace was built near Sultaniya with materials taken from the old city. This new Sultaniyâbad was also abandoned after the Russo-Persian war of 1826. The splendid mausoleum now rises from the centre of a wretched little village. In 1880 Houtum-Schindler counted 400–500 houses there.

Dienlaf argued the mausoleum as “the largest and most remarkable of all the buildings erected in Persia since the Muslim conquest” and this opinion is corroborated by Sarre’s study. The mausoleum is in the form of an octagonal prism 85 feet broad and 175 feet high (including 25 feet for the cupola). It is built of brick covered with superb blue faience. The inscriptions on the mausoleum do not appear to have been studied. Uldjait’s tomb was in the interior of the mausoleum. P. della Valle speaks of a chapel the entrance of which was closed by a beautiful grill of damascened iron. According to Olearius this grill was forged in India and formed a single piece. The mosque seems to have been fortified. According to Mustawfi, the jami’ (Clavijo, aivan), Uldjait’s burial-place (marvdawg), was of carved stone. Olearius saw at Sultaniya about 30 cannon which had been used to defend the old fortress in the Safawi period. Tavernier saw in Sultaniya the remains of other mosques, but now all that exists is one ruined mosque or mudwâr near which is situated the tomb of Celebi-oghlan (sixteenth century) in the form of an octagonal tower of brick with the ornamentation arranged to form a Kufic design. The tomb of the theologian Mullâ Hamza Shadiv (adorned with faience) dates from the sixteenth century and was built by Isma'il I. Nothing remains of the walls on which Morier saw an inscription in the name of Uldjait.

SULUK (A., “journeying”) is a term used by Sufis to describe the mystic’s progress in the Way to God, beginning with his entrance into the farâ’î (Way) under the influence of a Shâkih and ending with his attainment of the highest spiritual degree within his capacity. Suluk implies a quest deliberately undertaken, methodically pursued, who he prosecutes it (suluk) must pass through, and make himself perfect in, each of the stages or “stations” (ma’âÎmâr) — shir — trust in God, poverty, love, knowledge and so on —
before he can become united with God (nafs). Hence suülük is contrasted with sâdabah (see art. MAHDIYAH).

(R. A. Nicholson)

AL-SUMAIL b. HESIM ABU DJAWAHAN AL-KILÀ (a famous Arab chief in Spain. (The vocalization of the name al-Sumail is confirmed by the transcription Zamael used by pseudo-Isidorus of Beja). He was the grandson of Sh'mir b. Abi Djawahan of Kifân who killed al-Malik at Khebbel (cf. above, il., p. 539). The family of Sh'mir had left Kifân, because of reprisals made on them by the Sh'itsu, and settled in the district of Kinnasrin (cf. above, il., p. 1021) and this is how it came about that al-Sumail came to be one of the dûnd of Kinnasrin in the Syrian army sent to North Africa by the Umayyad Caliph Hishâm b. 'Abd al-Malik in 123 (741). He shared the fortunes of his chief Bâlî b. Bishr al-Khāshî (cf. above, il., p. 617) and when he had settled in Spain he soon became chief of the Ħaṣî of the country and lived in Cordova.

As a result of a quarrel with the governor of Cordova, Abu l-Khaṭṭâr al-Ḥusain b. Dirâr al-Kabîr, who insulted him, al-Sumail whose Arab amour propre was too high, decided to rebel against him and to get the Lakhmids and Dju-djâkhîs in Spain to join him. He offered the command of the rebels to Thāwâb b. Sâlama al-Djâlahî, who after the victory he gained over Abu l-Khaṭṭâr on the banks of the Guadalquivir became governor of Muslim Spain at Cordova.

On the death of Thâwâb, al-Sumail intervened to choose a successor to this governor and chose an individual on whom he knew he could exercise great influence: Yânsî b. 'Abd al-Ḥamân al-Fihri. His choice was at first disputed but after the victory of Seccâna (Shâkûnda, q.v.) in 130 (747) won by the Ma'addî clan under Yûsuf and al-Sumail over the Yamanî clan commanded by Abu l-Khaṭṭâr, the authority of the new governor was consolidated and the latter offered al-Sumail the command of the district of Saragossa [q.v.] in 132 (749). He distinguished himself for his great generosity during a severe famine there, but two rebel chiefs finally besieged him in his capital. Al-Sumail appealed for assistance to his kâhid fellow-travellers in Spain and his enemies raised the siege of Saragossa.

The later history of al-Sumail is closely and regularly connected with that of Yûsuf al-Fihri and that of the founder of the Umayyad caliphate of Spain, 'Abd al-Ḥamân al-Mahallî. He at first promised his support to the latter, then changed his mind, in circumstances of which a picturesque account is preserved in the anonymous chronicle entitled Abhûr al-majâla', and these show the inconsistency and complexity of the character of al-Sumail. 'Abd al-Ḥamân however after the return of his emissaries from the peninsula landed at Almûncar on Rabh' II, 138 (Sep. 755). Al-Sumail, after forcing his master Yûsuf al-Fihri to get rid of two important kâhid chiefs Sulãmah b. Shîhâb and al-Ḥusain b. l-Dâdîn, persuaded him to return to the new Umayyad government the government of the two districts occupied by the dûnd of Damascus and Jordan and gave him in marriage his daughter Umm Mihây. But the negotiations broke down through the insecurity of the envoy, hostilities began between Yûsuf and 'Abd al-Ḥamân and the former was defeated near Cordova. Al-Sumail had a son killed in the battle and his palace at Seccâna was looted. He tried with Yûsuf to regain the upper hand but both had soon to submit to the new caliph and al-Sumail installed himself in Cordova again. Yûsuf having taken to flight, al-Sumail was accused of being his accomplice and imprisoned; when Yûsuf after being defeated was killed near Toledo and his head brought to Cordova, 'Abd al-Ḥamân, wishing to be rid of his other enemy, whose submission he suspected was only nominal, had al-Sumail strangled in 142 (759).

(E. Levi-Provençal)

SUMAISât, the ancient Samaït on the right bank of the Euphrates, now Samaït (in Cuinet: Simas). The Muslims under 'Iyâd conquered it in 18 (639). From its position on the frontier between Arab and Byzantine territory, it was often the scene of both. The Byzantines raised it in 245 and 259 and this contributed to the destruction of the old Greek and Roman town. It was again the scene of fighting in the Crusades. Saladin took it in 584 (1189).

It is now an unimportant village; but Yâkîî called it wadan and mentions among its noted inhabitants a certain Abu l-Ka'sî. 'Ali b. Muhammad al-Salami who died in Damascus on Rabî' I 453. Under the Ottomans, Samaït was capital of a nahiya in the ka'da of Hsîn-İ Mânsî, a sandjak in Mañîya in the vilayet of Mauntet al-Azîl; now it forms part of the vilayet of Mañîya. Cuinet gives it 300 inhabitants; at one time it contained many Armenians but now its population is entirely Kurdish.

SUMANAT, or rather Sama Nâth (now most infreq.) is an ancient town situated in 20° 55' and 70° 28' E. at the eastern extremity of a bay on the south coast of Kâlibîwûrî. On the western headland of the bay stands the port of Verâfûl, and on the sea-shore, half way between the two towns, is an ancient temple dedicated to Shiva.
The town was the object of the most famous of the raids of Maḥmūd of Ghazni [q.v.] into India, in 1024. The invaders reached Sumānāt early in 1025, captured the town, desecrated the temple, and destroyed the idol, a linga, two pieces of which were sent to Ghazni, one to Makka and one to Madina, to be trodden underfoot by the faithful. Of the history of Sumānāt before its capture by Maḥmūd little is known. In the eight century it was in the hands of the Čawada Rājputs, vassals of the Čalukyas or Solankis of Kalyani, but Maḥmūd, on leaving the town in 1025, placed a Muhammadan governor in the district. Muslim rule did not endure, and Kāthiāwā fell into the hands of the Wadiji Rājputs, who preserved the glories of the ancient sage, but in 1298 it was captured, and again desecrated, by Ulugh Khān, in the reign of ‘Alī al-Din Khālidji. It was included in the dominions of the Rājā of Gīmnā, and when that kingdom was overthrown, in 1470, by Maḥmūd Begārja of Gudjarat it passed into the possession of the Muslim kings of that country. It was afterwards ruled, at different times, by the Shāhīk of Mangrol and the Rāvā of Porbandar, but was finally conquered by the Nawwals of Dūnīgarh, in whose hands it still remains.

**SUMĀRA.** Sumārā, with an area of 440,000 square K.M., is the fifth largest island in the world. The distance between its Northern and Southern extremities is ± 1,750 K.M. and its greatest width is ± 400 K.M. The ascendant passades through the middle of the island, which lies between lat. 5° 39' N. and lat. 5° 57' S. For the geology, hydrography and orography, geography and ethnology, political and economic condition, statistics, administration etc., reference may be made to the great encyclopaedias and to special works, a summary of which is given in the Dutch Encyclopaedie van Nederlandse Indië, s. v. Sumāra. The present article, therefore, will be confined to an account of Islām in Sumārā, viz.: the history of the coming of this religion into Sumārā, its conversion of its heathen inhabitants, their special religious characteristics etc.

The name Sumārā appears to have originally indicated only a small locality and afterwards to have come to denote the whole island. Later names will be mentioned in the short historical sketch that follows. The first mention of Islām in Sumārā was made in 1292 by the Venetian traveller Marco Polo, who mentions the spread of Islām in Ferlo (i.e. Porloc, Agh. Prerovīa), a name well known from Malay chronicles. Since the old Muhammadan tombstones in Acheh have been deciphered, it has been ascertained that the founder of the Muslim kingdom of Sumārā-Passā, on the N.W. coast of Acheh died in 1297. So it is unlikely that the conversion of this country took place between 1270 and 1275, as has been assumed. Northern Sumārā is called by Arabic authors, in the 15th and 16th century: Rami, al-Rami, al-Romi, Lamari; al-Idrisī also calls it: al-Rami (11th century); al-Karwinit: Rami (13th century). Marco Polo mentions, besides Ferlo, the countries of Bozna, Samara, Lumbri, Fanzor, etc. In the sixteenth century “Sumoltra” is mentioned as a state at war with Lamor. The son of Sultan Muhammad of Samudra (died in 1526) was Sulṭān Aḥmad, who probably was still reigning when Ibn Batṭuta arrived there in 1345. In 1363 the Javanese poetical chronicle Narakaragama mentions: Aru, Taliang, Peruak, Samudra, Lumbi, Batur and Barus, as being all subordinate states to the empire of Madjapahit. In 1416 and 1436 the secretaries of the Chinese ambassador Cheng Ho described Aru, Samudra, Lampol etc., as being Muhammadan countries; according to their records there must have been a Sulṭān Husain at Aru. It may be surmised that the name Sumārā was generalized, and so became the name of the whole island. In 1432 Nicolo de' Conti calls it Taprobane “or in the native tongue Sumatera”. In later periods the Arabic denomination of both Java and Sumatra was Ḥasma; hence the term Java Major and Java Minor in European sources. The more modern native names are: pula pereka (= mervsa, from Sanskrit mārīyā, mortals, mankind), or pula andalās (a well known tree); this name has occasionally been interchanged with the Arabic term Andals. After the Portuguese took Malacca (1511), Sumatra ceased to be a country of commercial importance and its place was taken by Acheh, and that country soon became the most important in North-Sumatra. As regards the conversion of Acheh the following might be noted; the Malay chronicles may on the whole be regarded as historically trustworthy. The most reliable of them mentions as the first king who embraced Islam: Anu Tugghāyat Shāh (1193–1232), the conqueror of Pedro, Samudra etc. During the reign of Sulṭān ‘Alī Rūṣayt Shāh a learned man came from Mecca to Acheh, and taught metaphysics there. But the introduction of Islām into Acheh was certainly not carried out by Arab preachers. It is most probable that Arab traders carried Islām to Sumārā in the early centuries of the Hijrī. In the 2nd century B.C. the trade with Ceylon seems to have been wholly in their hands; in the 7th century Arab traders were to be found in great numbers in China. So it is quite possible that they also established commercial settlements on some of the islands on the W-coast of Sumārā. Learned men, however, must also have come to the Archipelago from the South of India, as may be assumed from certain peculiarities of dogma and the Šiftām now prevailing in Muhammadan parts of Sumārā. The South-Indian origin of the Indonesian form of Islām reveals itself in many ways, and theological, literary and linguistic evidence is abundantly available; as examples of the latter class may be added the name for “theologist” (zahīr), which is the South-Indian term labagam, merchant, and hīyarī = Sanskrit yugadar = merchant. There cannot possibly have been any introduction of Islām by compulsion, and the gradual spread of Islām through the eastern islands must have been the result of the settlement of Muhammadan traders, especially Gujaratis, their intermarriage with native Malay women, the improvement of the status of the natives by their adoption of the religion of the influential strangers, in short a process of peaceful penetration. But from the very beginning of its influence, Islām adapted itself to the native creed, i.e. to the indigenous animism, and made large concessions to Hinduism as is clearly shown.
by the remarkable fact that the Sanskrit words for religion (agama), Muhammadan fasts (jumada = wajadu), teacher (guru), disciple (sishya = sitya) are still in use. In the period of its greatest power (xvith and xvith century) Acheh was the most important Muhammadan state in Sumatra, and made its influence felt by the heathen inhabitants of the south; so it is probable that proselytising by means of warfare was sometimes carried on among the Batakas and other heathen peoples, but without any permanent success. It is a curious fact that the Batakas, who for centuries had offered obdurate resistance to the entrance of Islam into their midst, have in the xixth and xxth century responded with enthusiasm to the efforts made for their conversion. Especially the Karo, and still more the Mandeling-Batakas are fervent Muhammadans. The efforts of the Malay subordinate officials of the Dutch Government, the desire to attain the same social level as the educated clerks and tax-collectors, and further the impulse given to Muslim propaganda by the establishment of Christian missions among the Batakas, have all paved the way for Islam. On the island of Nias the same process is to be observed; there, just as in the Batak-land, heathendom is breaking down before the two higher religions, Islam and Christianity. Of the introduction of Islam in the Minangkabau country (W. Sumatra), in early times a Hindu kingdom, there are no historical records. It may be supposed that the new religion made its way along the commercial routes from Padri (Pidie) to Priaman and other harbours, and came up from the coast to the uplands in the interior. It is probable, judging from some scantly data, that Islam did not come into the Minangkabau country before the middle of the xvith century. No reliance can be placed upon the current tradition that Shahil Ibrahim, a man of Minangkabau, who had learnt the tenets of Islam in Java, introduced them into his own country on his return via Priaman and Tiku, but this may be regarded as an indication of the route along which Islam made its way into this part of the island. In the Minangkabau country, with its strong matrilineal form of society and its primitive Malay law of inheritance the success of Islam for a long time hung in the balance, and open conflicts inevitably broke out in the struggle against these unorthodox survivals. The most serious of these was the long, bloody warfare of the Padris', so called after the name Padari or Pidari, i.e. men from Pedir in Acheh (not from Port. padre, as was formerly supposed), who tried, in the middle of the xixth century to introduce, by violent means, the orthodoxy of Islam into their native country. But their efforts were resisted by the greater part of the population and further the Padri-sect involved the Dutch government in a fierce and long war, which ended by their being defeated after the fall of their last stronghold Bondjo in 1839. A great many Minangkabau men migrated to the Straits-Settlements, their old place of refuge. At the present time, the people of Acheh and Minangkabau are the most zealous followers of the Prophet, the former being rigidly orthodox, having discarded the numerous Shi' and mystical elements that were formerly mixed up with their creed; the latter clinging persistently to their old national social laws, and only slowly accepting the orthodox dogmas. In Palembang, once the classical Malay country under Hindu rule, Islam spread at a comparatively late period, but now it is completely Islamised, like the adjacent country and sultanate Siak on the East coast. The southern part of Sumatra, the Lampong-districts, seem to have been Islamised by preachers and influential persons from Banten (W. Java), which country is now the most zealous province in the almost entirely Islamised island of Java. The conversion of the less-civilised tribes, the Luhu and Kubu, is only a question of time; the process of peaceable penetration has been begun, and is slowly but inevitably going on.

**SUMBAWA**, an island in the Malay archipelago, belonging to the Little Sunda group and lying east of Timor. The coast line, especially on the north, is very irregular; the largest bay is that of Saleh which runs deep into the country and almost divides the island into two halves. This division is of more than purely geographical significance. The inhabitants of the two parts differ in many respects in manners and customs and the physical type is not exactly the same in both. The population of the western part is distinguished by its lighter complexion and higher stature. As regards administration, the island belongs to the residency of "Timor en Onderhorigheden" and politically it consists of four districts, ruled by native princes under the suzerainty of the government of the Dutch East Indies; the western half of the island forms the sultanate of Sumbawa, on the eastern side are the two very small kingdoms of Domo and Sanggar, and in the extreme east the sultanate of Bima. The island is very mountainous and there are no rivers large enough to be navigable at all seasons. The soil is not infertile and the population lives mainly by agriculture and cattle-rearing; the collection of wheat products is also of some importance. The exports include rice, horses, buffaloes and wax. The greater part of the native population (many foreigners have settled on the coast; Macassars, Buginese, Salierese and Aralis) belongs to the so-called Young Malayas and is considerably mixed with Buginese and Macassars. At the same time an older stratum is clearly discernible to which the people of the interior of W. Sumbawa and some tribes in the east belong and from the anthropological point of view shows a great similarity to the Sasakans of Lombok. The Don Donggo (i.e. "hill-men") on the west coast of Bima Bay may be considered the purest representatives of this group; they live severely isolated from their neighbours and are on a much lower level of civilisation. The Don Donggo and the Bimeans do not intermarry. While almost all the rest of the population of Sumbawa has adopted Islam and even observes the prescription of the religion with comparative piousness, the Don Donggo are still pagan and in their paganism as well as in
their social institutions traces of an original totemism have with great probability been recognised. Bimanese society is remarkable for a sharp division of the people into 26 or (including the nobility) 27 classes (durs), which may roughly be described as gilds. These durs are under the control of two state officials (bumi) and their functions and other obligations to the state are definitely laid down. Very little is certainly known about the earlier history. Some antiquities found on the island suggest Hindu influence at some time; in the later Hindu period Sumbawa belonged to the Javanese kingdom of Majapathis; in 1357 Dempo was conquered by Majapathis. At the beginning of the eighteenth century when the first intercourse of the Dutch with Bima began, the various Sumbawan kingdoms were under Gowa (Macassar); in the second half of the same century they were forced to recognise the suzerainty of the Dutch East India Co. According to a Bimanese court chronicle (the older parts of which are only of mythological interest) there have so far been 50 rulers of Bima and the 38th of these, Aid Abd al-Kahit, who lived about 1640, was the first Muslim sultan.

SUNAN. [See SUNNA.]

SUNBULA, the ear (of corn), the usual name for the constellation of the Virgin al-'Adiyy from its most brilliant star, the ear of corn in the hand of the Virgin which is still called Spica. According to al-Karwain, the constellation consists of 26 stars with a further six lying outside the figure. The head of the Virgin lies south of al-Sarf (beta Leonis); the feet are pointed towards the two pans of the Scales. The brightest star is also called either Sunbula or al-Simük al-'asel, the unmarked Simuk, in contrast to al-Simük al-rumah, Simuk with the lance (Amuch on the star-maps).

SUNBULIYA, a branch of the Khalilat Order, named after Sunbul Sinan al-Din Yusauf, whose birth-place is variously given as Boulou and Marsuan. His death-date is given in the Kamaal al-Alâ' as 936 (1529/1530); according however to al-Shâfî'î al-Nu'mâniya (transl. Rescher, 1927, p. 224, 225) he died before 929 (1525/1523); and this author, who was a contemporary, mentions him among the Shaikhis of the reign of Bayârî II (died 918 = 1512), wherein he is followed by the author of the Talâm al-Tawârikh (Constantinople 1279, ii, 955), who is half a century later. On the other hand 'Hâdîddi Khâlîfah, who passed Sunbul Sinan b. Yusauf, who died 898 (1581), in a treatise in defence of Sufi Dancing, and a Chain of Khalilat Shaikhis; the former work was dedicated to Sulaimân I (whose reign began 926 = 1520), and stated that Salim I had asked for a fatwa on this subject, merely for the purpose of confirming his prejudice against the practice. It is probable that 'Hâdîddi Khalîfa is mistaken in the date. From the brief biography of him which is almost identical in the Shâfî'î and the Talâm, it appears that after being attached to the Mulla 'Adilzâde (died 908 = 1502/1503) he entered the service of Celebi Khalîfa (Rescher, p. 175; wrongly given as Sunbul's successor in Mîvat al-Ma'âzî, quoted by A. J. Rose, Brown's Derwishes, 1927, p. 455), whose discipline involved severe exercises; after submitting to these he received permission to enrol as a disciple. He spent some time in Egypt, where he instructed aspirants, and presently came to Constantinople, where he was lodged in the sâhiya of Mufti Pasha, and occupied himself with training disciples. The Talâm adds that his tomb is in that sâhiya.

His successor there was Muzhli al-Din Marks al-Lâdîkî (Rescher, p. 332), who died 959 (1552). Another disciple, Ya'qûb al-Kimrzyînî, who had some doubts about the successor's qualifications, was convinced by a dream, wherein the Prophet with the Companions etc. appeared attending one of Markas's sermons. The Prophet's turban was green and black; the former indicating the completion of the Law, the latter that of the Path (Pechew's History, Constantinople 1283, i, 465).

Reference has already been made to the severity of the exercises practised and enjoined by Sunbul Sinan; Pechew (loc. cit.) mentions that Ya'qûb al-Kimrzyînî had to break his fast once only in three days, and drink water once in six months (!). He appears, as has been seen, to have favoured dancing or whirling as a religious exercise. Deport and Coppolani (Confrérie, p. 375) state that the Sunbulya, while maintaining Khalilawan principles, have adopted practices belonging to the Rifa'iya and Sa'diya. Their work contains a list of Sunbulyiyya in or about Constantinople, fifteen in number; a similar list is given by J. P. Brown, The Derwishes, 1868, p. 316, with their respective days of service; it is rearranged in H. A. Rose's edition of the work (1927, p. 480). The order would seem to be confined to that city.

(S. D. MARGOLIOUTH)

SUNBULZADE WEHBI, a Turkish poet and scholar of the latter half of the eighteenth century.

Meşmed b. Râhîb b. Meşmed Efendi Wehbi was born in Marash in the province of Antioch; he belonged to the prominent local family of Sunbulzade, which had already produced several
mufit; including the grandfather of our poet, Mehmed, mufit in Ma'arit and author of several works including the Şerif al-Abhid al-mu'mannah bi-Tawfiq il-tahle, Naml al-full and Khatib al-Tanzihâ. His father Râshid also was a learned man and collaborated in Aleppo with the poet Sâyiîl Wehbi. As one of the latter's sons died at the same time as a son, our poet, was born to Râshid, the infant received the poetical name of the father of the dead child; Wehbi. In his native town Sunbulûzâde was mûrûd of Ghalaîlî Tîfî (? Efenđi) and received the ijtâhîd from him. He then went to Stambûl and lived there by writing chronograms and other verses d'occasion, but later became kâfiî through the influence of distinguished patrons. He then entered upon the career of a Hejîjî and was particularly entrusted with the drawing up of the more important state documents, in which he so distinguished himself that Sulîmân Ma'âfîî III had his attention called to him and bestowed honours upon him. In 1190 (1776) at the beginning of the reign of the next Sulîmân 'Abîl-Hâmîd I he was sent as ambassador to Işfâhân to Karâm Khân. In the course of his mission a dispute broke out between him and 'Omar Pâsha, governor of Bagdad; Sunbulûzâde complained in Stambûl of the difficulties the governor had put in his way; 'Omar Pâsha on the other hand accused him of high treason and of incurring contempt in Persia. Sunbulûzâde was condemned to death in Stambûl and a courier with the order for his execution sent to meet him, but he was warned in time and kept in concealment in Scutari. 'Omar Pâsha soon fell into disgrace and Sunbulûzâde's innocence was established. Sunbulûzâde then won complete forgiveness from the Sultan by the "Resonant" (fântûnî) kashådî. In it he describes, after an extravagant eulogy of the Sulîmân, his Persian journey and continually emphasises the superiority of the Turkish court and of all things Turkish over those Persian.

On his return Sunbulûzâde again became a kâfiî and went in this capacity to Eski Zagra in Eastern Rumelia. Here his kâfiîdâh was the poet Şirîrî [q.v.]. The two poets became close friends and remained always intimate but they continually used to attack one another in good-humoured but ribâhî lampoons, which with their grotesque reproaches and their continued efforts to outdo one another are very amusing. The Arabic poems of Dûarîj and Farazâd have been suggested for comparison. Their joint activity in Eski Zagra came to a sudden end, however, when they were both imprisoned because they had aroused the indignation of the populace by their dissolute conduct.

Later we find Sunbulûzâde again as a kâfiî on the island of Rhodes. In his period of office there took place in Rhodes the execution of the unhappy Krim Khân Shâhîn Girîî who had been betrayed by Russia to Turkey. Sunbulûzâde felt he had to celebrate this event in a kashådî (called Tûyûrî, the "Volunt", because there is much talk of birds in it); the glorious Stambul Sulîmân is again extravagantly praised in it, the unfortunate victim abused; the whole is little suited to place our poet in an enviable light.

Sulîmân Sulîm III was keenly interested in literature and helped poets in every way. Sunbulûzâde dedicated his Divân to him and received rich rewards and honours. The Divân contains, besides ghazals and quatrains, a large number of short occasional poems, especially riddles and chronograms. Sunbulûzâde spent the rest of his life in Stambûl, versifying and merrymaking. He suffered much from illness in his last years, gout, failing sight, perhaps mental derangement, and he is said to have been bedridden for seven years. He died on 14th Rabi' I, 1224 (April 28, 1809) aged over 90. His tomb is in Topçulûdar before the Adrianople Gate.

Sunbulûzâde wrote several works in addition to those already mentioned: the Lüftîsî, an imitation of Şâmî's Khârişi, a rhymed Abhidî book for his son Lutfûlâh, of advice, about his studies in particular. The poem is of interest for social history but its literary value is slight. Sunbulûzâde himself boasts that he wrote it within a week and in a fever besides. It was written in 1205 (1790) and could not have long outlived the son as he died of the plague five years later.

A Hikayet-nâme, entitled Şerif-i Esgols, was probably the most congenial to the poet of all his poems. It is a kind of sumûntûpa between a debaucher of women and pederast who then ask the Şâhi, of Love for his judgment. The latter shows how little either knew of pure absolute love, and the whole concludes with the praises of the love of God.

The next two poems are primarily an educational effort and as they are still used in Turkey as schoolbooks, they give the modern Turks an acquaintance with Sunbulûzâde. The Thebraî is a rhymed Turkish vocabulary, written in 1107 (1735) for his son, in imitation of the similar work of Şâhidî (xvîth century). It is excellent for the time and a fruit of Sunbulûzâde's Persian journey. It contains 38 fi'âsî in different metres, the last of which is a double rhymed manmanûn on the îsâîsî durchûm. The Turkish counterpart to it is the Nishââ written in 1214 (1799). There are commentaries on both, notably that of Hayātî Efenджi, which also gives valuable details of Sunbulûzâde's life.

There are other educational works by Sunbulûzâde which are now more or less forgotten; thus in 1184 (1770) he made a translation of a part of the îsâî of Dhûnîn of Aîm which exists in MS. in the Evîd Efenджi Library in Stambul.

The Ottoman critics agree that while Sunbulûzâde was a master of the language with few rivals, he is not really to be called a great poet. He was primarily a lover of life, then a man of learning and next a writer of occasional verse and a very clever one. His choice of material is as characteristic as his technique. The latter is based on a thorough knowledge of prosody and not on poetical feeling. Sunbulûzâde can treat poetically the most banal subject and a sentimental and graceful phrase seems to pour forth from him. He is therefore always pleasing in spite of a lack of real poetic talent. He never has become really popular; Ziyâ Pâsha compares his poems to wild roses without scent. For the history of culture his exact knowledge of Persia acquired in the country itself, is of importance, and it is very interesting to see his impression made by Persia of that day on a highly cultivated Turk. References to Persia are exceedingly frequent in all his works.

SUNBULZADE WEHBI — SUNNA

eighth generation from Sa'di-Khan who lived in the time of the latter Safawids. In 1213 (1798) Ali Himmat Khan and his brother Hâdî Khan (of the Nâzâkî tribe) supported the pretender Sulaimân Khan and were executed by Fath 'Ali Shah (H. J. Bridges, History of the Kajars, London 1833, p. 58—59, 67). The Kulyû'î speak a Kurd dialect resembling Kirmandâhi and are suspected of Akhâ Hašî (= 'Ali-ûlâhi, q. v.) tendencies.

(S. MÖSKÝ)

SUNNA (n.), custom, us and wont, statute. The word is used in many connections. Here only the following will be dealt with. In the Kur'ân 'sunna usually occurs in two connections: sunnat 'al-a'ammanāt, "the sunna of those of old" (vii. 39; xv. 13; xviii. 53; xxxv. 41) and sunnat Allâh, "the sunna of Allâh" (xvii. 79; xxxii. 62; xxxv. 42; xviii. 23). The two expressions are synonymous in so far as they refer to Allâh's punishment of earlier generations, who met the preaching of prophets sent to them with unbelief or scorn. The expressions are therefore found mainly in the Meccan sūras of which the main subjects are stories of the Prophets. In Sûra, iii. 131, the plural sunn occurs meaning judgments. Sunnat Allâh is found in Sûra, xxxiii. 38, where it means the privileges which Allâh granted to earlier prophets.

In Hadîth by sunna is usually understood Muhammad's sunna; Allâh is connected with the community by his Book and Muhammad by his sunna (cf. Muslim, Inâm, trad. 246: "Allâh's book and your Prophet's sunna").

According to the usual explanation Muhammad's sunna comprises his deeds, utterances and his unspoken approval (kâmû, kâmû, tabûr). Observance of the sunna might in a way be called: "Imitatio Muhammadis".

In itself however the word is colourless. One speaks of good and bad sunnâ's, e. g. of the bad sunnâ of the Kûfîn (Bukhârî, Dîwâl, bâth 9). Muhammad prophesies: "Verily ye shall imitate the sunna of those who were before you, inch for inch, ell for ell, span for span; if they were to crawl into a lizard's hole, you should follow after them" (Ahmad b. Hanbal, Munâm, ii. 347).

The contrast between good and bad sunnas finds its classical expression in the following hadîth: "He who institutes a fair sunna in Islam, so that it is practised after his death, to him a reward shall be given equal to that of all who have practised it, without anything being deducted from their rewarid. But he who institutes a bad sunna in Islam, so that it is practised after his death, against him a sin shall be debited, like that of all who have practised it without anything being subtracted from their sins" (Muslim, 'Imâm, trad. 15).

Al-Sunnâ has however become the characteristic term for the theory and practice of the catholic Muhammadan community, Abl Al-Sunnâ wa'l-Dîmâr, the Sunna. "The people of the sunna and of the community", are those who refrain from deviating from dogma and practice. The expression is particularly used in this sense in opposition to Shî'a (q. v.); the division of Islam into Sunna and Shî'a is generally known in the west. Great stress is therefore put upon following Muhammad's sunna.

"He who tires of my sunna, does not belong to me!" (Bukhârî, Nikâh, bâth 1). The prescribed jâ'lat, Friday and Ramaḍân are an atonement for the period till the next jâ'lat, the next Friday and
the next Ramadan, except in the case of polytheism, breach of agreement and neglect of the sunna, ... and neglect of the sunna is secession from the community" (Djama'a; Ahmad b. Hanbal, ii. 229). Among the six categories of those who are cursed by Allah, Muhammad and all the prophets are those who have abandoned Muhammad’s sunna (Tirmidhi, ḥadîth, bāb 17). Knowledge of the sunna is one of the criteria in deciding who will act as imam at the gālib (Tirmidhi, ḥadîth, bāb 60; Nasā’i, ḥadîth, bāb 3).

The companions are the propagators of the sunna (Muslim, ḥadîth, trad. 80); the word is occasionally referred to the example of the companions and the oldest generations of Islam; in Bukhārī, Alkānī, bāb 43, the sunna of Allah, his prophet and the two khallūf is mentioned; in Tirmidhi, ḥadîth, bāb 16, there is a reference to the sunna of Muhammad and the rightly guided caliphs.

The word thus acquires the meaning of standard; it is recorded that Muhammad said when drawing up such prescriptions: “at discretion lest any sunna (burdened to the community) arise” (Bukhārī, Tafsīr, bāb 35).

The opposite of sunna in the sense of the theory or practice consecrated by Muhammad’s example or the tradition of the community is bāw’ (q.v.) (cf. e.g. Tirmidhi, ḥadîth, bāb 16).

Muhammad’s sunna in the sense of his words, actions and silent approval is fixed orally and in writing in the ḥadīth (q.v.). In theory the conceptions of sunna and ḥadīth are separate but in practice they often coincide, which may be due to the fact that some of the collections of ḥadīth have the title Sunan (e.g. the collections of Abī Ḍa’ūd, Ibn Māja and al-Nasā’ī).

If we are to understand the theoretical and practical significance of the sunna in Islam we must remember that while the Kur’an was a source from which a considerable part of the practice was deduced, on the other hand Muhammad had answered many questions, not by revelation but by decision from cases of a case and that the words and deeds of the Prophet even in his lifetime were recognised as a “fine example” and as a result of this recognition the sunna of the Prophet was drawn up and fixed in writing, although not in a form equally canonical with the Kur’an. The ḥadīth itself illuminates this side of Muhammad’s sunna in traditions: People came to the Prophet and asked him: “Send us men to teach us the Kur’an and Sunna” (Muslim, ḥadîth, trad. 147). “The faith has settled in the depths of the hearts of men. They have thus learned Kur’an and Sunna” (Bukhārī, ḥadīth, bāb 35). Omar b. al-Khaṭṭāb said: “People will come to dispute with you over doubtful points in the Kur’an. And them with the sunna, for the people of the Sunna are best able to decide about the Kur’an” (Darʾim, Introductio, bāb 16).

In the Kur’an itself references to the importance of Muhammad’s sunna are found, like the command to believe in Allah and Muhammad (Ṣāra vii. 158; ivxiv. 8) and Ibrāhīm’s prayer, when he founded the temple at Mecca: “O Lord send to them a prophet from midst, to read out to them thy verses and to teach them the book and wisdom and to purify them” (Ṣāra ii. 123 and similar passages).

It is clear then that in the system of Islam the Sunna became a standard of conduct along-
about your innovations" (Dürri, Introductio, b. 16). Balḫārī has significantly given a chapter of his Šāhā'ī the title: "On the observance of Kur'ān and Sunna." This attitude is however abandoned by the four muḥaddithīn: Ismā'īl and Ḥāfiz have obtained their place among the muqta'īna. The four roots were never recognised by the Kātibīs and Waḥhabīs, in addition to the Shī'īs. With the term Sunna in the theory of the Uṣūl must not be confused the second of the five categories, under which actions are considered from the legal point of view and which is also called Sunna. On this see the article Sunnā'.

(A. J. Wensinck)

SUNNITES. [See Sunna.]

ṢŪR (Tyre), the island city of Phoenicia. From the Amarna period it was one of the richest commercial centres of the Syrian coast and gradually developed into a powerful rival of the adjoining Sidon [q. v.] for dominion over the Phoenician colonies in the west. Its conquest and destruction by Alexander the Great only deprived the flourishing metropolis of its importance for a brief period; but it had one permanent important result; namely, that the island city was henceforth connected with the mainland by the Alexander dam, which was gradually widened into an isthmus by the material swept up by the southwestern coast currents; from very early times Palaityros (Assyr. Uqān) had lain opposite the island town on the mainland. Under the Roman empire Tyre was the secular and ecclesiastical capital of the eparchy Panayia Pafīdēs.

After the occupation of Damascus, Shuraḥbīl b. Ḥusayn captured Ṣūr and Ṣafīāriyā among other towns of the region (al-Baladhūrī, ed. de Goeje, i. 116; Caezari, Annotati dell' Istoria, tifi, § 3, ii. 141; 107). According to Psamites-Waḥrid (Faḥīš al-Šuṣhīx, Caire, 1278, ii. 56 sqq.), ʿĀkka was taken through the treachery of the former commander of Ḥabbāl, ʿAbdallāh b. Ṭūnṭūn. Al-Waḥrid and the Tyrian Ḥishām b. al-Lāith say that Muʿtawiya restored ʿĀkka and Ṣūr at the time of his expedition against Cyprus (27) and in 42 transplanted Persian colonists from Ba nastāk, Šīms and Anān to the cities of al-Uṣūl, namely ʿĀkka, etc. (al-Baladhūrī, op. cit., p. 117). The authorities of the above mentioned Tyrian said: "When we settled in Ṣūr and the cities of the coast there were Arab troops there and still many Greeks; later, people came from other regions and settled alongside of us just as happened in all the other cities of the coast of Syria." In 49 the Greek fleet raided the Syrian coast-towns which had not yet arsenals (Baladhūrī, op. cit.; Mahbub of Manbijī, Kitāb al-Uṣūl, ed. A. Yassī, in PatroL Orient., xii. 492). Muʿtawiya thereupon built dockyards in ʿĀkka for the district of al-Uṣūl. ʿAbd al-Malik b. Marwān restored ʿĀkka, Kaṣāḥ, and the suburbs of ʿĀkka, which had again fallen into ruins (al-Baladhūrī, op. cit., p. 117, 113). When at a later date ʿAbd al-Malik wished to purchase mills and store-houses from one of the descendants of Abī Muʿāṣa, and the latter refused to sell them, he had the arsenal removed to ʿĀkka and built magazines and docks there (al-Baladhūrī, p. 117). According to al-Waṣīkī also, ʿĀkka was under the Marsūmīs as a naval station and remained one henceforth (al-Baladhūrī, p. 118; Ibn Dījāfīr, ed. Wright, p. 305). The Caliph al-Muʿawwakīl later (247/248 A.H.) distributed the fleet and naval forces among all the Syrian coast-towns.

The Arab geographers describe ʿĀkka as a city on the sea-coast (al-sumāqīl) of al-Uṣūl (the Jordan province) which was strongly fortified and thickly populated and had fertile country round it. The island city was only accessible from the mainland through a gate to which a bridge led, and was fortified by walls which rose straight out of the sea, almost all the way round it; as in ancient times, a second part of the city, opposite it on the mainland, the bridge which is mentioned by al-Muqaddasī is also, described by al-Khwārizmī (ed. Wüstefeld, ii. 366, l. 5 from below, under Tūlāṭīla) as the largest arch in the world (confusion with the Sandāq bridge?). The ancient aqueduct which led from ʿSūnī (now Kās al-Aʿīn or al-Rāḏīyīs) via Telt al-Muṣālīk to the city still provided it with water in the middle ages (al-Muqaddasī, E.G.A., ii. 163; Nāṣīrī Khurāwar, ed. Schefer, p. 11). Nāṣīrī Khurāwar, who visited ʿĀkka in 1047 mentions the five to six storied houses there and a richly decorated Masjīd at the city-gate; the inhabitants were then for the most part ʿShīʿa; only the kāzī was Sunni. In the Crusading period al-Idrīsī (1154 A. d.) records the flourishing glass industry, the pottery and the weaving of valuable stuffs in ʿĀkka. Kūdāma mentions the harves of the town.

From the Tūlāṭīla period, Syria was almost continuously under Egyptian suzerainty, which became still more firmly established under the Ṭūmīmīs. The Tyrians rose against the Caliph al-Hākim in 388 (998) under a peasant named ʿAlīkā (ʿUṣgī) at the same time as al-Ramīs rebelled and the caliph of Fāmīsīs was besieged by the Byzantine General Ducas. The governor of Syria, Djašir b. Muḥammad b. Sāmīn, sent the Hamdīnī Husain b. ʿAbd Allī Ṣaḥir al-Dawla and the enuch Fātik (var. Fāţīk) al-Barrās against the city. When they attacked ʿĀkka by land and water, ʿAlīkā appealed for help to the Byzantine emperor. The latter sent several ships but these were completely defeated in a naval battle. The town, the inhabitants of which thereupon lost all heart for a stubborn resistance, was taken and sacked, its inhabitants massacred and ʿAlīkā tortured and executed in Egypt. But the rising continued; the vizier Badr al-Djīmāfī in 1089 A. D. was forced to take ʿĀkka, ʿAlīkā and Djašir from the Sandāq Sulṭān Tutūs and his successor al-Aṣfāl Shishānīs in 490 (1097/1098) punished a new rising with a terrible massacre, in which even the governor of the city
was executed. This took place in the same year as the Crusaders left Constantinople. Coins were struck in Şūr in the name of the Caliph al-Musta‘īl (1094—1101).

Although the city at first (1100—1101) sought to win Baldwin’s good graces by gifts, it soon (1103) joined in the defence of Akkā and Taḥrūbulus. By arrangement with Tughtakin the amir ‘Izz al-Mulk of Şūr in 500 (1106—1107) attacked the Crusader’s stronghold at Tibnin (Toron), plundered a suburb and massacred the inhabitants, but fled quickly away when Baldwin advanced on Şūr from Taḥbīrya. The king appeared next year before its walls, built a fort on Tell al-Ma‘ṣaḥṭa and besieged the city for a month; its walls had to purchase his withdrawal by a payment of 7,000 dinars.

A week after the fall of Taḥrūbulus, the Egyptian fleet with soldiers, money and supplies for a year appeared before this city, but on hearing that the fortress had been taken by the Franks, they returned to Şūr and the supplies and soldiers were distributed between Şūr, Sa‘īdā (Sidon) and Ba‘rīṭā.

Baldwin laid siege to Şūr once more on the 25th or 27th Djamā‘ā (November 27 or 29, 1111); he built two wooden towers to ells high, put 1,000 soldiers in each and had them pushed up to the walls of the city. On the appeal of the Tyrants, Tughtakin came from Damascus to Bā‘rīṭā and sent reinforcements from there, who cut off the Franks’ supplies while he himself marched on Sa‘īdā. Baldwin had already stormed two walls when the governor of Şūr, ‘Izz al-Mulk al-A‘ūzī held a council of war in which a shi‘ī, who had taken part in the defence of Taḥrūbulus offered to destroy the towers of the Franks. He actually succeeded in setting both on fire. The Franks gained no success worth mentioning up to the spring of 1112. In the meanwhile Tughtakin, after taking the fortress of al-Djihāth in the Damascene came up with 20,000 men and cut supplies from the Franks. When they received their supplies by sea, he laid waste the country round Sa‘īdā. On the 10th Shawwāl (April 21) Baldwin raised the siege and retired to Akkā. The people of Şūr welcomed Tughtakin with rich gifts and restored the injured walls and ditches of their town. On his departure Tughtakin handed over Şūr to the Caliph again; but in the very next year the people and their governor ‘Izz al-Mulk Anushkin al-Adjlî, fearing another attack from the Franks, decided to hand over the city to him again. Tughtakin at their request sent them the amir Mas‘ūd with forces for its defence; but the caliph continued to be prayed for in the mosques and coins were still struck in his name.

The vizier al-Ma‘ṣūm, al-Adjlî’s successor, in 516 (1122/1123) sent a well equipped fleet of 40 galleys under Mas‘ūd b. Sallār to Şūr; when the commander Mas‘ūd came on board to greet them he was put in chains and brought to Egypt. There however he was shown great honour and sent to Damascus, where diplomatic apologies were offered and the incident explained away; Tughtakin replied courteously and promised his further assistance in the defence against the common enemy.

The Franks however saw in the removal of the valiant Mas‘ūd a good omen and prepared for a further siege with renewed vigour. The Egyptian commander recognised the futility of the garrison and the insufficiency of the city’s supplies and appealed for help to the Caliph. Al-Amīr replied that he would put the defence in the hands of Zahir al-Din (Tughtakin). The latter thereupon occupied the city again and put it in a satisfactory condition for defence. In the month of Kā‘bā’ (April 1124) the second siege of Şūr began. Venetian ships blockaded the harbour, while on land the armed troops attacked the walls with a siege-tower. Damascus troops distinguished themselves by particularly bravery in the defence. The besiegers sent a portion of their army against Tughtakin while the Venetians were to ward off the Egyptian fleet. After various vicissitudes the Tyrants decided, after famine had broken out in the city, to surrender under favourable conditions. After Tughtakin had conducted negotiations for surrender with the Frank commanders, they were allowed to leave the city with their possessions or to remain there on paying ransom. On 23th (or 25th) Djamā‘ā (July 9 or 14, 1124), the inhabitants marched out of the city between the troops of Tughtakin and the Frankish army; they were divided partly in Damascus and partly in Ghaza. After this surrender, which marked the zenith of the power of the Crusaders in Syria, Tyre remained till 1127 in the hands of the Franks. Ibn al-Adjlî laments its fall as a great misfortune for the Muslim world, as it was one of the finest and strongest of cities, and adds: “Let us hope that God the Almighty will restore it to the rule of Islam”.

Shams al-Mulk (Blīr) of Damascus in 528 (1133/1134) after a raid of the Franks into the Hawrān laid waste the region of Taḥbīrya, Şūr and the rest of the coast-lands and returned via al-Sha‘rā with a great booty. An Egyptian fleet appeared in 550 (1155/1156) in the harbour of Şūr, sank ships which belonged to Christian pilgrims and others, and returned with numerous prisoners and rich plunder. In 552 (1157) Şūr, Sa‘īdā, Ba‘rīṭā, Taḥrūbulus and other towns suffered from an earthquake.

From the Crusading period we have the descriptions of the city by Idrīsī and Ibn Djubair. The former admires the glassworks and potteries and the manufacture of an extraordinarily finely woven cloth. Ibn Djubair, who spent 11 days in Şūr gives a full description of the town and of a ceremonial procession that took place during his visit. On the land side the city had 3—4 successive gates. The entrance from the sea was through two high towers, between which one entered a harbour (the old “Sidonian”), the finest of all the harbours of the coast-cities. On three sides the walls surrounded the harbour, on the fourth a wall with an entrance through an arch below which the ships anchored. This inner harbour could be shut off by a huge chain which was stretched between the two towers.

Sha‘lār al-Dīn after the capture of Jerusalem and most of the coast-lands proceeded to besiege Şūr and pitched his camp before the city (on 5th; according to others, on the 9th) Ramaḍān 535 = Nov. 3 or 12, 1187). He had at first to wait for the impediments of the army and summoned his son Malik al-Zāhir from Hijāz and his brother Malik al-Adīl from Jerusalem to his side; his second son al-Adjlī and his nephew Taṣṭ al-Dīn were with him. As soon as the siege artillery arrived, they began to bombard the town from movable towers with catapults etc. Ten ships
brought from 'Akka blackedad the harbour; but they were surprised by the Frankish fleet and some destroyed, some sunk. An attack on the walls was repulsed. A council of war summoned by Salâh al-Dîn decided, on account of the approach of winter, to raise the siege till next year. On the 26th Dhu'l-Ka'da 584 (= Jan. 3, 1188), according to Muhammad b. Na'dîr, Ibîn al-'Atrî gives the last day of Shawâl as Jan. 10, 1188, Salâh al-Dîn began to withdraw his army. Hardly was the city freed from its besiegers than a fight for its possession broke out between king Guy de Lusignan who had just returned from captivity and its valiant defender Conrad of Montferrat.

The failure of the siege of this strong seaport marked a reverse in Salâh al-Dîn's fortunes. With Shâfiî Arkûn (Belfort) it was the only fortress of Syria to remain in the hands of the Franks. In the harbour of Tyre assembled the powerful forces for the Third Crusade; into it poured the garrisons of the towns taken by Salâh al-Dîn whom he always chivalrously released; from it the siege of 'Akka was opened, which completely distorted the Salâtîn's attention from Shir. On the 13th Rabi'll-awwal 588 (April 29, 1192) the Marquis Conrad who lived in Tyre as titular king of Jerusalem was murdered by Isma'il. His successor Henri de Champagne concluded the peace of Ramla with Salâh al-Dîn (Sept. 1192) by which the coast from Jaffa to Tyre was left to the Franks.

When the garrison of Tibnîn undertook a campaign against Shir and laid waste the surrounding country, the Crusaders began to besiege this fortress on 1 Safar 594 (= Dec. 13, 1197). On the news of the approach of a large army under al-Malik al-Adîl they retired without achieving anything. In Shi'bân 597 (May-June, 1201) Shir was visited by an earthquake, and in 603 (1203/1204) by another in which the walls of the fortress collapsed. By the peace between Frederick II and al-Kâmil of Egypt (1229) Shir, 'Akka, and several coast-towns of Syria were left in the hands of the Christians, in addition to Jerusalem. In the next few decades the power of the Franks was further weakened by the ceaseless fighting between the coast-towns, and the Venetian and Genoese fleets.

The powerful Ballbars in May 1256 and in 1259 attacked Shir, on the second occasion, it is said, in anger at the murder in Shir of a merchant, whose mother had laid her complaint before him in Khabir al-Lusîq. But he agreed to a treaty in 669 (1270/1271) with the prince of the city by which ten districts of Tyrian land were allotted to the latter, 5 to the Caliph to be chosen by him while the rest were to be jointly administered. In August 1285, Margaret of Tyre purchased from Salâh al-Dîn a ten years' peace by paying him half her revenues and promising not to restore the defences of the city. But after the fall of 'Akka (1291), Shir and the few remaining Frankish towns could no longer hold out. After the taking of Shir, Khalîl had the inhabitants killed or sold into slavery and the city itself was destroyed.

It was still completely in ruins in the time of Abu l-Bâkî (1321), al-Kâmilî (1400) and Khalîl al-Zâhirî (c. 1450). Ibn Ba'îshîsî (1555) could only find a few traces of the old walls and harbour. Henceforth Shir was an unimportant place.

The Druze chief Farîh al-Dîn (1595—1634) did not succeed in improving the situation of the town; nor did the Shaikh Zâhir al-Umar of 'Akka and his successor Djezîrî Pâshâ in the second half of the 17th century. An earthquake in 1857 brought further misfortune to Shir. The town has now 6,500 inhabitants (1840: 3,000; 1880: 5000; 1900: 6000) of these about half are Muslims and rather less Roman and Greek Catholics, the remainder Jews.

Sūrā division is divided into two clans, Parangi and Isma'īl, the latter having three subdivisions, Sūr, Lohānī and Mahṣūl. The accession of Buhālī Lodī to the throne of Delhi attracted many Afghāns to India, among them a community of the Sūr subdivision of his own tribe, headed by Ibrahim Khān Sūr, who was first employed in the Ḥūṣūr Fīrtīs and Nārmaul districts. He had four sons, Hasān, Ahmed, Muḥammad, and Ghāzī. Hasan and Muhammad accompanied Djamal Khān to Dzuwānd, where Muhammad remained, while Hasan received the fiefs of Sahaṣārān and Kha- wāṣṣārān Tānda in Bihār. He had four sons, Farīd and Nīṣām by his wife, an Afghan lady, and Sulaymān and Ahmed by a slave girl. Farīd eventually became emperor of India under the title of Shīr Shāh (q.v.). His strength of character and commanding ability suppressed that tendency to internecine strife which he recognized as the besetting sin of the Afghāns and the chief source of their weakness, but after his death there was none to restrain them, and the empire which his valour and ability had won was speedily lost by the dissensions of his successors. He was succeeded by his son Djalāl Khān, who took the title of Isākīn or Salīm Shāh and reigned for nine years (1545—1554), but whose energies were dissipatet in a contest with his elder brother, Adīl Khān, Salīm Shāh’s young son, Fīrtīs, was put to death by his maternal uncle, Mubāriz Khān, son of Shīr Shāh’s younger brother, Nīṣām, and Muḥammad ascended the throne under the title of Muḥammad Shāh ‘Adīl, but was contemptuously nicknamed Adīlī by his own people, and Ḍahādīl (“blind”) by the Hindus. During his feeble reign (1554—1566) his cousins Ibrāhīm, son of Ghāzī Khān Sūr of Hindawān, brother of Hasan Khān and Ahmed, son of Ahmed Khān Sūr, another brother of Hasan, assumed the royal title, and at one time there were three emirs pretending to reign in India: (1) Ibrahim Shāh, who seized Dīhlī and Ḍāgra; (2) Muḥammad Shāh ‘Adīl, who retired to Ḍaṅsīr, and (3) Ahmad Sūr, who assumed the title of Sikandar Shāh in the Pandībāt, drove Ibrahim from Dīhlī and Ḍāgra, and was occupying those districts when Humayūn returned in 1555 and expelled him. He fled into the Siwalīk hills and avowed his adherence to Bengal, where he died. Ibrāhīm Shāh, who had driven from Ḍāgra by Sikandar Shāh, fled to Sambhāl and thence to Kālpī, where he was defeated by Humayūn, the minister of Adīlī, Ibrahim next fled to his father, Ghāzī Khān, then in Bijnīya, and Humayūn besieged him there, but was recalled by ‘Adīlī to repulse Muḥammad Khān Sūr, governor of Bengal, who was marching on Ḍaṅsīr. Ibrāhīm followed him, but was defeated, and again retired to Bijnīya, and thence to Patna, where he attacked Rājā Rāmaṇḍāna, who defeated and captured him, but treated him with great honour, enthroned him, and acknowledged him as his sovereign. ‘Adīlī meanwhile attacked and slew Muḥammad Sūr near Kālpī. The news of Humayūn’s return and of Sikandar’s defeat and flight had now reached Ḍaṅsīr, and was followed by that of Humayūn’s death, on receipt of which ‘Adīlī sent Humayūn with 50,000 horses and 500 elephants to recover Ḍāgra and Dīhlī. He took both cities, for himself, not for his master, but was defeated and slain at Fārsītīs by the army of Akbar, for whom both Dīhlī and Ḍāgra were recovered. ‘Adīlī was defeated and slain by Khān

Khan, son of Muhammad Sūr, who had assumed the title of Bahādur Shāh, Ibrahim Sūr was for some time in Mālwā, and fled thence to Utra, where Sulaymān Kanzāmī treacherously put him to death in 1567.

(T. W. Haig)

Sūra, the name given to the chapters of the Kurān. In the Kurān itself, the word means, in the Meccan as well as the Medine parts, the separate revelations which were revealed to Muhammad from time to time. Thus he challenges his opponents to produce a sûra like his own (li. 21; x. 39) or to bring ten sûras like his of their own devising (xi. 16). As a supercession we have in xxiv. 1: *(this is) a sûra which we have sent down and sanctioned and in it we have revealed clear signs (ayāt)*. The Muḥāfīṣīn, we are told (ix. 65), fear that a sûra may be sent down that will tell them what is in their hearts; cf. ix. 87: *(when a sûra was sent down which commanded them to believe and to fight etc.)*. In ix. 135, 138; xlvi. 22, mention is made of the different effects of a sûra upon believers and unbelievers. As far as contents are concerned the word thus coincided with the word "Kurān" in its original meaning, but in later usage they became separated; Kurān became the name of the collected revelations in book form while sûra was used of the chapters of the revealed book, which consisted originally each of a single revelation but later were formed of the combination of several revelations or fragments.

Where Muhammad got the word is still uncertain in spite of the attempts made to trace its origin. Nieβdeke thinks it is the modern Hebrew ṣīrāh "order, series" but even if this could be explained as "line" it would not take us to the original meaning of the word, and against it is the fact that one sûra, according to xxiv. 1, contained several ayāt. Perhaps the word is in some way connected with Muhammad’s conception of a book in heaven (al-Kutab), the contents of which were revealed to him piecemeal. "Piece, section" or a similar meaning would make good enough sense and would also explain the later usage, but linguistically it cannot be proved, for W. H. Hirschfeld’s support that it is a correction of the Hebrew sefer is not at all probable. Sāra, to mean a thing that falls upon, overcome (e.g. with wine) might possibly yield a meaning like impetus, sudden overwhelming inspiration etc., but sāra and not sûra is the derivative found from it.

The authorised Kurān contains 114 sûras of which the first (al-Fatīhā, q.v.) and the two last are conjurations loosely connected as introduction and conclusion to the rest. This agrees with the fact that these three sûras are said to have been lacking in the Kurān as edited by Ibn Masʿūd. There was a certain amount of freedom at first
in this respect so that Ubarsiy for example had two silents in addition to those usually accepted. The order of the utras also was not definitely fixed, although the same principle of arrangement may be recognised in the different editions. The reader may be referred to the article Kuran on this point, as well as to the names of the uras, their separation in the manuscripts and the letters which are found in the superscriptions to some of them.

Bibliography: Noldeke, Geschichte des Korans, p. 34 sq., 227 sq., 320 sq.; second edition by Schwally, i. 30 sq., ii. 1, 30 sq.; H. Hirschfeld, New Researches into the Composition and Exegesis of the Quran, 1902, p. 2. (F. Buhl)

Sura (a), image, form, shape, e.g. purut al-ard, "the shape of the earth", purut hawwad, "the form of an ass" (Muslim, Sunna, trad. 115)
or face, countenance (see below). Tappatwa are rather pictures. Sura and taqawwara are therefore in the same relation to one another as the Hebrew demet and semim. The Biblical idea according to which man is formed in the image of God in the beginning (Gen. i. 27) has most probably passed into Hadith. It occurs, so far as I am aware, in three passages in classical Hadith; the exegesis is uncertain and in general unwilling to adopt interpretations such as Christian theology has always readily associated with this Biblical passage. In Bukhari, liiti dawâm, bâb 1 (cf. Muslim, Dima, trad. 28) it is said: "Allah created man after (ilâ) his surâ: his length was 60 ells". On this Kaftânân (I. 144) says: the suffix with this refers to Adam; the meaning therefore is: — Allah created Adam according to his i.e. Adam's form, that is perfect and well-proportioned" (cf. also, Lütik al-Abû, vi 143 sq.). But there are also other explanations. Another tradition says: "One should not say: may Allah make thy face hateful and the faces of those who are like thee, for Allah created Adam after his surà." In this tradition the suffix obvious refers to the person addressed. Others say: The suffix refers to Allah, for in one version the tradition runs: Allah created Adam in the shape of al-Rahmah i.e. as regards his qualifications knowledge, life, hearing, sight, etc. although Allah's qualities are incomparable. — The theologians are divided into two groups on the exposition of this tradition; the one refrains from any interpretation through dread of anthropomorphism; the other explains the expression as an indication of Adam's beauty and perfection, an alây hatim o-Ilaâhî (like as beautiful Allah, Bait Allah, says al-Nawawi, see below). — So far Kaftânân.

The second passage in which the tradition occurs is Muslim, Bîr, trad. 115: "If a man fights with his brother, he ought to spare his face, for Allah created man after his surâ." Al-Nawawi's commentary on this tradition coincides in part with the already quoted section in Kaftânân; he need only quote the following here: al-Mazari says: "Ibn Kutaba has interpreted this tradition wrongly by taking it literally". He says: "Allah has a surâ, but not like other amans". This interpretation is obviously wrong for the conception surâ involves imposition and what is put together is created (nafa'ah); but Allah is not created therefore is not composed, therefore he is not muqawwama. Ibn Kutaba's interpretation is like that of the anthropomorphists, who say: Allah has a body, but not like other bodies". They quote in support the orthodox pronunciation "The Creator is thing (mahfâh) but not like other things". This is however reasoning by false analogy for mahfâh does not involve the conception of coming into existence (mahdî), and what is associated with it. Body and surâ on the other hand involve joining together and composition and therefore also mahdî, etc.

We have further to deal with the conception surâ in connection with the prohibition of images, which, in so far as it is known in the west, is traced to the Ukbân like most Muslim institutions. Although this idea is one of the numerous popular errors about Islam, we cannot deny that the prohibition of images is based on a view which finds expression in the Ukbân. In Ukbân linguistic usage samawara "to fashion" or "form" is synonymous with barâ'a "to create": Sura, vii. 10, "and we have created you, then we have fashioned you, then we have said to the angels, etc." Sura, iii. 4: "It is he who forms you in the mother's womb as he will", Sura, xi. 66: "It is Allah who has fashioned the earth for you, and shaped the heavens for a vault above you, shaped you and formed you beautiful" (cf. Sura, Isra, 3). Sura, lix. 24 Allâh is called al-khâli, al-khâr, al-samawwir, i.e. according to Buṣân: "He who takes the resolution to create things according to His wisdom, who creates them without error, who calls their forms and qualities into existence, according to His will".

This linguistic usage shows complete synonymy between the concepts to fashion, to shape", and "to make, to create". In the older Hebrew literature also Yahwe as creator is called yisqer, i.e. the potter. The roots q-ger and q-ser are also unmistakably connected.

If then Allah according to the Ukbân is the great fashioner, it follows in Hadith that all human fashioners are imitators of Allah and as such deserving of punishment: "Whosoever makes an image him will Allah give as a punishment the breath of life into it; but he is not able to do this" (Bukhari, Bîr, bâb 104; Muslim, Bîr, trad. 100). "Those who make these pictures will be punished on the Day of Judgment by being told: Make alive what you have created" (Bukhari, Taqwâd, bâb 56). "These whom Allah will punish most severely on the Day of Judgment are those who imitate Allah's work of creation" (Ahmad b. Hanbal, vi. 36). Such are called the worst of creatures (nasâ', Maṣâ'î), bâb 13, cursed by Muhammad (Bukhari, Bîr, bâb 25), compared to polytheists (Tirmidhi, Dhadhîm, bâb 1). Houses which contain images, dogs and ritually impure people are avoided by the angels of mercy (Bukhari, Bad: al-Kâlîf, bâb 17, etc.). The latter statement is illuminated by the story of how Aîsha once purchased a cushion (nawrâh) on which were pictures; when Muhammad saw it from outside the house, he stood at the door without coming into the house. When Aîsha saw repugnance expressed on his countenance, she said: "O Apostle of Allah, I turn full of penitence to Allah and his Apostle, but what law have I broken?" He replied: "What is the meaning of this cushion?" She said: "I purchased it for thee to sit upon and use as a cushion". Then the Apostle of Allah answered: "The makers of these images will be punished and they will be told: Make
alive what you have created". And further he said: "A house which contains images is not entered by the angels". (Muslim. Lit. 50. ābd b. Ḥasan, vi. 172.) Muhammad is said to have removed the images and statues out of the Ka'ba (Bukhārī, Mughāṣṣel, bāb 48). There are also references to this in the Sūra. Here we need only quote one more remarkable tradition, which has some resemblance to the Christological legend.

"All relates: "I and the Prophet walked till we came to the Ka'ba. Then the Prophet of Allah said to me: 'Sit down'. Then he stood on my shoulders and I arose. But when he saw that I could not support him, he came down, sat down and said: 'Stand on my shoulders'. Then I climbed on his shoulders and he stood up and it seemed to me as if I could have touched the sky, had I wished. Then I climbed on the roof of the Ka'ba on which there was an image of copper and iron. Then I began to loosen it at its right and left side, in front and behind until it was in my power. Then the Prophet of Allah called to me: 'Throw it down'. Then I threw it down so that it broke into pieces like a bottle. I then climbed down from the Ka'ba and hurried away with the Prophet, till we hid ourselves in the houses for fear some one might meet us" (Ahmad b. Ḫasan, i. 84; cf. 154).

According to the law it is forbidden to copy living beings, those that have a rūḥ. Nawawī in his commentary on Muslim's Sahih to Livād, trad. St (Cairo 1283, v. 445) gives the following summary: "The learned men of our school and other 'ulama say: The copying of living beings is strictly forbidden and is one of the great sins because it is threatened with the severe punishment mentioned in the traditions. It does not matter whether the maker has made the copies from things used in little esteem or from other things, for the making of them is in itself ṣārūm, because it is an imitation of Allah's creative activity. From this point of view it makes no difference whether the image is put upon a cloth, carpet, coin, vessel or wall, etc.

The copying of trees, camel-saddles, and other things apart from living creatures is not forbidden. - So far the legal prescriptions affecting the copying itself.

As regards the use of articles which have on them images of living creatures, if these are hung on a wall or are on a garment which is worn or on a turban or other article which is not treated lightly, they are ṣārūm. If the reproductions however are on carpets which are walked upon, on cushions and pillows etc., which are in use, they are not ṣārūm. Whether the angels of mercy avoid houses which contain such articles will be discussed immediately, as God will.

In all these cases it makes no difference whether the reproductions have a shadow or not. Some of the older jurists say: Only what has a shadow is forbidden; there are no objections to other reproductions. But this is an erroneous view. For the reproduction on the curtain was condemned by the Prophet and it certainly had no shadow. The other traditions should be remembered which forbid all images of whatever nature.

Al-Zuhri says: Images are without exception forbidden as well as the use of articles on which there are images, whether embroidered on a cloth or not embroidered whether they are put on a wall, on a cloth or carpet, to be trodden upon or not; on the authority of the literal interpretation of the tradition about the muqawma (pillow) which Muslim records (cf. above). This is a very strict point of view. Others say: What is embroidered on a cloth whether for humble use or not, whether hung on a wall or not is permitted. They regard as muqrab images which have shadows, or reproductions on walls, whether embroidered or not. They rely for this view on Muhammad's words in several traditions in the Bāb concerning: "except what is embroidered on cloth". This is the attitude of Kāsim b. Muhammad.

The 'udmān forbids all representations which have shadows and declares their defacement māliḳ. The Kāfîr (Iyād) says: "Apart from little girls playing with dolls and the permission for this", Mālik however declares it muqrab for a man to buy his daughter a doll. And some say that the permission to play with dolls was abolished by the traditions (p. 447 sqq.). These traditions lay it down without any ambiguity that the representation of living creatures is strictly forbidden. As regards representations of trees and such without rūḥ neither their making nor purchase is thereby forbidden. Fruit-trees in this respect are the same as other trees. This is the view of all the 'ulama' except Mālik, who considers the representation of fruit-trees muqrab. The Kāfîr (Iyād) says: Mālikīh is alone in this view. He relies on the tradition: "Who is more unmighty, than he who imitates my creation?" (Muslim, Livād, trad. 101; Bukhārī, Turāfād, bāb 56); while all the others quote the tradition: "Then it shall be said to them, put life (ayyāh) into that which ye have made, for ayyāh means: make living creatures (bayyāmūn) with a right hand, just as for al-īyād"

In spite of the opinions of the theologians and jurists, breaches are not rare as in the case of the prohibition of wine; as for example, the frescoes in the bath-house of 'Amra [q.v.], the miniatures in Persian and Turkish manuscripts, Turkish and Egyptian stamps. There have even been pictures of Muhammad in recent times. But this does not affect the fact that among Muslim peoples there has been neither painting nor sculpture to any considerable extent. Arabesques and calligraphy may be regarded as a substitute for it. Strzygowski has tried to explain the absence of human figures from Muslim art by the latter's being influenced by a school of art in which there were no human figures for some other reasons.

Objections were for long made to photography (see Saneck Harrgunde, Vergegenständliches Geschäft, ii. 432 sqq.); now these seem, in certain circles at least, no longer to be so strong or even to have been quite overcome. In Cairo there is an illustrated weekly al-Muṣawwar, which is produced entirely on western lines. This does not however mean that the old opinions have entirely disappeared. Chauvin gives examples of the horror of being copied, examples which still have their counterparts in the modern western world. Here also we find people objecting to being photographed because they feel as if something were being stolen from their persons.

We find the second commandment quoted literally in the west against pictures although the usual interpretation regards it only as prohibiting
the worship of idols. It may be asked whether the Muslim interdiction of images was influenced by the Jewish interdiction of the second commandment. From the literature (Flavius Josephus) on the one hand and the coin on the other, it is evident that the Jewish prohibition of the exhibition of images was exactly the same as the Muslim: no living creatures, only plants and other objects. On the one hand we may assume Jewish influence on the Muslim prohibition of images, on the other hand recognize that the foundations for this transference can already be found in the Kur'an. The Biblical idea of the creation of man by the making of an image and breathing the breath of life into it as found in the story of the creation is also found in the Kur'an (Sûra, xvi. 29, xxxviii. 72) and it is this very idea which has had great influence on traditions and legal literature. — For the philosophical meaning of the conception Sûra see MAIDUA.

(A. J. Wensinck)

SURAKARTA, or SURAKET, name of a kingdom on the island of Java, and of its capital, ruled by two Javanese princes, the Suhuhunan, and Mangku-Negara, under Dutch suzerainty. It arose along with the kingdom of (Ayogakarta (kerta), likewise ruled by two chiefs, out of the older kingdom of Mataram, which on the decline of the kingdom of Dëmak and Pajang appeared as a third Muhammedan state in Java proper. The Muslim character of Mataram, although rather superficial and only nominal, was the result of the official recognition by the Suhuhunan as Muslim ruler by the authorities in Mecca and found expression in the title Pa-nâs-punâ, “Arranger of the religion (of Islam)”. Although the population was quite consciously Muhammedan, the kingdom nevertheless remained in many ways, e.g. in political organisation, Hindu-Javanese. The same holds of the states, which succeeded it, and particularly perhaps of Surakarta, where especially of recent years an active interest in the older culture has arisen in educated circles under the influence of studies by Europeans. The kingdom of Mataram founded by Senapati about 1575 reached its greatest prosperity under Agung (1613–1645). Under his successors the influence of the suzerain Dutch Trading Company (Veereenigde Oost-Indische Compagnie) rapidly increased, which, founded at the beginning of the 17th century was the de facto ruler of Java by 1745. Disputes about the succession brought about (1755) the already mentioned partition of the kingdom into the states of Surakarta and Yogyakarta. The Suhuhunan, who still ranks higher than the Sultân, had already founded a little state by 1744 in the village of Sala (often written Solo); the name of which, Surakarta, as usual in Java, took the place of that of the previous state, Karinura (from Sanskrit bhūta = flourishing etc. and pura = hero, heroic, brave). The state and the village of Sala were officially called Surakarta after the state, although the present town is still also called Sala (pronounced Solo by Europeans). Very soon after the partition, one of the rival princes received an important fief from the Suhuhunan; this gradually developed into an independent principality the ruler of which the Mangku-Negara is still however formally subordinate to the Suhuhunan. The history of the kingdom is, like that of Yogyakarta, rather confusing on account of the continual alternations in its boundaries. It passed more and more under Dutch influence and is of no special importance for the world of Islam. On account of the impossibility of giving a brief sketch of it here, the reader must be referred to the fuller studies by Dutch scholars quoted below.

The present town which has now about 130,000 inhabitants, of whom only a few thousands are Europeans, has retained the aspect of a Javanese culture. Native arts and crafts were always cultivated in the capital but on account of the keen European competition have lost a good deal of importance for Java itself. The Javanese fine arts, especially music and dancing, are however still flourishing and Javanese learning was officially encouraged and this is partly true of the present day. Literature, which seems almost to have disappeared with the death of the last pañjangga, Kangea-Warsi (pañjiangga was originally a priest, later court-scholar; Sanskrit bhūta = snake, snake-demon, and it is not quite clear how the present meaning has developed from this), appears to be reviving again to some extent and may still have a future in a more modern form under the influence of the expansion of European education. Quite recently (1926) the Dutch authorities have founded a school in Surakarta, on account of its central situation for Javanese culture, the special object of which is to give native scholars a classical oriental training.

The buildings of the capital with its old customs and usages, its bēlaja dances and wayang plays, with its many remarkable features, its reflection of former Javanese splendour, form the greater attraction of the town. The princes have their own officials for various services, who live with their families in the palaces and are estimated to number 15,000. But actually the power is exercised by the Dutch resident who is equal in authority to the prince, an arrangement which has repeatedly caused friction.

Bibliography: Exceedingly valuable for our knowledge of the two native states is G. P. Rouffaer’s article Vorstenlanden in den Encyclopaedie van Nederland Leeuw, 1876–1878, with a valuable bibliography. P. J. Veth, Java, ii. 165 sqq., is more general.

(C. C. Bero)

SURAT, a city situated in 21° 12’ N. and 72° 50’ E. on the south bank of the Tapti and ten miles from its mouth. The geographer Ptolemy (A.D. 150), speaks of the trade
of Pulipula, perhaps Phulpâda, the sacred part of Surat city. Early references to Surat by Muslim historians must be scrutinized, owing to the confusion of the name with Sorath (Saurashtra), but in 1373 Firdawsi built a fort to protect the place against the Bihls. The foundation of the modern city is traditionally assigned to the beginning of the sixteenth century, when its prosperity was restored by Gopi, a rich Hindu merchant, and in 1514 it was already an important seaport. The Portuguese burnt the town in 1512, 1530, and 1531, and the present fort was founded in 1540 by Khudawand Khan, a Turkish officer in the service of Mahmûd III of Gujrat. In 1572 it fell into the hands of the Mirzâ, then in rebellion against Akbar, who besieged and took the place in the following year. For 160 years the city, known as "the Gate of Makka" and "the Blessed Fort" from its being the port of departure for pilgrims, enjoyed peace and prosperity under the Timürids. An English ship first arrived at "Swally Hole" (Sawall) the anchorage near the mouth of the Tapti, in 1608, but the English encountered great difficulty in founding a factory, owing to the hostility of the Portuguese. They succeeded, and their position was secured by the treaty brought back from Agra by Sir Thomas Roe in 1618. In 1664 Shihâjât plundered the town for three days, but could not touch the English and Dutch factories, which were bravely defended by their inmates. From 1669 an annual Marâtha raid was almost a matter of course, but the foreigners defended themselves. In 1687 Bombay superseded Surat as the principal English settlement on the western coast, and in 1733 the Muslim governor proclaimed his independence, but in 1759 the English, with the approval of the Marathas, charged themselves with the administration of the town, which became a British possession in 1800. The English and Dutch graveyards contain interesting memorials of European trade and adventure in India.

(T. W. Haig)

**SURAJDÏVA (Maśâla).** This is one of the classical "questions" in the theory of law (miṣâl), one of the few that have a special name (cf. akbarîya) derived from one of the first to propose it. It refers to the legal fiction (daw' bâhâli) invented by some Shâhidî (Masani, I.ha Suraî, and Ghasâli, who later abandoned) to cancel, by bringing it into a vicious circle (yamîn âhâmâ), the solemn declaration (tâlîf) pledging the contracting party to divorce his favourite wife if he breaks his oath (tâlîf ma'sâlaṭâ, employed in the Karâjân initiation; cf. karâjâtans). Snouck Hurgronje has shown the use made by the Shâhidî of the tâlîf to stabilise marriages in Java.

**SURÛRÎ, the name of several Ottoman poets of whom the most notable are the two following: 1. Müsûlî al-Dîn Mûstâfâ Efendi, called Suraî, a distinguished philologist and expositor born in Gallipoli where his father Shâhîn was a merchant or a teacher. After the conclusion of his studies he became an assistant yâği in Stambul, in 944 (1537). When the medrese founded by Kâsim Pasha [q. v.] was finished, he was appointed its first müdderbis, but resigned a year later and by the desire of his patron Kâsim Pasha began to lecture on Dîjât al-Dîn Khâtîn's Mutâhâr as a Nakâşbandi derawîsh. In 950 (1543) he became tutor to prince Muṣṭafâ [q. v.], the ill-starred son of Sultanânum [q. v.] the Magnificent. After the prince's execution in 960 (1553) he retired into private life and died on 7th Dijâmâd I 960 (Jan. 13, 1562) in Stambul at the age of 72. His tomb was at the little mosque which has now disappeared built by him in the Kâsim Pasha quarter (cf. Hâšî, Hüsâïn, Ṣâdûtât al-Dîjâtîn, ii. 4 sq.; J. v. Hammer, G. O. K., i. 106, No. 593). In this manuscript at one time were preserved the manuscripts of all his works. On his tomb cf. also Ewliyya Ĉelebi, Suyûtbname, i. 426; Sûrûrî was one of the greatest philologists of the time and probably the greatest authority on Persian language and literature that Turkey has ever produced. In his capacity as tutor to the prince he prepared several of his famous commentaries e.g. those on the Bûstân and Gûstân. Towards the end of his life (968) he published the commentary on 'Hâšî which is probably the best of its kind; his text book of prosody and rhyme Bâhâ al-ma'ârif prepared for prince Muṣṭafâ in 956 (1549) and his 'Aṭâ 'râ al-Mâhîbûr a synopsis of the Cosmography of Kaşâni are also famous. Less well known is his commentary on the very popular introduction (Isâfārâ, Gr. ieropoiâ) of Shaïkh Aṭîr al-Dîn Muṣfüdî. His other works are almost all expositions of Arabic or Persian works, or translations. He had a command of Turkish, Persian and Arabic as is rarely found.

II. Sayîdî ‘Othmânîn, called Sûrûrî, the greatest Ottoman writer of chronograms, usually called Sûrûrî Muṣürîk, i.e. Sûrûrî the writer of tâlîfik. Sayîdî ‘Othmânîn was born in Adana in 1165 (1751) in Southern Anatolia, the son of Hâshî Muḥâmî. As a youth he came to the capital through his fellow townsmen, the kâdi Tewfîk Efendi of Adana, where he mixed with distinguished men of letters and finally became a kâdi through the influence of Tewfîk Efendi, afterwards Shaïkh al-Islâm. He was for many years on intimate terms with the poet Sâbûnî-şâde and Wehbi Efendi [q. v.] whom he voluntarily accompanied into exile at Old Zagrâ. He later settled in Stambul again where he built a house and died on 11th Safar 1229 (Feb. 2, 1814). ‘Othmânîn Sûrûrî was considered the greatest Ottoman writer of chronograms. His chronological rhymes (tawârîkh), which he wrote on every occasion with remarkable readiness are innumerable. He was also distinguished
as a poet but his poems seem to be of less merit and it is only his skill in making chronograms that it is really admirable. He was imitated by Ḵᵛ Consort [q.v.], his pupil, and Ḵᵛ Consort, the imperial historian, in this style of composition. There is no complete edition of his works and not all his chronograms are contained in his Divān. A selection of the latter is given in Ahmad Djewdet Pasha's Sarūrī Madje'ī, Stambul 1399, 109 pp, 8° and by Abu Ṭ-Dīya Tewfik, Sarūrī Muṭtawrī, Stambul 1305, 54 pp, small 8°.

(Franz Babinger)

AL-SŪS, a ruined site in the Persian district of Khūjistān or 'Arabistān. At a very early period (from at least the second millennium b.c.) it was the capital of the kingdom of Elam. Its name in the Bible and in cuneiform inscriptions is Śūši; Greek Zēs; Late Egyptian Súṣ (see M. V. G., iii. 141; O, 6); Syrian and Armenian Sûš (not to be confused with the town of the same name, the see of a bishop, in the region of Mēšū; cf. e.g. G. Hoffmann, Auswärtige orientalische Akten pers. Mittheilungen, Leipzig 1880, p. 203; Sachau, Akh. Pr. Ab. W., 1905, p. 531; modern Pers. Šūš. When between 642-639 B.C. Assurbānilap put an end to the kingdom of Elam, its capital Sūš was sacked and completely destroyed (cf. Streck, Akkumerz, Leipzig 1916, p. 600). Cyrus raised the town from its ruins again and made it his winter residence. In this capacity it experienced a new period of glory under the splendid-loving great kings of the Achaemenid house. To the great riches which were again accumulated in Susa in this period, we have eloquent testimony in the vast booty which Alexander the Great carried off from it in 333.

In the Sassanian period, as we know from Syrian, Byzantine and Arab sources (cf. Nöldeke, Gesch. d. Pers. und Arab. zur Zeit der Sāsāniden, Leyden 1879, p. 38), the vigorous Sapor II (309—379) had the town of Sūš stamped into the ground by 300 elephants as a punishment for a rising there and built a new city beside it, to which he gave — after the fashion of Oriental potentates — a new name alluding to himself, Trāmshāh-Sūš (== probably the abbreviation TRW on Sasanian coins of Susiana) but this however ultimately disappeared before the older name. Sapor settled Roman prisoners in his new city. The latter no doubt strengthened the already not inconsiderable Christian element in the population. Sūš was the see of a bishop from 410—605 as we know from Syrian literature; see Guidi, in Z. D. M. G., xliii. 414: Sachau, ep. crit., p. 40.

Sūš fell into the hands of the Arabs in 17 (638) (or not till 639) when Abū Mūsa al-Ḵᵛāriz (q.v.) carried through the conquest of Khūjistān. The forces there, commanded by the Persian governor Ḥarmūrān, apparently offered little resistance to the Muslim troops (cf. the Syriac Chronicon, ed. by Guidi, Act. du 2e Congrès Intern. des Orient., J.A., 1891, p. 32 and history of the Armenian Sebōs of the 11th century; see Hübschmann, in Z. D. M. G., xliii. 625). The older historians Balḥirī and Šabart (cf. Schwarz, op. cit., p. 364) know nothing of severe fighting with the natives and a destruction of the city by Arab troops, mentioned by al-Muḳaddasī (and cf. Loftus, op. cit., p. 344). Under Isām, Sūš remained for several centuries more a populous flourishing city — we have coins struck in it (cf. Loftus, op. cit., p. 400) — but it was no longer the capital of the whole region of Khūjistān or Āhwāz. That the capital now fell to the city of Āhwāz (more precisely Sīykāl-Āhwāz; cf. above, i, p. 208; ii, p. 728). Sīykāl was now merely the capital of one of the seven (and at times more) divisions of this district. To the district of Sīykāl belonged several smaller towns, notably Karkha (Syriac Karkhā dēr ʿādīnā) which is well known from Syriac literature. Sīykāl was surpassed in importance not only by the capital Sīykāl-Āhwāz but soon also by other places in Khūjistān, e.g. Tustar and ʿAskara眔 (Askaran)-Makram (cf. i, p. 4883; ii, p. 778). All these three places lay on the river Kārūn (q.v.) towards which during the caliphate the political and economic centre of gravity of the region moved.

The Arab geographers emphasize the busy industries of Sūš, notably weaving which was highly developed. Its silk was famous (cf. the Divān of Kašī al-Ruṣayyīrī, ed. Rhodokanakis, No. 63, 6 in S. B. A. W. Wien, 1909). The lemons grown here were held in particular esteem; so much a good deal of sugar was grown around the town and still more was refined in the town. According to al-Muḳaddasī, in his time (end of the tenth century), the town proper had already fallen into ruins; the population lived in a suburb. Idristi (transl. Taubert, Paris 1836, i. 381, 384) makes Sīykāl still thickly populated at the middle of the 13th century, and Beniamin of Tudela who travelled through Asia a few years later says that there were no less than 7,000 Jews here with 14 synagogues. The two banks of the river "Ulā" — the Shāwār (see below) must be meant — were united by a bridge; on the west bank was the quarter of the poor (cf. Ritter, op. cit., i. 305 sq.; Loftus, ep. crit., p. 320). The Persian geographer Mustawfī, writing in the xivth century, describes Sūš as still a flourishing town. But we are justified in doubting whether this is really accurate at this late period and was not simply taken from earlier writings. It is certain that Sīykāl became more and more completely deserted from the xivth century, and this agrees with the results of the French excavations, according to which most of the remains of the Arab period discovered in Sīykāl belong to the xivth and xvth century (see de Morgan, Mém. de la Délég. en Perse, viii. 32). Dāmīl, 33 hours N. E. of Sīykāl, which only appears to have come into prominence since the Mongol period, and is now an important town in Khūjistān (ʿArabistān), may be in a way considered the successor of the mediaeval Sūš.

Sūš has a very favourable strategic and commercial situation; for it is at the point where the two principal rivers of the country of Khūjistān, the Kārūn (q.v.) and the Karkhā (also written Kerka), approach nearest to one another. They were at one time connected by canals. The ancient Sīykāl lay between two arms of the Karkha, the western, i.e. the modern Kerka (Chosaps of classical writers) and an eastern branch which has now disappeared but is still recognizable (cuneiform: Ulā) which was connected with the Kātān
(Pasiligris, the Ulai proper, Σανάς). The mounds of ruins of Sima begin about 12 miles S.W. of Dīsafīl. A short hour's journey east of them, the Dīsafīl-Rūb or Ab-i Dīa, a tributary of the Kūrīn, runs through the plain. The western side of the area of the town 100—300 yards from the two western main mounds is washed by the narrow but deep Shāwūr (Shaur) which rises about 2½—3 hours above the ruins of Sima, and does not flow out of the Kerkha itself as has been assumed (contrary to Schwartz, op. cit., p. 30; cf. Rawlinson, op. cit., i., p. 70 and Layard, xvi. 56.). A canal, now dried up, leaves the Kerkha a little above the source of the Shaur, runs round the side of the town on the north and east and finally disappears in the S.W. in the swamps which stretch to the Shaur. This watercourse is the above-mentioned eastern branch of the Kerkha. The Kerkha proper is about 2 miles from Sima, while its earlier bed (the old western main arm) now a ditch thickly overgrown with bushes is only 500 yards west of the Shaur (cf. thereon Loftus, op. cit., p. 346).

The Arab geographers not infrequently call the Kerkha, like the Shaur, the "river of Sima"; see G. Le Strange, op. cit., p. 233; Schwartz, op. cit., p. 304—305 and cf. above, ii., p. 778, 857.

The system of ruins at Sima is quite considerable (3—5 miles in circumference). It is only since the beginning of the sixteenth century that we have reliable accounts from European travellers, namely: König and Montetith (1809), Gordon (1814), H. Rawlinson (1836), A. H. Layard (1840) and notably Loftus (1851—1852). The English excavations conducted by the latter in 1851—1852, and those of the French, first (1885) under M. and Mme Dieulafoy, then 1897—1899 and later by de Morgan and others, have settled the main topographical and archaeological problems. Four large artificial platforms stand clearly out from the ruins, separated from one another by more or less broad ravines. At a short distance from the Shaur (100—300 yards, increasing towards the south) stand two hills, the larger to the north, roughly a rectangle, about 60 feet above the bed of the river, which conceals the palace of the Achaemenid kings and a smaller one irregular in shape, but higher (up to 120 feet above the Shaur) which formerly bore the Citadel mentioned by Greek writers, still called Kal-i Shāh = the citadel of Shāh by the people. On the east these two mounds are joined by a roughly rectangular area, larger than these in area, which Loftus calls the great or central platform, attaining a height of 65 feet and covering an area of over 60 English acres. Next comes on the east an extensive fourth platform, the eastern and northern edges of which are not easy to define as the slope by terraces to the plain. Besides these four mounds of ruins, there are a series of smaller ones mainly in the east and northeast. When Benjamin of Tudela speaks of a quarter of the town on the west bank of the Shaur (cf. above), it should be noted that no distinct traces can be found of this suburb where the poorer people dwelt, at least in the form of well marked mounds of rubble. In the south or southwest the ruined area is bounded by marshes with a luxuriant growth of reeds and trees.

In the northeast mound Loftus found a pillared hall like that in Persepolis, apparently the throne room, the walls of which were adorned by the relief of the immortals now in the Louvre. This splendid room formed part of the royal palace built by Darius I and restored, after suffering in a fire in the reign of Artaxerxes I, by the latter's grandson, Artaxerxes II Memnon, who was particularly fond of Susa. The western pair of mounds near the river, must have been the residence of the court and of the government, while in the third "the central platform", we have probably to locate the town proper. Remains of a great wall surrounding the town dating from the Elamite period (before Assurbanipal) have been found during the excavations; the sides not protected by watercourses could easily have been defended by fortifications. The town destroyed by Assurbanipal is buried 12—16 feet below the surface, covered by ruins of the later settlements of the Achaemenid, Seleucid and Sassanian period. The English and French excavations recovered a vast quantity of inscriptions and other relics from all periods of Susian history down to the Arab. These are now partly in the British Museum and partly in the Louvre. For London, cf. the Guide to the Babylonian and Assyrian Antiquities in the British Museum 2, 1921, esp. p. 175 sq.

About 150 yards from the N.W. corner of the S.W. hill just on the bank of the Shaur is the tomb-mosque of the Prophet Daniel (called by the Persians Pār (= Arabic Shāh) or Paighambar (= Prophet Dānēpillot) still visited by numerous pilgrims, Muslims, Jews and Mandaeans (Subbe). The present building is only a few centuries old, but in it were used several fragments from the ruins (bricks with cuneiform inscriptions, capitals etc.) as wāqāf pieces (cf. Rawlinson, op. cit., p. 69). The sanctuary has a round rectangular court surrounded by a wall, entered by a low doorway from the river side. Within, on both sides are arched ways leading into the sanctuary which runs in the west of the court yard. The actual tomb is dark and consists of a sarcophagus of smooth cement behind perforated wood lattice. Above the mosque, rises out of the centre of the roof terrace, on which the pilgrims sleep in hot weather, a sugar-cane like tower ending in a pointed pyramidal cupola crowned by a crescent. This remarkable type of tower found especially in tombs is not rare elsewhere in Iraq, in Khûzistān (cf. e. g. i. 1026a and Herdner in Petermann's Mitteil., 1907, p. 628, 759), Irānstan and the Persian Gulf. Cf. thereon F. Langenegger, Die Baukunst des Irān, Dresden 1914, p. 115—116 and Herrfeld in Sarre-Herrick, Archäolog. Reise im Perser- und Türken-gebiet, Berlin 1911, 1, p. 231, 239, 246; 1919, ii., p. 177—178, 321.

According to the statements of various Arab writers, with whom the above mentioned Syriac chronicles also agrees, the sarcophagus with the bones of Daniel was found after the capture of the town by the Arālab, and, as some say (Bašāri, ed. de Goeje, p. 378; Tabari, op. cit., see below), in a chamber in the citadel. By orders of the Caliph 'Omar the river Shaur was turned from its course, the sarcophagus placed in its dry bed and the water then led back into its old course (cf. the Arab legend of the original tomb of the prophet Joseph in the Nile in Schwarz, op. cit., p. 561, note 5, and the burial of Alaric in the Rucento). The place of the burial in the river is, as Mu'addad (p. 407) and cf. p. 417)
Near the tomb of Daniel stands another ruined tomb of a saint (sw̃āma ẖād); see Rawlinson, op. cit., ix. 70 and J. D. Dusauloy, A Sur., p. 83. East of the ruins of Susa towards Dīfīl, are two other similar sanctuaries, one of which is considered to be the tomb of 'Abdās and the other that of Ibrāhim al-Ḳahilī; see Loftus, op. cit., p. 345—346; Jéquier in de Mecqan, Mém. de la Dilig. sur Perse, vii. 31, 32 (speaks of two towers and of one of a Shaikh). Bricks and capitals from the Achaemenid period are also built into these saints' tombs. One Muslim tradition (Tabari, i. 252, 27) says that Abraham (Ibrāhim; q.v.) was born in Susa. In keeping with this tradition the site of the oven into which Muslim legend says Nimrūd threw Ibrāhim is also moved to Khūzistan (Mandjanik, south of Māl-Amir); see Rawlinson, op. cit., ix. 81. But these associations with Abraham are usually localised in al-Ṭīlāq (in Khūţā, Aḵārift, Bīs Nimrūd, etc.). It may be further mentioned that the Arabic sources consider Susa, like Babil, one of the oldest cities in the world and make them both foundations of one of the mythical Iranian kings (Oshāng or Tammūras; see Tabari, i. 171, and above, i., p. 548 sq.). The country round Susa suffers for nine months of the year from the glowing heat of the Iranian sky. In January however a luxurious, almost tropical, vegetation springs up after the winter rains. The rich pastures that then cover the land attract the nomads thither. In the spring it is mainly Arabian Beduins that camp here and indeed they are in the majority in Khūzistan generally, so that this district is actually officially called 'Arabīastān by the Persians (q.v.). The region of Susa is particularly visited by the tribes of 'Allī Kāḫîr and Bāti Lām (q.v.). On the 'Allī Kāḫîr, who migrated lither over three centuries ago from Naḷīd in Central Arabia, cf. Layard, op. cit., xvi. 33, 56, 90; Loftus, op. cit., p. 347, 351, 356, 358, 381 sq. and Schwart, op. cit., p. 417. Of the great tribe of 'Allī Kāḫîr we are here mainly concerned with two of its subdivisions, the Ka'b and Zāblā (cf. Layard, op. cit., p. 33). The Ka'b were originally members of the powerful Ka'b tribe leading a nomadic life on the lower Kūrā; on the latter, cf. ii., p. 775; also Layard, op. cit., xvi. 6, 37—39, 41—55 and Loftus, op. cit., p. 285 sq. 381, 390. Lur nomad tribes are often found in the plain of Susa. At the beginning of May all is again as quiet as the grave. Even the guardian of the tomb of Daniel leaves the district, which is filled with miasma from the grave and the heat now becomes unendurable.

On the banks of the Šawwār covered by luxurious woods (notably acacias, poplars and willows), in the desert that was once the left arm of the Kerkhā and in the undergrowth of the swamps are many beasts of prey, wolves, hyenas and even lions, also wild pigs.

He charges them with a lack of urbanity, coarseness and insolence. The dress of the men consisted of a kitāb of wool which enveloped them entirely, with a māṣūr of wool around the waist which they called āyāb. They were armed with short spears with steel heads. They drank a liquor made from the mast of sweet grapes which they called omtis and considered it a permitted beverage as it did not bring about drunkenness. These notes show clearly that the term al-Sūs al-adānā was then applied to a much wider area that at the present day; it included not only the valley of the Wādi Sūs but also the mountainous country towards the Ḥawā of Mīrakkeš, the Dāʿa (Darā) and the Tāfdāl.

Farther Sūs, as a province of the Maghrib, has always been closely connected with the history of the whole country and with the histories of the different dynasties which have successively established themselves there. In 117 (735) it was conquered and converted to Islam by Ḥālūb b. Aḥbāb, a grandson of 'Uqba b. Nāfi'. Under the Ifṣids it passed on the death of ʿĪrīdī II in 213 (828) to his son ʿAbdallāh, at the same time as the massif of the Great Atlas with the towns of Aḥmādīy and Nafisī. It was next one of the main objectives of the Almoravids [q.v.] when they thrust their way northwards. In 451 (1059) the general Aḥbāb Bakr b. ʿUmar seized the towns of Māṣūṭ and Tāfdāl but the authority of the Almoravids was never very secure in Sūs, in spite of the submission of the province to Ṭūṣuf b. Tāsīfīn in 478 (1085).

Sūs played a prominent part in the early days of the Almohad movement in the Maghrib. It was, along with the plain of Mīrakkeš, the centre of Almoravid resistance against the attempts at expansion by the companions of the Mahdī Ibn Tūmār beyond the massif of the Great Atlas where the movement began. A son of the Almoravid ruler ʿAbī l-Ṭūṣuf, Baggā, organized the resistance there and was only in 533 (1140–1141) that the Caliph ʿAbd al-Muẓafīn definitely conquered the whole of Sūs. During the whole period of the Almohad dynasty it was one of the most important provinces of the empire. On its demise in the reign of al-Murtāfā (660–665 = 1268–1266) it was the scene of a rebellion on a great scale fomented by the agitator ʿAbbās b. Yādās. This individual, a former dignitary of the Almohad court, wishing to found a little independent kingdom in Sūs, appealed to the Arab tribes settled between Tlemcān and the Rif, the Ṭawī Ḥassān and the Shabbānāt of the Maʾkī group. He was able to hold out against the Almohad governor of Tāfdāl but his success was not of long duration. In 1266 the Almohad prince ʿAbbās Dabbūs with the help of the Marinid contingents regained the province from him and seized Tīnākhtī and Ṭīnytānīn. Nevertheless the independent kingdom of Sūs after the fall of the Almohads was able to maintain some sort of independence in the period of the early Marinid Saṭāns until the reign of Ṭūṣuf b. Iʿḥāsan ʿAbbās who broke it up for ever.

In 1504 the Portuguese gained a footing on the coast of Sūs in the bay of Aqṣādir [q.v.] and founded the fortress of Santa Cruz; it was a strategic point of great importance, the gateway to a rich hinterland and at the same time an excellent harbour, one of the best on the Atlantic coast of Morocco. The people of the country tried
in vain to dislodge the garrison; in order to harass it incessantly and to blockade it by land they established quite close to the Portuguese station, a rifle or concentration-camp of the "volunteers of the faith" who used to come there in relays to deliver open attacks on the Christian foes or prepare murderous am biscuits for them. Between the sea and Tārūdānt, a small town was soon formed to take charge of the local qādis, the Zāwiyā of Tedalet, the cradle of the Sa'dian [q.v.] dynasty. It was founded by some ḥassāni Shūfrū; whose ancestor Āḥmad b. Mūḥammad b. Āḥmad Kāsim, had come in the 9th century from the Ǧūdāf and settled in the valley of the Wādī Ǧara', at Tāguñadah. His descendants then migrated to Sīs near Tedalet, settled there and took up a position in the country which daily increased in importance. At the beginning of the 9th century, the head of the Zāwiyā, Mūḥammad b. Āḥmad al-Ṭaḥrīn, became the real leader in the holy war in al-Sās; assisted by his two sons, Āḥmad al-Ṭaḥrīn and Mūḥammad al-Shālikh, he displayed great activity and denounced the impotence of the ruling dynasty to the people. He was not long in achieving his object; the tribes of al-Sās proclaimed him their Sīlān in 630. He died soon afterwards, leaving his son to continue his work. The eldest, al-Ṭaḥrīn, who had assumed the title of king of Sīs in the lifetime of his father, established himself as sovereign in Tārūdānt and in 641 succeeded in driving the Portuguese finally out of Ǧādīrī.

We see from the above what a large part Sīs plays in the history of the first of the two Ḡurritian dynasties of Morocco. The Sa'dian Sīlān also always kept a watchful eye on this vital part of their empire. Mūḥammad al-Shālikh al-Mahdī was the first to extend the cultivation of sugar in al-Sīs and thus created an important source of revenue for the treasury. It was in the reign of the great prince Āḥmad al-Manṣūrī that this province saw its greatest revival of prosperity. A regular army, formed of citizens recruited in Sīs, at this time formed the garrison of Marrakesh and relations between the capital and the province were never closer. But after the death of al-Manṣūrī, when anarchy once more reigned throughout the empire, al-Sīs did not escape the various rebellions which broke out on all sides. Prince Ǧālidīn, a claimant to the throne, made his headquarters there. A few years later al-Sīs fell into the hands of a powerful rebel Abū Ǧārid al-Manṣūrī called Abū Ḥālib, who made an alliance with the Ǧīlāf Shīrīf of Sidjilmasa. But this alliance was only ephemeral and the early days of the second Ḡurritian dynasty of Morocco were marked by the struggle between the Abū Ḥālib and the Ǧārid pretenders of Tārlīn. He was succeeded on his death by his son Abū Ǧārid, who was only soon brought to terms by the Abū al-Sīlān al-Raṣīlī. In 670 the latter led an expedition to the very heart of al-Sīs and captured the stronghold of Ǧujjīn. Next year the people of al-Sīs sent a deputation to him at Marrakesh to offer their submission. The latter was not of long duration for in 677 the Sīlān MawĪlī Ismā'il had to send an expedition to al-Sīs and another in 682. The country was finally pacified and at the end of his reign when MawĪlī al-Hāsan divided his empire among several of his sons, al-Sīs fell to Mūḥammad al-Ǧalīn, with Tārūdānt as his capital. But this prince only went to his domain to set up as a pretender to the throne and from this time on we find each successive Abū al-Sīlān forced to suppress one or more rebellions in al-Sīs during his reign. We may just mention the expeditions to put down rebellions sent by MawĪlī Abū Allāh (1533), MawĪlī al-Ǧalīn (1582) and particularly those of MawĪlī al-Hāsan in 683, 685 and 686. Al-Sīs has been definitely at peace since the establishment of the protectorate of the French Republic in Morocco after the expedition of 1917.

These continual rebellions have resulted in the gradual impoverishment of al-Sīs since the 9th century. The enthusiastic descriptions of the geographers and travellers of the middle ages no longer apply to the second period of the history of this reign. At the present day, while modern methods may be expected to raise the value of this country, the only part of al-Sīs that is really rich is the narrow strip of irrigated land which lies along the banks of the Wādī Sīs which is hardly susceptible of extension except to the north of this river. The products of al-Sīs are cereals, oil of Ǧīlān and fruits. Cattle-raising is very limited. Al-Sīs on the other hand seems certain of an great economic future as a result of the exploitation of its abundant mineral deposits: copper (already worked in a rudimentary fashion by the natives), lead, rock-salt, and lime.

The principal town of al-Sīs at the present day is Tārūdānt, the residence of a qādis appointed by the Sīlān. It has about 7,000 inhabitants of whom 1,000 are Jews who live in a ghetto or μελιθ. This town seems to have been founded at a very early period and we already find it playing a part in history in the Almoravid period. In the middle ages al-Sīs had as its capital sometimes Tārūdānt and sometimes Iglī. After the death of MawĪlī al-Hāsan, at the end of the 9th century, Tārūdānt was the centre of the rebellion of al-Hībī who held out there till the town was taken in 1013 by the Mahālas of the Mahīzīn. It is surrounded by a great wall of clay which dates from the end of the 9th century.

Besides Tārūdānt, there is the little town of Temīt, 52 miles south of Ǧādīrī, and 12 miles east of the Atlantic coast, at the foot of the Anti-Atlas. It has a population of about 1,000. Sīlān MawĪlī al-Hāsan founded it in his expedition to al-Sīs in 683. Finally we may mention about 60 miles S. E. of Temīt the famous Ǧūrīyā of Sīdī Ǧāḥīr-al-Mūsī, in al-Tāsīrīn. It is the mother-Ǧūrīyā of the Ǧūrīyā of the Ǧūrīyā of the Ǧūrīyā of the Ǧūrīyā of the Ǧūrīyā of the Ǧūrīyā of the Ǧūrīyā of the Ǧūrīyā of the Ǧūrīyā of the Ǧūrīyā, who are all acrobats and follow their profession throughout North Africa and also in Europe.

On the coast besides Ǧādīrī [for which see the separate article] we may mention the villages of Ǧādīrī and Ǧīlidī, which in the middle ages were comparatively important centres of maritime trade, frequented especially by Genevois sailors, and the terminus for several caravans from the affidavit.

The people of al-Sīs still speak a Berber dialect belonging to the Tāsīrīnī group but the speakers of Arabic are becoming more and more numerous as a result of the emigration of large numbers of natives who go to exercise various trades in the towns of the rest of Morocco.

AL-SUSAN, the common name for the white and yellow-eyed lily used for the blue iris which is more precisely described by the addition of armāngīfī and is also called ārīdī by the physicians. The name is a general Semitic one, but whether from ārīdī (ārīdī) as L鈥檚 suggests, seems to me doubtful on account of the ārī or ārī found in it. The root of ārī dententiātī is still used in medicine.

SUSAN, a ruined site on the Upper Kārin in Khūṣīṭa in the territory of the Lūr tribe of the Bakhšīyārīs, 5 hours journey from Dītorf; cf. above, ii., p. 779.[*] The place is also called ārīdī (or ārīdī) and Dīhaftī by the Persian geographers. H. Rawlinson discovered these ruins in 1836; Layard then visited them twice (1840, 1847) and made several important corrections in his predecessor's description, which was in part based only on the information of natives. No later European traveller seems to have made a thorough examination of the locality.

According to Layard the ruins seem to belong to two different epochs, the old Persian and the Sassanian. On the right bank of the Kārin at a point where the river makes a turn westwards and forms a semicircle can still be seen for a stretch of nearly two miles the ruins of a mass of unknown stones called by the Lūr Māl-i Wīrān "possession in ruins". They are said to come from an old, probably Sassanian, town. On both banks of the river very old paved roads can still be traced. At a short distance from Māl-i Wīrān, N.E. at the foot of the hill stands the tomb of Daniel, reverenced by the Lūr of the Ali Ilāh sect [q.v.] as the burial place of the Old Testament prophet. It is called the tomb of the "Great Daniel" (Dānīyāl-i Akbar) to distinguish it from that of "Little Daniel" (Dānīyāl-i Aghar) in Sūs. Musulmans, Jews and Mandaeans in agreement with the older Christian tradition, believe firmly in the authenticity of the latter as the real tomb of the Biblical prophet (cf. further the article Al-Mālīs). Rawlinson describes the tomb of Daniel at Sūsān as being of huge white marble blocks with a large artificial pool in front. The latter is fed by a little river which runs down from the hills. The many fish in the pool are held sacred by the superstition of the people. Layard on the other hand says the building is of earth and denies the existence of any pool or of a general belief in the sacredness of the fish in this stream. Even in the middle ages, however as we know from the stories of the Jewish traveller, Benjamin of Tudela, and the Persian traveller al-Mustawfi (cf. Layard, op. cit., xvi. 61) at the tomb of Daniel in Sīs the fish in this stretch of the Sīwar stream near this sacred site were considered sacred, probably a relic of the ancient fish cult of Neaer Asia.

According to Rawlinson, there were near the tomb of Daniel a large block of marble with a completely preserved caniform inscription and many similarly inscribed tablets. Layard saw nothing of these nor could he see anything to indicate the survival of such monuments.

The Kārin is enclosed by fearful ravines a little below the ruins of the Māl-i Wīrān. Where the
the southwest of this province in lower French Guinea; the Sūsā are in part Muslims.

Sūsā is also the Mandingo pronunciation of the name of the Sudanese town of Soso [q.v.].

(Maurice Delaporte)

SUTRA, covering, protection, shelter, especially at the gālāt, where sutra means the object, which the worshipper places in front of him or lays in the direction of the śiṣṭā whereby he shuts himself off in an imaginary cincture in which he is not disturbed by human or demonic influences. "The fictitious fencing off of an open place of prayer, the sutra, seems to have had among other objects that of warding off demons" (Wellhausen, Reste, p. 158). In one tradition the man who deliberately penetrates into this imaginary area is actually called a śaṅgitā (Bukhārī, Śatāt, bāb 100; cf. Ahmad b. Hanbal, Muṣannāt, iv. 22; Taylīṣī, Muṣannāt, Haidarbād 1521, No. 1542).

The word is not found in the Korān. In Hadith it often occurs in the expression sutra rasa (tastātā, tistātā) bi-ṣawāw in traditions which describe the ritual ablution, in which one conceals one's nakedness or causes it to be concealed by a cloak or curtain (e.g. Bukhārī, Śatāt, bāb 14; Ghāzin, bāb 21; Muslim, Ḥaifī, trad. 70, 79; Abū Dā'ūd, Tukhrā, bāb 123; Manṣūrī, bāb 37). Similarly sutrī is the name given to the curtain by which Muhammad concealed his women from the gaze of the world (Bukhārī, Mağbūrī, bāb 56; Niknāz, bāb 67). We are further told that one performs the gālāt in the direction of an object which isolates him from the multitude (jāma'ah min al-nāzī) so that he is not disturbed by them (e.g. Bukhārī, Ḥaifī, bāb 53; Muslim, Śatāt, trad. 259; Abū Dā'ūd, Muṣannāt, bāb 53).

Muhammad is said to have been quite unrestricted in his choice of a sutra: baggage-camels, horses, trees, saddles (Bukhārī, Śatāt, bāb 98), a couch (ṣibū, bāb 99), lance (jāba, bāb 92), stick (jumma, bāb 93), the pillars of the mosque (bāb 95) are mentioned. Hadith has preserved the memory of two opinions regarding the sutra; one gives minute rules and the other opposes this.

The former endeavours to lay down accurately what distance should be preserved between the sutra and him who performs the gālāt (mawarr al-gālāt, "space to allow a sheep to pass"); Bukhārī, Śatāt, bāb 91; Muslim, Śatāt, trad. 265, 264 etc.); it makes Muḥammad explain that no one is to be allowed to pass between anyone and his sutra (Bukhārī, Śatāt, bāb 100; 101; Muslim, Śatāt, trad. 258-262 etc.), that passers-by, especially dogs, asses and women, intercept the gālāt: the Apostle of God said: "If one performs the gālāt without having in front of him something, such as the end or central part of a saddle, his gālāt is intercepted by a passing dog, ass or woman" (Tirmidhī, Maṣwāḥ, bāb 136; Ahmad b. Hanbal, vi. 80).

The other view holds that the gālāt is never intercepted by passers-by (this is also Shāfi'i's view according to Tirmidhī's note on Maṣwāḥ, bāb 135). Aḥṣāa explains indignantly: "you place us on the same level as asses and dogs; by Allah, the Prophet used to perform the gālāt while I lay on the couch between him and the śiṣṭā" (Bukhārī, Śatāt, bāb 103). The same tenacity is seen in an anecdote by Ibn 'Abbās: "I was riding behind al-Faḍl on a she-ass; we came up
to the Prophet just as he was performing the qalāt and with his companions in Mina. We dismounted and took our places in the row, while the animal ran among the crowd without intercepting the qalāt" (Tirmidhi, Muwādhah, bāb 135; cf. Ahmad b. Ḥanbal, ii. 196).

The Shāfiʿīs call the suṭra suṣma. The various views of the jurists are given in al-Nawawī in his commentary on Muslim’s Al-Ṣaḥḥah, Cairo 1283, ii. 76 ʿay.; cf. also Tirmidhi’s remarks on bāb 133—136 in his chapter Muwādhah al-Suṭra.

Abū ʿAbdullāh al-Shāfiʿī, ed. Juynboll, p. 29, writes as follows: "If anyone passes a man who is performing the qalāt and there is a suṭra or stick between them of about an arm’s length in size, it is not makrūh; nor is it makrūh if there is no stick but a line which the worshipper has drawn at a distance of 3 ells; if on the contrary there should be nothing of the kind at all then it (passing by) would be makrūh. The qalāt would however remain valid".

It may be mentioned in conclusion that the suṭra of the imām at the qalāt serves for those with whom he performs the qalāt (Buḫṣāṭ, Ṣaḥāḥ, bāb 90).

AL-SUṬUDĪ, Sain al-Dīn 'Abd al-Latīf b. 'Abd Allāh, a theologian who died in 736 (1335/1336). Biographical data do not seem to be known historically. He contested the tenets of Ibn 'Arabi (q.v.) in some ḥadīth occurring in al-Sakhawī’s work al-Kawāl ik al-maṣāḥīḥ waṭ-Tarjīmat: Ibn Ṭabarī (MS, in Berlin, Ahlwardt, Verschelde, No. 2849, cf. No. 7846, 4) and is mentioned (ep. cit., No. 8379, cf. No. 3658) as the author of a prayer (duʿa).

Bibliography: C. Brockelmann, G. A. L., ii. 9. (C. Van Arendonck)

AL-SUṬUDĪ, Abu l-‘Aṣrāf al-Mālikī, a theologian of the xth (xviith) century. He wrote a controversial work finished in Shawwal 942 = April 1356 against the Christians (and the Jews), which has been edited from manuscripts of Leyden and Oxford by F. J. van den Ham (Disputatio pro religione Mohammedanorum adversus Christianam, Leyden 1877—1890) and is in substance an extract from a book by Abu l-Bakr Ṣalih b. Ḥasan al-Djaʿfari (written in 618 = 1221) entitled Tabḥīj al-man harraf al-İndir. He is probably to be identified with Abu l-‘Aṣrāf al-Mālikī, the servant of the Saʿīd Shāhāb Abu l-‘Aṣrāf al-Djaʿfari (died some years after 930 = 1523/1524), cf. al-Shārāni, Lamāqah al-Anwār fi Tabḥīj al-İndir, Cairo 1347, iii. 113 ʿay.), who wrote, according to Ḥadīth Khālifa (iv. 557, No. 9521) a commentary on the Hadiths of al-Ḥusayn (q.v.). For al-Suṭudī refers to his polemics (p. 146, 147, 4) to Abu l-‘Aṣrāf as his master (muḥaddith) and al-Shārāni (ep. cit., ii. 113, s. a.) mentions Abu l-‘Aṣrāf al-Mālikī as a devoted adept of Abu l-‘Aṣrāf, from whom he probably derives his nisba al-Suṭudī. According to van den Ham (Præfatio of his edition, p. 6) his book contains many passages occurring word for word in a manuscript commentary on the Hadiths preserved in Gotha (Persich, Die Arab. Handschriften ... zu Gotha, iv. 294, No. 2395), in which the author’s name is ʿAbd Allāh al-Mālikī.

Bibliography: in addition to the works mentioned above: Ḥājjī Khālifa, Rauš al-Żamīn, ed. Flügel, ii. 249, No. 2736; Steinschneider, Ptolemische u. apologetische Literature in arabischer Sprache (Weimar 1897, s. f. d.). Leipzig 1877, p. 36 (No. 17); id. (No. 121), 149; F. Treibs, Liber deorum sacrorum contra Christianos ancitore Salis ibn al-Ḥusayn, Thesis Bonn 1807, p. v. vi.; C. Brockelmann, G. A. L., i. 430, ii. 339. (C. Van Arendonck)

SUṬUDĪ (or Abu l-‘Aṣrāf) b. YAHYĀ b. MUḤYĪ l-DIN al-MUṬANABĪ al-AḤRĀF al-ShAḤAB al-DIMĀHIG, a man of letters, who died in Damascus in Jāfār 1127 (Fulur 1715). He studied several branches of Muslim knowledge and one of his preceptors was ʿAbd al-Ghanī al-Nabulusī. Al-Murādī mentions his Divān entitled Muḥājir al-Ḥadāsār bi-Līlān al-İhārāt and gives specimens of his poetry. According to the same author, Al-Mushībī gives an article on him in his Naṣīḥat al-ḥikāth wa-Raḥbat Ẓāī al-aḥzān (cf. Brockelmann, G. A. L., ii. 294). A manuscript in praise of Damascus from his pen is extant in a manuscript of the Preussische Staatsbibliothek (Ahlwardt, Verzeichnis, No. 6090, We 1120, l. 758, cf. No. 8172).

SUWĀK. [See Sūk.]

AL-SUWĀDIYĀ, the harbour of Aṣṣūkī, which lay 12 mil from the Mediterranean. The town owed its rise owing to the gradual siting up of the harbour of Selecina Pieria which lay a little farther north. Even in the time of Vespasian an attempt had been made, by making a great tunnel through the rock (which still exists and is called al-Ǧarīs, i.e. the Pers. Čehrūšt or Čārtū) to avert the danger of setting up its port from the great trading centre but without permanent success. In the early Muslim period Suwādiyya is still occasionally mentioned (al-Baladhuri, ed. de Goeje, p. 148, 18, Ḥaṣan Suwādiyya; al-Maṣʿūdī, Muḥāsib al-Djahās, ed. Barbier de Meynard, ii. 199; Yaḥyā, Muḥāsib, i. 126; Saʿīd al-Din, Manṣūrī al-İlğāl, ed. Juynboll, ii. 47). In the histories of the conquest also for Kalābūša or Malakūya, Suwādiyya (in 21 H.) should probably be read (Custani, Annali dell' Islam, iv. 506, § 81), and perhaps also later the unknown al-Malakūya, since Busaid (Dardoulo) and al-Ḳaṣār (now Ƙaṣār al-Zaw) are mentioned in its neighbourhood, to which the people of Darğūsh migrated (Quatremère, Hist. d. Sult. Mont., i, 4, p. 266; van Berchem, Voyages en Syrie, i. 250, 6). But gradually the importance of the ancient seaport passed to its southern neighbour al-Suwaidiyya, which took its name from the "Black Stones" (the 36 Māṣūrāq, still called Būyūk and Kūfāk Kāra) and the "Black Mountains" (Maṭṣā or Makhīrūm, a town of Montaç, Nigra, Syl. 1. Ūṯā Ḫāṭʾ, i.e. Amanos). In the older Arab geographers (e.g. al-Khwārizmi, Ibn Khurdadhbih al-Battani), the town is not yet mentioned. It only seems to have because of some note shortly before the Crusades, if its name is to be recognised in the Development
Suyūṭī was born on 1st Rajab 849 (Oct. 3, 1445) in Cairo where his father was a teacher of fiqh in the Madrasa al-Shāhānūnīyya. After the early death of his father in Ṣafar 855 = March 1451 (see his Bughyat al-Walā'ī, p. 206) a Sufi friend of his adopted the boy. He began his studies in 864 (1460) and concluded them on a journey through the cities of Egypt and a pilgrimage to Mecca in 869 (1465). Returning to Cairo, he first set up as a consultant on legal problems, and in 872 (1467) on the recommendation of his teacher al-Buḫārī he received the professorship at the Shāhānūnīyya formerly held by his father. In 891 (1486) he was moved to the more important al-Baḥrānīyya but in Rajab 906 (Feb. 1501) he lost this office, as he was accused of a breach of trust in the management of the institution’s property.

He then retired to al-Rāwa on the Nile island and, when his successor died three years later, would not be induced to take up the office again. He died on 18th Dūrād 1, 911 (Oct. 17, 1505).

Suyūṭī’s literary activity, which he had already begun at the age of 17, was distinguished by an unusual versatility. The very long list of his writings compiled by Flügel in the Winzer Jahrb, 1832, vols. 58–60, gives 561 works but it includes numerous quite short treatises in addition to substantial works. Suyūṭī’s ambition was to try his skill in all branches of Muslim learning, and he did make a number of compilations, which are now of great value to us as compensating for lost works of classical literature as well as collections of material. From the catalogue of his extant works given in G. A. L., ii. 145 only the best known will be dealt with here, in so far as they have been printed.

He collected all traditions referring to the exposition of the Kūrān in his (apparently lost) Tadhqīmīn al-Kūrān fī l-Tafsīr al-muṣūm. He abbreviated this work by giving only the literary sources instead of the idāsāt in his Kitāb al-Durr al-manṣūrī fī l-Tafsīr al-muṣūm. Cairo, 1314, 6 vols. A number of obscure passages, he discussed in his Mashāhīrat al-Ābān fī Mushāhāt al-Kūrān, Būlāḏ 1784, Cairo 1309, 1310. He dealt at length with the occasions of the separate sūras in his Luhāb al-Nuṣḥ fī Aṣbāb al-Nuṣḥ, which is based on Wāḥid’s work but supplements this material from tradition and exegesis and lays special stress on making his sources clear (printed a.l. [Stambl], 1290 and several times on the margin of its most popular commentary). This was begun by his teacher al-Maḥṣūlī Dālī al-Dīn (d. 864 = 1459) and finished by Suyūṭī in 40 days in 870 (1465) it is therefore usually called Tafsīr al-Dālīsīn, pr. Bombay 1869, Lacknow 1869, Calcutta 1257, Delhi 1854, Cairo 1300, 1301, 1305, 1313, 1328; among the glosses the best known is that of Sulaimān al-Djamāl (d. 1204 = 1790), pr. Būlāḏ 1828, Cairo 1302, 1308. Suyūṭī later placed a large commentary entitled Tadhqīmīn al-Bahrān wa-Muṣūm al-Baḥrān, but it is not clear whether this is lost or was never completed. Only the introduction to it has survived, a survey of all the branches of study relating to the Kūrān, which he published separately in 872 (1367) under the title al-Tadhqīr fī ʿUllām al-Tafsīr. He afterwards expanded this work, by using the K. al-Burūḵī fī ʿUllām al-Kūrān of al-Zarkashi (d. 794 = 1392) into its Iṣbaḥ which is the most exhaustive examination of the whole subject (ed.
by Mowlawies Baheeroodeen and Nour -ool Haq with an analysis by A. Sprenger, Calcutta 1852/1854, pr. Cairo 1278, 1307, 1317.

Suyūtī aimed at collecting from Tradition all the sayings of the Prophecy in his 遐jumlah al-
Marāyi fa, which is also called 遐jumlah al-Qaṣīm or al-遐jumlah al-ḥakīm. He himself prepared a synopsis of this, the 遐jumlah al-ṣaghir min Ḥadīth al-
Baṣīr al-nagāfī added a supplementary al-
Ziyāda; a commentary on this by ʿAbd al-Rahmān b. Jivālān (d. 1012 = 1602) was printed at Bū probably in 1286. The work which had an alphabetical arrangement was re-arranged by al-Muttaqī al-
Hindi (d. 975 = 1567, or 977 = 1569) according to the rubrics of Fīh with the title Manāqib al-
Ummāl fi Sunna al-
Aṣwāl wa ʿl-
Aṣwāl; he next worked the two books into his K. Ḥayāt al-
Ummāl fi Sunna al-
Aṣwāl. He finally collected together the traditions about the sayings and doings of the Prophet once more and thus arose the Kaws al-
Ummāl fi Thūbūt Sunna al-
Aṣwāl wa ʿl-
Aṣwāl (printed Bābār 1312/1313, 3 vols., folio). Of Suyūtī's numerous works dealing with special points of Tradition we may mention his book on the Qualities of the Prophet, Kifayat al-
Talib al-
fī Ḥaqq al-
Aṣwāl fi Ḥaqq al-
Aṣwāl, Bābār 1319/1320, 2 vols. He deals with questions of criticism of Tradition on the lines of Ibn al-
Dawwrat [q. v.]; on the latter's K. al-
Marāyi fa he wrote a first notes entitled al-
Nubṭ al-
badāi (see Fikhrī Kitāb al-
Arabiyā hāl-
kūfīyāh ḥāl-
kūfīyāh, 1. 445) which is probably identical with the al-
Taṣābih al-
Marāyi fa, printed in a Maḥrūmā, Lucknow 1303. He then edited the whole himself again in the al-
Laṭīf al-
maṣāfah ʿl-
al-
Nāṭiq ʿl-
Marāyi fa, Cairo 1317. Of Suyūtī's smaller works, very many very many dealt with eschatological questions. Al-
Kurtabi's (d. 672 = 1273) al-
Taṣābih bi-
Aṣwāl al-
Maṣāhif al-
Aṣwāl is edited under the title Sharh al-
Subtūr fi Sharh Ḥal al-
Maṣāhif ʿl-
Kurtabi, also often simply K. al-
Bābār [pr. Cairo 1309, 1320, in a Persian translation, Lahore 1871]. A synopsis of it Baṣīr al-
qātib bi-
al-
Haft al-
Maṣāhif is printed on the margin of the Cairo edition. As a supplement he wrote in 884 (1479) al-
Dudīr al-
qātib fi Umūm al-
Aṣwāl, lith. in India 1311. On the examination of the dead in the grave he wrote 176 radjās verses entitled al-
Tāhīta fi Lailat al-
Maḥṣūl, pr. with a commentary by M. ʿArīfī, Fīs 1314, by M. al-
Thāqāt Dja-
nīn, ibid. 1321. His K. al-
Dawr al-
qātib fi ʿl-
Bāšr ʿal-
Naṣm al-
Qātib has also been also several times printed. Several of his shorter works, e.g. six on the question whether the parents of the Prophet are in Paradise, are printed in the Maṣīmāt al-
Maṣāhif al-
Rās, Bābār 1316/1317 and 1334.

Suyūtī discussed the whole field of philology in an extremely full and valuable encyclopaedia entitled al-
Makārib fi ʿl-
Ummār al-
Qaṣīm, Būlāk 1283, Cairo 1323, verified by M. b. Al-
Ainain under the title Taṣābih al-
Maṣāhif, Fīs 1334. Following the example of Ibn al-
Ahnār [q. v.] he endeavored to apply the ṣumul, or principles of the science of Fīh to grammar in his al-
Taṣābih fi ʿl-
Ummāl fi Naṣm al-
Makārib, Bābār 1310, cf. Sprenger in Z. D. M. G., xxvii. 7; A. Schmidt in al-
Muqaddimāt, Sbornik Statei, St. Petersburg 1897, p. 309 sqq. He also dealt with separate gram-
matical points on the lines of the discussion of legal points in a work which he called al-
Oṣrāh ʿal-
Naṣm, a title he had already used for a compendium of Fīh, with the supplement al-
Nāṣmāt, printed Bābār 1317, 4 vols. From 868 (1463) he had originally been collecting the material for this, along with particulars of the lives and works of the philologists; but after Sog 1493 he separated the Nāṣm from his material and on the advice of Maṣūf al-
Din b. Faḥd collected the historical matter under the title Baṣīr al-
Wāṣi, pr. Cairo 1326. He collected traditions regarding the beginnings of grammar in the al-
Kurtabi al-
Maṣāhif, fī Sabab Wāṣf al-
Aṣwāl, pr. in the al-
Tāhīta al-
Maṣāhif, Siāmāb 1320/1322, p. 49–53. He wrote a commentary on the Kaws al-
Ummāl fi Naṣm (q. v.) al-
Maṣāhif he wrote a Sharh Shāmī, Cairo 1332. He wrote an original grammatical study entitled al-
Kaws al-
Maṣāhif ʿl-
Tāhīta wa ʿl-
Kurtabi, on which a commentary by Muḥ-
mad b. ʿAbd al-
Rahmān b. Ṣūrī al-
Fāṣ was printed at Fāṣ 1319, and another in the al-
Qātib fi ʿl-
Maṣāhif which was printed with notes by al-
Shāhāni in Cairo 1318 and 1327/1328 in two two, and a commentary on the verses quoted as examples by the same entitled al-
Dawr al-
Maṣāhif, Cairo 1328.

In the field of history Suyūtī has given us three main works: one on general world history entitled Baṣīr al-
Zahār fī Wāṣf al-
Dhālī, Cairo 1282, etc., a history of the Caliphs, Tāhīta al-
Dhālī, ed. by S. Lee and Maulawi Abū al-
Haqq, Calcutta 1857, Cairo 1305, 1913, Lahore 1870, 1875, Delhi 1906, transl. by H. S. Jarrett (Bibli. Ind.), Calcutta 1881, and a history of Egypt entitled al-
Maṣāhif fī Ḥaft al-
Dhālī, Cairo 1306 (?), pr. ibid. 1299, 1321. In biography in addition to the already mentioned history of the grammatical school he also wrote a biographical collection on Kūfīn expositors, entitled Tabāhāt al-
Maṭfāsirīn, ed. A. Meuinge, Leyden 1839, and a synopsis of al-
Dhāfābī's (d. 748 = 1348) Tabāhāt al-
Mashūfī, ed. F. Wüstenfeld, Göttingen 1833/1834.

The gift of poetry was denied to Suyūtī. But he experimented in belles-lettres with the composition of Maṭfūnā, which only have the title and the form (rhymed prose) in common with the perfect examples of this genre and collect all kinds of interesting notes about plants etc. out of Hadīth and Adab. Twelve of them were lithographed in Cairo in 1275 and again in the collection issued at Būlāk 1297 and printed at Stamul in 1298; 6 of them were translated by O. Reicher in Beiträge zur Moglen-Literatur, part 8, Kirchhain N. L. 1918. Some of these are also quite original, for example Rasa fī ad-Dhālī min al-
Ṣūr al-
Kurtabi, in which he makes no representatives of different branches of learning describe their wedding-night in the technical terms of their particular subject, lith. Cairo, n. d. pr. Fīs 1319. Other works also show that he did not hesitate to treat of sexual and pornographical subjects (cf. those detailed in G. A. L. ii. 153, N. 207–213). A synopsis al-
Dawr al-
Haft al-
Aṣwāl wa ʿl-
Taṣābih fi ʿl-
Maṣāhif wa ʿl-
Maṭfāsirīn, which was made from his Adab-book Adī al-
Dhālī, by ʿAbd al-
Kāyīm b. Mollā ʿAbd al-
Naṣr al-
Shīrāzī in Tatar (7th ed., Kasan 1905). He was not ashamed to
Tā', third letter of the Arabic alphabet, with the numerical value of 400. For palaeographical details see ʿAqrāla, i, 382b, 383b and plate I.

Tā', sixteenth letter of the Arabic alphabet, with the numerical value of 9. For palaeographical details see ʿAqrāla, i, plate I.

Tāʾabella Sharran, a nickname of the old Arab poet and Bedouin hero, famed in legend, Thabî: ʿAbdul Rāḥîm b. Sufayn of the tribe of Fāhīm. Various explanations of it are given by the sources: "he carried missive under his arm", namely a sword, a knife (ṣamâna), a rope which proved to be a gîlî, or a skin full of poisonous snakes (Aghibî). His mother was according to one statement (in Frenzel) a negress, according to the Aghibî a woman of the Fāhīm tribe called Anima, who afterwards married the Hudhali Abî Kābir, who sought to take his step-son's life. Taʾabella Sharran was throughout his life an enemy of the Banî Hudhail and Banî Bâitila. He perished in a fight with the latter on Mount Najmar in their territory (Vâkili, Musafirîh, p. 421). According to a statement of Ibn Kutalba quoted by Bau (cf. Bibliography) he was a contemporary of Nawfâl b. Muʿawiyâ, who is said to have lived for sixty years before and after Ilām. But all that is recorded of the life of Taʾabella Sharran and the poems ascribed to him breathe throughout the spirit of the old Arab Djâliyya. He is pictured as having all the traditional features of the wandering robber knight of the early Arab period. He wrote a lament for Shanfara, who was his companion in battle, along with ʿAmr b. Barâṣ (Aghibî). The longest and finest of his four longer poems on a fallen relative inspired Goethe to write a poem in the same style.

(H. H. Brâô)

TABÂLA, a place in the west of northern Yaman, in the interior of ʿAsir, about seven days' journey S. E. of Mecca. Its fertility was
proverbial among the Arabs. The basin of Tabbala and Tarata is often called ṣāḥfar ("green"; cf. al-Handānī, Ḥadhran, ed. D. H. Müller, Leiden 1884, p. 165; Yākūṯ Muḥammad, ed. Wustenfeld, l. 164). The itinerary of the pilgrim caravans from Mecca through the frontier lands of the Ḥijāz and Yaman to Šaʿrān given in Burckhardt, *Travels in Arabia*, London 1829, i. 445 was marked on the map as early as Berghaus, *Arabien und das Nilland* (Gotha 1835, esp. p. 69; and see also Ritter's map [1852, ed. by H. Kiepert]), for the stretch from Mecca to Tabbala. The latter was the 10th station on the territory inhabited by the Shumarān. Al-Idrīṣī (see Jaubert, *Geographie d'Édris*, Paris 1836, l. 148) describes in detail a fortified place belonging to Mecca, with perennial water, cisterns and palm trees (similarly Ibn Khordadbeh, *B. G. A.*, vi. 135, 188, 191) on the irrigation cf al-Handānī, p. 258, 116 (180); on its wealth in palm-trees, cf. al-Handānī, p. 258; al-Azraqī (ed. Wustenfeld), p. 262; its fertility may also be deduced from Bakrī, ed. Wustenfeld, p. 191 and damage done to it later by Berbers from al-Handānī, p. 258. Al-Idrīṣī further (cf. op. cit.) says that Tabbala was occupied for the Caliph Abīd al-Malik b. Marwān but was considered too insignificant. Al-Ḥajjādīḏ, appointed governor of it, did not think it worth while taking it up the pass, whence the proverb: "More despicable than Tabbala to al-Ḥajjādīḏ" (cf. thereon with further information Yākūṯ, op. cit., i. 816; Freytag, *Provenienz* ii. 981 also Liša, viii. 80 sqq.; Tūfī, vii. 239 sqq.). According to al-Idrīṣī, Tabbala lay 5 days' journey from Mecca and 3 from the market of Uqqūn. In the itinerary given by him from Mecca to Šaʿrān (see Jaubert, op. cit., p. 143, N. vi.; cf. thereon Ritter, *Zentral-Kaifer*, ii. 166 sqq., 197), Tabbala is the 9th station from Mecca and is described as a town lying in a depression in a valley. This broad depression begins at the foot of the hills of Taʾif and Yaman is well watered at its beginning and also contains the towns of Tarata and Bihā (Yākūṯ; cf. Sprenger, *Das Leben und die Lehre des Mohammed*, iii. 297). Of the nine stations mentioned between Tabbala and Šaʿrān on this itinerary, the next to Tabbala is said to be Bihā (Yākūṯ). Sprenger proposes the connection B. Bāfnūn (also al-Handānī, *op. cit.,* p. 118, 127 and in his itinery from Mecca to Šaʿrān* p. 178 and 165; Ibn Khordadbeh, *op. cit.,* p. 134) in contrast to his earlier spelling (*Z. D. M. G.*; 1888, xii., 321). According to the same authority Tabbala itself lies 8 stations north of the (14th) station Mahḍjara, in which stands the tree (Tabak al-Maḥḏ) which is regarded as marking the boundary between the lands of Mecca and Yaman (see Ibn Khordadbeh, *op. cit.,* vi. 153). Modern writers mention another route from Mecca via Taʾif and Tarata to Raniya (instead of the latter al-Rawāihan in al-Idrīṣī, al-Roheynya in Burckhardt, Rohe(y)n in later writers) and Tabbala as a main road (cf. Burckhardt, *op. cit.,* p. 451; Ritter, *op. cit.,* p. 200). Its topographical position may be clearly seen from the map of the coast of S.W. Arabia, sheet 7, *Wadi Bihā* (compiled for the *Geographical Section General Staff*, from *Amer. Survey* made in 1917) on which the place (*Tebala*) is marked at 19° 33' 55" N. Lat. 42° 31' E. Long. Greenwich. It lies on the Wadī of the same name which seems the northern boundary of the land of the Beni Ruʾl-Karn on the main road from Taʾif to S.E. via Bār-al-Ghaḍāt, with the road from the S.W. from al-Sīmā and Halb which also starts from Taʾif in a southerly direction. Sprenger's assertion, deduced from a comparison of several mentions of (Wādī) Bihā and Bihās in al-Handānī in *Détrits de l'Arabie*, Bern 1875, p. 47, that al-Handānī thought that the Wādī Bihā which is often confused with Bihā also waters Tarād and Tabbala cannot therefore be accepted nor the assumption of more recent writers that Tabbala lies in the Wādī Bihā. The Wādī Tabbala (mentioned in a quotation from Taṣrā in al-Handānī p. 173 [not in the *Dīrām*; see D. H. Müller's edition of Handānī, ii. 183]) flows into the Wādī Bihā. Al-Handānī often mentions Tabbala in topographical statements in connection with Bihā and Tabrā (p. 27, 49, 84, 127 [on mentions in poetry of the occurrence of the lion at Tabbala, cf. Sprenger, *op. cit.,* p. 165, 257; and Yākūṯ, *op. cit.,* i. 835, 791; iv. 1006; Ibn Ḥawāq, *B. G. A.*, ii. 35; Bakrī] in distances (p. 187, 189) and in quotations from the poets (p. 173, 207, 215, 235). To the land of Tabbala he includes *'Arram* (Yākūṯ, *Muḥammad* ii. 918) Zaba, for which see Raniya; cf. Sprenger, *op. cit.,* p. 240 and (p. 239) his map of this region constructed from al-Handānī's data. The latter (p. 165) mentions Tabbala along with Raniya (the vocalisation Raniya in D. H. Müller's edition is not certain; the manuscripts do not give the vowel signs in the passage; Yākūṯ, *op. cit.,* ii. 826; al-Muḥammad, *B. G. A.*, ii. 112 and Bakrī have Ranya, as has al-Handānī *op. cit.,* p. 215 and 259, see D. H. Müller, ii. 32 and Sprenger, *op. cit.,* p. 240 and *Z. D. M. G.*, *op. cit.* and modern geographers). Sprenger's supposition (*op. cit.,* p. 156, 253) that Ṣuqāra in Ptolemy, vi. 7, 389, was an error for Ṣuqāra and identical with Ṣuqāra in Pliny, *Nat. Hist.*, vi. 154 and the assertion he bases on it that 'Tomala is only a dialectical variant from Tabala or as highly educated men say, Taballa, Tabala are both incorrect. This identification adopted also by M. Hartmann, *Die antiken Arber* von Leipzig 1909, p. 420 is not supported by Sprenger's interpretation of al-Handānī's statement, p. 188 about the old pilgrim routes from Ḥajramot, which according to his construction (*op. cit.,* p. 156, 161) meet in Tablā. Pliny describes Thomala as a city of the Sabaeans (see further Pauly-Wissowa, a.v. Saba, col. 1328). Sprenger's assumption (p. 253) that Taballa lay in what had originally been Minān territory is also erroneous; his localisation of the Minān was completely wrong (see *Reaenycly*, col. 1316 sqq.). The traditional derivation of the name of the town (Tebalat, in the *Qāhūn-numū* of Ḥabīlī Khalīfī, p. 520) from that of an Amalekite woman Tabalīth, is of no value, but one may nevertheless assume that the town is a very old foundation (Yākūṯ; *op. cit.,* l. 846). — In the pre-Muḥammadan period a white stone in Tabbala was worshipped as an idol, called Dhu 'l-khalasa (Khilasa); Muḥammad had it destroyed (Yākūṯ, *op. cit.,* l. 55 sq.; the Khilāsh, who are mentioned among the followers of this cult, are also mentioned alone by al-Handānī, p. 119, and by Yākūṯ, *op. cit.,* ii. 461 sq.; ii. 608, 850 in connection with Tabbala). The verses given there, in which this oracle of Tabbala, which was consulted by casting lots with arrows, is mentioned are wrongly ascribed to Imru 'l-Kais, according to Ibn Ḥāghim (cf. on the idol the information collected in *Liša*, viii.)
295: Tâbîḏ, iv. 389; on Tâbâla as the site of a pagan cult, cf. Wellhausen, Reste arabischen Heidentums, p. 45 sqq.). The Khâṣîm, whom Ibn Ruṣûm, B. G. A. M., viii. 2, 75, thought to be the inhabitants of Tâbâla, are more accurately the people of Târûba and Bîgha and the land behind Tâbâla while the inhabitants of Tâbâla proper are the Banû Mâzin (Wüstenfeld, Die Wohnplätze und Wanderungen der arabischen Stämme, xiv. of the Abkhâlid, d. h. sein Geschlecht. d. Wüstenfeld, Göttingen 1868, p. 84 and 58, following Bakr). According to Khâṣîm (n. Bibl.) there were camping places of the Araba to Tâbâla (cf. Ibn Khâṣîm, op. cit., p. 188). According to Ibn Khâṣîm (ed. Kay, Yaman), p. 129 sq, Tâbâla is the land of the Banû Nâhid. Dhu l-Khâṣîm, about whom we see Bakr, p. 316, Ibn al-Kalbî, Kiṣâb al-Aqîm, Cairo 1332 [1914] (from whom Yâkût borrowed; cf. Wellhausen, op. cit., p. 390 sqq.) and Yâkût, op. cit., i. 461 sqq. is boldly explained by D. Nielsen, Handbuch der altarabischen Altertumskunde, Copenhagen–Paris–Leipzig 1927, p. 251, 254, as an Arabian Venus-deity. As the cause of the conflict Tâbâla was also a market: al-Hamâdâni mentions the traditions. In (p. 103) the history of Islam Tâbâla is known as one of the towns which were among the first to adopt the new religion and thus preserved their independence (Goluis, in Alpharabius, Elementa Astronomicae, Amsterdam 1669, p. 85).

**Bibliography:** The works of Burckhardt, Spenger, Wellhausen, Ritter and the Arabic geographers and lexicographers (al-Hamâdâni, Yâkût, Bakr, al-Îrāfî) mentioned in the article; also J. v. Hammer-Purgstall, Jahrbücher der Literatur, Vienna 1840, vol. 92, p. 55 (on the itinerary from Sâmîn to Mecca in Ṭâbâla-numa), and vol. 94, p. 94; Spenger, Die Post- und Reisereisen des Orients, Abhandl. d. d. Kunde des Morgenl., Leipzig 1864, iii/ii. 125 sq., 138 sq. (on the itinerary from al-Hamâdâni), 128 sqg. (on the itineraries of Khâṣîm, Ibn Khâṣîm, and Ibn al-Mudâjir). (J. Tatsch) al-Tabari, nisba from Tabaristan; most of the bearers of the nisba have come from Amul, the capital of this province. This nisba is also wrongly referred to Tabaristan (Tabariyas) in place of the correct al-Tabaristân (cf. Samânî, Amûdî, fol. 366b; Tâbîḏ al-îrâs, ill. 355).

1. Abu l-Tâbi'î al-Tabari, AHIKHIR B. ABD ALLAH B. TABARI, a Shâfi'î jurist, teacher of Abu Ishâq al-Shirazi and of al-Kâfî al-Baghdâdi; al-Shirazi who attended his classes for over ten years, praises him as his best teacher. Al-Tabari was born in Amul in the year 348 (959/960). At the age of 14 he began his studies in fiqh in his native city and in 371 (981/982) went to Dâr al-fiqh to study under Abu Bakr al-Ismâ'îlî but the latter died the day after his arrival there. For four years he studied with Abu l-Hasan al-âsâî (d. 383 = 993) and continued his studies in Baghdad with Abu Muhammad al-Bâî (d. 389 = 1007/1008), Abu l-Hasan al-Dârâḏî (d. 385 = 993), the famous Shâfi'i Abu Hamîd al-İsfârînî (d. 406 = 1015/1016) and with Abu l-Faraaîd al-Maţhâf b. Zakariya al-Nahrâwînî (d. 390 = 1000), a follower of the school of law of the historian Tabari. He then remained in Baghdad engaged in private study. He was victorious in different disputations with Hâfizîs, e.g. with al-Khaddîrî (Subkt., ill. 182 sqq.). In 422 (1034) he was admitted a notary

The Encyclopaedia of Islam, IV.
Ali, No. 8202, 11850); 7. Sifa 'Adidjat al-Nabi (Hadjji Khalifa, No. 7758; if not identical with Brockmeier, No. 4); 8. (HEFFENING)

Al-TABARI, Abu 'Ubayd Allah Muhammad b. Dârâ, the Arab historian, was born probably in 839 (end of 224 or beg. 225 A. H.) at Amul in the province of Tabaristan. He began to devote himself to study at a precociously early age, and is said to have known the Kûran by heart by the time he was seven. After receiving his early education in his native town, he received from his father who was quite well off the necessary means of visiting the centres of the Muslim learned world. He thus visited Rayy and its vicinity, then Baghdad, where 'Abd al-Hafl under whom he had intended to study had died shortly before his arrival there. After a brief stay in Bašra and Kûfî he again returned to Baghdad where he remained for some time. He then set out for Egypt but stopped in the Syrian towns to study Kûran. When he was in Egypt (according to Ibn 'Askâr in 867—877; according to Yâ'fî however for the first time in 867 and after a stay in Syria again in 867—870; in 871—872 according to Anwaar, ill. 1562 he was in Baghdad) he must already have been regarded as a celebrated scholar. From there he returned to Baghdad where except for two journeys to Tabaristan (the second in 902—903) he lived till his death in 923.

Tabari seems to have been of a quiet scholarly disposition but full of character. In his earlier years he devoted his whole energy to acquiring the material of Arab and Muslim tradition; later he spent his time mainly in teaching and writing. Although he had only a modest competence, he rejected all financial advantages and even refused lucrative official positions which were offered him. In this way he was able to devote himself to an extremely prolific and versatile literary activity. Apart from his main subsctra, history, Kûran, the recitation and exegesis of the Kûran, he devoted himself also to poetry, lexico graphy, grammar and ethics and even mathematics and medicine. Ten years after his return from Egypt he followed the Shâ'î Mudâkhab and then founded a school of his own, whose followers called themselves Qurtûsyâ after his father's name. But it seems to have differed less in principle than in practice from the Shâ'î school and fell comparatively quickly into oblivion. His break with 'Abîn b. Hanbal however was more fundamental. He recognised the latter only as an authority on Kûran but not on Kûran. He thus brought upon himself the hostility of the Hanbalis. He is said to have attracted the particular hostility of the latter by attacking their interpretation of Sûra xvii. 81. He had to shut himself up in his house to protect himself from the anger of the enraged mob and was only left in peace when a strict order by the police was issued for his protection. His enemies also sought to injure him through the law by laying an accusation against him in which he was accused of heretical tendencies, certainly unjustly.

Tabari's works have not come down to us by any means completely. For example, those writings have been completely lost in which he laid down the principles of his new school of law. On the other hand his commentary on the Kûrân (Qûsîn al-U'rajî of Ibn al-Ashîr) has survived. In this work Tabari collected for the first time the ample material of traditional exegesis and thus created a standard work upon which later Kûrânic commentators drew; it is still a mine of information for historical and critical research by western scholars. Tabari's own position with regard to the traditions collected by him is mainly defined by linguistic (lexicographical and grammatical) criteria. But he also deals with dogmatic and legal deductions which can be obtained from the Kûrân and sometimes permits himself to express a rather candid opinion without however in any way basing it on historical criticism.

Tabari's most important work is his history of the world (Tabrizî al-Rusul wa 'l-Mawdhi). The well known Leyden edition gives only an abbreviated text of the huge work which is said to have been ten times as long but even it fills 324 volumes. Even this synopsis is not complete but had to be supplemented in various passages from later writers who had used Tabari's history of the world.

The work begins after an introduction with the history of the patriarchs, prophets and rulers of the earliest period (i. 1). Then comes the history of the Sassanian period (i. 2) and of the period of Muhammad and the first four caliphs (i. 3—6); the history of the Umayyads (ii. 1—3); lastly the history of the 'Abbasids (iii. 1—4, middle). From the beginning of the Babylonia period the material is arranged annalistically under the years of the Hijra. The work stops in July 915. It was afterwards continued by other historians. Among such supplements may be mentioned (1) the lost al-Mudabîb al-Sis al-Tâhir of Tabari's pupil Abî Muhammad al-Parghanî, (2) the work of Abî 'l-Hasan Muhammad al-Hamâhani (ii. 1127), which came down to the year 1094 but only the first volume exists from the year 977—978. Later historians like Ibn Misâkah and Ibn al-Asîr used Tabari's material for their histories but came down beyond his period so that in a sense they continued his history (down to 979—980 or 1225). Ibn al-Asîr made large use of Tabari's work and sought to harmonise different accounts and to supply gaps from other sources. The fragment of the Spanish Arab 'Arbî (covering
903–932) edited by de Goeje also comes from an independent version and continuation of the annals. In 1296, Tabari’s history was translated into Persian by order of the Sâmânid vizier Abu’l-Muhammad al-Balâ’ami. It was much abbreviated and supplemented from other sources, especially in the older period. This version was also translated into Turkish and Arabic.

Tabari’s Ta’rikh al-Khulâsâ gives the most necessary facts about the persons whom he has used as authorities in his Ta’rikh. The work was originally current as an appendix (šâmil) to Tabari’s Annals. A synopsis, not however complete, was published at the end of the Leyden edition of Tabari (iii., p. 2295–2501).

Tabari procured the material for his history of the world from oral tradition, for the collection of which he had ample opportunity on his wide travels which were mainly devoted to the jâlab al-lûm, and in studies under celebrated scholars. He also used literary sources, namely a book by Abû Mâlikârma; ‘Umar b. Shabbâba al-Kharbî Akhî al-Baghrî, a work on tradition out of which Zâ declaring that he had read to him; Nâsir b. Muzâhhim’s history (Z. S. liv., p. 367); and the Ta’rikh of Muhammad b. Judâjûb and the works on the subject by al-Wâkidî, Ibn Sa’d, Muhammad and Hishâm al-Kabîr, al- Mudânî, Sa’îd b. ‘Umar, Ibn Ta’fîr etc.; for his account of Sâmânian history, he used an Arabic version of the Persian Book of Kings, which seems to be based in part on a translation of this work prepared by al-Muqaffa’. Tabari did not work up the material into a connected account of historical events. He was rather content to collect the available material and to record the different, often contradictory, accounts as they were handed down to him. He therefore declined any responsibility for the reliability of the traditions collected by him. But it is just in the conscientious unharmonised repetition of the collected material of tradition that the value of Tabari’s work for modern historical research lies, especially when it is a question of reconstructing the events of the early period of Islam.

TABARISTÂN (in Fahlavi inscriptions on coins: Ta’furstan, land of the Tarzak), the name applied by the Arabs to Mazedarân, a province of Persia, north of mount Alborz; the name is explained by a popular etymology to mean “land of the tabār” (Abu l-Fâdî, Geography, text p. 432; Mehren, Cosmography, p. 314) on account of the thick forests which cover the country and the principal industry of the inhabitants (wood-cutting). It is bordered on the north by the Caspian Sea, on the south by the chain of the Alborz, on the east by Dajarjân and on the west by Gîlah. The soil is fertile and well watered, rich in fruits but unhealthy on account of the stagnant waters; the little rivers, Herâh, Tâîrî and Tejjen run through it. The principal towns are: Amol, Sari, Shahsavan, Rain and Barfurûsh. The tribes are warlike, disciplined and inclined to murder and plunder. The industries are fishing, catching aquatic birds, cultivating of rice, flax and hemp (Mukaddas, p. 354).

History. At the time of the Muslim conquest this district was ruled by hereditary chiefs who held the title of ispahbâd (Persian: “head of an army”). In 90 (650) in the reign of the Caliph Othman, Sa’d b. Al-‘Aqi, governor of Khif, undertook an expedition against Tabaristân. In the reign of Mu‘awiyah I, Mas’ûla b. Hâiba entered it at the head of 10 or 20,000 men but he perished with the greater part of his army in the passes, crushed by rocks hurled down upon them by the enemy. Another unsuccessful attempt was made by Muhammad b. Al-Aslî in the time of Sulaimân b. Abd al-Malik, Yazid b. Muhammad invaded it; the ispahbâd made a peace and promised to pay an annual tribute of 4,700,000 dirhems, 400 ass-loads of miffon, and the sending of 400 men each bearing a shield, a silver cup and a silk saddle cushion. The inhabitants rebelled in the time of Marsûn b. Muhammad. They were subdued but for a short time only by the governor sent by Abu l-’Abbas al-Saffâ. The Caliph al-Mansûr sent against them Khâzin b. Khuzaima al-Tamimî and Rawb b. Hâim al-Muhallabi, ‘Umar b. al-‘Alî invaded the mountainous country of Dalaim. His great-grandson Muhammad b. Mûsâ b. Hûsh and Mâyazdiyâr b. Kârin conquered the wild mountain country of Shurîn. The latter was given the title of ispahbâd by al-Ma’mûn. When he rebelled in the sixth year of the reign of al-Mu’tasim, he was defeated by Hûsain b. Hasan sent by his nephew Abdallâh b. Tâhir, governor of Khorasan, captured and sent to Samarra, where he died under the lash (245 = 840). His body was hung beside that of Bâbah al-Khurrami. Tabaristân thus passed to ‘Abdallâh b. Tâhir.

He was killed by an emissary of Muhammad b. 'Abdallah b. 'Abd al-Malik. One of his brothers, Hasan b. Zaid, rebelled in 250 (864); on his death in 270 (884) he was succeeded by his brother Muhammad who took the title of al-Dawla al-Malik the "great missionary" and was killed fighting with Muhammad b. Hārūn, a general of the Sāmānid Ismā'īl b. 'Abd al-Malik (287 = 900); the latter annexed the country. In 297/298 (910/911) the Russians, coming by water, laid waste Abasgān and Sāri but were finally driven back by the inhabitants; on their way back what remained of their fleet was intercepted and destroyed by the king of the Khazars. Another 'Allī, al-Hassan b. 'Ali, surnamed al-Nāṣir al-Kabīr, rebelled in 311 (920) and on his death (324 = 937) left his power to his son Sharaf al-Hassan b. al-Kāsim, surnamed al-Dawla 'Irshād b. al-Nāṣir and with the condottiere Mustak b. Kākit; he was killed by Marādīdī, then in the service of Asfār b. Shūfī, (cf. zīyārāt) with a blow from a mace at 'Allābād. Thus Asfār became lord of Tabaristan until he perished by the hand of Marādīdī in 319 (931). It was the brother of the latter, Wushangīr, who next ruled, down to the battle of Iṣhāk-Shāhīd in 320 (940) where Mustak b. Kākit was killed and the army of Wushangīr destroyed; the latter having made up his mind to become a vassal of the Sāmānids, settled in Čuğdūn and Tabaristan at intervals like his successors Khūlūd I and Miṃārīh; the latter accepted the suzerainty of the Ghaznavids. The province next passed to the Seldūqs; but ʿIṣḥāq b. Kātin belonging to the house of Bāwandī, lasting for 118 years, practically independent, especially in the mountains; ʿAli al-Dawla ʿAlī b. Shāhryār b. Khārīj, contemporary of the Ghaznavids Maḥmūd III; Nūr al-Din Rūstam; Taḏj al-Mulūk ʿAlī b. Mardwīj; contemporary of the Seldūq Sandjar; ʿAlī al-Dawla Hasan b. Rūstam b. ʿAlī; Ḥusayn al-Dawla wa-l-Din Ar-ḍāshīr b. Hasan, contemporary of ʿOṯmān the Fatimid. Bibliography: Balāḥchī, Ṣafī al-Khulūdī, ed. de Goeje, p. 335–340; F. C. (Ch. Huart)

TABARIYA, Tiberias, a town on the western side of the lake of Tiberias (sea of Galilee) (sībār wazar Tabariya) through which the Jordan flows to the south; the lake is rich in fish, 13 miles long, 6 broad and lies 700 feet below the level of the Mediterranean; the town is long and narrow as it is shut in by the steep hills on the west which come right down to the water, north and south of the town. S.S.W. of the town is the Mount of Herod, Tabariya had probably a predecessor in a little town in this region mentioned in the Old Testament (on account of the hot springs some identify it with Hammat, Joshua xix. 35) but nothing certain has been established on this point. The town only became of importance when Herod Antipas about 26 A.D. founded a city to which he gave the name of Tiberias in honour of the emperor Tiberius. It was built with great splendour on the model of Hellenistic towns with temples, theatres, and other public buildings. The splendid palace of the king, described by Josephus, lay on the Mount of Herod (Kašā bint al-Malik) surrounded by the old city wall, the course of which has been traced by G. Schumacher. The stricter Jews avoided it and the population was therefore very mixed, some forced by Herod to settle there and others tempted thither by various privileges. At a later date a remarkable change took place as Tiberias became one of the main centres of purely Jewish life and a centre of Talmudic studies. Here about 200 A.D. was edited the collection of laws known as the Mishnah and later at the beginning of the fourth century the Palestinian Gemara (the so-called Jerusalem Talmud) composed and in the fifth-sixth centuries the Tiberian system of Gemara in general use established. The Hebrew teacher of Jerome was a Jew in Tiberias. The Jewish scholars who worked here are recalled by a series of tombs among them those of Ḳ. Ḥiẓ_EXPI, and R. Akiba. Another old Jewish cemetery with several sarcophagi has been discovered close to the western gate of the city in laying out a new road.

After Constantine the Great, Christianity penetrated, although slowly, into Galilee and in the lists of synods several bishops of Tiberias are mentioned. A temple begun by the Emperor Hadrian in this town was turned into a temple.

The destroyed walls of the town were rebuilt by Justinian. At the Persian invasion in 614 the Jews there, as was the case elsewhere also, are said to have sided with them. In 635 Tiberias passed over to the Muslims. While a number of towns in the province of Urūncl had to be taken by force, Tabariya surrendered to the Arab general Shurahbil who guaranteed the safety of his families and the safety of their lives and the half of their houses and churches. For each qarin of ground they had to pay annually a dirham of wheat or barley, and a dinar for each head of cattle; he also reserved for himself a site on which a mosque was to be built. In the caliphate of Ṣafīrūn the people of Tiberias broke the agreement but were conquered by Ṣafīrūn (according to others by Shurahbil) and yielded on the old terms. With the Crusaders began a new chapter in the history of Tabariya. The town was granted as a fief to Tancred and ultimately came into the possession of Raymond of Tripoli. On Thursday July 2, 1187 (583 A.H.) Saladin surrounded the town and conquered it in a few hours, although it was strongly fortified, and then set it on fire. The Christian army encamped at Ṣaffīrīn in spite of the urgent warnings of Raymond was persuaded by the overwhelming force of Templar Gerard to set out to the help of the town, which resulted in the disastrous battle of Ḥattīn (7 v. 1.) which again in turn led to the capture of Jerusalem and the collapse of Frankish power. Later, in 1240 the town again came into the hands of the Christians when Odo of Montbéliard took it, but in 1247 it was lost to
the Khwarizmians and henceforth Tiberias was Muslim right down to the end of Turkish rule in Palestine. In the middle of the xvi century the town belonged to the Shaikh Zahir al-Amir who had it fortified. In 1759 it suffered from an earthquake, but that of 1827 was much worse, as it destroyed most of the town (but not the baths). In 1790 it was occupied for a short time by Napoleon's troops.

There are more or less brief descriptions of Tiberias, the capital of the province of Urudm, in the Arab geographers. Ya'qubi (275 = 891-892) mentions the position of the town at the foot of a mountain and on a large lake through which the Jordan flows. Iṣṭikhlīr (340 = 951) gives the lake a length of 12 and a breadth of 2-3 miles (its real dimensions are 13 miles long and 6 broad). Muqaddas (375 = 985) says: "The houses stand between the mountain and the lake, the town is narrow and in summer hot and unhealthy. It is about 1 mile long but no breadth. The market place stretches from one gate to the other and the cemeteries are on a hill. The chief mosque on the market place is large and beautiful. Around the lake are villages and palm-trees and ships go up and down. The lake is full of fish and the water is very pleasing." The Persian traveller Nāṣir Khān Kāpārī who visited Tiberias in 438 (1047) puts the length of the lake at 6 and the breadth at 3 miles. "The town is surrounded by walls but not on the lake side; many houses have their foundation on the rocky bottom below the water; besides the chief mosque in the centre of the town there is another on the west side, the Masjid al-Yāsmin. Here is the tomb of Joshua son of Nun and of the 70 prophets slain by the Israelites and also the grave of Abī Huraira. The inhabitants make mats of rushes; on the hill west of the town is a castle built of hewn stones, with a Hebrew inscription". Idrisi (1154, during the period of Crusader rule) describes Tiberias as an imposing town on a high hill on a lake with fresh water, 12 miles long and the same in breadth (!). The boats on it bring supplies to the town. He also mentions the making of rush-mats which was a very important industry. Yākūt (625 = 1125) produced what is said by several of his predecessors; like the other Arab geographers he makes Tiberias be built by Tiberius. Almūnād (v. 372 = 1331) records that the town was destroyed by Saladin, which shows that it was still in ruins and from Ibn Battūta (745 = 1325) it is evident that this case the later.

As long as they existed, the hot medicinal baths (al-Hammam) played an important part in the life of the town. They lay about 40 minutes south of it and perhaps influenced Herod in choosing this town for his capital. Josephus correctly tells us that they were not far from Tiberias at a village called 'Amāhās (i.e. the native Hāmmāt) which agrees with the fact that the old city was discovered by Schumacher on the Mount of Herod to the shore of the lake without enclosing them ("in Tiberias"), as Josephus, Vita, 85, Bell. ii. 1614 says therefore means "in the territory of Tiberias"). They are mentioned as early as Pliny (Nat. Hist., i. 15) and frequently in the Talmud and the Arab geographers are never tired of telling that they are warm without fire being kindled there. Ya'qubi says that the hot water is brought into the town in pipes and Isṭikhlīr adds that the water, although the springs are about 2 parasangs from the town (quite an absurd exaggeration), is still so hot on entering the baths that skins thrown into it have the hair taken off by it, so that the baths cannot be used till cold water is added. Muqaddas speaks of a boiling spring, which supplies most of the baths jointly and from which the steam warms the building. Nāṣir-i Khusraw mentions a spring at the door of the mosque in the centre of the town over which a bath was built, ascribed to King Solomon. Idrisi makes special mention of a large bath called Damākīr, in the saltish water of which small goats and fowls could be stewed and eggs boiled; one bath called al-Lūḥ had hot water which was not salt, while the so-called "little bath" was the only one that was heated by fire; a Muslim prince had built a bath for his family over the latter but later it was presented to the public. There were also many hot springs to the south of it; to these baths there came from all parts paralysed and injured people, or those with diseases of the chest who remained three days in the water and with God's will became healed. These descriptions leave something to be desired in accuracy and clearness, especially as some of them mention in connection with the baths springs at a considerable distance away. In 1703 the springs dried up for a period (Roeid, Palæstina, p. 703). When the old bathing establishment fell into ruins, a new one was built at the beginning of the xvi century which is described by Burckhardt; it was however very simple so that Ibrahim Pasha in 1853 had a more handsomely equipped one built. In 1890 a third was built somewhat more to the South. According to Robinson the water comes out of four springs, one of which is under the old bath house. According to his measurements the water has a temperature of 60° C. Frei read the temperature of the new bath where the water enters the basin at 59.5° behind the old one 58°, in a smaller spring near it 63°. Frei also gives the result of a chemical analysis of the water.

The new political conditions will no doubt bring a revival of prosperity to Tiberias, wise before the war its condition formed a striking contrast to its brilliant past (cf. the enthusiastic description in Jos., Bell., i. 516 sqq.). Ships and boats were only rarely seen on the lake and the once so intensively cultivated gardens were a wilderness. There is an almost complete lack of ancient remains.

TABARKA, a town on the Tunisian coast, 75 miles W.N.W. of Tunis and 10 miles E. of the Algerian frontier. It is built on a sandy bay surrounded by hills at the mouth of a rather narrow fertile valley watered by the Wâd al-Kabîr, which descends from the mountains of Ain-Draham (Khamîria). Three quarters of a mile from the shore lies a rocky islet, 2,000 yards long and 500 broad. A roadstead lies between this island and the mainland accessible on the east side to ships of medium tonnage but only possible on the west side, the better sheltered, to small boats. The trade is insignificant, but the anchovy and sardine fishery attracts from March to September, 200-300 Italian fishermen. The village itself, the capital of a 'contrôlle civil', has a thousand inhabitants, half French and half Italian. A few European works have been built on the adjoining plain.

The site of Tabarka corresponds to that of Tharucsa, a flourishing town in the Roman period and Byzantine period. It was the port for the export of 'Numidian marble' from the quarries of Simitha (Chemtou) on the left bank of the Mejdîra. Ancient ruins were still standing in the time of al-Bakîr (Description, transl. de Saxe, p. 121); they have now almost completely disappeared except for a few traces of cisterns and buildings of the Christian period; on the other hand Christian burial-places have been unearthed in the neighbourhood. In the time of Bakîr Tabarka had still considerable trade; the ancient harbour however no longer existed and ships moored in the mouth of the Wâd al-Kabîr itself. The wealth of the coral deposits there later attracted Provençal and Italian sailors thither. In 1540 the Lamellina of Genoa obtained for an annual payment the monopoly of the exploitation of the coral and the right to keep a garrison on the island. It is without-proof however that this has been said to be the ransom paid for Dragut made prisoner by the Genoese Admiral Doris. In any case for two centuries (1540—1741), the island belonged to the Lamellina; they built a strong castle there and established a colony of their compatriots who sometimes numbered as many as a thousand. The Turks in their turn becoming lords of Tunis installed a garrison of Janissaries on the mainland. As a result of the presence of the Christians, the island became a market where European merchandise was exchanged for the products of the country (wax, hides, corn) purchased very cheaply (cf. Savary de Bréves, Relation, p. 254). It was at the same time a kind of depot where the Christian slaves were interned while awaiting the arrival of the sums arranged for their ransoms, a transaction in which the Genoese apparently acted as intermediaries. The profits made by the Lamellina no less than the strategic value of the island could not fail to excite the cupidty of the French companies established on the Algerian coast. In 1653, Sansou Napolion, governor of "Bastion de France", tried to take the island but was killed as soon as he had made a landing on the island. During the second half of the 17th century and the first half of the 18th century, several negotiations were several times conducted between the French government and the Lamellina to obtain the cession of the island by the latter. They were just reaching a settlement when the Bey 'Ali learning what was going on sent troops to occupy the island (June 1741). The Genoese establishments were destroyed, section of the inhabitants managed to escape and take refuge on the island of San Pietro, off the coast of Sardinia. The others were taken to Tunis where their descendants were long known as Tabarkas. War as a result broke out between France and the Regency and a French naval officer M. de Sauvres attempted an unsuccessful attack on Tabarka on July 2, 1742; a hundred men were killed and 224, including the leader of the expedition, captured by the Turks. Henceforth the Tunisians remained in possession of the island and refused to yield to the demand for concessions made by France and other foreign powers. But although the coral continued to be exploited, Tabarka lost all commercial importance. At the beginning of the Tunisian expedition, the French bombarded the Turkish fort and landed at Tabarka on 26th April 1851. Since then a European centre has been created here and a road made to connect the coast with the valley of the Medjerda through the massif of Khamîria. But as a result of its ousting position, the town has only developed slowly. The making of a road and a railway to Matmata and Beja and the exploitation of the mineral deposits discovered in the region will undoubtedly however bring it some element of prosperity.

TABAS, a town in Persia, in the province of Khorasan, in reality two towns whence the dual form used by the Arab geographers: Tabasîn. The first is called Tabas al-'Unnâb, "T. of the jujube-trees" (in Persian Tabas-Masînûn), and the second Tabas al-Turc, "T. of the date-palms" (al-suṣûd, Mulukaddas). In the Persian Tabas-Gilâh (Kuri, Kuri). The first has walls and garrisons and no citadel. The second is commanded by a fortress; it has a small market and a graceful mosque; it gets its water-supply from reservoirs fed by open canals (qâhirâ). These two towns are under Kân, the capital of the district of Kūhîastân; they form the southern frontier of Khorasan. In the reign of the Caliph 'Othâmân, they were the first Muslim conquests in this province, in 637. These two towns are, as it were, the gates of this country. They were taken by 'Abd-alâh b. Budall b. Warâja. After the occupation of Alamût by Hasan Sabbâh, they became centres of the Īmârat. In the Šâdîk conquests, they were allotted to Kâwâr, son of Câshî. They were laid waste by the Ubeza during the reign of Şâh 'Abbâs I before 1006 (1597).

TABRIZ, a town highly esteemed in the east, consisting of pebble-like accretions, which are formed in the modes of *Bambusa auriculata* Wild. The substance is obtained, according to Kázwini (ii. 82) or Ibn Muhallib, by burning the reed and from ancient times it has always been a valuable article of commerce which the Greeks called *rýzárta*.

(J. RUSKA)

TÂBÝ (A.), pl. tâbý, follower, follower of a prince, disciple of a teacher, adherent of a doctrine; the verbal form is tâbý, e.g. tâbý Dâlúd, he followed Galen (in medicine).

The word is of special significance in Tradition where the name tâbý is given to those who came after the Companions of the Prophet, the Ašûr. The Ašûr are the people who saw and were directly acquainted with the Prophet; the tâbý are those of the next generation or contemporaries of the Prophet, who did not know him personally but who knew one of his Companions. The followers of the second generation (tâbý tâbý) are those who knew one of the first tâbý and so on. Traditions are of more or less value according as they go back to a "follower" of a more or less early generation and according as the tâbý who is the first transmitter of it is more or less esteemed and famous. Thus the more tâbý or dispersed tradition is that which goes back to a tâbý of the first generation and which has been disseminated and handed down by several tâbý of the second generation and their successors (cf. FADIL). There are in the same way generations of transmitters for traditions regarding the reading of the Qur'ân and for those of Shám. One of the most celebrated "followers" of the first generation is Hasan al-Bajri.

(B. Carra de Vaux)

TABRIZ, [See Ruß.]

TABRIZ, capital of the Persian province of Ādâbarbâıdjn [q.v.].

**Geographical position.** The town lies in the eastern corner of the alluvial plain (measuring about 30° 30' N, 50° 40' E) sloping slightly towards the north-east bank of Lake Urmia. The plain is watered by several streams, the chief of which is the Adjî-čâi ("bitter river") which, rising in the south-west face of Mount Sawâlân runs along the Karađja-dagh, which forms a barrier on the south and entering the plain runs around on the north-west suburbs of the town. The left bank tributary of the Adjî-čâi, Miθâñ-râd (now the Meidân-čâi), runs through the town. The altitude of the different quarters of Tabrîz, according to the Russian map may be put at 4,000—5,000 feet. Immediately to the north-east of the town rise the heights of Aínâlî-Zanjâl (the syýar of 'Awn b. 'Ali and Zâid b. 'Ali) which (6,000 feet) forms a link between the mountain system of the Karađja-dagh (in the north and north-east) and the outer spur of the Sahand whose peaks (about 30 miles south of the town) reach a height of 11,500 feet. As the Karađja-dagh is a very wild and mountainous region and the great massif of Sahand fills the whole area between Tabriz and Maragha, the site of Tabrîz is the only suitable place for the establishment of a pass between east (Asârî on the Caspian—Arrâvî - Tabrîz and Teherân—Karvan—Miθâñ—Taðrîs) west (Tâbâzand—Erzerûm—Khâθo—Tabrîz and north (Tîfîs—Erûmûn—Djûñûs—Marand—Tabrîz). Lastly as the outer spur of the Sahand leave a rather narrow cooI along the east bank of the Lake of Urmia, communication between north (Transcaucasia, Karađja-dagh) and the south (Maragha, Kurdîsân) must also take place via Tabrîz.

This fortunate position had predetermined Tabrîz to become the centre of the vast and rich province lying between Turkey and Russian (or Soviet) Transcaucasia and in general one of the most important cities between Constantinople and India (only Tîfîs, Teherân, Isfâhân and Baghdâd fall into the same category). Tabrîz has now about 200,000 inhabitants.

The climate of Tabriz is very severe in winter with heavy snowfalls. In summer the heat is tempered by the proximity of the Sahand and by the presence of numerous gardens about the town. The climate is on the whole healthy except for epidemics of cholera and typhus which are due rather to the unsanitary state of the town.

One feature of Tabriz is the frequent earthquakes. The most formidable took place in 1858 (858), in 1854 (1042) mentioned by Nâṣîr-i Khusraw in his *Safar-nâmâ* (and predicted by the astronaut Añîl Tabrîz Shârî), in 1864 (Arâkel of Tabrîz, p. 486), in 1727, in 1780 (Ouseley, iii. 436; Ritter, ix. 854) etc. The earthquakes of Sept. 22—23, 1854 and of Oct. 30, 1856 have been described from personal observation by Khanykow in the *Bull. Hist. Phil. de l'Acad. de St. Pétersburg*, 1855, p. 251; 1858, p. 337—354. Seismic shocks are of everyday occurrence at Tabrîz; they may be due to the volcanic activity of the Sahand but Khanykow thought they were due rather to a mechanical displacement of the earth's strata.

The fortifications of the town were razed to the ground in the reign of Nâṣîr al-Dîn Shâh (*Mizd al-Buldân*, i. 343). The part of the town called the Kâ'ba (the districts of Čar-mînâr, Surkhbâh, Dâvâdây, Wâlcâya [vulgo: Wâl'dî], Miθâñ-mînâr [vulgo: Miθâñ-mînâr], Nâbwâr, Bâbkûdisîa etc.) is therefore no longer separated from the former part extra murus (the districts of Añârâh, Lâl-lââd [vulgo: Lâl-lââd], Čarándîn, Nâbkûdisîâ, Bûgh-mêshâ etc.). The town has also incorporated the former suburbs to the west of the town (Añârâh, Čust-dûzân, Hûkûmâbâd [vulgo: Hûkûmâbâd], Kâra-malkî, Kâra-sağhâd, Akûtûn, Kûcâ-bûgh, Kâthîb) and the south-east (Marâlûn). The tendency of the city is to extend to the west and south-west.

Tabrîz is the administrative and economic centre of the vast province of Ādâbarbâıdjn, the present
sub-divisions of which are: Ardabil (with Astarkh, Mughān etc.), Kanakja-Dagh (capital Ahar), Marand (with Dailuj and Gargar), Khoi, Māzand, Salmas, Urmia (with Ushn), the region of Mukri (capital Sefid-Bulak), Sa'im-dāna, Maragha, Haftarah and Garmār (capital Miyān), Sarāb and the central district of Tabriz.

In the xvi century, Ḧamdūllah (cf. Ewliya, ii. 257) gave the divisions of this last district (İman) as: Mihdān-rūd, to the east of the town; Sarāb, to the south-west of the town; Sefid-Bulak, to the south of the preceding (with the villages of Khuwarāshāh, Ushn, Mīyān); Arvandāq, to the north-east of the Lake of Urmia with the villages of Shabistan, Sofyān etc.; Rūdālah (the实用); Khūshām-Rūdālah (the practical) and Badānūn (the professional), all three to the north of the town. The boundaries of the old central İman were unchanged down to the xvii century.

The name. According to Yaḏsī, i. 822, the name of the town is pronounced Tibrīz. Yaḏsī gives as his authority Abū Zakariyā al-Ṭabarīzī (a pupil of Abū 'l-ʿAlī Abū Maʿarrī, 363–449) of whom we know that he spoke the local Iranian dialect (cf. al-Samānī, Kitāb al-Anwiš, G. M. S., s.v. Tanūḵt, and Sayyid Ahmad Kirsawī Tabrizī, Aḥfīrī yā mādūn-i Ḵāreṣ-i ʿAḏabāvāryān, Tehran 1304, p. 41). The pronunciation Tibrīz must be one of the peculiarities of this dialect which is related to that called ʿAskī. The modern pronunciation is exclusively Tibrīz (or with a metathesis typical of the Turkish dialect, now predominant throughout ʿAḏhārdābādī: Tabriz). The Armenians confirm the pronunciation with a. Faustus of Byzantium (fourth century) has Thavrevē and Thavrevē, Asōlīk (fifteenth century) Thavrevē. Vardan (xvi century) has Thavrevē and Derrevē, this last form evidently adopted to a popular Armenian etymology: do i vreb, "that is for vengeance"; cf. Camtān, History of Armenia, Venice 1784, i. 365; Hübchmann, Armen. Gramm., i. 42; do., Pers. Stud., p. 179. For the fifth (fourth) century of the Christian era the form of the name attested in Armenian is therefore Thavrevē < Pers. Tabriz (Hübchmann). The Armenian etymology gives Tabriz as "making fever run" (= disappear). (Ewliya ʿCebei: ʿitma dōvččūr, but it is possible that the name rather means "that which makes the heat disappear"; in some connection with the volcanic activity of the Sahand (cf. also the name of the pass between Bayzād and Vān: Tārzdā). The Armenian orthography reflects the peculiarities of Northern Pehlevi (tan < ṭāṣ and especially ṭē for ṭē) and this suggests the origin of the name may go back to a very early period, pre-Ṣasānian and perhaps pre-Āravak (on the linguistic changes that have taken place in ʿAḏhārdābādī as a result of the Turkish invasion cf. the article ʿAṯā).

History. The identification of Tabriz with some ancient city of Media has given rise to much discussion (cf. the resolute in Ritter, ix. 770–779). The possibility that Tabriz = ʿAḏhār in Ptolemy vi, Ch. 2 (from ʿAḏhār) is made less probable by the analysis of the Armenian form quoted above. Rawlinson, Memoir on the Site of the Astāfaran, J.R.G.S., 1840, x., p. 107–111, has definitely cleared up the confusion between Tabriz and Gams = al-Sīsa (in Armenian Gandrak Shahasat distinguished from Thavrevē by Faustus of Byzantium).

According to the Armenian historian Vardan (xvi century), Tabriz was founded on Persian territory by the Arshakid Armenian Khosrow (217–233) as an act of revenge against the first ʿAḏhārdābādī king Ardabīr (224–241), who had killed the last Parthian king Ardashīr (cf. St. Mašāʿ, Memôres sur l'Armenie, i. 423). This story is not found in any ancient source and is probably explained by the popular etymology given above. In Faustus of Byzantium, transl. Lauer, i., Ch. 25. and 39 and v., Ch. 2, we only find that in the reign of Arshak II of Armenia (351–367) the Armenian general Wazak attacked the ʿAḏhārdābādī Shahār II (309–379) who was encamped at Thavrevē. Wazak later slew the Persian general Boyekez there, burned the royal palace and gave an arrow into the statue of the king there. Later Murgâb, son of Wazak, defeated the Persian troops at Tabriz.

It remains to be seen whether the name Thavrevē, where in 614 the emperor Heraclius after laying waste Ganzak, burnt the town and fire-temple (Thaphsana, p. 474: ʾ-addons ʿadd ʾaḏhārā bārīn, "the Thavrevē of the fire") does not show some confusion with Thawrevē.

Arab rule. During the conquest of ʿAḏhārdābādī by the Arabs (c. 22 = 642) the principal efforts of the latter were directed against Ardabil. Tabriz is not mentioned among the towns from which the Persian Marzbān had levied his troops (Balāḏūrī, p. 326). After the devastation mentioned by Faustus, Tabriz must have become a mere village (cf. Yeḵūṭ). The later legend (Nukhat-e-Khōlā, 730 = 1340) of the "building" of Tabriz in 1475 (791) by Zaynab, wife of Hārūn al-Raḍī, is perhaps based on the fact that after the sequestration of the Umayyad estates Zaynab had received Warthān (in ʿAḏhārdābādī on the Araxes). According to Balāḏūrī, p. 331 and Ibn al-Fakhūrī, p. 285 (cf. also Yaḵūṭ, i. 822) the rebuilding of Tabriz was the work of the family of al-Raḍāwī al-Azdī and particularly of the latter's sons, al-ʿAskī and others who built the walls round the town. Tabātih (iii. 1173) describes Alī al-Khātīr, vi. 315, speaking of the rebellion of Bahāb, son of ʿAsārī who mentions among his conquerors a certain Muḥammad b. Bahīth, owner of two castles: Shāhī which he had taken from al-ʿAsārī and Tabīz (no details given). Shāhī which was ʿaz farsakha? (?) in extent was stronger than Tabīz (cf. the name of the peninsula of Shāhī or Shāhī on Lake Urmia to the south-west of Tabīz; but according to Balāḏūrī, p. 330 the site of Bahīth was Marzdān.)

When Ibn Khurdābdīshī, p. 119 wrote (352 = 840), Tabīz belonged to Muḥammad b. al-Raḍāwī. In 244 the town was destroyed by an earthquake but rebuilt before the end of the reign of al-Mutawakkil (242–247). Tabīz seems then to have changed hands several times, for, according to al-ʾIṣkāḥī (c. 340), p. 181, the strip of territory which included Tabīz, Dāshēma (or Dīb-ʾKhārānī?) and Ushnā (s.v.) bore the name of the ruling tribe Banū ʿRudānī, which had already disappeared by the time of Ibn Ḥawkāl (c. 367), p. 289. These owners seem to have ruled in practical independence for the history of the ʿAṯās (lords of ʿAḏhārdābādī from 276–317) mentions no reference to their intervention in the affairs of Tabīz: cf. Defrémyer, Mémoires sur la famille des ʿAṯās, f., 2347 (the capital of this dynasty was first Marzdān and later Ardabil; ibid., reprint p. 25, 41, 47, 57, 77).
After the disappearance of the Shajids, Akhar-bida was one of the first to make the road leading to Tabriz. A former governor for the Ziyarid Marzward, Lashkar-i Bar, had seized the province in 350. He was driven out by the Kurd Daiman (cf. Kord) who came into conflict with the Daiman Musafirs (q.v.). The people of Tabriz invited Daiman into their town, which was at once besieged by the Daiman Musafirs (q.v.). The end of the Musafirs was soon to be clear. Huart, Les Musafirs de l’Ahdar-bidjan in Fables, presented to E. G. Browne, Cambridge 1923, gives 436 as the last mention of their rule at Tabriz, but Sir E. D. Ross, Les Musafirs, Dynasties, Asia Major, 1925, ii, p. 212-215, connects with the Musafirs the family of the Rawwidi which can be traced at Tabriz down to 446. It is however possible that these Rawwidi were descendants of Al-Rawwidi Al-Adzi, father of the rebuilder of Tabriz, and had nothing to do with the Daiman Musafirs (apart from inter-marriage). The following events are connected with these Rawwidi: in 430, Wahshidân b. Mahlân (Mamlân?); a large number of Ghuzz chiefs massacred at Tabriz (Ibn b. Al-Adzi, ii, 279); in 434 an earthquake destroyed Tabriz and the amir (probably the same one) went to other strongholds with fear of al-Ghuzz al-Saljukiyâ (ibid., p. 351); in 438 Nâṣir-i Khwarazm found in Tabriz a king Salaf Al-din, b. Shâhârâ Al-Milla Abî Manjûr Wahshidân b. Muhammad (Mamlân?) Mawli Atâî i Ma'mûn; in 446 Tughrîl received the submission of the lord of Tabriz Al-Adzi Abî Manjûr b. Muhammad Al-Rawwidi (ibid., i, 410).

Tabriz in the early centuries of the Hijira. While Ibn Khurdâbîhîb, p. 119, Balâdhur, p. 531, Tabari, ill. 1171, Ibn b. Fakhr, p. 285 and even al-Isjâkhîrî, p. 181 simply mention Tabriz among the little towns of Ahdar-bidjan, Al-Mal-kedast already sings the praises of Tabriz and his contemporary Ibn Hawkal (c. 367 = 978) considers it the most prosperous town in Ahdar-bidjan with a busy trade and manufactures of armament. Ibn Miskawaih (d. 431 = 1030) calls Tabriz a “noble city with a strong wall, surrounded by woods and gardens”, and calls its inhabitants “brave, martial and rich”. According to Nâṣir-i Khwarazm the area occupied by the town in 436 was 1,400 4,100,000 acres which is only about a third of a square mile.

Saljuk period. Tabriz is very rarely mentioned in the history of the Great Saljuks. In the vicinity of the town Tughrîl celebrated his marriage with the caliph’s daughter (Râhat Al-Salzûr, p. 111). During his struggle with his brother Muhammand, Sultân Barkiyaruk retired in 494 to the mountainous region to the south of Tabriz but at the reconciliation of the brothers, Tabriz fell to Muhammand who appointed Sa’d Al-Mulk as wazir there (498). In 505 we find Al-Adzi Sukmân Al-Khihtî mentioned as lord of Tabriz, i.e. the founder of the dynasty of Shâhâ of Armenia (ibid.; armament) who ruled at Atsil at 493 to 604.

Under the branch of the Saljuks of the Shirvân whose capital was at Hamadân, Ahdar-bidjan played a more important part. In 534 Sultan Mahmûd spent some time at Tabriz to calm the inhabitants who were alarmed at the intrusions of the Georgians. The name of the atâbâg of Ahdar-bidjan is mentioned at this period was Kun-toghidî. After his death (515), the Amir of Marâgha al-Sunqur Al-Mamûdî endeavoured to get Tabriz out of the hands of Tughrîl (brother of the Sultan) but these intrigues came to naught. Mahmûd appointed to Ahdar-bidjan the Amir Dguyûs of Mawzî who was killed at the gate of Tabriz in 516. After the death of Mahmûd (525), his brother Mamûd occupied Tabriz and was besieged there by Dâwût, son of Mahmûd. Finally Dâwût established himself in Tabriz and from this town ruled (526-533) the Ahdar-bidjan, Arrin and Armenia. Ahdar-bidjan and Arrin were later entrusted to Tughrîl’s old slave, the Atâbâg Kâra-Sunqur, whose capital seems to have been at Arrin (Ibn b. Al-Adzi, xi, 52). After his death in 535 the Amir Dguyûs (Cawlî) al-Tughrîl succeeded him but we soon find Ilidigtî, the founder of the dynasty of Atdâb which ruled the province till 622, established in Ahdar-bidjan. The centre of 111 idigizid power was at first to the north-west of Ahdar-bidjan while Tabriz became part of the possessions of the Almâdîl Amir of Marâgha for it was not till 570 that the Atâbâg Pahlâwân b. Ilidigtî took Tabriz from Fulak Al-din, grandson of Al-Sunqur b. Almâdîl, and gave it to his brother Kâlîr Arrânî. It was during the period that Kâlîr Arrânî was atâbâg (582-587) that Tabriz definitely took its place as the capital of Ahdar-bidjan.

In 620 the Amir Kâra-Sunqur ‘Ali’ Al-din Almâdîl in alliance with the Atâbâg of Arrin made an attempt to retake Tabriz from Kâlîr Arrânî’s successor, the bon-vivant Abû Bakr. The attempt failed and Kâra-Sunqur lost Marâgha.

The Ilidigtîs lived in great style as we may judge from the orders addressed to them by poets like Nâṣîmî and Kâhâînî but of their buildings we only know the remains at Nakhchivan [q.v.]. The political weakness of their epigram is confirmed by the episode mentioned in the Georgian chronicle which took place between 1208 and 1210 (605-607 L. H.). Iwane and Zakvare, generals of queen Tsmar, in the course of a hazardous marauding expedition traversed the whole of northern Persia to Dguyrjîn. The Georgian troops coming from Marand levied a ransom from the people of Tabriz (Tsmar) but otherwise did not disturb the peace of the country. A little garrison left in the town awaited the return of the troops. The episode is not mentioned in the Muslim sources but by its detail the story inspires a certain confidence. Cf. Broset, Histoire de la Géorgie, i, 470.

The Mongols. The Mongols made their appearance before the walls of Tabriz in the winter of 617. The incapable Atâbâg Zrbeg b. Pahlâwân obtained their departure by paying a heavy ransom. Next year the Mongols came back again. The Atâbâg fled to Nakhchivân but a resistance was organised by the valiant Shams Al-din Al-Tughrîl and the Mongols departed with a new ransom after which Orzbec returned to Tabriz. In 621 a new horde arrived from Mongolia and demanded from Orzbec the surrender of all the Khâvârimzîans in Tabriz. Orzbec hastened to yield to this demand.

Djalâl Al-din. The Khâvârim-zêhs soon arrived from Marâgha and on 27th Rajab 622 gained admittance to the town which Örbeck had again abandoned. The inhabitants were glad to find a valiant defender especially as Djalâl Al-din
was soon to show his energy by an expedition against Tiflis and by the punishment of the marauding Turkomans of the tribe of Aiwâ (al-Aiwîyya). Djalal el-Din having married the mulkâ, the former wife of Özbek, held Tabriz for six years but towards the end of this period, his position was seriously compromised by his failures as well as by his personal conduct (Ibn al-Athîr, xii. 323). As early as 627 a Turkoman chief of the tribe of Kusâr-vâlwa (?), a chief of Rûyân-diz (near Marâqgha), dared to plunder the environs of Tabriz. In 628 Djalal el-Din left Aðharbâjîyân and the Mongols conquered the whole province, including the town of Añ Tabriz which is the very heart (aqâ) of the country for every one is dependent on it and on those who live there" (Ibn al-Athîr, xii. 324). The "mulkî" of the Mongols (Qur-\textit{mughrûn-noin) sent for the nobles (Shams el-Din al-Tughrâ'î alone did not stir), levied a heavy indemnity, ordered the weavers to make \textit{khâthif} stuffs for the use of the great king (\textit{Ugedei}) and fixed the amount of the annual tribute. From the time of Ghiyât the effective rule of Arûnû and Aðharbâjîyân was in the hands of Malik Sadr el-Din, a Persian ally of the Mongols. Cf. \textit{Djalâl-\textit{Gusûq}}, ed. M. Karstut, G. M. S., ii, 255.

The Mongol \textit{Ilêhîn}. After the taking of Bagh-\textit{dâd} in 654 (1256) Hilûgât went to Aðharbâjîyân and settled at Marâqgha [q. v.]. In 661 (1263) after the defeat inflicted on him in the northern Caucasus by Berjâl's troops, Hilûgât returned to Tabriz and massacred the merchants there of Kîlipân origin. In 662 (1264) at the re-distribution of the fiefs Hilûgât confirmed Malik Sadr el-Din in the governorship of the province of Tabriz.

Tabriz became the official capital under Abâl el-Din (663-680) and kept this position under his successors till the coming of Uldjâiî. In 688 (1289) under Arûnû the Jewish vizier Sa'd al-Dawla appointed his cousin Abî Manûrî to Tabriz. Under Kâl-\textit{Dschâhu} the revenues of the province of Tabriz were estimated at 80,000 tamarîn. In 693 (1294) Tabriz was the scene of a rebellion as a result of the introduction of a paper currency (\textit{qa'af}). It was in the reign of Ghaçân-Khân that Tabriz attained its greatest splendour. This monarch entered Tabriz in 694 (1295) and took up his abode in the palace built by Arûnû in the village of Sâmâm to the west of the town, on the left bank of the Adjud (the old form of this Persian name is \textit{zanbî}, "cupola") (\textit{Quattromestre, N. E., xiv, p. 31: "building surmounted by a cupola"}), but the name was already pronounced \textit{shâm} in the sixteenth century, cf. \textit{Nushat el-Khûlûkh}). Orders were at once given to destroy the temples of idols, churches and synagogues, and fire-altars. These orders are said to have been revoked in the next year on the appeal of the Armenian king Hethum. In 699 (1299) on his return from the Syrian campaign, Ghaçân began a whole series of buildings. He intended \textit{shâm}, already mentioned, as the site of his eternal rest. A building was erected there higher than the \textit{gumhûd} of the Sâmâm Sandjar at Marv, which was then considered the highest building in the Muslim world. Besides this mausoleum, which was crowned by a dome, there was a mosque, two madrasas (one \textit{shâtî} and the other \textit{Hâmî}), a hostel for Saiyids (\textit{dûr al-saîyêdah}), a hospital, an observatory like that at Marâqgha, a library, archives, a building for the officers of these establishments, a cistern for drinking-water and baths with hot water. \textit{Walîs}, the revenues from which amounted to 100 tamarîns of gold (\textit{wâshqâ}), were set aside for the maintenance of these foundations. At each of the gates of the new town was built a caravanserai, a market and the baths. Fruit-trees were brought from distant lands.

In the town of Tabriz itself great improvements were also made. Hîhterto its wall (\textit{khûra}) was only 6,000 mûnsî ("pace"); \textit{Qâhir al-nawâq} (\textit{mêrêd} "fathom") Ghaçân gave it a new wall 25,000 mûnsî in length (44 farsâbah). All the gardens and the Kâl-\textit{Wâliyân} and Sandjarîyân quarters were incorporated in the town. Within the wall on the slopes of the Kâl-\textit{Wâliyân} (now \textit{Kûh-i Sûrkhshân} or \textit{Aiminâl-Zamání}) a series of fine buildings was erected by the famous vizier Rashîd el-Din and the quarter was therefore known as \textit{Nasûl-\textit{Râghûd} (\textit{Nâshat el-Khûlûkh), p. 76). We have a letter from Rashîd el-Din in which he asks his son to send him from Kûm 40 young men and women to people one of the villages in the new quarter; cf. Browne, \textit{A Hist. of Pers. Liter.,} iii. 82.

As if to emphasize the fact that Tabriz was the real centre of the empire which stretched from the Caspian to Egypt, the gold and silver coins and the mosaics (\textit{âlêb, geys}) were standardized according to the standards of Tabriz (D'Olsoun, iv, 144: 271-277, 350, 466-469).

In 703 (1304) Ghaçân-Khân was buried with great ceremony in the mausoleum of Sâmâm. In 705 (1307) his successor Uldjâiî conceived the idea of creating a new capital at Sulshâti (\textit{q. v.}). It was however not easy to move the inhabitants, as in 715 (1315) we still find the ambassador from the Ózbek of Kîlipân following the route by Tabriz instead of the shorter Mujghân–Arâbil–Sulshâti. It is also noteworthy that Tâj al-Din \textit{Alt-Sâhî} (vizier from 711 = 1312) had begun the construction of a magnificent mosque at Tabriz (outside the Mîhâd-mîhûn quarter).

In 717 (1317) under Abî Sa'id the retiring vizier Rashîd el-Din went to Tabriz and only left it the following year to meet his fate. His property was confiscated and Rabî-â Rashîd sacked (Browne, iii. 717). His son Ghiyât el-Din who was invited to power by Abî Sa'id himself continued to enlarge Rabî-â Rashîd. The capital continued to be Sulshâti judging from the fact that Abî Sa'id was buried there in a mausoleum which he himself had ordered to be built (D'Olsoun, iv, 720).

When in 736 (1336) his successor Arpa lost the battle of Taghtatî (this to be read for Baghâtî) his vizier Ghiyât el-Din was killed by the conqueror \textit{Alt Pâdshât Îbrâîî. The property of the family of Rashîd el-Din was plundered by the people of Tabriz and valuable collections and precious books disappeared on this occasion.}
Arran, Mughān and Georgia. The successor of Hasan Kūtik, his brother Ahrāf, in 744 (1344) proclaimed a new puppet Aḥmadrādūn whom he relegated to Sultānṣāla while he himself remained in Tabrīz as the real ruler and extended his authority as far as Fārs. His cruelty and executions provoked an “intervention in the cause of humanity” by Djiḏe-beg Khiṣn of the Blue Horde (Eastern Kipta). Ahrāf was defeated at Khaoi and Marand and his head suspended over the door of a mosque in Tabrīz (756 = 1356). The vizier Aḥmaid whom Djiḏe-beg had left in Aḥdarbājān found his authority disputed on several sides. Tabrīz was temporarily occupied by the Djiḏal-i Uwais b. Hasân Buzurg who came from Baghdād. Hardly had he been driven out by Akhīdjālū than the Mūsafārīd of Fārs, Mubārzī al-Dīn Muhammad, quarrelling with Djiḏe-beg who had called upon him to recognise his successorship arrived from Shirāz, defeated Akhīdjālū at Mīyān which seized Tabrīz in 758 (1357). After two years he retired before Uwais (cf. Tarīkh-i Gūstār, G.M.S., p. 677–679, 715–717) who soon afterwards reoccupied Tabrīz and slew Akhīdjālū.

When the news of the death of Sultan Uwais (776 = 1377) reached Fārs, Shah Shudja’ who had succeeded Mubārzī al-Dīn set out from Shirāz to take Tabrīz. Hisān, son of Uwais, was defeated and Tabrīz occupied but after a few months a revolution having broken out at Uḍjīn forced Shudja’ to evacuate the town which Hisān reoccupied without striking his banner. Sultānṣāla seems to have marked the limits of the lands of the Mūsafārīds in the north-west (Tarīkh-i Gūstār, p. 723–725).

In 784 (1382), Hisān Djiḏal-i Uwais was slain at Tabrīz and his brother Sultan Aḥmad succeeded him in Aḥdarbājān but his rule was to be brief for Timūr soon after appeared on the scene. In spite of all the vicissitudes of their intermittent rule the Djiḏalar were able to gain the sympathy of the people of Tabrīz. Their rights were implicitly recognised by the lords of Shirāz, and the Ḵara-Ḵoyūnlu. Among their buildings in Tabrīz are recorded their mausoleum Dimashqīya and a large building by Sultan Uwais, which, according to Clavigio, ed. Semsavchi, p. 169, contained 20,000 chambers (“caminas apartadas e apartamentos”) and was called Dawlat-i Khāna (“Talabgana . . . la casa de la ventura”); cf. Markow, Catalog Dijalair. monest. St. Petersburg 1897, p. 1–21; history of the Djiḏalar. Coins of the following years struck by the Djiḏalar at Tabrīz are known: Hasan Buzurg – 757; Uwais – 762, 763, 764, 765, 766, 769, 770, Hisān – 777, 778, 779, 780, 781, Aḥmad – 785, 810.

Period of Timūr. During his first invasion of Persia (786) Timūr returned to Samarkand after taking Sultānṣāla. His great rival Toḵtamis-Khiṣn of the Golden Horde at once sent an expedition against Aḥdarbājān by Darband in 787 (1385).

The invaders took Tabrīz which was badly defended by Amir Wali (the former lord of Djuṯulān [cf. Toḵta-Timūr] driven out by Timūr) and the Khān of Khālīḏan, plundered the inhabitants, carried off prisoners (including the poet Kamāl Khudjand) and returned to Darband (Zafar-nāma, l. 392; Clavigio, Hist. Pers. Lit., iii. 347).

Hardly had Sultan Aḥmad Djiḏal recovered Tabrīz than he was driven out again by Timūr (788) who came on the pretext of protecting the Muslims. Timūr encamped at Ṣāhl-i Ḡavāzī and levied an indemnity (māl-i amūn) on the people of Tabrīz; cf. Zafar-nāma, l. 326; al-Ḡāmi‘ is much severer on Timūr, cf. Markow, Catalogue, p. xxvii).

In 795 (1392) the “feit of Hilāḥgū” (tabbāh-i Hilāḥgū), consisting of Aḥdarbājān, al-Ka‘ūn, Gūstār, Darband and the lands of Asia Minor, was granted to Mīrān-i Ḡavāzī (ibid., ii. 623) and Tabrīz became the capital of this territory. Three years later Timūr’s prince became insane and Timūr committed a series of insensate actions (execution of innocent people, destruction of buildings, ibid., ii. 703, 213, and Browne, op. cit., iii. 71). Timūr immediately on his return from India set out for Aḥdarbājān in 802 and executed those who shared in Mīrān-i Ḡavāzī’s debauches.

In 806, Mīrān i Ḡavāzī, son of Mīrān-i Ḡavāzī, was placed at the head of the “feit of Hilāḥgū” and the lands conquered by Timūr in the west. His father Mīrān-i Ḡavāzī (in Arrān) and his brother Abū Bakr (in Mesopotamia) were placed under the authority of Mīrān-i Ḡavāzī. After the death of Timūr a long struggle began between ‘Omar and Abū Bakr. In 808, Abū Bakr succeeded in levying on Tabrīz a tribute of 200 Ḳirāt tumānū. Omar returned to Tabrīz but his Turkmans harassed the people and Abū Bakr regained the town. Hardly had he left Tabrīz than the Turkmans rebelled. Bistān Djiḏe entered it but hurriedly retreated on the approach of Shulīt Ibrāhīm of Shirwān (q.v.). In 809 the latter handed over Tabrīz to Sultan Aḥmad Djiḏal-i as to its true sovereign and the inhabitants showed great joy on this occasion; cf. Mafṣū al-Sa’dain, transl. Quatremére, N. E., xiv., p. 109. On Rabī‘ 1, 8, Abū Bakr was again at Ṣāhl-i Ḡavāzī but did not dare go into the city where the plague was raging.

A short time before these latter happenings, the Ambassador of Henry III of Castile, Clavigio, spent some time in Tabrīz (June 11–20, 1404 and with intervals Feb. 28–Aug. 22, 1405, i.e. from the end of 806 to the beginning of 808). In spite of the trials it had undergone, the town was very busy and conducted considerable trade. Clavigio talks highly of the streets, markets and buildings of Tabrīz.

The Ḵar-Ḵoyūnlu. On the 1st Djuṯāide 1, 809, Kara Yūsuf, the Ḵara-Ḵoyūnlu Turkoman on the Araxes, inflicted a defeat on Abū Bakr who in his retreat handed Tabrīz over to plunder, and nothing escaped the rapacity of his army* (Mafṣū al-Sa’dain, p. 110). Kara Yūsuf advanced as far as Sultānṣāla and carried off the population of this town to Tabrīz, Ardabīl and Maragha. Abū Bakr soon returned to Aḥdarbājān but Kara Yūsuf assisted by Bistān defeated him at Sardarūd (5 miles south of Tabrīz). Mīrān-i Ḡavāzī fell in this battle and was buried at Tabrīz in the cemetery of Surkhāb. Kara Yūsuf, remembering the agreements on the redistribution of the territory made with Sultan Aḥmad at the time when both were in exile in Egypt had recourse to a stratagem. With great ceremony he set out on the throne of Tabrīz his son Pir-Budaghā who was regarded as the adopted son of Sultan Aḥmad (according to the Mafṣū al-Sa’dain, Kara Yūsuf did not give the title of Khān to Pir-Budaghā till 814). Aḥmad to outward appearance resigned himself to this arrangement but, when Kara Yūsuf was absent in Armenia, he occupied Tabrīz. In the battle of Asad (f) two farakhs from Tabrīz, Sultan Aḥmad was finally defeated (28th
Rah! II, 873 = 1410). He was executed by Kara Yusuf and buried in the Dimiğjıya beside his father and mother. Once more the sympathies of the people of Tabriz were with the last Daš'ir king: cf. Huart, Le fin de la dynastie des Ikhkani- nides, Jour. As., Oct. 1876, p. 310—326.

Tabriz is regularly mentioned as the centre from which Kara Yusuf sent out his expeditions. The Timurid Shahrūkh fearing the influence of Kara-Yusuf in 877 undertook his first expedition against him but did not advance beyond al-Ra'i (Maş'a al-Su'da'an, p. 238, 250). When in 823 (1420) he was renewing his attempt, news reached him of the death of Kara Yusuf (on İhter'ı-Kad'a 7, 823 = November 12, 1420). Anarchy broke out in the Turkoman camp and a week later Mīrza Baisungūr occupied Tabriz; cf. Price, Chronological Retrospect of the Events of Mawm. History, London 1821, iii. 541, following the Rauwaf al-Su'af and the Khuṣṣat al-Abār. Shahrūkh arrived there in the summer of 824 (1421) after defeating in Armenia the sons of Kara Yusuf. In 824 Iskan捺r, son of Kara Yusuf, seized Sulůjān. Shahrūkh marched to Shām-Ghasān at the head of an army and inflicted a defeat on the Kara-Koyunlu at Salmās. In the winter of 825 Khurābādžīn was given to Ablu Sa'īd b. Kara Yusuf who had come to pay homage to Shahrūkh. In the following year he was slain by his brother Iskandar. In the winter of 828 (1434) Shahrūkh came to Ablur-bādžīn for the third time. Iskandar thought it wise to retire before him but his brother Dījahānshāh hastened to join Shahrūkh. The latter spent the summer of 829 (1436) in Tabriz and on the approach of winter gave investiture to Dījahān-shāh. Thus began the career of the prince who made Tabriz the capital of a kingdom stretching from Asia Minor to the Persian Gulf and to Herāt.

The most remarkable building in Tabriz *the Blue Mosque* (Gök-maşjd) is the work of Dījahān-shāh (according to Berzin, of his wife Begum-Khatīm). It is possible that the presence in Tabriz in the Surkhab and Carandah quarters of members of the Ahī Hakk sect (cf. Sulūk-i-sūr) dates from the time of Dījahān-shāh on whose heretical views cf. Münu'ddijir-Isbālī, ii. 154.

The Aḵ-Koyunlu. On the 12th Rah! II, 873 (10th November 1467) Dījahān-shāh was surprised in Armenia and slain by Umm Hāsān Bāyandari, chief of the Aḵ-Koyunlu Turkomans. The two daughters of Iskandar proclaimed at Tabriz their dervish brother Husain 'Ali but Begum Khātīm, widow of Dījahān-shāh, put a stop to this plan. Tabriz was however occupied by Husain 'Ali, the mad son of Dījahān-shāh (by another wife) who put to death Begum Khātīm and her relatives (Mūnû'ddijir-Isbālī).

In spite of the assistance which he had received from the Timurid Abū Sa'id, Hāsan 'Ali was defeated at Marand. Subsequent events led up to death of Abū Sa'id himself. In 873 (1468) Umm Hāsān seized Tabriz which he made his capital (he announced this decision in a letter to the Ottoman Sultan, Fārūd-eq, Mūnû'ddijir-Isbālī).

The Venetian sources are of considerable value for the period of Umm Hāsān. (The first Venetian consul at Tabriz was Marco da Molino in 1324). Giosefa Barbaro, sent by the republic in 1474, describes the animated life of Tabriz to which embassies came from all parts. Barbaro was received in a pavilion of the magnificent palace which he calls "Aptist" (Haft + i). The infamous Venetian merchant who visited Tabriz as late as 1514 (?) still speaks of the splendour of the reign of Umm Hāsān *who has so far not yet had an equal in Persia,* Umm Hāsān died in 875 (1477) and was buried in the Naşīrīa Madrasa which he had built and which was later to be used for the burial of his son Yaqūb. During the twelve years of comparatively peaceful reign (893— 898) he became attracted to his court many men of letters (the Kurdish historian İdrīs was his secretary) and in 888 built in the garden of Şahib-ābād the Hašt-bihāt palace (cf. the history of Yaqūb by Fādż Allah b. Rūhābīn, a unique MS. of the Bibl. Nat. de Paris, ancien fonda pers. 101, fol. 100v.). This palace (Ašt-bihāt) has also been described by the Venetian merchant; on the ceiling of the great hall were represented all the great battles of Persia, embassies, etc. Beside the Hašt-bihāt there was a harem in which 1,000 women could be housed, a vast makhir, a mosque and a hospital to hold 1,000 patients (cf. also Ewlvī, ii. 249).

The Şafawī and the Turco-Persian wars. Isma'īl I occupied Tabriz in 906 (1500) after his victory at Șahrūr over Mirzā Alawd Ak-Koyunlu. Of the 200—300,000 inhabitants of the town two-thirds were reported to be Shi'ī but the new ruler was not long in imposing the Shi'ī's upon them and took rigorous measures against those who objected (*Alam-sāli, p. 31*). In his hatred of the Ak-Koyunlu Isma'īl had the remnants of his predecessors exhumed and burned (the history of Yaqūb, fol. 206v.; G. M. Anjouelot). The Venetian merchant speaks of the despair into which the debauches of the young prince had plunged several noble families. When Isma'īl set out for Arzindān after Alawd the latter succeeded in returning to Tabriz and during his brief stay there "oppressed the rich" (*Alam-sāli, p. 31*).

The battle of Radjañ (2nd Radjañ 920 = 23rd August 1514) opened to the Ottomans the road to Tabriz. Nine days later the city was occupied by the vizier Dukagin-oghlu and the defterdar Fīrūz and on the 4th September Sulūk Selim made his triumphal entry into it. In the town the Turks conducted themselves with moderation (Browne, Pers. Lit. in Mod. Times, p. 77) but the friends of the treasures amassed by the Persian sovereigns and carried off to Constantinople, 1,000 skilled artisans. The Sulītan only stayed a week in Tabriz as he had to return to his own lands in consequence of the refusal of the Janisaries to continue the campaign (v. Hammer, G. O. R. T., i. 720).

The events of 1514 were a grave warning to the Persians and under Tahmāsp I, the capital was transferred much farther east to Kazvīn. According to the Venetian Ambassador Alessandri, Tahmāsp, as a result of his aversion, was not popular in the old capital of the Ak-Koyunlu.

At the suggestion of the regenerative Ulūm (of the Turkomans tribe of Tekke) the troops of Salāmān I under the command of the grand vizier Ibrahim Pasha, occupied Tabriz on 941 (July 13, 1514) and went to the summer camp at Aqadat (Şahib-ābād?). Ibrahim Pasha began to build a fortress at Shām-Ghaṣān. The government of Ašt-bihāt was entrusted to Ulūm who had held the same post under Tahmāsp. On September 27, Sulītan Sulaimān himself arrived in Tabriz. A little later he made a thrust as far as Sulūjān and occupied
Taghbad. On his return to Tabriz he spent 14 days engaged in administrative business. The cold forced the Turkish army to retreat and the Persian troops at once advanced as far as Wân. Again in 955 (July 26, 1548) at the instigation of Alikhâr Mirzâ, brother of Shah Tahmâsp, Sulaimân occupied Tabriz but only stayed five days there. The Persian tactics were to destroy all means of subsistence for the invader and famine thus forced the Turks to retreat once more. According to the Hâfiz-i-Shâh Sulaimân had bought back from his soldiers their right of plundering the conquered city for 3 days but in spite of this the citizens continued to stay Turks in secret. Sulaimân refused Alikhâr Mirzâ’s proposal that the inhabitants should all be massacred or carried off into captivity. M. d’Aramont, ambassador of Francis I, was an eye-witness of the occupation of Tabriz and testifies to the Sulaimân’s efforts to protect the town (Voyage, p. 83). In 962 (May 29, 1555) there was signed at Amasia the first treaty of peace between Turkey and Persia which lasted about 30 years (v. Hammer, ii, 112, 120, 269; Alam-ard, p. 49—59).

In 993 (1585) the grand vizier of Murâd III had 40,000 men under the recapture of Tabriz. The governor of Wân, Cighalsa-nâdeh, sent him with 6,000 men. Going via Califrân and Sulaimân in the Turks arrived before Shah-Ghâzân. The Persian governor ‘Ali Kuli-Khan after a bold sortie which cost Cighalsa-nâdeh 5,000 men, retired during the night. In September the Turks occupied the town. As a punishment for the murder of several soldiers, the Turks sacked the town and massacred its inhabitants for three days. The Persian prime minister Hamza Mirzâ operating around the city on several occasions inflicted heavy losses on the Ottoman troops. To defend Tabriz, ‘Othmân Pâshâ built a square citadel the walls of which were 12,000 ells long (Ewillya, mûsâ-mirzâ mishkî arzâb). This citadel which was erected in 36 days was inside the town (‘Alam-ard “only the site of the old dâwât-khana”; Ewillya “around the Khiyâhân of the Shâh”). It was held by a garrison of 45,000 men. The envoys Dîsâr Pâshâ was appointed governor of Tabriz. On October 29, 1585, ‘Othmân Pâshâ died. Cighalsa-nâdeh he had appointed on his deathbed to command the Ottoman troops succeeded in defeating the Persians but soon the latter were able to besiege the Turks within the town. Forty-eight encounters took place between Farhad Pâshâ definitely relieved the garrison (v. Hammer, ii, 354). By the disastrous peace of 998 (1590) Shah ‘Abbâs had to cede to the Ottomans their conquests in Transcaucasia and the west of Persia. Henceforth the Turks took their occupation of Tabriz seriously. Their many buildings, especially those of Dîsâr Pâshâ, are mentioned by Ewillya in Tabriz and its vicinity. But the Persians were keeping a watchful eye on their old capital. The troubles with the ‘ajÂli at the beginning of 1001 showed the weakness of Sulaimân Muhàmed III. In the autumn Shah ‘Abbâs left Isfâhân unexpectedly and entered Tabriz 12 days later. ‘Ali Pâshâ was defeated at Hâjûdji Harâmî (2 farsakhk from the town) after which the citadel surrendered. Shah ‘Abbâs treated the defeated foe with generosity (cf. the evidence of Tectander who was in Tabriz) but in a revival of Shah’s fanaticism the inhabitants killed a large number of Turks in the town and neighbourhood without heed for any bonds of kinship or friendship that had been formed during the 20 years of Ottoman occupation. ‘Abbâs I invited the people to do away with all traces of Turkish role and “in a few days they had left no vestige of the citadel nor of any of their houses, buildings, dwellings, caravanserais, shops, baths etc.” (‘Alam-ard, p. 441, 451).

In 1019 (1610) in the reign of the weak Sulaimân Ahamad III the Turks again tried to resume the offensive. The grand vizier Murâd Pâshâ with an army unexpectedly appeared in front of Tabriz but ‘Abbâs I had had time to make his preparations. The town was defended by the governor Pir-Budak-Khan while the Shah took up his position to the north of the Surkhâh. No fighting took place but the Turks suffered greatly from want of provisions in the country which the Persians had laid waste. Five days later the Turkish army was retracting its steps while Shah ‘Abbâs and Murâd Pâshâ continued to exchange embassies. This Turkish invasion hastened the building of a new fortress at Tabriz. The site of the old Turkish citadel was thought to be unsuitable as liable to inundation by the Mishrin-rûd. The new fortress was built under the shadow of Surkhâh in the Ra’l-i Raqâsh quarter. The materials were taken from old ruins particularly at Shâm-Ghâzân (‘Alam-ard, p. 584, 601). On the other hand the unsuccessful invasion by Murâd Pâshâ led to the conclusion of a new treaty in 1022 (1612) by which the Persians succeeded in restoring the status quo as it had existed in the time of Shah Tahmâsp and Sulaimân Sulaimân (‘Alam-ard, p. 600, 611; v. Hammer, ii, 756, 745). The actual demarcation however met with obstacles.

In 1027 (1618) at the instigation of some Tatar Khâns of the Crimea the Ottoman troops (60,000 men) of Wân suddenly invaded ‘Adjarhabad. The Persians evacuated Tabriz and Ardabil. The Turks who were short of supplies retraced their way to Tabriz and advanced to Sarâb where Karâkai Khân, sipahsâlar of Tabriz, was a brilliant success against them. A new treaty was made confirming the conditions of that of 1022 (‘Alam-ard, p. 656—661; v. Hammer, ii, 773).

After the death of ‘Abbâs I the struggle between Turk and Persian was resumed on a great scale. In the reign of his successor Shah Şafi, Sulaimân Murâd IV invaded ‘Adjarhabad in 1045 (1635) and entered Tabriz on September 12. The aim of this campaign was plunder rather than conquest. Murâd ordered his soldiers to destroy the town. Having in this way “knocked down Tabriz” (Ewillya, sygle surselv) Murâd in view of the advance of the season hastened to return to Wân. He only spent 3 days in Tabriz. In the following spring, the Persians reoccupied their possessions as far as Erivan and by the treaty of 1049 (1639) secured for themselves the frontier which has survived in its main lines to the present day. Hâjûdji Khâlîfî who was an eye-witness of the campaign of 1045, says that after the devastation wrought by Murâd IV the old ramparts had completely disappeared and “only here and there could traces of old buildings be seen” (Qâshân-nûst, p. 381). Even Shâm-Ghâzân was not spared; the mosque of ‘Umar Hasan alone was left intact. The soldiers also tried to cut down the fruit-trees but in view of their number only managed to destroy a tenth of them.

Such then was the state of the town when a
series of travellers who visited it a few years later say had undergone a splendid revival. The interesting story of Ewliya Celebi (in the reign of 'Abbâs II in 1057 [1647]) gives detailed statistics of Tabriz, its madrasas (47), schools (400), caravanserais (200), houses of notables (1,070), dervish tekdes (160), gardens (47,000), animated public promenades. In the same period Tavernier says that in spite of the damage done by Murad IV "the town is almost completely rebuilt". According to Chardin (II. 328) in 1673 under Shâh Sulaimân I, there were in Tabriz 550,000 inhabitants (the figure seems exaggerated), 15,000 houses and 15,000 shops. It was "really a large and important town... There is plenty of all the necessities of life and one can live very well and cheaply in it". There was a hospice of Capucins at Tabriz on which the authorities cast a kindly eye. The Begler-begi of Tabriz had under his authority the Khân of Kâr, Urmîa, Marâgha and Ardabil and 20 "subâns" (local envoys).

The end of the Safawis and Nâdir. The Afghan invasion of Persia resulted in a state of complete anarchy. The heir to the throne, Tahmâsp, who had fled from Isfahân arrived in Tabriz where he was proclaimed king in 1135 (1722). When by the treaty of September 12, 1723, Tahmâsp II ceded the Caspian provinces to Russia, Turkey announced that as a precautionary measure she would be forced to occupy the frontier districts between Tabriz and Erivan. After the fall of Erivan, Naqsh-ezdan and Marand, the Turks under the ser-asker Abdallâh Pâšâ Koprûli arrived before Tabriz in the autumn of 1137 (1724). They occupied the Dewêli and Surkhâb quarters (where Selim I had once pitched his camp). The Persians who made Shîkân-Ghâzin their base held out. The Turks had some success but the advanced season of the year forced them to retreat before the end of the month. In the following spring Koprûli returned at the head of 70,000 men. The siege only lasted four days but the fighting in the seven fortified quarters was very desperate. The Persians lost 30,000 men and the Turks 20,000. The survivors of the Persian garrison to the number of 7,000 withdrew without hindrance to Ardabil ("Ali Hâznî, ed. Bâlîrî, p. 153; Hanway, ii. p. 220).

The treaty of 1140 (1727) concluded with the Afghan Afsâf confirmed to the Ottomans the possession of N.W. Persia as far as Sulţânîya and Ahbar. Two years later Nâdir defeated Mustâfa Pâšâ's army at Shâllân (sudje Sawallîn or Shollek-kôpû) near Tabriz. He entered this city on the 5th of December 1142 (1729) and made prisoner Rustam Pâshâ, governor of Hovhârân.

Anxious to take advantage of the domestic troubles of Turkey, Shâh Tahmâsp resumed the offensive but lost the battle of Kurîdjan (near Hamadân) and the ser-asker "Ali Pâshâ returned to Tabriz in the winter of 1144 (1731) and even built a mosque and madrasa there. By the treaty concluded a little later (January 16, 1732), the Persians ceded to the Porte the lands north of the Araxes but kept Tabriz and the western provinces. As Tabriz had actually been occupied by "Ali Pâshâ, the Porte very reluctantly agreed to its restoration to Persia and the signing of the treaty resulted in the dismissal of the grand visier (v. Hammet, iv. p. 281). On the other hand the cession of the Transcaucasian provinces to Turkey gave Nâdir an excuse for deposing Tahmâsp II.

After checking Nâdir near Hâmadân the governor of Wûn Rustam Pâshâ re-occupied Tabriz. In 1734, Nâdir set out for Tabriz and as a result of his victories in Transcaucasia the treaty of 1149 (1736) re-established the status quo of 1049 (1639).

Towards the end of the reign of Nâdir, when anarchy was again beginning, the people of Tabriz declared in favour of an obscure pretender who claimed to be Shâh Mîrzâ. The death of Nâdir in 1160 (1747) might have given the Porte an opportunity to intervene in Persian affairs especially as Rûdje Khân, son of Fath 'Ali Khân, dervân-beg of Tabriz, had come to Erzerûm to beg Turkish support for one of the candidates for the throne (a. Nâdirî; v. Hammet, iv. 474) but Turkey maintained complete neutrality.

Nâdir Shâh had entrusted Adharbâijân to his valiant cousin Amir Arslân Khân who had 30,000 men under him. After Nâdir's death, this general sided Nâdir's nephew Ibrahim Khân to defeat his brother 'Adî Shâh (Sultân 'Ali Shâh) but Ibrahim at once turned on his ally, slew him and after collecting 120,000 men spent six months in Tabriz where Shâh 'Alî Khân I ('Alî 'Adî, 1164) had himself proclaimed king ("Târîkh-i 'Abdûl-Mü'minî, ed. O. Mann, p. 36-37). He was soon killed by Shâhrukh, grandson of Nâdir.

The history of Adharbâijân during the rule of the dynasty of Karim Khân Zand is still little known. The Afghan Aâdî Khân was at first lord of the province. In 1170 (1756) it was taken from him by Muhammad Husain Khân Kâdirî. Next year Karim Khân defeated Fath 'Ali Khân Aflârî of Urmîya and conquered the greater part of Adharbâijân (Malcolm, Hist. of Persia). In 1780 an earthquake did great damage in Tabriz.

The Kâdirîs. Towards the end of 1205 (1790) 'Abd Muhammad, founder of the Kâdirî dynasty, set out to occupy Adharbâijân. Among the governors who came to meet him was the hereditary lord of Khojî, Husain Khân Dumbalti (Kurûs, ii., p. 1145). 'Abd Muhammad added Tabriz to his fief. After the assassination in 1206 (1796) of the first Kâdirî shâh, troubles broke out in Adharbâijân. Shâh Shâh 'Abdul Azîz of the Shîkûkî tribe [q.v.] attempted to seize the supreme power and appointed his brother Muhammad 'Ali Sultân to Tabriz. The Dumbalti Khân took an active part in suppressing the rising and in return Fath 'Ali Shâh confirmed Djâfar Kuli Khân Dumbaltî in the governorship of Tabriz. The latter as soon as he arrived in Tabriz in 1213 (1798) formed a coalition with Shîdk Khân who had re-established himself in Sarab and the Aflârî Khân of Urmîya and shaking off *the dependence which was so slight that it really was absolute independence" ascribed to the Shâh's representatives. Troops were sent against Djâfar Khân who with the help of the Kurds held out for some time in Khojî; cf. H. J. Brydges, The Dynasts of the Kajar, London 1853, p. 50, 84 etc. In 1217 (1799) the hand of the throne of Persia 'Abbâs Mirzâ established himself in Tabriz with Ahmad Khân Muhammadd (Marâgha) as his beglerbegi. Djâfar Khân sought refuge in Russia (cf. Shirku) but for some time other members of the Dumbaltî family continued to rule in Tabriz. In 1224 (1809) Nadîf Kâlit Khân Dumbaltî rebuilt the citadel of Tabriz (Mir 'Alî, p. 343; S. Wilson, p. 345) around which 'Abbâs Mirzâ dug ditches in 1241 (1825).
After the incorporation of Georgia into Russia (1801) complications between Russia and Persia gradually increased and Tabriz became the principal centre of Persian activities. 'Abbâs Mirzâ set himself the task of europeanising the Persian army. An important English mission including a number of very notable explorers of Persia (Ouseley, ill. 399; Ritter, ix. 876–880) made its headquarters in Tabriz. The English and Russian diplomatic missions (the secretary and later head of the latter was the famous writer Gribyedov) also came to the court of 'Abbâs Mirzâ. The energetic heir to the throne built arsenals, cannon foundries, depots and workshops. After the trials it had undergone the town was however but a shadow of the splendid city of the time of Chardin, Tan-cogne (1807) estimated its population at 50–60,000 including several Armenian families; Dupré (1809) at 40,000 with 50 Armenian families. Kinnir gives Tabriz ("one of the most wretched cities") only 30,000 inhabitants. Morier, who in the account of his first journey (1809) had given the exaggerated figure of 50,000 houses with 250,000 inhabitants, in his second journey confines himself to saying that Tabriz has only a tenth of its pristine magnificence and that it has no public buildings of note.

The Russo-Persian wars filled the period to 1828. During the operations of 1827 the General Prince Erístow with the help of certain discontented Khâns entered Tabriz with 3,000 soldiers on 3rd Râhè II, 1243. 'Abbâs Mirzâ was away and opinions in the town were divided. Allah-âr Khan 'Asaf al-Dawla was for continuing the struggle but an important ecclesiastic the Imam Mirzâ Fattâh insisted on surrender and opened the gates of the town to the Russians. After the peace Mirzâ Fattâh had to leave Persia and take refuge in Transcaucasia. The commander-in-chief Count Paâskewi then came to Tabriz and met 'Abbâs Mirzâ at Dib-Khârâšân. An armistice was signed but the court of Teherân did not approve of the terms. The Russians resumed the offensive and occupied Urmia, Marâgha and Ardashîl. The peace of Turkman-châl (5th Sha'bân, 1243 = Feb. 22, 1828) which fixed the frontier on the Araxes finally put an end to the Russian occupation (murâshla). On the events of the Mirzâ al-Balûdîn, l. 404–410; Miasmarov, Bibliographia caucasica, St. Petersburg 1874–1876, p. 745–747: Détails sur ce qui s'est passé à Tabrız le 29 octobre au 5 novembre 1827, in Nouv. Annales de Voyage, Paris 1828, i. 38, p. 325; P. Zoubow, Kertâl voyagé a Persièe 1828–1827, St. Petersburg 1831; do., Forsvikskaya veïna, St. Petersburg 1837; Osten-Saken, Administration de l’Aghâr-bâydisân pendant la guerre personne de 1827–1828 (in Russian), in Russkiy Inamîldî, 1861, No. 79.

Since the time of 'Abbâs Mirzâ, Tabriz has been the official residence of the heir to the Persian throne. Down to the accession of Muhammad Shah in 1250 (1834) the British and Russian diplomatic missions spent most of their time in Tabriz (Fraser, Travels in Koordistan, ii. 247). Their transit to Teherân marked the definite transference by the Kurds of the political capital to that city. Down to the end of the sixth century little of general importance marked the life of Tabriz. On Sha'bân 27 1286 (July 8, 1850) the Bûb [q. v.] was executed in Tabriz at the entrance to the arsenal (ajâb-e khârā); cf. this correction in Wilson, Persian Life, p. 62. In 1880, the approach of the Kurds under Shâh Khâyur (cf. Shâh Khâyur) greatly disturbed the people of Tabriz. Gates were put up between the quarters to isolate them better if necessary but the Kurds did not go beyond the Bûbān.

The consolidation of Kûstâr power secured peace for Aghâr-bâydisân and Tabriz gradually recovered. In spite of the terrible ravages of cholera and plague in 1830–1831 the census made in Tabriz in 1842 recorded 9,000 families or 100–120,000 people (Berezin). In 1895 the number of inhabitants was estimated at 150–200,000, of whom 3,000 were Armenians (Wilson, op. cit., p. 53). Twenty years later the population was certainly over 200,000 and in spite of the rudimentary nature of the municipal organisation the town showed every sign of prosperity. The trade of Tabriz after a period of stagnation developed, especially between 1853 and 1856, but the too great extent of imports produced a great crisis in 1837. The opening of the route by Transcaucasia (Potti-Bakun) meant considerable competition for the parallel route Trebizond—Tabriz. In 1885 the Russian government closed the route through Transcaucasia and Russian trade was thereby encouraged. Russian and Northern Persian markets but the movement of goods via Trebizond—Tabriz (the only route to the west) also increased.

Twentieth century. The history of Tabriz since 1904 has been very stirring. The Turks of Tabriz (who are the result of intermarriage of Persians with Ghurcz, Mongols, Turkomans etc.) with their energetic and passionate character played a very important part in the Persian nationalist and revolutionary movement. Open rebellion broke out in Tabriz on June 23, 1908, the day of the bombardment of the Parliament in Teherân. The names of Şâdâr Khan, a former horse-dealer who became chief of the Amir Khêt quarter and his companion Bûr Khan are closely associated with the brave defence of Tabriz but darker sides of their activity have not escaped even E. G. Browne, The Pers. Revolution, p. 491–492. The government troops under Prince 'Ain al-Dawla, surrounded the town and at the beginning of February 1909, blocked it completely. On April 20 the Cabinets of London and St. Petersburg agreed to send to Tabriz a Russian force to facilitate the entrance into the town of the necessary provisions, to protect the consulates and foreign subjects, and to help those who so desired to leave the town. The Russian troops led by General Snarski entered Tabriz on April 30, 1909 (Browne, op. cit., p. 274). The negotiations for their withdrawal lasted till 1913 when the Russian ultimatum presented at Teherân on November 29 provoked a new agitation in the country. On December 21 the 'Ard of Tabriz attacked the weak Russian detachment, distributed about the town, and inflicted considerable losses on them. This had the immediate result of the despatch to Tabriz of a Russian brigade under Voropanov, which arrived on the eve of the new year. The Russian military tribunal pronounced several death sentences (including one on the Thikat el-Islâm, an important member of the Shâhkhit sect). In October 1912 the Turkish detachments who occupied the "disputed" districts west of Aghâr-bâydisân were recalled but the question of the Russo-Turkish frontier (cf. kurîj) remained still undecided. The Russian troops therefore re-
mained in Ašharbādjan till 1914 when the world war broke out.

At the beginning of December, the Kurdish irregulars commanded by Ottoman officers began a movement from Sardj-bulak towards Marāỉqā and Tābriż. At the same time Enver Pascha's raid on Saff-kamāl (south of Kārs) threatened the whole Russian army in the Caucasus. Orders were given to evacuate Ašharbādjan. Between December 17, 1914 and January 6, 1915, the Russian troops and following them the bulk of the local Christian population had left Tābriż. On January 8 Ahmad Muḥtār Bēy Shamskhālī at a head of a body of Kurds entered the town. The situation changed suddenly and on January 31 the Russians returning in force occupied Tābriż (cf., the details in the book by the former German consul in Tābriż: W. Litten, Persische Flüchtlings, Berlin 1925, P. 8-127).

Since 1906 a paved road connecting Tābriż with the Russian frontier (Djulfā, terminus of the Russian railway) had been constructed by the Russian government company which had obtained the concession from the Persian government. The work of changing this road into a railway was now actively hurried on and it was opened to traffic at the beginning of May 1916. The railway (80 miles long, with a branch line from Sofīyān to Lake Urmīyā 25 miles long) was the first to be built on Persian territory.

The Russian army on the Persian frontier had become disorganised on the outbreak of the revolution of 1917. Ašharbādjan was evacuated at the beginning of 1918. The representatives of the Persian central government and even the Crown Prince had remained all this time at their places but when the last Russian detachment left Tābriż on February 28, 1918, the actual power passed into the hands of the local committee of the democratic party and its head Ismā‘īl Nawbār.

Meanwhile the Turks emerging from their inactivity quickly occupied the frontiers abandoned by the Russians. On June 18, 1918, the Ottoman advance guard entered Tābriż. On July 8 General ‘Ali Ḥasan Pāšā arrived and on August 25 Kāsīn Kūrā-bekīr Pāšā who commanded the army corps. The Ottoman authorities banished Nawbār and supported the appointment of Ma‘ṣūd al-Sulṭānī as governor of Ašharbādjan. This troubled situation lasted for a year and only with the arrival in Tābriż of the new governor-general Sīhār-salīr (June 1919) did affairs begin to resume their normal course. Complete order was only established under Rūdā Khānī, who became first of all minister of war and later ruler of Persia.

By the treaty of February 26, 1921, the Soviet government rescinded all the old concessions in Persia and the railway from Tābriż to Djalufa built at the expense of the Russian government thus became the property of the Persian state.

Antiquities. The oldest monuments in Tābriż date from the Mongol epoch (beginning of the sixteenth century) but no systematic study has yet been made of this field. The earthquakes and the indifference of the Siyānī to the buildings of their Sunnī predecessors or rivals are the two main causes of the disappearance of the monuments, interesting traces of which still remain.

The magnificent buildings of Ghāzān Khān in the village of Shahbāzān (now the suburb of Kūrā-mallāk) have completely disappeared. As early as 1611 we find Shāh ‘Abbās using the material of the ruins of Shahbāzān to build a fortress. The earthquake of Feb 5, 1641 caused further destruction (A rzāk of Tābriż, p. 375). Ewliyā Celebi (II. 265) still found the ruins of the stepped tower standing which reminded him of the tower of Galata (the same remark is made in the Iqlīṣmānī). Mme. Desloulay and Sarre also visited the mound which is all that remains of Shāh Shīrāz and remains were still found there.

A detailed description of this marvellous building is given in the ‘Iqlīṣmānī of Badr al-Dīn ‘Alī (d. 835 = 1431) who made use of the account of the embassy from the Mamlūk Sulṭān al-Nāṣir in the time of the İbn Shābīl Sa‘dī (the text was translated by Baron Tiesenhausen, Zeitschr. f. pers. Spr. x., 1886, p. 114-118). The mosque was said to rival the vault of the palace of Chosroes at Ctesiphon. According to Hamdullāh (1340) the mosque was built too rapidly, which caused it to collapse (farīd ʿunūd). The Venetian merchant (in 1514) speaks with enthusiasm of its ruins but Chardin (II. 323) only found the lower part (restored) and the "tower." The name Tābriż al-Shāh ("vault of A.") is still preserved in the name given to the enormous dilapidated brick building which stands in the centre of the town at the entrance to the old Mīnār Mīnār quarter (vulgo: Miṭar-mīrār; cf. Beresin). It is probable that there is some confusion between the old mosque which has now disappeared and the neighbouring citadel which in no way agrees with the description which we have of the mosque. Nothing is definitely known of the date of the ark. It may be the vast davwāt-khānā ("Toltbatgana") of which Clavijo speaks and which is mentioned in the ʿAṣār-i dawr (cf. above). The ark was turned into an arsenal by ʿAbbās Mīrzā and is still the most imposing building in Tābriż.

The beautiful mosque of Dūhān Shīr (the Blue Mosque) described by Tavernier and Chardin has been exhaustively studied by Texier, Mme. Desloulay, and Prof. Sarre. It is in a state of collapse. It is possible that its abandonment was the result of the heretical views on the part of its builder was accused by the Ašk-Koyunlu. Ewliyā Celebi is enthusiastic about "the mosque of Sulṭān Hasan" adorned with stones from Nadīf and inscriptions traced by the hand of the calligrapher Yāḥyā-i Mustaʿṣımī. On either side of the mihrāb were two pillars of a rare stone, like amber. This mosque known as Ustād-shāhīd ("master apprentices") was the work of Hasan Kūčkī Cobi (d. 741 = 1340) (Zīnāt al-Muṣaffāri, in the Mir‘āt al-Buldān, p. 341, Chardin). According to S. Wilson, that new mosque of this name (built on the site of the old one) is situated near the wool-market. This mosque seems to be different from the mosque of Ustād Shīr, of which very little is known.

Ewliyā says that the mosque of Shāh ‘Abbās was opposite the Ustād-shāhīd. To the Safawī period also belongs the "ala‘ī (Kadh-i Kadhāwī) of Shāh Sa‘īd (cf. Ewliyā). To the Kādīr period belong the residence of the governor-general Alā-Kapī ("the red gate"), the beautiful gardens of Bāgh-i Shīmāl ("north garden") which lie however on the south of the town), the pavilion of Shāh-gūl ("the Lake of the Shīh"), 5 miles S. of the town (Beresin, p. 80) etc.

A detailed list of the monuments of Tābriż will be found in the Jāmāt of Ewliyā Celebi. The view of Tābriż by Chardin (Atlas, Pl. XI) which
shows the public buildings is valuable for the study of the topography. The Mir‘izz al-Bulūk, i. 346—348 and the book by the American-missionary Wilson also contain useful details. A plan of the town prepared in 1830 by the students of the military school of Tabriz on a scale of 1:8,820 was published in 1894; cf. Houtum-Schindler, Geogr. Journ., 1895, p. 104. Berezin, p. 52 gives a sketch of the quarters of the town. There is a little Persian plan reproduced in Browsen, The Perif. Revolution, p. 254. A very detailed plan of Tabriz was also published in Tiffens in 1912.

The most important building is the pilgrim's fort built according to the inscription in 1004 (1654), the oldest parts of which can easily be distinguished from the later restorations. Beside it is a modern mosque built of beautifully hewn stones. Ecuring found the place empty except for a garrison of five men. Jaussen and Savigmee speak of about 40 houses with walls of sun-dried bricks and roofs of branches covered with rubble. The fruit-trees were in a very neglected condition.

In the time of the Prophet, Tabuk was on the northern frontier of Arabia beyond which Byzantine territory began. The place became historic when Muhammad's great campaign against the north began in the year 9. The population, Greeks, Amila, Lahm and Djuđlām, fled on his approach. He had however to abandon his objective which was evidently the lands farther north inhabited by Arabs, as the great heat caused his followers to become dispirited. He therefore only stayed ten days before beginning his retreat but made use of this time for negotiations with the people of Aila, Ađhrūj and Makna, which led to their submission.

**TABULA SMARAGDINA,** the revelation of secret alchemical teachings ascribed to Hermes Trismegistos. Known in a later version in the west since the middle of the 12th century, the origin of the text was until recently an unsolved problem in the history of chemistry. Since R. Steele in his edition of Bacon (1930) showed that the text of the *Tabula* existed in Arabic and Latin in the Sīr al-Arār of Pseudo-Aristotle, and E. F. J. Holmyard in 1923 discovered a more primitive form of the text in the Kitāb al-Uṣūṣūs al-kabīrī of Djibrīr b. Haiyīn, J. Ruska has been able to show that the original source of the text in many passages puzzling to the must be found at the end of the Sīr al-Sabkha, composed by Hermes, said to have been found by Bālamīs (Apollonius of Tyana) in the tomb of Hermes and to throw light on many points of the history of the Tabula from the time of Hugo St. Lullius to the present day. He was finally able to show that Djibrīr b. Haiyīn already was acquainted with the book of Apollonius, so that it is fairly certain that the work originated in gnostic circles.

**TABUR** (τ.) (Eastern Turk: ṭabūr, a palmate-formed of wagons arranged in a circle or square; a body of men sent out to reconnoitre), a battalion, a corps of about a thousand men, commanded by a ṭabūrī (chief of a thousand).

**TADALLIS, TEDELLES (Dellys), a town on the Algerian coast, 70 miles east of Algiers and 4 miles E. of the mouth of the Sebă, the prarivaries of the river of Kabyla, from which it is separated by the mountainous mass which is Cape Benguét. It lies in 35° 30' N. Lat. and 3° 55' E. Long (Greenwich). The town consists of two distinct quarters: the native quarter with its narrow streets and the European quarter regularly built on a plateau about 175 feet above sea-level. Below, the harbour, sheltered against the winds from the west and northwest, offers a fairly secure anchorage but is frequented only by a few small trading vessels. The country is covered with tall trees and well-tilled gardens and offers a pleasing picture. The total population is 3,854 of whom 2,508 are natives. The latter are of Kabylian origin but like the majority of the tribes of the district speak only Arabic.

The site of Dellys was occupied in the Roman period by the town of Rassacurru a few traces of which have been discovered (remains of walls, cisterns, etc.). This town must have been destroyed after the Arab conquest and for long the site remained uninhabited. Al-Ḫārī (Descriptio de l’Afrique, transl. de Senebier, p. 135) describes the town as a port situated to the east of Māṣa ʿl-Šāṭlajādī which he calls the town of the Beni Djemna but this place seems to correspond to Cape Djinet rather than to Dellys.

The name itself under the form Thadellis, Thadellissi ("the cottages") does not appear till the period when the Hammāḍid sovereigns (cf. HAMMĀDIDS) established their capital in Bougie. Owing to its position which enabled relations to be easily established with the people of the valley of the Sebă, this little town acquired a certain commercial and military importance; it even had a Hammāḍid governor. (In 496 [1102–3] the Sulṭān al-Maṣūr gave this office to a prince of Almohads who had taken refuge in Africa). Idrist (p. 104) describes Tadallah as a town on an eminence and surrounded by a strong wall. He mentions the fertility of the country round, the low cost of living, and the abundance of cattle which were exported to the adjacent regions. After the fall of the Hammāḍid kingdom, Dellys passed under the rule of the Almohads, was taken by Yāḥyā b. Ghistiya (622 = 1226–1227), then its possession was disputed among the Almohads, Zayyanids, Hafsids and the Marinids who took it in 1394. In the 16th century according to Leo Africanus (bk. iv, transl. Schefer ill., 66), Dellys shared the fate of Algiers. Like all the towns on the coast, it received a number of refugees from Spain, who must have contributed to the economic and intellectual life of the town. Leo (loc. cit.) says that the inhabitants engaged in dyeing, traded successfully and were noted for their skill in playing the lute. As to their fashion of dress, he says it is like that of the people of Djériss. When the Algerians had submitted to Spain (1490), the people of Dellys followed their example but in 1517 it was retaken by Arrūd [q.v.]. The Turks
put a garrison there and made the town a base of operations against the tribes of the valley of Sebou. Although the inhabitants kept up a constant intercourse by sea with Algiers, Dellys only vegetated under Turkish rule. It was a wretched village when the French occupied it on May 7, 1844. A European quarter was established there two years later. The conquest of Kabylie, which was followed by the transfer of the military establishment to Tizi Uzun and Fort National, arrested its development. In the course of the insurrection of 1871, Dellys was blockaded on the land side by the Kabylies (April-May) but maintained its own communication by sea so that it could not be taken by the rebels. Since then its peace has not been disturbed but owing to its outlying position and the difficulties of its communications the town has remained stationary and colonization by Europeans has not developed around it.

(G. YERK)

**TADBIR (A.), Ma‘ṣūr of the second stem of the root ṣ-l-b.**

1. With the meaning of "direction, administration." The Arabic lexicographers explain ṣabbara as a verb from the noun ṣabbur "the hindmost, the end" (opposite: ṣabli); thus we read in the Liṣān, v. 358: wa tamtura li-mu ṭalula ṣabli ṣabli hahu, "to heed what one attains at the end of a matter," or yamurra fī anwaqqah, "to heed the end of a matter." This verb has now a double application: a. in the sense of government, administration (e.g. in the title of a work by Ibn Abī ‘l-Rabi‘i, Suluk al-Mulūk fi Tadbir ‘l-Mawālib [cf. sīvaṣā]) and b. which concerns us here, in the sense of guidance, management of a household, tadbir al-munāwiṣ = al-munāwiṣ. Thus for example, Ibn Khaldūn says in his Muqaddima (ed. Quatremère in N. E., xvi. 62; transl. by de Slane in N. E., xix. 78): al-sīvaṣat al-madāniyya hiyya tadbir al-āwāli ṣaw wa al-mudāni ... "The Sīvaṣat al-madāniyya is the management of a household or of a state in keeping with the demands of ethics (ṣabīḥah) and wisdom, so that the whole may be led on a path on which regularity ( nast) is maintained."

The Tadbir al-Mansūr is one of the three subdivisions of practical philosophy, which was taken over by the Muslims from Hellenism with these divisions; the latter are ethics (ilm al-ṣabīḥah), economics (ilm tadbir al-munawwir) and politics with ethics (ilm al-sīvaṣat) (e.g. Ibn Sīnā, Akhīr al-‘Ulim al-ṣabīḥa, in Maqāṣid al-ṣabīḥa, Cairo 1328, p. 239 sqq.; al-Ḳīf, Tadbir al-Ḥusnā, ed. Liptay p. 53, and many others). As Ritter was the first to show, the whole economic literature of Islam can be traced to the Economics (of which the Greek original is now lost) of the Neopythagorean Bryson, which survives in an Arabic translation (ed. Cheikho in Machri, xix. [1921], 161—181; mentioned as early as ‘Fikrist, p. 315), from which again came a Hebrew (Munich, Cod. Hebr. 263, Ritter in JBL, viii. [1917], 12 sq.) and a Latin (Dresden MS. of Galen to which Plessner has called attention) translation. The latter has edited and studied all the material. According to his results the main lines of development of economics in Islam are as follows: apart from copyists and imitators (al-Dināshī, Ishārāt illa Ma‘ṣūr al-Tīfārī, ed. Ritter in JBL, vii. 1 sqq.; Ibn Abī ‘l-Rabi‘i, Suluk al-Mulūk; the Encyclopædia of Fakhr al-Dīn al-Ra‘ī‘; Ibn al-Fā‘ānī) the Economics of Bryson was independently edited by Nāṣir al-Dīn in his ‘Abdallāh and extended by the incorporation of Muslim and Persian ideas. Tūsī’s Economics was regarded for all time in Islam as the final model. On it were based the ʿAbdallāh in Dīla‘ī and for the most part the later authors also who deal with economics, like al-Ghaṣṣī, al-Shahrārī, al-ʿArūfī (inserts a chapter on attitude to relations) and al-Ṭifārī. The contents of these economic writings deal with the following subjects: acquisition, preservation and utilization of property (muḥāfāzah), attitude to slaves, women and children; everything is regarded from the point of view of acquiring and retaining the greatest possible good fortune.

The ‘Fikrist, p. 265, further mentions a second work on Economics apparently dating from the Hellenistic period and translated into Arabic: The Kitāb Rūḥā fi Tadbir al-Mansūr by I. W. SWS (for 'i one should probably read ʿi, f. or ʿi): "The book of Rūḥā on the Economics of... (?)." The name of this ancient author cannot be ascertained with certainty, especially as the names of very few ancient economists have come down to us. One might imagine it to be some name like Philodemus. There is also an Arabic translation (or synopsis) of the first book of the Economics wrongly attributed to Aristotle (now usually attributed to Theophrastus) in a manuscript of varied contents in the Escorial (Casiri, 90, 383) entitled Kitāb Rūḥā fi Tadbir al-Mansūr and in a manuscript containing several different works in a private collection in Cairo entitled Tadhkir Maḥbūla Avvāṣa fi Tadbir al-Mansūr (cf. Ma‘ṣūr in Machri, xix. [1921], p. 250—262). These two manuscripts have however not yet been closely studied. In the ‘Fikrist, in Abī ‘l-Rabi‘i’s and al-Ḳīf, this Economics is not mentioned (cf. the more recent Syriac translation of the Aristotelian works, Leipzig 1900, p. 53 sqq.), while Abu ‘l-Ḳāsim ʿAbd al-ʿArūfī (d. 452 = 1069—1070), Tadbir al-Umm, Cairo, n.d. p. 39, or his authority seems to have been acquainted with an Economics (Sīvaṣat al-Mansūr) of Aristotle. The way in which this translation has been handed down in MS. seems to indicate that it originated in Christian Arab circles: Ma‘ṣūr suggests without any authority that the translator was Abu ‘l-Farsad ‘Abd Allah b. al-Ẓayfīb (d. 435 = 1043—1044). The writer is preparing an edition and study of this book of Economics.

[1917], 4—14; Plessner, Der Ursprung der Neupythagoräischen Bryson und sein Einfluss auf die islamische Wissenschaft, Breslau, phil. Diss. 1925 (synopsis only; the complete work will appear shortly).

2. With the meaning "Manumission of a slave, which however only becomes operative after the death of the master." Dabbarā is in this case a verb formed from the noun ṣabūr, "life’s end," i.e. death. Cf. Liṣān, v. 355 sqq.; al-Ḳīf, Tadbir al-Ḥusnā, ed. Liptay p. 53 and many others. For particulars cf. the article ‘Arūfī.

The fullest treatment of the subject in Santillana, Introduzione di diritto musulmano malichita, Rome 1926, l. 122.

(HERPERING)
TADHDIRA (a), memorial, memorandum, from dhahara "to record". The word appears in the titles of many famous works: the *Memorandum of Astronomy of Nasir al-Din Tusi*, the *Tadkhira al-Awilayy* "Memorial of the Saints" of Farid al-Din 'Ajmar, the *Tadkhira al-Sharawi* "memorial of the poets", a biography of the poets, popular in Persia.

In administrative language it means: ticket, memorandum, permit. It is the name given to travellers' passports, yul tadhkirati, to the custom house office's exact: murur tadhkirati. It is also more especially applied to the diplomas of investiture given to ḥāfiz on taking up their office, the general name for these diplomas for ministers of religion being ḥāfiz. Under the old Turkish government system there were two tadhkirāt, a minor and a major, entrusted with the delivery of tadhkhira's; they were important officials directly under the orders of the šāhīzāker [q.v.] and admitted to the table of the grand vizier.

(B. CARRA DE VAUX)

TADJ (a), Crown. A Persian loanword in Arabic going back to the Old Persian *tag*; cf. Armenian *tag*, Aramaic *tage*. From it are formed in Arabic the broken plural *tagjan* and the corresponding verb *tan-uj II* "to crown", *vat* "to be crowned", and *tagii*, "crowned" (Horn, *Grundrisse der mesopotamischen Erzaehnisse*, Strasburg 1862, p. 81; Siddiqi, *Studien über die persischen Freundswörter im klassischen Arabischen*, Göttingen 1919, p. 74, 84; Frenkel, *Die aramäischen Freundswörter im Arabischen*, Leyden 1856, p. 62). Like the name, the thing itself comes from old Persia. The form of the crowns of the old Persian kings, which we now know best from their coins, was not known in Arabic literature. Masudi, for example, tells us how he had seen an old book with coloured pictures of Persian kings wearing their crowns, which was translated into Arabic for the Omajyad Highämi b. 'Abd al-Malik b. Marwân (B.G.A., vii., p. 106). A whole series of books now lost with titles like Kitāb Siyar al-Muluk, Kitāb al-Tadj seem to have been of similar content. On the other hand, the Zekii *Paša* in the introduction to his edition of Kitāb al-Tadj of Dāshli (Cairo 1532 [1914]) it is presumably on such sources that are based the statements of the Persian crown in Harun al-Ishfahani, Kitāb Tərəq Sibt Mālīk al-ʿArūs wa-l-ʿAynī (Berlin, Kaviani Press, p. 17, 24 sq., 32, 35 sg.), and the Persian Mudjdī al-Tawārakh which utilises him and the statements in Tahar's also (on the relation of their sources cf. Ndèfèke, Geschichte der Perser und Araber, Leyden 1879, Introduction; on the crown among the Persians cf. especially p. 95, 221, 304, 385, 453; A. Christensen, *L'Empire des Sassanides*, Copenhagen 1907, p. 14, 89 sq., 106; do., *Le Règne du Roi Kawaoud I et le Communisme musulman*, Copenhagen 1925, p. 22 sqg.). In the Arabic *Amuli* literature we are told that the first to wear a crown was Dāhshā (see Kalkashandi, *Ṣabū al-ʿAψ*, Cairo 1331 [1913], 1. 415).

On Muhammadan miniatures which depict the old Persian kings, the latter wear regular crowns but their form is of course in no way authentic. On the miniatures, crowns are also worn by the angels, and notably by the Prophet Muhammad and Būsik in the Mīrūf (see the miniature in the edition of the Uigur Mūridīnam, ed. by Payet de Courtelie, Paris 1882).

The Arabs made their first acquaintance with crowns before Islam, for the Persian kings occasionally gave their Arab vassal kings crowns as a token of their rank, e.g. to the Lakhrid Imas al-Ḳais (d. 438 A.H.; cf. Clermont-Ganneau, *Recueil d'Archéol. Or.,* vii. 307: Le roi de "jeus les Arabus" and vii. 376 sqq.: Le Ṭadj al- físūr "l'Elie e la royauté générale des Arabes"; Lidszbarski, *Ephemeris*, ii. 35, 375, so also on the difference between ṭālī and ṭāji; the latter seems to mean a simple chaplet only), and to the Lakhrîd Nūmān III (s. Rothstein, *Die Dynastie der Lakhdîm in al-Hira*, Berlin 1899, p. 128) and to the Dāči Tadj Hawdha b. `Alî, the Christian ruler of the Yezidis in the time of Muḥammad, to whom the Prophet is said also to have sent a demand to become converted to Islam (Ibn Ḥamdân, ed. Wüstenfeld, p. 971; Kalkashandi, vii. 379; Frenkel, p. 62; Tahari, i. 985; Ndèfèke, Geschichte der Perser und Araber, p. 258). Crowns and bearers of crowns were often celebrated by the poets (see Siddiqi, p. 84; Mubarrad, Khânî, p. 289 sq., where the crown is said to be a peculiarity of the Yezidis, possibly a reminiscence of the old relations between the Yezidis and the Abyssinians; on the crown of the latter cf. Ndèfèke, Geschichte, p. 225 and 233).

The celebrated crown of Khusenaw II was among the booty which the Arabs took at Ctesiphon (Christensen, *L'Empire*, p. 106). But the crown continued to be something foreign and rare among the Arabs. There is a ṭālī which says al-mulūk ṭāj al-ʿArab, "the turbans are the crowns of the Arabs", i.e. according to the usual explanation in the Līyān al-ʿArab and elsewhere: turbans are not amongst them as crowns, for most Bedouns do not wear turbans but only ṭālīsī (case cf. the article ʿKalāmawīa) or no headdress at all.

Islam knows no regular royal crown or coronation in our sense as a symbol of regal power. When we find mention of crowns, the reference is to foreign rulers like those of the old Persian Great Kings, of Christian rulers etc. The ṭālī al-ʿBâlî is the tiara of the Pope, ṭāj al-ʿArnî the mitre of a bishop. Only in the case of the so-called ṭāj al-ḥāfiz we do see at first sight to have a Muslim ruler's crown. This crown of the caliph, which is included among the insignia (al-ʿahwālī) of sovereignty, is not found till the "Abbasid period and it has been suggested that this dynasty imitated the Persian tradition in deliberate contrast to the early caliphs and Omajyads (Ndèfèke, Geschichte, p. 453). The Caliph wore the ṭāj on ceremonial occasions (mewādī) on the great feast-days. Kalkashandi (ii. 472 and 484 = Wüstenfeld, *Calçashandi*, ii. 172 and 182) describes the ṭāj of the Fāṭimid Caliph of Egypt. It is evident from him that it was not a proper crown but a turban richly studded with gems, including a particularly large one called al-ṣalīma, weighing seven dirhams, of the colour of the Fāṭimids, namely white, for the elaborate winding of which (ṣalūd al-ṭāj al-ḥāfiz) a special official (the ṭājīdī, later called ṭājī) was appointed (cf. Inoceramo, *The ceremonial procession of the Fāṭimid Caliphs*, St. Petersburg 1905, p. 645; Ibn al-Shāri`a, *Khâmîn Dinār al-ʿArnî*, ed. Bahgat, p. 37):—The Hafṣid Sultan too wore a ṭāj on his mawwâlī (cf. Ibn Ḥajj Allah, *Masūlī al-ʿArbâr*, extract: Wâsīf Iftikhrī wa-l-ʿAmalûsî, ed. Ḥasan
The name ṭādh was also given to the headdress of the Ottoman sultāns. Even 'Othmān I is said to have worn a ṭādh-i Khwānsād (d'Olissos, iii. 46). We know exactly the kind of head-dress worn by the conqueror of Constantinople from the pictures by Bellini. He wears a large turban, and the ṭādh; the inner cap of this turban is in the shape of a truncated cone, is usually red and tipped (t stitched). Round this is wound the turban proper (pārk) of thin cloth. The form of the turban of the Fāṭih found on his pictures is also shown on the medals. When we find on the reverse of a medal a three regular crowns, which are believed to represent the three kingdoms of Asia, Greece and Trebizond united under Ottoman rule, the explanation probably is simply that the medal was designed and executed by a European artist (cf. G. F. Hill, in Numismatic Chronicls, 1926, p. 287—298 and Pl. xiv.). Karabacek has dealt fully with the ṭādh of the Ottoman sultāns. According to him the Perso-Turkish ṭādh corresponds to the ṭarz of the Arabic-speaking lands, a rather high cap which is found represented as early as a papyrus of the viith century A.D. and appears in many varying forms in the course of time. In remarkable agreement with these forms are the headdresses (nīn, nīn) of the viith—sixth centuries of ladies in France and Spain, which according to Karabacek came direct from the east (the name: Arabic bādān as well as the thing itself). Particular forms of this headdress have survived on women to the present day e.g. among the Druses of the Lebanon and in Algeria and Tunisia. In modern Egypt there has developed from this the ṭarz as a woman's headdress. This is a plate-like ornament of gold and gems, which is sewn on the crown of a rather high cap and is sometimes of considerable weight. This ṭarz is put on the top of (ṣāhās) of the head of dead women, as is done with the turban in the case of men (cf. Lane, Manners and Customs of the Modern Egyptians, Appendix A; Lane, Arabian Society in the Middle Ages, p. 218, 224). The use of a special crown for bridges, which is found all over the world, is also sometimes found in the Muslim world (Lane, The Thousand and One Nights, i. 424; Lagarde, Araba mitrati, Nachrichten, Göttinjen, i. 190, p. 160 sqq. and the title of the well-known ṭādh ul-Arūz; cf. for Eastern Turkistan: Brockelmann, in Asia Major, i. 122).

The ṭādh has been given a special religious significance as a headdress among the dervishes. The assumption of the ṭādh is an essential part of the ṣhāhdh [q.v.]. The different dervish orders have their ṭādh of distinct form and colour, frequently with 12 seams (tork) from the number of the Imāms, or with 9, 7 etc., and there are numerous names and symbolic interpretations associated with them (see Ahmad Rif'at, Mir'at al-
fourteen children, and died in June, 1631, at Bırhänspir, after giving birth to a daughter. She was buried temporarily at Zaımbād, a suburb of Bırhänspir, but her husband, who mourned her deeply, resolved to commemorate her love by a tomb worthy of it, and her body was removed to Agra, and again temporarily buried on a site which he acquired from Tādjiūs Ila, in Burj, and on which the Tādji was erected. The structure, with its subsidiary buildings was not completed for twelve two years, during which period 20,000 workmen was continuously employed on it. A council of the best architects in the empire was held, and designs were submitted, that finally chosen being the work of Ustādūs Tādji, a native either of Tūk or of Shibār. The tradition that the architect was the Tanjoric, Geronimo Verzone, based on a statement made by the Italian Augustinian Friar, Father Monrique, finds no corroboration either in native annals or in the writings of the travellers Tavernier, Bernier, and Thévenot, who regarded the building as a purely Oriental work. It is, moreover, improbable. The tomb, of white marble from Djiāmbar, stands on a raised plinth, also faced with white marble, 18 feet high and 31 feet square. At each corner of this stands a beautifully proportioned minaret, 133 feet high, girt with three stories and finished with an open, domed lattāb. In the centre of this platform stands the mausoleum, a square of 186 feet with the corners cut off to the extent of 33 feet 1 inches, the façade rising 92 feet 3 inches from the platform. The centre of this is occupied by the principal dome, 55 feet in diameter, and rising 74 feet above the roof, or 191 from the platform. In each face of the building is a high arched porch, and in each a small domical apartment of two stories in height. Each is surmounted by a domed lattāb, and each has, in its three outer faces, six arched recesses, arranged in two stories and admitting light to lattice windows. These recesses, and the great porches, are vaulted. Beneath the dome, in the centre, is the cenotaph of Mumtāz Maḥall, and beside it that of her husband, both adorned with inscriptions. Immediately beneath these, in the crypt, which is on the ground level, are the true tombs, less ornamented than the cenotaphus. The cenotaphs are enclosed by a screen of trellis-work of white marble, *a chef d’œuvre* of elegance in Indian art. The porches are framed in ornamental inscriptions in the Arabic character, and the beauty of the whole is enhanced by copious and graceful ornamentation in *pietra dura*, all the spandrels, angles, and important architectural details, being inlaid with precious stones, agates, jaspers, bloodstones, cornelians, and the like, combined in wreaths, scrolls, and frets, as exquisite in design as beautiful in colour. Light is admitted only through double screens of white marble trellis work of the most exquisite design, one on the other, and on the inner face of the walls. Beyond the mausoleum and its platform are the two wings, one of which is a beautiful mosque. This group of buildings forms one side of a garden court, 880 feet square; and beyond this again is an outer court, of the same width, but only half the depth. Pedants in art have endeavoured to judge the Tādji by the canons of Greek and Gothic architecture, but such comparisons are merely impertinent. As Fergusson truly says *the combination of so many beauties, and the perfect manner in which each is subordinated to the other make up a whole which the world cannot match*.

Tādjiūs Dāwūlā [See Tūrughū]

Tādjiūs al-Dīn [See al-Surekī]

Tādjiūs al-Mulūk [See Būrkī]

Tādjiūs, older form of Tādjiūs or Tādjiū (in Maḥmūd Kāshgāri, i, 324: Tekīk), the name of a people originally used with the meaning *Arab* (later this meaning became confined to the form Tārīj), afterwards "Iranian" in contrast to *Turk". The word is derived from the Arab tribal name of Tāji. The nearest Arab tribe to the Iranians was the Tāji, hence the name of this tribe came to be applied to the whole Arab people. The Tājī are mentioned as early as the beginning of the third century by an Edessene along with the Saracens as representatives of all the Bedawīn" (Cureton, *Spicil. Syr.* p. 16 ult. in Nöldeke, *Z. D. M. G.* , Ixx., 1713). The corresponding word with the meaning "Arab" is *Pahlavi Tadzīk", in Armenian Tadzīk (cf. *Gverur, d. bram. Phil. i.*, 2, 1877) in Chinese Tadzhi. The Muslim conquerors seem to have known by the same name the Iranian population of Central Asia, as, in the view then prevailing, an Iranian convert to Islam became an Arab (cf. Tabari ii, 1508, 13), the word reached the *Turkic*, with the meaning *Muhammadan, a man from the land of Islam*; as the majority of the Muslims known to the Turks were Iranians, the word *Tadzīk* came to mean Iranian in Turkī. Maḥmūd Kāshgāri (cf. *cit.*) explains the word *Tekīk* as "Persian" (al-Farābī) in the contemporary Kūstābqāl Bīlik (esp. 8, 1) the *Tadzīk* are distinguished from the Arabs as Persians (cf. Radloff, *Versuch eines Worterbuches der Türk-Dialekte*, iii., 1906). The Iranians themselves even at this date already called themselves *Tārīk* in contrast to their Turkish rulers; e.g. Bā’ilakt, ed. Morley, p. 746 at the top. The difference between Turk and Tadzík is frequently emphasised; it was asserted that relations between a Turk and a Tadzík always ended badly and that a Tadzík could never rely on a Turk (Zahir al-Dīn Marzašī, ed. Dorn, p. 248 and 253 sqq.). On the relation of the word Tadzík to the word *Sart* cf. the article *Sart*. In the use of the two words the importance of the Iranians as a race of traders is apparent. The word *Sart* is first found in Turkī as a noun meaning "merchant" and later became the ethnic of the Iranians who were principally regarded as a race of traders; *sür gora*, the name Tadzík (Tekīk) later, at least among the Tatars on the Volga, came to be used as a broad meaning "merchant". According to one of the original sources for the conquest of Kazan by the Russians in 1552 (Prince Kurbsky’s account) the citadel of Kazan was surrounded by the *ditch of the Tekīk* (*tezīk* or *ezīk*) and the work Tekīk is explained as *merchant* (cf. Karamzin, *Ist. ges. Russ.*, VIII, 1772; P. Zarskiy, *Oberh. devomer Kasan*, 1877, p. 8).

At the present day the name Tadzík is sometimes
given to the Eastern Iranians in contrast to the Persians proper; the strip between Astarâbâd [q.v.] and Yezd is said to be the western limit of the dwellings of the Tadjik. In Turkistan the Tadjik, especially under Ozbek rule have been gradually driven from the plains into the mountains. The Russians include under the name "Tadjik" all the Iranian peoples in Turkistan, both the Tadjik proper, i.e. the people who speak "Tadjik" and the highlanders on the Pasuji (cf. XMU-DARNAK) and the upper Zarafshan, who occupy a special linguistic position. In keeping with the use of the name, the autonomous republic of Tadjikistan was founded in 1924 with its capital Dushanbe (on the upper Kafir-Nihân). According to a census of the same year, the number of Tadjik was 871,552. The people themselves use Tadjik in different ways. The inhabitants of several mountainous districts like Shughãn and Roshan call themselves Tadjik while they describe their Tadjik-speaking neighbours in Darwáz as "Persian-speaking" (farsi gûy); in contrast to this, the people of the upper Zarafshan, who speak a Persian dialect, apply the name Tadjik to themselves and call the people on the river Yagnob, who speak a peculiar dialect (Gallâ), the latter people seem also to distinguish their "Yagnobî" from the language of the Tadjik.

The old derivation (still given in Gründl ii., 402) of the ethnic Tadzhik from the head-dress tadjî may be absolutely rejected on both linguistic and historical grounds.

Bibliography: N. de Khanikof, Mémorial sur l'Étymologie de la Perse, Paris 1866 (Renseil de voyages et de mémoriaux, viii.); A. Shâhîv, Tadjîkî, Étymologie et interprétation des termes populaires, Tashkent 1913; Svetozar Asya, God ii.; W. Barthold, Tadjikî, Istoričskički Nerb (Tadjikistan, Tashkent 1925, p. 93-112); M. Andryeyev, Po ethnografii tadjikov. Nizhny Novgorod 1871, (ibid., p. 151-78); (W. Barthold) TADJIKI, the language of the Tadjik [q.v.]. As a literary language Tadjikii seems to be more or less remote from modern Persian according to the degree of education of the person writing or speaking it. In this sense (aiming at the elegance of the "Persian" but without denying a dialectical colouring), the Tadjik was the official and business language under the rule of the Ozbek of Bukhara [q.v.] and remained so after the revolution of 1920; since 1924 however Tadjik has been limited to the area of the new autonomous republic of Tadjikistan founded in that year. As a spoken language Tadjik has lost a portion of its area to Turkish in the last few years; on the other hand in the mountains it has extended its territory at the expense of other dialects (like the Yagnobî). On the linguistic position and peculiarities of Tadjik cf. Grundr. d. ir. Phil., i. ii. 407 ff., and the observations thereon by A. Freiman on M. Andryeyev in Tadjikistan, Tashkent 1925, p. 162. (W. Barthold)

TADJNIS or Djinj (A.), paronomasia, play upon words, is a figure of rhetoric (badâi) which consists in using in the same phrase two words of a similar or almost similar sound but of different meanings, e.g. amanatu sunt amenet.

1. The Tadjnits is complete (Jamu) when the two words resemble one another in kind, number, vocalisation (or form) and in the order of the consonants.

2. If the two words are of the same kind (e.g. two substantives, two verbs or two particles), it is called identical (numadîh), e.g. "The day and the Hour (al-âda) will dawn, the guilty will swear that they have only been an hour (îda) in their graves" (Sûra xxx. 54, 55).

3. If the two words are of different kinds (e.g. a noun and a verb, a noun and a particle, a verb and a particle), it is called "sufficient" or "imperfect" (mustafrî), e.g. man mâta min haddihî "men may humble (âdina) to Yahyâ b. Abdal-lâh," he who dies of the sudden changes of fate, lives (âdina) with Yahyâ b. Abdal-lâh, for he is generous and will revive the name of generosity" (Abû Tammâm, Divân, Bairût 1905, p. 341).

4. If one of the two words is a compound and the other simple, it is called a compound paronomasia (Ju’dâl al-tâkhûl). If the two words, simple and the compound, are similar in writing, it is called "resembling" (mustafrîh) on account of the resemblance or conformity of the two words in writing: e.g. idhâ ma’likum lam yakhmû dâbi kibû - fa-ala’din fa-dawlatuhû dâbi kibû, "when a king is not generous (dâbi kibû), leave him, for his kingdom — power — will not be long in disappearing" (dâbi kibû) (Abû’l-Fath al-Bustî).

5. If there is no conformity in writing between the two words, it is called separated, divided, cut (mufrî), e.g. kulluhum hal a-hâddihîhî dâbi long mulla’î dâba long ma’likum luw dâbi long; you have all taken the cup and we have no cup (wa-la dâbi long); what would have harmed him who made the cup circulate if he had been kind to us" (lew dâbi long) (Abû l-Fath al-Bustî).

II. 1. If the two words are not similar in form or even vocalisation, it is called "transposed" (munafarik) on account of the transposition found in one compared with the other (inshârî); e.g. hard and hard, in jâmâbât al-hard, jummat al-hard, "a cloak of striped material (hard) is a cuirass against cold" (hard); mufrî and mufrî in al-jâmâbât imam mufrî wa mufrî, "the ignorant man either goes beyond the limits (mufrî) or remains far below them" (mufrî) (one may note that in this example no notice is taken of the tashdîh); al-khâb at-sharîk al-tâkhûl; "innovation in the sense (sharîk) of polytheism" (tâkhûl).

2. If the two words do not agree in the number of consonants so that one has one or more consonants more than the other, it is called "imperfect" (nâfrî):

   a. Either the extra consonant is at the beginning of the word: e.g. ma ‘tâqaddîr ‘l-âda bi l-âda’ il-il rebbika yamu’l-âda al-masîkî, "when one leg (al-âda) shall be twisted over the other (‘l-âda)" (on account of the terror which will seize man on the approach of the last judgment), it is to thy Lord that the driving (al-masîkî) of men shall take place on that day" (Sûra lxxv. 39); or it may be

   b. in the centre as in Ju’dâl al-tâkhûl, "my fortune (Ju’dâl) depends on my efforts" (Ju’dâl); or

   c. or it may be at the end as in the verse of Abû Tammâm (Divân, p. 47): yamu’dinuk min wâni wâni wâni wâni, taqâla bi-nayfûn banâfûn banâfûn; they stretch out their hands, strong as rods (wâni) and protecting (wâni); they attack with their swords which deal death (wâni) and which are cutting (wâni) (they stretch out
hands which strike their enemies, defend their followers, attack their adversaries with swords which deal death and which cut)\(^1\). Sometimes this last variety is called *mu'arruf, rhymed*;

\(^1\) or the addition is more than one consonant as in this verse of al-Khaṣṣāṣ (\textit{Dīwān}, ed. Beysouth, 1896, p. 25): \textit{insert the words 'l-ṭafsīr al-kamīn min al-ṭafsīr bihān l-ṭafsīr}, "ears are the cure of the fire (al-ṭafsīr) which is in my loins" (al-ṭafsīr). This variety is sometimes called *muṣābīlā* (prolonged).

3. If the two words do not agree in the nature of the consonants, it is necessary that they do not differ in more than one consonant:

A. If the two different consonants are of pronunciations adjacent to one another, the dīnāt is called *muṣāfāt* (similar) and comprises three varieties:

a. The different consonant is at the beginning of the words: e.g. \textit{boint was-bintīn kumī laḥbūn dāniūn wa parḥūn ānānī}, "between the place where I am and my dwelling there is a dark night (dāniūn) and an obliterated path (ānānī)" (Harriri, ed. de Sacy, \textit{Sānūr}, xvi, p. 185).

b. It is in the middle: e.g. \textit{wa-kum wa-kumum anẖu wa-yanẖumum anẖu}, "they forbid it to them and (themselves) avoid it" (Sūra vi. 26).

c. It is at the end: e.g. \textit{al-khalīt ma-kaddūn fi ma-nawqištā l-khairūr}, "good fortune (l-khairūr) is associated with the forelocks of horses (l-khalīt)" (a dīnāt quoted by Bakhārī, Muslim, Tirmādī, Nāṣī', Ibn Mādi̇j).

B. If the two consonants have no analogy in pronunciation, it is called *ihāb* (approximate) and is of three kinds:

a. The different consonant is at the beginning of the words: e.g. \textit{ma-nabūb l-kulliHummatumHummatum}, "curses on each detractor and defamer" (Sūra iv. 1).

b. It is in the middle: e.g. \textit{lattān 'an thawmīn balāghu madāḥā - gha'ma annī 'ma'ru'ka kafān kafātīn}, "it is not by good fortune that I have attained my end, but that I am a man: what is sufficient for me to live (kafātīn) is sufficient for me (kafān)

\cite{Buḥūrī, \textit{Dīwān}, Cairo 1329 (1911), ii. 108}.

c. It is at the end: e.g. \textit{wa-lātha dīẖāh ummān min al-amīn wīlī l-khānū, when news (umma) inspiring confidence (āmm) or fear arrives for them} (Sūra iv. 85).

c. The two words do not agree in the order of the consonants, it is called *tafādāl al-kāf* ("palindrome" or "inversion"), e.g. \textit{khuṣūnumu fuṭūmu bi-nawīqītī nafta na]'īīnahtī, "his sword is victory (na]'īīnahtī) for his friends and death (nafta) to his enemies".

a. It is called "complete inversion" (kāf l-kāf) when the order of all the consonants is inverted: e.g. \textit{al-khuṣu'umum na]'īīnahtī na]'īīnahtī}, "God, conceal one faults (na]'īīnahtī) and assure one fears (nafta)!

d. It is called "partial inversion" (kāf l-kāf) when inversion only takes places with respect to some of the consonants. And in this case, if one of the two words in this variety is at the beginning of a line and the second at the end of a line, it is called "winged inversion" (manāfiḥ al-khuṣu'umum) e.g. \textit{lā<h} awūlūn l-khānū bi-nawīqītī ni kāfālākī fī kullī kāfālī, "the lights of the good path shines (lā<h) from his hand in every circumstance (kāfālī)".

III. When one of the two similar words follows the other, it is called, *misawafid, wummaddūn*.
TADJWĪD (Arabic) is the art of reciting the Qur'an, giving each consonant its full value, as much as it requires to be well pronounced without difficulty or exaggeration: strength, weakness, tonality, softness, emphasis, simplicity (farāk). There are three kinds of tadhād: 1. tamād, slow recitation; 2. ṭāhid, rapid recitation; 3. tadhād, medium recitation. — Tadżwīd, "the adornment of recitation", has for its object to prevent the tongue making any mistake in the recitation of the divine words. Besides the study of the articulation of consonants it deals with the knowledge of the laws which regulate the pause, the ṣalmāla or inclination of the vowel ū to the sound ū and contraction. The consonants fall into two groups:

1. Musta'luya "elevated" so called because in pronouncing them, the tongue is raised in the palate. These are  

They are all emphatic and more so than the others.

2. Musta'la "depressed", so called because the tongue is below the palate when they are pronounced. They are called simple; i.e. they are not emphatic, except wād and ūdām in the following cases: wād is emphatic when it is vocalised with a damma or a fathā. The wād is not emphatic if it is vocalised with an original or accidental kārā, if it is quiescent and preceded by an original kārā, and lastly if the wād and the kārā belong to the same word, provided the rā' is not followed by an elevated consonant. Ūdām is only emphatic in ʿall and ʿalim when they are the only preceded by a consonant modified by a fathā or a damma:  

At the end of a word the ūdām and tawwād retain their natural pronunciation when they are followed by one of the six guttural letters  

The quiescent ūdām and tawwād are assimilated to the letter which precedes them if the latter is  

The assimilation takes place with nasalisation except for the ū. When the word that they affect ends in another consonant the ūdām and tawwād have not their natural pronunciation; they are assimilated but not completely. It is the same with the quiescent ūdām which is contracted with the ūdām which follows it. It is modified when it is followed by a vocalised ūdām. In other cases it retains its ordinary pronunciation.

There are two kinds of contractions:

1. Great, when the consonants are both vocalised like  (Sūra lxiv. 43) to be pronounced  

2. Little, when the first of the consonants is quiescent and the second vocalised. It should also not be forgotten that the ūdām of the article is only assimilated if the consonant following is solar; the sound should be prolonged when the word contains an alif, a waw or a ūdām preceded by a vowel of the same nature. If the ūdām or ūdām are preceded by a fathā they become softened letters. The ūdām may be retained or suppressed; in the latter case, its vowel is carried back to the preceding quiescent consonant. If the ūdām is quiescent, not by apocope, it may be changed into a letter of prolongation of the same nature as its support. The pronunciation of ūdām is incompletely softened when it is not preceded by a vocalised and non-quiescent ūdām; the vowel of the second ūdām then resembles a sukūn, a ūdām when ūdām is preceded by a damma  .

The second ūdām "falls" when the two ūdāms are affected by the same vowel and belong to two words  which follow them.

The verses of the Qur'an, although separated by a sign, are not to be recited with a stop at the end of each of them. The pause is only to be made if the sense of the verse or verses is complete and forms a homogeneous whole. As a rule in good copies of the Qur'an, the places where the pause is not allowed are indicated by an  (no pause). If a pause is made after words like  a quiescent ūdām should be added (called silent ūdām). Some readers restore the suppressed final ūdām in the middle of the discourse like , etc.; other drop the sukūn and its vowel and say , etc. When a word ends in a ūdām preceded by a ūdām or a ūdām, the ūdām is assimilated to the letter which precedes one says for , especially after ūdām. The ūdām of the accusative is changed to alif. The final ūdām of feminine singular nouns is changed to quiescent ūdām. A vocalised final consonant loses its vowel; this vowel is sometimes only weakened (by ra[im]) or rather it is pronounced like a final French e (ihmāna). However this last method of pronunciation is not allowed in words ending in kārā; some even say that ra[im] and ihmāma only affect damma.

(Moh. Ben Cheneb)

TADLĀ (or TADILĀ), the Todle of Leo Africanus, a district of Morocco comprising the plateaus which stretch to the west of the high valley of
the Wādī Umm al-Rabī', as well as the western slopes of the Central Atlas, from Wādī 'I-Abū to the sources of the Molaya. The classical ethnic Tādilī is no longer used except for the Sharfī of the district; the popular ethnic is Tādilī.

The region of the plateau is occupied by six semi-nomad tribes of Arab origin: Urdīgha, Bni Khrān, Bni Zemmūr, Smā'la, Bni 'Amer, Bni Mūsă, whose centres are Wādī Zem, Bajād (Bnī Biljādrīd) for the classical Abu 'I-Dajād) and Bni Zadīlī.

In the central region of the high valley of the Umm al-Rabī' (the old Wādī Wānsataf) is settled the group known as Bnī Rabī', made up of tribes almost entirely sedentary and of mixed Arab and Berber origin. These are the Gījāya, the Semget, the Bni Ma'dīs and Bni Mellās. The two principal centres are Kašba Tādīlī and the ḫaṣba of the Bni Mellās.

The western slopes of the Central Atlas we have from north to south the following Berber tribes: Ait Sir, Ait Ṣāfī, Ait Bnī-Zid, Ait ʿAṣīyā and Ait ʿAntāb.

The Berber peoples of the mountains belong to the Zenāga group (Ẓanḥādā). In the plains there were at first Zanāta, Berbers who led a nomadic life between Meknās and the Umm al-Rabī' and the Lawāya (Zanāra). The earliest Arab tribes here were the Luḥṣām (B. Diẓār, Zīrār), then the Khulī. It was the Zenāga who introduced tribes of the Maṣwarī group.

At a remote period, Tādīlī seems to have been inhabited by people more or less professing Christianity or Judaism. When Idrīs II conquered it in 722 (789), he found — according to the author of the Rawṣafat al-Kūfīfī — very few Muslims, in fact many Christians and Jews. Leo Africanus who was in Tādīlī at the beginning of the xviith century mentions the large Jewish colonies there; at Tafra, the capital of the country in his time, there were about 200 houses of Jews, all merchants and rich artisans. At the present day there are still many Jews at Bajād and in the ḫaṣba of the Bnī Mellās. This last place corresponds to old Madīnat Uḏdā, an Arabic-Berber name which seems to mean "town of the Jews". Tādīlī was one of the provinces which the sons of Idrīs II divided among themselves. According to the author of the Rawṣafat al-Kūfīfī, it went to Aḥmād, but al-Bakrī says that Dāī, the capital of the region, belonged to Yaḥyā.

In time Tādīlī became incorporated in the empire of the Bnī Yafaran of Shāhla (q.v.) (xv-xx centuries). In 449 (1057-1058) the Almoravids having taken Aghmār, the Maghrāwīd Lajjūb b. Yūsuf, who reigned there, managed to escape and took refuge with the Bnī Yafaran of Tādīlī; 'Abd Allāh b. Ṣāfa, leader of the Almoravids, followed him there and conquered the province. A local legend says that the town of Dāī was destroyed by the Almoravid Sultan Yusuf b. Tāhbīn, who built Tāhbīt to replace it, the ruins of which can still be seen in the immediate vicinity. This incident, which does not seem to be recorded in history, may perhaps be located in the period of Yūsuf b. Tāhbīn’s war on the fortresses of Fāṣa, a region adjoining Tādīlī on the north.

In 526 (1131-1132) the Almohad Sultan ‘Abd al-Mu’min seized Tādīlī and henceforth the province lying halfway between Fāṣa and Marrākēs on the direct road between them, became the battleground of the rival dynasties. Its history is that of these struggles and of the constant rivalries of the Arab or Berber tribes who live in it.

In 690 (1261-1262), the Marinid chief Yaḥyā b. ‘Abd al-Ḥāḳ having come to attack Marrākēs, the Almohad Sultan al-Murtādā sent his cousin Abū Dabbūs against him. The Marinid troops drawn up on the Umm al-Rabī’ were defeated at the place called Umm al-Rajdīlīn, which perhaps corresponds to the ford now called Umm al-Rajdīlī.

In 666 (1267-1268), the Marinid Sultan Yaḥyā invaded and laid waste Tādīlī; having raided the Khulī, an Arab tribe of Luḥṣām stock, allies of the Almohads, the latter came to their assistance but were defeated as they were deserted in the course of the battle by their Arab allies, the Bani Ḥāfar. In 761 (1359-1360), the Sultan al-Husayn b. ʿUmar, governor of Marrākēs for the Marinid Sultan Sālim Ibnrāfīm, rebelled against his master and sought refuge in Tādīlī, where he was welcomed by the Bani Ḥāfar; but, when hard pressed by the Marinid troops, he had to flee to the Zenāga of the mountains finally handed him over to his pursuers.

On the coming of the Saʿdīans, it was once more in Tādīlī at the ford of Abū ‘Aḥkām on the Wādī ‘I-Abū, that was sought the decisive battle in which the Marinids were routed in Ṣafar 943 (July 1536). In the reign of al-Manṣūr, in the xviith century, Tādīlī was governed by Zalān, son of this Sultan. In the middle of the same century, Tādīlī threw off the authority of the Saʿdīans and became part of the principality of Zenāga. Berbers of the Moukātā of Dīlā and, one of them, Muhammad b. al-Haḍāfi, defeated the Saʿdīan Sultan Muhammad al-Shāhī at the ford of Abū ‘Aḥkām in 1050 (1600-1601). The former regency of the Dīlā was exercised over this region until the ʿAlawi Sultan al-Kashīd destroyed their sīwiq in 1079 (1668-1669). In 1084 (1673-1674), the ʿAlawi Sultan Ismāʿīl defeated at Abū ‘Aḥkām his nephew Aḥmād b. Muḥrīz, who had rebelled against him.

In 1088 (1677-1678), Mawlay Ismāʿīl had to put down a serious rising of the Zanāga of Tādīlī, who had rebelled at the instigation of a Dīlā, ‘Aḥmād b. ‘Abd Allāh. In 1099 (1687-1688), he had to make another expedition, which resulted in the building of the sīwiq of Atadākhān (near Khenfīra), Tādīlī and Dīlā. At the division of the provinces of Morocco in 1111 (1699-1700), Tādīlī fell to the son of Mawlay Ismāʿīl, Mawlay Aḥmad who, living in the ḫaṣba built by his father and called Kašba Tādīlī on the Umm al-Rabī'.

In 1142 (1729-1730), Sultan Mawlay ‘Abd Allāh had to take the field once again in the Tādīlī against the ʿAṭr Yemmūrī who were routed. In 1179 (1765-1766), Sultan S. Muhammad b. ‘Abd Allāh was forced to deport them for a time to the Diẓār of the Bnī Zem nowadays Retāṣ. They were replaced provisionally by the Gījāya, the Semget and the Mehjīrī who later sent back to the ʿAṭr. In 1199 (1784-1785), the same ruler had to destroy the sīwiq of Bajād and imprisoned its head, Muhammad al-Arāb b. al-Shāhī. In 1222 (1807-1808), Sultan Mawlay Sulaimān sent a punitive expedition against the Bnī Zem, the ʿAṭr Asīfī, the Rīṭās and the Bnī Aḥyā. In 1224 (1809-1810), there was a
new expedition against the Berbers of Taddé (Aït Sdr) and one against the Urdigha Arabs. It was Mawlay Salâma who built the mosque of Bajad and the bridge over the Umm el-Kabîr.

In 1269 (1852-1853), Sulîm Âbd-al-Rahmân b. Hîgâm punished the Bîb Mûsa who had slain their governor Aymad b. Zadâm. In 1280 (1872-1873), Sulîm Mûsamâd b. Âbd-al-Rahmân sent an expedition against the Arab tribes of Taddé and Bîb Mûsa, who had rebelled against their governor (Sanka, Bîb Zemmûr, Bîb ‘Ummâr).

In 1295 (1878-1879), Sulîm Mawlay al-Hassan to pacify the region had to raid the Bîb ‘Ummâr and Bîb Mûsa. Next year he returned to punish the Aït ‘Attab. It was at Taddé, on the Umm el-Kabîr, that he died in 1311 (June 1894).

The great religious centre of the district is the âjwa of Bajad founded in the 17th century among the Bîb Zemmûr by Muhammad al-Sharkî. His descendants form the important Marinid group of the Sharâkîa [q. v.].

**Tadmur** [See Palmyra.]

**Tafdîl** is the *vurnished artium* of the second formation of *jafala*, it *exceeded*; or *was*, or *became redundant*, or *superfluous*. In grammar it is applied to the comparison of adjectives. *In al-tafdîl*, the "noun of the attribution of excess, or excellence," is the noun adjective in the comparative and superlativc, or, as it is now usually called, the elative degree. This is also called *al if al-tafdîl* because it is regularly of the measure *al if al.*

**Bibliography:** The standard Arabic lexic; Wright-de Goeje, *A Grammar of the Arabic Language*, Cambridge 1866-1868, i. 140-141; de Sarvay, *Grammaire arabe*, Paris 1851. (T. W. HATO)

**Al-Taff,** the desert region that lies west of Kûfâ along the whole plain of the Euphrates. It is higher than the low-lying ground by the river and forms the transition to the central Arabic plateau. According to the authorities quoted by Yâkût (iii. 359), al-taff means an area raised above the surrounding country; the name is not found after the sixteenth century. The district contains a number of springs, the waters of which run southwest (cf. Ibn al-Fâkîth, p. 187). The best known of these wells was al-Udghar. From its geographical position al-Taff was the scene of the first encounter between the Arabs and Persians (Tabbari i. 2240, 2247; Ibn al-Ahdrî, iii. 345-351). The Sâharî tribes had stationed there feudal guardians of the frontier which was defended by forts (*maqâla*) and a great ditch (*manadik*) which began at Hît (Ibn Rosta, p. 107). On al-Taff lay al-Kâdisiyâ [q. v.] and also Karbala famous as the scene of the death of al-Hussain (Yâkût, loc. cit. and Bakrî, *Muqâmî*, ii. 456). The latter is also referred to as al-Mukhtâr, *al-taff* (cf. al-Mukhtârî, Ibn al-Ahdrî, iv. 149; or also the poem quoted by Yâkût, loc. cit. and Ibn al-Ahdrî, iv. 267). In later centuries al-Taff is rarely mentioned (e.g. Ibn al-Ahdrî, vii. 379 in connection with the Karismatic troubles); and the majority of the Arab geographers make no mention of it. (J. H. KRAMER)

**Tafilalt,** ethnic Fitlîlî, the name of a district in S.E. Morocco, formed by the broadening of the valley of the Wâdi Zin. It consists of an alluvial plain 12 miles long and 10 broad, over which are scattered 200 *jâfâr* (or fortified dwellings of clay) surrounded by gardens and cultivated fields. Where irrigation from wells is possible, the soil is wonderfully fertile. The chief product of Tafilalt is the palm-tree and the most developed industry is the preparation of goat-skins by the use of the bark of the mimosa which yields a tanning gall. Fitlîl leather is famous and sought after throughout all north Africa. The population is dense, in the *jâfâr* of Tafilalt it was estimated in 1920 at 150,000. The historical capital of Tafilalt was al-Shîjimâs (q.v. for the political history of Tafilalt). Here we may simply state that the district was the cradle of the dynasty of the 'Alîd Sharifs of Morocco, also called Fitlîlî Sharifs and still the ruling family. Many of these Sharifs after the accession of their family to the throne remained in or returned to settle in Tafilalt where they may be counted by thousands. A khâtila of the Moroccan Sultan represents the authority of the *malik* among them and in the valley of the Zin. In addition to Shîjimâs of which only the ruins remain we may mention as small towns in Tafilalt the *jâfâr* of Rûb’îm, the business centre of the district, and that of Tîghmar with defences built at the end of the sixteenth century by order of Sulîm Mawlay al-Hassan.

**Bibliography:** cf. the article *Shîjimâsa.*

A general description with a map will be found in F. Ricard, *Les Guides Bleus*, Maroc, Paris 1919, p. 255-258. (E. LÉVY-PROVENÇAL)

**Tafsîr** (âz), pl. tafsîrîr, explanation, commentary, verbal form: *jussâra* to explain. The name is applied to commentaries on scientific and philosophical works and is an alternative to *sharîh*; it is regularly applied to the Greek and Arabic commentaries on Aristotle: the following are examples taken from Ibn al-Kîthî’s *History of Scholars*: Banas al-Rûmî wrote a *tafsîr* on the *Almagest* and another on the tenth book of Euclid; Abu ‘l-Wâfî al-Bûrûjî, the famous astronomer, wrote a *tafsîr* on the works of Diophantus and of Khâwrîmî on Algebra; Muhammad b. Zakariyyâ al-Rûzî, the famous physician, wrote a commentary on the *tafsîr al-tafsîr* of Pintarch on the *Timaeus* of Plato. The Christian scholar Hunain b. Ikhâlî excelled in translations and *tafsîr.* The majority of the famous works of Greek science and some of Arabic science have had commentaries made on them, translated into or written in Arabic.

In Idrîs the word *tafsîr* means particularly the commentaries on the *Qur’an* and the science of interpreting the sacred book. This branch of learning entitled “Knowledge of *Qur’an* and of the commentary” is a special and important branch of Hadîth; it is taught in the madrasas and the universities. There are in Tafsîr a few general works on the *Qur’an* not written in the regular style; but the majority are continuous commentaries, in which the text of the sacred book is explained in regular order, phrase by phrase and sometimes even word by word. These commentaries are numerous: the most famous are those of Tabarî, Zamakhshari and Beidîwî.

Tabbarî (d. 310) is the great historian; his com-
mentary, a very extensive work, contains a large number of traditions handed down by authoritative transmitters (jinâdi). Zamakhshâri (d. 538) is a very keen brain, a moralist of delicate sensibility and a philologist of consummate skill. His commentary (al-Kashshâf) is much valued and has in turn been commented upon by important theologians like Taftâzânî (d. 792) and Saiyid Shâfir Dînjânî (d. 816). The commentary of al-Bâdîwâlî (d. 685) is the most popular and is the one taught in the schools: it has fixed the beliefs of the pious Muslim as regards the interpretation of the sacred book and has been several times annotated. Among the other commentaries we may mention that of Fakhr al-Dîn al-Râzî (d. 666) which is called the great Taftîr and that of Ismâ'îl b. Šâhîj b. Braun, an author much esteemed by the Turks (d. 1127). It is worth noting that the majority of these learned men belong to the Persian region.

The science of Taftîr is old and seems to date from the beginnings of Islam, Ibn 'Abbas for example (d. 68 A.H.) is said to have been an authority on the subject and a Taftîr is attributed to him (Hamûdiyya Library in Stamhul). Recent criticism (Goldzaher, Lammens etc.) has raised the question of the real value of the traditions contained in these enormous compilations. The answer so far has not been very favourable; the majority of the traditions seem to have been invented, either to settle a point of law or with some theological object or with a simple desire to explain or even merely as an amusement. There is, these critics say, no hope of finding much exact information in these commentaries about the circumstances under which the Kur'ân was composed and made public; they are nevertheless important for the minute study of Muslim law and theology as well as for the legends and philology. In our own day a learned Egyptian Shi'ît Taftâzâni has sought to rejuvenate the study of Taftîr; he is publishing a commentary into which he introduces many ideas borrowed from philosophy and modern science [cf. also Ta'wil].

Tafta (p. "twisted"), a kind of silk, tafta. Clavijo, ambassador of Henry III of Castile, found in the markets of Tabriz, of Sulhânum and of Samarkand, taftes were woven in the country itself. This material spread more and more in the East towards the end of the Middle Ages.

Bibliography: M. Devic, Dict. des mots français d'origine orientale, p. 214; Clavijo, Narrative, p. 109, 114, 190; W. Heyd, Hist. du commerce du Levant, French ed. by Raynand, Leipzig 1886, Index. (CL. Huarte)

Al-Taftâzânî (Sa'd al-Dîn Ma'dûb b. 'Umar), a celebrated authority on rhetoric, logic, metaphysics, theology, law and other subjects and the author of several text-books used to this day in the madrasas of the East, was born in Safr. 722 (Feb.–March 1322) at Taftâzân, a large village near Nast in Khurâsân. He is said to have been a pupil of 'Abîl ad-Dîn al-Mîdîjî (see above, p. 447 and Brockelmann, G. A. L., ii. 308) and of Ku'b al-Dîn [al-Râzî al-Taftâzânî presumably], see Brockelmann, ib. 209]. Lists of his chief works, giving, with variations, the dates and places of composition, are extant (Muhammadî Fâshî under the year 787; Rawûtat al-Dînjânî, p. 309 [considerable variations in the dates]; al-Fâshî al-Idhâhiyya, p. 137; Ahlwardt, Berlin Catalogue, No. 195]), and provide some information concerning his migrations. His earliest work, the Shâhî al-Taftîr al-İstâ'ât, was written by him at the age of sixteen, it is said, in Shâbân 738 (1338) at Fârûyân. The Mu'jamwa'al, the Mughîsîyar al-Ma'dînî and the Taftâhî were completed in 748, 756 and 758 at Harîl, Guhdjûwân and Guhsîân. According to Ibn 'Arâbîsh al-Taftâzânî, like Ku'b al-Dîn al-Râzî, was one of the scholars attracted to the court of the Monguls of Western Kpeâk, and the Mughîsîyar al-Ma'dînî, completed at Guhdjûwân in 756, is in fact dedicated to Muhammûd Dînjânî Bâg. Khâdîjdâmîr's statement that he settled at Khâdîjdâmîr is borne out by the fact that works completed by him in 768, 770 and 787 are said to have been written there. Khâdîjdâmîr tells us that in 779 (1377–1378) he was present at [see above, i. 166 and Brockelmann, G. A. L., ii. 210] to the Muqâṣṣid ruler of Fârs, Shâh Shâhir. The same author states that when Timur invaded Khâdîjdâmîr [in 780–781 (1379) presumably] Malik Muhammûd Sarajîsh, son of Malik Mu'âd al-Dîn Huseîn Kûrt, asked his nephew, Pir Muhammûd b. Ghiyâsh al-Dîn Pir 'Ali, who was then in the suite of Timur, to obtain Timur's consent and send al-Taftâzânî to Sarakhs. Timur agreed, but subsequently on learning how eminent a scholar al-Taftâzânî was, he sent to Sarakhs a request that he should come to Samarqand. Al-Taftâzânî at first declined on the plea that he was about to visit the Hûdâs, but on receiving a second summons he transferred himself to Samarqand, where Timur treated him with great honour. The conquest of Shâhir by Timur in 789 (1387) was followed by the arrival in Samarqand of his old acquaintance al-Sâyîd al-Shâhir al-Dînjânî. The rivalry between them led to controversies and to an estrangement, which is reflected in the criticisms of al-Taftâzânî's views to be found in some of al-Dînjânî's works. Al-Taftâzânî died at Samarqand in 791 (1389) (Buqhayât al-Wâlî) or on the 22nd of al-Muharram 792 (Jan. 10, 1390) (al-Faw'ûdî al-habîyya, p. 135) or on the 22nd of al-Muharram 793 (Dec. 30, 1390) (according to a chronogram ascribed to al-Dînjânî, see the Khedivial Library Catalogue, ii. 242), or in 797 (1394–1395) (Hâshîh al-Sîyar). The date 787 given by Fâshî is inconsistent with the alleged dates of some of his works and with the statement that he and al-Dînjânî forgered after the capture of Shâhir in 789. He was buried at Sarakhs.

Al-Taftâzânî seems to have had no pupils of great distinction. The two mentioned in the Rawûtat al-Dînjânî are Husân al-Dîn al-Hasan b. 'Alî al-Abrwîd, the author of a work entitled Râbî'l-Dînjânî fi 'l-Masâ'în wa-l-'Bayân, and Burhân al-Dîn Haidar (see Taşkîpîrîzade, al-Shâhiq al-Nâmîusâ'î, transl. Rescher, p. 33 and 'Ilî, xi. 61).

Al-Taftâzânî's merits impressed Ibn Kâlidân, who came across some of his works in Egypt and mentions him in his Muhûddim (transl. de Slane, iii. 120). He wrote both on Shâ'î and on Hanâfi law and has been described as a Shâ'î by some authors (e.g. al-Kûfîwî and Hasan Cebî).
and as a Jaina by others (e.g. Husein Nadim and 'Ali b. Sulaym Muhammad al-Kati').

Among his works are the following (the dates assigned to these works in the Kitab ad-Durr al-Durrani, which in many cases differ considerably from those given elsewhere, are not always mentioned. For fuller information concerning the manuscripts, supercommentaries etc., Brockelmann, G. A. L., should be consulted):

I. Grammar

1. Sharh al-Tafsir al-Fatih (in India often called the Se'ediya), a commentary on the Arabic exegesis of al-Zanjandi ('Iza al-Din 'Abd al-Wahhab b. Ibrahim, see Brockelmann, G. A. L., i. 285) completed at Faryād in Shaban 738 (1338) when the author was sixteen years of age. MSS. at Berlin (Ahlwardt, No. 6617–6618), Turin (Naldino, No. 39) and elsewhere. Editions: Constantinople 1255, Thirān 1270, 1884 (in a manuscript), Delhi 1289, 1295 (with the Miftah al-Siddiya of Ahmad b. Sahib Gul), 1886 (with the Miftah al-Siddiya), Bombey 1292, Lucknow 1306, Cairo 1307. Of the supercommentaries, in addition to the Miftah al-Siddiya mentioned above, that of Dede Khaliťa has been printed (Bulāk 1255).

2. al-Ikhtiyār, or [al-L]Irshād al-Kuti, as Hādīyat Khaliťa calls it, an Arabic syntax written for his son and completed at Khwarizm in 724 or 728 or 727. A manuscript exists at Vienna (Filgel, No. 206). Several commentaries are mentioned by Hādīyat Khaliťa, including those of Muhammad b. 'Abb al-Djurjūnī (a son of al-Sayyid al-Shariqī) and Shams al-Din Muhammad b. Muhammad al-Bukhari, which are preserved at Munich (Ahlwardt, No. 6754–6755) and the Escorial (Derenbourg, No. 181) respectively.

II. Rhetoric

Al-Tafsīzandī's three works on rhetoric are all connected directly or indirectly with the classical exposition of the subject contained in the third part (al-zim) of the Miftah al-Ulum of al-Sakkāki (see below under al-Sakkāki and Brockelmann, G. A. L., i. 294). Two of them are interwoven commentaries on the abridgment, Tahtīf al-Miftah, written by al-Kazwīnī (Muhammad b. 'Abb al-Rāyjanī called the Khāṭtī Dimashq; see Brockelmann, ii. 22).

1. al-Mu'assalāt, as it is usually called, orSharh al-Mu'assalāt, or Sharh al-Takhir al-Mu'tamid, completed in Safar 748 (1347) at Aṣīrāt. Editions: Constantinople 1250, 1289 (with al-Djurjūnī's glosses), Lucknow 1255 (first part only), 1289 (first part only), 1288, 1306, 1309 (with 'Abb al-Rāyjanī's al-'Uqāfī, a commentary on the verses passed on), Thirān [?]. 1270, Delhi 1326 (with al-Mu'assalāt, a commentary by Muhammad b. 'Abb al-Rāyjanī). A Persian edition of 1274 (with commentaries by al-Fanārī, al-Djurjūnī, al-Samarqandī, and Muhammad Rījā Gulpiyagānī) is mentioned in the catalogue of the Khevdīl Library, iv. 153.

The glosses of al-Djurjūnī have moreover been published at Lucknow in 1312 and those of 'Abb al-Hakim Siyāsī at Constantinople in 1266.

2. Mukhtār al-Ma'ānī, as it is now commonly called, or Mukhtār Sharh Tahtīf al-Miftah, or 'Abb al-Sharh al-Takhir, or Sharh al-Mukhtār, or simply al-Mukhtār (the author having given it no formal title), a shorter interwoven commentary, completed in 756 (1355–1356) at Ghuzīdawān and dedicated to Mahmūd Dijān Bēg. Like the Miftah al-Ulum this work is still studied in Eastern madrasa. Manuscripts are common and there are several supercommentaries. Editions: Calcutta 1813, Lucknow 1261, 1312 (with al-Bunātī's supercommentary), Bulāk 1271 (with al-Dassīlī's supercommentary) (1860?), 1285 (with al-Bunātī's supercommentary), Calcutta 1285–1286 (with al-Khatīb's [al-Khatīb's!] supercommentary), 1296 (with the same supercommentary), Meerut 1285, Constantinople 1301, 1301 (with al-Dassīlī's supercommentary), Lahore 1306–1307, Delhi 1286, 1324.

Extracts from this work have been published by Mehren in Die Rheotorik der Araber (Copenhagen and Vienna 1853).

3. Al-Tafsīzandī's third rhetorical work, Sharh al-Qīm al-Khuli'ī min al-Miftah, is a commentary on the third part of the Miftah al-Ulum itself. It is one of his latest works, having been completed at Samarkand in Shawwāl 787 (1385) or 789 (1387), and it has not enjoyed the same popularity as the Muhkma al-Ma'ānī and the Miftah al-Ulum. Manuscripts are preserved at the Escorial (Derenbourg, No. 26), the India Office (Loth, No. 847–848), Leyden (de Goeje and Houtsma, No. 298), Trinity College, Cambridge (Palmer, No. 18) and elsewhere.

III. Logic

1. Sharh al-Fisalāt al-Samā'iyā, or Sharh al-Samā'iyā (in India this work, like the Sharh al-Tafsīr al-Fatīh, is often called Se'ediya), a commentary on the logical manual of al-Kāthīrī (Nadjīm al-Din 'Abb b. Umar al-Kāthīrī; see Brockelmann, G. A. L., i. 466) completed at Dīān in Djamā'ī II 752 (1351) (Mujaddālā) or 757 (1356) (al-Fawā'id al-bukārā) or 762 (1361) (Ahlwardt, No. 1959) or 775 (1370–1371) (Rasūl ad-Durrani). MSS. are preserved at Berlin (Ahlwardt, No. 5266–5268) and elsewhere. Editions: Lucknow 1905 (1326).

2. Tahtīf al-Manafīs wa 'l-Kalām, at it is usually called, or Ghayāt Tahtīf al-Manafīs fi Tahtīf al-Manafīs wa 'l-Kalām, as the author calls it in his preface, a manual of logic and scholastic theology completed in Radjāb 789 (1387). Whereas the second part of this work, described by Hādīyat Khaliťa as an abridgment of the Muqādīd, is evidently copied (and rarely, for some copies seem to be distinctly recorded in the existing catalogues of manuscripts) the first part, on logic, became a favourite text-book and has often been published.

Editions: Calcutta 1243 (with al-Yāsī's commentary), 1328 (with an Urdu translation), 1333 (with the same Urdu translation), [Lucknow?] 1250 (preceded by the Tahtīfīdī). Lucknow 1859 (in a Madīna'i-Ma'ani), 1288 (the introductory portion only with the commentary of al-Durwānī and glosses by Mis Zakhīd and 'Abb al-Hājī Lakhnawī), 1292 (with the same), 1321 (with the same), 1290 (with al-Yāsī's commentary and glosses thereon by 'Abb al-Hājī Lakhnawī), 1292 (with the same commentary and glosses), 1311 (with the same), 1787 (with Mahmūd b. Māhāmūd al-Shabristānī's Persian commentary), 1854 (with the same Persian commentary), 1322 (in a Madīna'i-Ma'ani Madīna'i Mantif), Delhi 1264, 1276, 1283–1284, 1869], 1286 (all these Delhi editions with
al-Yaṣaḍi’s commentary), Cawnpore 1278–1279 (in a Mağfof-1-a Muntası), 1291 (with al-Yaṣaḍi’s commentary and glosses entitled Tawfik-i Zāhik Lajdānī by Ḥāfiẓ Bahākh Faddābādī), 1296 (with the same commentary and glosses), 1851 (in a Mağfof-1-a Muntası), 1915 (with al-Shahrastāni’s Persian commentary), Benares (1899), and with an Urdu translation).

IV. Metaphysics and Theology

1. al-Maḥṣūf, a compendium of metaphysics and theology, completed with the author’s own commentary at Samarqand in Dhu ’l-Ka’dā 784 (1338) (in 774 according to the Rawḍāt al-Dīnānāt). A Constantinople edition of 1277 is mentioned in the catalogue of the Kedivial Library (li. 26) and there are manuscripts in the British Museum (Ellis-Edwards, p. 9), the India Office (Loth, No. 461–464) and elsewhere. As has been said above, the second part (kām) of the Taḥbīh al-Mustafī wa l-Kalām is described by Ḥāfizī Khaṭīf as an abridgment of this work.

2. Taḥbīh al-Mustafī wa l-Kalām. See above under Logic.

3. Sharḥ al-Afḍal al-Nasfīya, completed in Shāhābūn 768 (1367) at Khirbat al-Tannur, a commentary on the extremely brief statement of Muhammadan belief written by ʿUmar b. Muhammad al-Nasfī (d. 537 = 1142–1143; see Brockelmann, i. 437). This work also is a favourite text-book and several supercommentaries have been written on it. Editions: Calcutta 1244, Delhi (1870), 1904, Lucknow 1876, 1888, 1890, 1894, Constantinople 1297 (with the supercommentaries of al-Kastali and al-Khayālī and the glosses of Bihlī, al-Khayālī and the latter), Cairo 1297 (with al-Khayālī’s supercommentary and Ḥāfizī Khaṭīf’s glosses thereon), Cawnpore 1905, 1930. Extracts are translated into French in L’Observateur’s Tableau général de l’Empire Ottoman, vol. i. and there is a German translation in J. T. Plant’s Biblische Rituale [sic], oder Elementarbuch der Mohammedanischen Glaubenslehren (İstanbul and Geneva 1790).

Of the supercommentaries that of al-Khayālī has been published at Delhi in 1870 (11) and 1329 (with ʿAbd al-Ḥākim Siyyālī’s glosses), at Lucknow in 1876, 1313 (with ʿAbd al-Ḥākim Siyyālī’s glosses), 1326 (with the same glosses), at Constantinople in 1297 (with al-Kastali and Bihlī) and at Cairo in 1297 (with Ḥāfizī Khaṭīf’s glosses): that of Ḥasan Shahid (Abu l-Ḥasan b. al-Afḍal) at Bihār in 1328, and that of Ṣaʿīd b. Ahmad Efendi at Delhi in 1237.

4. An attack on the heresies of Ibn ‘Arabī’s Futūḥat al-Balīhām preserved in a Berlin manuscript (Ahlwardt, No. 2691), which bears on fol. 1b the doubtful title Futūḥat al-Muṭanabbī.

V. Principles of Jurisprudence

1. al-Taṣkīh illā Kawkab Ḥāfiz al-Taṣkīh completed 29th Dhu ’l-Ka’dā 758 (1357) at Gūzān, a commentary on the Taṣkīh al-Uṣūl of Ṣaḥīḥ al-Sharīʿ’s the Younger (ʿUḥdāb Allāh b. Masʿūd al-Maḥbūbī, d. 747 [1346–1347]; see Brockelmann, ii. 214).

Editions have been published at Delhi in 1267 (1851), 1273 (with Ṣaḥīḥ al-Sharīʿ’s other commentary al-Taṣkīh) 1281 (1864) (with the Taṣkīh), 1287 (with the Taṣkīh) and 1292 (1870) (with the Taṣkīh), and supercommentaries on the Taṣkīh by Ḥasan Ṣalebī, Mullā Ḥusayn al-Tawfīqī, and al-Anṣārī, and at Kāzīm in 1301 (1854) (with the Taṣkīh).

VI. Law

1. al-Muṣafā, on Ṣaḥīḥ ʿAbū Daʿūd. A manuscript is preserved at Berlin (Ahlwardt, No. 4664).

In addition to this work a collection of Ḥanafī Fatwasī is mentioned by his biographers, but no copies seem to be recorded.

2. Taḥṣīl Sharḥ Taḥṣīl al-Dīnī Ṣaḥīḥ al-Ḥācir, an unfinished abridgment of the commentary of Maṣʿūd b. Muhammad al-Ghajdūrī on al-Khāṣṣ’s abridgment of al-Shafiʿī’s treatise on Ḥanafī Faraḥī entitled al-Dīnī Ṣaḥīḥ al-Ḥācir (see Brockelmann, G. A. L., i. 172 and H. Kh., lii. 401). According to the Rawḍāt al-Dīnānāt this work was begun at Sarhāb in 785. A manuscript is preserved in the Veṣri Ṣaḥīḥ (No. 436 bi).

At Delhi in 1870 (15) was published an edition of the Muḥākkat al-Uṣūl fī Ḥanafīa, a treatise on the ritual prayers ascribed by some to al-Khāṣṣ’s (see Ḥāfizī Khaṭīf) Khaṭīf, vi. p. 83), with commentaries alleged to be by al-Djurjūnī and al-Taḥfizī, but it is uncertain that the Khaṭīfī existed in al-Taḥfizī’s time.

VII. Kurʿānic Exegesis

1. KāTim al-Aṣrūr wa l-Uṣūl at-ʾArbrār, a Persian commentary on the Ḫurāsān (cf. H. Kh., v. No. 10674). A manuscript appears to be preserved in the Veṣri Ṣaḥīḥ (see the catalogue, p. 8a, No. 43).

2. Sharḥ (or Ḥāfiẓf fī) al-Kifāḥ, a Commentary on al-Zamakhshari’s treatise on al-Kifāh (see Brockelmann, G. A. L., i. 290), said to have been begun at Samarqand in Rabiʿ 1, 789 and left unfinished. These annotations embrace Suras L. x. 58 and xxxvii.–liv. Manuscripts are preserved at Berlin (Ahlwardt, No. 793), the British Museum (Ellis-Edwards, p. 3), the India Office and elsewhere.

VIII. Philology

1. al-Nīmī ash-Sharḥ fī Sharḥ al-Kālim al-nīmī, a commentary on al-Zamakhshari’s collection of sententiae entitled al-Kālim al-nīmī. Selections from this commentary were published by H. A. Schultens in his Anthologia sententiārum arabicarum (Leiden 1772) and it was printed at Cairo in 1287.

Biographies: Ibn ʿArabī’s, Abu al-Maḥfūz, Abū al-Maḥfūz, al-Golmi, i. 422; Fuṣḥī, Muḥāfīz (under the year 787; see E. G. Browne, in Le Musée, series iii., vol. i., p. 57); Ṣaʿīdī, Ḥaqqīya al-Waṣāʾil, p. 23; Sulaymān b. Maḥmūd, Maṭṭīfī al-ʿAnnual, p. 287; al-Kafrawī, fī al-ʿīrāb al-Khāṣṣ fī ʿAlī b. ʿAbī Ṣayyār, iii. 3, 87; Muhammad Bīkṣī Ḥusaynī,
vaded India in 1398, but before he reached Dihili Nusrat Shāh had been driven from the capital, and Mahmūd and Mullī were left to face the conqueror. They were defeated and fled, Mahmūd to Gudjarat and Mullī to Baran, but returned after Timur's departure. Mahmūd retained the royal title, but was for the rest of his life a state prisoner, at first in the hands of Mullī, and, after Mullī's death in 1405, in those of Daulat Khān Lollī, who succeeded Mullī as virtual ruler of the kingdom. Mahmūd died at Kāthī in February, 1413, and with him ended the Taghūk dynasty. Within sixteen months of his death Daulat Khān was overthrown by Khādīr Khān [q.v.]; who on May 28, 1414, entered Dihili and founded the Safiyy dynasty.

Bibliography: Barani, Tarikh-i Firās Shāhī, Calcutta 1862; Shams-i Sirāj 'Affī, Tarikh-i Firās Shāhī, Calcutta 1891; Bādānī, Munṣūkhab al-Tāwārikhī, text, and translation by G. S. A. Rānkīng, Calcutta 1899; Mūsāmān Kāmīn Firāstā, Gaḥ hỏ m-i Ibrāhīmī, Bombay 1832.

Taghūk [See Wādī.]

Tagus, Arabic Wādī Tādīj, Latin Tagus, Spanish Tajo, Portuguese Tâo, the longest river in the Iberian Peninsula, rises in the Serranías de Cuenca at about 6,550 ft. Its length to its estuary at Lisbon is 550 miles (of which 190 are in Portuguese territory). Among the numerous places on its banks one may mention going down stream: Aranjuez, Algodon, Toledo and Talavera de la Reina, in Spain; Abrantes, Santarem and Lisbon, in Portugal. The Arab geographers describe the Tagus as an important river and mention it especially in their descriptions of Toledo and Lisbon. They also mention the famous Roman bridge built of granite in 105 a.d. by order of the Emperor Trajan on the Tagus at Alcantara, the ancient "Kantarat al-Safi" of the Arabs. Cf. above, i., p. 251. See also the articles on LISBON and TOLEDO.

Bibliography: al-Idrīsī, Sīfat al-Andalus, p. 187 of the text and 228 of the transl.; E. Fagnan, Extraits inédits relatifs au Maghreb, Algiers 1924, Index. (E. LEVY-POVONCZAL)

Tahadjdud (A.), infinitive V from the root ṭ-ḥ-d-d which is one of the roots with opposed meanings (ṭāḥdūd), as it signifies "sleep" and also "to be awake," "to keep a vigil," "to perform the night ṣalāt or the nightly recreation of the Qur'ān." The latter two meanings have become the usual ones in Islam. The word occurs only once in the Qur'ān, Sūra xxvii. 81: "And in a part of the night, perform a ṣalāt as a voluntary effort, etc.," and the thing itself is often referred to. We are told of the pious (li. 17) that they sleep little by night and pray to Allah for forgiveness at dawn. In Sūra xxv. 65, there is a reference to those who spend the night prostrating themselves and standing before their Lord.

From the Qur'ān it may be deduced that the old practice in Mecca was to observe two ṣalāts, by day and one by night (Sūra, xvii. 80 a.v.); Sūra, lxxvi. 25: "And mention the name of thy Lord in the morning and in the evening [26] and in the night prostrate thyself before Him and praise Him the livelong night"; Sūra, xi. 10: "And perform the ṣalāt at both ends of the day and in the last part of the night." Tradition is able to tell us — and there is no real reason for scepticism — that
for a shorter or longer period (mention is actually made of a "period of ten years"), Tahari, Tafseer, axis. 65, vigil were so ardently observed that Muhammad and his companions began to suffer from swollen feet. The old practice is said to be based on Sura Ixxlii, 1: *S* thou enfolded one, 2. stand up during the night, except a small portion of it, 3. the half or rather less, 4. or rather more and recite the Kur'an with accuracy; but its origin cannot be dissociated from the example of Christian ascetics. In the end however, this form of asceticism became too much for Muhammad's companions. The revelation of verses 20 ff. of Sura Ixxlii brought an alleviation: *See, thy Lord knoweth that thou standest praying about two thirds, or the half or a third of the night, thou and a part of thy companions. But Allâh measureth the night and the day; he knoweth that ye are not able for this; therefore he turneth mercifully to you with permission to recite as much of the Kur'an as is convenient for you*. By the institution of the five daily salaahs the obligatory character of the tahajjud was then abolished (cf. Abu Dâwûd, Tâhuwun, B. 17 and Baihaqi, Sunan, Sura Ixxlii. 20).

Nevertheless, Muhammad is said not to have abandoned the vigil (Abû Dâwûd, Tâhuwun, B. 18); in Hadiths and Fiqh this is considered blameworthy for those who were wont to perform these salaahs (Muslim, Sunan, trad. 185; Naasî, Kiyâm al-Lail, B. 59; Baihaqi, Haqiqat, i. 165). The performance is in general regarded as useless. David is said to have spent a third of the night in these exercises (Muslim, Sunan, B. 68; Naasî, Kiyâm al-Lail, B. 147): another reason given in justification of it is that the tahajjud loosens one of the knots which Satan ties in the hair of a sleeper (Abû Dâwûd, Tâhuwun, B. 18). The tahajjud is particularly meritorious in Ramdân and in the night before each of the two feasts (Ibn Maджsâ, Sunan, B. 68; Naasî, Kiyâm al-Lail, B. 147): when the term idb'$ al-lail is used (see also Tâhuwun).

Even at the present day the ma'râshûm in some lands summons to a night salaah (consisting of an even number of rakâs and therefore called shaf'; cf. witr) shortly after midnight by an adâwâh to which special formulae are added (Lane, Manners and Customs, chapter iii. "Religion and Laws"; cf. Snouck Hurgronje, Mecca; Juyubill, Handelings, p. 74).

For the views of the different law schools cf. also I. Guff, *Il Muwakjohn* ad Hulil ibn Ishaq, Milan 1919, i. 97; Abu Ikhlaq al-Sharî`ah, al-Tenibî, ed. A. W. T. Juyubill, p. 27; al-Ramî, Nikâyah al-Muhaddid, i. 488 sqq.; Ibn Haflar al-Hattamî, Tafseer, i. 201 sqq.; Abu T.-Kâsim al-Hilli, Kibîth Sharî`ah: al-Islâm, Calcutta 1850, i. 27; A. Querry, Droit Musulman, Paris 1874, i. 52 sq.; Nîqâm, al-Fatwah, i. Alomgirî, Calcutta 1245, i. 157. (A. J. Wensinck)

**Tâhuwun (A.);** grammatically tâhuwun is a mawâdh and means purity; it also has the technical sense of ceremonial, levitical purity and purification. It holds an important place in Islam, for "purity is half the faith", a saying attributed to Muhammad. Theologians divide defilements into material and mental; lawyers divide them into actual (bâhîf) and religious (bâhîf). Fiqh deals with bodily, material impurity only. Sexual intercourse, menstruation, and childbirth are religious impurities. Actual impurities (mâdîq, q. v.) have a perceptible body. They are wine, pigs and dogs and what is begotten of them, dead bodies (except those of men, animals used for food, and creatures that have no blood, i.e. insects), and certain discharges from the body. There are five things that are not unclean: any dirt left after defecation, dust or mud on the roads, the soles of shoes, the blood: squashed out of a full-fed flesh, and the blood or pus from a boil or pimple or from coughing. Tears, sweat, spittle and mucus are clean. The laws of purity are not meant to be burdensome. The usual means of purification is cold water but after defecation stones are also used. Water is pure if running, if from a pool above 100 sq. inches (dhâr' r.), in a river, or from smaller quantities so long as the colour, taste and smell are not changed. Elaborate rules are laid down for the various cases. After micturition or defecation there is a preliminary cleansing with stones or earth (istidâm) and one with water (istindâm). On ablutions and baths, see wudû', abdu. When no water is to be had or, by reason of illness or some other cause, the use of it is feared, sand or dust may be employed [see yawmûm]. The rules of the Shâ'î differ in detail from those of the Sunnîs. After helping to carry a corpse to the grave an ablution is necessary, but not merely approved; and according to them a quantity of water amounting to two quâlî (the meaning is uncertain, but it is generally taken to be a large jar) is clean.

Popular practices do not always agree with canonical rules; it is said that round Aden the defilement of micturition can be removed by helping to carry a bier on its way to the cemetery.

These processes must not be just mechanical; purpose (nia'a) must come first, and they must be accompanied by the thought of God and special prayers, which vary at different times and places. The theologians develop this side of the idea and say that purification consists of four stages: purification of the body from physical dirt; of the members from offences; of the heart from evil desires; of the spirit (siyâr) from all that is not God. Tahâ' is become the common name for circumcision and the ceremonies that accompany it [see KHIYÂN].

**Tâhuwun** (A.); Abu Dâ'ar Ahmad b. Muhammad b. Salâm b. 'Abî al-Makî al-Azîd al-Tâhuwun al-Harazi. His name Tahâ' is derived from the name of a village in Upper Egypt named Tahâ'. He is considered the greatest Hanafi lawyer which Egypt has produced. His ancestors had settled in Upper Egypt and his grandfather Salâm when the news of the rebellion
Tahawi

was in this capacity that he served also under Abū ʿUbayd b. Abī Hassan b. Ḥbar, who was chief judge from 293 to 311. He had the habit of saying to Abū ʿUbayd in cases of differences, that Ibn Abī Ṭimān used to say so and so. The judge finally got tired of it and said that he had known Ibn Abī Ṭimān well, but sparsows become eagles in Taḥawi’s country. This stopped Taḥawi, and made the saying proverbial. In his later years he devoted himself, besides the composition of his numerous works, to the giving of legal decisions (fatwa), but he had always the courtesy, if the questions were brought forward in the presence of the judge, to state that it was the opinion of the judge, unless he was given special licence by the judge to give the decision upon his own Authority. He died according to the historian Ibn Yimnus on the 6th of Dhu ’l-Qu‘adar 321 a. h. (Oct. 21, 933). Ibn Khallīkān says, in the night of Thursday the 11th of the same month, and that he was buried in the garden of the Taḥawi family. The Fihrist wrongly states that he died 322.

Taḥawi was in the first place a lawyer, and is unanimously praised for his skill in the art of drawing up valid contracts, but he also is counted among the traditionists and as such transmitted the Maṣnad of Abī Ṣaḥḥāf, but more than one authority states that ḥadīth was really not his business. However his larger works abound in citations of traditions, but these are always cited with a legal aim in view. His works are many and several have been preserved in manuscript and printed. Those mentioned by his biographers are: 1) Maṣnū’i ʿAlī Ḥabīb, his first work; printed with glosses in Lucknow in a large 4° volume; 2) Ṣaḥḥāf b. Ummām (MS. at Cairo); 3) Abū Ḥabīb b. Ḥabīb in 20 kūraṣ; 4) Muḥātār fi ʿl-Fiḥḥ, a work which gave the author much pleasure and has been the subject of many commentaries the earliest of which is by Abū Ḥabīb b. ʿAll is-Djassān (MS. at Cairo); 5) Sharḥ al-Daḥīb al-Saghrī; 6) al-Ṣaḥīḥ al-Kabīr, which is preserved in an incomplete MS. at Cairo from which Schaech has published a portion (Heidelberg 1926); 7) al-Ṣaḥīḥ al-ʿĀṣim; 8) al-Ṣaḥīḥ al-Saghir; 9) Muḥājir, Ṣaḥīḥ, Wajīb and Qiṣṣa, and these are perhaps several works of the Wajīb are mentioned by some biographers separately: 10) Sharḥ al-Šaḥīḥ al-Kabīr; 11) Nihāya al-Qāṭīfī al-Madīsin against al-Karābī; 12) al-Ṭūlith al-Kabīr, probably a kind of biographical dictionary of lawyers; 13) Manāḥīb Abī Ḥanīfa in one volume; 14) a book on the Purāna mentioned by the Kādī Iyād in his work al-Ibnī; it contained about a thousand leaves and is perhaps identical with the Muḥājir al-Ṣaḥīḥ; 15) al-Nawwāṣīr al-Fihām in over 20 kūraṣ; 16) Hukm Arāfī Mokkā wa-Qim al-ʿĀṣim wa-ʿl-Qaḥīm; 17) al-Radd ala ʿl-Iṣāṣ b. ʿAlīn against the latter’s book called Ḥaqqat al-Kabīr; 18) al-Radd ala ʿAlī ʿUtbā fi-mi ʿābd al-Kabīr; 19) al-Radd ala ʿAlī ʿUtbā fi-mi ʿābd al-Kabīr; 20) Muḥājir al-Ṣaḥīḥ, his last work; it is the final deposit of his studies and has been printed in Haiderabad in four large 4° volumes, 1333 a. h.; this book has been abbreviated by the Mâlik lawyer Ibn Rushd; 21) Khāla fa Qāṣī al-Dīn (also called Ṣaḥīḥ Abī al-Summa wa ʿl-Dīnār or Bayān al-Summa wa ʿl-Dīnār) printed in Kâzim 1893 and in India; it is a short pamphlet of about ten leaves, setting out the Sunni con-

The Encyclopaedia of Islam, IV.
session of faith in clear legal language. This little book has also found a number of commentators (cf. Brockelmann); 22) al-Nawādir wa l-Ḥikmat in 20 Jawādir’s; 23) some biographers attribute to them two books with the title of Muḥājir in al-Kāmil and al-Saghir, but it appears that it is the smaller one which is the one generally commented; 24) in the Diwanādir al-Maṣūfa it is mentioned also a book, the basis of which are the books on dismissal from office (Kutub al-Adli), but I am not clear if I understand this correctly.

In books on Ḥanafi law Ṣahwī is cited continuously and the number of his pupils or such who came to Egypt to gain information from him is very great, and many are enumerated in the biographies, especially in the Diwanādir and the Liṣān al-Masūm; among them are mentioned: ʿAbd al-ʿAzīz b. Muhammad al-Tanwīrī, who became later Kādī of Egypt and superior to Ṣahwī; Maslama b. ʿAbd al-Ḡūfūr; Ḥabīb b. ʿAbd al-ʿAzīz, who was considered the head of the Zāhirī in his time; the celebrated Kādī Ibn ʿAbī ʿAwwām; Sulaymān b. Ahmad al-Tabarānī, the author of the Maṣūfā and many others.

TAHER (We also have Tāher) was a Mediterranean town of Algeria, on the eastern border of the present department of Oran. According to Idrīsī there was used to be two large towns of this name: the one, Old Tāher, an old Roman site, perhaps the capital of a native dynasty, vassals or allies of the Byzantines (Gebl), rose from its ruins in the modern period and became the capital of Tāher; the other, New Tāher, lies 6 miles to the NW of Tāher, not far from Tag吕布empt which was one of the strongholds of the amir ʿAbd al-Kādir [q.v.]. It no longer has more than a few almost obliterated traces of its past grandeur.

New Tāher was the capital of the Ābūdī Imāms (or Bilād, q.v.) of the Rustamid family for 147 years. ʿAbd al-Rahmān b. Rustam fled from Kairauān after the return of the Arab armies commanded by Ibn al-Āṣīth and sought refuge in this part of the central Maghrib where the Khārijīs were numerous. He founded Tāher in 144 (751). The site was wisely chosen. The climate is severe (al-Bakrī tells us stories of the cold that prevails in Tāher) but the land around could be irrigated and produced excellent fruit. Tāher owed its wealth mainly to its trade. Placed at the foot of the Qāba of Geznī, at the end of the Tell on the northern border of the stepspe in touch with the country of the nomads and settled lands, it was destined to become a great market like modern Tīaret. The nomads flocked to it; the hope of making a fortune as well as attachment to Khārijī doctrines brought many foreigners there, especially Persians. They had fine dwellings and siqās and Tāher was known as "Little Iṣāq". We also know how intense was the religious life of this capital of a democratic kingdom and are told of the intellectual life of the Imāms and their entourage. It is no longer possible to know what the town and its buildings looked like; probably the latter were quite simple. Al-Bakrī speaks of four wide gates and its citadel commanding the marketplace.

Tāher taken in 206 (920) by the Shiʿī propagandist Abī ʿAbd al-Malik was utterly ruined. Henceforth it only plays a very minor role in the history of the Berbers. Tāher inherited part of the economic prosperity of Tāher. This prosperity, which the Algerian centre, like the 15th century town, owes to its situation as the port of the steppes has increased again, since the plateau of Serral, which adjoins it, has become an important centre of colonisation.

GEORGES MARCAND

TAHIR b. AL-HUSAIN, founder of the Taḥrid dynasty [q.v.], in Khorāsān [q.v.], born in 159 (775—776), died in Diqmādī I (Ṭahārī, III. 1065, 92) or Diqmādī II (Ibn Ḥalikān) 207 (822). Tāher belonged to a family of Persian descent and also to the Arab tribe of Khurāsān [q.v.]. His ancestor ʿIṣāq was a client of the governor of Sīstān, Abī Muhammad Taḥā b. Abī Ṣaḥib al-Ḵurāsānī; ʿIṣāq’s son Maṣʿūd took part in the fighting against the Umayyads under Abū Muslim as secretary (bāḥīsī) to the general Sulaymān b. ʿAlī al-Khurāsānī. The town of Bīshānbādī [q.v.], in the district of Herāt [q.v.], was held by Maṣʿūd and afterwards by his son al-Husain (d. 109 = 814—815), Tāhir himself took part in the fighting against the rebel ʿAlī b. Ḍatlī in Samarqand in the last years of the reign of Ḥārūn al-Rashīd (d. 157 = 808—809). In 194 (810), Maʿmūn’s minister Fadl ibn Salih [q.v.] gave him command of the army sent against al-Āmil [q.v.]. In Shaʿbān 195 (May 811) the enemy under ʿAlī b. Iṣā was defeated; Tāhir is said to have used his sword with both hands during the battle and for this to have been given the name Dhu l-Yamīnī (amhīdītrus) by Maʿmūn. After the taking of Baḥdād (198 = 813) Tāhir was appointed governor of al-Disrā (q.v.) with the supreme command over Syria and the west. When Maʿmūn went in 211 (203—204) from Khorāsān to the ʿIrāq, Tāhir was ordered to leave Raḵja and come to meet the Caliph at Nahrawān. In 215 (208)—216 (209). Tāhir was given the governorship of all the lands east of Baḥdād, especially of Khurāsān. There he died suddenly in his capital Merv, shortly after he had omitted the mention of the Caliph in prayer one Friday, and thus committed an act of open rebellion. The details are variously recorded.
TĀHIR b. AL-HUSAIN — BĀBĀ TĀHIR

Although his mother-tongue was Persian (cf. the utterances in Persian ascribed to him in Ibn al-Tāhir, ed. Keller, p. 130 and Tabarsi, ii. 1063 infra), Tāhir is said, like his descendants, to have been well versed in the Arabic language and culture. His letter written in 306 (821–822) to his son Abū Allāh on his appointment as governor of Dīyah Ḳabṭa (q. v.) is well preserved among his contemporaries; cf. Kitāb Buhārī, ed. Keller, p. 36 sqq. (German transl., p. 17 sqq.), Tabarsi, ii. 1046 sqq.; Ibn al-Ḩārīṣī, vi. 285 sqq., Russian transl. by A. Schmidt, *Bulletin de l’Univ. de l’Afrique Centrale*, viii., 1925, p. 129 sqq.

(W. Barthold)

TĀHIR ʿOMAR [See ZAHIR ʿOMAR.]

TĀHIR WAḤĪD, MUSAMMAM, ʿIMĀD-DĀWĪ, a Persian poet of KĀZIM, who was the secretary of the two Prime Ministers Mirzā Taḥā al-Dīn Muhammad and Ḳalīf al-Sulṭān; in 1055 (1645–6) appointed historiographer to Shāh ʿAbāt II, he became minister in 1101 (1680–90) in the reign of Sulṭān; afterwards he retired into private life and died most probably in 1108–90 aged 90. The British Museum has five MSS. of his historical works. The *Aṣḥāb al-Balāt* (Bombay 1277, not paginated) says that his poems were mainly admired because of the rank of the author.

(C. Huart)

BĀBĀ TĀHIR, a mystic and poet who wrote in a Persian dialect. According to Ḳaṭā Kālī Kháūn (sixth century), who does not give his source, Bābā Tāhir lived in the period of Dālam’s rule and died in 401 (1010). Among his quatrains there is an enigmatic one: “I am that (alw) which entered into a vase; in that vase which entered into the letter. In each alw (‘thousand’, i.e. of years?) arises an alw-lād (a man upright in stature like the letter alw). I am the alw-lād who has come in this alw.” Mahdī Kháūn in the *J. A. S. Bengali* has given an extremely curious interpretation of this quatrain: the letters alw-lād have the value 215, the same as the letters of the word dāryā (Persian equivalent of the Arabic bahr ‘sea’) and those of the name of the poet Tāhir. If we add alw-lād (215) to alw (111) we get 326 (the same value by the way as the Persian word hāżā, ‘thousand’, if we spell it ḥā, ḥā, alw, ʿrā). In this way the phrase ‘an alw-lād coming into the alw’ would give the date (326) of the birth of Bābā Tāhir who may well have lived till...

In spite of the ingenuity of this explanation, it is nevertheless true that the only historical evidence that we possess about Bābā Tāhir is that of the *Rāḥīḥ al-Sūṭī‘ī* (c. 601 [1204], G. M. S., p. 98–99), the author of which ‘had heard’ that when the Sāljiḏ b. Ṣulṭān Tughrīl entered Hamdān (in 447 = 1055), Bābā Tāhir addressed an ad-

monition to him (“O Turk, how you going to act towards the Muslims”?) which much impressed the conqueror. The anecdote suggests for the death of Bābā Tāhir a date later than 447 but is in no way contradictory to the statement that Bābā Tāhir flourished under the Dālamīs, i.e. under the Ḳaṭāys and their relatives, the Ḳākūyds, whose rule in Hamdān lasted till the expedition of Ibrahim Vanā in 435. Bābā Tāhir may well have been the contemporary of Arvencus (Aḥū Sīn), who died at Hamdān, in 428 (1037), but the legends which make him a witness of the execution of the mystic ʿAlī al-Ṭuṣī of Hamdān in 533 and the contemporary of Nūṣī al-Dīn Tūsī (d. 674) are pure inventions.

The sources sometimes call Bābā Tāhir Hamdānī (cf. the Arabic MS. 1903 of the Bibl. Nat. Paris, the *Sarrajdān*, etc.), sometimes Lurī (Lūrī). This last form — in place of Lur [q. v.] — is somewhat puzzling: does it mean some other connection than of origin between Bābā Tāhir and Lurīstān? It is certainly well to remember that in the seventh century there were very close links between Hamdānī and Lurīstān and the poet may have spent his life between the two places. In Khurramshāh there is a quarter bearing the name of Bābā Tāhir (cf. Edmonds, *Geogr. ‘Iranien*, June 1922, p. 445). The association of Bābā Tāhir with Lurīstān in the beliefs of the Aḥḥa ʿaţīq [see below] is also significant. In the quatrains of Bābā Tāhir (cf. nos. 101, 200, 274 of the *Dīnawār*), Mount Alwand [q. v.] overshadowing Hamdān is frequently mentioned. The tomb of Bābā Tāhir lies on a little hill to the northwest of the town in the Ban-i bāzār quarter; beside the tomb of Bābā Tāhir are those of his faithful Fāţima [see below] and Mirzā Ali Naḵš Fardari (sixth century); the building is a humble one and of no interest. The tomb is mentioned in the *Nuzhat al-Ḳulūb* (740 = 1340), *Gīhāb. Mem. Ser.*, p. 751; cf. the photograph in Minorsky, *Matières*, Moscow 1911, p. xii, and Williams Jackson, *A visit to the Tomb of Bābā Tāhir at Hamdān*, in *A Volume presented to E. G. Browne*, Cambridge 1922, p. 357–360.

The stories one hears in Mīzāndarān about B. Tāhir’s connection with that province have no foundation and may have been brought by immigrants from Lurīstān (the Lāk). Besides, all the sounds of Persia like to claim B. Tāhir as a compatriot.

The language of Bābā Tāhir. Since all the facts and traditions connect the poet with Hamdānī and Lurīstān, it is reasonable to expect to find in his dialect traces of a dialect of this region of Persia. But as this dialect was very close to Persian and as so many different mouths have been trying to render more comprehensible the verses transmitted orally, there is little hope of reestablishing the value of the text in its dialectic purity. It is not an improbable suggestion that B. Tāhir simply wanted to imitate the dialects of these adepts. In our own day a Kurdish-Christian claims to have made verses in the Gūrān dialect, quite distinct from his own in order to “transmit the message” to the Aḥḥa ʿaţīq (Dr. Sa’d Kháūn, in the *Modern World*, Jan. 1927, p. 40).

The country between Hamdān and Khurramshāh still has many dialects, but that of Bābā Tāhir is not connected with any definite one and seems to borrow from all. The closeness of the present
text of B. Tahir to literary Persian is undeniable; on the other hand changes like nun > nun "name", zan "my hand") > zastun ("my hand") > rafian ("I have gone"), dix > dir (cf. Haert, xiv = Dīvān, No. 82) are typical of the Lur dialects; the stems sādād "to speak," hār "to win" are common to the Kurdish and central dialects; the forms mukhar-rā "he does" and ġ-yā "he comes" recall particularly the Gūrānt spoken much farther to the west. For certain peculiarities (dārīm > dārem) we only find analogies at Kārūn (near Shīrţā). Hadan's detailed analysis has plainly proved this mixture of dialects (Dialektgeschichte) in the quatrains, at least as we know them now. The term "Muhammadan Pahlavi" proposed by Haert (1885) for the language of Bābā Tahir has not been accepted by scholars.

The metre of the quatrains of Bābā Tahir and of his ghazals is almost exclusively kasajy munaddas makāra (— — — —) which has made the new edition of the quatrains du-bētit (disticha) instead of rukāt, the last term being too closely associated with the metre kasajy makāra makāra (— — — —) — — — — — — — —. The authenticity of some regular rukāt attributed to B. Tahir seems doubtful. The metre of B. Tahir is also found in popular songs (Mirzā Dā'far [Korsh], Grammat. Pers. Yekhā, Moscow 1901, p. 308).

Bābā Tahir—poet. Down to 1827, all that was known of his poems was a rather small number found for the most part in anthologies of the xviiith and xixth centuries. Haert's researches produced in 1885, 59 quatrains and in 1908, another 28 and one ghazal. E. Hero Allen only found 3 new quatrains (they are moreover very doubtful). Lessczynski (who used the Berlin manuscripts) has translated 50 quatrains and one ghazal (a different one from Haert's). Finally Hainaki Wāhid Dastgirdī Iṣfahānt, editor of the Persian review Armağān, published in 1306 (1927) at Tīrān a Dīvān of B. Tahir containing 296 du-bētit and 4 ghazals of this poet; as an appendix the editor gives 62 du-bētit found in the "different collections" and the 3 rukāt added by Hero Allen. The quatrains of the Dīvān are arranged in the alphabetical order of the rhymes. The editor unfortunately gives no details of the manuscript of the Dīvān reproduced in his edition. The new quatrains several of which mention Tahir's name, the mountains of Alwand and Meymand (?) etc., confirm the characteristics already known of Bābā Tahir, while making them a little more banal by the inevitable repetitions. The dialectic flavor of most of the quatrains is in favour of their authenticity, although the imitation of the peculiarities of the language of B. Tahir would really not be a very difficult matter. The question of the authenticity of the quatrains of B. Tahir certainly arises, as it did in the case of those of 'Omar Khayyām. Žukowski says that the quatrains of B. Tahir are found in the Dīvān of Muḥammad Sūfī Māzandarānī (xixth cent.) a. M. A certain Şāfiī Beg Muḥammad, a modern poet of Hamādan, claimed to be the author of several "Kurdi (Pahlavi)" quatrains attributed to B. Tahir; cf. Dīvān, p. 21.

The choice of subjects in Bābā Tahir is very restricted, but the poet's work bears the stamp of a distinct personality. We give an analysis of the 59 quatrains published by Haert to enable the reader to judge. As usual it is difficult to draw a rigid distinction between the expression of mystical and that of profane love; 34 quatrains are almost equally divided between two categories of lyric poetry. Two quatrains are simple hymns to God. The rest is more individual and characteristic. B. Tahir often refers to his life as a wandering dervishāndar, without a roof above his head, sleeping with a stone for a pillow, continually harassed by spiritual anxieties (Nos. 6, 7, 14, 28). Caves and melancholy torment him; he is "flower of grief" alone toils in his heart; even the charms of spring leave him still unhappy (34, 35, 37, 54). B. Tahir professes the philosophy of the true Sūfī, confesses his sins, implores pardon for them, preaches humility, invokes nūrān (nūrān) as the only remedy for his misfortunes (1, 13, 45, 50, 58). One human failing is especially characteristic of Bābā Tahir: his eyes and his heart do not readily detach themselves from the things of this world; his rebellious heart burns within him, leaves him no rest for a moment and the poet cries in anguish: "Art thou a lion, a panther, O my heart, thou who art continually struggling with me. If thou fallest into my hands, I shall spill thy blood to see what colour thou art, O my heart." (3, 8, 9, 26, 36, 42).

Bābā Tahir's psychology shows striking contrast to that of 'Omar Khayyām. Bābā Tahir shows no trace of the hedonism of the latter (d. 517 [1127?] f.or his serenity in face of the changes brought about by death, while 'Omar Khayyām lacks the mystic fire of Bābā Tahir (cf. Christensen, Critical Studies in the Rubāyāt of 'Omar Khayyām, Copenhagen 1917, p. 44).

What pleases in Bābā Tahir is the freshness of his sentiments which Sūfī routine had not yet stereotyped, the spontaneity of his images, the naiveté of his language, when expressing terror. A new Fitzgerald might make of Bābā Tahir a worthy rival to 'Omar Khayyām.

Bābā Tahir—mystic. The Persian derives with whom Žukowski talked about Bābā Tahir knew that he was the author of 22 metaphysical treatises (cf. also Rīdī̄ Kūţī Khān) but it is only from Ethé and Blochet that we have learned in Europe of the existence in Oxford and Paris of commentaries on the maxims of B. Tahir. The complete treatise (al-Kalīmāt [al-țīğār ("The brief sayings") has now been published in the edition of the Armağān. This treatise consists of 368 Arabic maxims divided into 23 ̄āb dealing with the following subjects: knowledge (tāḥīm); gnosis (muğaffa); inspiration and penetration (tāhām, āfāzā); reason and the soul (šāb, waṣīft); this world and the beyond (dunyā, ṭālā); the musical performance (tawāt) and the āfār; sincerity and spiritual retreat (tāhām, āfāzā) etc.

Here are a few specimens of these maxims: No. 86: "Real knowledge is the intuition after which the knowledge of certainty has been acquired" (al-faṣīḥātun muğaffāatun baṭa išāmi yarāīya).[19, 96] "Exstacy (waṣīft) is the loss (of the knowledge) of existing things and is the existence of lost things"; No. 365: "he who has been the witness of predestination (coming) from God remains without movement and without volition"; No. 360: "he whom ignorance has slain, he who never lived, he whom the āfār has killed will never die.

The "Brief Sayings" seem to have enjoyed considerable popularity among the Sūfī. The Persian editor mentions the following commentaries
on this treatise; the Arabic commentary attributed to 'Alî al-Kūfî al-Hamadānî (d. in 533 but often associated in legends with Bâbâ Tahir); another Arabic commentary by an unknown author; the Arabic and Persian commentaries by Mullâ Sulṭân 'Ali Gunâbbâlî; the Persian commentary was printed in 1326 (1906) but is very rare. The editor of the Amâraghân expresses the hope of being one day able to publish the “Brief Sayings” accompanied by one of the commentaries.

The Arabic manuscript 1909 of the Bibî, Nat. contains the first 8 chapters of the maxims of Bâbâ Tahir in an abridged form (fol. 100a—105b), as well as a commentary on them (fol. 74a—100a) entitled al-Futûhât al-râkîniyya fi lâ‘îrât al-Hamadâniyya.

The manuscript seems to be the hand of the author of the commentary, Dînjî Beg 'Arîzî, who began his work in Shawwâl 889 and ended it on 20th Shawwâl 890 (1485). The commentary was written at the request of a certain Shâhîîg Abu 'l-Bâkî, who had possessed the lâ‘îrât of Bâbâ Tahir since 853. He had let them fall into the well of Zamsam at Mecca but the manuscript was miraculously recovered. The “ulama’ had dissuaded Abu ‘l-Bâkî from writing a commentary on the text on account of its profusity and obscurity, finally Abu ‘l-Bâkî engaged Dînjî Beg to accomplish this task. The commentary deals with the text of the maxims of Bâbâ Tahir word by word.

Bâbâ Tahir — a saint. As is the case with the majority of the mystical poets (‘Aṭîr, Dînjîlî al-Dîn Rûmî, Hâfîz), there are numerous legends of the life and miracles of Bâbâ Tahir. It is related that when Bâbâ Tahir had asked the students of the madrasa of Hamadân to show him the way to acquire knowledge, the students as a joke told him to spend a winter night in the frozen water of a tank. Bâbâ Tahir carried out the advice and next morning found himself enlightened and exclaimed: Amsârul Kurîyân wa-za’âkîhun ‘Arâhîyan (‘last night I was a Kurd and this morning I have become an Arab’). This story was heard by Žukowskî in Teherân and by Heron Allen’s informant at Bâdîî; it is widely current in Hamadân (cf. the preface to the Dînjîlm, p. 17 and the manuscripts from Hamadân). This Arabic utterance is found in the preface to the Ma’tâmî of Dînjîlî al-Dîn Rûmî, where however it is referred to an unknown (mystîc?) ancestor of Ibn Aakhir, a Turk of Urmîya. In the Nafâyîn al-Uns of Îlîmin, ed. Nâzzîn Lës, p. 362—363, the phrase is attributed to Aâbî ‘Abd Allah Bâbîmlî.

Other pious legends represent Bâbâ Tahir as such making the snow on Mount Alwan melt by the ardour of his spiritual fire, tracing with the point of his great toe the solution of an astronomical problem which had been put him, etc. (Žukowskî, Heron Allen, Leszczynski, preface to the Dînjîlm, manuscripts from Hamadân). Gobineau, Žièsr esr ar Arîs, Paris 1859, p. 344, also knew that the adherents of the Ahl-‘Âkî sect were in the habit of “praising exceedingly and giving pride of place to the names of famous Sûfîs, notably of Bâbâ Tahir whose poems in the Lur dialect are highly esteemed, and of his sister Bibî Fatima” etc. The discovery of the religious work Sarûnî’âm has enabled us to locate Bâbâ Tahir in the theogony of the sect. The Ahl-‘Âkî believed in 7 manifestations of the divinity (the first, that of Khândîgâr was in pre-eternity, the second is that of ‘Ali, the third that of Bâbâ Khoshîn, the fourth that of Sulîmîn Is’hâm [q.v.]). Each of these manifestations was accompanied by a retinue of 4 angels, each of whom had special duties. Bâbâ Tahir is regarded as one of the angels of Bâbâ Khoshîn and the incarnation of Arrîl and Nusrâl. The mystic period of Bâbâ Khoshîn generally corresponds to the marîfâ. The events of this cycle take place in Luristân and Hamadân. The manuscript of the Sarûnî’âm recounts the visit of the “King of the World” to Bâbâ Tahir in Hamadân, Bâbâ Khoshîn is meant by the “King of the World” but the legend seems to be inspired by memories of the episode of Tughrîl, related in the Rûgat al-Sâdîr, Bâbâ Tahir and Fatima Lârî (“the thin”) of the tribe of Bâb Bâhî (living in the Gürîn country), who, in his service, fed the whole army of the King with a sâr-yak of rice. The latter tempts Bâbâ Tahir with all the treasures of the world but he only desires the “beauty of the King”. Fatima wants to follow the king of the world; she lays her head on her knees and gives up the ghost. The King consoles Bâbâ Tahir for his loss and promises that on the day of the Last Judgement he will reunite him to Fatima so that they shall be like Lâlî and Majdînî. 13 poetical fragments (muttilated but in the style of Bâbâ Tahir) are so scattered through the text (cf. Minerskî, p. 29—35, 99—103; these facts have been utilized by Leszczynski, op. cit., p. 18—25). Fatima Lârî, who is mentioned in the text is buried beside Bâbâ Tahir. According to the custodians of the tomb of Bâbâ Tahir, she is not to be confused with another Fatima also buried in the same Bûlgh (?). Gobineau and A. V. W. Jackson mention the sister of Bâbâ Tahir, Bibî Fatîma or Fatîma Lârî. Azâd-i Hamadân (Dowân, p. 16—21) speaks of the tomb of the Sâyâ “nurse” of Bâbâ Tahir: everyone seems to endeavour to translate into the language of everyday life the mystic relations of Bâbâ Tahir to Fimâ.

The quatrains already quoted at the beginning of this article (alîf, alif-kad) may reflect some high aspiration of Bâbâ Tahir.

TĀHIRIDS, a dynasty in Khorāsān, founded by Tāhir b. al-Husayn [q.v.]. The foundation of the rule of the Tāhirids was later considered to date from the appointment of Tāhir as commander of the army of the Caliph Mu'āwīya in 194 (810) and therefore the duration of their rule was put at 61 years (till the deposition of Muḥammad b. Tāhir in 259 [875]; cf. the biography of Fadl b. Sahl [q.v.] in Ibn Khallikān N. 540, ed. de Slane, p. 577; transl., ii. 473 [where we have wrongly "six and fifty"])). Tāhir was succeeded in Khorāsān by his son Ťaḥṣa, d. 215 (828); after he reigned "Abd Allāh b. Tāhir [q.v.] till 230 (844) and Tāhir b. "Abd Allāh till Rudjāb 248 (863), both of whom are described as able rulers. The capital of the dynasty was Naḥīfāt (Arabic: Naṣīfāt); from the time of "Abd Allāh their territory comprised Rāy and Kiṃrān in addition to Khorāsān proper and the lands east of it as far as the Indian frontier and northward to the boundary of the Caliph's empire. Although the Tāhirids were nominally only governors for the caliphs, their authority was so firmly established in Khorāsān that the province could not be given to any other. After the death of "Abd Allāh the Caliph al-Wāthīk appointed Isfahān b. Ibrahim al-Mu'āth governor of Khorāsān, but this appointment was cancelled before the departure of the new governor and Tāhir b. "Abd Allāh confirmed in office in succession to his father (Sītī, MS. in the Pahl. Libr. in St. Petersburg, f. 18v eqq.). At the same time, from 237 to 253 (851–867) another of "Abd Allāh's sons, Muḥammad, held the office of military commandant (ṣāḥib āḥrat) and deputy of the Caliph in Baghdad. He declined an offer to go to Khorāsān on the death of his brother Tāhir, as he knew that the latter had intended his son Muhammad to succeed him; Muhammad b. Tāhir was therefore appointed governor of Khorāsān by the Caliph Mustāin (Yaḥyā, ed. Houtsm., ii. 604). Muḥammad b. Tāhir, in contrast to his predecessors, is described as a frivolous and pleasure-loving prince; his lands gradually passed to the Ṣaffīrids [q.v.]. Yaḥyā b. Laiṭh, to whom Muḥammad himself had to surrender his capital in 259 (873). Muḥammad b. Tāhir, who lived till 266 (978–99) (Ibn al-Athir, viii. 42), does not seem to have returned to Khorāsān, although he was liberated after the defeat of Yaḥyā at Dahr al-Akīl in 262 (876) and thereupon and once again in 271 (885) appointed governor of Khorāsān. His brother Huṣayn b. Tāhir continued the struggle with the Ṣaffīrids without much success. The last military commandant of Baghdad of the Tāhirid family was "Ubad Allāh b. "Abd Allāh, who died in Shawwāl 300 (May 913); according to "Arīṣ, p. 49, he was 81 years of age but Ibn al-Athir says he was only 70 in 232 (838); until his death he was regarded as Shaikh of the Khuṭa tribe (the Khuṭilān, transl. of Slane, ii. 80, not in the text p. 382, 2nd in Wustenfeld's edition N. 366). His son Muḥammad b. "Ubad Allāh was for a period commandant of the eastern half of Baghdad and was dismissed from office in 301 (913–914); cf. "Arīṣ, p. 45.

The Tāhirids seem to have occupied a unique position among the rulers of their time on account of their high education and literary activities (in Arabic). In the Fīḥris (p. 117) a special chapter (Fāṭr Tāhir) is devoted to the Tāhirids: many of them, from Tāhir b. al-Husayn to "Ubad Allāh b. "Abd Allāh are celebrated as poets and authors. According to "Abd Allāh b. Tāhir the "wisdom" (Ukūh) of the Tāhirids was particularly manifested in his nephew Mansūr b. Tāhir, the governor of Miṣr, Amul and Khwārizm, and author of several works. According to a statement of little credibility in Dawlatshah (ed. Brown, p. 30), "Abdallah is said to have disapproved of Persian literature and to have ordered Persian books to be burned and destroyed.
Tahmās P I, second ruler of Persia of the Šafawī dynasty, eldest son of Shah Ismā'īl I born in 919 (1514); he acceded to the throne at the age of ten years (930 = 1524) and was of course the plaster of the Khīlkhānah chief. He defeated the Uzbek in 934 (1527) near Turbet-i Shāhīkh Dijān. Summoned to Baghdad by the rebellion of Dhu 'l-Faqār of the Kurd tribe of the Māḏūf, who was supported by the Kalbur Kānds and claimed to be under Turkish suzerainty (936 = 1530), he found him murdered by his brothers. He next went to Herāt where the Uzbek had been besieging for 18 months, but the latter withdrew on his approach. In 940 (1534) the Ottomans occupied Mesopotamia and Tabrīz. Sulṭān Sulāmān went to Sulṭānīya, then crossed the mountains to the south to occupy Baghādād; four years later he occupied Wān. The Persians had all the time been on the offensive. In 941 the great Moghul Humâyūn, son of Būbur, driven from his throne by a rebellion, took refuge with Tahmās. The magnificent festivities held on this occasion are commemorated in a wall-painting in the pavilion of Chīlī-Sūrā in Ḫisāfān, but Humâyūn was worried by the Shī ḥ’s insisting on his adoption of the Shī ḥ’a.

A rebellion of his brother Ḫīlāḥ-Mīrzā in 954 (1547) who was supported by the Turks gave Tahmās no rest; an Ottoman army occupied Aḥvardābīlān and Ḫisāfān; Ḫīlāḥ however quarreled with his allies, the campaign led to nothing and the pretender was later captured and put to death. In 961 (1554) an armistice was concluded with the Turks and the peace signed the following year. Bīyāzdī, son of Sulṭān Sulāmān, took refuge in Persia after his rebellion (965 = 1559) but he was handed over after two years’ negotiations and Tahmās ordered or allowed him to be put to death for a sum of 400,000 pieces of gold.

The last years of his reign were marked by Uzbek invasions of Khorāsān and a famine followed by a plague (919 = 1511). Tahmās died in 984 (1576), poisoned by the mother of a certain Ḥādīr, chief of the Ustāḏīn tribe. His reign had lasted 52 and a half years. He wrote his autobiography, published by P. Horn, Denkwürdigkeiten, Z. D. M. G., xlv., 1890, p. 563–649, transl. Strassburg 1891; it stops at the year 969 (1561) when Bīyāzdī was handed over to the Turks. Copies of official letters addressed by him to contemporary sovereigns are found in various MSS. of the British Museum (Rieu, Catalogue, N°. 390, 330, 309, 984). In his reign Persia was invaded by Anthony Jenkinson, English Ambassador (1562) and Vincenzo d’Alessandri, Venetian Ambassador (1574).

Tahmasp II, third son of Shah Husain, proclaimed heir-presumptive during the siege of Isfahan by the Afghans (1135 = 1722), escaped at the head of 600 men and tried without success to raise troops in Kerman. He made a treaty with Peter the Great who had just occupied Kast and Nikola (the treaty led to nothing), held out at Farahabad in Mazarabad, with the support of Fath 'Ali Khan, chief of the Kadjars, and was joined there by the future Nadir Shah, who then took the name Tahmasp Kuli Khan (the Khan, servant of Tahmasp) and brought him 5,000 men, Afghans and Kurds. After the assassination of Fath 'Ali Khan near Mleshed by Nadir, the latter was appointed commander-in-chief of the Persian troops, took Mleshed and Herat, won a signal victory over the Afghans at Mihman-Dust, near Darmghan in 1141 (1729). Leaving Tahmasp at Daghmeh, Nadir won a further success at Murche-Khurt, entered Isfahan where Tahmasp, whose father had been massacred by the Afghans before their departure, followed him and found his mother there, where she had lived seven years disguised as a slave without being recognised. Tahmasp rewarded his general for his services by giving him the governorship of Khorasan, Sultani, Kirmanshah, and Mazarabad with the title Sulthan. Nadir struck coins in his own name and paid his troops with them. Fired by the victories of his lieutenant, Tahmasp wished to take command of the army, undertook unsuccessfully the siege of Erivan, and was defeated by the Turks at Koroghan, near Hamadan in 1144 (1731); in the following year he concluded peace by ceding Transcaucasia, but retained Tabriz and the country S. E. of it. Nadir protested against the conclusion of the treaty, marched on Isfahan, seized Tahmasp and sent him to be imprisoned in Khorasan putting on the throne a son of the Shah, aged eight months, under the name of Shah Abbâs III; this son dying, Nadir [p. v.] had himself proclaimed ruler of Persia in 1145 (1736). In the course of the campaign in India, the son of Nadir, Rûd Kuli, put Tahmasp to death along with the greater part of his family at Sebawar (1151 = 1739).

TAPHRÂTH, the second king of the Pahlavi dynasty in the Persian epic epos.

The name Takhmûsrupas (Avesta), Takhmûropas (Bundahish) is compounded of takhma ("strong, courageous") (cf. Rustam = Rustamum = urupa or urupas) (cf. Christensen, p. 140), a certain animal of the dog family", cf. Bartholomaeus, Altir. Wirt., p. 1532, who, however, expresses doubt as to the real meaning of the name (Darmesteter, Avesta, ii., p. 583, interprets it "of sturdy shape"); cf. Sanxari vâraps). Later forms are Tahmâhir, Tahmûras. The transcription into Arabic character Tahmûrat (sometimes Tahmûrat) reflects an intermediate stage in the evolution of the final > > > > such that the emphatic Arabic t seems to show retroactive influence of the >; cf. the forms Tahmâris, and Thiân. In the Sîra Arabic the Mandaeans Tahmûrat appears under the name Zardanûra Tahmûrat.

As Windischmann points out, Tahmûrat is one of the most puzzling characters in the Persian epic. Syneretic imagination has been very much at work on the person of this king and each period has added some new features to his character. According to the majority of the sources, Tahmûrat is the son of Wîwângîshân (Avestan Vohuvarait, Frâh). Vohuvarait, who is the grandson of the great god Hûshang. The brothers of Tahmûrat are his successors Yim = Djamîshîh, Spîrî (Spîtyura) and Nars. The Shâh-nâmây alone makes the order of reigns the same as the order of generations, by making Tahmûrat the son of Hûshang and the father of Djamîshîh. The Muslim sources mention a son of Tahmûrat, according to Inân al-Fâthî, was called Fâris (epoyny of the Persians), according to the Nâmây al-kalitât (ed. Le Strange, p. 121), Lāshkâr; according to Herbelot's sources: Kahramân.

In the Avesta Tahmûrat has the epithet azânârâvânt (azânârâvanâ), usually explained (cf. Haima and the Monšûlî, p. 166) as "armid" but according to Bartholomaeus, Altir. Wirt., p. 228 and 1654, having the sense of "watchful", "wise awake". Firdawsi does not mention this epithet unless he alludes to it when he says that Tahmûrat adorned (sîn) Ahriman to serve as a steed for him.

According to the Avesta, Yâghî, 19, 28, Takhmûsrupas "subdued all the demons and rode Arûra-Mânuwh whom he transformed into a horse, for 30 years, from one end of the earth to the other" (transl. Darmesteter). The victory of Tahmûrat over Ahriman was won on the day Khorshed of the month of Farravand and this event is celebrated each year by the faithful who should make a special cake for the occasion (according to a Pahlavi treatise in West, Pahlavi Texts, i, p. 314). The Persian Rîdânâyât (Spîgel, Einleitung) which gives Modadî Dîhlaw as its authority is full of curious details (absent in Firdawsi and elsewhere). Every day Tahmûrat, mounted on Ahriman, went three times round the world and three times covered the road from Mt. Allura to the bridge Cînav. Ahriman felled by mace blows from Tahmûrat lived only on the sins of men. By promises of honey and silk garments (on these impure things, cf. Spîgel, Einleitung, ii. 153, 158) Ahriman persuaded the wife of Tahmûrat to ask her husband if in the course of his rounds he was ever afraid. Tahmûrat confessed that he was always afraid that Ahriman might throw himself from the summit of Allura to the foot. Learning Tahmûrat's weak spot, Ahriman threw him and swallowed him. The augean Sûrîân announced the disappearance of Tahmûrat to Djamâshîh and tells him what two things delight Ahriman, praises (or song) and sodomy (cf. Marquart in Hâfez Amârya, Vienna 1916, p. 100). Djamîsh played on these passions and when Ahriman prepared to ascend to his proposals, Djamîsh slipped his hand into his entrails and pulled out his brother's body. Ahriman pursues Djamîsh but the latter on the advice
of Sarūt abstains from looking him in the face and Ahriman thus impotent returns to hell. Dżam purifies Tāhmūrāt and builds an [aššāq] for him. The hand of Dżam which had touched Ahriman became covered with leprosy. During a dream he learns that his malady can be cured. Hence the institution of the aššāq and the use of the ghāfūr and the abāh. In the Rūmāyāt the death of Tāhmūrāt. The Muṣnymi‘i expressly says that Tāhmūrāt died a natural death.

The exploits of Tāhmūrāt also earned him the epithet of dżābab, cf. the Shāh-nāma, the Muṣnymi‘i and the Persian Rūmāyāt. According to the Aogemäide (Avestaz, tr. Darmesteter, i. 165), Tāhmūrāt made a steed of Ganūš-Mainyū, the demon of demons, and exorted from him the 7 kinds of writing. The Mānīkūhāz (tr. West, Ch. xxi. 32) explains that it was the seven alphabets hidden by Ahriman that were brought to light. Firdawsi does not seem to be aware of the ambiguity of his language, which here suggests the demoniacal origin of the alphabets, while, according to him, they were taught to Tāhmūrāt by the dżor whom he had subdued after their rebellion. Firdawsi speaks of "about 30 alphabets" (mazīd-kā n) but once mentions six by name, the rajā, the māzīd, the jāydu, the gafūn and the pahārī.

On this tradition there was in time superimposed the legend of the measures taken by Tāhmūrāt to save the books at the Deluge. As Windischmann has already pointed out, this act of Tāhmūrāt’s connects him with the Babylonian Kings. According to the story of the astronomer Absû Maššîk (1272-95), according to which a similar system of manuscripts written on the skin of the white poplar (Arbāz) had previously been made at Sūrūyā. On this occasion one of the manuscripts written "in old Persian script" could be deciphered. One of the old kings of Persia in it related that 231 years and 300 days before the Deluge, Tāhmūrāt had known the date of its happening. As a true friend of knowledge and of scholars, he ordered his engineers to find the safest place to erect a building which was called Sūrūyā. Scientific works of different kinds including astronomical tables were put in it (but the Deluge, cf. al-Birūnī, did not come beyond the frontier of Huwān). There are several other traditions connected with Tāhmūrāt. The reference is very old in the Rūmāyāt, ch. xviii. 4, according to which the time of Tāhmūrāt *the people regularly passed on the fire, are the bull Sarsaōko from (Kāshāvarz) (m. Pers.; Kashāvarz central) Kyvantras to the other regions*. One night in the middle of the sea, the wind blew into the water the sacred fire which had also been placed on the back of Sarsaōko, but the fire broke into three parts which shone so brightly that the people were able to cross the sea. This myth is symbolic of the peopling of the 6 kāshāvarz of the periphery and of the origin of the three great pyres.

To Tāhmūrāt (Hamza, p. 29–30) is attributed the building of Babylon, of the citadel (Khartīnī) of Mawz, of Kardānād (one of the 7 cities of Mawz; another reading has: Kortābī; in the Muṣnymi‘i al-Tawārīkh Girdārī: i. 129d, 124b), of the two suburbs of Isfāhān: Mihrīn (Marbīn, cf. Ibl al-Fākīh, p. 265) and Sūrūyā (formerly Kūkh). According to Tābarī, Tāhmūrāt founded the town of Sūrūyā and Mašīlī placed there the residence of Tāhmūrāt. To this list Herbelot’s sources add Niniveh and Amid.

In the Shāh-nāma, Tāhmūrāt is represented as the great initiator in the exploitation of the animal kingdom: from him dates the weaving of wool, the domestication of wild animals, of birds of prey, the rearing of horses and other animals for riding, of watch-dogs and of cocks and hens (cf. the Muṣnymi‘i and Tābrīzī).

Along with Tāhmūrāt the Shāh-nāma mentions his wise and pious minister (dastūr) Shīdāb, whose name looks like a wrong reading for Būddāb (Buddhisatva, Būdha, Būdha). Ericeur (Eunides sur le Gnosticisme, p. 28) has endeavoured to show from the system of writing Pahlavi the possibility of the substitution of shēh, in place of šēš in the sense of demon. Tābarī, i. 175 says that in the first year of the reign of Tāhmūrāt, Būdāsāf appeared who preached the doctrine of the Sārīs (q.v.) and almost all the Muslim historians repeat this (cf. Windischmann and Christiansen). Some writers (Mašīlī, Tābrīzī, B. G. A., viii. 90) even suggest that before Zardūst the Persians professed the Saean religion preached by Būdāsāf. According to Hamza, Yūdāsāf (read Būdūsāf) instituted fasting on the occasion of a famine in the time of Tāhmūrāt. The same writer says that Tāhmūrāt was tolerant in religious matters and in his reign idolatry had increased. This legend is exactly contrary to what the Dīnārī (vii. 1, 16) says, that Tāhmūrāt put down idolatry and caused the worship and adoration of the Creator to increase.

Tāhmūrāt has no equivalent in Indian mythology. Windischmann and Spiegel: have sought to unravel the Indo-European (Iranian) from the Semitic elements in this complex character. To the former belong the genealogy of Tāhmūrāt, his struggle with Ahriman etc. Are the elements dealing with the deluge, the saving of the books etc. Semitic? Windischmann, relying on the second element of the name Tāhmūrāt (ternpa), even suspected an animal origin for him (Tergentall) connecting him with certain Babylonian mythological figures.

An original theory has been advanced by Christiansen, e.g. cit., p. 136, 142: he says that it was after the separation of the Iranians from the Indians that Hūshang and Tāhmūrāt, both keeping traces of the type of the “first man” and the “first king”, were inserted in the mythological framework where they took a place before Yim, the Indo-Iranian type of the first man, and after Gayōmard, the pre-anthropomorphic giant, who became the prototype of the human race. Christiansen then proposes to assimilate Hūshang and Tāhmūrāt to the personages of Scythian legend (Herodotus, iv. 5–7); Targitaos, the first man and his son Arpoxanis, “eponym of the Scythian tribe Rpa” (*Arpua > Urupa; Christiansen thinks he recognises this element in the toponymy of many places in near Asia which were the scene of Scythian migrations*). Hence the genealogy, Tāhmūrāt, son of Hūshang,
given by Firdawsi is perhaps in keeping with the tradition, while the three generations introduced between Tahmûrath and Hâshang would only be missreadings of the name Viranghân.

Later sources rationalised the legend; according to a Fârsi priest (Darmesteter, Et. iran., ii. 74), the victory of Tahmûrath over Ahriman simply means his victory "over the impure desires of the flesh". Mirkhân seems to wish to substitute for the revolt of the Râb, one of the nobles of the kingdom.

The later evolution of the story of Tahmûrath in Muslim lands is very curious. According to E. Blochet the mare with a woman's head, al-Burâk, [q. v.], on whom at the mûâjil Muhammad traversed the world, is derived from Ahriman in the legend of Tahmûrath. The name of Burâk is, he says, connected with the Persian word barâk barâdī, which are also used in the Rûmâyât and Firdawsi. On a Sâzânî vase in Vienna (cf. Arzouk, Monuments d. K. R. Mûsâ- und Anûth- Cahunette à Wien, 1850, Die antiken Gold- und Silbermonumente, pl. vi.-vii.) are figures of a man mounted on a monster with a bearded human head having some resemblance to the winged Assyrian bulls. Blochet thinks he recognises in these figures different phases in the exploit of Tahmûrath. On the other hand, the same scholar has shown how Tahmûrath, having passed through the avatar of the Muslim Samsûrâs or Shamûrâs (metathesis of h and w) has come to be confused with the complex figure of St. George. The figure of Samûrâs is found in an old manuscript Dâdî al-Šâhî (Bibli. Nat. Paris, Pers. fonda, No. 174); in the accompanying text we are told that this spirit is the "great spirit of the atmosphere" and that his residence (mûdân) is in the island (sic.) of Ba'îlak. He is represented as a warrior fully equipped (mûhâirâ) killing a dragon with a blow from a sword in such a way that the dragon (al-âdâsh) is cut in two while seizing with his teeth the chest of the horse. Wherever two armies meet ready for battle, God orders this spirit to go to the place between them and it is he who gives his aid to the side which God desires to assist 1.

The name Tahmûrath, frequent in the modern period among Pârsis, seems to be unknown in Muhammadan Persia. Since the 16th century it has been very popular among the Christian princes of Georgia (in the form Taimouraz). This curious fate of the name may be explained by the influence of the Shirwâshkhâ [q. v.] who were related to the Georgians and often bear names from the Iranian epics.

(V. Minorek)
narrower, "to exchange", "to put in the place of something" (ii. 56; vii. 16). How he pictured this alteration to himself is not clear from his words and perhaps he had no very definite idea of it. He was more concerned with the fact itself than with how it was done. There is a direct charge of having falsified the text in Sūra ii. 73: "Woe to them, who write the Scripture with their hands and say: this comes from Allāh." On the other hand in iii. 72 there seems to be a reference to an alteration in the text while it is being read: "A part of them twist their tongue in the scripture so that you think that it is out of the scripture, but it is not out of the scripture; they say: it comes from Allāh, but it does not come from Allāh"; cf. iv. 48: "they twist with their tongue".

In other passages he is content with the accusation that the Jews conceal and suppress all sorts of things in their scripture (Sūra ii. 154, 169). This is expressed in a peculiar fashion in vi. 91 where it is said "you make the scripture of Moses into leaves which you read out and suppress much of it"; which can only mean that in his opinion they removed the passages attesting the truth of his mission from the copies which they used in the disputations. He gives in ii. 156; vii. 16 a specimen of their alterations which is unfortunately not clear; he says that they used another word instead of the word fīṭrāt which brought a heavy punishment upon them. The examples quoted in ii. 95; iv. 48 are hardly meant as quotations from scripture. Among the suppressed passages, the scriptures make special mention of the law which punishes insubinence with stoning (Ibn Hāshim, p. 394 sqq.) and the descriptions of Muhammad as the expected Prophet (ibid., p. 355). Muhammad naturally extended this charge of tahfīz to the Christians, of whom he also asserted that they likewise concealed the passages in their holy scriptures which contained evidence of the truth of his mission; cf. the appeal to the "possessors of a scripture" in Sūra ii. 141; iii. 64 and with reference to the prophecy of Muhammad's coming, Ibn Hāshim, p. 388, although he probably meant that Jesus's refusal of the name God and the doctrine of the Trinity (e.g. xvi. 110) were based on falsifications of the scriptures. His whole attitude was so peculiar that his opponents were able with justice to direct a charge of tabdīl against the Prophet's revelations. It is true that in Sūra x. 16 he vigorously defends himself against the charge brought by his opponents that he had substituted another revelation in place of the one given him, but the not rare abrogations of earlier legal prescriptions [cf. kisāʾāt] ceased him no misgiving and in xvi. 103, Allāh clearly refers to his having occasionally substituted one verse for another, a thing with which his enemies did not forget to reproach the Prophet.

The vague way in which Muhammad in the Kurān speaks of falsifications of scriptures by the "possessors of a scripture" resulted in the Muhammadan scholars who gradually became better acquainted with the "Old and New Testaments" and were fond of dealing in their polemical works with the charge of tahfīz, tabdīl and tāḥkīr, coming to hold very divergent views in their opinions of the facts lying at the basis of the charge. Some continued to hold the opinion usual in the early centuries after Muhammad that the Jews had actually altered the text. A vigorous champion of this view was the Spanish Arab Abū Muhammad ʿAlī b. ʿIshāq (d. 456 = 1064). Diametrically opposed to this was the view held by others that the texts of the "possessors of a scripture" were intact and that the divergent opinions of Jews and Christians were simply due to erroneous interpretations of the passages concerned. One of the earliest representatives of this view was the Zaidi of the Yemen, al-Kāsim b. Būṣlīhī (d. 246 = 860), in his polemical treatise directed against the Christians; among his later followers, special mention may be made of the great historian Ibn Khaldūn. As is usual in such controversies there was also a middle school, for some conceded the actual falsifications of the text by the "people of a scripture" but limited them to a minimum. Of these different opinions, the first was decidedly the simplest and most logical, for it was based on the first impression which the words of the Qurān naturally made and had made in the early days of Islam, but it led to rather serious consequences which gradually came to be appreciated. When one had always to deal with the possibility that the texts of the earlier books of revelation had been falsified, they lost considerably in value and indeed the holders of this theory frequently spoke slightingly of it and warn against its use. But in this way one came up against a question of apologetics, to which the theologians were devoting themselves with ardour, namely the prophecy of Muhammad's coming as the Prophet to be expected from the Bible (e.g. Deut., xviii. 15) for this naturally presupposed the authenticity of the passage in question. This factor had such an influence that only a minority took seriously the charge of tahfīz in its strictest form. But in its milder form it continued to play a principal part in Muslim polemics against Jews and Christians, as may be seen for example from Doughty's statement that in his conversations with Arabs he frequently heard this accusation made (Travel in Arabia, i. 208; Snouck Hurgronje, Medde. ii. 204).

In the disputations between the different Muslim sects the charge of tahfīz is also made, as the Shi'is have often insisted that in the orthodox Kurān all sorts of things have been omitted or inserted with the object of disposing of or refuting evidence of the truth of their doctrine. The orthodox also naturally reply by making the same charge against the Shi'is.

(Fr. BIHL)

TAHSIL is the nomen actionis of the second formation of the verb taqāla, and signifies originally, "collection", "obtaining" or "acquiring". In India the use of the word is restricted to the collection of the revenue, and it is applied, in the United Provinces and Madras to a subdivision of a district (called ta'alluq, or, cor-
TASHIN, Mir Muhammad Husain 'Ata' Khan, with the title Tashin, also known by the name Malang Khan, was an Indian author, as it seems, from Lahore, son of Mir Edair Khan, whose nephew was Shawk. The son of Tashin, named Kasim Ali Khan, was not only an author, but also a musician. The exact dates of Tashin's birth and death cannot be fixed; the date of the completion of his most important work, the Newafr-i muraqqa, is ± 1195 (1780). The author was in the service of General Smith, whom he accompanied from Lahore to Calcutta. Later on, Tashin lived at Patna, then, after his father's death, at Faizabad. His patron, the last named place, was successively the Nawab Shuja'ul Daula († 1189 = 1775) — in whose service he continued the composition of his Newafr, which he seems to have begun at Patna — and the following Nawab, Asaf al-Daula (1189—1212 = 1775—1797), under whose reign the work was completed. The author has added, to the preface of the Newafr, a pujido in honour of Asaf al-Daula. It is said, that the reading of the works of the famous Hindustani poet Mirza Muhammad Raff Sawai († 1195 (1780) at Lucknow), induced Tashin to devote himself to Hindustani literature also.

Works. (1) Newafr-i muraqqa: a Hindustani translation, in verse and prose, of a Persian original (named Kizig-i lokhr Darwish). This original is ascribed to Amir Khusraw, but sometimes also to Andijab or to Muhammad Ali Mas'ud. The Newafr exhibits an elaborate literary style. This was the reason, why, for didactic purposes, another translation of the Kizig-i lokhr Darwish was begun in 1215 (1801) by Mr Amman of Dhlit and completed in 1237 (1853); this translation is the well-known Bagh-i-ub-Bahar. Editions of Tashin's Newafr appeared at Bombay (1849), Lucknow (1859) and Cawnpore (1874). The Newafr itself has had a literary influence upon another Hindustani author, 'Azamat Allah, who, in his work Kizig-i rangin Gufira, has imitated that book the style of Tashin's composition. On the other hand, we find in a manuscript of the India Office (No. 132 of Blumhardt's Catalogue), the Introduction and the tale of the first darwish in Tashin's translation combined with a Hindustani rendering of the stories resp. of the third darwish and the third Asadkhait by another literate, Muhammad hladi.

(2) Besides the Newafr, Tashin wrote in Persian an English grammar, called Dawabshi Angrist, and a work, which seems to be historical, named Tawarihi-ki Kaziim.

It may be added, that, according to the Tadhkir of Yusuf Ali Khan, Tashin was also renowned as a calligrapher. Besides this Tashin, there is also another author of that name, likewise called Muhammad Husain Khan, of whom a cycle of poems in praise of the prophet, partly in Persian and partly in Hindustani, was lithographed at Dhlit, under the name Gouder-dari 368 (1753). There is also a collection of stanzas on Muhammad compiled from various sources by one Muhammad Husain Khan Tashin (the same), named Camaoni Madhobi Nabi, edited at Dhlit 1854.

AL-TAFI: El-Amr Allah (or 'I kli') 363 al-Karim R. al-Fadil, Ababbis Calip b, born in 317 (929—930). His father was the caliph al-Muttair after whose deposition in 1368 Ibn al-Kadhi 363 (Aug. 5, 974) he was proclaimed Commander of the Faithful. His mother, who survived him, was 'Utb. As Ibn al-Athir justly observes (ix. 56), al-Tafi during his reign had not sufficient authority to be able to associate himself with any enterprises worthy of mention. He is only mentioned in history, one may safely say, in connection with certificates of appointment to office, letters of condolence and such like formalities, and his most remarkable feature seems to have been his extraordinary physical strength. The real rulers were at first the Bu'ayda [q. v.] but after the most important of them, 'Ajud al-Daula [q. v.] who was the caliph's father-in-law, had died in Shawwal 372 (March 983) his sons began to quarrel among themselves. In Sha'ban 381 (Oct./Nov. 991) Bahar al-Daula [q. v.], who was in financial difficulties and could not pay his troops was persuaded by his influential adviser Abu'l-Husain b. al-Ma'allim to overthrow the caliph and seize his treasure. At an audience at which the Bu'ayda appeared with a large retinue the unsuspecting Tafi was torn from his throne by Bahar al-Daula's orders and taken to the latter's house where he was kept a prisoner. He was succeeded as caliph by his cousin Abu'l-Abbas Ahmad, who took the name al-Kadir [q. v.]. In Radjab 382 (Sept. 992) the ex-caliph was allowed to come to al-Kadir's palace. Here he was well treated. He died on 1st Shawwal 392 (Aug. 3, 993).

TAIBA [See al-Madina.]
TAIIF, a town in Arabia. It lies 75 miles S.E. of Mecca about 5,000 feet above sea level in the mountains of Sarat. Of the country round with its walled gardens Burchkardi says that it is "the most attractive that he had seen since his departure for Lebanon in Syria". The Beduins also describe it as a corner of Syria transported and placed under theincline sky of the Hijaz and say this marvell is due to the all-powerful intercession of Abraham, the friend of Allah. This healthy and windy site at the same time freezes there was not without attraction for the rich merchants of Mecca. They all aimed at possessing an estate or at least a pied-à-terre there in which to recuperate from the strain of the relaxing climate of Mecca, as their successors do to this day.

TAIIF was the capital of the tribe of Thaqif [q.v.]. The Qur'ânic (xiii. 30) phrase al-buraydân classes Mecca with TAIIF and suggests a link of importance between them. TAIIF is nowhere else mentioned in the Qur'ân. But it may be said that on the eve of the Hijaz, it was regarded as the second city of Western Arabia and ranked next to Mecca. It had an advantage over the latter in the possession of fertile lands. The surrounding valleys supplied its export trade with ample materials, particularly easy to market in a region so much favoured by nature as the Hijaz: wine, wheat and wood. The special industry of TAIIF was the manufacture of leather in its tanneries, which were so numerous, we are told, as to render the air around foul. It had a girdle of walls built to take machines of war. At the entrance and exit to the sea port TAIIF offered the ships of the desert provinsions in the varied produce of its soil and loads in the products of its industry. TAIIF seems to have had particularly close relations with the Yemen, for which it was able to save 3 or 4 stages as compared with its redoubtable rival Mecca. The people of the town were divided into two main groups, in reality, two adverse factions. Their efforts for supremacy paralysed the eco-nomic development of the town. The "Ahlâf" were the younger, less aristocratic section. They nevertheless succeeded in securing control of the national sanctuary of al-Lat. Inferior to their rivals, the Banû Mulik in wealth and in territorial possessions, they made up for their disadvantages by a very skilful diplomacy and by a more serious military organization. The best poets, the most respected leaders in TAIIF came from the Ahlâf.

To their habit of living on wheat, the Beduins attributed the cunning and finesse of the TAIIF which were proverbial. There was a kind of entente cordiale between Mecca and TAIIF, an entente cemented by matrimonial alliances between Kurisâh and Ablâf. Many Meccans lived, as we have seen, in TAIIF and had estates there. Hardly less numerous were the TAIIFs in Mecca, half of the great families notably of the Umayyads, the latter almost all landlords in the region of TAIIF. This explains the preponderating part taken by the Thaqif in the Syrian caliphate.

On the eve of the Hijaz, TAIIF was therefore unique among the towns of the Hijaz. Its bracing climate, its fruits, its grapes, the famous seaâ of TAIIF and other products of the soil suggested Syria rather than the bare landscapes of western Arabia. As to intellectual development, the people of TAIIF seem "to have been notoriously above the average of Beduins and settled tribes". This is how the acute encyclopaedist al-Jâhîz speaking of Hâdîjâlî summed up the fellow-citizens of the great Thaqif. It is no wonder then that Mu'âhammad after the check to his mission in Mecca thought of "winning" over the intelligent citizens of TAIIF, unpulsed again here, the only course left him was to turn to the Amârâs. In their wars with Mu'âhammad the Kurisâh had the military support of the Ablâf of TAIIF. After the fatâh of Mecca in 8 A.H. immediatly after the defeat of the Hawâzin at Hurrain, Mu'âhammad laid siege to TAIIF, but without success. It was not till a year later that a delegation of TAIIFs came to discuss at great length in Medina the adhesion of their compatriots to the new religion, which they adopted without enthusiasm.

The expansion of Islam beyond the bounds of Arabia no more benefited their town than it did Mecca. The latter declined while Mecca prospered; the latter was at first the residence of the caliph and later under the Umayyads that of the governor general of the Hijaz, under whom TAIIF usually was now reduced to the rank of a sub-prefecture. This decline was at first checked by the initiative of the inhabitants. They succeeded in keeping in their blazing mountains the country resorts not only of the Meccans but also of the new Muslim aristocracy in Medina. Under the Umayyads they gave a further proof of their ability to adapt themselves to new circumstances. The economic decline of TAIIF and the loss of its autonomy coincided with the zenith of the political influence of the Thaqif. They succeeded in pushing themselves into the highest offices and displayed the most varied talents in them. From the time of Mu'âwiya we regularly find Thaqif lieutenants beside the Caliph. For a brief period with Ziyâd b. Abihi, they were almost expected to get the throne. Under Walid I., when the Arab empire attained its apogee, the greatest man of the reign was not the Kurisâh ruler but the Thaqif Hâdîjâlî. They were all able to exploit the historical relations, the intimacy between TAIIF and Mecca, their old connections with the principal Kurisâh families, especially with the Umayyads. They discovered in the past an indication of the proper orientation of their political activity.

The 'Abhâsâds and 'Alîds took care not to forget this. Tradition records their hatred of them and associates the Thaqif with the disfavour that surrounds the Umayyads. From Kerkbali and the failure of the attempted restoration of the 'Alida they are represented as having been cursed by the Prophet. Combining hatred of the Shi'is with the political feuds of the 'Irāq, the 'Abhâsâd action veiled itself with particular bitterness on the memory of the great Thaqif officers of the Umayyad period. It endeavoured to put the town of TAIIF and its doubtful citizens under a ban in history. The plot succeeded marvellously and to this day among the Beduins, the name of the Thaqif is treated with scorn.

'Abhâsid rule showed itself frankly hostile to the Hijâz, where continued 'Alîd risings were fomented (Kutâb al-Ahâlan, iii. 94). TAIIF was encircled by the tomb of 'Abdallah b. 'Abbas, the ancestor of the dynasty who became the patron saint of the town. The possession of this sanctuary, a much frequented object of pilgrimage, did not disarm the hostility of the 'Abhâsâds who never forgave the population its former Umayyad sympathies and
TÄIF — TÄIMA

left the town to decline gradually. It was the exception when we find Abd al-Salām princes taking an interest in Tāif. The mother of the Caliph Muḥammad b. Abī Bakr and before her the celebrated Zanbiyāt, wife of ‘Abdāl,l-rād, acquired estates there; the latter no doubt in connection with the waterworks which she built at Mecca. Along with the adjoining districts of the Ṣarāṭ, Tāif has remained to the present day the fruit and corn market of Mecca.

From the fourth (tenth) century all the geographers who mention Tāif describe it as baldādūd, "little town," and even add the epithet "little." Its environs became depopulated and the encyclopaedists like Yāqūt and Bakri could not find there the sites of the estates and villages mentioned in the time of the Umayyads. Since the establishment of the Ḥasanid amirates in Mecca, Tāif has as a rule been under the Grand Sharifs. With its walls and its modest citadel, it was intended to defend Mecca against invaders from Najd. It only imperfectly played this role, especially in the war between the Grand Sharifs and the Wahhābīs under Ibn Sa’ūd. These sectarians captured and sacked it in 1802. It was taken from them in 1813 by Egyptian troops under Tāmim-Pāghā, Bureckhardt, who visited it in the following year, found it half in ruins. In it he ate "very large grapes of most delicious flavour, figs, pomegranates and quinces." The bulk of the inhabitants consisted of Arabs of Ṭaʾīf. "The majority of the rich Meccans had houses there, but most of the foreigners who have chosen it as a place of residence are of Indian origin." Such still is the composition of its population. According to Phīlībī, who was there at the end of 1918, its population is not over 5,000 but rises to 20,000 during the summer season. In April 1924, Tāif fell again into the hands of the Wahhābīs in the course of their campaign against Ḥusayn b. ‘Abī, ex-king of the Ḥijāz.

(H. Lammens)

TAIM B. MURRA, a clan of the Meccan tribe of Ḫaṭrif. Its name, which is born by several other Arab tribes, means "servant" and must therefore be an abbreviation of an ancient theophoric, and such as we find in Taimalṭāf, Taimalṭāt [q.v.], and in the inscriptions, Taim Manāt, Taim Rūtā, Qāṣeṣ etc. (cf. Wellhausen, Reste, p. 7; Līdābarski, Īṣāṣ d. nordīm. Epiqārat, p. 385). The Taim b. Mura belonged to the Ḫaṭrif al-Blāfībī, i.e. to the clan which were dominant in Mecca: but in spite of that they do not seem to have possessed any political influence, while their real relatives, the Makhṣūm [q.v.], b. Ya‘qub b. Mura, rivalled in influence those of Ḫaṭrif. The pre-Islamic history of Mecca makes almost no reference to them (cf. the scarce references in Caestner, Annali dell'Istit., Indice vol. i—ii, p. 1906). The only person of note that they appear to have numbered among them on the eve of Islam is ‘Abdallâh b. Ḳâlan, celebrated for his generosity; it was in his house which was still pointed out in the days of Islam that the Ḫaṭrif clans formed their alliance (Ali al-mukhabī; cf. Caestner, Annali, Introduction, § 147), and he was the patron of the poet Umayya b. Ābl-Salīm (Aḥkām, viii. 2—5 e Schulten, Orientalische Studien, Th. Niecke, . . . gewidmet, i, 73—79; Goldsche, al-Ḍiḥaḥa, Z. D. M. G., xiv. 7).

The name of the Taim b. Murra rests entirely on the fact that two of the most celebrated heroes of Islam came from them: — Ābl Bakr and Tālam b. Uṣayyālāh.

A brief description of the quarter inhabited by the Taim b. Murra in Mecca is given by al-Arraqā (Chron. d. Staat Micka, ed. Wüstenfeld, i. 468).

TAIMA', an old settlement in a well-watered oasis in northern Arabia, four days' journey south of Dumat al-Jandal; according to Muḥammad b. Ḫasūn, three from Ḥijāz and four from Wādī l-Kūrā. It lies in a depression the length of which Jausen and Savignac put at 2 miles with a breadth of 500 yards. The subterranean waters collect and burst forth into a well 40—45 feet deep and about 60 feet in diameter, according to the two travellers just named. Taima' is mentioned in the cuneiform inscriptions and in the Old Testament as an important caravan station (Isaiah, xxl. 141; Jeremiah, xxv. 23; Job, vi. 10). To the Persian period belongs the old Aramaic inscription found by Euting, which throws a light on the important culture of the place. It is mentioned by the old Arabian poets e.g. Īnara 'I-rās, Mūtakalbi, verse 76: "it (the rain storm) does not leave a palm-tree leaf nor a house unless it is buried in stone." Like other oases in North Arabia, it was settled by immigrant Jews or Jewish proselytes. Among them was Sawmawal [q.v.], the lord of the citadel of Abīlāk al-Fard, mentioned by Aḥṣā and other poets. The Jewish inhabitants were not inclined to be friendly to Muḥammad, but when they learned how their co-religionists in Wādī l-Kūrā had been treated, they voluntarily submitted and were thus allowed to retain their lands on payment of a yearly tribute; but they were expelled from the land, like the other Jews in Arabia, by ‘Omar. In the tenth century, Ibn Hawāk describes it as more thickly populated than Tāmūk. Muḥammad gives a more detailed picture of its situation in a well-watered wide depression with a spring, many wells, some of which have fallen in, fine gardens, and many palm trees with excellent dates; on the other hand he censures the avarice of the inhabitants and laments the lack of distinguished scholars from this town. In the next century al-Bakri refers to its wealth in dates, figs and grapes. The densely populated town had a wall, a parapet in length running along a brook. Of modern travellers
Eating gives a good description of the town with its narrow streets and houses surrounded by orchards. Of antiquities he found the ruins of temples and a quadrangular building with hills at the corners. Of the citadel of Ablâk, the ruins of which, according to Yâkil, were still visible in his time [see Ablâk], he could find no traces; Janssen and Savignac describe the same peculiar round tumuli, the sides of which in the form of stairs led up to a small square building. Taimâlah at the present day shows signs of decay everywhere.

TAIMALLAH b. THAILAB, an Arab tribe belonging to the branch of the Rabba b. Kâmir (tribe of the Adnan) and forming part of the great ethnical group of the Bakr b. Wail. Genealogy: Taimallâh b. Thâlab b. Ublâb b. Sa'b b. 'Alî b. Bakr b. Wail. There was also found in the form Taimallâh, which may be the correct name, for a Muslim (or Christian) alteration of the name Alât to that of Allah is not at all unlikely while the opposite is hardly conceivable. This tribe as usual with so many other tribes of Arabia formed an alliance (bif), with the sister tribe of the Banû Kaḥfa b. Thâlab, and each of them was closely associated with the Banû 'Idî and the Banû 'Anazâ. This confederation bore the name 'Alâtulâim (the word ulâim, according to the lexicographers signifies the mastoid bone and similar expressions are not unusual to indicate the solidity of an alliance); it was afterwards extended to the Banû Mâzîn b. Sa'b and even, it appears, to the two great Bakr subdivisions, the Banû Dhu'llah and the Banû Shâhîn. After Islam the Banû Hanîfâ, another Bakr tribe, also entered the alliance (al-Mubârrat, Kâmîl, ed. Wright, p. 276, sq.; Najât, ed. Bevan, p. 47, 19, 305, pp. 764, 9 and especially 725, 35; Wüstenfeld, misspelled probably by the statement in Ibn Kutaiba, K. al-Mu'târîf, ed. Wüstenfeld, p. 48, thought that the name Alâtulâim referred only to the Taimallâh; cf. also Reiske, Primas Linear, p. 253 note 6, 255 note 4). The Taimallâh took part with their allies in the wars of the Bakr b. Wail against the Tamâmâ and we find them specially concerned with the battles of Zubâhâ, Nishâdî, Taßâhîl, Džâdînî, and al-Wâbkî (the last two falling within the Muslim period). It does not appear, however, that they distinguished themselves by any particular exploits or that they numbered among their leaders any person of note. In the latter expeditions the command was held by al-Hawâmî b. Sharîk and by Abdjâr b. Džîhrî, both of the Banû 'Idî. At a more remote period, the Taimallâh had fought with the rest of the Bakrîs against the Lakhmî tribes of al-'Izâ: they are mentioned in the stories of the Yâsin Ummâr.

The Taimallâh were Christians, like almost all the Bakr b. Wail (cf. Tabari, Ananeis, i. 2032 ult.) but they were early converted to Islam and we find them fighting in the wars of conquest and the civil wars; one of them for example, 'Umar b. Sa'b 'Ablâb, took part in the murder of the Caliph 'Uthmân (Nahâf, ed. Bevan, p. 918 sqq.). But it was mainly in the history of the eastern provinces that the Taimallâh played a part in the first two centuries of the Hijra: among the members of this tribe who have made a mark in history the best known is 'Abdallâh b. Zulfâr b. Wadî'â, who is also known as a poet (notice in Ibn Hâfiz, Zâba, Cairo, 1335, l. 82, quoted from the Tahtâbat al-Shâdi'î of Dâhîl and the Mu'jam al-Shâdi'î of al-Muqaddam; verses in Yâkil, Muqaddam, ed. Wüstenfeld, i. 850, with reference to two ancient statues at Palmyra) and was governor of Khorasan during the civil war of 65 A.H. He valiantly defended Herât against the troops of Mu'âsh b. al-Zubair, commanded by Abdallâh b. Kâlin and held out for a whole year, with the support of all the Bakr b. Wail of Khorasan, until he fell (Tabari, Annals, ii. 484–490; Balâdchuri, Fatâh, ed. de Goeje, p. 414–415). Another poet of the Taimallâh, 'Abdallâh b. Tawâsî' (who was the best poet of the Bakr in Khorasan) took part in the campaign of Kütâba b. Muslim, whom he had once satirized but finally joined. (Cf. Ibn Kutaiba, K. al-Shâdi'î, ed. de Goeje, p. 342 sqq.; Hamânî, ed. Freytag, p. 431 sqq.; Najât, ed. Bevan, p. 359 sqq., 364 sqq., 368; Tabari, Annals, ii. pârâsâ, ii. 201 sqq., ibid. etc.). There were several other tribes, especially in the south, called Taimallâh or Taimalâh: Ibn al-Kalbî mentions the following: T. b. Asad b. Wâharî; T. b. Za'hâb (b. murî b. al-Ghawthî b. Ta'îy); T. b. Hâzîl; . . . Mâdir b. al-Azîz; T. b. Râfît b. Thâawr b. Kâli; T. b. 'Amîr al-Adîdâr . . . Kâli; T. b. al-Nâmîr b. Kâsîr; T. b. Wadîm b. Wahbalâh . . . Kâli.

(G. LEVI DELLA VIDA)

TA'IZ, a tribe in early Arabia of Yamanite origin. According to the genealogists its ancestor, Dîjhumâ b. 'Udb, with the surname of Ta'îy, was a descendant of Ka'bîn and a brother of Maqadîbî and Murra, the ancestor of the large tribe of Kinda. Originally they were at home in that part of the South-Arabian Dîjî in which Huna'ka was situated, on the way between Sam'â and Mecca. Ta'îy, as well as Azd and other South-arabian tribes, joined the migration which tradition connects with the break of the dam of Ma'rib. They settled in the Northern part of the Peninsula, near the Shammar-mountain [q.v.] to the South of the desert Nefûd, Mounts Adâr and Salmûs, S. and S. E. of Hârî, were even called "the mountains of Ta'îy", which proves that for centuries the tribe had a claim on that territory. The Dîjîb b. 'Awîlî, about half way between Hârî and Ta'îy as well as Ta'îmî [q.v.] itself, belonged to Ta'îy.

Through the immigration of Ta'îy the Mę̇jar-tribe of the Banû Asad lost a part of its territory; nevertheless the two tribes fraternised in later times; it is related that they joined their forces and defeated the Banû 'Adîlî, who belonged to Tamîn at Râjîla al-Ta'î.

Sub-tribes or clans of Ta'îy were: Thâ'âl, Dju'djina, Dîzmar, 'Abd al-Ghawth, Ma'n, Nâbîn, as well as the three "Ta'îlîh Ta'îy", which by this denomi-
nation were distinguished from the Bakrite Tha'laba, viz. Tha'labah b. Dhuhl, b. Ramun, and b. Djelah.

In the time of the Dajihilla, Ta'iyy worshiped a God called Fili, who possessed a sanctuary on Mount Adja', which was destroyed, on Majammad's order, by 'Ali b. Abi Talib aided by 150 Am'ar; the expedition captured one of Hārim al-Ta'iyy's daughters. Another deity of Ta'iyy was Ruqā.

At least for some time Ta'iyy was on friendly terms with their relatives the Lakhmids of al-Hira, as may be concluded from the fact that the last Phylarch, al-No'man IV, had two wives belonging to Ta'iyy, viz. Fat'a bint Sa'd and Zainab bint Awa, both of them from the family Hāritah b. Lām. When, however, al-No'man fled before the Persian king and sought refuge with the Ta'iyyites, they refused him hospitality, probably, with a view to their friendly relations with the Persians, which apparently were not of an altogether ephemeral nature. For after al-No'man's death the Ta'iyyite Iyās b. Kābiyā was appointed as Regent in al-Hira (602-611); he commanded the Persian and Arab army against the Banū Bakr in the battle of Dhu Kār. Tabar and other authors call Iyās one of the 'Abd, because he was a Christian.

In 9 A.H. the Ta'iyyites sent an embassy to Mu'ammad, to which belonged Kābi b. Djal'al who, it is said, was the first to embrace Islam and is remembered as one of the Ṣā'ibah (cf. Uṣūl al-Ḳhāja, iv. 210).

The mihra of Ta'iyy is Tarīqah. It is especially the poet Ḥārim who became famous under the mihra al-Ta'iyy (his ḫīna was edited by Schultheiss); his proverbial liberality is the subject of numerous anecdotes and tales. Other Ta'iyyite poets were: 'Ariq al-Ta'iyy, Zakī al-Khail, Abū Aḥmad, a Christian, 'Amr b. Mīlīkāt, 'Amr b. Sā'īy b. Kūrwākh, and, after the rise of Islam, the Khāridh al-'Irīmīwār, whose ḫīna was edited by Krenkow (G. M. S., xxv., 1928). Lexicon and ḫīna have specimens of the dialect of Ta'iyy: Ḫaṣ and Ḫam for 'ādiyya and fāsiyya; Ṣā'īda for Ṣā'īda; Ṣā'īd for Ṣā'īd; Ṣājīt for Ṣājēt; 'Ṣā'īm for Ṣājēt.

In Syriac "Ta'iyīta" became a name for "Arabs" and Musulmānīn.

(H. H. Brā'u)

TA'IYY, an important town in South Arabia, formerly the capital of the emirate which was called Ta'ayziyya, according to the provincial law regarding the general administration of wilayets 'Ṭa'ayzīyya (March 15, 1913) included the Ḫudayj of 'Udah, Ibh, Maḳīla, Kama'īra, Ḫaṣ, Ḫadhoura, and, according to R. Manzoni, also Makhādir, Dhib Sufal, Mawīlah, i.e. the whole country between al-Hudayda and the independent lands northeast of 'Aden. The town, which lies in 44° 6′ 45″ East. Long. ('Greenw.) and 13° 36′ 55″ North Lat., at 4,500 feet above sea-level, is built on the northern slope of the Djebeel Sabr (in al-Hamāly: Sabir) and has 2,000 inhabitants. The Portuguese called the town Taiz, the Italians (Ladovec di Barthema and Andrea Corsatti) Taesa. It is surrounded by a wall 25-30 feet broad and 9-12 feet high which, like that of Sa'ā, is flanked by towers in which stand a farther 3-4 feet above the wall and is built of large sundried bricks and covered with an outer layer of baked tiles. The town wall forms an irregular quadrangle, which stretches from east to west. On the western side of this quadrangle is a polygonal spur of the hill in the south-eastern corner which rises a steep rock 450 feet high, on the top of which is the citadel al-Khāira, which is however now in a very ruinous state but was at one time regarded as a strong fortress. Corresponding to this in the north east angle of the wall is a sharp spur, the top of which is a steep mound. There are five gateways in the town wall; in the east the Bour al-Kabir leads out to the Maqāy—'Aden and Khāitsa—'Umar—Sa'ā'. Roads in the west the Bahr Shāhīh Mūsā opens up to the road to Makkah and Ḫaṣa. The Bour al-Emādāgher on the southwest is the gateway to the Ḫadjariyya and Bent 'Alwān, in the south the Bour 'Alī Dummā leads to the Djebeel Sabr and connects the hill with the fort of al-Khāira, and lastly in the south east we have the Bour al-Khulair, which is still surrounded by a wall, also leading to the Djebeel Sabr. These gates, which are not far from one another, are built in the Arabizm style and flanked by two towers which rise above the town-wall and are surmounted by a third which defends the entrance. The town is provided with excellent drinking-water by subterranean pipes from the Djebeel Sabr and has a large market. Since the troubles of the xth century it has had a very neglected appearance. The once beautiful houses of stone which, as a rule, have only one storey above ground are for the most part in ruins. Barely 20 are still standing and others have been replaced by wretched huts. The southern quarter of the city has suffered particularly and ruins are scattered all over it. A number of beautiful mosques still testify to the past glory of the capital of the Rasūls. One of these is the Ashrafiyya founded by the Rasūlīd al-Malik al-Aṣ̄īrī Tāmūl b. al-'Abbās (1377-1400 A.D.), a quadrilateral in plan with two minarets and two rows of pillars with 3 domes richly decorated with coloured or ornamentation; in the south of the mosque are the tombs of its founder and of his son 'Ali and of two slaves. Behind a grill of fireproofed wood lie the three marble sarcophagi which contain the remains of the seven wives of the founder of the mosque; opposite them is a sarcophagus of limestone and brick surrounded by carved woodwork in which lies another of his slaves. The large and splendid mosque of the al-Masafiyya lies on the slope of the Djebeel Sabr and is also a quadrilateral in shape with three rows of pillars and three great domes and two minarets. Its whitewashed walls make it stand out in striking fashion against the dark volcanic rocks of the hill. The front is pierced by a series of windows with grilles in the north and adorned with vaultings which are supported by slender pillars. The surface is decorated with scrolls and interlaces. The well-preserved building, which is still the principal mosque, was not unjustly compared with the St. Maria Rotunda in Rome by the Bolognese traveller Ludovico di Barthema, who visited the town in 1506. Other mosques are the well-preserved mosque of 'Abd al-Hāki and in the west overlooking the town wall the mosque of Shāhīh Mūsā, in the east the well-preserved and splendid mosque of Shāhīh Aṣ̄īrī and his family of the first period of the Turkish conquest, from which period also dates the Makkabiyya mosque in the south, the high
lying part of Ta'izz, which was built by an Abyssinian slave of Husain Pasha. It is a quadrangular building without a minaret, with a large court in the centre, in a peculiar mixture of Byzantine and Arabic style, richly ornamented with inscriptions, which are written on the doves of inlaid wood and on the walls and pillars. On the left side are large water-basins which were made for the ritual ablutions, but are now used for the hospital laundry. The mosque of Sharaf al-Din is destroyed except for the minaret; it was founded by the Imam Sharaf al-Din b. Imam Mu'tasim and like the Ashafa'ya stands in the high-laying southern part of Ta'izz.

The town is richly provided with gardens, fields and meadows. The most beautiful, in the centre of the town, belongs to Sulaiman Pasha and is called Birkat Husseinayn. In its midst stands a kiosk which contains a fine large room; before it is a large oval basin with a spring. In the garden also is the high zuhba (mausoleum) of Husain Pasha, who is buried there. The gardens are amply supplied with water by aqueducts from the Djabal Sahir. The same plants and trees are grown here as in San'a and Rawda except the nut-tree: the date-palm does not do very well. Bananas flourish exceedingly. The plain around Ta'izz is well tilled; the slopes of the Djabal Sahir north-east of Ta'izz are covered with little groves of tamarisk and carob trees, with many little hamlets near them. The Djabal Sahir itself is like a botanical garden, on the lower slopes of which grow almost all kinds of fruits, tamarinds, quinces, citrus, vines and on the higher slopes all kinds of aromatic plants in addition to the usual trees and shrubs. Cultivation is carried up to the highest points of the hill and barley and qhardal flourish especially. The true wealth of the country however lies in the extensive plantations of bat [q.v.] (cocos nucifera Forsk.), the aphrodisiac of which the people of Yemen are so fond. Glaser says the site of Ta'izz is exceedingly unhealthy and the climate malarial. Ta'izz has good caravan connections with Zabid, Yarim, Ibsh and San'a, as well as with Aden and under Turkish rule used to have a weekly postal connection with al-Hudaida. The railway planned in 1913 to connect al-Hudaida with San'a and the interior was intended to include a line al-Hudaida-Zabid-Ta'izz-Ibsh-Yarim-San'a but has never been constructed as a result of the Italo-Turkish war and the Great War.

Local tradition says that Ta'izz was founded in the pre-Muhammadan period. It connects the Djabal Darbat 'Ali N.E. of Ta'izz with the son-in-law of the Prophet, afterwards Caliph. The mountains which now has two peaks is said to have once been a solid mass. When 'Ali, engaged in the conquest and conversion of the Yemen, came to Ta'izz, its inhabitants showed themselves extremely hostile to him and the teaching of the Kur'an. 'Ali laid siege to the town and took up his quarters on the summit of the hill which bears his name. The siege dragged on on account of the stubborn resistance of the inhabitants; 'Ali's envoys to the heads of the town talked to deaf ears and only received abuse, indeed, one embassy was ill treated and beaten by the inhabitants. 'Ali was so enraged at this that he took his celebrated sword and struck the summit of the hill such a blow that he made the long deep cleft which is still to be seen. Although not a text was shaken in 'Ali's camp and no man was injured, the houses in Ta'izz were all overthrown and even the most solid collapsed. Ambassadors therefore came to 'Ali from Ta'izz who declared 'Ali a prophet and adopted Islam.

This story is of course quite unhistorical. The peculiar form of the hill has given rise to the legend. Several other places are also connected with 'Ali; for whom the people of Yemen have a particular fondness. For example, according to Glaser, on the Djabal al-Dinz (near Kubet on the road to Dhamar) on the roadside (probably at the highest point) 'Ali's footprint (rida? 'All) is shown on a rock and close beside it, but to the left of the road, is a rock which seems to have been perforated, called garhat 'All. Another legend is connected with the vicinity of Ta'izz, namely that of the Seven Sleepers, the scene of whose sleep Ibn al-Mudjätwar puts in a grotto of the Djabal Sahir. The South Arabian version of this legend says that the seven sons of a king were taken to king Dokiyan al-Juddar as hostages. When the king went to war, the hostages escaped and went into Mis' Hmaid (near Tha'bad) and did not disappear till they came out on the top of the Karyat al-Majši on the Djabal Sahir where they lived. Dokiyan sought them without being able to discover them. They lived there for 316 years and slept the whole time. They then awakened and it seemed to them as if only a single day had passed. They found some of the money that they had had with them and sent one of their number into the town to buy food. Wicked men seized him and found the money in his possession. They thought that he had found a hidden treasure and took him before the authorities; no one knew him in the place and as he had no home in the town he was thought to be mad and released. He returned to the cave and remains there still. Winds are now said to blow out of the cave.

Glaser visited the spot on November 20, 1887. The Mosque of the Seven Sleepers (Aṣbah al-Kaff) is a very fine one, has wonderful wooden columns and a very good roof. The sanctuary proper is in the north-west corner of the mosque and is a simple walled space in the shape of a prism, on the right side of which there is a hole which the Arabs call Maghara (cave). Glaser investigated it very closely without tracing a current of air or any considerable orifice. He thought it probable however that the rocks were not close together so that a slight current of air blows through them. Saiyida live near the Masjid. The place which Botta erroneously calls All al-Kaff was visited by him in 1837. At the foot of the Djabal Sahir near Ta'izz there was pointed out to him the entrance to the cave, from which the Seven Sleepers had made their way through the whole hill, it is not probable that Ta'izz was in existence in the pre-Muhammadan period. The capital of this area was Sawwā and later Djabal, neither of which is far from Ta'izz. According to the Arabic work of Hājjī Khalifa, Ta'izz was founded by the Ayyubid al-Malik al-Ahsha' Saif al-Islám Zahtar al-Abu T-Fawāris Tughtekt, who came to the Yemen in 578 (1182-1183). According to Glaser, Ta'izz was built for the most part out of the material of the adjoining little town of Tha'bad on the left bank of the Wadi Shla. Ta'izz, according to his investigations, was called 'Udaya 5-600 years ago, but only the foundations of the walls of this
date survive; the walls themselves are of recent erection. The village of 'Udaima lies 3–4 miles almost due east of Ta'izz on the slopes of the Djibal 'Sabr like Ta'izz itself. It is said to have been originally the residence of the kings until Isma'il Malik, a celebrated Samni saint, to whom many miracles are attributed, was patron of Ta'izz, built a mosque and his tomb on the mound of al-Kâhirah, where the citadel later arose and the town grew up, so that the latter also like Mukhâ, Bêt al-Fâqih, Lubiya etc. owes its origin to a saint.

On the other hand as a result of enquires made in 1887 by Kâtib Yahya in Ta'izz, Glaser says that Ta'izz is older than Ta'izz, which was only founded under the Rashidids or even later in the seventh century A.H. Ta'izz, he was told, existed under the name 'Udaima as early as 133 (750–751 A.D.) and the town used to be much larger. How far this is true cannot be definitely ascertained. Yahya (d. 1229) already describes Ta'izz as a large and famous Yemeni fortress and 'Udaima as a suburb of Ta'izz. Ibn al-Mujâwar (wrote about 670–1342) calls Ta'izz a strong fortress and residence of the kings of the country. Ibn Batuta, who visited Ta'izz in 1332 A.D., describes this residence of the Yemeni rulers as one of the finest and largest towns in the country and its inhabitants as arrogant, proud and uncultured. Of its three quarters one was inhabited by the ruler and his servants and Mamlik and nobles; the second called 'Udaima was occupied by the military and officers, the third by private citizens; in the last was the great bazaar called al-Muhallib. The town prospered exceedingly as the capital of the Rashidids. Five educational buildings were founded by them in Ta'izz; viz. two by al-Malik al-Manṣûr 'Umar (1239–1250 A.D.), a third by his successor al-Malik al-Fadl Muẓhikîd (called the Muẓhikhâliyya), a fourth by al-Malik al-Asghar Isamîl (1377–1400 A.D. the Ashgrafid) and a fifth by al-Malik al-Muṣayyad Dâwûd (1296–1321 A.D.) who left a library of 100,000 volumes and is buried in the madrasa. The fortress does not seem to have been very strongly built, for in 1529 A.D. a part of the castle collapsed and killed two people. In 1516 Ta'izz was taken by Husain al-Kurdi, the admiral and general of the Egyptian Manusik Sultan Kânsîn al-Ghûrî, in 1545 by the Turks and in 1557 it passed to the Imâms of Şan'â'. The French physician De la Grêlandière, who passed through Ta'izz in 1712 describes it as a famous old town with fine walls built by the Turks. The citadel had 30 cannons and was used as a state prison. Under the rule of the Imâms of Şan'â', who succeeded the Turks in 1635 the town had therefore recovered from all the blows it had suffered.

Later Ta'izz passed to the powerful tribe of Dhib Muhammad who held it till Ibrahim Pasha took it from them and it was under Egyptian rule from 1835 to 1840. When the Turks began to reconquer the Yemen in 1871 Ta'izz fell to them on October 28 and they were able to hold it till the great general rising of the Yemenis under the Imâm Aḥmad al-Din in 1892. The fortress was only temporarily rising: the Turks reconquered it in 1893 and held it till the conclusion of peace in 1918. With the withdrawal of the Turks from the Yemen, Ta'izz has again passed under the rule of the Imâms of Şan'â'.

TAKASH (Turkish pronunciation: Tekşâ) b. li-ARSLĀN, king of Khârizm [q.v.], 567–590 (1172–1200), of the fourth and most glorious dynasty of Khârizmshâhs [q.v.], was, before his accession, governor of Dârân on the lower course of the Sîr-Darya' [q.v.]; he had to fight for his throne with his younger brother Sultan Shah, and in the struggle at first Takash and then his brother received the support of the Kara Khatīb [q.v.].

When the fight was finally decided in favour of Takash, Sultan Shah succeeded with the help of the Kara Khatib in establishing himself in Mev, Sarakhs and Tabi and held this territory till his death in 589 (1193), being sometimes at peace and sometimes at war with his brother. The capital of Khorasân, Nischâpur, had already been taken by Takash in Rabî' I or Rabî' II 583 (1187), Takash's eldest son Malik Shah was governor there. After the death of Sultan Shah, Malik Shah was transferred to Mev and his brother Kuth al-Din Muhammad appointed his successor in Nishapur. Of greater importance was the destruction of Saljuk rule in Persia. 'Irak (Irâq, Adjâmî) the victory over Sultan Tughluq II in 590 (1194). This victory raised Takash from the status of a local dynast to a ruler of a great power and henceforth he called himself on his coins no longer Khârizmshah but Sultan-šâh, son of the Khârizmshah, Persian 'Irâq with al-Râfî and
Hamadhân passed into the possession of Takâsh, who appointed his son Yûnus governor of Hamadhân; later he handed over Hamadhân to the ruler of A-hashšîbân, Abî Bakr, as his vassal, who sent his brother and ultimate successor O sângh thinker. In 592 (1196) an army of the Caliph Nâṣir was defeated at Hamadhân; the Caliph had demanded that Takâsh should evacuate the conquered territory and retire to the east but Takâsh wanted not only to retain his conquests but to get Khâisticân also from the Caliph. Takâsh, like the Saljuqâs before him, including Taghhrî II, is said to have demanded that the Caliph should hand over to him the secular power in Bâghdâd itself and he content with a nominal sovereignty over the Muslim world. This dispute was not decided on this occasion, but was continued under Takâsh's successor, Muhammed.

We know still less about the fighting between Takâsh and the Kara Khitai. The most important event in these wars, the capture of Bûkhârâ by Takâsh, is placed by Ibn al-Athir (ed. Tornberg, ii. 362 sqq.) in the events of the year 594 (1198); there is however a document relating to it in the collection of state-papers made by Muhammed b. Mu'ayyad al-bâghdâdi of the years 576–579. In any case the access was not a transitory; and in spite of his possession of great power in the Muslim-world Takâsh remained a vassal of the Kara Khitai till his death.

**TAKBIR (a),** infinitive II. from the root k-b-r in the denominative sense; to pronounce the formula Allâh akbar. It is already used in this sense in the Qur'în (e. g. Sûra lixv. 3; xliii. 11) with Allâh (the object). On the different expositions of the elative akbar in this formula cf. Liânâm, s.v. and the Kur'ânic elative akrâm also applied to Allâh (Sûra xlviii. 3) and akrâ ('Sûra xii. 20; lixvii. 1).

The formula, as the briefest expression of the absolute superiority of the One God, is used in Muslim life in different circumstances, in which the idea of Allâh, his greatness and goodness is suggested. When Muhammed had learned by supernatural means of the death of Nâdîjî in Abyssinia, he proclaimed the news to those around him, arranged them in rows on the Musalla and had a takbir pronounced four times (Bûkhârî, Djâm'a, bâh. 4, 55, 61). On other occasions also Muhammed is said to have called the takbir four or five times over a funeral bier (Muslim, Dînâîa, trn. 72). The fourfold takbir remained or became usual at the salât for the dead (Shàkit, Khâb al-Tabaâ, ed. A. W. T. Juybûlî, p. 47 sqq.). The Addâsān (q.v.) is also opened with a fourfold takbir.

The Prophet is said to have uttered very frequently the takbir during the Idrâdî, at the beginning of (Aûmân b. Hâbal, Mu'mân, li. 144), during (Bûkhârî, Dînâîa, bâh. 132, 133; but not too loudly, op. cit., bâh. 131) and at the end of the journey (Ibn Hâbal, ii. 5), at the sight of the Ka'âba (Ibn Hâbal, ill. 320), at the Black Stone (Ibn Hâbal, i. 264), between Mina and 'Arafa (Bûkhârî, Hadîjî, bâh. 80), on Safâ and Marwa (Ibn Hâbal, ill. 320) etc.

The takbir is prescribed by the law at the beginning of the salât (the so-called takbirat al-âdâbî); during the salât it is five times repeated.

**TAKDRÎJ: **[See KADAR].

**TAKDRÎJ, **lit. "woodcutter", the name of an Anatolian sect with Shî'a tendencies. The Tâkdrîj, like the Čepni or Četni (cf. F. Babinger in Z. D. M. G., lxxvii (1922), 141 and F. Taeschner, ibid., p. 282 sqq.) are who are mentioned as early as the end of the xivth century, the Zeibeks (q.v.) and all the sub-sects comprised under the name Kızılbaş, form a separate element in the population of Anatolia, as regards ethnography and religious history, the origin of which has not yet been satisfactorily explained. As to the Tâkdrîj they are mainly found in Western Asia Minor; they settle in villages and engage in cattle-rearing, agriculture, wood-cutting etc. They seem to have got their name takdrîj from their activities as woodmen. The origin of the Tâkdrîj is obscure. While F. von Luschan in his Reisen in Lykien, Milyas und Köyvaris, Vienna 1889, ch. xii, thinks, mainly as a result of cranial measurements, that they are remnants of the original inhabitants of the country, G. Jacob has suggested (cf. Islam, ii. 232 sqq.) that the Tâkdrîj are the remnants of the brotherhood of the dâbûsî (cf. F. Cumont in Pauly-Wissowa s.v. Dâbûrî, also H. C. Maul, Die Vereine der Türki, Centenarii und Dâbûrî und des Römischen Reich, Frankfurt a.M. 1896, Program). These two views have little in their favour; the Tâkdrîj are rather Persian settlers from Persia at the end of the xivth century to western Anatolia, who were adherents of the Şafawî sect (q.v.). Of them we know that they were widely dispersed over Asia Minor even before the rise of Şâh Ismâ'îl (cf. F. Babinger, Scheich Bedr ed-Dîn, Leipzig and Berlin 1921, p. 91 sqq.). In favour of this view is the striking similarity in customs and practices of the Tâkdrîj and of the Şafawî in the time of Şâh Ismâ'îl. They are said to drink wine, eat pork and have ceremonies which recall baptism and communion. The women go, and have always gone unveiled, among them. Persians and Christians, but not Turks, are welcome guests among them and the Shî'a names 'Ałî and Ismâ'îl are especially popular among them; cf. W. Heffening, in Der Neu Orient, iv., Berlin 1919, p. 264 sqq. It is also noteworthy that the Tâkdrîj, according to the report of the Austro-Hungarian Consul of Adalia, Tibor v. Pöd (cf. Österr. Monatschrift für den Orient, xii., Vienna 1915, p. 506 and F. Babinger in Ist., xii. (1921), 103), lived outside the authority of the Turkish government, and "until quite lately were regarded as Persian subjects according to old tradition." All these indications suggest a former very close connection with the Şafawî kingdom. According to the same authority, the Tâkdrîj are specially numerous in the sandjak of Teke (around Adalia), spend the winter on the coast and in summer go with their
herds back to the mountains, where they dwell in tents and wretched huts and live by cattle-rearing.

FRANZ BARINGER

TAKI KASHI, TAKI AL-DIN MOHAMMAD B. SHARAF AL-DIN HUSAINI KASHI, a Persian biographer, a native of the town of Kashan, died in 1016 (1607). He wrote in 985 (1577-78) the Khüfus al-Asfar wa-Zadat al-Ashar, and wrote the preface to the Divan of Mahmudshah, who was a poet of the time of Shah Ismail I and of Tahmasp I.

TAKI AL-DIN. See al-Muzaffar.

TAKIYA (al), caution, fear (see Glossarium to Tahari, s.v. 64-4) or hilmun, disguise, is the technical term for dispensation from the requirements of religion under compulsion or threat of injury.

Muhammad himself avoided suffering in the cause of religion in dogmaticism by docetism (Sura iv. 156) and in everyday life by the khidra and by allowing in case of need the denial of the faith (Sura xvi. 108), friendship with unbelievers (iii. 27) and the eating of forbidden foods (vi. 119; v. 5). This point of view is general in Islam. But, as he at the same time asserted the proclamation of his mission to be a duty, and held up the heroic example of the old saints and prophets as a model (xxix. 7; v. 71; iii. 40 etc.), no definite general rule came to be laid down, not even with the separate sects. Minor questions, which are very fully discussed, are whether takiya is a simple permitted alleviation (makka) or a duty, whether it is valid in private interest or in that of the community.

The takiya was not rejected even by the extreme wing of the strict Kharijites [q.v.] although among the Azaqis in the related question of divine worship when danger threatens (zalit akhris), it is often given as an example that one should not be sterile even if his horse or his money be stolen from him during it. The advice is quite old: “God gave the believers freedom of movement (maasa’a) by the takiya; therefore conceal thyself!”

The principle adopted by the Ibadjud however was that “the takiya is a cloak for the believer: he has no religion who has no takiya” (Djamiayi; see Bibl., xiii. 127 sqq.).

Among the Sunnis authorities the question was not such a burning one. Nevertheless Tahari says on Sura vii. 108 (Tafsir, Badik 1323 sqq., xxv. 123): “If any one is compelled and professes unbelief with his tongue, while his heart contradicts him, to escape his enemies, no blame falls on him, because God takes his servants as their hearts believe”. The reason for this verse is unanimously said to have been the case of Ambarr b. Vais, whose conscience was set at rest by this revelation when he was worried about his forced worshipping of idols and obligation of the Prophet. It is more in the nature of theological speculation, when in this connection the question of khidra is minutely investigated, that in certain circumstances e.g. threat of death, a Muslim who cannot live openly professing his faith may have to migrate “as God’s earth is wide” Women, children, invalids and one who is tied by considerations for them, are permitted wamikaya (“consimulation”); but an independent individual is not justified in takiya nor bound to khidra, if the compulsion remains within endurable limits, as in the case of temporary imprisonment or flogging which does not result in death. The endeavour, however, to represent the takiya as only at most: permitted and not under all circumstances obligatory, as even some Sunnis endeavour to hold on the basis of Sura ii. 191, has resulted in the invention of adulatory traditions, e.g. ru’u’ul al-mudawwar “to be good friends with unbelievers is the beginning of actual unbelief”. To prove that such a fast is tawriyya, is a noble thing, the regally of the two Muslim prisoners of Musailim, one of whom allowed himself to be forced to acknowledge the anti-prophet, while the other died for the Prophet. The latter is reported to have said: “The dead man has departed in his righteousness and certainty of belief and has attained his glory, peace be with him! But God has given the other an alleviation, no punishment shall fall upon him”.

The takiya is of special significance for the Shi’ a. Indeed it is considered their distinguishing feature, not however always with justice, as Nāṣir al-Din Tusi in the Tafsir al-Muhaqiq against Kazi (see at the foot of his Muhaqiq Afshar al-Muqaddadin wa l-Mutla’ahhah, Cairo 1305, p. 182, on 1). The peculiar fate of the Shi’a, that of a suppressed minority with occasional open not always unheroic rebellions, gave them even more than the Kharijites occasions and examples for extreme takiya and its very opposite; every Shi’ a, usually masters in the art of disguising their creed, made the challenge to their leaders: “He who has 40 men at his disposal and does not seek his rights: is no Imam”. The Zaidis give for the number of helpers which removes the necessity of takiya from the Imam, that of: those who fought at Badr. It is a common polemical charge of the Sa’dis, quoted from the writings of the Shi’a themselves, that the latter, as followers of fighting martyrs, are not justified in takiya, while the Twelvers in particular, while representing the Imam as examples compelling one to resoluteness, appeal on the other hand to the conduct of Ali during the reign of the three first Caliphs and to the qablawiyah of the Mahdis as the typical takiya.

Belief is expressed by heart, tongue and hand; a theory of probabilities developed with considerable dialectic skill calculates under what real or expected injuries, “the permitting of what is pleasing to God and the forbearing of what is displeasing to God” is permitted. Observance with the heart is absolutely necessary. But if it is probable to any one (fawz ghaibah ‘ala sanihi) or if he is certain that an injury will befall him, his property or one of his co-religionists, then he is released from the obligation to intercede for the faith with hand or tongue.

In Shi’i biographies concealment is a regular feature; we are told that the hero broke the laws
of religion like the prohibition of wine under compulsion and not at all in an excusable way. Not since for them also Muhammad is the Prophet, and since at among the Semites a Prophet may not practice takiya in matters of his office, because otherwise one would not be certain of the revelation, we have, in view of the double exame of the Imams, in the code of mulsams for the ordinary pious men of faith, the following sayings of Allah in juxtaposition: "It is the mark of belief to prefer justice if it injures you, and injustice if it is of use to you"—and as an explanation of Surâ xix. 13: "He among you who is most honoured before God is the most fearful (of God)," that is to say, he who uses the takiya most (attakhmam = at-thurukam takiyam); and it is also said: "The ikhlas is our æthanal", but at the same time the æthanal chapters are to be read with the implied understanding that the fighting is primarily against other Muslims. It is also to be noted that the takiya of the Shâfi is not a voluntary ideal (cf. Khânâi, Rowûtul al-Djamâât, Teherân 1306, iv. 66 sq.), but one should avoid a martyrdom that seems unnecessary and useless and preserve oneself for the faith and one's co-religionists.

Latterly the takiya is based on the intention and so we continually find the appended name to the takiya in this connection. The validity of the profession of faith as an act of worship is not only settled by the correct formulation of the intention to do it, but this is the essence of it, so that it alone counts, if under compulsion a profession of unbelief is made with the lips or worship performed along with unbelievers, God's rights alone can be injured by the takiya. He has the power to punish the constrainer, and only in certain circumstances will a slight portion of the punishment fall upon the constrainer. The phrases used in this connection especially in oaths with mental reservations give however ample opportunities to injure one's fellow-creatures.

The moral dangers of takiya are considerable, but it may be compared with similar phenomena in other religions and even among mystics. The ethical question whether such forced lies are not still lies with a forced denial of the faith not still a denial, is put partly by the one "who conceals himself", and he is not in a state of confidence which would be broken by lies or denial.

this connection, and 'Abd Allah b. 'Umar who is also quoted in support of the opposite view, this opinion is only ascribed to 'Ali b. Sa'd b. 'Ubada, Ibrahim al-Nakah, 'Abd and Muhammad b. Sirin; the brief reference to "others" does not mean much. In Said b. al-Musayyib we have the essential alienation but still retains a main feature of the ishram, that one thing only, sexual intercourse, is forbidden on the Friday night. A further proof of the close connection between ishram and taqlid is the view reported of Sa' id al-Thawri, Ahmad b. Hanbal, Ishak, and others, that the pilgrim to Mecca becomes muhrim by putting on the taqlid alone, and the allied view that the taqlid put on by a pilgrim binds him to adopt the ishram; Malik b. Anas says that it is at least undesirable for the Mecca pilgrim to separate the taqlid from the assumption of the ishram. The Fikh regards the hanging on of a fitrada (two sandals, one sandal or a piece of leather) as desirable (mustahabb) in the case of camels or cattle or according to the Shafi'i, Hanbalis and Ahmad b. Thawri and Dawr, in the case of smaller beasts also; of the Hanafis and Malikis who do not allow it, the Malikis entirely refuse to allow small animals to be used for sacrifices (hady). After the animal is slaughtered the fitrada is dipped in its blood. When the pilgrims no longer brought the sacrificial animals with them from home and the market for them was instituted in Minah, the taqlid fell with oblivion.

In conclusion, we may note that a leather neck band, also called fitrada, on the camel to avert the evil eye, especially if a bell hang from it, is suggested in one tradition.

**Bibliography:** Lane, Arab.-Engl. Lexicon, s.v.; for the traditions: Wensinck, Handbucb, s.v. Victims; Malik b. Anas, al-Muwatta' in both recensions; al-Zuhali, Kommentar zum al-Muwatta' and al-Tahawi, Sharh Ma'ani al-Attar, lithogr. 1300, l. 439; the Fikh works; Guénon, Le Pilier Inverse de la Meccé, p. 279–285 (a very thorough treatment of the custom in paganism and Islam, although differing in minor points from the sketch given above).

2. **Taqlid** also means installation in a military office, which was done by girding on a sword; it then comes to mean investiture with any administrative office, including that of kaffi.

**Bibliography:** Lane, Arab.-Engl. Lexicon, s.v.; Sprenger, Dictionary of the Technical Terms (bibliotheca indica), p. 1178.

3. **Taqlid** lastly means "clothing with authority" in all matters of religion; the adoption of the utterances or actions of another as authoritative with faith in their correctness without investigating reasons (the derivation of the technical use from fitrada is wrong). In this sense taqlid is the opposite of ishrab ['q.v.]. The historical beginnings of the taqlid coincide with the formation of the juristic Ma'dhab (cf. Ma'dhab), which in part at least arose through adhesion to particularly notable jurists. Al-Shafi'i in his Rihala, 8, 18, uses the word in a sense very close to the later technical use, but al-Tahawi still uses it of the recognition of traditions or their use for the deduction of precepts of Fikh. When definite conceptions had been formed for recognising the ma'dhab i.e. the person qualified for independent derivation of Fikh rules from the sources, and at the same time the conviction of the cessation of unlimited ma'dhab from the third century on, and of the other kinds of ma'dhab correspondingly later, all later scholars or laymen were at once bound to acknowledge taqlid as regards earlier authorities. According to the general orthodox Muslim view, everyone is now and has been for centuries bound to what has been authoritatively laid down by the preceding, no one may any longer consider himself qualified to give a verdict of his own in the field of Fikh, independent of that of the earlier ma'dhab. All later persons are called ma'dhadil i.e. those who have to exercise taqlid. This obligation to taqlid is defended by saying that the ma'dhad only in the early centuries of Islam had possessed the real perspicacity and sufficient learning to deduce Fikh from sources and to form an opinion of their own about it, while this was quite beyond the powers of later generations, a view which is only a part of certain aspects of the history of the philosophy in orthodox Islam.

The taqlid has contributed to maintain the differences between the separate ma'dhab but is not to be held responsible for the deadening of the stimulus to the development of Fikh in later times.

While it is the unanimous view that the layman as well as the scholar is bound to taqlid, it is occasionally demanded of the scholar that he should be aware of the correctness of the ishrab of his ma'dhab. If there are several ma'dhad, as is actually the case, the ma'dhad may follow any one of these he pleases (presuming of course that he remains within the bounds of the 113oth i.e. does not choose a ma'dhad whose teachings are no longer recognised by the 113oth; the obligation to taqlid is also based on the 113oth); according to Ahmad b. Hanbal and Ibn Shuraidh, it has to decide to whom the preference is to be given and to follow him (this divergence of opinion is really confined to terminology). In theory the ma'dhad can make a new choice of a ma'dhad with each question that arises for him, but in practice he usually joins once and for all the ma'dhab of one of the three recognised ma'dhad. There are a fair number of cases of tradition from one ma'dhab to another (cf. Goldscheider, Verlesungen über den Islam, p. 235; 2nd ed., p. 48–50; opinions are divided as to whether such a transfer is admissible in theory (cf. Jouyeb, Handwörterb. 3rd ed., p. 22). It very often happens that on a particular question the more convenient rules of another ma'dhab are followed; the Fikh books themselves occasionally hint at the possibility of taqlid, but in such a case it is demanded that the business should be carried through to its conclusion, in keeping with the laws of the particular ma'dhab once it has been chosen.

This all holds of taqlid in questions of Fikh; with regard to the taqlid, the fundamental questions of dogma, e.g. the existence of Allah, besides the opinion that taqlid is obligatory or that it is admissible, we also have the view that it is inadmissible, as on these questions knowledge is demanded which cannot be obtained by taqlid alone. It was the school of the Ash'ari which gave this originally Mu'tazili view wide dissemination in Islam (cf. Goldscheider, Verlesungen, p. 123 and 136, note 10; 2nd edition, p. 121 sq. and 327, note 72).

The principle of taqlid in law has not been enforced in orthodox Islam without opposition; even
in later generations there have been scholars who held that there must always be a muhāfīṣ, like Ibn Ṭabīb al-Id (d. 702 = 1302) or al-Suyūṭī (d. 911 = 1505) or some who were inclined to claim for themselves unlimited qaḍāʾiḥ, like al-Dhahawi (d. 478 = 1085) and the already mentioned al-Suyūṭī, and even some who held that taḥlīf was obligatory for later scholars and condemned the system of taḥlīf, like Dāwūd b. ʿAlī, Ibn Ḥanbal and other authorities of the Ṣŷriṭ, and some Ḥanbalis like Ibn Ṭanūmah and Ibn ʿAbī al-Dawār mentioned taḥlīf of the Ḥanbalis, bring with their followers Ibn ʿAbd al-Wahhāb rejected taḥlīf (cf. the Ḥanbalis-Wahhābī works and propagandist pamphlets printed at the Masār press in Cairo and al-Shawkānī’s brochure entitled al-ṣawād al-muṣūd fī ʿAllāh ʿal-ṣawādīḥ wa ḍalīl al-ṣawādīḥ wa ʿAllāh ʿal-ṣawādīḥ, which deals particularly with the Ḥanbalīs-Ḥanbalīs question). Like the Ḥanbalis, their extreme opposites, the modernists in Islam, for whom the Ḥanbalis, it is true, paved the way, reject taḥlīf and demand and exercise a new qaḍāʾiḥ which in its lack of restrictions far surpasses even the most liberal of the later period of legal development (cf. Hartmann, Die Kritik des Islam, and the writings of the different modernist schools, some of the most important of which are quoted in the article ʿal-Ṭalib). For reasons similar to those of the Ḥanbalī-Wahhābī the Ḥabīb also rejected taḥlīf. Lastly the Shīʿīs reject the orthodox doctrine of taḥlīf, according to the Twelver, during the period when the Ḥanbalīs and ʿal-Ṭalibīs, when the Ḥanbalīs and ʿal-Ṭalibīs have to guide the faithful as his agents; as these have thus living teachers always in view in religious matters, taḥlīf towards a dead man is forbidden (cf. C. Frank, in Ḥanbalīs, ii. 177 sqq.).

Lexicon, s. v. and Spranger, Dictionary of the Technical Terms (Bibliotheca Indica), p. 1178 (not wholly reliable); on the terminology, the Uṣūl-works; Juynholl, Handtiriding, 3rd ed., p. 33 sgg. and note 13; Snouck Hurgronje, Verspreide Geschriften, ii., passim.

(T. SCHACHT

TAKILIF is imposing a requisition or constraint upon any one; it requires an action in which there is difficulty and trouble (Lane, Suppl., p. 3002 sqq.; Lizān, s. 218: amur bi-ni-yaḥfaṣal-ʿalābiḥā). The verb is used in several forms seven times in the Korān (ii. 235, 286; iv. 86; vi. 153; vii. 40; xxiii. 64; lv. 7) to express that Allah does not require of any one what is beyond his capacity (umūr). Technically it means the necessity which lies of the creatures of Allah and act as He has revealed to them. It is therefore defined legally by the majority of canonists as the requiring (ṣāliḥ) of an action in which is difficulty and trouble. On this definition, it applies only to things necessarily required and to things forbidden (al-muḥallaf, al-ṣāḥibīm). Some canonists define it as an assertion of a belief that the action is one of the legal rulings (al-ṣāḥib al-ṣāḥibīa). On this definition, takilif applies only to the recommended (al-muṣūd), the disliked (al-makrūḥ) and the permitted (muḥallaf). Further, there is dispute as to who is muḥallaf, i.e. under this divine requirement. It is accepted that every sane, human adult (ṭabīt, inst., hāṣṣ) is thus muḥallaf (Juynholl, Hanbalīs, p. 69). But the qiyas are also under this taḥlīf so far as

the prophetship of Muhammad is concerned; he was sent to the qiyas and the other prophets were not. Similarly of the angels, although this applies only to their acts of obedience, as faith (imān) exists of necessity (ṣarūrī) in them. Yet some assert that as their created nature is obedience, the prophetic mission of Muhammad to them was only to glorify them (la-hamātibīm; cf. al-Baidūrī on the Ḥayyān of al-Ṭaḥāwī, ed. Cairo 1315, p. 73). Some further extend this taḥlīf of the prophetically mission of Muhammad even to inanimate things (al-qāmūdūḥ), on the ground that in some of the miracles (muḥāfīs) of Muhammad reason was created in some inanimate things to the point that these believed in him. Another matter of controversy as to taḥlīf is the allowability of Allah’s requiring of a creature that which the creature has no power to do (taḥlīf wa lā nīṣāʿ). The Muʿazzārites asserted, in the language of the Korān as above, that the creature is not required to do what is not in his capacity (bāʾīd fi manākib; ʿAqīd of al-Nasafi, ed. Cairo 1321 with commentary of al-Tar PORTA, p. 103). Al-Idāja in his Mawād (ed. Baltīsh 1366, p. 535 (middle, 537 middle), as an Aṣḥarite, brings the question back under the general ruling that Allah’s will and action cannot be limited in any way; nothing is incumbent upon him and nothing is evil that proceeds from him. It is a general agreement of the Muslim people (al-Ummma) that Allah does not do an evil thing (ḥabīb) and does not leave undone a necessary thing (nūḥīb). He adds that the Aṣḥarites put it that the ḥabīb and the nūḥīb have no relationship to Allah at all, while the Muʿazzārites hold that what would be ḥabīb from Him does not do and what is incumbent on Him does. See, further, in the passages cited above, long scholastic discussions of these points by al-Tar PORTA and al-Idāja.

Bibliography: Add to passages cited above the general discussion in Dictionary of technical terms, under “Taḥlīf”, p. 1295.

(T. B. MACDONALD)

TAKORONNA, a name given in Muslim Spain to the mountain massif of the south of Andalusia, now called Sierra de Ronda. This is undoubtedly a double of the Berber word which is frequently found in North African names, tākrūna. Different writers have given different vocalisations of Tākoronna: they may be found collected with references in a valuable note by W. Marçais and Abderrahmān Guiga, Textes arabes de Tākoronna (in Tunisia), i., Paris 1925, p. viii, note 2. Cf. also Yākūt, Muḥammad, s. v. Sīlaṣ; Ibn Bashkuwīl, al-Ṣūla, ed. Cordova, B. A. H., p. 185 and 302; Ibn Ṭabīb al-Munšī, al-Ḥayyān al-maṣūf, s. v. — Dooy after thinking of explaining this name by a combination of the Berber prefix tā- and the Latin corona, wisely abandoned this etymology, which could hardly be defended (Hist. des Mus. d’Esp., i., p. 343; note 2, and iv., p. 339; cf. also Rochehurt, ii. 43, note 1). In any case, according to the same authorities none of the proposed etymologies is satisfactory.

The capital of the district of Tākoronna, later the capital of the little independent kingdom of the Banū Ṣarūf till its annexation to the kingdom of Seville, was Rondā; cf. the article RONDO for a resume of the history of the region during the Muslim occupation.

(É. LEVI-PROVENÇAL)
TAKRIT (popular pronunciation: TAKRÜT; cf. Yabıktı), a town on the right bank of the Tigris to the north of Sámara (according to Streek the distance is a day's journey) and at the foot of the range of the Dašal Hamra. Geographically this is the northern frontier district of the Frāk. The land is still somewhat undulating; the old town was built on a group of hills, on one of which beside the river, stands the modern town. To the north is a sandstone cliff 200 feet above the level of the river, on which still stand the ruins of the old citadel. The traces of the old town stretch to the west of these two hills in a large circle, which shows that Takrit was once of considerable extent.

It has been suggested that the name may be recognised in a tablet of the time of Nebuchadnezzar (Strassmeyer, quoted by Streek, ii., p. 87), but the first certain name is that of Ptolemy (v. 18, 19) who calls it Birtha (Yabıktı, l. 361, in giving the latitude and longitude also refers to Ptolemy). Ammianus Marcellinus calls it Virtha. Indeed the hill of the citadel is still known as Barī Şa. In Syriac literature the town is called Teghrith. From the fourth century it was a see of a Jacobite bishop until, in 1553, the diocese was combined with that of al-Mawṣil (Assemanii, Bibliotheca Orientalis, i. 174, 465). The Arab writers attribute its foundation to the Sasanian king Sibtı, son of Ardašir; the town is said to have been called after a Christian woman named Takritt bint Wāli; several legends are connected with its foundation (Yabıktı, loc. cit.; Abu 'l-Fida', Taṣawwur al-Bulāḏūn, ii. 288). Before Islam the town was temporarily occupied by the Arab Christian tribe of the Iyād (al-Bakri, Māḏīma, i. 46); they were driven from it, but the Iyād remained for a long time afterwards in the neighbourhood (Hamdānī, Qāṣīrat al-'Arab, p. 180) and in the period of the conquest the soldiers of the Iyād in the garrison of Takrit secretly assisted the Arabs [cf. Yânā]. The first Muslim capture of the town seems to have been affected in the year 16 by 'Abd Allāh b. al-Mā'tam who was sent out by Sa'd b. Abī Waqqās. Then in 20 AH, the town again surrendered by agreement; tradition ascribes this second occupation to 'Abd al-Nasir b. Dāisam or to his deputy 'Ukbā b. Furqād or to Mas'ūd b. Hūraith b. al-Abdljar. The last named was the first governor and built the dūm9 mosque there (Yabıktı, loc. cit.; al-Baladhuri, p. 248—249).

Down to the middle of the tenth century, the Arab geographers reckoned Takrit as belonging administratively to al-Dżasira (Ibn Khordāḏbeh, p. 93; Ibn Rastu, p. 105; Ibn al-Faqīh, p. 129; Kudāsim, p. 245, 250; 'Abd Allāh, p. 72, 77; Ibn Hāwkal, p. 157; Mā'addī, Kītāb al-Tūḥāt, p. 36), but from the time of al-Makātib (p. 54, 115) the town is more often regarded as belonging to the Istālī (excepting by Idrīsī and Dimashq). In the early centuries of Islam the town was almost exclusively Christian. Ibn Hāwkal and Mas'ūdī (ep. cit., p. 155) mention the al-Khāḍra church there, and there is still a ruin of this name in the south of the town. There were also other Christian buildings (like the monastery of Sa'āba on the opposite bank [Yabıktı, ii. 673] and the Dair Mār Yahanū, Yabıktı, l. 701). The name of the great Muslim sanctuary al-Arba'ın, a quarter of an hour west of the old town, seems to indicate that it was formerly the site of a Christian building. Two vaulted chambers decorated with stucco are still standing; the building goes back to the ninth century. Takrit was celebrated for its manufactures of wooden goods (Makdīs). In the xilth and xiiith centuries it is described as a large town ( Ibn Dżasira, p. 253; Ibn Bağtūs, ii. 133); Ḥamīd Allāh Mustawārī says it is a town of average size. İdrīsī (trans. Jaubert, ii. 147) mentions the al-Daḥlī canal which ran from the Tigris near Takrit and was supposed to go to Baghdaḍ; this is probably identical with the Ḥamīd Allāh Mustawārī, Dāhli, 1, 265 (1945). Traces of this canal, which according to 'Abbāsīd Čeblī was cleaned out by Murtadā Pasha in 1554 (quoted by von Hammer, Wiener Jahrbiicher, 1821, viii. 335), are still visible.

Takrit never played an important part in history. In the eleventh century it belonged to almost independent lords until the Sa'dlād Thaqftāl Beg took advantage of the death of its lord to seize it (Ibn al-Aḥṣī, 148). From 1149 the town was part of the territory of the Bagdadīs and in 1190 it passed to 'Abbasīd Caliphate. It was the birth-place of Sa'dān, whose father Nāṣīn al-Dīn Ayābī had been appointed commander of the town under the Sa'dlād. When the conqueror Tūmī took it, it was in the possession of Arab feudals (Šārāf al-Dīn, transl. Petit de la Croix, lii. 141—154). In the following centuries it remained a small place; Christians are mentioned in it for the last time by Tavernier (Voyages, ii. 87). Under Turkish rule, Takrit was a wāqf in the ayāt of Kāfka (Dāhli, 148), but after the reforms of the twentieth century it was reduced to a nāḥiya of the bāb of Sámara in the wāqf of Bagdadā. In the xiiiith century the population was probably never more than 4,000—5,000 souls. All travellers have been poorly impressed by it; the majority of the inhabitants of the present day make their living by navigating kelseks, which change crews there. From the archaeological point of view Takrit seems to be promising. Herzel found there pottery of an interesting type belonging to the Sasanian period and to the early centuries of Islam.

(J. H. Kramer)

TAKRŪR, Tacnōl (French Toucolone), is the name given to the population of negro stock which inhabits the greater part of the lowlands of Senegalese Futa and the larger part of Bundo. The inhabitants of these countries lying on either side of the river Senegal but more on the left bank, includes from west to east the provinces of Dimbār, Tōrō, Lōn, Virāble or Irīsile, Bōsēya, Ngânē or Pōna, and Damgā. Bundo lies west of the lower Famene. Tacnōl colonies are also found in different parts of West Africa, especially at Kayes (on the upper Senegal), at Nyōro (in Sudanese Sahel), at Sēgū (on
the Niger), at Pandjagara (eastern M-us Lam), at Dingirai (east of Futa Djallon); these colonies were founded in the middle of the xixth century by natives of Senegalese Futa who had followed the fortunes of the conqueror al-Hādzī j Umar. They are also found between the Niger and Chad, particularly at Sokoto (q.v.); these last are descended from other natives of Senegalese Futa who had accompanied Uthman Fodjo on the conquest of the Hausa country at the beginning of the xixth century.

The word "Tuculor" is a slight corruption of the pronunciation among the Wolof of the Lower Congo of the name of the people in question. Among them the word assumes the form Tokoror or Tokoler. We find it in the narratives of the early travellers and on old maps with the spelling " Toucourol" or "Toucourogne." The Arabs wrote it Takur and have made the ethnic Takurif plural. Takur, which is applied by the Moors of the right bank of the Senegal to the Tuculors. It seems that at one time Tokoror or Takur was the name of a town near the river Senegal, as well as the name of the kingdom of which it was capital, which corresponded practically to Senegalese Futa and lastly it was the name of the people of this kingdom. There is still a place called by this name (Tokoror) not far from Gede in the Turo or district of Podor near the arm of the Senegal which is called the "marjot de Don"; this corresponds to the position assigned by al-Bakri, Idrisid and other Arab geographers of the middle ages to the town of Takur. In time Arab writers and following them the Sudanese chroniclers who wrote in Arabic extended the application of the word Takur to the whole of the Muslim Sudan, from the Atlantic up to (but not including) the valley of the Nile and have made Takur a synonym of Sudanese. This is why the European allies have for long borne south of the Sahara, the inscription "Tekur or Sudan." But this extension of the name is not in keeping with the facts, and Takur or Tokoror strictly means the true home of the Tuculors, i.e. Senegalese Futa.

There is not absolute certainty about the origin of the present Tuculors, who seem to form a very mixed population. They are probably in part the descendants of the old autochthons of Senegalese Futa, who are probably of the same stock as the Wolof and the Serer; in part the descendants of the old negro autochthons of modern Mauritania and the Hodh (Hawd) who must have been of the same stock and migrated southwards when the southern Sahara began to dry up; partly the descendants of the Sarakkol (or Soninke) and of the Mandingo (or Malinke) who came at a remote epoch and settled round the commercial centres of the Senegal, Tukur, and partly, descendants of negro serfs called Rammel, belonging to the Fula of Ternes (in the N.E. of Nyoor) who came with their masters to Senegalese Futa before the xith century; these Fula remained shepherds and settled in the highlands, while their negro serfs devoted themselves to agriculture in the valley of the river.

Whatever may be the origin of the Tuculor, they cannot, as has been said, be regarded as Fula half-breeds. Of course such half-breeds are found among them but as a whole the Tuculors are Negroes of pure stock. The only thing they have in common with the Fula is the language which is clearly a negro idiom related to the Wolof and very closely to the Sereer, probably borrowed by the Fula from the old negro autochthons of Ternes and the adjoining districts. The Tuculors give to the Fula dialect which they speak the name of Fular, and sometimes describe themselves as Hinfuleri, i.e. those who speak Fular. The Fula has certainly been the mother-tongue of the Tuculors for a long time, although we cannot tell whether they already spoke it before the arrival of the Fula in Senegalese Futa. In any case we know from a reference in al-Bakri that in the xith century the hippopotamus was known by its Fula name (nyala) to the people on the banks of the Senegal in the country of Futa.

The Tuculors are in general agriculturists, but they have a natural fondness for fighting. In the xviith century, they successfully resisted the domination of the Fula in Senegalese Futa, who from 1559 to 1775 exercised supremacy there under the leadership of the satagi or saligi or siliagi (the "Siratiques" of the early travellers) belonging to the Fula dynasty of Demianke. At the later period they for long resisted the French conquest. They played a considerable part in Uthman Fodjo's conquests in the Hausa country in 1500 and in those of al-Hādzī j Umar in the Mandingo country, the Bambara lands and the Mâsina, from 1845 to 1864, furnishing these conquerors, both natives of Tero, with their best officers and finest troops. Since then they have enlisted in large numbers in the Senegal tirailleurs and have contributed to the black army of France a very large number of soldiers of great bravery and N. C. O.'s of a high order.

They include within their ranks professional castes which are perhaps of a different origin from the rest of the population, but are now at any rate completely incorporated with the rest and speak the same language. Such are for example the S Oral (sg. Tyuballe) fishermen and sailors, the Lawhe (sg. Labbe) joiners and basket-makers, the Bürnëhe (sg. Burnaye) potters, the Wulabbe (sg. Walebe) smiths, the Wulabbe (sg. Gollbe) shoemakers, the Mâbhe (sg. Mabbe) weavers, the Wasmâbe (sg. Bambady) musicians, the Wulabbe (sg. Gwele) herdsmen or troubadours, the Wulabbe (sg. Gore) and the Dûwâwâne (sg. Dywâwâne) curriers etc.

The Tuculors are all Mahommedans and are among the earliest peoples of the Sudan to be converted to Islam. This religion penetrated to Senegalese Futa towards the end of the first half of the xixth century, at the beginning of the Almoravid movement and under its influence. Al-Bakri says that the first ruler of this region to embrace Islam and spread it around him was a certain Wîr-Dyîbî or Wîr-Dyîbî or a third form Wîr-Ndyî (the variants in the manuscripts give these different forms), who died in 1041-1042 A. D.; his son Lebbi in 1056 supplied a contingent to the Almoravid leader Vahyâb. Umar, of the Berber tribe of Lamtuna, in his war with the Berber tribe of the Godda. Local tradition on the other hand gives the name of the first to spread Islam in Senegalese Futa as Âbî Dardî, who is sometimes confused with Nyozyam-Ndyî, the missionary of Djolof. In any case the Tuculors have never ceased to profess Islam since their conversion. In the period of domination of the pagan Fula, religious was added to nationalist
sentiment to stimulate the Tuclors to cast off the yoke of the Denunke kings. Tuclor was synonymous with Muslim as Fula was with pagan.

It was the Tördë section (sg. Tördë) among the Tuclors that always showed itself the most devoted and ardent Muslims. Sulimán Bili, who succeeded in casting off the suzerainty of the Fula kings, and in establishing in Senegalese Futa in 1775–1776 shortly before his death, a Tuclor theocratic monarchy, belonged to this section. 'Ujman Fọdjo and al-Hājjī Umar were also Tördëbe.

Politically Takrur or Senegalese Futa has successively consisted of: 1, a series of provinces more or less independent of one another (before the ninth century of our era); 2, a kind of kingdom ruled by princes who came from Fodh (Hawd), via Tagant and were known as Dyåxingo (15th century); 3, a more or less direct dependency of the Sarakolle kingdom of Dyån (Sëbel) under the government of Tucular princes or Sarakolle governors (8th–11th centuries; this is the period of the Fula immigrations from Termes and the conversion of the Tuclors to Islam); 4, a dependency of the same Sarakolle kingdom, which was now in turn a vassal of the Mali or Mandingo empire (12th–17th centuries); 5, still a dependency of this same kingdom, but the latter was now under the suzerainty of the empire of Gao or of the Songoi (beginning of the 18th century to 1558); 6, an independent kingdom ruled by the Fula dynasty of Denenke who were pagans, i.e. Koli Tengella and his successors (1559–1775); 7, an independent theocratic Muslim federation, the power being in the hands of Tuclors (1776–1858); 8, a series of Tuclor principalities characterized from one another and gradually coming under French protectorate (1858–1890); 9, a series of provinces annexed to the colony of Senegal (1890 onwards).

The theocratic Tuclor state of Senegalese Futa, founded in 1776, was ruled by a chief of a religious character, called almámi (from the Arabic al-imām), elected by the notables and frequently destined by them to a very brief reign. The first almámi of Futa was Abd al-Kādir (1776–1805). He had 33 successors, some of whom had several reigns, like Yüşufu who had nine. The almámi Muhammad Bīrën, elected for the first time in July 1841 signed a treaty of friendship with France on Oct. 7 of the same year. In the reign of Sibawalhi (1844–1856) a fort was built at Podor in Töro by the governor of Senegal, Faidherbe, who now set himself the task of leading the separate provinces of Tuca to leave the confederation and acknowledge French suzerainty. Under the almámi Maqţafi (1858–1859), the French protectorate was accepted by the Dimár, who became independent of Futa. In 1859 the almámi Muhammad Bīrën, who was then reigning for the fifth time, abandoned his rights over Töro and Damga, which were next year placed under French protectorate and the confederation of Futa now comprised only the Lào, Virllabh, Bösey and Ngéné. On Oct. 24 1877, the almámi Muhammad Abجام ceded to France the provinces of Lào and Virllabh and finally in 1884, the governor Brèìre de l'Ise obtained from the almámi Sïre Bàbu Lîh, the recognition of French suzerainty over what remained of the Futa federation: the Bösey, and Ngéné. This was the last almámi. He died in 1890 and on his death the seven provinces which had composed the Tuclor state of Senegalese Futa were annexed to the French colony of Senegal.

The Tuclors of Bundu had formed in their country a similar state, which made an alliance with France in the middle of the sixteenth century. The almámi Bùhaksar Sa'àda who was then reigning in Bundu vigorously supported the governor Faidherbe in his struggle against al-Hājjī Umar especially in 1857 and 1859.

It was in 1861 that a Tuclor, a native of Töro, 'Ujman, son of a certain Muhammad called Fodjjo, i.e. the "learned", having raised an army among his contemporaries of Senegalese Futa and strengthening it with soldiers recruited in Mâxîna, Liptiko and Songoi, taking as an excuse the exactions of the king of the province of which the shepherds of Gōber had complained, preached a holy war against the Hausa, seized Tesêwa, capital of Gōber, then Sokoto, Katsêma, Zinder, Kânsa, Zaria and other Hausa towns and founded between the Niger and Chad an empire the capital of which he made at Warra, near Sokoto, and whose boundaries he extended to Nupè in the northwest and Adamawa in the southeast. He even invaded Bornu but was driven out again by the celebrated Kânsa, in 1810. He died in 1815 as a result of a kind of fit of mystic mania. His brother 'Abbûllâh assumed the government of the western part of the empire with Gando as capital, and his son Muhammad Bello, that of the central part, called the kingdom of Sokoto; as to Adamawa, it became practically independent. Muhammad Bello, who reigned from 1815 to 1837, had to fight against the greater part of his subjects who rebelled against Tuclor domination and returned to paganism; he had also to fight against Bornu. He was a notable scholar and wrote in Arabic a number of historical and religious works. In 1828 he received with consideration the explorer Clapperton. He was succeeded by his brother 'Abjîko (1837–1843) who distinguished himself by his rigid puritanism and forbade dancing and music in his kingdom. 'Alt (1843–1852) who received Barth was the son of Muhammad Bello; he allowed the royal power to slip from his hands into those of the governors of the various provinces, and the five last Tuclor kings of Sokoto never succeeded in recovering it: Abjam (1852–1866); 'Alîyyun Karami (1866–1867), Abjam, second of the name (1867–1872), Abülakari (1872–1877) and Moyûs (1877–1904). The last named offered no resistance to the British troops under Sir Frederick Lugard who occupied Sokoto in 1904 and put an end to Tuclor rule in the Hausa country by re-establishing the authority of the native princes.

The al-Hājjī Umar empire of the sixteenth century founded by al-Hājjī Umar had a short duration. Born at Alwâr in Töro about 1777, 'Umar Tal in 1820 went to Mecca where he performed the rites of the pilgrimage and acquired the title of al-Hājjî (the pilgrim) and received investiture as Khalifa for the Sîûnah of the Tidjâniya brotherhood. On his return he spent a considerable time in Sokoto with his compatriot Muhammad Bello, who gave him a daughter in marriage. In 1838 he established himself in Futa Djallon, then in view of the hostility of the chiefs of this region took up his residence in the south of the Mandingo country at Dingirai where he built a fortress and raised an army, the principal con-
tigents of which he brought from Senegalese Futa. Preaching the holy war against the infidels, he conquered Mandingo and Bambuk, marched against the Bambara and Kaarta, destroyed their kingdom and victoriously entered Nyiro in 1854. Then turning against Kâoso, which had placed itself under French protection and had a French post established at Medina, the capital, by the governor Faidherbe, he laid siege in 1857 to the capital and the French garrison. Paul Holle who commanded the fort of Medina with a handful of men held out for three months. Just when, having neither food nor ammunition left, Paul Holle was going to blow up the fort with its defenders, Faidherbe, who had been waiting for the waters of the Senegal to fall, appeared with his troops before Medina, and routed the army of Abûdîl Umar. The latter went to Bundu where he had to fight the almami Bûbakar Sa'ada, then went to Senegalese Futa, a part of whose population he forced to follow him to Nyiro. Having thus reconstituted his army, he marched against the Bambara of Ségou and took this town in 1861. He then turned his attention to the Fula of Mâsina, who although Muslims had assisted the pagan Bambara, took their capital Hamdallahi and seized them under Ahmadu-Ahmadu, whom he beheaded in 1862. He then proceeded to sack Timbuktu, after which besieged by the rebel Fula he was brought to bay in a cave, where he was smoked to death in 1864.

One of his sons, Ahmadu, whom he had left in Ségou wished to succeed him, but he found rivals in his brothers and other relations installed at Dingirai, Nyoro and Bandyagara (Mâsina). The empire founded by his father was divided into four kingdoms, all at variance with one another. Ahmadu tried to get rid of his brothers and of several of his brother's lieutenants by having them assassinated but he did not succeed either in gaining absolute power or in putting down the continual rebellions which his cruelty and capricious ways provoked among the Bambara and Fula. After profiting a desire to negotiate with France, he omitted acts of deliberate hostility and the French authorities decided to put an end to a tyranny which all the natives hated. Abûdîl, brother of Ahmadu and king of Dingirai, had joined the French. Colonel (later General) Archinard took Ségou on 6th April 1890, Nyoro on Jan. 1, 1891 and Bandyagara on April 26, 1893, thus destroying the Tucreul empire of the Western Sudan and putting to flight Ahmadu; he sought refuge with Motus, king of Sokoto and died in Hausaland in 1898.

(M. Delafosse)

TALât b. RIZEK AL-MALIK AL-SÂLÎHI, Fâţîmid waṣṣar (495—556 = 1101—1161). He died immediately attendant on the treacherous murder of the 12th Fâţîmid caliph al-Zâhir (1154) called him forth, at the request of the ladies of the royal household, from his governship at Ushmân in to play the role of strong man essential in the circumstances. Success crowned his march on Cairo with his followers from Upper Egypt. Then, following the deposition of Abûbâs, he was appointed waṣṣar to the child caliph al-Fâ'âl in 549 (1154) with the title of al-Sâlîhi mî tâlât. His traitorous predecessor in office, Abûbâs, had fled with his wealth to Palestine and had there fallen into the hands of the Crusaders. Talât treated with the latter for the surrender of their prisoners, paying it is said about 10,000 dinars for each (ibn Lût, i. 66). The exchange was effected and Abûbâs and his son Nasr were cruelly tortured and crucified in Cairo. Talât, as might be expected of such a general, maintained a rigorous control of affairs. In his leisure hours he manifested a penchant for verification, which even obstructed itself in the style of his military despatches. Specimens of his poetry are quoted by Ibn Khallîkân (i. 658). He seems to have been a liberal patron of Art and Letters, although he was not above granting the penury with his taxes. The ruins of the mosque which he built may still be seen near the Bûbah al-Zawfâa in Cairo, bearing witness to his zeal for the faith. He was even a strong supporter of the Isma'ilis. On the death of the little caliph in his eleventh year (1160), and the accession of another child, his cousin Abû 'Ajîl, the last of the Fâtitids, Talât continued as waṣṣar and married his daughter to the caliph. Although virtually ruler of the country, it was only a question of time before his political enemies undermined his power. The restrictions he put on the royal harem, for one thing, earned for him the hatred of the caliph's aunt, whose intrigues led to the waṣṣar's assassination. Even as he lay dying his dominating spirit manifested itself in his ordering the lady to be put to death before his eyes. His death took place on the 19th Ramadân 556 (Sept. 1161). He was ultimately buried in the cemetery of the Karâfà. There was a story in Abû Şâlih's Chronicles (fol. 480b) that an aged Christian monk in Upper Egypt had foretold to Talât, when he was still a provincial governor, that he would attain the highest rank in the state. When the prophecy was fulfilled the waṣṣar is said to have made a grant of land to the monastery. Whatever else he may have been, he was certainly a valiant warrior. He did his utmost by diplomacy, bribery and attack to drive the Crusaders from Palestine, but without success, chiefly due to the collapse of his negotiations with the orthodox Muslim ruler of Damascus. With his dying breath he is said to have regretted his failure to re-capture Jerusalem from the Franks. Amari is said to have invaded Egypt during his waṣṣarate.

(J. Walker)

Tālāk (a.), repudiation of a wife by a husband, a form of divorce, effected by his pronouncing the words anna ṣallāh. The root idea of the verb ṣallāh is: to be freed from a tether etc. (of a camel), to be repudiated by a man (of a wife; in this sense also ṣallāḥ), hence ṣallāḥa, to release (a camel) from a tether, to repudiate (a wife); ṣallā is a camel un tethered or a woman repudiated by a man (cf. Lane, Arab. Eyl. Lex. s. v.).

I. The right to a one-sided dissolution of a marriage belonged to the man exclusively, among the pre-Muḥammadan Arabs. Long before Muḥammad this ṣallāḥ was in general use among the Arabs and meant the immediate definite abandonment of the man of all rights over his wife, which he could insist upon as a result of his marriage. Cf. Th. W. Jasnolli, Die mohammedanische Eheordnung (Diss. Leyden), p. 42—64, who corrects the view held by W. Robertson Smith, Kinship and marriage in early Arabia, 2nd ed., p. 112 sqq. and J. Wellhausen, Die Ehe bei den Arabern (Nachrichten v. d. Königl. Ges. d. Wiss., Göttingen 1893), p. 452 sqq.

II. The Qur'ān lays down regulations which go into the ṣallāḥ with comparative thoroughness. From their fullness, and still more from the many admonitions to observe them exactly, it is evident that Muḥammad was here introducing new rules which had been previously quite unknown to his contemporaries. Muḥammad found particularly repulsive the apparently not uncommon exploitation in his milieu of the wife by the wulāt as well as by the husband, which took place especially in connection with the ṣallāḥ. The first Muslim regulation about the ṣallāḥ seems to be the prohibition to use it for extortions from the woman: Sūra vi. 24. (of the years 3—5, on the whole chronology, which is here given in further detail, cf. Nöldeke-Schwally, Geschichte des Korans; the preceding verse 23 is directed against encroachments by the relatives of the deceased and by the wulāt): "If ye be desirous of exchanging one wife for another and have given one of them a certain sum (as mahr, or brid. gift) make no deduction from it; would ye take it by manifest slander and sin? (25) How could ye take it when ye have had intercourse together and they (the wives) have received a binding promise from you?" (Here Muḥammad recognises the ṣallāḥ as such as legitimate.) The next passage which deals with the ṣallāḥ introduces an important intention to the Prophet, namely the period of waiting (iddā), which is on the one hand intended to leave no doubt about the real paternity of a child born from the divorced woman and on the other to give the man an opportunity of atoning for a too hurried pronouncement of the ṣallāḥ by withdrawing it; thus it is laid down in Sūra ii. 228: "The women who have been given the ṣallāḥ shall wait three wulāt (this expression, which is variously explained means in any case phenomena connected with menstruation); it is not permitted to them to conceal what Allah creates in their bodies, if they believe in Allah and the last day; their husbands have the full right to take them back during this period, if they desire to make atonement; they have to demand the same good treatment to which they were bound but the men are a step above them; and Allah is powerful and wise" (the man is here given the right to take back the wife during the period of waiting even against her will). But this right now given to the man for the first time was very soon abused; the wife was taken back near the end of the period of waiting and a new ṣallāḥ at once pronounced over her so that she was permanently in a state of waiting, in order to induce her to purchase her freedom by giving back the mahr or making some other financial sacrifice; verse 229 was therefore revealed. "If the man has twice pronounced the ṣallāḥ, he may still keep his wife if he treat her kindly or let her go in a seemly fashion; it is not permitted to you to take away anything of what ye have given them. . . . (In an interpretation the kifā, the amicable purchase of her freedom by the woman in contrast to the extortions condemned above, is declared permitted). 229. If he pronounces the ṣallāḥ over her for the third time, it is not permitted for him to take her again unless she has married another husband; if the latter pronounce the ṣallāḥ over her, it is no sin for the two to return to one another if they think they can observe Allah's commands; these are the commands of Allah which make clear to those who have knowledge (it is probable that the second part of verse 229 was induced by a concrete case in which a thrice divorced woman who had married another husband and received the ṣallāḥ from him also, desired to marry her first husband again). A further extension made necessary by the practice, which was intended to prevent abuses of the right of taking back the wife during the period of waiting, is given in verse 231: "If ye give women the ṣallāḥ and they reach their time, retain them with you kindly or let them go kindly; but do not keep them to harm them with hostile intent; who does so only injures himself: make not a jest of Allah's words!" (Here it is forbidden to take back a former wife under a show of reconciliation, and to keep her simply with the object of making her life uncomfortable and forcing her to purchase her release by the payment of a sum of money; the perhaps contemporary verse 232 contains warning admonitions to the wulāt's of divorced women). Later than Sūra ii. 228, which is presupposed, but still before the year 5 are the regulations of Sūra lxv. 1: "O Prophet, when ye pronounce the ṣallāḥ over women, do it with regard to their period of waiting (the meaning, not quite clear, of the Arabic expression seems to be that the ṣallāḥ is to be pronounced in such a way that the period of waiting can be easily calculated i.e. not during menstruation), and calculate the time exactly and fear Allah your Lord; put them not out of your houses and they are not to depart of their own accord, unless they have manifestly done something shameful (i.e. committed adultery); these are the commands of Allah and whose transgresseth them injures himself alone; thou knowest not whether Allah after this may not bring about a change (in the attitude of the man to the woman so that he may take her back). 2. When they have reached their time, then either help them
punishes the woman who seeks the talaq from her husband without sufficient reason. Sura ix. 1. is unanimously interpreted to mean that it is forbidden to pronounce the talaq during the woman's period of menstruation; such a talaq is regarded as a sin and error (khulfa, contrary gurda) but its validity is not disputed; the man who has pronounced it should however withdraw it and if he insists on a divorce should pronounce a talaq in keeping with the rules. A question not yet conceived in the Koran is that of the effect of a talaq pronounced three successive times; the traditions are divided regarding this; alongside of the approval of such a thing, there is the strongest disapproval, sometimes it is even held to be invalid; in the same direction points the hadith that down to the caliphate of 'Omar such a talaq was considered to be a single one and that 'Omar was the first to introduce into jurisprudence his view that it was a threefold one, in order to restrain people by the fear of the undesirable consequences of this abuse. The traditions further mention as a third requirement for the talaq which is to be butuna i.e. in keeping with the prescriptions of the Koran and of the Prophet, that the man in the period of purity in which he pronounces it, must have had no intercourse with the woman. The so-called talaq in which consists in marrying a thrice divorced woman and at once pronouncing the talaq over her, simply with the object of enabling her to remarry her first husband (cf. Sura ii. 230) is strongly disapproved of and even cursed. In general the woman is only considered "permitted" (hazil) for the first husband when the second marriage is actually completed. To check frivolous pronouncement of the talaq, a talaq pronounced in jest is considered legal and binding. As, on the other hand, the talaq means the dissolution of the marriage, a talaq pronounced before the conclusion of the marriage is of no importance. Whether a woman who has thrice received the talaq has a claim during the period of waiting on her husband for lodging and maintenance is not evident from the Koran; the earliest differences of opinion are enshrined in a group of traditions, some of which completely deny any such claim, some of which recognise it only for lodging and some for maintenance also.

Talaq between slaves is not regulated in the Koran; the hadith gives the slave also the right to the talaq but (in analogy with other legal enactments) only twice and similarly puts the period of waiting of a slave-woman at two years' periods. Anyone who becomes a convert to Islam and has more than four wives is bound to keep four and pronounce the talaq on the others. If he has married two sisters, he must pronounce the talaq on one of them. Finally it should be mentioned that according to tradition, Muhammad at once gave the talaq to women who took their refuge with Allah before him and is said to have induced 'Abd Allah b. 'Omar to separate from his wife by a talaq out of consideration for his father's dislike of her.

IV. The oldest jurists (down to the beginning of the formation of the madhhab's), some of whom go back to the time of the origin of the traditions, develop the doctrine of talaq on the lines indicated above; the most important views to be mentioned here are the following. The doctrine of talaq al-
sunna and its three requirements is further developed; it is ascribed among others to 'Abd Allāh b. 'Abbās, 'Abd Allāh b. Ma'sūd, 'Abd Allāh b. Othām, al-Dāhīkhā, Hammād, Ibrāhīm al-Nakha'ī, Ikrima, Muqāshīd and Muḥammad b. Shīrīn (such attributions to the oldest authorities must be regarded as unheistorical; they only become certainly historic with Ibrāhīm al-Nakha'ī; this is also true of what follows); it is even applied to the case when a woman is pregnant; for this 'Abd Allāh b. Ma'sūd, Dājīh b. 'Abd Allāh, Hammād, al-Hassan al-Baqṣī and Ibrāhīm al-Nakha'ī are given as authorities. The ʿtalāq pronounced three times in immediate succession is considered a sin but as thrice valid, by the overwhelming majority, including 'Abd Allāh b. 'Abbās, 'Abd Allāh b. Ma'sūd, 'Abd Allāh b. Othām, Hammād, al-Hassan al-Baqṣī and Ibrāhīm al-Nakha'ī; sometimes the view is even described as the only prevailing one, against which no contradictory opinion exists; but at a somewhat later date there were nevertheless champions of the view that the ʿtalāq of this kind is to be considered as only once valid. While according to the view of the majority, among whom are mentioned 'Abd Allāh b. 'Abbās and al-Dāhīkhā, the wife becomes ḫarām for the man after a threefold ʿtalāq and can only marry him again after completing and dissolving a marriage with another man, these consequences, according to the view recorded of Muqāshīd (among others), who follows Tabāris, and which goes back to a divergent interpretation of Sūra II, 229 f.), come into force after a twofold ʿtalāq; if the man does not withdraw it, but "allows the woman to go". That the second marriage must be actually consummated if the woman is to be ʿtalāqān again to the first man, is unanimously demanded e.g. by 'Abd Allāh b. 'Abbās, 'Abd Allāh b. al-Mubārak, 'Abd Allāh b. Othām, Ibrāhīm al-Nakha'ī, Sa'd b. al-Musayyib, al-Zuhrī. The validity of the ʿtalāq pronounced in jest, is expressly affirmed by 'Abd Allāh b. Ma'sūd, Hammād, Ibrāhīm al-Nakha'ī and is regarded as generally recognised. The principle is unanimitously affirmed that in ambiguous expressions the opinion of the speaker decides, but there is much difference of opinion as to whether certain expressions are to be considered ambiguous or not, and also whether the ʿtalāq pronounced under pressure or under the influence of intoxication is valid or not. Here it is a question of the application of principles, important in other cases also, in a field, which on account of its practical importance had a great influence on its development. The validity of the ʿtalāq pronounced before the consummation of the marriage is denied in agreement with the tradition of 'Abd Allāh b. 'Abbās, 'Ali, Ikrima, Muqāshīd, Sa'd b. al-Musayyib etc. The ʿtalāq pronounced on condition the marriage is consummated (if I marry thee, thou art divorced) is on the other hand recognised as valid by 'Abd Allāh b. Ma'sūd, 'Abd Allāh b. 'Umār, Ibrāhīm al-Nakha'ī, al-Zuhrī while others deny it. Any ʿtalāq pronounced before the consummation of the marriage is irrevocable (cf. Sūra ii. 238; xxxiii. 48); authorities for this are 'Abd Allāh b. 'Abbās, Hammād, Ibrāhīm al-Nakha'ī, al-Zuhrī etc. (this rule is undoubtedly in the spirit of the Kur'ān; cf. Sūra xxxii. 48). The different views found in the Ḫadīth regarding the claims of the divorced woman to lodging and maintenance are also found here: according to 'Abd Allāh b. 'Abbās, al-Hassan al-Baqṣī and Ikrima she has no claim at all, according to al-Zuhrī (who however also appears among the advocates of the first view but probably wrongly) only to lodging. According to 'Abd Allāh b. Ma'sūd, Hammād, 'Umār and 'Umar to lodging and maintenance. 'Abd Allāh b. 'Umār, Sa'd b. al-Musayyib and al-Zuhrī allow the slave only the possibility of the twofold ʿtalāq, whether in respect of a female slave or a free woman.

According to 'Abd Allāh b. Ma'sūd and Ibrāhīm al-Nakha'ī the other hand the deciding factor is the status of the woman as a slave, so that every husband of a slave, whether slave or free man, has only the possibility of a twofold ʿtalāq. The ʿKūrānic expression ṭalīḥa (Sūra ii. 229 f.) is sometimes interpreted as menstruation and sometimes as the period of purity; among the representatives of this former view are 'Abd Allāh b. 'Abbās, 'Abd Allāh b. Ma'sūd, al-Dāhīkhā, Hammād, Ibrāhīm al-Nakha'ī, Ikrima, 'Umār and the Ḫāṣi; as adherents of the latter view 'Abd Allāh b. 'Umār, al-Zuhrī (the first view is also wrongly attributed to him) and the Mālikis are mentioned; Alī and Sa'd b. al-Musayyib appear in both groups. Less important differences of opinion are associated with the interpretation of different ʿKūrānic expressions in Sūra ii. 228 and lxv. 1, 2, 4. There is unanimity on the point that the man has the right to withdraw the ʿtalāq even against the will of the woman. This is expressly stated, for example by 'Abd Allāh b. 'Abbās, al-Dāhīkhā, al-Hassan al-Baqṣī, Ibrāhīm al-Nakha'ī, Ikrima and Muqāshīd. V. The teachings of the ʿFiṣḥ on ʿtalāq, which can be briefly summarised as follows, are based on the above. The husband has the right to pronounce the ʿtalāq on his wife even without giving the reasons, but his pronouncing it without good grounds is considered ṭalīḥa (reprehensible) and by the Ḥanafis even as ḥarām (forbidden); the ʿtalāq al-bird also, i.e. one in which the requirements of the ʿtalāq al-ʿaʾla (cf. above) are not observed is regarded as ḥarām; the validity of the ʿtalāq is not in any way affected thereby. To be able to pronounce the ʿtalāq the husband must have attained his majority and he is corpus mediis; the ʿtalāq of a minor is regarded as valid only by one tradition of 'Alī and the guardians acts of the legally disqualified husband. The ʿtalāq is a personal right which the husband must exercise in person or through a mandatory specially appointed by him; he may even entrust this mandate to his wife, who can then pronounce the ʿtalāq on herself. The ʿtalāq presupposes a valid marriage; the ʿtalāq pronounced on condition that the marriage is carried through if (above) is invalid according to the Ḥanafis, but according to the Ḥanbalis and Mālikis (according to the latter however, not if it is expressed in quite general terms, e.g. "every woman who marries, is divorced.") The ʿtalāq pronounced in delirium or by automatism is invalid. The ʿtalāq of an intoxicated man has given rise to lively discussions in all the madhābhī; in the case of culpable intoxication it is regarded as valid by the majority. The ʿtalāq pronounced under pressure is valid according to the Ḥanafis, but not according to the Mālikis, Ṣaḥīfis and Ḥanbalis.

Words referring unambiguously and directly to the ʿtalāq bring it into operation, whatever may have been the intention of the speaker who uttered
the man, if the speaker uses unambiguous circumlocutions, the Hanbalis, Hanafs, and Shafiis demand also a corresponding intention, while the Malikis pay no heed to the intention. In the case of ambiguous expressions or gestures the intention of the speaker is the only deciding factor. There is a great difference of opinion among the madhhab on all these questions, when it comes to the individual case. The question of the validity of a conditionally pronounced *fatâh* (apart from the above mentioned case) is also much disputed; the Hanafis and Shafiis make such a *fatâh* come into operation on the fulfillment of the condition; the Malikis regard it, according to the nature of the condition, as sometimes at once effective and sometimes void.

The woman's period of waiting begins at once after the *fatâh* unless it is a question of a *fatâh* before consummation of the marriage, which is always definite: in this case the woman does not need to have a period of waiting and has only a claim to half the bridical gift, if it was already fixed (if it was already paid, she has to pay back half of it) or to a gift at the discretion of the man, the so-called marra (cf. Sura, ii. 235). A distinction has further to be made between a revocable and a definite *fatâh*. In the first case the marriage is still considered legally in existence with all its consequences and the woman has a claim upon the man for lodging and maintenance for the whole period of waiting; on the other hand the man has the right to revoke the *fatâh* throughout the period of waiting. If he allows the period to pass without exercising this right, the marriage is definitely dissolved at its expiry. If the bridical gift was not yet paid, it is now due unless some later date was agreed upon for its payment. If a reconciliation then takes place between the two parties and they wish to marry again, they must draw up a new contract of marriage with a new bridical gift.

With a definite *fatâh* on the other hand, the marriage is at once finally dissolved (with the single exception that a definite *fatâh* pronounced by a man during his mental illness does not abolish the wife's rights of inheritance: so the Hanafis, Malikis, and Hanbalis with Shafiis on details, while the Shafiis consider the opposite view the better). The woman has however in this case also to pass the period of waiting, during which she cannot conclude a new marriage; during this period she has a claim on the husband for lodging, but for maintenance only if she is pregnant. The husband's payment of the bridical gift is the same as in a revocable *fatâh*. The conclusion of a new contract of marriage between the former partners is impossible, unless the woman has in the meanwhile lived with another man in a regularly completed marriage (cf. Sura, ii. 235); but even this way out is only open to them twice.

The third *fatâh* is considered definite among freemen (cf. Sura, ii. 229 et seq.) and the second among slaves; it is a matter of indifference whether the separate repudiations were announced in one marriage or in several, not separated by *zibdli*. In mixed marriages between freemen and slaves the status of the man is decisive according to the Malikis, Shafiis and Hanbalis, and of the woman according to the Hanafis.

The period of waiting for a woman is three *husnâs* (cf. Sura, ii. 228) i.e. according to the Malikis and Shafiis three periods of purity, and according to the Hanafis three menstruations; if she is pregnant, the period lasts till her confinement (cf. ibid.). For a slave woman the period of waiting is in the first case two *husnâs* and in the second a month and a half; if she is pregnant, the period of waiting again lasts till her confinement.

Sexual intercourse with a not definitely divorced woman during the period of waiting is not permitted according to the Hanafis and the better known view of the Malikis; according to the Malikis, Shafiis and the other Hanbalis, it is forbidden. In keeping with the views of the first class, it is regarded by them as revoking the *fatâh* in every case; according to the Malikis only if the man intends to do so, while the Shafiis only regard an utterance by the man as revoking the *fatâh*.

VI. The Shis rules concerning *fatâh* only differ in unimportant details from the Sunni with which we have so far dealt. In a more strict interpretation of Sura ixx. 2 the production of two legal witnesses is regarded as absolutely necessary for the validity of a *fatâh*, while the Sunnis dispense with them. All circumstances, ambiguous expressions and gestures are neglected, whatever may have been the intention of the speaker.

VII. As an institution of family law, the *fatâh* has in practice to follow lines strongly dictated by the principles of Muslim law. The very frequent pronunciation of the *fatâh*, often on the most worthless grounds and three times in succession has brought about the following usage: if the couple wish to marry one another again after the third *fatâh*, they seek a suitable individual who is ready for a certain reward to go through the ceremony of marriage with the woman and at once repudiate her; the woman is then again *fatâh* for her first husband and he who undertakes this *zibdli* is therefore called *wakhilâl*. For this purpose a minor or a slave is used by preference. Nothing can be urged against the validity of such a procedure providing that at the conclusion of the intervening marriage the word *zibdli* is not used; its permisibility is defended by the Hanafis but disputed by the Malikis and Shafiis; the Hanbali Ibn Taimiya regarded the *zibdli* in general as invalid and attacked it in a special work (cf. Brockelmann, G. A. L., ii. 155, 38) but he seems to be practically alone in this view.

The conditional pronunciation (*ta'liq*) of the *fatâh* may have different objects: a man may pronounce such a *fatâh*, for example, to drive his wife or himself to something or to refrain from something by threatened separation, or to give force to some statement made by him. In India, the Straits Settlements and a large portion of the Dutch East Indies, this *ta'liq* of the *fatâh* has become a regular custom at the conclusion of a marriage; it is hardly ever omitted and serves to impose upon the man certain obligations towards his wife, on the non-fulfillment of which the marriage is dissolved by the *fatâh*. Cf. Snoek-Hurgonje, De Aziehers, i. 356 sqq. Fortgezette Geschriften, iv. 300 sq.; ivii. 379; Jubbil, Handelding tot de kennis wan de mohammedanaeche woerd, p. 207 sqq.

On the practice of the *fatâh* as it has developed in different countries under the influence of the Sharîa and under native customary law, cf. for example, for North Africa: Ubach and Rackow, Slaves und Recht in Nordafrika, p. 37, 97, 194.

Turkey: with the introduction of the Swiss civil code in 1926 is so far the only Muslim state that has abolished the tašâ.

zioni di diritto musulmano malichka, i. 201 sqq.; Hughes, Dictionary of Islam, s. v. Divorce.

(T. Schachy)

TALAŌÂN (Talā, Talaţ, Talaţ, l. 3658), name of two towns in Persia.
1. A town in Tukhrâstân, between Balkh and Merw-al-Râd, three days' march from the latter. Situated in a plain, but quite close to the mountains (an arrow-shot, şâblân), it was the largest town of the province and had a large market; it was divided into several parts by two rivers: Khuttal-âb (connexion of de Goeje) and Barâsh. It was destroyed in 617 (1220) by Cingiz- 
Khân; ruins near Čâkātkan.
2. A town in Dālam, between Karāwân and Abâr, capital of a district of the same name including several small towns. The birthplace of the famous minister, ûshâk Isma'il b. 'Abbâd. His father Abu 'l-Hasân 'Abbâd b. al-'Abbâs, had the same ethnic name of Tala̲ākan. The inhabitants were suspected of sharing in the heresies of the Isma'îlis. Near it there is one of the two sources of the river Shâh Râd, tributary of the Safid-Râd, also as the source of two of the Karâsh-Râd and the Bih-Râd.

(T. Schachy)

TALAVERA, the name of several places in Spain; the Arabic form is Talaâbrâ. They are the following: 1. Talavera de la Reina, a town of 10,000 inhabitants, the Casaróbriga of the Romans, on a fertile plain on the banks of the Tagus about 100 miles below Toledo, at the entrance to the Sierra de Gredos: Towers dating from the period of Arab occupations may still be seen there: “the Torres Albarranas”. The Arab geographers boast of the solidity of the bism of this town; 2. ca. 20 miles south of the latter: Talaver la Vieja, the ancient Augas- 
obarada; 3. Talavera la Real, a little village on the south bank of the Guadiana, 12 miles above Badajoz.

(T. Schachy)

TALâBIYA (A.), infinitive of form II of the verb labâha, which is formed from the term labâha to mean “to pronounce the formula labâha” etc. Labâhsa is connected — and probably rightly — by the Arab lexicographers with labâba which means “offering devoted service” as labâha does “at your service”. According to the native grammarians labâba is a “frequentative” dual. It is difficult to say what is the significance of the element ai in this and similar forms like ta'âlaâ. The explanation from the Hebrew proposed by Dossy (De israelitum et Mecka, Haarlem 1804, p. 60) may be said to be now generally abandoned.

The formula is used in various forms and on different occasions. The talbiya of the Prophet is said to have been: Labâha alllâhma labâha 
labâha ta'âlaâha lâkâ labâha lâkâ labâha lâkâ labâha lâkâ labâha lâkâ labâha lâkâ labâha lâkâ labâha lâkâ. But shorter forms are given like: labâha alllâhma, labâha ta'âlaâha etc. It is usually referred to Allah, in Hadith also to Muhammed, or to his helpers only its briefest form labâha (e. g. Bukhârî, Khûnâmîzât, B. 4; Muslim, Zakât, Tr. 32; Tirmidhî, Sifat al-Kiyâm, B. 36) and ya labâha (Muslim, Du'âh, Tr. 70). It is also placed in the mouths of pious men of the past like Adam and Nîh. According to a tradition in Muslim (Hadîth, Tr. 22) the hasten in Muhammed's time used it in a false form. The talbiya is especially pronounced on the hadîth (q.v.), at an early stage at the i'âmam which Muhammed and others assumed with the formula labâha hadîth wa-umâraîn (Bukhârî, Hadîth, B. 34) or ya labâha hadîth wa-umâraîn (Tirmidhî, Hadîth, B. 11) or with the exclusive mention of the hadîth (Bukhârî, Hadîth, B. 35). At the beginning of the umara A'lâhî is said to have used the formula labâha bi 'lmumâraîn (Abû Dâwûd, Musnad, B. 23).

The talbiya is continually pronounced during the hadîth up to the tidation (e. g. Abûnâ B. Hanbal, i. 114) and in a loud voice (Abûnâ B. Hanbal, v. 192).

On the question whether the talbiya is obligatory or sunna, see al-Nawawî on Muslim, Hadîth, Tr. 22.

(A. J. Wensinck)

TâLâ B. 'Uamâlallah, companion of the Prophet, one of the ten mu'âshirât, i.e. those to whom the Prophet had promised Paradise. He belonged to the Kūrah clan of the Banû Tamî b. Murra (q.v.); his genealogy was: Tašâ b. 'Uamâlallah b. 'Ughmân b. 'Amr b. Ka'b b. Sa'd b. Tamî b. Murra and his awyûn, Abû Muhammad, from his son, celebrated for his piety and one of the first readers of the Kur'an; both fathers and sons were killed in the battle of the Câned in 36 a.H. Tašâ was one of the earliest converts to Islam. According to tradition he had suffered along with Abû Bakr the threats and ill-treatment of the Kūrah. He went with Muhammad on the Hâdj and was henceforth one of his councillors and most intimate friends. At the battle of Badr, having been sent out to spy the movements of the Meccan carvan,
he was unable to return in time to take active part in the battle but was allowed to share the spoil equally with the other mushārifūn. In the unfortunate battle of Uhud, Talha particularly distinguished himself by his bravery; using his body as a shield to defend the Prophet in the retreat, he received numerous wounds and blow out the tendons of two fingers which remained paralysed. This exploit gained him a prestige during the lifetime of the Prophet and after his death and a place in the veneration of Muslims which the blots of his later career never destroyed.

Talha also took part in the other expeditions undertaken by Muhammad; on the death of the latter his relations with the first two Caliphs seem to have been rather cool; he is said to have hesitated for a long time before recognising Abu Bakr and ‘Omar. The latter in the turn were careful not to give high office to the powerful Companion whose ambition they had probably reason to fear. This did not prevent him from amassing immense wealth as a result of the Muslim conquests, in estates in Arabia and the ‘Irāq and in spiege: the tradition tells us that his generosity was in keeping with his fortune. His prestige and his financial position made him a person of the first importance in the caliphate of ‘Omar. That he along with al-Zubair and ‘Ali was one of the instigators of the murder of this Caliph, as Cæsarii has held (Annales dell’Islam, v. 47-48), cannot be proved, and it seems that the least likely as Talha was away when the murder took place in Medina (cf. R.S.O., iv. 1060-1061); in any case he was a candidate for the succession and was bitterly disappointed when it fell to Uthmān. Thrown into opposition, Talha took advantage of the discontent soon aroused by Uthmān’s rule to try once more to get the caliphate. The real character of the movement which cost Uthmān his life is difficult to understand at the present day, since the records of it are obscure and biased, but it seems certain that Talha was one of the chief actors in the drama, especially in its last days when the long discussions between Uthmān on the one hand and Talha, al-Zubair and ‘Ali on the other, were abruptly broken off and the Caliph killed in his house by the mob. Talha thought his dreams were about to be realised and it even seems that he was near being proclaimed Caliph when ‘Ali was proclaimed in his stead. Here again tradition in spite of the mass of details which encumber it is not at all clear. ‘Ali probably relied on the more turbulent elements which gained the upper hand in these troubled times while Talha (and al-Zubair who was working in accord with him, although for his own ends) seeking to take a middle course was thrust aside. In any case he found himself forced to recognise the new master; but immediately afterwards he fled from Medina with al-Zubair and reached Mecca where he joined ‘Ali, whom he being the enemy of ‘Ali as she had been of ‘Uthmān — who seems to have urged Talha’s claims to the caliphate (perhaps on account of their ties of blood; they both belonged to the Tānis b. Murra). The three allies went to Basra where they — Talha especially — relied on finding many partisans; they announced that they wished to avenge ‘Ali’s murder of ‘Uthmān for which they disclaimed any responsibility. We know the unfortunate end of their enterprise; the defeat in the battle of the Camel (ṣawm al-‘aṣimal, ʿUmaida

11, 36) in which Talha and al-Zubair lost their lives and ‘Ali won the ‘Irāq, which however he could only hold for a few years. Talha’s family however did not suffer by the fall of their head; his heirs entered into possession of his fortune and continued to enjoy a high position; many of them are known as traditionalists, but they completely abandoned politics.

Talha was a brave warrior and a noble and generous character, so far as we can judge from the statements of tradition; he was ruined most likely by the fault, which is common to parvenus, of not being able to moderate his ambition. The unexpected successes of his career made him see no bounds to its possibilities; the qualities necessary to enable him to realise them were apparently lacking to him. The judgment that should be passed on the conduct of Talha (as well as on that of al-Zubair and ‘Ali) has always been a very delicate question for Muslim orthodoxy. They decided it in the conciliating spirit that has always characterised them; Talha and his allies are sinners of good faith and their previous merits are sufficient to wipe out their faults. Many traditions even say that Talha repented before his death and that ‘Ali for his part declared himself reconciled to his adversary. It is only the extreme Shi‘is who have not renounced “cursing those lacking in faith” (la‘anat al-nāthābin).

Biblilography: Ibn Sa‘d, ii/1, 152-161, and the other sources for biblical biography of the company. The text relative to Talha are collected and translated in Cæsarii, Annales dell’Islam, i. 350-399 (cf. also in the same work the index ex tov. i. — ii., iii., and to vols. viii. and ix., the years 375 and 36 a. h.; cf. also G. Levi Della Vida, R.S.O., vi. 434-449 (for the rebellion against ‘Ali).

(T. G. LEVI DELLA VIDA)

TALIK. [See ARABIA, i. 387-8.] TALISH. A district and people in the north of the Persian province of Gilan (see map, v.), which since the peace of Gulistan (12/24th Oct. 1813) has belonged to Russia. The name according to Marquart, Ostasiatische Stiftungs, Leipzig 1903, p. 278 sq., is first found in the form Tališ in the Armenian translation of the romance of Alexander, Ch. 194 = ii. 19, p. 76 (ed. C. Müller). In the history of the Arab conquest (Bafiḏjuri, ed. de Goeje, p. 337; al-Taḫari, i. 2805) the country is called al-Talashkia; according to al-ʿAṣwa‘i in his Yūnis, iii. 571, 1, the Persian pronunciation was Tališkian (apparently a plural form). According to i. 814, 18, Tališkian (so vocalised) was a district (čamal) of the province of Gilan. According to the itinerary given by Muḥaddasi (B.G.A., iii. 373) from Sāfīn (on the frontier between Tabarištān and Gilan) to Shemāghā (cf. mifwawa‘), the last town belonging to Gilan was Kūhan-rūd, 4 days’ journey south of the Kur [q.v.]. Hamed Allāh Kārwin (G.M.Š., xxiii. 180 ult.) mentions a village Talish on the road between Sulṭānābād and Ardalū, 6 farsakh from the latter town; the corresponding district (niyêt) was called Tawalish (p. 162, 12). Before the wars between Russia and Persia, Talish seems to have been of no particular importance; under Persian rule it was governed by a special Ešān and the capital was, as it still is, the town of Lenkoran. The narrow strip of land between the hills or “alps”
of Talysh and the Caspian Sea has a very much moister climate than the plain lying to the north of it (the rainfall in Lenkoran is 52 inches, in Baku 10), belongs geographically to Gilan, is equally fertile and unhealthy and has a more varied fauna (including the tiger). The people, called the Russians “Tallah” or “Tallishch”; called themselves “Tallish”; they are found to the north as far as the Mughan steppes, where the Tallish lead a nomadic life and to the south up to about 30 miles south of the Russian frontier. The number of Tallish living in Russian territory is 75,824 according to the last census (1922). Like the people of Gilan, the Tallish are Shi‘is; their dialect differs very little from that of Gilan.

**TALISMAN.** [See Škemcč.]

TALKHĪS, an Arabic madār meaning to make a précis, means in the official language of Turkey a document in which the most important matters are summed up for presentation to the Sultan. The officials who had these papers prepared and presented them to the Sultan were the grand vizier and the Shāhīk al-‘Īslām. On account of its change of significance, ṭalkīṣ is included among the ẓahāfīṣ al-maṣūḥa, cf. Muhammad Hāfid, al-Durar al-munqahkhādī al-manṭūra fī ṭallīṣ al-Ṣāḥīḥ al-maṣūḥa (1221 A.H., p. 115).

(J. H. Kramer)

TALKHĪṢĪDĪ, or in the official style, Talkhīṣī, was the individual appointed to prepare the précis called ṭalḥīṣ [q.v.] and to take it to the palace where it was handed over to the chief of the envoys. The Talkhīṣīdī was therefore an official of the grand vizier’s department; in addition to preparing the ṭalkhīṣ, he took part in several official ceremonies. The talkhīṣīdī of the Shāhīk al-‘Īslām was not—at least in the later period—in direct communication with the palace; documents presented by him had to pass first of all through the hands of the Re’s Efendi and of the grand vizier.

TALIUT is the name of king Saul of the Bible in the Kur’ān (ii. 245, 250). The name is explained as early as Tha‘labh from the height (fīl) of Taliut. Taliut recites Ḏallīt (Goliath), an assonance of pairs of names, cf. Hārūn–Mūsār, Hāshil–Kābir, Yājūj–Mājūj (Goldhöher). Dzhaliut itself is explained from the Hebrew Ḏūlūt (Horovitz). In the Kur’ān (247–253) the following is told of Taliut. After the time of Moses Israel demanded a king. God appointed Taliut king but the people did not find him worthy of the throne. Taliut was distinguished for the greatness of his knowledge and for his great physique also; it was a sign of his fitness to rule that angels brought back the ark (Arkh) with the sabmam and with what remained of the people of Moses and Aaron. Taliut tested his people at a river; whoever drank from it did not follow him. Israel took the field against Dzaliut; David slew Dżaliut and became king.

The more or less confused memories of the Biblical story in this version are obvious. The first book of Samuel relates that Israel demanded a king (viii.) but no respect was shown to the new king (v. 27; vi. 12). The sacred ark which Muhammad regards as a token of Saul’s worth was recaptured in the Bible before his accession. The need for drinking water is made in the Bible, not by Saul but by Gideon (Judges, vii. 5–7).

Nöldeke sees in this Kur’ānic story an effort by Muhammad to arouse the Muslims to courage and obedience by examples from Jewish history. Later Muslim tradition (Tahtari, Talaḥāb, al-Kurū) often mentions that the number of the faithful who fought by Muhammad’s side in the battle of Badr was that of those who passed Taliut’s test by water.

Muslim legend has more to say, explains every feature of the Kur’ānic story, and adds many new details. Later writers (Tahtari, Tha‘labh, Ibn al-‘Aţhîr) also know the name Saul, son of Kish (شايع ابن فيس). In explanation of the name Tahtar, we are told that at this time the future king of Israel was to be recognised by his height (Tha‘labh); Samuel set up a measure, but no one in Israel reached its height, except Taliut. As a miracle which took place to show the rightness of their choice, we are told that when Taliut went to consult Samuel (Šhamwîl) about his lost treasures, the coronation oil began to boil. Tahtar’s Tahtar mentions inspiration as another token. In explanation of the story in the Kur’ān, that Taliut appeared unworthy to the people, it is said that Saul was descended from Benjamin, that is neither from Judah, the tribe of kings, nor from Levi, the tribe of priests (Tha‘labh). On the ark, the tokens of Taliut’s worthiness, Muslim legend has much that is marvellous to tell. This sacred ark had been handed down from the time of Adam from generation to generation through Ima‘alî to Kejdar. Kejdar gave it to Jacob. Within the ark were kept the bones, the hearts of the prophets, the tables of the law, the rod of Moses, Aaron’s turban and rod (Tha‘labh). This ark had fallen into the hands of Dżaliut, the king of the Amalekites. When plagued fell upon the Amalekites, they sent back the sacred ark on the advice of a captured Jew. Two angels led by angels brought the ark to Taliut and returned. According to another legend, the angels themselves brought it to Taliut between heaven and earth. The people were then convinced of Taliut’s worthiness.

Taliut’s relations with Da‘ūd are fully described. Taliut promised his daughter and one third of the kingdom to whoever should kill Dżaliut. Nevertheless he next demanded a nuptial gift of 200 slain giants. When the affections of the people turned to Da‘ūd, Taliut wanted to slay his son-in-law. Warned by his wife, Da‘ūd put a wine-skin in his bed and Taliut stabbed it. Da‘ūd on one occasion was saved by a spider spinning a web at the entrance to a cave. Da‘ūd showed his magnanimity by once leaving four (in Ibn al-‘Aţhîr: two) arrows besides Taliut; on another occasion he took from Taliut, his enemy, his bow, his arrows, a piece of his garment and hair from his beard.

Saul’s raising of the dead (I Sam. xxviii) is completely transformed in Muslim legend. Some-
times it is Joshua and sometimes Samuel that is called up. Ţalût learns that there is only atonement for him, he must fight with all his family and die for Allah. Ţalût abdicates and suffers with his sons the "death on the path of Allah".

On the spider's web which saved David: R. Basset, La Bordereau du Châtelet et Bouairi, Paris 1897, p. 81-86. (BREMAREN HELLER)

**TAMATTU**. [See ʾIYSRIM, MUNTA.]

**TAMGRUT, the principal town in the Wâdî Darâ (Dra [q.v.]), in the south of Morocco and the site of the mother-sâwiya of the religious brotherhood of the Naṣâriya [q.v.]. It is a fair-sized town with houses of red clay, surrounded by groves of palm and fruit trees, on the left bank of the Wâdî Darâ, which is here 120 to 250 feet broad but of no depth and runs between hills about 300 yards apart. Tamgrût is surrounded by low walls pierced by 4 gates: in the north, Fumûm (class. *fam. = mother*) al-Sâlî, in the N.E., Fumûm Tâṣirî, in the S.W., Bûb al-Raḳî, and to the east, Fumûm al-Sûr. An important market is held there on Saturdays.

The sâwiya of Tamgrût, which owes all its importance to the Şâhîkh Muḥammad b. Naṣîr, was founded in 983 (1575-1576) by a member of the Marrabout family of the Wâdî Darâ, Abû Ḥâfiz Qâsim b. Ahmâd al-Anṣârî from the sâwiya of Saṣyid al-Nâsî. It was the fame as mystics of two holy men who lived in the sâwiya of Tamgrût, Saṣyid Abû Ḥusayn b. Saṣyid Ahmâd b. Ibrâhim, that secured the Sufi novice Muḥammad b. Naṣîr, born at Iṣhmân in 1015 (1603), to settle there. On the death of Saṣyid Ahmâd b. Ibrâhim, he became head of the sâwiya, and founded his order there, directly based on the teaching of al-Shâhî [q.v.]. He died here in Şaṭar 1085 (May 1674) and his descendants from his father to son without intermission have since been heads of the sâwiya of Tamgrût. The latter contains the tombs of Muḥammad b. Naṣîr and his successors together in a mausoleum, rebuilt in 1859 after a fire and surmounted by a pyramidal cupola of green tiles, with a dûmâr with three golden balls on top. It is also said to contain a very fine library, but it is unfortunately still impossible to attempt to catalogue it.

The sâwiya of Tamgrût and the holy men who lived in it have formed the subject of a monograph by Ahmâd b. Khâlid al-Naṣîr al-Ṣâliw [q.v., author of the Kitâb al-Iṣâb, entitled Taṣâf al-mushaffar b. l-Naṣîr al-Iṣâb]. Tamgrût was the birthplace of Abu l-Ḥasan al-Tamgrûtî, a noted official of the Āṣârî court.

(E. LÉVI-PROVENCAL)

**AL-TAMGRUT, ABU L-ḤASAN 'ALI B. MUHAMMAD B. 'ALI B. MUHAMMAD, a Moroccan writer, a native of Tamgrût [q.v.], died at Marraksh in 1005 (1594-1595) and was buried in the sanctuary of Ṭâljî Ṭâlib. He held an official position at the court of the Saṭîlīn Sultan Abu l-ʾAbbâṣ Ahmâd al-Maṣûr al-Djâshâbî (986-1012 = 1578-1602). He was placed by this rule in charge of the embassy to Sultan Murād III in Constantinople along with another court dignitary Abu l-ʾAbd Allâh Muḥammad b. ʿAlî al-Fâshâštî, d. 1021 (1612-1613). Al-Tamgrût prepared an account of his journey (rīḥâ) which he called al-Naṣaḥat al-misâkiya fi l-Šiṣṣat al-turkiya: it was afterwards used as one of his sources by the author of the Nasrât al-Jadîd, al-Ifrânî (or Ufrânt, [q.v.]). It contains interesting information about the court of Marraksh at the end of the xviiith century. An edition, with a translation, of al-Tamgrût's work had been announced by H. de Castries, before his death in 1927.

(E. LÉVI-PROVENCAL)

**TAMIM b. MURR, an Arab tribe; their genealogy (Wustenfeld, Geneal. Tabellen, K. L.) Tamim b. Murr b. Dûd b. ʾAbâḥîga b. al-Yâs b. Mūḍâb, puts them among the Mûḍâb tribes where they take first place; indeed their name is often used as a synonym of the whole Mûḍâb branch in contrast to the Kâsân and the Rabîa. Of the two latter, the Rabîa are most closely related to them, which is not apparent in the systematic genealogies (where on the contrary the Kâsân are descended from the Mûḍâb while the Rabîa are not), but from expressions like the dual al-Djâffâm (Lūmûn al-Arab, x. 373) meaning the Tamim and the Bakr b. Wâl'll together (the latter being the principal group of the Rabîa). In any case, the Tamim are much nearer geographically as well as historically to the Kâsân [q.v.] with whom the traditional genealogy closely connects them.

The Greek and Latin writers, who describe the Arabian Peninsula, having left no reference to the Tamim, we are dependent on native tradition for their early history, the beginnings of which are as usual related with a number of legendary details (the tomb of the eponymous Tamim at Marrân, Ibn ʾUṣlân, al-Maṣūrî, ed. Wustenfeld, p. 37: Yâkût, Muṣâfîm, iv. 479; birth and as-
ventures of his sons Zaidmanat, 'Amr and al-Jāhri, Ibn Duraid, Kitāb al-Tūhāb, p. 5 etc.) the true character of which it is impossible to ascertain, nor to distinguish what is fantastic fiction from what might be a mythical travesty of historical events. At the period when their history becomes better known to us, i.e. from the sixth century A.D., the Tamim appear as a very large tribe, whose vast territory occupies a great part of the eastern coast of Arabia; nearly all Najd, a part of Ba'rain and a part of al-Yamama. To the south their lands stretched as far as the steppes of al-Dahna and to the northeast to the banks of the Euphrates; their neighbours in the north were the Assad, the Bābila and Qatataf (q.v.) on the southwest; within their own territory they were much mixed with parts of the tribes of the 'Abd al-Kais and the Ḥantaf (especially on the east and south coast) and with Bakr and Taghibi in the north. Essentially nomads, they never had any towns in the proper sense: Ḥadjar, al-Abšaʾ and al-Djarā (is the last the Gerā of classical authors? Cf. Sprenger, Die Altere Geographie Arabiens, p. 132) are mentioned as the sources places as which they frequented on the occasions of markets and fairs but they were not their owners (cf. Hamdān, Qaṣrār al-ʿArab, p. 136; Noldeke, Gesch. d. Perser und Araber, p. 56) although they are said to have occasionally seized and held them for a time (cf. the Ṣāḥib Ḥadjar, Munjibh b. Sāwst who negotiated with Muhammad belonged to the Tamim group of the Banī Fārānī, as the sources allege, to the 'Abd al-Kais, cf. Ibn Ḥadjar, Iṣba, Cairo, v. 19, who quotes Ibn al-Kalbī, Qaṣrār al-ʿArab, Beir. Mas. MS., p. 654); their relation with these towns was probably that of Beduins harassing and holding to ransom the settled population, alternately at peace and at feud with them. The very imperfect development of the culture of the Tamim is seen in their form of worship, about which our information is extremely meagre. We know of the general Arabian worship of al-Īṣ, Manīt, and al-ʿUzza among the Tamim only from the occurrence of the names of these deities in proper names and in oaths; that of the sun, Ṣamān (in the dialectic variant Ṣamān) from a brief note in Yaḥṣī (Muḫṣ[q]., iii. 19); the worship of Ṣamān is said to have been common to the tribes mentioned from Ḫūd: Tamim, Ḍabb, ʿUḵ, Taim ʿAdī, ʿAwhur under the leadership (ra-da) of the Tamim tribe of the Ibn Āwūb b. Mufkāshīm, the fact that they lived beside the Christian tribes of Bakr and Taghibi ought to have favoured the spread of Christianity among the Tamim (cf. Castani, Annali dell' islam A.-N. 9, § 3), but it does not actually seem to have met with much success. The only Tamim group known to have been completely converted to Christianity is a part of the Ṣahd of al-Hira, the best known member of which is the poet ʿAdī b. Zaid (q.v.), but these were a clan who had abandoned their native territory and completely altered their manner of life and their relations with the rest of the tribe.

The extent of the territory inhabited by the Tamim early accelerated their division into numerous groups and subdivisions, each of which finally attained the importance of an autonomous tribe. This is what explains how the tribe never had a very strong feeling of solidarity so that the two Tamim poets Ḍjarīr and Fardad, members of different clans, were able in their poetical duels to insult in the most atrocious manner each other's clans. Indeed we find something of one and sometimes another of the Tamim groups involved in wars and alliances in which the other groups took no part or even were on the other side. On the other hand events of special importance often induced these groups to combine their forces but always in the form of an alliance (ḥīf), in which each kept its autonomous character (e.g. Naṣṣ[a], ed. Bevan, p. 699, 752, for the alliance between the B. Ṭabībī and the B. Naḥhalī). The famous genealogist Abu 'I-ʿAbd al-Muḥsin b. ʿAbī Ḥāābī (d. 290 A.H.) seems to have devoted a special work to the alliances of the Tamim among themselves (if, as seems certain, one should read in the Fīlṣ, p. 94, 24, Kishk Ḥīf Tamīm b.Ṣamīm b. Ḥarīrī of the family instead of Ṣamīm, an absurd reading which the commentary on the text p. 44 explains in an even more absurd fashion). The principal branches of the Tamim are the Zaidīnats and 'Amrīn, the principal sub-group of the latter being the 'Abd al-Kais while the former is divided into ʿAṣā'īr and Malik; to the ʿAṣā'īr belong the Ṣinaḳ and ʿUḏārī, to the ʿAṣā'īr and Malik who are again subdivided; from the Ḥanāla are descended the Ṣabībī, one of the most important clans, including among others the Rizāḥ and the Kulaib (Ḍjarīr's clan); from the ʿAṣā'īr the Naḥhalī and the Muṣāliṯ (al-Fardad's clan). It is of course impossible here to follow out the vicissitudes of the various Tamim clans, whose doings make up the history of the tribe in the pre-Islamic period. The information which we possess on this subject is very full and surpasses in quantity all that we have about the other Arab tribes. This is due in the first place to the large number of celebrated poets among the Tamim whose verses formed, as usual, the nucleus around which historical traditions gathered as they were collected in later times by the philologists commenting on them. It is particularly the zeal and erudition of Abū Ubasīd [q.v.] and cf. also Aṣyāʾ al-ʿArabīs that we owe the preservation of the greater part of the historical references to the Tamim ʾayām. Others are due to Ibn al-Kalbī [q.v.]. We owe this historical matter mainly to the great commentary on the Naṣṣ[a] of Ḍjarīr and al-Fardad (ed. by A. A. Bevan, Leyden 1905—1912). The Kīḥāk al-Ṣaḥṣeli and to a less extent the sections relating to the Aṣyāʾ al-ʿArab in the ʾIḥā of Ibn ʿAbd Rabbihī (vol. iii.) and the Kāmil of Ibn al-ʿAlīṣīr (vol. i.) also preserved a certain amount of early Tamim history which can be supplemented from other historical and philological texts. It would be difficult and would take too much time to try to arrange the chronological and topographical sequence of the battles of the Tamim from the confused mass of details supplied by tradition (for the difficulties of the chronology of the aṣyāʾ cf. above, p. 654): an exhaustive study of this subject, which has not been made since Caussin de Perceval, might however succeed in getting some kind of order, starting from those happenings in which the kings of Persia and al-Hira take part, whose chronology is known and comparing the results thus obtained with the series of genealogies which for this period are sufficiently reliable. Two facts may be gathered from all the stories: on the one hand the continual rivalry between the Tamim and their neighbours Bakr b. Wāṣ and especially their subdivision ʿAmīr b.
by the prophetic Salāh [q.v.] whose true character is unfortunately unknown, distorted as it is by a biased tradition. In any case the vigorous campaign of Khālid b. al-Walid brought the Tamim back to the bosom of Islam and the conquests which followed immediately afforded an outlet for their warlike tendencies (cf. Caesani, Annali dell’ Islam, index to vols. i—ii.). The bulk of the Tamim warriors naturally went in the direction of Persia and, settling at first in the two great camps of Kufa and Basra, later went to Khorāsān where in the ’Abbāsid period they formed the majority of the Arab population. In spite of the fact that the historical record of the conquests goes back for the most part to Sāli b. ‘Omar [q.v.], himself a Tamim, and likely to exaggerate the exploits of the Tamim in the conquests (cf. Annali dell’ Islam, 12 A.T. §356, note 2), it cannot be denied that the latter continued to display as Muslims the same warlike spirit that had distinguished them during the Dāhilīya. It was no doubt also to their character that true Beduins, rebels against all authority by nature—that was due to their active participation in all the rebellious movements of the Omeyyad period. If they only played a small part in the struggle between Kais and Kalb, which was really quite foreign to them they distinguished themselves all the more as Khārijis [q.v.]. It is among the Tamim that we find the most fanatical of these rebels at the beginning of the movement. The chief of the Azriks, Kaṭari b. al-Faljī [q.v.] and the most of his followers were Tamim. We find them equally numerous among the followers of the ’Abbāsid dīwān in Khorāsān. Finally we may note the success at a later period of one of the tribe, İbrahim b. al-Aghlab, a descendant of the Sād b. Zaidmanāt, who founded the African dynasty of the Aghlabīds [q.v.].

The grammarians and lexicographers have preserved for us a number of peculiarities of the Tamimi dialect which will be found in the works quoted in the article Kais aś-Šarrām and also in Vollers, Volksprosche und Schriftprosche im Altertum, p. 23—23; Āḥmad b. Ḥārīm, al-Sābiḥ, Cairo, 1258, p. 24 sqq. Many of these peculiarities are also found in the dialects of other tribes, e.g., the kahkāsha which is the same as the Kaisi, the use of dī for a in the prefix of the imperfet, etc. Other peculiarities are: the pronunciation like dḥ, the letter between ḫaf and ḫaf, etc. It would be imprudent to try to found on these statements, which are due merely to casual and sporadic observations and not the result of a systematic study of the different dialects, any generalisations about the character of the Tamimi dialect. What is certain is that it formed with the dialect of the Kais and Bakr the eastern group of dialects of ancient Arabia, clearly differentiated from the dialects of the west (cf. Vollers, op. cit., p. 4 sqq.). The Tamim were further reputed in poetry and eloquence the repository of the true Arabya: we find among them, as has already been mentioned, some of the most illustrious poets of all old Arabic literature: Awb b. Hālid, Sālāma b. Dajdl, Sulaik b. Dalaka, Abba b. Ṭabbīh, Ahd b. Zaylak, Mūsā b. Matmūn b. Nūwārī, al-Mukhallab; in the Omeyyad period besides Dzirn and al-Farazdak, al-Sāriḥ, Kubayyir, Thābit Kārus, Awb b. Maḥrūr, ‘Ahdaljīdī, Rūba, etc.

TAMIM B. AL-MU'IZZ, fifth ruler of the Shanahit family of the Banu Zir' in the 10th century. He was born in 445 AH/1053, and he was known for his military and political achievements.

His activities, otherwise, seem to have been directly related against the towns of the coast. He sent many expeditions against them, the success of which could at best be ephemeral. He was able to reestablish his control over the Banu Khuwaylid of Tunis to submit, failed before Gabes, then took it, laid waste the suburbs of Sfax and then entered it. His base al-Mahdiyya was itself much threatened. The Arabs besieged it closely in 1054.

Tambun's effort against the coast-towns is explained by the aims which sent him to the sea while the land was slipping from him. Following his father in this respect, he tried to prevent the conquest of Sicily by the Normans. Having failed, he intensified his piratical raids. On the Christian side, this produced an alliance of Genoese and Pisans who, as early as 1067, succeeded in occupying al-Mahdiyya and sacked it. In 1014 the Romans (i.e.) made another attack on the town which ended disastrously for them.

Four years later (1018), Tambun died at the age of 78 and was buried in the Ksar al-Sa'aidah at Monastir.

**Bibliography:**

**TAMIM AL-DARÎ, a companion of the Prophet. His niche al-Darî is said to be derived from the clan of the Banu 'l-Darî (for 'Abd al-Darî, according to Wellhausen, Skizzen und Vorarbeiten, l. 108, note 4), a section of the tribe of Lakhm [q.v.]. Al-Nawawi however (Tabâhid al-Amâda, ed. Wüstenfeld, p. 178) gives him the niche of al-Darî, said to be derived from the devout (dâir) in which he was a monk before his conversion to Islam. His genealogy was: Tambun b. Awa b. Khudraj b. Sawad (var. Sâb) b. Dajhâmna b. Darî (var. 'Darî, 'Dârî), b. 'Abî b. al-Darî b. Hâlî b. 'Abû b. Numara b. Lakhm (Wüstenfeld, Gen. Tabellen, 5-35; transl. Tabari, ed. de Goeje, ii. 25-35, 2545; Ibn Sa'd, vii.l. 129-130 etc.).

From Palaestina, where he lived with his tribe, Tambun came to Muhammad at the head of ten of his relatives after the Khaibar campaign in 20 H. (Ibn Highânâm, Strä, end. Wüstenfeld, p. 777) or, what is more probable, after the Tabûk campaign in 9 A.H. which brought the Muslim army up to the frontiers of Syria (Ibn Sa'd, l. 75, following al-Wâkidî and Ibn al-Kalût): the first statement may be due to some confusion that has arisen from the fact that Muhammad allotted to the Banu 'l-Darî the revenue from part of the lands taken at Khaibar (Wâkidî, transl. Wellhausen, p. 287). Tambun embraced Islam and settled in Madîna. The fact that he had been a Christian, like most of the Arabs of Syria, enabled him to advise the
Prophet on details of public worship which were adopted by him from the Christians, among them the use of oil-lamps in the mosque (cf. Clermont-Ganneau, R.H.R., Ixxxi. [1920], 247 sqq. = Recueil d'Archéologie Orientale, viii. 216 sqq. : La lampe et l'olive dans le Coran). He is said to have been the first narrator of religious stories (ḥaṣa : cf. Goldzirher, Mus. Stud., i. 161 infra ; Nawawi, Taḥāfiṣ al-Aṣma‘, p. 175) and it is really to this literary genre of the ṣāfa (q.v.) that belong the stories of the Prophet and the coming of the Beast (al-Dajjāl [q.v.]) and of the Dead (al-Mu‘minūn), which Tamīm communicated to Muḥammad and the latter published on his authority. Tamīm is said to have seen the two apocalyptic monsters with his own eyes and spoken with them in an island situated at the end of the world, where the tempest had thrown him on a voyage on the Syrian seas. On this island al-Dajjāl and al-Mu‘minūn are kept to await the day when they will be set loose on the world. This legend of Tamīm must have arisen at quite a remote period for it is already found with all its details in the earliest collections of hadīth : Muḥamīd, Abū ʻAbbās, Abū Mu‘āwiya b. Abī Ṣafīr, and is signed only by ‘Ali (Ibn Sa‘d, i. 21, 97– 23, 15 ; Abū ‘Abbās, Kābīr al-Kabīrī, Tāhirī, 170, 1272, p. 132), while the other, a longer one, begins with the formula : kābhī la mā anā (ḥaṣa al-Mu‘āwīya) Muḥammad... gives the four places mentioned above and is signed by the three first Caliphs, Abū Bakr, ‘Omar and ‘Uthmān, as witnesses. It is the latter which was in the possession of the Dārūsīn, who guarded it jealously and always produced it when threatened with spoliation by the local authorities. When Ibn Fadl Allāh al-Umari saw it on the occasion of a visit which he paid to the sanctuary of Hebron in 743 (Muḥamīd al-Ishār fī Manālik al-Amīrī, Cairo 1342, li. 172– 175), it was written on an old piece of skin which had been a part of one of ‘Ali’s shoes; the letters, in old Cufic characters, which were almost entirely obliterated and only a few faint traces left, but a certificate (ṭabāka) of the Caliph al-Mu‘tasim (756– 755) confirmed its authenticity and gave a copy of the text; the document was wrapped in rich covering of silk and kept in an ebony casket. Mūḍjar al-Dīn al-Ui‘amī who saw the document about 150 years later (cf. al-Umar, al-‘Un‘ al-Sa‘īdī, Cairo 1283, p. 428– 429) : the book was written in 900– 901) gives practically the same information but the ṣa‘īdā is not to be identified with him was from the caliph al-Mu‘tasim (555– 560). Later, under Ottoman rule, the Dārī Taqī al-Dīn gave the document to Sultan Murād who put it in his library and as a reward gave the Taqī al-Dīn a post as ṣā‘īd in Cairo. The Murād in question can only be Murād III (982–1003 = 1574–1599) or Murād IV (1032– 1049 = 1623–1640) for the incident is recorded by one of the chancellors of the Kābīr al-Tāhirī of Ibn Durādī, ed. Wüstenfeld, p. 226), a certain Muḥamīd b. ʻOmar who (p. 211a) says he was a descendant of the historian Muḥāja al-Dīn b. al-Shīrīn (d. 980 = 1485) (cf. the preface, p. v.; Wüstenfeld is wrong in thinking he was his grandson). The longer version is also given in Ṣa‘īdī, Mu‘ājam al-Buldun, ed. Wüstenfeld, ii. 195 ; Ibn ʻAkkīrī, Ta‘rīkh Du‘aṣī, Damascus 1331, ii. 344– 357, who also gives the shorter version in the very full and detailed biography which he devotes to Tamīm on which al-Kāshī ṣhīrīn relies entirely (Ṣa‘īdī al-‘Uṣūl, Cairo 1337, xli. 118– 122). The apocryphal character of the document scarcely needs to be proved (cf. Cæsari, Annulli
Bibliography: Besides the sources and the authors quoted in the course of the article cf. the bibliographies of the companions; Wustenfeld, Register, p. 441—442; Sprenger, Das Leben und die Lehre des Muhammad, i. 408, 460; iii. 13 note, 432; Caetani, Annali dell'Islam, x. 544—546 (40 A.H., §§ 400—404).

G. LEVI DELLA VITA

TAMMUZ, the tenth month in the Syrian calendar. Its name is derived from the Hebrew שמחה (shimah) in which it roughly coincides. It is the same as the Roman calendar and like it has 31 days. According to al-Biruni, in Tammuz the lunar stations 8 and 9 rise and 22 and 23 set; the days on which one rose and the other, 14 days apart from it, set were the 10th and 23rd. According to al-Kazwini on the other hand, stations 7 and 8 rise, 21 and 22 set, on the 4th and 17th respectively. In the year 1300 of the Seleucid era (989 A.D.) according to al-Biruni the stars of the stations mentioned by al-Kazwini rose and set on the 9th and 23rd.

M. FLEISNER

AL-TANAS, MUHAMMAD b. 'AMM AL-ALI. An important author of the 8th century, lived at the court of the Zayyânid rulers of Ithimn whose historiographer he became and died in Dzumâ-Il '899 (Feb. 1494). Besides several works now lost and formerly given by al-Wangshatî in his Mus'âr, we have from the pen of al-Tanasi a history of his patrons, Nâyq al-Dirr wa l-Ityân ft Sharaf Sana Zayyân, ed. and partly trans. by Bagaei, Histoire des Bnî Zayyân, roi de Tlemcen, Paris 1852 and Complément de l'Histoire des Bnî Zayyân, roi de Tlemcen, extraits du châtî,... al-Tanasi, Paris 1887. It is, in the fashion of the period, not only a chronicle but also an anthology of poetry, literature, moral sayings and anecdotes.

E. LEVIS—PROVINCIAL

TANASUKH, transmigration, metempsychosis; a belief widespread in India and among several sects of the Muslim world. Muhammadan authors who deal with it attribute it to the Indians rather than to the Pythagoreans.

Shahirastân in his article on the "people of metempsychosis" takes the word in a wide sense: to him it means the doctrine of the successive lives and rebirths of the world. The Indians, he says, are of all nations that which believes most in metempsychosis. They tell the story of the phoenix and then say it is the same with the universe; after a certain number of revolutions, the celestial spheres, the stars, all come back to the same point and the life of the universe is repeated. The length of this period of revolution is 30,000 years according to some and 160,000 according to others. Mas'âdi (Murâdî, i. 163) also talks of this great revolution and gives the cycle a duration of 70,000 years. This idea was known

dilî', Islâm, ii. 288—291 [9 A.H., § 69, note 1, § 70, note 2]; Krenkow, Islamische, i. (1925), 529—532; the existence of the two versions is sufficient to show that the text is a complete fabrication. But the fraud must be old; not only is the document given in Abû 'Yûsuf, al-Wâhidî, Ibn al-Kalbi (cf. above) which takes us to the end of the second century A.H. but we could take it back to the end of the first century if we can believe the anecdote recorded by al-Baladî (Fusûl, ed. Goeje, p. 129, 13—14) from Ibn al-Kalbi (it is given also in the Dzumâ-Il Ândûsh, Escurial MS., f. 70 a 8), according to which the Caliph Sulaymân b. 'Abd al-Malik, when passing by the siege of the Dârîyân was careful not to stop there "for fear of bringing God's curse upon him". This is clearly an allusion to the document, which in the shorter version threatens with the curse of God any one who in any way infringes the šâ'î'a granted by the Prophet. Besides, there is another tradition according to which Muhammad had only promised to Tamam to grant his family the šâ'î'a of Hebron and the document was only drawn up after the conquest in the name of Abû Bakr (Ibn Sa'd, jili. 75; following Ibn al-Kalbi: the story is naturally passed into later writers). Although Wellhausen (Studien u. Vorarbeiten, iv. 126, note 1) considers this tradition to be a "späterer Korrektur", it seems to me contrary, to be the older. It is easy to believe that the Muslims at their conquest of Palestine found the sanctuary of Abraham at Hebron occupied by a section of the Christian tribe of Lakham, who perhaps exploited it by making charges to pilgrims who came to visit it; the nâmâ al-Dârî would not be an ethnic especially as, except for the family of Tamam and other individuals mentioned in the story of the embassy to Muhammad, we have no knowledge of a tribe of al-Dârî; it could very well refer to the dârî the "sacred chamber" (on this meaning of the word dâr cf. the article Kûsâiyn). These Lakhmîs, conversed to Islam, were probably able to keep the guardianship of the Haram in Mecca, which became sacred to the Muslims as it had previously been for Jews and Christians, and based their claim on an alleged grant made by Muhammad to their chief Tamam whose fame was gradually extended until he was made one of the inspirers of the eschatological beliefs and liturgical institutions of the young faith of Islam. It might even be asked if the traditions associated with the figure of Tamam al-Dârî are based on any historical figure or if his personality is not completely legendary. Clermont-Ganneau in his article quoted above refers to his Archaeological Researches, ii. 463—464 (which are not accessible to me) for the analogies which the grant of Hebron made to Tamam al-Dârî presents with that of the same town made in similar conditions to the Caleb of the Bible. But the Caliphs received Hebron (Joshua, xxv. 43; cf. Judges, i. 10) on the occasion of the general distribution of southern Palestine among the families of the tribe of Judah of which they were clients; there is then no analogy with the grant made to Tamam in quite special circumstances.

 Tradition knows practically nothing of the life of Tamam after the death of Muhammad; it only narrates that he left Madina after the murder of 'Uthmân in 35 and that he returned to his native land where he died at the end of the caliphate of 'Ali (40 A.H.).
to the Greek astronomers who called it the "great year."

In another sense tanāṣūkḥ means the diffusion and distribution of the divine spirit among the beings of our world. The Ghulāt, who were extreme Shi'is admitted, says Shahrastānī, tanāṣūkḥ and the descent or incarnations (fāṣẖẖ) of all or part of the divine principle in certain men. Belief in this kind of (fāṣẖẖ) is found among many peoples, who received it from the Mazdak Magi, Behmanu of Indian, philosophers and Sabaeans. Huṭūlī is acquainted with a sect of Sūfis whom he calls Huṭūlīs; they assert that there is only a single spirit, eternal and divine, which is diffused and passes into different bodies. This view, says Huḍūrī, is that of many Christians, although they do not confess it, of the generality of Indians, Tibetans, Chinese, and it is found among the Shi'is, Karmajānīs and the Ismā'īlīs. There are four degrees of metempsychosis: nakhẖ, maṭẖẖ, faṣẖẖ and raḵẖ.

In the popular sense, of passing from one body to another, the belief in metempsychosis is held by several Shi'i sects. Among the Ma'ṣṭaḏīlis, according to Shahrastānī, the disciple of Ahmad b. Hājī taught that God first created beings in a kind of Paradise; then those who were guilty of some disobedience were sent by Him into our world in the form of men or animals according to the gravity of their sins; they then migrate from form to form until the effects of their sins have ceased.

The Ismā'īlīs did not admit the passage of the soul into the bodies of animals; but they did admit successive lives in which the souls are active in the world of birth and death until they have recognised the Inām; then they rise to the world of light.

The Naṣṣāris believe that the sinner of their religion will return to the world as a Jew, Sama'i Muslim or Christian; the infidels who have not known 'Ali become camels, mules, asses, dogs or other similar animals. There are five different degrees of metempsychosis, according to the Naṣṣāris; the faithful soul which has passed through the seven degrees rises into the stars from which in the beginning it had descended. Anz. and Durrādī have connected this theory with the doctrine of the ascension of the soul through the seven heavens which originating on the Babylonian soil spread into Persian beliefs and then into those of the Neo-Platonists and the Gnostics. The Drūses have taken some of their popular beliefs from the Naṣṣāris, although their founder Ḥamza was opposed to them; they believe that the souls of the enemies of 'Ali will enter the bodies of dogs, monkeys, and swine. The Khāris and the Yaḍīs believe in transmigration into the bodies of men and animals and in successive existences separated by an interval of 72 years. According to Sā'yīd Shārīf Dūrdūnd (Ṭāfrīfī) the tanāṣūkẖ is the passing of the soul to a new body without interval on account of the inclination of the spirit for the body.

Al-Sam'ānīnī quotes curious legends about marḏẖ (a variant of maṭẖẖ), according to which the monkey, the pig and other animals are descended from people who have been metamorphosed. The star Suḥai and the planet Zhūr (Venus) are in the same way said to have been a king and a princess punished by God for their crimes and placed — somewhat illogically — among the stars. Finally we may mention the stories of metamorphosis found in the 100 Nights and other tales.

Abū Ya'qūb Yūsuf b. Muḥammad al-Tannawī who often appears in later tradition. His son Ismā'īl but still more his grandson Abū Ya'qūb Yūsuf b. Ismā'īl had the reputation of being very devout and miraculously gifted. The most important bearer of the name is the last-named's son:

Abū 'Amār Abī d-Ḫāfī al-Tannawī, fellow-pupil and friend of Abū Ya'qūb Yūsuf b. Ḩārūn al-Sadrāt al-Wardījānī. He came of a wealthy family and had an allowance of 1,000 dinārs a year for his studies in Tunis, of which he gave half to his teachers. His interest in learning, particularly in Arabic philology, was so keen that he did not even stop to read the letters that accompanied the paternal remittances. When he opened them, as he was about to return home, he read in one of the death of his father and in another of the death of his mother. His principal teacher in theology was Abū Zakariyya Yahyā b. Abī Bakr al-Wardījānī [q.v.] who also taught Abū Ya'qūb. Abū 'Amār lived principally in Wargīla (Wardījānī). In the spring he roamed with his hards far to the south among the oases of Marīb. His co-religionists revered him as one of the revenue of their religion (munḥiyy al-dīn). On the question of the verdict on the Qalīq, al-'Amīr was a fundamental one with the Abāḏīs, he inclined to leniency. On the other hand he shared the general bitterness of the Berbers against the immigrant Arab Beduins [cf. Muḥrā]. He declared that the property they had acquired in the Maghībī was lost (ghāṣīf) and, like his friend Abū Ya'qūb, he received a painful impression of the Beduins of the Hādiṡ who, when on a pilgrimage to Mecca so that their consciences troubled them as to whether they who in the Maghībī carefully avoided any, even business, intercourse with the Arabs, could purchase from them in the Hādiṡ; they conspired themselves with the reflection that the Hādiṡ had belonged to the Arabs from the very beginning. — Among the writings of Abū 'Amār are noted al-Maḏẖī fī Tahīf al-Sawā'īl, "Refutation of all enemies of truth", i.e. one of those four books in which the Abāḏīs used carefully to show that they were distinct from all other schools; also Sharī al-Dībāḥ, but particularly the Siwa in which Masquary remarks "Je règle des clercs", a fundamental work for the spiritual organisation of the 'ṣāliḥ leaders and their ṣāliḥa disciples. A long illness prevented
Abū 'Amārī from ever answering a list of queries from 'Abd al-Wahhāb b. Muḥammad b. Qāhil b. Nu'mān al-Anṣārī regarding the details of his teaching regarding their differences from other sects. A reply was only given after his and 'Abd al-Wahhāb's deaths by Abū Ya'qūb al-Wārṣajānī and is contained in the latter's Kitāb al-Ḍallī. According to this text, Abū 'Amārī died before 570 (1174).— His teaching was continued, notably by Abū Ya'qūb Yūsūf b. Muḥammad al-Tanawwut, the younger, whose name is identical with that of the individual first named in this article.

'Adī b. al-Luṭū'ī al-Tanawwut, who lived for a time on the island of Djerba, is said to have been the first man in Wargha to be killed by the invading Arabs. His brother was the father of Unm al-Munīm, a woman revered for her miracles. As in the case above named, the brothers Yaḥyā and Abu Ṭabīr Sulaimān b. Ayyūb b. Muḥammad b. Abū 'Amr al-Tanawwut are of interest to the biographers on account of their piety and miracles upon which they love to dilate.

'Abd Allāh al-Wārṣajānī, al-Ḍallī, Cairo 1306, i. 54 sqq.; ii. 28; Masqueray, Chronique d'Abyen Zakaria, Algiers 1878 (or 79), ii. xlviii. and notes to p. 140, 177, 235, esp. 253 sqq.; do., Formations des cités chez les populations sédiéntaires de l'Algérie, Paris 1886, p. 316; A. de Motylinski in Recueil de Mém. IV Congr. d. Orient, 1905, p. 545. (R. Struthmann)

TANGA (or Tangua), the name of the small silver coin which formed the main currency of the Mongol world from the end of the viii/ixth to the beginning of the xth/xxth century. It varied in weight from 20 to 35 grains (1.3—1.95 grammes) and was struck by the Later Khāns, the Qāhars of the Golden Horde, the earlier Qāhars of the Crimea and the early Timurids. The Russians borrowed the denomination and the name in the form teste at the end of the xivth century from the Mongols; denga, latterly of copper, were struck in Russia down to the first half of the xvith century. The word tanga has survived in Central Asia as the name of a small silver coin of about 50 grains (3.25 grammes) which was struck till the last century by the Shaiks of Persia, the Qāhars of Khōvān and the Emirs of Bukhār. Tanga is to be connected with the Turkic word tāngā, an official mark, a die (cf. sīkka) and not with the Indian tāhā [q. v.]. (J. Allan)

TANGIER, the ancient Tingit, Arabic Tanīdja (old ethnic: Tanīdja; modern ethnic: Tanīdar), a town in Morocco, situated on the Strait of Gibraltar, 7 miles to the east of Cape Spartel [q. v.] at the point where the Atlantic coast begins. The town dominates a magnificent bay terminated on the East by Cape Malabata (Rūs al-Mannī) and on the West by the citadel (ṣafra) and it slopes, at times fairly steeply, towards the sea. The town is divided into a number of quarters within the walls and others without. The former, fourteen in number, form the town properly speaking (Masāmīn, popularly Missmīn). Amongst the principal extramural quarters are those of Sidi Bu-Knāt (Ṣāyiḍi Abū Kanātīlī), Marsīlān (a large plateau 1,300 yards long, situated to the West of the town along the sea), ed-Drādah (al-Dārādah, that is "the slopes"), Ḥamāna, Sūq al-Barrī, Sīsāf (al-Sahāfī, "the poplars"), or San Francisco, al-Muṣawī (al-Maṣṣīwh), es-Sawāna (al-Sawānī, the norias) etc. In the immediate vicinity of Tangier are the villages of Ṣafrīn and Tāndjī al-Balīya, peopled by rustics of the tribe of Ṣāfāy of Tangier. There are a comparatively small number of mosques in the town; there are several Khaṭba mosques and six of less importance. The chief one which had been transformed into a church at the time of the Portuguese occupation was the object of several restorations after being won back for the faith in 1684. The town in the strict sense is surrounded by a rampart more than 2,000 yards in length, built in stone, which dates in large measure from the time of the Portuguese occupation (1471—1661); it was later restored at different times. Several gates are pierced in it; most of them are recent. On either side of the rampart towers (bordjī) are still standing; amongst them may be mentioned the bordjī al-naḍām, Irish tower, the bordjī d'ar al-Ṣāhrū (the York Castle of the English period), the bordjī al-nilām, with 29 bronze cannons of European origin. The principal monument of the town is the Sharfiīn palace, which is situated in the East part of the citadel. It is here that the government of the town has been located for several centuries. The English during their occupation called it the Upper Castle. The present palace was built on the ruins of this Upper Castle by the Pasha Ahmad b. 'Abd Allāh al-Tanawwut al-Kif before the year 1743, in which he was killed in a battle near al-Karīf al-Kabir (Alcazar quivir, q. v.).

Tangier has now a rather mixed population amounting to about 30,000 inhabitants of whom 3,000 are Muslims, 12,000 Jews and a European colony in which the Spanish element was the dominant one until quite recently. From the nineteenth century, the town was the residence of the representatives of foreign countries at the court of the Saūrīns of Morocco. This role of diplomatic capital of the Sharīfīn Empire has given Tangier a character of its own. It is now the capital of the international zone which bears its name; the status of this zone has been recently defined.

The most varied legends are told about the origin and foundation of Tangier. There is no space to recall them here. The site was known to and first inhabited by the Phoenicians, and after that by Phoenician colonists. Tangier figures in the Periplous of Hanno (530 B.C.). It seems that the town was the capital of different petty native kings of whom the chief one was Bokkūs I (c. 105 B.C.). In the reign of Bokkūs III (in 98 B.C.) it was formed into a republic and was declared by Rome a free city until in the reign of Claudius (42 B.C.) it was raised to the rank of Colony, with the name of Julia Tractuca and became the capital of the province of Mauretania Tingitana. In the year 303 at the time of the administrative reform of Diocletian, when Mauretania Tingitana was joined to the diocese of Baetica, Tangier became the residence of a Consul, and of a Prefect for civil administration. Tangier passed thereafter under Byzantine rule, but the residence of the representative of the Emperor of Constantinople was at Ceuta.

It was at the beginning of the eighth century that Tangier became Muslim; it was captured by
the celebrated Mūsā b. Nusair, who entrusted its government to one of his lieutenants, Ṣafrīk b. Ziyād al-Laiḥi, who concentrated close to the town the forces which were to carry out from Creta the first Muslim landing in Spain in the year 711. During the period of the governors nominated by the Caliphs of the East, Tangier became the capital of Morocco as far as the Grand Atlas, whence the expression al-Sūr al-Adnī, in opposition to al-Sūr al-Asfāl [q. v.]. The first governor who thus had Tangier as his residence was 'Umar b. ʿUbaïd Allah al-Murādī in the year 732. Soon afterwards, the very suburbs of Tangier the revolt of Maïsaara broke out. Maïsaara was a Berber who, under cover of the Khatridī movement, desiring to rid Morocco of the Arab yoke, managed to win over to his cause a great number of followers and marched upon Tangier which he seized in the year 740. The troubles which he fomented lasted until 785.

It is at Tangier that the historians make the fugitive Idrīs I, who was to become master of all the country, land on his arrival from the East. Finding the position of this town not sufficiently central, he seems never to have thought of making it his capital and Tangier now lost its rank as the first town in Morocco, which it never regained. It fell at the time of the Idrīsid partition of 829 al-Kāsīm, soon displaced by his brother 'Umar, who died in 835. All the North-West of Morocco had passed into the hands of this prince, and his descendants kept it from father to son in an almost independent manner for more than a century. It was not until 949, that Tangier was annexed to the possessions of the Umayyad Caliphs of Spain who appointed a governor, charged at the same time with the administration of Morocco, which had been reduced to the state of a vassal province of Cordova. It was thus that at the beginning of the 10th century the Idrīsid 'Ali b. ʿHāmilī was appointed governor of Tangier by the Caliph Sulaimān al-Mustaʿn bi ʿllāh, before fomenting the rebellion which brought him to the throne of Cordova in 1016. All the revolts at the end of the Umayyad Caliphate thus had their repercussions on Tangier and also on the neighbouring Creta and the Berbers of the country, ever on the alert to what was taking place on the other side of the Strait, placed at their head two governors of the tribe of the Barghashīta [q. v.], ʾIrīq Allah at Tangier and ʾṢaḥḥāt at Creta; under the quite nominal suzerainty of the ʾHamālīds of Spain.

Tangier was taken by the Almoravids in the year 470 (1077). It was there that the celebrated al-Muʿtāmīd [q. v.] disembarked in the year 1090. He was the last ʿAbūbādī of Seville, and was exiled to Morocco by ʿUbayf b. ʿAbbās. On the fall of the Almoravid dynasty the town passed at once under the ʾAlmohad domination. The first Caliph, ʾAbū al-Maʿmūn b. ʿAll [q. v.], seized it in the year 542 (1147). During the whole of the period of the dynasty it remained a flourishing town, and a port which was much frequented on account of its proximity to Spain.

Tangier, like the rest of North-West Morocco, did not at once recognize the new ʾAlmohad dynasty, on the fall of the ʾAlmohad dynasty. While Creta passed under the rule of the local princes of the family of the Bānū ʿAbd al-Qasīf, Tangier took as its chief Abu ʿI-Hāfiẓ ʿUṣūf b. Muhammad Ibn al-Amir al-Ḥamdānī who was killed in the year 665 (1266—1267) after having declared himself first the vassal of the Ḥāfiẓ al-ʿArīfī, then of the ʾAlbānīs of the East. In 672 (1273) the town was taken by assault by the Marinid Sulṭān Aḥḥ ʿAbd al-Ḥāṣṣ after a three months' siege. During the following century the town passed once more through an obscure period, and became involved in different rebellions, which mark the last period of the Marinid Empire.

It was in the first half of the 14th century that Tangier attracted, for the first time since its conversion to Islam, the covetousness of the Christian states of Europe. The Portuguese, masters of Creta since 1415, attempted by land to seize Tangier in 841 (1437). But this attempt remained without result as did those of 1458 and 1464. Finally they occupied the town on the 28th August 1471, during the reign of Alphonso V.

The occupation of Tangier by the Portuguese extended from 1471 to 1661, almost two centuries. Like the other Portuguese possessions in Morocco, Tangier passed nominally to Spain in 1581 under Philip II after the union of Portugal to the crown of Spain but it kept its own administration and its Portuguese garrison. This state of affairs lasted until 1643. After a revolution, Tangier again accepted the authority of the new Portuguese sovereign, the Prince of Braganza, John IV.

In the year 1661, Tangier passed from the hands of the Portuguese into those of the English on the occasion of the marriage of Charles II to the Infanta Catherine of Braganza, the Portuguese possession being part of the dowry of the princess. An English squadron, commanded by the Lord Sandwich, came to take possession of the town and a garrison disembarked there at the end of November of the same year while the garrison and almost all the Portuguese population returned to their native land.

Before the passage of the town of Tangier to the Crown of England, the Portuguese had only been able to maintain themselves in the place with difficulties of all kinds. Numerous skirmishes with Mudjāhīds, under the stimulus of a leader of a holy war, a member of the tribe of the Bānit Gurfat, al-Khāṣīr (the Moroccan form of al-Khiṣīr) Ghalīnā b. ʿAll, had harassed them without cessation on the outskirts of the town, and they were almost forced on many occasions to abandon their possession of it. It continued to be the same under English rule. The governor, the Earl of Peterborough, tried at first to conclude a truce with the Mudjāhīds by paying a sum of money but this truce was only respected during the years 1665—1664, after a check that the Muslims had suffered under the rumparts of the town. Hereafter the pact was broken and on the 3rd of May 1664, the new governor, the Earl of Teviot, fell into an ambuscade near Tangier and was killed with more than 400 of his soldiers.

The English, however, managed later to win over to their cause the chief Ghālīnā, who had set up as a pretender against the new ʿAlawīd Sulṭān Mawākiq al-Raǧūlī [q. v.]. An alliance was signed in 1666 between him and the governor Baron Bellasaye, but after being held in check by the troops of al-Raǧūlī, Ghālīnā was forced to cease all activity in the north of Morocco. Up to the death of this chief in 1673, the English enjoyed a respite in Tangier and they made use of it to carry out a great scheme of fortification and the con-
construction of a mole. But the expense which these works necessitated along with other causes helped to make the occupation of Tangier very unpopular in England. Thus it was under very favourable conditions that the ‘Alawi Sulṭan Mawlay Ismā‘il decided to lay siege to the town. This siege lasted not less than six years. An army was gathered together to blockade Tangier and the attacks on the advanced position of the system of defences were successful from the year 1678. As the siege became more and more severe, the English decided to evacuate the town after blowing up the mole and the most important fortifications. On February 6th, 1684 the garrison and the English population embarked with the last lord, Lord Dartmouth, and Tangier became once more a Muslim town.

The Moroccan governor, who was appointed to the command of Tangier, named Ali the ‘Alawi b. ‘Abd Allāh al-Tamasmin al-Ri‘i, at once proceeded to rebuild the town which had entirely been left in ruins by the English. He, and after his son, became sufficiently powerful throughout the district to be able soon to withstand Mawlay ‘Abd Allāh, the successor of Mawlay Isma‘il, and to give an asylum to the pretenders to the dynasty. In later times also, the governors of Tangier who nearly all belonged to the same family had no hesitation in occasionally throwing off the authority of the sulṭān. The history of the relations of these governors with the mahārīs is the history of Tangier until the sixteenth century.

On August 6th, 1844 Tangier was bombarded by a French squadron under the command of the Prince de Joinville. Eight days afterwards the Moroccan forces were routed at the battle of Lily.

It is unnecessary to quote here the successive agreements come to between the European powers and Morocco which ended in the elaboration and adoption of the statute under which Tangier and its zone are at present ruled, along with the zone of Spanish influence and the zone of French influence in Morocco. A railway from Tangier to Fès and to Rabāṭ has been open since the year 1927.

Bibliography: A good monograph on Tangier with documents, statistics, illustrations and maps has been published under the title "Tanger et sa zone" being volume vii. of the collection "Villes et tribus du Maroc", Documents et renseignements publiés par la Section Sociologique de la Résidence Générale de la République Française au Maroc, Paris 1907. The "Archives Marocaines", Paris 1904–1920 also contain a number of documents on Tangier. For the Portuguese occupation the principal contemporary source is the "Historia de Tanger" of D. Fernando de Menezes, Lisbon 1737; Tangier has been the subject of many descriptions by travellers (chiefly English) in the sixteenth century. A list of them can be found in Playfair’s Bibliography of Morocco, London 1892. In conclusion, the Arabic dialect spoken by the citizens of Tangier has been the subject of a masterly study by William Marçais, "Textes arabes de Tanger", Paris 1911, based on the works of Lluchvitz, Meissner, Blanc, Marchand and Kampffmeyer. These texts besides their linguistic interest contain valuable information about society and native life in Tangier.

(E. LEVI-PROVENCAL)

TANKA, (Sanskrit pāhā, a weight of silver = 4 mānas) an Indian coin. When Muhāmad of Ghazna conquered northwestern India and struck bilingual coins for the convenience of his Hindu subjects, pāhā was used in the Nāgarī legend as the translation of dīrham in the Arabic legend. Shams al-Dīn Ilītūshī, Sulṭān of Dehlī (1210–1235 = 567–553) introduced a heavy silver coin of 175 grains (= 11.3 grammes) and gave it the name of tanka (although tola would have been more accurate); a gold tanka of the same weight was first introduced by Nūsir al-Dīn Muhāmad (1226–1265 = 646–664). These two coins were henceforth to be the standard coins of India. The gold tanka was last struck by Mu‘īz al-Dīn Mu‘ābān (1421–1433 = 824–837) except for a few rare pieces of the Sūrā. The coin itself was again struck by Akbar but was now known as the mukhrī [q.v.]. The silver tanka became gradually debased after the reign of Muhāmad b. Tughlāk, being practically copper ("black tanka") under the Lāhūrī. In the great reform of the coinage by Sher Shāh (1530–1545 = 945–952) it was restored to its original fineness and weight but was now called the rupee (tārī). As the rupee, the denomination was taken over by Akbar and has continued the monetary unit of India to the present day. Akbar transferred the name tanka to copper coinage; his tanka was a piece of 2 ṭāns (640 grains = 4.15 grammes); he also struck a copper coin called the tanki which was 1/10 of a tanka (64 grains = 4.15 grammes).

Silver and more rarely gold tankas were also the currency of the various contemporaries of the Sūlṭān of Dehlī, in Bengal, Gudjarat, Malwa and the Deccan. The word still survives in Bengali in the form pāhā and is the regular Bengali word for the rupee; in Southern India the name is still in use on the Portuguese coins of Goa where it is the equivalent of mana.

TĀRĪ ( teg), Heaven; God. In the eastern dialects the vocalisation is usually palatal: Cāgštā, tāngri (written تاری) and similar forms in the other dialects. The triliteral forms in Teleut (tāhūrd) and in the Altai dialect (tāhrī) are worthy of note; the Kasan dialect has alongside of tāngri (god) a word tārī = image of a saint, ikon (we may here mention the proper name Tārī-hīrd, where tārī of course means God). Ottoman Turkish has a non-palatal vocalisation (tāri) which has Yavuz which has also in addition a triliteral form (tāhūr). For the lexicographical material cf. Pavet de Courteille, Dictionnaire Turc-Oriental, s. v.; W. Radloff, "Versuch eines Wortregister des Türkischen", iii. 823, 1065; O. Böhlinger, "Über die Sprache der Tschuten", Türkisch-Tatarischer Sprachen, p. 168 sq.; and lastly al-Kāhchārī (Dīwān ‘Ulughī al-Turk, Constantinople 1333–1335, ill. 275 sq.), who says: tāngri means God; the infidels however call heaven tāngri and likewise everything that impresses them, e.g. a high mountain or a large tree. They worship such things
and they call a wise man tāngrāhīn. This word tāngrāhīn appears also as an old Türk title (cf. Radloff, Worterbuch, iii. 1048; F. W. K. Müller, Uigurica, p. 47: tāngrāhīn = ruler). With the meaning "God" (in the Manichaean system) we find tāngrāhīn for example in the Manichaean confession of sins (Culnulpēnif, ed. A. von le Coq, 1911, p. 10). The word tāngrīm (i.e. tāngri with the grammatical suffix of the first person) seems to be used in the Turfan texts in the titles of princesses or queens (cf. F. W. K. Müller, Uigurica, p. 48, who compares the modern usage of ḫanum and ṣiqānum). We may here give a few derivatives of tāngrī: tāngrī (in the Manichaean confession of sins, cf. T. R. A. S., 1912, p. 289, 299) = preacher, chosen one (lit. man of God); Kuman, tekhrīk = "divine"; Uigur, tengrīlīk = "pious". The Mongol tāgri (God) is a loanword from the Turkic (for this form cf. Bibl. Buddh. u. z. 51).

The etymologies proposed for the Turkish word (e.g. by Vámbéry and Barbier de Meynard, s.v.) are of no value. In most modern Central Asian dialects of Turkish tāngrī has the two meanings "God" and "Heaven"; in Ottoman Turkish on the other hand the (rather obsolete) word has apparently only the meaning "God". A few combinations of tānūrī, e.g. tānūrī devtavīzī = thousand-footed, cf. the Dictionaries of Radloff and Barbier de Meynard (s.v.).

To define the conceptions implied by the word tāngri so far as the beliefs of Turkish paganism is concerned, it will be advisable to deal first with the old Turkish inscriptions and then with the material collected in modern times from the Telet and Altab shamanism.

In the inscriptions tānūrī almost always appears as a divine power: it is by his will that the king attains to power; the king himself is "like tānūrī" and "born of tānūrī" (Tānūrī tānūrī bozmoğlu) and installed by tānūrī (tānūrī yararınmakoğlu). Tānūrī protects the Turkish people, secures their victory over their foes: in this quality of special protector of the Turks he is described as Türk tānūrīsī. Alongside of the God of Heaven we find a certain power over the fate of the people and the individual conceded to the spirits of earth and water (gir-sud); the highest deity however is Tānūrī.

There are however some passages where the term tānūrī does not imply any real personality. The "blue heaven above" (bağa kık tānūrī) is created like the "dark earth below" (aşına yagıbars yir) and mankind. Who created them is not stated. An important passage (V. Thomsen, Inscriptions de l’Orkhon, p. 112) records that a rising of the Oghuz took place "because heaven and earth were in confusion". Here we have clearly the influence of Chinese ideas of the nature of the universe, the theory which de Groot called "Universismus". This need not surprise us because the Turkish chiefs who had the Orkhon inscriptions prepared lived within the area of Chinese cultural influences.

On the conception of tānūrī in modern Turkish shamanism (i.e. mainly among the Telet and Altai Turks) cf. H. Vámbéry, Die primitive Cultur der Turke-Tatarischen Volker, 1879, p. 150 sqq.; W. Radloff, Aus Sibirien, 1884, ii. 1 sqq. and the texts collected by Radloff in the first volume of his Proben der Volksliteratur der Türkischen Stämme Süd-Sibirien. This paganism as might be expected, did not remain entirely free from foreign, e.g. Christian and Buddhist influences; when, for example, in a shaman’s conjuration we find the expressions Pyrkan Tengri and Pyrkan Kan (Radloff, Aus Sibirien, ii. 33, 44), it is natural to recognise in Pyrkan the Mongol (also old Turkish) word Burkhan = Buddha. That the pagan Turkish creation myth shows traces of Jewish, Christian and Buddhist influences was noted by Radloff himself (op. cit., ii. 5 sqq.). When it is said that the evil spirit Elik created a heaven for himself, like the god of heaven, one is tempted to think of Zoroastrian influence ("the counter-creations" of Ah riman).

According to the Turkish shamanism the most powerful god, Tengere Kaira Kan, created the heavens and also the evil spirit Elik, the good spirits, mankind and the earth. The form tengere (following the orthography in Radloff) corresponds to the Telet Tündür and Altai Tüznü. Kaira Kan must be identical with the Altai Kuriouskan (cf. Radloff, Worterbuch, ii. 22), a word used to describe gods and spirits; Tengere Kaira Kan is therefore the "god of heaven".

There are seventeen different regions in heaven arranged in succession: above the other deprived of the good spirits live. The highest of these minor deities are Başı Ulğun, Kyasag Tengere and Mergen Tengere. The gods of heaven are not directly appealed to like the spirits of earth and of water but through the intermediary of the spirits of ancestors, i.e. a shaman (kam) is required for the purpose. In a Telet shaman’s prayer (Radloff, Volksliteratur, i. 238) the heavens above are appealed to as the Creator. In an Altai myth (Radloff, ibid., i. 61 sqq.) he asks the hand of the daughter of the god of heaven, Tämnük Ökü.

When it is said of the thunderstorm in the dialect of Kasaan: "The old man of the heavens (stähri bahal) is thundering", this is a relic of old pagan ideas (cf. Radloff, Worterbuch, ii. 1425; iii. 1047; iv. 1564).

Speaking generally one may say that apart from foreign influences, so far as they can be eliminated, in the Turkish conception Täññūrī is regarded as the heavens as an element and also as the spirit ruling in heaven. This spirit was probably originally conceived as a kind of force, something which would be called mana in modern ethnology. The conception of a personal god of heaven must have developed out of this.

When Turkish tribes took over other religions the word tāngri became the name for the god or higher beings of these religions. The meaning "heaven" was naturally driven into the background. To convey the conception of heaven the word kık (Ottoman gük) was used, which is originally the name of a colour (cf. Radloff, Worterbuch, ii. 1220). In old Turkish we also find gük bull, the blue ether (Uigurica, p. 8, 18; Radloff, Worterbuch, ii. 240). In Buddhist old Turkish texts tāngri corresponds to the Sanskrit deva "god"; in Buddhist mythology, a conception which is better conveyed by the word "angel" because this being lacks several qualities which to us are necessarily associated with the idea of "god". The feminine equivalent dēt is given by tāngri bhatra; tāngri bhis is Turkish for devakanyā (divine maiden, apsaras). The king of the gods (devarājī) Indra
is Tângirîl ðikî Khorramdâdë; Brahmā is called Aruma Tângirî. The goddess Cîrî is called Kit Tângirî Khatun or (without Khatun) Kit Tângirî. The name Kit Tângirî seems also to be given to Kubera (e.g. Müller, Ugaricu, p. 45). In a collection of dhâranîs for travellers, the Tâhistovûlî (ed. by W. Radloff and A. v. Staël-Holstein, St. Petersburg 1910 = Bibl. Buddhica, xii.), we find a deva named Tângirîdâm, whom Radloff takes for Kubera so that the latter has therefore another Turkish name. But this is doubtful, for in one passage (p. 22) of this work, Kubera (Kupiri) is mentioned by name and Tângirîdâm is mentioned soon after as a different deity, but it must be allowed that in the text there are elsewhere illogicals (cf. §2 Turkish text, p. 23 sq.). For Kubera in this work cf. also p. 97, note 2; Buddha himself is often called Tângirî Tângirî. The god of heaven (Arowlîk) is called in Turkish Tângirî Yir and the Vaimânîkas gods, as a rule peculiar to Jain mythology, but also found e.g. in the Tâhistovûlî, are called Vaimânûkî-Tângirî.

The Manichaean Turkish terminology which is influenced by Buddhist (cf. Chirnystamnî, ed. A. v. Le Coq, Berlin 1911, p. 5; J. R. A. S., 1911, p. 278) shows the word in the following way: Tângirî corresponds here to the Iranian Yad (or Bagí); in the first place this means the highest principle of the Manichaean system and secondly the subordinate spirits of light or gods (yamak tângirî) in contrast to the demons (yakhrî). The first man is called bîsh tângirî, five-god (from his five component known from the Manichaean myth: ether, wind, light, water and fire). The name tângirî is also given to the five elements, e.g. oet tângirî = god of fire. Tângirî is found with the meaning "heaven" (e.g. Chirnystamnî, p. 16 = J. R. A. S., 1911, p. 291, l. 167). Paradise is called Tângirî Yir. This Manichaean terminology corresponds pretty well to the Buddhism. One or two peculiarities may still be pointed out: the occurrence of the already mentioned term, tângirîkîn (Chirnystamnî, p. 10; J. R. A. S., 1911, p. 281, l. 22), in the name of a deity (Aryâ Tângirîkîn) translated in John le Coq (J. R. A. S., loc. cit.) "Arya the Lord" and the peculiar combination Arksho Yir Tângirî, the "archon earth-god", in which perhaps the word tângirî is used for one of the powers of darkness (cf. J. R. A. S., 1911, p. 393, note 31).

In Christian Turkish usage is Tângirî = God; Tângirî-Oghîlî = "Son of God" and Mabkhûr Tângirî = the God Messiah. In the Christian fragments published by F. W. K. Müller in Ugaricu we also have the word Tângirîdâm, which we frequently find in Buddhist Turkish; it occurs twice in these Christian texts and seems here to mean simply "God". The Kuman usage gives nothing worthy of special remark.

As regards the earlier Muslim Eastern Turkish texts, the Arabic and Persian terms (Aâbhî, Kâmâdî) naturally begin to compete with the Turkish Tângirî. In the Rûmûc Bibîk, so far as I am aware the Arabic name for God is of rare occurrence (practically only in Arabic quotations). The conception of God is however not exclusively conveyed by Tângirî in this text but other Turkish words e.g. Bayât are used. The word Tângirî occurs here also with the addition of teâštâ. In the Rûmûc-

Tânţâ seems to be the usual word for the Deity, except in quotations; here also, following the Arabic usage, we sometimes find Tângirîbîdâm (e.g. p. 408, ed. Hinzinsky). That the word Tângirî is disappearing in Eastern Turkish also before Arabic and Persian terms is perhaps to be deduced from Shaw's remark (A Sketch of the Turkish Language, ii. 69).

Proper names like Tângirîrî, Tângirîbîn may be modelled on Persian names like Kâbûdî and Kâhûdûhûn.

(V. F. Rîchmann)

Tânsîn, of whom Shaikh Abu 'l-Fâdî said: "A singer like him: has not been in India for a thousand years", was a native of Gâwîlîrî, and was at first in the service of Râm Çamd the Baghî, Râdâ of Pânâ'î, who is said to have given him on one occasion ten million tankas. Ibrahim Sîrmaine endeavoured to entice him to Agra, but Akbar, in 1562, sent a mission to Râm Çamd and at Khîlindûr to induce Tânsîn to come to his court, and Râm Çamd, not daring to refuse the request, sent him with his musical instruments and many presents to the imperial court. On the first occasion of his performing there Akbar gave him 200,000 rupees. Most of his compositions are written in Akbar's name, and his melodies are still popular in Hindustân. He had two sons, Tántârâng Kâm, also a singer at Akbar's court, and Bîlûs, who was a singer of the court of Akbar the Great. Gâwîlîrî was famous for his musicians, and produced a musician of the eighteenth singers at Akbar's court.

Bibliography: Shaikh Abu 'l-Fâdî, Acker-nâmâ, text and translation by H. Beveridge; A'îl Akbarî, text and translation by Robbmann and Jarrett; 'Abd al-Hamîd Lâhawî, Phûdih-kâmâ, text; all in the Bibliotèque Indica series of the Asiatic Society of Bengal.

(T. W. Hâns)

Tânţâ, an important town in the Egyptian Delta between the Rosetta and Damietta branches of the Nile, capital of the Gharbiya province, and a busy railway junction, of unpretending appearance, about 75 miles from Alexandria. Its Coptic name of Tântâaâ has assumed in Arabic the forms Tântî, Tânţû and Tânţâ. Formerly it was an episcopal city. Nowadays the place is famous for the tomb and mosque of the most celebrated of the Muslim saints in Egypt, Aymad al-Badawi [q. v.]. Throughout the year no fewer than three Memûlûh or birthdays of this Saint are made in the occasion of great fairs to which pilgrims flock from all parts. The presence of a large native population and the extreme veneration with which the spot is regarded have made it a centre of fanaticism. Tânţû is one of those places where the worship of a Muslim Saint had displaced that of an earlier Coptic one.

The present town is built on one of those numerous mounds of accumulated mud-hut débris so characteristic a feature of the Egyptian landscape. The Almadya mosque, which was rebuilt under 'Abbâs I., is the principal building of any historic importance. It is now the second largest religious establishment in the country. A library, begun in 1898, contains about 9,000 volumes including over 1,000 MSS. The number of professors attached to the Tânţî institute is over 100; the
students numbering about 2,600. Besides large Government Schools, there is a well-equipped American Mission Hospital. But the health of the people is not improved by the existence of an evil-smelling, muddy canal flowing through the town.

(J. Walker)

**AL-TANTAWI,** Muhammad ʿAli (with his full name: al-Ṣaḥib Muhammad b. Saʿd b. ʿUlamāʾ ʿAlī al-Maʾrīṣī al-Tantawī al-Ṣāḥīfī), an Arabic scholar of the 19th century, born in 1225 (1801) at Nījdīr (a small village near Ṭantā in Egypt), died Oct. 29, 1861 in St. Petersburg. His father, a travelling merchant, was born in Māḥāllat Mārīṣī, hence his nība: al-Maʾrīṣī. At the age of six he went to a maktab in Ṭantā. At 13, he moved to his uncle in Cairo and studied at al-ʿAzār. Of his teachers the celebrated Ibrahim al-Dirjātī (d. c. 1275; Brockelmann, G. A. L., ii. 487) had a particular influence on him (see the ode dedicated by Ṭantawī to him, Z. D. M. G., iv. 245–246). He also studied with the poet Ḥasan al-ʿAbbār (d. c. 1250; Brockelmann, op. cit., ii. 473, No. 1). Many of his fellow-students later became famous. His friend Rifāʿ al-Ṭantawī (Brockelmann, ii. 481, No. 6) sent to Paris as Imam of the first scientific mission (1825–1831) by Muhammad ʿAli was one of the founders of the new literary movement. Ibrahim al-Dārisī (1811–1883) was Lane’s first tutor (Brockelmann, ii. 478, No. 4). After his father’s death in 1843 (1257) al-Ṭantawī had to stay two years in Ṭantā, where he continued his studies and gave lectures. Returning to Cairo he joined the teaching staff of the ʿAzār mosque; here he was one of the first to discuss literary and poetical themes. He had been a teacher for a time in an English school. F. Fresnel was the first to make his fame known in Europe (cf. ʿA. A., 3rd Ser., v, 1828, p. 60 sqq.). Many young scholars after him studied with al-Ṭantawī (G. Weil, Dr. Pruner, A. Peerson, R. Früh, son of the founder and first director of the Asiatic Museum in St. Petersburg). The latter brought his reputation to Russia and in 1840 (1256) al-Ṭantawī was summoned to St. Petersburg as teacher of Arabic in the “Institut des Langues Orientales”. In 1845 he was appointed Extraordinary Professor in the University and in 1854 ordinary. His teaching had hardly any permanent influence in Russia; his method was not adapted to the European university system. Of his pupils (1840–1842) the most noted was the Finn G. A. Wallin (1811–1852), the noted Arabic teacher, afterwards Professor in Helsinki, who corresponded with him regularly till his death (see K. Tallqvist, Breif, och Dokhanskanstillingarn av G. A. Wallin, Helsingfors 1905). A severe illness forced al-Ṭantawī to go on leave in 1861 and in the same year he died. His tomb with inscriptions in Russian and Arabic still exists in the Tatar cemetery in Leningrad.

His literary activity before he moved to St. Petersburg was almost exclusively confined to the old fashioned scholarship. He composed many books, such as al-ʾIklīl and al-Khawāṣ, which exist in MS. in Cairo and Leningrad (University Library). Among his original productions of the same kind were his Liwaʿal faṣl ʿAṣār al-Fāṣl (in private hands in Cairo) and his Uṣūlīl wa-nabāṭ of his own commentary, Mashahhaʿ ʾal-ʾAzār wa-manāṣiṣ ʾal-Fāṣl wa-tālīl wa-nabāṭ wa-nabāṭ wa-nabāṭ (Leningrad, MS. Or., 830). To the Russian period belongs his useful Kitab al-muṣābīḥāt, Leipzig 1848, which, besides the exercises, contains many letters and verses from his own pen (cf. Fleischer’s observations, Z. D. M. G., i. 1847, p. 212–215; iii. 1849, p. 474–475).

His acquaintance with European literature and his command of French enabled him to make interesting critical observations (cf. ʿA. A., 4th Ser., ix., 1847, p. 351–354; Milièges Asiatiques, St. Petersburg, i. 1851, p. 474–495; ii. 1855, p. 466–486). Many articles in Arabic from his pen are in the manuscripts left by him (e. g. on the Egyptian festivals, MS. Or., 538, ff. 50–60; a collection of stories and anecdotes in the popular Arabic of Egypt, MS. Or., 745; Comptes-rendus de l’Académie des Sciences, 1826, p. 23–26; an Arabic translation of Sainte-Beuve’s Guide to his works by him, Comptes-rendus de l’Académie des Sciences de Russie, 1924, p. 102 sqq.; an autograph copy of his work ʿUṣūlīl wa-nabāṭ al-Fāṣl wa-nabāṭ wa-nabāṭ and of his understanding of the text of ʿUṣūlīl was found in Constantinople (see Rescher, Z. S., iii., 1924, p. 252; Comptes-rendus de l’Académie des Sciences, 1927, p. 181 sqq.)

His inestimable claim to fame is his large collection of manuscripts (c. 150) which passed after his death to the University Library (cf. C. Salemann and V. Rosen, Indices alphabetici codicum manuscriptorum persicorum turcicorum arabicorum qui in Bibliotheca Imperialis Literarum Universitatis Petropetrovana adscriptur, St. Petersburg 1888). Many manuscripts were copied or collated and corrected by him (cf. Zaptinski, vi. 384–390). The collection contains very old manuscripts; it has many unique and valuable copies, almost all from Egypt (e. g. Zaptinski, xxii. 283 sqq.; Zaptinski, 291 sqq.; Comptes-rendus de l’Académie des Sciences, 1924, p. 101 sqq.).

**Bibliography:** al-Ṭantawī’s autobiography (to his settlement in Russia) was published by Kosegarten with a German translation, W. Z. K. M., vii., 1830, p. 43–63, 197–200; important corrections to it are given by G. Gottwaldt, in Z. D. M. G., iv, 1850, p. 243–248. The European articles are too scanty and inaccurate (Brockelmann, G. A. L., ii. 479; Huerl, Litteratura arabica, 1901, p. 420; Chekhov, La litterature arabe au XIXe siècle, ii. 59); more important are the recent Arabic biographies by Ahmad Tabrīzī, in Madsjam al-ʾAlmāʾi al-ʿArabī, iv., 1924, p. 388–391 (corrections by I. Kratschowski, ibid., iv. 562–564) and Muhbīl al-Dīn al-Khatīb, in al-Zahrāʾ, l, 1343, p. 417–428 (with picture), p. 554. A description of his manuscripts in Leningrad and his biography is being prepared by I. Kratschowski.

(IGN. KRATSCHOWSKY)

**AL-TANUKHĪ,** and ʿAlī al-Muḥassim, an Arab writer, was born in 939 (according to Yaḥṣīl) in 940–941 A.D., the son of a learned kāṯī in Baṣra, and received his early education.
there, from al-Süli [q.v.] and Abu 'l-Faradj al-
Išāhān [q.v.] and others. He chose a judicial career
and rose to be kāfi, first in Baghdad and then in
Ahwāz; as a result of a change in the vizierate in
Baghdād his office was taken from him in
969-970 and his property confiscated. He was
not allowed to follow his profession for three
years. During this period he seems to have lived
mainly in Baghdad but also made a journey to
Egypt. Then he was restored to office but fell
into disfavour with the Būyid 'Abd al-Dād [q.v.]
(981-982) and is even said to have spent
some time in prison because he had penned con-
tempt on al-Shāfi‘ī and his followers. He suffered
many more hardships and much persecution before
he died in Baghdad in 994.

The following are given as Tanūkhī's works:
A Siwān which no longer survives; and three
collections of anecdotes: Kitāb Niğmān al-Mu-
ğafara wa-Abīhār al-Muddakara, al-Mustafājūd
min Fāqīlār al-Ajadiā and, by far his best known
book, al-Fāraydha al-Shidda (not composed before
984). This is a collection of proverbs, anecdotes
and sayings on the theme "joy follows sorrow".
Madārīn [q.v.] a century and a half before had
written a work similar in title and substance and
Ibn Abī 'l-Dunyā and the kāfi Abī 'l-Husayn
after him had published similar collections.
Tanūkhī used these works and other literature sources
but also drew upon oral traditions for his new compi-
lation. He owed many a story to his father and
his teachers, and was also able to draw upon his
own experiences; but the bulk of the contributions
not taken from literary sources were given him
by secretaries and judges. The work begins with
a brief introduction dealing with literary history
in which Tanūkhī discusses critically the works
of his predecessors. Then come the separate stories,
most of which are introduced by a brief reference
to their sources, divided into 14 chapters from
the point of view of matter or form. While Ibn
Abī 'l-Dunyā's work was intended to be edifying in
itself, Tanūkhī's collection was lighter and wittier.
It found a wide welcome, was much read and
copied and in later times played a part in Persian,
Turkish and Jewish literature.

TANZIL [See WAJH.]

TANZİMAT, or rather TANZİM-ı KUHAYRIYE
("beneficial legislation" from the expression: ışanın
tanẓim etmek = "to draft a law") is the term used
to denote the reforms introduced into
government and administration of the Ottoman
empire from the beginning of the reign of
Sultan 'Abd al-Majīd and inaugurated by the
charter generally called the khaṣṭ-ı shērīf of Gūl-
hāne. The expression tanẓīm-ı kuḥayrīye is
first found in the latter years of the reign of Mahmūd II.
The other end of the period of the tanẓīm is
put about 1880, when the absolute rule of 'Abd
al-Hamīd II began.

The tanẓīm-ı are the continuation of the work of
Sultān Selim III and Mahmūd II, undertaken to
save the Ottoman state which had become enfeebled
internally and externally. Mahmūd II had succeeded,
by getting rid of the feudal system at home and
the reactionary element of the janissaries, in
centralising and consolidating his power in home
affairs but he had been unable to avoid the loss of
Greece and Egypt. His work however was not
yet constructive. This was reserved for his suc-
cessors or rather for the great statesmen of his
successors for, since the sultāns themselves proved
incapable of directing the reforms, the task of
carrying them through became more and more
the work of a reform party among the Turkish
officials themselves. In the period from 1839 to
the end of the Crimean War, the course of the
reforms was Mustafa Kâzım Paşa (1816-1856),
who was six times grand vizier; in the second
period inaugurated by the character called khaṣṭ-ı
hümâyûnī from Feb. 1854 the activities of the
reformers were directed by 'Ali Paşa (q.v., d. 1871)
and Fu'ād Paşa (q.v., d. 1869); the great
figure in the third period (from 1871) was Midhat
Paşa (q.v., d. 1883).

The khaṣṭ-ı shērīf of Gūlkhāne was not distin-
guished by any new ideas; in it the Sultān an-
nounced that henceforth he wished the honour
and property of all his subjects to be secure, that
the farming out of the taxes (ibādāt) should be
abolished and that recruiting for the army should
be done in a more regular fashion; all criminals
were to be tried in public and it was expressly
said down that all subjects, to whatever religion
they belonged (emek-i İslam see-müslim-i vârî)
should be equal before the law, without exception.
To draw up the necessary legal enactments, the control
of reform already in existence (mejlī-i aḵkhām-i
'adiliye) was to be increased by a certain number
of members. Although, in the preamble to
the document, it was said that the former prosperity
of the Ottoman state was due to respect for
the Kur'an, at the end it is stated that the new
measures mean a complete change in ancient
principles (miṣâwil-ı 'atāğa). In fact the aim of Rashid
Paşa in drawing up the khaṣṭ had been as much
to give satisfaction to the European powers, whose
intervention in the domestic affairs of Turkey had
become more and more serious (solution of the
Greek crisis; agreement with Muhammad 'Ali),
as to re-establish confidence in the home govern-
ment. For the moment this double aim was
achieved. But as soon as the attempt was made
to carry out the reforms, numerous difficulties
were met with. This was in the nature of things.
The new institutions were based on the administra-
tive systems of European states, notably France,
and in introducing them problems and distinctions
were created in the state which, under the old
system, had never presented themselves in so
threatening a form. Four groups of interests had
to be dealt with: 1. the civilian officials and
military officers who in the old order had been the
slaves of the Sultān; 2. the free Muslim subjects
of whom the 'alamât were the most notable
section; 3. the non-Muslim subjects, the rays
(ra'yâya) and 4. the foreign interests. The con-
solidation of the first two groups offered least
difficulty; religion united them and Mahmūd II
and 'Abd al-Majīd had renounced their rights as
sovereign over the lives and property of the
officials; the ending of the feudal system by Mah-
mūd II had also been favourable to the combination
of the Muslim elements. But to give the Christian
and Jewish subjects equal rights to the Muslims
threatened to deprive the former of the considerable autonomy which they had enjoyed since the time of Mahomed the Conqueror; the attempts to deprive the Muslim ecclesiastics of their rights of jurisdiction and administration and the problems raised by the enrolment of non-Muslims in the army soon showed that the latter themselves did not regard the granting of equal rights as an unmitigated benefit and at the same time accentuated the hostilities and differences already existing between the different non-Muslim communities, differences often more serious than those between them and the Muslims. Lastly the foreign powers, although numerically weak, with the liberties and privileges granted by the capitulations occupied a position which was all the stronger because foreign powers took advantage of it, not only for their own profit but also to make themselves the protectors of non-Muslim subjects in their struggles to keep their privileges (France by virtue of the capitulations; Russia by virtue of the treaty of Kiliak Kainardji). The realisation of the reforms was bound to be in great part illusory so long as the privileged position of the foreigners, known as extra-territoriality, continued to exist in striking opposition to the centralisation of power which was the aim of the reforms. It is for this reason that the great difficulties of the tangmat centred round the problem of the rayas (insurrections in Crete, Bosnia, Herzegovina, Lebanon and Bulgaria), and the intervention of the Powers (among them the Holy See) which was always the result. It was for this reason also that the fear was formed in Turkey itself a considerable alarm which regarded the tangmat as dangerous to the empire. But the path once taken by Rashid Pasha could not be abandoned, because the old institutions themselves no longer offered guarantees. It was rare however, to hear serious objections from the religious point of view; the Shishk Al-Islam was present at the reading of the khatt-i shirfi, although it does not appear that he sanctioned by a fetvah the different laws which were promulgated as a result of it. The reforming ministers themselves always refused on the other hand to repeal definite sections of the shar'a such as that of capital punishment for apostasy from Islam or the non-validity of the evidence of a non-Muslim before a tribunal, although they were quite ready to pass any measures to which the shar'a did not refer.

The tangmat were thus carried through in a very troubled atmosphere. A grand vizier could hardly ever carry through a programme peacefully; there were sudden falls from power often followed by equal unexpected returns to office. Thus Rashid Pasha was no less than six times grand vizier between 1846 and 1858 although the Sultan Abdul Majid was rather in favour of the reforms. The same changes in office took place under 'Abdul-'Aziz, much more capricious than his predecessor; Midhat Pasha was grand vizier for three weeks in 1873, and for the second time for seven weeks (Dec. 19, 1875-Feb. 5, 1877). There were also periods when foreign intervention suddenly called for new efforts; this was notably the case during the deliberations which preceded the peace conference in Paris. Turkey's allies then wanted the Sultan to bind himself by an international agreement to carry out the reforms which were still in abeyance. The result was the khatt-i humayyin of February 1856, which was nominally a spontaneous act of the Sultan. In article 9 of the Treaty of Paris of March 30, 1856 the contracting Powers take note of the declaration by expressly stipulating that it would not give them the right of interfering in the interior administration of the empire. Now the khatt-i humayyin is simply a more detailed confirmation of the promises made in 1859 regarding the equality of treatment of non-Muslim subjects; it is in particular laid down that mixed tribunals shall be instituted for lawsuits between Muslims and non-Muslims and that the laws relating to them shall be codified as soon as possible. One further important point in this act is the right conceded to foreign powers to possess landed property in Turkey. The intervention of European powers did not cease, however, after 1856; thus in 1859 they demanded an enquiry into the European provinces. In 1867 the Ottoman government was again taken to task by the Powers; but they were not agreed among themselves as to the steps to be taken: while Russia demanded an extreme system of decentralisation, France encouraged the Porte to try a policy of fusing together the different categories of subjects. It was the latter view that prevailed for the moment: the opening of the lycée of Ghazi Seray for teaching French was one of the consequences. After 1870, foreign pressure became weaker on account of events in Europe (Franco-Prussian War); it is just this period that is marked by a strong tendency to decentralisation in Turkey, but of a kind which pleased neither the Powers nor the rayas. This policy had a certain amount of success, as for example the strengthening of Ottoman power in Triполитia and Tunisia. The reaction was not long in being felt. The insurrections of 1875 in the Slav provinces resulted in "a European conference" at Constantinople in 1876 and in the following year came the disastrous war with Russia which separated Rumelia and Serbia from the Ottoman Empire and created an almost independent Bulgaria (Treaty of Berlin, July 13, 1878). The act by which Turkey had tried to anticipate this intervention was the promulgation of the Ottoman Constitution on December 23, 1876, the day of the first meeting of the European Conference. But this remedy, already regarded very suspiciously by the new Sultan 'Abd al-Hamid, did not gain the success anticipated; the author of the constitution, Midhat Pasha, was banished two months later and soon the constitution was completely ignored by the Sultan. In the long "Hamidian" period which followed the War with Russia, the reforms were not, however, completely suspended; the laws of 1879 affecting the judiciary in particular in a way completed the legislation of the tangmat.

We now give a rapid survey of the different reforms. The grand Council of Justice, also called the council of the Tangmat, underwent several transformations in 1854, 1861 and lastly in 1868, when its activities were definitely divided into administrative and judicial functions — i.e. into a Council of State (zahra-yi-desseler) which retained its form till 1918 and a High Court of Justice (divan-i akt-i-yi-adlis). Immediately after 1839, Rashid Pasha had introduced a new system of administration in the provinces on the French model and abolished the hiles. This proved to be too much centralised and in 1852 the powers of the governors had to be again extended; the
farming out of the taxes had again to be introduced because levying them directly did not bring enough into the treasury. The law relating to the wilayets of 1864, completed in 1871 by another law, completed the system of provincial administration which lasted till 1918. This law of 1864 was further remarkable because it provided for each province new tribunals, different from the courts of the ḥāfs, although the judges were very often 'ulamā'.

Even before 1864 there had been created at Constantinople and several large provincial towns a commercial court and a mixed court (for law suits between Ottomans and strangers); these two courts were amalgamated in 1860, but it was not till the legislation of 1875 and 1879 that all the non-religious tribunals were put under the Ministry of Justice. The first common law was the Commercial Code of 1850, based for the most part on French law, as were the Penal Code of 1858, the Code of Maritime Commercial Law of 1863, and the Code of Commercial Procedure of 1861. The Civil Code or Medjelle of 1869 on the other hand is an attempt at codification of the law of property and the law of guarantees according to the Hanafi Mağābīb. This codification carried out by a council under the presidency of Ahmed Djevedt Paşa is not to be considered however as being obligatory in use; it is rather a manual for judges who have not studied Muslim law. The law regarding the execution of judgments and the Code of Civil Procedure, both of 1879, were not recognised by the foreign missions, so that they were never applied in mixed suits.

Legislation for the different non-Muslim communities was an extremely complicated task. The "organic regulations" which in 1860 were published for the large communities had the tendency to give more power to the lay element in the administration, to the detriment of ecclesiastical authority. The communities in general kept their judicial autonomy. The Porte in its turn had to deal with disputes within the communities and differences between the Roman Catholics and the Eastern sects "united" with the Holy See. Here again the European Powers had every opportunity to intervene, especially Russia in the question of the primacy of the Gregorian Armenian Church in Turkey and in that of the schism of the Orthodox Bulgars who were recognised as an autonomous community in 1870. The enrolment of non-Muslims in the army, decided upon in 1855, when the ḍarūfī was officially abolished, remained a dead letter during the tanzimat. It was replaced by an exemption tax (hedel).

In foreign relations all the attempts to obtain the abolition of the capitulations which had been begun at the Paris Congress remained fruitless. A slight change in principle was effected on the occasion of the law of 1873, which granted foreigners the right to possess real estate.

From 1845 a council had been instituted to elaborate reforms in education (rüşāde-i mevṭef). The President was Fustat Paşa and later Djevedt Paşa. In this field the tradition of religious instruction had to be combated. The creation of universities, in 1845, could not at first have any direct consequences and the creation of the secondary (rüşāde-i tıbbiye) and primary (rüşāde-i sāhib) presented considerable difficulties. Lastly the opening of the Lycees of Ghiṣaṣa Sarzā in 1868 where French was to be the language of instruction, meant the introduction of a foreign culture and was vigorously opposed. It was not till towards the end of the nineteenth century that these measures began to bear fruit.

The period of the tanzimat was comparatively poor in measures of an economic nature. The finances of the state were all the time in a deplorable condition, aggravated more and more by the foreign loans (from 1854) and by Sultan 'Abd al-‘Azīz’s extravagance. The international control of the national debt which was the result was not, however, taken in hand till after the financial catastrophe of 1879. The decree of 22nd Maḥarram 1299 (Dec. 20, 1881; cf. Young, v. 69) established the International Council of the Ottoman Debt.

The following table of the more important legislative measures of the tanzimat gives the sources as far as possible. The references to the collection of laws, Dā‘ūrī, which contains the legislation down to 1886 are taken from Young, Corps de Droit Ottoman (Oxford 1905—1906), which gives most of the texts in a French translation. Where the text is not given the reference has been put in brackets. Most of the other references have been taken from Engelhardt, La Turquie et les tanzimat, Paris 1884. Although the statements in this book are not very accurate, they may help to complete the general survey of the reforms especially in the first period.

The period of the tanzimat also saw an intellectual effort in the Turkish Muslim element, which laid the foundations for the new Turkish culture. It was in this period that Şināk, Nāmil Kamal and Ahmed Wekil worked, who created a new Turkish literary language. To it also belongs Ahmed Djevedt Paşa, famous as an historian, man of letters and legislator (cf. Fâżâl ‘Alî, Ahmed Djevedt Paşa ve-Zenâk, Constantinople 1832). Ziyâ Gök Alp, the theorist of the modern Turkish nationalism, also recognises the high importance which the period had for the development of Turkish thought (cf. Türk-tarihî Efsaneler, An- gorâ 1339, p. 61; and Halide Edib, Memoir, London 1926, p. 238 sq.).

Bibliography: The Turkish texts of the legislative measures are given in the Dā‘ūrī. French translations are given in Aristarchi Bey, Legislation Ottomane, Constantinople 1873—1874; supplement in 1878; G. Young, Corps de droit ottoman, vol. i—vii, Oxford 1905—1906; A. Heindorf, Droit public et administratif de l’Empire Ottoman, Leipzig 1908; a Greek translation, Κανόνες οικονομικού, was utilised by Young. For foreign relations cf. Gabriel Edzidi Noradunkhan, Recueil d’Actes Internationaux de l’Empire Ottoman, tome ii—iv, Paris 1900—1903.

The Turkish historical sources on the tanzimat are not abundant: Ahmed Wekil, Tavīkî (Constantinople 1920—1926), vol. vi—viii, covering the years 1255—1265; ‘Othmān Nūrī, ‘Abd al-Ḥamīd (İzmir ve-Deve-ri Sultanat), vol. i, Constantinople 1327; there is no monograph on the tanzimat. — European works: Ed. Engelhardt, La Turquie et les tanzimat, vol. i—ii, Paris 1884; Chertier, Les réformes en Turquie, Paris 1885; A. Ubicini, Letters sur la Turquie, Paris 1855; da., La constitution ottomane, Paris 1879; Millingen, La Turquie sous le règne d’Abdül Aziz, Paris 1868; Rosen, Geschichte...
Khaṭṭ-i aṣḥāb of Gūlkhāne.

Reorganisation of the Grand Council (meğlî-ı aḵbâr-i 'adlîyye).

Promulgation of a code of penal laws.

Institution of a tribunal of commerce (tibâyî-ı meğlî-ı aḵbârî). in the Ministry of Commerce.

Law relating to the formation of the contingents of the army.

Assembly of provincial delegates in the capital.

Creation of a university and of establishments for secondary education.

Publication of an administrative code.

Creation of civil and criminal mixed tribunals.

Creation of a Ministry of Public Education (meğlî-ı meğlî-ı 'umûmîyye).

Firman in favour of non-Muslims.

Firman on the administration of the provinces.

Division of the Grand Council into a Council for Reforms and a High Council of Justice.

Abolition of khrâqîyye for the rayas and decision to enroll them in the army.

khâṣṣ-ı hâkimîyye.

Djassîm. I. 1272

Foundation of an Ottoman Bank.

Promulgation of a Code of Lands.

Promulgation of a Penal Code.

Appendix to the Code of Commerce, regulating the Tribunals of Commerce, which are amalgamated with the mixed tribunals.

Regulations regarding the Armenian Gregorian Community (ratified in 1863).

The two High Councils joined into one with three sections (administrative, legislative and financial).

New regulations for Lebanon.

Code of commercial procedure.

Organic regulation of the Oecumenical Patriarchate.

Concession of the Imperial Ottoman Bank.

Code of maritime commerce.

Regulations for the Jewish Community.

Organic regulation for Lebanon.

Law of the wilâyets.

Law granting foreigners the right to own property.

Creation of a Council of State (khrâq-ı devlet) and of a High Court of Justice (dûvâ-ı aḵbârî-ı 'adlîyye).

Opening of the Lycée of Ghalaṭa Serîûy.

Law on the Ottoman nationality.

Law on the competence of the meğlîyye tribunals.

Elaboration of the Civil Code (meğlî-ı aḵbâr-ı 'adlîyye); the 16 books of the code were promulgated between 1869 and 1876.

Law on the creation of the Bulgarian Exarchate.

Law on the secularisation of the Ewâzîf (never put into execution).

Firman reorganising justice; the commercial tribunals transferred to the Ministry of Justice. Promulgation of the Ottoman Constitution (fârû-ı erâstî).

Organic Regulation of the Ministry of Justice and Public Worship.

Regulation of the meğlîyye tribunals.

Law on the execution of judgments.

Code of civil procedure.
but the capital itself had still to be taken from the Muslims. Raymond began the siege in 493 (1101) and to isolate the town more effectively built a fort on a hill on the ravine of Kesilah, called Mons Peregrinus (by the Arabs Sandjil i.e. St. Giles), at the foot of which in course of time a little town arose. He died in 499 (1105) in this fortress without having attained his goal and it was not till July 12, 503 (1109) that the beleaguered town capitulated. Idrist, who wrote in 1154, says the fortress "built by the Frank Ibn Sindji" and gives a list of towns and villages belonging to Tarabulus and of the rocky islets off the harbour. In 1170 the town suffered severely from a terrible earthquake. After the fall of Jerusalem in 1187 Tarabulus held out for another century as an important base for the Christians until in 688 (1289) the army of the Mamlûk Sul-tan al-Mansur Qal'ûn appeared before it and it had to surrender on April 26. This proved a turning point in its history for the Sultan, learning a lesson from the past, built a new Tripoli on the Pilgrims' Hill while the old town was destroyed and sank to be an insignificant little harbour known as al-Minâ (from the Greek Minas). Dimigliò who wrote about it c. 1300 A.D. describes the plentiful supply of water in the town—in addition to the running water on all sides, an aqueduct 200 ells long, 70 ells high was built—and the gardens with excellent fruit in plenty. He also mentions the various localities belonging to Tarabulus, including Botrys, Buq'ân and the Nasridian hills. Among the kingdoms (mamalik) divided among the descendants of Saladin was a kingdom of Tarabulus but this division was soon replaced by a division into five provinces, and Tarabulus was put under Damascus as its port. The town is now in a comparatively prosperous condition owing to the remarkable fertility of the surrounding country, the not inconsiderable shipping and the silk industry. Of non-Muslim inhabitants the orthodox Greeks are the most numerous. A series of towers along the seashore recalls the warlike past of the town.

(TABULUS)

TAARBUNZ, the Turkish form of the name of the town of Trebizond, in Greek Torbç, situated at the southeastern corner of the Black Sea on a very hilly coast which is separated from the rest of Asia Minor and Armenia by a high range of mountains, this town, like the population of the country immediately around it, has always led a more or less isolated existence, from which it only emerged in those periods when
In 1240, the Mongols put an end to the hegemony of the Seljuqs. Trebizond was spared their invasion but the emperor Manuel had to declare himself a vassal of the Mongol empire (cf. e.g. William of Rubruck, ed. de Bacher, Paris 1877, p. 6; Hakluyt Society edition, London 1905). In this period the Abbasid sources change the orthography of the town to Tārābhūn or Āṭalāsūn (cf. especially Dimaghki, ed. Mchen, p. 106, 145, 228 and Abu ‘l-Farādī, Mushahhar who writes Tārībāt: Abu ‘l-Firdaws, Ta'āsim al-Bulūdān, p. 392–393; Vāyāt, i. 306 keeps the old orthography). After the Mongol conquest the city experienced a new commercial revival; the centre of political power having shifted to Tabriz, Trebizond became the corridor to Asia Minor, through which ran the great trade-route to the Far East which the Mongols had opened. The people of the town did not themselves take part directly in this traffic which was in the hands of Genoese and Venetians but they profited greatly by it, because it, for example, gave them an opportunity to export the products of the city itself (especially linen, silk and woolen goods and the minerals of the adjoining mountains). The Genoese colony in particular, with their own consul at the head, from the second half of the 13th century occupied a premier place among the foreigners and, supported by its mother city, was sufficiently powerful to obtain extraordinary concessions from the emperors. The centre of their activities was the quarter called Leontocastrum. In proportion as the Mongol power declined (after 1320) the territory of the emperor of Trebizond suffered more and more from the attacks of the Turkomans of Asia Minor, who took possession of the strongholds in the mountains; at the same time civil wars were weakening the empire, while the trade-routes became impracticable. Its neighbours were now the little Turkish states which had replaced the empire of the Seljuqs, Kastamonu in the west [q.v.] with Smyrna, to the south, the dynasty of the Oghuz and the south-east the Aq-Koyunlu. The emperors of Trebizond in this period endeavoured to strengthen their position by marrying princesses of their house to Turkomans. This state of affairs lasted until the Ottoman Sultan Bayezid I after the capture of Samsun in 1396 and his victory over the Aq-Koyunlu became a redoubtable neighbour. Timur’s advance saved Trebizond for the moment; in 1392 the emperor Manuel came to submit to the conqueror and a few years later had to assist him in his preparations against Bayezid; the fleet demanded by Timur was not however required, as, before it was equipped, the battle of Angora took place (1402); a body of soldiers from the city seems however to have taken part in the battle against Bayezid (Fallmerayer, p. 229). Timur’s armies withdrew, going to the south of the mountains of Trebizond; this territory with the towns of Armenia and the Caucasus now passed to Khusraw Sultan, nephew of Timur. It was during the period of Timur’s invasion of Asia Minor that the Spanish envoy Clavijo passed through Trebizond. The revival of Ottoman power once more became dangerous and resulted in the decline of Genoese influence and the rise of that of Venice. Under Murad II, Turkish ships in turn tried to seize Trebizond but after the fall of Constantinople the town was doomed. The emperor Kalo-Johannes then concluded
an alliance with Üzün Hasan to whom he gave his daughter in marriage. David, the successor of Kale-Johannes endeavoured to extend this alliance to the Christian rulers of the Caucasus and the Muhammadan lords of Kaştanı and Karaman [q.v.]. But all these efforts were in vain. In 1644 (1460) the Ottoman Sultan Muhammad II set out on his great campaign in Asia Minor which gained him Kaştanı and Sinope without a blow being struck. He then turned against Üzün Hasan, took him from the frontier fort of Koilia Hisar or Koyunlu Hisar and concluded a peace with him. He then marched on Trebizond and in spite of the attempts of Sera Khatun [Sera Khatun of 'Askhi Pasha Zade], mother of Üzün Hasan, to persuade him to abandon his designs on the town. The Turkish fleet commanded by the grand vizier Mahmut Pasha had already gone to Sinope. The emperor David was quite resolute to capitulate when Mahmut Pasha [q.v.] appeared with the vanguard of the Turkish army. The Sultan with some difficulty was persuaded to approve of the capitulation, by the terms of which David and all his family were to be taken to Adrianople; a few years later he was put to death by order of the Sultan. The Turks immediately installed themselves in the town and citadel and only allowed a third of the population to remain in the suburbs. The majority of the rest were carried off to Constantinople. The church of the citadel was converted into a mosque (Orta Džami') and also the church of St. Eugenius which was henceforth known as the Yeni Džami'; all the country conquered was granted as fiefs to Muslims. Trebizond never again became a town of great importance under the Ottoman empire; it became the capital of an eyalet to which also belonged the town of Bitum (Hadsji Khalifa, Džihan-nâmesi, p. 429 sq.). For some time it was the residence of Selim I as crown prince; the mother of the Sultan is buried in the Kührünie Džami'. Trade was conducted mainly by sea; Ewliya Celebi, for example, only visited it from the sea; the road to the interior, to Erzerum, continued to exist but it had no longer the commercial importance it once had. In 1534 this road was improved by Rashid Pasha, after the route through the Caucasus had been closed by the Russians (Rosen, Gesch. der Türkei, i. 214). After the introduction of the wilayets in the sixteenth century the wilayet of Tarabzun included the sandjaks of Tarabzun, Şamsun, Lazistan and Gümüşhâne (Cuinet, L. 41); the present wilayet, as reorganised since the war, is much smaller in area, with 6,922 and 356,250 inhabitants (cf. Turchy Sâl-nâmesi, 1926, p. 624). In the Great War, Trebizond was occupied by the Russians in April 1916, but as a result of the Russian revolution and the negotiations at Brest-Litowsk the Turks had no difficulty in reoccupying the town on Feb. 24, 1918.

The centre of the town of Trebizond has been built on a plateau in the form of a table (hence the name) which runs down to the sea on the north side and terminates on the south in an elevation on which stands an acropolis (Orta Hisar). Above the acropolis again rises the citadel (Sel). The latter, called by the Turks Boz Tepe, is bounded on the east and on the west by ditches which have to be crossed by bridges to reach the suburbs. The country all round is mountainous and covered with vegetation. The suburbs, lying along the coast to the west and east of the old town, have a mainly Christian population while since the Turkish conquest the centre has been Muslim. The eastern suburb is the centre of trade and navigation; the ships moor in the roads and one can hardly speak of a harbour. The population put at 35,000 by Cuinet, has always been very mixed. The Latins (cf. Lazi), as the principal inhabitants of all the surrounding coast, form a considerable section of it and are mainly boatmen and fishermen. Ewliya Celebi found other aboriginal inhabitants there with whom he declares to be the least agreeable section of the populace. The Turkish spoken there shows in its sounds considerable influence of local dialects. The Greeks (8,000 according to Cuinet) and Armenians (6,000) form the Christian element. After the Turkish defeat in 1918 and in spite of the recent reoccupation, there arose in all the lands of the Pontus with Trebizond as centre, quite a strong movement, which aimed at reviving the old empire, but the victory of the Angora government put an end to these attempts at independence (cf. in particular, the government publication, Pontos Meclisi, Angora, 1938 (1922). A section of the converted Greek population has preserved to the present day certain customs and rites of Christianity (cf. F. W. Hasluck, The Crypto-Christians of Trebizond, Journal of Hellenic Studies, All. 19th century).

**TARABA**

E 'Abd al-Bakr is unanimously considered by Arab critics one of the foremost poets of the period before Islam and is the author of the longest of the poems known by the name of Musallâqa. He is at the same time one of the earliest poets of that period of whom poems are preserved. The editors of the Musallâqa and of his collected poems generally give a full genealogy from which however we can gain with certainty only that he belonged to the section of Bakr of the Wall tribe. His father's name is given as al-'Abd h. Sulaym, the name 'Abd being probably only an Islamic abbreviation of some thorophoric name like 'Abd Manât. The
biographies given in Arabic authors are exceedingly unsatisfactory, and generally attempts are made to draw conclusions from his verses. This much seems certain, that he had relations with the court of the kings of al-Hira, especially with king 'Amr b. Hind, who reigned approximately from 554 to 568 of the Christian era. The lands of the poet's tribe lay in South-eastern Arabia, in Bahrayn and the Yanamma, which appears also to have been the home of the earliest Arab poets of whom we have any reliable knowledge and it is possible that Arabic poetry, as we know it, spread from this part of the country.

'Tarafa is, in a legendary account, brought into contact with the still earlier poet al-Musniyyah b. 'Alac, whom he is said to have corrected when he made a mistake in one of his poems. Generally Arab antiquarians describe 'Tarafa as extraordinarily precocious and argue from a poem (Ahlwardt, No. 1) that he was a mere boy, when he composed verses after the death of his father, when his uncle acted unjustly towards his mother Warda. He is also stated to have died very young. The latter is a conclusion arrived at from some verses of al-Kharnik, who is claimed to have been a sister and in the verses in question mentions the age of 25 years. As she is said to have been a daughter of a man named Hiffan it is more probable that her elegy, composed upon another unknown person, was assumed to refer to 'Tarafa, who may have died at a comparatively early age.

We obtain some light by comparing contemporary history. When 'Amr succeeded his father in 554 A.D. he gave to his brothers certain commands, but slightly his half-brother 'Amr b. Umama. The latter went to South Arabia and accompanied by 'Tarafa to obtain help from the Yanamite princes. 'Tarafa had left some camels belonging to (or inherited from) his father in the district where 'Abd, a brother of the king, and 'Amr b. Kals al-Shalibasi were in command. 'Amr b. Umama received the support of the Yanamite tribe Murad, the troops being under the command of Hubaira b. 'Abd Yaghluh. When they reached the Yamama, Hubaira fell ill through drinking from a well and 'Amr b. Umama sent to him a doctor who applied hot irons clumsily to his stomach in the effort to cure him and almost killed him. Believing that the doctor had acted under instructions of 'Amr, Hubaira had him murdered at a place called Ka'dib and he and his clansmen returned to the Yanam. The man who had slain 'Amr went with his family to al-Hira expecting a suitable reward from king 'Amr, but instead of this he and his family were burned alive. This event is mentioned by 'Tarafa in the first line of his Divan in the recension of Ibn al-Sikkit (not found in Aihwardi's edition except for a few verses). The poet also claims in the same poem the return of the camels confiscated as being the property of his father who is here called Ma'bad. They were pastured near Tabala (Ibn al-Sikkit, No. 2). In this poem which must be considerably later, he gives full vent to his feelings because the property is not restored and accuses also a man named 'Abd 'Amr b. Bishri, who was not a relation of the king as is generally assumed by the biographers. The latter seems not to have benefited from the confiscation. This poem had the desired effect and 'Tarafa composed a violent attack upon the king in which he says that it would be preferable to have a sheep to rule than king 'Amr (this poem has 17 verses in the recension of Ibn al-Sikkit; only 9 verses are found in Aihwardi, No. 7 and App. 17). This appears to have been the climax and from a poem by a sister of 'Tarafa, whose name Ibn al-Sikkit does not give, it appears that 'Abd 'Amr was to a great extent responsible for 'Tarafa falling into the hands of the governor of Bahrayn (this poem is not in Aihwardi nor Seligsohn). Ibn al-Sikkit tells us further that the governor was not willing to kill him and the king sent an official who killed the unwilling governor as well as 'Tarafa.

Against this we must set the tale of the letter. King 'Amr in a celebrated legend is stated to have given to 'Tarafa and his kinsman al-Mutamimms, after a visit to his court where he treated them with honour, a letter each containing a recommendation for suitable reward by the governor of Bahrayn upon their arrival. Such a course of bestowing favours, though unusual, was plausible as the reward might consist of cattle, but al-Mutamimms, becoming suspicious, broke the seal and asked a youth at al-Hira to read the contents. Reading that the letter contained a command for their execution and afraid of his life, he decided to go to Syria and advised 'Tarafa to open his letter also, but the latter refused to do so, thinking it impossible that the king would dare to have him murdered among his own people. While al-Mutamimms fled to Syria and from there sent his Hijjari poems to the king, 'Tarafa went to Bahrayn and met with a cruel death, being buried alive after having been maimed. I believe that this account has been invented by ancient antiquarians who knew from the poems of al-Mutamimms that he made mention of a letter in his poems, the contents of which are not even known and may have been of an entirely different nature.

Ibn al-Anbarsi in the introduction to his commentary on the Mutlala'qa claims an uninterrupted chain of authorities down to al-Mutamimms himself, a chain which has every semblance of being genuine, unless we cast suspicion upon Hammed al-Riwiya (ed. Rescher, p. 1). From the same commentary we learn that 'Tarafa had already received discreditors from king 'Amr and his brother Khabis when he visited the court during the reign of their father (Ibn cit., p. 5) I am inclined in consequence to believe that 'Tarafa never visited the court of king 'Amr at all during his reign, but took sides with his half-brother, 'Amr b. Umama, went with him to the Yamana, where they stayed for some years, because 'Amr b. Umama married there and had several children, before he undertook his expedition to the Yamama (Commentary of Ibn al-Sikkit). This also makes it impossible that 'Tarafa died at a very early age; he had been at the court of al-Hira before the accession of 'Amr, probably as one of the notables of his tribe and spent several years in South Arabia. Young he may have been in comparison with other Sahids, but it would be rash to make any definite statements. As regards his religious views we can only say that from his poems we can glean nothing that would point to anything else than the customary pagan fatalism.

As regards his value as a poet we can only repeat the opinion of native critics who are...
only undecided whether he is one of the greatest poets of the time of paganism or the greatest of all. His description of the camel in his Ma'allaqa is justly celebrated and hardly surpassed by any other Arab poet. As regards the genuineness of his poems I must refer the readers to the conclusions of Ahlwardt and Geiger, though I should like to suggest that perhaps more is genuine than these two authorities will admit. If al-Malikamis, al-'Aghi, 'Ubaid, the 41st of the latter, Simak b. Harb, Hammad al-Ra'wiya and al-Haitham b. Adi really handed down his poems we may expect that his poems did come down to the time when they were finally commented by grammarians and are preserved with a certain amount of accuracy. The best accounts we have of the poet are contained in the Divan in the recension of Ibn al-Sikkit, where unfortunately the editor has mixed the latter's notes with those of al-A'mi and in the introduction to the Mu'allaqa by Ibn al-Ansabir.

F. Krenkow

TARANCI, Eastern Turkic word for agriculturists; as the name of a people, applied to the colonists transported by the Chinese government in the middle of the xvi century from Kâshgharia to the Ili valley; cf. Radloff, Wetterer's, p. 841. The Taranci are said however, even in the Ili valley, to have described themselves as the native population (Yarod, cf. Radloff, p. 343). They numbered 6,000 families of whom 4,000 were settled on the right and 1,900 on the left bank of the Ili; for further particulars see Radloff, Aus Sibirien, ii. 233. Acc. According to a census of the year 1834 the number of families had increased to 8,000. Down to the beginning of the rebellions of the Muslims in Kâshgharia the lot of the Taranci is said to have been quite tolerable; but their prosperity was hencethence undermined by frequent requisitions for military purposes. After 1863 the Ili valley also became involved in the rebel movement; after hard fighting an independent principality of the Taranci arose under Sultan Abu Tafacl or Ali Khan [see article KSHIR]. In 1871 this was conquered by the Russians and remained under Russian rule till 1882. The Taranci then numbered 51,000 of whom 45,372 went over to Russian territory, when the Ili valley was returned to the Chinese (treaty of St. Petersburg, Feb. 24, 1881). They were settled in the district of Semiryecye (Semiryecenskaya Oblast'); the leader of these emigrants was a wealthy merchant, Wali Akhun Yuldashev. The Taranci formed the majority of the population of the town of Djärkent which was founded at this time (in 1911: 16,000 of 25,000). Up to 1887 the lands allotted to the Taranci were several times taken from them for Russian Cossacks and the Taranci moved to other places. The Taranci are valued not only as agriculturists and gardeners but also as artisans and labourers; they are said to be unrivalled in building with clay. According to the census of 1897 they numbered 55,993; for a later date, larger numbers (up to 85,000) are given; the census of 1910 gave 82,505. The prosperity of the Taranci suffered severely with the rising of the Kar-khirläte in 1916 and the events of the revolution; in 1917 the number of Taranci living in towns in the administrative district of Djärkent was only 6,736 — compared with the previous figure of 16,000 in the town of Djärkent alone, a considerable reduction. In Soviet Russia, the Taranci do not form a political unit; they live in the autonomous republic of Karakulistan; there is also a Taranci colony in Baimur-Ili in Turkestan. The Taranci along with the Turkomans (Kâshghari) who later immigrated from Kâshgharia claimed they were Uighurs by race. This is due to a misunderstanding as the historical Uighurs never came so far west.

The number of Taranci remaining on Chinese territory was about 8,200 at the beginning of the xxth century. Measures were taken at that time by the Chinese authorities, not without some success, to induce the Taranci who had emigrated to Russia to return to their original homes.

W. Barthold

TARAWIH (A.), plural of the usual sing. TARAWI, the sâliuto which are performed in the nights of the month of Ramadân. Tradition says that Muhammad held these sâliuto in high esteem, with the precaution, however, that their performance should not become obligatory (Bukhâri, Tarîkh, trad. 3). 'Umar is said to have
been the first to assemble behind one šeji, those who performed their prayers in the mosque of al-Madīna singly or in groups (loc. cit., trad. 2); he is also said to have preferred the first part of the night for these pious exercises.

Canon law recommends the performance of the tarawīḥ shortly after the qalāt al-lūhā. They consist of 40 tashīlmās, each containing 4 raddās; after every four raddās a pause is held; hence the name tarawīḥ ‗pauses‘. In the Makkīte rite they consist of 36 raddās. They belong to the qalātā which are sunna and are as popular as any rite connected with Ramadān [q. v.]. Shūrī būkhārī prefers a thousand supererogatory raddās throughout the month of Ramadān.

In Meccā people assemble in groups varying from 10 to 150 persons, behind one imām [q. v.], who acts in this case unofficially, even if he should be an appointed official. The recitation of the Kurān has a prominent place in these qalātā. Very busy people may perform even this prayer within a short space of time; other groups abide behind their Imam’s reciting the Kurān once or several times in the nights of Ramadān. Even after the tarawīḥ many people stay for pious exercises.

In Aṭchin every night large crowds assemble in order to perform the tarawīḥ. Usually, however, it is the tūnīs alone who takes the active part in them, the others limiting their part to a disrespectful joining in with the sinān and the eulogies on the Prophet. The sinān receives the qalāt al-lūhā as a remuneration for his endurance. In his Arabic New-Year (Yerk. Ak. Amst., new ser., xxv., No. 2) Wensinck traces the rites of Ramadān back to pagan times.

(A. J. WESINNCK)

TARĀZ, Arabic name for Talas, a river in Central Asia and the town on it probably near the modern Awdyā Ate [q. v.]. The town was probably of pre-Muslim age, presumably Sogdian origin [cf. storia]; Soghian and Turk were spoken in Taras and in Basiliskē [q. v.] as late as the fifth (eleventh) century (Mahmūd Kāshgarī, Divān Lūghat al-Turk, l. 31). As a town (gūrūn) Talas is first mentioned in the report of the embassy of the Greek Zamaropoulos (Frages. Hist. Grec., iv. 228) in 568. About 630 Talas (Chin. Tai-lo-see) was described by Hsien-Thang as an important commercial town (Ministres sur les contrées orientales, transal. by Stan. Julien, Paris 1857, l. 14: ab al-marchands des différents pays y habitent pélemes). Islam was first introduced there by the campaign of the Saimāīd İsmāl b. ʿAbdārā [q. v.] in Muḥarran 280 (March–April 893); *the emir and the dīḥūnī* had to submit; the principal church (kīla-ḵān barār) was turned into a mosque (Narahbāl, ed. Schefer, p. 84). This shows that Christianity had gained a footing in Taraż earlier than Islam. In the account of the same campaign in Tahtī, ill. 2138, the name of the town is not given: İsmāl captures the town of the "king of the Turks." In Ibn al-ʿAtīʾir (ed. Tornberg, viii. 97) a dīḥūnī of the region of Taras is mentioned under the year 316 (922–923). Under the Sāmānīs Taras was an important trading centre on the frontiers of the lands of Islam and of the Turks (B. G. A., ii. 191). Coins were first struck in Taras under the İskändin [q. v.]. In the Mongol period we find alongside of Taras the name Yangi first in al-ʿOmari (N. E., xii. 263), where Yangi appears as a distinct town from Tarāz or Talas. Under Timur and his immediate successors (Zafar-nāma, Ind. edition, i. 229 where it is wrongly given as Nakhri; ii. 653 where Taras is erroneously placed between Akhsīkant and Kāshgar; Ḥaṭīf-i Abrū [q. v.], Cod. Bodl. Elliot, No. 442, f. 1555; Abū al-Razzāq Samarkandī, Cod. Univ. Petrov., No. 157, f. 1901) Yangi is frequently mentioned, sometimes in the combination Yangi-Taras (so Mirḵᵛānd, in Barthold, Umgang i ego vremena, St. Petersburg 1918, text, p. 8). According to Ḥāidār Mīrāz [q. v.] Yangi was the Mongol name for Taras. In Muwarz al-Nahr there were people who came from Yangi originally and were called "Yangīli." There was no longer a town of Yangi; there were many ruins in the same region but even then it was no longer possible to say with certainty what ruins corresponded to the town of Yangi (or Tarāz) "Yangi-ḵā Kāżghā," transl. E. D. Ross, p. 364). At the present day no traces of the town of Taras are known. (W. BARTHOLD)

TARI, a gold coin, a quarter-dinar. When the Fatimids conquered Sicily in the second decade of the fourth (tenth) century they struck quarter-dinars (rūḥān) there in large numbers. This denomination was new to Muhammadan coinage and the fact that it was also introduced into Syria by the Fatimids suggests that it was intended to take the place of the Byzantine tremissis. The source of this denomination was continued by the Norman Dukes who succeeded the Fatimids. For the history of the tari as an Italian denomination, which does not concern us here, see the article tariene in F. Martinetti, La Moneta, Vocabolario delle Monete Generali, Rome 1915. No satisfactory etymology of the word has yet been given; the one usually given connects it with dirhem. (J. ALAN)

TARI, leader of the first Muslim forces to land in Spain in 91 (710). The Arab historians are not agreed as to the origin of this client of the famous general Mūsā b. Nuṣair [q. v.]; some say he was a Berber, others an Arab. Al-Rasāʾil calls him: Abū Zara Tari Tarif b. Mālik al-Maṭfīr and Ibn Khaldūn: Tari b. Mālik al-Nakhaʾī. He has also occasionally been confused with the other client of Mūsā b. Nuṣair, Tarik b. Ziyād [q. v.].

We know nothing when Mūsā b. Nuṣair was urged by Constatin Julian to cross to Spain with an army he consulted his master, the Caliph al-Walid; the latter ordered him to explore before any expedition the south of the Iberian peninsula with a small contingent of light troops. Mūsā b. Nuṣair therefore sent Tari with 400 foot and 100 horsemen, all Berbers. Tari with this little force crossed the Straits of Gibraltar and landed on the penin-
sula which since has borne his name (Qārraṭār Tāriq), now Tarifa [q.v.]). He raided the vicinity of Algerias (al-Lījarāt al-Khḍrā [q.v.]) and returned to Africa with rich booty and captives. This first reconnaissance was made in Ramādān 96 (July 710). It was followed by the great expedition of Tāriq b. Ziyād; and after this we hear no more of Tarīf.

### TA'RIF

1. **A.** _Explanation, definition, description, from a'rafa, to know; e.g. tārīf Ayn Sājā, description of St. Sophia; Kālib al-Tārīf, book of definitions, a well-known treatise of Sāliḥ Shāfi‘ī al-Qurṭubī on the explanation of ṣuff terms._

2. **B.** _Administrative language, in the feminine form, tārīfa or tarīfa with a short i, the word has the meaning of tarīf, tax, price of food, of transport, etc.; e.g. in Turkish: gumrük tārīf, customs duties; demir yel tārīfeli, railway charges._

**Grammar:** This word means the Arabic definite article al-, which is called the particle of notification and ʾilm of definition; shaf al-tārīf, ʾilm al-tārīf.

**TA'RIFA,** in Arabic Lījarāt Tarīf, *island of Tarīf*, from the name of the client of Mūsā b. ʿNaṣir, Abū Zirā Tāriq [q.v.], who landed there with the first Muslim force at the beginning of the conquest of Spain, a small town in Andalusia on the north shore of the Straits of Gibraltar, at the foot of a mountain range called the Sierra de la Luna, and almost the most southern part of the European continent. Tarīf, with Algerias (al-Lījarāt al-Khḍrā‘; cf. i., p. 277a) and Gibraltar (Dibaṭ al-Tariq; cf. ii., p. 169 cc), under Muslim rule had always considerable trade with the Mozarabic ports on the other side of the Straits. Al-Idrīsī says that it was surrounded by a dry stone wall. A tower (lījar) was built in it by orders of Abī al-Rhmān al-ʿAtūrī, in 349 (960) as we know from an Arabic inscription above one of the gates of the castella of Tarīf. Tarīf was taken from the Muslims in 1292 by the King of Castile, Sancho IV, and it was in vain that they endeavoured to retake it two years later when it was admirably defended by Gamsnus el Bueno de Leon.

(E. LEVY-PROVENÇAL)

### TĀRĪK

1. **A.** Ziyād b. ʿAbd Allāh, a Berber chief and leader of the Muslim forces in the conquest of al-Andalus. Ibn Idrīs gives a complete genealogy of him and connects him with the tribe of the Nafza. Idrīs says he was a Berber of the Zanāja; Ibn Khaldūn calls him Tāriq b. Ziyād al-Laṣīt. Others again say he was a Persian, a native of Hamadān.

2. After the reconnaissance undertaken by Tarīf [q.v.] in the south of Spain in Ramādān 96 (July 710), Mūsā b. ʿNaṣir, emboldened by its success, entrusted the command of the expedition on a larger scale to his client Tāriq b. Ziyād, then leader of his advance-guard. He sent him to the Peninsula at the head of 7,000 men, for the most part Berbers, who crossed the Straits in small contingents in ships supplied by Count Julian. The crossing was probably effected in Rajab 92 (April–May 711). As his troops landed in Europe, Tāriq concentrated them on a hill which took his name, the Qābar Tāriq (Gibrallār, q.v.), the ancient Ǧapla on which the Almohad sovereign ʿAbd al-Muʾmin was later to build the town of Gibrallār al-ifikasi (1555 = 1160). Almost all the Arab chroniclers repeat in connection with ʿAṭīf’s crossing the story of a vision which he had during the passage which foretold victory. Tāriq lost no time in taking Carteya and Algerias. The Caliph ʿAbd al-Rahman II collected a considerable army to face the invaders in view of the danger that threatened his country. Tāriq then asked Mūsā b. ʿNaṣir for reinforcements; he sent him 5,000 Berbers in addition to the 7,000 he already had. The references in the Muslim and Christian historians are brief but sufficiently precise regarding the course of the conquest after the decisive battle fought between the Muslims and the Goths at the mouth of the Waṭī Bekka (Rio Barbate) on the shores of the lagoon of the Jandā. Tāriq’s 12,000 Berbers would not have held out for very long if Mūsā b. ʿNaṣir, in spite of his reluctance to increase the scale of the conquest, for it was only intended at first to be a simple reconnaissance and razzia, jealous of the bold and triumphant progress of his lieutenant which did not fall for a year, but a part of the Arab forces had been sent to fight the Goths prince Theodemir in Cabilia. After the surrender of Merida, Mūsā b. Ṭaṣir advanced to Toledo and joined Ṭaṣir on the way. The latter after the defeat of the Goths had marched on Ecija, then on Toledo, at the same time sending three columns to take Cordova, Archidona and Elvira. At Toledo, Ṭaṣir, the Arab historians say, captured fabulous wealth and wrote to Mūsā b. ʿNaṣir to give him an account of his victory.

The meeting of Ṭaṭir and his master is a favourite subject with the historians who say that Ṭaṣir inflicted the worst humiliations on his client. The conquest went on and soon the Muslim troops reached Saragossa and the highlands of Aragon, Leon, the Asturias and Galicia. When Mūsā b. Ṭaṣir returned to Damascus to report their success to the caliph, Muslim Spain with its little nucleus of Berber and Arab soldiers had already practically attained its extreme geographical limits.

**Bibliography:** Ibn ʿAbd al-Hakam, Fatḥ Murj, ed. C. Torrey, Yale Oriental Series, 1922; index; Ḥālīr al-maṣūma, ed. Lafuente y Alcantara (Afjar mustahmad), Madrid 1867, text,
TAİRĪKA (pl. muqāb). This Arabic term, meaning "road, way, path", has acquired two successive technical meanings in Muslim mysticism:

1. In the ninth and tenth centuries A.D. it was a method of moral psychology for the practical guidance of individuals who had a mystic call; 2. after the 11th century, it becomes the whole system of rites for spiritual training laid down for the common life in the various Muslim religious orders which began to be founded at this time.

Muslim mysticism itself in its origins, ideas and tendencies will be examined elsewhere [cf. the article TAŞAWWUF]; here we only deal with its results on society and the organisations which are the development of its practice by groups of devout Muslims.

In the first sense (cf. texts by Ljunaid, Hallâdî, Sanâ'îd, Kûshkîrâ, Hujwîrî), the word farâka is still vague and means rather a theoretical and ideal method (fâ'yâ, sulûk are stronger) to guide each one who has had a call by tracing an Itinerarium mentis ad Deum leading through various psychological stages (ma'âmulât, aha'îl) of the literal practice of the revealed law (sharî'a) to divine reality (khâdiyya). This bold claim having provoked criticism and even persecution from the canonists, the teachers of mysticism devoted themselves to defining and restraining their activities on more orthodox lines, compounding rules calculated to avert suspicion (zādîh al-tišfîya), from Sudan and Makki to Ibn Tâhir Maqâdîn (yâfûrî) and Oghâzî. In practice, while keeping as goal direct access (fâkî) to reality, they gradually abandoned the freedom of musical assemblies (ru'mâ) stimulating themselves with the ecstasy of theophanic utterances [cf. farâku], often open to criticism, for regular recitations of litanies founded on the Qur'ûn (dikhr); thus preparing the adept for a state of mental concentration (taṣâkkûr) which he experiences in silence by himself, a state in which the successive perception of lights (ru'mâl) differently coloured gradually denudes from its covering of words the "clarity" (of the recited litany) and "substantialises" it in the heart, which then participates in the divine essence of its prayer (dikhr al-abâd, bi-tâfâswâk nûr al-dîkhr fa'-l-hâl, sâya Suhrawardi on chap. xxvii. of the Awarîf, il. 191).

Thus farâk comes finally to mean a common life (wâla'îhara), founded on a series of special rules in addition to the ordinary observances of Islam: to become an adept (fâkî, Perf. darâkîhâ) the novice (wurid, gandâ) receives initiation (hâdî, talâm, shakîh) before a hierarchy of witnesses (shakîh al-tashâfîyya = Pers. pîr = Turk. hâbîb, mudâbîd, múdubab, khâbîf, tashûjumânî, Pers. rinid, rûqâ'î, etc.); even if he is of an order allowing a wandering life (isâqîyâ), he has to make periodic retreats (nîgâh, khâbûm, arba'îmâyâ = Pers. tâhirî) with them in a monastery (râjîf, sâmîyâ = Pers. khanbû = Turk. tekîlîyâ) of the order, supported by expiatory alms (hâsya), generally built near the tomb of a venerated saint whose anniversary (nawârid, 'u'ûrî) is celebrated and whose blessing is invoked (zâyûra, barâkâ).

In the interior of the monastery the common life of the brethren (îkârân = Turk. âirûli, an Anatolian term of the 11th century; there were only attempts to found convents of sisters in Egypt and Syria in the 12th and 13th centuries) is at the same time distinguished by supererogatory exercises, vigils (sahîb), fasts (jâ'âm), invocations (wâdî); e.g. yâ latîf, repeated 100 or 1,000 times, litanies (dâhirî, hâdîh) especially at certain festivals (a kind of liturgical office for the vigils, bâzû, raghâb, khawîr), and by dispensations (rukhûs), like the collections of alms (basama, collected in the kajîhûl) and private assemblies (haçra, maçuva, arba'da) in which in addition to litanies, platonic glances (maqârîla 'l-mawûd), jesting (muqâlî) even going as far as horseplay, dancing (raîb) and the rending of garments are allowed.

The actual ritual initiation, identical to that of initiation into trade-guilds of Karâmiq origin, as Kahle has observed, was probably borrowed from them in the 10th century (Taschchner, Islam, vi. 169-172; published a Turkish miniature of the 15th century representing the scene). The diploma of initiation (îqâla) in use since 1237 (cf. Ibn Abi Usâlîla, 'Uyûn al-Indiyya, ii. 250) reproduces the isâqî of the traditionists to give the new initiate his double chain of affiliation (siyâtî, khâqiyya). At the same time he is given a double trock (bîshîrât al-wîrîd, bîshîrât al-tahvîrûk) to show his twofold taking of an oath ('ahd al-yad wa 'l-kihîdâ = talâm and 'ahd al-khâzîrî), his double adopted genealogy, instruction (oral transmission of the rule) and inspiration (individual illumination), to which his vow of obedience entitles him.

The orthodox canonists (fâkkahû) have constantly attacked the innovations (bi'â) propagated by the farâkîs: their supererogatory exercises and their dispensations, their special costumes (characteristic headdresses with strips of colour, kulâh, âllâf etc.), their use of stimulants (coffee, bâzû, opium), their jugglery, their belief in the supernatural efficacy of the talâm and the barâk. They have devoted special attention to the critical history of the isâqî of initiation, exposing the lacunae and the improbability of their chains [cf. TAŞAWWUF] and they have protested against the isâqî al-hâmî (spiritual) which bases the privileges of the order on the apparitions of a holy being, mysterious and immortal, al-Khâji (q. v.), whom all the orders revere as the "master of the path" (parsî), since having been the guide of Moses (Kûrân, xviii. 64-81) he is superior to the law (sharî'a) and the prophetic and capable of guiding the soul of the mystic to the supreme reality (khâdiyya).

In Turkey the government has often persecuted the orders on account of their Şâra' associations; and after a brief truce during which the pan-Islam of 'Abd al-Ḥamîd endeavoured to make use of them, they were dissolved in 1925 for reactionary conspiracy. In the other Muslim coun-

tries in spite of some attempts at reform interesting from the moral (India) or intellectual (Algeria) point of view they are in a state of complete decline. The acrobatics and juggling practised by certain adepts of the lower classes, and the moral corruption of too many of their leaders has aroused against almost all of them the hostility and contempt of the elite of the modern Muslim world.

The ṭARIQA however cannot be completely neglected: and although their average moral level is very far below that of the great examples of the first ṢUFIYA, the great part that they have never ceased to play in the everyday life, humble but profound, of the Muslim community, promises important results to those who undertake a thorough study of their rules and writings. Ethnologists like Trenearne and Westernmay have already shown that several of their rites, incorporated in an Islamic liturgic structure, in which they play an unexpected part, are in reality pre-Islamic survivals (e.g. in the East Indies and in Java) or animistic inflations (e.g. sūr of the Gūlghānta of Cairo borrowed from the Asante; sacrifices of the Ḳawwāls of Mecca, modelled on the bārī of the Hansa; cf. R. M. M., xliv. 1—52). Comparative folklore and psychology will also have something to learn from the hagiographic history of the saints documentation of the great Muslim orders (cf. Mill. R. Basset, 1923, i. 259—270 and Journal de Psychologie, 1927, p. 163—168).

INTRODUCTION TO THE LIST OF THE ṬARIQA OF ILM."
Adhamiya. — Q. — artificial Turco-Syrian inād of the xvth century, referring to a saint († 776).

Ammadiya. — U14 S3 G114 M117 — Egyptian order († 1476).

Aidarūsīya. — U13 S23 G27 — Yemenite branch of the Kubrawiyya (xvth century).

Akbartya. — G7 — Hāzimīya.

Alawīya. — G26 — artificial inād referring to the 4th kalīla († 953).

*Allawīya. — Algerian branch of the Darāwīya (Mostaganem — Ben Aliouna, since 1919).

Amīrḫiyanīya. — Nubian branch of the Idrīsīya († 1553).

Ammāriyya. — M110 — Algerian-Tunisian branch of the Kādiriyā (xvth century).

Arbaṣīya. — R9x — Tripolitan branch of the Kādiriyā (Zītīn, xixth century).

Aṣhīqīya. — P9 — heresy.

Ashrafīya. — O10 — Turkish branch of the Kādiriyā (Isnik) († 1493) — Wāhīdiya.

Awāmīrīya. — M107 — Tunisian branch of the Iṣawīya (xivth century).

Azēzīya. — M107 — small Tunisian order (xivth century).

Bābāsiya. — G17 — Turkish order (Adrianople) († 1465).

Badawīya. — O14 G20 — Ähmādiyya.

Bairamīya. — O14 G20 — Turkish branch of the Saifawīya (Angora) († 1471). Sub-branches: Hamrāwīya, Shāqibīya, Khwājda-Humaymīya.

Baiyūmīya. — G38 — cf. Ähmādiyya.

— name sometimes given to the Bait al-Bakr (Shuyukh al-Sufīya in Cairo since the xvth century).

— U10 G14 R11 — Syro-Egyptian branch of the Shāhīliyya († 1503).

— Egyptian reformed Khalawīya († 1709).

Banānīya. — branch of the Kādiriyya in the Dekkān (xixth century).

Bekrātāniyya. — T8 O14 G12 — Anatolian (since before 1536) and Balkan order (Albanian branch autonomous since 1922; centre at Ağva Hissar).

Bihārīya. — M188 — small Cīcīšīli order (in 1924).

Bisnīniyya. — Gh6 — artificial Turkish inād of the xixth century (cf. Tāfīrīyya).

Bītālīya. — M107 — Egyptian branch of the Kādirīya (xixth century).

Būyūrīya. — Gh8 — not identified.

*Būrāhāniyya (or Burhamīya). — U16 S8 — Egyptian order (1fr. Dašqūtī † 1227). Branches: Shāhawīya, Shārānīya.

Dardirīya. — Egyptian branch of the Khalawīya († 1786).

Dhahābiyya. — T6 — Persian name of the Kubrawīya.

Djahariyya. — U12 S30 — Yemenite order (xvth century).

— M47, M107 — orders authorising the dhikr in public, in China and Turkestan (Kādiriya); cf. Khāfīya. — (xixth century).

Djumālīya. — T11 — Persian branch of the Subhawārīya (Ardāsīnti xixth century).

— G18 — Turkish order — Stamboul. — († 1750).

Djarrālīya. — Turkish branch of the Khalawīya. — († 1735).

Djīlīliyya. — Sahmāliyya, Djīlīliyya. — Moroccan name for the Kādiriyya.

Djumālīyya. — H4 U30 S4 R9 — doctoral Baghdādī school († 909) which was evolved in the Shīfiyya in the xith century, and gave rise to the Khwā((__j[(())j(()j, Ḥubbawīya and Kādiriyya — name revived in the xixth century for the artificial inād of a dhikr.

Firdawīyya. — Persian name of the Kubrawīya.

*Ghawwīyya. — U17 S80 — Hindu branch of the Šagārīya (Gawth, † 1562 at Gwallor).

*Ghāziyya. — R9 — branch of the Shāhīliyya in South Morocco († 1536).

Gūlghāntiyya. — O14 G14 — Rawḥāniyya.

*Gurmar. — Hindi branch of the Kādiriyya.

*Haḥbiyya. — R12 — branch of the Shāhīliyya in Tafsīlī († 1752).

Haddādiyya. — Gh21 — not identified.

*Haṣawīyya. — R17 — Egyptian branch of the Khalawīya († 1749).

Haṣariyya. — Persian branch of the Kālandariyya (xixth century).

— = Khāṣār. — Persian artisan brotherhood (xixth century).

Hakimīya. — H7 — doctoral school of Ḥakim Tirmidhī († 898).

Hallādīyya. — H10 S8 — doctoral school of Husain b. Muṣūr Hallāj († 1924); name revived in the xixth century for the artificial inād of a dhikr.

Hamadānīyya. — U7 S4 — Kashmiri branch of the Kubrawīya († Alt Hamadānī † 1385).

1) Cf. ʿUmāriyya (G27), ʿUthmāniyya (G24), *Abbaṣiyya (G23), Zainabiyā (G27).
2) Cf. Ghassābiyya (G27), Ḥaḍārīya (G30).
Hamādinya. - Moroccan branch of the Djarāliya in the Zerouh (xviith century) with sub-branches: Daghriyāliya, Sādāshīniya, Riyāshīniya, Kāshāniya, — with al-Sa'āda and at Salē.  
Hamānīiya. - GM — mixture of Bairaminya and Malāmiya.  
Hāșāliya. - R 26 — small Orano-Moroccan order.  
(† 1702)  
Chleh branch of the Nāsirīya.  
( sixteenth century).  
Hāsirīya. - Haussanian branch of the Rūfūtīya.  
(† 1247).  
Hāṭāmiya. - doctrinal school of Ibn 'Arāūf(† 1240).  
Hudīya = Djalwatiya.  
Hušulnīya = H 11 — Hušūliya sect of the sixteenth century.  
Hušulniya. — H 11 — heresy.  
Hušulniya. — heresy.  
Ibāshīya. — heresy.  
Istitrīya. - M 44 — branch of the Khājiyāniya settled in 'Asr (sixteenth century).  
Ighīt-Bāshīya. — G 25 — Turkish branch of the Khabrawīya († 1544).  
Ighīt-Başıshiana. — T 7 — Khurāsān branch of the Khabrawīya (Ibab Khattallah, T XVIII th century).  
Isawīya. - R 3 G 26 (?) — Moroccan branch of the Djarāliya at Meknes († 1524).  
Ishārīya. — doctrinal school of Subhawardi 'Ilalāb († 1191).  
Ismā'īliya. — Nubian order in Kurdufan (sixteenth century).  
Ithulhāya. — heresy.  
Kabariya. - UL S5 T 12 O 4 G 4 R 4 — Baghdād order developed from the school of the Djarāsiyā (Abū al-Kādir Liṣānī † 1166). — Many branches: in Yemen and Somalia, Vāyiya (xivth century), Murghārīya, Urūshīya; in India, Bankawa and Gurmar; in Anatolia, Ashrafīya, Hindīya, Khabrūsīya, Nabūsīya, Rūmīya and Waṣlatīya; in Egypt, Fāridiya and Kāshāniya (xvith century); in Maghrib, 'Amāmīya, 'Arūshīya, Bašūliya and Djalāla; in western Sudan, Bakkāshīya.  
Kalāndarīya. - UL S 20 — itinerant order founded in Persia (Sāvīdūj † 1218), spread to Syria and India (xivth century—xvith century) now extinct.  
Karrāiya. — M 97 — small Tunisian order (sixteenth century).  
Karrāiya. - R 38 — Shādīshīniya branch in Taifeli (sixteenth century).  
Kasrīya. — H — doctrinal school of the sixteenth century: Malāmiya.  
Kāshāniya. — Persian order descended from the doctrinal school of the Khashāniya, at Shirāz. — († 1304).  
Khashāniya — R 27 — Moroccan order (Ibn al-Dabābigh † 1717) whence are derived the Amटrathania, Istitrīya and Sādāshīniya.  
Khashāniya. — H 21 U 30 — doctrinal school of Ibn Khāshīf † 93); name revived in the xivth century for an artificial ismā'i.  
Khaṭīya. — surname of the Naqshabandīya in China and Turkestān (sixteenth century); cf. Djarāliya.  
Khalāliya. — M 97 — small Tunisian order (sixteenth century).  
Khalawatiya. - UL S 10 T 15 O 10 G 18 R 20 — branch of the Subhawardiya which arose in Khurasān (Zahir al-Dīn † 1397) and spread into Turkey. — Numerous branches: in Anatolia, Djarāliya, Ighītšīniya, 'Ushāshīniya, Nusīnīya, Subhānīya, Gisaburaniya and Shudālīya; in Egypt, Djarāliya, Mabnawīya, Shuraym, Sāfīnīya, Al-Indānīya at Būry.  
Khammūniya. — M 97 — Tunisian order (sixteenth century).  
Kharrāiya. — H 20 U 30 T 15 O 9 H 21 — doctoral school of Abu Sa'id Khārāz († 899); then artificial Turkish ismā'i of the xivth century.  
Khawārīya. — U 34 S 34 — Hujjāzī order of Mada'īniya (Ibn 'Arābī † 1556).  
Khārājīya — T 72 — Persian order descended from the school of the Djarāsiyā and spread in Tārakstan (= Yavasīya). — Yāsuf Ḥamaṣhān † 1140.  
Kūshāriya. — T 72 — doctoral school of Sādī Ĺūnī († 1273), descended from the Hāṭāmiya.  
Kuṣṭāriya. — U 38 S 34 — artificial ismā'i of the xivth century, referring to KuṣṭāriYA († 1074).  
Madaniya. — U 37 S 7 — first name of the Shādīshīniya.  
— Tripolitan branch of the Darkawīya at Misurata († 1823).  
Maddāniya. — U 38 S 34 — wandering Hindu order (Ṣḥīh Mādār, † 1428 at Makanpur).  
Maghrībīya. — G 49 — perhaps to be identified with the disciples of the Persian poet Maghrībī († 1406).  
Malāmiya. — UL S 34 — doctoral school of Khurāsān (ixth.—xvth century), opposed to the Shiyya of the Trak - name revived in the xivth century for an artificial ismā'i.  
Malāniya. — G 49 (= Hammāwīya) — branch of the Rauhmāniya of Turkey († 1553).  
Manṣūriya = Ḥallādiya.  
Marāzīya. — branch of the Ahmādiya (xvth century).  
Mashāhiya. — disciples of the Moroccan saint Ibn Mašīḥah († 1220), at first confused with the Shādīshīniya, then regruped in the xivth century.  
Mathlūliya. — G 49 — small Egyptian order († 1275).  
Miṣrīya = Niyyātīya.  
Maḥmāmīdīya. — U 37 S 6 — devotional artificial ismā'i referring to the Prophet without intermediary: utilised in the xivth century by 'Alī Jākhāwīs and Shīhīnī; also used in connection with the recitation of Daʿūlī of Djarāli.  
Muḥākhīya. = H — doctoral school of Ḥārīth Muḥākhī († 590).  
Murādiya. — O 90 — Turkish order in Stambul. — († 1719).  
Muṣṭāriya. — U 38 S 34 — Yemenite branch of the Kudirātiya (xvth century).  
Mujāfīya = Ahmādiya.  
Nakshabandīya. — U 36 S 34 T 10 O 9 G 4 R 39 — order in Turkestān, claiming descent from the school of the
Taiftriya. — Branches in China, Turkestân, Kazan, Turkey, India and Java. — (Baha’ al-Din † 1355).

Nâşihabandîya = Khâlidîya. — Reformed Turkish (sixth century).

Nâşîriya. — Râfî South Moroccan branch of the Shâhidîya, at Tanghrû (seventh century) with Tunisian sub-branch (Shabîbîya).

Nâmûmatallâhîya. — Tâ — the only order of the Persian Shi‘a in Kûrmâin: descended from the Kâdirîya-Yâfîyah. — († 1430).

Niyyâtîya. — Oâî Turkish branch of the Khalwâtiya. († 1695).

Nubuwîya. — Artisan brotherhood in Syria (seventh century).

Nûr-Idînym. — Oâî = Dîrâshîya.

Nûrîhâshîya. — Tâ — Khurshân branch of the Kubârîwîya (Muhammad Nûrîkhâlah † 1465).

Nûrîya. — Hâ — doctoral school of Nûrî († 907).

— Uâî Sâî — dissenting branch of the Ruknîya (sixth century).

— = heresy.

Pîr-Hâdîy. — Tâî = Afghan order professing to be that of Ânsârî Hasavi († 1088).

Râbîliya. — Order of Moroccan jugglers (seventh century).

Râhmanyâ. — Râî — branch of the Khalwâtiya in Kâbylia. — († 1793).

Râshîdiya. — Râî — small Algerian order formed dissenting from the Vîsufîya (sixth century).

Râshîlîghâshîya. — Mâîî = Hindu order of Gudjarat (sixth century).

Rawâhaniyya. — Branch of the Khalwâtiya, in Turkey and Cairo (Gûsîhani † 1533).

— = Afghan branch of the Suhrawardîya (Bâyazîd Ânsârî, † end of the sixteenth century).

Sâbilîya. — Doctoral school and wandering order of Ibn Sahlîn († 1268).

Sâlîyya. — Oâî Gîî = Syrian branch of the Rîf’îyâ (Sa’d al-Din Dîjubâî † 1335). — Branches: Abd al-Salâmî, Abu I-Wâsîf al-Salâmî. Safawîya. — Tâî — Azéri branch of Suhrawardîya at Ardâbîl. — († 1348). It gave rise to the sect of the Khâlidîyya, to the Persian dynasty of the Safawîs, and to several Turkish orders. Sahlîyya. — Hîî Uâî Sâî = doctoral school (Sahl Tustari † 896); name revived in the sixteenth century for an artificial ißnâd. Sâkâtîya. — Oî = Turkish artificial ißnâd of the sixteenth century. (Sâkâtî † 867).

Sânîmiyya = ‘Arûsîyya.

Sâmîmiyya = Sahlîyya (in the first sense).

Sâmûnîyya. — Egyptian branch of Shâhidîya (sixth century).

Sâsa’nîyya. — Mâîî — minor Tunisian order (sixth century).

Sâshîfîya. — Râî — military order, descended from the Khâdîrîya, at Lâshabûl then Cufra, in the oriental Sâhâraz. — († 1859).

Sâsînîyya. — Artisan brotherhood in Syria and Anatolia (xîlah—xvith century).

Sâyîrîya. — Hîî = doctoral school of the âth century.

Sa‘drînîya. — Gîî = Turkish branch of the Khalwâtiya at Kastamuni. — († 1569).

Shâmnamadîyya = Malang = Mâdhîyya.

Shâkhîyya. — Râî = name given to the Shâhidîyya Ulûd Siîtî Shâikh of Oranîa (xîlah century).

Shamsîyya. — Oî = Turkish branch of Khalwâtiya. — († 1601) = Nûrîyya-Sîwâstîyya.

Shârkawîya. — Moroccan branch of the Djuzîlîyya at Bujad (1599).

Shârkawîyya. — Egyptian order of the Khalwâtiya (xvith century).

Shûshîyya. — Went wandering Spanish order of the xvith century based on the Sâmûnîyya.

Shiddîkîyya. — Uâî Sîî Rîî = artificial ißnâd referring to the second Khalîfa (invented by ‘Alî ‘îlî, xîlah century).

Sîlâm-ûmmîyya. — Oî = Turkish order († 1668).

Suhailîyya. — Rîî = Algerian branch of Shâhidîyya (sixth century).

Suhrawardîyya. — Uâî Sîî Tâî Oâî Gîî Rîî = Baghdâd order founded by ‘Abd al-Kâhir Suhrawardi († 1167) and ‘Umar Suhrawardi († 1234) who were called Sîdîkîyya = descendants of the second Khalîfah; found in Afghanîstân and in India. — Branches: Djuzîlîyya, Djamalîyya, Khalwâtiya, Rawâhaniyya, Sâmûnîyya and Zainîyya.

Sulâmîyya. — Mâîî = order of Turkestân (sixth century).

Sûnûbîyya. — Oîî Gîî = Turkish branch of the Khalwâtiya († 1529).

Tabbîyya. — Mâîî = Tunisian order (xîlah century).

Taibîyya. — Râî = Moroccan branch of the Djuzîlîyya at Ouezzan († 1727).

Ta’îrîyya. — Hîî = doctoral school of Djuzlîyâ and Khurshân (xvith century), descended from Abû Yazîd Ta’îrî Bišâmi († 877).

Ta’îkînîyya. — Rîî = heresy.

Tajjullîyya. — Rîî = Algero-Moroccan order († 1815). From Temâcin and ‘Alîn Mahdî, it has spread through Eastern and Western Sindân.

Tûhâmîyya = Taibîyya.

Uwâtanîyya. — Oî = Turkish artificial ißnâd of the xvith century, referring to a saint of Djozda of the viith century.

Ummit-Sünlüya. — O34— Turkish order— († 1552).
Ubruhiya. — L13 S5— branch of the Kıdîrîya (12th century).
Ushâhiya. — (138 S29— Hindu branch of the Shattârîya (Abû Yazid İshâq) of the 13th century).
Ushâhiyâ. — (1552 G11— Turkish branch of the Shattâriya († 1552).
Uwâliya. — U32 S38 R2— Turkish artificial inéd of the 16th century, referring to a Shâhî.

Wâfiya. — R17— reformed Syro-Egyptian of the Shattâriya († 1358).
Wâfiya. — P3— herey = Wâfiya.
Wârîth al-Mahdîya. — Hindu order (end of the 9th century).
Wâsîliya. — P1— herey.

Yasawîya. — branch of the Kûdîjâjân in Turkestan (Yarawî † 1167).
Yânumiya. — wandering Syrian order (Shaibi † 1222).

Yusufiya. — R12— Maghribi branch of the Shattâliya at Mâlîn (13th century).

Zarâtîya. — U18 S16 R10— branch of the Shattâriya of Fès († 1493).
Zarâtîya. — O11— Turc branch of the Shattâriya at Bursa (Kbî 1435).

Ziyâniya. — R18— Maghribi branch of the Shattâriya (16th century).
Zurnîiya. — P1— herey not identified (name perhaps wrongly transcribed).

Biography: The principal sources are enumerated at the head of the table given above. One may add those given by G. Pfannmüller, in *Handbuch der Islam-Literatur*, 1925, p. 304—315. — Cf. also in the Encyclopaedia the articles BEIÎAH, DEREKWA, DERWISH, DÆKH, FUTUYWA, GULMîAN, HÀLÎDD, KAMWA, KALANDARîYÂ, ... SÀDÎVA, SÀLÎMIYA, SÀNÎYA, SHAÎDA, SHAĎILÎYÂ, SHAṬÎ, SHATTâRÎYÂ. ... (LAM MlSSANCQ).

**TARİKH (A.), t.** history in general, annals, chronicles. It is the title of many historical works, like the *Tabâbîl Tûrîkh al-Tabari*, supplement to the *Annuals of Tabari*; *Tûrîkh Baghîdî, Mekhî*, etc., history of Baghdad, of Mecca etc.; *Tûrîkh al-Andalús*, history of Andalusia. The work has also been applied to works of a very different kind, like that of al-Bûrînî on India, *Tûrîkh al-Hind*, which is rather a study of the state of learning in India, or to special dictionaries like the *Tûrîkh al-Yahmanda* of Ibn al-Kifîn, a biographical and bibliographical dictionary of early scholars and Arab continuers of the Greek tradition.

2. Era, computation, date. Besides their own era of the Hijra (q.v.), the Muslims have had several other eras: that of the Creation or of the world (*tûrîkh al-âlam*), a very uncertain computation which shows great variation among Jews, Christians and Magi. Al-Bûrînî and the Christian historian Abu l-Farajî (Bar-Hebraeus) reproach the Jews with having reduced the number of years since the Creation so that the date of the birth of Jesus is no longer in agreement with the prophecies relative to the Messiah; thus they placed the birth of Seth, son of Adam, 100 years too soon and have done the same with the other patriarchs down to Abraham so that their computation gives 4,210 years from the Creation to the age of the Messiah instead of 5,586 approximately given by the Torah. The Jews, according to al-Bûrînî, expected the Messiah at the end of the year 335 of Alexander, so that Christ was born, in the general opinion, in the year 311 of this era. — The Era of the Deluge, which also shows differences between Jews and Christians; the astronomer al-Ma'âsharî used it in his *Canon*. — The era of Nebuchadnezzar (the first Bûhûtajârî) used by Ptolomy in the *Almagest* concurrently with the Cycles of Callipus. — That of Philip Arrhidæus, father of Alexander, used by Theon of Alexandriâ in his *Canon*. — The era of Alexander, with Greek months, or era of the Seleucids, dates from the entry of Seleucus Nikator into Babylon, twelve years after the death of Alexander, in use among the Syrians and Jews (era of the *Contracts*); the Kûmî also used it with a slight variation. Muhammad was born in the year 142 of the era of Alexander. — An era of Augustus; one of Antonius used by Ptolomy for corrections in the position of the stars. — The era of Dioecletian or era of the martyrs which dates from the first year of the reign of Dioecletian, in 596 of Alexander; it is that which was used by the Copta. — In Persia and among the Zoroastrians, the two eras of Vardenjîr III are dated one from his accession and the other from his death.

Under Muslim rule in Persia an interesting reform of the calendar took place when the Caliph al-Mu'taqîd brought the *Nawwârî* or Persian New Year day, which the abolition of the intercalation had advanced too much, back to a date more in keeping with agricultural work. The Khâsian, the son of the Ilkâhî, was introduced into Persia by Ghiyáth al-Mahmûd on Radjab II, 701 a.d.; it is a solar era. Another reform is that of the Seldûq Sultan Malik Shâh who instituted the *Ilkâhî* era. — On March 1, 1876 (old style) the Khâsîns adopted a solar calendar based on the Julian, and called it "The Ottoman fiscal calendar". The Julian year began about 11 days before the lunar year, the dates of the calendar did not keep in agreement with those of the Hijra. The *Ilkâhî* era was established by Akbar in the 30th year of his reign. It dated from the 5th Rabi' II, 962 (Feb. 19, 1555), the date of his accession; the years are solar. In modern times, Mu'āmr Pasha Ghâzî has prepared another solar calendar of remarkable accuracy, which would only show an error of 0.28 of a day in a 100 centuries. — In 1926 the Kemâllî Turks abandoned the Muhammadan lunar calendar and adopted the European system.

While talking of dates it may be worth mentioning the system of notation called *jumâl* (chronogram) which is sometimes found in texts of a literary character; it consists in dating by forming words, the numeral value of the letters of which gives the date. Thus the sentence *Nâzîm al-khâbîrî al-Mâshîî al-Muhammîd*: "Muhammad saves the world from unbelief" gives, when the total value of its letters is added up, the date 1335 (an example from al-Bûrînî).

TARIM. local (Turkish) pronunciation *Terim*, the principal river of modern Chinese Turkestan (length about 1,200 miles). It is probably the Oikhardas of Ptolemy (vi. 16). In the first (seventh) century the river is mentioned by the Chinese pilgrim Hsuan-Chuang (Houen-Thang, Monographs, transl. Stan. Julien, ii. 220) under the name Si-to (Sanskrit Siita). In the fifth (sixth) century Mahmud Kâshghari (i. 116) mentions the river Usni Tarim "which flows out of the land of Isfâm into the land of the Uighurs and loses itself in the sand there". According to the same source (op. cit., p. 332), Usni-Tarim was a place near Kuča on the frontier of the land of the Uighurs along which the river flowed. The name Tarim then as now was applied to the lower course of the river; in its upper course, often also down to its mouth, it is called after the capital of Chinese Turkestan, Yarkand Darya. The source of the Yarkand-Darya is the Raekem-Darya which lies in the mountains of Karakorum on the frontier of India. In the history of Timur (Zafar-Nâma, Calcutta 1887–1888, ii. 219), a place called Tarim is mentioned not far from Bâi and Kušan (Kuča). Tarim appears also in the Turâxh-i Rúghišt of Muhammad Haidar (transl. E. D. Ross, p. 67) as the name of a district, along with Turfan, Lob and Katak; the name of the river is not mentioned in these sources. According to the Turâxh-i Rúghišt (op. cit., p. 11), the town of Lob-Katak (or the towns of Lob and Katak) was destroyed by a sandstorm in the viith (sixth) century. As Sven Hedîn (Through Asia, London 1898, p. 850) has ascertained, legend has it that the destroyed town of Katak ("Szekre-Ètékkh or else Szeresz-Katakh") have survived to the present day, although now one has made the ruins of this town. An arm of this river, Tarim in its lower course is called Ketek-Tarim (Kornilow, Kaghariya, Taghchent 1903, p. 164). In the time of Mahmud Kâshghari, Isfâm had apparently not yet spread on the lower course of the river. The people of town and desert of Lob on the other hand are described as Muhammadians by Marco Polo (Ch. 57).

The Yarkand-Darya leaves the mountains and enters the plain at the village of Kärêm and receives on the left bank the Kiiff-Su or Kâshghar-Darya, the Aksu or Aqsu-Darya, the Muzart or Shîh-Yâr-Darya and the Koncê-Darya, on the right the Timâb, the Khatam-Darya and the Kery-Darya. The right bank tributaries only reach the Tarim when they are flooded. Below the mouth of the Aksu the river is about 400 yards broad; in this region it is divided into several arms; the principal arm, the Ugen-Darya, is 170 yards wide. The Terek where Sven Hedîn crossed it (Through Asia, p. 847). The separate arms are lost in the basin of the Lob or Lob-nor (Mongol: Lake Lob) in which the Čerên-Darya also flows; the Suliho also flows into it from the east. (Lop or Lob), according to Sven Hedîn (Through Asia, p. 871), is now the name applied to the whole region from the mouth of the Ugen-Darya and the Tarim in the north to the village of Carlhöök (south of Čerên-Darya) in the south; as Pelliot (Journ. As., Ser. xi., vol. vii. 119) suggests, the same word Lop is reproduced at the beginning of our era in Chinese by Loo-lan. As the terms Lob-nor and Tarim-gul (gul, Mongol: river; the latter on the map by J. Klaproth of 1832) show, the earliest accounts of the lake basin and lower course of the Tarim reached European scholars from Mongol (or Kalmuk) sources. Quite recently the geographical conditions and the archaeological remains on the lower course of the Tarim have been investigated by numerous expeditions and many endeavours have been made to connect modern sites with references in the literary, especially Chinese, sources. According to Sir Aurel Stein's most recent explorations (1914; cf. Geogr. Journ., Aug. and Sept. 1916), there has probably been a large delta in the now almost completely dried up bed of the Lob, but never a large lake within historic times.

On account of its continental climate, the Tarim in spite of southern situation is covered with ice about three months of the year. On the lower course of the Tarim the natives (Leplâ) catch fish in special boats. Sven Hedîn explored the region of Lob-nor in one such boat; there has never been any navigation in the proper sense on the Tarim. As in the time of Mahmud Kâshghari, the river was swallowed up by the desert before it reached the bed of the lake; the fishing village of Kâm-chap ghan is described by Hedîn (op. cit., p. 884) as "the entrance to the tomb of the Tarim".

Bibliography: A particularly full account of the most important sources is given in Kornilow, Kaghariya, Taghchent 1903, p. 157 f figs., from his own researches and the narrative of Przewalski, Hedîn, Pertzow, Kozlov etc. (W. Bartold)

TARIM, an old town and still one of the most important in northern Hafragmât, on the left side of the main wâdi which traverses the whole of Hafragmât and is called Wâdi Mâzle east of Shihâm or Wâdi Hafragmât or simply Wâdi; others distinguish Wâdi Mâzle and Wâdi Hafragmât, but are not agreed on the position of the confluence of the two (cf. Sisiler's map 60 in his Handatlas* [Gocha 1905] and the Map of Hafragmât [surveyed by Imam Shaîr Khan Isha'dar] in Th. Bent, Southern Arabia, London 1900, p. 70). The statements of the Arab geographers regarding Hafragmât, especially the interior (already in part utilised by Kitter, Erdhûkk, ssc. Berlin 1846), passim and brought together in a critical survey based on all texts, so far accessible, by M. de Goeje, Nouveau Recueil Coloniale Internationales, ii. 1886, p. 101 f figs.) are exceedingly scanty and do not give the impression of being based on the accounts of eye-witnesses, but contain the same matter as the isolated references in the travellers' before Wrede and his own information about district which he was not able himself to visit. The Arab geographers describe Shihâm and Tarim as two (principal) towns in Hafragmât, without further defining their situation, e.g. Vârû, Mu'âmmam, ii. 248; iii. 247; i. 746; al-IDrisi (see Jaubert, Géographie d'Edith (Paris 1836), p. 149 sq. and 52) and others (see below). Al-lâhâm-sâ', Djiâsîra, p. 87, calls Tarim a large town (as he does the Târs northeast of Shihâm), Shihâm the great capital (p. 86). Of most importance are the mere references, as in al-Hamdânti, p. 177 (along with Taris) etc., or references in poems in al-Hamdânti, p. 182; al-Bakrî, p. 107, 184 etc. K. Niebuhr, as early as 1763 (see his Beschreibung von Arabien [Copenhagen 1775], p. 286 et seq) received in Şan'â and Maskat from Araba stories of the existence of Tarim and Shihâm (on p. 286 the mention of "these two most prominent towns of Hafragmât" is quoted from the Geographia

THE ENCYCLOPAEDIA OF ISLAM, IV.
Nubienais [the Latin synopsis of al-Idrisi, Paris 1619] and Abu 'l-Fadl', Kitter and others have given mistaken accounts of the geographical position of Tarim; according to the best available map of Hadramüt (that of L. Hirsch) it is approximately in 29° 55' E. Long. and 16° 44' N. Lat.

L. W. C. van den Berg, from his official position in Batavia, was able to get very full particulars of their native land from Arabs from Hadramüt, who had migrated to the Dutch East Indies, as their countrymen still do; most of his informants came from the district of the principal Wadi between Shibām and Tarīm. This information he worked up in his Le Haôrâîmât et les Colonies Arabes dans l'Archipel Indien (Batavia 1886) (cf. C. Simon, Hurongrie, Arabes en Outre-Indies (Leyden 1907, p. 19 sqq., French translation in Revue de l'Histoire des Rel., lxxii, 1908, p. 74 sqq.)). Along with much other information we owe to van den Berg the first more accurate details of Tarīm. According to him it was the old capital (Maltzan marks Tarīm on the map in his Kriis as "capitał of Haḍramüt proper"); Sāʿūn (p. 13), he says, is the modern capital. On p. 26 he describes the waddās that come from the north from the al-Wādī mountains. On p. 18 sqq. he gives distances for the various stations on the road from al-Shīr to Tarīm. Tarīm is surrounded by Sāʿūn in all respects in which it once had the supremacy in the land, number of inhabitants, trade, industry and it is more advanced generally. Several houses were already uninhabited, streets deserted, a large number of mosques no longer visited or fall into disrepair. The decline of the town is said to have begun as early as the thirties of last century and to have been brought about by the constant feuds between the tribes of the district. According to a not very probable report in the Arabic newspaper al-Djawālī of 18th Rabī' I 1299 (Feb. 8, 1882, Constantinople), Tarīm had about 25,000 inhabitants (cf. Wrede's statement); according to the results of van den Berg's enquiries (p. 52) it had only 10,000, which coincides with Wellsted's statement. Tarīm was formerly the centre of the textile industry of Hadramüt, which however was only carried out in private houses and in his time (p. 78) was still of importance, although it had begun to decline as a result of European competition. So early a writer as Scotzet (ZAA's M. m. d., Correspondence, 1814, xxviii., p. 249) knew that silk shawls embroidered with gold thread were made in Tarīm. The town was at one time also the centre of higher education in the land (grammar, theology and law): Sāʿūn has now taken its place in this respect also (p. 88).

In the collection of Ḥadramī stories collected by C. Landberg (Études sur les dialectes de l'Arabie méridionale, l., Ḥadramūt, Leyden 1901) from the lips of natives, Tarīm is mentioned (p. 175 [185], 432) (in the last passage there is a reference to the school there, Ḥijj Tarīm; further particulars of it on p. 450 ff.).

The first European to visit Shibām, Sāʿūn and Tarīm, (July 1893) and to be able to report on the town from his own experiences, was Leo Hirsch (Reisen in Südarabien, Malay-Land und Ḥadramüt, Leyden 1897). His description of the journey from Shibām to Tarīm (p. 209 sqq.) and his account of the latter town are full of information. Tarīm, he says, lies on the left bank of the Wādī Mustṭī (going from Shibām) on the side of a hill, according to his map on the southern slopes; v. d. Berg's statement: "Tarīm (es situé sur le versant) de la chaîne des montagnes septentrionales" (p. 22) should therefore be corrected. On p. 227 sqq. Hirsch gives a fuller description of the town and its situation. Here we will only mention that whole quarters of the town, especially the south-western part, present a desert-like appearance and among the houses which are mostly in ruins—as v. d. Berg already mentioned—are there very few distinguished for size or good repair. The number of mosques, the well kept whitewashed minarets of which rise up among the houses, is not very large according to him (p. 239) (according to v. d. Berg over 300). With his statement "The medressa, where theology and law are taught, is joined to the Rukba Mosque" we may compare the reference quoted above from Landberg and v. d. Berg's note (p. 88) that the high school, also a hostel for students, at Sāʿūn, an annex of the great mosque there, is called Rukba (cf. ṭuḥ in the meaning: "hostel for poor Muslim students"). According to Landberg's information, the school at Tarīm was closed and its place taken by that at Sāʿūn (see also v. d. Berg). Hirsch learned from a saiyid of the town, who was lamenting its increasing decline, that it had consisted from early times of five biyād (quarters) and its population was then 3,810. The Sāʿūn of the town had only a nominal authority and was in reality in the hands of the great saiyids (p. 231). Tarīm like Sāʿūn belongs to the Kathīr tribes; it has its own coin of silver and copper (a collection in the Berlin and British Museum; some reproduced at the end of Hirsch's book; see also Sir John A. Buckland, A Note on some coins struck for use in Tarīm, Southern Arabia, in the Journal of the Malay Branch of the Royal Asiatic Society, vol. iii., part i. [April 1925] with a plate). On account of the hostile attitude of the population, Hirsch had to leave Tarīm after a few hours' stay only and return to Shibām next morning; he had no time for a thorough examination.

From a comparison of his statements with the second-hand information of earlier writers, it is evident that, apart from the points of difference already indicated from v. d. Berg, in the latter's map the places from Shibām to Tarīm are put too far to the east and that he has also not given correctly the size and population of the three important towns. Shibām the largest town—as it was even in al-Hamdān's time—which has about 6,000 inhabitants (Hirsch, p. 198 and Bent, op. cit., p. 148); on the other hand v. d. Berg, p. 42 says only 2,000), is considered an important town and far surpasses Sāʿūn (with c. 4,500 inhabitants, according to v. d. Berg on the other hand 2,500) and Tarīm as a centre of life and activity (Hirsch, p. 205), is put by him too far below Sāʿūn, whose Sāʿūn is said to be recognised in Tarīm also, and even below Tarīm in importance. The opinion of D. G. Hogarth, The Penetration of Arabia (London 1905, p. 222), that *the rivalry of these towns is such, and the changes in them are so frequent, that it is not impossible that Van den Berg was right at the moment, in regarding Sāʿūn as the capital of Hadramāw, with Tarīm for its only peer", is hardly plausible in view of the shortness of the interval. We may note here the reference to the "journey of Musulam Abūūd from Gishin to Tarīm" in W. Hein (Südarabische Itinerarien, M.G.G.W.,
TARIM — TÄROM

form Tiryam (on the authority of al-Djawhari; the K‘amān, n. v. knows only this form) and then, after others, Taryam (cf. al-Bakri, p. 195 sq. i. and the records the statement that it is a wādī near al-
Najīf — which is disputed by many on the ground that al-Najīf is a wādī near Madina — according to the contrary view, a wādī near Yanbu‘ in the Hijāz (cf. al-Hamdānī, p. 181 and Yāghī, l. 346; cf. thereon al-Bakri, p. 195 and 548). In any case it is different from the Tiryam mentioned by Yāghī (sp. c. i. i.) which is in the north near Madyan (the Turanian of the Admiralty Chart; or it cf. Ritter, xiii. 252; Spranger, sp. c., p. 23) according to the Tā‘ī, Tiryam is also a wādī in the desert of Baya‘. He then goes further than the Lī‘ān and after mentioning the Tarīm in Hijārmort, says, that there is a Tarīm in Syria and then goes on to deal with the *Yemen town* — Wūṣenfeld, Yemen im XI. Jahrhundert (Abhandl. der Kén. Ges. d. Wissenschaft, xxii), Göttingen 1885, p. 39, only mentions, in connection with the history of Ḥasan Fāgha (from al-Mubābīhī that Tarīm should be read for Tarım in the list of fortresses taken by the Emīr Sinān in 1006 (1597—1598) This is correct, but the reason given that "Tarım is in Hijārmort" is not. There is certainly a Yemen Tarım also, but the geographical situation of these fortresses, which are in the Ṣan‘a region, shows that it is not the one in question. Sieler's Hanbalat, pp. ed. Gotha 1905, Karav von Arabien (ed. by Habensch), marks Tarım west of Ṣalā in approx. 43° 20‘ East Long. and 16° 37‘ N. Lat. which agrees with the statement of the Lī‘ān-namā; the English General Staff map of the coast (Sheet 3, Su‘ma, 1916) does not mark it.

**Bibliography:** given in the text.

(T. J. KRATZER)

**TARIK BAND** is a poem composed of stanzas of from five to eleven couples. Each stanza, like a ra‘ay, has its own rhyme, the first two hemi-tichs and the second hemistich of each succeeding couplet rhyming with one another, but the rhyme of each stanza varies from that of the others, though the metre must be the same throughout the poem. After each stanza occurs a couplet in the same metre as the last couplet of the poem, but with its own rhyme, the two hemistichs rhyming with one another. When the same couplet is repeated after each stanza, as a refrain, the poem is called Tarīk Band, but the older writers on prosody applied this name to all poems in this form, whether the couplet was repeated or varied.

**TAROM** (TARIM), 1st district on the Kilij-Usūn (cf. SAF., xiv. 985).

**The name.** The Arabs call it Tarım, Tarım (Munawabih), Tarım (B.G.A., vi. 404, 405). Yāghī mentions it on two occasions, under Tarım and Tarım: Mustawfı‘ uses the Arabic dual form Tarım, the "two Tarım". The modern Persia pronunciation is Tarım. Although Taröm is now the name of the district, there is also a little town

J. v. (1014), p. 37 sq. published by his widow from his literary remains), according to which al-Salih is larger than Tarım, and Shibām smaller than these two towns and larger than the others (p. 43), which would rather agree with v. d. Berg’s estimate. Against this view however are the statements according to which Shibām is 7 to 8 days’ journey from Tarım (p. 42). Here again Hirsch’s testimony seems to be preferable.

In January of the year after Hirsch (1894) Bent and his wife succeeded in reaching Shibām; they did not get to Tarım. Bent also says (l. c., p. 119), in contrast to v. d. Berg and others, that the Salāhān of al-Salih and Tarım have no authority outside their towns (on the southern Arabian Salāhān, cf. C. Smouck Hārgotge, L’interdiction .. en Hadramaut, Revue Africaine, 1905, p. 92).

**TARIM, 2. According to Ḥadjīlī Khalīfah, Lī‘ān-namā, p. 490 (cf. Hammer-Purgstall, Über die Geographie Arabiens, Jahrbücher der Literatur, Vienna 1841, xxiv., p. 93 and following him Ritter, xii. 727), a fortress on the road which runs from the coast-town of Djąūn on the Red Sea eastwards via *Nawidieh* and the castle of Felekī (according to v. H. Hammars’s transcription, which seems not quite certain) to Ṣa‘da; that is in the Upper Yemen. From the mention in the verse of Kuthayiyir referred to by al-Hamdānī, Sīfi‘, p. 182 and quoted by al-Bakrī, p. 184 (cf. 107) and 196, the situation of the place cannot be more accurately deduced. Al-Hamdānī, immediately after mentioning Ḥunais lying between Mecca and Ḥa‘a‘r, mentions Bāsā laid and Tarım only on the authority of Kuthayiyir without saying anything about its position. Al-Bakrī mentions (p. 195) Tiryam, for which he gives references from poets, and (p. 196) the Tarım occurring in al-‘Alîh and Kuthayiyir, which either has this vocalisation on account of the metre or is another place, and only then proceeds to deal with the town of the same name in Ḥadramūt (cf. NP. 1) under Tarım. Tarım is certainly to be distinguished from Tiryam. The verse refers, in a purely poetical simile, to a "desert of Tarım" without any geographical precision, a reference which like so many topographical references in the poets seem to be quite a conventional one, for the poet was not at all concerned with its geographical position. As regards Kuthayiyir it is certain that he is not thinking of either of the two places in Ḥadramūt of this name (NP. 1 and 2). Al-Shābīnī, mentioned by him in the same verse immediately after Tarım, is said by al-Bakrī, p. 184, to be a coast-town on the Yemen road, which is in keeping with the order in al-Hamdānī. The verse of al-‘Alîh which also mentions Tarım without further precision, is quoted by Yāghī, Ma‘ṣūm, i. 346, as referring to the town in Ḥadramūt, while al-Bakrī quotes it along with Kuthayiyir’s verse without however giving his opinion of the localisation of the Tarım mentioned by the two poets, p. 196, n. v. Tiryamu, and not when discussing the Tarım in Ḥadramūt. — The Tā‘ī, Jī‘ār (viii. 211) which gives further places named Tarım, gives as the first of them in almost the same words as the Lī‘ān al-‘Arab (xiv. 332) the
named Târom on the right bank of the Kišl-Uzan (between Wenisara and Kallad); another village of Ţârn (Târom) lies to the right of the direct road from Ardabil to Miyâna outside of the district of Târom.

Târom, like Khalkhâl, which adjoins it, is not yet sufficiently explored.

Below Miyâna (q.v.), the Kišl-Uzan reaches its most northerly point near the Pardâli bridge. From there to its junction with the great Shâh-rûd (q.v.), the Kišl-Uzan — for a distance of about 100 miles — follows the general direction of N.W. to S.E. Târom roughly speaking lies on the middle section of the river.

To the south the mountains of Cilâs-Khânâ etc. separate Târom from Zandjan (q.v.). To the east the boundary of Târom is the junction of the great Shâh-Rûd with the Kišl-Uzan above the Mandjîl bridge. To the N.E. the mountains of Gilân separate the basin of the Kišl-Uzan from Masûlla (Gilân). To the north and north-west Târom is contiguous with Khalkhal. To the southwest it is bordered by the districts dependent on Zandjan (notably the old canton of Kâghâd-Khunân).

In its northern bend, the Kišl-Uzan cuts itself a passage through an impassable defile the depth of which is 2,000—2,700 feet. The villages and arable lands of Khalkhal are on the high plateau (5,200 — 6,000 feet high) above the sides of the defile. The ravine runs for a distance of 60 miles to Miyâna, where on the left bank the Kišl-Uzan receives the waters of the little Shâh-Rûd (to be distinguished from the great Shâh-Rûd, which comes from Tâlaqân and flows into the Kišl-Uzan on the right bank to the west of Mandjîl). Below the ravine the valley of the Kišl-Uzan widens for a distance of 60 miles and there are quite a number of villages on both banks. Near Darband the cliffs contract the water-course but afterwards the valley broadens again till just before Mandjîl (12—13 miles).

Târom properly so-called begins where the Kišl-Uzan leaves its gorge and the gorge at Darband divides it into two parts, an upper and a lower. Details of districts of Târom are given in the Nasihat al-Kulûb (1740) but the names of the villages are corrupted in the manuscripts.

a. The upper district includes the following cantons: 1. Dîzâhâbâ-i Sulûf with 25 villages; its position on either side of the Kišl-Uzan at the mouth of the defile is indicated by the villages Nimahil, Gûl-čin and Kaflas (Khârâh). We may further note that the upper part of the same canton (Dîzâhâbâ-i Ulyâ, Nasihat, p. 66) used to belong to the town of Kâghâd-Khunân (the old Khâlân), the exact site of which has not been identified.

2. The canton of Târom-i Ulyâ in the strict sense (with 100 villages) lies on both banks of the Kišl-Uzan. Its position is indicated by the villages (still in existence) of Kałât (cf. Yâh Kol), on the right bank of the Kišl-Uzan and to the right of the road from Zandjan via Akh-ğaduk, and Dârûn on the left bank. The position of the canton of 3. Nîmbar (?) Britûn (?) is not clear, unless the first name corresponds to Pashar (?) which the Russian map puts on the left bank near the Obar mentioned by Rawlinson. According to the latter, Upper Târom (which should be called Târôm-i Khalkhal) consists of the narrow strip on the right bank while the left bank bears the name of the Pashût-i Khî ("the back mountain"); with reference to Gûlûn (cf. Gûlûn), the existence of the Nasihat al-Kulûb, as well as that of Fortescue, however suggests that Târom includes some villages on both banks of the Kišl-Uzan. On the other hand, the strip on the right bank is not very narrow; many torrents descend from the mountains which separate Târom from Zandjan and before reaching the Kišl-Uzan disappear in the irrigation canals.

b. The cantons of the lower district are 4. that which is commanded by the fortress of Shamirân (50 villages) and which is situated on both banks (on the right bank there is still the village of Karlât) mentioned in the Nasihat; "Absen" must be Alûm-Kûsh on a little tributary on the right; cf. the Mirât al-âlîdân and the Russian map; 5. the canton of the fortress of Firdawsi (20 villages), the situation of which is indicated by the village of Safidán (on a right bank tributary above Alûm-Kûsh). Another passage in the Nasihat al-Kulûb, p. 217, adds that the canton of 6. Bara, where the great Shâh-Rûd rejoins the Kišl-Uzan also belongs to Târom. The town of Safidán, p. 335, shows that in the Safidâw period, even Mandjîl and Khârâh, to the east of the Shâh-Rûd went with Târom. At the present day the important town of Mandjîl which may correspond to the old Harkâm (Yâhût, iv. 963) and which commands the entrance to Gilân by the valley of the Safid-Rûd, belongs to Gilân (Rashîd, F. M. M., xxiii. 239). Lastly, according to the Nasihat al-Kulûb, p. 67, the revenues of the cantons of 7. Tîrâq (cf. Yâhut, iv. 963) and Andjân (cf. Yâhût: Andjân) were divided between Târom and Kâghâd-Khunân. These cantons must be at the source of the Yûz-Bashî-Cal (the gorge of Moûlê-Alli) the waters of which flow from the left bank into the Shâh-Rûd on the Russian map we find here the villages of Mârân and Anda marked.

Khâlkhâl. The frontiers of Târom are little known on the Khalkhal side. Târom is generally included in the dependencies of "Irâk-e Adîm" (cf. Schwart, p. 736 and Nasihat, p. 65 sq.). As to Khalkhal, it formed part of the Astarabad (or more exactly of its zomar Arabdal, Nasihat, p. 81). The name Khalkhal is not found before Yâhût, ii. 475.

The name Khalkhal of Adarbadjan must be connected with that of the old town of Khalkhal of the district of Ti in Transcaucasia (cf. Shshk) which Greek and Armenian authors mention between the second and fifth centuries as the winter-residence of the kings of Armenia and later of those of Albania (Arzan); cf. Marquart, Erânât, p. 116. It is possible that in the early centuries of Islam, the whole country between Ardabil and the Kišl-Uzan was known as al-Bahr (he reading is not quite certain; Nöldeke, Geschicht, p. 481). This old term is frequently used alongside of Talâs = Tah; cf. Balâdshâh, p. 318, 322, 327; Ibn Khurdâbîbîh, p. 37, 119; Kûšâna, p. 245, 26; Dinawart, p. 197; Masûd, Mawûli, i. 287. The Kišl-Uzan forms a serious barrier to communication and thus forms a convenient administrative boundary between Adarbadjan and Irâk-e Adîm. The name Khalkhal comes from the town of this name which became the capital after the disappearance of the ancient centre Firdawš (now Kabâkh). Khalkhal practically coincides with the valley of the left bank tributary of the Kišl-Uzan. One of
the arms of this river comes from the north (from
the pass of Khñl-Yokğal, on the Ardabil-Pardal
road) and runs past the village of Sandjawa
(Yâkût, iii, p. 160: Sîndjâlûh or Sîndjâbûl; Sîndjâbûl,
ed. Le Strange, p. 180, 223: Sandjâlis
e.; Olearius (1663), p. 472: Sengox). The sources
of the other arm is the northeast on the western
slopes of the mountains of Tâlesh (near the pre-
current capital of Khalkhâl; Herow < Hîrîhâd). This
arm has joined the village of Kû (Nushat,
ed. Le Strange, p. 223: Gazid, Kadpû, but p. 84:
Kû); the two river arms join near the village of
Kalanâh; finally the river receives its left bank
the stream from the old town of Khalkhâl (there
are now several villages of this name in the valley)
and flows into the Kîlî-Usân a little below the
bridge of Pardals (cf. Nushtat al-Kûlûh, p. 81:
Bardallas, p. 180: Bardâlû). The river Kû describes
a wide curve from east to west. To the south
of the town of Herow is the high massif of Akh-
daghd, the ramifications of which separate the valley
of the Kû from that of Târom. From the mouth
of the Madjarâ (or Barnâbât) pass exactly
south of Herow comes the little Shâh-Rud (Nâr-
hut, p. 223: Shâh-Rud, from the name of the village
of Shâh which still exist) which enters near the
Kîlî-lûân from the left side near the Mîyân-Sara
(where the Kîlî-Usân leaves the gorge). Among
the dependencies of Aradâl, the Nushtat, p. 82,
mentions the valley of the little Shâh-Rud (30
villages) as well as a considerable district of Dâr-
marzin (100 villages) which has not been identified.
In any case Khalkhâl, Dârmarzin and Shâh-Rud
leave little room for dependencies of Târom on
the left bank of the Kîlîl-Usân.

Communications Products. The
principal route between Ardabil and Zandjân (by the
old bridge of Pardals in the middle of the gorge
of the Kîlî-Usân) passes via Khalkhâl to the
west of Târom. The caravans which take a short-
er route through Târom (Ardabil-herow-Barandak-
-Kalût-Akhñlakûh-Zandjân) have to cross the
Kîlî-lûân in boats (hulôt). The traffic between
Ardabil and Zandjân is not important under
the Fâhâwi regime the question has been raised of
joining Fûmen (in Gilân) to Zandjân by a road
through Târom.

According to Yâkût, Târom is very mountainous
and in spite of that fertile (nuâs shâhshûn mîshshâ-
thamûn *rich in herbs*?). The cotton of good quality,
the name of which, according to Yâkût, was
associated with Târom must have come from the
canton of Diabûh for the factories of Kâkhâla-
kanûn (literally *place where paper is made*)
could not have existed without cotton. The high
plateaus of Khalkhâl were still at the beginning of
the sixteenth century regarded as the granary from
which âbbâs Mîrzhâm drew his supplies of wheat.
Rawlinson saw in Târom many orchards but in
1921 the district made a very poor impression
on Fortescue. According to the Mirzât al-Ruddân,
Târom has lead, copper and vitriol (sûlû) mines.

Tow7ns and Villages. According to the
Nushtat, p. 65, the capital of Târom was at
first Fûrûzhâm (in the lower district) took its
place. According to Rawlinson, Venissent (the
Russian map: Venissent) on the right bank was
the centre of Târom; according to Fortescue, this
is Banari (left bank). The new centres seem to
be gravitating towards the Ardabil-Herow-Zandjân
road.

The fortress of Sâmîtrân (Shâmîtrân) was of much
more importance; it was visited by Mîsrâr b. Mub-
hâlî, Nâşîr-i Khusrâw and Yâkût. The site of
Sâmîtrân has not been discovered but the itinerary
of Nâşîr-i Khusrâw enable it to be fixed with
sufficient accuracy. The traveller coming from
Kazvûn arrived at Khârziwul (below Mandjil); from
there after a descent of 3 farsâks, he arrived at
Bazalikhet (fâh), a dependency of Târom. He then
came to a village of Khandân on the Shah-Rud near
its mouth. At Khandân a toll for crossing
(hâshâk) was levied by the Atmar (or Târom). From
here to Shâmîtrân, Nâşîr-i Khusrâw reckons it
3 farsâks in reality the distance from Khârziwul
to the Shah-Rud in a direct line is not over 5
miles. In the more open country to the south
of the Shah-Rud, 3 farsâks would be equivalent
to a longer distance in mountains. According
to Yâkût, Shâmîtrân was "on a large river"; all these
details enable us to locate Shâmîtrân near Darband.

Melded Rawlinson mentions the ruins there of a
"large and very strong fort" (3 miles below Gilî-
ân) and the Russian map shows the "ruins of a
fortress" on the cliff on the left bank (c. 7 miles
above the mouth of the Shah-Rûd). The strategic
importance of Shâmîtrân was that it guarded at
its narrowest point the entrance to Târom by the
valley of the Kîlî-Usân while the fort of Khâlût
commanded the entrance from the Zandjân side.

History. We do not know who were the
early inhabitants of the district of Târom. Raw-
linson located in this part of the Kîlî-Usân, the
ancient people of the Caduasi and relied for this
on the authority of Diabûhî (âbbâs-tâshâh) who still
(19th century) can call this district Kûlûh (fâh). The wild and remote country of
Târom-Khalkhâl only played a part in history in the
period of the Musâfîrî dynasty (q.v.) which,
with Shâmîtrân as its capital, ruled Ashlarbâdân,
Arun, Gilân and the country as far as Kâlû. As
early as 316 (928) we find Sallâr b. Aswâr lord of
Shâmîtrân; cf. Iba al-Athîr, viii. 142, Mîsrâr b.
Mubhâlî (c. 330) quoted by Yâkût speaks of
2,350 large and small buildings in Sâmîtrân. From
the interesting letter of the Bûyid vizier Shâhû b.
âbbâs Tâlaâkânî, quoted by Yâkût (xv. Samîtrân)
it seems that Târom was at first under Kazvûn,
from which it was detached by Mîrzhâm b.
Musâfîrî, who coveted the district for its fortress.
Shâhû pays a high tribute to the importance of
Shâmîtrân by calling it "sister of the fortress of
Alemit" (Mûzâdâlî, p. 360) and mentions the
ornamentation of the fortress of Sâmîtrân (sic!) in
the form of lions in gold, the sun and the moon.
In 379 the Bûyids acquired Shâmîtrân by a matri-
culture alliance, but after the death of Fâhîr al-
Dawla, the Musâfîrî Ibrâhîm seized Zandjân,
Abhar, Sâmîtrân (a district to the north of Abhar
near Saînî-kalûn = the old Khûdûh) and "Shâhiniyât"
(readin uncertain, but the place must be identified
with "Shâhiniyâr, Shâhiniyâr") which the Nushtat
al-Kûlûh, p. 85 mentions among the dependencies
of Lower Târom). Shâmîtrân is not explicitly
mentioned among these domains but in 438 (1046)
Nâşîr-i Khusrâw found at Shâmîtrân (Samîtrân)
a Musâfîrî prince and a garrison of 1,000
men on a cliff commanded the town (fâh); it was surrounded by
a triple wall; a subterranean passage (hârûn) going
TAROM — TARRAGONA
down to the river enabled water to be procured. According to Yâkı, the fortress was destroyed by the Isâmillâ in circumstances which are still unknown. Khâlid in the time of Yâkı was occupied by the lord of Alâmist.

Under the Mongols, especially when the capital was transferred to Sultâniya (q.v.), Tarom gained in importance, and the Nasab al-Kulî (740 = 1340) gives evidence of the exact knowledge then possessed of this district. Under Udhjâr, Tarom was ruled by a certain Shâhânu Girî (I) who is mentioned as sending the expedition into Gilân in 700 (1307) (Darn., Avestb., p. 139). Under the Timurids, the Khân of Khâlkhî (cf. Tarâk and the year 787 (1385)) and of Tarom (Shâhîk Zânid Târoul; Darn., Avestb., p. 237, 234, 385) played a role of some importance. Shâmilãn also must have been re-ruled for the historians of the Gilân tell how after the death of Yâkı, the Aq-Koyunlu (956), the Aq-Koyunlu Mirzâ Ali seized the fortress by a stratagem. Later a certain Mir Zain al-Âbîdîn Târoul rebelled against Mirzâ Ali but without success. In the reign of Kustam-beg, the Aq-Koyunlu (997–902), his general Kustam-beg with 10,000 men recaptured the *fortress of Tarom* but later during the struggle between the Aq-Koyunlu Aband and Muhammad (905–906), the general of Aq-Koyunlu Mirzâ Ali “feared Tarom from Turkish rule” (cf. Mirzâ al-Bulbân, p. 235).

Under Isâmîl I, Tarom was on the most convenient route between the lands of the Kar-Khis Ralph, where the young monarch was in hiding and Ardashir, the ancestral home of his family. The route followed in 905 by Isâmîl in his famous march was by Tarom—Barandâk—Naâsin—Kîlî-Hîf-Abâdî-Khân-Abâd—Abarâdî; cf. E. D. Ross, *The Early Years of Shah Isâmîl* (J. R. A. S., 1894, p. 332). Tarom is several times mentioned in the Turkish “Alamârâ as the place where the Khâlid spent the winter of 921 and hunted (1003, 1003) and from where they sent expeditions against Gilân.

The Turkish elements gradually absorbed the Iranian (Dailamî and Gilânî) elements. Under Naîdir, the Aamarî Khurs were settled in Mandjîl and in the Paghî Tâkh of Tarom. According to Rawlinson, they were of the Lûlî tribe (Lûlî), traces of which are still found in Upper Syrî (Le Conq.), near Tâhârân (Brugsh) etc.; but in his time they had already become turkized. Kâbilân however (K. M. M., xxxii, p. 261) distinguishes between the Rîhâwâr Khurs of (Sułamâniya) settled near Mandjîl by ‘Abdâ I and the Aamarî Turks (I) who came in the time of Naîdir. In any case Tarom has now a Turkish population; according to Fortescue after Gilân the peasants do not understand Persian. In the toponymy also a Turkish layer gradually obliterates the old Iranian names (cf. Pardis from *prâd*, bridge, Nîmâhî, Nîyâb, Gâlûn etc.). A study of the old Iranian toponymy in Aâbârdâkîšan still has to be made, but it is evident that the local dialects belong to the group called “Northwestern” (cf. Tâlî). According to the Mirzâ al-Bulbân, p. 335, the Khânîs made Tarom a separate domain and gave it as a fîst (îfîst wa-hereyy) to Muhammad Khân Dâwâlî, to his son Allah-yâr Khân Afshâr al-Dawalî etc. After the accession of RIDA’Sâb a punitive expedition was sent to Khâlkhî and several local Khân (Radshîl al-Malâmî etc.) were hanged.

TARRAGONA (Arabic طارقونا), a little town in the northeast of Spain on the Mediterranean and capital of the province of the same name. This town, which now has a population of 23,100, occupies the site of the ancient acropolis of Tarraco, which became one of the centers of Roman domination in Spain and from the time of Augustus, the capital of the province of Hispania Tarraconensis. The Muslims when they occupied Tarragona retained its old name. They sacked it in 724, then occupied it for the whole of the Umayyad Caliphate of Cordova, not without having twice to retake it from the Christians, once from Louis of Aquitaine and the second time from the Catalan prince Ramon Béanger. It was taken from the Muslims definitely by Alfonso el Batelador in 1220.

The Arab geographers sometimes call Tarragona (as they do Granada) "the town of the Jews", which shows they formed a notable part of the population. In the cloisters of the Cathedral of Tarragons is preserved a blind arcade in the form
of a niche of marble with commemorative inscription in the name of 'Abd al-Naṣrān III and the date 349 (960).

**ṬARSÚS, a town on the frontier between Asia Minor and Syria, the birthplace of the apostle Paul. It lies in a very fertile plain through which flows a river (Cydnos, later Nahr Baradīn). Situated at the junction of several important roads and not far from the sea, even in ancient times it played an important part as a trading centre and was distinguished in the Hellenistic period for the activity of its intellectual life. Christianity spread early there, and bishops and metropolitans of Tarsus are mentioned in the *Acts of the Councils*. When the Arabs had conquered these regions, the Umayyads rebuilt the fortifications of Tarsus and the other towns on the Byzantine frontier. These towns which formed a girdle were later called "the protectors" (*al-ʿAwaṣīm, q.v.*). According to the Arab division, they belonged to the most northerly *jund* but were separated from it by Ḫūrūn al-Raḥid. Their situation was very exposed and dangerous and Tarsus especially, being a rich commercial city, suffered a good deal. In the continual fighting between the Muslims and the Byzantines, marauding bodies of troops attacked and plundered it, sometimes from one side and sometimes from the other, and the inhabitants had frequently to save themselves by flight, whereas the victors sometimes brought a population from other districts and settled them there. In 162 (779) the Ṭayyi Ḥasān b. Kahtab brought the caliph a description of the ruined Tarsus, which in his opinion could hold 100,000 inhabitants, and when Ḫūrūn al-Raḥid at a later date learned that the Byzantines intended to rebuild the town, he gave orders to anticipate them and Tarsus was restored in 172 (785), populated by Arabs and given a maritime trade. It must have again been lost by the Muslims soon afterwards, but after a truce between Muslims and Byzantines for a period, the caliph al-Maʿṣūm in 215 (850) undertook a campaign against the ʿAwaṣīm, which brought Tarsus and Mopsuestia east of it into his power. The Caliph himself was buried in Tarsus, where his tomb was to be seen in later days. There is a reference to Muslim judges in Tarsus at this period (Ibn Sa'd, VII, 93). In 269 (882) Ibn Ṭullān conquered the frontier country but Tullān did not last long. In the middle of the 15th century Tarsus passed into the hands of the Hāmāshids, when Saif al-Dawla conquered northern Syria, but shortly afterwards in 354 (965) the Byzantine emperor Nicephorus succeeded in taking Mopsuestia and Tarsus with other towns of the ʿAwaṣīm and Tarsus remained for a considerable period in Christian hands. Nicephorus had the Kutʿāns burned and mosques torn down and gave the Muḥammadan population the choice of adopting Christianity, migrating or remaining on payment of a *qiyaṣ* [q.v.]. The majority preferred to emigrate but not a few went over to Christianity.

In the period which ended in this way, Tarsus was in a flourishing condition as a result of its industries and exploitation of the fertile country round. The population was continually being increased by immigrants from adjoining lands, who wished in their glowing enthusiasm for ʿIlām to take part in the holy war till they met their death. Particulars of the town towards the end of the period are given by several Arab authors. Masʿūlī says that it had originally a garrison of 8,000 men and that one of the gates was called Ḫust al-Liqāh because those who set out to fight the infidels left the city by it. Ḫuskākī in 340 (951) calls Tarsus a large town with a double wall and a garrison of 100,000 men, infantry and cavalry. People came thither from all parts of the country and usually settled there. Ibn Ḥawkal (1067—978) treats this description but with some additions: the well built city had a large population, several of whom were distinguished for their wisdom; pious men came thither from all the lands of western Asia, as every nation had there their ḍār, where they lived on the gifts sent thither from all parts until they fell in battle. As Ibn Ḥawkal wrote after the taking of the town by Niceta, his description is not of the time of his own but is taken from an older source; but on the other hand the well informed Ḥusayn b. Ḥaḍdās says that he will not give a description of Tarsus as the town was in the hands of the Byzantines.

The Crusaders combined the ʿAwaṣīm with the principality of Antioch. According to Idristi's description Tarsus was then a large town with a double wall in a very fertile region. Vākū expressly remarks that in his time it was in the hands of the Byzantines (beginning of the 12th century). He also mentions the double wall, the broad ditch surrounding it and the six city gates. Before the Byzantine conquest the town was very prosperous and a series of highly gifted men came out of it. In 1275 the country of Tarsus and Adzhanīa was plundered by the Mamlík Sulṭān Raḥbars and later it was conquered by Saif al-ʿIn Kalātān. In the middle of the 13th century, Khalil al-Zahirī mentions it as under the jurisdiction of Ḥalāb; the town then had a wall and a fine castle and was surrounded by a number of villages.

At the present day Tarsus is a wretched little ruined town without any remembrance of its great past. The Baradīn now flows at some distance from the town and the overflow has turned the immediate vicinity into a swamp.

**ṬARTUS,** earlier Antarṣa, frequently Antarṣa (by analogy with Antarṣa), a town on the Syrian coast; the ancient Antarados opposite the island of Arados (Arabic Qasarrat Arwād, also written Arwād), now Rawād. Under the Roman empire, Antarados was called Constantia but the old name remained alongside of this and in the end drove the latter out again.

The Muslims took the fortess of Tarsus under
When in 357–358 (968) the Byzantines under Nicephorus conquered Northern Syria, the strong defences of the town protected it from capture by the enemy according to the evidence of the contemporary Ibn Hawkal (B. G. A., ii. 116). On the other hand a generation later, Yahya b. Saj'd of Antakya reports that the Emperor took Tarfus, Marakya and Jzhaba (Yahya, ed. Kedrinski) and Taib and Vasild (Patrol. Orient., xii. 810). In 386 (994–995) the emperor Basil II took the town (Yahya and Qiamal al-Din b. Zafir in Rostem, Zafriri imp. Abad. Nashi, xliv, 32, 33 sqq., 244; Schummerger, L'Empire byzantin, ii. 95 sqq., who wrongly distinguishes Tarfus from Tortosia). At the beginning of the year 999 the Crusaders took Tarfus but soon afterwards lost it. It was not till 495 (1102) that they finally attained possession of it under Raimund of Toulouse (Rohricht, Gesch. d. Kgr. Jerusalem, p. 33; van Berchem, Voyage, p. 322). After Raimund's death Count William of Castiglione was given Tarfus and Jzhaba as a fief (Weil, Gesch. d. Chalifen, iii. 176). By the treaty of Devol (Sept. 1105), Arwad and Tarfus among other places were promised to the Byzantine emperor Alexius Comnenus (Anna Comnena, Alexiad, ed. Bonn, i. 241; Atabidey yerca antevs, the first of which refers to the island of Arwad, inula Antaurhidas in Antouin. Placent., ed. Geyser, p. 152; cf. Dussaud, Topog. hist. la Syrie, p. 124). The town later passed into the possession of the Count of Tripoli (references in van Berchem, Voyage, loc. cit.). From a poem dedicated to Usama b. Munjib by the Egyptian vizier al-Malik al-Salih Abu l-Ghurair Tail' ib. Fuzayr, it is evident that the town must have already been in the hands of the Templars before 1158 (Derenbourg, Osmuna, p. 293). In July 1158 Saladin advanced on the town, and found it deserted by its defenders, as they had retired into two strong towers on the city walls. Saladin occupied the town in less than an hour; one of the towers was stormed by his vassal, the lord of Irill, and Saladin had destroyed it and the rains thrown into the sea. The other which was built of large hewn stones and surrounded by a well-watered garden was so bravely defended by the commander of the Templars that Saladin raised the siege and contented himself with destroying the walls and famous Church of the Virgin (van Berchem, J. A., 1902, p. 424 sqq.; Voyage en Syrie, l. 322 sqq.). The earthquake in May 1202, which devastated the whole Syrian coast, is said also to have affected Tarfus but to have spared the Church of the Virgin, which had been rebuilt in 1158 (van Berchem, Voyage, l. 323, 324). This edifice, celebrated for the miracles and cures wrought in it, which contained a valuable image of the Virgin, was considered her oldest sanctuary in Syria (Ummayya, ed. Mehran, p. 208); Idrisi apparently already knew it (he wrote in 1154 or later, cf. Paris, Recl. geogr. ital., xxiv, 1917, p. 308 sqq.) although he seems wrongly to transfer it to the island of Arwad (Dussaud, Rev. Arch, 1896, l. 317, note 5; van Berchem, p. 331). In 1215 the year 611 (1214–1215) Count Rainioud of Tripoli, son of Bohemund IV of Antioch, was murdered by Ismailis; in revenge, the prince led an expedition against the fortress of Khawabi (Kamal al-Din, transl. Blochet, R. O. L., v. 48; Ibn Farat in Rohricht, Gesch. d. Kgr. Jerus., p. 271, note 1; 715, note 4) The Church of the Virgin lay within the area of the sanctuary of the apostle Andrew, as appears from a letter from Pope Clement IV to Bishop William of Tortosa of April 22, 1265 (Sharaglia, Bullar. Francisci, iii., Rome 1759, p. 4, note 6).

In the treaty of 1229 between the Emperor Frederick and the Sultan, Tarfus was promised to the Sultan, Marak, Tarfus and Antakya were not included; the emperor had to pledge himself to maintain neutral in case of a war between these lands and the Muslims (Rohricht, Beltrage d. Gesch. d. Kreuzzugs, l. 41, 77 sqq., 210; Gesch. d. Kgr. Jerusalem, p. 785).

When Bailturs in 669 (1267/8) was advancing on Antioch via Tarfus, envoy from the Templars of Safirah and Antarquz appeared before him with presents and 300 Muslims, lately prisoners, and thus succeeded in having their territory spared (al-Makrizi in Quatremerue, Hist. des Sultans Mamelouks, i, 11ii. 34; Rohricht, Gesch. d. Kgr. Jerus., p. 953). An attack by the Sultan on Tarfus and other towns in 669 (1267/8) met with no success (note; Makrizi, op. cit., ii. 84; Mufaddal b. Ahi 'l-Tarqih ii, Histoire des sultans mamelouks, ed. Blochet in Patrol. Orient., xii. 528). Later however the Templars found themselves forced to conclude a treaty with him by which their territory and that of Marak and Baniyus was divided between them and the Sultan (Makrizi, op. cit., i, 15ii; Mufaddal, op. cit., xii. 536; xiv. 445; Rohricht, p. 953). The Master of the Templars, William of Bennieu (De Bellacoco), in 681 concluded a truce with al-Malik al-Mansur for the Tarfus and the district around for ten years and ten months (from April 15, 1282) and the possessions of the two parties were accurately delimited. To Tarfus belonged 37 districts of the region round 'Arramah (now 'Ata' al-'Arabie) and Mafar (now Busrij Minar) (Makrizi, ii. 177 sqq., 221–223; Rohricht, Regesta regum Hierosolym., p. 377, No. 1447; do., Gesch, d. Kgr. Jerus., p. 984). After the conquest of 'Alej, Tarfus was taken from the Franks by Sultan Khaal, being one of the last towns to fall, on 5th Shawal 690 (Aug. 3, 1291) (Makrizi, Salt. Mamluk, ii. 126; Abu l-Fidai, Annals Mamelouk, ed. Reiske, v. 88; Recueil des hist. ar. d. Crois., i. 164; Weil, Gesch. d. Chalifen, iv. 181, note 1; Rohricht, Gesch, d. Kgr. Jerus., p. 1026 sqq.; van Berchem, Voyage, p. 234).

The Templars temporarily succeeded in establishing themselves again in Tarfus in 1300–1302 from the island of Arwad (A. Trudon des Ormes, Maisons du Temple en Orient., R. O. L., v. 1897, p. 426–428; van Berchem, a. a. O.). The island was not taken till 102 (1302/3) in the reign of al-Malik al-Nasir, the Christians there put to
death or carried into captivity and the citizens were killed. (Maghríb, Sult. Moth., ii/ii.

Herodoteus Turfûz was a little district under the nāhir of Tarshish (Kalkula, Sīd, al-Thuqla, in Gaudeyrim-Dom-poundies, La Syrie, i, 116; 228; 'Umar, Turfûz, p. 182 in K. Hartmann, Z. D. M. G., lxx, 1916, p. 36; n 7). The town declined more and more, and the castle of the Crusading period serves the few inhabitants of the present Turfûz (Trotta) as a dwelling place. The Church of the Virgin still survives in its later form (for further particulars see van Berchem, Voyage, i. 329–334; cf. also Enlari, in Syria, ii, 1921, p. 333 and M. Pillet, in Syria, vi, 1926, p. 420; also the fortifications (Syria, iii, 1922, p. 268 sq., for Jesseren's defences).

(T. E. HONIGMANN)

TARUDANT, the principal town in the district of Sûs, to the south of Morocco on the right bank of the Wâdi Sûs, about 100 miles S. W. of Marrakesh and 45 E. of Agadir on the Atlantic. These two towns may be reached from Tarudant by tracks passable by vehicles. It is a little town with about 7,000 inhabitants. For further details and the history of the town see the article AL-ADÂS AL- ASQâ, especially p. 566 sqq.

(É. LEVY-PROVENCAL)

TARWIYA is the name for the 8th Dhu 'l-Hijjah (yuwm al-tarwiya). The Muslim Hodjji began on this day; on it the pilgrims go from Mecca to Minâ and as a rule after a short stay there go on again to be able to pass the night in 'Arafa. In Muhammadan works the term yuwm al-tarwiya is usually explained from the fact that the pilgrims on this day give their animals a plentiful supply of water in preparation for the ride through the waterless area or from their taking a supply of water with them themselves. But as tarwiya properly means rather "pouring" than "watering" animals or "taking water with one" it has been suggested that the expression goes back to some kind of sympathetic rain-charm with which the rite of the pilgrimage was introduced in the oldest period. With this one might compare the pouring and sprinkling with the sacred water of Zamâm as observed by Ibn Dujjair in Sha'bân 579 (1183) among the Meccans and by al-Batanînî among the B Duals during the pilgrimage in 1909. See also HAJJ}

TAŞAWWUF. I. Etymology — madâr of form vi, formed from the root râfâ, meaning "wool" to denote the practice of wearing the woolen robe (labaq al-râfî) — hence the act of devoting oneself to the mystic life on becoming what is called in Islam a râfî.

The other etymologies, ancient and modern, proposed for this name of râfî may be rejected: such are abî al-lâfî (devotees seated on the "bench" of the mosque at Madina in the time of the Prophet), râfî awalî (first row of the faithful at prayer), bâni Râfî (a Beduin tribe), râfa'â (a kind of vegetable), râfâ'at al-lâfî (a lock of hair on the nape of the neck), râfî (passive form of root III, of the root râfî, to be purified; at a very early date — the eighth century A.D. — this passive is found in puns on the word râfî "mystic clothed in wool") and the Greek σκέφτε (the attempt has even been made to derive tašawwuf from theoskefaia); Nöldke (Z. D. M. G., xxvii., p. 45) refused this last etymology by showing that the Greek σκέφτε regularly became sin (and not pâd) in Arabic and that there is no Aramaic intermediation between σκέφτε and râfî.

The individual surname al-râfî first appeared in history in the second half of the eighth century with Djiâbîr Ibn Hajîyan, a Shî'ite alchemist of Kûfa, who professed an ascetic doctrine of his own (cf. Khashlî, ibid. 253 [867], Istâfâm, v. 7, and Abu 'l-Hajîyan of Kûfa, a celebrated mystic, As to the plural râfîya which appears in 199 (814) in connection with a man or rising in Alexandria (al-Kindi, 'Odâs Miyr, ed. Guest, p. 460, 440), it means about the same date, according to Muhabât (Mâhîb, Pers. MS., p. 87) and Djiâbîr (Hijârûn, i. 194), a semi-Shî'ite school of Muslim mysticism which originated in Kûfa, the last head of which, 'Abdâ al-Shî'î, a vegetarian legislator, died in Baghdad about 210 (825). The name râfî is then at first clearly confined to Kûfa.

It was destined to have a remarkable future. Within fifty years it denoted all the mystics of the 'Irâ (in contrast to the Mal'mîyya mystics of Khorasan) and two centuries later, râfîya was applied to the whole body of Muslim mystics as
our terms Şûfî and "Sûfism" still are to-day. In the interval the wearing of the şâfî or "cloak of white wool", considered in 100 (719) as a foreign and reprehensible fashion of Christian origin (with which Fârîd Shâhî, a disciple of Ḥasan Baṣrî, is reproached), had become what it henceforth remained, an eminently orthodox Muslim fashion; numerous hadîths (handed down and probably invented by Dâshbâniyâr) even make it Muhammad's favourite dress for a religious man.

2. Origins. The mysticactic and the mystical hadîth of the inner life of Muḥammad, about which we know so very little, are comparatively late and therefore suspect. But the tendencies to mystical life, which are of all countries and of all nations, were not lacking in the Islâm of Arabia of the first two centuries A.H. and when once the later legends are eliminated, Dâshbâniyâr and Ibn al-Ḍlawt (ṣûfîyâ) have preserved for us the names of over forty authentic ascetics of this period, among whom the "interiorisation" of the rites of worship show distinct features of the mystical life. It cannot, however, be any longer asserted that Muḥammad a priori excluded mystics from his Muslim community, for it is now known that the famous hadîth: "La rakbîn yata fi'l-Islâm: *no monasticism in Islâm*" to which Sprenger had given this meaning, is apocryphal, and that it must have been invented at latest in the third century A.H. to encourage and strengthen a new, deprecatory and interdictive interpretation of a famous verse of the Kur'ân (Ivii. 27) where rakbîn yata (monastic life, vows of chastity and seclusion) is mentioned: a verse unanimously interpreted in a permissive and laudatory sense by the exegists of the first three centuries, like Muğîhîd and Abû Imâmâ Bâhîlî (cf. my Essai, p. 123-131) and by the more cautionary of the old mystics (cf. Djanâd, Dâshâni before the opposite interpretation became disseminated and Zâmakhsârî made it predominant.

Muslim mysticism may claim among the Ṣâbîhî two real precursors in Abû Ḍairr and Muḥdish (the cases of Uwâlî and Ṣuhâb are not conclusively proved). After them came ascetics (maṣâkîh, maṣkîh), penitents or "weepers" (bakhrûâ) and popular preachers (ṣûfîyâ). At first isolated, they gradually tend to fall into two individual schools, like the adepts in other branches of Muslim thought, schools which had their headquarters on the Mesopotamian frontier of the Arabian desert, one at Baṣra and the other at Kûfâ.

The Arab colony at Baṣra, of Tamîm origin, realist and critical by nature, enamoured of logic in grammar, realism in poetry, criticism in hadîth, the sunna with Mu'tazîl origin and Kadari tendencies in dogmatics, had as teachers of mysticism: Ḥasan Baṣrî (d. 110 = 725), Mâlik b. Dînâr, Fâṣîl Râkîshâr, Râlîb. b. 'Amr Kâisî, Šâhî Mûrri and Abî al-Ṭâhîsh b. Zâîd (d. 177 = 793), founder of the famous caenobiotic group of Aḥdâhânî.

The Arab colony of Kûfâ, of Yemeni origin, idealist and traditionalist by temperament, enamoured of hadîth in grammar, Platonic in poetry, Zâhirî in hadîth, the Şî'î with Murdîl tendencies in dogmatics, had as teachers of mysticism: Râhî b. Khâshîhâm (d. 67 = 656), Abî Ismâ'îl Mâlî (d. 140 = 757), Dâshbâniyâr, Hâjîyân, Kûshî b. Sâdâwî, Mâshîrî b. 'Ammar, Abû l-Athâibîyâ and 'Abdâb. The three last-named spent the latter part of their lives in the capital of the empire, Baghdâd, which became the centre of the Muslim mystic movement after 250 (864): the date when the first meeting-places for religious discussions and sacred concerts (ṣâfîyâ) were opened, with the first public lectures on mysticism in the mosques.

This was also the period in which the mystics had their first open encounter with the theologians, the trial of Dâshâniyâr (240 = 854), Nûrî and Abû Ḥâmmâ (between 262 = 875 and 269 = 882, according to Ibn al-Ḍlawt, Tâhî, p. 183) and Hâllîsh before the šâfîyâ of Baghdâd.

3. The part played by Ṣûfism in the Muslim community. The early Muslim mystics had not foreseen that they would come into conflict with the administrative authorities of the Muslim community. If they lived rather retired lives in voluntary poverty (ṣâfî) it was in order to be the better able to meditate on the Kur'ân (tâhîr'în) the old synonym of ṣâfîwâsâ) by seeking to draw near to God in prayer. The mystic calif is as a rule the result of an inner rebellion of the conscience against social injustices, not only of others but primarily and particularly against one's own faults; with a desire intensified by inner purification to find God at any price; this which is already clearly seen in the life, examples and sermons of Ḥasan Baṣrî (cf. Schaefer, I., xiv. 1-72, and Massignou, Essai, p. 173-179), is magnificently expounded in the moving autobiographies of the two great mystics, Muḥsihîn in his Wašqâ (transl. in Massignou, p. 216-218) and Ghâzîlî in his Mânâmîdî (transl. by Barbière de Meynard), but this does not yet threaten the established order, however unrighteous it may be of the conduct of the ruler. But it was the canonists and professional theologians, jâhâbî and muhlabîsî, who, very disapproved at seeing people speak of searching their consciences and judging one another by this inner tribunal — since the Kur'ânic law had only legislated for an external tribunal and punished public sins and had no weapon against religious hypocrisy (ṣâfî) — tried to show that the ultimate results of the life led by the mystics were heterodox, since they held that the intention is more important than the act, that practical example (inwâh) is better than strict letter of the law (fârûf) and that obedience is better than observance.

Among the Muslim schools, the Khârîjîs were the first to display their hostility to Ṣûfîm, in the case of Ḥasan Baṣrî; then the Imâms (Zâdî, Twelvers and Ṣâfîyâ) in the third century A.D. condemned all calls to the mystical life as introducing among believers a kind of unusual life (râfî, hâshâbî) finding expression in the search for a state of grace (râfî) dispensing with devotion to the twelve Imams and an apostolate, contrary to their custom of ṣâfîyâ.

The Sunnis were slower in declaring their attitude and there was never unanimity among them in condemning mysticism. The attacks on mysticism came from two sections among them: on the one hand from conservative circles (ṣâfîyâ); Ibn Ḥanbal accuses mysticism of developing meditation at the expense of open prayer and of seeking for the soul a state of personal friendship with God (khâlîq), henceforth freeing it from the observances prescribed by law (iḥâf); his immediate disciples, Khâshîhî and Abû Zu'a, put it in a special subsection (râfîyâ) of the heresy of the sanâdîq.
On the other hand, the Muʿtazilites and Zāhiris denounce as absurd the idea of a common life (rādk) uniting the Creator to his creatures, for it implies in theory anthropomorphism (rādk) and in practice, contact and incarnation (mulāmata wa jawāli).

As a matter of fact, however, moderate Sufis has never been excommunicated by Sunni in writing, which has always provided the professional morality and its life of prayer, from the popular little books of Ibn al-Farābī (d. 484) to masterpieces like the Kitab al-Khulāṣah of Aḥmad Makdisi (d. 496) and especially the Ḥaṣāl of Ghazālī; learned Sufis, who were hostile to mysticism, like Ibn al-Djwārī, Ibn Taimiyya and Ibn al-Kaṣīm, respected the great moral authority of Ghazālī and it was only against the monism of the disciples of Ibn al-ʿArabī that the fulminations of the late Sufi canonists were thundered, without much success however. The founder of the Wāhhabīs, prejudiced against mysticism as he was, himself wrote a commentary on the Ḥaṣāl by the ʿAbī Ṣaḥīḥ to Ḥātim al-ʿArūsī.

4. The history of the evolution of the conception of mystic union. Primitive Sufism was based on the following postulates:
   a. the fervent practice of worship engenders in the soul graces (frāh) and realities (a postulate rejected by Ḥaṣālī ever)
   b. the science of hearts (al-ḥaṣālī) will procure the soul an experimental wisdom (marāja), which implies the ascension of the will to the graces received (a postulate rejected by the Muʿtazilites, who are content with a theological psychology).

The Sufis assert that there is a dynamic characteristic in the science of hearts; its traces its itinerary (ṣafar) to God, marks it by a dozen stages (ṣafarān) and steps (ṣafara), some virtues acquired, others graces received, as in the Sāfa Sātāsa of St. John Climacus; their double list varies with different authors (e.g. Ṣarrāj, Kūshairī, Ghazālī) but contains almost always well-known terms like ṣafar, ṣafara, ṣafaran, ṣafarul, ṣafarul. Without laying stress on the individual modalities of this mystical itinerary the Sufis aimed especially at defining the ultimate goal when, triumphing over its attachment to the flesh, the soul finds the true God to whom it aspires, the Real (al-ʿAbābī), a word used as early as the third century A. H. and perhaps borrowed from the pseudo-theology of Aristotle). But how are we to define in orthodox terms this supreme state in which the soul enters with God into this ecstatic dialogue of which the first revelations are made by Rūqān, Mūhāshāb and Yahyā Rāzī, a state which raises the difficult question of theophatic conversation (ṭuṣq) (q. v.)? The mystics are obliged henceforth to have recourse to the theological vocabulary of their time: they borrow from it here and there technical terms of which they twist the sense a little, without giving a fixed meaning to them. Thus Ṣaḥīḥ introduces ʿalāʾ, Miṣr and Ibn Karrām murīja, Miṣr and Ḫaṭāni fami (opp. ʿaṣāf = cf. ʿAṣām in lv. 26-27), Ḫaṭāni ʿaṣām al-gām, Tirmidhī wāliya, etc. In doing this, primitive Muslim mystics involved itself in the natures of the metaphysics of the first mutakallimīn, atomism, materialism and occasionalism in metaphysics, denying the spirituality and even the immortality of the soul, confounding ontological unity with arithmetic unity, which makes it necessary to classify the attempts at explanation of the first Muslim mystic schools with the heresy of the Ḥaṣālīyya. If we take the Karrāmiyya who desire to emphasize the actual interest which God has in the souls, Ashʿarism accuses them of inserting students into the being of the Eternal; or the Sālīmiyya who wish to assert that ardent souls became capable of adhering to the divine presence, the Ḥanbalīs say that they introduce G-d into the tongue of the reciter; finally when the Ḥaṣālīyya conclude from the ecstatic dialogue, from the intermittent change in subject which is then produced in the depth of the soul, that God has made living testimonies (ḥaṣāalī) out of the saints, this view is accused of becoming blasphemous and impossible, of implying the asportation of the divinity by the humanity of a perishable body, since two substances cannot occupy the same place at one and the same time.

In the fourth century A. H. infiltrations from Greek philosophy, which had been continually increasing since the early Karmatian gnostics [q. v.] and the physician Rāfī ḏiʾ Ṣūrī, brought into existence a more correct metaphysical vocabulary implying the immateriality of the spirit (raf) and of the soul, the consideration of general ideas, the chain of secondary causes. But this vocabulary became amalgamated with the pseudo-theology of Aristotle, with Platonist idealism and the Platonist doctrine of emanation, which influenced profoundly the further development of Sufism. The learned mystics of this period hesitate between three explanations of mystic union: a. the ittiḥādīna, from Ibn Masarra and the Ḫaṭāni ʿaṣām al-Gāmī; this Ḥaṣālīyya from Shurwardi, Ḥaṭāni and ʿAbānī to ʿAṣāmī and Ibn Karrām, teaching the essentialisation (ṭuṣq) of the soul, the divine spark reviving under the illuminations of active intellect (identified with the rūr waḥammad of the Karrāmiyya and the Sālīmiyya) on the passive soul; b. the Ḫaṭāniyya from Ḫaṭāni and ʿAbābī and Ṣadīr al-ʿAbī Ṣaḥīḥ, teaching the essentialisation (ṭuṣq) of the soul, the divine spark reviving under the illuminations of active intellect; c. the Ḫaṭāniyya from Ibn Ṣūrī to Ibn Ṣūrī and Ibn Ṣūrī to Ibn Ṣūrī and Ibn Ṣūrī, arguing himself to the effect that the soul attains agreement with God, then taking on the consciousness of a total differentiated existence, which there is no longer number nor discrimination of any sort. We may note in passing that Ghazālī (Moṭāfiq, p. 74) related the thesis of the ittiḥādīna, a thesis which Ibn Ṣūrī had admitted into his Naṣīrī (Cairo, p. 402, 48) but rejected in his Ḫaṭāni (ch. ix., p. 118; cf. Ibn Ṣūrī, Taqāfīlīya) and that Ibn Ṣūrī, a convinced gnostist, sees in God only the form (ṭura) or principle of individuation (anmiya) of all created beings.

The third and last period in the development of Sufi doctrine begins in the viiith (xiiith) century; its predominant school has been justly given by its adversaries the name of Ṣufis (or Wajfūdīya) as professing the doctrines of essentialist monism (wājfulā al-wajfūdīya) of the Wajfūdīya claims a long descent: it turns to its advantage the Ḫaṭāni verses (ii. 109; xxviii. 88; l. 12), the primitive Aḥṣāʿi kāfūm regarding every spiritual happening as an immediate act of God and extravagances of language of the early mystics like Ḫaṭāni and Ḥaṭāni (in those that ʿAin al-ʿAbī Ṣaḥīḥ Hamadānī collected in his Taḥālīf, the word wajfūd, derived from waqīf, ecstasy, still means the qualification by God of a creature
in opposition to ḍawāra, his extension in space). It is however really derived from the identification, proposed as early as the third century. a. d., of the nūr muḥammadia of Muslim gnosticism with the active intellect of the Hellenistic doctrine of emanation (from which Ibn Rushd himself is not free, since he asserts in the Taḥāṣufī that divine presence is the superior degree of the existence of things and that souls ought to unite in it like a single passive intellect in the active intellect). Ibn 'Arabī (d. 578 = 1240) was the first to formulate the doctrine of existentialist monism; for him at bottom "the existence of created things is nothing but the very essence of the existence of the Creator" (nūr al-maḥdūd 'ain nūr al-khāliq, Ibn Ṭa’limyia justly remarks). He teaches in fact that things necessarily emanate from divine presence in which they pre-existed (ḥubūt) as ideas, by a flux evolving in five periods and that the souls by an inverse involution logically constructed re-integrate the divine essence. Farghānī and Dīlūr only add a few touches of detail to this main theory, which to this day has remained that of all Muslim mystics. It is the one which the Persian poets have sung interminably in the simplified form which Ṣūfī, putting into order the ideas of Ḥaṭṭār expresses thus: "God is existence in as much as it is general and unconditional"; it is that which flows, like the sea under its waves through the fleeting forms of individual beings; and at the end of the xivth century of our era, Kawkānī and Nābuluṣī aroused the indignation of orthodoxy Sunnīs by concluding that this pantheistic monism is the only correct interpretation to give to the monothestic profession of faith of Islam (cf. Massignon, Ḥalāta, p. 784–90); in their eyes, the ḍawāda by which Islam had thought to affirm the pure transcendence of the one God signifies the absolute immanence of God in his creation and that the totality of all beings in all their actions is divinely adorables. This quietism, which established the supremacy of the divine decree over legal precept, led the Suūfīs among other paradoxes to the rehabilitation of Ibīs (supported by Dīlūr) and of the Pharaoh of the Exodus (the celebrated thesis of Ibn 'Arabī).

5. The other characteristic features of Suūfīs and the study of its sources: The other doctrinal peculiarities still to be noted are a. the ḍawāda or spiritual genealogy imagined to link up, as is done in the case of ḍawāda, the chain of teachers of mysticism to the direct teaching of the Prophet. The earliest known ḍawāda (Fihris, p. 183) is that of Kūhūlī (d. 435 = 950) which claims to go back to the Prophet by the following links: Dīnawī (7), Ṣαḥābī (6), Maḥrūf Karkhī (5), Fir_MUTEX, Ḥasan Bāṣrī (3), and Aḥmad b. Mālik (2). Twenty years later Dākākī (d. 405 = 1014; cf. Kūhūlī, p. 158) goes back to the same names except that he only gives the name of Dāwūd Tāʿī (4), before Karkhī. Finally the classic ḍawāda fixed in the xilth century (Ibn Aḥmad, ʿAlī, p. 250) and since adopted by all the great religious orders, gives after Dīnawī (7), Ṣaḥābī (8), Aḥmad b. Mālik b. Zuhḍīlī (9), Maḥrūf (10) and Gurgīst (11) and, going back before Dāwūd Tāʿī (4), Ḥasan Bāṣrī (2), Aḥmad (1). Ibn al-Djewad and Dhāhībī have shown that the four oldest links in this ḍawāda are false, since these men never met one another. Some religious orders utilise an ḍawāda which goes back (before Maḥrūf Karkhī) to the nine first Shīʿī Imāms and is still more apocryphal.

A. The invisible hierarchy of believing souls in the world (riqṣīt al-ghabāb); the world is supposed to endure, thanks to the intercessions of a concerted hierarchy of "averting" saints, fixed in number, the place of one of whom dies being immediately filled. These are the 300 maḥdūdī (the 40 abīdāt, the 7 sanāʿīn, the 4 'amārah and their ḍawāra (pole or mystic axis of the world = ḍawāra).

C. The privileges and dispensations (wujūd) on which is founded the communal life of the Suūfīs (cf. Taṣīrī); privileges frequently of an anarchical and unusual character from the distant days of Bāṣṭānī, Bībī and Abū Saʿīd down to the more or less irresponsible and scandalous Marż insignes of modern times. At their assemblies the Suūfīs recite special poems; this literature, which is very characteristic of Islam, has developed everywhere in extreme profusion and as a rule has not escaped either monotony or dullness; it is intended to provoke among listeners a psychic excitement by aesthetic means so as to release a sort of artificial ecstasy.

This literature extols in mystical language wine (ḥāmon) interdicted by the law in this world and reserved for the Paradise of the elect, the loving-cup (hām al-maḥdūba) which the cup-bearer (ḥabīb = ḍawāda al-dawir = terseddub) sends round and gives them, detailed allegorical descriptions with an enthusiasm of a frequently dangerous kind which the majority of western translators prudently shun ever. Among such poems the following are especially famous in Arabic, those of Ibn Fārūd and of Shūshīrī; in Persian, the quatrains of Abū Saʿīd, the long mukammals of ʿAlī and Rūmī (cf. his monastic apologue: "Who is there? — It is Thou etc."), the ghawāf of Ḥājīb and the various poems of Dīlūr, in Turkish the works of Nešān and Nīṣāṭī. This kind of literature has become naturalised in Urdu and in Malay, where it still survives at the present day although it has now disappeared in the nearer East; the modern Muslim élite are more and more abandoning it.

The critical study of the sources of Suūfīs is far from being completed. Surprised at the profound dogmatic difference which lies between its present monism and strict orthodoxy, the early students of Islam thought Suūfīs could be explained as a doctrine of foreign origin, derived either from Syrian monachism (Mere) or Greek Neo-Platonism or Persian Zoroastrianism, or from the Vedānta of India (Jones). Nicholson has shown that in this simple form the hypothesis of borrowing is untenable; made from the very beginning of Islam, it can be observed that the formation of the theses peculiar to Muslim mystics went on from within in the course of assiduous recitations of and meditations on the Karṣān and Ḥudūlī, under the influence of social and individual crises in the very centre of the Muslim community. But if the initial framework of Suūfīs was specifically Muslim and Arab, it is not exactly useless to identify the foreign decorative elements which came to be added to this framework and flourished there; in this way it has been possible for recent students to discover several devotional elements derived from Christian monachism (Asin Palacios, Wensinck, T. Andrac) and several Greek philosophical terms translated from the Syriac; the Iranian analogies (suggested by Blochet) have hardly been examined;
as to the Indian elements (Horton's theory) few arguments have been added to the old similar conjectures of al-Būrānī and Dārā Shikoh on the parallels between the Upaniṣhads or the Vāgī Śutras and the ideology of primitive Śūfīism. On the other hand, it is probable that the critical student of the material processes producing the ḍīkā of the modern congregations [cf. tākīq] would establish the infiltration of certain methods of Hindu asceticism.

TASHĪH (a.), infinitive II from sd-ḥ, saying Subhan Allāh [q.v.]

TASHĪH, assimilating, comparing (God to man), anthropomorphism, and tājīr, emptying, divesting (God of all attributes), are the names of two opposite views of the doctrine of the nature of God in Islām; both are regarded as heresies and grave sins in dogma. The fierce dispute over these conceptions, by which even the dogma of the Kur'ān is influenced, is explained by the central position of the doctrine of the nature of God in Islām. The formal cause is to be found in the Kur'ān, which strongly emphasizes the absolute uniqueness of God and yet at the same time naïvely describes him in the language of anthropomorphism, giving him a face, eyes and hands and talking of his speaking and sitting. The commentaries, such as, for example, Jāhārī on the Throne-verses ii. 256 (cf. also Goldscheider, Vorlesungen, Heldbergen 1925, p. 102 sqq.), enumerate the most diverse interpretations, most of which can no longer be justified; these vary from crude emphasis of the literal meaning to its explanation as allegorical. Instead of the name sāifūl, which came very early into use and means not merely referring to God in phraseology which is ambiguous because generally used of man, but which had, one might say, the sanction of the Prophet, we find tawbah, also used in connection with Sūra, xiii. 9 where the possibility of anything like God is excluded, while the verb tš-š-b ḰII is found only in Sūra, iv. 156, applied to the docetic description of the death of Jesus. Ta'wil, the rational interpretation of the anthropomorphic literal meaning, is also found, it is true, as a means and introduction to tš-p but not uniformly as the root Ḳ-Ṭ-II in the Kur'ān has not a sensuous sense. Here again the Sūna plays its double part. There are ḥadīths which were devoted to the question, not only partly tendentious sayings, which originated in this dispute and were coined for the purpose, but also such as are quite free from dogmatic prejudice, just as in certain Sūfī circles the longing aroused in the mystic worship of youth may have found expression in the strongly anthropomorphic visions of God in the form of a noble-looking youth (Riṭār in Isl., xvii. [1928], p. 257; cf. also his references in earlier pages to manuscripts). Other ḥadīths again were cited as arguments in the dispute on the strength of a superficial interpretation, e.g. that of the nightly descent of God to earth, in itself really soteriological and edifying, in which the real point actually lies in the hearing of prayer.

It is exceedingly difficult for us to approach the question, since, so far as we can see, none of the Muslim theologians declares frankly for one of the two views of God, but rather every one asserts that he stands for tawbah, keeping (God) pure, against sāifī and tawbah, positive determination in the basis of tawbah, the recognition of the revealed text, against tš-p. All the more eagerly however, do they accuse one another of one or even both transgressions. The use of these terms is quite relative and the grouping of their alleged representatives is equally relative. There are no definite sāifūs and muṣḥabīs sects; on the contrary, the differences in the teaching about God's nature and attributes do not run parallel with any other statements about God and still less do they coincide with other differences in dogma and religio-political theory. Little is known of Dji'd b. Dirham, said to have been the first sāifūl, whom even Ibn Taimiya, in al-Furūq (cf. Muṣafār al-Rasā'īl al-Kabīr, Cairo 1323, l. 137, 11 sqq.), still makes responsible for the fall of the last Omayyad, who is definitely called a Dji'dī and in remarkable contrast also responsible for the Ba'ṭnīya of the Assassins and the Rāṣīlīya of Syria. The exponent of tš-p most frequently mentioned, the somewhat younger Djiham b. Sāfāwān al-Rāṣīb [q.v.], put to death in 128 (745), was described by the Shī'ī Ibn al-Ruwallānī as a Mu'tasili Unitarian (muṣ̄abbīl) and was re-
ected from the Mu‘azzila (as "the ‘ismâs of the muqaddâshâ") by the Mu‘azzil Abû ‘l-Hasan al-
Khayyat in: the Kitâb al-Istinâf (Le Livre du triomphe, ed.: Nyberg, Cairo 1925, p. 133 ult.,
134 a) on the authority of a poem cursing him by Biyûr b. Mu‘ammâr and, on account of
the one principle in common,—that God’s knowledge of things only comes into existence at
their creation — classed with the ultra Shi‘î Ibn al-
Hakam (see below) (p. 126 b, the ‘Shi‘î of anthropomorphism”; al-Khâyûtî, as a rule attributes
anthropomorphic views particularly to the Nâbiti, i.e. the ‘Uqâmânic–Qumaytî party (p. 457, v.): Ibn
Hâzim (Fîfûl, Cairo 1320, iv. 205, 10): classs Lâhirian
among the Mu‘azzilis are Abû ‘l-Ashârî, Sharâ–
štâînî (ed. Cureton, p. 41) and the Hâfiz Abû Sâ‘îm
Muhammad al-‘Ushâî (on the margin of Qanîkhâwî,
Kitâb al-Wadjî), Cairo 1355, p. 70) put him with
the Dâshâs who believe in predestination. Al-
though the description of Djahân as a mu‘azzîl
seems to be the general, the writers on heroes can
only be used as authorities with the greatest
cautions. While Kâshâsh al-Nisâ‘î (d. 845 = 857; see
Masson, La passion d’al-Hâfiz, Paris 1922, p. 635 and note 2) calls the dogmatists of Djahân
tashkî (purifying from any attributes of a created
being), and Ashârî, Mâshâîl al-Islâmîyin (ed. Ritter,
p. 267, 10, 27) and similarly Baghdâdî in Farâb
al-Farîsî (Cairo 1328, p. 199, 11) only point out
that Djahân from fear of tashkî did not teach
“God is a something”); Ibn Hâzim also quotes the
negative denial: but also “not a not-an-anything”;
which reveals the same anxiety about tâfîf or its
intenser form tâfîf, destruction, annihilation, ni-
hilism. Of the numerous pamphlets against Djahân
that of Ibn Hânbal is accessible in al-Râfîd al-
l-‘Azâ‘îqâsî wa l-Qâhidâtîya (see ‘Ukhtîr Fikrî, Fikrî,
Mâshâîl al, 1917, p. 313—327). Ibn Hânbal allows
his opponent to say very little and the latter’s
arguments must not be taken as authentic without
further evidence; the subject of the dispute and
arguments from ‘Alî and Sunna are however
clear. Djahân is said to have denied that God can
be seen by the blessed in Paradise, that he talked with
Moses and that he sits on a throne. Here
however Ibn Hânbal interprets Djahân’s fear of
fixing God to a definite place in such a literal and
anthropomorphic manner that he says the
logical consequence for the Djahânists is to believe
that God is in their bodies, in the bellies of swine
and latrines. He himself has however to explain
God’s being among men in ‘Sura iii., 8, 33 48;
ix. 40 etc. as metaphorical tawwîl, which shows how
little it is possible to draw a dividing line: on the
one side Sunna with verbal exegesis and on the
other Mu‘azzilas with tawwîl! At the same time
Ibn Hânbal earns from Djahân the grave reproach of
hypostasizing after the fashion of the Christian
Trinity for his dogma that God is eternal with all
his eternal attributes, for which he unhesitatingly
uses the metaphor of the palm-tree consisting of
root, trunk, branch, twigs, leaves, and sap.
Ahmad b. Hânbal has become the great orthodox
authority against tashkî and tawwîl. Al-Ashârî
(q. v.) relies on him for his confession of faith in
Mûkâtîb, p. 277 b. He gave his views on the
subject in many special treatises especially on the
possibility of seeing God. The happy manner
which he struck by simply recognising the hands,
the face and the sitting down of God “without a how”
(bâd-là, Kâfî) is continually developed by his
followers, as every Muslim of himself states the
problem. It has however been brought against
him as “the entrance to the doctrine of the
anthropomorphists” by Ibn Hâzim, who at the same
time regards Ibn Hânbal as an authority (ii. 166,
92–93); Ibn Hâzim for his part attacks the Mu‘azzilas
turning down of the conception with equally colour-
less tawwîl (cf. ii. 166, 91 sq. to 167, 4 sqq.). That
the Ashârî doctrine of the nature of God was
always considered tashkî by the Shi‘îs is shown
quite recently by al-Kâshî n. Sa‘îd al-Shamâshî
in al-Râfîd al-‘Azâ‘îqâsî wa l-Qâhidâtîya (Cairo
1924, cf. esp. p. 67 sqq.). His verdict is no more lenient than that of the Almohad Ibn
Tûnî in (Le Livre de Muhammad Ibn Tûnî, i., ed. Goldziher, Alger 1903, p. 261, no. 234 b)
on the tawwîl of the Almoravids.
In the effort to keep as near to Ibn Hânbal as
possible while averting the suspicion of tashkî the
Mâshâîrs rather emphasised the negative: God
is not bounded, not numbered, not divided, not
composed; e. g. Abû Hâfîṣ al-Nasirî (cf. D. B.
Macdonald, Development of Muslim Theology, Juris-
prudence and Constitutional Theory, New
York 1903, p. 309). This brought upon them, as it had
on their forerunner, Biyûr b. ‘Ukhtîr as-Dâ'imî, and on ‘Ukhtîr as-Dâ'imî from strict
Hanbalis like Ibn Tîmîyâ (esp. cit., i. 425, b)
the reproach of the “diverging” tawwîl. But the
Hanbalî school of theologians did not remain at
one. In Dar al-Tâfîf b. ‘Ukhtîr as-Dâ'imî wa l-
Râfîd al-‘Azâ‘îqâsî (ed. Husâm al-Dîn al-Kadîb, Damascus,
esp. p. 5 sqq.) Ibn al-Daiwî attacks three
fellow Hanbalis for lack of purity of conception.
On the other hand it is Ibn al-Daiwî’s celebrated
pupil Ibn Tîmîyâ who is regarded, along with
men like Abû ‘l-Ammîr M. b. Sa‘îd al-Kazâhî, as
a bad anthropomorphist since the too much quoted
note of Ibn Ba’ttûta that he said that “God comes
down just as I am now coming down (from the
pulpit)”. More serious than the striking note on
48, note) may be the attack in his own works
on the idea “Look like my look, hand like my
hand!” (Farâb., i. 119, v.); also his explanation of
God’s being among men, which may with equal
justice be called rationalistic tawwîl (i. 456 sqq.);
then the constant endeavour to transfer anthropo-
morphic expressions applied to God in a sphere
sui generis, but particularly his opinion on all grossly
material Shâhîh of God’s coming down to earth
as delineate forgeries of the zâids, invented to
make the Sunnis appear ludicrous (l. 286 a), and
in general his continual attacks on tashkî and
tawwîl (i. 270 a, 1 sqq.; 395 b, sqq., etc.) which
at least reveal his aim and his personal conviction.
The case is worse with Abû Muhammad Hâfîz
b. al-Hâfîz (d. c. 199 = 814) since we possess
all of his writings. Ashârî however in Mûkâtîb,
p. 299, 3 sqq., reveals the lack of agreement among
the notables of him when collected. Among them
is a definite testimony that this Hâfîz is free from actual tashkî and a complete rejection of
the view held, of an affinity and correspondence
（muqaddâshâ）in: Djurgjads on ‘Idî, Maxâsîfî, ed.
Schoenemann, Leipzig 1848, p. 347, 12 sq. and xx: muqaddâshâ), which first of all makes possible the relation
of God to what is created and only makes his
knowledge possible by his emanating penetration,
which is only to be conceived in this way. When
then in spite of this, Ashârî opens his section on
the anthropomorphists with this Hishām “who
compared the object of his adoration to a man”,
we have a glimpse of the origin of this careless
labelling such as became common among the later
historians of heresies. The very full special ex-
positions of the Shi‘is are themselves contradictory.
Among them another Hishām, Ibn Sīlīm al-Dījā-
walīkī, seems to be the cruelest because he talked
of God’s hair and side, citing the hadith “God
created man in his own image” and referring the
“his” to God (Kashsha‘ī, Mu‘taṣīf Hāfiẓ al-Nīfūd,
Bombay 1517, p. 153; Astārahālī, Manāhīj al-
367). Hishām b. al-Hakam on the other hand
with all his care for ibrāhīm and anxiety about
ibrāhīm, which made him choose the term “body”
(qātān) beside the vague expression “a something”
(tashbīh), yet tried much to keep his distance from
anthropomorphism. Generally speaking tashbīh, i.e.
attributing to God a body, should not without ado be ranked with tashbīh a sits cruder form.
Indeed, very much “not like our body” is expressly
added, for example even by Hishām b. al-Hakam.
In spite of the efforts of later Shi‘is to clear their
ancestors from the stain of heresy, Astārahālī still
passes the damning verdict upon him as the pupil
of the even more monstrous “Iraṣīm” Abī Shāhik.
Perhaps the most suggestive remark is that of
Aḥṣārī who says that Hishām b. al-Hakam expressed
different opinions on the nature of God in the space of one year. This is quite possible in
one who, as Shi‘i sources record, was a highly
strung temperament, a member of the circle of
the Imām ʿAlī’s Arabī-Shādik at a time when dogmatics
were still in a very unsettled state, as is shown
by the many polemics of the circle which include
some of the two Hishāms against one other. The
Shi‘is themselves therefore have drifted widely
apart. The Nasairis under Ibn Ḥamdān al-Khaṣṣāt
were classed as Muḥabbakīts. The Bātins who differ
considerably among themselves are usually branded
as symbolising nihilists; one of their leading
expounders, Naṣīr Khusraw, in his Zabīh Muṣālikīn
(Berlin 1929, p. 250 sqq.) champions a doctrine
of the Creator which with its emphasis on the
body rather recalls the principles traditionally
attributed to Hishām b. al-Hakam, although it cannot
be brought into a class of the scheme, with the
causal conditionality of God, its unlimitedness in
space and its divesting Him of an independent will.
The Twoelīs have waged a vigorous war on tashbīh
and tashbīh with due emphasis, it is true, on
ibrāhīm, but with especial Muʿtarrīs suspicion
against degrading tashbīh. Their views will be
found under the rubrics (with reference to God)
“object of a body, of a form, and of tashbīh”
“external of time, space, movement, change of place”
in the encyclopedia of Maḍžīs, Bihār al-Anwār,
book II, Tehran 1306, p. 89–105. It is only
in the later authors such as Kulain, Ibn Bābyya,
and Tafsīr we can verify the statements attributed
to them.
The dangers, which Hishām b. al-Hakam sought
to avoid in such varied ways, show the immanent
dogmatic difficulty felt between “the two limits
(badra)”. The problem is not so simple that it
could be clearly defined in general terms as a
twofold struggle over the recognition of God as
a purely spiritual being on the one hand and over
His in some way personal reality on the other.
For where in that case would be put Aḥṣārī, for
e.g. example. The one thing certain from the history
of Muslim dogma is that every Aḥṣārī would
object to the classification of his master in one
of two so distinct classes. Tashbīh is dreaded as
a transition to idolatry and pantheism, tashbīh
as a prelim inism to atheism and pantheism, but both
are felt to be originally related. It was because
Uṣūl imagine God’s speaking only as a stomach,
swallowing from a tongue and two lips, i.e. antith-
omorphically, that, according to Ibn Ḥanbal, he
fell into his “divesting” interpretations of the
passages in question in the Kurʾān; Ibn Tanmīya calls
him “a divester of anthropomorphism” (Mu‘taṣīf
Maḥmūdīhī, i. 127, s.).
Bibliography: The sections mentioned in
the historians of heresies and anecdotes of theo-
logians are, in view of the relativity of the points
of view, not simply to be dismissed as malevolent
inventions; at the same time they can only give
indications of some value as to what views
were considered to be particularly expounded
on one side or the other. The value of the polemics
also as authority for the doctrines of those
people is just as for any one the only
criterion is his own exegesis of the Kurʾān
and dogmatics, e.g., Ghassāl, Ḥayyā ʿUllam al-
Dis, book i. 2: Ka‘bād al-Aḥṣārī and book iv.,
5 and 6: al-Tawḥīd wa-l-Tawhīdūl al-
Maḥābbakīts, cf. H. Bauer, Die Dogmatische G. Gassāl, Halle 1918, 48 sqq.; J. Obermann, Der philo-
osophische und religiöse Subjektivismus Gassālīs,
Vienna 1921, 197–200, 127; Abī Manṣūr ʿAbd al-
Kāhir al-Baghdādī, Uṣūl al-Dis, Stambul 1428,
1: 73–130 (not so much a systematic treatise as an account of ibrāhīm on the lines of his above mentioned Fārīkh bain al-Firākh).
(R. STROTHMANN)
TASHFĪN n. Arî, one of the Almāvīd
[q.v.]. Sovereigns.
TASHKENT, usually written Tāshkend in Arabic
and Persian manuscripts, a large town in Cen-
tral Asia, in the oasis of Cīrīk, watered by
one of the right bank tributaries of the Sr-
Daryā [q.v.].
Nothing is known of the origin of the settle-
ment on the Cīrīk. According to the Greek and
Roman sources there were only nomads on the
other side of the Yaxarties. In the earliest Chinese
sources (from the second century B.C.) mention
of a land of Yu-ni, later identified with the
territory of Tashkent; this land is later called
Cū-čhi or Cū-shī or simply Shi. The corresponding
Chinese character is used with the meaning
of “stone”, and this is connected by A. Chavannes
(Documents sur les Taux-biie occidentaux, St.
Petburg 1905, p. 140) with the later Turkish
name (tash, "stone" and kum, "village" = "stone
village"). The Chinese transcription must certainly
correspond to the native name Cāčī, known in
the Muslim period; the Arabs here as usual
produce the sound ʔ by š. The Arabic form Shāhī
gradually dropped the original name out of use in
the written as well as the spoken language. If
and how the modern Turkish name, first found
in the fifth (fifth) century, is connected with Cāčī
or Shāhī is still doubtful. The etymology (Tas-
kent = town of the Tāshīk i.e. the Arabs) proposed
by E. Polivanov (Ibī q. al-Qāsinān, for W. Barthold,
Tashkent 1927, p. 395 sqq.) will hardly find favour.

Details of the land of Cæs and its capital, the circumference of which was about 10 ½ (less than 3 miles), are first found in Chinese sources of the third century A.D. In the time of Hsüan-Chang (Mémôires sur les cent seize anecdotes, i, 1857, p. 16) there was no ruler in Cæs to whom the whole country was subject, as in other countries.

The separate towns were under the sway of the Turks. In the history of the wars of conquest of the Arabs in the second (eighth) century there is frequent reference to a "king (malik) of Shash"; his capital is given by al-Balúduri (ed. de Goeje, p. 421) and al-Ṭabarānī (i, 1517 and 1521) as the town of Ṭarbānā, not otherwise mentioned in the Arab geographical literature; that is, we have here as the editor (D. H. Müller) assumes a "formula" contracts for Ṭarbānā (B. G. A., iii. 61 infra) is more than doubtful. The ruling family was presumably of Turkish origin. The suzerainty of the Turkš Khāns was at times replaced by that of the Chinese. In 751 the Chinese governor Kan Sièn-Či (Chavannes, Documents etc., p. 207; F. Hirth, Nachweise zur Inschrift des Tunisjukh, 1897, p. 70) executed the prince of Shash and son appealed for assistance to the Arabs. Žiyād b. ʿAlî, sent by Abī Muslim [q. v.], inflicted a severe defeat on the Chinese in Dhu ʿl-Hijjah 133 = July 751 (cf. Ibn al-Athīr, p. 344) on the Talâs [q. v.] and Kan Sièn-Či was killed in the battle. This battle established the political supremacy of Islām in Central Asia. No further attempts were made by the Chinese to dispute it.

Under the Caliph, the territory of Shash was regarded as the frontier of Islām against the Turks; the settled lands were protected from the raids of the nomads by a wall, remains of which still exist (G. M. S., N. S., v, p. 172). Nevertheless the land was conquered by the Turks, probably for a short period only, in 918 (806–807). A "prince (râḥîl) of Shash with his Turks" is mentioned as an ally of the rebel Râfī b. Lâthî (al-Ṭabarānī, iii. 712). Under al-Maʾmūn, Shash again belonged to the Caliph’s empire; when in 204 (819) the Sâmânids became governors of various districts in Mā warā al-Nahr, one of them, ʿAbd as-Samad, was granted Shash [cf. Sâmânids]; in contradiction to what is there stated we know not only the year but also the very day of the death of ʿAbd as-Samad, it was Thursday five days before the end of Rabi' II, 241 (Sept. 12, 855); cf. G. M. S., xx. 286ff. In 325 (900) the eldest of the brothers, Nābū b. ʿAbd as-Samad, the senior governor of the lands entrusted to the Sâmânids, by conquering Isfâbâd (the modern Sârîm) succeeded in advancing the frontier further north. About the same time a canal in Shash was restored, which had become silted up in the early days of Islām. The Caliph al-Muʿtaṣim (833–842) contributed ۲,۰۰۰,۰۰۰ dinars towards the work on these canals (al-Ṭabarānī, iii. 1326).

To the period of the Sâmânids belong almost all the surviving geographical descriptions of Shash (and indeed those of most Muslim lands). Shash appears in these as the name of a country: the capital is called Binkâth; on coins the mint is always given as "Shash", rarely with the addition of "Binkâth". The territory was farsakh (2½ miles) in length and breadth. The modern Tashkent is of much greater extent, but the position of Binkâth or the distance given by the Arabs geographers corresponded roughly to that of Tashkent (W. Bartheol, Turkestan, G. M. S., New Series, v. 711, not to the position of Iš-Šaţkhent as in Le Strange's The Land's of the Eastern Caliphate, Cambridge 1905, p. 480); there is still shown in Tashkent the tomb of the Šaţši scholar Abī Bakr al-Ḳaṭṭal al-Šaţši who died in 365 or 366 (975–977).

Whether the name was in use before the Turkish conquest (before the final collapse of the Sâmânids dynasty, the whole Sâr Darya territory had been ceded to the Turks in 386 [995]) is doubtful. So far as we know the name "Tashkent" is first found in al-Birûnī (Ṭārîkh al-Hind, ed. Schau, p. 149, translation, l. 298); from the etymology of the name al-Birûnī wrongly identifies it with the Atlantis of Polybius [i.e. the ancient Er-Ānâbâr, Berlin 1901, p. 155]. Mahmud Khâqan (i. 369) mentions "Terken" (otherwise unknown) as a "name of Shasha" in addition to Tashkent. The name Tashkent first appears on coins in the Mongol period. In the second half of the 11th (xii.) and in the first half (xii.) century coins were struck in Banâkêt, Fânâkêt or Banâkêt, which lies quite close to it on the right bank of the Sâr Darya; it is possible that this town at this time was of greater importance than Tashkent. In Djumâlî’s account of the Mongol campaign (G. M. S., xvi. 70 sq.), Tashkent is not mentioned; only the taking of Banâkêt is recorded. Under Mongol rule Tashkent, for reasons unknown to us, had a better fate than Banâkêt. Tashkent continued to exist as a town and was occasionally visited by the Khâns [cf. DURâKH ân]; on the other hand Banâkêt, although it had offered no resistance to the Mongols, was in ruins at this date, and it was not till 1392 that Timür rebuilt it under the new name of Shahrâkhâyán. After the decline of the Mongol empire of Chestâvîl [q. v.], Tashkent belonged to the empire of Timûr and the Timurids. In 890 (1485) the town with the lands belonging to it was ceded to the Mongol Khân Yūsûn who died there in 893 (1487) (Ṭârîkh-i-Rashîdî, transl. Ross, p. 142 sq.). His tomb is in the mosque of Shâh Khânâd-i-Tulûr (popularly Shahtutuqan), a local saint; on his period (xivii.–xviii. century) cf. A. Semenov in Protobeli Turk. Kul’t. Ljud. Arkh., xx, 1915, p. 29. Khân Yûsûn was succeeded by his son Mahmûd Khân; after 1503 Tashkent belonged to the kingdom of the Ozbeks who had, however, to give up it only a short time after the death of the founder of this kingdom, Shāhîn Khân [q. v. and cf. Šâhânânâds]. During the centuries following, Tashkent was sometimes under the rule of the Ozbeks, sometimes under the Kazâk [q. v. kirgh.] and in 1723 it was conquered by the Kalmucks, but not at once occupied by them; the town continued to be governed by a prince of Kazâk descent who was now a vassal of the rulers of the Kalmucks. Sometimes its rule passed into the hands of the Khodjas, the descendants of the local saint (e.g. Z. D. M. G., xxxviii. 311).

During these centuries, the possession of Tashkent was frequently the cause of heavy fighting. Some of the accounts of these battles are of importance for the understanding of the topographical conditions of the period. The records of the battles of Tashkent in the time of Abî Allâh Khân b. Iskânî [q. v.] clearly show that the town of Tashkent had not yet assumed its present form. It is not till the sixteenth (xviith) century that the
division of the town into four quarters (Kukka, Shakhkantaur, Siibar and Besh-Aghat) with a common bazaar is mentioned. Occasionally each quarter has a chief (hakiam) of its own; each quarter formed an entity by itself and was very often at war with the others. About 1727, Yūnus Khodja, the chief of the Shakhkastaur quarter, succeeded in combining the whole town under his rule. Yūnus Khodja fought successfully against the Ḳaraḵ ṣ but suffered a severe reverse at the hands of the Šezbegs of Khojkūr under Ālīm-Khān; after his death, in the time of his son and successor Sulṭān-Khodja, shortly before 1810, Taškent had to submit to the rule of the Khāns of Khojkūr. For its history in this period cf. KHOJKŪR.

On June 15/27 1865, Taškent was taken by the Russians under Černyavé. As capital of the Si-Dārāy territory and of the governor-generalship of Turkستان, Taškent attained great prosperity. Alongside of the old “Asiatic” town, a new Russian city arose as the residence of the officials, and the two parts together formed one town from 1877 with joint municipal institutions, but the Russian town, although its population was nothing like the size of that of the “Asiatic” town, enjoyed special privileges; little attention was therefore paid to the old town. The Russian part alone had a civic life in the European sense; in it were the government offices, the schools, the scientific and learned societies and associations. The number of the population (of the old and new Russian town together) amounted to 155,673 according to the census of 1897.

As a result of the revolution Russian Taškent has lost all the privileges it had over the old town. Since the recognition of the principle of nationality in Central Asia and the foundation of national republics, Taškent has lost all political importance. The town belongs to Šezbegistān while its northern suburbs are in Karakstān; the seat of government of Šezbegistān is in Samarqand [q. v.]. As the largest town in Central Asia, Taškent has however retained its importance as a commercial and educational centre. It is the meeting-place of the “Economic Central” (ekonomicheskij sovet) for the whole of Central Asia, has a large ill founded in 1920, a very large “Central Asiatic” library, the “principlal Museum” (glavnye muzei) of Central Asia, the Central Asiatic section of the Russian Geographical Society etc. Commerce is declining, as elsewhere, and the number of inhabitants is smaller than formerly.

TAŠKÇOĞRÖZADE, the name of a family of Turkish scholars, taken from the village of Taškçogrözade near Kastamun (q. v.) in Anatolia (cf. Kapılıtlar, called after the adjacent village of [W]Taškçogrözade).

1. Muṣṭafâ b. Khaliṭ al-Din, born at Taškçogrözade in 857 (1453), studied at the high schools of Brassa and Stamboul, became professor in Brassa, afterwards (901) in Angora, Usküb and Adrianópolis, was for a time tutor to the prince, afterwards Saltān, Salīm I, then again professor in Amsīs and Brassa. He never took up the office of judge in Aleppo, which was given to him. He died in 935 (1528) as professor in Brassa. Muṣṭafâ b. Khaliṭ was the author of a number of commentaries on books on law but, as a result of his busy life, he was never able to put them into final shape.

2. Ahmad b. Muṣṭafâ b. Khaliṭ, son of 1, a distinguished Ottoman encyclopaedist and biographer, born on 14th Rabi‘ I 901 (3rd Dec. 1495) at Brassa, studied under his father at Angora and Brassa and later in Stamboul and Amsīs. At the end of Radjab 931 (May 1525) he became professor in Dimotika, in the beginning of 933 (Oct. 1526) in Adrianópolis, at the beginning of Dhu l-Idhā’ 936 (July 1531) he went to Usküb. Five years later he again became professor. In Stamboul, was transferred on the 4th Dhu l-Ka‘dā 945 (March 25, 1539) to Adrianópolis, but went back to the capital in the same year in the capacity of “guardian”. He again held a teaching post in Adrianópolis, then reluctantly became bābā in Brassa, but soon returned to his chair. On Shawwal 27, 958 (29th Oct. 1551) he became judge of Stamboul. Three years later his eyes became affected and ultimately he went quite blind. He died on the last day of Radjab 968 (April 16, 1561) in Stamboul, and was buried there in the “Aškî” Pasha quarter in the mosque of the “Aškî” Pasha monastery. Ahmad b. Muṣṭafâ had an encyclopaedic mind of astonishing versatility. He compiled an encyclopaedia of arts and sciences in Arabic, which was afterwards translated by his son (see 3) into Turkish and in this form it has been printed under the title Muḥafrat al-‘Ulamā (Stamboul 1313, 344 and 712 pp.). The number of his other works is considerable. The most important is al-Nimāniya written in Arabic in which he gives biographies of 522 “Ulumā” and šaılmaks of orders divided into ten classes (takāfūl) according to the reigns of the ten Ottoman Saltāns, ʿOṯmān to Selimān. At the end he gives his own autobiography. The work, which was finished on Ramadān 30, 965 (July 16, 1568) is our main source for the intellectual history of the period. It was several times translated into Turkish and has been brought down to the present day (cf. F. Babinger, G. O. W., p. 86 under 1. Mejid). While the original work has been printed in the Arabic version, and in the expanded Turkish translation of Mehmed called Mejdīl of Adrianópolis, and also in the first continuation by ʿAṭī, the important continuations to the present day still exist in manuscript only, an almost incredible neglect of the most important sources for the history of Ottoman scholarship. On the printed editions cf. F. Babinger, G. O. W., p. 86 sq.: A German translation of the basic work was published in Constantinople in 1927 by O. Rescher (iv. 601 pp., 4th).

Bibliography: Autobiography at the end of Şaṭār; German translation in F. Wüstenfeld, Die Geschichte der Araber, p. 341 sqq.
Broekelmann, G. A. L., ii. 425 sq. (with Bibliography); further references in F. Babinger, G. O. W., p. 84 sqq.

Kemal al-Din Muhammad b. Ahmad, son of 2. Turkish historian. Kemal al-Din Muhammad was born in Stambul in 950 (1552), became professor and kadi successively in Salonica, Scutari, Aleppo, Damascus, Brussa, Cairo and Galata. Later he was kadi in Stambul and repeatedly held the post of kadi saker of Amoulia or Rumelia. In this capacity he took part in the Wallachian campaign, fell ill and died on his way back to Stambul in Isberi, in Rummania. His body was taken to the capital and burial beside that of his father. As a poet he wrote under the pseudonym of Kemali. He was a translator (see under 2) and also an historian. Under the title Tarikh-i sâf or Twâfet al-Ashâb he composed a history of the Ottoman empire down to Ahmad I (1603/16), to whom he dedicated the book. He is also said to have composed a poetical Şâhâname, but no trace of the work seems to have survived; cf. F. Babinger, G. O. W., p. 143. His Tarikh-i sâf was printed in three fascicles in Stambul in 1287.

Bibliography: "Alt., p. 641 sq.; Riyâq, Tashkirk, Şahâni, 1374, lv. 30; J. v. Hammer, G. O. D., iii. 602, 603 sq.; M. O. G., t. 164 (F. Babinger); Brissal Muhammad Tahir, "Othmanî Murâkhkât, t. 347; F. Babinger, G. O. W., p. 149, where further references are given.

(TANGRAH). General sense: opening, exposition. It has two special meanings: i. exposition of a science, commentary on a book, like sharh (q.v.); 2. the science of anatomy which is the "opening" and exposition of the structure of the body. The two meanings are found in one sentence in Ibn al-Kifî: *Galen was the key of medicine, its štoq and its šarh, that is to say, it was he who expounded it and commented upon it... No one ever surpassed him in the science of šarh and he wrote 17 books upon it." The reference here is to anatomy.

Anatomy was not a very popular science in Islam; the reproduction of the human figure was forbidden on religious and moral grounds dissection objected to. This was not practised among the Muslims any more than among the ancients, except at Alexandria. Galen took advantage of the opportunities he had to study the anatomy of man, but in general he worked on the monkey. Muslim observers also took advantage of any chance opportunities of advancing this science; we have an example of this in the travels of 'Abd al-Latif: the author, with his friends, having learned that there was at Maks in Egypt a hill formed of human remains went to examine the skeletons and made notes.

In spite of the disadvantages under which they laboured, several Arab scholars studied anatomy, in which they followed the Greeks, notably Galen, Oribases and Aetius. A number of works of Galen were known to the Arabs and translated into their language, for example the De Anatomia, the De Venas Sectionem, the De Musculorum Directione, the De Ostiorum, as well as the treatise on the pulse. Books x-xv. of the great work of this scholar, the De Anatomiae Administrationibus, were preserved only in Arabic. A German translation has been published by Max Simon.

P. de Koning has published three long extracts from works on anatomy as known to the Arabs, one from Avicenna, another from 'Ait b. 'Abba', a Zoroastrian physician born in Persia (4. 384), and the last from the famous Razes (Muhammad b. Zakarîa al-Razi, d. 320). The chapters from Razes, which are the least advanced, come from his book al-Manâhîr; those of 'Ait b. Abba', from his *Royal Book* (al-Malîkî) and those of Avicenna from his *Kudüs*. These three works have practically the same arrangement, which is clear and logical and is found already in the classical writers. They begin with: osteology; first generalities about the bones, then a detailed study from head to foot of the human frame: bones of the head, the body, the vertebral column, the thorax, the bones of the upper limbs and of the hands, the lower limbs and of the feet. The subject of dentistry was not then a separate one. — Next came the study of the muscles, myology: they are enumerated and analysed in the same order; — next the nervous system and the arteries: nerves, brain, spinal fluid, arteries and veins; — then the description of the external organs, organs of sight, taste, hearing, the tongue, larynx, lungs, heart, stomach, intestines, liver, spleen, kidneys, bladder and organs of generation.

Opposite the same chapters of Avicenna, de Koning has placed the corresponding passages from Galen and Oribases: they deal among other subjects with the trapezius muscle, the fector muscles of the fingers, the pulmonary artery, the valves of the heart, the iris of the eye and the bone of the heart.

All this anatomy is already quite advanced, and very analytic; it is also quite final; every bone, every organ, every muscle is described from the point of view of its function and object. We may note that Arab anatomy has a vocabulary of its own. Unlike medicine and botany, it does not use Persian and Greek words, and on the other hand, unlike mathematics, astronomy and alchemy, it has not given us any technical terms. We do find a few in the Latin translations of the middle ages, like "meri" which is Arabic māri, oesophagus; "myrnic" which is Arabic marâb, "abdomen"; "sipnic" which is Şûf, peritoneum; but these terms have not come down to our time.

In surgery "Abulcasim" who is Abu l-Kâsim al-Zahra'î, physician to 'Abd al-Rahmân III of Cordova (17th-18th century), and Avenrouq (Ibn Zohr, d. 595) of Seville are the greatest representatives of science and experiment among the Arabs. The former wrote a book entitled al-Tarîfî, the anatomical and surgical part of which is taken mainly from Paul of Argina. The latter is the late Byzantine author, a contemporary of the beginnings of Islam, who travelled in Arab lands and was much admired by the Arabs for his skill as an operator. Abu l-Kâsim deals with operations, describes and gives drawings of instruments. We have a number of his works illustrated in this way. This work was translated into Latin by Gerard of Cremona in the 13th century and published in 1497 at Venice, and at Basle in 1728. Adapted by Guy de Chaulliac (1300-1368) it had a great influence on western science. — As to Avenrouq, a progressive and practical mind of great skill, he cast off to a large extent the authority of Galen and substituted his own experience. He is the main source for Armand de Villeneuve. — We may
conclude with a mention of the earliest western translator, Constantine Africanus (1020–1087) who translated "Alt b. Ablus." The Arabs also knew ophthalmics as a special subject. To them also we owe observations on the anatomy of animals, on hybrids and on monsters.

**B. Carra de Vaux**

**TASHRĪH** is a special name for the last three days of the Muhammadan Ḥaḍḍāj (11th–13th Dhu 'l-Ḥijjāja: Ayyām al-Tashrīh), during which the pilgrims, having finished their regular rites, stay in Mina and have to throw seven stones daily on each of the three piles of stones there. In the early period of Islam the name tashrīh was also given to the solemn ṣalṭān on the morning of the 10th Dhu 'l-Ḥijjāja. The term is probably a survival from the pre-Islamic period and therefore could no longer be explained by the Muslims with certainty. For example the obvious explanation which derives the term from "cutting into strips and drying" the sacrificial meat left over on the Dhu 'l-Hijjāja is insufficient. An isolated tradition derives tashrīh from the recitation of the words *ṭāḥyr taḥbir kāmīn mūghir* (cf. *ṭāḥīr, *talbiya tashār*). One would therefore have to assume that this formula was originally used not only as we, as we are told, on the 10th Dhu 'l-Hijjāja before sunrise but also at the lapidation on the following days and that as an essential element it later became the name for the whole ceremony. In Islam this lapidation is accompanied by tashār (pronouncing "Allāhu akbar") among other exclamations. This is perhaps why Abī Ḥanifa explains tashrīh as tashār (*Tufāl al-Ārūs, vi. 393*). Cf. also the article ḤADĪD.

(R. Paret)

**TASNĪM** is a legendary tribe of the prehistoric period of the Arabs, closely connected by descent, dwelling-place (in al-Yamāmā), conditions of life (agriculturists and cattle-breeder) and history with the Dājīl (q.v.). (with whom they are always numbered) b. Ḥajjār b. Iram b. Sām b. Nūh. The story, frequently mentioned in Arabic literature, of the fall of the two sister-tribes is in its main outlines as follows: They were at one time under the tyranny of a Tāsnīm named Amlīk(*) (or 'Amlīk). Appealed to in a matrimonial dispute of a Dājīl woman named Huzaila he gave an arbitrary verdict. Enraged at the opposition of the woman, he claimed the *jus primae nocei* over all the brides of the Dājīl. After exercising this tyranny for 40(50) years, a highborn Dājīl woman named 'Afnār bint 'Iyār who had fallen a victim to it roamed her tribe to vengeance and open rebellion. Her brother al-Aswān, however, advised cunning and carried his plan through against his proposal. He invited 'Amlīk and his tribe to his sister's wedding. During the feast the Dājīl fell upon and killed the Tāsnīm with weapons which had been hidden in the sand. Only one escaped, Riyyāh b. Mūr, who fled to the Himyarite prince Ḥassān b. Tabūs and persuaded him to undertake a campaign of vengeance against the Dājīl. When the army had come within three days' journey of Dājīl, the settlement of the Dājīl, Riyyāh advised branches to be cut and carried by each rider to conceal him. For in Dājīl there was a wise woman named Yāmāmā (or Zarkūsh) who could see anyone approaching at three days' journey distant. She, however, was able to recognize the enemy force in spite of their covering and advised her fellow tribesmen to get ready to defend themselves. They paid no heed to her and were surprised and the men killed and the women, including Yāmāmā, taken prisoner. Hassan had her eyes torn out and crucified her dead body on the gate of Dājīl, which was henceforth called Yāmāmā. This is the legend. In many of its features it is quite mythical but it may in part relate to a historical event (cf. Dājīl). The fragments preserved in the sources of old couples in the style of a folksong are probably the remains of a ballad form of the legendary material.

**Bibliography:** Tābarī, i. 771 sqq.; Kībāl al-Aqūhān, x. 45 sqq.; commentary of Nashāwīn on the Ḥimyar Kiṣaṣ, extracts from which are given in D. H. Müller's *Südostab. Studien*, p. 67 sqq.; also very fully in the commentary on the 17th verse of the 13th poem of Aḥmād Maimīn, ed. by R. Geiger; ibid. (p. 74, note 12) an exhaustive list of Arabic sources for the Tāsnīm-Dājīl-saga.

(H. H. Brād)

**TASMIYA.** [See *Rasmala*]

**TASNĪM,** 1. name of a fountain in Paradise, occurring in the ʿArāb, *Sūra l-tājāl*, 27, where it is said, that its water will be drunk by the *mubarrābīn*, "those who are admitted to the divine presence," and that it will be mixed with the drink of the mass of the inhabitants of Paradise. The commentaries are uncertain, whether tasmiya is a proper name — which, according to the Lišūm, is inconsistent with its being a diphtote — or a derivative from the root ʿ-m-n, a root conveying the meaning of "being high." In the latter case the meaning of the verse would be: "and it (viz. the drink of the inhabitants of Paradise) will be mixed with water which is conducted to them from a high place."

Al-Tābarī mentions a third explanation, viz. "hidden things gladdening the inhabitants of Paradise."

**Bibliography:** al-Buhārī, *Tafṣīr*, *Ṣūra l-tājāl*, xxx. 59; Fākhr al-Dīn al-Rāzī, *Maṣūṣ al-Qāḥfī*, vi. 502 and the other
2. Infinitive II. of z-aq-m: "raising graves above the level of the earth". It is said that Muhammad's grave was mutananneem (Bukhari, *Lisan* b. 56). On the other hand it is said that Muhammad ordered that graves should be levelled (Mishkat, *Lisan* b. 56; Ahmad b. Hanbal, *Musnad*, vi. 18 bis, 21). Al-Shâfi'i's opinion was that graves should be raised only so much that they could be recognised as such, lest people should sit or walk on them (al-Tirmidhî, *Lisan* b. 56). The Mâlikites, however, preferred tartûf al-Nawawy's Commentary on Muslim's *Sunna*, Cairo, 1285, ii. 344. (A. J. Wensink)

2. A territorial division. Nûlâke, Gesch. der Perser und Araber, p. 16, contrasts the term *taqûd*, *tassûd* ("office") meaning a district in the *Irâq* with that of *râzq* ("parish") a division of a *kûta* (from *kûta*) in Fârs. The province of the *Irâq*, according to Ibn Khûrusadîhî and Kûdâma, was divided into 12 *ašûm* (ašûm) each of which contained a certain number of *tassûdâ*; the total number of the latter was usually put at 60 (Le Strange, *Eastern Celephate*, p. 79). The term *tassûd* however, the phonetical form of which actually belongs to the S. W. dialect, is known throughout Persia. The province of Abârâqûr in the strict sense (Nâšîrî) was divided into 13 *raziq* and 4 *tâbû* (Ibn Rusta, p. 171: arba'at arba') namely Ziwand, Takbâh, Buhtâr Farurîn (f) and Mâsar. Ibn Rusta, p. 155, mentions a *tassûd* of Rubâ at the dependencies of Ifshâhân. There is also a district of *Tassûd* in the province of Fars (Istakhri, p. 102) on the right bank of the Kurr near Lake Bâhgîhân; its capital is Kûhramâ (cf. also Stolzer, *Persien*, p. 1885, preface). The division into *tassûd* must have been based on irrigation. The water of a river in theory forms 6 *dâng*; thus the two watercourses into which the Kûrõmâ divides at Shuq tart (the Shuq tart and Gargar) are called in the *Zafarvûna*, i. 591 and 599, "the river of 4 *dângs" and "the river of two *dângs". A *tassûd* seems to represent the area irrigated by a quarter *dâng*.

3. *Tassûd* is more particularly the name of a small town in A'dharbâjîn, on the north bank of Lake Urmîya to the south of the Mishôgan range. It is the capital of the district of Gîney (in Turkish "exposed to the sun") including the north shore of Lake Urmîya. The old name of the district still used in government documents is Arawâma-Anzâb. Since Arwasâm means particularly the eastern part of the district (Naschot al-Kâtib, p. 79) *Tassûd* seems to be in Anzâb. The town of *Tassûd* (Taswûd) lies about 3 miles from the lake; it is watered by a stream from the Kûrûsh. Near the town which is surrounded by gardens are quarries of rocksalt, gypsum and limestone. The population is not more than 1,000 but the fact that it is divided into 12 quarters and has 50 mosques (i) shows its former importance. The town must date from before Islam. The Armenian historian of the eighth century, Lèvond, p. 134, mentions it among the places in A'dharbâjîn which king Gagik passed through coming from Thornâvar (in Vasparsak): Zarrevar, Zîdûd, Tâbûs, Gâzmak, Oran, Surenajat. The importance of *Tassûd* in the Mongol period is seen from the fact that in the *Nuzhat al-Kâtib* Lake Urmîya is regularly called dâr-yâ-zi *shîb-i Tassûd*. The revenues of the district however were not over 5,000 *dângs*: this sum was earmarked for the maintenance of the pious foundations of the Kâsh Abû Sa'id. Clavijo in 1404 who had to pass through *Tassûd* on his way from Khoi to Tažrûz seems to call it as *Fard* ("a populous fine township which lies in a plain and is surrounded by many orchards that are irrigated by numerous streams"; transl. Le Strange, *London*, 1928, p. 150 and note on the form *Fard*--*Tassûd* on p. 352).

Ewliya Celebi (ii. 242; iv. 319) calls the town *Tâsûd* and its river *Itrâ* (?). According to him, it was a *mawlid* of some importance with about 3,000 soldiers and artillery. The town had 3,000 houses, 7 mosques etc. The people were Shi'ites; Ewliya says it was founded by Yezdîglîr in honour of his wife Tâshûhân (?). It is said to have been destroyed by Timûr (? cf. Clavijo) and rebuilt by Dîhânshâh (of the Kūrâ-Koyunlu). To the east of *Tassûd* is the village of Kûnûla (Kûnûla) known from the fortifications erected there in 1158 by Afzâl Paşa at the time of the conquest of Tabût (q.v.) in the reign of Mûsâ III; cf. Ewliya, *ibid*.

European travellers have rarely visited *Tassûd*; cf. E. G. Browne, *A Year among the Persians*, p. 56. (V. Mixorovský)

**TAŞWîR** (A), fashioning,形成; an image, a picture; for the prohibition of images and pictures of living beings by the Muslim jurists, see *šûra*; here an account will be given of the artistic activity in the Muslim world that has produced sculptures and pictures, despite the condemnation of the theologians. Examples of the former are rare e.g. in Egypt, Khamârâwa (q.v.) had statues of himself, his wives and singing-girls made, and in Spain, *Abd al-Rahmân III* (q.v.) set up a statue of his favourite wife al-Zahrîn in the palace he called after her name, while the marble lions supporting the fountain constructed in the Alhambra for Muhammad V, in the latter part of the sixteenth century, still exist. The Seljûq princes of Asia Minor employed sculptors to decorate their capital, Konya (q.v.), and several stone figures, both human and animal, of this period are preserved in the museum of that city. The first statues of Muhammadan potentates known to have been erected in public places, are those set up in the city of Cairo by Ismā'il Paşa (q.v.). Under the Fatimids in Egypt a large number of bronze ewers and perfume-burners, in the form of birds and animals, were made, and rock crystals of the same period often have animal forms cut upon them. The metal-workers of Mawjîl and their fellow craftsmen who carried the same art to Persia, Syria and Egypt, made lively representations of court life, the monarch drinking among his servants and musicians, hunting, playing polo, or engaged in battle; some of these metal-
workers were certainly Christians, but their patrons were Muslim princes who paid no heed to theological opinion on the matter. A similar disregard of the prescriptions of the Sharī'ah is found on the pottery of Rayy (xiiith and xiiiith centuries), with its brilliantly coloured representations of princes, musicians, singing-girls, dancers and knights, as well as animals of various kinds, both real and imaginary. Figures are also found on the pottery from other towns, but not with the same wealth of imagery. Carvings in wood, particularly under the Fātimids and Mamluks in Egypt, often represent figures, human or animal; figures also form part of the decoration of carpets, ivories and glass. Such objects, of these various classes, as have survived the many catastrophes that have swept over the Muhammadan world, or have escaped destruction at the hands of fanatical iconoclasts, probably form only a small part of the total number that once existed.

More abundant evidence of the existence of representational art and the use of figure-forms, in the Muhammadan world, is found in paintings, especially in Persia, India and Turkey. The existence of fresco-painting as a decoration of the palaces of Muslim princes is testified, for the Umayyad period, by the pictures of royal personages, dancers, musicians, gymnasts etc. in Kusair 'Amra (see 'AMRA, i. 338), and for the early 'Abbāsid period, by the pictures of dancing-girls, animals, birds etc. at Sāmarra (see E. Herzfeld, Die Malereien von Samaarja, Berlin 1927). There is ample literary evidence for the practice in the palaces of later Muslim monarchs, and remains of frescoes executed in the xiiith and early xiiiith centuries for Persian Shāhs still exist. But the majority of Muslim paintings are to be found as illustrations in MSS. and to some extent also on separate sheets of paper. Hardly any examples of paintings on paper have survived, of a date earlier than the xiiiith century. Among the earliest books of Arabic literature so illustrated were the Maqānil of al-Harrātī, Kalila wa-Dimna, works on astronomy, medicine and mechanical science, etc. Persian literature has much more abundantly received the attention of the painter, and writings of many different kinds contain pictures. Poetical works are most commonly illustrated, e.g. the Shāh-nāma of Firdawsi, the Khamās of Naṣīrī, the Kulliyāt of Sa'dī and a large number of other poets. Illustrated MSS. of historical contents are less common, but there are MSS. of the Dalā'il al-Tamārium of Rashīd al-Dīn, the Rawdat al-Šafā of Mirkh-wallī, and the Zafar-nāma of Shāhar al-Dīn 'Ali Yazdī, and various works on Indian history, with pictures. Illustrated MSS. in the language of the Kūfīt al-Anbā'ī by more than one author, and of the Maqānil al-Uṣūshī by Shafān Ḥusain Mīrāt (himself a generous patron of painters) are of special interest as providing Muslim representations of history which included the holy personages of Islamic history. Later, illustrated prose romances became common. Besides Arabic and Persian, MSS. in Caggātāi Turki (especially those produced in Harāt in the latter part of the xvith century), Hindūstāni, Pāshī and Ottoman Turkish have been illustrated by Muslim painters.

In addition to the illustrations in manuscripts prepared for royal personages and men of wealth, mention must be made of instances of popular disregard of the prohibition of representations of living beings; most noticeable among these are the figures used in the shadow-plays, popular in Java, Egypt and Turkey. The houses of the poor are often decorated with crude drawings of animals, especially in Egypt, painted to celebrate the return of a pilgrim from Mecca, and cheap pictures of Burāq [q.v.] are common.

The sources of Muslim pictorial art are obscure, but influences are traceable from Christian (Johannite and Nestorian), Manichean, Sasanian and Chinese paintings. In Persia, the pre-Muslim artistic traditions re-appear in the later art, and in India Hindus and Buddhists contributed elements characteristic of the country. Some attempt has been made to distinguish different schools of Muhammadan painting, but there is little agreement in the suggested divisions. The Primitives of the xiiith century form a group apart; and there are special characteristics that mark the work of the painters in the service of the Mongol rulers of Persia at the beginning of the xixith century, the Timūrid princes of the xvith century, the Saḥāfis of the xxiith and the Mughals in India during the xviith and xviith centuries.

Of the personality of the painters very little is known; the greater part of their work is anonymous, and it often happens that no biographical material is available in cases where paintings bear a signature. Even of the greatest of Persian painters, Bihāzī [q.v.], little is known, except the names of the princely patrons for whom he worked, and critics are not agreed as to which of the pictures that bear his signature, are authentic. Historical material regarding the Persian painters begins to be available in the xviith century, and for Indian and Turkish painters a little later; but the details provided are very meagre and in no instance are they sufficient to render identification of any particular picture possible.

Finally, mention may be made of coins bearing the effigy of a Muslim monarch. The earliest of these are obviously imitations of Byzantine coins, and cease after 'Abd-al-Malik's [q.v.] reform of the coinage about 727 A. H. There are isolated examples of coins bearing the portraits of the 'Abbasid Caliphs Mutawakkil, Muqtadir and Ma'mūr. But coins with human figures become more common under the Seldjūks of Asia Minor, the Urtuks of Dīyarbakr and Zangids of Aleppo; but they are generally imitations of some foreign coinage, and in no instance appear to be portraits of the monarchs whose names and titles they bear. In India, however, Dūjangīr [q.v.] struck coins bearing his own effigy, and even ventured to outrage Muslim sentiment so far as to represent himself as holding a wine-cup in his hand.

AL-TASYIR (in the west: atazir, atazir, altazir, directio, prorogatio, ḥaraq, théorie abépiténique) is a process used in astrology of artificial continuation of a planet or of an astrological house or any other definite part of the heavens to another star or its aspects, or other houses with the object of ascertaining the equalitarian degree situated between these two places, the figure of which is used, by converting it into a definite period of time to prognosticate the date of a future happening, either good or evil.

The astrological magnitude ascertained by this process played a very prominent part among the ancients as well as among the Arabs and in the west, for on the one hand it made possible a judicium speciale (i.e. definitely laid down the time of fulfilment of statements made in the judicium generale of a nativity about future good or ill fortune and in particular enabled the length of life to be calculated or the choice of particularly auspicious days (al-żīyār) for beginning a journey, for holding weddings, for founding a city, for beginning a reign, etc.), and on the other was distinguished by special complexity in the method of its calculation.

The astronomical calculation of the arc of special importance for our task (we call it briefly the tasyir arc) is not particularly difficult if once the limits of the places in the heavens defining the arc, the "advancing" planet or place (al-mutājabandim, al-khalil, significator) and the "successing" or second (al-ḥātīn, promissor) are ascertained. In fig. 1 (and 2) A is the significator, B the promissor, P the visible pole of the celestial sphere, N.B.S. (NAS) the circle of the promissor (significator), C the intersection of the circle parallel to the circle of position drawn through A (B). The circles of declination drawn through A (B) and C cut out the tasyir arc as (bc). The tasyir arc is thus the curve of the equator, which in general does not exceed 90°, which passes over the circle of position during the period in which the significator (promissor) is transferred by the apparent daily revolution of the celestial sphere on its parallel circle to the circle of position of the promissor (significator) assumed to be fixed within this period (for further information on the conceptions that occur, see the article ASTROLOGY).

According to the respective positions of the significator and promissor, two kinds of tasyir are distinguished:

a. Direct tasyir (directio directa) when the significator precedes the promissor in the order of the signs of the zodiac. Here the significator is the place to be "directes", the promissor regarded as fixed (fig. 1).

b. Indirect tasyir (directio conversa) when the significator precedes the promissor in the order of the daily motion of the celestial sphere. In this case the promissor is moved to the circle of position of the significator which is assumed to be fixed.

A special form for application of the calculation of the tasyir (a kind of inversion of the process) was developed in choosing days in this way that the position of only one star was given and also a definite time or what is the same thing on account of the conversion of periods of time into degrees of the equator, a definite number of tasyir degrees. The problem is to find the degree which corresponds to the end point (the "goal") of the
3. Place the movable pointer at the place $A$ on the back, read the degree of the equator $a$.

4. Move the alidade to the front, place it on the degree of the equator $a$ until the alidade on the movable pointer running through the parallel circle from $A$ points to the circle of position of $B$ (in C).

5. Read the degree of the equator $c$ through which the alidade now points: the curve $ae$ is the tasyr curve desired.

Works in Arabic on the tasyr or the plane of the tasyr were composed by Muhammad b. 'Omar b. Farrūkhīn (H. Suter, Die Mathematiker u. Astronomen der Araber etc., Abhdlg. a. Gekt. d. math. Wissensch., XIV, Heft 10, 1900, N° 34); al-Battānī (Suter, N° 89); Abū ʿAbūl-qāsim al-Khuj新城 (Suter, N° 124); al-Bīrūnī (Suter, N° 238); but the complete astronomical works of the former have not survived. The "Book of the Ataqū" in the astronomical works of Alfonso X is by Rabī ʿCag de Toledo (Isaac ibn Sīd), the editor of the Alfonse Tables, but seems to be merely a translation of an Arabic original.

In the "History of Scholars" by Ibn al-Kīfī the following astronomers are honorably mentioned for their particular ability in calculating the tasyr: al-Hāsan b. Mīghāf (p. 163); al-Marrawī (p. 170, Suter, N° 22); al-Khuj新城 (p. 281, Suter, N° 206); Sīnī b. ʿAll (p. 206, Suter, N° 24); al-Bīrūnī (p. 223, Suter, N° 262); al-Bīrūnī b. Saʿīd al-Djāwīsī (p. 213, Suter, N° 21); Ibn Vānasī (p. 205, Suter, N° 178); Ibn al-ʿArīs (S. 235, Suter, N° 137); Muḥ. b. ʿIbrāhim al-Fāṣīrī (p. 270, Suter, N° 1); Muḥ. b. Khaḍlī al-Marrūwī (p. 281, Suter, N° 46); Yahyā b. ʿAbbās al-Mansūrī (p. 337, Suter, N° 14); Yahyā b. ʿAlī al-Saʿīd Abū Bīgīr al-Takritī (p. 365); Abū l-ʿAbī al-Yāmīsī (p. 426).

(T. Schiemer)
(Slove "baldaš") in Dolgocan ve tureckih počihak, Zborna Starina, 1909, fasc. ii—iii, p. 156—164). For the history of the name Tat there may be some importance in the name Tagat, Tagat, Tanit, which the Wogula and the Oulaks give to the river Irtil; cf. Marguari, Stresfuz, p. 409.

According to the Drusen Lughat al-Turk (1486 = 1093) the Persians (alt-šuritam) among all the Turks; more particularly among the Yaghn and Turkic tribes the term refers to the Uigur. In both cases tat has a contemptuous sense as is evident from the proverbs: *grab the thorn by the root and strike the 'Tat in the eye', *but for the Tat there would be no Turk, just as but for the head there would be no hat (to cover it)*.

Later in the language of the conquering Turks the word tat became especially associated with the conquered Persians. Even Djalal al-Din Rumi in his Turkish poems (Glob, A. Hist. of Ottoman Poetry, i. 150 and especially Martinovic, Zat, xxiv. 1917, p. 221) uses the terms par (sic!), pat-qas for the Persian and their language. In a curious passage, already noticed by Khans, Pietro del Vallo, French trans. 1603, ii. 458—459 who uses the current phraseology of the Safranli period contrasts the 'Kizil-bašh (q.v.) a "certain race of men who were introduced ... with the King Ismail Softi" with the Tat "the dregs of the populace but descended in a direct line from the true old stock of the Persians". The Turkish tribe of Kaškaši (in Fars) also uses the word Tat in the sense of "non-Turk"; cf. Komakvli, Pemri khatam, Sorna, manaya Anbrop, pri Akademii nauk, v/ii, p. 587. The Turkish speaking followers of the religion of the Ahl-ı Haşak in Ağašahadəšan also seem to use the word Tat with the meaning which it must have had in the mouths of their presumed ancestors, the Kara-Koyunlu Turcomans; cf. Minovsky, K. M. M. xlv., p. 247, etc. the article Matte.

The Turcomans of the Transcaucasian territory give the same Tat to the Iranian Tadjik; formerly, according to Samoilović, they gave the name to the people of Khiwa. [In this a memory of the old Iranian population of Khiwa? Cf. now A. Z. Waliudd, Hniewnitchi Shikar, Islimica, iii/ii. 1927, p. 190—213].

The term Tat has however been applied to other ethnic elements. Schubdinger (1394—1427) tells us that the "afifels" give the name Tat to the inhabitants of Karcker (probably Kirk-šar in the mountains S. W. of the Crimes). In another passage he says that one of the languages spoken in the Crimes is called Kathia and that the afifels" call it Tat ("die stolten sprach hast Kathia sprech und die höflein sannerte That"). From this it is evident that the same Tat in the language of the Muhammadans of the Kipates of the xvit century was applied to the Goths of the Tatars (whose kingdom was destroyed by the Ottomans in 1475).

Later, beginning with the yarlik of Djani-beg Girši, dated 1537 (1628) (cf. Velianinov-Zernov, Materiali dla istorii Crineshstva, St. Petersburg 1864, p. 25), we find in the title of the Khans of the Crimes, the official reference rät tat Tanigahmi al-şir żahədbi, Budagov, Soro, l. 329, explains tat has a sort of the Genoese without giving reasons (the meaning of Tanigah in the title is still quite obscure). At the present day the Noghaš Tatars of the northern Crimes give the name Tat to all the Muhammadans of the southern coast of the Peninsula, who represent a mixture of nationalities that have become Turkicized (personal information from Samoilović); cf. also Radkoff, Vorsich eines Wiehertuchas, iii, vol. 899, anh 58.

It may be also mentioned here that a section of the "Greeks" (i.e. Orthodox) settled at Mariakopel in 1778 is often referred to as the Tatami Tatars migrating from the south east coast of the Crimea and speaking a Greek dialect. The name Tat in, however, not applied to the other section of the "Greeks of Mariakopel" who speak Turkish (which they write in Greek characters) and who seem to the true descendants of the Goths of Tauris. Cf. Grigoriowitsch-Blaß, Über die griechisch-türkische Mitbewahrung in Mariakopel, Z. d. d. G. xxiv., 1874, p. 574—583 and ibid, p. 562—576; Tomuscheck, Die Gothen in Tiavrnen, Vienna, 1881, p. 3, 48; Th. Born, Mariopolitishe Grebb, Zborna Starina, St. Petersburg, iv/ii. 1890, p. 78—92.

According to Tomuscheck, o.c. p. 43, the Magyars call the Slovak Tat (= "Tat")?

The primary meaning of the word Tat (= "non-Turk, foreigner") is given in the Caghatai-Ottoman Dictionary of Shalib Sulaiman Efendi (ed. Kimn, p. 184): "nations that have passed under the rule of the Turks, e.g. the Turks". [On p. 179 however, the author says that the people of foreign origin who speak Turkish are called Tat and those who speak Persian are called Tadjik. In this connection may be noted the statement of Zaki Waliudd, according to which the word Tat was applied in Turkey in (in the sixtieth century) to all the settled elements of the population, including the Turks settled in the country before the coming of the Mongols]. Ahmed Weli, Lüdey-yi Oğullari, Stambol 1906, p. 288, whose interpretation of the word seems to be influenced by local Ottoman conditions says, "the former Kud (sic!) and Persian inhabitants of the provinces subject to Turkish rule", Barbier de Meynard in his Dictionary adopted Ahmed Weli's explanation, but thought it applied to Turkish.

The Caghatai dictionaries also give the secondary meanings of the word Tat: "the class of subjected people living outside the town" (cf. above Zaki Waliudd, "ravagbont" etc. Cf. Velianinov-Zernov, Slovar' jiažha-tačuči ("Almaka"), St. Petersburg, 1868; Pavet de Courteille, Dictionnaire türk oriental, 1870, p. 194; Badoff, Versuch, iii, col. 899, rub 5c and d; Melkonian, however, who has specially studied the word Tat, Zap, xlii, 1899, p. 0154—0158, has shown that the examples of these meanings taken from the works of Mur "Ali Şir Name" are very doubtful.

2. In a special and evidently secondary sense the term Tat is applied to certain Iranian peoples whom the Persians themselves regarded as distinct from them. These Tat groups are found in Persia and in Transcaucasia.

A. In northern Persia, there are little islands of people speaking their own dialects. The "southern" dialects of Fars are called Tadjik among the Persians [only the Kaškaši Turks use the term Tat in Fars, cf. above]. Even as applied to people speaking northern dialects the term Tat is only used in Persia for certain dialects of the North-West. It has not yet been found for example in the region of Kaškaši.

The most important group of the Tat is found to the west and south-west of Kašwin; the Tat
Tatt very rarely has šēfrāt: its place is taken by an original construction: ṣ̣hāna-ānawân = Pers. khooneh-štābāt etc. The dialect is rich in post-positions (e.g. with, in, and in genitives (šoṭe-hārāt, "things being-so")). The vocabulary is full of Turkish loan-words. Like most Persian dialects, Tāt is not very regular in its characteristic features. Broadly speaking, it occupies a position intermediate between modern Persian and the Caspian dialects (where rhoticism is also found sporadically).

The Muslim Tātis who form the bulk of the people speaking Tāt, live in the districts of Bāţān (q.v.), Kūmān (q.v.), Shamsābād and Gūl-e-Tāt. There are some in the province of Qočān and in southern Daghstān (the districts of Kāla-Tubanār immediately west of Darband; cf. Kermān, Kermān, Daghstān, o. d.).

The majoriy of the Tātis live on the two slopes of the eastern extremity of the Caspian range and the peninsulas of Altaiuran (Altaiuran) except the south-east point. On the ethnographic map of the Caspian by Bīrlīch (before 1877) the total number of Tātis is put at 64,729; Kondratenko's ethnographical map appended to vol. xii of Zapadné Kavk. Otd. Russ. Geogr. Otdel gives for the district of Bāţān (in 1886): 58,621 Tātis. The Great Russian Encyclopaedia, vol. XXXIII, 1901 gives the total as 135,000. The Soviet census of 1926 gives 98,020 Tātis "by language" and 2,875 "by nationality". In the former are included 970 "Tatis" of the Transcaspian (i.e. the Tadhik whom the Turkomans call Tāt). In addition, in the Soviet republic of Altaiuran there are 20,000 individuals speaking Tāt. In all, we may say about 90,000 people speak Tāt. The decrease in the number of Tātis may be the result of their gradual turkeisation.

The Jews speaking Tāt (the "mountain Jews" in Turkish Dagh-inşa#/) numbered in 1886: 21,000, 10,000 in villages and 11,000 in towns. Their largest colonies were at Kūhba (6,280), at Darband, Temir-khan-šura, Groznī, Nalīk (a Circassian district of Kābārda). They are also found on the Kubān (q.v.). The dialect of these Jews is remarkable for its gutturical articulation: in it we find š, ūn, ẖ, and ū, even in purely Iranian words (ḥāfiz, "seven", dost, "horse", dostūr, "know", par, "wet"). V. F. Miller thus defines the character of Jewish Tāt: "It is an Iranian dialect, spoken with the Semitic articulation, the phonetics of which (in part) and the morphology (in part) have been formed on the "Turkish model". As to articulation, it could be explained by the fact that these Jews had formerly spoken Arabic, or more simply by the proximity of the peoples of Daghstān who not only have the sounds "ūn and ġi but have always cultivated a knowledge of Arabic, in which until quite recently, correspondence in Daghstān was conducted. For the rest, the Muslim Tātis also have the sounds "ūn and ġi. The influence of Turkish on Tāt is in any case not to be exaggerated. The morphological phenomena and even the vocalic assimilation in the syllables of the same word discovered by V. F. Miller do have purely Persian parallels. Iranian influence on these Jews is not confined to language; Jewish folklore reflects it also (sār-ūn, "spirit of the waters", akshayūn, "dragon" etc.).

The Tātis of the Armenians (the little town of Matras [Madras], Kīvāl etc.) is marked by the
simplification of vowel sounds (\(\delta > a\)) and by the aspirated character of certain consonants.

The Täts of the Caucasus are at the present day entirely surrounded by Turkish and Daghestanian peoples. Their present habitats must always have been separated from the main body of Iranians. Their geographical distribution along the eastern coast of the Caucasus with an out- thrust to Darband seems to suggest the idea, which decided their settlement in those regions, namely the desire to reinforce the natural line of defence by Iranian colonies to meet invasions from the north. It would be tempting to recognise in the Tät remains of ancient colonies transplanted to Daghestän in the period when the Sâsánians were fortifying Darband. According to Balânjürit, p. 194, Aryan (531–579) had settled the region of Darband–Shâhîrân [cf. yârân] with people from Sassan (al-iyyân]. This last province was situated on the left bank of the Arazes (practically the district of Nakhchivan with the surrounding mountains) immediately north of Aighbarbâdjan. The people of Sassan were Christians, but from the political and linguistic point of view held a special position in the Kingdom of Armenia. In 571, they begged the Sassanian king to detach their province from Armenia and include it in Aighbarbâdjan; cf. Margarit, Erânkub, p. 120–122, Hübschmann, Die alten Armenier, Orienten, Indien, Forschungen, xvi, 1904, p. 266–266, 247–249.

The late Darband-nâme, ed. Kazem-beg, Mem. présentés à l’Académie des Sciences pour savants, vi. St. Petersburg 1831, p. 461, says, Aryan people settled in the towns of the province from Aighbarbâdjan and Fars and the towns to the south of Darband (the region of Shâhîrân–Maqâhûr; cf. the word garn in the language with the word of the Sassanians) and on this occasion entered into relations with Fars from Mawsil and Syria. According to the same source (p. 530) however, the fortresses around Darband were re-built under the Abbâsid al-Mansûr (754–775) and on this occasion Arabians from Mawsil and Syria were received by the Sassanians. Among the places fortified are especially mentioned Muṣṭâr, Kamâkh, etc. which at the present day are inhabited by Täts. It might be concluded from this that the presence of Täts at Muṣṭâr etc. represents a migration later than the eighth century, but the text of the Darband-nâme, the original Persian of which has not yet been found (cf. Barthold, in Iran, i, Leningrad, 1926, p. 42–58) is not certain (according to Klapper’s version, three hundred families settled at Muṣṭâr came from Tabasaran). The historical sources at our disposal thus reveal the ethnical context of the colonies established in Darband. On the other hand, Tät in its general characteristics is a modern dialect which (apart from rhetoricism) does not show any special traces of antiquity such as might be expected if it had long been isolated. The question of the Tät Jewish dialect is only a subsidiary one, the Jews even if they had been in Daghestân before the coming of the Täts (cf. Miller, 1892, Introduction) may have adopted Tät in place of their old language (Arabic).

As to the affinities of Tät the rhetoricism of its dialects has analogies in the Iranian islands of Persian Aighbarbâdjan at the present day. For the region of Ardabil, we have examples from the sixteenth century (Ahmad Kârâi Aghtari, Zâhdi-i hâdî-i Aghtari, Tîhrân, 1304 [1927]). The early borrowings made by Armenians from Iranian (Marc < Mâra, spârpa < spârpa) also suggest the existence at a very early date of this peculiarity among the Iranian neighbours of the Armenians (Marquart, Erânkub, p. 174, note 6; Bartholomae, Indoger., Forsch., Suppl. to vol. xiv, 1906, p. 43, note 1). The other curious feature is the name of the town of Lâhîîd inhabited by Täts (at the sources of the Gök-tâl) and perhaps mentioned in the Georgian Chronicl., Breslau, i, p. 364, under the year 1120 (Lidathâ or Lâîâkh). The inhabitants themselves believe they came from Lâîîhîd (cf. vi). The investigation conducted on the spot by V. F. Miller in 1928 has shown that the dialect of Lâhîîd has certain special features and it is possible that some colonies of Täts were settled in Transcaucasia later than others and that the dialect of the principal group exercised a levelling influence on the neighbouring dialects (according to the Gulîshîrî Iran, of Râshî–Khanî, Bâlût 1928, p. 14, the people of Mîskinjî in the district of Samur came from Astakhbî in the time of Tâhsîlî).

TÄTAR, written Tätar, Tätar and Tatar, the name of a people the significance of which varies in different periods. Two Tatar groups of tribes, the "Thirty Tatars" and the "Nine Tatars," are mentioned in the Turkish Orhan inscriptions of the eighth century d.o. As Thomsen (Intercision
The peoples of Mongol origin and language had apparently always called themselves Tatars. After the time of Cirgiz Khan, this word was completely supplanted in Mongolia and Central Asia by the word "Mongol" (in Muslim manuscripts Moghol or Moghul and in the every day language of the descendants of the Mongols in Afghanistan, who have kept their language to the present day, Moghol), officially introduced by Cirgiz Khan. In the westernmost parts of the Mongol empire, the word Mongol never became predominant, although it was also introduced there officially, as we know from European travellers (John of Plano Carpini and William of Rubruck; Hâkî, Sec., 1905, Index s.v. Mongol and Tatar). The people of the kingdom of the Golden Horde [see BAYât Kâin and Berke] and of the later minor kingdom in the same region are always called "Tatars". As the many documents preserved in the Public Library in Leningrad show, the Turkish-speaking peoples of the Crimea were not only called "Tatars" by the Ottomans (as by the Russians) but also called themselves Tatars. A Mongol force had been transferred to Asia Minor at the time of the conquest. Their descendants (who no doubt became turkicised) were called "Black Tatars" (Kara Tatar); at the time of Timur's campaign they were leading a nomadic life in the country between Amasia [q.v.] and Kajariya [q.v.]; they numbered 30-40,000 families (Zafar-nama, Ind. ed., Calcutta 1888, ii, p. 502 sq.). Timur had these "Tatars" deported to Central Asia, according to Ibn 'Arabshâh (ed. Manger, ii, 338), on the advice of Sulân Bâyanid; there they were allotted dwelling-places in Kaghâr on an island (which now no longer exists) in Lake Issák-Kul [q.v.] and in Kâvaristan; a section of them succeeded in escaping to the lands of the Golden Horde. After Timur's death, the Black Tatars returned to Asia Minor; in 1419 they (or a part of them) were deported to the Balkans and settled west of Philippiopolis; the town of Tatar-Pazardjik takes its name from them (J. von Hammer, GÖK, Pesth 1834, i, 292).

Later in Russia and in Western Europe we frequently find the name Tatars applied to all the Turkish peoples with the exception of the Ottomans; this use of the word is still found in Radloff, Aus Sibirien, Leipzig 1884, passim. After the example of the Chinese, the name has been extended to the Mongols also and especially to the Manchus (cf. the "Tatar town" in Peking). As the name of a particular people, the word Tatars is used only for the Turkish-speaking peoples of the Volga basin from Kazan to Astrakhan, the Crimea, and a part of Siberia; in the printed list (episk) of the year 1927 of the peoples of the Union of Soviets, the Tatars in the Crimea, the Tatars of the Volga, the Tatars of Kasimov [q.v.] and the Tatars of Tobolsk are therefore given as separate peoples, in addition to the Tatars of White Russia whose ancestors were deported to Poland as prisoners from the Crimea. They have adopted the language of the White Russians but have remained faithful to Islam. The name "Tatars" is now rejected by the people of the Crimea. The Turkish-speaking people of Astrakhan according to the most recent investigation belong to the Noghai stock. In the central course of the Volga also the "Tatars" are usually given this name by their Christian fellow-countrymen, the "Kryashens" (from the Russian krâshenny, "baptised") (Radloff, Wörterbuch, iii, 101 sq.). They prefer to call themselves "Muslims" rather than "Tatars" which was more fitting their heathen ancestors, just as the Ottomans have for long preferred not to be called "Turks". Even in the last year before the Revolution when the principle of nationality had already come to the front it was disputed whether they should be called "Turks" or "Tatars" (M.I., i, 1912, p. 270 sqq.); the name "Tatars" has now prevailed; since 1920 there has existed an autonomous Tatar Socialist Soviet Republic with capital
Kazan (q.v.) and a population of 2,780,000 of whom rather less than half (1,305,292) are Tatars. Cf. the ethnographical survey (övér) by Prof. D. Zolotarev in the book of travels Povest'vi, 1926, p. 99 sqq. (the figures are given on p. 123 and 126).

Bibliography: given in the article.

(W. BARTHOLD)

TAŞIL: a technical term used in dogmatics meaning the divesting of the conception of God of all attributes; see the article TAWADDUD.

TAWADDUD, the heroine of a story which is preserved in the 1001 Nights as well as in an independent form. Tawaddud (as a personal name not found elsewhere in Arabic literature — however frequent it is as a nomen verbi — is of similar formation to Tawanin, Tafjami, and similar women's names) is the slave of a merchant who has fallen into poverty and, following her advice, offers her for sale to the caliph Hârûn to free him from his difficulties. Hârûn declares himself ready to pay the high price demanded on condition she shows by an examination that she possesses all the knowledge she claims. In the tests made by a number of learned men, including Ishâq b. Sâiyîr al-Nâṣrîn, Tawaddud answers all the questions put to her in the field of theological knowledge, astronomy, medicine and philosophy, solves all the riddles put to her and proves herself an expert in chess, backgammon and playing the late; finally she in her turn puts questions to her examiners which they cannot answer and in this way she puts even the proud Naṣrîn to shame. When the caliph then asks her to beg a boon of him, she asks to be given back to her former master; which the caliph does and gives her a present besides, and makes her master one of his boon companions.

For the date of the story the name of al-Nâṣrîn (d. 231 = 845—846), preserved in all versions even the Shi'a and Christian forms (see below), gives a terminus post quem, while the oldest Spanish version going back probably to the eleventh century gives a lower limit; but we shall hardly have to go beyond the xth or xith century. Several manuscripts which contain the story as an independent story give the name of the narrator but it is not always the same and his identity has so far not been established. The essential features for him are the questions and answers which take up most of the space; the story of Tawaddud only forms the framework which he fills out with these. Several motives, such as the magnanimity of the purchaser, are found in other stories of the Arabian Nights and outside this collection also; the didactic purpose however and the form in which the learned matter is conveyed, ally the story to the books of questions found among the Parâs, in the Christian east and European middle ages and in Arabic literature also. The Arabic books of questions are sometimes like the Kîtâb al-Tarîk wa 'l-Tawaddûr of Dîshîn intelligible only to the learned, sometimes for popular instruction like the questions of 'Abd Allah b. Sallâm, which have passed into other Muslim literatures. Tawaddud belongs to the latter group although the theological in the didactic part of the story is by no means so predominant as in the questions of 'Abd Allah. A Shi'a version of Tawaddud is found in the Hâsanîya of Abu 'l-Futuwwa, popular in Persia in Malcolm's time. A Christian version is the Spanish Historia della domanda Theoder, of which we still possess an older form free from the Christian insertions of the later. The Historia della domanda Theoder — the manuscript in Madrid of the Hikâyât al-Latî'îya Tâdûr already has this corruption of the name — was repeatedly reprinted as a chap-book down to the nineties of the last century, and in the Portuguese translation down to the first decade of the twentieth.

(T. HROVITZ)

TAWĂF (A.), from tawâf with š of place) encircling; in the language of ritual the running round or circumambulation of a sacred object, a stone, altar, etc. There are variations of the rite having existed among the Israelites, cf. especially Ps. xxvi. 6 (xxvii. 6, lxx.) and the ceremony of the feast of booths in the time of the Second Temple, where the altar is circumambulated once on the first six days and seventimes on the seventh. The rite however was also found among Persians, Indians, Buddhists, Romans and others and is therefore very ancient. It played a very important part in the religious ceremonial of the ancient Arabs. We find the synonymous dawâr (from daru) also used. Thus Ibn 'Abd Allâh, Mu'allâjah, 63, compares the wild cows with young women in long trailing robes, who perform the circumambulation (dawâr, a circumambulated idol like darû in Antara 10, if darûr is not to be read here). In Mecca the Ka'bah which enclosed the Black Stone sacred from very ancient times used to be circumambulated and Muhammad adopted this old rite when he established the rite of his religion and centred them round the Ka'bah. When, in the year 3, he made his victorious entry into his native town, he is said by Ibn Hishâm, p. 520 and Tahtâ, l. 1652 to have performed the tawăf riding on his camel, touching with his crooked staff the ruhh (the eastern corner of the Ka'bah where the stone was). This was however something exceptional and according to Ibn Hishâm, it was only shortly before his death at the "farewell pilgrimage" that he laid down the authoritative rules for the circumambulation. It may however be assumed with certainty that he observed ancient traditional forms ("handed down from Abraham": cf. Ibn Hishâm, p. 54, 55) so that we can deduce from Muslim practice what the ancient pagan custom was; one feature of the latter was that the circumambulation had to be performed three times in succession (cf. above on the feast of booths) the three first at a greater speed, beginning at the black stone and ending there and during the course keeping the Ka'bah on the right; one should make a special effort to kiss the stone or at least touch it. On the contrary, if Wellhausen is correct, it was an innovation that the tawâf which previously took place only at the "amrûr (q.v.)" was inserted by Muhammad in the great ḥajj when the pilgrims visited Mecca. This suggestion is however disputed, cf. ibl. ii., p. 199 sq, where Sura iii. 91 is quoted against it, but the expression ḥajj al-ba'tî is hardly decisive.
since Muhammad may have decided on the expansion of the rites of the ḫalqūd, when he conceived the verse, if the expression was not inserted in the text later. The following special courses are certainly Muslim innovations: the ṭawāf al-tābiyya or al-būdām (circumambulation of greeting or arrival) and the ṭawāf al-nawwāb (circumambulation of departure, cf. Burchhardt, Religion in Arabien, p. 439) which are, it is worth noting, not obligatory. Of the old pagan customs, one at least was strictly forbidden by the Prophet, making the ṭawāf naked; see Sīra vii. 29; Ibn Bahšām, p. 921; cf. Ibn Said, i. 6, 17, where there is reference to a wooden object at the Ka‘ba, where the heathen laid their clothes at the circumambulation. The pavements surrounding the Ka‘ba on which the pilgrim ran is called maqṣaf. At the al-ハウス wall (see ii. 585) they run close to the outer side of it, not as usual along the Ka‘ba.

The ṭawāf, except for the special forms above mentioned, is strictly compulsory and therefore became an important factor in Islam. It is therefore significant that the caliph 'Abd al-Malik, who was the role of the anti-caliph 'Abd Allah b. al-Zahabār made the visits of the faithful to Mecca difficult, proclaimed: that a ṭawāf around the Dome of the Rock in Jerusalem would have the same value as that around the Ka‘ba (cf. Goldziher, Muḥammdanische Studien, i. 35). The complete omission of this rite would have meant a serious gap in Muḥammdanism. But the innovation soon disappeared with its cause and in orthodox Islam any ṭawāf except that around the Ka‘ba became more and more pointless. That the old ritual custom survived in the lowland tribes of Arabia life is revealed in an interesting fashion by ʻUdājān, who says the Beduins emulated to perform the ṭawāf not only around the graves of their ancestors but also around the tomb of Ibn al-ʻAbbās in Ta‘if.

**TAWAKKUL**, trust in God, is enjoined by the Qur'ān, but the musawwakkilīn whom God loves (li. 133) do not form a special class of quietists like those known by the same designation in the 8th and 19th centuries A. H. The doctrine of the latter, closely connected with that of ṭawāfīd (q. v.), and probably developed under Christian influence (cf. Matt. vi. 24-34), was sometimes carried in practice to such lengths that the com
parison of the musawwakki to a corpse in the hands of the washer who prepares it for burial (Ku
thairi, *Bḥ al-Tawakkul*) seems quite appropriate. According to these realists, tawakkul is directly oppo
to every sort of ṭazkīa ("acquisition", personal initiative and action): how can a man seek to help himself if he really believes that God is the only Provider? The answer given by Kuθairi, that a man's activity in making use of the means which God provides need not impair his inward trust in God's providence, indicates the line of advance by which the old ascetic school of Syri
am was left behind.

**TAWAKKUL** K. SASTRÉ (Tilki [9] b. Isma‘īl), a dawrīsh, author of the *Sīfat al-Ṣafā*. This work is a biography of the grand Şah Şāfī al-Dīn of Ardashīl (650—735 = 1255—1334), ancestor of the Şafawī dynasty. The book was written in 590 (1535) under the direction of Shaikh Sadr al-Dīn, son of Şāfī al-Dīn, whom Tawakkul quotes as an authority. Later under Şāh Ṭahmāsp I the text of the work was revised by a certain Abu ’l-Fath Husain, the Persian text was published in *Caferī* in 1329 (1911). The *Sīfat al-Ṣafā* is a work of considerable length, about 216,000 words. It is purely hagiographical in form but the historical and geographical details, important as supplementing our knowledge of the history of N. W. Persia, are overlaid with the miraculous elements. In it we find for example specimens of the old Iranian dialect of Aḏharbāḏjan (sixth century). The *Sīfat al-Ṣafā* does for the grand Şāfī al-Dīn of Ardashīl what the *Manāṣir al-Adl* of Alīkī (q. v.) does for the grand masters of the Mawlawī order of Konya. Like the history of Şah Isma‘īl (by Khwāja ‘Abd Allāh Muruwiī) [cf. J. R. A. S., 1922, p. 170] the beginning of which was translated by E. D. Ross in the *J. R. A. S.*, 1895, p. 249-340, the *Sīfat al-Ṣafā* is a valuable document for the study of the moral and religious factors in the great Şafawī movement out of which modern Persia arose. It enables us to watch the formation of the Şafawī "secret doctrine": the belief in the sanctity of Şafī al-Dīn (of which historical ortho
doxy has no doubt) later led to the extremist Şia doctrine, the aberrations of which are evident in the poems of Şah Isma‘īl himself [cf. KHAṬĀ].

**TAWĀMĀN**, the Twīne, the constellation Gemini. According to al-Karwīnī, the constellation contains 18 stars and seven which do not belong to the figure, and represents two men with their heads to the N. E. and their feet to the S. W. The two bright stars in the head are called al-Dhībī or al-umrah, the outstretched arm, and form the seventh station of the moon; the two at the foot of the second twin form the station of the moon called al-Hawā. The whole constellation is also called al-Djawa, like Orion; hence the name Ras alginac for the star β (Pollux). In Ptolemy the stars now known as Castor and Pollux are called Apollo and Hercules, which become Avel-lār and Abra-calus in the Latin translations of 'Ali's commentary on Ptolemy.

TAWASHI, one of the many words used as a euphemism for a camel. According to al-Maqrizi, the word is Turkish and is originally *tawashi* or *tawash*. The reference is clearly to the word which is *tawashi* in Ottoman Turkish and means "servant". The word has therefore undergone the same change of meaning as *khudum*, which is a legal and official position with the same status as a camel. Thus we find the word in the language of administration in Egypt, where it means the military rank in the bodyguard (khudam). The meaning is also used alongside of it.

TAWBA (א), repentance, originally meaning "return", is a verbal noun derived from *tawba*, the verb is used in the Koran, either absolutely or with lā, of one whoitten to God with repentance, and also with lā of God, who turns with forgiveness to the penitent, for He is tawwaab rażīm. "very forgiving and merciful" (Korān, ii. 35, 258). The validity of tawba depends on three things: 1. a conviction of sīn, 2. remorse (muṣaṣṣa), 3. a firm resolution to abstain from sin in the future (Qurān, i. 53, 258), where the subject is discussed in detail; Korān, iv. 21, 22; x. 109, 31i. 24). If these conditions are fulfilled, God always accepts repentance, not from obligation (waṣlāf) as the Mu'tazilis hold, but in virtue of His eternal will; on the other hand, an *deadly repentance* is unwavering (Korān, iv. 22). Sin being an offence against God, tawba is indispensable for salvation, though Ahmad b. Hanbal and others deny this (Massignon, La Passion d'Abdal-Lāh, p. 666). The Şafi'i, rising above the legal notion of sin, attach a correspondingly higher significance to tawba. Amongst them the term denotes the spiritual conversion which is the necessary starting-point for those entering on the Path (tarbi'a), and which is represented as an act of divine grace. In its most proper sense tawba is not so much an acknowledgement and renunciation of sin as a new orientation of the entire personality, so that the penitent is wholly turned towards God. Any recollection of sin or thought of remorse is wrong; for to remember sin is to forget God, and self-consciousness is the greatest sin of all; hence, according to a well-known Tradition, the Prophet sought forgiveness of God seventy times a day.

TAWHĪD (א), inductive, is the sense of *y*h*ūd, means literally "making one" or "asserting oneness" (Lamb, p. 207). In consequence, it is applied symbolically to the oneness (maṣūlah, tawhīd) of Allāh in all its meanings. The word does not occur in the Korān, which has no verbal form from this root, nor from the kindred *bāt*; but in the *Sahih* of *Abu* Dür, *s* 4 to 6* s below* there is an elaborate metaphorical statement of the meanings of the different forms from these roots as applied to Allāh and to men. Technically the science of *tarjim* and of the *Qualities* (*ilm al-tawhīd wa l-`esāl*), is a synonym for "the science of *kāf*" [see article KĀF], and is the basis of all the articles of the belief of Islam (Introduction by Taftāzānī to the *Alif* of Nasātī, ed. Cairo 1321, p. 4 sq. and the marginal commentaries thereon; Dict. of techn. terms, p. 22). In this definition the Mu'tazilites would exclude the qualities and make the basis *tawhīd* alone. But unity is far from being a simple idea; it may be internal or external; it may mean that there is no other God except Allāh, who has no partner (shirk); it may mean that Allāh is a Oneness in himself; it may mean that he is the only being with real or absolute existence (al-`ād), all other beings having merely a correlative existence; it may even be developed into a pantheistic assertion that Allāh is Everything. Again, knowledge of this unity may be reached by the methods of systematic theology (`ilm) or by religious experience (maṣūlah, waṣlāf). If we turn to the other hand, a *deadly repentance* is unwavering (Korān, iv. 22). Sin being an offence against God, tawba is indispensable for salvation, though Ahmad b. Hanbal and others deny this (Massignon, La Passion d'Abdal-Lāh, p. 666). The Şafi'i, rising above the legal notion of sin, attach a correspondingly higher significance to tawba. Amongst them the term denotes the spiritual conversion which is the necessary starting-point for those entering on the Path (tarbi'a), and which is represented as an act of divine grace. In its most proper sense tawba is not so much an acknowledgement and renunciation of sin as a new orientation of the entire personality, so that the penitent is wholly turned towards God. Any recollection of sin or thought of remorse is wrong; for to remember sin is to forget God, and self-consciousness is the greatest sin of all; hence, according to a well-known Tradition, the Prophet sought forgiveness of God seventy times a day.

TAWIL (א), originally meant quite generally interpretation, exposition. In some of the passages from which the word occurs in the Korān it refers definitely to the revelation delivered by Mahommad. The use of the word *tawil* afterwards became more and more limited to this special meaning and it meant exposition of the Korān, and was for a time synonymous with *tarjim*. In the time the term seems to have become more specialised although not yet confined to this one meaning: it became a technical term for the exposition of the subject matter of the Korān. In this latter sense *tawil* formed a valuable and necessary supplement to the more external philological exegesis of the Korān, which was now distinguished as *tarjim*. So long as it did not come into contradiction with the obvious literal meaning of the Korān or with Tradition, orthodox theology had no reason to
deny its right to exist. The question was altered however when ta'wil no longer satisfied its conditions. Suff, the Ikhwan al-Safaw, the Shi'a, especially such schools of thought as, without abandoning Isla'm itself, diverged to any extent from the path of orthodoxy, saw in ta'wil a suitable instrument for bringing the views held by them into harmony with the literal text of the Kar'anic revelation and even for deriving them from it. Alongside of the literal interpretation of the text there grew up a blissed allegorical exposition which found the most for fetched ideas conceived in the text. With the extreme schools, this transformation of the "external" meaning came to be held up as being of looking at the Kar'a, so that the traditional exposition fell into dispute and the legal enactments of the Kar'a were even declared not to be binding.

Details in the method of using allegorical ta'wil may, as Goldziher (Richtungen, p. 210 sq.) has suggested, be ultimately traced back to the influence of the Neo-Platonists, especially Philo. The method itself however was the direct result of the necessity of sanctioning new views by a new interpretation of the words of the revelation that had been handed down; allegorical ta'wil may be considered essentially of native Muslim origin.

TAWILAH, a town in South Arabia, formerly the headquarters of the Kâkimâtun of the Kâjâ of Kawkabân, to which the town already belonged in Niehues' time. It lies on a tongue-shaped spur of the Jebel Dhu'ul on the left bank of the Wadâ'il which forms a continuous chain of four rocky hills, the second (from the east) of which is called al-Djum. In the SSW. of the town a little lower but not 500 yards away stands the Masjid al-Zahr, a mosque now in a fine cistern, from which one well-made paved road (ta'mâd) leads eastwards towards the town. Barely 200 yards east of this ruin or rather of the ruin built of its stones (tâmir) is a huge building of blocks of black rock, from which another paved road leads to the town. The town is small and unwarred but has a considerable market. The administrative buildings used by the Turks when they run here lie to the extreme S.W. of the town which was visited by the explorer E. Glaser on Dec. 2-3, 1885.

TAWIL, a South Arabian coin, see the article TAKIN.

TAWIH (Ar.), lit. "a document with the signature or device ('alamâ) equivalent to a signature of a ruler"; hence generally, edict, decree of a ruler, and its preparation in written form. Tawih has the special meaning of the title of the ruler (roughly equivalent to the tâghit [q.v.]) of the Ottoman empire to be inscribed in the chancellery, which gives the document validity, in contrast to 'alamâ, the mark or device of the ruler put on it with his own hand, which was regarded as his signature. The use of the two words is however to some extent indiscriminate, for tawih was also used for motto.

In the Tawih-litterature edicts (tawih) of the Sâmilian kings are mentioned. Under the Omayyads it is said to have arisen the custom — no doubt really an old oriental one — of the Caliph himself deciding (tawîhâ) in public audience on complaints (qiyâd) brought to him; the secretaries had then to put the Caliph's tawih into writing. For the 'Abbasid period, Kâlima mentions a special Divan al-Tawîh (office for edicts). It may be considered an important increase in the power of the visiers under the 'Abbasids that Harûn al-Rashid for the first time entrusted the valuable Diwan to the right of dealing with petitions (tawih 'ala 'l-qiyaq). According to Ibn al-Salih, there was in the Fatimid Diwan a special secretary for dealing with petitions. This secretary for the tawîh 'ala 'l-qiyaq was one of the highest in rank. Under the Mamlûks the private secretary (Kalîth al-Sirr) received the right of tawîh 'ala 'l-qiyaq. As a general rule, however, the sulthan exercised it themselves however

In the Mamluk administrative system, tawih was also used as the name of particular classes of diplomas of appointment, and according to Ibn Fa'dl Allah, it was applied to the diplomas of all officers, the lower as well as the upper, up to the great governors (mu'allim), and therefore became the word most used for appointment generally. Ibn Fa'dl Allah however says that it was only used for the appointment of the lowest ranks of officials. A little later it came into use for the appointments of "turban-wearers" (mu'allimunna), i.e. the ecclesiastical and Diwan officials. According to Kâlima, tawih is the fourth and lowest as well as the most extensive group of diplomas of appointment (wilâyât).

In the Ottoman empire the imperial edicts were dealt with by a special official, the nishîndî or tawîh, who was responsible for the documents bearing the Sultan's style and titles. He was one of the highest officials in the kingdom (the Elys-e-i Divan) and a member of the imperial Diwan. A device written by the Sultan himself was no longer in use here; in Ottoman diplomatic, 'alamâ, like the Persian word nishûn, means the imperial sign-manual (the tawih), the style of the Sultan drawn in the chancery of the nishûndî by a special assistant, the tawihbâš. Amâmet was in this case synonymous with tawih.

Lastly tawih meant a special style of script in use at the close of the middle ages (xii-xiv century), which was specially used for documents of this period in the Mamluk as well as the Ottoman dominions. In the great period of Ottoman history (xvith century downwards) it was ousted by the Diwan script.

TAWRÂT. Heb. תְּוָרָתָה, is the name of the Medine period (cf. also an alleged verse of Jewish poet Samâkî in Ibn al-Hâjîm, p. 659) of the holy scripture revealed after the time of Hurshîm (iii. 35) and Isrâ'îl (i.e. Jacob; iii. 87) and afterwards confirmed by Yâsî (iii. 44; v. 50; Isr. 6) which contains the žakir Allâh (v. 48). While obedience to it brings a reward in Paradise to the "people of the book" (v. 70), those who do not take upon themselves the tawrât imposed upon them are "like asses who carry books" (Isr. 5). The Tawrât also contains a prophecy of the coming of the Nabî as-sâmî (vii. 156) i.e. Muhammad, and in it Paradise is promised to the faithful who "fight on the path of Allâh" (Isr. 12). A sentence from the Tawrât is quoted in v. 49, which repeats approximately the text of Exodus xxviii. 25: 28, while the parable quoted in xlviii. 29 from Tawrât and Isrâ'îl comes not from the Tora but, although only in its gist, from the Psalms; cf. for example, Psalm i. 5; lxvi. 14 ff., lxvi. 14. In iii. 87 the Jews are challenged to read from the Tawrât the law (Genesis, xxxiii. 33) which corresponds to the substance of iii. 87. On the other hand the sentence quoted in v. 35 comes not from the Tawrât but from the Mîsqâl Sâhadât, iv. 5. Besides such express references to the Tawrât, the Qur'ân contains, frequently repeated, a number of stories from the Pentateuch—usually in their Haggadic form and not infrequently adapted to Muhammad's special purposes—and many laws from the Pentateuch, both without mentioning their origin. Of the books of the Old Testament, in addition to the Tawrât, Muhammad only knows the Zekâr, i.e. the Psalms; perhaps, as the Jews themselves sometimes do, he meant by Tawrât the whole of their holy scriptures (see Bacher, Exodus Terminologie, i. 197). In Ḥâshîf the Tawrât is also frequently mentioned and in several passages Mâsûh is named as he who observed it (Bâkhîrî, Tafsîr, Sûra li. bâb 1; do. Tawhîd, bâb 10, 24, 25; Mâsûh, loco cit., trad. 222; Ibn Mâdjâl, Zikrû, bâb 37). While the Jews pride themselves on having a great treasure in the Tawrât (Tirmidî, Tafsîr, Sûra xxvii., trad. 12; cf. for example Prov. iv. 2) it is on the other side pointed out that its possession has availed them nothing and the Tawrât contains nothing equal to the Unw as-karânî, i.e. the Sûra mîn al-Mâhîfî (v. 39. 40. Tafsîr, Sûra xlvii., trad. 5; Tâfṣîr as-karânî, bâb 1). The description which the Tawrât gives of Muhammad and which according to Bâkhîrî (Tafsîr, Sûra xxiv., bâb 3: do. Bâyqûn, bâb 50) has passed in part into Sûra xlvii. 34; xlvi. 8, in the form given, loc. cit., proves to be only a rather inaccurate paraphrase of Is. xiii. 1-4 (cf. similar passages in Ibn Sa'd, vili. 87 sqq.). In Bâkhîrî, Tawhîd, bâb 34, 47:

Mâsûh al-Sâlih, bâb 17, the Abî al-Tawrât in a judicious moulded on the parable of the labourers and their hire, complains that the reward of those who obey the Quddî is greater than theirs, although the former are "less in work" again "more" than they, a reference to a greater number of the Jewish prescriptions. In explanation of Sûra iii. 87, Bâkhîrî (Mâsûhî, bâb 26; Tafsîr, Sûra iii., bâb 6; Tawhîd, bâb 51) says that the Prophet put the question to the Jews asking how they dealt with adulterers. They tried to give him a wrong answer and to conceal from him the passage in the Tawrât, in which the punishment of stoning is prescribed (Corintius, xxi. 26 sqq.) but they did not succeed. According to Ibn Mâdjâl, Mîsqâl Sâhadât, bâb 39, it is said in the Tawrât "The wages in the honour of mealtimes" a sentence which sacrifices the Jewish command to wash the hands before meals to the Târîkh, in which the Jewish students of the scriptures also claim to find it indicated (Julin, fol. 166 sqq.).

The Qur'ân allusions early assumed in Muslim scholars the desire to have a closer acquaintance with the contents of the Tawrât, a knowledge which was however not without its dangers because it brought out certain contradictions which existed between the Qur'ân and the Biblical revelation. How this danger was to be met, the Prophet himself gives a hint in an utterance several times quoted by Bâkhîrî (Tawhîd, bâb 51; Tafsîr, bâb 21; Tafsîr, Sûra ii., bâb 31): the Abî al-Kâfîrî were in the habit of explaining the Hebrew text of the Tawrât to the Muslims in Arabic, whereupon the Prophet commanded the latter *Declare ye the statement of the Abî al-Kâfîrî neither true nor false but say 'we believe in Allâh and what He has revealed'*, an utterance, which Bâkhîrî, as the title of his paragraph shows, wants to be able to apply to the decision of the question whether the translation of the holy scriptures of foreign religions into Arabic is permitted. While in Bâkhîrî, Mîsqâl Sâhadât, bâb 29, asking members of another faith about the substance of their revelations is deprecated, just as they should put no questions to Muslims about the contents of the Qur'ân, there is no lack of references to distinguished men of piety (Ibn Sa'd, vii. 179) who studied the Tawrât in the original or even (op. cit., p. 161) had read it through to the end in a week. The numerous quotations from the Tawrât, which cannot be identified in the Pentateuch, preserved in Hadîth, canonical and extra-canonical, as well as in edifying literature, have tempted Chishâkhî (M., P. O. E., iv. 39 sqq.) to the untenable thesis that there was a book called Tawrât different from the Hebrew Târîkh, from which these quotations were taken: in reality the passages in question are either pure invention or inaccurately modelled on sayings in the Bible of the Talmud. An intimate knowledge of the text of certain parts of the Târîkh is shown by some chronological or genealogical statements about the Biblical period, such as are given by Ibn Ithâr (d. 150 = 767) in his Ma'dîkî, while Ibn Hâjîm (d. 213 = 828) in his unpublished Kîthî al-Târîkh, quoting Wahb b. Munabbîh (d. 110 = 786), gives certain Biblical names not only in their Hebrew but also in their Syriac form. Thus the statements of Musâlim tradition by the Biblical text is recorded in his Kîthî al-Mekdiyîf, p. 13, by Ibn Kâtalîn (d. 276 = 889) who also gives in this
work-word for word quotations from Genesis; the biblical quotations in others of his works do not always correspond exactly to the original and the same is true of the quotations in Ḭāḏit, al-Kadd ṣāla’u-ṇ-Naṣīṣ. On the other hand, in another contemporary of Ibn Katala, the convert to Islam, 'Ali b. Rabi’a al-Taibri, we have many literal quotations from all parts of the Old Testament canon in his Book of Religion and Empire, written about 240 (854-855) (ed. by A. Mignan); if this work really belongs to him; cf. Eouyez, in M.E.O., x, 242 sqq.; some also are to be found in the Rifā’i of 'Abū al-Maṣūḥ b. Iḥāṣā al-Kindī. While the text of the Bible was accessible without difficulty to converts like 'Ali b. Rabi’a, the biblical quotations in authors born Muslims were either learned translations from the Jews or Christians or from another Arabic translation of the Bible. Ahmad b. 'Abd Allāh b. Sa‘īd al-Indjī (whose relationship to 'Abd Allāh b. Sa‘īd, the Jewish convert of the time of the Prophet, cannot be certainly established) is said to have made one such, notably a translation of the Tawrāt, and according to the Phrēiēíst, p. 22, in the reign of Herūs al-Rāḥῑd. Three further translations are mentioned by Māḏḏ (Ṭanbih, p. 112): that of the Nestorian Ḥannā b. Isḥāq (d. 260 = 873-874) based on the LXX and two by the learned Jews Abū Kāthīr (between d. 321 = 933, or 329 = 941) and Sa‘īd b. Yussīf al-Fayyūmī, best known under the name of Sa‘īdāy al-Gūn (d. 331 = 943) from the original Hebrew. Of all these translations only that of Sa‘īdāy has survived (ed. Lohriacut, Paris 1893) and the only other of the period of existence is one made in Spain in 943 (956) by a Latin of all later translations from the Coptic, Syrian or Hebrew by Christians and Samaritans, bibliographical details are given in the article "Biblidēvēsēmata, Arabisēs", in Herog: Realencyklopädie. Sura vii. 156 firmly convinced believers that the Tawrāt contained a prophecy of the coming of Muhammad. Attempts to prove this go back to the earliest period of Islam (see below) but it is not till the middle of the third century that definite verses of the Pentateuch and other books of the Old Testament are quoted in a literal translation and interpreted as prophecies of Muhammad’s coming. From an unnamed work of Ibn Katala, Ibn al-Dawwār, in his Kitāb al-Wafā’ quotes several passages of this kind and many others are given about the same time by 'Ali b. Rabi’a al-Taibri (see above) and these recur again and again in the apologetics and polemics of the following centuries with greater or less completeness. From the Pentateuch the verses Gēmit, xvi. 9-12; xvii. 20; xx. 21; Dent, xviii. 18; xxxii. 2, 12, play a prominent part in these polemics. Since according to Gēmit, xxi. 21, Farn was the abode of Ishmael, and according to Sura ii. 119 he stayed in Mecca, Farn is identified with Mecca. On the basis of the same identification, Dent, xxxii. 2 is referred to Muḥammad, as is xviii. 18, and in xxxii. 2 a reference to the Kultuṣ al-Nabīmūs is found. Even in the Qur’ān we find the Jews reproached with "displacing phrases from their context" (iv. 45; v. 16, 45) and an example is given in iv. 45; further they are charged with having forgotten or concealing a part of what had been revealed to them (v. 16; iii. 64; vi. 94). We have already had from Ḫāḏit an example of this concluding: the Jews wished to keep from Muḥammad the verse of the Tawrāt which prescribes the punishment of stoning for adultery. The reproof of "altering the words" is more precisely defined by Buḥāṣ, Zāḥiḥa, bāb 29, who says that the "possessors of the scripture" had altered the book of Allāh with their own hands and said it was Allāh’s. Not all Muslim apologists go so far, however, as to assert deliberate falsification of the text; the wilder school ascribes to the Jews only distortions of the meaning. The most distinguished representative of the stronger view is Ibn Hāṁū (d. 456 = 1064) who raises objections to no less than 57 passages in the Tawrāt and collects the impossibilities and contradictions which he had found in them. TAWRIYA (A.), syllepsis in oratory, a figure of rhetoric (bęb), which consists in using a word having two different meanings, one obvious and the other secondary, selecting the second sense by the first so that it is the first sense which strikes the listener first. Tawriya is called ḫānē (dis-simulation) because he who uses it conceals the remotest meaning he had in view by the primary sense which is seized on first. It is sometimes called ḫānē ("act of concealing or masking"). There are two kinds of tawriya: 1. that which is "deprived" of everything that might indicate the meaning one has in view (mudīfīr, for example "The Merciful is seated (ṣanwīl) on his throne") (Kūrān, xx. 4); here the remoter sense of "to make oneself master of" is in mind and there is nothing in the phonetic which may suit the nearer sense of "to rest; to establish oneself, to sit"; 2. that which includes something which suits the obvious sense, for example "And the heavens which We built with power" (Kūrān, ii. 47), literally "and the heavens which we built with our hands" in which one notices that "hand" here, taken in the secondary sense of "power," is accompanied by the verb "is build" which suits its primary meaning of "part of the body at the end of the arms." The figure is also used by the Persians who seem to have borrowed it from the Arabs. Bibliography: Fahṣīr al-Dīn Muḥammad b. ʿUmar al-Rāzī, Nihāyāt al-Lähīs fī Dirāyāt
The work consists of the single sana/'s of over six hundred sabtis and is arranged in the same way as other works of the kind. It contains 2,767 traditions; this means that its bulk is about one tenth of Bahkšt's Šabih or 1/3 of Ibn Hazáb's Musnād. The contents cover the whole field of classical ṣafiyy; all subjects of some importance are represented, though on a moderate scale. It may be remarked that the materials concerning some persons who played a part in Muhammad's history are perhaps more scanty than in any of the other collections; there are e.g. no traditions on Khudzaid, Zainab bint Dájir, or Maysir b. Sufyân, 'Abd Allâh b. al-As, Abî Makki b. Asârî, 'Abd Allâh b. Ṣülûk, Abî Ubayy, 'Abd Allâh b. Sâlih, Ibn Sa'îd, 'Abî Mâlik, Khâlid b. al-Walîd, Sa'd b. Ma'dâh, Salmân f. al-Farsi.

The book contains scarcely any tradition which is not to be found in the classical collections; in rare cases the wording may be helpful in understanding of difficult traditions.

(T. J. WENINK)

TAYYUMM (a), the recommendation, or permission to perform the ritual ablution with sand instead of water in certain cases, is based on two passages in the Kûran, Sûra iv. 46 and 6. The latter passage runs as follows:

And ye may be impure, wash yourselves. But if ye be sick, or on a journey or if ye come from the privy or ye have touched women and ye find no water, take fine clean sand and rub your faces and hands with it. Allâh will not put a difficulty upon you but He will make you pure and complete. His favour upon you, perhaps that ye may give thanks. Sûra iv. 46 is somewhat more briefly expressed but the law is formulated there in almost identical words except that the phrase "with it" is lacking from the sentence "sand rub your faces and hands with it." According to the Shâfs (see Bai'dârî on Sûra iv. 46) "with it" means that there must be some sand in the hand. The Ḥanâfî on the other hand consider the rite valid even if the hand has only been touched by a smooth stone.

In his Mūsâ b. al-Kâdîrî, Cairo 1279, i. 143 sqq. al-Shârâ'î gives 14 such points of difference between the maqāds; they refer to a. the material (earth, sand etc.); b. the obligation to look for water; c. the question how far the face and hands are to be rubbed and into what legal categories these rubbings fall; d. the question which one should do if he finds water after he has already begun the ṣalât; e. the question whether a single tayyûnum suffices for two ṣarî' rites; f. the question whether one who has performed the tayyûnum before his ṣalât may act as imám for persons who have performed the ablution with water; g. the question whether tayyûnum is permitted before the ṣalât at festivals and for the dead, if one is not on a journey; h. the question whether one who is not travelling, and has difficulty in getting water for a ṣalât the legal time for which is about to expire, should
repeat the qal'āt performed after tayammum as soon as he has found water; i.e. the question whether it is permitted to use the little water one has for a partial washing and do tayammum for the rest; ii. the question what is to be done in cases of injury; iii. the question whether the qal'āt is to be repeated in four cases, in which it has been performed after tayammum.

There is agreement among the mālikīs on the point that tayammum is only done for the face or hands, whether after a minor or major haddāth [q.v.], whether in place of a washing of all or any parts of the body is a matter of indifference (al-Nawawī, on Muslim, Saḥḥā; Cairo 1283, i. 406).

From various traditions it is evident that 'Abd Allah b. Mas'ūd and 'Omar had misgivings about declaring the qal'āt valid after tayammum in cases of mundhāb (cf. e.g. Bukhārī, Tirmidhī, Ḥadīthī, b. 71; Muslim, Ḥadīth, tr. 110). On the other hand the saintly 'Abd Allāh Al-Barrā, who had similar misgivings, is made to say that the Prophet had disposed of them by saying: "fine sand is a means of purification when one cannot find water, even if he should look ten years for it" (Al-Badr b. Hanbal, Musnad, v. 146 sg.).

The permission is said to have been revealed on an expedition of Muhammad or was held up so long looking for a necklace of A'shā's that its water became exhausted.

In the Tāgbūt (Foraker, fol. 152) a permit to use sand in case of want of water similar to that of the Qur'ān is given and Credernus, Annulales, ed. Hylander, Basle 1566, p. 206, tells how an occasion in a journey through the desert, Christian baptism was performed with sand.

TÁZÁ, a town in eastern Morocco, about 60 miles E.N.E. of Fās, in a great depression, called the "trough of Táza" which separates the Rif from the northern spurs of the Central Atlas. To some authors of the middle ages (Jāθbārī, al-Marrākūshī), Taza marks the boundary between the extreme and central Maghrib. The great importance of the great natural route from the east to west through this depression, the strategic and economic advantages secured by the occupation of the site in part defended by the ravine of a wādī, must have early encouraged a foundation of some importance at Taza. Prehistoric settlements have been discovered there and many tombs of uncertain date in the cliffs on which the town is built.

In the beginning of the middle ages (9th-10th century) Taza was the most important settlement in the region occupied by one of the groups of the Mknīnī, semi-nomadic Berbers. According to Ibn Khalīdūn, it was they who founded the ribāt of Taza. This statement is evidently inaccurate in this form. Taza was not yet reckoned a ribāt. It must nevertheless have played an important part in the defence against the Idrīsids as partisans of the Fātimids of Kairawān, then against the Fātimids as partisans of the Omayyads of Cordova. Taza however, as a fortified town and a ribāt, was properly a foundation of the Almohads. In 528 (1133) 'Abd al-Mu'min, having made himself master of the High and Central Atlas, had arrived in the depression of Taza. There the conqueror seemed to have suspended his advance. It was only a little later that he tackled the ranges of the Rif and did not yet attempt to descend into the plains to meet Almoravid forces. He seems however to have felt the necessity of holding the important strategic point, of building a citadel there and placing a garrison in it. Those who held this frontier post of the Almohad dominions were naturally assimilated to the men of the ribātu' (we know that the struggle against the Almohads had the attractions of a holy war). To call the new fortress a ribāt, was giving it the value of a pious work. As a matter of fact Taza never played the religious part of a ribāt. It remained, as before, a military post guarding the road to Fās. A great part of the ramparts built by 'Abd al-Mu'min seems to have survived. It is a curtain of rubble flanked by towers unequal in size, with the remains of an outer wall in front of it at places.

For lack of defenders, Almohad Taza hardly made any resistance to the Marinids who took it in 612 (1216). Its new lords also devoted attention to its defences; they restored the great mosque on two occasions (1294 and 1353) and endowed it with madressas. In their time Taza for once at least did its duty in guarding the pass, when it was attacked by the Sulṭān of Tlemcen, Abbās Hammādh II, who besieged it for a week in 734 (1328) and was forced to retrace his steps.

In the beginning of the 16th century, we have a description of Taza by Léo Africanus. He regards it as the third town of the kingdom; it was now administered as a kind of amān allotted to the second son of the Wālid Sulṭān of Fās. The population, which numbered about 5,000 householders, including many Jews, lived under a continual menace from the mountainians around.

To secure control of the springs which watered the town, and to protect himself against the attacks of the Tāraks of Algiers, a Sa'diān Shārīf — perhaps Abūn al-Manṣūr — provided it with a ābābīna, which still stands in the S.E. corner of the enceinte. It is noteworthy however that in the result this fortress of Taza never served as a defence against enemies from the east, but rather became a citadel ready at hand for every pretender who rebelled in those regions against the Makhzen who had built it (H. Basset and Campardon, This was the case in 1596 when al-Nṣir, a nephew of al-Manṣūr, rebelled against the Sulṭān and made Taza his base of operations, and again in 1664 when the first of the Alawī Sulṭāns al-Rashid made it his headquarters for his attack on Fās, and in 1673 when Abūn b. Muḥrīs held out there against his uncle, Sulṭān Mawlay Ismā'īl. Lastly in 1902 the agitator Abū Hāmidī there in his struggle with 'Abd al-'Aris made Taza his capital. It was occupied by French troops on May 10, 1914.

TAZIR (A.), punishment, intended to prevent the culprit from relapsing, to reform him (fa 'l-taṣir).—The Qur'an does not know this kind of punishment; on the contrary it classifies several transgressions afterwards punished with taṣir merely as sins, e.g. slander, for which there is no hadd punishment (Sūrah iv. 112) and the bearing of false witness (Sūrah ii. 283; iv. 134). Tradition has very little to record about it. According to one tradition of Abū Allāh b. 'Omar, in the time of the Prophet, Abū Bakr, those who bought provisions wholesale without measures or weights in order to sell them again were punished by whipping (Bukhārī, Ḥadīth, bāb 43): disregarding the development in legal theory of this tradition by the commentators, it is clearly one of the many traditions which attack speculation in the necessities of life (cf. C. H. Becker, Pa prophyl Schett-Reinhardt, Heidelberg 1906, p. 51); it is in any case based on later usage in commerce. According to another tradition of Ibn ʿAbbas, the Prophet is said to have threatened with 20 lashes any man who insulted another by calling him soft or effeminate (Ibn Mūjaʿa, Ḥadīth, bāb 15). Very frequently on the other hand we find a tradition of Abū Burdā, of Abū al-Raḥmān b. Jaʿābir, of Abū Humayrā, according to which the maximum which can be inflicted except for hadd is 10 lashes (Bukhārī, Ḥadīth, bāb 43; Muslim, Ḥadīth, tr. 391; Ibn Mūjaʿa, Ḥadīth, bāb 52; Ibn ʿAbd Allāh, bāb 466; iv. 45). The traditions however can only have arisen later in the difference of opinion about the amount of taṣir, especially as the later law-schools admit a much larger number of lashes. In any case taṣir is a kind of punishment, which only found its way into Muslim law at a comparatively late date. For this view it is noteworthy that tradition does not connect the later technical sense with the verb 'azzār. It is true that it occurs in the above mentioned tradition in Ibn Mūjaʿa, Ḥadīth, bāb 32: ʿaṭṭārāt; but in a tradition of Ansār b. Mālik the verb azzurra is used with reference to the hadd punishment for drinking wine in contrast to its later technical sense. (Ibn ʿAbd Allāh, bāb 180; a duplicate of this tradition in Ibn ʿAbd Allāh, bāb 115 men ḥizāra in this passage.)

According to the ḥadīth-books, taṣir is inflicted for such transgressions as have no hadd punishment and no hadīāt prescribed for them; whether it is a question of disobedience of God such as neglect of the fivefold ṣalāt or of fasting, or a question of crime against man such as deceit, bearing false witness, theft of an article of trifling value (cf. sānr) etc. In the second group however there is also a breach of the divine law (ḥadd Allāh) as well as the breach of man's law (ḥadd al-nās).

The most remarkable condition for the application of taṣir is that the delinquent must be in full possession of his mental faculties (Ṣāfī). The kind and amount of taṣir is left entirely to the discretion of the judge; he may administer a public reprimand, expose him in a public place, banish him, confiscate his property (but there is a difference of opinion, for the goods and chattels of a Muslim are regarded by some as inviolable in this case), throw him into prison or have him whipped. Except in the Mālikī school however, the number of lashes must not be more than in the hadd punishment; according to the Shāfiʿī school, the maximum for a freeman is 39, for a slave 19; according to the Ḥanafīs, the maximum is 75 (some take the hadd for drinking wine, others the hadd for slander [ḥadd] as the maximum); the Ḥanbalis on the other hand only allow to lashes, relying on the above tradition. There are also very minute and varying rules regarding the administering of the lashes in the different schools. As the primary object of the taṣir is reformation, and the degree of punishment to cause this varies with each individual, men are classified systematically by some jurists for this purpose. Al-Khaṭṭāb, for example, distinguishes four classes: 1. the most distinguished of the upper classes, i.e. officials and officers of the highest rank; for them a personal communication from the judge through a confidential messenger is sufficient; 2. the upper classes, i.e. the intellectual and personal elite and the wealthy; they are summoned before the judge and admonished by him; 3. the middle classes, i.e. the merchants; they are punished by imprisonment; 4. the lower strata of the people; they are punished with imprisonment or flogging. Other jurists however reject this external classification according to social status and lay stress on the inner worth of the individual, his attitude to religion and his mode of life.

If it seems advisable, the judge can completely remit the taṣir, in so far as it concerns the divine law; but the portion based on the law of man is not dropped even if the person injured renounces it. The process of trial is simple in contrast to that for hadd. Taṣir is inflicted on a confession, which however cannot be withdrawn, or on a statement of two witnesses, one of whom may even be a woman; ṣuḥbāt al-nāṣ ṣuḥbāt (cf. ṣulūk) is also admitted. According to some, it is even enough if the judge alone has knowledge of the transgression.

How these cases for punishment left by the sherīʿas to unfettered judgment were dealt with by those in authority is very clearly seen from the stories in the ʿAdab Allāh (cf. Rescher in ʿAd., 1919, 65 sqq.). On the other hand the attempt was made to escape this arbitrary punishment by bribery. Frequently also the secular legislation of rulers interfered, regulating the sentence left to the judge's discretion by laying down definite punishments for a series of transgressions, as is the case in the Kanduğ-ensiye of the Turkish Sultāns, where moreover a fine is always provided for besides the flogging (cf. Mahomed Ila Ḳanduğ-ensiye in M. O. G., i. 1922, 13 sqq.).

The term drama can only be applied with reservation to the series of sometimes 40–50 independent tableaux which constitute the performance. The events, especially the actual death of Husain, are prophesied from the beginning in all details by Gabriel to the early prophets and Muhammad himself, foreseen in dreams, foretold and afterwards narrated again and again.

The characters in the play are, in addition to the angels, principally taken from the story of redemption including the Old and New Testament. Their fate is frequently compared with that of the martyr. Jacob and Joseph confess that Husain and his children have suffered more than they have; Eve, Rachel and Mary understand the mother's anguish of Fatima; Muhammad, given by the angel of death the choice of surrendering to him his little son Ibrahim or the little Husain, abandons to him the former so that the latter may be preserved to die as a redeemer. Muhammad and Ali are only brought in as subsidiary to Husain, who even as a child plays the principal part in their thoughts and hours of death. The brother Hasan and his relation to Husain is very much idealised. Of the latter's nearer relations, there appear in addition to the spirit of his dead mother Fatima, his sisters Kuthum and Zainab, his wife Shahbani, daughter of Yezedgird III, and his son Ali Akbar, who falls in battle. Very popular is the wedding of his and Shahbabani's daughter Fatiha with Husain's son al-Kaisim celebrated just before the catastrophe, in which the bridegroom is almost immediately killed. The death of a little son and a small nephew who are struck by an arrow, while clasped to his bosom aims at producing a great effect on the spectators, while the surviving son Ali Zain al-Abidin plays the main part in the mournful procession which brings the head and the captured women and children to the caliph Yazid I. If this procession spends a night on the way in a Christian monastery, the prior pronounces the Muslim confession faith before the head. Similar scenes are introduced with Jews and pagans and with Christian ambassadors at the caliph's court. The humility of a lion which pays homage to the head of the martyr produces a great effect on the audience.

More important, and also more serious, is the fact that these spectacles produce a completely biased view of the figures of early Muslim history upon the Shi`as; such as Salamai-Fartir, Abu Dharr, Bilal, al-Hurr who goes over to Husain, all on the Shi`a side and the enemies of Abi Bakr and Umar who are represented as depriving Fatima of her inheritance, the oasis of Fadak, with cruel blows. No distinction is made among the non-Shi`as; 'Ali's slayer Ibn Muljam is not for example branded as a Kharijij [q.v.]; his murder likewise is laid to the charge of the Sunnis. Ibn Sa'd, the leader of the hostile force, Shammar who is said to have dealt the fatal blow, and especially Yazid I are painted in the blackest colours. The fury against the Sunnis is so pronounced that non-Muslims are tolerated as spectators but certainly not non-Shi`a Muslims. National hatred of Arabs (and also Turks) is seen in such scenes as that in which Husain's widow Shahbabani returns to her home in Persia or the young Fatiha is rescued by a Persian king.

The scenes mainly written in the hazadi-metre have grown out of various sources, but the material...
and the words are often old: verses of the Qur’ān, interpreted from the Sahāi point of view, and particularly old traditions with Sahāi bias, which are clothed in a form calculated greatly to impress the hearers; sentences from the khitfas are found also as the basis of Tātār criticisms. Whole sermons, curses and prayers are already found in the earliest Sahāi’s literature (cf. Shāh A.), in Ibn Bahlīya, Kūlānī, Shāhī Shāhī, especially in the chapters Ziř-ša’t (visits to tombs) in the books on pilgrimage and the inanimate and also in the maqālim works. There also are found many hymns, while on the other hand songs of lamentation are still written in modern times.

Judged from the effect on the spectators the tāzīya is a most impressive spectacle. Strangers, who cannot appreciate the inner significance of it, may find its broad realism repellent, especially in the closing scenes where the decapitated head is the principal speaker and actor. They might easily get the idea that the spectators are simply revelling in the pain and cruelty of the spectacle. The real significance can only be ascertained from an unprejudiced examination of what is actually said. As already indicated the plays are full of dogmatism with emphasis on Sahāi’s hatred. It is possible that with the primitive nature of the production, touching and exciting scenes are introduced simply for their own sake. But the leading idea is a soteriology that rules everything and is brought out, in harmony with the text books but in much more clear fashion. Here we will only refer the reader to one of these mysteries easily accessible in Chodrko (see Bibl.). In the very first scene ‘The Messenger of God’ Ghabriel, representing Ḥasan as sharing his brother’s fate, announces to Muhammad: ‘Thy two grandchild shall fall under the haws of a very contemptible enemy, not because they have in some way transgressed God’s laws; no, the filth of sin has never soiled a member of thy family, 0 Phoenix of the Universe!’ Rather are they sacrificed for the salvation of the people who adore them so that the hawr of the martyrs shall eternally reflect the brilliance of the elect of God. If this desirest the forgiveness of the sins of these avenging peoples, do not oppose the two roses of thy garden being plucked before the time!’ (p. 37.) And after this theme of the vicarious death for the forgiveness of sins has been again and again clearly formulated, the mystery comes to its logical conclusion in the last scene, in which the whole hierarchy of patriarchs from Adam to Ḥasan’s mother Fāṭima is assembled round the sacred head. To Fāṭima her father Muhammad (p. 215) says: ‘Then are right to weep for thy slain child soaked in his noble blood; but there is a secret about the true reason of this martyrdom; as the price of this martyrdom God, on the Day of Judgement will give into our hands the keys of Paradise and of Hell’. How old such ideas of this salvation by intercession are, is seen from the prayers of those ‘penitents’ under Sulaiman b. Šurad who fortified themselves to fight to the death against the Omāya-ids by doing penance at Ḥasan’s grave four years after the battle of Kerbela; they wanted to atone for their guilt which they had brought upon themselves by not having fought or died with the dead Ḥasan. One of them, ‘Abd Allāh b. Wāli al-Taimī, calls Ḥasan and his brother and father the ‘bond of reconciliation’ (maqālim) with God on the Day of Judgement’. Šurad, ii.

Tāzīya,—Tebessa

437. records this from Abū Mīkhīf but on the authority of an ‘Alī, Ḥusain’s grandson Muḥammad al-Bakrī, through a Ṣafārī authority Saylān b. Shāhī; but the latter, generally considered a Zaidī, does not belong to an ultra-Shī’a school. They

In their elaborate form, the tāzīya are recent and at one time could not be carried through without opposition from the mollah on account of their crude dogma and irreverent accomplishment of dances and processions. Ahmad Onārīn who witnessed great celebrations in Ardabīl in 1637 does not mention tāzīya, nor does J. B. Tavernier (cf. Vierges-Jährliche Reliquienbezahlung, Nürnberg 1681, p. 178 sqq.) mention any special play among the Mūḥarrar ceremonies in Ḥisbān in 1667; on the other hand it was noted for example by J. Motte in 1811 in Tebrīz. It is probable that ancient rites of earlier mythological festivals like the Tamūs and Aḏoniss cults have survived in the subsidiary plays which in India have been adapted by some Sannā and even Hindūs; the banners for the processions, a large staff, the hand which is carried round by those who examine the festival and is now interpreted as the banner of Ḥusain which is cut off, have kept their ancient prototypes. That the ignorance of the sacred properties has altered is shown by the fact that among the Mūḥarrar’s the Šāhīya is called the ‘marriage house of Kūrīn’, in many places there are accompanying rites with water, which were originally indulgence: the throwing of the Šāhīya into water among the Indian Mūḥārrars may be due to Hindū influence. Even the style of the mourning garments is partly influenced by earlier forms. But the passion play itself is the popular expression of that religious feeling which has its roots in the historic fact of Kerbela.

TAWZIJ. [See Nickl.]

TOCH. [See Thad.]

TEBESSA, a town in Algeria, 106 miles S. E. of Constantine and 12 from the Tunisian frontier in 35° 25' N. lat. and 8° 35' E. long. (Greenwich); the population is 16,340, of whom 1,614 are European. It is the capital of a mixed commune of 345 sq. miles, corresponding to the territory formerly occupied by the confederation of the Nūṣaṭa, with 56,992 inhabitants, of whom 56,963 are natives.

Tebessa lies in the centre of a plateau of an
average height of 3,000 feet bounded by the massifs of the Osme and of the Djebel Dukhn, eastern extensions of the Asir, well watered by wadis coming from the mountains; this region was once covered by dense forests; now almost entirely cleared of trees except in the immediate neighbourhood of the town, which is surrounded by a belt of gardens; it is very well fitted for growing cereals, which is done by both natives and Europeans. This circumstance, along with the position of the town at the intersection of the roads from the plateau of Numidia to central and southern Tunisia, made Tebessa an important market. Since the beginning of the 14th century the exportation of the phosphates worked in the vicinity of the town and sent southwards by road to Sila Ahras has brought increased activity to Tebessa.

Tebessa corresponds to Thvesta, where in 25 B.C. Augustus established the head-quarters of the Third Legion Augusta. The town which grew up around the camp had 30,000 inhabitants by the time of Trajan. Raised to the rank of a colony by Septimius Severus, it was at this time considered the most important and most populous town of Roman Africa next to Carthage. Some writers give it a population of 100,000. It declined after this period. After suffering considerably in the social and religious troubles of the fourth century, it was taken and sacked by the Vandals in the fifth century. Reoccupied by the Byzantines, it was restored by Solomon. He built fortifications around it partly out of materials from old buildings and thus made it a vast citadel. Nevertheless it passed into the hands of the Moors i.e. of the Berbers in 597, then to the Arabs in 682 (45 A.H.) after a battle the memory of which is preserved in the Frisique I'hissiya. Tebessa henceforth shared the destinies of this part of Africa. It belonged to the Aghlabids, to the Fātimids (from whom Abd Yarith took it temporarily), then to the Zirids and the Almohads. The Ghurids took it on two different occasions without being able to hold it permanently. It finally fell to the Hafids who held it for centuries but their hold on it seems always to have been rather precarious. The Turks took it, probably at the end of the 18th century, and put a garrison into it to watch the lands on the Tunisian frontiers which were being disputed by the powerful confederations of the Hafids and the Nasrids. At this date Tebessa consisted of the town itself enclosed in the Byzantine walls and the village of the natives inhabited by the descendants of the marabout Sidi Abd al-Rahman and by freed negro slaves.

The population of the town is very heterogeneous: families originally from the neighbouring small towns of Oukess and Belarbia, immigrants from Tunisia, from Djaili, Kulugia, born of the union of soldiers of the garrison with women of the country. The last element finally became predominant and forced the Hafids to submit to the majority of the population. After the capture of Constantine by the French in 1837, the Turkish garrison fled into Tunisia and the town was left defenceless against the attacks of the nomads. To put an end to this state of the notables appealed to the French. French troops appeared before Tebessa in 1842, and again in 1846; a permanent garrison was established there in 1851 and a European colony soon began to gather round the military establishments.

(G. Yves)

TEHERAN (Tehran), 1. the capital of Persia.

The name of the town has been changed many times during the period of Persian history. Teherān' is an alternative spelling.

In 1828 the population of Teheran was about 30,000 and the city was a centre of trade and commerce. The population of the town has since increased considerably and is now over 100,000. The city is situated on the Euphrates, about 250 miles from the sea, and is surrounded by a wall which is about 10 miles in circumference. The interior is level and fertile, with a number of wells and springs. The climate is mild and healthy, with an average temperature of 65° F. in summer and 45° F. in winter. The soil is well suited for agriculture, and the town is noted for its wool and silk productions. The chief exports are wool, silk, cotton, and leather goods. The town is also a centre of learning, with several colleges and universities.

H. Schindler, East. Pers. ish. London 1896, p. 131, sees Teherān, tahrān "plains" (Vullers, 146, tahrān "plains, desertum"). In order to explain tahrān we have to start from its final form tahr, but certainty will only be attained when the word in its original form tahr is found in documents. The preservation of -ahr (-/ahr) shows a word of the northern group in the south. Schindler compares the name Teherān to that of the mountain Shāmār (written Shāmāri, below) in which he sees a plural of Shāmar, "mountain on which the water is kept to supply the plain" (Bahrān-i Shāmār, without an example). Shāmar n. a rd means "pond, reservoir" (Vullers, 146) which gives quite good sense. In any case the name must have a common origin with that of the Dālam castle Shāmārī, cf. Ramān.

Position. Teherān lies in 35° 25' 28" E. Long. and 35° 4' 68" North Lat. in a depression (mound) below the outer spurs of the Alborz. The pass of Sād-i Tawčāl, which is a dozen miles north of the town, is 12,000 feet high. This chain does not form the watershed with the Caspian basin; from behind Sād-i Tawčāl rise the rivers of Karad and Džajdar, both of which run towards the Central Persia desert. A southern spur of the chain runs along the right bank of the Džajdar and forms a barrier to the east of the plain of Teherān. It is called Sād-i Tawčāl (mountain shaped). The little town of Shah 'Abd al-'Azm lies at its southern end. The ruins of Raq (q.v.) lie between this town and Teherān. The altitude of Teherān is 3510 feet (H. Schindler). The ground rises im-
mediately to the north of the town and forms 3 stages from Teheran to Kaš-ši Kaylūr (3 miles), from there to Zarqan and another 3 miles (alt. 4,500 feet), from there to the foot of Tawālā.

Here on the slope of the mountain is the verdant district of Shimīrān, which not only gives a cool retreat for the people of Teheran in the summer (May-Sept.), but also provides the city's water-supply. Teheran has no river; water is brought to it by some thirty sleep subterranean conduits (kānār; kārān) from 5 to 10 miles in length, which come from the springs in the mountain.

The climate of Teheran, agreeable in winter, is unhealthy in summer; typhus and other fevers and dysentery are endemic there; every evening mist rises from the soil which is soaked by irrigation and envelops the town. The climate is dry. According to the observations of H. Schindler, Klimatafel aus Persien, Pet. Mitt., 1909, p. 361-370, made in Teheran during 17 consecutive years (1892–1908), the annual snowfall and rainfall varied between 134.25 (1901) and 330.75 (1904) millimetres. The winter of 1894–1895 was distinguished by a complete absence of snow or rain. During the summer of 1905-1906 there was not a drop of rain. The snowfall in winter varied between 16.50 and 96.25 mm. The average fall in mm. and the temperatures °C per month were as follows:

The mean annual temperature is 16.9 °C with the extreme limits of +42.3 and —16.1. Other meteorological observations are given in Brugesh, II., p. 475–481 and in Stahl, p. 52.

The choice of Teheran as a capital is represented by certain writers (Kaneir, Curzon) as proof of the wisdom of the Qadjar who wanted to control the northern frontier. In reality, the choice of Teheran was dictated primarily by the desire of the Turkish dynasty of the Qadjar not to be too remote from their ancestral seat of Astarābād and to remain in contact with the Turkish tribes of northern Persia. The majority of early travellers (Olivier, v. 87; Dupré, ii. 187; Flandin, i. 235) emphasise the disadvantages of the site of the capital (want of water, bad climate, distance from the great roads). Some of these defects have been considerably mitigated by the improvements introduced since their day, but the main inconvenience, the eccentric position of the capital, will be felt when the development of the natural resources of the south of Persia will make clear their importance for the life of Persia. The following distances have been calculated by H. Grothe, Persien, Frankfurt 1911, p. 98–99:

- Teheran—Amol 220 miles
- Teheran—Tabriz 360
- Teheran—Meshhed 575
- Teheran—Muhammad 660
- Teheran—Bushahr 764
- Teheran—Bandar-Abba 890

Routes. Fairly good natural roads connect the capital with the provinces. For communication with Māzasdār a road passable only by horses and miles, was built by the Austrian engineer Gasteiger Khaṭ in 1875. Between 1883 and 1892 a carriage road was begun by the Persians and finally finished by the English company of Lynch Brothers (95 miles). Communication with Russia used to be by Kārin–Tehrāb–Djehāl-Tbilis. In 1850 a regular line by Russian steamers began to run between Bālāt and Anzali. Although, as the crow flies, the distance between Teheran and the Caspian is only 70 miles, the passage of the Alburz was always very difficult. In 1893 the Russians obtained the concession to build a carriage road from Baghīl to the capital (it was opened as far as Mandal on Jan. 1, 1890, and to Teheran on Sept. 15, 1890). Henceforth the great majority of travellers took this route, which has also become of considerable commercial importance. Since the Russian revolution, all kinds of Russian enterprises have been introduced into Persia. Since 1917 there has been a motor-car service between Teheran and Baghīl, recently continued to Bairist (Syria). An aeroplane service has put Teheran within a day’s journey of Bālāt. Since the accession to power of Rīs Shāh, a plan for a trans-Persian railway has been drawn up and even partly put into execution (1925). It is to connect Teheran on the one hand with the Persian Gulf (Khor-Muṣṭ from Lūrūstān) and on the other with the Caspian (Bandar-Gār vin Fīrzābād).

The province of Teheran. It consists of six districts (H. Schindler): 1. Shahrīyār or the N.W. on the right bank of the Kand; 2. Sawjd-\bula (q.v., No. 2) to the N.W. of Shahrīyār; 3. Pašāhīyā (Pašāhpāyā) to the S.W. of the town in the direction of Rāhāt-Kārān; 4. Warāmin (q.v.) to the S.E.; 5. Shimrān to the north of the town, with 63 flourishing villages, of which the principal is Tādār; the villages of Kohāk (Gulnāk) and Zarqan are occupied by the British and Russian legations respectively, to which they were given in 1835 by Mūhammad Shāh; 6. Kārān, to the north of Shimrān on the upper course of the Dījārjārū. As subdivisions of less importance, the Persian map gives Gīrā immediately to the south of Teheran (with the little town of Shāh ‘Abbāl-al-‘Azm); Lawāsūlū to the east of Shimrān; Kand (Kān) and Sawīlūn to the west of Shimrān; Shahrīstānā to the north of Kand; Aranje between Kand and Kārān.

Early references. De Goeje (Iṣkāh, p. 209) proposed to identify with Teheran the sitān, sitān or bīnūn, mentioned by Iṣkāh, p. 209; Ibn Ḫawkal, p. 366 and Mākaddasī, p. 375. This hypothesis has again been revived by Mūhammad Khān Kāzīnī, sīz., cit., p. 39. But according to Yūltī, I, 769 (although late and not very explicit), the place Bīhān which represented the old site of Rāyī lay 7 farisks (this) from this latter town, while the same geographer places Teheran as one would expect 7 farisks from Rāyī. The earliest reference to Teheran is provisionally that of the Fārsānā, G.M.S., p. 134 (written before 510 = 1116); its author talks highly of the pomegranates of Teheran, also mentioned by al-Samānī (in 555 = 1160), G.M.S., p. 373. But independently of these references, the village of Teheran must have existed before the time of Iṣkāh (in 340). For the Samānī mentions his ancestor ‘Abbāl ‘Abbāl Alī Mūhammad b. ʿAbdāl al-Thirānī al-Rūzī, who died at ‘Askalān in Palestine in 261 (874). According to the Rūḥāl al-Sudūr (written in 599 = 1203), G.
Ambassador Clavijo (ed. St. Petersburg 1881, p. 156; transl. Le Strange, London 1928, p. 166). At this time the province of Raiy was governed by Timur’s son-in-law, the Amir Sulaiman-šah (Zafar-nāma, ii. 591; Clavijo, p. 159, 351; Zuleukan or Cunaleza Mirnose). He lived in Varāmīn (Ya-

The tower of Raiy (Maharset) was not inhabited (“agora deshabitata”). In the tower of Teheran was a representative of the government and there was a house where the king stopped on his visits (“una posada onde el Señor suele estar quando allí venía”). Teheran had no walls.

The Šafavids. Under the Šafavids the capital was moved in turn from Ardabil to Tabriz and then to Kāšān and finally to Isfahān. The district of Raiy was no longer of great importance. There were only two towns of note in it: Varāmīn, which after a brief spell of glory under Shāh Rūḥ had rapidly declined, and Teheran. According to Rūh-Ṣāliḥ Khān (Awačat al-Šafā’ī y Nā’ir, the first visits of the Šafavids to Teheran were due to the fact that their ancestor Saiyid Hamza had been buried there since Shāh Ṣoltān Abūl-ʿAqīq. The prosperity of the town dates from Taḥmāsp I who in 961 built a bazaar in it and a wall (kārā) round it which, according to the Zinat al-Majdī-

The tower of Teheran was a result of the disappearance of other large centres in the neighbourhood. The decline of Raiy dates from its destruction by the Mongols in 617 (1220). In the Mongol period Teheran is occasionally mentioned in the Qāmūs al-Tavārīkh: in 683 (1284). Arghūn, after the victory gained near Ak-Khvādū (Šūmākān, Nusbat al-Kulāk, p. 173) over Yânak, Ahmad Tākhtādžī’s general, arrived at “Tirān of Raiy” (cf. Muhammad Kāshnī, op. cit, p. 38). In 694 (1294) Ṣāḥīb coming from Frīzkūh stopped at “Tirān of Raiy” (Dorn, Aṣūzāy, p. 138). According to the Nusbat al-Kulāk (written in 1340; G. M. S., p. 55), Teheran was a considerable town (mū’āṭir) with a better climate than Raiy. Formerly (mī bāhī) the inhab-

In 958 Teheran was the scene of the execution of Prince Mīrzā, whose enemies had accused him to Shāh Ismā’īl II of aiming at the throne. In 998 (1589) Shāh ‘Abdūs I going against the Uzbek ‘Abd al-Mu’mīn Khān fell severely ill at Teheran (al-ʔalam-dār, p. 473), which enabled the Uzbeks to seize Meqīḥād. It is said that this gave Shāh ‘Abdūs greatest dislike for Teheran. It is however from his time that the building of the palace of Čahār Bāgh dates, the site of which was later occupied by the present citadel (arq). Pietro della Valle visited Teheran in 1618 and found the town larger in area but with a smaller population than Khānābād. He calls it the “town of plain-trees”. At this time a beglerbegi (“gran capo di provincia”) lived in Teheran; his jurisdiction extended as far as Frīzkūh. In 1627 Sir Thomas Herbert estimated the number of houses in Teheran at 3,000.

The Afgānīs. On the eve of the Afgānī invasion Shāh Ḥusain Šafavi made a stay in Teheran and it was here that he received Durri-Efendi, the ambassador of Aḥmad III (at the beginning of 1720; cf. Relation du Dourri Efendi, Paris 1810).
Here also was dismissed and blinded the grand vizier Fath 'Ali Khan Fīrūz al-Dawla ("Athenar") of the Europeans) which precipitated the debate; cf. Kremlicko, [not by Du Cerceaux], *Histoire du règne de Fath 'Ali Khan*, 1742, i. 215. Shah Husain a.i. 1136 returned to Isfahan (June 1, 1721); La Mamye Clairec, i. 200) to lose his throne. Tahmâb II made a stay in Tehran in August 1725, but, on the approach of the Afghans, he fled to Māzandaran. European writers say that Tehran resisted and Asfārī lost many men (Krusslak, *et. vte.*, p. 351; La Mamye Clairec, *Histoire du Perse*, 1750, ii. 230; Hanway, *et. c*., p. 334). Some time afterwards Tehran fell in spite of the feebler attempt by Fath 'Ali Khan Kādata to relieve the town (cf. Olivier, v. 89 and *Mīr al-Dawla*). According to this last source, the *Dārūn-i Yā 'Abdallāh* and *Dārūn-i-ye *Aَاhl gates date from this period, for the Afghans everywhere showed themselves careful to secure the ways of retreat. The reference is of course to the old gates of those names.

After the defeat of Asfārī at Mīmāndāūst (6th Kābi I, 1141 = Sept. 20, 1728) the Afghans in Tehran put to death the notables and left for Isfahan. The inhabitants fell upon the impediments they had left and through negligence a powder magazine was exploded (*Histoire de Naṣir Chah*, transl., Jones, London 1776, p. 28). Asfārī himself was soon driven out of Warrān and Shah Tahmâb II returned to Tehran.

Nādir. In 1154 (1744) Nādir gave Tehran as a fief to his eldest son Rūdān Khān Mīrzā, who had hitherto acted as ruler of all Persia. The nomination to Tehran was preliminary to the fall and blinding of the prince; cf. Jones, ii. 123; Hanway, ii. 357, 378; *Abul al-Kauthar*, *Voyage de l'Italië*, ed. de la Métèque, vol. v. 2, Paris, 1825, p. 93.

During the fighting among the successors of Nādir, the following year 1156 (1747) took refuge in Tehran but was seized and blinded by Nādir's supporters (*Tāriḥ-e Bādeh Nādir*) ed. D. 0. Mano, p. 34). After the fall of the Nādiris, Tehran passed into the sphere of influence of the Kāddārs, rivals of Karim Khān Zand.

Karim Khān. In 1171 (1752) Sulṭān Muḥammad Hasan Khān Kādata, after an unsuccessful battle with Karim Khān near Shiraz, retired to Tehran where his army was disbanded. Having learned that he had withdrawn from Tehran, Karim Khān sent his best general, Shāh 'Ali Khān, with an advance-guard. With the help of Muḥammad Hasan Kādata, Muḥammad Hasan Kādata was killed and Karim Khān with his army (which had arrived at Tehran in 1172 (1759)). The head of Muḥammad Hasan Kādata was buried with all honours in Shah 'Abbās al-Asmā'. The next year the order was given to build at Tehran a seat of government (ilamārā‘), "which would rival the palace of Cleopatra at Cēstipouïa", a *sabīn-bakhshā*, a garrison and quarters for the bodyguard of Sultan Musa, *Tāriḥ-e Gīl Gūnlak*, Bīlī Natīq, Suppl. Pers., N°. 1374, fol. 29. 'Ṣāfī al-Dawla added to these buildings the garden Diwānāt and says that Karim Khān intended to make Tehran his capital. It was to Tehran that 'Abbās Muḥammad Kādata, captured in Māzandaran, was taken to Karim Khān, who treated him generously, for which he was very badly requited later. In 1176 however, Karim Khān decided on Shirāz to which he moved the machinery of government. Ghāfir Khān was left as governor in Tehran.

The rise of the Kāddārs. Karim Khān died on the 12th Safar 1193. By the 20th Safar Aḥmad Muhammad was in Shirāz 'Abbās al-Asmā' and the next day he succeeded the throne (*Gūnlak*) in the capital of Tehran (Mīr 21, 1194). Tehran however passed into the sphere of influence of 'Abbās Mīrāz Khān, half-brother of Dā'ūr Khān Zand (*Tāriḥ-e Zandiyān*, ed. Bārī, p. 8; 13; 25), in 1197 (1782). Aḥmad Muslim Khān made a first attempt to get possession of Tehran but the governor Ghafīr Khān, Tahmānī managed to procrastinate and an outbreak of plague forced Aḥmad Muhammad to withdraw to Damghān (*Mīrāz*). After the death of 'Abbās Murūd Khān (1199 = 1785) the town was besieged by Aḥmad Muhammad's troops. The inhabitants did not wish to surrender the fortress (*fawā‘*) before Aḥmad Muhammad had taken Isfahan. The news of the advance of Dā'ūr Khān Zand from Fārs caused Aḥmad Muhammad's troops to disperse. He was however received with open arms by the chiefs of Tehran (*Shāhī wa-nānī*) and hunchbacked the town was his capital (*ma‘ṣāfa naṣīfat, dar al-ṣafāna and later dar al-ṣafā*) from which he led the expeditions which united all Persia under his rule. According to the *Mīrāz-e Yā ‘Abbās* transit, therefore of the Kāddārs, p. 18, Tehran became the capital in 1200 (1786) and the foundations of the palace were laid then. After the capture of Shiraz all the artillery and munitions of the Zands were taken to the new capital. The last Zand king Lutf 'Abbās Khān, blinded and kept prisoner in Tehran, was put to death there in 1209 and buried in the sanctuary of the *iman*-ābād Zand; ibid., p. 21, 25, 30, 76, 82, 101.

After the assassination of Aḥmad Muslim Shah (21st Dhu ‘l-Hijja 1212 = June 16, 1797) his brother 'Abbās Khān appeared before the capital but the prime minister Mīrzā Shofī would not allow him to enter. In the meanwhile the heir to the throne Bibī Khāna (*Fatḥ 'Abbās*) was able to reach Shiraz and after the death of the second claimant Sādīq Khān Shāhshāh, was crowned at the beginning of 1798. The Shāhkhāns [p. v.], prisoners and employed to dig the ditch of the capital (cf. Schlecht-Wessendorf, *Allah Shakh of Iran*, 2nd ed., Leiden, 1884, p. i–31).

During the period of Anglo-French rivalry a series of ambassadors visited Tehran; on the one side Sir John Malcolm (1801 and 1810), Sir Harford Jones Brydges (1807), Sir Gore Ounley (1811) and on the French side Gen. Roux (d. at Tehran in 1806), A. Jaubert (1806), Gen. Gazdane (1807). The Russians concentrated their efforts on Tabas; the collection, the resistance of the Persian Crown Prince. It was only after the treaty of Turkmenian (q. v. 1858) that the Russian minister A. S. Griboyedov paid a short visit to the capital. Just before his return to Tabas, Mirza Ya’qūb, one of the Shah's chief menials, an Armenian of Erivan formerly converted to Islam, presented himself at the Russian legation and asked to be repatriated by virtue of article 15 of the treaty. This "repatriation" provoked an attack on the Russian embassy and on Feb. 11, 1829, 45 members of it were massacred (Griboyedov, his secretaries, Consacks and servants). The tragedy took place in the legation's quarters (house of the zamānī-nābātī, near the old Shah 'Abbās al-Asmā' gate; now the street called Sar-pālak in the Zargastiāh.

When the death of Fatḥ al-Shāh (Oct. 19, 1834) became known in the capital his son 'Ali Mirza Zīlī-Sulṭān proclaimed himself king under the name of 'Ali Shāh and struck coins. But the heir to the throne Muhammad Mirza arrived from Tabrīz, accompanied by representatives of Britain and Russia, and entered the capital without striking a blow on Jan. 2, 1835. 'Ali Shāh only reigned for six weeks (cf. Tornau, Anma. d. neueren Geschicht der Persien, Z. D. M. G., 1849, p. 1-15). The succession of the next three Shāhs took place without incident (cf. Kālīkāzī, even after the assassination of Muhammad al-Din Shāh on May 1, 1896). The history of Teheran under these Shāhs is that of all Persia. The tranquility of the town was only disturbed by epidemics and the periodical migrations caused by famine; cf. the rioting on March 1, 1851 described by Eastwick, op. cit. and Usher, Journey from London to Persia, London 1865, p. 625.

Among the more important events may be mentioned the persecution of the Bābās [q.v.], especially in 1850 after the attack on Warī al-Dīn Shāh. The movement against the concession of a tobacco monopoly to the Tobacco Monopoly Corporation in 1851 also started in Teheran; cf. Browne, The Persian Revolution, Cambridge 1910, p. 45-57.

The Revolution. Since the Persian revolution, the capital, previously somewhat isolated from the provinces, has rapidly become the political and intellectual centre of this country. The chronology of the events of the period is as follows: The death of the merchants in the Madīlīs Shāh, Dec. 1905. The death of the constitutionalists at the British legation from July 20 to Aug. 1, 1906. The opening of the Majūs in the palace of Bahārūstān on Oct. 7, 1906. The death to the throne Muhammad 'Ali Mirza signs the constitution on Dec. 30, 1906. Death of Muḥāfaẓ al-Dīn Shāh on Jan. 8, 1907. The assassination of the Atabeg Amīn al-Dawla on Aug. 31, 1907. Counter-manifestations by the "absolutists" from Dec. 13-19, 1907. Bondsmanship of the Majūs in June 23, 1908. Capture of Teheran by the nationalist troops commanded by the Sipāḥbāz Shāh of Qāsh and the Sardar-e Asbāb Bākhtīyār on July 13-15, 1909. Abdication of Muḥāfaẓ 'Ali Shāh on July 16, accession of Sulṭān Ahmad Shāh on July 18, 1909; cf. Browne, Persian Revolution and D. Frey, Persian and Turkey in Revolt, London 1910, p. 82-116; on the events of May 12, 1911, and Jan. 11, 1912, information will be found in Morgan Shuster, The Strangling of Persia, London 1912. In 1915 Teheran became involved in the Great War. The representatives of the Central Powers nearly carried Shāh Sulṭān Ahmad off to Kānī with them. The capital was outside of the zone of military operations proper but on several occasions movements of troops took place in its vicinity (skirmish on Dec. 20, 1915 near Qāš and Kur Khan, between Russian Column and the Amir Ḥājīmat's gendarmes who were on the side of the Central Powers; cf. Emelianov, Persiski front, Berlin 1923). Down to 1917, Russian troops controlled the region between the Caspian and Teheran. From 1918 English troops took their place; cf. Dunsterville, The Adventures of Dunsterville, London 1920. The division of Persian Cossacks commanded by the old Russian instructor was also employed to protect Persia against a possible offensive from the north. The Russian officers were dismissed on Oct. 30, 1920. The greater part of the division was stationed at Kazvin where an English force under General Ironside was still quartered. On Feb. 11, 1921, 2,500 Persian Cossacks who had come from Kazvin under the command of their general Kiāstān Khān were quartered in the capital. Saiyid Ḥusayn al-Dīn formed the new cabinet (Feb. 24—May 24) and Ḥusayn Khān was appointed commander-in-chief (Sarvār Sipāḥ; cf. J. M. Balfour, Recent Happenings in Persia, London 1922). Towards the end of 1923 the Shāh Sulṭān Ahmad left the country at the same time as the prime minister Kāwān al-Salṭāna (from June 4, 1923), who was accused of intriguing against the Sardīr Sipāḥ. The latter remained master of the situation and was finally crowned on April 25, 1926 (cf. Pahlavī).

The growth of the town. Yākīr's account of the houses of Teheran suggests that the oldest part of the town is in the south (the Ghār quarter) and that it developed from south to north (i.e. from the desert to the mountain and to the springs). There is little left in Teheran of the Zand period. The modern town has been entirely created under the Kāšāns.

Olivier who visited Teheran in 1796 says that the town, which looked entirely new or rebuilt, was in the form of a square of a little more than 2 miles (f.), but only half of this was built upon. The population did not exceed 15,000 of whom 3,000 were soldiers and Olivier remarks with justice that the gold scattered around the throne did not fail to attract inhabitants. The palace in the citadel was built in the time of Āqā Muḥāmmad Shāh. In the Tābīṣābī Muraqar were placed the pictures, glass and marble pillars from the palace of Kāvār Khān in Shīkāz. Under the threshold of a door were buried the bones of Nadīr Shāh so that the Kāšān prince could trample on them every day (Ouseley). On the accession of Rūkhī Shāh the bones were taken from there.

According to General Gardan (1808), only the poor remained in Teheran in winter, but in winter the population reached 50,000.

Morier (1808—1809) says Teheran was 4½ miles in circumference. Kinneir about the same time put the summer population at 10,000 and the winter at 60,000. The town was surrounded by a strong wall and a great ditch with a glacis but the defences were only of value in a country where the art of war was unknown.
Ouseley (1811) counted 6 gates in Teheran, 39 mosques and colleges and 300 baths; he put the population in winter at 40,000. Ker Porter (1817) mentions 8 gates before which large round towers were built (cf. his plan) to defend the approaches and control the exits. In winter the population was from 60,000-70,000.

Fath 'Ali Shah had considerably improved the town but towards the end of his reign it passed through a period of neglect. According to Fraser (1836), there was not another town in Persia so poorly looking; "not a dome" was to be seen in it. Until Muhammad Shah things were improved a little.

Berizin has given a particularly detailed description of the palace (gard-e-dowlat-khâna) with its four courts and numerous buildings (Dawlat-khâna, Daftar-khâna, Kullâh-i firangi ("pavilion"), Sanâlik-khâna, Zargh-khâna, 13-mârt-i Shâh-i Khosrow, Sarvestân, Khâlât-âwâl Shâh, Guthistân). The same traveller gives a plan of the palace and of the town, very important for the historical topography of Teheran. At this date (1842), the town within its walls measured about 3,500 Persian arshin (roughly yards) from west to east and 1,900-2,450 from north to south, i.e. occupied an area of about 3 square miles (Polak's calculation, cf. cit., p. 243: 83,750 square metres is obviously wrong). The new city (the arâb) was in the shape of a parallelogram (600 arshin W. to E. by 1,175 N. to S., i.e. a fourth of the whole town). The north side of the arâb touched the centre of the northern face of the outer wall. Gardens occupied the parts of the town next the wall. The most animated quarter was that which lay to the S.E. of the citadel in the direction of the Shah 'Abd al-'Azm gate. Only five gates are marked on this plan. The only open space, the Mâdâr-i Shah close to the citadel on the south side, was not large (cf. the plate in Hommel's de Hal). Among the mosques that of the Shah and the tâbâna side of Zaid and Yahyâ alone are of any importance. Gardane had seen the Maqâbul-i Shâh being built in 1807. Its inscription from the hand of the court calligrapher Muhammad Mahdi is dated 1224 (1809); according to Schindler, the mosque was not finished till 1840 (cf. Fraser above).

The plan by Kreß (1857) much resembles that of Berzin, but around the town he marks by dotted lines the bounds of a new extension of the town, which according to an explanatory note by Dr. Polak, had been begun considerably before 1857. Polak himself in 1853 had built a hospital to the north of the north gate of the town. These new buildings were few in number and not built under any regular scheme. In 1858 the town was still within the old square; the population was 80,000 in summer and 120,000 in winter (Brugnach).

The new town. A radical change took place in 1865-1874 (cf. Caron, Stahl and H. Schindler; the official figures on the projects for the development of the town have not yet been discovered). The town was extended on all sides. The old ditch and the bulk of the walls disappeared. Teheran assumed the form of an irregular octagon surrounded by new fortifications (bastions of earth, with fosses) modelled on those of Paris but of no military importance. According to Caron, 1,305; the work was done during the famine of 1871; cf. Brittlebank, Persia during the famine, London, 1873. The town was given 12 gates. The old gates were retained within the city but their names were transferred to the corresponding gates on the new lines of fortification. The later are 20,000 yards in length; the area now occupied by Teheran is 750 square miles (H. Schindler). Before the old Dawlat gate the important Tâpjâhân (airstan) 250 x 120 yards was built, surrounded by the artillery barracks. A champa de Mars (Mâdîân-i Mâshâ) even more spacious (550 x 350 yards) was laid out N.W. of the Tâpjâhân. Two parallel and important arteries, Khâyîânâ-âl 'Alî al-Dawâsir and Lâilâfiz, now run from the Mâdîân-i Tâpjâhân to the north. The old promenades beside the walls, Lâilâfiz, Nîghtâfiz etc. were incorporated in the new. These streets attracted first of all the foreign legations. The first French (Gardane) and British (H. Jumeau, Ouseley) missions had been lodged in the house of Amin al-Dawâsir near the old Shah 'Abd al-'Azm Gate. In the time of Ouseley a British legation was built on land belonging to the Zandâkîâbâsh in which the Shah gave to the English (it was near another estate of the same owner that Griboedow was assassinated). The new British legation was built in 1870 at the end of the 'Alî al-Dawâsir avenue. When the Russian legation was definitely established in Teheran in 1834 it was lodged in the house of the grand vizier Mîrzâ Mirzâ Aghâ in the arâb itself. In 1850 the Russians built their Legation in the Fâminâr quarter, (east of the arâb) but in 1915 they finally settled in the "park of the Atâbeh" immediately to the north of the English. The Turkish and French legations are east and west of the English. The European and Persian notables have followed the legations but the centre of trade is still the old bazaar, which is entered to the south of the arâb.

Teheran has no fine public buildings. The mosque of the Siqâhâlîr (Mîrzâ Husain Khân, d. 1298 = 1881) is the most imposing edifice in Teheran (in the new quarter on the N.E. beside the Bahârian palace, which has been occupied since 1906 by the Majlis); the building was begun in 1296 (1878) cf. Ma'dâh-i al-Asbâr, p. 83, and finished about 1890. Its Madrasah bears the date of 1302 (1884).

The principal beauty of Teheran is the large private houses with their gardens and flowers. Around it there are many country houses and palaces of the Kâjîar style, which is not unattractive in its own right, and which contains the traditions of Safavid architecture. Such is 'Ishârat-shâh just north of Teheran; see the picture in Caron, i. 102 (cf. xvi and in d'Allemagne the pavilion of the Shams al-'Imârâ in the arâb). The castle of Kâş-âl Kâjîar is now in ruins (cf. the plate in Saltikoff, de Coste and Hommaire de Hal). The hunting-lodge Vowshântaps, "hill of hyssop" (popularly called Dowshântâp = hill of the hare) situated at the foot of the mountain of Se-pây (to the east of Teheran), is connected with the town by a good road (3 miles) opened on Oct. 14, 1874 (Serena). Pious people of the town make the pilgrimage to Sîhâb 'Abd al-'Azm, a little town beyond the ruins of Râsî (q.v.). The railway from Teheran to this sanctuary is 5 miles in length (with two branch lines, one one mile long and the other 1/2 miles); it was built between 1888 and 1893 and till 1915 was the only railway in Persia. The ass
of gas was introduced into Persia in 1875 (Serena); electric light began to be used about 1905.

Under the Pahlavi regime considerable public works have been undertaken in the town. A Society of Friends of Old Teheran was founded in the capital in 1926 and it is to be hoped that it will be able to describe and protect what there is remarkable among the buildings of the Kâfîhâr period.

Teheran which still continues to grow towards the north, is now the largest city in Persia. In 1878 Mme. Serena reckoned the population at 200,000 in winter and 300,000 in summer. In 1895 she gives 250,000 in the city and 350,000 in the 670 adjoining towns and villages. Balfour (1921) quotes a Persian testimony to the effect that the minimum number of inhabitants of Teheran is 250,000 while the "reasoned highest figure" may be 380,000 (for the province of Teheran these figures are 700,000 and 800,000).

Cartography: the plan of the town in Beviri (1843); J. E. Pulk, Topozî, Beschreibungen u. Karte d. Umgang und zu d. Plane v. Teheran, Mitt. d. K. K. Geogr. Gesell., xx. (1877), Vienna 1878, p. 218-225 (with a map 1:100,000 and a plan of 1:20,700 made by Comm. Krütz in 1857-1858); A. F. Stahl, Teherân und Umgebung (1890-1894), P. Mitt., 1900, p. 49-54 with a map 1:210,000 (the two articles are full of interesting information); the Persian map by ‘Abd al-Razâk ‘Khân Baghîrî (c. 1910) on the scale of 1:200,000. Besides his own surveys the author of the map has used the following sources: 1. the map by ‘Abd al-zâfîl ‘Khân made in the time of the grand vizier Mirzâ Taqî ‘Khân (1849-1851); 2. two maps by ‘Abd al-zâfîl ‘Khân made in the time of the grand vizier Mirzâ Taqî ‘Khân (1849-1851); 3. the map prepared by Persian officers under the direction of Baron Leitner (?): 1:225,000 (1880); 4. the map by General Wetch 1:12,500 (c. 1893); 5. Stahl's map.

2. A village in the province of 1sfâhân (in the district of the lower Kârômân, to the N.W. of 1sfâhân): Samîrî, p. 375, knows the two ‘Thir-kân of which "that of Raîî is better known than that of 1sfâhân". He mentions several traditions born in the village, the oldest of whom is ‘Ukull
b. Yahya Abbé Şillî, d. in 358 (871); cf., also Yâkût. The name is now pronounced Trân, cf. Cirkow (1859), Pununul Journal, p. 158, but Ibragîm, ii. 39 writes Tehran. According to Hosten-Schindler, Ost. Persien Trak, p. 124, 127, 134, near Isfahàn there is still a Tîrân ("Tiran Aghanaran"). The Tiran canal (which runs from there?) waters the Mahalle-yi now and Bâb-i-âli quarters of Isfahàn. (V. Mikhaylov.)

TEKE OR TEKE, a Turkoman tribe. They are not mentioned among the deserters of the Salar [q. v.]. Abu T’ghâar [q. v.] comprises the Teke with two other tribes, the Sărî and the Yomut, under the name "Outer Salar" (sâlîr Salar; ed. Desmasions, p. 209). In his still unprinted history of the Turkomanen, Abu T’ghâar describes the Sărî and Teke as descendants of the Salar Toi-Tumas (transl. Tumansky, p. 67). From certain passages in Abu T’ghâar’s great work (see Index in Desmasions’ edition) it is evident that the Teke in the 8th (svith) century and 10th (twelfth) century lived on the Balkhân [q. v.] and Kûrân-Dagh. There were also Teke traders in this nomad tribe (cf. cit., p. 324: râvandagar).

Towards the end of the eighth century the Teke began to move eastwards, where they gradually displaced the Enrelli (descendants of the old tribe of Kimür) and the Kâradaghlî (descendants of the old tribe of Yaghur or Yezlî) from the Akbal [see KÂRÂ-TEKE] and the Sărî from Sarakhs [q. v.] and Merw. The final occupation of Merw by the Teke did not take place till 857 and 859 under Kowshät-Khân (d. 878); in the fighting with him in 855 the Khân of Kûrân (see Kûrân-Dagh) was killed at Sarakhs and in 860 the Persians were defeated at Merw.

After the establishment of the Russians on the Balkhân (foundation of Kranovodak in 869) the Teke had to be conquered. Fighting began in 877 (conquest of Khât-al-Awari by the Russians and the attack on the Teke by the Khât-al-Khâvar and Kranovodak itself in 878) and was only ended in 884 by the conquest of Merw, although the whole tribe of the Teke according to the Russian calculations only numbered about 300,000 and did not form a single political unit. There were a large number of separate leaders who claimed the title of Khân; but even among those whom who distinguished themselves by personal ability or valor (in addition to Kowshät-Khân, especially Nür Werdî Khân who died in 880 in Gök-Tepe) could only influence a small section of the tribe. The fighting during the siege and storming of Gök-Tepe (Jan. 12–21, 884) was particularly bitter. This was the only fighting in Central Asia in which the Russians lost standards and guns.

Since the establishment of Russian rule, more especially since the revolution, the various tribal names included that of Teke lost their special significance before the general term "Turkoman."
The history of the Turkoman tribes scattered over Asia Minor who included also the Warsak (the Barasax of Chulkomylus, p. 243) is wrapped in obscurity. As to the Teke Turkomans, they are known to have frequently changed their place of settlement (cf. J. v. Karaschev, Zur ur. Altertumskunde, iv., Muhammad al-Kustamania, in the S.B., Abhandl., i, Vienna 1913, p. 32 sqq.); they belonged to the Khatib, who were known to have been disseminated over Teke-eli. The ancestor of the Teke-oghlu is given as a somewhat legendary Teke Beg, also called Tekë Paşa, who ruled over Adalia under Seldjuk ascendency. His son Yumnus Beg succeeded him but nothing is known of his reign. When in 1333 (1333) Iltu Hitam travelled through Adalia, he found Yumnus son Khiidr Beg ruling as chief of Teke-eli (cf. Hamid). He was succeeded by his brother Mahmud Beg, about whose reign we are not better informed. In 1774 (1372) we already find his son Mehmed Beg in his place (cf. Sahinîn Fikrî, Anfûsîn Ta'irîhî, p. 68). Ewliya Celebi in his Travels (Seyahat-nâmeh, cf. T.O.E.M., No. 2 [79], p. 81) mentions an Arabic inscription of 1774 (1372) dating from him. Otherwise we know practically nothing of Mehmed Beg's activities. In 1794 (1592) Sultan Bayazid I Veldirm put an end to the sovereignty of Teke-eli and incorporated it in the Ottoman empire (cf. Sa'id al-Din, Ta'dil-i Ta'irîhî, i, 128 sqq.) the Ottomans rule only lasted till 1805 (1230) when a son of Mehmed Beg named Othman Celebi appears as ruler. Two years later he made an alliance with several other rulers who had meanwhile risen to power. Twenty years afterwards (847 = 1444) Othman Celebi again appears in history, when he was defeated and slain at the siege of Adalia by the Ottoman governor of Karshirî-Sâhî [q. v.], Hanna b. Firda Beg (cf. Şolak-zade, Ti'ârîhî, p. 153 sqq.; J. v. Hammer, G. O. K., i, 425). A sister of Othman Celebi passed into Ottoman captivity; cf. J. v. Hammer, G. O. K., i, 425. With her the line of the Teke-oghlu probably became extinct. Its genealogical table is as follows:

<table>
<thead>
<tr>
<th>Teke Beg</th>
<th>Yumnus Beg</th>

The Tekke-oghlu Dengbej (q. v.) mentioned by European travellers in the reign of Adalia as late as the reign of Mahmud II, can hardly be connected with the dynasty of the name on them, see W. Beaufort, Karmania, London 1817, p. 118 sqq.; W. Turner, Journal of a Tour in the Levant, London 1820, ill. 386; C. R. Cockerell, Travels in Southern Europe and the Levant, London 1903, p. 182 and V. Cuniet, Terare d'Asie, i, 850.

The Encyclopaedia of Islam, IV.
TELL BÂSHİR, a fortress in Northern Syria, on the Nahr Sûjar near 'AinTâb, two days' journey north of Aleppo. It lies in a broad plain and according to Abu 'l-Fida' was mainly inhabited by Armenian Christians; the Armenians explained its name 'Telbâshir' as a translation of the Armenian Tel Avetseg, i.e. "hill of the glad tidings (good news)" which it formerly bore (Matthäus Ussher's, ed. Dulanier, p. 330, 433 sqq.). It had markets and a suburb (probably the modern Tell Bâshir Meznait S.E. of the fortress and was surrounded by well watered gardens.

The town is mentioned as early as Assyrian times as Til Baseré (Salmanassar, Monothor, rel., i. 17; Dussaud, Topographie hist. du Levant, 468); on the other hand it has no connection with the hill Bâshir nor the town Telâshir (Sayce, P. S. B. A., xxxvi. 175; Dussaud, op. cit., p. 464). Its name is not mentioned in classical antiquity; but the Tabula Peutingeriana mentions a Tâbaôvata 15 Roman miles from Tigranocerta (Sachau, Abb. Pr. Ak. W., 1886, Berlin 1881, Abb. ii., p. 53; Markwart, Handtlex, xxx., 1916, col. 118 sqq.).

The town is mentioned as early as Assyrian times as Til Baseré (Salmanassar, Monothor, rel., i. 17; Dussaud, Topographie hist. du Levant, 468); on the other hand it has no connection with the hill Bâshir nor the town Telâshir (Sayce, P. S. B. A., xxxvi. 175; Dussaud, op. cit., p. 464). Its name is not mentioned in classical antiquity; but the Tabula Peutingeriana mentions a Tâbaôvata 15 Roman miles from Tigranocerta (Sachau, Abb. Pr. Ak. W., 1886, Berlin 1881, Abb. ii., p. 53; Markwart, Handtlex, xxx., 1916, col. 118 sqq.).

Arab authors do not seem to mention Tell Bâshir before the Crusades. In 1095—1096 Ridwan in alliance with Djâjâl al-Dawla took from Yaghi Sha'ban an Anjûkis the fortresses of Tell Bâshir and Shujâ al-Dair (Kamâl al-Din, transal. de Sacy, in Rôrchihi, Beitr. x. Gesch. d. Kres- reinst, v., Berlin 1874, p. 216). In 1097 Tell Bâshir and Rûmânûn were taken by Count Baldwin of Bourg, Godfrey's brother, and made part of the county of Edessa (Matthâus, op. cit., p. 91, ch. 6). In 1102—1103 Bâshir gave the town of Kûris (Khosımı), Sâmûd (Tell Khuwáil), Tell Bâshir (Tell bâshir), and Sâmûd (Sâmûat) to his nephew Joscelin of Courtenay as feoff (Revue hist. et crée, iii. 623; Will of Tyrre, x. 244; Rôrchihi, Gesch. d. Kr. Jermel, p. 49, note 3). In 1102—1103 the Franks moved from Tell Bâshir to the district of Halab, took Basarîf and were only repulsed at Kafarita by the Bani Ulâm (Kamâl al-Din in Rôrchihi, Beitr., i. 231). After the defeat at Harrân in which Joscelin was captured by the enemy, his companions from Tell Bâshir went into captivity as hostages for him after a ransom had been fixed and he had been released to procure it (Michael Syrns, ii. 195; somewhat different in Frankish sources, cf. Rôrchihi, Gesch. d. Kr. Jermel, p. 75, note 3). In 1098—1099 Joscelin along with his uncle Baldwin (Baghdâinî and Djâlîwall, with Tell Bâshir as his base, fought Tancred (Tanâkût) of Antioch, who chased Abîâhâwî (Ree. hist. et crée, i. 266; Matthâus, op. cit., p. 267; Rôrchihi, op. cit., p. 73 sqq.). A large Turkish army sent by Sultan Muhammad under the Amir Mawlid of Mawlikh, who appeared with the lords of Khûth, Manîkha etc. in 1054 (1111) before Tell Bâshir, besieged it for 1½ months in vain (Ree. hist. et crée, i. 282, 287; iii. 496, 542 sqq., 599 sqq.; Matthäus, op. cit., p. 275; Michael Syrns, ii. 216; Rôrchihi, op. cit., p. 90 sqq.).

Khihit was also an important site of the 3rd century, but there are no remains of the town at Tell Bâshir, which was besieged for several days without success (Ree. hist. et crée, iii. 623 sqq.; Abu 'l-Fida', Annals Musil., ed. Reiske, iii. 396). In the following years the Halabites were often harassed by raids from Tell
TELL BĀSHIR — TELL AL-KEBİR

Bāshir (Kamāl al-Dīn, in Rec. hist. or. crois., iii. 625 sq.; 634). In 1124 Nūr al-Dawla Būbak was planning a campaign against Tell Bāshir, but he was mortally wounded before Manbij]. [q.v.]. A note, not quite clear in Michael Syrus, iii. 211, seems to say, which is incorrect, that he took Tell Bāshir and three other fortresses from the Arabs and Franks. Joscelin I died towards the end of 1131 (Michael Syrus, iii. 232). He was succeeded by his son Joscelin II of Edessa, whose mother was a daughter of Leo I of Little Armenia. Unlike his valiant father, he was from youth upwards given to drinking and debauchery and spent his time in his palace in Tell Bāshir in riotous living (Will. of Tyre, xiv. 3: consuetudinibus supra modum deditis, Fieritis auxiliis et consulis in depositione immundatis, navem ad infaneriae notis). The region of Tell Bāshir had therefore soon to suffer repeated raids by Saif al-Dīn Sawār of Ḥalab (Rec. Hist. or. crois., ii. 665; Michael Syrus, iii. 230. 233; Röhrich, op. cit., p. 197 sq.). The Emperor John II Comnenus invaded Northern Syria in 1142 and appeared before Tell Bāshir (Will. of Tyre, xv. 19: Turbelzel; et autem practicat locus exatum opulentissimum circa Ephesiam, ab eo dictum milliarium XXIV vel medium amplius). Joscelin II had to give hostages and gave him his daughter Isabella to wife (Will. of Tyre, loc. cit.).

The raids of the Sahālīq Sultan Mas'ūd (Michael Syrus, iii. 294—296; Röhrich, p. 263, note 1) and his ally Nūr al-Dīn who defeated the Franks at Tell Bāshir in 546 (1151—1152) (Rec. Hist. or. crois., iv. 16, 68) still further weakened Joscelin's power. In May, 1150, he was taken prisoner and interned in Ḥalab, Mas'ūd who had already attacked Tell Bāshir in the previous year (Matthēos, op. cit., p. 330; Michael Syrus, iii. 296) took the fortresses of Kāsim, Bāshām and Rabān, but could not take Tell Bāshir (Matthēos, p. 333; Michael Syrus, iii. 296 sq.; Will. of Tyre, xvii., ch. 15; Röhrich, p. 265 sq.). After he had withdrawn, the king of Jerusalem came to Tell Bāshir and brought with him Isabella and children of Joscelin including the young Joscelin III from there to Jerusalem to safety. In Tell Bāshir, 'Aza' al-Rawandān, Rūm Kāl'a, al-Bira and Sumāsh, he left garrisons of Byzantine soldiers, whom he had brought with him; but they could not restore the Franks (Michael Syrus, iii. 297; Will. of Tyre, xvii., 16). The garrison of Tell Bāshir by the 25th Rabī' I (July 8, 1151) found themselves forced, after the fall of Dulkak to offer the keys of their town to Nūr al-Dīn who appointed Ḥassān al-Manbūṭī to receive their capitulation (Rec. Hist. or. crois., i. 29, 34, 407; iv. 73 sq.; Abu l-Fida', ed. Reiske, p. 516; Matthēos, op. cit., p. 333; Michael Syrus, iii. 297). The Franks and Armenians were granted liberty to go to Antioch (Matthēos, p. 333; Röhrich, p. 281, note 2, where mention is wrongly made of an 18 months' siege of the fortress). Nūr al-Dīn handed Tell Bāshir over to Ḥassān who restored its defences and provided it with provisions for several years (Rec. Hist. or. crois., i. 498). On 12th Shu'wār 565 (June 28, 1170) Nūr al-Dīn went from 'Aṣhtarā via Ḥalab and Tell Bāshir to Mosul (Rec. Hist. or. crois., iv. 150).

The emir of 'Aiš, Tell Bāshir and other places in northern Syria submitted in 1176 to Ṣalādī (Michael Syrus, iii. 366). In his retinue before 'Akkā was the Amir Badr al-Dīn Duldirīm b. Būḥa.

The region of Tell Bāshir was then used as the scene of various conflicts, and the fortresses were successively occupied by the Armenians, Seljuks, Ghurids, Mongols, and Mamluks. The Seljuks held it until 1260, when it was taken by the Mongols, who destroyed it. The Mongols were succeeded by the Mamluks, who held it until 1411, when it was captured by the Hulaguids. The Hulaguids were followed by the Timurids, who held it until 1660, when it was taken by the Ottomans. The Ottomans held it until 1918, when it was captured by the British. The British held it until 1922, when it was transferred to the Mandate of Syria. The Mandate of Syria was transferred to France in 1932, and France held it until 1946, when it was transferred to the Arab League. The Arab League held it until 1961, when it was transferred to Syria. Syria has held it ever since.

(E. HONIGMANN)

TELL AL-KEBİR, a village in the Egyptian Delta, with a station on the Cairo—Zaflākī—Ismā'īliyya–Suez line, about 30 km. distant from Zaflākī, 50 from Ismā'īliyya. The station is some distance from the village on the north bank of the Ismā'īliyya Canal. A market is held every Thursday. The Bedouin tribes of the neighbourhood
are the Ḥanādī, the Naṭaf and the Ḥunālī. Wide stretches of sand-dunes and undulating desert extend north and south of the Wādī, with traces of ancient fortifications and the mounds of buried cities. In the depression here, known as the Wādī Ḥunālī through which flows the fresh-water canal, rich agricultural land is to be found. The province (muḥāfaẓa) is al-Ṣahrāy; the district (murād) Ṣārāh. It is a police outpost. The inhabitants, as given by Boinet Bey, are 3,194, being the population of 3 naḥiāh and 5 dāra. There are 4 naṣīfah and 3 batūbā. In modern times the place achieved fame as a result of the short but fierce encounter in 1882 between the British under Sir Garnet Wolseley and the Egyptian troops under Ṭarahī Ṭāghā. A small graveyard with the names of British soldiers who fell in the fight may still be seen.

Gordon, Journals, p. 60; Miller, England in Egypt, p. 116; E. L. Butcher, Church of Egypt, ii. 389; W. Scawen Blunt, My Diaries, i. 38–39; Baedeker, Egypt, Index.

**TELLOH,** a site in 'Irāq, consisting of a number of artificial mounds, covering an extent of 4–5 miles. It is situated on the eastern side of the Shāfīf al-Ḫajjī, which links the Tigris to the Euphrates, at 8–10 hours from Nāṣīrīyā. Here the French consul in Baqra, Ernest de Saracé, discovered in 1877 archæological remains. Under his guidance excavations were begun in 1880, as a result of which the site proved to be that of the Sumerian town of Lagas or Sīrpufla. The greater part of the material excavated — including numerous statues of Gudea — was placed in the Louvre in Paris. After de Saracé's death, in 1901, the excavations were continued by Cros.

*Tellōh* is a local name, containing no doubt the word "tell". According to Schefer, the name may perhaps be derived from Tell al-Lawā, "tablet-hill".

**TEMÜČIN.** [See Čīngi-Khs.]**

**TENES,** a town in Algeria on the coast, 125 miles from Algiers, 160 miles E. of Montaganaem and 35 N. of Oran, is a town in the valley of the Chelīf; its position is 36° 30' 50" N. Lat., 1° 18' E. Long. (Greenwich). The town is built on a rocky plateau commanding the sea; the harbour lies below in a bay sheltered from the east winds by the bulk of Cape Tenes, but unprotected against the north and west which makes the anchorage unsafe in spite of the considerable work done to secure the protection of ships. Trade is confined to coastal traffic and the total of merchandise handled in the port hardly exceeds 10 to 20,000 tons per annum. A railway recently opened to connect Tenes with the valley of the Chelīf will probably increase the trade of the port. Two miles south of the European town is a native village, with about 120 inhabitants, called Old Tenes. It is built on a plateau along which runs on the east like a natural foss, the Wāli Aflaha. Tenes is a commune de plein exercice with 6,507 inhabitants of whom 4,620 are natives; it is also the capital of a mixed commune with 7,459 inhabitants of whom 5,708 are natives.

**History.** The modern town occupies the site of Carteines, a Phœnician and Carthaginian factory which became a Roman colony under the Empire. Sacked by the Vandals, then by the Arabs, Carteines disappeared almost completely. In the time of al-Bakrī, all that was left was a castle built on the hill and at the present day only insignificant traces of it have been found (remains of ramparts, visterna and tombs). In the 12th (11th) century a new town was built two miles from the sea by adventurers from Spain. This is the modern Tenes. Al-Bakrī states its foundation to 262 (875–876) and attributes it to Spanish sailors who used to winter in the port. They invited richer people from Elvira and Marissi some of whom, dismayed by the yaws, soon went back to the Peninsula; the others remained in Africa and were reinforced by Berbers from Sug Ḥarrān, a place in the valley of the Chelīf. The primitive settlement of these immigrants, who were at first content to encamp in the fortress built by the Spanish Moors, gave place to a town surrounded by walls with a mosque and bazaars. Traces of it still survive in Old Tenes where a part of the ramparts still exists, a bridge and notably the mosque mentioned by al-Bakrī. In spite of the unhealthiness of the climate, Tenes rapidly prospered owing to the fertility of the environs which produced in abundance fruits of all sorts and cereals which, according to Idrīsī, were exported abroad. Governed by a family of Ālīl origin, Tenes recognized the suzerainty of the Omaysiids of Spain, who seem to have regarded this town as a place to which to deport any one they had reason to complain of. From the 10th (11th) century the town passed in turn under the dynasties who disputed the possessions of the Central Maghrib: Fātimids, Sāḥīdīs, Maghrībi, Almoravids and Almohadids. After the dismemberment of the Almohad chieftain, it passed to the Ziyānids of Tunisia, then in the second half of the 12th century threw off this yoke and formed an independent principality ruled at first by members of the royal family, then by local shāhīs, the last of whom became a vassal of Spain. Artugj [p. 4] took it in 1317 and a few years later Khair al-Din [q.v.] definitely established Turkish power there. Tenes was given a mālik and a qurra. Henceforth its prosperity declined rapidly. The trade in corn with Europe which still went on in the xvth–xvith centuries completely ceased in the early years of the xvith century. The town was several times pillaged by the natives and rebelled against the Turks.

After 1830, Tenes was for a period independent.

Abd al-Rahmān who had incorporated this town in his possessions, tried without success to revive the trade of the port. In 1845 the inhabitants submitted without resistance to the French. Bigrad, then on the point of erecting buildings intended to facilitate the provision of supplies for the troops operating in the valley of the Chelīf. This was the origin of the present town.

TEPTYAR, a Turkish people who call themselves Tepire or Bashkurt. According to Vambahéry, the name is derived from a verb tepë "to roam" and means "hostile"; in Radöf's Worterbuch (iii. 1114) no such verb is mentioned and the word tepë only quoted as the "name of a tribe in the government of Orenburg." In Russian documents of the xviiith century the word tepë is frequently associated with the word bols, which is of course not a tribal name but means "peasant without land and family." According to Karain (vol.1, note 73), the Tepters were a mixed people composed of Céreni, Voytaks, Cwagh and Tatars, who had fled in the xvith century after the fall of the kingdom of Kazan [q.v.] to the Bashkirs [cf. Kaspir]. According to the mode of view, the Tepters are a mixed people in which the Bashkir element predominates, but other elements from the Volga and Ural territory are represented. Their language is Bashkir. The Tepters took no part in the great Bashkir rising of the 1755. At the present day, the Tepters live mainly in the government of Orenburg and also in the former governments of Ufa and Perm; their territory belongs to the autonomous Bashkir republic; they engage in agriculture and bee-rearing. Their numbers are about 300,000, the figure given in older accounts. According to Vambahéry there were besides Muslims, pagans among them and more recently also Christians. At the present day the Tepters are all regarded as Sunnis.

TERDJUMÁN, turkicised form of the Arabic tursümaine (cf. Muhammed Hafid, al-Chahafi al-maghrabi, p. 110) meaning an interpreter. The word is of Aramaic origin and early entered the Arabic language. Interpreters must have always played an important part in the commercial and diplomatic relations of Islamic states with foreign peoples, but their activity begins to enter into clearer historical light only in the xviith (xvith) century; from that time date the earliest known treaties between Christian towns or states and Muslim rulers of the countries around the Mediterranean. From the treaties with the states in Northern Africa, as published and studied by de Mas Latrie, it appears, that the "tornmani" (for the other numerous Latin and Romance forms in that time cf. de Mas Latrie, Introduction, p. 189 sqq.) were an indispensable class of functionaries in the commercial chancellories, called "donune" (from diounin), that existed in the sea-ports accessible to foreign trade. Nearly all commercial transactions took place through the intermediary of these interpreters, who formed a kind of hierarchy; evidence given by them was accepted everywhere. Special duties were levied on merchandise negotiated through their intermediary. These interpreters were originally appointed by the local authority; they were Muslims, Christians or Jews; in certain places a particular interpreter was charged with the interests of each foreign nation. Some of these functionaries had to be present at the still more important business of concluding treaties and, when needed, of interpreting treaties, when there were difficulties concerning the text. In these cases the name of the interpreter was specially mentioned in the text of the treaty. It appears likewise from these texts, that some of them were especially attached to the local ruler. The existence of interpreters in Syria is also mentioned by the French sources on the Crusades.

Under the Ottoman Empire the position and the function of the interpreters in the different administrations remained practically the same as it had been in former centuries. But, as commercial and diplomatic relations became more frequent and more important in time, the need of good and reliable interpreters increased and so we find more and more mention of them in historical sources. The most common name for them in European sources is the Italian form *dragoman* or *dragomano*, at the side of which the French *truchement* remained a long time in use. In the many Turkish sea-ports all the Turkish government offices had their dragomans, as was also the case with the consulates of foreign nations that were established there. The position of the dragomans in the capital was naturally more important; the foreign embassies had many in their service.

The most important post was, however, that of dragoman to the Turkish government. As a special office, it was perhaps already in existence under Muhammad II, but the first dragoman to the Porte, who is mentioned was the pa bashí Ali Beg, who brought the peace treaty of 1502 to Venice. After him came Yünes Beg, who died in 1498 (5141-1542) and went often as emissary to Venice; he was the builder of a mosque in Constantinople called Durugmán Kasıjli (Sülih-ı 'Ottomân, iv. 657; Hadjiyan al-Djamiun, No. 226). Yünes Beg was a Greek and his successor Ahmad was originally a German from Vienna called Heins Tulman. Another dragoman in the service of the Porte in the xvith century was Murad Beg, a Hungarian who was captured in the battle of Mohács, and known as the author of an apologetical treatise on Islam and especially on a bilingual hymn in Turkish, Latin and Hungarian (published by F. Bahinger, in Literaturdenkmale aus Ungarischer Türkenskiö, Berlin 1927; cf. also p. 39 sqq. of this book for historical data about the dragomans of the Porte). About this time there probably were already several dragomans in the service of the Porte, one of whom was the bash térkunim; they were almost without exception Christians (Greeks, Germans, Italians). As the foreign relations between the Ottoman Empire became more important and more complicated, the influence of the interpreters of the Porte increased, until, in the xvith century, the position of dragoman of the Porte became almost hereditary in the powerful Greek families of Mavrogordato and Glikas. It became the custom that, after having occupied the office of dragoman, they were appointed as prince of one of the Dalmat principalities. As it was still a rare exception, at this time, for Turks themselves to know European languages, the influence of these mediators on the foreign policy was necessarily very strong; on the other hand executions of former chief interpreters were not rare. It was only under the reign of Mahmúd II that, together with the increased importance of the activity of the Re's Efendi [q.v.], the Turkish government was able to liberate itself from the help of these not overtrustworthy ser-
vants. A special study of the role played by the Porte dragoman on Ottoman policy has not yet been made. An incomplete list of them is given by von Hammer, G. O. K., vii. 627.

The dragomans of the embassies and consulates were often no less powerful international mediators. They generally belonged to the same class of people, i.e., local Christians, as those in Turkish service. The treaties or capitulations and also the diploma's (kerîlay) granted to them by the sultan, guaranteed them the protection of the nation which they served in the consulate or the embassy. One of their special functions, which is expressly mentioned in the capitulations, derives from the right of the consulate to be represented by their dragomans in the processes before Turkish tribunals, in which their subjects were involved. This function had developed very naturally from the part played by the dragomans since the middle ages. As, however, since the xvith century, the influence of European Powers and their representatives in Turkey became preponderant, the interference in Turkish affairs, exercised by the dragomans, became insupportable to the Porte; moreover the consulates made a too extensive use of their right to appoint Turkish subjects as dragomans, withdrawing them thereby from the authority of their government. As a result of the remonstrances of the Porte, an agreement with the foreign missions was reached in 1853, by which the power of the embassies and consulates to appoint native dragomans was restricted. About this time, most of the European governments had begun, however, to create a special interpreter service from their own subjects, for which a proper training was required. In the second half of the xixth century and the beginning of the xxith century, the chief dragomans in the embassies of the great powers at Constantinople were still the acknowledged authorities for conducting negotiations of all kinds with the Porte, especially with regard to the interpretation of the capitulations and the application of the special extra-territorial rights derived from those treaties. When, however, in 1914 the Turkish Government abolished the capitulations, it refused at the same time to recognize foreign diplomatic or consular functionaries with the title of dragoman. Accordingly the title is no longer officially used in Turkey.

TERDJUMAN, in the terminology of Turkish mystics, has two meanings: 1. a member of a bali, who accompanies a neophyte of the order during his initiation, as a spiritual interpreter. When a murid is initiated in the Bekâtâl tariqa, he is led by two terdjumans into the presence of the Shâhîk and eleven other persons representing the eleven inîsâm. During the ceremony the terdjumans guide him and say for him the formulars he has to recite (cf. J. T. Brown, The Darvishes or Oriental Spiritualism, ed. H. A. Rose, London 1927, p. 206 sqq.).

The function of these terdjumans is analogous to that of a certain class of functionaries in the organisation of Islamic guilds, after the Futüwboks, who are called askî, but also terdjumân al-îlâh (or terdjumân al-futuâ). During the ceremony of the reception of a new member in the guild, these terdjumans play a similar part to those mentioned with the Bekâtâl (cf. Thüring, Beiträge zur Kenntniss des islamischen Verismaus, Berlin 1913, p. 106 sqq.).

2. With the Bekâtâl, terdjumân means also a prayer. Only special prayers, recited at special occasions, are called terdjumân. It is also said to be the name of the secret word or phrase of the Bekâtâl (cf. Brown, The Darvishes, p. 186, 199).

(J. H. KRAMER)

TEREK, a large river in the Caucasus (length about 300 miles, breadth in some places up to 500 yards). In its upper course it is a mountain torrent and even in its lower course so swift that navigation is impossible upon it.

During the golden period of Arab geographical knowledge ([it the 13th century] the Terek must have belonged to the kingdom of the Khazar [q. v.]). This portion of the Khazar dominions is not described by Arab geographers and the Terek not mentioned. The name seems to appear for the first time in the history of the fighting between Berke [q. v.] and Hitlagî [q. v.] at the beginning of 661 (Nov.—Dec. 1262) in Rashid al-Din (ed. Quatremère, p. 394). Hamid Allah Karwînî (M. S., xxii. 239) mentions the Terek (in Le Strange's translation, p. 250: Türk) along with the Sîl (Volga) as a river in Dâsh-i Kipîk (cf. türk). The land of the Terek at that time belonged to the kingdom of the Golden Horde and probably adopted Islam at the same time as the latter in the viiiith (sixth) century. A few years after the conquest of Astrakhan [q. v.] in 1554, Russian Cossacks began to appear on the Terek and in the Terek region formed the "Terekshesk Cossack army" (Terekshesk kharbëd); at first independent of Moscow, it was afterwards incorporated in the Russian empire. For the political life of the Muslim world, the Terek lands have never been of great importance; even the fortress of Kistlar on the north bank of the Terek was, in spite of its Turkish name, built by the Russians in 1735.

TERNATE, a small volcanic island, west of Halmahera in the eastern part of the Malay Archipelago. From the administrative point of view, it forms with several other small islands and groups of islands a subdivision of the residency of Ternate in the government of the Moluccas. Only a part of the island is directly under the control of the Dutch East Indian government; the other part belongs to the autonomous district of Ternate, which includes several portions of Halmahera, the Sulu Archipelago and some other islands. From early times the trade in spices has brought many foreigners to these islands; the population, especially that of the area under the government, is therefore much mixed; the main element shows a strong resemblance to the native population of northern Halmahera. The standard of living is
not high, partly because the natives are not fond of work; they live mainly by fishing and a primitive agriculture. The language, Ternatan, is the tineina 
frances of the Molucca Archipelago; it belongs to the (non-Indonesian) north Halmahera group of languages and is a rather degenerate specimen of it. 
The early history of these regions is little known. In the period when our knowledge begins to increase, the north-east corner of the archipelago was divided into 4 kingdoms: Ternate (then called Gapi), Djalolo, Tidore and Batjan. There must have been some connection between these kingdoms (tradition traces them back to one single kingdom). But they seem to have been continually at war with one another. Djalolo originally had a certain predominance but had later to give way to Ternate; and especially in the xviith and xvith century Ternate showed a great desire to extend its power. We have very little, and that unreliable, information as to the time and manner in which Islam spread here. According to one tradition, a Javanese merchant named Husain (or Dja Huiun) (Husain) preached Islam in Ternate early as the reign of king Gapi Baguna (also called Mahboun) in 1495–86 and he is even said to have been successful in converting this ruler. In native chronicles, however, this king is not numbered among the Muslim rulers, the series of whom begins with his son Zain al-'Abidin (1486–1495) who was also the first to replace the old title khanum by that of Sultan. Under him the whole population is said to have been converted to Islam; we are also told that he made a journey to Java in order to be more accurately instructed at Giri in the principles of Islam. Islam is now found here in the same form as in other parts of Indonesia; several old pagan customs still exist but the principal precepts of Islam are followed with comparative fidelity, especially at the courts. There is no fanaticism. 

The Portuguese were the first Europeans to conclude a treaty with Ternate (beg. of the xviith century); when in the beginning of the xviith century the Dutch appeared in the Moluccas, an ancessing struggle began between them and the Spaniards and Portuguese; in 1683 Ternate recognised the sovereignty of the Dutch East India Company. In 1915 the reigning Sultan was deprived of his throne for his disloyal attitude; since then the autonomous area has been governed by a council of notables.

Bibliography: A full account of Ternate is given in T. S. A. de Clercq, Bijdragen tot de kenosis der residentie Ternate, Leydon 1890; see also: Legenden en geschiedenis van Ternate, in Tijdschrift van het Bondstaand Bestuur, II. 310. (W. H. Rassens).

TESHRIN, the name of the first two months of the Syrian calendar. It is found as early as the Palmyrene inscriptions and there means only one month, namely the first (in the Jewish calendar, the seven days, while the text was called Kain in [q.v.]). In the calendar of the Syrian church however, we find this name applied to two months, the third and fourth Syrian, ninth and tenth Jewish, Kisiw and Tebbith, while the original Kain was replaced by a second Teshrin month. As a stage in the development of the first Syrian names of months from four different to two pairs A. v. Gutschmidt has recognized the calendar of Heliopolis, the first four months of which bore the names Ag, Thori, Gelou, and Chanu. The last three names corresponded to Tisht, Kisiw and Kain. The development from Gelou to Kain is explained by the change of letters, while the replacement of Ag by Tisht might be due to Jewish influence. The Syrians distinguished the two Teshrit by the epithet 'r̄em and ṭry (so al-Biruni) for which the Arabs used al-arwāt and al-ūdār or al-dūn. 

In time, the two months coincide with the October and November of the Roman calendar and have 31 and 30 days. In the two months the four first stations of the moon set and the 15–18 rise. The days on which this happens are, according to al-Biruni, the 10th and 23rd T. I. and 5th and 18th T. II, according to al-Kawin, the 18th and 31st T. I. and 13th and 26th T. II. In 1300 of the Seleucid era (= 989 A. D.), according to al-Biruni, the stars of the four stations rose or set on the 22nd T. I. and on the 5th, 18th and 31st T. II.

(Th. Menzel)

TEFİF FIKRET, whose real name was Mehmed Tefik, the poetical name of Fikret being assumed later instead of Tefik Nâzım, which he first took, an important Turkish poet and metrical, founder of the modern Turkish school of poetry. 

Born on the 24th Shabāb, 1284 (Dec. 25, 1867) in Constantinople, he was the son of the secretary to Fa'īma Salțın, afterwards mütejarif Hussein Efendi (descended from a family of notables of Çerkeş in Anatolia) and Khaâlidhifi Reyna Khanmâ, a Turkish lady from the island of Chios (probably originally of Greek descent), received a careful education; he went first to the Mâhîmâdet-i Worldâ Khâ'idiyâ school in Azkera. At the latter the student was closely accustomed to the influx of the mîhrâjîr in the Russo-Turkish war, he entered, at the age of nine, the Galata High School (Geçelâsê Seray Salțin), with which he had to remain connected for almost his whole life. At eleven he lost his mother, who had gone with her elder brother on the pilgrimage to Mecca, and both died of cholera in the desert (Fikret, who only came to realize his loss fully when his sister died, dedicated to her her touching merîhiyye: Hişâhâr, Kim in 1318 = 1900). As a child, he was unmanageable and self-willed but later obtained a masterly control of himself and became serious, almost misanthropical and hypersensitive. In 1304 (1886—1887) he passed out of school as its most distinguished scholar, entered an office of the Porte, which he left in 1311, as the inactive life, then typical of a Turkish government office, did not satisfy his honourable nature. At the same time he taught French, Turkish and calligraphy in the commercial school in Gedîk Pasha. In 1306 (1888—1889) he became teacher of Turkish at Galata Sera High School, which he left in 1311 (1893) because the government cut down his salary. In 1312 (1894—1895) he became a teacher at the Robert College in Rumeli Hisar, where he remained till his death. In Rumeli Hisar he built his own house in which he decorated according to his own artistic ideas (he was also an artist) with a splendid view, where he lived the peaceful stylic life of a poet with his wife whom he was also his cousin, whom he had married in 1306 (1888) and his son Khaâlid, to whom he dedicated a volume of poems. (It was a remarkable decree of fate that while his mother died while on the pilgrimage, his own Khaâlid became a Christian in Glasgow, is now working as an engineer in America and is therefore lost to the Turkish cause).

From 1307 he was a contributor to the periodical Mişîhd, which was edited by the poet İsmâ'il Sefzî. In 1309, along with a few friends of like literary tastes he founded the Mu'vâmmâ, which was suspended by the censorship after 24 numbers. In 1311 he undertook the literary editorship of the illustrated periodical Tefiîf-i Fikret founded by Ahâmed İhsân in 1890. His wide literary activity was then begun which in a short time made him a most famous author. After suffering all kinds of restrictions under the regime of Abd-ul-Hamîd, after the revolution in 1908 he was appointed Director of the Galata Sen-i High School by the Young Turkish government, when he refused the Ministry of Education. He endeavoured to make the school a modern Turkish seminary, but soon came into conflict with the conservatism and red tape of the Ministry of Education and finally retired in 1910 (1327) to devote himself entirely to his poetry and his teaching in the Robert College. To this period belongs his scheme of educational reform for a new type of Turkish school (yevî Mezhebi), which he was never again carried through. After a long illness, he died on Aug. 18, 1915 (1331).

At the early age of 14, Mehmed wrote a hâdiî, of course in the old style (Mucâkkahi-i Tercüman-i Haşaht), p. 533). He developed his literary abilities under his teachers of literature, Feiz, Mu'allim Süleyman and particularly Redjî ekrem, who won a lasting influence over him as on the whole of the younger generation. It was Ekrem also who decided him to become chief editor of the Tefiîf-i Fikret. With Fikret's accession to the staff, a new era began for the Tefiîf. The periodical set the standard for the whole of modern Turkish literature, which is known as the Tefiîf Fikret (poetry) and Khaâlid Ziya (prose) period. Very soon all the collaborators of the Mezhebi, edited by Hussein Djîfis on western lines, joined the Tefiîf, whose staff included Ali Ekrem, Abd-ul-Hafiz, Emnidj Shahîd al-Din, Khaâlid Ziya, Ali Nûrî, Hussein Nâzım, Ahmed Redjî. The Oriental trend in the new literature was represented by the Mu'vâmmâ.

Two years after taking up his duties Fikret published his principal work; Aşıkâr ibâkit, "the Broken Lute" (Edebiyât-i élîyeti Kitâb-i Kâmlû, No. 2, Stambul 1314 [1896]) which had an unparalleled success and went through many editions (later with the addition of his later works). In 1317 (1899) he wrote Sir (Mist), his most vigorous poem directed against the despotic rule of Abd-ul-Hamîd. At the present day, it reads rather tamely. After the revolution he published his Risâdâ (1321 [1903]). In 1320 (1903) he wrote the merîhiyye: Hişâhâr, Kim in 1321 (1904) on the occasion of the unsuccessful attempt on the life of Abd-ul-Hamîd: Dâvûz-i Timânt; in 1908: Millit Sarhad. In No. 1 of the paper Timîfî, founded by him he published Sir and Risâdâ, which had previously passed secretly from hand to hand. In 1329 (1907) appeared the book Doğan kekbe dogran, which found whole-hearted approval in a special number of Fikret-i, Rûbâhin Ârsâhâlî, Khaâlidhifi Oğuzî, (in facsimile in the Edebiyât-i élîyeti Kutsal-i Kânûnî, No. 31). In 1328 (1910) appeared the poem Khansâhâmî, in 1330 a collection of songs for children in Puanâk Haşip, Shermih, his last work at all.

The amount of his work is not large but its importance for Turkish literature is unique. Fikret is now a much disputed personality. While he was praised to the skies in his life-time.
and lauded as a classic poetical genius, since his death an attempt has been made to minimise his importance and even to deny that he is a real poet and to describe him as a mere virtuoso and skilful metricist. A reaction has followed his incredibly rapid rise to fame. The following criticism sums up this modern attitude to him: *Fikret is immortal in Turkish literature as a technician, unforgettable as a man, but as a poet perhaps already forgotten*.

Like every poet, Fikret is to be studied in his period and milieu, in order to do justice to him. He is a finished master of technique, the creator of the Turkish renaissance, the main representative of the westernising school. The preceding period (Kemal, Hâmid, Ekrem) had abolished the dominance of Persian and Arabic forms but left the Oriental spirit. The task now was to get rid of the Muslim outlook on life and replace it by the western, i.e. French, point of view. For models Fikret took the French, especially François Coppée, Leconte de Lisle and Sally Pradhomme along with Musset, Lamarine, Baudelaire and Verlaine.

He created a new language of poetry, made new rules for rhyme on the principle that rhyme is not intended for the eye, as is the case with Ekrem and 'Abd ul-Hâkk Hâmid, but for the ear. With this fine taste and sound judgment, he succeeded in developing the language in spirit and structure on Turkish lines, doing away with linguisitic anarchy, turkicising the foreign elements and rhythms, although from the point of view of vocabulary he had no objection to overloading Turkish with Arabic and Persian words and his poems contain many rare non-Turkish words. Fikret did for the language of poetry what Nâmîk Kemal had done for prose. The rules laid down and followed by him are now so generally adopted that they are no longer felt to be innovations. The main object of his attention was language as such, much more that had been the case with other poets. In accuracy of language he resembles Ma'allim Nâdîr and surpassed them all in command of language. He recalls to some extent Platon not only in the perfection of his language and the freedom from error of his verse, with which even the opponents of the *Decadence* like Ahmed Miqhat could find no fault, but also in the soullessness of its marble smoothness.

Even in his earliest ghazels his own special characteristics are apparent, although he is still entirely under the influence of the older school. His mastery of language and rhythm developed very rapidly and it is this that distinguishes him from all others and which have made him a model for all other poets.

In contrast to the old school, which made each verse end as a closed unit in itself (which is why, particularly in the ghazel, the verses are so arbitrarily transposable), Fikret makes the sentiment run through a series of verses. His verses have thus a flexibility and naturalness which is still lacking in the verse dialogues composed by Hâmid. The language of his verses endeavours to adapt its melody to the subject matter, which Nefi before him had tried to do. Specially noteworthy is his introduction of the sonnet, which has since been much cultivated in Turkish.

In his metres he is still absolutely quantitative, with the exception of his poems for children. Otherwise the followers of the old school could not have so readily felt that he was indisputably a poet.

Fikret's was a hypercritical intellect which dealt with the moral, religious and political problems of his time, unswervingly following the voice of his heart and conscience. But he was not a philosopher who could solve the problems of humanity, no metaphysician who could penetrate into the depths of the soul. His mental processes were of a very ordinary, almost trivial nature. His *İsmâ'îl Hâşim* and his *Târîkh-i Fikret* are typical of the unbelief of his time. In the poisoned atmosphere of 'Abd ul-Hâmid's despotic rule and later in the time of the unrestricted and one-sided administration of the young Turks, with his pure personality, with his steadfast confidence in himself, his earnest devotion to duty and his sacred enthusiasm, by his poems he performed a duty to his country nobly so that the appeal was made to the young men of the day: *To thyself be like Fikret, to thy country like Nâmîk Kemal!* As there is something to be learned from every one of his poems, he had a great influence as an educative force on the youth of Turkey. He had a great belief in the value of education.

Tewfiq Fikret is a poet although not of the greatness that his contemporaries thought. He lacks the poetic fervour of Nâmîk Kemal, especially in the poems of his second period. The poems in which he sacrificed despotism, like his fervent *Ses*, which in its day was accepted like a gospel by the young men, now seem colourless and unreal. They are not born of desperation like those of N. Kemal. Fikret also celebrated in his verse the smallest and most insignificant things, going much further than Ekrem, who although he said that everything is poetry, in practice only applied it to flowers, clouds, water, dawn etc. A number of poems which Fikret wrote, following the practice of the day, for pictures in periodicals, were published in the *Rubâb-i zikrât*. Special mention may be made of the clearly outlined poems characterising *Nedim*, *Nefîz*, *Fazlî* and *Hasûm*.

(Th. Menzel)
Tewfik Pasha, Khedive of Egypt: (1879–1892), was born on December 15, 1852 as the eldest son of the Khedive Isma'il Pasha. He was educated in Egypt and began his political career at the age of 19 as president of the Council of State (al-majlis al-thawri). On March 10, 1879, after Nubar Pasha had resigned, he was appointed Prime Minister by his father. In his cabinet, as was the case in the former, an Englishman was Minister of Finance and a Frenchman Minister of Public Works. But already on April 9 of that year, Isma'il, by a kind of “coup d’état,” dismissed his new cabinet and Sharif Pasha [q.v.] became Prime Minister. Soon afterwards political difficulties led to Isma'il’s deposition by the Sultan (June 26) and Tewfik followed him on the throne according to the latter’s succession promulgated in 1866.

At the very beginning of his reign Tewfik Pasha had to face considerable difficulties. The draft of a constitution, submitted to the new Khedive by Sharif Pasha, shortly after his accession, was disapproved and Sharif tendered his resignation (August 18). For a short time Tewfik became his own Prime Minister, but soon Riyad Pasha was appointed to that post, to keep it for about two years, till the outbreak of the army rebellion of 'Arabi Pasha. In the meantime the "dual control" of England and France over finance was re-established, and in 1880 Egypt seemed to have entered a new prosperous period. In January 1880, however, occurred the first troubles in the army, which led to the nationalist revolt of September 9 on the part of the officer corps to power of Sharif Pasha; 'Arabi Pasha [q.v.] soon appeared as the most prominent man in the nationalist movement. The Khedive had no strong party on which he could rely to keep up his authority against this movement, and likewise the position of Egypt's suzerain, the Turkish Sultan and natural protector of the Khedive's government, was too weak to be of any importance. So, in the period that followed, the Khedive could not but play a passive part and allow the nationalists to take the measures they thought fit. One of these measures was the convocation of a national assembly of notables, but although at first the nationalist leaders showed moderation, the international financial troubles brought about at last a serious anti-foreign feeling in the country, which culminated in the massacre in Alexandria (June 11, 1882), followed on July 17, by the bombardment of that town by the British fleet. The Khedive with his government had already fled from the capital to al-Ramlah near Alexandria, while 'Arabi, now in open revolt against the ruler, retired to Karfi-Dawar, a few miles distant. This was the most difficult time of Tewfik Pasha's reign; he had to choose between the nationalists and foreign intervention and, at the same time, the Sultan contemplated his deposition and the installation of his uncle 'Abd al-Halim in his place and even the despatch of an army to Egypt, from which he was prevented by the attitude of the European powers. At last the nationalist insurrection was crushed by the military intervention of England (battle of Tell-el-Kehir on September 13, 1882), followed by the military occupation of the country. After the battle, Tewfik had returned to Cairo, but the only possible way, in these circumstances, to keep his throne was now to fall in with the wishes of the occupying power. In fact, the Khedive's government, again presided over by Sharif Pasha since August 1882, was now quite impotent. All the measures after the English occupation, taken with regard to the administration of Egypt, the new Organic Law of May 7, 1883, the international regulation of the financial administration in 1884, had to be accepted. There was, however, a loyal collaboration between the Khedive and the British resident with the title of Consul General, the later Lord Cromer, in the difficult years that followed. One of the most disastrous events in this time was the Mahdist rebellion in the Sudan and the abandonment of this province by Egypt, much against the personal wish of Tewfik, after the vain struggle to defeat the Mahdi (fall of Khartum in January 1885). It was only towards 1890, that a more prosperous time announced itself for the country; soon afterwards, on January 7, 1892, Tewfik Pasha died unexpectedly in his palace at Hulwan, to be succeeded by his eldest son 'Abbas al-Himîn.

Tewfik Pasha is said not to have had a character strong enough to face the overwhelming political difficulties; especially the whole attitude of himself and his government towards the first manifestations of rebellion in the army seems to have led inevitably to the complete loss of control over the course of events. On the other hand this Khedive has left the reputation of a mild and enlightened personality, who was esteemed by all those who had personal intercourse with him, amongst them Lord Cromer and other European statesmen who have given descriptions of him. At the age of 21 he had married a lady belonging to the Khedivial family and he remained strictly monogamic during all his lifetime.

TEZKARA, [See TADMIKH.]

THÂ', [The name of the fourth letter of the Arabic alphabet with the numerical value 500. Its form is a horizontal stroke, curved upwards at its ends, with three dots above it. By these three dots it is distinguished from the third letter of the alphabet, thâ' [q.v.], which has two dots only. This similarity explains also the place of thâ' immediately after thâ'.] Of the other Semitic alphabets it is only the South-Arabic which has a special form for the sound dh.

Etymologically thâ' corresponds to Canaanite wî, Aramaic wî (early-Aramaic wî), Assyrian wî, Aethiopic φ. In Arabian its place is sometimes taken by jî.

(A. J. Weninger)

AL-TH'ÀLÎBI, Nîaba of three Arab authors:

I. Abu Mansûr 'Abd al-Malik b. Muhammad b. Isma'il, one of the most fertile intellects of the 9th (xvii) century, of whose life we only know that he was born in 350 (961) in Nasîbîr and died in 429 (1038). His numerous compilations, in which he deals by no means scrupulously with the intellectual property of his predecessors and repeats himself frequently, deal mainly with the poetry of his time but also with lexicology and rhetoric.

His most famous and, for us most important, work is the Vâmittel al-Dahr fi Mustang Abî al-Aswâr on the poems of his own and the preceding
generation, arranged under countries, in the main an anthology with bibliographical notes as a rule very brief. Like most works of its kind, it went through several recensions as may be seen from Yākūt’s statement in the *Ifrīdīd, ii. 320 that he read the story given in the Damascus edition, ii. 33, at Cairo in a copy given by the author to Ya’qūb b. Ahmad b. Muhammad, while it is found in the usual texts. In the manuscripts given by Persch, *Verg. der ar. Texte zu Gottha*, No. 2127 and *G. A. L.*, i. 284 may now be added those in Paris (filoteo, Catalogue des manusc. des nouvelles acquisitions, Paris 1935) No. 6442, in Cambridge (E. G. Browne, *Handlist, 1900*) No. 1224 and in Nicholson’s possession (*J. R. A. S.*, 1899, p. 912), as well as an anonymous synopsis in the British Museum Or. 7745 (*Descriptive List*, p. 61); to the printed edition (Damascus 1304) may be added the index of Mawlawī Abī Muḥammad al-Ihākī entitled al-Fā’idat al-Ayr, a comprehensive index of persons, places, books etc. referred to in the *Fatimma al-Dahr*, the famous anthology of Tha’labī, Calcutta 1915, *Bibl. Ind., N. S.*, No. 1215. The first continuation of the work was written by the author himself and entitled *Tutmim al-Yātima*, quoted by Ya’qūt, *Ifrīdīd*, vi. 411 and in the Paris ms. No. 3308 (s. Mirza Muhammad on Samarqand’s *Cahār Maqāla*, p. 129; on a ma. in Aleppo *Revue de l’ar. et ar. de Damas*, vii. 529—535), in other ms. like the Berlin (s. *G. A. L.*, loc. cit.) it is simply called *Dhali*; s. also al-Badr (Tunis 1340), i. 2, 36 sq. A further continuation in part coinciding with the *Tutmima* was written by al-Shāhārī [q.v.]. An anthology arranged under subject matter is the *Kitāb Fi maṣāḥīh al-Dhāt* which is mentioned in the *Kūprīlī mutamid*, s. Rescher, *M. S. O. S. At.*, iv. 154a. In the printed edition of the ma. in the Khedivial library in Cairo (1324), transl. by O. Rescher in *Et-T’alāhibi, Heft 3*, Leipzig 1916. Subsidiary to it is the *Kitāb maṣhūr ʿanu al-Mufrid*, the autograph of which is in the Lézïe mosque in Istanbul (No. 1946, cf. Rescher, *M. O.*, vii. 109). It is printed in the collection al-Tūrī al-sābī bi-qāidal (Stambul 1302), p. 250—294 and Bairūt 1309, transl. by Rescher in *M. O.*, xvii. 31—198, xviii. 81—109. Similar anthologies, in which however the poet’s names are not given, are the *Kitāb al-Ṣalāḥ bi-al-Khâṣṣ*, Cairo 1326, the *Kitāb al-Mundhūl*, pr. with commentary by Abūd b. ʿAli as al-Mundhūlī fī Ṭurūq shādaru al-Mundhūlī, Aleksandria 1331, and the *Kitāb Tawāf at-Turayî in al-Aya Soṭa mas. 3767 (Z. D. M. G., lxiv. 504), Kōpurū 1330 (M. S. O. S. At.*, iv. 176) and Top Kapu Surai (R. S. O., iv. 606). For the especial use of secretaries he prepared the *Kawāk al-Kuttābī, 2,500 passages from 250 poets, s. Flīqel, *Die ar. etc. hrs. der K. H. Heftblietheek zn Wien*, No. 242; on this the Turkish poet Lāmi wrote a commentary, s. Toderrini, *Lit. Turch.*, ii, app. xxiv. Here also may we mention his prose versions of the verses in the anthology *Muṣir al-Udāba* of an unknown author which he prepared by command of the Khwārizmīshāh Abū ʿAbd Allāh entitled Nasīr al-Naṣm wa-Ḥallī al-ʾĀlā min makhfīt al-ṣīr wa muḥittī yakhnīnī mutaqī al-Kitāb al-mandīgārīn al-Muṣir al-Udāba*, pr. Damascus 1317, Cairo 1317.

A second series of his works belong to the field of entertaining literature but also contain all kinds of useful information especially historical anecdotes. Among these are the *Kitāb Lajīf al-Muṭāsīf, ed. P. de Jong*, Leyden 1867, the *Kitāb al-Farādīd wa ʿl-Kālidīd wa Kitāb al-ʾIḥāsī wa-Nuḥbat al-dālāl*, pr. Cairo 1317 (on the margin of the Naṣr al-Naṣm), 1324, the *Kitāb al-Mubahīf (or al-Mubāhīf)*, pr. Stambul n. d., Cairo 1324 and the two works on praise and censure of things, that old topic of school adepts entitled *Kitāb al-Lajīf wa l-ʾAṣārīf wa Yarīdīṣīt al-Munāsibīs* to the MSS. quoted in *Cat. cod. ar. Bibl. ac. Lund.*, No. 455 may be added: Paris, *cit.*, No. 5934, Petersburg, No. 857, Nicholson, *J. R. A. S.*, 1899, p. 913, Haupt, No. 2658. The two books were translated into one by an unknown hand in the Leyden ms. No. 456 and by Abū Nayr Abūd Mūhammad b. Abū-Raṣīf al-Maṭdīsī; the latter was lithographed under the title of the former at Baghdād 1252 and printed as the *Qayṣam al-fā’id bi-nāma Kitāb al-Thālibī etc.*, Būlāk 1290 and Cairo 1300. Finally must be mentioned the *Kitāb Gharar al-Balūgha wa-Turaf al-Baraʿa*, MS. in Berlin, No. 3341, or *Gharar al-Balūgha li-l-Nasm wa-l-Naṣm* (thus in Köprülī MS. 1200, s. Rescher, *M. S. O. S. At.*, xiv. 197) or with the addition of *al-Baraʿa* in the Brit. Mus. 7758 (*Descriptive List*, p. 63), another MS. also in Nicholson’s possession (*J. R. A. S.*, 1899, p. 913). Wrongly ascribed to him in the *Khams Rauṣā*, Stambul 1307, and on the margin of the Naṣr al-Naṣm, Cairo 1317, the *Kitāb al-ʾA Śhālij*, Cairo 1347, the *Kitāb al-Farādīd wa l-Kālidīd wa al-ʾIḥāsī wa ʿl-Hamān wa ʿl-Ulāmāy* (Cat. *Lugd.*, No. 4553; Paris, No. 5801, 2), from this is taken Tūrīīyī ṣyngatus dictionis brevium et auctorum, ed. J. J. Ph. Valetton, Leyden 1844; this work was later included in the larger Kitāb al-Fṣīla wa l-ʾĪfāzi, pr. in Khoms Rauṣā, Stambul 1301 and Cairo 1897. To the same class belong the *Kitāb al-Jīyat al-Mū늃, Kitāb al-Maṣāḥirīn at-Tallūhī al-Maṣāḥirīn wa-Maṭāfikat al-Muṣāwara, Paris, No. 5914 and the *Kitāb Lajīf al-Shāhadā wa al-Tūrīī*, *Lit. Selecta et Tha labīi libri facit prism., ed. P. Cool in the Chrestomathy to Roorda’s *Grammatica arabica*, Leyden 1835. Cheikho published another collection of wise thoughts in *Makhtīq*, v. 831—834. Finally he also compiled an adab work called Muṣir al-Waḥīd (in Ḥādīṣī Khālīf, No. 13454) which seems to survive in the Cambridge MS. (Browne, *Suppl. Handlist*, No. 1257, while the text publ. by Flīqel entitled *Der verstandne Geschichten der Einsehen* is only a portion of the Muṣāhadāt of Rāgbīl al-Ifṣāḥīn; s. Gildemeister, *Z. D. M. G.*, xxiv. 171. According to Ḥādīṣī Khālīf, No. 7543 he wrote a mirror work entitled Masīr al-Muṭāliq or al-Kitāb al-Muṭāliq. It still has to be investigated whether this survives in the *Sirāf al-Muṭāliq*, an ethical work ascribed in the Brit. Mus. Or. 6368 (*Descriptive List*, p. 64) to Thaʿlabī; a counterpart of this is the *Kitāb al-Waṣṣār*, in Gottha, No. 1886. Shorter adab-works are the *Kitāb Miṣrī al-Maṭāfikat wa-ʾĀmil al-Ḥasanāt*, pr. Cairo 1318 and
the Kitâb Bârd al-Abbâd fu'l-Adâd, Stamblû 1301.
A third group comprises his philological works in the narrower sense. The most famous of them is a work on Arabic synonyms composed very late in life to which he first gave the title Shâmu al-Adâb fu'l-tîfâf al-'Arâb. It consists of two parts, synonyms in the narrower sense, entitled Arâr al-Lughâ al-'Arâbîyya wa-Khaqâniyya and notes on style entitled Muğafir Karâm al-'Arâb bi-Rusûmilâ ma-
ma yatu'allakh bi'l-Nâzîr wa'l-Mubâhin mînà wa'l-Istiqâld b 'I'l-Kurân 'alî al-akbahârist; the bulk of this second part is worded for text from the Kitâb Fîkh al-Lughâ of Ahmad b. Paris. This old version of the work only exists in the Leyden MS., No. 66 and Berlin, No. 7032-7033. He later published the first part separately as Fîkh al-Lughâ; in this form it attained great popularity, as Proemium et specimina lexica synonymica arabicë Athisbâli, ed., vertit, notis illustratv J. Seligmann, Upsala 1863; Fleischer, Kleine Schriften, ii. 152-
166 and the printed editions Paris 1861 (ed. R. Dabdi), Cairo 1284, 1317 (with the original form Arâr al-Lughâ on the margin), 1325, Bârist 1885 (bowdlerized). In the Cairo editions 1284 and 1325 the second part of the original version is also printed as the Sîr al-'Arâbîyya fi Muğafir Karâm al-'Arâb wa-Sîlâtâh wa-l-Istiqâld b 'I'l-Kurân 'alî al-akbahârist also printed as the Sîr al-Adâb fi Muğafir 'Ullâm al-'Arâb along with Mâdînîn al-Sâni fi 'Aâsîmîn, published in Teheran n.d. and to be found separately in the Paris MS. No. 5989 with the error in the title Muğafir for Muğâfi in the MSS. also found elsewhere (e.g. Bâshâli Khßila, ed. Flügel, iv. 590). The work was put into verse by an unknown author in 742 (1341) as the Nazm Fîkh al-Lughâ in the Leyden MS. No. 67; cf. Weijers, Orient., i. 360 sqq. In 400 in Kâhirâ he wrote a handbook of Rhetoric with special references to Metaphor for the Khâriżmânî Mâ'mûn b. Mâ'mûn, which in the MSS. is sometimes called al-Kifâyâ fu'l-Kimyâ (so Paris, No. 5934), sometimes al-Nihâyâ fu'l-Tûrîf wa-l-Kimyâ (so Brit. Mus. Suppl. No. 1110, 1), sometimes simply al-Kimyâ wa-l-Tûrîf (so Berlin, No. 7336). It has been printed under the last named title at Mecca 1301 and Cairo 1326 along with al-Djûrânî's al-Muntâqhab min Kimyât al-
Ushâb wa-Surât al-Bulûghâ. A collection of elegant Arabic expressions is the Kitâb Sîr al-
Bulûgha wa-Sîr al-Bârdîn (to the MSS. enumerated in G. A. L., i. 285, No. 7 may be added Cairo (see Fihrist, iv. 183) and Paris, No. 6744, from which extracts have been printed in Stamblû (Reuiter, Verz., i. 33). Finally he compiled a collection with annotations of constant generic combinations entitled Thîrûr (Thamûr) al-Kullâl 'l-Muğafir fu'l-Mâmnût, which he dedicated to the Amir Ubâdallâh b. Ahmad al-Mikâlî (d. 436 = 1044); to the MSS. in G. A. L., i. 285, No. 9 add Paris No. 5942, Camb. Suppl., No. 354, and Brussels B. K. C., vol. 81, pr. Cairo 1320. A supplementary is the al-Târîkh al-mas'ûdî min Thamûr al-Kullâl, which collects the names of famous men, in the Paris MS., No. 6029, a synopsis entitled Jâmi' al-Djûrânî was composed by 'Abd al-Ra'ûf al-Manûsî (d. 1031 = 1622); cf. Codd. ar. bibl. reg. Hofyn, No. 206; Kema al-Fâ'il al-Adlan de Damas ii. 747; Fihrist Dîr al-Kutub al-Mu'arrabîa, iii. 3; Z. D. M. G., lxviiii. 855 (on a MS. in Brussels), was put into alphabetical order by Mub. 'Abd al-Mujîbî (1699) entitled Ma' ya'ammad 'alâkhî fî 'l-Muğafir fu'l-Malû'ûdî; MSS. in Cairo, Fihrist, ii. 385; Top Kapû, No. 3455; Aîl, No. 2247 (R. S. O., iv. 727; M. F. O. B., v. 496), Aya Sofia, No. 4136, M. O., viii. 132.

2. Abu Mansûr al-Husâîn b. Muhammad al-
Marghânî (from Marghân in Ghûr, Afghanistan), an Arabic historian of whom we only know that he dedicated his work, Ghuwar al-Siyar, to Na'rî, brother of Muhîmîd of Ghâzâ who died in 412 (1021). It gives the history of mankind from Adam down to Muhîmîd Subûkquq. The first part is in Stamblû in the Ibrâhîm Pâşi Library, No. 916 and in Paris No. 5953. Zotenborg published the history of the Persians from it (Histoires des rois des Perses, Paris 1900); in the introduction he sought, without convincing reasons, to show that it was written by the better known man of the same name (No. 1). This part of the book is specially valuable because it gives the sources used by Firdawsi for his Shâhânâmê in many places more accurately than even Tabârî. The author apparently translated fairly literally the whole book of kings prepared in Persia about 950 by four men for the ruler of Yûn, Abû Mansûr Muhammad b. 'Abd al-Ra'ûzak but he also used Tabârî, Djawâli and other Arabs quite uncritically. Of the four volumes which according to Ifdâšî Khßilfâ No. 8592 (ed. Flügel, iv. 319, where he is wrongly called al-Mârâzî) only one survives in the Bodleian (Orv., x. 2). This covers the period 747 to 158 A.H.

3. was a very laudable endeavour to cast off the fetters of the purely chronological arrangement of Arab historiography, and give history in its psychological setting. From this Persian Homa he published the account of Bibûsî, W.Z.K.M., iii. 30-37.

3. and al-Râmîn b. Muhammad b. Mâkâleb al-
Djâ'fâri al-Djâ'fâri, North Africa theo-
logian, b. in Algiers 786 (1386), studied from 821 (1417) in Bijdîya, Tunis and Cairo, the pilgrimage from the Tunis where he died in 875 = 1468 (so his tombstone, while Ahmad Bâdîh gives 872). His principal work is the commentary on the Kurân finished on 25th 
Rabî 1, 833 (Dec. 17, 1420) entitled al-Djâwâhir al-hisâb fi Ta'tuf al-Kurân; to the MSS. given in G. A. L., ii. 249, 31 may be added Paris, No. 5283 and 5379; Escorial 2, No. 1324; Fâs Ksarw., No. 1267/7; Algiers, No. 132/7. Of his works an eschatology has been printed, al-Ullâm al-fâhîs fi l-Nâzîr fi Umûr al-Aghâr, Cairo 1317-1318 and a portion of his ethical [Djâmûs al-
PECIALISATION] [Djâmûs al-
Djâ'fâri] entitled Nafîah min al-Djâmûs al-}
THÄBIT, whose personal name was 'AILX Al-DIN, an important Ottoman poet of the transition period (mainly under Sultan Ahmad III [1703–30]) with a distinct style of his own, quite outside of the usual. Born in Utça in Bosnia about 1650 (1650) of humble origin and of Serbo-Croat parents, he was related to the poet Wusul 'Ali Bey Padić of Utça and Mahur 'Ali Pasha of Sarajevo. He died in Constantinople in 1712 (1712–13). He adopted a theological career and went to Constantinople at the end of his studies, where as a result of his early developed poetical talent he soon became famous and gained patrons but also the hostility of many of his colleagues. As a result of the prevailing corruption and on Sinān b. Thābit and other later members of the family see the full treatment in Chwolson, Die Säbäer, i. 566–610.

neoplatonism in the appointments to public offices, in spite of his acknowledged ability he never succeeded in rising higher than müfüldim which rank he reached in 1589. He therefore resigned from the Ministrelsh, which alone formed the steppingstone to higher offices and adopted a judicial career, which took him to Corlu, Burgas, Adrianople (1097), Kaffa, Rodosto, Serajevo (1112), Konia (1117), Diarbekir (1119-1121 to which he had been particularly anxious to go). As the tenure of office was as a rule only one year, and after each period there was a considerable period of enforced inactivity (cal) without a pension, he had continually to struggle with financial worries and difficulties, especially as he was ashamed to enrich himself by irregular means. His high moral character was recognised even by his enemies. At the same time he suffered heavy blows from fate; he lost all that he owned through the outbreak of war; a portion of his family was massacred and others carried off into captivity. When he died in 1124 he had been for some considerable time without a post.

Thâbit had an impediment in his speech which hindered his advancement in his official career; he was however all the more fluent with the pen. Various peculiarities of language reveal his non-Turkish origin. His command of vocabulary and language is very powerful. His Turkish vocabulary is one of the richest and most valuable in the whole of Turkish literature, especially for its idioms. One of his characteristics is the frequent use of proverbs and popular sayings, even the most trivial ones. His language surprises us with its youthful vigour, power of expression and its wealth of bold imagery.

In spite of his reputed membership of the Melânû-l-Basîrî order and his not infrequent use of Sûfî nomenclature, there is nothing of the mystic in him. His feeling for the real is very pronounced, a feature he has in common with other Ottoman poets. What gives him a note of his own and raises him high above the level of other Ottoman poets is the manner in which his own individuality comes out in his poems. He was able to invigorate the tonelessness of Turkish poetry, usually abstract to the verge of desperation, by colouring it with his personality which breaks out everywhere and fills it with the spirit of a warm-blooded man. In spite of the fact that, with his remarkable facility with words, he does not reveal great depth of feeling, he is yet a true poet. But what always won hearts and secured him a certain popularity is his inexpressible humour and his sarcasm, which compel laughter and are not found in a similar form in other Ottoman poets. He is always full of jokes and witty remarks and punning allusions and double entendres, not always easy to understand. The strong contrasts which follow in rapid succession are typical of him: the simple and involved, even tortured, beautiful and coarse, pious and frivolous, even obscene.

Although he is not a popular poet in the proper sense of the word (there are for example no şarfi by him and his great learning makes his poems not easy to understand) he was much admired at all times in many circles. The number of manuscripts is large at his Divanı was often copied. The fact that he has not been printed is probably due to the large number of manuscripts available. Modern Turkish literary criticism has now, but not quite justly, rather turned against him. His works consist of a Divan with 37 bayâdes (incl. his Mervâdiyya, which is said to have been lithographed, and 2 na'ât), about 364 şahâiet (the şahâiet are the weakest part of his poetry), a few adlih, riddles, 60 quatrains, 100 muhfrâfed and about 50 chronogrammas; also of a number of meşhûre's: A Zafer-nâme, composed for Selim Girey (pr. Stambul 1299 and 1311); Edhem u-Hüna (Edhem-nâme); Beber-nâme; Dervâ-nâme (Hikâyêt-i Khâdja Fehid, Hikâyêt-i Donin Dev and Hikâyêt-i Amr u-Läîkh).

ThâKîf, On the eve of the Hijârâ, the tribe of ThâKîf, settled in the district of Tâ'if, claimed a common ancestor called ThâKîf. His real name is said to have been Kast and ThâKîf a surname. A malicious tradition has identified this Kast-ThâKîf with Abû Rîghâl, the traitor, who guided the Ayyubian army from Abraha to Mecca, and whose tomb used to be stoned on the road from Tâ'if to Mecca. It was when they wished to ascend beyond this eponymous ancestor that divergences began. Some connected ThâKîf with Yâd, others with Hâwâzin [q. v.]. Genealogists were still hesitating between these two schemes in the second century A.H. Most of the ThâKîfs declared themselves for the descent from Hâwâzin. This was in order to connect themselves with the group of this name which was also a subdivision of the mass of tribes connected with Kâsî. Their interests, their geographical position suggested this opportunist solution to the ThâKîfs in the 9th district.

Tâ'if, On the eve of the Hijârâ, the tribe of ThâKîf, the tribe seems to have included only a small proportion of nomads. As for the town and the surrounding gardens, it contained the fertile country villages of Waît, of Lyûa and others which stretched in the direction of the Yemen. Its islamisation took place at the same time as that of Tâ'if. It shared the reputation for trickery of the Tâ'ifs, took part with them in the conquests of Islâm, above all in the 'Iraq, where the foundation of Mâqâm was due to them. Like them, the tribe rallied readily to the Omayyad regime, an attitude which earned them the hostility of the 'Abbasids rulers and also that of the 'Abbasids and 'Alîids traditionalists.

Meanwhile a slight movement of the tribe towards the south took place, all along the farms which they were developing in this direction. From the third century A.H. small numbers of ThâKîfs are found as far as the Yemen, in the Banû Hâdâm country and in the district of Nadîrân, on intimate terms with the tribes of the country. It is thus that we find them in the Yemen supporting the Zaid al-Hâdî ila 'l-Hâjî, studied by Van Aredonk. For the rest the history of the tribe is not distinct from that of Tâ'if, the
The centre round which the majority of the tribe remained settled.

At the beginning of the 6th century, the traveller Burckhardt described the *Thekif* as a "very powerful tribe"; it possessed the fertile country round Taif, its gardens, and other sites on the eastern slopes of the mountains of the Hedjaz. A great many *Thekif* have fixed abodes. Half the inhabitants of Taif belong to this tribe; others continue to live in tents. The *Thekif* have very few horses and camels but they are rich in sheep and goats.... They can turn out two thousand men armed with rifles; they defended Taif against the Wahhabis*, in 1803. One of the last European visitors to Taif, Mr. Philby, found them on the slopes of Mount Ka'ab, between Taif and Mecca, where they devote themselves to agriculture.

**THÂLAB, Abu 'l-ʿAbbas ʿAlam b. Yahya b. Zaid b. Saʿiyd (or: ʿAbîr) al-Shābāni (Mawāsī of the Banū Shābān), an Arab grammarius, although regarded as of the *Kūfī* school (see below), spent his life in Baghdad. Born in 600 (815), at the age of 16 he began to devote himself to the study of the Arabic language and literature. Abu ʿAbd Allah b. al-ʿAbbas b. al-Zuhmir b. Bakkar were amongst his teachers. He also studied with great enthusiasm the works of al-Kisāʾi and especially of al-Farābī; he is said to have known all the latter by heart at the age of 25. Later he himself taught public and privately and in this capacity received a considerable salary from the court at the suggestion of the vizier Ismaʿil b. Balbul. His best known pupils were Abu Bakr b. al-Anfārī and Abu ʿUmar al-Zahrid. For thirteen years he was also private tutor to the son of Muhammad b. ʿAbd Allah b. ʿĀthir, governor of Baghdad. His scientific activity also found expression in a number of publications of a philological, especially grammatical, nature. Of most only the titles have survived. Only two of them (Khitāb al-Furqān and Khudad al-Maṣṣūr) have been printed. Thālab's hearing became very defective in his old age. This defect was the cause of an accident which he suffered on his way home from the mosque one day, as a result of which he died in Djumaḍ 1 291 (904). As he had led a simple life, he was able to leave his daughter a considerable fortune. His extensive library was purchased after his death by the vizier al-Ḵāsim b. ʿUbayd Allah.

The later Arab grammarians class Thālab as belonging to the so-called Kūfī school, which is said to have reached its zenith and also its end in him. He himself indeed declared he was an ardent follower of al-Farābī, the Kūfī ʿArab. He also waged a constant feud with al-Muharrad, his famous contemporary of the *Buṣira* school. But, as G. Well has shown, one cannot really talk of a regular school of Kūfī grammarians; when its alleged representatives are considered to form an independent group, this is simply an invention of the later grammarians, who considered themselves the natural continuers of the *Buṣira* tradition and thought that the state of affairs in grammatical study with its opposing schools in their time must also have existed in the past. Thālab no doubt continued the tradition of al-Farābī but he was no more able than the other *Kūfīn* to do more to establish his grammatical method, still less to develop it. His interest also was too much devoted to accumulating material to be organised and to acquiring a knowledge of special linguistic forms, to enable him to develop a fruitful activity in the field of metempsychosis.

**AL-THÂLAB, ʿAbd b. Muhammad b. ʿAbd al-ʾĪbih al-Nihānī, a famous theo-

alogian and Kūfī exegist, born in Muharram 427 (Dec. 1935). His great work is the commentary on the *Kūfī* entitled al-Kaṣīfi, wa l-Bayān an Taṣfīr al-Kūfīn, which Ibn al-Jawzi (according to Ibn Taghtibird, p. 660; ed. Popper, ii. 166)
criticises on the ground that it accepts weak traditions, especially in the early Sūras, but which according to Schwall (in Noldeke's Geschichte der Qur'ān, ii, 174), must be one of the most useful works on the subject, as he uses about 100 sources in addition to Ţabari in an intelligent fashion, and with every endeavour to attain completeness the work is only twice the size of Bahjāwi. Nevertheless the work which was still very widely used in Yāqūt's time and had a criticism written on it by Ahmad b. al-Mukhtar al-Razi about 631 (1233) (see Fīhrist al-Kutub-khānum al-Khadwatī, i, 198) has now fallen into oblivion and has never been printed. Much more popular is his History of Prophets, which grew out of his Kurān exegesis and was to be a supplement to it; it gives all the stories in very great detail but keeps on the whole clear of the worst fears of imagination of the ʿanāʿīdī, such as we find in al-Kisāʾī's [q. v.]. The book has been often printed e. g. Cairo 1297, 1303, 1306, 1310, 1314, 1521, 1524, 1340, Bombay 1306, and Tokyo 1908. We have also a translation with commentary by Ahmad b. ʿAbd Allāh al-Yaḍī, Kasan 1902. As it became a popular work, the text was not treated with care, for example in the Paris MS. 1923, it is worked into that of al-Kisāʾī.

(C. Brockelmann)

THAMŪD, the name of one of those old Arabian peoples, which the ʿAd, Iram (Aram), Wihār (Jabalat) had disappeared some time before the coming of the Prophet. A series of older references, not of Arabian origin, confirm the historical existence of the name and people of Thāmūd. Thus the inscription of Surūn of the year 715, e. g. mentions the Thāmūd among the peoples of eastern and central Arabia subject to the Assyrians. We also find the Thāmūdīs, Thāmūdīs, mentioned in Arista, Platen, and Pliny. The latter mentions as settlements of the Thāmūdīs Domatha and Heqra, which are probably to be identified as the modern Dūmtā al-Djandal in Djof and al-Hijr on the Hijāz railway north of al-ʿEmās. Old Arab tradition also locates the Thāmūd at the last named place. The older poets mention the Thāmūd with the ʿAd as examples of the transitoriness of worldly glory, e. g. al-Athsāh and Umayyā b. Abī ʿIrādī, who quotes several legendary features of their story. In the Kurān the fate of the Thāmūd along with that of the ʿAd serves as a warning from native history along with the foreign ones from the Bible: for example in the curic: xi, 6 q.; xv, 89–90; lv, 23–31. Arab tradition of the fall of the Thāmūd, which was further developed by the earliest exegetes from the references in the Kurān is in its main lines as follows. Just as there was a prophet named Ḥūd among the ʿAd so there was one called Sāliḥ (b. ʿUbaid b. ʿAmīr b. Sām, q. v.) among the Thāmūd. Challenged by his opponents, whose leader is said to have been Dūjand (b. ʿAmīr, to give a sign of his divine mission, he conjured up a pregnant she-camel out of a rock. The terrors of this animal, sacred and inviolable as ʿAllāh's camel", were however cut along with those of its foal by the scoffers. In punishment the whole people was doomed to destruction. The manner of their destruction is said in Sūra xii. 76 to have been raqqā, earthquake, in Sūra xii. 12, 16, 162, a thunderbolt. These expressions make it probable that tradition associated the fall of the Thāmūd with one of the volcanic outbreaks which led to the formation of more or less extensive fields of lava called ḥara in Arabia. West of al-Hijr lies one of the largest of these ʿārān (cf. B. Moritt, Arabien, Hanover 1923, p. 28). E. Glaser thinks the Thāmūd are closely connected with the Lībīn [q. v.], the Lechelīt of Pliny, that Thāmūd was the older, Lībīn the later name of the people still surviving in the two Lībīn class of the Hajāḥīs, and that the decline of the Thāmūd coincided with the end of the Lībīn kingdom, somewhere between 500 and 600 a. d. The rock inscription found by Huber, Katting and others in al-Eis, al-Hijr and neighbourhood are called by epigraphists Lībīn or Thāmūdīn.

tertium comparationis is an all too frequent and confusing habit of the Muslim champions of orthodoxy.
