The above charges against the three last-named are taken from al-Khayyāt, Kitāb al-Indikhāj, ii, 157, 159, 161, and also, in the index under the name mentioned here and below). To appreciate his opinions properly, one must remember that they are counter-attacks on Ibn al-Rawandi, who in his Kitāb Fadālah al-Mutūthlih has branded several leaders of the Mu'tazilah [q. v.] as dualists. It is true that these circles produced many polemics against Thānawayya, Manichaean and Da'ishi; but Ibn al-Rawandi seized upon the Mu'tazilah endeavour to make God not the originator of evil. Even al-Dhāibli is said to have endangered monotheism by the assertion that the bodies develop out of their nature. and that "God cannot destroy them" (op. cit., p. 168). Ibn al-Rawandi particularly characterized Ibrāhīm al-Naẓīr, the teacher of Dhāibli, although he wrote against the Thānawayya (op. cit., p. 17, 18), as a downright dualist Manichean and Da'ishi (op. cit., p. 167, 168); and particularly on account of a view of the absolute opposition between good and evil, as between light and darkness. So long as the original works are not available, we must accept with caution the distorted reproduction of his opponents' views by Ibn al-Rawandi and the evasive exposition by al-Khayyāt. It is, however, not only these opponents who suspect the Mu'tazilah, who take pride in calling themselves the people of true monotheism and not only the Mu'tazilah mentioned who have become suspect, but several others like "All al-Aswārī and Abu Bakr al-Aswārī (cf. also de Boer, Geschichte der Philosophie im Islam, Stuttgart 1901, p. 47: Hogen, Die philosophischen Systeme der spekulativen Theologen im Islam, Bonn 1912 and his other works by index under Dualismus). The Mu'tazilah counter-attack however was able to reproach the Sunnis with their Kurfān which they asserted had existed from the beginning alongside of God.

Dualism is said to have been distinctly taught by some disciples of al-Naẓīr. Just as they are said to have intensified his Shi'i tendencies till they became ultra-Shi'a, so did they develop his christianizing logos-theory into the doctrine of two creators: God and God's word. The latter however, identified with the Messiah, does not mean complete incompatibility with monotheism, as it is only a created creator, an intermediary. Even the names of these heretics are, it must be confessed, uncertain. In Shahrastānī (ed. Cureton), p. 42 whose authority is Ibn al-Rawandi they are called al-Faḍil al-Hadathī and Ahmad b. Ḥāfīz. The latter is also the name given in Masʿūdī, Murādī (ed. Barbier de Meynard), iii, 266, but in another classification; in Ibn Hamd, Fīqīr (Cairo 1331), iv, 197, 199; Ahmad b. Ḥāfīz and al-Faḍil al-Hārbi (cf. Nyberg on Khayyat, p. 148 on p. 222 esp. and Friedländer, The Heterodoxes of the Shi'is, in J.A.O.S., xxix. [1909], p. 100). The ultra-Shi'i Bāyān al-Samān al-Tammī is said to have interpreted Surat xliii. to mean that there is one God of heaven and another, inferior however of the earth, and Abu ʿl-Khaṣṣāb Banīyah and a certain al-Surī are said to have agreed with him (al-Kashshāb, Muṣaffāt Abūl-Bāqil, al-Bīrāq [Bombay 1317], p. 196, 295). This seems to lead towards those Gulātt (cf. nasriya) who see in 'All not so much the incarnate identity with God as the demigare under the highest God. It is often insisted by theologians and philosophers (cf. Ibn Harm, Fīqīr, iv, 37; see also Schreiner, in Z. D. M. G., iii [1928], p. 479 sqq. and Nallino in the Encyclopaedia of Religion and Ethics, ii, 91 sqq.) that the participation in rule by the stars as second forces in addition to God, because it is dualism, is no less infidelity than the purely atheistic paganism of an absolute astrology.

To Islam with its striving after monotheism, duality means the abolition of the very idea of God (cf. on Surat xvi, 51: al-Khaṣṣāb, Musaffāt al-Qāhir [Cairo 1308], v, 327, 34, 36; al-Baiḍāwī, Anwar al-Tamīd [ed. Fleischer], p. 517, 52; al-Naṣīrī, Tażīrī on the margin of Ṣafarī, Tażīrī, Balić 1323, ed., xiv, 74). Thānawayya thus became a term of contempt, but even in this use, it is not absolutely free from ambiguity but is used to some extent synonymously with the commoner word šarīf, the application of which is much wider. Of the philosophical systems the Neoplatonist brought a dualistic system, of metaphysics into the Kalām of Islam. Ghasālī very strongly emphasises its halfway position, full of contradictions, between the true belief in tawḥīd on the one hand and complete infidelity on the other, as taught by the Dahirī [q. v.], naturalism, erroneous it is true, but quite conceivable: "the philosophers think that the world is eternal, but in spite of this they assume a creator; this is a self-contradictory proposition which requires no refutation"; Ghasālī insists it is only hiding and not bridging over the difficulty when the empiricism of the Peripatetics summons to its assistance, from the Neo-Platonic doctrine of emanation, from the fashion of the Brethren of Purity (cf. ighāṣīn al-Sākīn), a being intermediate between God and the universe: "a caused (creative intermediary) alongside of the prime cause gives two creators and those eternal", cf. Taḥafut al-Falsafīya (ed. with the works of the same name by Ibn Rāhīd al-Khwādżāzāvī, Cairo 1319), p. 33, 37 and thereon J. Obermann, Der philosophische und religionssubjektive Ghasālī (Vienna-Leipzig 1921), p. 43 sqq., 57 sqq., 63 sqq.). It is at the same time (p. 35) strongly emphasised that from the Aristotelian Neo-Platonic point of view of Fārābī or Ibn Sīnā a proof of tawḥīd need not be given. He is therefore not all impressed in any way by the fact that the latter tries to remove the danger, which he himself feels of a "second Necessarily Existing One" (see Hogen, Die Metaphysik Avicennas [Halle 1907], p. 542 sqq.; esp. p. 551 on Ibn Sīnā, Kitāb al-Sifāʾ, iv, treatise 9). Even more uncertain sounds the monotheistic assertions of Ibn Sīnā in the narrower scope of his Kitāb al-Najdār (Cairo 1317), p. 337 sqq., 356 sqq., 374 sqq., in view of the granting of the independence of the hybrid sublunar created creation, as it is reflected in his dualistic anthropology also.

The contamination of Muslim monotheism by dualism from outside Islam presents itself to the Sunni Ash'arīs may be seen, for example, in ʿAbd al-Khālid al-Raghibīdī. In Farḥ bān al-Farḥ (Cairo 1328) he expresses surprise even more ironical than Ibn al-Rawandi (see in Khayyat, p. 30, 31) at the fact that al-Naẓīrī in his arch-dualism (Farḥ, p. 120, 121: tāḥif bānīmilt ʿan al-Thānawayya) wrote against the Thānawayya and the Manichaeans (p. 117, 120, 120, 123 sqq.)
Al-Baghdaṭī in Uṣūl al-Din (Stambul 1928, p. 54) associates al-Nazārī directly with the Thānawīya outside Islam, among whom he in error includes the Marcohites, unlike the other heresiologists: He describes the Bāṭiniyyah [q. v.] without qualification as dualists (p. 322): "They were originally Madżūs and Thānawī, then in the time of al-Maḍīn their prophets like ’Abd Allāh b. Māmin al-Qāḍīb [q. v.] and Ḥamād b. Kārun preached that there were two creators whom they called the first and the second; but this is in substance the teaching of the Thānawīya about light and darkness and the substance of the teaching of the Madžūs about Yaḥdān and Aḥrimān. Who are meant by the "two creators" is not recognisable with certainty from the brief general observation. It might be thought that al-Baghdaṭī had accurately, emphasised only the nūr aḥzā vivini and the nūr ẓulmi out of the series of emanations [see Ḫañwaṭiyya] in order to assert the Madžūs character of the Bāṭiniyya. The known monotheistic tendency of the Bāṭini Nūṣir-i Khusrav (Zadrā Muṣṭafīr, Berlin 1925, p. 74 160, 15g. 160 sqq.) does not support the idea of a duality of this kind (cf. also Scharf), "Die islamische Lehre vom vollkommenen Menschen," in Z. D. M. G., N. S., iv. [1925], p. 222 160, esp. p. 231). The subordination of the second god would, it true, not fit the comparison with the Madžūs made by al-Baghdaṭī but it is just this point that would not be regarded as proper dualism in the usual language of the Muslim heresiologists. They expressly excluded the Madžūs from the Thānawīya, distinguishing them from the three groups mentioned at the beginning of the article, because, according to their dynamic monochronic view of Aḥrimān-darkness was a temporary condition of Yaḥdān-light, the sub-group of the Za‘rūṭiyya (Zaraqūṭṭiya) teach, both are equal to each other, but are subordinate to a supreme God as the first things created by him.

**THĀNĪSARI, MAWLĀNA,** whose real name was Ḥamīd, was a disciple of Shākh Naṣīr al-Dīn Mahmūd Ṭūrābī b. Dīlī (d. 757 = 1356), and was distinguished for his learning and piety. When the news of the arrival of Tiμūr (d. 807 = 1404) spread in Dīlī, most of the "Ummā" left the place but Thānisari stayed till he and his dependents became prisoners of Tiμūr. As his fame was widespread and Tiμūr had previous knowledge of his learning, he was set at liberty and was made a friendly advisor. Although he had been removed from his office, discussion arose about the precedence in the assembly between Thānisari and Shākh al-Islām who was the descendant of Ali b. Abī Bakr al-Farghānī al-Marghīnānī (d. 593 = 1197), the author of al-Ḥidāya. Tiμūr took the side of Shākh al-Islām and said that the latter was a descendant of the author of the Hidāya, meaning that preference should be given to him. On which Thānisari replied that it was no wonder that Shākh al-Islām had committed one mistake, for his ancestor, the author of the Hidāya, had committed many mistakes. Whereupon Shākh al-Islām became very angry and asked him to point out the mistakes. Thānisari told his pupils to do so. But Tiniμūr stopped the discussion, in order to prevent further disturbance. When Tiniμūr left India, Thānisari also went away from Dīlī and settled at Kālpi where he engaged in teaching till his death in 820 (1417) and was buried in the fort of Kālpi.

Among his compositions the ʿeqāda Dāliya is very famous.

**THĀR.** [See Ẓiḥār.]

**THĀWBAḤ & IBRAIḤIM.** [See Dīlī 'l-.MM.]

**AL-THĀWBR, the constellation of the zodiacal circle. The figure is the front half of a bull whose head is turned to one so that the horns face east. The constellation consists of 32 stars in the figure and 11 outside it. On the sector (ṣafā, ʿawrān) are said to be four stars in a straight line; in reality the stars ʿawrān form a curve. The bright star of the north horn also belongs to the constellation of the Steer-man. The eye of the bull, 'Ain al-Thawbr, the star with a red light of the first magnitude in the centre of a thick group of smaller stars, the Hyades of the Greeks, is given many names by the Arabs. The name al-Fālak, the "large camel," seems to be genuinely Arabic; around it are grouped the other stars or al-Kīlāf, "small camels." Other names of the stars are connected with the Pleiades. As this constellation is called al-Najmam, "the group of stars," by the Arabs, it is called Ḥādāt al-Najmam, the "driver of the stars," and ūlaq al-Najmam and al-Dakrīn, the "follower of the stars." This last name has passed into our star names in the form Aldebaran. The stars and near the ear of the bull are called al-Kalbāzh, the "two dogs," i.e. of the driver.

**AL-THUGHHR (plur. of thawr, "heaf, opening"), the zone of the fortresses built against the Byzantines in the Syrian and Mesopotamian marches (here also Zuhūhr al-Rumīyya). In Constantinople Porphyrogenetos they are called τῷ Ὀρνικ (De Cerimon., ed. Bonn, i, 657; cf. Reiske's note, ii., p. 777 = Migone, *Patrol. Graec.* exil., col. 1220, note 38), by the Syrians the "land of Tagris" (Michael Syrus, ed. Chabot, iii. 20, 49, 467; Barthelemaeus, *Chron. Ecclesi.,* ed. Abbeleu-Lamy, i. 339 sq.).

This frontier was swept from the Tarsits [q. v.] in Cilicia, the Turks on to Malayta [q. v.] to the Euphrates and sought to protect the frontier province of the Awšazīn [q. v.] from enemy invasion. It corresponded in object (but not in position) to the ancient times, and a distinction, analogous to the old division into Limes Arabicus, Syrianicus, etc., was made between the Thughūr al-Shawmiya and the Thughūr al-Dzariyya. The most advanced town in the former was Marāṭsh [q. v.] and in the latter Malayta [q. v.]. Al-Iskāḫānī mentions in the Thughūr the fortresses of Malayta, al-Hadith, Marash, al-Hārānīyya, al-Kantā (= Kanṣir, al-Sawārī); 'Ain Zarba, al-Maṣṣūrā, Adhān and Tarsis; al-Dimāḥqī gives the following as the fortresses on the Mesopotamian frontier: Malayta, Kāsakh, Shinadīlī, al-Bīrā, Ḥuṣn Mānūr, Kāfīr al-Rūm, Hadāth al-Ḥamadī and Marāṭsh, on the Syrian
Thulā, Thilha, a town in South Arabia, at the foot of a reddish range of hills, which branches off from the great chain of Kawkaban, Hadhir al-Shihā, Dīn Ibn to the east (S.E.) and forms the southern boundary of al-Bann. According to E. Glaser who visited it on Dec. 5, 1883, the town is very clean, and has narrow streets and very high regularly built houses of yelllowish-red limestone, which is hewn into neat blocks of about 10 inches by 4 and shows the same character in the whole town. The town is built against the eastern side of 1,000 feet high sandstone cliff, on the top of which is the castle (husn) el-Nakir and is surrounded by a wall with 4 gates, beginning and ending against the cliff; it is at least twice as large as Shibam and one and a half times as large as Kawkaban and after Sa'īn, one of the largest and finest towns in the Yemen. The citadel, which was entered through a great archway, which spanned a deep cleft, but was later destroyed, is extraordinarily strongly built and apparently very old. It is said to have been previously called Husn al-Ghurāb (castle of the Raven), the name of the famous fortress on the coast at the old harbour of Kane (el-Madījāba). It is one of the finest castles in the Yemen; unfortunately the Turks at the conquest of the country destroyed all the outer works. The entrance gate of the castle is at a height of 15 feet in an absolutely perpendicular wall, over a ravine 60-100 feet deep. Besides a fine mosque, the castle had also a large dwelling-house in the extreme east on the highest part of the hill, which looks at a distance like a low square tower; besides it a little lower is a higher tower, also square. Water was supplied from 4 or 5 deep well cemented cisterns; 15-20 granaries (madāfīn) cone-shaped caves, hewn out of the sandstone served as storehouses for provisions; the opening was at the narrow end. They are 13-20 feet deep, are 12 feet at the bottom and not quite 3 in diameter at the opening. The summit of the mountain, on which the castle stands, has on all sides caves hewn out of the rock (dīrāb) with regular dwelling-houses with windows, niches and doors. Some are whitewashed and have 5 or 6 rooms of varying size. They seem to be old and were at one time used as dwellings by the Arab garrison of the fort. West of the above mentioned tower-like square ruined building are several large tombs built on the sandstone with old Arabic inscriptions. A saint (wa'll) is said to be among those tombs.

According to local tradition, there was originally not a town of this name but a group of villages; the latter — said to have been over 40 in number — were under the rule of Thulā down to the Turkish conquest. In C. Niebuhr's time the administrative district of Thulā (he writes Tulla) comprised also the lands to the north like Kohlān, 'Affār, Hadji, Dōfar, Kawkaban (near Hadji), Djebel Sherif, Habūr, Sūda and Djebel Shabara with about 300 villages, and was therefore much more extensive than at the end of the sixth century. 

**Bibliography:** C. Niebuhr, Beschreibung von Arabien (Copenhagen 1772), p. 251 sq.; E. Glaser, Geographische Forschungen in Fernen 1883, p. 251 sq.; (Manuscript), fol. 61. (Grohmann)

**Thuluth.** (See Arabia, i. 380; 387.)

**Thumāma b. Ashras, a theologian, representative of the liberal movement under the early 'Abbāsids. On account of his great learning and intellectual ability he was invited to the court by Hārūn and Ma'mūn, to whom his sharp criticism of conservative views was no doubt also pleasing. This brought upon him the enmity of the conservative school of thought, which began to come to the front again after Mutawakkil and they have endeavoured to belittle his reputation. To the burning questions of his time he took up an independent position, logically thought out, which often seemed peculiar and arbitrary. The "consequences" of actions, e.g. the turning of a key by a man, are produced neither by man (otherwise he would be able, like God, to bring into existence new realities, i.e. to create) nor by God, for them. God would also create sin and moreover be in dependence on the will of the creature. The "consequences" (mutawalli'ār) are rather subjectless acts of God (ou phrasing). The liberal school traced them to tawlīf, the "engendering" of man, without being willing to call this a "causation". Our knowledge is therefore, according to Thumāma, something originating in time but is without a prime cause (muḥbīt) working in time. Our spirit itself cannot produce it, for then it would be exercising a function of the Deity.

Only the internal activity of the will (tā'add), excluding all its consequences, is our own special
possession and "free". The world is created by God through his nature (tiḥāb = phylos), i.e., synonymous with "physical" necessity. It must therefore have been, as Ṣahrāstānī rightly observes, produced "eternally" i.e., without beginning, and this is the root of falsafīja. Our natural reason decides on the ethical value of the moral action (taḥsin al-ʿaql). God cannot arbitrarily establish the moral. All our intellectual apprehensions are necessary (gārūrī), and have no connection with chance. He who does not know God in this logically compelling fashion is not bound to obey his commandments; but thereby he also loses the dignity of man's nature and becomes like the beasts. In the next world he will fall into dust. He is not conceded an immortal soul. This is true of Jews, Christians, followers of the Duḥar, Mazdak (Zanadīdā), Magians (fire-worshippers, Parais) and children, even those of Muslims. Ibn Murtaḍā in his "Book on the Sects" (Khitāb al-Milāt bi'l-Nīfār, ed. T. W. Arnold, Leipzig 1902, p. 35 ę.) puts him in the seventh generation, which follows that of al-ʿAlīf (d. 849). He was a pupil of Bījār b. Moṭamār (d. 704), who taught him "philosphy and intellectual culture in his day" and was Mehemed Thurayā's opponent in disputations. His full name was Aḥbār Maʿān al-Nurānī.

**THURAYĀ, the constellations of the Pleiades.** According to al-Kazwī, the group is made up of two brighter stars between which are three others close together like grapes in a bunch. The group is also called simply al-Nāṣīm "the (group of) stars" and the principal star (ė Alkynoe) is called Waṣāf, Liwaʾ or Naṣīr al-Thurayā i.e., middle, heart or bright star of the Pleiades. The word Thurayā is a diminutive of gharwā which means "existing in plenty" and would correspond to the Greek πάντας if this name could be connected with παντες and not with παντες "to navigate." According to others, the constellation is so called because rain at its rising at the dawn brings gharwā i.e., great plenty. In any case, from early times the Pleiades have been credited with great influence on the weather and the processes of nature dependent on it. A more popular name for the group is, according to the astronomer Ibn Aḥbār ʿI-Ridjālī (Abenragel, in the xith = xvith century), Daḏāḏaḏ al-Samāw wād Baṣṭānī, the hen of heaven with her chickens, also found in the English name Hen and Chickens. The constellation is also regarded as a diadem with jewels and it is mentioned in countless passages in the poets. In the form Ṣwara the word has recently become widely known as the name of the queen of Afghanistan.

**Biography:** al-Kazwī, Ḥāfīz al-Maḥākif, ed. Wistenfeld, l. 35; 43; transl. by H. Etbe, as the Kūsempograph, p. 75, 90; L. Ideler, Untersuchungen über den Ursprung und die Bedeutung der Sterennamen, p. 146. (J. Rukka)

**Thurayā, Mehemed, an Ottoman biographer, born in Stamblu, the son of a certain Husni Bey (cf. Südlīl-i ʿOltāmānī, ii, 178), adopted an official career and died in his native town as an official in the education service on the 19th Dhu ʾl-Hijja 1236 (Jan. 12, 1609). His tomb is in Scutari in the Karadja Ahmad cemetery. Mehemed Thurayā has earned lasting fame as the compiler of an Ottoman Dictionary of National Biography, which he called Südlīl-i ʿOltāmān and published in 4 volumes in Stamblu between 1308 and 1315. On the plan, contents and importance of this work to historians cf. F. Babinger, G. O. W., p. 396 ę.; the fact that the statements of the Südlīl-i ʿOltāmān must be used with great caution does not lessen the magnitude of the achievement, which is an astonishing one for one man. Mehemed Thurayā has however not rendered the compilation of an Ottoman biographical dictionary on scientific lines superfluous. Under the title Nəbbaret al-Waṣāfī (Stamblu 5 parts, complete to 1787 = 1287) Mehemed Thurayā began his dictionary, but did not finish a collection of public appointments from 1447 (1821) to 1592 (1787) with biographical notes. Among his literary remains were found copies of several biographical works and works on contemporary history which he had begun, which still await publication or utilisation; cf. G. O. W., p. 387.

**Biography:** Mehemed ʿĪbār, ʿOltāmān Māʾlīfīsī, iii, 39 ę.; F. Babinger, G. O. W., p. 385 ę. (Franz Babinger)

**Ṭībb (A.), medicine.** This is one of the branches of science in which the Arabs have attained most fame. The Muslims received their knowledge of the subject mainly from the Greeks, first through the intermediary of the Syrians and Persians, then directly by the translation of classical works. Muslim rulers and princes were at all times very eclectic in the choice of their physicians; there was a conflict at the court of the caliph. Ghurānī was Jewish, Christian, Mazedan, Sabaean and even a few Hindu physicians. Medical science had been much studied in the eastern world in the period that preceded Islam, especially at Alexandria in Egypt and at the school of Dānandārā in Persia which lasted down to the time of the ʿAbbāsids.

The Greek medical authors known to the Arabs were especially Hippocrates and Galen, besides whom may be mentioned Rufus of Ephesus, Oribases, Aëtius and Paul of Aegina. Hippocrates [cf. Bokād] was translated into Arabic by Ḥusain b. ʿĪyāb, Ṭūḥa b. Lūṭa, Ṭūḥa b. Yahyā and ʿAbd al-Raḥmān b. ʿAll; they translated his book of "Aphorisms"; his treatises on "Prognostics" and "Epidemics" were later studied and annotated. A large number of the works of Galen were translated into Arabic: the Art medici or Iqṣād which was later very popular in the middle ages, the De elementis secundum Hippocratem, the De temperamentis, the De sanitate tuenda, three books on the properties of foods, De alimentorum facultatibus, 14 books on Therapeutics, Methods medendi, a treatise on diagnosis, De morbis et symptomatis, another on fevers which was well known in Latin, others again on the pulse, on tumours and several commentaries by Galen on Hippocrates, especially on the book on Epidemics.
and on the Aphorisms to which should be added the commentary by the same scholar on the “Timaeus” of Plato, which HUNAIN B. IŞĀK translated.

Among Christian physicians, who distinguished themselves at the court of the caliph was Ibn Munāṣab, physician to Harūn al-Raḍīd. He was given by the caliph the task of procuring translations of the books of medicine of the ancients and he taught medicine in Bagdad. In the same period, the family of the Bokht-išāb was celebrated: one of its members attended Raḍīd at the beginning of his reign. They are said to have come from Djuḏūdsīlūr, “Alt b. Ridyān, an Egyptian Christian, was physician to the Fāṭimid caliph Hākim in Egypt. He wrote a commentary on Galen.

A Zoroastrian, “Alt b. Abānās, was physician to the Būyid sultan ‘Aḍūd al-Dawla and wrote a treatise entitled “The Royal Book,” which had the greatest vogue before the Canon of Avicenna. The Sabaean Sinān, son of the great geometer Thābit b. Kurra [q.v.], attended the caliph Kāhir. It was he who had official medical diplomas instituted: aspirants to the medical profession had to pass examinations and certificates were given them defining within what limits they were to be permitted to practice. In Bagdad alone there were over 800 doctors, held this certificate, not counting those who, on account of the renown they already had, had been exempted from the examination. Sinān having been persecuted by the Caliph, fled to Kūhrānān; he later returned to Bagdad where he died in 942.

These differences of origin among the physicians did not mean that they had serious differences in their idea or practice of their art. A few prescriptions, a few methods on some question or other, may have been peculiar to one or other school. Thus Ibn al-Kīfī tells a story of a prince of the family of Harūn al-Raḍīd, who had fallen into a lethargy. A Christian physician was sent to attend him and then a Jewish one; they were told to do anything; a Hindu was then summoned and he succeeded in reviving him. In this case it was “Indian medicine” that triumphed; but one must not conclude that it was quite different from Jewish or Byzantine medicine, nor that it was in any way superior to them.

The Muslim physicians surpassed even the preceding in reputation. Raż, so well known in the middle ages in the Latinised form Razès, physician, apothecary, surgeon and alchemist, left two principal works—al-Rūbūl and al-Manṣūrī, dedicated to the Sāmānid Abū Sāliḥ Manṣūr, on “special” maladies. Abū Raż was head of the hospital in Rayy and then of that of Bagdad. The foundation of regularly organised hospitals under official control is a thing that reflects the greatest honor on Muslim science and government. The authors also mention the hospital of Damascus. There were besides in large towns “Chief of the doctors,” appointed by the authorities. Among those quoted as having had this title is the second Ibn Zahr.

The great philosophers of the Hellenistic schools, the “scholastics,” were physicians and wrote on medicine. Avicenna was a practitioner with a high reputation. His great work, the “Canon on Medicine”, is the largest treatise on the subject produced in the Middle Ages; it was several times annotated in Arabic and became authoritative in the east and then in the west. It is divided into five books.

The first is devoted to the general principles of medicine, the Kulliyāt; these generalities are anatomy, hygiene, the diseases which as a rule affect the whole body in opposition to “special” diseases which affect particularly one organ or limb; these are enumerated and studied in Book III, beginning at the head and going down to the feet. General diseases are also dealt with in Book IV; then come different accidents, tumours, poisonings, fractures of limbs. Book II is a treatise on “simple,” and V is devoted to “compound” remedies, called akhruḍhīn, i.e. pharmacetics.

In the Maghrib, Ibn Bīḍāja and Ibn Ṭuafīl were physicians to the Almoravids. Arborves, who succeeded Ibn Ṭuafīl in this capacity, wrote a Kulliyāt, the popularity of which rivaled that of the Canon of Avicenna in the Muslim world and then in the Christian world. Muslim Spain also produced the family of Ibn Zuh, the Avuarzoar of mediaeval Latin.

Arab medicine had an enormous influence in the western world. It passed first to the Jews, especially to Maimonides, whose medical work is very considerable, then to the Christians. This is how Gerard of Cremona came to translate the Canon of Avicenna and the Kulliyāt al-Manṣūrī of Razès. The translation of the Canon was revised by Andreas Alpagus of Bellona, who also translated the De Theriaca of Avorrosse and the Pratica of Ibn Serapion. Faragut translated the Continuus of Razès, and Bonacossu, a Jew of Paliza, the “Colligit” (Kulliyāt) of Avorrose. These translations were published at the beginning of printing.

The pharmacopoeia and the knowledge of “simples” are represented in the treatise of Ibn al-Beṣīr of Malaga in addition to the parts of the Canon of Avicenna which refer to this subject. The Arabs themselves studied herbs and further developed the knowledge of their medicinal properties from the teaching of Dioscorides and Galen. Through their sailors they were able to introduce into medicine the use of new plants from the Malay Archipelago and China, like camphor, cassia and sandalwood. They developed pharmacetics and invented several preparations, syrups, juleps and alcohol.

One branch of study closely allied to medicine, veterinary science, was the subject of a number of special treatises among the Arabs.

Bibliography: Full information on the physicians of the Muslim world is to be found in several Arabic works: Ibn Abī Usābi‘a, Tabajrāt al-Aḍabī, ed. A. Müller, 1884; the Turāgī al-Dhawām of Ibn al-Kīfī; the Mukabbār al-Dawāl of Abu I-l-Faṣrī, ed. Sāliḥ; Maḥkār, Analecta, for Spanish physicians; the “Canon” of Avicenna, ed. in Arabic at Rome in 1593, at the Typographia Medica, reprinted Būlāk in 1294.

(B. Carra de Vaux)

TIBBU. [See Tubù.]

TIBET, a country to the south of China. Yākūt gives the forms Tabbat, Tubbāt, and Tabbat,
preferring the first of them. The oldest Arab notices of Tibet and the Tibetan kingdom are probably of Turkish origin. The ruler of Tibet is called Kḥāşān; the names Ṭūpūt and Tūpūt-Kḥāşān are found as early as the 8th century inscriptions. A fancied resemblance of Tablat to Ṭūpūt and Tābūt has given rise to stories of the veneration of Tablat as the 'ruler of the Tibetan kingdom; cf. e.g. al-Ṭabarī, i. 656 supra; Gardizi in Barthold, Oktō e göçakte v Srednyymu Asiyu, p. 87 sqq. There is much more that is legendary in the Arab notices of Tibet; the story of the inexplicable joy and desire to laugh that overcomes every stranger in Tibet, first found in Ibn Khudīddībīh (B.G.A., vi. 170), is frequently quoted in Muslim literature (cf. Niżāmī, Shīkmur-nauma, Cawnpore 1830, p. 226, even in the best account of Tibet we have (in the anonymous hadīth al-ʿĀlam, text in Comptes Rendus de l'Acad. de Russie, 1924, p. 73), the first that mentions the town of Ṭhannya. There is said to have been a mosque in Ṭhannya and a Muslim community, not however, very large. The period of the Arab conquests in Central Asia was not that of the zenith of Tibetan power against Tibet's usually successful wars against China. In the Chinese annals, Arabs are often mentioned as allies of the Tibetans and vice versa. Chavannes sums up the relationship in these words: (Documents sur les Touksins [Turcs] occidentaux, St. Petersburg 1903, p. 291): "L'appui que les Tibétois prêtaient aux Arabes dans la vallée de l'Yaxasites, les Arabes le leur rendaient en Kasgarie". It was not till the 7th-8th period (785-805) that the Arab expeditions met with a war against Tibet. Henceforth the Tibetans had continually to send armies to the west, so that the Chinese frontier districts suffered less from them than before (E. Breuschneider, On the Knowledge possessed by the Ancient Chinese of the Arabs, London 1871, p. 16). In Arabic sources there is no reference either to the alliance or to the estrangement. According to al-Ṭabarī, the Arab ruler Muhammed b. Abū al-ʿĀlam, "Abd Allāh b. Ḥāṣim b. Abū al-ʿĀlam, was attacked during his rule in Ṭarak (fifteen years: al-Ṭabarī, ii. 1160 infra, till 85 = 792) by the Ḥajjāz or Ḥabštāna (see ch. ii., p. 845), by the Tibetans and Turks, and Turks (in the parallel passage in Puladži, p. 418, the Tibetans are not mentioned); the attack was repulsed. According to Yaʿqūbī (ii. 362; also B.G.A., vii. 301 infra), in the reign of ʿOmar II (717-720) an embassy was sent from Tibet to Ḥāʾirāt b. Abd Allāh, governor of Khorsān, with the request that a teacher of the Muslim religion should be sent to that country. Salīḥ b. ʿAbd Allāh al-Ḥanāfa is said to have gone on this errand. In the same source, the king of Tibet (p. 479) is mentioned among the kings who submitted to the Caliph al-Mahdi (933-962). In the last years of the reign of Hārūn al-Rashīd (170-195 = 786-809), the rebel ʿAlāʾ b. Lāḥīj ṭ. al-Maqārin, was supported in rising in Samarqand against the government by Tibetan troops (djanguč) (op. cit., p. 526). In the reign of al-Maʾmūn (193-218 = 813-833), the king of Tibet is said to have adopted Islam, and in token of his conversion to have sent to Khorsān his golden idol reproduced on a golden throne. Maʾmūn sent the idol to Mecca (op. cit., p. 550); the governor Yazd b. Muḥammad al-Makrumūn during a rebellion struck gold coins from it (p. 544). In Ṭabarī (iii. 815) the "Khāṣān, king of Tibet" is mentioned under the year 195 (810-811) as one of the enemies of al-Maʾmūn, with whom he had to come to terms before attacking al-ʾAmīn. In 956 (811-812) al-ʾAfdal b. ʿAbd Allāh (q.v.) was given the governorship of the eastern provinces from Ḥamadān to Tibet" (Ṭabarī, ii. 844). The Arab geographers seem to have generally understood by Ṭabarī, Little Tibet or Barīstān (q.v.). There were routes to it from Khotan (q.v.) and Badakshān (q.v.) via Wakhān. It is to the Khotan-Tibet road that the story given by al-Birūnī (Chronology, ed. Sachau, p. 271, xi, where Ṭabarī should be read for ʾAbūt and by Gardizi (op. cit., p. 88) from ʾAṭjarī about mountain sickness refers. On Djirm in Badakshān as a frontier post on the road to Tibet see B. G. A., vii. 288 infra. The fullest notices of the road through Wakhān are given in the Ḥadīth al-ʿĀlam (fol. 25a). As a frontier port of Māwarī al-Nahr in this direction there is mentioned the "large village" of Samarqand (probably meaning "little Samarqand") in which Indians, Tibetans, Wakhāniya (Wakhānīa) and Muslims lived. Musk was brought from Tibet to the Muslim world by this route (B. G. A., i. 280 supra, 297 infra). In contradiction to the historians and to his own statement against the frontier defences between Tibet and China (l. 208), Yaḥyā b. Lāḥīj (l. 204) says that no one ever waged war on the northeners. Probably the first campaign of a Muslim ruler against Tibet was the campaign of the Sultan of Bengal (q.v.) Muḥammad Bakhšīya Khābdūji towards the end of the 6th (xiib) century (the date 641 = 1245-1244 given in the text cannot be right as the same source gives the year 670 = 1205-1206 as the date of this ruler's death); it is described in the Tābakht-Naqṣir of Minhād al-Dīn Dārādū (ed. W. Nassauss-Lees and Mawlawī Khāsid Ḥusain and ʿAbd al-Ḥai, p. 553; transl. by Ravyrty, p. 560 sqq.; Elliot History of India, ii. 310 sqq.). The name Tibet (Ṭebet, Thibet, Thibet, Thibt, Thibet) contrary to Breuschneider, Medieval Research, ii. 21, probably reached Europe independently of the Arabs through European travellers in the Mongol period, although Tibet (Ṭabbot) is already mentioned in the xiib century by Benjamin de Tudela (transl. Adler, p. 59): his account, however, probably did not become known in Europe until later; Benjamin, as is now supposed, only went as far as Baghādā (J. K. Wright, The Geographical Lore of the Time of the Crusades, New York 1892, p. 282). He gives only a very confused account of what he picked up in the Muslim world, probably from Jews; for example he says that one can go in 4 days from Samarqand to Tibet. Rashīd al-Dīn's great work on the Mongol empire also contains some references to Tibet. The name: Būrī Tabbat (Rashīd al-Dīn, Ṭabul Vost. est. ord. Atrak, a. 1302, xiii., text, p. 237) is not found elsewhere in Muslim writers, is mentioned in the xvi century by Flavio Filarete (Buriablet) and in Chinese sources (cf. the references in Breuschneider, op. cit.). Tibet was already converted to Buddhism in the xiib century, was from the Mongol period of importance for the spread of Buddhism. Rashīd al-Dīn expressly says (ed. Blachot, p. 545) that of Buddhist monks (bakrūk) those of Tibet enjoyed the greatest prestige. After the final triumph of Islam in Central Asia and Northern India in the 15th (xviiib) century, Tibet was invaded by Muslim rulers under pretext of a holy war, Little Tibet in particular. Towards
About 1682 when Central Tibet was under the rule of the Kalmucks [q.v.] the celebrated Khodja Apa’k (his tomb is still revered in Kâshghâr) who had quarrelled with his Khân Isâm’lî (1670–1682) went to Lhasa, which he calls “town of Bâq” (Bâq’ Şâhr) after a great statue of the Buddha. At his request the Dalai Lama (in a Turkish manuscript we have the plural form, Dal’watnâder) gave him a letter of safe conduct from the Khân of the Kalmucks, Gâldân Böshokta. At the head of an army, which included the Khodja, the Khân invaded Kâshghâria. Isâm’lî Khân was carried off a prisoner, and the rule given to the Khodja (M. Hartmann, Der islamische Orient, i. 210, 212, 321 and 326; Zap., xv. 250).

In the last few centuries, Tibet has had little contact with the Muslim world, although Muslims were not barred from visiting Lhasa during the period when Europeans were. It was a matter of years before an embassy arrived there with presents from Kâshgîr. In a plan of Lhasa given by A. Waddell (Lhasa and its Mysteries, London 1905) we may note a mosque and a court of law for Muslims from Kâshgîr and an inn for Chinese Muslims.

Bibliography: given in the article.

(W. BARTHOLOM)
II, 502 (Feb. 2, 1109) [so Ibn Khallikân: Yâkût I, which is wrong, as the day of the week shown]. His tomb is at the Ahraz gate. — Among his various pupils a number of sources mention al-Khaṭṭîb al-Bâghdâdî, the historian of Bâghdâd (Brockelmann, G. A. L., i, 329); but this statement, which goes back to Samâ'îl and is adopted by Yâkût, Maş'ûn (see Bibl.) and Ibn Khallikân must be due to an error as al-Khaṭṭîb al-Bâghdâdî was thirty years older than Tâbrîzî. Ibn Khallikân and Tâbrîzî refers to his article al-Khaṭṭîb al-Bâghdâdî, where he says he gives further particulars of the relations between these two but there is no information in the passage to which he refers (Nâ, 33). On the other hand Yâkût himself in the Erûkhât s.v. al-Khaṭṭîb al-Bâghdâdî gives a story with a Wâzâd going back to Tâbrîzî. The kheira Tâbrîzî is not given: but there can be no doubt that our Tâbrîzî is meant by Abu Zakariyyâ Yahya b. 'Ali al-Khaṭṭîb al-Lughwâi, especially as the link in the chain is Abu 'l-Faṣîl Nâṣir al-Salâtim, apparently the father of Abu 'l-Faṣîl Muhammâd b. Nâṣir al-Salâtim, the pupil of Tâbrîzî, which is probably only a slip for the name of his son, since M. b. N., besides being a pupil of Tâbrîzî, is also known as a teacher of al-Samâ'îl (cf. Bergrässer, in Z. S., ii. 205, N. 154) while his father is in the first place quite unknown and could hardly have also had the kawâna of Abu 'l-Faṣîl, but secondly because the poverty of the narrator which occasionally crops up in the story agrees very well with the poverty of Tâbrîzî, which we know of from the story of his journey to al-Mârâz. Tâbrîzî must thus have come to Damascus in 456 and studied Abu 'l-Faṣîl al-Bâghdâdî; the story of his thirst for knowledge is told in detail. Tâbrîzî lived in the midst of the great mosque (this also is evidence of his poverty). One day al-Khaṭṭîb visited him in his abode and they talked for an hour. Just before leaving al-Khaṭṭîb gave him something wrapped up in paper as a present with the request that he should buy pens with it. When Tâbrîzî unfolded the packet, he found it contained 5 Egyptian dina'ar. Al-Khaṭṭîb visited him a second time and gave him money of the same value as or even higher than on the first occasion and asked him to buy paper with it. This story of Yâkût's is corroborated by the same author in his own article on Tâbrîzî in the Erûkhât is certainly correct in contrast to that in the Maş'ûn, so that al-Khaṭṭîb al-Bâghdâdî was really Tâbrîzî's teacher. Otherwise al-Bâghdâdî would certainly have devoted an article to him in the Wâzâd al-Bâghdâdî. Tâbrîzî's pupils were: Abu 'l-Faṣîl Muhammâd b. Nâṣir al-Salâtim (457—550 = 1074—1155, cf. above), Abu 'l-'Iṣâฮîn Sa'd al-Khair b. Muhammâd b. Saïl (in al-Maš'ûn, i, 895: Sa'd) al-Anjârî al-Andalusi (al-majhâlî) s.v. 541 = 1146 in Baghdadî, Abu 'l-Tîhir Muhammâd b. Muhammâd b. 'Abd Allâh al-Sinjûlî (462—548, lived in Merw) and lastly Abu 'l-Qawâlidh (q.v.), his successor in the Nîşâmîya. His conduct was not of the best (he is said to have drunk wine, worn silk garments and a turban trimmed with gold so that he must have later become prosperous); but his scientific authority is undisputed.

His works that are known by name are all of a learned nature; but Ibn Khallikân quotes two verses by him and a poem of al-'Imâd al-Fâyîsî to him with his answer. In the list given below of his works, those already mentioned in Brockelmann (G. A. L., i, 279 f.) are only given again when further remarks can be made on them. On the Hâmâsa of Abu Tamâmî (q.v.) Tâbrîzî wrote 3 commentaries, first a short one on each ba'tt and then one on the whole work. The second has been edited by Freytag. On the sources cf. Freytag's preface. Yâkût had an autograph copy of Tâbrîzî's commentary on the Mu'llâkâtî. It is annotated the Divân of al-Mutanabbi (G. A. L., i, 85), the Muṣafâdâtî, the Kâtha Bûnîd Sînâsit (on the edition s. the art, the Kâ'î b. Zûhair), the Mâfûra of Ibn Durayd (q.v.), the Kâ'î b. 'Ahnâm b. 'Abd al-Uqîl of an unidentified Ahmad b. 'Ali b. al-Salâtim al-Bâghdâdî (the author of this name in Brockelmann lived later than Tâbrîzî, i, 382), and the Kâ'în. The same authority also says he edited the Kitâb al-Fârîq al-Mushîfî of Ibn al-Sâkînî (q.v.) in a corrected version. It is the title the Tâbûdî (MS. Stambul, 'Ajîf, N. 2716; cf. Rescher, M. F. O. Beyouâd, 1912, p. 495), pr. Cairo, a.d.; but there is also a commentary printed in Shiraz (1895 sg.) by him on the Kâ'î b. 'Iyâfû of the same author. An extract of the Kâ'î b. 'Iyâfû al-'Arîb wa l-Kawâfû is perhaps contained in the collected volume Maṣ'ûn min Muhammâtî al-Murînî, Cairo 1325, p. 550 sqq. where no author is named but, according to Brockelmann, Index s. v. Kâ'î, at least two others are possible authors of it. Attention has been called by Rescher, Z. A., xxvi, p. 156 to another proseody entitled Risâla b. 'l-Arîbî in the Stambul MS. Hamidîye, 1127, which does not seem to be identical with the two mentioned by Brockelmann. A MS. of his commentary on the Divân of Imrîn' l-Kâ'î is mentioned by Rescher, Z. D. A., lvii, 63; but the sources say nothing of this work. Of other works, now unknown, by Tâbrîzî Ibn al-Anâhîrî and Yâkût mention: Muḥâfîz al-Fârîm, Ibn Khallikân, 11. Charkî al-Fârîm, Vâkîl: Muḥaddidatatat b. 'Iyâfû. Bibliography: (so far as not already given): al-Samânî, Anisâd, ed. Margoliouth, 1912, G. M. S., xx., fol. 1039; Abu 'l-Harâmî Ibn al-Anâhîrî. Nasîh al-'Arîbî fî Turûsî al-'Arîbî, Cairo 1294, p. 445—448; Ibn Khallikân, Wafayât al-'Arîm, ed. Wüstenfeld, N. 810; do. Engl. by de Slane, lv., 1874, p. 78 sqq. (with valuable notes); Yâkût, Muṣafâdâtî, ed. Wüstenfeld, i, 822 sqq.; do., Erûkhât, ed. Margoliouth, G. M. S., vii. 254 sqq.; vii/1vii. 286 sqq.; Sceiss, Dictionnaire encyclopédique de Bibliographie arabe, p. 625 sqq. (M. Plessner) al-Tâbrîzî. [See Muhammâd Husâin al-Khalâl.]

Tâbrîzî, commonly calledシャムス-蓮Tâbrîzî (SHAMS AL-DÜN Muhâammad b. 'Ali b. Mâlîkînâbî Tâbrîzî, according to Dînî, Nafâṣât al-Un, ed. Lees, p. 335), a Şûfî, was the spiritual guide of Dînî al-Dûnî (or Dînî b. 'Attîsî) who composed in his name the greater part of the collection of mystical odes known as the Dînîsî Shamsî-Tabrîzî. Born in Tabrîz (q.v.), where his father carried on the trade of a cloth-merchant, he is said to have studied in Shiraz under Shâhîb Ābî Bakr Zanbûlî (Sâlsbîlî), Shâhîb Rûkîn al-Dûnî Sindi, and Bâhîb Kâmil Dînjî. Afterwards he became a wandering dervish, and in 642 arrived at Konya. So profound was the fascination made by his enthusiastic personality on the young Shams al-Dûn that the disciples of the last, bitterly remembering their master's devotion to his beloved friend and meşâsî, caused Shams-î Tâbrîzî
to leave the city. It is said that after spending some time at Damascus he returned to Konya in company with the poet's son Raḥā al-Dīn Sulṭān Walad, who had been sent in search of him. In the month of Shawwal 643, he vanished mysteriously. The stories which represent him as having been put to death by the myrmidons of the government or murdered by a band of conspirators, amongst whom was one of Djalāl al-Dīn's sons, are not confirmed by the best authorities, namely, the Muḥammadīyāt of Sulṭān Walad and the Rūḥāt-i Sipāḥīlār of Farīdūn b. Aḥmad, an account of Djalāl al-Dīn and his successors written in Persian circa 720. Some modern scholars hold the view that Shams-i Tūbštī never existed save in the poet's imagination: "c'est son propre génie inspirateur" (Rīḍa Tawfīq, in Textes l'arabe, G. M. S., i., 270, note 1); but even if we suppose the dates and other circumstantial details given by the biographers to be fictitious, such a theory rests on frail foundations. It is impossible to regard the case of Shams-i Tūbštī as unique: the terms of "delegation" which the poet applies to him in the Dīwan-i Shams-i Tūbštī are entirely parallel to those used of Huṣain al-Dīn in the Maḥānawī and of another dear friend, Șahāb al-Dīn Zarkāb, in some of the odes. So far as the evidence of language is concerned, these three inspirers of Djalāl al-Dīn stand or fall together; and that evidence can with more reason be interpreted in a different way. To readers of Dante it will not appear strange that the great Persian mystic should have clothed his feelings of intimate spiritual relationship and personal affection in words which reflect the ideas of a pantheistic philosophy. Bibliography: Faridun b. Aḥmad, Rūḥāt-i Sipāḥīlār, Cawnpore 1901, p. 65 sqq.; = p. 164 sqq. of the Turkish translation by Muḥāfaẓ Bahārī Huṣainī, Constantinople 1913. Allātī, Muḥammad al-Ārīfīn, transl. by C. Huart in Les scribes des derviches touaregs, Paris 1918 and by J. W. Redhouse in Th. Monnier, Book I, London 1881. E. A. Nicholson, Selected Poems from the Dīwan-i Shams-i Tūbštī, Cambridge 1898. (R. A. Nicholson) Al-Ṭūfštī, an Arab author of Tūnīs. Practically nothing is known of his life. His name is not even recorded in a single form. The manuscripts of his Rūḥāt (see the works by Rousseau and Bel quoted below) all seem to call him Abū Muḥammad ʿAbd Allāh; so he is also called in Ibn al-Khāṭīb Ibn Kūnṭūfī (G. A. L., l. 241), al-Firayisi fi maḥālāt ʿAbd Allāh al-Haḍīsī (in Cherbonneaux in J. A., iv, 17, 1851, p. 53, transl. in J. A., vi, 64). In his Tūfštī al-Ārūs wa-Nasāḥat al-Ṭūfštī on the title page we have Abū ʿAbd Allāh Muḥammad b. Aḥmad; this is what Ṭūfštī Khalīfa, no. 2652 and also written as al-Zarkašī, Tūfštī al-Dawla al-Mūwāhidīya wa-l-Haḍīsī, Tūnīs 1289, p. 51, except that the latter calls him Ibn Ibrāhīm. The sources also differ regarding the quantity of the first syllable of the nība. There is no question of: more than one author of the two surviving works attributed to Tūfštī is made certain by two circumstances. In the first place al-Zarkašī, who uses the form of the name found in the Rūḥāt as well as Ibn al-Khāṭīb who uses the form of the Rūḥāt tells us what we also know from the Rūḥāt that al-Tūfštī had dealings with the Ḥafṣid emir Abū ʿAbd Allāh Zaḵrātī b. Abī ʿAbd Allāh Aḥmad al-Liḥāyānī (711–717 = 1311–1317). In the second place the authors of the works quoted in the Tūfštī come down to a period which make it clear that the author must have written at the beginning of the viiith (xivth) century. Of his life we only know that he made a journey with his royal master through North Africa, which he describes in the Rūḥāt. It began in Tūnīs towards the end of Dījmārād I 706 (beg. December 1306) and his fellow-travellers were on the Ḥaṣṣaṣi to Mecca. Al-Ṭūfštī had however to separate from the caravan at the beginning of Maḥarrām 709 (June 1309) because an illness forced him to return home. They had not got much beyond Tripolis, as long halts were made everywhere. These long delays were all to the advantage of the book of travels. Everything that was of any interest in a comparatively small stretch of country could be noted down. The Rūḥāt thus became a regular mine of geographical, scientific and particular historical information about the country passed through; extracts are also given in it from authors, whose original works must now be regarded as lost, and copies of documents. When the prince became amir, al-Ṭūfštī became one of his highest officials. The year of his death is not known, nor that of his birth.

There is not yet a complete edition of the Rūḥāt; long extracts are given in M. Amari, Bibliotheca Arabo-sicula, 1857, ch. 45. A short extract with translation has been published by A. Bel, Les Bensou Ghomma (Publications de l'École des lettres d'Alger, xxvii., 1903), appendix. A translation of extracts from the whole book was given by A. Rousseau in J. A., iv, 20 (1852), p. 57 sqq.; v. 1 (1853), p. 101 sqq., 354 sqq. The selection is however quite arbitrary; the reconstitution of the text is defective and the translation to be used with great caution. The text can be checked for several passages in Ibn Khaldūn's Dhur.

Al-Ṭūfštī's other book is a compendium on love and marriage. In 25 chapters it gives advice on the choice of a wife with very full description of the marks of beauty arranged according to parts of the body and on their treatment and on married life with means to heighten its enjoyment, all in the form of traditions and extracts from writers, roughly in chronological order. Theologians and jurists are quoted at great length but more with regard to ethical paraenesis than the regulation of the Rūḥāt. Manuscripts and texts of the book are given in Brockelmann, G. A. L., ii. 257.

Bibliography: given in the article; cf. also M. Amari, Stori dei Musulmoni di Sicilia, l. 1854, p. l., and the works quoted by A. Bel, op. cit. (M. Plessner) Tūfštīya (the forms Tūfštīn, Tūfštī occur also), order founded by Abu l-ʿAbbās Aḥmad b. Muḥammad b. al-Muḥtār b. Saʿīd al-Tūfštī (1150–1230 = 1737–1815).

1. Life of the Founder. This person was born at ʿĀin Mūḍī, a village 72 kil. W. of Laghouat, 28 E. of Tumurt. His family were the Awlād Sīdī Shāhīd Muḥammad, and his parents both died of plague in 1166 (1753). After pursuing his studies at his native place, he went to Fez in 1171 (1758) to continue them, thence to Abyad, where he stayed five years, thence in 1181 (1768) to Tiemcen, thence in 1186 (1773) he went to Mecca and Medina; thence to Cairo. At all these places he heard ṣaḥīḥs, and at the last of these at the suggestion of one Muḥammad al-Kurdi he founded a new order, having previ-
only been admitted to the Kādiriyā, Taḥriya and Khāliwatiya; of the last of these his own is regarded as a branch. He then returned to the Maghrib, and after visiting Fez and Tlemcen went to Ila Semghān in the Sahara in 1196 (1782), an oasis S. of Geryville, where he believed himself to have received a commission from the Prophet to proceed with the propagation of his Order. A disciple, 'Ali Ḥāṣim, suggested to him to return to Fez, whether he went in 1215 (1798), and was given possession of the palace Ḥawāḥ al-Maṣūrāt. Though much of the remainder of his life was spent in travelling, in order to regulate the affairs of his Order, Fez remained his headquarters till his death, and he was buried in his Zāwiya in that city.

2. Doctrine s and Practices of the Order. The members of the Order are called Aṯkhāη "friends", and they are strictly forbidden to join any other ḫāṣaṣ. Their ḏīḥr consists (as usual) in the repetition (usually a hundred times) of certain formulas, at particular times of the day, these are translated by Depont et Coppolani, p. 447. Their most important doctrine is that of submission to the established government, whence ever since the French conquest of Algeria they have been ordinarily on good terms with the French authority.

3. History of the Order. On the death of the founder in 1230 his two sons (Muḥammad al-Kādir and Muḥammad al-Ṣaḥghir) were left in charge of one Maḥmūd b. Aḥmad al-Tūnīsī, who was succeeded as guardian by al-Ḥāḍirī 'Ali b. ʿAṣṣ, himself head of a Tāḏīḏīna Zāwīya at Temmān and nominated by the founder chief of the Order. They were brought by the latter to Aṯīn Māḏī, the palace which had been occupied by their father in Fez having been seized by a new Amir, Vazīr b. ʿAbdullāh. After a time 'Ali b. ʿAṣṣ left the two sons in charge of the Zāwīya at Aṯīn Māḏī, and returned to Temmān. It would seem however that a splitter had occurred in the Order, even in the founder's time, the dissidents, who were called Tāḏīḏīna, having been expelled by him from Aṯīn Māḏī. In 1235 (1820) these dissidents invoked the aid of ʿAbd al-Muṭṭī, Bey of Oran, who besieged Aṯīn Māḏī, but was induced by a heavy payment and the failure of an attempted storm to retire. Two years later the Bey of Titteri attacked the settlement, but unsuccessfully. These military achievements encouraged the two sons of the founder to take the offensive against the Turks in Mascara; they failed however both in 1246 (1829—1832) and 1257, and on the latter occasion Muḥammad the Elder lost his life.

Under the direction of ʿAṭī b. ʿAṣṣ, who remained at Temmān, the younger Muḥammad, now in sole charge at Aṯīn Māḏī, proceeded with the propagation of the Order, especially in the Sahara and the Südān. Great success attended these efforts, but though the power and wealth of the community increased, neither 'Ali nor Muḥammad ventured on any military operations. Hence when after the French invasion of Algeria the Derkāyī Muḥammad desired the aid of the Tāḏīḏīn in the Sacred War, it was refused.

In 1296 (151—1525) the Amir 'Abd al-Kādir, who aimed at the expansion of the French, endeavoured to enlist their services; the Tāḏīḏīn chief replied that it was his purpose to live in the calm of a religious life, and after a long and fruitless correspondence the Amir in 1298 (1554) presented himself at the head of an army before the walls of Aṯīn Māḏī, and demanded the submission of the Tāḏīḏīn chief. This was refused, and in spite of the inequality of the numbers the latter held out for eight months, whereas various expedients for reducing the place were tried by the Amir and frustrated by the astuteness of the Tāḏīḏīn and his advisers. When the Tāḏīḏīn found the place no longer defensible, he took refuge in Laghūṭ. The reputation of the Order was vastly increased owing to the length of their resistance; and in the following year (1540) he offered his moral and material aid against the Amir 'Abd al-Kādir to the French Marshall Valette. 'Ali b. ʿAṣṣ, who remained at Temmān, also declined to join resistance to the French, and on his death in 1544 left the control of the Order to the surviving son of the founder, who died in 1553, when the son of the son of 'Ali b. ʿAṣṣ, Muḥammad al-Ṣaḥghir, succeeded.

The sons of the third Master of the Order, Aḥmad and al-Baghīr, were of tender years at the time of his death, and fell under the charge of one Rāyān al-Mahṣūrī, who renamed the Zāwīya of Aṯīn Māḏī independent of Temmān, a policy which caused the relations between the two Zāwīyas to be strained, though it did not result in a definite split. In 1569 the two became suspected of disloyalty to the French, and were arrested and sent to Algiers. They succeeded however in making their peace with the French authorities, and the heads of the Order have ever since maintained a friendly attitude towards them.

4. Distribution of the Order. Although the missionaries of the Order in the period of its greatest prosperity obtained adherents in Egypt, Arabia and other parts of Asia, its main expansion has been in French Africa. One Muḥammad al-Hāḍirī b. Muḥtār b. Ḥabīb, called Bāddi, who visited the founder in Fez about 1780, received instructions to spread it among the Saharians of the extreme South of Morocco; "Returning home via Shingora and Tijikya, he conducted the aggressive propaganda in favour of the Tijikya Order, and by 1830, about the time of his death, he had the satisfaction of leaving the whole tribe ʿAbd al-Ḥādī to it" (Paul Marty, R. M. M., xxxi. 239). Under his successor, who died in 1807, this attachment steadily increased. To the Meccan pilgrimage, faithfully observed by this community, there was added the practice of pilgrimage to Fez, to visit the tomb of the founder, and this is ordinarily performed before the visit to Mecca. The Order was propagated in French Guinea by one ʿAbd al-Ḥādī ʿUmar after his return from Mecca to Dinguiray, which in consequence became one of the most important religious cities in this region; "the Tijikya doctrine supplanted almost everywhere the Qāḍīriyah traditions" (ibid., xxxvi. 203).
TIDJÂNYA — TIDJÂRA

Thidjâni min al-Ashâb was composed by Abu l-Abbas Ahmad b. Ahmad al-Ashâbi Sukairîdî (Fes 1235 and 1332). 

Tidjâra (a), trade, commerce; masdar from tâdâr, "to trade," which again is a denominal verb from tâdâr "a merchant." Like many terms in Arab commercial language, tâdâr is an old Aramaic loanword (cf. e.g. Syr. ṣâ̇dk and ṣâ̇dk, "merchant," derived from the verb ṣâ̇dk, "price, reward"), which again comes from ṣâ̇d, "price, reward"

This is the place to write a history of commerce in the lands of Islam, especially as the necessary preliminary work has hardly been touched (cf. e.g. Meis, Die Renaisances des Islams, Heidelberg 1922, p. 441 sqq.). Nor shall we attempt to characterize the spirit of Muslim commerce or its usages, but rather deal primarily with the problem, what position Islam as a religion adopts with regard to commerce, and how its attitude is expressed in Hadith particularly, and in ethical works. On the legal aspects of the whole question cf. the article Tidjâri.

a. That Muḥammad, who himself belonged to the merchant class, was favorably disposed to trade was natural in a commercial republic like Medina, whose prosperity entirely depended on trade. At least so we must interpret one of the oldest sūtras of the first Meccan period, Sūra vii. 251, the time of the origin of which is just before the conflict with the Meccan aristocracy. "As often as the Kurâñh equip their wares and summer camp," they "shall worship the Lord of this House (i.e. the Ka'ba)." But even in this period Muhâammad raises a warning voice against the evils which were beginning to be associated with trade; trade is to be conducted according to law and justice. "Woe to those who give short measure," says Sûra lixxiii. 1 sgg. "who, when they receive good measure from other men demand the full measure and when they measure out or weigh out to them, depraid!" (cf. Sūra lv. 6—8; and from the third Meccan period Sûra vi. 153; vii. 53). At a later period this attitude of the Prophet underwent a certain change, which must date from the Meccan period, although there is only evidence of it in the Kurâñh from the Medina period. Under the influence of Christian ascetic ideas, his attitude to trade was modified; he does not condemn it, it is true, but he now sees in it something which may detain believers from the worship of God and from performing the salât. This is most strongly marked in the description of the monastery in the Medina Sûra xxiv. 37: "Men whom no trade nor purchase keeps from the thought of God, from performing the salât and from paying the zakât from fear of the day on which hearts and eyes shall be fully of trouble." In any case, one can deduce from this passage that the Prophet was fully conscious of the deleterious influences of trade on religious life. The result of this train of thought was in the Medina period an express prohibition of trading during the Friday service, in Sûra lixxii. 11—11: "O ye who believe, when ye are called to the salât on Friday, hasten to the worship of God and cease trading; this is better for you, if ye knew it; and when the salât is over, then disperse yourselves in the land and strive after the benefits given by God and think often of Him that ye may prosper, and when they see trading and empty chatter, they turn to it and leave thee standing. Say: What is with God is better than chattering or trading and God is the best provider." On the other hand, the Prophet in the latest Medina period expressly permitted trading during the pilgrimage (Sûra ii. 194). And yet the emphasis at the same time once more that family and clan, goods and chattels and stock in trade are not to be preferred to God and his Prophet (Sûra ix. 24). To this late period also belong the well known Kurâñhic regulations for the conclusion of agreements (Sûra ii. 282 sqq.).
dirham which comes from trade is better than ten otherwise gained". In trading it is recommended to be generous and conciliatory; one should give food weight and measure and in weighing give overweight. The morning is recommended as particularly blessed and profitable for trading. One should be careful to avoid deceit and deception, which cancel the blessing (baraka) that rests upon trade. Defects in the goods should be pointed out to the purchaser. "If any one sells defective goods without pointing this out, God will hate him for ever and the angels will also curse him" (Ibn Mādīq, Tijārat, Bāb 45). But if one has been guilty of such faults in trading, he can atone for it by alms (qaddās). The Prophet is further said to have condemned the adulteration of goods, especially the adulteration of foodstuffs, to be carried on by mutual agreement, but never under compulsion. An agreement already made can only be cancelled if buyer and seller have not yet separated; in this period it can also be cancelled by tacit agreement (Aḥmad b. Ḥanbal, ii. 536). A further sale can only be effected when one has obtained possession of the goods (gawā'id) or Istīfā'; the traditions in this connection speak only of foods (qā'idūm) but we are told by commentators that foods are only taken as examples and in fact one tradition talks of a baṣr in quite general terms (Aḥmad b. Ḥanbal, iii. 402). If in disputes between the contracting parties one is not able to prove his point, the purchaser either remains valid and the assertion of the seller is taken as authoritative — or both must abandon the transaction. If there are two claimants to be the purchaser, the first is held to be the actual purchaser.

The traditions in general have nothing to say against business being arranged for a definite date or on credit (mawā'iq). But no increase of price must take place nor is a reduction allowed if payment is made at an earlier date (Mālik, Buwayṭ, tr. 81). The making of a debt on a credit transaction also is allowed as the Prophet once purchased provisions on credit and left his iron body-armour as a pledge.

Tradition frequently objects to a practice of traders of protesting the quality of their articles with oaths; e.g. one tradition says: "Swearing furthers the disposal of goods but diminishes their blessing" (Buḥārāt, Buwayṭ, Bāb 25). According to another tradition, Sulrā, liii. 71 was revealed in this connection; this verse has however nothing to do with the swearing of oaths when selling; its associations are other and purely religious.

A series of articles are excluded by Tradition from buying and selling: firstly all that is not one's own property (Aḥmad b. Ḥanbal, i. 186, 190); secondly a series of articles the use of which is forbidden or which are considered unclean—wine, wine, swine, dogs, cats, idols (ṣayyām) and ma'ūn [q.v.] and also water; water according to a tradition is one of the three things which are re's communes, the price of which is harām (Ibn Mādīq, Kukhān, Bāb 16).

Tradition strongly condemns a practice still very prevalent in the east: haggling or bargaining; in selling also one should not outbid his fellows. Tradition also condemns the raising of prices (maqāṣid) and speculation in or holding up of foodstuffs (iyākās); on the expression, cf. Fraenkel, op. cit., p. 185). Anyone who holds up food supplies and thus raises prices "is a sinner" (Aḥmad b. Ḥanbal, ii. 351). "He who holds up food supplies, God will punish with leprosy and bankruptcy" (Ibn Mādīq, Tijārat, Bāb 6). "The speculator is cursed" (Ibid.); according to other traditions, he "will be thrown into the deepest hell-fire" (Ṭayyālist, No. 928). On the other hand, the prophet is said to have declined as an injustice to fix prices for foodstuffs in a time of scarcity (Ibn Mādīq, Tijārat, Bāb 27 etc.). Generally speaking, however, Tradition condemns any speculation in foodstuffs. It is forbidden to buy or sell provisions wholesale without fixing weights and measures (dīnārīs); food should not be sold again in the same place as it is purchased in but only in the particular market-place intended for the purpose. One should not go out to meet caravans to purchase goods (taṣrīḥ); the townsmen should not purchase from the man from the desert in order to sell again in the town at a profit; brokering (ṣinār) is therefore condemned.

Finally may be mentioned a whole series of branches of business and practices which are described by Tradition as improper. They will be mentioned here:

1. In the first place it forbids the conclusion of two transactions in one contract e.g. one portion of the goods on credit and another for cash (cf. Aḥmad b. Ḥanbal, i. 398).

2. Baṣr al-ṣurūbān: a form of sale in which an earnest-money (ṣurūb, or ṣurūb) is given which belongs to the vendor if the transaction is not carried through (Aḥmad b. Ḥanbal however considers earnest-money permissible; cf. Ibn al-Aṯīr, Nihāyāt, u. v.);

3. Auction (baṣr al-muṣūyaha): in three cases it is permitted however: in direct poverty, in sickness or when deeply in debt.

4. Baṣr al-μuṣāba: (presumably also of Aramaic origin; cf. Fraenkel, p. 189), i.e. when any goods the weight, size or number of which is not known is sold in bulk for a definite measure, weight, or number of another commodity, e.g. the stilb of dates for a definite tree for a definite amount of dates or the seed for a definite amount of provisions. The unreal and speculative in this transaction is seen by Tradition in the fact that the yield which cannot yet be defined may bring the purchaser more or less than he has given for it (cf. Aḥmad b. Ḥanbal, ii. 64). This rule is in the direction of the prohibition of profiteering. — But according to one tradition of the Prophet, an exception was allowed, the baṣr al-ṣurūyān; according to this, a poor man who does not possess a palm-tree of his own, in order to procure his family fresh dates may purchase for dried dates the fruit of a palm on the tree, but it has to be valued. In the opinion of several Traditionists, this transaction is limited to cases where not over five wāḥ assessed are involved while 'Aḥbāb Allah b. 'Amr b. Al-ṢāQA transmits a tradition according to which the Prophet prohibited even this (Aḥmad b. Ḥanbal, ii. 183).

5. Baṣr al-μuṣūyama, is the purchase of the yield of palm-trees for two or three years in advance. This is a question of the sale of things which are not yet in existence at the time of the contract.

6. Baṣr al-μuṣūyaha. In this the exchange is irrevocably concluded by the two parties handing over the goods without seeing or testing them beforehand. Another form of this transaction is
7. Bah al-mar‘ama. In this the transaction is also concluded without the goods being seen or examined beforehand, the covered goods being simply touched with the hand.

8. Bah al-zhar: “dangerous or hazardous trading”. For this kind of transaction the traditions give a series of examples, e.g. the milk in the caddar, an escaped slave, booty before its division, fishes in the water etc. (cf. e.g. Ahmad b. Hanbal, l. 302, 338; iii. 42). The commonest example is the very complicated case of bah al-habala, namely the sale of a pregnant sheep-camel for slaughter with the prospect that it may produce a female young one, which will again bear young.

All these transactions are condemned by Tradition on account of the element of uncertainty in them. On money-changing (tijji) and the prohibition of profiteering (rida), see these articles. The above transactions are in all the older collections; a still larger number with a great wealth of detail are given in the later collections, e.g. Kansa al-‘ammad (cf. Kitter in lit., viii. [1917], 28 sqq., where a series of such traditions is translated).

c. In the traditions of the first three centuries an open and honourable attitude in business is demanded of the merchant; he is to treat his customers “like his brother” and refrain from cheating them in any way. Tradition therefore also condemns any business in which there is an element of uncertainty, in which chance can play any part, so that no one may suffer injury. These fundamental principles of Muslim commercial ethics have found their classical expression in Ghazal’s It’ab and Uloom al-Din, Cairo 1326, ii. 48 sqq. According to Ghazal (l. 505 = 1111), one should strive to earn one’s living with a view to the next world. To him the acquisition of a livelihood is a means of attaining bliss, the world is a field sown, a preliminary to the next world. But Ghazal does not regard trade as absolutely better than any other means of earning one’s living. “Through trade”, he says, “one can either attain a sufficiency or wealth and superfluity”. He condemns the accumulation of wealth, in so far as it is not applied to good purposes. But if the merchant obtain a sufficient livelihood for himself and his family, it is at any rate better than begging. But certain types of men do well to refrain from any such activities, for example, the plebs, the mystics, the learned and the officials. Ghazal then gives his views on the ethics of commerce of which only a brief resume can be given here.

Even if a business is legal and irreproachable, yet it may be immoral and injurious to others; for not every prohibition makes the agreement invalid. Ghazal then distinguishes two kinds of business, those that injure the community and those that only injure the individual. To the first group belong speculation in foods, especially in corn (iktibar), and the putting into circulation of false coins. In the case of false money the merchant has to pay attention to the following points: 1. If he takes false money, he should throw it down a well. 2. He must acquire a thorough knowledge of the coins current in the country. 3. If he pays another false money with the latter’s consent, he is not free from guilt, as the other may put them into circulation again. 4. If he takes false money to oblige some one, he will only participate in the blessing which rests upon a good feeling in trade, if he does it with the intention of throwing the false money into a well.

Ghasali then deals with the conduct of business, which is only injurious to the individual. The guiding principle in trade is that one should only do to a fellow Muslim as he would be done by. Therefore, the seller should not praise the wares and not emphasise his statements by oaths; he must only emphasise such qualities in the goods as the customer cannot know without further trial, e.g. the capability of a slave; 2. he should tell all the faults of the goods, he should for example not show only the good sides of a material, he should not exhibit materials in a dark room etc.; for this is deception and neglect of the “good counsel” to which his brother is entitled. The merchant must remember two things, firstly that though he can dispose of his goods by concealing defects, he thereby loses the blessing which rests upon trading, and secondly that the benefit of the goods of this world ceases with the end of life and that only the injustice and sin remain, which were committed in trading; 3. the merchant must give just and full weight and measure; 4. he must quote the correct price of the day.

Ghasali then deals with the showing of little kindness and civilities in trading, i.e. one should allow the other an advantage which he is not strictly compelled to do. Such little civilities are: 1. if the seller refuses a price offered which is much above the market price; 2. if the purchaser allows himself to be charged too much when the vendor is a poor man; 3. if in the collection of arrears, one allows a remission or prolongation of the period; 4. if the debtor brings the money to his creditor to save him the trouble of coming for it; 5. if at his request the contracting party is allowed to annul an agreement to purchase that has been concluded; 6. if one sells to the poor on credit and only demands the price, when it is possible for one’s books of the debt and leaves the payment completely to their pleasure.

The merchant however in his pursuit of profit should not neglect the salvation of his soul. The merchant should therefore 1. begin his transactions with good intention (niyya) and good faith (‘ishla); 2. he should conceive of trade as a “social duty”, as al-fard al-kifaya, as his trade is only a part of the complicated system of the whole; 3. he must not let the market of this world distract him from the markets of the next world, i.e. from visiting mosques and performing the salat; 4. in entering the market and in it itself he must often think of God; 5. he must not be too eagerly set on the market and trading, not be the first to enter it and the last to leave it and must not cross the sea; 6. he must not only avoid what is forbidden, but also avoid all doubtful and suspicious business; he should enquire after the origin of goods and not deal with notorious swindlers or thieves; 7. he must carefully watch his words and deeds in business, as on the day of judgment he will be called to account for them.
According to Gharîbî, the market for the merchant is the scene of his qîthîd, his "holy war" where he has to wage a war against his own ego in his intercourse with his fellow-men. Since for Gharîbî, commerce is a preliminary and a preparation for the next world, he therefore discards the ascetic ideal of fleeing from the world for the ordinary mortal as an evasion of the struggle. Similar views, although not always of such high moral worth as in Gharîbî, are found throughout adab and akhlâq literature. For example, Tâbâq al-Dîn al-Suhî, the biographer of the Shâfi'i jurist (d. 771 = 1370), in his Mu'âd al-Nûmân discusses the merchant in several passages. In these he no doubt takes typical cases of his age. Thus the paper merchant should give preference to those of whom he knows that they buy the paper for the preparation of religious works (kutub al-hikma). On the other hand, he should not sell paper to those of whom he suspects that they will use it for the preparation of heretical works, false documents, increases of taxation etc. (ed. Myhirmann, London 1908, p. 188; transl. Rescher, Constantinopel 1925, p. 138). The bookseller must not sell religious works (kutub al-hikma) to people who will destroy or criticise them. He further must not deal in books by heretics or by astrologers nor in fabulous works like the Straî 'Antar, nor must he sell copies of the Kûran or works on Tradition and Law to unbelievers (cf. thereon al-Shâfi'i, Umm, iv. 132 and Heffening, Fremdenrecht, p. 49, note 5, where the "keine" should be deleted before "banan. Werke"). Lastly the dealer in lands must take care that he does not sell poor estates (ed. Myhirmann, p. 205; transl. Rescher, p. 119).  

2. A more selfish morality on the other hand is championed in the book ed. and transl. by Ritter, Kitâb al-Insân ilâ Ma'âlim al-Tâbâ'î (by Abu l-Faţl Dîjâr bi-'All al-Dimâshqi) (of the 12th/13th centuries). The book consists of two parts, one dealing with the merchant and the other with his goods. On the subject of merchandise there are many other works, some independent and some in the well known Muslim encyclopaedias, on which see Ritter, op. cit., p. 17 sqq. Here we are mainly concerned with the sections on the merchant. The classes of merchants distinguished are: 1. The wholesaler (khâsîh). He endeavours to purchase his goods under the most favourable conditions in order to sell them again, when there is a scarcity of them and the price has gone up. He must therefore keep accurately informed about the position of the market at the places of production and the security of the roads thither so that he does not let the best time for buying and selling pass him. A purchase of larger consignments is recommended to be carried through in four instalments at intervals of 15 days so that no loss may be suffered by a sudden change in price or by some unforeseen circumstance. The wholesaler must also take account of the state of the government of the country, whether it is just and strong or if it is just but weak or tyrannical. — 2. The travelling merchant (rakâtî). He must take especial heed as to what goods he buys and must exercise great caution; for his journey may be prolonged, or some unforeseen accident may happen to him, like danger on the road, which will delay him so that he must again sell the goods in the place where he has purchased them and thereby suffer considerable losses. He must also know the average prices, which the goods he is buying will attain in his native land as well as the tariffs, lest he throw away his profit even before purchasing in a foreign country. He should also look out for a reliable agent, and a suitable warehouse etc. at his destination. — 3. The exporting merchant (mujâhîdîn). Here we have to deal with agencies. He must have a reliable agent in the place to which he is exporting; to him he sends the goods under reliable care; the agent then has to sell the goods and buy others, sharing the profit. Besides much other valuable advice for the merchant and warnings against swindlers and deceivers, al-Dimâshqi's work also contains discussions of questions of economic theory such as the fixing of the market price, the "average price" about which the merchant must keep himself accurately informed. How far all this is connected with economic views of the ancients has not yet been investigated.

Ibn Khâlid in the chapters on trade in his Mushâhidîn (Caer. 1317, p. 444 sqq., transl. in N. E., xx. [1865], p. 348 sqq.) expresses himself in similar terms. He also classifies his observations under the heads of the wholesale and the travelling merchant, while he apparently omits the export merchant. He defines commerce as the art of increasing one's fortune by buying goods and selling them again at an increased price, either by storing them and awaiting an increase of price, or by taking them to another country where the price is higher.

Ibn Khâlid's verdict on merchants: in general is of interest; for the trade of merchant, one requires to have much skill, to praise his goods untruly, to deal cunningly and stubbornly with his customers, all things which affect a man's sense of honour and justice and unfavourably influence his character. It is the small trader who succumbs more readily to the influence as he has to deal with his customers day in and day out. It is otherwise with the merchant who through some favourable circumstance has risen rapidly to wealth and fortune and has attained a position of esteem; he is rather protected from the evil influences of trading as he can leave the actual dealing to his employees and has only to supervise them and give them general directions.

The question raised in the beginning of this article of the attitude of Islam to trade is one aspect of the problem, several times discussed in recent years, of the possibilities of the economic development of the lands of Islam. Until shortly before the world war the possibility of development was denied, as is still frequently done in missionary circles. W. Barthold in his introductory essay to the Mîr Islâmî mûâsir may be regarded as the first to show the untenability of this view on historical grounds, Following Max Weber's religions and sociological studies, C. H. Becker, R. Junge and more recently Alfred Rüdî have dealt with this question and come to the conclusion that Islam has never been hostile to economic development. But the Oriental mind thinks of economic problems quite differently from the Western, which is the result of the peculiar conditions of the east, especially certain racial characteristics and the dry climate prevailing almost everywhere with the
supreme importance of the question of water supply. These conditions produced a much closer bond of union between the individual and the community. The prevailing principle is not competition but cooperation. Under these circumstances one can understand the fundamental principle of Muslim commercial ethics, that the merchant must treat his customers like his brother. To this strongly marked feeling of being a member of a community is added religion, which for every Muslim is the main guiding principle of all his dealings. Even business must submit to its control and cannot take up an independent position with a morality of its own.

In spite of this however, Muslim lands will be quite capable of adopting modern business methods; Islam in the past has often displayed its adaptability and capability of development and various Muslim lands like Turkey and Egypt are at present making up for what they have long neglected in various fields: figures like Ziya Gökalp and Muhammad Abd al-Áhad are milestones on this path of progress.

TIDORE, a small volcanic island west of Halmahera in the eastern part of the Malay Archipelago. For administrative purposes it belongs to the residency of Ternate but is not under the direct authority of the Dutch East India government; along with various other small islands and a part of Halmahera it forms an autonomous district also called Tidore, formerly under a sultan, since 1909 under a council of notables. The population is in every way very like that of Ternate (q.v.). From Portuguese sources it may be deduced that Islam first introduced into Tidore about 1470; according to native tradition, an Arab named Shalih Mansur was the first to teach Islam here and Tjililiti (also Tjililit and Tjiri Lelii) about 1495 was the first ruler to be converted, when he took the name Djamal al-Din.

AL-TIFASHI, Shams al-Din Abu l-'Abbas Ahmad b. Yuhayr, d. 651 (1253), is the author of the Kitab Asbik al-Áfghar f't Djamal·d·d·d Al-Afghar, one of the best known works on jewels which he describes — in all 25 kinds — according to their origin, provenance, natural and magical properties, defects and merits, price and appreciation of particular varieties. An edition and translation of the book which exists in good manuscripts is a great desideratum, as that by Count Raineri Bisio of 1818 (new edition 1906) no longer suits modern requirements. Nothing is known of the second mineralogical work of which there is a manuscript in Paris. To Tifashi are also ascribed some writings of an obscure nature.

TİFLİ (Ahmed Čelebi T.), an Ottoman Turkish poet and maddâh of the 16th century. Shalik in the Shaikh al-Sharî (say) he was born in Constantinople but the other sources say he belonged to Trebizond. He was the son of a certain 'Abd al-Ázîz Efendi and wrote poems while still a mere child, hence his sobriquet of Tiflî. Of a very keen wit he acquired a reputation as a maddâh and nesmil rather than as a poet. In this capacity he was a member of the entourage of Murâd IV and was very well off, as a result of the income granted him from the customs and c u s . A ll the sources record that he used to recite the Ṣâlâmâniya in the circle of Sultan Murâd and that he composed witty and amusing stories (to gain an idea of the importance and place of the Şâlâmâniya in the palaces of India, Persia and Asia Minor, cf. Köprüli Zade Fuâd, Türkîyec Mejdî muş'tâz, i. 4—5,10—12). Efîliyâ Čelebi who confirms these statements adds that he was called Lâleci Tiflî on account of his height (l. 671). Although he belonged to the Mejmû'î-ye Bârâmiye order and was an adept of Idris Mahjûfî (MS. of Mustâkim Zâde, Menâşîf-i Mejmû'î-ye Bârâmiye in my private library), he led a dissolute life. According to the Mejmû'î-ye SaleÎmân Fuâd Efendi, he lived in the vicinity of Köşkî Maşafa Pasha. The anecdotes about his relations with the poets of his time are famous. We know from Şâfî-I that Târîş Mejmû Melebi of Eski Zâhîrâ wrote two satirical treatises in verse called Ważîyet-nûme and Dhilî-nûme and represented them as the work of Tiflî. There is a copy of the Ważîyet-nûme in my own library. He is also mentioned by the poet Gaflî of Edime in his amusing rhymed biographies of poets. He died in 1701 (1665 H.) and was buried near Hazret-Kull outside Siîvîr Kapî. His tä'rîş was engraved on his tombstone by his relative Nasîm Mejmû Efendi. The celebrated poet Nâlî Kapî also wrote a tä'rîş of his death (the tä'rîş of 1707, given by 'Atîm in the Dhašl Zadab al-Áf'gâr and by Shalik as well as the tä'rîş of 1707 given by Şâfî-I are wrong. Hammer, Osmanische Dichtkunst, iii. 449, gives the date 1704 on the authority of this last source and Rieu repeats it in the Catalogue of Turkish MSS. in the British Museum, p. 198). Tiflî — who according to Şâfî-I wrote a Divân — is not however quite negligible as a poet. Biographers like
Shaihti, Riza, 'Aqin and Safi'i include him among the poets. There is a Dithon of his in the British Museum but it contains only his qaneh-fat (Rieu, Catalogue, p. 198; Add. 7953, fol. 18–25). In the meqimmâ dating from this period we have several of his poems (Flügel, Katalog der orient. HSS. Wien, l. 721).

It is to his quality as a meqdim and metem that he owes his great fame. The sources of the xvith century are all agreed in this respect and Mirza Zade Sallim, author of a taheh-e in the xviiith century, in order to emphasize the skill as a meqdim of his contemporary Kirtam says that he was a teller of stories as skilful as Tiflis, which shows that the latter's fame still survived (Taheh-e Sallim, Constantinople edition, p. 568). Suleiman Fakî Efendi, author of the Meqimmâ, says he was the first and oldest of the 'Othmanî meqdim's but this is wrong, as my investigations on this subject have shown. We may however regard Tiflis as the most famous of the 'Othmanî meqdim's. In some old meqimmâ, we find fragments of his work and anecdotes about Tiflis and Sulțan Murad have been kept alive to the present day. In the story of Şâmil Mufta contained in No. 1208 of the library of the University of Stambul and in another copy in my private library, Sulțan Murad and Tiflis appear as the dramatis personae. In the story of Khanlarî Khanîn, also one of the oldest stories of meqdim's, Tiflis and Sulțan Murad play a part ('Ali, the editor of the Djebrilî'ân-20, has republished this old story at the Djebrilî 1954 well press under the title Khanlarî Khanîn. Hâkîyâ-i cheatî). On the life of this 'Ali and a résumé of the story cf. the article Meqdim-i Meqdimî by Ibn al-Amin Mah- mûd Kâmil in T. O. E. M., No. 96, 1928). It may be asked if these stories which are of an extraordinary value for a knowledge of the social life of old Stambul, were really composed by Tiflis himself, or if later meqdim's, remembering the great fame of Tiflis, adapted them and introduced Tiflis into them. No definite answer can be given, but these stories of meqdim's show in any case what a great reputation Tiflis had acquired.

Bibliography: (besides the works above mentioned) the addition of Shaihti to the addition of the Shâmilî, entitled Wâfik al-Fudâlî (there are a number of copies in the libraries of Constantinople. The author's son completed his father's work and added the biographies of the niâm and itisîms from 1131 to 1143; there is a copy in the Aya Sofia, No. 3198); Riza, Taheh-e, Constantinople 1316, p. 63; Safiî, Taheh-e, Library of Fakî Efendi, No. 3549; Seirek Zade Meqdim 'Aqin, Dagh Zah- da al-Akbar, in my private library; Gufî, Taheh- e, in my private library; Meqdimî of Suleiman Fâlî Efendi (on this Meqimmâ and the different manuscripts of his works cf. Tîrîsî Medînedî, i. 35); Meqdim 'Ali 'Ainî, Hâfizî hâ'irâm well, Constantinople 1343, p. 127; Köprülü Zade Meqdim Fâdî, Tîrîsî Medînedî, i. 31–34.

(TORALÖ ZADE MEKİMPÉ FÉAD)

TIPLIS, the capital of Georgia and also the eastern part of Georgia (Kharthlia).

The Name. In Georgian the town is called Tphlis, which is usually explained as derived from tpbli 'bot' (referring to the hot springs of Tiflis), in Armenian Tphhis (Tphis).

in Arabic Tafaîs (Balâdhûr: Taîlîs). Among similar names we may note the town Taffiâ or 6 mediante mentioned by Ptolomy v., ch. ii to the N.E. of Abania, i.e. in Daghestan and the place called Taîfis to the south of Lake Urma (cf. Kadima, p. 215: the road running from Dajnavar to Ashârâdïn forked at Barâ (='Sâkka'î or q.v.). Taîfis lay 2 farsakhs north of Barâ on the road to Urma.

Before 112b. The old capital of Georgia was at Mskheta (Ptolomy, Geography, v., ch. x., Marqâma = 'Marqâma' which the Arab geographers by a popular etymology sometimes call Madjîd Dhi 'l-Karmîn (Mas'udi, Murâdî, ii, 56; cf. Mar- quart, Svenskgeogr., p. 185). According to the Georgian Chronicle the Persian erîshaw ('ethnarch') sent against Waraz-hakar (379–395), king of Georgia (of the Khosroïd dynasty descended from the Sasânians), built Tiflis "between the Gates of the Caucasus" (between Darial and Darban) "to serve as a bulwark against Mskheta" (Brousse, Histoire de la Géorgie, i. 140).

During the wars of King Wakhmat Gursual (446–499) with the Persians, the fortress (baia) and the village (napheil) of Tiflis were destroyed. Wakhmat laid the foundations of a town at Tiflis and his son Dalî (499–514) completed its walls (cf. cit., p. 180, 196, 201).

After 453, the Persians, having suppressed the ruling dynasty of eastern Georgia, maintained a Persian marrasân in Tiflis, beside whom representatives of the Georgian nobility had a nominal share in the administration of the country (Brousse, i. 226; Marquart, cf. cit., p. 397, 431–432; Ljahakhow, Khrist. Vostok, i. 110). The governor of Mskheta was under the marrasân. Theophanes of Byzantium (xvith century) is the first Byzantine author to mention Tiflis. (Tâphis) marrasân under the year 571 (Theoph. byz. apud Photius, in Migne, Patrologia graec., cl. 139; cf. Muradî, Emarî de chronologie byz., St. Petersburg 1855, i. 156).

The wars with the Turks and the Byzantines having detracted the attention of the Persians from Iberia, the Georgians asked the Byzantine emperor to give them a king and the Bagratid Guaram (571–600) was set up at Mskheta. To this king tradition attributes the resurrection of the foundations of the church of Sion in Tiflis (l. 222). After the victory gained over the Byzantines by king Khwaraz Parwâz (after 606), the son of Guaram, Stephanos I (who was content with the title of erîshaw = 'ethnarch'), joined the Persians. Later when in 624 Heraclius and his Turkish allies laid siege to Tiflis, Stephanos defended the town bravely. Heraclius appointed as mikhawî (chief) Adarnases of the old Khosroïd family, who associated with him the erîshaw Dîshghâ (Theophanes: Dîshghâ); according to Marquart: Thong Vaghba Khayan). The citadel (baia) was taken and Stephanos slain.

The Arab conquest. The Arabs conquered Armenia and Georgia (cf. Balâdhûr, p. 194; and Yâkût, ii. 58 where Djarâm is a mikhâyê of the country of Armûni). According to the Georgian chronicle (Khârthlia tikheoreîa), the Agarians invaded Somkheta ['Armenia'], a rather ambiguous term, for "Somkheta of Kharthlia" began to the south of the river Khram, about 20 miles S. of Tiflis in the reign of Stephanos II (659–663), son of Adarnases, who lived in Tiflis. On the death of this king, his sons Mir and Arêl
withdrew to Egris (Mingrelia, the land north of the Rion and to the west of Imeretia as far as the Black Sea). In the period of their joint reign (665–668) Georgia was visited by the ferocious Murwan Kru ("M. the Dead") sent by the Amur Al-Mu'minin Ezghr (I'li Haghani, who was actually 105–125 = 724–743). Such mistakes and anachronisms may be explained by the fact that at this period the national life of Georgia had taken refuge far to the west in lands not easily accessible from Corokhi (Klardzhetia). The thread of events may however be pieced together from Arab and Armenian statements [cf. the article ARMENIA].

In reality Arab expeditions penetrated into Transcaucasia in the reigns of the early caliphates. According to Tabbari, i. 266, in 22 (643) Sufakh having made peace with Shahr-Burzin (king of the Bah Al-Awab) sent Habib b. Maslama against Tiflis. To the same year Tabbari, i. 2674, puts the peace with the people of this town but it was actually made in 25 (645) in the reign of Othman (al-Yakub, p. 194; Baladshuri, p. 198). When Habib b. Maslama had conquered Armenia [q.v.] he turned his attention to Georgia. A Georgian ambassador (Nikly = Nicolaus; Tfly = Theophilos II) appeared before him to testify that the khatrib of Djuraz and his people were well disposed. Habib's answer (cf. the versions in Baladshuri, p. 201 and Tabbari, i. 2764; Yakuti, i. 857 rather follows Baladshuri) was addressed simply to "the inhabitants of Tiflis, in (the rustak of) Mandjasis (now Manglis) in Al-Djuranj (i.e. Georgia) in the land of Hinduza". Habib guaranteed the people the exercise of their religion; but he sent again to Tiflis the learned 'Abd al-Rahman b. Djar to expound the law of Islam and indeed the people of the town were soon converted to Islam.

After reducing Tiflis, Habib extended his conquests or his treaties of peace over other regions inhabited by the Georgians and their neighbours (Baladshuri, p. 202–203; cf. the attempt to analyse them in Ghaurani, op. cit.). Among these the Shanirya play a prominent part (Ptolomy, v., ch. viii., § 13: Shanairia; in Armenian: Tzarnakh), a very warlike Christian people who lived in Kakhetia and the high Alazani and who, according to the hypothesis of N. Y. Marr, were identical with the modern Thshkh, whose language is related to that of the Cechs (cf. Isae, Abd. Nakt., xiii, 1930, p. 1379–1408).

From the time of Habib's expedition to the reign of al-Mutawakkil (212–247) the Djurzan (eastern Georgians) and the Akhbagh [q.v., here in the wide sense of "western Georgians of the valley of the Rion", i.e. of Imeretia) paid tribute to the Arab military commander in Tiflis (Murudi, ii. 65; Yakuti, ii. 583). Of the time of Yazid II (101–105) we have a letter in which Djurrah b. 'Abd Allah confirmed to the Djurzan the guarantees given by Habib b. Maslama (Baladshuri, p. 202; there is a reference there also to the rustak of Mandjasis, but several place-names are still unidentifiable).

As to the "Murwan Kru" of Armenian and Georgian tradition, two personages seem to have been confused in this figure (Marquart): Muhammad b. Murwan of the Georgians says he had heard the Armenians mention him as 'Abd Allah, and his son Marwan b. Muhammad who (in the reign of Haghani, 105–125) was fighting mainly in Dagesthan but whose expedition against the "Gate" of the Alans must have passed through the region of Tiflis. His headquarters were at Kisal (?), 20 farshaks from Tiflis and 40 farshaks from Burgahia (probably Kesal under Ta'lis) which satisfies the description; below). A dirham is known of 'Abd al-Malik struck at Tiflis in 85 (704).

The 'Abbasids. In 141 (758) the Khazars under Ka's Turkhan invaded Armenia (Ya'qubi, ii. 424). Tabbari (ii. 326), speaking of the same event under 147 (764), says that during the invasions of Ashtar Khan al-Khuwarizmi (ii) many Muslims and dhimmi were made prisoners and the Turks entered Tiflis. Ya'qubi immediately after 141 mentions a raising of the Sanjar. The latter were defeated by 'Abd al-b. Isma'il who then returned to Tiflis and executed his prisoners there.

Another Khazar invasion took place in 183 (790). Their king came as far as the bridge over the Kur and ravaged the country but the taking of Tiflis is not mentioned by the Arab writers (Ya'qubi, ii. 518; Tabbari, ii. 648) while the Georgian chronicles say that in the joint reign of the brothers Ioane and Dizanaher (718–786?) the Khakan's general Blcan (in Armenian Bul'n'an) took Tiflis and conquered Kharthlia.

Of the governors that Harun al-Rashid (170–193 = 786–809) sent to Armenia the harshest was Khusaiba b. Kha'if (Baladshuri, p. 210). The Georgians called him Ch'um-Asim. Ya'qubi, ii. 210 confirms the cruelty of his second government. The Djurzâh (read Djurzân) and the Sanjarîya rebelled. Khusaiba's general Sa'd b. hastily defeated them, drove them out of the country and then returned to Tiflis.

Under al-Mu'azzam (198–218) a certain Muhammad b. 'Attâb established himself in Armenia. In 214 (829) he conquered the land of the Djuran and the Sanjarîa joined him (Ya'qubi, ii. 540, 565–566). Khallid b. Yazid gave the awâd to Muhammad b. 'Attâb and defeated his allies, the Sanjarîa, but the disturbances in Armenia went on (Ya'qubi, ii. 566; Baladshuri, p. 210–211). In 215–239 (830–853) Is'kâh b. Isma'îl carved himself out a principality in Georgia.

Is'kâh b. Isma'îl. According to Mâṣūdi, Murudi, ii. 65, he was of Kumaq origin. His father Isma'îl b. Shu'âib al-Murdi, a client of Harun (126–132 = 744–750); he had settled in Georgia in the time of the caliph Amin (193–196) and had had skirmishes with the wali Assad b. Yazid (Ya'qubi, ii. 528). The uncle of Is'kâh, 'Ali b. Shu'âib mentioned in the Georgian chronicle, i. 260, 265; is said to have received Tiflis from Khallid, probably after Muhammad b. 'Attâb. But already in the governorship of Hassan Badghihstî, the second successor of Khallid, we find the name of Is'kâh. When the Byzantine troops of Theophilos (829–842) reached Wangand (near Kars) they "were cut to pieces by Salak, son of Isma'il" (cf. Stephen Asolik, ii, ch. v., trans. Daluanier, p. 171). As a result of such exploits the caliph Wallih (842–847) recognised Is'kâh as lord of Tiflis, but this did not last long. Muhammad, son and successor of Khallid, defeated Is'kâh and drove out the Sanjarîa. According to the Georgian chronicle, the Georgian princes (who had less fear of the central government so far away) supported Muhammad against Is'kâh and his allies, the people of Kakhethia and the Sanjarîa.

Finally in the reign of al-Mutawakkil the Turk
Baghā al-Kalb or al-Shāhīd was sent to Armenia. In Rabī‘ I 238 (autumn 852), he left Dublis for Tiflis. Baghā watched the operations from the high hills besides Saghdiabat (the reference is to the heights of Makhatha to the north of Isani = Saghdiabat; cf. the description of Tiflis below).

Ishākh made a sortie but Baghā’s nāfiṣāt (throwers of Greek fire) set fire to the town. Ishākh’s palace was burned. He and his son Ḥamīd were taken prisoners by the Turks and the Moors.

Dadish was decapitated and 50,000 (?) men lost their lives in the destruction of the town by fire. The Moors took the survivors prisoners and spoiled the dead. Ishākh’s wife, daughter of the lord of Sarra (= the princedom of the Avars in northern Daghestan), was at Saghdiabat, which was defended by the Khwawilīya (people of Sarra; cf. MAIYĀK-AHMET). Baghā granted them the amanu on condition that they laid down their arms and continued his operations in the direction of Djarndan and Bailsaḵān (Tabart, iii. 1114–1116; cf. Thomas Artzruni, iii, ch. 9–10, ed. Brosset, St. Petersburg 1874, p. 140–150. A Georgian inscription on the church of Ateni gives the Muḥammadan date 259 for the taking of Tiflis by Baghā; cf. Djaswakhw, Krist, Vostok, 1912, i. 284). The destruction of the Muslim princedom of the former clients of the Omayyads, which was a focus around which local elements gathered, was an irreparable mistake for the caliphate. The Arab authors (Masʿūdī, ii. 67; Yāḥīṯ, ii. 58) date the decline of Arab power in the Caucasus from this. Baghā was soon recalled; cf. Brosset, op. cit., i. 266–268 and Thomas Artzruni, ibid.

There was an Aḥṣāṣi mint for dirhama at Tiflis till 922 (pieces are known of 210, 248, 250, 294, 298, 304, 307, 311, 324, 334, 339, 337); cf. Tiesenhausen, Memoirs des khāṣīṣ orientaux, St. Petersburg 1873 and especially Pakhomov, op. cit.

The aid which Bagrat (826–876) had lent to the caliph against Ishākh did not bring the reward desired by the eastern dynasty. The rival dynasty called of Akkahan (cf. the explanation of this term above) seized Kharrithia, Thus Masʿūdī (writing in 332 = 942), Mūrīḏī, ii. 69, 74, says that the Kur left the possession of Djarndan (Bagratid of the lateral line, d. 941; Marquart, op. cit., p. 176) crossed the land of Akkahan (sic) and arrived in front of Tiflis, the inhabitants of which although surrounded by Muslim invaders on all sides still retained their courage and continued to defend their city. The founder of the Armenian Bagratid kingdom, Aḥṣāṣ (880 a. n.) also interfered in the affairs of Kharrithia (Brosset, i. 270, note 12). Masʿūdī gives Masʿūdī Dhib ʿl-Karnān (= Mskheta) as the residence of the king of Djarndan [al-tamahabat], ingeniously emended by Marquart, op. cit., p. 186 to the Armenian *mamabat > mamapat, a Georgian title.

The Sādīqā, the Sīhrids and the Shaddādids. In the meanwhile there arose in Adharbādšīn the first Muslim dynasty that owned the suzerainty of Baghdād, the Sādīqā (276 or 279–317; cf. this article and R. Vasmer, O mearlyā Saghdiabat, Topozia Ohkōh, Ined. Aretb., Baku 1927, No. 5, p. 22–31). Abu ʿl-Kasim Yāṭān went to assist the isolated Muslims in the north. In 912 (?) he came to Tiflis the amir of which was called Djaṭfar b. ʿAlī (cf. below) and seized the fortresses of Udjarmon and Bokhara (on the upper Iora) (cf. Brosset, i. 275, note 9). The chronicle also mentions another expedition (between 918 and 925) of the Sādāqā called Saiṣīl in the course of which Mskheta was taken. The Muslim sources are silent about these expeditions. Immediately afterwards the chronicle mentions the appearance of the Shaddādids [q. v.] at Barḏa and in Adharbādšīn.

Bagrat III and Bagrat IV. The series of reigns “shows the greatest confusion” (Brosset) until the king Bagrat III (980–1014?) reunited Kharrithia, Akkhāz, Tuo (on the Ḍorokh) and Ardanaq. In his time the Shaddādids [q. v.] Fadjīl invaded Armenia but was defeated by the Georgians and Mskheta was always regarded as the royal city although the rulers resided in Kutais (Khanthahāni). In 1030 (421) the Georgian and Khakhthia notables, with the help of the amir Djaṭfar of Tiflis, undertook an expedition against the Shaddādids Phulion (Fadjīl of Ganda). But when the latter died, Liparit Orbeliani, the powerful lord of Thurialet (on the upper Khram), captured Djaṭfar by a ruse and only released him on the appeal of the young king Bagrat IV (1027–1072), who evidently did not wish Tiflis to be annexed by the turbulent Liparit. Djaṭfar was re-established at Tiflis but a few years later the king himself laid siege to Tiflis. The siege had lasted for two years when suddenly the king at the suggestion of Liparit made peace with Djaṭfar. After the death of the latter the elders (ber) of Tiflis offered the keys of the town to Bagrat, who occupied the citadel Dar al-Djallī and the two “towers” Teḵaḵān and Thabor (cf. the description of Tiflis below). The inhabitants of the Isan quarter on the left bank of the Kur however destroyed the bridge and Bagrat had to turn his ballistas upon Kutais.

The Sādīqā. In 1045 the troops of Irthym Yambil (in Georgian Bahram-Lam) appeared for the first time in Isulan (Pass on the upper waters of the Arazas). In 1053 (?) the Sādīqā undertook an expedition against Gândīa but a counter-movement by the Byzantines who were allies of Bagrat IV saved the town. Thereupon the people of Tiflis again invited Bagrat but as a result of Liparit’s intrigues, the Byzantines kept Bagrat prisoner in Constantinople for three years. Then Bagrat recovered the greater part of his fortresses, when suddenly Alp Arslan (1063–1079) invaded Georgia (Brosset, i. 326). On Dec. 10, 1068, Alp Arslan accompanied by the kings of Armenia and Khakhthia (Aghsārthān, son of Gagik, of the dynasty of Korishe [Chorespiscoph] which ruled from 787 to 1105) as well as the amir of Tiflis marched against Bagrat. All Khakhthia was occupied and many Christian slaves or taken prisoners. The Shaddādids were given compensation. Tiflis and Rastaw were given to Fadjīl of Gândīa and Aṭi to Manṭulib b. Abuʿl-Awsār. In the spring of 1069, Bagrat returned to Khakhthia. Fadjīl encamped at Isan (a suburb on the left bank) and with 33,000 men ravaged the country. Bagrat defeated Fadjīl who took the road through Kakhthia but was taken prisoner by Aghsārthān. At the price of conceding several fortresses on the Jora, Bagrat ransomed Fadjīl and received from him the surrender of Tiflis where in the meanwhile a certain Sīhrbarā (Sīyaḏ al-ʿArab) was acclaimed amir. This plan failed for Alp Arslan obtained the liberation of Fadjīl (Georgian, Gorgis, son of Bagrat (reigned 1072–1089, lived to 1185), lived in Kutais. In Kakhthia Aghsārthān retained
his possessions on condition that he adopted Islam.

Dawid II. The revival took place under Dawid II Aghmushenebeli (the "Bridegroom") who took the title of king of Kharthila and Alekha (1089-1125). Dawid brought into Georgia through the pass of the Alans (Darial) 40,000 Kipchaqs (Polovtsi) and 5,000 slaves converted to Christianity. In spite of their unrilliness (Brosset, op. cit., l. 379) these warlike elements enabled Dawid to throw off Seldjuk domination. He ceased the payment of the kharaj and put an end to the seasonal migrations of the Turks into Georgia. He gave his daughter Thamar in marriage to the Shirvanshah [q.v.] Akhmet in (Georgian Aggharsht) and treated him as his vassal.

The capture of Tiflis in 515 (1121). On the complaints of the Muslims of Tiflis the Seldjuk Mahtmut b. Muhammed (1118-1154) sent an expedition into Georgia in which the Urtukhs Nadji in-Din Ghiyat, the Maryzadi Dubais b. Sadzaqa (Dubata of the Georgian chronicle) and the brother of the Sultan Tughra (lord of al-Arran and Nahkibewan) with his atabeg Konchegh all took part. On the 18th August 1121 this army entered Tirkhelet and Manglis but was destroyed by Dawid and his Kipchaqs, after which in 515 (1121-1122), Dawid stormed Tiflis so that the town might become "for ever an arsenal and capital for his sons"; Brosset, l. 365-367 and Addition, l. 230, 256-241; cf. Ibn al-Athir, x. 395-399 (= Defremery, Fragments, p. 26); Kamal al-Din, Ta'rikh Halab, in the Recueil des hist. des croisades, ii. 628; Yaghi, l. 857 (Tiflis). The Arab historian al-Ain (1360-1451) who utilises sources, some of which are no longer accessible (Brosset, l. 241), admits that Tiflis was taken by a pilleaged but, contrary to the other sources which emphasize the atrocities committed by Dawid (Matth. of Edessa in Brosset, Add., l. 230), says that the king respected the feelings of the Muslims more than Muslim rulers had done; Dawid is also said to have promised to strike coins with Muslim legends; the coins however of the king (cf. Pahkomow, Monists etc., p. 77-81) bear the image of the Virgin. Great caution in dealing with the Muslims was necessary because as the Georgian chronicle acknowledges, the fighting between Muslims and Christians was still very bitter (cf. Brosset, l. 380).

The Banu Dja'far. Dawid succeeded in Tiflis to the Banu Dja'far of whom it is not known whether they were of Arab or purely Georgian origin. While the Georgian Chronicle (l. 367) puts at 400 years the period of Muslim rule in Tiflis, al-Ain gives the Banu Dja'far alone a period of 200 years. Indeed, we have heard that about 912 the amir of Tiflis was already called Dja'far [b. 'Ali] (Brosset, l. 275). His successor struck coins at Tiflis; dirhams are known of Mansur b. Dja'far, dated in 342 and 343 (with the name of the caliph al-Mujj II l'talih), and of Dja'far b. Mansur, dated 354, 368 (al-'Tayy II l'talih). In the time of Bagrat IV (1027-1072) the amir of Tiflis was called Dja'far (his father 'Ali had carried off the property of the Swetsi-Taykoweli church of Mtksheba). The Chronicle calls him Mukhad Gward Dja'far (Mskhath Gward is a place near Mtksheba). During the 400 years before the conquest of Tiflis by Dawid, the town was governed by the young members of the Banu Dja'far family, each of whom in turn held power for a month (al-Ain).

The strong kings. The reign of Dimitri (1125-1154) was occupied with a civil war with the Orbelian family. The Muslim rulers contemporary with him were: in Adharbajjian, the Banu Dja'far Ilidugs (in Georgian Djudzor); at Ani, the sons of the Shahbaniyeh Khatun, Zahir al-Din Shahb-I-Armun (1128-1133); at Erzerum the amir Saltuq b. 'Ali, whom the Georgians defeated near Ani in 548 (1153); cf. Ibn al-Athir, xi. 126 sub anno 548 (1157); Muneqdeljim-bashi, ii. 577; Defremery, Fragments, p. 40. It was Dimitri who, taking advantage of the earthquake in 1139 at Gandja, carried off the famous iron gate of this town and took it to the monastery of Gelati (cf. Frazhin, Mem. Ac. St. Petersburg, viith series, St. monast., vol. iii., p. 531). The position in Tiflis is described by Ibn al-Azra'k, historian of Muyafafrpshin [q.v.] who visited Tiflis in 548 (1153). He says the Muslims were in a favoured position. Every Friday Dimitri came to the mosque and sat on a dais (dabhe) opposite the khatib; cf. Ademov, Three Arabic MSS., J. R. A. S., 1904, p. 791 (al-Azra'k may have been the source used by al-Ain).

Under Giorgi III (1156-1184) the Muslim kingdoms around Georgia remained the same and the king conducted vigorous campaigns against Erzerum, Ani, Dvin, Nahkibewan, Gandja, Bardha'a and Baillejan. To assist his cousin the Shirvanshah Akhmet, son of Thamar, Giorgi's aunt, the king even went to Darband (cf. Brosset, i., p. 393-403 and Add., l. 255-257, 266; Ibn al-Athir under the years 556, 557, 559, 561, 569).

The reign of Thamar (1184-1211 or 1212), the "Sun of Khurthlia", is the culminating point in the history of Georgia, now on the threshold of terrible trials. Having forced the diadochoi of the Seldjucks to the Christian king now assumed the offensive and surrounded itself with Muslim vassals. Thamar played an important part in the creation of the empire of the Comnenoi of Trebizon (Knik, Ostrov. Trapes. imperii v 1904, Utia. Zap. Akad. Nauk, 1853, vol. ii., p. 705-733). The troops operating from Erzerum and Eraniqian inflicted defeats on the Ilgidists of Adharbajjian. The sack of Ararat by the Georgians (Brosset, l. 469-473) finds confirmation in the Sililat al-Nanab-i Safawtes, Berlin 1843, p. 43; cf. Khanykow, Misc. Asiaticques, i., 1852, p. 580-583. The Chronicle also mentions in 1210-1212 an expedition through the whole of northern Persia as far as Romguaro (= Ramaljar near Nahkib) but beyond Tabriz the stages in this march seem to be quite fanciful (Brosset, l. 471-473). In spite of the brilliant success of the generals Zakhar' and Iwane of the Mkhargrdzel family (Armenian of Kurd origin; cf. Brosset, Add., l. 267), the Georgian victories were not lasting and of all her conquests, Thamar could only retain Kars (Brosset, l. 467). At home also (Djwaswhow) the growing power of the feudal lords demanded the attention of the queen. Muslim customs penetrated into Georgia; the general Iwane was given the title of Atebeg ("used among the Saltans"; Brosset, l. 474). In the reign of Thamar, we find mention of a rebel, 'Oozan son of Abu l-Hasan, "amir of Tiflis and Khurthlia" (is this a scion of the Banu Dja'far?).

The Mongols. The son of Thamar, Giorgi III Lasha ("splendid" in the Abkhazian language) who ruled from 1212-1223, levied the khorruf of Gandja, Nahkibewan, Erzerum (Kurnakalak) and
Khitai but in 617 (1220) the Mongol troops of Subatai and Djebe (in Georgian: Saba and Loma or Çeba) made their appearance in Persia. The Georgians were several times defeated; the Chronicle (Brosset, l. 493) considers the defeat at Birdbul (on the Berda) as the turning-point in the fortunes of the Georgian armies, henceforth invincible.

Gori in suddenly and the throne passed to his sister Rusudan (1223-1247) (Khulati, the "maiden king" of the Muslims), a beautiful princess devoted to pleasure, whose hand was sought by her Muslim neighbours (Brosset, l. 495). In the end she chose the son of the Saljuq of Erzerum, Mughith al-Din Toghril (in Georgian Orthiul) who by his father's orders became a Christian (Ibn al-Athir, xii. 370: شیخ شریف شریفیان فی شیخ شریفیان). In the letter from Rusudan to the Pope Innocent III (which reached Rome in 1224) the king speaks of the Mongol invasion as an insignificant episode, but a new enemy was at the gate.

The Khwarizmshah Djalal al-Din defeated the Georgians at Garin in Shaibann 622 (Aug. 1225) (Ibn al-Athir, xii. 383; Nasawi, ed. Houdas, p. 112; Brosset, add.). This was the last of the Georgian commanders who had been taken prisoner. Tiflis was occupied on March 9, 1226, thanks to the treachery of the Persians who lived in the town. According to Diuawani, Djalal al-Din spared the inhabitants and allowed them to withdraw to Ab-kharaz but destroyed all the Christian places of worship. Ibn al-Athir on the other hand says that the town was taken by storm (اوکار وفکار می شریت ونی و) and all those who did not accept Islam were massacred. Nasawi (p. 122) also confirms the massacre of all Georgians and Armenians in Tiflis (cf. Brosset, l. 304-307). The visier Shahar al-Mulk was appointed governor of the town. When he left for winter-quarters at Gamdja, the Georgians returned to Tiflis and burned the town, knowing that it was impossible for them to hold it (Nasawi, p. 125). Djalal al-Din, occupied elsewhere, did not return to Georgia until 1228 when at Mindor (in Georgian "field") near Lord he scattered the forces of the commander-in-chief Iwane, made up of very diverse elements: Georgians, Alban, Armenians, people of Sarf (= the Avar of Daghestan), Lak, Kipchak, Swan, Abkhaz, Djani (= Can-ethi; cf. the article Laz), men from Syria and Asia Minor (cf. Diuawani, li. 170). The Georgian Chronicle (Brosset, l. 310) says that after the victory at Bolsin (= Mindor?), Djalal al-Din committed fresh atrocities at Tiflis.

Second coming of the Mongols. Djalal al-Din disappeared from the scene in 625 (Aug. 1221) but the remnants of the Khwarizmians disturbed the eastern part of Georgia and shut the feudal lords up in their castles. Tiflis however was still in possession of Rusudan, who when the Mongols of Djurumghan entered Georgia via Gandja. This took place in 1236 (Brosset, l. 333; according to d'Ohsan, ill. 75: ca. 632 = 1235). Rusudan left Tiflis for Kutais and the governor of Tiflis burned the town (Brosset, l. 514: "thus was ruined the city of Tiflis").

The whole of whom the Chronicle always mentions four (Carmaghian, Caghtar, Iseri and Bibe) occupied the country and restored Tiflis. Rusudan's rule was confined to the valley of Koni. The Mongols broke up the political organisation of the country; the Georgians were pressed into the Mongol service (expeditions against the Saljuq of Rum, Ghiyath al-Din, against the Isma'ilis of Alamut, against Baghdad etc.). The country was divided into six rumais and the Georgian feudal lords (emirvans) whose feuds underwent changes, were divided among the rumais. The people of note fled there to Batum-Khan and then to the Great Khan in Mongolia, where they were kept for years. In this way the heir to the throne, Dawid (called in Mongol Nurin "splendid"), was removed from the country. A certain Egrasian tried to unite the country against the Mongols ("he only lacked the name of king"; Brosset, l. 542) but the Mongols set up against him Dawid, son of Georgi Lesha, who was crowned at Mtkakheta. He also had to go to Batu and to Karakorum. The "two Dawids" are mentioned among these present at the kurultai of Guyuk-khan in 643 = 1245 (cf. Diuawani, l. 205, 212; Raghid al-Din, ed. Blochet, p. 242). Returning to Georgia, after the accession of Mongke (1248-1259) they ruled together at first.

As Hulagu did not love Dawid Nurin, the latter escaped to Abkhazia. "It was thus that our country became two principalities" says the Chronicle (Brosset, l. 546). eastern Georgia owned two suzerains: on the one side Battu-Khan, lord of the country north of the Caucausus, wished to extend his authority over Georgia; on the other side the Ilkhan of Persia asserted their rights over it. Dawid, son of Lasga, exasperated by the exactions of Khodja Azis, collector of Mongol taxes (Raghid al-Din, ed. Quatremere, p. 395, calls him "one of the governvors of Georgia"), fled to his cousin. The novein Ouat Arghun occupied Tiflis. A reconciliation only took place when the son of Lazha had fought beside Hulagu against the troops of Berke, successor of Batu who had invaded Shirvan in 1262 (d'Ohsan, ill. 182). In the reign of Abagha, Berke returned to Transcaucasia and reached Tiflis, where many Christians were massacred (in 1266; cf. ibid., p. 418).

The successor to Dawid, son of Lasga, was his son Dimiri II (1273-1297). He took part in the numerous campaigns of Abagha and Amanud but in the reign of Arghun he behaved as if he were himself heathen after being bastinadoed at the ordina. The Georgians call him Thaw-Dadchuli, "he who gave his head as a sacrifice".

Several further kings were nominated and deposed by the Mongols. In vain Dawid VI (1292-1310) endeavoured to negotiate with the Khan of the house of Batu (Otabba = Tokhtoghul); he had to send to Ghazan an embassy consisting of the orthodox Catholicos and the khatif of Tiflis (cf. Brosset, l. 615 [this last detail is evidence of the revival of Islam as a result of the accession of Ghazan!]). The Georgians continued to take part in all the campaigns of the Mongols, which they never saved them either from persecutions (cf. the activity of the Muslim novein Nawritz in the reign of Ghazan: Brosset, l. 617) nor from attempts to convert them (e.g. after the Gilan expedition of 1307).

Giorgi V. After the death of Iuliani (1316) Giorgi V (Britiismonata, the "Splendid") was placed on the throne (1316-1345) under the patronage of the amur Cobu. Giorgi profited by the troubles in the last years of the dynasty of the Ilkhan to drive out the Mongols. He exterminated the rebels, went with his army into Imeretia and united under his rule not only the Georgian lands
TIFLIS. It was during the long reign of Bagrat V (1360—1395) that Timur made his appearance. The official historian of his reign represents his campaign in Georgia as a ḥaṣāb. Timur set out from Kars in the winter of 788 (1386) (Ẓafar-nāma, i. 401). Bagrat had shut himself up in the capital of Tiflis. The town was captured and the King and Queen taken prisoners. The Chronicles and Thomas of Metsop (Nève, Exports, p. 37) mention the apostacy of the King but represent it as a clever ruse which enabled him to exterminate 12,000 of Timur's soldiers and regain his lands. His son Giorgi succeeded him in 1395. The Ẓafar-nāma, i. 735, 730 does not give these details. In 796 (1394) he only mentions the dispatch of four generals to the district of Akghal-tiske (Askheiska, q.v.) in order to apply the law of ʿādm. Timur in person finally chastised the Georgians called Kara-Kalkandil ("with black bucklers") —the Georgian mountaineers, the Pahaws and Khevares—and returned via Tiflis to Shekki (q.v.).

In 798 (1395) the Georgians, allied with ʿAll of Shekki (q.v.), inflicted a defeat on the troops of the Timurid Miran-shah who was besieging Alinda (near Nakhchiwān) and delivered Sultan Ṭehrār Ẓalāfiyir, who was shut up in it (ibid., 303). This event brought about its reaction in winter 802 (1399) when Timur took Shekki and mercilessly ravaged the wooded defile of Khimishi (?), probably in northern Kakhetia: where a Khimishi family held a fast at Mucwel to the east of Timtheth (Broset, t/a, p. 464). In the spring of 1400 Timur marched on Tiflis and demanded that King Giorgi (Gurgun) should hand over Sultan Tahir. On receiving an evasive answer, Timur laid the country completely waste (ibid., l. 241). Tiflis received a Khorasanian garrison but Giorgi retired again to the mountains. After the voluntary submission of a Georgian prince named Dżam-beg and the capture of the fortress of Zarḵ (?) Timur's troops set out in pursuit of Giorgi and laid Swinathwa waste. Giorgi went into Abhazia and sent Tahir back to Asia Minor. Through the intermediary of a Muslim named Inmek (Broset, i. 668) he offered to Tiflis to pay the ḥārārāj, Timur accepted the offer. Next the land of the Georgian Iwane (the attah of Samakhe) was converted to Islam, and that of the Kara-Kalkandil plundered. After resting for two months in the summer quarters of Min-göl ("1,000 Lakes") near Kars, he sent troops against the Georgians who had concentrated at Farasgird (Phanaskert, on the upper Čorokh); ibid., i. 250.

In 804 (end of 1401) Timur returned to Transcaucasia via Siwās-Bağdašl-Khurāb. His delegates (muḥāsir) went to collect the tribute (saww waḥrārūd saw-dīša) from Giorgi who sent his brother with the contributions. Timur gave Giorgi the amān on condition that he supplied him with troops and treated the Muslims well (ibid., ii. 379). In the summer of 804 (1402) Timur went from Karabaḵ to Min-göl and took the fortress of Tortum occupied by Kürdül, lieutenant of a certain Taghi (?)

When, in 805, Timur returned to Erzincan, he decided to punish Giorgi for not having come to present his congratulations on his victory over Bayzid. At Min-göl, Iwane, son of Al-Ḥūgha, arrived with gifts as idd Kustandil (Constantine), brother of Giorgi, who was then on bail terms with his brother (ibid., ii. 521). Šāhku ʿIrāhim of Shīr-wan went to estimate the revenues and expenses of Georgia (ibid., ii. 521). Giorgi sent new presents but Timur refused them and summoned Giorgi to appear in person. In 806 (Aug. 1403) he himself laid siege to the impregnable fortress of Kūrttān defended by Nasrūl (or Narwāl (the Chronicle calls it Birthwīs on Alget) and took it in nine days (ibid., ii. 524—532). The troops then laid waste the country round (ṣaṭr) Georgia as far as the borders (ḥalaṭ) of Abkhasia: "which is the end of this country", 700 towns and villages were destroyed and the historian of Timur waxes eloquent over the massacres and destruction (li. 536). Timur only stopped the waste when his son Ḥusayn decided it was possible to grant the ʿāmārī. The Georgians sent 1,000 tanges of gold struck in the name of Timur, 1,000 horses, aruby weighing 18 miṣwaḵūr etc.

Timur passed through Tiflis, destroyed all the monasteries and churches and went to Bâlaḵān (winter of 1403—1404). All the country from Bâlaḵān to Trebizond was given as an appanage to the prince Khâhl Mirsā (li. 545).

Post-Timūrid period. The general disorder after the havoc wrought by Timur, is reflected in the part of the Chronicle which gives a brief account of the reigns. The Muslim sources (Mītāl al-Salātār, N.E., xiv. 235 and Mīrkhud; cf. Debrémery, Fragments, p. 245) mention an expedition of Šāhku ʿIrāhim of Shīrwaḵan, a friend of the dynasty of the Ẓalāfiyir, against the Kara-Koyanlu Kara Yūsuf in which Kustandil, king of Gurdżistān, took part. The allied forces were defeated to the north of the Araxes and Kara Yūsuf slew Kustandil with his own hand. This happened in 815 (1412—1413). 300 ʿaḏārūs (Georgian nobles; cf. Armenian ʿaḏār “race”) were also massacred. Wakhquhurst (Broset, i. 689) alone mentions Constantin as king and puts his death in 1414. In 1415 (1416) on the invitation of the Persians (= Muslims) of Akghal-tiske, Kara Yūsuf invaded this region and laid the country waste (Thomas of Metsop; cf. Nève, loc. cit., p. 96; Broset, Add., i, p. 399). The Chronicle confesses that down to the accession of Alexander (1415—1442) “no conqueror arose from anywhere.” This king gradually drove out the invaders, restored the cathedral of Sweti Ẓalāfiyir (at Mtkhet) and repaired the fortresses. The Georgian envoys who greeted Shāhrukh in 823 (1420) at Kara-bāgh (cf. Mīrkhud in Debrémery, ap. cit., p. 251) must have been sent by Alexander, and when in 841 (1437) Shāhrukh arrived in Somkhetia (cf. above) Alexander sent him rich gifts after which the son of Timur left Georgia.

In 1444 (843) the Kara-Koyanlu Ẓāḥān-šāh made a raid to Akghal-tiske (cf. Broset, i. 683; according to Thomas of Metsop, Ẓāḥān-šāh took Tiflis in 1440; cf. Nève, p. 149).

Partition of Georgia. At this period Georgian tradition becomes exceedingly difficult to unravel (Broset, i. 679—689). The history of Wakhquhurst, which continues and corrects the Chronicle and agrees better with the statements of the Muslim historians, begins with the reign of Constantin III (1469—1505) during which Georgia was divided into three main kingdoms (Broset, ii/1, p. 11—18, 147, 208, 249): Khârūthala (on the Kar [i.e. Georgian Mtkvar], with capital Tiflis), Imerethia (on the Rion, with capital Kutaisi).
and Kakhchita (on the Alazan, with capital at Gremi [in Persian Gurin] and later at Tbilw]). In addition, the atabeg of Samtșke (with capital at Akhal-tash) was detached and founded the independent principality of Saatibabo (consisting of Samtșke, on the upper course of the Kura, and of Klarjetia on the Corokh) the princes of which from Mansur III to Safar-pâša (1625) had become Muslims. (Brosset, II, 228). A number of local princes also became independent of Imeretia (the Gurics of Guria, the Dadians of Mingrelia, and the Gelowani of the Swans; cf. the article ABL Gil). In Kakhchita also, Constantine III's reign was disturbed by the invasion of Bagrat II of Imeretia.

The Aḵ-Koyunlu. In this period Urōn Hasan comes on the stage. According to Mūmūl[ji]-bāghš, III, 160, he went to Georgia for the first time in 871 (1466) when he liberated the Muslim prisoners and took the fortress of Čemča (I). Civil complications prevented him taking Akhal-tash but he returned to the attack in 877 (1472). King Bakušt (read: Bagrat II of Imeretia) was dethroned (bakr) and 30,000 prisoners taken from Georgia. According to Waḵhūti's version, Tiflis was surrendered to Urōn Hasan by Constantine, evidently to prevent Bagrat getting it. Urōn Hasan left a garrison in Tiflis but entrusted its government to Constantine (cf. Brosset, II, 13 and 25). The Tareq-i Amīn however calls the governor (āydl) left by Urōn Hasan, Shīr Kahlīl Beg, who stayed there till the death of Urōn Hasan in 1478 when the Georgians re-occupied the town.

Sulṭān Yāḡū Aḵ-Koyunlu invaded Samtșke in the autumn of 891 (1486) to chastise the Atabeg Kvarqāvari. In the next year Yāḡū sent Shīr Kahlīl Beg to conquer Georgia. The construction of the forts of Aṛkha-taša and Kozani was begun by the Turkomans on the lower course of the Debed (Borșala) at the place which commands the approaches to Georgia from the south (cf. the Geography of Waḵhūti). Kustāndī (Constantine III) withdrew from Tiflis. Shīr Kahlīl began the siege with the help of reinforcements which arrived in the winter; he took first of all the fortress of Kadër (Kodjori, south of Tiflis). In the fighting around Tiflis the Muslims suffered heavily but finally Wali ağa Īsḥāḳ-āğa had the town (3rd Rabī' I, 894 = 1490) (cf. the unpublished history of the reign of Yāḡū, Tareq-i Amīn, MS. Bibl. Nat. Paris, No. 101, fol. 101r–105r and 157r–159r). The Chronicle (Brosset, II, 326–327) which confirms many of the details, denies however that Tiflis was taken and adds that the people of the City of Tiflis (called Barzil-li by the Muslims) on Alget inflicted a defeat on the Turks.

The Safawī. In 907 (1510) a detachment of Ismā'īl I's forces under the command of Khadīm-beg invaded Georgia (Ṣāḥīḥi Khāna, quoted by Dora). The invasion by Dīw Sulṭān in 916 (1520) was stopped by the embassy of Ramaz, son of Dawōd VIII, to Ismā'īl I (cf. Ḥabīb al-Siyar, Bombay, iii, 352, p. 92). In 929 (1522–1523) the founder of the Safawī dynasty seized Aṛkha-taša and by making certain promises obtained the surrender of the citadel of Tiflis; he desecrated the churches and built a mosque "at the corner of the bridge" (cf. Waḵhūti, in Brosset, II, p. 23) (the mosque is still standing on the right bank). The Chronicle mentions four expeditions on a large scale sent by Shīr Taḥmāsp against Georgia. In 947 (1540) Taḥmāsp seized Tiflis, the governor of which (for Lurāsh I) submitted to the Persians and became a Muslim. Next the fortress of Bābī (Bardāsh (Bābi), c. 1541, 1542) was taken (Aḵ-[y]-rā Ṭeherān, 1542, p. 63). The second time was in 952 (1548) when the Georgian princes came to pay homage to Taḥmāsp at Shīrāqān (near Germā = Alexandropol = Leninakan). The third expedition in 958 (1555) was sent from Shīrak to the appeal of the atabeg of Kār Khusraw, son of Korkūr (Kvarqāvari) who complained of the injuries done him by Lurāsh (Iskandar Munāḥ writes Lawārāb but the name is Iranian: Lawārāb; cf. Mirʿat al-Bulān). According to Iskandar Munāḥ, Aḵ-[y]-rā, p. 65, by the Turco-Persian peace of 961 (1553) the territories of Māk (Mogī = Samtșke), of Kārī (Kakhchita) and of Kahlīl were allotted to Shīr Taḥmāsp, while Sulṭān Sulaimān received those of Bashāk-ānīk ("with head uncovere", a nickname of the king of Imeretia), of Daftiyān and of Gūrīyān (Gūria) as far as Tēvōrinān and Tārās (Tēvōrinān and Tārās). Lurāsh I however continued to worry Tiflis. This provoked the fourth expedition. Barzdī (Salaštāhān), Gori and Ateni were occupied and the king himself fell in battle. Waḵhūti dates the four expeditions in 936, 954, 955 and 958 respectively. Brosset, II, p. 450, considers these very probable as they coincide very well with the visitations of the Turko-Persian war. King Swīmōn I, son of the indomitable Lurāsh, had a troubled reign (1558–1600). He was defeated by the Persians and replaced by his brother Dawōd (Dāwūd Khān) who purchased the throne at the price of apostacy. Swīmōn was imprisoned in Alamāt from which he was released by Ismā'īl II (1576–1577) to checkmate the activity of the Ottomans.

Ottoman Domination 1578–1603. In 1578 during the reign of the weak Shīr Khānābāda, the Ottomans under Muṣṭafā Lāš-Pāshā penetrated into Georgia via Samtșke and in August seized Tiflis from which Dāwūd Khān had fled. The Turks put a garrison of 200 men with 100 guns in Tiflis. Muḥammad, son of Ferḥād-Pāshā, was given the sandjaq (pāšalik) of Tiflis (v. Hammer, G. O. F., ii, 483). Two churches were turned into mosques. In October, Gori received a Turkish garrison and was given as a sandjaq to Swīmōn. When Muṣṭafā-Pāshā returned to Erzerum, Ismā'īl Khūl Khān, son of the Shamsīl alān al-Dżemā'īr-Pāshā, and Swīmōn laid siege to Tiflis. Supplies were brought to the garrison by Ḥasan-Pāshā (ibid., p. 480) but the struggle around the town continued. In 1580 the new erāshker Sinān-Pāshā arrived in Tiflis and appointed as governor a son of Lurāsh who had adopted Islam under the influence of Yūsuf (?). Swīmōn made advances to the Turks which were not accepted. In August 1582 Muḥammad Bey left Erzerum to bring supplies to Tiflis but was defeated at Gori by the Persians and Georgians. Ferḥād-Pāshā put himself at the head of a new expedition (Dec. 1581) intended to strengthen the towns held by the Ottomans. In 1584, Rīwān-Pāshā left for Tiflis. Dāwūd Khān, on further reflection went over to the Turks. Swīmōn attacked Rīwān but without success. Ferḥād-Pāshā's Janissaries mutinied at Akhal-kalāk which forced him to retire. After the campaign of 1585 against Tabriz (q. v.), the Ottomans obtained from Persia thecession of Āḏarbadījān and of Transcaucasia including Georgia (treaty of March 31, 1590).
TIFLIS 759

cf. the Chronicle of the Pahlari of Mashki (1599–1587) in Takavishvili, *cit. op. cit.*, p. 183–214; von Hammer, il. 481–497 (Brosset has given an annotated translation, 1/1, p. 411–419). The principal source used by von Hammer is the *Nuqret-Nama* of Ali (Jan. 1578–Jan. 1580). On the other Turkish sources cf. Balinger, *G. O. W.*, p. 117, 181. Soon after the accession of Muhammad III (1595) Swinom was taken in a skirmish and sent to Constantinople where he died in 1600. Ottoman rule, more or less undisturbed, lasted from 1591 till 216. Oct. 1603 when Tiflis was retaken by Shah Abbas I. The Turco-Persian treaty of 1612 re-established the situation as it had been under Sultan Selim (1512–1520). Shah Abbas I and the Muslim Kings. The worst misfortune that fell upon Georgia (and especially on Kakhetia) in the reign of this monarch, although Giorgi of Kharthlia and Alexander of Kakhetia had fought under his banner at the siege of Erivan in 1602, Abbas after his victory took love from Georgia. He married the sister of Luaraeb II (1605–1616) but brought the latter to Persia and had him strangled at Gulbash-kala. In 1625 (1616) Abbas came in person to Georgia and granted Kharthlia to the Muslim Bagrat VI (1616–1619). He then punished Kakhetia. According to the official history of the reign, *Alam-ārā*, p. 635, the number of those put to death was 60–70,000 and the number of young prisoners of both sexes 100,000–130,000: "since the beginning of Islam no such events have taken place under any king." In 1633 (1623) Kharbash-Safi, on being sent to Georgia called to the colours 10,000 men of Kakhetia and instead of leading them against Erithia had them massacred "as if at a banquet" (*qulat-e-sef-e Alam-ārā*, p. 719). Exasperated by such treachery the *muqraw* ("governor of lower rank"); Brosset, 1/1, p. 148; the Persians write *muhurav* Giorgi Sasakidze (a Muslim and till then a faithful servant of the Shah) raised a rebellion in Kharthlia which the Persians did not overcome till 1626 (Isselian, *Zam muqrawa G. Sasakidze*, Tiflis 1848; Brosset, 1/1, p. 53–59 and 489–497). In spite of all these disasters, the part played by Georgians in the life of Persia becomes more and more important and Shah Sāli, successor to Abbas I, owed his throne to the support of Khrsaw Mirzâ, brother of the king Bagrat who was *dargaha of Iqbashān.*

When Swinom II perished in the civil war (1629), Theimuraz I of Kharthlia (1605–1664), a very troubled reign marked by all kinds of misfortunes; his mother Khetkhanen was put to death at Shērāz in 1624; Brosset, 1/1, p. 167) came to Kharthlia where he reigned from 1629 to 1664, after which the Khrswar already mentioned arrived from Persia and set himself up in Tiflis under the name of Rostom (1634–1658). The old king, brought up in Persia, took the Persian title of *sultan-e-zâlir* and ordered his court in the Persian fashion. Persian garrisons were installed at Guri and Saram. The Georgian prisoners who had become converts to Islam returned from Persia; Georgian manners and customs became the fashion. On the other hand, as if to celebrate the fusion of both cultures, Rostom celebrated his marriage both in the mosque and in the church, and restored the cathedral of Mikhetsa etc. In 1656 Mustâd IV took Erivan and by the treaty of 1641 (1639) Persia renounced her claims to Kara and Akbal-tishke (Za'rifā-i-Nūmān, p. 686); according to Wakhsht (Brosset, 1/1, p. 68), the Sultan received Imerchia and Saaxbago and the Shah kept Kharthlia and Kakhetia.

Wakhtang (to Muslim, Shah Nawzâ I), adopted son of Rostom, succeeded him (1658–1676). The Persopolish policy continued. Shah Abbas II (1642–1667) married the daughter of Shah Nawzâ. The latter, although a Muslim, favoured the Christian religion and even restored the confession and the communion of which the people "had been ashamed" in the reign of Rostom (Brosset, 1/1, p. 79). In order to give more support to Shah Nawzâ the Muslim tribes of Agharatbādjin and Karabagh (10,000 Djasavān and Djasavān) were settled in Kakhetia (cf. the History of Shah Abbas II by Muhammad Tāhir Wahdā, in Dorn, p. 109, 111 = Brosset, 1/1, p. 503–504). Shah Nawzâ fought in Imerchía, but when he set his son on the throne there, the Shah restored the situation as guaranteed by the treaty of 1639.

Giorgi XI (Shah Nawzâ II) received investiture from Shah Sulaimān. In 1688 he fell a victim to his own intrigues in Kakhthia and the Shah replaced him by Erkole I (1688–1691; 1695–1703). This king who had been brought up in Russia became a convert to Islam under the name of Najar 'Al Khān.

Afghan Invasion of Persia. When the Balû and the Afghans began to disturb eastern Persia king Giorgi with a body of Georgians was sent against them by Shah Hasin. He restored order in Kandahār but in 1709 was treacherously slain by Mir Wals cf. the article Afghanistan who then defeated the new Georgian forces led by Giorgi's successor, Kai Khurasaw (1700–1711). These events paved the way to the Afghan invasion of Persia.

Wakhtang (governor of Kharthlia 1703–1711; King, 1711–1724 with interruptions) was at first a Christian. The Persian garrisons with the connivance of certain Georgian elements went in for slave-trading. Wakhtang tried to put down this traffic (Brosset, 1/1, p. 97, 101, 105) and in general "humbled the Muslims, especially those who garrisoned the citadel of Tiflis." Between 1614 and 1616 he was replaced by a servent Muslim lâse (i.e. 'Al Khāl Khān) and only regained the throne at the price of professing Islam.

After the decisive victory of the Afghans at Gānabāb, near Iqbashān (1723), Shah Husain sought help from Wakhtang but in November 1721 the latter had offered his services to Russia (Brosset, 1/1, p. 117). Peter the Great who reached Darband on Aug. 23, 1722 had to return at once to Russia. On the other hand the King of Kakhthia Muhammad Kûli Khân (Constantine III) took the field on the side of the Lezgis against Wakhtang and in 1723 took Tiflis, which was plundered for three days.

Second Ottoman Occupation (1723–1734). The troubles in Persia and the Russian advance disturbed Turkey, War against the Shâhs was declared permitted. In June 1723 the se'asker Ibrahim Pâshâ, who had been negotiating with Wakhtang, installed in Tiflis the latter's son Bakar (in Persian Shah Nawzâ and now given in Turkish the name Ibrahim Pâshâ). The Janissaries occupied the citadel. Bakar soon rebelled but the Turks sent to Tiflis reinforcements under Jese, uncle of Bakar (who now assumed the name of 'Abd Allah).
In the meanwhile the Russo-Persian treaty of Sept. 12, 1723 was signed by which the provinces on the Caspian were ceded to Russia. As a counterpoint to the good offices of the French ambassador, a Russo-Turkish treaty was concluded at Constantinople on June 12, 1724: Russia kept Daghestan and the narrow strip of litoral; Turkey obtained all Transcaucasia as far as Shamilka, including the Georgian territory (von Hammer, G. O. R., iv. 206–214). The Ottoman historian of these events is Celciö-üke; on the other sources cf. Babinger, G. O. W., p. 289: Nāmi, Feth-Name der 'Abd-ı Gürüşhâni.

The deposed King Waghntagh went to Russia with a retinue of 1,400 (Aug. 1724). The Turks having taken possession of Khartli took a census and levied taxes on the inhabitants. The stay at Tiflis of the noble 'Oţmān Topal Pāshā alone has left a pleasing memory among the Georgians (Brosset, ii/, p. 129). Isse did not bear the title of king and the real power passed to 'Isăk Pāshā, a hereditary ruler of Akhal-tsiike established at Tiflis. After the death of Isse (1727) 'Isăk Pāshā was appointed governor of all Georgia (Brosset, ii/, p. 236). In 1728 he divided Khartli among the feudal lords (mētkawar) whose dimensions made it easy for him to control them. The Leegis continued to ravage Georgia (cf. Brosset, l. c.; v. Hammer, iv. 223, 231, 235, 280, 313).

Nādir Shāh. In 1143 (1730–1731) after a war in which he won little glory, Shāh Ṭahmāsp recognised the Araxes as the frontier between Persia and Turkey (Mahāl Khān, Ṭokhtābā Nādirī, Tabriz 1384, p. 90 = trunal. Jones, l. 144; v. Hammer, iv. 227 dates the peace on Feb. 6, 1732). Nādir dissatisfied, dethroned Ṭahmāsp and resumed the conquest of Transcaucasia. While he was operating against Daghestān (1143: autumn of 1734) 'Isăk Pāshā of Tiflis set out with an army to the help of Gadjū, Theimuraz, son of Nāṣir Āl Khān (= Erkē I), and his nephew Āl Mirzā, Alexander (son of Mūsā Kuli = Dawid III) attacked 'Isăk Pāshā and forced him to shut himself up in the citadel of Tiflis. Nādir, highly gratified, gave presents to the two princes (ibid., p. 114 = Jones, l. 200). At the siege of Gadjū, Nādir ordered Ṣafī Khān Bagh'īrī to lay siege to Tiflis with the help of the Georgian nobles (ma'mūnān wa-mawā'nūn = ibid., p. 116 = Jones, p. 205).

When ʿAbd Allah Pāshā was defeated at Baghāward near Ervān, 'Isăk Pāshā surrendered the citadel of Tiflis on the 22nd of Rabi I, 1147 = Sept. 17, 1734 (ibid., p. 123). Nādir summoned the nobles (māwā'nūn wa-mawā'nūn) of Khorāshān and Kakhkhteh among whom Ṭahmāsh (= Thimuraz) had most importance and privileges. Nādir however appointed as wali of Khorāshān and Kakhkhteh, Āl Mirzā, because he was a Muslim, and his brother Muḥammad Mirzā (= Leon) had fallen in battle against 'Oţmān Pāshā. Ṭahmāsh was allowed to go to Kakhkhteh to bring his family (kiš) to Tiflis. Now he was a „man of the sword and rapid decision“; he fled to the mountains of "Karalakhlān (Pāhaw), Rūs (Ru'īn, west of Gori) and Čerkes." Nādir sent his troops in pursuit of him, arrived himself at Tiflis on the 29th Djamād I, where he distributed punishments and rewards. 6,000 Georgian families of the Kašal (Abots) were transferred to Khorāshān (ibid., p. 124 = Jones, p. 210). In 1736 Ṣafī Khān captured Theimuraz and sent him to Persia. At the beginning of the
Description of Tiflis. The Arab geographers give few details about Tiflis. According to Iṣṭakhri (p. 185) the town was very large; it was surrounded by walls of clay. (jin) with 3 gates and had natural hot baths like those of Tiberias. According to Muṣfir b. Muḥalḥī (in Yūṣif), these baths were reserved for Muslims. Ibn Hawqal (p. 142–144) compares the water-mills of Tiflis (urūb) with those of Mawsūl and Raṣṣā. He is filled with admiration for the plentiful supplies of food at Tiflis and the hospitality of the inhabitants. Tiflis was an outpost of Islam, beyond which there were no Muslims (Iṣṭakhri). The town was surrounded by enemies (Ibn Hawqal). An interesting detail is given by Balḥastān in the 14th century: the town was built of pine wood (fīsamukh) (according to Kāẓımī, only the roofs were of pinewood).

In the Mongol period, Zakariyya Kāẓımī tells us that on the one bank of the Kur at Tiflis could be heard the call of the muqadhdha and on the other the peals of the Christian māṣūf. The Christians were in the majority. Hāmīd Allāh Mustawīl describes the houses of Tiflis built one above the other, the roofs of the one being the courtyard of the next.

From the xviith century we have the Turkish descriptions of Haḏīdī Khalla (his brief narrative refers to the years 1630–35) and Ewiliyya Cebeli (in 1648) and also the first detailed description by a European (Chardin 1673). Ewiliyya gives many details of the citadels. The larger (that on the right bank of the Kur) was 6,000 paces in circumference and its walls were 60 ells (ghirâs) high. It had 70 towers and a garrison of 3,000 men. There was no ditch. There was a tower fitted up to supply the fortress with water (sultaḥ būl). In the large citadel there were 600 houses roofed with clay. In the smaller citadel (on the left bank) there were only 300 houses but it was very strong on account of its walls. Pl. iii. of Chardin’s Atlas gives a general view of Tiflis in which the traveller shows the 19 principal features (churches, palace, etc.).

For the xvith century we have the descriptions by Tournemont (1701), ii. 307 (with a view, p. 314) and in Wakhaugh’s Geography (the difficulties in which have now been cleared up by Brosset, p. 180). A panoramic plan of Tiflis was published by De Fīlā, Averission sur la carte générale de la Géorgie, Paris 1766 (the editor had received it during his sojourn in Russia from the “prince of Georgia”). The gazetteer by P. Fossellian (1866) is valuable as it locates ancient buildings.

Old Tiflis consisted of 4 quarters, of which three lay on the right bank of the Kur (which here bends from N. to S. to N.W. to S.E.): 1. Kula or Kulli (= Arabic Qal‘a), the old quarter intra muror (between the streams Sololaki and Dabakhana which flow into the Kur), with the citadel (Narin-kala. 2. The town properly called Tphĭli, which grew up around the hot springs (according to Brosset, iv. i. p. lxxxiv, it was founded by Armenian inhabitants). The town was situated on the bank of the Kur opposite and below the Kura (Shah Safi); it had settled a colony of Sāyida on the heights of Thab-dom to the east of Dabahkana, whence the Persian name of this district: Sāyīdshāb. 3. The outer quarter Garesh-ubani near the race-course (eķēs), above and to the north of the first two quarters. 4. The quarter on the left
TIFLIS

bank opposite the Kala was called Isani or Nisan (later Awlabah) and had the heights of Mahkorta to the north of it. Isani corresponds to the Sughdhab of the Arabs. It is the cemetery Sardegbel, in Georgian "place of granaries", mentioned in the Life of St. Abo; cf. Broset, Additions, p. 156 and Schulze, Das Martyrium d. hl. Aba von Tiflis, Texte und Untersuchungen, 1905, xiii., fasc. 4, p. 35. The same name occurs twice in the Georgian Chronicle (cf. Broset, i, 407 and 653).

Three citadels have to be distinguished at Tiflis:
1. The old citadel of Thabor (Korol'Kal'a) on the hill on the right bank of the Dabat-khana destroyed in 1618, in 1725, and finally in 1785; it defended the southern gate of the Kala, called the Gandja Gate. 2. The citadel Narin-Kali on the hill of Kala. Before Islam, this fortress seems to have borne the name of Shuris-Tikhe (Wakhsha). It was dismantled in 1818 (cf. the picture in Gambla's Atlas). 3. The citadel of the left bank (Isani) served as a bridge-head; in 1728 the Turks began to fortify this place for the last time but left the work unfinished.

As to the royal palaces the oldest was that of Metekhi on the left bank in front of the old bridge. In 1538 the Muslim king Rostom built a palace about 400 feet in length along the Kur in Tphiliis. Here Chadin was received by Shakh-Nawaz. A little farther to the south King Wakh-Taghi built a palace very richly adorned in the Persian style; it was destroyed by the Turks in 1725; cf. Iosselian, Opliuniye (on the mosques cf. p. 239).

From the nature of the site, compressed between the Kur and the heights of the right bank, Old Tiflis attained no considerable extent (cf. Chadin). In the 16th century the town began to extend far beyond its ancient limits and is developing especially on the left bank along which runs the railway lines (Tiflis-Baku, Tiflis-Batumi, Tiflis-Dulfa and Tiflis-Kakheti).

Population. In 1783 after the prosperous reigns of Teymurz and Erekle, the town had 4,000 houses with 61,000 inhabitants. In 1803 it had only 2,700-3,000 with 35,000 inhabitants. This was the result of Agha Muhammad's invasion in 1795, traces of which could everywhere be seen even in Tiflis's time. The more exact figures for 1834 (Dubois de Montpéreix) give 3,662 houses, 4,936 families and 25,290 inhabitants, not including Russians. The population grew rapidly: 1850: 34,500, 1865: 70,000, 1897: 160,605. Of the last figure the Armenians formed 38.1% (cf. the Georgians 26.3% and the Russians 24.8%). The census of 1892 gives 233,958 inhabitants for Tiflis, of whom 85,309 were Armenians, 80,884 Georgians, 38,612 Russians, 9,768 Jews, 3,984 Persians, 3,255 Adharbajdzhani Turks, 2,437 Germans etc.; cf. the Zakhmaley, Tiflis, 1925, p. 156–157. Lastly the census of Dec. 17, 1926 gave 282,918.

Bibliography: The standard work is M. F. Broset, Histoire de la Géorgie, St. Petersburg, 1849–1857: vol. i; / — Additions, — an important introduction by the author and the early history to 1450; vol. ii / — Additions, for which an Armenian and Muslim sources have also been ransacked; vol. iii / — History of prince Wakhshut (± 1450–1750): separate histories of the four kingdoms: Kharthlis, Kakhethi, Saatabago, Imereti; followed by Additions; vol. iv / — Later chronicles, memoirs etc. (circa 1659–1856); in all 2,424 pages in 4°. Cf. also Laurenti, Broset, Bibliographie analytique des ouvrages de M. F. Broset, 1824–1879, St. Petersburg 1887 (analysis of 271 books and articles). For the history of the sources cf. the three chronicles translated by Takaishvili in Shornik materialow, Tiflis 1900, xxviii. 1–214. The chronicles are supplemented by the important Geography of prince Wakhshut [finished at Moscow in 1745], transl. into French by Broset, Description géographique de la Géorgie, St. Petersburg 1842 (with the original maps), Russian transl. by Dianashvili, Tiflis 1904, in Zap. Kavk. Otd. Russ. Geogr. Obshch., xxxiv., fasc. 5; P. Iosselian, Tiflis in russ. istoria, 2 vols, Tiflis 1915 (down to the Mongol invasion); vol. iii, ed. 1928, a part of vol. iv. (Post-Timurid period), 1924.

The desert of al-Tih which formed the most southerly district of Filastin was 40 farsakh long, about as much broad, and stretched from the district of al-Djiyf (the region of al-Farama), al-‘Arab, al-Waradah to the mountains of Sinai (Tur Sina); in the west it was bounded by the Egyptian province of al-Rif (Maspero-Wiet, M.E.F.A.O., xxxvi. 101 n.), in the east by the districts of Jerusalem and Southern Palestine.

According to the description of the Arab geographers, it consisted partly of stoney and partly of sandy soil, contained also salt-marshes and red sandstone hills, a few palm-trees and springs.

In the desert, there was a fortress bearing the same name (De Guignes, Perle des Merveilles, N. E., ii. 31); there was a Wadi ‘I-Tih in the eastern part of it (Quatremère, Mémoire sur l’Egypte, i. 186).

On the relations with Russia (which begin in the xvth century): Perepiska gruzinshchikov (correspondence in foreign languages of the kings of Georgia with the rulers of Russia from 1639 to 1770), ed. Brosset, St. Petersburg 1861 (contains, i. p. 1-xxi., a memoir by F. Floen on the Russo-Georgian relations to 1739); Berghe, Abk sabran. Kaukaz. arkeograp. Kommissiyay oficjalnyy dokumenty referentnyy k Kaukazu; 10 vols. in folio, Tiflis 1856—1859, R.K. Bulakh, Materialy novoye izvestiya Kaukaz, (1772—1803), St. Petersburg 1860, 3 vols. (with a detailed chronology by L. Brosset); Belokourov, Soweteniya Rosit k Kaukaze, i. (1578—1613), Moscow 1889; Belokourov, Arseni Sakhnov, i. Moscou 1892; Tsagareli, Perepiska gruzinskiy xvIII veke, St. Petersburg 1890; do., Gramoci otnoishcham k Grussi k xviii century, 2 vols., St. Petersburg 1891, 1898 and 1902; Belovskii, W. potto, Utverdzenie russ. vladetstva na Kaukaze, Tiflis 1901—1908, 12 vols.; Avalov, Prizvedeniei Krussi k Rosit, St. Petersburg 1901 and 1906 (also gives a sketch of the relations with Persia); W. E. Romanowskii, Ocherki o istorii Grussi, Tiflis 1902.

Works specially dealing with Tiflis: P. Isnellaa, Opisanie drevnosti Tiflis, Tiflis 1866 (Maunz, notes on antiquities, p. 272—273); Brakke and Basenov, Tiflis v istor. i etnogr. otnosheniyakh, St. Petersburg 1870; Dianashvili, Tiflis-tiflisos Gruisi, Tiflis 1899 (in Georgian).

Bibliography of western and Russian travellers in Miasnarov, Bibliographia Caucasia, St. Petersburg 1870, esp. p. 87—89; Dubrownin, Istoriya voyeki na Kaukaze, vol. i—v, St. Petersburg 1871; la Grande Eneyel. russ. (articles by Masalak, Tsagareli). The earliest notices of Tiflis are by Josephat Barbaro (1436) and A. Contarini (1473); Chardin, Voyages, ed. Langlès, ii. 22—38 and pl. ii. of the Atlas; Tournefort, Relation d’un voyage au Levant (1701), Paris 1717, ii. 307—320; Guldensztad, Reisen durch Russland, 2 vols., St. Petersburg 1787; la Grande Eneyel. russ. (articles by Masalak, Tsagareli). The earliest notices of Tiflis are by Josephat Barbaro (1436) and A. Contarini (1473); Chardin, Voyages, ed. Langlès, ii. 22—38 and pl. ii. of the Atlas; Tournefort, Relation d’un voyage au Levant (1701), Paris 1717, ii. 307—320; Guldensztad, Reisen durch Russland, 2 vols., St. Petersburg 1787—1791; do., Reisen in Georgien (1770), ed. Klaproth, Berlin 1815, p. 127—134; Gamba, Voyage dans la Russie méridionale, Paris 1826, ii. 154—184 (Tiflis and the Atlas); pl. 152; Duboin de Montpère, Voyage autour du Caucase, Paris 1839, iii. 225—275 (Tiflis); etc. (V. Miroséy.)

TIRGIS. [See Didjla.]

AL-TIH, properly Faqih al-Tih, is the name of the desert forming the frontier between Syria and Egypt in the interior of the Sinal Peninsula. The Arab geographers also call it the "Desert of the Beni Israil." As early as the Tabula Peutingeriana we find the legend: Determ uti quadraginta annis erraverunt Jjby lii Israel ductce Moysi et on the map of Madaia: ιπας [850] τοις (ɛ̃ta ɛ̃ta [780] ῥαν τουν τού γενε γενε καὶ γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενе γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γεنε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γενε γε

TIFLIS—TIIHAMA

753
and send out a ridge to the east. The frontier of Tihamā is in the west the Gulf of el-Kulām and in the east a range of hills running north and south (the Sarṭ). The province called Tihamā stretches, according to Idriṣī, from Sarṭa to 'Adnā, 12 days' journey along the sea-coast and a 4 days' journey by road from the mountains as far as the land of Ḥalāfāḥa (not Ḥalābāḥa). The greatest breadth of Tihamā is in the hinterland of Jidda, the port of Mecca, which is also usually included in Tihamā — as districts of Mecca in Tihamā are also given Ǧanbān, ʿAsma, Bilād and ʿAkī — although writers differ in their views on the extent of Tihamā in this particular direction. Al-ʿAṣimāʿ for example makes Tihamā begin at al-Dhīr Ḫaṣrī, Ibn al-Kuṯāmīnī puts its frontier at Dhāt Ṭārṣ and al-Ǧaḥba and in the Yanān highlands; according to ʿUṣmān b. ᴫqī, it stretches from the sea to Ḥarrā Sulaqīm and Ḥarrā Lailāt; al-Madīnī says that everyone who passes through Wadār, Ǧabara and al-Ṭūf in the direction of Mecca is already in Tihamā, which he puts south of the Ḥijāz, others again make Tihamā stretch from Ǧilīrān via Mecca to al-Ṭif (between Mecca and al-Madīnā) (all the statements are recorded by Yāqūt, Muḥammad ibn ʿAbd Allāh ibn ʿAbd al-Muṭṭab, I, 902; of the Yanān Tihamā, extent and particulars of the people etc., a full account is given by al-Hāmidī, Ǧīlīrān al-ʿArab, p. 54, 119–121). In any case the geographers not only use Tihamā as a synonym of "coast" (ṣabl al-bahr) and "depression" (ghawr) or "hollow" (ṣifāḥ) but they place it as an independent geographical or political entity alongside of Ǧamāl, al-Yanān, and al-ʿArabī (B. G. A., viii. 79). Indeed Tihamā at various periods in the history of Yemen was a separate province for administrative purposes, for example as early as the period of the Persian conquest of the Yemen (end of the vii. century A. D.), presumably a survival of the organisation of the late Sabaean kingdom, and at a later date under the Ǧizyālīs; then it had a period of independence with Zahid as capital (1118–1174 A. D.) to become a province again under the Imām of Ǧimālī al-ʿAbd."}

It is significant of Ibn Ḥajr al-ʿAsqalānī's keen perception of the similarity of the coast on both sides of the Red Sea that he also speaks of a Tihamā of Ethiopia (B. G. A., vii. 155), by which he apparently means practically the coast of Erythraea. Ibn al-ʿArḍī describes the Tihamā as mountainous country, which is peculiar, no doubt on account of the hills which run through the plain along the coast and are also mentioned by al-Idrīsī. Al-ʿIṣḥāqī and Ibn Ḥawqal in this way made the Tihamā stretch far into the mountains while others expressly define Tihamā as the land between the sea and the Sarṭ.

As to the etymology of the name, B. Moritz, Arabien, p. 9, note 1, for example thinks Tihamā is taken over from the Hebrew-Babylonian ʾḥāmā ʾḥāmā, "sea". On the other hand, H. Zimmern, Die Kellinschriften und das alte Testament, Berlin 1902, p. 402, note 2, is not certain whether Hebrew ʿtḥāmā like the Arabic Tiḥāmā, as a name for a coastal region is originally connected with Babylonian ʾṭāmuṭu or, what is more probable, in both cases we have a case of an early borrowing from the Babylonian. When it is suggested that ʾṭāmuṭu, ʾṭāmuṭu (in Berossos ṕaʾaʾ) with the meaning of "ocean", "salt sea" is connected with the Hebrew ʾḥāmā meaning to "stink" (cf. P. Jensen, Keltinisar. Bibl. vii., p. 559 sq.), it should be pointed out that the Arab philologists also quote ṣāḥāma with this meaning to explain the name Tiḥāmā (on account of the malodorous air there), but at the same time they compare ṣāḥāma with the meaning "intense heat", "calm" (Yāqūt, Muḥammad ibn ʿAbd Allāh ibn ʿAbd al-Muṭṭab, I, 902; Bakrī, Muḥammad ibn ʿAbd Allāh ibn ʿAbd al-Muṭṭab, I, 203). The name Tiḥāmā moreover occurs already in the South Arabic inscriptions, Glaser, Nos. 554, 3, 5, 618, 8, 90, and Rehasek, 4, 8 as ṣāḥāma with which may be compared the ṣāḥāma in Cruttenden, line 10. The muṣāʿir inscription of king Ǧabāl II. Yahya quoted by Yāqūt, Muḥammad ibn ʿAbd Allāh ibn ʿAbd al-Muṭṭab, p. 208, 9, mentions al-ṭāmuṭu wa-ṣāḥāma "people of the Tihamā (coastland) and of the mountains", quite in keeping with the passage in Glaser, No. 554, 3, 5, 618, 8 sq. ( предостה ( предостה). With the first of these musāʿir, which is evidently taken from an inscription of a late period, may be compared the inscription No. 13 of the académie des Inscriptions et Belles-Lettres in Paris, published by J. and H. Derenbourg in which the rulers mentioned by name are described as "kings of Saba" and the Tihamā.

The origin of the Tihamā, the breadth of which varies considerably — sometimes it is merely a narrow strip of coast, as at places between al-ṭūf and Sues and at Kenfuḍa and Lahayya — probably dates from the middle Pliocene period and is connected with the subsidence of the Red Sea. Coral formations and modern alluvial deposits form the material of which this plain consists; in the Yanān portion it rises to 2,000 feet above sea-level and then suddenly ascends sharply to the great highlands of the Yanān Sarṭ. The Yanān Tihamā begins at al-Ṭūf and stretches to "Adnā if we include the Tihamā of ʿAsīṭ. In the Yanān part the breadth varies between 30 and 50 miles. From the slightly undulating country, especially towards the high lands — isolated hills which consist either of recent limestone, which often contain fossils (mammaliths) at a considerable height, or of volcanic rock. The climate is very unpleasant. It is hot and dry and extreme temperatures are recorded at certain periods in the year (May and Sept. 35°–45° C, April 40° C). In the summer the temperature drops a little under the influence of the frequent rains but on the coast 40° C by day and 30° C by night are not unusual. In the winter the temperature varies between 25° and 35° C but the minimum even in the coldest months is never below 14° C on the coast. The rainy season is from February to March or from May to the end of September. Only the most southern part of the west coast of Arabia belongs to the region of tropical summer rains, and the south coast as far as 50° East Long., 15° or 16° N. Lat. A feature of the Tihamā are the mists called ʿtḥāmānīt or ṣāḥāma which rise in the mornings and drift towards the highlands and make these regions regular hothouses in which flourish numbers of valuable crops, notably coffee.

Tihamā, hot and dry, is the natural soil for the vegetation of a plain with thornbushes, thistles and grasses. The saline steppe which adjoins the coast (ḫāḥā) is covered with bushes; in the in-
terior especially towards the highlands, durra, barley, maize, wheat, sugar-cane, date palms, sesame, indigo and cotton flourish. The population of Ti-
hamah, estimated at 30,000 (secondly to 'Abd al-Wāsīl b. Yāḥyā, Ṣurkhāl al-Yaman, p. 292) on the coast is engaged in trading, shipping, fishing (also pearl-fisheries) and shipbuilding and in the interior mainly with agriculture. They appear to be a mixed race with olive-coloured com-
plexions; their woolly hair and thick lips show a strong admixture of African blood. Their colour is described e.g. by Botta as quite black; Bury speaks of the negroid taint and calls the Tihamah people slightly built. The largest tribe, the Zerāńt, is characterised by the crisp short beard and straight hair (cf. the picture in Bury, Arabia Infelix, facing p. 28). The language of the Tihamah Arabs is generally said to differ very much from pure Arabic and to contain numerous foreign loanwords.

The southern Tihamah, the natural frontier of which runs from Mulghā to Mawsā is traversed in all directions by volcanic ranges and shows only scanty deposits of sedimentary rocks; it is mainly formed of the same rocks as the continent. There is no continuous strip of flat coast; this is only found at intervals between projecting spurs of the highlands of the Interior or the volcanic features of the coast. Perpendicular cliffs and sandstone cliffs which run along the coast alternating with white deposits of chalk and sandy depressions are characteristic of the southern Tihamah which rarely ever exceeds 25 miles in breadth. In the interior the southern Tihamah is more steppelike in character; in the valleys of the Wādis on the other hand, fruitful oases are found after the fertile summer rainfall, for example the extraordinarily rich oasis of Lāḥaj or of the Wādi Mawsā which has the same flora as the western Tihamah. The southern Tihamah has as a rule a slight rainfall. The winter rains are irregular although they seldom fail. At the end of April heavy rains begin, often accompanied by severe thunderstorms; occasional rains fall in January, February, and December and July, and August.

Reihe, Forschungen, vol. iv, Vienna 1929), p. 5-8, 17-24, 40-42, 53 sq.; B. Moritz, Arabien, Studien zur physischen u. historischen Geographie d. Länder, Hanover 1923, p. 9, note 1. Tík, a technical term in Arabic music, corresponding to the learned term ʿbūd; also used in Arabic dialectic metres for the sugāf. It means the note struck, sharp and heavy: a. on the edge of the tambourine, sometimes on the little cymbal that is fixed there, k. on the back of the closed left hand when the hands are beaten, c. with the left foot on the ground when the hands are beaten, d. on the open palm when the hands are beaten; the latter being Balābāl, sometimes ʿtā or ʿlābāl (usually ʿlābāl); the first being the sharp and heavy blow and the latter, ʿdāl, the dense and sonorous. The latter being struck on the stretched skin: a. at the centre of the tambourine, k. on the centre of the open left palm if the hands are beaten, c. with the right foot on the ground when dancing. Just as classical prosody built up a series of metres by arranging long and short in varying order so the popular Arabic prosody of the mu-
ważkahāti built up a series of special rhythmic
TIK — TILIMŚAI

types (called ʿurrā') on differentiated series of ʿāṣāt and ʿādāt with pauses between. The maqāṣid rhythm for example may be thus written:

$$k, m, a, k, z, m, m, m, r$$

(where $k = 'a'$, $m = ʿādāt$, $a = silence$ and $r = ʿāṣāt$).

So that the phrases in the song may coincide with the series of characteristic beats of the rhythm selected the following rules are observed:
1. each syllable must correspond to one beat (naḥra) at least; 2. one or more ʿāṣāt may be intercalated (intercalation = riḥū) in the rhythmic series; 3. but certain pauses must not be interferred with, intangible cesuras, characteristic of the rhythm (first by pause after ʿādāt, otherwise short pause after ʿāṣāt); 4. contrary to Arabic classical metre, we may have open syllables when the time is strong and closed when the time is weak. Martin Hartmann was therefore wrong in trying to reduce the rhythm of the suṣmaḥābāt to the ṭaḥdāl of the Arabic classical metres. Several Oriental musicians have given tables of identification, confusing intensity and duration, so as to force the Arabic ʿurrā' to correspond with European musical notations. Indeed modern Turkish music counts a ʿādāt as a quaver and a ʿāṣāt as a crochet.

TIKIRI. (See TAIKIR.)

TILIMŚAI. Many Arabic scholars are known by this name, but generally the three following are meant when mentioned in books of adab:
1. ʿAffāl al-Dīn Sulaymān b. ʿAlī b. ʿAbd Allāh b. ʿAli b. Yāsīn claimed to be descended from a family which originally came from al-Kifā (Dhahabi in MS. Or. 53 reads however Kūm al-ʿAṣād) and was born at Tīlimsān (?) in 616 (1219) according to his own statement. He came early to Syria where he occasionally filled official positions, but was also frequently out of employment. He claimed that in Aḥsan Minor (Rūm) he had as a Sufi gone forty times into seclusion (ḥidrāt), each time for forty days, without interruption, a statement which Dhahabi rightly questions as the total makes 1,600 consecutive days. At one time he filled the post of supervisor of the market-dues (maṣṣāl, q.v.) and when al-Aṣād came to Damascus in the retinue of the Sulṭān al-Mansūr Kālabīn he demanded from ʿAffāl al-Dīn a balance-sheet of his accounts. As this after repeated requests was not forthcoming he upbraided ʿAffāl al-Dīn, who then lost his temper and wanted to remonstrate with the Sulṭān for having, contrary to the Sharīʿa, placed a Coptic Christian over Muslims. He was finally appeased and probably never rendered the desired accounts. ʿAffāl is said to have been a pious man of affable manners with a certain amount of dignity, but he was always under suspicion because, as Dhahabi puts it, one could never really ascertain what his true opinions were and he was even accused of being an adherent of the Nusayrī sect (q.v.). The difficulty lay in his poetry which was eloquent, easy and pleasant, but, his biographers say, contained hidden poison. His poems collected in a Dīwān of which copies are in the libraries of the British Museum, the India Office, the Bodleian at Oxford and elsewhere, certainly do not openly contain any heresies, but are in many cases after the style of Sufi compositions addressed to some imagined object of love. ʿAbd al-Dīn al-Sultānīn found him pleasant company, and says that he laid claim to ʿIrāqīn (q.v.), the full conception of God. This he is said to have expressed upon his death-bed when he is stated to have said: "How can any one who knows God fear him, and since I do know him I have no longer any fear and am happy to meet him". He died in Damascus on the 5th of Rajab 690 (July 1, 1291) and was buried in the Sufi cemetery of that city. He composed a number of works upon various sciences, besides his Dīwān, of which apparently only his Kānīš fī ʿIlm al-ʿArāb, Berlin No. 712, has survived. Dhahabi mentions in addition: Sharīʿ al-ʿArāb al-I ṣārāar, Sīhā, Mākhām al-Madār, Sīḥā, Fawāʾid al-Ḥiṣām of Ibn al-ʿArāb. The titles of these works indicate the school in which he was trained and we may assume with safety that he was an ardent follower of Ibn al-ʿArāb.

2. His son Shams al-Dīn Muhammad b. Sulaymān, called al-Qāsī b. al-Zafīf (the intelligent youth), was born in Cairo in 601 (1203) and died young two years before his father in Rajab 688 (June 1289). He held an appointment in the office of the treasury in Damascus and is described as a young man given to pleasure and amusement. His reputation rests mainly upon his poems collected in a small Dīwān which has been printed several times. These poems consist principally of short sayings addressed to males, occasionally to fictitious women, in simple language. A Sufi interpretation is possible, but hardly likely. His other compositions preserved in manuscript convey the impression that the poems also are realistic. Two Makhāzīn contained in the MS. Berlin No. 3953 are jocose and lascivious and the same appears to be the case with two other works contained in MS. Berlin No. 8509 entitled Ṣulḥāt al-Maddāt fi Madār māṣṣāl al-Maddāt and Māṣṣāl al-Maddāt wa ʿIrāqīn. The Māṣṣāl al-ʿIrāqīn contained in the Paris MS. No. 3947, and the Damascus print of a māṣṣāl, are perhaps identical with the lastnamed work. A short notice on Shams al-Dīn by al-Dhahabi, in the biography of his father, concerning him lends colour to the suspicion that ʿAffāl al-Dīn looked upon the extravagances of his son as a step towards becoming an accomplished Sufi by the way of madhāmā (q.v.), but they were in reality perhaps one of the causes of his premature death.

in Spain. Three years later they removed to Malaga and there Dethlim conducted most of his studies. Later he went to Salta (Centa) where he married the sister of the Malik bar Malik b. al-Marrab and in this city he died after 690 (1291). He was a learned Malikij lawyer, skilful in drawing up contracts and a poet. At the age of 21 he composed his arfajus upon the law of inheritances, which has been the subject of a number of commentaries preserved in manuscript. His other works are:

**Bibliography:** Ibn Faruq, Diljâl, ed. F. Dujarric de la Gravière, Paris, 1889; Dujarric de la Gravière, Dictionnaire arabo-français, 1, 1885. No. 20, 50, 25, 385, 387, and 386.

**TILISM.** [See TILSAM.]

**TILSAM,** also tilum, tilim, tilim, tilum etc. from the Greek τήλης, a *talisman*, i.e. an inscription with astrological and other magic signs or an object covered with such inscriptions, especially also with figures from the zodiacal circles or the constellations and animals which were used as magic charms to protect and avert the evil eye. The Greek name is evidence of its origin in the late Hellenistic period and gnostic ideas are obviously reflected in the widespread use of such charms. The wise Ballûnus is said to have been the father of talismans; according to tradition, he left in many towns charms for protection against storms, snakes, scorpions etc. Many rules for preparing talismans are also ascribed to Hermes Trismegistos.

**TIMAR,** a grant of land for military service (*haf伞* or *honné*), or more exactly, a kind of Turkish *levée*, the possession of which entailed upon the feudatory the obligation to go mounted to war (*khassoeb*) and to supply soldiers or sailors in numbers proportionate to the revenue of the appanage (*diriib*).

The feudatory or *stamiat* was called *timm* (*fild* or *fild*), *timar* or *timur* (*fildushia*—ed. Gine, p. 22, 38, 22) or *fild* (*fildushia* or *fildushia*), i.e. "horseman," whence the popular name *fildushia* for the *timur*.

There were three classes of military seizes, according to their importance:
1. *khâsha* (plur. *khâshâ* or *khâshâ*) or more exactly the majority of the *khâshâ* of the governors of provinces;
2. *zâmer* or *zâmer* with a minimum annual revenue of 20,000 aspers (*jâsh* or *âsh*);
3. *timar* with a maximum revenue of 19,999 aspers.

In a wider sense the same *timar* is sometimes applied to the two last and even to all three classes.

*Timm* has often been translated "commandership" (*commanderie*; Meiuni, Michel Bandier, Pitton de Tournefort) by analogy with the *commandeur* of the Knights of Malta and the Teutonic Order but the institutions are very different; the commanders were former Knights whose services were rewarded by giving them the right to collect for themselves a part of the revenues of certain estates of the Order.

The word *timar* has further the meaning of care given to a sick or mad person, a wounded man, or beast of burden (still used in many modern Persian); *timmar* might tend a horse, whence *timmar* (*Egyptian tamarrag*), a male nurse. It further means rest-cure or open air sure for servants or slaves (*khâshâ* or *âsh*), and care given to an estate, a farm, or a vineyard (*shams al-Din Sâmi Bey*).

**Etyology of the word timar:** Leunclaire seems to have been the first to connect this word with the Greek *timarion* honorarium which in turn comes from the Greek *tîmos* (cf. Leunclaire, *Pandectes historiae turcicae*, N. S., 1865, l, et the end of Annales Sallustianorum Othmanidiarum, Frankfurt 1925). This hypothesis was admitted by Michel Bandier (*Histoire générale du serfage*, 1624, chap. xvii) and by Ducange, who pointed out that the word *timarion* in the sense of feif is taken by Leunclaire from a text of the xvth century (the reference is to the *Ibâdan hâwa* or *hâwa* of Damascus Thesal; cf. Emile Legrand, *Bibliothèque hellénique*, li, 1885, p. 12). The quotations, including this reference, given by Ducange in his *Glosarium* and its Supplement are, as has been already pointed out by V. D. Smirnov (Vuzihek glonsirâm, St. Petersburg 1873, p. 73, note 1) of much too recent a date. They are all later than the Ottoman conquest. The "novelists" of the Byzantine emperors do not use this term for military feifs, but others like *vroum kar* or *vroum kar* or simply *vroum*. As more technical terms we find "sipyche" and later "vroum" when the military benefice had developed more towards the form of a seignorial *fief* (Ernst Stein, *Untersuchungen zur späbyzantinischen Verfassung*, M. O., G, ii, 9).

In 1598 we find the Venetian senator Luaro Sorano (*L’Ottomano*, p. 12) proposing, but not conclusively in opposition to the Greek the Persian etymology *timar* "care, anxiety, pains, dressing." It may be objected to this etymology, which has the support of von Hammer (and more recently also of Gregorowiski) that the word *timar* has never been applied to military feifs in Persian and that the Turkish feudal organisation seems to have been borrowed from the Byzantines and not from the Persians.

In my opinion the word *timar* is an echo of the Byzantine *frėmyn* (princess). In other instances also it can be noticed that the semantic evolution of terms can be paralleled from language to language. The Latin synonym of *frēmyn*, beneficium, French *prévôtage* (cf. Ducange and the edition of Pachymeres in the Corp. Script. Hist. Byz., ii, 715) is also a term relating to benefices. The Latin and low Latin *cura* and in a less degree the French and English *cure* have almost all the acceptations of the word *timar* (except that
they have no military associations) "care, treatment (medical), country, estate, cleric's benefit".

We need not waste time on the explanation of the Arabic Hệm, plural of Hệm, "fruit", provided by Belin de Vagnerre and Trévoux's Dictionary.

Origin of the Institution. Von Hammer, in spite of the importance he gives to Persian influence, Worms, who has however corrected several of his predecessor's errors, Belin, and Tischendorf have represented the Hệm as being a kind of adaptation of the Muslim "feudal" system. Although the historian Sa'd al-Din uses this term of lands which were distributed to the musellem of Turkey (cf. below) it seems to me difficult to recognize in the Arab Hệm the origin of the Turkish timars. The more particularly Muslim element in the Turkish legislation, was the legal and political distinction between the yükîyya (little-lands) i.e. *those conquered by force and divided among the conquerors on condition they paid a tithe* and Hệmâgîyya "tributary lands, taken after capitulation and left to the liqâmi (<lîqâmîs) or infeudals on payment of tribute*. Now the military feuds as Belin himself says (Progr. foncière, N° 305) could consist of any kind of land and it is only by a very wide interpretation that some lawyers have assimilated to Hệmâgîyya lands constituted into washer for military requirements (ibid., N° 298). The jurists of the period — fairly late — of Salaiûn the Magnificent found some difficulty in defining the status of the military domains in the strict sense (cf. Steeg and Padel, p. 19-20 and especially M. T. M., p. 58-59 [Turkish text] von Hammer, l. 342 sqq. [German edition], Joüen. Ann. 1843, p. 56 sqq.). Voltaire was right when he said that the Turks had not borrowed the system of the Hệm from the Arab Caliphs (Essai des Meure, chap. xxxi).

The hypothesis of a Persian origin seems to me no more justifiable. Kremer (Culturtwiss. des Orientl, l. 109-110) has shown that the Persians had no influence on the Arab feudal system. Von Hammer certainly exaggerates when he attributes to Persian influence the organisation of the Byzantine and Turkish military feuds. There certainly is one feature in common to the three nations: this is the existence of mounted feudalatories wearing cuirasses (cf. for Persia Cl. Huart, La Perse, 1945, p. 184, 204). It is even possible that these cuirasses were of Persian origin (a novella of Nicophorus Phocas seem to speak of them as an innovation) but this is of no major importance.

It seems much more natural to admit that the Turks imitated or rather preserved the Byzantine institution which they found in existence. What would tend to confirm this is the existence of feuds with the obligation to naval service alongside of those supplying horsemen. This was also the case with the Byzantines (Ang. Fr. Gröger, Byzantinische Geschichte, III. 21). It is not our task here to inquire to what extent the Byzantine military feuds were related to the Roman beneficia or to the colonies of German soldiers (on the mailed horsemen of Byzantium, cf. Winkler, Un Gouvernement, Un Empereur byzantin au Xème siècle, 1937, p. 40 and p. 288 and on Greek military feudalism: Rammel, L'Empire grec au dixième siècle, 1870, chapter entitled La féodalité dans l'Empire grec: les feux militaires; L'histoire générale de Lavius and Rammel, chap. xiii. of vol. I, by C. Bayet, p. 680 sqq.; Zacharias von Lengenthin, Histoire du droit gréco-romain, trad. into Fr. by Eugène Lanth, Paris 1870, p. 65, 129 sqq.; cf. Geschichte des griechisch-romanischen Reiches, 1877; Geugnet, Des timères militaires dans l'empire romain et spécialement en Orient au Xème siècle, Bordeaux 1898, p. 81, 85; Testand, Des rapports des païrautes et des petits propriétaires variants dans l'empire byzantin au Xème siècle, Bordeaux 1898, p. 75 sqq.; Firth Grove-romani et doua Johanna Lenciawian Amherst, Frankfort 1956, III. 144 sqq.; cf. also the works of Maurins, Motreff and the bibliography to the article benicha in the Dictionnaire des antiquités grecques et romaines by Darenberg and Saglio).

As to the influence which the Saldjaks of Asia Minor may have exercised on the Hệm, we know nothing about it nor about their military organisation in general (cf. however the remarks by Koprulâ- nâye Mehdân Fuâd in Millet et Mûlûm, N° 5, p. 213-214).

Formation of the Ottoman military feuds and their administration: We know very little about the administrative activity of the early bey or Ottoman rulers. The following words are put into the mouth of Oğluç, the founder of the dynasty: "He to whom I have granted a şef shall not be deprived of it without good reason; if he dies, his son shall succeed him; if the latter is too young, his servants shall take his place in war until he is fit to bear arms".

Under Orbân, "All al-Din formed a corps of horsemen called musellem exempted from taxation", who held in times of peace certain lands, free of taxes and who seem to have been served in part at least by the organisation of the timâr (on this milita, cf. Belin, Fiefs Milîtes, p. 39-40, Gregorzewski, p. 45; Marsigli: a firman relating to them, Bibl. Nat. Paris, MS. Suppl. Turc, N° 79, in fine).

Markâl I, assisted by Timurtash Pasha beylerbeyi of Rumelia, in 1375 issued a şâmâs laying down the distinction between the little Hệm and the şâmâs (Bibl. Nat. Paris, MS. Suppl. Turc, N° 65, fol. 63).

Mehmed II in 1381 a.t. instituted a more systematic method of keeping the registers (defters) of the military feuds. There is comparatively little reference to these feeuds in the şâmâs-Nezîm of this ruler (publ. in a supplement to T. O. E. M., 1330 A. H. 32 pp. 8°. Cf. v. Hammer, Shatavîy, m. 86; C. Orfelin, Les Myss en VIeuvre, N° 1820, 3rd and 1813, 3rd). The fiscal officials who administered the feuds (fâhîz peygâf-fâr) appear in it as completely organised in the provinces. They wore the timâr defter-dâri for the simple timâr on the defter hıbhâm (fâhîz) for the şâmâs. Both sets of officials were under the defter emini who in turn was under the defter-dâr of the empire (cf. the şâmâs above quoted, p. 19; von Hammer, p. 93 and Belin, Fiefs milit., p. 44). Details of the organisation of the timârs or defter-dâris will also be found in another şâmâs of Mehemel II, publ. by F. Kranz and Geissenhöft in the M.O.G., l. 173, 48. In contents this şâmâs is closely connected with şâmâs (cf. below).

Sulaimân the Magnificent is credited with the organisation of the timâr but it is probable that he only codified already existing regulations. In
any case he deprived the governors of control of the relatively more important timār which were called tekereli (cf. below). It is from this reign that the rather numerous collections of laws begin to date (fāṣlid, fāṣlid-name, ṣīnūl-name-i ʿUthmān, ṣīnūl-i milhān) or codes drawn up by the niẓāmī (more rarely by the ḥəfr-ādar and the ḥəfr rūm, with the help, more and more frequent as time goes on, of the šāikh al-ḥalak (cf. bibli.). These laws clearly reveal the haqqaq character of the institution of timār. The mettr lands or domains of which they were formed were fields lying around the villages, the houses in the latter being the property (milhā) of private individuals (M. T. M., p. 54). Otherwise any land under cultivation, even in a garden or vineyard belonging to the roya, became domain and paid dues to the sipahi. (M. T. M., p. 87; cf. J. A., Jan.-Feb. 1844, p. 87).

The timār, from the military point of view. We know that the Turks had a remarkably well organised regular army before the western powers. In the beginning of the sixteenth century, i.e. on the eve of the disappearance of the timār it consisted of the following elements:

1. The permanent regular army with regular pay, the public treasury, called ṣafu (kapul) zulj, servants of the Porte (of the Sultan) it consisted of the Janissaries, gunners, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bombardiers, bomba

2. The cavalry (teşrakhl) and feudal troops.

3. The serakhl (ser-bad-ḥulul) or frontier troops, as a rule summoned to the colours and paid irregularly, and particularly at times of great danger, they comprised as cavalry the giznul (giznulli) or "volunteers", heavy cavalry, ṣafu or beli, a light cavalry (according to Montecuccili, like the Hungarian Hussars), and ḍeli or partisans, and for infantry, the ṣafu (ṣaful) or picked garrison soldiers (like the Hungarian hajduks), soldiers according to Montecuccili, named the giznulli as present volunteers, fighting like dragoons on foot or on horseback and placed in charge of the baggage and cavalry and the mamlūk or pioneers.

4. The yerkahl or "local troops" of the pasha, sandjakbeys or ḍāʾūn. Levied in theory by special authorisation of the Porte but often without this they enabled a number of ambitious Pashas to gain power (All of Teheran, Ljusnjar, Muṣṭafā Bāirakar etc.). Rightly or wrongly they are often confused with the preceding, and some writers like Ahīṣəl Rāmāt put among the yerkahl the māsul(teymon, and mamlūk mentioned above, or, giving the tufandul "families", yerkahl, "heavy artillery of the frontier forts" and even the ṣafu, it is into this second category, that of teşrakhl or territorial troops that the feudatories who held timār fell. Jacherea de St. Denis compares them to the "levies of the arrière-bas of the old feudal monarchies of the west".

There were no hard and fast divisions between these different categories of soldiers. Janissaries could obtain timār. On the other hand there were timarists in the frontier provinces and one of the means of promotion, the only legal one, for a man who was not the son of a sipahi or ḍāʾūn actually was to go as a volunteer (giznulli) "to the frontiers" to distinguish himself there by va
provinces. The former were held by governors either in full ownership (mülâkâyet, veziyyet or yurâlık) like the medium provinces or like the 5 Kurd sandjaqs called hâkimât or the 19 sandjaqs of the wilayet of Diyarbakır, or for a year at a time (iânâmât ilâ or seriye iânâmât ilâ, whence the word âyalâm). With this system the emoluments of the governors were deducted from the revenue of the state collected by the fiscal offices of the province (or levied on the iânâmât which represented, after deduction of allowances and the pay of the soldiers, the hâkimât, Turkish hâkim or "treasury" destined for Constantinople) without the iânâmât (vice-regal) "being able to exact the least thing from the people" (Marsigli) while the governors who held hâkimât levied taxes (îmarât, pl. dîhrâ) on these fiefs.

This distinction must not be taken too literally. Some sülâyman governors actually had hâkimât and the hâkimât were not all military fiefs. The Khân of the Crimea for example levied 1,200,000 aspers on the customs of Caffa, under the name of hâkimât. On the other hand sandjaqs of different character are found in the same province, some sülâyman, others hâkimât. This was the case with the provinces of Bagdád, Cyprus (already mentioned as hâkimât provinces), Damascas, Alepp, Chlidr, without reckoning the eyâlet of the Kapudan Paşa. This distinction between sülâyman and hâkimât provinces appears very clearly, when it is a question of a sandjak and not of an eyâlet as a whole.

The idea of hâkimât must not be confused with that of "military fief". It is larger and differs from it, in as much as the hâkimât was attached not to the person but to the position of the governor. At least this was the case from the time when in the reign of Murad III, the sandjak-beyi ceased to be inalienable (cf. Belin, Propr. fonc., N° 313).

The sulîn had also his regular private hâkimât which were called hâkimât-îhümâyîn.

With this reservation the vassals of the first category were represented by two kinds of high officials, the beylerbeyi and the sandjakbeyi both holders of hâkimât.

The beylerbeyi (cf. Deny, Sommaire des arch. turques du Caire, p. 41-52) held hâkimât the value of a annual revenue of which varied from 600,000 to 2,000,000 aspers (Marsigli gives 1,200,000) and were proportionate to their rank and precedence i.e. to the date of the conquest of the province. The hâkimât the revenue of which attained or surpassed the million were Rumelia, Anatolia, Damascus, Erzerûm, Diyarbakr, Van, Shêrûzûr, Khânate of the Crimea, Bagdád, Başra, Babêsh, Egypt and going down by 100 aspers: Rhodes, Cyprus, Algiers, Tunis, Tripoli in Barbery (it is probable that some of these hâkimât existed only on paper).

Each beylerbeyi had to supply one mûkemmel ighélî for each 5,000 aspers of revenue. Marsigli adds that some provinces, which were exempt from military obligations.

The beylerbeyi were allowed themselves to issue berat conferring the small timâr (teskeressî; cf. below). When a viceroy died the state gave timâr to eleven of his servants. The sandjak-beyi in theory held hâkimât of at least 200,000 aspers of annual revenue. In practice we find in the lists of 'Ain-i 'Ayt sandjaqs with a lower revenue. When the new holder was an officer of the palace (in such case the expression used was "to go out to

or ascend to the sandjak": sândjak-î hâmî, the minimum was higher and proportionate to his dignity. The Agha of the Janissaries had the highest: 500,000 aspers.

The augmentations or terâhâhî of the fiefs of the sandjak-beyi were made by sums of 100 aspers on each 1,000 of revenue, (i.e. 10/9). When a vacant fief was allotted to a sandjak-beyi who had not yet a right to the whole of the revenue it yielded, the surplus went to the mülâkâ (which was retained by the state) to be set aside for the janissaries who had a right to a timâr. Later, the hâkimât could be reconstituted in its entirety by the beylerbey of the same holder and the janissaries who were thus dispossessed were given compensation. This system prevented the domains being broken up into small sections.

The precedence of the sandjak-beyis was regulated by the importance of their hâkimât, but ex-grand viziers had always precedence over all others. A sandjak-beyi had also to supply one mûkemmel ighélî per 1,000 aspers of revenue. When a sandjak-beyi died, the state gave timâr to six of his servants. It is probable that it was not necessary to be a sandjak-beyi to obtain a hâkimât.

What was the lower limit of a hâkimât? The authors of Turkish works on the history of the Ottoman empire say that the hâkimât was a domain with at least 100,000 aspers of revenue, granted to a râsûl (plur. of râsîr — bey, which is applied to the sandjak-beyi and in opposition to vizier or pasha of 3 tails, to the beylerbeyi or pasha of two tails. At the present day, it is applied to the higher officers in contrast to the general or pasha). Although the figure of 100,000 aspers is confirmed from other sources (Tournefort, p. 319) it was probably fixed at a later date. We actually find, in the lists of 'Ain-i 'Ayt Efendi, hâkimât which are lower than this (for the benefit of the defterdar of a wilayet).

If we may judge by the total of the duties of Saltanîye (cf. below) paid by the hâkimât, the minimum revenue of the latter must have originally been 60,000 aspers.

Zî bar or zî û bar. Every fief called zî bar had a minimum revenue of 20,000 aspers, which could not be reduced or divided in case of transfer to an heir or another holder. This minimum was called hâkimât zî bar. The surplus, whatever its amount, was called jîfe or "part".

Every zî bar entered in the register (îgâfî) as irreducible and was called from this fact zî barî in opposition to hâmî or divisible into parts (Belin, Fiefs milîs., p. 55-57). It was the same with timâr; cf. Marsigli, p. 96-97.

The holders of zî bar were called zârîm (plur. zârûmîn), "chiefs". A zî bar had to go to war in person and supply one ighélî for each complete 5,000 aspers of revenue above 20,000 aspers of the hâmî zî bar. Nothing was paid on a sum less than 5,000 even if it were 4,999. The zî bar who lived in the capital of a ḥâfa generally became a bâbîzârî.

According to modern Turkish writers and Tournefort, the maximum revenue of a zî bar was 99,999 aspers but some states like the state of Baghdad held zî barî with a large revenue (lists in 'Ain-i 'Ayt 'Aghâ Čengisovski gives the maximum of 50,000. It is probable from what has been said above about the hâkimât that originally it was 59,999 aspers.

Timâr. The timâr were of two kinds:

1. — teskeressî, or given by berâî or sâkînî on pro-
Military organisation of the siefs. The high command of the feudatories was exercised by the governors of provinces (themselves important feudatories) and thus the title of mir-beyi (a synonym of sanqah-beyi) became the name for a brigadier-general.

Under the orders of these generals were officers whose duty it was to mobilise and probably also to command the feudatories, namely:

1. the ayay-beyi, a kind of colonel chosen by the feudatories of a sanqah. They had the right to a drum and a flag (the beyrakdar or "flag-bearer" was a kind of lieutenant-colonel and the savvah a kind of "major"). The Turks often confused the sipahi and the savvah (a loanword from the Slavonic) but distinguished between the sipahi of the kavak (Miri sabahli) and those of the timar (âbi timar zemdiyli). cf. the Künnün publ. in 1330, p. 28.

2. teri-bahş and sah-bahş. These two titles seem, as has been observed, to refer to the same officials (ce older zem is a synonym of teri "army, troops").

There was one brigadier division (teri-bahş) and two brigadier divisions (sah-bahş) in peace-time. the teri-bahş were officers of the police.

As to the teri sârâşı (from sâr-ı mevk); "to drive a flock or troops in front of one") Belgin makes them captains of ten, for the sake of symmetry with the preceding, but they were less regular officers than police or detectives, i.e. soldiers whose task was to bring back deserters to the army (cf. documents No. 85 and 72 in Grzegorzewski).

In case of mobilisation the Sultân sent a firman to the beylerbeyi concerning orderning them to raise the ban of the zâfim and sipahi (cf. a specimen of one of these firmans in the Müşayvat-name, transl. Piets de la Croix, p. 35-36; the same work p. 8, puts at 2,000 yüks i.e. 100,000 aspers, a sum set aside for the gifts which according to custom were given in this case to the militia and especially to the zâfim and timariots).

Administration of the military siefs. We have already mentioned the administrative and financial officials who had charge of the allotment of siefs. These officials who were called mühadet müammerler or "provincial writers" kept registers called sâbancilik or "general" statistics of the siefs and münaflul or "detailed" statistics. In another book called sâbancilik or "journal" were recorded the berat or orders relating to the siefs. The armies in the field carried these registers with them (probably duplicate copies) in order to enter at once on the battlefield the necessary distributions of timar (cf. doc. No. 78, 100 and 150 in Grzegorzewski).

In the Turkish archives are preserved registers which go back to the Conqueror and would be well worth studying. Cf. my article in Historie et historiens depuis cinquante ans (Bibli. de la Revue historique), Paris 1927, vol. 1, Turquie.

The berat granting siefs were liable to chancellery dues ("of the pen" kalemîye) levied by the Müşayvat-name. It was 4⁄100: 120 aspers for the holders of timar of 5,000 aspers, 800 aspers for the zâfim.

There were 15,000 aspers for the hâhi (we have used this figure to ascertain the probable original minimum of the hâhi). The berat, following a general custom, were renewed annually (teyâfiye-berat) and the same kalemîye dues were paid every year (cf. Müşayvat-name, p. 41, 78, 79).

It would take us too long here to give the regulations which were intended to secure the
devolution of the Eunay to men suitable for military service and who had to be by preference the sons or descendants of feudatories (sipahi-sudur, in plural ebn-i sipahi-sunur) or of old settlers who had done their service. Their legitimacy was established by the evidence of ten timariots (Koça-Bey).

When a timariot failed to obey the summons, he became muvāl "deprived" i.e. he was temporarily deprived for one or two years of his timar which was then called divliy-i taşenmãh. Every timar vacant (muvālî) thus escaped or default fell (divliy-i mevâlî) to be managed by the official called muvâlicheri, who collected the revenues until it was allotted to another. The money thus saved were bound to live on their estates. To look after the land one in ten was usually left at home and called the kurşuni or "guard". If the war was a prolonged one, the sipahi of each vakîli sent home a score of their number who, known as kurdâlî, had to send supplies (kurşuni-fık) to their comrades in the field.

A rayâ or peasant could only become a timariot by proving his prowess on the battlefield, which he could only do by going as a volunteer to the frontiers (cf. above).

Decline of the system of military fiefs. In spite of precautions and attempts at reform like that of 1632 as a result of the memoir presented by Kudî Bey (or Kûcûk, or better perhaps Koça Bey) of Korca (better of Gâmilâdji) and again in 1657 and 1777, the decline of the fiefs continued to be marked.

In addition to the laments of Turkish officials like Koça Bey and Aina-i Âli Efendi, we find frequent criticisms in western writers.

In theory the sıdhâ and timariots had to go to war, even if they were so ill that they had to be carried in a litter, with their children in panniers (Tournefort) but after putting in an appearance an opportunity was always found to return home (Abe-câli, 88, p. 18). We find in Grigorovetski orders to bring to the colours mutinous timariots, who were hiding in their çiftlik (çiftlık) (doc. No. 73 for example).

A timariot could buy himself off and this was a valuable source of revenue for some ministers, according to Philippe du Fene-Canaye (Le Voyage du Levant en 1577, Paris 1867, p. 137).

Another passage in the same traveller (p. 60) seems to show that foreign ambassadors could actually obtain timar for their protégés. Tournefort (ii., p. 319) writes: "The viceroy and provincial governors have such powers by their intrigue at court that commanderies which are outside of their districts are given to their servants or to those who give them most money".

Baron de Tott shows us that the khan of the Crimea was very disconsolate with the services of 10,000 sipahi sent by the Porte and says he was able to prove to himself that some of them were really Christians who pretended to be converted to Islam for the sake of the timar (Memorie, 1785, p. 112). Lastly there is an account of various other abuses in Mourad-Reis d'Ochsen, Tableau de l'Emp. Oth., vii., p. 375.

The suppression of the Janissaries and of the corps of cavalry or paid sipahi under Mahmûd II brought about the disbandment of the feudal militia. To safeguard the rights they had acquired, this Sultân formed the élite of the dispossessed feudatories in 1831 into four squadrons, which later formed the framework of the new regular cavalry. As to the other holders of the old fiefs now the property of the state, they received pensions which were provided for in the budget. The total of these pensions at first 120,000 purbes or 60,000,000 piastres (Bellin) fell in 1850 to about 15,000,000 without reckoning some 10,000,000 paid as indemnities to the farmers of the domain lands (leased since the ministry of Rustam Pasha, the Sultan's grand vizier).

On the 27th Radjab 1250 (Jan. 7, 1864) these pensions underwent a revision which still further reduced their number, from lack of certain formalities (Tischendorf).

There was no longer any military organisation of the fiefs but the state retained the tapu, which it henceforth levied for its own benefit, and the laws retained numerous survivals of the old regime (cf. below).

The timar and Ottoman land legislation. In return for his services the sipahi had the right to collect all or part of the hagiaconjur (of divine prescription) dues as well as "taxes deemed by the sovereign" râgumu ursîl (we should add or sanctioned by usage) on the lands of the fief. He exercised a kind of seignorial jurisdiction over the ratsi "Muslim or Christian peasants". If the peasants, the tillers of the soil, only held their land with a fief of title (possession not implying ownership) they hand it on to death to their children only. All other heirs or acquirees can only acquire possession of them by paying to the sipahi of the place the dues (muvâsâdîte) called tapu: if there are no heirs, the land is awarded to a new owner also by tapu and by regulations made ad hoc" (Bellin, Prop. fonc., No. 303).

In return for his military obligations the timariot enjoyed feudal privileges. As regards the proprietor of the soil he was his lord (sâhîh-i ır or ır for the Arabic ıfâ) but this right of ownership was not only bound up with military service: it was precarious and revocable.

The peasant (rîzîet; plur. also employed in the singular: rîzâ or rîza) Muslim or Christian — for western usage is wrong in applying this term only to Christians — was attached to the state and went with it (Bellin, Rits. mutl., spec. repr., p. 50).

He paid to the sipahi different taxes and dues which varied somewhat according to locality, a few of which may be enumerated here:

- Iştereb or mazbatı 5th" (Bellin, No. 303).
- Grigorovetski, p. 233; benachat or penak (Grigorovetski, p. 226 and doc. No. 84; 4th-nüme, ed. 1239, p. 16, note 2; Hammer, Statisticalg, p. 318), 2; 8th (Bellin, No. 318), 2; Grigorovetski, p. 238; 4th-nüme, p. 316, note 2; mizâr, "bachelors" (No. 321); 4th-nüme, "a girl, married woman" (No. 329, 330); dhahhân or râzân right of fuel for individuals foreign to the timar or haspiisâz (No. 326, 328); sâhîhe (No. 348);
- 4th-nüme, p. 16, note 3; rûgâ or depremen (münlâ) "winter pasture"; suâtâl "summer pasture"; ûbîl "water pasture"; sâhîhe kendi "sheep";
- 4th-nüme, "compensation for the maintenance of a falcon which comes to die"; bâdaya or bâdâ-ümuzi "extra ordinary taxes"; kovan "hives"; ûte "measure of wheat" (No. 345).

A fuller list of imposed and taxes will be found in Ahmad Wafik, Türkîf, 86-7, 86-7.

Western authors give as the most important impose on land in the country the tithe, but the older Ottoman legislators distinguish between:
Tapu, The Ottoman substantive tapu or by the operation of the law of vowel harmony tapi (as in Bâshî, ed. Dviotak, p. 171, 3 infra) for the older (Ogulı) tapu-ñe, Çaghatay tap-uñ, is derived from the verb tap-mak: 1. to obey, to submit to God or a conqueror by begging amin from him (cf. Ateş-paşâ-ûde Türkê, ed. Giese, p. 22; Nöddecke, Nebras, Z.D.M.G., 1859, p. 212: tapu wilâyet is not a proper name); 2. to worship (a divinity), 3. to pay homage. — Cf. also tapu, Vânbëry, Alt.-Osum. Sprache, p. 219; tabi, Codex Comunicans, 217; Houtman, Etn Türk-ev, Glossar; the Koman form with intervocalic sonant is found in the Karaitê tabu, tabû: thanks, gratitude (T. Kowalski, Karaimische Texte ... von Troble, Cracow 1920).

Tapuğ according to Kâshghârî means 1. "service (şâhidîya); 2. obedience (aâ)"; i. p. 311 and derivatives i., p. 410; ii., p. 132, l. 5; cf. ii., p. 278, infra, the proverb: sütin tapu ghiç, tägî sîvînîce "the priest is always ready to worship God but the latter is not at all pleased with him".

The Burûhan-î Kâ'în explains the Persian borrowing thus: "it is a polite custom which the Turks of Transoxania call tapu and consists in, when one has committed some crime, presenting oneself before the Şâlûn or viziers, the head uncovered, holding one's hands bowed down and seeking forgiveness." Cf. for the meaning the Turkish verb yâkûn-mâk so frequent in the Buddhist and Manichaean texts publ. by F. K. W. Müller, von Le Coq, Pelliot etc. The following passage is typical: sâ-ge Oghuš reseminde tapu vi-bhînem resemin yrine geterâlî, "protesting oneself" (or bowing) three times according to the custom of the Oghus, they went through the traditional gestures of tapu and homage" (Houtman, Hist. des Sedîî, d'Ibn Bûch, p. 10, l. 9). The ceremony seems to have included the offering of a cup for there is an expression tapu sağrâgîch "cup of homage" recorded by the Burûhan-î Kâ'în (p. 477 sub sağrâğî).

It may also be noted that according to Silvestre de Sacy, the Arabic šâhidîma "service" given above as the equivalent of tapu (according to Kâshghârî) sometimes has the same meaning as the Turkish timûr (N.E., i. 210, note 4; cf. Bibliothèque des Arabistes, Cairo, ii., p. 114, 116).

Lastly in Mongol, the same word (pronounced tabî according to Kowalewski which presupposes a Turkish form tap-i) means "offering, sacrifice, divine service, service, worship, act of honouring".

In connection with the timûr, tapu is the name of the title-deeds which confirm the tributary state of the land, the renewal of which is obligatory in certain circumstances and which establish the permanence of the right of conquest (Belin, No. 298, note 2).

From the preceding one might be tempted to see in the tapu a kind of homage and Ahmad Wâfiğ gives as the equivalent of tapu, the expression asgirî khâkî "right of the overlord", in the analogy it is only apparent: tapu existed between the sipâhi and the ra'ye and not between the sipâhi and the aserain (Şûlûn). It is therefore quite a real bond going with land. As the delivering of this title was done with the payment of a certain sum in anticipation (mûnâfiqel) the name tapu was given not only to the title but to the sum itself. And when on the abolition of the timûr the tapu was levied by the state, mêmûru
or ḥāṣālī was given to the employees who handed over the tāmu (Belin, N° 88, 335 spp.). Tāmu could only be taken when the employees became really vacant. Transmission by inheritance takes place without tāmu or gratis.

The following are some phrases in which this word occurs: tāmu-la-ayāt or tāmu-ya wār-nīk or tāmu-ya-ātashīk "to give by tāmu (speeching of the sināpāt); tāmu-ya alāmāt "to take by tāmu (speaking of the ravyā);" cf. tāmu-la-yāt-i-ān alāmāt, MS. suppl. Turc, N° 68, fol. 17: hāi tāmu or tāmu-i-akī "against payment of the tāmu", opposed to bu tāmu or motaīyīmīn "without expense, without paying tāmu"; tāmu-ya uṣwardāshi (land) which ought to be or perhaps as a result of a vacancy given to another or payment of the t.; (whence the expression isībāhīyā, with trāt understood, etc., opposed to 'āqīlīyya); tāmu-ya bu-nāma "to break an engagement by t.;" tāmu-ya īfīyī dūrī "cannot be given by t.;" ruwā-ta tāmu "tax paid as t.;" ḥātītī t. "right of holding land by t.;" tāmu-i tāsiī "right of proportional t.;" dam tāmuṣa "tax levied on any new buildings created by the raya" (M. T. M., p. 83; J. A., Jan-Febr. 1844, p. 88; v. Hamm. i. 399).

Comparision of the tīmar with western fiefs. The tīmar is more of an administrative than a social organisation. It is due to the initiative of the state and the latter has never lost its right to supervise and even control directly the tīmar, which are only hereditary because the state finds an advantage in this, but it sees that no dynasty of feudatories is allowed to establish itself in the provinces. The fief is and, in spite of certain abuses, remains closely associated with the obligation to military service and is taken away on the slightest sign of failure to perform this or of rebellion.

The possession of it is so precarious that some tīmar have returned as many as eight times to the state in one campaign (Thornton). The domain, which has not the same social importance as in the west, does not confer its name upon its holder nor give him any degree of nobility. There is even a somewhat unexpected tendency according to which a raya could receive a tīmar without ceasing to be a raya. He could not abandon his state of raya when the beyat conferring the fief specifically stated that his yod-dašīk was being rewarded, "his good services in war as a free comrade in arms" (Millī tett. m., p. 311). The feudal relationship is expressed only in the domain, an irreducible part of which only was guaranteed to the holder on condition that he give a service. The reward is, as it were, divided into small sections which are used to give regular increases, as to officials. One does not talk of a tīmar of so many aspers but of so many aspers of tīmar (ṣuḥ ḫāṭār aštā tīmar). The great feudatories are at the same time officials and if the state fears them it is not so much as feudal lords, but rather as viceroys of large provinces.

There are no vassals. Each feudatory owes his fief directly to the Sultan (except the very small ones appointed by the beylerbey). He is not under the orders of more powerful feudatories except when mobilised for military service. Over the raya he only has certain fiscal rights, as we have seen, some of which recall the rights of the census of a village or of the estate of a lord (ṣwārīkhe or yordā). Madame Louise Saint-Belloth thought it would not be unreasonable to admit that Napoleon borrowed his system of grants of land from the Turks.

Bibliography: Belin, secretary-interpreter of the French Embassy at Constantinople is the only man who has so far seriously studied the Turkish tīmar. To him we owe the two following monographs:

We may also mention the work of Worms, Recherches sur la constitution de la propriété territoriale dans les pays musulmans et indiennement en Algérie, J.A., 1842, 1843, 1844. As to the study by Paul Andreas von Tischendorf (Das Lehnsweise in den malemischen Staaten inbegriffigen im osmanischen Reiches, Leipzig 1872, 129 pages in 5°), this is simply a version of Belin's work with a few additions. We have been unable to procure the important work by Trudelka, Historiska och politiska agnemärken, i Stocni, publ. in the Tidnacks select Kunskapar i Sverige och Iveren, 1815, p. 125 sp.; a German version was published at Sarajewo in 1911, under the title Die Geschichtliche Grundlage der bosnischen Amtsverwaltung. For further details cf. Durnitir in Zapiski Kollegij Poteshnikov, II., 1926, p. 104.

The works of which we now give the full titles with some others of less importance have been quoted in the body of the article:

The Kīnām-nīmē. The bibliography of these codes has still to be compiled. Here we shall confine ourselves to giving the more important, neglecting those, not very many, which do not refer to military fiefs.

Apart from the Kīnām-nīmē of Mehmed II already quoted, these are:

1. Sūlaimān's code as published by the T.O. E.M. as a supplement under the title Kīnām-nīmē Al-ʿAṣr Olgīmān (72 pp. 1320). The editor Mehmed ʿAriż attributes it to Saiyidī Bey in spite of the copy in the library of ʿAṣhir Etabār which gives as its author the mishāfī Dīlawī ʿAriż as does von Hammer, Hist. de l'Empire Ottoman, Fr. transl., vii. 787, where the names are inverted), cf. also Bull. Nat. Paris, MS, suppl. Turc, N° 80 and also Anc. fonds Turc, N° 35, 16; Suppl. Turc, N° 79, 27;
the beginning of the latter seems to be the same as that of the manuscript mentioned by von Hammer, *Staatverfassung*, i, p. xxi, under Nr. vi, but the text of Hādżdji Khalīfa to which he refers really deals with mining laws.

2. Another version (later?) of the preceding (Vienna, N. 1799, 1st; Bibl. Nat. Paris, Suppl. Turc, N. 81). This version and the preceding should be compared with the text translated into German by von Hammer under the title *Staats- und Polizeiordnungen Sulaimans* (*Staatverfassung*, i. 143—62) which according to him (i.e., p. xix), is the part of the code of laws of Abī al-Ḥāfiẓ Efendi to be mentioned below (Nr. 6).

3. Code of Āḥūnā of the same sultan, commonly called *qādī* "the new" (although this qualification seems sometimes to be applied to the two preceding). If the somewhat confused explanations of von Hammer (Hist., vi. 247 and 267 and *Staatverfassung*, i. 375—376) are correct, this code, which is almost entirely devoted to questions of land laws, was first compiled by Abīd al-Ḥāfiẓ Mehmet Mehehī, in the early years of Sulaimān’s successor (Selim II). It contains a large number of *fītwās* of the celebrated Shāfī’ī al-Islām Abū l-Suʿūd and Kamāl Pāhsāzāde. It would be valuable to discover the original dated manuscript of this collection, of which we have a large number of copies more or less late (Rieu, Add. 7840, iii., mentions a copy of 1044 but there are some as late as the xixth century A.H.). The preface which invokes the authority of the great Sulaimān the Legislator is in all copies, but the more recent are interspersed with *fītwās* of later Shāfī’īs al-Islām: (Akhkhamzāde) Hüsain (d. 1043), (Zekeryāzāde) Yahyā (d. 1053), Mehehī Behā’ī (d. 1064), not to mention Pir Mehehī (cf. below), Abī al-‘Arwa, Mehehī Sa’d-also, Şan-also, Shāhīk Mehehī, Abī-ul-Hāfiẓ Mehehī, Abī-al-Ḥāfiẓ Mustafā and Mehehī Bruswī. These *fītwās* are mixed with *Qānūn* dating (der semen) from earlier memoirs such as (Tājī-bey-zāde) ‘Ijmā’ar Čelebi (d. 921), Dilâzāde (already mentioned), or older, like Hamza Paşâ (d. 1180), Mu’llaimzāde Lūm ‘Ali Efendi etc. The majority of the dated laws belong to the first half of the xixth century A.H., the latest being of 1129; a partial German translation of this text is given in v. Hammer, op. cit.

This *Qānūn* was published in N. 1 and 2 of the *Mīllet tıı, meyjmez*’l, there are MSS. of it in Paris, Suppl. Turc, N. 71 and 72, Vienna, N. 1816, 1817, 1822, 3rd and elsewhere (cf. a list in Rieu’s catalogue, Add. 7834).

4. *Qānūn* or *Risāla* by the Shāfī’ī al-Islām Čağrı Pir Mehehī Efendi b. Ḥasan, author of the *Mūn* il-Muṣṭa. This like the preceding is based mainly on the *fītwās* of Abī-ul-Suʿūd. MS. at Paris, Suppl. Turc, N. 68 and fragment at Vienna, N. 1804, 4th.

5. *Qānūn* i Zāhdi-i Derviş prepared by order of Sultanān by Meṣṭa a. Abīd Maṭbûl al-Daftār al-Khaṣāsun to the end of Dżanmāl I, 973 (middle of Dec., 1356) under the direction of the sultan, Mehehī Beşhāret, MS. at Vienna, N. 1804, 6th. Another MS. of the same work was compiled by Ḥan (Propr. fonc., N. 298, notes 2 N, 315 297). This text, along with some others has been published by Tānıkī in the *Günnet* of Sarajowe, xxviii; for further details cf. Dimitrew, loc. cit., p. 105.

6. *Qānūn* called that of Abīd I, edited by the *destiter emini Mu’ul-hi-nī-zade* ‘Ain-i ‘Ali in 1018 (1609) under the title *Qanun-i Ali-i Ḍaftār al-Khaṣāsun-i Meṣṭa-i Deft-i Dīnu* printed in Rab’i I, 1280 (Aug.—Sept. 1869) by Abīd Muḥaffaz Paşâ, the imperial commissioner in Asia Minor. MSS. in Vienna (4 copies), Leipzig, Dresden and Paris (incomplete). It was translated into French by Belin and into German by Tischendorf (cf. the Bibliography below). It is the only *Qānūn* that has so far been systematically studied. Hammer (*Staatverfassung*, i, p. xvii.—xx.) has given an analysis of a work, of which this *Qānūn* seems to be only the first part.

Ewštia Čelebi seems to have noted, in part at least, this *Qānūn* for the statistical information which he gives on the provinces and the military fiefs of the empire (i. 173—206).

10. The regular organization of the military fiefs promulgated in 1777 (1911) by ‘Abd al-Ḥamid (reproduced in *Djewdet, Turīdī* i. 154—192).

Among other *Qānūn* we may mention the MSS. of the Bibl. Nat. de Paris: Anc. fons Turc, N. 41, Suppl. Turc, N. 79, 1st (*Qānūn* presented in 1017) and Vienna, N. 1804, 3rd (*Qānūn* presented in 1028), N. 1822, 3rd etc. The list might be prolonged by searching the catalogues of various libraries. Marsigli’s work (cf. above) was compiled from a *Qānūn*, as far as facts dealing with military fiefs are concerned.

There is an important note on these *Qānūn* by Abīd Raffi Bey in *T.O.E.M.*, xixth year, p. 319—320 (which is not at the moment accessible to me). Cf. also the article by C. Brockelmann in *Irl.* viii. 261—267 (Der Göttinger cod. turc. 25. — Ein Beitrag zur Quellenkritik des Qanunnamace). There were also *Qānūn-nāme’s* for each vilayet. They were on the back or at the top of the *destiter manṣāfiz* of these vilayets (cf. M. T. M., N. 1, p. 109. Such is for example the *Qānūn* of the ilīs of Szegedin, Hatvan and Nógrád, MS. Bibl. Nat. Paris. Suppl. Turc, N. 76.

The majority of the extant *Qānūn-nāme’s* — apart from their original defects, often serious — are full of errors and obscurities, the result of the carelessness of copyists. They ought to be
completed and corrected from the collections of inscriptions or model letters and especially of original documents, firmanas, beatae et al., as for those of No. 823 of Suppl. Turc de la Bibl. Nat. de Paris and 1802 of Vienna; cf. also Gregorowicz's collection. Meminski himself has given three in his Institutiones linguae turcicae, Vienna 1756, ii., p. 174—175. A study of the rich archives of the Distier-bashâni in Constantinople would assuredly be most fruitful. (J. Devy)

TIMBUKTU (Tibmuchoo, French Tombouctou), a town in western Africa. It is not only of interest as evidence of the great extension of Islam to the south; it has itself been a centre of Muslim life of considerable activity; it possessed a celebrated university and produced learned men and historians who are not without merit. According to the author of the History of the Sudan, it was founded at the end of the viii (xiii) century by the Maghâharen Tâteg, a nomadic people who came into these lands to pasture their flocks. In summer they camped on the banks of the Niger in the village of Amadzah; in autumn they went back to their homes in Arman. At last they settled definitely on the site of this town. Timbuktu became an important commercial centre; travellers reached it either by the river or by caravans from the coast of Morocco and Tripolitania. The people of Maghâbim migrated thither in considerable numbers; the commercial centre had formerly been Walatta. Learned men and devout theologians soon followed the traders; they came from Egypt, from Ghadames, from Tuat, Tafalet, Fez, Sbâs etc. The town was given fine buildings and walls were built around it; the huts, once built of branches and straw, were replaced by houses of clay. A large mosque was built in Timbuktu itself and another to the north at Stankore.

The first dynasty, which came from Mâlli [q. v.] reigned at Timbuktu from 737 to 837 (1336—1433). The town in this period was visited by the celebrated traveller Ibn Battûta whose description is very interesting. In 753 (1352) he went there with a caravan from Morocco which included many traders of Sidjilmasa, then a very prosperous commercial centre. After a journey of 25 days he made a halt at Taghaza where there were mines of rock-salt, then at Walatta (Iyâkâlîwe), the first place in the land of the negroes, two mouths' journey from Sidjilmasa. Ten days after leaving Walatta he came to Zâgharti and reached the Niger near the town of Kâarkhâ; thence he went to Mâlli on the river Sansara and finally reached Timbuktu, after which he continued his journey by water. The people of these lands were Muslims; the tribe of Messâf was the dominant one. Ibn Battûta admires certain virtues of the negroes but cannot understand the nudity of women among the believers. The town itself does not seem to have impressed him greatly. The Messâfs who lived in it wore the âshqâ (q. v.), a veil covering the lower half of the face. We know that the Arabs usually gave the name of al-Mulâtchânin to the settled people, to the Berber peoples who led a nomadic life in the desert as far as Nubia (Juynboll and de Goeje, Descr. du Maghreb, Leyden 1860, p. 48).

A second dynasty that of the Maghâharen Tâteg, held sway in Timbuktu for 40 years. Then came the conqueror Sunni 'Ali whose rule lasted 24 years (873—898 = 1468—92). He made his victorious entry into Timbuktu in 873 and brought great havoc there. Local historians judge him very severely, as a wicked libertine and a bloody oppressor who persecuted learned men and laughed at religion. He performed the palâtî sitting. Nevertheless the Sungai dynasty which descended from this prince was a brilliant one and raised the town to a high degree of prosperity. The most eminent sultan of this dynasty was the askia al-Hâdi Muhammad, a patron of letters and learning. The last, the askia Dâwût, died in 935 (1528). Timbuktu then passed under Moroccan domination. The Pâshâ of Marrakesh Mahmoud conquered it from the Sultan of Morocco, Mulay Ahmad in 999 (1590). Moroccan rule lasted from 999—1164 (1590—1750); the exactions of the Pâshâs and the raids of the marauding Tuareg mark the period of decline. The Tuareg regained the town in 1207 (1792), then the Pal took it in 1245 (1827) and then the Tacouar. In the xvi (xvii) century Europeans came into contact with Timbuktu. Through Tunis and Tripolitania it had dealings with Italy; especially with Florence. Four great caravans routes led from it, going to Egypt via Kâen en Gao, to Tunis via the Haggâr, to Morocco via Sidjilmasa, Tafalet and Tuat, and to the Sudan by Mâlli. Two Europeans mention the town at this time and refer to it in terms which suggest that it was a well known place; these were the Florentine Benedetto Dei who visited it in 875 (1470) and says only "here coarse clothes are sold and seriges and materials which are made in Lombardy", and a few years later Leo Africano who is more enthusiastic: "the city", he says "is well provided with shops: it has a temple of stone and lime, built by an excellent architect of Granada and a splendid palace for the king. The latter is very rich in plates and rods of gold some of which weigh 1,500 pounds". The traffic in gold and in salt is specially mentioned at this time.

After the xvi (xvii) century Timbuktu became cut off from Europe. It was now only talked of in Europe as a mysterious and inaccessible town, thought to be very beautiful and rich, no doubt on account of its trade in gold, ostrich feathers, ivory, and slaves. The mystery of Timbuktu after various unsuccessful attempts and the assassination of Major Laing was pierced by the French explorer René Caillée in 1824 (1828) who was much disillusioned by it and greatly preferred Djenné. Barth then visited it in 1853.

The town, still modest in appearance, although the native architecture is not without taste, was incorporated in the sphere of French colonisation in 1311 (1893). Communication by motor-car (caterpillar wheels) was opened with Algeria in the Haaritz—Audouin—Dubreuil expedition. The town is no longer as large as it was under the old Sungai kings, whose memory the natives still cherish; in those days it was bounded by one of the arms of the Niger, but now the ruins lie 10 miles south of it. Caravans carrying salt still do a busy trade.

As to the works of Sudanese authors, the manuscripts of them have been brought back mainly by Felix Dubuis and Colonel Archirand. M. Houche has published several of them. The most important are the History of the Sudan and a Dictionary of the Fasah. The best known author of Timbuktu is Aham Bâ, who compiled a biographical dictionary. Taken prisoner when the town was occupied by the Moroccans, he was carried off to
Morocco where he lived till 1006 (1597). He died at Timbuktu in 1036 (1626). The period of the greatest literary activity in Timbuktu extends from the 11th (xvith) to the 13th (xvith) century. Educated Muslims are still to be found in the country, for example the ḵaḍī who a few years ago (1913) made available some inscriptions throwing light on the history of the Maghānanian penetrations of the Niger country.

(articles on the Timbuktu region in the *Business Review* and *The Times*)

**TIMSAH** (Lake), one of the series of swamps and lagoons in the Eastern Delta through which the Suez Canal passes on its way from Port Said south to Suez. The Canal enters the Lake at the 50th kilometre. On the northern shore lies the town of Ismaʿilya [q.v.], an exclusively French residential quarter. The Lake is about 6 sq. miles in area, although before the construction of the Canal it was brackish and reedy. Now it is very picturesque with its bright blue waters and the background of desert hills. The name means Crocodile Lake [cf. the preceding art.], being once upon a time the haunt of that creature. Archaeologists are undecided as to the part it played in historic times. Wallis Budge *Hist. of Egypt*, v. 131 sq.) supposes that it was somewhere in its neighbourhood that the Israelites crossed during their flight from Egypt. He identifies it with the *DEP* or Sea of Reeds mentioned in Exodus, xiii. 18.

**Bibliography:** A.H. Muḥammad, *Qīṭat Dēdīla*, viii. 405; S. W. Baker, *Ismaʿilya*, i. 190; Badecker, *Egypt*, Index. (J. Walker)

**TIMÜR LANG** (Tamerlane), the conqueror of Asia, born near Kaš in Transoxiana on the 25th Ša’bān of the year of the Mouse, 736 A.H. (8th April 1336), the son of Amir Tāṣhāghī (or Targhū), governor of Kaš and its district before Hashā al-Burā, and Takma Ḥāfū. His family claimed descent from Cinggis Khān and his epitaph gives the following genealogy: Timūnā, Kāzī, Ismāl Burā, Karāṭīr Nūṣān, ʿAṯīr, Burkāl, Tāṣhāghū, Timūr. A rabid detractor of Timūr, Ibn ʿArabī, ḫāṣ, says that he was the son of a shepherd and lived at first by brigandage and the epithet of Lang (lame) was given him as a result of a wound he received while stealing sheep. Timūr was also called Kūkān, the “son-in-law of the Ḫāfū”, Amir, “the Emir”, al-Amr al-Ḳabūr, “the Great Emir”, ʿṢāliḥ Ḫārūn, “lord of the fortunate conjunction of planets”. In 790(1388) he definitely took the title of sultan and after his death was given that of Dījan Makūn, “dweller in Paradise”.

While still quite young, Timūr distinguished himself by his intelligence, forethought and bravery. At first in the service of the local ruler, the amir
Kâğıtšâ, he accompanied Hâdîjî Bârîc facing before the invasion of Tughlâk Timûr Khân but soon returned to plead the case of his oppressed countrymen before the conquerors. He did this with such eloquence and courage that the invaders, eager to win over such an opponent, gave him the governorship of his native country. The next year (762 = 1361), Tughlâk Timûr organizing his conquests, made his son Iyâs governor of Samar- kand and appointed Timûr his vizier; the latter however, disguised with the consensuses of those around him, soon went to rejoin his brother-in-law Amîr Hûsaîn, who was preparing for resistance against the invasion.

Tughlâk Timûr and Iyâs, defeated in their turn, perished on the battlefield. Turning against his ally, Amîr Hûsaîn, Timûr made war on him, had him assassinated after a pretended reconciliation and becoming master of Bulqîk ascended the throne on Ramâzan 12, 771 (April 10, 1370), assuming the titles of successor of Caghâttiâ and descendant of Genghis. Success however only really begins with the conquest of Djâta and Khatvîrîm, which took over ten years of fighting (771-782 = 1369-1380) and nine expeditions: five to the first and four to the latter country. Becoming the official protector of Iâlam, Timûr favoured the priests and the new Nakhâbbândiya order and on his campaigns was accompanied by a long retinue of holy and learned men, men of letters and artists.

On the procession of the Kiçîlîk in 777 (1375) Timûr had taken the part of Tugisâvish [r.v.], Khân of the Crimea, who had been defeated by Urûs, ruler of the White Horde. In 782 (1380-1381) he sent him against the Russians; Moscow was taken and sacked. Four years later Tugisâvish rebelled against his benefactor; at first victorious, then defeated, he wanted to continue the struggle although Timûr offered to pardon him. In 790 (1388) he invaded Transoxiana, defeated 'Umar Shîshkî, son of Timûr, with his generals and threatened Samarqand. Timûr had to go to restore the situation. There was another invasion in 793 (1390-1391); this time 'Umar Shîshkî had his revenge and the rebel Khân fled into Georgia, abandoning his lands, to resume the offensive four years later.

Undertaken in 782 (1380-1381), the conquest of Persia began with the invasion of Khorasan, which submitted. On the return of an expedition against the pagan Mongols in 784 (1385), Gurgân, Mâzardarân and Seistan were conquered in rapid succession; the local rulers having submitted, retained a nominal authority. In the following year the rebellion of Herât ended in the suppression of the Kûrty dynasty. In 786 (1384-1385) Wâlî, king of Mâzardarân, was dispossessed. The years 787-788, 789-790 correspond with the conquest of Fârs, the 'Truk, Luristan and Âdhar- bâdjiâ. Sultân Alâjm Djalîr was defeated and put to flight. Timûr spent a winter in Tâbris and imposed a heavy fine on Isfâhân which having rebelled was punished by the massacre of 70,000 inhabitants. Towers were built of their skulls. Timûr is said to have had a lively disposition with Hâfiz in Shîrâk, but the truth of this story is not certain.

On the 10th Ramâzan 795 (July 31, 1392) Timûr set out on what is known as the "five years' war"; the main episodes of it were the massacre of the heretics in the Caspian provinces, the destruction of the Mu'âzîzârî dynasty of Fârs (795 = 1393) and the Mesopotamian campaign. Alâjm Djalîr after seeking to conciliate his rival fled into Syria, where he became a vassal of the Sultân of Egypt, al-Mâlik al-Zâhi Barâkî. The latter having refused the extradition of his protégé, Timûr invaded Asia Minor took and sacked Edess, Takrit, where he erected a pyramid of skulls, Mârdîn and Antî. 'Umar Shîshkî was killed in the course of the fighting. Forced to defend himself against a new attack by Tugisâvish, Timûr invaded the Kîpîkî (797 = 1395), occupied Moscow for over a year, undertook a campaign into Georgia and suppressed several risings in Persia.

According to Shahâr al-Dîn, Timûr thought the Muslim rulers of India much too tolerant; they ought, he thought, to have imposed Islam on their subjects. In Râjâb 800 (March-April 1395) therefore, he set out for India, crossed the Indus on the 12th Ramâzan 801 (Sept. 24, 1398) and on the 7th Rajab II (Dec. 17) took Delhi. In spite of the admiration with which this city inspired him, he plundered and destroyed it, massacring 50,000 of its inhabitants. The defeated Sultân Ma'âmûd III had retired across the Ganges. Timûr who had just divided his kingdom among his officers had to retire hurriedly to face new troubles. A rebellion had just broken out in Syria and Alâjm Djalîr's, once again lord of Baghâdâd, had invaded Âdharbâdjiân, the governor of which, Mirânshâh, son of Timûr, had compromised himself by his excesses. The rivalry between Timûr and Bâyazîd I was beginning and the new Sultân of Egypt, Fa- raqî, had refused to release a relative of Timûr's; the envoys sent to negotiate had been executed by the governor of Damascus.

Having taken the necessary measures against Mirânshâh, Timûr ravaged Georgia and set out for Asia Minor in Maharrâm 803 (Aug. 1490). At Sîrâs the Muslim garrison was surprised but 4,000 Christian soldiers were buried alive. Malatya fell, Timûr entered Syria, took Aleppo and after demanding of the "âlamâ", which, his men or the enemy's, killed in fight would earn the title of martyr, handed over the town to be plundered for three days. Hamân, Homs and Ba'âlbeck fell in their turn; Sultân Faraj was defeated. Damascus capitulated and Timûr sacked it, reduced its inhabitants to slavery and extorted from the "âlamâ", a fatâwî approving his conduct. On the 27th Dhu'l- Kâ'da 803 (July 10, 1401), he took Baghâdîb by surprise and wrought a great massacre there to avenge his officers killed in the siege. 20,000 inhabitants, or according to Ibn 'Arâshâbâh, 40,000 are said to have perished. Abu Bakr, son of Timûr, was given the task of defending the region against the attacks of Karâ Yûsûf and Bâyazîd, who had sought investiture from the "Abhâhsâda in Eyypt and attacked the Byzantine emperor, a friend of Timûr's, next molested his allies, the princes of Asia Minor. On Timûr's returning from a new expedition into Georgia, war broke out between the two rivals and their fate was decided at the battle of Ancyra, actually fought at Çîtqâbâh, N.E. of Angora on the 19th Dhu'l- Hijja 804 (July 21, 1402). Bâyazîd who had disposed his forces badly was defeated after a desperate struggle in spite of the valour of his troops. Imposed in his flight by the fall of his horse, he fell into the hands of the victor who treated him with respect and showed real regret when Bâyazîd died at Aş Şebir on the
14th Shab`āb Sūr (March 14, 1403). Owing its origin to a misunderstanding of a Persian verse, the legend that he ended his days in an iron cage is quite fictitious.

The captures of Brusa and Sozyn were marked by new atrocities. During his sojourn in Asia Minor, Timur lost his grandson and heir Muhammad Sulṭān, and received embassies from the Sultān of Egypt, who recognised his authority, and from the Byzantine emperor John VIII. Georgia having become tributary, Timur returned to Samarqand in 807 (1404) where he received a number of ambassadors, to one of whom, Ray Gonzales de Clavijo sent by Henry III of Castile, we owe a valuable account of the court of Samarqand and the festivities which took place there on the occasion of the marriages of several of the grandsons of Timur.

A new campaign was planned, this time against China, of which Timur was not content to remain simply suzerain. The Kurilus assembled at Samarqand accused the declaration of war. On the 23rd Djamād-i 1, 807 (Dec. 27, 1404) he began the campaign, crossing the Oxus on the ice. At Orār he granted Tōskānī the pardon which he sought of him. On the 10th Shab`āb Sūr (Jan. 12, 1405) he fell ill. Feeling his end near, he made all his dispositions and died on the 17th (19th) January aged 71, having reigned 36 years. His body was conveyed to Samarqand two months later to Samarqand, where his funeral was celebrated, and the magnificent monument, the Gūr-i-Mīr, in which he is buried, can still be seen.

Timur had married two Chinese princesses whom he called the, the Great Queen, and the , and the Little Queen, and the Queen, and also Tūmān, daughter of the Amir Mūsā, governor of Nakhshāb and Dāshāū, a woman of rare beauty whom he had executed for some imaginary fault. He had also a large number of concubines. His children were Ghiyāth al-Dīn Djamāngī (d. 779 = 1377–1378), Murāz al-Dīn `Umar Shāhī, killed in Syria, Daftāl al-Dīn Gurghā, called Mirānghā, Shāhshākh whom circumstances made his heir, and one daughter Sulṭāna Bakhtī, who married Sulaimān Shāhī, Realising that his rule could not last for ever and desirous to avoid civil war, he had divided his empire among his sons and grandsons giving them equal parts. But Muhammad Sulṭān, son of Ghiyāth al-Dīn, and after his death Pir Muhammad Djamāngī, his brother, were to have precedence.

Grave and serious, Timur did not love displays of gaiety and demanded absolute frankness in speaking to him even though it should pain him. Clavijo speaks highly of his justice and he certainly showed himself merciless to criminals. Gifted with a very fine memory but having little education himself, he encouraged and rewarded men of genius. It was in his reign that the art called Timurid had its origins. He enriched Samarqand with magnificent buildings and made it an international market which, in his lifetime at least, supplanted Tabriz and Baghdad and he transplanted thither the artists and craftsmen from the towns he conquered. He did everything possible to encourage commerce and industry and by his conquests he opened up new routes by land for the trade between India and Eastern Persia. Throughout his empire he carried through great public works, organised the administration and the army on rational bases and worked with all his might for the spread of Islam.

In physique, Timur was of middle height, had a large head and a high complexion. His hair had become white at an early age. Two wounds in the foot and the hand had made him somewhat deformed. Numerous portraits of him exist, by Persian or Indian artists, but they are for the most part purely imaginary (cf. Vānbēry, Gesch. Rechard’s, i. 212–213).

*Biography:* To Timur are attributed Memoirs (Malḥāba) and Institutes (Taḥṣīl) but their authenticity is very doubtful. He himself, however, had two official histories of his career written: one, the Tarḥītī Shāhī, written in Turki verse in Uighur characters, is now lost and the other the Zafar-nāme of Naṣīm al-Dīn Shāhī, still unpublished, survives in a unique manuscript in the British Museum (Add. 23,980); a recension of the latter work by Sharaf al-Dīn `Ali Yākid is the best known in Europe of his histories. The Aghāī al-Maḥfūz fī Nāvī Tarbih of Ibn ʿArabjāh is a bitter satire but it nevertheless contains a just appreciation of the character of the conqueror and valuable details about Samarqand. Murashīn (Kunya, Ba. vi.) and especially Khwāndūnī (Hakīmī Shāhī) are with Abū al-ʿAbd al-Ghayrī Samarqandi (Maḥfūz al-Sulṭānī) the most valuable of the later historians. In Books vii. and viii. of his Gesch. d. Osten. Reiches, von Hammer has given the substance of contemporary Ottoman and Byzantine chroniclers. We may also mention the Manṣūrī of Ferdiy, a valuable collection of documents. Among European travellers, we may mention Clavičio, Schiltberger and Boucicaut.

TIMURIDS This term, sometimes used to include all the descendants of Timur, means more especially the princes of his family who ruled in Persia and Central Asia in the 16th century; it is in the latter sense that it forms the subject of this article.

The history of the Timurids may be divided into two quite distinct periods (cf. Browne, *A History of Persian Literature under Timur* Dominions, p. 380). In the first the empire, divided between the sons and grandsons of the conqueror, was soon reduced to two great kingdoms — in the west that of Miranaghā and his sons Abū Bakr and Muhammad Umar — in the east that of Shāhrukh which, at first limited to Êupān, to which Transoxiana was next added in a few
years, comprised almost the whole of the lands that had been ruled by Timūr. It was a brilliant and comparatively happy period. Of a peace-loving disposition in spite of his success in war Shāhrukh endeavoured to repair the damage done by his father and favoured as far as he could men of intellect. In the second period from the death of Shāhrukh to the battle of Shurţ: which by securing the unity of Persia dealt the last blow to Timūrid domination, the empire was steadily breaking to pieces. Each prince wanted to have his own kingdom; thus facilitating the advance of the enemies who from all sides were threatening the enfeebled state. But by a bizarre contrast the renaissance which had marked the reign of Shāhrukh continued under his successors to the end of their rule in all its splendor. The whole 15th century is the golden age of letters, art, and scholarship. The court of Hūsain Bīškar, the second last Timūrid, was not inferior to that of Shāhrukh.

The amirs believing that by concealing the death of Timūr they could successfully carry out the expedition to China, decided to take as ruler for the duration of the campaign prince Khaṣīn, who was to be assisted by a council of regency and at the end of the expedition would surrender the power to Pir Muḥammad Dzhāhāngir, or Timūr had desired. War broke out between the two claimants and Pir Muḥammad twice submitted to the generosity of Khāhil who left him his lands. Six months later the vizier Pir All Tāz had Pir Muḥammad assassinated and tried to seize the throne himself; this cost him his life (808 = 1400). Abandoned by his troops, dethroned by his vizier, whom he reproached him with his extravagances, Khāhil was compensated with the governorship of the Šīrāz (809 = 1400-1407) in which he ended his days.

Mīranshāh reigned, with his son Abū Bakr, and under the authority, imposed by Timūr, of his youngest son Muḥammad ʿUmar over a kingdom which included the Šīrāz, Alḥārbiyān, Mughān, Shīrwān and Georgia. A quarrel broke out between the two brothers and the amir Dīlahānshāh tried to deprive them of their power which cost him his life. Mīranshāh having made a hostile demonstration against Shāhrukh had to submit (808 = 1405-1406). In 810 (1408) he was killed in battle with Kara Yūsuf. His sons perished about the same time.

Shāhrukh on the death of Timūr was ruler only of Khurāsān; he conquered Marandarān in 809 (1406) and Sistān in the next year, then extended his authority over Transoxiana to which he went in 811 (1409) to take possession of Samarqand, to organise the country, rebuild Merv and restore the old course of the Murghab; he further extended his power to Fārs (817 = 1414-1415), Kirmān (819 = 1416-1417) and Ḍarābīdjanān to which he had gone to attack his doubtful rival Kara Yūsuf; the latter having died suddenly, the enemy army dispersed (822 = 1419) but the fighting continued with the successors of Kara Yūsuf and the rival dynasty of the White Sheep. In the end, Shāhrukh held all the lands of Timūr except Syria and ʿArabistān. Many risings broke out in his reign but all were put down. Among them were those led by the amir Khudālān and ʿAbd Bahaʿ al-Dīn (813-1409-1410). Buğa Mīrzā at Shīhrāz (818 = 1415-1419), Kiskandar and Dīlahānshāh (832 = 1429).

In 820 (1417-1418) Shāhrukh put at the head of the government his son Bīsoṅqor, made all who had been false to their trust disgorge their ill-gotten gains. He survived all his sons except ʿUṯlīgh Beg and died in Fishāwārd (Raiyat) on the 25th Dhū l-Ḥijja 850 (March 12, 1447) leaving the memory of a generous and peace-loving prince, brave and free from ambition. To him we owe amongst other useful works the opening of a large library in Herāt. With China, of which he was suzerain, he was always on good terms and he asserted his nominal suzerainty over India. On the other hand, his relations with the Ottomans and with Egypt were always difficult.

After his death the decline began, rapid and irremediable. ʿUṯlīgh Beg, the "Estranged Princeling" (850-852 = 1447-1449), was a scholar and man of letters, more fitted to be a student than a ruler and incapable of facing the difficulties which assailed him. Conquered by his nephew ʿAbd al-Dawla he agreed to all his demands in order to obtain the release of his son ʿAbd al-Latif. But the conqueror failed to fulfil his promises. The ʿOfbeeks took and sacked Herāt and Samarqand; ʿAbd al-Latif rebelled, seized his father, who had been several times defeated, put him to death after going through the farce of a trial but was himself assassinated after reigning six months (853-854 = 1449-1450). ʿAbd Allāh Mīrzā, grandson of Shāhrukh, ascended the throne in spite of the opposition of Abū Saʿīd who sought the support of the ʿOfbeeks. ʿAbd Allāh was defeated and slain (853-854 = 1450-1451). Bābūr Mīrzā, a dissipated and drunken prince, who had vainly sworn to reform himself, lost the ʿIrāq, Fārs and Kirmān, invaded ʿAbd al-Dawla, failed against Abū Saʿīd and died (his successor (855-861 = 1451-1457).

Very different was the reign of Abū Saʿīd, the most powerful monarch of his time. A bitter opponent of ʿAbd Allāh Mīrzā he had at his death taken possession of Samarqand; the disappearance of Bābūr and his further conquests gave him Transoxiana, Bahaḵlušān, Kābul and Kandāhar, with the border districts of India, the ʿIrāq and Khorāsān, which he completely conquered in 863 (1458-1459). He was ambitious but the historians agree that he had fine qualities: dignity, discretion, frankness, energy and remarkable political ability. After fighting the Mongols he made an alliance with them, returning to the old traditions of his family. Declaring war on Ṣūfān Ḥasan whose attempts at a reconciliation he repulsed, he marched into the Kābūgh where his army starving deserted him. He fall into the hands of the enemy and ʿUṯlīgh Hasan's officers, in spite of their master's opposition, demanded his death (855-872 = 1456-1459).

Ṣultān Maḥmūd, who began by having the four sons of his predecessors assassinated, only reigned six months, detested and obfuscated. His tyranny, arbitrariness and depravity surpassed anything previously known. He was assassinated and a rebellion was just about to break out when his death which had been concealed by the astute vizier Khurān Shah (900-901 = 1494-1495) became known. He left several sons. Ṣultān Maṣʿūd who reigned four years had to fight for his throne with his brothers Ḍarābīdjan and ʿAll who, owing to the intrigue of Khurān Shah, failed miserably (901-905 = 1495-1499).

Ṣultān Aḥmad, son and successor of Abū
Sa'd, had a number of good qualities: he was loyal, frank, courteous and brave; but having no power he was only a puppet in the hands of his envoys especially the clergy; and except for an attack by 'Umar Shaikh and an expedition against Böber, the future conqueror of India, his reign was peaceful. Magnificent buildings were erected in Samarkand at this time and scholars and men of letters flocked to its court (874—899 = 1469—1494).

'Umar Shaikh, fourth son of Abü Sa'id, had made for himself a little kingdom in Farghâna of which the capital was Akhât. Brave and fond of fighting, although his army was only 4,000 men, he made several attempts to take Samarkand. His contemporaries praise his justice, his generosity and lovable disposition. Although given to drinking and gaming, he was very devout. A son-in-law of the sovereign of the Ghaznâvi, he had to cede to his father-in-law Yânî Khan lands which he could not keep and died after an accident after a short reign on the 4th Ramaḍān 899 (3rd June 1494) aged only 39. His son Zâhir al-Dîn Böber who succeeded him at the age of 12 after various successful expiditions in one of which he took Samarkand, was dispossessed by Şahbântî in 906 (1506). He went to India where he founded a great empire.

Sultân Hussain Bâikâra reigned at Herât for 37 years. Literary and artistic, a brave and successful soldier, he conquered Khurasan, Tukhâristân, Kandâhar, Sistan and Mazârâstan, victorious over all his rivals. But the eight or nine years of his reign were troubled. A martyr to rheumatism, threatened by the Ōzbekîs, he had to put down rebellions by his sons and finally died on his way to fight Shâhîm. At first an agnostic and pious Muslim, he latterly gave himself up to deauchery, an example which his sons and subjects followed. The literary circle at Hussain Bâikâra's court is famous. In it besides the famous visir Mir 'Ali Shîr, the creator of Turkî literature, were poets like Dîzânî, historians like Mirghând and Khândâmî, painters like Bahâ and Shâh Maqâfar. The palaces of Herât rivalled those of Samarkand (873—911 = 1469—1506). The son and successor of Sultân Hussain Bâikâra, Bâ'dî al-Zannân, was the last Timurid of Persia. Defeated by Şahbântî, a guest of Shâh Ismîl and finally a prisoner of Şultân Salîm, he died at Constantinople in 923 (1517) leaving a son Muhammad al-Zâmân, who went to try his fortune in India, where he died in 946 (1539) after vainly trying to become king of Gujûrî with Portuguese help.

The coming of Shâh Ismîl, the triumph of the Shâfi'i and the Persian unity which was the result, the realisation of national unity in China and in Russia in the same period, the foundation by the Şahbântîs of a great empire in Transoxiana deprived the descendants of Timûr of all hope of domination except in India which was passing into the hands of one of them.

The intellectual revival which characterises the 14th (xvth) century is in part the work of the Timûrid sovereigns and princes many of whom were themselves poets, artists and scholars, and attracted to their courts men of genius. Among the former were Shahrâkhû, who promoted historical studies, Ulugh Beg, astronomer, poet and theologian, Hussain Bâikâra, artist and poet, and Böber, who left a number of valuable works in addition to his memoirs, and among the latter, Bâisonghor, son of Shahrâkhû, a calligrapher of the first rank to whom the art of the book owed a great deal. Dâmi is at this period the greatest name in Persian literature which is also represented by the mystic poets, Sâyîdî Ni'matallâh Kirîmî and Kâschî al-Anwâr; by Hyâtî and Kâlibî, authors of matârân; Hussein Wâ'id Kâghî, a moralist and author of apologies; the historians Mirghând and Khândâmî, 'Abd al-Razâk Samarkandî, Hâfiz Abrû, the latter also a geographer. Besides Dâmi, the most notable theologians were Âmûd Taftânî and the traditionist Mir Dâmûl al-Dîn Mişâhâdî, jurists, mathematicians, physicians etc. were also numerous.

Of the Turkish poets of the time, Mir 'Ali Shîr is almost the only one known; he has however some noted disciples, like Shâhkhâm Beg Suhaîlî and Kamâl al-Dîn Gâzârî.

In the 14th (xvth) century Persia art attained its perfection. The schools of painting of Samarkand, Bukhârâ and Herât were at their best. We have already mentioned what Bâisonghor did for the book. Architecture, inspired alike by the Chinese pagoda and the Mongol tent is represented by monuments like the Gâr-i-Mîr, the mosques of Bîbî Khânâmûn, Ulugh Beg and Shâh Ziâdât not to mention those of Samarkand. Owing to the presence of the colonies of artists and artisans installed involunt volentes in Samarkand and A'dharbâd by Timûr, decorative arts, ceramics in particular, made remarkable progress. Music also was brilliantly represented.

Bibliography: For the whole period Mirghând and especially Khândâmî are very useful; 'Abd al-Razâk Samarkandî whose Matâtî, unfortunately still unwritten, was largely used by Quatemère (Mémoire historique sur le règne du sultan Schâh-rokhî, j. A., 1856, and Notice de l'auteur persan,... forming the first part of vol. xiv. of the N.E.); Mu'tân al-Dîn Isfârî, author of a valuable chronicle of Herât (extracts given by Barbier de Meynard in the J. A., 1860—1862). For the early years, Sharaf al-Dîn 'Ali Yarzî, Ibn 'Arâbahjî, Fâshîî, author of a Muifimal unpublished and incomplete. For the last years the memoirs of Bâber are most valuable, checked and supplemented by the Tarîkh-i Raghibî of Mirzâ Hâdîr Dughlât, and the Shâhîm-Nâmâ of Muhammad Sâli, Ferîdûn Bey and Muhammadjîm Bâsî should be consulted for the relations with the Ottomans. For further details the reader may be referred to the works of E. Blochet and E. G. Brown in quoted under Timûr Lânî, L. Bouvat, Études sur la civilisation timeride, j. A., cclvi, 1926, p. 193—299; do., L'Empire mongol (2e phase), vol. vii, of the Histoire du monde, publ. under the direction of A. E. Cavignac (Paris 1927).

On the literary renaissance, cf. the Tâdhîrî of Dawlatjâhî and the works of Mir 'Ali Shîr, his Madâtî al-Nufâtî in particular (extract in Belîn, j. A., 1861, xviii. and 1866, vii. viii). The European travellers who have given us descriptions of the Timûrid kingdom were: Clavijo and Pero Tafur, Oyon de Longaville, Ambrogio Contarini, Nicolò Conti, Hieronymus di San Stefano and Caterino Zeno, Italians; Boucicaut, French; Nikitin, Russian; Schlitzerger, German. The principal European historians are D'Herbelot, De Geignes, Gibbon, von Hammer and Vâmbây, Gesch. Bohrâr's, chap. xii.; Brown, op. cit., book iii.; Skrine and Denison
TIMÜR-TASH, an Ortoqšid, son of Nachçun al-Din Ɨlgāhshāh of the line of Mārdin. Al-Malik al-'Alîm al-Ądîl Ɨşām al-Din Timür-Tash, who died in 5081 (1104) and by the age of 12 (in 512) his father had left him in Aleppo as his temporary deputy. In 515, Timür-Tash was sent to the Saïdijšād Sulṭân Mahmid and as a result of this mission Mâlîyâfärîkîn (q.v.) was added to the territory of the Ortoqşids. After the death of Ɨlgâhshāh, his lands were divided up. Timür-Tash received Mârdin, his brother Sulaimân, Mâlîyâfärîkîn and his cousin Sulaimân b. Ɨbd al-Djâhîr, Aleppo. In 518, Balak b. Bahârân b. Ortoq al-Aleppo was killed while besieging Manbûj (which belonged to the amr al-Ḥasân al-Ba‘albek). Timür-Tash, who was in camp at Balak, raided the country as far as Aleppo which he seized on the 20th Rabi‘ 1 518. He left his lieutenant there, for Syria was full of fighting and he was a man who liked peace (Ibn al-Ąthîr, x. 450). As a result of the intrigues of the Shîf Dubâsis (of the Mâlîyâdîn dynasty) the Franks besieged Aleppo. The inhabitants, seeing the weakness (āwqah wa Ɨ-šâqīfah) of his master appealed to Ɨşâf-Şūkân al-Bursûqt al-Mawṣûl, whom they admitted into the citadel.

Timür-Tash suffered a series of reverses immediately after the accession to power of Imam al-Din Zangi (who succeeded Bursûqt in Mawṣûl in 521). Zangi, eager to extend his possessions, marched on Nîşîbîn which belonged to Mârdin; Timür-Tash sought the help of his cousin of Ɨşîn-Қalîf, Dâwûd b. Sulîmân, but Zangi, by a stratagem obtained the surrender of Nîşîbîn before the troops of the two cousins could arrive.

In 524, on his way back from Syria, Zangi besieged Sardjî (between Mârdin and Nîşîbîn; cf. Қašî Sereţîkhîn [1] S miles W. of Nîşîbîn). Timür-Tash, Dâwûd and the lord of Dijârâbîk collected 20,000 Turkomans but were defeated. Failing to take Ɨşîn-Қalîf, Zangi turned back to take the fortress of Dârâ.

In spite of these reverses we find Timür-Tash in 526 joining Zangi in the siege of Amîd (Dijârâbîk). The lord of this fortress summoned Dâwûd to his assistance but the latter was defeated. Zangi and Timür-Tash laid waste the district of Amîd but the fortress held out. Zangi recompensed himself by taking Qawr which belonged to Dijârâbîk; cf. Mîlîwî; the Ɨlbîl of Saurû. In 518 Timür-Tash was to succeed his cousin Sulaimân at Mâlîyâfärîkîn. His only success seems to have been the taking of Hattîkh (or Ɨṭṭîkh; Ɨwâf-sīmân, i. 245; Ɨlîk) to the north of Mâlîyâfärîkîn (q.v.) which he took in 532 from the last son of the Mawûndîns (q.v.).

Timür-Tash and Dâwûd took advantage of the death of Zangi in 541 to recover their former possessions which had been annexed by the lord of Mawṣûl. The latter's successor however, Saîf al-Dîn b. Zangi, not only regained them but laid siege to Mârdin and laid the country round it waste. The peace-loving Timûr-Tash confined himself to regretting the days of Zangi which now seemed to him like days of rejoicing (niyâmûba li-hâl Ɨsârät dîlîmî). He hastened to make peace with Saîf al-Dîn and promised him his daughter, Saîf al-Dîn died however in 544 and the young princess became the wife of his successor Ɨṯâb al-Dîn. Timûr-Tash "lord of Mârdin and of Mâlîyâfärîkîn" died in 547 (1152) aged 48 after a reign of 30 years. The same date is given by Abu ‘I-Faraj (ed. Pococke, p. 391) and by Abu l-Fidâ‘ī, while the name of his son is given by ‘Alî Etnîr (an Iyun al-Ibar of ‘Abd al-Salâm Etnîr, multif. of Mârdin [al. in 1359 = 1843] and Firdâ‘ī) give 548. Timûr-Tash built the Ḩisnātîyâ madrasa of Mârdin and the cathedral-mosque opposite it. The coins of Timûr-Tash described by Ghâlib Ed‘hem, Catalog des Monnaies Turcomanes, Constantinople 1894, p. 27. and by ‘Alî Amîrî, op. cit., p. 18, bear neither date nor mint. ‘Alî Amîrî interprets the symbol found upon them as the tângha of the Turkish tribe of Kayîl.

Bibliography: cf. the articles Ortoqšâd and Mârdin; Ibn al-Ąthîr, x. 373, 418, 426, 436, 440, 455, 526; xii. 6, 34, 81, 92, 115; Abu l-Fidâ‘ī, Annales musulmiens, ed. Reiske; Kâmil Ferdi, Mârdin Malûbî Urjûkîye Ta’ekîlî (944 [1537]), a quite unimportant list of reigns but supplied with valuable notes by the editor ‘Alî Amîrî, Stambul 1931. (V. Morosov.)

TIMûR-TASH, an ambassador and vizier, son of the Kâr ‘Alî Beg who, in the first year of the reign of Urkhan took the fortress of Herceke on the Gulf of Nicomedia and displayed particular bravery at the siege of Aidos, when he removed with his own hand an arrow that had pierced his eye. Of the origin of the family very little is known; as is also the case with the other noble families of the early Ottoman empire, viz. the Candarian [cf. Cenderelli], the Ewrenos [q.v.], and the Mîkûlî-oglu [q.v.]. Timûr-Tash’s Fasha is mentioned for the first time, when he continued the Sulṭān’s conquests along the Tündja by Murad Pasha’s order with the help of Lâilî Shâhîn Fasha. In 1367 he took Yenidîye Ksîlahgâh (cf. Hâdîlî Khâlah, Rumalî and Rumî, p. 49, where the date is given as 768) and Ed‘hem (ibîd., p. 763 sq. with the same date) in the plain of the Tündja. The sources tell us nothing of his activities during the next decade. When Lâlî Shâhûn died towards the end of the Serbo-Bulgarian War (777 = 1375), Timûr-Tash succeeded him as Begler-beg of Rumelî. In this capacity he distinguished himself in the first place by completely organizing the army, by founding the system of sîdâs of the sipahs [see TIMûR] and creating the vîmûz for the lowest ranks in the army, which consisted mainly of Bulgarian Christian towns who were chiefly used as drivers (cf. J. V. Hammer, G. C. R., i. 181 sq.). It appears that it was at Timûr-Tash’s instigation that the felt caps
(usually made in Bilećik) since the time of Urkhan were generally, were limited to the army and that red was decided on as the colour for the headaddresses of the beggs and officers (cf. J. v. Hammer, G. O. R., i. 89 sq.). Timúrtaš Pasha again came into prominence when he took the fortress of垄断 (the modern Buloš), Prilep and Ḡañip (the modern Stip) (the date given is 784 = 1382; cf. Hāǧidji Ḥaṭfatī, Romania and Beina, p. 97, 96 and 92 and also his Taḫṣīʿ al-Timúrtašī, Stambul 1146, p. 97 where the same date is given, but is difficult to reconcile with the reputed letter of Murād I to his son Bāyazīd I given by Fīrūz, Mansûrīyat al-Saltāna, i. 107, dated Adīrānī first tenth of Rabīʿ I, 787 = middle of April 1385; cf. thereon J. v. Hammer, G. O. R., i. 197 sq., where the extracts are given from the document). Until the chronology of the early Ottoman period is finally settled, it may be regarded as certain that Timúrtaš crossed the Wadzār, invaded the south of the modern Serbia and conquered there three strongholds for the Sultān, Kâfri-i, viz. Astočia and Acrarali, the land of the "King of the Epirotians" Carlo II Tocco (d. July 1429), was also hard pressed by him on this occasion. In 1385 Timúrtaš is said to have undertaken a campaign against the Arta (not far from the Ionian Sea), who were showing separatist tendencies (cf. Epitótes, ed. J. Behkner, 1849, p. 229 sq. and Jorgo, G. O. R., i. 273) so that he was sometimes here, sometimes there is Thessaly and in Epirus, districts in which Turāḳhān Beg (q. v.) also fought with success. In 788 (1386) Turāḳhān Beg suddenly appeared in Anatolia. In the battle which Murād fought in the plain of Konya against his most dangerous opponent, "Ali" al-Dīn "All of Kāramān, he commanded the rearguard of the Ottoman army and it was his intervention that put the ruler of Kāramān to flight and thus decided the battle in favour of the Ottomans. As a reward he was given the greater part of the plunder and the title of vizier i.e. a Pasha with 3 tails, which he bore as the first Beglerbeg of the kingdom. When in the following year (789 = 1387) Murād was again preparing for a campaign in Europe, Timúrtaš remained in Anatolia and administered the district of Germān-eli (q. v.) in the absence of prince Yâkhi. In 792 (1390) Timúrtaš again appears in the Balkans. In this year, according to Ḥāǧidji Ḥalīfatī's Taḫṣīʿ al-Timūrtašī, he took Kratovo (Turkish Kastrowa) east of Uzkuš, famous for its mines of silver and copper. In the next year (793 = 1391) he was taken prisoner in Brussa during a Kāramānian raid on it and Angora, was released and revenged himself by defeating the prince of Kāramān in the plain of Aļ-čai in Germān-eli. When he had him without ceremony although he was the brother-in-law of Bāyazīd I. From Mănești-Rășcan, who probably drew on Idris Būltī (iii. 311) we learn of the farther history of Timūrtaš Pasha that he conquered Klaughr (q. v.) in Anatolia. The year of Bāyazīd I is 799 (1396 and 1397) and in the following year (800, beg. Sept. 24, 1397) Athens (cf. Chronicon breve in Duca, Bonn ed., p. 516 [Mœurde]) and J. H. Mordtmann in Eva-Neogr. Tarch., iv. 1923, p. 346 sqq.) with the surrounding lands, also Behesti (q. v.) and Mālītāya (q. v.) from the Turkmans, Divrigi from the Kurds, Dārendre and Kemeḳ (q. v.) (cf. also Sa'd al-Dīn, i. 150) and he was busy with warlike enterprises, sometimes in Europe and sometimes in Asia Minor (cf. J. v. Hammer, G. O. R., i. 248 sq.) In the battle of Angora (19th Dha 1-Hijdhja 804 = 29th July 1402), he with his son Yâkhi shared the fate of Bāyazīd I and passed as a prisoner into Timūr's hands. When the treasures accumulated by Timūrtaš were discovered in Kūtāshıa (q. v.), Timūr heaped reproaches upon him and at first refused him his liberty (cf. J. v. Hammer, G. O. R., i. 330, following Şaraf al-Dīn 'Ali Vāzdi, Histoire de Timūr-Bēz, transl. Petit de la Croix, v. 34, p. 41.) He only survived the collapse of the Ottoman kingdom for a short time. While leading an army for prince 'Īsā in the battle of Ulbāb (Asia Minor) he was treacherously murdered by one of his own servants in 808 (1405). Sultān Mehμmed left the head of the old warrior to his brother Sultan in a token of victory. His body was taken to Brussa and buried there in the mosque founded by him. He had four sons, who also rose to distinction as viziers and generals, viz. (according to Sa'd al-Dīn) Urdül Beg, 'Umur Beg, 'Ali Beg, and Yâkhi Beg. The last named, who had distinguished himself in the Balkan campaigns (e.g. at the capture of Niža in 777 = 1375 [cf. J. v. Hammer, G. O. R., i. 181] and of Provadija [Turk. Prăvădi, Bulg. Oveč, cf. K. Jireck, Das Fürstentum Bulgarien, p. 539 and Jorgo, G. O. R., i. 250], in 1388) seems to have perished soon after the battle of Angora. A son named 'Othμn Bey mentioned by J. v. Hammer, G. O. R., i. 495 (cf. however ibid., p. 492, where he is not given) cannot be traced in the Ottoman annals. There may be some confusion with a grandson of Timūrtaš who bore this name (see below). The family of Timūrtaš is set out in the following table:

<table>
<thead>
<tr>
<th>Khan 4All Beg</th>
<th>Timūrtaš Pasha</th>

4Ali-Čelebi d. as διοριστικός to prince Muṣṭafā

'Othμn-Čelebi killed, it is said, in 832 (1428) as Sandjakbeg of Germān-eli at the siege of Varna
Bibliography: The works mentioned in the text and Belaghi Brasse, Gliederi, Kiyatfi, Serkan, Brusa 1302, p. 65, where two bearers of the name Timurtash appear in error. — On a general Timurtash under 'Oktun and Urgan, see Zinken, G.O.R., t. 112. (Franz Baringer)

Al-Tinnin, the constellation of the Dragon. According to al-Kazwini, it consists of 51 stars none of which lies outside of the constellation. Apart from the general figure of the constellation which comes from Greek (and probably earlier from Babylonian) astronomy the Arabs have names for smaller groups of stars within it. Thus the star μ is called the Dragon's tongue, al-rijāf; ω, one of the four stars of the head, al-sawadīf, the young dam-camels; ψ, a not very bright star between them al-rajlii, the camel-foot; the bright stars ξ and η are called al-dāhārin, the two jackals; the dark α and ζ agār, the jackal's claws. The Arabs imagine that the two jackals are trying to seize the camel-foot and that it is being protected by the dam. At the beginning of the Dragon's tail is the star al-dāshī, the male hyena. In Ulugh Beg we find the readings al-qawād the hute-player and al-rāshī the dancer (this also in Wattenfeld's text); these seem to have no further authority and are easily explained as misreadings of al-sawadīf and al-rijāf.

(T. W. Hunt)

Timur Sultan, the son of Haidar Ali [q.v.] of Misur, was born in 1753. His father employed him in many military operations, and on one occasion, in 1771, when he and his troops were not found where they were expected to be, publicly inflicted on him a most unmerciful beating. On his father's death, on Dec. 7, 1783, he succeeded to the throne of Misur, and in 1784 he concluded peace with the British, with whom his father had been at war. In 1785 war broke out between Timur and the Marāthā Pāshā, who was joined by Nīżām 'Ali of Hindərabād, but in 1787 Timur took alarm at some military reforms introduced by Lord Cornwallis and made peace with his opponents. He was a bitter enemy of the British, and was known to be secretly in communication with the French at Pondicherry, and in 1788 he attacked the Rādja of Trancore, who was under British protection. The Rādja appealed to the British for aid, and in 1790 Lord Corn-

Tirana, also Tirnā, capital of the kingdom of Albania, pleasantly situated 400 feet above sea-level on the well cultivated plain at the foot of the Mali Dajit (5,570 feet) enclosed on three sides (east, south and west) by hills, connected with the Adriatic and its seaport Durazzo by road (25 miles) and soon to be connected by a railway now being built. The town which in 1627 had 12,454, mainly Muslim, inhabitants only attained importance when it was chosen in place of Durazzo as the seat of government of the Free State and later kingdom of Albania. Tirana is also the seat of the chief Mufti of Albania and with its numerous Hungarian noble families forms a stronghold of Islam in Albania. It is important in commerce as the market for a large part of lower Albania. Tirana is usually said to be a foundation of Fārān-Şah Sulaimān Pasha (about 1600) who in memory of his Persian campaigns called it after the Persian capital Tavān of which Tirana is a corruption. This statement (cf. A. Degrand, Souvenirs de la Histoire Albâtie, Paris 1901, p. 205 sqq.) is not worthy of credence because as early as 1572 "Il borgo di Tirana" is mentioned (cf. M. v. Soffla, Städte und Burgen Albaniens, in Denkschr. Ak. Wien, lxi/1, 1924, p. 35). It is certain that Tirana was of no importance in earlier times, in comparison with the adjacent Krua. On Sept. 2, 1477, in the plain of Tirana the Venetian provveditore Francesco Contarini with 2,500 cavalry and Albanian infantry fought the Turks in a battle which ended disastrously for him (cf. J. v. Hammer, G.O.R., ii. 154). Later the place passed into the possession of the powerful family of Topkan from Krua, who established themselves here through marriage at the end of the xviiith century. Their most celebrated member was Kaplan Ahmad Pasha (c. 1800) who was given large estates round Tirana for his services to the
Sultān in the war against Kara Mahmut Pasha Buqshafi of Scutari (Albania). The whole plain of Tirānā still belongs to the Toptani family. There are very few memorials of olden times in the town. The most important are the mosques of Šajdlji Edhem Bey, a descendant of the above mentioned Sulaiman Pasha, the Añaf Džami‘i, and a mosque founded by Sulaiman Pasha in 1605 with his ārāt beside it. On the S. E. side of the town, surrounded by very old cypresses, is a quadrangular open space called Namizgāzah on which the Muslims assemble to worship together at the feast of Bārām. In 1830 Tirānā suffered a good deal during the civil war. The Muslim inhabitants of the town until quite recently were reputed to be very fanatical.

(T. Baringer)

TIRÁZ. The word is borrowed from the Persian and originally means "embroidery"; it then comes to mean a robe adorned with elaborate embroidery, especially one ornamented with embroidered bands with writing upon them, worn by a ruler or person of high rank; finally it means the workshop in which such materials or robes are made. A secondary development from the meaning "embroidered strip of writing" is that of "strip of writing", border or braid in general, applied not only to inscriptions woven, embroidered, or sewn on materials, but also to any inscriptions on a band of any kind, whether hewn out of stone, done in mosaic, glass or faience, or carved in wood (cf. e. g. al-MA‘rūz, Kūtāf, ii. 79, 212, 407). The same fīrāz then becomes the special name for the inscriptions officially stamped upon the rolls of papyrus in the factories for papyrus with ink, sometimes in colours (red, green) and is next used for the factories themselves. The two last meanings are limited to a few occurrences (cf. J. v. Karabacek, Dix arab. Papyriprotokóle, p. 8 sqq.; A. Grobmann, Corpus Papyrorum Raineri, iib, N. 175 [p. 170], 204 [p. 200], 214 [p. 209], 265 [p. 239], 270 [p. 242]); when papyrus ceased to be made about the middle of the tenth century A.D. these two meanings of fīrāz disappeared.

Cloths, curtains and garments with embroidered, woven or stitched on them may be divided into two classes, distinguished by the contents of the inscriptions and the rank of the wearer. One class expresses the whishes of private individuals, the height of which is reached in the inscriptions contained in the Khōf al-Munawwi‘ah, p. 167 sqq. with which dandies and ladies of fashion liked to adorn their robes; the other is of an official character and may to some extent be compared with our orders and decorations. Such scrolls run, either along the border, sometimes arranged in two, or even more, strips around the upper garment, or were placed around the neck, around the sleeve, on the upper arm or wrists and even on the headdress. They were used not only as ornamental borders but were also put in the pattern of the material. The breadth varied considerably, and, while J. V. Karabacek (Svarand- schitura, p. 84 sq., note 56; Papyriprotokóle, p. 26) gives breadth of from 2 to 35 centimetres, this does not exhaust all the possibilities; on fragments of material from Egyptian graves, fīrāz borders of less than a centimetre in breadth have been found.

Ibn Khalidān is very well informed about the institution of the fīrāz; according to him, the majesty of the ruler found expression in his name or the royal badge (‘alāma) being put in the border (fīrāz) of the materials, which were used for his robes of silk or brocade, and the inscription was worked into the web of the material with gold thread or bright coloured yarn, which stood out against the background of the material. The royal robes were thus distinguished to mark out the royal wearer, or him who received the garment from the ruler as a mark of special favour, to show him honour or appoint him to one of the higher offices in the kingdom. Under the Umayyads and ‘Abdāsids the cloth mills which worked for their wardrobe were housed in their palaces and called Dīr al-Fīrāz.

They were under the control of an official called Sūkh al-Tirāz, whose duty it was to supervise the activities of the workers, the machinery and the weavers and to see that they were paid and that everything went smoothly. Only men of high rank and trusted individuals among their freedmen were given this office; the same arrangements were in vogue under the Umayyad caliphs in Spain and their successors, under the Mamūt sultāns in Egypt, and their contemporaries among the Persian kings in the east. It was only with the decline of the great Muslim empires that this system came to an end.

Ibn Khalidān’s statements, which are in the main followed here, find ample corroboration in the finds of Muslim textiles which have been made at different places in Egypt (notably Akhnim, Antinōi, Erment, al-Aṣm near Asyût) and are preserved in the museums in Berlin (Schlosmuseum, Kaiser-Friedrich-Museum, Kunstgewerbemuseum), Leningrad, Paris (Louvre and Musée de Cluny), London (Victoria and Albert Museum), Vienna (Österreichisches Museum für Kunst und Industrie and Sammlung Papyrus Erherzog Rainer in the National Library) and in many private collections, as well as in the rich stores of textiles found all over Europe in churches and monasteries. Ibn Khalidān’s information is obviously based on his own experience, for the inscription in these textiles does actually, without exception, stand out in bright colours from the background: e. g. the pieces of linen, Inv. Ar. Lin. N. 11 and 19 of the Rainer collection in Vienna show a border of writing embroidered in red silk (N. 19 reproduced in J. v. Karabacek, Führer, p. 228 and do., Papyriprotokóle, p. 38). In Inv. Ar. Lin. No. 18 of the same collection, on the other hand, the fīrāz inscription stands out from the background and is embroidered in black silk; in the fine brocades it is often woven in gold thread. The texts of the surviving inscriptions also fully confirm Ibn Khalidān’s statements. In the first place as to the names of the rulers, we find various examples of these occurring alone on textiles. A green silk
damask from al-‘Aṣm in the Victoria and Albert Museum, Inv. No. 760–1898 (Guest, No. 9, p. 395 sq.; A. F. Kendrick, Catalogue of Muhammadan Textiles, p. 39) has the inscription Nāṣir al-Din Muhammad b. Kātān; a piece of linen embroidered with red silk in the Leningrad Museum has the name of the Fātimid caliph al-Aṣwāt il-lilāh (363/975 a.H.; A. K. Guest, J.R.A.S., 1918, p. 263, No. 1). The name of the ruler in addition to his usual titles, is frequently accompanied by a conventional formula, as Ibn Kātān also tells us (cf. below); thus, a piece of linen in the Kaiser-Friedrich Museum, the inscription of which I copied in 1924, has the inscription woven in red and enclosed in a white border: Bismillāh al-Rahmān al-Rahīm, Baraka min Allāh wa-rabbir rūhā b-Ilāhī ‘Abd Allāh al-Mu’tūfī il-lilāh Amīr al-Mu’minīn, wa-ilāh ‘Abū ʿAbbās (cf. in the name of God, the Merciful, the Compassionate. The blessing of God, grace, and good fortune upon the servant of God, Dżafar, the Imām al-Mu’tadir b-Ilāhī, the Commander of the Faithful, whom may God long preserve. [This is part] of what the vizier Abū Ahmad al-Abbās b. al-Hasan has ordered ...” (cf. J. v. Karabacek, Papyrusprotokolle, p. 39). One of the most important tīrāz in the collection of textiles in the Arab Museum in Cairo, found in al-Fustāj (cf. Herr-Bey, Catalogue rai-sonné, p. 271; E. Kühnel, Il., x, 83) bears the following inscription: Bismillāh, Baraka min Allāh il-lilāh Amīr Muḥammad Amīr al-Mu’minin, wa-ilāh ‘Abū ʿAbbās (cf. In the name of God, the Merciful, the Compassionate. The blessing of God upon the servant of God, Amīr Muḥammad, the Commander of the Faithful, whom may God long preserve. [This is part] of what he ordered to be made in the public factory in Miṣr (al-Fustāj) through al-Faḍl b. al-Rahīm, the freedman upon the Commander of the Faithful”, al-Faḍl b. al-Rahīm, born 140 a.H., died 208 a.H., was according to Ibn Taghribirdi (l. 598), chamberlain and vizier of the caliph Hārūn al-Rashīd; after the latter’s death, he took possession of the storehouses (phāra) and handed them over to his successor designate, al-Amin in Baghdad, at the same time bringing him the insignia of the ruler — the cloak, the staff and the signet ring — for which al-Amin showed him marks of honour and entrusted him with the management of his affairs. In his capacity as Amīr’s vizier, he had also to see to the manufacture of the textiles intended for the caliph, as we learn from the above tīrāz. He is also mentioned in the tīrāz of two curtains (al-sūr) for the Küna‘ mentioned by al-Maṣūkht, Abū Dām, l. 181, 226 (cf. von Karabacek, Papyrusprotokolle, p. 35). In this connection, we may also mention a piece of linen from Sāmarrā‘ with an inscription embroidered in red silk (cf. E. Kühnel, Il., x, 87 and fig. 3) which reads: Baraka min Allāh bi-‘Abd Allāh il-Mu’min Allāh al-Mu’tamid ‘alā ilāh Amīr al-Mu’minin, wa-ilāh ‘Abū ʿAbbās (cf. in the name of God, the Merciful, the Compassionate. There is no god but Allāh, Muḥammad is the Messenger of God, ‘Ali is the vice-regent of God ... al-Mustaṣāmīr b-Ilāhī, Commander of the Faithful, God’s blessing upon him and his ancestors (the most noble), the pure and his sons, the expectant”.

Sometimes, in addition to such conventional formulas, the name is given of the place of manu-
The text of the šārs inscriptions however very often consists only of the conventional title of the ruler without his name, accompanied, or not, by certain auspicious formularies, or of the latter alone. A few examples will suffice here. On the brocade in the Ducal Museum in Brunswick several times repeated and divided by rossettes is the inscription ʿIṣṣ il-Mawlawīn al-Sūltān Qalāda Mubāku (O. v. Falke, Siedemnowerli, ii, fig. 342). On a piece of silk in the Arab Museum in Cairo we find: ʿIṣṣ il-Mawlawīn al-Sūltān Qalāda Nazīru (cf. Herz-Bey, Catalogue raisonné, p. 272); on a piece of silk textile in the Victoria and Albert Museum in Guest, J. R. A. S., 1913, p. 405 (A. F. Kendrick, Catalogue of Muhammadan Textiles, p. 40): ʿIṣṣ il-Mawlawīn al-Sūltān al-Malik al-Munīr; on a piece from Granada in the same museum, continuously: ʿIṣṣ il-Mawlawīn al-Sūltān (O. v. Falke, Siedemnowerli, ii, fig. 372). The well-known specimen in Brussels of the xiiith century A. D. in O. v. Falke, Siedemnowerli, i., fig. 172, shows, on the wings of the birds on either side, the inscription: al-ʿīs al-dīn wa l-dīn allah bi-l-qiblā. Only a portion of this formula, al-ʿīs al-dīn, is found on the textile woven in Syria or Egypt, Inv., No. 1235—1864 of the Victoria and Albert Museum in Guest, J. R. A. S., 1918, p. 264; A. F. Kendrick, Catalogue of Muhammadan Textiles, p. 44 (xiiith—xiiiith century A. D.). The already mentioned formula al-ʿīs al-dīn wa l-dīn allah bi-l-qiblā often occurs alone (cf. O. v. Falke, Siedemnowerli, also ii., figs. 338, 339, 340, 342; A. F. Kendrick, Catalogue of Muhammadan Textiles, p. 37) and pl. 37, 339: wish may mean Allāh "victory from God" is found on several textiles in the same Museum in Guest, J. R. A. S., 1906, p. 398, No. 12—15 (A. F. Kendrick, Catalogue of Muhammadan Textiles, p. 14): the formula al-ʿīs lahu al-qiblā al-masjid "the glory be Thine, the fortune, the splendour" is found embroidered in red silk on a piece of linen with a coat of arms in the Arab Museum in Cairo (Herz-Bey, Catalogue raisonné, p. 274). The conventional title of the ruler is found on a textile in the Kaiser-Friedrich-Museum in Berlin with pairs of griffins; in the circles of the braided border we have: al-ʿīs al-dīn al-qiblā al-masjid, in the central bars of the circles of the compartments, arranged like a coat of arms: al-sūltān al-naṣṣār (O. v. Falke, Siedemnowerli, ii, p. 63 and fig. 363), on a textile in Damascus (xviith century A. D.): al-ṣūltān al-qiblā (O. v. Falke, Siedemnowerli, ii., fig. 325, 329) On a piece of Syrian silk in the Kunstgewerbsmuseum in Berlin in O. v. Falke, Siedemnowerli, ii., fig. 377, we have the title al-sūltān al-malik; on a patterned textile in the Arab Museum in Cairo we find al-ṣūltān embroidered in silk thread (Herz-Bey, Catalogue raisonné, p. 273 sq.). In conclusion we may remind the reader of the pious formularies, which often make up the entire šārs inscriptions. Thus on the Maastricht specimen, with the lion, we have on the lion's back: al-malik il-lūlā (O. v. Falke, Siedemnowerli, i., fig. 153); others have the formularies al-amr il-lūlā which means the same thing (ibid., i., fig. 187, 191). A much used formula is al-burāk al-khāmilā (arranged in as a coat of arms on right and left in O. v. Falke, Siedemnowerli, i., fig. 205) or burāk alone (ibid., i., fig. 202). On a textile in the South Kensington Museum (Inv., No. 613—1892) in Guest, J. R. A. S., 1906, p. 399 (A. F. Kendrick, Catalogue etc., p. 18) the formula ma ʿabūn il-lūlā hāya "What God wills is done", in addition to a series of other formularies, which have only survived in fragments but are known on other textiles in the same collection (ibid., p. 396 sq.). The finest specimen of the kind however is probably that in the Musée de Cluny (Inv., No. 6526 found in Bayonne) which shows a portion of the symbol of Islam in letters, a span wide, beautifully woven. Occasionally these inscriptions are abbreviated by the omission of some letters (cf. J. v. Karabaseck, Die liturgischen Gewänder, p. 142 sq.). It may further be mentioned that datel inscriptions are found among the šārs; for example the piece published by Guest, J. R. A. S., 1918, p. 407 from the Engel-Gros collection with barmala and date 448 (cf. A. F. Kendrick, Catalogue etc., p. 16, No. 651 and pl. 6); another with the name of the caliph al-Muʿtaṣid of the year 282 in the South Kensington Museum was also published by Guest (J. R. A. S., 1906, p. 391; cf. A. F. Kendrick, Catalogue etc., p. 35; G. Salles and M. J. Ballot, Les Collections de l'Orient Musulman, p. 74). It has already been pointed out that the šārs bands with inscriptions correspond in a way to our orders and decorations. The presentation of garments adorned with them was a sovereign right of the crown, as much as the right of coinage. The custom of presenting such robes is certainly a very ancient one in the East. The Pharaohs used to give their faithful servants robes of honour, in addition to golden neck-rings and other valuable presents. It was understood that only for eminence attained great proportions. Not only was the decree appointing high officials of the state usually accompanied by a robe of honour, but the officials also received, at least once a year, a robe of honour and, at the court of the Mamlūk Sūłṭān, the Mamlūk and high officials of state used to receive a robe corresponding to their rank, twice a year, in winter and in summer (cf. A. v. Kremer, Kulturgeschichte, ii. 220—23; Kālqaṣandī, Ṣabīʿ al-ʿĀʾidh, iv. 55). According to Ibn Djabair, Khilāfa, p. 94, the dress of the preacher in the principal mosque in Mecca — and no doubt of the other large mosques also — consisted of a black robe trimmed with gold and a similar piece of cloth wound round the head, with a turban cloth of fine chābī linen; it was given to the preachers of the empire from the caliph's own stores, so that it was an official dress, given by the ruler. The robes of the emirs, which they wore on state occasions, were of course more gorgeous. Those of the Fātimids consisted of materials from Ḏābī with head-dresses with golden šārs borders, which were given to the emirs from the Caliph's stores (Ḍār al-Kirwā) (Makhtī, Kīfī, i. 409, 427, cf. 440). Kālqaṣandī, Ṣabīʿ al-ʿĀʾidh, iv. 52 sq., tells us that part of the dress of honour of the emirs was a turban cloth with the name of the sultān embroidered on it and the robes themselves had similar inscriptions.

It was only natural that the caliphs should lay great stress on this important prerogative of the crown and take every precaution to prevent abuses. What importance was given to the šārs and its preparation is evident, for example, from the fact that in Hārūn al-Rašīd's will (186 A. H.), in the
portion dealing with the allotment of the province of Khorsâm to al-Ma'mûn, the tīrāz-factories (kurâs) are specifically mentioned amidst of the khasâsī, the lust and the treasures (cf. al-Asrâr, Aḥābūr Mekhu, p. 162, 166). The mention of the ruler in the tīrāz is a mark or sign of his sovereignty as in the khasâs and, when al-Ma'mûn rebelled against his brother al-Āmin, the first thing he did was to omit the caliph's name from the tīrāz inscriptions (Ibn Taghrîbrîdî, al-Nadîjûm al-akhîrîn, i. 544; cf. further passages in J. v. Karabacek, Papyrography, p. 25). When a successor was designated, his name was put into the tīrāz inscriptions (J. v. Karabacek, loc. cit.); this applies not only to the inscriptions on textiles and on robes of honour but also to those on rolls of papyrus (cf. Corpus Paq. Raineri, iii., vol. i/2, No. 150, 158, p. 145 sq., 153 sq.). But while, in the latter case, the visier is often mentioned in the protocol, it seems very rare and to be a special distinction for the name of the visier to be put in the tīrāz inscriptions of robes of honour. The Fâtimid al-Asît bi'l-lâh, for example, put the name of his visier Ya'rāb b. Ysâf b. Khîlis (d. 380 A.H.) in the tīrāz inscriptions (al-Asrâr, Khaṭṭâf, ii. 6, 11, 284 ult.). Similarly the Fâtimid caliph al-Mustâri bi'l-lâh (1094-1101 A.D.) allowed his visier al-Ājah to be mentioned in the tīrāz as we learn from the tīrāz inscription on a textile in the Vatican Library (cf. J. v. Karabacek, Papyrography, p. 39), but, in this case, the name of the visier is followed by the additional words "in the name of the Imâm" so that the sovereignty of the ruler is fully guarded. Later, it is true, high officials kept their own tīrāz establishments. Thus 'Ali b. Ahmad al-Ra'iî (d. 301 A.H.), who was governor of all the territory between Wâṣî and Dnjâdîbârî on the one hand and Sûs to Shahrîrî on the other, maintained no less than 80 tīrāz factories, in which cloth for his own use was woven (Ibn Taghrîbrîdî, al-Nadîjûm al-akhîrîn, ii. 192; A. v. Kremer, Kulturgeschichte, ii. 293) and on a piece of silk from Egypt (21st century A.D.) in the Victoria and Albert Museum (Guest, J. R. A. S., 1906, p. 59; A. F. Kendrick, Catalogue of Muhammadan Textiles, p. 43 sq.) we find al-soyîdi al-agdâli Yûnîn al-Dawâla Abû Yûnîn, asfâl Allah bağ'ahu, "the most glorious lord Yûnûn al-Dawâla Abû Yûnûn, may God give him long life"; on the splendid piece of silk in the Louvre, published by G. Migeon, Syria, iii. (1922), p. 41-43, we have 'îs wa'i-tâhîl li 'l-Khâjî Abû Mansîr Nasîrîjîn Yâdîsâha, asfâl Allah bağ'ahu. The sovereign rights of the caliph however did not find expression only in the inscriptions of the tīrāz on garments. The right of covering the khalif by tīrāz was originally confined exclusively to the caliph (al-Kâlâshandi, Sûbî al-Âbîn, iv. 37). The 'Abbasids sent such kiswa every year from Baghdad to Mecca—they were often manufactured in Egypt—then this duty passed to the rulers of Egypt. In a Kâlâshandi's time, the kiswa was woven in the Masjd al-Husain of black silk with an inscription in white; at the end of the reign of Zâhir Barâkchî with a yellow inscription gilt with gold. A collection of the inscriptions on these kiswas has been made by J. v. Karabacek (Papyrography, p. 35—39). According to these inscriptions, the kiswa were made either by direct orders of the caliph to the governors and at the direction of the latter's financial secre-

...
garment that came complete from the loom and had not to be cut or stitched (cf. Herz-Bey, Catalogue raisonné, p. 266–268; A. Mez, Die Renais-
sance des Islam, p. 433). The export of the materials produced in Tinnis was considerable and down to the year 360 A.H. reached a value of 20–30,000 dinars annually. The village of Ta'na, which belonged to the administrative district of Tinnis, made the kind of stuffs and also kiswas for the Ka'ba (al-Makritzi, Kābiṣ, i. 181; J. v. Karabacek, op. cit., p. 36). There was a ti'ras factory here also. Damietta produced not only the same linens as Tinnis—but white in colour—but also gold brocade and the material known as Balchan (balqāh) (‘Ali b. Dawud al-Khaṭṭī al-Djahwarī, MS. A. F., i. 282a, fol. 69a; cf. also A. v. Kremer, Culturgeschichte, ii. 289) and other textiles. Shāri‘a also made kiswas and the stuffs known as Shāfī‘nī (al-Makritzi, Kābiṣ, i. 226, 5. 94a). Of the former we are told that they were made in a ti'ras factory which belonged to the state, as we know from the kiswas inscription given by al-Makritzi (cf. J. v. Karabacek, Papyrusprotokolle, p. 36); as to the latter this is not definitely known. In a papyrus in the Rainer collection (NW. 849 in the Ausstel-
 lungs; cf. J. v. Karabacek, Führer, p. 227) in line 6 there is a reference to a braided head-cloth from Shāfī‘nī (madī‘ī ūqāfī mawla) worth 20 carats of gold. This price must be considered fairly high, as those of Shāfī‘nī and Darbār (Darab) and Du-
mairān were not so fine as those of Tinnis (Idrisi, p. 320). The work done here by Copt weavers was under strict state control (al-Muqaddasī, B. G. A., iii. 213; cf. A. Mez, Die Renaissance des Islam, p. 118; C. H. Becker, Islamadventure, p. 184) which held the moment the weaver began to work, to the stuff in his loom. An official stamp had at once to be placed upon it. What these were like we know from the red stamp on the piece of linen, Inv. Ar. Lin., NO. 1 in the Rainer collection with the inscription al-Malik al-Mu'min (cf. Corpus Papy.
Raineri, iii, Ser. Arab. 1/fi, p. 59 sq. and fig. 2). It could only be sold through brokers appointed by the state and a government official had to keep a record of all transactions; only when this had been done, was the cloth given to one work-
man, who folded it up, then to another who wrapped it in a packing, made of bast (kīghī), perhaps the coarse papyrus packing is meant), then to a third who did it up in bales and finally to a fourth, who tied these up; each of these men received a definite fee. The bales were then taken to the gate of harbour and here also a charge was made and each man put his mark on the bale. The whole process does not very much suggest that we have a state factory here. In the Delta at least, we seem rather to have an industry con-
ducted in private houses, probably alongside of the state factories. The lot of the workmen—
women span and men wove and the workrooms were rented by them—was wretched; the half dinar, which was the daily wage, was not suffi-
cient for the minimum necessities of life. Wages throughout Egypt, however, were very low. Silks and brocades along with the fine sharb linens were mainly made in Alexandria, also however in Tinnis, Damietta and Shāfī‘nī (cf. A. v. Kremer, Culturgeschichte, ii. 353) which even in Roman times was celebrated as a silk-weaving centre and where the Byzantine court had a gynaeceum. While the quality of the material under Muslim rule was at first not so fine as in the earlier period, in the viii-th and ix-th centuries Alexandria was supplying Byzantium and the Pope in Rome (O. v. Falke, Säidenwandel, i. 48, 51, 110); and several popes used beautiful stuffs with the horseman pattern as gifts to churches. The state factories in Tinnis, Alexandria and Damietta worked mainly for the wardrobes of the Fātimid caliphs (al-Makritzi, Kābiṣ, i. 433; al-Kalāqānī, Šuḥī al-Čīgh, iii. 476; F. Wüstenzfeld, Geographie, p. 175 sq.) and their successors, and Abu 'l-Fidā‘ī, Šuḥī al-
Čāmī, iv. 101 mentions that the Dar al-Ti‘rās in Alexandria worked for the ruler's private re-
quirements (li 'l-Kābiṣ al-ḥayatī) (cf. J. v. Karabacek, Die byzantinischen Gemälde, p. 195). Dabār, which produced the curtains which were used to drape the throne of the Fātimid Caliphs on ceremonial occasions (al-Kalāqānī, Šuḥī al-Čīgh, iii. 499), was celebrated for its linens and turban cloths. Dabār textiles are frequently mentioned in literature, notably in al-Makritzi. The manufacture was an old established one here; a richly em-
brodered saah of the Coptic period in the Austrian Museum has within the border the inscription

Tūhī, the Coptic name of the town (cf. J. v. Karabacek, Die Theodor Graf'schen Funde, NO. 427). Of the manufacturing town of Banā‘ah we know little more than the name. The fragment of a silk ti‘rās embroidered in black from the Rainer collection (Inv. Ar. Lin., NO. 18) published by J. v. Karabacek, Papyrusprotokolle, p. 39, has the inscription khāda‘ī mīlab al-mārā‘ ibn al-‘mārī fī ti‘rās al-‘lākāt bānā‘ah ("this is part of what was ordered to be made in the factory of the royal property of Banā‘ah"). Where then we have the case of a silk factory, which supplied the caliph only, and was state property. We also know the name of the place from papyri. Besides the Faiyum in Upper Egypt, al-Ush mānāsīn was celebrated for its manufacture of textiles (cf. al-Iṣākhī, B. G. A., i. 58; Ibn Hawqal, B. G. A., ii. 105; al-Idrisi, i. 124; A. v. Kremer, Culturgeschichte, i. 353) as was Taḥkī, where woollen goods were made (cf. A. Mez, Renaissance des Islams, p. 432). Al-Bāhnās occupied a special position; in it, according to al-Idrisi, i. 128, valuable materials were produced which bore the name of the town and were used for making garments for the ruler and high officials; ordinary kinds were also made. The lengths of stuff, which were made in pieces of about 100 dinars cost 200 dinars the pair. Every piece of cloth, whether woollen or cotton, cheap or dear, bore the name of the quality, so that the purchaser could know what he was buying. As to prices, we get some information from a papyrus in the Rainer collection (Ausstellung, NO. 849) according to which a long turban cloth from Bahnas (mandā‘ī bāhnasī jawīl) cost 1 carat of gold. Idrisi, unfortu-
nately, does not tell us whether the stuff intended for the court came from a ti‘rās factory or from a private firm. A ti‘rās sulū‘ī is mentioned in ‘Ali b. Dawud al-Khaṭṭī al-Djahwarī, A. F., No. 282, fol. 91b, but it is not stated where in Upper Egypt this state factory was. Two papyri in the State Library in Cairo (Inv, NO. 96 and 103) assist us on this point, for a certain Rūmāb b. Yūnis is described in them as al-Muṭawakkil bi-ti‘rās U‘ṣūbahu mu-
Anjīnī. The man was therefore manager of one of the ti‘rās factory of Uqūnī and Anjīnī, and managed them both together, in which connection it may
he noted that the two originally separate kûra's of this name were later combined into one (cf. C. H. Becker, Fağrî Şehitt-Reînhardt, i. 20). In Cairo (al-Fustûḥ) under the 'Abbâsidâs, there was already a public tîrâs workshop (tîrâs al-šāmâna bi-Mâşr) as we know from the already mentioned piece of cloth in the Arab Museum in Cairo. The šâmâna is here apparently contrasted to the kâşîra, which means a factory which worked only for the caliph. This does not mean that in al-Amin's time the Cairo factory had become a purely private concern; it can quite well have been a state undertaking, which supplied private individuals as well as the court. In no particular case can we see with certainty how the question of ownership stood. We cannot imagine, as it has hitherto been usual to do, following Karabacek, that the crown had exclusive control.

While the Umayyads and 'Abbâsidâs had already devoted great attention to the manufacture of fabrics with the tîrâs and to the preservation of the rights associated with them, the importance of such fabrics increased under the splendid-loving Fâtimidâs. The account which al-Mâkîrî gives, following the very well informed Ibn al-Tawârîsh (Kâhi'î, i. 469), sufficiently shows this. Besides the famous state Dîr al-Tîrâs in Alexandria there was a factory of the same name in Cairo, which was founded under the successors of the caliph al-Áţish bi-l'âláh, in the name of the vizier Abu'l-Farâdîq Yağhîb b. Yâsuûf Ibn Killa, who died in 380 (991) and was also called Dîr al-Dîhâdî, because silk brocades were made there (al-Mâkîrî, Kâhi'î, ii. 104, 105 sq.). At the head of the administration of these state factories there was always an official of high rank from the judicial or military service, who was held in particular estimation by the caliph. A picked staff was at his disposal for the transport of the products of the tîrâs factories, as well as the necessary means of transport. When he arrived with the fabrics intended for the royal use, among which were the parasols and the robes called bâlîla and bâdâna and the ruler's personal apparel, he was received with the highest honours and a steed from the caliph's stables was placed at his disposal for the duration of his stay. His quarters in town were in the Manşarâ al-Ghâzâla on the bank of the great canal, opposite the door of the Dîjâmî' Ibn al-Maghribî, which had also fallen into ruins in Mâkîrî's time, and he received the same hospitality as foreign embassies. When the bales with the precious fabrics were brought in, the superintendent of the tîrâs presented himself to the caliph, showed him all that he had brought with him and called his attention to each piece, that went into the caliph's palace through the hands of his chamberlain. When the presentation was over he was given a robe of honour by the caliph at a private audience, — the public being excluded, an honour which was shown only to him — and then returned to his lodging. Only at certain clearly defined times, could he be represented by his son or brother. He held a very prominent position and his salary was 70 dinârs monthly, that of his deputy 20. The latter took charge in his stead, when he had to go to deliver the fabrics, and was present as his witness at the packing of the bales. When the parasol and other articles for the personal use of the caliph were brought into the public room of the Dîr al-Tîrâs, during which ceremony the people present stood up, the superintendent of the Tîrâs sat in his seat and his deputy carried through his task standing (cf. also al-Kalâqshandî, Sîhî al-A'ârî, iii. 476; F. Wüstenzfeld, Geographie, p. 175 sq.).

As already mentioned, the tîrâs-factories brought a considerable sum to the state by their valuable products. It is significant that out of the treasuries of the towns of Tinni, Damietta and al-Ughmûn in 365 A. H., under the Fâtimid vizier Ibn Killis could pay 200,000 dinârs into the treasury in one day (al-Mâkîrî, Kâhi'î, ii. 6) and the expenditure for gold thread was usually 31,000 dinârs and under al-Amir bi-Áhâmî Allah even amounted to 43,000 dinârs (ibid., i. 469). Under the Manşikûs, conditions seem to have been somewhat altered. At least, Ibn Khâlûnî (i. 223) tells us that the fabrics and garments with tîrâs were no longer made in their factories and palaces, workshops, and were no longer produced by the state in its own buildings but what the state required was simply woven from silk and pure gold in the houses of the weavers.

The institution of royal tîrâs factories was of course not limited to Egypt. We find them in other lands also. If we turn to the west we find one in Palermo in Sicily. Ibn Dîjibûrî, Rîhâ, p. 329, even records the name of an embroiderer who worked in the Tîrâs al-Mâlîk, as the royal factory was called. The chief piece of evidence from this factory is still the cloak woven for Roger II in 528 (1133), later the coronation robe of the Austrian Royal Treasury. In its inscription the factory is called Kâhsâna al-mâlîkîyya (cf. F. Bock, Kleinode, p. 29). This regnum regis erat produced finely woven silks down to the xiii century A. D. (cf. O. v. Falke, Seidenweberei, i. 119, 121). In Spain, Almeria, when the first 100 looms were working in Ídirî's time and valuable brocades, sîflûn and silver were made in the style of those of Dînjânî and Îsfâhân, was the principal centre of manufacture, but Murcia, Seville, Granada and Malaga should also be mentioned. In the latter town there was a factory for gold brocade (cf. J. v. Karabacek, Über einige Benennungen mittelalterlicher Gewebe, p. 6; M. J. Müller, Beitrag, p. 52; F. Bock, Geschichte der liturg. Gewänder, p. 39 sqq.). In Asia Minor there was a tîrâs factory at the Saljuq court; one of its products is the gold brocade of the Lyons Textile Museum, the inscription on the border of which mentions: Sultân Çâlîshâhî, son of Kalâqshârî (1219—1236 A. D.). Marco Polo (cf. O. v. Falke, Seidenweberei, i. 106) notes the industry of the Greek and Armenian population of the Saljuq empire, who made the finest carpets and rich silks. In Syria, Damascus and Antioch were famous for their textiles (O. v. Falke, op. cit., i. 108; J. v. Karabacek, Die liturg. Gewänder, p. 196). In the 'Irák, Baghdad was the most important; its speciality was the white Mars fabrics (Ibn al-Fakîhî, G. G. A., v. 252) but it also made silks and richly embroidered brocades which were celebrated throughout the west as hâlâdchînus or haoudchînus (O. v. Falke, op. cit., i. 108). Silk-weaving here can be traced back to a colony of weavers from Tuscar who settled here at least as early as the middle of the tenth century (J. v. Karabacek, Über einige Benennungen mittelalterlicher Gewebe, p. 28). On a piece of silk published by A. F. Kendrick in the Burlington
The development of the weaving of silk in Persia seems to begin with the transplanting of workmen from Mesopotamia, Amid and other Byzantine provinces to Sûs, Tustar and other places in Ahwáz by Shâpur II (cf. al-Mas'ûdi, Muruji, l. 124). In the province of Fârs, which was celebrated for its weaving of linen, there were factories like those in Egypt, which, for example in Fâr, worked both for the ruler and for commerce, while the ruler had also his own establishments in Shînâr, Djan-nâbkh, Tawâ-djî and al-Grandûdîn. Ibn Hawkal, B. G. A., ii. 213 sq.; J. v. Karabacek, Safardschirch, p. 106 sqq.; al-Idrîsî, i. 391, 399 sq.). Kârûn, "the Damietta of Persia", later became the chief centre of the linen manufacture and about 500 a. n. (beginning of the xii century a. D.), this was so strictly controlled that the Râbâbîn canal, important for the making of the yarn and the transport of the finished articles, being the property of the royal treasury, was only available to those weavers who wear cloth for the emir; here also we find the production under state control (cf. A. Mez, Die Renaissance des Islam, p. 434). Not less celebrated than Persia was Khuzistân (Susiana) as a centre of textile weaving. In Tustar, where silk fabrics, brocades, velvets, turban shawls, curtains, and the heavy kharz stuffs were manufactured, there was a state factory with a superintendent (zâhib) at its head. The curtains for the Kâhs were made of brocade produced there and as these, as we have seen, were sent by the court in Baghâdâd, we can understand the significance of the remark by Ibn Hawkal, B. G. A., ii. 175, that every one who reigned in the Irâk had a factory and a superintendent in Tustar (zîrâs wa-qâhib) (cf. also J. v. Karabacek, Über einige Benennungen mittelalterlicher Genre, p. 30—32). In Idârî's time, the material for the kitâb was already made in the Irâk (Nushkat al-Majâ'hîlî, i. 385). Not less important than Tustar were the two towns of Sûs and Kûrkhûb. In Sûs, where there was a state factory, khaz harz fabrics and fine linen were made (al-I斯塔khîrî, B. G. A., i. 93; Ibn Hawkal, B. G. A., ii. 175; al-Mukaddašî, B. G. A., ii. 416). There was also one such factory (zîrâs wa-l-tulûbîn) in Kûrkhûb, where as in Sûs, royal robes, rich brocades, and the striped materials, which took the name of the town were made (al-I斯塔khîrî, B. G. A., i. 93; Ibn Hawkal, B. G. A., ii. 175; al-Idrîsî, i. 383 sq.; J. v. Karabacek, Safardschirch, p. 107); finally it may also be mentioned that in Sindistân also, there was a zîrâs factory working for the ruler, in which robes of honour were made, with which the was very liberal (Vâštî, Mâdhâfân, iii. 48). On the origin of the weaving of the zîrâs nothing has been definitely ascertained. J. v. Karabacek (Papyrologie, p. 27) endeavoured to trace its origin to foreign, probably Babylonian-Assyrian influences and even thought that the many factories of fabrics in Fârs which were state monopolies and the erection of great storehouses for garments (khasîn al-khâniwîrî) might be taken as a royal custom inherited from the Sasanians (Über einige Benennungen mittelalterlicher Genre, p. 20). Karabacek seems to be right in quoting in this connection the statement in Ibn Khaldûn (i. 222) to the effect that the Persian kings before Islâm put the portraits of kings or figures and pictures made specially for the purpose on ornamental borders, and the Muslim rulers replaced these by inscriptions containing their names and auspicious formulae. Karabacek also points out that they were in this matter influenced by the Byzantines, among whom they found the zîrâs, which they took from the same source. G. Fhers, Cleomen, i. 205 also connects the zîrâs with the clavus and O. V. Falke, Sefedwâberî, i. 77, holds the view that the key pattern was imitated by the Persians also in the fifth and sixth century A. D. on the celebrated robe of Zsedegerd (before 640 A. D.; cf. Falke, i. 83 and fig. 105), the dress of the great king has these typical key pattern stripes woven in it, which run downwards from the shoulder and also down the back, as we frequently find in tunics from Afghanistân. Falke sees in the borrowing of the key pattern from the west on the tunic a sign of a new Persian style (p. 85) and a comparison with the famous Sasanian fabric with the horseman in the Berlin Kunsthistorische-Museum (Falke, i. fig. 107) arouses misgivings against the assumption of adoption of the key pattern into Persian court-dress, but we see here in what an un-Roman and confused fashion the key pattern has been interpreted by the artist. Perhaps there are connections here which we cannot yet see in their completeness, but it is well worth noting that the Roman clavus — the sign of the senatorial and knightly rank — is ultimately traced to an Etruscan origin (cf. the article clavus in Pauly-Wissowa, Real-Encyklop., vii., col. 4 sqq.), so that an Oriental origin for this remarkable institution is not absolutely excluded. Memories of the ancient clavi survived until quite late in the external form of the zîrâs borders. Thus the two pieces No. 921 and 922 of the Abyâbid and Mamlûk period published by A. F. Kendrick, Catalogue of Mummûdian Textiles, Pl. 5, still show the same fundamental form as Coptic fabrics, although the decoration is slightly varied (cf. O. V. Falke, Sefedwâberî, i., fig. 26); even the custom, so frequent in Mummûdian zîrâs borders, of placing a figured or decorative strip between two bands of writing is already found on the border of a strip of Coptic cloth of the viii century A. D. (cf. A. Kiegl, Die ägyptischen Textilfunde, Pl. 9 opp. p. 48). The text used here is Psalm 24, verse 10 sqq. The continuity in art in Egyptian industry, which in the Muslim period, as far as the production of textiles is concerned, was mainly in the hands of Copts, makes the preservation of old forms and customs quite intelligible. It is worth noting that in Muslim fabrics also, the band of writing was often embroidered or woven in red silk. Perhaps the preference for this colour is due to the fact that the clavi of the Romans were usually done in purple. The privilege of the Prince to grant the latus clauius to the senators and the reservation of purple for the use of the
ruiter and, from 369, the limitation of the production of gold braid to the gyaeece, at least, afford parallels to the sovereign right of the Muslim Caliphs to the širāz and its presentation. The institution of the gyaeece was not imitated in Islam however. Only in Cairo was there for a time a similar institution, where the garments intended for the caliph underwent a slight fitting by a staff of 30 women under a female superintendent (C. H. Becker, Islamstudien, i. 183 sq.). The institution of the širāz in Islamic is in any case found quite early under the Umayyads; we know this from al-Kisā's account of 'Abd al-Malik's reform of the coinage and adoption of the Arabic language for the text of official documents. So far, it is true; we have only found one caliph of the Umayyad house—probably Marwān II. mentioned, on a piece of silk from Ashīm which bears the inscription [Abd Allāh Marwān Āmmu al-Mu'Amin] (A. K. Guest, J. R. A. S., 1906. p. 390 and A. F. Kendrick, Catalogue of Muhammadan Textiles, p. 33). The Muslim širāz and the Muslim širāz bands were brought into fashion. As early as Parzifal (311, 8), Anfortas wears an Arab širāz braided on his head dress and it is very curious to find that the vestments of high dignitaries of the church were adorned with širāz braid, which contained the Muslim confession of faith. A collection of Arabic širāz inscriptions on robes of the Madonnas and on pictures by Italian masters was made by Sewell, J. R. A. S., 1907, p. 164. I may add that on fol. 28 of the fine Vienna manuscript of René d'Anjou's Le livre du cœur d'amour épris (written after 1457 a. D.), Cupid is represented with a blue tunic with Arabic širāz borders written in gold on a blue ground, and two Brussels gobelins of the xviiith century show Abraham with širāz inscriptions in gold at the wrists and sides. The often clumsy imitation of Arabic inscriptions on North Italian silks is well known.

TIRE, a town in Anatolia, capital of the kâş of Tired in the vilayet of Aidin, in the province of the Kütük Menderes, 18 miles S.E. of Smyrna with which it is connected by railway. The present town presumably occupies the site of the ancient Arcadiopolis, later called Teirra (i.e. "town"), e.g. in Thysa-teira; cf. W. M. Ramsay, Historical Geography of Asia Minor, p. 104, 114). In the Byzantine period the town appears as Thyrrea (Θύρρεα) and Thyrria (Θύρρια) (cf. Ducas, p. 38, 73, 97, 109, 175, 196) and repeatedly played a part in history. In 1308 Sasan transferred many of the inhabitants of Ephesus to Tired (cf. Pachymeres, ii. 558). Travellers like Ibn Battûta (i.e. 307 sq.) who went via Birge to Tired which lay in the midst of orchards, gardens, and streams in the land of the "Sulûn bir Birge", i.e. of the Aidin-oghlu or the adventurous Catalonian chronicler Ramon Muntaner (sec. 25) used to pass through Tired. When in 1403 Timur advanced against the town, the inhabitants fled to Smyrna (cf. Ducas, p. 38, 97, 109). After the collapse of the petty kingdom of the Aidin-oghlu in 830 (1426), Tired became Ottoman. It plays no particular part in later history; it was a mint down to the 17th century and is occasionally mentioned in connection with risings (cf. J. von Hammer, G. O. E., iv. 398, note v. and v. 50 note). In Timur is the tomb of the celebrated Iskender the "Abd al-Latif b. Abd al-Azîz b. Shirîfî (Ar. Ibn al-Malak, Turk. Firîştî-oglu, d. according to the Shihâb al-A’in of 1302, p. 239 in 799 [1396]; cf. on this point Şâhiîfî al-Nâmînîâyî, p. 66 sg.) known as the author of a once much used Turkish dictionary in verse (Lughâtî Firîştî-oglu) and of a commentary on the principles of jurisprudence, Manâhîl Arba‘înî of a Naqî (cf. s.v.). He taught there in a madrasa which bears his name and is still in use. Tired was also the birthplace of several Ottoman authors, e.g. Shaikh Haidar b. Sa‘îd Allah (cf. ‘Atî‘î, Dhâhil on the Şâhiîfî, p. 101), Molla Nasr Allah al-Kûrî (ibid., p. 123) and the scene of activity of kâshîs who also played a part in literature (cf. ibid., p. 130, 172 and F. Babinger, G. O. W., p. 145: Djaşi‘hade). Tired is also mentioned as a place of banishment; the versatile historian Şâmî-Shâhde for example ended his life here (cf. F. Babinger, G. O. W., p. 346). The earlier European travellers rarely visited Tired. The chaplain of the English convent in Smyrna, EDM. Chishull (d. 1755) is of the few who visited Tired (cf. Travels in Turkey and back to London (London 1747), p. 19 and Thos. Smith, Septem Asiae Ecclesiastarum Notit. It was then thought that Tired represented Thytâteîza (Tekâ Hitâya), one of the "Seven Churches of Asia". Ewliya Celebi (q. v.) describes Tired in the ninth, still unpublished, volume of his Travels. The town does not seem to possess any antiquities. Mention may be made of the library of 1,325 volumes (including the hagiology of the above mentioned commentary of Firîştî-oglu), presented by Nadîjî Pãhsh, governor of Baghda’d. Down to the Turk-Greek exchange of population, Tired had about 15,000, mainly Greek, inhabitants (cf. V. Cuinet, Turquis d’Asie, iii. 508 sqq.) who were mainly occupied in carpet-weaving and the cultivation of the vine.

TIREBOLI, capital of the kâş of Tired in the vilayet of Trapezunt in Anatolia on the Black Sea, picturesquely situated on three capes from which the town of Tripolis, founded by Greeks from Miletus in the eighth century b. c., received its name. The town is commanded by a mediaeval castle; the remains of two small churches still recall the Byzantine period. In view of its proximity to Trapezunt and Keraitis, Tired played no special part in history in ancient or modern times. The Comnenoi of Trapezunt were fond of living in the castle here. The conquest of Trapezunt by Mehemmed II in the autumn of 1461 also sealed the fate of Tired. The inhabitants fled to the fortress of Petrona 20 miles away and only surrendered after a long siege, when starved out. Henceforth Tiredboi belonged to the Ottoman empire. While the Spaniard Ray Gonnâle de Clavijo on his journey to Samarkand in 1405 still found Tiredboi ("Tripoli") a very large town, the place later sank into comparative insignificance. European travellers have often visited and described Tiredboi, e.g. J. Pitton de Tournefort (cf. Relation d’un voyage du Levant, ii. [Paris 1717], 222 sq. with picture); Wm. J. Hamilton (cf. Researches in Asia Minor, London 1843, i. 255); A. D. Mortmann (cf. Anatolien, ed. v. F. Babinger, Hannover 1925; p. 411); J. Ph. Fallmerayer (Fragmente aus dem Orient, ii. 131, 133 sqq.) etc. In Tiredboi, besides 8 mosques, there are a number of Greek churches, some of them old. Near it is the now deserted dortish monastery of Şârî Kahlâfî (cf. thereon J. H. Mortmann in M. S. O. A., xii. 112 sqq. and xxx. 206, perhaps the individual in question). Before the Turk-Greek exchange of population Tiredboi had about 8,000 inhabitants, 4/ of them Greeks.

TIROBOL, the Turkish name for TIRÌMÌMÌH, a celebrated poet of the first century of Islam. He was descended from a highly respected clan of his tribe and his grandfather Ḥākim Al-Tāyī was numbered among those who came to Mecca in the year 9 of the Hijra to pay homage to the Prophet. He himself, according to the most reliable accounts, was born in Syria and spent the earliest years of his life there. Later he came as a soldier to Al-Kāfān and through the influence of some Khāǰirdī leaders became himself one of their sect, and remained true to their doctrines to the end of his life. Either as a soldier or in some other capacity, he visited several parts of Persia. His collected poems, which are preserved only in part in a very old Spanish manuscript, are distinguished from those of his contemporaries by a studied use of uncommon words, similar to the compositions of the rasfas-poet Ru‘ba, who made a kind of speciality of this. Ru‘ba was for the grammarians of Bagh a source of information on questions of obscure words and he alleged, according to the grammarian al-‘Aṣname and a few others, that he had learned these strange expressions from Tirimimah. This is not unfounded because Tirimimah was dead when Ru‘ba came into prominence. Different was the intercourse of Tirimimah with the poet al-Kumait (q. v.), a fervent Shī‘a poet of no mean order, for in spite of their differences in almost every other thing, their friendship was sincere and lasting. The betrayal of the Tamiits of the family of al-Muhallab and the downfall of Yazīd b. al-Muhallab in 102 (720-721) and the undisguised joy of the Tamiits brought Tirimimah into opposition with the poet al-Farazdāk and in the end the stinging ḥiṣā‘ī poem by Tirimimah it seems as if al-Farazdāk gave up the contest. This poem remained for more than a century, the pride of the Yamanis and was continually cited against the Tamiits. Tirimimah’s grandson Amān a century later lost a post as secretary in North-Africa when Ibrahim b. Aghlab, who claimed to be descended from the fami le of governors of North-Africa, 184 (800). The fragmentary state of the ḥiṣā‘ī poem by Tirimimah gives us only an imperfect idea of his character, but through some of his verses runs a pious vein, so different from that of his prolific adversary. Veres of his from the descriptive poems, abounding in uncommon words, are often cited in Arab dictionaries as evidence of their existence in the language; but I have been able to ascertain with a fair amount of certainty that Tirimimah uses many words which are also found with the same meanings in the poems of his tribesman Abī Zubayd, and of Ibn Mu‘īn (Tamit b. Ubayy b. Mu‘īn b. Al-Aḍāḥa), whom he both have known personally in his younger years and we may assume that the words he uses were really found in the speech of some Arab tribes and not newly-coined words, as is frequently the case with Ru‘ba.

Bibliography: Al-Tirimimah e. Ḥākim Al-Tāyī, a celebrated poet of the first century of Islam; (F. Beringer)
TIRMIĐI, a town on the north bank of the Amū Daryā (q.v.) near the mouth of the Surkhān. As Samʿānī, who spent 12 days there, testifies, the name was pronounced Tarmidh in the town itself (G. M. S., xx., fol. 105b) which is confirmed by the Chinese Ta-mi (e.g. Hsien Tsang, Mémories sur les centures accidentelles, i, 25), Russian officers in 1889 also heard the pronunciation Termis or Tarmiz (Shornik materialov po Asii, iv., 393 and 399). The town is now officially known as Termes.

Tirmidh does not seem to have been touched by Alexander the Great and is not mentioned in antiquity, although its foundation was ascribed to Alexander. According to Ḥāfīz-i Abrū (q.v.) text by Barthold in al-Muqaffariyya, St. Petersburg 1897, p. 20 not only Tirmidh but also Bursīghbā, not far from it on the river, was built by Alexander; Bursīghbā is said to be a Greek word and to mean "inn" (mīthunakbhamā) (See Turkmenbā Yazdāni).

At the time of the Muslim conquest Buddhism was predominant in Tirmidh; there were 12 monasteries and about 1,000 monks there (Hsien Tsang, loc. cit.). Tirmidh was then under an important ruler who bore the title Tirmidh-Shīh (Tabari, ii, 1147; B. G. A., vi, 39); there was a powerful fortress on the bank (Tabari, ii, 1147). In the year 70 (689-690), Tirmidh was conquered by Mūsā b. 'Abd Allah b. Khāzām, who had thrown off allegiance to the Muslim government, and ruled for 15 years by him (cf. Balkhārī, p. 417 sqq.; Tabari, ii, 1145 sqq.). Only towards the end of 85 (794) did 'Ummān b. Masʿūd by order of the governor al-Muṣafīdāl b. al-Muṣafīdāl succeed in taking the town from the governor. In this fighting and in later sieges and bridge-building, the island at Tirmidh, called in the Arab period Dijāzrat 'Ummān, played an important part; in the Ŭzbeg period the island is called Orta-Aral or Orta-Aral ("middle island") (J. Senkowski, Supplément à l'histoire générale des Huns etc., St. Petersburg 1824, text, p. 20, and the passages quoted from manuscripts in Barthold, Kʻ itb-i orkhānīya Turkestana, St. Petersburg 1914). The worship of the prophet Dhu'l-Kif (B. G. A., ii, 201) mentioned as early as the fourth (tenth) century in Kāfīf, was transferred here; after this cult, the island is now called Aral Paḫmābar ("island of the prophet").

On geographical conditions in the fourth (tenth) century cf. especially B. G. A., i, 298 and ii, 291. Tirmidh was an important port on the Amū Daryā; boats bound for Balkh and exported from there (B. G. A., ii, 325, s.). Like Balkh, Tirmidh was noted for its soap (O. cit., p. 324). Two natives of Tirmidh have attained fame in Muslim literature; the author of the famous collection of traditions Abū 'Isa Muḥammad b. 'Isa Muḥammad b. 'Isa Tirmidhī (q.v.) (d. 279 = 892) and the traditionist and mystic Abū 'Abd Allah Muḥammad b. 'Ali Tirmidhī (q.v.) (d. 255 = 866); cf. Brockelmann, G.A.L., i, 164. The latter's tomb, probably erected in the ninth (xvth) century is now the finest building in the ruins of Tirmidh and one of the most beautiful in Central Asia (picture e.g. in Ion. Geogr. Othām., xiv, 1908, on p. 552 with a Russian translation of the inscription, and in Barthold, Islam, St. Petersburg 1918, p. 57). The inscriptions give us in full what we are told about Muḥammad b. 'Ali in the Tahdhīrat al-Aswāfī (Por. Hist. Texts, v, 93) of Farīd al-Dīn Aṭṭār (q.v.), and in the Nafḥāt al-Umā (lith., p. 77) of Dāqiqī. (q.v.); we are further told that he studied under the same scholars as al-Bukhārī, which Samʿānī (G. M. S., xx, 1069) refers to Muḥammad b. 'Isa.

Tirmidh afterwards shared the political history of Khorāsān and Čārukār al-Nahr, sometimes, as at the present day, the Oxus frontier and sometimes the connection with Balkh being of greater importance. Under Muḥammad and his immediate successors, Tirmidh like other dependencies of Balkh north of the Oxus belonged to the empire of the Ghāznavīs (q.v.). When as a result of the battle in the desert of Ḵᵛāyun near Samarkānd (5th Sefīr 536 = Sept. 9, 1141) rule over Mā warā al-Nahr passed to the Kara-Ḵhīṭāt (q.v.), Tirmidh remained to the Saldāḏūq as is shown by the fact that Sultaṅ ʿObây in 551 (1156) Tirmidh was later in the possession of the Kara-Ḵhīṭāt from which it was taken in Dhu 'l-Kahtān 601 (June-July 1205) by Imām al-Dīn ʿOmar, governor of Balkh for the Ghurīds (q.v.). Ibn al-Athīr, xii, 135). Imām al-Dīn's son Bahārūn ʿAbd the (name occurs in Nasawī, ed. Houdas, p. 39) was appointed governor of Tirmidh. The very next year it was taken by the Khwārizmshāh Muḥammad, then allied with the Kara-Ḵhīṭāt, and handed over to the latter; according to Ibn al-Athīr (xii, 152 sqq.), this news provoked great indignation against the Khwārizmshāh throughout the Muslim world. According to Djuwaṅī (G. M. S., xvi/i, 64), the town was surrendered by the governor on the advice of his father to ʿOṯmān, Khān of Samarkānd; in Murkhwāṅī (Hist. des sultans du Khwarazm, ed. by Defrémery, Paris 1842, p. 51 sqq.) the Khwārizmshāh is mentioned in place of the Khān. After the fall of the empire of the Kara-Ḵhīṭāt, Tirmidh belonged to the empire of the Khwārizmshāh; in the autumn of 1220 it was taken and completely destroyed by the Mongols. In Djuwaṅī's narrative (G. M. S., xvi, 102) the conquest is mentioned that half of the city walls are in the middle of the river.

A few years earlier, we have the first reference to the sāyids of Tirmidh whose importance was not affected even by the Mongol conquest. When the Khwārizmshāh Muḥammad had quarrelled with the caliph Nāṣīr, he proclaimed through the learned men of his empire that the ʿAbdālids had appropriated by unjust means the countries which really belonged to the descendants of ʿAlī, ʿĀlāʾ al-Mulk, one of the great sāyids (a ʿādāt-i hussaynī) of Tirmidh, was appointed caliph (G. M. S., xvi/i, 97, 122). The appointment had no further consequences and we know nothing of the life or end of this anti-caliph. In the Turāḳī-Gušāta of Ḥamd Allāh Karwīnī (G. M. S., xvi/ii, 496) he is called Sāyīdī Imām al-Dīn Tirmidhī.

In the next century Ibn Bāṭūta (q.v.) (ed. Defrémery and Sanuqminī, 1948) records happenings in the Caghātai (q.v.) kingdom. ʿAlī al-Mulk Khudāwānd-zāde, a descendant of Ḥusain b. ʿAlī, lord (ṣajīb) of Tirmidh is mentioned. He is said to have thrust himself upon the Khān Khudāwānd Allāh at the head of 4,000 Muslim and to have been appointed visir by him. The members of his house are also called Khudāwānd-zāde in later times (in the Zafār-nāma, 1nd. ed., i, 210, pass. and in the Khudān-nāma, facs. Beveridge, fol. 208 contrasted to Khudān-zāde. The full form is found in the oldest recensions of the Zafār-nāma, composed in Tirmidh's time (Tehrān po ʿitārī Sīorang
Aziz, St. Petersburg, 1895, p. 131 and 199). In the Zafar-nama the “Khān-sāde” Abu ’l-Ma‘āli and his brother ’Ali Akbar are several times mentioned; in 1371 Abu ’l-Ma‘āli was banished for his share in a campaign against Timur (Zafar-nama, i. 231), but his exile was not of long duration; in the very next year we find him taking part in Timur’s campaign against Khwārizm (cf. cit., p. 241). A Khān-sāde “’Alla” al-Mulk is again mentioned later; Timur stayed at his home on his return from his Indian campaign in 1399 and from the campaign in the west in 1404 (cf. cit., ii. 190 and 593). In 1487 Ahmad Mirza married a wife of the house of the Saliyds (Bahrān-nama, fol. 206).

In the time of Ibn Battūta, when Balkh was still in ruins, Tirmidh had already recovered from its destruction by the Mongols; the town was not rebuilt on its old site but two Arab miles from the river; it was a fine large town with prosperous inhabitants (Ibn Battūta, ed. Defrémery and Sanguinetti, i. 56 sq). Among the ruins of this town is the mausoleum described by A. A. Semenov (PRIVATELY LENDARKA, ARKH., xix. 3 sqg. with pictures) with the tombs of the sainys just called Sultan-Sadat (probably Sulṭān-i Sādāt). The descendants of the sainys now live in the village (according to the latest census: 724 inhabitants) of Şahlābād near Tirmidh. A. Semenov obtained from them a manuscript genealogy and history of their house ending on the 14th Dhu ’l-Hijjah 1046 (29th April 1637). According to this MS., the sainy Ḥasan al-Emīr, son of the emīr Ḥusain, came to Samarqand in 835 (849–850) and thence went to Balkh and Tirmidh in 246 (860–861). We are told some of his relations with the Sāmindīs, with a number of anachronisms; for the rest, the genealogy only contains names (Sulṭān-sādāt occurs in it as a woman’s name) without facts or historical associations.

In the Zafar-nama (i. 57) “Old Tirmidh” (Tirmidhi-i Khuna) is mentioned alongside of Tirmidh. In literary works, including the MS. just mentioned, and on coins Tirmidh after the Mongol period is frequently called “The Men’s Town” (madrasul al-ridāf). After Timur’s death, the Oxus frontier again came into prominence for a brief period. Khalīl Sulṭān who had seized Samarqand could only hold the territory north of the Amīr Daryā. During the preparations for war between him and Šahrukh [q.v.], Khalīl Sulṭān in 810 (1407) restored old Tirmidh and Šahrukh, the defences of Balkh (Ibn ’Arabshī, Egypt, ed., p. 205 sq.). It is in this period that probably belongs the memorial to Muḥammad b. ’Alī al-Tirmidh, as stated above.

From the 14th (xvth) century Tirmidh, and as a rule Balkh also, belonged to the kingdom of the Orbegas. During the fighting for Balkh between the Orbegas and the Indian prince (later emperor) Awrangzēb [q.v.] in 1646 and 1647, Tirmidh was occupied by Indian troops under Sa‘dāt Khān (Elliot-Dowson, History of India, vii. 79, also Barthold, in Bulletin de l’Acad. etc., 1921, p. 204).

In the early years of the xvth century Tirmidh was in possession of Shir b. ’Alī of the Khungrat family, the founder of the town of Shahrāb (J. P. M. G., xxxviii. 276). A distinction was made at this time between the “great citadel” (bār-i bahla) of Tirmidh and the “fortress of the village” (kula) where the bulk of the inhabitants (of Tirmidh) lived. The unsettled condition of the following decades brought about the complete ruin of Tirmidh and of many other towns. In 1758 Muhammad Rahman Khān rebuilt the town (Barthold, K. izet mir seniyya Turkestan, St. Petersburg 1914, p. 74); it was afterwards destroyed once more.

In the second half of the xixth century, there was nothing near the ruins of the old town of Tirmidh except the insignificant village of Patta Hijār (with 1,525 inhabitants) and Şahlābād (cf. above). Patta Hijār acquired more importance when it was made the starting point of the Russian steamships on the Amīr Daryā. In 1894 the Russian fort of Termez was built 5 miles from the ruins and gradually became a town, but with a predominantly male population (according to the last census: 8,052 men and 3,669 women). In 1910 the Buhārā–Karaghis–Termez railway was opened; during the revolution it was destroyed but has since been rebuilt. The excavations conducted on behalf of the Moscow Museum for Oriental Culture have yielded in theumpu numerous important art treasures; the objects of the Buddhist period have been found.

(W. Barthold)

AL-TIRMIDH, ABU ’IBN MUHAMMAD B. IBN BAWRA B. SHAHWAH, the author of one of the canonical or semi-canonical collections of traditions. The mīda al-Tirmidhī connects him with Tirmidh, a place on the upper Amīr Daryā, at a distance of 6 leagues from Balkh (about 37th Lat. N. and 62nd Long. E. from Greenwich; cf. E. Busk, Naukat al-Khulūf, ed. and transl. Le Strange, G. M. S., xxiii., India, etc., p. 143; Le Strange, The Lands of the Eastern Caliphates, p. 440 sqg. and map, etc., facing p. 443), where he is said to have died in 279 (892–893); according to other reports, he died at Būgh, one of the boroughs of Tirmidh, in 275 (888–889), or in 270 (883–884).

Of his life very little is known. It is said, that he was born blind but also, that he lost his eyesight in his later years. He travelled widely, in Khurāsān, Ḥiraḵ and Hijāz, in order to collect traditions. Among his masters were Ahmad b. Muḥammad b. Ḥanbal [q.v.], al-Bukhārī [q.v.] and Abī Dawūd al-Ṣaḥḥātī [q.v.].

Two of his works have been printed: his collection of traditions (Cairo 1292, 2 vols., lith., Mirza 1283, fol.) and his Sha’mālid, a collection of traditions concerning the person and the character of the Prophet (Cairo 1306, with a commentary by Muḥammad b. Kāsim Dja‘a’ī, entitled: al-Fa’al‘id al-Djal‘ā‘ al-Baḥl‘iyah lata i-Sa‘māl‘i al-Um- maniyya; and ibid., 1318 with 2 commentaries: the first, entitled al-Wa‘al‘i, by ’Ali b. Sulṭān Muḥammad al-Kari; the second by Abī al-Ra‘i‘if al-Munkwi (for other editions and commentaries, see Brockelmann, G. A. L., i. 162). Brockelmann, loc. cit., mentions also a collection of forty traditions; it does not appear whether this was made by himself or by others. In Arabic sources other works on various subjects — asceticism, names and banya’s,
law, history — are ascribed to him, none of which seems to have come down to us.

His collection of traditions bears the title of ṣaḥīḥ in the edition printed at Cairo; elsewhere it is called ṣaḥīḥ; it deserves the latter qualification (cf. Goldziher, Muhamedanische Studi., ii. 231, note 2), at it comprises, besides traditions on law, also some concerning other topics. A glance at the list of chapters shows that nearly one half of the work is devoted to such subjects as dogmatic theology (ʿUqād, ʿIyyāmā, Līlāma, Dāhānā, Ḥālia, ʿAqīla), popular beliefs (Pītan, ʿArwā), devotion (Ṣabab, Ṭawwābiʿ, Ṣaʿdi), manners and education (Ṭāʾlā, ʿAdb, Ṣaḥīḥ), philosophy (ʿUmmāt).

The work contains far fewer traditions than those of Bahūrī or Muslim, but also less repetitions. It is chiefly two chapters that are particularly extensive, viz. ʿUmmāt and Ṣaḥīḥ. They are lacking in the other three ʿUmmāt (by this title the four collections of Abū Dāwūd, al-Tirmidhī, Nasṣāʾī and Ibn Mājdā are sometimes denoted). Though traditions showing a predilection for ʿAlī are not rare, those which favour Abū Bakr, ʿUmar and ʿUthmān are not lacking.

By two features, however, Tirmidhī's work is distinguished: the critical remarks concerning the ṣaḥīḥ's and the points of difference between the ṣaḥīḥ's, which follow every tradition. On account of the latter feature, Tirmidhī's Ṣaḥīḥ may be called the oldest work on ṣaḥīḥ that has come down upon us; the remarks on this subject occurring in ʿAbd al-Rahmān's Ṣaḥīḥ al-Umm are much less complete and scarcely authentic.

According to the Ṣaḥīḥ, as cited by Goldziher (Muhamedan Studi., ii. 252, note 1), the MSS. are not uniform in reproducing Tirmidhī's remarks on the ṣaḥīḥ's and the points of difference between the ṣaḥīḥ's, which follow every tradition. On account of the latter feature, Tirmidhī's Ṣaḥīḥ may be called the oldest work on ṣaḥīḥ that has come down upon us; the remarks on this subject occurring in ʿAbd al-Rahmān's Ṣaḥīḥ al-Umm are much less complete and scarcely authentic.

AL-TIRMIDHĪ, ABD AL-LĀH MUḤAMMAD b.ʿALĪ b. ḤUSAIN, known as al-Ḥakim (the wise), a Sunni theologian of Khurāsān, a muḥaddīd, a jurist of the Hanafi school and a mystic, d. in 285 (995). Some of these works still exist in manuscript; their style is somewhat prolix but they are very fully documented.

In his Nawawī al-ʿUṯlāʾ and his Ḫulūl al-Wilāya, he attempts to give an exodok mystical exegesis of certain mystic themes (developed by the extremist Shīʿī like the pre-existence of the Nūr Muhammadī and the Ḫūṭṭa Ṣadūqīya, the value of the 98 letters of the alphabet, angelology, the criteria of the state of "sanctity" which he was the first to study ex professo under the technical name of wilāya (borrowed from the ʿShīʿī); in it he gives a particular role to Jesus.

He tries to explain rationally the form of the canonical rites in his Ṭalā al-ʿUblāyya (which were condemned), ʿṣārīb al-Ṣalāt, Ṣanāʾī maʿārūkhū; his curious kitāb al-Furūḥ endeavours to show that there are no true synoims (which is half-Muʿtazila). He insists on introspection of the heart and professes a very high morality; his Kitāb al-Maḥāl castigates the different professing categories of hypocrisy and refutes the ḥikāy of the canaists of the time. He was the author of the first collection of biographies on the history of Ṣaffism but this work is only known from quotations.

He is the true precursor of Ibn ʿArabī who three centuries later studied him closely and admired him.

TIRMIDHĪ, SAIYID BURHĀN AL-DĪN, a. 893, also known as Saiyid Husain Tirmidhi, Saiyid Sirānī, or Burhān al-Dīn Muḥaqqīkī, a native of Tirmidhī and a disciple of Mawlaʾnā Bahaʾ al-Dīn Walad. After studying for some time with the latter he spent a long time in ascetic practices and finally settled in Tirmidhī where pulpits gathered around him. After the death at Konya of Bahaʾ al-Dīn Walad (628 = 1231), Burhān al-Dīn went to Konya (632—630) in response to the appeal of his late master's spirit and undertook the spiritual education of the young Daʾūd al-Dīn Ṣalīm who up till then had been studying law and literature. After nine years, in spite of the appeals of Mawlaʾnā, he retired to Kašāriya. It is evident from his biographies that he was in this town when the Mongols took Kašāriya and made a general massacre here (the MSS. of Mūṣṭafā Bāšī, Zīwāt al-Dawli, No. 5019 and 5020 of the Kitāb al-Dīn ʿumānī say that this event took place in 641 [1245]; for the details cf. Recueil de textes relatifs à l'historie des Selō, ed. Houtsma, iv. 241)). Shams al-Dīn Isfahānī, the Sāljuq governor of Kašāriya, was the patron and disciple of Burhān al-Dīn. It was he who saw to the performance of his funeral rites and built his tomb. We do not know the exact date of his birth nor can we determine accurately that of his death. Ewliya ʿCeli states that the maqām of Saiyid Burhān Tirmidhī was in Kašāriya and that he died in 747 which is clearly wrong. At the present day there is in Konya near the ʿāqā' known as the Tātīr-ḵānārī Tūrsī (the tātīr ʿŪrūsī), who is called Burhān al-Dīn Tūrsī; although there is no inscription on the latter, it has always been regarded as that of Saiyid Burhān Tirmidhī. Dawlatabhā, who regards Burhān al-Dīn al-Muḥaqqīkī as the shākh of Bahaʾ al-Dīn and of Mawlaʾnā, says that he accompanied them on their travels in Syria and to the Ḥudayla and that he died and was buried in Syria. This is not in keeping with the facts (Dawlatabhā, ed. Browne, p. 194; Bombay edition, p. 86; and quoting Dawlatabhā: Fehm, Safar al-Šawārū, Constantinople, Maṭbaʿāʾi Amīr, 1259, p. 82), Saiyid Burhān Tirmidhī owes his fame more especially to the part he plays in the traditions of the Mew-
lewis. From this point of view, it is in the oldest and most important sources for the history of the Mewlet order, such as Sipahsalar Manṣūhii and Efendi Manṣūhii, that we must seek for reliable information about him.

*Bibliography:* (in addition to the works mentioned in the text): Feridun h. Ahmadi, Sipahsalar, Manṣūhii-i Hadisvii Khwāniwud, Turkish translation, printed 1313, p. 159-164; Efendi, Manṣūhii al-ʿArif, Pers. MS.; Sh. transl. into Turkish by Maḥmūd Mīde, MS. ch. ii. (The MSS. of both versions are in many libraries); the French translation by C. Huart, Les Saintes des derewihc toursneirs, Paris 1915; Lālīn translation of the Nafṣālāt, p. 515-516; Elyūsī Čelebi, Siyāṣatname, Derel Sehdet 1314, i. 186; Khalīl Edhem, Kolıyette Shkëri, Constantinopel 1334, p. 118; Koppelii, Zade Fuād, III Mutawafugwan, Constantinopel 1918, p. 245.

(TÒTT in the texts one finds sometimes the Berber name Tīt-an-Piris, sometimes its Arabic translation: "Aīn al-Piris, "Source of the Breaking of the Fast"), a place on the Atlantic coast of Morocco, some eight miles S.W. of Mazagan.

According to the local legend, Tīt owed its foundation to a saint, Ismālī Amghār (Berber = Arabic ʿAbī dhikr) who came from Medina, led by a light which guided him in the sky, and settled among the Guālis, a branch of the ʿAnṣārī of Azemmour. He settled in the forest opposite a spring "situated in the sea" to which he used to go walking on the waves whenever he broke his fast; hence the name of Tīt-an-Piris. If we may trust the synchronisms given by the legend, his settlement here took place in the tenth century.

Ismā'il married the daughter of the chief of the country and became the ancestor of the Shāfī family of the Amghārīyin (cf. the article SHUKAYA), one of the members of which Mawlay ʿAbd Allāh founded an important ribāt at Tīt in the first half of the eleventh century. The history of this stronghold is not well known and al-Bakri, who enumerates with details the ports and towns of the Atlantic coast, does not mention it; but it should be remembered that he also omits Azemmour. In the eleventh century, al-Umairi mentions Tīt as one of the 42 large towns of Morocco; it paid 5,000 mithqals of taxes, as much as Tīgās and a little less than Sufāt. When in 1513 the Portuguese occupied Azemmour, Tīt also submitted to them and paid tribute. But in 1514, fearing that the ribāt might serve as a base for the Christians, Maḥmūd al-Nāṣir, the Waṭṭāṣīd sovereign, dismantled its walls and transported the inhabitants to the region of Fās; Tīt henceforth lost all importance, which passed to the neighbouring port of Mazagan which became the principal Portuguese factory in the land of the Dukkāla. At the present day it is only a wretched village among the ruins of the towers and gates of the old ribāt; its old name is hardly known to the natives who call it after the founder of the ribāt: Mawlay ʿAbd Allāh.

In spite of the resemblance of meaning, this Tīt has no connexion with Tīt-an-Quwarṣīn "Spring of the Saint (9)" which the Almohad historian al-Baidaḫṣ says is in Tīmānā in the land of the Barqijin and Ḥāwāta; we know that Tīmānā lies to the north and not to the south of the Umma Rabī. This second Tīt should, it appears, be identified with the place-name wrongly written ʿAīnī Bāqī in the manuscripts of Idris "a little place but nevertheless a town in character, inhabited by Berbers of mixed origin and lying on the road from Tīdīl to Salé, four days' journey from Tīdīl and two from Salé". It must therefore lie approximately in the south corner of the lands of the present day tribe of the Zāzīr.

(G. S. COLIN)

**TIṬTAWIN, TETUAN, FR. TETOUAN, SP. TETUAN, the Tetuan of Leo Africanus, a Berber place-name meaning "the springs" (a quarter of the town is still called al-ʿUṭūn); al-Idrisi gives the defective form Tiṭṭawin and the modern popular pronunciation is Tiṭṭawin, Tiṭṭawin. The name Tetuan given it by the Spaniards comes from the form found at the end of the xviiith century on coins of the early sovereigns of the Fatimid dynasty. It is a town in the north of Morocco, 21 miles S. of Ceuta. It is built on a little terrace which juts out of Mount Darsa and commands the valley of the Martin (or Martil) which flows into the sea 7 miles away. Between Tetuan and the sea lies a little plain encircled by the mountains of Angjera, of Bud Ḥāzār and the lower hills of the Baḥ Maʿdān. The Martin corresponds to the Ṭuṣāt of Ptolemy and the Tamuda of Pliny. These old names are perhaps to be connected with the Berber nomads: *pond*, *marsh*, for the low valley of the Martin is very marshy. Pliny mentions an oppidum called Tamuda; this must have been the name of the Berber-Roman town, the ruins of which can still be seen on the right bank of the Martin 2½ miles west of Tetuan near the bridge on which the railway to Shafāshāwan crosses; an old Lybian inscription has been found there. The river was then more navigable and ships could ascend to the oppidum. The Novitia Digesturum (Occ., xxvi. 13) mention Tamuda as the residence of the praefectus and of the ala herculae. The lists of bishops mention a Tamudanus episcopus.

The name of Tetuan is not found in the early days of the Arab conquest; the country was then governed by Yūlyān (= Julian?) who ruled the whole territory of the Ghamrā but Cetua was the capital. Tetuan does not appear in the Muslim history of Morocco until the ninth century when the empire of Idris II was partitioned in 850; the town fell to al-Kasnī along with Tangier, Ceuta, Ḥaṣr Masmūḍa and Ḥadjar al-Naṣr but the capital of this kingdom was Tangier.

In the xixe century al-Bakri knows Tītawin as the capital of the territory of the Banī Sikkīn, a section of the Masmūḍa of the coast; it was a town with an old citadel and a minaret.

In 347 (953) the Fāṭīmid general Djawhar came from Morocco to fight the Omajyads and marched on Cetua and Tītawin after having taken Fās; but having failed in his attack on Cetua he went no farther and returned to Siddīnāya. In 399 (997) the Fāṭīmid general Bāqīn b. Zīr came to the top of the hill of Tītawin but did not take the town.

In the xixe century Tītawin is twice mentioned by the Almohad historian al-Baidaḫṣ; the Almo-
ravid general Reverter encamped there when he was pursuing the Almohad troops. Al-Idrisi mentions it as a stronghold (hisn) of the Madjaks. It does not seem to have played any special part under the Almohads. In 685 (1286) the Marinid Sultan Yusuf b. Ya'qub wanting to create a base for operations against Ceuta, held by the king of Granada, built an important fortress at Tetuan around which his successor the Sultan Abú Thabit 'Amir in 708 (1308) ordered a town to be built; the historians are not clear as to whether this was the restoration of the old Tetuan which had fallen into ruins or the creation of a new town on a different site. In 1350 Tetuan saw Abú 'Inan, son of the Marinid Sultan 'Ali b. Uquban, rebel against his father and proclaim himself sovereign. The new town barely lasted a century; it had become at the end of the sixteenth century a haunt of pirates, particularly dangerous to Spain on account of their proximity to its coast; in 1400 Henry III of Trastamare, king of Castile, sent a squadron of ships which penetrated into the mouth of the Martín and destroyed the corsairs' fleet; troops were landed who took the town, destroyed it and carried off many of the inhabitants as prisoners.

Tetuan remained deserted for about eighty years. In 1414 the Portuguese established themselves at Ceuta which was now to be held by Christians. After Ferdinand's capture of Granada, in Jan. 1492, many Spanish Arabs went over to Morocco; one of them, a valiant defender of Granada, Abu 'l-Hassan al-Mandari, obtained from the Wazir idr of Fès, Muhammad al-Shalih, the concession of Tetuan and the lands round it; gathering round him a number of emigrés from Spain, he built a fortress surrounded by ramparts and ditches. A new town was soon built with its Friday mosque. With a body of Spanish horsemen and contingents of mountaineers who had joined him, al-Mandari began to harass the Portuguese at Ceuta, the Ksar al-Shaghir and Tangier by his raids, taking many prisoners whom he employed on the building of the town. Leo Africanus passing through Tetuan saw over 3,000 of them, who were shut up at night in silos (a quarter of the town is still called al-Mu'minar, "the silos"). After the suppression of the risings of the Muslims of Spain, many came to join Mandari in the last years of the xviith and early years of the xvith century, especially in 1501 and 1502. To the war by land against the Portuguese was joined that of the corsairs by sea; Tetuan with the adjoining Shafahawan became one of the principal centres for carrying on the holy war.

With the death of al-Mandari the heroic period of the history of new Tetuan comes to an end; henceforth it was simply a town of bourgeoise from Spain whose only desire was to increase their wealth by trade and enjoy in peace the pleasures of art and letters. Independent and turbulent and favoured by the isolated position of their town, they tried to escape the authority and especially the taxes of the Sultan, but whenever they had begun to enjoy a semi-independence, they broke up into factions which conflicted the town and made foreign intervention easy.

Down to the time of the Alawid Sultan Mawlay Isma'îl, the supremacy seems to have belonged to the family of al-Nâşîst, which this ruler had to exterminate. The period of anarchy which followed the death of Mawlay Isma'îl saw the fighting between the Kà'id of the Dîhîbî, the Rif, Ahmad b. al-Bâjîyûr governor of Tangier, against the Tetuanese commanded by 'Umâr al-Wâjîûb; the Rifian leader finally succeeded in extending his authority over Tetuan. After his death (1743) the Tetuanese resumed their old habits, recognising all the pretenders who appeared in the district. In the xvith century, the important fact for the history of Tetuan is the Spanish-Moorish war of 1839—1860, at the end of which the town was taken by the Spaniards, who occupied it till May 1862. In 1890 Tetuan was visited by the Sultan Mawlay al-Hassan. In 1903—1904 it was blocked by the hillmen of the neighbourhood, who took advantage of the anarchy provoked by the rising of the pretender Abû Himâr. Lastly in 1913, the Spaniards occupied Tetuan which became the capital of their zone of protectorate in northern Morocco and the residence of the Sultan's shâhîf.

Tetuan, whose port is Ceuta with which it is connected by railway, is the centre from which the tribes of the Ghmâra and the region of Shafîthawwan obtain their supplies of imported goods. The local industries, especially the manufactures of brocade and of silk, are declining. The population is about 25,000 of whom 12,000 are Muslims and 4,250 Jews.

TIVUL, a term used in the administrative system of Persia (the usual pronunciation tivul is due to a false assimilation to Arabic plurals of the type fu'ul; in the same way Chardin's translation "perpetual" is due to an erroneous derivation from the Arabic fûtufl "long"). The tivul (at least in the xixith century and in principle) is the authorisation granted by the government to an individual to levy his salary or pension directly on the taxes which a village or group of villagers has to pay the treasury. In its simple form the tivul was a kind of guarantee to secure the payment of the pension. This guarantee was given sometimes simultaneously with the pension and sometimes later as an additional favour. The beneficiary could be a stranger to the village but he might also be its owner. The economic and social history of Persia still remains to be written and we can only indicate a few facts relative to the origin of the word tivul and the custom to which it gives its name.

Etymology. The word is of eastern Turki origin. Radloff, Öpt. Slav. u. lit., vol. 1343, 1380, explains it as "property assigned to any one, allotment" (das Zuerkleidt) and derives it from
the verb t-mah (== Constantinople Turkish, degmek == tayyak). From the point of view of morphology one might compare tayyel with the word baalul "camp" which has also passed into Persian (place to which one returns, from baalma, *to return*). The word tayyl is not found in the Mongol period: for example, it does not occur in Rashid al-Din’s chapter on Ghiyath’s reforms (MS Bibl. Nat. Paris, Suppl. Pers., No. 209, fol. 405r-413b and d’Ohsson, Histoire des Mongols, iv, 370-377). It is not even found for the period of Timur in the Zafar-nama. So far as one can see, the word first appears as an official term under the Timurids; cf. the Matul al-Sa’dain under 1110 (1407); cf. N.E., xiv, 1843, p. 124-125, where Quatremere studies the word and quotes passages from the Akbar-nama (concluded in 1597) and the Alam-ur (which comes down to 1629).

Origin of the Institution. Although the name tayyl is comparatively late, the practice to which it is applied existed in the time of the Saljuq or even earlier. The old Turkish word tayyl in the popular language must correspond to an official term like tayyl "feudal" (plur. tayyllari) which it finally supplanted. The Arabic term tayyl disappears just at the time when the terms tayyilghil (cf. below) and tayyil come into general use.

In chap. 3 of the Siyarat-nama, Nisam al-Mulk thus defines the prerogatives of feudalists (masal-gilan): *they must know that their statutory rights (as faraln) over the peasants (ra’sayla) are simply the levying in a mild fashion of the legal dues (madr-ba’ba) which have been assigned (hawalilat) to the feudalists. These dues having been levied, the cultivators remain free (alibin) in all that concerns their bodies, their wives and children. Their property — goods and lands (azbil wa-siyal) — is also free and the musabda’an have no claim on it*. The tayyl is thus reduced to the right to levy the dues (madr-ba’ba) payable by the cultivators. These dues have been levied, the cultivators remain free (alibin) in all that concerns their bodies, their wives and children. Their property — goods and lands (azbil wa-siyal) — is also free and the musabda’an have no claim on it*. The tayyl is thus reduced to the right to levy the dues (madr-ba’ba) payable by the cultivators. These dues have been levied, the cultivators remain free (alibin) in all that concerns their bodies, their wives and children. Their property — goods and lands (azbil wa-siyal) — is also free and the musabda’an have no claim on it*.

As to the first category the lands of the jami’at (ra’sayla) continued to enjoy their rights but paid all their dues (habra, madr, ba’afa), those of private individuals and of the musabda’ and those which are uncultivated. As to the first category the lands of the jami’at (ra’sayla) continued to enjoy their rights but paid all their dues (habra, madr, ba’afa), those of private individuals and of the musabda’ and those which are uncultivated.

Tayyl, a financial expedient. The regular tayyl is characterised by the simplification of the process, which is gradually transformed into a simple financial expedient in proportion as the number of payments increases and the central treasury finds a difficulty in making them in specie. Chardin, v, 416, for example, explains the origin of "payments by assignments" as mainly due to scarcity of currency.

The nature of the tayyl (i.e. of the right to appropriate the taxes of a village) was often complicated by privileges granted at the same time to the tayylidar (e.g. that of administering public domains on his own account). This explains the vagueness of the definitions given it by European observers.

Chardin translates the word tayyl by "assignation de terre" and distinguishes two categories of tayyl *for these estates are either the squandering of the charge, the great charges having all the marks of the "cultivator's estate under which condition the payment of the amount of wages and which remain perpetually attached to the charge; or they are assigned at the will of the treasury". In the latter case also, the payments had a character of perpetuity for a series of years. Chardin with much perspicacity criticised the system and concludes (p. 418): "the lands which are assigned for payment of salaries are not under the inspection of the king's men; they are as if they were the private property of the man to whom they are granted. He arranges about the revenue as he likes with the inhabitants of the place".

Similarly Kämpfer (1684—1688) enumerates three kinds of salaries in Persia: barat (claims on remote provinces), hamma salla (lands yielding only the amount of the pension) and tayyl. These *tayyl dar tayyl" which correspond, broadly speaking, to Chardin's first category are the lands (baghi, prudicia vel fundi) given to dignitaries of state (ministri regni) who during the term of their office enjoy possession of them (i) and of their taxes (Datum servitio cessar possession es et annum gaudent) and only draw from these lands (belonging to the Amir) a revenue equal to 3 to 10 times their salary.

Siyar-ghil. A distinction must be made between tayyl and the document by which the privilege was granted; this usually was given the Turco-Mongol name of siyvar-ghil (favour) or perhaps *inam", cf. Chardin, vi, 65 (who limits the meaning too much) and Badogov, i, 650. The firman of Shâh Housain Safawi dated 1113 [1701] (publ. by Khaykow, Mem. Isl. Hist., iii, 1859, p. 70-75) may be taken as a specimen of a siyvarghil (the only name for it has been used in the text of the document): the beneficiary has to put at the Shâh’s disposition seven armed men; for this he is allotted the annual sum of 6 tamsins, 3 hazars and 96 dinars and a half representing the taxes of the district of Dizmar which the beneficiaries have to pay their taxes (mud-dudvali [?] sada-usdudvali wa-bakshis-eti) to the beneficiary of the siyvar-ghil and the agents of the government are not to interfere with the exercise of this privilege. Thus the favour of the monarch (siyvar-ghil) constitutes the tayyl of the beneficiary.

Sixth Century. For the beginning of the sixteenth century we have confirmation of the exact sense of tayyl in Rawlinson, Notes on a Journey from Turkestan, J.E.G.S., vii, 1849, p. 5: "tayyl is a grant of the crown revenues of any town or district; the individual receiving the grant is usually entrusted with its realisation, though not necessarily so. The grant also extends only to his own lifetime, unless otherwise specified. It is calculated that about a fifth of the whole land revenue of Persia is at present thus extorted from the crown’s. But very often the tayyl proper continued to be associated with other privileges accorded to the same beneficiary, which disguised the extent of the tayyl. Dr. Polak who himself nearly became a tayylidar thus defines tayyl: *ebenfalls Kronland,
TIYUL — TIIMHCN

TLEMCEN, in Arabic TIMHCN, from the Berber tilmus (pl. tilmisiin or timlussin). *spring, well of water* is the *town of the springs*_. The old town a few hundred yards E.N.E. of the modern town was called both Tlemcen and Aguder, the latter, the old Phoenician name, which passed into Berber with the meanings given above [cf. Aqaddis] and also that of “steep cliff or plateau”, which corresponds exactly to the position of the place on a slightly inclined plateau rising abruptly from the plain which it commands to N. and E. Perhaps we may see in this name of Aguder the origin of the Arab legend which calls Tlemcen al-Djard or Madinat al-Djard and makes it the scene of the meeting between Moses and al-Khadij (q. v. and cf. Īrūk, xvii. 64996). The following other names of this town may also be noted: Pomaria *the orchards*, of the little town which the Romans had there and which is found in some Latin inscriptions found on the site of Aguder; — Tāgrāt, *the camp* (Berber), given in the 6th century A.D. by the conquering Almoravids who founded the modern Tlemcen and its principal mosque when they were besieging the older Tlemcen, i.e. Aguder, — and lastly that of Mansūra or al-Mahjud al-Mansūra (Arabic), the “Victorious” or “Victorious Camp”, a town 250 acres in area built by the Marinids of Fās a mile to the west with a great mosque, a palace and a walled fort at the end of the 13th century and beginning of the 14th, at the time of their first and great siege of Tlemcen. Of the three successive towns forming Tlemcen, Aguder in the east, Tāgrāt in the centre and Mansūra to the west, only the central one has survived and retained the name Tlemcen.

Geographical position. Tlemcen lies in 1° 30’ W. Long, of Greenwich and 34° 53’ N. Lat. It is 3,600 feet above sea-level. It is built on the north flank of a ridge of the massif of Tlemcen facing the sea, which can be seen 30 miles to the north, on the ravine which the Tafna makes in the chain along the coast. The massif of Tlemcen is a geographical unity; it consists of parallel chains running S. W. to N. E. which rise by stages towards the south from 400 feet just behind Tlemcen to 6,000 commanding the steppe of Alfa in the south. This Jurassic massif is bounded on the south by the ancient alluvial formations of the steppes, in the W. and N. by the argilaceous plains of the Cartemian and Middle Myocene (Horsemahn) and Lower Eocene, of the Helvetian and Pleistocene alluvial deposits of Lamoriciere and Bel-Abbs. From its geological formation of Dolomitic limestones resting on porous sandstones resting on clays and gravels so suitable for the collection of the rain water in vast subterranean basins, the Tlemcencian massif is a vast reservoir which distributes during the long summer the precious liquid from the countless springs, which never fail and give the region of Tlemcen for miles around the town the beautiful orchards and rich vegetable gardens which constitute its fortune and the luxuriant vegetation and beautiful woods which adorn it. The Jurassic massif, down the slopes of which run perennial rivers (Tafna, Mafrezah, Wād-Shullī, Wād-Isser) with their waterfalls and which is covered with forests (oaks of various kinds, thuyaus, terebenthines, wild olives etc.) and which gives a home to large fauna (lynx, hyena, jackal, fox, wild boar and other smaller quadrupeds as well.

V. MINOSKY

THE ENCYCLOPAEDIA OF ISLAM, IV.
as countless birds). In the mountains are also many subterranean galleries, caves and caverns filled with pigeons and sometimes affording shelter to the animals and homes of the natives.

The soil is fertile and the flora varied; in the orchards of Tlemcen the trees and plants of the Mediterranean coast are grown as well as the species of Central Europe. The average annual rainfall is about 26 inches. It is spread over all the months of the year but is very low in July, August and September, which only have a few thundershowers. Snow makes a brief appearance each winter. The climate is healthy and invigorating and especially beneficial to anemic or neurasthenic people.

History. A situation so favourable for human habitation has naturally been occupied by man for millennia. Almost everywhere traces of prehistoric man have been found; but there is still much to be found in this region, so far little explored from this point of view and especially in the numerous caves, none of which, so far as I know, has been systematically excavated.

We know very little about the Roman Pomaria of which a few inscribed stones survive from its remnants. Avulisia (called on the inscriptions demus sanctus and demus invictus) forms the body of cavalry which garrisoned it.

Nothing is known of the history of Tlemcen between the Roman occupation and the Muslim conquest. If we do not know how Islam penetrated into this region in the viiith century A.D. we know no more about the Sofri Berber principalship whose chief in the viiiith century was Abil Karr. We know that on several occasions this emir of Tlemcen at the head of his Zenata Khairidji undertook military expeditions to the east as far as the Zift and Ifrikiya.

Sunni Islam was definitely established in Tlemcen and its vicinity at the end of the viiiith century. Idris I built a fine mosque in which he put a beautiful pulpit in 790. Henceforth Tlemcen—Agadir was the seat of a Muslim provincial government which experienced all the vicissitudes of the central and western Maghrib.

Modern Tlemcen (Taghritar) founded at the end of the xith century by Yusuf b. Tashfin developed considerably and the Almohads at the end of the viith (xiiith) century surrounded this town (Taghritar) with a rampart, for Agadir already had its own walls.

Of the Almoravid Tlemcen, which was a centre of theological and legal studies (1081—1144) in which celebrated masters flourished, there remains as an expression of religion in art, the great mosque with its vigorous and elegant floral epigraphic ornamentation of carved slabs around the mihrab. Almost 55 years after the occupation of Tlemcen that the Almohads finished the decoration of this part of the great mosque as we know from a beautiful inscription running round the cornice of the drum of the dome in front of the mihrab giving the date 530 (1135 A. D. BC).

It is remarkable that the great builders of monuments like the Almohads have left no trace of their rule in Tlemcen (1144—1236) except the solid rampart of terre pisé around the town. No building in Tlemcen or its immediate neighbourhood can be attributed to them. It was during this period (1197) that the great mystic, Abul Ma'dyan (q. v.) of al-Ash'ar, who is buried at Tlemcen, became the patron saint of the town.

In the first half of the viith (xiiith) century when the Almohad empire, weakened by lack of energy and authority in its rulers, was being exposed to the attacks of nomad Berber tribes in the west and the Hashif governors of Ifrikiya rebelled against the imperial authority and declared themselves independent, the Zenata tribes of the Banu 'Abd al-Wadid [cf. 'abd al-wadid] (q. v.) in the Central Maghrib and the Banu Marthin [cf. marthin] (q. v.) successively formed two kingdoms having Tlemcen and Fis as capitals.

In spite of the almost continual attacks, often successful, of which Tlemcen and the 'Abd al-Wadid kingdom were the objects during the viith (xiiith) and viith (xivith) century, especially from their Hashif neighbours in Tunisia and the Marthinids of Fis, the kings of this Tlemcen dynasty found time to embellish their capital with various buildings, some of which still exist. They also cultivated the sciences and founded madrasas for students, one of which, in the village of al-Chibba near Tlemcen, the great historian of the Berbers, Ibn Khludin, retired for a time, still exists. They realised the commercial importance of Tlemcen for relations with the Sahara, the high plateaus and the Tifelt and entertained constant relations with Spain through their port of Humaia; they also did not fail to take advantage of the favourable position of the town for trade with east and west since it was on the great natural road from east to west.

Tlemcen was not only a centre of trade, a market for the products of the country around, but its own industries produced articles which were much sought after as they still are. At the time of the emigration of the Moors from Spain in the xith (xvith) century, Tlemcen received an important contingent of them, which gave it renewed activity in various fields (learning, industry, art, literature and music, agriculture, etc.).

Unfortunately this town so well gifted by nature and climate was never rich even at the height of its power when it was the capital of the central Maghrib, to spread Muslim culture as one would have expected. This was because it was surrounded by nomad tribes in a continuous state of agitation: Berbers of the Zenata or Hilali Arab; the latter especially were much too turbulent neighbours and politically too unreliable for the capital to enjoy for sufficiently long periods the peace necessary to develop its culture.

The Turks and Christians of Spain disputed Tlemcen at the beginning of the xith (xvith) century. The last 'Abd al-Wadid prince accepted the sovereignty of the Spaniards in Oran, Salah Ra'is, pasha of Algiers, took final possession of Tlemcen for the Turks in 1558.

With the Turks, Tlemcen entered upon a period of moral and intellectual decay; commerce gradually declined and education ceased; no more fine buildings were erected; a number of public buildings and palaces were even allowed to fall into ruins. The popular poetry of this period gives an idea of what Tlemcen had become under the military and fiscal rule of the Beys:

*God has sounded Tlemcen's last hour! has He not devoted everything to an irrevocable end? For it the glorious days are over; the days of sadness and misfortune have come. It is ruined, it has perished, ruined by tyranny. It is clothed in mourning and covered with shame; vice has supplanted the former virtue."
In addition to the memory of three centuries of oppression, the Turks have left an important ethnic element in Tlemcen, the Kulgllis ('Korgii, "son of a slave or of a soldier"), the result of the union of the Turks with the women of the country. The Kulgllis still form a quarter of the native Muslim population of the commune of Tlemcen of which they form the most active element, the closest to European in character and the most accessible to progress.

From 1830 to 1853, Tlemcen, rid of Turkish domination, was under the Sultan of Morocco. This Moroccan suzerainty was even recognised by the emir 'Abd al-Kadir, who with the support of the Haçar (Moors and Berber-Arabs) had succeeded in establishing a precarious authority over Tlemcen.

The French entered Tlemcen for the first time in 1836 but abandoned it on May 30, 1837 (treaty of the Tafna) surrendering it to 'Abd al-Kadir's lieutenant. After the breach of the treaty of the Tafna, Bugeaud came and retook Tlemcen on Jan. 31, 1842. Henceforth peace and prosperity reigned in the town which had been ruined by the years of fighting between Muslims (Kulgllis and Haçar). Tlemcen was made a "commune de plein exercice" in 1854 and capital of an arrondissement in 1858. It is now also the capital of a judicial district, of a military subdivision and has a regiment of infantry and one of cavalry (aphis), many educational institutions, banks and agricultural credit offices etc. The population is about 30,000 Muslims, 6,000 Jews and 4,000 Europeans.

The attraction of Tlemcen lies not only in its verdant and picturesque situation but also in its monuments of Muslim art, which make it a regular museum of the best period of Hispano-Moorish decoration and in the public and private life of its Muslim Máliki population, who have for the most part remained faithful to the manners and customs of their ancestors. No other Algerian town can be compared with Tlemcen in this respect.

Besides the imposing remains of the old ramparts around Agáîr, Túrgrárt and Manšíra, and the numerous mausoleums of Muslim saints, the following may be mentioned as worthy of the attention of the archaeologist and lover of Muslim art: the great mosque (viith [xiith] century), with its minaret of the viith [xiith] century, the minaret of the great mosque of Agáîr (viith [xiith] century), rising on the site of the old mosque founded by Idris in the second (eighth) century which is no longer in existence; the mosque of Sidí Bel-Hasan (viith [xiith] century) with its graceful mihrab, its elegant minaret and the lovely lacework of its fretted and carved plaster, its floors of cedar in geometrical patterns (this building houses the Museum of Muslim archaeology). The mosque of the Usâr al-Inâm (beginning of the viith [xiith] century) stood beside the Madrassa al-Kadima which has disappeared. In the town (intra muros) one can still admire the Badhwar, a fortified palace built in the viith [xiith] century in the highest part of the town by the first 'Abdaláwíd ruler of Tlemcen. Next we may mention for their art, the mosque and sanctuary of Sidí Bráhim, the mosque of Sidí Sanátî and of Sidí al-Banna.

In the faubourg (extra muros) are to be found further treasures of Muslim art and architecture:
1. the ruins of Manšíra, this Tlemcen of the west built by the Martínids of Fas at the end of the viith [xiith] and beginning of the viith [xiith] century when laying siege to the 'Abdaláwídís, their relatives and rivals, besides the imposing remains of the flanking towers and of a part of the surrounding walls 4,000 yards in circumference, the ruins of an ancient royal palace, we are particularly struck by the remains of the outer wall and majestic minaret in hewn stone of the vast huge mosque; what still remains, some 120 feet high of this minaret of the beginning of the viith [xiith] century recalls by its vigour, beauty of decoration, coated with polychrome faïences, Almohad works like the Giralda of Seville, the tower of Hassan at Rabat and the Kutubiyya of Marrakesh.

2. To the E.S.E. of the town in the Muslim village of al-Usbûd still stands in perfect preservation the Mosque of Sidí Bû Madyan founded by Abu 'l-Hasan, the Marinid lord of Tlemcen for several years; it is dated 1339 A.D.; with the memorial porch of its main entrance, the swinging doors of cedar wood studded with carved bronze work, its halls of prayer with the walls covered with floral and epigraphic arabesques, its ceilings ornamented with protruding bricks, the dome lit by panes of many coloured glass in front of the mihrab, the minaret patterns traced on its sides in protruding bricks with the remains of paintings and faïences in delicate enamels, this monument, which is exactly dated, is a valuable document for the Muslim art of this period and country. Beside this mosque which the ruler built in honour of the saint whose name it bears, Abu 'l-Hasan erected a number of subsidiary buildings; a madrasa (1345 A.D.) quite well preserved in spite of the fact that some of the outer covering of plaster and faïence has disappeared, latrines and lavatories, a hamam, a palace now much decayed but whose splendour is recalled by the remains of its walls richly adorned with plaster and faïence. It was here between the mosque and the ruins of the palace that there was buried at the end of the viith [xiith] century the famous mystic, patron saint of Tlemcen, Sidí Bû Madyan; his mausoleum — an object of pilgrimage for every Muslim passing through Tlemcen — is a building on a square plan covered by a dome in 12 sections surmounted by a roof of green tiles; inside, the walls are covered at the bottom with Italian faïence of the xvith century and at the top with molded and painted plaster work. Many princes have adorned with some new decoration this hall which the faithful have filled with their gifts. The framework of the arch of the door is ornamented with arabesques in plaster of the Turkish period; a well with a border of onyx and four pillars of onyx with capitals supporting the roof stands in front of the mausoleum.

3. To the north of the town at the very foot of the walls in the centre of the Muslim faubourg of Sidí 'l-Halwî (the name of another great Andalusian mystic) rises another Marinid mosque, the work of Abu 'l-Inâ, son and successor of the sovereign Abu 'l-Hasan. This very well preserved building which, like the other mosques still standing at Tlemcen except that of Sidí Bel-Hasan (now a museum), is still used for worship, is another monument of Marinid art of the viith [xiith] century (1353). In the technique of its interior decoration (plaster covering of the walls, ceilings of cedar wood in compartments covered with geometrical patterns, columns and capitals of onyx which support
the principal hall of prayer and some from Manṣūra); this mosque may be compared with the madrasa of Bū Ḥanīfa in Fāṣ, founded by the same ruler at the same time. In the one as in the other of these two monuments we can clearly see signs of the decadence of the Muslim architectural art of Barbary. It is the period when Muslim culture is beginning to lose its hold on Tiemcen as on the rest of the Maghrib. This is not the place to examine the causes. But in the domain of minor arts (weaving, embroidery of gold and silver, ornamentation of articles of copper and wool, wood and metals) Tiemcen long retained an honourable place among the great cities of Islam in North Africa. Its countless artisans in these minor arts and industries are still renowned; they still hold the first place for embroidering in gold or silver thread on leather, especially the ornamentation of harness and saddle-cloths for horses for state occasions.

The population. One can easily understand that in this old metropolis of Islām, the native population (Muslim and Jewish) always very conservative, has preserved its original character in spite of the material and intellectual development produced by a long contact with Europeans, especially the French.

The Muslim population (agriculturalists, artisans, traders, workmen, clerks and minor officials) is the most numerous; it is formed of elements of diverse origins: the Ḥaḍar (lit. "citizens") or Moors are the result of the intermarriage of the former Berber occupants of the land with the Arabs; among them are also descendants of the Moors driven from Spain in the viith (xvith) century and ixth (xvith) century; the negroes, not numerous, are descendants of former slaves who came from Tust and the Sudān; the Kulglish, since the Turkish occupation. To these may be added an element in the rural suburbs, which are known as ġāna, whence their name of ḡandī. The whole forms the Muslim community of Tiemcen united by one faith, the same beliefs, a common family law, but deeply divided by racial jeff and family feuds.

Early converted to Islām and having probably adopted the Arabic language in the Idrisid period, the people of Tiemcen and its suburbs have always shown themselves greatly devoted to the cult of saints and the practice of magic.

The Jewish population has for some centuries been an important community here which, for long oppressed, has preserved its habit of close combination against the foreign and non-Jewish elements around it. The Jews themselves are for the most part of Berber origin belonging to the district or to Morocco. To these have been added from time to time foreign Jews especially Spanish at the emigrations. The old costume is no longer worn except by the old men; the younger generation educated in the French schools has adopted European costume and shown an aptitude and willingness to study. All however have remained faithful to their ancestral customs and beliefs, sufficiently close to those of the Muslims, in the belief in spirits and occult powers, in magic, in the sacred calendar, in the cult of saints and even for usages of family. However, in all the North Africa the Jews speak an Arabic dialect, it here strongly influenced by Moroccan and clearly different in phonetics, morphology, and even lexicography, from the Arabic dialect of the people of Tiemcen and that of the rural districts around it.

To sum up: then, Tiemcen, an ancient Berber city converted to Islām in the viith—viiith century using the Arabic language since the third (ixth) century, has since then remained Mālikī (no other Sunni school or Muslim sect has representatives in Tiemcen). During the middle ages it was an important provincial capital, then the royal capital of a Muslim Berber dynasty of the viith (xvith) to the xth (xvith) century. From the period of its glory it has retained intact precious monuments and numerous remains of buildings of great interest, traditions and customs, testifying to an established culture of its own.

The coming of the Turks, practically without influence from the cultural point of view, was of importance ethnically. The Kulglish (Turkish) element however has been absorbed by the natives so far as customs and religion are concerned but remains distinct from the social point of view and is hostile to the proper native element or ḍārī. Kulglishs and ḍārī do not intermarry or very rarely and are readily distinguishable by intellectual as well as physical features.

Next in order of numerical importance to the Muslim group, which is by far the largest, comes the Jewish group, then the French and other Europeans. No more here than in the rest of North Africa is there any fusion between the three great groups by marriage. Religion which for Muslims and Jews decides customs, family life and mental outlook, has established between these two groups and between them and the European element an impassable barrier to reciprocal penetration.

Leading their daily lives side by side, on terms of unrestricted and friendly intercourse bound by common interests of business, these three groups of the Tiemcen population are clearly separated by profound differences in upbringing and private life. If it happens that an individual of the Muslim or Jewish group joins one of the two other groups through change of religion or simply by marriage he becomes to some extent excommunicated and banned from the society to which he formerly belonged and may even be cut off by his own family.

being grown. The population consisted of the Afer, descended from the intermarriage of Romans and Berbers, and of Arabs descended from the soldiers of the garrison settled in the region. These two elements were however often at loggerheads and the first had the support of the people of Seif and the second of those of Biskra. The Hiáilt invasion dealt a decisive blow to the prosperity of Tobna. Sacked in 1064, after the defeat of the Hamáildís by the Arabs, Tobna rapidly declined. Its importance declined in favour of Biskra and it was not long in disappearing completely.

TOJIBIDS. [See TOJIB.]

TODMIR, the name given to the province (kūra) of al-Andalus, of which Murcia was the capital down to the time of the breaking up of the Omayyad caliphate. If we may believe the Arab authors, the word is an Arabic transcription of the name of the Visigoth governor Theodonir, who, at the time of the conquest of Spain by the Arabs, was the representative in Murcia of Roderick, king of Toledo. He is particularly known for the treaty which he made with Músà b. Nūqáir [q.v.], the Arabic text of which has been preserved by 'Abd al-Dabbī and Ibn 'Abd al-Mun'im al-Ḥimyarī. It was first published by Casiri, Bibliotheca Hispana, vol. ii., p. 106 and has been the subject of an elaborate study by Gaspar Ramiro, Historia de Murcia musulmana, p. 11–37.

The kūra of Todmir, according to the Arab geographers, was adjacent to those of Jæn and Elvira and its principal towns were Lorca, Orihuela, Alicante, Cartagena and Murcia. For the history of this part of al-Andalus during the Muslim period see the article MURCIA.

(E. LEVI-PROVENÇAL)

TOGHSA TIMUR. [See TOGHA TIMUR.]

TOGRUL. [See TOGHRIL.]

TOGHUZHGUZH, a Turkish people. The name was variously written and pronounced. The Arabic notices of the settlements of the Toghuzghuz correspond to the Chinese and later Muslim accounts of those of the Uighur; according to Chinese sources, the Uighurs were divided into nine tribes; according to Rashid al-Din (text in Travert, Oeuv. Ott. Arch. Oth., viii, 161), the Uighurs were divided into two main groups, the Oa-Uighur (ten-Uighur) and the Tokus-Uighur (nine-Uighur). It was on these facts that Grigoryev based his formerly generally accepted view (Vestn. Turkestan, v. 2, St. Petersburg 1873, p. 203) that for Toghuzghuz one should read Toghuughur, which
was a contraction from Toghuz-Uighur. This view was disseminated in western Europe by M. Th. Houtsmûl in his article "Türks" in the Encyclopædia Britannica; he was followed by M. J. de Goeje de Minn van Gog en Magog, Amsterdam 1880 = Mededelingen K. Ak. Wet. Sect. 3, v. 36—122). In the first five volumes of the R. G. A., de Goeje adopted the reading Toghuzghuz; in vol. vi. (1889) Toghuzghuz is used throughout and in vii. he went back to Toghurghuz. In the preface to this volume a few extracts are given from a letter from Th. Nöldeke, quoting Pahlavi Texts, i. 329 (Sacred Books of the East, xviii). Nöldeke observes that in the book by the Persian high priest Münßchir written in 881 d. (cf. now G. J. Pfa, ii. 104 where the form is Münßchir) we find Toghurghuz "in absolutely clear Pārsī script; (but and therefore not Uighur is the form in it)". A few years later, the name Toghurz-Ughuz was found in the newly discovered Orkhon inscriptions. The form Toghurghuz is perfectly certain; it is equally certain that it contains the name of the Ghuz (Oghuz); nevertheless the view has been recently upheld by several scholars that by Toghurghuz the Arabs meant the Uighur and no one else. J. Marquart (Ostasienstische und ostasiatische Streifzüge, Leipzig 1903, p. 300) lays stress on the fact that the first edition of Ibn Khurṭibīhī, said to have been written about 232 (846—847), already has the Toghurghuz in the district to which the Uighur did not come till 866. As the identity of the Toghurghuz with the Uighur seemed doubtful to him, Marquart thought the explanation was that we really had a recension of the book prepared not earlier than 272 d. Apart from the references given under the title, in which the Toghurghuz appear much farther west than usual (cf. also Makritz, Kultur, i. 313 on the title of the father of Ahmad b. Ṭūlūn [q. v.]), who came from the people of the Toghurghuz, the Toghurghuz are also still mentioned: in the east in the first half of the ninth century A. D. Muḥammad b. Mūsī al-Khwārizmī identifies the two Sefthias of Ptolemy with the land of the Turks and the land of the Toghurghuz (Bibl. arab. Historiker und Geographen, iii. 105, No. 1600 and 1601). Even the text of Dīghī (d. 369 A. D.) quoted by Marquart, op. cit., p. 91 shows that the Toghurghuz were regarded as having long been neighbours of the Khurṭibīhī. As Reinaud (Relation des Voyages etc., Paris 1845, Discours préliminaire, p. cxxvii. 399) has shown, what we are told in Arabic sources (e. g. in Masʿūdī, Murṣīfī, i. 288 and 365) about the doings of the Toghurghuz in China refers not to the Uighur but to the Turkish, i.e. Uighur, Sha-tu (on this tribe, cf. now also E. Chavannes, Documents sur les Turcs occidentaux, St. Petersburg 1903, p. 96 and 272). In spite of the Chinese references to the nine Uighur tribes, the expression Togush-Ughuz has not yet been found in sources of the pre-Mongol period; the Uighur Khân of the viii century of whom an inscription has been published by Ram- stadt, Zwei türkisch-inscrption aus der Nord-Mongolei, Helsingfors 1913, p. 13, calls his people On-Uighur Togush-Oghuz.

The name Toghurghuz, which properly belonged to the predecessors of the Uighur, the Sha-tu Turks, seems to have been transferred by the Arabs to the Uighur. The Arabs apparently did not know that the Sha-tu had been driven away by the Tibetans and the latter in turn supplanted by the Uighur. From what sources the Arab notices of the Toghurghuz are taken and to what date they refer has not yet been established; nor is anything known about the date of the journey mentioned by Yākūt (Muṣlamī, i. 840 supra) made by Tāhmi b. Bakr al-Muḥāwati to the "Khuṭbih of the Toghurghuz". The best sources, the account in the anonymous Ḥudud al-ʿĀlam and in Gazīzī have been in part used by Marquart (op. cit., Index under "Toguras, Uighuren"). The account in Idrīsī (transl. Janhert, i. 401) is quite different. It is important to note that the only Arab author who writes on Central Asia, not from books but from his own experiences, knows nothing of the Toghurghuz; on the other hand we find in him the Uighur (without a numeral) hitherto quite unknown to his Arab predecessors. Later writers quoting literary sources again mention the Toghurghuz in place of the Uighur; cf. the note by Fākhr al-Dīn Muḥābrī Shāh al-Marwānī (beg. of the vii [seventh] century) on his ancient city Tughdūgh and Toghurghuz (Adjāb-Nāme, A Volume of Oriental Studies presented to E. G. Browne, Cambridge 1922, p. 405 sqq., p. 407 wrong vocalisation: Togurghuz). It was only, when during the Mongol period more accurate information became available about Central Asia and especially about the Uighur, that the name Toghurghuz for a people disappeared from Muslim geographical literature; in the Nuzūk al-Kulāh of Ḥumād Allāh Ḫawwīn (printed in 740 = 1339—1440) it does not occur.

Bibliography: given in the text.

(W. BARTHOLOM)

TOKAT, a town in Asia Minor, situated in the northern part of Cappadocia, to the south of the middle course of the Tonzülflu, the ancient Iry. The town is situated on both sides of a mountain valley opening to the north and between the town and the river there is a beautiful plain. In a northeastern direction, facing the river, lay in ancient times the well-known town of Comana Pontica, the name of which still survives in the village of Gümenek; the site of Tokat was occupied by a fortress called Dairoman (on this identification cf. Ramsay, The Historical Geography of Asia Minor, London 1890, p. 349 sqq.). This fortress must have gained in importance during the frontier wars of the Byzantine Empire. The name Tokat, however, which occurs in the Muḥammadan geographers since Vāqī (Ṭīkā, Vāqī, i. 895; Abū Tāfīlād, ed. Reinaud, Paris 1840, p. 834—85), is said to have been derived from the Armenian form of the name Eudokia (St. Martin, Mémoire sur l'Arménie, i. 188), but this identification still presents difficulties. Ewliya Čelebi gives a number of other etymologies. After the Seljuk invasion, Tokat kept its strategic importance and was occasionally a princey or residence; during the Mongol invasion, the Seljūk sultan tried to put his possessions in safety in the citadel, and resided there, when the Karaman Oglu had taken possession of Konya in 1275 (Ibn Bibi, Rev. de textes rel. à l'hist. des Seljouques, ii. 352). Afterwards Tokat belonged to the states of the Eretma Oglu and of Kûfi Burhān al-Dīn of Siwa (vide "Aṭṭī Ibn Ardashīr Astarābādī, Bāmūn-ārānān, ed. Constantinople 1928") from him the Ottoman Sultan Bayazid II took the town in 1392. Timur is said to have been unable to take this stronghold (Ewliya Čelebi, v. 55); and, after his withdrawal, the Ottomans were soon again
mastery of the town. Under Mahammad II Topkâr was devastated by the army of Uzun Hasan, during the Karaman wars, in 1471, but after that time it does not play an important role in Turkish history; occasionally its prison in the citadel, called Cartaj-i Badawi, was used for political offenders. It remained, however, an important town, as it lay on the main caravan and army road from Constantinople to the East; by this road it was linked to Amasya in the north and Siwâs in the south. Other roads also converged to Topkâr, so that, in the XVIth century, it was the chief crossing point of trade roads in those regions (Traveller).

Topkâr has also traditions in religious history; in the XVIIIth century it was invaded by the adherents of Baba Ishâk (Ibn Bibî), p. 239) and Ewliya tells a probably legendary story about the attempts of Hâjîlîy Bektâsh to win the town from the infidels in the time of Erçogul.

Until the sixth century, Topkâr was a fazî in the sanjak of Siwâs, belonging to the eyalet of Siwâs. The legislation of 1804 made it the chief town of the sanjak Topkâr in the vilayet of Siwâs, while, under the Turkish Republic, Topkâr has become the capital of a vilayet with six fazîs: Topkâr, Zile, Arbaa, Nîskâr, Kehâdîye, Artîk Owa. Towards the end of the sixteenth century, the population was about 30,000 inhabitants, 17,500 of whom were Mahammadans (Cuienit). The chief industries were the manufacture of copper utensils and yellow leather, the copper being imported from the mines of Kebân Maskûn and Arghana Maskûn.

**TOKHÂRÍSTAN,** also written TOHKHÂRÍSTAN and TOHKHÂRSTAN, a district on the upper course of the Amû-Barâyân [q.v.]. It is the name of a district formed from that of its inhabitants (like Afganistan, Balûcistân etc.), but the question of the nationality and language of the Tokhârians was no significance in the Muslim period. With the exception of parts of the mention of Balkh as Malnut Tokhârâ in Baldhart, p. 408 there is nothing to show that anything was known in the Muslim period of the Tokhârians as a people, although as late as 630 A.D. the Chinese pilgrim Hsuan-Chang (or Yüan-Chang) mentions, in addition to the land of Tu-ho-lo on the Amû-Barâyân, another district of Tu-ho-lo, then a desert, east of Khotan (Humen-Thang, Memoires sur les contrées occidentales, transl. St. Julien, i. 23 and ii. 247). The land of the Tu-ho-lo on the Amû-Barâyân was in those days divided into 27 small principalities; the northern frontier formed the "Iron Gate", i.e. the Bugdala pass between the valleys of the Khashka-Barâyân and the Upper Amû-Barâyân. In the Muslim period also Topkâr was in the wider sense included all the highlands dependent on Balkh, right and left of the upper course of the Amû-Barâyân. According to Yâkût (Magâvân, iii. 518), there were two Topkâr, Upper (al-afu) and Lower (al-irân), but he does not seem to have had any exact idea of this division. Upper Topkâr was said to be east of Balkh and west (according to modern maps south) of the Djâbûn (Amû-Barâyân); Lower was also west of the Djâbûn but more to the east than Upper Topkâr. The latter is also mentioned in B. G. A., vii. and viii. and in Tabari. According to B. G. A., vii. 93 (Ibn Rusta) Upper Topkâr, as was to be expected from the physical features of the country, lay north of the Amû-Barâyân; on p. 292, s the high lying territory on both sides of the Upper Amû-Barâyân is included in Upper Topkâr along with Badakshân and Sughdistan. In B. G. A., vii. 34 on the other hand it is assumed, as in Yâkût, that Upper Topkâr lies east of Balkh and south of the Amû-Barâyân. In Tabari (ii. 1559 and 1612) the expression Upper Topkâr twice occurs without its situation being defined. In another passage (ii. 1150), we are told that the lands of the Şûmân and Akgârân (north of the Amû-Barâyân on the Upper Kânî-nîhân) were in Topkâr, without the qualification al-afâw. Yâkût, B. G. A., vii. 289 and 290 calls the district of the town of Bâmiyân [q.v.] "the first" (al-âla) or "the nearest" (al-dunyâ) Topkâr. Bâmiyân was the "first of the districts (mumabîl) in the nearest, western Tokhârâ". Ibn Khorâdâbîdî assumes that Topkâr extends as far as the northwest including Zamun, the modern Kerki (B. G. A., vii. 36) as well as to the south where the frontier lands (dagu) of Topkâr are said to be Zâbulistan (p. 35) and Kâbul (p. 37).

The frontiers of Topkâr were in the narrower sense are given most accurately by I斯塔khri (B. G. A., i. 270 sqq.); they were the lands east of Balkh, west of Badakshân, south of the Amû-Barâyân and north of the main ridge of the Hindûkush; the most important towns besides the capital Tâleqân or Tâyêkân were Warwâlî and Andarkar.

The Hâjît (pl. Hayûlûa) appear for the first time in Tabari’s history of the Sâsânians during the fighting for the Persian throne after the death of Yâzdegûr II (438). They had conquered Tokhârîstân shortly before (Tabari, i. 573, 41 Nöldeke, Geschichte der Perser und Araber, p. 119) from whom we are not told. During the Arab wars with the native princes, the last Sâsânians and the Turks for the possession of Topkâr a dâbi-ga (dâbi-ga, Tabari, ii. 1206) is mentioned as king (mawlî) of Topkâr; he was a prince of the Turkish people of the Kharlûk (Karluk); the expressions dâbi-ga al-Tokhâr (ii. 604 and 1612) and dâbi-ga al-Kharlûk (1612) are used promiscuously by Tabari, although in one passage (1591) he does make a distinction between Tokhârîstân and the land (arg) of the dâbi-ga. Shortly before 740 A.D. these wars were finally decided in favour of the Arabs. Tokhârîstân later appears as a part of the kingdom of the Ghurids [q.v.] and of that branch which had its capital in Bâmiyân. The name Topkârân as that of a district seems to have dropped out of use since the ninth (xiiith) century.

**TOKTAMÎSH,** also written TOKTAMISH (e.g. regularly in Russian annals), Khân of the Golden Horde. The reading Türkamish described as correct by E. G. Browne (Persian Literature under Tartar Domination, Cambridge 1920, p. 585
probably on the authority of the lines quoted on p. 328) is contradicted by the reading in many manuscripts and on the Uighur coins and documents; for example Ibn 'Arabshah (Egypt. ed., p. 14 and pass.) regularly writes Toktamish-Khan. The accounts of his origin vary a good deal. The name of his father (although it is often corrupted in manuscripts) was certainly Tuli-Khoja, who, according to the genealogy given by E. von Zambour (Manuel de Genealogie et de Chronologie pour l’histoire de Tichwin, Hanover 1927, Genealogy S) and to that given by Lame-Poole and others, was a brother of the Khans Urs and a descendant of Orda, the eldest son of Djiusted; but according to Abou l-Ghurair (ed. Desmazières, p. 178), he was descended from another son of Djiusted, Tugel-Timur-Khan. Our only source for the life of Tuli-Khoja and the early days of his son is the anonymous work compiled for Timur’s grandson Mirza Iskandar described by Rieu, Catalogue of Pers. MSS. in the British Museum, p. 1662 sqq., of which another copy is preserved in the Asiatic Museum in Leiden (cf. the end of the article LAM-BAZIYAR, iii, p. 46). According to this source (As. Mus. MS., fol. 242b) he was governor (khatam) of Man-gushak [q.v.] and executed by order of Khan Urs; his son Toktamish had once or twice taken to flight but had come back again; as he was still a minor he was pardoned. In the year of the Dragon (= 1379) he went to Timur and was received by him in Samarkand; according to Abul al-Razzaq Samarkandi (q.v.; MS. of the University of Leiden, fol. 70b) he had been shortly before defeated by Khan Beg-Pulad. Timur granted Toktamish the towns of Otrar, Sabran and Shiginak; there he was attacked by Khulugh-Bughsh, a son of Khan Urs; Khulugh Bughsh fell in the battle but Toktamish was nevertheless defeated and had to retire to Timur. The latter lent him assistance and he returned to Sabran but was soon afterwards defeated by Tokhtaa-Kiyaa, another son of Urs-Khan and had again to flee to Timur. Timur himself, according to the Zaifar-Nama (Ind. ed., i. 278), at the end of the same year of the Dragon (= beg. 1377) had to take the field with Toktamish against the Khan. The enemy was routed and Urs Khan died soon afterwards. He was succeeded by his sons, Tokhtaa-Kiyaa first and then Timur-Malik. Timur returned at the beginning of the year of the Snake (=1377) to his capital; Toktamish was thereupon defeated by Timur-Malik but at Timur’s desire proclaimed Khan in Shighnak (op. cit., p. 284). In the winter (1377–1378) Timur was told that Timur-Malik was continually drinking and thus had lost all prestige; Toktamish was told of this and in the same winter by a rapid campaign he put an end to Timur-Malik’s rule; in the following spring (1378) he undertook from Shighnak the conquest of the western part of the Golden Horde and successfully carried it through (op. cit., p. 290). The period of these successes can be more exactly ascertained from the Russian annals. On September 8, 1380 the ruler of the Golden Horde, Timur-Mamish (in the Zaifar-Nama: Mamish), was defeated by the Russians on the Don at Kalikowo and soon afterwards by Toktamish in the neighbourhood of the Sea of Azov; in the same year the Russians learned of the victory of the new Khan. When in 1381 the submission of the Russians demanded by Toktamish was refused, Russia was cruelly ravaged in the following year by him (1382); on Aug. 26, the capital Moscow was completely destroyed and sacked and Tatar rule re-established in Russia for another century.

According to Iskandar’s anonymous historian (Asiat. Mus., Ms. f. 245b), Toktamish was a just and vigorous ruler (he is also said to have been a handsome man); but as a result of his ingratitude to Timur, his abilities were of no avail. Very soon after his rule was established he came out as an enemy of Timur; Khazr’ism was conquered by Timur in 781 (1379) and by 785 (1383) we find coins struck there in the name of Toktamish. So far as we know, Timur on this occasion took no steps either against the Khazr’ism or against Toktamish; in the (Zaifar-Nama, i. 442), Toktamish’s first hostile act against Timur is said to be his campaign through Derbend to Adjum-bijidjan in 780 (year of the Harc = 1387). Toktamish in the previous winter had already sent an army against Tabriz [q.v.] (Zaifar-Nama, i. 392) but Timur had not yet reached it so that his rights were not directly challenged by the Khan’s expedition. Tabriz was laid waste in the most terrible fashion. Killing and plundering went on for 8 days (so the contemporary writer Zain al-Din Guri; for Timur-Timur). Even on this occasion Timur still showed great restraint towards his opponent; from his winter quarters in Karakhs he sent his son Mirzaan against the enemy with a division. After the latter’s victory, the prisoners were released and Toktamish was simply reproached and cautioned by Timur.

Towards the end of the same year (1387) when Timur was still in Persia, Toktamish sent his armies to attack the Hence Timur’s empire. On this occasion the armies of the Golden Horde were everywhere victorious and advanced as far as the Amu-Darya; Bukhara was besieged and the country round it laid waste (Zaifar-Nama, i. 443). Timur had to return hurriedly and left Persia about the end of Muharram 790 (beg. Feb. 1388). It was not till 1391 that Timur began his campaign of vengeance against the lands of the Golden Horde; at the beginning of this campaign an embassy arrived from Toktamish, which of course had no influence on the course of events. On Monday, 15th. Radjab 793 (June 19, 1391) Toktamish was defeated at Kanduzir. Timur advanced as far as the Volga, but returned to his kingdom without having subjected the kingdom of the Golden Horde. Toktamish had to abandon his throne for a short time but soon returned again. We find a letter from him to the Polish King Yagello, from Tana (Azov) of 8th Radjab 795 (May 20th 1393) in which these events are narrated from the Khan’s point of view. Timur, he said, had been summoned against him by the Khan’s enemies and the Khan only learned too late of this: at the beginning of the fighting these conspirators had abandoned the Khan, so that his kingdom was thrown into great confusion. Order was now entirely restored and Yagello had to hand over the arrears of tribute: his merchants could travel freely about (Zaifar-Nama, i. 3. 1393).

There is now open enmity between Timur and Toktamish. In 1385 ambassadors bearing gifts had been sent to Egypt by Toktamish (Tiesenhausen, Sbornik materialov otzovomaybycha iistorii Zeletov Ordyl, St. Petersburg 1884, p. 427 sq.) but nothing was said about joint military undertakings on this
occasion; on the other hand the missions of 1394 and 1395 had the specific purpose of an alliance between Egypt and the Kingdom of the Golden Horde against Timūr (op. cit., p. 428, 445 and 450). It was the time of Timūr's "Five Years' War" against the west (1392-1396). In 1393 Timūr had sent an embassy from Baghdad to Egypt (Zafar-nāma, i. 642 sq.); by order of Sultan Barqūk [q.v.] the ambassador was murdered at Raḥba, the frontier town on the Euphrates (loc. cit., ii. 275). In 1394 Timūr wanted to go to Syria, but abandoned this idea and went instead to Northern Mesopotamia (Iskandar's anonymous historian, MS. in the Asiatic Mus., fol. 291b); according to an Egyptian source (Ibn Ḥadjar al-Asqalānī in Tiesenhansen, op. cit., p. 450), the reason for this was the news of a raid by Toqṭamših into Timūr's territory. Adharbāḏjān with the lands north of it as far as Derbend had been under the rule of Timūr's son Miranšāh since 1392 (cf. Tarkiz); Derbend and Shīrwān had previously been expressly claimed by Toqṭamših and coins had been struck there in his name from 790 (1388) till 792 (1390); but there is no reference to danger threatening from there in the year following. Timūr was delayed for a considerable time by fighting in Armenia and Georgia. It was not till towards the end of 1394 that Timūr in Shāki heard from Shīrwān that the country had been invaded by the army of the Golden Horde; they were easily repelled and Timūr took up his quarters for the winter in Maḥmūdābād (Zafar-nāma, i. 732 sq.). From here in the spring of 1395 he undertook his main campaign against Toqṭamših. Before the opening of the campaign Shīmān al-Dīn Alwalighī was sent as an envoy to Toqṭamših; his reply was awaited on the Shāmān (south of Derbend); when it proved unsatisfactory, the campaign took its course. The decisive battle was fought on the Terek on Wednesday the 23rd Dżumādā II, 797 = April 14, 1395 (Zafar-nāma, i. 745 sq.). Toqṭamših had once more to disappear from the scene for a time. Timūr never, as the Zafar-nāma, i. 761 says, reached Moscow but only came to the Velez, where according to Russian annals, he turned on Aug. 26, 1395. Soon afterwards Azāk (Asov) and in the winter Ḥādji Ṭarkhzān (Astrakhān) and Sarāyī [q.v.] were sacked with much bloodshed; in the spring of 798 (1396) Timūr returned via Derbend to Adharbāḏjān, once more without establishing his rule or that of one of his protégés over the lands of the Golden Horde. Toqṭamših was able to return to his throne once more; according to Ibn Ḥadjar al-Asqalānī, in 799 (Oct. 1396-Sept. 1397) he fought against the "Genoese Franks" (Tiesenhansen, op. cit., p. 451). On the 3rd Dhu 'l-Ḥejjah 800 (Aug. 17, 1398) Timūr received an ambassador from the rival and successor of Toqṭamših, Timūr-Ḵutluḡ, son of Timūr-Malik (Zafar-nāma, ii. 35; the date in the original source, Tkhātī po ilišerī Srobyń Aqźi, St. Petersburg 1915, p. 54). Toqṭamših fled to Witwott, the prince of Lithuania, who took up his cause but was defeated by the Tatars on Aug. 12, 1399 on the Workska. Henceforth Toqṭamših led the life of an adventurer. Shortly before his death Timūr received an embassy from Toqṭamših in Otkar, which he had reached on Wednesday the 12th Rajab (Jan. 14, 1405), bringing the assurance of his penitence and an appeal for protection. Timūr promised to come after his return from the campaign to China, to the land of the Golden Horde again and restore his throne to Toqṭamših (Zafar-nāma, ii. 646 sqq.). According to Russian sources, Toqṭamših fell in 1406 at Tāmān in Siberia fighting against a force of Khaṅ Shādī's (802-810 = 1399/1400-1407/1408); according to Iskandar's anonymous historian (Asiat. Mus., fol. 243b) he died a natural death.

**Bibliography:** given in the text itself. The earlier European accounts of Toqṭamših (especially Hammer-Purgstall, Geschichte der Goldenen Horde, and Howorth, History of the Mongols, part ii.) are no longer in keeping with our present knowledge of the sources. ### TOLEDO (Ar. Ṭulajibula) Town in Spain

In the centre of the Iberian Peninsula 60 miles S. S. W. of Madrid. Built 2,000 feet above sea-level on a granite hill and surrounded on three sides by a bend in the Tagus, which has dug out its bed along the bottom of a deep fault, it commands in its immediate vicinity a fertile vega which runs to N. E. and N. W. along the river and beyond it is the plain of denudation of the Castilian plateau. Toledo has at the present day only some 25,000 inhabitants. It is the capital of the province of the same name and the see of the premier Archbishop of Spain. The old capital of the kings of Castile is now a little quiet town, but it has preserved a character of its own and is most attractive in a position of incomparable grandeur.

The Arab geographers who describe the Peninsula all give more or less long descriptions of Toledo. Idris puts it in the islim of al-Shārāt (las Sierras). In his time it had already been taken from the Muslims. He describes its excellent strategic position, its ramparts and the gardens which surround it, intersected by canals from which the water is raised for irrigation by means of norias. Abu 'l-Fidāʾ also praises the beauty of its orchards among the trees of which were pomegranates with enormous flowers. According to Yāḥṣī, the cereals grown around Toledo could be kept for 70 years without deterioration and its saffron was of excellent quality.

Livy (Hist., xxxvii. 7) is the first to mention the Iberian town of Toletum which was taken not without difficulty in 193 B.C. by the prosecutal M. Fulvius. It remained very little under Roman rule and when Christianity was introduced into Spain, it soon attained great importance as a centre of religion. In 400 a council of 19 bishops met there for the first time. Toledo was taken in 418 by the Visigoths and in the sixth century became the capital of their kingdom in the Peninsula. In 567 Athanasigis made it his capital and when the king Rekkare was converted to Christianity in 587, the Visigothic capital again became the religious metropolis of Iberia, on an even grander scale. The Roman Catholic clergy began to interfere in the political control of the country and to display their activity in numerous councils. It is in Toledo that is laid the scene of the legendary episode of King Rodrigo and Florinda, daughter of Count Julian of Centa, and in the town the spot is still pointed out on the bank of the Tagus where she was bathing when the Visigothic prince saw her and fell in love with her (Baños de la Casa). The invader Tārīq b. Ziyād [q. v.] took Toledo in 92 (714). He found it almost empty; only a few Jews had remained in it. Tārīq enrolled them in his army, which was
soon rejoined in Toledo by the forces he had sent to take Granada and Murcia. It is also in Toledo that the Muslim chroniclers locate the meeting of Tāriq and Muḥammad b. Nuṣair [q.v.]. The Arab leader only remained a short time there and continued his advance to the north of the Peninsula, going to Saragossa, which he seized.

The Arab writers, who deal with the history or geography of al-Andalus almost all record fascinating but legendary stories which circulated in the early centuries of the Hijra about the fabulous wealth which the Muslim invaders found in Toledo, when they took the city. The best known story is that of the "closed house of Toledo"; the sources which give it were studied by René Basset in 1898 (cf. the Bâbîl).

The name of Toledo recurs frequently in the chronicles of Muslim Spain in the period of the governors and especially after the establishment of the Umayyad emirate of Cordova. According to the accounts which they give, and which are confirmed by the Christian chroniclers, the town very soon became a hot-bed of sedition and a continual centre of rebellion against the government. It is certain that in spite of Muslim rule, the greater part of the people of Toledo never abandoned Roman Catholicism and remained Monarab. In spite of the great toleration shown by the conquerors, their rule was not accepted at all passively. The Toledoans never lost an opportunity of throwing off the yoke and, whenever a chance was given them, called to their assistance the ever turbulent Berbers, who were the governors of Spain or their successors, never able to exercise complete control. It was in Toledo that the great Berber rising of 122 (740) found most support and it was near it on the banks of the Wādī Saltî (Guzalete) that the forces were crushed by the troops sent from Cordova. It was again in Toledo a little later when 'Abd al-Raḥmān I deprived him of his governorship that Yaṣa'ūf al-Fihr sought refuge and he was killed near the town in 142 (759).

From the reign of the first Umayyad emir to that of 'Abd al-Raḥmān III al-Nasir there was not a ruler to whom Toledo was not a matter of care and anxiety, sometimes grave. In 147 (764) Hishām b. Uthmān rebelled there and 'Abd al-Raḥmān I had to send his two generals, Badr and Tammām b. 'Alkama, against the town. On the accession of Hishām I (172 = 788), his brother and rival Sulaimān had himself proclaimed in Toledo and the emir was forced next year to besiege the town from which he had to retire after two months without success. In 181 (797) soon after the accession of al-Hakam I, a new rebellion broke out in Toledo, stirred up by an individual named Ḫusayb b. Ḫusayb. But the Umayyad prince was not long in severely punishing the Toledoans for their habitual insubordination. Their spirit of rebellion at this time was being fanned by the verses of one of their townsmen, who was very popular with them, the poet Ghiribb. On the latter's death, al-Hakam appointed to the government of Toledo a renegade (muraḍ), a native of Huesca, named 'Amūrī who, by arrangement with the emir of Cordova, after gaining their confidence, hired the notables of the town into a trap in which they were all slain. This was the famous day of the ditch (waṣṭat al-hāfra) (191 = 807). But the brutality of this suppression did not prevent Toledo from rebelling less than ten years later. In 199 (814–815) the emir al-Hakam himself went against Toledo and by a stratagem succeeded in entering it and burned all the higher part of the town. In 214 (829) Toledo was again the starting point of a rebellion raised by a muraḍ named Ḥājjī al-Darrāz (the smith) and it took two years to suppress it. In the reign of 'Abd al-Raḥmān II, an expedition was sent against Toledo under prince Usayf in 219 (834). The next year the emir of Cordova laid siege to the town and it was taken by assault, after being invested for some months, in Radjab 222 (June 837). Toledo remained subject to the Umayyads, to whom it gave hostages, until 238 (852) but in this year, on the accession of the emir Muḥammad b. 'Abd al-Raḥmān b. al-Hakam, it rebelled once more. The intolerance of the emir had exasperated the Toledoans and the latter led, by one of their number, Sindola, depose the Arab governor and declared themselves free of Umayyad rule. Not only did they drive out of their town the representatives of the Cordovan government, but they organised an army which in Shawwāl 239 (May 854) defeated the troops of the emir Muḥammad near Andujar. Then in order to resist the force sent against them from Cordova, they made an alliance with the king of Leon, Ordoño I, who sent an army under Gato, Count of Bierzo, against them. But the resultant battle was disastrous for the Toledoans, who lost 20,000 men. In 244 (858) Muḥammad, giving the town no rest inflicted another disaster on it by mining the bridge over the Tagus; it collapsed when crowded with soldiers. Toledo had to beg for宽容 in the following year and Muḥammad appointed a governor there. From this time down to the reign of 'Abd Raḥmān III al-Nasir, the Arab historians hardly ever mention Toledo. We only know that in 873 its citizens obtained a treaty by which, if they agreed to pay tribute to Cordova, their political independence would be practically recognised.

The final subjection of Toledo was to be the work of the great Umayyad ruler al-Nasir. Before tackling it, he had to wait until all the hot-beds of rebellion in his dominions had been exterminated. Once Badajoz had been taken, the caliph in 318 (930) sent to Toledo a deputation of fakhs to make the citizens understand that their liberty was no longer compatible with the authority of the government of Cordova. This peaceful effort having failed, he at once laid siege to the town and came himself with a large army to direct operations. He pitched his camp on the heights of Charneca and made it clear that he would not withdraw his troops until Toledo was taken, by erecting some buildings and a bazaar which was given the name of Madīnak al-Fāṭījm (town of victory), opposite the invested city. The blockade was continued into 320 (932) and Toledo had finally to surrender. A strong Umayyad garrison was placed in the town and its capture had a great moral effect throughout Spain. Henceforth it was the capital of the Middle Frontier (al-tāhāyar al-mawṣūf) and the office of governor of Toledo was one of the most important military offices of the Umayyad atmāwīm. Among the principal holders of this office were Muhammad b. 'Abd Allāh b. Ḥudair, the ʾulamāʾ Abū Yaṯūr and, in the reign of al-Hakam II, the general Ghalib b. 'Abd al-Raḥmān al-Nasir, the father-in-law of the famous ʾAbī al-Mansūr [q.v.] Ibn Abī 'Amīr.
During the period of troubles which ended in the fall of the caliphate of Cordova and in the dismemberment of the Umayyad empire in Spain, Toledo no longer played any more than a very minor part in politics. On several occasions it served as headquarters or as a refuge for rival rebels but it does not seem to have itself taken advantage of these occasions to rebel, as it had so often done before. It was for several years the base of operations of the general Wâdî and between his two reigns Muhammad b. Hishâm b. 'Abd al-Djâhîb found a refuge there. Soon afterwards when little Muslim kingdoms were founded in the Peninsula, it became the capital of an independent kingdom, that of the Banû Dhi l-'Nûn.

The Banû Dhi l-'Nûn [q. v.] were nobles of Berber origin, who in the reign of al-Manûzr Ibn Abî 'Amir had obtained certain military commands. They were settled in the region of Shantaberya (Santaver, the modern province of Cuencâ). It was to them that the Toledoans appealed when on the fall of the Cordovan caliphate they wished to give themselves a chief. 'Abd al-Rahîm Ibn Dhi l-'Nûn, lord of Shantaberya, sent them his son Ismîl who took command of the town and the territory belonging to it and appealed to the experience of a notable of Toledo, Abû Bakr b. al-Hâdî, to administer it for him. According to several Arabic chroniclers, Ismîl b. Dhi l-'Nûn was not the first king of Toledo but succeeded other chiefs of other families, Ibn Masârra, Muhammad b. Ya'sîr al-Asadî and his son Abû Bakr Ya'sîr; other names are mentioned, Sa'd b. Shâmir and his son Alâdîn, 'Abd al-Rahîm b. 'Abd al-Malik, and the new ruler of Toledo, the beginning of whose reign is usually put in 427 (1035-1036), took the honorific labab of al-Ẓâhir and was only a few years on the throne for he died in 435 (1043-1044).

His son Yahya succeeded him and took the title of al-Ma'mûn. On his long reign see the article on him (iii., p. 223, where the date of his accession should be corrected from 429 to 435; cf. Dozy, Recueils, vol. i., p. 238, note 1).

On the death of Yahya al-Ma'mûn at the end of 467 (1075) the kingdom of Toledo, considerably increased, passed into the hands of his grandson Yahya b. Ismîl b. Ya'hya who took the labab of al-Kâdir. The great incapacity of this prince brought a period in which decadence became more and more marked after the brilliant and prosperous long reign of al-Ma'mûn. Left to himself by the old Muslim allies of his grandfather, especially by the prince of Seville, he had to seek the alliance of the king of Castile and Leon, Alfonso VI. The latter granted him his protection, but in return demanded payment of tribute which became larger and larger. To meet his engagements, al-Kâdir had to oppress his subjects with taxation and the latter ended by rebelling. Al-Kâdir retired by more rigorous measures and had several notable of the town executed along with his first minister Ibn al-Hâdî. This only exasperated the Toledoans against him still more and he had to abandon his capital and seek refuge at Huete. The kingdom of Toledo was then offered to the Almohad kings of Badajos, al-Mutawakkil, who took in 472 (1077) possession of it. Alfonso VI retook Toledo soon afterwards for his Muslim ally but this was only a pretense: on 27th Muharram 478 (May 25, 1085) the king of Castile, after a treaty concluded between him and al-Kâdir, which the latter could not escape signing, entered Toledo on his own account, thus making an important step in the progress of the reconquest. The taking of Toledo had a great moral effect among Christians as well as Muslims. It, more than anything, determined the invasion of Spain by the Almoravids in the next year.

In spite of the successes, which, first Yûsuf b. Tâshîf, then the Almohads, won in the Iberian Peninsula, Toledo never again passed into Muslim hands. For a century, however, it remained one of the great objectives of their armies. It was twice besieged without success, once on the death of Alfonso VI, and again by the Almohad Abu Yûsuf Yâhî b. 'Abd al-Maqûf in 592 (1195) in the course of an expedition which won the towns of Calatrava, Guadalajara and Madrid for the Muslims in some years, and was distinguished by the victory of Alarcos. But the battle of Las Navas de Tolosa, on July 16, 1212, soon deprived the Muslims of all hope of retaking Toledo.

Becoming Christian again, and created the capital of their dominions by the kings of Castile, Toledo however long retained a markedly Muslim character. Islam continued to be practised by a certain number of the faithful. A town of Moors under Islam, it was a town of Moriscos for quite a long time after its return to Christianity.

There are very few traces left in Toledo of its long occupation by the Muslims. At most, the remains of the little mosque of Bih Mardûm (Cristo de la Loma), some parts of the palace of Las Tornerías and of the old gate of Visagra can be dated back to the period of the musulûn al-jawâfîf. On the other hand the egeo near the town, a considerable number of epitaphs of Muslims of Toledo have been found, mainly engraved on the shafts of columns.

In spite of its position as a frontier town with a population containing a large proportion of Christian elements, Toledo, especially at the end of the Umayyad caliphate and in the reign of al-Ma'mûn, was reckoned one of the intellectual centres of Muslim Spain. A large number of the articles in the collections on the biography of Muslim Spain are devoted to scholars and jurists of Toledo origin.

TOLEDO — TOPAL OTHMÂN PASHA

Agha. He first entered the navy and in 1839 as Rear-Admiral, along with the Kapudan Pasha (q.v.), Ahmed Fehmi Pasja surrendered the Ottoman fleet in the Dardanelles to Muhammad Ali Pasha of Egypt, on hearing that Khuwar Pasja (q.v., ii, p. 958) had been appointed grand vizier. He remained a refugee in Egypt for several years after the conclusion of peace where he enjoyed the Khedive's favour. When an amnesty was granted to the deserters he returned in 1258 (beg. Feb. 12, 1842) to Stambul and entered the civil service. He became Kâmil-makâm of Ismit, then Mustafağrîf of Karab (q.v.), in Divâni-i-Xâdâ-i 1265 (Sept. 1849) of Bigha (q.v.), in 1271 (beg. Sept. 24, 1854) of Cyprus. In 1273 (beg. Sept. 1, 1856), he was sent as commandant (âmil-i-sefâr) to Belgrade from which he went on 11th Radjab 1277 (Jan. 23, 1861) to Sarajevo (q.v.) as governor (valî) of Bosnia and Herzegovina.

His government may be described as a golden period in the history of Bosnia: under the Ottomans. He held the office for nine years, a period of prosperity before the incursions of other governor, namely Köşrew Pasha (q.v.). His great aim was to deprive the powerful bogs of their influence and thus to strengthen the power of the Ottoman government. His plan was to place Bosnian notables in public offices, where they soon lost their hereditary prestige and influence with the people. He also raised the status of the bourgeois, especially artisans and small traders, and played them off against the nobles; as the protector of the common people he soon attained enormous popularity and to this day the "glorious days of Ottoman Pasja" are almost proverbial in Bosnia. He devoted special attention to the education of the youth in schools, which under his administration assumed a development hitherto undreamt of. In Sarajevo, in addition to numerous public schools, he built a reading room (plib-i-hârâmî), a high school (rûhîlye) as well as a technical school for the training of officials (nicket-i-hekim). The object of these institutions was to "Stambulis" the people of Bosnia, i.e. to bring them up to be loyal Ottoman citizens. But the educational institutions of the non-Muslim creeds were also supported in all kinds of ways by Othman Pasja. He endowed the mosque of Ghiş (Khoswe (q.v.) with a splendid library (about 3,000 MSS. and books) and one of his great services was the institution of a printing-works for the will-yet in which were printed not only the official calendar (Sâhib-i Buon), but the weekly papers Buon (official Gazette) and the Gâlîhen-i Serîyî (in Turkish and also in Serbian as the Sarajevski Svetionik), schoolbooks. From 1853, Othman Pasja endeavoured to regulate the relations between the Muslim landowners and the, usually Christian, tenants. He established a certain degree of legal protection for the kметs against oppression by the landowners and thus gained the affection and reverence of the lower classes. His endeavours to abolish tithes and replace it by a direct tax on land failed against the opposition of the Porte.

Othman Pasja was continually making roads in his province and used all the available labour in the work. A number of important routes within his province and also connecting it with the outside world were his work (e.g. from Maglaj to Đonja Tuzla and Zvornik; from Bosnia-Gradiska-Banjaluca-Travnik-Livno and thence across the Prošlago into Dalmatia; the road from Sarajevo to Mostar
completed by the War Office in 1864; the road made in 1868 from Trebinje to Ragnja etc.

It was only natural that he should continually strive to beautify Sarajevo, which was his official residence. There he built a splendid country house, the Cengić-villa which still exists (called after its later owner Dervish Pascha Cengić, known as De-
daga, therefore also called by the natives Dedagini domaci). As a result of the intrigues of his numerous opponents in Stambul, 'Othmān Paša was removed from his governorship in Ramadan 1285 (beg. Dec. 16, 1668) and transferred as Wali to Sili-
stria (Donau-Wallis). Muşir Şafvet Paša was ap-
pointed to succeed him. Suddenly, however,
three changes were cancelled and 'Othmān Paša returned to Sarajevo amid the tumultulous enthui-
siasm of the populace. His new period of activity
was of short duration. His Stambul enemies were
able to persuade the credulous Sultan 'Abd al-
'Aziz that 'Othmān Paša had built himself a Seray
in Bosnia and that, as an old pupil of the rebel
Muhammed 'Ali Paša, he cherished the ambition to
make himself independent. The consequence was
that 'Othmān Paša was definitely recalled on the
15th Safer 1286 (May 27, 1669). He disposed of
his estates and his komak and retired on a very
modest pension to Stambul, where he lived in
complete retirement in a little house in the country
on the Bospors. He died there on the 14th Dji-
mis 1191 (July 26, 1874) and was buried in
Stambul behind the Arsenal (Toruńt). — One of
his sons is Re'af Paša.

TÖRGHUD, a Turkish tribe in Asia
Minor.

The Törgbud tribe appears alongside of the
Warask (the Başakusoğulları of the Byzantine historians, cf. the important passage in Chalkoydyles, p. 243 4), quite early in Ottoman history. Its origin is wrapped in obscurity; it is mentioned for the first time in
history at the end of the century A. M. when 'Ali al-Din of the Karanmuğlbaşı included the Törgbud among the tribes under his command. A century later they appear in the
army of Djaş Şelîm in his Anatolian campaign
against Sultan Bâyâsâd (cf. J. von Hammer, G.O.
R., ili. 256; 886 = 1481). About this time the
Törgbud and the Warask were living in the Cilician Taurus on the other side of the
Bagh Dar (cf. J. v. Hammer, G.O. R., ili. 294). Then and later they were in political independence on the
Karanmuğlbaşı, the enemies of the Ottomans. With the decline of the latter the Törgbud disappeared from history. They cannot be connected with the
place called Törgbud-lu in the sandjak of Sarajšan (q.v.), still less with the Kalmuck Töngös (Töng-
ütan).

(F. Baringer)

TÖRGHUD, a general and companion
in arms of 'Othmān I.

Törgbud, usually Törgbud-alp (alp as a personal
name, is Turkish for brave, fearless, warrior); cf.
Alp-Tekh, Alp-Arslân, and Aigbud-alp, Konur-alp
etc.), is mentioned among the companions of
'Othmān I and connected with the earliest Ottoman
conquests. He is said, for example, to have sur-
pried Angelokomata, the modern Aigneğol, in 699
(1299) with only seventy men and taken it (according
to Negšer, Idris Bitlis in J. v. Hammer, G.O. R.,
153 sq.). He remained the councillor of 'Othmān's
son Ürgân. On the latter's instructions he took
Edrenos on Olympus, the key to Brusa (1326).
Nothing is known of his later life. In the Byzantine
historians, like Chalkoydyles (cf. p. 65, 243,
244, 4 447, 491 sqq. appears as Topoğlou. (F. Baringer)

TÖRGHUD-EVIN, literally the land of Törg-
bud, is the district around Aineğol in
Asia Minor, which Törgbud-alp [q.v.] conquered
and received as a fief. According to Leonclavia
on this ili, xii, 102), the Arabic form Dhu 1-Kadr
is a corruption of this, which is very probable,
as it is almost certainly derived from some Turkish
proper name. The royal family of the Dhu
1-Kadr-oğlu [q.v.] would thus have to be con-
ected with the Turkoman tribe of Törgbud [q.v.].

102. (F. Baringer)

TORTOSA, Arabic ترتوس (n. or Turtali),
a town in Spain on the left bank of the Ebro,
a few miles above the beginning of the delta of
this river, 115 miles from Valencia, 105 from
Barcelona and 60 from Tarragona. Tortosa which
now has 28,000 inhabitants, is the chief town of
a partido of the province of Tarragona and the
seat of a bishop.

The town is built on the site of the old Iberian
town of Dertosa which was succeeded by the
Roman colony of Julia Augusta. Its geographical
position has always given it considerable com-
mercial importance. It passed early under Muslim
rule and most of the Arab geographers who deal
with the Peninsula, give a description of it. According
to Idrisi, it was part of the al-ulm of al-Burast-
it was, he says, a large commercial town where
ships were built with the wood of the pine-trees
of remarkable quality which grew in the neigh-
bourhood. According to the historical and geogra-
phical dictionary of Ibn Abî al-Musîn al-Hamayti,
the Umayyad rulers built a wall around it of dressed
stone, with four gates. It had also a cathedral
mosque with five naves which was built in 345
(956-957), four public baths and several suburbs.
Its wharves for shipbuilding (dâr al-jiina') were
built in 333 (945) by order of the caliph 'Abd
al-Rahmân IV al-Nâsir; the foundation inscription
happens to have survived.

Information about the history of Tortosa in the
early centuries of Muslim rule is scanty and scattered.
We only know that it was besieged in 193 (809)
by Louis the Debonnaire, son of Charlemagne,
whose army was defeated by that sent against him
by the emir al-Yâkak I under his son 'Abd al-
Rahmân. This first siege, which ended in failure,
did not prevent Louis from taking Tortosa two
years later, but he only held it for a short time.
Later it appears that Tortosa, on account of its
position on the borders of Muslim Spain, was
used as place of compulsory residence for exiles
from the Cordovan court; for example, the secretary
'Abd al-Malik b. Idris al-Dżarrîl was detained there
by order of al-Manâṣr Ibn Abî 'Amir.

On the dismemberment of the Umayyad caliphate
and the formation of the kingdom of the Ifsîns,
Tortosa became the capital of a little principality
of 'Amirid "Slava" (al-islâmîa [q.v.]). The best known
of these individuals was a man called Nabit; he even
was able to take advantage of the anarchy prevail-
ing in the east of al-Andalus to seize Valencia,
The ancient city of Oea, one of the emporia of Sirtica, was first a Phoenician, then a Carthaginian colony; Roman influence began to prevail in the second century, during the Punic wars; direct Roman rule may be dated from the end of Carthage's rule (149 B.C.).

The ancient city lay mainly in the western part of the present city, round the still existing Arch of Marcus Aurelius, erected in 185 A.D. under the proconsul Cornelius Orfitus by C. Calpurnius Celsus, curator muneri et publicis muniarum, and dedicated to the Emperors M. Aurelius Antoninus and Lucius Verus. Oea however had no great political, military or economic importance, notwithstanding its harbour, protected by a barrier of rocks. The emporia of Sabrata and Leptis were then of greater military and economic consequence.

The first city wall may be attributed to the 5th century A.D., when the attacks of nomads from the interior became a menace. The Vandals, Procopius says, destroyed the walls of the African cities, but it is certain that the Byzantines hastened to reconstruct them; in Tripoli also the sections of walls still existing after the vicissitudes of ages, and partly demolished since the Italian occupation, preserve traces of Byzantine workmanship. The city was not surrounded by walls on the side overlooking the sea; the Arab invaders were thus able to enter it from the W., following the beach.

Occupied by the Vandals about 439, Tripoli remained under their rule up to 535, save for the expedition of Heracleius, sent by sea from Byzantium in 468. Belissarius, after having conquered the ancient province of Africa in 533, sent troops also to Tripoli, which from 535 may be considered subject to the Eastern Empire; the Catholic religion, troubled by the invasion of the Arian Vandals and by the rebellions of tribes in the interior, seemed to flourish anew in Tripoli for about a century.

Historians do not agree on the date of the Muslim occupation, which according to some happened in 22 (642-643), to others a year later. It may be that a first vanguard of the Arab conquerors of Egypt pushed as far as Tripoli in 22 A.H.; that a second expedition was led against it in 23.

It is well known that these first Muslim expeditions were raids, rather for the purpose of plunder than of conquest; neither the interior of Tripolitania, nor Tripoli itself, were firmly held at that time; as late as 26 (647-648) 'Abd alLāh b. Sa‘id with ‘Ukba b. Nāfi‘ passed through it; in 45-46 ‘Ukba b. Nāfi‘ pushed further the conquest of Ifriqiya; about that time a garrison (fuqara‘) was permanently established in Tripoli; the names of the city’s governors are not known.

'Tārāf al-Rājīm b. Ḥabīb, governor of Ifriqiya, after 126 A.H. marched against Tripoli in 131 (748-749), the two Tripolitans, 'Abd al-Dā‘ūd al-Ḥāfīz and al-Ḥāfiz, Berbers of the Ḥadītā school, and in 132 restored the city walls. Ibn Khaldūn records
that the city was then governed by Bakr b. Isâ al-Kasî, and that he was killed during the revolt. Throughout the second and third centuries, Tripoli and its environs were troubled by the political-religious revolt of the Ifâdîs. This sect had found many followers among the Hawwâra and Zanîta Berbers, who formed the predominant element in the population. About 410 (757–758), the Ifâdî imam Abu l-Šâhâb al-Maârîf set out from Tripoli, in the rising known as the revolt of the Waradîjuma, which seriously endangered Arab possession of North Africa, and was put down by Muhammâd b. al-Anfîs, sent by the caliph 'AbdAllâh, in the battle of Tawârîgha (145 = 760–761). In the following years further risings, due to the rebel Ibrâhîm, took place, and Tripoli was repeatedly besieged and attacked. We know that Hartama, governor of Ifrikia in the name of the 'Abbâsids in 179–180 (795–797), ordered the wall on the side next the sea to be built (al-Bakrî, transl. de Slane, p. 25; Ibn al-Azhîr, vi. 49; Ibn 'Ashîr, transl. Fagan, i. 107).

Tripoli remained under Aghlabid rule from 184 to 296 (800–900), but this century was not one of quiet; among many revolts, Ibn Khaldûn mentions that of 196 (811–812) against 'AbdAllâh, son of the Amir Ifrîhîm b. al-Aghlub, and against his successor Sufyân b. al-Madî; the latter were once again the Ibrâhîm Berbers, who had their centre of resistance in the Djebel Nefissa. Under the Aghlabid Amir 'Uzzâyat Allâh, Tripoli remained invadied by al-Aghlub, son of Ahmad b. Tûlîn, lord of Egypt; the governor of Tripoli, Muhammâd b. Kûlûh, was vanquished in 255 (868–869) by 'Abbâs at Labda, and besieged for 43 days in 501.

During the rule of the 'Abbâsids in Northern Africa, Tripoli was subject to them, and they appointed its governors; a revolt, put down by Abu l-Kâsim, is mentioned in 300 (912). When the 'Abbâsids transferred themselves to Egypt, Tripoli was at first ruled by the Zirîs, left as their lieutenants in Ifrikia, but not much later the independent rule of the Berber Banû Kharrûn, of the Zanîta stock, was established there (391–541 = 1000–1150).

The history of this period of a century and a half is not quite clear, notwithstanding the information furnished by Ibn 'Ashîr, Ibn Khaldîm, and Ibn al-Azhîr. Tripoli enjoyed a period of almost autonomous government, but it was ravaged by internal discord.

The invasion of the Banû Hilîl and the Banû Sulaim, an event which was to modify deeply the ethical and political formation of Northern Africa, swept away also the rule of the Banû Khazàran in Tripoli. For twelve years (1146–1158), the city was under the Normans; it was then conquered by the Almohâda, who held it for about a century, in the midst of raids and risings due to the adventurer Kârâkûsh and to the Banû Ghâniya.

The condition of Tripoli under the Ifâdîs is better known thanks to Ibn Khâldûn, al-Tîjânî and al-Zarkashî. The dependence of Tripoli upon the Almohâda ceased in 646 (1247–1248), when Muhammâd b. Isâ al-Hintâî was appointed governor of the city. Al-Tîjânî, who passed through Tripoli in 1305 A.D., found a 'Abbâsid governor, there living in a castle (Gezabe), probably on the site of the present castle; the city was administered by the governor and a council of 10 notable s (lûhîs), who used to meet in a sanctuary called 'Askâf al-Gezara. The traveller observed in Tripoli a fine bath (hammûn), broad, clean streets, mostly meeting at right angles; he admired the Arch of Marcus Aurelius, a Great Mosque (al-Asârî), a very large mosque (al-Damûr), several shrines, 'Ammâra (al-'Ammaârî), strong walls in good repair, with a moat in some parts. The city's intellectual life was flourishing at this time; cultivated people abounded.

A short time after al-Tîjânî's visit, Tripoli appears in the history of the internal rivalries in the 'Abbâsid family, at the time of al-Lîbiyân; later, notwithstanding the permanence of the 'Abbâsid rule, the city had a second, almost autonomous dynasty, that of the Banû Thâbit or Banû 'Amâr al-Mutâbirders (1324–1400 A.D.). In this period Tripoli was conquered for a few days by the Genoese Filippo Doria, who sacked it in 1354, and immediately sold it, for 50,000 marks d'or, to the Merchants. The 'Abbâsid Sultan Abu Fâris made his direct influence felt as far as Tripoli for a few decades longer; later the city was almost independent under its own rulers, until 1510, the date of the Spanish conquest.

Peter of Navarre, who had conquered Oran in 1509, and Bougie in January 1510, reached Tripoli with his Spanish troops in July 1510; the city was much damaged by the attack and the looting of Spaniards, who otherwise reconstructed the castle in the form it has preserved more or less up to this day; they also repaired the walls. Little is known of the 20 years of Spanish rule (1510–1530).

Already in 1524 the city had been visited by a committee of the Order later called of Malta, which had left Rhodes and had returned to Civitavecchia and Viterbo. In 1536, when the Mediterranean archipelago was conferred on the Order as a fief by the Emperor Charles V, Tripoli also went to the new rulers. The Knights of Malta maintained themselves at Tripoli from 1530 to 1551, holding out against the attacks of the rebel Arabs, who received help from the Barbary corsairs in alliance with the Porte. Khâir al-Dîn Barbarossa, who in 1533 had occupied Tunis, now threatened Tripoli; after him Murûd Aghâ, a corsair arrived from Constantinople, directed from Tâdîrûn the continual inroads on Tripoli by land and sea. The Order had in Tripoli a garrison of Knights and of Italian and Spanish mercenary troops, its authority was limited to the city and its immediate environs. On August 5th 1551, Sinâh Pâshâ, with Darghût Pâshâ and Murûd Aghâ, besieged the city, and took it on August 13th; the Governor-Commander Fra Gaspar de Valier was able to depart for Malta with the Knights of the garrison; most of the mercenaries were slaughtered. Murûd Aghâ became the new governor for the Porte, with the title of Beylerbeyt; his name is preserved by the large mosque in Tâdîrûn; about 1544 he was succeeded by Darghût Pâshâ, an important figure in Ottoman and Barbary history, and especially in that of Tripoli; he was killed in the siege of Malta (1565 A.D.) and was buried in the mosque he had founded at Tripoli. Spain and the Order of Malta tried many times to take the city from the Turks; the expedition of 1559–1560 ended in disaster at the island of Djerba; the attempt of 1590, in spite of an understanding with a rebel Murûtûbî, Yahya, was fruitless. Many times the galleys of Malta entered Tripoli's harbour, and burned its vessels.
Tripoli was the seat of the al-Jāhī of the same name, one of the three al-Jāhīs of the Janissaries in Barbary. Their chief, sent from Constantinople, bore the title of Pasha. However in Tripoli, as in Tunis and Algiers, owing to the distance and the decay of the central government, a domineering oligarchy was soon formed in the Janissaries’ quarter, and through marriages with the local population the al-Jāhīs’ ethno-religious class developed. Christian renegades were many and very powerful. Rule was wielded by the Pasha, assisted by the administrator; the administration was presided over by a Dey, the army by a Bey. Often Dey and Bey were the real masters of the city, the whole history of Tripoli in the 18th century and in the beginning of the 19th is full of these risings of Janissaries. While the central government grew weaker, and anarchy prevailed in the interior, the Consuls’ power increased, especially in the case of the consuls of France, England, and, later, of Sardinia.

A period of great power for Tripoli began with the rule of Mehemmed Pasha Qasim, of Chios, who reigned from 1642 to 1659 (1632–1649), and was succeeded by his son-in-law, Uthman Pasha, also of Chios (1649–1672). During these 60 years, within which fell the famous siege of Candia (1645–1669), the corsairs of Tripoli became more daring than in the past, and captured many prizes; Tripoli was enriched by new mosques and public baths. Under their successors, England in 1676 and France in 1685 broke the pirates’ overbearing pride with bombardments and threats. Internal struggles continued up to 1711, when Ahmad Karamehli (Caramani) succeeded, by slandering his opponent, in establishing a dynasty, which ruled, with the consent of Constantinople, for over a century (1711–1835). The rule of the Karamehli [q.v.] has left to this day many traces in Tripoli, in the part that remains of the Muslim and Barbary city; we shall therefore give a fuller account of its history.

Ahmad Karamehli (1711–1745), founder of the dynasty, was an energetic figure; in the 34 years of his rule Tripoli enjoyed comparative peace and economic prosperity; its power was felt more strongly than ever before, even in the interior of Tripolitania, as far as Fezzan and the territory of Barqa (Cyrenaica). Having unmasked, in 1723, the plot against his life, he secured, with his family and friends, the actual control of administration and government. An historian, Ibn Ghalibun, wrote about 1731–1732 the History of Tripoli, which is largely concerned with his reign: there were also poets who celebrated his exploits and his generosity. He was, however, cruel, a tyrant towards his enemies and all those who excelled his suspicion. He died blind in 1745. Among his acts, Ibn Ghalibun mentions many waqfs in favour of the city, the construction of an aqueduct which brought the water of a neighbouring spring, by means of a water-wheel, to the castle and the mosques, a fountain on the beach to supply sailors with water. But his best memorial is the mosque erected (1737–1738) on the side overlooking the castle, with its madrasa, which is still frequented, and enriched by many revenues, among them that of the neighbouring zârî. He also embellished the castle with new rooms and restored it. He had difficulties with the Powers and with the consuls on account of the damage to sea-trade suffered at the hands of his corsairs, but showed humanity and often generosity towards Christians, who from that time began to settle in larger numbers in the city and to ply their trades and crafts. The Franciscan mission was also kindly treated by him.

His son and successor, Mehemmed Pasha Karamehli (1745–1754), reigned too short a time to leave lasting memories; in 1751 the English defended with energy the rights of their citizens on the see. In 1752 he put down a revolt of Allama Muhammad ben Scheded, succeeded by his son Ali Pasha (1754–1793), whose period of rule is well known through abundant historical sources, printed and MSS. In 1765 he signed in Venice, through an ambassadour, a peace treaty with the Republic; in the following year, his promises having been broken, a Venetian fleet, commanded by the captain Giacomo Nani, obliged the Pasha to observe them. Under Ali Pasha the government was composed as follows: the Pasha, supreme head of the State, with almost regal authority, the Bey, commander of the troops, the Ağha, chief of Janissaries, the Khan, first civil authority and the Pasha’s counsellor, the Reis, commander of the corsair fleet, the Khansamâh, State Treasurer, one shâhâd, administrator of the city, a sort of mayor, a kadî, assisted by other clerks in the State Chancery. Important decisions were taken in the Divane of council composed of men who had been ambassadors to Europe or military commanders. It was said that Ali Pasha had begun to neglect consultations with the Divane.

In 1784–1785 Tripoli was ravaged by a terrible famine and by the plague: of the city’s 14,000 inhabitants one fourth is said to have perished. Ali Karamehli’s reign was unfortunate on account of family quarrels, due to the ambition of one of his sons, Yusuf Bey, who in 1790 went so far as to kill his brother Hasan Bey in the arms of his mother Lalla Hallâma. In 1793, while Yusuf Bey had become an outlaw and was waging war against his father, a certain Ali Borghi, formerly an official in Algiers, entered the harbour with a few ships and Greek mercenaries, and occupied the city during the night of July 30th. Ali Pasha took refuge in Tunis, whence he returned in 1795, with his children, thanks to the help of Hamuda Pasha of Tunis. Ali Borghi turned once more to the sea on the night of February 8th.

Ahmed II Pasha, son of Ali Pasha Karamehli, assumed the rule while his father, who died in 1796, still lived, but was unable to hold it against the jealousy of his brother Yusuf, who took his place in June 1795.

Yusuf Pasha Karamehli (1795–1832) possessed, together with courage and foresight, all the pernicious, wiles and cruelty of a Barbary sovereign. He carefully repaired the fortifications, and restored the city walls between the harbour and the castle, as is proved by an inscription of 1215 (1800–1801) in the neighbourhood of the zârî al-nâdîf (market of the carpenters). During the Napoleonic wars, in consequence of the Egyptian expedition and of the occupation of Malta, the Regency of Tripoli acquired international importance. It was to have been used as a base to invade Malta and to keep up relations with Egypt after the English had gained control of the sea, but this was not possible, as they had blockaded the harbour of Tripoli, and taken in charge the French
The period of Ottoman rule (1835–1912) was characterized by the progressive conquest of the interior, hindered by the ambitions and revolts of the tribes. The city however remained for 76 years entirely subject to the Ottoman; the conditions of the native population were practically unchanged; the city enjoyed a certain measure of progress thanks only to the foreign colonies, amongst which the Italian colony predominated as to numbers, influence, and private and financial enterprises. On October 5th 1911 Italian troops landed in Tripoli.

The city; monuments. In the historical summary we have already mentioned some of Tripoli’s monuments. Without describing the Roman and pre-Roman remains, like the necropolis to the NW. of the city and the Arch of Marcus Aurelius, we may mention among Muslim monuments, the Qasr al-’Ain (Qasr-nâga according to the local pronunciation), which is one of the most ancient, reconstructed by Saif al-Bezd in 1019 (1610-1611); Qasr Darghût or Qasr Shîb al-’Aiân, built in 1110 (1668-1669) by Mehemmed Pâshâ, called ‘Aznân al-’Azîn; Qasr ‘Ammâr, finished under Ahmad Pâshâ Karamânî, in 1550 (1737-1738); Qalâ‘i Gurdjî, already mentioned; Qasr ‘Ummân, in front of one of the city doors, recently restored on behalf of the Awtâ’i Direction, by Italian architects. Some mosques are attached to them tombes of great artistic and historical importance; worthy of mention are those connected with the mosques of Darghût, of Karamânî, the tomb of the madrasa of ‘Ummân Pâshâ, near the Arch of Marcus Aurelius. The ancient cemetery was outside the walls, on the NW. corner of the city; many gravestones had been built into the fortifications, and when the latter were demolished, were placed in the city museum, founded after the Italian occupation. There are now other cemeteries outside the city; the best known is that of Sidd Mînder (Musîndar, one of the Prophet’s Companions). The Ottoman occupation has no traces in the city monunents, except a few private buildings, and the military constructions outside the walls, especially in the Eastern plain and in the Mencis. The Italian government has but slightly modified the Muslim city’s aspect in its native quarters and in the Hârâ, the Jew’s ghetto; a lengthy portion of the walls, however, had to be demolished, part of them has been restored, and adapted to civic and sanitary requirements. The side of the city overlooking the sea has however been completely transformed by the construction of a modern harbour, piers and a large avenue along the beach (Langomare Volpi, from the name of the Governor for 1921–1925). The Castle (tiqâya of the Arabs), partly adapted to public offices by the Turks, has been restored in 1922–1923.

Administration. At present that part of the city’s affairs which is not directly conducted by the Government, is administered by a Municipality, presided over by a Mayor (ra‘î al-baladiya for the natives), and by Government commissioners. The administration of mosques and waqfûs is in the hands of an idārat al-waqfûs, composed of Muslims.

Public instruction. Muslim school organizations, with madrasas and kuttabûs for religious instruction, exist alongside of the Italian schools.

Libraries. There is a Government Library in the Castle; it contains a limited collection of works on Muslim history and religion, and some Arabic manuscripts. In the Castle the Ottoman Archives are also preserved; its most ancient documents go as far back as 1850 only. Of great importance for Tripoli’s history are the archives of the French and English consulates; the more recent ones of the Sardinian, Tuscan and Neapolitan consulates are preserved in the Government Library.

Private families possess small collections of books, containing also manuscripts. But the most important library is the so-called Library of the Awtâ’i (kutubkhâneh or maktabat al-awtâ‘î). The central nucleus of this collection was established by Mu‘âtha Khodja al-Miṣrî, first clerk at the time of ‘Ali Pâshâ Karamânî. The act (waqfûs) which founds a waqfûs the madrasa, the kutubû and the library annexed to them, together with a small annuity, is dated: beginning of Djumâdî II 1183 (October 1769). Successively various Muslims left books as a waqfûs to the library, which was enriched by part of the books left by the Tripoli historian Ahmad al-Nâîrî al-Ansâri, and in 1922 by a gift of printed books from the Governor Count G.
TRIPOLI — TUBU

Volpi. A systematic catalogue of this library has not yet been compiled, but an Arabic index-inventory is available. The books are arranged according to subject, following the traditional Muslim classification; printed and manuscript works are not separated; all the books, except a few Turkish ones, are in Arabic.

Bibliography: General. F. Minutilli, Bibliografia della Libia (Turin 1903); U. Ceccherrini, Bibliografia della Libia (Rome 1915); P. Romanelli, Bibliografia archeologica ed artistica della Tripolitania (Rome 1927).

History. The works of Ibn Khalduun, Ibn al-Akhir, al-Zarqushii, al-Bakri, al-Kairawani; al-Tijani, Rihi; al-Ayyubi, Ritha; Ibn al-Akhari; and many others are mentioned. Kithâ al-Mahnal al-Ashb fi Ta’rikh Tarabulus al-Gharbi (I, Constantinople 1317); Ibn Ghazzân, Kithâ al-Tijdhur fi man wa’ala Tarabulus wa kâna fiha min al-Ashb, Dastfar, ms. of Fâhith Hasân family of Tripoli; Mehmed Behêjî al-Dîn, Turkish abridged translation of Ibn Ghazzân and continuation, Constantinople 1284; L. ETTORE ROSSI

TUBU, a people of the Eastern Sahara.

The Tubu are distributed over an immense territory lying between the Libyan desert on the east and the Haqar on the west, Fezzan in the north and the region of Tchad in the south. In Fezzan, they constitute the greater part of the district of Gartûn; they are found in Kfûm; they occupy Tibestî, Borkû, Bodele, the northern port of Wadai, the valley of the Bahr al-Ghasal; they are very numerous in Kanem and in the oasis of Kawar. The name Tubu or Tibbu was given by Europeans to all these people but the various groups call themselves by particular names, Tubû is applied more particularly to the natives of Tibestî; in the Kanuri language it means the people of Tû; the latter call themselves Têda; in the same way are Amângare the Amma Borkû (Borkû), the Kreda, Norsu, Cheenafulde in Wadai, the Koéreth in the Bahr al-Ghasal. From the linguistic point of view, two groups may be recognised, speaking dialects very different in vocabulary: the Têda of Tibestî and the Darâgâa settled in the southern districts. The Arabs give the latter the name of Gouran.

The Tibû are very distinct from the black Sudanese on the one side, and the Arâm and Berbers on the other. They are as a rule of small stature, with a lean and thin body, dark skin, straight nose, sometimes aquiline, thin lips, and smooth hair. These physical characteristics are particularly strongly defined in the Têda, who have remained isolated in their mountains. They are found scattered through the Darâgâa, who are more or less mixed with negro blood. The poverty of their country dooms them to a wretched existence. Some are nomads, others sedentary. The main supplies come from the cultivation of the palm and cereals in the "emendi" or moist valleys, the rearing of goats in Tibestî and of cattle in the Tchad region. The Têda also make some money by hiring out their camels: they act as guides to caravans but are particularly given to brigandage whenever an occasion arises. This mode of life develops in them an extraordinary power of resistance to fatigue and privations, but also makes them treacherous and cruel robbers, as European travellers from Nachtigal, who was the first to study them, onwards, are all agreed. — The settled Tîbû are found in groups, not as a rule large. They either dwell in little stone houses, covered with palm-branches, or in huts of wattle with roofs of thatch, or even in caves roughly furnished. The gardens adjoining the huts are cultivated by slaves while the Tibû themselves fight and herd the flocks.

The Tubu are divided into two classes: the nobles or "maina" and the common people. Among the Têda, the tribes are divided into a superior and a lower class. The former are three in number, the Tômâgâhers, the Gûndâ, who have almost all emigrated to Fezzan and the Turaga. The Sulûf of Tibestî, or Drarî, who rules the country with the help of a council of nobles is compulsorily elected among the Tômâgâhers. Among the Tibû, on the other hand, as among the Sudanese peoples, the Hâddâd (smiths and fishermen and hunters) form a distinct caste, regarded as inferior and despised by all. From the religious point of view the Tibû are Muslims but, it seems, only recent converts. The Arâm treat their shepherds as dogs and regard them as infidels. They have actually retained fetishistic superstitions and practices, and their own customs which are on many points in contradiction with the Kur'anic law. For example, they do not take the diya or pecuniary compensation in case of murder nor do they observe the prohibition relative to fermented liquors. The Tibû are none the less fanatic Muslims, especially in Tibestî, Borkû and Bahr al-Ghasal; they are very much under the influence of the Sâmâyûsh, of the Sâwiya of Waï, of Anigala, etc. and have opposed a resistance to European penetration.

We have only incomplete and fragmentary notes on the history of the Tubu. The Arab authors down to Maâkriti make no mention of them. Relying on a passage in this author reproduced by Leo Africanus, they were for long regarded as Berbers and they have been identified with the Baralus, mentioned by both these geographers. But we tried to reconcile this view with the facts ascertained by him of the affinity of the Tubu and Kanari languages. On the other hand it is now agreed,
that the Tübù originally lived in the Sudán and were then driven into the Sahara. In any case, they seem to have played a fairly important role in the history of Kanem. Some of their clans took part with the Kanembou in the foundation of this kingdom. Down to the end of the xviith century the sufi district of Kanem kept up the custom of marrying wives from the Tübù. A certain number of Tübù had settled in Kanem, which the tribes who had remained in Tibeis came to attack in the xivth century. Sultan Dünâne II was forced into a seven years' war with them, out of which he emerged victorious but, with the resources of his kingdom exhausted. In the xivth century the Tübù were the allies of the Bulaba and helped the latter to conquer Kanem. Settled in the lands around Lake Chad, they shared the fortunes of their neighbours [cf. the articles BORNU, KANEM].

As to the Tübù of Tibeis, nothing precise is known about them till the xviiith and xviiiith centuries. In this period they were frequently raiding Bornù and Fersan. A defeat which they suffered in 1788 forced them to cease their raids into the latter country but in the second half of the xixth century, they had in their turn to defend themselves against the repeated attacks of the Whid Sliman and the Tihar.

(G. VYER)

TUDELA, Ar. TUBILA, a little town in Spain, with about 9,500 inhabitants, 860 feet above sea-level and 50 miles N.W. of Saragossa, on the right bank of the Ebro and the left bank of a tributary of the latter, the Queles (Ar. Kalâta). According to the Arab geographers, it was founded by the Umayyads in the reign of the emir al-Hakam I (850—860 = 796—822). In this period and on several other occasions, it was the headquarters of rebel Muslim leaders: for example in 849 (843—844) the emir 'Abd al-Rahmân II laid siege to it and in 855 (877—878) al-Munãhir. It was several times taken by the Christians and retaken by the Muslims. 'Abd al-Rahmân III made it his base on one of his expeditions to the north of the Peninsula in 928 (920—921). The general al-Hamid b. Basîl had to recapture it three years later for the same sovereign. The Arab historians do not tell us at what period Tudela finally passed into Christian hands.

(T. LEVI-PROVENÇAL)

TUDJIB (BANû), the name of an Arab family several members of which attained distinction during Muslim rule in Spain as well as under the Omayan caliphs. The family became divided into two branches, the Banû Hâkim of Saragossa and the Banû Šumâdi of Almeria. The family of the Banû Tudjib had settled in Aragon at the conquest. In the reign of the emir Muhammad I (239—273 = 852—886), its head was 'Abd al-Rahmân b. 'Abd al-Azîz al-Tudjib and his authority over his fellow-tribesmen was recognised by the ruler of Cordova, who thus tried to put an end to the power of another family in Aragon, of Visigothic origin, the Banû Kasî. On the Banû Tudjib, who were later vassals of Cordova, and then of the independent rulers (Banû Hâkim) of Saragossa down to the time they were submerged in favour of the Banû Hidr, cf. above, XV. SARA-GOSA.

The other Tudjibid branch, that of the Banû Šumâdi, had early been driven out of Aragon by the descendants of 'Abd al-Rahmân al-Tudjib. In the first half of the fifth century A.H., Abu 'l-Ashagh Ma'n [q.v.] b. Muhammad b. Ahmad b. Šumâdi al-Tudjib, the head of the second branch, succeeded in gaining possession of the little principality of Almeria, founded in 1025 by the two *Slaves* Kfishân and Zuhair. On his death in 433 (1052) his son Abu Yahyâ Muhammad succeeded him with the last al-Mu'asim. He was then only 14 years of age and for three years his uncle Šumâdi b. Muhammad acted as regent. Al-Mu'min remained ruler of Almeria till his death in 484 (1094) and his long reign was very brilliant and prosperous, if we may believe the Arab chroniclers. His son, Ahmad Mu'izz al-Dawla, succeeded him but soon after his accession, he retired before the Almoravids and when the latter seized Seville he went to Bougie, where he ended his life in obscurity as did his sons.

TUFAILI, "parasite, sponge". This is the meaning given to the word in the majority of the European dictionaries of Arabic, Persian and Turkish, e.g. Belot, Châfîrî, Şâmi-bey, etc. But this does not render the exact shade of meaning of the word, which was first of all applied to an individual who goes to a feast without being invited or accompanies a person invited. A little lower class of parasite is called in everyday Persian juftâl.
the term applied to "hangers on of the tufaili.
According to the Arabic dictionaries, Liddi al-'Arab, xiii, p. 429, 'Tafq al-'Arab, etc., p. 418 the word tufaili comes from a native of Kafa, Tafq al-'Arab, "Tufail the feeder," who used to attend all the feasts without having been invited and was wont to express his delight that Kafa was like a bowl, nothing in the interior of which escaped his eye. From this name Tufail comes the Arabic verb tafaal on tatafafa: "to act like Tufail." The latter lived in the time of the Umayyad caliphs and belonged to the Banu 'Abd Allâh b. Bâsa'nân. His story is told as early as Ibn al-Sikkit (d. 244 = 858).
In the form tufail, the word (in Persian) has the special meaning of "complement, thing thrown into the bargain, thing one gives up," which says in one of his odes: "all human beings and the pârsî are corollaries (tufail) of the existence of love." In Hindustani (cf. Shakespeare, A. Dicht. Hind. and Eng., p. 1436), tufai is used adverbially in the sense of "by means of, through, for the sake of,"

**Tufân. [See Nîrû.]**

**Tugh** (T.), a yak's tail (tufair), later replaced by a horse's tail attached to a pole, sometimes surmounted by a crescent and used as a standard and rallying point for troops. It was also used as a badge of military rank in the early Ottoman empire: the mir-lîwâd and sunnîyab-ây had one, the haydâr-ây two, the vâzir three, the grand vâzir five and the Sulânî in time of war seven or nine tails. When a Fâghî was dismissed from office he was deprived of this badge. It was abolished by Sultan Mahmûd II along with the other badges of the janissaries. — In Central Asia the bearer of this standard was called tugâ Beri.

**Tugh Timûr,** a Mongol Khân, whose dynasty ruled in Djurdjan for a century before 808 (1405).

The Name. The Khân's name may be read Tugh or Togh. The Zafar-nâmâ transcribes it Tugh (Tughai); on a coin published by Frehmel it is spelled Toghan (in Mongol character; cf. Howorth, cf. cit., iii. 718).

**Family.** Tugh Timûr b. Suri (Sorukûr) b. Babâ Bahâdur was a descendant in the sixth generation from a brother of Chingîs-Khân (Djudi-Usârî, Shi'asfar, p. 315, misunderstood by Miles). In 705 (1305) Babâ Bahâdur arrived in Khorâsân with his nâmâ (10,000 families) and entered the service of Uljâï-Khân. In 715 (1315) he made a raid into Khârim. On the complaint of Özbek, Khân of the Easen, Khân, Uljâï executed Babâ and his son Suri (Shi'asfar, p. 311, 330; d'Ohason, Hist. des Mongols, iv. 1572—5). The tribe of Babâ remained in Mâsândarân (at this period, Nusht al-Kalâh, p. 159, this term included Djurdjan and the eastern part of Tagharistan).

After the death of the Hûsîn Abî Sa'id (736), anarchy broke out in Persia. The Djâlyer Hasan Buzurg put the pretender Muhammad on the

As a result of a quarrel among the amirs of Hasan Buzurg, a number of them, like the Ughâr Igraði (Miles, op. cit., p. 315, 320, wrongly Akarunf) with the help of the amirs of Khurâsân (Shâkih 'Abî b. 'Ali Kâsîhî, 'Ali Dîfîr, Arghun-Shah) went to Tugh Timûr whom they proclaimed Khân in 737 (1337). Tugh Timûr, accompanied by his amirs, marched on Adharbâijân where he was rejoined by the other claimant Mâsî supported by the Qâyats. Tugh Timûr and Mâsî proposed to Persia, but on the 6th Dhu-l-Hijjah 737 they were defeated by Hasan Buzurg on the Garmâtir (west of Miyân); Schâfâfar, p. 316; d'Ohason, iv. 276). Tugh Timûr withdrew to Sistân where he ruled over Mâsândarân (in the sense above mentioned) and Khurâsân. At the same time the exactions of the minions of Khodja 'Ali al-Dîn Muhammed, viceroy of Khurâsân, provoked a rising and the coming to power of the Sardâbîs (q.v.). The expansion of their power considerably cut down that of Tugh Timûr. With the Kât dynasty of Herât, Tugh Timûr was on friendly terms, for his daughter Sultan-Khân Khâtî had married Mirza al-Dîn Kât (Zafar-nâmâ, l. 320).

In 739 (1338) Hasan Buzurg himself invited Tugh Timûr to come to the 'Irâq. He went there to see the Amir Arghun-Shah, son of Nawzâ and grandson of the celebrated Arghun-Shah; cf. Dâwud, ii. 251 (this family held Nishân, Tûs and Kâhî; it is known by the Mongol name of Liqân al-Dîn Khâribân (in Persia Liqân-Kurštânî). Hasan Buzurg went to see Tugh Timûr at Sâwà but on the one hand Khodja 'Ali al-Dîn Muhammed, who had control of the financial administration, appealed the inhabitants and on the other the Khân himself entered into negotiations with the Çâbânî Hasan Küçük. The latter seized the opportunity to compromise the Khân with Hasan Buzurg. Disgusted by his intrigues, the simple Mongol that very night broke his camp at Marâqî and returned to Khurâsân (Shâfâfar, p. 327; d'Ohason, iv. 732).

In 741 (1341) Tugh Timûr for the third time invaded the 'Irâq. He was supported by the princes Nishân, daughter of Ujdâstân-Khân, and by Shîrbûrgân, her son by the amir Çobân, but the army of Tugh Timûr commanded by his brother Ali Gâwûn was defeated at Ahib by the troops of Hasan Küçük.

Khurâsân very soon passed under the rule of the Sardâbîs who drove Arghun-Shah, lord of Nishân and Tûs, out of it. The Sardâbî Wâlîsh Shah al-Dîn Mâsûd defeated the Khân's troops on the Atrak, slew 'Ali Gâwûn and even held Djurdjan for a time. According to Dâwul-Shah, p. 236—37, Tugh Timûr had to be content with nominal power (mîm-nâma-isurl) over the Sardâbîs who appeared once a year at the Khân's court to pay homage as vassals (mîu'ilat-n mân-jadbî'at tâbî). During one of these visits the Khân was assassinated at Sûlân-duvîn (between Gürât and the Kûrmân) by the Sardâbî Yahya Karbût. The chronicle, composed by the poet Asfî, gives the date of this event as the 16th Dhu-l-Ka'da 754 (Dec. 1353).

According to Dâwul-Shah, Tugh Timûr expelled the Sardâbîs in his democratic tendencies; he encouraged people of modest origin and distrusted the nobles. He spent the summer at Râdûk and the winter on the Gûrât. He built a fine 'Imârât at Mashhad. Coins in name of Tugh Timûr were struck not only at Amlû, Mashhad,
keep on good terms with the sainyid-walls of Sârî and Anûl (ibid., p. 387, 391).

During the campaign of 1394 (1399) the ruler of Anûrâbâd was 4. Pîr [or Pîrâk] Pâhâlj, son of Lu'dîmân Pâhâlj (= Pâhâlj; Zafar-nâma, i. 570) whom Timûr had installed there. After the death of his father, Pîr Pâhâlj entertained Timûr lavishly and procured him ships for the conquest of Mahânsar (4 farsâkhs from Anûl). His loyal services are also mentioned in 536 (1404) on the occasion of Timûr's expedition against Iskandar Calkî in Mazândarân (ibid., li. 591). At the beginning of the reign of Shâhrûkh, Sultân 'Ali of Saljûzvarî having collected a body of Sarbadâr rebels in Khorâsân. Pîr Pâhâlj appeared suddenly in Rumân and joined Sultân 'Ali, but the allies were defeated by Sâyiyd Khodja sent by Shâhrûkh (Mat'âl al-Sâdîn, N. E., 1843, p. 26). Sultân 'Ali with his allies sought refuge with Mirân-shâh, who had come from Aqbarâbâd, but the latter handed him over to Sâyiyd Khodja. On this occasion several sons of Pîr Pâhâlj fell into the hands of Sâyiyd Khodja (ibid., p. 54; 80). In 824 Shâhrûkh placed Pîr Pâhâlj that he would be safe and summoned him to his court. Sâyiyd Khodja, however, over-whelmed with tokens of gratitude by Shâhrûkh, conceived ambitious projects, entered into negotiations with Iskandar (of Fân) and finally rose in rebellion. From Kâlât he had to seek refuge with Pîr Pâhâlj. This provoked Shâhrûkh's expedition against Mâzândarân (509 = 1406). Pîr Pâhâlj had considerable forces under him; but lost the battle. He fled to Khârûzîm and Sâyiyd Khodja went to Shîrâz. Shâhrûkh set prince 'Omar Bahâdâr up in Mâzândarân but he soon rebelled and was replaced by Ulûgh-beg. In 810 the latter informed his father Shâhrûkh of Pîr Pâhâlj's new preparations. For a second time Shâhrûkh set out for Mâzândarân and the news of his advance forced Pîr Pâhâlj to seek refuge with the Badâkshânî Kayûmâr b. Bâûûtîn. Without striking a blow Shâhrûkh re-established his authority at Anûrâbâd and Shâksâm.

In 812, the son of Pîr Pâhâlj, 5. Sultân 'Ali came to Shâhrûkh and took part in the expedition to Sâtûn but on the news of his death fled to Rostâmîr. There he obtained the support of the amir Kayûmâr and collected his father's forces. On the departure of Shâhrûkh for Transoxiana Sultân 'Ali tried to take Anûrâbâd but was defeated and slain by the governor. His head was sent to Harât (Mat'âl al-Sâdîn, in Dorn, Ausûl, p. 195).

TUGHRA (Ottoman and Seldjuk Turkish), cipher or calligraphic emblem of the Oghus, later Seldjuk and then Ottoman rulers, which in course of time became the coat of arms or escutcheon of the state, and was placed by the ruler not only on inscriptions and firmans but on title-deeds of property, coins, official monuments, ships-of-war and in more modern times on documents of identification, passports, postage-stamps, sheets of stamped paper, goldsmith's marks etc.

Lexicon. The word tughra was synonymous with the Persian mishun, nishan or mishan (whence the Arabic plural majyûn) "sign" and with the Arabic tsawib [q.v.] "cipher, signature" and in the concluding formula of firmans the tughra is called u'ammt. All these words have a wider meaning than tughra, and it came about, in Egypt for example, that the tughra was only a part or a particular aspect of the u'ammt. Tughra has passed into Persian (cf. the examples from Hakim-i Khalîkilân and Mir Nagmî, in T.O.E.M., No. 43, p. 56) and Ibn Khallîkilân (Wafâyât al-Ayûn, i. 202), even thought the word was of Persian origin. According to Ibn Khallîkilân, it was in Persian that the orthography in Arabic characters became fixed as تGROUND_1 Ground_2 (tughra) with âf âf majûra.

This is why it has been taken by Turkish literary usage for an elative Arabic feminine fu'tâ, and declined, according to Turco-Persian syntax, with feminine adjectives: tughrib-i gharrâz "the illustrious or brilliant tughra". Some western writers also put it in the feminine ("die Tughra").

Arabic has for some time used the verb tugghara, "to place the tughra upon" (Ma'ktrî, Khabî, Cairo 1270, ii. 211). Popular Arabic has confounded tughra with tarra ša钤 border of a piece of cloth or the upper border of a document" and this last name is given to the tughra in Djibartt (iv. 95, s) and in present day usage in Egypt. This confusion, easily explained from the place in the document where the tughra was put (cf. below), is fairly old (cf. Ibn Khallîkilân, op. cit.; cf. also Quatremére, Memleket, 17. Nov. 308, note).

In dialects, tughra is pronounced tarra and tawa, for example in Gagauz (Radloff, Freben, x; Moschkoft, p. 98) and thus becomes a homonym of a word, which means in Turkish "stick or swoon used for playing on a large drum, a twisted handchief used in a game to strike someone in the hollow of the hand" (the Arabic tarra, already mentioned, is also found with this meaning: cf. also Arabic or Persian, tarra, dere, darre, derr, dere, serve").

In spite of all these attempts at assimilation by foreign languages, the word tughra must be considered as purely Turkish origin. From valuable notes in Kâshghârî (L. 388), we know that it comes from the Oghus tugghrâ (تغتّر) which meant:

1. "asal (âsîh) and cipher (tawib) of the Oghus ruler (malik), but the (settled) Turks do not know it";
2. "any horse provisionally lent to the army for the days of a royal review or for the duration of a war (it is probable that this comes from the royal mark stamped upon the horse)".

Kâshghârî also gives (l. 217) the verb tugghrâl, "to receive the tugghra" referring to a document or to a page (Turk. ogâlan, Ar. al-fâ'il). The change tughhrâl > tughra is explained by the dropping, regular in Osmâli of the final guttural گ of the Oghus. We have many other examples of the same phenomenon.

Like other Turkish and Persian words ending in and borrowed by the Arabic, tughra in the latter language was given the termination -mašr in the plural: tughrâwânt (cf. Kâshghârî, xii. 163) like âsgânt, alâfânt, sâwânt, astâwânt, dawânt, etc.

On the other hand, the existence of the old form tughhrât enables us to dispose of a number of rash etymologies proposed for tughra, like that of Zekerî who sees in it, with metathesis, the optative târ-ghal-yâ "let it be so" or that of Tychsen, who sees in it the word doghra "truth" (Introduction in rer nummarium Musulmonianorum, Rostock 1794, quoted in the Description de l'Egypte, xi. 338-345).

The theory which connects tughra with the name of the fabulous bird tughrâ descures more space.

The writers who have maintained it, Ahmad Midhat Efendi, Ahmad Wefik Pasha, Ziya Gûk Alp (M. T.M., No. 3, p. 404, 445) and Colonel 'Ali (T.E.M., No. 43 and 44 of the year 1334), say that this bird was the badge (Ziya Gûk Alp says "petum") or onyx (عورة, عورة) of the great Kâshghâr of the Oghus and that each of the 24 tribes under him and each of the 4 khanîs who commanded them in groups of six had their onyx. Unfortunately not one of these authors gives their authority for their statements. The quotations from Rashîd ad-Din and Mahmût Kâshghârî only contain descriptions of this fabulous bird (we may add that it is mentioned in the Shâhânam, ed. Mohî, in folio, v. 619, 821; the Kâshghâr makes a present of this bird to Bahram Gûr).

Kâshghârî, although better placed than us to discuss the etymology of tughra, only says: "we do not know its origin".

History of the tughra. Unfortunately we do not know the pattern of the tughra used by the Oghus or the Seldjûks, who were of the same race. The title of the tughrâ-yi or official appointed by the latter to draw the tughra has been preserved through the name of one of them, who was viceroy of Malîk Shâh and Ma'sud and author of the Lîâyât- al-âdâm, d. in 514 according to some, 513 according to others [see the art. AL-TUGHRÂ]. His biograph (Ibn Khallîkilân, ed. de Slane, i. 462; Ibn-al-Wâsî, Cairo 1285, i. 131; Ibn al-Athir, Recueil des Histoires, i. 347) all say that tughrâ-yi is the official who draws the tughra. M. Bâhânî also mentions a râdâ' al-dîwân al-âlî (or tughrâ-yi) from the Malîk al-Balâdîrî al-Musawir (Cairo 1300, 118), while work by 'Ali al-Din 'Ali b. 'Abdallâh al-Bâhî', d. in 815 (1413).

We again find the tughra among the Malîk Sultanîs of Egypt, who no doubt borrowed it from the Seldjûks (through the Ayyûbids). According to Kâshghârî, it was only used down to the reign of Shâhân b. Husain (1352-1376). This statement is confirmed by Maktrî, Khabî, loc. cit., who says the tughra was no longer in use in his
TUGHRĀ

823

taken from the alif’s in the name of the prince and his father. The words “Emir Sulaimān” are surrounded by “ṣūḥa”, in turn surrounded by Bāyārīd. In a tughrā of Mehmēd (Ibn) Bāyārīd (Mehmed I; cf. Khalīl Edhem, Mīrzā Ḥusayn Muṣṭafā Ḥarūn, Constantinople 1534, i. 31), there are 4 verticals but this number is exceptional and is only found, for the sultāns, at a comparatively remote period.

2. The oval or elliptical curves, not closed, to the number of two, which meet in the lower part of the name of the prince and which turning first to the left, ascend, then turn to the right to cut the verticals in their upper parts and then disappear on the right. Exceptionally, we find one or three curves. The number two at quite an early period became sacred for the sultān’s figure. These curves seem originally to have been prolongations of the letters šīn, which occur in the word (Ibn and in the name of the prince of his father or in the tughrā of prince Sulaimān, in that of Murūd I (according to Colonel ‘Alt), in that of Mehmēd I, where the second šīn is supplied by the word sultān (cf. Khalīl Edhem, loc. cit.) or in the later tughrā in which, according to Fekete, the šīn of the word šīn and chān have been prolonged. It is true that they are found very early, even when the names do not supply a second šīn; cf. the tughrās, incomplete it is true, given by Khalīl Edhem, p. 44, 48, 55, 65, 67 and 68.

At first the names and the patronymic were placed in the escutcheon, circumscribed by the curves but in the later development of the tughrā this space was left party vacant. At first only the name of the sultān was left there; the name of his father and later the two names were placed quite at the bottom of the verticals where they formed a crowded group of intersecting lines, forming a more or less geometrical figure called are which means “the little palm, space between the finger and the thumb” (properly “spreading out” = gerundive of the verb are-are; cf. the saying are-are šēr-e, šēl šaresh; the word is found with the same meaning in Kirghiz, cf. Radloff, Wörterbuch, iv. 458).

Between the are and the escutcheon is inserted the word al-maghafar “victorious” with the addition of dāʾima “always”, which is placed in the form of a very conventional seal in the centre of the escutcheon. The final alif of the word dāʾima (dāʾima) is lengthened and, turning sharply round to the left, cuts through the curves. These words appeared for the first time according to I. Ghaṭīl Edhem (Catalogue, p. 3 and 206 note) on the coins of Ibrāhīm II, whose reign began in 1069 A. H.

The two extremities to the right of the curves are given an elongated and more elegant form. They have become one more characteristic feature of the modern tughrā of which they form the arms (tughrā gharaf). From the tops of the three verticals descend three broken lines like floating flames. As to the word Khān; after having figured at the end of the name of the sovereign’s father, it was added to that of the sovereign from the time of Muhāmed I (1730–1754).

In the field to the right of the tughrā, was frequently placed a flower. In the same place the sultāns later put their title of gāzi when they had the right to it (Muhāmed II put his poetic

time, i.e. between 766 and 845 (1364–1442).

Kālkhāndī (xii. 162–166) gives details of the tughrā (ṣūḥa) which the sultāns of Egypt placed upon muṣṭafā (q.v.; plur. muṣṭafāʾ) or rescripts addressed to the chiefs of a 1,000 and to the emir (ṣāḥib al-khansā').

It was the duty of a special official to prepare these tughrās on rectangular pieces of paper. The scribes then inserted these rectangles in the spaces left blank for them in the tahrīr or “upper part of the document” (cf. the hārām, cf. also Quenemère, Sultans Mamlouks, Hil. 2 (308–309).

The tughrā was formed of the šīn of the sultān, written on one line. The text of the tughrā of Sultan al-Malik al-Nāṣir Muḥammad b. Kālkhān was al-Sultān al-Malik al-Nāṣir, Nāṣir al-dīn wa-l-din Muḥammad b. al-Sultān al-Malik al-Manṣūr Saif al-Dīn al-Kālkhān (fig. 1).

The uprights (muṣṭafāʾ) of all the vertical letters like alif, dāl, lām, b, p, which number 33 in this tughrā, are considerably elongated isotropic uprights alternating with groups of two (Kālkhāndī gives the exact measurements of the spaces left between the verticals). To secure this regular arrangement, some letters were displaced; this was the case with the alif of al-malik, which was inserted between the two šīns of al-sultān. Under the line of titles were the words khālid al-ʾīlām sulṭānakht which were written, not by the official of the tughrā, but by the scribe who wrote out the muṣṭafāʾ itself on which this formula encroaches a little (perhaps intentionally).

The size of this tughrā, according to al-Kālkhāndī, was “a half ġīrā al-ʾīlām al-adhīrā” in width and height. The size of the characters or of the šālam varied according to the number of uprights.

We refer to the same work for a description of fig. 2. In it we have 45 uprights (or 47 vertical letters), which are arranged in pairs with their extremities horizontal. But the most striking peculiarity here is the fact that at the bottom of the verticals (traced in the šālam al-ʾīlām al-adhīrā) is written the name of the sultān, Shāhānshāh b. Ḥusain (in later characters or šālam al-jumār).

We may call attention to the peculiar features of the emblematic words as depicted by the words Shāhān and (Ibn) which are in the centre. It is probable that this is the junction of the two curves to be mentioned below.

The Ottoman tughrā, although derived in all probability from the same model (Saljūq), differs markedly, in appearance at least, from the Egyptian tughrā.

The oldest Ottoman tughrā known to me is found on the coins of the emir Sulaimān (806–816 = 1405–1416). All that von Hammer says on the subject of tughrās dating from Murūd I or his father Orkham does not seem to be based on anything tangible. Fekete, it is true, according to Khalīl Edhem, who gives no definite reference, speaks of coins of Murūd I with the tughrā, but this author’s Catalogue does not mention these coins. Colonel ‘Alt (p. 110–111) also gives the scheme of the graphic evolution of the tughrā from Murūd I but without saying whence he had taken it.

It should be noted that the tughrā of the emir Sulaimān already contains the principal elements of this cipher, i.e.

1. The verticals to the number of 3, which are
The form of tughra which we have just described has often been imitated by private individuals who used to substitute for the name of the sultan religious formularies to make it giba or calligraphic plaques to hang up in mosques, libraries, cafes or private houses. In Egypt we even find tradesmen's signs of this kind, but they are now disappearing and it was quite recently allowable to order a ḍabīrī or a maker of stationery to make a tughra in one's own name (cf. fig. 12, 13).

The official use of the tughra ceased in Turkey with the deposition of the last sultan (law of Ankara from Nov. 1, 1922).

If we now compare the Omani tughra with the Manūbī tughra, we ascertain that the graphic element which is common to both, we find that this element reduces itself to the uprights of the vertical letters. We are thus led to conclude quite naturally that the essential feature of the tughra is a certain number—not fixed—of upright strokes.

Writers have talked of a tughra formed on the model of the Murād II (Am, p. 413; Khalīl Edhem, loc. cit.) made simply of oval curves but I do not think we really have a tughra here. At least it is an incomplete one. We have seen that if in some Manūbī tughras there were lines analogous to these curves, they were not an indispensable element.

Although supplied later by the method of writing the words, the decorative motif represented by the verticals must be older than the use of the Arabic script among the Turks.

The symbol of the tughra. If we suppose the tughra is not simply a conventional mode of writing, what symbol does it represent?

We have already mentioned that some see in it the figure of a bird. Others have gone so far as to see in it a horseman galloping at full speed (Tychsen) but the most popular theory is that which owes its name to v. Hammer (Hist. de l'Emp. Ottom., 1851) 211. According to him, the tughra would be the imitation of the mark left by the hand of sultan Murād I, who not being able to write, dipped his hand in ink (!) and stamped it instead of a signature on the treaty concluded with the Ragusaus. This explanation, which seems to overlook the fact that the sultan in question had a chancellor, is taken by v. Hammer from Engel (Gesch. des Freystaates Ragusa, Vienna 1807, p. 141), who does not give any authority. It is not known in the east and is clearly a legend, which originated no doubt in Ragusa itself. It nevertheless has had a great vogue: Barbier de Meynard accepted it (Rec. des Hist. des Croisades, iv. 158 note) and it was defended quite recently by arguments taken from the antiquity of the use of finger prints.

Looking at the primitive form of the tughra (cf. above) all the hypotheses which we have just given, fall to the ground at once. It is interesting to note that Fekete came to the same negative result, starting from the design of the Ottoman tughra, which however is more complicated. Later interpretations being based on more elaborate forms of the tughra are of little importance.

This is why the fact that the tughra or the ḍabīrī, which is the imitation of it, is sometimes given the form of a bird in Turkish decorative art (a specimen of the year 1881 A.H. is given in figure 14). Similarly the fact that ḍabīrī means "claw" and sīrīz "palm" is not an argument in favour of von Hammer's theory, who however did not think of quoting it. (The French word "griffes" is used also with the meaning of "stamp for a signature".)

In thus simplifying the problem, one is led to ask if the books of which we have spoken have not some symbolic significance. Our question arises which we put forward with all reserve: do not these verticals represent the tughra, a word which we know was applied by the Turks to the horsemen's yokes floating on the end of a pole, or earlier to the pole itself? In general? The main argument that can be produced against the suggestion is the unity of the denominative verbal suffix -śa, from which we should have to derive -śuγ (in tughra) by a formation parallel to the well known suffixes -a (aqīş) We have however called attention to this suffix in our Grammaire de la langue turque and more especially in L'Anthropologie, xxxii. (1923), p. 174. The fate of this hypothesis can only be decided by a more profound study, which has still to be undertaken, of this suffix.

As to the argument that one might be tempted to draw from the flames floating at the top of the tughra or from the fact that in the ḍabīrī the custom became established of very often drawing two verticals for the ḍabīrī of two tails and three for the ḍabīrī of three tails or waris, these are all interpretations a posteriori which prove no more than those we have rejected above (as a curiosity we give as fig. 15 a signature in which the words bi-allaḥu ḍabīrī are arranged in three verticals: although they refer to a woman). It has also to be noted that sumissimatics sometimes seem to take the word tughra in the larger meaning of "motif of decoration by letters" (J.R.A.S., 1848).

Nīghāndī. We have seen that the Salājūk or Manūbī rulers had officials whose particular duty it was to draw the tughra (in Turkish tughra lēkem, in Persian tughra kirēh) It was the same among the Ottomans, who had officials for this purpose called nīghāndī and nīghānī.

The nīghāndī was with the three ḍabīrīs and the dīfar amīl, one of the five high officials of the court of the class of the ḍabīrīs (Mouradja d'Ohsouan, iii. 359; von Hammer, xvii. 54). Apart from his special office he had, at least at first, certain quite important legislative duties and he was to be called maṣūfī fi nīghānī, "jurisconsult of secular law", in contrast to the maṣūr fi nīghānī, "jurisconsult of religious law". In his house the façades were prepared. The text was checked by his master and the nīghāndī himself then drew the tughra upon it. It may be further noted that the majority of the façades that have come down to us were prepared by nīghāndīs.

These officials had also at first the right to examine and control all documents presented to him to be marked with the Sultan's monogram, which gave them a kind of supervision over the departments which sent them up (Mouradja d'Ohsouan, loc. cit.)

According to the Kāmān-nāme of the ṭirāfī (nīghāndī), "Abd al-Raḥmān (of 1085, M. T. M. p. 515), the following were the formalities to be gone through: When a firman is promulgated re-

quiring official authorization (nağihî ferman), the law required that the tughras should be executed by the grand vizier himself. On receiving this ferman, the mishâdji inscribed on the reverse the words defter gecik "let its register be brought" (in which is the precedent to be examined) and sends it to the defter rimâni. The latter at once sends back the ferman with the required register through the bânsûr (official in charge of the registers) of the archives (defter-immam). After finding the required reference, the mishâdji verifies it and keeps the ferman ordering it.

He also receives in a sealed bag (mumhär hânî) the defter issued by the bânsûr, writes on the register opposite the names of the beneficiaries of these defters the word qâlî "verified, seen, approved," again seals the bag and sends it by its kâdîâr to the âkîrîtân entîlî (who collects the chancellery dues). According to the hânsûr of Mehmed II, the nihâdjis had to be recruited from the mûderris of the grade of dâ'îlî and jâmi'î. The lists of defterlers (evidently on account of the qualifications demanded by these as regards legislation) and also from the defterler and the reis al-'âlîrîtâb. The early defterler ranked on this occasion as equal to the kâdirîyâ'îs, the early reis al-'âlîrîtâb only ranked equal to the sanââ'îtîb-heyî.

The reis al-'âlîrîtâb became more important and the nihâdjis gradually saw their functions reduced to the calligraphy of the tughras. Among their duties, however, they retained the control of the registration of transfers of timar (q.v. 'âdâsnî, kâhiyâ) and of the wa'îf villages (kânim-nâme of Mehmed II, edited by Mehmed Xirîf in 1330, p. 14, note 5, suppl. to T. O. E. M.).

According to the same kânim-nâme, in the âdânî-î adâsîyân, the nihâdjis occupied the place of honour (zâde) along with the wa'îf, the bânsûr, and the defterler. Precedence was arranged as follows: the wa'îf has precedence, then the nihâdjis, then the bânsûr, followed by the defterler, and on the other the nihâdjis. If a nihâdji had the rank of a vizier or heylîberîyâ (which gave him the title of paşa) he had precedence of the defterler; if he was only a sanââ'îtîb or emir rivâ (which only gave him the title of bey) he came after the defterler, but before the kâdiyâ'îs of the old and present capitals of the empire. The nihâdjis and the defterler had the same clerical title (âlisî; cf. Mângâlî-î Pardîn Bey, p. 9). The nihâdjis, having the rank of vizier, had the same privileges as the other viziers (kânim-nâme of Abd al-Rahîm). According to Mouradja d'Ossioon (iii. 373) the nihâdjis received a state salary of 6,000 piastres. Other details may be found in the same kânim-nâme of the ceremonial of the dâ'îlî as far as the nihâdjis were concerned. Like the other dâ'îlî kâdirîyâ'îs, they wore the ceremonial turban called musâhirwene. An eri or over-garment of wool, a kaftân or under-garment of kevâmât bûshî. According to v. Hammer (xxviii. 54), the robes of the nihâdjis were red, while those of the other kâdirîyâ'îs were violet. Their horses had a covering (zâbîrî) and harness (râkûtî) of the second class (orîtu). Their kâhiyâ was a little over 4 yîk (400,000 aspers).

Tughra kek. With the extension of the empire, the nihâdjis found themselves obliged to call in the help of other officials and the kânim-nâme of Mehmed II contains the following provision tughrâ-

The name meşâ'-î tughrâ "exercised (or penned) of the tughrâ" was given to the favour which the sultan granted to those he wished to distinguish by entrusting them with the task of preparing the tughras. (It was done with a brush or kâhiyâ).

The work of the nihâdjis was somewhat lightened by the fact that the orders of the Porte destined for the capital did not have a tughrâ; only the sultans sent to the provinces were tughrâlî ("supplied with a tughrâ") (Mouradja d'Ossioon, Biauschi and Kieffer, under the word تغریه). Cf. above however on the tughras of the Âhihî ferman.

In conclusion, we may add that the highest officials and even the governors of the second class in tracing their genealogy frequently gave it a form very like that of the tughras. I have photographs of orders issued by the four main waifs of Egypt (fig. 16-19) in which the genealogy resembles the sultan's tughrâ. In stead of (in the genealogy: 1061 and 1062 side by side) muqarrar two, and later three, elliptic circles are found. With the three shafts they form letters which apparently are a posteriorior reminiscence of the initial of the word kâhlî.

In stead of dâ'îlî, kâhiyâ is found. In stead of being at the top of the document, they were put on the margin of the right side and perpendicular to it. (I do not see why some writers will not admit that this peculiarity was dictated by feelings of deference to the sultan.)

When the nihâdji disappeared at the return, officials called tughrâkeh were kept to draw the tughras.

In the adâasî (official year-book) of the Ottoman empire of the year 1324 (1918), p. 123, is found the name of a tughrâkeh of the rank of sâmiyê (shûâbi) who belonged to the adâsnî-î adâsîyân (heylî-î alâisî). In the earlier annuals (e.g. 1302 = 1886, 1323 = 1907, 1324 = 1908), there are two tughrâkeh, known respectively as evessi and sâmi (shûâbi) who are mentioned as forming part of the mûsulmân adâsî, after the other officials i.e. the bânsûr kâhiyâ (later mûderris), müsâhirwîs (later), miftâh, mûderris (earlier), and two muqarrar. They had the rank of miftâh, sâmiyê and sâmiyê.

The earliest year-book of the Ottoman empire for the year 1265 (1847) does not mention the nihâdji, who however no longer existed nor the tughrâkeh, who was no doubt considered not of sufficient importance: the list of officials was less complete in this volume than in the others (cf. "J. A., Sept. 1847.

J. Decy

TUGHRA, MULLâ TUGHRA-i MAHMUD, a Persian literary man, was born in Maghâd (the date is not known) and went to India towards the end of the reign of Dâjmâh. After spending some time in the Deccan, he became munshi to Prince Mûrâd Bâkhsh in the reign of Shah Jâhân. He accompanied the latter on his expedition to Bâlkh. The conquest of the latter town and of Bakhshâna by this prince (1555–1557 = 1645–1647) was celebrated by him in a prose work (rûšâlâ). This rûšâlâ called Mrûsîr al-Fârîûh was later imitated by a certain Ghulâm Muhamîd al-Dîn who in 1135 (1722–1733) wrote a panegyric biography of a high military officer of the Mughal Empire, Saif al-Dawla Abd al-Samad (d. 1150 = 1737–1738) entitled Fârîûh-i-nâmâ-i Samâd.

Tughra later went to Isfâhân in the train of the Divâna (Privy Councilor) Mûsâ Awa Tâkî. Here he spent the last years of his life and died before 1078 (1667–1668). He is mentioned as already dead in a book written in this year (Rieu, p. 742). The year 1150 (1717–1718) in which, according to Pertsch (Die persischen Handschriften der ... Bibliothek zu Gotha, p. 24), a work by Tughrâ was completed, according to the colophon in the Gotha MS. No. 9, is to be referred to the copyist and not to the author of the text. Ch. Stewart (Catalogue of MSS, p. 64) gives 1323 a.d. as the year of Tughra's death; I cannot suggest how such an error arose.

Tughrâ wrote poems as well as prose (rûšîlî). Among his poetical works was the prose poem of Sâfîâ-nâmâ, a comprehensive Mawlawî in imitation of a work of the same name of an earlier poet Šâhârî (d. 1025 = 1616); Tâbīî-i Khâshâh, a description of Kashmir in Mawlawî form. Here also he imitated an earlier poet, Hâkim Zaîhil (d. 1026 = 1617). Tughrâ also wrote a preface to the works of this poet (cf. E. Châfis, Catalogue of the Pers. MSS, in the India Office Library, p. 316, 319). The Tâbîî was apparently composed in Kashmir i.e. after the poet had left the Mughal court. Tughrâ, like almost all Persian poets, also wrote ghâzals, rûšîlîs, muqâţâ'at etc. His rûšîlîs, written in very affected, pompous prose seem however to have enjoyed greater popularity than his poems. They exist in a number of MSS, while those of the poems are less numerous (in Europe at least). Tughrâ wrote about 25 of them, a list of them extent in MSS, will be found in the books quoted below in the Bibliography.——-

Here it is sufficient to mention in addition to the

Mîrâsîr al-Fârîûh, Mîrûsîr al-Idrîsh, an essay on the Divan of Hâfiz, Firdawsiyya and Tâbîî-i Khâshâh, two descriptions of Kashmir in prose; Tughrâ-i al-Asghâr, panegyrics on twelve contemporary scholars and poets of Kashmir; Mrûsîr al-Idrîsh, a satire on an emir of the court of Golkonda; Dînâyiszâ, a panegyric on Awarangzîb and Firdawsi, a panegyric on the Shâh of Persia 'Abdâbîl Shi. Lastly it may be mentioned Tughrâ's letters to various contemporaries, An edition of 18 of his rûšâlâ with the letters and commentary appeared (lit.) at Cawnpore in 1871 and Lucknow in 1885.

(V. F. Böckner)

AL-TUGHRA, MU'AIYYID AL-DIN FAKHR AL-KUTAYBI ABU 'ISMAIL AL-'HURAINI, ALI B. MUHAMMAD B. ABU AL-SAMAD AL-ISFAHANI, better known by the name of Tughrâ (so named after the scroll, consisting of the name of the sovereign and his titles, written at the top of official documents above the Basmala), an Arab poet, was born in 453 (1061) probably in Isfâhân. His early career is imperfectly known, but he appears to have first been engaged as secretary in Erbil. Then he entered the chancellory of the Saljuq Sultan and served during the reign of Malikshah and his son Muhammad. He was without equal as regards the beauty of his calligraphy, but according to the prolix statement of 'Imâd al-Dîn, his work was tedious slow. The vizier of Sultân Muhammad may have feared his rivalry was his enemy and should have liked to have him removed, but could find no cause. That Tughrâ's aspired to higher things is evident from the remark of the biographer that he spent money on bribes to obtain the position of vizier, but was not successful. His chance seemed to have come when Sultan Muhammad died, while he was with prince Mas'ud at Mawâqil, while the Wazîr al-Samairini was with prince Mahmûd at İsfaheen. In conjunction with other nobles they persuaded Mas'ud to throw off allegiance to Mahmûd, whom al-Samairini had proclaimed Sultan of the Western provinces of the Saljuq empire. Sultan Muhammad had died in 511 (1117–1118) and it was only in 513 that they tried to make a bid for the throne. An ill-equipped army accompanied by Mas'ud and Tughrâ, al-Mas'ud was at last vizier, marched to meet the army of Sultan Mahmûd. A battle was fought in the neighbourhood of Hamadân which
resulted in the complete defeat of Mas'ud. He himself was made a prisoner as also was Tughril who had thus fallen into the hands of his enemy. Mas'ud was pardoned, but Tughril's condemned to death, because he was declared a heretic. He was ordered to be shot with arrows by a company of soldiers, but some verses uttered by him as he was facing death caused the visier to defer the execution of the sentence. It was however carried out a later date, which is generally fixed in the year 512 (1216-1217). The chronology of these events is far from certain. Ibn al-Athir dates the battle in the year 514 and one account even gives 513 as the date of Tughril's execution. This latter date is certainly wrong, because al-Sumairi was murdered in the month of Safar 516 in Baghda as near the Ni'amatya Madrasa by a negro slave who was said to have belonged to Tughril's and committed the murder to avenge his master.

The reputation of Tughril rests principally upon his poem, the Lamiyat al-Adjam, composed in Baghda in 505 (1111-1112), in which he complains about the evil times in which he lives. This poem, published by Gallus with a Latin translation, was perhaps the earliest specimen of Arabic poetry accessible to wider circles in Europe and was several times reprinted and translated into other languages. It has also been the subject to a number of Arabic commentaries. The Dilmun, printed in Constantinople, was collected after the author's death and contains, in addition to the Lamiya, poems in praise of notables and princes, and the latest compositions are perhaps those in praise of his youthful master, prince Mas'ud.

There was another branch of study cultivated by Tughril, namely alchemy and in this pseudo-science he composed a number of works, which, as Dhahabi put it, were the cause of the waste of untold wealth, both by the author himself and by those who made use of his works. The language is these is abstruse with this class of literature. The following titles of his works are recorded and several of them exist in manuscript: 1. Dilmun al-Adjam (MS. in Goa?); 2. Tarikh al-Ammur (perhaps only part of the title of the first-named); 3. Hai'at al-Fatimihudat; 4. Kitab al-Khate al-Faw'id; 5. Kitab al-Rudda 'ala Ibn Sina fi Ruhul-Khulafa; 6. Ahrurrah al-Ilhama wa-Mu'attal al-Rahma; advanced students only (MS. Paris, No. 2514); in addition to these the Paris MS., No. 2067 claims to be a commentary of the Kitab al-Rahmah of Djibr b. Haiyans under the title Sir al-Hikma fi Sharh Kitab al-Rahma but the authorship is uncertain.

Editions of his poems: Dilmun, Constantinople 1300; Lamiya by Gallus, Leyden, 1629, reprinted by H. van der Sloot in Franeker 1769; E. Pocock, Oxford 1661 with Latin translation, reprinted in 1770 by J. Hirth in Institutiones Arabicarum, Jena; L. G. Parens, Utrecht, 1828, and A. Raux, Paris 1903 with French translation. English translations by J. D. Carlyle, Specimens of Arabic Poetry, Oxford 1796; reprinted by W. A. Clouston, Arabic Poets, Glasgow 1881; L. Chappelov, Cambridge 1758 (after Pocock's Latin version). French translation by B. Vattier, Paris 1650, after Gallus and the one by Raux mentioned above. Commentaries: Sulah al-Din al-Safadi, Ghazir al-Muwadridjan bil-Sharh Lamiyaat al-Adjam, also called Ghazir al-Adjam al-Safadi 'alawd us Salama, printed Cairo 1320 and 1305. This is a voluminous work and enlarges upon all subjects connected with the poem or otherwise. Several abbreviations exist of this commentary: one, called al-Kitab al-Arab al-Mu'addi 'ala al-Khadijat al-Mawdudi, by Abd al-Rahman al-Afwas, was printed Bahrutt 1290; another, much curtailed abridgment, with the title Kitab al-Arab fi Ghazir al-Adjam, was printed Bahrutt 1897.

Other commentaries found in manuscript are Nafir al-A'lam fi Sharh Lamiyaat al-Adjam by Muhammad b. 'Umar al-Hafrasmi (died 939) of which a number of copies are found in libraries; Naft al-Adjam 'an Lamiyaat al-Adjam composed in Constantinople in 962 by Djallal b. Khidr; the oldest commentary is perhaps that by Muhammad al-Din Abu 'l-Bakr 'Abd Allah b. al-Husain al-Ubkit (d. 616). The commentary by Kamal al-Dinami is also a mere extract from that of al-Safadi, and many more.

Biographies of Tughril are found in almost all historical works giving obituaries; all appear to draw upon the same sources: Ya'qub, Ittihad, iv. 50-60; Ibn Khallikan, ed. Cairo 1310, l. 159; Safadi, Ghazir, Cairo 1305, l. 6 sqq.; Ibn al-Athir, Kamil, passim; Bundarti, ed. Houtsma, Recueil, ii., passim. Verses of his are cited in all later anthologies.

Bibliography: given above.

(F. KEENOW)

TUGHRIL II 8. MUHAMMAD, a Seldjuk ruler in the Trak 526—529 = 1132—1134, b. 505 = 1109, had as his guardian (ahlubeg) the docile emir Shigrit and received as his fief a large part of the province of Dijbal with the towns of Swa, Kaswa, Abbar, Zandjin, Aflak, etc. On the death of his father (511 = 1118), the Atabeg Shigrit was thrown into prison and his place taken by the emir Kindoghli, who was on bad terms with Sultan Maliksh, Tughril's brother. With Kindoghli he took part in the unfortunate campaign against the Georgians in 515 (1121) and was in a serious position when his atabeg died in the same year and his relations with his brother never very good, became still worse. In these straits he was easily persuaded by the able and turbulent Arab Dibaj and Sadoqilt as [q.v.] that it would be easy to seize the province of al-Trak and get rid of the caliph and the sultan. The enterprise failed however and the two sought refuge with Sultan Sandjar, who took up their cause and began negotiations on their behalf with Maliksh in al-Ray (end of 522 = 1128). Some years later (524 = 1131) Maliksh died and his son Dizd was summoned to the throne temporarily until Sandjar had finally decided the succession. The latter declared for Tughril, but in the meanwhile another brother, Mas'ud, had claimed the throne and was approaching with considerable forces. In the battle that followed at Dimawar (526 = 1132) between Sandjar and Mas'ud the latter was defeated and sent back to his province of Ganda while Tughril was installed as sultan. Sandjar then departed and left his nephew to enforce his recognition upon his opponents. He was successful in routing Dizd's adherents but the latter himself escaped to Baghdad. Mas'ud was soon in power there and was able to persuade the caliph to mention him in the ikhsupa and designate Dizd as his successor (527 = 1132). Tughril was not a match for his brother and, after wandering about a great deal, sought refuge with the ispahbad of Tabaristan where he spent the whole of the winter of 1132—1133. In the
following year fortune was rather more favourable to him and he succeeded in again carrying the life granting him the throne. On arriving there, he fell ill of a cholera and died early in 529 (Oct.-Nov. 1134). }\textit{Biographies}, i. 174, wrongly gives 528. His widow later married Ildgut [q. v.], who raised Tughril’s son Aslan to the Seljuq throne (555 = 1160).

\textit{Bibliography}: Cf. the article \textit{Seljuqs}.

(M. T. HOUTSMAN)

\textbf{TUGHRIL II} k. ARSLAN, the last Seljuk Sultan in the \textit{Irak} 571—590 (1175—1194) was born in 564 (1168-1169) and when still a minor was raised to the throne by the Ayyubid Prince of Tughrilib. After his father had been poisoned to thwart his ambitious emblems he succeeded in escaping and seizing the Seljuq capital Hamadan. In order to remove the danger of dispossession by his powerful kinsmen, Khiw Arslan asked the caliph to send him troops from Baghdad while he himself advanced from Adharabjaban but the incapable leader of the Baghdad army, the vizier Ibn Uthman, attacked Tughrilib at Dayarg (584 = 1188) and suffered a terrible defeat from the impetuous bravery of his opponent. Little however was won thereby for Tughrilib’s cause, for Khw Arslan was coming nearer and the caliph was equipping a new army. To add to his troubles, the young Sultan quarrelled with his own people and on his return to Hamadan hanged several of his most promising supporters. The result was that he could not hold out in his capital, which was very soon taken by Khiw Arslan, spent some time ravaging the region of Urmia, Khoy and Salmas, and, in vain to win the caliph to his side, applied without success to several Muslim princes, including Salih al-Din, for help and had finally to surrender to Khiw Arslan, who imprisoned him in the castle of Kahriz near Tabriz in 586 (1190). Khiw Arslan then himself occupied the throne of the Seljuq and, when he was murdered next year at the instigation of the widow of his brother, Tughrilib succeeded in escaping and found an asylum with the Banu Kafkha, in Zandjan. The lack of unity among the sons of Pehlivan, now the rulers of Adharabjaban, gave him the opportunity of coming again to Hamadan and marrying Pehlivan’s widow, only however to put her to death. He also took Ishaq and al-Ra’i and sacked the stronghold of Tabarak near the latter town (Yakut, \textit{Majdian}, iii. 507 sq.) but this brought upon him the enmity of the powerful Khwarismahiz who only a short time before had taken al-Ra’i. He was not inclined to lose this city and sent troops there to take it from the Seljuk Sultan. The wise course would have been to avoid their superior numbers but Tughrilib felt it a point of honour to defend the Seljuk claims on the \textit{Irak} even at the cost of his life, namely awaited the approach of the enemy in spite of the advice of his friends, then threw himself with a few faithful followers on the fort and was immediately slain (29th Rabii’ I 590 = March 25, 1194).

\textit{Bibliography}: Cf. the article \textit{Seljuqs}.

(M. T. HOUTSMAN)

\textbf{TUGHRILBEG, RUKN AL-DIN AND TALIJUH MAMMUDDI NIKKIL}, the first Seljuk Sultan 429—450 (1033—1063). For the beginnings of Seljuk power, the rise of Tughrilibeg and of his brother Caghirilibeg, the reader may be referred to the article on the latter. Here we begin with the year 429 (1033) when Tughrilibeg entered Naishabur and his name was mentioned in the \textit{khamsa} there. Al-Baijaki, p. 691, gives interesting details of this. Ibn al-Athir and others say that as early as this he received an envoy from the Caliph, who complained of the robberies of the rude Ghuz which is very probably correct, for we know that the Seljuqs in their earliest document (Baijaki, p. 553) call themselves \textit{mawali} (clients) of the Commander of the Faithful and that there were from the first certain relations between the Seljuqs and the Caliph. Tughrilibeg had however very soon to abandon the town again on account of the Ghaznavids, and only after the defeat of Mansur at Dandanqan on 7th Rama’man 431 (May 22, 1040), were the latter forced to withdraw from Khorasan and leave this province to the Seljuqs. The leaders of the latter, among whom may be mentioned Tughrilibeg, Caghirilibeg, Ibrahim Inal and Kusam, had begun to extend their rule over the adjoining lands also, each for himself, although Tughrilibeg was conceded a certain pre-eminence. The first to submit to him were the Ziyarids of Qadjaran and Tabaristan on payment of an annual tribute in 433 (1041—1042). In the following year he assisted his brother Caghirilibeg in the conquest of Khwarizm; he then restored order in al-Ra’i, where the rudely Ghuz were laying waste the country under Ibrahim Inal, and conquered the Bujj Madjd al-Dawla, who had still been holding out in the stronghold of Tabarak. The rule of the Seljuqs was recognised in Khorasan and Hamadan also; Faridz and the lord of Ishaq, agreed to pay a sum of money. Through the intervention of the Caliph, who sent the celebrated jurist al-Mawardi to Tughrilibeg for this purpose (435), the Bujj Djalil al-Dawla sought to make peace with the Seljuqs but, as he died in the same year, the result desired was only attained under his successor Abu Kamilq in 439 (1047). Ibrahim Inal, who had ravaged Kusam with his Ghuz and was now on his way to Baghdad and had reached Huvan and Khanik, was therefore instructed to retire and seek another field for his activities. Thereupon turned against the Abkhaz and Byzantines, took the prince of the Abkhaz, Lipanites, prisoner and carried off such vast booty that 10,000 waggons were not sufficient to transport it (440 = 1048). A ...
had and in 492 (1050) besieged Isfahān whose ruler Farākār, according to circumstances, kept in the good graces of the Sulṭān of or the Būyids in turn. The siege of a fortified town was not a task for his rude warriors, so that it drugged on and Farākār was only forced to surrender for want of supplies in the following year. The town pleased him so well, that he decided to make it his residence and to give Karākār and Abarjūr in compensation. In 446 (1054) we find him, after a severe illness, in Ardabūlqishīn to receive the homage of the lords of Tabrīz and Garjū. A raid into Byzantine territory had so far not resulted, the siege of Mallakart had been abandoned (cf. Matth. of Edessa, ch. 78; Cebrenus, ed. Bonn, ii. 90). It is true that he was then busy with other schemes; in the autumn he collected his troops and had large supplies of munitions accumulated in Hamadān with the object of undertaking the great campaign against Baghdad. He was invited to do this by Ibn al-"Umarīs, vizier of the caliph, who had been conducting a secret correspondence with him, because the Būyids rule of Malik al-Rāhmīn, successor of Abū Kālidār after 440 (1048), which exercised by their military command in Baghdad al-Batrānī [q.v.] who had a secret arrangement with the Fātimids, was intolerable to him and the caliph. Tughrīlībīg did not hesitate to accede to this appeal and in Ramadān 447 (1055) reached Hulawī on his way to Baghdad where his arrival caused great dismay. Al-Malik al-Rahimīn, who was in Wāṣat, at once hastened to the capital: but al-Batrānī found it advisable to depart and seek refuge with the Masnadād of al-Hilī, Duhailī. There was now no obstacle to open negotiations with Tughrīlībīg. By Ramadān 448, 447, the caliph had his name mentioned in the Khāqān and three days later the sultan entered Baghdad. The presence of the rough Ghūrī however soon led to plundering and murdering and threatened to end in a regular street war with the citizens, so that Tughrīlībīg had at once to intervene to put an end to this state of affairs and, under the pretext that al-Malik al-Rāhmīn had brought it about, he had him arrested in spite of the Caliph’s intervention and the rule of the Būyids was ended for ever. The alliance with the caliph was cemented by his marriage with a daughter of Caghrībīg, but the sultan and caliph only met after the former had brought Duhailī and other rebellious Arabs to terms (end of 449 = beg. 1056). He was given the title of “King of the East and of the West”. Soon afterwards however a change set in; al-Batrānī had in the meanwhile been working actively for the Fātimids and even Ibrāhīm had been tempted to rebel against Tughrīlībīg, handed over his post in al-Mawjūd to al-Batrānī and himself went to Hamadān where many of the Sultan’s Ghūrī who were resting under the long period of inactivity in the Irāq joined him. Tughrīlībīg therefore set out from Baghdad with the troops that had remained faithful to him and when the sons of Caghrībīg came to his assistance with more troops, was able to take Ibrāhīm into prisoner at al-Ra‘īy and had him promptly executed. In the meanwhile al-Batrānī entered Baghdad, which was now empty of troops, and had the name of the Fātimid caliph al-Muqtadir inscribed in the statue of Dhūl-Kā‘īdā (450 = Dec. 27, 1058), while the Caliph and his vizier Ibn al-Muslimīn appealled for the to Kurāish b. Badrīn [q.v.] who was a friend of al-Batrānī’s. The latter succeeded in bringing the Caliph in safety to Hadīthā ‘Ama and landed over the vizier to the vengeance of al-Batrānī who inflicted a cruel death upon him. Exactly a year later Tughrīlībīg appeared on the scene, brought the caliph again into his capital and defeated the troops of al-Batrānī, who was himself slain in the battle (end of 451 = beg. 1060). The memory of these events was still kept alive in Yā‘qūb’s time in Baghādā by certain proverbial sayings (Mu‘āshīyān, iii. 595; 1096). Tughrīlībīg then went to Wāṣat, made peace with Duhailī and appointed farmers the collection of tribute in Wāṣat and Bayya. In 452 (1060) he was again back in Baghādā attending to a business which he had very much at heart, namely, the seeking of a daughter of the caliph in marriage, against which the pride of the ‘Abbasīs revolted. It was only when Tughrīlībīg’s vizier, al-Kandārī, threatened to confiscate the revenues of the caliph, that the latter yielded and the wedding took place during an absence of the Sulṭān in Armenia (454 = 1062). On his return to Baghādā, in the following year, however, he was only allowed to see his bride veiled, and he departed for al-Ra‘īy without the consummation of the marriage being mentioned. Moreover he was now an old man of 70 and his end was near, for he died in al-Ra‘īy on 8th Ramadān 455 (Sept. 4, 1063). On the death of his brother Caghrībīg, he had married one of his wives, as he was himself childless. He had designated her son Sulaimān as his successor but the latter was at once compelled to leave the field for another son of Caghrībīg’s, namely Alp Arūnī [q.v.].

(M. Th. HOUTMÉN)

TUĞHTEĞIN P. 'ABD AL-LAH AMĪN AL-DIN ĀD-DWIṢ AL-MANŞĪ, FOUNDER OF THE DYNASTY OF THE BūRIDS. Tughteğin began his military career as a mamlik in the service of the Seljūq Sulṭān Tutuş [q.v.] who afterwards manumitted him, entrusted him with the education of his son Dūkāk and even gave him the latter’s mother Šafwat al-Malik as a wife. After Tutuş had fallen in battle with his nephew Barkīyashī (488 = 1095) Dūkāk was recognised as lord of Damascus. He showed the greatest respect for his stepfather and, following the example of so many other Atthebs, Tughteğin soon thrust himself into the position of actual ruler. On the death of Dūkāk in Ramadān 497 (June 1104) he had homage paid first to a son of the deceased named Tutuş, who was only a year old, and then to a brother of Dūkāk, the 12 year-old Artōş (or Bektāş). Artōş however was soon thrust aside and Tughteğin recognised as the ruler. The former thereupon entered into negotiations with king Baldwin I of Jerusalem. It was not long before Tughteğin came into conflict with the Franks. When the Fātimid vizier al-Malik al-Afdal sent a large army to Palestine, Tughteğin was persuaded to send forces to support him. In Dhū l-Hijdādīa 498 (Aug. 1105) however Baldwin inflicted a severe defeat on the Muslims near al-Ramlī. In Safar 499 (Oct. 1105) Tughteğin defeated a Frankish Count who had been harassing the district of Damascus by repeated raids and destroyed his fortress, only two days journey from the town. Soon afterwards — or according to another authority a little earlier —
he also took Rafiyya where a nephew of Count Raymond was in command. He was less successful when he tried to take the fortress of 'Irka N. E. of Tripolis, the commander of which had broken his allegiance to his lord, al-Kaššāl Ibn 'Amār (q.v.) of Tripolis, and sought the help of Tughtegin. The latter succeeded in taking several strongholds but on hearing of his success, Count William of Tripolis took the field and defeated the Damascans troops so thoroughly that they fled in disarray to Hims whereupon he took 'Irka (Sha'ban 502 — March 1169). In 504 (1110/1111) the Saljuqs Sulān Muḥammad (q.v.) at the request of the Syrian fugitives decided to intervene vigorously against the Franks, ordered the ruler of al-Mawqil to collect an army and take the field against the Franks and issued orders to all the vassals of the Saljuqs to join Mawḍū'ī's army. After a few successes, the Muslim leaders began to quarrel and on Rabī' I, 507 (Sept. 1113) Mawḍū'ī was murdered by an Assassin in Damascus. Several Muslim rulers including Tughtegin were suspected of complicity in this deed. But when Sulān Muḥammad appointed the police-prefect of Baghādād, Aḥ-Sonkor al-Baraʾī (q.v.), as Mawḍū'ī's successor, the Ortoqiẓīd Ighāṣī I (q.v.) rebelled as he felt himself insulted by this appointment. Tughtegin joined him, as he was regarded in Baghādād as the instigator of Mawḍū'ī's assassination and therefore feared the vengeance of the Sulānī. On the alliance of these two Muslim leaders with the Christians and the further course of the war, cf. the article Ṭūqṭūq. In Dhu'l-Qa'da 509 (March—April 1116) Tughtegin went to Baghādād and submitted to the Sulānī who gave him a friendly reception and even appointed him governor of Syria with the right to recruit levies and regulate taxation. Tughtegin after some time again joined Ighāṣī and they continued their joint war on the Franks (cf. Ṭūqṭūq). In course of time however Tyrre fell into the hands of the Christians. This important commercial town belonging politically to Egypt but in 506 (1111—1112) the citizens out of fear of the Franks had appealed for help to Tughtegin. The Ṭāṭābūn sent them a governor named Maṣūd who held his office for some years. The Tyrians then complained of his conduct to the Fātimid caliph who at once dismissed him and appointed another governor. When the Crusaders threatened to attack the town, the new governor appealed to Tughtegin. The latter could not force the besiegers to retreat and had to begin negotiations. The garrison and the inhabitants were given free passage with their portable possessions and in Dhu'mīdād I, 518 (July 1124) the Franks entered Tyrre. Tughtegin, "one of the most dreaded enemies of the Christians", died on the 8th Safar 522 (Feb. 12, 1128). He is described by the Oriental historians as an able and just ruler. In accordance with his wish, his eldest son Tāḏ al-Maḳākīr Būrī succeeded him as lord of Damascus.

TULAIQA b. KHWAILID b. NAWFAL AL-ASAD b. FĀQĀN, one of the tribal leaders who headed the ridda as prophets.

In 4 A.H., being in command of the Banū Asad with his brother Salama, he suffered defeat from the Muslims in the expedition of Kaṭān. The following year he took part in the siege of Maḏīna. Early in 9 A.H. Tulaiqa, as one of ten Asadas, probably representing only a section of the tribe, came to Maḏīna and submitted to Muḥammad. Sura 3:14—17 is said to rebuke their arrogance, but a tradition that only Tulaiqa embraced Islām, points to political submission rather than conversion, he alone being considered a convert only because the ridda was explained as religious apostasy. The whole story may have been invented as a parallel to Musa'llīna's visit to Maḏīna.

Tulaiqa rebelled in 10 A.H.; he concentrated his forces at Samra', assumed the role of prophet, and is said to have offered terms to Muḥammad, who sent Dirār b. al-Aṣwar to keep him in check. No encounter of any consequence followed until after Muḥammad's death, when Tulaiqa succeeded in gaining the support of the Banū Faṣār and an important portion of Ta'y, and joined the revolt in central Arabia, sending troops to the battle of Dhu'l-Qaṣrā.

In Rājdāb 11 Khālid b. al-Walīd marched against Tulaiqa, and with threats persuaded most of the Banū Ta'y to follow him. The battle took place at Buzākha; Tulaiqa's defeat is attributed to the defection of 'Uyaina b. Ḥisham, chief of the Banū Faṣār, disappointed, it is said, by his failure to obtain an encouraging revelation. Tulaiqa fled with his wife; many of his followers, refusing Islām, were burnt alive, and his mother sought death in the flames.

After Buzākha, Tulaiqa lived for a time in obscurity, near Ta'if or in Syria. He was eventually converted after the Asad, Ghaṭaṣān and 'Amir's submission; passing through Maḏīna on the 'umra some time later, his presence was denounced to Abī Bakr, who mercifully refused to molest the convert. On 'Umar's election, Tulaiqa went to do homage to him; the Caliph reproached him for slaying 'Ukkāsha b. Miḥṭan and Tāḥīt b. Aqṣam at Buzākha and asked him what was left of his divination. "One or two puffs of the bellows", Tulaiqa modestly answered.

His subsequent military career was long and creditable; he performed acts of valour at Kāḏīya, at the head of his tribesmen, led the Muslim infantry at Dijālāt, and the victory of Niḥāwān has been credited to his plan of attack. He is generally reported killed in this action (21 A.H.), but we find him mentioned in 24, one of 500 Muslims who garrisoned Kāwīn, and the date of his decease remains uncertain; 21 was probably fixed upon because it was the year in which Khālid, Nūr b. al-Maḳkātarr and 'Amr b. Ma'dikārī also died.

His real name was Ta'la; the diminutive is contemptuous (cf. Masālima—Musālima). Of his revelations, which he claimed to receive from an angel
(Gabriel or Dhu 'Nun), very little is known; one is a prophecy of conquest in Syria and 'Iraq, another mentions the millstone, a common metaphor for victorious military action. He appears rather as a soothsayer than a prophet, for his few known attestances concern actual events, and no religious system is discernible.

Tulaiha was a gallant warrior, considered the equal of a thousand horsemen, but he lacked the qualities of a leader, to judge from his short career as a rebel. 'Umar wrote to al-Nu'man b. al-Ma'qarin concerning him: "use him in action and consult him on military matters, but do not entrust any command to him". Mention is also made of his oratorical and poetical improvisations on the field; he appears to have been a perfect type of the pagan tribal leader, combining the offices of soothsayer, poet, orator and warrior.

al-TuIAlli, an ethnic which the learned Spaniard Abu l-K'asim S'Id b. Ahmad al-A'zami, commonly called "the Kadi S'Id", is sometimes known. Born at Almeria in 1420 (1029), S'Id began his studies at Cordoba and completed them there, then the capital of the dynasty of the Dhu 'Nunids [see this article] and the centre of a very brilliant intellectual activity. He very soon made a name for himself by his knowledge of law, mathematics, astronomy. Appointed Kadi of Toledo by the Dhu 'Nunids emir Vahy al-Ma'mun, he held this office till his death in Sawwail 462 (July 1970).

S'Id wrote a treatise on astronomy, a universal chronicle and a work in the style of the Kitab al-Nihai of Ibn Hazm, which now appears to be lost. At the present day, we only possess by this author a history of the sciences, called Kitab Tabakh al-'Unmay (ed. by Cheikho, Bairut 1912). This book is divided into two parts. In the first, the author treats of the peoples who do not cultivate the sciences, and confines himself to generalities. In the second, S'Id studies the eight nations who have been interested in the sciences namely the Hindus, the Persians, the Chaldauns, the Greeks, the Occidentals, the Egyptians, the Arabs and the Jews. At the present day, only the chapters on the Greeks, Arabs and the Jews deserve our attention. The brevity and the anecdotal form of the notices, the absence of any technical development, moreover, show clearly that S'Id had never intended to compose a profound treatise after the manner of the specialists but only a simple popular work. The Kitab Tabakh al-'Unmay unfortunately soon lost in the eyes of the public the character, which its author had given to it. Very soon from being a summary of the history of the sciences, it came to be regarded as a leading work dealing thoroughly with all human knowledge. Soon, and this is more serious, the work of S'Id was ever regarded, no longer as a compilation but as a first hand source of information. In the sixteenth century this error was definitely sanctioned by the Arab authors who wrote on the history of the sciences. Ibn al-Kifi borrowed largely from the Kitab Tabakh al-'Unmay and it can be estimated that the parts taken from this work form a good quarter of his Turkh al-'Hukumay. Even Ibn 'Abd Usaybin, in his great work called 'Uyun al-Anwa' fi Tabakh al-'Ashab al-Kabir, has reproduced several biographies of physicians, the text of which has been taken from S'Id's work. Finally the Christian Bar Hebraeus has taken from the same treatise the division of peoples into the friends and the enemies of science as well as the general sketch of each of the races studied in his Arabic chronicle, Muhkam al-

TuIAlli, a Turkish noun meaning: 1. (obsolete) regular fireman; 2. (modern usage) volunteer or irregular fireman; 3. (figuratively) a badly brought-up person (R. Yonoun); a street rowdy, a ruffian (Red-house), derived from tulumba; "pump, hydraulic machine" (Menzinski, Thesaurus, 1680, p. 1355; cf. Relation de l'Ambassade de Mohamed I, Paris 1841, p. 52).

The word tulumba is for the Italian tromba with the same meaning, with change of r into t and epanthesis of the disjunctive vowel u between the two initial consonants. One also says yangi tulumbasi "fire-engine" to distinguish it from the other meanings of the word tulumba which are "sounding, pipette of the surgeon or douanier (istimara tulumbasi: wine-pipette); watertop in the sea". The word tulumba has become popularised in Turkey by its naval use, if one may judge from the common phrase qarga tulumba etmek, a transitive verb, which means "to work (cf. Venetian carico) the pump, i.e. for two or more people to carry some one — especially ill, wounded or dead — by taking him by the head and body" (Mehemet Djewdet, Akedal 'olker, p. 156; Husain Rahmi, Djan pasart, Hthime of the December 8, 1922). The Turkish tulumba (and the Italian tromba) may be compared with their synonyms, the old French trompe (Jul, Glos. Nautique), the Basque tromba (ibid), the modern Greek πυράμος ot πυράμος (Heseling, Les mots maritimes). The word tulumba has passed into most of the Balkan languages: Romanian (perimy, Danu), Bulgarian, Greek of Rumelia (P. Louis Romerovale). The Persian tulumba (Nicolas) and, in part at least, the Arabic of Syria and Egypt and the north coast of Africa turumba or tulumba must be borrowed from the Turkish.

One knows how frequent and violent are the Constantinople fires, especially in the past, A Turkish proverb says "if it were not for the fires in Constantinople, the thresholds of the houses would be of gold" (Istambulun yangi oltama, evlerin sikhity atldan ordu). Many things combined to make the old capital of Turkey perpetually threatened by fire and to keep away from it until quite recently even the most enterprising insurance companies.
The houses were almost all of wood (джагь) and painted with oil (тампак), in the time of Baron de Tott. Through laziness, as well as from fatalism and fear of earthquakes, of relatively rare occurrence, however, the Turks did not build of stone. The government, which, it was said, was afraid to allow any places of any strength in which rioters might hold out, was very reluctant to grant permission to build houses of stone (джагь, popularly джагь), джагь, джагь, джагь, джагь). Apart from Pera, where hewn stone appears relatively early, there were only the mosques, fountains, khamis, public baths, mekteb (markets, covered in and closed at night for valuable merchandise) and a few houses of the Fatamiys, some ancient monuments, like the aqueduct of Valens, which might escape the action of the fire and sometimes even served to bar the advance of the flames.

It should also be noted that the lead melted from the domes of some of these buildings during a fire ran into the street and made approach to them dangerous. There were also places for shelter built of masonry in the better class houses. Called джагь, they were excellence, and strengthened by iron doors, they were regular strong-boxes for articles of value. They were fire-proof, but one had to wait some weeks to open them after a fire, for fear that a premature draught might carry the flames inside. As, in the case of a fire, nothing was left but these cells, the chimneys and the foundations of stone, the debris was easily cleared away and the town was rapidly rebuilt, but this was only an illusory advantage for it sometimes happened that an afflicted quarter was burned down again, even before it had been completely rebuilt.

The streets were narrow and the landlords were able to prevent the government from widening them (as was the case, for example in the reign of Оghмщ III).

3. Rises in the wind are frequent on the shores of the Bosporus, where the breeze from the sea frequently changes its direction. It is said that there is a recurrence of fires, when aubergines (патлла) are in season, when the breeze which bears the same name (патлла мелать) blows on the kitchens.

4. The older Turks used to be exceedingly careless in the use of tobacco-pipes (тбак) and тандир (or тандур for томур), a kind of heating box for the winter.

5. Attempts by incendiaries (къндаб) were not rare. They used to throw into the houses dolls made of inflammable material (къндаб, a word of Greek origin) either for political reasons, or simply out of vengeance. It may be said that every crisis in domestic politics was accompanied by violent fires, the people adopting this simple method of manifesting their discontent. The firemen were sometimes their accomplices and fed the fire instead of extinguishing it. Among the best known cases of incendiarism are those which occurred during the rule of the unpoetic chief enunach, Beshtr Agha under Mahмуд I (according to Jouanni, Turquie, p. 343, this was the first occasion on which къндаб was used), during the occupation of Egypt by the French and on the accession of Mahмуд II. As to fires started out of personal vengeance, they were very frequently the work of negro slaves dissatisfied with their masters (according to Basili).

It would take too long to enumerate the fires recorded in Turkish annals. We shall mention only those which were of particular violence of the period from 1750 to 1756 (principally from v. Hammer, Histoire, xiv., p. 290 sq.). In 1750: on February 31st, a fire which lasted 36 hours and burned up 6,667 houses and the Porte of the Agha of the Janissaries; 18 days later: a fire which destroyed the house of the multi among others (started out of malevolence), two months later the market for arms. In 1751: 2,000 houses destroyed at the same time as the exi oldar or "old barracks" of the Janissaries. In 1752: several fires directed against Beshtr Agha (cf. above). In 1754: four great fires. In 1755, reign of Оghмщ III: on 12th July, 16 hours after sunset, 2,000 houses; 3 months later, a fire of 36 hours which consumed a large number of houses, notably the Sublime Porte or Porte of the grand vizier and that of the джанисар. Finally in 1756 on July 6th, there broke out the greatest fire recorded since the conquest of Constantinople: 3,000 houses were destroyed (Théophile Gautier writes 80,000). Fanned by the wind, after being temporarily checked by Saint Sophia, the flames went in 13 directions and ultimately combined to form one vast conflagration. This catastrophe has been described by de Tott.

Théophile Gautier noted 14 fires, most of them considerable, in one week during his sojourn in Constantinople. In his time, there were very few fires over 60 years old. In our own day the Fatih quarter has been completely destroyed. Thus in spite of Muslim fatalism, the outbreak of fire was no trifle. Watchmen, usually musicians (mekhter), were stationed in the tops of the towers of Galata, and later on those of the Sancakart, and announced outbreaks by beating drums and by hanging from the towers baskets during the day and lanterns during the night, varying in number according to the quarter to be indicated: Stambul, Galata, Scutari.

The night watchmen (пеби or пасуда for пасл) used to utter their cry of йсамомлы (or Galatada) yangin var! which travellers have made well-known (de Amicius used it as the title of a chapter of his Constantinopolis). As soon as the alarm was given, the grand vizier, the падишах паша and the Agha of the Janissaries sometimes the sultan himself, went to the spot and each official had to pay a kind of fine to his superior, if he allowed the latter to reach it before him. Th. Gautier particularly noticed the local colour provided by the odalisque dressed in red, whose duty it was to warn by his mere appearance the sultan, who was in his harem (cf. Robert de Piers, Vers l'Orient, p. 362).

The institution of firemen in Turkey is however of relatively recent date. Ewliya Celebi (xviith century), who gives a long and varied list of trades including the very humblest, does not mention any particular organisation for fighting fires. They were content to limit the area affected by demolishing houses with the help of long poles with hooks on the end (къндаб) and the destruction was completed with axes. Castellani also mentions the chains which were tied round walls in order to pull them down, and Basili talks of sheets sewn together and soaked with water, to protect the houses adjoining the centre of the conflagration.
According to the historian Râshîd (1st ed., vol. iii, fol. 111v—112v), it was in Ramadân 1134 (June—July 1232) in the reign of Ahmad III and in the viceroyalty of Dâmid by-kham Pâsha, who was fond of innovations, that pumps were used for the first time, made and directed by the renegade Gerêck Dâwûd (of French origin, according to Mouradja d’Ohsson). The results were so encouraging that a body of firemen was established with Dâwûd as commandant (tulumbâbî bâshî). He was given quarters in the recraria’s barracks (adami edarâ) situated near the new barracks or yelî edarê in the Shabâs-dire bâshî quarter. This body of picked men was recruited at first from the Janissaries and the other regiments (ojâk). It enjoyed special pay and various privileges. The office was hereditary, according to Thalasso. As to precedence, they ranked next to the Janissaries and before the Khânî or army service corps. Gradually however, they lost their military character, just as the sfâdan did. A connection with the different ojâks survived, however, in this way that each corps of soldiers had its own firemen, but, except for those of the ojâk of the bostangî who were regarded as regular Janissaries, the others were young artisans (ojâm delikanllîlar), who only remotely resembled soldiers. The corps of Turkish firemen seems however to have very soon degenerated. Less than thirty years after their creation, they were holding to ransom and extorting money from people whose houses had been burned, or who had asked them to protect threatened houses, and sometimes, de Tott says, gave themselves up to such pleantries as turning the hose on the spectators.

They wore a plated (galîstî) helmet (tari) without a visor, held in horror in Muslim lands, a head-dress which, according to Castellani, was surmounted by a spike and resembled, according to him, the kifûn of the Saltan priests, while Latî Efendi, more prosaically, compares it to a cop- toreem (levha tari). On it was the badge (khânas) of the erta, to which the fireman belonged. The helmet of the tulumbâbî bâshî was of solid silver. The firemen turned out to fires with arms, legs and chests bare. At other times they wore huge turbans (tarbîn) and red cloaks (kafip) called kastal hamat (for hamat) i.e. eagle’s wings. On their bare feet they wore yemini, also red.

The pumps were quite small and two men were able to carry them. They were a little improved in 1754 by the adoption of hose of more pliable leather. The number of pumps was increased shortly afterwards, in the reign of 0thmn III, and they were distributed among the watchmen, instead of, as previously, storing them with the chiefs of the different quarters (v. Hammer, Hist. p. 657).

The destruction of the Janissaries in 1826 precipitated the break-up of the corps of firemen. There only remained the pumps of the War Ministry (gâhî ser’üsér) who served by a collection of vagabonds (derme bahamun). A little later in 1243 (1827—1828), müdîr or “directors” were appointed to each engine and new firemen were enrolled (hâriyên merêf at tahrîrî), especially among the Armenians, a nation considered, however, according to Basili, as not of very active physique. There was nevertheless a certain improvement in the service, according to the same Basili. This improvement does not seem to have been maintained if we may judge by the depths to which the institution soon sank. The tulumbâbî became regular brigands, who took advantage of the fires to plunder and as they pleased: as to their habit of blackmail, we have seen above that they were only keeping up an older tradition. Recruited from among the porters (hamsâmî) and the boaters (hoxdil), the most turbulent corporations in Turkey, they formed a body of 20,000 men ready for anything. From the fear which they inspired in a feeble government they succeeded in maintaining their positions, even after the institution of a regular fire brigade, to be discussed below, and according to Thalasso, they continued to draw rations of bread. Their jailbirds figures were to be seen running through the streets preceded by a grotesque courier or herald. He alone seems to have retained the helmet; he was clothed in fiery red, had a hatchet at his side and in the right hand a pike with which he beat dogs and people not prompt enough at getting out of the way. This courier was called fara bulak (black ear) i.e. “lynx”, because according to legend, this animal performs a similar duty for the lion, whom he precedes on his hunts. Sometimes they had violent fights with the regular firemen. These latter were never at peace among themselves, and the Muslim companies fought with those consisting of Armenian or Greek Christians.

The tiny pumps, holding only three or four gallons, were painted in bright colours, surmounted, as the case might be, with the crescent or the cross and bearing the names of the different quarters or, what comes to the same thing, of the different mosques or churches. The firemen, who lived by preference beside the fountains (içâmeh) to be able to fill their pumps more quickly, had the latter opened to them during the night by the cami (Öüsü), the latter also having to assist at putting out fires. Some writers (e.g. Ducrot) have paid a tribute to the skill and courage of the tulumbâbî but criticisms like those of von Hammer are more frequent. The least one can say is that the corps lacked discipline.

The modern regular fireman (ifîdîyê). The modern fire-brigade was created after the conflagration of June 5, 1870 (the greatest since that of 1831 in the same quarter; it was described by de Amicis from oral information). Its organisation was entrusted to the Hungarian Count Edmund Széchenyi (Sertë Pâsha), who had previously been in command of the Budapest Fire Brigade. The first battalion began its duties on January 3, 1876 and in the course of its first year extinguished 77 fires, some very serious. It had a staff of 550 men, a large horse-drawn pumps, 8 small pumps, a first aid wagon, a water-wagon (with 16 buckets) and a waggon for the engines. This equipment was later improved. Three other units were added later: there was one of two battalions in Pera (Taşkâmi: the headquarters of the corps was also at Pera), Stamhul (Seraskeriat), Scutari in Asia and at the Admiraity. There were also naval firemen and a battalion of sappers. All these units together formed the regiment of firemen (ifîdîyê alyê) which formed part of the chief army corps or of the Imperial Guard (hâhîs ordu- hamûkâyên). Each of the battalions was commanded by a khânîbî and Count Széchenyi ranked as a general of division (ferdî). Details of the cadres of this regiment are given in the Turkish military yearbooks (ulûnmên ’azîbê).
Caliph Mu'ādh (279 = 892), the possession of Egypt, Syria, Cilicia, and Mesopotamia (excluding Mουα) was made over to Khumārawaith and his heirs for a period of thirty years, in return for an annual tribute of 300,000 dinārs (which was the sum formerly remitted by Ahmad b. 'Uthman to the Caliph Mu'āmad in respect of Egypt alone). This treaty marks the apogee of the power of the dynasty; the subsequent weakening of their position led to the revision of its terms in 286 (899), by which their dominions were restricted to Egypt and Syria, and the annual tribute raised to 450,000 dinārs. The breakdown of their administration in Syria in face of the Karmaṭians supplied a pretext for the sending of imperial troops to Damascus in 289, at the instigation (according to Taliz, iii. 2227, 2279, of the Syrmians themselves. Thence the victorious general Muhammad b. Sulaiman, organised, with the aid of the fleet of Tālib, a combined military and naval expedition into Egypt, and meeting with comparatively little opposition, captured, on 20th Rabī' 1 292 (14th January 905). The city was plundered, its inhabitants subjected to barbarous ill-treatment, the military suburbs of al-Katā'ī, founded by Ahmad, was razed to the ground, and the surviving males of the house of Tūlūth were carried in chains to Baghdađ and there kept in confinement.

The power of the Tūlūnids was based entirely on the army, created by Ahmad, the core of which consisted of Turkish, Greek, and Sudāni slaves, and probably also Greek mercenaries. With the local levies the army numbered more than 100,000 men. The most severe discipline was imposed upon the regular troops, and enforced by provost-marshal, probably one for each corps. In 288, according to Yaqūbī (ii. 524), an oath of personal allegiance to Ahmad was administered to all the troops; from this time also begins the building of al-Katā'ī and the other military works in Egypt. Though the conquest of Syria in 264 added to his army not only new militia forces but also the private troops of the former Turkish governors, it imposed on him a greater strain in maintaining his authority intact over such heterogeneous forces, bound to him by only the weakest of ties. The revolt of his son al-'Abbās (265 = 268) — in reality a rebellion of a number of his own officers — followed by the defection of Lūṭ′, constituted a serious menace to the stability of his position, from which he had hardly recovered at the time of his death. By the personal courage of Khumārawaith, after an insidious beginning, the danger of disruption was averted for the time being; and the numbers of the standing army even increased by fresh purchases in Central Asia. Nevertheless, it was mainly by lavish expenditure, and some relaxation of Ahmad's iron rule, that Khumārawaith succeeded in holding the army together; the annual cost of its upkeep in his reign amounted to 900,000 dinārs. Owing to his extravagance, moreover, the treasury was exhausted, and already on the accession of Djālīyah a section of the army refused to acknowledge him owing to his lack of funds. The gross incapacity of Djālīyah further alienated the principal Turkish generals, who escaped to Baghdađ, and were received with princely honours by the Caliph Mu'ādh. During the reign of Hārūn the central government lost almost all direct control of the army, in which the Greek element now predominated. The principal commanders in Egypt, Bady, Šalī, and Fātih,
each obtained control of a portion of the troops, and drew on the revenues of the State for their upkeep; in Syria, the general Ṭahḥal b. Dījāff (the father of the future Ikhshād) was practically independent at Damascus. The mutual rivalries of the generals go far to explain the disasters suffered by the Egyptian armies in Syria during the Kar-
mażān outbreak, which in turn further weakened the resources of the Tūlūnids. The disintegration was accentuated by rivalries among the members of the dynasty and by the growing estrangement between Hārūn and his amirs. On the appearance of Muḥammad b. Sulaimān at Damascus, he was joined not only by Ṭahḥal, but also by Bāḍr and Fūlah with all their troops. Of the remainder of the army, the greater part deserted during the operations which led up to the capture of Fustāğ, largely owing to Hārūn's inability to pay them.

In addition to creating an army, Ahmad b. Tūlūn also gave his attention to the strengthening of the fleet, and to the provision of naval defences and stations, partly in order to maintain his hold on Syria, where he created a naval base at 'Akka (see also Yāsūr, Mufliṣī, iii. 707-708). The fleet was kept up by his successors, but was destroyed at Tumam by naval forces from Tarāsūs, commanded by Dawkānī, who accompanied the expedition of Muḥammad b. Sulaimān al-Ḍairī.

The details of the reforms which Ahmad b. Tūlūn effected in the financial administration of Egypt are rather obscure. All the sources quote the statements that the revenue from ʿ flattān, which under his predecessors had yielded only 800,000 dinārs, rose at the end of his reign to 4,300,000 dinārs, and that he left accumulated savings which amounted to ten million dinārs. In addition to the income from ʿ flattān (which included the rent paid by the amirs for their estates), the treasury received an annual rent from the royal domains (al- ṣāma), which were administered in the name of the nieces of Egypt, at this time Iṭjār al-Mufawwad, son and heir of the Caliph Muḥammad (P. E. R. C., No. 850); the supervision of these occupied a separate department of the administrative staff (Saḥīd, p. 67). The transmission of detailed information by later writers was probably rendered impossible by the destruction of the divān after Muḥammad's removal to Baghdad (I. 345, 35). It is agreed, however, that, so far from laying additional burdens on the country, the increase of revenue was accompanied by the reformation of abuses, the suppression of oppressive imposts, and the establishment of a strict supervision over the amirs and the finance officials. These measures, helped by a series of uniformly high food prices, together with the fact that the sums which had hitherto been drained away to Baghdād were now spent within the country, resulted in an outburst of great prosperity. A somewhat obscure narrative (Ibn Saḥīd, p. 38) hints at an attempt to create a lax monopoly, which was afterwards given up, but it is indicated also by the same authority (I. 67) that in the last years of his reign Ahmad made other experiments of the same nature. It is certain that Egyptian commerce must have expanded greatly, but no data bearing on this aspect have to be preserved. During the reign of Khumārwašā the financial administration probably began to deteriorate. Details are again lacking, but the fact of a decline may be inferred from the reckless expenditure characteristic of his reign and his easygoing attitude to the amirs, which allowed them a free hand in the management of their estates. The loss of Ahmad b. Muḥammad al-Ḍairī, who had been Ahmad's right-hand man in financial matters, must also have affected the efficiency of the administration. At the death of Khumārwašā the treasury was completely empty, and the virtual abdication of the central government to the amirs unadvisedly revealed in the reintroduction of the familiar abuses into the financial system. The ruler Hārūn was a mere child (he was only twenty-two years old at his death) and the conduct of affairs was left in the hands of Abū Dijāfīr b. Abīlis, under whom things went from bad to worse, while the final disaster was aggravated by an exceptionally low Nile in the year 291.

In the general domain of administration Ahmad's reign also marks a considerable advance. The chancery (divān al-ṣawāṣir) was organised on the model of the divān at the court of the Caliphs, and the ruler held regular public sessions for the hearing of complaints (ṣulūṭ). A papyrus document (P. E. R. C., No. 855) seems to indicate that a general survey of Egypt was made between 258 and 261. Jews and Christians suffered, as a whole, no detriment under Ahmad, and many of Ahmad's decrees for native Egyptian officials were probably extensively employed in the administration. On the other hand, the country was frequently disturbed during Ahmad's reign by risings and private wars. The 'Alids in the Sa'dīd gave constant trouble, which even Ahmad's wholesale deportations of them to al-Ma'dina could not stop; the Arabs in the Delta were so turbulent that in order to divert them from their customary brigandage and violence, Khumārwašā (following the example set by the former finance minister Ahmad b. Mūsābhir) enrolled a picked body of their young men as his bodyguard, with the name of al-Muḥāširāt. Arabs from Bahṣa formed, together with Berbers, the forces of Hārūn's rebel uncle Rabī'a. To meet these disorders Ahmad adopted severe measures; in addition to wholesale executions during his lifetime, he is said to have had 138 people lying in his prison at the time of his death. The difficulties of the Tūlūnids were increased by a certain tension with the theologian class, in spite of their efforts to conciliate the latter by lavish almsgiving and other marks of respect to religious feeling. During the breach between the Tūlūnids and the Caliphate, the theologians apparently sided with the latter, and regarded Ahmad and Khumārwašā as usurpers. Ahmad's chief ṣāḥib, Abū Bakra Bakālī, is not above suspicion of having privately abetted his rebel son al-ʿAbīt, and was imprisoned for refusing to sign the fatwa against al-Mawāfīs. Among other significant indications of this conflict is the fact that the list of ṣāḥins of Egypt is full of gaps between 270 and 277, and between 283 and 288.

The majority of the public works erected by the Tūlūnids were dictated by their military policy and the needs of the new city of al-Kaṭāt. The first Tūlūn's mosque was built because of the overcrowding of the mosque of 'Amr by the troops of the vast military camp. Such other works as the aqueduct and the hospital were scarcely less military in purpose. His restoration and endowment of the tomb of Muṣawwa in 270, however, has the obvious air of a political manoeuvre, to enlist the sympathy of the Egyptian anti-Shīhites and the Syr in his side against the Caliphate. On the other hand,
Ahmad, who had received an unusually liberal education, showed himself a keen patron of learning and the arts, and there is every reason to suppose that he encouraged the spread of education in Egypt. It is possible that a trace of his activities is preserved in a document relating to the endowments of a mosque school at Üçmînâ (P.E. R., N.P. 773). Khunarawâ’s interest in music, painting, and even sculpture, together with the general luxury of the period, must have contributed to the development of local arts and crafts, to which also Maḥrûz’s account of the bazaars in al-Ḳasr’si bears indirect witness. Like all enlightened despot, Ahmad and his son took care not only to humour the people by free distribution of food, magnificent spectacles, and lavish generosity, but also, by the alleviation of hardships and by practical measures for the improvement of their economic condition, to secure their interest on behalf of the dynasty and at the same time raise their capacity as revenue-producers. In spite of a foreign domination, therefore, and its militarist basis, the Tûnmân was one of marked material prosperity and progress for the mass of the Egyptian population, and was in afterdays recalled as a golden age; ēnâdî mi nî gharîr l’adnîn wa-ṣâqîn kum min maḥṣûn tâjûn, “They were numbered among the most brilliant of dynasties, and their days among the most beneficial of days”.

Biography: See under Ahmad b. Tûlun and Khunarawâ; also al-Kindî, Governments and Judges of Egypt (ed. Khunîn Guest), p. 212-228, and 477-480 of the supplement, and W. Björkmann, Beiträge zur Geschichte der Staatswissenschaften im islamischen Ägypten (Hamburg 1928), p. 18.—The relevant sections in the encyclopaedia of Nuwâ’î (Nîkâyât al’Avâl) have not yet been published. For the mosque and other public works of the Tûnmân see now K. A. C. Creswell, Early Muslim Architecture, volume i.

Tûman, original (Turkish) pronunciation túmân, usually written tûmân; at first used vaguely for “very many”, later the numeral for “ten thousand”. The Turkish numeral was first explained by G Ramstedt (J. S. F. Ch., xxiv. 22) from the Chinese, later by N. Mironov (Zdp., xix., p. xxiv) from the Togrâkian (tæma or tæma, “ten thousand”). Mahmûd Kâshâî (4337) still knows the Turkish word only in its indefinite meaning; according to him tûmân tâlûk means “very varied”, ṭûmân munîg not 10,000 × 1,000 = 10,000,000,000,000,000,000,000. The word seems to be first found with the meaning “ten thousand” in the Mongol period. As an army division, the tîmûn consisted of 10,000 soldiers (N. E., xiv/f. 280); sometimes the word tûmûn is also used with the meaning of lî (tribe); as a territorial unit, the tûmûn was said to be the area that produced 10,000 fighting men (e.g., in Ibn ‘Arabîn, Fihrist al-Maḥfûr, Cairo 1285, p. 17), which can hardly be right as the tûmûn was the smallest administrative or taxation area. Every province (wilâyêt) of any size was divided into a number of tûmûns, e.g., that of Samarkand into seven; it can hardly be supposed that this wilâyêt alone could have had 70,000 men in the field. With this meaning (the name of the smallest administrative unit) the word tûmûn was used in the period of Mongol rule in Persia (the Persian tûmûn, for example, was divided into 9 tûmûns: G. M. S., xxii/f. 47) and also in what is now Russian Turkestan with the exception of Farghânâ (q.v.). In Turkestan this usage (tûmûn sometimes also stands for wilâyêt) survived even in the first two decades of Russian rule, in the kingdom of the Khân of Bukhârâ (q.v.), and later even after the revolution of 1920 in the Bukhârâ republic. The whole village population liable to pay taxes is sometimes called tûmûn (Tâyirkh-i Khâtûbî, trans. Ross, p. 501). The dwellers among the mountains, who live under different conditions, are sometimes distinguished from the villagers; for example the Wûkhânâmâ distinguishes between the students (fullâh) from the tûmûn and the students from the mountains (abbâsînî) in the medrese built in Samarkand by Shâhâbîn Khân (q.v.).

As a money of account the tûmûn or tûman in the period of Mongol domination was 10,000 dinârs. In all three Mâmmâdân states that arose out of the Mongol empire—Persia, the Golden Horde and the line of Chaghatî—small (dirhem in Persia under Ghânsân Khân (q.v.), 2-1/2 dinârs = 33.1 grains, later smaller) and large (dirhem = 6 dinârs = 180 grains) tûmûns were issued and the sums calculated in dinârs of 10,000 dinârs or 60,000 dirhems; cf. the conversion given by Hakîm Allâh Khâzînî (G. M. S., xxii/f. 29); 128,000,000 dinârs = rather more than 2,133 tûmûns (fuller details in W. Barthold, Persepolto náqî’iî na sîrîlî Avâzî Mêзнания, St. Petersburg 1911, p. 15 sqq.). Calculations were also made in the trade of Timur and the Timurîs in tûmûns of 10,000 dinârs; in Turkestan these dinârs were called tâbîl after Kobek Khân (N. E., xiv/f. 74; cf. also under Qâhîhâ Khân). At a later date, for a time, only copper coins were in use in Turkestan and these as well were calculated in dinârs and tûmûns; for example according to Babur (faces of Beveridge, p. 56), the cost of feeding the troops of the province of Hishr was estimated at 1,000 tûmûns of copper coins (fullî). According to the Wûkhânî-nâmâ, already quoted, 6 copper coins were equal to one dinăr; 26 of the dinârs were exchanged for one thulûk (about 66.3 grains = 4.3 grains) of silver.

In Persia the word tûman in the xviith century meant a much smaller sum than at an earlier date. About 1660 Raphael du Mans gave the value of the tûman as 40 French francs (P. E. V. o., ser. ii., vol. xx., p. 183). Sir Thomas Herbert (1650) and Fryer (1677) give the value as £ 3.6.8 in English money. The tûman as a gold coin was first struck by Fath ‘Ali Shah Khân (q.v.) in 1212 (1797), at first weighing 95 grains (6.16 grammes), later reduced to 70 (4.5) and again to 53 grains (3.4 grammes). Under Nâṣir al-Dîn, who struck a few large gold ten tûman pieces, the tûmûn was worth ten ka’ns or 10,000 dinârs, the dirhem, now of course, being not a coin but a very small money of account. The tûmûn continued to be the standard gold coin down to the reign of ’Abd al-Sâ”d but was abolished by the new dynasty, its place being taken by a pahlâmî of 29 grains (1.88 grammes).

Biography: In addition to the literature quoted in the article, cf. the dictionaries (Freytag, Vullers, Radloff) s. v., which are however very defective in this connection.

Tûmânbâi II, al-Malîk al-Asrâr (mîn Kâšîb al-Qâtîrî) was the last of the Mamlûk

(W. Barthold)
Sultan. He reigned from 14th Ramadán 922 (17th October, 1516) to 21st Rabí‘ 1 923 (15th September, 1517). He was bought as a slave by the emir Kásîrî, afterwards the Sultan Kâsîrî al-Ghûrî [q.v.], to whom he was related, and given to Sultan Kâsîrî ibn Quraysh [q.v.]. The latter had him trained in the class of clerical Mamlûks (al-khatÎbîyya). He was manumitted by Sultan Muâmmâd al-Nâhirî II probably in the beginning of the year 923 (1516) and promoted to be ḍârîrâr [q.v.]; a little later he entered the Sultan’s bodyguard. There he remained till the accession of his native, Sultan Kâsîrî al-Ghûrî, who made him an emir of 10, in 910 (1504) on the death of the heir to the throne, he became ēmir fâtâkhûnî and chief butler, in 913 he became ḍârîrâr kâsîrî [q.v.], and was usual in the last period of the Mamlûk dynasty, Major-domo (turâkîrî) and Superintendent of the domains (kâbîlîr al-kabîrî); he thus had: attained the highest civilian post. He became deputy in the absence of the Sultan (wâlî al-qâdî) when the latter went to Syria against Sultan Selim. On the defeat and death of Sultan Ghûrî he checked the rout among the retreating troops and emirs and restored order as far as possible so that the emirs and people had confidence in him. He was unanimously elected Sultan and with much reluctance finally accepted the choice although he well understood the difficulties of the position; the want of money in the first place was serious, for the Turks had captured several million dinars from Sultan Ghûrî. Some of which, he had with him in camp and some in his fortresses. Besides this the army was exhausted and the great emirs could not be trusted. The question was decided for him by a learned šâhid Abû Sa‘îd al-Dîjrî, a quarter near old Cairo still bears his name) who made the emirs swear fealty to him. The caliph was a prisoner with Sultan Selim, but his father wrote the diploma of appointment and paid homage to the new Sultan. Tîmânbâhî granted the highest offices to the emirs returning from Syria. An appeal for assistance came from Ghâza and troops were very soon sent thither. About this time Selim sent an offer of peace. Tîmânbâhî was to recognise him as caliph. The Sultan was ready to make peace but the emirs were disinclined to do so and managed to get the envoy put to death, which made the continuation of the war inevitable. The troops sent by the Sultan under the emir Eljanbîl were defeated at Ghâza by Sinân Pâshâ [q.v.] and returned to Cairo. Selim thereupon crossed the desert and although harassed by the Beduins reached Egypt with his forces in good order. Tîmânbâhî wished to attack him at Sâlîhîyâ immediately on his arrival there but the emirs decided to await him before Cairo between Mâṣrîyâ and Dîjrîl Aqûma at Râcidînîya. The guns were put in position in the sand to bar the Turkish advance. The plan was betrayed however to the Ottomans and a portion of the army went round the Egyptian position and attacked it on the flank. In an hour the mobile, cleverly planned artillery of the Turks mowed down the greater part of the Mamlûk army. The walls of Sultan Tîmânbâhî at all by a small body fought his way to Sultan Selim’s tent and cut down the emirs there in the belief that Selim was among them. Returning safely he saw the flight of the Egyptian and followed them to the Nile where he rallied the scanty remnants of his army. The Turks took and plundered Cairo and slew all the Mamlûks who fell into their hands. Tîmânbâhî once more succeeded in taking the city and held out there for two days. He then had to take flight across the Nile to Upper Egypt. From there he negotiated with Selim, who promised to retire if his name was put on the coins and mentioned in the Friday service. Tîmânbâhî was ready to accede to his emirs prevented him and slew the Sultan’s envoy. Selim therefore put to death the emirs and Mamlûks taken in Cairo and ordered troops to be sent across the Nile, but as they landed in small bodies they were cut down by Tîmânbâhî’s superior forces. Selim therefore decided to bring his artillery into action. He placed guns on the bank of the Nile and bombarded the enemy who suffered terribly and took to flight. The Turkish forces could now cross undisturbed. Tîmânbâhî again collected an army. whereupon Selim sent an envoy to negotiate with him. The latter, a former Mamlûk of Tîmânbâhî’s, however began to use insulting language and was wounded during the parley and sent back. In the night indecisive fighting took place. On the next day Tîmânbâhî challenged his former follower Eljanbîl to a single combat which ended in the Sultan’s victory. But in spite of the bravery displayed by the Mamlûks, they were routed by the superior forces of the Turks and the Beduins who had joined them. Tîmânbâhî fled to a Beduin chief, who was under a band of gratitude to him, but he was compelled by his people to betray his hiding place. Selim had him taken prisoner and brought to his camp where he overwhelmed him with reproaches for the murder of his ambassadors. Tîmânbâhî’s noble bearing made a good impression on the Sultan; he was inclined to give him his life but on the advice of the emirs, who had gone over to him, he had him hanged a week later at Bâb Zuwaila. Thus died the last Mamlûk Sultan. The causes of his defeat were the corrupt state of Egypt, the eternal feuds among the Mamlûks, the lack of funds, but the main reason as must again be emphasised, was the superiority of the Turkish artillery. The brave Mamlûks did not care to use firearms and did not realise their full importance as they believed that the deciding factor should be personal valor.

Hamer, G.O.R., Pest 1847 (with list of sources); Ibn Iyâs, Budayr al-Zâhirî, Bâbâk 1311 and for those who do not know Arabic the translation of part 3 of this work by Lieut.-Col. W. H. Salmon, London 1921, in Oriental Translation Fund, N.S., xxv. In addition to Iyâs Zundbul’s history of the conquest of Egypt by Sultan Selim it is very important, s. Brockelmann, G.A.L., ii. 43 and 298. Of indirect use for this period is H. Jansky, Beiträge zur aßen. Geschichte, ii. 173 sqq., where the Turkish sources are given (M. S. OBERHEIM)

TUNIS (in Arabic Tûnus or Tûnîs), in 36° 47' 39" North Lat., and 10° 10' East Long. (Greenw.), capital of the regency of the same name. Tunisia at the present day consists of two adjoining, but very different cities, with two quite distinct forms of town life: a native but not exclusively Muslim town, an almost unchangeable survival from past
centuries, and a European town of recent origin and completely modern appearance, still steady and rapidly growing; the old town is about three quarters of a mile from the end of the lagoon called the Lake of Tunis or Bahira (al-Bahira); this town rises gradually from east to west till it overlooks the shallow, generally dry salt lagoon known as the Sabkhat al-Saljum; on this side however, the highest point of the Manouliya, which has extensive views, lies outside the ramparts. To the southeast and close at hand rise the heights of Sidi Belhassen and of the Djbal Djallil, farther away the hills of Bir Kassa; to the north the heights of the Belvedères and of Ras-Tabia and beyond them the Djbal Aghmar and the Djbal Nabelli. These slight undulations do not prevent Tunis from communicating easily with the plain of Monast and the valley of the wad Miliane on the one hand, and on the other with the plain of the Manbaca and the valley of the Medjerda, also by the north bank of the lagoon with Goulette and Carthage. The natural defences are good without being excellent (Tunis has been taken frequently without much difficulty); except for cisterns, all drinking-water has to be led in from a distance. But from the economic point of view, the position is very advantageous, at the exits from Central Tunisia, in a fairly fertile region, and sufficiently near the sea to give rapid connection with the nearest European coasts.

We need not spend time over the attempts of Arab writers to explain the name Tunis from an Arabic root. They claim with equal facility, following one another, to identify the original town with the Biblical Tarshish. A plausible etymology has yet to be found; but the name is said, like the town itself, to go back to Punic times, if not beyond them. Tunisia is mentioned by Diodorus and Polybius as a considerable town built behind fortifications, no doubt concentrated around the present Kasba at some distance from the lagoon, then perfectly navigable. It was besieged and taken successively by the Libyans, who rebelled at the beginning of the fourth century B.C., by Agathocles, and by Regulae. The headquarters of the mutinous mercenaries, it later fell into the hands of Scipio Africanus. It was perhaps destroyed by Scipio Emilianus (cf. Gsell, Hist. anc. de l'Afri., du Nord, vol. i., ii., iii., pass.).

Was Tunisia — the future Tunis — which is not to be confounded with another Tunis (called the "white", on Cape Bon), as Tissot has said "one of the principal centres of the aboriginal race..., the Libycon city par excellence, in contrast to the Phoenician colony" which was Carthage?

In any case it was for long eclipsed by its illustrious rival and it was only much later that it became a city of the first rank. It was of no particular note in the Roman, Vandal and Byzantine periods. A Roman road connected it with Carthage; a few references in geographical or ecclesiastical works alone remind us from time to time of its existence. Are we to take as history or legend the life of St. Olive, of the Vandal period, who is said to have given her name to the great mosque (Qâbare el-Zafti), and whose remains were officially claimed in 1402 by King Martin of Aragon? With the Muslim conquest, Tunis suddenly emerges from the shadow; and it comes into history as a Muslim city, the heir to some extent of Carthage and soon to rival Kairouan. When Hassan b. al-

Nu'man in 698 had taken and destroyed Carthage, the old capital, his first care was to turn the little town at the end of the lagoon into a naval base, from which fleets could set out on more distant expeditions, but where on the other hand he was sheltered from the possibility of a sudden attack by the Byzantine navy. He gave Tunis an arsenal (darr al-akhiyar) and he probably brought from Egypt a thousand Copt families to supply this new naval dockyard with experienced workmen. Of the town itself we do not yet learn anything very definite; we can only venture a vague surmise as to the nature of various elements that migrated thither: at first undoubtedly, Christian merchants and officials, but soon increasing numbers of native converts to Islam, with Arab soldiers, arrogant, greedy and turbulent. The first great truly Muslim foundation of a religious nature, the Great Mosque, for centuries the spiritual centre of the city, is attributed by tradition to the Umayyad governor Ibn al-Habib (built in 184 = 732) who also rebuilt the arsenal. But we do not know who built the ramparts, of which al-Ya'kubī tells us they were of clay (lit) and unskilled brick (littir), except in the part near the lake which was built of dressed stone (al-qabur). To sum up there was not in the case of Tunis, as at Kairouan, a regular creation but rather a sudden development, a political and religious transformation, of great importance, an adaptation, — perhaps more gradual than one thinks at first — to the new role assigned to it by circumstances and the far-reaching will of the conqueror.

During the eighth and ninth centuries, Tunis begins to develop its commercial possibilities, but it is still particularly renowned as a centre of legal and religious teaching. Before the fame of Kairouan was definitely established, Tunis already possessed celebrated teachers who by their teaching contributed to the Islamisation of the whole country: e.g. the traditionsists Ali b. Ziyad and 'Abbâs b. al-Walid al-Fârisi. At the beginning of the Fâtimid period, Abu 'l-'Arab al-Tamimî compiled a useful account of these early generations of Tunisian savants (Kitâb Tabîbî al-Ulum). Tunis, ed. and trans. by M. Ben Chenas, edited the "Lists of Savants of Ifrikiya"). The Great Mosque was now a number of necessary additions made to it and was embellished in various ways. Some important alterations were no doubt due to the Aghlabid Ahmad, the great builder; an inscription in the name of the Aghlabid caliph dates to 350 (864) the dome which is in front of the mihrâb. Stone and marble were in any case easy to procure here for all buildings, civil or religious. Carthage is near at hand and its ruins were ready to be plundered and to provide in abundance building material, columns and capitals.

In politics, Tunis seems to be the focus of opposition, the centre of resistance to the central authority exercised by Kairouan; the Tanitân ghâfiq rather than its walls was an element of disunion and a source of strife. The town took part in most of the risings, which were put down by the Umayyads, and was annexed and later by the Aghlabid emirs. It was implicated in the great rebellion of Mâmûr al-Tun Ziibî, and the troops of Ziyaâd Allah I took it by assault and destroyed its ramparts in 318 (833). After one of these risings, Ibn Khânîr II punished it severely and thought to control it by transferring his court
and seat of government there in 281 (894); for these he had erected a number of buildings, including the Kasbah (al-kasbah). But two years later, he went back to Kairouan and when his son Abdallah II made a second attempt to settle in Tunis, he was killed in 290 (903) in a palace which he had just built for himself. His two assassins were put to death, one at the al-Djazira Gate (of the Fenmarkets, i.e. Cape Ross), the other at the Kairouan Gate. Tunis was not yet ready to become the capital of Ifriqiya.

The Fātimids and their Ṣanḥājja successors, whose capital was at Kairouan or Mahdiya, founded by them, deliberately neglected Tunisia which seems to have remained faithful to orthodoxy. It is a fact of no little significance that the greatest of its saints, its patron saint, still greatly venerated, lived in the first half of the tenth century, just in a period when official Shi'a and rebel Khurādīd were fiercely contesting the dominion of Ifriqiya; Ṣidi Mahriṣ (Mahriz b. Khalfān) who was the inspirer and the recipient of the famous Niqāl of Ibn Abī Zayd (in 347 = 959), the classic précis of the Mālikism of North Africa (cf. Ibn Nādirī, Mīṣār al-Mīriṣa, iii. 138). It was he who after the short but disastrous occupation of the town by Abu Yazīd in 332 (944) restored the courage of the inhabitants, urged them to build a solid wall around the town and stimulated them to take up commerce on better organised lines. The old court of the silk-merchants (Fumukha al-Haraṣṣa) almost opposite his zāwiyah, a little beyond one of the main gates of the city, may go back to him and the same is probably true of the little market, which has given its name to this gate: Bāb Souika (Bāb al-Sawāki). Unanimous tradition further attributes to Ṣidi Mahriz the foundation of the Jewish quarter, the Ḥārā, at some distance from his zāwiyah in the direction of the Great Mosque: a measure evidently intended to retain there a people particularly skilled in commerce, which was a source of prosperity for the town.

The flourishing situation of Tunis is attested in the tenth century by Ibn Ḥawkal, who extols the abundance of its products, the pleasantness of its climate, its situation and the wealth of its citizens. He mentions especially the potteries, and the system of irrigating the gardens around the towns by water-wheels. Further details are given in the next century by al-Naḥḥār: the ramparts and ditch; the five gates namely: Bāb al-Djazīra in the south, the gate which opened on the harbour (Bāb al-Bāṣrā) and Bāb Ṣaqqāda (of Carthage) on the east, Bāb al-Ṣaqqāda (Gate of the water-carriers; evidently the same as Bāb Souika) in the north and Bāb Arja in the west. The harbour, the entrance to which could be closed by a chain, was defended on the north by a wall and in the south by a stone castle: the Castle of the Chain (Djar al-Sūbiga). Al-Naḥḥār admires the Great Mosque, the entrance staircase of which (east side) had, at the present day, twelve flights, the many and well filled arāqī, the hammams of which there were fifteen, and the abundance of provisions (fruit and fish); he too mentions the potteries. Passing to another sphere he notes the success of the teaching of fiqh among the Tunisians.

Tunis therefore seems to have enjoyed peace and prosperity for about a hundred years, until the terrible event in the middle of the eleventh century which upset completely the economic and political conditions of the whole country: the invasion by the Hārārīs. While the helplessness of the Zirids, overwhelmed by the new conquerors, shut themselves up in Mahdiya, Tunis fell for a time into the hands of the Ṣanḥājja chief 'Abd b. Abī 'l-Ghāthil in 446 (1054). But to secure protection, it placed itself a little later under al-Nādirī, the Ḥusaynī of al-Kal’a, who sent it a governor in 451 (1059), the Ṣanḥājja ‘Abd al-Ḥaṣb b. Khurāsān. The latter soon declared himself independent and in this way was founded the first dynasty of Tunis, which except for an interruption of 20 years (1128—1148) maintained itself till the Almohad conquest, exactly a century later.

At first oppressed by the Ṣanḥājja Banū ‘Ali, who were established in Carthage in the Māṣalaga (La Malga), Tunis came to terms with them to secure herself from their raids; in return for an annual tribute, they promised to spare the district and its inhabitants; they even soon began to attend the markets of Tunis, both as buyers and sellers. The town survived the attempts made on it by the Zirids of Mahdiya, and by the Normans of Sicily; but it was disturbed by civil troubles, rival political parties, riots and fighting among the sufs, rivalry between the different quarters. It was nevertheless in this most disturbed period that its sea-trade began to develop on a large scale; trade with Italy was organised and developed; the business relations which were increasingly entertained with the Christians offered unexpected prospects. The Banū Khurāsān themselves did a great deal to promote the prosperity of Tunis. The greatest of them, Almārīd, fortified it in the first half of the thirteenth century; he built the earthworks mentioned by al-Idrīsī. He was also he who built the citadel (al-ḥarir) to which the present mosque of El-Karaï may originally have been attached. It is in this quarter, near the street of Abū Bou Krišān, which seems very soon to preserve their name in a corrupt form, that there still exists the cemetery of the Banū Khurāsān, which was probably originally joined up with that of al-Sitīla (on the site of the Sadiq Hospital). The principal door of the Great Mosque dates from the same dynasty. With the two great suburbs of Bāb Souika and Bāb al-Djazīra, which are already extending to the north and to the south of the city proper (al-Malika), Tunis has now a fairly definitive configuration. Its now considerably increased importance made it henceforth the capital of Ifriqiya. It was to be so from the time of ‘Abd al-Malik (554—1159) to the present day, and its political history is henceforth merged in that of Tunisia.

After the terrible alarms caused by the unsuccessful attacks of Ibn ‘Abd al-Karim al-Raghibī in 955 (1059), then by the ephemeral rule in 1203—1204 of the last Almoravid Vabīš b. Ghaniya, it was reserved for the Hafsids to restore to Tunis the feeling of security and to add to its monuments and make it a capital worthy of the name. Abū Muhammad b. Abī Hafs, who was still ruling in the name of the caliphs of Marrakesh, built in the Bāb Souika quarter (in the street El-Halifiouine) a Djami, which bears his name, corrupted, it is true, into Bāb-Muhammad. But it was the first independent ruler of this dynasty, the devout Abū Zakariyyā, whose buildings mark most clearly that a new era had begun in the town. In 1230 he built outside the town, towards the southwest, the
fortified Musalla (Qamari al-Sultan) which Ibn Baṭṭaṭ notes in the next century; he then proceeded to rebuild the Kašba or Kasbah completely and flanked it by a mosque for his private use. The Mosque of the Almohads or of the Kašba or Kasbah, the minaret of which, in pure Almohad style, is dated 630 (March 1233) in a beautiful inscription outside it (cf. O. Houssas and R. Basset, Mission scientifique en Tunisie, Algiers 1882, p. 5). He formed a fine library, which was scattered by one of his successors, Ibn al-Līhābi. He introduced to Tunis the modrana of the east: the Shamāllīya, near the old Sīkh al-Shamālīn (now Sīkh El-Nejhdjīn), later completely restored, was the first medersa in North Africa. It was he also who sheltered the three daughters of Yahya b. Qāmila in the palace thereafter known as Kašr al-Bānti. Lastly it was he who organised the quarter of the slaves immediately around the Great Mosque and built the Sīkh al-Āṭfārīn (of the merchants of oils and perfumes) and perhaps also the Sīkh al-Kumās (Sīkh for textiles).

In place of this interest in commercial and religious matters his son al-Mustānṣir bllah, a calliph fond of display, had a taste for luxury and splendour. He built a hall of audience, Kesba Anīrār, in 1253 in the court of the Kašba or Kasbah, pleasure gardens in the adjoining suburbs at Ra’s-al-Tabīya (Ras-Tabia), on the road to Bardo and at Abū Fīhr (site uncertain in spite of the identification with al-Baṭṭam proposed by Ibn Abī Dinar; H. Aḥujwah places it in the Džabal al-Aqmar, near al-Ārīna, ed. of Ibn Faḍlallāh, p. 12, n. 1) of which Ibn Ḥakīm gives a glowing account, both connected with the Kašba or Kasbah by a private road to enable the ladies to go there without being seen. In 665 (1267) al-Mustanṣir completed the restoration, celebrated in verse by Ibn Ḥazin, of the old aqueduct of Carthage (al-Honbar): he also brought water to the great pond of Abū Fīhr and thence to the Great Mosque.

His mother ʿAfī, the worthy widow of a pious ruler, built a second medersa, the Tawfiqīyya attached to the Džamī al-Tawfiq or al-Havžā, which is of the same period. The first century of the Hafsids produced two other mosques: the Džamī al-Zātīnā al-Berūnī (in 1283) outside the Bāb al-Bahār, built by order of the false al-Faṣīrī to take the place of a fundūk, where wine was sold, and the Džamī al-Hilāk (of the Kings) in the same quarter as the Musalla. A third medersa, Madrasat al-Mawṣiq (of the Remains-you) built by Abū Zakariya, son of Sulṭan Abū Iṣḥāk in the Sīkh al-Kutubiyun (of the book-sellers) - it too was built as an expropriatory work on the site of a fundūk, frequented by wine-drinkers - has disappeared without leaving a trace. Finally the ramparts were rebuilt, in parts at least, with the Bāb Ljadvīl (New Gate), Bāb al-Mandara (Gate of the Beacon) and probably also the Bāb al-Baṭṭam which no longer exists.

The Tunis of about 1300 is already very like the native town of to-day. The Ma’āni, which stretches from north to south is shut in between the Kašba or Kasbah on the west - the fortified dwelling of the ruler who commands both the town and the plain of La Manouba - and on the east, in the lowest lying part, the Bāb al-Bahār which gives access to the arsenal and thence to the lagoon. Halfway up and in the very centre the Great Mosque opens its doors directly on the new sīk which surround it; the name Bāb al-Bahār is attested for the northern gate, but was the western one already called Bāb al-Sajīf? Each sīk, by a custom still maintained, closes its doors at nightfall; the Bāb el-Rafīn near the sīk of the same name is, as at the present day, the southern exit to this quarter. Around the Madina and outside the main gates are grouped certain manual trades. In the Bāb al-Djaʿma we have the dyers, at the Bāb Ḫalīl, the smiths, at the Bāb al-Manāra, the tailors, in the Bāb al-Bahār there were no doubt several foundries allotted to Christian merchants but the latter, requiring more space, soon began to build outside the gate a little quarter or suburb of their own, the first sketch of a European quarter. The houses of the city were closely built together; no open spaces were left, no room for markets or assemblies; the Bātālā of Ibn Mardim cannot have been anything more than a cross-roads.

In the outer quarters however, more modern and less crowded, large open spaces serve as markets: for pottery and alfa grass (Place des Potiers and El-Halfouâine) in the Bāb Soukta quarter, those for animals: al-Marrāq (for sheep: Raqqebat al-Qāmūm) and perhaps also the cattle market (Place du Marché au Bîl) in the Bāb el-Djaʿma quarter. Each of these quarters is protected by an outer wall which ends at the Kašba or Kasbah; the gates of this first line of fortifications are for the southern quarter (Raqqebat): Bāb Khālid (originally no doubt Bāb al-Manāra) in the west, Bāb el-Djasirīn in the south, Bāb el-Falāq (outside of which is a Karia) and Bāb ʿĪlāwa (Bāb Alelson) in the S.E.; for the northern quarter, in the N.E. Bāb al-Khairāt, in the N.W. Bāb [Abī] Sadiq, and in the west Bāb al-Qāmūm (of the Arcades) perhaps identical with Bāb al-Falāq (Bāb El-Alloucha) the first mention of which is later. It is beside the last gate that we should like to locate the raiḥan of the “ulūd called “raṭātān”, Christian mercenaries in the pay of the sovereigns of Tunisia, if Leo Africanus did not expressly locate it outside the Bāb al-Manāra. As to the Kašba or Kasbah itself, of its two gates one opened on to the country, Bāb abel-Dīri (of Disloyalty), the other into the city, Bāb Intisām (cf. the Bāb Intisām of Temcen; cf. Būyāṭ al-Rawwāl, ed. Belh. i. 34).

Between the Bāb ʿĪlāwa and the Bāb al-Khairāt, a whole series of open drains (khadnātā) into which the gutters run, flowed eastwards into the lake. The cemeteries lay around the town; in time they were built up to and pushed farther out by the expansion of the suburbs; to the south-west the vast Djalās (al-Zalāqā), more isolated, preserves the memory of the mystic Abu ʿl-Hasan al-Shābdīl (Sidi Belhassen), the founder of the Shābdīlīya brotherhood, who lived there in the first half of the 13th century. Close to the Bāb al-Djasirīn, beside a cemetery of the Hintsāta (al-Mamūthuq al-Hintsīrta), lie the tombs of many “ma’ārīn” (records of their miraculous powers) for the most part unpublished, contain useful information for Tunisian topography of the Hafsids period, supplementing that given by Abī Zakariya or Ibn al-Shābdīl. The famous Lalla Mannūṭya (cf. J. A. 1899, P. 485—494; and Kiṭb Maṣūḥ al-Sawāja wa al-Manūṣīya, Tunisia 1344), d. 1267, has given her name to a village overlooking the town in the S.W. (La
As even greater source of pride to Tunis than these marabouts, whose political influence however is undeniable, as in the case of Abū Muḥammad al-Munṣūfī, the tutor of the future caliph Aḥmad, were its increasing numbers of lawyers, men of letters and students. Religious sciences flourished there, as al-Abdārī notes (1280). We may mention four of the most illustrious of the 13th century the chief kāfīr Ibn Ṣa‘īd Ibn al-Zaytūnī. To this development in the study of belles-lettres and of Maṭrīkī law, the Muslim refugees from Spain made valuable contributions: Ibn al-Abbār and the chief kāfīr Ibn al-Ghasmī came from Valencia; from Seville came the Banū ʿAṣfūr and also the Banū Khaldūn, ancestors of the most celebrated historian of North Africa (born in 1333).

The fourteenth century, to the great admittance of the traveller Khālid al-Balawī (1335–1340), is the golden age of legists and commentators; among these may be mentioned the chief kāfīr Ibn Abī al-Qāfi, Ibn Abī al-Salām, Ibn al-Ǧubrānī, the chief kāfīr Ibn Rasūl al-Salāt, the mufti Ibn Hurayrān and particularly the illustrious imām Ibn Ṭārānīf in the fields of politics we have nothing but weakness in the rulers, unrest and insecurity. The nomad Arabs threatened the capital without difficulty; the Marinids twice occupied Tunis. The development of the city to the west and southwest, so vigorous in the preceding century, was suspended by the weight of lawless immigration, not to say decline. We may however note the foundation of two madrasas, one in 1334–1342 by the sister of the caliph Abū Yāḥya Abī Bakr, the ʿUnaḥiya (restored later; now Onq al-Dīn), the other in 1348, by the chamberlain Ibn Ṭārānīf (han Sīlīyīn). But it was a sign of the times that military demands had first claim on the architect: the Marinid Abu ʾl-Hassān after his defeat at Kairawān in 1348, restored the ramparts of Tunis and dug a ditch around them; Ibn Ṭārānīf considerably strengthened the outside walls and formed considerable kūhāt for their future maintenance.

We have to come down to 1400 and the xvth century to find, with a more stable political situation, a marked revival in building activity; but nothing on a really grand scale. During their long reigns, Aḥmad Fāris and his grandson Abū ʿUmar Ummānī only founded two libraries and a few madrasas; their interests lay more in charitable works; these are the earliest Muḥammas hospital (mawṣilīs) of Tuniṣīs, finished in 825 (1420) and in the suburbs numerous zāwiya offering shelter by day or night; or in water-works, inspired also by a sense of religious duty: a great cistern (mawṣilīs) in the Masqūlī, a hall for abortions (miṣārīs) in the Sīk al-ʿAṭārīn in 834 (1430), drinking-troughs (ṣīḥā) and the kind of public fountain where one drinks by sucking a narrow pipe called “sucker” (mawṣilīs). The whole reflects a somewhat aesthetic piety, incapable of great energy, a religion gradually passing more and more under the control of marabouts and brotherhoods. The families of Kaldānī and Banū al-Raqīṣ are mentioned in this period as artists of standing; in 1451 Tuniṣ had an eighth kūhāt in the fanoub of Bab Souika; but the dominating figure of this period were Sīdī b. ʿArīs (cf. his Menāṭik, Tuniṣ 1393) who came from Morocco, and was buried in his zāwiya in 1463, the founder of the brotherhood of the "Arabīya;"
on for several centuries, suddenly assumed vast proportions when in 1609 the dey ʿOthman welcomed the Moriscos expelled by Philip III. Those who had been used to a town life settled at Tunis in two localised groups: in the street of the Spaniards (S.W. of the Madina) and in the Quarters of the Spaniards (Qawwat al-Andalus, near the Place Hafsaouine). To these Muslims from Spain is due the industry of making red caps or ẓāshiyat, which according to Peyssonnel in 1724 produced 40,000 dozen per annum and engaged over 15,000 people. These Spanish Muslims, with the Ḥanafi Turks from the east and the important part played by renegades of European origin and the corsairs, combined to give Tunis its peculiar character in the xviiith century. The dey Yūsuf I was the first to make a name by public works, a list of which is given by Iīm Abī Dinār: the creation of a commercial quarter around the Bāb al-Banāṭ and the restoration in the same neighbourhood of a ʿākīf for woolen yarn (al-ghebat); the building of a ʿākīf for merchants from Djibra, improvement of several other ʿākīfs, and the continuation of the Ḥafṣīd ʿākīfs to the north: Sāk al-Baqṣāmīyiya (makers of Turkish trowers, street of Sidi B. Ziyād), Sāk al-Birka for the sale of black slaves and Sāk al-Turk (El-Trouch) for Turkish tailors; the installation of a café; water conduits to various points in the town, such as the Great Mosque and above the Sāk al-Turk. There his favourite Ali Thābit built the pretty niżāla (in 1620) which at present adorns the Belvedere; the latter also restored the old mosque of the fanoub of Bāb al-Dżafira. Probably the rebuilding of the eastern door of the Great Mosque ought to be dated to the same time (Bāb al-Dżamīʿ, Gate of the Interments). Yūsuf built in the street of Sidi B. Ziyād a Ḥanafi medersa (in 1622) and a mosque of the same rite with an octagonal minaret, beside which is his tomb. After his time the power of the dynasty began to wane: they no longer undertook great works. Ahmad Khodja (1640–1647) was content to rebuild the al-Shaṣṣāmiyya and al-Unkiyya medersas; Muhammad Līs to build in 1649 the curious minaret of the mosque of al-Kaṣr or El-Kaṣr; at his death in 1653 a mausoleum (niżāla) for him and his family was built in the square of the Kaṣba or Kasbah. The Mālikī beys built a great deal; in the same style as the mosque of Yūsuf Dey and in a street quite near it, Ḥamādīdī built the Ḥanafi mosque of Sidi b. Arīb (finished in 1654) with a family mausoleum beside it. He also rebuilt the minaret of the Great Mosque; he built a mañira in the street El-Afafsane and began to rebuild the Aqueduct. His son Marād built the Medersa al-Muraddiya (in 1673), in the Sīk for Tunis, and while his second son Muhammad al-Ḥaʃīd founded the Sīk of the Shaṣṣiyas, his grandson Muhammad gave the town the original mosque of Sidi Mahīr (after 1675). The French architect Daviler is said to have supplied the plan for the dome. About 1666 we have an excellent description of Tunis in the memoirs of the Chevalier d’Arvieux (Paris, vol. iv., 1735). The Kaṣba or Kasbah, at first the residence of the pashas before the collapse of their authority, comprised two main buildings: the first housed the day’s guards, officers and their families; the other behind it contained a long hall (al-saṣṣa) in which the dey gave audience to the soldiery and in the remotest part were his private apartments. The Dżamīʿ, where the Aqṣa presided over the council of the soldiery, was a large oblong court (cf. also a detailed description by La Condamine in 1741, K. T., 1858, p. 86); the religious tribunal of the Charba (al-kherb) still sits here. The district west and north-west of the madina (especially the Rue du Pacha) formed the aristocratic quarter, the real Turkish quarter. The sumptuous houses of the beys and the other high personages were adorned with marbles; the central court, which was, a regular feature, was ornamented sometimes with a kiosk or a little pool of water; the furniture and the decoration already showed an unfortunate tendency to imitate Italian work of poor quality. With the extraordinary development of the activities of the corsairs the number of Christian slaves increased (6,000 in 1654; on their life cf. Figoon, K. T., 1930, p. 18 sq.); whence the multiplication of those strange prisons called by the name of the Saint to whom was dedicated the chapel contained in them. Father Dan gives 9 in 1635; there were very soon 13. If we must, with P. Grandchamp (La France en Tunisie au XVIIe siècle, Avant-propos de VI et VII, Tunis 1928–1929) regard as legend the story of St. Vincent de Paul’s capture at Tunis from 1605–1607, special importance on the other hand should be attached to the mission of the Lazarist Julien Guebri (1645 to 1648) who succeeded in converting Muhammad Shalabi, the celebrated Don Philip, son of the dey Ahmad Khodja, and to the work of another missionary, Jean le Vacher, consul of France for 1648 to 1653 and 1657 to 1666 (cf. R. Gleizes, Jean le Vacher, Paris 1914 and in Revue des questions historiques, July 1928). It was in his time that the first public chapel was built at the consulate and dedicated to St. Louis; it was he who raised from its ruins the church of St. Antony, in the centre of the Roman Catholic cemetery around which he built high walls, outside the Bāb al-Baḥr (on the site of the present Cathedral); it was he who organised worship in the chapels of the prisons; it was he again who obtained from the Dīwan a site and permission to build a new French consulate or “foundé de l’Açif” finished in 1661 (run de l’Ancienne-Douane; Grandchamp, op. cit., vi., p. xxii., xxxxi.). From 1672 the Italian Capucins were in charge of the missions: their house is described about 1730 by St. Gervais (Mémoires historiques, Paris 1736, p. 86) as well as the Greek Church and the richly endowed Hospital of the Trinitarians. Protestants were buried outside the Bāb Karṣājin in the cemetery of St. George where the English church now stands. In spite of consular protection, the Christian merchants never seem to have been very numerous. The French nation for long numbered only six merchantmen. Foreign trade was mainly in the hands of the Jews, among whom the fugitives from Spain or Portugal (expelled in 1492 and 1496), who had come either directly or through Italy, were distinguished from the Tunisians of old stock (ţibṭa); the “Portuguese” or “Livournese” (Grénois) ultimately formed a separate community: they gave the name to the Sīk el-Grénois. The Jewish cemetery was outside the walls, to the east of the Bāb Souika quarter in the vicinity of the present Rue Sidi Silīfane; then it expanded southwards. In the political troubles which mark the end of the xviiith century and the beginning of the xviiiith, Tunis was twice occupied by the Algerians (in
1686 and 1694) with bloody disorders. The ramparts could not resist a serious attack; they followed "no rule of fortification, for one cannot consider as fortifications the square towers attached to the walls at intervals". Again, even under the Hassansids, Tunisia was at the mercy of the Algerians; pillaged by the latter in 1735, it was vain that in 1756 the Tunisians tried to withstand them with the help of defensive works hurriedly thrown up by "Ali Pasha" and his son Muhammed: an arched joinment with loopholes and a ditch between the two recently built forts on the Djebel Djellâa and the Mannâlîya, a fortified redoubt behind the Kabâba or Kasbah. At this period two other forts are mentioned: crowning the slight eminences on the N.W. These are no doubt the Bârîjî al-Sêmâwâr or Tahâmât al-Rîbî (of the Windmill; it is the fort of the Spaniards) and the Bârîjî al-Râbîa (of the sultans of the Bey); this is the Râbah, itself skirled at a little distance by the little Bârîjî Filîfî (cf. Pirantet, Corresp. . . . . Tunis, ii. 501; and for the year 1829: Monachecurt, Relations inédites. . . . . Filîfî, . . . p. 47 and 91).

In the intervals of peace the town was also enriched with other buildings. It was great grand-daughter of the Dey Uthman, died in 1710 and was buried near the Medersa al-Shammâ'îya. Many charitable and pious institutions benefited from her bountiful gifts. Hussein, himself a great builder, built in Tunis (cf. al-Masâ'ûdî, al-Malabî, R.T., 1895, p. 328-329) in the southern quarter of the Medersa, the Dîwâ'î al-Diwdî or "Mosque of the Dyers" with an octagonal minaret. He planned out the streets and buildings which adjoin the Sâk al-Sabâbîdîn (of the harness-makers); it was in his reign that the Mausoleum of the Dey Kara Mustafâ was built beside the mosque of the Ksar; it was he who moved the seat of the government to the Bardo. In the decline of the decline in religious teaching acknowledged in the preceding century by Ibn Abî Dinâr (p. 399; transi. p. 506), he showed a real interest in building medersas: Mâdrasat al-Nâhâbî (of the palm-tree), the Medersas al-Husainîya and al-Diwdî. His immediate successor "Ali Pasha, following his example, built four: al-Râbîaî, in the Sûk of the booksellers; al-Salâmîya, in memory of his dead son Sulaymân, Mâdr. Bîr al-Hajjîâ, Mâdr. Hamûstî Âghâ; and a little later "Ali Bîy founded another Dîwâ'î. It is to this same "Ali Bîy that we owe the mausoleum of the Hâssânsid (Turbat al-Bîy) not far from the Mosque of the Dyers, and (built in 1775) the home for aged poor called al-Tâkhy (the Tekka). About the year 1800 the famous minister Vasûf Şâhîb al-Tâhâ, keeper of the sultans seal, built in the Halfâmoun square the mosque that bears his name, probably, as the raised outer gallery shows, on the site of the Mustâfîd al-Mâlîhî (al-Muâlîhî) al-Halîfî of which Ibn Nakî mentions in the sixth century (iv. 149); in the same quarter he set up the Halfâmoun fountain (in 1804), inside the Bâb Sûtîl 'Ahd al-Salâm and at the other end of the town a large watering-trough inside the Bâbl Alwaâs.

His sovereign hammerbâ Khanîsh, who finished the Dîr al-Bîy (Caroline of Brunswick stayed there in 1816) a little above the Kasbah or Kasbah, devoted all his energies to military works and to fortifications. To defend Tunis, particularly against the Algerians, he had the outer ramparts rebuilt by a Dutch engineer. This work, which took from 1797 to 1804 according to the inscriptions on the bastions adjoining the gates, was never completed on the south side (cf. H. Hugon, R.T., 1905, p. 377; and G. Dolot, R.T., 1905, p. 298). On this side they were satisfied with the advanced entrenchment made by "Ali Pasha and the outer walls of the houses which formed an almost continuous line of defence. Hammâmîa built barracks (in 1798) alongside of his magnificent villa at al-Mamouba, and others in 1814 at the close of his life, in the middle of the Sûk al-Astârin (it now houses the Bibliothèque Publique and the Direction des Antiquités; cf. M. Houdas, Note sur trois inscriptions de Tunis, in Bull. Archéol., 1911). In the same period many other barracks were built in the Madina: Rue de la Caserne (al-Sâkha; now the Société Française de Bienfaisance), Rue de l'Église (now the Administration of the Habits), Rue des Moniquettes, Rue Stîl B. Ziyâd; but by far the largest, that of the "First Regiment" (Birslâmî Allîy; now the Caserne Sausier); it was built near the MurâdhÎy, on the site of the former maqâllîy, by the Bey Húsain b. Mâhmîd, then by his brother Mustafâ (in 1835-1836). An artillery depot (now the Caserne Beyriguel) was built outside the town in 1839 by Abûmî it Bây, the creator of the "Tunisian army". While "Ali Pasha had been content to send on two occasions (1743 and 1744) for a founder from Tonlon, who repaired several cannon in an emergency workshop, under Hammâmîa Pasha a regular foundry was established under the permanent charge of some Frenchmen in a wing of the Hafîzîya palace (the Hafiz; street of the same name). Lastly Abûmî it Bây organised the Dâbahîya (cf. N.T., 1922, p. 276), where the bread and oil required for the army was made (Rue Dâbahî, a little north of the Dîr al-Bîy and Rue des Teinturiers).

Just when these military undertakings seemed to be going to transform Tunis into a garrison town, the European colony, which was developing with greater freedom every day as a result of the French occupation of Algiers (1830) and the reforms made by the bey, gained a footing in the Madina. Shops were opened by the Christians. Religious edifices sprang up in addition to the old Church of the Holy Cross (Rue de la Kasbah; moved in 1853 to the old Hospital of the Trinitarians, Rue de l'Église), the registers of which are valuable for the history of Roman Catholicism in Tunisia. In 1831 the Italian school was opened at Sulema, the Jewish in 1840 at Morpurgo, in 1841 the Bourgade College in the Zone of Bâb el-Medina (Impasse du Missionnaire). The whole of the quarter of the Place de la Bourse (recently renamed Place du Cardinal Lavigerie) with the present Rue de l'Ancienne-Domaine, des Glacières and de la Commission became completely European. Outside the ramparts, the modern town began to spread towards the lake; thus the Consulat de France was moved in 1861 to the building which is now the Résidence Générale. Other consulates however are still within the city: those of Spain (rue Stîl el-Bâni), Great Britain (place du Cardinal Lavigerie), Italy (rue Zarkoun; this is soon to be moved).

European influence became so strong that the administration of the town itself was at length affected. Under the Hafîzîs each of the two fra-
hurges had its shaikh, probably under the khâlih al-madina: these three officials survived under the Turks; assisted by patrols of citizens taken in rotation (lawdûdîa) they saw that the town was policed at night after the closing of the gates. Below them the muḥarrar were heads of the quarters. The day police, under the Ḥusaini, was the business of the darvâlî, this destitute dey, who had under him 50 ḥâshâ and 55 ḥâšûflî (cf. E. Pellissier, Desc. de la régence de Tunis, Paris 1853, p. 52-53) and acted as police magistrate in the long-hall called Driba in the street of the Bâb I’Arûs. The Kasaba was administered separately under an ḥamî. In 1858, however, a municipal council was formed (a president, a vice-president, a secretary, and a dozen notables) the budget for which was provided by a tax on wines and spirits. In 1860 the darvâlî was replaced by a general of division (farîf) who had under him “zaptîs” (dâḥîflîa). Vigorous steps were taken to bring the city up to date; a telegraph line was laid to Algiers and a railway to La Goulette; a drainage system was laid out and water brought from Zaghouan by the French engineer Colin. The water-tanks took the place of the covered reservoir (khâmnà) which stood in the preceding century beside the gate of the outer ramparts, Bâb Thub Aflâth, adjoining the Kasaba or Kasbah.

Preoccupation with such modern works left little time for any great religious buildings; one may however mention the imposing zawiya of Stîr Ibrâhîm al-Riyâhi (d. 1850; cf. R.T., 1918, p. 124, and on the jirhsh of the Ḥusaini period: al-Sântîs, Maktabât al-Zarîf, Tunis n. d.) who enjoyed a veneration which shows no signs of decreasing. In 1875 the Sâdîkî College was founded (in the barracks of the rue de l’Église) called after the bey Muhammed al-Sâdîkî. In 1880, the Sâdîkî Hospital was built. Among the mansions, the Zarrîch palace (rue des Juges) was at first the residence of the deys. The Dâr Husain (now the Palais de la Division) built in the xviii century by a minister of the bey, was restored in 1876; the Khair al-Din palace, an enlargement of the old Ḥâshîya, was the court of justice for a time at the beginning of the protectorate (rue du Tribunal); the Palace of Muṣâfî b. Ismâ’il was in the rue du Pacha; that of the Khânâmî (Place Hâflîwîn, rue du Palais) became the Jewish Hospital, but has not been used for some time now. It may be noted that after the rising of the sons of Ḥusain b. ‘Ali against ‘Ali Pacha in the middle of the preceding century, the Hâflîwîn quarter, inhabited by faithful *Husainîya*, enjoyed the favour of the bey to the detriment of the quarter of Bâb al-Djazira, the stronghold of the jâf opposed to the *Râhîya* (cf. R. T., 1918, p. 124).

The French occupation (from 1881) has produced tremendous developments in Tunis which are still going on. The European town stretches from the Porte de France (the old Bâb al-Bahr) to the lagoon, where the quays are; it stretches from the Belvedere to the Djellâs, then, in the south of the southern quarter, within and without the walls, it covers the heights of *Montferrât*. The outer wall is still standing. That of the Madîna has almost completely disappeared except for a few gates. The Kasaba or Kasbah, entirely preserved, is used as barracks. The Dâr al-Bây houses the Direction de l’Intérieur; the other offices with the new Sâdîkî College (1897) and the Palais de Justice are modern buildings stretching along the Boulevard Bâb Benât from the Place de la Kasaba. An electric tramway runs round the Madîna but does not enter it. An attempt has been made to retain the original character of the city itself. A number of buildings are now used for other than their original purpose: the general appearance of the city is just what it was fifty years ago. Religious instruction remains centralised in the Great Mosque, the minaret of which was entirely rebuilt in 1864; in 1896 the resident Millet founded the Khâlîflîyà in the Sâdîkî, to instruct young Muslims in the elements of modern sciences. The Sîkhs continue to group the native trades in guilds each under an âsî; some of them are visited by large numbers of tourists and a busy trade is done with them in "Oriental" articles, perfumes, carpets and leather goods; public criers offer for sale books and jewellery in the Sîk of the Booksellers and Sîk al-Berka. The wretched Jewish quarter, abandoned by those of its inhabitants who have acquired sufficient to enable them to live beside the Place des Frères or in the European town, will shortly be replaced by modern buildings and broad streets.

The Muslims on the other hand live in the native town, except a few rich families who have villas at the end of the Avenue de Paris and the few antus of the houses in the new village of al-Omran (S. W. of the Belvedere). Finally we must mention the growing population of the remoter suburbs (Raûdes and Hammâm-Lit, or Carthage La Mara) European, Muslim and Jewish, which really now form one with Tunis.

The Municipal Council was reorganized by decree of Oct. 31, 1883; supplemented by the decrees of 1888 and 1914 relating to the communes of the Regency. It consists of a President, two Vice-Presidents (French) and 17 members appointed by decree (8 European, 8 Muslim and 1 Tunisian Jew). At the last census (1926) the population of Tunis had risen to 185,996 divided as follows: French 27,922, other Europeans 51,214, native Muslims 82,729, Tunisian Jews 24,131.

Bibliography: Saladin, Tunisi et Kairouan, Paris 1908 (statements should be verified); Descript (in collaboration), Histoire de la ville de Tunis, Algiers 1924 (the only useful chapter is that which deals with Europeans in Tunis in the xixe century before the occupation); C. Marquis, Manuel d’art musulman, L’Architecture, vol. 2, Paris 1926-1927 (excellent descriptions of the principal monuments; s. p. 871-875, a study of the architecture of the Muslim palaces of Tunis). — Cf. also the references in the text, and in the article TUNISIA.

(Robert Brunschwig)

AL-TUNISI, MUHAMMAD B. ‘OMAR E. SALAMÂN, an Arabic author of the xixe century. He belonged to a Tunisian family devoted to learning, especially to theological studies. His grandfather Salamân was a copyst of books and, when he set out on a pilgrimage to Mecca, left his three sons behind under the guardianship of his maternal uncle Ahmad b. Salamân al-Azhari, a learned theologian. On completing his pilgrimage, Salamân, as he had lost all his property, did not return to Tunis, but stayed first of all in Djedda where he made a living by copying books. There he became acquainted with some people from Senégâr and on their advice went to their land. The ruler gave him a hearty welcome, assigned
him a house and other property and allotted him a regular income. Sulaimân then married a woman of Sennâr who bore him a son (Ahmad Zarrûk) and a daughter.

When 'Omar, the second son of Sulaimân by his first marriage in Tunis, had grown up, he went with his grand-uncle on the pilgrimage to Mecca and on the way met by accident his father Sulaimân, who was on his way to Cairo on business with a caravan from Sennâr. From Mecca, where his grand-uncle died, 'Omar returned to Cairo in order to study at al-Azhar. Later he visited his father in Sennâr, resumed his studies at al-Azhar and in 1201 (1786) married. Two years later he returned to his native city of Tunis where a son Muhammad (al-Tunisi) was born in 1204 (1789). 'Omar stayed only three years in Tunis and then went with his family back to Cairo to devote himself once more to study at al-Azhar. There he soon obtained the office of nāšib al-rîwāt (cf. L, p. 535), being appointed grand-uncle of the fraternity of Mughâl students. In 1209 ('Omar) learned of the death of his father from his step-brother in Sennâr and of their poor circumstances. He at once went there and never again returned to his own family. Fortunately for the latter, in the same year Tahir, 'Omar's younger brother, came to Cairo on business, intending afterwards to go on the pilgrimage to Mecca. He adopted his brother's family and sent the young Muhammad, who at the age of 7 had already read the Qur'an through, to study at al-Azhar. When, after Tahir's departure for Mecca, Muhammad's means of subsistence gradually came to an end, he decided to seek his father in the Sudan as news had reached Cairo that soon after his arrival in Sennâr he had gone on to Dâr Fûr. Among the members of a caravan which had reached Cairo from Dâr Fûr he met a friend of his father, who at his request took him back with him to Dâr Fûr. This must have been 1218 (1803). In Dâr Fûr he met first his father's step-brother Ahmad Zarrûk who took him to Djilût (in the district of Abu-l-Djilût), where his father 'Omar lived. The latter had attained a position of great prestige at the court, become wealthy and prosperous and had also founded a new family. By order of the king 'Abd al-Rahmân b. Ahmad (d. 1214 = 1799; cf. the list of kings of Dâr Fûr, i, p. 917) 'Omar had composed commentaries on two theological and legal works (cf. Voyage au Dur-Four, p. 107; on the other literary activities of 'Omar, see p. 424). When Muhammad arrived in Dâr Fûr, a certain Muhammad Kufrî (Nachtigal, Sahâra und Sudan, iii., Berlin 1879, p. 387, calls him Abû Shaïkh Kufrî) was acting as regent for the infant ruler Muhammad al-Fâṣî; he later met his death in a rebellion. Muhammad received a kindly welcome from Kufrî to whom he was introduced by Ahmad Zarrûk. Kufrî also enabled 'Omar to make a journey to Tunisia to visit his relations on his promising to return. For the period of his absence 'Omar left his estate at Djilût in the hands of his son Muhammad.

'Omar went first to Wâdâ' where he stayed some years; for he managed to attain a very high position at the court of the local Sâbûn sultan, being appointed a vizier and getting land in the village of Abali. But after awaiting his son there in vain, he decided to go on to Tunis.

Muhammad stayed some seven and a half years in Dâr Fûr after the departure of his father and became thoroughly acquainted with the land and its people. It was only after the conclusion of a war between Dâr Fûr and Wâdâ' that he was able to go to the latter country on an embassy from the sultan of Dâr Fûr. He came first to Wâra, the then residence of Sultan Sâbûn who showed him much kindness, as he had done to his father. Muhammad was thus likewise detained a considerable period in Wâdâ'. But his position became more and more difficult, in the first place because his uncle Ahmad Zarrûk who had followed 'Omar to Wâdâ' and on the latter's departure had been entrusted with the care of his children and house in Abali took full possession of 'Omar's property and only gave his son the minimum necessities of life. A second difficulty was the ill-feeling that developed with Ahmad al-Fâ'sî (on him cf. Voyage au Ouadây, p. 66 sq., 497 sqq., 508) who had been appointed 'Omar's successor in the vizierate on his suggestion. He slandered Muhammad to Sâbûn so that the latter became suspicious and ceased to show him favour. 'Omar, who came to Wâdâ' at his son's request, was able, it is true, to get Ahmad al-Fâ'sî dismissed, but on his ('Omar's) departure he regained his old rank. In these circumstances Muhammad readily took advantage of the Sultan's permission to leave Wâdâ' after eighteen months there. He joined a caravan going to Fesân with which he travelled through the land of the Tûbû (Tibesti) to Murzûk, the capital of Fesân. Here he stayed three months, during which the ruler there, Muntâm, died. From Murzûk he continued his journey to Tripoli and finally reached Tunis via Sfâqes (Sfax) about 1225 (1813) about ten years after leaving Cairo for the Sudan.

Muhammad at first settled in Tunis; later however, he moved to Cairo and there entered the service of the viceroy Muhammad 'Ali. When in 1824 the latter sent an army to the Moeur under his stepson Ibrahim Pâshî, Muhammad went through the campaign as chaplain (ma'âkip) to an infantry regiment (cf. Voyage au Darfou, p. 6). An incident of the siege of Missolonghi (1825-1826) is related by him in his Voyage au Ouadây, p. 634-635.

At the end of the war, Muhammad acted as reviser of the Arabic translation of European medical, especially pharmacological, works in the veterinary college founded by Muhammad 'Ali in Abû Za'bal (N. E. of Cairo). There Dr. Perron became acquainted with him and his arrival in Egypt, took Arabic lessons from him and induced him to write down his memoirs of his travels in the Sudan, fortunately for Arabic reading lessons. Written in 1839 Perron became director of the Kârî al-Âin medical school in Cairo, on his recommendation Muhammad was appointed chief reviser there. A. v. Kremer, who came to Egypt for the first time in 1850, mentions Muhammad as one of his teachers whom he esteemed highly (cf. A. v. Kremer, ed. cit; cf. Bâlle). As he further tells us, Muhammad also devoted himself to the editing of important works of the earlier Arabic literature, for example the Masâbmus al-Hârî (q.v.) and the Masâbmus al-Mahbûbî (q.v.), this is probably the Bekhî edition of 1278 = 1856. According to Comand (cf. Voyage au Darfou, p. x), Muhammad was also appointed to undertake, for an edition of the Arabic lexicon al-Kâmî.
of Frisåladi [q.v.], a revision of the Calcutta edition of 1230 (1857) for which purpose he corrected the text of the latter with the help of seven or eight manuscripts. The new edition was printed in 1274 (1857). In his later years Shaik Muhammad was engaged at the request of the Zain al-Abidin to lecture every Friday on the Hadith in the Zainab mosque. He died in Cairo in 1274 (1857) and was buried in Kempten [cf. cit.].

The many observations and enquiries made by Muhammad al-Tunisi in his long sojourn in the Sudan about the ways and people of the districts visited by him were written down, in his own experiences, at Perron's instigation in two comprehensive works, which Perron translated into French. They are:

1. **Voyage au Darfour par le Cheikh Mohammed Ebn Omar et Towany [Tunisi, popular nisha for Tunisi; cf. Stumme, Gramm. des tamenisch. Arabisch, Leipzig 1896, p. 66]**. *Réviseur en chef à l'Ecole de Médecine du Caïr, traduit de l'Arabe par Dr. Perron, Directeur de l'Ecole de Médecine du Caïr, Paris 1845 (lxxxviii. 492 pp. in 8°, with map).* The *Préface* to this book by Jomard (p.i.—lxxxviii) also appeared separately under the title: *Observation sur le Voyage au Darfour suivies d'un Vocabulaire de la Langue des Habitations et de Remarques sur le Nil-Blanc supérieur*, Paris 1845 (lxxxviii. 277 pp.).

Perron published the Arabic text of the first part of the Darfur-journey under the title: *Ta'likh al-Ashar bi-difaf Bilad al-Abar wa-l-Sudan* (= *L'Aisancement de l'Empire par le Voyage au Soudan et parmi les Arabes*) in 1859 in Paris in autograph (310 pp. in 4^°, with 4 pp. in French of introduction, emendations and additions to the translation).

2. **Voyage au Ouadda par le Cheikh Mohammed Ebn Omar et Towany**, traduit de l'Arabe par Dr. Perron, Paris 1851 (lxxvii. 756 pp. in 8°, with map and 9 plates with pictures). Jomard added to this book also a long preface (p.i—lxxvii) with historical and geographical observations. Perron himself in the introduction (p. 1—35) deals particularly with the divisions of the Sudan.

The Arabic text of the second work, which Perron (loc. cit., p. 34) intended to publish, never appeared. The manuscript was probably in his possession but where it went after Perron's death in 1876 in Paris, to which he returned in 1850, I do not know.

Muhammad al-Tunisi is the first to give us full and reliable information about important parts of the Sudan. On Darfur, he had before his time only the scanty notes of the explorer W. G. Browne and on Wadai a little information gleaned by Burckhardt. It was not until several decades later that H. Barth and J. Nachtigal were able to visit these lands and describe them in more detail in their books. There is no reason to doubt al-Tunisi's reliability; Perron checked his statements with the help of a number of people from Darfur and Wadai settled in Cairo and obtained complete confirmation of them. It cannot however be denied that there are certain defects in the Shaikh's description. A certain lack of order in the arrangement of the material, the lack of any approach to a regular system, a fondness for digression and a disposition to believe much too readily statements about the popular fictions of the country (e.g. especially about the size of the cities) are not such serious defects as the fact that he gives no exact geographical, topographical, statistical and meteorological data (cf. thereon the criticisms by Barth, in *Reisen und Entdeckungen in Nord- und Centralafrika*, iii., Berlin 1859, p. 529 sqq. and Nachtigal, in *Petermanns Geogr. Mitt.* (in. 1757, p. 176 and in *Studien und Reisen*, iii., p. viii.). Nevertheless Tunisi's two works form an important and still too little appreciated source for the ethnographical, cultural, and political conditions in the Sudan lands through which he travelled. In conclusion it should be emphasized that the Shaikh's two books supplement one another; the much larger work on Wadai also contains a good deal of information about Darfur.

As an appendix we may give a brief account of a countryman of Muhammad al-Tunisi who resembled him in many ways, the Tunisian Shaikh Zain al-Abidin. The latter, an educated, well-read man, who had studied at Fezzan and grown up in constant intercourse with Europeans, in 1818 or 1819, when at a mature age went out for the Sudan where (like Tunisi) seems to have spent about ten years, to some extent as a missionary and adventurer learned in religious matters. He went first to Senaïr and Kordofan, then stayed a considerable time in Darfur and Wadai; making his living by teaching. After over three years in Wadai he returned via Fezzan to Tunis. His experiences and observations there he recorded in an Arabic book of no great length which was published (when and where?) It was translated into Turkish and printed at Stambul in 1802 (1846) (cf. Z.D. M.C.G., ii. 482). This Turkish version was translated by G. Rosen as *Das Buch des Sudan oder Reisen der Schacht Zain al-Abidin in Nigritien*, Leipzig 1847.

The importance of this book lies in the description of the state of civilization and organization of society in Darfur and Wadai. We are told of the court life, of the soldiers—a campaign, the natives, slaves and negroes, of trade, superstitions, a wedding etc. These interesting notes are an important supplement to the far fuller description of Muhammad al-Tunisi. Noteworthy is an account of excavations made by Zain al-Abidin with the permission of the Sultan of Wadai's in ruins near the capital (p. 47—49, 61—75). Zain al-Abidin left Wadai just as a change on the throne took place; the name 'Abd al-Asir given in Rosen's translation to the new ruler (p. 108) should be amended to 'Abd al-Asy [cf. Nachtigal, op. cit., iii. 284, where an 'Abd al-Asy, grandson of Sidi, is mentioned].

Bibliography: The main source for the life of Muhammad al-Tunisi and his family are the two books of travel, especially the autobiography in the introductory chapter to the *Voyage au Darfour* (p. i—27) and a number of references like *op. cit.*, p. 48—49 and in the *Voyage au Ouadda* p. 37—39, 50, 62, 66—67, 129, 199, 211 sqq., 215, 497—499, 508, 512 sqq., 643—645. The biographical sketch by Jomard (*Voyage au Darfour*, p. viii.—x.) should be consulted for errors and omissions; cf. also Perron's notes (*Voyage au Darfour*, p. lxxi.—lxxiii.) and A. v. Krenz's *Agypten*, Leipzig 1865, ii. 324. Cf. also, in addition to the references.
in the article, Wüstenfeld in Lüttke’s Zeitschr., für vorglück. Erdkunde, i. (Magdeburg 1842), p. 67 and Brockelmann, G. A. L. ii. 491 (where the book on Wadis is not given!)

M. Struck

TUNISIA. Tunisia consists of the eastern declivity of Barbary; it corresponds approximately to the Ifrikiya of the middle ages. Since 1831, Tunisia or the Regency of Tunis has been a French protectorate.

I. GEOGRAPHY.

With its present frontiers, Tunisia, which lies between 30° and 11° E. Long. and 32° and 37° N. Lat., has an area of 115,180 sq. km. Along its western frontier it is bounded by Algeria (département of Constantine), on the south by the Sahara and, far to the southeast, by Italian Libya (Tripolitania). The Mediterranean washes its shores, which are usually low-lying, on the north and east. The climate is on the whole moderately warm; but the rainfall varies greatly with districts and even with years, and being influenced by the proximity of the sea and also of the Sahara, it varies very much with latitude and still more with altitude. The relief is very varied although the average height above sea-level is not great; the mountain-ranges, which are the continuation and end of those of Algeria, run generally from S.W. to N.E.

In the northwest, the mountains of Krummiria and of the Mogods, of chalk and sandstone, rarely exceed 3,000 feet, towards Algeria; subjected to a heavy rainfall, covered with oaks and bruschwood, they contain mines of zinc and iron (Dauria). They run along the coast where in turn we have, with the little port of Talbara, the dunes of Nefza, Cape Nègre and the little peninsula of Cape Serrat. In the east, they gradually diminish in height down to the hills which surround the alluvial plains of Jerba and of Mater, both well watered and growing great crops of wheat. The lagoon of Bizerta, which communicates with the sea by a narrow strait, forms an excellent roadstead with deep water opposite Sicily, which is not a great distance away. The plain of Mater, now almost entirely covered with soil except for a number of marshes still existing, is dominated by the curious massif of the Djerif Achkeul. Further east, the Ra’s Shit ‘Ali al-Makki above Porto-Farina (Ghān al-Makki) bounds the Gulf of Tunis on the north, which is being filled up by deposit brought down by the Medjerda and the Wād Milliane: Utica, a port in the Roman period, is now 6 miles from the sea; the peninsula of Carthage, formerly an island, is connected to the mainland by an isthmus, which separates the Sebkha el-Raizana from the lagoon of Tunis; the lagoon, at the end of which stands Tunis, the capital, communicates with the sea by the strait of Le Goulette (Hatik al-Wādī). The district of Tunis, which has not a great rainfall, is less suited for cereals than for the vine and fruit-trees.

The Medjerda, which runs through northern Tunisia from west to east, is the only real river in Tunisia and its level is very low in summer; from November to April it is flooded and very turbid. Its lower course (Medjerja el-Bah, Tébourba) is separated by the gorges of Testur from its middle course, where it drains the great alluvial depression of Dakhla (the region of Suk el-Arba and Suk el-Khemis) as rich in cereals and pasturage as the adjacent chalk-hills of Beja. Its valley is bordered on the north by the limestone hills of Bejawa and Teboursk, while to the south the very undulating relief of the centre and west of Tunisia present an alternation of rounded hills of limestone and great plains, the prolongation of the Saharan Atlas of Algeria: this High Tell (districts of Teboursk, of Kef, Sers, Elha-Ksar, Thala) covered with natural woods of Aleppo pines, and tall shrubs and great pastures, enables wheat to be cultivated, except in the drier part of the southwest, which has to be content with barley. This, especially towards the eastern frontier, is the part of Tunisia which is richest in mines (iron at Djerissa and Slatat, phosphates at Kalaat-Djerdja and Kalaat es-Sekkâs). The rivers, tributaries of the Medjerda (W. Mellégu, W. Tessa, W. Sillana) and W. Milliane (plains of Fahs and Mornag), flow directly into the Gulf of Tunis.

To the south of the High Tell rises the most marked mountain barrier. The "backbone of Tunisia" runs from the neighbourhood of Tebessa to the Djerif Zaghwan (4,300 feet high, 30 miles from Tunis) and to the Djerif Raïs and Bu Kearnâin; it includes the highest peaks: Shambî (5,150 feet) and Semarîn in the Byazzene range, the massif of Maatar, Serdîf, Bargoun, Kirîne and the chain of Zeguitania. But it permits communication to be maintained easily with the south, through several passes or defiles, notably the great corridor of Ksar-Sbibla. On the other hand, the watercourses on the southern slopes, like the W. Merguellîl, Zerad, El-Haiab (which waters the plain of Gamuda) which flow irregularly and even intermittently, lose themselves when they flow at all—in the saline hollows called Sebkhas: e.g. S. Kelbia and S. Sidi el-Hani in the plain of Kairawan. These are in the region of the great steppes, the land of the camel, which stretches to Tebessa, only interrupted by a few limestone-hills of no great height; covered in the west with alfa or white artemisia, and jujube-trees towards the east, where it gradually slopes down to the olive-groves of the hinterland of Safx, it nevertheless contains extensive agricultural land and areas suitable for cattle rearing. The only towns in it, besides Kairawan, are at the outlet of the passes of the "backbone"; Sellala, Kasserîn, Ferlana. But it becomes more and more desert-like in character towards the south as a result of a decrease in rainfall, and ends, beyond Gafsa and the rich deposits of phosphates at Metlawa and Redeyef, in the depression of the Shotts (Sh. el-Chârha, 500 feet below sea-level, Sh. el-Djerîld, Sh. el-Fedjîl: enclosed by the Djerif Sherb and Djerif Teboga), in the oases of Djerid (Medjerda, Nefza) and those of Nefsa (Kerbîl, Dong), which produce dates; here the Sahara begins. More to the S.E. the Djerif Dahar (1,300—2,000 feet), of limestone and chalk, with the massif of the Matmata, is only the eastern border of a great basin in the Sahara.

On the N. E. coast of the Regency, where prosperous farms have been established, the important peninsula of Cape Four, in the prolongations of the "backbone", lies between the gulfs of Tunis and of Hammamet, the coastal plains of which are connected by the passes of Zaghwan (Pum el-Kharrîbta) and of Grombalia. Then to the south of the orange-groves of Nabeul and Hammamet, the Sahel of Sissa, with its valleys, is still sufficiently well watered to support by its olives and
other crops a dense population which lives in large fortified villages: Kalaa-Kbira, Kalaa-Ssira, Msaken, Maknine; the regularity of the coastline is interrupted by the little peninsulas of Monastir and Mahdia.

Beginning at Ras Kapudia, roughly on the level of el-Djerir, the coast turns inwards and leaves out in the bay of Sfax the islands of Kerkennah, which are separated by shallows from the shore, and then runs along the Gulf of Gabes (the ancient Little Syrtis) where sponge fishing forms a source of revenue. At the end of the Gulf rise the palm-trees of Gabes. Between them and the oasis of el-Hamma adjoining the Shells, lies the passage from the central or eastern plains of Tunisia to those on the extreme south coast: Arad, off which lies the large flat green island of Djéla, Léjara bordered by lagoons; a few olive-groves however flourish around Zirzis and Ben-Gandane.

2. HISTORY.

The conquest of what is now Tunisia cost the Arab invaders who came by land from the southwest at least half a century of fierce fighting with the native Berbers and with the Byzantine governors. In North Africa as in the East, Islam was bound to come into conflict with Byzantium, but in the middle of the seventh century the situation in the exarchate of Africa was eminently favourable to the prospects of the ultimate conquerors: religious dissensions, a distant but all too faithful echo of disputes provoked in the east by monotheliist doctrines were rending the Christian community of Carthage; and detaching from Byzantium the majority of those who were strictly attached to orthodoxy; the governors, less and less under the control of the Emperor, were aspiring to a state of independence which forced them to rely for support on the chiefs of the great native tribes, and the tribes, taking advantage of this, gradually cast off all Byzantine authority so completely that at the time of the Muslim conquest, all the south of Byzacene seemed to be practically independent of Carthage.

The two first invasions of the Arabs with an interval of 15 years between them, were only raids, razzias; but they prepared the way for better organised expeditions for the methodical conquest of the country. Besides, by a remarkable coincidence, on each occasion the invaders found Byzantine Africa in the throes of a political crisis: in 647, the patriarcus Gregory had just broken with the Emperor and settled himself in the midst of the Berbers, far from the coast, when 'Abd Allah b. Sard b. 'Abd Sarh, governor of Egypt, crushed him near Sheilla and proceeded to lay waste the Djérid; in 655, the people of Carthage were most unexpectedly open revolt against the empire, when Mu'ayya b. Hudayfi razged Byzacene and took the stronghold of Djérid.

Was the government of the Magrib added by 657 to that of Egypt? The real occupation only dates from the period 669–775, marked by the victories of 'Ukba b. Nafi al-Maghrib and the foundation of Kairouan: this was the period of the definitive occupation of Byzacene and the beginning of the conversion of the Berber tribes to Islam, but the most important event was the foundation of the new city, a Muslim town, an arsenal, caravaner, and market-place, which henceforth raised its mosque and its ramparts in the plains, facing the heights of central Tunisia which were still defended by a line of Byzantine forts.

After the governorship of Abu 'l-Muhadjar, of which little is known, 'Ukba returned in 658; but two years later on his way back from an imprudent raid which had taken him as far as Tingitana, he fell in the Zab before Tahdits, killed in a vigorous native rising against the invaders. This rising which began in the Auras, emerged Kairouan; its leader Kusaila, supported by the Byzantines, was for several years the head of a vast Berber state, which offered a desperate resistance to new Arab attacks. He himself fell fighting in 688 in the district of Shbou, whence Zahir b. Kais al-Bahawi is said to have come. It was however only in 693 when the position of the Umayyads at home permitted a policy of expansion to be resumed, that Hāsān b. al-Naṣrān was able to lead an army of 40,000 men to the invasion of Byzacene and advance swiftly northwards in an attempt to crush the Byzantines before turning back against the rude Berbers of the Auras. He took Carthage in 695, but two years later lost it again defeated by the patrician John, and again by the Berbers under the legendary figure of Kāhina [q. v.]. in the plains of Baghail. 'Ukba fell back on Barca and in the following year in a combined offensive by land and sea, he took Carthage finally. In 698, the Arabs had at last taken almost the whole of the modern Tunisia from the Berbers and Byzantines. Hāsān was able to "found" Tunis and his successor Mūsā b. Naṣir to take Zaghawa, then to lead the "Ifriqyia" Berbers themselves to the conquest of the west.

The greater part of the Byzantine colony had been able to escape by sea, mainly to Sicily and Malta. The majority of the inhabitants who remained in the country seems to have been very quickly converted to Islam, except for a few groups, Christian (of'arab) or Jewish. But even after they had entered Islam the Berbers of Ifriqiya, like those of other parts of North Africa,
tried on several occasions to regain their autonomy on the convenient pretext of religious heresies. The whole history of the eighth century is made up of risings, which in the name of socialist Kharidzism roused the natives against the Arab rulers, and also of mutinies by the Arab soldiers themselves, who readily broke the bonds of discipline.

Umayyad b. Ša'wān was able to put down the rising of the Ṣafīr 'Ukāsha, but he had to flee the east when the rebel 'Abd al-Rahmān b. Ḥabīb al-Tabari took Kairawān. After the last Umayyad had proved powerless to retain this distant province which was slipping from them, the 'Abbasid dynasty, seeing Spain cast off their suzerainty, were anxious at least to retain Ḥarrān, captured Kairawān, rebuilt its ramparts and installed themselves there as governor, but not for long. The Arab soldiers, dissatisfied with him, forced him to depart in 765. Not even his successor al-Ḥālib b. Ṣalīm al-Tamimi, an old companion in the east of the 'Abbasid propagandist Abū Muslim, was able to hold out against the rebel Muṣārūt; he fell in the rising in 767 and anarchy prevailed for five years.

From 772 to 794, Ḥarrān was ruled by a regular petty dynasty of officials of the caliphate, the Muhāllabids, Yemenis by origin, who succeeded for a time in securing some degree of peace and order in the country; Ya‘qūb b. Ḥasan of al-Ḥālib, with the help of 40,000 new troops, finally disposed of the Ḥālib b. Ḥarīm, rebuilt the Great Mosque of Kairawān (774) and organised the gilds of the capital; his son Dāwūd in 783 at Kef crushed the Berber confederation of the Wārāfūd, and his brother Rawḥ, governor in his turn, concluded with the Ḥālib of Tiaret, Ibn Rostum, an agreement which put an end to the spirit of rebellion among the Berbers in Ḥarrān.

Henceforth it was only the Arab soldiers who constituted a serious danger for the domestic peace of the country. After the death of the last Muhāllabid al-Ṣa‘līd an era of bloodshed and trouble begins again. The aged general Ḥarīm b. Ayyān sent for the purpose, restored the authority of the caliph of Baghdad and built the ribāṭ of Mounastir; but his successor Muṣārūt b. Muṣārūt al-‘Abbāsī was driven from his post by theTamimi soldiers of Tunisia whom his tactlessness had roused (Oct. 799). At this moment, Ibrāhīm b. al-‘Abbās, son of the governor killed in 767, suddenly appeared as an 'Abbāsid champion in his province of the Zāb. He brought Ibn Muṣārūt back to Kairawān. As a reward and to establish a stable government at last, Hārīn al-Raḍdī on the advice of his councillors decided to appoint him tributary 'emir' of Ḥarrān. Ibrāhīm received his diploma of appointment in July 800; the power was to remain for over a century in his family, down to 909, without interruption.

The dynasty of the Aḥhābīds [q.v.] left its mark deeply upon Tunisia. Under an outward submission to the caliph of the East, the country, practically independent and hereditary, pursued a policy of pacification, organisation and expansion. The hostility of the Tamimis, whose centre was Tunisia, was always active. Ibrāhīm, although a Tamimi himself, came into conflict with these warriors of Muṣārūt, who could ill endure the authority whether near or distant of the 'Abbāsīds, the friends of their ancient Yemeni rivals. He had to rely on a military which contained many non-Arabs from Khurāsān, but he relied mainly for his personal security on a recently formed negro guard and on the fortifications of Kaff al-Kadim (or al-Abbasaya) which he built in 801 a league to the south of Kairawān. It was probably there that he received the ambassadors of Charlemagne. In 802 he had to deal with a rebellion in Tunisia, in 807 with one in Tripoli, 810–811 with the mutiny of his own, general Imrān b. Muḥḥammad who even laid siege to Kairawān. It was in his reign that the frontiers on the east coast began to be covered with the little military posts called ṭamāris. When he died in 812, Tripoli was again in full insurrection.

His son Ẓiyādat Allah (817–838) who has left the reputation of an energetic, but cruel and violent man, had a powerful opponent to deal with. Mansūr al-Tunbaḍī was within an ace of destroying him, and for several years the whole of the north, including Tunis, was completely lost to the emir; but by a stroke of genius, Ẓiyādat Allah diverted to a holy war against Sicily the ardour and applause of the most turbulent soldiers, who embarked at Sūs in 827, full of enthusiasm under the leadership of the illustrious Kaff Asad b. al-Parṣūn. Palermo was taken in 831; Messina fell the following year later. Ẓiyādat Allah, who in 831 had built the ribāṭ of Sūs, was unable to devote his attention to works of a more peaceful nature, like the building of the Great Mosque of Kairawān. His architectural activity was followed on a great scale by his successor. In 850 the Great Mosques of Sūs and Sfax were built; the Emir Ahmad in particular, about 860, erected ramparts around these two cities and built the famous 'reservoir of the Aḥhābīds', a great reservoir to supply Kairawān.

In 874, Ibrāhīm II, the last great prince of the dynasty, succeeded his brother Muḥammad, whose passion for hunting cranes earned him the name Abu l-Gharān. Ḥarrān was abandoned for a new residential town with the government offices. Raqqādah, the site of which is still known 5 miles south of Kairawān; but from 894, after Tunisia, which had rebelled, had been taken by assault, the emir frequently removed his court to the reconquered city, on which he wished to keep a close watch. The foreign policy of the reign is marked by important events. At first in the southeast there was the disturbing exploit of al-‘Abbās b. Ahmad, the son of the first Tūnīd, who, in spite of his father, led a force from Egypt against Tripoli in 880 in an attempt to conquer Ḥarrān. Tripoli was saved by the Nafīsī Berbers; Ibrāhīm arrived in time to seize a treasury of Tūnīd dinars, which served to improve the financial condition of his state; the improvement was of a short duration, however, for it was not sufficient to refill the coffers, emptied at the beginning of the century by the civil troubles and later by the heavy expenditure. The terrible rising of 893 was provoked simply by a brutal requisitioning of slaves and horses in the plain of Gamuda for the benefit of the needy government. On the other hand, the conquest of Sicily was completed with the capture of Syracuse in 878 and of Taormina in 901; and when Ibrāhīm, on the complaint of the always hostile Tunisians, had agreed to abide in favour of his son al-‘Abbās in obedience to an order sent by his caliph, it was as a muṭṭalib before Cosenza. In Cabala he died on Oct. 25 of the same year.
In the meantime the religious revolution which was to overwhelm Iršiya was preparing in the west. In the ninth century the whole of the Berber south (Warrā, Lawā'st, Mīnās) was ‘ābdī from the Awdūs to Tiferra and Tripoli, the Nafīsā in particular, who in the south of Gabès barred the road to the east, before Ḥorāṭmū II had massacred them in 896. But Kharīdjūm had not been able to prevent orthodoxy from gaining the upper hand in the greater part of the country and from producing illustrious men, like the Kādāb ’Abd al-Raḥmān b. Ziyād, the companion of Ibn al-Aṣbāḥ and the ascetic Buhūlī, popular and very influential, in the eighth century; in the Aghlabid period, the golden age of the discussions on points of law, which were contemporaneous with the foundation of the various schools, and the gathering of the principal collections of traditions, two pupils of the famous Mālikī jurist of Egypt, Ibn Kāsim: Ṣādiq b. al-Fārābī, of a Kharāṣī family, d. in Sicily in 828, and his pupil Ṣaḥīḥ (Ibn Sa’d al-Taniḥkī), born in Syria and son of a mercenary, who in 850 as Kādāb of Kairūn brought about the triumph of Mālikism, which was threatened by the Ḥanafism of several teachers; his Madīnah is still a classic, and Mālikism, in spite of apparent eclipses, is still the maqāmah par excellence of Tunisia. The eastern origin of the more notable teachers and doctrines is a remarkable fact; it was also from the east that the propagandist (wj) ’Alī ’Abd Allāh came in 893 to the Kūṭum Kabyt of Idrīs (Little Kabylia east of Rabors) to convert them to the cause of the Shī ’ Mahdī Ḥabīdālādī. An Aghlabid expedition sent in 902 against the Kūṭum barely reached its objective, and in the reign of Ziyā detached Allāh III, who in 903, had murdered his father, the Mumālīt ’Abd Allāh, the Shī ’s danger became pressing; in 905 while the Mahdī was hastening from Syria to North Africa to await Siqīliyā, the proper moment to appear, his faithful wj was cutting the emir’s troops to pieces. Events then began to move rapidly: Ziyā detached Allāh had in vain had the Shī ’s condemned by an assembly of jurists at Tunis and sought the aid of the Aḥbāsī; in the spring of 907, Baghā fell; in March 909, after the fall of Libūna, Ziyā detached Allāh fled to Baghā and the wj entered Raḥkā in spite of the mute hostility of the orthodox teachers. Finally in December of the same year, the Mahdī in person received the homage of the people of Kairouan. In this way was founded Iršiya, solely through the efforts of the Kabyl infantry of the Kūṭum, the heretical caliphate of the Fīṭḥi mīdīs (Ubṣī līdīs) which was to transform the political conditions of the whole of North Africa, before returning to its original home in the east.

From the first, the new dynasty had its eyes on Egypt, and down to the day when it was able to install itself there definitely, never ceased to send out military expeditions to prepare the way for conquest. In January 910, ’Uthman Allāh had ’Alī ’Abd Allāh, to whom he owed the throne, put to death just as the Aḥbāsī al-Mamūrī had disposed of his own propagandist Abū Muslim. In 913 an army led by his eldest son invaded the Fayūm while another took Alexandria; and it was only after the check to this first attempt at eastern expansion that the Mahdī decided to found a capital in Iršiya, but on the sea: the strong town of Mahdiyya (qv.), a starting point for fleets against the east, and a refuge against the expected attacks of the Berbers of the interior (916–918), but in 919 a second expedition again seized Alexandria and held it for a short time. In the west, the successes were overwhelming: Sicily which had rebelled was brought to obedience, and when ’Abd Allāh died at the beginning of 924, the whole of the Maghrib, where the Shī ’ state of Tariq, the Idrīsid of Faz and the Shī ’ of Kairouan had collapsed, recognised the suzerainty of the Mahdiyya. ’Abu ’l-Kāsim Niṣār (al-Kāsim b.-Amr Allāh) maintained with difficulty his authority over the great empire he had inherited. His fleet, if true, was able to plunder Genoese in 925, but it was a raid of no more importance than that of the Tunisian on Carthage under Bouniface of Lucca in 828. On the other hand, he all succumbed to the formidable rising led by the Nakkārī Abī Yarīd b. Kāsidī, the Firanī, the “man with the axe” (gāhī al-imār), who proclaimed himself Ṣaḥīḥ al-muṣīmin and under the mask of religion led the Hāwūrā of the eastern Awrā to attack the towns of Iršiya. The Kharīdjī Berbers sacked Beja, Lorbeu, Kairawān (in 944) and Sīsā, seized Tunis and with their ranks swollen by volunteers from the Zāb and Nafīsā, invested the caliph in his headquarters at Mahdiyya (in 945). At the most critical moment, ’Abu ’l-Kāsim died in 946. His son Isma’il (al-Mamūrī), supported by the people exasperated by the excesses of the invaders, re-established the situation with the help of the faithful Kūṭum. Defeated in a series of bloody battles, Abū Yarīd saw his partisans scattered and he himself fell mortally wounded into the hands of his enemies at a place where in time the Kūfī of the B. Hāmmād was to be built (947).

This troubled period was succeeded by one of calm and prosperity. Al-Mamūrī at once displayed his power by founding the luxurious town of Saḥra (al-Maṣṣṣirya) which was to eclipse its neighbour Kairawān (947). Commerce and industry flourished, and at sea the Kabīr Raḥīk was the terror of the Christians. Under al-Mu’izzī, who came to the throne in 953, the long awaited hour arrived: in spite of occasional outbursts of rebellion in support of the Omayyads of Cordova, the Maghrib as a whole seemed subdued; the raids of Spanish Muslims on the coasts of Sīsā and Tabarka in 956 were more reprisals and not indications of a real danger. Hopes of conquering Egypt, weakened by the death of the Ikhaṣṣīd Kāfīr, seemed to be just fulfilled. In July 969, the freedman Dajjar at the head of the Kīṭum occupied Fustānt on behalf of al-Mu’izzī just as Abū ’l-Abd Allāh had taken Kairawān for his master, the Mahdī. The following year his troops entered Damascan. Then when he had built the town of Cairo for his sovereign, who was still in the west, he urged him to rejoin him, to oppose the threatening progress of the Karmātians. After the last Zenātī rebel had been crushed in the Maghrib, the Fāṣīmid, who now wore a crown in the eastern fashion, began his preparations for departure in August 792. On June 10, 973, he reached Cairo, the new capital of his dynasty. Before leaving Iršiya for ever, al-Mu’izzī had entrusted his government (excluding Sicily) to one of his most valued helpers, the Berber emir Bologgin (Bulūkkin), whose father Zīrīr, the Mamūrī, a great enemy of the turbulent Zenātī, had always placed his Ṣanḥādji of the region of Titteri
and Meden at the service of the ‘Uthmānid Dynasty. This plan of ruling the country by a line of Berber princes was a complete success. Under the Zirids (q.v.), who regularly received their investiture from Cairo, Ḫīrīṣīya enjoyed happy days of material prosperity and an abundance of the necessities of life due to the development of agriculture and native industries (carpets, cloth and pottery) and trade with the outer world; there was an extravagant splendour about the great official ceremonies. Law and medicine, which under the Fāṭimid Dynasty had already produced such famous men as Ibn Abī Ḥusayn b. Sulaimān b. ʿAbd al-Jalīl b. ʿAbd al-Dżazār, flourished; literature produced the poet Ibn al-Raṣīk. The Jewish colony of Kairawān attracted and produced celebrated Talmudists.

The brilliance of this period had been hardly affected by the defections, more and more serious, of the Zenīta of the west, who proclaimed allegiance to Cordova, nor by the accession of Ḥammād who, in the reign of his nephew Bādis b. al-Muṣrī (995–1010), founded an independent dynasty in his famous Ka‘ba (in 1007). On the contrary, it was under al-Muṣrī b. Bādis in the first half of the 10th century that it seems to have reached its zenith. But this al-Muṣrī, ostentatious to excess, held in great honour by the caliphs of Cairo, respected throughout the Magrib, committed the fatal mistake of awakening the old religious hatreds in the name of which the north Africans used to rebel against their eastern rulers. Rallying around him the ‘Alītīt townsmen of Kairawān, who under his eyes one day proceeded to a general massacre of the Shī‘a, he transferred his harem to the ‘Abbāsid of ‘Utsayd and ended by breaking openly with the Fāṭimids, through a series of steps covering the period down to 1050.

The revenge of the sīyāṣīn whom he had cast off was terrible; the Egyptian wāṣir al-Ḥāfsūṯ, who felt personally insulted, sent against the rebel vassal marauding bands of nomad Hilālī Arabs who were quartered in the Sa‘dīd, to the east of the Nile. The year 1051, when the first Hilālī, the B. Rīḥāŷ, arrived in Ḫīrīṣīya, marks a turning point in the history of Tunisia. Al-Muṣrī was twice defeated at Kairawān which he vainly undertook; in 1052, overwhelmed by the nomads who ravaged all the lowlying country, he secretly moved to Mahdiya under the escort of an Arab emir whom he had been forced to take as son-in-law. The invaders, hundreds of thousands in number, profusely altered the appearance of North Africa, economically, ethnographically and politically: the Berbers were driven back, the country arabised, nomadic life and insecurity introduced, agriculture ruined and central power broken up. The chief towns fell into the hands of the Arabs or rather because autonomous little states under local chiefs or governors who proclaimed themselves independent; some even paid homage to the Ḥammādīd of the Ka‘ba, whose protection they desired. In this way were established in Tunis the B. Khurṭasānī, in Bizerta the B. al-Ward, at Gabes the B. Dijā@js, at Gafsa the B. al-Rand; in the centre there was anarchy.

In the midst of countless difficulties, the Zirids held out at Mahdiya, from which they now held only the coast between Sfaxia and Gabes. Tamīn (1063–1108), son and successor of al-Muṣrī, vainly tried to regain some lost ground; he made peace with the B. Ḥammād but did not succeed against Tunis and, shut up in Mahdiya, had to withstand the attacks of the Arabs and also of a new enemy in the Christians. In 1087 Mahdiya was taken at the instigation of the Pope by the Pisana and Genoese under Pantaleon of Amalfi; Tamīn had to pay an indemnity and admit the merchandise of the victors without duties. Yahyā b. Tamīn, who died, probably murdered, in 1110, then his son ʿAll, who died in 1111, had recognised the superiority of the caliph of Cairo, obtained the support of the Arab tribes, and won some successes by land and sea, when an unexpected adversary overwhelmed them. The Normans, who had already conquered Sicily and Malta, now intervened in the affairs of Ḫīrīṣīya; in 1118, a rupture occurred with the Zirids, who appealed to the Almoravids of the distant west. Al-Ḥasan b. ʿAll, at first forced to make terms and accept the protection of Roger of Sicily against the threat from the Ḥammādīd of Bougie, could not prevent the Sicilian admiral George of Antioch from driving him out of Mahdiya in 1148. Roger II, then William I, lords of Djerba and the coast towns from Sīsa to Tripoli, organised a kind of tolerant protectorate there, the objects of which were mainly commercial. But this was of short duration; the inhabitants, rising against the Christians, very soon regained their freedom; Sfaxia and Mahdiya alone had to wait till 1150–1156 before being cleared out from the indefatigable Almohads Abū al-Muṣirīn who coming from the supreme Magribi defeated at Setif in 1151 the Arabs of Ḫīrīṣīya, united under the Rīḥāŷīd emir Mahdī b. Ziyād, crushed all opposition, seized the fortresses, massacred Jews and Christians and restored for more than fifty years the political unity of North Africa.

In spite of the prestige of its new masters, the caliphs of Marrakesh, Ḫīrīṣīya did not yet know peace. Almohad authority was not felt directly but through the intermediary of a governor settled in Tunis; this representative of the ruling power, usually a near relative of the sovereign, very soon proved incapable of restoring order to the province, where to the continual threat from the Arabs there was added from 1158 onwards the trouble caused by the Turkish bands of the Armenian adventurer Karakūsh and by the extreme Magribi of the B. Ghānīyā Almoravids, ʿAlī (d. in 1158) and his brother Yahyā. The coming of the caliphs in person, Vilāṣ in 1180 and Yaḥyā b. al-Muṣirī in 1187, at the head of their armies, was not enough to improve the situation. Yahyā was favoured by fortune: in 1200 he had disposed of his former ally Karakūsh, suppressed his rival Ibn Abū ʾAl-kartum al-Ragrāqī, the ‘alīṣīf’ of Mahdiya, and from his base of operations in the Djerid extended his rule over the whole of the modern Tunisia. It required the expedition of the caliph al-Nasir in 1205–1207 to put an end to the Almoravids by reducing Yahyā to a precarious position and to install a powerful provincial government, entrusted at first to the ‘Shaykh’ Abū al-Walīd b. Abī Ḥaṣaf (1207–1221), the hero of Alarco. Thus the Ḥādīdīs got their first grip on power.

This family of the Ḥāfṣīd Dynasty (q.v.), of which another member had been since 1184 governor in Tunis, was descended from a chief of the Ḥanīta Berbers (a Maqṣūdī tribe of the Makharat Atlas) who had played a very prominent part in the
mediate entourage of the Mahdi Ibn Tumart. They established themselves definitively in Irikiya in 1226 with the appointment as governor of Abū Muḥammad ʿAbd Allāh who was appointed two years later by his brother Abū Zakaryā (1228–1249). The latter, while gradually becoming independent, considered himself however with the title of emir and was the true founder of the great Tunisian dynasty which with various vicissitudes of fortune occupied the throne for three and a half centuries. In spite of their repudiation of Muʿāmmād suzerainty and the return to Mālikīm, the Ḥafṣids always proclaimed an unswerving fidelity to the Almohad tradition of which they liked to consider themselves the authentic representatives. The organisation of their government with a few slight changes reminds one of the early Almohad constitution.

Even when the second independent emir, the son of Abū Zakaryā, known as al-Mustanṣir, had been proclaimed caliph by Mecca about 1250, the sovereign remained surrounded by an important body of Almohads, the cornerstones of the political edifice and of the army, and the coins retained their Almohad character in type and weight. The government departments were collected into three great branches: the army, the treasury (al-ṣaqībār) and the chancellery. The governors of provinces were for long chosen preferably, indeed almost exclusively, from among the nearest relatives of the monarch. But it would be wrong to deny the part played in the higher administration, as in the intellectual life of the country, by the numerous Muslim refugees from Spain, ‘Andalus’ expelled at the “reconquest” of the xiiith century.

The Ḥafṣids in their desire to pacify Irikiya came continuously up against the Arab problem. The nomad B. Sulaim having driven back the B. Riyāṭ in 1268 they were masters of the interior; their factions, hostile to one another, subjected the country districts to regular contributions. Among them, the Kūnā, who were a Makḥzan tribe, frequently interfered in the dynastic disputes, threatening Tunis, supporting pretenders of their own choice, and driving the people of the towns to desperation. In 1268 they obtained from a sovereign who owed him a throne to them, a charter of ‘ādāb granting them the revenues of several cities; the rivalry of their two branches, Awlād Abū l-Lail and Awlād Muḥalhalh, was to have immediate repercussions on the central power in the course of the xivth century.

Due to the death of al-Mustanṣir in 1277, the dynasty had its brilliant periods. In spite of sporadic rebellions, its rule extended from Tripoli right into Algeria and was solidly established in the principal towns, Tunis, Constantine and Bougie. Its prestige extended beyond the limits of North Africa, attracting the attention of Spain and Christian Europe. This is the period when commercial relations were established on a regular basis with Barcelona, Marseilles, Genoa, Pisa, Sicily and Venice: treaties of commerce and navigation, Christian envoys at Tunis, the importance of the customs duties, which justified the tribute paid by Tunis to Sicily and later to Aragon. A body of Christian mercenaries was gathered round the Ḥafṣid, who was however seriously threatened by the attack on Carthage by St. Louis’ Crusaders in 1270.

To sum up, Irikiya enjoyed a more stable and more prosperous regime than in the preceding two centuries: the renaissance of legal studies and of architecture [cf. Tunis] is evidence of this. Unfortunatelately the successive revolutions provoked by the claim to the throne of princes of the blood true or alleged — as in the case of Ibn Abī ‘Umr in 1293 — rapidly weakened the authority of the Caliph and diminished, to the advantage of the Arabs, the by no means too secure cohesion of the two peoples. The direct line of al-Mustanṣir, after the forced abdication of his son Abī l-Wālid (in 1279), only produced one further ruler, Abū ‘Aṣīla (1295–1300), and he too was little used. It was the descendants of another son of Abū Zakaryā, Abū Isḥāq l-Idrīṣī (1279–1292), who — after the reign of a third son, Abū Hāṣ (1284–1295), then that of a cousin, Abū Yahya b. al-Lībyān (1311–1317) — finally held the power, beginning with Abū Yahya Abū Bakr (1318–1340).

Ḥafṣid unity, destroyed for a period by the succession of Bougie, which made itself an independent state, was reconstituted in Djerba, in the hands of the Christians since its conquest by Roger of Lorris in 1264, was taken from them in 1337; the Abī l-Wālid threat was averted by the alliance with the now powerful Marinids. But this alliance itself concealed a danger, since, profiting by the internal disorders, the ambitious Marinid sultan Abū l-Ḥasan, already lord of Tlemcen, did not hesitate in 1347 to invade Irikiya and to instal himself in Tunis with his jurists and his court. It required a victorious rising of the Arabs to bring about a Ḥafṣid restoration in 1350, and about seven years later the troops of the Marinid Abū Ḥanfī were able to occupy Tunis again, although only for a brief period. It was at this period, in the reign of Abū Isḥāq l-Idrīṣī (1350–1369), that the personality of the intriguing chamberlain Ibn Tafriğī (d. 1364) began to make itself felt; his efforts, however, did not succeed entirely in consolidating again all the lands of the empire. The south in particular gradually slipped away from the caliph; local dynasties established themselves there: the B. Yamlī at Toreur, B. al-Khīfā at Nefza, B. Makī at Gabes and the B. Thābit at Tripoli. But Abū l-Abās (1370–1394) who had begun his career at Constantine, restored the glory of the dynasty; by his continued expeditions he reduced the rebels in obedience; in his reign, a Franco-Genoese crusade, a rebellion against the excesses of the pirates, failed before Mahdia (in 1390).

His son Abī Fāris (1394–1434) encouraged the development of the navy, and even dispatched a fleet against Malta in 1428; but he had on the other hand to defend himself from the Catalans and Sicilians of Alfonso the Magnanimous who had taken the Kerkennah islands in 1424 and in 1432 made a great attack on Djerba. He built the forts of Ras Adar, Rrif and Hammamet against them. In 1424 he took Tlemcen and established his suzerainty there.

The Ḥafṣid fifteenth century, marked by the increasing numbers of the freedmen employed under the name of ḥādās "as governors and generals, was dominated by the figure of Abīl Abīmūs "Amr, the last great sovereign, who reigned from 1435 to 1485. In a broad, in spite of the activity of the Tunisian corsairs, there were friendly relations with Europe. Catalans and Genoese were given concessions of the coral fishing at Taharka and of the tuna fishing at Cape Bon. At home, maraboutism, coming from the west, extended its hold and agriculture developed as the result of a period of comparative quiet, in spite of the eternal source of disorders, the nomad Arabs.
On the death of Uthmān, things became rapidly worse; three caliphs succeeded one another in the space of a few years; and in the reign of Abū ʿAbdallāh (1504—1526) the empire, torn within by the rebelliousness of the tribes, began to collapse before the blows of the Spaniards who pursued the Turkish corsairs in these regions. In 1510 Pedro Navarro deprived it of Bougie and Tripoli, in 1520 Hugges de Moncade temporarily occupied Djerba. Finally in August 1534, the unfortunate al-Hassan, son and successor of Abū ʿAbdallāh, found himself driven from Tunis by the celebrated Khāir al-Dīn Barbarossa.

He did not return till July 1535, when the town was taken by Charles V, whose vassal he became; and he surrendered to the Spaniards the fortress of La Goulette in perpetuity. The conditions of the protectorate became still harsher in 1540 when Andrea Doria had taken Sfax, Sitra and Monastir. In 1542, after great Spanish reverses and the defection of his own troops in the struggle against the Kairawan rebel Sidi ʿAraf al-ʿArāf and against the rebellious marabout confederation of the Shībīnīs, which held the whole of Central Tunisia, the al-Hassan went to Europe to seek support but in his absence he was dethroned by his son Ahmad (Hamdā). The "cruel and brave" Hamdā endeavoured in vain to reconquer the kingdom of his fathers. A new champion, the Tunisian corsair Darghūlā, who had only been delivered out of the hands of the Genoese in return for the surrender of the island of Tabarka, was driven from Mahdiya by the Spaniards in 1550; but in the following April he was able to escape cleverly from Andrea Doria in the passes of Djerba, then from his base at Tripoli he occupied Gafsa at the end of 1556 and Kairawan at the beginning of 1558, where he left troops under the command of Haidar Pasha. In 1560 he inflicted a disastrous defeat on the expedition led against Djerba by the viceroy of Sicily, the Duke of Medina-Celi; but he fell at the siege of Malta in 1565.

The continual fighting between Hamdā and the Spanish governor of La Goulette, in spite of several treaties made between them, facilitated the occupation of Tunis at the end of 1569 by the lord of Algiers, ʿAli Pasha (Eulidi-ʿAli), who put a garrison in it. In the autumn of 1573, when Don John of Austria, the victor of Lepanto, had recaptured Tunis from the Turks, he restored Has̱̣̄fī power for the last time in the person of Muḥammad b. al-Hassan, to whom Serbelloni was appointed as adviser. In Aug.–Sept. 1574, Ottoman troops brought from Constantinople on Sinān Pasha's fleet seized La Goulette and Tunis, putting an end to the Spanish occupation, which had always been limited and precarious, and also to the old Has̱̣̄fī dynasty, the "mahdīyān" one no to speak, which after periods of glory had gradually sunk into helpless impotence; its last outburst of vitality was the return of Hamdā (in 1581), who held the Tunisian steppe and the Djerid for several years.

Before returning to Constantinople, Sinān made Tunisia a Turkish province under the rule of a pasha, at first under Algiers, from 1587 directly under the Porte. An ʿAšba was in command of the army of occupation of 4,000 men, each hundred of whom was under a dāy (dāri). But in 1591 the tyranny of the dīwān, the governing body consisting of the higher officials, provoked a bloody revolution, at the end of which one of the 40 days was given supreme power. Under the rule of the dāy elected by the Janissaries, the Pasha, the representative of the Sultan, had now only an honorary position. The Dīwān on the other hand was remodelled and enjoyed great influence, as did the corporation of the corsairs (ṣūrā of the rain). From the religious point of view, Ḥanāfīs enjoyed official precedence.

The regency owed its final organisation to the third day, Uthmān (1594—1610), who evolved under the name of mithnā a code of laws and maintained order in the country with the support of a bey whose task it was to collect the taxes in two annual circuits with armed forces (muhallā). Through the intermediary of the ḥāǧīʿ bābā, the state controlled piracy on the high seas and shared largely in its profits, which became considerable after a number of renegades, notably Ward, an Englishman, had developed its technique. Morisco expelled from Spain (in 1569) and settled in North Africa and Cape Bo (Soliman, Grombalia) and in other localities (e.g. Tebouiba, Medjej el-Bāb, Testour, Guellat el-Andleus) gave a great stimulus to market-gardening and to industry (hosiery and dyeing). Subordination to Turkey had relaxed to such an extent that France, who thanks to the Ottoman capitulations, enjoyed a privileged position throughout the Turkish empire and had established a consulate at Tunis in 1577, had in 1606 to send an ambassador S. de Brèves, to deal directly with the "Powers" of Tunis.

Under the son-in-law and successor of Uthmān, Yāṣaf (1610—1637), the Regency regained Djerba from the Pasha of Tripoli and what was something quite new, delimited its frontiers with Algeria as a result of Algerian attacks in 1614 and 1628. The next day, ʿAbd al-Mūsā (1637—1649), a Genoese renegade and old corsair, fortified Porto Farina which he populated with Spanish Moors. But already the authority of the Dāy was declining and there is no interest in detailing the 24 Dāys (Kbodja, Līs and others) who ruled from 1640 to 1702, generally as puppets in the hands of the Dāys, who had succeeded in supplanting them.

The Bāy Mūsā (1612—1631), originally a Corsican called Pasha, had in his lifetime handed over his office to his son Muḥammad (Hamūdā), thus creating a precedent which secured his family hereditary power. Hammūdā (1631—1663) made Pasha in his turn in 1659, relying on a corps of spahis (q.v. spāhī) which he distributed between Tunis, Kairawān, Za Kef and Beja, became the real master of the country. He was the founder of the line of the Murādūdīs—his sons Mūsā and Muḥammad al-Haṣī, his grandsons Awād and Shawkat, his great-grandson Muhammad, "Ali and Khamīlūn—whose power was constantly threatened by civil troubles (e.g. the rising of Muhammad b. Shawkat) which culminated in the assassination of his great-grandson Mūsā Pasha in 1702.

The first half of the xvii century is marked by a resumption of trade with Europe, particularly with Marseilles and Livorno, for which Christian and Jewish merchants from Spain and Italy were largely responsible. The Marseilles Mutasarrīf was established at Capo Negro or Bizerta competed with the Genoese of Tabarka for the trade in coral and gained profits from the exportation of leather and cereals. The foreign relations of the Regency were extended, including for example
Great Britain and the Low Countries; in the second half of the century, as a reprisal for pirate expeditions of the Knights of Malta, European squadrons several times bombarded the coast and demanded reparation. The position at home, at first fairly flourishing, as is seen from the public works and religious buildings erected throughout the country (mederassas, mosques at Tunis, Beja, Kairouan, including those of Sidi Sa'id); gradually became worse under the later Muradids, until in 1685-1686 and 1694 Algerian invasions were possible. The tribes, among whom the dreaded Awlad Sa'id, became subordinate; for a long time Le Kef was in the hands of the B. Sharif and Kalaat es-Sennam in those of the Hammada. The Daj Ouaslat was a hotbed of sedition. Frequent epidemics of plague decimated the people.

After the bloody reign of Ibrahim al-Sharif (1702-1705) who combined for the first time the titles of Bey, Dey, Pasha and Agib of the soldiers, Husain b. Ali Turk was proclaimed Bey on July 10, 1705 in the middle of a new Algerian invasion; the Husainid dynasty which still ruled was founded. Husain restored peace and did a great deal of building (e.g. at Kairouan); but having tried to establish a regular order of succession for the benefit of his direct descendants, he was dethroned by his nephew, 'Ali Pasha (1735-1756), supported by the Algerians; thus arose new troubles, aggravated by the revolt of Tunis, son of 'Ali, in 1752. Finally after further intervention by Algeria, Hussein's son Muhammad ascended the throne (1756-1759), and the reigns of 'Ali Bey (1759-1778), Muhammad's brother, and of his son Hammada (1782-1814) did much to heal the wounds of the state and to restore real prosperity to Tunisia.

Like agriculture, foreign trade made progress. Although the Bey had in 1741 destroyed the factories at Cape Negro and Tabarka, his relations with Christian powers became more numerous: many treaties were made, now signed in the name of the Regency by the Bey alone, who was a regular monarch. France, although on several occasions at war with Tunis, finally appointed a Consul-General there. A war with Venice lasted 8 years (1784-1792), 'Ali Bey, who had subdued and scattered the rebels of the Dj. Ouaslat in 1762, could not dispose of the Algerians, who still gave a great deal of trouble to Hammada. The latter, aided by the Sahib al-Jabba Yawuf, massacred the mutinous Janissaries in 1811 and reorganised the government.

The sixteenth century was to bring marked changes into the political situation of the Regency. First of all there was the suppression of the corsairs and piracy — one of the principal sources of the revenues of the state — forced upon Mahmiid (1814-1824) by the European powers, as a result of the congresses of Vienna and Aix. La Chapelle; there were further the incalculable consequences of the taking of Algiers by France in 1830, in the time of the Bey Hussein (1824-35). For half a century Tunisia made vain efforts to adapt herself to the new conditions by a domestic reorganisation and to steer a course between a slack and intermittent Ottoman suzerainty and the interference of the Christian nations in her affairs through their consuls. The suzerainty of the Porte, encouraged by Great Britain, disputed by France, was only manifested in a few firmans of investiture and in the sending of Tunisian troops to the Crimea (1855) against Russia. (A Tunisian squadron also cooperated with the Turkish fleet at Navarino in 1827). French, English and Italian influence on the other hand continued to increase steadily. It is true that the French plans for establishing Tunisian princes in Algeria did not succeed. On the other hand, Tunisia no longer levied the tribute which Christian states had formerly paid in return for the right of trading with her. The Bey Ahmad (1837-1855), a kind of 'enlightened despot', abolished slavery, granted liberties to the Jews, organised the "Tunisian army" on the European model with French instructors, and visited Louis Philippe in Paris in 1846. But his vast expenditure, further increased by the building of the arsenal of Porto Farina and the palaces of Mohammedi, emptied the coffers of the state, already very poorly supplied; new taxes had to be raised: waqf, haram on the olive-trees, monopolies.

His cousin Muhammad (1855-1859) introduced the mukata, a poll-tax of 36 piastres, from which the towns of Tunis, Sfax, Monastir, Sfax and Kairouan were exempted; but the most important event of his reign was that under pressure from the consuls in the "fundamental agreement" (tahdid al-amira: Sept. 9, 1857) which reproduced the khedifat shari'a [q.v.] of Gulkhan of 1839, he proclaimed the equality of all the inhabitants of Tunisia before the law and taxes, liberty of conscience, liberty to trade and to work, and the right of foreigners to acquire landed property. His brother Muhammad al-Sahib (1859-1862) on April 25, 1861 promulgated a constitution, which he had had approved by Napoleon III: executive power remained in the hands of the hereditary but responsible Bey (the throne passing to the eldest of the princes of the Husainid family), assisted by ministers chosen by him; legislative power was divided between the Bey and Grand Council of 60 nominated members. The judicial power was independent; the tribes followed a civil and penal Tunisian code; provincial administration was in the hands of the "hafla", assisted by elected "shakhs"; the Bey had only a civil list and the farming out of taxes etc. was abolished.

In spite of these reforms, the situation became rapidly worse; the disastrous financial policy of Mustafa Khaznadar (appointed minister in the reign of Ahmad Bey) which had recourse to loans and to the raising of the mukata taxes, provoked a rebellion of the tribes under 'Ali b. Ghadham in 1864 and the institution of an International Financial Commission (Tunisians, French, Italians, Maltese) in July 1865. In 1864 the constitution had been suspended. In Oct. 1873, the general Kheir al-Din succeeded to Khaznadar, who was dismissed; during his ministry, which lasted till July 1877 and was marked by intelligent reforms, there were a slight improvement. But the irregular resources of the country were so small and the debts so great that the Financial Commission came to nothing; the bad administration of Mustafa b. Isma'il (Sept. 1878) proved the last straw, while a bitter struggle for influence was going on between the French and Italian consuls, Roustan and Maccio, regarding the concession of public services. France, encouraged since the Congress of Berlin in 1878 by Great Britain and Germany, then inter-
ferred. As a result of raids by Khrumira into Algeria and various other incidents, the minister Jules-Ferry sent 50,000 men to invade Tunisia in April 1881. On May 12, in spite of Turkish protests, General Bratet, without having struck a blow, forced Saddik to sign the treaty of Kassar-Said (known as that of Bardo), which practically handed over to France the control of the military, foreign and financial affairs of the Regency. A French resident Minister, in the first place Roustan, was appointed, through whom all dealings of the Bey with the French government had to be conducted. Thus, although the word was not used, were laid the foundations of the “Protectorate”, which became effective and final when, after the rising in the centre and south (under ‘Ali b. Khalifa) and its rapid suppression by a second French expedition, the Bey agreed by the convention of La Marsa of June 8, 1883; to “proceed with such administrative, judicial and financial reforms as the French government” should consider useful.

The establishment of the Protectorate marks the beginning of a new era in the history of Tunisia. Never since the Muslim conquest had any political event had such a profound effect on the organisation of the country and the life of its inhabitants. The original feature of the rule, which in spite of criticism has now lasted for half a century, lay essentially in the outward maintenance of the old machinery of government, upon which a new framework and new institutions were merely superimposed.

H. H. the Bey remains in theory the sovereign of the Regency, the “lord” (nâhib) of the kingdom of Tunis; but the Resident Minister, since June 23, 1883, called the Resident-General, under the French Foreign Minister, and the plenipotentiary of the Republic in the Regency, is in practice the real ruler. Being both Minister of Foreign Affairs of the Bey (who can correspond with Paris only through him) and President of his Council, he countersigns the beylical decrees, a part of the population of which was made compulsory by a decree of Jan. 1883; he has also under his orders the commanders of all the forces on land and sea and all the administrative services. The military guard left to the Bey is exceedingly small (600 men); his subjects, forced to serve in the Tunisian army (beylical decree of Jan. 12, 1892 on recruiting), form in a way a part of the French army; over 10,000 fell for France in the war of 1914–1918.

On the council of ministers, aside from two later, three, native ministers, sit the “Directeurs” of French heads of departments, the number of whom has grown rapidly, as well as the general commanding the division of occupation and the naval commander of Bizerta who act as ministers of war and of the admiralty. Each of these high officials issues by-laws. The “Caidats” into which the tribes are divided have become territorial divisions; above the “caid” there is placed a French “commandeur civil”.

Tunisian legislation, which applies to Tunisia alone, is often quite original. Only questions relating to the Resident-General, to the commandeurs civils and to French justice have been settled by decree of the President of the Republic. The actual position in politics and administration and a juristic system which has gradually taken root seem to justify the recent view, which sees in Tunisia the existence of a “double sovereignty”, that of the Bey, traditional, and that of France, more recent and progressive.

The first great task of the protecting nation has been to eliminate as much as possible foreign interference in its two forms, financial and judicial. France having guaranteed the Tunisian debt, Great Britain and Italy agreed to the suppression of the Financial Commission, which was carried out in Oct. 1884.

Tunisia, given a regular system of financial administration and a normal budget, regained its economic stability. The Bey was given a civil list, for the upkeep of his family and his court. The French government still puts down officially in the budget certain expenses like an important subscription to the archbishopric of Carthage. Through the decree of July 4, 1891 the monetary unit is no longer the piastre but the franc.

The French law of April 10, 1883, having created French tribunals in the Regency, and the beylical decree of May 5 1883, having agreed that all those who formerly had the benefit of capitulations were amenable to the new courts, the foreign powers, one after the other, renounced (1883–1884) their consular jurisdictions, just as in 1896–1897 they had to abandon the customs privileges which they also held under the capitulations. Italy alone made reservations; and if at the expiration of her treaty of 1868 with Tunisia and immediately after her defeat at Adowa in Ethiopia, she had to recognise the fact of the Protectorate — which Turkey declined to recognise officially until the treaty of Sèvres in 1920 — she has nevertheless retained an advantageous position in the Regency which she does not cease to covet. Her subjects are entering in larger numbers than the French; she is developing her influence through the press (the daily Union), banking and especially cultural institutions (schools, societies) which by virtue of her agreements are not under French control; she complains however of certain steps which put her subjects at a disadvantage. In 1919, France recognised her ownership of the oases of Ghat and of Ghadames (the frontier with Tripolitania had been delimited in 1910) by an agreement, which is far from having put an end to the disturbing “Italian question” in Tunisia.

The Protectorate has enabled France to carry out in the Regency a remarkable work in the way of utilizing natural resources, and in supplying intellectual and social needs (hospitals, dispensaries, medical men, benevolent societies, various scientific and learned institutions). Modern implements and more rational knowledge and methods have produced encouraging economic results. Primarily a land of agriculture — cereals, the vine, olive, vegetables, fruits, and live stock, to which may be added cork and aifa grass — and cattle-rearing, Tunisia is becoming more and more an exporter of iron, lead and zinc but especially of phosphates (since the discoveries of Ph. Thomas in 1885). It imports fuel, tropical products and a quantity of manufactured objects.

Its foreign trade is about 3 milliards of francs. For a number of years, it is true, its balance of trade has shown a deficit; the revenue from tourists is not sufficient to balance this.

To facilitate European colonization and to modernise the administration of lands, Tunisia by decree of July 1, 1885 was given an important loi foncière based on the Acte Tourne: optional registration
of lands, on a favourable decision by a "Tribunal mixte" instituted for this purpose (at Tunis: French and 3 Muslim magistrates, at Sfax: 4 French and 2 Muslim); a decree of March 1924 also foreshadowed the establishment of a survey. In the early period of the occupation, colonisation by French agriculturalists was left almost entirely to individual initiative. An official policy of settling French citizens on the land has only been actively pursued since about 1900. The Domaine purchases lands to sell them later on a system of very easy payments to Frenchmen, e.g. former students of the École Coloniale d'Agriculture in Dakar. The Italians compete with the French, less by the size of their farms, than by the number of their farmers.

In default of a great immigration of French citizens, France has begun in Tunisia a policy of naturalisation by the decrees (the one presidential and the other beylical) of Nov. 8, 1921; but as a result of litigation begun in this connection by Great Britain before the Court of the Hague, they have been replaced by the French law of Dec. 20, 1923; naturalisation, considerably facilitated to foreigners and strangers who request it, becomes automatic (with however the power to decline it) in the second generation, obligatory in the third, for foreigners settled in the Regency. Great Britain has accepted in the main these regulations which concern chiefly her Maltese subjects. The Italians however by their agreements escape any forced naturalisation; but some of them become naturalised voluntarily. The "indigenes" among whom the Muslims do not number 2,000, while they include about 5,000 Jews, form over a quarter of the present French population.

The Jews, of whom several thousands of European origin have retained Italian nationality, remain for the most part subjects of the Bey under native authority and jurisdiction, except in personal matters in which they are dealt with by a "Tribunal Rabbinique" of Tunis (reorganised by decrees of Nov. 1898 and Nov. 1929) and by "notaires israélites" (decrees of Dec. 1918 and Apr. 1927). The Tunisian Jews do not perform military service and in general cannot become government officials. Their rapid development in European civilisation raises the problem of their obtaining in large numbers or en bloc French citizenship. The decree of Aug. 30, 1921, established, for all the Jews in the civil lists of Tunis, without distinction of nationality, a "Conseil de la Communauté" of 12 members elected for four years by suffrage of the second degree, with authority to deal with matters of relief and worship. The government appoints the administrators of the other Jewish communities; it also appoints the Chief Rabbi of Tunis. The practice of religion is declining, but Zionism on the other hand enjoys undeniable favour.

The government of the Protectorate has always tried to improve, without offending religious beliefs, the native administration and the economic and religious conditions of the Muslims (cf. above). If there are more problems to be solved, some of which are being studied, the work done so far is however quite appreciable. In spite of its resistance to the adoption of modern ways of living, the Muslim world of Tunisia is undergoing a radical transformation, of which it would be rash to predict the results. The Durtité movement (Tunisian constitutional party, desiring autonomy), which made progress in the years following the war, was skilfully checked by the Resident-General Lucien Saint. It looks at present as if the native population are satisfied with the nature of the reforms towards which, during the last ten years (1920—1930), the domestic policy of the Protectorate has been directed.

The liberal measures already taken, notably in 1922 and 1928 the creation of and reorganisation of the Grand Consul, follow two fundamental principles: an appeal to the more and more direct collaboration of the natives, and an extension of the powers of the elected assemblies. New rights are being given in the French colony: elected municipal councils, a greater liberty of the press and of combination.

At the time of writing, Tunisia is preparing to celebrate in tranquillity the jubilee of the Protectorate.

4. On the French Protectorate and Tunis since 1881, there is now a vast literature. The following are the principal works:

5. For non-Muslims, in addition to Darmon (see also under “Religion”):

Tunis 1915; Tibi, Le Statut personnel... des Israélites tunisiens, Tunis 1933; Slouschs, Un voyage d'études juives en Afrique, Paris 1909; du, Travels in North Africa, Philadelphia 1927.

3. Administration.

a. French administration. At the beginning of the Protectorate and by virtue of the beylical decree of Feb. 4, 1853, the Resident-General was immediately assisted by a “Secretary General of the government of Tunisia”, who had control of all the official correspondence and held the same position with the Prime Minister as the Resident did with the Bey. This office was abolished on July 14, 1922 and to some extent replaced by a “Delegate to the Residence General”, whose powers, fixed by presidential decree of Feb. 10, 1923, are very different and in practice not so considerable, although he is vice-president of the Council of Ministers, inspector des contrôles civils, and takes the place of the Resident when away or prevented from appearing. By virtue of a residential resolution of Nov. 10, 1926, the Resident is assisted by a civil cabinet and a military one.

This same resolution of 1926, supported by a number of beylical decrees of the same day, remodels the main government offices of the Regency and defines the activities of the principal services organised and directed by the French since the occupation: the “Direction Générale des Travaux Publics” created on Sept. 3, 1882, the “Direction Générale des Finances” on Nov. 4 of the same year, the “Direction Générale de l'Instruction publique et des Beaux-Arts” on May 6, 1883, the “Direction Générale de l'Agriculture, du Commerce et de la Colonisation” on Nov. 3, 1899, the “Direction Générale de l'Intérieur” (which includes the departments of public health and public assistance) and the “Direction de la Justice Tunisienne” of July 14, 1922 (the two latter were created as a result of the suppression of the office of Secretary General). We may add the “Office des Postes et Telegraphues”, which was created on June 11, 1888, and became an autonomous “Direction” by the decree of Nov. 18, 1927.

If we except the southern part, which is held to be a military zone (capital Médémine) and governed by a “Service des Affaires indigènes” (4 officers of higher rank, 20 captains or lieutenants, 11 military interpreters, paid out of the French budget), Tunisia is divided for administrative purposes since 1857 into 5 “regions” (Bizerta, Tunis, Le Kef, Sfax and Djerba) each of which is sub-divided into a certain number of “contrôles civils”; in all 160: Bizerta, Tabarka, Sidi el-Arba, Tunis, Zaghouan, Grombalia, Théboursouk, Le Kef, Maknassy, Medjes el-Habib, Susa, Kairouan, Thala, Sfax, Gabès, Gafsa, Tozeur, Djerba. The “contrôles civils”, French officials instituted by presidential decree of Oct. 4, 1854, are appointed by presidential decree on the nomination of the Minister of Foreign Affairs; their duties, defined by the residential circular of July 22, 1857, consists mainly in supervising the native administration and aiding in French colonisation; they have the title of vice-consuls and perform the duties of French consular agents. Their status was regulated by residential resolution of April 25, 1922.
French law is administered in the Regency by two tribunals of first instance, one at Tunis (4 chambres), the other at Sfax, and by 14 regular justices de paix to whom are to be added the justices forains, whose courts are itinerant. The tribunals are amenable to the Court of Appeal in Algiers. Penal law is administered, for offences and misdemeanours, by correctional tribunals, and in the same cases as in Algeria by judges de paix. Crimes are judged by criminal tribunals sitting at Tunis and Sfax, composed of 3 French professional judges and 6 assessors, whose appointment is regulated by the presidential decree of Nov. 22, 1893; their nationality depends on that of the accused; there is no jury. All the French magistrates, who are in every respect the same as in Algeria, are appointed by presidential decree on the nomination of the Garde des Sceaux.

France is responsible for the budget for the army and the navy. Bizerta is the headquarters of a naval prefecture which covers the whole of the shores of North Africa. The general commanding the "Division d'Occupation" assumed in 1926 the title of "Commandant supérieur des troupes de Tunisie".

To complete the list of the principal public services of Tunisia, mention must be made of the two companies which have concessions for the most important ports: that of Bizerta, founded in 1886, that of Tunis, Sfax and Sfax founded in 1894; and the 3 railway companies: a. the Company Bône-Guelma, called Compagnie Fernière as a result of the convention of July 22, 1922 (almost all the Tunisian system, which consists primarily of a long line following the coast, two lines Tunis-Algeria through the valley of the Medjerda and by the High Tell, a line from Sfax to the phosphate mines west of Gafsa through the steppes of Bettina and Periana); b. the Compagnie des phosphates de Gafsa (narrow gauge lines connecting Sfax with Gabes, Redeyef and Tozeur); c. the Tramway Company of Tunis (electric system in the suburbs: 2 lines Tunis-La Marsa, one via La Goulette and Carthage).

Beside the government departments, Tunisia has a certain number of deliberative assemblies, nominated or elected. The French alone are electors to the chambers of commerce and agriculture, elected for 6 years, one third retiring every two years; the chamber of commerce of Tunis, chamber of agriculture of Tunis, chamber of commerce and agriculture of Sfax, chamber of commerce and agriculture of Sfax, all four instituted in 1805, chamber of commerce of Bizerta, instituted in 1902. Women have the right of voting but cannot themselves be members. The chamber of mining interests which meets in Tunis, created by presidential resolutions of July 15, 1922, represents indiscriminately French or Tunisian owners, directors, managers or engineers of mines in Tunisia; its 12 members are elected for 6 years and half retire every 3 years.

60 places have been created municipalities. By virtue of the decrees of Jan. 14, 1914 and Jan. 1, 1924, the municipal councils appointed by decree for 3 years, on whose third only elected each year, consist of a native president, one or more French vice-presidents and a varying number of native or European councillors. Their deliberations, which are public, are subject to the approval of the prime minister.

The decree of July 13, 1922, replaced by that of March 27, 1925, instituted "regional councils" whose members, elected for 6 years, were at first representatives on the one hand of the native municipal councillors and of the (native) councils of the wilayat, and on the other of a slight majority of Frenchmen representing French municipal councillors or chambers of commerce and agriculture; they now also include a vice-president of the municipality of each capital of a region, the delegates to the Grand Council elected by universal suffrage, representatives of the chamber of mining interests and native chambers of commerce. The regional council, a consultative body on economic and financial questions, meets twice a year, for 6 days at most at each session, in the capital of the region under the presidency of a contrôleur civil, appointed by the Resident General, who has however no vote. The French members elect a vice-president and a secretary, another vice-president and another secretary are appointed by the native members.

The principal representative assembly, the "Grand Conseil", replaced on July 13, 1922 the "Conférence Consultative" of 1896, which had in the meanwhile been several times remodelled. A number of reports and resolutions of March 1928 regulate its composition and powers. It consists of a French and a native section which in principle deliberate separately. The French section, presided over by the Resident General, numbered 52-22 representatives of economic interests, 6 elected by the chamber of agriculture of Tunis, 2 by the chamber of commerce of Bizerta, 4 by that of Tunis, 4 by the mixed chamber of Sfax, 4 by that of Sfax, 2 by the chamber of mining interests, and 30 representatives of the French colony, elected regionally by all French inhabitants over 21 years of age and domiciled in Tunisia for at least two years, 6 for Bizerta, 10 for Tunis 4 for Le Kef, 5 for Sfax, 5 for Sfax and all the "territories militaires". The members of the Grand Council, aged at least 25, are elected for 6 years, half being elected every 3 years. The Council expends and votes the budget. It can also express its wishes, except on political or constitutional questions, give its opinion on questions submitted to it by the government, and ask questions to the government. France reserves the right to approve a decree dissolving the Grand Council or to overrule its decisions even on budget questions. The Grand Council meets once a year in ordinary session for a maximum period of 20 days; it may also be convoked for an extraordinary session. Each section elects its own officers and appoints two grand commissions: financial commission and commission for economic machinery. The French section sends 5 representatives of economic interests and 7 of the French colony. The plenary sittings of the Grand Council are not public. A "Commission Arbitrée", presided over by the Resident-General deliberates on all proposals, votes or motions, on which the two sections have held different opinions. Its 14 members are appointed half by the French section and half by the native section. In case of persistent disagreement, the Resident General takes part in the voting, as well as the ministers or directors present, i.e. the government has a casting vote between the two disputing sections.

A. Finance. The fiscal resources of Tunisia are composed, in decreasing proportion, of direct taxes: 1. the "taxe personnelle" (sittâia) which has replaced the old magâfût (cf. Barthès, Les imposts arabes en Tunisie, Algiers 1923) and is levied on every male inhabitant of Tunisia over 20 years of
A number of decrees and resolutions of 1922, modified in 1928, have instituted and organised (except in military territory) "councils of kaidates", whose purpose is to discuss the economic needs of the kaidates and to reply to government enquiries and elect representatives to the regional councils. Each shailkate sends 4 delegates, 1 or 2 principals, the others subsidiary, of at least 30 years of age, chosen from among themselves, subject to ministerial approval, by the notables, i.e. by the most distinguished taxpayers, over 25 years of age, living in or owning land in the shailkate outside the communes. The lists of notables drawn up by the kaid are revised by a commission on which sit along with him the civil comptroller and the hadd. Solicitors, officials or policemen cannot be delegates to the council. The sittings, which last 2 days, are quarterly. The elections take place every 6 years.

Native chambers of commerce and agriculture were created in 1920, reorganised in 1924 and 1928: the "chambre d'agriculture indigène du nord" which includes an agricultural section (1 member in each kaidate, chosen by the government from 2 candidates presented by the delegates of the shailkates) and a section for rural economy (2 members, matriculants or agricultural engineers, chosen by the government from 4 candidates presented by the delegates from the shailkates); the "Chambre de Commerce indigène du nord" which includes a commercial section (12 elected Muslims and 5 Jews) and a section for general economics (2 Muslim or Jewish members, chosen by the government from 4 candidates presented by the electors). The electors must be at least 25 years of age and the candidates 30.

Since 1928 it has been provided that these two assemblies should have joint meetings with the similar French bodies. There has also been founded, inside each "chambre mixte" of Susa and Sfax, a native section of 7 members.

We have already seen what share the natives take in the municipal councils and regional councils. In the Grand Council they form a distinct section of 26 members, 10 of whom represent the 5 regions (2 each), 3 the territories of the south, 4 the native chamber of commerce of the north, 4 the native chamber of agriculture of the north, 2 each of the native sections of the mixed chambers, 1 the Jewish community of Tunisia. This section of the Grand Council is usually presided over by the Delegate to the Residence General or a high French official of the protectorate nominated by the Resident, exceptionally by the Resident-general. The two sections may agree to deliberate in common; the votes are then considered as having been given by a single assembly.

Tunisian law, the statutes of which were settled by decree of Jan. 1928, carefully preserves the distinction between lay and religious jurisdiction. At the head of the first category, the tribunal of the "Ouzara" ("Uzara") at Tunis has comprised since 1921: a. a kind of court of appeal for all Tunis, the two courts of which (civil and penal) each sit with 3 magistrates; b. a criminal court which judges cases of first instance and without appeal; c. a court of arraignment; d. a commission des requêtes, a kind of court of appeal. The Ouzara is completed by the regional tribunals with 3 magistrates created at Sfax, Gébaa and Gafsa in 1896, at Susa and Kairouan in 1897, at Kef in
In 1906 "commissaires du gouvernement" were attached to them, i.e. French lawyers speaking Arabic. Parties can be represented by "oukis" (mâkil, pl. uktûs). In conclusion it may be noted that the regional tribunal of Tunis is still called Djéba, and that Tunis has also the tribunal of the "Ort" (ßîra), a kind of tribunal for trade and commerce on which sit the Shaikhs al-Malînà and ten assessors.

**Bibliography:** Zeyt, Cédé annuëlo de la Tunisie, 1901 (annual supplements down to 1912); Lagrange and Fontana, Cédé et côti de la Tunisie, Paris 1912 (supplements to 1928); Journal Officiel tunisien; A. Girault, Principes de colonisation et de législation coloniale (vol. v., La Tunisie et la Maroc), 5th ed., Paris 1928.

4. **Muslim Religion.**

With the exception of the island of Djerba, 4° of the inhabitants of which are Khâridjîs, Tunisia has for long adopted Malîkite sunnism. The descendants of the Turks or those who claim to be such profess to be Hânasîfis; they are a small, but aristocratic, minority, and privileged from the fact that they include the beylical family.

**a. Institutions.** — Shay. Under the Haçîfîs (q.v.) the highest religious functions were performed in Tunis by the "Kâfi of the community" (kâfi ûlâmûd) and the "Kâfi for marriages" (kâfi 'inânîd) appointed, like the chief mufût (q.v.) or Kâfi (q.v.) by the sovereign. Below them again there was a kâfi 'inânîd and a kâfi 'ukhlûs. The "Kâfi of the camp" (kâfi 'almaûlûs) accompanied the government troops in the field.

In Ahl Dinâr (p. 470; trans., p. 470) has pointed out how the Kâfi gradually allowed himself to come under the domination of the mufût to such an extent that they are associated in the tribunal of the "Chârdâ" (Shârâ); cf. Saint Gervais, p. 93-95), and that under the Turks the Hamâfî chief mufût (hâshîf-mufût) took the title of Shâhîk al-Islâm (q.v.), which he still retains; the Malîkî hâshîf-mufût, who occupies a position which is officially not high, has sometimes been honoured with the same title.

The "Chârdâ", exclusively applied in personal law (civil law, marriage, divorce, trusteeship, guardianship, inheritance), is formed in each town of the interior by a Malîkî madâjîs: one kâfi with one or more mufûts. In Tunis, a Hânasî fâdîs sits in the "Dîwân" alongside of a Malîkî one; both take cognisance of cases submitted to them by litigants from the interior or remitted to them by other kâfis.

The operation of these courts, formerly regulated by decrees of 1856 and 1875, is now fixed by that of Dec. 15, 1896, which defined the procedure of the mûsûmût by insisting that they should be recorded in a register kept by notaries. The decree of March 6, 1926 installed a system of legal assistance, which frees the natives from a tax of enrolment created on March 3 of the same year. In conclusion, registrars were appointed by decree of January 28, 1930.

**Notariats.** The native notaries (mâkil, pl. uktûs) are appointed by beylical decree. Their recruitment and method of practice have long been regulated by the decree of 30th Dhu 'l-Ka'da 1291 (Jan. 8, 1875); appointments were made on the nomination of the kâfi; former students who had received the diploma of the Great Mosque were almost automatically appointed notaries without necessarily practising. The decree of May 8, 1928 made appreciable modifications to the earlier statute; new regulations were again made by the decree of July 1, 1935, which came into operation on Jan. 4, 1931. In future, Muslim notaries must be at least 24 years of age, have spent two or three years in a notary's office, — most remarkable innovation — have passed an examination which demands a knowledge of Tunisian legislation. The diplomas of the Great Mosque confer the right to present oneself for the notariate examination of the "first category," which enables the recipient to practise in a large town; the notaries of the "second category," after a slightly different examination, can only practise in towns of less importance. The registers (daybook and minute-book), supplied and checked by the ministry of Justice, are subject to a regular and serious system of inspection.

**Habous.** The mûtûf (q.v.), properties in Tunisia are called "habous" (bûtûs). The public habous have been managed since Kâhir al-Dîn's time in 1874 by a central office (Djâmîya) reorganised by decree of March 19, 1924; at its head are a directeur and an administrative committee: it is divided into a certain number of offices, and has a representative (mouîbî) in each of the principal centres of the Regency who delegates the actual managing agents (mouküf). The decree of July 17, 1908 has placed the Djâmîya under the control of a "conseil supérieur des habous" directed by the Minister of the Pen and the Director-General of the Interior. The Djâmîya has the right to supervise the management of private habous.

The legislation relating to the habous has been cleverly got round with the help of the three following processes (cf. H. de Montety, Une téni expériece en Tunisie, Cahors 1927): a. the contract of "enzel" (inâsil) or transference of habous on payment of a rent in perpetuity (decree of May 26, 1886, frequently modified and supplemented; since 1905, the enzett debtor has been able to redeem the rent; the sale of land is by public auction except that the rights of the occupants of rural estates are safeguarded); b. exchange in kind or money (decrees of Jan. 11 and Nov. 13, 1898); c. long-term leases (Jan. 31, 1898).

The Baît al-Mal is under the Djâmîya. It gives grants for charitable purposes and receives estates for which there are no heirs.

**Brotherhoods.** It would be very risky to give definite figures about the Muslim religious brotherhoods of Tunisia (cf. Depont and Coppolani, Les confréries religieuses musulmanes, Algiers 1897, passim). We cannot adopt without reserve those given in the Annuaire du monde musulman. The total number of adherents is certainly much greater than the figure of 58,143 given there. According to an unpublished official enquiry made in 1924 by the Résidence Générale, the administrative district of Le Kef alone has 18,000 kâhir ou fâdîs, while the members of the brotherhoods form a third of the population in the district of Le Kef, which includes in all 66,000 Muslims. There are over 13,000 in the ammané of Tahtoua alone. The four orders most widely spread are: the Kâhirîs and the Kâhidîs, and the "Tunis" and the Tadjîfîs (q.v.); the Tahârûs are also quite numerous. Further, in addition to local groups like the Bûl-Alîys of Nefta, there are scattered groups of Mehendîs, Kâhidîs and Tadjîfîs. The administrative officials of Tabarka
and Thala agree in estimating in their areas the proportion of Bahamiaya and Kadiyya respectively at 50% and 40% of the total number of members; but this proportion is of course smaller elsewhere where rival orders have had more success. We may note the spread of the recently-formed sect of the 'Awdiya which originated in Mostaganem in Algeria, and seems to have its Tunisian centre at the Zawiyah of Kesh el-Medjouni near Monastir. While Tunis, Mentel bon-Zefla, and the Djebel are centres of important brotherhoods, Le Kef contains the most influential mother-zawiya. It is true that the political role of these organisations is practically nil and that even their religious influence is gradually declining.

The right of asylum of the zawiya was abolished on Feb. 6, 1883.

5. Education: The Kur'anic schools are called bastabs. At the top, the "medersas", directed by certificated former students of the Great Mosque, maintained by the Djamiya under the supervision of the Director of Public Instruction, are now practically nothing more than hostels for the students at the Great Mosque; at most they do a few tutorial lectures are given there. Only the medersas at Agadir remain muladabb or teachers for the bastabs.

The Great Mosque and the Turks, the Great Mosque gradually became the centre of all religious teaching; in our day, it has secured a monopoly of it and is attended by some 2,000 students, from Tunisia, Tripolitania, Algeria and even sometimes Morocco. The organisation of its courses, in what may be called the modern period, goes back to the edict (Ma'adba) of Ahmad Bay of Rama'dan 27, 1238 (Nov. 1, 1842) known as Al-Mu'aadha, because it was affixed to the Bab el-Shi'a gate of the Great Mosque. The principal arrangements were: 30 teachers (Alnia, pl. Alnana) of whom 15 are Muliki and 15 Hanafi, were each to give 2 lectures a day, except on Thursday and Friday, the days of the Two Festas and the month of Ramadaan; their pay was to be 2 piastres a day, except when absent without regular cause. The head scholars Al-Ishaa, Muliki and Hanafi, were appointed inspectors (mouqab) and were to receive 200 piastres a month; they were to inspect in their task by 2 or 3 kadd, or one of each rite, who drew 3 piastres a day. These four also audited the accounts of the administrators of the Bait el-Mal, from which the above salaries were paid. If the funds of the Bait el-Mal showed a substantial surplus, it was to be divided under certain conditions among the most diligent students. The appointments of teachers were to be made by beylidial decree (tabhir) on the advice of the inspectors and the two kadd.

But it is only from Khair el-Din's time that a more detailed organisation dates: the decree (aari 'ali) which he made Sadik Bay issue on 28th Juma al-Ka'da 1292 (Dec. 26, 1875) lays down in 67 articles the subjects to be taught, the lists of authors to be expounded, the privileges and duties of the students, teachers and supervisors, and regulations for theaternity. The number of partial modifications afterwards made caused this decree to be replaced by that of Sept. 16, 1912, of which the 81 articles with a few additions still govern the institution. In it we find, somewhat mixed up, alongside of pedagogical provisions of an old-fashioned type, strong recommendations in favour of correctness and good behaviour and, in article 19, the prohibition to doubt principles traditionally admitted by the 'Ilmals's.

The subjects taught, more numerous and more varied than the "eleven branches of learning" provided for in the Azhar by the regulation of 1872 are, in the order in which they are given in article 1: Kur'anic exegesis (tafsir), traditions relating to the Prophet (hadith), biographies (suyar), dogmatic theology (tasawwir), the reading and proper recitation of the Qur'an (firsat, taqaddum), technology (mu'tahid), judicial methodology (nil al-fiqh), jurisprudence (shia), the law of inheritance (sawa'idi), mysticism (tawawwur), the determination of the hours of prayer (mukhtalif), syntax (ma'qal), grammatical morphology (nafir), elocution and rhetoric (mu'tani, bayana), style, composition, literature (tabaq, inqalab, ada), history and geography (tarikh, maghrib), writing and calligraphy (rasm, khatt), verisa (sargas), logic (muqtasib), dialectic (tabl akhri), arithmetic (niha), geometry (kandahar), astronomy (khal), mensuration (mhikha). Of these subjects the latter are somewhat neglected. The rigidly traditionalists and the erudite methods of instruction used in the Great Mosque are obstacles to all progress in profane sciences, and to any liberalism in religious matters. Under history and geography the programme, in addition to a brief resume of Muslim history, gives only two books to be studied: the Ruzn al-Halal of Ibn al-Khatib and the Musnadima of Ibn Khaldun, both of the xvith century. The geometry is still Euclid, whose propositions are read in al-Tusi's version (xiiiith century).

The courses, which are free, are divided into three stages, and there are examinations to pass from one to the other. The following is a list of the works on religion and language expanded in the highest course (art. 4):

- tafsir, the commentary of the two Djallis; the Mushaf with commentary of al-Zarqani,
- ajd al-Bukhari with commentary of al-Kastallani,
- the Sehij of Muslim with commentary of al-Ubabi,
- the Skif of the Kadi 'Iyad with commentary of al-Shibli al-Khashqabi,
- the Mansif al-Tabdulayn of al-Kasalani with commentary of al-Zarqani,
- the Siria al-Islahiya; the commentary of al-Djurjani on the Mishaf of 'Adud al-Din al-Tafi,
- the commentary of al-Tahla on the 'Arif of 'Umar al-Nasafi,
- the Khabr of the Shibli al-Sanadi,
- the Taqrib of Sadi al-Shafi'i's Alhaid Allah al-Majadda,
- the commentary of 'Adud al-Din al-Tafi on the Majallar of Ibn al-Halajib,
- the commentary of al-Majadda on the Lajm al-Lajmouni of 'Abd al-Wahhab al-Sukkab;
- the Tahiy al-Haqqi of 'Ushman al-Zaila'i (commentary on the Kuts al-Da'idi of 'Abd Allah al-Nasafi),
- the Durar (commentary of the Ghurar),
- the commentary of Sadi 'Abd al-Baki on the Majallar of Khalif,
- the commentary of Sadi Muhammad al-Khitaih on the same;
The thirty original teachers along with a teacher of madrass$^2$ take the title of "teachers" (mawardis) of the first class; they are qualified for the higher course. For the middle course there are 12 teachers of the second class, half Maliki and half Hanafi, and also a teacher for tad$^1$wjd. The elementary course is conducted by "voluntary" teachers (muta"ab$^2$aru), certificated former pupils, who are unpaid (art. 9). The teachers have two months' leave a year, from the middle of July to the middle of September, and the month of Ramadan in addition; there is also a holiday every Friday, the days of the two feasts and the four days that follow each of them, the day of "Arafa and the two preceding days, the 10th Muharram, the 11th, 12th, 13th Rabi‘a I (art. 29); Thursday is expressly restored as a working day (art. 28). — Each student carries a roll book which the teachers endorse once a month (art. 32), and in which they certify that the course has been attended by the person concerned (art. 33). — Supervisors appointed by the inspectors secure that discipline is maintained (art. 40). The duties of these inspectors are carefully laid down in accordance with the regulations of the Mawlala$^a$ (art. 44 sqq.).

A complementary decree of the same date, in 11 articles, settles the conditions of the final examination which gives the right to the diploma of the tapus$^3$. Success in a written examination on the Fiqh admits to classes for two consecutive sessions (art. 6). The oral examination allows six hours of preparation with the assistance of the books in the library (art. 7). A special tapus$^3$ is provided for the reading and recitation of the Qur’an (art. 9).

Since 1928, 50 "auxiliary" teachers (muwa’$^2$ara ila $'$-sdris) have been appointed by competition from among the muwa’$^2$ara’u’n; they draw a fixed salary of 500 francs a month. From Jan. 1, 1931, the annual emoluments of the teachers of the second class are fixed at 13,000 francs, those of the first class at 16,000 francs. The budget of the Tunisian state has since 1924 included a subvention for the Great Mosque; being continually increased, it rose from 50,000 francs the first year to 250,000 in 1927 and to 770,000 in 1938.

The recent reorganisation of the Muslim notables has provoked vigorous protests on the part of the students who can no longer pass straight into their profession and whose studies at the Great Mosque do not enable them to pass without further preparation the new examination required of future notaries. The whole question of the reform of religious instruction has thus been raised, or at least that of the introduction of modern legal teaching into the Great Mosque. A commission appointed by the government in December 1929 is studying the possibilities of reform and painfully endeavouring to draw up a programme.

The Catalogue of the Library, which is in course of publication in Arabic, was published incompletely in French by B. Roy and Bel-Khodja (Tunis 1900).

Modem Education. In addition to the Sidi$^1$k College (417 pupils in 1928—1929) where the double system of teaching French and Arabic prepares for administrative careers, the young Muslims are attending in increasing numbers the French schools: primary establishments (among which are Franco-Arab schools and special schools for Muslim girls, cf. R. M. M., vi. 123—125) and secondary (open to all). In Dec. 31, 1928 (cf. Statistique gendarme de la Tunisie, ann6e 1928) the Muslim population was sending to the French primary schools of the Regency 25,876 boys and 2,936 girls (in addition to 67 boys and 617 girls in the private schools); to the Lycée Carnot of Tunis 359 pupils out of a total of 2,000, but only 28 at the girls’ Lycée out of over 1,200, and lastly 485 pupils in three other institutions in Tunis (Collège Alsous, École normale d’Institut- teurs, École professionnelle E. Louiet).

An "École supérieure de langue et littérature arabes" in Tunisia gives after examination a certificate in spoken Arabic to its European students, and a certificate in written Arabic and a higher diploma in Arabic to its pupils, whether Muslims or not.

Inaugurated under the influence of the Residency, the Muslim Society al-Kauthirus$^2$ organises for nearly 200 young members popular courses in Arabic on all kinds of subjects.

Finally the Department of Justice in Tunisia has courses of law given in Arabic to prepare natives for legal careers.

5. Population.

a. Ethnography. The population of the Regency includes, in addition to the native Muslims and Jews, an increasing number of Europeans, the result of a considerable immigration of Italians and of the French Protectorate. The census of 1926 gives a total of 2,159,708 (density 278 to the square kilometre) of whom 1,113,184, are Muslims and 54,243 Tunisian Jews (not including the Jews who have acquired a European nationality).

The 173,281 Europeans were distributed as follows: 71,020 French (41%), 89,216 Italians (51.5%), 8,396 Maltese (English subjects) (4.5%), 4,649 of various other nationalities (2.5%). The Italians, who come mainly from Sicily and Sulunia, are masons, miners (i.e. Keif), agricultural labourers and vine-growers on a small scale (Beja, Medjes el-Bah, Grombalba, Zaghouan). The French are principally officials, merchants or colonists.

The bulk of the Europeans are in the Tunis area (105,000 or 60%) and in some of the towns of the coast: about 6,700 in Bizerta, 4,150 at Ferryville, 3,000 at Sfax and as many at Sfax. The Tunisian Jews, of whom 28,141 (more than half) are in the Tunis area, are over 2,000 in Sfax and nearly 3,300 in Sfax. They are also fairly numerous in Bizerta, Beja and Nabeul, and there are very few in the interior (a few called Sakkias live in tents towards Sera), but there are groups of some size in the south, nearly 2,500 in Gabes, nearly 3,800 in Hount-Suk (Djerba) out of 4,654 inhabitants, and over 2,500 in the military territories.
Excluding Tunis the capital with 185,466 inhabitants, 12 other towns have over 10,000; these are

We may note that Masqan and Kal'a Kabira, both in the Sahel, are inhabited exclusively by Muslims.

A. Tribes. In the present state of our knowledge we cannot sketch with certainty the evolution of the present divisions of the Muslim population of Tunisia. Even if we set aside the urban centres and the more thickly populated areas (districts of Bizerta, Beja, Tunis and Siç) where very varied elements are found together and intermingled, the constituent elements of the great tribes, clearly defined and centralised at different periods in the history of the country, is far from being clear. We do not know the origin of many of them; even their disappearance is not always free from mystery.

For a long period the Arab soldiers were numerically insufficient to produce a real change in the old Berber bloc. But the great new factor was the invasion in the middle of the 19th century of the Hilâfi Arabs, followed in the 19th and 20th centuries by the Subaïms; they drove up into the highlands the greater part of the native Berbers, occupied the plains and completed the Arabisation of the country; it is true that, frequently fusing with bodies of natives, they completely subjected them to their influence, so that it is impossible to-day to discriminate at all between "Arab tribes" and "Berber tribes." We can only say that of all North Africa, Tunisia is on the whole the most Arabised region.

In the 19th century Ibn Khalâl gives us some information about the surviving Berbers. One group lived on the island of Djerba (Khaïridji Djerâba) and in the mountains of the south: Lawta (Hist. des Berbères, trans. 1. 235) to the south of Gabes in the Djebel which bears their name, Majûta (ibid., i. 240) in the district they still inhabit, Zanûta driven from Tripolitania, who had taken refuge in the Djebel Demmer, where the most important body was the confederation of the Warghamma (ibid., 2. 285). Other Zanûta, the B. Wardjâl (ibid., i. 204), maintained their independence in the oasis of al-Hamâma, while the Marzidja Frânde (ibid., i. 225-246), half agriculturalists, half cattle-rearers, between Tunis and Kairaouân, were exposed to the attacks of the Kaïb Arabes. A remnant of the Samitâ (ibid., i. 231) still exists near Kairaouân. But the most compact Berber group, formed of Harrwata (ibid., i. 278-279) in part nomads, occupied the region of the High Tell; Wanîf of Tebbessa at Marmadjâna (no doubt the present Bermdjâna), Kaïjar between Elba-Kour and Lorbeïn, Bouzala of Tebussat on the Djiougar. The Baçwa had, however, already incorporated a body of Riyaḥ Arabes who were neighbours of their relatives, the B. Hâbi, in the same way in the mountains of the north, Arabs of Maṭrâ, the B. Hûdâlî, had become fused with the Hawwârî tribe of the B. Sulaim.

Among the Arab invaders, the Hilâfi, pushing farther west, only left in Idrîsia a few of the Abî Zughbi near Tunis. The B. 'Awf of the Sulaim, on the other hand, is shown by the Rikâs of al-Tâjânî (in 1306-1309), occupied the whole of the eastern coast district: from Nabeul to Sûsa were the Dallâdîj, then up to el-Djene the Hâkim, who were later joined by the Tûrud (these latter were later moved on towards Wargla) then up to al-Mabârâka the B. 'Ali of the Hâjan. The hinterland was dominated by their Kaïb relatives and masters, of whom the two rival groups, Awâlî Muhâhalî and Awâlî 'Ali, were in Haçid politics that considerable role which has been well brought out by G. Marsâa. During spring and summer, the Mûrdis b. 'Awf, of whom a detached branch arrived near Beja, regularly replaced the Kaîb in their winter quarters, the Djebel. Finally, starting from al-Mabârâka, the southern plains were occupied by other Sulaim, the Dâblâ: these were, in the interior, the Aklâl, the B. Aklâl, which was the confederation of the B. Vânt (Sâba, Hamâna, Khârjūdja, Aşâla), the Sharâd and Zughbî on the coast, the Nâwîl, as far as Gabès, and the Maqâmî of the confederation of the Wargha, up to the present frontier of Tripolitania.

Some of these names reappear in the memoir published in 1536 by B. de Mendoza, in Les Arabes du royaume de Tunis (publ. by La Primadour). The B. 'Ali, the most powerful of all, mentioned by Les Africains, were at that time scattered along the coast from Bizerta to Djerba; the Awâlî 'Ali, in the district of Mateur and Beja. The Awâlî Muhâhalî who swallowed up the Awâlî 'Awîn between Kairaouân and Beja. But alongside of these appear the dreaded Awâlî Sa'd of obscure origin, who extended from Monastir to the interior of Cape Bon; the Awâlî Vâhîs in the region of Tebess and near Tebessa, probably of Hawwârî stock; the Hanâsha whose chief exercised political influence from their citadel of Kaîal el-Sînîn (cf. Fréraud, Les Harîr ... R. Afr., 1874).

In spite of the considerable alteration and wastage of the tribes, their old names have frequently survived. In the south, where the Berber element is flourishing, we still have the troglodyte Matmâ and the Warghamma, the tribes of which have reconquered the plains: Akhârî of Zarrîs who live in tents from February to June to harvest the barley and pasture their flocks and herds, Twâm, who, formerly nomads, now tend to settle in the gardening country of Modernine and Ben-Gardane the Djâbâlaya who inhabit villages in the highlands of the south of Tebessa, and the Wâlarna, partly settled and partly nomad. Two shajâhîs, bear the name of the Lawta, in the kaidâts of W. 'Awîn and Bizerta. In the High Tell towards Algeria, the Wânîf[a] group comprises several tribes among whom are the Wargha (cf. this name in the Hist. des Berbères, trans., i. 275). The Wâghîta, now in the country round Beja and Suk el-Ârba, are not unknown to Ibn Khalâl (ibid.), like the Nafrî (i. 282 and 290) settled in our days on the northern coast.

The names of the mediaeval tribes of Arab origin are fairly well preserved in the south; the Nâwîl
and the Mahbūba, it is true, were driven into Tripoli, but the counter-offensive of the War-ghams, but the berberish Dālāsh form a shāhikāte in the annexe of Tafara, and the important B. Zdī (iz-Yaṣid), a section of whom still call themselves Khādīja, still lead a nomadic life with the Ḥamārina near Gabes. We also find scattered and in diminishing numbers giving names to shāhikātes the Hedīl or B. Ḥafṣah (kaidate of Ain-Draham), the Tūfī (Bizerta), the Ḥakim (Suq el-Āris), the Awlād Muhāhal (O. Ayār), the Kašīl Awlād al-Rūḍājī (Ajlas; cf. Hist. des Berb., transl. i. 143). Several of the O. Bélīl or Awlād Abī l-Laini survive in the plain of Beja, and of the Rīyāḥ near Zagwan. It was only in the sixteenth century that the Kūmnī or Khumna settled in the mountains of the northwest, not far from the Moguds or Mūqīl, whose name at least has an Arab sound, and in the Sers and around it, as a Maḥsān tribe, the Dīrī or Durānī, a branch of the B. Aḥmadīy b. Hīlī, who were for a period the police of the Algerian frontier. The Naftājah in the hinterland of Matmāta are mentioned as Arabs by Ibn Khaldūn (Hist. des Berb., transl. ii. 101 and 290).

Among the groups mentioned under the later Ḥafṣah, some Awlād Vābah are surviving in the kaidate of Telbursak, the Awlād Saʿūd are very scattered but their chief centre is the town of Enfīs, the O. Aww or Awlād Aww formed a whole kaidate around Sīslīna, N. E. of Maktar.

Finally, in the present mosaic of the tribes of Tunisia, some of quite uncertain origin, if it is not maraboutic, are of sufficient importance to be mentioned: not far from the coast, to the south of el-Djem up to the north of Gabes, the Māḥsūt, Agātī and Māḥsūb; in the interior, occupying the steppes, the Swāt, Dījān, Frājus, Ṣawar, Māḏjir and Hamāma, who form the same number of kaidates; in the High Tell, the Jūqī, the Ayyār or Awlād Ayyār, the Swātīn; in the Neftāwān and Tunisian Sahara, the Gharīb, Māḏṣgī, the Ādārā, and the Awlād Ya ṣūf. c. Native Life. Nomadism is clearly dying in Tunisia; there are no longer migrations of considerable extent nor in large bodies ("esmalas") except in very bad years. Usually the tribe remains stationary and a few herdsmen take the flocks away. It is the flocks only which move; the cattle pass the winter in the steppes and the summer in the Tell; the route most frequently traversed is the contoir Shiba-Le Kef; the migrants like to spend some time in the plain of Gomouha. The Māḥsūt alone go in summer as far as Bizerta and the Dījāl and Swātī as far as the neighbourhood of Beja. The Neftāwān and the Tunisian Sahara are of course still peopled by nomads.

The government of the Protectorate actively pursues a policy of leading the natives to adopt a settled life by making it easy for them to acquire land and directing their energies towards agriculture. Alongside of the old contract of Mūkhāra, regulated by the Ḫāniṣ al-Filhāsa of Khair el-Dīn in 1291 A. H. (cf. Bill. in W. Merg, Taubmaison, p. 252), the sale on credit by the Domains of the "salines" (around Sfax for a radius of about 50 miles), and of the naft of Sharrāla (near Kairouan) suitable for growing olives (decrees of 1892 and 1905), has been the occasion of putting into practice the contract known as Mūlāhāran: the native farmer, who contracts to plant with olive-trees the whole extent of a piece of ground granted to him, becomes the owner of half the ground when the trees begin to bear. The new legislation dealing with kaimes estates has made it possible to settle on the land a number of native families, by establishing their rights as "occupants" in a legal and definite form (most recent decree: that of July 17, 1926). In the midst of the terrains collectivistes of the tribes, the law of purchase laid down by the decree of Dec. 23, 1918, modified in 1926; each collectivité or group of land forms a unit and is represented by a council of notables; the deputation of each kaidate sits a council (conseil de tutelle locale) which has local authority and whose decisions can be revised by a central council in Tunis. The authority of one of these bodies being always required when land changes hands, or is let on a long lease, or similar occasions, the native ownership is safeguarded. Finally, besides the technical progress made since the occupation, the Tunisian agriculturist owes the Protectorate his powers to form irrigation companies (decrees of May 25, 1920), the distribution of lands for cultivation to native farmers, the creation of the native chambers for agriculture and the institution of an "Office public de crédit agricole" for the natives (decree of June 10, 1923).

In 1928, the number of animals belonging to natives and Europeans respectively was as follows: horses 77,000 and 10,500, asses 157,000 and 2,500, oxen 28,500 and 41,500, cattle 430,000 and 55,000, sheep 2,000,000 and 103,500, goats 1,350,000 and 30,500, pigs 6,000 and 13,000, camels 151,500 and 300. The natives own about 9,000,000 taxable olive-trees (the Europeans 878,000) and 4,500,000 untaxed (the Europeans 1,100,000). We may note that several thousand natives live by fishing.

Throughout the Regency the tent is disappearing before the gourbi, a sure sign that the people are becoming settled, or even before the house. In the south we find two peculiar types of habitation: the subterranean dwellings of the troglodytes, over 7,500 in the districts of the Maṣṣāṣ, Medenine and Tatahouine, and the ghurfas "kauris" (kauri) (cub-shaped buildings with curved sides, long, narrow and low used as storehouses) of which the most remarkable are Medenine and Metamur. The number of town-dwellers is relatively large among the natives, for it reaches 18.9%; Tunisia has always been remarkable for the development of urban life. In Tunisia, the foreign Muslim elements (kabriyya) are grouped in several separate communities.

Native commerce is becoming more and more modernised; one of its most striking achievements is the organisation of co-operative buying by the Jberian grocers who are established in large numbers in Tunis. As to the local industries, they have been suffering for a considerable time from the fierce competition of European produce; it is true that the government does its best to support it, especially as regards native works of artistic interest; regular training courses have been instituted for the purpose, and attention is being devoted to the improvement of technical or artistic methods in manufacture. Besides milling, the manufacture of oil and soap, the main old-established industries of the Regency are dying, now threatened by the infinite dyes imported from France, the manufacture of wool (in various districts; blankets at Djerba, Gafsa and in the Djerid), of cotton (at Tunis), of silk (in Tunis and Kasser-El-Hall), of goat and camel hairs (in the south), the weaving of carpets (by
TUNISIA

women, especially at Kairouān), and of "sha'as" (at Tunis with a fulling-mill at El-Bathin and of ceramics (at Nabeul). We may also mention the manufacture of sieves (at Tunis, Kairouān and Sousse), of mats, baskets and esparto (at Nabeul), tanners, and shoemakers (at Tunis, Kairouān and Nabeul); saddlers (at Tunis), cutters, metal-work, stone- and woodwork. The tinsmiths are all Jews, as are some shoemakers, many tailors and almost all the jewelers.

The trade-gilds, of which the most important in Tunis is that of the manufacturers of shashiyas (ganoûds) of Spanish origin, are regulated by byzical decrees; they may admit Jews but the avâd is always a Muslim. The shashiyas have a common reserve fund; their trade mark (mihrâb) has to be approved by byzical decrees. In spite of the competition of importants (from France, Austria and Czechoslovakia) and the disappearance of the Turkish market, the production of shashiyas is still much the same as it was 25 or 30 years ago, i.e. about 50,000 kg. of which about half are exported.

According to statistics, not yet published, compiled by the Direction de l'Agriculture, the gilds of Tunis are constituted as follows:

Berber. Berber dialects have almost entirely disappeared from Tunisia. Berber speakers are now only found in the region of Séned (kaidate of Gaâa), the dialect of which has been studied by Provotelle, at Tamezret among the Majmûta and in the island of Djerba, where the women in particular preserve the old idiom.

Spoken Arabic. The linguistic arabisation of Tunis is thus practically complete but it has proceeded along lines of which we do not know the details. W. Marçais would allow, at least for the Sâhîl, that it has been more rapid than is usually thought. Since before the coming of the Hilîl and Sulaim (sixth–seventh centuries), the "urban centres, those permanent foci of arabisation", Susa, Monastir and Mahdiya, have been disseminating among the peasants of the surrounding country their own town-language which, gradually transformed by a rural population, has given birth to various rustic dialects. In their consonant system and their grammar the Beduin dialects differ, as Ibn Khaldûn noted, from the Arabic of the towns and therefore from that of the Sâhîl.

Von Maltzan has pointed out (E.Z.D.M.G., xxiii. 655–656) that the Arabic spoken in Tunis has retained the classical consonant system more perfectly than any in the Maghrib. We need only note the fusion of the š and š, both pronounced like an emphatic sonant interdental spirant; the š is pronounced as a postpalatal sonant (g) in borrowed words (e.g. agärū, amgūrū), or influenced by Beduin dialects (e.g. bāqrū, bāqrū); ṣīm, postpalatal (French j), is treated after the article as a solar letter and has a tendency to pass into s in words which already contain this sound (e.g. qawāṣ > sûs). The confusion which appears in the use of the liquids l, n, and ẓ affects borrowed words almost exclusively.

The "unation" has disappeared except in some rare formulae; it has left traces in certain adverbial accusatives where the vowel of the old termination has survived, sometimes even lengthened (e.g. a₂̣iṃ > lim₂̣, dā₂̣ṃ). The careful observations of W. Marçais for the dialect spoken at Tâhirina still constitute the only satisfactory record of the Tunisian vowel system. Although the dropping and weakening of vowels is far from being so serious as in the extreme Maghrib, it is a broken down vowel system. Sometimes to facilitate pronunciation, transitional sounds are developed, secondary ultra-short vowels, notably before a laryngal preceded by t or ð (cf. the pittâ kâdf of Hebrew). It will be remembered that in Tunis the women have preserved the old diphthongs ai and au while the men have reduced them to i and û; the Beduin dialects in general bring them back to t and to û, but some of them make a false diphthong with an ultra-short second element: û, û. With some nomads the inālā û > ẑ open is forced in certain positions into a very much closed ẑ. Educated people read the hara of the classical language as ẑ in an open syllable, but almost like the French s in a closed syllable.

H. Stumm's to whom we owe a detailed morphology of Tunisian Arabic, has laid down the following rules for accentuation: If the word ends in two consonants or with a consonant preceded by a long vowel, the accent is on the last syllable; in the other cases, it falls on the penultimate syllable, if the latter is long or closed, if not it goes back to the first syllable of the word; exceptions: the verbal form jāfūlarna (for jūfûlarna) and jūfl (for jīfl: a type at once verbal and nominal. The accent goes back from the last syllable to the penultimate when the first syllable of the following word is accented.

The conjugation naturally reveals the essential features of all the Maghribi dialects: the alternation sg. nafla, pl. naflala in the first persons of the
The vocabulary has made borrowings from Turkisch and Italian; it is every day taking more from the French. But French is affecting Judaeo-Arabic much more, and it will perhaps die out without being studied.

2. The native press. For a long time the publication of newspapers was forbidden in Tunisia; even printing and bookselling were not unrestricted but subject to an administrative control regulated in 1875 by the decree relating to teaching in the Great Mosque. From 1859 the "Journal Officiel" (al-Rūdidd al-arṣalī al-Tunīsī) gave a certain amount of information, mainly relating to administration, but it also accepted other articles. The press decree of Oct. 14, 1884 and particularly the more liberal one of Aug. 16, 1887, modified however several times later, permitted the establishment in the Regency of a press in French, Italian and Arabic.

In 1888—1889 the daily papers al-Haḍīra belonging to Bil Shāhā and al-Zahraa belonging to Shāshāh appeared in Arabic. The Zobara still exists and is now regarded as conservative although in its early days it was thought to be very advanced. Alongside of it, the principal newspaper in al-Nahāma appears every day except Monday. The majority of the present Arabic jounals are weekly: al-Zamūn (liberal), Liṭām al-Shāh and al-Sawād (both nationalist in tendency, especially the former), al-Naṣrīn (literary, satirical, much appreciated); also the humorous al-Zahrā, which admits to its columns the popular daily, Al-Wastir, in theory a monthly as is al-Mustaqīm which is very irregular. Recently an illustrated monthly magazine has appeared dealing with history and literature: al-Adām al-adābī; but the most widely circulated Arabic magazines in Tunisia come from Egypt, notably al-Siyāsah. The "Journal Officiel" which has also had a French edition since 1885, confines itself to publishing twice a week documents of an official nature. Lastly a kind of almanac al-Dirūm al-Tunīsī, which appeared from 1899 to 1921, has been replaced by an annual, almost exclusively administrative: Taḥwīl al-Tunīsī.

It is interesting to note the unsuccessful attempts to create a local Arabic press, which have been made at Sfax with al-Sayr al-dā‘ī and at Kairouan with al-Kuttabī. On the other hand, a little weekly in French edited by Muslims has been a success in Sfax; the Tunisie Nouvelle belonging to Zahir Ayâlî; in Tunis also where Bâb Hôna and Le Tunisien was already established about 1910, Shâshâ Khâir Allîh edits the Feis du Tunisien, which in very recently succeeded the Liberal; since August 1930, Abd al-‘Azîz Lazouli has been publishing the Croissant. Those organs show a Tunisian nationalist spirit, which is exclusively Muslim.

The Jews, who used to have a fairly abundant literature and press in Judaeo-Arabic (in Hebrew characters), of which E. Vassil wrote a history down to 1907 (La Littérature populaire des Israélites tunisiens, 1905—1907), no longer publish in this dialect, which is disappearing before French, except the intermittent and poor al-Šalāb. Their three weeklies are in French: the conservative Egālī, the Justice ("samatimlat") and the best known, the Rivolul Juif (Zionist) founded in 1924 at Sfax by Félix Allouche and recently transferred to Tunis.

Al-Tūr

Sulṭān Ināl, Khunṣādām and Ka‘lībey (Moritz, op. cit., p. 25 sqq.). They mainly dealt with the protection of the Christian monks from the raids of the manuring Beduins of the country round, but seem to have been regarded by the latter as empty threats, as their frequent renewal shows (Moritz issued no fewer than 22 firmanās for the monastery during the 30 years of his reign!). The monastery was frequently stormed, set on fire, its gardens robbed and pilgrims and merchants plundered; sometimes the monks even had to seek refuge in the monastery of the village of al-Tūr (see below) (Moritz, op. cit., p. 28).

Within the monastery "between the church and the dwellings on the northern part of the buildings", there is still a mosque, the pulpit of which was, according to an inscription, presented by Abū 'Ali al-Manṣūr Anāštakūn al-Amīr in Rahīl' 1 of 500 (Nov. 1106) in the reign of the caliph 'Amīr b. Aḥīkal Allāh (Moritz, p. 50-52). The monastery of Sinai in this inscription is called "the upper monastery" (ṣurur al-ḥill) to distinguish it from monasteries in al-Tūr (Psche) and Fārān. According to another inscription, this same Anāštakūn found three maqṣūḍā (places for prayer) on the Munṣūdā Mūšā, a mountain on the hill of the monastery of Fārān and another below Fārān al-Ḍajadda, and a lighthouse on the shore of the coast (al-Ṣahlī). By Munṣūdā Mūšā is certainly meant the traditional Sinai, now Dījāl Mūšā (Moritz, op. cit., p. 54); it was only in the sixth century that the name was transferred to a smaller hill east of the monastery of St. Catherine, which is now called (like a hill near Fārān) Dījāl Munṣūdā. Of the three maqṣūḍā only two could have been on the top of Dījāl al-Tūr, namely the Christian church built in 364 A.D. by St. Julian and a small mosque, also mentioned by al-Idrisī; the third place of prayer no doubt lay on a small plateau 500 feet below the summit on which now stands a chapel of Elijah erected at a later date. The mosque on the "hill of the monastery of Fārān" is perhaps to be sought on the Dījāl al-Muḥarrat, that of al-Fārān in the coasts of Fārān in the gardens of which the inhabitants of the "city of the Amalekites" Fārān later settled (Maḥṣūr, Kīḥāṭ, Bilāl, i. 155; Moritz, op. cit., p. 56). Moritz supposes the lighthouse (op. cit., p. 57) to have stood at that point on the coast where the Wādī Fārān enters the sea and there is a poor anchorage.

In a Syrian description of the seven climes of the ixth century A.D. the monasteries of Sinai (Ṭūrī al-Sīnā?) forms the centre of the crescent-shaped map in the second clime (Chabot, Notice sur une mappomonde syriaque, in Bulletin de géogr. hist. et descrpt., 1897, p. 104 and pl. lv.).

The tradition that Selim I visited Sinai on his Egyptian expedition is an invention; neither his journal nor Ibn Iyās make any mention of it (Moritz, op. cit., p. 5; note 1).

The little town of al-Tūr lies S.W. of the Dījāl Mūšā on the Gulf of Suez, about 50 miles from Rās Muḥammād, the most southern point of the Sinai peninsula. It is in regular caravan communication with the monastery of St. Catherine, some of the monks of which usually stay there (Weill, La presqu'île du Sinai, 1908, p. 82). It lies at the only spot on the west coast of the peninsula which is completely free from coral reefs and has therefore an anchorage. As al-Tūr is further excellently supplied with water, and has large palm-groves in the vicinity, it has always been the most important harbour in the peninsula. In ancient times it was called Moraṭīd (Agatharchides in Strabo, xvi. 776 and Diodorus, ill. 42) and later (from the Arab tribe of the Pasqe) Pasqī (Pasqe in Suidas); probably the monastery there dated from the pre-Arab period.

Kaškānshī already knows al-Tūr as the most important Egyptian harbour for the ships of the pilgrims to Mecca, until about 450 (1047) A.D. and took their place. It was not till 1780 (1378-1379) that the harbour of al-Tūr was restored and the pilgrims henceforth again took the northern route (Weill, op. cit., p. 92-94). After the discovery of the sea-route to India by the Portuguese al-Tūr gradually lost its importance and sank to be a mere fishing-village, until in the second half of the xvth century a quarantine station was put there for pilgrims returning from Mecca and the place began to flourish once more. Sulṭān Murād built the fort of Kaft al-Tūr near the old monastery but both are now completely in ruins.

2. The Zatāt of Dījāl Zatāt, the Mount of Olives, east of Jerusalem (see Al-Kuds, ii. 104 sqq.) is still called Dījāl al-Tūr. According to tradition, 70,000 prophets died there of starvation and are buried there. The Ascension of Jesus, according to an old tradition, took place from the Mount of Olives. Between it and the town ran the Wādī Dījānamm (vale of Cedron, now Wādī Sittī Maryam with the well of Siloam, Arabic 'Ain Sulaym) over which ran the bridge of al-Sūr. The village of Kaft al-Tūr now stands on the hill.
in vain to recapture it in 614 (1217). Ballhore in Djamah II 661 (1263) used the fortress as a base of operations for his raids against Akka.

4. Al-Tūr, the hill of Gerizim (3,000 feet) above Nablus, the sacred mountain of the Samaritans. Jewish tradition makes it the scene of the sacrifice of Isaac. The hill is still called Djabal al-Tur or Djabal al-Khibī to distinguish it from the Djabal al-Shamāl of Isāmiyya (Ezul) to the north of the town.

**Bibliography:** Vâkıfı, Meşhur, ed. Wüstenfeld, ii. 557; Saifi al-Din, Mərəşəd al-İşkəş, ed. Juyaboli, ii. 214; Le Strange, Palestine under the Moslems, p. 74.

5. Tûr Hārin, the hill of H̄ārin (3,000 feet) west of Petra, called after Aaron, who according to an old tradition, is buried there (Josephus, Archel., iv. 4, 7). When the children of Israel accused Moses of having slain him, he showed them on the top of the hill the tree on which Aaron lay. In al-Masādi the hill is called Djabal Māsād in the district of al-Šarāb; he also mentions the caves in the mountain. On the eastern peak (3,000 feet) of the Djabal al-Nabi H̄ārin is Aaron's grave (Kabir H̄ārin) which is still a place of pilgrimage for the Beduains.

(E. Hormann)

**Tûr Ābdin,** the name of a mountainous plateau in northern Mesopotamia. It stretches roughly from Mārān in the west to Džanar (q. v.) in the east. The Tigris forms the eastern and northern boundary, from Džanar up to the point where it is joined by the Tigris. A line drawn from the confluence of the two rivers to Mārān would roughly mark the western boundary of the area known as Tûr Ābdin, while the Koros-Daggh, which lies in the northern part of this western boundary is also to be regarded as belonging entirely to Tûr Ābdin, as an outlying portion of it. In the south the frontier is very well marked, for there the rocks of this old tableland slope steeply, often precipitously, to the Mesopotamian plain and seen from the latter look like a well-built wall. The road, in constant use from the earliest times, which goes from Mārān via Našṭun to Džanar, runs a short distance from the southern edge of Tûr Ābdin. With the latter are usually included the mountains in the centre of which is the town of Mārān (hence sometimes called after it; cf. also the Turkish name Mūrān-dagh; see Schlööf, op. cit., p. 48). It stretches — west of Mārān part of it is called Djabal al-Āf — roughly up to 40° 15' east long. (N. lat.) and is separated by a very marked depression from the gigantic basaltic ridge of the Kardżja-Daggh. The average height of Tûr Ābdin is in its central portion about 3,000—3,500 feet above sea-level. In the district between Mārān and Jūr (q. v.) on the Tigris (cf. î, p. 320) and in the mountains of Mārān, individual peaks reach 4,300 feet. In general however, Tûr Ābdin lacks any marked heights and looks everywhere like an undulating plain which is cut by deep and broad wadis. The largest of these is the Wadi Khātfin, which flows into the Tigris at Finik (N. W. of Džanar).

Tûr Ābdin consists almost entirely of limestone, often with beds of marl. In places however we find angular basalt blocks scattered, which are of volcanic origin. Such outcrops of basalt are found especially in the east, towards Džanar, where the basaltic Eblīs-dagh rises as a continuation of the southern wall of limestone of Tûr Ābdin, and also west of Mārān where the lava from the Kardżja-Daggh flowed out. To the nature of the rock composing it, Tûr Ābdin owes its many wadis, which are often, as in ancient times, used as dwellings. Such caves are numerous, for example in the region of Mīdāy (mentioned as early as the Assyrian inscriptions), and mentioned as a hunting place by Kašān, which is the regular trophy capital. Cf. thenon Lehman-Haupt, op. cit. (see Bihk) p. 370 sq.; Streck, in Z.D.M.G., lxxvi. 310 and in Pauyl-Wissowa, Realencycl. d. Islam. Altertumswiss., viii. 2457 (Art. Hārin); see also above, î, p. 320.

The eastern and western part of Tûr Ābdin is in general characterised by an absence of trees, but in its central east of Mīdāy, a strip of forest runs from north to south. Here we have many small hills overgrown with stunted trees (dwa'r' oaks) and shrubs. As a result of the scarcity of forests and the fact that most of the rainfall sinks into the porous limestone, there is a serious scarcity of water in a large part of Tûr Ābdin. For watering the cattle, water is collected in cisterns, often very old, and large ponds. The south has the most plentiful supply of water; there we find numerous springs and countless little streams running southwards through the hills, usually to disappear in the sands of the Mesopotamian plain at no great distance from the foot of the mountains. These streams that flow from the southern side of Tûr Ābdin enter the river Dja gə dja gə, which divides into two arms above Našṭun. The southern slopes of the Karadağ, as well as the Mārān mountains, are drained by the Khātf (q. v.) which receives the waters of the Džangulagh at Hesaka (36° 25' N. lat.).

In spite of many barren patches and the generally unfavourable irrigation conditions, there are many stretches of ground which grow cereals well and excellent pastures, especially in the hollows which hold the fertile reddish-brown earth, and on the slopes of the little hills, which are preferably used for the vine. At all the monasteries we find well cared for vineyards. Terraces to which the soil has been carried have also been built to grow the vine and produce fruit. The people are exceedingly skilled in irrigating their fields. In addition to cereals (usually barley) and their vines, cotton and all kinds of fruits (especially very fine apricots) are grown. In the wooded portions of Tûr Ābdin gall-apples and manna resin are gathered, and are found in large quantities. A ridge west of Mārān, the already mentioned Djabal al-Āf, takes its name from the plentifullness of gall-apples there (sīf). On the vines and other products of the

Tūr 'Abdin was already known to the Assyrians. They call it the ḫaššāri mountains; it is found under this name as early as the inscriptions of the early Assyrian King Assur-nāṣir-pār I (c. 1300—1270 A.D.) and Assurbanīpāl I (c. 1270—1240); see the pertinent texts in Altoriental. Bibliothek, vol. i. (= Ebeling—Meissner—Weidler, Die Inschriften der assyris. Könige, Leipzig 1926, p. 58 sq., p. 118 sq.). The ḫaššāri are still mentioned in the documents of the later kings of Assyria. Tūr 'Abdin—Kashari corresponds fairly well to the Maššū (Μασσά) in the Latin, a term found in the later Greek writers (Arrian, Ptolemy); cf. Delitzsch, Wer war der Parthus?, Leipzig 1881, p. 259; Streck, in Z.A., xii. 1897, p. 169; Streck, Anmerkungen etc. (= Forschungen. Bibliothek, vol. vii., p. 790; R. Kiepert, in Formae orbis antiqui, Heft v. (Mesopotamia etc.), 1909, p. 8. The view put forward by Lehmann-Haupt (s. Z.A., xiv. 371; Kloe, ix., 1909, p. 409 and Aramäisches rind und jetzt, vol. i., Berlin 1910, p. 368 sq., p. 510, 513) hardly seems to us tenable; that, Kashari and Maššū represent a wider geographical conception than that of Tūr 'Abdin and mean: the whole eastern or southern part of the Tanur of the ancients i.e. include the Karādža Dagh and the Harar Daghliari to the north of Malyafrīkān (Farkūn).

In the cuneiform inscriptions we find besides Kashari two other names which apparently also refer to parts only of Tūr 'Abdin: Nīrbu, probably used for the centre of this plateau (see Streck, in Z.A., xii. 34; xiv. 169) and Isita, in all appearance a special name for the western strip of Tūr 'Abdin and particularly for the district of Mārīn (prob. the modern, already mentioned, Marān, a tributary of the Khābūr (q. v.)). Rises in Tūr 'Abdin. We may also mention that the Arab geographers (see B.G.A., ii. 73, and Abu 'l-Farid, Taqāṣīm al-Dustūr, ed. Paris, 1828) also have the special name Dījasāl Mārīn (Mārīn Hills) (cf. above) for the southern borders of Tūr 'Abdin, the district of Naṣīrīn and Dārā. The modern Syrian pronunciation of Tūr 'Abdin (one also hears Tūr al-'Abdīn) is Tūr al-'Abdīn. The name Tūr 'Abdin is locally not unknown, especially in Christian circles, but belongs to the literary rather than to the spoken language. At the present day in Syria, this hill-country is usually Tūr or in Arabic al-Tūr, also al-Dījasāl and Dījasāl Tūr, or Dījasāl al-Tūr; cf. Prym and Socin, op. cit., p. 1390; and Socin, in Z.D.M.G., xxxv. 238; G. Hoffmann, Aussage aus syriscchen Akten persischer Mäzīrez, Leipzig 1850, p. 179 sq.

As to the Aramaic name Tūr 'Abdin = "Mount of the Servants" (of God)—cf. the analogouos place-name ḫaššāri 'Abdin in Wright's Catalogue of the Syriac Manuscripts in the British Museum, London 1871, No. 950, 267—, it is of course of Christian origin and belongs to the period when the region had through the number of its monasteries become a great centre of eastern monachism. The name Tūr 'Abdin is in a Syrian Lives of Saints of the time of the emperor Julian, i.e. about the middle of the fourth century; see Wright, op. cit., No. 960, p. 1136 and Socin, in Z.D.M.G., xxxv. 239.

Of great topographical importance for the Tūr 'Abdin region is the Descriptio orbis Romanii of Georgius Cyprius of the first decade of the seventh century, because it gives a whole list of forts in this area; see the edition by Gelen, Leipzig 1890, p. 46, l. 913—938. There we find Kāṣṭor Maššū (= Mārīn) followed immediately by Kāṣṭor Tūrādān (l. 914); it is very natural to amend this name with Hoffmann in Gelen (p. 159—159) to Tespādān = Tūr 'Abdin. Here we may point out that of the Roman forts of Mesopotamia one group were near the Tigris and the others on Tūr 'Abdin; cf. V. Chapot, La frontière de l’Euphrate, Paris 1907, p. 322. In the Syriac Lives of Saints above mentioned the time of Julian there is a reference to the building of two large fortresses in the region of Tūr 'Abdin.

In the chronicle of Pseudo-Moses of Choreone, which at the earliest was compiled at the end of the seventh century, we also find the name Tūr 'Abdin (see Marquart, Einleit. Nachr. d. Göt. Ges. der Wissenschaft, Berlin 1904, p. 141, 158); but here it apparently denotes a smaller area, the southern border (= Isita?).

In the Arab authors of the middle ages we also find the term Tūr 'Abdin. For the pre-Islamic period we have it in verses of the poet Abī Dunṣ al-Ḫaḍr, which tell us that the legendary founder of the kingdom of al-Ḫaḍr (q. v.), Sīṣīla, also ruled the land of Tūr 'Abdin (see B.G.A., ed. de Goeje, vi. 95, 96—= Yākūt, Muṣṭafā, ed. Wüstenfeld, iii. 559, 2 and cf. also Yākūt, ii. 284, 37—). Tūr 'Abdin is also mentioned in a poem the subject of which is Khusraw and Sīṣīla: see B.G.A., v. 159, 36 sq. (Masudi, B.G.A., viii. 34, 4) mentions that in Tūr 'Abdin remnants of the Aramaeans still survive. Ibn Rūta (B.G.A., vii. 90, 3 and Baladhūrī (ed. de Goeje, p. 175, 11) point out that the Ḥirānaeus (the modern, already mentioned, Ḥajābān), a tributary of the Khābūr (q. v.), rises in Tūr 'Abdin. We may also mention that the Arab geographers (see B.G.A., ii. 73, and Abu 'l-Farid, Taqāṣīm al-Dustūr, ed. Paris, 1828) also have the special name Dījasāl Mārīn (= Mārīn Hills) (cf. above) for the southern borders of Tūr 'Abdin, the district of Naṣīrīn and Dārā. The modern Syrian pronunciation of Tūr 'Abdin (one also hears Tūr al-'Abdīn) is Tūr al-'Abdīn. The name Tūr 'Abdin is locally not unknown, especially in Christian circles, but belongs to the literary rather than to the spoken language. At the present day in Syria, this hill-country is usually Tūr or in Arabic al-Tūr, also al-Dījasāl and Dījasāl Tūr, or Dījasāl al-Tūr; cf. Prym and Socin, op. cit., p. 1390; and Socin, in Z.D.M.G., xxxv. 238; G. Hoffmann, Aussage aus syriscchen Akten persischer Mäzīrez, Leipzig 1850, p. 179 sq.

As to the Aramaic name Tūr 'Abdin = "Mount of the Servants" (of God)—cf. the analogous place-name ḫaššāri 'Abdin in Wright's Catalogue of the Syriac Manuscripts in the British Museum, London 1871, No. 950, 267—, it is of course of Christian origin and belongs to the period when the region had through the number of its monasteries become a great centre of eastern monachism. The name Tūr 'Abdin is in a Syrian Lives of Saints of the time of the emperor Julian, i.e. about the middle of the fourth century; see Wright, op. cit., No. 960, p. 1136 and Socin, in Z.D.M.G., xxxv. 239.

Of great topographical importance for the Tūr 'Abdin region is the Descriptio orbis Romanii of Georgius Cyprius of the first decade of the seventh century, because it gives a whole list of forts in this area; see the edition by Gelen, Leipzig 1890, p. 46, l. 913—938. There we find Kāṣṭor Maššū (= Mārīn) followed immediately by Kāṣṭor Tūrādān (l. 914); it is very natural to amend this name with Hoffmann in Gelen (p. 159—159) to Tespādān = Tūr 'Abdin. Here we may point out that of the Roman forts of Mesopotamia one group were near the Tigris and the others on Tūr 'Abdin; cf. V. Chapot, La frontière de l’Euphrate, Paris 1907, p. 322. In the Syriac Lives of Saints above mentioned the time of Julian there is a reference to the building of two large fortresses in the region of Tūr 'Abdin.
the history of Tür 'Abdin in the xvi. century, especially for the period of Timur's campaigns, is contained in a continuation of the Chronicon Syriacum (of profane history) of Barhebræus (Aham 7-Eragd) by anonymous monks (one of whom belonged to a monastery in BIasa)hin); see the edition by O. Behnisch, in Revue d'histoire des religions, ed.: O. Behnisch, Berlin 1858; cf. also Beuastar, Gesch. der syrisch. Literatur, Berne 1822, p. 338. In the middle ages and down to the present day the history of the Kunday tribes in Tür 'Abdin and the country round it is of importance. The history of the Kunday dynasties of Djastrat b. 'Omar and Hisn Kaïfa is of special importance in this connexion; cf. the account based on the Kunday chronicle (Makarmona) by Barth, in Stud. u. k. wis., vol. xxx., (1859), p. 217 sq.; see also the article KZ. In the redistribution of territory which followed the War, Tür 'Abdin was left to the Turks. In the administrative division of the Turkish empire as it existed down to the War, Tür 'Abdin belonged to the vilayet of Distubazar and to the sanjak of Mardin, which was divided into five kaşas: Mardin, Djiata, Midyat, 'Awine, and Nazifel; see Cünet, op. cit., p. 412, 496 sq. For the administrative division since 1921 and 1927 cf. 'Abd al-Kadir Sa'di, Yeni Turkiye Meclisleri Dijijah- 
nyus, Istanbul 1927, p. 174. In the early middle ages and the first centuries of Islam, Tür 'Abdin was probably inhabited almost entirely by Christian Syrians and Arabs. Later, more and more Muslims (mainly Kurds) settled there, so that with the gradual decline in the numbers of Christians, the result of frequent persecutions by the Muslims, the proportion increased more and more in favour of the latter down to the War. According to Cünet's statistics, not however, as reliable (op. cit., p. 412, 496 sq.), the sanjak of Mardin which in area is at least larger than Türk 'Abdin in the wider sense, had in 1890 in all 349,572 inhabitants, viz. 122,322 Muslims, 67,070 Christians, 1,500 Jews. 1,500 gypsies and 580 Jews; the Christians were thus a third of the whole population. In the two kaşas which are almost entirely within Türk 'Abdin, the kaşas of Midyat and that of 'Awine, Cünet (op. cit., p. 513, 517 sq.) gives the population in 1890 as 31,920 Christians and 37,712 Muslims. In the cašas of Midyat, the numbers were about equally balanced: 22,632 Muslims and 22,126 Christians. The present distribution of nationalities and creeds within Türk 'Abdin is not known. Ma'munian are however certain in an overwhelming majority, since the Christians suffered severely during and after the War; in particular many Armenians had to leave the country. When in a new persecution in 1924, the Patriarch of the Jacobite Church Ignatius Elias III., was driven from his residence in Dair Za'farun (east of Mardin), the bulk of his followers (3,000 migrated) with him to Syria; cf. H. C. Lake, Mevle und its Minorities, London 1925, p. 113. Christianity spread in Türk 'Abdin at a very early date. Edessa, which is quite near. At the Council of Chalcedon (451) among the six Mesopotamian bishops we find only one of Hisn Kaïfa, but not one of Isla as Noldeke assumed (Z. D. M. G., xxxvi., 219, note 2) on the authority of Manaf's statements in Concilior. . . . collectio, vol. 403; here Insula = Isla is, as the new edition in Schult- 

hess, Die syr. Kanaan im Syriam von Nisias bis Chalcedon (= Abh. d. G. Gesellschaft d. Wiss., N. Folge, vol. x., Nr. 2), p. 135, shows, a wrong reading. Since the time of the Christological quarrels, Türk 'Abdin has been the citadel of the Jacobites; nowhere do or did they exist in such solid masses as in these highlands and in Mardin and its vicinity. Türk 'Abdin proper originally seems to have been a single Jacobite bishopric; about 1089 it was divided into two dioceses, the bishops of which lived in Karpin and Hîh respectively. Later, in the xii. century, other sees were created in the chief towns of the district. In the middle of the xii. century, differences between the patriarchate of Mardin and the bishop of Safak (i.e. a bishop north of Mardin) led to a schism, in the course of which the bishops of Türk 'Abdin cast off the authority of the patriarch and chose the bishop of Safak as patriarch of Türk 'Abdin and Hisn Kaïfa. This split lasted for over a century, cf. theon Pogonon, op. cit., p. 45, 52-53, 73. Lists of the bishops of Hîh, Hisn Kaïfa and Karpin may be found e.g. in Wright, op. cit. (476), p. 132, 125 sq. In addition to Jacobites there were also in Türk 'Abdin in the middle ages, and even later, communities of Nestorians. The oldest monastery there, that of Mur Awez, was for long in their possession (see Pogonon, op. cit., p. 109). These Nestorians were won over to Rome in the xvi. and xvii. century and henceforth called themselves Chaldaens (Kaldans), as a religious community with their own ritual. The members of this so-called Chaldaen church settled in Türk 'Abdin have at their head two bishops (in Mardin and Djiata); according to a native Chaldaen cleric, they numbered in 1914, 5,000 souls; cf. Annuaire Pontificale Catholique, xvii. (1914), p. 502-511 and based on it Labeck, in Histor. polit. Blätter für das katholische Deutschland, vol. 154, Munich 1914, p. 92, 101-102. According to Cünet, there were in 1890 in Türk 'Abdin about 4,000 Syrians (Suryani), i.e. Jacobites in union with Rome, who were under Patriarch of Mardin and a bishop of Djiata. According to Cünet there were in the administrative district of Mardin also 28,666 Armenians, of whom the one half professed (i.e. converts to the Orthodox Church, the other in fairly equal proportions to the Roman Catholic and to the Protestant churches. The Armenian Protestant community is a creation of the activity of American missions. The prosperity caused by the civilising influence of the American missionaries, who had their main centres in Mardin and Midyat, spread practically over the whole of Türk 'Abdin but has ceased since the War; cf. on this American mission: Souchon, Révis etc., p. 404, 418, 424, 422-423. Finally Cünet gives from about 1890 as further Christian inhabitants of the sanjak of Mardin 6,730 Greeks (who had to leave the Turkish territory after the War) and 380 Jews. We may assume with certainty that before the War the Jacobites were the largest in numbers of the Christian communities in Türk 'Abdin proper, but we have no material available to enable us to make an approximate relative estimate of their numbers. Cünet's estimate (for the sanjak of Mardin!) which puts the Jacobites at 15,754 only half of that of the settled Armenians, is obviously based on incorrect premises and seems unreliable. In 1838 Southgate (see op. cit., li. 268, 275) estimated the number of Jacobites (from information given him by the Patriarch of the day) at 6,000 families.
or 60—70 villages with populations of 50—69 families. In the mountains, i.e. in Tür 'Abdin proper, according to him there were 30,000 Jacobites, to which were to be added 5,000 settlers in the vicinity of the monasteries; in Mardin there were 2,000, Jacobite Christians in the immediate neighborhood of Mardin and in the plain of Sinjar 6,000. Badger who visited Tür 'Abdin in 1850 put the number of Jacobite villages there at 150 (see Badger, The Nestorians etc., l. 63). That the number of Jacobites of Tür 'Abdin from the time of Badger and Southgate till the beginning of the War steadily if slowly decreased there is no reason to doubt.

The Muslim part of the population of Tür 'Abdin consists mainly of Kurdu. They have spread more and more widely in the heart of Tür 'Abdin in recent centuries and the Christian peasants with whom they are constantly warring are being driven more and more from the southern slopes of the mountains towards the plains. On the constant state of civil war among the people of the villages of Tür 'Abdin see Poggen's observations, op. cit., p. 110-111. For Kurdu tribes or families settling within the region of Tür 'Abdin cf. Niebuhr, op. cit., ii. 358; Lersch, Forschungen über die Kurden und iranischen Nordchaldäer, St. Petersburg 1857-1858, vol. ii. (Glossary); Schlaffi, op. cit., p. 49-51. Lists of tribes in Prym and Socin, Der neue-sozialeische Dialekt des Tür 'Abdin, ii. 416-418 and Prym and Socin, Kurdische Sammlungen, ii. 275-284; Sachau, Reise, p. 387; Sykes, op. cit., p. 578 (under No. 15); see also above, vol. ii. 1132, 1141, 1144. The followers of the Yazidi religion in Tür 'Abdin are also Kurds but their numbers are insignificant. The most important Yazidi tribe there is called Djuokit (Teftekit); see Niebuhr, op. cit.; Prym and Socin, Dialekten des Tür 'Abdin, ii. 379; Sachau, Reise etc., p. 387; Mentzel in Grothe, Meine Vorderasiatischen Expedition, Leipzig 1911, I, p. cxvi.

Arab Beduins also encamp occasionally in Tür 'Abdin especially on its southern outskirts; for the names of some of them see Taylor, op. cit., p. 54-55 and M. v. Oppenheim, op. cit., ii. 68. A special position is occupied by the large tribe of the Melkibilin (Muhamelentsa) whom we find as early as the already mentioned anonymous continuation of the Chronicles of Barhebraeus (year 1407); see Behnsch's edition, p. 6, 9-10.

The result of the intermarriage of Arabs and Kurds (with Arab influence predominant) and are said to have renounced Christianity over 300 years ago. They dwell mainly in the kaşaf of Awine, the part of Tür 'Abdin running west of Mardin to the Tigris; on this see Niebuhr, loc. cit.; Z.D.M.G., i., 591; Sachau, Reise, p. 421; Sykes, op. cit., p. 356, 378.

Three languages are spoken in Tür 'Abdin: Kurdish, Syriac and Arabic. They have all strongly influenced each other. The most widely influenced is Kurdish, which all the Christians also understand and speak in addition to Syriac. The Kurdist dialect spoken in the northern and western branch of the Kurdist dialect, which is now better known from the investigations of Lersch, Prym and Socin, and Makas (see above; p. 1152).

See especially Prym and Socin, Kurdische Forschungen, Erzählungen und Lieder im Dialekte des Tür 'Abdin und der Behdin, 2 parts (text and transl.), St. Petersburg 1857-1890. The Jacobites, like most of the other Christians of Tür 'Abdin (especially the Kadzhit), use among themselves a peculiar Syriac dialect, usually called briefly Törani, "The language of Tör". It differs very much from the modern Syriac idiom spoken in the east (in the district of Urmiia and Miskel and in eastern Kurdistan) by the Nestorians and Chaldeans (Kadzhit). The Jacobite modern Syriac (or modern Jacobite) is much closer than this dialect to Eddessene, i.e. to the Syriac literary language. It cannot however be said to be derived from this without further enquiry, but is to be traced to an older form of the language which was closely related to Eddessene. Törani texts of importance for our knowledge of the language have been collected by Prym and Socin and also by Kaufmann. On texts taken down by Prym and Socin in 1869 from the mouth of a Midyat man see Prym and Socin, Der neusyr. Dialekt des Tür 'Abdin, 2 parts (text and transl.), Göttingen 1881; cf. thereon the important review by Noldeke, in: Z.D.M.G., xxxvi. 218-235. Sachau through the intermediacy of the American mission got specimens taken down in Törani by a Syrian priest; this MSS. material is now in the Berlin State Library, see Sachau, Katalog der syrischen Handschriften, p. 812-816 (No. 278-292). Of these so far only one text (No. 290, the story of the wise Hallcar) has been published, namely by Lähnatski, in Die neusyrischen Handschriften der Kgl. Bibliothek zu Berlin, Leipzig 1896, vol. i., p. 1-77 (text) and vol. ii., p. 1-41 (transl.). The Arabic texts collected by Parisot in 1867 from Tür 'Abdin (A. Parisot, Contribution à l'étude du dialecte norvegien du Tour Abdin, in Act. du 1er Congrès Int. des Orientalistes, Paris 1897, vol. iv., p. 179-198) differ in language considerably from those collected by Sachau and Prym and Socin. Do we perhaps have here another modern Syriac local dialect? A. Siegel has prepared an excellent Laut- und Formenlehre des norweh. Dialektes des Tür 'Abdin, Hannover 1925, based mainly on the texts published by Prym and Socin; cf. thereon Littmann's review in: O.L.E.Z., xxix., 1925, col. 1003-1008. Of other works, the grammatical and lexicographical sketch of Törani given by Noldeke, in Z.D.M.G., xxxvi. 218 ff., should also be noted; cf. also Guild's observations, op. cit., xxvii. 294-301. On the boundaries within which the modern Jacobite dialect is spoken cf. Prym and Socin, Der Neusyr. Dialekten des Tür 'Abdin, vol. i., p. vi.-vii.; ibid., p. vii. (repeated in Z.D.M.G., xxxvi. 255), and Socau, Reise, p. 412-413 a list is given of the localities in which at the present day (or rather 1870 and 1880) Törani is still spoken. There are also Syrian villages in Tür 'Abdin where Aramaic is no longer spoken but only Kurdish.

Araiche is understood by the majority of the inhabitants of the larger villages. It is more frequently spoken in the south towards the Mesopotamian plains and particularly in the region of Mardin. The dialect of Mardin, which shows many peculiarities, belongs to the Tigris groups of the dialects of Mesopotamia (cf. above p. 539). It is closely related to the Arable spoken around Mysel. Cf. Socin, Der arab. Dialekten von Mysel und Mardin (a collection of texts), in Z.D.M.G., xxxvi., 1882, p. 1-53, 328-377; xxvii., 1883, p. 188-222 (also separately, Leipzig 1904).

The number of villages is the sandjak of Mardin, which however includes territory not in Tür 'Abdin, is given by Cuihn (p. 412, 496) as
1,052; of these 410 are in the ηαδή of Μίδιατ and 97 in that of 'Awnta. A manuscript Syrian chronicle (according to Frym and Socin, De narratione, Dict. etc., i. p. iii.) estimates the number of villages in Tür 'Abdin at 243. In Z. D. M. G., xxv, 258—269, Socin gives a list of 168 names; cf. also the list of places in Frym and Socin, op. cit., ii. 416—418 and in Frym and Socin, Kreuzige Sammung, ii. 275—284. One should also consult the geographical indices and to the catalogues of the Syriac manuscripts, especially Wright, Catalog of the Syrian Manuscripts in the British Museum, London 1870, p. 1239 sq.; Sachau, Vorlesungen über die syrisch. Hist. der Kgl. Bibliothek in Berlin, Berlin 1889, p. 923 sq.; Payne Smith, Catalog. codic. bibl. Bodleiana, vol. vi., Oxford 1864, p. 664 sq. and Zoltenberg, Catal. des mss. syriques... de la Bibliothèque nationale, Paris 1874, p. 230 sq. The number of Syrian villages in Tür 'Abdin has already been mentioned; most places have a mixture of nationalities and religions, i.e. have Musulim (Kurd) as well as Christian (Jacobite, Aramian etc.) elements in their population. In earlier times Tür 'Abdin must have been better cultivated and more thickly populated; this is shown by the numerous ruins that exist.

For the larger towns on the edge of Tür 'Abdin like Märdin (Märdlin), Hîjn Kâfî, Djazîrâb, Omar and Naqûf see the special articles. The capital of (inner) Tür 'Abdin proper is Mîdîyat (Syriac: Midyat), which lies practically in the centre in a beautiful plain surrounded by hills (4,400 feet above sea-level) and about 41° 25' E. Long. and 37° 25' N. Lat. This very old place, already mentioned in the early Assyrian inscriptions (at Malatîya; see Streck, Z.A., xiii. 98; xiv. 169; xiv. 249) lies at the intersection of two great roads which cross Tür 'Abdin from North to South (Naqûf—Hîjn Kâfî) and from east to west (Djazîrâb—Märdin). Before the War, Mîdîyat is said to have had an exclusively Christian (mainly Jacobite) population of about 5,000.

Of the other larger places in Tür 'Abdin may be mentioned: Szawr (15 miles N.E. of Märdin), the capital of the ηαδή of 'Awnta (see above). East of it lies the village of Kûllûti and somewhat S.E. of the latter Erbbî (Kurdish: Habbî); cf. above ii. p. 533 and Frym and Socin, Kreuzige Sammung, ii. 206, 207; North of Mîdîyat, halfway between it and Hîjn Kâfî, is Kefr Dîbûz (Kurdish: Kandîs), a fairly large Kurd village, in the neighbourhood of which is the Muslim place of pilgrimage Tell 'Abîd (Ab-, which Rawlinson wished to identify with the old Armenian royal city of Tigranocerta (see Sachau, Reise, p. 415 sq.; Lehmann-Haupt, op. cit., i. 372—373, 375 sq.) Twelve miles north of Mîdîyat is the village of Hibgi with many ruins, which testify to its former importance. We may also mention Zâr and 'Arâs, both N.W. of Hâb, one and a half and three hours' journey respectively, and twelve miles S.E. of Hâb, the large village of Mîdîd. Two hours west of the latter is the large Christian village of Bășebrîna (Old Syriac: Bâšî-Sûbîrna) which plays an important part in the ecclesiastical history of Tür 'Abdin, one miles S.E. of Märdin on the S.W. spurs of Tür 'Abdin lie the great and impressive ruins of the town of Dâtî-ibuilt by Anastasius I (491—518) and later refounded by Justinius I (527—565) (also called from its founder Anastasopolis); its name is still borne by an adjoining village. On the ruins of Dâtî cf. Suchau, Reise, p. 294—295, and especially Fresnay, op. cit., p. 44—49 (with plates 53—61).

Tür 'Abdin plays a very important part in the history of eastern monachism. According to a tradition in Nestorian circles, St. Eugenius came from Egypt in the fourth century and founded a monastery in the southern part of Tür 'Abdin, and thus laid the foundation of the monastic system which developed to such an extent in Mesopotamia. St. Eugenius, who had many followers, is said after his death in 363 to have been buried in the monastery built by him. This is not the place to go into the question of the truth of the Syriac legend of St. Eugenius; it may be sufficient to refer to the serious objections raised to it by Labourt, in Le Christianisme dans l'empire perse sous la dynastie Sassanide, Paris 1904, p. 302 sq.; cf. also Baumstark, Gesch. d. syrisch. Liter., Bonn 1922, p. 235—236. In any case, it is certain that in the middle ages Tür 'Abdin became a regular monastic citadel like an ancient Mount Athos. When Neubauer (loc. cit.) is told that there are over 70 ruined monasteries in this mountain land one need not think this is an exaggeration. At the present day, Tür 'Abdin is still full of remains of old monasteries. Only a few are in good repair and still inhabited by monks. Great churches, for the most part of the fifth—seventh centuries, are still to be seen. These monuments of the mediæval ecclesiastical architecture of the east are of considerable importance for the history of Christian art. They have been studied recently by different investigators, notably Pognon, G. L. Bell, Fresnay and Guéry; for the literature see the Bibl. Pognon has earned special praise for collecting the numerous Syrian inscriptions on the churches and monasteries visited by him.

Strzygowski, Guéry and Herrfeld have devoted special attention to the dates and appreciation as documents of the history of art of the buildings of Tür 'Abdin; cf. M. v. Berchem and Strzygowski, Anst. Heidelberg 1910, p. 269—273, 293; Guéry, in Rept. d. Kommission für Vereinigung, xxvii., 1916, p. 215—221, and in Sarre-Herfeld, op. cit., i. (4. Bibl.), ii. 45—336; Herrfeld, in L. Z. v., 1911, p. 402 sq., iv. 415 and in Sarre-Herfeld, op. cit., ii. 277, 296, 298—299, 336, 345. Strzygowski's thesis that the art of the Mesopotamian monasteries is older than that of Syria and that Mesopotamia, especially Tür 'Abdin, and not Egypt, is the cradle of monasticism, has been rejected, in my view on good grounds, by Guéry and Herrfeld, who champion the later date of the Mesopotamian buildings compared with the older Syrian; cf. also Becker's remarks (Jl., iii. 396) against the assumption of priority of Mesopotamian monarchism.

The mother-house of all the Mesopotamian monasteries of Tür 'Abdin, the already mentioned Mar Awqün (Kurd.: Marîbek), is 18 miles N.E. of Märdin, i.e. 30° 30' E. Long. and 30° 37' N. Lat. (cf. the cliffs of the southern declivities of the plateau. In the middle ages it was the headquarters of the western Nestorians and is now inhabited by Jacobite monks. Half-an-hour's journey from Mar Awqün is another old monastery, Mrî Yûhannî, founded by a disciple of St. Eugenius and bearing his name (cf. him the cf. the work by Vigh, Stud. no. 2 quoted above ii., p. 304).

In the middle ages one of the most important monasteries of Tür 'Abdin was the Monastery of
Abraham, frequently referred to in Syrian literature briefly as "the great monastery (on Mount Ila);" cf. e.g. the indices to Chabot's edition of 'Al-Bidayat's work just mentioned. Its founder was the celebrated creator of definitely Nestorian monasticism, Abraham of Kaskar (d. 588); on him see vol. II, p. 301a. G. Hoffmann (op. cit., p. 170 sq.) wished to identify this monastery with the monastery in ruins at Mar Bakal (= Mar Bish, 3 miles S. W. of Mar Awgen) mentioned by Taylor. This is not possible: we must rather identify the monastery of Abraham with Der Mar Braham, visited by Hinrichs on his journey in 1911; see his notes in Bell, Churches and Monasteries of 'Urb 'Abdin, Heidelberg 1913, p. 49-50 or p. 105-106.

At the present day the principal monastery of 'Urb 'Abdin and the greatest centre of pilgrimage for the Jacobites is now the monastery of Karmin (Old Syr.: Karjamn), about twelve miles S.E. of Midyat. This coenobium, perhaps the most celebrated of the monasteries in Asia, was in the middle ages one of the richest and most venerated in the whole of the East. In its greatest days it held 350 monks, while at the present day there are only about a dozen there. It is said to have been founded in 599 under Arcadian; its founders are said to have been St. Samuel (c. 406) and Simeon (d. 433). It is still usually called among Syrians Mar Gabriel after its great Abbot, St. Gabriel (d. 667). The Muslims and Greeks usually call it Der 'Amr (in travellers we also find Der Amar and quite wrongly also Der el-Amr) = Dalr 'Umur, the monastery of Omar. The caliph Omar at the time of the Arab invasion is said to have given the Abbot rights of jurisdiction over all Christians in the country. In Karmin are three churches, i.e. two, in addition to the principal called after St. Gabriel, which are dedicated to the Virgin and to the Forty Martyrs. The structure of the church of St. Gabriel, perhaps the oldest in the country, is typical of the monastic churches of 'Urb 'Abdin. The village of Karmin is built around the site of another monastery, that of St. Simeon. For the history of Karmin cf. the essay by Nau, in Acta XLIII Congr. Internat. des Orient., vol. II., Paris 1906, p. 72 sq. and the Syrian chronicler discussed by Baumstark, op. cit., p. 273 sq.

Among the oldest churches in 'Urb 'Abdin is that of Mar Kyriakos in Arnà and that of Mar 'Azzariel in Kaf Zeh (1½ hours S.E. of Arnà) stylistically they are closely connected. According to Geyer, the village of Ilbû is the archaeological centre of 'Urb 'Abdin. In it are two very interesting old churches: Mar Sàvâ (Sàlìkh) and that of the Virgin, the al-'Adnà, which is very rich in ornament, and has come down to us practically uninjured from the time it was built. Among the latest of the mediaeval churches is that of Mar Yûghîb in Sàlìkh; this monastery became one of the most important in the country when it became the residence of a separate patriarch for 'Urb 'Abdin.

We may further mention that ruins of monasteries and churches, e.g. op. cit., p. 116 mention twenty -- are particularly numerous in Bashêrin (cf. above); but they are mainly of more recent origin. In conclusion we may just mention the famous monastery of Der el-Za'n-fàrûn (one hour east of Marûn) which till 1924 was the residence of the Jacobite patriarch; he now lives in Aleppo; cf. on it especially Petermann, op. cit., ii. 343 sq.; Sachau, Reiss, p. 405 sq.; Parry (who stayed six months in it), op. cit., p. 153-154 and Preusser, op. cit., p. 49-53 (with plates 62-65).

As already mentioned, there was in the area of 'Urb 'Abdin in Roman Byzantine times a large number of forts which were mainly intended to defend the Roman frontier against Persia. Ruins of such citadels may be seen in several places, for example the Palaces of Byzantine writers is probably identical with the modern Kafat 'Uldûm 'Taiî (about three hours' journey south of Bâsebirna); cf. Weisbach in Pauly-Wissowa, op. cit., 2nd ser., i. 13. Another citadel frequently mentioned in the classics, Sarbân (the forms Sírûa and Sírûnúma also handed down are probably corruptions), is probably to be located on the site of the modern Sûnûma (cf. Weisbach, op. cit., 2nd ser., i. 2435). On other celebrated citadels, like the "new citadel" (Arab. al-Kafû al-Djâlid) apparently the modern Kafat 'Uldûm 'Taiî, and the citadel of Halûmûn (Syr. Husûn al-Halûmûn), often mentioned in Syrian or Arabic sources, which must have stood near Bâsebirna, see Geyer in Petersmann's Mittell., vol. 62 (1916), p. 297. On the citadel of Fînik on the north bank of the Tigris (above Diabîra) which is mentioned as early as late classical writers (as Théod., Phoenice), and has played a notable part in the history of the Kurds (cf. above, i., p. 1130) see Tuch, in Z.D.M.G., i. 57-61; M. Hartmann, op. cit. (see Bihn.), Index (v. E.).

TUR 'ABDIN — TURKAHAN BEG.

On cartography cf. the notes by R. Kiærup in M. v. Oppenheim, Von Mittelalter zum Fr"uhesten Gek, Berlin 1900, II. 410—411. The map of 'Tur 'Abdin by H. Kreyberg appended to Socin's article in the Z. d. G. M. is now practically obsolete and we have much fuller and better material available. The best maps of this district now are: R. Kiærup (1893), Karte von Syrien und Mesopotamien (1:850,000), east sheet prepared by R. Kiærup in 1893 which accompanies M. v. Oppenheim's book; R. Kiærup, Karte von Kleinasien (1:400,000), Berlin 1914, sheet Diarbekir and Néstön. Maassouli's map: Eastern Turkey in Asia (1:250,000), London, War Office (1903), sheet 25 (Mardin) and 26 (Bohban-Jeair) should also be mentioned. A special map of the Umgebung von Mardin und Néstön (1:200,000) was prepared in 1918 by the Kartographische Abteilung der preussischen Landesaufnahme in Berlin. (M. Steck).

TURKAHAN BEG, an Ottoman general, conqueror of Thessaly and warden of the marches. The hitherto obscure origin of Turkahin Beg is now explained in his last will and testament of Djamal'din 1850 = August 1446 (in a certificate of Greek translation in Epam. G. Pharaklisde, Il. d'Adam, Voi. 1926, p. 250, where he calls himself son of the famous Paş trava Vigit Beg ("("7evv 2ev a6xé rpa6v Xadr Bep). Accordingly, his father was the well known Paş trava Vigit Beg (called by the Serbs and Italians Passythus, Bassilus etc.; cf. C. J. Jireček, Staats- und Gesell- schaft im mittelalterlichen Serbien, iv. 7, note 5) who conquered Ustik (Skopje, on June 6, 1392) and governed a part of Bosnia after 1391 (1390) in the modern southern Serbia as Ottoman warden of the marches and must have died about 1415 in Ustik. There his tomb is still shown (tubre; cf. Gliska Elemeri, Torski spomenici u Skoplj, Skopje 1927, p. 5 with a picture). There is no support for the statement of the Sadi'il-i seghlini, i. 57 that he did not die till 835 (1431); nor for the statement that the grand vizier Işah Paşa had been his "slave" (hale). This is obviously due to confusion with Işah Beg, the first governor of Bosnia, whose "lord" (rimesli) he is called in a curious ghazal in the Altipan, anonymous Chan, ed. F. Giese, p. 28, 3 (which is probably followed by Şokoldah, T'ra (h) p. 52). Nor was Vigit Beg the son of Işah Beg, as has been stated in C. J. Jireček, Geschichte der Serben, ii. 127 (probably following Lennelius, Hist. Mus., Turc., p. 315, 13), but obviously his father, as is evident beyond doubt from the Arabic inscription on the mosque of Ghard Işah Beg at Skopje of the year 842 (1438—1439) (cf. the text in Elemeri, op. cit., p. 11 infra). When then Işah Beg appears in C. Trubelba, Turke-slovenski spomenici duhovnike arhivarje (Sarajevo 1911), p. 200, as the son of Paşa Vigit Beg ("Pašati- beg"), this is quite correct although his epithet there, Hrančić, is an unnecessary slavisation (cf. p. 11 infra). It is therefore evident that Işah Beg and Turkahin Beg were sons of Paşa Vigit Beg, i.e. were brothers. We do not know when and where Turkahin was born. The meaning of the name also is uncertain, if it is not to be connected with Türkahin (cf. in Astrakhan) mentioned in Ili Bajilli, II. 410; its pronunciation is assured by the Byzantine form Tawatak, G. Phrnatzes, Duca, Chalcocodyles, in the Chronicon breve.
Nothing is known of the early career of Turakhān Beg. His name is found for the first time in May 1423, when he appeared in command of the cavalry in the Peloponnese, broke through the ruined trenches of the Isthmus at Hexamilia, took most of the defences recently restored by Emperor Manuel on this tongue of land and, meeting no resistance, ravaged the interior of the country. He attacked a number of Byzantine towns like Mistra, Leonidai, Gardikli, Dahi (cf. Chronicon breve, in the Bonn edition of Ducas, p. 199) and subdued the Peloponnese for the Ottomans as far as the lands held by the Venetians. This whole campaign (cf. Phrantzes, p. 177; Chalcocodyles, p. 235) was most probably intended as a reconnoissance against Venice. Soon afterwards Turakhān appeared, if Ducas reports correctly, with his cavalry on the Black Sea (p. 50, 4). He also took the field against the Albanians and inflicted a decisive defeat on them (cf. Chalcocodyles, p. 239, 252, 4) and reappeared in the Peloponnese, where from Naupaktos he prevented the despot Constantine from taking the town of Patras (Phrantzes, p. 150, 3). At the end of 1431 he again destroyed the walls of the Isthmus of Corinth, besieged Thebes in the summer of 1435 and conquered it in a few days (cf. Phrantzes, p. 157, 12 and 159, 17). At this time the Byzantine historian Georgios Phrantzes made his acquaintance in Thebes (p. 160, 3 97). In the beginning of Nov. 1443, Turakhān Beg commanded one of the Ottoman corps in the battle against John Hunyadi. His peculiar conduct in the battle of Issád (cf. Atthaman, Chron., ed. Giese, p. 58, transal. p. 90) was held to be responsible for the defeat (cf. Kata, xiii. 253: Turakhān; Chalcocodyles, p. 315) and he was sent in custody to the state prison of Bedrewi Çarşı at Ṭozāt. Nothing is recorded of the next ten years of his life. In the early days of October 1453, Sultan Muḥammad II sent Turakhān with his two sons Ahmad and ʿOmar with a large force to the Peloponnese, where he again took the outer defences of the Isthmus, invaded Arcadia, plundering and burning, and ravaged and burned the whole Gulf of Messene passing via Ithóme (i.e. Messene). When the difficulties of communication made it necessary to divide his army, his son Ahmad was captured in the pass of Derenaziki between Myrcane and Corinth by the brother-in-law of Mattheus Azanès, the despot Demetrius of Sparta (cf. Phrantzes, p. 235 and W. Miller, The Latin in the Levant, London 1908, p. 426), but was liberated in December 1454 by his brother ʿOmar (ibid., p. 383, 15 97). In October 1455 Turakhān appeared with his sons in Adrianople (Phrantzes, p. 385, 1 97). He died in the middle of 1456, probably at a great age (Phrantzes, p. 386, 7). His official residence as governor was at Larisa in Thessaly (Turkish: Vehşeh-ı Fanar; q.v.), the lands of which he held as a fief. There he built a mosque and numerous other buildings for charitable purposes; even a Christian church, in Tirnovo (Greek Tyrnavos) not far from Larisa, which is still standing, was built by him. His tomb, a chapel-like türbe, is in Larisa on the north-east edge of the town. The cemetery around it with a monastery has now disappeared. Turakhān Beg had two sons, Ahmad and ʿOmar, who accompanied his father on his campaigns. ʿOmar, who appears as Ottoman warden of the marches in the Peloponnese, while his brother Ahmad succeeded his father in Thessaly, was left in 1456 by Muḥammad II in the Peloponnese with an army (Phrantzes, p. 388, 6197); in 1452 and 1456 captured the country round Naupaktos and in 1457 after an initial reverse inflicted a defeat on the Venetians (Phrantzes, p. 425, 2); a fuller account of ʿOmar, ʿAkāqē (Phrantzes always writes ʿAkāqē, is given by Chalcocodyles, cf. the Index s.v. Omorēs). On the other life of the two brothers, of whom Ahmad, like his father, had made the pilgrimage,
not much is known. Omar seems to have been the more active of the two. In 1477 he fought
on the Isoro against the Venetians (cf. J. von
Hammer, G. O. R., ii. 351), next year defeated the
Albanians (ibid., ii. 157), and was still alive in
1484, as his will dated Muḥarram 889 (February
1484), shows (cf. E. G. Pharmacides, op. cit.,
p. 287—303 or 307—310). Omar Beg had two
sons, one of whom, called Haṣān Beg, is known
from his will written in Shawwāl 397 (May 1531; cf.
Pharmacides, p. 310 seq.), while the other, Idrīs
Beg, made a name in his day as a poet and ex-
tcellent translator of Hāfīz's Shāhāna w Sīraha
and Ladih w-Maqīnā into Turkish (cf. Seht, Tashkirt,
p. 36 seq.). The family of Turkanān-oghlu, which
was established around Larisa and owned extensive
estates until quite modern times, later played no
important part in history. A certain Fakhr Pasha,
recorded as a late descendant of Turkanān Beg,
by his exertions as governor of Rum-eli made his
name hated; he was beheaded in the court of the
Serai in Stambohl at the age of 70 in March
1643 (cf. J. von Hammer, G. O. R., p. 322 from Naṅγu,
in 1842 saw "at the chief mosque of Larisa a
biography of Turkanān-Beg preserved there" (cf.
Fragmente aus dem Orient, 1877, p. 351 seq.)
but this seems to have since disappeared (like the
MS. biography of the Ereucos-oghlu [q.v.]
mentioned by Bejournj, Tableau du commerce de
la Grèce, i. 117). The genealogical table on p. 877
gives a conspectus of the descendants of Paça
Yigıt Beg, the real founder of this Ottoman noble
family.

East, London 1858, vol. 1.; cf. the German
transl. by F. G. Buck, Stuttgart and Tubingen
1839, i. 226 seq., from an Arabic biography
of T. and his family preserved in the public library
at Tyrnacos in Thessaly. (F. BADEKIN)

Turān (or Tabarān), the old name of a
district in Balūchestān.

According to Tabari, i. 890, the kings of Turān
and of Makhūn (Makrūn) submitted to the Sasanian
Ardašir (224—241). The Parkinson inscription only
mentions the Makrūn-ghāz. Hosh ended, Parkinson
p. 38, thinks that these princes at first owned the
suzerainty of the Sāskas and their submission to
Ardašir was the result of the conquest of Sabastān
(=Satan) by this monarch.

Balūchir does not mention al-Turān. According
to one of his sources, Ḥosaynî [q.v.] appointed
Ṣeht b. Aslam to Makrūn and "all (that) frontier",
Ispāhān, p. 171, and Ibn Hawkal, p. 226, among
the inhabited places in Turān mention Moḩānī (?),
Kūshkān, Sūra (Shura) and Kuṣhtar (or Kuṣhtar).
Bibliotheca Isippiana, p. 322, says that Turān is a valley
with a fortified town (ṣaḥrā) also called al-Turān
and in its centre is a fortress (baṣm) commanded
by an ignorant Baytān. Ibn Hawkal, p. 232—233,
maintains Kuṭār separately from the ṣaḥrā of the
same name. Kuṭār was the town (commercial ?)
of Turān possessing a district and several towns.
A certain Mughir (or Muṭṭən b. Ḍahmān) had seized
Kuṭār and only recognised the direct authority
of the Aḥṣafid caliph.

The statements in Idris, i. 166, 177, confuse
the situation, for he gives the name al-Tubārān to
the station in Makrūn which Ibn Khurṣidībhīlī,
p. 55, calls al-Tubārān [ten farakhah S. E. of Fakhrāj],
on the river which is now called Sardas and flows

into the sea near Gwatūr, but then associates
Kūshkān and Kuṭār (towns in the district of
Kūshk) with this Ṭabārān. On the other hand,
he places Turān 4 days' journey from Kuṭār, in
the direction of Masmāl, i.e., to the north. At the
site of Kuṭār [q.v.] is known (85 miles S. of Kalāt,
at a height of 2,200 feet; cf. the article Baha'dīrān);
Ṭabārān (the town) must be located at Kalāt.
The town of Kuṭār, six farakhahs (more accurately 5
marghal from Kuṭār), is outside of Turān and
The state of Kuṭār, is the capital of the district of the Turān
is a ford of the river, at the site of Kuṭār, the road to the north
is a height of 314 feet above sea level.

The position of Kuṭār, the residence of the
already mentioned Muṭṭ̣ən b. Ḍahmān (chief of Turān
according to Ispāhān, or of Kuṭār, according
to Ibn Hawkal), is unknown. Marmar, op. cit., p. 109,
275—276, connects Kūshkān with Kuṭār (cf.
Baha'dīrān, p. 432) and seeks it at Kalāt. In this case,
Kūshkān = the ṣaḥrā of al-Turān. The land between
Kūshkān and Kuṭār, inhabited by Badshahs and
possessing vines, bore the name of its chief Ayīl
(or Ulū)?

Ṭabārān, iii. 557, reckons Ṭabārān (the ṣaḥrā of
which is Kuṭār and which has several ṣaḥarī̄
among the Timūrids of Mard). He also mentions
a ṣaḥrā of Turān in Māzān and a village of
Ṭabārān belonging to Harāz.

The Arabs write Turān with Ṭ, which may
represent some local assimilation of ṭ. In principle
there is nothing to object to in the connection of
Turān with Turān but it would be unwise to go
beyond stating the similarity of the names. The
connection is still weaker if we connect Turān with
Ṭabārān and Tabarān.

Bibliography: Tousmeh, Zur. hist.
Topp. Persien I. 56, thinks the name Turān
may come from the Iranian term Turān, which
means "enemy, non-Iranian countries"; Marmar,
Baha'dīrān, p. 31—33, 187, 190; Le Strange, The
Lands of the Eastern Caliphate, p. 332; Hsenig,
Völkerchroniken in Iran, Mitt. d. Anntk. Geol.
Wien, xxxvii., 1916, p. 200, seeks the real Turān
not in Turkestan but in Turān of Kuṭār (inhabited
by the ancestors of the Baha'dīrī of our
day). (V. MARMAR)

Turān, an Iranian term applied to the
country to the north-east of Iran. The
form of the name is not earlier than the Middle
Persian period. The suffix -ša is used to form
both patronymics (Paštāna) and the names of
countries (Gēlān, Dailamān) (cf. Grundr. d. Iran.
Fah., i, ii, p. 176; Solmaxan, ibid., i, p. 280
expresses doubts as to whether Ṭar is from the
geografic plural -šan).

Three questions are raised by the name Turān: 1. its origin, 2. its later acceptance, which identifies
Turān with the "land of the Turān", 3. its modern
geographical, linguistic and political applications.

The Turān. In the Iranian sphere, the element
Ṭar of Turān has analogies in the Avestan Turān
(Tur). In the parts preserved of the Avesta, we
have 1. Turān, the father of two pious individuals,
who bear the Iranian names of Arāyāshān and
Thrītān but of whom nothing more is known (Yaqūt,
113—123), 2. the people called Turān or Turān,
probably nomads (Yaqūt, xvii, 55: "aus-aspā "having
swift steeds") [The adjective from Turān, with
euphony, is Māzān].
The Tûrans are several times represented as enemies of the Iranians and of the true religion. (cf. Yaghî, xvili. 55 where they pursue Ashî waqfîl). A subdivision (I) of the Tûrans is called Dûn (Yaghî, xvili. 55—56), which may be connected with the Sanskrit dûnant "demon". A particularly hateful figure is that of the "Tûryan brigand" Fûranas (= Afûnasbi), whose fruitless attempts to seize the royal power (aravâna) are related at length in Yaghî, xix. 56—64. But the same Yaghî, xix. 93, admits that the aravâna had once been in the possession of Fûranas, when he played the part of defender of Iran against the tyrant Zainig. The hostility to Fûranas might therefore have political roots.

Quite a number of passages reveal that there were pious people among the Tûra. The family of the Tûryan Frûnna is particularly praised in a very early passage in the Gâthas (Yâna, xvi. 12). The passage in Yaghî, xiii. 143 is very well known: "we sacrifice to the frûnasbi of the pious men and the pious women of the Aryan (Iranian), Tûra, Sainînya, Sînînya and Dâhîna lands." An indirect indication of the Tûra is in Yaghî, xvi. 57, where the descendents of Yâvasaka, lieutenant of Fûranas (Shâh-šmûn), ed. Vuillers, i. 248, 264: Wêsa), are located at the pass of Xvêlîh-sûka, situated "very high" in Kânsa (= Bûkhârâ; cf. Marqart, Kommen, p. 196; in Chinese: Kâng = Samarqand). On the other hand, the name of the canton Tur, which the Armenian translator of Ptolemys mentions in Kfhûrîm (ed. Soukry, § 34; cf. below), is very significant.

Several hypotheses have been put forward regarding the ethnic character of the Tûra. Geiger, Ostv. Kultur, p. 194, thought that this term referred to all the peoples of the steppes without distinction of race ("eine Kollektivbezeichnung... der keine ethnographische Trennung bedeutet, sondern die Steppenvolker der Ebenen vom Kaspiischen bis zu den सर und darüber hinaus umfasst""). Geiger thought it possible that there were Tûra elements among the Tûra ("Überreste einer altrussischen Urbewahrung")! It should however be evident from Geigers attempt (p. 198) to find the Hunns among the Tûra is now rejected (huma, *son, descendant*; Bartholomae, Alter. Wörterb., col. 1831).

The term dûn (cf. above) may also have a non-ethnic significance and mean the non-Mazdaean Tûra ("demon") [Christensen (1928) has revived Geigers thesis; he supposes that Tûra was "originally the designation of the nomad peoples, whether they were of Iranian race or not"). On the other hand, Blochet, in his article "Le nom des Turks dans l'Avesta" supports the popular etymology Tûra = Turk and seeks to explain the names of the Tûryan Dûn, Kara Abyana and Vara Abyana, by the Turkish words hara "black" and gür (?) "clever": "the name Turk, or at least the root from which it comes [sic!], was in existence at a quite long before the sixth century". In this connection it may be recalled that whatever may be the etymology of the name Turk (cf. òrk-örük, "force, power"; F. W. K. Müller, Ugarita, ii. 101: òrkömen, "family"); Kashghar, l. 308), the name Tûra is rapidly explained in Iranian as "courageous", "brave"; cf. òrî in Persian and in Kurdish and the significant allusion of Firdawsi to the character of Tûr, son of Farûnî. It is true that the etymology of Kara and Vara is still obscure and that, ac-
other in the east, apanages in conformity with the political divisions of the period (Šēhēnian i). The west was thus identified with Rūm (Byzantine empire) and the east with the Turks, neighbours of the Persians since the defeat of the Hephthalites under Khosrow I (ca. 557).

The ancient legend of the :tripartition of the world among the sons of Tharaštana symbolized the relationship of the ancient peoples of whom they were the eponyms. In the time of Firdawsi, the legend was totally deprived of ethnical foundation and the contradictions had to be concealed by playing upon words. In the Šēhēnān, Faradīn gives his sons the name of Salm, Tūr and Īrād only after subjecting them to a test to reveal their characters. The eldest, who has escaped the danger without scathe (išāmat) receives the lands in the west (Khos-ōn-e-čāvar) with the title Xwar-khān. To the dashing second son (Tīr-e ūrovānis) is given Tūrān and he becomes Tūrān-khān, or Šīl-i Īrād, "lord of the Turks and the Chinese" (Türk wa-CN); cf. ed. Vullers, reissue of Faradīn, verses 400 and 295). The youngest, as brave as he is wise, receives inān and the plain of the heroes (or perhaps the king of the Khāns; cf. ibid., verses 296, 300 and 321) with the title tūr-khān. In the Arabic writers (cf. Tabari, i. 236) the name of the eldest son still has the form Tārakān or Sairima. But as the Pahlavi alphabet does not distinguish r and l, Firdawsi (as well as the Muqarnās al-Tawārīkh) preferred the variant Salm, which lent itself to a play on the Arabic root s-l-m [Modi's attempt: Azatū Pardā, Bombay, 1905, p. 244, and loc. cit. "Revue d'Or. Christien", 1925, xxv, p. 431, to connect Salim directly with Rome (aRīm, cf. Armen. kRom) is wild in every respect]. That the connection of Salim with the west is still very slight is evident from the fact that the two brothers Salm and Tūr fight east of the Caspian Sea (Thāˈlibī makes the scene of war to Aghāshīḏānja and hold there jointly a vast stronghold Alkhān-dī (Dīmastānān, on the Cape of Qanān-khâl; on which see Barthold, K. ištār-i vr̩os̲n̲ašān-n-i Turānšāh, St. Petersburg, 1914, p. 33). The name of the Alkhān (ancestors of the Ossetes and descendants of the Saqaromites = Sinairima) in these regions can relate only to a period about the first century B.C., when the Iranians still ruled around the Caspian (Marquart, Komanon, p. 108).

The name Tūr (Firdawsi and Muqarnās al-Tawārīkh) appears in the Dīmartih, xlii. 13 as Tīr and this form predominates in the Arabic sources: Ibn Khurāndihī, p. 115: Tūdā or Tīr; Dinawarī, p. 11 (the sons of Nīrībār: Irād, Salm and Tūr); Tabarī, i. 245; Fīrūzštī, p. 12; Māsūmitti, Murādjī, ii. 116; Brīst, al-Aṣrāf al-bābīya, p. 102; Thaˈlibī, ed. Zotenberg, p. 41 (Tūr, Tūr). In any case the form Tūr chosen by Firdawsi to explain Tūrān as the apanage of the bearer of this name differs from the forms found in the Pahlavi and Arabic sources. According to Marquart, Beiträge, Z.D.M.G., 1895, p. 662-7, Tūr < Tavārīkh (from Tūr); according to Christianen, Tūr is from Tūr + či = "of Turyan origin".

Tūrān as a geographical term. The term Tūrān, formed from the name of the people Tūr, which is derived from that of its eponym Tūr/Tūr, and ultimately applied to the country of the Turks, ought to be found in the Sassanian Kān-wūn-šān, the source used by the Arab historians and by Firdawsi. It is true that the Bundāstik, xii. 15, 39, etc. uses only the term Turkustān [while Salmūn, "land of Salm"; ibid. xx. 12, there designates the country from which the Turugs come], but we find Tūrān in the Dīmartih and in the fragments from Tūrān (F. W. K. Müller, ii. 87).

For Firdawsi, Tūrān, land of the Turks and of the Chinese, is separated from Iran by the Oxus (Šēhēnān, ed. Vullers, reissue of Faradīn, verses 295, 309, 322, 456, 459, 542, 792, reissue of Nawādīr verses 131; ed. Mohb., v. 680, reissue of Bahram Gūr). On the other hand in the account of the defeat of Afrikaštāh, the beginning of his domains seems to be extended to "Kībštāt", Marquart, Komanon, p. 110, from the manuscripts, enunciates this name to Kočča (Kībšt) and identifies it with the encampment of the Karšah [q.v. 5] faraḵhs beyond Tārā (q.v.); cf. Ibn Khurāndihī, p. 24: Ksīr-e bān. In the same way the capital of Afrikaštāh, Kang-dū, is located by Firdawsi somewhere near China, without any connection with the country of Kang (bākhāstāt) (ed. Vullers, verse 1351; cf. Bartholomew, col. 437; Marquart, Komanon, p. 109). These details may record the early stages in the western movements of the Turks. As to the Chinese, subjects of the kings of Tūrān, Firdawsi may have substituted their name for that of the real Avar people Sinairima, already assimilated to the Chinese in the Bundāstik (Darmesteter, Le Zend Avesta, ii. 554).

The Muslim writers, Arabic, Persian and Turkish, have not been logical in the use of the term Tūrān. But since for the Arab geographers, the land of the Turks began only to the east of the Sir Darya and did not include Transoxiana (cf. Barthold, Turkestân, I. M. Mem. Ser., p. 64), it seems that there was a tendency to identify Tūrān with Transoxiana, i.e. with the lands between the Amīl-Darya and the Sir Darya. According to Kharīmī, Mumtāz al-Ultim, p. 114, the Persians call the land beside the Oxus, Marz-i Tūrān. For Ya区政府, i. 822, Tūrān is the country of Ma warz al-Nahr (Transoxiana); after the tripartition of the world by Afriðūn, the Turks called their land Tūrān after their king Tūdā (Ya区政府 also mentions a village of Tūrān near Harrān). Very curious is the archaistic reference in Dīmarshī, Cosmographie (ca. 1250), ed. St. Petersburg, p. 114, according to which the Sayyān (Sir-Darya) forms the frontier between Transoxiana, i.e. the land of the Hayatiya called Tūrān (= Tūrān) and the land of Turkestān which is called Farghāna (on Haipal = Transoxiana, cf. also Erānšahr, p. 307). Much more vague is the use in the term the Mumtāz al-Al-Qur (sixth century) where the Volga is called Nahr-Tūrān and the summer camps of the old kings of Tūrān (the former Khūn of Kīpčak; Marquart, Komanon, p. 135) are located at Arīk-tagh (?), identified by Quatremère and Marquart with the Ural Mountains.

In the Zafar-nāma (sixth century), Tūrān is only used for poetical comparisons (i. 34, 624: "the heroes of Tūrān in Iran"). Abu l-Qādis (seventh century) sometimes uses it as a mythological term (ed. Deems, p. 2, 129, 149), sometimes identifies it with western Siberia (p. 177), sometimes seems vaguely to regard the lands of Muhammad Kharīmī as situated between Iran and Tūrān (Iran birān Tūrān varā; p. 96).

The term Tūrān became known in Europe from Herbelot's Bibliothèque Orientale, Paris 1697,
p. 63, where we are told that Afrasiyab, a Turk by birth but a descendant of Thir, son of Faridun, was king of all the country which lies beyond the river Oxus... to the east and north; this country used to be called Turan but it has since received the name of Turkestan." This last term is already found in the maps of Orellius and Mercator in the xvth century (Oberhammer). The term Turan became naturalised in Europe only in the sixteenth century. Its vague character has earned it a certain degree of popularity as applied to ideas where accuracy of definition is out of the question.

Turanian languages. The inventor of this term seems to have been the historian Bunsen (1842) who applied it to all the languages of Asia, the Near East, and Europe, which are neither Indo-European nor Semitic. The real popularisation of the term was by Max Müller, The Languages of the Scat of War in the East, with a Survey of Three Families of Languages, Semite, Arian and Turanian, London 1855, who includes in this group (for he avoids the term "family") of agglutinative languages not only Finno-Ugrian and Altaic but also Siamese, Tibetan, Malay, etc. Lenormant, La Magie chez les Chaldéens et les origines ascendantes, Paris 1874, extended the term to include Samerian. J. Oppert, in Les Peuples et la Langue des Medes, Paris 1889, wrongly taking the language of the second column of the Achaemenian inscriptions (the Neo-Elamite) for Median concluded that the Medes were "Turanian," Turanian became a regular dumping ground for all languages awaiting classification. But already Castrén (1842) pointed out the proper line of criticism. He insisted that all listed the quintuple group of "Ural-Altaic" languages with its branches, Finno-Ugrian, Samoyed, Turko-Tatar, Mongol and Tungus. Later researches have brought further restrictions by separating the first two of these from the last three, which form the Altaic group. G. Ramstedt, the founder of the comparative gram-
ment... of Solomon the Magnificent, Cambridge Mass. 1913, p. 51—56). The theory of the Isnin-Enofa excluded the possibility of preferring the Turkish elements to the other Muslim subjects of the empire. Even in the sixteenth century the word Türk had in the Ottoman empire the definite meaning of “peasant, rustic, yokel” (cf. the popular proverb). In this connection the poem by Mehmed Emin Bey, written during the war with Greece in 1897, marks the date of the complete change of meaning of the word: 

Ben bir Türk-îm, dinsim ilâ-udur: “I am a Turk, my religion and my race are exalted.”

Several factors have determined the development of the “Turkist” movement, sometimes called Türkanism.

4. The formation in the sixteenth century of numerous national movements (Greek, German, Italian, Slav, Armenian, Arab) several of which were directed against the Ottoman empire.

5. The reverses suffered by the Ottoman empire, which deprived it of its possessions in the Balkans, in Africa and finally in Asia also (Syria, Arabia, Mesopotamia, Mawjil). With each diminution of Ottoman territory the Turkish element of Anatolia gained in importance, not only as regards numerical proportion but also from the point of view of the only sure and stable basis upon which the state could be established.

6. The progress made by Turcology, which has drawn up an inventory of the Turkish peoples, established the affinity of their languages and thrown light upon the early history of the Turks. More direct has been the influence of the romantic work by L. Cahuz, *Introduction à l’histoire de l’Ottoman*, Paris 1896 (Turkish adaptation by Nefijsi ‘Aina). Among the earlier works which have exerted an influence on these lines Ziya Gök Alp mentions of Guigues, *Histoire générale des Turcs, des Mongols et des Huns*, Paris 1759—1758 and Lusley Davids, *Turkisch Grammar*, London 1832 and 1836. Here also we should mention the sketches of national movements published by the *E. M. M. M.* and the work of R. Hartmann tending to establish a bond of union among Turkish peoples.

7. The formation in Russia of a Muslim intelligentsia, primarily Turko-Tatar, and the impetus given to the Turkish press in Russia by the events of 1905. The emigrés from Russia, like ‘Ali Husain-zade (Rashid), Yusuf Ak-çura (Kazan) and Ahmad Agha-oghlu (Karnbğûh) have been the driving forces in the movement and even had to overcome considerable opposition emanating from the Turks of Turkey.

At the beginning of the twentieth century, three political theses were to the front in Turkey: Pan-Islamism, Ottomanism and Pan-Turkism. An open discussion of these was instituted (1902—1903) in the journal *Türk* published in Cairo. The Pan-Turkist point of view was championed by Yusuf Ak-çura-oghlu whose article *El cürsi ezâkât* (reprinted at Stambul in 1327 H.) has played an important part in the elaboration of the programme of the movement. Ak-çura criticised Ottomanism as tending to diminish the privileges of the Turks and contrary to Islam which recognises equal rights for all believers. On the other hand, Pan-Islamism would exacerbate the non-Muslims and meet resistance from certain European powers. The author then declared for Pan-Turkism, thinking it would overcome the greatest obstacle, represented by Russia, with the help of other governments (R. M. M., xxxii, p. 179-221).

In the same journal Türk, Ak-çura’s thesis was criticised by the liberal Ali Kemal, in the name of Ottomanism, and by Ahmed Ferid on grounds of possibility, for pan-Islamism seemed to him unrealisable and pan-Turkism so far non-existent.

In the early days of the revolution of July 1908, Ottomanism (= equal Ottoman citizenship for all ethnic elements) triumphed officially but before a year had passed the Committee of Union and Progress had reluctantly to recognise there were irreconcilable tendencies among the nations that composed the Ottoman empire. The Turkist movement was growing rapidly.

On Dec. 24, 1908, the Turkish Assembly (*Türk Derneği*) was founded at Stambul with the object of studying the situation and the activities (eşâkînee va-âfâl) of all Turkish peoples. In practice, the interest of this body has been confined to questions of language, which have been discussed in the reviews *Yieli-lüm*; *Gendi balemer* etc. In 1911 the Turkanî Society for the propagation of knowledge (*Türkan nezârî mîrâfet dijmâsîyi*) was created and in December appeared No. 1 of the periodical *Türk-yurâni* edited by Y. Ak-çura. On May 25, 1912, the *Türk selâhiîleri* (Turkish Heartths) were founded, circles for the study of Turkish culture.

At the same time the great theorist of Türkism, Ziya Gök Alp [q.v.], elected in 1910 a member of the Central Committee of Union and Progress, began his activity first at Saloniki (1909) and later at Stambul (1912). In a series of poetical works he aroused the memories dormant in the blood of the Turks and sang the Turkish ideal as personified in the mysterious land of Türkan: “The children of Oghuz-kûln will never forget this country which is called Türkan.” (‘Türükîl, 1911). This land is associated with Attila, Farsîti, Ulugh Beg, Ibn Sîni (the Turkish origins of the latter [q.v.] are not by any means proved), “The fatherland of the Turks is neither Turkey, nor Turkmenistan, their fatherland is the great eternal land of Türkan” (‘Türkiye, 1914).

The teaching of Ziya Gök Alp was summed up in the formula “Turkicise yourself (from the point of view of culture, sarî), Islamise yourself, modernise yourself (from the point of view of civilisation, modernise)”.

The systematic exposition of the theories of this writer will be found in *Türkîliyâniœ esâtîlî*, *The foundations of Türkism*, published at Angora in 1339 (1923) a year before the author’s death. In this work, the idea of Türkan is a little more practical. Ziya Gök Alp defines the nation as a group of individuals connected by language, religion, ethics and aesthetics. Türkan is not a mixture of Turks, Mongols, Tungus, Finns and Hungarians. “The word Türkan is a name covering the Turk tribes exclusively”. The reunion of the Turks can only be brought about by stages. The immediate ideal of Türkism is the cultural union of the Oghuz-Turks, i.e. the Turks of Turkey and the Turkomans of Kâharbadjûa, of Persia and Kâhîrûm. Their political union is not at present envisaged but one cannot foretell the future. On the other hand, if the Tatars, the Özeghs and the Kirghises succeed in creating civilisations of their own and in forming separate nations, they will retain their respective names, but in that case “Türkan” will serve as a common term
Turkan romanticism has had various repercussions in the purely literary field in the works of Ahmad Hikmat (Allah ola), Khalide Edib Khanım (Yezî Türkân, 1913), Ağa Günüz (Mustârem Kâmil, a drama produced in 1914 whose subject is a Turkish rising in the Caucasus), Müfide Ferîd Khanım (Ay Demir, a Turkish rising in Central Asia). On literary Turkanism during the War, cf. M. Hartmann, M.S.O.S., 1918, xi., p. 19–22.

During the War of 1914, the Young Turks (Committee of Union and Progress) governing the Ottoman empire officially professed Ottomanism, at least so far as Muslims were concerned, but in fact the deportations of Armenians in 1915 were realizing the programme of the Turkification of Turkey.

Expansion towards the East. The war of 1914 had drawn a curtain between the Turks of Turkey and their kinmen. The Russian revolution of 1917 entirely modified the situation. By the clause added at the last minute to the treaty of Brest-Litovsk, Turkey obtained the return to the frontier of 1877 in Transcaucasia (surrender by Russia of Batum, Kars and Ardahan). The refusal of the Turks of Adharbajdân to resist the Ottomans put an end to the Transcaucasian confederation (April 22, 1918), which was replaced by three independent republics (Adharbajdân, Georgia and Armenia). Under the command of Emuer Pâshâ’s brother, the Turks advanced as far as Petrovsk on the Caspian Sea but the armistice of Modros (Oct. 30, 1918) forced them to turn back. The English then occupied and later withdrew from Transcaucasia. While in the capital, occupied by the Allies, Dûmûd Ferîd Pâshâ’s government in extremis was making a last attempt to unfold a programme of Ottomanism, the nationalist government was formed in Asia Minor (summer of 1919) and by energetic measures was able to retain the ground gained by the Young Turks at Brest-Litovsk. The republic of Armenia was conquered (Peace of Alexandropol of Dec. 3, 1920). Georgia declared its neutrality and submitted to the ultimatum (of Feb. 23, 1921) which demanded the evacuation of Artvin and Ardahan. On March 16, 1921, the Turkish-Soviet treaty was signed at Moscow and on Oct. 13 confirmed at Kars, with the participation of the three Caucasian republics (now Soviets). Turkey withdrew her claim to Batum but, what was not in the Brest-Litovsk treaty, received the district of Iğdır on the Araxes (which Persia had ceded to Russia in 1828) and thus enabled her territory to be contiguous to that of Nakhichewan, which had been created as a dependency of the Soviet republic of Adharbajdân.

The government of Angora thus secured considerable gains in Transcaucasia, but publicly disowned Emuer Pâshâ’s achievements, who had at first allied himself with the Soviet government but finally raised the standard of revolt in Turkestan where he dreamed of founding a Turkish empire. He fell in a skirmish in eastern Bukhûr on Aug. 4, 1923 (“as a martyr to Türkism” as his colleague Dr. Nâzim said at the trial of the Young Turks in August 1926); cf. Castagnè, Les derniers combats, Paris 1927.

Cultural Movement. The old leaders of the Turkanian movement had early rallied to the government of Angora. (The poet Mehmed Emin and Aş-ûrâ Oğlu arrived at Angora in April 1921). From April 13, 1924 the Turkish Hearths (Türk ogâhları) resumed their activity in Angora under the leadership of Hamdullah Subbû. Their first k碾alsı meht at Angora on March 28, 1926. In 1928 Yûsuf Aş-ûrâ produced at Stambul the annual Türk yill (The Turkish Year) with summaries of the doings of Turks abroad. As a result of the Russian revolution of 1917 a new wave of emigration swept over Turkey. The supporters of the old nationalist governments overthrown by the Soviets established the review Yezî Keskâyi (1924) which was succeeded in March 1929 by the Odûl Yûrû “Land of Fire” (= Adharbajdân). These organs of Turkish solidarity have not however linked up with the local Turkish press.

As regards the Turks in what was the Russian empire, since the revolution of 1917, they have realized and even gone beyond their old programme of establishing their own civilisation and autonomy. But alongside of this natural evolution, the Turks of the U. R. S. S. have actively and passively taken part in all the phases of the Soviet revolution. For the moment (1930) is impossible to separate the results of the particular and general factors and to say what point the tendencies of all the peoples of Turkish origin are converging.

The communications and discussions at the first Turcological congress at Bûklû from Feb. 26 to March 6, 1926 (131 delegates, Soviet and foreign, including two from Turkey) were of great interest (see the shorthand reports published in Russian, Bûklû 1926, and Menzel’s detailed analysis in Der islam, 1918). The decision of the congress regarding the optional adoption of the Roman alphabet (compulsory since 1928) had a great influence on the introduction of the new alphabet into Turkey (1928) (cf. H. Duda, Die neue Latein-schrift in d. Türkii, O.L.Z., June 1929, col. 444–453; E. Rossâ, Il nuovo alfabeto, Oriento Moderno, Jan. 1929, p. 23–48).

It is difficult to foretell the future of the Pan-Turkish movement. The cultural attraction of Angora, this great centre of Turkism, is legitimate and inevitable. But Angora is now a lay capital entirely free from the Islamic prestige of the old Stambul. The intensity of its influence will therefore depend primarily on the worth of the Turkish culture (barth) which will be developed there. Even the bringing of all Turks “descended from Oghus” under one culture according to ziya Gök Alp’s idea would not be easy, because, for example, the Persian Turks, the immediate neighbours of Turkey, are very much under the influence of Persian culture, the persistence of which is a moral fact. As to the political union of the Turkish peoples, account must be taken of the very different conditions under which they live. Their lands are very scattered. They are separated by the Caspian Sea and the desert. In Transcaucasia the corridor between Georgia and Armenia on the one side and Persia on the other is very narrow and is of no importance, unless a complete reversal of the situation in Transcaucasia and in Persia should take place simultaneously, which is quite beyond the programme of Turkism pure and simple.

TURANSHAH. A. AYUB AL-MAQRUZ A.-ZAM SHAMS AL-DINWAFAH AYUB A. AL-MAQRUZ A.-ZAM SHAMS AL-DINWAFAH AYUB A.

He was born at the beginning of Rajab 569 (February 1174); two years before, the death of the last Fāṭimid ʿAḍīl [i.e., the previous Saladin] had formally made Saladin lord of Egypt; the relationship of vassal and overlord between him and the Zanjīd Atʾālīh Nūr al-Dīn Mahmūd had now become unstable and threatened to end in war; King Amalric of Jerusalem, with whom Saladin had been fighting, was still unassisted; the Crusaders of Kerak and Shawbak [i.e., the Crusaders of Aragon] were harassing the roads to Egypt. That Saladin should choose such a time for the conquest of Yemen is remarkable and is not completely explained by the religious grounds which induced him to wage this war, namely the expulsion of the Khāridjī Mahdī [i.e., the Mahdī] from the lands of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾmin and of the ʿAbd al-Muʾm
the name al-Mansûr, founded the dynasty of the Rasûlid, which ruled the land for over two centuries as a native Yemen dynasty, after the foreign rule of the Ayyubids had prevailed for only half a century.

(R. Struthmann)

**Turban, the headdress of males in the Muslim east, consisting of a cap with a length of cloth wound round it. The name turban is found in this form in European languages only (English turban, turban; French turban, turban; German Turban; Italian, Spanish and Portuguese, turbanate; Dutch tulband; Rumanian tulipan; all going back to older forms with o: toli/tihab, tuli-pan, tolopan, tourban, tourbanate, turbanate) and is usually traced to the Persian dulband, from which is also said to be derived the word tulip (cf. Meyer-Lübke, Romanisches etymologisches Wörterbuch, Heidelberg 1911, p. 682, where also is cited from the Krima de Langue Romane, iii., 54 the Spaniard's name for the turban (tubul, tubulan). It should be remembered however that the word dulband is by no means so widely disseminated in the east as one would have expected from the general use of the word turban in Europe, but is limited to the Persian (and to a smaller extent Turkish) speaking area and even there is not the only name in use. The commonest word in Arabic is ƛumâma, which properly means only the cloth wound round the cap and then comes to be used for the whole headdress, and in Turkish ƛâhâ is the usual name for the turban. Besides these however, there are a large number of other names for what we loosely call turban and for its parts in different Muslim countries; these are given in a preliminary list at the end of the article.

The origin of this form of headdress ought probably to be sought in the ancient east; a turban-like cap seems to be found represented on certain Achaemenid and Egyptian monuments (cf. Krippel, Geschichte der babylonischen und assyrischen Kleidung, p. 40; Josef von Karabacek, Abendländische Künstler zu Konstantinopel, Denkm. Ak. Wien, lxii., 1878, p. 87 sq. and von Hammer, G. O. R., vii. 268 und Staatverfassung, p. 441). In Arabia the pre-Muslim Beduins are said to have worn turbans, and it has been supposed that the high cap and the cloth wound round it the true Arab element of the turban (Jacob, Altertumliches Beduinenleben, p. 44. 237).

In Islam in course of time the turban has developed a threefold significance, a national for the Arabs, a religious for the Muslims and a professional for civic professions (later divided into religious and administrative offices ƛawâfî d'inâm wa-d'ârâiyâ) in contrast to the military.

Many details about the Prophet's turban have been handed down by tradition but most of these hadiths bear obvious traces of a late date. They therefore prove nothing for the time of the Prophet but only show what later ages wanted to believe. To the latter the turban, as succinctly expressed in a hadith, signified "dignity for the believer and strength for the Arab", wañâfî li-μuслиm wa

'izî H. 'l-'Arab and the Prophet to them is the owner of the turban par excellence (sâhîh al-îmân). The makers of turbans in Turkey (dulûndâ'yân) have actually chosen the Prophet as their patron saint, for he is said to have traded in turbans in Syria before his call and to have exported them from Mecca to Bojîr (Ewliyyî, i. 590). The only reliable hadith is negative: the muhîm is not allowed to wear the turban, nor hamîn, sâwînh, etc. This hadith is also found in Bûkhârî in the Sab al-îmân (Lîbîz, bbt 13) contrasted with the following, mostly weak, hadiths. According to one, for example, Adam is said to have worn a turban which Gabriel wound round his head on his expulsions from Paradise; previously he wore a crown (tâdî). The next was Alexander Dhu 'l-Karnân who wore a turban to conceal his horns. A much quoted hadith runs "turbans are the crowns of the Arabs" (al-îmân/t多方 tâbîn al-'Arab), which is variously explained to mean, either that turbans are as rare among the Turks as crowns among other peoples for most Beduins only wear caps (kâ'âm) or no headdress at all, or that the Arabs wear turbans as the Persians, so that the Persian has a similar hadith runs "wear turbans and thus be different from earlier peoples" (.Raw卒 kâ'âm hâlhab). Still more numerous are the hadiths which describe the turban as a badge of Muslims to distinguish them from the unbelievers; turbans are a mark of Islam (al-îmân is mín al-Îlm), the turban divides the believers from the unbelievers (al-îmâná gâyûsîna baal al-kâfîr wa 'lmâna wa baal al-Mu'minîn wa 'lmâna al-muhrûkin); the distinction between us and the unbelievers is the turban (farj mân bâ'înuma wa-bail al-muhrûkin al-'imân), and the prophecy: my community will never decay so long as they wear turbans over their caps (fâxin ummat 'ala 'l-farj, mân bâ'înu 'l-'imân), and on the day of judgment a man will receive light for every winding of the turban (katwûrâ) round his head or round his cap. Thus "to put on the turban" means "to adopt Islam". Nevertheless the stage was never reached where it was a religious duty (farj) to wear the turban; it is however recommended (mustâfâh, summa, muwâdî) and a general recommendation runs: "wear turbans and increase your nobility" (Raw卒 hâlhab hâlma).

Especially at the ƛâlît and on going to the mosque or tomb is the wearing of the turban recommended and it is said: two rakas (or one rak's, or the ƛâlît) with a turban are better than seventy without; for it is not proper to appear before one's king with head uncovered. Or: God and the angels bless him who wears a turban on Fridays. In great heat and after the prayer however, it is permitted to take off the turban, but not during the prayer itself, on the other hand the want of a turban is no reason for abandoning oneself from prayer. At other times also — in great heat or at home or while washing — the turban may be removed, and as a rule the Arabs always wore the turban "until the ascension of the Pleiadum", i.e. until the beginning of the great heat. Even in later times the turban played an important rôle in the spreading of Islam, e.g. in the Sudan (cf. A. Bras, in Isl., x. 22, 27, 30; M.S. O.S. Ac., vi. 191 sq.). It has not always been the custom in Islam for
none but Muslims to wear turbans. The later regulations for dress demand, it is true, that only believers may wear turbans while unbelievers are only to wear a cap (ṭupāninwā). But in earlier times unbelievers were only to wear turbans of another colour or with some distinguishing mark. Rulers who were not generally well disposed to members of other faiths were always distinguished by strict regulations about dress; but with a change of attitude the observation of the prescriptions became slacker until it again became necessary to enforce them more strictly. In later days appeal was frequently made to an alleged dress regulation by 'Omar I, which is however probably a later invention and was probably transferred from 'Omar II to 'Omar I. The latter is said to have been the first to forbid Christians to wear the turban or dress resembling that of the Muslim (cf. now Tritton, Islam and the protected religions, J.R.A.S., 1927, p. 479—484). Further laws about dress are attributed to Hārūn al-Rashīd, like 'Omar II, is said to have issued a general order forbidding Christians to wear the same dress as Muslims. Mutawakkil is said to have prescribed yellow turbans for the unbelievers, including the turbans if they wore any, and the Fātimid Ǧāḥīm black because this was the colour of the hated Ǧābdūs. At one time Christians were forbidden to wear red, at another any one who wore white was to be punished by death. In Egypt and Syria in the eighth century A.D. Christians wore blue or yellow and the Sāmir red and they might also wear silk, turbans, and neck-veil (harīr, 'ināma, ṣādalan) of these colours (Kalkashandi, Ṣuhb al-Asbāb, xii. 364).

Turkey has had a whole series of dress regulations of its own: the earliest was enforced by 'Alī al-Dīn Paša (d. 732 = 1331) in the reign of Orkhan (cf. above, p. 477). He introduced a cone-shaped cap of white felt but only for officials in the Sultan's service; other subjects apparently had freedom of choice in their dress. In the reign of Mehmed the Conqueror (Fatih), further laws about rank, titles and dress of the officials were issued. Under Sulaimān the Legislator, ranks and professions were carefully graded as described in the Shami 'Ilimān al-Ālī Orkhan of Lūghān b. Saiyid Ḥusayn about 1580 (v. Hammer, G. O. E., iii. 17; Karabacak, p. 4). Sulaimān also regulated the use of the turban, hitherto apparently quite arbitrary, and issued regulations about the trade of turban-makers, varābmin (v. Hammer, Staatsverfassung, i. 443). Unbelievers were given red, yellow and black, while white was restricted to the Ottomans. About 1683 in the reign of Mūtād IV, only the Stambul Turks were permitted turbans, the Arabs in Egypt various colours, the people of Barbary, white with gold. Jews and Christians in the cast in those days wore blue (Voyage d'Henri Vernet en Orient, ed. M. Gupi, Fesquet, Paris 1839—1840) and according to Niebuhr, Kriezbeschreibung nach Arabien und den von der westlichen Welt nicht erreichenden Ländern (Copenhagen 1774), Christians wore a blue stripe on their caps so that the tax-collector could at once readily recognise them.

In other countries also the colour of the turban was not at all uniform and for every colour authority was given from alleged hadiths of the life of the Prophet, which of course are all weak. A pious Muslim like Kattān deduces from the contradictory description of the shape and colours of the Prophet's turban that he allowed himself considerable liberty and sometimes wore the turban without the cap and sometimes the cap without the turban, and sometimes both together; in the house or when visiting the sick he put on both, but never when addressing the community, when he wished to make an impression on the people.

The commonest colour for the turban is white. The Prophet is said to have been fond of this colour and it is considered the colour of Paradise. There is not actually a hadith telling us that the Prophet's turban was white, but probably only because white was the normal colour. The angels who helped the believers at Badr are said to have worn white turbans.

If now the following references speak of turbans of other colours, they are not in direct contradiction with white, for the colours in question are connected with the events and have therefore a special reason. For example another tradition says that to Badr the angels wore yellow turbans with the object of encouraging the fighting Muslims. According to another story, only Gabriel had a yellow turban of light, the other angels white, and others again reconcile the various statements about the angels at Badr by ascribing to some white, to others green, black, red etc. turbans. The Prophet is said to have at first liked the colour yellow but later found it too light.

The Prophet is said to have worn a black cloak and a black turban on entering Mecca and at the address at the gate of the Ka'ba, also on other occasions at addresses from the minbar, on the day of Hudaybiya and during his illness. In black there is said to be a subtle allusion to sovereignty (al-dān) and besides black is the foundation of all colours. The Ǧābdūs claimed that the black turban of the Prophet worn at the entry to Mecca had been handed down to them, and in a tenderacious hadith in which Gabriel prophesies the coming of the Ǧābdūs, he of course wears a black turban. Turbans of black silk (ṣuhāz) are said to have been at first permitted but later forbidden by the Prophet; the so-called 'arbaibīyā turbans are black (the derivation of the word is uncertain, according to Suyūṭī from ʿr-ḥā, to burn) and the Prophet is said to have worn them on his campaigns. Many great men in Islam are also said to have worn black turbans, such as Hassan al-Basri, Ibn al-Zahab, Mu'āwiyah etc. and Suyūṭī wrote a whole book on black dress (Thalādī al-Fawā'id fi Liht al-Ṣawād). Later writers often claim the black turban as the special badge of the ǧāthib and the ǧawām.

The Prophet is said to have at first liked to wear blue but then forbade it because the unbelievers wore it. On behalf of red, it is urged that the angels at Ubayd (or also at Ḥunain) wore red turbans. According to others, Gabriel wore red at Badr and on one occasion appeared to ʿAḥāsa in a red turban. The so-called ʿirfāya turban which the Prophet wore is also said to have been red. Sometimes also striped material has been used as turban cloth, e.g. yellow and red or green and red (Fesquet).

In the history of religion the green turban is important; as the well-known badge of the descendants of Muḥammad. Tradition is unanimous that the Prophet never wore a green turban, and there is no support for the colour green in law or tradition. But green is the colour of Paradise and it is also said to have been the Prophet's
favourite colour and some say that the angels at Ḥusnain (or also at Badr) had green turbans. The green turban as a badge of the sharifs is however of much later origin: the 'Abbasid al-Ma'mūn in Ramadhān 201 is said to have clothed the eighth Shī'ī Imām 'Alī al-Riḍā in green, when he designated him his successor; the latter died before he could succeed, the 'Abbasids went back to black and there were even persecutions to compel the 'Alids to wear black (cf. Ibn 'Abdūn, K. al-Wasāyir, ed. Mārk, p. 395 a.v.). They seem however for a period at least to have worn a piece of green cloth in the turban as a special badge (ṣaffāṣa) and to have been fond of wearing green, especially in times of liberty of conscience. In 773 A.H. the Mamlīk Sulṭān Qādir Shadūr ordered that the turban cloths (ḍaffūṭ ṣaffā'ī l-bashār) of the 'Alids should be green and from 1004-1005 A.H. the whole turban became green by order of the Ottoman governor of Egypt al-Sayyid Muḥammad al-Shārīf. This fashion spread from Egypt to other Muslim countries, at first regarded as a late innovation and sometimes disputed, but has now become generally approved. It is now regarded as a law that no non-'Alīd should wear the green turban nor strictly anyone who is only connected with the Prophet on the mother's side but this last point is frequently disregarded. A short essay has recently appeared on the green turban in the Baghdād monthly al-Murğūdī, ii. 6 (July 1927) Turākh Aṯwār al-Amīlīm, p. 229-232; cf. also al-Kaḥfūra Sāfūr Al Muḥammad by al-Sayyid Ḥibat al-Din al-Shahrūstānī, 1. 4 (March 1926), p. 106-108.

Not only the colour but other āṭāb of the turban are regulated by religion: 1. When should a boy be first given a turban? When his beard begins to grow, when he reaches maturity or at the age of say 7 to 10 years. One should go by the practice of the country; but in any case it shows shamelessness to wear a turban before one's beard begins to grow. 2. How should a turban be wound? Here again the answer is given by stories of how the Prophet wound his. It should be wound standing (trousers on the other hand are put on sitting), with the right hand, twisted to the right around the head and not simply laid upon it and in doing this, one should act according to the sunna, as regards pulling under the chin (tāḏīn) the loose end (tāḏāba) and the size of the turban. As in putting on any other garment, one should utter a badūlah while the āḥamal is only used for new articles of clothing. A new turban should if possible be put on for the first time on a Friday. It should be carefully done before a looking-glass but one should not spend too much time over it. People of position may have their turban wound by two servants. There are countless ways in which a turban may be wound; 66 are mentioned but these are not all. 3. The question whether gold and silver ornaments may be worn in the turban is usually answered in the negative. In the course of the development of the headdress, it was the women in particular who adorned their turban-like headdress in this way. Silk on the other hand is allowed with certain restrictions. 4. The turban has acquired considerable religious significance as a symbol of investiture, since there is no crown or coronation proper as symbols of sovereignty in the Muslim east. The prototype is again an act of Muḥammad; he is said to have put a turban on 'Alī at the pond of Ḥummān and again when in Ramadhān of the year 10 he appointed him governor of the Yemen; he is next said to have wound the turban on every governor in order to teach him fine manners (laẓizmu) and to give him dignity. Following this example, the caliphs, the successors of the Prophet, put the turban on their viziers and later on sultāns. For example Kalbāṣandānī, ii. 280 a.v. describes the investiture of the Egyptian Mamlūk Sulṭān Al-Shārīf al-Rūmī in 742 by the Egyptian 'Abbasid caliph Ḥākim II. The caliph wears a black neck-veil (fārṣa) with white stripes (māḥma ḥā l-bāyāf) and placed on the head of the sultān a black turban ('imāna sawdā′) with white stripes round the edge (māḥma ḥā l-tarāf, l-bāyāf). Then we have a description of the investiture of Nūṣr Fardūd by Mutawakkil in 801-802 A.H. where we are told 'imāna sawdā′ māḥma, fārṣa l-bāyāf sawdā′ māḥma. The turban is also an essential feature of the robe of honour (bādū′) which Muslim rulers used to bestow upon their viziers and emirs (there is a poetical description of a turban, for example, in Mīḥyar al-Dalālī, d. 428 = 1037), Dūlān, i. 243; a description of s. robe of honour of the Mamlūk period: Kalbāṣandānī, iv. 32 a.v.) and this is the origin of the differences in the turbans of the different classes, which were such that the initiated could at once tell an individual's position by his turban. In general it may be said that the largest turbans belonged to the highest and most respected ranks, especially of the clerical profession, and the differences in size of the turbans are, according to some, more important than those of colour. With this is connected the endeavour to give oneself as large a turban as possible and against this religion has had to fight: a warning is uttered against wearing too large a turban as it is an extravagance — but not among learned men; on the contrary, they ought to be recognizable at once by some external feature to attain success in their labours. Hence the dress of the scholar is not a censurable innovation (bādū′), although earlier men of learning did not wear it. All other statements about the sizes of turbans, including definite lengths like seven or ten ells, are again defended from the example of the Prophet.

To mention a few isolated examples, we have in Kalbāṣandānī, iii. 280 a.v. the description of the turban of the 'Abbasid kalīf Muḥta'īr, who in 815 was for a period independent Sulṭān of Egypt; his turban was round, of pleasing appearance (ṣaffa), with a tall hanging behind (raʃraf) 1/3 × 1/3 ells in length. (The Christian patriarch also had a larger and more regular shaped turban than the other priests). The dress of the Sulṭān of Morocco is described for example in the published portion of the Masālik al-‘Aqūl of Ibn Fāḍl Allāh al-‘Omarī (Wasl Sīra bi wa l-‘Aṣlād, ed. Ḥasan Ḥusnī ‘Abd al-Wahābī, Tunis about 1923), p. 31, as not too large with ṭaḥmān and ʿudhāba; cf. Kalbāṣandānī, v. 203: with a long narrow turban. The head-dress of the Ottoman Sulṭān is frequently described. The turbans of dead Sulṭāns were kept in their tombs, e.g. in the mausoleums in Brussa (v. Hammer, Staatsverfasung, i. 446) and in other places we find them modelled on a stone on the tomb.

The turban, generally speaking, has, as we have said, become the badge of the civilian profes-
Turban-wearers (zāhīb al-imāmā : Ibn Shihbūs, Muḥallīn al-Rābi'a, p. 34 or rābī al-imāmā) is synonymous with civilian and there is the expression: he abandoned the turban of men of the law and assumed in its stead the cap (shirbān) and the dress of the emirs (Makrīzī-Bloch, p. 335, note). Kālkhāndi often uses al-māsināmān in this sense, e.g. zār. 114: al-mā sin arshūk al-nāri'īw al-dāmīa wa 'dīnānāyāt al-m. dīnān arshūk al-nāri'ī.(1) To distinguish among the various officers, the officials in Turkey under the old régime had different badges on their turbans, clusters of feathers and egrets (ṣāāqa and bāqqā) and soldiers wore on them decorations awarded for bravery (ṣarāa ṣābīl 'alā tāleem ; v. Hammer, Staatsverfassung, i. 446). Forquet says that secretaries and scholars wore the turban high with many windings, merchants and artisans loose and broad and slaves very small.

It is on this point that we find the differences in the various countries and especially between the east (Syria, the 'Iraq, Egypt, Persia) and the west (Spain, North Africa). This is noticeable in the description of western dress in Kālkhāndi and in the Maṣālib al-Ālīq, and vice versa in the accounts of eastern customs as given by the Moroccan Kātibi. In Muslim Spain very few turbans were worn at all; they were not worn in the dress-revol (jiynās; Maṣālib, p. 42; Kālkhāndi, v. 71) was rather worn instead; the loose end ('alāqā) and the chinstrap (ṣāāliq) are, originally at least, apparently western fashions. In 1596 we find the Turks being struck by the narrow turban of striped silk worn by the Persian ambassador. (G. O. K., iv. 275).

In modern times there has arisen a movement against the turban, which is more or less apparent through the whole of the east. Men are reluctant to wear a turban and the young people and the women laugh at it and say al-daf'a hadir min al-ba'tīf, “the board for washing the dead is better than wearing a turban.” But the conservative classes vigorously attack the bid'a implied in this and declare that it is never (lā tangūf al-turāb) is essential to the turban that is heresy and unbeliever. Associated with this we often find abandonment of the old Muslim style of hair-dressing with clean upper lip and a beard on the chin. These two things are essential features of emancipation and are regarded by many as signs of the Day of Judgement (ṣāāla al-sāb'ī). The modern development is attacked in a number of special treatises on the turban mentioned below, notably the last one by Kattāni, and according to them, any one who succeeds in restoring the turban to a country, acquires the merit of reviving a good tradition (ṣāāla al-sāb'ī). The modern development however can hardly be checked, and in Turkey a hundred years ago the turban was officially replaced by the fez, which in its turn had to give way in 1925 to the modern European hat (ṣāāla) (cf. Gailm, Modem, v. 630 sq.), just as in modern Persia the turban has been driven out by the kūlāh. The turban could also be used for many purposes other than that for which it was primarily intended. We give a few examples: in Sa'dī, Bīdxīn, p. 156, a man in the desert giving a dog dying from thirst water uses his turban (kūlāh) to get water out of the well, and his turban-clot (destāb or maṭār) as a rope. The turban was often worn as a pocket, also as a rope to tie up criminals or to tie firmly in the saddle or to strange. In 1623, the rebel Turkish 'alāmā chose the turban of Shīkh al-Ārṣ Shams al-Dīn as their standard (G. O. K., iv. 590). In Mamlūk coats of arms (ṣāāla means the cross or long hair, in European heraldry a turban is the sign of a Crusader (Fayyūm al-ṣāāla, Rawārī, Ḥafīr, p. 372). Some musulls of the genera turban and ča'numān are called turban; Persian turban = tūbān či nmān; Phārah's turban = ča'numān Phārahī; Turkish turban = laša či nmān; (Grande Encykl., and Turkish loans used to be known as “turban stock”, and “turban lotteries” the shares of the Banque Ottomane, which were of very uncertain value.

As a survey of the many names for the turban and its parts we give below an alphabetical list with short notes. The merit of first making a classification possible is due to Dozy, who in his Dictionnaire des Vétérans et in his Supplement has collected ample material, which should generally be consulted. There are also some recent works by Karabacek, Brunot and Kattāni. 'Abāqās is the end of the turban-cloth which usually hangs behind from the turban “between the shoulders”. When this form of turban first came into use cannot be ascertained exactly; it is of course said to have been worn by the Prophet and by the angels at Badr and according to Ibn Taimyā, Muhammad had a dream in this connection in which God pointed to the place between the shoulders; but many orthodox people regard this dream as anthropomorphism. The leaving of one end hanging down is recommended and a turban without tails and ṣāāliq is said to be kūlāh. On the position and length of the tail there are differences of opinion; the most usual is four fingers long between the shoulders. The Ǧūfā wear the tail on the left because the heart is on that side; wearing the tail behind the right ear was a privilege of the Ǧāfārī sultans; the legists of the Ǧīmāna and Kattāni have left two tails hanging down, one before and one behind, the so-called Baghdādī turban had two tails. 'Abāqās VIII means: “to wind the turban leaving a tail hanging”.

'Ābdī, a cord of brown camel hair, which the Ǧāfārī wear instead of a turban cloth wound two or three times round their head-dress, which is called 'Iṣāfā. 'Amīmā, turban, another form of 'imāmā. According to the dictionaries, the pronunciation with a is wrong but according to Brunot, p. 121, this is the pronunciation in Algiers. It is there an unwound turban, and is also given as a present to the wall of the woman one wishes to marry.

'Arābīya, perspiration-cap, a little cap of some light material which is worn below the turban-cap, to collect the perspiration, and which often peeps out below. The Turks say garbī ārabīyi. The name marīxa is also found; some write ārabīyya and would connect the word with the 'Irāq (Brunot, p. 120; Kattāni, p. 33). In everyday language the word is said to mean ordnance cap (yākūf cap) and in earlier times in Syria it was a sugarcone-shaped cap adorned with pearls worn by women. 'Arābā (Arabic form of ārabī) says that the Prophet once wore a black ārabā. Among the Mamlūkū, ārabā was the double camel-humplike erection on the tūbān worn by men and women (Karabacek, p. 74), and in modern times it is a square black silk kerchief worn by women (Lane, Manners and Customs, p. 50 sq.). Ārabā (another form of ārabā) seems to be
a headdress with pearls and gold worn in Morocco and Egypt.

Beadel is properly an iron helm but, according to Kattani, p. 3, may also mean a turban.

Bâgbât or Bâgîtâ or Bâgbât from Bâgîtâk etc. may mean turban and especially: the high head-dress worn by Mongol princesses and ladies of rank, adorned with gold and pearls.

Bhurnar, barukis was in earlier times not a cloak but a high cap and in this sense it is used in Lakhari, Liibta, hâb 13. Of later writers, for example, Kâlkapzâdi, v. 264 still uses it in this sense: the Sultan of Morocco wears a white burnus. The corresponding verb is tuburny.

Burtül [f], a high cap, with the pronunciation burtul a low skull-cap; in modern language it means the tâbi of a bishop. The Persian has por-

Danniyâ (perhaps from dannia) the "pot-hat" of the kâdiri called thirf in Turkish.

Dastîr (Pers.) turban-cloths: dastîr hamîzî, the "head-cloth," the coverings, divânî, white turbans, kõrdî or kordâ, dervishes etc.

Dâmthâ, the term: âmthâh. This word seems to be used only in Egyptian writers. In the dress of the Fâjimid caliph and officials an end of the turban cloth is left hanging down with or without a thâbîf (cf. Ibn al-Safrî, Kâmûna, ed. Baghât, introduction). According to Kâlkapzâdi, iv. 43, the Sûfî Shâfiikhs have a small dâmthâ at the left ear. According to Sûyytî, Hâmîn al-Mubâhâra, ii. 226, scholars and dâmthâ wear a šálîh with ends hanging down between the shoulders.

Dubûnd (Pers.) is perhaps the original of our word turban; cf. von Hammer, Statzverfassung, p. 442; G. O. R., iii. 17. Dubûnd-thâbûn are the turban-wearers, Turkish dubûnd aqshâch, the keeper of the sultan's turbans.

Fârûlîya, a square kherchief worn by women who make a kind of rakhîa with this and the fahâya and parshâb. Two or three pieces of cloth used to be used, which formed a kind of small turban but quite distinct from the kind worn by men. The turban proper is distinctly a man's head-dress but the women have occasionally had similar fashions. The vigour with which theologians attack women who wear turbans or otherwise ape men's dress, quoting hadîthi to support their strictures, shows only too clearly the existence of such practices (cf. Kattani, p. 42, 112 sq.).

Fis [q.v.], the red cap originally belonging to Fis in Morocco, which was replaced in Turkey in 1925 by the European hat (gâhpâ), while it is still commonly used in use in example in Egypt.

Fûtâm, turban, also a mouth-veil worn by the Parati and a kind of mazzele for camels and oxen.

Fûshân seems to have been a head-dress worn by women in Cairo and Syria, gilt below and decked with pieces of silver.

Ghîsîra in early times was a kind of fahâya for men, a red cloth with which they protected their head from the sun and the heat. In Muslim Spain it was the name of a similar cap for men, who usually wore not turbans but ghîsîra of red or green wool, and Jews a yellow one. It would therefore perhaps correspond to the cap often called ghîsîya in the Maghrib which was worn under the turban.

Gulîra (Pers. pronunciation of the Arabic kallutâ) a cap worn by women and children.

Himâyin [French], a high head-dress worn by women in France and Burgundy, a xvith century fashion influenced by the east, which still survived in Germany in the xixth century. The form changed and was sometimes shaped like a sugar loaf or dome, sometimes like a roller or a truncated cone; sometimes it had two peaks, like the double hemin worn by Queen Isabel of Portugal (Karabacek, p. 11, 67 sqq., 84; there it is explained from the Arabic hâmîn tinkling, from the metal pendants on it) which occurs once in the Arabian Nights).

Hûrût is a name for the cap of the turban; cf. Brunot, p. 105.

Hûrût is a high-head-dress worn by women in Morocco, triangular in shape, made of linen, three inches long and broad and a span high, with silk and silver, the whole looking something like a camel's hump; cf. Kattani, p. 112 sq.

Hûnûma, the most general Arabic word for the turban cloth and also for the whole turban; other forms are awmân, sermon, pl. serâmîm and immân. The verb is "swm-, II, V, VIII, X. Details and variations according to colour, profession, and thus the countries in which they are mentioned above. Among special kinds may be mentioned immân Wârîs (q.v.), immân Sûfi from Sûs in Morocco.

Immân is properly the style of form of winding the turban, then the turban itself, Kattani, p. 4: hûmân al-immân = hûmân al-šâmîm.

Išâba, turban-cloth like 'asîb, in modern times also a head-dress for women, as in the Arabian Nights: 'asîbî muharbâhâyi of women and an 'asîbî al-hâs. The 'asîbî sulâfîya under the Ayyûbids and Mamlûks in Egypt (Kâlkapzâdi, iv. 46; Sûyytî, i. 110) were the flags of the Sultan in the public processions (mânâbîhî), for the flags envelop the head of the lance like a turban (Kâlkapzâdi, ii. 128; cf. Kattani, p. 12 sq., 36).

Kâlamûma [q.v.], a high head-dress.

Kâlri or kâlîrîwî old in Turkey was a state turban which was worn in Stambul by the Grand Vizier, the High Admiral (Kuçumdan Paşa) and the chief eunuchs (Fisâr, Fatih) and in the provinces by the pashas of three tails; cf. v. Hammer, Statzverfassung, i. 440, 444; do., G. O. R., iii. 17; vii. 268; viii. 191.

Kâlî, plur. kâlîfûtâ, a high cap, another form of kallutâ.

Kâlîwîta, kâlîta, plur. kâlîwît, a cap. The word is perhaps connected with the French colotê, Pers. gûlû(5,6),(995,991) and perhaps even with the Latin calotântica, calotântica, calotântica; in Syriac, kalâwû is found with the meaning of tiara, mitre. This name was particularly common under the Turkish dynasties of Egypt; under the Ayyûbîs, the sultan, the emirs and the soldiers wore yellow kallûtâ without turban (zâmîm) with ghânâmîth hanging down behind (Kâlkapzâdi, iv. 39; Makriî, ii. 98). In the reign of Asârîf Shâhân the kâlîwîta with gold were introduced (kâlîwîta al-mârîbâh; Makriî, op. cit.); according to another source (Kâlkapzâdi, op. cit.), they were red with zâmîm; from the time of Ashraf Shâbân they were worn larger. The emir Vêlîbâghî al-'Omarî introduced a special form, the so-called kâtûtî yelâbûgûshîn which were large, but under Zâhir Barkî still larger kallûtâ ferêshî appeared (Makriî, op. cit.). In those days a set of robes of honour included a kâtûtî wârîsh (Kâlkapzâdi, iv. 52 sq.).

Kâlîba [q.v.].

Kâna, a red cloth, adorned with pearls, which the Egyptian women twisted round their earbâgh.
Kurugsi, pl. Kurugsi, popular pronunciation of küfısı, Kufisi, qufis, a small white or red cloth cap, around which the turban can be twisted.

Kobusbati in old Turkey was the round turban worn by viziers and other officials, who were no longer in active service and therefore did not wear the muslin body (v. Hammer, Statuta Farasung, l. 444). According to d'Ohsson, ii. 135, 6 Othman I is said to have worn a cap of a red material, which was called kufisi, körbusbat and was worn by the Tatars and the Caghatai.

Kufisi, pl. Kufisi, also mikšaro(a), was a cloth, which women and men wound on the head, like the 'ribbon and the Küfısı. Sometimes it also seems to mean a woman's veil of silk embroidered with gold, then again to be the same as milka (Kattani, p. 12, 106). From al-kını came the Spanish alquimal. Bukhārī has a faḥ al-Turkamana.

Kibba, properly a general word for garment, is a piece of flannel worn by learned men in North Africa, around the body and head. In earlier times every one wore it and called it baž, which was the name for a woman's veil (cf. Brunot).

Konqal, a cap worn by women in Algiers and Tunis.

Kufi, pl. Kufi, was in Egypt the name for the innermost cap of the turban, which could be kept on, even when sleeping, while the turban proper was taken off and put on a special turban stand, kusari al-imimua; the kufi thus corresponds in a way to the modern fayla and arafla. The Egyptian texts of the Arabic Nights have baž for kubāri. Kufi's arafl is a similar cap of blue Chinese silk. According to Kattani, ii. 105, there was a market called sīh al-akfarzīnîn in Cairo. Küfisiye = Chalil, Kufî, Syr. Koča, Heb. קָפִי is also said to have been a kind of cap or turban, but it also means the capital of a column.

Kufiye, popularly kefıye, pl. kemisfi, is in Arabic probably a loanword from the Italian (per)uza, Lat. vith century colofa, Span. (ti)cofa, Port. colofa, Fr. coife, Engl. coif, to which the Turkish usfayie is also said to be related. It is a rectangular piece of cloth worn by the Bedouins and their women in Egypt, Arabia, and the Irāk on their heads, of linen or silk in various colours, almost a yard square. The cloth is folded diagonally, the ends hang down or are tied below the chin and above it the Bedouins sometimes, and townsmen usually, wind a turban. This form, which was already known in Egypt in the Mamluk period and is mentioned in the Arabian Nights, has in modern times come into prominence again as part of dress of the Wahhabis.

Küfı is a head-dress worn by women, along with an 'ribbon. The word is perhaps a corruption of sarafıd, searafl, which is said to mean a Tatar cap.

Kụba, a Persian word, is applied in Turkish to the plumed head-dress worn by the princes of Moldavia and Wallachia and by the Aghas of the Janissaries (cf. v. Hammer, Statuta Farasung, l. 444).

Kutil is the Persian general word for the cap, which replaced the turban in Persia. In old Turkey it meant more particularly the sugar-loaf-shaped head-dress of the cooks, confectioners and woodcutters of the Serail, and also a white felt head-dress worn by the Janissaries = kele and one of red cloth worn by the kusandijes = kusarisa. Scull

Kushân is the Persian name for the Shāfr Persians corresponding to the Turkish hâlbâkân; cf. Babinger, Islam, xi. 811.

Kulito (cf. kalwinta) means in Persian a veil worn by women or a child's kap = yulnās.

Kumma, yemma, plur. Kumma is a little tight-fitting cap; cf. Abu 'l-Fadl, iv. 332, 5; Kattani, p. 40 sq.

Kurysa, kürsye, kurysa. The word seems to be a loanword in Arabic and Berber and to come from the Persian; it is found mainly in the Maghrib and Spain and was there applied to a man's head-dress of white wool or strips of wool which the Berbers wound round their heads like a turban cloth. But now it seems to mean a cloak; cf. Brunot.

Lişa (supply yulnawma) means a small tight-fitting (fayl) cap, but is probably not a proper name for it; cf. Kattani, p. 37, 40, 41.

Lība, lībāda, a small cap of brown or white felt (lihbi) which the common people in Egypt wear under the feryān. The very poor wear it alone, without feryān and turban.

Lithām, a mouth-veil for men (q.v.).

Mandī, mendi, a loanword from the Latin mantile, is applied to cloths generally, but may also mean the turban, especially in Turkish and Persian. It is found in this sense also in Arabic authors, like Thālabī and Maqriti, but they probably get it from the Persian.

Mita, means in Persia the turban, probably derived from mitur, which however means a veil.

Mīr'ān, a parallel form for arafla, perspiration-cap.

Mīghur, also pronounced mīkšur, the helmet, is a network of iron wire to protect the head in battle under the cap (yulanuma): the Prophet is said to have worn one at the entry into Mecca. Soldiers wore a turban around the helmet, not only when fighting, but also in times of peace (Fris, Das Herrwerden der Araber, p. 59). Thus the Turkish mīgır Murad IV, who was continually in the field, used to wind his turban cloth around his helmet (v. Hammer, Statuta Farasung, l. 443). Hence the phrase (the article to allay the turban) = to live in peace and security (Kattani, p. 4) while "the turban on the neck" (fi 'urši mendi or imimua) is a sign of submission.

Nawzā is the same as nihe, a head-cloth but the former is usually smaller. The mavi of women is also called kafūra.

Mikawara, mikawara, is a word for turban and mawzawar thus came to mean the same as maqamīna, i.e. theologian, man of learning, and in Muslim Spain, the officials and jurists, because these alone wore the turban there.

Mishscudi, mishscudi, mishscudi, mishscudi are rarer words for turban.

Musulvania, Arabic, but apparently only found in Turkish, a barrel- or cylindrical-shaped cap, which was worn with the turban cloth from the time of Soliman's dress edict, as the proper court and state head-dress. Soliman is said to have been the first sultan to wear himself the Turban (v. Hammer, Statuta Farasung, l. 447; Pernot, i. 4. M. turban: the musulcan was previously the military cap, the red top of which peeped out from the turban cloth. The conqueror (Feth) Mehemmed II is said to have worn his turban over a spiral lihbi, like the musulvan of scholars, and the turban of his son Fatih II, like his father's, resembled the type worn by learned men (Karabacek, p. 15).

*Mukā 'a*, a large turban worn by learned men of unvarying shape, but also the head-dress of Copt priests with a long narrow band. *Mukā 'a* = "half the head", is a small helmet or cap worn by steamin the Maghribi; the name is also found in Egypt. In Morocco the *parbāk* is also called *nisf al-'orū'a* because it covers half the head, tightly fitting; cf. Brunot.

*Parbāk*, the "suitable turban", was the name of the turban worn by the common people in the reign of Soliman; G. O. R., iii. 17, Petole, Pers. pronunciation of *barfulla*.

*Rahā* of women consists of the *fābiya, parbāk* and *arwādīya*; together they make a kind of woman's turban, but it is very different from that worn by men.

*Rusā* is a small turban for young people in Morocco (cf. Brunot).

*Sadī* is a green or black *fābiya;* cf. Kattāni, p. 106.

*Salim*, a special variety of the kind of turban called *Yarni*, called after Sulān Selim I, who is said to have preferred it, as did Selim II also; G. O. R., iii. 17; vili. 268.

*Shāb*, * arbitrāg* pl. *sharābaq*; *sharābaq*; probably from the Persian *sarē* but the latter is a woman's head-dress. In Syria we found *sorfōl* in Bas Hrnnes. The *sharābaq* was the head-dress of the emirs under the Mamluks in Egypt; according to Makritti, ii. 99, it resembled the *tūgī*, was three-cornered, worn without a turban, and one formed part of a set of robes of honour. It had a markedly military character and the *sharābaq* of the emirs is contrasted to the turban of the jurists (Makritti-Blochet, p. 353). In Cairo in those days, there was a special market for sellers of *sharābaq*; in which however in Makritti's time only robes of honour were sold, and in Damascus there was a madrasa called al-Mudrasa al-Mulkiyya al-Sharabābīyya. Under the Circassian Mamluks, the sharābaq fell into disuse (and was replaced by the hairīrt *terkīya*).

*Sarfī* also *sarī*, a bandage, is the usual Turkish name for the turban. *Sarfīl* = turban-wearer c. *sarī, hagī* = clerk with the turban, *parbāk* = turban-maker; *parbāk* = *sadī*, the sultan's turban-keeper. The first rigid regulation of the turban-makers dates from Soliman's time, when their shops were first opened, and regulations about the wearing of turbans were drawn up (v. Hammer, Staatsverfassung, l. 443).

*Shāhb* [q. v.], the turban-cloth, then the whole turban, a name used particularly in North Africa and Egypt. The Egyptian texts of the Arabian Nights have *shāhb* for *imāna*. Sometimes *shāhb* was particularly the white and blue striped turban of the Copts, while that of the Muslims was called *shābī*; the *shābī* bahabakī was particularly well-known. The *shāhb* *fābiya al-khulaf at the court of the Fātimids was the office of the turban-winder to the Fātimid caliph; Kalllaghāndi, iii. 484.

*Skīl*. The word has passed into the languages of Europe, "shiw", etc., and means the turban-cloth or turban, especially in Egypt, sometimes also kerchief worn by women c. in Arabia and North Africa.

*Skīl* is the Turkish word for the modern European hat, which was introduced into Turkey by law in 1925. Only clerics already wearing turbans (parbāk hagī) were allowed to retain their turbans. A number of publications appeared at the time on this question (Alamī, mē'eselat). *Skīl* from which we get the English word "sash", meant the turban-cloth in Egypt, Syria, Arabia and Persia. Under the Ayyubids the kājī and learned men wore turbans with large *shābāːa*, some let a tail (shābāːa) hang down between the shoulders or wore the neck-veil in addition (fālāsan; Kallakshand, iv. 42; cf. Makritti, ii. 98 and Sayyuti, ii. 226). The *shāb* however also meant a cap (= *shāhīya*) and formed part of a set of robes of honour; e. g. Kallakshand, iv. 52 sq.: *shāb* *rafī", *mawzūl bīhi fārāfū min ḫūr al-yafū. From 780 we also find the *shāh* as part of a woman's dress; it is the cloth embroidered with gold and pearls, thrown over the double *fālāsār*; cf. Karbacaque, p. 67 sq.

*Shāhīya* in Egypt was a cap, around which the turban-cloth was wound; it was of silk and might be trimmed with pearls and gold. On the other hand, however, it was the name given to the paper cap, put upon criminals, and also to iron helmet-like turbans. To put on the *shāhīya* = *adopt Islam*. In modern Morocco, it is a black cap for young people in the form of the *parbāk* also a head-dress in the form of a sugar-loaf, which the Đeļka dervishes wear, in Algiers a woman's cap (Brunot), in the oasis of Siwa it is pronounced *shāba*. *Shāhīya* seems originally to have been the turban-cloth of *shāh* muslin; cf. Z.D.M.G., xxii. 161.

*Shemī* was in Turkey in the reign of Soliman a carelessly wound turban-cloth, worn by the common people (G. O. R., iii. 17). In North Africa it is a cloth, still sometimes wound over the turban (*imāna*); cf. Brunot.

*Shinīr* = Span. sombrero is the name given in Morocco to the European hat, sometimes also called *fīrār*; cf. Brunot.

*Sudāra* is a skull-cap like the *fābiya* worn under the *miknu* and *yạh*. *Sūkā*, the name for the Turkish dervish cap; cf. Jacob, Bekrādyya, p. 40.

*Sudās, sudās* is a green *fābiya* worn by women, especially in winter time as a protection from cold.

*Tūgī* [q. v.], "Crown", also turban.

*Taḥnīk* (al-*imāna*) is a special adjustment, in which the turban-cloth is brought under the chin as a protection against heat and cold or its two ends tied under the chin. This form is found particularly in the Maghribi and those who use it defend it intolerantly and describe all other forms of the turban as innovation (bild'ā), as the dress of the devil or of the Copts, or as a survival of the turbans of the followers of Līf (Kattāni, p. 70). The opposite of *taḥnīk* is *tālātī* or *tīyā* (even letting the ends hang down is also wrong in contrast to it) while other rare synonyms for the *taḥnīk* are *talākʰ* or *tīkʰ*. From the Maghribi, the Fātimids seem to have brought the *taḥnīk* to Egypt, and the *nsūkʰ* musulmaanīt̃ were the chief emirs (munuca) at the Fātimid court who held the highest offices in the personal service of the Fātimid caliph (Kallakshand, iii. 484; Iml al-Sairifī, Kīnān, ed. Bahgat, Introduction). Farther east also the *taḥnīk* was occasionally found; for example even al-Ṣallīl is said to have recommended it. But it is not *sunna* with the Shāhīya, while, for example, Iml Kâyim recommends it.

*Tūlāsān* [q. v.], neck-veil of the kājī.
Tub, a green *taqilin*, a name of very rare occurrence.

*Taşk*, a word, originally Persian, and in Persia was the turban or a high cap. French *fouque* and Spanish *falsa* are perhaps connected with it. The name seems to be first found in Mamluk Egypt in the sixteenth century, when it was a round cap with flat top in various colours, worn without the turban-cloth. Under Nasir Faradji it was extended in height from 1/8 to 1/4 zils and swollen out like a cupola (perhaps under the influence of old Egyptian models) and called the Circassian *fábiya*. Egyptian women are said to have imitated this for erotic or other reasons and this form then made its way to the east. The *fábiya* was also accepted with paper and in a Fāqimid cap, similar in shape, of the sixteenth century have been found fragments of papyrus with writing upon them. These headaddresses were quilted and had a rippled appearance. Other forms were evolved from them, such as the bottle, barrell-cone and the so-called unicorn (Maqrizi, ii. 104; Karabacek, p. 73; cf. *fartur*). In modern times *fábiya* is used as a synonym for *aračiya*; cf. Brunot; Kattâni, p. 98.

*Tali*, parallel form for *taša*. *

*Tarabih*, probably, like *tarabih*, going back to the Persian *sarab*, only found in Arabic from the eighteenth century, was a tight-fitting cap, in Egypt usually of red wool, with a tassel of black or blue silk. Around this cap, men of rank wore the turban-cloth and under it the small *farrar* or *aračiya*. In Syria and in the *Iraň* the *tarabih* has sometimes a peak, which hangs behind or at the side and is kept in position by a piece of cloth. In Egypt this cap used to be called *gaštah* (in Morocco we still find both terms in use side by side); in Spain *cartaga*. *Tarabih* is a name given in Morocco to a young man, who does not yet wear the turban (Brunot). The *tarabih* there is also imported from Europe; the *shabihya* on the other hand is made in the country itself. *

*Takš* is also a kind of *taša*.

*Taš* is a kind of *taša*.

*Tarar*, *tarar* (a), *fanara*, *fanura*, in Arabic a loanword of unknown origin (the Latin *turris*, tower-shaped, has been compared), a high cap which round the turban can be wound. *Tarar* seems to be found as early as a papyrus of the fifth century A.D. (Karabacek, p. 67), and in the fourth century A.D. it was a popular head-dress in Kairawân (Karabacek, p. 65). The *tarar* at a later date seems to have been a head-dress of the Bedouins (they wore by it, *wa-kabbi* *tarar*; there is a saying, *he fell at the first blow like the *tarar* of a Bedouin*) and to have gone out of fashion with the denizens of the towns. A *tarar* of paper used to be put on the heads of criminals and prisoners captured from the enemy, and it was worn also by the "prince of the New Year" (*waqar*) at a popular festival in Cairo, which was prohibited in the reign of Barsâk. The pointed *tarar* was in the sixteenth century, with or without the turban, the head-dress of the common people in Egypt and the countries adjoining it (Karabacek, p. 68); at a later date dervishes in Egypt wore sugar-loaf-shaped *tarar* with trimmings (*lana*, *Manars* etc.); in Turkey it was worn by the volunteer corps of the Delis, in Algiers by the Dey’s *çawashes*, in Morocco by the negro soldiery. The name is found wherever Arabic is spoken and *tarar* in Arabic seems to correspond to *çaf* in Turkish and Persian. About 780 A.H. the double *tarar* with two peaks like a camel’s hump, and the *çaf* above them, appears as a lady’s fashion in Egypt and was taken to Europe (Karabacek, p. 71) and in modern times we find among the Druze and Maronites of Lebanon a *tarur* plated with gold or covered with horn like the horn of a unicorn. In Fès, Algiers, and Tunis also, the name is given to certain forms of women’s head-dress (cf. Brunot, p. 119; Karabacek, p. 80).

*Ubrâf*, *ubhrâf*, a high cap common in the Maghrib, which could be made either quite simply or of valuable material. *Urf* was in old Turkey a large globe-or pad-shaped turban worn by learned men, corresponding to the Arabic Dimy³a and the Persian *bâlibi-shâfî*. Sultan Mehmed II was fond of wearing the *urf* embroidered with gold; cf. von Hammer, *Staatserfassung*, i. 444 sq.; do. G. O.R., vii. 268; viii. 191.

*Urça*, *urca*, *urça* is said to be a melon-shaped hat. *

*Ushâbi* also *ushâfiya*, from the Italian *schioppi* = Arabic *câbiya*, was a peaked cap embroidered with gold, which the officers of the Janissaries and some officers of the Serrâli like the Ballâsji wore, also called gašhâ. Sultan Mustafa Paşa, son of Orkhan, is said to have invented it; he is said to have introduced it out of affection for Djalal al-Din Rumi and even to have worn it. It came into general use in the reign of Murâd I and became a kind of ruler’s crown; cf. v. Hammer, *Staatserfassung*, i. 444 sq.; do. G. O.R., iii. 17.

*Yânfi*, *imnän* = *Yânfi* is an old name for the Turkish turban; it is said to have been originally invented by Joseph and to be called after him. Selim I and II wore these *Yânfi*, which were then called *Selims* after them; cf. v. Hammer, *Staatserfassung*, i. 442 sq.; do. G. O.R., iv. 17.

*Bibliography*: Arabic works dealing especially with the Turban:

TURFAN – TURFAN 893

Note 14 is the most detailed monograph on the Turfan and has been much used for the above article. Of other writings he mentions No. 1, 2, 3, 8, 10, 12, 13, but has himself only seen and used No. 8. In addition to No. 14 we have used No. 2 for some purposes.

European literature in addition to the works of Dörzi, Karabacek and Brunot cited above we may mention a few general works on costume: Rosenberg, Geschichte der Kleidung, 5 vols., plates with brief descriptions, pls. 297 on the Turfan; J. v. Falke, Kleidungsgeschichte der Kultusvölker; Albert Kretzschmer, Die Trachten der Völker, Katalog der Lipsius’schen Kostüm-bibliothek. – 15 forms of Turfan are illustrated by Fesquet, 1902, 44 different ones by Niebuhr, and no less than 286 are given by Michael Thalman, Elechna librorum or. loc., Vienna 1792, 23 vols. on Cod. turc., vii. Bologna (according to E. L., ii. 751); cf. Victor Rosen, Remarques sur les mus. orientaux de la Collection Marussi à Bologne (Atti della Reale Ac. dei Lincei, 281, 1893–1896), p. 182.

(W. BÖRKEMAN)

TURFAN, usually written Turfan, locally pronounced Turfan, a town in Chinese Turfan. The oasis, fertile although suffering from a scarcity of water, between the depression of Lukchun, which lies below the sea-level, and the ranges of the Thian-shan, has been of importance from ancient times not only for trade between China and the west but also politically; the settlements mentioned in ancient times and the early middle ages were however not on the site of the modern Turfan but west and east of it. In the second century B.C. the principality of Kuch was here; in the year 60 B.C. it was destroyed by the Chinese and eight small principalties took its place, including anterior Kuch in the region of Turfan; the capital of this was the little town called Kao-ho by the Chinese, the site of which is marked by the ruins about 4 miles west of Turfan called Yarkhoto by Klemens (Nachrichten über die von der Kaiserl. Akad. der Wiss. zu St. Petersburg im Jahre 1888 ausgeführte Expedition nach Turfan, St. Petersburg 1899, p. 44 ff.). Considerable importance was later attained by the Chinese settlement Kao-cang, called in Turki first Khōlo (Mahmut Kâshgharī, L. 103; Kâddil) later Kâr Kâddul, now the ruins of Idikut-shahrî, 20–25 miles east of Turfan. Immediately south of the modern Turfan lie the ruins called Oul Turfan by Klemens (op. cit., p. 28); according to S. Franke (Eine chinesische Tempelinschrift aus Idikutshahrî bei Turfan, Abh. österr. Akad. Wiss. Abt. für Abh. 1907, p. 35) these ruins mean date from ancient times and have been an unimportant place; but they occupy a rather larger area (3 square kilometres) than Idikut-shahrî.

Turfan is not mentioned in the Mongol period and not on the Chinese map of 1331 (E. Bretschneider, Medieval Researches from Eastern Asiatic Sources, vol. ii.). The only suggestion that there was perhaps a town of Turfan in ancient times also, is found in a Saka document found in Tan-Huang and published by Stem Konow (Oslo Etnografiske Muséums Skrifter: Publications of the India Institute, iii. 3. Oslo 1929, p. 137 and 148) where a town called Turfanja is mentioned. The first Chinese (in the Ming-shi) reference to Turfan (Chinese T’u-lia-fan) is in the year 1377; some foreign em-
Turfan — Turgai

basesses on the way to China were robbed at Turfan and a Chinese army was sent against the king of Turfan as a reprisal (Med. Rei., ii. 193). To a somewhat later date belongs the first Muslim account of Turfan; according to the Tarikh-i Ragdoll, Khalil Khodja, Khan of Moghulistan (c. 1380-1399), undertook a campaign against “Karā Khodja and Turfan, two very important towns on the frontiers of China”; the inhabitants were forced to adopt Islam and the two towns were henceforth regarded as within the territory of Islam (Tarikh-i Ragdoll, transl. Ross, p. 52). When the celebrated embassy of the Timurid Shāhrukh (q. v.) passed through the country in 823 (1420) the inhabitants were, however, for the most part still idolators; there was a large temple of idols there and a great statue of Buddha Sakyamuni (Šāktimuni) and many other idols, some old, some of recent erection (N. E., xiv., p. 310 and the original text of Ḥāfṣi-ibn-Abū [q.v.] in Barthold, al-Muṣaf-fūrīya, p. 27). The present inhabitants of Turfan (Turfanī) know that Uighurs used to live there, but these Uighurs are now considered to have been Muslims; all Buddhist relics are ascribed to the Kalmucks (Klementz, op. cit., p. 29) or to Kalmouks (see q. k.). Turfan suffered in those days from want of water even more than it does now. In the reign of Wais Khan (1178-1428) agriculture was conducted in a very primitive and laborious fashion; the Khān had a deep well dug and out of this he himself and his slaves drew water for their fields in earthen vessels (kīna) (Tarikh-i Ragdoll, p. 57). Conditions seem to have improved later; towards the end of the xvith century the land of Čaflī (the modern Karagāh) obtained its corn from Turfan (Zāp-xv., 251) quoted by M. Hartmann, Der islamische Orient, i. 502). The present underground irrigation canals are said not to have been made till the xvith century (Sir A. Stein, in Geogr. Journ., x. 1916, Sept., p. 47).

Under the princes claiming descent from Čaghaṭāi Khān in the modern Chinese Turkestan (xvith–xvith century) Turfan is frequently mentioned as the residence of various Khāns; at a later date it was, like the rest of the country, subjected first to the Kalmucks, then after the destruction of the Kalmuck empire in 1758 to the Chinese. In 1765 the town of Uč (west of Aq-ūs, q. v.), which had rebelled against the Chinese, was destroyed and its population completely wiped out; in order to restore the town, inhabitants were imported from other towns, especially from Turfan. Uč was henceforth known as Uč-Turfan or Us-Turfan; to distinguish the two, Turfan proper was called Old Turfan (Khomē Turfan). In the time of Yaqub Beg (1866-1877) Turfan was the frontier town of his dominions in the east; in 1876 it was visited by a famine and in 1877 occupied by the Chinese without resistance. Turfan now belongs to the territory of the “king” (wang) of Lānkun. The first European to visit Turfan was Dr. A. Regel (see below) in 1789. The modern fort of Turfan is said by Regel to have been built by Yaqub Beg; east of it is the Chinese fort, which, according to Gram-Grimaldo (Opisanie patrastyhovy v Zapadny Kital, i. St. Petersburg 1836, p. 275), was not built till 1886; but it is already mentioned by Regel. Still farther to the east, according to Regel, lay the ruins of the Turfan of the last centuries “with numerous fine tomb-mosques and a beautiful minaret”. The minaret and the medrese, to which it belongs, have been several times illustrated (Klementz, op. cit., p. 49; O. Donner, Ross i Centralasien 1889, Helsingfors 1901, p. 120; A. le Coq, Auf Hellsen Spuren in Otranttien, Leipzig 1926, pl. 2). The minaret was not, as has been asserted, a Christian holy tower, but was only built in 1760 by a Wang of Lānkun. These ruins are probably identical with the Old Turfan of Klementz, which in this case would belong to a later date than Franks (see above) and Grünwedel (“a terribly ruined old town of the Uighur period”) have assumed; Klementz also (op. cit., p. 38) seeks to identify the Tu-lo-fan of the Ming geographers with the present Old Turfan, which lies S.E. of the modern Chinese Turfan. The ruins of most of the buildings of the old town seem to have been destroyed between 1879 and 1898, but, as Oldenburg established in 1909, more has survived than one would suppose from Klementz’s description. The modern town is of some importance as a commercial centre; the highest estimate of the number of inhabitants is about 20,000.

TURGAI, the name of a river system and of a small town in the steppes of Central Asia. The main river Turgaí is formed of the Karun-saddl Turgai, which receives the small Turgai, and the Karun-Turgai, all flows into Lake Durukā; north of it runs the Sarf Turgai, which is called Ukun-tamdi in its upper course and receives from the west the Maitil-Turgai and the Sarf-bai Turgai. The Sarf Turgai flows into Lake Sarf-Kopa. In Turkish turbghi or turgæ means "little bird" (Radloff, Wörterbuch, iii. 1584, 1457); Kärn Turgai is a name of the stalling. The fortifications of Orenburg are called Turgai Kala.

The modern town of Turgan on the river of the same name was built in 1845 by Major Tomlin as a fortress and one of the centres of Russian power among the Kirgis (q.v.) under the name of the Orenburg fortress (Orenburgskoe Ukreplesienie). In 1855 the territory of the Orenburg Kirgis was divided into two provinces (oblasti), the Ural and the Turgai. When the Turgai province in 1868 was divided into districts (uveli), the fortress was made the capital of the district and called Turgai. As there was no suitable centre in the province, itself, the Turgai province was administrated from Orenburg. The governor lived there and in it was published from 1887 the official gazette, Turgatskaya Oblastnaya Vedomosti. Among the four capitals of districts in this province, the town of Turgai only takes the third place and has never been important; the number of inhabitants according to the census of 1897 was only 866, to that of 1911, 1,557. The southern part of the province with the town of Turgai is less suitable for agriculture and Russian
colonisation than the north, on account of the scarcity of fertile areas, although in the sixties about 1,300 hectares were cultivated on the river Turgai alone. From Turgai, trade routes lead northwards to Orsk and Kustanai, and southwards to Irgiz and Perovsk (now called Kizil-Orda).

Before Russian rule the present Turgai territory was inhabited only by nomads and hardly mentioned in political history. An exception is Nasawi's account (ed. Houdas, p. 9 sq.) of the campaign of the Khwārizm-shah [q.v.] Muhammad in the year 612 (1215–1216) against the Kipchaks and his encounter with the Mongols; cf. Barthold, Turkestān etc. = G. M. S., N. S. v., p. 370 sqq.; J. Marquart, "Östtürkische Dialektstudien", Berlin 1914, p. 128 sqq. where on p. 133 a later date (midsummer 1219) is assumed.

Turgai now belongs to the autonomous republic of Kazakhstān. Instead of the earlier division into provinces and districts, the area is now divided into administrative regions (obrugs); the town of Turgai now belongs to the area Aktyubinsk, the most southerly part of the former Turgai province to the area of Kizil-Orda.

(W. Baktold)

**TURKISTĀN or TURKESTAN**, a Persian word meaning "the land of the Turks". To the Persians of course only the southern frontier of the land of the Turks, the frontier against Iran, was of importance and this frontier naturally depended on political conditions. On their first appearance in Central Asia in the sixth century A. D., the Turks reached the Oxus (cf. Ämule-Daryā). In the ecclesiastical administration of the Sasanians therefore the "land of the Turks" began immediately north of the Oxus: according to the story given in Tabari (i. 455 sq.) the Oxus was settled by an arrow-shot of Umar as the frontier between the Turks and the "territory (Camālu) of the Persians". According to the Armenian Sebōn (seventh century A. D.) the Vehrat, i.e. the Oxus, rises in the land of Turkāstān (Histoire d'Hiraclius par l'Évêque Sébōn, transl. by Fr. Macler, Paris, 1904, p. 49; J. Marquart, Érainlahir, p. 48); in another passage in the same work (p. 43; Marquart, p. 73) Turκ'astān is associated with Delhistan i.e. Dehistan (in the neighbourhood of the Caspian Sea, north of the Atrek [q.v.]).

By the victories of the Arabs, the Turks were driven far back to the north; for the Arab geographers of the third and fourth (tenth) centuries, Turkistān therefore began, not immediately north of the Oxus, but only north of the area now called the "lands beyond the river:" Mā warṣaʾ al-Nahr [q.v.]. Turkistān, the land of the Turks, was then regarded as the regions north and east of Mā warṣaʾ al-Nahr. [The town of Kūsān in Farghāna [q.v.] north of the Sir-Daryā [q.v.] was "where the land of Turkistān begins" (Yāḥūk, ii. 227).] The towns of Džand and Shahrkand on the lower course of the same river were in Turkistān (op. cit., ii. 137; iii. 344); in Turkistān lay the town of Khōtān (op. cit., ii. 403). From this use of the name it has been held (especially by M. Hartmann, Chinesisch-Turkestān, Halle 1908, p. 4) that the name "Turkestān" was first applied by the Russian conquerors of Central Asia quite arbitrarily to the land of Mā warṣaʾ al-Nahr. As a matter of fact, the name Turkistān had long regained its earlier significance as a result of the Turkic conquests, perhaps less in literature than in everyday usage. To the people of Persia and Afghanistān the "Turks in Turkistān" were their immediate neighbours on the north; thus in a hagyie taken down in Shirāz in 1886 we are told "Two Turks came from Turkistān, brought me to Hindūstān" (Y. Žukovskiy, Obruch peresildage narovago turysta, St. Petersburg, 1902, p. 169 sqq.). Through the Oxov conquests of the xviith century a new Turkistān arose south of the Ämt-Daryā. The corresponding province of Afghanistān still bears the name of Turkistān; as the southern frontiers of this Turkistān some travellers (R. Burnes, A Peep in Turkistān, London, 1846, p. 57 sqq.) give the pass of Aḵ Rahat north of Bāmiyān [q.v.]; others (J. Wood, A Journey to the Source of the River Oxus; [q.v.], new edition, London 1872, p. 130) the pass of Hadjikak, a little farther south, where the watershed between the basins of the Helmand [q.v.] and the Ämti Daryā is; farther west, in the region between the Monghāb and the Åbol Mainamān, the frontier of Turkistān is given as the range of Band (or Tīrband)-i-Turkistān. The name Turkistān was introduced into the scientific terminology of the xviith century, not by the Russians but by the English, probably under the influence of the Persian and Afghan usage.

In literature, especially in travellers' records, a distinction has usually been made between Russian, Chinese and Afghan Turkestān, although the word Turkestān (or Turkistān) had an administrativusignificance only in Russia and Afghanistān. Sometimes instead of these we find the terms West and East Turkistān. The governor-generalship of Turkistān was founded in 1867 by the Russians with Tashkent [q.v.] as its capital. The frontiers of this governor-generalship were sometimes contracted, sometimes extended. From 1882 to 1898 the province of Semireyeyeh, at one time included in Turkistān, belonged to the governor-generalship of the Steppes with Omak as its capital. In 1898 Semireyeyeh and the Transcaspian province (Turcomania) were incorporated in Turkistān.

In 1886 Prof. I. Mushtetow attempted to give the name "Turkestān" a definite geographical significance, independent of administrative conditions. Under the influence of A. Petzchoh's book Umschau im russischen Turkistān nicht einer allgemeinen Schilderung der Turkistänschen Reiche, Leipzig 1877, he proposed to give the name Turkistān or the Turkistān basin to the lands between the central mountains of Central Asia and the basin of the Caspian Sea, the Iranian plateau and the sea of ice. Mushtetow had no doubt that the frontier between Russia and England in the not distant future would be established on the Hindū-Kush [q.v.]. He proposed to replace the term "Chinese Turkestān" by the Chinese Han-hai (interpreted by European scholars since Richthofen as the "dry sea"). Mushtetow deals only with geographical facts and hypotheses, without regarding the etymological significance of the words or any ethnographical considerations.

Mainly on ethnographical grounds the word Turkistān has gradually dropped out of use
in Soviet Russia. After the revolution, a "Turkestan republic" lasted a few years with the old capital Tagh-kent. In comparison with the earlier governorship, the area of this republic was much smaller; in the north isolated parts were attached to the Kirgiz republic [cf. Kirghiz]. After the principle of nationality had been finally carried through in 1924, the common name of the land had to give way to terms formed of the names of the various peoples like Uzbekistan, Turkmenistan and Tajikistan. Only a few, mainly economic questions, are still settled in Tagh-kent for all the lands in question; for Turkestan in such cases the expression Central Asia (Sredneeaziya Aseyi) is used.

Turkestan was also the name in use under the Ozbek for a town on the middle course of the Sir Darya. From the accounts of the Arab geographers it may be asserted that in the fourth (tenth) century the town of Shāhvar (in Le Strange, Lands of the Eastern Caliphate, 2nd ed., Cambridge 1905, p. 485; Shāhvār) must have stood there; unfortunately no trace of it has been found. In the sixth century and probably as early as the ninth, the later Turkestan was called Yast and is mentioned as late as the history of Timur (Zafar-Nāma, Ind. ed., ii. 9) as a village (jāran). The importance of the town increased from the 11th — first known in the Mongol period — of the saint Ahmad Yesevi [q. v.], regarded as the convert of the Turks to Islam (on his period see also Barthold, in Der islam, xiv. 112), and especially after the splendid tomb had been erected there by Timur. The saint was regarded as the patron of the land of the Turks and was called Hadrat-î Turkestan, which probably explains the new name of the town. At the time of the Russian conquest the circumference of the town was about 2 miles, the population about 5,500, and in 1908 it had risen to 15,000.

**TURKMEN-CAI** (better C-Tayf), a village in the district of Garman in the province of Adjarabaidzhan. Turkmancai, "the river of the Turkmans," is really the name of the stream on which the village stands; it comes down from the Çitak pass (between Turkmancai and Sarh). It is one of the northern tributaries of the river of Miyana (Shähā-ārzai) which flows into the Kkudun (cf. the article Safadun). The village of Turkmancai marks a stage on the great Tashkent-Krasnovoroshtka-Tirman-Khafran road. The distances are Taliris-Turkmancai 60 miles; Turkmancai-Zandjan c. 80 miles. Handullah in the Nuhat al-Kullih, G. M. S., xxii. 183, puts these distances at 16 and 25 farakhs respectively. He calls the village Turkmancand; the word baxna = village, only used in Adjarabaidzhan and unknown elsewhere in Persia, is certainly of ancient Iranian origin (cf. Sogdian, bagn, town; cf. Barthold, "Istoriya Kul'turno, Zhitni Turkestana, Leningrad 1927, p. 34); the word must have been brought into Adjarabaidzhan by Turkish invaders. Handullah also says that at one time the village was a town, the Iranian name of which, Dib Kharran (several variants), he gives.

Clavijo, ed. Srezewski (St. Petersburg 1881, p. 172 and 354), calls Türgman-çai Tunelar and Tunqlar (evidently a corruption of Türk-çai) and says that it is inhabited by Turkmans.

Turkmancai is known in history from the treaty signed there between Russia and Persia on Feb. 10/22, 1828. This diplomatic document consists of two parts. I. By virtue of the political treaty, which was to take the place of the treaty of 1813, Russia annexed the Khanates of Erevan and Nakhichevan and received from Persia a contribution of 5,000,000 tinaris = 20,000,000 roubles, but this was later reduced. 2. A special agreement fixed at 3/4 ad valorem the customs duties between the two countries and regulated the personal status of Russian subjects in criminal cases they were to be tried by Russian courts, civil cases affecting foreigners were dealt with by Russo-Persian tribunals with the participation of the Russian consular representatives etc. This particular agreement of 1828 is the historical origin of the Persian capitulations. By the most favoured nation clause, all the states of Europe in time secured similar rights. On its accession to power in 1817 the Russian government renounced sua sponte all the old political and judicial privileges in Persia and this renunciation was sealed by the Persian-Russian treaty of Feb. 28, 1921. Since 1918 Persia has shown a desire to abrogate capitulations generally, but not till May 10, 1927 did she address a circular note to this effect to the powers, several of whom, from May 10, 1925, have made new treaties on a basis of equality.

The frontiers of 1828 between Russia and Persia (Little Ararat-Caspian Sea) still remained unchanged even after 1921.

**Bibliography:** Turkmancai is mentioned by all the travellers who have gone from Tabriz to Karvin, cf. Hommaire de Heil, Voyages, Paris 1854-1866, iii. 33-34 (the village has 200 houses), and the atlas p. 111 (room where the treaty was signed); Brugsch, Reise, Leipzig 1862-1864, i. 181; Lycklama a Nijhoff, Voyages, ii. 83; H. Schmiidler, Reisen, Zeitschr. Geolll. Erdk., 1883, p. 333 (100 houses, altitude 5,385 feet).

**TURKMANS,** a Turkish people in Central Asia. The name has been in use since the fifth (tenth) century, first in the Persian plural form Turkmānān, by the Persian historians Gardīz [q. v.] (cf. also now the printed edition by Mub. Nazim, E. G. Brown Mem., vol. i., Berlin 1928) and Abn 'I-qafi Balhaqī [q. v.] in the same sense as the Turkish Oghuz, Arab. Gharis [q. v.]. The Oghus of course used to live in Mongolia, where they are mentioned as early as the Orkhon.
Inscriptions of the eighth century. These Oghuz are, so far as we know, only called Turks, not Turkomans. The Turkomans are mentioned only in the west, first (in the transcription T'o-kü-Mäng) in the Chinese Encyclopaedia of the viith century a.d.; T'ang-tien, chap. 195 (F. Hirth in S. B. Bury, Achar наук, ii. 1899, p. 263 sq.). According to T'ang-tien T'o-kü-Mäng was another name for the land of Suk-tak i.e. the lower course of the Alans (see Allen and Wilson) which in the beginning of our era was stretched as far east as the lower course of the Sī Darya (q.v.), which in the fourth (tenth) century was the main centre of the Oghuz.

In the Arabic geographical literature the Turkomans (al-Turkman or al-Turkmāniya) are only mentioned by al-Mukaddasi (or al-Maqrizi, B. G. A., iii. 274 sq.) in the description of a number of towns N.W. and N.E. of Arbaqjāb or Sairān on the situation of which cannot be exactly defined. By the fifth (xiiith) century the origin of the word Turkomand had already been forgotten; the popular (Persian) etymology Türk mánamid "like Turks" is found as early as Maqmūd Kāshghāri (iii. 307). From his time onwards we often find "Turks and Turkomans" opposed to one another. The language and particularly the type of the Turkomans was influenced by their migration to the west so that only a "similarity" was allowed to exist between them and the rest of the Turks. The Turkomans living in Central Asia at the present day are particularly easy to recognize by their long heads (dolichocephalic); this formation of skull is partly produced by artificial deformation in the cradle, but is also explained by intermixture with Iranian nomadic peoples of Central Asia. Maqmūd Kāshghāri (i. 80 and 393) calls the Khārāj (q.v.) Turkomans as well as the Oghuz.

On the wide dissemination of Turkomans in western Asia as a result of the political events of the xiiith century see gizat and suqshigs. As a result of the political importance of the Seljuk dynasty, we possess full notaries of their people, the Turkomans, than of all other Turkish peoples of the middle ages. Rashid al-Din (text in Tract. Vint, ed. Arif Oghli, vii. 32 sq.) for example gives the names of the individual "Ghūru tribes". In a linguistically older form (e.g. Saqluhr for Salur, Yaqhrfr for Yadsr) we find these names in Maqmūd Kāshghāri (i. 56 sq.). Of the 24 names given by Rashid al-Din, 21 agree with the lists in Maqmūd Kāshghāri. Three names (Yaqhrfr, Karši and Karšk) are found only in Rashid al-Din and one (Djarqulugh or Carsulugh) only in Maqmūd. The total number of tribes according to Rashid al-Din was 24 (the same number occurs in many Turkish and Turkomans also, according to Maqmūd 22); but the latter also knows (iii. 307) that the original number was 26, but two tribes were said to have separated in the pre-Islamic period from the rest and formed the people of the Khaḍar (q.v.).

The name Oghuz was not ousted by that of Turkomans till the Mongol period; in the xiiith (xiiith) century the word Ghūru is found even in official documents (text in Barthold, Turkistan, i. 28 sq.). On the place of abode of the separate tribes nothing is said either by Rashid al-Din or by Maqmūd Kāshghāri. In the historical references (e.g. Zaf, ix. 303; Nesswi, ed. Houdas, p. 391; G. M. S., xvi. 120 and 122, where Tāl should be read for Tāl) the Yaqhrfr or Yadfr are the earliest (end of the viiiith and beginning of the viiiith = xiiith century) to be associated with a definite region — east of Balkhān (q.v.), where the fortress of Tal, later the town of Durūn, now a mined site near the railway station of Boharden, once stood. According to Hamd Allah Kāsawī (G. M. S., xvi. 159 supra; there and in the transl. ii. 155, wrongly al-Tāl) there was much corn there; the Yafzīr seem therefore to have taken to agriculture. At a later date the Yafzīr are called Karatashī or Karadāshi; it was only towards the end of the xviith and beginning of the xivith century that they were driven out of Ardal (see Ardal, Teke) by the tribe of Teke.

Among the Turkomans who migrated into western Asia the ethnic Turkomans gradually disappeared and has survived only in a few districts. Ibn Bahjīqī (q.v.) still calls even the Ottomans Turkomans (Voyage, ii. 324). In the ninth (xvith) century Khabīl al-Zahrī (G. M. S., ii. 135) gives a list of the Turkomans tribes living in the empire of the Mamluks (q.v.) from Ghaζ̣a (q.v.) to Djībq Bāk (q.v.). (P. E. L. O, Eij. vii. s. v. xvi. 105). Of the tribes mentioned there only that of Dalghāqī (see Dalghāqī) attained any political importance. The only really important Turkomans states in western Asia were the empires of the dynasties of the Kār-Kūynal (q.v.) and the Aq-Kūynal (q.v.). The still celebrated Turkomans carpets are first mentioned in the west (Abū 'l-Fida, ed. Reinhold, p. 379, from Ibn Si'il). The carpets were made by women, mainly by girls.

The Turkomans were among the few Turkish peoples of Central Asia, who retained their old ethnic even after the Mongol period. But very few of the old tribal names survived; the names of the most important and largest tribes of the present day (the Teke, Göklen, Yomut, Ersari, Sarık etc.) are not mentioned before the Mongol period. As with other nomads or semi-nomads, new formations were produced by the activity of single individuals; thus a clan of the Sarık still calls himself Bajiri, after a leader who fell in 1651 (year of the hare) (Abū 'l-Ghāzī, ed. Desmaisons, p. 324 sq.). The most information about the Turkomans in the xvith and xivith centuries is given by Abū 'l-Ghāzī (q.v.), in his larger work and also in his history of the Turkomans. Şahqurra-i Turākbuma (not mentioned in the Encyclopædia), which so far is only accessible in a Russian translation (Ağhabād 1897).

As the Turkomans were unable to form a state of their own, they dwelt in various kingdoms (Persia, Khwarazm, Bukhara, and also in the xvith century Afgānīstān) but as a matter of fact, the Turkomans usually succeeded in practice in maintaining their independence against these kingdoms; they frequently inflicted disastrous defeats on armies sent against them. The separate tribes were also frequently at war with one another. In the xivith century the Teke tribe especially distinguished itself by its victories over other Turkomans tribes. It was only in poetic literature that the Turkomans people felt itself united; they all regarded Makhīm Kull of the tribe of Göklen, who flourished in the second half of the xvith and first half of the xivith century, as their common national poet (his father Dawlat Mamul was writing in 1075—1175) (Zaf, xvi. 146). Towards the end of the xivith century a section of the Turkomans migrated from Manglāh (q.v.) and went north-
The written literature of the Turkomans consists of lyric poems and epics, poetry of a religious and didactic nature as well as popular romances, which were recited among the Turkomans by haşşη [q.w.v.], i.e., wandering musicians. In form and subject, these poems differ very little from those popularised in Adharbādzān and in Anatolia by the şeğil's. They are written in the syllabic metre and in the quatrains called şerb añış [cf. köşma]. Among the Turkomans this word is used in the general sense of poem. The popular anonymous romances deal with the same subjects as those of Adharbādzān and Anatolia, like the Fisher and his Companion (Şahīd ü Zehir), Ashok Ghōlī, Köprə Şah, Şirin Zehira, Şamīr and Eblīm, motives which belong originally to the Oghuz. We may also note the close relationship between the popular music of the Turkomans and Adheri music. These links between the different Oghuz Turk groups may be explained partly as a continuation of their common ancient culture and partly as a result of mutual influences of later date. Thus there are obvious connections between the famous romance Şamīr and Ablīm (which has also been adopted by the Šekh) and the book of Dilər Khusār which is a remnant of the ancient Oghuz epic. In addition the intercourse of the Turkomans with the centres of Turkish culture in Khorāsān, Kūstān and Turkestan have caused the Turkish literature of Central Asia to influence Turkoman literature. Among the Turkomans the Şahīd Adhīm poets like Nūshī and Fūsālī and the poems of the great Şaghātāi poet 'Ali Şir Nešā'ī are also studied and the memory of the last, as well as of his patron Şahīd Ebnī Baḵtār is still alive among the people. The influence of Ablīm Yeşewī and of his pupils is visible in the work of the best known Turkoman poet, Şahīd Şamīr (cf. Ilk Mütövvarfaris, p. 199).

We have as yet very little information about the early works of the Turkoman literature composed in the period of the now Turkomen-Subei 'l-Qāhīr in his Şahīd-I Tārīkh mentions a poetic work called Mu'min al-Ša'īrī, which, according to him, had been popular among the Turkomans down to his own time. But this work, written in 1313, although containing some references to nomad life, in reality originates among the Turks of Kūstān and has no connection with the Turkomans. Next comes the muḥżii: Rasūl al-Šīrāzī, attributed by tradition to Şahīd Yezidīr al-Šīrāzī, but Zekī al-Weli shall have shown that the work was composed in 889 (1484) by a poet named Wašī'ī. This book is still studied among the Turkomans; it is written in the 'arāf metre but has no literary value. Perhaps this Wašī'ī was one of the poets in the entourage of the Turkoman princes of Kūshārān of the time of Şahīd Isma'il Şafawi. We know however that as late as the Timurid period, poems in the Turkoman-Caghānī style were recited in Kūshārān and from the Tārīkh of Şamīr Şāh, [q.w.v.], and from the Tārīkh-i Şaghātāi, called Muşīmā al-Kūstānī, we know the poems of several Turkoman poets belonging to the 14th century (for the Muşīmā al-Kūstānī see: W. Pertz, Die türk. HSS. an Gotth. Nr. 169). These poems however were intended for town-dwellers and were not known among the nomads. A work which was known to the Turkomans is the Şahīd-I Tārīkhā of Abu 'l-Qāhīr (not mentioned in the article
The literary traditions of the Turkomans of the present day and the other sources available only help us for the xviiith and xixth centuries. Samoilovitch, the best authority, has been able to collect the names of about 20 poets belonging to Turkoman tribes. Their poems celebrate the battles and rivalries between the different tribes and are read, without exception, by all the Turkomans. The tribe of the Goklen, probably because it adopted a settled life before the others, produced most poets in the xvith and xixth centuries: in the first place the greatest poet Maghâdûm Kûli, his father Dewlet Muhammed Molla Arazî, then his son-in-law and pupil Dhalîfî, and lastly Sâyiûdî, the poet of the Erôtsh, who sought refuge among the Goklen. Dewlet Muhammed Molla Arazî in 1107 (1753) composed a methnâwî entitled Wa-fî Arazî in the 'arâf metre, a morallising poem showing the influence of Caghtâî literature. The same poet also wrote poems in the style of the akbârîs. Among the poets of the xixth century may also be mentioned Ma'âtûfî and She'idâyî. Another poet, a product like Azâdî of the medrese, of the xixth century is Abû al-Sattâr Kâdî of the tribe of the Teke, whose Liğnînînu was published by Samoilovitch in 1914. This methnâwî, written in the metre --- --- --- ---, is a historical poem describing an episode of a struggle between the Sumî Teke and the Shî' Persians. The work is not, however, a pure specimen of the popular language of the Turkomans.

Maghâmûm Kûlî received his education in the medresâ of Shîr 'Ali Khân in Khiristan but his real life has been much obscured by legends. His popularity has been so great that the works of many other poets have also been attributed to him; even although the maghâmûm of these poets are given at the end of the poems. Among the Turkomans of Khîwâ and even among the Ûrûbegs, the expression "to read Maghâmûm Kûlî" means "to read didactic poems in Turkoman". We do not know which of the 279 poems attributed to him are really his. Among them we find pieces of a religious and didactic nature as well as warlike poems inspired by the struggle with the Persians. These poems are our most important source for our knowledge of the Turkoman conception of life. The cheqekezâ of Dhalîfî and Sâyiûdî reflect this popular wisdom and are written in the 'arâf metre and in the form of mukhammas, munaddâs etc.

Since the Russian revolution of 1905, there has been a marked revival among the Turkomans but it is easy to see since 1915 that the movement has been a steady one. The centre of this renewed intellectual activity is 'Ashqabâd. Schoolbooks, periodicals and newspapers are published in the Turkoman dialect and an institue for Turkoman culture has been founded. Ethnography, music and popular literature are being studied and the foundations laid for a Marxist literature just as in the other lands belonging to the Union of Soviets. Although the products of this new literature are not yet of much literary value, several important works have been published, like the collected works of Sâyiûdî and Dhalîfî and the Sâyiûdî ile İmâmâ Hikâyâtî (by scholars like Yeldîyeff and Kulmehmedoff). These researches by learned Turkomans assisted by Russian orientalists will probably in the near future throw much light on unknown periods of this literature.

Bibliography: The earliest account of Turkoman poets and of Maghâmûm Kûlî is found in A. Chodzko, Scripta of the Popular Poetry of Persia, 1842. After him Bennin published several Turkoman poems in his Cœrætænæcæ, H. Vâmbéry in his Travels, London 1864 gives some information about Maghâmûm Kûlî in 1879, the same author published in Z.D.M.G., xxxii., 31 fragments of his poems. This article, however, as well as that of Ostrowski, publ. in 1907, contains many errors. The most important researches have been those of Samoilovitch in the following articles: 1. Türkmençen poëzîezerî Kât Mulla ile öüsînû in Russkâf (zigozûa Sâzma, suria XVI, St. Petersburg 1907, p. 215—23); 2. Furst. Otd. Imp. Russ. Arch. Obô, xviii., p. xviii.—xix.); 3. Po poezîâ inânâmî N. P. Ostrowskova "Svetîâ Islama" (Zag., xviii., 158—160); 4. Mëtâlîsî po Srosvanaatçicîc tew endurance literatur (Zag., xix., 1—30); 5. Ukhanatâ ile öznâmî Muhhamd-Kûlî (Zag., xix., 6); 6. Ulehîn Türkmenhásîe novelîa (Zag., xviii.); 7. Kûstâmî "Ukhanatâ ile öznâmî Muhhamd-Kûlî" (Zag., xix., p. 125); 8. Abû-Sattâr Gâyî, Kniga russkâv v bitva v tehnî Türkmenhásîe izerîsîâsî poëma XIX veka, St. Petersburg 1924.

H. Vâmbéry, Turc und Ahmed, Budapest 1911; this story has also been printed at Kazan in 1904; some sections have already been published by Vâmbéry in Cagaitâcîc Sprachstudien, Leipzig 1907, p. 35—36. On the Mûsülîn ilâlîlî of: Zekî Valdî, Kühdisâmî, Muhammedî Kûlî Etkisû, in Türkîyâ Meşgülâtâ, ii, 335—45. The various manuscripts of the Kovanî ilaâmî have been described by Samoilovitch (a new manuscript of the xixth century is in my private library); the work was printed for the first time at Kazan in 1850; in 1905 it was again published at Tashkent by Ostrowski. The Dvâm of Maghâmûm Kûlî publ. at Constantinople in 1940 by Sheikh Muhsîn Fâm contains more mistakes than Vâmbéry's edition. For a critical bibliography of the publication relating to Maghâmûm Kûlî see: Zekî Valdî, Türkîyâ Meşgülâtâ, ii, 465—474; Kül-Mehmedof, Sayîl Zikhlîlîsî, 'Ashqabâd 1926; do., Dhalîfî Zikhlîlîsî, 'Ashqabâd 1926; do., Sâyiûdî ile İmâmâ, 'Ashqabâd 1927. The last and most complete publication on Turkoman literature is the article by Samoilovitch, Özerle ilê ilôvî Türkmenâcî literaturî in the periodical Türkmenîya, vol. i, 1929, publ. by the Academy of Sciences of the Union of Soviets.
The word Türk (Chin. Tu-küe, Greek Τεχθά) first appears as the name of a nomad people in the sixth century A.D. In this century a powerful nomad empire was founded by the Turks, which stretched from Mongolia and the northern frontier of China to the Black Sea. The founder of the empire, called Ta-men by the Chinese (in the Turkish inscriptions: Bo-mla) died in 552; his brother Istamu (Chin. She-tâu-yu, Greek Διασήκης, Διάσηκηση and Διασήκησης; in al-Tahart, i. 895 and 896: Sindjib Rizkhan) by whom the conquests in the west were made, seems to have lived till 576. The two brothers seem to have been quite independent of each other. The Turkish empire in question were distinguished by the Chinese as the empires of the Northern Turks and of the Western Turks. In 581 under the influence of the Chinese dynasties of Sui, which had now risen to power, a final breach was made between the two kingdoms. In the next century both had to submit to the nominal suzerainty of the Tang dynasty (618—907), the Northern Turks about 630, the Western in 659. In 682, after 50 years of foreign rule, the Northern Turks succeeded in regaining their independence and outer power. To this new empire, which lasted till 744, belong the "Orchon inscriptions" (called after the river Orchon in Mongolia), the oldest monument of the Turkish language. From time to time, especially in 692 and 711, these rulers succeeded in bringing the Western Turks under their rule but could not subdue them permanently. Of the Western Turkish tribes the Tubürk were the most distinguished, whose chiefs in the last years of the viiith century assumed the powers of Khan. The kingdom of the Turugah was ended by the Arabs under Naṣr b. Saïr in 121 (739) (Tahart, ii. 1593 sqq., 1613, 1689 sqq.). Various views have been expressed regarding the relations of these, the oldest Turks, to their predecessors, the nomad peoples in the east and west. The attempt has been made to prove that in earlier centuries also there were Turkish languages, of course under other names, and to explain from the Turkish isolated words that have survived from the pre-Christian period. In the west it has been often assumed that the ancient nomad people par excellence, the Scythians, or at least a section of them, were related to the Turks. In Carth. vii., 7., in the history of Alexander the Great, Carthais, a brother of the king of the Scythians who dwelt beyond the Vaxartes (cf. Ἱεράρχα), is mentioned. Th. Nöldeke pointed out to A. Gutschmidt that this might be the Turkish Jär-
we do not know. E. Blochet (G.M.S., xii. 301) connects Sien-pi with Sibiir. In Byzantine and Armenian sources we find a people called Sabara mentioned for the first time in 463 and the last in 558 (cf. J. Marquart, Osteniatische und osteuropäische Bestattung, Leipzig 1903, index), but of migrations of the Sien-pi to the west nothing is known.

N. Poppe has recently dealt with the question of the origin and early history of the Turks from another standpoint, the linguistic. An Altaic primitive language (Ugrische) is presupposed, to which the primitive Turkish, the primitive Mongol and the primitive Tungus go back. The primitive Turkish was on the same level of development as the language of the Orkhon inscriptions; "the phonetic system of the Orkhon Turkish is completely in keeping with our ideas of the primitive Turkish phonetic system" (Ungerische Jahrhücher, vi. 88).

The writer of course does not assert that all modern Turkish languages are descended from the language of the Orkhon inscriptions; this would be impossible, if only because the inscriptions themselves mention several tribes of Turks; it was only an "archaic dialect". The period of primitive Turkish" must be placed "at the latest in the centuries just before the Christian era" (op. cit.). In general the Turkish languages are on a higher level than the Mongol ones; even the "modern Mongol of any district one likes to choose" in the Mongol world "is much more archaic than the oldest Turkish languages known to us". The Mongol of literature, not however the living dialects", is phonetically "almost at the same stage of development as the Altaic primitive language" (op. cit., p. 117).

Special attention is devoted by the author (op. cit.; cf. also Bulletin de l'Acad. etc., 1924, p. 259 sqq.; Annales, i. 755 sqq.; Kort i. Comptes-Ann. Archiv., ii. 65 sqq.; Ungerische Jahrhücher, vii. 155 sqq.) to the relation of the "Cauwasische" (his form) to the other Turkish languages. Cauwa does not go back to the primitive Turkish language but the latter and the oldest form of Cauwa both go back to a "Cauwa-Turkische primitive language" and these with the primitive Mongol go back to an "Altaic primitive language". The division in the Cauwa-Turkish original language is with caution brought into connection with the migrations of Hun tribes to the west. The Cauwas are descendants of the Western Huns; the Cauwa-Turkish primitive language was then the language of the Huns. The change characteristic of the Turkish language (unlike the Cauwas) of $s > s$ and $s > s$, did not take place as Ramstedt thought (J. S. F. Öst., xxxvii. 31) between the fourth and sixth century, but much earlier, perhaps about the beginning of the Christian era.

V. Thomsen (Z.D.M.G., lxxvii. 322) supposes the word "Turk" means "strength, power" (cf. also W. K. Müller, Úgvarka, ii. 92; ärk türk, "might and power"). As he also has been at first probably the name of a single tribe or more probably rather of a ruling family. In the inscriptions, the word türk seems to have a political rather than an ethnographical significance; the expression "my Turks, my people" (in Thomsen, i. 18; ii. 16; ii. 10) points in this direction. Alongside of the Turks, the Oghus or Toqšu ("nine"; from the number of their separate tribes or families) Oghus are frequently mentioned, sometimes as enemies of the Turks and their rulers, sometimes as the Khân's own people, esp. i. N. 45; ii. E. 30, where the Khân calls the Toqšu Oghus his "own people" and regards their rising against his rule as the dissolution of all order in heaven and earth. The Khân and his followers had probably belonged originally to the people of the Oghus; the Oghus hostile to the Khân dwelt to the north of his residence, which was near the mountains of Hörken (on this see also now also B. Vladimirov, in Comptes rendus de l'Acad. etc., 1929, p. 115 sqq.), according to Thomsen (Z.D.M.G., lxxviii. 123) "probably a part of the present range of Hungaer near the river-system of the Khörken in northern Mongolia". The people of the Uighur are also mentioned in northern Mongolia, on the Selenga river, although only in one passage (ii. E. 37). The Oghus enemies of the Turks had about 680 a Khân of their own, a vassal of the Chinese emperor; in the eighth century he is no longer mentioned. The leader of the Uighur bore the more modest title of an elţbur (e.g. ii. E. 38); in the inscriptions the expressions baghnta bagzun "people under a Khân" (e.g. i., E. 9; ii. E. 9) and elţbur-lijis bagzun "people under an elţbur" (e.g. ii. E. 38) are contrasted. In addition to the Turkish Khân in the east (according to the Chinese view in the north), there was also a Turkish Khân in the Kalgan of the Türgis or Törgesh in the west. From Arabic (Tabart, ii. 1553, where the town of Nawakten is mentioned; on its situation: B. G.A., vi., text, p. 209 and 206) and Chinese sources we know that his royal residence was on the river Chü (q.v.). His people is called oğh "ten arrows" town the number of their tribes. There was a third Turkish Khân, the Kalgan of the Kirje (q.v.) on the Yenisei; the Khân of the inscriptions claims to have himself given the ruler of the Kirje the title of a Kalgan (i., E. 20; ii., E. 17). The opinion that to begin with a Khân (Kalgan) the title had to be received from another Khân is also found in Muslim sources (Amft in Barthold, Turkestan in yezgöb mongolškago narodnosti, l. 96).

"East of the western Turks and into their territory between the Altai and the upper course of the Irtysh" (so Thomsen, Z.D.M.G., lxxviii. 172) lived the Karlik, a people of undoubted Turkish origin. In 766 the lands of the Western Turks passed into their possession; their ruler at that time, like the ruler of the Oghuz on the Sr-Darya, bore the Turkish (originally Toqšu: cf. Marquart, Erdväla, p. 204; W. Bang, in Ung. Jahresber., vi. 101, note 3) title of yuvqun, which is mentioned in the Orkhon inscriptions as the title of a prince. The only Turkish people at that time already leading a settled life (at least in the east) was the Basmil in Bighalki (q.v.); their ruler had the title of bals-šuł "shyly majesty" (ii., E. 25). The province of the Uighur in the same region had the same title in the 5th century, when its origin had already been forgotten (hence the attempts to explain it in Raqšid al-Din and Abu 1-Ghazzāl; cf. the passages given in Radloff, Kaddakhi 6ilq, part i., p. xxvii. and xxix.). A. Grünwedel seems to have heard the pronunciation idikbut in this very region; hence the name of the town of Idikbutari at Turfan (A. Grünwedel, Berichte über archäologische Arbeiten in Idikbutarih und Umgebung, Munich 1905). Thomsen (Z.D.M.G., lxxviii. 171) describes the Basmil as only "a tribe related to the Turks", that they were not a pure Turkish
people seems to be clear from the name. Aristov (Zemstvo v cinnomu sostave tyurubilsh plemen, St. Petersburg 1897, p. 91 sq.) has pointed out that according to Ducange (Glossarium ad scriptores medii et infimae graecitatis) the children of a French father and a Greek mother were called Basque or Gascoule in Byzantium. Even in the 16th century, in Malebud Khashghari (I. 30), the Basmen are mentioned among the peoples, who have a (non-Turkish) language of their own although they also know Turkish.

The other peoples mentioned in the inscriptions were probably not Turks, notably the Tartars, although Turkish numerals like vies (30) and toqas (9) are prefixed to their names. As Thomasen (Z. D. M. G., ixviii. 174) rightly points out, they were "undoubtedly the Mongols".

From the Oghus ("Turks") rule over Mongolia passed about 745 to the Uighurs, whose ruler, henceforth assumed the title of Khan. His dynasty lasted till 846. Of this period also we possess inscriptions, including one published by Ramstedt (J. F. G., xxx. 3), of the Khan who reigned from 746 to 759. The view, also shared by Thomasen (Z. D. M. G., ixviii. 128 sq.), that the Uighur appeared to the confederation of the Oghus and that there is only a slight difference of dialect between the forms Oghus and Uighur is not confirmed by this inscription; the Uighur appear as a separate confederation, distinct from the Oghus; the Khan calls himself ruler over the On (10) Uighur and Toqas Uighur, although according to Chinese sources, the Uighur also numbered nine tribes. Some of the Oghus appear to have remained in Mongolia under the rule of the Uighur, and others to have migrated west and south. Among the latter was the tribe of On (in Chinese transcription Ch'yu, in Chinese translation Cha-ko = sand desert) which belonged originally to the Western Turks. In the 8th century the Ch'yu lived on Lake Barkul (properly Barksu) where they were exposed to the attacks of the Tibetans, and at a later date (since 712) somewhat further west on Bishbalk. After 808 they were driven from there also by the Tibetans and had to go on over to Chinese territory. In the history of China, they are best known in connection with the suppression of the rebellion of Huang-Cao (877-883); in Muslim history this is ascribed to the people of Toqshu-ghus [q.v.]. In the tenth century, three short-lived dynasties were founded in the province of Ho-nan by the Cha-ko Uighurs (the Later Tang 943-956, the Later Tsin 977-947 and the Later Han 947-951).

In the Chinese inscription of Karabalgham, composed by the Uighur Khan who died in 821, the adoption of Manichaeanism by the Uighur is recorded. The Uighur had become acquainted with Manichaeanism in a campaign against China in 762 in the town of Lo-Yang (near Ho-nan), and four Manichaean missionaries were sent from there back to their land (Mongolians). "The land with barbaric customs and the smell of blood" was to be "changed into a land where men live on vegetables, the land where men slew one another, to a land where they exhorted to the good" (J. A., xi. 1, 104). Buddhism and Syrian (especially Nestorian) Christianity at this time developed a zealous missionary activity in China and among the Turks. The expeditions to Chinese Turkestan have found many Turkish fragments which testify to this activity; but the inscription of Karabalgham seems to be the only record that has survived about the conversion of a Turkish ruler to one of these religions. The Sogdians (cf. sogdiana) in particular seem to have spread Manichaeanism in China and among the Turks; besides the Chinese inscription, there is a short one formerly thought to be Uighur, now recognised as Sogdian by F. W. K. Müller (Ein iranisches Sprachdenkmal aus der nordlichen Mongolei, in S. B. Pr. Akh. W., 1909). According to R. Gauthiot (Essai de Grammaire sogdiene, Premier partie, Phonétique, Paris 1914-1923, xiii.), the language of this inscription is "somme toute, la tradition la plus vieille et la plus constante du sogdien". From the Sogdian script developed the Uighur which later, probably in the 12th century, was to drive out of use completely the oldest Turkish alphabet, that of the Orkans inscriptions. The Uighur alphabet was adopted by the Mongols in the 13th century; in the period of the Mongol empire, the Uighur alphabet was used in all countries from Mongolia to South Russia and Persia.

About 930 the Kirgiz put an end to the Uighur empire. Two new kingdoms were founded about the middle of the 10th century by the Uighurs driven out of Mongolia, one in Kan-wo (see KARES), better Kan-djou, the other in Bishbalk and Karakholja. Manichaeanism are mentioned in both in the tenth century as well as in Khotan (J. A., xi. 1, 265 sqq.).

The ruler of Bishbalk and Karakholja undertook the defence of his co-religionists against the Chinese Emperor (Mas'ud, Muradji, i. 300 sq) and the ruler of the Samaunds (Flavii, p. 337). In Bishbalk and Karakholja, Manichaeanism had probably already spread under the predecessors of the Uighurs, the Toqas-Uighurs. Tamim b. Bakr al-Mas'udwal, who is quoted by YAKUS (Ma'qarin, i. 840, supra) and was certainly utilised by the Khorasani also (B. G. A., vi, text, p. 30 sq), seems to have visited not the Uighur but the Toqshu-Uighur proper (Toqas-Uighur).

At that time Manichaeanism predominated, especially in the Khagan's (Khagan's) capital; in the country west of the capital there were Manichaeanism and also but the Zoroastrians were more numerous there. Whether, as Chavannes and Pelliot (J. A., xi. 260 sq) suppose, the turkisation of what is now Chinese Turkestan was for the most part ("en grande partie") first carried through by the Uighurs, is doubtful. This process may already have made considerable progress under the predecessors of the Uighur. Khashghar and all the lands east of it are from the very beginning regarded by the Arabs as purely Turkish areas.

Of the two Uighur kingdoms, one (in Kan-wo) was conquered by the Tanguts in 1028 and the second was still in existence in the Mongol period. In the year 934 the proposal was made to the Uighur in Kan-wo by the founder of the kingdom of the Ikitai (cf. KARKHITA) Apoaki, who had shortly before driven the Kirgis out of Mongolia, that they should return to their original homes on the Oloshin, but the Uighurs had already settled down to the conditions of their new home and did not wish to become nomads again (E. Bretschneider, Missionary Researches from Eastern Asiatic Sources, i. 214; J. Marguert, Gramm. der Uigur. Sprache i. die Beziehung der Uigurin, S. B. Pr. Akh. 1912). The victory of the Ikitai over the Kirgiz really marks the end of Turkish and the beginning of
Mongol rule in Mongolia. The Kirgiz were the last Turkish people to live in Mongolia and the only one whose memory has survived there to the present day. All the pre-Mongol tombs in Mongolia, including the Uighur, are called "Kirgiz tombs" (khiitg seri). The hills of Otkan mentioned in the Orkham inscriptions as Turkish country sar (şer) were according to Mehran Khoshbari (Dini sanatük al-Turk, l. 123) in the Tatar steppes.

Most references to the Turkish peoples are from this time found in Muslim sources. For the older period also the information in the Turkish inscriptions and in the Chinese annals is often supplemented by the western sources. From Byzantine sources we learn that Turks in 576 conquered the Taufic Besoporus, in 581 they were before the walls of Chersonesus, but their rule over the Taufic Peninsula was of short duration; by about 590 Byzantine rule had been restored there (A. Vasil’ev, in Inv. Acad. Mater. Kulturn, v., 185 sq.).

There are also Byzantine sources from 568 (Byzantine embassy under Zemarchos to the Turks) to 1640 (the letters of the Turkish Khaghan to the Emperor Mauricius; cf. the latest study of these sources in E. Chavannes, Document sur les Fém-kén [Turcs] occidentaux, St. Petersburg 1903, p. 233 sqq.).

Of the Byzantine envoys only the first, Zemarchos, crossed the Volga and visited the residence of the Khaghan of the Western Turks which, as Chavannes has shown, at this time was in the Ay Tagh ("White Mountains") north of the town of Kuka. There were, however, frequent negotiations for joint campaigns against the Sasanids, but no lasting alliance was made; in a few years the Turks were at war with the Byzantines as well as with the Persians. After the conquest of the Alans [cf. ALAN] by the Turks the kingdom of the Sasanids became bounded by the land of the Turks not only in Central Asia but also west of the Caspian Sea. It was probably these Turks that the walls of Darbend (q.v.) were built. The tradition that the Turkish nomad empire was continued by the Khazars, who became a great power in the seventh century [see Kutiar and Khazar], just as at a later date the Golden Horde carried on the traditions of the Chingis-Khan's (q.v.) empire. The language of the conquerors of the sixth century has left no more traces in Eastern Europe than the Mongol has in the lands of the Golden Horde. The language of the Bulghars and Khazar belonged to the above-mentioned older stratum of Turkish now represented only by the Cumans and the Turkish elements in Magyar; Turkish proper was brought to Europe only towards the end of the ninth century A.D. by the Pečenegs.

In the lands east of the Caspian Sea also, defences were erected by the Sasanids against their Turkish neighbours. A wall of brick was built to defend the province of Djurdjân [q.v.] but it was not able to prevent the victorious invasion of the Turks (Baladari, p. 350; B.G.A., vi, text, p. 261 aq.). The remains of this wall on the right bank of the river Gurgân are called Kaff-Alan at the present day (description e.g. by I. Poszewsky, in Prokezal Turk Kurşu Lyak. Arka, v. 185). The loss of the province of Djurdjân probably means the erection of another wall also of baked bricks on the frontier between Djurdjân and Tabariştan (q.v.) attributed to Khusraw Anšahrwân (B.G.A., vii, 150). During the fighting between the Arabs and Turks in the year 98 (716-717), the Turks of Dürjân were led by Ṣül, the Dihkân of Dihishtân (Tabari, ii. 1520). Sül here is certainly a Turkish proper name or title, probably for Turkish Čâr. In the history of the fighting against the Turks in the Sasanid period, the word Sül appears in one passage in Tabari as the name of a people, and on this J. Marquart (Erdeiak, p. 51 and 73) bases his views on the people or tribe Çul (see also above under ṢURDÂN). But this statement probably does not refer to the Gürgen region, as the Sül are mentioned along with the Alans (Tabari, i. 895). According to a late source (Khitab al-agrahin, ix. 21), the Turks on the Gürgen had adopted the language and religion of the Persians; they must therefore have already conquered this region under the Sasanids, probably as early as the sixth century, although in the Khitab al-agrahin, the same persons (Sül and his brother Fûrus) are mentioned as Turkish conquerors of the land and are fighting against the Arabs.

The fighting in the lands south of the Amu-Darya [q.v.] generally went in favour of the Turks; as Marquart (Erdeiak, p. 53 and elsewhere) and following him Chavannes (Document etc., p. 252) have shown, the northern boundary of the Sasanid empire at this time was the Murghâb. The Turks and with them their protégés, the last Sasanids, were less successful later in the same area, during their struggle with the Arabs. In the accounts of this fighting only the "Turks" are mentioned, not separate Turkish peoples; an exception is often the mention of the Qâhghân of the Karuv (the name of this people is written Kharûk in Arabic and Khalkh in Persian) in the year 119 = 737 (cf. Tabari, ii. 1612 in/fra); more frequently the same prince is called "Qahghân of Takhristân" [q.v.]. A portion of the Karuv had therefore by this date reached the lands south of the Amu-Darya, where they have survived to the present day (now regarded as an isolated family of the Dzereds). There were also Arab embassies sent on peaceful missions to the Turks: e.g. the caliph Hishâm (105-125 = 724-743) is said to have asked the "king of the Turks" to adopt Islam. Unfortunately in the only record we have of this mission (Yâkût, Muqâjam, i. 839; the source of Yâkût is Ibn al-Farîd) cf. Bulletin de l'Acad. etc., 1924, p. 241) we are not told where this king's capital was.

We get more detailed accounts of the separate Turkish peoples and their habits only from the Arab geographers of the third (ninth) and especially the fourth (tenth) century. In this geographical literature the word "Turk" is used only as the name of a group of peoples and branch of languages, not as in the Orkham inscriptions and the Chinese Annals of a single people or kingdom. Five peoples in particular are mentioned (B.G.A., i. 9) who spoke one language and could understand one another: the Tughruszgis [q.v.], the Khârizm (Kirgis), q.v.), the Kimak [cf. KIMAK], the Ghus (q.v.), i.e. the Oghuz, and the Kharûk, i.e. the Karuv [q.v.]. As at the present day, the lands on the Upper Yenisei were even then the extreme limits in the northeast of the land inhabited by Turks; they also marked the limits of the world as known to the Arabs; according to the Arab view, the lands of the Kirgis, then the extreme northeasterly of Turkish peoples, stretched to the Ocean. The Oghuz and Karuv were the immediate neighbours.
of the Muslim lands in Central Asia. The land of the Oguz, adjoined the Muslim lands of Djurdjua in the west as far as Färki (q.v.), and Ashdjab (the modern Sainian near Cimkent (q.v.)); in the east, still farther to the east, lived the Karlik. To go to China one had to travel through the lands of the Karlik and the Topghuzhuz, over 30 days from the eastern frontier of Farghona (q.v.) through the land of the Karlik to the frontier of the land of the Topghuzhuz, thence about two months through the land of the Topghuzhuz and through China to the shore of the Ocean (B.G.A., ii. 111; other descriptions vary). Two other names of people are mentioned by Ibn Khurdadbeh (B.G.A., vi. p. 28 sq.), not far from the winter quarters of the Karlik east of Tartar (at the modern Avilya-Ata, q.v.) were the winter quarters of the Khamáj (q.v.), where only the southern branch of this people is dealt with; for the Khamáj who migrated to Persia, see 584q.v.). Between the rivers Talas and Çen, nearer to the latter, was the town of the "Khabān of the Turchids". Further notices are given in the Persian sources in the Ēfīmd-ad-Ālam and in Gardizi (q.v.). The Turchids according to these were divided into the Tukkšt (so vocalised in Mahmud Kāshgari) and the Az; the Tukkšt lived on the Çen (q.v.); the town of Sīyāb was in their territory. East of them on the Isāk-Kul (q.v.) lived the Çigīl (the pronunciation is established by a story giving a popular etymology in Mahmud Kāshgari, i. 330). South of the river Narīn (see 564q.v.) lived the Jaghmī, a branch of the Topghuzhuz; their king was a descendant of the royal family of this people. The town of Kāshgār was in their territory. According to Mahmud Kāshgari (i. 85), the Jaghmī and the Tukkšt lived on the river III (q.v.) as did a part of the Çigīl. The term Tukkšt-Cigīl (i. 354) is also found. The Çigīl were divided into three parts: in addition to the Çigīl on the Çen there were Çigīl in villages near Kāshgār and is little town or stronghold called Çigīl near Tartar; this latter was near the land of the Oguz and was frequently besieged by them. The Oguz therefore called all the Turks from the Ēfīmd-ad-Ālam to China Çigīl. In this sense the word Çigīl is sometimes used by Kāshgār himself; it is recorded that the word Varālgī "edict", which implies a certain degree of culture, was unknown in the language of the Çigīl and of the Oguz (i1. 31). The Jaghmī were also called Kān Yaghmī ("black Y."); there was also a village of this name near Tarīk (i. 55 sq.). The name Turkman first occurs in the geographical literature in Makhaddas in two passages (B.C. A., iii. 274 sq.) with a not quite certain significance. On the Sarwarī below Savrān, that is in the land of the Oguz, are mentioned the towns of Bāldīd and Barakāt ("frontier forts against the Turkomans"), which had by that time already adopted Islam "out of fear". In another passage, in this region between the Talas and the Çen, i.e., in the land of the Karlik, is mentioned king of the Turkomans, from whom the lord of Ashdjab regularly received gifts. Kāshgār also says that not only the Oguz (i. 27 and 35; i. 504) but also the Karlik (i. 393) were Turkomans; the well-known popular etymology in Kaghd al-Dīn (Trūdīd Vest. Ort. Arābī. Okāhī. vii. 26, infra: Türk armesem "resembling the Turks") is found as early as Kāshgār (i. 307). As F. Hirth (S. B. Bayr. Akad., 1899, ii. 263, sq.) has told us, the word Turkoman, in Chinese transcription To-k'iu-móng, appears much earlier, in the eighth century A.D., in the Ts'ang-T'ien Encyclopaedia; there also it refers to the west, to the land of the Alan. It is possible that the Oguz or Turkomans (as early as the eleventh century we find the names used promiscuously) are descended from nomad Iranians who had become Turkicised and this explains their peculiar eponymology (dolichocephalic). Whether non-Turkish, perhaps Mongol, peoples wandered westwards with the Turks has still to be investigated. As one of the seven tribes of the Kinfā are mentioned the Tatars (Garden in Barthold, Ost, etc., p. 82), also called a tribe of the Topghuzhuz (q.v. cit., p. 54). A full account of the Turkish peoples, their lands, and dialects including also the not purely Turkish elements, is first given by Mahmūd Kāshgār, but he does not seem to be always reliable, even apart from the fact that the same Turk, as frequently elsewhere in Muslim literature, is sometimes given to non-Turkish peoples of Eastern Asia. According to one passage (i. 27 sq.) there were twenty Turkish peoples, who fell into two groups, a northern and a southern one, each of which, as follows, from east to west, the author tells us. The ten peoples of the northern group were the Beqjeneq, Kūšārā, Óghur, Yämšāk, Bašmīl, Kāy, Yabhāq, Tatab, Kīrūq; the ten peoples of the southern group were the Džūqīl, Tukkšt, Yaghmā, Ighrāq, Djarāq, Dżumul, Uğbār, Tankūt, Kīštāq, Tafghāt. This order for the northern group obviously cannot be the right one. As in Ėstakhīr (see above) the Kīrūq (the Kirghis on the Yenisei) are moved to the extreme northeast, although according to another passage (i. 123), the Tatars lived in Ótūkan (in little way on the Onkho), i.e., much farther east. The Yämšāk (Yemek), originally a tribe of the Kinfā (q.v., not mentioned by Kāshgār) lived on the Irīsh (i. 273). The Bašmīl (the Bashkirs, see 339q.v.) obviously could never have lived so far to the east (to what was already known of them, it may he said that Ibn Fadlān (q.v.) in 922 [309—310] met the first Bashkirs to the south of the Usha, much farther south than any other mention of them; see Bull. de l'Am. etc., 1924, p. 16). Of the northern peoples the Kāy, Yabhāq, Tatab, and Bašmīl had their own languages, although they could also speak good Turkish (on the Kāy cf. J. Marquart, in Osttürk. Dialektstudien, p. 53, where there is an erroneous association with the name of the Oguz family Kāy, in Mahmūd Kāshgār: Kaylīf; cf. there Kūprūlī Zāde, in Türkçṭ Millâm̀\kālî, i. 187 sqq.). The Yabhāq lived on the great river Uşār (i. 21), on the situation of which the author does not seem to have had any very clear idea; it was probably the Ob (still called by the Tatars Omar or Umor). The Uşār was crossed in the 5th (6th) century (the author had spoken with participants in the campaign) by a Muslim army under Arslān Tegh in the war against the Yabhāq under Bukt Bardin and their allies the Basmīl (on the war see especially I. 173 sq.; on various episodes other passages; on the crossing l. 5; cf. O. Brockelmann, in Hirth Anniversary Volume, p. 11). Of the ten peoples Džūqīl, Tukkšt, Yaghmā, Ighrāq; Djarāq, Dżumul (in other passages like I. 382: Dżumul), Uğbār, Tankūt, Kīštāq, i.e., Śīn,
TURKS

Tawghâj, i.e. Mâstn) of the southern group
the Djumal were one of the non-Turkish speaking
peoples, who nevertheless spoke Turkish quite
well. We are told by the Uighurs that they had
another language, in addition to their "pure
Turkish", in which they communicated with one
other. The Tankut (Tangut), like the inhabitants
of Khotan and Tabut (Tibet), were people with a
foreign language, who had settled in the land of
the Turks. Khotan had its own language and al-
phabet; they did not speak good Turkish there.
In Sin and Mâstn the inhabitants had a language
of their own but the people in the towns could
also speak Turkish well. Their letters to the Turks
were written in the Turkish alphabet. A wide
meaning is given to the word Sin in one passage
(l. 378); there were three Sinu, the upper of Taw-
ghâj (Mâstn), the central or Khotâi (Sin), and
the lower or Barâkhâ; this was also the name of a
fortress on a high hill near Kâshghar; there were
rich gold-mines there.

Of these peoples the Djerâk (probably to be
pronounced Carru or) lived in the town of Bârzhîj
(Barchu), the modern Maral-bâshî (l. 318); on the
site of Bârzhîj; cf. especially Vallinian, co numer-"s
p. 83 sq). This enables us to define roughly the
habitation of the not-originally Turkish Djumal
(east of Barâkhâ and west of the Uighur). During
the fighting on the Yânân, the Djumal were the
allies of the Yâlaqâ and had therefore presumably
not yet adopted Islam. In the land of the Uighur
there were five towns, among them Bâhîlânî and
Kûdîjî, i.e. Koro or Karâ-Khoja near Turfan.
The Uighurs were Buddhists and worshippers of
Bûrkhân (idols). The only evidence that there was
also Christianity among the Turks is the transla-
tion of the word bûrkhân (bânî) known also from
Manichaean texts (e.g. Chaustroem, App. to Aab.
Prema, tâh. 1910 P-39) by "Christian fast" (l. 345).

In other passages Mahmût Kâshghari mentions
other Turkish tribes, who are not included in the
list of the twenty Turkish peoples; e.g. the
Adkhis (l. 89), known from the geographical
literature also (e.g. B. G. A., vi. 31) and the
Kodjût (l. 208) settled in Khabârân and known
also to Bâhîlânî (ed. Morley, p. 91). Of the peoples
of Eastern Europe, in addition to those already
mentioned, the Bulghar and Swâr are called Turks;
The Kachar are not mentioned; they had probably
cashed by then to have a separate political
existence. In contrast to Iskûhri (B. G. A., l. 222
and 225) who says the Kachar and Bolghár had a
common language distinct from Turkish, Kâshghari includes
the dialects of the Balghârs, Swârs and Pečenek in
one group.

The dialects of the Kirgis, Kipçe, Oghuz,
Tuckhu, Yaghma, Çigîl, Ighrhâ and Carru were
pure Turkish. The dialects of the Yamek and
Bâshkirs were closely all to this language. The
language of the nomads from the Ili to the Yâmür
were generally purer than the language of the
(originally probably not Turkish) settled peoples,
such as the Arghu from Sairân to Ballâshûhîn
(in the towns there Soghadian had survived alongside
of Turkish) and the Kendjût (Kendjie) in the
villages near Kâshghar. Various phonetic peculi-
larities of the different dialects are discussed, including
words which are still of significance in Turkish,
like the interchange of r and g and k and ñ etc.

In the vocabulary Oghur (Turkoman) had already
the form still characteristic of the south Turkish
dialects. Turkoman was already so different from
the other Turkish languages in vocabulary that
Turkoman and Turk were contrasted like Oghur
and Çigîl (l. 37; l. 253 infra).

Although in the first centuries of the Hijra
campaigns were undertaken into Turkish territory,
in addition to the defensive fighting against Turkish
raiders, the successes of the Muslim arms had little
influence on the conversion of the Turks. The
principle laid down by the Prophet for the Abyss-
sinians was applied to the Turks: "Leave them
in peace so long as they leave you in peace" (see
Goldziher, Mab. Studien, t. 270; l. 127; in the
first passage translated: "Leave the Turks alone
as they have left thee"; in another sense and in
somewhat different form the hadîth is quoted in
B. G. A., v. 316; vi. 262; Yâbûk, Muğâmam, l. 857
infra). Islam was adopted by the Turks in the ivth
(8th) century of their own free will. In 291
(904) the last great inroad of heathen Turks into
the frontier lands of Islam, the Ósmanî kings,
was driven back (Tabari, ill. 227-249); in 38
(992) Muslim Turks invaded Russia probably for the
last time. Of even greater importance was the
conquest of Asia Minor by the Muslim Sâdîqis in
the fifth (eleventh) century. Other sayings about
the Turks are now ascribed to the Prophet. He
is said to have remarked: "Leave the language of
the Turks, for they are destined to long rule" (Kâshghari, l. 3). Allah said to the Prophet:
"I have a host which I have called "Turk" and
settled in the east; if any people shall arouse my
wrath, I shall give them into the power of this
host" (cp. cit., p. 264). On the story of the adop-
tion of Islam by a numerous (200,000 tens)
Turkish people see KâSHGHAR, where also is the
suggestion that this story is connected with the
rise of the dynasty of the Ilek-ölâns [q.v.] or the
"race of Afzîayû". No source tells us from
what people this dynasty came; they and their
people are always simply called "Turks". In Kâ-
shghari also these rulers are simply called "Khân
kings" (âl-mlûk, âl-ölbâhâns, l. 37 inftra, or
simply khânâns, e.g. l. 354 infra). Khân was
adopted in the early decades of the fifth (eleventh)
century by the Muslim rulers of Kâshghar but
nothing is known of the exact date or any details
of the campaign. According to Kâshghari, an em-
named Djenkîš was the cause of the conquest of
Khotan (ill. 279). This shows that there was a
story then known of the conquest which has not
come down to us. In Kâshghari's time, the frontier
towns of Islam in the modern Chinese Turkestan
were Kisen or Kûcî (l. 336) and east of it "between
Kûcî and Uighur" on the hill-fortress of Bâgîr
(l. 301) in the north, Çerên (in Kâshghari, l.
364; Dürâhân) in the south. At a later date the
Turks living farther west were converted to Islam.
According to Ibn al-Âdîr (ix. 335 sq.), a Turkish
people which had its winter home near Ballâshûhîn
and its summer pastures in the vicinity of the
land of the Balghârs i.e. probably in the Ural
Their name is not given; in spite of the great
area covered by them, they were less numerous
than the Turks in Central Asia converted in 950.
According to Ibn al-Âdîr, they had only 10,000
people, according to Abu 'l-Fida (Mab. Studien,
ed. Reiske-Adler, ill. 120) only 5,000.

Some alterations in the ethnographic conditions
of the Turks were produced by conditions of
the Kipchaq [q.v.] from the Iriltish to the southwest as far as the Sr-Daryä and in another direction towards Eastern Europe. Just as the migrations of the Oghus explain the formation of the present group of South Turks, so probably the migrations of the Kipchaq explain the formation of the group of Western Turks. On the Sr-Daryä in the viith (xiiith) century we find the Kipchaq mentioned along with the Kanghi, and the distinction between the two is left very vague (cf. also J. Marquart, Osttürk. Diaskritistik, p. 78 and 172). In the time of Mahmud Kâshghâri there was not yet a people called Kanghi; the word Kanghi is there quoted (iii, 280) only once in the course of a great man among the Kipchaq". In the second half of the sixth (twelfth) century the Kipchaq had not yet adopted Islam, even when living close to the Muslim lands on the Sr-Daryä; in a document in which the arrival of a prince of the Kipchaq in Djand [see Sr-Daryä] is recorded, the wish is expressed that God may convert him to Islam (rassuğana Allâh 'in al-İslâm: cf. W. Barthold, Türkistan etc., i. 79).

Most information about the Kipchaq in Eastern Europe and about their predecessors, the Peçenegs and Oghus (Greek Ογδοσ, probably the Russian Torki; the Russian annals also mention the Berendelt, probably the Oghus family of Babamur; cf. Mahmûd Kâshghâri, i. 55), is found in the Greek and Russian sources. From the middle of the viith century in the Russian annals all Turkish peoples of Eastern Europe with the exception of the Kipchaq (Polojevi) are included under the name Černi Klobunî ("black caps") (cf. on this: D. Razowsky, in Seminarum Kondakivianum, Prague 1927, i. 95 sq.). Whether, as might be thought from the identity of the names, the karakalpaks are descended from the Černi Klobukî, cannot yet be decided. It would also be in favour of the western origin of the Karakalpaks (first mentioned in the xiiiith century) that, unlike the people of Central Asia, they lived mainly by cattle-raising. Although Islam had already conducted successful propaganda among the Peçenegs (J. Marquart, Osteuropäische und osteuropäische Streifzüge, p. 73), it made little progress among the Turks of Eastern Europe before the Mongol period.

In Central Asia, the spread of Islam was not checked by the foundation of the empire of the non-Muslim Karâ Khîlati [q.v.] nor by the persecution of Islam in the beginning of the viith (xiiith) century. At the time of the foundation of the empire of the Karâ Khîlati (soon after 1130), the principality of the Khan of Bâltâqân was still the most northerly Muslim country in this region; when the empire broke up there were Muslim kingdoms more of the ill also, namely that of the Karâq [q.v.] in Kayalîjî, and that founded by a member of the same stock in Almâligh near the modern Kuldî [q.v.]. In the time of the Chinese traveller Câng Cûn (1154), the town of Cûng-büla-i, i.e. the Uighur capital Djanbalâ, already mentioned by Kâshghâri (i. 103), was the frontier town of the non-Muslim lands to the west (E. Bretschneider, Medizinsaal Forschungen, i. 67 sq.); according to the Armenian Hethum (journey in 1254), "Djanbalâkh" was immediately east of "Khotaspi", the Khotukhâni of the modern maps, immediately east of Mânas (ib. cit., i. 169). The region of the modern Mânas was therefore the limit of the spread of Islam in Central Asia at this date.

In contrast to the lands of the modern Chinese Turkestan, which had long been under Turkish influence, the Turkisation of Mânwî al-Nâhr and Kâhtîrî only seems to have made appreciable progress after the Mongol conquest; this is suggested by the appearance of geographical names of Turkish origin like Karâ Kül on the lower course of the Zarathshûr (Narshâkhî, ed. Schofer, p. 17) and Karâ Sî (Tabâhîz Nâşî, transl. Raverty, p. 474) or Sî Kâri (Din al-Atbîr, xii. 222) in Kâhtîrî. Turkish culture was brought to Asia Minor and Adjârásbîdjan by the Sâlçûks. The Turks were probably settled here at first to guard the frontier and to fight against the Byzan
tines and the growing power of the Georgian kingdom (cf. Georgia). Nothing is known of the gradual progress of Turkish culture in these countries now completely Turkish (in Southern Persia the Turks have for the most part remained nomads, by the ninth (ixth) century the process had been completed. Saladin brought bodies of Turkish troops to Egypt, whence some of them found their way to North Africa and Spain; on the Turks in Spain see especially "Abîl al-Wâlijî al-Marrâkushî, ed. Dory, p. 210. These soldiers were of no importance for the spread of Turkish culture.

The foundation of the Mongol empire was of much greater significance for the Turks than for the Mongols themselves. In spite of all attempts by later writers to prove the contrary, the view of Abel-Rémusat (Recherches sur les langues tatars, p. 240) must be upheld that the area inhabited by the Mongols had the same western frontier at the time of the rise of Cîngiz Khân as it has to-day (with the exception of the much later migrations of the Kalmucks [q.v.]). Of the descendants of the Mongols who came westwards in the time of Cîngiz Khân and his successors only the Moghol in Afghanistan, whose dialect has been investigated by G. Ramstedt (Mogholla, in J. S. O., xxiii. [1903], 4), have retained their Mongol speech to the present day. Their habitats have not yet been exactly defined. Dr. Emil Trinkler (Afghanistan, Gottha, 1928 = Pet. et. Mitr. supple. 196, p. 53 sq.) in spite of all his enquiries found no Mongol speaking people in Afghanistan. Most of the Mongols have been merged in the Turks and thus strengthened the latter numerically and especially politically. Of special importance in the political history of the Tatars since the conversion to Islam in the xviith century was the kingship of the Golden Horde. By the end of this century, this kingdom had become completely Turkicised; its documents were written in Turkish, and Cuvass, which had earlier been spoken on the Volga, had given way to a pure Turkish language. After the break up of this empire, three new "Tatar" kingdoms were formed in Kazîn [q.v.], Astrakhan and in the peninsula of Krîm [q.v.], which only came under Islam and Turkish influences in the Mongol period. A new "Tatar" kingdom also arose on the Iriltish [q.v.] in Siberia, at the modern Tobolsk; this land now became instead of Bâlgar the outpost of Islam in the north. The word Tatar, originally applied to the Mongols, became the name of a Turkish people and, especially in the Crimes, was used by themselves. In Russia the word "Tatar" was given a very wide meaning, although not quite so extensive as in China and in European Sinology (cf. the prefix to Abel-Rémusat, Recherches sur les langues tatars). Down to the second half of the xviith century (W. Radloff, Asi Sibirien,
in the empire of the Mamlûka (q.v.) from Dîjûr Bakr (q.v.) to Ghazra (q.v.); a list of them is given by Khalîl al-Zâhirî (Zâhidî 'Alî al-Mamûlî, ed. Rayâsî, Paris 1894, p. 105). Only the family of Dulgâdîr (Turkish pronunciation from Dhu 'l-Ḳadr, q.v.) attained some importance; in the xvth century they founded a little kingdom of their own, as vassals of the Mamlûka.

In Central Asia, the Turkomans were not merged, like so many of the Turkish peoples mentioned in the early Mongol period, into the new formations of the Mongol period, although among the Turkomans there were migrants from the kingdom of the Golden Horde; this is indicated in the xviith century by the name of the tribe Sayîn-Ḳânî on the Caspian Sea (Turkomeniya, vol. i., Leningrad 1929, p. 47 sq.). The Turkomans were never able to form a state of their own in Central Asia, but it was only in 1884 that an end was put to their independence by the advance of the Russians from the north and the Afghans from the south.

In the xvith and xviith centuries, the Turkomans, like other Turkish peoples of Central Asia, notably the Kazak and Kirghis, suffered a great deal from the attacks of the Kalmucks, the founders of the last great nomad empire in Central Asia. The Kazak and Kirghis were driven out of a part of their lands by the Kalmucks; it was only after the destruction of the Kalmuck empire that the conditions that had previously existed there were restored. A section of the Turkomans still live in the government of Stavropol, into which they had been driven by the Kalmucks towards the end of the xviith century from their earlier habitations on the peninsula of Mangîshlak (q.v.). At an earlier period, the Turkomans fought unsuccessfully for this peninsula with the Noghai and later with the Kazak. In contrast to the Kazak the Kirghis had not their own khans, either on the Yenisei or in Semireye; Kirghis, the Kirghis on the Yenisei attaining their highest development only after the beginning of the xviith century, have remained quite unaffected by Islam, as have the Turkish peoples living in the Yenisei area at the present day, who after the Russian revolution took the name of "Khakas" (in its origin a mistaken reading of the Chinese transcription for Kirghis). The mountain peoples in the Altai on the upper Ob are also non-Muslim Turks. The Altai people (Altai Kîth) were called "mountain Kalmucks" by the Russians, but after the Russian revolution took the name of "Oirat", which properly belongs to the Kalmucks; their land is now the "autonomous Oirat territory". Completely distinct, even in language, from the other Turks are the Yakuts (who call themselves Saka or Sakha, probably connected with the ethnie Sagai in the Yenisei area) who were driven out of the Yenisei territory, probably not before the xviith century, into the valley of the Lena. The language of the Yakuts shows, in vocabulary and grammatical structure marked divergences from Turkish, although this language, unlike Caspian, is directly descended from the primitive Turkish language.

In the first half of the xviith century, all the lands from the Balkan Peninsula and north shore of the Black Sea to the Chinese frontier were under the rule of Muslim Turks. The economic life of almost all these countries at this period
showed a considerable setback, compared with earlier periods; nomadic life had developed at the expense of agriculture and especially of the towns; the future of these lands had also been undermined by the fact that world trade had taken other routes. The Turks were neither economically nor intellectually fit to cope with the rising power of Russia. Through the conquest of the Volga territory by the Russians (Kazan 1552, Astrakhan 1554), the connection between the Turks of Central Asia and their relatives in the west was broken; it was restored by another route but only for a short period—during the rule of the Turks on the western shore of the Caspian Sea (1578—1603). As early as the 19th century, Russia had laid down the principle that all the lands of Northern Asia should be divided between Russia and China; but this process of settlement was only completed by the Treaty of St. Petersburg of Feb. 12—24, 1881.

Islam as a religion [cf. e.g. Sakha] and Turkish as a language have made no progress under Russian rule; in the Caucasus, as well as in Central Asia, Turkish as a lingua franca is much more widely disseminated than before; the level of civilization has also been raised by the influence of European culture introduced by Russia. After the Revolution of 1917, and especially after the principle of nationality had been put into practice in 1924, republics were formed in Soviet Russia among the Turkish peoples also on a national basis under their own government and following their own lines of development. The Özbek and the Turkmen Republics form separate parts of the Union of Socialist Soviet Republics (U.S.S.R.), and the Adherbajdzhan Republic is a part of the Transcaspian alliance. Seven autonomous republics (the Krim-Tatar, Çuvas, Baskhir, Tatar, Kazak, Kirgis and Yakut republics) are members of the Russian Socialist Federative Soviet Republic (R.S. F.S.R.), as are four autonomous territories (the Karakal, Balkar-Kabardin, Karakalpak and Uigur region) with preponderantly Turkish populations.

With the carrying through of the principle of nationality the names of certain peoples have received meanings which they did not possess before. At one time, many Turks in Central Asia, especially the town-dwellers, were content to describe themselves as Turkish-speaking Muslims and inhabitants of a particular town; the question with what Turkish people they should be numbered was a matter of indifference; names which originally did not refer to nationality, like the word Sari [q.v.], were also used. This word has now been driven out of use, and the term Özbek is now used in a much wider meaning than formerly; those who used to call themselves-Sari are now called Özbek. Names have also been invented (on the word Khakas see above): the Tarantul [q.v.], who belong to Kaghchirka, and the Kaghchirlik now call themselves Uighurs; a name which does not belong to them historically, Uighurs never came so far west. Most of the Turkish peoples in Soviet Russia have joined the movement to introduce the Roman alphabet; the Çuvas, Khakas and Uigur refuse to join it and adhere to the Russian alphabet.

An attempt to estimate the total number of Turks was made by N. Aristow, Zemležiti ok stoljeću sveta, 1920, p. 170. According to Aristow, in 1885 there were about 26,000,000 Turks, but even he thought the figure should be higher. At the present day, the number of Turks living in Soviet Russia alone is about 16,000,000; the total therefore is probably over 30,000,000. Much higher figures have been given by Turkish publicists and statesmen: Ahmed Agyev, 70—80,000,000 (A. Samoylovich, in M., 1914, p. 450); Mustafa Kemal Pasja, 100,000,000.

II. THE TURKISH LANGUAGES.

1. The Classification of the Turkish Languages and their geographical Distribution.

The Turkish languages are divided according to their general phonetic characteristics into two main unequal groups: the R-languages (tıbük = nine) and the Z-languages (tevən = nine). Among the old languages, Bulghur or one of its dialects belonged to the first group; among modern languages, the Cuvash alone; but we find sporadic cases of z corresponding to r in all the Turkish languages. To the second group, the Z-group, belong all the other Turkish languages, ancient and modern, including Yakut. The question of the ethnic and linguistic origin of the predominating nationality in the nomad union of the Huns as well as those of other ancient peoples of Central Asia and eastern Europe (Shangpi, Avars, Khazars) is still uncertain or insufficiently elucidated. The languages of the Z-group were formerly dispersed over the territory corresponding to modern Mongolia, southern Siberia and the steppes of the Altai and later gradually occupied all the modern habitats of the Turkish peoples, from the Sea of Osbottok to the Mediterranean, except the Cuvash region.

The Z-group is again divided into two groups: the D-languages (ədək or ədəğ = foot) and the Y-languages (əvək = foot). The D-languages existed as early as the 6th century by Mahmut Kâshghar, but is much older. To the D-language belonged the following ancient languages: the Kiktu, Turkish in the strict sense and Uighur. This group is at the present day represented by a limited number of languages and dialects in Eastern Siberia, Mongolia and China proper and is divided into three sections: the T-section or Yakut (ədək = foot), the D-section or the Tanu-tuwin dialect, or Soyote or Ucran-Khoy, and the Karaghas dialect, related to the latter (ədək = foot), and the Z-section composed of the Kamasins, Koybals, Saghys, Kafins, Belirs, Khils, Cilm-Kukers, Shor and Saltz-Uighur (əmək = foot). The dialects of the Z-section of the D-division which at the present day are found in the northwest part of the Turkish world, existed, according to Mahmut Kâshghar, in Eastern Europe in the 12th century. The philologists of the middle ages writing in Arabic included Bulghar in the Z-section. A trace of one of these dialects is still to be found in eastern Europe in the name of the Sea of Asov (əmək = the "foot", i.e. estuary of the Don). According to Mahmut Kâshghar, the Əpčak
and Oghuz languages, spoken in the west of Central Asia and in Eastern Europe, belonged in the xi-ith century to the Y-division of the second great group of Turkish languages (äqâş = boast). At this date the division is the largest, for it is found over large areas in Asia and Europe, from western Siberia and the Altai to the Mediterranean (excluding the Caucaxious), Mahmud Kâshghar in the xith century noted a criterion for the establishment of two sections in this Y-division: äqâşqan and bâlam (remained). The latter section includes the Oghuz of the xith century and their modern descendants, pure or mixed: the Turkomans, the Aghbarâdjiaks and the other Turks of Persia, Anatolia and the Balkans, the Gagans of Bessarabia and the Tatars of the Southern Crimea, i.e. the S.W. part of the Turkish world. The Oghuz section of the Turkish language is distinguished by this criterion, bâlam not only from the first section of the Y-division (äqâşqan) but also from all the other Turkish languages except Caucaxious. The first section — äqâşqan of the Y-division — is much larger than the second, and the peoples of all the central part of the Turkish world from Tobol to Baghchïerar and from Kâsin (q.v. in the province of İsfân) to Turfan speak its dialects. The äqâşqan section can be further divided. It includes two sub-sections: tawîl and taghîkh (highlander). The criterion fî connects the tawîl sub-section with the bâlam section (in both mây = yellow, in place of tawîl of the northern division and the tawîl of the taghîkh sub-section) and with the Caucaxious, whereas the criterion to connects it with the Caucaxious (tî) and Yakut (â). Korsâz considered the correspondence of mây and açî to be very old and thought that the Turkish languages were originally divisible into two groups, the northern (mây) and the southern (açî). But this correspondence has not yet been attested by any ancient document. The dialects of the tawîl sub-section are represented in the N.W. part of the Turkish world by the Teleut-Altai-Teleng group and the Kamanî and Lebed dialects in Altai, by the Kiî rises (q.), Kâzâk and Karakalpak (q.) dialects, by some of the purest Osîbeg dialects, by the dialects of the Tatars of Tobol-Tumene and of Kâsar, of the Khârsâ, Baghchîs, Nogârs (of Astarishân (q.), of Stavropol, etc.), of the Kêmî of Daghestan (q.), of the Bashkirs of the Northern Caucaxious, of the Tatars of the Crimean steppes, of the Kàrâîts (except those that have been organised) and the Kirmâshaks (the Turkish-speaking Jews of the Crimea). The dialects of the section that form a transition between the tawîl sub-section of the Y-division to D, are represented in Siberia by the Çàffîm, Aba, Cernî (îñsî) which have y instead of i, but açî in place of mây and açî in place of i (aqâş, taghîkh). The taghîkh sub-section of the äqâşqan section, which we have just mentioned, is represented in the southeastern part of the Turkish world by the dialects of the settled populations of Western and Eastern (Chinese) and in part of Afghan Turkistân, by the Osîbeg dialects (except the Khâsian and those of the tawîl type), the Târâncî and those of the Turks of the oases of Kâshghar (q.), Khotan (q.), Turfan (q.), etc. This sub-section sometimes called, not very happily, Caghatâi shows a mixture of the northwest tawîl sub-section with the northeast D-division. The Özbek and Sart (of the turkized Iranians; cf. sart) dialects of the former Khânate of Khiwa (Khiwîzîm, q.v.) form a transition between the dialects of the southwest and northwest; their criteria are âqâşqan and äqâşqan.

2. General Sketch of the Turkish Languages.

The syntax of the Turkish languages is based on the following principles: the governing parts of a grammatical statement or of a group of statements follow the parts governed. This is the principal part of a statement — the attribute — is usually placed at the end, the completed parts follow the complement, and the qualified parts are placed after their qualification, the principal statements follow incidental ones. In keeping with this principle, the auxiliary morphological elements, which can historically be traced back to governing roots, follow the stems of the words to which they refer and cannot precede them. The auxiliary morphological elements represent a series of links starting from the post-positions which remain phonetically unchanged, to the formative and modificative prefixes, which unit with the preceding word to form a unit as regards accent and vowel harmony, which we shall discuss later. It is thought that the accent in Turkish languages originally fell on the first syllable, as is still the case in the Mongol languages. In modern Turkish languages, the principal accent usually falls on the last syllable but even now the first syllable still, particularly one with a broad vowel (a, e, o, ı, ü), retains a trace of the old accent in the form of a secondary accent, and is weaker in other dialects. By the existence at one time of an accent on the first syllable we can explain the fact of progressive vowel harmony which is of two kinds. First, by the law of assimilation, the posterior vowels (a, ı, ö and ı) are followed only by posterior vowels and the anterior vowels (e, o, ü, i) always by anterior; this assimilation was also extended to consonants, especially to ı, ı, ı: kâf stop âqâşqan, stopped; kîl, come, kîlgen, come (p.p.). In some dialects we see more or less weakening in this fundamental vowel harmony as a result of the influence of other languages, particularly Iranian (some Turkoman and Aghbarâdjiak dialects, the Turkish of Anatolia, and the iranized Osîbeg dialects). The harmony of the second kind is much less consistent than the harmony of the first kind: the assimilation between rounded vowels (ö, ü, ö, ü) or unrounded (a, e, o, i) are so rounded (ö, ü, a) remain unrounded. The non-rounded vowels are followed by un-rounded broad or narrow vowels: ı: know, ı: + ı: I knew; ı: + ı: + ı: ı: died; ı: + ı: + ı: ı: of five; ı: + ı: lake, ı: + ı: + ı: of lake.
TURKS

It is only in some dialects (e.g. the Kura-Kirghiz) that the vowel harmony of the second class is extended to all the broad vowels, while in others (e.g. in Kirghiz-Kazak) to the anterior broad vowels (ə, ə) only: bol = lake, bol = der = the lakes (in both dialects) but bol = hand, bol = der (Kirghiz-Kazak) and bol = der (Kara-Kirghiz). Harmony of this kind has attained its greatest development with regard to the narrow vowels in the Turkish and Staminal, in which, however, it does not affect the broad vowels.

In the Turkish language there are nine fundamental vowels: a, ä (open), e (closed), ə, æ, ê, i, u, ü. There used to be long vowels, which did not attract sufficient attention except in Ayak and Yuktan. In some languages (e.g. the Kazan-Tatar) the number of vowels is over nine and the series has undergone modifications (ør, ø, ø, ø, ø, ø, ø, ø).

The Turkish consonant system has not yet been sufficiently studied either; and sufficient attention has not been paid to the existence, in addition to mute and sonant consonants, of middle consonants (e.g. in Turkoman and Adjharabjadian).

The progressive assimilation of the sonant vowels with mutes and vice-versa is widespread: yaw + di, he has written; taw + ti, he has seized; kaw + da, in the eye; kaw + za, on the head.

There are other kinds of progressive assimilation of consonants. Cases of progressive dissimilation are features of certain dialects only (e.g. Kazak, Kirghiz, Altai): ata + tar, the fathers; bol + der, the lakes. A very distinctive feature of the Yakut language is the regressive assimilation of consonants: at + in, my horse; at + la, thy horse; but a + gor, to my horse; a + mat, from thy horse.

In the majority of the dialects the only initial sonant consonants are k, g, and exceptionally n and d; the sonants d, m, g are found initially in Turkoman, Adjharabjadian and in Anatolian Turkish and were found in the Oguz of the 14th century. Words cannot begin with the consonants r, l, s (the latter, except in loanwords, is only found initially in a few onomatopoeic words) nor with two consonants. Two consonants at the end of a word are only admissible in cases where the first of them is r, l, s.

This is why we find supplementary vowels in loanwords: árszalg < árszalg (Arb.), istáq < isteppe (Russ.), šibir < šibir (Arab.).

Morphological formations or modifications are, as we have already said, produced by the addition of one or more formative or modificative suffixes to the verbal or nominal roots and to stems, which, even without this accretion, have a certain definite meaning: the verbal stem, the 2nd pers. sg. with imperative meaning (top = find) and the nominal stem — that of the nominative, genitive, accusative and some other cases of the sing. or plur. (a dynam, apple, of apple, the apples). Cases of formation by analogy are also found: bér = one, bér + a = by one, and by analogy: bér = two, bér + dör = by two (Chaghatay); or bér = five, bér + a = by five, and by analogy: alt = six, alt + a = by six.

There are two fundamental grammatical categories: the noun and the verb. Nouns are divided into pronouns, numerals, and nouns in general; there are no special morphological features for the adjective. Nor can one make a sharp distinction between nouns and adjectives, e.g. teto = iron and of iron, teto = stone and of stone, in =

water and pertaining to water. The adjective forms with the noun it qualifies a grammatical whole; thus the suffixes of the plural and of the diminution are added only to a qualified noun while the adjective is un declined. The verbal forms are divided into: 1. finite verbs, very limited in number, 2. verbal nouns having the meaning of nouns of action or of agency and 3. verbal adverbs (gerundives).

The adverbs of nominal or verbal origin are very few in number and like the postpositions and interjections form a secondary grammatical category, in addition to the nouns and verbs.

The possessive suffixes in the nouns correspond to the possessive pronouns of the Indo-European languages: at + in = my horse, at + al = thy horse, at + if = his horse, ata + m = my father, ata + a = thy father, ata + if = his father, ata + in = our horse, at + in = your horse, ata + an = our father, ata + am = thy father. The same suffixes in certain verbal forms are used as personal endings: kelt + gu + m, I shall come, kelt + gu + a = thou wilt come, kelt + gu + if = he will come (Chaghati); kelt + al + m = I came, kelt + al + a = thou didst come, kelt + al + if = he came.

The predicative (enclitic) semi-suffixes, derived from personal pronouns are used in certain dialects, having been influenced by the possessive suffixes, in the nouns to the substantives of the Indo-European languages while the verbs take the most used personal endings: 1st pers. ben, men, bin, min, in, ion; 2nd pers. cen, sin, sin; pl. 1st pers. bis, us, is, mis; 2nd pers. sin, sin. Examples: ádghu-ber (bin, min, m) > úgipim 1 am good; yuwar-ber (m), men, min > yuar-ber (m) I write. In the old language the demonstrative pronoun o = was used in the third person of the substantive verb: ádghu + o, he is good; in the modern languages — the predicative semi-suffix atir (dit), from the verbal from tarur = he is erect.

The suffix of the plural fear, feur is used with nouns as well as with verbs: at + tar (at + tar) — the houses, at + if + tar — they have thrown.

The personal verbal forms are formed as follows: in the imperative from the pure verbal stem; in the other cases from the stems of one or other mood or case. In addition to the possessive and predicative suffixes, special suffixes are also used as personal endings, e.g. na, na, na, na, na, na, na, the 3rd pers. of the imperative, j, a, for the first pers. of the plural of the preterite and conditional in the modern dialects (kelt + al + j, we have come, kelt + an + j, if we had come). The latter suffix (j, a) is used in the Adjharabjadian dialects, in some Anatolian dialects and in the Gokkent dialect of Turkomian, instead of the predicative enclitic of the first pers. plur. of nouns and verbs.

In the majority of the modern Turkish languages there are five cases in declension with special terminations: genitive (nit, nit, nit, nit, nit), accusative (i, i, old g), dative (ka, a, a, yot, aor, aor), locative (oa), ablative (das, das, das, das), but in the old languages and in some modern ones there were also suffixes for the directive, instrumental and other cases.

Grammar as gender does not exist; there are only two numbers.

The differences in phonetics and vocabulary are more marked in the Turkish languages than those of morphology. Cuwash and Yakut occupy
a position apart; all the other Turkish languages may be regarded as dialects and variants of a single language.

The Turkish languages show considerable conservatism in the whole extent of their known history (from the viith century). The comparative historical study of the Turkish languages is still in its initial stages (the works of Radloff, Groenbeck, Thomesen, Melinrantski, Bang, Brockeckmann, Deny). As a result of the researches of Ramstedt, Gomboé, Németh and Poppe, it may be regarded as more or less proved that the Turkish languages are related to the Mongol and Cauwagh closely allied to both. A new light has been thrown on the past history of the Turkish by N. Marr, who has examined Cauwagh from the point of view of the Japhetic theory and places the Turkish languages in a group not any larger than that proposed by the earlier theories of the Turanists.

3. Literary Scripts and Languages.

The oldest dated monuments of Turkish writing date from the eighth century. These are the inscriptions on the steles erected in honour of princes of the Turkish dynasty of the sixth—seventh centuries, Kük-Tegin and Bilge-Khan, found in 1869 by Radloff in the valley of the Orhon in Mongolia. Other inscriptions in the same script, large and small, are known in Mongolia, Siberia and Western Turkestan. The Siberian monuments were discovered in 1854 by Messerschmidt in the valley of the Venise. Manuscripts in the same hand, approximately of the ninth century, have recently been found in excavations in Chinese Turkestan. This script, deciphered in 1893 by the eminent Danish linguist V. Thomesen, was given by him the name of Turkish runes. Others have called it the Orkhon alphabet. The name "Kük-Turkisch" proposed by W. Bang for the Orkhon inscriptions has been rejected by Thomesen, Radloff and others. The Turkish runes are derived from the Arahamatic alphabet through the intermediary of the Old Boghdian alphabet; but some of them have an independent origin and are ideographic in character, e. g. v (f) = arrow, (v) j = moon, (v) 0 = house. Some documents in Turkish runes may be dated to the seventh or even the sixth century a.D.

The language of the Turkish runes, whether on stone or in manuscripts, is distinguished by a certain archaism in its phonetics (the sounds a, j, in morphology (by the directive and instrumental cases, genitive in -iš, ablative in -išt, verbal forms in -šar, -šna), and in vocabulary (šana = father, šag = mother).

The Uighur alphabet, which came into general use in the viith—ixth centuries among the Turkish people of the Uighurs, is derived from one of the northern Semitic alphabets, also through the intermediary of the Sogdian; it has been wrongly suggested that it is derived from the Estranghel. The Uighur literary language belongs to the same group as the Turkish of the Mongol monuments but with certain dialectic differences (genitive in -iš, ablative in -išt). The Uighur xylographic and manuscript literature, found by the English, Russian, French, German and Japanese expeditions, is very vast. In addition to the Uighur alphabet, the ancient Turces of Chinese Turkestan used Turkish runes, Manichaean, Syriac and Brahmi alphabets. Among the Turks of China, who did not adopt Islam, the Uighur alphabet remained in use down to the beginning of the xvith century. After the conversion to Islam of the Turks of Central Asia followed by the adoption of the Arabic alphabet (tenth—eleventh centuries), the Uighur alphabet remained in use as the court manuscript. It was used in the xith—xvith centuries among the Golden Horde and among the Timurids for the Kipchak and Chaghatay languages (Yarlik, works in prose and verse). At the beginning of the xivth century, there were still at Istanbul experts in writing Uighur (Abd al-Ra’ajjak Bakhsh). In Western Europe, Klareth, Rémusat and Joubert began to read the Uighur script in the first half of the xith century.

Founded on the literary Uighur of the pre-Islamic period, there developed in the lands of the Ilek-Khan (q.v.) or Karakhanids, converts to Islam, the Turkish literary language of Central Asia of the Muslim period written in the Arabic alphabet. It may be supposed that Arabic was the script of the original of the oldest document of this language known to us, the Kudagh-sh bigger ("the science of giving happiness"), a didactic poem of the eleventh century, composed by Yusuf Khudj Haidji (q.v.) at Bulghar and Kuchbahr. The language of this work, which has come down to us in two later copies in Arabic and one in Uighur script made at Herat in the xivth century, cannot be considered as pure Uighur. M. Krüppelhilde regards the language of the Kudagh-bigger as Karluck but it would be safer to call it Karakhnîid.

Data are lacking to enable us to decide if there was a literature in the Bulghar language in the Bulghar kingdom on the Kama where Islam was established in the tenth century. In any case Bul-
The development of the literary Turkish of Central Asia went on without interruption from the eleventh century but its centre changed from time to time. We may date to the sixteenth century the didactic work in quatrains by Edib Ahmed entitled 'Ahit "ul-Kh affili', the language of which is closely related to that of the Kuvait-bilg, without being identical with it. The absence of early manuscripts prevents us giving a definite name to the language of the Hikmet of Ahmed Ilemer (thirteenth century), the founder of Turkish mysticism, whom M. Köprüsüzade takes to have been a Karakahan Türk. Literary activity in the different parts of the Djibid kingdom or "Detshkêpiç", in Khwarizm which included the mouth of the Sir-Daryâ [q.v.], in the capital Saray [q.v.] and in the Crimea, had attained a considerable development by the beginning of the sixteenth century. A uniform literary language did not come into use in the Djibid state; in all the literary materials of this epoch which we possess, the different parts of the literary language of the Karakhanid period are combined with those of local dialects still living, Kipchak and Oghuz (Turkoman). The copy of the romance in verse of the sixteenth century in the Bibliothèque Nationale in Paris, the Khârâv a-Marin of the poet Kûth, an imitation of the corresponding work of Nisâmî, dedicated to Tendik and his wife of the White Hordes, is a literary language very close to that of the Kuvait-bilg but showing also Kipchak (sinali village etc.) and Oghuz elements. Khârâvâ's poem Mezâhkeb-mawâns, written in the sixteenth century on the Sir-Daryâ and preserved in two copies of the sixteenth and seventeenth centuries in the British Museum, reveals far more Kipchak and Oghuz than Karakhanid linguistic elements.

In the sixteenth century in the Turkish Muslim world the different literary languages were not yet clearly separated from one another. The formation of the Mongol empire which embraced almost the whole Turkish world of the period created for a time an atmosphere favourable to the development of a uniform literary language for this part of the Muslim Turkish peoples. In its beginning literary activity in the Turks in the lands of the Sultân of Asia Minor was no doubt to some degree bound up with that of Central Asia and Eastern Europe. It would be very difficult to determine exactly where the romance in quatrains of the sixteenth century by a certain 'Ali entitled Kist-i Vüsurf was written; its language has much in common with the literature of the sixteenth century of the Golden Horde, in which the Oghuz-Turkoman shared, and it later became very popular in the region of the Volga. Differing from Brockelmann, who connects the Kist-i Vüsurf with the literary products of Anatolia, Merdijana, a Kazan scholar, thinks it is Bâlghar. The language of the prose work of the sixteenth century with passages in verse called Kışpi ul-Bulushi, written by Rahîb-i Oghuz, is closely related to the Karakhanid language. It would not be correct to call it language Kâ الولايات. The Syriac Christian Turkish inscriptions on the tombs of Semirzeh of the sixteenth centuries are in a language closely resembling the Karakhanid (if = bull, ven = horse, gërmânes = this world, atu = father, ana = mother).

We may date in the sixteenth and seventeenth centuries the beginning of the development — starting from the Central Asiatic Turkish literature which we may suppose to have been the only literature of the period — of the different literary languages of different parts of the Muslim Turkish world. The greatest development was that of the Ottoman Turkish and Câghištâ Türkili Turkish literary languages. The first goes back to Central Asiatic Turkish literature through the Anatolian Turkish literature of the Sultân period. Câghištâ Türkili represents the third, longest (sixteenth—seventeenth centuries), and most brilliant phase of the development of Central Asiatic Turkish literature and takes its rise directly out of the second phase, the Djebid. The Câghištâ Türkili language developed in the lands of the Timurids, which consisted of the second son of Čingiz Khân, Câghištâ [q.v.]. The Kipchak and Turkoman elements of the preceding phase of development of the literary Turkish of Central Asia were replaced in Câghištâ Türkili by living elements from the predominant Turkish dialects of the Câghištâ country. The emperor Bâsar says that the language of the most distinguished figure in Câghištâ Türkili literature, Mit 'Ali Shîr Nâsil, is identical with that of the dialect of the town of Anadilân. The Câghištâ Türkili poetical language was distinguished from that of prose by its morphology and its vocabulary.

Until lately some scholars have used the term Câghištâ [cf. Câghištâ Türkili literature] wrongly by applying it to the language of the literary monuments of the sixteenth century as well as to the living Turkish dialects of Western and Eastern Turkey. A renaissance in Câghištâ Türkili literature, prose and poetry, was observable in the sixteenth and early seventeenth centuries in the vizireys of Khâshkan and Khwa. At the present day in Osebegistan Câghištâ is giving way to the Asebeg Türkili language, the fourth phase of the development of Turkish Central Asiatic literature, the sphere of which has been considerably restricted by the coming into use in the seventeenth century of new literary languages by the peoples of Central Asia. Even in the seventeenth century, the historian Abu'l-Ghazî Khân wrote in Khwa in Osebeg and not in Câghištâ, contrary to the tradition of the time.

The Turkomans of Central Asia, who took part in the foundation of the literary language of Khwarizm in the time of the empire of Djebid, had in the centuries following their own literary language, especially for poetry, which after the sixteenth century came under Câghištâ influence and did not develop further. In our own day there is growing up in Turkmenistan a new literary language based purely on living Turkoman dialects (particularly Òkê and Yomun).

Ağharbâdâjî (Aser) developed among the Turks of Persia from the same stock as the language of the Sultân of Anatolia; after a short period in the sixteenth century under the patronage of the early Safavids [q.v.], it continued in existence in the following centuries, without being able to make progress against the influence on the one hand of Persian culture and on the other of Ottoman Turkish. The rehabilitation of Agharbâdâjî, which is closely related to the spoken dialect, began in the middle of the sixteenth century in Transcaucasia (Mîrîân Fâth 'Ali Akhîndowî). It became strongly influenced by Ottoman Turkish at the beginning of the seventeenth century and the result has been two rival currents which still exist at the present day.

In spite of the division of the division of the Golden Horde into different Khânates in the sixteenth century, the
Crimea retained a literary language based on Kipchak and known to the Ottomans as Crimean or Deaht (steppe), but the influence of Ottoman culture, felt especially in the historical literature and belles-lettres, interfered with its further development. The official language of the Khaan's chancelleries in the Crimea retained down to the xvith century the Djidid tradition to a great degree. At the end of the xixth and beginning of the xxth century Mizra Gasprinskii tried to establish a Pan-Turkish literary language in the Crimea, based on a simplified Ottoman and closely resembling the living dialect of the south of the Crimea. Gasprinskii's paper, the Torgijumun, circulated as far as Kâshgâr in the xixth century, as in Adjarbâidjân the struggle between two rival influences, Ottoman and local, still goes on in the literary language, and the situation is complicated by the fact that the living dialects of the Crimea belong to two different groups, southwest and northwest.

The Djidid literary language was also inherited by the khanate of Kazan where it was influenced by Çaghatay and old Ottoman and in the xixth century by modern Ottoman. In the second half of the xixth century, since Kayum Naşiri, there began among the Tatars of Kazan a movement to link up the literary language with the local dialect. The movement, in spite of the opposition of followers of Gasprinskii, has attained complete success. A barrier has now also been set up against infiltration of Russian influence into the Tatar literary language, which used to be very marked in certain places, not only in vocabulary but also in syntax. The Tatar of Kazan is used not only among the Tatars but also among the Mighars and the Noghais of Astarâkhân; before the foundation of the Bashkirk republic, it was also used by the Bashkirs and Tepters [cf. Tekvtar]. The Bashkirs at the present moment are creating for themselves a literary language of their own, but without completely avoiding the struggle between various tendencies of which the most powerful is one which takes a middle course and refuses to base the literary language on dialects having too pronounced peculiarities in phonetics and vocabulary. The Kazan-Tatar literary language is the most developed and most stabilised, next to the Turkish of Anatolia, and like it enjoys a popularity which reaches far beyond the boundaries of the Volga region.

Literary Turkish languages began to increase in number especially after the Russian Revolution of 1905 and still more after that of October 1917, with the awakening of national sentiment and the consciousness among the different nations of the Turkish world of possessing a culture of their own. The literary (Kîrghiz-)Kazâk language, young, but rich and flexible, developed considerably at the beginning of the xxth century. It is comparatively free from Arabic and Persian borrowings and, in close touch with the popular dialect, uses the Arabic alphabet ingeniously reformed by Baytursun. With the foundation of the Kîrghiz republic, the (Kara-)Kîrghiz have undertaken to create a literary language of their own, distinct from (Kîrghiz)-Kazâk.

In the northern Caucasus is being formed the Karaçal-Balkarian literary language, the development of which is hampered by the scanty population and the proximity of more developed languages, Crimean and Ajarbashânî. The latter shows its influence still more in Dagestân, where it is on the point of being recognised officially and is offering serious competition to the young local literary language, the Kumîl, which began to develop in the xixth century by outstripping Arabic, which was the language in every day use in Dagestân.

As to the alphabet, two forces are at present at work against one another in the Turkish Muslim world. One advocates the Arabic alphabet reformed to fit the Turkish phonetic system and has succeeded in giving new Arabic alphabets to the Kazan-Tatar, (Kîrghiz)-Kazâk, (Kara-)Kîrghiz, Õzbek, Turkoman and Crimean languages. The other is in favour of a Latin alphabet with additional letters for all the Turkish languages. It has been well received in Turkey itself, has gained a decisive victory in Ajarbashânî, where the movement started in the middle of the xxth century, and it is still making progress among the other Turkish peoples. The new Turkish uniform alphabet based on the Latin was formally adopted in 1927 by the Turkish Muslim peoples of the Soviet Republics.

The oldest Turkish writing found in the Runic alphabet had Semitic features and in many cases did not indicate the vowels (lguhn = bagban, yâh = yâh, ëlînhm = ëlînhinâh), the sound a being indicated in the first syllable only when it was long (t = at, horse; a = at, name). In the Uighir alphabet, the vowels were marked more frequently than in the Runic and more precisely than in the Arabic alphabet used later: to distinguish the sounds ë, ë from the e and a, to the latter was added the letter š: ë = ë, ë. Under the influence of the Arabic alphabet, this practice was dropped from the Uighir writing of the Muslim period. The notation of consonants in the older Uighir writing was more precise than in the later alphabet, which used the letters چ and ş indiscriminately and introduced other simplifications, which led Radloff to defend the erroneous Uighir consonant system, later corrected by Thomsen. Uighir orthography as regards vowels, with the exception of the special notations for ë and ș, was adopted in Central Asia at the time of the adoption of the Arabic alphabet and henceforth a distinction was made between Çaghatay and Ottoman orthography. In Asia Minor under the immediate influence of Arabic orthography a special Turkish orthography became established which was very characteristic of the old Ottoman writing (no indication of vowels, use of Arabic harakat's etc.). In later centuries, some of these Arabic orthographical peculiarities were, it is true, abandoned but to the present day Ottoman orthography is distinguished from Çaghatay by a considerable restriction in the indication of vowels (Ott. bt = Çag. bût; Ott. br = Çag. bûr) and the use of the Arabic characters ی and ئ to mark the sounds î and ô in words of Turkish origin, in combination with posterior vowels (m = water = Çag. mâ; ëç = mountain = Çag. them). The old Kazan-Tatar orthography was based on that of Central Asia but in some cases also it showed the influence of old Ottoman.

The movement for the reform of orthography in the form of the adoption of a phonetic script began to make itself felt in the Turkish Muslim world from the end of the xixth century. It has had most results, not in Turkey but among the Turkish peoples of Russia, and particularly among the (Kîrghiz)-Kazâk. The Turcological congress
of 1926 at Baku decided in favour of a mixed orthography—a combination of the phonetic with the cymological—for the establishment of which steps have now been taken with the help of the reformed Arabic alphabet and the new Turkish Latin alphabet.

The modern non-Muslim Turkish minorities, Çuwaan, Yakut, Turks of the Altai and Veniseli were, until quite recently, to be classed among the illiterate peoples, although the Yakuts preserve the tradition that they possessed an alphabet in olden times and although among the Turks of the Altai the Mongol alphabet as adapted to the Turkish language is still used, although to a very limited degree. All these peoples received from the Russians in the xviiiith and xixth centuries, the Russian alphabet, slightly adapted to their particular requirements. In 1917 the Yakuts replaced the Russian alphabet by a Latin one based on the international phonetic alphabet and prepared by a Yakut student, M. Novgorodov. The Tannau-Tuwa (Ouriangkhis or Soyots) are who are much under the influence of Mongol culture are at the moment trying to develop a national literary language and to choose themselves an alphabet.

The Greek alphabet used for the Turkish language from the ninth century in the Turk Bulghar kingdom on the Danube was quite recently in use among the turkicised Greeks of Anatolia and Samos. The turkicised Armenians have adapted the Armenian alphabet to the Turkish language. There are Adharabidjians manuscripts written in the Georgian alphabet. The Karaites who speak Turkish have from early times used the Hebrew alphabet.

4. Turkish Borrowings from neighbouring languages and vice versa.

In the pre-Muhammadan monuments of the Turkish languages we find words borrowed from Chinese, Sogdian, Sanskrit and the northern Semitic languages. Foreign influences may even be observed in the syntax of these manuscripts, especially in passages which are translations from other languages. In the modern dialects of Siberia and Mongolia, especially in Yakut, there are a number of Mongol elements which have come in by direct borrowing as well as through mixture of races. It is by the latter means that the paleo-Asiatic linguistic elements and other elements not yet elucidated have entered these dialects. The name of the river Venisei, Kram, known from the time of the Orkhon inscriptions, comes from the Kot language where it means "river" as in the modern dialect of the Soyot Turks. Finnish elements are found in the Turkish dialects of the Volga region. At the time of the foundation of the Mongol empire of Çinghis-Khan (q. v.), a certain number of borrowed Mongol words found their way into the majority of the Turkish languages. It was in this way that the old Turkish word yâlur "halter," preserved by the Yakuts, Soyots and the Turks of Anatolia as well in the women's language, was used in the Altai Turk, was gradually ousted in the xixth century by the Mongol word yâlur, which is now used in all the other Turkish languages including Çuwaan.

The Turkish dialects of the Ozbek, Turkomans, Adharabidjians and of the Turkish tribes of Persia show considerable Iranian influence as a result of the intermingling of races and cultures. As a result of the complicated mixture of the Turks with other races of Asia Minor and the Balkan Peninsula and of the cultural borrowings, we find in the language of the Turks of Anatolia and the Balkans, Greek, Slav—especially Serb—Armenian, Kurd, Italian, French and other elements in addition to Arabic and Persian. The mixture of the Turks with the natives of the Northern and Southern Caucasus has introduced into their dialects elements from the phonetics and the vocabulary of the Caucasian languages. The Turks who entered Syria and Egypt have been very strongly influenced by Arabic, as have the Khams of Dagestan, among whom, unlike other Muslim Turks, the names of the days of the week are Arabic and not Persian. In the other parts of the Turkish world, the adoption of Islam brought more Persian than Arabic words. The Arabic and Persian loanwords in the Turkish literary language are sometimes almost fifty, but they also found their way into the popular dialects of Turkish tribes but little influenced by Islam, like the Karak and the Kırklı (ten = body, lam = soul).

A certain number of Arabic and Persian words have also found their way among the non-Muslim Turks, not only among the Çuwaan, but also among the Turks of the Altai and Venisei and even through the intermediary of Russian among the Yakuts (omşar = omhår). The influence of Russian makes itself especially felt in the Turkish dialects of the Volga region and among them in Miphar in particular, but there are Russian loanwords in all the Turkish languages of the U. S. R.
The Turkish languages in their turn have from early times influenced the neighbouring languages, beginning with Chinese. There are Turkish words in the Mongol languages, in several Finnish languages (especially Ceremis and Magyar), in the Iranian languages, in modern Arabic, in Armenian, Georgian, Kurdish, Greek, Albanian, Rumanian, in the Slav languages of the Balkan Peninsula and of Eastern and Western Europe. History records fewer cases of the loss of their language by a Turkish people (the Bulgars in the Balkans, the Kuman in Hungary, the Tatars in Lithuania, the Dungan in China and the Turks in India) than of cases of the Turkicisation of other peoples: in Siberia, in Central Asia, in the Caucasus, in Asia Minor, in the Balkans and in Eastern Europe (the Magyars). We find Turkised gipsies in Turkey, Transcaucasia in the Crimea and in Turkistan.

III. ÇAĞHATAI LITERATURE.

Under the influence of the brilliant development of Turkish literature in the Çaghātāi kingdom [cf. Şahbib Erzurumlu] during the rule of the Timūrids, this eastern Turkish literary language has been given the name "Çaghātai" in the east itself, as well as in European literature. In an anonymous Turkish work (probably written in India, Brit. Mus., Or. 1912; Rieu, Cilt. Türk. MSS., p. 268), all Turkish dialects are divided into two languages, Çaghātāi and Turkoman. Ibn Mahāниз (Turk. ed., p. 73; Melioranski, Arab. Belog, p. xx.) uses the word "Türkistinšah" in the same sense. The language of the Turks is said to have come from Turkistan just as Arabic came from the Hijāz. The "language of the Turks of our (presumably Persian) lands" is also contrasted to Türkistinšah as well as to Turkoman. In Radloff's Wörterbuch (iv. 15), the word Çaghātāi is quoted only in the form Daghātāi and as an Ottoman word; cf. also Şahīk Salāmān Bāģārī, Lughāt-i Çaghātāi wo-Turkī Əlbəltān, Istanbul 1297-1300; abbreviated edition with German translation by Dr. S. Kinos, Budapest 1902 (Publ. Scrit. Orient. 22 Sec. Ethn. Honr.).

Radloff (Zap., iii. 1 1901) presumes a purely eastern origin for the Çaghātāi literary language. The Uighar alphabet and literary language had survived from the pre-Muhammadan period among the Muslim Turks; through the adoption of many Arabic and Persian words the Uighar alphabet gradually fell into disuse; we have books written in "pure Uighur" language but in the Arabic alphabet, such as the Kitāb al-Amīrī of Rāghbūrī written in 710 (1310-1311) (Radloff in the introduction to his edition of the Kadibah-Bihār, p. 1xxvii. has tried to show that the "İlek-Khāns") in whose lands the earliest Muslim works in Turkish were written are "without a shadow of doubt to be regarded as Uighur rulers". In the period of the Mongols the Uighur alphabet and language were widely disseminated. Many "pure Uighur" words and grammatical forms were in this period driven out of use by borrowings from "Central Asian dialects"; but there are still in Çaghātāi words and forms of Uighur origin, which are only used in the literary language. As the Eastern Turks, unlike the southern Turks (Constantinople), had no common literary centre, the Çaghātāi literary language has been influenced in different districts by various local dialects.

In contrast to this view it has now been proved (notably by A. Samoylovitch in Mir-All-Shir, Leningrad 1928, p. 1 1928) that already in the pre-Mongol period in addition to the oldest Muslim centre of Turkish literary activity, Kāshghār [q. s.], there was a second literary centre in Khorāsān and on the lower course of the Sir-Daryā. This region retained its importance in the Mongol period under the rule of the Khāns of the Golden Horde. The literature of the Çaghātāi kingdom seems not to have arisen till later and to have been influenced by the literature of the Golden Horde. Dīmāl al-Kurāshī, the author of the Muḥājīl al-Tarīkh written in Kāshghār, made the acquaintance of the learned Shaikh al-Islām Hušām al-Dīn Abu 1-Māsamī Hindī b. ʿAṣīm al-ʿAṣīm al-Bārūtnī in 672 (1273-1274) in Bārūtīn (also called Bārūdn̄ and Bārūtn̄) on the lower course of the Sir-Daryā. In addition to theological works in Arabic, the Shaikh also wrote verses in the three literary languages of Islam (this is probably the first time we have them classed together like this); his Arabic verses were of beautiful form (fajāba), his Persian ingenious (maṭla) and his Turkish is keeping with the times (atāla). To the frequent recurring (as early as the Kādib Bāgātā of Ahmad b. Aḥā Tāfīṣār, ed. Keller, p. 158) contrast between the perfect form of Arabic writings and the ingenious ideas of the Persian is now added the truthfulness of Turkish; and indeed the works of the Çaghātāi poets by their simpler language and more simple train of thought give an impression of being more true to life than their Persian models (cf. E. Berthels, Nemūsāt ʿAffār, in Mir-All-Shir, p. 24 1947, esp. p. 80).

Among the works written in the kingdom of the Golden Horde, Khwārizmī's Muhābbat-Nāma (written in 754 = 1353 on the banks of the Sir-Daryā) had a direct influence on Çaghātāi literature. Besides the Brit. Mus. MS., Add. 7914, Rieu, Türk. Men., p. 284 sq. we also have the Muhābbat-Nāma in the Uighur manuscript written in Ragjāb and published in 835 (March-April 1430) in Yezd for the emir Djalal al-Dīn, Or. 8193 (Comptes Rendus de l'Acad. des Sciencies, 1924, p. 57 sq. ; J.R.A.S., 1928, p. 99 sqq.). The Tūṣhāhīm-Nāma of the Timūrid prince Sīdī Ahmad written in 839 (1435-1436) (in the same MS., Add. 7914) is modelled on the Mahābbat-Nāma.

A few Turkish poets who lived in the Çaghātāi kingdoms are known of the viith (xivth) century; Timūr's contemporary, the emir Saif al-Dīn, is said to have written five poems in Turkish and Persian
under the pen-name of Saiif (Dawlat-Shah, ed. Browne, p. 168). What has survived to us belongs to the
sixth (xviith) century, the period of Timur's immediate successors. Sakkalt was a panegyrist of Halil Sultan (1405–1409) and Ulughbeg (1409–
1449) (Brit. Mus., Or. 2070; Rieu, Turk. Man., p. 284). Ulughbeg is also mentioned by the poet
Lutfi, some of whose poems have been included in the Uighur MS., Or. 8193 (more fully on Lutfi: Rieu, Turk. Man., p. 285 and 287; Ahmad Zaki
Walidow, Daghansky poet Lutfi i ego disan, Kazan 1914). Both poets speak of themselves with
great pride. Sakkalt says to Ulughbeg: "It will be many years before such a Turkish poet as I
and such a learned prince as thou appear again". Lutfi says: "The Khán Ulughbeg knows how to
appropriate the services of Lutfi, whose brilliant poems are not inferior to those of Salmun" [q. v.]
(text in W. Barthold, Ulgخذ, St. Petersburg 1918, p. 112 sqq.). To the same period belongs
the panegyrist of another grandson of Timur, the prince of Fars, Iskandar Sultan (b. 817 = 1414).
Mr. Haldar Madjdilah (Dawlatshah, p. 371; Rieu, Cat. Turk. Man., p. 285; A. Pavet de Courteille, in
to the Malakm al-Azwar of Ni'mat (G. F. Fk., ii. 241 sqq.). Parts of it have been published by
Pavet de Courteille from a manuscript in Uighur
(now in Berlin). This poet also says that earth
and heaven have been filled with the echo of his
songs. Two other manuscripts written in Uighur
belong to the first half of the sixteenth (xvith)
century: the Bakhshyr-Nama, MS. of 838 (1435)
in Oxford (G. F. Fk., ii. 324), and the Mradd
Azwar, with a Turkish translation of the Tashkhirl
al-Anfal of Fargh-i Din Al'Afaaz [see 'Afaaz'],
manuscript said to be (the Turkish year does not
agree with the year of the cycle) of 1059 Djamad II,

In the second half of the sixteenth (xvith)
century Caghatâti literature reached its zenith in Mir 'Ali Shir
(b. 844 = 1440–41, d. Sunday, 11th Djamad II,
960 = Jan. 3, 1501). On the significance of his
career and literary interest cf. Belin, Notice biographe et litteraire sur Mir All Chir-Nejdi
(J. A., xvii, 1861, p. 175–256, 281–357); E. G. Browne, A History of Persian Literature under Timur
Dominion, Cambridge 1920, esp. p. 437 sqq., 505 sqq.; Mir All-Shir, Leningrad 1928. Like
the other Caghatâti poets, Mir 'Ali Shîr, in his
Divans as well as in his numerous other poems,
is simply an imitator of Persian poets, but he
does not follow their models slavishly; his poems
seem to have suited the taste of his time and
people perfectly and have enjoyed great popularity
down to the present day. Of importance is his last
work, finished in Djamad I, 905 (Dec. 1499)
Muhahamat al-Lughatan (Quatre mains, Ch.
stomatik en tave oriental, parts 1–2, Paris 1842);
the language and culture of the Turks are
compared with those of the Persians; the author
devours to show that the Turkish language is
no less suitable than the Persian for poetic efforts
and intellectual purposes generally. Mir 'Ali Shîr
is frequently described in European works as a
minister or vizier; but as a matter of fact he never
held such official position. His influence on
affairs of state and his activity as a patron of arts
and sciences were the result of his friendship (not
always unclouded) with his prince Sultan Husain
(1469–1506). Sultan Husain was himself a poet.
His Divans was published in Bakû in 1526. As
name of this Sultan, prince Shih Gharbi, whose
pen-name was Gharbi (in the Bakhshyr-Nama, ed.
Beveridge, G.M.S., i. 160, probably wrongly Gurbet),
has left a Persian (not known to Brockelmann)
and a Turkish Divans in the Hambourg Stadtbibliothek, No. 15 (Brockelmann, Katalog, No. 183 and 277), MS. dated Ramaqân 940 (March–April 1534). Buxur [q. v.], the founder of the
Timurid Empire in India, was the author of a
number of poems but is most celebrated for his
Memories (Bakhshyr-Nama also WafaZi or Wafa-i
Rahbiti; cf. TurkiA Rahbiti, transl. Ross, p. 173 sqq.); but Persian was almost exclusively used
at the Indian court.

The Timurids were driven out of Central Asia
and Eastern Persia by the Ozbeks. Under the
latter, especially in the early period, when they
had not yet completely adapted themselves to
Persian culture, a good deal of Turkish was
written both in verse and prose; but they stuck to
the old "Caghatâti" models without producing anything
new or original. Mir 'Ali Shîr remained the model
for poets in educated circles, and for the poets of
the masses Ahmad Yesevi [q. v.], in the modernised
form in which we now possess his Divans. The
historian Abu l'-Gharbi Bahadur Khan [q. v.]
stands alone, who endeavoured in his work
(ed. Desmons, p. 37) to avoid Persian and
Arabic as well as "Caghatâti Turkish" words and
to write so that "even a five-year-old child", could understand him. One of the most popular poets
(also used as a school text-book) of the Ozbek
period was the mystic Sufi Allâh Yâr (end of the
xvith and beginning of the xvith century). Later
in Bakhshyr, Turkish literature was almost
completely driven out by Persian (partly
influenced by the local Tadjik [q. v.]). In Khoshand [q. v.]
the Khiwa [see Khiwanism] Caghatâti literature
experienced a noteworthy revival in the xviith
century. Cf. especially M. Hartmann, M. S. O. S. A.,
vi. 87 sqq. (the expression "revive" [Nawakhâd],
p. 79); A. Samovolov, Zap., xix. 0198 sqq.

The Uighur alphabet was no longer used among
the Ozbeks as it still had often been under the
Timurids; but the influence of the Uighur script
can still be seen in the Arabic here (use of
vowels instead of the vowel signs prevailing
in South Turkish manuscripts). So far little attention
has been paid to the question how far Caghadâti
literature was influenced by the literature of
the oldest Kâshghar period. That, as M. Hartmann
thought (M. S. O. S. A., vii. 79), the Kuteged-Bîlik
(so to be written instead of Kadolf's Ku-
dukha Bîlik) "remained almost neglected in the
land itself and was taken to Egypt at an early
date", can hardly be held any longer. Samovolov
(Zap., xxxi. 037 sqq.) has established the fact that
the copy found in Sarakeli on the lower course
of the Ural in the xviith century, quotations are
given from the Kuteaged-Bîlik. Edition in the
Tavshir-î Khârimshâhî finished at the end of
Dhu l-Ka'da 1280 (May 1864) of Mullâ Bîthâ
Lîjân (the only knowu manuscript is in
Berlin, acquired in 1929, l. 9b); we have the verses
which sound exactly like a quotation from the Kuteaged-Bîlik (although not found in it): masir ebâs khatrami ni'sâmî ni'sâmî ofna'add tapashna bi'dâm ("call
the activity of the vizier should be directed to
order; where there is no order, justice cannot be carried out")).

The same Turkish literary language as was written in the land of the Özbegs is written to the present in Chinese Turkestān (Kāghgharija). Here also day Turkish culture has been influenced by Persian; the only work of importance from Kāghgharija, the Tūrkı̄ Sı̄rāh-ı ʿAthār of ʿAlāʾîd Mirzā [q.v.], is written in Persian; there are at least two Turkish translations of it (by Muḥammad Şadīk in the xviiith century; by an anonymous writer in Khotan dated 22nd Djamād-i I, 1293 = June 7, 1874). Even under Ismāʿīl Khān (1670–1682) Mirzā Šāh Muḥammad Cura (Zap., xxii. 313 sqq.) wrote his history in very bad Persian instead of in his own native Turkish. A little later (beginning of the xviiith century) the history in the Asiatic Museum in Leningrad (Zap., xv. 236 sqq.; M. Hartmann, Der islamische Orient, 1 Berlin 1899–1905, p. 291 sqq.; in addition to this manuscript, still is now a second, Petrovski 9, in the Asiatic Museum) was written in a pure and simple Turkish language. On the most recent historical works from Kāghghar in [e.g. Zap., xvii. 6188 sqq. on the Tūrkı̄-i Amanīya of Mullī Mātī Sāraḵ finished on the 11th Shāwwal 1321 (Dec. 17, 1903)]. In the xviith century a new Turkish literature has been founded among the Özbegs under European (directly under Russian and Tatar) influences; it is sometimes called "Modern Çaghatāi literature"; it includes dramatic works among its productions.

(W. BARTHOLD)

B. — I. OTTOMAN TURKS.

Language and Alphabets.

Ottoman Turkish has since the end of the xviith century been a language of literature and culture the forms of which have become securely established during the four centuries of its existence. Its evolution and the extension of its sphere of influence have been intimately connected with the political and cultural development of the Ottoman empire. It has therefore become one of the principal languages of the Muslim world, being next in importance to Arabic and Persian. After Ottoman culture had begun to spread to the west in the period of the Tanzimat [q.v.] in the xviith century and in a greater measure since the end of the Ottoman empire in 1922, this same literary language has assumed the character of a national language which in Turkey is now called anything but Turkish (türkçe). The influence of this language is still to be traced in the languages of those Muslim and Christian peoples who formerly formed part of the Ottoman empire.

Ottoman Turkish is a branch of the southwest or Turkoman group of Turkish languages (cf. Samoilović, Nekstoriya dopolneniya k klassifikatsii turckikh jazykov, Petrograd 1922, p. 5 sq.; this same group is called by Radloff, Phonetik der türkischen Türkoprochen, Leipzig 1853, p. 280, that of the dialects of the south). These were the dialects originally spoken by the Özbeg Türk. With the other "dialects" of this group, the Adıhe and Turkoman, Ottoman shares certain phonetic peculiarities like the dropping of the consonant g after another consonant (e.g. čalum compared with žalum of the other groups) and the form ol- instead of ožol- (with certain survivals in Turkoman) for the root of the verb "to be", and, from the morphological point of view, of a special paradigm for the present of the verb (gel一道). In the application of vowel harmony it distinguishes two groups of variable endings, that in which e alternates with a and that in which we have ı, i, u, u alternately with fairly frequent traces of an infection, which knew only the alternations a, u (V. Gröbebech, Forskudter til tyrkisk Leksisker, Copenhagen 1902, p. 18–19). Ottoman is distinguished from Adıhe and Turkoman particularly by the change of initial m to b (often in place of m). The conservative character that belongs to the Turkish language in general, due to the fact that the nominal and verbal roots hardly suffer any change, is the reason why the dialects of Ottoman differ very little among themselves (cf. below, iii.).

Turkish, as taught in the many grammars in European languages, is based, from the point of view of dialect, on the pronunciation which prevails in Constantinople, a pronunciation which is often characterised as light and melodious. This is due to the fact that the Constantinople dialect tends to make predominance, especially in the endings, terminations with "light" and unrounded vowels, while we do not have there the pronunciation ś in place of š, which prevails in the eastern dialects; it is probably also the great number of Arabic loanwords which has brought about the predominance of the "light" articulations.

The language taught in the grammars has rather a conventional character, which is seen notably in the great regularity which they represent as prevailing in the vowel system of the roots (the two series a, i, e, o and a, i, e, o) and in the rigorous application of the rules of vowel harmony. This regularity is far from being found in practice, although the language of the educated people tends to develop in this direction. The employment of the Arabic alphabet seems to have distracted the attention of the Turkish grammarians themselves from phonetic questions in general; the establishment of an orthography in the Latin alphabet will no doubt reveal gradually what are the tendencies of Turkish pronunciation.

The question of ascertaining which is the standard Ottoman dialect is however somewhat complicated. The opinion predominating in Turkey itself is that the best türkçe is that of Constantinople (Ziya Güm Alp, Türkçülükü Sembol, Ankara 1939, p. 97). This however is making the question much too simple. The population of Constantinople is composed of many heterogeneous elements and on doubt a large number of Ottoman dialects have contributed towards the evolution of the language of the ancient capital of the empire. The prevalent view has more real foundation if we apply it only to the language of the educated classes. As regards pronunciation M. Bergsträsser thinks he
can say it is more or less uniform among the educated classes of Constantinople (Z.D.M.G., lxxii. 236). There are however still considerable divergencies in the different classes of society, as regards pronunciation and vocabulary; many memories of ancient dialectal differences must have still survived. We owe to Vámbéry the interesting statement that the members of the dynasty of Othman had retained a mode of speech among themselves which differed from ordinary Turkish. We are however not at all well informed regarding the evolution of the language of the educated classes. For pronunciation, we possess of the xvirth century written texts in Latin characters (cf. especially Foy, M. S. O. S., iv.; and Babinger, in \r
\r
Lit![\text{eraturenbücher aus Ungarn's Türkischen}, Berlin and Leipzig 1927, p. 43]. But these very interesting documents rather reflect a dialectal pronunciation; later documents also like Holdermann's Turkish grammar of 1736 (cf. Babinger, \text{Stemmbücher Buchwesen}, Leipzig 1919, p. 14-15) show considerable divergencies compared with the Turkish of Constantinople of today, especially in the retention of endings with rounded vowels.

As to the vocabulary of the Turkish of the educated classes, we are in a position of still greater uncertainty, due to the fact that the ideal of what is good Turkish has considerably changed in course of time. This ideal down to the middle of the sixteenth century was strongly influenced by the literary language.

This written literary language developed from the first attempts at writing the Turkish spoken by the different Turkish groups who were established in Asia Minor in the xixeenth century (cf. below, iv.). It is therefore based on several dialects, which did not differ greatly from one another and still less when written in the Arabic alphabet. This Arabic alphabet even caused the disappearance of a number of peculiarities of the Adheri dialect, which was not without influence in the development of literary Ottoman. The literary language does not, strictly speaking, possess a real classic, which could serve as an ideal model of language and style, as Arabic has in the Kur'an and Persian in a more limited sense in the \text{Shah-nameh}. The epithet classical is usually given to the language of the great Ottoman poets of the xvith and xvirh centuries but the exaggerated artificiality of this language did not permit it a lasting influence.

The most prominent feature of the ancient literary language is the almost unlimited employment of words and expressions borrowed from literary Arabic and Persian. Like the other Turkish languages, whose speakers became Muslims, Ottoman Turkish shows from the first a number of words borrowed from Arabic and Persian belonging to the sphere of religion and culture. The linguistic character of the Turkish language offers no obstacle to the adoption en masse of foreign words which are not at all felt to be intolerable in the system of the language (cf. e.g. E. Sapir, \text{Language}, New York 1921, p. 210). This circumstance has given Turkish a great richness in possibilities of expression both in the noun and in the verb (by means of the auxiliary verbs \text{stemek}, \text{yalmek}, \text{almaş}, \text{olmaş} combined with Arabic \text{wadad}'s). And since Turkish literature for the most part began with translations from Persian, which has the same faculty for adoption from the Arabic, the literary language has drawn abundantly from this source to enlarge its powers of expression. Thus there arose an ideal of literary beauty which has brought about a wide breach as regards vocabulary between the written language and the spoken language which came to be known as \text{bach Türkçe}. There have always, it is true, been scholars who condemned this artificial language (on the \text{bakh Türkçe} movement see below, iv.; \text{Ottoman Literature}) but it was only in the middle of the sixth century that a reaction set in against the abundant use of Arabic and Persian loanwords in the literary language. This movement coincides with the ascendancy of European influence on Turkish literature.

But at the same time the influence of European civilization in general caused to be felt the want of new terms to express new ideas, technical, scientific, political etc., which came into Turkish civilization when it turned towards the west. In this difficulty, recourse was again had to the inexhaustible resources of the Arabic vocabulary and also to the morphological possibilities of Arabic. The result was that Turkish scholars and men of letters of the second half of the sixteenth century found themselves faced with an embarrassing wealth of foreign elements in the literary and learned language beneath which the Turkish element tended to be stifled. In spite of its faculty for adaptation, the Turkish language seemed to be supersaturated.

The study of the Arabic and Persian elements in Turkish presents much interest for the cultural evolution of the language and the people. The present pronunciation in many cases enables us to distinguish the words which have really passed into the language of the people, which can be seen from their more complete adaptation to the rules of vowel harmony, and those which remained the property of the scholar and man of letters only (cf. M. Bittner, \text{Die Einfluss des Arabischen und Persischen auf das Türkische}, St. Ak. Wien, cxxii./iii.; G. Bergstrasser, \text{Zur Phonèkt des Türkischen}, Z.D.M.G., lxxii.; and A. Schaefer, \text{Vokalismus der arabischen Fremdwörter im osmanischen Türkisch}, Festuhrift-Meinhof, p. 449 sqq.). The study of the meanings of these loanwords is equally important; many Arabic words have a different sense in Turkish from Arabic; in these cases the old lexicographers spoke of \text{garla-ta meghhûr}. Several works in Turkish are devoted to this subject.

To the generation of Turks of the period of the \text{Tampûd} the question presented itself as a problem of culture. It was quite naturally thought that the only means of escaping from the impasse to return to the language of the people in which the foreign element had always been lighter. Among the first to urge the use of a simpler language was Salâmân Pâsha (d. 1803), known from the Russo-Turkish war; he recommended the adoption of the simple language of the soldiers and published a Turkish grammar which he called \text{Şar fís türk}, avoiding the word \text{efma} which Ahmed Djewdet Pâsha [q.v.] had still used in the title of his grammar \text{Kamâlidê év efma} (Constantinople 1311). Another figure in the same period is Ahmed Wâfî Pâsha [q.v.] whose \text{Lehê-d efma} is a serious attempt to regularize the use of foreign words. The literature of this period, although employing more modern literary
forms, still mod the old literary languages which also prevailed in the newspapers and periodicals (school of Mu‘assim Nâdi‘). But in proportion to the extent of the Ottoman empire in the 16th century, the interest in the language increased more and more. At this period we also find a movement for extreme purism of language, conducted especially by the paper İhtimâl; the great promoter of the tuzkeye-giller was Fu‘ad Râfî‘ Bey. He simply preferred to banish all Persian and Arabic expressions from the language and to form new Turkish words, even borrowing them from other groups of Turkish languages, thus creating a language which Ziya Gök Alp calls “Turkish Esperanto”. Even the lexicographer Sâmt [q. v.] declares himself in theory a supporter of this school. Soon this purism gave way to a more reasonable purism, which was propagated for the first time by the periodical Genel Kalemli in Salonika (1910) and later by the Türk Yurdu in Constantinople. Some innovators like ‘Omar Saif al-Den Bey even thought that the reformation of the Turkish language ought to be the principal article in the Turkish cultural reformation (cf. Nevresî ‘iştâna, Constantinople 1330, p. 305). In 1917 the question was investigated by Djêlâl Nûrî in his brochure Türkîmân. After the War, the new programme of the reform of the language was expounded by Ziya Gök Alp in Türkçe–Yüzyıl Edebiyatı (Ankara 1339, p. 100 sq.). As a result of these new views on language, the literary idiom has also taken a direction which brings it closer to the spoken speech; as examples we may quote the language of the literary works of Khalîl Edib Khanum and Küçüng Eşref. On the other hand, knowledge of the written language has spread at the same time among much larger sections of the people. The introduction of the Latin alphabet will undoubtedly influence the mutual relations of the written and spoken language. Alongside of Arabic and Persian loanwords, Ottoman Turkish had a considerable number of words from other languages. Thus Italian has considerably enriched the terminology of navigation; then there are a fair number of words from Greek and Albanian. French made its influence felt in the sixteenth century, but almost exclusively in scientific and quasi-scientific literature. Indirectly the influence of the great languages of Europe, and especially of French, has been felt in the simplification of literary style, in the tendency to avoid the heavy interminable phrases of the old Turkish prose.

The alphabet used for writing Turkish was the Arabic from the earliest known Anatolian documents of the sixteenth century. The system of transcription differs from that followed in Çağhâtî in as much as Ottoman makes a larger use of the emphatic Arabic letters (notably the ‘a’ in roots with a heavy vowel, which corresponds to a real distinction in pronunciation; cf. the article quoted by Schade, p. 451) and uses the “scriptio defectiva” in the case with vowel i or e, the “scriptio continua” even often even for a. In 1727 printing was officially introduced into Turkey (cf. Bahnger, Stammbaum Buchweisen im XVIII. Jahrhundert, Leipzig 1919) but this innovation was far from having the cultural importance for Turkey that printing had for Europe at the time of the Renaissance. A perfect uniformity of orthography in Arabic characters was never attained and, especially after 1900, we find several attempts to make writing in the Arabic character clearer, e.g. by the use of the final form of the letter ă for the vowel ā but none of these attempts at reform met with general approval. The technique of Arabic calligraphy has been much cultivated in Turkey. Several scripts peculiar to Turkish have been evolved, like the dîvânî hand which was used for official documents issued by the sultan and high officials, the ornamental hand called chûlî and the rîf‘a which is a kind of cursive hand, that remained in use till quite recently. Arabic calligraphy (hâline–chîlî) in Turkey has at the same time maintained a higher level than in other Muslim countries (cf. the collection of biographies, Khatf–i Khatfîn by Habîb, Constantinople 1305). Other alphabets, which have been employed for Ottoman Turkish are the Greek by the Karamanlîs and Armenian by the Turkish-speaking Armenians (cf. e.g. E. Littmann, Ein türkisches Streitgedicht über die Ehr, in A. Vol. or Or. Stud. Jres. to E. G. Browne, Cambridge 1932, p. 269 sqq.). The Hebrew script has never been used for Ottoman Turkish.

In 1928 the Latin alphabet was officially introduced into Turkey to take the place of the Arabic. Since the Young Turkish Revolution there had been several attempts to simplify the Arabic alphabet for Turkish usage. The difficulty of Arabic orthography, requiring entirely different principles to write Turkish words and words borrowed from Arabic and Persian, was rightly regarded as a serious obstacle to the spread of the written language among the masses. Thus alongside of several attempts to reform Arabic orthography itself (cf. above), there appeared from time to time more radical proposals like the system which Enver Paşa tried to introduce into the army during the war. This system is based on the Arabic alphabet, but it does not join up the letters and has a consistent notation for all the vowels. But none of these systems gained any great success. On the other hand, the use of the Latin alphabet had always been resolutely opposed in religious circles, even for purely scientific purposes. After the restoration of the Nationalist Turkish state the question remained for some years in suspense. Clerical influence no longer counted and from time to time the position of the Latin alphabet was discussed in the press (brochure by A. Galanti, Türkîdèle zehre we-latin Happy we-latin Meclised, Constantinople 1925). The question was also influenced by the attitude of other Turkish peoples living in Russia, notably in Adharbiyadžan, and by the discussions at the Tuzcological Congress at Baku in Feb. and March 1926 (cf. Isâm, xvi. 173 sqq.) where Turkey was only poorly represented. Finally in 1928 the government, supported by the Nationalist party, decided to push the matter forward. A law of May 20 officially introduced the use of the European numerals. In the meanwhile the government had been studying the new alphabet and on Aug. 21, Mustafa Kemâl Paşa delivered his celebrated lecture on the new Latin alphabet in Constantinople. After a few modifications had been made in the first schemes, the new alphabet was at last introduced by a law of Nov. 1. This law orders the use of the Latin alphabet according to the rules elaborated by the Dil engîjmeni (Dil encememi) and the abolition of the Arabic alphabet, at the same time arranging the stages of the transition. It laid down June 1, 1930 as the final date at which the new alphabet must
be used in all kinds of published documents (cf. the text of the law in Oriental Modern, Jan., 1929, p. 41. 299. and the article by H. W. Duda, Die neue Lautenschrift in der Türkei, in O.L.Z., 1929, col. 441-452). The newspapers had begun to appear in the new alphabet from Jan. 1, 1928. At the same time steps were taken to have the new alphabet taught to all classes of the population by means of courses lasting four months (milliés müktebè).

The rapidity of the successive measures and the little resistance that seems to have been offered them show not only the strong position of the government but also the feasibility of such a radical reform. This is probably due to the fact that the percentage of the population seriously affected by the change was relatively small, on the other hand no one will deny that the Latin alphabet is much better fitted to render the phonetic character of Turkish than the Arabic alphabet. The time chosen to introduce the new alphabet was not inopportune but it was equally clear that the sacrifice of an alphabet which for centuries had been bound up with the religious, literary and cultural development of a people meant a cultural crisis which places a great responsibility upon the intellectual leaders of the people. The reform is still too recent to be able to judge of its effects.

The new alphabet shows several original features (like the use of ş for the sound š, of ğ for ğ and of i without dot for İ; ç for ç shows the influence of Rumanian orthography); it is not overloaded with discritical marks. We cannot yet speak of an established orthography but the rules given at the beginning by the Dil emjumemi have laid down the principle of an orthography as phonetic as possible, which applies even to words borrowed from other languages written in the Latin alphabet (e.g. federasyon for fedsoter). This often gives Arabic words a form which makes their identification difficult to those accustomed to the Arabic alphabet. In general, we can say that the new alphabet tends to be more suited to the spoken language than was possible with the Arabic alphabet; it has already been pointed out that this circumstance may facilitate in many points the scientific study of the Ottoman language.

(J. H. KRAMERS)

II. OTTOMAN-TURKISH DIALECTS. 1)

1. Area of Dispersion.

For the want of the necessary detailed surveys it is impossible as yet to define the exact frontiers of the areas in which the Ottoman Turkish language is spoken. It extends over territory in Europe as well as in Asia. In Europe in the Balkan peninsula, it is found in islets surrounded by other languages, which have very much broken the Turkish bloc. We may mention the following such Turkish speaking areas: 1. Eastern Thrace with the peninsula of Gallipoli, where the Turks form a solid body with a population of over a million. 2. Parts of Macedonia, namely a long stretch on the left bank of the Vardar, the land between Ibtip (Știp) and Radoviš (Radoviša), along the Aegean, roughly from Salonika to Dede-Aya, especially the country round the towns of Drama, Eskiše, Guzmilija (Gümüşhane). On these lands there is a rich literature of the period of the Balkan Wars, some of it politically biased; cf. especially: Cartis etnográfiques de la Macedonia du sud représentant la répartition ethnique à la veille de la guerre des Balkans, 1912, by L. Ivanov (scale 1:200,000), also Ethnografiska karta av området villaforn 1912 god. by L. Miletic (scale 1:750,000), Ethnografiska karta av Makedonien by the same (scale 1:1,500,000); cf. also Vasil Kazimb, Makedonija, etnografija i statistika, Sofia 1900. Since that time however the ethnic proportions have been very much altered. The exchange of population introduced by the treaty of Lausanne (1923) between Greece and Turkey brought about a considerable shrinkage in the number of Turkish speakers on the new Greek part of these lands, after Greece had sent over 400,000 Turks into Turkey. 3. Certain areas in Bulgaria, namely the districts of Deli-Orman, Tostuk and Gortovo in N.E. Bulgaria (cf. D. G. Gadzhanov, Verhëger Bericht über eine im Auftrag der Balkan-Kommision der k.a. Akademie d. Wiss. in Wien durch Nordost-Bulgarien unternommene Karte von Zwecke von türkischen Dialektstudien, Anz. Wiss. of 9th Feb. 1911 and do., Zweiter vorlühliger Bericht über die ergänzende Untersuchung der türkischen Elemente im nordöstl. Bulgarien in sprachlicher, kultureller und ethnograph. Beziehung, ebdl., 24th Jan. 1912. For the question of the settlement of the Turks see also L. Miletic, Srebro bulgarsko naseljeni v sverovestnoln. Bulgarija, Sofia 1902; the map in A. Ichirkoff, Das Bulgarien im der Balkanhalbinsel im jh. 1724, in Petermanns Geogr. Mitteilungen, Year 1915, is also very valuable, Plate 44 where the distribution of the islets of Turkish speakers is also given), also a considerable area in N.E. Bulgaria around the towns of Kyriayli and Mastanly. In addition, Turkish are found scattered throughout Bulgaria, in the territory round Philippolis (Floydv) in the Köfetan, Deli-Orman and elsewhere; cf. Dr. Constantin Jirešek, Das Fürstentum Bulgarien, Prag-Vienna-Leipzig 1891, p. 133-146 (out of date). 4. Turkish speakers are found scattered up and down the modern Jugoslavia, the bulk in Macedonia (cf. J. Cvičić, Etnografske Karte der Balkanhalbinsel nach aller vorhandenen Quellen und eigenen Beobachtungen, Petermanns Mitteilungen, March etc. 1913 and do., Rusperd bulhansko naroda, Glazni Serbog Geography Drutov, Belgrade 1913, p. 234-265). Isolated little bodies are found along the Danube, as far up as the interesting island of Adakale at Orsova (cf. the introduction to Vol. 1. of L. Kinos, Türkische Volksmärchen aus Adhabl). 5. The whole western and northwestern shores of the Black Sea show considerable Ottoman influence. In the towns and steppes of the Dobrudža a good deal of Ottoman Turkish is spoken today. St. Romansky, Le caractère ethnique de la Dobrudja, Sofia 1917, and do., Cartis etnográfiques de la nouvelle Dobrudja Romaine, Sofia 1915. Unfortunately we do not possess fuller information of the dialectal conditions there. It is important to note that the language of the Christian Gagauz is at bottom Ottoman Turkish. The Dobrudžan Gagauz whom I met north of Varna speak a dialect which is almost indistinguishable from the popular dialect of Constantinople. The language of the Besarabian Gagauz also which we know from

1) For practical considerations the author's system of transliteration is retained in this article. See note p. 9266.
Moskov’s rich collection (RADLOFFS, Proben der Volkslitteratur der türkischen Stämme, vol. xvi, Mundarten der kasarabischen Gauzaun, St. Petersburg 1904), is simply an Ottoman Turkish dialect. In spite of the fact that some students have regarded the Gagaus as descendants of the Kumans (C. JIREČEK, Einige Bemerkungen über die Überreste der Petischmungen und Kumans, sowie über die Völkerzweigen der sogenannten Gagausi und Sarguši im heutigen Bulgarien, Sitzungsber. d. böhm. Gesellschaft der Wiss., 1889), their present language contains in fact no Kuman elements.

Ottoman influence is very strongly marked on the south coast of the Crimea. The specimens recently published by O. Satskaja of the popular poetry of Boykoturai and Tuuk (near Akka) may be described simply as Ottoman Turkish (7th-9th April-June 1926, p. 341—360). The same must be said of many of the texts in RADLOFF, Die Mundarten der Krym (Proben der Volkslitteratur der nordl. türk. Stämme, vol. VII). The Crimean Tatar literary language does not differ very seriously from the Ottoman written language (SAMOLOVIČ, Opyt kratkogo krymsko-tatarskogo grammatiki, Petrograd 1916, p. 7 infra).

We have no accurate information about the present condition of the Turkish language in the islands of the Mediterranean, especially in Crete, Cyprus and the islands of the Aegean.

The Anatolian Turkish speaking area in north, west and south has well marked natural boundaries. In the northeast it gradually and apparently without a definite frontier passes into Aşağı İlgilendirm. Many linguistic peculiarities, which even FOY took to be specifically Aşağı İlgilendirm (Ausekbaničke Studije mit einer Charakteristik des Südtürkischen, M.S. O.P. d. V., VII, 191—265), are also found in Asia Minor dialects, as Giese (cf. above l., p. 531) has rightly pointed out. In the southeast, Ottoman meets the Arabic of northern Syria. In northern Mesopotamia it is much broken up by Kurdish and considerably influenced by Aşağı İlgilendirm from Persia.

In addition to the settled Turks, we find in Anatolia and even in the Balkan Peninsula nomads and semi-nomads. In Asia Minor their numbers are still considerable, while they are disappearing on European soil (cf. P. TRAEGER, Die Türken und Konjaren in Makedonien, Ziehr, für Ethnol., 1905, p. 198—206; on the Jürük and Konjars in Bulgaria: JIREČEK, Das Fürstenstaat Bulgarien, p. 139 seq.). In Anatolia, Turkish nomads are known under rather vague names like Atileretti ("ełan") Jürük, Turkomans, or by their own tribal names like Aviars (or Afars) etc. As a rule their language does not differ essentially from that of their settled neighbours.

The frontiers of the area of Ottoman Turkish are still being considerably altered. In the west, i.e. in the Balkans, it is constantly decreasing; while in the east, on the other hand, in places it is gaining ground.

2. Linguistic Minorities in the Ottoman-Turkish Area.

Steps taken by the present republican government have very much reduced the linguistic minorities within the frontiers of modern Turkey. Nevertheless the Ottoman Turkish speaking area is not yet by any means uniform and there are many other languages in it. The following are the principal minorities: Greeks, formerly very numerous, now, as a result of the exchange of population, practically found only in Constantinople, Armenians (also almost entirely confined to the Constantinople territory), Arabs (Muhammadan on the Syrian and Írāq frontier, Christian in Mersin and district), Kurds in the eastern wilayets, but also in isolated groups elsewhere in Asia Minor (after Sheikh Said’s rising in 1925, a considerable number were deported to the interior of Asia Minor as a punishment), Nestorian Syrians in the eastern wilayets (especially Hakkari), all kinds of Caucasian peoples (Laz, Georgians, Aghbas, Circassians), who are found scattered all over Asia Minor, most thickly in the N.E., less numerous Albanians (Arnauts), Gypsies, Spanish Jews, who live in the larger towns, etc.

Turkish minorities are also found in Asia Minor (e.g. the Kurm Tatar emigrants in and around Eski-Shehır) as well as in Rumelia (on the Dobrudja, on the Bulgarian Danube).

3. The mutual Influence of Ottoman Turkish and neighbouring Languages.

We are at present very imperfectly informed regarding the influence of Ottoman Turkish on its neighbours and vice versa. We can only indicate isolated phenomena: for example the disappearance of initial & (h): ab (= Ar. به), an (= Ar. ان), one (= Pers. واحد), ani (= hany, hany) etc., which is so characteristic of the Macedonian dialects (KOWALSKI, Zagadki Indowe turcysty, p. 11; cf. OE. Ostanisč-türkische Volksreden, W.Z.K.M., xxxiiii. 167—168), but is also found in Bosnian Turkish (Blau, Römisch-türkische Sprachdenkmäler, p. 27), to be ascribed to the influence of the Southern Slavonic languages. Similarly the variation in initial of, which is often noticed in Northern Bulgaria, may be attributed to Bulgarian influence. Possibly also the peculiar phenomena of palatalisation in the dialects of the Bassarabian Gagaus (Moskov, p. xvii. 49) are to be ascribed to Serbian influence.

Blau has studied the Turkish Serbian mixed language of Bosnia, but he devoted himself not to the spoken language but almost exclusively to manuscript material. On the Ottoman-Turkish language of the period of Turkish rule in Hungary cf. the valuable information in Literaturdenkmäler aus Ungarns Türkenseit (ed. by F. Babinger, R. Gragger, E. Mittwoch and J. H. Mordtmann, Berlin 1927).

That in the southeastern regions under the influence of Arabic, a greater variety of gutturals prevails than elsewhere in Ottoman and that in particular the Arabic ‘ain is pronounced there in Arabic loanwords has been noted by several observers (cf. M. HARTMANN, in K.-S., i. 154; Balkanoglou, Dialecτ αυτ της Κίλια, K.-S., ii. 253).

The interaction between Turkish and the neighbouring languages is best seen in the vast number of borrowings. So far, Turkish loanwords in non-Ottoman languages have received more attention than non-Turkish words in Ottoman. On the influence of Ottoman-Turkish on the languages of Southeast and Eastern Europe, see especially the work of F. MIKLOŠIČ (Die türkischen Elemente in den südost- und osteuropäischen Sprachen, Germanisch, Albanisch, Rumäniisch, Bulgärisch, Serbisch, Kleinrussisch, Großrussisch, Polnisch, Denkschriften d.
The situation we find in the present Ottoman speaking areas is the result of a very long and very complicated process of settlement and assimilation.

It is clear that the inhabitants of Turkey and the adjoining territories who now speak Ottoman Turkish are only to a very small degree descendants of the Turks who migrated hither but, on the contrary, are in the overwhelming majority descended from Turkicised native elements.

A history of the settlement of Asia Minor and the Turkish parts of the Balkan Peninsula has yet to be written. So far not even the necessary preliminary work has been undertaken. The process of Turkicising of the territories in question can be represented in general outlines as follows.

Isolated South Turkish groups settled in Byzantine territory even before the Seljuk invasion, both in Asia Minor and in the Balkans. In the latter area there must still have been also considerable bodies still in existence, surviving from the earlier North Turkish immigrations which came there by the north of the Black Sea. But it is not till the middle of the xth century that we have an immigration on a considerable scale, which may be called Seljuk and lasts till the end of the xiiith century. Towards the end of Seljuk dominion in Asia Minor, the process of Turkicising the native population must have been begun. This process continued during the rule of the petty principalities which arose out of the ruins of the Seljuk empire.

The immigration of the Ottoman Turks in the xiiith century seems to have at first played a very minor part in the settlement of Asia Minor, on account of the small numbers concerned. But the political power of the Ottoman state which then began its rapid development had no doubt a far-reaching influence on the process of Turkicisation. Only through the gradual unification of Asia Minor by the Ottomans and their great conquests in the Balkans were the preliminary conditions for the Turkicisation of these lands created. During the whole period of Ottoman rule we have to think of continual movements of population going on within its frontiers, sometimes large, sometimes small, and with a continual infiltration of Turkish elements sometimes slow, sometimes fast, from outside, especially from the east. Large areas in the Balkans were colonised, although thinly, by Turks from Asia Minor soon after their conquest. Under pressure from the government, great masses of the non-Turkish population adopted Islam and gradually became assimilated to the Turks even to the extent of exchanging their own language for Ottoman Turkish. The Turks of the Balkans still know in many cases whether they are descendants of Turkish immigrants from Asia Minor or
from converted Christians, who became in time quite türkisch.

The immigration of Turkish elements increased in strength after Russia had extended her power over lands with a Muslim Turkish population. Particularly after the annexation of the Crimea in 1783 and on the final subjection of the Caucasian lands in 1864 great bodies of Turkish immigrants poured over the whole Ottoman territory. The attainment of independence by the Balkan peoples on the other hand began the return of large bodies of Turks to Asia Minor, which is still going on. This latter process increased in strength after the World War and, as a result of the exchange of population with Greece, led to about half a million Turks being moved from the now Greek part of Turkey and distributed over almost the whole of Asia Minor.

That a linguistic area which had been formed in such a complicated fashion cannot be uniform as regards dialect is obvious and it is equally clear that the dialectal relations must be extremely complicated.

As regards language, the Oghuz tribes who migrated into Asia Minor must have been fairly uniform. From all that we know of it, the language of the Saldırgan Turks was barely distinguishable from what is known as Old Ottoman. There were of course dialectal nuances in the speech of the different tribes which in time sometimes became deeper and sometimes disappeared. As regards the mixture and levelling of dialects, it was much favoured, especially in Asia Minor, by the nomadic or at least semi-nomadic mode of life of the pure Turkish population which lasted for a long time and induced a mixture and levelling.

North Turkish elements (especially remnants of the Kuman), who were still to be found in the Balkan lands in the Byzantine period, almost entirely succumbed in time to Ottoman influence as regards language. Certain linguistic peculiarities which are observed in the dialects of the lands W. of the Black Sea (Deli Orman, Dobrudja, Bessarabia) and, which, it is interesting to note, have certain analogies in the adjoining parts of Asia Minor, may perhaps be regarded as the result of contact between north and south Turkish.

In the language of the türklericised masses, one must expect to have to deal with secondary alterations in Turkish sounds, the result of inherited modes of articulation by the peoples concerned. The mobility of the population, military service, and in recent times the school have however tended to introduce a certain uniformity. That the mixture and standardising of dialects have not gone further than we actually find, is due to the fact that new settlements do not as a rule merge completely into the old but exist alongside of them and that every settlement retains its own peculiarities for a long period unaltered.

Apart from the historical sources, which have not yet been fully utilised to write a history of the process of settlement by the Turks, we have in place-names a valuable auxiliary source for the study of the gradual settlement and türkisation of Asia Minor and Rumelia. Unfortunately very little progress has so far been made with such toponomastic studies. In recent years Turkish scholars have devoted some attention to Oghuz tribal names which have become place-names (cf.

Köprülässade Mehmed Fuad, Oegna etnolojisinin dar ilerme halleri, Türkiye'nin meşhur illeri, i. 185–211; II. Nihal and Ahdad Nüle, Anadolu'da Türkler 'A'di yer lemleri, ibid., ii. 243–259). The villages of emigrants of recent date usually have artificial names derived from personal names by means of the Arabic ending -je, like Ortamarı, Orgâne, Relâdiye, etc.

5. Sources of our knowledge of Ottoman Turkish dialects and their value.

The most important source for our knowledge of the present linguistic conditions on Ottoman territory is the observations made by European students. Relatively little has been done by Turks as yet in this connection.

If we were to mark on a map of Turkey the places about which we have a certain amount of dialectological information, we would at once see what an infinitesimal amount of work has so far been done and how far we are from an exact knowledge of the whole linguistic area.

The value of the observations upon which we have to rely is very unequal. To the majority of students, the folklore content of the texts taken down by them was the main thing while the linguistic interest was quite subsidiary. The localisation of linguistic phenomena found in the texts is often made difficult by the fact that the collectors neglect to give the place of origin of their authority. The fullest collection of material, that of I. Kuno, is not free from objection as regards method and has therefore to be used very critically.

Folksongs, so interesting from the folklore point of view, do not form specially suitable material for the study of dialects. For whole songs as well as their individual motivs wander with remarkable rapidity over wide areas and their language becomes adapted to the local dialect, not at once and even after a considerable period not completely. The songs therefore occasionally show dialectal forms transmitted from distant areas. We have also to reckon with an artificial language for songs, such as has often been noted among Turkish peoples. It is the same with riddles and proverbs, and with the products of folklore literature in general, which show a more or less rigid form.

Most texts have been taken down in the towns where the population is as a rule considerably more mixed than in the country and where dialectal conditions are not so clearly distinguishable. Texts taken down from the lips of villagers on the spot are exceedingly rare. It is no wonder that in such circumstances we cannot yet speak of a study of dialects on Ottoman-Turkish territory on a sound scientific basis.

6. Specimen of language taken down in various areas.

The texts so far published concern either considerable areas or only very limited smaller ones. To the former belong: I. Kuno, Mundarten der Osmanen, St. Petersburg 1899 (forms vol. viii. of the Studien der Volkskultur der türkischen Stämme, ed. by Radloff). The provenance of the separate specimens is not exactly given, so that the work is of little value for dialect studies (quoted below as Mund.). V. Gordovskij, Obractz Osmanova narodnogo tvorchestva, Moscow 1916; folklore texts mainly taken down in Constantinople,
some also from Asia Minor (especially at Nigde): Abbrev.: Gurd. T. Kowalski, Zagadki i domowe

The Danube Island of Adakale. I. Kú

For the separate areas we may mention:

1. The Danube Island of Adakale. I. Kú

2. Bessarabia. W. Moikor, Mundarten der Bessarabischen Gegenen, Text, St.-Petersburg 1904

5. Thrace and Constantinople. I. Kú

6. Western Asia Minor. I. Kú

7. Theoretical Division of Ottoman Turkish Territory.

The names which have hitherto been in use for Ottoman Turkish dialects, e.g., Kastamuni, Laz-Turkish, Karamanian, Kharpou, etc., are of no value as designations of dialects. They correspond simply to geographical or political administrative conceptions, the connection of which with the boundaries of the corresponding dialects would have first to be proved, if it exists at all.

Even the great division, often taken for granted, of Ottoman into the Rumelian and Anatolian, is of no value from the dialectological point of view and should be discarded as misleading, in view of the history of the settlement of European Turkey. We know positively that certain Rumelian districts were colonised from Asia Minor and as a result their dialects still show distinct traces of their Anatolian origin.

After all that has been said above it must be clear that we cannot yet expect in the immediate future a serious attempt at a scientific classification of Ottoman Turkish dialects. What has so far been
done is based rather on intuition and imagination than on established facts. This applies also to the attempt by Künoś to divide up Asia Minor according to dialects.

Kūnoś (Kūnos fürvá dialautzairi, Budapest 1896) distinguishes the following seven dialects: 1. Zelbeks in Western Anatolia between Snyrma and Brusa; 2. Kastamuni in the central littoral of the Black Sea; 3. Laz on the eastern coast of the Black Sea, towards the Caucasus; 4. Khar put in the east of Asia Minor, towards the Armenian highlands; 5. Karaman in southeastern Asia Minor between Mersin and Konya; 6. Angorans in the heart of Asia Minor in the valley of the Kyzyl Yürük; 7. Jürük Turkmans in use among the wandering tribes (aliyätter), which are scattered over a wide area of Asia Minor.

Zelbek, Angorans, and Jürük Turkmans are regarded by Kūnoś as unmixed dialects of the early Turkish immigrants. The Jürük in particular are taken to be the descendants of pre-Saljūq Turkmans and the Zelbeke of the Saljūq Turks. Angorans is said to be the survival of the language of the earliest Ottoman immigrants. The four other dialects are regarded by Kūnoś as dialects of the turcified original population of Asia Minor, which arose through the influence of the original languages of these peoples upon Turkish. According to him, Kastamuni was especially influenced by Greek, Kharput by Kurdish, Karaman by Armenian, Laz however by an "Indo-Germanic" (l) language, not more precisely defined.

This attempt to classify the dialects of Asia Minor has no scientific basis, although at first sight it appears very plausible.

The first serious attempt to collect the distinguishing features of the spoken Ottoman language is in Jacob's essay in the Z.D.M.G., lii. (1898), p. 665-729, Zur Grammatik des Valıgür-Türkischen. J. Deny, in Grammaire de la langue turque (dialekt romani), Paris 1900, draws the attention on certain dialectical peculiarities.

8. Dialects and the Written Language.

The written language has always exercised a levelling influence on the spoken dialects. It is based on the language of the educated classes of Constantinople, which has till now been regarded as a model and is disseminated generally by the schools.

Of this language we had till lately only a vague conception. It was only quite recently that Bergsträsser began a serious attempt to define more exactly the living written language of the educated classes at least from the phonetic side (G. Bergsträsser, Zur Phonik des Türkischen nach gebildeter Konstantinopeler Ausprache, Z. D. M. G., lxii. (1918), p. 233-262). It is proved that this is by no means uniform in its phonetics. Hence the conception of an educated Constantinople pronunciation is only to be used with great caution and with all kinds of limitations.

On the origin of the Ottoman written language (cf. above, il.) we unfortunately still know far too little. We can only suppose that it gradually developed out of the dialect of court circles in northern Anatolia. When the capital was removed to Adrianople and then to Constantinople, the course of development was probably influenced by the dialects predominating there, while it in turn strongly influenced the latter. In any case the written language is closer to the dialects of the parts of Thrace and Asia Minor adjoining the Bosphorus and Sea of Marmora than to the dialects of the districts farther west and east.

The earliest literary monuments not infrequently reveal dialectal peculiarities, which we can still trace in various living dialects. Unfortunately their systematic study has hardly been begun.

9. General Characteristics of the Ottoman Turkish Dialects.

The differences between the various dialects of Ottoman are as a rule not great. This is connected with the fact that there is not great differentiation among the Turkish languages in general. In the area over which Ottoman Turkish is spoken at the present day, it would hardly be possible to find two places the inhabitants of which would not understand one another.

The differences between the separate dialects consist mainly in slight differences in the articulation of certain sounds, in a few sound shiftings and in not inconsiderable differences of vocabulary. Morphological differences are as a rule very slight.

Many investigators have already pointed out that there is little uniformity within the separate dialects. It can be observed everywhere that there is considerable variation in the articulation of separate sounds as well as in the use of grammatical forms by one and the same person. Most of our records of the dialects are therefore full of inconsistencies which, although to some extent due to the carelessness of the recorders, in the main give a true picture of the actual conditions. This variation must be ascribed to an advanced stage of intermixture of dialects which is almost general.

It must be remembered that many elements of the Turkish people now settled were till quite recently nomadic and moved about over a very large area. A great body of emigrants (mühâçir) from all possible Turkish areas has long been breaking up the early linguistic map, especially in Asia Minor. In quite recent years Anatolia has had to receive large bodies of emigrants from the Balkans. The measures taken by the republican government aim at as great a uniformity as possible within the state as regards language also, which is being attained mainly through the schools and military service. It is obvious that this is breaking up and destroying the local dialects.

If we remember what has been said above about the historical developments, the present confusion in dialects must be regarded as natural.

To a certain degree, the variation in articulation of separate sounds is to be ascribed to a lack of precision in pronunciation, which is peculiar to the Turks. The place of articulation as well as the degree of opening and expanding of the organs of speech often show considerable latitude. I need only mention the very indolent and varying pronunciations of the r pronounced on the tip of the tongue (cf. Bergsträsser, op. cit., p. 251).
From cases of real inconsistency of pronunciation we must carefully distinguish those which are only due to defective notation by the recorders. Thus we often find a varying transcription of a sound which in itself is uniform, like the narrow e or i, which in sometimes written e or i, or the slightly labial a, sometimes transcribed u or y etc.

Since it is not possible to speak of dialects as such in the strictly scientific sense, we must for the present be content with an orderly arrangement of the linguistic records, mainly of a phonetic nature, which shows a variation from the written language and in different combinations characteristic of the different dialects. On the area of dispersion of most phenomena we are very poorly informed. It will have to be left to future systematic investigation to fill in accurate details in the map of the Ottoman speaking area.

Since we still know very little of the historical grammar of Ottoman Turkish, it seems advisable to collect and arrange the facts afforded by our collections of material without going into chronological questions.

Vowels 1).

Round Vowels.

§ 1. e and u have a very varying pronunciation in the dialects but with a distinct tendency to abandon the characteristic peculiarities of their pronunciation. For many, especially Asia Minor dialects, e and u pronounced slightly farther back are characteristic, which sound to the ear rather as o or u so that they have usually been written as o or u. These varieties of e, u are frequently found in the first (root) syllable, especially after initial g or k. According to Raa., the shifting from θ > o seems to be almost regular in N.E. Anatolia. Giese often noticed the change of θ > o and ο > u in texts from the Wilayet of Konya. It is also recorded by Théry for Kastamuni (Kast. 8). Occasionally also it is found on Rumelian territory, namely in Adaleke.

Examples: o, from Raa. Föy (bör 110;), Fovan (kümür 123, 5%), opefer' (öpferen 131, 3%), den (dömr 98, 4%).

From G. donup (döömr 17, 9%), Köle (köle 29, 18).

1) The following signs are used to indicate Ottoman Turkish sounds:

A. Vowels (the approximate mode of articulation is added in brackets according to Bell's vowel table): i (förn), i (förn), e (mfn), e (förn), a (mkn), e (merkn), o (merkn), o (mkn), o (mkn), i (between hörn and knn), o (between hörn and knn), u (ib), o (not syllable forming i), o (not syllable forming a).

B. Consonants: k, p, r, f, r, m, a, a, i, ı, ı (= i), s (= ë), s (= ë), s (= ë), m, r, s, g, g, r, r, h, r, l.

C. Special signs: - length, - palatalisation, - aspiration, - reduction of voicing, - stress (accent), - derived from θ > o has become.

Note: In round brackets are given the equivalents in the written language of the corresponding dialect form. They must not however be in any way regarded as the original or basic form of the word in question.
which, as we know, ů and ů otherwise never occur (cf. Deny, § 25), is doubtful.

Unrounded vowels.

§ 7. Ottoman dialects have two varieties of ŵ, a narrow (higher), here written ŵ, and a broad (lower) variety, written ū. In many districts, for example, there is a clear distinction between the people, strangers, and "hand." The narrow ŵ is found either primary or as the result of combination. The former appears in ġẹy (Rus. "guy, 146, 4), demek, ġẹy, ġẹm, etc., the latter in bejẹ (G. 83, 3) bẹjẹ, ẹ jẹ or fi jẹ (G. 63, 4) ẹ jẹ, fi jẹ, fi jẹ (G. 52, 18) etc. That ẹ in the immediate vicinity of ū, ū becomes narrow is a phenomenon also observed in the educated speech of Constantinople (Bergstrasser, Z. D. M. G., lxxi. 240; cf. Deny, § 189 and p. 1090).

§ 8. Most dialects distinguish between an i pronounced with the tip of the tongue and a y with the middle of the tongue. There are however also dialects in which there is no such difference and which have no pronounced y. The absence of a distinct y is characteristic of the Macedonian Turkish dialect of the district of Skoplye. At first sight of this dialect one is struck by the forms with final ẹ, i (from y and u) bejẹ (bejẹna, bejẹna, Max. P. 172, N. 1, 2), nọ (ụn, ụn, ụn "large", N. 3, 4, 5), ọjẹ (ọjẹ, ọjẹ, N. 5, 6), bagẹ (bagẹ, N. 4, 28).

In N.E. Anatolia also we find, at least to judge from Râssâneg's records, a similar phenomenon: ọjẹlẹ (ọjẹlẹa 67, 1), sẹtẹ (sẹtẹa 69, 2), ọkalẹm (71, 1).

§ 9. The position of the tongue in pronouncing final y in many dialects is considerably lower than usual so that the vowel articulated is similar to an a: ẹvẹkẹkyẹna (ęvę́kę́kę́nyẹ́, Hefning, it., xii. 235, N. 32), enyę́kę́kę́n (ęnę́kę́kę́nyę́, G. 87, 14), ẹrọmẹn (ęrọmę́nyę́, Râs., 38, 9), ọjọ́ra (ọjọ́rọ́nyę́, Râs. 43, 4), atumę́ a (atunya (atunya a, Râs. 209, 9).

The confusion of the dative with the accusative noticed in Tzolń (Bulgaria) (Gadžanov, ii. 4—5) is probably of purely phonetic origin and to be explained by this peculiarity of final y and its confusion with ə.

§ 10. Ottoman Turkish, as is well known, had originally no nasal vowels. But here and there we find the nasalisation of a vowel where a nasal consonant has disappeared: ona (onna or onya), ona (ọnụ, ọnụ, ọnụ) etc. In many districts also we find a kind of nasalisation of final vowels or formation of an indistinct ə-like consonant after final vowels, where there was no nasal vowel originally. This is especially frequent in careless articulation. Most recorders write this nasal element with ū: ẹsẹriyẹ karmarnaryn (for karmarnaryy) sẹwẹrẹ (G. 77, 3), demek ki (demel kî, G. 27, 3), ə kẹẹyẹ bahọy (for bahọy) demel ẹẹyẹ "the father of that girl said to the girl" (G. 30, 10—11), amiriyi ilinde bohọy ẹẹyẹ (for ẹẹyẹ < ẹẹyẹ) (G. 79, 5 below).

§ 11. Contraction of a diphthong from ə to ə, ə to ə is very common in dialects: The e and e which thus arise are, as indicated, distinctly longer than the usual ə and ə. Examples from G.: ẹ (ọjọ́, 18, 2), ọjọ́ (ọjọ́, 19, 2), ọjọ́ (ọjọ́, 32, 2), ọjọ́ (ọjọ́, 38, 11), ọjọ́ (ọjọ́, 51, 11), ọjọ́ (ọjọ́, 54, 11; ọjọ́, 83, 11) etc.

Consonants.

§ 12. y, ū, i.e. a voiced spirant pronounced with the middle or back of the tongue shows a remarkable gradation in the dialects. In addition to narrow varieties that differ very little and sound like carelessly articulated explosives, we have a broad, half vocalic variety of ū, here written ū.

ỹ appears entirely in many dialects, thus giving rise to diphthongs, long vowels and all kinds of contractions. This is especially the case in the Constantinople dialect. Examples from O.T.: ọlẹmọ (ọlẹmọ, l. 50, 1), ọlẹmọ (ọlẹhmọ, l. 45, 5), atumọ (atumọ, l. 41, 3), ẹsẹriyọ (ẹsẹriyọ, l. 45, 4), etc. But this phenomenon is frequently noted elsewhere as well.

To judge from Kînos' specimens, ū remains in all positions in the dialect of Adakale: ọmọmọ (140, 1), ọmọmọ (142, 1), ọmọmọ (89, 3), ọmọ (ọmọ, 50, 7, 64, 2, 1) etc.

In the district of Skoplye in Macedonia the dative in polysyllabic substantives in -e ends in -e: ọmọmọ (ọmọmọ, N. 5, 3), ọmọmọ (ọmọmọ, ọmọmọ, N. 4, 3) etc.

In the same dialect the group -e/ looks becomes -e/ - e/ - e/, e.g. dajie (dajie, dajie), dajie (dajie, dajie), ejike (ejike) etc. This phenomenon is also found in Selanik. In Macedonia, final -e/, -e/, -e/ becomes -e/ - e/ - e/ - e/ - e/, hardy (hardy), hardy (hardy), hardy (hardy), hardy (hardy), etc.

A variety of ū, pronounced with a vibration of the uvula, which in popular poetry rhymes as ū pronounced on the tip of the tongue is worth noting; cf. Giese, p. 57, note 2; p. 64, note 3; also Hefning, in Jl, XIII, 254. No. 27; ọjọ́ (ọjọ́dọ́)."
In the dialects the initial sound shows a series of peculiar phenomena. Initial vowels are usually pronounced without very definite clearness. The glottal stop is unusual at the beginning of a word; it is sometimes heard in Macedonia where it takes the place of Ĥ sounds which have disappeared: ľe (ľešvec), lič (lički), ličar (ličarstvo) etc. (cf. § 14 and 23).

In many dialects initial vowels, especially at the very beginning, are often introduced by a slight breathing (glottal spurt): koše (koša G 17), lisle (liša), štalc (štalcstvo G 56, i); cf. Gies (G 51, note 11: kače (<< Pers. ľak); Zag. N° 39 from Runel territory we find čišć, čišć, čišć (čišć) from Deli Orman; čišć is also the usual form in the dialects of the Serbo-Croatian Gagauz.

§ 31. In the dialects the initial sound shows a series of peculiar phenomena. Initial vowels are usually pronounced without very definite clearness. The glottal stop is unusual at the beginning of a word; it is sometimes heard in Macedonia where it takes the place of Ĥ sounds which have disappeared: ľe (ľešvec), lič (lički), ličar (ličarstvo) etc. (cf. § 14 and 23).

In many dialects initial vowels, especially at the very beginning, are often introduced by a slight breathing (glottal spurt): koše (koša G 17), lisle (liša), štalc (štalcstvo G 56, i); cf. Gies (G 51, note 11: koče (<< Pers. koč); Zag. N° 39 from Runel territory we find čišć, čišć, čišć (čišć) from Deli Orman; čišć is also the usual form in the dialects of the Serbo-Croatian Gagauz.

In the dialects the initial sound shows a series of peculiar phenomena. Initial vowels are usually pronounced without very definite clearness. The glottal stop is unusual at the beginning of a word; it is sometimes heard in Macedonia where it takes the place of Ĥ sounds which have disappeared: ľe (ľešvec), lič (lički), ličar (ličarstvo) etc. (cf. § 14 and 23).

In many dialects initial vowels, especially at the very beginning, are often introduced by a slight breathing (glottal spurt): koše (koša G 17), lisle (liša), štalc (štalcstvo G 56, i); cf. Gies (G 51, note 11: koče (<< Pers. koč); Zag. N° 39 from Runel territory we find čišć, čišć, čišć (čišć) from Deli Orman; čišć is also the usual form in the dialects of the Serbo-Croatian Gagauz.

In the dialects the initial sound shows a series of peculiar phenomena. Initial vowels are usually pronounced without very definite clearness. These observations by Küno are to a great extent confirmed by Rasânef's notes. The voiced initial \( d \), \( g \), \( g \) appear in his work with partial or completely replaced voicing although not quite regularly: \( fır \) (p. 214, 19), in the same quadrain \( bər \), \( hęn \) (p. 217, 1), \( ʃəl \) (p. 181, 12), \( ʃəh \) (p. 211, 1), \( ʃənəl \) (p. 223, 1), \( ʃənəl \) (p. 223, 1), etc.

Similarly \( çədənənən \) (p. 244, 1), \( çədə \) (p. 246, 1), \( çənəs \) (p. 248, 1), \( çənərəf \) (p. 249, 1), etc., even \( çənə \) (p. 145, 2), \( çənə \) (p. 238, 2), \( çənə \) (p. 244, 1), \( çənə \) (p. 245, 1), \( çənə \) (p. 246, 1), etc.

To judge from Rasânef's records initial \( tənəs \) and \( mədəs \) are frequently not distinguished from one another in the dialect of Trâbzon: \( çələtən \) (p. 223, 1) and \( çim \) (p. 225, 1) are written initially with one and the same sign; also \( očë \) (p. 233, 1) and \( očë \) (p. 233, 1).

I have noticed unvoiced initial consonants which are voiced in the written language, in people from various regions of the former vilayet of Angora: \( çələt \) (vîlen, Bil-Tut near Çınıcy), \( çələt \) (p. 223, 1) and \( çim \) (p. 225, 1) are written initially with one and the same sign; also \( očë \) (p. 233, 1) and \( očë \) (p. 233, 1).

The frequent variation in our records of the spoken speech as regards voicing of initial consonants arouses the suspicion that there are no pure \( çiməs \) in this position. A final solution of the question will only be possible when we are accurately informed regarding the condition of voicing in the dialects, if possible by instrumental records.

Final Sounds.

§ 31. Final posterior-\( d \) (g) becomes \( x \) in the eastern dialects. The boundary between \( d \) and \( x \) may, broadly speaking, be said to be the Kızyl Yrmak and the central Salt Steppe, although \( x \) areas are also found on this side of the Kızyl Yrmak, notably the Kastamuni district. On the other hand, the change from \( d \rightarrow x \) is quite unknown, so far as I am aware, on Rumelian territory.

Examples: \( çənə \) (from Kâzık Çalı-Ayı) near Jozgad, \( çənə \) (ibid.), \( çənə \) (ibid.), \( çənə \) (Jozgad), \( çənə \) (Jozgad), \( çənə \) (Jozgad), \( çənə \) (Jojojë, village of Bojaljë near Kavara).

Similarly in \( çənə \) (Kâzık Çalı-Ayı) near Jozgad: \( çənə \) (ibid.), \( çənə \) (ibid.), \( çənə \) (ibid.), \( çənə \) (ibid.), \( çənə \) (ibid.) etc. On the other hand, the texts given by Rasânef from the coast of the Black Sea between Trabzon and Kize show almost regularly an unchanged final-\( f \). All the more remarkable then are the forms given by him like \( səhə \) (Telek, p. 284, 1), \( səhə \) (Telek, p. 284, 1), etc., in which final-\( f \) on the middle of the tongue becomes \( x \).

The change from \( f < x \) is found not only at the end of words but also at the end of stems and derivative syllables: \( çənə \) (Jojojë, Kast., p. 12, 16),

THE ENCYCLOPEDIA OF ISLAM, IV.
Vowel harmony is weakest with regard to labilisation. Attention has already been called to certain features in this connection above (§ 6).

To the very frequent cases of defective harmony belong those in which the final syllable of a word is distinguished in vowel harmony from the other syllables. We very often find the endings -a, -dun, -fer, -se after light stems and vice versa -e, -de, -den, -ler, -se after heavy stems: dedeına (dedeina, G. p. 60, 18), sinema (sinema, G. p. 62, 15), lähna (lähna, G. p. 82, 11), istanın (istanın, G. p. 60, 14), selma (selma, R. p. 209, 3), versin (versek, R. p. 83, 9), derler (derler, Miskov, p. 32, 19), sömmöller (sömmöller, G. p. 37, 9) and vice versa atalı (atalı, G. p. 60, 17), yakınçe (yakınçe, G. p. 51, 10), yulamın (yulamın, G. p. 91, 27), fidhre (fidhre, Miskov, G. p. 32, 19). Salm (salm, R. p. 6, 1, 19).

As the examples show, a vowel frequently occurs at the end of a word in place of the expected e. It is not only a real a but a very broad variety of a (ə) as the a in an open final syllable is generally pronounced very open in the language of educated people also (Hengstüser, Z. D. M. G., lixi. 239). Dimitrijev (J. A., April-June 1916, p. 343) calls attention to a similar phenomenon in the language of the Osmanified Krimer Turks.

On the other hand, we find in the dialects numerous cases of vowel harmony rigidly carried through, where it is not found in the written language. Loanwords form the most cases. The vowel attraction acts progressively or retrogressively according to circumstances.

Examples: a. progressive: mefen (meiden, Brun.-A., p. 125, N. 4, v. 3), coda (soda, G. p. 88, 16), mever (mezer, K. O., i. 345, N. 2, i), bilim (bilim, ibid., N. 6, 3), and (and, G. p. 36, 7), lahen (lahen, Pers. Mählin, G. p. 75, 14, 3, i),

b. retrogressive: alma (alma, Brun.-A., p. 121), olker (olker, K. O., i. 344, N. 51, 1), maraş (maraş), G. p. 17, 19, derer (derer, G. p. 17, 17), defe (defe, G. p. 23, 30) etc. -c. retrogressive and progressive: hahir (hahir, R. S., p. 19, 13).

Certain cases are worthy of special mention: a. -i and -en, progressively harmonised as -in, -en: ofornekn (ofornek, G. p. 37, 7), sarımkin (sarım, G. p. 37, 1), bolanınan (bolanın, G. p. 51, 11); cf. below § 76, bolanınan (bolanın, G. p. 51, 11) etc.
b. bare "a little" from bir as (G. p. 53, 26; cf. K. S., i. 189).
c. by vowel attraction acting retrogressively the demonstratives bu, in before light stems often become bu, in: bu: lü: büfen (bu gün, G. p. 29, 10), büfen (bu gün, O. T. i. 26, 12), 37, 95; i. 26, 10, lu: höle (lu k., O. T. i. 26 ult.), lu: güreșin (lu gürešin, O. T. i. 26 ult.), lu: renk (lu renk, O. T. i. 227, 12) etc.; cf. Hoy, in K. S., l. 187 spp.

Sound Change in Combination. Assimilation of Consonants.

§ 38. The dialects are characterised by a large number of peculiarities in assimilation. Most of these occur only sporadically. To define the areas

Vowel harmony.
in which they appear is not yet possible. Many of them also occur in the spoken language of the educated classes, especially when speaking more quickly than usual or with a certain amount of carelessness. These changes occur in the dialects all the more frequently as the speakers have not before their eyes the regulating influence of the written forms.

§ 39. Complete retrogressive assimilation occurs most frequently in the following cases:

b. $kt > Ht$ and $gt > Ht$: jilte (jiktte, jikde, R. O., ii. 205, from below, from Guneje), methup (mekhik), village of Naryjli in the district of Aijdya, anatator (anatutar, O. T., l. 192, s, 256, et al).

c. $tr > Hr$: cesis (settin, G., p. 67, in), iszisya (izitya, Brus.-A., p. 145, from below), kyyisam (kystdya, O. T., l. 218, y, isisam from tissi probably through tissi, O. T., l. 206, y).

d. $pt > Hs > H$ (after dropping gemination; cf. below § 53): isaszysii (isaszysii) (isaszysii), G., p. 37, 10.

e. $tr > H$: gassynnar (gasynnar, Brus.-A., p. 44, u), izmenn (izmenn, G., p. 60, s).

f. $tr > H$: tissi (tissi < tissi < Azin, G., p. 38, 6, 12, cf. § 36).

g. $tr > Hz$, unusually frequent: assuin (assain, G., p. 28, z), assay (aysap, G., p. 56, z), gessen, tayaw assin (gessen, tayaw, G., p. 51, s).

h. $rtr > Hz$: sawarn (sawaran, G., p. 18, s), lyxamas (lyxamas, G., p. 82, s).

i. $rtr > Hz$ (or $tr > Hz$, after dropping gemination): sotjarlar ... goqutarlar ... sevarlar ... sevarlar, Brus.-A., p. 121, goqutlar (goqutlar, op. cit.), tellikler (tellikler, O. T., l. 91, s), getikler (getikler, Gadan-yan, l. 7, below, from Dellorman, etc).

J. Adjectives: u>xu (xu “his forehead” from Tasaolik near Kyschier, K.)

k. $rtr > Hz$: anxious (anxious, R. O., p. 265, i).

l. $tr > Hz$: jesminen (jesminen, G., p. 20, m), samei (samei, G., p. 37, o), miyiduaneyi (miyiduaneyi, G., p. 75, s), Jesminen (jesminen, G., p. 37, o).

m. $tr > Hz$: émmanu (émmanu, G., p. 60, o), yoxammy (yoxammiy, G., p. 77, s).

§ 40. Complete retrogressive assimilation occurs mainly in the following cases:

a. $ns > Hz$, very frequent in sandhi: émmanuy (émmanuy, K. O., ii. 205, from below), yoxammy (yoxammiy, var., Zag., N° 92 from Azin in the district of Séd-Gazy, Jesminen-jarikin (jesminen varikin, G., p. 30, s), samei-mirdim (samei mirdim, G., p. 62, s), émmanuy (émmanuy, G., p. 71, s).

b. $m > Hz$ and $pt > Hz$: paysammi (paysammi, Zag., N° 102, Azin in the district of Séd-Gazy, humami (humami, G., p. 18, o), haizammi (haizammi, G., p. 18, o), yoxammi (yoxammi, G., p. 82, s).

c. $ns > Hz$: nemen (nemen, O. T., l. 25, 16), medamam (medamam, O. T., l. 134, 9), govat (govat, O. T., l. 217, s).

d. $yz > Hz$: yaranyu (yaranyu, G., p. 75, 14), derdigi (derdigi, G., p. 75, 15).

e. $yz > Hz$: ýarannen (ýarannen, G., p. 66, s).

§ 41. Partial retrogressive assimilation frequently occurs in the dialects in sandhi where a final - $s$ under the influence of a preceding - $n$, in the next word becomes: $bmam$ $bn$ (bmam $bn$, G., p. 78, s), bariym $baly$ (bariym $baly$, G., p. 85, s), umam $bajun$ (umam $bajun$, G., p. 88, s), bīriym $bajun$ (bīriym $bajun$, G., p. 56, ult), afànyn $bächik$ (afànyn $bächik$, G., p. 70, 13, s).

§ 42. Partial progressive assimilation $ms > Hz$: damen (damen, Zag., N° 97 from Azin near Séd-Gazy; dammen dammen got ef'se, Brus., p. 264, 4), almen (almen, Brus.-A., p. 154, 8), zannez (zanaza, Zag., N° 96 from Azin near Séd-Gazy) etc.

§ 43. Assimilation in regard to a sound which comes between the end of the stem and the beginning of the suffixed syllables, so far as we know, follows in the dialects the rules laid down by Bergstrasser for the language of the educated classes (Z. D. M. G., lxxvi, 1918, p. 261 sq).

§ 44. Progressive assimilation at a distance is often noticed in combinations of $ne$ “what” with forms of the verb ijelet “to select”: ijelet < ijelemin < ne ijelemin, Brus.-A., p. 224, 20, nejelem (ne ijelem, Brus., p. 270, 153), neharem (ne ijelem, G., p. 73, 12).

Influence of consonants on vowels.

§ 45. The labial or labio-dental consonants $b$, $m$, $w$, $f$ exercise to a greater degree than is the case in the written language a labilising influence on immediately adjoining vowels, both progressively and retrogressively: basafary (basafary, G., p. 86, s); the word $basa$ appears in many districts as $baba$ or $baba$: lula, Las., p. 287; Brus.-A., p. 127, 7; asewa, R., p. 223, 4; in this form I also know it from N. E. Bulgaria, bără (bără, Zag., N° 75 from Kučak in the district of Mayla), bără (bără, G., p. 62, 13), lotăbă (loțăbă, Zag., N° 11, 13), iezem (iezem, G., p. 19, 2), arăba (arăba, G., p. 39, 42), iezem (iezem, Zag., N° 75 from Kučak in the district of Mayla), iezem (iezem, G., p. 77, 16).

§ 46. The place of contact with vowels, especially with $a$, $u$, $o$, frequently cause a narrowing of the latter to $e$, $y$ (or at least to a y-like vowel), $u$.

Narrow $e$ before and after $y$, $j$, has already been discussed above (§ 7). Otherwise cf. tuzarny (tuzarny, R. O., p. 330 from the village of Dumanly near Ulaq, Naziantem (naziantem, G., p. 60, 4), cf. Deny, Grammatica, § 644, diarama (diarama, R. O., p. 46, 4), jonej (jonej, Zag., N° 120 from Tak, O'ak near Kyschier, Yonej (Yonej, G., p. 80, 15) etc.

Note: The new orthography in Latin characters has brought to light in the written language an $e$, or y-like pronunciation of $i$, or before an $i$: ijeleminy (ijelemi, G., p. 86, 13), gertnerijer (gertnerijer, G., p. 60, 14), gertnerijer (gertnerijer, G., p. 60, 14). Cf. Deny, § 627, note 2.

§ 47. On the influence of palatalised $l$, $ł$, $ł$ on vowels see above § 18. In Gagauz, $f$ regularly changes $a$, $o$, $u$ to $e$, $ë$, $u$, Moskv., p. xxvii: joki (Gagauz., p. 1, 10), ojiki (op. cit., p. 1, 10), jujaw (op. cit., p. 3, 6), induj (op. cit., p. 3, 12).

Influence of vowels on consonants.

§ 48. In all Turkish languages, in the Ottoman dialects also the articulation of consonants is dependent on the nature of the surrounding vowels. Under the influence of anterior vowels consonants are pronounced more forward, and farther back under the influence of middle and posterior vowels. In many consonants, especially $k$, $g$, $g$, $k$, $f$, the forward pronunciation is com-

In the willetys of Angora and adjoining districts I have frequently noted the same thing: eit (eii * bend") from Ta6-ol6uk near Kayssirih, peetne (peetne from Kuraji near Jassag), ky6ymdum (ky6ymduum, ibr.), peelmad (peelmad, ibr.), door (dear) from Denkremden etc).

The same phenomenon is recorded from To6Uuk in N.E. Bulgaria: 'bora, b6n, never (Gadzhanov, ii. 4).

§ 53. In most dialects an io sound has developed between two vowels coming together directly within a word. But sometimes we find a instead of io: svaklisl (swaklisl, swaklisl, G., p. 31, 3), to6p6-pilbl (to6p6-pilbl, G., p. 52, 80), timeless (tsim51, G., p. 57, 8c) etc.

Sentence Sandhi.

§ 56. When two words come together, of which the first ends with a vowel and the second begins with a vowel, in all dialects, as is frequently the case in Turkish languages, the first of the two vowels is usually dropped. Examples: Hamsiyov (Hamsiyoy, G., p. 87, 3), sulayrey tdindm (sulayrey tidinm, G., p. 86, 8c), gilr3 elnsal eif olurs (gilr3 olur, elnsal, G., p. 77, 8c), elii 66g6r6r6m (elii 66g6r6r6m, G., p. 82, 8c), elii atijoyy, G., p. 82, 8c (from below), del tesli (del tesli, G., p. 85, 8c), atif olur (atif olur, G., p. 67, 8c), hal olum (hal olum, G., p. 29 ust.).

Ne and the interrogative particle my deserve special mention (ilim6: ne elier, RO., ii. 204, 8 from below from Gine), ne6u (ne eli6u very common; cf. e.g. Ada6., p. 140 ust.), 6r6ff6y (ne ol6mas, G., p. 83, 8c) nap6mm (ne yap6mm, Brun.-A., p. 149, 8 from below); cf. also the forms given by K6no6 without references: nedd6nm = ne 6ed6kn6m, napp66s = ne 6appa66s, ned6kn6m = ne 6ed6kn6m, nap66sm = said to be ne 6app6sm (from above), ay6sfn6m (ay6sfn6m, G., p. 75, 4), ay6sfn6m (ay6sfn6m, G., p. 53, 11) etc.

In the combination of a to a the second vowel sometimes disappears: 6f6nm (6f6nm) pod6k6f6m (pod6k6f6m), to6l6m (to6l6m, G., p. 60, 18).

Reduction of Syllables.

§ 57. In words of three syllables, the central one, if it is open, is frequently reduced. This feature, also found in other Turkish languages, is much more common in all dialects than in the written language. It is connected with the accentuation of words of three syllables: a = a, or a = a, cf. W. Bang, Studien zur vergl. Grammatik der Turksprachen, S. B. Pr. Abh. W., xxxvii. (1916), p. 920; T. Kowalski, Zs studfum nad forma porzj5 ludou tureckou, p. 70, note 1.

Grammer.

§ 58. Declension. Declension offers no peculiarities of a local nature.

The "confusion of the accusative with the dative" noted in various Ottoman speaking districts (Gadzhanov, ii. 4-8) e.g. ab6ma ara6rim (for atnym ara6rum, Rus., p. 209, 8 from Kyranna, in the willety of Trebizond), is, as explained in § 9, due to a phonetic peculiarity.

Similarly the identity of the locative with the

1) M. Köprülü-Zade Pu'ud is wrong in thinking (K.C hive., ii. 37 on vv. 54), that a contraction like bud mufarjam = bud-ay mufar3 represents an archaic feature of the 16th century.

dative ending, which is frequently met with, is to be explained by phonetic changes (assimilation, with later dropping of the gemination, cf. § 49 and § 53): ku6m6ne ye kiu var *in your village there are three girls" (from ku6m6ne > ku6m6ne, Rus., p. 156, 8), i66 j6m6ma t'Cen (j6m6ma > j6m6ma) j6m6ma, Rus., p. 149, 8), j6m6m6 k66m6men den bir i6yn *on the meadow of the alpine pasture I was alone" (< cim6m6n < cim6m6n, Rus., p. 107, 8c) etc.

Nominative forms frequently met with in place of expected dative forms are probably to be explained as the result of contraction: mere (= mere: gi6ti6, helenni6 "he could not ascertain where the other had gone" (R.C., ii. 205, 8 from Gine), mere k66r6n on gider *whether (merc: thou dragest her, thither (mer: oraij) she will go)" (G., p. 66, 8o), indyn dere, j6m6ma "I went down to the valley (merc: to the river)" (Rus., p. 105, 8r). The (merc: why), "often found in dialects, is probably to be similarly explained.

The Pronoun.

§ 59. The personal pronoun of the 1st and 2nd person singular appears in the east and Anatolia in the forms heni, being, agreeing with the other cases, for hana (or hana), hana (or yana). I have heard them from a Turk from Ursa. The same forms are given by Balkanglu (K. Se., iii. 204) for the dialect of Kilis. Rausen notes them as heard from a woman from the willety of Ersemer: nene (R. 8., p. 16, 8; p. 23, 1). We must regard these forms as the result of Adharbasli influence.

Songs in Rausen from Trebizond and neighbourhood show a dative in h6a (alongside of hana), na:s: h6a (p. 176, 3), h6a (p. 205, 8), na:s (p. 263, 4) alongside however, we have: h6a (p. 134, 1), h6a (p. 133, 8).

The demonstrative pronoun hu appears in N. E. Anatolia strengthened by a prefixed ha (exclamative a with an aspirated anlani): hana (in Rausen, p. 159, 8; 215, 8; 250, 8; 256, 8). The same ha is added to the hu in hufar, huruy, hurudza: habu6man (Rus., p. 180, 8, 191, 8; 192, 8; 199, 8; 257, 8), habu6r6z (Rus., p. 258, 8), hab6jo6 (Rus., p. 164, 8).

Similarly we find prefixed ha in the demonstrative a, dialectal a (cf. § 4): ha:n (Rus., p. 240, 4).

Conjugation.

Personal Endings.

§ 60. 1st Pers. sing.

In the dialects we find a for -m at the end of forms in conjugation, as frequently in old Ottoman (Deny, § 551); cf. W. Bang, Studien zur vergleichenden Grammatik der Turksprachen, i., S. B. Pr. Abh. W., xxii. (1916), p. 534, note 1.

Examples from Asia Minor: japa66 (japa66, G., p. 17, 13), i66im (i66im, G., p. 85, 8c), o6man (o6man, G., p. 89, 8c), i6y6ran (i6y6ran, G., p. 79, 8c), e6men (e6men, ibr., p. 351, 4 from below), i6y6ran (i6y6ran, Zag., No. 33, from Mun6 in the district of Bali6e6t), i6f6jon, i6jo6jon, i6jo6jon (i6y6ran etc., Brun.-A., p. 134, 8), i6r6mon (i6r6mon, Thury, Kastl, p. 19).

So far as I know, a similar phenomenon is only found in Rumelian territory and in N. E. Bulgaria: hiktem, giltem (hiktem, giltem, Gadzhanov, i. 9), giltem, giltem (ibid.).

§ 61. 2nd Pers. sing.
bined with a more or less pronounced palatalisation. According to Rässenèn’s records, ā and ē are pronounced before e, e, o, u so far forward and so palatal that they almost become æ or œ’ (cf. § 20). This peculiarity seems to extend from the coast region of Trebizond and Rize nearly towards Erzerum.

In Gagauz, anterior vowels e, i, o, u cause a regular and pronounced palatalisation of all adjectival consonants (cf. Mokov, p. xxvi—xxvii).

Simplification of groups of consonants.

§ 49. In many cases the complete assimilation leads to the disappearance of a consonant, or the doubling of a consonant is dropped (cf. § 53). In the following cases we have the simplification of groups of three (or four) consonants:

1. t̨m > tm in atumy (atmly), G. p. 28, q. in a man from Isparja; 42. yu, in a jürük; O.T., l. 108, as from Constantinople, jişuçu (jiszusco), R. 19, 26, from Vezirhan. We also find 3t < ntl (G., p. 77, 82). Cf. K. O., l. 210, s, 99.

2. f t > ft in fštak (fštak, almost general "frontal" pronunciation of this word).

f t > ft in fštak (fštak, cf. O. T., l. 78, q. from below).

d. nɔλ > nnt; in gõllik (gõllik < gollúk, G., p. 56, 89; golluk, Dum., K. O., l. 343, Nt., 4, 3).

c. ry > rt in ulran (oršan, G., p. 38, q. and frequent elsewhere).

l. ṭu (≡ ṭu) > ṭu in ṭur cú (ṭurcu, G., p. 97, 84).

2. flashdata (kšt, ṭuš, ṭuša, G., p. 72, q.

Grouped consonants:

1. ṭl k > ṭl k (gštēkhrk, W.Z.K.K., p. 218, 89, from Macedonia).

2. e. ž > j, especially in diminutive forms, before the ending -ž, ż. The dropping of ž is also almost the rule in the written language, cf. Deny, § 111. Examples: žúlak (G., p. 78, 3), žūlužak (O. T., l. 304, § 72, 8; 305, 33; 333, 3); žafaržyn (žafaržyn, O. T., l. 334, 3; 334, 3); žafaržyn (G., p. 36, 84).

On the other hand we find: žūlak (żulač, žūlakūč, žūlakūč, R., p. 154, q).

Finally we may class here the often noted disappearance of a final ū after a, 3, l: abdas (abdast, K., p. 106), de (dest, G., p. 53, 81, ṭen (G., p. 71, 85), for w = w (cf. § 1); polu (polu, G., p. 59, 82, poluž (poluž, Max., W.Z.K.K., 311, l. 106, q. 35, q; cf. ibid., p. 224, q).

Interchange of sounds.

§ 50. r and l in contact with another consonant show a tendency to change place with the latter.

a. uččeti (uččeti, uččeti, G., p. 28, q.); točču (töčču, G., p. 31, 82); džččiv (duččiv, G., p. 29, q.); toččuž (töččuž, M., p. 59, 82); Belgrad (Biligrad, G., p. 57, Nt., 3, paas); toččuž (töččuž, etc).

b. ďččiu (ďččiu, Zag., Nt., 47; from Munur near Balykesir), ďččiv (ďččiv, Zag., Nt., 104; from Ayin near Sidi Gaz, tomáda (tomáda, G., p. 90, 84), yomččo (yomččo < Arab, yomččo, G., p. 89, 84), gõččž (gõččž, Brus.-A., p. 126, 84).

This feature is especially developed in Asia Minor.

Development of sounds.

§ 51. Before the explosives f, f, f, k, k, k, and the fricatives s, s, s, secondary nasal m, n, ñ are frequently developed. This phenomenon is, it is true, most frequently noticed in loanwords but it is also found in pure Turkish words: almku (aldu, Zag., Nt., 3; from Kaşgärden in Macedonia), pomper (pomper, Radovići in Macedonia), yurant, yurant (yurant, G., p. 36, note 2; p. 72, q; from Bogor; ibid., p. 69, 84; yurant, yurant (yurant, R., p. 4, 8; from Vezirhan), laşaf (laʃaf, Ar., K. N.), gõčču (gõčču, gõčču, from Damany near Kütahia), garmangaro (garmançaro, Thrý, K. R., p. 16), meččiti (meččiti, Zag., Nt., 103; from Ayin near Sidi Gaz, Brus.-A., p. 131, q.; Thrý, K. R., p. 16, q.)

Syllable Division.

§ 52. Simple consonants between two vowels frequently appear somewhat lengthened. They may even be pronounced long under the influence of stress. In this case the consonant is divided between the preceding and following syllables so that the division between the syllables divides the consonant which produces the effect of lengthening the consonant as a double one: defalalaj pronounced with emphasis sounds almost like def-falalaj. Examples: yuččjáy (yuććay), G., p. 77, 89, poluž (from polu “pluck, pull”, not from poluž “to send”, G., p. 80, 89); yorččuž (yorččuž, Brus., p. 267, Nt., 6); elččuž (elččuž, ibid., Nt., 25); gõččž (gõččž, ibid., p. 267, Nt., 88); elččiti (elččiti, R., p. 4, q); elččuž (elččuž, R., p. 31, q); elččiti (elččiti, R., p. 93, q).

§ 53. On the other hand, we do not find a pronounced double sound where it might be expected on etymological grounds. The result is taken with § 52, that e.g. the two last syllables in baby lajám “my (beloved) with the shawl covered head” and defalalaj “let us go around” are pronounced identically. Similarly bšbši elččuž and bšbši belččuž are practically indistinguishable in the usual pronunciation.

This enables us to understand forms like the following: ečči (origin: ečči, G., p. 17, q); bščči (bščči, G., p. 23, q); memlečč (memlečč [locative], G., p. 27, q); agmađčč (agmađčč, G., p. 30, q; cf. § 40); Býryžčč (Býryžčč, G., p. 61, q); žččuž (žččuž, G., p. 55, q).

§ 54. Many dialects allow two vowels to succeed one another directly within a word, where the cultured language and other dialects have an ž or γ sound. This is usually found where an original guttural has been lost. Most examples are found in Rässenèn’s text from N.E. Asia Minor: dalay žm, alyəžm (aždžym, alyəžm, R., p. 151, 82); gemižm (gemižm, R., p. 153, q); alyəžm (aždžym, p. 154, q); alyəžm (aždžym, etc.)
In the williêta of Angora and adjoining districts I have frequently noted the same thing: etal (*etil* "bend" from Taş-tak or near Kırche), *sümnca* (from Kuzlille near Jisrud), *çamymom* (Kymomurdu, ibid.), *çamly* (Keçistem, ibid.), doar (*döar* from Denikmen) etc.

The same phenomenon is recorded from Toğlak in N.E. Bulgaria: *buruç, boro, borë* (Gadžanov, li. 4). § 53. In most dialects an *a* sound has developed between two vowels coming directly together within a word. But sometimes we find *a* instead of *i*: *túuvala* (*túuvala, tuuvala*, G., p. 31, *túu-pólha* (*túu-pólha*, G., p. 32, *túu*) *súmcal* (*súmcal, G., p. 57, *súm*) etc.

**Sentence Sandhi.**

*Ne* and the interrogative particle *my* deserve special mention: *willije* (*willije*, R.O., li. 204, *willije* from below from Güne), *naa* (*naa* very common; cf. e.g. *Adak*, p. 140 ult.), *nuumbl* (*nuumbl*, G., p. 83, *nuumbl*), *numbl* (*numbl*, Boro-A., p. 149, *numbl* from below); cf. also the forms given by Kounos without references: *nedzg* (*nedzg*, *nedzg* (*nedzg*), *nedzg* (*nedzg*), *nedzg* (*nedzg*), *nedzg* (*nedzg*), *nedzg* (*nedzg*)

*Ala* (*Ala* from below), *ala* (*ala*, G., p. 75, *ala*), *ala* (*ala*, G., p. 53, *ala*), etc.

In the combination of *a*- and the second vowel sometimes disappears: *sým* (*sým*, G., p. 60, *sým*).

**Reduction of Syllables.**

§ 57. In words of three syllables, the central one, if it is open, is frequently reduced. This feature, also found in other Turkish languages, is much more common in all dialects than in the written language. It is connected with the accentuation of words of three syllables: *— — —* or *— — —;* cf. W. Bang, *Studien zur vergl. Grammatik der Türktsprachen*, S. B. Pr. Ak. W., xxxvii. (1916), p. 920; T. Kowalski, *Zu studien nach formen persiisch turkish*, p. 70, note 1.

**Grammar.**

§ 58. Declension.

Declension offers no peculiarities of a local nature. The "confusion of the accusative and the dative" noted in various Ottoman speaking districts (Gadžanov, li. 4-5), e.g. *çam* *apar* (*çam* *apar*), R., p. 200, *çam* (*çam*, G., p. 29, *çam*, Kysarina, in the williêta of Treföns), is, as explained in § 9, due to a phonetic peculiarity. Similarly the identity of the locative with the

---

1) M. Köprüli-Zade Fu'ât is wrong in thinking (K.C.A., li. 37 on v. 54), that a contraction like *bëd meşauri* < *bad-my afaynu* represents an archaic feature of the xiiith century.

dative ending, which is frequently met with, is to be explained by phonetic changes (assimilation, with latter dropping of the gemination, cf. § 49 and § 53); *këjïmâa û Rës xará "in your village there are three girls" (from *këjïmâa > këjïmâa*, R., p. 156, *jëdi* *këjïmâa* *te-çəm* (*këjïmâa* > *këjïmâa* > *këjïmâa*, R., p. 149, *jëdi* *këjïmâa* "on the meadow of the alpine pasture I was alone" (< *këjïmâa* < *këjïmâa*, R., p. 107, *jëdi* etc).

Nominative forms frequently met with in place of expected dative forms are probably to be explained as the result of contraction: *nïre* (= *merëji*; *gëlëni* *bëllëmmi* "he could not ascertain where (the other) had gone" (R.O., li. 205, *në* from *Güne*), *nëkëmen ûrë gîder* "whether (= *merëji*) thou druggest her, thither (= *orajia*) she will go" (G., p. 66, *në*), *indëph dërc* (*kërmpya* = "I went down to the valley (= *dëerci*) to the river" (R., p. 105, *në*). The *ne* (< *çëcë* "why") is often found in dialects, is probably to be similarly explained.

**The Pronoun.**

§ 59. The personal pronoun of the 1st and 2nd person singular appears in the east of Anatolia in the forms *senn, senn*, agreeing with the other cases, for *senna* (or *senn*), *senna* (or *sanna*). I have heard them from a Turc from Üzra. The same forms are given by Balkanoglu (K. Sc., iii. 264) for the dialect of Klis. Balkanoglu tells me that they come from a woman from the williêta of Erzum: *senn* (R., p. 16, *senn* from below, *senn*). We must regard these forms as the result of Azphâhâbîk influence.

The demonstrative pronoun *bu* appears in N.E. Anatolia strengthened by a prefixed *bu* (exclamative with an aspirated *bu*): *hëbu* (in Rësânên, p. 159, *hëbu* (*hëbu*), *hëbu* (*hëbu*), *hëbu* (*hëbu*), *hëbu* (*hëbu*).

The same *bu* is added to the *në* in *në* *hëbu* *bëvëri* *dëvëri* (*hëbu* (*hëbu*)), *hëbu* (*hëbu*), *hëbu* (*hëbu*), *hëbu* (*hëbu*).

Similarly we find prefixed *bu* in the demonstrative *a*, dialectal *a* (cf. § 4): *a* (*a*, R., p. 240, *a*).

**Conjugation.**

**Personal Endings.**

§ 60. 1st Pers. sing.

Similarly we find prefixed *bu* in the demonstrative *a*, dialectal *a* (cf. § 4): *a* (*a*, R., p. 240, *a*).
By confusion of the forms of conjugation in -sin, -sın, -sin (gelism, gelismen, ... gelisir) with that in -sin, -sin, -sin, -sin, -sin, or -sin; (gelism, gelismen, gelismen) in the Asia Minor dialects we very often find the personal ending of the 2nd pers. sing. -sini, where elsewhere we have -sini: gides, siniy (gelis, gelismen, K. St., l. 155 from North Syria), gelin (gelis, gelismen, ibid.), gelisim (gelisim, ibid.).

In keeping with this we find: sen... sodramamam (sedinim? for sediminim? G. p. 39, ed. C.)

§ 62. 1st Pers. plur.

As a result of a similar confusion of the two types of conjugation, the 1st pers. plur. of the opt., pres., acc., and fut. in many, especially East Anatolian dialects, ends in -sin (gelism), is: gelised (gelism from the district of Sivas), gelisedim (gelisedimin, from Kars), gelised (geliseden, K. St., l. 155 from North Syria), gelisedim (gelisedimin from Tatlyak, S. from Sivas), gelisedim (gelisedimin, ibid.), geliseden (gelisedeyen, R. p. 173, 3), alay (gellayi) is given by Bulkanoglu for Killis in North Syria, K. St., l. 264 etc.

Outside of the conjugation tables we also find -sin with the meaning “we are” (instead of the enclitic -[sini]: bes amelic we are workingmen) (I heard this in Amasia from labourers from Voyag).

This phenomenon is characteristic of the east of Asia Minor. While it is not found far east of Angora in northern Asia Minor, in southern Asia Minor it appears to extend much farther east. The case for the eastern part of Kusey-Ýama, I heard almost exclusively the forms in -sin (bes hem usi Remek, biz Kusin gelisden etc).

§ 63. 2nd Pers. plur.

Everywhere that we find in the 2nd pers. sing., for -sin we also have in the 2nd pers. plur. -sin, -sin etc. instead of -sin, -sin etc.: gelisesmen (gelisesmen, gelisesmenmen, gelisesmen), geliseden (geliseden, geliseden, gelisedenmen, gelisedenmen)

§ 64. Verbal forms ending in -er (3rd pers. sing. and acc. or pers, and acc): lose this -er in various dialects (cf. § 34): milhîye (i.e. müjûr, K. St., l. 204 from Gümüş), deker (derekim, ibid., p. 205, 3), alay (alayir, Thutry, Kast., p. 19), Kemiri (hemiri, K. St., l. 347, No. 15, 4), kalary (kalary, R. p. 70 from Borgotır etc.

After final -r of the form der (from dever) we sometimes find a vowel-like sound which is difficult to define, like der (cf. K. St., l. 206, 3).

In some Rumelian dialects (notably in the dialect of Adakale) the final -r of the nor. partic. almost regularly becomes: i: kazal (kusar), kalayir (kalayır), ulüri (ülürir) etc.

The Tomis.

§ 65. Present.

Besides the forms in -yör we find in dialects those in -yör, -yör, -yör with many slight gradations in the “quality” of the vowel. The half consonantal l may sometimes disappear so that the two vowels come together: the vowel of the corresponding gerundive form and the vowel of the ending -ar, -ar, -ar. The final -r also may disappear completely (cf. § 64).

Forms with the vowel a and i:* (yör, -yör, -yör, -yör, -yör, -yör, -yör, -yör, -yör)

-dr, or -yör, -yör are found in the two most northeasterly corners of the Ottoman speaking area: on the one side in the northeast on the coast of the Black Sea, towards the Caucasus, on the other in the northwest, in the N. E. of Bulgaria, in Dobrudja and Basarabia.

Examples from the N. E.: dülüşir (gelâsir, R. p. 68, f. from the willayet of Erzerûm), agâsir (abâyçir, R. p. 166, f. from Trebizond), cerd (çelir, R. p. 175, 9, ibid.), ceri (çeriçir, R. p. 194, f. from the willayet of Trebizond), demânsir (denânsir, R. p. 254, 9), bûssâne (bûssâncir, R. p. 245, 3: with very broad and low final i: cf. § 9), atûnlâsir (atûnlâsir, R. p. 319, 9) etc.

With Râsâden's statements, those of Khan for the district of Samsun-Trebizond agree: yörâsir (yörâsîr, R. p. 278, f. from below), yörâsir (yörâsîr, R. ibid., l. 17, from below), gelisir (gelisir, L. p. 251, 1, from below).

I have noticed forms in -dr (çer) even south of Sivas: dûdrâ, dûdrîsir, dûdrîsir, dûdrîsir: etc., all from the village of Tatlyak, between Sivas and Kâzâ-dîli.

Forms in -yör were noted by Thury in Kastumunian (p. 19): batani (bâtayçir (< batayçir, cf. § 49), bûCareer (bûsîçir (< bûsîçir), dûsîçir (< dûsîçir), dûsîçir (< dûsîçir), etc.

Forms ending in -yör and -yör are also characteristic of the dialect of the ottomanised Tatars of the Crimea: sâyîur (Satçaya, in J. A., 1926, p. 352, 4), paralasir (baçyçir (< baçyçir), sîyör (sîyör, itibid., p. 364, 7-9).

The forms in -yör and -yör seem to cover an area which begins with the willayet of Kastumun and stretches along the coast of the Black Sea far to the east and north. I do not know a single case of such forms from the southern half of the peninsula.

If we now turn to the western coast of the Black Sea we find very peculiar, complicated conditions which cannot yet be considered to have been quite cleared up.

Among the Bessarabian Gagaus, according to Mîov (Gagaus, xxviii, xxix), two forms of present are used alongside of each other: the one in -yör, the other in -yör (cf. e.g. yör, 3. 307; immediately following it yör). As forms like bûryçir (from the village of Þeëla in the circle of Ismail) show, -dr has arisen out of -yör.

Still more involved is the position in northern Bulgaria. The present forms there form one of the most important criteria for distinguishing the dialects of the different districts. According to Gudanow, whose statements I can generally confirm, we have the following forms of the present in conjugation:

b. Northern part of Gerovo (l. 7):

1) I cannot see why this present form should be entirely separated from that in -yör and "probably compared with the Cag. present in -yör" (M. Pâlo, K. C. A., l. 86).

2) Gudanow writes gelisîr: by f. he indicates that f is not f.
The forms above quoted from N.E. Bulgaria and the Dobrudja are exceedingly important for the explanation of the present in ľcor 2) as they represent an older stage of development than that preserved in the written language. The discussion of the question whether a form like ľovlerin is a combination with ľev- or a phonetic development from ľovlerix must remain undecided.

In the dialect of the island of Adakale the present has been completely ousted by an aorist form in -ā: ĕplaču, ĕplići, ĕplići (cf. § 64 and 66). But we also find forms in ľib, e. g. ľypsum (ľypsum, ľypsum, ľypsum, Adak., p. 260, a.)

Isolated forms in ľib are found in Macedonia: ľDig (W.Z.A.M., xxxii. 274, 2, Nr. 59, 2).

The present in ľib agreeing with the written language covers the whole of Rumelia especially, it was found in Thracia with Constantinople and the western and southern parts of Asia Minor. On Asia Minor territories ľib appears usually without final -ā: ľilliu (ne ľillušer, R.O., ii. 204 from Guine.), ľolome (belemečer, ibid., p. 205), ľegišum (lēgerom, ibid., p. 205, ao), ľolymi (ľolymi, ibid., p. 205, ao), ľelgišu ľelgišu, ľelgišu (M. Hartmann, K. S., l. 155 from North Syria; Hartmann’s remark, as if the forms were the 2nd pers. sing., is based on an error). The same form is given by Balkanoglu.

1) Unfortunately Gălătănoiu gives no further forms.

As to the conjugation of the present, two types can generally be distinguished, a fuller with the endings ĭavarn, ĭavarn, ĭavarn, ĭavarn, ĭavarn and a shortened with the endings ĭa, ĭa, ĭa, ĭa, ĭa (īavarn, ĭava, ĭavar, ĭavarn, ĭavarn, ĭavarn etc.).

In the former type belong among others the conjugation of the present in N.E. Asia Minor: ĭavarn (Rus., p. 100, a.), ĭavarn (ibid., p. 161, a.), ĭavarn (p. 247, a.), ĭavarn (p. 222, a.), ĭavarn (iavarn, p. 260, a.), ĭa, ĭava (iavarn, p. 258, a.) etc. N.E. Bulgaria also follows this type.

The second type is given by M. Hartmann and Balkanoglu for Northern Syria and Northern Mesopotamia. It is however also found in southern and western Asia Minor: ĭavarn (iavarn, Brus.-A., p. 134; cf. § 60), ĭavarn (iavarn, ibid., ĭa, ĭavarn (iavarn, Brus.-A., p. 133, a. from belki), ĭa, ĭa (iavarn, iavarn, ibid., P. 134-4) etc. While however the 1st pers. plur. in the east ends in ĭa, ĭa, ĭa, ĭa, ĭa (iavarn, K. S., l. 155; ĭavarn, K. S., iv. 125; cf. § 62), in the west it ends in ĭa: ĭavarn (iavarn, G, p. 19, 11).

Forms with the negation particle sa, e show no special features; only a, e usually become v, e, i under the influence of ś (cf. § 46). Gagauz forms like ĭavarnare (Gagauz, p. 2, 19), ĭavarnareticin (ibid., p. 5, 25) are present, not aorist forms.

In Delorman the 3rd pers. sing. is positive ĭavarn, but negative ĭavvar (from the village of Yunas Abad) north of Razgrad.

The Aorist.

§ 66. In the aorist participle the final -ā frequently disappears (cf. § 34 et 64); ĭavarn (iavarn, K. O., l. 347, Nr. 15, s.), ĭavarn, ĭavarn, ĭavarn, ĭavarn, ĭavarn (all from Brus.-A., p. 121), ĭavvar (iavvar, Kast., p. 19), ĭavvar (iavvar, G, p. 76). This form which is also the 2nd pers. sing., forms the starting point for a series of abbreviated forms: ĭavvar (iavvar, G, p. 32, 12), ĭavvar (iavvar, iavvar, Kast., p. 19), ĭavvar (iavvar, G, p. 89, 26); ĭavvar (Gagnoian, l. 9 from Toși in N.E. Bulgaria) etc.

There are also shortened negative forms: ĭavvar (iavvar, G, p. 69, 12), ĭavvar (iavvar, G, p. 65, 12) — in agreement with old Ottoman; cf. Deny, § 631, note.

§ 76. We usually find contracted forms which may be regarded as coming from the 1st pers. sing. (bašažum < bašažuyum) or from the 1st pers. pl. (bašažaž < bašažažy). The 1st pers. sing. frequently ends in -a (cf. § 60): amâšaž, anâšaž, ašušaž, ašušaž (ašašaž, G., p. 173, 4).

On the analogy of the former, the 2nd pers. sing. ends in -aš or -ašaž (ašašaž, G., p. 19, 6a), ašašaž (ašašaž, G., p. 22, 4), etc. Intervocalic, or: ašašaž, ašašaž (ašašaž, G., p. 16, 4). It also occurs in the phonetic signification: ašašaž (ašašaž, G., p. 18, 4), etc. (cf. § 61).

The 2nd pers. pl. ends in the east in -d (< -d (< -d in the west). It is also found in the Taurus territory: ašušaž, ašušaž, ašušaž (ašušaž, G., p. 173, 4).

The 2nd pers. pl. is also used as an adjective: šar-šušaž, šar-šušaž, šar-šušaž, šar-šušaž (ašašaž, G., p. 150, 4).

The imperative.

§ 69. The 1st pers. pl. of the imperative is ašašaž (ašašaž, G., p. 172, 4). It usually represents the 1st pers. pl. of the imperfect, in -išušaž, -išušaž, -išušaž (ašašaž, G., p. 60, 4).

In the 2nd pers. pl. of stems ending in vowels or in negative forms we frequently find the ending -aš added directly: ašašaž (ašašaž, G., p. 55, 6).
§ 74. Probably by contamination from -dilè and -dilè (or -diken) arise forms in -diken, which are found among the Bessarabian Gagauz as well as in Dilemar: doñës tituñdon ñam ylivis "after we have prepared (the boys) for the daily ceremony, we bring them (the boys) into a house" (from an account of the ceremonies of circumcision taken down by me in Kemenjar, Dilemar), to ñël (cf. § 24) gigiñdon xëp ylivmy uñamñar "even when one crosses, one finds nothing but red men" (Gagauz, p. 10, i) etc.

§ 75. In the construction in -diken in Macedonia, I also found a final -a (a): uñiñdon æh ylivmy uñamñar "when I freeze, draw the blankets over me" (W. Z. K. M., xxxii., p. 184, i), uñiñdon xög uñamñar ñiñi "when I thirst, put thy tongue in my mouth" (ibid., i. 6).

Iken etc.

§ 76. We find many dialectal peculiarities in the forms composed with iken:

- iken (from ðen) follows the rules of vowel harmony and after heavy stems becomes -am, in the eastern dialects -yan (§ 37). Both -ken and -yan combine with ablative -a, -a to -ken, -am. Examples: byppaym (byppken, Brus.-A., p. 122, 4 from below), bòlmybòna, ñeñeñbòna, gòbymayána (Gagauz, p. 51, 9, 6, 7); cf. Deny, p. 949, footnote 1.

On the other hand, we find in the dialect of Bessarabian Gagauz -am even after light stems: gòddìam (Gagauz, p. 1, i, 165, 13);

- kën, -kan frequently appears without final -a as -ka, -ka: gelórka (G., p. 50, 4, from below), bya yuña (bya ìkem, G., p. 65, 15), elórka (elòk, G., p. 72, 2), ñtärkè (W. Z. K. M., xxxiii., p. 216, 18) from Radoviç in Macedonia.

§ 77. When the subject of the form in -ëmáta ìken is a plural, in the dialects (as frequently also in the written language, see Deny, § 1358, p. 954) the plural termination -ar is added to the locative ending -a: gëmëpìm ñtärëmëñal-am ñtärëuler-àt (O. T., ii. 29, 30), ñsámnëmat-kam (G. T. ii. 51, 18), ñtärëmëñal-kam (O. T., ii. 48, 18) etc.

Note: The addition of the plural ending -ar to the locative ending is also noted elsewhere: gëmëppëlërej (for gëmëppëlëler, G., p. 33, 9). Ótër-madácar-kam (O. T., ii. 23, 1) is an isolated form; cf. A. Çt. A., i. 321.

On the use of the Participle in -an, -en etc.

§ 78. In the northeast as well as in the north west of the Ottoman speaking territory we find constructions with the participle in -en or -ën instead of with the verbal noun in -ik or the gerundive in -ine etc. (influence of Añ駹an): yëldëm ñëbân ñëdër "until the milk fills" (Rás., No. 197, a), ñëbân ñëdër ñëdër "til my husband comes" (ibid., v. 4), ñuñ aspèr ñëmënèr "every time I see thee" (Rás., No. 196, 3), ñëbân ñëdër ñëdër ñëdër ñëdër ñëdër "they live in comfort till their death" (Adak., p. 172, 4), ñëbân ñëbân ñëbân ñëbân ñëbân "in a moment" (Adak., p. 206, 15).

Vermek as an auxiliary Verb.

§ 79. Accelerative forms combined with vermek are used much more frequently in many dialects than in the written language. Their original significance seems to have become much weakened. According to Gadzanow, there are in Bulgaria (Dilemarov, Gerlovo) dialects which only have present forms combined with ver-; but it would have to be considered whether in the forms quoted by him the element -ver- is not perhaps, at least occasionally, a phonetic development from -jer- (cf. § 65). The people of South Gerlovo, who speak in this way are called by their neighbours geliniv (Gadzanow, ii. 6).

In Anatolia I heard this name given to the people of Konya among whom the accelerative forms in ver- are continually used; ver- appears in the dialects also in negative verbal stems: gelinnì-vi (gelinnì ver, cf. § 34, Brus.-A., p. 140, 10) gelinnìvërdì (G., p. 69, 4). Cf. Deny, § 824.

The Pasttenses.

§ 80. ëlë, ëlë is found in the dialects in many forms: ëlë, ëlë, ëlë, ëlë, ëlë, ëlë, ëlë; after heavy stems also harmonised: yëla, yëla, yëla, yëla, yëla, yëla, yëla "in summer and in autumn" (G., p. 79, 1, from below), gëla yjëmënu "with tears" (G., p. 59, 9), ñuñen ñamuy "with glory and prestige" (G., p. 54 ult.), ñapà yjëmënu "moon and stars" (G., p. 52, 2). gëlañ (tul ìk, Brus.-A., p. 130, 16), yëlañ (Rás., No. 151, 8), yëlañ (jëm-ëlañ; Rás., No. 3, 4) etc.; cf. Deny, § 876, note 2 and p. 924, middle.

§ 81. yjëla. Much more frequently than in the written language (cf. Deny, § 902) yjëla is used in the dialects as a postposition. Examples: ñpëjëla yjëla "close behind me" (Brus.-A., p. 127, 7, 147 ult.), ñpëjëlañar arla yjëla gëldën "let us go after the dragon" (Adak., p. 18, 26), arla yjëla yjëla "close behind her" (O. T., i. 110, 25, 147, 15), ñapì yjëla ñapì yjëla ñapì ñapì "takes him with him and goes away" (O. T., i. 127, 32), ñapì yjëla ñapì ñapì ñapì ñapì ñapì "he encircles him in front and behind" (O. T., i. 243, 24, 14.

§ 82. ñapidì. ñapidì appears in different forms in the dialects:

a. ñapidì (with voiced initial, § 296; and loss of the final -r, § 34) is noted by Thiry in Kastamonian, (p. 52, alongside of ñapidì, cf. also p. 18).

b. ñapidì (with nasalisation of the final, cf. § 10)
III. OTTOMAN TURKISH LITERATURE.

The literature to which the name of Ottoman is now generally given is really the literature of the Oghuz Turks, who settled in Asia Minor in the Seljuk period and later in the time of the Ottomans in Rum-Il, where they founded a powerful empire. This literature, which has had an uninterrupted development from the time of the Seljuks down to the present day, is based on the literatures of still older dialects and has remained in touch with these in all periods of its evolution. Especially since the xvth century, it has become the most important and richest branch of all the Turkish literatures and has exercised an influence on the literature of the other dialects. Here we shall only sketch the general evolution of this literature, noting its main genres and principal personalities. We shall deal not only with the classical literature which was confined to the upper classes, but also — in their general features — with the literature of the masses, that of the folk musicans (sax şairler) and the literature of the various mystic groups. We have felt the necessity of dwelling more fully on points which have hitherto been unsatisfactorily studied or which are not yet well known in the learned world, while, as regards better known aspects, we have not gone into details, confining ourselves to a synthetic exposition. For example the xivth and xvth centuries — the least known period of this literature — have been treated more fully in proportion to other centuries. This is necessary in order to be able to elucidate more fully unknown points and must not be considered disproportionate in this succinct résumé.

We divide Ottoman literature into three great periods, corresponding to the general development of the history of Turkey:

a. Muslim literature from the xivth century to the middle of the xivth, i.e. to the period of the Taqimül [x., v.]

b. The "European" literature from the period of the Taqimül to the development of the nationalist movement.

c. National literature, arising out of the nationalist movement.

We shall examine these three periods in chronological order, in order to avoid arbitrary distinctions.

a. Muslim Turkish Literature.

xivth Century.

After the Seljuk occupation in the xivth century, Anatolia had been gradually Turkishised and converted to Islam. In the xivth century however, Greeks and Armenians still formed a considerable proportion in the towns and villages of Asia Minor (Pauthier, Le Livre de Marco Polo, Paris 1865, p. 33—39). Among the Turks who settled in Asia Minor some belonged to one and others to other branches of the Turkish people. But as the Oghuz formed the majority, it was the Oghuz dialect...
that formed the foundation of the literary dialect that took shape in Asia Minor. The Oghuz dialect, which had separated from the other Turkish dialects well before the tenth century, had already a rich popular literature; we know of the existence of Oghuz poems in the Ghaznavid period (Köprüli Zade M. Fu'ad, Gขก h i m 1 1 r 1 d e T u r k i i 2 r a, Edebiyat Fonksiyonel Meşhurç, vol. vii., No. 2, p. 81—83).

The Oghuz who settled in Asia Minor had brought with them all these literary traditions. Beyond the literary products of other dialects also found their way in for different reasons (cf. on this: Köprüli Zade M. Fu'ad, Türk Edebiyatında ilk Mutatwaşf a, Constantinople 1919).

As a result of all these influences there gradually grew up in Asia Minor alongside of the popular literature, a written literature in Turkish; we do not know positively if this written literature had already begun before the xilth century or not. We do know that from the time of the Seljuk Sultan in the xilth century, Islamic culture had established itself in the large towns. Then, after the Seljuk Sultan had exterminated the Dânishmandids and disposed of the Crusaders, learning and literature attained a considerable development in Asia Minor. The products of this movement were written partly in Arabic, but mainly in Persian. We cannot therefore doubt that Anatolian Turkish had a long struggle with Arabic and Persian in order to become a literary language. We see clearly the predominance of Arabic, the language of religion and that used for teaching in the madrasses; it was the official language for the correspondence of the sultans with the 'Abbasid caliphs, the 'Ayyubids and the Mamluks and that used in the inscriptions and waṣf deeds of this century and also of the following centuries. The influence of Persian was still greater. We know that in the entourage of the sultans and of various scholars and princes, Persian was used and Persian poetry was constantly read. In the same way we find in some waṣf deeds of the Mongol period — although very rarely — phrases in Mongol, but written in the Uighur character. Nevertheless the predominant language in official transactions and state documents was Arabic.

The use of Turkish was probably confined to dealings with the people. In 1676 (1277) when the Wazir of the village Mehmed Bey had occupied Konya, he ordered that only Turkish should be used in the business of the chancellery; according to one tradition, he had a number of the old scribes put to death (cf. Sait yildiz, Djamîlî Ahmedî Ası-Salihe; J. W. L. Gage, Seyit Zekai, sa libre turque qui Oğuzanned inscription à ezot, Paris 1854, p. 13). According to Ibn Batî, the use of any language other than Turkish was forbidden not only in the business of the chancellery but also in private life (Sallât-nâme, Ayasofia MS. No. 2895). The importance given to Turkish during this brief reign does not of course prove that Turkish had already gained a predominance over the other languages. If we bear in mind that Turkish has come into general use in the religious tribunals of Asia Minor only since the xivth century, and that at Baghdad Persian was still employed in the registers of the chancellery in the xvth century, we can better understand this. It is however certain that Turkish began to gain in importance in state business from the end of the xiiith century (cf. T.O.E.M., No. 17—94, 1926). In this century the ayyâbat hand was used in the Seljuk chancellery and there was also a system of writing peculiar to the chancelleries. In documents written in Turkish on the other hand, vowels were never indicated by letters in the Arabic fashion, but only the vowel signs were used. This shows perhaps that among the Turks of Anatolia, the tradition of the old Uighur script has been quite forgotten.

It is as a result of all these conditions that we find Turkish literary works appearing in the course of the xilth century. A very small portion only of them has come down to us. Works which we no longer possess but of which we know of the existence from historical references are: the Shâhîkh Şâhîn in verse by an unknown author; the Sarîâl-nâmeh in verse and prose by a poet called Shiâyâd 'Izz, in which are described the combats of 'Ali with a demon called Şâlih; the Sarîâl-şamâl-nâmeh composed in 643 (1245) by Ibn 'Alî, secretary of the Seljuk Sultan, by order of the prince Malik 'Izz al-Din Kaïtûsu b. Ghiyâth al-Dîn. It is probable that the stories of Saiyid Bâjî, the existence of which is known in Egypt as early as the xilth century, were translated into Turkish in the xilth century. The Bâjî-nâmeh and the Sarîâl-şamâl-nâmeh, a work which grew up around the personality of Malik Dânishmand Ahmad Ghasî, a hero who came to Asia Minor in the period of the first Seljuk occupation and founded the Dânishmandid dynasty, is a product of the struggle between Muslims and Byzantines in Asia Minor.

The political and economic situation of Anatolia in the xilth century and particularly the material and moral crisis caused by the first Mongol invasions encouraged the expansion of mysticism in these regions. The Yeşewî and Hâzidari derivishes, coming from the east, brought to Asia Minor the mystic poems in Turkish of Aḩmad Yeşewî and his disciples. The Turkish mystics also, under the influence of Arabic and Persian mysticism, were forced to have recourse to Turkish as the language of the people in order to gather round them as many followers as possible. It was for this reason that Djaîalî al-Dîn Rûmi wrote a few Turkish verses, although very few, and that Sultan 'Abdu l's produced a certain number of Turkish poems in Turkey. These were until recently the only products of Seljuk literature known. We may also mention Aḩmad Faţîh of Konya who lived at the beginning of this century and wrote a fairly long mystical waṣf-nâmeh, which we still possess (cf. Köprüli Zade M. Fu'ad, Anatolische Dichter in der Seljukzeit, Körver Coema Archiv, ii.), and a little later Shiâyâd Hamâna (q.v.), whom we may regard as a disciple of Aḩmad Faţîh. These poets composed their works in the "arûf metre" and in imitation of the Persian mystics. But the mystical movement in Asia Minor was not confined to producing works of no originality. It also created a new kind of poetry, which was purely Turkish and original, in the language of the people, in syllabic metre and in forms suitable for a popular literature. Yeşewî and his pupils had a great influence on the genesis of this last poetry.

Vânis Emre was the greatest representative of this genre; he was still alive at the beginning of the xivth century. His art is essentially one of the people, i.e., it is Turkish. A Neo-Platonic
Muslim element can be distinguished in it, which does not differ at all from the mystic philosophy of, for example, Djalâl al-Dîn Rûmî, and a popular element which determines its language, style, form and rhythmic metre. It was through the mystical verses of Yûnus that there developed a tradition of writing poems in the language of the people and in the popular syllabic metre, which did not lose its power even in the periods when Persian influence was at its height. The mystics of the different orthodox and heterodox sects which are associated in Asia Minor in the following centuries wrote popular poetry in the style of Yûnus in order to exert an influence on the masses. Among the latter special mention may be made of the Bektaşî, Hurufî and Kütûfî-Bash poets who imitated Yûnus with great success.

In the xiii century we find a profane poetry beginning in Anatolia under the influence of Persian literature. It was encouraged by the luxurious life and freedom in the fullest sense of the word that prevailed among the upper classes. This movement became still stronger under the Mongols. It produced in the palaces of the Seldjûks a kind of profane poetry quite free from ascetic and didactic tendencies and inspired by Persian literature. The first representative of this school, the aims of which were purely artistic, is the poet Khâdîja Dâhânî. It is very probable that this branch of literature, which was practised among the eastern Turks as early as the xii century, had had representatives before him in Anatolia, for his poems were written in a perfectly perfect style and attained a high degree of perfection from the technical point of view. It is therefore a mistake for Turkish and European writers on the history of Ottoman literature to trace the development of Turkish profane poetry to the time of Bayázid Yildîrin at the earliest. Dâhânî, also wrote, by command of his sovereign, in the reign of 'Alî al-Dîn III a Şâhidîma of the Seldjûks, in Persian; he was a Turkoman of Kütûfî-Bash. From the dialectal point of view, this language shows all the peculiarities of the Oghuz dialect of Anatolia. A comparison between the works of Dâhânî and, for example, the Turkish works of his contemporary Sultan Weled, enables us to see with what success he could use the 'azrî metre. But nowhere in his works do we find any trace of mystic influence (cf. on Dâhânî my articles in Bayatî, Nô. 1 and 103).

It was natural that there should exist in this period in Anatolia among the masses and the nomadic tribes — just as was the case in the preceding centuries — a popular literature and that there should be bards of the people, whom the old Oghuz called evan. The latter, esogur in hand, went round the assemblies of the people, the nomads and the villages. They were also to be found in the armies of the Seldjûks. They recited and sang parts of the old Oghuz epics, like the stories of Dede Korkut. These products of the popular literature were, as a rule recited in the popular rhythm and in traditional forms going back to an ancient past. Sometimes the names of these forms show us ethnic origin like türkî (q. v.), turkâmî, waragîh; others, like ûzûma, dayâh, baya ûzî, reveal their popular character by their name or show that they were always accompanied by a melody. These popular poets usually employed the old Turkish musical instrument calledUXAM.

xivth Century.

We find the literary development begun in the xiiith century following the same lines in the xivth century. In spite of the political division of Asia Minor, the spread of Muslim and Turkish culture continued at the expense of the Armenians and Greeks. The Principality of the Ottomans founded at the western end of Anatolia reached the shores of the Sea of Marmara; towards the end of the century, it entirely subjugated a great part of Anatolia and reestablished the unity of the Turks once again; by its victories over Byzantium, the Serbs, the Bulgars and finally over the united forces of Europe at Nicopolis, it gave rise to a great and powerful empire.

A certain number of beys in Asia Minor had neither Persian or Arab culture, and this was the reason why the language of the people became important, why books were written in Turkish and also why a number of works were translated from Arabic and Persian into Turkish. Ibn Battuta gives some interesting notes on the importance of Turkish at the courts of the Turkoman beys and on poets writing in Turkish.

We know that books were written in Turkish in the xivth century at several centres like Konya, Nigde, Ladik, Kastamuni, Sinûbi, Siwân, Kîr-Shehir, Bursa and İranî. Many of the works of this period have been lost. On the other hand, the compilers of biographies of poets (nâserîn-ı şairvârîn), which begin to appear in the xivth century, give a very old period very little information and that for the most part inaccurate. The information we have been able to collect from the sources gives us the following works:

1. The İnandî Oğlulu in the region of Denizli and Ladik (1277—1365).

2. A Tâfitî on the Fatihî by an unknown author (manuscript in the library of the University of Stambül) and a Tâfitî on the Şirat al-Hâkitsî (MS. at Angora) very probably by the same author, written by command of Murâd Arslân Bey Ibn İnandî (d. before 763 A. H.). This dynasty had associations with the Mewlewîs and the author speaks very respectfully of Djalâl al-Dîn Rûmî.

3. We know also of a poet called Mûsarîf Ladîki who lived in this century at Ladik (Ibb. Mustafâ-zâf, p. 263) while Nakib Oğlulu, author of a story of Havan and Huvain in verse (Millet Kütükhînî, Nô. 1518), probably came from the same town. I think that Nakib Oğlulu Tâdî al-Dîn, mentioned in Elfit (Les Saints des Derwîches teuvânes, transl. Huart, ii. 329) as a contemporary of Čelebi Arîf (d. in 719), is the same person.

4. The Aidînî Oğlulu (1307—1403).

In the library of the Ulû Dînîî in Bursa (Nô. 21) there is a Fâtîma-i EvâƯîû of which the beginning is lost. From a complete manuscript recently acquired by the Maârîf Weckleiti we now know that the book was translated from the Arabic for Aidînî Oğlulu Meşîmî Bey (707—734 A. H.). The author's name is not known. Another work is a Kadîlî ve-Dînîvâ transl. by an author named Mûsadîr for the famous Umur Bey, son of Meşîmî Bey. This is dated before 734 A. H. (there is a MS. in the Bodleian among the Turkish manuscripts, Marsh. 180; another copy in the Lalêli library, Nô. 1897).

5. The Mentâşhî Oğlulu (1300—1435). Thanks to Hammer's publication (Falkenhorne),
we know a Bûnûmê translated from Persian by Maḥmûd b. Maḥmûd b. Sinan b. Muḥammad (in the Köprü Library, No. 253);
the Maḥmûna Wurûs wa-Gulshâh, written in 770 (1369) at Sişâv by the Mecmûwil Yûhsûf (in the Institute of Turcology);
the Maḥmûna entitled Hâkûyêt-i Kuvân wa-Sâmitûn, by 'Ali in my private library;
Tâshî, by Haydîli Pashâ (Pertsch, Dict. türk. Handwörterbuch, p. 97; there are many copies).

Maḥchakhsâb al-Shîfâ', written in 790 by Iṣâhâk b. Murâd (Pertsch, p. 99);
some ghanâs by 'Aflâkt, author of the Manûfût (Weled Çelebi, at the end of the Turkish verses of Sultan Weled);
translation in verse of Shahîl entitled Kâshî al-Mârûnî, written in 800 a.h. by Maḥmûd b. 'Aflâkt. Selmân al-Lâdîck and another work in verse on the Kurân by the same author (in my private library);
the Manûfût-nâmê written in 717 as well as a number of poems (Huq quwwatî, p. 378 sq.).
the Maḥmûna Siâshi al-Wuwa spoke written in 751 by Khâwâdî Mas'ûd and his nephew Iṣâ al-Dîn. Aḥmad (ed. J. H. Mordtmann, Hanover 1924);
translation of the Forâkûn-nâmê of Sa'dî, made in 735 a.h. by the same Khâwâdî Muhammad (Weled Çelebi, ed. Khâlîsh Rîfât, Stambul 1742; there is a manuscript in the Copenhagen Library; cf. on these two authors Köpr. Zade M. Fu'âd, Türkçî Müefnâncî, ii. 481–485).
A certain number of poems in eastern and western dialects were also written in the Mamûl empire, such as a Farâb-nâmê, a maṭnûna written in 789 at Tripoli in Syria by a poet named Kâmil Oghlu Isma'îl, a work which is in my private library.
We mention this work because it was also popular in Anatolia; 'Aflâkt Çelebi attributes it to Shahîl Oghlu and 'Ali to Aḥmad Dâ'î (cf. Gibb, Hist. Ott. Poetry, i. 256).
In a collection of poems entitled Maçuva al-Nâţirî composed in 840 a.h. by a poet named Umar b. Ma'ût (unique MS. in the University Library of Stambul), in the Dâmî al-Nâţirî written in 918 by Haydîli Kemalî of Egirdir and in some other collections we find the names of a great number of poets and books belonging to this century (cf. on these books and their bibliographical contents: Köpr. Zade M. Fu'âd, Millî Edebiyâtîlîcî Muhammedîler, 1928, p. 60–62).

The replacement of the Saldûş Sâltanî, who were much influenced by Persian culture, by simple Turkoman boys, knowing only their mother tongue, much encouraged the use of Turkish as a language of learning and of art. Many men of learning, şâhitdr, and poets to obtain the favour of the Turkoman boys and of the notables of their principalities — who were also equally uncultured — endeavoured to write books in Turkish and to translate into Turkish from Arabic and Persian. The princes themselves ordered the translation of religious and literary works which interested them. They began to translate into Turkish tafsîrs,

Ahmed b. Derișm, hâlifât of Menûma Sinân al-Dîn Aghshîrî (MS. in the Köprü Library, No. 253);
theological works, mystical works, legends of saints, books on medicine, books on hunting, books on the history of Islam and generally speaking the principal text-books used and esteemed in the madresses. As a result of the mystical movement and particularly of Mevlâvi mysticism, which was very influential in the palaces of the princes, we see in all these works the influence of Mevlâni and in part also of Sultan Walî. We can even say that in poetical works this influence was predominant and that many of the poets of this period were themselves Mevlâwis.

Prose literature in this period was mainly confined to didactic works. At the same time poetical literature assumed an extraordinary development; all kinds of works were composed from popular stories having a religious-epic character to works with a purely artistic ideal. The religious-epic stories show a considerable development in this period and include popular works describing the conquests and miracles of the Prophet and more especially the deeds of 'Ali. These works are written in the form of mağânûn and in a very simple style in the metre 'a-kûf-i bâsîn. 'Ali's historical character is usually lost in legend; supernatural events, demons, djinn, magical and miraculous elements give the work quite a fantastic character. Some of these epics, in which Muslim ideas predominate, are grouped round the personality of 'Abd al-Mâlik. Ibn Qâsim mentions as early as the end of the eleventh century the existence of a Hâsimî-nâmeh among the Turkomans of Syria (Minâhâl, al-Sunnah, iv. 12; cf. on the Hâsimî-nâmeh in Muslim literature: Köprülü Zâde M. Fuâd, Türkîcî Mevîl, i. 9). A third cycle of legends is that of 'Ali Muslim (cf. Köprülü Zâde M. Fuâd, Türkîcî Tarihî, i. 75). Among the heroic legends in which the influence of the Prophet is strong we may also mention the Bayrâm-nâmeh and the Dâîgânâmân-nâmeh.

Among the numerous works of this century based on Islamic ideas we may also mention the Carmen of Sîyâr, the works devoted to Fâtima, Hassan and Hussein, and the events of Kerbelâ, as well as the movâlûnu. Books dealing with the Prophet and the holy family were very popular in this Islamic milieu. There were in the palaces of the Mamlûks and even of Egypt men whose duty it was to recite to their books of Sîyâr. One of these was Darîr of Erzerûm, translator of the Fârîq al-Shâm of al-Wâkidî and author of a book of Sîyâr in Turkish, in verse and prose, written in the second half of the twelfth century and printed in 1786 (cf. Köprülü Zâde M. Fuâd, Füredi, Constantinople 1724, p. 97; 'Odânî, Muhiyyî, iii. 37; Rieu, Türkîcî MSS., p. 38). Its language belongs to the early period of the Âdîrî dialect — a period in which this eastern Oghuz dialect was not yet separated entirely from the western Oghuz dialect of Anatolia — but an account of the fame of the author in Anatolia we may mention him here. The language of this class of works was simple, easily understood and liked by the people. Authors even thought it unnecessary to mention their own names.

From the twelfth century we find the number of poets increasing, who wrote with purely artistic aims and took as their model classical Persian literature. Shaikh Ahmad Galâhshîrî of Kîr Shehri should be mentioned first of these, as much for his artistic merit as for his priority in time. He put into Turkish the Manzûk al-Ṭarih al-'Aţtar, expanding it with stories from various sources, notably the Manzûk of Kâmi, and with a number of other reflections relating to his own time. We also possess a number of isolated poems of his. Although a mystic, his literary aims were purely artistic. His Manzûk Karîmâtî Aţšî Ewurân, recently published by F. Tuschner (Ein Mezvïl Gâlâhshîrîs aus Aţšî Ewurân, 1930), which contains information about his life, is of no literary value. The fame of this great poet lasted down to the beginning of the sixteenth century but his reputation as a "great poet" disappeared after the sixteenth. In our têvberî his name is not found (two MSS. of his work are in the library of the Museum of Archaeology in Stambul). The town of Kîr Shehri produced other authors besides Khâdîja Galâhshîrî and seems to have been an important centre of culture; it also produced the well-known mystic poet Aşîkî Patxa (d. 737). His Qarîbî-nâmeh, written in 730, from the first attained great importance in Asia Minor and is found in many manuscripts. In our têvberî and chronicles Aşîkî Patxa is represented as a great mystic but as a poet he is a mere imitator of Mevlâni and Sultan Walî. His work is of a didactic character; as a poet he fell far below Galâhshîrî. The town of Kîr Shehri is not a number of detached îlâmîs in syllabic metre from the pen of Aşîkî Patxa, but they are far from showing the lyrical merit of Yûnus Ewurân (for the family of Aşîkî Patxa cf. the introduction to the edition of the Tarihî of Aşîkî Patxa Zâde by 'Ali Bey; on the influence which he has retained until recent years as a holy man cf. the article by V. Gordewski, Comptes rendus de l'Académie des Sciences de U. R. S. S., 1927, i. 25—28; on the language of Aşîkî Patxa see the researches of Brockelmann, Z. d. M. G., 1919, lxiii., p. 1—29).

The literary influence of Yûnus Ewurân is not confined to the mystic poems of Aşîkî Patxa. Many derivations composed îlâmî in the popular language and in syllabic metre: the most celebrated of them are Sâ'îd Ewurân and Kağûnush Abadî. Sâ'îd Ewurân was a pupil of the celebrated Khâdîja Sultân, one of the Khâlûs of Hâshîdî Bektaşi, and lived in the early years of the sixteenth century; he wrote a contemporary of Yûnus, Abadî, a number of poems of Sâ'îd Ewurân in the 'arîdî metre and in nezûrî on the Gâlînâmân of Abîdûlrahman, one of the disciples of Sâ'îd Ewurân (cf. Köprülü Zâde M. Fuâd, Ezvî, 1927, Nî. 43). Kağûnush Abadî, khâlîfâ of the Bektaşi dervîsh Abadî Mu'tâ, displays in his work a true lyric feeling, a deep sincerity and purity and a still freer and more vigorous command of language than that of Yûnus. The influence of Kağûnûh was very great in the development of the vast Bektaşi poetry in the following centuries (cf. Mütevâvîfî, p. 376).

In the second half of this century we find classical mystic poetry attaining high perfection in Nîsiîntî, equally famous in eastern and western Anatolia. His dialect connects him with the Adîrî group but on account of his great reputation in Asia Minor he belongs to the literature of this region. Nîsiîntî was one of the chief khâlûs of Fağlî Hârûlî, founder of the Hûrûfî sect (on the history of this sect, cf. Köprülü Zâde M. Fuâd, Anadolu'da İslâmîyet, Edîh, Fak. Mevîl, lii. 6, p. 464; on the sect itself cf. ûrîvî, Nîsiîntî plays a great part in the development of the Hûrûfî sect in Anatolia, and in 807 he was killed alive in Aleppo (on the date of his death, incorrectly given in all the sources, cf. Köprülü Zâde M. Fuâd, Ezvî, 1927,}
He was a great poet whose mystic lyrics are most impressive. His style is simple but full of power and harmony. Few poets have equaled him in the science and passionate expression of mystical love. Yet he observes all the rules of poetical style and uses classical forms with success. In his Divan we find hay'as, a form peculiar to Persian poetry and foreign to Persian literature (cf. on this form of poetry Köprülü Zade M. Fu'âd, Turkish Melimûdar, ii. 219-243).

In the fourteenth century also the subjects of romance and fables were taken from Persian literature, like the prose translation of Kultur ne-Dinîya [q.v.] by Mas'ûd, with verses intermingled, and the verse translation of the same work made for Marâdî I. The story of Sultan u-Newebahâr, however, written in verse by Mas'ûd b. Ahmad and his nephew 1Fax al-Dîn has more considerable literary value. This methbûne translated from an otherwise unknown Persian work is not, we believe, simply a translation but rather an expanded adaptation. Instead of the metre / unwr \(\text{v}c\)/ almost regularly employed in the methbûnîs of this period, we have the metre / unwr \(\text{v}c\)/ and here and there through it ghâses written in different metres. The eclectric translation of the Burûqan by Khwâdia Mas'ûd b. Ahmad is of much lesser literary value.

After Khwâdia Mas'ûd, Shâh Shâh Ogâlî Muştâfâ (born in 741) acquired the greatest reputation as a romantic poet. He was a pupil of Khwâdia Mas'ûd, and finished his Khurshd-nâmê in 789 (1387). Belonging to an influential family of Germâniyân, this poet was at first in the service of the Bey of Germâniyân, Sultanâmahâh, as mîkhâfî and defender; later he was in the suite of Bayrâzî Yildîrîm to whom he presented a second version of his Khurshd-nâmê [cf. on him and his Khurshd-nâmê the article SHAKEH-ŽDE]. We do not have a complete Divan of Shâh Shâh Ogâlî, but many of his poems are to be found in early mîkhâfîs. He has also left a work in prose entitled Kaws al-Kurârî. He finished it in 803 and dedicated it to Pasha âgha b. Khvâdia Pasha, an influential personage of this period (unique MS. in Kôprî, Zade M. Fu'âd's library). This work is occasionally embellished with passages in verse and also contains fragments of Yûsuf Meddûsh. Khâsî, Dâshkânî, Gûlshâhî, Khvâdia Mas'ûd and Elîwân Cîlê (cf. above; Khâsî is the only one of whom we know nothing). It is a kind of Sûyûk-nâmê and in this connection it is interesting for our knowledge of the social life of the period.

Alymedî [q.v.] must be regarded as the greatest poet of this period, with the exception of Nesmî. He is the author of the Ishandar-nâmê. This work, finished in 792 (1390), has always been famous and exists in numerous MSS. It has been studied in detail by Joseph Thury (Türkîc Nyelvelmekk a XIV. század végéig, Budapest 1903) and was later studied from the philological point of view by Broekelmann (Z.D.M.G., xxviii., i/2, 1919). The manuscripts of the Ishandar-nâmê show great differences. Alymedî took the subject of his work from a very common one in eastern and western literature — from Persian sources, but he added a long section dealing with the history of Asia Minor and especially with the 'Erfanîn princes. For this reason we may look upon him as the author of the first Turkish chronicle in verse. The Divan of Alymedî is undoubtedly more interesting from the artistic point of view. Among these poems, there are some which have a local interest from the description of the town of Bursa and the attacks on its inhabitants. In the works of the fourteenth and fifteenth centuries we find evidence of his great reputation and many of his poems of this period were wrote on him. We know that the Ishandar-nâmê was read and admired in these days in Aytarûddîn, in Khurshdî and in Transoxiana, and that the poet Shâhâbî Khân, founder of the Shâhâbî dynasty, much appreciated it.

To complete the general picture of the sixteenth century we must mention Kâddî Burhân al-Dîn, although his works show the peculiarities of the A'dhari dialect. Kâddî Burhân al-Dîn belonged to the tribe of the Selûr and was sultan of Selûr; his stirring political life is well known (545-581 a.h. [cf. the article on him]). Besides important works in Arabic on jurisprudence and some Arabic and Persian poems, according to the historian Shâhîn, he left a Divan in Turkish, containing ghâses, rûqâs and tuwâraks. Although his language lacks refinement and correctness, the poems of Burhân al-Dîn have a note of sincerity and passion of their own.

It is evident from what we have said that Turkish literature developed greatly in the sixteenth century and that Turkish was successfully making its way against Arabic, the language of religion, and Persian, the literary language. In following the Persian model, a classical Turkish literature laid solid foundations. Its progress had not yet reached its limits, for official documents in various districts were still written in Persian. In inscriptions, legal documents, wa'îf deeds, Arabic was employed. Works on law and theology were still written in Arabic and books on mysticism in Arabic and Persian. Nevertheless we can see Turkish gaining in importance in official business as is the case in some edicts of Murâd I (Kraueltz, T.O.E. M., xxviii. 242-242). Many authors and poets, while saying that Turkish is not yet sufficiently polished, felt, under the influence of the general trend, the need of writing in Turkish or rather translating into Turkish. They imitate and translate Persian poets like Firdawsî, Nişâmî, 'Ajîrân, Sâ'dî, Mowâsâî, Salmân Sâwâjî and Kânîl Khâdîjî. The language gradually becomes filled with Persian and Arabic elements. The grammars of these languages gave Turkish a certain number of rules, which tended to affect the independance and natural beauty of the language. Prosody and metres were also borrowed from Persian; but Turkish words were still very largely used and the domination of Arabic and Persian which is found in the following centuries is not yet felt.

xvi. Century.

The invasion of Timür in the early years of this century retarded for a brief period the evolution of the Ottoman state in Asia Minor; on the other hand, it strengthened Turkish culture in Rûm-îlî, to which many educated Muslims migrated at this period.

The advance of Islam and Turkish culture continued throughout this century with increasing force, notably through the application of the demshîrîs. The progress was most marked in Rûm-îlî; on the turkisation of southern Anatolia we have the evidence of Bertrand de la Broquière (Le voyage d'Outremer, publ. by Ch. Scheler, Paris
1892, p. 100, 101). The earliest work written in Rüm-li is a poem on the death of Elżma written in 805 (1400) by Kahlil, imam of the mosque of Kafa Bala in Adrianople, which is in no way distinguishable from popular works of this kind of the sixteenth century (the only known MS. is in my private library).

At the same time Turkish increased in importance as a literary and official language. The only inscription of the Selçuk Yezid II of 814 (1411) is the first Turkish inscription of this kind (Kahlil Edhem, T.O.E.M., i. 116). There is a Turkish epitaph in verse of 843 (1439) at Angora and another rhymed inscription at Brusa composed by the poet Iqanadin in 570 (1465). All the official documents of the first period of the reign of Sulaymân al-Dîn are in Turkish (Ahmad Reşîf, T.O.E.M., index) and also a certain number of edicts (Arşâms) of this century, the earliest of which is dated 800 (1455) (V. von Kunelitz, Osmanische Urkunden in türkischer Sprache, Vienna 1924).

We also know from a work written in 828 (1425) by Dewtul of the Yezid of Balkh, that Turkish was used in the mosques, which can also assume with considerable probability for the sixteenth century. In official correspondence with other Muslims, Christian states and in lands inhabited by non-Turkish peoples, other languages continued to be used. The historian Kutbodî mentions a Greek secretary of Mehemî II.

In the first half of the sixteenth century there were three great princely families who were patrons of scholars and poets; the Karaman Oğlu at Konya, the Đjamâr Oğlu at Kastamonu and the Ottoman princes at Adrianople and Brusa. In this century Fâkhîzâd, Khâlija Fâhîz Karamanî, Hânum and Nâqiûn belong to the large Oğlu circle. Nâqiûn may be regarded as the rival of Ahmed Paşa of Rûmi. At the court of the Djâlam Oğlu were Mu'inîn b. Mûkîbî, an Andalusi, author of the medical work entitled Mifûd al-nûr wa-khamsa wa-ṣûrah (Bibl. Nat., Anc. Fonds, Turc, No. 172), and the unknown author of a commentary on the Kurân entitled Qâsidat al-madh (Cl. Haют, Un commentaire du Coran en dialecte turc de Costamomani, J. A., 1921, p. 201-216) which exists in several copies. It is wrong to regard this language as the dialect of Kastamonu. Isma'îl Beg, a member of this dynasty who reigned from 1443 to 1457, was a religious work in Turkish entitled Huṣn al-nûr wa-sûrat al-ṣûrah (cf. Rûmi, Cat. of Turk. MSS, p. 11). This same Isma'îl (on him of the translation of the Şãdârî, p. 121, 122, 139) had a book on şââdat written for him in Turkey by a certain Umâr b. Ahmed (MS. in the Miller Kütüphanesi at Constantinople). He also had a translation made of the Kişmîyi-ye Şatîde (in my private library).

The poets of the court of the Oğlu were Mehemî Şâhî, the servâr of Kastamonu; Hamdî, Kahlil, Thâmî and Dâvût were at the court of Lezîmî Bây (the two latter were later at the court of the Ottoman). There is also a Kahlil Bây al-Tûbi in Turkish, dedicated to Kâsim Bây (cf. Kahlil al-Tûbi of the same dynasty. Rustem Bây, son of the latter, composed a Divân). In the sixteenth century, the three Schönberg Pachas and Umûr belonged to this dynasty.

But the greatest literary development is found under the Ottomans. Poets like Ahmedî and Ahmed Şâh composed legal and official documents (Bibl. Nat., Anc. Fonds, Turc, No. 104) and a mehemî called Ti̇b-e-nâmê begun in 806 (1459) by a poet named Mehemî; this poem is an adaptation of a Hânedân amârînî in eastern Turkish and shows several remarkable features (Bibl. Nat., Suppl. Turc, No. 86). We also have a Rûmîye-nâmê, a theological work written in 809 (1462) by Hâkim b. Yûsûfî (Bibl. Nat., Suppl. Turc, No. 499). The following also belong to this period: a Qâsidat al-madh, a theological work written in 811 (1407) by Vâli el-Dîn, also a Turc (cf. Fûlîcîzâd, Ed. Littér.), a medical translation of the Muâmmârî Tâhirî's books, in 812 (1409) by Ahmed Oğlu (Tâlâm, Mehdî, ii. 194) and the Muâmmârî of Kastamonu (dated in 812 [1418]; cf. Osmanî, M. al-madfrîl, l. 1442).

It was Murad II who did most for the development of the Turkish language and literature. His court was the centre of scholars, poets and also musicians, for example he had a treatise on music composed by a certain Khîdî, "Abd Allâh (a MS. in the Bibl. Nat., Anc. Fonds, Turc, No. 150; another at Berlin); another author of this period, who wrote two works on music is Ahmed Oğlu Shânzâdî (cf. Al-Qâsim, Encyclopédie de l'islam, p. 997-98). The poets of this period: Iqanadin, Şâhî or Rûmî, Hâlimûn, Hamdî, Hamîd, Sâhoûnî, Khâlîfûn, Nûdîmûn, Nâzîlî and Dâvût. The names are found in the earlier registers. We have here the names of many poets, writers and translators whose works have not survived, like the Fâhîzâd Hânsâdî of the Oğlu, the translation of al-Ṭâhirî Tâhirî al-Šâfîî of Mehemî b. Umâr al-Hâfizî (Rûmi, Cat., p. 224; H. Vâmhârî, Byzantinische Sprachkritik, London 1919), the translation of the Koûnmîyi-ye Şatîde of the same author (in the library of Köprü Zâde M. Feridî), the translation of the Koûnmîyi-ye Maûlânî by Mehemî Akhmed, in 835 (1431; Bibl. Nat., Suppl. Turc, No. 530; Rûmi, p. 116; Persîd, Cat. der türk. Lit. in Berlin, p. 376), the translation of the Muâmmârî Tâhirî by Khâsim el-Mahmûd Kâramîlî, the translation of the Muâmmârî el-Mahmûdî by Muâmmârî b. Shânîzâdî, (Nîlî, Othmanîye, No. 999-90), the translation of the Muâmmârî of the Bây, made in 840 (1444) by Dewtul Oğlu Yûsuf (several manuscripts), the translation of the Koûnmîyi-ye Şatîde el-Mehmûdî el-Shânîzâdî in 840 (1446); an anonymous translation of the Muâmmârî of el-Djâlam b. Rûmî, made in 840 (1447); an anonymous translation of the Muâmmârî of el-Djâlam b. Rûmî (MS. at Cambridge); an anonymous translation of the Muâmmârî of the Bây, (MS. in Umpa); a Turkish commentary on the Kurân in the library of the Museum at Konya with interlinear translation; a Fâhîzî-ye-ye Naâmî presented in 829 (1426) by Khâlim Oğlu (cf. Türk. Mehdî, ii. 489-495); a Koûnmîyi-ye-ye Naâmî translated from the Persian in 833 (1430) by Humî el-Ahchî, the translator of the Koûnmîyi-ye Naâmî, translated from the Persian by Muâmmârî b. Mamûl (Bibl. Nat., Fâhîzî el-Âli Pachas, No. 283); a Koûnmîyi-ye-ye Naâmî of the Bây, by Shânîzâdî el-Safî; a translation of the Muâmmârî of the Bây, (MS. in Umpa); a Turkish commentary on the Kurân in the library of the Museum at Konya with interlinear translation; a Fâhîzî-ye-ye Naâmî presented in 829 (1426) by Khâlim Oğlu (cf. Türk. Mehdî, ii. 489-495); a Koûnmîyi-ye-ye Naâmî translated from the Persian in 833 (1430) by Humî el-Ahchî, the translator of the Koûnmîyi-ye Naâmî, translated from the Persian by Muâmmârî b. Mamûl (Bibl. Nat., Fâhîzî el-Âli Pachas, No. 283); a Koûnmîyi-ye-ye Naâmî of the Bây, by Shânîzâdî el-Safî; a translation of the Muâmmârî of the Bây, (MS. in Umpa); a Turkish commentary on the Kurân in the library of the Museum at Konya with interlinear translation; a Fâhîzî-ye-ye Naâmî presented in 829 (1426) by Khâlim Oğlu (cf. Türk. Mehdî, ii. 489-495); a Koûnmîyi-ye-ye Naâmî translated from the Persian in 833 (1430) by Humî el-Ahchî, the translator of the Koûnmîyi-ye Naâmî, translated from the Persian by Muâmmârî b. Mamûl (Bibl. Nat., Fâhîzî el-Âli Pachas, No. 283); a Koûnmîyi-ye-ye Naâmî of the Bây, by Shânîzâdî el-Safî; a translation of the Muâmmârî of the Bây, (MS. in Umpa); a Turkish commentary on the Kurân in the library of the Museum at Konya with interlinear translation; a Fâhîzî-ye-ye Naâmî presented in 829 (1426) by Khâlim Oğlu (cf. Türk. Mehdî, ii. 489-495);
Turks of Kazaan and the Bashkirs (cf. Kiviya Celbi, Stjbaa-nâme, vii, 822). This great poem is written in several metres in somewhat heavy language; the subject is taken from the best books of riyâr; it also betrays mystic obscurantism while retaining an essential orthodox system of ideas. The literary influence of this poem has been enormous and there are several editions printed at Constantinople and Kazan (cf. also A. Ams and 'Ali Rahim, Tatar Edebiati Türk, voi. i, part 2, p. 165—177).

One of the most remarkable mystical poets of this period is Kemaâl Ummî. He was a darvish of the Khalwets and his works reveal him as a true poet; his influence extended as far as the Turks of Kazaan, the Bashkirs and Osbeke. 'Abd Allâh b. Eshref b. Mejmûd (d. 1474—1486), founder of the Eshrefiyâ divinity of the mystical order of the Bahrâmiyya and known as Eshref Ughî, is equally famous. He is the author of a work entitled Musâl al-Nâfish and of a Dârâta.

The appearance of the great mystics and the foundation of new orders created a regular Turkish hagiography consisting of collections of legends of saints like Etmâl Sultan, Eshref Ughî and later, 'Hâjjî Bekîkhî, Kâhinbâm and 'Othîna, Baba. This literature is of great value from the sociological point of view; it becomes especially abundant from the xvith century.

Hürîfî literature, which began with Nesîmî, was continued by his pupil Râfi'î, who wrote in 812 (1409) his Bâchâr-nâme, by Farâshîbî Ughî (d. 854 =1489), author of an 'Eshref-nâme, and by Wîrânî, his biographer. Hürîfî propaganda even reached the court of Mejmûd II, and under Bayâsit II these heterodox thinkers were violently persecuted. Nevertheless Hürîfî poems were numerous in the xviith and xvith centuries; Tâcnamâtî of Kazîcî, Hâsun Kanî of Kara Feyva, Huseînî, Uşîfî of Yemîndî Paydar, Nebâtî, Tarîzî of Baghdad, Wahîdettî of Homsî, Penâtî of Tabriz and Mubîî. In the region in which the Arabic dialect was spoken we find among the members of this sect Shah Ismâ'îl Şaffî (cf. Etnaî), Laâlkârî, Tîfî and Habîbî, who later came to Constantinople.

To turn to the non-religious literature, the earliest representative is Abd Dâ'î, a poet who lived at the court of the Germiyân Ughî and of the 'Osmânil. In addition to some translations, we possess by him an Arabic-Persian-Turkish dictionary, the Uşâf al-Därâî'î. As a poet he imitates with great success Persians like Salâmî Siwâdi and Kamât Khudîwâdi. He did not however exercise any notable influence on the poetry of his time.

The most important poet of this period next to Ašmâdî and Nesîmî was Şâhîbî. He was the author of Dâshîbî and was patronised by the Sultan Mejmûd I and Mu'mîd II. His real name was Sinâm Germiyân but the date of his life as transmitted are in part contradictory (cf. Etnaî). The date of his death is unknown but must be after 832 (1429). He was buried at Dau'al Timur near Kâshâya (Kiviya Celbi, vol. i, x.). Sheikhî must be considered a great poet. His translation of the Kâhirîn-nâme which he dedicated to Mu'mîd II is a masterpiece of satire (cf. Küprî, Zâhibî M., in Yeqî Mejmûfî, 1917, No. 13). The influence of this poet remained great down to the xvith century. Poets like Nefîdî and
Khayat mention him with veneration so that he merits the title of Şahîk al-Shu’arâ’î. He was also respected in religious circles and even among the Turks of Egypt (Ibn Taghitri, ed. Popper, ii. 345, 29).

Next to Sheikh Tawfiq; of Brusa who possesses a Divan. His real name was Akhî Celebi and his epithet at Brusa is dated 841 (1437-1438). This poet was clearly influenced by Khayat but there is a pessimistic note in his poems. It was he who was the first to make use of proverbs in the şeâde. Another remarkable figure of this period is the painter Şâti of Brusa. His Divan contains şâde verses dedicated to Murad II, to the vizier Khaâtâ Paşa and other great personages. The biographer Sehit gives a few details of his life.

Other poets of the same period are Üluf of Brusa, İsmail bin of İnstî, author of a metahe: Bozâme (Bibl. Nat., Anc. fonsa turo, No. 304), dedicated to Khaâtâ Paşa, Ağâmed Rûmî of Gallipoli, Bahâ Nâdîmî, the poet of the Bektashis, Da’âr-i Şâh of Gallipoli, who described in verse the wars of Murad II. We may also mention Dîmâlî, who dedicated his books to Mehmed II and Bayzid II; all the sources confuse this Dâmarî with the poet Şâhiç Oğlu Mustafa of the viith century [cf. also the article ŞEHÎK-ŞÛGÂL]. Dâmarî wrote in 850 (1446) a metahe entitled Gûlhezân Ustâhâr for Murad II and another based on Hamûn, a Wonders for Mehmed II as well as a third called Mişâh al-Parâfâ (Pértsch, Kat. d. türk. Hst., su Brusa, p. 371). There is also a poem by him on the art of letters entitled al-Riśâla el-şâqîya fi l-Sûbâhîna l-Subâ’dâ (Ibrowned, Cat. of MSS. in Cambridge, 1900, p. 85). Şâfiî praises this poet. He also wrote several inscriptions in verse for buildings in Brusa (T.O.E.M., No. xxv).

The period of Fatih Mehmed II and Bayzid II, themselves poets, is marked by a great development in the language and literature of the Ottomans. After the disappearance of the Turkmen dynasties in Asia Minor, the court and entreague of the 12th century was only a refuge of poets and scholars. The great conquests carried Ottoman influence to the Crimea and the isles of the Aegean; they were accompanied by an increased movement for the spread of Turkish and Muslim culture. At the same time the economic prosperity of the empire reached a great height, while the legislation of Mehmed II adapted itself to the needs of the period. The medrese and the tehr and especially the heterodox mystic orders like the Bektashis contributed much to the spread of Islam; for the extent of the empire by continual translations of the bodies and subject of its subjects.

Mehmed II and his grand vizier Mahmut Paşa granted considerable pensions to poets and men of learning. Poets and musicians like Neđîmî, Fentî, Nurî, Fâlki, Khâfî, Da’î, Du’ârî, Kêdî, Kâtîbî, Naßerî, Wâbî and others received great rewards for their labours. Mehmed Melîbî, Birârâ Ahmed Paşa and others were continually with Mehmed II. Hayâtî, Şârîjâ Kumî and Enver enjoyed the special patronage of Mahmut Paşa. To the entourage of prince Dîâm belonged Şahî, Şahî, Muhammed Paşa, and others of his time. The vizier of the prince Bayzid II and his son kept up this tradition. In the period of Bayzid II over 30 poets were receiving allowances from the treasury. As the literary and learned activities of the second half of the xvth century are sufficiently well-known from various sources, we shall confine ourselves here to giving a general survey of the various forms cultivated and their most notable representatives.

The greatest poet of the period of Mehmed II was Ahmed Paşa (q.v.) of Brusa; although influenced by Nâsîrî, Şâfiî, 1’Âyi, and his master Melîbî (cf. Yebî Mejdînî, 1918, No. 31) he surpassed his contemporaries in the şeâde especially in the şâde. Next to Sheikh Tawfiq; he may be regarded as the greatest figure in Turkish poetry. His influence is obvious on the poets of his time: Şemîr, İtarî, Kandî, Wâbî, Nâdîmî of Konya, Şâtî (the vizier Di’Serî) Khânî Haşînî and Sohâmî Dîmî, and is felt even in İnşâtî, Fâtî and down to the xvth century. Like the other poets of his age, he was also under the influence of Persian poetry, which was majestically used as a reproach against him by some authors of şeâde verse like Di’Serî Celebi and Şâtî. On the other hand, the very widespread opinion (which we find for the first time in the Şeâdeh of Hasan Celebi) that Ahmed Paşa began his poetical career by making naşîrs on some poems of Newîlî is quite erroneous (cf. Türk Yurdu, 1927, No. 27). Ahmed Paşa collected and arranged his Divan under Bayzid II. In it we have satires, şeâde and notably very fine şûgâl.

Next to him the greatest poet of the xvth century is Neđîmî, particularly known for his şeâdeh and his şeâdeh. He owes his reputation notably to his frequent use of proverbs in his poems. His style, which calls him the Khraraw of Rûm and all writers regard him as the greatest Ottoman poet after Ahmed Paşa (cf. also Persch, Kat. d. türk. Hst., su Gotba, No. 168). His fame spread beyond the bounds of the empire. The influence of Neđîmî is traced in Sunî, Ta’rî, Şahît, Râbihet, Zebî, of Uskub, Şâtî of Fâlî, Şâtî, Korbî of İnşâtî, Wâbî, Wâbî and Newîlî, poets of the xvth and xviith centuries, and also in poets of his own time like Mihrî. Many composed naşîrs on his works and some of them like Wâbî of Tokat have an almost religious reverence for him.

Along with Neđîmî should be mentioned his contemporary Mestî (q.v.) famous for his Divan and his Şeâdeh-şeâdeh: his work reflects more of the life of his milieu. He also had some influence on Birî.

The metahe, which came into vogue in the xviith century, became very popular in this period. Among mystical works we may mention the Gûlhezân Ustâhâr of İbrahim Tanûrî (d. 887 = 1482), Khâtîjî of Shaikh Shenî al-Dîn, the Wûtâm-nâmeh of Abû al-Rahîm of Kara Hâşî (written in 865 = 1460), cf. Persch, Die türk. Hst. su Berlin, No. 375-376), the Mektebî of Rûstem-i Efînî of Ahdîn, a famous Sheikh of the Khalwettîyâ, d. at Tabriz in 912 (1487), the Fâlî-nâmeh, written in 876 (1471) by İnşâtî of Dîyâr Bektî [cf. Khallî]. The romantic subjects of these poems were taken from Persian literature; the best known are the Yebî-nâmeh of Âk Shenî al-Dîn, Zâde Hâmi [cf. Hâmi], the Khârûn-nâmeh of Ahi (on him cf. Yebî Mejdînî, 1918, No. 54), the Şeâdeh-nâmeh of Rewâîî and particularly the Rûmân-nâmeh, written in 899 (1493) by Di’Serî Celebi (q.v.). This last work is entirely original.
and the author shows himself a distinguished poet in whom imagination gains over sentiment. Towards the end of this century, the subjects of the Khamsa were also very popular. Nišāmī's Khamsa was several times translated.

A certain number of chronicles in verse also belong to this period. There is a mevlevi in 11,000 baits on the exploits of Kemal Reis, composed by Șafaii of Siouab, a poet skilled in military matters who lived in his têkke at Galata; also a mevlevi in 15,000 baits by Şahbayi of Edirne on the conquests of Sûleyman Pasha in Bosnia; a rhymed chronicle dedicated by Şarl Kemal to Bâyazid II entitled Selçûk-nâme; a Divân-nâme written in 869 (1466) for Mahmûd Pasha by Esmâwî; and Īni, mainly important for the history of the Ağal oglu (Turk Turkish Enğin paper, No. 15); lastly a chronicle in 15,000 baits on the conquests of Miḥâl Qâhlîn 'Ali Beg by Sûleyman Pasha. We may also mention the Kâtûb-nâme, dedicated to Bâyazid II, in which the poet Uxun Fırdawî describes the taking of the island of Midilli, and which is a valuable historical source. The same poet acquired fame from other works like the Silâhâr-nâme and the Sâlanâme-nâme.

Dervish developed considerably in this period. It was mainly an artistic prose that was cultivated; its most brilliant representative was Şînâ Pâsha [q.v.], author of the Taşâveri-nâme, as well as of a Kâtûb-leghî and a Taşâveri-Evelîk. The former is interpolated with poetry; he shows power as a writer of religious lyrics. His style is the same in the famous treatise by 'Abd Allâh Anârî, i.e. artistically elaborated yet natural and sincere. The principal representatives of artistic prose in this period are Şarî Kemâl, who translated the Turâkîh Mûlîâzîm; Ahi who adapted to Turkish the Hzüm-u Dil of Fethî Nâbiî; Meshtî, author of the Gûlu-pâble and Dîjîâtî Mehmedî. Other great stylists (mûnüllî) were the grand vizier Mâhîmûd Pâsha who wrote under the mehfeh of 'Adeî; the naghâmî Mehmed Pâsha (mehfehî: Nishkî) and Târsu Beg, known as Yâzîdî.

The writing of history in prose also began to develop, Turkish taking the place of Arabic and Persian. In the time of Bâyazid II we find many specimens of the anonymous Tâvârik-kî-Atî 'Oghânî-nâme, the prose of which is intermingled with poems taken from the İskandar-nâme of Ahmedî; they show us that there existed in the xvth century among the people and especially the soldiers, chronicles which were almost of the nature of epic. The historical works of Dervish, Ahmedî 'Ahiî, known as 'Ahiî Pâsha-žade and of Ürûqî-Beg do not differ much in point of style from the anonymous chronicles. The chronicles of Kâtîb Shewkî, Behîtî and Neshît belong to the same period. Works like the Turâkîh Abû 'U-l-Fâhî of Târsu Beg [q.v.] and the Lîmâ-yînî-îfâmî style of Bâyîtî, on the other hand, were written for the upper classes of society and are very different from these other chronicles. The work of Yâzîdî 'Ali, who wrote in the time of Murûd II a Selçûk-nâme, which contains among other things a synopsis of Rawendi and a translation of Ibn Bûlî is in a way a model for this second class of historiography. Several of these historical works, like that of Târsu Beg and the İsmâ'ilî Fêk-nâme of Dîjîfîrî Chelbi were written rather with the object of displaying a particular style and extensive literary ability, which has had a regrettable effect on some of the literary works in prose.

A fine specimen in unaffected prose of this period is the treatise by Dervîshî Lûtî which is one of the oldest works of humour (mênavî) in Turkish (publ. by O. Resche, Orientiâlistische Mecmillen, ii., 1926, p. 40–43; on the life of the author cf. Hayâtî, 1928, No. 100).

In this period we have also a number of works in the Turkish of Anatolia which were composed in Egypt and Syria. In Egypt the Circassian Makmîlî were Turkish by language and culture and under their régime works were composed in Eastern and Anatolian Turkish. To the latter category belongs the translation of Kâtûbî by the historian 'Aînî [q.v.]. Other works are: a Hâkem-nâme in verse written in 983 (1588) by İbrahîm b. Bâyîî, who dedicated it to Kâtîb Bâyîî; the Turkish poems of Kâşî İcčîîî, a translation of the İskandarînî written in 903 (1597) by a poet named Şerîf for Kânâmî İĉîîî (manuscript in the British Museum, at Upsala, Lenaqrad, in the library of İbrahîm Pasha in New-Şahrîî and in the Miller Kutübîkhânè in Constantinople). There is also a translation into Anatolian Turkish from the Eastern Turkish of 'Îkbîî Gûlâdî, by the hand of Mehmed b. Bâyîî, who is perhaps the same as the Ibrahim b. Bâyîî already mentioned. We also have a letter in Turkish written by Kânâmî to Selçûk I (publ. by Khâltî Edemî, in T. T. E. M., 1928, No. 19).

We thus see that Persian influence in Turkish prose and poetry had increased considerably in the xvth century, even to the extent of becoming a fashion. Mehmed II even had the Anatolian poet Şeyhcî write for him in Persian a İskandarînî of the 'Oğlanîînî and Bâyazid II also ordered the history of İdrîs Bîlitî to be written in Persian. Scholars and poets who belonged to Mesopotamia, Ajjharbâdîn, Persia and Kûrâkân visited the Ottoman court and were treated with honour and given handsome presents, which even caused Turkish poets to complain. A remarkable figure among the poets who came from the east is Hâmîdî (born in 834 = 1430) whose Dînâhî contains Turkish and Persian poems. He himself was of Turkish origin. After having lived at the court of İsmâ'il Beg of Kastanî, he enjoyed the favour of Mehmed II from 864 (1459). His İsmâîlîn is of considerable interest for the history of the period.

The court of Mehmed II and Bâyazid II was in very friendly relations with the court of Herât and with other Oriental courts, and the cultural and literary bonds which connected the Ottoman empire with the Muslim lands of the east and especially with Turkish lands remained close. Mehmed II and Bâyazid II as well as Mâhîmûd Pâsha had relations with poets like Khawâjî-i Dîjîhân, Dîjîâfî and Dîjîâlî-al-Dîn Rûmi (cf. e. g. Browne, A Literary History of Persia, iii, 422–423). In the same way the eastern poet 'Ali Shurî Newâîî was famous throughout Turkey at the end of this century. The persistence of the old Turkish tradition in the xvth century is further proved by the fact that the Uighur characters had not been entirely forgotten; there is in the Miller Kutübîkhânè a little work prepared to teach these letters to Bâyazid II as well as a copy of the Hâfîz al-Haşîîîîî, written in Uighur characters. Towards
the end of the century there was actually a reaction against the excessive use of Arab and Persian words and phrases. They tried to write poems in the *arzish* metre, while avoiding foreign words and expressions; one representative of the movement, called Türk-i Basit, is the poet Wiyâlî.

The literature of the people, of which the vehicles were the *esnâm* continued in this century as in the preceding ones and was still appreciated at the courts although the *esnâm* had become poor musicians alongside of the great "classical" poets. They retained their popularity however among the people. We know of the existence of *giab-lu* also called *zâhîn-tâlwâs* and *mehmîd* [cf. *Hikayâ*, *Kayâs* and *mehmâd*]. They used to recite the old Muslim epics and were beginning to borrow their subjects from the everyday life of their neighbourhood; the latter provided a coreness which separated them still further from the classical poetry. We have no longer any work of the popular literature of the period. We may presume that the theatre of Kârâ Gîz also developed in this century [cf. *Şaîr Gûz* and *Khâyâl-i Şüll*].

**xvith century.**

The xvith century is the period of the apogee of Ottoman might, in which the empire attained its greatest power in the reigns of Selim I and Süleyman the Magnificent. This was reflected also in the sphere of language and literature, which were fostered by the great centres of culture which had grown up with the foundation of schools, colleges, and universities. As Rûmî received the particular attention of the government, it is here that we find many poets appearing. It was also at this period that the Turkish language and the Greek and Slav languages had most influence on one another. By the conquests in the east, the Aqhafr dialect was predominant, the poets of these regions were led to use the Ottoman dialect. The Crimean also gradually returned to the fold of Turkish culture: it began to produce Ottoman poets among whom were several of the Khâns themselves (cf. *Ith Müttepostier*, p. 197). The same influence reached the Dere-beys in Kûrûfân. The intellectual classes of the non-Turkish populations were forced to learn Turkish and on the other hand, Stambul attracted learned men and poets from other Turkish and Muslim lands.

All the sultans and princes of the dynasty of *Qâshân* were patrons of art and learning and their viziers followed their example. Selim I [q.v.] wrote, in addition to a Persian *Divân*, poems in Ottoman Turkish and in *Câghâti*. Süleyman [q.v.] wrote poetry under the *mehmân* of Muhabîbi and from the very first recognised the extraordinary talent of the poet Bâkî. The grand vizier İbrahim Pasha, himself a poet, was the special patron of the poets *Khâyâl*, Lâmi and Râmi. Under Selim II, Murad III and Mehmed III, the same tendencies prevailed so that, in this century, Anatolian Turkish became a great vehicle of art and learning.

The influence of the Persian poet Dâmi and of the Eastern Turkish poet Newî, as made itself felt very markedly in the xvith century: many of their poems were translated into Ottoman Turkish. The poet Lâmi is sometimes called the *Bâkî* of Türk, on account of his translations. On the other hand, it became fashionable to write poems in *Câghâti*. Poets from the east like *Djâmî*, (his Câghâti *Divân*, containing only *mehmân* on Newî, is in the Museum of Top Kapû, No. 753) did much to spread the glory of Newî. Many Adhar poets sought refuge at the court of the Ottoman sultans: the most famous among them were *Tâhirî*, who left the court of Shah Ismaîl, and *Hâfiz* who had been a member of the court of the Ak-Koyunlu Sultan Ya'qub and of the Şâfa'i Ismaîl. Hâfiz was a precursor of Fuzûlî (cf. on Hâfiz: Köpr. *Zade* Fuzulî, *Akbâr Edebiyyatîn* *Veit Tâgbîlî*, Baku 1926), and a few other Adhar poets, like Bâsi and *Bâsi*, were also beginning to write in the Ottoman dialect. There is also a good deal of evidence that the cultural relations between the Ottoman court and those of the Şâfaï, Shâhînids and even of the Great Moghuls were quite close. There are interesting details of these relations in the narrative of the famous traveller Siyâzi Rûzî, who wrote under the mehmân of Kâtîbi [cf. *Cilî de Rûzî*].

Literature flourished not only at Stambul but also in Bagdad, Diyar Bâkî, Konya, Kastamuni, Brusa, Edirne, Yenidje-i Wardar and Üskûb. At Stambul the poets used to meet in various places, such as little shops where some poets plied their trade, gardens (the garden of Bakhtîar at Beshiktash), the famous cabarets (*mekhâmîn* of Galata, the *teka* of Bakharabâh at Süleymaniye) and the mansions *(kosha)* of rich men (among them poets like Nûrî and Zireği). After the introduction of coffee, the *bâkhar-hâmîn* also became important meeting-places, and the visitors belonged to all classes of society. This progress in literature goes parallel to the development of architecture, decoration (*mâşîk*), calligraphy, music and several branches of science. By the genius of the great poets like Râmi, Dâmi and Khâyâl, and especially Bâkî and Fuzûlî, there was created a Turkish classicism which was of no less merit than the Persian classicism which had been its model. It is wrong to deny an original character to Turkish literature: an intensive study enables one to discover in it the reflection of the ideas of the period and state of society, the results of the great military successes of the empire and of local conditions. In this connection we would especially call attention to the high importance of the different categories of prose and of the historical works.

In the xvith century, the literary language still makes borrowings from the Arabic and Persian. The activity of scholars like Surêt Südi, Ibn Kemâl and Riyâd produced philological commentaries, lexicographical and grammatical works. Books without number were translated into Turkish from Arabic and Persian. The borrowings from the two languages enabled Turkish poets to perfect the prosody and style of their poems according to the taste of the day. The product of the movement however was a beautiful but artificial language in which many of the natural qualities of Turkish were lost. On the other hand, we find poets who fill their poems — probably under the influence of Nâgî — with proverbs (like the *Pemîde*, or *Kâm al-Basti* of Gwâhî). Other poets like Derînî of Trabzon, Ağıteh of Yenidje-i Wardar, "Tâkî and Yestim fill their *fasâden* and *gazâhî* with terms taken from navigation. The movement known as Türk-i Bastî (cf. xvith century) has two representatives in this century in Mahtamî of Tatvâla (d. 942 = 1535), author of *Bastî-nâme*, and *Naşîn* of Edirne (d. after 962 =
The greatest figures in the gazelde and ghazal in the xvith century are in chronological order: Dāštī, Khayālī, Fustullī and Bāšī. Dāštī wrote besides gazelde and ghazal a large number of works in poetry and prose which are of very unequal value. In his early works the influence of Ay Meh Āqišī and particularly of Neqāt is evident. His imagination and his love of poetry made him very popular and he had a number of disciples. In the evolution of Turkish poetry his place is between Neqāt and Bāšī.

Khayālī [q.v.] began his poetical career when he was at the height of his fame, but as a poet he surpasses the latter and many others. The Tahkardī, ("Attār of Bākadvāda") calls him the "Hashr of Rūm". His Dāzm contains all his work and is said to have been arranged by a certain 'All Celebī, although the poet himself says in a gazelde addressed to Soğān Suleimān that he had arranged it himself. In his youth Khayālī had been under the influence of the mystics, notably Ujūlī, but mystical poems form only a small proportion of his work. His most original poems are his ghazals. He met Fustullī in Bākadvād and seems to have written majzīr on his poems. Fustullī must be regarded as the greatest poet of Turkish literature in general, although he was born in the neighbourhood of Bākadvād and used the Aḏhar dialect in his poems. He was of Turkish origin of the Bayat tribe. He composed a Dāzm and a mevhwe Leilah we-Mujāsim which have secured him a place in literary history. Love in his works is never entirely profane in character, thanks to the inspiration of his mysticism. Bāšī soon as he turns to the gazelde we find him falling into artificiality of no value. His Leilah we-Mujāsim must be regarded as an original work rather than an adaptation. No other poet except Nastān and Newālī has acquired a reputation like his throughout the whole Turkish world; he even exercised an influence on the musician-poets of the people (cf. Köpr. Zāde M. Faḍā, Introduction aux Káltiyāt de Fustullī, Constantinople 1342, p. 3-22; Türk Vişer Medīr, ii. 434-436).

Bāšī after the death of Khayālī was undoubtedly the greatest poet in Stambol. His reputation spread very rapidly throughout the empire and even as far as India. All the later poets down to the xviith century have praised him as their master. His ḫaṣīde, mārthīye and ghazal really do attain a high pitch of perfection. In spite of the fact that he was inspired by a number of predecessors, he retains all his own personality. In the expression of sentiment Bāšī is below Fustullī, but the musical charm and faultless ease of his poems have given him the reputation of an inimitable master of classicism.

The xviith century also produced a number of other great masters of the ghazal and ḫaṣīde. We may mention Huṣreṭī, a very original poet, who describes the towns of Rūm-ul and his amours; his friend Ḩādī Āqiśī; Khayāmī of Brusā, known from his translation of the Shāh-nāma (Persian) of Hīlalī and for his fine ghazals; Fīrūzī executed by order of İbrahim Faṣādī; his successor Muṣṭafā; Durrī Zāde Ulīwī of Stambol, author of remarkable ḫaṣīde. In the second half of the century, Emīr 'Ubeidis, Māʾrūshīn Hūdāyī and Newī' are masters of the ghazal. Newī' was at the same time a great scholar and stylist. We must also mention Ṣūfī of Baghādhd which Türkvbī only won him fame later. Then Fawār, Ḥanānī of Brusā and Selīṣī, who became known by their mārthīye and māsār. Hanī and the celebrated Kāraka Ṣafālī wrote rubāt in the style of Khayāmī. Šuṭrī, Šākhravānī, Rūyāzī and Ḥādī excelled in the kāfīw. Others like Hābirī, Gūsānī and Gūsānī, named Ḫalīl Ṣabīrī, wrote kāfīw, mārthīye (bantering poems; cf. Ḥaṣhrūlī and Köpr. Zāde M. Faḍā, Yehī Meşravvā, 1317, No. 15). Finally two forms very fashionable in the poetry of this period were the ṣawerān (enigma) and the ṣawerān (chronogram). The poet Emīr excelled in both of these.

As regards the meyhwe we find, alongside of numerous translations and imitations of Persian works, original poems on local subjects like the Sherk-engi, mystical poems and rhyued chronicles. The subject of Ṣūfī's Zalīkhā was very popular, especially one by Ḥanī. Many poets also wrote a Leilah we-Mujāsim, of which by far the finest was Fustullī. Other subjects were the Mihkār, (translated by Ṣafālī from the Persian, ʿEbdār-i Fīrūz and Bahārān-i Zāhīr, both of which were chosen by Fīrūz as subjects, and many others. The best known authors of meyhwe were Kāraka Fāṣālī [q.v.] of Stambol, author of Gūsā-kušt, Ṣabīrī, Bāyāzīq of Taḥbīghā and not quite so celebrated, Lāmī [q.v.]. Bāyāzīq's most celebrated poem is his mārthīye on the death of prince Ṣafā (1551); his mevhwe Shīkān-kuḏ, Gūfrān-kuḏ, Panīr-kuḏ, Gīhrān-kuḏ, Emīrī, Ṣabīrī and Zalīkhār are distinguished by a remarkable originality (cf. Bāyāzīq). We must also mention ʿĪṣārī Ṣafa (993-1585), author of a Nābi, Khayāmī and Muṣṭafā Dībānī of Brusā (1004-1506), who wrote Māshān al-ʿArār, Rāyād al-Dībānī and Ḫalīl al-Kaṣāfūr. Among descriptions of towns we have several descriptions of Brusā beginning with that of Lāmī, there are similar works on Edirne, Diyar Bahr, Stambol etc.; to the same class belongs the Roh̄ā-i Ṭarīṣī of ʿĀfīrī (d. 941 = 1534) of considerable historical value for its description of the various classes of society (cf. Köpr. Zāde M. Faḍā, Ḥayāt, 1921, No. 2). The ghazals of Ṣahālī of Brusā (d. 949 = 1542) are of equal interest, in which the poet describes young beauties belonging to the trade-gilds (cf. Köpr. Zāde M. Faḍā, Yehī Meşravvā, 1918, No. 63).

The meyhwe form was also still used for mystical works, lives of saints, collections of rules for the mystic orders, lexicographical works etc., most of which have little literary value. Several poets wrote Ḩādīkē am, imitation of Dībānī and Newālī. To this class also belongs the famous Ḫalīk of Khayāmī [q.v.] and the translations of the Ḥādīkē am by the same author. Encouraged by the fame of the Munīl of Suleimān Celebī, many poets, beginning with ʿĀṣ Shams al-Dīn Zāde Ḥanī took up the same subject but without attaining the same popularity. Lastly we may mention a Deb-meqrān, inspired by the Munīl al-Tawr of ʿAttār and dedicated in 919 (1512) to Selīm I by ʿAṣīmī.

As the mystic movement increased in strength in this century and new ṭerāt were everywhere opened, it is not surprising that poets belonging to the different orders should write didactic works,
mythic poems and collections of legends of saints, alongside of translations of Arabic and Persian mystical works. We may say that each paska had its own literature; among these literatures the more important belong to the heterodox groups. Thus the literature of the Bektâshis, begun in the eighteenth century by Nâdîmî, had representatives in Yâbûsî and Aşkerî, developers of the edeb of Sâyiş! Lâkûnî, while others are of great interest in the history of religion for the freedom with which they expressed their thoughts—which sometimes cost them their lives. Their heretical doctrines were not only disseminated among heterodox bodies like the Bektâshis and Hâritâs but also in orthodox orders like the Kâhalwet and Mevlevis, as we know from the historical sources. Other mystics wrote very simple poems, like Yaş Çifreti of Beşiktaş and others.

Finally a number of historical works were written in the form of meşâlîc. With the exception of the Ottoman history of Hâfidî, written in 1337 (1551), they always deal with a single event (the taking of Buda, or Debrecen), the Venetian, etc.) or with the victories of a sultan (particularly Selim II or a commander (like Kâtîr âl-Dîn Pascha Barharos, or Demir Oğlu 'Othman Pascha etc.).

Prose in this century assumes a heavier and more artificial form; exaggerating Persian models, it is completely artificial; these are expressed by the most complicated images to the detriment of the subject. This lack of taste is found in the greatest stylists of this period: Lâmiî, Kemâl Pascha Zâde, Djeâdel Zâde, Ferîdûn Beg, Asâmi, the translator of the Hâmiyyet-yenîme, 'Ali Celebi, Khatûn Zâde, 'Ali Celebi, Khârîda Sa'd ad-Dîn [q.v.] and others. This artificial tendency had a much more disastrous influence on prose than on poetry. Works written in simple language were despised by the educated classes. We find however that in very long works, it was only the preface that was written in this turgid and clumsy style. Many literary, historical, religious or moralising works of the period were in fact written in more simple language. The same applies to official correspondence and other state documents. In religious works intended for the people, every endeavor was made to write as simply as possible. The prose which we possess by Bahâ and Fâtûlî shows an elegant and comparatively simple language.

We shall begin with the historical works, a field in which great progress was made in this century, mainly on account of the interest taken by the educated classes in the military successes of the empire. Besides the thymed chronicles, in continuation of the Seldjûk tradition, we find from the time of Bayazid II and Selim I historical works in prose. The official Ottoman history written in Persian by Fâris Bîlit was translated into Turkish by his son. Other general histories were those of İbn Kemâl, Djeâdel Zâde Muşafa Celebi, entitled Tûbâbât al-Mawilî, of Muşafa al-Dîn Djeâdel of Lafti Paşâ, of Khârîda Sa'd ad-Dîn and of 'Ali. There are also a number of special histories, dealing with particular periods or certain events (the Fethânos) and biographical works (like the Da'ashîyên al-Mawilî relating to Şoûkî). At the same time the office of Seyyed-i Nâmâyîşî was maintained at the court. In the time of Selim II, it was filled by Feiz Allah 'Arif Celebi, whose successors included Aşkerî Şirvânî, Sâyiş! Lâkûnî and Ta'îlî.

Zade (d. 1013 = 1604). These were also Turkish poets, but tradition demanded that the official Seyyed-i Nâmâyîşî should be written in Persian in the mawâlikî metre, until Mehmed III ordered it to be written in Turkish. From the time of Ta'îlî Zade, prose began to appear scattered through the text. From the historical point of view, Seyyed-i Nâmâyîşî are naturally of less importance than the non-official chronicles. The works like the Tûbâbât al-Mawilî of Sa'd al-Dîn were regarded as models of style, the Ta'îlî both of Lâfî Paşâ [q.v.], whose style more resembles that of the old chronicles, and especially his Ta'îlî are very important for our knowledge of the social history of this period. The Ta'îlî of Selimî Muşafa Efendi shows how corrupt the administration was at the end of the century. We must regard 'Ali [q.v.] as the greatest historian of the time and his other works reveal him as a man of almost encyclopaedic learning. Not only his Kaşî al-Ahbar, but also his Nâfis-i Salâtî, Khatûnî, Ma'mûrî and Menâbi-i Hâmûvarîn show that the author was a severe critic, well informed about the conditions of life of his time. The style of his historical works is relatively simple (on his life and works cf. the introduction by İbn al-Amin Ma'mûl Kemâl to the Nûrûs-i Muvâlî, Istanbul 1926). To this century also belongs the Djeâdel Nâmâyîşî, written in Arabic by Ta'âbûrî Zade [q.v.] and translated into Turkish with the assistance of Mâbûdî of Edeâne and Khâki of Belgrad; also an extensive biographical literature among which the biographies of the Turkish mystic sheikhs are of considerable historical interest. A similar interest is contained in a few light works of hâmidî like the Nûsî of al-umr-i-vâreme of Lâmiî and of Nâsirî Zade (cf. Milî Tâthîbîsîr Mezâmeyî, N. 3).

Among historical works, those which deal with literary history occupy an important place. The first Ottoman tekhâres is the Hâmîyât, written by September 945 (1538) by Şehît, in imitation of the Ma'mûrî al-Nâmâyî of Newâlî. He was followed by Lâfî [q.v.], Aşkerî Celebi [q.v.], 'Akhî Salâmî, 'Ali Celebi, and Isâmî Celebi [q.v.]. 'Ali also gives important notices of poets in his Kaşî al-Ahbar. The compilation of collections of poems on poems of other poets, like the Da'ashîyên of Newâlî written in 948 (1542) by Hâfidî Kemâl, containing poems by 266 poets, and others, is a custom which is also found in the eighteenth century and has contributed greatly to our knowledge of Turkish poets.

It is in this century that we find geographical works and travels beginning to appear. In the eighteenth century we have only translations and excerpts from Kaswin and İbn al-Wardî as well as a translation from the Greek of Polemy. In the eighteenth century, these two works are again translated, as well as those of Alm 'L-Fida'î (by Siânî Zade) and İstakhrî (by Şerîf Efendi) and 'Ali Kushtîjî's work on mathematical geography, and geographical descriptions of Egypt. A Cîn Seyyed-i Nâmâyîşî written in Persian by the merchant 'Ali Eker Khatîrî was translated into Turkish for Mustad III. The celebrated Bahâiyyûn of Pirî Re'tî [q.v.] written in 935 (1529) was the result of the maritime policy of the Turkish empire. It is based in part on older cartographers like Şafîî and
on Italian maps. As a result of Sulaimān's campaigns by land we have Mīrābdīr Našīb's work, full of admirable little sketches. Seiyidī 'Ali Re'is wrote his Muṣāf as a result of his unfortunate exploit in the Indian Ocean, although the book is based entirely on earlier Arab works. The Mīrābdīr al-Mawālik by the same author is much more original. After it we have the Siyāhat-nāme in verse of the merchant b. Ibrāhīm, describing his voyage to India. The Mā'tūrīr al-Abwālīn of Māitched Agīk̲h of Trebizond is very important; based on the old Arab gothographies, it gives valuable new information about Ottoman lands. Finally we may mention Ta'rīkh-i Hindī Gharbī on the discovery of the New World, translated in 1530 (1582) from a European language by Māitched Vūsuf al-Hārewwī (on this literature cf. Tüsencher in the Z. D. M. G., lxvii, 1923).

Alongside of classical Turkish literature, we find the literature of the people increasing, the knowledge of which was spread by the bāci-yū, the maddāsh and the khorgāzī in the popular cafés and in the barracks of the janissaries. Many classical poets also wrote türkī [q.v.] intended for the masses. These türkī are in the 'arūf metre and in the form of mi成本′; later they were called qāri [q. v.]. This form of poem goes back to the earliest forms of verse among the Turks. But the works of uninstructed poets, like Enwerī, Thiyyālī, Rāyī, Rāhī, and others, written in imitation of the classical poets, were more of the taste of the people. In popular gatherings such themes as Abū Muṣlim, the Ḥama-nāme, Başgül Qudā, etc. were enthusiastically received. This encouraged Ḥāshim of Stambul to write the mevna: Başgül ve-Qudā taken from the Ḥama-nāme and inspired several authors and poets to write similar works. Sulaimān Sulaimān had the story of Fīrūzārā translated into Turkish in 8 vols. by Sālih Efcendi, translator of the Dīwān al-Hāzīrī. There were ḥaṣba-yū even in the palaces of the sultāns. Alongside of old Muslim and Iranian subjects we find also collections of stories of everyday life like the Baṛṣāl Kānasā 'Abd al-Reyāf Efcendi Ḥikayēsī by the poet Wāhīd, also called Awa Başgül Ḥikayēsī. The stories of everyday life by Muṣṭafā Dīnānat of Bruna in an unaffected style give us a valuable insight into different aspects of the life of the people in those days. Another poet of this kind is Mūrī, whose real name was Derwaţ Ḥasan, who was the mevna of Murād III (cf. Rieu, Cat. of Turk. MSS., p. 42).

In the xvith century we are a little better informed regarding the activities of the 'marān, although they are now generally known as 'ābīb or seiyidī. These wandering musicians were to be found wherever the people congregated and used to recite their poems in syllabic metres, love-songs, heroic tales, mevna and türkī. At the beginning of this century we have a portion of Baḵshī's epic on the Egyptian campaign of Selim I and at the end of the century we have the names of Kūl Meḥməd (d. 1605), Ḫosās Dede, Ḫayālī and Kūr Oglu, and, in the garrisons of the Maghrib, Čarpāntī, Ārmūdīn, Kūl Čalḫān, Ḫanmuş (cf. also Kūṛ, Zāde M. Frād, Turk. Sıāsātveleri, 1930). The influence of the various classes of society on one another had even the result that syllabic metre was sometimes used among the cultured classes (but especially in the hotel) and the 'arūf metre in popular poems, just as had been the case formerly for poems of a religious character. The mystic poets however, following the tradition of Yūnus Emre, wrote their izāhā in syllabic metre. We may note the names of Ummi Siānā (d. 958 = 1551), Aḥmed Serbān (d. 958 = 1553), Ḫidr Muḥtēsī (d. 1215) and Seiyidī Seifi Allāh Khāwīwī (d. 1010 = 1601). But the greatest successors of Yūnus and his fellow poets were found among the Bekāḵs and Kīlīshāhs', such as Kūl Himmet and his pāpī Ḩaṣān Ābdāl, a native of Siwān who was executed in 1600 by order of Khıdır Faddā (cf. Sa'd al-Dīn Nīshākī, Fīrūz Ābdāl, 1729). Other products of the popular literature of the period were Ḥasan Oqla Qārābokrūn Türkārī, Qara Qoban Türkārūn, Qobān Dījārīnī.

xvith Century.

In spite of the political decline of the empire we still find intellectual and literary life pursuing its normal course. The knowledge of the Ottoman literary language spread among the Musulmān classes generally and also through districts with a non-Turkish population or speaking a non-Ottoman Turkish dialect like eastern Anatolia (Ar FLASH dialect) and the Crimea. The Crimea began to produce a number of Ottoman poets, among them actually some of the Khāns. The influence of Turkish literature and culture is found as early as the xvith century in the use of Arabic characters by the Muḥammadan Hungarians and Croats (cf. Ungarische Bibliothek, 1927, No. 14). There is also a Turkish-Serbian dictionary in verse, called Pevur Šahbīltun, composed by Hāwīyā (Bull. de la Soc. scient. de Skopje, iii, 189–202), a similar Turkish-Bosnian vocabulary by Uṣkāfī and several rhymed Turco-Greek glossaries.

Stambul was always the centre to which men of letters and learning flocked from all parts of the empire and from beyond its frontiers. With the exception of Murād IV, no sultan took an interest in literature, and among statesmen there were relatively few poems of literature like İlyāş Pasā, Mūsāḥhī Başgül Pasā, Kāmī Pasā and the Şehsī al-Islām Yahyā and Behbāyī. In spite of this and of the decline in the medresses this century saw scholars of ability like Şart 'Abd Allāh [q. v.], İsmā'īl AnbaRéwī, İs hákh Khwādīzāī, Aḥmed Efcendi, and others. The various branches of religious learning and Arabic philology have however no great representatives in this century, and the conflict between the medresses and the tekke known as the "question of the Khān Zāde's" shows what a narrow point of view still prevailed in the medresses. The persecutions of the mystical orders, which sometimes had a political object also, did not however prevent these orders from continuing to prosper throughout the empire. The "classical" Turkish poetry of the xvith century was in no respect below the level of the Persian models. But the place of devoting themselves to imitations and translations the Turkish poets were now working on original subjects. It is true on the other hand that the influence of contemporary Persian and Indo-Persian poets is still felt. Neftī shows the inspiration of 'Urī, Nāḥī of Şāb and Nā'īlī-ḵādīm that of Şawkāt.
Nefti [q.v.] may be regarded as the greatest Turkish master of the hâfsa, or account of the power of his imagination, the richness of his language and the harmony of his style. His ğezehs and his hâfzîn on the other hand are less successful. The influence of Nefti was always great on his successors, although his period saw several eminent hâfsâ, like New'i Zade 'Atâyî, Kâf Zade Fa'îlî, Riyâdî, Şâbriti and Ridâyî. The greatest representative of the hâfsa is the Sheikh al-Èslâm Yahyâ [q.v.] who may be regarded as the successor of Bâkti, especially on account of his great power to express feelings and emotions. His fame likewise survived into the following centuries. Other representatives of the school of Bâkti and Yahyâ are the Sheikh al-Èslâm Behayî and Wedjîl. In contrast to the latter, the poets Fehim [q.v.], Nâ'îbi Kâdim [q.v.], Seyhârî, and even the poet Nefti [q.v.] were under the influence of contemporary Persian poetry, Nâ'îbi on whom can be noticed the influence of Sa'îd became renowned for his mihvû and his ğezehs. His poems are characterized by the preponderance of intellectual conceptions but this has not affected his popularity. In many of his poems he describes and criticizes the social life of his time. His young contemporary Tâhiti [q.v.] endeavours to show his originality by mingling proverbial expressions with his poetry. Among the masters of the hâfsa of the xviith century we may also mention Nâ'îbi Mewlewî, Djewîlî and Râmi Mehmîd Pasha. 'Atâyî Zade Halîetti [q.v.] excelled in all poetical genres and is best known for his rûhî. The hâfsa and the mu'ammât became very popular as did the tarîhî (chronogram). The hâfsa and mevlevî, composed in different forms, caused poets of the first rank to write very coarse things. Some products of this genre however can be appreciated, like the tejhîrî in the form of a mevlevî by Güfîî in which the author depicts contemporary poets; the hâfsa of Fehim and of Djewîlî, written in the form of mu'ammât, are curious because the text is scattered with passages in non-Turkish languages.

Some mevlevîs of the first half of the century show a remarkable perfection. The subjects of the old khânum are gradually replaced by more topical subjects. The greatest representative of the style is New'i Zade 'Atâyî [q.v.] who acquired his great reputation with his Khânum, the subjects of which are taken from the life of his time. This poet reveals the influence of his Turkish predecessors like Yahyâ of Tahîdji and Djemânî (cf. xvith century). After him we may note the following authors of mevlevîs: Kâf Zade Fa'îlî, Ghani Zade Nâ'diri and Riyâdî. It was mainly in this century that it became fashionable to write Şahî-nâ'îs in imitation of the Persian poet Šahî, although this genre is already found earlier, as is shown by the şahî-nâ'îs of Rehînî (xvith century). Among the Şahî-nâ'îs we may specially note those of 'Atâyî, Riyâdî and Halîetti; all are tinged with mysticism. The mevlevî thus served for all sorts of subjects taken from daily lifetexts, descriptions, speculative works, tales of actual events etc.

The number of religious and mystical works, lives of saints and didactic works connected with the different şehîs is very great in this century. Poetical forms were often used for them. Very well known is the Mihvî of Nâ'diri. They were panegyrics of the Prophet (nâ'î), translations in verse of the Hazrat-âr-sînâ of mawlawi etc. Among the mystic poets there were some who used the syllabic metre; we may note Nişârî Mîşrî, founder of the Mîşrîyya division of the Khâlâtîyya order, whose poems were long popular; the Bekâshî also numbered several poets in their ranks. There are also a large number of historical works in verse, Şahî-nâ'îs, Ghâshî-nâ'îs, etc., like the Şâhî-nâ'î of Nâ'diri of the time of Othman II and others. The Şahî-nâ'î written by Mûlhemî by order of Murad IV has only the preface in Turkish; the rest is Persian in keeping with the old tradition. It is in this century also that the custom begins of writing brief Ottoman histories in verse; we have the of Tâhîlî, written in 1017 (1608), of Nişârî (d. in 1017 = 1608) written for Mehemîd IV and the Şahî-nâ'î of Şahî-Bahârî, dedicated to Mehemîd IV by Şulak Zade Hemîdî, and continued by a series of poets down to Ziya Paşa in the xviith century. This kind of work has neither much historical nor literary value.

Literary prose follows the same lines as in the preceding century. The great stylists (mihvîsî) like Weisî, Nesrîî, Oğçu Zade and others carried affection of language to a still more advanced degree. A fine specimen is given by the official documents addressed to the Persian court and written by mihvîsî like Hûkî; this same style, devoid of any taste, was sometimes used even in private correspondence. The works which were considered to have no literary value in their day are those which are now most appreciated, like those of Kocî Beg, Kâfît Cebleî, Ewliyya Cebleî and Na'îma. Histories in this century also, take first place among prose works. There are several which have the character of semi-official chronicles like the Şahî-nâ'î written in prose by Tâshkhâr Pâşâ for Othman II. Murad IV appointed Kâfît as mevlevî for the Erivan campaign. In 1074 (1664) the mihvîsî 'Abîd al-Rahmân Pâsha was appointed by Mehemîd IV to chronicle events, as was Mehemîd Khalîfî of Findikli by Mustafa II. It is only later that Na'îma was appointed mevlevî of the court. The historical works of this century are translations of the general histories of Islam, original works on the same subject, general and special works and monographs on Ottoman history. From the historical point of view, the most important are the Dijâmî al-Dowla, written in Arabic by Mûnedjîmî Bahî, the菲尔îâ of Kâfît Cebleî, the Fârîhî of Pelewî and the best of Na'îma. The great encyclopaedist Kâfît Cebleî (cf. Kâfît Khâlimî) also reveals himself in his Misâv al-Rahî and Davûlt al-Amal as a historian of penetrating insight. Pelewî [q.v.], who made use of Christian sources, is also very valuable for his sound judgment and impartiality. Na'îma [q.v.] who possessed descriptive gifts of the first order, gives vivid psychological analyses of his historical characters. Kocî Beg [q.v.] examines in his celebrated Rihât the causes of the decline of the empire. Kârî Cebleî Zade is a mihvî rather than a historian. We must also mention chroniclers like Wedjîlî, Hasan Bey Zade and Şulak Zade, as well as the şahî by the Şahî-nâ'îs of mihvîsî by New'i Zade 'Atâyî and the continuation by Ustâshî Zade.

The tejhîrî is much below the level of the xviith century; the most notable is that of Riyâdî written in 1018 (1609). The Riyâdî of Şahîrî of
The period of Damiad Ibrahim Pasha [q. v.] is a very important one. Many works were written and translated by his orders or those of Sultan Ahmed III. Committees were appointed to translate important works rapidly. Among the poets of this period we may mention ?Olmam Zade Tâlib, who was called the king of poets, Seyid Wehbi, Sâmit, Râshid, Neill, Sâlim, Kâmil, of Edime, Durri, ?Abdellah ?Aref, ?Sâlim, ?Celbi, Zade ?Asim, and ?Yezid ?Ali Pasha. Navid [q. v.] in particular acquired a great reputation in the second half of the century and later. His ghazals and his ?ashr? recall the period of Sul?n-?âd and by his original subjects, rich imagination and harmonious language, he surpasses his predecessors and his contemporaries. In the ?ashr? he reached a level which neither ?âs?m before him nor Fâd?l ?End?r?n? t after him attained. It was also through the patronage of Damiad Ibrahim Pasha that Isk?m Muteferrika [q. v.] was able to inaugurate Turkish typography, but for several reasons printing remained confined to a very restricted sphere throughout this century and did not exercise any particular influence on intellectual or artistic life.

Among the great poets of this century we must also make special mention of ?Ozd? Râshid Pasha [q. v.], the greatest representative of the school of Sel? and Sheik ?Sel? [q. v.], the last great poet of the classical period. In the ?ashr? it was the influence of Neft? that dominated, while in the ghazal there was a rivalry between the disciples of Sel?m and S?m? on the one hand and admirers of Nabi on the other. But towards the end of the century a decline in both schools became apparent; poets like Fâd?l ?End?r?n? t [q. v.] and ?S?v?l ?Zade Wehbi [q. v.] are only mere imitators. The poets of this century practised all forms of poetry and special attention was devoted to genres characteristic of an epoch of decadence, like the ??ehf, the haj?l, the ?m?m?n? (enigma) and the ?r?h?h? (chronogram), while immorality and a general decline in good taste increased. On the other hand, true religious inspiration still continued as may be seen from the ?m?l? ?h? and the ?m?l? of Na?m, the M?y?n? of poets like ?Olmam ?D?de, Na?f? and ?End?r?n? t, and of Nabi. The me?r?s of this period are numerous but of little literary value, the old subjects of the ?m?m? are entirely dropped, with the exception of the ?m?l?h of Sheik ?Sel?, the last masterpiece of this piece. Finally, the rhymed historical works of this period and the mystic poems by initiates of the various orders are of little importance.

Literary prose tends to become gradually simpler, although we still find imitations of the style of Nergis and ?Ab? ?Zade. A well-known stylist like ?Olmam Zade Tâlib openly declared against exaggerated artificiality in prose. Historical works occupy the first place. Among authors serving as ?m?l?m?w? [q. v.] we may mention Râshid, ?Celbi, ?Zade ?Azm and ?Sel?, but none of them can be compared to their predecessors like Na?m, although hundreds of people were writing biographical and historical works. The political and military decline of the empire caused a large number of ?y?w ("memoirs") to be written investigating the causes. The most remarkable of these memoirs is that of ?Ozd? ?Sel?m B?l. From the point of view of geography we may note a number of important si?f?r?n-?m?m?n, of which
the Fransız Şefkat-nâmesi of Virmi Şehit Celalı Mehmâd Efendi is a typical example; these works were occasionally, although rarely, written in verse. The Sûr-nâmes written to celebrate the splendid festivals held by the sultans are important sources for sociological research. Those best known are the Sûr-nâmes of Selîdî Wehri and of Şahmet. The collections of biographies of poets are even more numerous than in the preceding century. We may mention the tezkires of Şafîyî and Şelîm and that of Bâli, the tezkire of Eşreî Dedë, specially devoted to Mowlewî poets; to this century belong also the Şehbîyû al-Fâyîlû of Şehîkî, which is the final continuation (âdikilî) of the Şahsûîî. Later the Tahfîzî âdikilî of Mustafâ Zade — whom we may regard as the greatest encyclopaedist of this century — is the most important source for the Muslim and Turkish calligraphers (khâtatî). In the field of geography we have only translations and excerpts from European works.

The meNdî, šarâqılı, and orqa aspâgî continued to enjoy the same popularity among all classes of society. The works of the musician-poets were also known everywhere; we may mention Kîmêli, Nûrî, Lâwîni, Khâba Şâkal Mehmâd and Fâqîlî, but the popularity of Gewherî and 'Îşkî Omer continued; some of these poets were of Armenian origin, like Dûmîni and Warzan, who lived at the beginning of the century. This influence of Turkish music-poets on the poems of the Armenian akîbî perhaps begins as early as the xvth century (cf. Köpr. Zade M. Fu'âd in Edelîyî Fikrî Nâmesî, 1922, No. 1, p. 1—32). The best example of the range in which the literary taste of the people had penetrated among the upper classes is the fact that the great poet Nâdim also wrote a turkû in the popular metre. This tendency became more marked as the century advanced.

Sixth century.

At the beginning of this century, Ottoman literature had sunk to a very low level which continued till the period of the "Tântâmî", Wâsîf Enderûnî [q.v.] and 'Îzet Mollâ [q.v.] alone show some originality. Wâsîf appeals to the popular taste and shows the influence of Nâdim as well as that of Fâqiî Enderûnî. 'Îzet Mollâ, while strongly influenced by Nâdim and Şehîkî Ghâlîh, is, however, a much greater poet than Wâsîf, especially as regards the purity of his language and his poetical technique; in addition to şîtâden and ghâshîs he wrote quite good meNdavîs; he is the last "master" of classical poetry before the "Tântâmî". It is true that even after the "Tântâmî", many poets wrote şîtâden and ghâshîs in the ancient style and among them the great advocates of literary innovations like Nâmîk Kemal and Zîyû Pâsha; to this period also belong Ghâlîh Bey of Leskofça, 'Awmî Bey and 'Arîf Hikmet Bey, all imitators of Nâ'îlî and Fehmî Kâsim. They had, however, no influence on the course of literary development. It was only natural that the old literary tradition could not disappear at once; Şehîkî and his school had to maintain a long and hard struggle against the old school.

The prose of the period before the "Tântâmî" is not of much value, although the production was not less than in preceding centuries. In history, the Türkî of Mâtersîmî 'Arîm is remarkable for its style and critical ability; the author uses even simpler language in his translation of the Türkîyû Sûrî and of Şeyhû. The meNdâmî Efendi, translator of the Maštîraf and author of the well-known Cûz-i Zafar on the extermination of the Janissaries, is far below 'Arîm, with his inaudible language and confused style. The same writer edited the Türkîyû-i Mevlâî and Sultan Mahmûd II reproached him with the obscurity of his language in an account of a journey of the sultan which he had drawn up in this capacity. On the other hand, in his translation of the Maštîraf, he recommends the use of Turkish instead of Arabic and Persian words and the simplification of literary style, which shows that to an extent the movement to simplify the language had made progress. Lastly we must not forget the celebrated poet and stylist 'Akîf Paşa [q.v.] who, in spite of several poems written in the popular metre and some works in simple verse, ought not to be regarded as the first to spread literary innovations. 'Akîf Paşa, indeed, remained entirely unaffected by European culture and is one of the last representatives of the old literature.

Among the representatives of the popular literature we have information about the maddânu Fê Emîn, Khâlîm Eme, Hüdî Vûdîlî Mû'tedînî, Kûrî Hâfîî and others, as well as of some writers of shadow-plays (kâyûsûlî) like Sherhûdî Emîn, Hûfîî of Kânî Pâsha, Muwâhidü Sa'îd Efendi; it is only towards the end of the century that Kâtîlî Şehîlî in breaking with the ancient tradition began to imitate the modern theatre.

The best known musician-poets of this century are Dûrûl Şûhî of Bajûrî and Emîr of Erzerûm, who acquired a great and well merited popularity in Asia Minor as well as in Constantinople among all classes (cf. Köpr. Z. M. Fu'âd, Erzurumlu Emîrâ, Istanbul 1929). Down to the end of the reign of 'Abd al-Âzîz these Şûhîs used to assemble in a café in Ta'rikh Pusûr. They had an organisation of their own, with a chief (âteh) at their head, recognised by the government. This organisation was broken up later on, but in the xth century we still find musician-poets in Asia Minor.

This classical Turkish literature and especially the poetry had lost almost all its vigour and originality by the time the Tântâmî began. Classical poetry had lost the ability to create anything new within its narrow limitations, and the poets could only produce imitations (nasîrî) of the great models of the past, or in their efforts to show a little originality fell into artificiality and platitude. As a result of continually repeating the same conceptions by the same limited means of expression, all the vitality of Turkish poetry was destroyed. Even great artists like Nâmîk Kemal and Şehîkî Ghâlîh had not been able to escape the rigid rules of the old models. On the other hand, the attempts to draw upon the language and literature of the people and to appeal more to popular taste and language, efforts such as we observe in Fâtûlî Enderûnî and Wâsîf, only resulted in vulgarity and banality. In spite of the political and economic connection with Europe which had existed for centuries, the social structure of the Ottoman people had never emerged from the frame of
Islamic civilization, which kept it imprisoned in a mediæval system of ideas. It is true that the continual military defeats and the gradual economic decline had impressed upon thinking people the material and technical superiority of Europe and that, as early as the xvith century, they had begun to take advantage of European skill to reorganize the army and the fleet. But it was much more difficult to admit the superiority of Europe in the field of culture. The medreses, which were in a very backward state compared with earlier centuries, still clung tenaciously to the mentality and tastes of the middle ages. Modern science was beginning to be introduced only in institutions founded for the army, like the Engineering School (muha misdemean-an) and the Medical School (tibb-khâne). These innovations owed a great deal to a few individuals, who had studied western languages and modern sciences, like Ebu Üthâd Efendi, Gelenbert and Shânî Zade. It was the need felt by Selim III and especially by Mahmut II to reorganize the army and navy and to establish a central administration to prevent the empire being parcelled out between feudal chiefs, that led them to consider, in spite of the opposition of the medreses, to the reform of the teaching of mathematics and natural sciences.

From the end of the xvith century, there were in Turkey men who knew French and recognized the cultural superiority of Europe. In bringing teachers from France and sending students to Europe, the movement of Europeanisation was encouraged in Turkey. It was natural then that as a result of all these needs, European influence began to show itself little by little, as in every branch of life, also in the field of thought and art.

The great industrial and capitalist development in Europe as well as the political expansion and rivalry of the imperialist Great Powers could not long ignore so vast and rich a field of exploitation as Turkey. At the same time the mediæval institutions of the empire had lost their power of resistance and the revolutionary movements in France had propagated the principle of nationality among the non-Muslim elements. All these circumstances made the urgent need felt of introducing reforms in the social and administrative institutions of the empire. These reforms were to meet with considerable resistance, not only among the lower classes but also among those members of the educated classes who had been educated in the medreses. It was due to Reşid Pasha and his little group of followers that the reforms were gradually introduced into the country. In Turkish history these reforms are known as "Tanîmîs" [q.v.].

The Tanîmîs were not confined to the fields of administration, justice and finance; with the object of securing the progress of education among the Muslim Turks, primary and secondary schools were opened and plans made to found a university. An Emnûmen-i Dânîsî was formed to prepare schoolbooks (1260 = 1853) and students were sent to Europe. The Emnûmen-i Dânîsî was soon replaced by the Liyce-i Ilmiyî-i ścihî adî (1277 = 1860), which began to publish its own organ; Medresen-i Fünnîn. In the following year, the Girls' School was opened and in 1279 (1862) University courses were begun. In 1282 (1865) was formed a Terzîmen Liyce-i, in 1284 (1867) the Civil School of Medicine (Tibb-i mâlîyye Mehmed) began its lectures, and in the following year, the Lycée of Galata Serây was opened, the curriculum of which was adapted from western secondary schools and French was used for teaching alongside of Turkish. The University (Dâr al-Fünûn) was opened in 1286 (1869) but the intrigues of the conservative elements forced it to be closed two years later. In 1287 (1870) the School of Law (Hâşık Mehmed) was opened and in 1294 (1877) a School of Political Sciences (Mekteb-i mâlîyye) at the same time museums and libraries were founded as well as technical schools like the engineering, agricultural and commercial schools. Thus, there was gradually created an educated class outside of the medreses. All this activity was accompanied by a gradual development of the daily press. In 1247 (1831) the official publication Taşkîn-i Venâhî began to appear which was followed by the Liyce-i Hâmédî in 1256 (1840), the Terzîmen-i Âbyâlî in 1276 (1859) and the Taşkîn-i Efîrî in 1278 (1861) [cf. Jairü]. These two last mark an important stage in the history of modern developments for it was through them that Shânî, founder of the new literary school, and his disciple Nâmîk Kemal addressed the public. Down to the period when the absolutism of Abd al-Hamid prevented any kind of publication, the Turkish press developed very rapidly. Many scientific and literary works were translated from European languages, especially from French, and the Turkish language began to be simplified, at the same time enriching itself with a large number of scientific expressions.

The three great figures of the new literature are Shânî [q.v.] who had been educated in France, his great disciple Nâmîk Kemal [cf. Kemal] and Ziya Pasha [q.v.], both of whom had lived in France as exiles. Through these circumstances the new school was imbued with the French literature of the xvith and xixth century, and the principles proclaimed during the political revolutions in France. The innovators wished to exterminate the old feudal literature and proclaim the ideas of "fatherland" (vatan), "liberty" (sâriyê), "democracy" (hâşıkîtê) and "constitutionalism" (mektebîyye); they aimed at creating a "bourgeois" literature. It was in this way that journalism, political and literary criticism, the theatre, the translation of western literary works, the novel and the philosophical and sociological essay began. Shânî was neither a brilliant stylist nor a great poet, but his programme was well defined; he wished to free himself from the trammels of the old unintelligible language; although he was not able to realise all this programme, his theories exercised a great influence on those around him. Ziya Pasha, by his translations of Rousseau and Moléare and by his literary and political criticism, gave great support to this movement. He was well versed in the classical literature, yet he went so far as to allege that this literature had no relation to the Turkish character; he upheld the thesis that one ought to follow nature, i.e. borrow from the popular language and literature. In reality Ziya Pasha had neither the strength nor the courage to put these theories into practice.

It was undoubtedly Nâmîk Kemal who assured
the definite success of the new school. He was a great artist, a keen fighter, a prolific author and a great patriot. For him art was a means of provoking a revival in the land and he contributed vigorously to the cultural and political revolution in Turkey by his political articles, his dramas, his novels, his patriotic poetry, his historical works, his critical essays and even by his private letters. He exercised a profound influence. The presentation of 

Wafat was a great political event in the country. He attacked the old literature even more bitterly than Ziya Paşa and thought that it was impossible to write Turkish poetry in the "āvâl" metre. However, not even Kemâl could cast off the old traditions entirely, nor could his friends. It is for this reason that Süleyman Paşa was able to write in 1897 (1886) in an anonymous article in the journal 

Wafat, that pupils should only be given literal translations of western works because the "new" writers had not been able to produce in reality any really new.

Ābdul-Hādâk Hamîd [q.v.], a pupil of Nâmîç Kemâl, brought about a great revolution in the field of poetry, which hitherto had not been able to free itself from ancient forms. This extremely prolific poet introduced into Turkish the lyric and the drama in which his models were Dante, Racine, Corneille and Shakespeare. Even Nâmîç Kemâl acknowledged that the new Turkish poetry begins with Hamîd. Other important figures were Riďâ' al-Żâde Ekrem [cf. Ekrem], and Sûnûl Paşa al-Żâde Seniz [q.v.], but in proportion as the pressure of despotism increased, the second generation of the period of the Tsâmid began more and more to pursue purely artistic ends.

Many other thinkers or writers have contributed to the cultural evolution of the country. We may mention the famous historian Ahmâd Dîewdît Paşa [q.v.], Ahmâd Weîfî Paşa [q.v.], Sulâyman Paşa, and the great writer and encyclopaedist Ahmâd Mişhât Efendi [q.v.], as well as the lexicographer Şânû al-Ḏâin Sûmî Bey [q.v.]. Dîewdît Paşa, well versed in oriental learning and author of a Turkish grammar in collaboration with Fa'îd Paşa, has written beautiful prose in Turkish. Ahmâd Weîfî, animated by western ideas, wished to revive national culture, and proclaimed the fact that the Turks of Anatolia were a branch of the great Turkish nation. He compiled the first dictionary of Anatolian Turkish, collected proverbs and translated the Gâfara-Turk of Abu 'l-Ċâib. By his adaptations of the comedies of Molîère he played a great part in the development of the Turkish theatre. Sulâyman Paşa, who reorganised the military schools, was a great patriot. He claimed that the language and literature should be called "Turkish" and not "Othmanî"; in his Teşkîl-ī Âlam he devoted a special chapter to the early Turks, taking his material from Degaîne and other sources.

Lastly Ahmâd Mişhât wrote and translated hundreds of volumes of a popular nature, beginning with books of the alphabet; he thus trained the people to read and contributed to raising the level of education, which was his only aim, for his books have no scientific or literary value. Sûmî Bey showed himself a worthy successor of Weîfî Paşa in his Kânûnî al-Ālûm and Kânûnî-ī Türkî.

At the end of the sixth century appeared Mu'âllâm Nâḏî [q.v.], who obtained great fame under the protection of Ahmâd Mişhât. Nâḏî was well versed in eastern culture and wrote ghâzâs in the classical style alongside of good poems in the new style. The followers of the old school expected from him almost a resurrection of classicism, although Nâḏî was not at all a champion of such a reaction, as is shown by his beautiful simple prose (as in "Osârin-i Teşkîlâtâr"). His quarrels with Ekrem Bey originated rather in personal reasons. At the same time Nâbi Zâde Našîm, who died very young, came to the front; his novel Zehur makes him a figure of first importance in literary history.

The most important event at the end of the sixth century is the literary movement begun by a group of youthful men of letters who had associated themselves, at the instigation of Riďâ' al-Żâde Ekrem, with the periodical Tharîm-ī Fûnûm; this movement marks the second and last stage of the Europeanisation of Turkish literature. It is dominated by the figures of Tevîhî Fikrî [q.v.] and Khâlid Ziya and is very much under the influence of the literary movements in France at the end of the sixth century. Started in a period of absolute despotism and having only a short life of five or six years, this movement produced new works of a neurotic and pessimistic sentimentality. Its motto was "art for art's sake". If we except Dîewdît Şânû al-Ḏâin, who acquired after the revolution the reputation of a great prose writer, Sulâyman Našîm who may be considered a pupil of Nâmîç Kemâl with an originality of his own, Fa'îk al-Ālûm, an imitator of "Abd al-Hâdâk Hamîd, and İsmîl Şâfi, an independent figure, who finds his subjects in everyday life, all the poets who wrote in the Tharîm-î Fûnûm were imitators of Tevîhî Fikrî. Khâlid Ziya, who has a very choice style, is the true founder of the literary novel in Turkish. He takes his subjects generally from the upper middle classes, but some of his short stories describe the life of the people. The latter group has been more successfully treated by the novelists Ahmâd Weîfî and Hâsîn ad-Dâshid, in more simple language. Meşhûd Reşûf is a novelist who makes excellent psychological analyses, but his language is incorrect. In the field of science, philosophy and criticism, the collaborators on the Tharîm-ī Fûnûm did no more than translate. But the severe censorship and the short life of the group did not enable them to show greater vitality.

While the school of Tevîhî Fikrî and Khâlid Ziya reflected only the life of the upper classes, Hûsîn Nişâzî [q.v.] depicted in his novels various aspects of the life of the people; and at the same time the notable publicist Ahmâd Râzîm [q.v.] was dealing in several of his works with the same subject. Among the poets of this period, we may further mention Rizî Tevîhî [q.v.] who has written the finest lyrics in the style of the Şâdî poets and Bektâshî, but in syllabic metre, the poetess Nişâzâl Hûsîn and lastly Meşhûd Emin Bey [q.v.] who suddenly became celebrated during the Turko-Greek war by his Türkî Şerîfier. Meşhûd Emin employed a very simple language in the syllabic metre and wished to render the people directly (şükûf du ğârû), although the existing popular literature with its mentality, tastes and traditional forms were entirely unknown to him.

As a man of letters he was entirely of the school
of Fikret; he was not however an individualist like his contemporaries but imbued with the democratic spirit (hidayetli) ([hidayet])*. This was the first occasion on which a Turkish poet had descended to the level of the people. Perhaps it is right to charge him with a lack of lyrical feeling, but this does not prevent us from regarding him as an interesting figure in literary history. At the same time the movement to simplify the language continued and even gave rise to an exaggerated purism. By the translation of the works of European scholars the early history and culture of the Turks became known, while the journalistic activities of the young Turks abroad began to envisage Turkish nationalism from the political point of view. These were the main elements in the cultural and literary life of Turkey before the Revolution of 1908.

xxth century.

The revolution of 1908, having brought about the abolition of the censorship, caused an extended literary activity. The patriotic pieces of Kemal and Hâmet appeared on the stage and a large number of works of a sociological, philosophical and historical nature were translated into Turkish. At the same time, great improvements were made in education and the relations with Europe raised the general cultural level to a height never before reached.

The most important literary organisation after the Revolution was "Fedâ-ı Hür", although it was a literary circle which lasted only a short time; its members began by following the school of Fikret and Khalîd Ziya, but the majority of them ended up as members of the national literary movement. Ahmed Hâşim alone continued to develop in the way he had first chosen. He never abandoned the *avud* metre, nor the conception of "art for art's sake" in its strictest form. Besides, he had ideas of his own on the relation between music and poetry (cf. H. Duda, Ahmed Hâşim in W. L. II, 1928, No. 3--4, p. 200--244). The poet Yahya Kemal, who had a great influence after 1912 had literary views entirely different from those of Ahmed Hâşim for he sought music rather in the external elements of his poems, while he retained the motto "art for art's sake". Another poet, who remained outside of the national literature is Mehmèd 'Akif, the advocate of Panislâmism and unrivalled master of the *avud* metre; in simple language he describes the life of the people in its most realistic aspects. 'Akif, whose lyrics sometimes rise to great heights, has remained quite uninfluenced by western poetry; he is a democratic poet, born of the people. In the work of these three poets, very different from one another, we see Turkish poetry striving for freedom from the too limited sphere of Tewfik Fikret and his school; but under the stimulus of the great development of the nationalist movement which manifested itself in the whole domain of art, poetry also has ended by entering on new paths.

a. The National Literature.

After the Revolution of 1908, it was the ideal of Ottomanism (oglaḵaḵâni) that animated the governing classes. But the political events which rapidly followed, soon proved that this ideal was a chimera, by the attitude of the Muslim elements no less than by that of the Christians. The Turkish element, which was dominant in the empire, thus needed a new ideal; this was the national ideal, which had already revealed itself in the period of the Taqīmat and which had existed through the Hamidiye period in a cultural form. After the revolution also, this movement began by assuming a cultural aspect. On December 28, 1908, the society Türk Dernegi was founded, the object of which was to study the past and present of the Turkish people, to simplify the Turkish language and to make it a language of science. This society had not much power, but in November 1911 the periodical Türk Yurdu began to appear and on March 12, 1912, the Türk Dergisi was founded. This movement was not confined to a few Turkish nationalists: associated with it were a number of Turkish intellectuals from other countries who had fled from the oppression of Turanism, like Ağa Oğlu Ahmed, Hüsain Zade Ale and Ağa Cura Oğlu Yavuz. The movement was violently opposed by the followers of a badly understood occidentalism (sharpesi) on the one side and by the partisans of Panislâmism (irîkdaḵ-î Islâm) on the other. At the same time, the periodical Genc & Kâtib, published at Salonika, again started, under a pretentious name, a campaign to purify the Turkish language, and Ziya Gök Alp, a member of the Committee of Union and Progress (irîkdaḵ-î terâfii), began his activities. With the transfer of the central office to Constantinople, Ziya Gök Alp joined the Türk Yurdu. Later, after the disastrous conclusion of the Balkan War, the younger generation also rallied to the national movement. The time was very opportune for the success of the national ideal; it only required a man capable of directing the national idea and laying down a programme and giving it a philosophical basis. It was Ziya Gök Alp who did this. He exercised a great influence on the youth by his university courses, by his lectures and by his articles and poems; all his life, from the time of the Balkan War to the Armistice, when he was exiled to Malta, and later during his sojourn in Diyarbakir and Ankarâ, he displayed an uninterrupted activity; the résumé of his teaching is contained in his book Türkfüsilâmi Edebiyat (Angora 1939--1923). His death, soon after, was a great cause of general mourning throughout the land.

As in all branches of life, the national movement made its influence felt in literature; the syllabic metre attained the dominant position in poetry; the language was simplified; the motto "art for art's sake" was replaced by "art for life"; writers began to borrow from popular literature and its traditional forms; literature began to reflect the life and characteristics of all branches of society. Philological and historical studies were made on the works of the musician-poets, on the popular literature, the music of the people. In brief, the science of Turkology was founded. It is to Kâprüfûl Zade Mehmèd Fuâd, the author of this article, that almost all the credit of these important studies is due. E.d.d.] All this contributed greatly to give a definite direction to the new literary movement.

Among the poets of this movement we may give first place to Fêrûd Nêfîdî, who in his last poems depicts the scenery of Anatolia, then Orkhan Seifi, Emir Behzîd, Yavuz, Ziya, Khalîd Fakhri, Nêdîb Faqîl. All these show the influence of Ziya Gök Alp and Yahya Kemal rather than of Mehmèd Emin. In prose, the
progress is still more marked and the writers in it have still greater force. The greatest figure of the period is Khālid Edīb Khānīm. After the stories of love and passion which are characteristic of her first period she wrote books in the style of Arzham Edīb Khānīm in which she describes the struggle of Anatolia for independence. 'Omēr Seifeddīn, who died young, has left a number of very good little stories, some of which, like Bomā, are masterpieces of national literature. Rešīf Khālid, who is perhaps the best writer of simple Turkish, describes in his Məmbelət Alifıkyerler l realistic scenes of Anatolian life, hitherto unknown to literature; his realism however is expressed in a merciless sarcasm, quite devoid of sympathy and feeling. Ya'qūb Șurtri, even in his novels, is still a stylist and a mystic poet and not a story-teller. Other well-known figures in the new prose are Fālīh Rifğ, who describes in Arzham Edīb Khānīm episodes of the war in Palestine and Rūshen Eşref. Among the novelists Resḥad Nūrī achieved fame by his novel Cəzā Kəzūn. The evolution of the Turkish theatre is being hampered by the interminable adaptations of worthless French vaudevilles. But the fact that the Turkish woman has appeared on the stage, that there are many good actors and that important western pieces are now being played gives good hope for the future.

By the foundation of the Turkish nationalist republic, nationalist principles have entered into the things of everyday life. The government is devoting much attention to the simplification of the language and to the creation of a scientific terminology in Turkish. The adoption of the Latin alphabet will contribute a great deal to the simplification of the language. But there is no resting. While the nationalist literature is still in its beginnings, we already see announced an internationalist literature. The young and vigorous Marxist poet Nāṣım Hikmet, who has returned to Turkey after a long stay in Russia, is endeavoring to create a proletarian literature, with poems without metre and without rhyme, at the same time launching his thunderbolts at the capitalists and the literary men who defend them. Several young poets and novelists have gathered round Nāṣım Hikmet, while others are trying to spread futurist ideas. It may be doubted if this new movement, brought by wild winds from beyond the Black Sea, will find a fertile soil in this country, where industry and capitalism are only beginning to develop. It is impossible to say if the young national literature will be capable of resisting these foreign influences. In any case, future developments will take a course parallel to that of the country's destiny.

b. Texts: The majority of the texts of the old literature are still in manuscript. Some have been printed at Cairo and Constantinople but not in critical editions. For the manuscripts, the catalogues of libraries in east and west may be consulted. Very few texts have been translated into European languages. For details, see this article and other articles relating to the subject.

c. Chrestomathies: The most important manuscript selections are mentioned in the following:

In Europe there have been published: E. J. W. Gibb, A History of Ottoman Poetry, vol. v, vi; W. D. Smirnoff, Münəsoölu Edīb Khānīm, St. Petersburg 1903; M. Wickerhaus, Wegzeiger zum Verständniss der türkischen Sprache, Vienna 1853; A. Fischer and Mahledi, Anthologie aus der menschlichen türkischen Literatur, 1. Leipzig-Berlin 1919. La Musée ottomane by Sévres de Sagny, publ. in 1855, gives translations in verse.

For the classical poetry we have Khrabak by Ziyā Pāchu (3 vol., 1291), and Münəsoölu Mir Nāsif (Bülkâk 1261). For prose: Eləziyə Təşń, Namüntəsi Edebiyyət Eşkiməni (6th ed., Constantinople 1930). Lastly there are a number of chrestomathies for Turkish schools; the most recent is Türk Edebiyyəti Münəsoölu by Hüfe Təşń, Haməməti Zāde İhsan and Hanan Əli (vol. i, Constantinople 1927).

d. Biographies of poets. The most important tekkhər-i şairər have been mentioned in the text. A large number are not yet printed. For bibliographical information see: the introduction to İbn al-ʿĀdin Mahmūd Kemāl, Şərʿe türk Edebiyyət-i (publ. by the T.T.E., vol. i, Constantinople 1930). There one will find information about old and new bibliographical works on literary history. In addition, there are important notices of the poets in all the historical sources, the cəzā cəzā, and books of legends (məmbelət alifıkyerler) etc.

e. General Works. There is not yet a literary history on really scientific lines, either in Turkey or Europe. J. von Hammer, Geschichte der osmanischen Dichtkunst (4 vols., 1836) is a collection of biographies taken from the tekkhər-i şairər which were known to the author. The works of Siuriń, Krymski and others are defective as regards the information and the judgment of their authors. For the bibliography of these works see Th. Menzel, Die türkische Literatur (in Kultur der Gegenwart), who has however omitted to mention Krymski, Təşn-i yəya literaturi, 2 vols., Moskow 1916. The most important work on the early poetry of Turkey is E. J. W. Gibb, A History of Ottoman Poetry, 6 vols., London 1900-1906. This work is still of great value, although the account of the xii-th-xvth century is very inadequate. It is rather a collection of biographies of poets, which is complete only down to the Tahmāt; also P. Horn, Geschichte der türkischen Moderne, Leipzig; M. Hartmann, Aus der neueren osmanischen Dichtung, M. S. O. S., xix.-xxi.; O. Hachtman, Die türkische Literatur des zwanzigsten Jahrhunderts, Leipzig. As to the value of the literary histories publ. in Turkey (cf. also Menzel, article here quoted), we may mention: Şəlhab al-Din Sulaiman, Təş'n-i Edebiyyət-i şəxisməni, Constantinople; Fâlīh Resḥad, Təş'n-i Edebiyyət Eşkiməni, Constantinople 1913; İnshāh Nətfi, Təş'n-i Edebiyyət Dəvərleri, 2 vol., Constantinople 1338-1341; İsmə'ıl Habib, Türk Edebiyyəti Edebiyyət-i Təş'n-i, Constantinople 1340; İsmə'ıl Hikmet, Türk Edebiyyəti Təş'n-i, 4 vols., Ankara 1925-1926. But these works are superficial in method and in information supplied. Köprülü Zāde Mehməd Fuğ, Türk Edebiyyəti Təş'n-i endeavours to gather together in a systematic fashion the literatures of the various Turkish peoples. So far only
the first volume has appeared (Constantinople, Dewlet Maşta'aşl, 1926-1928). The most important monographs on the different figures and subjects in the literary history of Turkey are mentioned in this article and in the special articles. (Köprülu Xizbi Meşmer Fişko)

IV. HISTORY.

1. General Features.

The Ottoman Empire is the largest and most lasting state that has been formed in Islamic times by the people of Turkish tongue. At the same time it is the largest state formed in the later centuries of Islamic history. Its original centre was Asia Minor, situated in the north-westernmost angle of the Islamic world, a country that had seen four centuries less of Islamic domination than most of the lands of the ancient Abbasid Caliphate. It was founded about A.D. 1300, at a time when everywhere in the Islamic world the earlier political traditions were broken and none of the existing governments seemed to give much guarantee of durability, while Muslim civilization itself was passing through a critical period of weakness.

These circumstances are not sufficient in themselves to account for the rising of a new strong Muslim empire. It is right, therefore, to seek the explanation of the rise of the birth and the part played by the Ottoman Empire in the general course of political events in the world history of the later Middle Ages. It has been observed that the rise of a new strong power in the Mediterranean world had only become possible after the extinction of the Abbasid Caliphate and its political traditions, in 1258, and after the excessive weakening of the Byzantine Empire by the Latin occupation of 1204 (cf. R. Tschudi, Von alterm Osmanischen Reich, Tübingen 1930). This enabled a new state, to come into existence that continued at the same time a somewhat changed Islamic tradition and a good deal of the already much easternized Byzantine civilization.

The process of interpenetration of these two cultural spheres had already been in action a long time before the nucleus of the Ottoman state was formed, during the epoch of the Seljuk empire of Rumi. Consequently the rapid conquests of the Ottomans in the sixteenth and seventeenth centuries were not the elementary invasions of a wild horde of barbarians, but the realisation of a scheme that may have been in some degree present to the mind of great conquerors like Bayezid I, Muhammad II, Suleiman I and some of their statesmen. The conquest spread at the time a type of civilisation that took its definite shape in the sixteenth century. As history advanced, this Ottoman civilisation came into an ever more pronounced contrast with its eastern Muslim neighbours, thus giving a new political meaning to the Sunni-Shi'a controversy; while the ancient relations with Turkish Transoxania gradually slackened. At the same time the gap between the Ottoman and the western European civilisation — which in the sixteenth century did not yet seem unbridgeable — became constantly wider, as Turkey did not join in the transition from the Middle Ages to modern times. All the more firmly was Ottoman civilisation rooted in the many countries that had been subjected to the rule of the Turkish sultans, and this Ottoman tradition became most perceptible at the very time of the weakening of the Ottoman political power; a very good example is Egypt (cf. Lindsay). It is a curious fact that, when after the revolution of 1908 the Young Turks tried for a brief period to make this Ottomanism once more a political reality, these endeavours proved to be a complete failure, owing to the political decomposition caused by the penetration from the west of nationalist feelings.

Born in a religious sphere that was far away from orthodox Islam, the Ottoman Empire soon took a definite turn towards official orthodoxy after the Hanafite madhhab, but with remnants of older tradition. The claim to the Islamic Caliphate, however, and to the hegemony of the Muslim world, as well as the pan-Islamic policy of Abd al-Hamid II do not belong to the primary features of the Ottoman Empire; they were more a part of its outward politics, especially towards Christian powers (cf. KHALIPA).

The influence of western civilisation began in the xviith century, at a time when the Ottoman Empire, having acquired its own cultural type, began to feel its political inferiority towards Europe. Ancient relations made France the first European country to provide Turkey with some technical (military) innovations; this tradition remained stable until the first part of the xixth century. The introduction of western reforms and institutions has never had a revolutionary character; it consisted chiefly in government measures and its programme was successfully carried out during the period of the Tanzimat [q. v.]. A more indirect result of western ideas was Turkish nationalism, which new ideal the war of 1914-1918 has enabled Turkey to realize in a most unexpected manner. Modern Turkey has become a state of much smaller territory than the Ottoman Empire, but continuing a great deal of the traditions of the Ottoman Empire.

2. Historical survey.

First period. The founding of the state and its first expansion until the temporary dissolution by the invasion of Timur.

Ottoman I 1399-1426
Orkhan (son of Ottoman I) 1426-1459
Murad I (son of Orkhan) 1459-1489
Bayezid I (son of Murad I) 1489-1502

The dates of Ottoman and Orkhan cannot be established beyond doubt. Bayezid's reign was closed by his capture in the battle of Angora (July 20, 1402); it was followed by no years, during which Bayezid's sons Fatih, Muhammad, Suleiman and Mustafa disputed for the other the crown. This period ended by Mehmed's victory over Must in July, 1413 at Çamlıca near Sofia.

Second period. The restoration of the state and its rapid growth until its greatest expansion.

Muhammad I (son of Bayezid I) 1403-1444
Murad II (son of Muhammad I) 1451-1474
Muhammad II Fatih (son of Murad II) 1451-1481
Bayezid II (son of Muhammad II) 1481-1512
Selim I (son of Bayezid II) 1512-1520
Suleiman I Kanuni (son of Selim I) 1520-1566

Third period, during which the state maintained its territory, until the loss of Hungary.

Selim II (son of Suleiman I) 1566-1574
Murad III (son of Selim II) 1574-1595
Mühsim I (son of Murad III) 1595–1603
Ağrıd I (son of Muhammad III) 1603–1617
Murad I (son of Muhammad III) 1617–1618
Osman II (son of Ağrıd I) 1618–1622
Murad I, 2nd time 1622–1623
Murad IV (son of Ağrıd I) 1623–1640
Ibrahim I (son of Ağrıd I) 1640–1648
Murad V (son of Ibrahim I) 1648–1657
Suleiman II (son of Ibrahim I) 1657–1691
Ağrıd II (son of Ibrahim I) 1691–1695
Mustafa II (son of Murad IV) 1695–1703

Fourth period, during which the state gradually loses its strength and is broken up at the hands of powerful vassals.

Ağrıd III (son of Muhammad IV) 1703–1739
Mahmud I (son of Mustafa II) 1730–1754
Osman III (son of Mustafa II) 1754–1757
Mustafa III (son of Ağrıd III) 1757–1774
'Abd al-Hamid I (son of Ahmad III) 1774–1789
Selim III (son of Mustafa III) 1789–1807
Mustafa IV (son of 'Abd al-Hamid I) 1807–1808
Mahmud II (son of 'Abd al-Hamid I) 1808–1839

Fifth period. Cultural and administrative renaissance of the state under the influence of western ideas.

'Abd al-Medjid (son of Mahmud II) 1839–1861
'Abd al-'Aziz (son of Mahmud II) 1861–1876
Murad V (son of 'Abd al-Medjid) 1876
'Abd al-Hamid II (son of 'Abd al-Medjid) 1876–1909
Mahmud V (son of 'Abd al-Medjid) 1909–1918
Mahmud VI (son of 'Abd al-Medjid) 1918–1922

The national Turkish state, since October 29, 1923 a republic under the presidency of Atatürk.

A good general view of the history of the Ottoman Empire is given in Khalil Edhem, Dînéerî Islâmîya, Istanbul 1927, p. 320 sqq.

3. Conditions in Asia Minor at the end of the xviith century.

The more recent researches on the subject of the founding of the Ottoman state have made clear many things that formerly had been seen mainly through the medium of Ottoman historical tradition as reflected in the sources belonging to the xvith century and later. Epigraphic and numismatic discoveries, combined with a critical study of older historical sources (the different versions of the chronicles of the Atil 'Othmân) and half-legendary sources (oynaht-sûnes and wehâyît-sûnes of mystic orders) have cleared up many historical relationships, hitherto unsuspected.

The nucleus of the state of the dynasty of 'Othmân was a far advanced outpost (hâjî) on the northwestern frontier of the territory once ruled by the Seljûk dynasty of Konya, which had gradually relapsed into anarchy after the victory of the Mongols over Kajıhwar Şîrîn in 1243. Asia Minor, at that time, had already been territcised to a large degree; the greater part of the Anatolian Turks belonged to the Oghuz tribes, who had been introduced during and after the Seljûk invasion; there were also groups of Christian Turks, who had come by way of the European part of the Byzantine Empire, besides Turkish elements from Russia. Moreover the Mongol conquests in the east had brought crowds of fugitives into the country, especially from the former Khwarizmian sultanate; many of these immigrants were Iranians. We do not know the relative strength of the grazed original population of Asia Minor; they probably were found chiefly in the towns. In Konya the original inhabitants no doubt were already considerably waslamized. But the Christian element was still largely represented in the areas under Byzantine rule in the west and in the northwest in the Empire of Trebizond, where many of the population were Lazae, in the mountains of central Armenia and in the Cilician Armenian Kingdom (1080–1375). It does not appear that, within the former frontiers of the Seljûk empire, there existed a sharp social controversy between Muhammadans and Christians. MUCH sharper, at any rate, has been the anathesis between the townpeople and the still nomadic Turkish tribes or Turkomans (târîkôr-î Aman), who were roving all through Asia Minor, as they did also in the adjacent territories of Syria, Mesopotamia and Persia. The Turkish tribes had still preserved many pre-Islamic religious traditions within the particular form of Islam they had adhered to. This form of Islam was the result of the preaching of wandering dervishes, known under the name of Kâlemlerîye and Halâjrîye, who spread from the xivith century all over northern Iran and Transoxania; their preaching was imbued with mystical doctrines containing a large amount of Shi'ite elements. After their immigration into Asia Minor the Turkomans had remained under the same influences and those who exercised religious authority amongst them, called kâbeb, had still much resemblance to the pre-Islamic Ṣoyîrîs. Under these religious leaders in 1239 the fearful revolt of the Bekeštâhs under Bâbâ Isâb was taken place. The government, at that time, had been able at last to suppress the revolt, but the heterodox opposition among the lower classes in Asia Minor has still deeply influenced the history of the first centuries of the Ottoman Empire. These Turkomans were indeed far more numerous than the governing classes and the townspeople, as is shown by the present geographical nomenclature of Asia Minor; the names of numerous villages, rivers and mountains are now pure Turkish and we meet among them ancient tribal names as such Kay, Salur, Bayat and Čepni (cf. Köprüli-Zade Fu'âd, Oğuz in Emneleşme Türkü Neftar, Türkçü Meşrûfatî, i, 185 sqq.). As far as the Turkoman tribes were militant, the best use that could be made of them was as frontier guards and as conquerors of new territory. After settling down, they may have mixed with a good deal of the original rural population and by this mixture is to be explained the curious religious, half-Christian, views and customs that are reported in later times as existing among the lower classes in Anatolia, and which are especially current among the mystic order of the Bekeštâhs in the time of the Ottoman Empire. The Bekeštâhs derive their name from Hadji Bektash Weli, who is reported to have been a disciple of the above mentioned Bābā Isâb (Köprüli, Z. Fu’âd, Les origines du Bektachisme, in Actes du Congrès International de l’Histoire des Religions, tome à Paris 1923).

The government and the higher classes of society had followed in Seljûk times the orthodox Islamic tradition, just like the other Seljûk dynasties, and this tradition is to be traced back to the times of the Seljûk empire in Khorasan and Transoxania. These were also the regions with
which the Turkish element in Asia Minor has been, since its immigration, in constant relations; in the Seljuk period, the higher culture of Asia Minor was mainly Iranian in character. These relations explain also how the Hāsāfī madākhāb became officially predominant in Anatolia and afterwards in the Ottoman Empire. But the upper classes of society were not free themselves from a strong mystic influence of a higher order. It had likewise its source in Khurāsān, whence had come ʿAbī al-Dīn Rūmī [q.v.] himself, who lived at the Seljuk court in Konya, and who influenced for centuries Ottoman-Turkish culture through the Mevlâni-order. So the townspeople were likewise familiar with formations of fraternities on mystic lines, entering within the category of the fiṭrānu [q.v.]; on the fraternity of the Akhī the we are now fairly well informed (F. Taeschner, in Islamischer, iv., 1929, fass. 1); a similar fraternity was formed by the Ghūrān. On this basis of religious and social controversy is to be understood the development of events since the end of the xiiith century. In the many small principalities that appeared (jauz bi-i mawāli) we see sometimes the influence of the orthodox element and sometimes of the heterodox Turkoman element predominant. This last was especially the case with the powerful principality of the Karaman Oghlu [q.v.], at least in the beginning.

As the date of the foundation of the state of ʿOğlanı in Bithynia the year 1299 is generally accepted. About the same time sprang up the principalities of the Karazi Oghlu [q.v.] in Myria, of the Saruhan Oghlu [q.v.] in Lydia, of the Aïdin Oghlu [q.v.] in Ionia, of the Menteşe Oghlu [q.v.] in Caria and of the Teke Oghlu [q.v.] in Lycia. All these dynasties had this in common with the ʿOğlanı Oghlu, that they held large parts of the western coast of the Peninsula; their territories were on the outskirts of the former Seljukian empire and the dynasties were the dependants of the chiefs of the Turkoman frontier guards (sad bi qeğeri); these regions were the most remote from the Islamic cultural centre of Anatolia; on the other hand they entertained relations with the Greeks of the coasts and with the Italian colonists on the islands; some of these principalities (Saruhān, Aïdin, Menteše) even had coins with images and Latin letters. But the most important feature of these principalities of the coast was the possession of fleets, by which they were able to undertake raids on the Greek isles and on the European continent from Morea as far as the Dobruja. Especially the Aïdin Oghlu. Umur Beg (died in 1348) is famous for his maritime expeditions as ally of the Byzantine emperor Cantacuzenos. It was this opportunity of westward expansion, which has been most favourable for the ʿOğlanı Oghlu and secured them in the end the superiority over the other principalities.

The east of the maritime principalities had risen at the same time the Germiyan Oghlu [q.v.] in Phrygia and the Hamīd Oghlu [q.v.] in Paphlagonia, together with the less important Fahrih Oghlu in Bey Shehir (later incorporated in the dominions of the Hamīd Oghlu) and the Defārhi Oghlu in Lalik (later incorporated in the territory of the Germiyan Oghlu). The important dynasty of the Djandjas Oghlu — later called Isfandiyar Oghlu [q.v.] — in Paphlagonia held the Black Sea with Sinlûb, but had less opportunity of maritime ex-

pansion, although these regions too were in relation with the European continent, especially the Dobruja. A similar position on the south coast was held by the Karaman Oghlu [q.v.], whose origin can be traced back to about 1256, and who, by their geographical position on the main road to Syria, were able to develop more power and stability than the other principalities (cf. Khatl Edhem, Dinar-i İslamîyet, p. 270 sqq.).

The regions enumerated can be said never to have been a part of the territory administered by the Mongols in the xivth century. The Mongol governors, appointed by Uuljiaat (1304—1316) and Abu Saḥīl (1316—1325), resided principally in Kastriye and governed the central plateau of Asia Minor as far as AnKarā. The last of these governors was Timur Tash, who, in 1327, had to fly to Egypt, leaving as his lieutenant Ertene. This Ertene made himself independent in 1325 and founded the dynasty of the Ertene Oghlu [q.v.]. About the same time, in 1391, originated in Mənaš and Elbistan the dynasty of the Dhi l-kadriye [q.v.]. In these southern-eastern parts of Asia Minor the Mamlık power of Egypt was at that time an important political factor and both, the Karaman Oghlu and the Dhi l-kadriye had many dealings, friendly and unfriendly, with state affairs. The social and religious conditions in all the principalities enumerated were much the same. The military power of the Beg or Emir depended on still more or less nomadic tribesmen, and to this class are to be reckoned the half religious and half military chiefs that in several regions bear the title of Paša [q.v.], as for instance with the ʿOğlanı Oghlu, Teke, Aïdin, Deñiš and Djamār Oghlu. In several regions we meet also with the qeşes; these apparently were akin to the more orthodox fiṭrānu-organizations of Seljük times. The court of the Beg became also a gathering place of more orthodox scholars and of literary men who now began to write their works in Turkish (cf. Literature, supra, p. 3). The bigger towns had often retained older social forms; this is especially known for AnKarā, situated at the extremity of the Mongolian territory; the government was here really in the hands of the corporation of the Akhī.

On the religious history of this pre-Ottoman period are to be consulted the works of Köpr. İzzeddin, "Ilk Muftanovvıst, Istanbul 1918, and Amidaülâ'da İslamîyet, Edibiyat Fakültesi Mecmii, 1922—1923.

4. The First Period (1399—1402).

The historical tradition of the Ottomans has preserved reminiscences of the Turkoman nomadic origin of the founders of the state. The father of ʿOğlanı, Ertoghurlı [q.v.], is said to have established himself with his little tribe in the neighbourhood of Sogā [q.v.] as an adi biq; the pedigree given for Ertoghurlı and his father Suleimâni Şah shows them as belonging to the Kāyî [q.v.], division of the Oghlu Turks. The various reports, however, about Ertoghurlı and his clan have a good deal of a legendary character and it is also the case with what is told about the youth and the first exploits of ʿOğlanı himself. The different sources allow a historical reconstruction according to which ʿOğlanı — or ʿOğlanı, as the oldest known form of the name is given — was not even a real son of Ertoghurlı, but rather belonged to the non-

THE ENCYCLOPEDIA OF ISLAM, IV. 61
nomadic element of the population, with whom the orthodox Islamic tradition was stronger than with the Turkomans (J. H. Kramer, *Wor war Osmans*, in *A.O.,* v. 242). He was, at any rate, one of the *gülâşt-i Rûm* and, together with other *gülâsts* (Turkish *alâ*), he possessed, after Erkoghlul's death (about 1205), the leadership of the clan. He likewise was surrounded by people belonging to the fraternities of the *ahâl*, and it is clear that even Oghman's father-in-law, the Şâhî Khedibeh, whatever his extraction may have been, belonged to the same fraternity. As a result of the collaboration of these various elements the clan was transformed into a territorial state with the fortress Karsdag Hîsâr as centre; in this state gradually the more orthodox Islamic tradition became predominant, though the popular religious leaders (baba, dede, abdul) remained in high esteem.

During his reign and that of Orkhan the history of the small principality was not different from that of the contemporary Anatolian principalities. With the exception of the monuments on his personal relations, he succeeded in extending his territory, so that at his death, the Sâhârez was practically the eastern boundary of the state; to the south Oghman's power had probably reached Eski-Shehir. The Greek towns near or on the coast; however, Izniq, İrinlikdî (İzmid) and finally Brusa were only taken in the beginning of Orkhan's reign; forthwith Brusa became the capital. All these new territories had been conquered from the Byzantines, mostly local commanders of garrisons; the Turks were seldom (in 1301 and 1329) opposed by a regular Byzantine army. Under Orkhan there was also added other Turkomans territory to his dominions, namely the principality of the Karas Oghlu [q.v.]; by this territorial acquisition the Oghman Oghlu became at once the most prominent maritime power among the Anatolian principalities.

It is a noteworthy fact in the history of Oghman and Orkhan, that there apparently existed close relations with Christian chiefs and commanders in the neighbourhood. Kûse Nikhal, lord of the fortresses of Kirmendjik, is said to have been a constant friend to Oghman; and after the acquisition of the Karas principality, Orkhan was joined by Khâzî Ezrewus [q.v.], also of Christian descent. The descendants of both became afterwards notable feudal families in the Ottoman state.

This early collaboration with Christian Greek element makes it probable that in this way byzantine traditions and customs early entered the Ottoman state, in the same way as was the case in some other contemporary maritime principalities. Both the Christian and the Turkomans-nomadic element were gradually assimilated by the growing influence of the orthodox Muslim, often indicated in the older sources as *dâr-umâmînd*; some of these belonged to the *ahl-*circles, as is said of the Kâşi Djandari Kara Khalil, later vizier to Murad I under the name of Kâvir al-Din Paşa; many of them had also come from the more eastern parts of Asia Minor. To them may have belonged also "Alt" al-Din Paşa, Orkhan's vizier and, according to tradition, his elder brother.

So, during Orkhan's on the whole peaceful reigns, these very different elements contributed to the foundation of a typical form of administration and codification, from which the later development of the Ottoman state must be explained. The details are little known. The administration was a military one and probably followed Soldân tradition; the division of territory among feudal chiefs may have repolished on earlier institutions [cf. Timur]. Fields were given under Orkhan to the newly created cavalry called *muscellim*. During Orkhan's reign was also formed the new regular infantry called *yasa*, as the irregular force of the *sâziq*, originally composed of the Turkoman tribesmen, was no longer adequate. In this time also the title *paşa* ([q.v.]), originally peculiar to military desirers, began to be given to statesmen (e.g. Simâ Paşa under Orkhan) and military commanders.

The natural extension of the young state was towards the west, in keeping with the naval raids of the Şahsan Oghlu and Aflin Oghlu on the in-shore and on the Greek coast. Already under Orkhan there had been several military expeditions on the other side of the Hellespont, mostly in connection with his alliance with the emperor Constantine and the latter's civil wars. In 1353, however, begins the military occupation of towns on the European side by the famous expedition of Orkhan's son, Sulaiman Paşa, following the capture of Gallipoli. This was the prelude to the military operations of Murad I and Bayazid I, which took place nearly entirely in Rûm-ul. At first all the Byzantine territory to the west of Constantinople was taken; Adrianople (Edirne), conquered in 1361, became in 1365 the European capital of Murad. Then followed the wars against the Bulgarians and the Serbians, which assured the Ottomans the greater part of the present kingdom of Bulgaria. The Serbian power was crushed in the battle of Kossovo in 1389, where Murad I was killed, and Wallachia became tributary. Bayazid's military expeditions extended over a still wider range, including Hungary, Bosnia and southern Greece, but in these regions the Ottoman conquests were not yet permanent, notwithstanding the victory won at Nicopolis in 1396 over the allied Hungarian, French and German armies. Constantinople became a mere vassal town where the Ottoman sultan could exercise his influence as he pleased; it did not come yet to a direct occupation, although Bayazid's attitude towards the town was little less than a continious siege [cf. F. Giese, *Turkische und bulgarische Berichte zur Geschichte Sultans Bayezids I., Ephemerides Orientalis,* N. S. 34: April 1948]. The Ottoman policy in Asia Minor had another character. Ankara, in 1359, fell to them in a peaceful way; Murad acquired a large part of the Germîya Oghlu territory as a wedding present to his son and the country of the Hamid Öghlu by sale; even the expeditions against the Karaman Öghlu in 1336 and 1351 were conducted with much leniency, and it seems that the definite conquest of Konya, Siwis and Kastramuni in 1392 was a mere consequence of political necessity, felt perhaps through the conquests of Timur, who finally crushed the impetuosity of Bayazid in the battle of Ankara (1402). Many of Bayazid's conquests, indeed, were as ephemeral as those of Timur himself.

While the sultans conducted the military operations, the organisation was in the hands of their statesmen, among whom Djandari Kara Khalil, later known as Kâvir al-Din Paşa, is the most notable [cf. F. Taeschner, *P. Wissowa, Die Vaterfamilie der Grundherren und ihre Denkmäler, Die Islam, 1929*, p. 61 sqq.]. To him is attributed the institution of the janissaries in con-
section with the reservation of a fifth part of the war booty for the sultan. The Janissaries [q. v.] were taken from the captured Christians, and there is no indication that in the sixteenth century the devshirmes [q. v.] was already applied. Their organization on the lines of a fraternity after the model of the adab’s or the ghāṣṭa’s, and their connection in this respect with the devshirme-order of the Bekzadhi’s, shows again the influence of the peculiar religious tradition of the state.

The first begs of the ʿOthmān Oghlu, in the older sources generally bearing the title of ʿabunakir, had originally taken over some of the Sudanī custom and traditions, such as the bearing of lughāt’s composed with ʿānī and ṣanūqī, but from the time of Murād I this custom was abandoned. Murād is also the first to take the title sultan in inscriptions. These first rulers followed also the traditions of other Anatolian rulers by marrying high born Christian ladies; ʿOshshān was the first to take a Byzantine princess for his wife. On the other hand, the proper names of some of the first Sultans (Murād, Bayzād) have preserved older, in fact Syrian, traditions; to the same early time is to be traced back the investiture of the sultan by the girding on of a sword, which perhaps symbolized originally his admission to the order of the ghāṣṭa’s [cf. ʿghāṣṭa ʿalay]. An important fact of the first century of Ottoman history was the enforced migration of populations, which ancient oriental custom was particularly applied by Bayzād I, mostly from the east to the west. This general drift towards the west may have occasioned also the increasing estrangement between ʿOthmān Oghlu and Karamān Oghlu and, together with other influences, the religious opposition in Anatolia.

5. Second period.

When Timur left Asia Minor again, he left the peninsula as divided as it had been hundred years before; the principalities on the coast as well as ʿAsām, and Karamān, had been given back to their former owners, one of whom was replaced in 1403 by the enterprise İsmāʿīl ʿOgūlū Ėrmiş [q. v.]; two sons of Bayzād, ʿIṣā and Muḥammad, were residing at Brusa and at Amasia respectively. Although the European possessions, where Suleyman resided, had been left untouched by the Turks, in the restoration of the Ottoman state Bayzād again its centre in Anatolia, where Muḥammad had been able in a short time to establish himself as master of a considerable territory, including the old capital Brusa. After that his first move was the reconquest of the European possessions that were held first by ʿAsām and afterwards by ʿMāsā. Only after 1413 was Muḥammad I in a position to begin the gradual incorporation of the other Anatolian principalities into the newly restored state; this policy was followed by Murād II and by Muḥammad II. This time again the rounding off of the Anatolian territory was effected without much bloodshed, with the exception of the Karamān Oghlu state, the old rivals of the ʿOthmān Oghlu. But even here the Ottomans began by following a remarkably conciliatory policy. The descendants of those dynasties were generally granted high military posts in Europe. Muḥammad II finished the conquest of Anatolia proper by the conquest of the empire of Trebizond in 1461 and when, at last, the Karamān dynasty was extinguished in 1468, the Ottoman Empire stood face to face with the ʿĀṣ kūyuni dynasty in the north and the Egyptian state in the south-east. The dangerous aid of the ʿĀṣ kūyunlu Uzun ʿHasan, in 1472, had not, however, the disastrous consequences of Timur’s campaign, the Ottoman Empire being now more firmly established; under Bayzād II this neighbour was succeeded by the young Safawī dynasty of Persia; still, until the end of the reign of this Sultan, the Ottoman territory was not enlarged on the Asiatic front, though there were several inglorious frontier wars with the Manṣūrī forces in Syria.

All through the reigns from Muḥammad I to Bayzād II the chief military activity of the Ottomans was given to the establishing of the Ottoman power in Europe. The sultans themselves resided most of the time in Europe, where they led many campaigns in person. Already under Muḥammad I there broke out a conflict with Venice with the advance of the Turks in Albania and Morea, and under Murād II Hungary became the other chief Christian opponent, as a consequence of the Turkish raids and conquests in Serbia and Wallachia. These raids and conquests, as well as those in Albania and Morea, were of an indeterminate date; but they were undertaken by the frontier chiefs. The first results were more often the occupation of a few towns, where a ʿāṣārā or ʿāṣārā was appointed as chief of the garrison; most of the territory was left under the administration of the local rulers, who were responsible for the payment of the ḥāʾasha in the form of a tribute. Also Constantinople and the rest of the other Byzantine possessions kept for a long time their semi-independence in this way and succeeded even several times in defying a siege. Gradually these strongholds of Christian political and cultural independence were taken; the capture of Constantinople in 1453, which made such a profound impression among the Turks as well as in the Occident, was only the realisation of a part of the political scheme of Muḥammad II, of bringing the whole Balkan peninsula under the direct government of the Ottoman state; at his death this scheme had nearly become a reality. There were still Venetian enclaves in Morea and Albania, and in the north Belgrad was still held by the Hungarians, but even Bosnia was ruled by Turkish beys. The isles of the archipelago, except Rhodes, were incorporated in the same manner. Only the Danube principalties Wallachia and Moldavia and, since 1475, the Crimean Khanate had remained vassals.

During all this time the Christian powers had been scheming and planning crusades to expel the Turks from Europe, while trying also alliances with the Asiatic opponents of the Ottomans. But no really great enterprise was ever undertaken; only temporary damage was done by the Hungarian Hunyadı, the Wallachian Wlad ʿDrago, the Albanian Skander Beg [q. v.] and by some Venetian naval expeditions.

All these military successes in Europe would not have been possible without the strong base in Turkish Anatolia. Still more astonishing is per-
hapy the permanence of the Turkish occupation. The reason may be sought mainly in the lack of any sufficiently great political Christian power in the much divided Balkan peninsula.

After the relatively peaceful reign of Bâyâzîd II, there is no more question about Asia Minor or the Balkan Peninsula. The struggle continued in Albania and Morea, but had on the whole a local character. The empire was now strong enough to face its new Asiatic neighbours. The war waged against Persia by Selîm I was in a way a continuation on an international scale of the former internal struggle against the Şî'î opposition in Asia Minor itself. This war secured Turkey the temporary possession of Ağârîbâdîn and the lasting domination over Kurdistan and Northern Mesopotamia. Very soon afterwards the Egyptian state of the Mamlûks, with whom the Ottoman Empire had clashed under Bâyâzîd II in a rather unglorious way, was incorporated by Selîm in one single campaign. The consequence was the extension of Turkish overlordship to the cities of İskân and soon to Yaman. Finally, under Sulêimân I the Magnificent, the empire obtained its greatest extension by the conquest of the greater part of Hungary, one of the two great mediæval opponents in Europe; in the same campaign the Turks went even so far as to besiege Vienna. Only the other old rival, Venice, was not broken by the victorious empire. After Muhammad II's death, official wars with Venice had become rather an exception. The Ottoman empire never had acquired an absolute maritime superiority, and this weakness appeared almost immediately after: the great period of conquest was over, in the battle of Lepanto. Rhodes was conquered, but Malta has never been Turkish and the maritime exploits of Kemâl Re's [q. v.] under Bâyâzîd and those of Barbarossa Khair al-Dîn and others, which assured Turkey's political authority in the Sulêimânian era on the North coast of Africa and in the Indian Ocean, never wholly lost the character of piracy. On the Asiatic front the continuation of the conflict with Persia led for the time to the conquest of Baghîdâd and 'Irâq, so that the sultan was now in reality melân al-bârîn wa 'l-kafrâyân.

In the course of this second victorious period the inner religious and social evolution of the state had not been less astonishing than the enormous expansion of its territory. The originally somewhat dubious Islâmic orthodoxy had gradually converged towards an unimpeachable orthodox attitude of life among the higher classes; many Muhammedan jurists had found their way from eastern countries to the new cultural centres of the Ottomans and the jurists of Christian extraction (as e.g. Molla Khasraw) joined without reserve the leaders of the official form of Islam. Under this orthodoxy covered the sympathies for mystic organisations and doctrines continued to exist; the mystic orders and the dervishes were generally favoured and the ancient mystic traditions continued to be reflected in many points, such as the proper names of persons. Very probably we must see a reminiscence of the older influence of mystic religious leaders in the state in the remarkable institution of the Şâhid al-İslâm [q. v.] which first appears distinctly under Mustâd II and was gradually sanctioned by the şâhid. On the other hand, the controversy with the more extremist Şî'î under-current of mystic feelings, which existed of old in Asia Minor, has several times taken the form of open revolts against the government, such as the rebellion connected with the name of Simawna: Şâhid Ögîn Büçru Dîn (cf. IRN Şâhid Simawna and F. Baldinger, in Zü, xi.) in 1415, and the revolt of Şâhid Kuli or Şâhid Kuli and his Şâhid Bâsh under Bâyâzîd II. This last revolt was intimately connected with the contemporaneous political-religious movement that led to the establishment of the Sâfawî dynasty in Persia. For this reason the Şâhid Bâsh rebellion was also a grave danger to the existence of the Ottoman state itself, and this explains the ferocity with which under Selîm I the adherents of the Şî'î were persecuted. The attitude of the Muhammedan rulers towards the Christian and Jewish population followed the tolerant tradition; no one was compelled to embrace the Muhammedan faith, with the exception of the Christian children levied by the demâghûrî. It is true that many churches were converted into mosques — like Aya Sofâ —, but the constitution of the Greek-Orthodox and of the Jewish millet as autonomous communities, immediately after the capture of Constantinople, is the most famous example of a policy that was constantly applied. Muhammedan fanaticism began only in the end of the xvth century.

The overwhelming importance of the person of the sultan for the existence of the empire is still more accentuated during this period. This is shown by the menace of military revolts after the death of nearly every sultan and the artifices by which his death was kept secret until the arrival of his successor; also by the grave disturbances caused by pretenders [cf. DJEM] and the tradition of fratricide, inaugurated by Bâyâzîd I, which was the necessary consequence of it. The supporting of Ottoman pretenders was justly considered as one of the most effective means at the hands of the Christian enemies of the empire. For the Christian subjects the conquest made little difference; after Muhammed had taken the Byzantine capital, he had taken for them all the attributes of their legitimate 'insâliins'.

The wars of Timur had again caused great racial movements in Asia Minor, and in the times that followed it remained the policy of the sultans to transplant contingents of the population from one part of the empire to the other. In this way Constantinople — to which town now all the main military roads in Asia Minor were directed — was deliberately peopled with the population of different parts of Anatolia (İstanbul = Istanbul) and in the same way Adrianople had become an Islamic town. Amid the Turkish settlement population in Rûm-îli has always lived side by side with the Christians, the relative proportions varying considerably in the different territories. The Islamisation of large parts of the population in Bosnia and Albania had other causes.

Now it is especially this state of affairs in European Turkey that has been important for the development of the Ottoman political system that has found its highest achievement in the reign of Sulêimân I. The beginnings of this new inner evolution of the Ottoman civilisation are to be sought in the reign of Murât II, parallel with the consolidation of the Ottoman type of religious orthodoxy. The new leading men in the state and in the army were now for the greater part Christian renegades of Albanian, Slav, Greek or even more western origin; the older families that had
come from Asia Minor, such as the Mihâil Oğlu and the Evrenos Oğlu, receded to the second place as owners of large fiefs on the Danube and in Thrace; the high position of the Djindar Oğlu as vissiers ended, with the execution of Khalîl Pâsha shortly after the fall of Constantinople. The newly converted Christians served the state to their best, but the all-dominating authority of the sultan and perhaps also the democratic tradition of Islam prevented the formation of a hereditary nobility; statesmen and military commanders (as beglerbegs and sanjakbâshis) were the slaves (hâkû) of the sovereign and much less independent than they had been in a former century. Less dependent was the class of the scholars and jurists who provided the ecclesiastical hierarchy with the Şâhîh al-Islâm at the head; among them there are signs of an ecclesiastical nobility. So there was formed an Ottoman ruling class composed for the greater part of non-Turkish elements; they were continuously recruited from the ranks of the Christian renegades that were taken in war or by the dervish-me-levy. Under these circumstances it was inevitable that the administrative institutions should show the influence of Byzantine ideas, as was also the case with the court organisation. By Kâbul-nâmes, of which those of Muhammad II and Suleimân I are the best known, the hierarchy of officials was minutely regulated.

Besides the older troops of irregular askerîs and askashis, the army consisted chiefly of the sipahîs— whose organisation was intimately connected with the military administration of the territory (cf. tâmâş)— and of the Janissaries who, in the time of Murâd II, were for the first time (probably 1438) levied by the method of the dervish-me-levy (q.v.); guns were for the first time used during the siege of Constantinople by Muhammad II. The fleet (cf. Kaşfedan Pâsha) was mainly manned with askashis, besides Christian prisoners as galley-slaves, but had not by far the importance of the army.

The revenues of the state or rather of the sultan consisted for the most part of the constantly increasing askârî or levied on non-Muslim subjects and of the tributes paid by the semi-independent states. The different kinds of customes were equally considerable. Trade remained mainly in the hands of Greeks and, so far as foreign commerce was concerned, it was in the hands of the colonies of Venetian, Genoese and Florentine merchants. These colonies were treated in the same way as the indigenous non-Turkish communities; they were allowed considerable autonomy under their consuls, including consular jurisdiction. These privileges were granted by the sultans in the well-known form of capitulations, in which were prescribed also the commercial duties to be paid by the foreigners, who, in accordance with the principles of Muhammadan Law, were considered as m ashmun. On account of the various wars, those with Venice had to be renewed after each peace concluded (1454, 1479, 1502, 1540). Only afterwards the capitulations took on the character of bilateral international treaties. It was after the same model that the famous capitulation of 1535 was granted to France; but the political side of this instrument was much more important than in the capitulations with the Italian republics; it is the beginning of the normalisation of Turkey's international position in the following period.

The civilisation of the Ottoman Empire of the later Middle Ages was not yet separated from central and western Europe by the wide gap that became characteristic for later centuries. It has even been pointed out that the friendly relations between Muhammad II and Italian princes and artists and his liking for pictorial art enlivened him in a way to a place among the renaissance rulers of the time (Tischhuri, op. cit., p. 19). Soon afterwards, however, the Muhammadan attitude to life began to be again more predominant.

6. Third Period (1566—1699).

At the end of the reign of Suleimân I the Ottoman Empire found itself between two powerful continental neighbours: the Austrian monarchy in Europe and the Safavid empire in Asia. In Europe the Turkish provinces of Bosnia and Hungary were the bulwarks against Austria, while farther to the east the half independent principalities of Transylvania, Wallachia and Moldavia, and the Tatar Crimeans were allowed to exist; from the Turkish point of view also Poland with its Cossacks, and even Muscovy held similar intermediate positions between the two empires; during this period Turkey raised more than once claims to the suzerainty of the last-mentioned countries. In Asia the geographical situation did not allow for the existence of this intermediary kind of state, with the exception of Georgia which was invaded and brought under Turkish authority in 1578. In Asia, however, the Turkish feudal system left places for a number of petty local rulers who were given the title of Pasha. They were found on the Persian frontier in Kurdistan (the princes of Bitlis), but also in Syria (the Druze emirs). The shârîf of Mecca occupied likewise a vassal position, while Yemen, after its reconquest in 1568—1570, was again partly or a more direct Ottoman possession. After 1550 the Turks had even obtained a footing in Masâwî on the African coast and had begun to interfere with Abyssinian affairs; the opportunities here came to an end after the unlucky war of 1578. Egypt was at this time still somewhat under the control of the Turkish Pasha (cf. Mamûres); the Barbary states were nearly independent; the shârîf of Morocco recognised in 1580 the authority of the Turkish sultan.

This general political system of the empire was maintained throughout the third period, a kind of equilibrium being established between the Ottoman Empire and the great continental powers.

Under Selim II, or rather under the administration of Mehmed Sokollu Pasha, Cyprus was conquered (1570—1571), but this conquest occasioned immediately the naval defeat in the battle of Lepanto (q.v.) in 1571, considered to be the first great military blow inflicted on the Turks. The impossibility of further military expansion brought about an inner weakening of the Empire that was marked on the whole by unsuccessful campaigns against Austria (defeat of Kerestes in 1595) and against Persia (loss of Tabriz and Erivan in 1603 and 1604) and found its expression in the unfavourable peace treaty of Zâyttarok with Austria in 1666 and the peace of 1612 with Persia, then under the strong rule of Shah 'Abbâs the Great. In the last decade of the xvith century, Transylvania and the Rumanian principalities even made themselves for some time independent; from 1572
Poland also played often an active role in the complicated political and military course of events on these northern frontiers of the Turkish Empire. The raids of the Cossacks in the Crimea had not yet the dangerous aspect of a century later, when the Muscovite power began to appear on the horizon. A favourable circumstance for Turkey was the weakening of Central Europe by the Thirty Years War; among the west-European countries the already existing friendly relations with France, followed in 1580 by England and in 1605 by Holland were on the whole profitable for the Empire, while Spain had ceased since the end of the century to be a serious maritime danger. In view of the never very strong maritime position of Turkey, the relations with Venice remained subject to surprises on both sides, such as the annexation of Cyprus during the xviiith century this was followed by the not less astonishing conquest of Chios (1645-1666) and about 1655 by the important Venetian conquests in Morea and in the archipelago, so that for a moment even Constantinople was threatened. Still the relations with Venice were on the whole friendly, Turkey being the stronger power on account of its continental position. On the Asiatic frontier Turkey's weakness led temporarily to the loss of Bagdad in 1633 and a renewed Persian danger. But here the old position of the Empire was restored by the revival of its military strength under Murad IV; under his reign and after Shah 'Abbâs' death Persia was invaded by Ottoman troops, Erivan and Tabriz, and finally Bagdad reconquered (1638); in 1639 there began a long period of peace with Persia. After 1640 the stronger position of the Empire was used, as well as for the conquest of Crete, for strengthening the authority of the Porte in Transylvania and the Danubian principalities, and for a fortification of the frontier to the north of the Black Sea, where Aray was taken from the Cossacks, now under Muscovite authority, and fortified in 1660. In this same year the hostilities with the now recovered Austria began again and took at first a menacing character; even France was this time an ally of Austria (Turkish defeat of St. Gothard 1664). But this was only a prelude to the final struggle with Austria that began in 1683 with the unsuccessful siege of Vienna and finished in 1688 with the loss of the Ottoman province of Hungary, and the invasion of the Balkan peninsula by Austrian armies, followed at last by the peace of Carlowitz (1699) in which Turkey, considerably weakened again, had to give up nearly the whole of Hungary and its claim on Transylvania, while it had to recognize the authority of Venice in Morea.

The weakening of the Ottoman Empire at the beginning of this period was mainly due to domestic reasons. During the xvith century it had already been observed that the Empire in this form could only subsist by continuous warfare; it had to be adapted, now to peaceful conditions and this went beyond the possibilities of the personal rule of the sultan, which was based essentially on military conquest. The successors of Selim III the Great were not equal to the task of meeting these new conditions; it is true that Mahommed III, Othman II and Mahommed IV occasionally accompanied their armies, but Murad IV was the last sultan to revive the military traditions of his dynasty, the last real chief. So the sultans, whatever their personal qualities were, became less directly concerned in the administration of the state, though their personality remained surrounded with the traditional veneration. This did not prevent, however, the deposition and murder of Othman II in 1628, nor the deposition of Ibrahim in 1648 and of Mahommed IV in 1688. Instead of the sultans, the statesmen and generals became now more prominent, first in time and in importance Mehmed Soâkolî Pacha [q.v.] under Selim II, Sinuk Pacha [q.v.], the great enemy of the Austrians, under Mahommed III, Murad Pacha [q.v.], and Khosh Pacha [q.v.] under Ahmed I and Othman II; and in the second half of the century the great members of the Köprülî family: Mehmed Pacha, his son Ahmed Pacha and their cousin Mustafa Pacha, to the same period belonged also Nadir Pacha [q.v.], the besiger of Vienna in 1683. These military statesmen belonged to the numerically feeble renegade class and were supporters of the typical Ottoman government system as it had been perfected under Selim I, but they did not represent any considerable group of the strongly diverging population of the empire. There was not yet an Ottoman-Turkish nation. Several other groups were competing with them in the direction of the state affairs; the most formidable being the military corps of the Janissaries and the Sipâîî's, who, several times, especially after serious military defeats as at the time of the entrenchment of Murad IV in 1632 and of Mahommed IV's deposition in 1688, were masters of the political situation. The Janissaries were now even less recruited in the ancient way from the Christian populations, while many abuses had ruined the former discipline of their corps. Several grand viziers fell victims to their fury. Another powerful group, that made occasional use of these 'military' elements, was the court circle, led several times by a powerful Wallide Sul'tan or by a Kiflar Aga. Finally the 'ulama' with the Shahîk al-Islâm succeeded repeatedly in playing a decisive part in the direction of the state affairs (e.g. the munfi Sa'd al-Din under Mahommed III); the deposition of Sultan Ibrahim was sanctioned by fevûd of the Shahîk al-Islâm. These symptoms of decay were truly analysed in Köç Rey's [q.v.] famous Kitâb. Only Murad IV was able to suppress, often by violent means, the influence of these different groups; he succeeded even in raising a new military force (the Segbâns) alongside of the Janissaries. In the capital there were several times outbursts of religious fanaticism directed against the Christians, as happened under Ibrahim I, but it cannot be said that political events were influenced by them; the great statesmen showed on the contrary a remarkable tolerance.

The non-Muslim element, though excluded from all direct influence on the government, had adapted itself to the circumstances. A new Greek aristocracy had arisen in Constantinople, which by wealth and intrigue had powerful relations in Turkish circles, as well as in the leading circles of the Christian principalities on the Danube; the likewise were able to control the nomination of the Greek patriarchs. To this time belongs also the definite turn of the Ottoman Greeks towards Greek orthodoxy under the influence of the patriarch Cyril Lucaris (executed in 1658); the consequence was a decisive rupture with the Roman Christian world and indirectly a strengthening of the Ottoman Empire. The Ottoman Turks had still many religious traditions in common with the Greeks, and Christian
saints were also venerated in Turkish circles. Next to the Greeks the Jewish element, considerably strengthened since the arrival of the Spanish and Portuguese Jews under Beyazid I, played a great social role, chiefly as bankers; the best known representative of this group was Joseph Nassy, the favourite of Selim II.

The lower classes in Asia Minor participated as little in the direction of the state as those of European Turkey. Some dangerous revolts proved, however, that the old religious traditions of the xith and xivth century had not wholly disappeared. In 1599 began the movement of Kara Vazdf [q.v.] in Usfa; much more dangerous for the unity of the Empire was the revolt of Kalender Oghla in Sarukhân (1606), who ruled for some years independently over a great part of western Anatolia, until he was crushed by Murad Paşa. Soon afterwards, 1625—1628, took place the insurrection of Abāra [q.v.], the relentless persecutor of the Janissaries.

Farther to the east the movement for independence under the Kard Djanbalat [q.v.] in Northern Syria, like that of the Druze Fakhr al-Din [q.v.] in the Lebanon had to be tolerated to some extent. The inclination to mysticism and veneration for mystic shrines (such as Mahmid of Skutar, where several grand viziers found asylum under "Ommâhâ III) continued its hold on all classes of the population; several new mystic orders were founded during this period. The foreign trade remained as before in the hands of foreigners, Venetians and other Italians; of Italian origin were also many of the leading personalities of the Turkish navy that was rebuilt after the battle of Lepanto, such as Çigale Zade Sînâ Paşa [q.v.].

7. Fourth period (1699—1839).

During the xvith century the inevitable action of the elements of decay began to be felt more and more in the empire and brought about a situation that has been, too superficially, described as decadence. The causes of the decline were to be sought mainly within the body politic; they were still the consequences of the transition from a conquering state to a peaceful administration, for they were now ever more exploited by foreign powers. Among these Austria was in the beginning still a formidable opponent; after the war of 1716—1718 the peace of Passarowitz meant the loss of what had been left to Turkey of Hungary and Transylvania, and even of Belgrad, but the peace of Belgrad in 1739, in which this town itself was restored, proved that from the Austrian side the real danger had ceased. Moreover, in 1715, Morea had been reconquered from the Venetians by the grand vizier Djinm 'Ali Paşa, which success had shown that Venice also was no more to be feared. A new and formidable enemy had risen, however, in the form of the now much enlarged Russia, which, to the Orthodox Christians of Rumania and Servia, seemed a more welcome liberator than even Austria had ever been. The war of 1711 with Peter I, intimately connected with the coming of Charles XII of Sweden to Turkey, ended with a Turkish victory at Poltawa and brought back Azov to the Empire in 1712, and the war of 1732, equally successfully closed by the already mentioned treaty of Belgrad in 1739, was not yet disastrous for Turkey; Russian navigation in the Black Sea was even formally prohibited. After 1739 there followed a period of peace for the empire in Europe. The military and peaceful relations with Persia during this time were mainly influenced by the political events in that empire, by which the Turks sought to profit. The successes of Nidir Şeh in 1779 were for a moment threatening; they only occasioned the deposition of Ahmad III, but at last the peace of 1736 restored the frontiers of the time of Murad IV. The real military weakness of the Ottoman Empire was finally revealed in the conflict with Russia that had begun in 1768 with a Turkish declaration of war; this war brought the Russian armies deep into Bulgaria and was ended by the memorable treaty of Küçük Kaynarja in 1774, by which the Crimea became wholly independent (to be annexed in 1783 by Russia), while Turkey had to recognize the Russian protectorate in the Danube principalities. The right of religious protection accorded to the sultan with regard to the Mahommedans in the Crimea, was the beginning of the religious claims of Turkey, that were to acquire such importance in its international relations in the xixth century.

After an equally unhappy war with Kerim Khan in Persia (1776), in which Bâya was temporarily lost, the Ottoman Empire again suffered serious reverses to the Russians by the war of 1784—1792, closed by the peace of Jassy; this time the Dniepr became the frontier between the two Empires. Austria also had tried to profit by this war and occupied Bukarest, but in the separate peace of Zistova (1791) Austria did not gain the expected profits.

During all this time the friendly relations with the western countries, France, England and Holland, to which Sweden was added in 1737, Denmark in 1756 and Prussia in 1763, had often been of great value to Turkey by the services rendered by them as intermediaries in the peace negotiations; especially France, which obtained in 1740 its last known final capitulation, had considerable influence by its right to protect the Roman Catholics. At the end of the century, however, the Ottoman Empire began to be a factor in the new imperialistic schemes of the western powers, in connection with their colonial acquisitions and political influences in Southern Asia. These colonial interests did not show at that time any wish to possess Ottoman territory, but the rising colonial powers needed between themselves and their possessions a state over which they could exert control, since they saw the necessity of communicating with the Persian Gulf and India by a more direct way than the southern sea-route. The more immediate cause of the occupation of Egypt by the French in 1798 was the rivalry between France and England; this made for the moment England and even Russia allies of Turkey. But in 1802 peace with France was restored, to be followed some years later by a new war with Russia and hostilities with England (the English fleet before the capital in 1807). By the peace of Bukarest (1812) the Ottoman Empire again lost territory (Bessarabia) to Russia, while England, after the elimination of France's colonial power in India and the weakening of the Ottoman authority in Egypt, was for the moment satisfied. The Empire was again severely affected by the ups and downs of the Greek insurrection, that began in 1820 and ended in 1853 with the recognition of the Independence of Greece, not, however, before a disastrous war with Russia — that had played from the beginning an important part in the Greek
troubles — had obliged Turkey to conclude the peace of Adrianople (1829). Still, the action of the other European powers had prevented Russia from realizing its territorial aims; it had to be contented with a strong political ascendency over Turkey, as was proved in 1833 by the treaty of Hünkâr İskelesi, which, in a secret article, forced Turkey to become Russia's ally in the matter of the navigation in the Black Sea. This unnatural alliance with Russia was occasioned by the action of Meşmed ʻAli of Egypt (begun in 1831), who threatened for a moment to deprive the Empire of Egypt, Syria, and Cilicia, but who was checked and only to the recognition of Egypt as a privileged part of the Empire under a hereditary dynasty (1840). This time again the intervention of the European powers had been decisive for the territorial status of the empire. The existence of the Ottoman Empire was justly considered as a political necessity; already in 1759 there had been a treaty between Prussia and Austria to guarantee the northern frontiers of the Empire. About the year 1830, moreover, Turkey concluded several new treaties, on the lines of the capitulations, with the United States of America, Belgium, Portugal and Spain. The conquest of Algiers by France (1837—1839) could hardly be called a loss to the empire.

The administrative system of the empire remained much the same during this period; in every direction the central authority was however losing its influence. In the beginning of the xviiiith century this was not yet very perceptible. Constantinople was still the brilliant capital of a powerful empire, where the court of Ahmad III set the example of a luxurious life; to this time falls the curious passion for the cultivation of tulips, that makes the epoch known as "bulanı derevi". To this period also belongs the expansion of higher literary, specifically Ottoman, culture beyond the class of the "sâlimi"; a new class of literates came into existence, who were the precursors of the intellectual Turkish middle class that originated in the beginning of the xixe century. The beginning of Turkish printing in 1727 is likewise intimately connected with the new cultural orientation of the higher classes. Most of them served the government in higher or lower functions, and from this class have come forth great writers, such as Sânadı Türbâh and Râşîb Pâsha. This changed considerably the ancient military character of the government system; the home and foreign affairs of the empire were now treated in a more statesmanlike way by the Sublime Porte (Bâb-ʻAli), and the modest office of the Râhs al-Kuttâb [q.v.] now became more and more important since the holders began to act as competent ministers of foreign affairs; one of them, Ahmad Rasim, is well known as one of the first Ottoman ambassadors. Still this new class of functionaries was, according to tradition, the sultan's slaves; only under Meşmed II was his position regulated in a more liberal way. The new cultivated upper classes had manifold relations with the cultivated Greek Phanariots of their time, many of whom occupied high offices in the government service, especially as dragomans (as e.g. Nikusios and Maxevrordomos), there were no ties with the lower Müşûmsudan classes. Under these governing functionaries the Janissaries and Sipahis, now that their discipline was loosened, more than once interfered in a dangerous way. The Janissary rebellion under Patrosta Khusîli in 1730, which cost Ahmad III his throne, seems to have been directed mainly against this new aristocracy. After Meşmed III court life became much more sober. The ruling classes and most of the sultans with them had begun to realize the weakness of the empire and sought now a remedy in the introduction of military reforms, in which they were aided by several foreigners, of whom the Frenchman Bonneval (died in 1747) is the best known. Another French officer, de Tott, worked in the same direction under Muşafa III, but the Russian war that broke out under this sultan showed how little effective the measures had been. Selim III undertook to carry out reforms with much more energy, but even in his time very few leading people had real understanding for these things; the institution of the new corps (çanakkâr-şefiâ) provoked another formidable rebellion of the Janissaries, seconded by a large percentage of the ulama. Meşmed II, finally, took up the question of reforms with more deliberateness; this sultan finally concluded there was no other way of imposing the reforms than by the famous massacre of the Janissaries in Constantinople on June 16, 1826; at the same time the Bektashi derwigh order was persecuted. The events showed, however, that so far more destructive than constructive work had been done; still this sultan succeeded at least in subjecting a number of powerful semi-independent local dynasts. The weakening of the central authority had indeed been characteristic of the Ottoman Empire of the xviiith century. Algiers, Tunis and Tripoli were ruled by hereditary Beys; only Tripoli was brought by Meşmed II again under the direct authority of the Porte. Egypt had seen in 1767 the usurpation of ʻAli Bey. In Rûm-ı şerif some powerful powers had come forth from the ranks of the great timariots; they were called âli-bey. Under Selim III and Meşmed II the most noteworthy were ʻAli Paşâ of Yanina and Pasârâ Oghlu at Widdin. In Anatolia there had been in 1739 the dangerous insurrection of Şerif Beş Osmanu, after which the so-called dere-bey were as good as independent, as was also the case in Kurdistan. In Meso- potamia and Irâk the same conditions were prevalent; in 1706 was formed in Irâk the powerful Bedouin confederation of the Mûshâb, and under Selim III Baghdâd was ruled autocratically by Sulaiman Paşâ (died in 1810). In Syria the Druses of the Lebanon had their own emirs, and on the coast ruled, in Selim III's time, Djasrâ Paşâ [q.v.] of Akka. In Arabia the Wahhabis had taken Medina in 1803, and Yaman and ʻAstr could hardly be called parts of the Turkish empire. On the islands of the archipelago hardly any Turks were to be found; here as in Syria there was strong European influence. Still, although the Ottoman power had sunk everywhere, the Ottoman type of administration had put its seal on the cultural life of all these different regions; the great Ottoman tradition held them together and enabled Meşmed II and the statesmen who, after him, continued the centralisation of the Empire, to keep together their political unity for a century more to come.

8. Fifth period (1839—1922).

In this period the transition of the Ottoman Empire to a national Turkish state was completed, but in a way not intended by the Christian powers, nor expected by the Turkish ruling classes themselves. The new course followed in the admini-
by Austria. Then, after Tripoli had been lost in the war with Italy (1912, peace of Lausanne), the Balkan war of 1912–1913 reduced the territory of Turkey in Europe to Eastern Thrace, including Adrianople, which town had even been occupied for some time by the Bulgarians.

During the sixteenth century the relations with Persia had been on the whole peaceful; conflicts were only occasioned by frontier questions, such as the dispute about the authority over the Kurdish territory of Soleimântyê, which was settled in 1847 in favour of Turkey. The territory round the Persian Gulf had come more and more under the control of the British, but the territorial status in Asia remained for a long time unchanged. In the meantime Turkey had been drawn gradually into the economic expansion schemes of the German Empire as manifested by the project of the Baghdad railway; this diminished England's interest in the territorial integrity of the Ottoman State. So, when in the year of the world war, Turkey was not able to maintain its neutrality and joined the central powers, Russia and England co-operated for the first time to take away Turkish territories. The attempts of the Allies to enter the Dardanelles by sea and by land failed however during the war; but the combined action of the French and English troops in Palestine and Syria, and the different English campaigns in Iraq and Mesopotamia succeeded at last in conquering these provinces from the Ottoman armies. In Syria they were aided by forces of the Sharif of Mecca, who had made himself independent in 1917 as King of the Hijzâ. The Russians, in the meantime, had made considerable progress in north-eastern Anatolia, but from this side the danger came abruptly to an end with the Russian Revolution, and the peace of Rast-Litowits (August 3, 1918) gave back to Turkey the lost territory, besides Kars, Ardabîn and Batum. Soon afterwards the war with the other powers came to an end by the armistice of Mudros (October 30, 1918). Subsequently Constantinople was occupied by Allied troops; France occupied the west of the Ionian and Ionian, and Italian troops landed in Adâlia. Greece was allowed to occupy eastern Thrace and Smyrna in May 1915. All this the Constantinople government had to witness passively. The Turkish parliament, convoked in January 1920, took for a moment a firmer attitude by adopting the so-called National Pact (mîtkhâb-ı milî); but when in March the occupation of Constantinople was rendered more severe, the parliament was dissolved. Finally, in August, the Ottoman Government was compelled to sign the Treaty of Sèvres, by which large parts of the remaining Ottoman territory, including Constantinople and Smyrna, were brought under the control of one or more foreign powers. In the meantime another, interior, enemy had risen against the Ottoman Government as a result of the organized national opposition against the foreign occupations, especially the Greek' landing in Smyrna. In the course of 1920 the Constantinople government lost gradually all control over Anatolia and the measures undertaken with Allied help to restore its authority failed. Under the growing successes of the nationalists the authority of the Sultan's government dwindled down ever more, and the Great National Assembly of Angora was able at last to proclaim on November 1, 1922 the abolition of the Const-

TURKS
Moreover the Islamic sentiment found sympathy with the lower classes of the Turkish population, still strongly imbued with mystical traditions and with the non-Turkish Muhammadans of the Empire. 'Abd al-Hamid, while emphasizing his dignity as Khalifa, relied mainly on Islamic sentiment, though, in course of time, the persons who surrounded the ever more suspicious monarch came to be of the worst kind. Utterances of patriotism were opposed in the most drastic way, and many intellectuals had to take refuge abroad. The growing opposition against the *sütkâb* found at last a means of organizing itself in the province of Macedonia, since 1906 governed by a Turkish governor under European control. Saloniki became the centre of the new patriotic, more communal, Young Turkish movement, led by the Committee of Unity and Progress (*护身符 al-traghf*) and supported to a great extent by the army. Its influence obliged the sultan to promulgate again the constitution of Midhat Pasha on June 24, 1908 and to abolish at once the onerous system of censorship and espionage. In November the first Ottoman parliament came together, but in the troubled years that followed this parliament never had the opportunity to exert a real influence on the government. On April 13, 1909, followed an attempt to reestablish the Sultan's former authority; this time the Young Turkish cause could only be saved by the occupation of the capital by the Macedonian army and the deposition of the Sultan (April 27). Then, for a time, *Ottomanism* became the political ideal, meaning the equality of all Islamic and non-Islamic elements in the state. But it soon appeared that these elements were already too much estranged from each other, so that the foundation of a strong state on these principles became impossible. The Young Turks, under the influence of the ideas of Pan-Turkism, began now a policy with the final object of making the Ottoman Empire a state where the Turkish element should be predominant; they turned to the lower Turkish speaking classes, especially in Anatolia, to form a real Turkish nation. Pan-Islamism, too, was propagated again by several persons as a way of attending this aim, but this course was gradually abandoned, although used occasionally for outward political manifestations. The very unfavourable international development after the revolution, however, brought the Young Turkish rulers to measures that certainly were not originally on the programme, such as the Armenian massacres during the war and the severe government in Syria. And as a consequence of the final loss of nearly all non-Turkish territory in the war, Turkish nationalism was born at last, the simplest and at the same time the most effective form of Turkish patriotism, not hampered by any idea of religion or original racial connections.

The statesmen who had carried out the "Tanzimat" programme had been careful not to offend the religious scruples of the leaders of orthodox Islam. In spite of the remonstrances of foreign representatives, no measures were taken that were in direct conflict with the sharia, though the application in practice might have been changed. The sharia was also the basis of the new Civil Code or *Medjelle* (q.v.). In Midhat's constitution, Islam was declared the state religion and the Shahîk al-Islâm was given a rank as high as the grand vizier. This wise religious policy could not prevent, however, occasional religious outbursts of which
Christians were the victims, as in 1858 at Djidda and in 1860 at Damascus, both places situated outside the purely Turkish provinces. Under 'Abud al-Hamid religious activity was mainly under the influence of panislamism, shown in the various attempts to enter into relations with Mahomedans in all parts of the world. Even the Young Turkish government did not refrain from proclaiming the Holy War on its entering into the world war. In their inner administration the Young Turks clearly opposed the influence of the religious authorities, as was proved by their attempt in 1917 to bring the madresses under the administration of the Ministry of Public Instruction. Another break with the Islamic tradition was the reform of the calendar. In 1789 the Greek Julian calendar had already been introduced officially for the financial administration but by a curious compromise the era of the Hijira (zene-i milîyye) was preserved; and in 1917 the Gregorian calendar was adopted. The Christian era came gradually into use after the war.

It was also by the "Tauçma" that domestic administration was separated from the military by the laws concerning the millet. The chief occupation of the home department was still for a long time the tax-gathering. The Europeanisation and centralisation of the financial system proved to be one of the chief difficulties, as the reliable corps of functionaries had to be created at the same time. After the Crimean war, Turkey was able to conclude a number of foreign loans, but the money was not well administered nor well used. In 1876 a state bankruptcy had to be declared with foreign intervention as a consequence and the establishment of the service of the Public Debt, which was very much resented in all Turkish circles. A serious hindrance for the recovery of the finances was also the antiquated custom rules of the capitulations, although the original dues of 3% were several times raised. After the Revolution, however, the greatest difficulties seemed to have been overcome.

The new Turkish army created gradually by conscription, after the extinction of the Janissaries, had during this period many occasions to show its valour. It contributed considerably to the strengthening of the patriotic Turkish spirit and played an important role in the Revolution. After 1856 it was theoretically admitted that Christians and Jews also could be enlisted, but in practice they always liberated themselves by paying an exemption tax. It was only after the revolution that these non-Turkish elements also became Turkish soldiers.

9. The national Turkish state (since 1922).

The nucleus of the new Turkish state was the opposition to the foreign occupations after the armistice of Mudros. The organisation of the opposition began in 1919 under the leadership of Mustafa Kemal Pasha, who had gone at first to Asia Minor as army inspector. The first stage was the Congress of Ezerefin (July 23, 1919), followed by the Congress of Siwâs (September 11). Here the Representative Committee ( setbacks-i tanzîhîyye) was formed under the presidency of Kemal, and this Committee was charged with the execution of the new national programme; the armed opposition of the Kuveyîth milîyye against the occupation of Smyrna was supported and the landing of English troops in Samos, as well as the attack on Izmir from Constantinople were frustrated. In 1920, after the Constantinople parliament had been dissolved, many deputies escaped to Asia Minor, where in Ankarâ, on April 23, the Grand National Assembly of Turkey was convened by the Representative Committee. The Assembly gave itself legislative and executive powers and appointed a governing committee (hay'et-i welîî) under Kemal Pasha's presidency. In 1921 began the struggle with the Greek troops (battles of In Örû on January 11 and March 31), followed in July by a Greek advance as far as Eski Shehir. This advance was ended by a Greek defeat on September 13. In the meantime, the new national government had entered into relations with the Allies; by the treaty of November 20, 1921, France restored Cilicia. As other negotiations did not lead to definite results, the Ankarâ government decided in August 1922 on an attack on the Greek forces and gained a decisive victory at Dumlû Biflar; on September 9 Smyrna was restored and for a short time it seemed that Constantinople was threatened. By the armistice of Mudros (October 10) the national government obtained the right to occupy Thrace and Constantinople, which was effected in the following weeks. Thereafter the war was finished, and after difficult negotiations the peace treaty of Lausanne (July 23, 1923) established peaceful relations between the Allies and the new Turkey, this country being recognized as a completely independent state. The peace treaty had left undecided the question of the vilayet of Mîûslû, the restitution of which was claimed by the Turks; after great efforts of the League of Nations, Turkey and England came at last to an arrangement by which Mîûslû was left to 'Irak (June 5, 1926). The new Turkey had already concluded a consular treaty with Russia in November 1922; after the peace of Lausanne relations of friendship and commerce were successively renewed with other countries. The relations with England and Russia are now the most important in Turkish foreign policy.

Since the Turkish constitution of April 20, 1924, Turkey is a Republic. Cihat Muṣṭafa Kemal Pasha has been state president (sêî-i âdâmkerîyet) from the beginning. Constantinople has fallen from the rank of capital and has been replaced by Ankarâ, the Medina of the new Turkey. The Grand National Assembly has displayed since 1922 a considerable legislative activity in order to adapt the country to its new conditions and to modernise its institutions. In religious matters the new rulers have taken deliberately the way of laicisation, after the abolition of the Caliphate in March 1924. There is no longer a Şaitî al-Ilâmî and no Minister of Ewâfî.

In September 1925 the Tekkes of the mystic orders were closed and these orders themselves interdicted. These measures, directed against the traditional popular forms of religious persuasion, were a consequence of the great rebellion of the Kurds under Şaitî Sa'id; this rebellion began at the end of 1924. Similarly in September 1925 the fez was abolished as headgear; only the "ulamâ" were henceforth allowed to wear the turban. A noteworthy reform was the official introduction of the Latin alphabet and the abolition of the use of Arabic letters in 1928, which measure had also an anti-clerical aspect. The principal aim of these and other measures is, to raise the Turkish people to a higher cultural level;
their application has repeatedly provoked resistance in several parts of the country among circles attached to traditional institutions. Still the national evolution aimed at by the republican government has in any case more chances of success than ever before, as the large majority of the population is now really Turkish or turkised. Many ulema’s had returned already after the Balkan war to Asia Minor and the population exchanges with Greece have likewise increased the Turkish majority.

A comprehensive collection of the historical facts since 1918 is to be found in G. Jäschke and E. Pritsch, "Die Türkei seit dem Weltkriege, Geschichtskalender 1918—1928," in Die Welt des Islam, u. a., 1927—1929, containing also extensive bibliographical notes on the new Turkey. An independent survey of this period is contained in the article "Turkische Dümükkâyi", in Kâmil Esîhem, Ewâli-E Islâmî, Istanbul 1927, p. 331.

Bibliography Among the sources of Ottoman political history the historiographical literature of the Ottoman Turks themselves takes the first place. For this literature it is sufficient to refer to F. Bahinger, "Die Geschichtsschreibung der Osmanen und ihre Werke", Leipzig 1927. The study of documentary sources is still in its beginnings; historical documents have been published in various places, as in the T. O. E. M. (T. T. E. M.) and in the works of the Turkish historian Ahmed Reşî. Some of the Qâmilâhnamen have been published in T. O. E. M. and other Turkish publications. For the treaties of the Ottoman Empire a most valuable collection is to be found in Gabriel Effendi Noradonghanian, Recueil d'Actes Internationaux de l'Empire Ottoman, iv. vols., Paris 1897—1903. On the epigraphical sources there are important monographs, such as those of Kâmil Esîhem and the more recent publications of Mubârak Gâlîbî. The chief work on Ottoman Numismatics is still Ismaîl Gâlîbî, Tağvînî-i Mulkâtâb-ı Ottomanî, Constantinople 1937, besides other publications (such as Ahmed Reşî, "Ottomânî İmparatorluk-i Uluqânâmâhname"). British Museum Catalog. Oriental Coins, etc., 1905.

Of non-Turkish literature the Oriental ones have been partly studied by Bahinger in his bibliographical work. Among the Western sources the Byzantine historians are of extraordinary importance for the first centuries of the Ottoman Empire (Ephraim, Duca, Chalcocodyles, Critoibulos). Since the 17th century a very important place is also taken by the Reisâdâ of the Venetian bailo, to be consulted in the great publications of Albé (Florence 1830—1865) and Barozzi and Berchet (Venice 1856—1877). To them were added in course of time the reports of the representatives of other governments that entered into relations with the Ottoman Porte. To the same category may be reckoned the numerous descriptions of travels in the Ottoman Empire by European travellers, beginning in the 17th century. Not sharply separated from the travel literature are the many descriptions of the Turks and of the Ottoman Empire, of which the best known is d’Ohsson, Tablauv Général de l’Empire Ottoman, vol. i—iii, Paris 1787—1826. This kind of literature continued all through the sixteenth century (the important works of Ubicini) and the beginning of the eighteenth century.

The first great "universal work on Ottoman Turkish history was Josef von Hammer’s Geschichte des osmanischen Reiches, vol. i—x, Pest 1827—1855; zweite verbesserte Ausgabe, vol. i—iv, Pest 1834—1836 (French translation by J. J. Hellert, Histoire de l’Empire Ottoman, vol. i—ix, Paris 1835—1843). This work is for the greater part based on Turkish literary sources and ends with the peace of Kâşîf Kânârda in 1774; vol. x contains an extensive list of works concerning Ottoman History, that had appeared in Europe until 1774. A work of the same scope is J. W. Zinkisken, Geschichte des Osmanischen Reiches in Europa, vol. i—xvii, (until 1912), Hamburg 1840 and Gotha 1854—1865; Zinkisken uses Western sources much more than von Hammer, but he does not draw directly from original Turkish sources. The same is the case with N. Jorge, Geschichte des Osmanischen Reiches, vol. i—v, (until 1912), Gotha 1903—1913. The Histoire de l’Empire Ottoman, in vols., Amsterdam 1711—1724, is important for its historical treatment of the end of the sixteenth and the beginning of the eighteenth century. Among the several works that treat only a certain period of Ottoman history may be mentioned G. Rosen, Geschichte der Türkei (1826—1856), Leipzig 1866. As a result of the greater interest in Turkish history after the war, there began to be published in 1922 the Mitteilungen zur Osmanischen Geschichte, by F. von Kraefft and F. W. Wittke; it is much to be regretted that this publication has had to cease after only six years.

Ottoman history has begun to be studied more and more in Turkey itself since the revolution of 1908. Since 1910 was published the "Ottoman Endûmâni Mevînîât" and the "Ottoman Endûmâni Mevînîât", the last number of which was changed, after the war, to "Türk Endûmâni Mevînîât"; the last number in Arabic script was No. 19 (96). This valuable publication contains a great number of historical contributions, but other publications are too (such as the Mevînîâvâ of the Literary Faculty and the Mevînîâ of the Mevînîâ, Istanbul 1925 and 1928) contain important articles on historical subjects. The "Türk Endûmâni" has made possible, moreover, the publication of considerable historical monographs in its series Kültîyat. A comprehensive survey of recent historical studies in Turkey is to be found in the series of articles by F. Wittke in O.L.Z., under the title Neuer wissenschaftliche Literatur in osmanisch-türkischer Sprache (since 1928). A complete new History of the Ottoman Empire has not yet been written in Turkey; there has already appeared, however, the first volume of an "Ottomânî ve Türkhi-i Nezîq" (Kapîz ve Meşhur "Arif, Istanbul 1335 (1917).

(J. H. Kramers)

TURKO is the usual name for the folk song in Ottoman Turkish. It is to be distinguished from mahtûf [q.v.] on the one hand and from şarîf, on the other. The distinction between türkû and mahtûf lies in the fact that the former are polyphonic and the latter monophonic. This distinction is not however always observed. In many districts of Ottoman Turkey the people know only the name türkû and use it without distinction in speaking of mono- or polyphonic songs. As to the distinction between türkû and şarîf, the
former are genuine folk-songs, the latter more artificial in character. The former go back to proto-Turkish models and have marked analogies among other Turkish peoples, while the latter belong to the sphere of Muslim culture and follows Arabic and Persian models. The language of the türcü is therefore as a rule much purer Turkish than that of the şair-i şer.

As to the form of the türcü it is written in a syllabic rhythm or accented syllable rhythm in rhymed strophes. The single lines contain 7 to 15 syllables; the seven (4–3, 3–4, rarely 2–3–2) and the eleven syllables (usually 4–4–3 and 6–5) are the most frequent. It is well worth noting that the nine syllable line form, so popular among the Kasan Tatars, is not found among the Ottomans. The rhyme is in the great majority of cases purely grammatical and owes its origin, as in Turkish generally, to the combination of two factors: the construction of the strophe in two parts and the linguistic condition of the Turkish language. The effect of the former was to cause the Turkish strophe to fall into two rigidly parallel sentences; of the latter that these sentences, especially towards the end, represent two series of grammatical forms corresponding to one another. With the agglutinative character of the Turkish language however such forms must rhyme with one another. Turkish rhyme is therefore as a rule polysyllabic. Rhymes extending over three or more final syllables are not at all rare. The strophes of the türcü number two, three or four lines; three lined strophes are the most common and are the most characteristic of Ottoman poetry in general. The three lined strophe with the same rhyme as throughout seems to have arisen out of the quartain common to all the Turkish languages rhyming a a a a by dropping the third unrhymed line. This as a rule destroys the bisyllable character of the strophe. The single separate lines are as a rule made up of similar strophes: the only exceptions are the refrain strophes so common in love-songs and the final strophes sometimes found in longer songs. In songs collected from the lips of the people we may often find marked corruptions of the poetical form, a circumstance which points to the gradual disintegration of long poems that have been handed down for a considerable time.

As regards the subject, the türcü are predominantly lyrical poems. They include love-songs, soldier-songs, religious hymns, Ramadān songs of the beki night-watchmen, which usually have a dash of humour in them, etc. Special mention may be made of one variety of love-songs, the poems in the popular romances, in so far as they are not artificial products (cf. D. Spies, Türkische Volksbücher, Leipzig 1896, p. 41 sqq.). The soldier-songs frequently contain allusions to historical events. We can observe how old songs are continually being adapted by slight alterations to new events as they crop up. In favourable circumstances one can trace these adaptations through many stages. The love-songs in the form of dialogue deserve special mention, such as for example, the ballad Türkmen Kılal ("The Turkoman maid") first made known by Künoğlu. It is not necessary to assume that this form arises out of the Persian dialogue-ghazal (Jacob, Die türkische Volksliteratur, p. 19). Such poems in the form of a dialogue between a young man and a maid, recited or sung, are common to all branches of the Turks. It is evident of their independence that this origin that they are found in lands where the influence of Muslim culture is very weak or does not exist at all (cf. Radloff, Ansichten über die türkischen Sagen von der Shan Turkei, Andernach 1871, p. 145). The türcü are true songs, i.e. they are intended to be sung to music. It often happens however that the texts do not at all fit the melodies with which they now appear associated. In these cases the number of syllables in the text has to be adapted to the number of notes in the melody by artificial means. As the lines are usually too short, the equation is usually done by inserting superfluous exclamations like oya oya, aman aman, vali vali, aman, etc. or by quite nonsensical explications like gam gam, tilla tilla, etc. The texts of the türcü are also often completely broken up by such parasitic intrusions.

Türcü songs are also accompanied by popular producions of trances.

Bibliography: G. Jacob, Die türkische Volksliteratur, Berlin 1901, p. 19 sqq.; T. Kowalski, Geschichte der türkischen Dichtung, i, Krakau 1923, p. 61–102; Ahmad Taš, Kısıl şairlerinin şeher ve nevü, Istanbul 1928, p. 32 sqq. (cf. thereon Arche Orientolii, ill. 503 sqq.); Mahmut Rüşhü, Anadolu türcüler ve müziği, Istanbul 1928. The fullest collections of Ottoman Turkish folk songs have been made by I. Kılıç. The following of his publications may be mentioned:

TURKU — TÜS

TURUSUN BEG, an Ottoman historian. Turusun Beg whose mabūḥ was Lübübek Ali and also possessed a zafet which soon passed to the son. Turusun Beg took part in the capture of Constantinople and the Kumanlian campaigns of Mehemmed II and we find him in the campaign against Trebizond as a clerk in the 1524 (year of the battle). He later became defterdar of Anatolia and finally of Kumanlia. He still held this office in the reign of Bayazid II. The date of his death is not known. Under the title Tūrīkī Edī'ī (1497), Turusun Beg wrote a history of the reign of Sultan Mehemmed II and of the first six years of Bayazid II. The work, composed between 903—905 (1497—1500), comes down to the year 953 (beg. Dec. 17, 1457). An edition of this Chronicle was published by Mehemmed Arif as a supplement to T. O. E. M., parts 26—38. On the MSS. cf. Babinger, G.O.W., p. 26 sq.

Bibliography: F. Babinger, G.O.W., p. 26 sq., where further references are given.

(T. BABINGER)

TURUSUN FAKHĪ, an Ottoman jurist. Turusun Fakхи was, like Sultan Oğuzhan the husband of Mahbūbe, a son-in-law of Sheikh Ede Bahl who died in 726 (1325) aged 120, and was buried in Bilecik. He succeeded him as muhterem and imām. In this capacity he accompanied Sultan Oğuzhan on his campaigns and preached the first Friday sermon in Kara Hanım in Oğuzhan's name and the first Bâirâm sermon in Eski Shehi. The Sefi in Şemseddin without any apparent reason gives Turusun in 1326 (733) as the year of his death. He must therefore have died practically at the same time as Ede Bahl and Sultan Oğuzhan.

(FRANZ BABINGER)

TUS (original Iranian form Tūs, in Arabic transcription Tus), a district in Khorasan.

In the historical period Tus was the name of a district containing several towns. The town of Nāwīkān flourished down to the end of the third (ninth) century. The name Nāwīkān is confirmed by the present name of the Meshhed quarter Noughān (where the diphthong ou corresponds to the old uwa u mağhūl, i.e. û). At a later date, the other town Tabarān became more important and was considerably extended so that the original Tabarān seems to have become one of the faubourgs of the new town (cf. Irītl), which then became generally known as Tūs. The name Meshhed, at first a simple sanctuary in the valley of Sāmkād, is already mentioned in Muḥaddass. Meshhed first of all encroached upon the adjoining town of Nāwīkān, the name of which disappears about 1330. In 1339 Tūs was destroyed and never rebuilt. The waters which supplied it were diverted to Meshhed. Under the Ṣafawids this, the sacred city of the Shīʿa, became the capital of the old district of Tūs (the valley of the Kahlāf-rūd) and of all Khorāsan.

Situation. Two ranges of mountains stretch
along the north of Khorasan. The one (Koestelagh etc.) rises in the north of Khorasan and runs through Transcaspia. The other (which is a continuation of the Alburz) is parallel to it in the south. To the south of Kucan, the two approach one another and this narrowing forms the watershed. By the corridor which opens towards the northwest the Arak descends to the Caspian. Through the plain in the southeast runs the river Kaghaf-rud "Tortoise river", a left bank tributary of the Hari-rud (river of Herat). The district of Tus lies on the upper part of it. The outer spurs of the southern range (Zerdan, with peaks of c. 2,500 feet) separate it from Nishapur, the waters of which lose themselves to the south in the central desert.

Origins. The nomenclature of the region seems to suggest the presence in Tus of old non-Aryan elements. Regarding the Kaghaf-rud, the Bundahisht says: "The river of Kans comes out of a ravine of the province of Tus and is there called the river of Kasp..." (transl. West, p. 51). Marquart (Untersuchungen zur Geschichte v. Eran, ii, 28) traces the names Kasp and Tabaran (town of Tus) to the lost peoples of the Kassag and Tarvak, of whom traces are found in many places. The Pehlevi list of the towns of Iran (transl. Blochet, in Recueil des travaux relatifs à la philol. et archéol. égypt. et assyriens, xvii, 1895, p. 165-176, §§ 14-15) relates in connection with Tus that the hero Tso, son of Nesar, was sipahkhat there for 900 years. In the Sakk-samme (ed. Mohl, iv, 255) Kai Khusraw when distributing封 فا حبب (or Khurfaqan) to Tus. Other more explicit stories (Nasihat al-Kulâd) attribute to Tus (Tus) only the rebuilding of the town of which the actual founder was Imanushid, which reflects the pre-Islamic date of Tus. According to San'ul-Dawla, i. 199, 377 and Sir F. M. Skyes, the ruins of the oldest inhabited place (or Kakhana) on the right bank of the Kaghaf-rud 4 miles S. E. (read S. W.) of Tus and 10 miles N. E. of Meghad. The ancient Tus has been connected (Spiegel, Eran Altert., ii, 539; Tomasek, Zur histor. Topogr. v. Persien, ii, 219; Marquart, Untersuch., ii, 65; Skyes, op. cit.) with Susia, a town in the province of Areia to which Alexander the Great went from Parthia (Arrian, Anabasis, xxv, ed. C. Muller, p. 84; Caesar, Rerar Acis). As the province of Areia (Old Pers. Huravba) was traversed by the Hari-rud (Kiepert, Lehrb. d. alt. Geogr., 1878, p. 59) we may be permitted to add to this Tus, situated on the tributary of the Hari-rud. On the other hand, the change in the original *Sos [Shos] to Tus would have parallel in Shushtar > Tuswar and perhaps in Shash > Kand. The identification of Susia with Zestan by Khanikow, Artocentric, in J.M.A., Aug. 1875, p. 235-242 is untenable.

[In his recent publication, Archéol. Mittel. aus Iran, 1930, i, 2, 199 and i, 3, 182, Herfeldt interprets the Avestan Tuwa asterismum as "T. of the cadet branch," and explains it from the fact that Vighatspa, father of Darius and ancestor of the younger line of the Achaemenids, lived there. According to the Iranian Bundahish, the mythical Vighatspa removed the fire Aturburzhmahir from Khvarizm to Mount Roshan in the land of the kanarang].

Sasanian period. In the Sasanian period we have very little information about Tus. Legend attributes the death of Yazdagird I (440) to a mortal kick given him by a horse which came from the spring of Sawa, near Lake Shabt (Shab-t-nûma, ed. Mohl, v, 519-523). Nödeke, Gesch. d. Perser und Araber, 1879, p. 77-78, thinks that the topographical details have been added by Firdawsi. We have therefore to ascertain what the latter actually meant. Sani' el-Dawla locates this spring at Naishuma-yi Gilâs (Gulas), one of the eastern sources of the Kaghaf-rud, but the Naqshat al-Kulûd, p. 241, more in keeping with Firdawsi, places it near Lake Naishuma-yi Satir, to the west in the mountains between Tus and Nishapûr (cf. Mo'la' al-Shams, i, 241).

According to the Armenian historian Sebistos, the general Smbat Bagratuni sent (c. 616-617) by Khosrow against the Khânsâns encamped in the district of Tus of the province of Aprash = Nishapur; cf. Marquart, Erânshahr, p. 65.

The Arabic sources are less explicit regarding the administration of Tus before the conquest.

The Arab conquest. According to a story given by Balâḏshâh, p. 334, c. 29 (649) the marzbân of Tus wrote simultaneously to the vassals of Kâta and Baṣra, inviting them to Khorasan, on condition that the conqueror should put him in possession of the province. Khorasan was conquered under 'Othâman (in 29-31 = 649-661) by the vâl of Baṣra, 'Abd Allah b. 'Amir b. Kuraiz. The marzbân of Nishapur after some resistance agreed to pay a tribute (wâzif) of 1,000,000 dirhems (another version 7,000,000 dirhems) while the Marzbân of Tus (Kâzâk; read Kanârân) appeared before 'Abd Allah and made peace by paying 600,000 dirhems (Balâḏshâh, p. 495). One would think that the two marzbâns were different individuals, and Ya'qûbi, Kišâl al-Baladân, p. 295; also speaks of a letter from the marzbân of Tus and of 'Abd Allah's reply which the descendants (nulâdât) of the marzbân still preserved in his time. According to Tabari, i. 2886, however, when 'Abd Allah had established himself in Nishapur, the other half of the province, i.e. Nasir and Tus, remained in the hands of Kanârân with whom 'Abd Allah had to make peace in order to be able to go on to Mars. As Marquart has shown, the title Kanârân (or Kanârâ, in Greek Kânârân) was probably descended from a pre-Sasanian dynasty (cf. Marquart, Erânshahr, p. 75; Christensen, L'espoir des Sassanides, p. 27). The intrigues to which Balâḏshâhi and Ya'qûbi allude and which were to facilitate the conquest may have originated with some member of the family of the Kanârân, a rival of the lord of Nishapur.

In the period of Arab rule Tus played no independent part but its name is however often mentioned in the records of civil wars. Under the Omayyad 'Abd el-Malik (65-86) the citadel of Tus was occupied by a body of Bani Tamim (Balâḏshâh, p. 415) who still held control in 725 (Tabari, ii. 1771). In 130, Kâhu'a, a liwanet of 'Abû Muslim, inflicted a decisive defeat on the
Omaiayd mali. Naṣr b. Sāyūr near Taṣ (Tabarit, ii. 2009; Ibn al-Athir, 1: 282, 292, 295). In 134 a. the news of Abu l-Khaṭṭab of Nusayr rebelled in Khurāsān and for a time seized Taṣ, Nishāpur etc. On the 20th Djamād-Il 134 (March 24, 809) Hārūn al-Rashīd, who was operating in Khurāsān against the rebel Rāfī b. Lāṭūr b. Naṣr b. Sāyūr, died at Taṣ (Tabarit, iii. 733). On the 1st Safar 203, the ‘Abī A‘īl b. ‘Abd al-Malik b. ‘Abd al-Rādād died in the village of Sanābād of Taṣ. According to Ibn al-Athir, vi. 203, al-Mu‘āmmil prayed to God for the deceased and interred him near the tomb of his father (“in the garden of Humayd b. Kaḥfaba”), following Mus‘ir b. Muḥallib quoted by Ya‘qūbī. Sanābād is the modern Māshqīd [q.v.]. The tomb of Hārūn al-Rashīd, now completely disappeared, was beside that of the ‘Abī A‘īl for, according to Ibn Ba ṭūṭa, used to kick the tomb of Hārūn (which however was still kept in good order in the 12th century).

According to his father’s wish, Muḥammad (read Nawāk) was to be taken to the Tahirīyya, but after the seizure of the capital the capital was moved to Nishāpur (between 252 and 253; cf. Ya‘qūbī). The historical sources state that in 250 (872) Taṣ was destroyed (nakhrabat), evidently as a result of the rebellion of Abū ‘Abd Allāh al-Khadījastānī, an old servant of Muḥammad b. Tāhir who had seized Nishāpur in 245 (ibid., iii. 1931; Ibn al-Athir, vii. 227; cf. Debinsky, Memsirs, sur Ahmad, fils d’Abd Allāh, in J.A. [1845], 345-362). Ya‘qūbī (278 = 891) still mentions Nawāk as the principal town of Taṣ. In 283 the Sa‘ādīr ‘Amr b. Lāṭūr reported to the Caliph that his men had defeated Taṣ and the Amīr Rāfī b. Harṭahmān who had been asserting his independence in Khurāsān from 271 (884) (Tabarit, ii. 2160; Ibn al-Athir, vii. 334).

The Sāmānīids. In 309 Lāṭūr b. Mu‘āmmil, one of the generals of the ‘Abī A‘īl b. Ḥasan b. Kāsim, came to Nishāpur and had the ġāba‘a read there in the name of the Sāmānī b. Ḥusayn. By orders of the Sāmānī b. Ḥusayn b. ‘Abd Allāh b. Bakhrūr against Lāṭūr. He was at first defeated at Taṣ, but Lāṭūr later lost his life (Ibn al-Athir, viii. 91). In 336 (947) the governor of Taṣ and its dependencies, Abī Maḥmūd b. ‘Abd al-Kazzāk rebelled against b. ‘Abd Allāh b. Naṣr. The latter sent Abī Maḥmūd b. ‘Abd al-Kazzāk to Khurāsān. Muḥammad went from Nishāpur to Uṣūnaw (Kīčan). His brother b. Rāfī b. Harṭahmān was the chief of Uṣūnaw and the latter in the fort of Samuilān and later in the fort of Darak (3 farāks from Samuilān). Samuilān was dismantled but Rāfī succeeded in retaining what was left at Darak. Lastly in 339, Muḥammad b. ‘Abd al-Raṣṣāl, being paraded by b. Rāfī returned to Taṣ (Ibn al-Athir, viii. 355, 361). The personality of Abī Maḥmūd is particularly interesting on account of his friendship with Firdawṣī (cf. Shekh-nawma, ed. Mohl, l. 20, ed. Vulcini, l. 10–11). Abī Maḥmūd beautified the cathedral mosque of the town of Taṣbarīn which henceforth was the first in Taṣ (Muḥaddas, p. 319). In 349 Abī Maḥmūd was appointed sipahsālī but immediately dismissed in favour of Alp-tegin. The latter settled in Nishāpur and Abī Maḥmūd retired to his ex-fief of Taṣ. In 350 (961) after the accession of the Sāmānī b. Rāfī, Alp-tegin fell into disgrace. Abī Maḥmūd who had sent troops from Taṣbarīn and Nawāk toward Cāna (on the road from Nishāpur to Marw; cf. Ghūrā Maḥāra, G.M.S., p. 51) did not succeed in stopping Alp-tegin. Fearing the wrath of his master Abī Maḥmūd rebelled and was ultimately poisoned (Gardizi, Zain-al-‘Abūdīn, Berlin 1928, p. 41–44).

The Arab geographers to the end of the fourth (10th) century. Ibn Khurdabkh (323–346), p. 24 and Kudamā, p. 201, place the district of Taṣ on the Nishāpur–Sarqax road; Nishāpur–Sarqax 4 farāks (Ibn Rusta, p. 171; Faghṭi 4 farāks); al-Hamār 6 farāks (according to Ibn Rusta, the distance is 5 f.; this “red village”, so called from the colour of its walls, is situated in the mountains); al-Muḥākkah (Ibn Rusta: Barā‘a) belonging to Taṣ 5 f.; al-Nawāk 5 f.; Mundūrān al-Kabār 5 f.; Aqṭān (Aqwān) 3 f.; Sarqax 6 ½ f. This makes the distance between Nishāpur and Nawāk (= Mustagh) 20 f. Ya‘qūbī, 2 farāks; Ibn Hawqal, 3 farāks (which shows that the road ran round the south side of the mountains which separate Nishāpur from Taṣ, for Ibn Hawqal, p. 331, says that one can “ascend” in a single farāk from Nishāpur to Taṣ, 5 farāks before Nawāk the land of Taṣ begins which evidently means the whole district.

Ya‘qūbī’s figure of 891 (p. 277) says Nawāk is the largest town in Taṣ. Ibn Khurdabkh valued the kharābiyya of Taṣ at 740,000 dirhams. Ya‘qūbī says that the kharābiyya of this district (bahlā) is included in that of Nishāpur. The people of Taṣ were mainly Persians but there were also some Arabs (Tayy; cf. also p. 306).

Buldāht (the passage quoted by Muḥaddas, p. 331, is not found in the Futūh al-Hulayd, ed. de Goeye) already mentions Taṣ among the dependencies of Nishāpur (Irāqāshir, read: Abargāshir). Muḥaddas, author of the most complete description of Khurāsān, emphasizes the subordinate character of Taṣ. “If some said that Nishāpur has eclipsed Taṣ, one would reply that Taṣ has never been a town to be eclipsed!” Muḥaddas repeats several times that Taṣ, like Nishāpur and Abargāshir, is only a kāhānī (“grain depot”) of the kābīr of Nishāpur (p. 50, 295, 300, 3019). Among the towns of the district of Taṣ, Muḥaddas mentions al-Taṣbarīn, al-Nawāk, al-Rādīkān, Dūanbād, Usrānī, Trūḡhūl (the last three are uncertain). The largest of these at this time was Taṣbarīn (375 = 985). It had a citadel and from the distance resembled Medina. Muḥaddas mentions its busy market in which there was the cathedral mosque which Muḥammad b. ‘Abd al-Raṣṣāl had embellished (nakhrabat). The water ran in shallow subterranean canals; forests and firewood were abundant and the prices of merchandise moderate. In spite of all this, Taṣbarīn was a wretched little town (būlāzq) the outskirts of which were in ruins, the water bad and the climate cold. The inhabitants professed the Shī‘ite rite and were capable of being very troublesome in times of turmoil. Taṣ produced toasted or boiled cooking vessels (kūḏin), mats and wheat as well as striped materials and šīk (cords for supporting awnings) of good quality. Nawāk was below Taṣbarīn (piton, perhaps “lower down the river”). In Mustagh there was a citadel with houses and a market; the mosque built on the
where the Imam 'Ali was buried was uninjured. Ibn al-'Athir gives a list of individuals of note slain on this occasion.

The family of al-Mu'a'iyid. In 548 (1153) a slave of Suljân Sinjâr Ay-Abâ al-Mu'a'iyid carried out for himself a small kingdom including Nâhpûr, Tûs, Nasâ', Damghân etc. Sinjâr's successor, his nephew Mahmûd b. Muhammad (the Kara-Kânîd; cf. Barthold, Turkenstaeton, text, p. 27), had to be content with the payment of tribute by Mu'a'iyid. In 552 Mu'a'iyid's rival Aitulâh (Ay-tâk) devastated Tûs and its townships, after which the district was left waste (ibid., xi. 150). In 553 the Ghuzz, having defeated Mu'a'iyid near Marw followed him up and sacked Tûs. In the same period a quarrel broke out in Khurâsan between the leader of the Shahtûs Mu'a'iyid b. Husain and the 'Alawîs. The people of Tûs, Isfârâyîn and Djuwânî supported this other Mu'a'iyid but the 'Alawîs were vanquished. These internecine struggles brought about fresh devastation (ibid., xi. 155). In 555 Mu'a'iyid Ay-Abâ after a quarrel had a reconciliation with Mahmûd and as soon as he was reestablished in his post began to harass the 'Alawîs. In 560 the suzerain Mahmûd who was dependent on the Ghuzz quarreled with them. The Ghuzz sacked Tûs (nakham fâlikon) including Mesghid but did not touch the sanctuary. In 557 (1160) Mu'a'iyid blinded Suljân Mahmûd and had the khâtûb said in his own name (ibid., xi. 180; Barthold, op. cit., p. 335). He laid siege to the fortress of Waskarakh-Khûtî (which belonged to Tûs, where a certain Abû Bakr Qânîdî had installed himself. Mu'a'iyid took the fortress and Karastân (which also) in 558, Mu'a'iyid recognised the suzerainty of Suljân Arslân (of the 'Irât). Ibn al-'Athir gives a list of his lands which included Qâmîs, Nîzhî and Tûs and it extended from Nasâ' to Tabas-Kunkî (ibid.). In 568 Mu'a'iyid, who had taken the side of the Khâirimshâh Suljân Shâh Mahmûd, was taken and executed by the latter's brother Suljân Tâkâsh. Under Tâghan-Shâh, son and successor of Mu'a'iyid, his slave Kus-Kush in 568 took Tûs and Zâmî (Djâm; cf. Ibn al-'Athir, xi. 248; according to the Manûbîr al-Tadrîjât of Abu 'l-Haasan Bâläh). According to another source used by Ibn al-'Athir, xi. 253, the Khâirimshâh Tâkâsh (in 568) before his final struggle with Mu'a'iyid advanced as far as Tûs. In 576 (1181) Suljân-Shâh having received the support of the general of the Kara-Khanî Fûmî defeated Tâghan-Shâh and seized Sarakhs and Tûs. Tâghan-Shâh died in 581 (cf. Djuwânî, ii. 19-23; Barthold, op. cit., p. 339).

The geographers of the xith century. Samânî (d. 562 = 1166), G.M.S., p. 375, mentions in Tûs two towns (Tâbûran and Nâhpûran) and over 1,000 villages. Idrîsî (548-1154), transal. Jaubert, ii. 184 (= MS. f. 164) puts the distance between Tûs and Nâhpûran at a 4 days' journey (marzâ)'a). Tûs is a considerable town, well built and thickly populated. In the vicinity were a number of towns with minbars: Rûkân (sit.), Bright, Dûnûs, Mirhân (according to Ya'qûbî: town of Isfârâyîn) and Mûlân (sit.), "a most noteworthy town" with a good citadel and earthwork. On "the mountain of Mîlkân" there were quarries for stone out of which were made mortars and cauldrons (hirbûn), and also mines of silver, copper, iron, turquoise, dahamûs and rock crystal. A number of inaccuracies were inevitable in Idrîsî who was writing in Sicily.

THE ENCYCLOPAEDIA OF ISLAM, IV.
The Khwārizmshāh and the Ghurids. In 594 Takaš, who had risen against the Ghurids with the help of the Kara-Khitai, went by Tūs to Harāt. In 597 the Ghurids Ghishār al-Dīn seized the lands of the Khwārizmshāh in Khurasān. Tūs surrendered after a siege of three days and was sacked (Djouwaini, ii, 48). In the next year, the Khwārizmshāh 'Alī al-Dīn Muḥammad reconquered Khurasān and laid siege to Harāt, but the Ghurids Shīkhār al-Dīn drove him back. Takaš before returning put to death the lord of Nūshāpūr, the amir Sanjar b. Tughān-Shir b. al-Mu'āliy, suspected of plotting against him. Shīkhār al-Dīn came to Tūs and spent the winter there (Ibn al-Athīr, xii, 59, 111; 118).

The Mongols. At the beginning of Rābi' al-akhir 617 (1220), the generals of Cingiz-Khān Yемеn (Djihe) and Subutai pursuing the Khwārizmshāh came to Nūshāpūr. Subutai left for Djam and Tūs. The eastern townships of “Tūs-Nawḵūn” were submitted but the inhabitants of the town (i.e. Tūs-Tābarān) did not give a satisfactory reply. Subutai ordered a general massacre (batt-i-bafrī) in the town and vicinity. Rādikān, the situation of which Subutai liked, was spared (Djouwaini, Qītānān-gūshā, G.M.S., i, 114-115). After the two generals had gone, the people were able to breathe again (ibid., p. 117). The chief of the militia of Tūs (ḥafr-i-raūst) was bold enough to kill the Mongol šoqān, but the Mongol general Kāšīnūrī, hastening from Ustānā (= Kaṭān) arrested the culprit and began to dismantle the fortifications. In the meanwhile, the advance guards of the army of Ťoluj (Tūj), son of Cingiz-Khān, had arrived in Khurasān. The last forts of Tūs were occupied. Nawḵūn (and Kār-i) resisted vigorously; but Nawḵūn was taken on the 28th Rābi' al-akhir 617. In the spring of 618 (1221), Toluj himself arrived from Marw. At one stroke the army occupied all places in the valley of Tūs and the last remnants of the population (nebāy-yi izzātār) were put to death (ibid., p. 130-135). The first sūkī of Khurasān appointed by the Mongols (under Ťogotai, 624—639) was the Kara-Khitai Khamdūrū (Qāsīnūrū), reading uncertain; cf. Rādikān al-Dīn, ed. Bl措et, p. 37). The citadel of Tūs was occupied by an advenutier, Tadj al-Dīn Fartānāh, who submitted to Kūlūnūt (= the one who was sent by Khāndūrū (Djouwaini, ii, 220). In 637 (1239) the Lakhwīr Buddhist Kūrūk ("the Long") was appointed to Khurasān and made Tūs his headquarters. In all the town (the old Tābarān), there were only 50 houses still inhabited. Kūrūk began to build government offices (iṣmārat). Contra the Mongol custom he built a solid treasury (khānāyā in the centre of the citadel (iṣṭūr). The town began to recover rapidly and the prices of municipal plots went up a hundredfold in a week (Djouwaini, ii, 255, 260).

Karākūs was succeeded by the famous amir Ovrat Arghūn. On returning from his journey to the erās in 643, he saw that the Masjūriya palace and the forts (ṣagār) were completely in ruins and gave orders to rebuild them (ibid., ii, 245, 247). Confirmed in office by Motke-Kaṭān (649) Arghūn entered the government of Nūshāpūr and Tūs to Malik Nasir al-Dīn 'Ali (ibid., p. 255). Arghūn then entered the service of Hulghū and in the reign of Aḥāba died in 673 (1275) at Kaṭān of Tūs (Rādikān al-Dīn, ed. Bl措et, p. 559). The place of death of Arghūn suggests that his own estates were in the district. The activities of his son Nawżūr (who converted Ghara to lāmūn but was executed by his orders at Harāt in 696 [1297], cf. d'Olsoum, iv, 190) were closely associated with Khurān and thus paved the way for the later successes of his family.

Christianity in Tūs. Traces of Christianity must have survived in Tūs from the Saffārīd period (cf. above). In the biography of Shaikh Abu Sa'id (1067—1049), Ahrūs al-Tanzūlī, ed. Zukowsky, p. 70, we have a curious story of his meeting with the child who was later to become Nūshāpūr al-Mulk (born in 1017—1018) at Tūs (= Tābarān) "at the beginning of the street of the Christians" (ari zar-ī kāwarī tavākūn). In the Mongol period the Christians enjoyed greater freedom. When in 1278 the future patriarch Nābhālārī was on his way from Mongolia to Jerusalem, he went to the monastery of Mār Šeybūn "near the town of Tūs" and there received the blessing of the bishop and of the monks. In the year 1350 of the Greeks (= 1279) the bishop of Tūs, Simeon, was ordained metropolitan of China (Bar Hebraeus, Chron. Enl., ii, 449).

The geographers of the XIII-XVII cent. Yākūt, iii, 500, gives few details about Tūs and only reproduces the fables of Mis'ār b. Muḥallā about a powerful stronghold on the road between Tūs and Nūshāpūr built by a Hindū king (tawāsīb). Under Tābarān (iii, 406) and Niḳūn (iv, 524) Yākūt says: "Tūs consists of two towns of which the larger is Tābarān." At Nawḵūn Yākūt mentions the manufacture of pots and caddrons of stone (cf. Lisān al-Arab, xiv, 311 on the stone pots which the pilgrims bring from Meḥshid). A village of Tābarān also existed at Khurān and there was a village of Nawḵūn at Nūshāpūr. Zakariyā Kāzvīnī, Akbars al-Bilād, p. 275, seems to have been the source of many confusions (cf, their excellent analysis in Samī al-Dawla, i, 190—199) by saying that Tūs was "a town of which the two parts (mahāllātāin) were Tābarān and Nawḵūn". In reality these two towns were separated by a distance of 4 farsakh, as ʻAbd Allāh Mustawīt (G.M.S., p. 151) rightly points out.

According to Ibn Bāḍīs, iii, 77, Tūs (= Tābarān), which he reached from Djam, was one of the largest towns in Khurasān. From Tūs he went to Meḥshid which at this time must have encroached upon Nawḵūn for of the latter the traveller says nothing and from this time the name disappears completely.

The Dīn-Ghorbān. These rulers were the direct descendants of Nawżūr b. Arghūn. Their name was probably that of one of the sections of the Mongol tribe of Ovrat (quwāṣhārān = the three [detachments] of the left [wing]), later given a Persian dress as Djam-Kurān (those who sacrifice their souls); cf. Dawlat-Shāh). After the extinction of the Mongol dynasty of Persia, the son of Nawżūr, called Arghūn-Shāh, won for himself a kingdom in Khurasān which, according to Hāfiz Abru (quoted in Barthold, Inter-geogr., ehre frasat, p. 769), included Tūs, Kaṭān, Kašān, Kūt, Ahūward, Naşā, and Marw. Dawlat-Shāh (Bombay edition 1887, p. 121) calls Arghūn-Shāh "ṣagārān of Nūshāpūr and Tūs", but in 738 Nūshāpūr was taken from him by the Sarbadār Mašūd. Arghūn-Shāh played a considerable part in the election of Tugh-Timur (q.v.). After the latter's death (754), his possessions were divided among the Sarbadārs, the Karts and Arghūn-Shāh, but the Sarbadār Karashī at some time took Tūs from
Argān-Shāh [cf. SARKARA; one of the gates of Kūrān named Dasrān-ta-ya Argāhwan-Shāh (sic) owes its origin to this prince rather than to the 14th-century Arghun who was never called Shay].

The successors of Argān-Shāh were his sons Muhammed-beg and Alī-beg. When at the beginning of 1383, Timūr came to Tūs, Aḥ-ī-beg went to pay homage to him but in the winter of 1381, he shut himself up in the fortress of Kūrān. After many vicissitudes, Aḥ-ī-beg surrendered to Shahīd 'Alī Bahādūr in 784. As a reward Timūr gave the latter Rādān. Aḥ-ī-beg was deported to Andijūn and executed there towards the end of the year. Others of the Dūr-Gorābīn were exiled to Tūshent (Zafar-nāma, i. 324, 335, 351, 385). But in 791 (1389) a rising took place in Kūrān, which was joined by the Sarbadārā, Ḥaḍjdī-beg (younger brother of Aḥ-ī-beg) and the troops of Kūrān and Tūs. The Zafar-nāma briefly records the suppression of the rising by Mirān-shāh (i. 468—469). A much more detailed account is quoted by Şanf al-Dawla (op. cit., p. 208—209). Timūr is said himself to have appointed Ḥaḍjdī-beg to Tūs (in 789) where he amassed great wealth. The rumours of Tokhtamish's successes turned Ḥaḍjdī-beg's head and he stopped the kūhā for Timūr and proclaimed his desire for independence. He fought for several months with the amir Aū-bāq-I who remained faithful to Timūr. On the arrival of Mirān-shāh, Ḥaḍjdī-beg fled but was captured and put to death.

The town was taken in Radja I 791 (1389): 10,000 men were killed and towers of skulls (mnāra) erected at the gate of the city. *No trace was left of Tūs.* In 807 again, Timūr had executed near Taškhabad (Asḥi Sabt) the Dūr-Gorābīn Aū-bāq-I and Kāra-būq-I, who had been plotting in his absence (Zafar-nāma, ii. 597). At the present day, the country north of Meshhed (from Colaykhan to Kalūya-Tūs) is inhabited by a tribe which is called the campament (yurut) of the Dūr-Gorābīn tribe (Şanf al-Dawla, op. cit., p. 197).

End of Tūs. Tūs (i.e. Tābārān) never was able to recover from the events of 791. It is true that Shahīdā after his accession to the throne of Kūrān in 807 sent to Tūs the amir Saiyid Khabādā with orders to rebuild the town. In 809, Tūs, Kūtān, Kūrān etc. were given to prince Ulugh-beg. In the period of the decline of Timūr's line, some members of it exercised more or less independent power at Tūs: in 822 Mirza Shah Ḷajmūd, in 905 Mirza Muḥammad Ḫusain (son of Şalāh Ḫusain Baikāra).

In 918 'Ubayd Allāh-khan Orbekh, having raised the siege of Harān, came to Tūs and Ifsarān but after some months evacuated Kūrān on the approach of Shah Ḳamīl. In 947 the Ḳahīr al-Siyar mentions a governor in Tūs of Meshhed*. Khānīkow found at Tūs a funerary inscription of a šah-i-bādī Ibrahim dated 983. The argument of the same traveller from the fact that the name Tūs does not disappear from Persian astrological till the sixteenth century A.D. is, by no means conclusive, for we know how tenacious geographical memories are in the East. Amin Ahmad Rāzī in the Hafiz-i-Nāla (Iblī, Nat. Paris, MS. suppl. Pers. 355 e., f. 264—274) no longer mentions Tūs; in speaking of Meshhed he says: *This will be at once called Tūs*. At the beginning of the sixteenth century, Zain al-Abidin Shīrānī, Rūṣūl al-Siyāh, Taḥerīn 1315, p. 354; says: *This was a well-known town in Kūrān. Destiny has so destroyed it that all that remains is a village of 30 houses*.

Two causes have contributed to the disappearance of Tābārān—Tūs: the weakness of its geographical situation in the plain, open to every invader, and the popularity of Meshhed which is protected by the renown and sanctity of its sanctuary, and attracts crowds of pilgrims. The Indian traveller Abū al-Karim who visited Meshhed with Nādir-Shāh in 1153 (1741) rightly observes that the splendour of this town caused the ruin of Tūs (transl. Langles, 1797, p. 74).

Antiquities. Fraser, Khanskiw, O'Donovan, Zakowsky, Jackson, Dier and notably Şanf al-Dawla and Sykes have described the ruins of Tūs, i.e. the town of Tābārān. They are situated on the left bank of the Kāsha-fūrūd about 15 miles (4 farsakhs) north of Meshhed (Nawākīn). The walls of the town are of brick and form an irregular circle a farsakh in circumference. Their thickness at the base is 5 dhār (about 15 feet). The remains of 106 towers and 9 gates can still be traced. The area occupied by the old town according to Sykes is about 2,300 yards each way.

On the north side of this area are the ruins of a square fortress each side of which measures 200 dhār (= yards). It has 12 towers. The ditch surrounding it is 15 dhār broad. In the middle of this arbān an artificial mound was a fort, oblong in shape 80 × 50 faces (measured).

It had 9 towers. Two little villages, each of 25 houses, lie at the foot of the wall inside: to the west lie the villages of Tūs-i Karim-khānī and to the east Tūs-i Bahādūr-khānī. To the N.E. outside the wall are the fields of a third village (maṣūra) Isfārsūa.

In spite of all the lack of attention on the part of the authorities, popular memory, even after the lapse of nine centuries, has not forgotten the site of Firdawsi's tomb. It is shown inside the town near the N.E. wall. Niṣām-i 'Arūsī, who visited the tomb in 1110 (1706) locates it in the garden which had belonged to Firdawsi "inside" the Rūḏīn gate (Cahār-mašā'ī, G.M.S., p. 51; darūn-i darvāsā. By a slip, Brown, A Litt. Hist. of Persia, i. 138, translates *outside* the gate*). As Sykes has shown, the village of Rūḏīn (modern pronunciation; Rūzān) still exists 9 miles N.E. of Tūs and the "Rūḏīn gate" corresponds to the one it ought therefore to be at the birthplace of Tūs-i Bahādūr-khānī. The Rūḏīrāh gate (cf. the story of Firdawsi) must have been at the opposite end of the town. The Nūḥat al-Kulīb, p. 151, moreover positively asserts that it was S.E. (dīnābī-bālā, i.e. opposite the great bridge over the Kāsha-fūrūd which still exists to-day. According to Sykes, Kūtānā was the name of a mountainous district between Tūs and Nāshāpur but Kūtānā may simply mean the part of the town near the river, i.e. the Kāsha-fūrūd. The village of Bāš, which Firdawsi owned, corresponds to the present village of Bāš (or Bāz) 4 miles S.E. of Rūḏīn (see the photograph in Sykes, A seventh journey, G.J., xiv. [1913], 305). The village of Bāš-i Tūs 2 parasakhs from the town of Tābārān is mentioned in the biography of Shaikh Abū Sa'ād (967—1049), Aṣrār al-Tamādūl, p. 68, which also mentions a place called Burārān, one parasakh from the town and the khānagāh of Ustād Abū Aḥmad in the town.

The village of Shālā, the birthplace of Firdawsi, also has been identified in the neighbourhood of Tūs (as I am informed by Taṣi-zade).
As to the tomb of the poet itself, Dawlatshah (852 = 1457), Bombay, ed. 1887, p. 39, says that it is beside the dome of Abab’i and is a place of pilgrimage, and Kashi Nuz Allah (end of the 12th [12th] century) in the Magżīl al-Ma’āniyya (Magżīl No. 12 on the Persian poets) claims to have himself visited it. He adds: "in spite of the ruin of its generally and the destruction of the tomb by order of 'Ubaid Allah Khán [its site] is well marked and obvious" (mawjud bād ma‘ma’ayin). [The contrary interpretation by Zukowsky, according to which 'Ubaid Allah Khán ordered the tomb of Firdawsi to be "put in order"], seems due to some misunderstanding of the MS. which he quotes, Univ. of St. Petersburg, No. 147, fol. 63. If we may believe Fraser, loc. cit., p. 319, a little building surrounded by a dome decorated with faience still existed in 1822. In 1838 Khanjoo could find no trace of it. In 1883 the Wali of Khurāsan, Aṣaf al-Dawla, having cleared away the mound (žālep) which had accumulated with the crumbling away of the old building (cf. Fraser) covering the tomb with brick and surrounded it by an earthen wall. His death stopped further work. The peasants told Zukowsky that the tombstone of Firdawsi had been taken away for the building of a bath but Zukowsky expresses doubts on this point. Under the Pahlavi régime and on the initiative of Anti Kāi-Khuṣraw, a Parāt deputy to the Persian medjīl, a building has been begun to mark in a worthy manner the resting-place of the author of the Žālp-žūma. [The doubts expressed regarding the site of the tomb by Sykes, F.R.A.S., 1910, p. 1120, seem exaggerated in view of the existence of an uninterrupted tradition and the statements of Zukowsky].

In the midst of the ruins of its stands a fine brick building (Sa’m al-Dawla, l. 180: hā’īs mawṣul "like a mausoleum") now dilapidated. According to Dīz, its plan is a parallelogram 18.6 × 25 metres and its walls are extremely thick (3.60 m. × 5.40 metres). The height of the walls to the foot of the dome is 18 m. (Sa’m al-Dawla). The building consists of three parts: 1. the entrance (žālp 8.70 × 3.20 m.); 2. the chamber under the dome (Kapheppale), 12 × 12 m. and 3. rooms of different sizes with vaulted roofs. Sa’m al-Dawla (l. 181) relying on the absence of covering for the walls had already suggested that the building had never been finished. A single inscription noticed by Sa’m al-Dawla is al-dunjī atat ("this world is but an hour"). There are no dates. Dīz (p. 59) alluding to the similarity of style with the mausoleum of Sulajin Šanḏar at Marw (1157) proposes tentatively to identify it with the tomb of Abū Šāفائ al-Qazālī (d. 595 = 1191). But the translations of the texts on which Dīz relies are inaccurate. Yāqūt says only that Qazālī was buried in his native town, Ibn Baṭṭūṭa, ii. 77, also continues himself to saying "and there (at Tūs) is his tomb (stayr)". It would be strange if the Maghribi traveler had not given some note on the mausoleum. Inside the mausoleum on the ground are the tombstones of a certain prince and descendant of the Prophet (Ṣāḥib-yūqūl, contrary to the translation quoted by Dīz, is not a name but a title) and of his daughter (the princess; shuyqūrat) Māhwaš Khānīn. These stones do not belong to the mausoleum but have been brought from outside. The tombstone (nāqebkīyeh) of the prince Ḳaḥīm (983) which Khanjoo, Oltīr, saw at Tūs likewise cannot be connected with this building.

As to the ruins of Nūḵān, they lie immediately to the east of Meshed as far as the villages of Hūrašūd and Mīhrābūd. Sykes found sepulchral inscriptions dating from 1360 (1539) to 1399 (1688). The quarters of Meshed adjoining the ruins is also called Nūḵān (Sykes, op. cit., p. 1116).

(Contrary citations.)

TŪS, according to Yāqūt, a village a farsakh from Marw al-Qāhīd (q.v.) In 1350 the Umayyad wilh Naṣr b. Sīyāk, a vizier on pressure from Abū Musa, was imprisoned on the river that, already appointed and Abu l-Dhaϊyāl to Tūs, the inhabitants of which were partitions of Abū Musa. Abū l-Dhaϊyāl was defeated at Tūs (cf. Ibn al-Antir, v. 282). (Y. Minorsky)

AL-TUSI NAṣIR AL-DIN, Abū DIYĀK MUHAMMAD B. MUHAMMAD B. AL-ḤASAN, astronomer, polymath and Shi’a politician of the period of the Mongol invasion, born at Tūs on the 11th Djamād al 1737 (Feb. 18, 1201), died at Baghdad on the 18th Dha’i (12) Hindji 672 (June 26, 1274).

Naṣir al-Din al-Tūsī began his career as astrologer to the Emir of the city of Nisār al-Din Abū al-Rāmi b. Abī Ṭasnīr, a vizier and supporter of Najīr al-Din’s court. After his attempt to transfer to the caliph’s court had been betrayed, he was kept under supervision in Serakht, and later in Alamut (q.v.) but allowed to retain his office and continue his researches unhindered. In 644 (1245) he played the Assassin leader Rukn al-Din Khwāshah into the hands of Hülagü (q.v.) then accompanied the latter on his trusted and now to the conquest of Baghdad, founded by his orders the observatory of Najīr al-Din, became vizier and supervisor of waqf estates and retained his influential position under Abī Ṭasnīr (q.v.) also without interruption until his death.
Tusil's political attitude was determined by his strong sympathy with the "Twelver," which made him with his talents and versatility a leader of the Iranian-Shi'a oligarchy on the Mongol side against the caliphate. It was through his influence that a certain degree of mercy was shown the Shi'a during the Mongol holocaust and their sanctuaries in Southern Mesopotamia were spared. Among his writings (see 56 titles in 4. A. E., i. 508 sqq.; cf. also Nallino, in Orientale Moderno, viii. 43 sq.) are two hand-books of dogmatics much esteemed by also-religious and several times commented upon: the Taqdir al-Asbah (Teheran n. d.) and Ruhul-Asbah (Teheran 1305 with the commentary of his pupil Ibn al-Mujahhar). The teaching of the Twelvers concerning the Imâms is clearly worked out and also in the metaphysics al-Fâsîl written in Persian (cf. the annotated Arabic edition in Berlin MS., No. 1770, fol. 1388 sqq.). Tusil's logic and philosophy is also occasionally expressed in his dogmatic writings as the formal preliminary to the dogmas, which are substantially derived from Shi'a tradition. It belongs to the school of Ibn Sinâ (q.v.). On the latter's al-Ishârât wa-l-Tanbihât he composed the commentary Hall Muhshârât al-Ishârât (Lucknow 1930). Here he defended Ibn Sinâ against Fâqîr al-Dîn al-Rāzî (q.v.) and further wrote against the latter's Muhaffalât al-Athâr fi al-Muhabbat al-Din (Teheran 1320), however much the fact of his Shi'ism and reverence even for al-Hallâdî distinguishes him from most of his co-religious. In Fîkh he wrote on the law of inheritance; of his occult works a Kitâb al-Râmî has survived (Munich, Arab MS., No. 880). While still in Sûrakhût he dedicated to his patron there the treatise Al-Dībāb Alkhâl-î Naqîrî still frequently reprinted (Lahore 1625; Bombay 1657 etc.) which shows the influence of Ibn Miskawwâl. His devotion to his own sect did not in any way cut him off from others. He discussed scientific matters with Dâllî al-Dîn Rûmî by letter and with Nâmî al-Dîn al-Khâtî (G.A.L., i. 466) orally. He worked with the brothers Liwwânî (q.v.). To one, the historian Allâh al-Dîn, he dedicated his Ta'ârîf Muhaqqal and to the other, the Sâhib Dîwân Shams al-Dîn, the Awâfî al-Ashâfî; and he owes his fame beyond Shi'a circles to his books and researches in the exact sciences: medicine, physics, mathematics and particularly astrology and astronomy.

Al-Tâsî's medical works are of no particular scientific importance. In Physics, as an astronomer, he was primarily interested in questions of optics, both geometrical and physiological. To this field belongs his Ta'ârîf Kitâb al-Manâqî, a version of the Optics of Euclid, and the Râ'hî al-`ilm al-`aswâr wa-l-`awzâhî. The industry is remarkable which al-Tâsî displayed in editing and improving the translations made by Thâhî b. Kûrâ, Kâkî b. Lûkâ and Ithâbî b. Hûnîn of Greek mathematicians and astronomers; we may mention among mathematicians, Euclid (Elements, Data, Phainomena), Apollonius (Conica), Archimedes (Dimension of the Circle, Sphere and Cylinder, Lemnata), among astronomers, Theodorus, Menelaus, Antolykos, Aristarchus, Hypsicles and Ptolemy. His most famous original work is the Kitâb Shâhîl al-`asfâh, a work on the principles of the transversal, from which he deduces relations of fundamental importance in spherical trigonometry. He also wrote a book on arithmetic, Muhammâd al-Dîwânî, al-Haithâm bi l-Tâhîr wa l-Tâhîb, which gives the principles of the field of astronomy. He owed the means to conduct his researches to the astrological interests of the Mongol Khâns, particularly his patron Hüllûq. The latter entrusted him with the building of a great observatory at Marâq, which was equipped with the best instruments, some of them constructed for the first time, and a large staff of observers. Tâsî was already 60 when the building was begun, but he was spared another 12 years to finish completely the task of calculating new planetary tables based on comprehensive observations. His calculations he recorded in the Tâhîb al-Manâqî. The first Mashâl deals with eras, the second with the movements of the planets; the third and fourth are devoted to astrological observations. Of further works we may mention the Kitâb al-Tâhîbîr al-Nâsirî, a survey of the whole field of astronomy, on which numerous later scholars wrote commentaries, and the astrological Kitâb al-Fa'îl.

AL-TŪSĪ, Muḥammad b. al-Ḥasan b. 'Alī, was born at Tūs in Ramāzān 385 (995). After receiving early education at his native place he came to Baghdaḍ in 408 (1017) and studied under al-Shāhīd al-Muḥāfīd (Muḥammad b. Muḥammad al-Baghdādī), who lived from 405 to 1022. On the latter's death, al-Tūsī associated himself with Sa‘īd b. Muḥammad and al-Muṣṭaṣir (Al-Tūsī, d. 436 = 1044) and was his companion and pupil for about twenty-three years. When the latter died he stayed on at Baghdaḍ for twelve years and tried his utmost to spread the doctrines of the Shi‘a sect. His enemies once complained to the Caliph al-Kā‘im (422-467 = 1031-1075) of his hatred of the first three orthodox Caliphs and supported their allegations by quoting passages from his book Kišāh al-Muṣīṣ. Summoned to the presence of the Caliph, he explained the passages in such a way that the Caliph became satisfied that no disrespect was meant to the Sunni doctrines and no action was taken against him. But the public agitation against him grew vehement and at last in 468 (1070), his residence was burnt to ashes. He left Baghdaḍ that year and came to Naḍasaf where he passed the rest of his life. He is the greatest doctor of the Shi‘a sect, and is popularly known as Shāhīd al-Tūsī or simply al-Shāhīd. He died in 566 (1170) and was buried in his native place. As a man of letters he has left behind him a very large number of books, among which are the following:

1. Kišāh Taḥdīḥ al-Āḍām, a work on Ḥudūd ascribed to al-Tūsī, printed in Tehran, 1321.
4. al-Ṭabīb, a compendium of Muḥammadan law according to the Shī‘a school, printed in Tehran, 1321.
5. Fikhrī Kutub al-Sахa, a list of Shī‘a books, printed in Tehran, 1326.
6. Dhāt al-Dīn Manṣūr al-Muḥāfīd (d. 468), another book on prayers ascribed to al-Imām Ali b. Abī Ṭālib (d. 468), from whom it is descended to the author. Lithographed in Tehran, 1328.

Important works of al-Tūsī include:

1. Kišāh al-ītībat fi‘ma kāhilna fī man al-Āḍām, a treatise on the fundamental dogmas of the Shi‘a creed. It avoided the term 'ulamā‘, which is not used in the Shi‘a sect.
2. al-Muṣīṣ al-Muṣīṣ, a book on the sciences and their application to the Shi‘a sect. It is a comprehensive commentary on the Muhadith of the Shi‘a sect.
3. al-Muṣīṣ al-Muṣīṣ, a work on the Shi‘a sect and its literature. It is a comprehensive commentary on the Muhadith of the Shi‘a sect.

able to win over Ašḵoḵ, so that the latter refused to do anything against him and went home with his troops, when he was vigorously reproached by Tutuš for this step. Buḵān also did the same so that Tutuš was forced also to retire, when the sudden death of Malḵalḵād altered the whole situation in a moment. In view of the uncertainty regarding the succession, the two Turkish emirs were forced to pay homage to the claimant Tutuš and support him on his campaign to the east. Nisibis, Aram, Mālaḵūṯān and al-Mawṣil had submitted and in the first named town a fearful massacre was wrought by Tutuš. When it became known that Barkiyawūḏ was coming forward as his father's rightful heir, the emirs left Tutuš in the lurch and joined Barkiyawūḏ, so that Tutuš had to retire to Syria, firmly resolved to revenge himself on the emirs. He thereupon collected new forces to take the field against them while the emirs, who were supported by Kurbuḵa on behalf of Barkiyawūḏ, did the same. At Tell al-Sulṭān, six farsakhs south of Halab, the two sides met (487 = 1042). Tutuš was victorious; Ašḵoḵ was taken prisoner and at once executed. Kurbuḵa and Buḵān escaped to Halab but had finally also to surrender. Tutuš had the latter also executed and sent his head to Edessa to frighten the inhabitants into obedience. Every one now submitted to the victor, who at once entered the Iraḵ with his troops and came to Hamadḵān, while Barkiyawūḏ, who had only a small army at his disposal, had to flee before him to Iṣphān where he took small-pox. Nevertheless the Turkish emirs in the town hesitated to submit to Tutuš and when Barkiyawūḏ recovered from his illness, they pointed out to him that the claims of the two pretenders could only be settled by the sword. Barkiyawūḏ was then joined by troops from all sides so that he was able to attack Tutuš at a place called Daghla near al-Raṣay (17th Satar 488 = Feb. 26, 1005). Tutuš, abandoned by his soldiers, made a valiant stand but is said to have fallen at the hands of one of Ašḵoḵ's men who wished to avenge his master. Syria then passed to his sons Ridwān (q.v.) and Dukān.

**Bibliography:** Of the works mentioned in the article sedīqī some special mention may be made here of the historians of DAMASUS: Ibn al-Kallānī, ed. Amedroz, cf. index, and of Halab: Kamāl al-Din, Zublaṭ al-Talāb and Bāgika al-Talāb, especially the excerpts in Historia Orientalis des Croisades, iii. (p. 703-706 biography of Ašḵoḵ); Ibn Khallākūn, ed. Būlaq 1299, i. 168 sq.

**TUWAYS, ABU 'ABD AL-MUN'IM ILK R, AND ALLAH AL-DĪN** was the first great singer in the days of 1448. It is said that his real name was TAṬUS (peacock), but that when he became a muḥānnaṭ it was changed into Tuways (little peacock), and that 'Abd al-Mun'im was changed into 'Abd al-Nasīm. He was born on the day of the death of the Prophet Muhammad (June 8, 632), was weaned the day that Abū Bakr died, was circumcised the day that 'Umar was assassinated, was married the day when 'Uthmān was murdered, and his first son was born on the day when All passed away. These extraordinary coincidences gave rise to the proverb: "More unfortunate than Tuways". He belonged to Madīna and was a muḏaḏ of the Band Māḏkān, being in the service of Arwā, the mother of the Caliph 'Uthmān. He first attracted attention by singing certain melodies that he had learned from Persian slaves, and rose to fame as a musician in the reign of 'Uthmān (644-666). About this time a new style of music was introduced into Madīna which was known as the gāhī al-ṭaṭī or gāhī al-muṣṭakī, its special feature being the application of rhythm (rizā) to the melody (qāna) [see qāna]. He is said to have been the first to sing this "new music" in Madīna (Aḡhānī, iv. 385; al-Ḥār al-farād, iii. 187). What is attributed to him is given elsewhere in the Aḡhānī (ii. 170) only can be properly supposed to be in conjunction with the above, so that this must be read: Tuways was the first who sang [the gāhī al-muṣṭakī] in Arabic in Madīna. Like many other musicians in Madīna at this period, Tuways was a muḥānnaṭ (see my Hist. of Arabian music, p. 45) and the proverb arose: "More effeminate than Tuways". Indeed it was said that music (qāna) had its origin in Madīna among the muḥānnaṭūn (Aḡhānī, iv. 161) which is probably a canard started by the Ummānī. That Tuways was the first muḥānnaṭ in Madīna, as the author of the Aḡhānī says, can scarcely be correct (cf. al-Buhārī, iv. 32; al-Tirmīdī, l. 271; Und al-Ghāṣ, iv. 268). Whilst Abū 'Uṯmān b. Alphān was governor of Madīna, Tuways was favoured by the emirs, but when Muʿṣawīya I (661-680) became Caliph, and Marwān b. al-Hakam was appointed governor, the muḥānnaṭūn were suppressed, and Tuways fled to al-Suways, a two days' journey on the road to Syria. Here he remained until his death about 710-711. Some say that he died at Māṭaḍ, whilst others say elsewhere.

In spite of the fact that Tuways only used a square tambourine (daff), which he kept in a bag or in his cloak, to accompany himself when singing, yet he had so high a reputation in music, says Ibn Khallākūn, that his talent became proverbial and a poet of Madīna said, "Tuways, and after him Ibn Surādī, excelled [in singing], but preeminence belongs to Mas'ūd". Among his pupils were Ibn Surādī (q.v.), al-Dahlī Nāshī, Nawmā al-Duḥā and Fandī. Ibn Surādī said that Tuways was the finest singer of his day, and was considered the best exponent of the kanājī rhythm.

**TUZER, A TOWN IN Southern Tunisa, 350 miles S.S.W. of Tunisa and 120 W. of Gabes in 33° 54' 48" N. Lat. and 8° 8' E. Long. (Greenwich).**

Tizer is the most important place on the isthmus which separates the Shott Gharsa in the N. from the Shott al-Djarid in the S. and in the immediate neighbourhood of the latter; it consists of a town and a few scattered villages in the oasis which runs southwards over an area of about four sq. miles. The principal town is quite regularly
built; the majority of the houses are built of bricks arranged in geometrical patterns; the dwellings in the oasis are usually only "gourbels" of trunks and branches of palm-trees. The people make carpets and woollen and silk blankets which are much esteemed, but they are mainly dependent on their gardens and palmgroves. The oasis, the richest in al-Djarid, owes its fertility to the numerous springs (1943) which rise to the west of the sand-dunes and unite to form a stream which runs towards the shoal. The water is distributed for irrigation purposes by a system described by al-Bakri (Manahil, trans. de Sagne, revised by Fagnan, p. 102) and still in active use. The palm-trees, numbering 228,000, supply dates of various kinds, notably the dālīl-nūr. Export has assumed considerable proportions since the railway was connected to Sfax and the rest of the Regency. The population are arabsised Berbers; Tûzer itself has 11,056 inhabitants of whom 10,723 are Muslims, 181 Jews, 152 Europeans (Census of 1926).

Tûzer (Thynauros of the Tab. Peut.; Thymuros of Ptolemy) is of very ancient origin. The Romans founded near the site of the village of Bīdāt al-Hāder, a township, remains of which can still be seen in the base of the minaret of the mosque, a well, shafts of columns, fragments of capitals etc. Taken by the Vandals, it was recaptured by the Byzantines; pillaged no doubt by the first Arab invaders, it finally fell to the Arabs at the end of the xiith century a.d. The population had to adopt Islam or go into exile. Those who migrated were probably very few, since al-Tidāymi (Rīhā, transl. p. 143) regards the people of Tûzer as descendants of the Rûm who were in Irkâyâ at the Muslim conquest.

During the centuries that followed, Tûzer seems to have enjoyed great prosperity. Ibn Hawṣbal (Dess... de l'Afrique, transl. de Slane, in J. A., 1842) calls this district Kasîlitya — al-Bakri (loc. cit.) and Ibn Idrīs agree in recording the importance of the trade here and the wealth of its palmgroves.

According to al-Bakri, 1,000 loads of dates were exported every day.

The history of Tûzer has been by no means without incident. Nominally subject to the various dynasties who ruled in Irkâyâ, the people of Tûzer endeavoured to retain their independence in practice. They showed their hostility to the Fātimids by supporting the rebel Abū Yâsîf. Under the Zirids, they had local chiefs of the families of the Bānū Fūqīya, then of that of the Bānū Waṣṣāf; cf. Djarid.

In the Almohad period, their town was pillaged by Alī b. Ghanîya, then reoccupied by the Caliph Abū Yāsîf. At the end of the xivith century, they threw off Hafsîsâ suzerainty and in the xixth recognised that of Ibn Yumiḥu b. Sulṭān Abū L'Abî-Abîs; had great difficulty in disposing of in 1379 a.d. Under the successors of this prince they continued to be distinguished for their insubordination and on several occasions forced the rulers of Tunes to resort to force to reduce them to obedience. The town was also disturbed by the fighting between the citizens and the Arab tribes of the neighbourhood (Leo Africanus, Bk. li., ed. Schefer, ill. 257). The position hardly changed in the Turkish period. The people of Tûzer took part in several risings in the xivth and xixth centuries; the boys had always difficulty in collecting the taxes. The quarrels of the Seff also contributed to disorders. In the xixth century two of these Seff, the Ḫâlafi and the Zebra, each occupied a quarter of the town and maintained a fierce warfare until the French occupation definitely established peace and tranquillity (1884).

(G. Yver)

U

'UBAID ZĀKĀMĪ (Nizām al-Dīn 'Ubaid Allāh), a Persian poet of the xivth century, born c. 700 (1300) at Kāzwin in the family of the Žakāmī, which took its name from a village in the neighbourhood, the seat of the Žakāmī dynasty, which from that date until the end of the xivth century was the seat of Žakāmī rule. He was a judge in Kāzwin, went to Baghdad where he died in poverty in 772 (1371). He was a satirical and erotic poet. A selection of his facetics was printed at Constantinople in 1305 (1885-1886) by M.H. Ferit and at Berlin 1343 (1924); it contains: Ākhārī al-Asrāfī ("Morals of the Aristocracy"); a satire written in 740 (1340); Rīhā-al-nūr ("Book of the Beard"); a dialogue between the poet and the beard regarded as a destroyer of youthful beauty; Šah Penda ("100 Counsels") in prose written in 750 (1335); Thrifāt ("Definitions"); and in prose; Rīhā-al-dīn-gūsâ ("Little book which discloses the heart"); Arabic and Persian anecdotes and facetiae; several obscene poems. This edition does not include the Užzhīnā-nūmā ("Book of Lovers"); Al-bāṣ ("Book of Prophecies"); etc. Mīnū dūgū-ba ("The Mouse and the Cat") has been libellous in Bombay, n.d. and Berlin.

"UBAID ALLĀH. [See AL-MANĪF 'UBAID ALLĀH.]"
UBAID ALLAH b. Ziyād, an Omayyad governor. Ubaïd Allah was the most distinguished of the sons of the favourite of Muawiya I, Ziyād b. Abīthu [q.v.], celebrated for his rigour, and severity, and was appointed governor of Khurasan at the age of five and twenty. According to the usual statement, this took place in 54 (673-674). Soon afterwards he crossed the Oxus with an Arab army and advanced as far as Bukhārā [q.v.]. But he did not remain long in Khurasan; in 55 (674-675) or according to others 56 (675-676) or the beginning of 57 (676-677) the governor of Bāṣra, Abīd Allah b. Amr b. Ḥattābil, was dismissed and the administration of the city entrusted to Ubaïd Allah who, temporarily appointed Aslam b. Zūrā' al-Kīhāni as his deputy in Khurasān and only later was relieved of his former office. After his arrival in Bāṣra, Ubaïd Allah at first endeavoured to win over the Khāridjīs there by kindness, but when his efforts failed, he had to use more vigorous means and exerted all his energy to bring the Bāṣrān Khāridjīs under his authority. In time he succeeded in restoring peace to Bāṣra. In the year 60 (679-680) he was appointed by the caliph Yazid governor of Kūfah, while retaining his post in Bāṣra. When Ḥusān b. Abī [q.v.] was persuaded to set out from Mecca to go to Kūfah, Ubaïd Allah sent troops against him and on the 10th Muḥarram 61 (Oct. 10, 680) the battle of Kerbelā was fought in which Ḥusain lost his life. With the death of Yazid 14th Rabi' I 64 (Nov. 10, 683) a troubled period began. Ubaïd Allah had homage paid to himself in Bāṣra but only provisionally. The Kūfīs however, were disappointed and he had to escape to Syria, and by 1st Dhu‘ al-‘Idhā I of the same year (Jan. 25, 684) Abīd Allah b. Ḥartī b. Naufal called Naufal was recognised as governor of Bāṣra. After the death of Mu‘awiya II Ubaïd Allah supported the Umayyad party and urged Marwān b. al-Ḥakam to come forward as a claimant to the throne. At the battle of Marj Dābit (end of 64 = 684) where al-Dhāhīb b. Ka‘ṣ [q.v.] fell, ‘Ubaïd Allah commanded Marwān’s left wing. In the following year he was sent with Ḥusain b. Numair al-Ṣab‘al [q.v.] by the caliph to Khartishmā in order to invade the ʿIrāq from there and to bring this unruly province to obedience once and for all. He is said to have been appointed in advance governor of all the country to be conquered by him. Soon after his arrival in Mesopotamia the news of Marwān’s death reached him; his son and successor Abīd al-Ma‘līk confirmed ‘Ubaïd Allah in all the offices and privileges which Marwān had given him. Abīd Allah spent the whole year in Mesopotamia continuously fighting with the enemies of the caliph. He then advanced on al-Mawṣil. An army, which al-Mukhtar b. Abī ‘Ubaïd [q.v.] sent against him in Dhu‘ al-Ḥijja 66 (July 686) put to flight the advance-guard of the Syrian army but did not dare attack the main body. Soon afterwards the Shī‘ leader ‘Āshur b. al-‘Ashur attacked the Syrians and on the ‘Ashur’ day 67 (Aug. 6, 686) a battle was fought on the river Kāshir in the vicinity of al-Mawṣil. One of ‘Ubaïd Allah’s subordinates, ‘Umar b. al-Ḥudhīb, is said to have gone over to the enemy. The Syrians suffered a disastrous defeat and both ‘Ubaïd Allah and Ḥusain b. Numair were killed.

(K. V. Zettersten)

'UD, the lute, is the most important musical instrument of Islamic peoples from the Atlantic to the Persian Gulf [cf. also TUNR, ṬITRA, ṬIHAṬA].

Arabic authors do not discriminate between the harabat and the 'ud, but they have generally been a fundamental distinction between them. The harabat has its sound-chest and neck constructed in one graduated piece, whereas in the 'ud proper the sound-chest and neck were separate. Al-Mas‘ūdī says (Mawardi, viii. 88) that the lute was "invented" by Lānuṣk (Lamucke of Genesius, iv.), but elsewhere (viii. 90) he tells us that it was generally acknowledged that the Greeks were the inventors. Pythagoras, Plato, Eucleid and Ptolemy are also given the credit of its invention, although in the Tanbih (B. G. A., viii. 129) al-Mas‘ūdī says that since Ptolemy does not mention the lute the Greeks evidently did not know of it. The instrument was certainly of ancient origin. Whether the terra cotta figure found at Goshen in Egypt, and attributed to the xixth—xxth dynasty, shows a lute or not (Petrie and Duncan, Ḥyknos and Israelite Cities, p. 38, pl. xxxvii. B), we see undoubted examples of it in India from the ibid century A. D. (sculpture from Bihār in the Indian Museum, Calcutta). For later Indian examples see J. Am. O. S., l. 244, 255; Burgess, Buddhist stupas of Anuradhapura and Jâgyagnâyâsita, fig. 7. It also occurs in a frieze from Afghanistan (1st cent. A. D.) presented to the British Museum by Maj. Gen. Cunningham.

We are told that the lute ('ūd) was known in Persia at the time of Ṣimarūr I (241—272 A. D.) during whose reign it is said to have been invented (Abū l-Firdaws, Ḥīstorīā anteislamīca, p. 82). It is more likely however that this instrument was the harabat, and that the reference is rather to an improvement, possibly the substitution of a holly of wood instead of skin. The Persians called the instrument the harabat because it resembled the breast (hor) of a duck (ḥat) (Ma‘fahīth al-‘Ilm, p. 335; cf. Lane, Lexicon). J. F. N. Land was of opinion that the Persian lute referred to by Arabic authors was actually a two-stringed fountain (Trans. IXth Congress of Orientalists, 1891, p. 154), but several specimens of Sasanian art (fifth—sixth century) have preserved designs of the Persian lute showing four strings (Dalton, Treasures of the Oxus, ed. 2, p. 211), and the number of strings is confirmed from other sources (J. E. A.S., 1899, p. 59). That a two-stringed lute ('ūd) existed at the end of the fifth century in al-‘Irāq we know.
from the 18th century (iii. 181), and the design of a two-stringed lute (barbat) of the 12th century has been preserved (Pézard, La céramique archéologique de l'Islam, pl. 67). The barbat was the chief instrument of the Arab Qaṣṣain in pre-Islamic times (Ağānš, xvi. 15) and also of the Syrians in early Islamic times (Ağānš, iii. 84). The Greek θάλαβος would appear to have been borrowed from the Orient (Athanasius, Deipn., iv. 14) and Strabo remarks on its barbaric name (Geog., xii. 17).

The Arabus of pre-Islamic times had certain types of the lute known as the miskar, kirsan and mawtaar. These would appear to be identical with the barbat but with skin bellies. The miskar is unanimously identified with the lute (sud) by the Arabic lexicographers (see also al-Mas'udî, Murūj, viii. 91: al-18d al-farîd, iii. 186). In the 12th century Glossarius Latino-Arabicus however, the miskar (p. 562) or miskar (p. 508) equates with symposium, and the modern miskar is a tambourine. Indeed, the identification by the older Arabic lexicographers is suspect. The praises of the miskar are sung by the 9th century poets Imru’r-1-Kais (al-Shalâhî, fol. 73) and Aḥlam (Mustâlee, text, p. 812). It was a great favourite with the Kurâsh, until al-Nadîr b. al-Hârîth (d. 624) introduced the 18d from al-3râq. The kirsan, according to al-Harîb (d. 808), was also a lute (sud), and this author says that it was called because it was placed [in playing] against the breast. This instrument is also mentioned by Imru’r-1-Kais (al-Shalâhî, fol. 73) under the name of mawtaar, which is referred to by Labût (d. 612) [v. v.] and is generally considered to be a lute (sud) (Lane, Lex., i. 126). About the close of the 12th century al-Nâsîr b. al-Hârîth, as mentioned above, introduced the 18d from al-3râq into Mecca (al-Mas’udî, Murūj, viii. 93-94), the probable special feature of the instrument being its wooden belly (18d = wood). Al-Khalîfî (d. 763) records (Ağānš, vii. 188) that the first to play the lute (18d) in Madīna was Shâbî Khâthîr (d. 685). About the year 684, Ibn Surâqî [v. v.] was playing on a lute (18d) constructed after the Persian manner (Ağānš, i. 98) (see the lute delineated in Heraclius, Die Mederien von Samarra, 1927). This Persian type of lute continued to be favoured by the Arabs until Zalâl (d. 798) [v. v.] invented its “perfect lute” or 18d 18ddîh (Ağānš, v. 34), The Persian lute, i.e. the barbat, continued however to be favoured by side by side with the 18d proper, and the 12th century Mesopotamian lute shown in Bowron’s Life and Times of All b. 20 (frontispiece) may very well be a barbat. The same remark may be applied to the lute depicted on the Hispano-Moorish box of the 12th century in Victoria and Albert Museum London (The Legacy of Islam, fig. 89), whilst the lute shown in the sixteenth century Cantigas de Santa Maria (Riásan, Notes on early Spanish Music, fig. 45) undoubtedly represents the barbat (cf. the 18d or lute proper, in fig. 44 b).

Two other instruments of this type of the kind that we know of are the 18ddîh and 18dâmîh. The 18dâmîh is the so-called “balloon guitar” of the Chinese (Van Aalst, Chinese Music, Shanghai 1884, p. 64), who are said to have possessed it since the days of the Han dynasty. It was introduced into Mesopotamia by the Mughals in the 12th century, and Ibn Ghâbî (d. 1435) describes it. It may be found in the paintings of the Mughal-Persian school (Marsden, Miniatures pontains, 1913, pl. 212).

Al-Mas’udî (d. 1216) refers to an instrument which he calls the mawDar [see art. MîDar] and describes it as “a sort of barbat” made by the people of al-Yaman. According to the author of the Tahâf’ al-‘Arâb, this was the instrument known as the 18damîh. The 18damîh (al-Hijâsî, 18damîh (Ulâm), 18damîh (Hadrâmît), 18damîh or 18damîh (Turkey) is a very old instrument. Perhaps that illusive name of the musical instrument of the Varâmî is 428, 339, 117, 428 or 8 in the Murūj of al-

Mâ’sûtî is a copyist’s error for 428, 339, 117, 428 (Farmer, Studia in Oriental Instruments, p. 73; History of Arabian Music, p. 6). Ewliya Celebi (xviib. cent.) says that the 18damîh was invented by a vizier of al-Mrmân b. al-‘Ammâr named Ahmad Pagha Harasî Ughîl. He describes it as being a hollow instrument, smaller than the barbat, and mounted with three strings. (Travels, Ad.xxii. 25). On the other hand, Ibn Ghâbî (d. 1435) says that the 18damîh 18damîh had five double strings. The instrument is no longer used by the Turks, although it has survived under the name of bâbîn, babîn, in Poland, Russia, and the Balkans, but here it is the lute proper and not a barbat type. For the 18damîh of the modern Hijâsî, a long, shallow chested barbat, hollow throughout, with a part bally of skin and six strings see Farmer, Studia, ..., p. 75 (For the Hadrami instrument see Landberg, Arabic, iii. 15, 29, 113, 428). For a Malay gambus see Journal of the Straits Branch of the R.A.S., 1904 [No. 40, p. 13, fig. 5]. In Turkestân a rather primitive bowed instrument is known as the 18damîh (Fitrat, Dâhik Kätâbîn Mîrâmîbîn, Tashkent, p. 43).

The 18d or lute proper, as introduced by Zalâl in the 12th century, had, apparently, a separate neck like the modern instrument, whereas the barbat or Persian lute, which the Arabs had used until then, had no separate neck, the whole instrument from the head downwards being in one graduated piece, perhaps even somewhat like the 18damîh. Zalâl’s 18d al-shabîh was so named because it resembled the fish called the shabîh. The description of the shabîh given by the Arabic lexicographers leads to the inference that the soundbox of Zalâl’s lute was void rather than pear-shaped (cf. the Spanish mañcabe in Engels’ Musik, 1891, in the South Kensington Museum, pl. facing p. 248, which is in the form of a fish). We see the form of the 18d al-shabîh persisting in Islamic art for centuries, but the pear-shaped sound-chest, upon which the barbat was founded, eventually became the more popular type (Luchmann, Musik in Ost, pl. ii. 11). Zîrâb (xvth.-xvith. century), the famous Andalusian musician, is claimed to have improved the 18d at Baghdad, and in al-Andalus he introduced a spectreum or quill instead of the wood of that had hitherto been used (al-MAkka, 1184). He is also said to have introduced a fifth string, a device dealt with by both al-Khâlid (d. 947) and al-Fârîbî (d. 950). For a full statement of the influence (a-dahr, cf. 18ddîh) of the strings of the 18d lute proper see Farmer, The Influence of Music from Arabic Sources, London 1926.

At this period the names of the various parts of the 18d were: br’d (head, scroll), 18ddîh (tuning pegs), anf (nut), bûth (neck), 18ddîh (strings), 18dâmîh (frets), 18damîh (bridge-basepiece), 18damîh (bells), 18damîh (sound-hole), 18damîh (plectrum).
For the particular names of the strings and frets see art. -widget. Dimensions and other details are given by al-Kindi (Berlin MS., No. 3530, fol. 25), al-Fārābī (D’Erlanger, La musique arabe, i. 153) [q.v.], the iʿād had five strings (Carra de Vaux, Le traité des rapports musicaux, p. 53), and this continued up to the xvith century in the East. This instrument, called the ḫūd rāmāl, was slightly larger than the older classical lute (iʿād jādīm) of four strings. Some very large types of lute have been preserved in Persian art (lit., iii., fig. 6). A (modern) lute is a ve full details of the construction of the iʿād. In the xvith century copy of a Marghābī treatise on the iʿād we have a four-stringed instrument (Farmer, on old Moorish Lute Tutor, p. 4). Unlike the iʿād of the modern Moorish iʿād with four double strings see Hūst, Nachrichten von Maresch und För (1757), p. 261, pl. xxxi., and for a seven double stringed instrument see Lavignac, Encycl, de la musique, v. 2927. Neither Russian (Nat. hist. of Aleppo, 200 ed., 1794) nor Niebel (Reisereisewohnen in Arabien und anderm undgelegenen Ländern, 1774—1775) mention the iʿād, but the seven double stringed instrument is figured and fully described by Villoteau in the Description de l'Egypte (1800—1826), fol. ed., i. 847, and in Lane’s Modern Egyptians (1836). The Egyptian iʿād of to-day has five double strings (Darwish Muhammad, Sāfī al-ʿAwbāt, Cairo 1910, p. 11; Muhammad Kamīl al-Khulāsī, al-Maṣbīḥ al-ṣhābiyyāt, Cairo 1904) although occasionally six double strings may be found (Lavignac, op. cit., v. 2785). In Syria and Palestine a seven double stringed instrument was in use (Murshākī, Rābaṭ al-shābiyyāt) in the early xviith century, but this has now fallen into desuetude in favour of the five double stringed instrument (Dalman, Palastinischen Dichter, i. F. O. B., vi, pl. iii.; Z. D. V. F., l. 4). Turkey favours a six stringed iʿād with five double strings, one single string (Lavignac, op. cit., v. 3017; Fakhrit Bey, Nargis ve-limni, 1878 [i.e., Directeur, Stambl]). Specimens of the ʿād may be found in most museums (South Kensington, London, No. 659/69; Brussels, No. 164; New York, No. 378). Europe owes both the instrument and its name (al-ʿād = Port. alaud, Span. lute, French luth, German Lute, Eng. lute) to the Arabs.

Among other types of the lutes are the tabūfat al-ʿād, kawitā, laṭṭa, ʿād, shahrūd, ṭarab al-fustūk, ṭarab sūr, awānūn, rubāb, mughāth, thidirgāh and rub afšā. The tabūfat al-ʿād is described by Ibn Ghāsib as a half-sized ʿād. The kawitā or kawīṭa is a lute with a smaller and shallower sound-chest, its head being fixed obliquely rather than at a right angle as in the ʿād. It is common to the whole of the Maghrib and has four double strings (Salvador-Daniel, La musique arabe, 1879, p. 81; Christianowitsch, Enquête historique de la musique arabe, p. 30, fig. 4). The name is a diminutive (vulg.) of bittār or biṭṭār, an instrument used in Moorish Spain as early as the xviith century (al-ʿād al-fasāda). The 8 كمبت of al-Shaḳūndi (d. 1331)

quoted by al-Maṣrī (Musammat, ii. 144) is doubtless ٨ كمبت (cf. Dony, Suppl. Dict. Arab., ii. 1203) [q.v.], the iʿād had five string (Carra de Vaux, Le traité des rapports musicaux, p. 53), and this continued up to the xviith century in the East. This instrument, called the ʿād rāmāl, was slightly larger than the older classical lute (iʿād jādīm) of four strings. Some very large types of lute have been preserved in Persian art (lit., iii., fig. 6). A (modern) lute is a ve full details of the construction of the iʿād. In the xviith century copy of a Marghābī treatise on the iʿād we have a four-stringed instrument (Farmer, on old Moorish Lute Tutor, p. 4). Unlike the iʿād of the modern Moorish iʿād with four double strings see Hūst, Nachrichten von Maresch und För (1757), p. 261, pl. xxxi., and for a seven double stringed instrument see Lavignac, Encycl, de la musique, v. 2927. Neither Russian (Nat. hist. of Aleppo, 200 ed., 1794) nor Niebel (Reisereisewohnen in Arabien und anderm undgelegenen Ländern, 1774—1775) mention the iʿād, but the seven double stringed instrument is figured and fully described by Villoteau in the Description de l'Egypte (1800—1826), fol. ed., i. 847, and in Lane’s Modern Egyptians (1836). The Egyptian iʿād of to-day has five double strings (Darwish Muhammad, Sāfī al-ʿAwbāt, Cairo 1910, p. 11; Muhammad Kamīl al-Khulāsī, al-Maṣbīḥ al-ṣhābiyyāt, Cairo 1904) although occasionally six double strings may be found (Lavignac, op. cit., v. 2785). In Syria and Palestine a seven double stringed instrument was in use (Murshākī, Rābaṭ al-shābiyyāt) in the early xviith century, but this has now fallen into desuetude in favour of the five double stringed instrument (Dalman, Palastinischen Dichter, i. F. O. B., vi, pl. iii.; Z. D. V. F., l. 4). Turkey favours a six stringed iʿād with five double strings, one single string (Lavignac, op. cit., v. 3017; Fakhrit Bey, Nargis ve-limni, 1878 [i.e., Directeur, Stambl]). Specimens of the ʿād may be found in most museums (South Kensington, London, No. 659/69; Brussels, No. 164; New York, No. 378). Europe owes both the instrument and its name (al-ʿād = Port. alaud, Span. lute, French luth, German Lute, Eng. lute) to the Arabs.

Among other types of the lutes are the tabūfat al-ʿād, kawitā, laṭṭa, ʿād, shahrūd, ṭarab al-fustūk, ṭarab sūr, awānūn, rubāb, mughāth, thidirgāh and rub afšā. The tabūfat al-ʿād is described by Ibn Ghāsib as a half-sized ʿād. The kawitā or kawīṭa is a lute with a smaller and shallower sound-chest, its head being fixed obliquely rather than at a right angle as in the ʿād. It is common to the whole of the Maghrib and has four double strings (Salvador-Daniel, La musique arabe, 1879, p. 81; Christianowitsch, Enquête historique de la musique arabe, p. 30, fig. 4). The name is a diminutive (vulg.) of bittār or biṭṭār, an instrument used in Moorish Spain as early as the xviith century (al-ʿād al-fasāda). The 8 كمبت of al-Shaḳūndi (d. 1331)
musical Instruments", p. 14–15, and frontispiece. The **abárij**, as it is written by Ibn Ghāṭīr (cf. Sachs, *Lexikon, s. v. *bidārij*), was a long instrument with half of its belly covered with skin. It had four strings but was mostly used, he says, in China. The **raš ōstāf** had a hemispherical sound-chest with six double strings of silk and metal. Many instruments with a hemispherical sound-chest are to be found in Persian art (*Pantheon*, 1929, p. 173; *Münchener Jahrbuch der bildenden Kunst*, 1911, i. 151).

(H. G. FARMER)

**UDHRA.** An Arab tribe of the southern group, belonging to the great subdivision of the Kūfaʾ. Genealogy: *Udha b. Saʿd b. Ḥudhaib b. Zaid b. Laith b. Aslam b. al-Ḥīf b. Kūfaʾ (Wustenfeld, *General Tabellen*, i. 18). We know nothing of their history in the remote past, for their identification with the *ʿAqbaru (var. *ʿAqbaru)* of Pleneum, proposed by Sprunger, *Die alte Geographie Arabiens*, p. 205, § 363 is anything but certain; in the historical period we find them established in the north of the Hijāz, in the vicinity of other Kūfaʾ tribes (Nahd, Dhiyāna, Bal, Kalb) and their territory adjoined that of the northern tribe of the Garmān. The Udhra Ḳurṭub and Tabhak are mentioned as their principal centres and they were found as far away as Asil on the Red Sea. Their settlement in districts in the north of Arabia is said to be due to the great migration of the Kūfaʾ tribes, which took place after the war with the Himyarites (see especially al-Bakr, *Maṭbaʾ, p. 18, 22, 27, 29, sq. = Wustenfeld, *Die Wandscheuern d. arāb. Stämme*, p. 25, 31, 37, 41; cf. *Ahmad b. al-ʿAnta* (xvi. 161) and the Udhra are said to have acknowledged an agreement with the Jews living in the Ḳurṭub Ḳurṭub by which they were allowed to lead a nomadic life there and they respected the palm-groves and gardens of the latter.

The Udhra seem always to have been closely allied with other tribes of the Saʿd Ḥudhaib (especially the Banū Dinnu, who had the same name as a clan of the *Udha* and the Banū Šalāmān) and were known together with them by the name of Suḥur (of which the doubtful etymology is given by Yākūt, *Maṭbaʾ*, ii. 368); they were also associated with the Dhiyāna, to whom some sources also extend the name Suḥur; this alliance is said to have been a result of the "war of al-Kārib" which took up the Kūfaʾ and caused them to leave al-Thamānīn where they had settled after their departure from the Yemen. We know that modern historical criticism attacks hardly any value to these statements of genealogical tradition, and indeed the *Udha* seem to be allied with tribes which the same tradition assigns to the northern group, like the Bakr b. Ḳurṭub and the Djiṣrā. It is true that al-Ḥamūdānī (*Dirārat al-ʿArab*, ed. Müller, i. 116, i. 17) puts a section.
of the 'Udhra in southern Arabia, but it is impossible to decide if he is referring to this tribe or to another of the same name, especially as the genealogical lists mention almost everywhere other tribes bearing the name 'Udhra (cf. Muhammab b. Ḥabh, Muhkkālif al-Kalbì, ed. Wüstenfeld, p. 37, gives four of them; Ḥabn al-Kalb in his Dīmākhurat al-Anīsū gives us another five).

According to tradition, the 'Udhra were closely related to the Meccan Qurash; the latter's ancestor Kuṣiy (q.v.) whose mother had married an 'Udhri is said to have been brought up with this tribe, and his half-brother Kīzā (in Wüstenfeld, General Tabellen, l. c., 24, erroneously: Dārrābī) b. Ḥarb b. Ḥarīm is said to have fought on the side of the Qurash defending Mecca against the Khāza. On the other hand, the mother of the eponyms of the two tribes of Yathrib, al-Aws and al-Khazraj, is also said to have been an 'Udhri called Kāila bint Kāhil (or bint Hālik) b. 'Udhra; so that the Āṣār as well as the Qurash were connected with the 'Udhra on the female side.

The 'Udhra are said to have worshipped a deity Shams, the sun (al-Yaṭṣūbi, i. 296, l. 3), but we know no details.

The principal subdivisions of the tribe (Ibn Durāsīd, Kītab al-Iqtiṣāḥ, p. 320) are the Banū Dīnna, Banū Dālīhuma, Banū Zaṣ̄rafqa, Banū 'l-Qāšābà Banū Ḥarqāṣa, Banū Ḥamm; the Banū al-Kalb (Dīmākhurat al-Anīsū) also adds the Banū Mūḍīḏ, who are said to have been numerous and powerful (they are not mentioned in Wüstenfeld, General Tabellen).

The pre-Islamic history of the 'Udhra is poor in warlike episodes. This is probably due to the fact that the 'Udhra, as poets of this period are not numerous and we know that the records of the wars of the tribes depend almost entirely upon the verses which mention them; there is just a mention of a battle which took place at some time not precisely stated between the 'Udhra and the Banū Marra b. Naṣr, a clan of the Banū Aḥṣā' (Yāṣīn, Muṣīm, l. 171). An allusion to a defeat which they sustained at the hands of the 'Abs is found in a verse of a poet of the latter tribe (Mūṣafajūlī, ed. Lyall, p. 826, l. 2). But the 'Udhra must certainly have attained a considerable degree of influence through the control which they exercised over the road between the Hijāz and Syria: this explains the title 'Master (rab) of the Hijāz' borne by a certain Ḥawwā b. 'Amr (Ibn Durāsīd, Kītab al-Iqtiṣāḥ, p. 320) or better: b. Abī 'Amr, whose praises were sung by Ben-Nabīgha (cf. Dernbourg, Nasīb al-Dhobyatthin idnī, p. 48, n. xvii. [F. A., 1899]) where one should read Dīnna for Qubbāt). This Hassan is a descendant of the semi-mythical mu'ammar poet Uṣā or Ilyyār (numerous other variants) b. Labōd (cf. Goldziher, Abhandl., v. arab. Phil., l. 42 and notes, p. 30); Nöldke, Z. D. M. G., lvi. 168). It is again al-Nabīgha who sings praises of another clan of the 'Udhra, the Banū Ḥumm, against whom the king of al-Hira al-Nu'mān III proposed to take the field (cf. m. xlii., Ahlwardt; cf. Yāṣīn, Muṣīm, l. 583).

But it is only after Isām that the part played in history by the 'Udhra becomes better known; it was undoubtedly their dominant position in the Wādi 'l-Kūtā, which caused Muhammad to enter into friendly relations with them; in the year 7 of the Hijāra he sent them a letter (Ibn Sa'd, t/i. 33) but without any apparent result, and in the year 7 he is said to have assigned a sief (ṣāfā) to a descendant of the above mentioned Hawwā, because he was the first of his tribe to bear the sāḥib to the Prophet (al-Balādhurī, Futūḥ, p. 35); in the following year they fought at Mu'ta against the Byzantines (Ibn Ḥājīn, Sirr, p. 793; Tabari, i. 612). These facts suggest that the 'Udhra were early converted to Isām, but on the other hand it is not till the year 9 that we find the first mention of an official embassy from them to Medina (Ibn Sa'd, t/i. 66-67); this is what makes one think that the earlier references are not authentic and even that the 'Udhra did not become Muslims until after the death of Muḥammab (cf. Caetani, Annali dell' Isām, ii. 59, 229, 444, 1126).

The 'Udhra took part in the Syrian expedition of the year 12 under Amr b. al-'Āṣ and we find them settled in this country in the Omeyyad period (cf. Tabari, i. 1792, 1818) and also at Kūfah (Aḥṣā'ī, xvi. 7, 37), but it does not seem that they distinguished themselves in any way; although their presence in Upper Egypt is noted (al-Hamdānī, Diwanat ar-Rar, p. 130, l. 4-5), they played no part in politics and gave neither here nor elsewhere any personality of note to the history of Isām.

What has given the 'Udhra a name without equal even beyond the bounds of the Arab world down to French and German (Heine) romanticism, is their love of poetry and the touching stories of some of their poets (cf. 'Udhra), whom an unfortunate passion for a woman of their tribe reduced to death by consumption (notably 'Urwā b. Ḥiṣām, the "victim of love" [butt al-kub] who is the representative of this type; cf. Ibn Kutaiba, al-Shir wa l-Suwar, ed. de Goeje, p. 394-399; Aḥṣā'ī, xx. 152-158 etc.). But that love-poetry did not exclude the cultivation of other varieties, is evident from the example of Dāmil (q.v.) whose celebrated love affair with Buthāna (Buthaina) did not prevent him writing panegyric and satirical poetry. Besides, the romantic conception of love is found also among other tribes; in this connection is recorded the answer of an 'Udhri who was asked if his tribe was really the most tender-hearted in all Arabia (Aḥṣā'ī, i. 149): "We were", he said, "but the Banū 'Amir (b. Sa'ā)a have vanished as with their Madjīnāt (the poet Kais b. Mu'tadh or b. al-Mulawwah) (illi. 102). The 'Udhra were also celebrated for their eloquence (cf. Aḥṣā'ī, vii. 54).

The charge of cannibalism, so frequent in the satires exchanged between tribes (cf. al-Jāliā, Kītab al-Bahāsh, ed. Van Vloten, p. 260-261; Kītab al-Haywa, i. 139-150), has also been levelled against the 'Udhra, who are said to have eaten a female slave (Ibn al-Kalbī, Dīmākhurat al-Anīsū, Brit. Mus. MS., Add., 23, 297, fol. 1844); we know that such statements have no value except the very general one of showing that a particular tribe was reputed to be in a miserable state of poverty, and in reality the 'Udhra appear from the rather meagre information we possess about them to have been an essentially communitarian tribe, living mainly in the pre-Muhammadan period and in the tribute paid them by the Jews of the oasis. The occupation of the latter by Isām must have undoubtedly reduced the resources of the Beduins.

UDHI, or also 'Abd al-Anas or 'Anas, is the Arabic name of the Biblical Og, the giant king of Bashan. The Kur'an does not mention him. Tabari, Anwaar, i, 500-501 tells of his great stature and death: Moses was ten ells in height, his staff ten ells long; he jumped to ells high and sent Udi in the heel; the body of the fallen giant served as a bridge across the Nile.

Tabari gives more details: Udi was 23,333 ells high, drank from the clouds, could reach to the bottom of the sea and pull out a whale which he roasted on the sun. Noah drove him in front of the ark but the Flood only reached his knees. He lived for 3,000 years. When Moses sent out the twelve spies, Udi put them into the bundle of wood on his head and wanted to trample on them but on the advice of his wife he sent them back so that they might put fear by their report into the heart of those that sent them. When Udi saw the camp of Israel, he broke from the mountain a rock large enough to crush the camp at one blow but God sent the hudud (hoopoe) and birds who made a hole in the rock so that it fell like a collar on Udi. Moses overthrew him in one leap.

Al-Kisai expls the story and increases the marvellous element in it. Udi was the son of Ka'bi (Cain) banished by Adam and of his sister 'Anas ('Anas thus becomes a woman's name). Although chaste by his mother, Udi caught the stone with which his sister tried to kill her. She therefore blessed him with strength and longevity. When Udi walked through the sea, it reached to his knees; when he walked, the earth trembled; when he slept, rivers flowed from his eyes; he used to eat two elephants at a meal. He slept twice a year. In Nimrod's time, he boasted that he controlled the heavens. He worked on the Ark with Noah. He was sitting on Pharaoh's council when Yisra'el sent by Moses, demanded that he should worship God. In order to win Pharaoh's daughter, he was going to destroy the camp of Israel with the gigantic rock, but was slain by Moses.

The sources of these legends are to be found in the Bible and in the Haggadah. The Bible mentions 'Og's great size (Deut. iii. 11) and his fall (Num., xxxi. 33-35). E.约翰an describes 'Og as a fugitive who had escaped the Flood (B. Nidda, 61a). Sometimes he is said to be the fugitive who brought Abraham the news of Lot's capture (Gen., xiv. 13). As a reward for this, he was given long life (Gen. Rabbah, xiii. 8). Like Al-Kisai, Da'udi, and Raba, L. 25 puts him at the court of Pharaoh, B. Berachoth, 54b. Palmet, Targum on Num., xxxi. 35 records how the Egyptians slew him in one leap. It is in keeping with Mosadiah and that place in the ants, or worm, which eat away 'Og's rock we have the Hudud, celebrated in the legend of Solomon.
UDJ — UGANDA

(BERNHARD HELLER)

UPJDA. [See OUPJDA.]

UL-FRANI. [See AL-WAFRINI.]

UGANDA, a British Protectorate in Eastern Equatorial Africa lying to the North of Lake Victoria. It takes its name from the Baantu Kingdom of Buganda, which is one of the four provinces comprising the Protectorate. The Swahili name Uganda ('Country of the Buganda', the Swahili prefix wa 'Country of' replacing the Buganda wa with the same meaning) was first applied to the kingdom of Mutesa, discovered by J. H. Speke in 1862, and in time came to include the whole Protectorate which grew out of the extension of British influence in Buganda.

a. Geographical Outline. The Uganda Protectorate lies approximately between latitude 1° S. and 4° N., and longitude E. 30° and 35°, and has an area of approximately 94,204 sq. miles including 13,616 sq. miles of water. The general level of the country is 4,000 ft., with the slopes of Mt. Elgon (14,000) in the East, and the highlands of Toro in the West at an altitude of 5,000 ft. rising to the Ruwenzi range with its snow-capped peaks, of which the highest is Mt. Stanley, 16,816 ft. Highlands are found in the South-West, culminating in the volcanic region of Mumbiro where great cones rise to 10,000 ft. or even 15,000 ft. But with the exception of some highlands on the Belgian Congo boundary West of the Nile at 2° 15' N., the general level in the northern districts of the protectorate has been influenced by the Nile drainage system and is consequently lower and may not be more than 3,000 ft.

Lake Victoria, or Victoria Nyanza (3,726 ft.) feeds the Nile at the Ripon Falls (discovered by Speke in 1862), and is looked upon as the source of that river. Lake Albert (2,028), which forms part of the western boundary of the Protectorate, is fed by the Semiliki River draining from Lakes George and Edward, and in its turn discharges into the Nile proper, soon after receiving the waters of the Victoria Nile at its northern end. Accordingly Uganda is situated at the headwaters of the White Nile, and the Nile is the main drainage system of the whole country. The climate of the Protectorate is more temperate than that of other tropical countries; the mean maximum in most districts averages 80° F., and the mean minimum 60° F. In the lowlying areas in the North the mean maximum may be as high as 90° F. The annual rainfall varies considerably; on the North littoral of Lake Victoria the average approximates 60 inches, and there is a good rainfall on the slopes of Mt. Elgon and in the Toro Highlands. To the North the rainfall diminishes until conditions similar to that in the Southern Sudan are reached. In areas where the rainfall is adequate, bananas are cultivated, and constitute the staple diet of the people; elsewhere, grains of various kinds are grown. The vegetation of Uganda ranges from a sparse desert type of flora to equatorial forests of the Congo type, and on the Highlands of Elgon and Ruwenzori is found an Alpine Zone of considerable interest. A great portion of the Protectorate consists of rich grasslands in a rolling savannah country.

b. Inhabitants. The population in 1929 was given as 3,410,857, of which 1,995 are Europeans and 12,539 are Asians. In the 1921 Census, the native population was returned as 3,848,735, made up of 267,522 Protestants, 255,014 Catholics, 98,000 Muhammadans, and 2,226,199 pagans. The population of the Buganda Province of 77,415 includes 72,263 Muhammadans, so that nearly 73% of the adherents to Islam are found amongst the Buganda. Ethnologically the inhabitants may be divided into three divisions, following the classification of Prof. C. G. Seligman: Eastern Bantu, Half Hamites and Nilotes. Of the Eastern Bantu the Baganda are the best known. It seems that several centuries ago there were successful migrations of a Hamitic cattle-owning people into this part of Africa, who established the large kingdom of Kitara, dominating the agricultural Bantu. This kingdom in time broke up into the three present divisions: the kingdom of Ankole, where the Hamite is dominant, the kingdom of Bunyoro, where there has been considerable fusion between the original Hamitic stock and the Bantu, and the kingdom of Buganda in which, though the dominant Hamitic stock still carries on the line of Kings, there has been a still greater fusion with the Bantu element.

The Half Hamite is represented by such tribes as the Karamojong and the Iteso; whilst the Nilote is represented by the Acholi, Lango and other tribes in the North West of the protectorate.

c. History. The Victoria Nyanza was discovered by Burton and Speke in 1859 and the source of the Nile, the Ripon Falls, by Speke and Grant in 1862. Stanley reached Uganda in 1875 and wrote the famous letters, depicting the native kingdom of Buganda dominated by the influence of the slave trading Arabs, flirting with Islam and ripe for Christian missionary endeavour, which had such influence in determining the future destinies of that country. A band of Protestant missionaries reached Uganda in 1877 by way of the route used by the Arabs from Zanzibar, followed in 1879 by a party of French priests. Meanwhile Sir Samuel Baker, having discovered Lake Albert in 1864, was sent by the Kedive in 1869 as Governor General to the Sudan with instructions to suppress the slave raiding which was carried on by Turks and Arabs, whose base was Gondokoro and whose furthest station was some 15 days farther south. By 1872 he had reached Bunyoro and annexed it to the Sudan. Gordon followed him as Governor-General and sent emissaries to the kingdom of Buganda, one of whom met Stanley at the court of the Buganda King, Mutesa, and took back with him for dispatch to England Stanley's celebrated letters. On the outbreak of the Mahdi rising in the Sudan, Emin Pasha, who was Governor of the Equatorial Province of the Egyptian Sudan, which included the northern part of Uganda, was cut off from Khartoum and was rescued by Stanley. A large force of Emin's forces remained and remained in Toro, in what is now the Belgian Congo, under the leadership of Salim Bey, an Egyptian officer.

The route to the interior from Mombasa [q.v.] through what is now Kenya Colony having now been opened up by the Arabs, the Imperial British East Africa Company in 1886 sent an expedition to Uganda with a view to annexation, and on the
Anglo-German negotiations for the partition of the east coast and hinterland, Uganda was assigned to Britain.

In 1890 Captain (now Lord) Lugard, who was engaged in building a series of forts from the coast, was ordered to Uganda to consolidate the Company’s position there. Mwangi, the son and successor of Mutesa, had been deposéd by both Christians and Muhammadans, and had fled to the South end of Lake Victoria to take refuge with some Catholic Missionaries, and Kiwewa was put on the throne. The Muhammadans soon tired of Kiwewa and wanted to adopt their customs, and eventually Kalema was proclaimed Kabaka (king) in his stead. He, profiting by the experience of his brother, professed himself a devout Muhammadan, and tried to enforce Muhammadan rites, including circumcision, on the peasants, which caused a considerable exodus of Christians into Ankole.

Mwangi was then invited by the Protestant party to return, and with a large following, he defeated the Muhammadan army and entered the capital. The Muhammadan refugees to Bunyoro whence they made frequent raids into Buganda, and on the death of Kalema chose Mbogo, Mutesa’s brother, to be their Kabaka. Lugard on his arrival forced Mwangi to sign a temporary treaty, and in order to obtain a reliable force, came to an agreement with Salim Bey, the leader of the remnant of Emin Pasha’s troops. He enlisted some of these Sudanic for service in Buganda, and the others he posted in forts in Bunyoro and in Toro. The Sudanic in the forts were not under proper supervision and were left to the care of their native officers. They were allowed to forage for themselves, and accordingly the cause of Islam was not helped by them amongst the neighbouring peasantry.

In 1891 the imperial British East Africa Company proposed to abandon the country on the grounds of expense unless subsidised by the British Government, who at first refused to assist them, but subsequently, partly owing to the pressure of public opinion, mainly organised by the Church Missionary Society, and partly because they were given proofs that the country showed every sign of returning prosperity, reversed its decision, and assumed control in 1894, when a provisional treaty was completed with Mwangi.

In 1897 a series of revolts broke out. Mwangi had never become reconciled to the new state of affairs and was secretly plotting. Finally he fled to Bulaka and raised the standard of rebellion, but being defeated by the Sudanic troops, fled to German territory. Macnald, who had been engaged on the railway survey, was ordered to survey new and unexplored country near Lake Rudolf, and required a large escort, and Sudanic troops who had been almost continually fighting in various areas were detailed for this purpose. The troops were underpaid and in a discontented state of mind, and consequently several companies seized this opportunity to break into open revolt. Messengers were sent to the Muhammadan Buganda and an endeavour was made to induce Mbogo, their leader, to throw in his lot with the mutineers who would place him on the throne. Mbogo, however, refused and remained loyal to the British despite his religion, for not only had he no wish to join the rebels, but he also knew that according to the customs of the Buganda, he, as eldest son of the late Kabaka, could not properly be placed on the throne. Affairs were also complicated by Mwangi joining up with Kabarega, the Mukama (King) of Bunyoro, in an endeavour, whilst the troops were in a state of mutiny, to drive the British out of their countries. Eventually the mutiny was quelled and the capture of the two kings and their deportation to the Seychelles brought the troubles to an end, and since 1899 the country has enjoyed almost unbroken peace. The story of Buganda and its troubles is the real story of the Protectorate.

From Buganda the other tribes have been brought under British rule, sometimes by a show of military force and sometimes by expeditions, more often by peaceful penetration.

Islam was brought to Uganda both from the East Coast and from the North. Arabs from the East Coast had penetrated to the kingdom of Buganda and were in a dominant position when Speke arrived at Mutesa’s court. With the guns obtained from the Arabs in exchange for slaves and ivory, the Buganda, a most intelligent and enterprising race of people, who had already evolved an elaborate system of government, were enabled to gain the ascendancy over neighbouring tribes,

In early days the Arabs refused to give them this, but made converts. No sooner had the Christian missionaries arrived than the Buganda quickly learned that they were willing and anxious to teach them to write, and give them other instruction which would enable them to assimilate a culture, which they recognised to be superior to their own. The Arabs, realising that they were losing ground, set for teachers from the coast and established schools, where children were taught to write Swahili in Arabic characters. The fluctuating fortunes of Islam and Christianity represent the conflict of two different cultures, and the final ascendancy of Christianity must, in the main, be attributed to the superior educational facilities offered by the Christian missions.

Islamic influence from the North has not been so important. In the early days the Turks and Arabs were interested only in raiding slaves from unorganised tribes. The troops and followers of the Provincial Governors and other officials from the Sudán made few converts, and the imported Sudanic, remnants of Emin Pasha’s force, all of whom are adherents to Islam, have not had a great influence on the native population, though they live in communities scattered through the Protectorate and at one time formed the backbone of the Protectorate military forces and the civil police. In the West Nile district, inhabited by the Nilotes, there has of recent years been a spreading of Islam, mostly due to the strong personalities of a few chiefs, who have embraced Islam, encouraged education, and set up schools, but this is offset by large numbers of pagans who have become Christians and receive the benefits of a better education under European supervision.

Johnston in Encycl., Brit., 14th ed.; H. R. Wallis, Handbook of Uganda, 2nd ed. (London 1920), with bibliography; Naval Intelligence Division, Admiralty, Handbook of the Uganda Protectorate (Oxford 1921); Sir Harry Johnston, The Uganda Protéc.

(R. E. HADDO)

'UKÃB, the eagle, the king of birds. al-Ka-watil and al-Damiri tell remarkable things about his habits, some of which go back to Greek tradition. According to al-Damiri, there are black, brown, greenish and white eagles. Some nest in the mountains, others in deserts, in thick woods or in the vicinity of towns. (Here there is of course a confusion with the vulture and also in the statement that they follow armies and devour the fallen). The eagle hunts small wild animals and birds and eats only the liver, because this is a protection for him against disease. He does not stalk his prey but gives a cry when he sees a bird from his lofty perch and this gives it an opportunity to escape. Sometimes it happens that his beak grows so long that he can no longer hunt and must die of hunger. When the eagle is weak with age and becomes blind, according to al-Ka'awini, he rises into the air until his feathers are consumed by the sun. He then falls down, plunges into a well of bitter water and comes out again completely rejuvenated. According to al-Damiri, the young eagles carry the old ones, when they are blind, from place to place until they reach a spring in India. They are plunged into this and then dried in the rays of the sun while the old feathers fall off and new ones grow and at the same time their eyesight is restored. According to the author of "Agricultura", vultures come out of eagles' eggs and eagles out of those of vultures. According to others, all eagles are female and mate with other birds. They lay three eggs but throw the third young one out of the nest because they can only rear two. The third is brought up by the bird called kisir al-fur ("bone-breaker").

Eagles fly so quickly that in the morning they can be in the 'Iraq and in the evening in the Yemen. Their eyries are built on steep hillsides; the young ones know they must not move or they would fall out and perish as soon as they have feathers, they fly excellently.

The eagle-stone is brought by the eagle from India and put in the nest to enable the female to lay more easily. It is a stone with another stone loose inside it, the rattle of which can be heard. It is used to relieve women in child-birth. This wonderful stone is taken from Greek tradition also.

In astronomy al-Ukâb is the name of the constellation Aquila, N. of Capricorn (a'rik, Aqaila). It has three outstanding stars, which are called al-maṣr al-wâṣir, "the flying eagle", Persian: yâhâin al-arkâb, "the thieving falcon". The brightest star is called Aitair or Atair on our star-maps. Opposite it in the Lyre is the star al-nâr al-wâṣir, "the falling eagle", the Vega of the star-maps.

In alchemy al-Ukâb (Lat. alocaph, etc.) is the most usual name for sal-ammoniac.

(J. RASKI)

AL-ŪKÁṣIR, the name of a divinity of pre-Muhammadan Arabia, or better an epithet, the meaning of which (diminutive of aqar, "he who has a stiff neck" or perhaps simply "the short") seems to indicate an idol in human shape. All that we know of this god (whose real name is unknown) goes back to the references by Ibn al-Kalbi, Khalâb al-ṣâmûn, Cairo 1914, p. 38—39, 48—50, followed by Yâkût, Muṣâjam, i. 340—341 (transl. and annotated by Wellhausen, Reise arab. Heidennamen, 2nd ed., p. 62—64), Djalîl, Ḥayyâm, v. 114, Buḫalâl, p. 237, Khâdiyân al-Ādah, iii. 246 (abridged), Maḥmûd al-Alûsî, Bulhâk al-Ārâb fi Mufrâj Aqwil al-Ārâb, Cairo 1343, ii. 209 below (abridged). Al-Ūkâṣir was worshipped by the tribes of Ka'bah, Lakhm, Ḥijāz, "Amila and Ḥatâflân living on the plateau of the Syrian desert. Verses in old poets quoted by Ibn al-Kalbi mention the stones (anbâq) put up around the sacred place (which another anonymous verse, Liyim al-Ārâb, vi. 416, already quoted by Wellhausen, describes as dripping with the blood of the victims), the "garments" (al-thâb), already the reference to those of the idol (al-mâhân), the "covering for the sanctuary in the style of the hirâf of the Ka'bah), the ditch (dafrf) into which were thrown the offerings, the cries and shouts of the pilgrims. The sacrifices offered to the god were not always slaughtered; they are said to have also included hair kneaded with flour (according to the widespread custom of pre-Muhammadan Arabs; cf. Wellhausen, p. 123—124, 198—199): in this connection a story is told, according to which the tribe of the Hwastin, reduced to great misery and entirely without food, went to beg around the sanctuary of al-Ūkâṣir for the filthy remains of these offerings. The truth of this story is very doubtful; it is a common motif in the hijâf between tribes, but in itself it has nothing improbable.

As Wellhausen notes, the expressions used in the verses which Ibn al-Kalbi quotes in connection with al-Ūkâṣir might refer to a sanctuary as well as to an idol. We might then suppose that the epithet reflects the squat form of the building.

The Encyclopedia of Islam, IV.

(G. LEVI DELLA VIDA)
UKHAIĐIR, the name of an imposing castle now in ruins in the Mesopotamian desert, twenty-five miles from Kerbela and ten south-east of Shīlātīyaz; it perhaps preserves the name of Isma'il b. Yūsuf b. al-Ukhaidīr who came from Yamka and was appointed governor of Kufa by the Kāmilīs in 315 (927). The Badrīn tribes of the Kūrām, which leads a nomadic life in the vicinity, pronounce this name al-Askāfī but prefer to call the castle Dirās or al-Askāfī. Discovered by Pietro della Valle in 1625, discovered in 1908 by L. Massaquin, visited by Miss Gertrude L. Bell in 1909 and A. Musil (1912) was systematically examined by O. Reuther in 1910.

The castle, built of stone and cement, with a few bricks, consists of a rectangular fortified enceinte with forty-eight bastions, with sides 354 feet long, 69 feet high and 9 feet thick; blind arcades support a machicolated chemin de ronde; there are four staircases in the four corner towers and four gates in the centre of the four sides. The north gate, which is the main one, gives access to the palace, one of the halls of which was, according to Miss Bell, perhaps used as a mosque, although wrongly oriented, and rooms for the women, built on to the north wall, with three stories on this side and a single storey on its three other sides around the inner court. Outside the enceinte are two annexes of less importance. From the architectural point of view we may note in the palace the numerous niches, the slated vaulting and the seven domes on drums.

The date of the building of Ukhaidir is disputed; the regularity of its plan, the large scale, and the finish of the work place it in a period when the Mesopotamian cities of the desert still contained royal residences. Dānūfayr and Massaquin see in it a pre-Islamic winter palace, like Hatra, built by an Iranian architect for a prince of the Hāzār; it might be the Kāsr al-Sadīr of the poets. Miss G. L. Bell prefers to regard it as the site of Dānūfayr and would bring its date down to the Umayyad period. Herrsfeld dates Ukhaidir about 215 (830) from architectonic analogies with Șīmarrā; finally, Musil brings it down to 277 (989) in order to identify it with the Șīr al-Sufyān built in this year by the Kāmilīs rebel. It is indeed very likely that they restored it to install themselves in it, but they had not the means nor was it their custom to build such an imposing palace as a "place of refuge."

UKUBAT. [See UKUBAT; HARD.]

ULAMA' is strictly the plural of 'alim, one who possesses the quality 'alim [q.v.]; knowledge, learning, science in the widest sense, and in a high degree (mašūkāga). In usage, however, the accepted singular of 'ulama' is 'alim. Both singulars are Kūrānī and can be used of Allāh and of man; but the plural 'ulama' occurs only twice in the Qur'an and there of men (xxv. 197; xcv. 25). The plural 'alimūn occurs four times: twice of Allāh (xxi. 52, 64) and twice of men (xii. 44; xxiv. 42). On all this see Munfrudī of al-Rāghībī al-Ifṣāhānī, Cairo 1324, p. 348 sqq. and Zādī, xv. 316 sqq.

In the first instance it was known from the traditions and of the resultant canons law and theology, the 'ulama', as particularly custodians of that tradition, were commentators and theologians. They, thus, as a general body, represented, and voiced the Agreement of Article L'habitation to the Muslim people, and that Agreement was the foundation of Islam. In consequence the 'ulama', in whatever stated form they functioned, came to have, in a wide and vague fashion, the ultimate decision on all questions of constitution, law and theology. Whatever the de facto government might be, they were a curb upon it, as a surviving expression of the Agreement and of the right of the People of Muhammad to govern itself. The different governments might try to control them by giving them official status and salaries, and to some extent might succeed in that, if the success were too glaring the people would reassert by contempt for such government agents and would give their respect and devotion to private scholars who refused thus to be muslied. This was a constantly recurring situation under all Muslim governments. The 'ulama', therefore, might be government functionaries, either controlled by the government or keeping the government in a certain awe; or they might be private and independent students of canon law and theology.

The term 'ulama' is applied in the present day in its literal meaning to any one who is evidently a scholar in our sense. For this situation in Egypt, in the early sixteenth century see Lane's Modern Egyptians, chaps. iv. and ix. and index. For a similar situation under the Mamluks see Gaudreuil-Demouyene, La syrie à l'époque des Mamluks, passim and especially p. lxxxv. sqq. It is plain that the organisation of the 'ulama' was the solid framework of permanent government behind those changing dynasties. For the Ottoman Empire see E. J. W. Gibb, History of Ottoman Poetry, ii., p. 394 sqq. For the same situation in the Muslim world generally see Sir Thomas W. Arnold, The Caliphate, by index under 'Ulama'. For the distinction between the 'alim, canon lawyer and systematic theologian, and the 'ārif, the mystic who knows Allāh by religious experience and vision, see article 'Ālim above; so, too, for the distinction between the 'alim who was at first a knower of definite facts (Kūrānī texts and their meanings) and the 'ārif [q.v.] who was at first the independent thinker about these by his intelligence (bi'rā). It is, perhaps, hardly necessary to notice the error of western writers who frequently use 'ulama', in many spellings, as a singular.

(D. B. Macdonald)

ULDIJAITU KHODABENDE. [See OLAJAITU.]

ULUGH BEG, MUHAMMAD TUBBAB, son of Shah Rukh and of Gawhar Shad, was born in Sulhānā in 796 (1393). He became governor of a part of Khūrān and of Mārzandān in 810.
had previously undertaken to publish the Tables (Fac. 1, Paris 1839). E. B. Knobel has published the Catalogue of stars... after collating all the manuscripts in Great Britain and adding a Persian and Arabic glossary (Washington 1917). It has been disputed whether the original version was in Arabic, Persian or Turkish; it is probably the Persian version that we possess. The work seems to have been finished in 1441 (1457). Ulugh Beg, it seems, did not observe all the stars which he mentions and takes his latitudes and longitudes from Ptolomy, but he gives a disproportionate space to astrology. But Sédillot (op. cit., i., p. 361) can say that with him is the period of astronomical works in the East finished.

Ulugh Beg was less happy in war and politics. He drove the invading Özbek back to the Ak Sül following Bokhara's cavalry and that of Muhammad Dschuk soon had their revenge, advanced as far as Khodjend and laid the country waste (1428 = 1431).

The sole survivor of the children of Shah Rukh, he inherited the power on the death of his father (25th Zhil 1-Hijrijja 850 = 13th March 1447); but plunged into despair, he remained inactive for several months, enabling the Timurid princes to act against him. Gawhar Shid wanted to secure the throne for Ulugh Beg's son Ali, but the latter, misled by false reports, thought it had gone to "Ali" al-Dawla, another claimant, who, a few days after the death of Shah Rukh, led her prisoner with all her suite to Semnân. From there he set off for Herât, seized it and had himself proclaimed ruler there. Sultan 'Abd Allah, son of Ibrahim Sultan, took possession of the district of Shurte, Kâbul and Ghazna formed a new state with the sons of Soyardülmisim. Two other princes, Muhammad Mirzâ and Baha Mirzâ, also aspired to the power and the second had himself proclaimed ruler of Djurjân and Mazzarârâh. 'Abd al-Latif, who returned from Nishapûr with his prisoners was surprised by the emirs Mirzâ Şâli and Uwaïs. The prisoners were released and 'Abd al-Latif, who took to flight, was captured. He was brought before "Ali" al-Dawla who treated him generously.

Ulugh Beg finally cast off his lethargy, listened to the advice of his ministers and came out for Khurásân. Wishing to conciliate a rival, ‘Abd al-Bakr, he gave him his daughter in marriage but had to imprison him on being convinced of his treason. He crossed the Oxus, heard in Balkh of 'Abd al-Latif's doings, pardoned him and ready to make any concession to be free of his troubles, sent his first minister Nişân al-Din Mirk to Herât with this object. But Bâbar Mirzâ invaded Khurásân and at Djam routed "Ali" al-Dawla's advance-guard and the latter, caught between him and Ulugh Beg, surrendered. Prisoners were exchanged and 'Abd al-Latif became governor of Balkh. Through fear of Ulugh Beg the generals of "Ali" al-Dawla forced their master to make peace with Bâbar Mirzâ; Khabâshân was to be the frontier.

The treachery of 'Abd al-Latif, who refused to deliver up his hostages and had them massacred after the defeat of an attack on a detachment sent to fetch them, brought about severe hostilities. "Ali" al-Dawla made plundering raids but abandoned an expedition, which he had planned, on the threats of Ulugh Beg, who had now decided to assert his rights as sole heir of Shah Rukh and to avenge the massacres of Balkh (152 = 1448-1449) by the murder of several of his son's officers. 'Abd al-Latif brought large contingents to his father
on his crossing of the Oxus. Defeated through treachery at Tarhāb after a desperate battle, "Alī" al-Dawla sought refuge in Mervah where his brother Bābar Mirzā promised to assist him to regain his lands. He pretended to submit but Ulugh Beg was not deceived, occupied Herāt and its forts and marched on Isfahān where he divided his army into two: the one with Mirzā 'Abd Allāh Shāhī was to lay siege to Bābān and the other with "Abd al-Latif marched against Astara-bād. At this moment the Özbek invaders Transoxians, Sarmatians and Turks were attacked. Ulugh Beg, taking the sarcophagus of Shāh Shamlu and the treasure of Herāt, returned in haste. His rear guard was attacked by Bābar Mirzā and the Özbek captors his baggage at the crossing of the Oxus. He finally reached Bukhāra, where his father's obsequies were held. Khuršān, which was disputed between the Timurids and the Turkomans, was in a state of complete disorder. Yar 'Ali, prince of the Black Sheep, escaped from the castle of Nerbād and laid siege to Herāt. Ulugh Beg relieved the city but Bābar Mirzā rebelled and attacked it in turn. "Abd al-Latif escaped to his father and Yar 'Ali, entering the town by surprise, had himself crowned there and became popular. An emissary of Bābar Mirzā gave him a sarcastic and he was executed.

In Dža' 1-Hiḍḍa 852 (Feb. 1449) the whole of Khuršān belonged to Bābar Mirzā who gave a lustful compensation, the government of the little town of Tūn, to "Alī" al-Dawla, who was replaced by his son. The two, accused of plotting, were sent to Herāt and suffered a harsh captivity. The discontent was general. Bābar Mirzā was re-proached with debauchery, drunkenness, incapacity and the exactions of his agents. Refusing to lead an expedition against Bursīg, the powerful ruler of Hindīkūd, he sought to raise the country with the help of Ulugh Beg, to whom he sent an emissary Eīdākh. The latter was captured by "Abd al-Latif and sent to Bābar Mirzā to whom he confessed everything. In spite of prodigies of valor Hindīkūd was defeated and slain.

"Alī" al-Dawla escaped; he went to Sīstān, then to the ʻĪṣā where his brother Muḥammad Mirzā, who was also lord of Fārs, was ruling. The two invaders Khuršān and Džam inflicted a terrible defeat on Bābar Mirzā, who with eight horsemen escaped and sought refuge in the castle of Timur-lū. At Herāt, Muḥammad Mirzā showed: himself generous; he liberated his nephew Ibrāhīm and sent Bābār's son Shah Muḥammad to his mother.

"Abd al-Latif had a hatred for his father which had been explained in various ways. Ulugh Beg in his communiqué at the battle of Tarhāb is said to have substituted the name of his other son "Abd al-ʻAtīx for his. He is said to have refused to restore to him the money and arms which he had stored in Herāt as, relying on astrological predictions, he distrusted a son in whom he saw a paracide. Rebelling, "Abd al-Latif seized Bālākh, defeated his father and his brother "Abd al-ʻAtīx at Rāmānjān 853 (Oct. 1349; 1449) after a reign of two years night months. After this murder, the dismemberment of the Timurid empire made rapid progress; claimants arose in all directions, many of whom achieved their aims. At the end of six months, "Abd al-Latif himself met a violent end.

(U. BOUYAT)

UMAIYA b. ‘ABD SHAMS, ancestor of the Umayyids, the principal clan of the Kurash of Mecca. His genealogy (Umayya b. ‘Abd Shams b. ‘Abd Manṣūr b. Kūsayr) and his descendants are given in Wüstenfeld, Geneal. Tab., U, V. Like all other surnames of Arab tribes and clans, his actual existence and the details of his life have to be accepted with caution, but too great scepticism with regard to tradition would be as ill-advised as absolute faith in its statements. As those Umayyids who were living at the beginning of the Muslim epoch were only in the third generation from their eponym (e. g. ‘Abd Sulaym b. Harb b. Umayya), there is nothing improbable in the latter's being a historical personage; besides there is nothing in tradition to suggest he was a mythical individual or a later invention. The name Umayya is common in Arab nomenclature and is found in both northern and southern tribes; the meaning which anti-Umayyan polemics gives to it (a diminutive of ‘umma "serving") would make it a sobriquet; we also have the positive form Banu ʻAmm as the name of a tribe (cf. Ibn Dāmid, Kitāb al-Iskāb, p. 34).

Umayya was the cousin on the father's side of Ḥāmpī b. ‘Abd al-Muṭṭalib, and tradition relates that, being jealous of the latter's influence, he challenged him to a sumūfayra, the judge of which was to be a ʻālim of the Khuršān. Being defeated, Umayya had to exile himself from Mecca for ten years (cf. Tabarzī, 1, 1090; Ibn Sa‘d, ii. 43-44). This story is evidently only an anticipation of the rivalry between the Umayyids and Ḥāmpīzids ("Aliids and "Abdālids) which forms the centre of the political struggle in the Arab empire during the first two centuries of the Hijra (cf. al-Maqrīzī, al-Tamīmī ma‘ Ṭabīkūnum fi ma‘āla baḥtha wa Umayya wa-Banu Ḥāshim, ed. Vos, Leyden 1883). It looks like a legend of learned origin. Similarly the story of the emissary of Umayya and his nephew "Abd al-Muṭṭalib b. Ḥāmpī and other chiefs of the Kurash to the Hīyazīr king Ǧa‘īf b. Dīl Vazān after the latter had defeated the Abyssinians (al-ʻAzraqī, in Chron. d. Staat Mitte, ed. Wüstenfeld, i. 99; Aḥsān, xi. 75-77; Ibn Ḥabīb, fiḥal al-ṣafar, Cairo 1295, i. 131-133 etc.) is only intended to enhance the
prestige of the Quraysh and to prophesy the coming of Islam. Lastly the truth seems very problematical to us of the stories of alleged eye-witnesses who had seen Umayya, a decrepit old man going through the streets of Mecca leaning on his son Abī 'Amr (according to the historian Haihām b. 'Abdī, this was really his slave whom he afterwards adopted; cf. Tabari, ii. 967; Al-gušāri, i. 7–8).

We come down to historical ground with the statement (Arwāḳ, p. 71, etc.) that Umayya, like his father 'Abd Shams, commanded the Meccan army in time of war (al-hiyāda), a post which was later transmitted to his son Ḥarb and his grandson Abū Suffāyān. Although we perhaps should not interpret this literally as implying a permanent military post (it seems to have been rather an occasional appointment) and although we find alongside of descendents of Umayya as military leaders, numerous members of other clans and even ḫalafā' (clients) (cf. on this question: Lammen, Les Algérie, etc. of the organisation militaire de la Mosquée, in L'Arabie occidentale avant l'hégire, Beyrouth 1928, p. 237–303), there is nothing improbable in the story, especially if we regard the hiyāda as the direction of the military affairs of the republic rather than the actual command of troops in the field. As a matter of fact, the descendents of Umayya never lacked talent either for military organisation or for politics.

At the beginning of Islam, the clan of the Banū Umayya appears as the most powerful in Mecca; it was represented by two main branches: the A'yāz and the A'ansābiya (plur. al-qoturi from the name 'Anṣābiya common in the family). The former claimed to be descended from a son of the eponym whose names come from the same or a similar root (a common occurrence in Arabic nomenclature): Abū l-'Iqā, al-Uwwās, al-Āṣ, Abū l-Āṣ; the others were represented by families of Ḥarb, Abū Ḥarb, Suffāyān, Abū Suffāyān (from his name 'Anṣābiya, son of the celebrated Abū Suffāyān b. Ḥarb), Abī 'Amr (the latter whose name is said to have been Dḥakwān was probably, as already mentioned, an adopted son of Umayya). From a son of Abū l-Āṣ, al-Ḥakam, are descended, through Marwān b. al-Ḥakam, the Umayyad caliphs who succeeded Marwān as well as the emirs (later caliphs) of Anfalasija. Some branches of the family of the calipha settled in Egypt and Persia; although the greater part of the family was exterminated in 132 A.H. by the 'Abbasids, some of its members survived: among these were Abū l-Farāq al-Ṭaybāhāni, the author of the Kitāb al-Āḍāmīy, a descendant of a brother of Marwān I; his Shī'a views contrasted strangely with his descent. Another son of Abū l-Āṣ, Affān, was the father of the Caliph 'Uthmān; his descendents are numerous (among them the poet al-Ardāt; cf. Al-gušāri, p. 153–168), and several of them held important offices under the Umayyads. Of the line of al-Áṣ b. Umayya, the most celebrated member is Sa'id b. al-Áṣ b. Sa'id b. al-Áṣ, governor of Kufa under Uthmān, whose misdeeds were one of the main causes of the rebellion against the latter. The family of Abī l-'Iqā also produced a number of notable individuals under the Umayyads who were all descended from Asād b. Abī l-'Iqā.

As to the A'ansābiya branch, its most illustrious family is undoubtedly that of Ḥarb, whose son Abū Suffāyān plays so remarkable a part in the story of the origin of Islam. Through his son Mu'āwiya, he is the founder of the dynasty of Suffāyānah caliphs, which early became extinct with Mu'āwiya II, son of Yazid I. Another son of Yazid, Khalīl, is said to have been the founder of Arabic alchemy, and a grandson, Abū Muḥammad Ziyād b. 'Abd Allāh b. Yazid b. Suffāyān, was slain by the 'Abbasids at Madīna in 152 (Tabari, III. 54). Yazid b. Abī Suffāyān, who was Mu'āwiya's predecessor in command of the army of Syria in 'Umar's reign, left no descendents. Of the other sons of Abī Suffāyān, Uthba, 'Anbata, Yazid, Muḥammad, 'Amr, only the two first had issue. A collateral branch of the Banū Umayya, descended from Abī 'Amr b. Umayya, whose paternity, as we have seen, was not absolutely certain, included among its members al-Walid b. Abī 'Amr, governor of Kufa under Uthmān and later a favourite of Mu'āwiya during his caliphate and also known as a poet (Al-gušāri, IV. 175–190); his father Uthba had been made prisoner at the battle of Badr and put to death by Muḥammad, who could not forgive the insults which he had heaped upon him at the beginning of his preaching in Mecca; the shameful memory of the father weighed heavily on the son and is often revived in 'Alid polemics against the Banū Umayya. A son of al-Walid, Abī Kaṭifa 'Amr, is also known as a poet (Al-gušāri, i. 7–18). All the members of the line of Abī 'Amr settled in al-Irāq and al-Jāzira.

UMAYYA b. Abī l-Salt, an Arab poet of the tribe of Ṭāqif, lived in Ṭafīf, the son of Abī l-Salt 'Abd Allāh and Ṭuṣayna b. Abī Shams b. Abī Manāf, grandson of Abī Suffāyān, cousin of the Uthba and Ṣabīa who were killed at Badr and closely related to the Quraysh patrician families of Mecca. A lament on the Quraysh who fell at Badr, preserved by Ibn Hīṣam, p. 531 seqq., shows that he was still alive in 624 A. D. According to tradition, he died in 8 or 9 A.H. Traditions differ regarding his attitude to the Prophet and to Islam. But the statement that he was not in personal touch with the Prophet and refused to recognise his claim to be a prophet may be regarded as the better founded. It is also in keeping with his sympathy for the Kurāish expressed in the poem above mentioned. The poems and fragments transmitted under Umayya's name, which have been collected by F. Schultheiss and added to by E. Power, may be divided according to their subject into two main groups. The one, a smaller group, consists of poems and verses which are panegyrics of individuals—namely the rich Meccan 'Abd Allāh b. Djuḍān, and do not differ essentially from similar pieces by other old Arab poets. The other, a larger group, which begins in Schultheiss' edition with No. xxiii., reveals almost entirely the point of view which we may call Ḥanifi. On a basis of the recognition of one personal God as 'lord of the slaves', we have apocalyptic pictures of the abode of God and the angels of his kingdom, stories of the creation, eschatological conceptions of the last judgment, hell and paradise; appeals are made for the practice of a moral life and reference
made to "warning examples" which are taken, some from Arab (Asid, Thamûd) and some from Biblical legends (the Flood, Abraham, Lot, Pharaoh etc.). As the same time he is fond of using the hea-
fable. We may also note the references to magical practices (charms to produce rain, poison, xxxiv. to-
towards the end). As regards religious ideas and the treatment of these themes, Umayia's poems thus show a far-reaching agreement with the Kur'ân, which in many passages is almost word for word (cf. Frank-Kamenetsky's investigations). The question of the dependence of the one on the other has been naturally been raised. Haart (see Blüt) holds the view that Umayia's poems on Biblical legends quoted in Pseudo-Balbaki's Book of Creation are all genuine and direct sources of the Kur'ân. As to their genuineness, this is, as in the case of old Arabic poems in general, in each case questionable. But apart from some Muslim insertions, which at once strike one by their bias (e.g. p. xxiii., a panegyric on Muhammed and such pieces, as have already been recognised by tradition as not genuine, there are no cogent reasons to doubt the genuineness of the poems handed down in Umayia's name as a whole. But that Muhammad actually drew upon Umayia's poems seems to be improbable for the simple reason that Umayia had a greater knowledge of the legendary material in question and one that differs in many details from the Kur'ân. The same fact is against the view that Umayia might have borrowed from the Kur'ân, although this is not chronologically impossible and one tradition (al-Ghazâ, iii. 187, 10) says that Umayia

Mu'awiya b. Abi Sufyân
Yazid b. Mu'awiya
Mu'awiya (II) b. Yazid
Marwân b. al-Hakam
'Abd al-Malik b. Marwân
al-Walid b. 'Abd al-Malik
Sulaimân b. 'Abd al-Malik
'Umar (II) b. 'Abd al-'Aziz b. Marwân
Yazid (II) b. Yazid
'Abd al-Malik
al-Walid (II) b. Yazid
Yazid (III) b. al-Walid b. 'Abd al-Malik
Ibrâhîm b. al-Walid b. 'Abd al-Malik
Marwân (II) b. Muhammâd b. Marwân

was the first to read Allah's book. The agreement between Umayia's poems and the Kur'ân may more easily be explained from the undoubtedly fact that about the time of Muhammad's mission, and probably for some time before, currents of thought of a Hafti nature had attracted wide circles of the Hijâri, especially in Mecca and Yathî, stimulated and nourished by Jewish baggadás and Christian legends, which were in circulation there and over South Arabia in many recensions — and this explains the occasional divergences between the Kur'ân and Umayia. Muhammâd and Umayia like other luminis religiosi (Zaid b. 'Amr, Wârâqa, Maslama, etc.) drew upon common sources, whether written as Schnell's thinks or oral as Noldeke holds (see Birol). Recently, Tór Andræs (see Birol) has put forward and with weighty arguments the view that none of the religious poems of Umayia are genuine and should be regarded as the work older Kur'ânic exegetists, à la al-Saddîq, Ibn 'Abbâs etc.

Umaiys (Basî Umaiya), the dynasty of the caliphs from 41-132 a. H. = 661-750 a. d., takes its name from the fact that its founder Mu'awiya b. Abî Sufyân was the representative of the principal branch of the Basî Umaiya; even after the exclusion of this branch from the caliphate he retained its name, for the caliphate was passed to the head of another branch, Marwân b. al-Hakam b. Abî 'Tâk. For the reader's convenience we give below a list of the Umaiys caliphs with their dates of accession.

Rabi' I or II or Djamâdat 1 41 (July-Sept. 661)
Rahib 60 (April 650)
Rahib I 64 (November 653)
Tih 'A'a-da 64 (June 684)
Rahib 65 (April 685)
Djamâdat II 66 (October 705)
Djamâdat I 96 (February 715)
Tih 99 (October 717)
Rahib 101 (February 720)
Djamâdat II 105 (January 724)
Rahib II 125 (February 743)
Rahib 126 (April 744)
Djamâdat II 126 (October 744)
Tih 127 (December 744)

"The Arab empire" is the title given by Well-
ahausen to his classic work on the Umaiys period; by this, he wished to indicate that the Umaiys caliphs represented the attempt made by the Arabs to assert their power in the world as a nation, while religion only played a secondary part in this attempt. After thirty years Wellhausen's historical structure still stands; if on the one hand the numerous researches of Lammens, full of erudition, have filled up with details the framework supplied by Wellhausen, a little remote and rather schematic; if Caetani, on the other hand, by happily developing — perhaps rather too systematically — a hint from Winckler, has succeeded the expansion of the Arabs after their conversion to Islam with a long series of armed migrations made by the desert tribes seeking more fertile settlements in the north of their peninsula, the main lines laid down by Wellhausen are still followed in modern research in the field of Umaiys history. If there is one thing to be modified in Wellhausen's panoramic view, it is perhaps the too strictly political idea which he had of the
development of Arab history, as if one ought to recognize in the actions of the Umayyad caliphs a conscious desire to give expression to purely national values (cf. Becker's remarks in *Itihās*, ix. 95—99). Although the existence of a national consciousness among the Arabs, especially in the Umayyad period, is beyond doubt (Goldziher, *Muh. Stg.* i. 101—145), we are now convinced that the irrational element plays as important a part in individual initiative as reasoned reflection; in this particular case it should be recognized that Wellhausen and still more those who have followed in his footsteps have somewhat neglected the importance of the religious factor. In reality, if not of mystic tendencies were quite foreign to the descendants of this Meccan aristocracy which had fought Islam in its early stages, and if one ought rather to recognize in it the survival of the spirit of the *sāyiya* of the Dāhilīya and of the business men of the merchant republic, we should run the risk of evading the historical truth if we took no account of the fact that the unprecedented triumph of the Arab movement took place under the banner of the religion of the *kurān* and no mentality, even the most modern and "agnostic", could escape the impression made by this circumstance. The Umayyad caliphs, as men of their period and milieu, must have believed in good faith that the propagation of the Muslim faith and the expansion of their temporal power were one and the same thing; and they must have been convinced that the enemies of their policy, whether Shi'ītī or Kāhidjī, were enemies of the true tradition of the Prophet. This tradition has preserved as a certain amount of evidence which leaves no doubt of the presence of this conviction among the Umayyad caliphs; and if tradition, as established after their fall under the influence of the ideas dominant in pietist circles, has cursed the memory of the Umayyads, we ought not to forget that it was precisely under their regime and partly under their stimulus that Islam established itself as a universalist religion.

This pietist tradition, which under the *Abābāda* became the official history of Islam, further reproaches the Umayyads, even more than with having failed in the duties of religion, with having betrayed the spirit of the constitution of the theocratic state as Muhammad had established it and with having replaced the caliphate by *swall*. In this charge we find (analogous to what may be noted in the attitude of the prophets of Israel to the monarchy) combined the protest of the theocratic spirit which gives to God alone power on earth and the intolerance of the Behaim towards any kind of regular authority. In reality, as the researches of Caetani and Lammens have shown, even the governments of Abū Bakr and of 'Omar were far from corresponding to the ideal of the theocratic regime which the schools of *fukhā* later constructed; but the personal prestige of the two great companions of the Prophet, if it did not succeed in silencing the opposition that centred round 'Alī, prevented a constitutional theory which was in contradiction to the actual situation from being developed in the early days of the caliphate. It is only under *Othman*, whose rule marked the open triumph of the Umayyad party at the expense of the first century, that people began to regard the historical paradoxes, which made the former enemies of the new regime now reap the profits of it, as treason against the *rights of God* by which the Prophet's work was disowned and destroyed. We can easily see how the same aim of opposition united on one side the resentment felt by the pious souls of the heroes and martyrs of the infant religion, and on the other the ambitions of a more positive nature of those who sought to maintain for the family and the encomage of the Prophet the privileged position which the founder of the new theocratic state had secured for them. Religious legitimism and dynastic legitimism found a common champion in 'Alī. 'Alī was able to boast an initial success in his elevation to the caliphate at Medina; then the occupation of Kīta, the victory which he won at Basra against the coalition of 'Abbās, al-Zubair and 'A'ishah, the triumph of his party in Egypt seemed to have secured him authority over the whole Arab empire. In the conflict with Muʾawiyah, 'Alī actually represents, at first at least, considerations of state in conflict with the primitive and quite pagan idea of blood vengeance demanded by Muʾawiyah and by the Umayyads for the murder of their relative. But the situation, ambiguous even from the point of view of the new Islamic ethics, in which 'Alī found himself by his compromise with the murderers of 'Othman, was skillfully exploited by the political talents of Muʾawiyah and was not long in developing and dividing the anti-Umayyad party into its two original constituents: on the one side the religous intransigence which culminated in the extremist attitude of the Khāridjīs; on the other, the dynastic legitimism of the Shīʿa. This division made the fortune of the Umayyads, who came to stand for the moderate element which would guarantee law and order in face of the guerrilla war which was ravaging the 'Irāq and brought the country into a position to reap the benefit of the conquests.

At what moment was Muʾawiyah's formal candidature put forward? This is still an obscure point on which tradition gives divergent views, dating the candidature from the beginning of Muʾawiyah's struggle with 'Alī (37 A.H.) or putting it as late as the latter's death (40 A.H.). In any case it raised a new and exceedingly delicate constitutional problem: that of the assumption of supreme power by the believers by one who was not among the earliest companions of the Prophet. The different chronological statements are themselves an indication of the confusion which must have prevailed when the solution given by the course of events suddenly caused a breach with the precedents. Indeed the indignation of the *fukhā*, which takes no account of the requirements of historical development, is quite legitimate from the point of view of doctrine: the caliphate of Muʾawiyah opens an entirely new period in the constitutional history of Islam; the caliph ceases to be the executor or continuator of the *umma* of Muhammad, to which he has been a witness since its beginning. He is henceforth something more: the outstanding personality of the Arab world; the first among the tribal chiefs in military strength, in family connections and influence and in individual prestige, he is in fact, if not in official title, a "king" or rather a "tyrant" in the Greek sense of the word. This was the ambiguous situation which lasted for a century, i.e. as long as the Umayyad dynasty lasted, and which formed the platform for the Shīʿa propaganda, which was to be ended by the victory of the legitimist idea and by the fall of the Arab *empire*. 
It is exceedingly difficult for us to judge the extent to which Mu’awiya was aware of the difficulty of the situation. If we were to confine ourselves to certain aspects of his policy, usually much clearer and more systematic, we should be tempted to conclude that he did not fully appreciate the importance that the religious factor would assume in the political struggle. It is true that he sought a reconciliation with the sons of his unfortunate rival — he succeeded completely with one, al-Hakam, but was less fortunate with al-Husain — and in general he was full of consideration for the whole family of Muhammad, the ‘Umayyads as well as for the Ansar, proud of their title of ‘helpers’ of the Prophet. But he did not go so far as to insist on the suspicious elements taking an oath of loyalty (the ‘curse of Abū Turīb’), a hateful measure which seemed to be a prelude to the ‘imams of the ‘Abbasids and which brought more secret hatred upon the Umayyads than real benefit, and he made the mistake of giving a free hand in the ‘Iraq to Ziyād b. Abīth’s merciless policy of suppression, so different from the policy which he himself practised and which he might also have applied in person in the ‘Iraq with the insinuating mildness of which he had the secret. It is worth noting that during the twenty years of his reign Mu‘awiya never himself went to the ‘Iraq to try to form personal attachments. The ‘Iraqi population seems then to have been justified in thinking that the Umayyad caliphate really represented the hegemony of Syria over the rest of Islamic territory and the memory of ‘Abīth, which legend soon seized upon, was in a way bound up with the nationalism of the ‘Iraq.

Mu‘awiya was moreover detained in Syria by other problems, really formidable, which the organisation of the empire laid upon him. The first question was that of the relations of the sovereign with his own family and with the tribes. Mu‘awiya did not fail (more Arabi, or rather in obedience to a general human feeling) to see that his relations profited largely from the good fortune that had befallen him; but he was careful not to fall into ’Ommān’s error and did not become the prisoner of his claim. It is worth noting that it was the most important provinces which were assigned to non-Umayyad governors; the relationship with ‘Yazd, all-powerful in the ‘Iraq, was purely a fictitious one, while in Egypt where, after the death of ‘Amr b. al-‘As, Mu‘awiya put his own brother ‘Uba, the latter was not succeeded by another Umayyad when he died after barely a year of office. But it was particularly in his relations with the turbulent chiefs of the tribes that Mu‘awiya showed the complete measure of his talent; the latter, little disposed to be impressed either by the authority of the Kurāsh or by the religious prestige of the ‘umr al-mu‘minin, made the caliph’s position something like that of a European suzerain in the age of feudallism. The long and patient work by which Mu‘awiya tried to gain for his cause the influence of the tribes, which he could not have destroyed, inclined on the one hand at strengthening his power, and on the other at achieving the great aim of his life, the šara’ of the tribal chiefs for his son Yazid, which he succeeded in extracting from them in his lifetime; by this he succeeded in making the caliphate hereditary. It is this that we must regard as the most tangible success of Mu‘awiya’s policy and it was owing to this act that the caliphate of the Umayyads lasted a century, in spite of the convulsion that followed the death of Yazid. But how precarious the situation remained even after the dynastic principle was solemnly affirmed! The principle had only been won by Mu’awiya’s personal prestige, as is shown by the fact that immediately after his death, al-Husain thought the moment had come to raise his standard as a legitimist claimant. When ‘Abd Allāh b. al-Zuhayr came forward as a champion of neglected Arabia and the memory of the first Companions, the tragic end of al-Husain’s effort and Kerbela’s left a memory of martyrdom which was later exploited against the Umayyads; but for the moment it crushed the ‘Abīth opposition. Perhaps, if Yazid had lived longer or if he had left a son old enough to succeed him worthy, in place of Mu‘awiya II who was still a child, the position of the Umayyads would have been strengthened. Yazid, if he was not the monster of dissipation and impetuous, which phlegm tradition likes to represent, had certainly not the distinguished qualities of his father but he lacked neither energy nor brains to continue the latter’s work.

The haphazard method in which the vast Arab empire had been formed in the days of the early conquests and the lack of any system in the administration of a dominion so vast and so distant (if the story of the constitution of ‘Umar is not quite legendary, the measures taken by him certainly only represent the embryo of the later financial and civil organisation of the empire) raised a series of problems which Mu‘awiya could not help tackling in his usual practical spirit. Unfortunately it is just on his activity as an administrator that the biography of Mu‘awiya, so rich in anecdotic details, is exceedingly weak and his work as a statesman is known to us only from scanty and insufficient notices. There was a slackening in the progress of the conquests, one of the causes of which was the serious resistance offered to the advance of the Arabs by the Byzantines, who were directly threatened in Asia Minor and in Europe; the series of expeditions into Asia Minor, which brought Muslim arms up to the gates of Constantinople and naval raids in the Aegean sea and on the coast of Sicily recorded local successes which brought no definite result, while the attacks by the Byzantine fleets on the Syrian coast, supported by risings of the highlanders of the Lebanon (the Darajima-Mardaites), made it advisable for Mu‘awiya to sign a truce on conditions little satisfactory to Arab ambitions (57 A.H.). Successes were more brilliant in the east where the penetration of the plains of eastern Iran was actively continued, and in Africa where Egypt continued to form a base for expeditions to the west and south, but here also there was a futile acquisition of territory. These expeditions were as before left to the initiative of the provincial governors and carried out by the resources of the tribes who had settled there following the first conquests (the muhājirūn); the caliph’s own army, formed by the junds of Syria, was reserved for campaigns against the Byzantines and the protection of the caliph against possible rebellions at home. It was to the existence of these forces, so loyal to the Umayyads, that the latter owed their victory in the civil war of 64 A.H.

In the internal administration of the empire, Mu‘awiya, even more than his predecessors, made use of the experience of the Christians with whom he had been in close relations in Syria since the years
of his governorship under 'Omar and 'Othmân, when he had learned to appreciate their knowledge and practical ability. It was at this period that Christian culture of Aramaean–Byzantine type began to penetrate into the Arab milieu, a penetration which ultimately led to the formation of the characteristic civilization of Islâm. But if we can see the beginnings of this process under Mu'âwiya, the process itself escapes us.

The premature death of Yazîd enabled Ibn al-Zubair's rising to involve the whole of the 'Irāq by incorporating the Shi'a hostility, with which however it later broke. As always happens in periods of crisis, all the problems which had only been batted under Mu'âwiya's government presented themselves again in an aggravated fashion: the untruth and particularistic tendencies of the tribes; the relations of the subject peoples with their conquerors; the rivalry of interests and feelings between Syria, the 'Irāq and Arabia; all these combinations of conflicting forces which the genius of Mu'âwiya had been able to restrain, retained all their strength and were even intensified under the stimulus of the war of religion. The support of the great Syrian tribe of the Kalb, which Mu'âwiya had won through his marriage with the daughter of Badrân b. Unalî, the mother of Yazîd, continued to be assured to the collateral branch of the Umayyads, that of al-Hakam b. Abî 'I'sâ b. Umayya, which replaced the Suyûfîs in the control of the clan (there was however a feeble attempt to keep the direct line of descent by making Yazîd's young son Khâlid caliph). Marwân b. al-Hakam was already an old man when he came to power; in his long career he had had experience of feuds among the tribes as well as of the rivalries and intrigues among the Companions, the covetous of the heritage of Mu'âwiya. The victory at Mardj Râkîb (64 A.H.) over the forces of the Kai'a, whom Ibn al-Zubair had won over to his cause, secured him Syria, and Egypt, where the anti-Umayyad party had triumphed, soon came back to him; but his death very soon after this last success left his son 'Abd al-Malik the enormous task of subduing Arabia and the 'Irāq. Succeeding to the caliphate, almost unexpectedly, 'Abd al-Malik represented a new attempt to establish a dynastic sequence in the succession: it was Mu'âwiya's scheme, in complete contrast to Arab custom which regarded the power as an appanage of the family group as a whole. 'Abd al-Malik himself and almost all his successors were to have as the principal aim of their dynastic policy the securing of the succession for their direct descendants and the exclusion of collaterals.

In the confusion of the struggles between caliph and anti-caliph, between the latter and the Shi'i and Khârijî rebels, struggles which extended to the remote regions of Fârs and Khorâsân and in which the particularistic tendencies of the tribes were revealed in all their vigour, taking as their badge the standard of one or other of the contesting parties (the dirâws of the poets of this period and the historical anecdotes that accompany them are the best documentation of this), 'Abd al-Malik had the good fortune to hit upon two men of the first ability who secured success for him: first al-Muhallab [q. v.], an old partisan of Ibn al-Zubair who joined the victor (as Ziyâd had lately been); then, far superior in talent and devotion, al-Hâdjîdîdî, who was able to take up with unselfish and ruthless energy the task of restoring the authority of the state above any particularism of tribe or party. Al-Hâdjîdîdî, whose mentality seems almost foreign to the Arab character, looks to us like the precursor (who was however far in advance of later incarnations) of the vizier of the 'Abbâsid period, knowing no other master than his sovereign (or, we might say in modern language, the intercessor of the state) and resolved to serve him in every possible way. The hatred with which tradition has surrounded his name is well justified; al-Hâdjîdîdî's views and his methods he employed to make them successful must have appeared almost diabolical to the old tribal sentiment as well as to the new individualist and antistatal conception of religion which was in process of formation. In reality al-Hâdjîdîdî was the loyal faithful Muslim; one might even say that in a way he represented the continuation of the tradition of the theocratic state founded by Muhammad. This tradition is linked up with that of monarchy by divine right which western Asia and Egypt had known for millennia, from the time of the Pharaohs and Sumerian priest-kings down to the Roman and Sassanian empires whose actual heirs were now the successors of the Prophet. The whole caliphate of 'Abd al-Malik under the driving power of al-Hâdjîdîdî is simply an attempt to establish an absolute monarchy. What the times were not ripe for in the time of Mu'âwiya (although Ziyâd was in this respect a precursor of al-Hâdjîdîdî) seemed possible to 'Abd al-Malik who directed a whole series of measures towards this same end. First of all the powers of the governors of the provinces and their connections with the tribes were cut down; this policy was exercised with most success in the eastern provinces, the farthest from the centre of the caliphate, where the wars against Turk and Iranian kept alive the bellicose spirit of the tribes: al-Hâdjîdîdî by suppressing the attempts to gain autonomy by the Muhallabids and Ibn al-Ash'ârî asserted the political unity of the state and endeavoured to transform the governors into mere officials (he who, although lord of half the empire, regarded himself as his sovereign's servant). The foundation of Wâṣît, the establishment of the Zaôûdî in the marshes of Bâjan were all measures tending to reduce the importance of the tribal element. Egypt, a land which since the time of 'Amr b. al-Asî had retained a position of semi-independence towards the central government, could not have been reduced to such a position of dependence; on the other hand, its importance for the security of Syria was so fundamental that the caliph thought he could save the principle of the unity of the empire, while respecting Egyptian desire for autonomy, by allowing his brother 'Abd al-'Azîz to rule there uncontrolled. The latter however regarded his vice-royalty as a stepping-stone to the caliphate. Other steps taken by 'Abd al-Malik had also as their object the unification of the state: the fiscal census aimed primarily at the adh'ā l-dhâmmma which however ended by weighing on the Muslims themselves; the adoption of Arabic as the official language; the reform of the coinage; the buildings and sanitary work carried out, mainly in the 'Irāq but also in Egypt and Arabia. In a reign of twenty years 'Abd al-Malik was able to give the Arab empire an outward appearance which more and more resembled an monarchical state, which was following in the path laid down by the true tradition of Islâm; and indeed 'Abd al-Malik's attitude to religion is marked by a renewal of
The caliphate of al-Walid saw the harvest of the seed planted by the long work of 'Abd al-Malik; the imposing personality of al-Hadid(led) continued to dominate it; Maslama b. 'Abd al-Malik, the Umayyad who was to besiege Constantinople, Mu'ad b. Nasir, the conqueror of Spain, and Kataba b. Muslim secured great triumphs for Muslim arms. The mosque of Damascus and many other splendid buildings proclaimed the power of the Umayyads. But the problem of the succession reopened the crisis; this time, it was the "Arab" principle that triumphed, in excluding from the caliphate al-Walid's son in favour of his brother Salman, and the duel between the caliph who wished to keep the power in his line and his brothers seeking to supplant him, continued until the end of the Umayyads with the result that it affected the prestige of the dynasty. The results of the lavish expenditure of 'Abd al-Malik and al-Walid began to weigh heavily on their successors; the economic crisis and the problem of the converts made themselves felt. 'Omar II, the Benjamin of orthodox tradition, which makes an exception for him in its condemnation, felt that a policy of "accommodation" was needed in a terrible catastrophe were not to overwhelm the destinies of Islam itself together with those of the Umayyad house. The deep mark which the work of 'Omar, although it only lasted two years, left on history, shows that this caliph really possessed high qualities and that he was gifted with a vivid feeling for realities; at the same time, we are surprised to find at this time a system already fully developed of principles and religious regulations, a system which it had taken barely two generations to elaborate. The pietist and legalist mentality of Islam was already formed at the end of the first century and had the stamp it was to bear through all successive ages. It had been encouraged in the course of its development by the fact that it had been elaborated in the circles of the opposition, who were kept remote from the exercise of power, and from a knowledge of practical politics; at the same time, by one of the most singular paradoxes in history, its authority has been recognised, owing to the prestige of those who championed it, in the very circles of government against which its reproaches were directed; one might almost think we have here the quite modern phenomenon of the influence which the opposition in a parliametary government insensibly exercises on the direction of the policy of the party in power! This paradox is simply the consequence of that which was, as we have seen, at the very foundation of the Umayyad regime; for this regime represented the carrying out and development of the triumph of the preaching of Muhammad, going back to historic precedents and working by methods and through individuals who were clearly opposed to the spirit of this preaching. 'Omar II, in anticipating the 'Abbasids with perhaps more good faith than they, tried to reconcile the political and financial demands of the state with respect for religious tradition. Although his attempt must be regarded as having failed as regards the destinies of the dynasty, his fiscal reforms paved the way for the equal treatment of Arabs and non-Arabs and contributed more than anything else to the fusion of the descendants of conquerors and conquered. It was undoubtedly to the beneficial activities of 'Omar that we owe the third period of splendour which the Umayyad
caliphate experienced under Hishâm. During the twenty years of his reign, the conquests were resumed on the old grand scale, in the west (in spite of the great Berber rising of 123) as well as in the east; the Arabs advanced into the heart of Gana; the Mediterraneans began its transformation into an "Arab lake"; the Turks who had begun to slip off the Arab yoke on the dismissal and death of Kutba were subdued for a third time.

The Umayyad caliphate was at its zenith when Hishâm died; one can hardly believe that a few months later this state which seemed to be solidly built on the authority of the caliph would be in complete disorder and fall a prey to anarchy. Tradition is undoubtedly to some extent right in attributing to the vicious conduct of al-Walid II, a dissolute drunkard, an important part in the collapse of the established order. But the faults of one individual are not sufficient to explain the unexpected appearance of all the signs of dissolution. The causes must be sought, as usual, in the very elements which gave the caliphate of Hishâm the appearance of prosperity. The latter had exploited to the limit the fiscal reforms of 'Omar and exhausted his Muslim and subject subjects alike (the risings caused by excessive taxation, the memory of which is preserved by the Christian historians in particular, are symptomatic in this respect). Misery, counsellors as ever of extreme measures, had brought about a revival of Khāridjism, which was even introduced into Syria, an unprecedented phenomenon; and in Syria again, the 'umma on which was based the military strength of the Umayyads threw off their discipline, tired of the more and more marked tendency of the government to an absolute monarchy. The Shi'a movement began again to show itself openly in the 'Irak as is evident from the attempt, which however failed miserably, of Za'id b. 'Ali b. al-Ḥusain (123). The increasing extent of the conquests had finally removed the remotest provinces from the control of the central power: the tribal feuds, combining with religious differences, had been resumed with violence, while in distant Khurāsān, in spite of the energetic measures taken by Naṣr b. Sā'īr the secret propagandists of the Shi'i sect met with rapid success. We can understand therefore how (indignation at al-Walid's scandalous conduct found a new and prepared for it to burst forth upon, especially when the ambitions of the various descendants of 'Abd al-Malik were frustrated by the proclamation, as soon as al-Walid mounted the throne, of his two children as his successors designate. A rising in the 'umma of Palestine and al-Uriyuna brought Yazid III to power; al-Walid was slain. But neither Yazid nor his brother Ibrāhīm, who succeeded him after a few months, succeeded in checking the anarchy which was spreading throughout the empire. The Khāridjīs under al-Dāhkhān b. Kais al-Shafi'ī seized Kūfa. It looked for some years as if salvation would come from a distant member of the ruling branch, Marwān b. Muhammad, grandson of the great Marwān, governor of Armenia, who had created an army devoted to himself during the long years he had been successfully fighting against the Byzantines. He arrived in Syria to support the claims of al-Walid's children; finding they had already been assassinated by the murderers, he proclaimed himself caliph and in a few months had put down rebellion in Syria and destroyed the members of the Umayyad house who opposed him; he next took Egypt and the 'Irak. The work he did in the first three years of his caliphate is hardly comparable to that of his grandfather whose name he bore and of his uncle 'Abd al-Malik. But the circumstances were much more difficult for him than they had been for them: the family bonds of the Umayyads had been broken and the energy of the stock was exhausted; at the same time, the confidence of their adversaries in their success had increased: instead of having to fight with the improvised armies of Ibn al-Zubair or with desperate bands of Shi'I who had escaped the disaster of Kerbelā', Marwān had to meet troops hardened by the wars with the Turks and Persian forces of Khurāsān organised by Abu Sulaym, while in the background the 'Abbasids were preparing to enter the field. The sou-diant Shi'I threw down the gauntlet in 130: Khurāsān and Fārs were rapidly conquered and in the following year the invaders occupied the 'Irak where the 'Abbasids suddenly put forward their claims and proclaimed Abu ʿAbd Allah ʿAbd Allah caliph at Kūfa. The latter, having defeated Marwān on the Zab, sent his lieutenants in pursuit of him through al-Djazira and Syria and again defeated him in Egypt where the last Umayyad caliph was slain on 27th Dhu l-Ka'āda 132 (July 7, 750). The assassination of the members of the Umayyad family, the fruitless rising in favour of Abū Muhammad al-Sayfānī in Syria and the flight of 'Abd al-Rahmān b. Mu'awiyya b. Hishām from Medina to Africa and Spain form the epilogue of the tragedy which marked the end of the fall of the dynasty of Mu'awiya and Marwān.

It is undoubtedly an exaggeration to say that the end of Arabism coincides with the fall of the Umayyads and to attribute to the 'Abbasids a kind of translation of the Muslim world. In reality not only did the dynasty of the caliphs remain Arab, but the governors of provinces and generals in the army were recruited from Arabs for nearly a century. It is true on the other hand that the internationalisation of Islām, in the sense that the Arabs ceased to be the sole active element in the organisation of the state and in the development of civilization, had already begun, at least as a theoretical possibility, when the reforms of 'Omar II had made the marwālīs equal with the Arabs. Further, the adoption of Islām brought these heterogeneous elements to form part of a civilization, which we are justified in continuing to regard as Arab even if the analytic research of the last half century has shown that its constituent factors were for the greater part foreign. Not only did the Arabic language give a homogeneous colour to this civilisation but all the varied elements which coexisted it were kneaded together under Arab influence. The merit of having given this composite civilization an Arab colouring is undoubtedly due to the Umayyads. We can unfortunately no longer recognise in detail the preliminary work which sowed the seeds, the fruits of which were seen only in the 'Abbasid period; but the fact that in the second half of the second century, Islāmic civilization is in full bloom, as regards not only religion but also science and the arts, makes it clear that the Arabs did not await the coming of the 'Abbasids to begin their transformation from Beduins to civilized people. What strikes one in the Arab civilization of the Umayyad period, is the coexistence of two worlds, the old and the new, existing side
by side, just as happening elsewhere in periods of transition. Beduin customs and mentality, the poetry of al-Farāhī, of Dājrī and Ṭabarānī were still real and alive when the religion of the Kurān was already being penetrated by Hellenistic and Christian theological speculation, when the interest of traditionists, historians and philologists was beginning to be attracted to the literary products of the spirit of the desert which they knew through the venerable memorials of an epoch now closed. Even the administrative system of the Ṭabarānī in its main lines is practical what the Umayyads had built up on a basis of Byzantine and Sassanian tradition, and the original contribu-
tion by Yaḥyā b. Barmak was very much less than what tradition credits him with. In conclusion, what the Umayyads lacked, namely the power to transform the colossal Arab empire into a homogeneous unity, was equally deficient in the Ṭabarānī: what the latter accomplished, the intellectual and moral unification of the Muslim world had already been begun under the Umayyads.

On matters of detail, which it has not been possible to deal with in this general article, see the articles on the individuals and place-names connected with the history of the period.

Bibliography: Being unable to give the complete bibliography for so vast a subject, we shall confine ourselves to works of a general character. The sources for the history of the Umayyads have been collected by L. Caetani in his Chronographia Islamica, Paris (1912 sq.), pp. 461-1716, an invaluable repository but unfortunately without an index; in it are given along with the Arabic sources, also those from Syriac, Greek, Latin, Armenian and Chinese. Very few really important texts are still unpublished; the chief of these is undoubtedly al-Balādhūrī's great compilation Anāṣ al-ʿĀdadī, of which only a fragment has been published by W. Abūwardā (Anonyme arab. Creativ etc., Greifswald 1883), the publication of which is being undertaken by the University of Jerusalem; we may hope to find in it some reminants of the Umayyad historical tradition which has almost entirely been swept away by writers with Ṭabarānī bias. This same tradition is in part preserved, so far as we can judge from the little we know of it, in the history of the Spanish Arab al-Balīyāṣī (al-Ṭabābīh bi l-Ḥarīb ʿš-Shāb al-Šām, cf. J. Horovitz, M.S.O.S., 1907, p. 22-27), which would be worth publishing. One regrets not to find in Caetani's Chronographia the results of a methodical search of the dārūs of the poets and their commentators (in first place the Naḥḍa of Dājrī and Farasādī) which might supply some new information (a good deal of this work has however been done by Lammens). The papyri also constitute a source, of great importance though limited range, especially the series which bears the name of Kūra b. ʿAbī Shams [q.v.]. The general work which is of fundamental importance for the Umayyad period, is, as we have seen, J. Wellhausen's Das arabische Reich und sein Sturz, Berlin 1904, in which Ṭabarānī's great work was utilized for the first time; his Die religiopolitischen Oppositionskämpfe im alten Islam (Abh. G. W. Gött., 1901) and Die Kampf der Araber mit den Khorasān in der Zeit der Umayyaden (Nachrichten G. W. Gött., 1901) are also of a lesser importance for two essential aspects of the history of this period; H. A. H. Gibb, The Arab Conquest in Central Asia, London 1923 [James G. Furlong Fund, ii], carefully studies another point of great historical significance: it is a matter of regret that we have nothing similar for the conquests in Africa; the researches of H. Lammens (Etudes sur le règne du califat omeyyade, Mémoires 1, M.F.O., i., ii; L'islam des Arabes égyptiens des S et des R, 4. c., iv, 4); Etudes sur le siècle des Omeyyades, Hârîrî 1930), without constituting a complete survey of the history of the Umayyad caliphate, are nevertheless indispensable for the immense quantity of material that is examined in them, for the wealth of detail and the keen penetration with which historical problems are investigated; C. H. Becker's essays (collected in Islamstudien, i., Leipzig 1924, also Beiträge zur Geschichte Ägyptens unter dem Islam, ii, Strassburg 1903) have contributed in remarkable fashion to illuminate the problems of the Umayyad caliphate's place in history. (G. LEVI DELLA VIDA)

II. THE UMAYYADS OF SPAIN.

The Banū Umayyā or Banū Mardwān of the Arab historians, direct descendants of the Umayyads of Syria, reigned from the viith to the xiiith century over the Muslim empire which they founded in the Iberian peninsular with Cordova as their capital.

The restoration in the extreme west of the Muslim world of the sovereignty of the Umayyads, which had been destroyed in the east by the Ṭabarānī, is one of the most striking events in the history of the Arabs in the Middle Ages. It was this dynasty which encouraged the separation of Muslim Spain from the rest of the Arab world and made it a real political unity; it was this dynasty which gave the social physiognomy of this country, already so characteristic, a decided stamp of Syrian tradition. Thanks to the vigour of its princes, it was able to resist the designs of the Ṭabarānī and then of the Fatimids. It succeeded in the evil, exhausted by civil wars, only through allowing a hereditary dictatorship to be established alongside of it and because it failed to restrain in time the excesses of its foreign mercenaries.

The history of the Umayyads of Spain may be divided into three principal periods: 1. the independent emirates of Cordova; 2. the caliphate; 3. the decline and fall of the dynasty. Here we shall only give a very brief résumé.

Chronological list of the Umayyads of Spain.

II. Hishām I, 172-180 (788-796).

IV. Abū ʿAbbās al-Raḥmān II, 206-238 (822-852).

V. Muḥammad I, 238-273 (852-886).

VI. al-Munṣīrī, 273-275 (886-888).

VII. Abū Ṭālib, 275-300 (888-912).

X. Hishām II, al-Muʿassāyad ʾīl-Hāšimī, 366-399 (976-1009), and 400-403 (1010-1013).
XI. Muhammad II, al-Mahdi, 399-400 (1009-1016).

XII. Sulaiman, al-Mustansir bi 'l-Thaqif, 399-407 (1009-1016).

XIII. 'Abd al-Rahman IV, al-Murtadha, 408-409 (1017-1019).

XIV. 'Abd al-Rahman V, al-Mustanshir bi 'l-Thaqif, 414 (1025).

XVI. Hisham III, al-Mustadd bi 'l-Thaqif, 418-422 (1027-1031).

1. The independent emirate of Cordova.

The Arab historians usually give the date 138 (756) for the foundation of the independent emirate of the Umayyads of Cordova by 'Abd al-Rahman I, the son of Mu'awiya b. Hisham, whom they call al-Da'idi, "the immigrant". When his relatives were being persecuted by the 'Abbasids, 'Abd al-Rahman, still quite a young man, — he was born in 113 (731) — succeeded in escaping secretly to Palestine and from there, accompanied by his freedman Badr, went to Egypt and then to Ifrikiya. He was soon obliged to fly from al-Kairawân, where he was exposed to the persecutions of the governor 'Abd al-Rahman Ibn Hâbûb and went to the Maghrib. He spent some time in Taht (q. v.) at the court of a petty dynasty, the Rustamids, then enjoyed the hospitality of various Berber tribes, among them the Mihissa and the Nafa. From the day of his arrival on African soil, 'Abd al-Rahman, encouraged by Badr, had shown a desire for political activity. But his ambition did not find a suitable soil in the Maghrib, and his eyes naturally turned towards Spain.

'Abd al-Rahman was able, very cleverly and with a keen political sense, to turn to his own interests the rivalries which for some years had made a profound cleavage between the Kaifis and the Yamanis settled in the Peninsula. On the other hand, he had no difficulty in securing the support of clients of the Umayyads, who had come some years earlier into Spain with Badr b. Bahr (q. v.) and were scattered, some 500 in number, over the military districts (d'umâra) of Elvira and Jaen in the S. E. of Spain. The governor of the Peninsula at this time was Yüsuf b. 'Abd al-Rahman al-Fihr, who derived most of his authority from the chief of the Kaifis of Spain, al-Sumayil al-Kilabi (q. v.). Judging the moment had come to land on Spanish soil in the guise of claimant to the throne, 'Abd al-Rahman left the Maghrib and arrived at Almuñecar (q. v.) in Rabî II, 138 (Sept. 755). The welcome he received surpassed his expectations; he took the field against Yusuf al-Fihr and as a result of meetings, military engagements and negotiations, for the details of which the reader may be referred to the Arab historians, he was ultimately recognised as emir on the 10th Dhu 'l-Hijja 138 (May 15, 756) in the town of Cordova, the traditional residence of the Arab governors.

The founder of the Umayyad emirate of Cordova was destined to rule for over 33 years. The first of these he spent in consolidating his position in the capital itself. News of his success spread through the whole of the East and there was soon an influx into Spain of clients and partisans of the Umayyads, who came to do their share in restoring in Spain the dynasty which had fallen in Syria. But the Cordovan emir had soon to deal with a number of political complications. He had first of all to put down Yusuf al-Fihr, who was not taking kindly to his fall and, having gathered round him a number of followers, tried to retake Cordova; but he was defeated in 141 (758) and in the next year killed in the region of Toledo. But rebellion continued to smoulder in all parts of Spain, as in the period of the governors; trouble was continually stirred up not only by bodies of marrā'idūn i.e. neo-Muslims, Spaniards recently converted to Islam, but also by the Berbers and Arabs always at daggers drawn with one another on account of their ancient enmities. 'Abd al-Rahman I therefore had to put down in succession risings by the Yamanis and the Fihrs, led by al-'Alî b. Maghthul al-Djalami in 146 (763), by theBerber Shaskàt, who rose at Shantabiyà (Santaver) in 152 (769) and never dared allow any slight local disturbances to spread. In the latter half of the reign of 'Abd al-Rahman I, a coalition was formed of a number of Arab chiefs of the east of the Peninsula, who sought the aid of Charlemagne. The latter himself crossed the Pyrenees at the head of an army and laid siege to Saragossa in 162 (778). But the emperor, suddenly recalled to the Rhine, had to raise the siege. On his way back to France he suffered in the pass of Roncesvax, where the Basques had prepared an ambush for him, the famous defeat associated with the memory of Roland. 'Abd al-Rahman I took advantage of the departure of the Franks to besiege Saragossa in his turn, and occupied it in 164 (780) but for a short time only. An expedition against the Basques was crowned with success. On the death of the founder of the new Umayyad dynasty, which took place in 172 (788), the Cordovan kingdom had already become solidly established from the political and territorial point of view and was possessed of powerful military resources. The success of the exile from Syria and the remarkable way in which he was able to build up a kingdom for himself and to undertake the task of pacifying his new territory has aroused the admiration of all the Arab historians, who give him the flattering epithet of "Eagle of the Kuraish" (al-kuraishî). The pacification of the new kingdom was to be the main task of all the successors of 'Abd al-Rahman I. On his death the power passed to his son Hisham I, who reigned only a little over seven years for he died young in 180 (796). He had at first to fight against his brothers, who wanted to seize the power, and as a result he had to send out two summer expeditions (al-ifa) in 177 (793) and 179 (795), one against Nabitouse and the other against Galiaca. The chroniclers describe Hisham I as a noble prince full of virtues and regret that he reigned so short a period.

His son al-Hakam I succeeded him for 26 years. It is not certain whether it was he or his father who introduced the Mâlikite rite into Muslim Spain: the maddâhāb hitherto followed had been that of al-Awza'î (q. v.). In any case, it was only on his accession that the lawyers or jûsâhî assumed an excessive importance in Cordova and tried to dictate the decisions of the sovereign. Al-Hakam I, unlike his father, had very little sympathy for them; he at once took up a stand against them and showed them that he could resist their demands.
But the faiths determined to resist, made common cause with another body of malcontents, the neo-Muslims or muswalladun, and thus to some extent made themselves in the name of Islam the champions of Spanish nationalism. The result, with a ruler so vigorous and decided as al-Hakam I, was a series of measures cruelly and viciously enforced during the greater part of the reign. The first rising took place in Cordova itself in 839 (852): conspirators from the aristocracy urged on by the faiths tried to drive al-Hakam from the throne; but the plot was discovered and the sovereign dealt most vigorously with the rebels. In the next year, he took Merida and stifled in blood another rising in Cordova. In 841 (853), there took place at Toledo the celebrated "day of the ditch" (waqifat al-hafr). The inhabitants of this town from the beginning of Umayyad rule had been almost continually in rebellion; al-Hakam sent to govern them 'Amr ibn, a renegade who was absolutely devoted to him; he with his master's approval prepared an ambush for the Toledo notables from which none emerged alive. But it is the affair of the suburb which best reveals the implacable character of the grandson of 'Abd al-Rahman I. Determined to destroy completely the seeds of rebellion in his capital, he surrounded himself with a guard of foreign mercenaries, the "silent ones" (al-qubur) who began a reign of terror in Cordova. The discontent continued to increase and in 202 (817) a rising on a large scale broke out in the southern suburb of the capital on the other bank of the Guadalquivir: the mob, stirred up by the faiths led by Yahyā b. Yahyā, tried to take by assault the emir's palace but were soon surrounded and cut down by al-Hakam's troops. The emir then decided at once to hasten from Spain all the Cordovans of the suburb who had survived the massacre. Over 20,000 families had to leave the country: about two-thirds went to Egypt and later to Crete. The remainder went to Fās and settled in the quarter still called the "bank of the Andalusians" (idnibat al-Andalus). The suburb itself was razed to the ground and it was forbidden for any one to build there again. This drastic suppression of the rising made such a sensation in the Muslim world that the historians often call al-Hakam I al-Rahbād (the "suburbanite").

The whole of al-Hakam's reign was passed in this way in dealing with domestic troubles stirred up by neo-Muslim malcontents with the faiths behind them. His energy enabled him to triumph over all but with his attention continually occupied in the interior of his country he could not always defend his frontier districts (shindār) sufficiently. In the reign of al-Hakam I we find the kingdoms of Asturias and Galicia making a notable advance to the south. Barbastro was also taken from the Muslims in 835 (850) by the Duke of Aquitaine.

Al-Hakam's son and successor 'Abd al-Rahmān II was the very opposite of his father. He reigned from 266 to 278 (862 to 883) and was completely powerless to control events. It has been said with justice that he was guided throughout his reign by a fakhr, a musician and woman and a nun chuck: 'Ayyūb ibn 'Abd al-Mu'min who had just arrived in Spain and brought there the refinements of the Abbasid capital; the favourite Tarīb and the cunning Nāṣr, who dictated to the ruler most of his political acts. The reign of this weak ruler, after the reign of terror begun by al-Hakam I, corresponded with a recrudescence of the nationalist movement. It was in this period that the Spanish Mozarabs (q.v.) who had retained the Christian faith, felt themselves strong enough to rebel, led by Eulogio and Alvaro. As a result of the counter-measures of the Muslim government, we find a wave of voluntary martyrdom descending on Spain and particularly on Cordova between 276 and 278 (880 to 883): a council summoned by the Umayyad emir,建筑设计 to put a check on it. Besides the opposition of the Christian communities, the caliph had in deal with new rebellions by the muswallats: Merida and Toledo had again to be taken by force. It was in this reign also that the Normans, called by the Muslims al-Mudjar (q.v.), made their first appearance in Spain. In 290 (844) Norman raiders took Seville and a truce was concluded between the leader and the emir of Cordova who had sent them an ambassador, Yahyā ibn al-Hakam al-Qhatāli.

Muhammad I, son of 'Abd al-Rahman II, succeeded his father on the throne of Cordova when the latter died in 278 (880). His reign, which was to last till 273 (886), was also marked by a series of domestic troubles which in spite of the cruelty of the prince continued to increase. The Mozarab rebellion broke out again on his accession and vigorous persecutions of the Christian communities were at once begun. The Christians of Toledo having appealed for help to Leo Ochrida I, he sent them an army under Count Bierzo, which the Muslim troops routed in 290 (854) at the battle of Wald Salts (Guadaceite). The Christian risings ceased only in 295 (859) after the martyrdoms of Eulogio and Lenceria. But the political instability of the Cordovan emirates had been emphasized and gradually separatist movements began to take shape in all the provinces which were in theory subject to Cordova, usually led by neo-Muslims who posed as independent chiefs and nationalist champions. This attitude of the muswallad aristocrats and soon the pretensions of the great Arab families were to keep the Cordovan emirs busy till the beginning of the tenth century.

It was in the reign of Muhammad I that the long rebellion of the independent chief 'Umar b. 'Abd al-Ḥafṣān (q.v.) began in the S.W. of the Peninsula: he soon exercised absolute power over all the mountainous country between Ronda and Malaga and established his headquarters in an impenetrable citadel, Bobastro (q.v.). Except for a few brief periods of truce, he kept up the struggle against the central Muslim power and soon became recognized by all the malcontents of the country as their undisputed leader.

The successor of Muhammad I, his son al-Mu'ādhdin, had only a short reign (273 to 275 = 886 to 888), entirely filled with the war with the Ḥafṣān, whose influence daily increased, and with the siege of Bobastro, which would have perhaps been successful but for the emir's untimely death, poisoned, it appears, by his brother 'Abd al-Allāh, who succeeded him.

The reign of the emir 'Abd Allāh (275 to 300 = 889 to 912), eclipsed in some degree by that of his glorious grandson and successor 'Abd al-Rahmān III al-Nasir, is rightly said to mark an important stage in the pacification of the kingdom
of Cordova. It is not quite right to see in him only a bloodthirsty tyrant. Like all the rulers of the period, he undoubtedly dealt most cruelly with those who tried to overthrow him, even his own brothers. But he had to face numerous dangers, to fight the movements with which his predecessors had had to deal and which had been increasing in strength in the meantime. The rebellion of Ibn Hafṣūn alone was to occupy almost the whole of his reign. On the other hand, in spite of the relative proximity of Cordova, the country of Seville seemed to be about to cast off Umayyad rule; the Spanish party and the Arab party there were continually undermining the authority of the governor sent from Cordova and occasionally let loose on the town bodies of Berbers who were settled in the neighbouring mountains. The hostility of the great Arab families, the Banū Ḥādījīd and the Banū Khalid, became more and more disquieting; the representatives of these families were great landowners who had large numbers of devoted serfs whom they could equip and arm when necessary. Kuraib b. Khalid, the head of the second family, soon after the accession of 'Abd Allāh raised the whole region of Aljarafe (Arab. al-Ŝaraf) and got the chief of the Banū Ḥādījīd to join him. Then he concluded a treaty with the emir by and arrangement with him attacked the neo-Muslims of Seville which he reduced to ruins (278 = 891). But his submission was only temporary. In 286 (899) the chiefs of the two great Seville families quarrelled and Ibrāhīm b. Ḥādījīd, after disposing of his rival Kuraib, concluded an alliance with the leader of the rising in the S. E., Ibn Hafṣūn. 'Abd Allāh finally received his submission but had to give him such privileges that in practice he ruled Seville as an independent chief. In this period also the growing influence of the nobles, vassals, more or less in theory, of the Cordovan sovereign, contributed largely to break up his authority. The chief of these nobles (গাড়ি) were the lords of Saragossa, Ucles, Huesca, and, in the S.W., of Oromona. As to Ibn Hafṣūn, after having shown at the beginning of the reign of 'Abd Allāh some slight signs of submission, he was not long in resuming the struggle against Cordovan rule. Supported by the Christians of Cordova and their chief, Count Servando, he extended his influence northwards so that the capital itself was soon threatened. Prompt measures became necessary: in 278 (891) the emir 'Abd Allāh marched against the fortress of Poley (now Aguilar, in the south of Cordova) where Ibn Hafṣūn had established himself and forced the rebel to take refuge in his citadel of Bobastro. This success strengthened the emir's authority and procured him, for a brief period only, it is true, the submission of the districts (کیر) of Ecija, Archidona, Elvira and Jaen. Down to the last years of the reign of 'Abd Allāh, the work of pacification continued with continually varying results, but the activity of the prince, never giving his turbulent adversaries rest, gradually achieved a consolidation of his authority and the break up of the anti-Umayyad movement. When he died in 300 (Oct. 912) the situation was more settled; he had prepared the way for and been one of the most vigorous workers for the pacification of Spain, which his grandson was to complete in the first part of his long reign.

2. The Umayyad caliphate of Spain.

'Abd Allāh's successor, 'Abd al-Rahmān III b. Muḥammad, was only twenty-three on his accession; in spite of his youth he had been chosen to succeed to the throne by his grandfather on account of his good qualities, and the choice was fully justified. No reign in the annals of Muslim Spain was more brilliant or more glorious. Its great length (half a century: 300—350 = 912—961) assured the prince the policy the benefit of unusual continuity and enabled him to extinguish for several decades the various centres of rebellion which had been always active in Spain since the coming of the Muslims. The reign of 'Abd al-Rahmān III marks, with that of his successor al-Ḥakam II and to a certain point the period when the two first 'Amirid dictators, al- Mansūr and al-Muṣṭafār, assumed power, the culminating point in the Muslim occupation of Spain. Spain was never afterwards able to attain in the eyes of the Christian and Muslim worlds the political influence and brilliant culture which she attained in the time of these great princes nor to play a part of the first importance in the west, in Europe as well as in Africa.

We are not going to give here a detailed account of the reign of 'Abd al-Rahmān III, but only to study it in its main outlines. It may be divided into two main periods: the first, the period of restoration of peace at home, the result of which was the realisation of the political unity of the Cordovan empire; the second is a longer period marked mainly by preoccupation with foreign affairs, relations with the Christian kingdoms of the north and with North Africa, then more or less under Fātimid suzerainty.

On his accession 'Abd al-Rahmān III set to work and traced out his programme: to put an end to the rebellions which had been drenching Spain with blood since the foundation of the dynasty, to neutralise the influence of the powerful Arab aristocracy and to maintain the Muslim frontiers on the north. He carried through his programme point by point. In the first year of his reign Ecija was taken and its fortifications dismantled; another campaign ended in the taking of the strong castle of Monteleon and in the pacification of the districts of Jaen and Elvira. The subjugation of the south of the Peninsula was continued down to 305 (917); Seville and Cremona submitted; finally the aged leader of the rebellion, 'Umar b. Hafṣūn, died. His sons Ḏa'far, Sulaimān and Ḥafṣ endeavoured to continue the struggle but without any great confidence in the success of their arms; the result was the taking of Bobastro by 'Abd al-Rahmān in person, who laid siege to it and captured it in 315 (beginning of 928). Five years later the last centre of resistance fell: Toledo [؟ی], to which the predecessors of 'Abd al-Rahmān III had been forced to grant a kind of political independence, was strictly blockaded and had finally to surrender in 320 (932).

At the same time the sovereign did not lose sight of the aspirations of the Christian kingdoms of the north, particularly the programme of territorial expansion by the kingdom of Leon, over which there then reigned an energetic and ambitious prince, Ordoño II. The latter had taken the stronghold of Alajen (Kald' al-Hamzah) to the south of
Merida, and a little later with the help of King Sancho of Navarre he sent an expedition into the districts of Tudela and Valtierra. But the Leonese advance was checked by 'Abd al-Rahman III, who in 930 (920) gained a series of successes, with the capture of the castles of Osma, San Esteban de Gormaz, Clunia, Carcar, Calahorra and Merez and the victory of Valdejuquera. Four years later, as a result of a new offensive by Leon, the Umayyad ruler re-established the situation to his advantage in a victorious campaign, profiting by the troubles caused in the Christian country on the succession to Ordoño II.

Throughout all this first period of his reign, 'Abd al-Rahman III was closely watching what was going on in Africa and by building fortifications on the coast and organising a powerful fleet, was preparing for the eventuality of an invasion by the Fatimids, against whom he had committed acts of open hostility. To show it still more he assumed in 316 (949) the lofty title of commander of the faithful (amir al-mu'minun) while his predecessors and he himself had previously been content with the simple title of amir. The little Cordovan kingdom became at the same time a great Muslim empire, and the restoration of the Umayyad caliphate of Damascus in Spain was completed. He assumed at the same time the honorific title of 'Abbasid of al-Nasir li-Din al-Mu'azzam ibn al-Mu'min (cf. E. Las Cases, Provençal, Études musulmanes du XVe siècle, Paris 1932, p. 45 sq.).

A little later in 319 (931), the Caliph captured the stronghold of Ceuta [q.v.] on the African coast and installed a governor and a garrison there; this was the beginning of the Umayyad attack on the western Maghrib. A few years before, the petty rulers of the kingdom of Nador had asked for and obtained Umayyad suzerainty. Al-Nasir did not stop there and was able to rally to his side the little local dynasties who were trying to hold their own against the Fatimid invaders. With the help of an alliance with the Maghrawa [q.v.] he was soon able to subdue the whole of the central Maghrib except the region of Táhert.

The second part of the reign of 'Abd al-Rahman III shows rather less personal activity by the caliph, and at the same time the formation, in the heart of the united and pacified Cordovan empire, of parties, no doubt of little weight at first, which were in the end to cause the greatest disorder in the internal affairs of the caliphate: the Slav party and the Berber party. The Slavs [cf. 99X9] prisoners not only from the east of Europe but also from Italy and northern Spain, soon formed a large class in Cordovan society, and it is in the reign of al-Nasir that we find them for the first time occupying high offices in the state and even in the army. The sovereign seems to have used these slaves, originally devoted to his cause, to reduce or even annihilate the influence of the old Arab aristocracy. In 327 (939) for example, we find him giving the Slav Nadjia the command of an important expedition; but he was to regret it; indeed on this occasion Muslim troops suffered the first reverse of his reign and were defeated by the Leonese under Ramiro II and their allies of Navarre at Simancas and Alba and ega. Henceforth al-Nasir's policy with regard to the Christian kingdoms, while remaining watchful, was confined to taking advantage of any possible occasion. Civil war had broken out in the north of Spain as a result of a feud between Ramiro II and the Count of Castile, Fernán González. On the death of the King of Leon in 951, his sons Ordoño III and Sancho fought for the crown and the former, to have his hands free against his brother who was supported by Castile, offered 'Abd al-Rahman III an advantageous peace and promised to pay him tribute regularly. When Ordoño III died in 955, Sancho succeeded him; but, disliked by the nobles and defeated by the armies of the Cordovan caliph, he was forced to take refuge in Pamplona with the aged queen Tota of Navarre and then appealed to al-Nasir for help to regain his kingdom which had passed into the hands of Ordoño IV. Negotiations were begun and through the skill of al-Nasir's representative, the Jew Hasdai ibn Shaprut, Sancho and Tota came in person to Cordova to seek the caliph's help. This was an event without precedent in the annals of Muslim Spain. The king of Leon had to abandon ten fortresses in exchange for which the caliph gave him troops who assisted him to take Zamora in 958 and Oviedo in the following year.

The Fatimid threat to the Peninsula had not yet completely disappeared. In 343 (954), the Fatimid caliph al-Mu'izz sent his governor of Sicily to make a raid on the Spanish shore. He ravaged the district of Almeria and brought back prisoners and considerable booty to Sicily. A reprisal, al-Nasir gave Chilubi, one of his most devoted clients, command of a fleet of seventy ships, which went and burned Marsa T-Kharaz near Calle on the North African coast.

'Abd al-Rahman III al-Nasir died on the 2nd Rama dán 359 (Oct. 15, 961), aged 73. His political work was to be continued by his son and successor al-Hakam II al-Mustas tür r bi 'llah who was nearly fifty when he came to the throne. He was a pious and scholarly prince and his name is especially associated with the Great Mosque of Cordova which he enlarged and embellished; on it he spent considerable sums and even brought from Mediterranean lands and Byzantium skilled craftsmen and valuable material. His father had been mainly interested in public and strategic buildings and had built for his own residence the town of Madinat al-Zahrâ' [q.v.], 3 miles N.W. of Cordova.

His love of study and his age, it is true, predisposed al-Hakam II to a quiet life; but he is too often represented as taking no interest in political affairs. He had to maintain the situation created by his father and for this he had only to watch the normal working of the wheels of government. But like his predecessor, whose programme he continued to carry out, he did not remain an inactive spectator of events in northern Spain and Africa. He received at Cordova with great pomp Sancho's brother, Ordoño the Wicked, and gradually became the successor of the Christian princes of the north. His political right hand men were the šā'īb al-Mu'hazi and Slav dignitaries, and he may be reproached with having given them too much confidence. On the African coast, the Umayyad government continued to display considerable activity. The Fatimid peril seemed to have disappeared with the departure of al-Mu'izz for Egypt, but his representatives, the Şahibjas, resumed the fight with the vessels of the Umayyads in North Africa. On the other
hand, the petty Ittārid dynasts of the region of Tangier and Arrilla had remained faithful to the Fatimids. The resistance of Ḥasan b. Ghāniya was long but in the end he was taken in his stronghold at Ḥājjarat al-Naṣr and imprisoned in Cordova. The reign of al-Hakam II was also marked by a new attempt by the Normans to land in Spain in 355 (966) [cf. al-Maqrīzī].
al-Hakam II soon felt himself growing old and his principal care became the maintenance of the succession in direct line in the Umayyad dynasty. He had only one son, still a youth, Ḥājjam, and he had him recognised as heir presumptive (wali al-ʿād). He died soon afterwards on the 7th Dārūd 366 (Oct. 1, 976).

The reign of Ḥājjam al-Muʿayyad bi ʿĪlāh, the third Umayyad caliph of Spain, is the period of the establishment of the hereditary dictatorship of the ʿĀmirids and their effective seizure of civil and military power, the sovereign himself being relegated to his palace and deprived of all political initiative. The circumstances under which this new state of affairs was brought about after the death of al-Hakam II are very complicated but quite well known. A detailed account, which need not be repeated here, is given under al-Manṣūr b. Abāʾīn b. Muḥammad. We would only recall that, while in theory preserving for the young caliph the exercise of sovereign power, the famous Ḥājjam, whose ambition knew no bounds, does not ever seem to have really thought of dethroning him in order to take his place. All official measures were taken in the name of Ḥājjam II, who never seems to have shown any inclination to resist the ʿĀmirid control of his lands. It is really only with the disappearance of al-Manṣūr that the weakening of the Umayyad caliphate begins.

Al-Manṣūr in the name and on the purely nominal behalf of Ḥājjam II continued the policy of the caliphs ʿAbd al-Raḥmān III and al-Hakam II, not without, however, giving it the stamp of his powerful personality; but the era of peace and glory which al-Nāṣir had begun continued undiminished throughout the dictatorship of al-Manṣūr. The influence of the Arab aristocracy and of the Slav party was soon completely destroyed. The army was reorganised with the help of mercenaries recruited outside the Muslim lands of Spain, in northern Africa and in the Christian kingdoms of the north of the Peninsula. In the western parts of Barbary, al-Manṣūr established a kind of Umayyad protectorate so that African expenses became less heavy in the caliph's budget. The Ḥājjam was a successful general, the worst enemy of the Christian kingdoms, against which he undertook an expedition almost every year to preserve his personal prestige. Among these expeditions we may mention that of 374 (985) against Catalonia: Count Borrel was defeated and Barcelona taken. Three years later, he turned against Leon and its ruler Bermudo II who had broken a treaty made with Cordova: Coimbra, Leon and Zamora were taken. Al-Manṣūr strove to invest himself with glory in the famous campaign against Galicia in the course of which on 2nd Shaʿbān 387 (Aug. 10, 997), he took Santiago da Compostella (Arab. Shant Yūthīl; q.v.). In 392 (1002) he led his troops against Castile, took Canales and San Millán de la Cogolla. On his return from this victorious campaign he died at Medina del Cid (Madinat Salīm; q.v.) in the same year.

3. The Decline and Fall of the Umayyad Caliphate.

On the death of al-Maṣūr, his son ʿAbd al-Malik, who had already distinguished himself in Africa a few years before, succeeded him as Ḥājjam and was installed by the caliph Ḥājjam II. During the six years in which he held the power, down to 399 (1008), Muslim Spain continued to prosper as regards peace at home. He reinforced the caliph's army with new contingents, recruited mainly in Africa, and undertook several expeditions against the kingdoms of the north. In 393 (1005) he conducted a series of raids against Catalonia, in 395 (1005) against Galicia, in 396 (1006) against Pampiluna, in 397 (1007) against the Castilians whom he defeated at Churias. On the conclusion of this last successful campaign, he had himself given the honorific title of al-Muṣaffar bi ʿĪlāh. In spite of the sullen opposition that was felt in Cordova against ʿAmīr control and several plots, which were, however, quickly thwarted, ʿAbd al-Malik al-Muṣaffar secured the Umayyad caliphate a few more years of existence, abnormal no doubt but free from serious danger at home or abroad. But the second ʿAmīr bi Ḥājjam died soon, poisoned, it is said, at the instigation of his brother ʿAbd al-Raḥmān, who succeeded him, again with the approval of the weak caliph Ḥājjam II.

This ʿAbd al-Raḥmān was the son of al-Maṣūr by his marriage with a Christian princess, daughter of King Sancho of Navarre. The new Ḥājjam was therefore everywhere known as Sanchuelo, little Sancho. Not long after he had assumed control, he made himself singularly detested by the Cordovan population by breaking the restraint which his father and brother had always prudently observed. Strong in the support, which he thought he could always rely on, of the Berber soldiery, he was seized with unbounded ambition and meditated succeeding Ḥājjam II with the title of caliph. The monarch was sufficiently cowed to receive the request favourably and by an edict of 399 (1008) the Ḥājjam was proclaimed heir-presumptive to the Cordovan throne. This proclamation roused the country generally against the ʿAmīrids and the party of the disaffected, singularly increased by this unexpected news and led by the Umayyad princes cut off from the throne, took advantage of the departure of ʿAbd al-Raḥmān b. Abī Ṭamir on an expedition against Galicia to let loose a rebellion in the capital, seize the palace of the caliph and force him to abdicate in favour of a great-grandson of al-Nāṣir, Muḥammad b. Ḥājjam b. ʿAbd al-Dżahhār, who was proclaimed with the honorific title of al-Mahdi in 399 (1008). The new sovereign cleared out and roused to the ground the ʿAmīrids palace al-Madinat al-Zāhirah [q.v.]; a few days later, Sanchuelo, hurrying back to Cordova, was arrested some distance from the capital at the same time as his faithful ally, the Count of Carrion, and executed.

From this time and down to the fall of the caliphate, which was not far distant, civil war reigned in Cordova and the caliphate. The Berber element augmented by the Ṣanḥaḥjids contingents from Ifriqiya, recruited by the ʿAmīrids, played a more and more disastrous part in the troubles that followed. Al-Mahdi, instead of conciliating the chiefs of these mercenaries, alienated them very soon by his brusqueness, the contempt which he

was installed in the caliph's palace by the Ṣanḥādja chief Zāwi b. Zīr.

Al-Mahdi did not consider himself beaten. With the help of Wādī and the Counts Raymond of Barcelona and Ermengard of Urgel, he attacked Sulaiman al-Mustā'in and his Berber followers near Cordova, at 'Aṣbah al-Bākār (near Castillo del Viver, to the north of Cordova), routed them and returned victorious to the capital, which was plundered by the Catalans. But the Berbers reassembled, seized the whole country between the Mediterranean and the Guadalquivir and harassed Cordova and the country round. In face of this, the Cordovans soon attributed to their sovereign Al-Mahdi, whose incapacity became more and more evident, the blame and responsibility for the evils that had befallen them. A conspiracy was hatched, Al-Mahdi slain and Hīshām II replaced on the throne (Uḫu 'l-Hiddijja 400 = July 1010).

Hīshām's first care after his second accession was to appoint Wādī first minister and make peace with the Berbers. The latter refused to come to terms and resumed their blockade of Cordova. This situation continued down to 1013; and the Arab historians have left us detailed accounts: cabals in Cordova, periods of hope, timid sorties against the besiegers. In the end, the Cordovans had to capitulate and the Berbers forced them to renew their oath of fealty to Sulaiman al-Mustā'in.

The latter appointed Berbers to the offices of ḥājjis and visiers. The people of Cordova were subjected to a régime of vexations without precedent. The last freed "Slaves" of the Amiridīs went to join their relations in the east of the Peninsula. The Cordovans then agreed to entrust their destinies to an ambitious 'Alī, the governor of Ceuta.
what exactly was the end of his ignorious career.
In any case, the beginning of the 8th century saw the united political state of the Umayyads gradually breaking up and the moment was not far distant when all the provinces of Muslim Spain were to proclaim their independence under a Spanish, Slav or Berber chief and form the numerous little kingdoms of the muluk al-fawā'id. As to Cordova, it was soon to become the centre of a kind of little republic, very soon transformed with the Drahwasid [q.v.] into a principality.
In any case, a few decades sufficed to destroy completely the solid edifice which the great Umayyad princes had built up, among whom the great figure of 'Abd al-Rahman III al-Násir, one of the greatest sovereigns of the middle ages and of the Muslim world, is the dominating figure.

Bibliography: A. Arabic sources.
The history of the Umayyads of Spain has been the subject of numerous works in Spain itself, during the period of the dynasty and later also. Unfortunately not all these chronicles have survived; the most important were those of al-Râzî and Ibn Halyan. Ahmad b. Muhammåd al-Râzî, who lived in the first half of the fourth (tenth) century, wrote a history of the rulers of Muslim Spain (Akhbâr Muluk al-Andalus) which was to be the main source for later writers. Among contemporary histories, which still survive, we may mention the following in chronological order: the anonymous chronicle entitled Akhbar mulk al-andalus (ed. and transl. into Spanish by E. Lafuente y Alcántara, Madrid 1867, under the title Akbar, machinma, Cronica onimina del siglo XI); it is a vivid and colourful chronicle and full of information which seems to be free from legendary matter of the history of Muslim Spain to the reign of 'Abd al-Rahman III; the Kitâb Hishâb al-Andalus of the Cordovan Ibn al-Khâliya, d. in 367 (977), which covers the history of the Muslims in Spain down to the reign of al-Nâṣir. It has on several occasions been edited and in parts translated, and more recently in full by J. Ribera, Madrid 1926. Of the monumental work of the great historian Hâlyan b. Khâlah Ibn Hâlyân, who died in 406 (1016), entitled Mu'athâr fî 'Tarikh al-Andalus and al-Ma'tin, there only survives the manuscript of one volume in the Bodleian dealing with the reign of the amir 'Abd Allah (ed. Melchor M. Antuña, Textes Arabes relatifs à l'histoire de l'Occident musulman, ii., Paris 1912) and the copy of a manuscript from Constantinople (in the Library of the Academy of Madrid) covering a portion of the reign of al-Hakam II. Considerable extracts have fortunately been preserved by later writers, notably Ibn Bassâm in his Dakhkhana. We may also mention as indirect sources, written in Spain itself, the history of the kâdis of Cordova (ed. and transl. J. Ribera, Historia de los Jueces de Cordoba, Madrid 1914) and the works of the Spanish biographical writers which have been published by F. Codera and J. Ribera in the Biblioteca arabico-hispana, 10 vol., Madrid and Saragossa 1885-1895.

But the fullest sources for the history of the Umayyads are undoubtedly two compositions of comparatively late date, one of the 11th century by Ibn 'Idhâr al-Marrakushi, the other of the 12th by al-Ma'âkṣari. The first is called Al-Bayân al-ma'âkhrî fi 'Alâhâr Muluk al-Andalus wa't-Ma'âkhrî; of three volumes now known, two deal with Spain; the first covers the history of the Peninsula from the conquest to the death of the 'âlid al-Mansûr b. Abî 'Amîr; as Dozy, its editor, has shown, this volume reproduces almost in entirety the Spanish part of the work of a Cordovan annalist of the tenth century, Arib b. Sa'd, who continued down to his time the chronicle of 'Alârî (ed. Dozy, Histoire de l'Afrique et de l'Espagne instituée al-Bayân mawgûl, Leyden 1848-1851; transl. into French by E. Fagnan, Algiers 1901; partly translated into Spanish by Fernández González, Granada 1862); the next volume which deals with the history of the fall of the Umayyad caliphate from the time of the 'Amirid 'Abd al-Malik and that of the muluk al-fawâ'id was discovered and published by E. Lévi-Provençal (Textes arabes relatifs à l'histoire de l'Occident musulman, ii., Paris 1930). The other work no less valuable for the history of the Umayyads is the Nâfâ' al-Ṭadh al-Maghribi al-Ma'âkṣari. The first half was published by Dozy, Dugat, Krehl and Wright under the title Analecires sur l'histoire et la littérature des Arabes d'Espagne, Leyden 1855-1861 (also at Bulak 1879 a.f. and Cairo). An English adaptation was made by F. de Gayangos, The History of the Muhammadan Dynasties in Spain, London 1840-1843. Ibn Khâlidân devotes a part of his Kitâb al-Thar to the history of the Umayyads of Spain (Cairo ed., vol. iv., p. 116-155); as do the earlier historians Ibn al-Ahmar in his Khulîl (transl. by F. Fagnan, Annales du Maghreb et de l'Espagne, Algiers 1901) and al-Nuwarî, author of the Kitâb Nikhâyât al-ʿArab (History of Spain, ed. with Spanish translation by M. Gaspar Reino, Granada 1917-1919).

This brief sketch of the Arabic sources for Umayyad history may be completed by consulting the valuable but now somewhat out of date work of F. Pons Boiguès, Ensayo bio-bibliográfico sobre los historiadores y geógrafos árabe-españoles, Madrid 1898, and the brilliant survey by L. Barru-Diligó, Recherches sur l'histoire politique du royaume arabe, Tours 1921, p. 55-78.

UMM AL-KITĀB, the original copy of the Book with Allah in heaven, from which the revelations of the Kur`ān come and from which Allah "abrogates and confirms what He pleases." (Sūra xii. 39). This original copy, called Ḥijāb al-Kitāb in Ḥadīth (e.g. Tabaqat, Tafsīr, xxv, 26), is according to Sūra lxxv. 21 written in a "carefully preserved table" (fī laqm muḥšīfat); cf. Enoch 93, 1; Book of Jubilees 5, 13, 16, 21, 32-34. In the Medina period Umm al-Kitāb is used in another sense: according to Sūra ii. 5. The book revealed by Allah to Muhammad, i.e. the Kur`ān, consists of verses "clearly expressed" (īyād maṣḥūlatu) and of "others ambiguous" (muṣbāḥahār); only the first however constitute the Umm al-Kitāb. In keeping with this expression post-Kur`ānic linguistic usage calls the Fātihā, as containing the essential content of the Book, Umm al-Kitāb or Umm al-Kur`ān.

**Bibliography:** Lane, Lexicon, s. v. Umm; Horovitz, *Keramische Untersuchungen, Berlin-Leipzig* 1926, p. 65. (J. Horovitz)

**UMM KULTHUM, daughter of Muḥammad. Tradition knows even less of her than of her sister Rukayya and this little consists mainly of a repetition of what is told of the latter. Umm Kulthum is said to have married a son of Abī Lahab but to have been divorced by him by his father’s orders before the marriage was consummated; what this means is discussed in the article Rukayya. The view there expressed that Umm Kulthum was really married to a son of Abī Lahab is supported by the usual and literal interpretation of her kumayr (her real name is nowhere recorded). That at a later date efforts should have made to suppress all record of such a grandson of the Prophet is only natural. Otherwise we are only told of her that her brother-in-law Quthmān mounted her after Rukayya’s death during the Badr campaign. She died in Shab’ān of the year 9 without having borne a son to him.

**UMM AL-WALAD (A.), a slave-girl who has borne her master a child.**

1. The master’s right to take his slave-girls as concubines was recognised by Muhammad in continuation of a general practice of Arab paganism. In regard to the position of the children of such unions a change of view had been perceptible among the Arabs in the period just before the coming of Islam. In place of the previous unrestrictedness in marriage and concubinage a certain degree of regulation had grown up, and a higher value began to be attached to marriage with free women and to good birth on the mother’s side also; corresponding to this however, the position of the children of slaves became worse; they were as a rule called only after their mother and not after their father, and only received their freedom when expressly recognised by their father (this condition probably always held) and even then were not fully privileged; the slave-girl, it was argued, must not give birth to her future master as the son would reveal the qualities of a slave like his mother. The position of such a slave was not at all a privileged one. Even her designation umm al-walad ("mother of children") is in contrast to umm al-banīn ("mother of sons") as the name for a free woman. Although the personal position of a woman taken in war was hardly different from that of a slave, yet we frequently find a marriage in this case instead of concubinage, and her sons were considered free men, although they were as a rule only called after their mother and not regarded as having full privileges; but an endeavour was often made to remove even this stain due to the irregularity of the union by a new regular marriage.

This state of affairs was continued under Islam without any essential change at first. The Kur`ān permits concubinage with a man’s own slaves in several passages dealing with the limits of lawful sexual intercourse as against *ādib (vs. 3, 28 sq.; xxii. 6; lxv. 30, all Meccan; cf. the references in Nöldeke-Schurmann, *Gesch. der Rel. i.*); the passage specially addressed to the Prophet (xxiii. 49-51) expressly describes them as prisoners of war. In Islam therefore there was no distinction in theory between the slave-girl and the concubine taken in war, which is not surprising after the above remarks; in practice the old procedure towards a woman taken in war remained in operation (cf. e.g. Wellhausen, *Vehdicti*, p. 178; do., in *N.G.W. Götze*, 1893, p. 436; although not always historical in the particular case, yet typical). In the Kur`ān the position of the umm al-walad is not defined and it is certain that the Prophet issued no decree altering her position or that of her children. That he is said to have set free the slave-girl Māriya, when she had borne him his son Ūthmān (cf. Ibn Sa’d, viii. 155, 151 cf. also 156, 4) should not in any case be taken as a general rule; this episode is not at all prominent in the material of tradition relating to the umm al-walad. The story that the Prophet recognised Māriya’s son only after serious consideration (ibid., p. 154 sq.) might be possible as regards substance but is incredible in the form in which it is given.

3. That an umm al-walad should become free ipso facto on the death of her master, and no longer liable to be sold (or given) was first ordained by the caliph ‘Umar (cf. below). The starting point for this ordinance must be found in a hadith transmitted by Abī Dawd (‘Abī Bakr b. ‘Abī Bakr) and Ibn Ḥanbal (vi. 360) the genuineness of which is thereby rendered certain (a later recasting: *Kana al-ummard*, vi. 52). According to this, a woman, who had been sold in the heathen period by her uncle as a slave had borne her master a son and now on the death of her master was to be sold again to pay his debts, lamented her sad lot to the Prophet; the latter ordered the administrator of the estate to manumit the woman and gave him a slave in compensation. Ibn Ḥanbal observes on this case with justice that the different possible interpretations of the Prophet’s treatment of the case gave rise to later iḥkāfīs; there is
no doubt that it was a decision for this one case only. A tradition given by al-Bukhari (97b, bkb 8; and several other passages) and al-Taba'awi (Shahr Mu'addam 'Abbās, ii. 66) deals with a dispute over the paternity of a child of a slave-woman; Sa'd b. Aish Wāqīṣ claimed it as the illegitimate child of his dead brother 'Uthā in accordance with the latter's last will and 'Abd, the son of Zayd, claimed it as the legitimate child of his deceased father by his grandmother. In spite of the child's resemblance to 'Uthā, the Prophet decided on the principle of al-umm al-walad it 1-l-fāṣākh ("the child belongs to the legitimate head"). In view of the difficulties of interpretation raised by this hadīth (cf. the commentaries, especially al-A'īnī, on al-Bukhari) it might be in the main genuine (the secondary res- form which al-Taba'awi [ii. 67] also gives is certainly not genuine); in any case there is no mention of the manumission of the slave-woman here.

4. The above-mentioned ordinance of 'Umar's is certain from numerous accounts, although the details vary and are embelished with legends (cf. especially Kaus, iv. 5118, 5122, 5124; al-Sa'ūnī, Sahab al-Sa'ūnī, Kitāb al-Buya', on No. 11). Setting aside the settlement of the question whether it was preceded by another divergent ruling (Kaus, iv. 5118), the story that 'Umar ordered the umm al-walad to be free from the birth of her child (al-Khwārizmī, Dhā'im Mu'addam al-lilm al-am'ām, ii. 166; also Kaus, v. 5116) must be regarded as a product of the later dispute over this question. For 'Umar's decree in no way made a final settlement; it gave trouble under 'Uthmān (Kaus, iv. 5122), Ali again diverged from it (ibid., p. 5129-5131). Ibn 'Abbās is specially mentioned as another opponent of 'Umar's view among the Companions of the Prophet. In the dispute that now arose between the different opinions, the attempt was made on the one side to ascribe 'Umar's decision to the Prophet (ibid., p. 5115, 5117) and to ascribe the same opinion even to 'Ali and Ibn 'Abbās ('Ali: ibid., p. 5132; Ibn 'Abbās: ibid., p. 5039-5041; Ibn Hanbal, i. 305; Ibn 'Abbās from the Prophet: al-Irisānī, p. 18, 38; Ibn Mādīja, Itb, bkb 2; Ibn Sa'd, vili. 155; Ibn Hanbal, i. 317), on the other hand, it was insisted, sometimes quite polemically, that the Prophet approved the sale of the umm al-walad (Ibn Mādīja, ibid.; Ibn Hanbal, iii. 321; al-Yātānī, No. 2200; Kaus, iv. 5125, 5127); against this, evidence was quoted to show that the Companions of the Prophet gave approval to 'Umar's ordinance (Abū Dāwūd, Itb, bkb 8; al-'Aīnī giving al-Bukhārī as authority, Itb, bkb 8). But these were not the only two theses put forward: another view ascribed to 'Umar has already been mentioned (some traditions make the Prophet utter a corresponding opinion but one easily distorted to mean something else: Ibn Mādīja, Itb, bkb 2; Ibn Sa'd, vili. 155; both transmitted through Ibn 'Abbās; also Kaus, iv. 5128); 'Ali is credited with having said: "If the master, he can set free his umm al-walad and consider her manumission as her bridal gift" (Kaus, iv. 5133) and Ibn Mas'ūd held the view that the umm al-walad should be manumitted at the expense of the slave of the estate falling to her child (presumed free) (al-'Aīnī, ibid.), both variants of the fundamental thesis. — From the point of view of the criticism of Muslim Tradition, none of these hadīths is impeachable with the exception of the one quoted above in paragraph 5, which itself is not free from ambiguity, so that it is usually preferred simply to quote 'Umar and his ra'y as authority for the view that later prevailed.

5. 'Ali (on al-Bukhari, Itb, bkb 8 at the end) is therefore able to give a list of seven different expressions of opinion on the umm al-walad in addition to 'Umar's from the period of the earliest jurists before the origin of the muqābātī: 1. The master may release her for money (i.e. as mawāba); 2. she may be sold without restriction; 3. the master may sell her at any time during his life-time and when he dies she becomes free (she is thus regarded as mawāba; al-Shāhī is said to have held this view); 4. she may be sold to a debt due by the estate; 5. she may be sold, but if her child is alive at the death of her master and her master, she is manumitted at the expense of any share he may have in the estate and inherits with him; 6. she can only be sold on condition she is set free; 7. even if she is contumacious and runs away, she cannot be sold, but only if she is immoral or becomes an unbeliever (according to al-Mas'ūdī al-Shāhī could not come to a decision on this point). But even by this time the thesis that the umm al-walad could not be sold but became free on the death of her master, had won most supporters, among whom al-Hāshim al-Baṣīrī, 'Abd al-Askālī, al-Qāsim al-Imām al-Qāsimī (cf. on him al-Khwārizmī, op. cit., ii. 167; al-'Abābī, p. 71, 102) and others are specially mentioned. Particular questions which now arise for the first time, are referred back to other authorities, such as the decision No. 5 to Ibn Maṣ'ūd, Ibn 'Abbās and Ibn al-Zahār (ibid.), decision No. 6 to 'Umar (ibid.; also Kaus, iv. 5123), other details also to Ibn 'Abbās (Mawāba, vulgata, Itb, bkb 8; rīzā'a of al-Shāhīn, Kiti' al-Buya'; Rāb Bāf Umūmahā at-Asalād, al-Khwārizmī, ibid.; ibid.). 6. In the time of the formation of the muqābātī the view that the umm al-walad cannot be sold is held by Abū Hanīfa with Abū Yazīr, Zufar, al-Shāhīn and their colleagues, al-Awārī, al-Thawrī, al-Hāshim b. Sa'id, al-Awārī b. Sa'id, Malik (Mawāba, loc. cit.; Mūsawwara, ii. 25) and his colleagues, Abū Thawr and Ibn Hanbal. This is also the final opinion of al-Shāhī and therefore that of his colleagues and pupils, while he, according to a reliable tradition, had previously sanctioned the sale of the umm al-walad (al-'Aīnī on the authority of al-Bukhārī, Itb, bkb 8; al-Nawawī, Majmū'a, ix. 2435; cf. also above, section 5); the liberation of the umm al-walad was deduced therefrom in three ways (al-Nawawī, ibid.) so that in all we have four different opinions attributed to al-Shāhī (al-Shawkānī, Nīl al-Anwārī, Kiti' al-Buya'; Bāb Umūmahā al-Walad, on No. 7). According to Dāwūd also, and the Zāhirī, the Shī'ī Imāms and the Twelver-Imāms (here however sometimes with the qualification that she becomes free if she was still in the possession of her master at his death and her child is alive) and the Mu'tazilīs (al-Shawkānī, op. cit.), she can be sold. Although the four muqābātī in the end all declared that the umm al-walad could not be sold, the existence of idjma on this point is nevertheless sometimes doubted (al-Sa'ūnī, op. cit., on No. 12; al-Shawkānī, op. cit.), sometimes however also definitely asserted (al-Nawawī, op. cit.). The verdict of a ḫāṣī who gave a decision opposed to this teaching is not absolutely without support (cf. e.g. Nawawī, op. cit. etc.).
7. In order to prevent the birth of a child the practice of 'zul' was frequent in intercourse with slave-girls, and it is therefore often discussed in connection with the name umm al-Walad. The most important of the references in tradition on this subject have been collected by Wensinck, *Handbook of Early Muhammadan Tradition*, s.v. "Intercourse"; here it is sufficient to say that 'zul' was considered to be permitted with a slave-girl. — To prevent a slave-girl becoming umm al-Walad the master had also the possibility of not acknowledging the paternity of her child; this goes back to a similar usage in the pagan period (cf. above, sect. 1). While this was never so rigidly regulated as the case of disputing the paternity of a wife's child (cf. thereon Wensinck, *op. cit.*. s.v. Child and the article *t*ālā), nevertheless an effort was made to restrict the right of disputing the paternity in the case of the umm al-Walad also. Hadiths are quoted from 'Umar and Ibn 'Umar to the effect that no one who has intercourse with a slave-girl has the right to dispute the paternity of her child, even if he says he used 'zul' or if there is another paternity possible. The Malikis and the Shafis agree with this. The Hanafis on the other hand hold the view that the paternity of the child and the character of the slave as umm al-Walad in this case depends entirely on an acknowledgment by the master. For this they cite traditions to the effect that Ibn 'Abbas and Zaid b. Thabit had disputed the paternity of children of their slave-women on the ground that they had used 'zul'. This question is discussed by al-Tahawi (*op. cit.*, p. 66, 68) and the traditions cited. — That the child borne by a slave to her master (on the assumption that his paternity is established) is free, has always been recognised in Islam without any difference of opinion and in the discussion of the position of the umm al-Walad it is regarded as a presumption and argument for her not being sold. The deduction is natural that the father's recognition of children born in concubinage (cf. above, section 1) must as a rule have been regarded as a matter of course in the days just before Islam: the survival of considerable possibility of disputing paternity with regard to a concubine seems to have actually been conceded primarily by the considerable improvement in the position of the umm al-Walad under Islam at the expense of her master.

8. The details of the teaching of the 8th about the umm al-Walad are as follows. Every, even non-Muslim, slave-girl who has borne her master (even after his death) a child is considered umm al-Walad; on the death of her master she becomes ṣafīa in free (so that she can neither be sold to pay debts on the estate [cf. however below] nor can she be included in the third of the estate set aside for legacies); a legacy set aside by her master in her favour is therefore valid, as tradition even from 'Umar's time shows (al-Dhahiri, *Waqiyāt*, bāb 27); all legitimate and illegitimate children she has after becoming pregnant by her master are likewise free — in so far as they are not already free as children of her master. Even in the case of a stillborn child, the mother becomes umm al-Walad; opinions differ regarding a miscarriage. There is also a difference of opinion in the case where a man marries a foreign slave, makes her pregnant, and then sells her, as well as in the case where a man makes his son's slave pregnant. From the umm al-Walad's expectancy of reversion to free-

...

UMMA, the Qur’ānic word for people, community, is not to be derived from the Arabic root āmm, but to be explained as a loanword from the Hebrew (ʿamām) or Aramaic (ʿumāmā). It has therefore no direct connection with the homonyms also found in the Qur’ān, which mean a period (Ṣūra xi. 17; xii. 45) and descent (Ṣūra xliii. 11, 12). Perhaps the loanword found its way into Arabic as a comparatively early period (see Horovitz’s citation of the Saʿīf inscription, ill. 407). In any case the word was used up by Muḥammad and henceforth becomes a specifically Islamic term.

The passages in the Qur’ān, in which the word umma (plur. umaim) occurs are so varied that its meaning cannot be rigidly defined. This much however seems to be certain, that it always refers to ethnical, linguistic or religious bodies of people who are the objects of the divine plan of salvation. Even in passages like Ṣūra vili. 164 and xviii. 22, where umma is used in a colourless fashion, there is a hint of this significance. The term is in isolated cases applied to the Djiun (Ṣūra, vili. 36; xii. 24; xvi. 17), indeed to all living creatures (Ṣūra vi. 38) but always with the implication that these creatures are to be included in the divine scheme of salvation and are liable to judgment. Umma is exceptionally applied in one passage (Ṣūra xliii. 112) to an individual, Abraham. Here the term either has the meaning of ittam (so the Arab lexicographers), or Abraham is so called in his capacity as head of the community founded by him (Horovitz), by a use of the part for the whole. Otherwise umma always refers to whole groups or at least to groups within large communities.

God has sent to each umma a messenger (Ṣūra vi. 42, 48; xiii. 29; xvii. 35, 65; xviili. 46; xix. 117; xlii. 5) or admonisher (Ṣūra xxxv. 22, 40) to guide them on the right path. But like Muḥammad, these messengers of God have often been attacked and called liars (Ṣūra xliii. 46; xix. 117; xlii. 5). They will therefore appear on the day of judgment as witnesses against them (Ṣūra ix. 45; xvi. 86, 91; xxvii. 75; cf. ii. 157). For each umma is brought to judgment (Ṣūra xlii. 105; vili. 32; x. 50; xv. 5; xixi. 45; xvili. 85; xlii. 27). In contrast to those who could not be converted, however the individual umma however the appeal of God’s messenger and thus came on to the right path (Ṣūra xviili. 35). This is particularly true of the ahī al-kītāb. The companies of the righteous among the ahī al-kītāb are also called ummī (Ṣūra lii. 109 sqq.; v. 70; vili. 159; cf. ii. 128, 135; vili. 167, 180; xii. 50). They are relatively small groups within larger communities.

Muḥammad frequently discusses the question why mankind consists of a plurality of ummāt and has not remained a unit. He sees the ultimate reason for this in God’s inscrutable decree. *Men were a single umma. Then they became disunited. The word had not gone out from thy Lord, the matter would have been decided between them, about which they disagreed* (Ṣūra x. 20; cf. v. 53; xi. 120; xvi. 95; xiii. 6). Sometimes he traces this to the malevolence of mankind (Ṣūra ii. 209; xxi. 92 sqq.; xxiii. 54 sqq.). In another passage it is traced to the division of the Israelites into 12 tribes (Ṣūra vii. 160; cf. 167). These rhetorical rather than logical utterances of Muḥammad are most likely to be taken as replies to objections raised by his opponents of the ahī al-kītāb. The Prophet would hardly have come to tackle this difficult problem of his own accord.

As regards Muḥammad’s umma in particular, we can trace a number of variations and changes in the meaning of the term. But the question is simpler here as we are dealing to some extent with a historical phenomenon.

In the first period of his prophetic activity Muḥammad regarded the Arabs in general or his Meccan countrymen as a closed umma. Josua, the earlier messengers and admonishers of God had been sent to the ummāt of the past (see above), so he had now been given the task of transmitting the divine message to the Arab umma which had hitherto been neglected, in order to show it the way to salvation. Like the earlier messengers (see above), he also was fiercely attacked by his umma and accused of lying. After he had finally broken off relations with the pagan Meccans and migrated with his followers to Madīnā, he created a new community there. He went beyond the circle of Muslims proper and included those citizens of Madīnā who had not yet heeded his religious appeal in one political combination. The constitution of the community of Madīnā, in which this unification was laid down in writing, expressly states that the citizens of the town, including the Jews, formed an umma (Ibn Ḥishām, p. 341, 8 sqq.; 342, 19 sqq.). The predominantly political character of this new umma was however only a makeshift. As soon as Muḥammad felt himself firmly established and had successfully attacked the pagan Meccans, he was able to exclude from his politico-religious community the Madīnës (especially the Jews) who had not yet adopted his religion. As time went on, his umma came more and more to consist only of his proper followers, the Muslims. In contrast to the ahī al-kītāb, with whom he had previously been in alliance, he now described the Muslims as an umma and laid stress on their religious and ethical qualities (Ṣūra iii. 100, 106). His final breaking away from the ahī al-kītāb had as a result that he turned more and more to the Meccans and their centre of worship, the Kāba (cf. in this connection Ṣūra i. 119 sqq., esp. 122, and Ṣūra xxii. 35, 66). He only apparently resumed his original idea of an umma embracing all the Arabs. In reality the final result was fundamentally different from the starting-point. The Arab umma, which Muḥammad had originally taken for granted, was only created by him after much hard work. It if at first represented a community of Arabs, this was more or less a secondary phenomenon. The essential
thing was the religious foundation on which it was based. The umma of the Arabs was transformed into an umma of the Muslims. It is no wonder then that it spread very soon after Muhammad's death beyond the bounds of Arabia and in course of time brought together very different stocks and nations to form a higher unit.

(R. Paret)

**UMMI, an epithet of Muhammad in the Qur'an, connected in some way with the word umma [q. v.]. It does not seem however to be a direct derivative, as it only appears after the Hijira and has a different meaning from umma, which is already common in the period before the Hijira. In Sura iii. 19, Muhammad invites the abl al-kibbat and the ummu to adopt Islam (ṣal ilight ṣumari ʿalākātina ʿalā ḫiyātina wa ʿummiyya...). Ummiyyin here means "heathen", as it does in the earlier Sura, verse 69, where the word is put with this meaning into the mouths of the abl al-kibbat. The latter passage makes it probable that ummi or ummiyya is a word coined by the abl al-kibbat (probably the Jews especially) to describe the heathen. This explanation is all the more probable since Horovitz has shown that it has an equivalent in the Hebrew ummaḥ kāʾ-ṣām (Greek ὑμματικός). In Sura viii. 9 there is an allusion to God having sent an apostle to the ummiyyin. As Muhammad here is unmistakably called an apostle from the heathen and for the heathen, it is natural to assume that he also refers to himself as the heathen prophet. In the words al-nabi al-ummi (Sura vili. 156, 158) and presents himself "to the Jews and the Christians as the mashiḥ ummaḥ kāʾ-ṣām" (Horovitz; cf. Sura viii. 156; "whose name they find written in their Tawrat and the Inqilāb"). What further shades of meaning Muhammad himself gave to this epithet is however very difficult to ascertain. If we compare the words of Sura viii. 156 with the praise which Muhammad gives in Sura iii. 106, 106 to his umma we cannot help thinking that he might possibly also have been making a play on the etymology ummaḥ < umma. In any case, he did not in the least consider the epithet al-nabi al-ummi as derogatory. Frants Buhl has recently again put forward the thesis that ummi means not "heathen" (Ṣamadiyy) but "untaught" (Ijad). In spite of the fact that this could very well fit the text of Sura ii. 73, there is on the whole more against than for it. Ummiyya in Sura ii. 73 can, if necessary, no doubt be translated "heathen", if one does not want to try something else (see Horovitz). On the other hand, the same word in Sura iii. 69 cannot from the context possibly be translated "untaught", even if we really understand the heathen by it. Ummi would also on etymological grounds be difficult to

explain as "layman" for neither the Arabic umma nor the Hebrew umma nor the Aramaic ummiyya means people in the sense of the laity. Finally Buhl's objection to the Prophet calling himself a "heathen prophet" loses weight when we remember that Muhammad was perhaps not quite clear about the full significance of the Jewish conception of "heathen" and that he, as above indicated, may have given it a new significance.

The application of the term ummi to Muhammad is often quoted as evidence that he could not read or write. In reality the expression has no bearing on the question. For the text of Sura ii. 73 which gives rise to this assumption does not charge the ummiyyin with ignorance of reading and writing, but with a deficient knowledge of the holy scriptures.

(R. Paret)

**UMRA, the little pilgrimage**, i. The ceremonies of the (Muslim) umra. The umra, like the hajj [q. v.], can only be performed in a state of ritual purity (ṣumari [q. v.]). On assuming the ihram, the pilgrim (mutamam) must make up his mind whether he is going to perform the umra by itself or in combination with the hajj and express his intention in an appropriate siya [q. v.]. If he combines the umra with the hajj [see below] he can assume the ṣumari for both pilgrimages at once; in the other case the ṣumari must be specially assumed for the umra in the consecrated area (kibla) outside of the haram of Mecca. This holds also for native Mecceans who, when they are going to perform the hajj, can assume the ṣumari within Mecca. Three places are preferred for the assumption of the ṣumari for the umra: Džyriya, Ḥuṣāibya and especially Ṣumari Ṣuhrā. The latter place was therefore also known as al-Ummra. With the utterance of the ḥabbāba, [q. v.] formula, the actual ceremony of the pilgrimage begins. The mutamir goes to Mecca in order first of all to go around the Ka'ba [cf. tawaf]. He enters the mosque through the north door of the north-east side (Bayt al-Salitum), goes under the portal of the Banū Shālikh to the Black Stone built into the wall of the Ka'ba and, turning right, begins the sevenfold circumambulation of the Ka'ba, saying prayers all the while. The first three circumambulations are performed at a rapid pace (rasmal), the four last at an ordinary rate. After this is finished, in order to acquire a special blessing he presses himself against the part of the Ka'ba wall which lies between the Black Stone and the door of the Ka'ba. In conclusion he prays two rak'ās behind the Makam Ibrahim, drinks a draught of the holy Zamzam water and touches once again in farewell the Black Stone (these last ceremonies are however not considered absolutely necessary). The mutamir now leaves the mosque through the great al-Ṣaft door in order to perform the second essential part of the umra, the running between al-Ṣaft and al-Marwa [cf. the article ašya']. He goes to the hill of al-Ṣaft and utters a few prayers there. He then goes to the hill of al-Marwa, over
four hundred yards further north, past the northwest corner of the mosque. A short low-lying stretch at the east corner of the mosque is covered by a more rapid pace (hamal or khabas). Reaching al-Marwa, the mu'tamir again utters a prayer. He then returns the same way in the reverse direction and so on until he has covered the distance seven times and ends at al-Marwa. He has thus completed the ceremony of the 'umra, and has only to have his hair cut or be shaved by one of the barbers waiting there. If he is making the 'umra, he in combination with the hadjijj, he only has his hair trimmed and has the pilgrimage done on the 10th of the Hijri of the end of the hadjijj. 2. The History of the 'Umra and its relation to the Hadjijj. The ceremonies which make up the Muslim 'umra are undoubtedly for the most part taken over from the pre-Islamic period. They completely lack any close connection with the religion preached by Muhammad, except for the Muhammadian prayers used in them. The Prophet did not alter these practices but only assimilated them to his teaching. This he could all the more readily do as his original significance seems to have become but obscurely understood by his contemporaries. He allowed them to persist at all is probably less to be attributed to his personal reverence for them than to his political instinct which made him respect the traditions of his conservative fellow-countrymen.

On the parts played by the separate ceremonies of the Muslim 'umra in the pre-Islamic period see the articles 'Ibra'm, Sa'y and Tawaf. The Muslim 'umra as a group of ceremonies forming a single whole also goes back to a pre-Muhammadian institution. This is shown by the very fact that Muhammed refers to it by a name which in his time seems already to have become a special term and enables us to assume that the thing itself was well-known. This however does not mean that the separate parts of the pre-Islamic 'umra exactly corresponded to those of the Muslim 'umra. The two institutions as far as we can see, did not exactly coincide. It is however very difficult to make out in what the difference lay, as we do not even know the earliest form of the Muslim 'umra, much less that of the Dhikhrata. We have therefore to make up for the lack of authentic sources by deductions from material which is not absolutely above reproach.

The pre-Muhammadian 'umra probably consisted of ritual acts, which were performed in a state of inayt within Mecca and included the tawaf of the Ka'ba. On the other hand, the course between al-Safa and al-Marwa (sa'y) does not seem to have been included. This follows from the text of Sura ii. 153, which clearly distinguishes between hadjijj and 'umra on the one hand and the course between al-Safa and al-Marwa on the other and describes the performance of the latter in connection with the hadjijj or 'umra as irreproachable, indeed even meritorious, but still as a work of supererogation. Muhammed himself performed it in 632 following the tawaf and thus by his example gave a further stimulus to the incorporation of the sa'y into the Muslim 'umra. If the Muslim 'umra in this respect shows an accretion compared with that of the pre-Muhammadian period, it seems also to have lost something. For the 'umra in the Dhikhrata can hardly have consisted of the tawaf only. Probably an additional essential element in it was the sacrifice of animals bought for the special purpose, a custom which was later mainly confined to the hadjijj. Muhammed himself bought sacrificial animals to the unfortunate 'umra of al-Hudaybiya and a year later to the so-called 'Umar al-Ka'ab. As to the relation of the 'umra to the hadjijj, the very similarity of these two institutions has contributed to confuse them and to blend their distinguishing features. Their reciprocal fusion had already begun in the last years of the Prophet. Muhammed began the only hadjijj in which he took part as head of the Muslim community shortly before his death, by performing the tawaf and sa'y after his arrival in Mecca, ceremonies which did not originally form the beginning of the hadjijj but were elements of the Muslim 'umra. He then put off the 'ibram and said that the ceremonies so far performed formed an 'umra. When over 'Umar and others of those with him did not approve of putting off the 'ibram and did not follow him, this clearly shows how closely the ceremonies of the 'umra were associated with those of the hadjijj for them and that in their view these holy acts should be performed in one and the same 'ibram. If we reflect that the revelation announced on this occasion (Sura ii. 192) laid down a penance for using the hadjijj for the 'umra in this way and that Muhammed to some extent acknowledged himself guilty, then it is natural to suppose that Muhammed had only put off the 'ibram in order to be able to associate with his wives who were there and not with the object of keeping 'umra and hadjijj absolutely distinct (see Sounck Harrowje, Het Mekkaanse Feest, p. 83-102). In the case, Muhammed in the year 632 made the 'umra precede the performance of the hadjijj and thus put his approval on the combination of hadjijj and 'umra. This combination had a deeper cause: Muhammed on the one hand proclaimed Mecca with the Ka'ba as the centre of the worship of Islam and on the other took over the hadjijj, which originally had very little, if anything at all, to do with Mecca, into Islam. He had indeed every reason to bring the Muslim hadjijj into connection with the sanctuary of Mecca. The more he succeeded, however, the more the 'umra lost its raison d'être as a special pilgrimage to Mecca. It was therefore quite a natural development when the Muslim 'umra became more associated with the Muslim hadjijj and original elements of the 'umra were absorbed by the corresponding elements of the hadjijj, as was presumably the case with the sacrifices (see above). The 'umra and the hadjijj did not however absolutely combine into one. This was prevented by, amongst other things, the fact that Muhammed in the pilgrimage above mentioned drew a line of separation between the two by discarding the 'ibram.

In the consensus (ijma') of Muslim opinion, two ways of combining the 'umra with the hadjijj came to be recognised in course of time: tawatu'a and 'ibram. The former term was applied, following Sura ii. 192 (mar tawatu'a 3e 'l-'umra 3is 'l-hadjijj), to the way in which Muhammed had actually followed, namely combining 'umra and hadjijj with a break in the 'ibram. 'Umar threatened during his caliphate to punish its observance with the punishment of stoning and even under the early Omayyads it does not seem to have been usual. 'Ibra'm is the name given to the combination
of 'umra and ḥaḍḍā is without breaking the ṣafāra. In this the ṣafāra is assumed for the 'umra and the ḥaḍḍā at the same time. As in the Muslim ḥaḍḍā the ceremonies which constitute an 'umra are also performed, according to the prevailing view an 'umra is completely carried out when they have been performed, so that - if the ayāt of ṣafāra has been taken - the ḥaḍḍā is completed. Some authorities however demand that the ceremonies of the 'umra should be specially carried through. The ṣafāra must not be broken in any circumstances.

The 'umra, in spite of its partial absorption in the ḥaḍḍā, has however retained its independence, although only to a limited degree. When the ḥaḍḍā is performed alone in the ṣafāra, i.e. by itself (in contrast to tamattu'a and ṣafāra), the 'umra also must be performed separately. Pilgrims who come from outside to Mecca seem as a rule in this case to perform the 'umra after the completion of the ḥaḍḍā ceremonies so that they naturally have to assume the ṣafāra again. In the course of time this independent 'umra ceremony seems to have become gradually confined to such Muslims as were permanently or for a considerable time resident in Mecca or came there at a time other than that of the ḥaḍḍā. But it was just this local limitation of the independent 'umra that favoured the survival of traditions from the pre-Muhammadan period. If we therefore learn that the 'umra for centuries was celebrated as an independent ceremony, preferably in the month of Rajab, we can probably see in this a survival of pre-Islamic tradition: the 'umra in the time of Umayyad was presumably a ceremony observed annually in Rajab and therefore had nothing to do with the ḥaḍḍā, the pilgrimage in ibn 'l-Hīdhā (cf. also the tradition according to which 'Ukkaša had his hair cut in Rajab of the year 2 to make himself look like a pilgrim). As Muhammad could only prepare the way for the combination of the 'umra with the ḥaḍḍā but not complete it, the old tradition of performing it in Rajab survived for centuries later. It is only in comparatively modern times that Rajab seems to have lost its significance for the performance of the 'umra. The custom of the Meccans of journeying to the holy places of Mecca in Rajab perhaps broke it down. When 'umras are now performed in dissociation from the ḥaḍḍā (i.e. in ṣafāra), the nights of the months of the fast (Ramādān) are specially favoured for this purpose and especially the last ten which are connected with the ḥajjad al-ḥādīn.

3. The significance of the pre-Islamic and the Islamic 'umra. If the pre-Islamic 'umra was annually performed in Rajab and also if the calculation is correct which places Rajab originally in the spring, its similarity with the Jewish passover strikes one at once. The animals which are sacrificed at it were perhaps, as in the Jewish ceremony, originally first born (cf. Wellhausen, Rechts, p. 98 sq. ; W. Robertson Smith, *Lectures on the Religion of the Semites*, p. 397, 464). In Muhammad's time however, the original significance of the 'umra seems to have been practically forgotten and it no longer fell in the spring.

The Islamic 'umra is an expression of piety, mainly of a personal nature, especially if it is undertaken separately and not with the ḥaḍḍā, the ceremony observed annually by the Muslim community together. Probably this individual character is the result of the fact that it lost its independence in time and so far as it was not associated with the ḥaḍḍā constituted a work of supererogation. Before Islam the 'umra had probably a more collective character.

The question, answered differently by the different madhhabs, whether the Muslim is bound to the same degree to perform the 'umra as he is the ḥaḍḍā is of little significance, in as much as every Muslim who performs the ḥaḍḍā as a rule performs the 'umra at the same time. The case of the pilgrim who has begun a ḥaḍḍā and for any reason cannot complete it, is a special one. Under these circumstances he is bound to perform an 'umra in order to be able to put off the ṣafāra for a time. The conclusion is however not made good by this. The ḥaḍḍā on the contrary must be made good in the following year.

**UNAIZA**, one of the most important towns in southern Ḥaḍḍā, and of the district of Ḥaḍḍā. The vocalisation used here is confirmed by the Arab geographers (e.g. expressly by al-Bakrî, *Muṣūqum*, p. 670; Yākūh, *Muṣūqum*, i 737 and pass.) and lexicographers (e.g. Līūvī al-Arâbî, p. 251) and also by the modern pronunciation (*C. M. Dougherty, Travel in Arabia Deserta*, Cambridge 1888 (London 1924), ii 551) gives for it as his authority the educated negro Shaikh b. Ḥālîd u. *'Unāiza*. The transcription varies with different writers (*A'neleh, A'neleh, A'neleh, A'neleh, A'neleh, A'neleh, b.; A'neleh, A'neleh, A'neleh, A'neleh, French Enele, Anele*) and sometimes agrees with that of the Arabic Amara, transcribed in different ways. As regards the etymology, M. v. Oppenheim (*Vom Mittelalter zum Persischen Golf*, Berlin 1900, ii 45) deduced too much from the confusion when he thinks that the name suggests the original home of the Amara. If any etymological relation between the two names may be assumed, the most we can
say is that the foundation of the town may be
scribed to the tribe. The note in the **Tāj al-
Arab**, lv. 62 (cf. **Liṣān, op. cit.**) is also based
on a connection with a tribe-name. The explanation
given to Doughty (op. cit., ii. 562, s.v. **Blackstone**
[of 'Aneza']) is untenable: "The name of 'Aneza
is from a berg upon which it is built."

In ancient times the site of 'Unaiza seems to have
been occupied by **Tāhba** (Ptol. vi. 7, 31), i.e. the
Djarad al-Kasim of the Arab geographers (e.g. **Yākūt**, ii. 56), the old capital of **Kasim**;
one of the positions given by Ptolomy corresponds
to the position of 'Unaiza so closely as the
Gordia, "70° 10', 24° 30' (still better the "valgatte
24° 10'). Djarad al-Kasim is located by A. Sprenger,
*Die alte Geographie Arabiens*, Berne 1875, p. 168,
in the vicinity of the modern Buraida or **Uyun**
(north of **Unaiza**), by Doughty (op. cit., ii. 606)
with more reason, in the ruins site of the modern el-
Dhiyat on the Waâl l-Rumma, east of al-Rass
(S.W. of **Unaiza**). 'Unaiza is mentioned in the
older Arabic poetry, e.g. in the **Hamadh**, p. 211, 
501 (ed. Freytag), in **Imru'l-Kais** (ed. Altwardt,
The Discourses), No. 34, p. in the *Nabīt* (ed. Bervan),
p. 344, 646, in a quotation from Aws b. Harih in
there is also the "Alunai'at in the *Mu'allâjah* of
Antara, verse 9, which however does not quite
fit (the dual form also in the quotation from a
poet in **Yākūt**, ii. 135 etc.), a place-name, which
according to al-Bakri, op. cit., and **Yākūt**, iii. 739
is identical with 'Unaiza; it perhaps was applied to
two adjacent settlements (cf. al-Karyatian) of the
same tribe, and similarly with `Unaisid in **Yākūt**,
iii. 398. It should be remembered however that
other places in southern Nadîj with dual endings
can be cited, like Sirrâ, Rāmâtan, Ushhâyân;
but one can hardly see in this simply a local
fondness for dual names, as Sprenger, *Z.D.M.G.*,
xvii. (1888), p. 329 would like to. However little
they may weigh singly, these references enable
us to conclude that the place was already of
some importance in ancient times, as one might
expect from its natural situation. It was only in
the later Muslim period that its importance began
so increased. Of the references in the Arab geograp-
ths the most comprehensive is that in **Yākūt**,
iii. 737–739, according to him, 'Unaiza lies
between Bānî Za'īd and Mecca (i.e. the half-way caravans
station), in the Bâsîl-Rumma, the gathering-place
of the waters of the wâdî, near a hill, which
served as a dam (cf. al-Bakri, p. 207). The place
belonged to the Bânî 'Amir b. Kuraiz. This
emphasises the features which made 'Uinaiza important
at a later date also, its central position on one of
the great roads of northern Arabia and the fact that
it was at the place where numerous small streams
combined to form the main wâdî. In this main
passage **Yākūt** only adds scraps of information
relating to the plentiful water-supply of the district,
which include the statement that (according to
Ibn al-Faqqī) 'Uinaiza was one of the wâdíls
of al-Yamâma (inaccurate for Nadîj or Kâṣim)
(near mount Sûwâd), and quotations from poets
(including early ones) which are of little importance
as the references to other mentions in poetry in
other passages such as i. 626, 762; ii. 259, 255;
iii. 262, 298, 398; iv. 93 or the passages from
poets in al-Bakri, p. 207, 310, 670, 684, 801
842, **Yākūt** refers, iv. 77, s. v. Karyatian (cf. the
article **Sirrâtha** in Pauly-Wissowa's *Realencyclo-
"UNAIZA" 

1019

pädie der blatt. Altertumswiss.) only briefly
to the state of the water-supply in the vicinity
of 'Uinaiza. No further information is afforded
by the passages quoted from the poets by al-Handâm,
p. 172 (see above) and in the list of old watering-
places (verses from Muhâlîh also given with
variations by **Yākūt**, iii. 739). In al-Handâm,
p. 178, 'Uinaiza (with Wadîja and Zaby) is mentioned
among the watering-places of the Kâṣim (as
so described by B. Murâk, *Arabien*, Hanover 1923,
p. 56). Handâm's editor (D. H. Müllcr, ii. 188)
has already called attention to the fact that al-
Handâm in this passage seems to have taken
the female name 'Uinaiza in the *Mu'allâjah*
of Imru'l-Kais, verse 11 as a place-name (and
so have others, cf. **Liṣān**, vil. 251); Wadîja also
is derived from this *Mu'allâjah*, verse 30, and
Zaby from verse 36. The preceding place-names
in Handâm, p. 177, are also taken from the
poem; this passage is therefore rightly omitted
from the *Index geographiceum* in Müller, ii. 38.

In the excerpt from **Yākūt** in the *Martis ad
Rutam* (ed. J. A. M. Müller, ii. 386), Sâfî al-Dîn
writes 'Uinaiza as a place between Bâsî Za'īd and Mecca,
then as a wâdî near Mount Sûwâd in al-Yamâma,
and lastly as a well 2 miles from al-Karyatian in
the Wâl l-Rumma (the original is **Yākūt**, iii. 738;
iv. 77). — Sprenger's statement (Die alte Geog-
raphie Arabiens, p. 177) that Ibn Khurâdâbîth
mentions along with other stations 'Uinaiza after
Buna, a station on the road leading from the S.E.,
does not agree with the text but the place-names
in this passage cannot be read with certainty (see
*BeG.A.*, vi. 191). Sprenger's remark: "The shortest
route from Yâmâma to Mecca, no itinerary of
which is known to me, joins the Bâsî Za'îd road
at Dârîja and the road to Medina joins it at
'Uinaiza or near it" as regards the second state-
ment is by no means indisputable. The maps
show why we cannot agree with the first. The pilgrim
roads from al-Yamâma joins the great caravans-road
'Uinaiza-Mecca at the watering-place of Sharmas
(North of the Djarâl Khâlid). Sprenger's idea (Z.
*D.M.G.*, xvii. 324, 326) that the **Uinaiza** of the
Arabic sources is different from the present **Uinaiza**
would not be without parallel but there is not
sufficient foundation for it. The statements in
the Arab authors are perfectly applicable to the modern
town. There are ruins of an old settlement of the
Bânî Khâlid, Djanânah, not far from 'Uinaiza
(Doughty, op. cit., ii. 354 sq.). If the name **Uinaiza**
really used to be attached to another town, it was
scarcely farther away from the modern town than
Djanânah. The latter place is said to have been
founded about 1300 a.d. by the Kâsî Sâhî, who
also established other settlements in Kâṣim
(Doughty, ii. 241, 355; on this tribe we now have
more accurate information in H. Philby, *The Heart
of Arabia*, London 1922, ii. 350, index).

Of modern geographers, the first to mention
'Uinaiza is C. Niebuhr, from second-hand information
however. In 1765 he ascertained that "Anâzî" was
10 days' journey from Bâsî (Reisebeschreibung
von Arabien, Copenhagen 1772, p. 344; Ritter,
Erdbuch, xiii. 343, 873), separates this name
from its mention from his Anezyeh, p. 873). The
first more accurate information about the interior
of northern Arabia dates from the beginning of
the sixteenth century, as a scientific result of the
Turkish and Egyptian operations against the Wahhnits.
L. A. Corance's *Histoire des Wahahis* (Paris
1810), already contains reliable geographical information, in the publication of which S. de Sacy co-operated. The latter in the *Tableau*, note 39, p. 214, and p. 218 of this *Histoire* (appendix) gave their first accurate list of the divisions of the Wahhabi kingdom and gave the provinces of al-Nadjj including among them the third place Kasim, with the three towns "Kasym, Berey (Bursida) and Enayz" and ten more (cf. the extract in Ritter, *op. cit.*, p. 467 sq.). When the Egyptian troops under Tussun, the second son of Muhammad Ali, passed and afterwards viceroy of Egypt, in the campaign against the Wahhabis in 1815 had advanced into the interior of Nadjj as far as the borders of Kasim and then began to retire, "Abd Allah, son and successor of the Wahhabi ruler Sa'id who died in 1814, was in Unaiya with a hostile force but did not allow himself to be involved in a battle for a decision. After the withdrawal of the viceroy, "Abd Allah deposed in Unaiya as a punishment the chiefs of Kasim who had joined the enemy, and incited the Arab tribes against one another (cf. on the events of the campaigns: F. Mengin, *Histoire de l'Egypte*, Paris 1853, II, p. 35 sqq.). On Ibrahim Pasha, the oldest son of Muhammad Ali, advancing on Nadjj in 1816, "Abd Allah again collected his forces in Unaiya. Ibrahim forced his way into Unaiya out of which "Abd Allah had retired to Bursida a few hours before. The citadel of Unaiya, about a quarter of an hour from the town, surrendered after several days’ bombardment whereupon the town itself which had been abandoned by most of its inhabitants also surrendered (cf. Mengin, *op. cit.*, p. 105 sqq.). After the fall of Unaiya the rest of Kasim soon submitted to Ibrahim, who had nearly 6,000 palm-trees cut down in Unaiya to use them in the manufacture of war material. — Just before the defeat of the Wahhabis, J. L. Burckhardt (1815 and 1816) had collected at Mecca information about Unaiya and Kasim (cf. his *Travels in Arabia*, London 1829, 2nd ed., p. 452 sqq.). He gives Bursida as the capital of Kasim because this was the residence of the Shalib at this time; but Unaiya was much greater in size, which he compares with Siyut in Upper Egypt (3,000 houses). He mentions bazaars and prominent merchants in the town (extract in Ritter, *op. cit.*, p. 452 sqq.). — The next eye-witness was Captain G. F. Saddler, who (1819) was the first European to cross Nadjj from east to west, from Kasim to Medina. He mentions (Account of a journey from Kasim ... to Yemna, in *Transactions of the Lit. Soc. of Bombay*, London 1823, iii. 474) "Anizir" as a place of importance, but it like other towns had been for the most part destroyed in the fighting; a few date-palm groves had survived. According to him, Unaiya was the capital of southern Kasim and as a result of its central position in a well watered valley was the centre of a busy trade, indeed the emporium for a considerable part of North Arabia, a junction of caravan routes from Baza, Kasim and other places to Medina and Yemna. The town thus had a political as well as a commercial importance. Saddler still found a number of merchants in the devastated town. His journey was frankly too hurried to enable him to gather scientific information of value. — Berghaus, *Arabia* (Gotha 1833), p. 88 sq. calculated the geographical position of Unaiya as 26° 26' N. Lat. and 41° 17' East Long. Paris (44° 7' East Long, of Greenwich; on Moritz's map the position is put too far to the south and east). Ritter published (op. cit., 2nd, 523) from W. Schlimmer's *Arabische Reise* (MS.), a table of population statistics which the botanist had drawn up in T'aiif from the unchecked statements of a Wahhabi in 1836, i.e. about 15 years after the events. "Unaiya according to this had 25,000 inhabitants which is probably too high a figure. The cruelty of Ibrahim's forces had only stimulated Wahhabism and about 1849 the last remnant of Turkish-Egyptian influence in Nadjj disappeared. — Later explorers of North and Central Arabia went through Hail to the north, passing Unaiya, W. G. Palgrave (*A narrative of a year's journey through Central and Eastern Arabia*, 1865) in 1862–1863 on his journey from Hail only came as far as Bursida. His statement that Unaiya has 30,000 inhabitants is untenable, like his other figures for Kasim. His account has always been distrusted; cf. most recently Philby's doubts (*op. cit.*, ii. 134 sqq.) on the reliability of Palgrave's account of his stay in Hail and his polemic against D. G. Hogarth (*The Penetration of Arabia*, London 1905, p. 248 sqq.) and other champions of Palgrave: among the latter are F. Hommel, *Grundzüge der Geographie und Geschichte des alten Orients* [Handbuch der Altertumswissenschaft, sect. iii., part i, book 1, 2nd half], Munich 1926, p. 527. From about 1855 Faisal, who lived in Riyadh and was presumably a grandson of "Abd Allah, was trying to take Unaiya; but the warlike inhabitants led by Zamil repelled his attacks and peace was made. The treacherous Faisal however again began fighting in 1862; the town could not hold out against the superior numbers of the enemy and after its defenders had suffered a disastrous defeat, it was incorporated with the rest of Kasim in the Wahhabi state of Nadjj (cf. the events after 1847 see Palgrave in A.Zendeh, *Arabien und ihre Arabier seit hundert Jahren*, Halle 1875, p. 379 sqq.). The fettlers of dependence were soon cut off however for by Doughty's time "Unaiya was again the model of a free independent community in Arabia. — In 1864 C. Guarnelli (*Il Nedo Settentrionale, Historie di Gerusalemme e Anizir nel Cisirim*, Jerusalem 1866; with map [No. 7] of his road from Bursida to Unaiya) tried to penetrate into Kasim from Hail southwards but was taken for a Turkish spy and was brought a prisoner to Unaiya, the base of operations of "Abd Allah b. Faisal, who was at war with the Beduins; the emir Zamil however released him and he went to the Djibal Shammar. The fact that he was a prisoner prevented him making any special observations in Unaiya. According to him, it is the most important town in Central Arabia, the capital of Kasim and has 15,000 inhabitants in seven quarters. He confirms isolated statements by Palgrave. — Shalib Hamid of al-Russ, J. G. Wetstein's authority (*Nordarabien und die syrische Wuste nach den Angaben der Eingeborenen*, in *Zeitschr. f. allgem. Erdkunde*, Berlin 1865, xviii. 408 sqq.), talks of an alliance between "Unaiya and Bursida for protection against the people of the Shammar territory, the capital of which is Hail and gives a few geographical statements, e.g. on the relations on the road from Unaiya to Bursida. "Unaiya, "the mother of Nadjj", he calls the largest town of Nadjj; it is surrounded by gardens; the palms cut down by Ibrahim had been
replanted (cf. e.g. J. Euting, Tagebuch einer Reise in Inner-Asien, ii., Leyden 1914, p. 14 on dates from 'Unaiš). The information so far available only enabled a rough picture of the appearance of the town to be drawn. It was known for example, that outside the strong city wall lay palm-groves around which there ran an outer wall. The first and so far the only traveller to give a full and reliable account of 'Unaiš is Doughty (in Arabia Deux; a not always well-chosen abbreviation is E. Garnett's Wanderings in Arabia, London 1912). On his journey through northern Arabia, which occupied nearly two years (1876-1878) he visited Hâ'il and when he was driven from there and afterwards from Buraida also, was given a better reception, at first at least, in the rival of the latter town. Under Zāmil's patronage, he was enabled to stay some months in 'Unaiš (April 29-July 16, 1878), unlike other European travellers before and after him, and had therefore sufficient leisure for thorough exploration and observation. He describes (Arab. Descriptions, ii. 137 sqq.; Wanderings, ii. 161 sqq.) the town and the walls of the town, the town itself, its streets, the houses outside and inside, the wells and water-supply, the date-groves around the town; he gives a vivid picture of the life of the citizens, their personal qualities and manners and customs, their food and clothing, the religious and secular life of rich and poor, the social conditions, and the distribution of labour. In a special chapter (Life in Ayme, ii. 365 sqq.) are collected observations on the characteristic features of tribal life, the defences and other aspects of the life and work of the town. Commerce is especially well developed; among the numerous merchants are some from abroad; merchants of 'Unaiš on the other hand have their depots in Jidda, Messopotamia and elsewhere. Caravans (coming from Başra) go from there to Mecca and Medina. Various classes of artisans and tradesmen are to be found there (field-labours, masons, gold- and silversmiths and other workers in fine crafts whose skill is much esteemed in Mecca; cf. also Morthin, op. cit., p. 57). From his account it is clear that the city occupied an outstanding position in Central Arabia for its prosperity and culture. In the fifteen years before Doughty's visit, it had doubled in size and now had about 15,000 inhabitants; Guarnieri gave about the same number. It is called the centre of Arabia from its position in the middle of the caravan route from Başra to Mecca; it could really be regarded as the metropolis of Najd. Learning is held in high esteem by the rich merchants. Half of the townpeople are Wahhābi (on the movements of Wahhābism for 25 years before Doughty's arrival see ii. 428 sqq.). Wahhābi fanaticism brought about Doughty's expulsion from 'Unaiš; the Nasrāni (set out towards Mecca with the “barter caravan” which had come from Başra. — Doughty's investigations established the main lines of the system of wābis of North Arabia and ascertained that the wādi, which runs south of Buraida, just above 'Unaiš (on this region see Leuchman, Geogr. Journal, London 1914, p. 512, the first to visit it since Nolde), is the Wādi 'Rummah (according to Yaḥṣū, ii. 523, to be written with one ʾ, not Rummah, as Ibn Buraidā for example requires); pronounced er-Rumeh in northern Arabia, see Moritz, op. cit., p. 22), about the course of which erroneous ideas were previously current (cf. Yaḥṣū, op. cit.). Southern Kašm may be called a gift from this wādi.

What we are told about 'Unaiš by writers since Doughty amounts only to a few notes on local history. Euting (op. cit., i. 63) records in his diaries for 1883 (at Kaf) the struggle between the two Wahhābi families, that of Ibn Sa'ūd and that of Ibn Rashād, for supremacy in North Arabia; ii. 226 (in 1884 at el-ʿUbl) a message of victory from Ibn Rashād. — Ch. Huber, who came in 1884 from Hā'il via Buraida to 'Unaiš, where he only stopped a few hours, mentions in his Journal d'un voyage en Arabie, Paris 1891, p. 685, that 'Unaiš was completely independent and had over 5,000 rifles; Palgrave gives a similar estimate for the fighting men of 'Unaiš and the villages belonging to it (cf. Zahme, op. cit., p. 380). Huber (p. 709) gives only a few cursory remarks on the immediate neighbourhood of the town; his map No. 13 gives a very useful sketch of the route for the stretch from Buraida to the Djabal al-Nir. — E. v. Nolde in 1893 on his journey to the camp of the emir of Hā'il, Muḥammad b. Rashād (between Shākhrah and Riyyūd), also made a brief visit to 'Unaiš; in his Reise nach Innerarabien, Kurdistan und Armenien 1892 [recte 1893], Brunswick 1905, p. 78 sqq., he gives only details that were already known. His statement based on his enquiries, that 'Unaiš has about 35,000 inhabitants, is wrong. His information about the wars of Ibn Rashād (p. 68 sqq.) who became lord of Najd after taking 'Unaiš in 1891, is more valuable, — A. Nolde (p. 69) had prophesied, the situation changed; soon after the death of Ibn Rashād (1897), the political preponderance of the Shāhmūrī capital Hā'il disappeared and 'Unaiš again became independent. Buraida which is smaller, has recently come much to the front in the hegemony of Kašm. — Philby is the first to have acquired a knowledge of the land S.W. and S. of the political capital of Najd (Riyyūd), especially of the district of al-Ain; in 1917—1918 he went from Riyyūd around the whole Taʾlūk range to the south to the Wādi Dāwāsir. He tells us nothing special about 'Unaiš, although (op. cit., ii. 120) he went not only to Miṣnāb, but also via Buraida into Kašm, where Raunkjaer had been some seven years before him and Leuchman in 1912, as far as Kuṣalūb (cf. also his references to 'Unaiš, i. 47, 54, 365). He gives in some details an account of the most recent developments of Wahhābism (see ii. 334, index).

Bibliography: The authors of the standard works (such as Yaḥṣū, al-Balkri, al-Hamātān; of modern writers: Bürckhardt, Salzler, Ritter, Guarnieri, Palgrave, Zehme, Sprenger, Doughty, Huber, Nolde, Philby, Moritz) are given in the article with the necessary bibliographical details.

'UNUR (plur. 'ANAS) means, like ali, rubu, isqub (ışqūb), etc., principle, basis, element in the general sense. It is used in the special sense of materia prima. The hel lenising philology treated it as a rule, use arḫān or ʾisqūb for the four elements of the sublunar world, which are composed of matter and form and, according to the prevailing view, are mutable. The material of the heavenly spheres is called rubu by these philosophers, more frequently however a fifth nature (tēqī).

Bibliography: Sprenger, Dict. of Tech., Trent, p. 960 sqq. (Tj. de Boer)
UNSERI, Abu 'l-Kāsim Haran b. Ahmad al-UNSERI of Balkh, a Persian poet. The year of his birth is unknown and that of his death is variously given, the most probable date being 441 (1054–1050). Very little is known of his life. The matter, mainly anecdotes, recorded by the Persian literary historians is of very little value. According to a very late source, Rūhān Kūti Khān’s Majmu‘ al-Fuṣūlī (Tehran, 1325, f. 355), he was captured by robbers while on a trading journey for his youth and deprived of all his goods. He was later brought by Amir Naṣr, brother of Maḥmūd of Gha zam, to the latter’s court, where he was highly esteemed as a court poet. According to the Persian sources, he held the office of poet laureate (shāh-i shā‘rār) at the head of 400 other poets. How far this is accurate, it is impossible to say. That Unseri was highly esteemed by his contemporaries as an artist is evident, at any rate from the reverence in which he is held by Minūrī. The latter sang his praises in the celebrated ‘ādīd of the candles (Nq. xxxiiiiin. in Kazimirski’s edition). The stories however which tell how Unseri was commissioned by King Maḥmūd to produce a poetic version of the Islamic epic and how he did not feel fit for the task and recommended Firdawsi to the king for the work (e.g. Dawat šāh, Tadbirat al-Sharar, ed. Browne, p. 51), are part of the legend that has grown up around the great author of the Shi’ī imām, the Shihāb al-Dīn.

Works. Unseri wrote three mathnawis, all of which are lost. Their titles were Ḵīyng Bust u-turkh Bust (The White and the Red Idol), Nākrī ‘Ain al-Fuṣūlī (this is the most probable reading but the forms in which this title is given vary), and Wānīk u-Adhrā.’ His Īṣā‘ al-waṣī‘a has survived and exist in manuscripts and in a Teherān edition of 1298 (1881).

A. The Mathnawis. While the two first mentioned romantic poems by Unseri are more titles to us, we know at least the contents of his Wānīk u-Adhrā’f. The subject was taken later by several Persian poets, but not much seems to have survived of this poem. There is a fragment of a Persian Wānīk u-Adhrā’ poem by a certain Nāmis in a manuscript in the British Museum (Add. 7722, cf. Rieu, Catalogue, i. 813). The version of this romantic theme by the Ottoman poēt Lāmmi‘ (d. c. 940 = 1533) is well known (cf. J. v. Hammer-Purgstall, Geschichte der osmanischen Dichtkunst bis auf unsere Zeit, ii. 45 sq., where a full synopsis is given. We may note that von Hammer’s much abbreviated verse translation Wānīk und Adhrā (Vienna 1833) does not give a proper idea of the contents of the original).

Lāmmi‘ mentions Unseri as his precursor in the poetical treatment of this subject in the following lines:

\[\text{cəlicən bu həsicə kəlaq manəvarı} \]
\[\text{nqən ndiș yənnəstə mənər kəi ‘Unsərət} \]
\[\text{Rəmən adəsihiq həkərə kərə-rəkə} \]
\[\text{Tərkə xələn xələnən kələşki qəlləs} \]

(from the Leyden MS, No. 360).

The subject of the romance is the love story of Wānîk, son of the Khān of Cim, and the prince Adhrā. The young man falls in love with a picture of the princess and has to go through many adventures and suffer much before he is united with his beloved. He is for example taken prisoner in war, falls into the hands of the black fire-worshippers, who wish to sacrifice him but he escapes, because the flames will not attack him and has adventures with ādə (whose king is his friend) and nəmən. Adhrā has not much better fortune. She also falls into dangers of all kinds, until the lovers meet at the court of King Maḥmūd of Gha zam, where not only is their marriage celebrated in brilliant fashion but several other happy couples, secondary characters in the romance, are also united. The Turkish poem of course only enables us to learn the subject of the lost ‘Unseri poem; its external form with its numerous lyric and rather precious style is a creation of Lāmmi‘.

The nature of Unseri’s poem would have been quite unknown to us if a few verses had not been preserved in Asad’s Persian dictionary Enaght al-Farisi (ed. P. Horn, p. 25 where these fragments are given). We thus learn that the romance was written in waṣī‘ (Poetry); this metre survived in later times only for the heroic epic, while the romantic epic used other metres.

As to the subject of the poem we know only the very poor authority of Dawat šāh however — that a romance of Wānîk and Adhrā had already been written in Pahlavi for Kami raw and that a copy was brought to ‘Abd Allāh b. Tāhir. The latter, however, is said to have ordered it to be destroyed because, as he said, he abominated the books of the fire-worshippers (Dawat šāh, Tadbirat al-Sharar, ed. Browne, p. 30; cf. E. B. Browne, A Literary History of Persia from Firdawsī to Sa’di, p. 275 sqq). This story probably caused von Hammer (G. O. D., ii. 45) to say: “The cause of the disappearance of this poem in Irān seems to have been mainly, the fact that it originally contained the teaching of the fire-worshippers... in its present form therefore it cannot be regarded as the original story but only as a feeble echo of it” E. J. W. Gibb’s judgment (Hist. of Ottoman Poetry, iii. 26) is also based on this passage.

Von Hammer’s assumption is however unnecessary even if we grant that there was a Pahlavi original. The subject of the poem is the final union of two lovers; in spite of all obstacles. This very subject is the main theme of the Hellenistic romances of the early centuries A.D. We may perhaps assume that there were free versions of such romances in Pahlavi literature (which perhaps came through Syriac) and that the original story of Wānîk was based on a work of this kind. The matter must of course have been adapted to the East and Muslim authors must have later contributed their share. That the supposed Pahlavi original had a religious bias, as von Hammer thinks, can never be proved and is, besides, very improbable. One circumstance which makes the assumption of a Pahlavi original most probable is the fact that the two chief characters in the poem have Arabic names, as P. Horn (Goth. d. Pers. Litt., p. 178) has already recognised.

B. The Divān. Unseri’s Divān contains, as one might expect, mainly hāstās in praise of Maḥmūd of Gha zam, his brother Naṣr and his son Maḥmūd as well as of nobles like the vizier Maḥmūd al-Naqī. It of course also contains ḍazān, ḥifŏrs and ṣubḥāhs. The author himself says that he is a writer of love-poems as well as a panegyrist.
Ursuri’s primary importance is as a writer of gazalas. The oriental literary historians are most enthusiastic about these panegyrics but the value of their judgment is lessened by the well-known fact that in most cases they are too lavish in their praise. To a European, the whole panegyric poetry of the Persians offers little attraction; one must however recognise that Ursuri shows himself by no means unfitted for his task. The subjects of the gazalas are usually the great deeds of King Mahmud; in these cases the poems contain an epic element. There are other subjects which we find in other panegyricists, e. g. Minâshiri, such as the descriptions of festivals (gazalâh-e nafa etc.) or the king’s war-horse. Ursuri also writes on Mahmud’s war-elephant and his sword. That the poet occasionally expresses the same ideas and images in different gazalas can hardly be avoided in view of the uniformity of his subjects. Ursuri’s tajribâs are often erotic but we also find descriptions of nature which we know so well from Minâshiri and Arâfât for example. In such mawâf’s we often find quite beautiful lines, for example in a description of the beginning of spring:

Afsar-e zamin frî zâd az sâr kâh-kibulan (Mâdâna al-Fuâzî, p. 356). His gurâzûs (transitions from tajhîb to mawâf) not infrequently contain original ideas, as when he says that in spring the days increase in length like the power of the king and the nights become shorter like the lives of Mahmud’s enemies.

In these poems we find all the rhetorical embellishments of the period just as in the panegyrists of the later Gharnawids and Sâjsâfâs. We frequently find very pretty comparisons: e. g. in the description of one of the king’s victories:

bar ub dar hamah gharâb ûhanad ûn (Firouz

in bar gudhâtâr bar ân ub kîb Mûsâwâr)
(Mâdâna al-Fuâzî, p. 358).

Very neat is an allusion like:

ûn kîd dar hâr âsâr zâmâ hamûlân (nâm-i khowd (= Mahmûd)

wâm kîd dar hâm dârât güm ûnân)
râm-i ûsar (= Masûd)
(Mâdâna al-Fuâzî, p. 360).

Less fine, even to European taste rather frigid, pictures are not lacking; thus he compares a garden bright with flowers to a copy of the book of Euclid with its many mathematical figures.

In one pleasing and ingenious form of poem he attained considerable success, e. g. in the poem on Nasr, which consists of questions and answers (transl. by Browne, Lit. Hist. of Persia from Ferdows to Solti, p. 121 sq.), as in another shyâs he in the same prince (Mâdâna al-Fuâzî, p. 362) which has three internal rhymes in each couplet:

bârjârân tâdji n-pîrâya, uhabrâ dżuwâhar

[u-mârân,

ba dîl ba fâhâr hamidîy, ba himmat ba ba]
[baåd hamhar.

The reading aloud of such a piece must have been very effective, but practically all the beauty of these pieces disappears in translation (cf. F. Horn’s observations in his Gesch. d. Perz. Litt., p. 80).

Some of Ursuri’s smaller poems are said by the literary historians to be improvisations composed on certain occasions. The best known is the qaun which he is said to have uttered when Mahmud had his favourite Ayâz’s locks shorn and regretted it afterwards (cf. Browne, op. cit., p. 38). Other short poems were improvised on the king’s falling from his horse and on Mahmud being blind.

Even in the middle ages Ursuri was reckoned a classic. Ibn Kâsî, the celebrated writer on poetics, quotes him ten times (cf. Ibn Kâsî, Muqdaš [G. Mî. S., x.], index). We may note the passages on p. 325, where the line which is given as an example of the figure of speech called tajhîb-i ma’âsî may be a fragment of the Wâmîk on p. 445, where in the discourse of borrowing in poetry (ma’âf), a passage from Ursuri’s poetry is quoted, the idea of which is borrowed from Rûdaki but is better expressed by Ursuri, and lastly on p. 269 where Ibn Kâsî cites a passage in Ursuri for the archaic form abar instead of bar, of which idiom he however disapproves.

(UL. HuârT)

UNWÂN (A.), the title of a book, usually decorated in fine manuscripts by a frame work of arabesques which the printers have sought to imitate by a happy arrangement of fleurons, tail-pieces and other printers’ ornaments. In Persian manuscripts the first two pages, very much ornamented with floral patterns, are called sarîwâsh “head-plate”.

(UL. HuârT)

URBÂN. [See Arabîa, b.]

URDÛ, an Indian language. The Urdu language, which as the result of a series of events has now come to occupy the position of a lingua franca for India, is of mixed origin. Neither Indo-Aryan nor Persian can claim a monopoly in its creation and formation; it has, lexically and grammatically, thrived upon the linguistic and cultural stocks borrowed from both. It is the ineradicable monument of the mingling of two peoples and their cultures—the Hindu and the Muslim.

With the advent of the Mughalmaddan conquerors from the North-West the first foundations of this language were laid in India. During the reigns of Sulṭân Mahmûd of Ghazni [q.v.] and his son Mas’ûd [q.v.], many Hindûs, such as Tulak, Nîth and others, held highly responsible posts at the court
of Ghazni. A Hind� army also was stationed there, of which, during Mahmud's reign, Swendru R��, a Hind�, was the commander. The last rulers of the Ghurid dynasty left Ghazni and settled in the Panj�h, where they continued to live until their rule came to an end; thus, both in Ghazni and at Lakeh, Hindists and Muhammedahans began to enter into close contact with each other. Many lords, nobles, and other proteges of Kafir's company, the raids of the Sajdals Turks had made homeless wanderers, also sought his protection and made Lakeh their permanent home. This daily contact between the Hindists and the Muhammedahans had a far-reaching influence on the languages spoken by the two communities. Thus we find in Prithvir R�d Kins, the famous work of Can Bardas, the court poet of Prithvir R��d (died 1392), distinct traces of this influence, for, as he himself states, he "has made use of the Kafiric language" (canto 1. 23), and his book contains in fact many Arabic and Persian words.

Urd� is a Turkish word meaning "camp" or "army". As the Turks, Persians, and Indians all lived together in the royal camp, their language, which was an admixture of these three languages, was called the language of the Ahd-i Urd�, "people of the camp", or more simply, the language of the Urd�, the camp; and after some time the language itself became known as Urd�. Whilst the Muhammedan rulers of India spoke Persian, which enjoyed the prestige of being their court language, the common language of the country continued to be Hindi, derived through Prithvir from Sanskrit. On this dialect of the common people was grafted the Persian language, which brought a new language, Urd�, into existence. Sir George Grierson, in the Linguistic Survey of India, assigns no distinct place to Urd�, but treats it as an outgrowth of Western Hindi. This view overlooks the preponderating influence of Persian, which has deeply affected Urd� in its formative process. It is not merely words that are borrowed; the whole poetry of Urd� — its prose, themes, style, imagery, allusions, grammar, and peculiarities of construction — and even its prose are saturated with Persian. It cannot strictly be called either a branch of Hindi or an outgrowth of Persian, but is a distinct language of a mixed character.

The first great Persian poet and writer of India who used Hindi words in his compositions was Amir Khusro (1255-1325) [see Kitab, Abu-i-Maskan Amir]. It is generally believed, and has been mentioned in some Tadhkiras, that Amir Khusro composed many works in Hindi; but these, unfortunately, are not extant, though one or two of his ghazals are still frequently quoted in which one mirda (hemistich) is in Persian and the other in Hindi, and also many versified conundrums (lista) etc. in the mixed language.

This practice of writing mixed poetry, with alternate hemistichs in Hindi and Persian, continued long after the time of Khusro, and it was for this reason that such poetry was called Rikshau. Now the word rikshau has various meanings, one of which is to produce and rhyme something new. After Amir Khusro had succeeded in producing a new combination of Persian and Indian rhymes, the word rikshau came to be used as a term of art, denoting a composition of such mixed Hindi and Persian verses or hemistichs as were in harmony both in respect of the subject matter and of the
sultān Muḥammad Ḥusayn Shāh (reigned 899–1020 = 1590–1621), whose Kulliyāt is a voluminous work, was a poet of versatile genius, and his two successors, sultān Muḥammad Kutb Shāh (1020–1035 = 1611–1626) and sultān ‘Abd Allāh Kutb Shāh (1035–1083 = 1625–1672), and also Tānā Shāh (1083–1098 = 1672–1687), the last ruler of the dynasty, were themselves good poets and used to compose Urdu verses. Other famous poets of the Kutb Shāh period are: 1. Wajdhī, who related a love-story of Muḥammad Kull Kutb Shāh in his mathnawi Kutb-e-Mushtari, written in 1018 a.h.; 2. Shāhī al-Dīn Kuraishi, author of Bhāg Bāl; 3. Shāhī Ahmad Shārīf, author of a mathnawi on medicine; 4. Ghawwāzī, author of Sāif al-Mulūk wa-Bābī al-Lamāt (1035) and Tūba Nāma (1049); 5. Ibn Nāṣir, author of Ḥikmat Bān (1076); 6. Rūzī or Kutbī, translator of Thūfat al-Nashīd al-Pandā or Tūfa Bāja; 7. Tāhī, author of Bakhshānī al-Mulkandām; 8. Wali, author of Tālīkh al-Mulkh; 9. Maqīfī, author of Zafar Nāma-i Īsk (the last-named belong to the period of ‘Abd Allāh Kutb Shāh); 10. The author of Riḍān al-Mulūk al-Islāmī, 11. Shāhī and 12. Mīrāz, both elegists; 13. Naṭīr of Hyderabad, and others flourished under Abu l-Ḥasan Tānā Shāh.

The ‘Adil Shāh kings were also great patrons of art and learning. Under Muḥammad ‘Adil Shāh (1035–1067 = 1626–1656) there flourished four great poets: 1. Ḥasan Shawkī, author of Fathnāma-i Ḥusain Khān (the battle of Talikot); and of Mulkhānā-i ‘Adil Shāh; 2. Miqīm (Mīrza Miqīm Khān), author of Fathnāma-i Yaq̄īnKhān (an account of the victory of ‘Adil Shāh) and a love-poem of Mahvār o Chandar Khān; 3. Rustamī (Kamāl Khān), author of the voluminous mathnawi Khwānāmā (an account of the wars of the Khalīfah) Allī, written in 1059 a.h.; 4. Malik Khushnīd, author of Dīwān Shamsī (the story of Bahram), written in 1055. Whilst it was Ibrāhīm ‘Adil Shāh II (988–1035 = 1580–1626), called the Dījag-Gura on his account of the mastery of music, and author of the famous book Nawwār on Hindu music, who made Hindu (or, more correctly, Dakhari Urdu) his court language in place of Persian, ‘Ali ‘Adil Shāh II (1067–1083 = 1656–1673) was particularly interested in the Urdu language. Amongst the Dakhani Urdu writers who were active during his reign are: 1. Ṣullā ‘Urūdī, the famous author of Gulkhānā-i Īsk and ‘Alīnāma; 2. Ayāghī (Muḥammad Amin), author of ‘Adilnāma (1076) and Shahsīnāma; 3. Siyād Bulūkhī, author of ‘Alīnāma (1065). During the reign of Ṣīhānān ‘Adil Shāh we find the following poets: 1. Shāh Amin al-Dīn Alish (see above); 2. ‘Abd al-Mu’īmn of Ḥidjapur, author of ‘Īsknāma (an account of Saiyid Muḥammad al-Djawa-pur, Makhāl al-mawloud); 3. Ṣālihī, the author of Yāsūf Ṣulayshī, the best-known and greatest poet of this period. He was born blind. It was perhaps he who laid the foundation of ‘īsk, i.e. poems written in the language and idioms of women, developed by ‘Urūdī (see below). Beḥrī (Ḵāz-e Muḥammad) of Gogī author of Man Lagan (1112 = 1700), Wajdhī author of Fanchhī Bacha, the translator of Agfa’s Ḥaft-e ‘Adad and some other poets flourished in the 13th century when Awrangzīb conquered the Deccan. In prose, the first books to be written in Urdu were in the Dakhani idiom. Besides sayings of the saints (such as ‘Ala al-Din Sayyid A†ūn, Sayyid Muḥammad Bada Nava’ī, and ‘Ala al-Dīn Alish), some short treatises on mysticism composed by them are still extant, but these do not possess any great literary significance. Other more voluminous and important works on literature and theology were also written, such as the Sharh-i Sharḥ al-Tadvīl. This was a translation into Dakhani Urdu by Sayyid Mīrā of Hyderabad (died 1074 = 1665) of the Persian work called Tadvīlī written by Ṣā’īd A†īn al-Quṣṭ al-Hamadānī (died 533 = 1137).

The above-mentioned poet Wajdhī or Wajdhī was the author of a prose work which has great literary significance, called Sab-Ras or Husn o Dil ("Beauty and the Heart"). It is a kind of allegory, describing the conflict between beauty on the one hand and the love sentiments of the heart on the other. The whole book is written in thymed prose, and was composed in 1045 (1635). Another voluminous work, bearing the name of Tarjama-i Shamsī al-‘Athsī, is a translation, made by Mīrā of Ya’Barmah about 1080 (1670), of the Persian book of Rūcoh ‘Imād al-Dīn, who was a spiritual disciple of ‘Abd Allāh Bābānī al-Dīn (died 732 = 1332 al-Dawlatī). Many other prose works were also written soon after this time.

In this early language, just as Arabic and Persian words have been allowed to intermingle freely with Hindi words, so also the authors have drawn freely upon both Hindi and Muhammadan legends for the subject matter. While some of the themes versified are translations from Persian writers and poets, for others the authors are indebted to popular legends in the Sanskrit and Hindi languages, and also to Hindi folklore, e. g. Nāl Dau, or ‘Urūdī’s famous mathnawi Gulkhānā-i Īsk, which is a love story of Madhumītī and Manohar, or the story of Kām-rūp Kāntī. In the books written by the Shīfs, words of all three languages, Arabic, Persian and Hindi, have been freely used, and the poets too have drawn their similes and metaphors from all three.

It was, however, only when these works began to be written in Persian characters, and the system of Persian (or Arabic) prosody was adopted, that the real foundations of the Urdu language can be said to have been laid. The Padmāvat of Malik Muḥammad of Dījān (1547 = 1540), although composed in the perfect Hindi of that period and containing but a sprinkling of Arabic and Persian words, was nevertheless written in Persian characters. The prose works as well as the verses composed in the early Dakhani Urdu were similarly written, and the majority of the poems have Persian metres. Malik Muḥammad, by presenting the pure Hindi language of that period in Persian characters, represents the fusion of Indian and Islamic cultures. The writers who came after him went a step further, and by writing prose and poetry in a combination of Hindi, Persian and Arabic words still more closely cemented this alliance. Their adoption too of Persian (i.e. Arabic) prosody helped to make the foundations of the new language permanently strong. This may be ascribed to the influence of Persian culture, which was then predominant. Closely in the wake of foreign prosody
came foreign music, and these two helped to give an entirely new colouring to the nature and moral tone of Urdu poetry.

The beginnings of what may be called modern Urdu poetry were made in the time of Muhammad Shah (1151–1161 = 1716–1748). Even Wali Dakhani (1099–1150 = 1668–1714) of Awrangzaib learned from the masters who were then at Dilli, and drew his inspiration from them. His verse shows a tendency to select and refine, and he sincerely endeavours to choose the most polished words and idioms. The proportion of Hindi and Persian elements in his verse, both as regards diction and subject-matter, is about equal. His contemporary Siraj-ud-din is also a good poet, and uses a purer language than Wali.

The classical period of Urdu poetry begins with Mir Taqi (1137–1223 = 1712–1799). Mir's poetry truly reflects his own life. As he was the son of a pious darwaza who had kept himself strictly aloof from everything worldly, the tender and impressionable years of his life were spent in the society of saintly darwazas. He lost his father at the age of eleven, and leaving Agra, his native place, came to Dilli to earn his living. At this time, the once famous and powerful Mughal empire was fast crumbling to pieces, and the frequent excursions of Akbar Shah Durrani, coupled with the plundering activities of the Dauds and the Marathas, had deprived it of even that meagre share of prestige which had been left to it after the devastating onslaughts of Naitir Shah. All this had a deep effect upon Mir (see his autobiography Dilkash-i Mir), and accounts for the general pessimism and tender pathos of his poetry. His verses are lyrical and were couched in the sweetest, simplest and most melodious language, a combination but rarely met with in other poets. His ghazals and mathnawis are by far the best to be found in Urdu literature, and their merit has been acknowledged by almost all the great poets in Urdu. Mir was a man of very strong character, self-sacrificing even to a fault, and led a severely disciplined life. During the reign of Shah Alam (1759–1806), when there was no one left in Dilli to encourage poetry, a number of poets migrated to Lakhanpuri, which was then the seat of a flourishing court. Mir too, on the invitation of Nawab Asaf al-Dawla of Awadh, went to Lakhanpuri and remained there until his death in A.D. 1799.

Sawda (1125–1195 = 1713–1781), a contemporary of Mir, was also a good poet, but he falls far short of the latter. He was impatient of criticism, had no control over his temper, and wrote long sares, but is nevertheless to be ranked among the masters. The chaste and graceful poetry of Sawda Mir Dard (see the article DARD, (1133–1199 = 1721–1784) reflects the mystic religion of his age. The realist MirHasan (d. 1201 = 1786), a follower of Mir Dard, depicts in his poetry the social manners and customs of the age to which he belonged. His famous mathnawi Shair al-Bevasan, in which he describes both human passions and natural scenes with remarkable fidelity, is the best and most popular mathnawi in Urdu.

We now come to the age of Rangin and Lashkari (d. 1233 = 1817), both of whom, like Sawda, Mir, and Mir Hasan, migrated to Lakhanpuri. At that period Lakhanpuri was the home of fashion and follies and the centre of a polished and pleasure-loving society, which fact could not but be reflected in the poetry written there. Rangin is generally considered the real originator of rangini (see above under Haidari), a form of verse in which everything was written only about women and in the language and idioms used only by them. He is fond of using Hindi words but his standard is very low, and his verses are full of erotic suggestions and other obscenities. Indiya, on the other hand, is not sensual but milharthul. He was a true poet but born in a decadent age, when the place of honour was usurped by servility. He regards life as a sport, and in his poetry, though the colours are usually heightened, the sentiment is often falsified. But it should be remembered that he is a master of technique, and that, while his affectations harmed Urdu literature in a general way, they also contributed to it an element of refinement and freshness. Thus his influence on literature has been both good and bad. His book Daur-i Laphar bears eloquent testimony to his mastery of the Urdu language.

Nasiri (d. 1830) stands out as a solitary figure in the history of Urdu literature. Though one of the most neglected of Urdu poets, and by some biographers even refuted the title of poet, he is an Indian poet in the real sense of the term. Even when swayed now and then by sensual pleasures, he does not cease to be a perfect artist. His best poems are those in which he merely sings the songs of his native land, or on common topics which appeal alike to young and old, poor and rich. Like nature in India, his imagination too is rich and fertile. Several of his poems on birds and beasts (e.g. "The poor Swan", "The Bear-Cub", and "The young Squirrel") indirectly criticise the social manners and customs of his period. In some of his poems he has portrayed the happy scenes witnessed at Indian festivals, and his love of nature is shown in his vivid descriptions of the seasons. His style, however, is sometimes careless, his verse is faulty, and he has no feeling for the choice of words. He is really a poet of the people and allows nothing to stand between himself and his swiftly-flowing narrative.

Dhawe (d. 1747–1855) is a follower of a long line of Persian poets who reduced literary slavtry to a fine art. His Dhawax, most of which were written in praise of the last ruler of the Mughal dynasty, are famous in Urdu literature. Not so, however, are his ghazals, to which his genius was totally unsuited.

At this stage in the history of Urdu literature poetry seemed to have come to a standstill. The poetical productions of the period were mostly imitative, satirical, and uninspiring, repeating with wearisome monotony the old ideas, themes and even the words which had been again and again employed by earlier poets. At this moment Ghulam suddenly appeared like a new planet in the literary firmament.

Ghulam (1212–1286 = 1797–1859) was descended from a family of warriors, and the warm blood of the Alitek Turks in his veins shows itself in his poetry. While yet a schoolboy he had begun to compose verses, but his real merit as a poet shone out only after the great mutiny of 1857. This revolution, representing as it did the conflict of contradictory forces, was destructive of much that ought not to have perished. The complete destruction of many a useful institution of
the Mughal reign, and the extinction of the great Mughal dynasty itself, deeply moved Ghâlib and imbued his poetry with that pathos which makes it so poignant. Like all truly great men, he was far ahead of his time, and for this very reason was not appreciated by his contemporaries. He was a pioneer of the modern movement in Urdu poetry. In the whole realm of Urdu literature there is none to surpass him in originality, strength of imagination, or flight of fancy. Ghâlib was the first to introduce philosophical conceptions into Urdu poetry, with the result that his verses offer a captivating combination of philosophy, mysticism and pathos. His style is decorative, expressive, and pleasing to the ear. Its one defect is that its literary idiom is Persian, but in spite of this a considerable number of his verses were written in a clear and simple style.

The most famous of the Persian elegies on the martyrdom of Husain, the _Hafiz Band_ of Muḥammad Kâhi, served as model for the Indian elegiac poets. But Anis (1803–1874) and Dabir (1803–1875) have far excelled the Persian prototype, except that, as in it, the nature of their grief is far from moral. Religious devotion and the literary excellence of their poems have accorded to them a very high position in Urdu literature. Anis is so graphic in his description of battle scenes, and so realistic in his portrayal of the Martyrs of Karbala, that the whole narrative seems to be alive and is surprisingly true in details. The verse is fluent and majestic, and in places so simple as to be suitable for every-day conversation. But a veil of gloom drapes all the poems. Instead of recounting the heroic deeds of the Imâm in a vigorous epic strain, both Anis and Dabir mourn for him, for his sufferings and death, with true feminine grief. The Imâm as depicted in these verses does not possess that forcefulness of character which marks all those who have gained martyrdom in the cause of truth. In spite of these defects of characterisation, however, Anis is a true master of language and of the art of poetry.

The period which marks the downfall of Lakhnât is one of stagnation and reaction in the history of Urdu literature. The poets are innocent of originality, in matter as in style, and overlaid their verse with redundant figures of speech. Atish and Nasîkh are both great masters of technique, but they do not deserve to be ranked with the other great poets of the Urdu language, and the entire "poetical" talent of their followers and pupils consists in pass and plays upon words. The mathnawî of Dâyâ Shakar Nasîm (1811–1843), written about this time, is a fine specimen of perfect versifying skill, and would have been good poetry had it not been figurative and ornamental to a fault. The various mathnawîs by Shawâ are nothing more than more word-pictures of the corrupt and free manners which characterised the society of that period, and in writing them the poet has drawn his inspiration from the gay and gallant court of Wâjjîd 'Alî Shâh, the last ruler of Awadh. But to do him justice, wanton mirth is not summed with grace of art. That is all that can be said in justification of his mathnawîs. The poet has sacrificed his art on the altar of frivolity.

After Dâgh (1831–1905) and Amîr (1828–1900), the foundations laid by Mir's classical poetry may be truly said to have fallen asunder. The poetry of both of these shows marked degeneration; both are upholders of that effete tradition which devoted its entire efforts to purposeless but sometimes decorative word-play. Of the two, however, Dâgh is a master of expression, and he has certainly enriched the language by introducing into his poetry colloquial idioms and some exquisite expressions.

It was, however, at this stage in the declination of Urdu poetry, when literature had degenerated into a mere farce, that the influence of the West began to make itself felt in the intellectual life of the country. The West formed a new world of thought laid open for the benefit of the Indian mind. Old traditions were changed; modern sciences replaced subjective egoism by objective art; instead of the classical, ornamental, and rhymed language, a simpler and more natural style of expression was adopted, and the effeminate dilletantism of the age gave way to manliness and self-confidence. In short, there began the true renaissance of Urdu letters.

Muhammad Husain Azad (d. 1910) was a remarkable embodiment of the characteristics of this period. He was the first poet to drink deep of the fountain of the Occident. He was a philologist and a master of the _mawâdûtî_metrical prose; but he was not a great poet. His contemporary Hâli, however, was altogether different. Hâli was born at Panipat in 1825 (1837) and died in 1832 (1914). His boyhood and youth were spent at Dihî at a time when the Mughal empire was fast declining, and as is natural at all such times, social and political upheavals were the order of the day. Hâli was an eye-witness of the setting sun of the Mughals, and all that he saw had a deep effect on his sensitive soul. Though in his literary pursuits he was the successor and pupil of Ghâlib and Shefta, yet intellectually he was a true descendant of the great Arab poets of pre-Islamic days.

His early poetical productions were of the type than common, but gradually the modern tendencies of the age began to influence him and led him ultimately to Naturalism and to a minute study of the society around him. The genesis of his didactic poetry was the Aligarh movement. Through the efforts of Sir Saiyid Ahmad Khan the era of a new humanism dawned upon India, and a new spirit suffused the intellectual and cultural life of Indian Muslims. Hâli was destined to be the bard of this new movement. In his _Mataaddas_ he not only made the dead past of History a living present, but he also described with surprising detail the national life of the Indian Muslims. Although his poetry is founded on a deep pessimism, he was filled with a passionate longing for truth and burned with the desire to rebuild and reconstruct. Besides being a great poet, Hâli was also one of the interpreters of English literature to the Indian people. But he was a true realist, and never allowed the surging tide of Occidental ideas to carry him off his feet. Before his time, literature was but a medium for expressing the ideas of a class. It was he who opened it up to the masses, and expressed himself in the common language, which was essential for the success of his mission. This, as was to be expected, raised a storm of hostile criticism and satire, but time has vindicated him against his critics. Moreover
his diction is immaculate, and he uses Hindi words in his verse with great beauty and skill.

In face of the flood of new ideas that swept away old-time conventions, AKBAR HASSAN (1846—1921) raised his voice in support of what to him was Oriental culture, and indulged his humour at the expense of the admirers of Europe and of their follies. Even the modernism of 'Allgahr could not escape his venomous satire. He regarded Indian and Islamic culture as in grave danger of submergence under the swelling tide of Western materialism, and made it the aim of his poetry to avert this catastrophe. New-fangled ideas came in for a good deal of criticism at his hands, and he has nothing but supreme contempt for those small-minded Indians who blindly imitated Europeans. His style, at its best, is polished and humorous, even though his verse is marred by a too-studied effort to create effect by word-play and rhyme. It is doubtful if he will be popular with posterity once his present utility as a satirist is exhausted. Though he is not one of the great ones among the poets he is certainly the least imitable of them all.

In modern Urdu poetry three figures stand out preeminent: Ghalib, Hali and Ibne Babl. Ghalib's soaring imagination and philosophical ideas broke through the crust of old-time poetry, but his verse is filled with the deepest pessimism. Hali is one who stands alone amid the fast crumbling ruins of ancient grandeur and weeps over it, but who yet bourns with the desire to reconstruct and to revive that which is fast decaying. Ibne Babl may not possess the soaring imagination of Ghalib nor the deep pathos of Hali, but he has a vigour, an enthusiasm and a creative force all his own. Though not favourably disposed to occidentalism, he has, more than any other of the poets, availed himself of western ideas, which have widened his poetic outlook. His early poetry was of the popular patriotic type, but of late he has developed a keen pan-Islamic feeling. He calls upon Muslims to make religion a basic and unifying principle and to develop the characteristics of the believers of old, and sees the vision of a day, not far distant, when Islam will prove to be the salvation, not only of Asia, but of the whole world. Of late he has devoted his talent to Persian rather than to Urdu verse, for he considers the Persian language to be more serviceable in propagating his ideas throughout Islamic countries than his mother-tongue Urdu.

The beginnings of Urdu prose have already been referred to above. The first prose books in the language were also written in the Dakhan, but most of them dealt with religion and other allied subjects, and none except the Sah-Ras (1045 = 1635), which is in metrical and rhymed prose, can claim any literary significance. In northern India, even so late as the post-Mutiny period, people wrote books and carried on correspondence in Persian. Shah Rafi's Al-Durr e Dilk (1163—1233 = 1750—1818) and Shah 'Abd al-Kadir (1157—1230 = 1754—1815) both translated the Koran into Urdu, but their translations were too literal. The foundations of modern Urdu prose were laid in the Fort William College at Calcutta, founded by Lord Wellesley in 1800. Of the languages taught there, most attention was paid to Persian and to Hindustani or Urdu. Dr. John Gilchrist, who was in charge of the College and was himself a keen student and author of Hindustani books, may well be regarded as a great patron of Urdu. Mir Aman, the compiler of the Bakhsh o-Bahar or Geeta-o-Geeth Darbars (1801—1802), and Mir Shair 'Ali Afzal, the compiler of the Arz-o-Mahi (1805), deserve special mention. Both of these books are admirable in point of diction and description, especially the Bakhsh o-Bahar (*The Garden and the Spring*) which will remain a perennial source of literary enjoyment. One notable influence of these compilations and translations produced under the auspices of the Fort William College was that Urdu writers began to develop a taste for simple language, and the old metrical rhymed style, laden with Arabic and Persian words and expressions, went out of fashion. But the majority of these books dealt with fiction in one form or another. It was left to the great Sir Saiyid Ahmad Khan (1857—1948) to teach his generation the art of writing on serious and scientific subjects in the simplest and most fluent language. His magazine Takhrib al-Akhbhar almost completely revolutionised Urdu literature. It was for this reason that the masters of modern Urdu prose were mostly those who had come either under the direct influence of Sir Saiyid, or else were in some way connected with the Dilk College, where Urdu was a medium of instruction, and where books were being translated and written in Urdu. In the meanwhile I cannot overlook the letters of Ghulam (see above) published under the title of *Urdi-i Mosalla* which are model of freshness, purity and wit.

Among the principal modern Urdu prose-writers are the following:

**Muhammad Hussain Azad** of Dilk writes chaste prose, and his books, though not free from artificiality, are couched in simple language, and have a genuine charm. His *Ab-i Hayat*, a biography of Urdu poets, should always remain a living thing in literature.

**Khawaja Ali Fazal Hussain Hali** was a master both of prose and poetry. His style, besides being sober and vigorous, is fluent, and he possessed a fine literary taste. He may be regarded as the founder of literary criticism and of biography in Urdu. His *Hayat-i Saud*, Fadlan-i Ghalib and *Mubaddalan-i Sair* are epoch-making books in Urdu literary criticism, and his *Hayati Qadim* (life of Sir Saiyid Ahmad Khan) is the high-water mark of Urdu prose literature.

**Nawab Ahmad (1831—1912)** was a forceful writer and speaker, with a wonderful command of language. In spite of his frequent use of Arabic words and phrases, his vigorous language penetrates to the hearts of his readers, and his works of fiction, such as *Misirat al-Amar*, *Tawabat al-Naqqal*, *Fasani-i Muqtha*, will always be read with interest by lovers of Urdu. Some of his characters have become household words among Urdu-speaking people. His translation of the Koran into Urdu is undoubtedly the best that has appeared.

**Sharif [see SHARIF NOUMAN] (1857—1914)**, who was a professor at Aligarh, was mainly instrumental in developing a taste for history in the Urdu-reading public. In addition to a series of lives of Muslim heroes, he wrote many treatises on Islamic questions and was a distinguished literary critic.

Novel-writing in Urdu dates only from the time of Kuranuddin Sargoor (1847—1902), the author of *Fasani-i Asb*, which, in itself some-
what confused, is yet well-known for its delineation of some of the chief features of the Greek society of its day. The novels of Abd al-Halim Sharrar (1866–1926) are mostly historical, but are weak in characterization. The fact is that with the exception of some of Naqib Al-Madina’s stories, no novel worth the name has yet been written in Urdu. Sharrar’s novels do not helped to create a literary taste, but they did no more.

With the advent of the British into India, a taste for the drama also began to be cultivated, and the Thakurs were the first to popularise it. This naturally produced some dramatists who wrote a number of ordinary plays, but unfortunately there has not yet appeared even one drama in Urdu which is deserving of serious mention.

Although at first the influence of English education tended to alleviate the sympathies of the younger generation from their own language, a phenomenon for which the style of education introduced into India was largely responsible, yet when their taste became more mature they turned to their mother-tongues with greater zest and began to enrich them with translations of European books on the arts and sciences. The Andjumani-Taraqqi-i Urdu of Awrangabad, Dahan, and the Osmania University of Haiderabad, Dahan, with its Translation Bureau, are the foremost institutions to-day for the advancement of the Urdu language. On the whole systematic progress is being made, and the people are beginning to love and feel proud of their language. During the last few years many magazines and journals have been started, some of which are rendering signal service to Urdu, and assisting in the development of a more refined taste.

Al-URDUND, the Jordan, Hebrew (ba) Vardâ emphasis, in LXX, Josephus, Pliny and others of Ḫarmâq. The etymology of the word is obscure and it is even thought by some to be a loanword (cf. the river name Ḫarmâq in Crete). After the Crusades the name al-Sha’ar al-Sabit, the "great watering-place" came into use and is still the most usual name among the Bedouins.

1. The Jordan is formed by the combination of three streams—a-Habsūn, Nahr Liddān and the Nahr ‘Awad. Shortly after their junction, the Jordan reaches the Hule district and here flows through the lake of Bāḥret al-Khālid (Bāḥret al-Hult according to Dalman is only the papyrus swamp in the north). The valley of the Jordan sinks rapidly towards the south, so that the surface of the Lake of Galilee, Bāḥr Tabāriya, through which the Jordan flows (cf. Tābāriya), is 652 feet below the level of the Mediterranean. The valley is known as al-Ghōr (cf. Ghawak) from the south end of the lake to an elevation 3 hours' journey south of the Dead Sea. Here it assumes a character different from that of its northern half: a plain of dazzling white marl, through which the river runs with numerous windings, looking to one who surveys it from a height like a twisted green ribbon, as the banks are covered with dense vegetation, which hides the river. Otherwise the plain is devoid of vegetation but at the foot of the hills on its western edge are several very fertile oases ("the gardens of Urdūn"; cf. Tābarī, Annals, 1:1324; see the article at Jabbok). The Jordan terminates in the Dead Sea, Bāḥr Li‘l (Lot’s Sea), the surface of which is 1,392 feet below sea-level and the deepest point 2,600 feet. It has no exit to the south or west and never has had one. The 1,300 million gallons of water brought down to it every day by the Jordan, evaporate in the burning heat so that the level of the water, apart from slight seasonal variations, remains the same. The result is that nothing can live in the water as the salt and other mineral constituents remain while the water evaporates. The depression south of the Dead Sea is called al-‘Arabah; the ground rises considerably here and then sinks again to the level of the Gulf of ‘Akabah.

The following tributaries of the Jordan may be mentioned. Soon after its exit from the Lake of Galilee it receives on the left bank the important stream of the Sha‘ar al-Sabit (the little watering-place) or Sha‘ar al-Menakhire, in the earlier period Varmik [q.v.], and farther south the Nahr al-Zerkā (the ancient Jabalok) which flows in at al-Damāiy. On the right bank comes the Djalīf, rising in Gollat’s spring (‘Ain Djalīf), which runs by Būsān into the Jordan.

On account of its currents, its numerous windings and many shallows, the Jordan cannot be used for navigation. On the other hand, even in ancient times several of these shallows formed fords which connected the lands east with those west of the Jordan and thus linked up the Mediterranean coast and Egypt with Damascus. North of Lake Tiberias there are five and south of it 54; they are most frequent opposite Būsān. In the Old Testament they are mentioned under the names ma‘abar or ma‘abara. Whether the Israelites had ferries is uncertain and in any case not proved by the obscure passage 2 Sam. xix. 19. On the other hand, it is difficult to imagine that in their fighting with the Aramaeans in the lands east of the Jordan, they would take their troops, horses and chariots (1 Kings, xxii. 35) across the Jordan by
fords, but how they did it we are not told (with floats?). If necessary it was possible to swim the Jordan (1 Macc., ix. 48) but in view of the strong current it required skill and strength. There were certainly no bridges here since these only began to be built in the Roman period. The ford a little south of the Hule district is specially celebrated; from it a road led via Kasiyrah to Damascus. Whether there was a Roman road here is, according to P. Thomson’s map in Z.D.P.F., xli. (cf. p. 33), uncertain but in the middle ages this ford, called Fidum Jacobi (wrongly from Gen. xxiii. 22), is often mentioned and was of considerable strategic importance during the Crusades. Here Baldwin III was defeated in 1157 by Nur al-Din and in 1178 Baldwin IV built a fort below the crossing, but in the following year it was stormed by Saladin and destroyed. At a later date, a three-arched bridge was built of large blocks of basalt at the site of the ford (cf. pictures in Z.D.P.F., xiii. 74). It is known to have been in existence in 1450 and was probably built not long before. The name “Bridge of Jacob’s daughters”, Djiyar Banu Ya’qub, points to the old Fidum Jacobi but it is remarkable as Jacob did not have a number of daughters (cf. above p. 1050).

One of the most important roads from Damascus to the lands west of the Jordan has probably always been the route via Fidj (or Affik, perhaps Afeik [Aphek] i Kings, xx. 26, 30; cf. xiii. 22) to the south end of the Lake of Galilee, where the Jordan was crossed by a ford where it leaves the lake. A little south of the crossing are the ruins of two stone bridges: Umun al-Kasrj and Djiyar al-Sidd. Nothing is known of their history but one of them is probably the bridge at the south end of the lake which Makkaddas mentions in his description of Tabariyya and of which Ya’qub says that it had over 20 arches. As late as the 19th century we are told by W. de Belderssen that he crossed the Jordan by a bridge here (Robinson, Biblical Researches in Palestine, iii.). Close to the junction of the Yarmuk with the Jordan is a bridge Djiyar al-Mudjami whence roads led to Mekka and to Irbid below the hills of Kar Shamha. Further to the south we again find a bridge Djiyar al-Damiyya but this is now out dry land as the river has dug out a new bed here. It was built in 1266 by the vigorous Muslim ruler Baibars who also had bridges built at several other places (cf. Röhrich, Archäe de l’ Orient latin, II, p. 382; Clermont-Ganneau, in J.A.E., ser. viii., vol. ii. [1887], p. 518). Among the most used is the bridge north of Jericho which leads to W. Nimrin.

In the brief descriptions of the Jordan in the Arab geographers there are a few details of some interest. Makkaddas mentions that the river is unmanageable. Ya’qub, quoting an older authority, says that the Jordan above the Lake of Tiberias was called the “Great” and between the lake and the Dead Sea the “Little Jordan”, which statement however is probably based on a confusion with the Yarmuk (see above). He mentions the sugar plantations watered by the river in al-Qatar (cf. xil. 114). Makkaddas mentions the hot springs near the Lake of Tiberias and of Mudjami where the Yarmuk joins the Jordan. He also gives an account of the remarkable phenomena at the river’s end. The Jordan flows by night and day into the Dead Sea without any outflow, yet the Sea does not increase in winter or decrease in summer. The main road

from Damascus to Egypt goes, according to Ibn Khurdadhbih (E. G. A., vi. 214) and the geographer who follow him, via Fidj to the south end of the Lake of Tiberias and thence by a circuitous route via Tiberias to Baisan. In the 19th century on the other hand, the route lay through a part of ‘Ajlun, as one descended from Baisan into the Jordan valley to Mudjami and thence over the bridge to follow the road to Irbid. In the 20th century, a notherly route begun to come into use by going eastwards from the new capital Safat (see below) crossing the Jordan on the above-mentioned “bridge of Jacob’s daughters” and thence via Nuyan and Kasrut to Damascus. This road remained the usual one and has recently been made more convenient by improving the road leading to and from the bridge.

2. The Jordan province of the Arabs, Djamal al-Urdunn (military district of the Jordan), corresponded to the Talasitina Sekmuna of the older division and included the two Galilees, the valley of the Jordan and the western part of the lands east of the Jordan. Most of the towns in it were taken by Abū ‘Ubayda in 14 (635), the remainder by Khalid and ‘Amr b. al-‘Asi; others name Shahrabid as the conqueror. They were all taken by force of arms except Tabaryya which capitulated under shamefaced conditions and probably on that account was made the capital instead of Skybopoli. The size of the district may be judged from the list of towns given by the historians and geographers as belonging to it: according to Balbuzi: Tabariyya, Baissan, Kadas, Akka, Sür, Safarizia and in the land east of the Jordan Sisaya, Affik, Djaraq, Bait Ras, al-Djawlan and (?) Sawad — according to Ya’qub: Tabariyya, Sür, Akka, Kadas, Baissan and in the land east of the Jordan Fahil, Djaraq and (?) Sawad — according to Inh al-Fakih: Tabariyya, al-Samara (i.e. Nabisus), Baissan, Akka, Kadas, Sür and in the land east of the Jordan Fahil and Djaraq — according to Makkaddas: Tabariyya, Kadas, Sür, Fardhखw, Akka, al-Ladhul, Koub, Baissan and in the land east of the Jordan Ajar’at — according to Ibn ‘Ajlun: Tabariyya, al-Mudjân, al-Samara (Nabisus), Baissan, and at Jericho, Akka, Nijam, Sür and in the land east of the Jordan: Zughr, ‘Ammat (Amatus), Habba (Yabis), Djarad, Atiya (Atala), Sisaya — according to Ya’qub: Tabariyya, Baissan, Safarizia, Sür, Akka and in the land east of the Jordan Bait Ras and Djadur etc. These lists show that the boundaries have not always remained the same.

Regarding the yearly tribute of the province of Urdunn the Arab authors give the following figures (cf. vita qurtis): towards the end of the vihth century 96,000 dinars, under ‘Abdun 97,000, according to Ibn Khurdadhbih and Ibn al-Fakih 350,000, according to Kudma 109,000, according to Ya’qub 100,000, according to Makkaddas 170,000 (cf. Z. D.P. F., vii. 225).

In the Crusading period, the previous divisions were abolished and the members of Saladin’s family constituted various kingdoms (mamlukid) instead. The province of Urdunn is represented mainly by the kingdom of Safat which in addition to the town of that name included the following districts: Marsi, Aliyân, Ladgûn, Djarad, Akka, Sür and Selim, i.e. all towns in the lands west of the Jordan. In Shikh al-Din al-Madshûb, who wrote his al-Maqrî in 1351 and was often copied, we find another division, in which al-Qatr and the lands east of
The smellas have never recognised their competence, denouncing as illegal any judgment based on surf. In Turkey it stood for the conception of the Sultan's own arbitrary power as distinct from 'ada (customary law, q.v.), fitna (civil law) and the shar. Sometimes surf might run counter to the shar, e.g. when the Sultan enslaved Christians, though they were dhimmis and thus "protected", in order to recruit the corps of the Janissaries.

(R. LEVY)

URFP, DJAMAL AL-DIN, of Shiraz, a Persian poet. His personal name is variously given: al-Sajjīdī (Arāfātī), Khwājā Sayyidī Muhammad (Ma’ṣūrī, Ruknī), and Muḥammad Ḥusayn (Mayḥānī). He was known in his younger days as ʾAlī (Mayḥānī, cf. Oude Cat., p. 126). His father's name was Zain al-Din Balawi (?) and his grandfather's name is Khwajaghi al-Din Sayyidī, but the latter was more commonly known as Khwājā al-Ṣāḥib al-Bālī. 'Urifu was born in Shiraz, where his father held a post in a Government Office. According to the author of the Ma’ṣūrī, the poet was that of the vizier of the Dīrāgā (Prefect) of the town. 'Urifu received his early education in the usual kind in Shiraz, and began to compose verses in early youth. His tahallus had reference to the occupation of his father, who had to deal with matters relating to canon law (qanat) and customary law (urf). At the age of twenty he had a severe attack of small-pox, which disfigured him very much. The various tahallus give us only a few glimpses of his poetical career in Persia. He entered into poetical contests with Muhammad Ghairati (for whom see Hafiz Ḥāmeneh)(s), Shirāz, and Badḫūn, iii. 292) and other poets of Shiraz. Awāhī tells us that a few years before 'Urifu left for India, he wrote ghaslā in the same metre and rhyme as those of Fīghtān (d. 922 or 925) and other famous poets. His extreme self-conceit and arrogance brought him into serious conflict with his contemporaries, especially with Wāhījī of Yazd (d. 953), and caused much unpleasantness. The mortification caused to him by his own discomfiture, his conflict with his contemporaries, and the lure of Indian patronage are given among the causes which induced him to leave his own country and emigrate to India.

Leaving the port of Līṭan, he came by the sea-route to Ahmāndnagār in 994 (1585-1586) (Takī Rāhī, Oude Cat., p. 37), perhaps more correctly in 993 (1585), and thence went to Fathpur-Skri, where he arrived about the new year's day (19th Rāhī, i. 993 = March 10/11, 1585). There he attached himself to Fāṣīd, who took him along to Atoock, where Akbar encamped early in Muhammad 994 (Nov. 1585), to control the operations against the Yūsufzai Afghans, in which expedition Fāṣīd himself took part (Abār Nāma, iii. 476). Later, 'Urifu attached himself to Masīh al-Dīn Ḥakim Abu ‘l-ʿAlī, and, on his death in 997

URFP, (A.), defined by Dijurīn (Naʿīrī, ed. Fligel, p. 154), and "Action or belief" in which persons persist with the concurrence of the powers and which their natural dispositions agree to accept (as right). It stands therefore to represent an unwritten custom as opposed to established law, shar' (cf. Miṣwadī, ed. Eimer, p. 5; Bahaʾ al-ʿAlī, ed. Beveridge, f. 1424, line 7; transl., p. 194) though attempts have not been lacking to regard it as one of the qanats (cf. Goldsader, Tahārin, p. 204 sq). It is sometimes held to be equivalent to case law or common law. This may be where civil laws (akhnīs) are based on recognized local customs (urfī) and it is a well-known fact that in many tribal and other communities these are native codes of unwritten laws and traditions by which life is regulated locally. In Southern Palestine these existed as late as the middle of the nineteenth century a fellahī code called khākat baltal, i.e. "the law of Abraham", as distinct from the Muhammadan code (Palestine Exploration Fund, Quarterly Statement, Jan. 1879, p. 38). Amongst the Bedouin of Arabia also these have always existed, as distinct from the ʿirfi of the sharīʿ special judges possessed of the customary lore of their tribe, to whom recourse is had in matters affecting tribal interests (cf. J. v. Barckhardt, Notes on the Bedouins and Wahabis, London 1831, i. 120-122; A. Muzzī, Araḫa ʿAṭmar, Vienna 1908, iii. 209, 377 sq., 346 sq., 365). Frequently ʿurf is simply the decision made in various cases by the sovereign or his agent — not the kāfī — according as the requirements of the state demand or as prejudices dictate. In Persia, since the Safavid period or even before, decisions based upon ʿurf have been made by the Shāh or his governors or by the special court of ʿurf presided over by the Divān-begī. There was however never any rule to decide which cases were to go to the latter court and which to the courts of the shar, though mainly it was offences against the state and against law and order — e.g. rebellion and disloyal conduct, debase the coinage, rioting, theft, highway robbery, and murder — which came before it.
(1898), to Mirzâ 'Abd al-Rahmân Khân Khânân, to whom the Ḥakím had recommended him, and from whom he was already receiving considerable grants of money every year. The Khân Khânân treated him with great kindness and consideration.

Finally, the Emperor (Akbar) took 'Urfit to his own service but he died soon after in Lâshore, at the age of 35 or 36, on the 18th Amurud (August 1591), of dysentery, or, as later writers say, of poison. He was buried in Lâshore, but thirty (lunar) years after his burial his bones were sent by Mîr u ʿAbîd va ʿInshâvî, vizier of the Khânân al-Dawla (father of Sîr u ʿlîshâ Banu), to Najaf, where they were reburied.

'Urfit's contemporaries describe him as a conceited and arrogant person and the fact is borne out by many disparaging remarks which his divân contains about great Persian poets. As a poet, however, he enjoyed great popularity in his time in India, and outside India, though his early death prevented him from developing fully. He was praised as the inventor of a new style of poetry, some of the outstanding features of which were a forcible diction, coinage of new and original expressions, the continuity of topics, freshness and novelty of metaphor and comparison. In the quote below, his chief merit lies in his giving a personal expression to philosophic ideas and lofty ideals but his fame rests mainly on his Ḥâfizān. In the following centuries 'Urfit suffered somewhat in popularity, especially in his own country, where Akbar condemned his excessive use of similes (see Ateh-Nâdâ, Bombay 1877, p. 276), and more recently Rûdâ Khân indicated that his style was not to the taste of that writer's contemporaries (Madīnâr al-Farsâr, ii. 24).

'Urfit published his first divân in 996 (1587-1588), which comprised 26 Ḥâfizān, 700 hâns, and hâns and enâh is containing 700 hâns (*230 of the former and 350 of the latter*); (cf. Oude Cat., p. 259). In 1026 (1617) Sirâjûḏ-Isfahânê edited a Kullâhâ of 'Urfit (14,000 hâns) from the MSS. which the poets had sent from his death-bed to the Khânân Khânân, For Nâṣim Tabrizi's claim to have edited these after 1023 (1617) see Mayhânû, Hâwâsh, p. 102. The Khânân included, besides the poems of the kind comprised in the first divân, some madâkhâns (viz. Madâkhâns al-Akhâr, Farhâd va-Shirvâs, and a Khânân). Apparently Sirâjûḏ's edition had a preface from the pen of Mulla 'Abîd al-Bûkî Nâshâwândî. 'Urfit also has a short prose treatise called Naftûyê. Several commentaries on his Ḥâfizān exist in Persian and Turkish (see Bûbikâr Cotationâ, ii. 198 ed.). His Ḥâfizān has been frequently lithographed in India. An English translation of his Ḥâfizān was published in Calcutta 1887.

URGIÊNÇ. [See KUWAIT.]

URMIYA, a district and town in the Persian province of Ādâbâr-Đâlân.

The name, the Syrias write Urmîyû, the Armenians Ormi, the Arabs Urmiya, the Persians Urtûn, the Turks Urîmi or Únlûn (through a fanciful derivation from Únlû Byzantium, Turkey). The name is of uncertain, non-Iranian origin. Asyr. sources mention a place called Urmiya in the land of Mann in the vicinity of the Lake of Urmiya (cf. Streck, in Z.A., xiv. 140; Belek, Das Reich der Mannû Çav, in Verkhvi. d. Belr. Geisl. f. Anthropol, 1894, and Minoros, Khâshkan etc., in Zap., xxiv. 1617), 179). On the other hand, the name is unknown to the classical geographers and to the Persians and Pahlavi sources (cf. Jackson, op. cit., p. 87). The name is also unknown to Armenian geography of the 9th century (cf. Marquart, Erânîhî); this is in spite of the fact that late Zoroastrian tradition early recorded by the Arabs (cf. Balâshûrî, p. 331; Ibn Khurdâshîhî, p. 119) placed the birthplace of Zarastur at Urmîya.

Geography. The district of Urmîya is bounded on the east by the Lake of Urmîya and in the west by the mountain range which runs north and south and separates Persia from Turkey. In the north it is bounded by the transversal range (Shâh-Bûrîd-Awûtân-daghî) which separates it from Salmas [q.v.]. To the south Urmîya is bounded by the valley of the Garîd, the upper course of which belongs to Úshû (q.v.) and the lower waters the Sûlûz [q.v.]. Urmîya is about 80 miles from N. to S. and 33 from E. to W.

The district of Urmîya consists of plain and mountains. The rivers that water it and which flow from W. to E. are:

1. the Bârândus which unites the waters of the district of Mûgâvûr and then runs through the gorge of Nergî into the plain which it runs E. and then south on the south side. On the right (south) bank the Bârândus receives the Khâshîn which runs through the little Dâsh-tâbâl. The mountains of Mûr separate the eastern Dâsh-tâbâl from the Dâsh-tâbâl. This last district lies in the shape of a horse-shoe on the S.W. shore of the lake (to the north of Sûlûz).

2. the Barâd-e Sar (= Kurd. "Red Stone") runs out of the gorge of Bîkûzî (belonging to Turkey) through the mountainous region of Dâshâh, which belongs to Urmîya and then through the pass of Band into the plain and through the town of Urmîya, whence its other name, Shahr-i Zai, "the river of the town."
3. The Roušā (Ravādā)-čai drains the hilly district of Tārgāvar and before reaching the lake has been used up by irrigation canals.

4. The Nāζlū-čai is made up of a number of streams of which the southern rises in the Turkish district of Detir (where the monastery of Mar-raisio is) and below the village of Arzin runs through the northern part of Tārgāvar (where on the right bank it is joined by the Mawānā); the middle one comes out of the gorge of Bālīs (Turk.) and near the village of Sēro enters the Persian district of Bārīs; the northern stream is that of the district of the Sonā [q. v.] which belongs to Susa. The waters of these three join at a foot of Mount Mānīdār (in Kurdu "set on the head") and from the fort of Isā'īd Khan Shākāk [q. v.] the river formed by their union flows through the northern part of the plain. On the north of its left bank on the slope of the Awhgam-daghī is the district of Amād.

The lake of Urmīa lies at a height of 4,245 feet above sea-level, the town of Urmīa 4,390 feet; the heights of the outer spurs are: 4,780, 7,520, 8,395, and that of the frontier range is 11,120, 11,542, 11,830 feet.

The abundant supply-water renders the alluvial plain of Urmīa extremely fertile. The villages are buried in verdure. In the mountain districts the agriculture is dependent on the rains. The natural conditions there are very favourable for the breeding of sheep.

Archaeology. Several tells in the vicinity of the town (Gūk-tāpā, Dega, Taramān, Almāzān, Sarāzan, Dinā-tāpā) have already produced objects of great antiquity (cf. Virchow, Fundstücke und Grabhügel bei Urmiya, in Zeitschr. f. Ethnologie, xxvi., 1900, p. 609—612; Jackson, op. cit., p. 90—98; Lehmann-Haupt, Armeenien, i. 276). In 1888 in a vaulted chamber discovered at Gūk-tāpā at a depth of 25 feet was found a cylindrical seal representing the Babylonian god. W. H. Ward, Amer. Journ. of Archæology, vi., 1890, p. 280—291 and Lehmann-Haupt, Materialien z. Alter. Gesch. Armenien, 1907, p. 8—12, date it c. 2000 b. c. If Urmīya is the ancient Urmiata it must have been included in the land of the Mannaces (Mmin. of Jeremiah, ili. 27), exposed to the invasions of the Assyrians as well as to the influence of the kingdom of Wan (Urasu); cf. the rock chambers at Nergi and Ka'ā Isā'īl-khan which have a Vānic character; cf. Minoros, in Zap. xxiv., p. 188—191. There seems to be a third chamber on Mount Kotul at Brèlsdyot.

The Assonism of the two names of which it was supposed to be an origin had the identity of Urmīya with the Gāzipādā; where stood the great fire-temple and which was burned by Harecius in 625. But it is strange to find thevāsmans on the road which Khrusav Fotwiz took to go to Dastgerd (cf. Ritter's remarks, Frāz. bndi, ix. 944). According to the text of Theophanes, restored by de Boor, i. 358, ii. 190, 619, thevāsmans was situated to the east iv. of Avarzādī, evidently with reference to Gāzipādā. Since Rawlinson, the latter place has been located at Taht-i-Sulaimān (cf. 4952). De Brébisson connects thevāsmans with Betharram, Bethrāisā, and Berma mentioned by several classical authors.

Islam period. Urmīya was conquered by Sādaqa b. 'Ali, a client of the 'Azd, who built several castles there (Balāḏūrī, p. 331—332); according to another story, the town was taken by 'Uṯa b. Farajād whom the caliph 'Omar had sent in 290 (640) to conquer the district of Mawṣil.

The geographers of the ninth century (Iṣākhī, p. 181; Ibn Hawqal, p. 239) give Urmīya the third place among the towns of Adharbājān (next to Ardabil and Marāgha) and emphasize its wealth in water, pastures and fruits. Muḳaddasi, p. 51, puts Urmīya in Armenia and says it is governed from Dvin. At this period Urmīya was on the great road Ardabil—Marāgha—Urmīya—Barkīt (to the N. E. of the lake of Wan)—Āmid (Muḳaddasi, p. 303). As Tābrīz [q. v.] was not yet of any importance, the road made a detour to the south to serve the principal towns. It is possible that the presence of unattached elements in the north of Adharbājān (cf. the name of the lake Buḥairat al-Shirāt and the history of Rābak) also influenced this deviation of the road towards the south.

The district of Urmīya, being inhabited by Kurds and Christians has never played a great part in Muslim history. It was a remote fief in which the off-shoots of the dynasties that reigned in Adharbājān lived in isolation.

In the period of Dailamite domination in Adharbājān we find in Urmīya a certain Dījāstan b. Sharmāzan. This general had begun in 542 (1953) as a devoted partisan of the Kur Daisans [cf. kur]. Later on, with the Dailamites, he became governor of Armenia under Marzubān. When Dījāstan succeeded his father Marzubān in 546, Dījāstan b. Sharmāzan did not recognize his sovereignty. At first he left Urmīya to throw in his lot with Irāhīm b. Marzubān for whom he conquered Marāgha. He later left him to return to Urmīya which he surrounded with walls; he also built a strong fortress there. He then entered the service of the claimant to the caliphate Mūsā b. 'Uṯān and had the support of the Khāḏān Khurd. But the sons of Marzubān (Dījāstan and Irāhīm) defeated him with the help of the Khāḏān Khurd. In 549 at the instigation of Wāḥsūn, brother of Marzubān, he inflicted a defeat on Irāhīm b. Marzubān, captured the remnants of his army and annexed Marāgha to Urmīya. In 555 through the mediation of the Būyid Rūkn al-Dawla, he again recognized the authority of Irāhīm (Ibn Miskawayh, Taḏkārāt, ed. Amèdès, ii. 150, 167, 177—178, 180, 219, 229 and Ibn al-Athir, viii. 395).

When the Ghūz invaded Adharbājān in 420—432, the lord of Urmīya was a certain Abu l-'Iḥšūd b. Rabīb al-Dawla, chief of the Ḥāḏābī Khurs, whose mother was the sister of the prince of Tabrīz, Wāḥsūn al-Rawwādī [cf. tarkā and marāgha]. This son of Rabīb al-Dawla boasted of having destroyed near a bridge 25,000 Ghūz of the 36,000 who were trying to cross his territory (iv. 413?); cf. Ibn al-Athir, i. 271.

In Muḥarrar of 455 (1063) Sulṭān Tughrīl passed through Urmīya (al-Bundārī, p. 35). When Sulṭān Muṣʿūd returned from Baghdad to Adharbājān (in 5267), the amīr Ḥāḏīq Tātar had fortified himself in Urmīya but later he submitted to the Sulṭān (ibid., p. 105). In 544 (1149) Urmīya belonged to Malik Muhammad b. Malīkābīd b. Muhammad, nephew and son-in-law of Sulṭān Muṣʿūd b. Muhammad b. Malikābīd (Rāḥīṣ at-ṣudārāt, G. M. S., p. 244). When the last Sulṭān Tughrīl quarrelled with his uncle, the Ildegrids Ẓīrlī Ārānī, Tughrīl had the support of the amīr Ḥasan b. Ḥāḏīq and with him laid siege to
Urmia in 585. The town was taken by storm, sacked and destroyed (Bundârî, p. 302). From the same Saldâk period must date the building of Se-Gumbadîn, on which Khanyovk reaped the name of Allah Mânsûr b. Mâwâ and the date 580 (1184).

In 602, the Atabeg of Tabriz Abî Bakr gave Ushnâ (-cancel for Ustawa) and Urmia to the Atabeg of Marâğa [q.v.] "Abâ Îl-Dîn to recompense him for the loss of Marâğa (Ibn al-Athîr, xii. 257). Yâkût, who visited Urmia in 617 speaks of it as having lost its security on account of the weakness of its ruler, the Ilkhanid Ozbek b. Fâhâwân.

During the rule of Aqâhârâddîn of the Khârizmshah, Djalîl al-Dîn, Urmia, Salâmâ and Kâbû formed the personal appanage of the Saldâk princes whom Djalîl al-Dîn had carried off from her first husband the Ilkhanid Ozbek. In 623 the Iwâlî Türkomans seized Urmia and levied xâshâyî. On the complaint of the princess his wife, Djalîl al-Dîn sent troops who defeated the Türkomans (Ibn al-Athîr, xii. 301). Later Urmia was given to Boghöh, a former slave of the Ilkhanid Ozbek; cf. Nasawi, ed. Houdas, p. 118, 153, 165.

On the other hand, according to Djewwantsî, u. 160, 184, the Georgian generals Shalwa and Iwane, taken prisoners in the battle of Kârhi (622=1225) and at first treated with honour by Djalîl al-Dîn, were given for a short time Marnad, Salmas, Urmia and Ushnâ. In 628 (1230-1231) the Khârizmshah had a press of the Mongols spent the winter in the region of Urmia-Ushnâ (cf. Abu'l-Farâdî, ed. Focucce, p. 470; Raashî al-Dîn, ed. Blochet, p. 33). His stay there may explain the story of the building by the Khârizmshah of the Se-Gumbadîn (cf. above) and even of his burial at Urmia; cf. Rittner, p. 75; Hörnle, p. 488.

According to Khanyovk, the cathedral mosque of Urmia bears the date 676 (1277) [reign of the Ilkhan Khân Abâghâ].

Timmûr. According to the local chronicle (Nikîkâne), Timmûr had given Urmia as a seif to Gurgin-leg of the Ahsârî tribe, who established himself in the fortress of Torpakh (= Toprak-Kâlı), a quarter of a farsakh from the town of Urmia. The Zafar-nâmê, however, (i. 424), mentions as governor a certain Timru (?) whose rights were confirmed by Timmûr in 789 (1307).

The Brâdâsî. According to the ʿAlâm-ārî, p. 559, in the time of Shah Tahmâsp the great amirs were governors at Urmia while the Kûr Kûr Tâdî of the Brâdâsî tribe who had been made abâhâr was given the districts of Târgâvar and Mârgâvar. In 1012 (1603) Shah Abâhâ, to reward the loyalty of Amîr-Khân Brâdâsî, who had not submitted to the Ottomans, gave him Urmia and Ushnâ. But Amîr-Khân under the pretext that the fortress of Urmia was dilapidated made his stronghold at Dîmidîn (to the south of Urmia at the mouth of the river Kâmilîn in the Bârândûs) and became suspected. Dîmidîn was taken in 1019 (1610) and the district (âlîq) of Urmia given to Kâhân-Khân Bâqâdbâlî. The Brâdâsî, by a stratagem, recaptured Dîmidîn after which Bâqâdbâlî. Pommak (of Tabriz) was appointed in place of Kâhân-Khân and later Aqa-Khân Mîyâkshâm (of Marâğa). In the list of the great dignitaries of the kingdom, however, the same source (p. 762) mentions as governor of Urmia Kallû-ʿAlî Sultanî, son of Kâmil-Khân of the Ilmân clan of the Ahsârî tribe.

Conversions to the Shi'a (cf. above) under the Saljuqids seemed to have been of an isolated character among the natives of the region of Urmia where to this day the Kurds and a few villages (Below) are still Sunnite. The influence of the Sunnite Nâshîbânî šâhîs may be judged from the fact that in 1630 Sultan Murad executed in Dîyârî-bakr the šâhî Mâhkâm of Urmia who had 30,000.40,000 partisans. His ancestors were also šâhîs of Urmia; cf. v. Hammer, G. O. K., ill. 187; cf. Xâshâyî-nâmê, p. 385.

Ewîliyê Celiêbi. For the years 1065 (1653) we have the very detailed account of Ewîliyê Celiêbi (tr. 271-318) who had gone from Van to Urmia to recover the flocks of sheep which the Khân of Urmia (whose name is not mentioned) and 20 other Khâns had carried off from the Khân tribe of Tû-yânî. Unfortunately Ewîliyê's itinerary and story are very confused.

According to him, the founder of the fortress was Ghanâz in 694 (1295); it was enlarged by Shah Tahmâsp in 930 (1532). At the Turkish conquest in the reign of Sultan Sulaimân Urmia was fortified by the Fâhâs Sulaimân and Dîyârî-bakr. The usual name of the fortress is Toprak-Kâlı, but the Persian (?) historians call it Surtîyâ-Ghanâz. The fortress the walls of which were covered with plaster looked like a white swan, its circumference was 10,000 paces, the walls were 70 zabir high and 30 zabir wide; the ditch was 80 zabir wide and 15,000 paces round. During the night the walls were lit by torches. The garrison consisted of 4,000 men and 310 (!) guns. The Khân had at his disposal 15,000 soldiers and 20,000 mukûr.

The town was a gunshot from the fortress. It had 60 quartermaster's houses and 8 cathedral mosques, among which was that of Umm Hatun, which was finished under his son Sultan Yaʿâmî. In the plain of Urmia (âlîq) there were 150 villages with 300,000 peasants.

Ewîliyê Celiêbi says the town was exceedingly prosperous and gives a list of its sanctuaries (Hâzûr Keğha Sulâtqân), its medresas, schools, coffee houses, etc. (nîkâh-i šâhî Xâshâyîân). The Afâhir. In the xviiith century the fate of Urmia was closely bound up with the fortunes of the Afâhir settled in the plain (cf. above). Their chief bore the title hâshâyî. The best known among them are (Nikîkâne):

Khândâdâlî Beg Kâmilî 1113-1134 (1707-1722)
Fath-ʿAlî Khan Arêhî 1157-1172 (1744-1758)
Kâmil Kâlî Khan 1132-1158 (1707-1722)
Imâm Kâlî Khan 1186-1197 (1772-1783)
Mujammâd Kâlî Khan 1198-1211 (1784-1796)
Husain Kâlî Khan Kâmilî 1211-1236 (1796-1821)
Nâdir Kâlî Khan 1236-1252 (1820-1865) [cf. Fraser, i. 56].

These chiefs were continually fighting with their neighbours (in the north, the Dumbâli of Khol, in the south, the Zarrî and Makrit Kurds) in troubled times, so frequent in the xviiith-century, they even led expeditions to the east of the Lake of Urmia.

During the campaign of 1724, the Ottomans employed the Hekîkî Kurds to ward off the Afâhir who were threatening the provision- ment of the army. When in 1725, the Turks organized the administration of the country, the Khânate of Urmia was recognized as hereditary in the family of Kâmilî (Afâhir). In 1729 Nâdir recaptured from the Turks Marâğa, Saʿdîj-bulâk
and Dumlup (cf. *Histoire de Nadir*, transl. Jones, p. 104), but in 1731 the Hekim-oghlu Pasha 'Ali and Rustam seized Urmia after a desperate resistance — which lasted a month. Urmia was entrusted to the Hekim chief Binasingh (cf. v. Hammer, iv. 225, 228, 279). It was only by the treaty of 1736 that the Turks were put out of Adharbajdjan.

Azad Khan. After the disappearance of the Naderid Iskand-Shah (in 1161 = 1748), one of his generals, Azad Khan, a descendant of an Afghan chief, retired first of all to Shahzur and then taking advantage of the troubles among the Afshar, seized Urmia where he was favourably received by Fath 'Ali Khan. Urmia became the capital of the ephemeral principality of Azad. The mountain name Aqwghani-dagh to the north of Urmia seems to preserve the memory of Afghan rule.

The Kadjars. In 1769, Muhammad Hasan Khan Kadjar having defeated Azad in Gilan, seized Urmia. Fath 'Ali Khan Afshar joined Muhammad Hasan. On the latter's death Fath 'Ali Khan reappeared on the scene and from Urmia captured Maragha and Tabriz. In the winter of 1173 (1759) he was besieged in the latter town by Karim Khan Zand and in the following year, after the battle of Karaj-Misran (near Miykun), Adharbajdjan passed into the power of Karim Khan. Urmia was taken after a siege of seven months. Fath 'Ali went into Kish as a result of Kalin Khan Kadjar's battle with the Shahag [q.v.]. In 1179, the Dambulla of Khoi formed a coalition against the Kadjars but had no success. Fath 'Ali Shah had Muhammad Kuli Khan put to death but married the sister of Hassain Kuli Khan Afshar (Fraser, i. 59), whose sons were the first governors of Urmia to be appointed by the central government in Tiberias.

In 1828 in the course of the Russo-Persian war, Urmia was occupied for several months by Russian troops. In the absence of the governor (the prince Malik Kásim Mirza), the town was ruled by the beylerbeyi Nadjaf-Kuli Khan Afshar (cf. Gangelov, op. cit.).

Ubadullah. In 1880 the Shahik 'Ubadullah of Shandian [q.v.] invaded Adharbajdjan. Urmia was besieged by the Kurds and was about to surrender when the arrival of the Khán of Mâki [q.v.] saved it.

Turkish occupation. In August 1906, after the reverses suffered by Russia in the Far East, Turkey, under the pretext that the Turco-Persian frontier had never been settled, occupied the district of Urmia except the enclaves of the town (cf. Nicolas, op. cit.). The Turkish troops were recalled at the beginning of the Balkan war. After the incidents at Tahir [q.v.] in Dec. 1911, Urmia was occupied by Russian troops. During the world war Urmia changed hands several times. As early as Oct. 9—12, 1914, it suffered the first attack from Turks and Kurds. The town was vacated by the Russians on Jan. 2, 1915, occupied by the Turks from Jan. 4—May 20 and retaken by the Russians on May 24. As a result of the break up of the Russian army in 1917, the actual authority in the town passed into the hands of the council of "Assyrian" Christians (mutassar). After a series of traumatic and bloody events (massacre of the Muslims of Urmia by the Christians on Feb. 22, 1918, the assassination of the patriarch Mâr Shimun by followers of the Kurd chief Simko on Feb. 25, the arrival of 20,000 Armenian refugees from War, the flight of the Assyrians and Turks), all the Assyrian population collected in the plain of Urmia and to the number of 50 to 70,000 set out for the south to put themselves under British protection (end of July — beginning of August). This exodus with women, children and cattle took place via Sa'in-Kal'a and Hamadân in the midst of fighting with Turkish troops and the Kurds. The refugees were settled at Ba'ashina to the north of Baghâd (cf. Rockwell, Canjole, Wigram, Shklovski, pp. 24). After the departure of the "Assyrians", the Catholic Bishop Mgr. Sonntag and the Baptist missionary H. Pfauem were killed at Urmia on Aug. 1, 1918.

The peace found Urmia in ruins and depopulated. Only gradually was the central government able to reassert its authority in the West of the Lake of Urmia.

Population. We have given above the figure, probably exaggerated, given by Ewliya Celebi (in 1655). At the beginning of the sixteenth century there were at Urmia 6—7,000 households of which 100 were Christian, 500 Jewish and the remainder Shī'ī Muslims (Persian memoir published by Bittner). According to Fraser (1821), there were 20,000 inhabitants at Urmia. According to Hörnle (1835), the population consisted of 75 500 families of whom the majority were Sunnis (?), 300 Jews and 100 Nestorians. In 1872 Arsimis reckoned 8,000 houses with 40,000 inhabitants. In 1900 (Maximović) the total population of the province was put at 300,000 among whom the Christians numbered 45% of whom 40,000 were Nestorians, 30,000 Orthodox, 5,000 Catholics and 30,000 Protestants, and 30,000 (?) Armenians. The town had 3,500 houses. During the world war Dr. Canjole reckoned 30,000 inhabitants at Urmia, of whom a quarter were Assyrians, and 1,000 Jews occupied a special quarter. Nikitine (Ethnographie, 1926, p. 25) enumerates 37 villages in the plain of Urmia, inhabited by the Christians only and 59 with a mixed population.

We do not know at what period the Aramean Christians ("Syrians") who since the war have called themselves "Assyrians" appeared in Urmia. The town is not given in the oldest lists of the eastern dioceses (Guilin, in Z. D. M. G., 1889 and Chabot, Synodicon Orientalis), Assemani, ii. 449 and 455; notes the presence of Nestorian bishops at Urmia in 1111 and 1289. According to the same author, the Nestorian patriarch settled at Urmia in 1582 (ibid., ii/iv. 621). In a document of 1653 the Chaldaean (Uniate) patriarch Simon (writing to Rome from Kososova in Salmas) gives a list of his congregations in Salmas, Arma (?), Saphrans (?), Targosvar, Urmia, Anzal (district N. E. of Urmia), Sulbat, Ashnogha (Ushnâ), (cf. ibid., iii/iv. 622 and Perkins, Residence, p. 95). Nöldeke, Grammatik des assyrischen Sprachen aus Urmia-Suc und in Kordistan, Leipzig 1868, p. xxiii, and Hoffmann, Auszüge, p. 204.

The first American missionaries of the "Mission of the Nestorians" (Perkins, A. Grant) settled at Urmia in 1835. The Lazarists followed them in 1840 and a Catholic bishop was appointed to Urmia. In 1859 the Americans organised an evangelical community in Urmia. Towards the end of the century, Anglican missionaries were sent to Urmia by the Archbishop of Canterbury. In 1900, an important Russian Orthodox mission began its
activity among the Christians; it was dissolved however by the Perso-Soviet treaty of Feb. 28, 1921.

Barthold, 1910, fol. 34b, Arman—Urmia, a large, prosperous and agreeable town; Kazemi, p. 104; Yi§it, l. 219, 513; Handbuch der neuen Länder, p. 80, 85, 241; [Hadjji] Jalil, Ehem.-ruhm., p. 385 and the map of the town from the survey and map of the lake. On a manuscript list of the villages of Urmia, "Urmia-i KIamisleri wa-Ayni-i Wilaya-yi Urmia-i, ne kurn, Das Sammlung ... welche die Kaiserl. Akademie im Jahr 1828 von Herrn v. Chasayno erhoben hat;" St.-Petersburg 1865, p. 32, NN. 113; M. Bittner, Der Kurdengau in Schlesien und die Stadt Urmia im, in Stiirnegg, Ahad, Wien, phil.hist. Classe, cxxxii/l3, 1896, p. 1–97 (text and translation of a Persian memoir completed at the beginning of the 19th century with historical and geographical commentary); San' al-Dawla, Mir al-Buldan, l. 1924, s.v. Urmia; Nikitin (former Russian consul at Urmia), Les Affaires d'Urmia, in J.A., January–March 1929, p. 67–123; résumé of a Persian memoir prepared in 1917 (perhaps from the Takhiriz Urmiai of which a MS. was in the possession of the notable of Urmia Madsa al-Salama in 1910).

The Lake of Urmia. The lake is about 90 miles long (N.–S.) and 35 broad (E.–W.). Its area is 2,230 sq. miles and the area drained by its tributaries is 20,265 sq. miles.

The most important rivers flowing into the Lake are: in the east, the Adjai "bitter river", which wades Sarab and Talbit; the Sefai and Mardu-kai which flow from the S.W. face of Mount Sahand [cf. MAHRABA]; in the south, Djaghajt, Tatskak and Sarghl-Bakl [s.v.], to the south-west, the Gadir [cf. sardun and uvash]; in the west, the
The name Shahi (Shahi) although only found late, is connected with the old fortresses which stood on the peninsula to the N.E. of the lake. The fortress of Shahi is known to Tabari, iii. 1172 and 1379 (under 200 = 815). It is mentioned in the time of the Khwarizmshah Djalal al-Din (Nasawi, p. 157). It was at Shahi that the first Mongol

Ilghásu Hülägü and Aliaks were buried (cf. Rashid al-Din, ed. Quatremère, p. 416; Hâfiz Abîrî quoted in Le Strange, op. cit., p. 151; d’Ohsson, Histoire des Mongols, iv. 340). Abu l-Fadhîl calls the Lake Buhurait Tâlî. It is not clear if Tâlî = Shahî. The Persian translation of Ispâhîrî (cf. de Goeje in Ibn Hâwîlî, p. 267, note 27) seems to distinguish between the two names, and the fortress of Tâlî mentioned by Nasawi, p. 153—154 (cf. Yâkîî, iii. 541) who takes Tâlî to be a Persian word would seem rather to be connected with the west bank. In this case, it should be sought at Guvercin-Kâla on a cliff which rises above the lake on the Salmâs shore; cf. Ker Porter, Travels, ii. 593; Khanykov, in Poyestski, Primstices Géogr. Obyaz., 1852, vi. (Khanykov found at Guvercin-Kâla the inscription of a certain Abu Nâsîr [al-Nâsîr?] Hüsîn Bâkdûr Khân [should this Hüsîn be Umm Hasan, whose title was exactly Abu l-Nâsîr] and Lehmann-Haupt, Armenien, 1. 306—314.)

On the other hand, it remains to be seen whether Guvercin-Kâla is not identical with the stronghold of Yâkîî (or Bakdûr) which Tabari mentions along with Shahi and which in turn may correspond to the mountain of Bakîrî (which may be read Bakdûr; cf. Bundakîh, xii. 2 and 20) where Afsârîyâr (Fraârîyân) took refuge. In the Avesta, Yâstî v. 49; ix. 18, Khazar slays him "behind Lake Caecastas", which seems to indicate the region west of the Lake. [The latter tradition puts the place of Afsârîyâr's death in Artânî; cf. Shahî-nâmâ and especially Nasawi, Sîrat Djalâl al-Dîn, p. 325; transl. p. 375.]

The Arab geographers know that the salt waters of the Lake will not support organic life. According to Tabari, iii. 1380, the Lake does not contain fish or anything of value. Ispâhîrî (p. 189) and Khanykov (in Kazwînî, p. 194) alone affirm the contrary. The first talks of the "fish-animal" called "water-dog"; Khanykov delights in wonderful stories, which are later repeated by Ewrîlî Câelîsh.

URALYA — URS

(V. MINORSKY)

URALYA, a district in ABAKH BAIAN." According to Baladzhi, p. 328, Sar'd b. Al'i, sent to conquer ABAKH BAIAN, attacked the people of MUKUN and GIIL. A number of inhabitants of ABAKH BAIAN and Armenians who had gathered in the niziy of URM and at SHIRAZ were defeated by one of Sar'd's captains. The leader of the rebels was hanged on the walls of the fortress of BAJjarwan (Voskhod, 1811). Bajjarwan was a farangh of nookh of ABAKH BAIAN.

Ilm Khudairedib, p. 110, mentions the citadel of URM between al-Bajjar (a town of Bulak's on a river which flows into the Araxes above the river of ABAKH BAIAN) and BALONKIRAN. Ilm al-Fakih, p. 216, speaks of several districts (ra'sat) of URM. YELU, i. 216, mentions the region (muf) of URM but gives only an abridgment of Baladzhi's. The names mentioned by Baladzhi and by Ilm Khudaredib suggest a district in the N.E. of ABAKH BAIAN, perhaps in the KARAJA-dagh of the present day (the capital of which is in ABAKH and in the northern districts of which we find Armenians). (On the other hand, the element *Balavan* can be connected with the name of the river *BULHAN* (Bolguni) in MUKUN; q.v.).

(U. MIMORSKY)

"URS, URSU (A., Pl. d'ursu and 'ursahi), originally the leading of the bride to her bridgroom, and also the wedding feast simply; whence a denominative verb, 'urs 'to celebrate a marriage'. 'Ursu means both bridegroom and bride in modern linguistic usage. This term has however been supplanted by 'aritbridgroom' and 'ursu bride' (as early as the 1200s, cf. Doro, Suppliment). Two kinds of weddings have been to distinguished: 'urs is the wedding performed in the tribe or the house of the man, and 'ursu is the wedding performed in the house or tribe of the woman (this distinction is already made by Ibn al-Arabi [d. 351=845] in the Li'nah al-Arab, vi, 283; cf. Farsabadi, *alMa's, s.v. 'ursu and 'arit). The two forms agree for the most part in practice; they only differ in the choice of place for the main ceremonies and in the fact that in the 'ursu the affa of the bride is omitted.

"We learn little from the poem" says G. Jacob of the wedding customs of the pre-Muhalla in Arabs. They seem to have been very simple in the Arabian Peninsula itself, as is still the case among the Beduins (cf. below). The pomp and display of later centuries, especially in the bridal procession, was probably unknown. The wedding lasted a week, whence it is also called wadi (cf. Aghani, xii. 145). The bride is adorned, perfumed and painted with azah. There is an old proverb which says: "The scent behind the bridgroom cannot be concealed" (Noldake, Diction., p. 48; Maldant, Preverb. ed. Freytag, xxiii. 260). The bridgroom is called the "conducted one" (cf. 'Antara, xxvii. 1). She was therefore conducted to the bridgroom, usually by a number of women without any escort, but very quietly and simply. This is at least is indicated by the story of 'Ukati b. Ullaha who betrothed his daughter to the caliph YASIR III; he made it a condition that the caliph's people should not come for his daughter but that she should bring her himself on a camel. (Aghani, xi. 90). Sometimes she was brought in a litter (mudhaf) (cf. Djawhari, Shidah, s.v. sif-sif), as is still the case in Mecca (Snoock, Hurgenolje, Mecca, ii. 182). A special tent was always put up for the young couple. About the bridgroom there is an old proverb: "The bridgroom wants little to be an amir (or king)" (Djawhari, Shidah, s.v sif-sif; Maldant, Preverb., xii. 143).

In the lands adjoining Arabia on the other hand, weddings were celebrated with great splendour. Thus we are told (Aziz al-Aghani, xx. 23) of a Persian wedding in the *Mish' with a splendid bridal procession; similarly for Syria as early as I. Marz, ix. 37: "and the groom and the bride and the bride's relatives and the guests...with the trum- phal parade and...with parades and parades..." As late as the beginning of the third (nineth) century, we find a simple Beduin moshie surprised at a splendid wedding in North Syria (Aghani, xii. 35 sq.), which shows that Syrian usages were foreign to the Arabs (cf. on the above section: Freytag, Einführ. in das Studium der arab. Sprache, Bonn 1861, p. 309—324; Wellhausen, Die Reihe der Arabern, in V.G.W. Gsell, 1895, p. 441 sq.; Jacob, Arab. Recht, Berlin 1897, p. 57—58).

The records in Tafsir are as in the whole in keeping with the simple usages of the Arab pagan period. *Al* was at her wedding with the Prophet a robe of red striped material which came from Bahrain (cf. Hudaib, b.b 24), Fatiha's wedding with *Ali, Al* and UMM SALAMA made the preparations at home; they scattered soft dust from the *Bath* over the ground and filled two cushions with straw (laf) and tossed it out. They laid out dates and figs to sat and sweet-tasting water to drink; they also put up at one side of the room a stand for the clothes and the water-skin (Hudaib, b.b 24). Fatiha's trousseau consisted of a silk robe with fringes (lafmi), a water-skin (birkha) and a cushion filled with rushes (shider) (Naas, b.b 81). In another tradition the Prophet allows considerable expenditure on large carpets with fringes (lafmi) (Naas, b.b 83). From numerous traditions (Hudaib, b.b 58, 64; Tafsir, Sura xxiii., b.b 8). ABDUL MADJ, B. Hudaib, b.b 21, 24; Naas, b.b 37, b.b 18, 77; ALI, b.b 58). Tradition gives no further details of the toilet; but the men seem also to have been perfumed; a perfume was used which left yellow stains (ililul, *ufra* or *ufara*), such as the Prophet noticed on "Abd al-Rahman b. AWF still a few days after his wedding (according to Anas b. Makk in Hudaib, b.b 7, 55, 77; Muslim, b.b 70—71; Naas, b.b 84; Muslim, b.b 24; Dzirini, b.b 82; ALI, b.b 22; ALI b. Shahb)."
According to a tradition transmitted by Abu Hurairah, the Prophet uttered the following blessings at weddings: Dārakha 'ilā kūthum (var. laka) wa-dārakha 'ilākūthum (var. 'alaika) kānumāni (var. 'alaika) wa-dārakha 'ilā kūthum (var. 'alaika) kānumāni or instead of the third part: wa-dārakha labba ʃīkā (Ibn Mūdža, Nikāh, bāb 23; Tirmīḏī, Nikāh, bāb 7; Abu Dā'ūd, Nikāh, bāb 35; Ahmad b. Hanbal, l. 381; cf. i. 201; iii. 451; Nasā'i, Nikāh, bāb 73; Tirmīḏī, Nikāh, bāb 6), while he forbade the wish from the period of the Dāliliya bi-'iṣra' ʿam 'in harmonies and with songs! (Nasā'i, Nikāh, bāb 73; Ibn Mūdža, Nikāh, bāb 23; Tirmīḏī, Nikāh, bāb 6; Ahmad b. Hanbal, l. 201; iii. 451).

The bride was conducted to the bridegroom by young girls who sang 'anāhāra; two opening lines of such a ghazal are preserved: Atnāmān a'tn'āmān fa-sha'iyāni na-sha'iyākum *we come to you, we come to you, may (God) give us long life and give you long life* (Ibn Mūdža, Nikāh, bāb 21; cf. also Bukhārī, Nikāh, bāb 64) or aatnāmān a'tn'āmān fa-sha'iyāni na-sha'iyākum *we come to you, we come to you, then greet us, we greet you* (Ahmad b. Hanbal, iv. 78).

The participation of women and children in the wedding ceremonies is approved by the Prophet (Bukhārī, Nikāh, bāb 76; Mas'ūdī al-Anṣārī, bāb 5). On these occasions young girls used to beat tambourines (drum) and sing of the death of the champions of Badr, which the Prophet is definitely said to have permitted (Bukhārī, Nikāh, bāb 49; Māqālī, bāb 12; Ibn Mūdža, Nikāh, bāb 20, 21; Tirmīḏī, Nikāh, bāb 6; Nasā'i, Nikāh, bāb 72, 80; Tayālīsī, l. 1221; Ahmad b. Hanbal, l. 418). Other instruments are mentioned, such as another variety of tambourine (ghirāh, Ibn Mūdža, Nikāh, bāb 20) and the drum ( tabl; Ibn Mūdža, Nikāh, bāb 21). The object of this music was to call public attention to the marriage (Ibn Mūdža, Nikāh, bāb 20; Tirmīḏī, Nikāh, bāb 6; Ahmad b. Hanbal, iv. 5). According to one tradition, the Prophet is even said to have forbidden marriages to be performed in complete quiet (Ahmad b. Hanbal, iv. 78).

A wedding feast (wa'ilima or ja'āma) for the men was part of the wedding (Bukhārī, Nikāh, bāb 69; Ahmad b. Hanbal, v. 359; Zāhid Māmduḥī, l. 949, etc.). A feast is obligatory for the first day (ka'āb) and commendable for the second (maṣ'īf). Tirmīḏī regards it also as maṣ'īf, i.e. done in order that people may hear and see it (Tirmīḏī, Nikāh, bāb 10; Abu Dā'ūd, Af'ima, bāb 5; Dārimī, Af'ima, bāb 28; Ibn Mūdža, Nikāh, bāb 25; Ahmad b. Hanbal, v. 28, 371). Sa'd b. al-Musayyab (according to Dārimī; the Prophet) is said to have accepted the invitation for the first two days, but refused that for the third (Abū Dā'ūd, Af'ima, bāb 5; Dārimī, Af'ima, bāb 28). Bukhārī, in the superposition to Nikāh, bāb 72, speaks of a week's feast and says that the Prophet did not limit it to one or two days. The feast at the Prophet's wedding with Ṣafīya consisted of ḥāsia, a dish of dates, curds (yāfīf) and fat, to which according to some traditions was added meal of roasted barley (nūmaṣ) (according to Anas b. Mālik in Bukhārī, Nikāh, bāb 13, 61, 69; Bukhārī, bāb 111; Dālālā, bāb 73; Af'ima, bāb 8; Muslim, Nikāh, tr. 84, 85, 88; Nasā'i, Nikāh, bāb 79; Ahmad b. Hanbal, iii. 99, 102, 159, 195, 264) according to another tradition, the Prophet used on this occasion another 1/2 mūdī of the best kind of dates (ṣafqān) (according to Dālimā b. Abūl Allāh in Ahmad b. Hanbal, iii. 353). At the Prophet's wedding with Zainab (according to Anas b. Mālik in Muslim, Nikāh, tr. 87, 89, 91, 92; Ahmad b. Hanbal, iii. 98, 103, 172, 196, 200, 263) and at the wedding of Rabī' b. al-ʿAtāmī (Ahmad b. Hanbal, iv. 58) bread and meat were given, which seems to have been usual along with ḥāsia as in some cases it is specially mentioned that there was no bread and meat (Ibn Mūdža, Nikāh, bāb 24; Mālik, Nikāh, bāb 48; Ahmad b. Hanbal, iii. 99, 195, 264; Bukhārī, Nikāh, bāb 13, 61; Nasā'i, Nikāh, bāb 79). In other passages a mūdī of barley is mentioned (Bukhārī, Nikāh, bāb 71; Ahmad b. Hanbal, v. 113); a sheep and mallet (Ahmad b. Hanbal, v. 359); but for the wa'ilima at least a sheep should be slaughtered (according to Anas b. Mālik in Bukhārī, Nikāh, bāb 7, 55, 57, 69, 70; Tirmīḏī, bāb 54; Abu Dā'ūd, bāb 67; Bukhārī, bāb 1; Muslim, Nikāh, tr. 79—84, 90; etc.). Anas b. Mālik also records (that his mother ʿUmm Salāmā sent the Prophet a dish of dates (ḥāsia, see above) on the occasion of a marriage and that the Prophet offered it to his guests in groups of ten until they were satisfied (Muslim, Nikāh, tr. 94, 95; Nasā'i, Nikāh, bāb 84). Sahl b. ʿAbīd records that at the wedding of Abū Asyad al-Sāʿīdī his bride offered the guests after the feast a beverage made by steeping dates (nāfī), which she herself had prepared (Bukhārī, Nikāh, bāb 72, 78, 79; Adhīma, bāb 7, 9). Bukhārī concludes from this that on the one hand non-intoxicating beverages are allowed at weddings and on the other that women may wait on the men at a wedding. As a rule the traditions give no information about the time of the wa'ilima. In the few passages which admit a definite time, the wa'ilima took place after the bride had been taken to the bridegroom's house but before the wedding night (Bukhārī, Tafsīr, Sūra xxiii., bāb 8; Ahmad b. Hanbal, iii. 196 and the other traditions about Zainab's wedding); but the waiver that Ṣafīya's wedding seems to have taken place next day, probably as a result of the special conditions, as the Prophet married her on the return of the expedition to Khaibar (Bukhārī, Bawāy, bāb 111; Dālimā, bāb 73; Muslim, Nikāh, tr. 88; Ahmad b. Hanbal, iii. 195 and the other traditions about this wedding; cf. however one tradition about Zainab's wedding in Ahmad b. Hanbal, iii. 98, 105). An invitation to a wedding feast ought always to be accepted (Muslim, Nikāh, tr. 100, 101; Abū Dā'ūd, Af'ima, bāb 1; Ahmad b. Hanbal, ii. 22). ʿAbd Allāh b. Qomār used never to refuse an invitation even when he was fasting (Bukhārī, Nikāh, bāb 78; Muslim, Nikāh, tr. 105; Dālimā, Af'ima, bāb 40). People of all conditions, rich and poor, should be invited; in one tradition given by Abū Hurairah, we read: "The wedding feast: at which the rich eat and from which the poor are kept away is an evil feast!" (Ahmad b. Hanbal, ii. 494). For further references see Wensinck, Handbuch of Early Muhammadan Tradition, Leyden 1927, s. v. Wa'ilima and the article was published in 1927.

The following two traditions presumably refer to the procedure in the bridal chamber: "If any one of you marry a woman ... she shall take her on her forelock and pray (to God) for blessing (baraka) ... and pray to God for refuge from the accursed Satan" (Mālik, Nikāh, bāb 52) and "If any one of you marry a woman ... he shall say:
O God, I pray Thee for her good and for her good inclinations which Thou hast created, and I seek refuge with Thee from her evil and from her evil inclinations which Thou hast created" (Abū Dāwūd, Nikāb, bāb 44). Umūm Salāma for her wedding night with the Prophet prepared a meal of barley and fat (ṣajida) (Ahmad b. Hanbal, vi. 307).

According to many traditions (Anān b. Mālik, among others), it is a sunna for the young husband to spend seven days and nights with his young wife if she is a virgin (ḥab) and only three days and nights if she is not (ḥayāth); only after this does the regular rotation with the other wives begin (Bukhārī, Nikāb, bāb 101, 102; Abū Dāwūd, Nikāb, bāb 33; Tirmidhī, Nikāb, bāb 40; Māsim, Ṣafī, tr. 45: Zain, Muṣannaf, NA, 737; Iḥnātī, Nikāb, bāb 26; Mālik, Nikāb, bāb 15; on the Prophet's marriage with ʿAisyah (whom Ṣafī calls): Abū Dāwūd, Nikāb, bāb 33; Aḥmad b. Hanbal, ii. 99; on the Prophet's marriage with Umūm Salāma (who Ṣafī calls): Muslim, Ṣafī, tr. 41—44; Iḥnātī, bāb 33; Mālik, Nikāb, bāb 14; Aḥmad b. Hanbal, vi. 202, 295, 307, 313, 320, 321 (this was done by her request; the Prophet had given her the choice between seven and three days)). According to another tradition, the young husband should only stay three days even with a virgin and only two with a bride who is not (Aḥmad b. Hanbal, ii. 178; Tirmidhī, Nikāb, bāb 40).

As to the season of the year, the month of Shawwāl is expressly mentioned in Tradition as the month in which the Prophet celebrated his wedding with ʿAisyah (Nawz), Nikāb, bāb 18, 77; Muslim, Nikāb, tr. 73; etc.).

5. In the Fīh, the Mālikīs pay special attention to wedding customs, since most of them are primarily intended to call public attention to the conclusion of the marriage. According to Mālik b. Anzā as well as Ibn Abī Lailā (cf. Sarakhi, Muhājir, v. 50) in contrast to other schools, making the wedding public (al-ṭāla) is a necessary condition for the validity of a marriage. Witnesses are not essential as an essential for the conclusion of a contract of marriage, although with the Mālikīs it is usual to have them in practice; if the two witnesses were not present at the conclusion of the contract they must be present on the night of the wedding and for example yeal the bridal chamber (Kairawa, Qishā, Cairo 1335, p. 66; Khalīl, i. 1459; Kāsım, Badrū ʿal-Sanāʾ, Cairo 1327, p. 252; Ibn Rūḥā [Avertre], Ḳalayt al-Muḥājir, Cairo 1349, i6 where we already find witnesses mentioned among the essentials). On the same grounds of publicity, Khalīl (ii. 1) also recommends congratulating the bridal pair. The doors of the house should therefore not be closed at the wulmat al-was (Khalīl, i. 117). This wulmat is considered praiseworthy (muṣafakh) among the Mālikīs, Ḥanafīs and Ḥanbalis while the Shāfīʿis hold a stricter view: according to one view, it is sunna muṣafakh; according to the others, it is sunna muṣafakh (cf. Shināzī, p. 205; Ghasālī, ii. 22; Nawwāb, p. 90; Ardaibī, ii. 94). According to Khalīl, it should be held the day after the wedding, according to other Mālikīs, however, before, so that the wedding is only consummated after its public proclamation (Tafsīr, Tawhīf, p. 35). A wealthy man should kill at least a sheep, a poorer man provide as much as his can afford (Shināzī, Ardaibī). To accept an invitation to a wulmat is according to the Ḥanafīs praiseworthy (muṣafakh), among the Mālikīs, Ḥanbalis and Shāfīʿis on the other hand a duty (ṣajīdah), (Nawwāb, vi. 178 says: ṣajīdah). Among the Shāfīʿis it is praiseworthy to accept the invitation for the second day also; on the other hand, it is best to refuse it for the third day (Nawwāb describes acceptance for the third day as muṣraḥ). If the person invited is fasting, he should nevertheless accept the invitation; he need not however eat anything; it is best however if he breaks his fast unless he is pledged to observe it. If an intoxicated man is at the wulmat or wine or anything else forbidden, it is best to stay away; similarly if there are in the room representations of living creatures, even if one tramples on them (e.g. on carpets). According to Shināzī, one should also stay away from the wulmat where songs are sung, even if one does not listen to them and only pays attention to ṣajīdah and eating. Music is on the other hand permitted to some extent — for example that of the tambourine (duff) already mentioned in tradition; Ghasālī gives a list of permitted instruments: another kind of tambourine (ghirsh), an instrument kind of lute (mishār [cf. ṣal] cf. H. G. Farmer, History of Arabian Music, London 1929, p. 46—47), a kind of lute (sumūwār) and horns (ḥūr). The question is much discussed whether one should scatter among the crowd at weddings nuts, almonds, sweets (Ardaibī also mentions dates, dirhams and dinārs). According to Dimāghi (ii. 76), Abū ʿAbd Allāh and Aḥmad b. Hanbal had no objections, while Mālik, Shāfīʿ, and Aḥmad b. Hanbal in a second opinion declare the practice muṣraḥ. The views of the later Shāfīʿis are however divided. Muzani recommends the omission of the practice, as the things would be hurriedly picked up as plunder by the people; it is not however forbidden except when the people fall upon one another and try to take the things from each other. Ghasālī allows the scattering of sweets, since it was done in the time of the Prophet (cf. no reference in the canonical works; cf. above), and Nawwāb and Ardaibī, while regarding it as permitted, consider it better omitted, Shināzī on the other hand declares it muṣraḥ.

Bibliography: cf. the articles Nikāb and Walīma; Shināzī, Ḳ. al-Uṣūl, ʿUṣūl, 1324, ii. 175; Muzani, Muhājir, on the margin of the preceeding, iv. 39—41; Shināzī, Tawhīf, ed. Jaynabboll, Leyden 1879, p. 205 sq.; Ghasālī, Waftī, Cairo 1318, ii. 22; Nawwāb, Muhājir, Cairo 1339, p. 90; Ardaibī, Kitāb al-Anwār li-Amīl al-ʿAbrār, Cairo 1348, ii. 94—96; Khalīl, Muhājir, tr., Trans., Santillana, Milan 1919, i. 65 sqq.; Ibn Rūḥā, Muḥājtīnāt, on the margin of the Muṣawwara al-kabīr, Cairo 1324, ii. 58; Shināzī, Muṣawwara, Cairo 1925, ii. 124; Dimāghi, Ṣalāḥ, al-Uṣūl, on the margin of the preceding, ii. 76; Tornow, Das moslemische Recht, Leipzig 1855, p. 70 sq.; Juyonboll, Handbuch der islamischen Geisteswiss., Leyden 1910, p. 162 sqq. d. Later usages down to the present day. For the older period we are dependent on occasional scattered notes; it is only with the literature of European travellers (from the xth century), with the recording of texts in dialect and the systematic collection of folklore in recent decades (Westernmark for Morocco, Janssen for Nablus etc.) that we have a wealth of material which is almost impossible to deal with. These sources are however not all of equal value. On
the one hand, particularly with the earlier literature, we have first of all to investigate the trustworthiness of the traveller. To take a striking example: The Itinerary of the Syrian pilgrim, Abu al-Aswad, 1281-1282, says (Voyage, Gent 1559, p. 288) that the old that the bridal pair before the marriage contract is signed are put one in each of two adjoining rooms with an eyehole through which they can see each other naked. This is contradictory to Muslim ideas. (Cf. however the fact that some jurists like Da'ud al-’Azhiri permitted the man before marriage to see the whole of the woman's body except the pudenda; Ibn Rashid, Bidaya, ii. 3; Dimishq, Kutub, ii. 62.) On the other hand, there are gaps in the records of the travellers; they only record what is done in the street or more or less publicly. Full accounts of the customs observed, as in Leo Africanus and Lane, are by no means numerous and can be supplemented for the earlier period by scattered references in the Alif Laila wa-Laila and the popular romances.

Wedding customs are more or less distinct according to country. This is most clearly seen on the periphery of the Muslim world, for example in the Malay Archipelago, Central Africa, among the Kirdzhali and Turkomans. Here Islam has taken over old local customs and sometimes adapted them to its point of view. For the original lands of Islam however, the same observation can be made, except that the process was completed in the early centuries of Islam. In modern Syria and Egypt the customs among Muslims and Christians are almost identical except as regards purely ecclesiastical and religious matters (cf. the sketches in Littmann, Neuruhische Volksseept; Jaussen, Contumes Palestiniennes; Blackman, The Fellahin of Upper Egypt, p. 93). This fact shows that we have to deal in this case with old customs of the nearer East, at any rate not with specifically Muslim practices. In this connection we may call attention to the already mentioned pompos pre-Islamic practices in Syria and Mesopotamia. Pre-Islamic origin can in some points be definitely proved. In many districts the Muslim bride wears a crown of flowers or of pasteboard (cf. below); in this I see the adoption of a practice of the Christian east where the crowning of the bride was and still is a part of the wedding ceremony. (This crowning is mentioned as early as a liturgical poem by Ephraim the Syrian in Deminger, Ritu Orientallium, Würzburg 1864, ii. 443; in Barbaraeus, ibid., ii. 385; among the Copts of the sixteenth century, ibid., ii. 395; cf. also ibid., ii. 391 ff., 408 ff., 423 ff.). The carrying of lights in the bridal procession may also be of Christian origin (for the Copts of the sixteenth century, cf. Deminger, op. cit., ii. 364; cf. the carrying of lights in the Mawlid festival and its Christian origin, op. cit., p. 420). The ceremonies on the seventh day have also their parallels in the Christian liturgy of the East; on the seventh day the bridal crown is solemnly removed among the Copts (Deminger, op. cit., ii. 380).

From the point of view of method, it would be more correct to deal with wedding customs by regions. But this would take up too much space here. I shall therefore endeavour to give the most important customs in vogue in towns in the old lands of Islam and as far as possible to treat them historically. It should be noted in this connection that practices differ in different levels of society.

Therefore, three groups have at least to be distinguished: customs in the towns, among the fellahin and among the Beduins. The two last named are essentially simpler and agree more with the Arab practices than do those of the town-dwellers.

Among the Ruwala Beduins (Musil, The Manners and Customs of the Ruwala-Beduins, New York 1928, p. 228 sqq.), a camel is killed on the morning of the wedding before the bridegroom's tent and its flesh distributed. In the course of the day the bride puts up her tent — the woman always brings it with her — and at night she is taken by a few female relations in all secrecy to this tent; soon afterwards the bridegroom enters the tent. There are no ceremonies, no singing or dancing, not even the usual zgâharît cries of the women. On the next morning the bridegroom goes to his relatives while the bride is visited by the women and congratulated; she then receives a gift from her father-in-law and remains for seven days in her tent while the bridegroom goes about his usual business. He must however spend seven nights with his young wife (cf. the traditions quoted). Among other Beduins the Arab tribes (Musil, Arabia Petraea, iii. 196 sqq.) the youths and maidens sing bridal songs and dance.

Here as on the Sinai Peninsula (Burckhardt, Berichten über die Beduinen, Weimar 1831, p. 216–217) the bride runs away into the desert after the first night, sometimes for six days, sometimes even for longer and the husband must go to look for her.

Between these very simple practices of the Beduins and the highly developed rites of the town-dwellers numerous intermediate stages are to be found among the fellâhîn, among whom we can observe the gradual advance of usages from the towns.

Let us now come to the towns. Weddings were celebrated with great pomp at the 'Abbasid court in Baghdad. In the sources, sums of 50 and 70 million dirhams are mentioned as having been expended by the caliphs Harûn al-Rashîd and Ma'mun for their weddings. But the common people also on such occasions liked to appear wealthier than they really were. Even in early times, the wîlduse used to lend ornaments to the bride (cf. the tradition above quoted about 'Âisha). The carpets, utensils etc. were also sometimes borrowed (Mez, Renaissance des Islams, p. 404, 455).

As was mentioned early in the article, two kinds of weddings have to be distinguished: the 'uwa and the 'umrah. The 'uwa seems to be the usual kind; at least it is almost exclusively the one that is described by travellers. We find the 'umrah for example in the case of the wedding of the caliph Ma'mûn with Bûrân (210 = 825; Tabari, Amali, ed. de Goeje, iii. 1081 sqq.); in Ibn al-Mudjâwir (d. 690 = 1291) in Landberg, Études sur les dialectes de l'Arabe meridionale, t.I. 859 for Mecca; Alif Laila wa-Laila, transl. Littmann, I. 265 sqq.; in the Karâgân play "The Wrong Bride" in Ritter, Karagân, Hanover 1924, p. 109 sqq.

Here we may also note that these wedding customs are only observed when a woman marries for the first time. When she marries for the second time they are content with the legal mdâlma. The parties often agree to have no festivities (Snouck Haurong, Melka, li. 155; Lane, Manners and Customs, London 1871, I. 219–220).

The celebrations extend over several days; they...
usually begins on Monday and the actual wedding takes place on Thursday. In Arab popular poetry we therefore have frequent reference to seven days of celebration while the *dhikha* takes place on the eighth (e.g. Alf. Liwa wa-Liwa, ii. 467; iii. 437; Strat. Saff, ii. 22, 33; v. 28; xii. 59). When however we find references to 50 days of feasting and the 34th night as the *būlāt al-dīkhka* (Alf. Liwa wa-Liwa, iii. 642; Strat. Saff, xii. 45; xiii. 12) or when 40 days and nights are mentioned in Turkish romances and fairy tales (Spies, Türkische Volksbücher, Leipzig 1929, p. 25), this is only a stereotyped literary form to express that the wedding celebrations lasted a long time.

The principal usages are as follows:

1. Immediately after the formalities of the marriage contract, the *wutha* takes place in the bride’s house; only men are present at it. This is already found in Ḏaḥīḥ. On this occasion sweets, money and other things are often thrown to the crowd. For example, the visier al-Hāsan b. Sahil at the wedding of his daughter Bīrān al-ʿAbidah al-Maʿmūn (210 = 825) had 1200 silver coins scattered among the leaves on which were inscribed the names of pieces of land, slave-girls and the distinguishing marks of horses. Any one who got one of the tickets received what was written on it. On this occasion, gold and silver coins, little bags of musk and pieces of amber thrown among the populace (Tabari, Annals, ed. de Goeje, iii. 1083 infra; Masʿūdi, Murūjū al-Dhākah, Paris 1873, vii. 405). — At the *wutha* on the occasion of the wedding of the Mamluk Muhammad b. al-Sulṭān (920 = 1514) wise (tabar) was served in vessels of Chinese porcelain (Ibn Ṣāfī, iv. 406). In general however, the *wutha* consisted simply in offering of sweets and other dainties (cf. Alf. Liwa wa-Liwa, ii. 23-24); sometimes however, roast meat and vegetables etc. were also served. Music and dancing are not usual on this day. In Nahla (Syria), according to Jaussen, there is only a meal for the women, while in Fāṣa a feast is held in the house of both bride and bridgegroom (Leo Africanus [1526], Tharaud [1930]). The real wedding ceremonies do not usually begin until a week later.

2. The bride’s bath. A few days before the wedding the bride goes to the bath with her friends; rich people perform this ceremony in their own house; usually however, a public bath is hired for a whole or half day. In Cairo in Lane’s time, they went with great pomp to the bath (ṣafat al-ḥammām). In front walked two men carrying dishes on which lay the bath requisites covered; then came water-carriers and men with rose water and censers to sprinkle the passers-by and offer them beverages. Then came musicians with oboes and drums and the bride’s friends two by two. The bride herself thickly veiled with a crown on her head walked between two female relatives under a canopy carried by four men; musicians brought up the rear of the procession. In the bath itself there were all kinds of diversions and feasting while women-singers sang songs. In the evening in the house there was a banquet for the women at which women-singers sang to pass the time. In modern Fāṣ, the bride is taken to the bath and led home dressed like a doll with shams of joy (Tharaud [1930]). In xivth century Morocco the bride’s bath before the wedding was unknown (Leo Africanus) while in Algiers in the same period, according to Hašīd, the bridal bath was usual. It is also unknown in Mecca. In Syria and Asia Minor they go very quietly to the baths while Colonna in the end of the xvth century in Syria saw a solemn procession with wax candles.

In the bath itself numerous ceremonies and diversions take place. In Nahla (Jaussen [1927]) the bride is put on a throne in the bath while her friends sing and dance around her with lights in their hands. They then all bathe, the bride last. After the bath the bride is sprinkled with perfume and refreshing are taken. She is then taken home very quietly and thickly veiled. For Constantinople, White (c. 1840) also reports that the bride sits on a throne while dramatic presentations are given and refreshments are offered. Then, just as in Persia (Polak [c. 1860]) and Tunis (Berthelot [c. 1900]), the hezma ceremony which in other lands does not take place till next day. The fingers-nails (in Persia also the hair) are dyed with henna. The guests theretofore distribute money to the bath attendants. This is called the ‘hezma gift’.

3. The adoration of the bride. This day is often called after the principal ceremony. *Sulūt-al-bawār* or *hezma gūzīrī* (e.g. in Mecca, Egypt, Tunis and in Turkey). In the present day, while the female relations and friends of the wife’s eyelids are blackened with *ṣaḥī* and the hands and feet coloured with hezma. In doing this the hands and feet must be coloured exactly the same and no pictorial representations put on them (cf. Atı Bakr Almād b. Muḥammad al-Mawrāzī [d. 375 = 888], Kitāb al-Warāʾ, Cairo 1340, p. 104). In earlier times, yellow patches (nāṣūr al-arīs) used to be put upon the cheeks (Dhūn 1-Rummā [d. 707 = 1719] in Aţţāli, xvi. 115; Maidānī, Furfūrs, ed. Frytag, ii. 762, N. 24; Surātal [d. 619 = 1222] in the commentary on Ḥarīrī, Muyammat, p. 610). On the same day the bride’s wedding ornaments are put on, including necklaces, bridal girdle (ḥūṣān; cf. Strat. Saff, xvii. 53), crown (ṣaḥī or ḍhīl; old reference: Strat. Saff [xvith century], iv. 36; xvii. 53; cf. also the title of the celebrated dictionary Taḥfūṣ al-arūs [xvith century]). The bride on these occasions often put on different dresses (e.g. in Siyāf, Narbeshah: cf. Alf. Liwa wa-Liwa, i. 265 sqq.: 6 different dresses). The dress display in silver pendants and foot-rings, pearls, henna, aloes-wood (for perfuming the face), rose-water, sesame-oil and other aromatics is already mentioned in the papyri (cf. Petruša Erhard’s Rainer, Führer, N. 584, 1014). After being dressed the bride is put on a raised seat or throne, where she has to sit quite still with downcast eyes while the women guests sing, dance and make music. These ceremonies often last far into the night (for the older period cf. Leo Africanus for Morocco; d’Arvieux [1674], Mémories, Paris 1735, v. 287, for Algiers and the other travellers). In Mecca and Siyāf (Narbeshah) the entertainment does not take place till the next day. In Cairo (Lane 1835) on this day the bride takes a lump of henna in her hand and her friends stick coins into it. In Nahla (Jaussen [1927]) there is a different collection for the bride. In Constantinople also we find the henna ceremony; but before it, all the women guests with wax candles in their hands go into the garden with the bride and dance there in long rows (Garnett c. 1890). Pictures of the bride in her wedding
The bridal procession (saffat al-‘urūba) and the elevation to the throne. As Friday is frequently recommended by the theologians for the completion of marriage (cf. Ghazzālī in H. Bauer, Islamische Ethik, Halle 1917, ii. 90) it is the custom to take the bride to her new home on Thursday evening when she passes the night with her husband. The bride is usually fetched by her bridegroom and his relations and accompanied by her own relatives in an imposing and solemn procession. From the superscription alone in Bahkārī, Nikāb 62 (al-bīdār ‘al-maḥār bīgħtar marbūt wa-tāhrūrāt) it is clear that the solemn procession was general as early as the beginning of the third (nineteenth) century; in those days the bride was taken at dusk in a litter borne on a beast of burden and accompanied by lighted torches (cf. Tājdar, Zafafa, p. 40–41, who for this reason speaks of it as a procession between a bride procession (a ṣaḥla and one by night; but the bīgħtar marbūt is against this). The other oldest references known to me are for the bridal procession of the wedding of Umm al-‘Ulwā in Kairawān (425 = 1024); the bride was taken on Thursday by slaves and nobles of the kingdom to the port put up for her (Ibn Iذhār, Bayān al-Mughārī, ed. Dory, i. 284). A story in a book from al-Ya‘māh, the bride is fetched by slave-girls who sing and play stringed-instruments (mawṣūfīt) (Kazwīnī, d. 682 = 1283, Astār al-Bilād, ed. Wustenfeld, ii. 88). A miniature by the painter Yāḥyā b. Maḥmūd b. Wāṣīt of 634 (1237) in the Paris MS. of Ḥarīrī, Arāb 5847 (Kühnel, Miniaturenmalerei im islamischen Orient, Berlin 1923, pl. 15) shows a bridal procession; in front go horn-blowers, drummers and men with peons sitting on camels; the bride herself is completely hidden in a splendid camel-litter and the bridgroom rides beside her on a finely caparisoned horse. Further references may be found e.g. in Alī Lālī wa-Lālī, li. 123; Sīrat Saffī, xiii. 12. The oldest western reference is in the travels of the monk Richold de Monte Criccius (d. 1409), ch. 9, 46 (Laurent, Peripateticus medici, Leipzig 1864, p. 116): „Turkei (= Mongolen in eastern Asia Minor) . . . quando tradunt cum [i.e. usuren] ad nupcias, parentes et consanguinei viri, qui cum accept, ducunt cum eum syntaxis et canco, sed parentes et consanguinei mulieris sequuntur cum eum planctu quasi mortuam“. Later European travellers all describe the bridal procession more or less fully. Almost everywhere the bride, who is always closely veiled, is fetched by the bridgroom in a procession carrying lights (candles, torches or lanterns) and accompanied to her new home by relations and friends of both sides. In modern Fārān, as in the time of Leo Africanus (1526), she gets into a silk-hung octagonal box which is carried on the shoulders of eight men (Westermarck, p. 166) or she goes on foot, if she belongs to the lower classes (Westermarck, Tharandt); while in the rest of Morocco a “covered cage” or a litter is generally used (Mogueri 1604, Hoest 1760, Westermarck 1914). In Algiers in the eighteenth century she was also carried (Haidūlī). In Egypt and Syria she walks or rides under a canopy (as early as Cotovicius 1598). In Turkey in olden times the bride used to ride on a horse (Dernschwam 1553) usually veiled in a red silk cloth, the ends of which were held up by many people accompanying her (Schweigert 1758, della Valla 1615, Tournesort 1717). In the Turkish album of miniatures of the xvith century published by Taeschner entitled Alttimamöhlner Hof- und Volkstheten (Hanover 1925, pl. 32) she is on foot, led by two women. According to della Valla (1615), in place of the procession of lights in front of the bride, a kind of high candlestick is carried which was made with flowers, painted paper, beaten gold, and other foliage, sometimes decorated with gold, silver and ivory; Schweigert (1758; cf. the pictures there) describes them as “wedding candles of green wax, made transparent but not burning”. In the same connection may be mentioned the tray of candles which is carried before the bridal procession in the Kūrāgā-play “The Wrong Bride” (pict. in Ritter, op. cit., fig. 34). In the sixteenth century, the bride rode in a covered carriage as did the women accompanying her, while the men were on horseback (White, Garnett). In Persia she usually rides, robed in red (Olearius 1637, Chardin 1673, Polak c. 1860, Willis c. 1870). At the present day, the motor car is of course also used in large cities like Cairo. — For pictures of the bridal procession see for Morocco: Dapper, Beschreibung von Afrika, Amsterdam 1760, p. 177; for Cairo: Niebuhr (1763), Reisebeschreibung nach Arabien, Copenhagen 1774, pl. 28; Cassas, Voyage pittoresque, Paris 1806, pl. 63; Lane (1835), Sitten und Gebärüchte, pl. 32–33; for Constantinople: Schweigert (1758), Keyzbeschreibung, p. 207; Taeschner, loc. cit.

The trousseau is usually carried in the bridal procession, distributed over as many horses and mules as possible; often empty chests are carried to make the trousseaus look as large as possible, while in many districts the delivery of the trousseau is a special solemn ceremony (cf. e.g. Ibn Iذhār, i. 284 for Kairawān [415 = 1024]; Ibn Ilyās, iv. 107 for Cairo [912 = 1506]). On leaving her parents’ house and entering her new home, a series of symbolic ceremonies are performed which refer to married life, averting evil spirits, fertility etc. I omit these here as they vary much in different towns and districts. In her new home she is welcomed by the bridgroom or her mother-in-law and taken to the bridal chamber. There she is placed by the woman on a high chair or throne and congratulated. Sometimes the bridgroom now gives her a present of money — if it is only a piastre — and she is unveiled so that the bridgroom sees her face for the first time. In a (not genuine) hadith in Muḥaddād (B. G. A., iii. 126) it is said “God shall place Muʾāwiya by his side and cover him and then unveil him to the people like a bride”. The throne (maʾaṣuq) on which the bride is raised and unveiled is mentioned as early as Zawāzīd (d. 486 = 1093) and Baydūsī (d. 494 = 1100); in their commentaries on the Muʿajjala of Imruʾ ʿl-Kais, ed. Hengstenberg, Bonn 1823, verse 32 or Cairo ed. 1828, p. 33). Cf. also Alī Lālī wa-Lālī, ili. 455; Sīrat Saffī, v. 29, where a throne (ṣaffī) of temper wood decorated with plates of gold and shining jewels is mentioned. In Mecca at the present day, the throne is called rīka (= arīka); cf. the picture in Soucek Hurgonje, Bilder aus Mecka, Leyden 1889, pl. 18.

The bridal procession is followed by a feast.
which lasts far into the night with music, singing and dancing (the men and women of course separate); in Turkey of the xviith and xviiith century Kangüre performances were also given (Thevenot, Voyer, Paris 1689, I. 172; cf. I. 169-110) while in Persia of the xviith century wrestlers (jahabandar) were performed (Charidin). A Persian miniature of 1604 shows festivities on the occasion of a wedding in the reign of Aly Arsalan (beginning of the xivth = xviith century) (Gromholt andArnold, The Islamic Book, Munich 1929, pl. 67).

The bridegroom's bath and his safa or turban take place on the same day as the bridal procession, i.e. on the Thursday; a visit is usually made to a mosque in connection with it (cf. Alf Laira wa-Laila, ii. 24). In the story of Nur al-Din and Shams al-Din (Alf Laira wa-Laila, I. 285) it is however a case of murra — the bridegroom goes to the bath and is carried on horseback in a torchlight procession to the bride's house; singers with tambourines accompany him and stop from time to time to get money from the bridgegroom. Another safa — but without a bath — is described in the Saffat, xii. 12. The bridegroom rides on a richly caparisoned steed through the town accompanied by dignitaries. Wax candles with camphor are carried, while slaves swing censers and sprinkle rose and jasmine water (cf. Saffat, vi. 65; xv. 32). Ibn Jyds (iv. 107, 196) records for Cairo in the early xviith century that the bridgegroom goes through the streets accompanied by eunuchs with lighted candles in their hands. This was not as usual in Lane's time in Cairo. Shortly before sunset the bridegroom was taken to the bath by his friends to the bath, accompanied by musicians or singers and torches (magashaf); from there they went to the mosque to attend the evening prayer. On their way back from the mosque, the friends carried candles and flowers in their hands. For a later date (c. 1875) Klauninger describes the bridgegroom's bath and safa for Kusair on the Red Sea.

In other lands, the bridegroom's bath appears to be less usual; at least it is only rarely mentioned in the sources (for Palestine: Rothstein [1907] 30 pictures of the safa; Jansen [1877]; for Tunis and Sfax: Bertholon and Nizheshuber [ca. 1900]; for Tlemcen: Ganderoy-Demouny, p. 40 [c. 1900]; for Tangiers: Westermarck, p. 118; for eastern Asia Minor: van Lennep, Travel, p. 627 [c. 1860]; for Persia: Polak [c. 1860]). The bath and safa seem to be quite unknown in Constantinople. Similarly the bath (but not the safa) for the bridegroom have been long unknown in Morocco (Ibn al-Mudawar [d. 690 = 1291] in Landberg, op. cit.; Snouck Hurgronje; Rutgers), while Niebel, Reisereihnung, I. 402, mentions both in 1765 for Yarmut in South Arabia. Leo Africanus also does not know of the bath in Fils (nor does Westermarck [c. 1914] nor Tharoud [1930]); on the other hand, he describes an imposing procession of the bridegroom, which met the bridal train in the principal square of the town and went home along with it. — Pictures of the splendid safa of the bride in India: Thevenot [1665], Voyages, Paris 1689, iil. 66; H. Goets, Bilderwurdeur Kulturgeschichte Indiens in der Grozmgallzeit, Berlin 1930, pl. 15 (xviiith century miniature).

6. The wedding night (lalat al-dubbla). During the festivities mentioned at the end of 4 the bridegroom goes to the bridal chamber or feigning reluctance is thrust in by his friends. In addition to the sandukh (see p. 1039) we have two descriptions of the early Islamic age of the proceedings in the bridal chamber. According to one (Akgiht, xiv. 70), the caliph Uthman stroked his bride Nafs on the head, asked the blessing of God (karaka) upon her and unveiled her. According to the other (Akgiht, xvi. 37), Shurak took his bride Zainab by the forehead while she knelt down, then prayed two raas with her, just as now is the usual practice in the two entomate ceremonies in Mecca (Snouck Hurgronje, ii. 180 and 185). In the oldest parts of the Alf Laira wa-Laila (Taghiud stratum, c. xviith century A. D.) we find the following usages. In the story of Nur al-Din and Shams al-Din (i. 269-272) the bride is undressed by her maids and led by an old woman in a long robe into the bridal chamber where the bridegroom awaits her. While in this case the unveiling has already taken place, in other passages it is only done by the bridegroom himself in the bridal chamber (e.g. ii. 5). In the story of Urs al-Wajdijd and al-Award 6 'Akmam (iii. 437-439) the two drink together and entertain one another with poems and entertaining stories, in the story of Nur al-Zaman (iii. 478-479) after the consummation the bride summons her maids who give shouts of joy. — In Cairo in Lane's time, the bridegroom was carried by a friend a part of the way to the baram during the festivities. He was only allowed to unveil his bride in the bridal chamber in return for a sum of money and see her for the first time. He then undressed her, laid her with her head in the direction of Mecca and performed two raas. After the consummation he summoned the women waiting outside the door to give shouts of joy (zaghari) and then returned to the guests. Jansen gives a similar description for modern Nahshas. Polak records [c. 1860] a very old and widespread practice for Persia (Leo Africanus knows it for Fils [1526], Haedo for Algiers [xviith century], Bertholon for Tunis [c. 1900]) after the unveiling the couple try to trample on one another's feet; the idea is that whoever does it first will be master in the house. In Turkey, according to Schweigge [1578], the bride is pushed into the bridal chamber by her companions with jests and scoldings. In the xviith and xixth centuries in Turkey after the unveiling and the usual prayers in the bridal chamber, coffee was served to the bridal pair and then a wedding feast held. Only then were they left alone (Glotter, White, Garnett).

In some districts of Morocco (e.g. Fas), it is considered seemly for the bridegroom alone to entertain his bride in the first night and to consummate the marriage only in the second night (Tharoud [1930]; Westermarck, xvi. Consummation). In Egypt on the other hand, it is a frequent practice to deflower the bride by mechanical means (Schwally, in Niederh-Petrkanscri, p. 418 af.). Both these customs are due to superstition, the fear of evil spirits, and perhaps in the first case to a certain feeling of shame.

During the wedding night, if the guests are still there, or on the next morning, the nurse shows the token of virginity to the women friends and relatives. If the bride is not a virgin, the bridegroom can send her back to her parents. The nurse or the mother therefore frequently make arrangements in case of need. In the Alf Laira wa-Laila (ii. 478) a pigeon is killed. In some districts the
bloodstained cloth is carried through the streets to the house of the bride's parents with drumming and shouts of joy. This is reported by Mocquet [1605] and Hoest [1760] for Morocco, Tournefort [1777] for Turkey, while in Burckhardt's and Lane's time (beg. of 19th century) in Cairo, it was only the custom among the lower classes.

On the morning after the wedding night in obedience to the precepts of religion both go to a bath [see Ṭahāna].

The ceremonies after the wedding night, especially on the seventh day. Sometimes the prescribed wistina is not performed till the day after the wedding night (cf. p. 1039 sq.). This is also the case in the story of Kamar al-Zammān (Alf Laila wa-Laila, ii. 461, 478). In Turkey on this day, the wedding ceremonies conclude with a feast, the "festival of the sheep's trotters" as it is called from a traditional dish; then the bride has one or two days to receive congratulations (Garrett [c. 1890]). In Egypt and North Africa the bride remains for a week in the bridal chamber and is visited and entertained by her female relatives. On the seventh day the bride and bridegroom usually hold a reception or give a banquet. The first seven days of marriage called sāḥet al-ʿarūṣ have always played a special part and go back to a usage sanctioned by the Prophet (cf. Dozy, Supplément, i. 626—627; s. above p. 1048). In the story of Us al-Wudujī, women singers come on the seventh day and gifts are scattered among the populace (Alf Laila wa-Laila, ii. 439—440). Leo Africanus [1526] mentions "a very old custom" in Morocco: on the seventh day the husband buys fish, which his mother or other women throw over the bride's feet. A similar practice is still found in Sfax (Narshabacher, p. 16). Probably there is some old magical practice to secure fertility concealed in this.

In conclusion we may briefly mention the entirely different customs in Mecca and Medina as recorded by Snäck Hurgonje [1884] and Rutten [c. 1828] for Mecca and Burton [1855] for Medina. Here there is a peculiar combination of the two kinds of wedding, the ʿārīs and the umra. On the evening of the fourth day, the ʿumra day (cf. umra), the bride in her wedding finery is put on a throne in her house, while the bridegroom goes to the Ḥaram in a procession with lights, to go through the evening prayer there and then go to the bride's house. He is there taken into the throne room and there unveils his bride. After a supper, everyone, including the bridegroom goes home. Towards morning the bride is taken by a few women secretly in a litter borne by two mules to the house of the bridegroom, which is in keeping with the old Arab practice. After a meal with the bridegroom the throne scene is repeated in his house on the fifth evening in a simpler form, after which consummation takes place. From this duplication, a combination of different ceremonies, it may be concluded that the modern Meccan wedding customs are not native to Mecca and Medina, but some features have penetrated in course of time from lands adjoining Arabia, been misunderstood and combined. This is confirmed by the simple practices in pre-Muslim and early Muslim Arabia (cf. p. 1038 sq.), and also by Ibn al-Mudžāwī (in Landstegg, op. cit., p. 859) who describes a pure ʿumra for the 7th (sixth) century in Mecca: the bridegroom goes to the Ḥaram, performs the sevenfold circumambulation, two ṭawāfs at the Makkah Ḥusayl, kisses the Black Stone (i.e. makes the ṭawāf) and then goes with candles to the bride's house. —

Weddings are usually celebrated in Muharram in Mecca, when the ḍuḥdī is over and most of the pilgrims have gone (Ibn al-Mudžāwī, op. cit.; Burckhardt, Travels in Arabia, i. 361).

Although the history and origin of Muslim wedding customs are very difficult to ascertain in view of the lack of early sources, it can be said that in Islam in general many old oriental customs of Syria, Mesopotamia and Egypt, partly taken over from Christianity, have been preserved and have been disseminated by Islam in other Muslim lands and there have become mingled with local customs.

Descriptions of weddings in modern times are given in the undermentioned works of Gaudefoy-Demollemyes, Westernmark and especially of Marquès. Here I give only the most important works and additions to the references in Marquès. —

South Arabia: C. Niebuhr, [1763], Reisebeschreibung nach Arabien, Copenhagen 1774, i. 402—403; Ad. von Wrede [1843], Reise in Hebräenland, Braunschweig 1870, p. 262 sq.; C. von Landberg, Études sur les dialectes de l'Arabie méridionale, Leyden 1909, ii. 192—202; ii. 717—869. —

It is recorded of him that he used to read one fourth of the Qur'an every night, and that he suffered his cankers foot to be amputated without uttering one groan.

Urwa had assiduously frequented his maternal aunt 'Abdah up to three years before her death, and collected a great many important traditions from her, from both his parents, from 'Abd b. Abi Kalib and Abi Warraza. Among those who received traditions from him are Muhammad b. 'Umar b. Hisham, and especially the famous traditions of 'Abd b. Yasar and Ibn Abi Malik.

As an authority on tradition 'Urwa ranks very high, and is one of the seven great sabah, authors of treatises on rijal and 'ilm muja'ala b. 'Abdah have no fault to find with him. He had collected an important library, bearing upon many subjects, both historical and juridical. He was the author of a Kitab al-Maghazi, but his traditions are only to be found incorporated in the works of later historians: Ibn Sa'd, al-Tabari and Ibn Ishaq. A feature of his traditions is the lack of a regular inma, which was formed after the time of 'Urwa.

Bibliography: al-Tabari, ed. Goeje, i. 1180; ii. 1166; Ibn Sa'd, iii. p. xviii (Einleitung), p. (Einleitung by E. van den Enden); Wellhausen, Skizzen und Verarbeitung, vi. 4; al-Khazraki, Armal al-Rijal, 1st ed., Cairo 1832, p. 124; Caetani, Annali dell'Islam, Introduzione, §11 and passim.

(V. Vacca)

URWA B. AL-WARD B. 'HAMIS, of the tribe of 'ABA, an old Arab poet. His father, whose fame was sung by 'Antara, played a part in the Dajjal war. His mother belonged to the less esteemed Banu Nahd, a branch of the 'uqayl (cf. Wustenfeld, Tal., i. 173; allusions to them in poems ix., xiv., xx.). He lived, as is expressly stated, in the Dihliya. But his allusions to individuals who survived into the time of Muhammad, like 'Abd b. 'Umar b. 'Uthman (schol. on l. 1) show that he must have flourished just before the coming of the Prophet. His poems and the anecdotes related of him give us a picture of a true Beduin, devoted to a chivalrous life of adventure, who for his protection of the poor later became known as Urwa al-Saffar. Among his adventures may be mentioned his raid from Mawān in the region of Yathrib upon the Bakhtan in N.W. Arabia, and the story of his wife Umm 'Amir (also Umm Wabab or Salmā) of the tribe of Khaybar whom he is said to have been tricked into giving away, while intoxicated, by the Jewish Banu 'Najjar (or in their region).

(H. H. BRAU)

'URWA B. AL-ZUBAIR B. 'AWWĀM, of the tribe of MADINAN, one of the earliest and foremost authorities on tradition in Madīna, born between 23 and 30 A.H. died between 91 and 99. His mother was the celebrated Asma' bint Abi Bakr, his father al-Zaibar b. al-Awamm b. Khuwailid was a nephew of Khadija. Some thirty years younger than his brother 'Abd Allāh, 'Urwa did not take part in politics or in the civil wars, but gave himself up entirely to study. When his brother, in 73, was vanquished by al-Hadjudād, 'Urwa abandoned him, like the rest of his family, and fled in haste to Damasus, to carry the news to 'Abd al-Malik and thus win his favour. Thereafter he lived in studious retirement on his property at Madīna, until his death, and there wrote, on 'Abd al-Malik's request, a series of communications on the earliest period of Islam, probably in the form of letters to the Caliph (see al-Tabari, i. 1180-1182).
years (1164—1174) in Hijaz Kaifah with the Urtuqshid Kara Arsalan, mainly engaged in his literary work. The fame of Saladin, who was so successfully conducting the war on the Crusaders, attracted him for the third time to Damascus. He died here at a great age in Ramadan 584 (Nov. 1188). His tomb on Mount Kuaiyin was a century later by the famous historian Ibn Khallikan.

Usama, one of a family whose members are frequently mentioned in literature (see e.g. Yahia Milli, Qayum al-Udabat, ii. 173—197), attained renown as a poet and a man of letters. His Divan (in two volumes) still existed in the time of al-Yahya (d. 1357) who knew it (see Mir'at al-Libyan, iii. 427); Deringen collected a number of his poems from the Gotha fragment and several anthologies (Ouassama b. Mouaddib, i. La vie d'Ouassama, Paris 1889—1893, p. 336—338, 545—562). Of his prose works we know the names of over a dozen (cf. Deringen, op. cit., p. 330—339) but only five are so far known to have survived. The most remarkable and most interesting of his works, the importance of which stretches far beyond the scope of ordinary Arabic literature, is the Kitab al-Dhikr, his memoirs, which gives a vivid and lively picture of his time in peace and war. The only MS. far known was found by H. Deringen in the Escorial (see Commentaire découvert en 1880 à l’Escorial le manuscrit arabe contenant l’Autobiographie d’Ouassama b. Mouaddib, as introduction to the German translation by G. Schumann (see below) and edited by him. It has been four times completely translated: into French by Deringen (Paris 1895), into German by G. Schumann (Innsbruck 1905), into Russian by Salier (with introduction, notes and bibliography by I. Kratschekov, Petrograd 1922) and into English by Hitit (New York 1929). Usama’s other works are still only accessible in manuscript. His treatise on poetics al-Abadak fi 'l-Abadak' was described with extracts by Deringen from three manuscripts (Berlin Leyden, Cairo) (op. cit., p. 330—333, 691—724). We may now add the MS. of the Asiatic Museum in Istanbul (see Kratschekov, in Zephi, i. 3—4). His anthology Kitab al-

Afi atr, deals with many quotations in prose and verse, with the "staff" known in history and legend (Deringen, op. cit., i. 334—336, 499—542); we may now add the MS. of Milan from the Yemen (see Griffini, in Z. D. M. G., ixxix. [1915] 193). Recently a hitherto unknown work of Usama, the Kitab al-Manasiy al-Diwar (autograph of 568 = 1172, written in Hijaz Kaifah), was found in the Asiatic Museum in Istanbul. This anthology, which was suggested by an earthquake in August 1157, contains all kinds of poetical quotations about maw'ud, mawqaf, alfi, ra'um, ra'um, etc. (description of the MS. with many specimens of the text by Kratschekov, in Zephi, i. 4—18). We do not yet have any details of the Laktuq al-Adab, which we know in Cairo in a MS. of 598 A.H. in the possession of Yaqub Sarraf (editor of the periodical al-Muktabat).

Bibliography: The most important material for the biography and on the works of Usama has been collected by Deringen in his comprehensive work (see above). He also wrote a number of separate articles on him (cf. Brockelmann, G. A. L., i. 320) which are reprinted in his Opuscules d'un arabe, Paris 1905, p. 313—336. These works and later literature and the more important reviews are listed by Ign. Kratschekov in the appendix to the Russian translation of the Kitab al-Dhikr by M. Salier (Petrograd 1922, p. 206—207). We may add T. Kowalski, Fałszywe arabskie i pierwotne wiedż krzyżackie, in Przegląd Warszawski, 1923, N. 18, p. 380—400 and Ign. Kratschekov, Niewykonane zmieny autografa zmirza Usama, in Zapiski, i. (1925), 11—18.

USAMA B. ZAID B. HASSAN AL-KALBI AL-HEMRI, AND MUHAMMAD, SON OF THE ABASINIAN freedwoman Baraka Umm Aiman and reckoned among the Prophet’s freedmen, was born in Mecca in the fourth year of his mission. Tradition records many instances of the Prophet’s fondness for him as a child, and gives him the surname of Khadi b. Khadiya Umm Aiman.

He joined the fighters on the way to Uthman, but was sent back before battle on account of his tender age. Questioned by Muhammad in the case of slander against 'Ali, he spoke in her favour. After Khadiya he received a pension, and in a.d. 8 rode behind the Prophet into Mecca and entered the Ka'bah with him. He fought gallantly at Hunain.

In a.d. 11 Muhammad put Usama in command of an expedition to avenge his father Zaid, fallen at Mina. Notwithstanding criticism, due to Usama’s youth, the Prophet, already in his last illness, insisted on a prompt departure, but the expedition turned back at the news of his death, and Usama was among those who prepared him for burial.

The newly-elected Caliph ordered the expedition to be resumed, in accordance with the Prophet’s wishes, though the tribes were already revolted. Usama reached the region of al-Balqa’, in Syria, where Zaid had fallen, and raided the village of Uthba (the modern Khan al-Zaid). His victory brought joy to Madina, depressed by the ridda, thus acquiring an important out of proportion to its real significance, which caused it to be regarded later as the beginning of a campaign for the conquest of Syria.

In the same year Abu Bakr left Usama in command at Madina, while at the battle of Uthba l-Kaaja.

In 20 Umar bestowed on him a pension of 4,000 dirhams, equal to that of the men of Badr, on account of the Prophet’s fondness for him and his father.

The election of ‘Uthman to the caliphate took place in the home of Fatiha bint Kais al-Fihitya, Usama’s wife; he probably had a part in the event, and was in favour with the Caliph, receiving from him the grant of a piece of land, and being sent by him to Harra in 34 to report upon the political situation there.

After ‘Uthman’s death Usama refused homage to ‘Ali, whose supporters attacked and ill-treated him in the Mosque at Madina. Therewith he lived in retirement, first in Wadi l-Kura, then in Madina; he died in al-Diwar, about 54, and was buried in Madina.

Usama has a place among transmitters of hadith. His political career, though not brilliant, appears blameless; we hear nothing of his riches.

In appearance Usama resembled his mother, being black and flat-nosed. The emphasis laid by tradition on Muhammad’s love for him is partly due to the intention of setting him off against ‘Ali’s family; it may also have been meant to
show that the Prophet was a true democrat and free from colour prejudice.

UShäN, a town in Asia Minor, capital of a kadi in the sandjak of Usbeyk in the province of Khudawan-dijar, on the edge of a cultivated plain at the foot of the mountains; it had 15,000 inhabitants of whom a third were Armenians and Greeks; the houses are built of brick, with gardens, and the streets are broad. It was rebuilt after a fire in the xith century. It is celebrated for its manufacture of carpets known as Smyrna carpets because they are exported through this port (150,000 yards per annum). There is a fortress on the site of the ancient acropolis (Eucarpia). Towards the end of the xvith century, the devr-beyi (governor) Hududji Murad-oglu declared himself independent but he was besieged by Kara Oghman-oglu of Adin, taken through treachery and executed. In the district there are asbestos mines and sulphur thermal springs.

Al-USHród ‘Ali b. Othman Sirdij al-Din al-Fardhami al-Hanafi, of whose life nothing is recorded (‘Abd al-Kadir b. ‘Abd al-Wafa’ al-Kureishi, al-Nzahdi al-unfla fti Tabakat al-Hanafi, Hadhirabad 1323, i, 367 does not even give a date), wrote about the year 569 = 1173 (s. Z. D. M. G., xvi, 685) a confession of faith in rhyme entitled Kajada al-Lamiya fti l-Tvihd, also called Raud al-Muslih or from the opening words Kajada yakhtib ‘I. ‘Abdi (Carmen arabicum Amali dictum, ed. P. V. Bohlen, Regensburg 1825; also in Mu‘jam, Muhammadi al-Muslin, Cairo 1273, 1281, 1295, 1233; on the margin of Salim b. Sumair, Safnaz al-Nadja, Singapore 1295, with Hindustani paraphrase by Mawlawi Muhammad Naqir Ahmad Khan, Dhill 1317). These printed editions show the popularity of the work down to the present time and commentaries have often been written on it. To the commentaries given in G. A. E. L. i, 439 of which the oldest is by Muhammad b. Ahi Bakr al-Kureishi, author of the Tafsir al-Muslih (G. A. E. L. i, 383, d, according to Hadijdi Khalifa, NO. 733, in 660 = 1260), some more may be added from the Stambul and other catalogues. The most celebrated among them is that of al-Kureishi al-Hamawi (d. 1014-1605), written in 1010 (1601) in Mecca entitled Dauw al-Aamili, pr. Stambul 1393, Bombay 1395, Delhi 1884; with Turkish tranal by Husain Effendi, Stambul 1304; anonymous glosses Tabak al-Adal, Cairo 1309 and d. There have also been printed two Persian commentaries Naqsh al-La‘ali by Muhammad Bakhs Rafik (lith.), Lucknow 1869 and by Ahamd Darwiza Nangahari, Lahore 1891, 1900; a Turkish commentary Morak al-Ma‘alib by Ahmad ‘Asim ‘Ainthal, Stambul 1304; and a Turkish paraphrase with commentary by Muhammad Shukri, Stambul 1305. Of his collection of traditions Gharar al-Abhir wa-Darur al-Adur, only a selection, containing 1,000 short traditions in 100 chapters, entitled Nish al-Abhir wa-Tadkhirat al-Abhir has survived in Berlin (Ahwardi, Katalog, No. 13001), Munich (note No. 163), Cairo (Fried, i, 444) and a fragment in Mqwil (s. Dschud, al-Maqsimat al-Musliny, p. 24, No. 28). His collection of stories, which according to Hadijdi Khalifa, NO. 8767, he finished on 2nd Mulharam 569 (Aug. 14, 1173) in Usba, was printed in Calkinta 1243 and Lucknow 1223-1225.

Bibliography: given in the article.

C. Brockelmann

USHËN (Ushn, Ushnya), a district and town in Acharbasjân. Ushn lies to the south of Urmia [q.v.] from which it has usually been administered. The district is watered by the upper course of the river Gdïr (Gader) which, after traversing the district of Saldus [q.v.], flows into Lake Urmia on the S. W. To the south of Ushn is the district of Lähigjân which is administered from Saldul-Budak [q.v.]. The town of Ushn (710 houses) is situated on the left bank of the Gdïr (Com-i-Cala, "river with 40 mills") which rises in the Gîlas valley through five districts and communicates with Margaviz [cf. USMA].

The population of the district is Kurds. The town and its villages are occupied by the Zarrâ tribe, the other twenty-five villages by the tribe of Masan which also occupies a part of Lähigjân and of Saldus.

It is possible that in the Khalidi (Yenic) name Ushnî corresponds to Ushn. Rawinson had identified the village of Singân (three miles S.E. of Ushn) with the Zorvan mentioned by Ptolemy, vi. 2 in Media. The town of Ushn is mentioned in Arabic sources from the time of I斯塔khri (p. 186). This author says that Ushnî al-Adharfa formed part of the lands of the Bantu Roudain, which also included Dakhurjan and Tabhira (Nir), but Ibn Hawkal, p. 240, already notes that this tribe had disappeared. On p. 239, he notes the richness of Ushnî in grass and fruits. Its produce (honey, almonds, nuts and cattle) was exported to Mawasîl and to al-Djazira. Its steppe (Yâdavî = Lähigjân ?) belonged to the Hadärjân Kurds who spent the summer there (yâdavî). The principal fief of these Kurds was at Arbîl (cf. above, ii, p. 1200).

We know nothing of the coming of the Zarrâ Kurds to Ushnî (they may perhaps be a branch of the old Hadärjân) but the Zarrâ are already mentioned in the Masâlik al-Abhir of Shihab al-Dîn al-Umarî, written in Egypt in 1335 (cf. N. E., xiii, 1835, p. 300-329). The author explains its name as malad al-‘abhir which Quatremère has emended to malad al-‘abhir "children of gold" (in Kurdish sîr = zarîr).

In the Shafâf-nâmeh the section on the Zarrâ, mentioned in the preface, is omitted in all the manuscripts. They must have occupied a very considerable area. In a mutilated passage, ii, 280, Shafâf al-Dîn seems to say that Lähigjân was taken from the Zarrâ by Pir Budaq, the first chief of the Bâban tribe (xvth century). He also mentions (ii, 278) the defeat inflicted on them by Sulaimân Beg Sûrân (in the time of Murad III, 982-1003).

Ushnî lies on the road between Mawasîl and the
valley of Lake Urmiya (Mawil-Rawanduz-pass of Kela-Shin [c. 10,000 feet]-Ushun-Urmiya or Maragha). This road, blocked by snow in winter, is much less convenient than the route from Rawanduz via Rasht to the pass of Garshi-Shinka (south of the Kela-Shin) which does not exceed 3,800 feet. The pass of Kela-Shin (in Kela "green stele") is celebrated for the stele with a bilingual inscription (Assyrian-Khaldic) erected in 300 n.c. in the time of the Khaledic King Japhetuni and his son Menas. The Musallak al-Aghtir (transl. Quatremere, p. 315) has a detailed account of the mountain of Hatch-jain, i.e. "the Two Stones" (i.e. the Kela-Shin and the similar stone of Topaszwa, S.W. of Kela-Shin). In the legendary account by Tabart, i. 440, of the campaign of the King of Yaman (Rashid b. Kain) in the region of Mawil, we are told that his general Shawr b. al-Ashaf had his exploits engraved on "the two stones (baqarayarain) still known in Ashbarahidja". These two texts have been published by G. Hoffmann, in Austrjia, p. 249-250.

The place-names of the district (in Aramaic Ashokh, Aghna) reflect the former presence of a Christian element which has now disappeared (cf. the names of the villages of Sargis, Dinja and Benmarla). As early as 558 already, a Christian of Ushun founded the church of Sargis and Becchina near Malayta. In 1271 the Nestorian Catholics Dengi transferred the see of the metropolis of Assyria to Ushun to be better protected by the Mongol rulers (Assemeni, li. 350, 456). An old Christian church may be concealed by the ruins of Deir- el- Shaikh Ibrahim (near Singin), which are venerated by both Muslims and Christians. Rawlinson (p. 17) saw there the tomb of the bishop of Ushun, Ibrahim, who in 1258 was present at the consecration of the Nestorian Catholicos Yahbalghay III. Bibliography: cf. Urmiya; Rawlinson, Notes on a Journey from Tabris, in J.R.G.S., xxi. 1840, p. 15-24; Fraser, Travels in Kordistan (1834), London 1840, i. 89-98; Bittner, Der Kordangil Uschakji etc., in Situatio, Ak. Wiem., cxxii., Vienna 1895; Lehmann-Haupt, Armenien, i. 240, 260; De Morgan, Mission scientifique en Perse, in Recerches archéologiques, 1896, i. 261-85 (Kela-Shin); cf. also Etudes geographiques, 1895, ii. 315.

On the Kela-Shin see the bibliography in Lehmann-Haupt, Lc., and in detail in Minorsky, Kela-Shin, in Zbl., 1917, xxiv., p. 146-93. (V. Minorsky)

**USHR.** The tenth or tithe levied for public assistance, is frequently used in the sense of qadarah and nakah (Abul Vusuf, p. 34; Yahyâ b. Adam, p. 79, 83, i. 23) and indeed there is no very strict line drawn in the Shi'ite books between zakat and 'ushr due (cf. Tormaur, p. 318). The term 'ushr is not found in the Kur'an but Sura vi. 142 is taken to refer to the tithe or half tithe (Abu Yitnuf, p. 32; Yahyâ b. Adam, p. 88 sq.) Etymologically 'ushr is the same as the Assyrian izb-rin-a (E. Schrader, Keilschriftliche Bibliothek, iv. 192, 205) which means tribute paid in kind (corn, dates) or in gold, and with the Hebrew maqhir (Gen. xiv. 20; xxix. 20-22), the tenth which the sanctuaries received but which was also levied by kings and which the Mosaic law wished to introduce as compulsory (Lev. xxvii. 30-33; Num. xviii. 21-26). While the prophet Samuel (1 Sam. viii. 13-17) wanted the tenth to go primarily to the king, later the demand was raised for a general tithe on behalf of the sanctuary of Sion, and under Persian rule a tenth of everything actually did go to the temple of Jahav (Mal. iii. 8-10). On the other hand, according to Deut. xiv. 28; xxi. 22, the Levites and the poor were to receive the tenth while, according to the code of the priests, the whole tenth was to belong exclusively to the Levites, who had in their turn to hand over a tenth to the priests (Num. xviii. 12-19). In the cases of lapses by Jews to idolatry, they bought the tenth to the temples of the gods (Amos iv. 4; cf. H. Grotius, Kursus Bibel-bouwende, Leipzig, 1743, p. 743; L. Castani, Annali dell' Istituto, iv. 49). It is also significant that in these cases was usually a tenth of natural products (grape-juice, curu, oil) but it was permitted to offer money instead.

An investigation of the significance of the tenth as a tax among neighbouring peoples is therefore important and necessary, because light is thereby thrown on Arab conditions. Of great significance is the fact recorded by Pinay, Hist. Nat., xii. 66 especially for South Arabia (Arabia Felix) that the tenth part of the frankincense harvest was collected by the priests for the god Sin (Masari) of which out of which to meet public expenses and the maintenance of the priests. In the inscriptions we find "mahar and 'ushr along with fr" as a tax and both are taken by N. Rhodokanaki, Studien zur Lexikographie und Grammatik des Altdarabischen, ii., S. B. Ak. Wien, clxxvi/7, 1917, p. 58 to be taxes on land, which however came under the temple tax. According to Sutra iv. 137, the pagan Arabs, even the Kuraish, both Bedouin and Fellah gave to their fields of the fruit and animals to Allah or other gods, which in practice of course went to the guardians of the sanctuary. Muhammad, probably deliberately, deprived the tenth of any connection with worship and, perhaps on the analogy of South Arabian customs, made the tithe a kind of tax. This, in his letter to the Khath 'Abbas bin (J.L. Volkmann, Stuken und Verfarbeiten, iv., Berlin 1859, Kap. 65, p. 130), it is laid down that a tenth is to be paid on all land irrigated by running streams and a half tenth on lands artificially irrigated. This also hold for the otium of Dina al-Dinial (ibid., N. 119, p. 173) and the Hunsar (Yahyâ b. Adam, p. 83); in the letter to the latter the tithe is called sanba. For the nomads around Shahr for example a tax of one in ten loads of dates is fixed for their palmgroves (J. Wellhausen, op. cit., iv. 57, p. 150).

Mecca, Medina, the Hijaz, the Yaman and the Arabian territory were thus regarded as 'ushar land (E. Paguan, p. 96) from which alone the tenth was to be raised (op. cit., p. 79) and this was contrasted with the zaruragi land on which the land tax was levied. With the gradual expansion of the Islamic empire, the 'ushr land increased considerably in area. For example at the conquest of al-Raqqa (18 A.H.) the lands which the protection people (abd al-sifini) did not use were given to the Muslims on payment of the tithe (Amali al-Istamal, p. 40). The lands acquired by the peace treaties, on which no land tax was levied became 'ushr land in so far as they belonged to none converts (Yahyâ b. Adam, p. 15). Further all land on which no land tax was levied became 'ushar land on the conversion of its owner, if the cultivator, dug a well or an irrigation channel (Paguan, p. 99).
A considerable increase in 'ushr land also resulted from the transference of land by sale or gift. If for example a Muslim bought land from the Banti Taghibi he paid the tithe, according to others the double radda; the same held of every member of this tribe or Christians generally who became converts to Islam, since the land thereby became 'ushr land (Yahyā b. Adam, p. 12, 16, 46 sq.). Land in areas acquired by treaties of peace became 'ushr land in so far as it had been acquired by Muslims by purchase, even if the payment of land tax was expressly laid down in the treaty (op. cit., p. 37). The tithe was also to be levied on naturally irrigated kharāj lands in Sawād (Fagman, p. 79). H. Becker, Islamstudien, p. 230 sqq., has shown how 'ushr land developed in Egypt. Gifts of land to meritorious Muslims and purchase by Muslims from Copthelanders here made the land 'ushr land, which in Egypt certainly developed to a considerable extent out of the old domains. On the other hand, the practice of allowing new converts to pay only the tenth frequently created 'ushr land. Of the rules which were in force regarding the transference of 'ushr land it may be mentioned that allies (mashūrī) who acquired 'ushr land by purchase had to pay kharāj, which remained a burden on the land if it was sold again to a Muslim. This at any rate is the Hanafi teaching (Yahyā b. Adam, p. 16). If on the other hand a Christian buys 'ushr land from a Muslim he has to pay the double tithe (hātum), which is regarded as a double radda. The land is further treated as mashūr if the owner becomes converted to Islam (op. cit.). This had of course great disadvantages for the treasury, as had the sale of kharāj land to a Muslim and therefore 'Umar II laid it down that in the latter case the land tax fell upon the new owner, who had also to pay the tithe or half tithe on the produce and agricultural land, as the kharāj was due upon the soil and the tithe or half tithe was due as zakāt from the Muslims (Yahyā b. Adam, p. 10). This regulation was however in contradiction to the principle that by 'Irāqī kharāj and 'ushr could not be levied at the same time, any more than zakāt and sadaqa or diya (poll-tax), and 'Umar II had already prohibited the collection of the tithe from a Muslim or ally when he paid kharāj (ibid., p. 10, 32, 46). How far this limitation was actually observed it is impossible to say. In Inv. Av. Pap. 194 of the Rainer Coll. in Vienna, which deals with taxation but unfortunately is very fragmentary, and contains lists of land-tax, poll-tax, palm-tax, sadaqa, dī'ār, the two last entries are missing so that conclusions cannot be drawn from it. How greatly the practice varied is clear from Mawardi (p. 104) according to whom an ally who owns 'ushr land has to pay neither 'ushr nor kharāj according to the Shāfi'i, according to the Hanafīs, kharāj, according to others, sadaqa, while according to Yahyā b. Adam, p. 15, the ally of the tribe of Taghibi who bought 'ushr land had to pay the double tithe but if he belonged to a tribe which had been adopted into the Islamic state as an ally, he paid neither 'ushr nor kharāj. Further it was open to the Imam — in practice the financial administrator of the province and the machinery of collection — to turn kharāj land into 'ushr land (Fagman, p. 89) so that in later times the rule as to what land paid kharāj and what paid 'ushr was treated quite arbitrarily and at most we can observe a certain tendency to observe principles generally regarded as valid and sanctified by custom. In the letting of lands and masāra's agreements the rule was probably that the cultivator of 'ushr land should pay a tenth or twentieth of the yield, according to the kind of ground (Yahyā b. Adam, p. 121). If a Muslim takes over the land of an ally to till it he pays a tenth of the yield, the sadaqa the land-tax, if he has lived untilled land out of the kharāj land, the landlord pays the kharāj but the cultivator no tithe (Yahyā b. Adam, p. 120). If the untilled land is mashūr the cultivator has to pay 1/12 or 1/16 of the yield as naskī (op. cit., p. 116, 123). If a Muslim has leased mashūr untilled land, he pays the tenth while the landlord pays nothing (ibid., p. 124). The Muslim also pays on rented kharāj land 1/10 or 1/16 of the yield as naskī, the landlord the kharāj (this is the Shāfi'i practice) while the Hanāfīs make the landlord pay tithe (Mawardi, p. 105). The same thing holds if owner and occupier are the same individual (Yahyā b. Adam, p. 118—120). According to Mawardi, p. 104, however, the Muslim occupier, as having contracted an agreement to cultivate a piece of kharāj land has to pay tithe and kharāj (Shāfi'i), only the kharāj according to the Hanāfīs. According to Abū Yūsuf (Fagman, p. 79), the tithe was only to be paid on durable products of the land but not on vegetables, fodder or fuel, according to Yahyā b. Adam (p. 84, 105) was paid on palm, wheat, barley, grapes, raisins, while (op. cit., p. 79, 101) it is laid down that the tithe is to be levied as sadaqa on all that the earth produces, even if it be only a bundle of green stuff. The latter is according to Yahyā b. Adam (p. 103) along with walnuts, almonds, and all fruit, only liable to tithe in the form of naskī if it is over 200 dirhams in value. For dates the limit of exemption is 5 mārā (Fagman, p. 80). 'Umar levied no tax on vines, peaches and pomegranates, while wine and oil are regarded as liable to tithe (ibid., p. 50, 111). According to some, 'ushr is levied on honey, according to others, only when it is produced on 'ushr land (op. cit., p. 17); this also holds of saffron. As a kind of trade-tax, the 'ushr was levied on merchants coming into Islamic territory and the ally paid a twentieth but a tenth on wine and pigs (op. cit., p. 32—49 sq.). Muslims under age are according to some jurists exempt from the tithes, according to others not (op. cit., p. 48). The half, single, one and a half and double tenth are the rates for the 'ushr; we even have higher ones, for they are fixed quite at the discretion of the Imam (Fagman, p. 93). It is however a principle and it is keeping with the old practice that the tenth is levied on all land which is irrigated by running water, brooks and streams or by rain, the half tenth on land which is irrigated by carried water, by water-wheels or water drawn by canals (Yahyā b. Adam, p. 78, 80—86). The income from the tithes could be used for other than benevolent purposes. Thus for example, the administrator of the provincial revenues in Egypt, 'Ubayd Allāh b. Ḥabbās, gave the Kais who were settled here funds to buy beasts of burden out of the tithes (Maḳrit, Abhandlungen, p. 488). Echoes of the ancient pre-Islamic practice have survived in South Arabia where the ṭālīṣr pay 'üşhr to the sulṭan or emir; here it is also called 'ażhara but it is worth noting that it is
mainly leaved on the fruits of the field, corn, dates, coffee, indigo etc. Among the Barkán and the people of Aryan, the corn is piled up, measured and 1/90 of the wheat set aside, of which the poorest of the sanctuary receive the half and the other half goes to the gashtabā, a custom which has analogies with the conditions in the Bible and also with those recorded by Pliney.

**Ushahkizade,** a Turkish patronymic borrowed from the Persian, meaning strictly son or descendant of 'Usbāh, the latter word being the ethnic from Ushāb (arabicized into 'ušbāb, plural of 'ušbāb), a town in Asia Minor. 'Ushahkizade therefore means a descendant of a man from Ushāb.

Two families in Turkey have borne or bear this name:

The descendants of 'Ushahkizade 'Abd al-'Askār al-Naṣīr of Mecca and son-in-law of the Naṣīr al-Dīn Seikzade 'Abd al-Rahmān Efendi. He was the third of the four sons of the saint Ṣayrī Ḥasan Hūsain al-Dīn said to have come from Buhārā, who was a pupil of Shamsī Ahmad al-Samarkandī in Erivan and who settled in 'Ushāb at first and later in Constantinople in the reign of Sulaimān the Magnificent. He died at Konya in 1003 (1594-1595) and was buried in Constantinople with the shəhīd who succeeded him in the mosque founded by him at the same time as a sāhib at Kāsim Pasha. Hūsain al-Dīn founded the first order of the 'Ushahkizade dervishes, the rules of which are influenced by the Kubrawīya and Nūrshāhkhābiyya dervishes. and which forms a branch of the Ahmadzade who in turn are connected with the Khālwaṭiya. According to v. Hammer (Hist. de l'Emp. Ottoman, vii. 287), the brotherhood of the 'Ushahkizade was founded in the reign of Murād III (1574-1596). The priority of the order did not long remain in the direct line of the founder, owing to failure of male descendants. On the other hand, another branch of the same family, the 'Ushahkizade properly so-called, flourished greatly. 'Ushahkizade 'Abd al-'Askār, already mentioned, had a son 'Ushahkizade...

Haş Hâshem Efendi who founded a family and acquired a certain reputation for his historical works (cf. Bahninger, G. O., W., p. 258-259; v. Hammer, op. cit., ii. 477). 'Abd Allah Nâṣīr Efendi, another son of 'Abd al-'Askār, was Naṣīr al-Dīn at-Tabrīzī at Constantinople from 1123 to 1130 (Sīdīji, iii. 373 sq.; Rifāt, Ṣaḥḥāl al-Muḥātār, p. 33 sq. 3). A family of merchants (carpet, etc.) and notables which was settled in Smyrna at the end of the sixteenth century and to which belonged the well-known prose-writer and novelist Ushahkizade Khālid Dīya (Halī, Zīya) [cf. KHALID ZIYA] and his niece Hamīl, formerly the wife of Ǧāḥiẓ Muṣṭafā Ḥanṣa.

Halī, Zīya has himself pointed out in his memoirs (Ḥallīrat al-ṣaḥāba, publ. in the Folli from Jan. 19, 1931, cf. No. 2 of these Memoirs), the family as late as 1869 was called Halīzāde (Halīzāde). The branch which went to Smyrna was known as ‘Ushahkizālī, "those of ‘Ushāb," a name which was later replaced by that of Ushahkizade, which was thought more elegant.

Ḥalīlīd Is’āmī ‘Ātwāntāsīrī, Ḥayāt al-Dīwānī, Constantinople 1581, i. 23-25 (considerably abridged in the translation in Hammer, Hist. i. 69, No. 634). (j. deny)

**Uşkub** (Serb. Skopje), capital of the former Turkish vilayet of Köşova (Serb. Kosovo), now the capital of the Vardar basin in the kingdom of Jugoslavia, is situated at a height of 596 feet above sea-level in the centre of a fertile valley surrounded by snow-covered mountains and built on both sides of the Vardar; in 1531 it had 64,807 inhabitants (only 32,409 in 1621) of whom more than a third are Muslims. On the left bank of the river were the older quarters of the town (the fortress, the Turkish quarters, etc.; on the right are the modern buildings and the railway station. Skopje has 8,958 houses, 15 mosques, 6 Serbian Orthodox and 7 Roman Catholic churches. Of specifically Muslim buildings we may mention a Mescit-i-Ulūm (i.e. a college of legal authorities, usually called "Ulūm-medresa"); a Wafi-Meşrut Council ("Vakufsko-mearšk spač"; cf. i. p. 768 seq.), a chief Shari‘at court and a state high school for Muslims ("Velika medresa kralja Aleksandra I") in which, in addition to the usual subjects, religion, Arabic and a little Turkish are taught. Owing to its splendid geographical situation, Skopje has become the economic and cultural centre of Southern Serbia.

The town has already played a similar role in the past. Originally an Illyrian colony called Scupi, it was later the capital of the Roman province of Dardania and lay about two miles farther up the river at the present village of Zlokučani (N, W. of the modern Skopje) but was completely destroyed by an earthquake in the year 518.

According to Sir Arthur Evans, Scupi was rebuilt in the neighbourhood of the ancient town on the
site of the present Skopje by the Emperor Justinian (527-565) and called Justiniiana Prima, but this new name did not survive. On the other hand, W. Tomasek thinks it more probable that Justiniana Prima was built very much farther north of Skopje. Professor N. Vulić also had adopted this view (Ona bila Justiniiana Prima, in Le Musee Belge, xxiii. [1928], 65-71) but now he agrees with Evans.

At the end of the seventh century, the town was taken by the Slavs. In the following centuries, Skopje (this is the usual Byzantine name; hence it also appears as Ishkija on Idrisi's map of the world of 1154 [ed. K. Miller, Stuttgart 1928]) belonged mainly to Byzantium, with a few longer and shorter intervals when it was under Bulgar (Jireček, i. 211 and 222) and Serbian (op. cit., i. 201) rule.

Towards 1282 Skopje finally passed from the Byzantines to the Serbs (op. cit., i. 245) and became the favourite residence of the medieval Serbian kings and emperors. It was here that the powerful Abbé Đukan had himself ceremoniously crowned as the first Serbian emperor (1346). This time Serbian rule in Skopje lasted 110 years (1282-1392) and this epoch may be described as the golden period in the town's history (especially down to 1374).

After the battle on the field of the blackbird (Serb. Kosovo polje) in 1389 Skopje became of especial importance to the Ottomans and they occupied it in the early years of the reign of Hānizad I. In the older Ottoman chroniclers (Urđič ad-Dîl, p. 26; Ašikpepağâzâde, ed. Giese, p. 58 [Stamba's edition, p. 64]; Negri-Nöldeke, ii., in Z.D.M.G., xv. 333; anon. ed. Giese, p. 73 [only in the critical appr., hence not in the trans.]), Paša Yigit (Yiyit) Beg, "who is the tutor of Ishkije Beg (Ishaq Beg efendi) and is like his father", is named as the conqueror of Čakub and its first governor. The exact date of the conquest is not given in any of these historians but preserved in a contemporary Serbian inscriptions: Jan. 6, 1392 (Lj. Stojanović, Staror. srpski spisi, i. [Belgrade 1902], p. 56, No. 177). Elwiliy Celebi (953) assures however that Erenow Beg took the town. Skama al-Din Şāmī (Kūmsū al-Aflâm, ii. [1889], 912-913) on the other hand gives Timur Taš Paşa as the Turkish conqueror of Skopje in 792 (began Dec. 20, 1389) but without giving his authority. "Ali Djedw (TUrks. ve-liceddrettâr Ishaqâdet), i. [1311 = 1895], 87) also gives Timur Taš Paşa but his authority seems to be the Kūmsū al-Aflâm. Čakub was at once settled with Turkish colonists (Hammer, G.O.R.2, i. 183) and was for a time the second residence of the Ottomans sultan next to Adrianopole (cf. e. g. Elwiliy Celebi, i. [553]). Čakub was the base of further Ottoman campaigns northward, and it was from here that their governors controlled their Christian tributaries (Jireček, i. 97). In the course of time a busy trade developed in which the Ragusans played a prominent part. Building activity was also considerable and was mainly devoted to mosques, madrasas, baths etc. The largest and finest mosque dates from the 14th century (Sašti Murâd mosque built in 840 = 1436-1437; Ishaq Beg [Iškija]) mosque built in 842 = 1438-1439; Ishaq Beg mosque about 880 = 1475-1476; Koca Muṣṭafâ mosque built in 900 = 1495 [destroyed 1925]) and from the beginning of the xvth century (Vâhî Paşa mosque built in 908 = 1502-1503). Some of the Čakub medreses early acquired a great reputation.

That Čakub in the xvth and xviith century also played a large part in the poetry and scholarship of Turkey is shown by the following celebrated names: i. Aštâ, poet, d. 950 = 1543-1544 (Gibb, H.O.P., ii. 191, note 3); 3. Išaḫâq Câlebi (Uškubit), lyricist and scholar, d. 949 = 1542-1543 (Gibb, iii. 40-45); 3. Aštâ Câlebi (Pîr Muḥâammad), biographer of poets and himself a poet, d. 979 = 1571-1572 (Gibb, iii. 7-8 and 163; note 4; cf. also Elwiliy, v. 566); 4. Wezîz (Uwaiz) Muḥâammad, one of the most brilliant prose writers of his time, died as Kât of Čakub in 1357 = 1627-1628 (Gibb, iii. 208-218 and Elwiliy, v. 560); 5. (New 'îzâde) Aštâ, the famous poet and continuator of the Shâkî 'al-naw'm 'ânâya of Taşköprüzâde, whose last judicial post was in Čakub, d. 1044 = 1634-1635 (Gibb, iii. 242-243; Brisał M. Tahir, Othmâniyyû Malkiller, ii. 93-96; Babinger, G. O. W., p. 171-172).

Western travellers of the xviith and xvith centuries (e. g. T. Petančić [1502], the anonymous Italian [1559], M. Biri [1604], Dr. Brown [1669]) describe Skopje as a large and fine town. The two Turkish accounts of the xvith century agree with this. The one is by Halictedj Kâhil (c. 1648) who not only describes Čakub, the capital of the sandjak of the same name, as a fine town but says that the tower clock, which dated from the time of the unbelievers, was the largest in all Christendom; the other description by the somewhat later Elwiliy Câlebi in spite of all its exaggerations is the best account of the accounts of the town. At the time of his visit (1661), Čakub had 70 mahallas, about 10,000 solidly built houses including several famous serays, 2,150 well built shops, 130 large and small mosques (45 Friday mosques), several churches and synagogues, 20 dervish monasteries, 110 fountains etc. Commerce, trade and industry were also all very flourishing. Conditions were so settled that a garrison of only 300 men sufficed.

But towards the end of the century, the Austrian general Piccolomini supported by rebel Serbs advanced across the Danube and the Save into the Vardar district, plundered Čakub and burnt it to the ground on October 26 and 27, 1669 (cf. M. Kottić, in Jutba Serbiya, i. [1923], 121-128).

In the xvith century, the plague raged in this region and at the end of this century the population had sunk to 6,000. It was only at the beginning of the sixteenth century that Čakub began to revive again rapidly as a result of the immigration of inhabitants from adjoining regions. The reforms of Omar Paşa Latas restored peace and order in the whole region after 1840 and trade flourished once more. From 1875 onwards Muslim emigrants from Serbia and Bosnia considerably increased the population of the town. In 1873 the railway Salonika-Čakub-Mitrovica was opened to traffic and in 1875 the capital of the vilayet was removed from Pristina to Čakub. The opening of the railway Belgrad-Nish-Skopje-[Salonika] in 1888 connected the town directly with Serbia and Central Europe. At the end of the xviith century, Čakub had already 4,474 houses with 32,000 inhabitants (17,000 Musulmans, 14,300 Christians and 800 Jews).
The Balkan war (1912) put an end to the 520 years of Turkish rule in Skopje. Since 1918 when the town definitely passed to Yugoslavia the number of inhabitants has doubled and the development of Skopje has been considerable in all fields (philosophical faculty of the University, Scientific Society of Skopje with its organ Glasnik skopjeg naučnog društva [Bulletin de la société scientifique de Skopje], South Serbian Museum, National Theatre, Hygienic Institute etc.).

(U.S.K.)

THE OLDEST AND LARGEST QUARTER OF THE TURKISH constantinople ON THE ASIATIC SIDE OF THE BOSPORUS, Lying at the foot of the hill of Buğlarh, where the Asiatic coast advances farthest to the west, opposite the Tower of Leander (Kî Kuclei). In ancient times the small town of Chrysopolis (already mentioned in Xenophon's Anabasis, book vi., ch. vi. 38) existed on this site; it was then a suburb of the still older colony of Chalcodon (now Kadi Köy). Towards the end of the Byzantine Empire the name Sencari had come into use (cf. Phrantzes, ed. 1838, p. 111; ὁσ εἰς τὸν Σενκράνταβολγὸν νήσον τῆς Ἀχαϊῶν). It is uncertain if this new name is to be derived from the corpus of shield-bearers that was located there in the time of the emperor Valans (cf. Cuenot and G. Young, Constantinople, London 1926, p. 203). The direct reason may have been that there was, from the time of the Commonol, a palace there called Scutariun (Cujen). The Turkish Uskudar contains at the same time a popular etymology, as the Persian word askudar (also askudar is given) has the meaning of a post station (Arabic harāt); by its geographical position, Uskudar became indeed the main base for all greater and smaller expeditions from the capital to the Asiatic parts of the empire (cf. E. Tischner, Das anatolische Wegennetz, Leipzig 1924 and 1926). Large armies generally were encamped in the vast plain to the south of the suburb, where now stands the part of the town called Harad Pasha. Still another explanation of Uskudar (viz. Eski Dâr) is given by Ewliya Celebi.

The historical sources do not mention in what particular way Uskudar was conquered by the Ottoman Turks, but it certainly was taken under Othman's rule, either after the capture of Enik (1331), together with the other localities of Kadif Èli (q. v.) (cf. Niceforos Gregoras, ed. Bonn 1840, iii. 458) or in any case after the death of the emperor Andronicus (1341; cf. Phrantzes, p. 41). The Old Ottoman chronicles mention it for the first time during the reign of Muhammad I. The local traditions, as recorded by Ewliya Celebi, connect Uskudar closely with the different expeditions undertaken against Constantinople by Sâydî Battûl Ghiuri.

To the Turkish times Scutari became much more an integral part of the capital than it seems to have been in Byzantine times, though, according to Ewliya Celebi, it became fully populated only in the time of Sulaiman I. One of the reasons was certainly that it became the seat of several dervish congregations and their tekke's, and consequently an important centre of the mystical life of the capital. The best known are the Hafıziye Tekke of Shaikh Mahmod (lived during xvii. century) and the Rifahiye Tekke. Scutari contains moreover a number of remarkable mosques, the largest of which were all founded by ladies of the imperial court. The most notable mosques are: Mihr-â-Māh Dâjîmî or Iskelse Dâjîmî, erected in 954 (1547) opposite the chief landing-place; Eski Wâlide Dâjîmî, more to the south, finished in 991 (1583); Cümiî Dâjîmî, on the south-eastern point, finished in 1050 (1640); and Yeni Wâlide Dâjîmî, finished in 1050 (1705). The Selimiye mosque was founded by Selim III and belongs to the buildings erected by that sultan for his new troops called niqâni开设ed. Finally this suburb is famous for the large cemetery that extends on its eastern side.

In the judicial hierarchy the Uskudar Molla ranked with the mollah of Ghâta and of Eyüp among the lowest class of the highest order of judges (d'Ohsson, Tableau, ii. 271). Administratively Scutari has long been a part of the town of Constantinople (Cuijets). In the new administrative division of the Turkish republic it is annexed to the province of Istanbul (Deveci Şahsmas) for 1926, p. 612; on p. 655 of this publication the number of inhabitants is given as 155,093.

(U.S.)

RÖTSCH, ÜSÜL

Among the various terminological usages of this word, three are prominent as terms for branches of Muslim learning: üsül-â-din, üsül-â-hadîth, üsül-â-fikr. U.â-din is synonymous with hadîm [q. v.]; by üsül-â-hadîth is meant the treatment of the terminology and methods of the science of Tradition [see hadîth]; the üsül-â-âfikr [frequently called simply science (of the) U.â] are the doctrine of the “principles” of Muslim jurisprudence, âfîk (q. v.).
1. In the usual classification of Muslim sciences, the *uṣūl al-khrāṣṭ* are generally defined as the methodology of Muslim jurisprudence, as the science of the proofs which lead to the establishment of legal standards. Its existence is justified by the consideration that man was not created without a purpose (ṣūra xxiii. 117) and is not aimlessly left to himself (ṣūra lxxv. 36) but all his actions are regulated by legal standards; as there cannot be a special standard for every individual case, one has to depend on their derivation on proofs. These proofs, according to the view which finally prevailed, are of four kinds: *kurban*, *sunna*, *iǧmāʿ* and *ḥiyāt* (? v.). In the *uṣūl al-khrāṣṭ*, therefore, we are not so much concerned with the material sources of Islamic law as with the formal basis of the individual prescriptions. Thus the four *uṣūl* include in addition to the two material sources, *kurban* and *sunna*, which are regarded from the point of view, not of their substance but of their legal force, the general condition of *iǧmāʿ* and method of *ḥiyāt*, while other historically no less important sources of Muslim law are not recognised. The development of these and other *uṣūl* which did not attain full recognition is somewhat as follows:

2. The logically first and most highly esteemed source of law in Islam is of course the Kurān; there could be no doubt of its conclusive authority and infallibility — in spite of the possibility of attempts to falsify it by the devil (ṣūra xxii. 51; cf. Noldeke-Schwally, *Geschichte des Quran*, i. 100), nor could there be any doubt that it had been handed down essentially intact (cf. ibid., i. 261; ii. 93) — in spite of the Prophet's forgetting several verses (ṣūra ii. 100; lxxxviii. 6 sq). The fact that the Kurān itself describes several of its sections as abrogated (*manākh*); the passage abrogating the older one is called *nawṣī*) by later revelations is not in contradiction to this (ṣūra ii. 100; xvi. 103 sq; cf. Noldeke-Schwally, *op. cit.*, ii. 52 sqq.). It was the task of later interpretation to get rid of the numerous contradictions within the Kurān, which reflect the process of development of Muhammad as a prophet, by harmonising them or in extreme cases to assume that the later revelation abrogated the earlier. It was in no way Muhammad's intention to create a "system" even in its main outlines, which was to regulate the whole life of his followers; the old Arab customary law, which already included many elements of foreign (Roman provincial, Babylonian, South Arabian?) origin, on the contrary remained in force in Islam as a matter of course with its variations adopted to local conditions (Bedouin, Mecca (commercial town), Medina (an agricultural centre)); Muhammad's legislative activity was confined to correcting isolated points out of considerations of religion — for even the modifications affecting social life have a religious basis, and from case to case usually under the stimulus of extraneous happenings. Including the very dealing with questions of public worship and those of a military or political nature, the total number of verses forming what is known as the *ṣūṣa al-ḥārīya* is only about 300—600; but essential parts of the legislation affecting worship, e.g. the ritual of the *qārat*, were not regulated by the Kurān, but simply by example and guidance of the Prophet, and a number of other prescriptions by Muhammad are not in the Kurān, usually of minor importance and not of general application, although having prophetic authority (cf. Noldeke-Schwally, *op. cit.*, l. 260). From the beginning, the prophetic authority of Muhammad has never been doubted, even on matters not laid down in the Kurān; at the same time, however, his actions as a mere mortal were not considered infallible even in religious matters and on several occasions he was sharply criticised. The abolition of certain customs permitted or practised by Muhammad very soon after his death points in the same direction. The Prophet himself made no claim to infallibility: the Kurān expressly states (e.g. ṣūra xviii. 110; xii. 5): "he was merely a man "like others" and sometimes even condemned his attitude (e.g. ṣūra xxi. 1)."

3. With the death of the Prophet, legislative activity through Kurānī revelation and prophetic authority of course came to an end. It was natural that the early calipha should endeavour to guide the Islamic community on the lines of its founder, in consultation with the leading Companions of the Prophet. The guiding principles were to be found in the Kurān and in authoritative decisions of the Prophet not in the Kurān. The endeavour to extend these comparatively narrow foundations led very early to their interpretation being broadened beyond the original meaning and probably to the rise of new traditions. At the same time the caliphs, as heads of their state and representatives of the Prophet, were not to be prevented from starting legislative activity of their own and from sometimes even altering decisions of the Prophet (cf. above). It may be historical that according to tradition Abu Bakr is represented as modelling himself exactly on the Prophet in this connection and 'Umar rather as showing more tendency to interfere and change.

The relationship to customary law continued unchanged, even after the latter had been more than ever exposed to foreign influence as a result of the great conquests in the 'Irāq, Syria and Egypt.

4. With the coming of the Umayyads and the transference of the seat of government to Damascus the circles of the devout in Medina, hitherto the centre, lost all actual influence on the business of government. They therefore began to devote themselves with all the more zeal to preparing an ideal picture of things as they ought to be, in contrast to the actual practice. While in reality the customary law continued to exist and disturbed in the various provinces of the caliphate, and developed in combination with the actual administration of justice — for the Umayyads caliphs down to 'Umar II had in general little inclination to interfere and establish standards based on religion — the principles of Muslim law arose first in Medina and later also in the 'Irāq and Syria. The object of these pious men who at first worked without any thought of theory or method, was to correct and adjust the material of the laws they found in existence according to Muslim religious principles and to systematise it. They took their religious points of view from the Kurān and the material of Tradition, which they recognised as binding; the (real and alleged) sayings and actions of the Companions of the Prophet, of whom as a body they were the successors, had also high authority with them. It was of special authority when a majority of the Companions acted in the same way and the same majority principle did a great deal to cause individual views gradually to approximate to one another. The results of these cogitations were for the most part formulated in traditions and put in
the mouth of the Prophet. This considerable increase in the material of Tradition, from other sources also, again introduced into Muslim law numerous new elements, particularly those of Jewish origin. This resulted in establishing already certain characteristic peculiarities of Muslim law: its character as the interpretation and unfolding of the prescriptions, given in essence at least, by Allah through the Prophet, the denial of the possibility of development of and of legislative activity after death of the Prophet; in contrast to the historical development, the recognition in the usage of the Prophet, the *sumu* at-nabi, as the second main standard standing next to the Kur’an only in position, not in power and authority. It was just because the teaching was based for a very large part on Muhammad’s (real or fictitious) *sumu* that this was regarded as an infallible norm for the Muslim community, a view which was with difficulty read into the Kur’an (e.g. iii. 29; iv. 67; xvi. 46; xxxii. 21; liii. 3) but was distinctly laid down by tradition. The contradictions, which naturally appeared more frequently in Tradition than in the Kur’an, were to be disposed of by the same means as in the latter (cf. above), and also by criticism of the *istihsan* [q.v.], behind which criticism of the subject matter had, it is interesting to note, usually to conceal itself. The more or less strongly islamized customary law was still recognized as having an independent basis, especially on points where it was not at all identical with the *sumu* at-nabi (cf. above). Both *istihsan* and *sumu* of Medina are to him closely connected; his work represents the degree of islamization of the customary law attained in his time in Medina and as is evident from a comparison with the later period— the process was now complete. The great works of al-Shabab were undoubtedly something similar for the *irak*.

6. In al-Shafii’s (d. 204 = 820) we have the founder of Muslim jurisprudence. It is his great achievement that in him legal thought becomes conscious of itself and thus becomes a science, that he argues not only occasionally and ad hoc but throughout and on principle and gives a discussion on the starting points and methods of argumentation in jurisprudence. The important steps in advance which he made in the *ugd* al-*fikha*, based on the results of previous development, are as follows. He finally defines *sumu* as a source of law as the usage of the Prophet, as the *irak* school had already done before him. He further defines the *istihsan* as the view held by the majority of Muslims and uses it as a secondary source of elucidation on questions which cannot be decided from the Kur’an and the *sumu* of the Prophet; he justifies its authority by general considerations and traditions which order adhesion to the community of Muslims and he therefore does not yet know the *hadith* later often quoted: “My community will never agree upon an error”. While the islamization of law had in general been already completed before Malik, al-Shafii did a great deal to advance its systematization. To attain this object, he to some extent abandoned the usual path of legal thought, not the first appearance of this tendency, and if he did not invent the process of *fiyad* (analogy), he considerably developed the principle and applied it extensively. It is essentially the old method of *ra’i* which he adopts here under this less ominous name, but a certain limitation of the process is apparent (among the old representatives of the *Irak* school *fiyad* seems to have been used to dispose of isolated abnormal traditions). Al-Shafii’s further endeavoured to lay down definite rules for its use; he only succeeded to a very small extent however and even in later times, in spite of limitations in method, *fiyad* still had not overcome the vagueness which causes it lack cogent power of conviction. In al-Shafii’s it still seems as synonymous with *istihsan* [q.v.] in the old sense in which the latter as a synonym of *ra’i* means the jurist’s use of his intelligence. Among the representatives of the *Irak* school and also among those of the Hidja, *istihsan* [q.v.] was used as a variety of *ra’i*. It consisted in
diverging from the result properly to be expected by analogy (ṣāha) out of considerations of reasonableness or practical considerations etc. Al-Shāfi‘ī vigorously challenged this process as purely subjective and held that only ṣiṣṭa was valid. Al-Shāfi‘ī in this way carried through a deliberate Islamisation of the šiṣṭa.

7. The development after al-Shāfi‘ī in the predominant school resulted in the āṣūl, summa, ʿijmā‘a and ʿiyas being classed together as the four ʿāṣūl al-ṣiṣṭa, which is only intelligible from their history, and in further developments in detail. Among the latter are the settlement of the mutual relations of ʿurūn and summa: while al-Shāfi‘ī taught that the precepts of the ʿurūn are given greater precision by the summa but the ʿurūn can only be received by the ʿurūn and the summa by summa, it was already recognised in part before and certainly generally after him, that it was possible to abrogate the ʿurūn by summa, which was thus ranked not only equal to but above the ʿurūn; the practical legal results were however hardly affected by this theoretical differentiation. As to the ʿijmā‘a, in later times they were not content with the majority of Muslims, but demanded the general agreement of all scholars living at the same time in a certain period, which was to be binding on all futility, but unanimity in the literal sense was never demanded. The ʿijmā‘a in this sense did not remain merely supplementary to the ʿurūn and summa; but was regarded as confirming them, on the ground of the general conviction of its infallibility, which had developed out of general considerations and found expression in the above quoted ḥadīth (Kufranic passages like iii. 98; iv. 85, 115 are also quoted in support); finally it was even allowed the power of cancelling prescriptions of the ʿurūn and summa, as was actually done for example in the case of the worship of saints and the doctrine of the infallibility of the prophets (cf. above §2). Important sections of Muslim law are based on this ʿijmā‘a alone, e.g. the caliphate, the recognition of the summa of the Prophet as an obligatory standard, the authorisation of ʿiyas etc.; in the last resort, in this view the whole of Muslim law owes its authority to the infallible ʿijmā‘a, which guarantees its correctness and agreement with the true meaning of the divine sources. This conception of ʿijmā‘a is in its essentials already found in Tabari (d. 310 = 923). This is the common orthodox doctrine; only the Malikis define ʿijmā‘a as the agreement, firstly of the Companions of the Prophet, then of the two generations following them (the so-called “successors” and “successors of the successors”), and therefore as the summa of Medina, the home of the true summa (cf. above §5), but grant this ʿijmā‘a the same authority as the others do. Only some Hanbalis and the Wahhabi, as well as the Zahiris, to be mentioned below, limit ʿijmā‘a to the agreement of the Companions of the Prophet, which has resulted in considerable differences in doctrine. The Khārijis (Ikhāṣ) recognised only ʿijmā‘a within their own community and here they demand unanimity. At the same time, there were various divergent views of ʿijmā‘a in the early period. Even after al-Shāfi‘ī’s death his opponents to ʿiyas was raised by Dīwād al-Zahirī (d. 270 = 883) and his school, who rejected all ʿiyas and ra‘y and declared for the interpretation of the ʿurūn and summa in the outward sense (ṣāhib) only; but even they could not get along without making deductions, which they endeavoured to represent as being already inherent in the words of the text (ṣawā‘il). But this school, which survived down to the ixth (xvth) century was not destined to have a lasting influence. We also still find other isolated opponents of ʿiyas and ra‘y, even among the Shāfi‘is, e.g. al-Buhārī (d. 256 = 870) and al-Ghazālī (505 = 1111), who—at least in his mystic period—applies it in practice, but in theory does not recognise it as having equal force with the traditional sources (cf. Al-Ghazali, Zahirīti, p. 182 sqq.); in the end however, ʿiyas won undisputed recognition and the Hanbalis and the Wahhabis as well as the Khārijīs (Ikhāṣ) recognise it. The Shāfi‘is and with certain limitations also the Hanafis use in ʿtiṣṣā‘ (q. v.) a special variety, surer in method, of the usual ʿiyas which is regarded as an independent ʿāṣūl. The Hanafis followed the other māḏhāb in taking over the term ʿiyas but the old ra‘y but in contrast to al-Shāfi‘ī they retained ʿtiṣṣā. The Malikis continue to recognise it, but in general they prefer the process or rather the name ʿtiṣṣā‘ (q. v.), a variety of ʿiyas which decides in favour of what is generally considered best. This ʿtiṣṣā‘ is also found among the Shāfi‘is, who following their master vigorously reject ʿtiṣṣā‘. As a matter of fact, the two processes are practically identical. On account of the arbitrariness with which the results of ʿiyas were often simply thrust aside, when it was considered necessary or simply desirable to diverge from the strict demands of the theory, both methods are disputed by many and have therefore never been generally included among the ʿāṣūl of the Ṣūfī.

The Twelver Shi‘is (Imāmīs) agree with the Sunnis in recognising the ʿurūn and summa as ʿāṣūl of the Ṣūfī; with them however not only the summa of the Prophet is authoritative but also that of the divinely guided twelve imāms, whose infallible authority guarantees the correctness of the law in a similar fashion to the ʿijmā‘a in the Sunni system. For the documentation of the summa the Shi‘is have several works of their own on tradition, which differ materially from those of the Sunnis; in particular all traditions and decisions are rejected which go back to the authority of the first three caliphs before “Ali or in which “Ali appears as their representative and successor. Under the guidance of an imām further ʿāṣūl are unnecessary; during the concealment of the last imām, however, there are still two others which correspond to the last two Sunni ʿāṣūl. But even in this period the school of the Alawis regards the summa along with the ʿurūn as above authoritative and seeks to trace back all decisions to traditions of the imāms, limiting as far as possible the shaddāl deductions, and even demands for the elucidation of each verse of the ʿurūn a tradition relating to it. The school of the Uṣūlī, on the other hand, which enjoys greater prestige as the more widely disseminated, recognises reason (ʿaḥf) as the third of the ʿāṣūl, but disputes the right of ʿiyas (this variation from the Sunnis is however limited to terminology). Lastly the fourth among the ʿāṣūl is the agreement of the majority of jurists since the beginning of the concealment of the last imām. While the summa can arrogate another summa and even the ʿurūn, this ʿijmā‘a can only dispose of traditions, the correctness of the transmission of which it disputes. At the same time, the Shi‘is recognise as secondary ʿāṣūl, ʿtiṣṣā‘, the similar methods of deduction
known as ṣurar and ṣifārī as well as, in the ultimate resort, the choice of the judge between several possible views.

8. Although the ḫāṣiṣ is strongly rooted in customary law and has actually gained official recognition for important elements in practice even against the Qurān and Tradition (cf. above), its fitness for the further development of Islamic law, the rejection of old prescriptions and the assimilation of foreign elements must not be underestimated, as it is as likely from its development to prevent, as much as to encourage, innovations; the numerous foreign elements which Muslim law contains had for the most part entered into it before ḫāṣiṣ had begun to prevail over ṣurar as a whole. On the other hand, ḥiṣār and ṣifār afford the possibility of paying consideration to customary law, though to a gradually diminishing extent in course of time. In places the attempt was even made to place ṣurar, the general usage, as a fifth of the ṣurar alongside of the four generally recognised, even as late as the yah (ṣiḥā) century; in general it is regarded as meritorious not to let the laws derived from the Qurān and Sunna come into conflict with actual practice and to legitimate the latter as far as possible *to escape the danger of sinning* (cf. ṣuruwā, xvi 21); but a general direct recognition of ṣurar, even in a subordinate position, by the ṣurar never came about. The discussion which we find about ṣurar in annas (general usage) and ṣurar (local custom or custom observed for a time only), their relation to the ḫāṣiṣ and their legal authority, are purely theoretical; in the cases in which the ṣurar itself refers to ṣurar or ṣinasi (custom), the reference is hardly ever to legal usages; customary law is not recognised as binding even for the cases for which the ṣurar gives no rule. The view prevailing in the Dutch East Indies for example, of the equality of ṣurar and ḫāṣiṣ (cf. the article ḫāṣiṣ at the end) takes us quite outside of the teaching of the ṣurar which can leave almost all practice to customary law, but not give it a place at all in its theoretical system. Even the later Milliki jurists, especially in North Africa, who have made particular efforts to adapt themselves closely to actual practice, make no exception on this question of principle. However important and natural the influence of customary law and of foreign legal elements in general was in the early period of Islamic law, all the more difficult has been its further advance, especially since the theoretical recognition of the ṣurar in its final form.

9. As the ṣurar had already developed in all essentials before the theory of the ṣurar was established, the elements which led to its origin cannot be given in their correct historical perspective. But even from the point of view of Muslim systematisation, they have for long had a purely theoretical position as regards ṣurar. Only the ṣurrājihā is qualified to apply them, that is to say to derive independently legal regulations from the ṣurar, but according to the orthodox ḫāṣiṣ, ṣifār is long ceased and all jurists are obliged to use the lowest stage of ṣinasi. Many jurists are therefore content, without going deeper into the study of the ṣurar, with the occasional brief notes on them, which most of the ṣinasi books add to the discussion of different regulations. There are however numerous special works on the ṣurar and these form the subject of one of the traditional Muslim sciences.

The Sunnī works on ṣurar deal mostly with, according to the author's point of view, with Ṣurar and Ṣifār as regards genuineness and arrangement for the purposes of ṣurar, the rules - usually given very fully - for their interpretation, according to form and legal substance, also the so-called formal legal categories (cf. the article ḫāṣiṣ), the recombination of contradictions among the sources by harmonising or assuming abrogation, the use of ḥiṣār, dispensation etc. and lastly as a rule with ṣifār and ṣifār. The first work of this kind, which however does not yet fall into the scheme given, is al-Shāfi'i's Rū'idā. Among especially important and much annotated works of a later period are the following: Ḥamād al-Nassāmī al-Ṭurāwīn (d. 1105), al-Waḥshī fī Ṣinā' al-Ṣirāḥ; al-Nasīrī (d. 881), Ṣinā' al-Ṣinā' ilā Maṣūfīat al-Ṣinā' al-Shāfi'i al-Ṭurāwīn (d. 747 = 1348), al-Tasbīḥ, al-Tawāṣṣil, al-Suḫkā (d. 771 = 1369), al-Shāfi'i al-Lawḥāwī; Mulla Khoshaw (d. 885 = 1480), Miḥkār al-Ṣhāfi'i and Miḥkār al-Ṣinā' al-Shāfi'i. The authority of the ṣinasi is the foundation of the ṣinasi and among the ṣinasi it plays a part similar to ḫāṣiṣ among the Sunnis; ṣifār also continues to exist here.

**Bibliography**: The fundamental works for the history of the ṣurar are: Goldscheider, Die Qādīs, vols. 1, 2, 3; Al-Makānī, El., xvi, 70 sqq.; Macdonald, Development of Muslim Theology, p. 65 sqq. gives an older historical view: concise account of the prevailing theory with historical notes are given by Juyb-nil, Handhālād, p. 34 sqq. (Handhālād, p. 39 sqq.) and more fully by Sanhāna, Istīramān, p. 25 sqq.; further literature is also given there. - Lists of the best known Arabic works on ṣurar are given in Ḥadīth Khalīfa, ed. Fligel, i., ii., 483 sqq. and in Ṣawā'īr al-Turāwīn, al-Safāi, ed. Hāmīd, p. 25 sqq.; further literature is also given there. - Lists of the best known Arabic works on ṣurar are given in Ḥadīth Khalīfa, ed. it intensifies its good or evil influences, just as with the Greeks and Arabs. — A detailed account of the part played by Mercury in Arabic astrology, its significance in the zodiacal circle, its conjunctions with the moon and other planets is given by Abü Mašhar, to whose work the reader is referred.

(WILLY HARTNER)

AL-UTBI, ABU NASR MUHAMMAD B. MUHAMMAD AL-DJARKEB, the author of the Kitâb al-Yamminî, was born at Rayî about the year 961. He left his home in early youth and came to live in Khurásân with his maternal uncle Abî Naṣr al-Îbî who held an important post under the Sâmâniids. After the death of Abî Naṣr, al-Îbî served as secretary first to Abî'î Ali Siyûrî, the commander of the army of Khurásân from 378 to 383 (988—993), then for a short time to Shams al-Ma'alî Khâbî b. who was living as an exile in Khurásân, and finally to Subuktîgin, ruler of Ghurâna. He continued to hold this post under Abû Nasr b. Subuktîgin whom he claims to have persuaded to surrender Ghurâna to Mahâmand.

In 389 (999) Sulṭân Mahmûd of Ghurâna sent al-Îbî as a special ambassador to Khurásân to persuade the ruler to acknowledge him as his suzerain, and he accomplished this mission successfully. About the year 412 (1021), al-Îbî finished his famous work the Kitâb al-Yamminî, presented it to Shams al-Kûftâh Ahmad b. Hasan al-Maimandî, the wazir of Sulṭân Mahmûd, and as a reward was appointed to the important post of Şâhibi Barid (Postmaster) of Kanaîj Rastsh. But al-Îbî quarreled with Abu 'I-Hasan al-Baghawî, the governor, and made complaints against him to Abîâd al-Maimandî, the wazir. As a result of the enquiries which were instituted into the matter, he was dismissed in 413 (1022). After this he entered the service of Prince Masûd, son of Sulṭân Mahmûd, and was heard of no more. He died in 427 (1035), or, according to another account, in 431 (1040).

Al-Îbî was the author of many works, only one of which, the Kitâb al-Yamminî, has survived. It is a history of the reign of Anûr Subuktîgin, his son Sulṭân Mahâmand and the contemporary rulers. The style of this work is very ornate and verbose and has always been appreciated in the East. Djarjî Zâdîn, in his Tâbîrî Al-dâd al-Lughât al-Mamandî (VIII, 322), regards its style as superior to that of al-Thâebî's Vatîm and compares it favourably with Hîsl al-Šâbî's Tâbîrî al-Wusârî.
'Uthūr and its commentary 'Fath al-Wakhāl, commonly known as al-Mufrad (Cairo 1285 H) and 'Iyār al-'Uthūr al-Dhāhīnah (M. NāṣIM)

AL-'UTRUSH AND MUHAMMAD AL-HASSAN B. 'ALI H. AL-HASSAN B. 'ALI H. UMAR AL-ADIRAR B. 'ALI ZAIN AL-ĀRūDIM [S. 'ALI H. AL-HUSAYN], both about 230 (844) at Medina of a Khurāsān slave girl, died in Shāhān 304 (beginning of 917) at Amal as ruler in 'Tabaristān, is recognized under the official name of 'Al-NāṣIR AL-KĀMI AS İMĀM BY THE ZĀĪDI, and also by those of Yemen.

Al-'Utrush came to 'Tabaristān in the reign of the 'A'id al-Dā'ī al-Kābīr al-Hassān b. Zāid [see al-Hassān w. Zāid b. Muhammad]; his brother and successor al-Kāṁī b. l-'Jフラ Muhammad b. Zāid distorting him, he endeavoured to found a kingdom of his own in the east, at first with the support of the governor of 'Naṣir-Bū Muhammad b. 'Abd Allāh al-Khādirjū, who took 'Utrush from al-Kāṁī. But the former's actions on 'Utrush and al-Khādirjū threw them into prison in 'Naṣir-Bū or 'Utrush and had him assassinated, which injured his hearing and to this he owes his epithet "the deaf". On his release he returned to al-Kāṁī Muhammad and in 283 or 288 or (according to Abu 'Ishāq Jābāl al-Imām, Muṣāfi al-Tulāysh, Tabaristān 1357, p. 229, 234) not till 289 (900–901) he shared in the latter's defeat at Dāmghān and Raîy among other places. On the death of the caliph al-Mu'taḍid in 289 (902) he came forward again, especially as Muhammad b. Hāriz, who had quarrelled with the Sāmirids, supported him. 'Utrush received a welcome from Ḍā'imūn of Dā'imūn (or his son Wali-Sālim; cf. Jāmāy in Iran, iii. 165 200). The friendship of the Dā'imīs, which dated from the time they and 'Utrush were with al-Kāṁī, was reflected as their attitude to Islām which their ancestor Marzbān had adopted only a century earlier. Several joint undertakings thus came to nothing, 'Utrush recognized the necessity of first of all securing a following of his own and through them the followers of the Dā'imūns. He conducted Islamic missions and 'A'id propaganda from Hawkins among the not yet 'Ummānīs tribes on the coast of the Caspian Sea and in Ghur and also built mosques.

The Sāmīrid Ahmad b. Ismā'il in 298 (910) sent 'Ummānīs b. Sālim to 'Tabaristān with orders to anticipate the foundation of the new state; but a Khurāsān army superior in numbers and still more in equipment was completely defeated by the Dailamites under 'Utrush at Shāhīn in 'Uzājmān in 301 (Dec. 913); many fugitives were driven into the seas; a detachment led by Abu 'Ishāq al-Wafā' al-Shafārī b. Nūf escaped to the fortress of Shāhīn, surrendered to 'Utrush on a promise of pardon but was shortly afterwards, massacred by his general and son-in-law al-Hassān b. al-Kāšīn b. al-Hassān b. 'Abd al-Ra'yīmān b. al-Kāšīn b. al-Hassān b. Zāid b. al-Hassān b. 'Abd al-Tālib b. 'Utrush had in the meanwhile come to Amal with the rest of the army sent for by the terrified inhabitants, and had taken up his abode in the former palace of al-Kāṁī Mahzār. He was able to install his officials from Shāhīn to Sā'im, unhindered by the Sāmirids, because just then Ahmad b. Ismā'il was murdered and his son Nasr had first of all to make his position secure against his family and the Banū Qays. The 'Imām Shāhīn b. Ruqaiyā of the house of Kharmān, which had been very dangerous to the earlier 'Ummānīs, made peace with 'Utrush.

In accordance with the usual experience in the foundation of 'A'id states, the ruler alone was found in getting the numerous relations to work together. As 'Utrush was at least 70 when he entered Amal, and his sons seemed rather incapable, the tension that had formerly existed between al-Kāṁī Muhammad and 'Utrush was now repeated between the latter and the already mentioned general al-Hassān b. al-Kāşīn. The latter broke for a time with 'Utrush, even took him prisoner as one occasion but had to fly to Dā'imūn in face of the general indignation. But equally general was the pressure brought by the notables upon the dying 'Utrush to designate this same al-Hassān his successor and they all once paid homage to his in after the death of 'Utrush.

'Utrush owed his rise not only to the skillful way in which he took advantage of the political discord on the Caspian Sea but also to his unusual intellectual ability. He was also a poet (cf. Brit. Mus. MS. Suppl. 195, iv., and specimens in the 'Itārā, see Rīyād, but he particularly cultivated dogmatism, tales and love tales also Ibn al-Nadim, Fihrist, 3: 281, 293; 4: 497). His name has been preserved indirectly (see Rīyād); he differs from the Yemeni practice in the ritual of burial and minor points of the law of inheritance; he also recognized the revocation of a marriage pronounced three times as successive to three actual divorces, by which he met the custom of the 'Ummānīs which was considerable in the north; one of his sons, Abu 'Ishāq 'Alī, actually joined the latter; and he himself used the form of washing the feet, of course with the general Shī'ī refusal to recognize the rubbing of the covered foot as a substitute for washing; he also showed himself less strict against members of other faiths, which is intelligible in view of his political and missionary aims. A particular Zaidi sect, the Nāṣirīs, was called after him, which was only merged in the Nāṣirīs, which had become predominant in the Yemen, by the Imam al-Muṭhir Abu 'Abd Allāh Muhammad, son of the above-mentioned al-Hassān b. al-Kāshīn. This, however, as al-Dā'ī al-Saghīr, succeeded 'Utrush and was able to conquer Nāṣirīs in 306 (919) through 'Abd al-Ra'yīmān, an old general of his predecessor, and even to send an army against Tus. But he was killed in 316 (928) when going from Raîy to the relief of Amal, which was occupied by 'Abd al-Ra'yīmān b. Shuwarlī b. Dallāmī and Abu 'Ishāq Jābāl al-Merduštī b. Ziyār. His power had always been limited by the sons of 'Utrush: Abu 'Ishāq al-Dībarī b. 'Utrush had taken Amal in 306 (918) with the help of 'Ummānīs b. Sālim, governor of Raîy, and again in 312 (925), on each occasion holding it for a short time. In 311 (924) his brother Abu 'Ishāq Ahmad had entered in his son Abu 'Abd Allāh Husain and his brother and successor Abu 'Abd al-Dībarī had also to fight an anti-'Ummānī, his son Ismā'il, who however was poisoned in 310 (921). In the meanwhile, another rival of Utrush, Abu Fāṭīmah al-Dībarī, had set himself up with the title al-Dībarī al-īthārī and soon after 320 (932) was able to occupy Amul for a time, aided by his policy of taking sides alternately in the
war between the Ziyarid Washqur with the Baydids who were now coming to the front, especially as the Fihrizid al-Hasan and a certain Ustazdar of the Banid's,[not specified] who had once been conquered by the Dagh al-Kahb al-Hasan b. Zaid also intervened.

This little north 'Abid state was continually able to hold its own, although its importance and size constantly changed, among the petty native princes, the Fihrizids, notably Makan b. Kull, and 'Umar Bagdadi the Ziyarid, Ispahbads of the house of Baitun, Baydids and Samaniids, even in spite of domestic troubles. It lasted down to about 8130 (1260), the year of the death of 'Abid al-Talib al-Saghat Vahty b. al-Husain al-Baghzi b. al-Mu'mayd who could not prevail in Dailam against the Assassins; we can hardly reckon in this line the alleged 'Alid dynasty of Kiya-Husain in Gilan from the end of the viiith (xiiith) to the end of the viiiith (xvith) century. 'Abid Talib was the general-nephew of the imam al- Nasir 'Abd al-Talib (see Buhayr) who, born in 340 (951), has given us the most important account of 'Utrush, based on the stories of eyewitnesses, such as his father.

(R. Strothmann)

UWAIS (Sultan Uwaq) was the second king of the dynasty of Dagh (q.v.) or Talik (Ilken, Ilken) who reigned 756-776 (1355-1374).

Uwaq, born about 742 (1341), was the son of Hasan Buzurq (q.v.), son of Husain Gurjan (Kashnian, son-in-law of the Kaha), son of Akbuhg Noyon, son of Talik (Ilken) Noyon (Rahman al-Din: II,-852). Hasan Buzurq's mother was a Mongol princess, daughter of Arghun Khan. Hasan himself married the famous Dilshad-Khatun, daughter of Damakhi- Khatun, son of Copan (Suwaidi) who had previously married Abu Said al-Khatun and on his death in 762 had married a certain amir Sulayman (Khatun al-Siyar). Dilshad-Khatun was famous for her wit and beauty. The visitors used to consult her in affairs of state (ibid.).

Uwaq, according to the majority of historians, succeeded his father who died in 756 (1355-1359) but according to Djalabih, the direct successor of Hasan (d. 757) was Sultan Husain (d. 760) (A man of charming character and a poet). One should probably allow with Markov that Husain and Uwaq had received separate fiefs which were united by Uwaq on the death of his brother.

Baghdad was the centre of Uwaq's activities. At this period Tabriz (q.v.) was held by the Khans.

Kiptak Djafari beg who had come to Adharbajdjan to put an end to the tyranny of Ashraf, grandson of Cahan (cf. Sultan) in the spring of 759 (1358) when the news of Djalabih's departure reached him, Uwaq marched against Akhbiujjik, whom Djafari-beg (or his son Berdji-beg) had left as his lieutenant at Tabriz. Meeting Uwaq near Mount Sisay (I), Minay (I) [probably Saland], Akhbiujjik retreated, first to Tabriz and then to Naqibnawam. Uwaq established his headquarters at Tabriz in the Imamati Raghib. In Ramsam (Aug. 1358) the execution of 47 of Ashraf's amirs (Hafiz al-Siyar: waranari shurb, a palpable error!) alienated the sympathy of his friends who sought out Akhbiujjik and went into the Karabagh with him. Uwaq sent against them 'Ali Pilten who acted with weakness and suffered a reverse. Uwaq had to retire to Bagdad.

In the spring of 760 the Muradhari Musammat of Shiraz marched against Akhbiujjik, drove him from Tabriz and stayed in the house of Khwaraji Shaikh Kadjajah (or Kadjajijah) while Akhbiujjik sought refuge with his father Sadr al-Din Khaajani. On the surrender of Akhbiujjik, Uwaq executed him on the charge of treason.

In 765 (1365), Khwaraji Marjana, governor of Bagdad, rebelled but his resistance was short.

He opened the gates of the city and Uwaq poisoned him but appointed Sadr-Khatun (Kashni al-Siyar) in his place. The Egyptian sources however (Markov, al-Sultun, Buhayr, Nat., MS. st. 673, fol. 49, 53) mention in 767 an attempt by Marjana to secure the assistance of the Sultan of Egypt Ashraf Shabtan by promising to send the khams in his name. The envoy of Uwaq, who afterwards came to Cairo to explain that Marjana was simply a rebel was received cordially. But in the meanwhile Uwaq had disposed of him. The date 767 given by Markov seems in any case to indicate that the rebellion of Marjana had lasted a considerable time. (According to the name source Marjana was blinded).

Uwaq stayed eleven months in Bagdad and then marched west. He took Mawjil from the brother of Baimar-Khwaraji (Turkman of the Kara-Koyunlu tribe), then at Mush he defeated Baimar-Khwaraji and plundered his lands. In the meanwhile Mardin was taken, the amir of which had in vain sought Egypt's help (cf. Markov, al-Sultun, fol. 53).

Uwaq returned via Kara-Kilisiya (between Erzerum and Bayazid) to Tabriz where he heard that the lord of Shirwan Ka'us b. Kailukhan had twice carried off to Shirwan (north of the Kura) the people of Karabagh (Arab) which Uwaq had evidently incorporated in his dominion on the disappearance of Akhbiujjik. Uwaq's general Baimar Rukn-ud-Din married Ka'us in the fortress of Shirwan. Ka'us brought in chains to Uwaq, was exiled to Bagdad but after three months was re-established under the suzerainty
of Uwais (cf. Djalâîrid coins struck at Shirwân).

In 772 (1370) Amir Walt, successor of Tâghâ Tâhir of Astârâbâd (cf. Tâghâ Tâhir), attacked Uwais but was defeated near Kâsî. In 773 Uwais himself took the field against Amir Walt but returned on reaching Ujzân. Amir Walt occupied Sâwâ. In 776 Uwais was preparing to punish him but died at Insârî Rashid on 2 Djamâd I 776 (Oct. 10, 1374).

According to Djalâîrid (p. 261—265), Uwais was so handsome that the people of Baghda'd used to run out in crowds to see him pass. The historians unanimously praise his kindness, justice and courage; he was also a great patron of literature. His chief panegyrist was Sâfâmân Sâwâl'dî from whom we have a series of odes on the principal events of his reign. Uwais himself was a fine calligrapher, draughtsman, and poet of merit. He built a great building, the Djalâîrid Khâna at Tabris (Ṭâhâgâna of Claivijo), probably identical with the Ark of our day (cf. Târîkh).

A scion of a completely iranised family and connected through his mother with the family of Cohan whose romantic adventures are celebrated, Uwais seems to have been of an impressionable nature. We learn of his passion for his favourite Boirâm Sâb and of the public mourning which he ordered on his death. The death of his brother Zâhid, who fell from a roof in a state of intoxication, caused him to cancel the expedition of 773 against Amir Walt. Uwais died of phthisis (dîrâ) aged about 30. He is said to have had a presentiment of his death and to have ordered his own shroud and coffin.

He had five sons: Hasan, Djalâî al-Din Ḥusain, Shâkit' ʿAli, Gîyâth al-Din Abûl-Nâbi, Bayzâd, and a daughter, Tâdû. Uwais wished to give Baghda'd to his eldest son Hasan and leave the throne to Ḥusain. When the nobles expressed doubts as to whether Ḥusain would agree, Uwais is reported to have said: "You know (what to do)". Hasan was therefore put to death on the day that Uwais died.

According to the Muntakhab al-Tawârîkh, the waiz of Uwais was Amir ʿZakâriyyâ and his admir al-umaraʾ Abîl-ʿAqâb [cf. Sulṭân Yâh].

Markov has given a description of 66 coins struck in name of Uwais at Baghda'd, Wâsît, Tâbâriz, Ardâshîr, Khûr, Nakhchivan, Shâbistan, Rûki, Gushnâta, Barâda, Sâwâ, Wâsît (Ṭân), Ujzân (Ujzân), Darâ (Ṭân), Band (Ṭân). The coin of 758 (Baghda'd) bears the title: al-ṣulṭân al-aʿlam al-dâlî; that of 762 (Baghda'd): al-ṣulṭân al-mâmuṭ shâkit Uwais al-Bâdilâ; that of 769 (Baghda'd) bears the name in Mongol. Lane-Poole's Catalogue contains descriptions of coins of Uwais struck at Tabris, Sulânîshá, Baghda'd, Bidâr, Shâkit and Khûr; that by M. Mâjârân contains the description of coins struck at Baghda'd, Sâwâ, Khûr, and Shâkit (the latter dated 766 gives Uwais the title of al-ṣulṭân al-aʿlam al-dâlî).
are found to agree; the Jews therefore believe that "Uzair must be the son of God."

Alongside of this legend we find a fuller one as early as Tabari's commentary on the Qur'an (and frequently later). Israel is oppressed by 'Amael (the Philistines). The learned men bury the Torah, "Uzair lectures and prays in the mountains. One day he meets a tomb a woman (in reality she is an earthly woman) but Duniya, the world) who seems to be lamenting him that fed and clothed her. "Uzair asks her who cared for her before her husband. She replies "Allah!" But, says "Uzair, Allah still lives. The woman then asks who had taught mankind before Israel. "Allah!" replies "Uzair. But Allah still lives, says the supernatural woman. At her bidding "Uzair then consecrates himself and swallows something an old man puts in his mouth namely a glass, like a large coal. "Uzair now announces that he has the Torah within him. He is branded as a liar. He then ties a pen to each finger and writes the Torah. The 'Ulamâ' dig up the Torah and find complete agreement; from this they conclude that "Uzair must be the son of God.

In *R. E. J.* 1904, xliii. 209, I have pointed out that an Arabic apocryphon has survived in these legends which corresponds to IV. Ezra where we are told that God had given Israel lands and instruction but when they sinned he took them away. Ezra is given a goblet full of flaming water. Then his breast swells with wisdom, teaching flows from his heart, and for 40 days on end he dictates to five men (in the Muslim legend they are his fingers) the sacred books (IV. Ezra, xiv. 18—49).

Sura ii. 261 is sometimes explained as referring to Ezra (more often to Jeremiah); "He passed by a city which had been destroyed to its foundations. How shall God quicken this dusty city to life? God caused him to die for a hundred years and then raised him to life and asked: how long hast thou stayed here? He answered: probably a day or less. But God replied: thou hast stayed here one hundred and one hundred years. Look on thy food and drink, it is not corrupt; and look on thy ass; we make thee a wonder unto men; look also on the bones, we raise them and clothe them with flesh."

The following legend is associated with this passage: Nebuchadnezzar slew 40,000 men of learning, including "Uzair's father and grandfather. "Uzair being a child was spared but already he was advanced in the Torah. When he asks whether the town will arise again, God plagues him into sleep for a hundred years. After a hundred years he awakens, his ass is still alive and his food uncorrupted. He appears as a man of twenty among his children and grandchildren who are now greybeards, proves his identity by making a blind girl see, and particularly by restoring the Torah. The original Torah is dug up out of a vineyard and found to agree: "Uzair must be the son of God.

In 606 (Ibn al-'Abīr, xii. 128) Abū Bakr sent Ay-oghmish to dispose of Kōkē who had in the meanwhile taken Rayi, Hamadān and Djalal (Media). Kōkē was killed and Usbek became ma'lūk, with Ay-oghmish as adviser and guardian. In 608 Ay-oghmish came to the side of Abū Bakr and enabled him to take Marāghi [q.v.], but in the end only allowed him to have Adhārbaījān and Arrān (Ibid., p. 196, 197).

Usbek-Atābek. Usbek had probably retired to the north where in 607 (1210) he succeeded Abū Bakr (Ibn al-'Abīr says nothing of this).

In 608 another slave Māngli took the place of Ay-oghmish who was finally slain in 610 (Ibid., p. 194, 196, 197). Māngli took up an independent attitude to his master Usbek. The caliph took the side of Usbek and brought about the intervention of the Atābek of Fārāšā's in his favour. The lands of Māngli were divided and Usbek gave his share to his slave Aghlamīsh (in 612; Ibid., p. 201). It should however be noted that Aghlamīsh said the ādānīša in name of the Kḥwārizmshāh and the latter regarded him as his lieutenant (cf. Nasawi, p. 15).

In 614, the Ismā'īlīān assassinated Aghlamīsh and the Atābek of Fārāšā occupied Rayi and Usbek Iṣfahān. Hearing this the Kḥwārizmshāh 'Abd al-Dīn Muḥammad came to Djalal (Media) and scattered the allies. Usbek withdrew to Adhārbaījān while his dignitaries, the prince of Aḥrār Nasrūr al-Dīn Bāqīfīn (of Georgiān origin) and the vizier Rāhī al-Dīn, were captured. By an arrangement with Usbek the Kḥwārizmshāh left him Adhārbaījān and Arrān, but forced him to read the ādānīša and strike coins in his name (cf. Ibn al-'Abīr, xii. 207; Nasawi, p. 17).

The Mōngol. When in 617 (1220) the Tatars appeared before the walls of Tābrīz, Usbek, who was spending his days and nights in drinking bouts, took the cowardly but prudent plan of paying a ransom for the city to them (Ibid., p. 244). The Georgians, beaten a first time by the Tatars, proposed an alliance with Usbek and the lord of Khīlāt, but the Tatars reinforced by troops whom a Turkīsh slave of Usbek named Aqūh (Aqūhū) had collected for them, frustrated these plans by a new attack on Tābīs [q.v.] and came in 618 for a second time to Tābrīz. Once again Usbek ransomed the city (Ibid., p. 246). When they came to Tābrīz for a third time (Ibid., p. 250), Usbek left for Nakhidawān and sent his family to Khōl.

"He held all Adhārbaījān and all Arrān and in spite of this was the most helpless creature to protect his country against the enemy" says Ibn al-'Abīr (Ibid., p. 250).

In 619 the Rīkēch, who had penetrated into Transcaucasia via Derbend, stirred up trouble in Arrān and later the Georgians, perhaps enraged at the failure of their new offer of an alliance, sacked Balaqəš (Ibid., p. 266). Towards the end of the year (Oct. 1222), we find Usbek again inactive at Tābrīz but he must have had a certain amount of influence, for an amir of Mawjīl put himself under his protection (Ibid., p. 268).

In 620 during a quiet period that followed the withdrawal of the Mōngol trouble broke out in Persia between the son of Kḥwārizmshāh Ghiyāth al-Dīn and his uncle Iṣfahānī Usbek; Usbek, accompanied by his slave Alībek al-Shāmī, marched against Ghiyāth al-Dīn but was defeated (Ibn al-'Abīr, xii. 270). According to Nasawi, p. 76, Ghiyāth al-Dīn, when he had established himself in the 1235, undertook operations against Adhārbaījān (Mārāghi, Uḏjan) and Usbek endeavoured to pacify him by giving him in marriage his sister, the princess of Nakhidawān; on the other hand, Iṣfahānī twice came and pillaged Adhārbaījān (cf. Ibn al-'Abīr, xii. 251).

In 622 (1225) the Georgians set out from Tābīs against Adhārbaïjān. The expedition was destroyed in a battle. The Georgians were preparing to avenge this reverse when suddenly came the news of the arrival of Djalal al-Dīn at Marāghi and again the Georgians sought an alliance with Usbek.

Arrival of Djalal al-Dīn. Before the approach of Djalal al-Dīn, Usbek withdrew to Gūndāt while a Kḥwārizm commander was admitted into Tābrīz. On the 16th of Rašd 622 (June 34, 1225), Djalal al-Dīn occupied the town.

During the absence of Djalal al-Dīn in Georgiā, a plot was hatched at Tābrīz to bring back Usbek, in which so important a man as Sha'in al-Dīn Tughrift took part, but Djalal al-Dīn arrived in time to check it. The Kḥwārizmshāh dealt Usbek a blow, which he felt deeply, by marrying his wife, the daughter of Tughrift. II. Legal authorities were found to bring grounds for a divorce between Usbek and the princess, but the scandal was considerable. The princess was afterwards neglected by Djalal al-Dīn and she finally appealed to the Aybīd Malāh Ahrāf and the latter in 624 sent an expedition to Adhārbaījān which brought the princess to Khīlāt (Ibn al-'Abīr, p. 307; Nasawi, p. 154).

Gandā also was lost to Usbek and he spent his last days (622—1225) in the fortress of Allindia (cf. Minorsky, Transcausia, in J.A., 1930, July, p. 93) overwhelmed by his misfortunes and humiliations (cf. Nasawi, p. 119; Dīwānī, ii. 127).

With him ended the rule of the Atābeke descended from Hedegī (Eghīdī). Usbek left one son whose name seems to have been Ḥīlār Ahrāf (Nasawi, p. 168, contrary to the Rūbild al-Sudur, p. 393, where he is called Tughrift), but he was generally known as Kūflī ("the silent") for he was deaf and dumb (cf. Nasawi, p. 129—130; Dīwānī, ii. 248).

Usbek is very severely judged by the historians. Ibn al-'Abīr, deprecating from his usual judicial calm, returns several times to the charge (xii. 244, 250, 267, 283) and accuses him of being devoted to wine, good living and games of chance (al-faṣār al-i'talif, ou the game of "agg") The Atābek led an indolent life and four months never left his home (cf. also Yākūn, s.v., Urmiya, p. 219). This gloomy picture must have been a contrast to the hopes which at this time Muslims were placing on Djalal al-Dīn who, however, was by no means free from vice in his private life (Nasawi, p. 186,
In his youth, Uzbek had taken part in several expeditions, but his forces were insufficient to meet the attacks of serious (the Georgians were then at the height of their power; cf. 71823) or redoubtable enemies (the Mongols and the great warrior Khilji al-Din).

Ibn al-Athir, ii. 283, mentions at Tbilis a kiosk built at great expense by Uzbek. The evidence of this hani lived Attabek attracted poets and artists. Uzbek's visit to Khabilt al-Din was a great patron of letters (Nasawi, p. 162–163 and the conclusion of the Marwani-nama).

(2) UZBEK HASSAN, a ruler of the Turkoman dynasty of the Al-koyunlu (the founder of the dynasty was Bayraman), prince of Divyar Bahr from 533 and then (872–882) sovereign of a powerful state comprising Armenia, Mesopotamia and Persia. The stature of Hasan Beg b. Ali Beg b. Kara Othman (see Kara Iski, reading uncertain), earned him the nickname of Uzun (see the image).

The reign of Uzun Hassan is very important but not well known.

Rise of the Turkoman tribes. The original seat of the chiefs of the house of Bayraman and of their Turkoman tribe "of the White Sheep" (Al-koyunlu) was in Divyar Bahr (from before the period of Timurid). From there they spread to the west, north and east. At first, the chief rivals of the Al-koyunlu were the Kara-ko-yunlu Turkomans and this rivalry was accentuated by religious differences, for the Al-koyunlu were Sunnis and the Kara-ko-yunlu Shiites (and extremely heterodox).

Kara Othman, an adventurous and energetic individual, died in 838 (1434–1435). His son Ali Beg spent his reign fighting with his brother Hamza against whom he sought the support of the Ottoman Sultan Murad II and Sultan Cajmuk of Egypt. After the death of the two brothers, Divyar Bahr, son of Ali, resumed the struggle against the Kara-Koyunlu but offended his brother Uzun Hassan, his uncle Ghazi Beg [whom v. Hamner, i. 500 calls Hassan] and the governor of Erzinjan, Gharib Arslan b. Pir Ali. In spite of his quarrel with Divyar Bahr, Uzun Hassan defeated his two adversaries and then conquered the western principalities of Asia Minor. The princes of Karaman [q.v.], gravely threatened by the Ottomans, endeavoured to enter into an alliance with their eastern neighbour Uzun Hassan. On the other hand, Uzun Hassan became involved in the affairs of the empire of Trebizond, which was then almost at its end. In 1458, the last emperor of Trebizond, David, gave to Uzun Hassan the daughter of his brother and predecessor Kalo-loannas, named Catherine, in marriage (in Europe she is more often called by her title Despina; cf. the Venetian travellers). Trebizond was closely linked with Georgia, while Venice and Rome were closely watching events in these two Christian states. The Muslim sources entirely neglect this complex of international political interests (cf. W. Miller, Trebizond, the Last Greek Empire, London 1926; Unzepanek, Ocherki po istorii Trujan. imperii, Leningrad 1929).

The embassies sent by Uzun Hassan to Constantinople in 1457 and 1460 revealed to the Sultan
his rival's ambitions (cf. v. Hammer, i. 464-466). Very soon passing to deeds, Usun Hasan took by surprise the fortress of Köyulu-i-Hasar (or Kayulu-i-Hasar) on the Kilkis-su above Nîskâr and sacked the suburbs of Toğat and Amasía (cf. Münêşidja-i-bâsh, iii. 375).

Having disposed of the Işendîyâr-oghlu (q.v.) of Sinope, Muhammad II turned his attention to Trebizond and first of all to Köyulu-i-Hasar. Usun Hasan concentrated his forces near Kemâkkh but the detachment sent into the mountains of Mountsirr (Sa'd-al-Din, i. 476; 1 Kâfî-i Mnâzî) was defeated by Köyulu-i-Hasar. Usun Hasan then sent his mother to negotiate with her captor; she8r, her story, and the capture were turned towards Bâğhzar-dagh (east of Erdâqisân, between the Kilkis-su and the Euphrates). In spite of the renewed appeals of Sûrâ-i-Kâtûn (the sultan called her "mother") that said that Trebizond belonged to her daughter-in-law, the town was taken in 865 (1461) and the Cinnonei dispersed and exiled. A portion of the treasures taken in Trebizond was given to Sûrâ-i-Kâtûn (Aşhâb-pâshâ-zade p. 159-160; Sa'd-al-Din and Münêşidja-i-bâsh, iii. 376).

The peace was of short duration, for according to Münêşidja-i-bâsh, iii. 160-161, Usun Hasan retook Köyulu-i-Hasar and advanced as far as the environs of Sîvak but the Ottomans defeated those of his troops who had entered Asia Minor. Usun Hasan sent to Constantinople Kehrşid Beg to summon the Timurid princes and ask the Sultan to renounce his claims on Trebizond (17). In view of the circumstances (işbir-ü askar) the request was granted (18) and Usun Hasan returned to Erzincan and then to Bâghhzar-dagh. (In this part of his story, Münêşidja-i-bâsh seems to give in somewhat different form the events of 1461.)

Death of Dîhân-i-Shâh and of the Timurîd Ablî Sa'id. Usun Hasan very soon achieved brilliant successes. In 871 (1466-1467) his rival Dîhân-i-Shâh of the Kara-Koyulu, who at this time held all Persia, marched on Diyar Bakr (on his plans cf. his letter to Muhammad II, in Feridân Bey, l. 273). Usun Hasan collected troops and received reinforcements from Mârdân. On 14th Rabi'I, 872, Dîhân-i-Shâh had reached Mûsîd and Çapshâm. Here his advance-guard was defeated by Khalîl, son of Usun Hasan. Dîhân-i-Shâh, who, on account of the excessive cold, had sent most of his troops home, went back to Kight, whence he wanted to reach Erzincan and the valley of Bûl-kul (Kilkis). On 13th Rabi'I, 872 (Nov. 11, 1467), Usun Hasan attacked him unexpectedly and Dîhân-i-Shâh lost his life while trying to escape. The field in the east now being open, Usun Hasan began the conquest of the lands which had been left without a master. He went via Mûsîl to Bâghhzâh, which he besieged for 40 days, but in Adharbâjûdâhe, the son of Dîhân-i-Shâh, Hasan Alî, had assembled a large army (Hâbbî al-Siyar, iii. 234: 180,000 men) and invoked the help of the Timurîd Ablî Sa'id, who set out from Khurâsan in the month of Şabân 874 (March 1468) and appointed governors for the whole of Persia (19). As a result of treachery on the part of certain amis of Hasan Alî, his army quartered at Marand broke up and Usun Hasan seized the opportunity to advance as far as Karabâgh (q.v.). In the meanwhile in spite of the protestations of friendship by Usun Hasan, who recalled the loyalty of the Ağ-Köyulu to the Timurîd, Ablî Sa'id had reached Mûyân but was caught there by the approach of winter. He thought of spending the winter in Karabâgh, out of which Usun Hasan was to be dislodged, but his march to the Araxes was disastrous and at Mahâmâdshâh (cf. Muğâs) he was blocked by Usun Hasan. The negotiations conducted by Ablî Sa'id's mother, however, came to nothing; he took to flight but was captured on 16th Rajab 873 (Feb. 11, 1469). Two days later Usun Hasan seated on the throne (to emphasise his accession?) received the prisoner kindly but on Rajab 22 Ablî Sa'id was handed over to his rival, the prince Yâdîgâr Muhammad b. Sultân Muhammad b. Ebrûshû, who put him to death. Ablî Sa'id's amirs were put under the command of Yâdîgâr who, supported by Usun Hasan, began the struggle against Hasan Balîkara. The latter was temporarily driven from Herât (6 Muḥarram 873) but the exactions of the sons of Usun Hasan (Khağli-i Olang, Khâtâb and Zeynûl in KhâshÎan) provoked a rising against Yâdîgâr, who was deposed and put to death by Sultân Usun Hasan Balîkara.

After the disappearance of Ablî Sa'id, the Timurîds of KhâshÎan remained a purely local dynasty while Usun Hasan's deputies occupied the remainder of Persia, including Kirmân, Fars, Kûshîstân and Kerdîstân (cf. the valuable details on the distribution of the fields in the letters of Usun Hasan to Muhammad II: Feridân Bey, i. 275 and 276; cf. Hâbbî al-Siyar, iii. 330). The Kara-Koyulu Usun Hasan Alî had retired to Hamâshîn but was surprised there and killed by Usun Hasan's forces in 873 (1468) (cf. the History of the Kâşîs, ill. Nat. MS. Pers. N. 174, fol. 16v). About the same time Bâghhzar-dagh was also occupied by the great amir Khâghli-beg, governor of Mûsîl (cf. Feridân Bey, ii. 276).

After these great successes, it became evident that Usun Hasan alone in Asia was strong enough to bar the Ottoman advance and the enemies of the latter, the rulers of Kanmân and the Christians, particularly the Venetians, sought to exploit this new power.

Venetian policy. On Dec. 2, 1465, the Venetian Senate had adopted the plan of an alliance with Usun Hasan and L. Quirini was sent to Persia with this object. On March 13, 1464, the first ambassador from Usun Hasan (a certain Mâmensaheb?) arrived in Venice and spent six months there. In 1465 Khâêm Hasan (?) arrived with a letter from Usun Hasan. The negotiations were interrupted for some time but the conquest of Euboea (which the Venetians had held for 264 years) by the Ottomans in 1469-1470 threw them into consternation. In Feb. 1471 Quirini returned from Persia with Usun Hasan's ambassador Mirath (Muhpûd) while another Persian representative arrived at the Vatican. It was then that the Venetian Senate sent to Persia the noble Caterino Zeno, who through his mother was a nephew of Despina Caterina, wife of Usun Hasan. On April 20, 1477 Zeno was in Tabriz. In the same year Hâddîl Muhammad (Athânumâne) came to Venice with a request for arms and munitions. Giuseppe Barbaro was then sent to Persia to take to Usun Hasan six large mortar and guns, 6000 cannonballs (şînâkû), matchlocks (şînâkşû), and munitions; 2000000 shields with their officers accompanied the consignment. In Barbaro's secret instructions (of Feb. 11, 1473), it was laid down that Venice would never conclude
peace with the Ottomans until they had been forced to renounce in favour of Persia all claims on Asia Minor as far as the Straits. Barbaro was delayed in Cyprus where he took part in the operations of the Venetian fleet (commanded by P. Morencigo) which on the appeal of the princes of Karaman had occupied Selyke and two other points on the coast.

In the meanwhile Zeno was active in Persia and according to the European sources (Jorge, ii. 164), the nephew of the last Comnenos, who had sought asylum with Uzun Hasan, had invaded the region of Trebizond.

Invasion of Asia Minor. The Karamanlaks were working alongside of the Venetians to force Uzun Hasan's hand. On the appeal of Piri Ahmad, Iskâr's successor, Uzun Hasan equipped an army which was placed under the command of the vizier 'Omar Beg b. Bektaşı (the Ambarci Sultan Nizamüzzazâ of Zeno, p. 16) and Uzun Hasan's cousin, Yüsufa-mirza, and which, according to Angeliolelo, p. 77, numbered 50,000 men (Zeno, p. 18: 100,000). These troops advanced from Dyâr Bakr on Tokat, which they sacked and then on Kaisariya, where, as Sa'd al-Din says, "they revealed their Tartaroman character." Caterino Zeno, p. 18-19, was an eye-witness of a part of these operations. (The attempt to take Biza from Egypt is perhaps connected with the same expedition).

After some time 'Omar Beg returned to Dyâr Bakr while Yüsufa-mirza overran Karaman and Hamid.

Resumption of the war with the Ottomans. Sultan Muhammad II was gravely concerned with these events and with this diplomatic activity of which he was certainly aware (cf. Feridun Bey, p. 287 and Ibn Ilyas, ii. 145). Uzun Hasan's letters assumed a more and more aggressive tone (cf. Feridun Bey, i. 278 and the humiliating title of 'inşar ma'ale' was given to the sultan in them; and p. 278: Muhammad II's reply in which he addresses familiarly the 'sar-âd-i wa'yam'). In autumn 877 (1472) the Sultan crossed from Constantinople over to the coast of Asia, but was held up there by the cold season. But by 11th Rabii' I (Aug. 19, 1472) the prince Mustafa and the beglerbegi of Anastolos Isidore Pasha, who had a force of 60,000 men under him, destroyed the Turkmans in the district of Krtelli (west of Konia).

The Sultan set out in the month of Shawwal 877 (March 1473). His army numbered 100,000 men in all (cf. Sa'd al-Din, i. 529 confirmed by Angeliolelo, p. 79-80, who writes as if he were in the Ottoman army). The famous akbaft [q.v.] ʿAl-Miḥrikül-oghlu [q.v.] sent with the advance-guard sacked Kemâh and took prisoners the Armenians of this region.

Uzun Hasan, who had arrived in the region of Erzincan at the end of July 1472, had established himself on the hils on the left bank of the Euphrates and when Khâis Murad Pasha rashly crossed the river, he surrounded him and defeated him. Khâis Murad was drowned in the Euphrates and the total losses of the Ottomans rose to 12,000 men (Angeliolelo: Caterino Zeno who was in Uzun Hasan's suite gives Aug. 1, 1473 as the date of this first encounter. The battlefield was in the district of Torçan (above Erzincan); the low ground on the Euphrates which Khâis Murad (Angeliolelo) wished to utilise began at the level of Pekerdî. Sa'd al-Din, i. 535 is not explicit but according to Angeliolelo (and Zeno), the Ottomans were ready to abandon the campaign. They left the valley of the Euphrates and leaving Balıkbûr on the right (towards the N.E.), took the road northwards towards Trebizond, evidently with the intention of turning there to the west. But while the Ottoman army was in the canton of Üç-agîftî (probably to the north of the mountains which separate Erzincan from the valley of the Kilkîl-su), Uzun Hasan's troops appeared on the heights of Otük-belî (a mountain which separates the Euphrates valley from the sources of the Coruk) on the right flank of the Ottomans. The latter accepted battle and on 16th Rabii' I, 878 (Aug. 12, 1473) (according to Zeno 10th Aug. 1473) routed the Ak-Koyunlu. The Sarâgâ of Uzun Hasan, Kâsîr Ihsân (a Christian?; according to Zeno, there were Georgians in the Ak-Koyunlu army), fell on the battlefield as did Uzun Hasan's son Zeneîn. Uzun Hasan himself took to flight, but: it was not so precipitous as Sa'd al-Din would have it, for Zeno's account of Aug. 18 is dated from the camp of Uzun Hasan, four days from Erzincan. In any case the Ottomans, thanks to their firearms (Zeno), gained a brilliant victory. The artificery and exports captured were taken to Constantinople. The Kârâ-Koyunlu mobilised by Uzun Hasan secured their liberty; the remainder of the Turkmans were put to death (ṣufî-i ʿalem) by order of the Sultan. Dârîb-Beg, commander of [Shahîn:] Kara-Hasan on the Kilkîl-su side Koyunlu-Ihsân, bearing the defeat of his master, handed over the fortress to the Ottomans. On the advice of the grand vizier Mahmûd Pasha, who explained the difficulties of keeping the territories still to be conquered, the Sultan refrained from pursuing Uzun Hasan, but later regretted this decision and the grand vizier lost his office (Sa'd al-Din, i. 541-544).

Uzun Hasan lost no appreciable territory by this defeat, but the moral effect must have been considerable. After the battle, Uzun Hasan wrote to Venice (Berchet, p. 375) that he was going to return to the attack ("cavalcheremo adesso a l'Ottoman") and at the same time sent Caterino Zeno on a mission to plead his cause with the European governments. The Polish and Hungarian ambassadors were sent back with Zeno.

The Venetian Senate, which always attached great importance to the alliance sent to Persia the secretary P. Ogniben Barbaro, leaving at Rhodes the representatives of the pope and of King Ferdinand of Sicily, then set out and arrived in Tabriz on April 12, 1474. Lastly a new envoy, A. Contarini, left Venice on Feb. 13, 1474, arrived at Tabriz on Aug. 4, 1474 and at Isfahan on Nov. 4.

We also know that at this time the friar Lodovico of Bologna was in Persia, who said he represented the Duke of Burgundy. But on this occasion the ambassadors could obtain nothing definite out of Uzun Hasan.

In the meanwhile Uzun Hasan had gone to Shirâz to put down the rebellion of his son Oghurlu Muhammad. On his return from Shirâz he took leave of Contarini (April 26, 1475) who saw a review of his troops (25,000?) but said that the expedition against the Ottomans was postponed to a later date. In 886 the plague wrought great havoc in Persia and Uzun Hasan's troops had to take the field against his brother Uways who was defeated and slain at Ruîh (Ibn Ilyas, ii. 160). Very soon the Venetians recognised the futility of their hopes and less than a year after
the death of Urn Hasan signed a peace with the Ottomans (Dec. 1478). Relations with Georgia. According to Münzeddjim-bashi, Urn Hasan thrice invaded Georgia, in 871 (1466), in 877 (summer of 1472) and after his defeat by the Ottomans. According to the Dižbən-dərə this last expedition took place in 881 (1476–1477). Barbaro (p. 90) who was an eye-witness, took part in the negotiations with the Georgians. The Georgian sources of the 18th century are very confused (Bremond, Histoire de la Géorgie, ii/1, 62, 249). The King of Kharthlia, Constantine III (1469–1503) seems to have utilised the support of the Ak-Koyunlu against his rivals Begrat of Imeretia and the Attabeg of Akhal-taškhe (Qurkware < Korkora).

Relations with Egypt. The frontier between the original sief of Urn Hasan (Diýar BAKr) and the lands of the sultans of Egypt lay roughly along the bend of the Euphrates. The Egyptian historians alone (used by Welz, Gesch. d. Chul., v.) tell us of the extensive relations between the Ak-Koyunlu and the Burdi Mamluks. The rivalry with the Ottomans forced Urn Hasan to deal very tactfully with the ruler of Cairo (we have references to them from 866 = 1465) but on the other hand, he had to seek an exit to the Mediterranean to be in contact with the Venetians. The lands on the right bank of the Euphrates, belonging to the rulers of Egypt and Syria thus formed an impediment to him and Urn Hasan endeavoured to round off his lands at the expense of the Mamluks.

In 868 the Kurds who had seized the stronghold of Gargar (on the right bank of the Euphrates S.E. of Malatya) sent its keys to Urn Hasan who in 886 (1485) restored Gargar to the wall of Aleppo but at the same time compensated himself by taking Kharptar (then occupied by Arabši Dumlad) and by ravaging Abulastain [cf. ALIBXAN and IHU 'L-KADIR].

In 877 (1471) Kähki [q.v.] and Gargar were occupied by Urn Hasan’s troops but the amir Yeşbek al-Dawdār sent by Kəšt-baý [q.v.] drove the Ak-Koyunlu out of Bina (cf. Ibn Iyās, ii, 140–144 and Rehmsch, sub anno 1783 [1471]). The Ottoman ambassador sent to Cairo stirred up feeling against Urn Hasan, the ally of the Christians, but the Kəšt-baý acted prudently. The amir Rustam and the kâd Ābdul b. Wadjdin who were leaders of the İrāk kəšt-baý in 877 (1473) succeeded in getting the kəšt-baý named in Medinas in the name of al-mawāl al-Ūnān al-Ṭawfiq kəšt-baý al-bərəmā, but the Amir of Mecca, Muhammad b. Barrakāt (cf. iii, p. 514), arrested Rustam and his companion and sent them to Kəšt-baý, who six months later liberated them “to please Urn Hasan” (Ibn Iyās, ii, 145–146). In 882 (1482) Muhammad Beyg from his father was supported by the Aleppo troops but the latter suffered a severe reverse (ibid., ii, 152). In 882 Kəšt-baý visited the line of the Euphrates and re-established the situation.

Death of Urn Hasan. Returning from Tiflis Urn Hasan fell ill and at the age of 54 died at Tabriz on the eve of the feast of Ramadan in 882 (night of Jan. 5–6, 1478), which agrees exactly with Barbaro’s statement, p. 92: “The Eve of Epiphany.”

The historians (Hābbi al-Siyar, iii, 330; Dižbən-dərə; Münzeddjim-bashi, iii, 165) praise his justice and piety. He created many pious endowments (khašārati wa-hašārati). On his mosque in Tabriz cf. the article.Tabriz. The Allah-i Hašzi of Dawānt is dedicated to Urn Hasan (cf. Rice, Catalogues, p. 443b). The astronomer Ali Kâşi lived at the court of Urn Hasan and was sent as ambassador to the court of Constantineople (Rice, Catalogues, p. 456; Münzeddjim-bashi, p. 164).

The family. The blood of the Ak-Koyunlu princess was considerably mixed. The mother of Kâm Othman, to begin with, was the princess Maria of Trebizond (cf. the Chronicle of Michael Panaretos, ed. by Palmer). Despina, whom Urn Hasan married, when he was thirty-four, was certainly not his first wife and in 1471 when her nephew Catarino Zeno visited her, she was living at Kharptar far from the court. She had remained a Christian and was buried in a church of Diýar Bakt (Barbaro, p. 84). According to Angiolello, p. 73. Urn Hasan had one son and three daughters by her; the son (Jacob?) is said to have been strangulated by his brothers after the father’s death (l). Despina’s daughter Martha (whom the Sīrāt al-nasab-i şāfa‘iyeh, Berlin 1843, p. 68 calls Bāqī-Ak; Hābbi al-Siyar: Haulma Begi Ak; and Münzeddjim-bashi: ‘Abdūl-bən Begum) was given in marriage to Shaikh Haldar of Ardebol and became the mother of the Safawid Shīh Ismā‘il I (the mother of Shaikh Haldar, Khadjīd-Begum, was the sister of Urn Hasan).

The oldest son of Urn Hasan, Muhammad, was the son of a Kurd amm waḥdat (cf. Ibn Iyās, ii, 160; Catarino Zeno, p. 36; Contarini, p. 145). In 879 (1474) after a rising in Shirāz, he took refuge for some time with Sultān Ḥāyāzid, but was finally killed in Persia by his father’s orders (Ibn Iyās, ii, 39).

Urn Hasan’s principal wife (mohād ‘ayyā) was Sālātīk-Shāhī-Begum who played a very active part in the government (cf. Tarikh-i Amīn, fol. 198). Her sons were Sultān Kha‘lil, Yaḥī‘, Yūsuf (and perhaps Mādhil). We do not know the name of Zeinat’s mother.

Urn Hasan’s visitors were Shams al-Dīn Muḥammad b. Sayyid Ābdal, Burhān al-Dīn ‘Abd al-Hamīd Kīmānī and Mādhil al-Dīn Shīrāzī (Hābbi al-Siyar, iii, 330).

Bibliography: According to the Hābbi al-Siyar, a contemporary of Urn Hasan, Mawānā Abd Bakr Thīrān, had written his history. This rare work, inaccessible to Khodāmī, may have been used by Münzeddjim-bashi among whose sources (cf. v. Hammer, G. O. R., vii, 549) is a Tarikh-i Bayānāriyā. The latter may be identical with a Kītāb Diyyūrākāriyā in which, according to the Tarikh-i Amīn (fol. 10), the ancestors of Urn Hasan were given in detail. ‘Abd al-Kaţār, Mātī’ al-Sā‘īn, is still in manuscript; Fadl Allah b. Rūshābah, Tarikh-i Amīn, Bibl. Nat. Paris, MS. Pers. N° 101 (history of Ya‘kūb b. Urn Hasan, with some notes [fol. 66–69] on Urn Hasan to whom the author gives the title of ḫābī-sīrān); Khodāmī, Hābbi al-Siyar, Teheran 1271, iii, 330 (very short paragraph) and p. 195–237, 237, 252 and 359 (the celebrities of the period); Ibn Iyās, Tarikh-i Mīrāj, ii, Cairo 1311; Ābdal al-Charkh, Qāzinār-dār, Brit. Mus. MS, Or 141 (love to Muhammad Khān Karawī the use of the copy of this MS., fl. 1876–1906, history of the Ak-Koyunlu with valuable details; the author’s grandfather was
the kült muʿaṣṣar (see) in the suite of Uzun Hasan in the campaign of 851 in Georgia; 'Ashqā-pāshā-kâle, Taʾrīḵ, Stambul 1832; Saʿd al-Dīn, Tawqīr at-Tawālīf, Constantinople 1279, 467–484 (capture of Trebizond), p. 521–544
with Uzun Hasan, a few meagre facts drowned in rhetoric; Džumānī, Taʾrīḵ, still in MS. (cf. Bahinger, G. O. P., 106) was used by v. Hammer; Müœeddjemb-dāgh, Sefīr al-ʿUṣūr (Turkish abridgment of the Arabic original), liii. 154–167 (numerous unedited details), liii. 337 and liii. 387; Ferhān Sīyāh, Minnas al-Tawālīf, Stambul 1274, l. 274–288 (very valuable documents and of undoubted authenticity); Chalcedonians, Bonn 1843; p. 166–168 (very confused data regarding the relations of the ‘Amrūsāt→ = Al-Kūyūnīl with their neighbours), 461–497 paean (the correspondence between Despina and the Comnenoi taken to Constantinople was the pretext for their execution); Dacca, 339, details on the embassy of 1457; Behnsch, Keram. scule X, in Memogstia geoturam liber, Breslau 1858 (curious details).

(V. MINORSKY)

Al-ʿUZZĀ, an old Arabian goddess, whose name means "the Strong, the Powerful". She was especially associated with the Ghūṭāf (cf. ʿAbd, i. 296) but her principal sanctuary was in the valley of Nakhlā on the road from Tārif to Mecca (cf. ʿAbd, iv. 765 sqq.) to which Hasan b. Ṭabīb (ed. Hirschfeld, xiv. 3, where nakhlā is to be read) refers. It consisted of three samara (acacia) trees in one of which the goddess revealed herself. It also included the sacred stone (Wilāla, trnsl. Wellhausen, p. 315) and the so-called Ghūṭāf, a cave into which the blood of animals sacrificed was poured (Ibn Hīfīm, p. 556). There are also references (e.g. Ibn Hīfīm, p. 839) to a "house" (Wilāla, trnsl.) which Wellhausen takes to be a confusion with another sanctuary of al-ʿUzzā. From these centres her cult spread among a number of Beduin tribes, the Khurāt, the Ghambam, the Khirba, the Dākhīf and especially the Kūrājīl, among whom she gradually acquired a predominant position. Here she formed with al-ʿLāt [q.v.] and Manīt [q.v.] a trinity in which she was the youngest and came in time to overshadow the others. The Meccans called the three

"Allah's daughters", which produced a vigorous polemic from Muhammad after he had retracted a compromise [see Mūhammad]. The way in which ʿUṣūr and al-ʿLāt are several times mentioned alone (Tabari, l. 135; Ibn Hīfīm, p. 145, 206, 721, where Wadd is also mentioned). When in the year 3, Abū Sufyān set out to attack Muhammad he took the symbols of al-ʿUzzā and al-ʿLāt with him (Tabari, l. 1359). That of the two al-ʿUzzā was the more important as the patron deity of Mecca is shown from Abū Sufyān's war-cry: al-ʿUzzā is for us and not for you (Tabari, l. 1418; cf. on the other hand: ari habal! Ibn Hīfīm, p. 582) and the same thing is seen in Ibn Hīfīm's poem, p. 145, where Zaid b. ʿAmr talks of "ʿUzzā and her two daughters", if by them are meant al-ʿLāt and Manāt.

Outside of Arabia proper, 'Uzzā was worshipped especially by the Lakhdīms of Ḥira. Manūḥīr IV swears by her (Kūbih al-ʿAṣān, ii. 21, 3 from below) and according to Zanbīn, p. 116, a Lakhdīm prince 'Nuṣān sent men to her so that she might settle a dispute. Her worship here had a particularly cruel character. Manūḥīr IV sacrificed to her 400 captured nuns and on another occasion a son of the Ḏafādī Ḥarthī, whom he had taken prisoner.

The name 'Uzzā is also, although rarely, found among the Syrians. As a rule, they use instead the name Kūbihī the "female" star, which they, like the Jews, apply especially to the morning star. It agrees very well with this that the Saracen who stormed the Sinai monastery according to Nilus wanted to sacrifice the young Theoloumis to the morning star. The nature of 'Uzzā could be defined in this way but the question arises whether we would yet have the true Arab conception of her and whether some syncretism had not taken place in the frontier lands. The same question is raised by the identification of 'Uzzā with the "Queen of the Heavens" (Jer. vii. 18; xlv. 17–19 in Isaac of Antioch, Ṣafā, ed. Bickell, l. 210, 220, 244).

This name occurs among the Syrians and the sacrifice of the women upon the roofs mentioned by Jeremiah is known among the Arabs according to Isaac, and the baking of cakes in honour of the goddess could also be proved to have existed among the Arabs (see also Wellhausen, Reste, p. 41). But this may all be due to foreign influence (as just the word kamsūnūn used by Jerusalem goes back to the Assyrian kamsun connected with the worship of Istar) so that the true Arab significance of al-ʿUzzā still remains uncertain.

After the taking of Mecca, Muhammad sent Khālid b. al-ʿAlābī to the sanctuary of al-ʿUzzā to destroy it. According to Wākidī, the last priest was 'Alābī b. Nāṣr al-Sabāšānī, according to Ibn al-Kalbī, Dubāyih b. Ḥarīm. Her cult disappeared after this as did the numerous proper names, combinations of al-ʿUzzā, while the masculine counterpart 'Abd al-ʿArīz remained because 'Arīz was one of the names of 'Allāh. But Doughty's statement that the Arabs still seek the help of the three goddesses in cases of illness is therefore very interesting [see AL-LĀT].

VALENCIA, Arabic Balantium, a town in Spain, the third in size as regards population, which is over 250,000, lying on the east of the Peninsula, 3 miles from the Mediterranean and from its port, el Grao. It is connected with Madrid by 340 miles of railway; the distance as the crow flies is however only 188 miles. Valencia is the capital of the province of the same name and the diocese of an archbishop. Its situation is a striking one, in the centre of the fertile Huerta de Valencia which is watered by the Turia or Guadalaviar (Ar. Wadih ‘labiyad, the “White River”). Unlike Cordova or Toledo, the old capital of Valencia has seen its importance grow with the years and it remains the capital of eastern Spain; the Shârîf al-Andalus of the Muslim period. It is still known officially as Valencia del Cid in memory of the part played in its history by the celebrated Castilian hero.

Valencia was founded by the Romans in 138 B.C. After the death of the rebel Viriathus, the corsair D. Junius Brutus established a colony there of veterans who had remained faithful to Rome. The inhabitants later took the side of Sertorius and in 75 B.C. Pompey partially destroyed the town which began to return to prosperity under Augustus. It was taken by the Visigoths in 475 and became Muslim in 714, when Tariq [q.v.] established himself there and at Sagunto, Jativa and Denia.

In the political history of Umayyad Spain, Valencia seems only to have been a place of minor importance. The country of which it was the capital soon became arabised by the settlement of Kâsh colonies; the capital of eastern Spain thus was one of the most active centres of Arab culture throughout the whole period of the Muslim occupation; on the other hand in the mountains along the Valencian littoral there were little islands of people of Berber origin. Valencia at this time was the capital of a province or ídara as we know from the eastern writer al-Majdil and the Spanish al-Râzi (in Yâkût, Muṣṭafîn al-Buldan, 4 v.) and the residence of a governor (mâlid) appointed by the caliph of Cordova. It is only from the 10th century, with the break up of the caliphate, that, becoming the capital of an independent Muslim state and very soon one of the principal objectives of the Christian reconquest, Valencia began to occupy a more and more important place in the Spanish and Arabic chronicles of the mediæval history of Spain that have come down to us.

The Muslim kingdom of Valencia was founded in 404 (1010–1011) by two enfranchised ‘Amirids, Muḥârrik and Muḥâṣṣaf, previously in charge of the irrigation system of the district who declared themselves independent and shared the power. After a very short reign Muḥârrik died and Muḥâṣṣaf was driven from Valencia; the inhabitants of this town then chose another “Slav” [cf. șārâlik] to rule them, called Labib, who placed himself under the suzerainty of the Christian count of Barcelona. The principality of Valencia soon passed into the hands of a grandson of al-Mansûr Ibn Aṭîf ‘Amîr [q.v.] ‘Abd al-ʿAzîz b. ʿAbd al-Rahmân who, like his grandfather, assumed the laḫab of al-Mansûr; he had previously been a refugee at the court of the Tuğlûkid Mahumîr b. Yaḥûs at Saragossa. The reign of ‘Abd al-ʿAzîz, which lasted till his death in 452 (1061) brought an era of peace and prosperity to Valencia. He recognized the authority of the caliph of Cordova, al-KâSIM b. Ḥamûd, who gave him the right to bear the titles al-Mâṣîmân and Dhu l-Şâbîkâtîn, and kept on good terms with the Christian kingdoms of Spain. His son ‘Abd al-Mâlik succeeded him and took the title al-Musaffar. He was still a youth at his accession and the vizier Ibn ‘Abd al-ʿAzîz acted as regent. Very soon afterwards, Ferdinand I of Castille and Leon attacked Valencia but failed to take the town, after inflicting a severe defeat on the Valencians who made a sortie to attempt to drive off the besiegers. ‘Abd al-Mâlik sought the assistance of the king of Toledo al-Mâṣîmân b. Dhu l-Nûn [q.v.] but the latter came to Valencia and soon dethroned the young king (457 = 1065). The principality of Valencia was then incorporated in the kingdom of Toledo; and al-Mâṣîmân left the vizier Abû Bakr b. ʿAbd al-ʿAzîz there to govern it. When al-Mâṣîmân died in 457 (1075) he was succeeded by his son Yaḥûs al-Kâsid, whose great incapacity soon became apparent. Valencia then gradually recovered its independence; al-Kâsid sought the help of Alfonso VI, king of Castille, to bring the town under his authority again but he ended by having to surrender his own capital to him in 473 (1083). For the course of events and part played in them by the great Castilian hero Rodrigo Díaz de Vivar, the Cid of history and legend, cf. the article al-Garîs.

On their arrival in Spain, the Almoravids tried to regain the kingdom of Valencia for Islam but their efforts against the Cid were fruitless. When he died in 492 (1099) his widow Chimaena was still able to offer some resistance to the attacks of the Almoravids, led by Mandali. But in the end she abandoned Valencia after first of all setting it on fire and the Muslims entered it on the 13th Ramadan 495 (May 5, 1105).

Governors appointed by the Almoravids succeeded
one another at Valencia until the middle of the eleventh century, when the town was eventually re-established. It was under the dominion of the Almohads in Spain, and it passed under the control of the Almohads in 1238. Under the rule of local princes until it finally fell to the hands of the Christians after the capture of Valencia in 1238.

**Valencia—Varna**

VALENCIA, Varna, a Bulgarian town on the Black Sea, the chief harbour of the country, capital of the district of the same name, lies at the mouth of the Devna, surrounded by gardens and orchards. The town, which now down to 1878 was strongly fortified, is the terminal station of the railway from Sofia and Rusek and according to the census of Dec. 31, 1926 has 60,569 inhabitants. The development of the modern harbour has considerably increased trade, commerce and industry. Before the war of 1878, Turks formed more than half the population, and Jirecek (Der Fürstenthum Bulgarien, p. 531) could say as late as 1861: "Turkish is predominant in the streets and is also spoken by the Armenians and the Gagauzes" but linguistic and ethnographical conditions are now completely changed. In ancient times the site of the modern Varna was occupied by Odessos (later Odysseis, Odysseopolis), a Miletian colony founded in 585 B.C. Excavations have shown that the town also flourished in the Roman period. It has born its present name since the end of the seventh century (679) and was called after the river Devna which was previously called Varna or Varna. Varna is occasionally mentioned in the middle ages. Idriš in 548 (1153-1154) mentions "Varna" as a large town (cf. Die Weltkarte des Idriš vom Jahre 1755 a. Cchr., restored and edited by Koundil Miller, Stuttgart 1928). According to Jireček (ibid. cit., p. 531), Varna was Bulgarian again from 1201 and much visited by Italian seafarers. In the second half of the fourteenth century a Bulgarian dynasty of Roman origin was established on the coast here (ibid.). In 1366 Varna was besieged by the Crusaders under Amadeus VI of Savoy. The first Turkish attack on Varna, which took place in the time of Murad II in 1388, under the leadership of Djandar Ali Pasha (cf. on him Tschirch and Wittke, Die Vorfahren der Oandaer, in Ist., xvIII, 86 sqq.), but was unsuccessful. It was only after the fall of Býdn (Vinid) that the whole of Bulgaria from Varna to the Timok became a Turkish province (1593; cf. Jireček, Geschichte der Bulgaren, p. 356). On Nov. 10, 1444, was fought the celebrated battle between Murad II and the Christians under Wladislaw III of Poland and Hungary, in which the latter lost his life. His Polish epithet was warmenéz (Wamer néz); and his army suffered a fearful defeat. This victory of the Turks consolidated their position in Europe and formed a stepping stone to the conquest of Constantinople. According to Hridjati Khalif, in the sixteenth century Varna was the capital of a district in the sanjak of Silistria. About this time and later it was repeatedly the scene of battles between Russians and Turks (1610, 1773 and 1810). Ewliya Çelebi in his Travels (i. 290) records a defeat of Cossacks at Varna in 1601 (1600-1613). He himself was wounded in another Cossack raid on Varna (v. 84-85). The same traveller mentions the town in several other passages (e.g. iii. 302, 304, 350, 373) and describes it fully in connection with his visit in 1656 (v. 88-92). According to him, the Muslims lived in seven mahallas while the Greeks (Rumis), Jews and Armenians occupied five. Varna then contained 4,000 well built houses, 5 large mosques, the names of which Ewliya gives, and 26 madrassas. The trade of the harbour was very busy. In the neighbourhood there were 10,000 vineyards and many gardens. In this connection Ewliya tells the amusing story of the Kâč of Varna of the time (called Paćawwa-Kâč by the people) who in addition to a wicked tongue had so large a nose that he could not perform the prostrations (naqal) with his forehead but only — contrary to the rules — with the right ear. Although the Paćawwa-Kâč was very strict (mequll), it was continuously discussed in the town whether his salt could be regarded as valid at all.

In the Russo-Turkish war of 1828-1829 Varna had to surrender on Oct. 10, 1828 after a three months' siege and was only restored to the Turks at the peace of Adrianople. In the Crimean war, the French and English joined the Turkish army at Varna by the end of June 1854, built a large camp here and at the beginning of September began the Crimean campaign from here. In the last Russo-Turkish war, Varna was not near the field of action and was handed over without seeing any fighting to the Russians and Bulgarians on the conclusion of peace (1878). At the Congress of Berlin, Varna was definitely allotted to Bulgaria.

The cession of the Dobrudja to Rumania (1913) is said to have affected the commerce of Varna. In the Great War Varna was twice bombarded (27 Oct. 1915 and 16 Jan. 1916) by the Russian fleet.

**Bibliography:** The battle of Varna is very fully described by the early Ottoman historians, e.g. Urduj b. Adil, f. 55-58 (Oxford MS); f. 117-120 (Cambridge MS); Aymis-pasha-aše, Stambol 1332, p. 132-133; Nešbi,
in M. Q. G., i. 118–119; Anonymous, ed. Giese, p. 65–70 (transl. p. 92–94) but it is not neglected by modern Turkish historians (cf. Amed Reki, Türkiye Türkçesi, i/1. [Istanbul 1923], p. 240–242, with a plan of the battlefield). The Ukrainian orientalist A. Krymski gives in his History of Turkey (Little Russian, Kiev 1924; cf. the review in M.O.G., ii. 335–37), p. 47–56 not only an account of the battle but also discusses the reports of eyewitnesses, the sources in the earliest European, Turkish and Byzantine histories as well as European works of the sixteenth and seventeenth centuries including Slav and Rumanian, with occasional critical notes. Krymski came to the conclusion that the works on the subject by Slavs and Rumanians of the sixteenth century are of less value than German works of the sixteenth century. — Also: Halid Jiři Khalifa, Ruské a Rumské transal. (Fënyh Bajkakteenići)

VIDJAYANAGAR, a city of Southern India, now in ruins, situated in 15° 20’ N. and 76° 28’ E., on the southern bank of the Tungabhadra. It was founded about 1336 A.D., either by Vira Balla III of Dvaravattiya, or by three Hindu chiefs variously described as being wardens of the northern marches of his kingdom or as officers of the Kâkâyta kingdom of Wargal or of Muhammad b. Tughluq [q. v.] of Dîhlî. Two of these chiefs, Harihara and Bukka, established themselves in Vidjayanagar while the Muslims, of the Deccan were in rebellion against Muhammad b. Tughluq, and later, while 'Abd al-Dîn Bahman Shâh was occupied in founding and consolidating the kingdom of the Deccan, they gradually extended their rule over the Peninsula and founded the great Hindu kingdom of Vidjayanagar, the history of which is largely a record of intermittent warfare with the Muslims on its northern frontier, first with the great kingdom of the Deccan, and later with the Muslim states which rose on its ruins. The wealthy Hindu kingdom was able to maintain an army greatly outnumbering that of the Bahmanis, but the balance of success lay with the more virile Muslims, though for two centuries and a quarter they were unable entirely to subdue the great Hindu state. The battlexible cause of difference was usually the possession of the Râyâsr Dîhlî, the disputed land lying between the rivers Krishna and Tungabhadra, but the Bahmanis seldom needed a pretext for attacking their Hindu neighbours. About the middle of the sixteenth century, after the dissolution of the Bahmanian kingdom, the Sultans of the independent Muslim kingdoms of Bijâpur, Audmâna, Gulkanda, and Bidar foolishly sought the aid of the Râjâ of Vidjayanagar in their internece disputes, and the Râjâ, more powerful than any one of them, so disgusted all by his assumption of superiority and by the insults which he offered to their religion that they formed a confederacy against him. In December, 1564, the allied Sultans of Bijâpur, Audmâna, Gulkanda and Bidar met at Sholapur, and, marching southwards, met the army of Vidjayanagar on January 3, 1565; on the south bank of the Krishna, about thirty miles from the small town of Tâlîkota, Râma Râjâ, the regent of Vidjayanagar, was captured and put to death, and at the sight of his head, raised on a spear, the Hindu army broke and fled, and was pursued with great slaughter as far as Vidjayanagar, which the Muslims destroyed, after having occupied the city for six months, reduced some neighbouring strongholds, and laid waste the country. The great kingdom of Vidjayanagar ceased to exist. Some of its southern districts were annexed by the neighbouring Muslim states, and its southern districts passed under the rule of minor Hindu chiefs.

VIZIER. [See Wazîr.]
WABAR, a district and tribe of the earliest period, in the southern half of Arabia. Al-Ḫakī, Māḏgām, p. 835 and Yezdī, Māḏgām, iv. 896; give the vocalisation Wāhāri and compare the form with Ḥaddāmi and Ḥaddāni.

The Wāhāri are mentioned by the historians along with the ʿĀd, Thamūd, and other extinct tribes as one of the original peoples of Arabia, all of whom are included (as al-ʿArab al-ḥabībā) by some genealogists among the "true, original Arabs" (al-ʿArab al-ḥabīb or al-ʿArabi). Al-Suyūṭī, for example, whose estimate of the ʿArab" Ibn Dārid in the Qisas al-ḥarāmī and others agree (see E. Frenzel, Letter IV, v. 1810, p. 529 sqq.; following him Ritter, Erdkunde, Berlin 1846, xii. 57), gives as the true Arabs the ʿĀd, Thamūd, Ṭūnūn, Ḥaddāni, etc., putting the Wāhāri in the last (ninth) place and distinguishing from this group the muṣṭaʿrība, the naturalised, "amalgamated" Arabs, who also include the descendants of Kaʿb, who altogether make up the descendants of Ṣum, son of Siqeem, and along with them as a special (third) group of peoples, the muṣṭaʿrībā, which comprises the descendants of Khaṭṭu (the Maʿdāni), while other genealogists with Yemen bias oppose them muṣṭaʿrība or muṣṭaʿrība as one group (the Maʿdāni) to these extinct tribes and along with them to the Kaʿb (trump) Wābār (in some MSS. curreat; in i. 221 we have the form ṣāḥ; Ibn al-Aṯīr also gives the right form in his Chronicle). Similarly Al-Masʿūdi, Tabaḳk (R. G. A., viii. 184) and Murūjī (Paris 1861, v. 288 sqq.) numbers the Wāhāri and others among the extinct Arab tribes, at the same time giving the names of their ancestors, as does Ṭabarṭi, i. 221 (on the genealogy, cf. i. 750).

The statements of the Arab geographers and historians about the history of the Wāhāri are strongly saturated with legend. The stories current among the Arabs are strongly given by Ibn al-Fāḫī (B. G. A., v. 37 sq.), whose statements are combined from several sources, al-Bakri (op. cit.), much more fully Yāḥyā (iv. 806 sqq; a brief synopsis in the Liwan, iii. 147), still more briefly in the Kāmil, and a little more fully in the Taʾṣī (r. w.). Yāḥyā quotes various authorities, including Ḥīṣām b. al-Ḵalīl, Muḥammad b. Ḥāshim, Ibn al-Fāḫī, and other direct and indirect sources. His statements (iv. 896 sqq.) agree almost for word with those of Ibn al-Fāḫī. Al-Kānishī (Arabīdī, ii. 4, ed. W. Weissenfels, Gottingen 1848) and later writers, except for the Muṣṭaʿrība (al-ṭfīs), are based on Yāḥyā. The same characteristic features are common to the authors and compilers mentioned. They include the purely legendary elements, that the name of the land goes back to an ancestor Wāhāri, who flourished at the time of the confusion of tongues (so Ḥasim al-Maḏzī, Tabaḳk, p. 184; Ṭabarṭi, i. 221, 250), that after the fall of the ʿĀd (cf. Ibn Saʿd, Tabaḳk, i. 20), the previous inhabitants of Wābār, the ʿĀqām took possession of the land (so al-Ḥamīṣī, op. cit., p. 154, 223; Ṭabārī, i. 221), and men lived there no longer but only half men (maṣālim), beings who had only half a head, one eye, one hand, one leg (Yāḥyā, ii. 263, tells the same story of Ṣhiḥr), that no one dared enter this land and its mysterious inhabitants destroyed the crops of the adjoining lands between Ṣhiḥr and Ṣinan. A feature which is developed in the legend, on older models, is the story that Wābār was a particularly fertile land, rich in water and fruit-trees and especially in palms (so also al-Maṣʿūdī, Murūjī, iii. 276, 288 sqq.; al-Nābiṭī, ii. 122, 126 sqq.; al-Labīṭī, ii. 110, 112 sqq.; al-ʿIṣāmī, ii. 225, 228 sqq.); al-Nābiṭī's mention of palms in the land of Wābār (in Abūwād, Ṭabārī, etc., London 1870, p. 112 from Yāḥyā) was taken as evidence that the land was fertile and inhabited (cf. al-Ḥakī, loc. cit., with Yāḥyā, iv. 898). The mention of Wābār in the poetry are of course not independent evidence, but repeat as a rule only the conventional notions of the great antiquity and fall of the people and the isolation of their land (cf. also Yāḥyā, iv. 897).

What arouses interest in these tables and may be of use are the geographical ideas at the bottom of them. According to some of these statements, the broad land of Wāhāri stretched from Ṣhaṭra to Ṣanʿa, in general to the eastern frontier of Ṣinan; according to others, it comprised the whole territory between Ṣanʿa and Ṣuṭr; lastly, according to others, it was the territory between the "sand of Yāḥyā" (Rimūl Yāḥyā) and Ṣinan (see also Dājbard). From these topographical hints, which in spite of their differences together give a rough general picture, it can be deduced that the portion of the South Arabian desert, of the Rab al-Ḫalīl or Dāhia, north of the Maḥra [q.v.], country, was called only Wābār by the Arabs, but this geographical name was also understood in a wider sense and extended to the whole Dāhia. The part called Ṣanʿa-Wābār adjoined in the east the desert area of the Ḥaṭṭāt (卣) which lay north and west of Ḥaṭṭāt, C. L. Cameron, (Études sur les dialectes de l’Arabie méridionale, Leyden 1901, p. 160) says on the authority of information received from natives that in the expression al-ʿAṣṭāl (.guild) the place-name, according to South Arabian ideas, refers not only to the district of al-ʿAṣṭāl (North Ḥaṭṭāt, p. 149) but also to caves in which the Arabian troglodytes live (cf. Yāḥyā, i. 154, on the different topographical clues for this district).

It is impossible to accept Ritter's (op. cit.) identification of the Wābār with the Banū Ṣinaṣ, who are mentioned by Prolemy in connection with the Thamūdī and are to be located in the northern half of the west coast of Arabia (the first component of the name is obviously connected with Banū; attempts at identification will be found in Spruner, Die Alte Geographie tiberiana, Bern 1875, p. 30 sqq. and in E. Glaser, Geschichte der Geographie arabisch, Berlin 1849, ii. 251 sqq.). Ritter's comparison (xii. 727, 592) of Wābār in Mäṣṣa (ed. Jusbert, i. 156) is also
to be rejected. There never was any cogent reason to dismiss the Wabar into the realm of fable, with Sprenger (op. cit., p. 296) and others, as a people that never existed and to deny any historical or geographical foundation to their mention along with other extinct tribes. Wüstenfeld (Die Wohnsitze und Wanderungen der arabischen Stämme, in Abb. G. W. Götter, 1868, xiv. 13) in agreement with the Arab writers described the tribes of 'Ad, Ṭamīl, etc., as the original inhabitants of Arabia, who had partly extinguished one another and partly become mingled with the peoples who succeeded them, so that they are to be regarded as having been extinct many centuries before Islam.

Although the records are clothed in the form of legend, it does not follow that the whole story is a pure invention, but only that we have here the memory of an ancient people, which has become a legend; similar things are to be found in the history of most nations. There is a series of fabulous stories associated with the whole of Southern Arabia between Yemen and 'Oman, a region little known to Arab men of letters. Moritz (Arabien, Hanover 1923, p. 28 sq.) also says that the names of those extinct peoples of the early days of Arabia including the "Wabar" (so also on p. 60, 122) are at least historical and that there may be a historical kernel in the stories of the fertility of cultivated areas which later became desert through natural causes, such as continued drought and sandstorms. He quotes similar phenomena in Egypt. The formation of the desert, moreover, must have made some progress since the time of Ptolemy, as his map of Arabia shows towns or villages in regions which have since become desert or only contain ruins; on references in Greek and Roman writers for the historicity of the Thamīl cf. the article Egra in Pauly-Wissowa's, Realencyklop. der klass. Altertumswissenschaft. — It is also worthy of note that south of Sa'īf, the chief town of the flourishing oasis of Al'id, Phylly (The Heart of Arabia, 1922, ii. 99 sqq.) in 1917 saw, along with other remains of an ancient culture, the ruins of a large building, the Ḳusairat 'Ad, as so called, as his companion told him, after the king 'Abd al-Qādir al-Rashādī, who ruled in the remote past over these regions and whose capital was in "Wabar" (ibid., ii. 353), a mouth's journey to the south in the desert near the frontier of Ḥadramāt. The story told by him of this king contains several details found in the well-known traditions of the Prophet. The ruined site of Ḳusairat 'Ad is marked in Phylly's map under 22° 10' N. Lat. and 46° 20' East Long., a position which of course is only calculated approximately. Of Wabar he was also told (p. 221) that the Dimān, a clan of the Al Murra, included it in their territory. If the geographical conception of Wabar still exists among the Arabs, there is no reason to suppose that the references in literature to this land and people are based on an invention of the genealogists. The old view put forward by Blau (in Z.D.M.G., xxii. 659) and recently championed by Moritz (op. cit., p. 29, 122) that the Wabar "offenbar die Ḳusairat des Ptolemaus sind (vi. 7, 24)" is certainly not probable (cf. the article Egra in Pauly-Wissowa; ibid., for Landberg's mention of the Ḏawākān, which has lately been used again as a basis for further deductions, and also for Glaser's errors). Isolated statements of Arabic authors regarding the countries round Wabar seem to make it possible to define its frontiers approximately. According to Ţaharī, i. 221, the land of Al'ur (see above) lay between Yamāma and Shīrī; Yākūt, iii. 591, gives the information that the "Sand of Al'id" (raʾīn 'Al'id) adjoins Wabar; the former is a northern salient of the great South Arabian desert which stretches between Bahrain and Yamāma and is characterized by the fact that trees and plants grow there. As a matter of fact the north-eastern termination of the great desert is an oasis, that of Yabarīn, in which the desert region, which some, especially later geographers, misunderstood as the Dakhnī proper, i.e. a north-easterly continuation of the Rubī' al-Khāli, has its southern limit. After this oasis, the most southern part of the district of Yamāma, the adjoining desert is also called "Sand of Yabarīn". The frontiers between 'Al'id and the Dakhnī fluctuate in the Arab geographers, and sometimes the two regions are even said to be identical. Al-Bakrī interprets the extent of the desert of Yabarīn in a wider sense, for according to him it extends from Yamāma to Ḥadramāt. For our knowledge of Yabarīn, the Ḳusairat of Ptolemy, vi. 7, 35, the statements in Abu 'l-Fidā' (see Rommel, Abūl-Fidā' Arabien descript., Göttingen 1802, p. 84) in Yākūt (see his several references from the index) and al-Hamālīn (p. 103, 137, 149). Burckhardt had already heard from Beduins that the only habitable area in the eastern Dakhnī was the Wādī of Yabarīn with date-plains and wells (which the latest reports confirm) but with an unhealthy climate. It is an oasis, rich in water, with settlements and was at one time, as Pelly, who visited the region in 1865 tells us, a fertile well-tilled district with an imposing town, but suffered heavily in the Karmatian wars. Phylly obtained some information about the oasis, which belongs to a section of the Al Murra (see op. cit., ii. 216 sqq.). Cheese man's account contained the first more accurate information (in G. 7, lxxv., 1925, p. 112 sqq.). Using the statements of the Arab authors, we may regard the oasis of Yabarīn as the most northerly part of the ancient extensive land of Wabar; this agrees with the stories of Wabar's wealth of palm-trees and with the geographical background of the legends, in so far as they do not, like some geographers, locate Wabar definitely in the adjoining desert of 'Al'id (cf. Māʾṣūdi, Murādī, iii. 288). The southern continuation of it is then either the sandy region of Ḥizrān about sixteen days' journey south of Yabarīn, a settlement of the Al Murra with some wells and water-pools (Phylly, op. cit., ii. 219), or the district about half a degree west of it in the same latitude. The farther continuation to the south goes via al-Alkhāf to the northern frontier of Ḥadramāt, N.W. of Mahrā. The sandy region of Yabarīn also runs southwards into the desert of al-Dijūz and then into that of al-Alkhāf. In Sīāyer, Hamadānī, 590, ed. map 60, Goa 1905, Wabar is located about 46° 47' E. long. and c. 22° 40' N. Lat. which is rather too high.

Bibiography: The works of the Arab authors and of the modern writers (Ritter, Sprenger, Moritz, Phylly, etc.) have been given with references in the article. We may only add F. Wüstenfeld, Bahrein und Yamama, in Abb. G. W. Götter, xix. (1874), 473 sqq. (J. Tschatsch)
it was Wara to the N.N.W. of Abeghe, down to the middle of the xviith century. It was then transferred to Abeghe (or Abeghe), which is a town of about 50,000 inhabitants with houses of clay and huts thatched with straw; the royal quarter, surrounded by a high wall of earth, is distinguished by a castle, three storeys high, of baked brick, built in 1860 in the reign of King *All* by two Egyptian or Tripolitanian architects.

According to local tradition, *Wadari* was at first under the authority of a dynasty of foreign princes, belonging to the tribe of the Tundjr, who had their capital at Kadama and who were more or less vasals of *Dir-Fur*. These princes were not Muslims but several of them whose memory has survived have Arabic names, like the last of them, Djuwied, called Almerenu. It was only in 1615 that Iklam is said to have been introduced among the native peoples of *Wadari* as a result of the preaching of a legendary individual sometimes called Djuami and sometimes Sahl, whom some say was of Maba stock, but whom others connect with the Arab tribe of *Jas'ali*, which has its cradle near Berber on the Nile. In any case, the family which claims descent from Djuami is undoubtedly of negro stock and regarded as of Maba origin.

About 1635 a son or nephew of *Djuami* called *Abd al-Karim* and also known as *Mahmud al-Sahl* gathered around him the Maba and the Kodol recently converted to Islam by his father or his uncle, as well as the Arabs of the district, preached the holy war against the infidel dynasty of the Tundjr princes, defeated or killed the king Djuwied, proclaimed himself *koluk* (i.e., sovereign) of *Wadari*, made his capital at Wara, and founded a new dynasty there which retained the throne till 1911.

The *koluk* exercised power with the help of several counsellors, including his mother, who had the title of *mama*, and four dignitaries called *kenalik*, assisted by lieutenants (*nadeker*), squires (*sowram)*, and a supervisor (*rinemati*). He had around him chamberlains, pages, eunuchs, messengers and tax-collectors as well as a military guard, one section free men and the other slaves.

The territorial commands were in the hands of military governors each of whom, called an *agid*, had at his disposal an army raised from the tribes of his district. The most important of these commands were: that of an agid who had the title of *djemara* under whom were the Kodol, as well as the town of Wara and the western provinces; that of the agid *Almahammed* which included the Arabs of the north and the Zaghwa; that of the agid *Al-Salamit* who ruled the territories of the south. There were as many as 80 agids. Each province or *djer* was administered, under the authority of the *agid*, by a *tundjir*, and each village had at its head a political chief and an agricultural official.

This organisation however lacked solidarity; the different agids were often fighting with one another or with the *koluk* and they had frequently to use force to secure the obedience of those under them. The history of *Wadari*, so far as we know it, is simply the history of foreign or civil wars and of the cruelties perpetrated by the kings and dignitaries on members of their own families.

The first *koluk*, *Abd al-Karim* (1635–1655), paid tribute to *Dir-Fur*, like the Tundjir rulers who had preceded him. He succeeded however in giving *Wadari* a certain amount of independence
and settled its eastern boundaries by agreement with Sulaiman Solong, the king of Der-Fur. He contributed to completing the conversion of a considerable section of his subjects to Islam. This work was continued after him by his son Khairu al-Kahir (1655-1678). Khairu (1678-1681) and Ya'qub 'Arus (1681-1707) endeavored to cast off the suzerainty of Der-Fur; the second succeeded in defeating the Der-Fur army which was commanded by 'Umar Lele and in taking him prisoner. Khairu al-Saghir (1707-1745) engaged in an unsuccessful war with the Baghirmi. Djoda (1745-1795) resumed the struggle against Der-Fur, defeated its king 'Abd al-Ka'im and secured the independence of Wadai'; he undertook a number of expeditions against the pagans of the south and even succeeded in taking a portion of Karem from the ruler of Bornu. Shihh Derret (1795-1803) was dethroned by his son 'Abd al-Karim who assumed the name of Shihh (1803-1813) and distinguished himself in a war against 'Abd al-Rahman Gawayn, king of Baghirmi, whose capital Masaanya he took and plundered in 1806. 'Abd al-Rahman was killed in the course of the campaign and his son and successor Djurgumanda who acknowledged the suzerainty of Wadai'. The khalif Shihh developed the trade of his lands and established relations with Egypt. He was however of a cruel and blood-thirsty disposition and made enemies in his entourage, who finally assassinated him. His son Yusaif Kharinein (1814-1829), a debauchee and drunkard, was poisoned as a result of a conspiracy against him. Rakkib (1829-1830) was placed on the throne at an early age under the regency of his mother but soon died of smallpox. 'Abd al-'Aas, great-grandson of Djoda, was chosen to succeed him after a bloody civil war but he also died of smallpox in 1834.

Famine now desolated the kingdom, and drove the Wadaians to plunder the western provinces of Der-Fur, Muhammad Faddal, king of this country, sent a punitive expedition which reached Wara and put on the throne a Wadai'an prince named Muhammad Sharif who recognised the suzerainty of Der-Fur and reigned from 1835 to 1858, possessing a prestige of authority and a sense of justice which had been previously unknown. Having cause to complain of the conduct of the powerful Shikh 'Omar, lord of Borni, he attacked him and defeated him at Kusti and forced him to pay an indemnity of 8,000 dollars. It was Muhammad Sharif who moved the capital from Wara to Abeshe. He became blind and had to defend himself against one of his own sons; ultimately he went out of his mind and died in 1858. It was in his reign that Wadai' for the first time was visited by a European, the German Vogel, who spent 13 days in Abeshe in 1856 and was murdered on leaving it.

His successor 'Ali (1858-1874) devoted himself to the restoration of order in the state and encouraged trade between Wadai' and Tripolitania and Cyrenaica. In 1870 he went to war with Abu Sakkin, lord of Baghirmi, who had attempted to cast off the bounds of vassalage; he besieged him in his palace, which he mined and took by storm, and brought back from Masaanya in 1874 over 20,000 captives, chosen mainly from among the artisans, as a result of which he gave a considerable stimulus to industry in Wadai'. It was he who built the royal palace of Abeshe and added to Wadai' the provinces of Raha and Kuti. In 1873 he was visited by the German explorer Nachigal, whom he treated with great consideration.

Yusaif (1874-1898) allowed Baghirmi to regain its independence. He entered into friendly relations with al-Mahdi, the head of the Santustya brotherhood. It was in his reign that the adventurers Rabah, who came from Bahir al-Ghasali, invaded Kuti (1879), then Raha, laid waste the southern provinces of Wadai', and installed a slave-dealer named Santast as suljan of Kuti and Raha (1890). In 1891 the latter was visited by the French explorer Crampel, who had come from Ubangi; he tried to prevent him from going on to Wadai' and being unable to make him abandon his plans, had him assassinated along with his companions. In 1894, Rabah being engaged in conquering Bornu, the khalif Yusaif sent an army against Santast and forced him to recognise his suzerainty. A little later, in 1897, the same Santast signed a treaty of friendship with the explorer Gentil, the French commissioner in Ubangi and Shari.

Ibrahim (1898-1901) had to put down several risings and died of wounds received in battle. Abu Ghasali (1901-1902) had to fight against one of his agis named 'Asif who raised a considerable section of the people against the khalif with such success that the khalif had to abandon his capital. In his place Didumurra, son of Yusaif, was proclaimed; he pursued Abu Ghasali, captured him and put out his eyes, while 'Asif, who had taken refuge in Fitti, put himself under the protection of the French troops who had established themselves in Yao. Didumurra reigned from 1902 to 1911. Soon after his accession, 'Asif left Fitti and made war on the pagans of southern Wadai'; arrested by order of Commandant Larguen in 1903, he was for a time interned at the French post of Fort-de-Posse. However, Didumurra's advisers professed to hold the French responsible for 'Asif's doings and the agis al-Salama set fire to the French custom-house of Gulfe to the west of Lake Iro and attacked Lieutenant Dujour at Tomba in April 1904. On June 7, the gurme' Ughun summoned the commandant of the French fort at Yao to evacuate the district of Fitti; the latter indignantly rejected the ultimatum and his post was attacked in January 1905 by a lieutenant of the gurme'. The attack was driven off and the Wadai'an army, routed by Captain Riviere. Didumurra blamed 'Ughun and had him poisoned in 1906. Various Wadai'an governors however continued to raid French territory, which gave rise to fighting in 1907 and decided the French to invade the western dependencies of Wadai' along with 'Asif, who, restored to favour with the French, posed as a claimant to the throne. Didumurra sent against the French an army of 2,800 rifles, led by the agis Almahmid, who was defeated on March 29, 1908 by the 280 men led by Captain Jersalamy and for a second time on June 19 of the same year by Commandant Julien.

On June 2, 1909, Abeshe was taken by Captain Fiegsensg and Lieutenant Bourreau and on Aug. 30, 'Asif had himself proclaimed Khalif in place of Didumurra, who had fled. But in January 1910, Captain Fiegsensg, going with a detachment of troops among the Masali, was attacked and massacred by them at Bir-Tawil and 'Ali Dinar, king of Der-Fur, seized the opportunity to invade eastern Wadai', while Didumurra again resumed
the offensive from the north. The latter was driven back across the Galba by Captain Chavaley. Then on Nov. 8, 1910, Lt. Col. Moll took Djedjil, the chief town of the Masali, which Dumdura was defending; the latter was wounded and put to flight, but Moll was himself killed at Dorothea along with two lieutenants and five non-commissioned officers. A little later, on Jan. 12, 1911, Captain Modat took at Ndele (Kutti) the fortified palace of Sanabi who was killed in the fighting and in October of the same year, the Ndele Dumdura came to make his submission to Colonel Largeau and abdicated. Asil became king of Wadi under a French protectorate but he reigned only a few months as he had to be deposed on June 5, 1912, on account of his duplicity. Since then Wadi has been directly administered by the commander of the district of Abessi, which forms a part of the French colony of Chad.

**WADI HALFA** or simply Halfa, a modern town in the Anglo-Egyptian Sudan, 21° 55′ N. 31° 19′ E., on both right bank of the Nile, or 770 miles south of Cairo and 5 miles north of the Second Cataract, is the chief town of the province or *khríya* of that name. It includes the village of Tawfikia, a new suburb with fine bazaars, and its inhabitants, inclusive of the Nubian villagers of Dahbour, number almost 3,000. Besides the Muslim places of worship there are the churches of the Copts, Greeks and English. The Government offices and hospital, and the official residential district lie to the south. The head of King John of Abyssinia is said to be beneath a tree near the hospital. The name of the place is due to the halfa grass abounding in this region. In Pharonic times the district was called Baken. Opposite the town, on the west bank, are the remains of the old Egyptian fortress of that name established under the Middle Empire. Faraabee, the *fervil* of Ptolemy, was also in the neighbourhood (Budge, *The Egyptian Sudan*, ii. 83).

It was only towards the end of the nineteenth century that the town developed from a miserable Sudanese trading village into the important centre it now is on the frontier of Egypt and the Sudan. During the years 1884-9 it was made the military base of the British troops. Lord Wolseley's expeditionary force passed through it on its way to assist General Gordon at Khartum. The place grew in importance as a result of the subsequent decision which made it the political frontier, and when a garrison of Egyptian troops was established on the spot it figured again in the campaigns of 1896-98 against the Mahdi. By the Sudan Convention of 1899 conditions were changed. The modern political boundary is now fixed at 22° N. Lat., a distance of 27 miles north of Wâdi Halfa. The government railway to Khartum, which begins at the town, accounts largely for its present day importance. Nile steamers connect it on the north with Shalahl, a village on the outskirts of Assuan, the terminus of the Egyptian State Railways. **Bibliography:** Baedeker, Egypt and the Sudan (1949); Wallis Budge, *The Egyptian Sudan*, i. 77; do., *By Nile and Tigris* (index); Reinwardt, *Geogr. d'Aboufida*, u. 139; C. **WADI 'L-KURA**, the valley between el-'Elt and al-Medina on the old trading route from South Arabia to Syria, usually called Wadi Deidibian. It is the dry bed of two wadis which join in the centre, the Wadi el-Djejel from the north and the Wadi el-Hamid from the south which comes down from near Medina above the village of Henskiya and runs between the Djebel Hamid or Uljed (Ejd) and the city of the Prophet. Half-way between el-'Elt and al-Medina it is joined on the right by the Wadi el-Tublij or Wadi el-Silsila, which connects it with Khaihar.

The most important place in the Wadi 'L-Kura' is el-'Elt' with rich date-groves and cornfields which owe their existence to warm springs in the valley. At one time Kurj was the most important trading centre of the Wadi 'L-Kura'. It presumably took the place of the ancient Dédân (Daidân) the ruins of which, now called al-Kharaiba, lie in the northeastern corner of the gardens of el-'Elt'. The oasis of Dédân, which was of importance as an important point on the old trading route from the south to Egypt and Syria, was at one time in the possession of Minaean rulers who had their deputies here. Numerous Minaean inscriptions, which were found in el-El't, and the mention of the name Dédân in the Bike (Gen. x. 7; xxv. 5) are further evidence of the close connections the old South Arabian states had with this place. Yâkût still knows the old name of this place and records that Daidân was once a large town on the road from 'al-Bal'k to the Hadhras but was already in ruins in his time. Legend connects the decline of the people of 'Ad and the story of the prophet Hud with this region. These stories were probably suggested by the rock tombs in the vicinity of Daidân (Khariba). At the beginning of Islam the Wadi 'L-Kura' supported a considerable Jewish population which, like their co-religionists in al-Medina, were hostile to Islam. When in the year 2 (623-624) the Kaûfûkûs were driven out of al-Medina and went through the Wadi 'L-Kura' to Syria, they sheltered them for a month and gave them food and horses for the journey. In the year 5 (626-627) the Jews of the Wadi 'L-Kura' joined the defensive alliance formed by the Jews of Ta'inik, Fadak and Khairalib against Muhammad. It was however not till 7 (628) that they came to blows with the Prophet's forces, when after the capture of Khairalib, he marched through the Wadi 'L-Kura' to al-Medina. The Jews of the valley, which was defended by towers, offered a vain defence. They were forced to surrender after heavy losses but were allowed to remain in the country; they had to till the soil for their hated enemy, and in this way contributed considerable wealth to the treasury in al-Medina. Henceforth this important corridor, used
for the victorious campaign of the Muslims under Abū Ḫubayl against Syria, remained in the hands of the lands of al-Madinah, although for administrative purposes it continued for a time to belong to Syria and formed the frontier against the Ḥijāz. The Jews were allowed to remain for some time in the Wādī l-Ḳūrā. Whether they were expelled as early as the reign of the caliph ‘Umar I is not certain. All we know is that in al-Baladjarī’s time there were no longer any Jews in the Wādī and the land had long been divided among the Muslims and belonged to the district of al-Madinah. 

WĀDĪ NŪN, older form WĀDĪ NŪL. This is not the name of a river but of a great plain in S.W. Morocco between the western Anti-Atlas and its Saharan outliers twenty miles from the sea. The plain is formed by the silt from number of water-courses, of which the chief are the Wādī Šayṣūd and the Wādī Umm al-Aṣḥar, which unite to form the Wādī Askkā; the latter river joins the sea through a defile which has given it its name.

We find in the Wādī Nūn a certain number of oases with large villages (Awegelim or Gleimim, Ḫṣāli, Tīlīwin, Ṭīk, Dūḥāyān, Tīghmat, Aṣūr, Waṭrān, Ābbūda etc.) which serve as trading centres for the Saharan nomads and contain 3,000–3,500 families. These are Arabo-Berbers belonging for the most part to the Maʿṣūl and the Lāmṭa [q.v.]; a few belong to the Gāsûlī and to the Ṣanḥāja. They almost all belong to the Tekna, but some to the Alt Bāʿamrān and the Altānān. There are also a number of shīrfs, marabouts, ḫārīfīn and Jews. 

There is hardly a historian or geographer who has dealt with the Maghrib al-ʿĀṣa who has not mentioned this province. It owes its importance to several things: the Wādī Nūn is in Morocco one of the rare groups of oases which throughout the centuries has communicated in the south with the Mauritiana Aḍrān and the Senegal and in the southeast with the bend of the Niger; it is the exit of the easiest route between the desert and the northern slope of the Atlas, a natural route which runs on as far as Mogador; lastly its proximity to the Ocean has enabled its inhabitants to counter at various periods into commercial relations with Europe and to secure the exportation of the rich produce of the Sahādan. 

Historical Sketch. The Wādī Nūn was, we are told, at one time a great pastoral region; native tradition says that it used to be called Wādī Nūn "the river of the shee-camels". Its name is sometimes derived from the Hebrew and Nūn is said to mean a fish-god. Jewish legends make the whale throw Janah up on the coast of Sūs and the memory of Joshua son of Nūn is said to survive in the name of the tribe of Ait Ṭaṣ. 

In the 8th century of our era, Lāmṭa Berbers were the owners of the oases and we may imagine that the expedition of ‘Ukba b. Nāfr and the ephemeral rule of Abū Allāḥ b. Ḥadīrā in Sūs brought them for the first time into contact with the world. They were probably great nomads; in the tenth century, however, they had a town, Nūl Lāmṭa, which seems to have occupied the site of the present village of Aṣārī. We do not know the date of its foundation but it was undoubtedly much earlier; it was a great market, where shields were made of antelope hide (lamṭa) and it from caravans set out to cross the Sahara for the Sāhādan and Mauritanian. It was no doubt this commercial activity that at an early date attracted a Jewish colony here. 

In the 9th century, Nūl Lāmṭa was conquered by the Almoravids who made it one of their base of operation and established a mint there. The Lāmṭa served this dynasty faithfully; on the other hand, their resistances against the Almohads in the following century resulted in bloody reprisals. A little later, in 1218, the invasion of the Maṣūl Arabs reached the Wādī Nūn and one of their tribes, the Lāḥt Ḥassān, soon incorporated the Lāmṭa, who ceased henceforth to play an independent part. 

Nūl henceforth lost its importance and was replaced as a port for the Sahara by Taghast (the modern Ḫṣāli); it was under this name that Europe for long knew the Wādī Nūn. In the 18th century began the expeditions from the Canaries to the coast of Africa, the object of which was to procure slaves for the exploitation of the country; these were the celebrated entradas, several of which reached the gates of Taghast and resulted in the foundation of a number of Spanish fortresses; one of them, San Miguel de Sáns, which however only lasted for a very short time, was quite close to the Wādī Nūn, at the mouth of the Askkā. These expeditions were perhaps preceded or accompanied by Christian missions. In 1325, Taghast venerated the relics of a Portuguese of the Order of the Hermits of St. Augustine, who had lived in this region. 

The foundation of the Sahādan dynasty resulted in the expulsion of the Christians and the people of Nūn supplied ḡāṣd contingents to the sovereigns who had liberated Islamic soil. But very soon, it seems, their oases began to lose their position as starting-points for caravans. The Ṣhūrta came from Tagmādārī in the upper Dar’s and it was by this route naturally that they brought to Marīkush the booty of their conquests on the Niger. 

This fact no doubt explains why the people of the Wādī Nūn very soon disposed of this dynasty, as well as why they were always at more or less open enmity with the Filalī, who for similar reasons favoured the route by Tafīllīn. In the 18th and 19th centuries the Wādī Nūn seems to have belonged to the marabout state of Tāzīrāwāl, founded by Abū Ḥassān al-Samīlā, whose ambitions at one time was to conquer the Sahādan. He and his successors in every case maintained very regular commercial relations with the country south of the desert. In their reign European ships frequently came to the coast of Sūs to carry away merchandise brought down by the caravans. This
Economic life. In the Wàdī Nûn a few cereals are grown, the vine and tobacco. The latter has a certain reputation in all the western Súddán. There are also palm-trees, figs, pomegranates, a few arganiers, oranges and Barbary figs. Numerous hives produce an excellent honey. The main wealth of the country is in rearing camels, horses, cattle and particularly sheep and goats.

Industry is rudimentary; there are a few armourers and several Jewish goldsmiths. Fishing is practised by certain tribes of the Teknà.

The markets of Awgelmia and Tíghart are of only local significance. The most notable are the fairs (müemem, awugfâr) of Asârî, Kiîsî and Awgelmia which annually give an opportunity for the settled population and the nomads to exchange commodities. Trans-Sahara trade has practically disappeared completely.

Wàdî (A), deposit, custody, is a contract (âdâb, mustawâfi) by which the depositor (mûdî, mustawâfi) hands over to the depositary (nûdî, mustawâfi) something to be kept and returned intact at a later date. Wàdî's means not only the thing to be kept but also the agreement regarding the transaction. The custody is therefore based on a special agreement and is therefore dealt with in legal works as a branch of the law of contract. While in the case of amâna entraîned goods, there is no agreement but only a general obligation to keep faith, without a binding agreement; under amâna therefore come such things as come into the keeping (yad) of any one by chance or without special intention, e.g. a garment blown into the house by the wind or an article found (likâyta) or a pledge (rabîn).

1. Wàdî is not found as a technical term in the Kûran but only amâna in the more general
meaning. Muhammad with all emphasis admonishes his followers to keep their contracts and to restore goods and pledges entrusted to them in their care (Sura iv. 61: ii. 283) and promises Paradise to those who obey these commands (xxvii. 8 sqq.; Ixx. 32). These verses show how little and how reluctantly the pagan Arabs fulfilled the obligations and agreements they had entered upon. The later fuḥūṣ also quoted Sura v. 3: “Help one another to do good and to the fear of God” in order to find support for the contract of custody in the Qur'an and represent it as a commendable action (mustaṣqaḥa).

2. Traditions also remind us that goods entrusted should be restored: “To whom a thing is entrusted, he should return it” or “give the thing entrusted back to him who entrusted it to you.” More numerous are the haddiths which relate to compensation when the thing deposited has been lost or has perished; in these cases there is no liability (Ibn Mādiya, Ṣaḥābat, bāb 7; Kanz al-ʿUmmāl, viii, N° 5443, 5444, 5448, 5449, 5450) because the depositor is regarded as a person worthy of confidence (Kanz al-ʿUmmāl, N° 5444, 5447). In other haddiths it is asserted that there is a forfeit, because the depositary has not observed the necessary care or has acted illegally, although this is not definitely asserted in the traditions (Kanz al-ʿUmmāl, N° 5451, 5452).

3. In the Fikh books the doctrine and legal position of waḍā'a are minutely expounded. According to the jurists we have the following rules:

1. Placing in custody is a contract (ʿaḍḍ) and an ʿaḍḍ dafūʿ, i.e., a revocable contract which can be cancelled at any time simply at the wish of one of the parties. The following conditions (arkān) are necessary to secure the validity of the agreement:

a. The two contracting parties must be capable of doing business. Therefore a minor (nāṣir), a lunatic (manṭūn) and a spendthrift (fājš, muḥādic) who has no guardian, can neither put nor take anything in trust, i.e., he can be neither a depositor nor a depositary. If a minor makes a deposit with a person competent to do business, there is no contract but it is binding on the ground of ʿamūnāh.

b. Only such things as are ʿamīl can be deposited. Therefore impure things (nāṣir) for example cannot be deposited.

c. A form (riḥa) is requisite and this is offer and acceptance (rāḥa wa-kaḥaḥ), i.e., the declaration by both that they are willing; one must have the will to give the thing into custody and the other to take it. This may be expressed in words; or in other form of declaration or may be done silently, e.g., by the depositary at once taking over the thing silently after the depositor has offered it.

II. The depository's obligation to preserve. He has to keep the thing as such things are kept, "as is the custom in ordinary usage". He has to use the care with which he preserves his own things, in the words of Roman law diligentissimae quae in esset. As to the place of preservation, he can keep the thing deposited where he pleases. But if the depositor has given instructions and directions about the method and place of custody the depositary must observe them strictly.

If he does not do so, he is liable to pay compensation if the goods suffer injury or perish.

III. The right to compensation (dāmmāṭ). The depositary is not liable if the thing deposited is damaged or perishes through no fault of his. Nor is he liable for the acts of a higher power or accident. On the other hand in cases of ʿaḍḍ and ʿaḍḍ dafūʿ, the depositary is always liable.

a. It is a case of ʿaḍḍ when he does less than he ought to, i.e., omits the necessary care. This occurs:

1. When he does not prevent damage to the thing deposited, e.g., if he neglects to give food and water to a mule left with him or does not keep the mules from clothes deposited with him.

2. If he is neglectful in the usual way of preserving the thing deposited and does not observe the instructions of the depositor.

b. It is a case of ʿaḍḍ dafūʿ, if he "exceeds the bounds", i.e., proceeds contrary to the law. This occurs:

1. If he deposits the thing with a third person, for the deposit is based on the personal confidence which the depositor has placed in a definite individual known to him. Ibn Abi Laila alone allows the depositary to deposit again. Opinions differ regarding further deposit with members of the family. As members of the family are considered such persons as live with the depositary and belong to his household: wife, children, parents, servants, slaves, ʿawm mawāʾir. The Shāfiʿī jurists follow Ḥanafī and forbid further depositing, while the Ḥanafī and Malikis who follow Ṣaḥīḥābī allow it. According to all schools, however, the depositary may deposit again in face of pressure of a higher power in order to save the thing deposited. As cases of this kind the examples are given of shipwreck, fire, inundation, enemy raids.

2. If the depositary uses the thing or derives advantage from it, e.g., if he wears the deposited clothes or rides the mule: unless he is trying thereby to avert damage.

IV. The termination of the contract. The contract of preservation is extinguished by the return of the thing deposited. Both parties have the right to dissolve the agreement when they please. The restoration can therefore be made at any time and at the wish of one party, since this contract is an ʿaḍḍ dafūʿ. If one of the two parties dies or becomes insane the agreement is dissolved. The thing remains until its return ʿamānā in the hand of the depositary. Here again we have a clear distinction between depositing by agreement and ʿamānā with no agreement.

If the depositary refuses the return of the article without reason, the degree of liability increases, if the thing deposited deteriorates. While the depositary is generally not responsible for any casual deterioration, he is now liable for causal deterioration also, since he is delaying restitution.

4. In literature, a thing entrusted to some one's custody sometimes plays an important part in a story. Entrusting with a depositary, especially a faithless or deceitful one, provides well-known motives (cf. Handwörterbuch des Deutschen Märchen, ed. L. Mackensen, s.v. Unredlich Aufbewahrer). The motif most frequently occurring in Oriental literature is that of the faithless depositary who is in turn outwitted. The ḥafṣ is frequently represented as a deceitful depositary. As it would lead us too far to analyse the legal

WAFĀ, SHARAF AL-DIN 'ALI HUSAYN, a Persian poet of the eighth century, belonged to a family of sāyids of Kūm, who had charge of the mausoleum of Fālāw, daughter of the Imam Miṣrā Khān [cf. H. v. Humboldt]. He went to India at the end of the reign of Shāh Shāh, stayed there nearly 30 years, returned home in 1180 (1766), made the pilgrimage to Mecca and died in Persia in 1194 (1780). The Asiatic Society of Bengal possesses a short muḥtawwī entitled 'Azīz-al-maṣfūrūn. "Pearls arranged in Order" by him; his Divān is in the India Office Library.

Other poets have had the same tāhāshīs: 1. Wafāf of Fārshān (Mirza Muhammād-i Husain), a satyric and mystic, brother of Miṣrā, called the great Kām-mīl. He was for a time a minister of the Zand dynasty and on their disappearance rendered great service to the Kādjar. He died at Kāvar and has left a Divān; 2. Wafāf of Yarī (Akkāb Muhammād), a poet of the ninth century; 3. Wafāf of Ashrafī (Mirza Mahdī Khān), also of the ninth century, was a descendant of a Georgian family that had settled in Persia in the time of the Safawī; he was secretary to Miṣrā Khān, Muhammād al-Dawla; he wrote a beautiful hand; 4. Wafāf of Daṭrī (Mirza 'Abd Allāh Khān), a derwīsh, was for some time in the service of the princes of the imperial family, Zill al-Salṭān and Shāhīz 'Alī Khān; he once visited Shirāz.

Sprenger, Descriptio Catalogi, Calcutta 1854, l. 584; Ethel, Cat. Pers. MSS. India Office, l. NP. 1718; W. Ivanow, Descriptive Catalogue, Calcutta 1924, p. 398. (Cl. Husky)

WAFIR, the name of the fourth metre in Arab prosody. It consists in theory of three

The alterations that may be undergone by the feet are as follows: 1. the fairly frequent disappearance of the vowel of the ālām in muḥtawwā (muḥtawwā = muḥtawwā); 2. the rather rare disappearance of the ālām and its vowel (muḥtawwā = muḥtawwā); 3. the excessively rare disappearance of the vowel of the ālām and of the ālām (muḥtawwā = muḥtawwā). It sometimes also happens that the first foot of the first line of a poem loses its ālām and taken with the above changes, we have muḥtawwā, muḥtawwā, and muḥtawwā.

(W. Moh. Ben Chener)

WAFK, plur. Amfūf, magic square, i.e. a square divided up like a chessboard, each square of which is inscribed with numerals, letters or words; it is worn as a talisman against illness and for all sorts of other purposes, or can be used for all kinds of magic.

The simplest form of a magic square is the nine-compartmented square with numbers as shown in fig. I. Under the name Bi-sāl̄, it is mentioned in Chinese literature: The legendary Emperor Yā (2200 B.C.) is said to have seen it on the back of a turtle which arose out of the Houng Ho. In Arabic literature, the square is first found similarly arranged in the Kitāb al-Musāfāra of Zanjīr b. Hājīyān, whose writings we must now date about 900 A.D. There it is ascribed to Bālās (Apollonius of Tyana) and is said to facilitate child-bearing if written on two uncut pieces of linen and tied below the mother's feet. The same amulet with the same use is also described by al-Ghazzālī (1048-1111) in the Muqaddam; it is still in use to-day as "Ghazzālī's seal". The essential point in the arrangement of the numbers is that all lines, vertical, horizontal and diagonal, should yield the total of 15. This is only possible if 5 is put in the middle of the four even numbers in the corners and the remaining (odd) numbers in the middle compartments. Beside that shown in figure 1, seven other arrangements are possible, but they do not differ essentially from the first, as they are easily obtained by revolving or interchanging the lines. In manuscripts of the Risālī il al-Ikhwan al-Salṭān, the method of filling up the square is described in terms of moves in chess. In the Safr al-Shem of Abraham ben 'Essa (1092-1167) the square is connected with the name of God in the account of the sum 15 = H. The corner figures form in the Arabih alphabetic numerals the word budāh [q.v.] which is considered a particularly powerful charm.
If we may believe the statements of the Arab bibliographers, Thabit b. Qurra (826–901 A.D.) wrote on magic squares. In this case, it is natural to suppose that this mathematician did not confine himself simply to the square with nine compartments, but also showed how to form squares with 16, 25 and 36 and more compartments. It is also not impossible that the connection of the squares with the planets goes back to Thabit, i.e. to the Sabaeans.

According to Suter, *Mathematiker und Astronomen*, p. 93, Ibn al-Haitham (965–1039) also dealt with the subject of magic squares; but it is mainly the mathematicians or students of secret sciences in the xilth century whose works on magic squares are recorded. Only the works of al-Bānūn (d. 1225), the *Kitāb Shams al-Ma’dūrīf* and the *Kitāb al-Durr al-mašràm fi Ǧim al-Anfšāq wa l-‘Nujum*, are known in detail. In these we find the use of magic squares developed in all directions which presupposes a long history behind it. A collection of the ways of using them would fill many pages and cannot be given here. In al-Bānūn it is a striking fact that squares with the base four predominate, no doubt because these already show a large number of independent forms, which the author makes available for his purposes.

Still very frequent, apart from the base 3, is the base 35 squares with the base 6, which are difficult to prepare, do not seem to exist, and squares with still higher basic figures seem to follow simpler rules.

Among the innovations which appear in al-Bānūn the first is the increase in the size of the numbers inscribed in the compartments. It is easy to see that the conditions for magic squares will also be fulfilled if each number is raised by the same amount or if the numbers form arithmetical series (fig. 2 and 3). That in the MSS. and editions of the *Kitāb Shams al-Ma’dūrīf* many defective squares are found is partly due to the copyists.

How the squares can be put right, with as little correction as possible, has been shown by W. Ahrens in his work.

As the Arabs use two systems of numerals side by side, the two systems are easily mixed. The usual form is for a word, usually a name for God, broken up into its consonants, to be put as a clue in the upper row, with its numerical value, while the other lines are filled up with ordinary numerals. Al-Bānūn gives numerous examples, one of which I reproduce; only I replace the letters of the word

\[
\begin{array}{c}
36 & 41 & 34 \\
35 & 37 & 39 \\
40 & 33 & 38
\end{array}
\]

Fig. 2.

need to replace 31 by 39 in order to get line IV correct also. For the last wrong numbers 6 and 20 we have to put 10 and 197 in order to have 299 everywhere, including the diagonals (fig. 5). The rows of figures are therefore now

\[
\begin{array}{cccc}
1 & 50 & 1 & 40 \\
38 & 11 & 198 & 48 \\
196 & 51 & 2 & 41 \\
5 & 39 & 7 & 199 \\
10 & 197 & 52 & 3
\end{array}
\]

Fig. 5.

by their numerical values (fig. 4). The sum of all the numbers in one line or vertical series must give 299 as this is the numerical value of the clue word. But we get this sum only in the vertical rows \( \epsilon \) and \( \eta \); all the other sums differ

more or less. If we put the figures written in the squares in order of magnitude we get the groups

\[
\begin{array}{cccccc}
\end{array}
\]

The figures 21, 29, 31, 99 cannot be correct, because they do not fit into the five-lined rows; 38 also occurs twice. If we replace the 38 below 8 by 48, the 21 by 41, we get two new correct lines II and III, and if we write 199 for 99, the vertical row \( \varepsilon \) also becomes correct. Now we only

\[
\begin{array}{cccc}
50 & 1 & 40 & 8 & 200 \\
38 & 11 & 198 & 48 & 49 \\
196 & 51 & 2 & 41 & 52 \\
5 & 39 & 7 & 199 & 49 \\
10 & 197 & 52 & 3 & 37
\end{array}
\]
yet: in general use. What al-Bīnī tells us on this subject in the Shems al-Ma'ārif is not complete; presumably the second work contains more about it. In any case, the two systems — the one ascending from Saturn to the moon, the other reversed — must have been well-known in the Muslim world by the xivth or at latest the xvth century. In the west, the first system became widely disseminated through the Ars Mathematica of Alciphron of Nisibis (1333), the second is taught in the Practica Arithmeticae of Cardinalis. The period when the making of seals of the planets was especially popular was the xvth or xviith century. In the coin cabinets we find complete collections of seals of different metals as follows:

The seal of Saturn with the magic square 3 x 3 of lead.

The seal of Jupiter with the magic square 4 x 4 of tin.

The seal of Mars with the magic square 5 x 5 of iron.

The seal of the Sun with the magic square 6 x 6 of gold.

The seal of Venus with the magic square 7 x 7 of copper.

The seal of Mercury with the magic square 8 x 8 of silver plating.

The seal of the Moon with the magic square 9 x 9 of silver.

In the east a number of empirical rules seem to have been used for the preparation of magic squares. The "rule of the Indians" was first made known by La Louës about 1691. Long before that, however, the Byzantine Moschopulos (c. 1400) dealt with the problem in a general form. From the middle of the xviith century onwards, i.e. after the seals of the planets became known in the west, the mathematical side of the problem has been continually studied down to the present day. For the literature of the subject S. Günther's work should be consulted specially.

Al-Wafarānī or Al-Ifrīnī, Abu 'Abd Allah Muhammad bin 'Abd Allah, called al-Saghīr, a Moroccan biographer and historian, born in Marrakush in 1080 (1669-1670); he belonged to the Berber tribe of the Idris or Ufān (Wafarānī) which was settled in the south of Morocco in the valley of the Wādī Darra. We know very few details of his life. He studied in his native town, then at Fās and spent his life in one or other of the chief towns of Morocco or at the al-wiṣāya of the Sharqāwā [q.v.] of Abu 'l-Lā'la' (Bujjad). Towards the end of his life he was imām and preacher (khāṭīb) at the Masjid Yūṣuf (or Madrasat Ibn Yūsuf) in Marrakush; he died in 1140 (1727) or 1154.

Al-Wafarānī is best known as the author of the great chronicle of the Sa'dians entitled Nushat al-būdī al-Akhbārī Makhāl al-Karn al-bādī, ed. and transal. by O. Houdas, Neshat el-boudi, Histoire de la dynastie saoudienne au Maroc (1122-1160), in F. E. L. O. V., 3rd. ser., vol. ii., Paris 1888-1889 and lithographed at Fās in 1307 A.H. It is by far the most important source for the history of the first of the Sharqi dynasties of Morocco, for it makes use not only of contemporary chronicles but also to some extent of state documents which the author studied at first hand. It covers the period 917 (1512-1513) to the end of the xiiith (xviiith) century and deals, very unevenly however, with the reigns of various Sa'dian princes, the longest and most detailed section naturally being that dealing with the reign of Sa'dan Ahmad al-Mansūr [q.v.]. For a critical study of the matter of the Nushat al-būdī, see E. Lévi-Provençal, Les Historiens des Chérifs, Paris 1922, p. 120 sqq.

Besides his history of the Sa'dians, Al-Wafarānī wrote other historical, biographical and literary works. These are, in chronological order: 1. al-Maṣlah al-nahī fi Šarḥ Tawābqī Ilūn Sahl, a commentary on a poem by the famous poet of Spain Ibrāhīm b. Sahl, lithographed at Fās in 1334; 2. a monograph on the 'Alawīs of Morocco Mawla 'Isā, al-Zil al-marīf fi Muḥarrir Mawla 'Isā Ilūn al-Shāfīr; 3. an unpublished monograph on the "Seven Saints" of Marrakush, Durar al-bīdāt al-Maṣābir Muḥarrir Muḥarrir; and lastly 5. a biographical collection on Moroccan saints of the xixth cent. a. H. Šaraf wa rūn ašhār wa rūn al-Maṣābir Al-Aḥammad 'Abd al-Dawla' al-Shāfīr al-Karn al-bādī 'agār. The last work, which has been lithographed in Fās, is an indispensable work of reference for the history of the Moroccan and Marabout movements in the history of Morocco from the end of the middle ages.

Al-Wāh (pl. Al-Wawāt), the name of a group of oases to the west of Egypt. There are three of them: the first is opposite the Fayyum and reaches to the length of Awaṣa; it is the largest of the oases and contains several villages; its palms give the best dates in Egypt. The second is smaller and less populous. The third is the smallest and contains a village named Santa. This is the information given by Yaḥyā. Maḥrīq makes four oases which he calls outer
and inner; in his time Sautariya was a little town of about 600 inhabitants of Berber stock called Swa who spoke a dialect resembling that of the Zenata. The soil of the oases produced alum and vitriol; the exportation of 1,000 quintals of alum per annum was imposed on the holders of the hil (mudjab) by the Ayyubids of Cairo; later this contribution was neglected and finally ceased. There are springs of acid flavor, the water of which is not used in place of vinegar, and others of an astringent and bad taste; there are about twenty springs of fresh water. Certain illnesses are endemic and fevers common. There are groves of palm trees, olive-trees, fig-trees and vines. There was said to be an extraordinary citrus tree there which yielded 4,000 citrons each year; which may be compared with the examples given by botanists of the fertility of the Aurantiaceae. In 339 (950) the oases were ravaged by a Nubian army, which carried off numerous prisoners.

Bibliography: Yahut, M. D. G., iv. 873; al-Mas'udi, Muradd, i. 90.

WAHB b. MUNABBIH, Asil 'Abd Allah, a South Arabian story-teller (Bâb al-aqâbâb, Bibliothèque, in Z.D.M.G., xlv. 483) of Persian descent who was born in Dhamar, two days' journey from San'a in 34 A.H. (no credence need be given to statements that he adopted Islam in 10 A.H.). Wahb is celebrated as an authority on the traditions of the Ahi b. Khalid and like his brothers Hammân, Khâlid and Maqûdî is classed among the 'Abîmâfân. The earliest sources know nothing of the story that before his conversion to Islam he belonged to the Ahi b. Khalid (Fihrist, p. 50) more precisely was a Jew (Ibn Khalidu, ed. Quatremère, ii. 179); he was presumably born a Muslim. Thâ'labî (p. 191) records a story of his meeting Mu'awiya, and al-Mas'udi says that al-Wahb sent him an inscription discovered in Damascus to be deciphered. We also learn that he held the office of kâfî in San'a, and it is related how in the emirate of Urwa b. Muhammad he once beat with the emir's stick to the effusion of blood an official (aswâl) against whom the people complain. When the saying is attributed to him that by accepting the office of judge, he lost the gift of foreseeing the future in dreams, this is only, as in numerous similar utterances, meant to be a warning against accepting this office (see Wensinck, in Oriental Studies presented to E. G. Brouwer, p. 496 sqq.). Many stories are told of his ascetic mode of life: for forty years no word of abuse of any living creature ever passed his lips; for forty years he never slept on a carpet and for twenty years never performed a mudab between the night and morning prayer (i.e. lived a life of continence). In keeping with this ascetic mode of life is the utterance he made after being thrown into prison: abâdha 'l-kâw lama 'l-âbâh fa-abâdabu lâhun siyâda 'l-bâdâw (Dbahat, op. cit., p. 492), an 'Islamic counterpart to Job, i. 21. Warnings against quarrelosomeness are also attributed to him and the advice not to avoid the society of men but rather to meet them with caution: be deaf when listening, blind when seeing or dumb when speaking. Wahb is said originally to have professed hadâr, but later rejected this teaching as in contradiction to all revealed scriptures. In what period of his life the already mentioned imprisonment fell, is not recorded; probably not till his last years for he died as a result of a fall to the ground to which he was sentenced by the governor of the Yemen, Yâsam b. 'Umar b. Thâ'labî, in 110 or 114 A.H.

Wahb's intimacy with the traditions of the Ahi b. Khalid is attributed to the fact that he had read 70, 72, 73 or even 92 of their holy scriptures, statements which, as the lists of his writings show, are pure inventions; his knowledge apparently came from intercourse with learned Jews and Christians in his native district. His statements which are sometimes in complete agreement with Jewish and Christian sources and sometimes variants adapted to Muslim tradition, are said to have been drawn from the field of Aâbâb al-A'mâhâr wa-l-Abâbâd wa'l-Mubâdâr (Ibn Sa'd, vili. 97), and were handed down to posterity by his pupils among whom several members of his own family were prominent. 'Abd al-Mun'im b. Idris (d. 229 A.H.), the son of his daughter, in particular, distinguished himself in preserving his grandfather's writings. Wahb's Kitâb al-Mubâdâr, which Thâ'labî used in the redaction of 'Abd al-Mun'im, is ascribed in the Fihrist, p. 94, to the latter and quoted by al-Mas'udi as Kitâb al-Mubâdâr wa-l-Siyâr, al-Mubâdâr in this title is to be interpreted as Mubâdâr al-Kâfî (cf. Ibn Kutilah, Mas'ûdî, p. 4) and al-Siyâr perhaps means not only the Kitâb al-A'mâhâr but also the Kitâb al-A'mâhâr (Hadâdî Khâli'a, No. 9436) where the A'mâhâr correspond to the 'Ubâdî of Ibn Sa'd, Hadâdî Khâli'a (No. 9826) also ascribed to Wahb a Kitâb al-Irâtît, which does not seem to have been known under this name at an earlier date. Yahut, ii, 124, says of Wahb that he was hadâr wa-la'nâf min al-islâm wa-l-hadâr wa-l-'asâs wa-l-irâtît, that is, he was a hadâr for the writings of 'Irâtît, i.e. Wahb used al-irâtît in the writings of 'Irâtît, origin, which Wahb used as sources. In later writers we frequently find quotations from Wahb's Irsâlit, but such passages are neither sufficiently reliable nor ample enough to reconstruct Wahb's supposed work, as Chauvin tried to do. It is certain that Wahb took account of Jewish as well as Christian tradition; this is proved by the numerous quotations which survive in Ibn Kutilah, Thâ'labî, Mas'ûdî, etc. Statements attributed to him even in these older sources are frequently contradictory and have apparently undergone all kinds of alterations in the various compilations to which they are to be traced. At a later period, stories of doubtful origin were readily given the authority of his name; in particular, what is credited to him in works like al-Kisiy's Kitâb clearly bears the stamp of later invention. In a separate work, the Kitâb al-Muilih al-mutawwadda wa-l-Himyar wa-al-Abhriram wa-l-Kâzâfîm wa-l-Abhirîm wa-l-Kâsâbirîm, Wahb dealt with the early legendary history of his native land. This work has not survived but it was presumably from it that Ibn Hishâm borrowed the introduction to his Kitâb al-Tâhib; Ibn Hishâm does not mention the name of the historian who takes Wahb's statements from the transmission of his grandfather. In the work used by Ibn Hishâm, Wahb follows Biblical sources completely in his account of early history and gives it — in contrast to the Western sources used in the Mubâdâr — the names and figures of the Biblical text exactly; he even regularly gives alongside of the Hebrew forms of names, those of the Syriac translation. Ibn Idrîs took over
Wahb's account of the beginnings of Christianity in South Arabia (Ibn Ḥishām, p. 20), and Tabari frequently quotes from Ibn Ḥishām the stories he had taken from Wahb. For the biography of Muhammad, on the other hand, Ibn Ḥishām never quotes Wahb as a source nor does Ḥāḍīqī, Ibn Sa'd or Ṣaḥābī, Ḥajjājī Khalfān, N. 12,403 however, says of Wahb that he collected maqāṣid and among the papyri of the Schott-Research collection, C. H. Becker discovered a fasciculus of a biography of the Prophet by Wahb which deals with events before the Hijra, and even includes the expedition against the Khāṭām. Wahb therefore did deal with maqāṣid proper. The same grandson of Wahb, 'Abd al-Man'am, as transmitted the Muhadditha, also appears in the Ṣaḥīḥ of the Heidelberg papyrus written in 228 A.H. The latter confirms what was already to be deduced from the quotations in Tabari and others that Wahb himself did not know of the use of the Ṣaḥīḥ; it also shows that Wahb, like Ibn Ḥishām, used to intercalate his stories with inserted poetry. Ibn Sa'd (VII, 97) mentions that Wahb's grandson used to read his stories, as well as his books, and a Ḥikmat Wahbī four parts is quoted by Abū Bakr Muhammad b. Khāliq (d. 575 A.H.) in his Fihrist (see Bibli. Ar. Hist., ix, 20) with a complete Ṣaḥīḥ going back to Wahb's nephew. This Ḥikma may be supposed to have been a collection of wise sayings taken, some from Jewish and Christian tradition and some wrongly ascribed to it; according to Ibn Kūtaiha, Wahb read over 10,000 chapters in the Ḥikmat al-Fātimiyyah. The Ma'ānī must have been of similar content, which the same Abū Bakr in his Fihrist (op. cit., p. 294) ascribes to Wahb and traces back to Abu 'l-Yasir, the pupil of Wahb and also mentioned in the Heidelberg papyrus. Finally, he also attributes to Wahb a translation of the Psalms (op. cit., p. 294): Kitāb Zabur al-Ṣawāfa Tarrajumah Wahb Ibn Munabbih; it is perhaps identical with the Kitāb al-Masānīs Tarrajumah al-Zabur which still exists, which however is not attributed to a particular author but is said to be by the 'Ulama al-islām in general (cf. 220B20). For the sake of completeness we may also mention the Kitāb al-Ṣawāfa, which Wahb composed but he later regretted having done so (see Yākūt, op. cit., p. 322) as well as the Fihrist, which Ḥajjājī Khalfān (N. 8902) quotes which but seem to be otherwise quite unknown.

Much has undoubtedly been attributed to Wahb for which he is not responsible. That he pursued serious studies can hardly be denied in view of the exact reproduction of Biblical matter preserved by Ibn Ḥishām in his Kitāb al-Tīfāq; when on the other hand even Ibn Kūtaiha points out the contradictions between Wahb's statements and the text of Genesis, the only explanation must be that either the information collected by Wahb was very early remoulded by those who transmitted it, in the manner of the popular story-tellers (faqīh), or that Wahb himself adapted it to popular taste.

WAHBI, a Turkish poet, usually called Saiyid Wahbi to distinguish him from Sûnûlûzâde Wahbi (q.v.). He was a contemporary of Nûmân and like him a native of Sâmûbîl. His father Ḥajjâjî Âmûdî, the bâgâya of İnâmûdî, Kâfî of Venâîghârî, claimed to be descended from the Prophet through a certain Hâsûn Âl-Adîn. After the latter, his son Hâsûn, our poet, was at first given the nîsba Husûnî but then, on the suggestion of Âmûdî Nâlî, the man of letters, given instead the nîsba Wahbi, since it was a gift of God (wahb) that he combined himself in himself descend from the Prophet (siyâsûlû) with the gift of poetry (shârî'î).

Wahbi chose a judicial career and became mûlîl in Aleppo. When a son was born to his nîsba there, the latter was also called Wahbi after him; this boy later became the poet Sûnûlûzâde Wahbi. Saiyid Wahbi was present at the reception of the Persian ambassador Mustâdî Kûl Kûhân in Sâmûbîl in 1134 (1724). At the inspection of the Arsenal on this occasion he is said to have jokingly asked the ambassador to crush into a huge canon in order to be able to report this in İsfâhân as proof of its size, which, to the amusement of those present, the ambassador took seriously. The poet also took part in the reception to the ambassador 'Aqâ al-Azîz Kûhân in 1138 (1726). After Saiyid Wahbi had made the pilgrimage to Mecca and returned again to Sâmûbîl he died in 1149 (1736). He is buried in the cemetery of the monastery of the rope-dancers (Izânâbî Târîbî or Mûsûfî) near the mosque of Djarâth Pasha. His tombstone bears a šâhâdât by Âyânî Nûmân Efendî. A son of Saiyid Wahbi was the mûdârîs Mûnîn Efendî, who had also the reputation of being a poet and died as kâfî of Mûnîn in 1153.

Saiyid Wahbi is reckoned with Nûmân, Belîgh and Nûrâsîs as one of the most important representatives of the romantic group in the reign of Âmûdî III. He is, like them, mainly a court poet singing the praises of his Sultan. His works have not yet been printed. There is a manuscript in Vienna of the Kûlîyât (Flügel, N. 735). A šâhâdât of his is famous in which he celebrates the completion of a well in front of the Rûbî Humâyûn, and it is still to be read in letters of gold on the building. According to tradition, the Sultan himself had endeavoured to make a chronogram (šâhâdât) for it but could not work in the necessary values. The poet succeeded and then added a whole rhyming šâhâdât. Of other works, Wahbi left a dîmûsî, also a few isolated poems. He also completed a romantic methârîs begun by Kûfîzâde 'Abd al-'Azîz (d. 1631 = 1621) entitled Lailût usc-Mûsûfî. Of importance for social history is his book of festivals (Sûrûmûne, MS. in Vienna: Flügel, N. 1092) in which he describes the ceremonial at the court of Âmûdî III in connection with the circumcision of four princes and the marriage of five princesses in 1132 (1720) in vivid and attractive fashion. There is also a tâhâmîrî by him on a gazel of Nûmân, which endeavours to imitate
the latter; in other works however, in spite of the fact that he is of the school of Nādir, he strikes an individual note.

Ottoman critics are not quite agreed in their estimate of Wāhbi. Ziya Paša praises his fine language but finds his other work long-winded and faulty so that not twelve of his ghazals are worth picking out. Kemal and Nādir esteem him highly and would put him at least among the best poets of the second rank and above (Nādir: below) Sīlahrīdē Wehbi.

(W. BÖKKEMAN)

WAHHABĪYA, Islamic community founded by Muhammad b. 'Abd al-Wahhab (1115-1205 = 1703-1787). This name was given to the community by its opponents in the founder's lifetime, and is used by Europeans; it is not used by its members in Arabia, who call themselves Ṭurāzīdē fāsepī, "unitarians" and their system (ṣīḥa) "Muharramīan"; they regard themselves as Sunnī, following the teaching of Ibn Ḥanbal, as interpreted by Ibn Taimiyya, who attacked the cult of saints in many of his writings, especially in a Kitāb condemning the visitation of tombs (in his Rasūl, Cairo 1332).

§ 1. Life of the Founder. He was of the Banū Sinān, a branch of Tānim, and was born at ʿUyain (written by travellers ʿArabina, al-ʿArabina, al-ʿAjība, ʿAina), a place now in ruins, but which (according to L. P. Dame, in M. W., xii. 350) "at one time must have had a population of nearly 25,000". He studied at Mecca under Salāmīn al-Kubari and 'Abdul-Hamid Iyyāt al-Sindī, both of whom (according to al-Dhīlān) detected in him signs of heresy (īḥīā'). Many years of his life seem to have been spent in travel; according to the ʿLamʿi, he lived four years in ʿArab, where he was tutor in the house of a āṣāf Hàṣan; five years in Baghdād, where he married a wealthy woman, who died leaving him 2,000 dinārs; a year in Kūsān, two years in Hāmān, after which he went to Ṣafqū at the commencement of Nādir Shāh's reign (1148 = 1736); here he is said to have studied for four years peripatetic philosophy, the Ḥāshīyā and the Shiʿī systems; for a year he attracted students as an exponent of Ṣūfī, then went to Kūmm, after which he became an advocate of Ibn Ḥanbal's school. Returning to ʿUyain, where he had property, he spent eight months in retirement, and then publicly preached his doctrines, as set forth in his Kitāb al-Tuwārid. He met with some success, but also with much opposition, and indeed from his own relations, such as his brother Salāmīn, who wrote a tract against him, and his cousin 'Abd Allah b. Ḥusain. It appears from his correspondence that his views attracted attention outside ʿUyain before he left the place. Different reasons are assigned for his expulsion; according to the ʿLamʿ, his dispute with his cousin led to bloodshed between the Tānim clan of Yūmān, in consequence of which Salāmīn b. Ṣūfī, al-Anazi, prince of ʿArab, wrote to the governor of the place demanding that he be expelled. He departed with his family and property, said to be considerable, and was received at Darīya (at the time a village of 70 houses) where the chieflain ʿAbdul-Muḥammad b. Saʿīd accepted his doctrine and undertook its defence and propagation. Possibly later events originated the statement that the two came to an arrangement whereby, should they succeed in enforcing their system on their neighbours, the sovereignty should rest with Ibn Saʿīd, whereas the religious headship should belong to ʿAbd al-Wahhab; this in any case represents the relations between the two. The founder's subsequent history belongs to that of the fortunes of the community.

§ 2. Doctrines of Muḥammad b. 'Abd al-Wahhab. His general aim was to do away with all innovations (ḥadda) which were later than the third century of Islam; thus the community are able to acknowledge the authority of the four sunnī law schools, and the six books of tradition. His written polemic and that of his followers is almost entirely aimed at the cult of saints, as exhibited in the building of mausoleums, their employment as mosques, and their visitation. The following list which is taken from the ʿLamʿ seems to agree with what is known of Wahhabī practice.

1. All objects of worship other than Allah are false, and all who worship such are deserving of death.
2. The bulk of mankind are not monotheists, since they endeavour to win God's favour by visiting the tombs of saints; their practice therefore resembles what is recorded in the ʿUṣūl of the Meccan ṣunnahīn.
3. It is polytheism (zhār) to introduce the name of a prophet, saint, or angel, into a prayer.
4. It is zhār to seek intercession from any but Allah.
5. It is zhār to make vows to any other being.
6. It involves unbelief (ḥarām) to profess knowledge not based on the ʿUṣūl, the Sunnah, or the necessary inferences of the reason.
7. It involves unbelief and heresy (ḥift) to deny ḥadāth in all acts.
8. It involves unbelief to interpret the ʿUṣūl by a tuwārid.

His system is said to have departed from that of Ibn Ḥanbal in the following manners:

1. Attendance at public ṣalāḥ is obligatory.
2. Smoking of tobacco is forbidden and punished with stripes not exceeding forty; the shaving of the beard and the use of alcoholic language are to be punished at the ʿālim's discretion.
3. Allms (ṣahāb) are to be paid on secret profits, such as those of trading, whereas Ibn Ḥanbal exacted them only from manifest produce.
4. The mere utterance of the Islamic creed is not sufficient to make a man a believer, so that animals slaughtered by him are fit for food. Further inquiry must be made into his character.

The list given by S. Zwemer in The Muḥammādin World of to-day (New York 1906, p. 106) does not differ materially from the above, but contains the following item which may be noticed:

They forbid the use of the rosary, and count the names of God and their prayers on the knuckles of the hand instead.
Wahhābi mosques are built with the greatest simplicity, and no minarets nor ornaments are allowed.

The *Nawmāt al-A fighter devotes a long section to a list of the practices savouring of paganism prevalent in Arabia in Muhammad b. 'Abd al-Wahhāb’s time; besides the visitation of tombs, reverence was paid to sacred trees and gilibs, and food was placed on graves. It is clear that the two latter were not "innovations," but survivals of pre-Islamic usage. Charges brought against him of burning theological works on a great scale are treated both by himself and his followers as calumnies; they neither admit the burning of the work *Rawm al-Khatib*; but not (apparently) that of *Dallāl al-Khatīrīt*. The charge of rejecting the Sunna altogether (repeated by Nolde) is certainly erroneous. On the other hand, the destruction of tombs on a great scale was practised both by Muhammad b. 'Abd al-Wahhāb and his followers. The former destroyed that of Zaid b. al-Khaṣṣāb at Dhubaila, and it has recently been carried on on a great scale at al-Raj’ of Medina, as a comparison of the photographs in Kilat Pascha’s *Mil’at al-Hamannin* (1925) with Eddon Rutter’s *Holy Cities of Arabia* (1928) shows.

Various minor points of ritual, in which they claim to have abolished innovations are enumerated in *al-Hadīya al-Sunnīya*, p. 47–49; such as: raising the voice in places of *ṣajja* with matter other than the *ṣajja*; reciting the Tradition of Abu Huraira before the Friday sermon; special gatherings to hear the *Sirāt al-Nabi* recited, etc.

It would appear that under the Bani Ḥāshid the founder’s precepts were followed less rigorously than under the Bani Ṣa‘ūd; yet Philby in confining the name Wahhabi to the followers of the latter does not differ from the other travellers, who regarded Ḥāshid as for a time the metropolis of the community. As has been seen, the community does not itself recognize the appellation.

§ 3. Early history of the movement. It is certain that within the year of Muhammad b. 'Abd al-Wahhāb’s arrival at Darʿiya he had won the assent of all the inhabitants except four, who left the place; he proceeded to build a mosque with a floor of uncarpeted gravel; there he gave instruction in his *Nawmāt al-Tawwīl*, punishing those who failed to attend. But he also gave instruction in the use of fire-arms. The new sect soon became involved in war with the Bani Riyād, Duhātam b. Dawwāṣ, which, commencing in 1160 (1747), lasted 28 years. During this period Ibn Sa‘ūd and his son ‘Abd al-‘Azīz, who proved a capable general, were steadily winning ground, with occasional reverses; it became the practice of Ibn Sa‘ūd and his son, when they captured a place, to build a fort at some distance from the original citadel, with a most round it, if the soil were suitable. These forts were garrisoned with men called *almusri*, who were well paid. In the larger places a jābī and a mutil were installed, in the smaller only a jābī. The series of raids whereby the power of Ibn Sa‘ūd gradually grew is sketched by Philby, and need not be reproduced. In 1178 (1765) Ibn Sa‘ūd died, and was succeeded by ‘Abd al-‘Azīz, who retained Muhammad b. ‘Abd al-Wahhāb as his religious guide. In the following year a deputation was sent to Mecca, which was honourably entertained by the Sharīf, and satisfied the theologians appointed to discuss matters with it, that the Wahhabi doctrine accorded with the system of Ibn Ḥanbal. In 1187 (1773) the most stubborn opponent of the sect, Duhātam, fled from Riyād, which was occupied by ‘Abd al-‘Azīz, who was now master of "the Province of Najd from Qatif in the north to Khajr in the south" (Philby). The son of ‘Abd al-‘Azīz, Sa‘ūd, also displayed some military capacity, and was employed by his father in various expeditions. Meanwhile relations had become strained with the new Sharīf of Mecca, Surūr, who forbade the Wahhabis access to the city as pilgrims: but owing to the difficulties which resulted to pilgrims from ‘Irāq and Persia, this prohibition was withdrawn in 1190 (1785).

In 1192 Muhammad b. ‘Abd al-Wahhāb died, at the age of 82; in the years that followed (1192–1195) the Wahhabis advanced eastwards, subduing the Bani Ḥāshid in Ḥaṣā; but even before 1190 they had made casual raids into the grazing grounds of the Mutaṣaṣik and other tribes on the borders of ‘Irāq; and representations having been made to the Porte of the danger from the new power that was arising in Arabia, the Paşha of Bagdad received instructions to deal with it. In 1193, Thuwanī, chief of the Mutaṣaṣik, was put to death for a time been exiled, but was now officially in control of Bayra, collected a force with the view of crushing the Wahhabis, but was assassinated by a negro slave at Shībik on July 1, 1194, in consequence of which the force dispersed. Meanwhile the new Sharīf of Mecca, Ghaθib, after some attempts at compromise, had been attacking the Wahhabī communities from the west, with very little success. In 1198 a fresh expedition was organized from Bagdad on a great scale, but this also proved abortive, and in the following year a treaty between the opponents was ratified in Bagdad. It had little effect, as the Wahhabi tribes continued to raid, and in 1199 invaded and sacked Kerbelā; and massacred the inhabitants. In 1193 Ghaθib found it necessary to evacuate Mecca, which was entered by Sa‘ūd, who proceeded to purge the city of all that in Wahhabi opinion savoured of idolatry, and to execute persons suspected of favouring such practices. His attempts on Djjdā and Medina failed, and in the same year he left the Hijjāz, where the garrison which he had established in Mecca was massacred by the inhabitants. On Nov. 4 of this year (1203), the Wahhabi Ibrāhīm, ‘Abd al-‘Azīz I, was assassinated at Dar‘iya by a Shī‘ from Kerbelā, who had come to the capital as a pretended convert to Wahhabism; Sa‘ūd, who had previously been declared heir-apparent, succeeded him without opposition, and employed his son ‘Abd Allah as commander of the army. A fresh attack on the Wahhabis was organized from Bagdad, but petered out, as the previous summer’s expeditions had done; Sa‘ūd was thus left free to renew his invasion of the Hijjāz, where Medina capitulated in 1204, Mecca in February 1806, and Djjdā some months later. In the following years his raiders advanced beyond the bounds of Arabia, attacking Nadjaf, and Damascus, which successfully resisted. The Wahhabi empire extended in 1211 from Aleppo in the north to the Indian Ocean (?) and from the Persian Gulf and the Iraq frontier in the east to the Red Sea" (Philby). The alarm felt by the Ottoman government was now so serious that Muhammad `Ali Pašha, ruler of Egypt, was authorized to deal with it. He proceeded to do with his usual energy, and although his army, commanded by his son Tūsūn,
suffered an initial defeat, it was after reinforcement able to take Medina in 1812, and recover Mecca in the following year. Muhammad 'Ali himself took the command in the latter half of 1813, and suffered a serious defeat, but the death of Sa'ūd on May 1, 1814, was a blow to the Wahhabi cause, since 'Abd Allah, who succeeded him, was far less capable. Tāṣūn, whom Muhammad 'Ali left in command, found it necessary to make a treaty with 'Abd Allah, who was to acknowledge the sovereignty of the Ottoman Sultan, while the Egyptians were to evacuate Najd; but this treaty was denounced by Muhammad 'Ali, who in 1816 organized a fresh expedition under the command of the able Ibrahim Pasha. (Since Philby has repeated the story told by Palgrave about the carpet, cut in proportioons with an apple set in the midst, which Ibrahim succeeded in reaching without treading on the carpet, by rolling the latter up, it may be observed that this story comes from Ibn al-Thir, who records it in connexion with an event of the year 444H. Ibrahim fought with varied fortunes, but on April 6, 1818 reached Dar'iyah, and on Sep. 9 took the capital. 'Abd Allah himself surrendered and was sent to Constantinople, where he was beheaded. This terminated the first Wahhabi empire.

§ 4. Restoration of the Wahhabi state after Ibrahim Pasha's departure. While the Hidjaz after the conquest was securely garnished by Turkish troops, less importance was attached to the security of Najd, where a revolt was organized by Turks, a cousin of Sa'ūd, who chose Riyadh for the capital of the reviving community, and established himself there in 1821. "By 1833 the whole coast of the Persian Gulf acknowledged Wahhabi rule and paid tribute" (Sir W. Wilson), and several of the inland provinces which had formerly been held by Sa'ūd were recovered. During the absence of Turki's son Faqih at the head of his army the former was assassinated in 1834 by a pretender of the royal family, who shortly afterwards met the same fate at the hands of Faqih, aided by a Shammar chieftain, 'Abd Allah b. Rashid, who was rewarded for his service by the governorship of Ha'il.

§ 5. The Rashid dynasty of Ha'il. 'Abd Allah b. Rashid, a capable ruler, continued to maintain amicable relations with both the Egyptian overlord and the Wahhabi ruler of Riyadh till his death in 1847, when he was succeeded by his son Tali, known to Europeans from Palgrave's travels, who calls him "a warrior even more energetic than his father, and infinitely his superior in the arts of statesmanship". His military skill was displayed in his conquest of the Hijaz, of Khaibar, and of Ta'izz; the province of Qasim, which belonged to the sovereign of Riyadh, voluntarily transferred its allegiance to Tali, and steps were taken to pacify the Bedouin raiders on all sides. (Henceforth no Bedouin in Jebel Shammar, or throughout the whole kingdom, could dare to molest travellers or peasants) (Palgrave). Tali further encouraged the presence of traders in Hai'il by offering liberal terms and security to members of different religious communities. In 1868 this ruler took his own life, through fear of losing his position; he was followed by his brother Mis'ab, shortly afterwards murdered by Tali's sons Badi and Bandar, of whom the latter assumed the sovereignty; he was shortly afterwards slain by another brother of Tali, Muhammud, who inagurated his rule with a massacre, described by Doughty (ii. 16). Doughty's statistical computation of the populations under the rule of Ibn Rashid at this time at 30,000 and of his revenue at £30,000 and expenditure at £13,000, is criticized by Philby as an understatement. About the same time Faqih died at Riyadh (Dec. 25, 1860) and was succeeded by his son 'Abd Allah, who had endeavoured to obtain poison from Palgrave for his brother Sa'ūd. The latter obtained allies who helped him to dethrone his brother in 1870; his reign was marked by the loss of Hasa to the Turks, and other losses on the west; and on his death in 1877 'Abd Allah returned to Riyadh as ruler, it is said through the influence of Muhammad b. Rashid. Relations between the two soon became strained, and in 1883 a pitched battle took place between the forces of the two, wherein Ibn Rashid won a complete victory; peace was made but a revolt of Sa'ūd's sons in 1884 gave Ibn Rashid the opportunity to invade Riyadh; despatch 'Abd Allah to Hai'il, and place a governor of his own in Riyadh. "Ultimately in the spring of 1891 events occurred which seemed to settle the fate of Najd for a long time" (E. Nolde, Reise in Insurabien, 1895, p. 69); a great alliance was formed against the too powerful Emir of Hai'il, consisting of 1. "Utalha under its warlike chieftain Zaud; 2. the whole royal family of Riyadh; 3. the towns Buraids, Kaa's and Shaker; 4. the united tribes "Utalha and "Mutajair. According to Nolde, who gives the most detailed account of this campaign, the forces on either side numbered about 30,000; in the struggle, which lasted a whole month, the initial results were in favour of the allies; but at the end of the month (March) Ibn Rashid succeeded by a mass attack of 20,000 camels in spreading panic among the allies' infantry, and won a complete victory (battle of Mulaidah). Riyadh had been during this rising governed by 'Abd al-Rahman, another son of Faqih; after the defeat of the allies he sought refuge in various places and finally received protection in Kuwait. Muhammad b. Rashid was ruler of desert Arabia till his death in 1897.

§ 6. Restoration of the Sa'ud dynasty. Muhammad was succeeded by his nephew 'Abd al-'Aziz son of Miš'ab; and so long this ruler was involved in a struggle with the Sheikhs of Kuwait, who was harbouring 'Abd al-Rahman b. Sa'ūd and his family. In January of 1901 'Abd al-'Aziz, son of 'Abd al-Rahman, at the head of a small force succeeded in entering Riyadh, and re-establishing the old dynasty there; after an interval of eleven years spent in exile. The succeeding years were spent by him in recovering provinces which had belonged to the old Wahhabi empire, and by 1904 "he was master of all that his grandfather had ruled effectually in Najd" (Philby). The campaigns which he conducted in the following years against Ibn Rashid, the Turks, disaffected tribes, pretenders of his own family, and finally the rulers of the Hidjaz, are recorded in detail by Philby, but only a few events of importance need be mentioned here. On Nov. 2, 1911 Ibn Sa'ūd seized possession of Hai'il, and put an end to the Rashid dynasty. In October 1924 he seized occupied Mecca; on Dec. 5, 1925 they obtained possession of Medina, and on Dec. 23 1923 Djjada. Thus the whole of the Hijaz was added to Ibn Sa'ūd's realm.

§ 7. Institution of the Ikhwān. In 1913
In India the foundation of agricultural colonies, whose residents were to be devotees, who took the title ḍhīfāṣ, "heathen", indicating that the religious tie had superceded that of the tribe. The first of these colonies was Araria (the locality is called by Philby, Rihani by Rihani) in the Kasim, and its inhabitants were mainly drawn from the Mughal treasurers. The able-bodied were provided with grants to be used in the ḍīḥāṣ, but they were also told to cultivate the land, which in some cases was near a source of water, and the accumulation of wealth was encouraged. Mud huts were built to serve the Bedouin in lieu of their tents, and they were told to sell their camels. About seventy ḍhīfās (the name for these colonies) with a population of 2,000 to 10,000 each sprang up after the Wahhabi revival in about ten years," writes Ameen Rihani, who adds that the Wahhabi doctrine is to be found in three classes: Ulema, who have become farmers, missionaries called muḥāfīz, and the merchant class; but for military purposes the division is into those who are at all times ready to respond to the call to the ḍīḥāṣ, the reserves, who in time of peace are herdsmen and journeymen, while the third class are those who remain in the colonies to keep up trade and agriculture, though not exempt from military service if necessary. The first two classes can be called out by the şalat, but the muḥāfīz, or calling out of the civil population requires an announcement by the ʿalāma, that it is necessary. A list of the ḍhīfāṣ with their population and the tribes represented is given by him (Jum Nāṣib al-ʿArabī, 1928, p. 198). Dame (L. s.) declared that the agriculture of these ḍhīfāṣ was exceedingly primitive, and that the movement was on the wane.

§ 8. Wahhabism in India. The Wahhabi doctrine was introduced into India by one Saiyid Ahmad, a native of the British District of Rai Bareli, born 1786; having already adopted puritan views, during his pilgrimage to Mecca in 1822—1823 he incurred the hostility of the authorities by the similarity of his doctrines to those of the Wahhabites, and having been expelled from the holy city, became an adherent of the Wahhabi system. He had already acquired a large following in India, and established a permanent centre in Patna, where he appointed four ḍhīfāṣ, and an imām; visits to Bombay and Calcutta swelled the numbers of his followers, and in 1824 he was at the head of an army at the Peshawar frontier, preaching a ḍīḥāṣ against the Sikh chieftains of the Punjab. (Jumādā al-ʿAṣar, 1242 Dec. 21, 1825) was fixed as the date for the commencement of the war, which all Muslims were called upon to join, in a proclamation called ṣarāḥb al-Ḥāṣ. The resistance, Saiyid Ahmad's army took Peshawar towards the end of 1830. He proceeded to take the title ḍhīfāṣ and to strike coins in his own name. His reign was ephemeral, as he was killed by a Sikh army in the following year. His adherents however found a refuge at Sattara in the mountains beyond the Indus, whither those Muslims who were unwilling to live under non-Muslim rule fled, and two of his ḍhīfāṣ from Patna circulated the doctrine that Saiyid Ahmad was not dead, but was merely hidden with the view to reappearance at a suitable time. They founded the ḍīḥāṣ to Hindus and British, and started an insurrection in Lower Bengal, under a disciple of Saiyid Ahmad, Tīvā Mīrā, who, after some successes was defeated and killed by government forces (Nov. 17, 1831). In spite of these defeats the ḍhīfāṣ continued to spread among the Muslim population of India, and while maintaining the puritan doctrines of the Wahhabites of Arabia concentrated attention on the duty of the ḍīḥāṣ. The Wahhabi movement thus became a constant source of trouble to the government of India, since a system was devised whereby funds were collected and men selected and trained to be sent first to the headquarters of the community at Panya, and thence to the frontier camp of Sattara, and thereafter employed in fighting against the non-Muslim rulers of India. After a great deal of trouble, destruction of property, and bloodshed had been caused by their efforts, and a series of trials had revealed the ramifications of the conspiracy, the older Muslim communities of India, both Ḍūʾa' and Sunna, in 1870 and 1871 issued official declarations dissociating themselves from the Wahhabi doctrine of ḍīḥāṣ. Since that time, the sect, though it still exists in India, has attracted little attention and indeed one portion of it is said to have abandoned the doctrine of ḍīḥāṣ. As late, however, as 1890, according to E. A. Oliver (Across the Border, p. 29), it had not ceased to be formidable.

§ 9. Wahhabism in Other Countries. Schuyler in his Turkestan (London 1876, ii. 254) mentions the presence of Wahhabi preachers in Khokand; in 1871 an attack was made on the Russian station Kara, on the high road between Taškent and Hodjent, led by Iyān Ḫālid Muhammad Kal, disciple of a Khokandian Wahhabi preacher, Sāfī Badal. Here, as in India, the aim of the community was to throw off non-Muslim authority, but the forces collected were too excessive to accomplish anything of consequence. The presence of the community in Afghanistan is connected with their aim in India.

§ 10. Wahhabi Literature. Prior to Ibn Saʿūd's recent conquest of the Ḥijāz there appears to have been no printing office in Wahhabi territory; the works of Muhammad b.ʿAbd al-Wahhab circulated in MS. Those contained in the British Museum (MS. Or. 4540) are Muḥāfāṣ al-Sūra, Ḥudūd al-Taḥkī, ʿAṣāṣ al-Kalābī; the autographs are said to be preserved in the Landberg collection at Leyden. The Ḥudūd al-ʿArāf contains a number of his Rasāʾil and Fāṣāṣ. A collection of Wahhabi tracts of different dates was published in Cairo by order of the king of the Ḥijāz and edited by Sulaymān b. Sulaymān (2nd edition, 1344); they are by ʿAbd al-ʿAsīr, ʿAbd Allāh son of Muhammad b.ʿAbd al-Wahhab, Ahmad b. Nasīr b. Muḥammad, ʿAbd al-Lāṭīf of the family of the founder, and his son Muhammad. The title of the collection is Ḥudūd al-Sanīyya wa-Talḥa al-Wahhābī al-Nāṣīfīya. The content of all these is doctrinal, as is that of an anonymous Risāla inserted by ʿAbd al-Ḥāṣ al-Fāḥshī in his Tāṣāṣ al-Ālam (Cairo 1327; reproduced in the Māʾār, xii. 390 and xii. 739).

Numerous tracts have been written against the Wahhabis; three preserved in the Berlin Library belong, according to Ahlwardt, to the commencement of the founder's activities (see his Catalogus, No. 2156, 2157, 2158). Dalais mentions one by the founder's brother Sulayman, one by Muḥammad b.ʿAbd al-ʿRāḥmān, b. ʿAṣīkī, (Zakāh al-Maḥšidīh in-maʿa suḥa Tāṣāṣ al-Dīn), and one by ʿAlī b. ʿAbd Allāh al-Baḥdālī (al-Miṣgūrī, 1835).
al-Muḥfīṣ). Some belonging to the middle of the sixteenth century are preserved in Cambridge University Library (see Browne’s Handlists). Two which have attracted especial attention are al-Durrar al-
ṣārīyā by ʿAbd al-Ṣāliḥ b. Zayn al-Dīn (about 1500); and printed in Bairūt in 1900), and a tract by ʿAṭālī b. Ḥāfṣih, by Baghdaḍī (recent).

The biography of the founder which has been excerpted above (Lam al-
ṣāḥīb fi Sulam Muḥammad b. ʿAbd al-
Wahhāb, Brit. Museum MSS.) is somewhat, but not excessively hostile. Philby mentions it as Wahhābī historians Ḥusayn b. Ghanīmah al-Najjāh,* who died more than a century ago,* and ʿUṯmān b. ʿAbd Allāh b. ʿAbd al-
Hanbali of the fifth decade of the sixteenth century. A British Museum MSS. (Add. 19, 799) without name of author, called Rawāʾī al-
ṣāḥīb wa l-
ṣāḥīb al-
Mushāriq, ʿAḥmad b. ʿAbd al-
Ṣāliḥ has in two volumes, of which the second is a chronicle of Wahhābī campaigns ending with the year 1212, whereas the first contains chapters dealing with various aspects of the founder’s mission and activities.

Several members of the ruling families are credited with skill in versification; specimens of Wahhābī poetry are given in an appendix to al-
Hadīth al-
Ṣaṣānīyyah.

The Wahhābīs of India appear to have employed the printing or lithographic press on a considerable scale. Hunter, p. 66, enumerates 13 works in Arabic, Persian, and Urdu by Wahhābī authors of this country, and adds that the Husayniyyah of the Wahhābī treatises in prose and verse on the duty to wage war against the English would fill a volume.* A work by Muhammad Ḥusayn, nephew of Sayyid ʿAḥmad, al-
Ṣaṣānī, is said to be the "Kūrān of the Wahhābīs of India."

**Bibliography:** British Museum MSS. mentioned in Vol. 10, II. St. John Philby, Arabia (London 1930: a complete history of the community to date of publication); A. Musli, Northern Nijar (New York 1928: p. 256–304 furnishes a continuous history); Ameen Rihani, Ibn Sawūd of Arabia and his Land (London 1928); S. E. Mills, The Countries and Tribes of the Persian Gulf (London 1919: treats especially of the dealings of the Wahhābīs with Ḥāfiz; S. H. Longrigg, Four Centuries of Modern Iraq (Oxford 1925: treats especially of their dealings with the British). For the Indian community: W. W. Hunter, The Indian Muslum (London 1871); Calcutta Review, vol. 1 and 2; (Calcutta 1870); W. R. van Dissevel, De leen der Wahhābītiten, thesis Leiden University, Leyden 1927.

D. S. MARSHALL: WĀḤIDĪ, THE NAME OF A DYNASTY IN SOUTHERN ARABIA, which rules over three sub-tribes, those of the 'Arab 'Ama'īn, Bāl Ḥāfiz 'Isā'īn and Ḥāfiz al-Ṣāliḥ. H. v. Maltzan (p. 222) after investigation divided the whole territory belonging to this ruling house into two groups: Lower Wahhid on the coast from 48° to 50° 30' East Long. (Greenwich) in the 14° N. Lat. reaching barely two hours journey into the interior, and Upper Wahhid from 47° to 48° 30' East Long. (Greenwich) and from 40° 20' to 4° 5° 30' N. Lat. C. v. Landburg (p. 180) gives Ḥāfiz al-Kuśārī in the west and al-
Ṣāliḥ al-
Ḥānṣūr in the east as the boundaries of the coast territory. The lands of the Wahhid dynasty therefore lie between those of the 'Awāli̇ and Ḥāfiz al-Ṣāliḥ. The most important area in the lower Wahhid territory is the Wālī Ma'īṣa, which reaches the sea about east of Ras al-
Kuśārī and is the lower course of the Wālī Ḥādī; its most important place is 1201 al-
Ṣāliḥ. The coast territory is so divided by the lower Wahhid into Bāl Ḥāfiz and Bāl Ḥāfiz 'Isā'īn that the former rules the land between Ḥūṣ al-
Ḥānṣūr and the promontory of Ras al-
Ṣāliḥ, while the latter rules from here to Ras al-
Kuśārī. Wālī Ma'īṣa belongs to the lower Wahhid, who lives in the summer at Ḥūṣ, but the ruler of Bāl Ḥāfiz 'Isā'īn also has land there. The two important harbours are Bāl Ḥāfiz al-Ju'wān and Bāl Ḥāfiz al-
Ṣāliḥ which is used in winter.

To the Upper Wahhid territory belong the Wālī Ma'īṣa of Bāl Ḥāfiz, which is independent, Wālī Ṭabār, al-
Ṣāliḥ, al-
Ṭāmūr, al-
Ṣāliḥ, and al-
Ṭabār, with the most important place which bears the same name. The Beutu tribes of Nu'mān, Sa'd and Ṭabār as well as the Ḥyam tribes of Ḥid al-
Ṣāriq, Bāl Ḥāfiz, al-
Ṭabār, and al-
Ṭamūr are distributed over the Wahhid territory. The wadi is particularly rich and fertile and produce cereals and dates, as well as tobacco, indigo and cotton. Textiles are manufactured, notably in al-
Ḥāfiz, while carpentry flourishes in al-
Ḥāfiz. Ḥūṣ al-
Ṣāliḥ and al-
Ṣāliḥ are important centres of the Saharan period.

In 1870 negotiations took place with Sultan Ḥāfiz regarding the cession of the two ports of Bāl Ḥāfiz and al-
Ṭabār to the Turks who wished to build quarantine stations there. This plan fell through however, owing to English opposition, as it involved the cession of a Turkish port to the Turks. However, in 1870, the Sultan of Bāl Ḥāfiz and al-
Ṭabār agreed to the cession of the town of al-
Ṭabār to the British, with the condition that the Sultan should have the right to collect duties on trade at the port.

A. GROHMANN: WĀḤSHĪ BĀFĶI, a Persian poet, born al-
Ṭabār, in Kirmān, died in 991 (1583) or 992 (1584) and spent most of his life in Yazd. He wrote paraphrases in honour of Shah Ṭahmāsp I and his court, began a poem (Ferādž u-Nād) which he did not complete; it was finished long afterwards by Ḥādī in 1265 (1848–1849). He wrote two other poems, Khudā Bārīn and Rūṭī
Wahshi Baki — Wahy

w-Mansur, ghulal’s and `abid’s. Forhad’s w-Shirin
has been lithographed in Persia and several times
in India.

cutta 1924, p. 300.

Wahy (Ar.), revelation [cf. also PROPHETS,
MUHAMMAD]. As to the etymology of the word,
cl. Jewish-Arabic تحية "to hasten", Anthropic
Wahy, "to go round, to recognize", and the non-
religious meaning ليه make it heard given by the
Dictionary of Technical Terms; on the use of the
verb by the pens, see Litts, v. v. As a religious
technical term it is distinguished from inspiration
(إلهام, q. v.), of saints, artists and others, from
نفل which chiefly denotes the object of revelation
and from إنذر which denotes the sending down
of revelation from heaven and from its heavenly
archetypal [see UMMAK-NABU], in so far as it
denotes revelation as transmitted to the
prophets.

Use in the Kur’ân. a. In the early passage
 sûra xix. 5. The earth is the object of divine
revelation: On that day shall she (the earth) tell
out her tidings, because thy Lord hath inspired
her. In sûra xxviii. 6. The object of revelation
is the mother of Moses: here ali-Badawi explains
the term by inspiration or vision, in order to
distinguish it from wahy proper. Likewise in sûra
xxix. 12 the subject of انذر is Zakaryya and its
object his people; here it is explained by اسماء’s.
In a peculiar way the term is used in sûra vi.
112: Even thus have We given an enemy to every
prophet, Satanas among men and among djins:
twice discourses do they suggest (يُدعَ) the one
to the other, in order to deceive.

The technical term for daemonic inspiration
is يُدعَ. The means of communicating between
God and man is wahy, either directly, or
indirectly through the intermediary of the angels:
It is not for man that God should speak with
him but by revelation, or from behind a veil, or
He sendeth a messenger to reveal by Him, or he
sendeth a messenger to reveal by His permission,
what He will (sûra xlii. 50 sg.). — Allah’s com-
munications to the angels are also called wahy,
sûra xliii. 121: When the Lord revealed unto the
angels: I will be with you etc.

b. In many passages wahy and the verb انذر refer
to the prophets before Muhammad: نُبى
(sûra xxiii. 37); مای (sûra xx. 13 etc.; xxi. 7;
xxii. 160), يُسْتَذَر (sûra xlii. 13) etc. — All those
who were sent before Muhammad, were men to
whom We granted revelations (sûra xxlii. 7).

The chief object of revelation in the Kur’ân
is Mahommades. Sûra xili. 29: Thus have We sent
thee to a people whose other peoples have preceded,
that thou mightest rehearse to them our revelations
to thee. — Sûra xxiv. 49: But I have guid-
ance. It is of my Lord’s revealing. Mahommades’s con-
temporaries are astonished at his receiving revelations:
A matter of astonishment to the men (of
Mocca) that to a man among themselves We
teach and to. (sûra x. 2). But he says: I say not
to you, “In my possession are the treasures of
God”; nor “I know things secret”, neither do I
say to you, “Verily, I am an angel”: only what
is revealed to me do I follow (sûra vi. 50).

The words of Allah that revealed to him may not
be changed: And publish what hath been revealed
to thee of the book of the Lord, none may change his
words (sûra xvii. 26).

The divine character of Muhammed’s revelations
is emphasized in sûra lii. 4: Verily, it is no other
than a revelation revealed; his honesty in sûra vi.
92: But is any more wicked than he who deviseth
a lie of God, or saith, “I have had a revelation”.
when nothing was revealed to him. — Mahommades
therefore is ordered to follow nothing but what
was revealed to him by his Lord (sûra xxi. 2;
xiii. 42). He does not forbid any food, because
he does not find such a prohibition among his
revelations (sûra vi. 146).

d. The contents and the aim of revelation are
described in various ways [see also MUHAMMAD].
The story of the Al ‘Imran is interrupted by the
verse (sûra iii. 39): This is one of the announce-
ments of things by thee unseen: To thee do we reveal it. — The story of Yashûf is introduced
to him with the verse: In revealing to thee this
Kur’ân, one of the most beautiful narratives will
We relate to thee, of which thou hast verily
more time been regardless (sûra xii. 3)—
Muhammad’s following “the religion of Ibrahim” is
ascribed to divine inspiration (sûra xvi. 124),
likewise his knowledge about the djins listening
to the recitation of the Kur’ân (sûra lixii. 1), as
well as about the disputations of the angels at the
creation of man is due to wahy (sûra xxxviii. 69 sqq.).

The aim of the revelation of the Kur’ân is men-
tioned in sûra vi. 19: And this Kur’ân hath been
reveal to me, that I should warn you by it
and all whom it shall reach.

Various terms are used in the Kur’ân in order
to denote the contents of revelation. Sûra v. 52: And
to thee We have sent down the book with truth
(cf. sûra xxxix. 2; 42; xxxii. 2; xxii. 72; xvii. 106, etc.),
confirmatory of previous scripture and its safe-
guard (cf. vi. 92). — Sûra xxxi. 1 sg.: These
are the signs of the wise book, a guidance and a
mercy to the righteous. — Sûra xxvii. 1: These
are the signs of the Kur’ân and of the lucid book;
guidance and glad tidings to the believers.
Sûra vii. 50: And now We have brought thee
the book: with knowledge have we explained it:
a guidance and mercy to them that believe. — Sûra
xxiii. 52: And thus we have sent the spirit to thee
with a revelation by our command. Thou
knewest not, ere this, what the book was, or what
the faith. But we have ordained it for a light.
Further the contents of revelation are called
knowledge (علم, sûra iii. 54; li. 114, 140), wis-
dom (sûra xvii. 41), guidance (sûra xli. 10; vii.
50 etc.), healing (sûra xlii. 44), light (sûra iv.
174; xliii. 52).

Regarding the forms of revelation recorded in the
biographies of Mahommades the following may be
said. The beginning of revelation consisted in dreams
anticipating real events (Ibn Hähim, p. 151; Tabari,
Tafsir, xxx. 138; Ibn Sa’d, i, 129). Also after-
wards such dream visions are said to have occurred.
When A’shar was under suspicion, he hoped that
Allah would reveal her innocence to Mahommades
in a dream vision (Abjad b. Hâmbal, vi. 197;
Bakhtari, Tafsir, s. 24, ba’h 6).

The first revelation in which Jibbân appeared to
Muhammed took place on mount Hira; when
The angel said to him: I am Dāirīr. Thereupon Muhammad hastened to Ḫādījā, crying: Wrap me up (ṣūra lxxiii. 1 or lxxiv. 1).

The first portion of the Qurān revealed was ṣūra xxi., when the angel, in the month of Ramādān, during his retreat, showed him a piece of cloth, on which this ṣūra was written, saying: recite! When Muhammad protested that he could not write, the angel pressed him so strongly that he was nearly suffocated. At the third repetition the angel pronounced the verses which Muhammad retained.

After this there came a pause (ṣafra) in revelation. During this time Muhammad was in such commotion that the thought of suicide came up in him (Ṭabarî, ed. de Goeje, i. 1150; Ibn Hāshim, p. 136, 166; Ibn Sa'd, i. 131). The pause ended with the revelation of ṣūra lxxv or xxvii.

The angel who transmitted revelation was visible to Muhammad and to others (Bukhārī, Fadā'il al-Qurān, līb 1; Ibn Hāshim, p. 154, cf. 156; Abū Nu'aim, p. 69). To some extent the ascension [cf. Mīrāj] and the night journey may also be reckoned as revelations. Visions also are mentioned in the Qurān. Ṣūra lxxiii. 18 ṣayr: Verily it is no other than a revelation revealed: one terrible in power taught it him, ended with understanding. With even balance stood he. And he was in the highest point of the horizon. Then came he nearer and approached closely, and was at the distance of two bows and even closer. And he revealed to his servant what he revealed; his heart falsified not what he saw. Will ye then dispute with him what he saw? And he saw him once again, near the ṣūra-tree, which marks the boundary... His gaze turned north, nor did it wander, for he saw the greatest of the signs of the Lord.

Ṣūra lxxxvi. 19 ṣayr: Verily this is the word of an illustrious messenger, powerful with the Lord of the throne, of established rank... faithful also to his trust. And your compatriot is not one possessed by dijinn; for he saw him in a clear horizon.

In other ṣūras, however, revelation is said to have taken place by audition. Ṣūra lxxv. 18: Move not thy tongue that thou mayest hear over the revelation; we verily will see to the collecting and the recital of it; when therefore we recite, then follow thou the recital. Afterwards, verily it shall be Ours to make it clear. — Moreover the whole form of the Kurān with its often repeated ṣayr as on the part of Allah, supposes revelation by the way of audition.

Particulars regarding Muhammad’s auditory revelations are to be found in the ṣūra and chiefly in ṣūra ii. 3.

The Apostle of Allah heard a sound like the humming of bees near his face; thereupon ṣūra xxviii. 1 ṣayr, was revealed to him (Ṭabarî, Taafsir, ṣūra 23, trad. 1; Ahmad b. Hanbal, i. 34).

The Apostle of Allah used to move his lips from pain, as soon as revelation began. After the revelation of ṣūra lxxv. 16, however, he recited what had been heard (Bukhārī, Taafsir, b. 431; al-Naṣṣābūrī, Ḥiftāštā, b. 371; Taṭbīqīl, No. 2628).

... on the authority of Abū Abd Allah b. ʿUmar I asked the Prophet: Do you perceive the revelation? He answered: Yes, I hear sounds like metal being beaten (cf. above, under 1). Then I listen, and often I think to die (from pain) (Abū b. Hanbal, ii. 222).

How they were perceived by others.

1. Even on cold days, sweat appeared on his fore-head (Bukhārī, Baqā al-Wāy, b. 7; Taafsir, ṣūra 24, b. 6; Muslim, Taafsir, trad. 86; Abū Hanbal, vi. 16, 103, 197, 202, 256 sq.; cf. ill. 21; cf. further above under 1.1).

2. When Muhammad covers his head, his colour grows red; he sweats as one asleep; or tattles like a young camel; after some time he recovers (murrīya ṣamah) (Bukhārī, Ḥiftāštā, b. 177; ʿUmar, b. 16; Fadā'il al-Qurān, b. 2; Muslim, Ḥiftāštā, trad. 6; Ahmad b. Hanbal, iv. 222, 224).

4. He falls into a lethargy or a trance (ilha): Abū b. Hanbal, vi. 103).

Thereupon the Apostle of Allah sat down, turning towards him (ʿUthmān b. Maṣʿūd). When they talked, the Apostle of Allah let his gaze swerve towards heaven; after a while he looked down to his right side and turned away from his companion, following his gaze and began to shake his head as if he tried to understand what was said to him, while ʿUthmān sat looking on. When ʿUmmad had reached his aim, his gaze turned anew towards heaven, etc. (Abū b. Hanbal, i. 318).

6. When Muhammad received a revelation... this caused him much pain, so that we perceived it. That time he separated himself from his companions and remained behind. Thereupon he began to cover his head with his shirt, suffering intensely, etc. (Abū b. Hanbal, i. 464).

At the time of the Apostle of Allah received a revelation, he began to cover his face with his shirt. When he had swooned, we took it away, while etc. (Abū b. Hanbal, vi. 34; cf. above § 2).

7. Zaid b. Thabit said: "I was at Muhammad’s side, when the sakīna [q.v.] came upon him. His thigh fell upon mine so heavily, that I feared it would break. When he recovered, he said to me: Write down, and I wrote down ʿṣūra iv. 97" (Abū b. Hanbal, v. 184, 190 sq.; Abū Dāwūd, Līlālāt, b. 19).

8. Abū Abd Allah b. Ṛṣdī says: "The ṣūra al-Māʾida was revealed to the Apostle of Allah, while he was riding on his camel. The beast could not bear him any longer, so that he had to descend from it" (Abū b. Hanbal, ii. 176). A similar tradition on the authority of Aḥmad b. Yazd,
Ahmad b. Hanbal, vi. 455, 458; another tradition of the same type: Ibn Sa'd, i, 325.

c. The circumstances under which revelation came to Muhammed. i. Muhammed is directly or indirectly asked for his opinion on a decision, when the answer is revealed to him, e.g., concerning the use of perfumes during the "awra (Bukhari, Hadith, b. 17; see above a. 2.), concerning excuses for staying at home during an expedition (Abu Dawid, Dabas, b. 93; Ahmad b. Hanbal, v. 184); concerning the question whether evil may proceed from good (Ahmad b. Hanbal, iii. 21; Taayiis, No. 2150); concerning the question whether his wives were allowed to relieve a want near town (Ahmad b. Hanbal, vi. 56); concerning Khasibi’s being or not being guilty (Bukhari, Taifis, s. 24, b. 6; Ahmad b. Hanbal, vi. 103, 197); concerning divorce in case of adultery witnessed by one witness (Taayis, No. 2067); concerning idris (Tabari, Tadis, xvii. 2).

2. Revelation comes upon Muhammed while he is riding (above, b. 8.; Tabari, Tadis, xxvi. 39), while his head is being washed (Tabari, Tadis, xvii. 2), while he is at table, holding a bone in his hand (Ahmad b. Hanbal, vi. 56), while he is on the pulpit (Ahmad b. Hanbal, iii. 31).

d. The contents of these revelations are not always communicated, and, if so, they are not always parts of the Koran (cf. Noldeke-Schawally, Geschichte der Querun, i. 356–361), e.g. Muhammed’s answer to the question whether evil may proceed from good (Ahmad b. Hanbal, iii. 31; Taayis, No. 3180); the permission granted to his wives to leave the town (Ahmad b. Hanbal, vi. 56), the punishment of fornication (Ahmad b. Hanbal, v. 317, 318, 320 sqq., 327, not the Surat al-Nahin), the permission of idris (Taayis, No. 2067).

As far as I can see, the idea of revelation has not called forth discussions of importance. Al-Idj and his commentator al-Djurjani combat the views of philosophers according to whom it is a charisma peculiar to the prophets that “they see the angels in their corporeal forms and hear their speech by revelation; it is not to be rejected that they are awake seeing what common people see when asleep, i.e., that they see persons who speak to them poetical words, which point to ideas corresponding to what really happens, since their soul is free from bodily occupations and can easily come into contact with the divine world (Shahih al-Bukhari). Often this peculiarity becomes in them a settled faculty which is easily set working. This theory of revelation is, according to al-Idji, misleading, not being in harmony with the views of the philosophers themselves, according to whom the angels cannot be seen, being merely psychic beings, who do not possess audible speech, which belongs specially to corporeal beings. So the theory of philosophers explains revelation as the imagining of what has no basis in reality, as little as what comes from the lips of ailing and lunatic people. Yet if any of us should command and prohibit on his own authority what is salutary and sensible, he would not on account thereof be a prophet. How much the less then would be a prophetic utterance what is based upon imaginations which have no foundation and often are contrary to reason (Maajzif, p. 172 sqq.).

(A. J. WUSNICK)

WAASI, properly Uwaas b. Mehem, known under his mahjub of Waaiz, a famous Ottoman scholar and poet. Born in 969 (1561–62) in Maablak, the son of a kazi named Mehem Efendi, he also adopted a legal career. After completing his training in Constantinople with the ‘ulema ‘Ullah Efendi and Ahmad Efendi, he filled a series of important posts in all parts of the Ottoman empire (in Rozetta, Cairo, Ahi Ihsar, Tire, Alaghebr, Seres, Rodosito, Uskub, Gumuljina) and died in 1037 (1628) in Uskub, where he filled the office of kazi seven times, after his dismissal at the age of 68. Waiz who was on his mother’s side a nephew of the poet Maksil was likewise a successful poet. He was also one of the finest prose writers of his time and wrote in a particularly fine persianising style. After the death of Baki, he was regarded as the greatest master of his time in prose and poetry. His language is laden with a foreign vocabulary and not easy to understand; his diction nevertheless is clever, intellectual and attractive. Anjati says of him (Shahih al-Nabawi, i. 715) that his poetry is better than his learning, his prose-style more distinguished than his poetry, his gift of entertaining finer than his prose and the beauty of his face and figure more striking than his gift of entertaining.

Waiz left a considerable number of writings in all fields. Some of his works still have their admirers, particularly his two chief works: Strbat al-Nabi and Khab-nama. The former, the Siyati Waaiz or to give it its full title: Durrat al-Tamith fi Strbat Sihi al-Mafridi is best known although he did not quite finish it. It only comes down to the battle of Bard. The holograph is in the Serai library. The book was continued by Nabi and after his death by Nasir-ud-din Shaik Hakfik. Waiz’s text with Nabi’s continuation was printed in 1245 in Bulak and in 1489 in Istanbul in his collected works. No less celebrated is his Khab-nama, a vision. It is a conversation between Ahmad I and Alexander the Great in a dream written in simple, clear Turkish.

According to ’Abd al-Hakim Hamid, the modern school was founded by Shihab under the influence of poems in the style of this vision. This Khab-nama, which is also called Wa’e-nama (Mejem
Tahir wrongly thinks there are two different works and which contains a criticism of his times, has often been reprinted (Bülbül, 1452; Istanbul 1263, 1293, and in the collected works in 1286).

His Şahabdúl-ma'âne or Dütük al-'Amal (Istanbul 1283 and 1286) which is of a religious nature has often been printed as has his Muğhâl of al-Ma'âne (collection of letters; collected works 1286).

His other works, of which Özelik Tahir gives the fullest list, are still unprinted, e.g. his complete Dümân of which only a few copies exist; a Tâlim which deals with a saying of Zain al-Din Kâbî, the Zainiyya order; the incomplete history of the conquest of Egypt: Fârûq al-Ma'ân; a reply to the attacks of the Kâmil on the Şâfîyya of Djâhâr (chronology in the Râhîl at-Adâr library); lastly two essays: Guerrero al-ajr al-sâfâr Sûrat al-Naṣr and Jadîyat al-Muqâlîn wa-Tâhkîrati al-Mu'assim.

WAQ'A NUWIS, WAQAT NUWIS. 'Waqa' nuwîs is the officially appointed Ottoman historian while 'waqat nuwîs means keeper of records; the distinction between the two terms was always pointed out by von Hammer, G. O. R., vii. 465. The first official historian of the Ottomans is usually said to have been 'Abd el-Rähmân 'Abd el-Vâth (cf. F. Babinger, G. O. W., p. 237 sq.). The list of official Ottoman historians is not yet complete and accurate. There are gaps and errors in the list given by J. v. Hammer, G. O. R., vii. 591 sq. (cf. thereom P. Wittek in M. O. G., li. 152 and 243 sq.) and also F. Babinger, G. O. W., p. 227, note 3 and p. 285, note 1). It seems that a keeper of records ('waqa' nuwîs) is occasionally given as official historian ('waqa' nuwîs); for example, the poet Nerkesi (cf. F. Babinger, G. O. M., p. 173) while the case of Mustafa Bântû (cf. F. Babinger, G. O. W., p. 285) who is said to have been given the title of an official historian still wants elucidation. The office of Ottoman official historian is in any case a continuation of that of Şâfîîbînî if he was appointed and paid by the court. The last 'waqa' nuwîs of the Ottoman empire was Waqa' Efennî (?v.).

WAKALA (also Wawla), mandate, authorisation, is a contract (wa'aba) by which one content party, the muwaqâkî, commissions the other, the mandator (waqâlî), to perform some service for him. In the Kûr'an we find forms derived from waqâlî in the meaning of "to rely upon, to trust in Allah" (5th form) or associated with the idea that Allah, is the waqâlî, one of the 99 names of Allah, which according to the commentators has the meaning of haqa' (Sûra xii. 65; ix. 52; xxii. 28). The word is therefore not found as a technical term. Nevertheless at the basis of Sûra xxxii. 11 we have the idea which belongs, rather to the field of law, that the angel of death is regarded as the authorised agent of Allah. But this passage is not quoted as evidence that the conception of wakala is found in the Kûr'an. The "waqâlî" quase as authority for wakala Sûra xviii. 18: "Send one of your number with this your money to the city." This was an authority and therefore according to them Kûr'ânic authority for wakala. Sûra iv. 39 is also quoted: "then send an arbitrator (= negotiator) from your family and an arbitrator from his family".

II. Hâdîthtîs are numerous about mandates and the mandatory, some of which may be quoted here.

The Prophet authorised Hâkim b. Ummâr to purchase a sacrificial lamb (al-Saraghhs, xix. 2) and on another occasion he appointed 'Amr b. Ummâiy al-Dumâni as his waqâlî at his marriage with Ummâl Hâlî. According to Bukhari, Wawla, Bibb. 3, a shepherd may kill an animal that is near to death and the mandatory may repair the thing that is deteriorating. There are also hâdîthtîs regarding the mandate in criminal cases. The Prophet for example gave authority for a woman to be stoned and a drunkard to be beaten (Bukhari, Wawla, Bibb. 13). Other hâdîthtîs mention the agent who demands debis in names of a third person (Bukhari, Wawla, Bibb. 4). From this it is evident that the debtor satisfied the creditor by paying his agent. Here the representation had further effects, for legal relations arose through the act of his agent between the principal and a third person.

III. Ijâma finally sanctioned the legality of representation (waqârat al-wawla). The Muhammadas have from the earliest times to the present day med wakala, without the slightest disapproving being shown, in the settlement of their affairs with one another. For wakala is an urgent necessity for man, since a man is sometimes not in a position to administer his own property when on a journey or on the pilgrimage, or to manage his estate on account of his lack of ability, or pressure of business or his great wealth. By wakala he can appoint a deputy. The verse v. 3: "Help one another to good deeds and to the fear of God" particularly urges this mutual help. — More particularly people of high rank or office usually do not attend to their affairs personally but through authorised agents.

IV. According to the teaching of the jurists, the wakala is a contract and a revocable one (waqât dîjârîs).

1. For the validity (jâfa'îa) of the mandate we have the following four requirements (wâzîkân):

a. the muwaqâkî,

b. the wakala. Both persons must be able to dispose of their property (titâq al-tâqarrûf). A minor (kadî), a lunatic (mâsâkîn), a slave (âbîd) or any one who is mâyâ'îr (q. v.) cannot be either principal or agent. For validity are also required the conditions demanded for other contracts. In particular we should add that in this marriage and divorce only a person of impeccable character in the eyes of the law (waqâlî) can be a wakala, while in all other cases this is not demanded. If then a woman chooses a man who is not of blameless character for her wakala at a marriage, the marriage is invalid. According to the Mâlikîs, a Muslim and a dîjârî cannot be wakala for one
another; but the hadith in Bukhārī, Wākāla, Bāb 2 is not so strict.

1. The object (mawakkil fikhi) must be the property of the principal, definite, legal, and incapable of representation. Representation under a condition to come into operation in the future is not permissible. The principal therefore cannot for example appoint a mawā'il in order to divorce a wife whom he is only going to marry at a later date or to sell a slave whom he is going to buy in the future.

Views differ on the question whether representation by a deputy is possible in the case of acquiring wādisah, e.g. water, wood, or game.

In general one can appoint a mandatary for all actions which one can carry out oneself. Thus we have proxies in all contracts, marriage and divorce, law-suits, payment of blood-money etc. According to Abū Hamīs’s teaching however, a representative in a law-suit could only be appointed with the approval of the other side; his successors however did not think this necessary. According to the unanimous teaching of all the madhāhib, an oath cannot be transferred to a proxy. A list of the commonest cases is given by al-Sarakhsī, xix. 190.

As regards one’s personal duties towards Allah and actions being brought into the sphere of the ‘hadādah, one cannot in general appoint a deputy because they are obligations of a purely personal nature, with the exception of the hadīfah and the distribution of wādah (tawfiqah or adu’ah) al-nāfahah. A proxy cannot be appointed to commit crimes like murder or theft on account of the illegality of the action.

4. The form (lijqah) is that of offer and acceptance (ijāfah wa-kabālīh). Both parties must be willing for this legal transaction to take place and give their approval to it. This is done by offer and acceptance. Acceptance may be given in silence or by an act which clearly shows the approval of the mandatary. Representation is purely a matter of mutual agreement.

2. The authorisation may be definite or general according as the proxy has to carry out a particular piece of business or all the business of his principal in the way he thinks fit. The first kind of proxy is called makhlī bi-wa’dan, the latter makhlī wu’udah. The Shāfi’is reject the general authorisation as they demand that the mandate must define accurately the nature of the business.

3. The proxy does his work without a fee; but some recompense may be made by arrangement. The proxy has in any case the right to be compensated for all expenses or losses that he has incurred. This does not affect the mandate as such. There is a difference of opinion among the jurists on the question where and when and an end to this kind of process into the service (ijāfah).

4. As to the liability (dāmān) it has to be remembered that the wādah is a person of trust. His statement on oath is therefore valid without proof but only as far as the loss, deterioration and return of the res mandata is concerned. His statement regarding the return of the thing to another person than his principal is only to be accepted with proof.

The proxy must adhere to the orders given him and is responsible for all mistakes in the transaction; he is thus responsible, a in shrift, i.e. culpa in omissione, if he does less than he ought strictly to do, and b in adadda, if he does more than he ought, i.e. exceeds his commission.

5. Termination. As the mandate is an ‘ādah, both parties can dissolve the contract when they please. The contract is dissolved like other contracts through death, insanity or the legal incompetence of one of the parties, since the mandatary like the depository [cf. wādah] is regarded as amūn.

V. Here we cannot go into the later development. The Cura Civil Ottomani Art. 1449—1550 contains, broadly speaking, the doctrines of the Hanafīs. In the ‘Awāma al-Majmū‘a, wakāla is dealt with in §§ 512—531 and in the Shāh al-‘Awāma, pp. 199—200.

WĀKĀR, MIRZĀ AḤMAD SHIRZĀD with the taqālīd Wākār (Browne vocalises it Wickār), a Persian poet, the eldest of the six sons of the poet Wājār. His five brothers also attained fame as poets. Specimens of the poetry of the father Wājār are given in the Magdīnā‘ al-Fāṣiḥah2 of Rūdāb Kuli Khān, ii. 528 sqq., and in Browne, Persian Literature in Modern Times, p. 318; in the last named work on p. 301, 319 sqq. and 323 sqq. are also specimens of the work of Dāwār and Farhang; two brothers of Wākār. In the Magdīnā‘, ii. 103 sqq. are two further poems of Wājār’s second son Māhmūd Ḥakīm and in ii. 384, poems by Farhang. Six haqīdas on Nāsir al-Dīn Shāh composed by Wājār and his five brothers are given in the British Museum manuscript, No. 570 of Rūdāb Kuli Khān, ii. 82 sqq., gives a few poems by Tawḥīdī (Mīrzā Ismā‘īl Shīrzwī), another of Wājār’s sons.

Wājār must have been born about 1239 (1827) (cf. Browne, Supplement, p. 250; Browne, op. cit., p. 300). A few years after his father’s death (in 1262 = 1846), Wājār travelled to India along with his brother Māhmūd. He stayed there from about 1266 (1849) to 1268 (1851) in Bombay until a letter from the memoirs of Naṣr al-Daula Firuz Mirza induced him to return to Shirāz. Rūdāb Kuli Khān says that Wājār was very highly honoured in Bombay, but the poet seems to have suffered from homesickness there. The verses in Magdīnā‘, ii. 552 refer to his sojourn in India.

WAemachine — WA£F

The main principles of Fikh

1. The founder (waqfi) must have full right of disposal over his property; he must therefore be in full possession of his physical and mental faculties, be of age and a free man (qabil, makhk, shawar). He must further have unrestricted ownership in the subject of the endowment. Endowments by non-Muslims are therefore only valid if they are intended for a purpose not incompatible with Islam (e.g. they must not be intended for Christian churches or monasteries).

2. The object of the endowment (manafa) must be of a permanent nature and yield a usufruct (ma'afif), so that it is primarily real estate. There is a difference of opinion about movables. One section of the Hanafis regards the granting of movables in an endowment as impossible but the majority, like the Shafis and Mlikis, grant the principle, and from this arise questions about the nature of things which can be the subject of an agreement of the Sharis, e.g. animals for their milk and wool, trees for their fruits, slaves for their labour, books for study. There is however here also a difference of opinion about points of detail (thus Shafis does not permit a slave to be made a waqf). Provisions, money (prohibition of usury) etc. are in general not admitted if their substance is consumed; they can only be the object of a wakala. Among the Maliks a manafa's can also be made a waqf, e.g. the yield of a piece of ground which is let for the period of the lease (laksal, ii. 553).

3. The purpose of the endowment must be a work pleasing to God (surba) although this is not always apparent on the surface. Two kinds are distinguished: waqf khari, endowments of a definitely religious or public nature (mosques, madrasas, hospitals, bridges, waterworks), and waqf akh or shurai, family endowments, for example for children or grand-children or other relations, or for other persons; the ultimate purpose of such a foundation must however always be surba, for the poor for example.

An endowment for oneself is however invalid (except in Abü Yaa). The Shafis give a subterfuge (khila) to evade this condition: the thing which is to be the subject of the endowment is to be presented or sold at a low price to a third person; the latter can then create an endowment in favour of the original owner. Ibn Hajar mentions a further subterfuge which is rejected by others: a waqf is created in favour of the children of the benefactor's father and in the deed he himself is exactly described (Ardabil, Anwa'ur, i. 433). On two other subterfuges see Kaswini, Nikh al-fiqal, ed. Schacht, iv. 45.

4. The form need not be a written one, di-

Band 1:

Vol. 1:

The Dogmatic Teachings of the followers of Islam, Arabic text edited by H. Ritter. Two parts. 27 + 610 pages. 1929—30. RM. 30.—

This is the oldest, most detailed and most important work on the Islamic Sects and was compiled by the celebrated founder of Islamic Orthodoxy, Abu l-Hasan al-Aš'ari (died 324/936). It is the main source for the study of the history of Islamic Creeds. The two parts contain the Text. A third part, containing the Index and sources of biographical information, is in the press.

Band 2:

ad-Dānī, Abū 'Amr 'Uṯmān b. Sa'īd, Kitab at-Taisir fi l-qirāt as-sabā'

Das Lehrbuch der sieben Koranlesungen. Herausgegeben von O. Pretzel. 1930, XV + 228 Seiten. Preis RM. 12.—

Nachdem anerkannt ist, daß eine wissenschaftliche Beschäftigung mit dem Koran auf Grund der üblichen Drucke ohne Heranziehung der Lesarten nicht möglich ist, gehört das klassische Handbuch der Koranlesungen von ad-Dānī zum unentbehrlichen Rüstzeug jedes Arabisten, der mit dem Koran zu arbeiten hat.

Vol. 2:

A Manual of the Seven Authoritative Readings of the Koran, edited by O. Pretzel. 15 + 228 pages. RM. 12.—

It has now been established that no scientific study of the Koran is possible on the basis of the usual text without reference to the different readings. Therefore the classical manual of the different readings of the Koran by ad-Dānī will be required for the study the Holy Book of the Muslims.

ad-Dānī, Abū 'Amr 'Uthmān b. Sa'īd,
Kitāb al-Muqni‘ī ma‘rifat khatt masāhif al-amsār,
ma‘a kitāb an-Naqīt

The two works of ad-Dānī on the Orthography and Punctuation of the Koran are clearly of fundamental importance for the history of the writing down of Mohammed’s revelation as they form the oldest written documents of Islam. They are essential for the history of Arabic writing as a whole and for an examination of the difficulties with which the Arabic language had to contend in order to adapt a strange system of writing. They are important for the understanding of the readings of the Koran and their origin. They also are the key for forming a judgement upon the Cufic Koran Manuscripts. Besides the text, these volumes contain a detailed introduction in German and the indices for Volumes 2 and 3 of the Bibliotheca Islamica. The notes contain full indications of all the material, printed and unprinted, required for the study of the orthography of the Koran as far as it is accessible to-day.
Band 4:

an-Naubakhti, Abū Muḥammed al-Ḥasan b. Müsā,

Kitāb fiḥī madḥāhib firaq ahī al-imāma wa-asma‘uḥā

Die Sektenten der Shi‘a. Herausgegeben von H. Ritter. 1931. XXX + 115 Seiten. RM 10.—

Das einzige Werk, das uns von der reichen schriftstellerischen Tätigkeit des schītischen Gelehrten Naubakhti (um 300 H) erhalten ist. Es enthält die älteste Darstellung der Parteien innerhalb der Schīa, von einem Schriftsteller geschrieben, und darf daher das größte Interesse aller Gelehrten, die sich mit der politischen und religiösen Geschichte des Islam befassen, beanspruchen. Die Einleitung enthält eine eingehende Darstellung des Lebens und der Schriften des Autors aus der Feder des Bagdadischer Gelehrten Sejjīd Hibetuddin as-Sahrastānī, sowie eine Zusammenstellung aller Fragmente aus den verlorenen Schriften Naubakhti’s, die sich bis jetzt haben nachweisen lassen. Der Namenindex enthält zugleich biographische Quellenangaben, die auch über den Rahmen des gedruckten Werkes hinaus von Nutzen sind.

The Sects of the Shi‘a, Arabic text, edited by H. Ritter. 1931. 30 + 115 pages. RM 10.—

This is the only work which has been handed down out of the extensive literary activities of the Shi‘a Scholar Naubakhti (c. 300 H). It is written by a Shi‘i and contains the oldest exposition of the formation of the groups within the Shi‘a, and can lay claim to be of the greatest interest to all scholars who are concerned with the political and religious history of Islam. The introduction contains a detailed account of the life and writings of the author by the Baghdad Scholar Sejjīd Hibetuddin as-Sahrastānī. It is a combination of all the fragments of the lost Naubakhti’s writings which have up to now been discovered. The index of names also contains biographical information which is not confined to the present book but is of general interest to students of the Shi‘a sect.

Ibn Iyās, al-Hanafi Muḥammad b. Ahmed,

Badā’i‘ az-zuhūr fi waqā‘i‘ ad-duhūr

Vol. 5e:

After the discovery of 4 Volumes written by the author, Ibn Iyās, himself and their comparison with the Bulagèr edition, a great part of the latter was found to be very defective and faulty summary of the original. It became therefore necessary to rebuild the original text, written in half colloquial Arabic, on the basis of these newly discovered MSS. The published Volume comprises the years 922—928 (1515—1521) and consequently deals with one of the most important periods of the history of Egypt — the Conquest by the Turks.
Band 6a:
ap-Safadi, Salâheddin Khalîl b. Aibek
al-Wâfi bi l-wafayât
I: Muhammed b. Muhammed — Muhammed Ibrahim b. ’Abdarrahmân

The biographical dictionary of al-Safadi (died 764/1363) comprising 29 Vols, forms the largest and most comprehensive work of reference which exists in Arabic literature. The first volume of this enormous work is published on the basis of the oldest MSS. partly written by the author himself. The lives of a great number of men are described in it, about whom information cannot be found anywhere else. As the work contains also extensive biographies of contemporaries of the author, the book is much more than a mere compilation of other works.

Band 7:

Ottoman’sche Konsonantentexte einzudruckhaft nicht allgemein anerkannt war und wie sein Buchstabenbild viel freier und mannigfacher gedeutet wurde, als die offiziell anerkannten Lesarten erkennen lassen; sie beweisen, daß auch auf dem Gebiet der Überlieferung des Koran die geistige Entwicklung im Islam von Reichhalt und Fülle auf dem Wege der ausschließlich Anerkennung einiger bedeutender Schulen konvergierend zu relativer Einförmigkeit verlaufen ist. Die Sammlung solcher Lesarten von dem alten Grammatiker Ibn Khallawáh (gest. 370 d.H. = 980/81 n. Chr.), die ein Späuterer aus seinem Werke ausgehoben hat, ist die einzige uns vollständig erhaltene; sie faßt nicht nur das verstreute Material zu einem sehr großen Teil zusammen, sondern bietet auch viel noch ganz unbekannten. Zusammen mit der Edition wichtiger Werke ad-Dáni’s (Nr. 2 und 5 der Bibliotheca Islamica) leitet die Herausgabe dieser Sammlung eine neue Epoche in der wissenschaftlichen Erforschung des heiligen Buches der Muslime ein.

the consonant text of Ottoman was not generally accepted, and how its characters were much more freely and more variedly interpreted than the official readings let appear; also they prove that in the transmission of the Koran as well as in other spheres the mental development of Islam by exclusively following a few important schools gradually converged from fullness and diversity to relative monotony. The collection of such readings by the ancient grammarian Ibn Khallawáh (died 370/980), taken from one of his works by a later author, is the only complete one which has been handed down to us; it not only brings a large part of the otherwise scattered material together, but adds much that was unknown. Together with the appearance of ad-Dáni’s important works (Vols. 2 and 5 of the Bibliotheca Islamica) the publication of this collection inaugurates a new epoch in the scholarly examination of the Holy Book of the Muslims.

Name:

Address and Date:
though this is usually the case. The founder must clearly express his wishes either by ważfī/urnished, haddarhī or if he uses other formulae by an addition that “it must neither be sold nor given away nor bequested!” (a phrase always occurring in ważfī documents, cf. the tradition quoted below and the ważfī document of Shāfi‘ī, Umm, iii. 281–52; otherwise it would only be a pāda rī). The founder must further describe the object accurately and state exactly for what purpose and in whose favour the endowment is made. The šāhī works deal very fully with the interpretation of the separate expressions describing those for whom the foundation is intended.

5. The following conditions are further necessary for the completion of a valid ważf:

a. It must be made in perpetuity (wūnaddab), which in the case of foundations for definite individuals is managed by allotting the proceeds after their death to the poor. It is therefore also inalienable.

b. It must come into force at once and there must be no provision for postponing it (wannajdīn), except the death of the founder; but in this case, as in the case of a will the founder can only make one third of his property ważfī.

c. It is an irrevocable legal transaction (fard alsmīn); but according to Abī Ḥanīfah (not however his pupils and the later Ḥanafīs), the foundation may be revoked except when it is connected with the death of the Founder (Sarābštī, Mahbūbī, xii. 27). The Ḥanafī founder therefore always brings a formal suit against the administrator for the restoration of his property; the judge, who then has the choice between the teaching of Abī Ḥanīfah and that of Abī ‘Ullāfūs, decides according to Abī ‘Ullāfūs, since the latter teaches irrevocability, and confirms the ważf by rejecting the petition.

d. Among the Ḥanafis (also in Ibn Abī Laisī; Sarābštī, xii. 35) and the Imāms there is further the requirement of the conveyance (tāzil) of the endowment to those for whom it is intended or rather to the administrator; on the other hand: not in Abī ‘Ullāfūs, since according to him, as in the other schools, the endowment is already complete by the declaration of the founder’s wishes (hashīn). In the case of a foundation for the common good (mosque or cemetery), the conveyance is completed by its being used, even if only by one person.

Among the Mālikīs on the other hand, the points mentioned here are not essential, e.g. it can be revoked not only by the founder but also by his heirs (Khāṣīfī, trans. Santillana, ii. 560–561).

6. As Muslim law does not know the conception of the legal person, opinions differed regarding the position of the ważfī in the law of property. According to one view (Shāfi‘ī, Abī ’Ullāfūs and the later Ḥanafīs; Shāfi‘ī and his school), the founder’s right of ownership ceases; it is usually said that it passes to Allāh; this however only denies the right of ownership of the founder and that of all other mortals. According to a second view (Abī Ḥanīfah [cf. thereon also Shāfi‘ī, Umm, iii. 375 sq.] and the Mālikīs), the founder and his heirs retain the right of ownership; he is however prevented from exercising it. According to the followers of this school, in the case of a mosque, the right of ownership of the founder ceases as soon as a single person has performed his salāt in it. According to a third view (some Shāfi‘īs, Ahmad b. Ḥanbal), the ownership passes to the beneficiaries (mawṣūf ala’thalī)

(cf. e.g. Shāfi‘ī, Tāj alāhī, ed. Jami‘bī, p. 164, 2). The ownership in the yield (mawṣūf ala’thalī) belongs however, according to all jurists, to the mawṣūf ala’thalī.

7. The administration of the ważfī is in the hands of a nāżīr, haizim or muwattawī who receives a salary for his services. The first administrator is usually appointed by the founder; frequently he is the founder himself (among the Mālikīs this invalidates the foundation). The šāhī has a right of supervision; he appoints the administrators and if necessary dismisses them (e.g. for neglect of duty). The form of the administration and the use to which the revenues are put depend on the conditions laid down by the founder. The revenues must however be used primarily for the maintenance of the buildings etc.; only the surplus goes to the beneficiaries. Agreements to lease the lands and buildings can only be made for three years as a maximum.

8. Extinction of the ważfī. If the founder secedes from Islam, the foundation becomes invalid and passes to his heirs. Endowments which have at their object fall, according to the view held of the position with regard to the law of property, to the legitimate heirs (among the Mālikīs only if they are poor) or they must be used for the poor or for the common good; in no case may they be confiscated by the temporal authorities.

II. Origin, history and significance

According to the general opinion of the Musslmans there were no ważfīs in Arabia before Islam, neither in houses or lands (cf. Shāfi‘ī, Umm, iii. 275, 286). The ṣadqā‘īs trace the institution to the Prophet although there is no evidence of this in the Qur’ān. In comparison with other things the support for this institution in tradition is very slight although it is always said by the legists that the companions of the Prophet and the first caliphs used to make ważfīs. In a tradition of Anas b. Mālik it is said that the Prophet wished to purchase gardens from the Bani ‘Uqab in order to build a mosque; they refused to take the purchase money however and gave the lands for the sake of God (Bakhrāshī, Wazīyāh, bāb 25, 37, 35). According to a tradition of Ibn Oman, one of the legists lay chief stress, „Omar, later caliph, at the partition of Khāibar acquired lands (ṣa‘d) which were very valuable to him and asked the Prophet whether he should give them away as ṣadqā‘ī. The Prophet replied: „Retain the thing itself and devote its fruits to pious purposes“ (habbī ṣadqā‘ī wa-raḥīl thumma-rataḥā). Omar did this with the provision that the land should neither be sold nor bequested; he gave it as ṣadqā‘ī for the poor, (needy) relatives, slaves, wanderers, guests and for the propagation of the faith (fi nabi Allāh); it is not to be a sin for the administrator to eat of it in mitigation or feed a friend if he does not enrich himself from it (Bakhrāshī, Shubātī, bāb 19; Wazīyāh, bāb 29, cf. 33; Mālikīs, Wazīyāh, tr. 15, 16; Ibn Mādis, Šodāštāh, bāb 4; Ibn Hānbal, ll. 12, 55; Ibn Sā‘d, Tabaqātī, ll. 111, 266, cf. Nasā‘ī, İḥār, bāb 2, 3). In another version the reference is to a palm-garden called Thamīgh (Bakhrāshī, Wazīyāh, bāb 23; Nasā‘ī, İḥār, bāb 37; Ibn Hānbal, ll. 114) which he acquired from the Jews of the Bank Hāritha (Ibn Hānbal, ll. 125). In both cases however, the reference is to one and the same piece of ground in Khāibar which was called Thamīgh (cf. Nasawī,
he showed that in Egypt the custom of making sites in the towns (riwaq) waqf and non-agricultural land (ard al-riwaq) which existed down to the Fatimid period, goes back to a Greek original. But already in this early period agricultural land must have elsewhere have been made waqf; Shahtaf already speaks of this and Bukhari (Waqiyat, hāf. 477) has a chapter ---If anyone makes agricultural land (ard al-riwaq) waqf and does not give the boundaries:'. This was not unknown to the Byzantines also; Justinian (Novell. 63) exceptionally allows the Mysian church to sell lands and vineyards, which had been given as endowments for the ransom of prisoners and to be used for the poor and brought in no yield worth mentioning.

On the further history of the waqf in Egypt Makrizi (Kāhīrī, i. 295 sq.) gives interesting notes. Abū Bakr Muḥammad b. ʿAlī Maḏāhirī (this is the right reading, d. 345 = 956) was the first to make agricultural land waqf for the holy cities and other purposes. The Fātimids however at once forbad the making waqf of country estates and entrusted the Kādi ʿl-Kudrat with the supervision, assisted by a ḍārūk al-ḥāṣar. In 361 (974) al-Muẓār ādjudged the property of the endowments and the waqf documents (ṣabrāh) to be handed over to the state treasury (baṣr al-waqf); the revenues from the waqfs were then farmed out for 1,500,000 dirhams annually; out of this sum the benefactors were paid while the rest went to the treasury. As a result of this system of farming them out, the waqf possessions had so sunk in value by the time of al-Ḥakim that the revenues in the case of many mosques no longer sufficed for their maintenance. In 405 (1014) he therefore created a large new foundation and had the condition of the mosques regularly examined.

In the Mamlūk period the foundations were divided into three groups. 1. Abūl. These were under the supervision of the māgār al-mašūra and were administered by a māqīr with his council (ṣālīs); they comprised extensive estates (in 440 [1339]: 130,000 saḥlat) in the provinces of Egypt and were used to keep up mosques and ziyārat. Makrizi (d. 845 = 1442) complains bitterly about the abuse and neglect of these endowments; they had come through corrupt practices into the hands of the emirs; the benefactors, who were called faṣiḥ or ḍārūk but knew nothing of ṭibb or of preaching, were registered in the name of some ruined mosque. 2. Abūl, bukmīya. These consisted of town lands in Misr and Kāhir; their revenues were earmarked for the two holy cities as well as for charities of all kinds. They were under the control of the Kādi ʿl-Kudrat and were administered by a māqīr (sometimes by two, one for each part of the city); there was a special ʿārbīs for each part of the town. In this connection Makrizi again makes a touching complaint about the conditions which were becoming worse and worse; from the time of al-Maḏāhirī al-Nīṣābūrī (301-815 = 919-1412) the waqf estates had become poorer and poorer as a result of maladministration. The ʿārbīs in return for bider's sales, without another piece of ground being purchased in place of that sold, it was only necessary to produce witnesses who alleged that this or that building was dangerous to the neighbours and the passers-by. 3. Abūl, alūmīya, family endowments, each of which had their own administrator. These were monasteries (ḥāsīlāt)
founders themselves endeavoured to prevent embarrassment etc. by dividing the lands among a number of endowments in small portions so that several administrators could keep a check on one another, or the supervision is put by the founder in the hands of an administrative commission, to which the kādh, the kāshīth and the prominent citizens of the town belonged (e.g. in Montargen of the year 742 [1340] in J.A., ser. 11, xii. 81). We have very early evidence of a central waqf administration like that of Egypt, e.g. under the Umayyads in Cordova there was a central treasury for the waqf (hāli al-nāāfū in contrast to the state treasury: hāli al-nāāfū) under the supervision of the Khāl L-Khafif (Levi-Provencal, L'Espagne mauresque, Paris 1937, p. 71, 85) and in Fās in the time of the Marinids there was an official who had to administer all the waqfs of the town (J.A., ser. 11, xii. 376). But all this could not permanently prevent embarrassment and flittering away of the waqf estates.

The waqf system in the east was very beneficial in ameliorating poverty and misery and in furthering learning; but it had its shady side morally as well as economically. On the one hand, considerable sections of the populace were taken from industry by the continual creation of new simchars and supported at the expense of the country; on the other hand, the capital for these great endowments had to be supplied by the wealthy and this was acquired not by productive labour but by extortion and unprecedented exploitation of the people (cf. C. H. Becker, op. cit.). The immense accumulation of landed property in the possession of the Dā'ūd family also was economically injurious, although from time to time confiscations by the state and illegal disposal by the administrators had a regulating effect. One consequence of this accumulation very frequently was that the soil was not used to the best advantage; these great latifundia are even often an impediment to the introduction of modern agricultural methods. They often deteriorated so much that the yields were not even sufficient for the necessary upkeep and improvements. To avert this evil and to arouse the personal interest of the tenants perpetual leases have been granted, apparently since the xvii century, which differs somewhat in the different countries but not the same in their main lines. Originally only used in case of lands that had gone out of cultivation, they gradually came into use for other waqf estates also.

The most widely distributed type of agreement of this kind (throughout the whole of the former Turkish empire, including Egypt and Tripoli) is the dafara-nisā' (as contrast to this the short term lease is called dafara wa'ā'afū) so called from the two words in it: the tenant pays a lump sum down according to the value of the land on the conclusion of the agreement (dafara wa'ā'afū) and an annual fixed rent (dafara wa'ā'afū) so that the right of ownership in the endowment may not lapse. He is bound to keep the land in order and make it productive. He can bequeath it (originally only to his children, since 1867 however, to other being named by statute) and sell his rights in the land with the approval of the administrator of the endowment. If the tenant dies or the tenant following him without leaving heirs the land as wa'ā'afū goes back to the endowment. New buildings are regarded as increment.
Another kind of agreement usual in Syria and Egypt is the ǧazā‘ which corresponds to the ǧārā‘ in Tripolitania and Tunisia but has a rent which rises or falls with alterations in the value of the produce on the ground. The tenant can only bequeath it, but has unrestricted rights in his new buildings and new plantations. The agreement only becomes void on non-payment of rent. In Turkey the Ǧawf is similar and in Tunisia the Ǧawf (炷sfol) agreement, but with a fixed annual rent and in Algiers down to the French occupation the Ǧawf (炷sfol) agreement and in Morocco the Ǧawf (炷sfol: in the case of business houses and factories) and Ǧawf (炷sfol: in case of agricultural lands) (cf. Michaux-Bellatere, in R.M.M. xiii. [1911], 197-245), as well as throughout the Maghrib the ǧārā‘ or Ǧufr (炷sfol al-Ǧufr). In all these agreements it is a question of the usufruct (碣r al-Ǧawf). The thing itself (碣r Ǧawf) remains the property of the endowment, which is recognised by the payment of rent; whereas the Ǧawf becomes the property of the lessee. As a result the legists, who at first regarded these agreements in accordance with the customary law as an unpermitted innovation, in the end came to tolerate them because the inalienability of the Ǧawf remained secure.

These varieties of agreement were not however created specially for the letting of Ǧawf estates but were rather older forms of lease adapted to the Ǧawf. They probably originated in cases in which a piece of land had been made Ǧawf with similar formulae. Thus the Ǧawf is already found in the Marind period in a Ǧawf document for the medrese al-Ǧafrad in Fas of the year 733 (1323) in which such Ǧawf plots of ground are made Ǧawf (7 A., ser. x., 1, 223); similarly in Egyptian Ǧawf documents of the year 691 (1292) Ǧawf lands are made Ǧawf (Moreberg, in M.O. xii. [1918], 10 N. 8). According to Maqrizi (Ka’afradi, ii. 114), it is a question of “lands the development of which undertaken by a third person is prevented”. They were originally state lands, which however on payment of ground rent ( getLocation) could be built upon or used for planting gardens. Later however, they became completely Ǧawf (Maqrizi, ed. Wies, ii. 107). According to a Ǧawf of al-Ǧarqas (d. 1601 = 1670), the Ǧawf agreement is a form of lease by which land is given in perpetuity when built upon or cultivated. Similarly the Ǧawf, a word which must be of Persian origin, is found as early as a Ǧawf of al-Buzarai (d. 877 = 1474). In both cases we have the question whether such a piece of ground can be made Ǧawf (in Ibn Ǧafr, Radd al-Ǧawf, Mir, v. 277, iii. 438). These agreements probably deal with forms of lease which were originally used in the large domains and are ultimately a survival of the ancient empyrean, which was already usual in the Byzantine period for churches and monasteries and their lands (Mittel and Wilcken, Grundzüge und Christ. der Papyrus- Kunde, i., p. 313).

Family endowments are almost as old as those for the public good. The earliest example is the Ǧawf document in which Ǧubayl makes his house in Fustat with everything belonging to it a Ǧawf for his descendants (Umm, iii. 281-283). Such foundations while being a charitable object in keeping with religion, primarily secure the descendants an income for all emergencies and in particular protect the property in times of insecuruty from unscrupulous rulers, although in practice they did not always have the desired result (cf. above). In addition it was a legal means of evading the KuhÂحnic law of inheritance, whether under the usus or anwa or in order to exclude particular heirs or to include those not entitled to inherit or in order to keep the estate intact, when it would be broken up by the application of the law of inheritance. The institution of the family endowment was also abused for other purposes: a man would make his property Ǧawf for his descendants in order to put it out of reach of his creditors, which however is forbidden in a Ǧawf of Abu ‘I-Sa’ïd (d. 928 = 1474; cf. Brit. Mus. Add. MS. N. 7, 834, fol. 131v). Family endowments in the east are very numerous and economically harmful from their great extent. In Egypt for example, the income from these endowments in 1928-1929 was higher than from all the other Ǧawfs together (over £ 1,000,000, p. R.E. Isr., iii. 295).

III. Modern Conditions

The estates of the Dead Hand in the former Turkish empire were estimated at three quarters of the whole arable land and in modern Turkey they have recently been calculated at £ 50,000,000 in value (O. M., v. [1925], 8). In the budgets for 1927 the revenues are entered as £ 3,489,000. Towards the middle of the sixteenth century, they comprised in Algiers the half, in 1885 in Tunisia the half and in 1927 in Egypt 1/4 of the cultivated soil. The accumulation of such extensive possessions in the Dead Hand meant a serious injury to the economic life of the country; but apart from anything else a piece of ground that is Ǧawf cannot be burdened by a mortgage. In addition there were everywhere abuses in the management of these estates and frequently there was an uncertainty in law regarding the question of ownership. The Ǧawf system thus everywhere became a problem in the course of the last century. The European powers (France) were the first to see in it an impediment to the economic development of their Muslim colonies but Muslims themselves (Turkey, Egypt) are now no longer blind to this point of view.

France was the first to try to tackle the problem in Algiers and in not very skilful fashion. As early as 1830 it was laid down that all public Ǧawfs should pass into the possession of and be administered by the French government which aroused particular indignation among the Muslims on account of the endowments for the holy cities. The inalienability of the Ǧawf was thus overcome indirectly: in 1844 the permanent rent was declared redeemable and in 1858 the annuity contract became a simple contract of sale, in which the rent was regarded as the interest on the purchase price. It was further ordained that the argument of inalienability should not be used as a ground of a charge against either French or natives. The sale of the Ǧawf was thus protected. Finally by the law of July 26, 1873, the legal position of land was brought completely under French law and all conditions contradictory to it were abolished. The sale of the Ǧawf was thus recognised in practice, but in order not to interfere further with the religious sentiments of the Muslims or with their family life, the institution was left in existence as a means to circumvent the Muslim law of inheritance, although in this mutilated form. Since 1873 the French courts have adopted this standpoint, which does not follow
with absolute certainty from the ordinance. The
holders of the wakf are now no longer guaranteed
the peaceful enjoyment of the endowment, since one
of the partners can sell the habous and the others
in such a case have to make their claims against
him. The Muslim population however avoided a
sale as far as possible or again invested the
proceeds in another piece of ground to take the
place of the first.

France went to work more cautiously in Tunis
and Morocco. Esrail al-Din had already in 1874
created a central office for the administration
(libéralisation) of the public habous in Tunis. In
1885 the wakf-agreement was legalised in the sense
of the customs previously in vogue. In 1898 it
was then arranged that the habous could either
be exchanged in kind or for money (in the latter
case another piece of ground must be purchased
to replace it, in keeping with the Sharías) and
that it could be let out on a simple lease for a
period of years (as long as ten with the possibility
of renewal). Here again however, they went a
step further to break up the estates of the Dead
Hand. By the decree of Jan. 22, 1905 the censal-rent
was declared redeemable in 30 annuities. Later
however another plan was adopted, less offensive
to religious sentiment, to create small holdings
on a state assisted basis. By the decree of April 12,
1913, natives could get their lands as censal
without public competition, if they had for a long period
passed from father to son. These endeavours were
concluded for the present by the decree of July 17,
1926, by this in the case of landed estate the
Tunisian Muslim, who lives on the piece of ground
in question and tills it himself, or his ancestors
have for at least 33 years, becomes the permanent
possessor on payment of a yearly rent; the piece
of land can however only be inherited in the male
line. This measure met with opposition from occupiers
of family foundations (cf. the party's item in the
programme for the elections in the native
section of the Grand Council in 1928: "to protect
private wakfs", O. M., xii. [1928], 322). For the
administration there has been since 1908 alongside
of the office of the habous also a Conseil Supe'ieur des Habous.
The habous of the Zawiya, which are administered
by Wakifs (usually identical with the Shaikhs), are
also under state control; in the case of the family
endowments which are under the supervision of the
wakf, the government interferes only under certain
conditions e.g. if the ownership of the endowment
is threatened.

In Morocco in 1912 a Direction des Habous
was created which also has to supervise family
endowments and by a dahir of July 21, 1913 the
leasing of the habous was regulated anew; in the
first place the long lease of untitled lands was
restricted to ten years and an exchange for money
was made possible with the obligation to buy another
piece of ground instead. It was further ordained by
dahir of Feb. 27, 1914, that the rents, heretofore
very small, should be raised in keeping with the
value of the estates. A dahir of July 8, 1916
then gave permission for the reservation of manfa'at's
privileges (jeza, qmilas etc.) so that the wakf land
became the property of the occupier. In these
cases however, the sums received had to be invested
in another piece of ground. France thus sought
to avoid a conflict with the Sharías and to use
the legal possibilities of the Sharías to improve
the economic situation.

In Tripoli and Cyrenaica the central
administration of the wakf which existed under
the Turks was taken over by the Italians and
reformed. The institution itself was not disturbed
in the slightest. But under Italian jurisdiction
disputes are settled, not by the Sharía's courts but
by the ordinary courts of law as the wakf is
regarded as coming under the civil laws. Another
regulation introduced in Cyrenaica by the decree
Aug. 23, 1923, was soon afterwards repulsed.
By the decree of July 3, 1921 (No. 1207) new
land registers were introduced, including a special
register for the wakf and for the wakf disposed of
by idjfaratian agreements. The first interference
with private wakfs originated on political grounds
and resulted in the confiscation of all the property
of the Senussi by the state; only the mosques and
cemeteries retained their wakf character and passed
under the administration of the public wakfs (decrees

For Palestine, Syria and the 'Iraqi, it is pro-
vided in the mandate of 1921 that the wakfs
should be administered by the mandatory power
in keeping with the Sharía's and the conditions
laid down by the founder. In Palestine, England
was content with a theoretical right of control by
decree of Dec. 20, 1921; she created a Supreme
Muslim Sharía Council (altered regarding the
method of election and several other points in 1926
and 1929), of 5 members indirectly elected, which
controlled the affairs of the wakfs along with
other matters (O. M., x. [1921], 594-596; ib.
[1929], 311-313). — France on the other hand
in her mandated areas in Syria placed the wakfs
under direct supervision of the mandatory powers.

By an edict of the High Commissioner of March
3, 1921, three bodies for the administration of
the Muslim wakfs in the whole Syrian mandated
territory were created: a Conseil Supérieur des
Wakfs, a Commission général des Wakfs musulmans
and a Contrôleur général des Wakfs musulmans,
who is the official directing the two other offices
and at the same time the general controller. The
controller is appointed by the commissioner and is
responsible to him (Rababah, "L'Evolution politique
de la Syrie sous mandat, Paris 1928, p. 207 sqq.).
In 1926 wakfs'atun and idjfarat agreements were for-
bidden by the High Commissioner and replaced
by mutahadi'a. — The 'Iraqi by the constitution of
July 10, 1924, the wakfs were put under a Wakf
Ministry, the duties and powers of which are to
be regulated by a special law (not yet formulated);
disputes on points of law are dealt with by the
Sharía tribunal, which decides according to the
Sharía's tribunal, which decides according to the
Sharía tribunals, which decide according to the
Sharía's tribunal, which decides according to the
endeavour to support their proposals, like their opponents, by traditional views and to show that the waqf endowment is not a religious institution.

Carrie Russia had already administered the waqfs in the Crimea through Russian officials for its own advantage and had confiscated numerous waqf lands in Turkistan and given them to Russian emigrants, and under Bolshevik rule in the war against all that is connected with religious the waqf buildings and mosques were also declared state property and let out. Cf. on this the statements by 'Iyâd Iskâf at the Islamic Congress in Jerusalem in Dec. 1931 (O. M., xii. [1932], 133-134).

Various Islamic congresses have dealt with the problem of waqfs but always on traditional lines. Thus the second pilgrimage congress at Mecca (1924) protested against governments dealing with waqfs in any way not in keeping with the stipulations made by the founders and demanded that they should be administered by the standards of the Shârâ'ī (O. M., ix. 402). The Islamic Congress at Mecca in 1926 as well as the National Congress of the Hijjas in 1931 demanded of the government that care should be taken to see that revenues from waqfs in favour of the holy cities outside of the Hijjas were collected (O. M., vi. 314; xi. 454). Similarly the Muslim Congress at Jerusalem in 1931 demanded the return of the Hijjas railway with all its rolling stock, because, before it was built, it had been declared a waqf by the Ottoman Sultan.

Bibliography: In addition to the well known collections of traditions and the Fiqh books there are numerous special works of which the following have been printed: al-Khâṣâ'î (i. 621 = 875), Aṣqâm al-Wakf, Cairo 1904; Isâhâk b. Mâlik al-Târâbulusî (d. 922 = 1516), al-Wâqf fi Aṣqâm al-Awâfi, Cairo 1924; tr. B. Adda and E. D. Ghalioungui as Le Wakf, Alexandria 1893. — Of the extensive literature only the more important need be mentioned: Tornaua, Das moslem. Recht, Leipzig 1885, p. 155 sqq.; Th. W. Juyaboll, Handbuch des islam. Gesch., Leyden 1910, § 603; in (Dutch) ed. 1925, § 62; Kreimkirk, Das Waqfrecht vom Standpunkte der Vaterrechtlich und der Roheinsch. Scliven, in Z. D. M. G., xiv. (1891), 511-576; E. Clavel, Le Wakf ou Haben en Egypte (Études habesque et malabite), 2 vols., Cairo 1898; E. Mercier, Le Haben ou Ouakf, ses règles et son jurisprudence, Algiers n. d. (from Règles algériennes et turques de législation et de jurisprudence), le Cours des habens, Constantine 1899; Santillana, Instituciones de derecho musulmán malabita, Rome 1926, i. 346 sqq. (on long term agreements).

WAKF — WAKHAN

Wakhan (in Arabic Wakhkhān), a district to the south of the Pamir [q.v.]. Wakhan is a long and narrow valley which runs from east to west and is watered by the upper course of the Oxus (Pandj) and by the river Wakhan-darya, which is the most southern source of the Oxus [cf. AMū-DARYA]. The length of Wakhan along the Oxus is 67 miles and of the Wakhan-darya (from Langar-kīsh to the Wakhlīr pass) 113 miles. Afghan sources put the distance from Ishkashim to Sarhad at 66 būrīhā = 22 farsakhhs.

To the south of Wakhan rises the wall of the Hindu-Kush through which several passes lead to the lands of the upper Indus. The main pass (12,460 feet) of Baroghīl leads into Citzal. The northern wall of Wakhan is the Wakhan (Nicholas II) which range the peaks of which reach a height of 25,000 feet. In the west, Wakhan stretches to the bend of the Oxus, where the river entering the boundaries of Zanghān (q.v.) turns northwards. In the east Wakhan (through the high valley of Wakhlīr) is joined by Chinese possessions and lake Cakmak-kul.

Wakhan lies as a barrier between Russian lands in the north and British in the south so that nowhere are they in direct contact. By the Russo-Afghan agreement of March 4, 1875 defining the frontier, it runs s. in the lower part of Wakhan up the course of the Oxus as far as Langar-kīsh where the two sources of the Oxus meet: the river Wakhan from S. E. (from the Little Pāmīr) and the river Pāmīr from the N. E. (from the Great Pāmīr); s. from Langar-kīsh the frontier follows the course of the Pāmīr river to its source (lake Zor-kul or Victoria); c. more to the east again, the frontier runs by a zigzag line towards the south to China (near the Meyk pass). Afghan territory therefore comprises the left bank of the Oxus, all the valley of the Wakhan-darya, the land on the left bank of the Pāmīr river and a small part of the upper course of the Ak-su (including lake Cakmak-kul).

Afghan part of Wakhan contains seven districts, namely from east to west: Warg, Urgand, Khandal, Wakhkhan, Pāmīr, Bābā-Tangī, Nirra-va-Shalak and Sarhad (this last named village is at the foot of the Baroghīl pass at a height of 11,350 feet), as well as the thinly populated territory of the Little Pāmīr (watered by the Wakhshīn-darya).

On the Afghan side there are in Wakhsh 64 villages with 3,500 inhabitants and on the Russian 27 with 2,000 inhabitants. The population (Wakhshīs) belongs to the race of Iranian mountaineers (Qaγhāsī) very often with blue eyes, a feature which had struck the Chinese as early as the sixth century. The Wakhsh language is an unusual variety of an Iranian dialect (Qaγhāsī). At the present day the Wakhshīs on the Russian side form part of the autonomous republic of Tadjikistān.

In his monumental works Sir Aurel Stein supports the thesis according to which the Wakhshīs corridor ("the most direct thoroughfare") has been used from very early times for communication between the settled areas of northern Afghanistan (Balgh) and those of the modern Chinese Turkestan.

From the seventh century, Wakhan is continually mentioned in the early Chinese sources under the names of Hu-um, Fo-ho etc. (cf. Marquart, Erklärung, p. 243, and Chavannes, Documents sur les Toussins occidentaux, Index). Hsien Tsang mentions the greenish eyes of the people of Ta-mo-al-ti (a form not yet satisfactorily explained) and its capital Hu-um-čo (= Khondol) with its great Buddhist stupa. In 747 A.D. Wakhsh had become the theatre of the operations of the famous Chinese general Kaouen-či against the Tibetans (cf. Chavannes, p. 152—153). Among Arab authors, Iṣḥāqī (<Balgh) several times mentions Wakhsh as a land of infidels, as the place from which monks come and where the Oxus rises (cf. Ḩṣahāni, p. 279, 280, 296; Ibn Rusta, p. 91). Māni, Marīg, i. 213: Turnīsh, p. 64, applies the term "Türk" to all the inhabitants of the upper Oxus: the Wakhshīs (Xkān) read: Ḩolbus (Xkān). Tūbbat (Tibetan) and Ayghān (?). As to the Iranian Wakhshīs the term "Türk" can only refer to their dynasty (cf. Marquart, Werōt and Arang [still unpublished], p. 101—102). More detailed information is supplied by the Persian geographical work Ḩudud al-Ālam (372 = 852, ed. Barthold, 1930, fol. 235) which calls Wakhsh the residence of the king and capital of the land (chakor) of Sīkhām (it ought probably to be emended to Ishkashim, the capital of Wakhshīs). At Khūndā (Khūndād) are the temples (būd-khānas) of the Wakhshīs and "to the left" was a fortress occupied by the Tibetans. Samarkandī is regarded as the remotest frontier of the dependencies of Transoxiana; it had Hindu, Tibetan and Wakhshī inhabitants (probably the Sarhad of the present day).

AL-WĀKI‘A (A.), the name of Sūra lxi. The title "this befalling, suddenly happening" which is the subject of the first verse is generally taken to refer to the ḥyā’ma (i. e. where the word is translated "the event") or ēṣr, both periphrases for the Day of Judgment. The content of the Sūra is in keeping with this. Opinions differ as to the date of its origin. Nöldeke and Schwally put it in the first Meccan period but add that Ḥasan al-Bayrāt regards it as Medinese. That some verses are Medinese seems to be generally acknowledged in tradition while Nöldeke-Schwally think the Sūra was composed at one time. In contrast to the verses there quoted as traditional Medinese, the Tafsir al-Diḥālah for example allows verses 80 and 13 (equal 38 in Flügel's notation) to the Medina period, while the official Egyptian Qur’ān (cf. Bergsträsser, in Jcl. xx, 2 seqq.) allows verses 81 and 82 (Flügel So and 81) to Medina. The same Qur’ān describes the Sūra as revealed after Sūra xx. which according to Nöldeke and Schwally belongs to the second Meccan period.

AL-WĀKI‘I, ABD ‘ABBĀD ALLĀH MUHAMMAD b. ‘UMAR, an Arab historian born in 139 in Medina; according to Alkānī, vii. 189, his mother was a great-grand-daughter of Sa‘īb who introduced music into Medina. Al-Wākī became so called after his grandfather al-Wākī, al-Aslamī as a mawla of Abd Allāh b. Barada who belonged to the Medinese family of Aslam. On the occasion of Hārūn's pilgrimage in 170 (see Tabari, iii. 605) he was recommended to him as the best authority on the holy places of his native town and acted as guide to the caliph and his vizier Yahyā when they visited the sacred places. He used the connections he had then formed with the court in 180 (see Ibn Sa‘d, vii/ii. 77) when he met with financial difficulties and went to Baghdād and thence to Rākja where Hārūn was then holding his court (see Tabari, iii. 645). He was kindly received by Yahyā and presented to the caliph who recalled with pleasure his visit to Medina and gave him rich gifts. He himself left a full account of his journey to Hārūn’s court and the reception he found there, which is given in Ibn Sa‘d, v. 314 sqq. The older sources make no reference to his receiving from Hārūn the office of kāfī of the eastern quarter of Baghdād: the story first appears in Yākūt, Uṣūl, vii. 56, without a source being given. On the other hand it is certain that Ma‘mūn after entering Baghdād in the beginning of 204 (see Tabari, iii. 1037) appointed him kāfī of ‘Askar al-Mahdi in Kuṣāfa (Ibn Khallīkān, Cairo, l. 641, wrongly ascribes to Ibn Kūtaiba the statement that Wākī was kāfī of the western side of Baghdād; Ibn Kūtaiba only says, agreement with Ibn Sa‘d that the kāfī of the western side conducted Wākī’s funeral service). Wākī became on intimate terms with al-Ma‘mūn and appointed the caliph his executor, and al-Ma‘mūn carried out the duties in person (see Ibn Sa‘d, v. 321) when Wākī died at the end of 207 (see Ibn Sa‘d, v. 321, vii/i. 77; Ibn Kūtaiba, Mu‘arrif, p. 579; Sam‘ānī, fol. 527v; Yākūt, Uṣūl, vii. 56). Wākī made no secret of his gratitude to Yahyā even after the fall of the Barmecide; the vizier had several times relieved him of the financial difficulties in which Wākī was constantly involving himself. Wākī himself (Ibn Sa‘d, v. 319 sqq.) gives an

example which has become celebrated of the vizier’s generosity, which occurs again in al-Ma‘mūn, Ma‘ṣūf (Cairo), ii. 237 sqq.; Yahyā, Uṣūl, vii. 57; Ibn Khallīkān, l. 641 in a slightly different form. — A list of Wākī’s writings is given in the Fikrist, p. 98 sqq. and Yahyā has used that is almost exactly the same (Uṣūl, vii. 58). The great majority of these works are of an historical nature, some relate to the Qur’ān, Fiṣṣ and Ḥadīth. To the first group belong: 1. al-Ṭāwīl wa ‘l-Muqaddimah, 2. ‘Āthār Ma‘mūn, 3. al-Tafsir, 4. Fiyūd al-Ṣahib, 5. Fiyūd al-‘Irāb, 6. al-Lamā‘, 7. Maṣāḥif al-Mahsūm, 8. al-Sūr, 9. ‘Awarīq al-Nahl, 10. al-Radd wa ‘l-Dīr, 11. ‘Adab al-Amīr wa ‘l-‘Arādāt, 12. Sīyās, 13. Wāfāt al-Nūr, 14. Amr al-‘Abbās wa ‘l-Fīl, 15. al-Sitāḥat al-Mustahbilah wa ‘l-Nafis, 16. Sirr al-‘Abbās wa ‘l-Wafāt, 17. Mu‘āwwad wa ‘l-Mansūḥ; fi ‘l-Kal‘ah wa ‘l-‘Aqīdah wa ‘l-‘Uṣūl wa ‘l-Ma‘ṣūf. Umar al-Dawāni wa ‘l-Maqāṣid wa ‘l-Aqād, 18. Mu‘āwwad wa ‘l-Husn, 19. Dar ‘al-Dawāni wa ‘l-Dār al-Dawāni, 20. Tawīl al-Fākhrī, 21. al-Tawīl al-Khāṣṣ, 22. Tawīl al-Ma‘mūn, 23. Taḥrīr al-Ma‘mūn, 24. Taḥrīr al-Ma‘mūn aḥṣā‘ī, 25. Taḥrīr al-Ma‘mūn fī al-Waqi‘a wa ‘l-Mu‘arrif. Wākī’s historical interests covered the early history of Meccan and Medina as well as the Muslim period. Only the Kitāb al-Ma‘ṣūf has survived as an independent work out of all his writings; the Taḥrīr, which comes down to events of the year 186, is the foundation of the Taḥrīr of Ibn Sa‘d (q. v., v. 314, 77) who also made considerable use of the Sūra (cf. also Bibli. Arab. Hist., ii. 437). Wākī’s and Awarīq; in all parts of his work that cover the same field, Wākī is the main authority and also in the Maṣāḥif. Tabari frequently quotes the Ta‘rīkh al-ḥābar, which must have come down to the year 179 (see Tabari, iii. 639) and Ibn Ḥubaysh (l. 584) has preserved numerous fragments of the Kitāb al-Radd wa ‘l-Dīr (Yawm al-Dīr) i.e. the assassination of Uthmān (see Cazamian, Annu., i. index, 6. v. Wāqī; cf. also Bibli. Arab. Hist., ix. 237). The Fiyūd al-Ṣahib and al-‘Irāb are not preserved; the books which go under these names belong to a later date and have been credited to Wākī. Wākī prefaced a list of his most important authorities to his Maṣāḥif, a list of which was published by H. von Krüdener, History of Muhammad’s Campaigns, in Bibli. Ind., Calcutta 1856) and of which Wellhausen has given a synopsis in German (Mohammed in Medina, Berlin 1882); the list is repeated in Ibn Sa‘d, vii/i. 1, 330 and vii/i. 1 (cf. also vii/i. 77) and has been fully discussed by Scahau in M. S. O. S. A., vii. 1 sqq., 21 sqq. The list consists entirely of the names of learned men, either born or settled in Medina, who had given information to Wākī, and went back to authorities like al-Zuhārī, ‘Aṣim b. ‘Umar, ‘Ansābī b. ‘Arāmī et al. Many of the authorities quoted by Wākī, like Abū Malīhar, Ma‘ṣūf b. Rāshīd, Mūsā b. ‘Ukhrī had written books on the Maghāzī; on the other hand Wākī did not mention by name his most celebrated predecessor in the field of the biography of the Prophet, Muhammad b. Ḥāfṣ. This is all the more remarkable since only (in Tabari, iii. 231) he expresses a very favourable verdict on him and undoubtedly made very great use of his book and obviously follows him in the arrangement of the material (see Wellhausen, op. cit., p. 11 sqq.; J. Horovitz, De Wāqīīr libri, p. 9 sqq.) he possibly wished to conceal his indebtedness by not mentioning the name of Ibn Ḥāfṣ. In the Kitāb al-Maṣāḥif
Wākīṭ. [See Zamān.]

WĀKĀWĀK or WĀKĀWĀK, in Arabic orthography, وککک or وککک or وککک or وککک or وککک and in the spelling of Oriental works refers, unless otherwise stated, to G. Ferrandi's Relations de voyage et textes géographiques arabes, persans et turcs (cf. the Bibliography).

I. WĀKĀWĀK OF THE SOUTH OR WĀKĀWĀK OF AFRICA

The islands of Wākāwāk are situated in the Lārwī sea which washes the western coast of India and the lands inhabited by the Zandj (Yaḵšūb, p. 49). The Wākāwāk of the south is different from that of China (Ibn al-Faḵīh, p. 55). The lands of Sofāla and of Wākāwāk are situated at the extremity of the sea of the Zandj (Maḵzūn, p. 108). The land of Wākāwāk is contiguous to that of Sofāla; there are two towns in it, Đarī and Nabhān, miserable and sparsely populated (Idrisī, p. 183). The town of Daḵḏaghīn, inhabited by hideous and deformed negroes, is next to the land and island of Wākāwāk (Idrisī, p. 184). Wākāwāk is situated in the land of the Zandj (Ibn al-Wardī, p. 425), to the east (= south) of Sofāla, on the same southern (= western) shore of the Indian ocean which extends without interruption to the end of the tenth section of the first clime, at the place where the Indian ocean flows out of the Surrounding Sea (Ibn Khölādī, p. 460). The islands of Wākāwāk are near the last of the islands of Dībāḏšt-al-Dūm (= Laccadives and Maldives) (Merveilles de l'Inde, p. 586).

The Wākāwāk of the land of the Zandj is vast, fertile and prosperous (Ibn al-Wardī, p. 425).

The gold of Wākāwāk of the south is of inferior quality compared with that of the Wākāwāk of China (Ibn al-Faḵīh, p. 55). There is much gold in the Wākāwāk of the land of the Zandj (MaḴzūn, p. 108; Ibn al-Wardī, p. 425).

The natives of the Wākāwāk of the land of the Zandj have no ships, but the merchants of Qumān come to trade with them and get slaves in exchange for dates (Ibn al-Wardī, p. 425; cf. also Idrīsī, p. 183). They know neither cold nor rain (Ibn al-Wardī, p. 425).

II. WĀKĀWĀK OF THE EAST OR WĀKĀWĀK OF CHINA

Wākāwāk lies to the east of China (Ibn Khurḏāḏbaḵ, p. 39), behind China (Ibn al-Faḵīh, p. 55), to the south of the Irāk (Aḥreḏ eq de merveille, p. 140). The Wākāwāk of China differs from the Wākāwāk of the south in the superior quality of its gold (Ibn al-Faḵīh, p. 55). Kankī Ḫī is the remotest town in the east; it is situated at the extremity of China and of Wākāwāk (Maḏfūḏ al-Ulūm, ed. G. van Vloten, p. 217). The island of Wākāwāk is situated to the north-east of the Greater Sea (al-Biṟūnī, Kāmān al-Maḵzūn, p. 598). The island of Wākāwāk forms part of the group of islands of Kāmār (al-Biṟūnī, p. 163). The islands of Wākāwāk are situated in the southern part of the Sea of Darkness (Idrisī, p. 160); they adjoin the islands of Muqūs and those of the Clouds and of places consisting of islets and inaccessible mountains (Idrisī, p. 192—193). It is a land situated above [i.e. south] of China (Yaḵšūb, p. 231—232). The islands of Wākāwāk situated in the Chinese
Sea, are close to the islands of Zabag [= Sumatra] (Ibn Sa'd, p. 334); they are situated in the extreme range, quite close to the coast; they are reached by the Chinese Sea (Dimashki, p. 375), beyond the ocean of Darkness (ibid., p. 391). They are the most famous islands of the Chinese Sea and number over a hundred (Nasrat al-Kulûb, trans. G. Le Strange, p. 222). The islands of Wâkâwâk are situated to the south of the island of Korn and to the west of the islands of Sîf [= Corea] (Ibn Khaldûn, p. 461); in the China Sea and near the islands of Zabag, they are said to number 1,000 (Bukwâ, p. 463); to the south of the islands of Timor, Banda and the Moluccas (Râdî 'Athîr, p. 513); opposite China, a year's journey from the east coast of Africa (Merveilles de l'Inde, p. 585), Wâkâwâk is 4,500 parasangs from Suze (Ibn Khurdâdhbih, p. 32).

The island of Nias on the west coast of Sumatra, which adjoins Zabag, forms part of the archipelago of Wâkâwâk (Ibn al-Wardî, p. 414—415). An island situated 52 li [150 hours' sailing] from Sribusa (Palembâng, S.E. of Sumatra) on the way from Sribusa to China, and 15 li [45 hours' sailing] from Campa (modern Ambon) forms part of Wâkâwâk (Merveilles de l'Inde, p. 589).

The route to Wâkâwâk is from the Coronamian coast (Dimashki, p. 391): one comes there by steering by the stars (Kazwînî, p. 300 and 311; Ibn al-Wardî, p. 415; Bukwâ, p. 463).

It is a large island (Ibn al-Wardî, p. 415). The islands of Wâkâwâk number 1,700 (Kazwînî, p. 300; Ibn al-Wardî, p. 415); 1,500 (Kazwînî, p. 311; Bukwâ, p. 463). They are inhabited and cultivated (Ibn al-Wardî, p. 415); they contain large towns (Merveilles de l'Inde, p. 387).

The ruler of the islands of Wâkâwâk is a woman. She sits nude on a throne, a crown of gold on her head, surrounded by four thousand young slaves also nude (Kazwînî, p. 300; Ibn al-Wardî, p. 415). This queen is called Damhara, wears a robe woven of gold and shoes of gold (Ibn al-Wardî, p. 415; Idrîsî, p. 131).

Some inhabitants of Wâkâwâk are black (al-Bitrînî, p. 164). They resemble the Turks; they are numerous, very industrious, active and intelligent, but treacherous, lying and cunning (Merveilles de l'Inde, p. 387). They weave tunics with sleeves in a single piece; they build large ships and floating houses (Ibn al-Wardî, p. 415).

In 334 (945) of our era, a fleet of 1,000 ships from Wâkâwâk came to plunder some islands of East Africa and certain towns of Sumatra and Zandj. The Wâkâwâk used to come there to get the merchandise necessary for their country and China (Ibn al-Wardî, p. 415). They trade ivory, tortoise shell, panther-skins, amber and Zandj slaves. The voyage lasted a year (Merveilles de l'Inde, p. 587—588). The men there are finer than the women (al-Bitrînî, p. 164).

The Chinese sometimes land there (Idrîsî, p. 193); merchants go with them to look for gold (ibid., p. 194). One cannot land there (Ibn Sa'd, p. 335).

Gold is abundant (Ibn Khurdâdhbih, p. 31; Ibn al-Fakhîr, p. 55; Idrîsî, p. 194; Kazwînî, p. 300; Ibn Sa'd, p. 334; Ibn al-Wardî, p. 415; Bukwâ, p. 463). The chains and collars of dogs, monkeys and other tame animals are of gold (Ibn Khurdâdhbih, p. 31; Kazwînî, p. 300; Dimashki, p. 391; Ibn al-Wardî, p. 414; Bukwâ, p. 463). The chief have bricks made of gold with which they build fortresses and houses (Ibn al-Wardî, p. 414; cf. Abû Zayd Hasûn, p. 84). Tunic woven in gold are sold there (Ibn Khurdâdhbih, p. 31 and 6741; Kazwînî, p. 300—301). The gold is exported in ingots and as dust (Idrîsî, p. 194). The gold mines of the islands of Wâkâwâk is of such productivity that official ordinances are engraved on plates of gold (Nasrat al-Kulûb, trans. G. Le Strange, p. 192).

There is no iron so that it is valued as gold in other countries (Dimashki, p. 391). Florus: "Iron of excellent quality (Ibn Khurdâdhbih, p. 31, Idrîsî, p. 194); ebony (al-Bitrînî, p. 164; Kazwînî, p. 301).

Fau na: elephants, many birds (Idrîsî, p. 193); elephants of great size (Ibn al-Wardî, p. 415); many monkeys which are trained to sweep the houses, and to look for wood in the forests and to do other work (Burhân el-hâkî, p. 563). Fabulous Fânh: fish 200 cubits long, tortoises 20 cubits round (Kazwînî, p. 303); flying scorpions (Merveilles de l'Inde, p. 356); the saumândâr bird which flies fire without injury, a kind of hare which changes its sex (ibid., p. 587).

III. Wâk or Wâk

In Arabic orthography وَكَ. لُوّاٴ

The island of Wâk lies to the south of the "ifâk (Abîregî des merveilles, p. 140), in the neighbourhood of the island of Konar, behind the mountain of Ujûkûn, in the centre of the Southern Sea (Abîghîhî, p. 470). One goes from the sea of Campa to the land of Wâk (Abîregî des merveilles, p. 144). The sea of Campa, which comes before the China Sea, adjoins Wâk (ibid., p. 145). The land of Wâk with its islands lies to the east of China (ibid., p. 153). The land of Wâk lies south of the equator between China and Sumatra, and lies to the south coast of the Indus Sea (Nuwrârî, p. 394).

Wâk is 4,500 parasangs from Suze (Mills à une nuit, p. 506).

The mahârâja, king of the islands, lives in the land of Wâk (Abîregî des merveilles, p. 153; Abîghîhî, p. 144). Marvellous statues are made there (ibid., p. 153).

Much gold is found there (Abîregî des merveilles, p. 153; Abîghîhî, p. 471). The bits for horses, chains and collars of dogs are of gold (Abîregî des merveilles, p. 153; Abîghîhî, p. 471). The people make shirts woven of gold (Abîregî des merveilles, p. 153 and 678).

The mahârâja sits on a throne with a crown of gold on his head, surrounded by 400 young virgins (Abîghîhî, p. 470). The exports are aloe, musk, ebony, cinnamon and all kinds of merchandise (Abîregî des merveilles, p. 153).

IV. The Wonderful Tree of Wâkâwâk and of Wâk

The earliest mention of the story of the fruits in the shape of human beings is given us by a Chinese text: the 道典 T'ung Tien of Tou Yeou, a book which was written between 766 and 801 of our era. Tou Yeou frequently quotes his relative Tou Hua, who was in all probability a monk at the battle of Talas in 754, was in Arab lands from 751 to 762 and put what he
had learned in foreign lands into a book, the

**King of the Arabs** which is now lost.

It was therefore apparently Tou Houna, who, during his forced sojourn among the Arabs, picked up the legend which Tou Yeou relates as follows (*T'oung Pao*, ch. CXCI, p. 235):

"The king of the *Tu-γε* (Arabs) had despatched men who boarded a ship, taking with them clothes and food and went to sea. They sailed for eight years without coming to the far shore of the Ocean. In the middle of the sea, they saw a square rock; on this rock was a tree with red branches and green leaves. On the tree had grown a large number of little children; they were six or seven thumb's length. When they saw the men, they did not speak; but they could all laugh and move. Their hands, feet and heads were fixed to the branches of the trees. When the men detached them and held them, as soon as they were in their hands, they dried up and became black. The messengers returned with a branch of this tree which is still in the palace of the king of the *Tu-γε* (Arabs)" (*T'oung Pao*, Oct. 1904, transl. by E. Chavannes, p. 484-497).

This text was reproduced in the encyclopaedia of Ma Tswan-lin (Ch. occ. era) who wrote in 1319.

Schlegel, who translated it for de Goeje and did not trouble to find out whence Ma Tswan-lin had taken it, inserts before the pentultimate phrase the words: "The name of this tree was vui sokou.

*"I do not know," says Chavannes, where he got this note which is not in the text of Tou Yeou nor in that of Ma Tswan-lin*.

Trees called *wákwí* are also found in India, the fruit of which looks like human beings (Mu- tajhah, p. 117) or like women (Ibn Ṭafail, p. 260).

This island of Wákwí is not so called after a tree the fruit of which is said to be in the shape of human heads crying: *wákwí, wúl (Ar.Briûni, p. 163).* The island or land of Wákwí is on the contrary called after this wonderful tree (Kazwini, p. 300; Ibn Sa'di, p. 334; Dimaghí, p. 375; Ibn al-Wardi, p. 416; Bakuvi, p. 463; Ibn Tyas, p. 483; Siuri Ṭali, p. 513; Burhân bîsh, p. 563; Milli et une nuit, p. 587-589; Merouillés de l'Inde, p. 580; Nuskat al-Kulûk, transl. G. Le Strange, p. 222).

There is in Wákwí a tree like the nut-tree and cassia tree, the fruit of which looks like a man. When the fruit is ripe, it utters distinctly the words: *wákwí, wúl,* then falls (Dimaghí, p. 375; Abâghí, p. 470-471).

The *Kulû mân* of the anonymous geographer of Almeria (xinth cent. A.D.) contains the following interesting description: *"In the part of the land of China which is in the sea, there are many islands; among them, those which are famous and well known number eight. The largest and most important is the island of Wákwí. It is so called because there are great, tall trees there, the numerous leaves of which are like those of the fig-tree, except that they are larger than the leaves of the fig-tree. This tree bears fruit in the month of *Adar,* i.e. the month of March, and they are fruits like the fruits of the palm-tree. These fruits end in the feet of young girls which project from them; on the second day of the month the two legs protrude, and on the third day the two legs and thighs. This continues so that a little more protrudes each day until they have completely emerged on the last day of the month of *Nisân,* i.e. April. In the month of May their head comes out and the whole figure is complete. They are suspended by their hair. Their form and stature are most beautiful and admirable. At the beginning of the month of June, they begin to fall from these trees and by the middle of the month there is not one left on the trees. At the moment of falling to the ground, they utter two cries: *waâk, waâk.* It is also said that they utter three cries. When they have fallen to the ground, flesh without bones is found. They are more beautiful than words can describe but are without life or soul. They are buried in the earth. If they were not buried but left lying no one would be able to approach them on account of the stench. This is a wonder of the land of China. The island is at the end of the inhabited world in this sea. It is in the east of the section of the coast where it touches the Greater Sea" (MS. 770 of the Bibliothèque du Protectorat Francais au Maroc, in Rabat, fol. 5b, supplemented by a manuscript of the same work in the René Basset library.

V. THE ANIMAL-VEGETABLE WÁKWÍ

The Wákwí are according to the *Kulû mân* of Al-Djihâd (in 255-289) the product of plants and animals (in *Ḥayât al-Hayâyân al-kulûh* of al-Damiri, Cairo 1330, ii. 177 and 38). The Wákwí are beings closely resembling the human species. They are the fruit of great trees from which they hang by the hair. They have breasts and sexual organs like those of women. They are coloured and never cease crying *wákwí, wúl.* When one of these creatures is captured, it becomes silent and falls dead (*Abrégé des merveilles*, p. 138 and 677-678). The Wákwí are like palm and coconuts trees, intermediate between the animal and vegetable kingdoms (Dimaghí, p. 367).

VI. THE KING OF THE ISLANDS OF WÁKWÍ

The king of the islands of Wákwí is known as Kapoor (var. *Kaqmir, Nuskat al-Kulûk*, Pers. text, p. 239; Engl. transl. by G. Le Strange, p. 222). Mr. Jadunath Sarkar has kindly examined the MSS. of the *Nuskat al-Kulûk*, accessible to him. In that of the Oriental Public Library (Khuda Baksh Library) of Patna, the name of the king is blank. The Imperial Library of Calcutta (Bohair Collection) has two MSS. of the text: No. 99 has *Kaqmî* and No. 98 *Kaqmî*. These readings unfortunately do not recall any possible known name.

VII. PROPOSED IDENTIFICATIONS

In an appendix to the *Livres des merveilles de l'Inde* (p. 295-307) de Goeje published a French translation, reviewed and corrected, of his *Arsenalbergichten over Japan* under the title *Le Japon commun des Arabes*. He naturally knew and quoted most of the Arabic texts above mentioned. In the course of his researches, he found that the Chinese name for Japan in the Canton dialect is *Wàn-âwâr,* of which *Wàkwí* is a perfect Arabic transcription and the identification of *Wàkwí* therefore seemed certain to him.
The old Chinese name for Japan is 倭国 We-kou, once pronounced *Wa-kou, "land or kingdom of Wa", in Japanese Wa-koku, with a barely perceptible final "u". Wa-kou would be rendered exactly to the forms given by the Arab and Persian geographers. This reasoning is then by no means worthless but it does not supply decisive proof. It remains to be seen if other evidence can be found to support this agreement.

De Goeje's thesis calls for several observations. In the first place, according to certain geographers, there are two Wa-kou: Wa-kou of China and Wa-kou of the south. Ibn al-Fakih expressly says so (cf. above, i.). Masudi, Idriis, Ibn Khallib and Ibn al-Wardi locate the African Wa-kou beside Sofala on the east coast of Africa; Ya'qubii in the Laccu sea, west of India. Now according to certain modern works of Africanists like C. MacTheal and R. N. H. Hall, wa-kou is a name given to the Bushmen by the Bantus of the country, who regard them as a kind of baboon. This explains the statements made by Masudi and the Arab geographers who follow him.

On the other hand, Wa-kou is represented in Malagasy by *tsoua, a vowel which corresponds phonetically to an old wa-kou and means "the people, the subjects, a nation, tribe or clan as a whole". Madagascar might therefore be the island Wa-kou of Ya'qubii. This identification is made certain by the following fact: in the great African island a pandanus called tsoua grows in great profusion; its fruit is a voluminous synocarp. It is known to the French as papaye. Its shape and characteristics might well have given rise to the story of trees producing human beings (cf. above, iv.). Madagascar thus corresponds as exactly as possible with the description of Wa-kou of the south. The "ego" of which the Livre des merveille de l'Inde speaks cannot in any case take the place of this wonderful tree, as de Goeje thought.

The other information supplied by the Oriental geographers is as a rule of little use on account of its fantastic nature or its inaccuracy. One note in the kitab *Adh-Dhib al-Hind may be mentioned: a famous sailor of the lands of gold, Ibn Lzk. reports that in 824 (945) the Wa-kou came with 1,000 ships to the east coast of Africa to procure merchandise and Zandy slaves. The voyage lasted a year. De Goeje, who identifies these Wa-kou with the Japanese, acknowledges that the history of Japan makes no mention of this remarkable fact and concludes that it must have been a private enterprise of Japanese merchants and daimyoos. E. Chavannes says that such an expedition could, not have taken place (Tsung-Pao, Oct. 1904, p. 495). M. Maurice Courant, whom I have consulted, is also of this opinion and Mr. Basil Hall Chamberlain, the eminent master of Japanese studies, has written to me to the same effect. It was impossible for the Japanese of the tenth century to undertake an expedition by sea to the islands and coast of East Africa. The Wa-kou of China or eastern Wa-kou are therefore not the Japanese.

The Arabic and Persian documents which seemed to de Goeje decisive in favour of his thesis, are far from being as conclusive as the illustrious Leyden orientalist believed. Indeed some are definitely against the Japanese theory of Wa-kou, which is really untenable. The existence of two Wa-kou is indisputable. The identification of Wa-kou of the south with Madagascar and East Madagascar of Sofala is equally certain. It only remains to locate Wa-kou of China. The most valuable hint for its identification is the statement that the Mahotsaadj, king of the islands, lives in it. Now we know from other sources that this is the title of the ruler of Zabag, i.e. Sumatra, the land of gold. The Sumatrans were acquainted with the islands and coasts of the western Indian ocean. They peopled Madagascar at an early period and Malagasy is a descendant of a Malay dialect. Idriis gives valuable information on this point: "The people of Komer (= Madagascar) and the merchants of the land of the Mahotsaadj (= Sumatra) visit them (the natives of the west coast of Africa) and are well received and trade with them" (MS. 2223 of the Bibliothèque Nationale, fol. 37v, 1-7-8).

A few pages earlier he says: "The people of the islands of Zabag come to the land of the Zand (here: Madagascar) in large and small ships and they export merchandise from it since they understand one another's language" (ibid., fol. 29v, 1-15).

The name of the port of Baros on the west coast of Sumatra, the Haliis of the Arab geographers, the Po-lou-jie of the Chinese, is mentioned for the first time by Ptolomy (*Paparora *Mere), the five Baros islands, inhabited, it is said, by the anthropophagi, in L. Remou, La Geographie de *Ptolomeos, vii. 1-4, p. 59); then, by the Long *Sung History of the Long (502-550) in the form *Pulo and at the end of the vijth century by Yi-Tak, who has Po-lou-chen. The Arabs call it sometimes Haliis and sometimes Fan'on < Malay Panur. One or other form is found in the oldest texts and recurs in the later ones. It is the famous port of Pakkaland or land of the Pakpok from which used to come the most esteemed camphor.

The tribal name Pakpok goes into Arabic as Pakpok, which is phonetically so close to Wa-kou, that one need not hesitate to identify the two. In Sumatra, as in Madagascar, the pandanus flourishes in a wild state and its Batak name bakhun wana = Malagasy vakona. There are remarkable agreements in the tribal names and in the flora of the two islands: in Sumatra a Batak tribe called Pakpok > Arabic form Pakpok and the pandanus: bakhun wana, in Madagascar the Vakoun < old *Wa-kou and the pandanus: vakona. It is an historical fact that the Sumatrains only have on several occasions come into the western Indian ocean. The Japanese theory of Wa-kou is therefore to be abandoned.

This article is only a synopsis of a memoir now being printed, which will appear in the *Journal Asiatique under the title: Le Wa-kou est-il le Japon ? In the limited space available here, the main arguments in favour of this new identification have been given.

**Bibliography:**
Gabriel Perraudin, *Relations de voyages et textes géographiques arabes, persans et turcs relatifs à l’Extrême-Orient du VIIème au XVIIIème siècles*, Paris, 2 vol., 1913–1914 (these two volumes with continuous pagination contain translations of the text of Ibn Khur-džubib, 844–848; the Arab merchant Sulaiman, 851; Ya'qubib, ca. 875 or 880; Ibn al-Fakih, 902; Ibn Kostel, ca. 903; Abu Zaid Hasan, ca. 916; Mas'udi, *Les prairies d'or*, 943; Le livre de l’aventurier et de la révision, 955; Makul-
This conception resembles that of Indian poets telling of the great ascetics of Brahmanism who, by power of penance succeeded in gaining complete power over matter; but not in Islam, this power is rather the result of a gift from God than the result of the personal merit or ascetic practices of the saints. Popular belief has however not extended the power of the saints in this way: it has rather inclined to specialise it, each of them having in the eyes of the multitude the power of performing a special miracle, like curing a particular disease, bringing success in a particular kind of business, guiding travellers, discovering secrets etc. These miracles of saints (karānāt) are distinguished from the miracles of the prophet, which are called ma'ā'is and are besides few in number, and the theologians discuss in an interesting fashion their evidential value. It is not absolute, whereas the miracles of the prophet count as proofs of religion. — The Mu'tasils denied that there were men like this having special gifts; they reject the privileges and miracles of the saints and teach that every faithful Muslim who obeys God is a 'friend of God' and of the prophet.

3. The saints have been classed in a hierarchy according to a system which is found in much the same form in different authors. There are always saints on the earth; but their sanctity is not always apparent; they are not all not always visible. It is sufficient that their hierarchy goes on and that they are replaced on their death so that their number is always complete. 4,000 live hidden in the world and are themselves unconscious of their state. Others know one another and act together. These are in ascending order of merit: the aḥāyir to the number of 300; the abād, 40; the abur, 7; the awlād, 4; the muḥābata, 3 and the Pole who is unique, kfit or gawwāb. A number of mystics have actually been given the title of Pole. Djinnaid for example was the Pole of his time; Ibn Masrūq was one of the 'pillars' (awlād). Every night the awlād traverse the universe in thought and inform the Pole of any defects in order that he may remedy them. Another variant of this theory is given by Douttē from Algeria. The hierarchy consists of 7 degrees. In the lowest there are the nuṣākā to the number of 300, each of whom is at the head of a group of saints without special titles. Next come the maṣṭakā; then the abarā, from 40 to 70 in number; the aḥāyir, the chosen, 7, who continually move about and spread the Muslim faith in the world; the awlād, pillars, 4, living at the four cardinal points of the compass with reference to Mecca; the kfit, the Pole, the greatest saint of his time, and quite at the top the gawwāb, here distinct from the Pole, capable of taking upon his shoulders a portion of the sins of the believers.

D'Ossison gives the following theory for Turkey: here also there are 7 degrees. There are always 356 saints living on the earth. The first is the gawwāb aṣām or 'great rogue'; the second, his viceroy, the Pole, kfit. Then come the 4 awlād, the pillars. The rest are known by their numbers: ulter, the 3; yodiller, the 7; kirkler, the 40 and yıldiller, the 300.

These seven classes correspond to the 7 degrees of beatitude in Paradise. The saints of the first three classes are represented invisibly in Mecca at the hours of prayer. When the gawwāb dies, the kfit replaces him and there is a moving up all through
mosque that bears his name stands. A son-in-law of Bâyârî I, Emir Sultan, was regarded as a saint. Several Ottoman sultans are also venerated but the title of wâli has actually only been given to Bâyârî II, on account of his piety. Other princes of the Imperial house have been regarded as saints and miracles attributed to them. Among the Arabs the only caliph who is reputed a saint—excepting of course the first four who occupy a special position—is the Umayyad ʿUmar b. ʿAbd al-ʿAzîz, a very pious ruler.

In Egypt the most popular saints are Ilyâsh al-Mâjâs and Shaikhu Ahmad al-Badawi whose tombs are at Tântâ. To these we may add Sâd al-Shâshâli who died at Hama, in the mountains of Upper Egypt; his tomb is much visited. The festival of Saiyid Maṣrî, al-ʿAzmî in Cairo is the cause of one of the most picturesque processions. A very popular saint in Egypt is Sît Nâfast.

In Arabia various individuals are honoured in the holy cities and their tombs visited, in addition to the usual rites of the pilgrimage. At Medîna in the cemetery of Bâkî are the tombs of several imâms, that of the caliph ʿUthmân and that of the amir Hâmid, uncle of the Prophet. The tomb of Eve recently destroyed by the Wahdhâns, as well as many others, was a few minutes from Dîdî and much visited. The tomb had the peculiarity of being in several parts: the head, the navel and the feet were separated by a short distance from each other. In Mecca, in the cemetery of al-ʿUmdâl, the pilgrims used to visit the tombs of Ŧâmin and Khâshîl, the mother and wife of the Prophet.

In North Africa the worship of saints and marabouts is highly developed. The road to Tripoli along the sea and the vicinity of the towns are fringed with numerous tombs of marabouts, elegant in style, shaded by palm-trees, decorated with gaily coloured cloths and ex-votos placed there by the devout. In the desert at Djebrâl is the tomb of Shaikhu Sanûsî, founder of a well-known order.

The patron saint of Tunis is Sîdî Mâkhlîg and its other saints are Sîdî Ben Arîs, Sîdî Ben Kâsîm, Sîdî Ben Saïd. The Tunisians hold in reverence the caves to which these pious men retired. This region includes the sacred city of Carthage which has many tombs and the famous mosque of Sîdî ʿOqba and that called ʿof the Barber’ in which the barber of the Prophet is said to be buried. — In Algeria in the first rank we have Sîdî Abî Mâkîn, a great miracle-worker whose mausoleum near Tiemcen is still much visited. No less important is Sîdî Abî Kâdir Djjâlî, the saint of Baghdâd to whom are dedicated a vast number of mosques, chapels, and cemeteries in Algeria. Over 200 ʿhabba’s are dedicated to him in the province of Oran alone. Next come Sîdî Ben Mâfîsh, successor to Sîdî Abî Mâkîn of the tribe of the Beni ʿArîs, assassinated in 625 H., whose tomb is in the Djebel ʿAlem near Tidjanié; Mâwâlî al-ʿArîs al-Durkâwî of Fes, a modern saint who died not long after 1822, and was buried in his shaâra near Fès; Shaikhu Tîdîjânî, founder of the order died in 1250 (1835) and also buried in his shaâra near Fès. In Morocco the principal patron saints are Mâwâlî Idrîs, the founder of the dynasty, venerated at Volubilis, and the shaâra of Wezzân, even during their lifetime.
on account of the blessing they bring (their barakat) which is much esteemed by the people; even their women are believed to possess this virtue. Several women in Morocco like Lalla Marna, and Umm 'Abd Allâh have been given, like Sitt Nafsîna, the title of saint (maâliyya). Mârâkiûh has some panegyric saints called "the 7 thieves", andabit al-nasîr; among them are Sidi 'Abbas and Sidi Sliman al-Djaâni, author of a wide-spread book on prayers. In Tangier there is Sidi Bîl al-Rikaya, a miracle-worker of the xvith century whose festival (mezwem) is celebrated on the seventh day of the Prophet's masjidat; at Mekez, Muhammad b. 'Issa, founder of the 'Isâwa. In this town a strange story is recorded of a living saint who kept standing leaning against a wall; pious people had a penthouse built above him, then a baheb without disturbing him. - In Timbuktu Sidi Yâbû, a miracle-worker of the xvith century, and Sidi Ben Sâsî are held in honour.

(B. Carra de Vaux)

AL-WALID b. 'ABD AL-MALIK, Umayyad Caliph (85-88 = 705-715). On the death of his father, the caliph 'Abd al-Malik (Oct. 705), al-Walid, his successor, was over 30. A prince of only average culture, he brought to the throne an aristocratic outlook and a display of religious fervour unknown among his predecessors. In the history of the Umayyads he ranks as the great builder of the dynasty. One of his first cares was to give his capital Damascus a magnificent mosque. Walid cast his eyes on the basilica of St. John the Baptist, once a temple of Jupiter Damascenus. Of this edifice, tradition says that it was divided in two between its old owners and the Muslims after the Arab conquest. Against this we have the explicit testimony of the pilgrim Arculf who visited Damascus in the reign of Mu'awiyah I. He says "in honorem sancti Johannis baptistae grandis fundata ecclesia est. Quadrum exist Sarracenorum ecclesia incendiorum et ipsa in eodem loco, quam ipsi frequentant, fabricata est". If this may be believed, then under Mu'awiyah, the Arabs in Damascus were content with a single mosque, a modest (quantum) erection built for them and not obtained at the expense of the basilica which was still in Christian ownership in the time of the Sufyanîd caliphs. The upholders of the Muslim tradition say that Arculf made a mistake. He did not notice that mosque and church formed a single building.

The caliphs Mu'awiyah and 'Abd al-Malik had vainly negotiated with the Christians for the cession of the whole basilica. The autocratic Walid decided to confiscate it without any ado. He did not take down the building; he only abolished the eastern apse; he built the Rûbat al-Narî, the "Dome of the Eagle", above the transept and to the north of the mosque pavement the "Minaret of the Fanece"; the two other minarets were built upon older towers. Walid's activity was fully displayed in remodelling the interior of the basilica in which he gave rein to all his taste for magnificence and to the suggestions of Syrian decorators. He mobilised a regular army of marble workers. The capitals were covered with gold and the walls with mosaics. An inscription "in memoriam legionis of gold on a ground of lapis-lazuli" (Mas'ûlî) bore the name of Walid with the date (Nov. 706) marking the beginning of the work, a year after the accession of the Caliph. Along with this great undertaking, Walid directed the building of the great mosques of Medina and Mecca, which he also entrusted to Christian architects.

The arabisation of the administration is another striking feature of his reign. The great government offices were taken from the Christians, the control of the finances from a Damascus family, the descendants of Ibn Sandâm. Finally we may mention the progress of foreign conquests. By a process of expansion which was almost automatic, the Arab empire in this reign attained its greatest extent from Transoxania to Spain, where the Arabs now succeeded in gaining a footing. Walid was a continually fortunate sovereign. Everything succeeded with him, even his autocratic manner, which had acquired distinction in a diminution in the tolerance shown to the dhimmîs. In Syria he enjoyed undisputed popularity. People admired his great buildings, his charitable undertakings and public works and the great conquests of his reign. In keeping with the will of 'Abd al-Malik, his brother Sulaimân was to succeed him. Walid was thinking of substituting his son 'Abd al-Azîz in his place when death overtook him at Dair Murân, near Damascus on Feb. 23, 715 at the age of about 45.

AL-WALID b. AL-MU'AIWAH b. 'ABD ALLAH b. OMAR b. MAQARH, an opponent of Muhammad. Little is known of his life but it is certain that he was one of the most powerful men in Mecca and one of the most ardent opponents of the Caliphs. 

---

---
he Prophet. As head of the numerous and prominent family of the Mağhām he naturally represented the aristocratic interests in the city of Muhammad's birth and that he was himself very prosperous is evident from the fact that, according to traditionists, he owned a garden in Ta'ifi which he planted for pleasure only and never pulled the fruit in it (Sprenger, I, 359). According to the commentators, there are references to him in several passages in the Kur'ān, e.g. Sūra vi. 10; ališ. 30; łxxiv. 11 sqq.; 1xxx. 1 sqq., although his name is nowhere expressly mentioned. One cannot of course place implied confidence in such statements, which are sometimes based on later deductions. Many historians frequently mention al-Walid among those Kurāqār who vigorously persecuted Muhammad and endeavoured to silence him. Thus he is said to have been a member of a delegation which went to Abū Ta'līb [q. v.] and protested to him but without success at the Prophet's conduct. It is also related that Muhammad's enemies had on one occasion, on the approach of the pilgrims discussed the best means to set strange visitors against Muhammad and proposed in turn the epithets ẖāṣīn 'worthless', maghānīn 'possessed' and ẖamīs 'poorer' but al-Walid rejected them all until those present finally agreed to his proposal to call Muhammad a sāhir 'magician,' who would separate a man from his father, brother, wife and whole family, and to warn the pilgrims seriously against the alleged magician. When 'Oğmān b. Ḥafṣū, a relative of al-Walid, who had adopted Islam and taken part in the immigration to Abyssinia, was still under al-Walid's protection, wished to break off this relationship, the latter endeavoured to dissuade him, but in vain. After al-Walid had therefore released himself from all obligations to his relative 'Oğmān was severely wounded in a squabble, whereupon al-Walid again offered him his protection but 'Oğmān rejected this kindly meant offer. Al-Walid died in Mecca in the year 1 and three of his seven sons adopted Islam. In keeping with his aristocratic descent and social position, his actions were frequently characterised by a certain megalomaniac and dignity, and Sprenger (ii. 111) describes him as follows, probably with justice: "He was one of the earliest and most decided enemies of Islam, but at the same time chivalrous and not without culture. He therefore laid more emphasis on dissuading his fellow-citizens from the new religion than on seizing it in the bud by attacking the personal rights of the Muslims. Instead of using physical force, he gathered round him men of talent, knowledge and experience like Umayya b. Abu l-Salit and Naḍr b. Hārith and endeavoured to expose Muhammad's contradictions and deceptions and to make him ludicrous and despicable in the eyes of intelligent people, while he silenced the common people by his prestige and material advantages".

(K. V. Zettlerstein)

AL-WALID b. YARĪZ, Umayyad Caliph. He was about 35 (Feb. 743) when he succeeded his uncle, the Caliph Hishām b. 'Abd al-Malik: if only for his personal courage, liberality, love of letters and patronage and practice of poetry, Walid was bound to shine in the first rank among the Umayyads'. Such is the judgment of the Kitāb al-Asrār (vi. 101) the author of which could not be suspected of partiality for the Umayyads. An artistic and remarkably cultivated young man, which was due to the culture his predecessors had been, the son of the hysteric caliph Yazid II he was certainly also the most libertine. After a brief appearance in Damascus for the enthronement (kalāla) the new caliph hastened to resume in the desert the free life, void of all constraint, that he had led as a prince without worrying about affairs of state or the interdictions of the Kur'ān. We need not however believe all the stories of his eccentricities given in the Kitāb al-Asrār. He spent his time in merry company surrounded by poets, parasites, musicians of both sexes, he himself being justly esteemed as a musician.

His cruelty towards the faithful Khalid al-Kafrî [q. v.] whom he put to death soon raised against him the Yemenis in Syria. Fond of field sports, the caliph had in the lifetime of his uncle built in the middle of the desert a hunting lodge, Kuṣair Amra [cf. 'Amra]. When he became caliph he proposed to build in the solitude a grand palace and transfer there all the refinements of civilization. Such was the origin of the fantastic castle of Maḥṣūr [q. v.]. A virtuoso in music and poetry, this bizarre and blasé character dreamed of eclipsing the architectural glories of 'Abd al-Malik [q. v.] and of Walid I [q. v.].

With his unusual proportions, its façade, carved with delicate treacly lacework, the building of Maḥṣūr "has fascinated the whole world and caused more ink to flow than any other in Syria" (van Berchem). Archeologists have attributed it successively to the Romans, Byzantines, Ghausoids and Persians. They have neglected the Umayyads, who were great builders from 'Abd al-Malik onwards, and all fond of a ḫājiyya or a holiday in the desert. For the builder of Maḥṣūr, we hesitated at first between Yazid II and al-dhisand, both of whom lived in the region of Moab (Lammens, La Bédia et la Hira sous les Omayyades, p. 110 sqq.). A passage in Severus Ibn Maṭṭaṣṣ' (p. 163-164) settles the question in favour of our Walid.

Rebellion was stirring in the provinces and soon spread to Syria. For the first time since Mu'awiyah, the harmony between this country and the Umayyads which had given them strength to face the most violent storms, was broken. The discontented Yemenis - they formed the great majority of the Arabi in Syria - were joined by the Kaddars, who also had been ill-treated by Walid II. The numbers of the Kaddars had grown and they were led by a Marwanid, Yazid, son of Walid I. The majority of the Marwanids, whom he had alienated by his capricious and the conspiracy. The rebels left Damascus to surprise the caliph who was hunting. In his flight northwards he was overtaken and killed in the little fort of Bakhrā' south of Palmyra (April 17, 744).
WALID SULTAN (A). Turkish pronunciation valide or valide sultan; the two words are, in asposition, according to Turkish syntax, the sultan's valide or sultan mother, a title borne in the old Ottoman empire by the mother of the reigning sultan and only for the duration of her son's reign.

The political history of the Wâlide Sultan is fairly well known from the Turkish historians, at least as far as those are concerned who took part openly in the government of the country, for example Nur Râni, Şâfiye, Mâh-Feiker Kösem and Turhan Khaddije.

We are by no means so well informed about the conditions of their life in the sultan's harem. The organization of the harem only began to be unveiled at the period when the institution itself was beginning to disappear. Influenced no doubt by a feeling of discretion or of modesty, the Turkish historians do not touch on the subject. Western writers, in spite of a lively curiosity, never succeeded in piercing the mystery and frequently give rein to their imagination to complete their notes. The oldest travellers passed over the subject in silence. It is however in western sources that we find valuable information if it is used with care. It is only in modern times however that criticism has dealt with certain fables long believed, such as, for example, the story of the bandarchief thrown by the sultan to his favourites (cf. v. Hammer, xiv. 71-73).

As Na'mâsh says (iv. 250, s v.) the Ottoman sultans according to the sultanian fâmi did not live in a state of marriage but of concubinage (fûstûrî). The word fâmi is to be taken here in the sense of "traditional usage" and not of written law. The chief of the customs (âmrûnâ sâgirî) and later the official slave dealers (srâfârî hâdûtî) and private individuals by gifts supported the sultan's harem with slaves of the most varied origins: Europe, Asia and Africa.

The custom of concubinage — which we also find in Persia (Chardin, vi. 233) down to the reign of Muhammad 'Ali Shah (1807-1809) — must have become established in Turkey gradually. In the early period the Ottoman sultans chose their wives from the daughters of the Turkish rulers of Anatolia or Byzantine princesses. It is difficult to say what was the social status of these wives or to know in what way they differed from the concubines of these princes. We see clearly from 'Ashk-paşa-zade's history (ed. Geise, p. 109-110) that Murâd I regarded the Serbian princess whom he married simply as a srâfî or "slave" but the preparations for certain other unions were made with a solemnity which suggests that great importance was attributed to them.

After the taking of Constantinople, official marriages of the sultans became quite the exception. We may mention Sulaimân the Magnificent and 'Othmân II and lastly Ibrahim who was the last to conclude a matrimonial alliance with one of his harem Tellî-Khâşèk or Şâh-Sultan in 1647 (D'Ossor, vi. 63; Na'mâsh, loc. cit.). The sultan was however represented in this ceremony by the Grand Vizier.

The principles of Ottoman policy were themselves against these marriages. The relatives of a slave seemed less to be feared and indeed were officially put into seclusion. It is hardly necessary to add that this prohibition only partially palliated the evil it was intended to avoid. As is seen from the bloody story of the Jews Kera, a contemporary of the Wâlide Sultan Şâfiye (Bâba), harem intrigues played a great part under some sultans. In Turkey as in Persia (Chardin, vi. 225), the sultan's mother had to be reckoned with. It was therefore natural for a politician to endeavour to get into the sérâfî or gift to the sultan a woman devoted to his interests. The Circassians in particular were very skilful in deriving advantage from the secret influence of such connections. It may also be noted that some sultans such for example as Muşafâz III and 'Abd al-Hamîd I married slaves formally or rather from conscientious scruples. "Religious law," says D'Ossor, "not permitting a person born free and a Muslim to be reduced to slavery, the intercourse of a master with a female slave can only be legitimate when it is certain that she was not born a Muslim and free. If he has not proof of this, and wishes nevertheless to live with her, he ought for the peace of his conscience to free her and marry her. The sultan then marries his manumitted slave without the slightest display in the presence of the Muqâbbî." From all this then it is clear that the Wâlide Sultans were always former slaves. Von Hammer (viii. 288) is therefore right when he says that the sultan was bound to be the "son of a slave". Ubicini (La Turquie actuelle, Paris 1855, p. 122) also adds that the people never mention him except by this name, but we do not know to what Turkish term he refers.

From her former position there survived to the Wâlide Sultan a picturesque name which was popularly believed to be taken from the Persian and to which was sometimes added an ordinary Muslim name (cf. the list of Wâlide Sultans, below).

The mere fact that she had given birth to a prince had early earned her the title of hâdût or hâsîk (hâsîkî) but nothing could equal the prestige which the accession of her son brought her and which, unlike dowager queens of other countries, she had not to share, officially at least, with a queen consort. Under the name of Wâlide Sultan she became henceforth the first woman in Turkey, simply as a result of the respect due to her quality of mother. This respect is so deeply rooted among the Turks that the influence of Islam (cf. the hâdût; "Paradise is at the feet of the mothers") is not sufficient to explain it. The sultans used to set an example of filial piety and the Wâlide Sultan sometimes exercised a very considerable influence over her son whom she called in Turkish fashion asלאمة the "lion" or پاشا "my tiger" (we know that 'Alî's mother called her son Assad, "lion", but this had been her own father's name).

The installation of the Wâlide Sultan was a solemn ceremony, especially if she had been relegated to the old sérâfî (srâfî-i sérâfî-i sérâfî, a building erected by Meşhed II, later the Seraskerat and now the University. This relegation
took place regularly when, after the death of the sultan, her husband, the throne passed to an heir who was not her son. A week or two after the accession of her son, the new sultan's mother was brought in procession (wa'lide alyaэфф) to the new sultan (top-şâph or top-şâph surâtly wrongly called the "old sultan") by western writers) where the sultan lived (cf. the examples of wa'lide alyaэфф in Wâfi, i. 28; Djezewetz, iv. 1275, 243; Mustafa Nedjîb, p. 112). The chief bodyguard (numerous) (dâlân-sâ'âdat uşûl-chârîe aghârî), the wa'lide alyaэфф (cf. below) and the officers of the imperial harem figured in this procession. The Wâlîde Sultan was borne on a litter (âkkârâsvâran), later in an open carriage, surrounded by pîkâ and sâhâ (q. v.). According to Andreyessi, the Wâlîde Sultan, as a remarkable privilege, showed herself to the people without a veil (âzghâmî). The sultan went to meet her mother at the Bâb-e-Sâ'âde gate of the sersi. She was settled in her suite (wa'lîde sultân yeri) which can still be seen to-day, although in comparatively modern form, for it was destroyed by fire on 10th Mubârak Ramdë 1076 (July 23, 1665) (Silhâtar Tarihi, l. 384; Halîl Ethen [Khalil Ethem], Le Palais de Top-kapou, in French, Istanbul 1931, p. 58 and picture on p. 50; cf. also a description of this suite in Pouqueville, Voyages en Turquie, à Constantinople etc., Paris 1805, ii. 256–255). Her removal to her new abode was announced next day to the Sublime Porte in an official document called hâkîm-îâmîc (Ahmed Râsim, 'Osmânîl Tarihi, pp. 1082).

The new Wâlîde Sultan sent to the Grand Vizier a dagger (khowlet) studded with jewels. The Grand Vizier and the Shâhîch al-Îlâm each received a clasp of sable (jâmâl).

The Wâlîde was supreme mistress of the female personnel of the imperial harem, the discipline of which she supervised. Every favour or permit to go out had to be submitted to her. The deference shown to her found expression in a special etiquette. She could not be approached unless a formal request for an audience had been made. It was forbidden to address her without being invited to speak or to sit down in her presence. One stood in front of her in the respectful attitude called âşâm durmâc or el jâmâl durmâc. Ladies, even the greatest favourites, never appeared before her except in the enbarl, the name in the language of the palace for a kind of ceremonial robe. When the Wâlîde Sultan went out she was escorted by an imposing suite and all the guards saluted her (P. de Régla, La Turquie officielle, 1891, p. 262–263).

The Wâlîde Sultan was so used to those honours that the adopted mother of 'Abd al-Hamid II is said to have been offended when the German Empress did not kiss her hand (G. Rizas, Les Mystères de Yildiz, Constantinople 1909, p. 64–65). As to the incident of the salute paid to the Wâlîde Sultan by ships of the Marquis of Nointel, the French ambassador, it was exaggerated if we may rely on what the Marquis de Bonnac says: according to him, his predecessor made excuses (cf. Vandal, Les Voyages du Marquis de Nointel, p. 53; Le Marquis de Bonnac, Mon. hist. sur l'Ambassade de France à Constantinople, ed. Schefer, 1894, p. 28). On the death of the Wâlîde Sultan, the sultan accompanied her remains as far as the gate at which he went to meet her on his accession. The cortège then went on to the place of burial led by the Grand Vizier and the Shâhîch al-Îlâm (Wâfi, i. 50). Forty days of mourning during which the ministers visited the tomb and the Qur'an was read (Tarikh-i Selimît, 1281, p. 173).

If on the other hand the sultan died before his mother, she returned to the old seray to join the women retired or disgraced from the harem (Ahmed Râsim, 'Osmânîl Meşâmû, N, 10, p. 190).

We can only quote two cases of the Wâlîde Sultan retaining the title in the reigns of two men: Mîh-Çeiker Kosem Sultan, mother of Murâd IV and of Ibrahim, and Gûl-Nâşir Emet-Ullah Sultan, mother of Meşêm II and of Ahmed III. In one case there were two Wâlîde Sultan simultaneously: Mîh Çeiker Kosem Sultan already mentioned, grandmother (bâyiûk wa'lîde) and Tarâkhan Khadîjû (Tarîkh-i Hâcîce) Sultan, mother of Meşêm IV. This was however terminated by the violent death of the former.

When a prince imperial became sultan after the death of his mother, the title of Wâlîde Sultan was given to his foster-mother or nurse (vîstie wa'lîde, tava kadın; older formula: ûçyê hâtûun), foster-relationships being held in high regard in Turkey. In default of either, the name of wa'lîde was given by the sultan to the Khamârûdar-Ûsta or Grand Mistress of the Treasury.

In the reign of 'Abd al-Hamid II, who had lost his mother at an early age, the rank of Wâlîde Sultan was given to his adopted mother Peresto Hanım, formerly fourth kadın of 'Abd al-Medjid (Razia, op. cit., p. 109; Dorys, Abu al-Hamid imâmê, 1907, p. 6 sqq.).

The position of the Wâlîde Sultan was very important during minorities. They acted practically regents.

Titles of the Wâlîde Sultan. The word wa'lîde "she who gives birth" is not in itself of any honorific significance. It is a synonym of the word ana "mother" but with the implication of greater respect. The Wâlîde Sultan very frequently has additional epithets like mûjdîdê "glorious" or muhtereme "honoured"; wa'lîdine mújdîdê (muhtereme), the (deceased) father of a reigning sultan was called wa'lîdine mújdîd. (The popular pronunciation is due to the loss of the narrow vowel in the second syllable, a phenomenon fairly common in Turkish which even affects foreign words, when the accent is displaced to the last syllable; khâlîf > xâlif; khâsin > xhasin. Cf. also in Arabic Bâshî; see below).

The title of sultan "sultanîa" on the other hand was the peculiar prerogative of the mother of the reigning sovereign. It was not given by the sultan and she was the only woman who could bear it "without birth" as Baron de Todt says. It is moreover used here as an honorific affix or more accurately, in post-position (cf. the article SULTAN) like other titles of this kind (pâga, bey, efendi, etc.), and it is a mistake to explain it as, is sometimes done, by the Arabic wa'lîde sultanî (i) which is said to mean "mother of the sultan". "Mother of the sultan" would be in Arabic in the construct state wa'lîdet as-al-sultanî. And we actually find this in the Arabic epithet of Kâhîvand khatun or Mâherî, mother of a Saljûq sultan, at Pazar Nâwiyesi (4 hours from Tokat; cf. the text in Isma'il Hâkîfi, Kâhiyûre, Istanbul 1345 [1927], pp. 77–78). Nor is there any question of a haplography in the Persian construction wa'lîdet-i sultanî.
Besides the Wālide Sultān, the only women entitled to the affixed title of Sultan — like begum in Persia (Chardin, vi. 233) — were princesses, daughters of a sovereign or a prince imperial, the daughter of a sultan having the right only to the title khanum-sultan.

Numerous authors, such as Cantimir and Guer, who followed him, are therefore wrong in lavishing the title sultan on the wives of the sultans. De Otti — who got his information from his wife who was born in Turkey and on terms of intimacy with Turkish princesses — long ago protested against this misuse of the term (ib. 42). It seems however that we must not go to the other extreme. Thornton (Present State of Turkey, London 1812, ii. 411) seems to be right when he says that the title of sultan was given "by courtesy" to all khanjets, and according to d’Ohsson (vi. 85) it is only since Mehemed IV (1648-1687) that it was given only to daughters of sovereigns. The dates would have to be brought down a little, if we remember that the same author (vii. 65) says that down to the reign of Ahmad III (1703-1730) the sultan who gave birth to a prince was given only the title of khanjetsi-sultan. If we believe the Marquis de St. Maurice, this title was given only to the mother of the male firstborn; cf. La Cour eathmane ou l’Intérêt de la Perse, Paris 1673, p. 94 and, with the necessary modifications, p. 185.

These customs were sufficiently well known in the west for Racine, who was nothing of an orientalist, to allude to them in these lines of his Bajazet (Act. II. Sc. 2): "Et même il (Sultan Amurah) a voulu que l'heureuse Roxane, Avant qu'elle eût un fils, pût le nom de Sultan".

It is clear from the above that from the beginning of the xviiith century at latest the title of sultan had ceased to be given to certain concubines of the sultan but we do not know at what period it was given to the latter's mother.

Among the Saliūi, the predecessors of the Ottomans, the sultan's mother had the title khatun [q. v.], (arabicised plural: khanwîlas) "empress", "queen", as in the already quoted epigraph of Khand-khatan.

The mothers of the early Ottoman princes bore the same title of khatun which under the form of sultan was to remain until the end of the imperial régime as the title of the sultan's principal favourites and in ordinary usage to lose its honorific significance to the extent of becoming inferior to khanıa "lady" and meaning simply "woman". This is how we find the mother of the Sultan Celebi Mehemed I called demet-sultan in the epigraph of 816 preserved at Bruss (cf. T. O. E. M., p. 509-510; corrected in M. T. M., ii. 177, l. 4 sqq.).

The mosque founded at Tokat by Bâyazid II in honour of his mother is called Khattaniye (T. Taqel, op. cit., p. 29-30). It is probable that in the following reign the practice became established of calling the sultan's mother Wâlide Sultan.

We have not space here to enumerate the other titles, administrative, literary or poetic, given to the Wâlide Sultan. The most common was that of mehdi-i īshik found as early as the Mongols of Persia (Mirkhod).

Allowances and house of the Wâlide Sultan. The allowances to the Wâlide Sultan like those of the khanjets and also sometimes those of the judges (Ewliya Celebi, ii. 6) were in general called başmâfi or paşmâfi, properly "for sandals" (v. Hammer, vi. 318; z. 75, 188). They were not fixed and consisted sometimes of money and sometimes of land. Sultan Ibrâhim distributed whole provinces among his khanjetsi as başmâfi (Na'ım, iv. 243). In normal times the Wâlide Sultan enjoyed a much larger income than the sultans (relations or sisters of the sultan; cf. d’Ohsson, vii. 95). According to Cantimir, it amounted to over 1,000 purses. The Turks, says the same author, never take a town without setting aside a street in it for the başmâfi of the Wâlide Sultan (cf. also Bianchi's dictionary under the word başmâfi). The town of Smyrna formed part of her appanage and she maintained a müstevel there (Taucogne, Voyage à Smyrne, Paris 1817, l. 29-30). On her appanage of Crete, cf. Savary, Lettres sur la Grèce, 1788, p. 247). The mother of the Sultan was the Wâlide Sultan, a title sometimes rich enough to build mosques or, like Ahmad III's mother, to raise troops.

In modern languages, the word başmâfi was replaced by tağıfi (the sâneyyân) "civil list" (Khloros). In 1850 the civil list of the sultan's mother and of the married sisters of the sultan amounted to 8,400,000 piastres, the piastre at this time being worth 23 gold centimes (De la réforme en Turquie au point de vue financier et administratif, Paris 1851, p. 12, a brochure of 34 pp. 8°, of which a résumé was given in the Revue des Deux-Mondes of Sept. 1st 1850 in 10 pp.; p. 938-948).

Like all the sultans, the mother of the Ottoman sovereign had a bâyâha (bânânda) or "superintendent, comptroller of her finances" (cf. the expression selçûkî bânânda, "comptrollers of the sultans" in Silahhar Târîkh, l. 646 below) but that of the Wâlide Sultan was by far the most important in view of the considerable financial interests which he controlled, and the influence which he himself could exert with the Wâlide Sultan. He sometimes exerted enormous influence although it was frequently hidden. Foreign ambassadors were well aware of this and as a rule did not fail to win these officials' good graces by every means in their power (Beauvaisins, p. 12; Târîkh-i Ebrûlet, 1288, viii. 252-256).

It has been said that the wâlide bâyâha combined this office with that of master of the Mint (dârâsâ-î umârî nâşirî) and this was indeed frequently the case (e.g. al-Hâdid Mehemed Efendi later Pasha and his successor, in 1127, Atitâl Dâsim Efendi; cf. Sidifis-i othmanis, iy. 219; III. 425; Râşid, l. fol. 105, 105-106) but there were very many exceptions; cf. Agha-babai Ibrâhîm Agha appointed wâlide bâyâha in 1605 (Wülf, p. 30 et seq.; cf. also Abdulkâhi, Mehînîli, 1931, p. 180, note 1).

The rank of râûbi-i iîsî (âfisî ruvelî) created on Monday 10th Rabbî II 1255 (July 24, 1837) was given to the wâlide hâlâ bâyâha and to the Master of the Mint (Silânum-i nezaret-i bâ-"idîfî, 1702, p. 109). When the rank of hâlâ was instituted in 1253 (1845-1846) the wâlide bâyâha Husein Bey was one of the two officials who first received it (J. Deny, Sommaire des archîves turques du Caïro, p. 559, below).

The Wâlide Sultâns, like all the important ladies of the serây, had at their command a first (baş-agha) and second enouch (Leila Hanoum, Le Harem Impérial, 1925, p. 113). Details of the organisation of their household, which resembled those of other sultans, except that it was more
magnificent, are given in Osman-Bey, Les Femmes en Turquie, p. 268.

List of Sultan's mothers. The list of mothers of the rulers of Turkey is here given from the Sīyāṣāl-ā'īb-māni of Thūrīyā (Sūreyyā) Bey with a few modifications.

The princesses figuring at the head of this list were not, as we have seen above, properly Wālīde Sūlṭāns since this title did not yet exist in their time. This title was nevertheless and like that of the Sūlṭāns themselves often wrongly put back to the beginning of Ottoman history. The title was given even to the mother of Ertoghul Ghâzâ, a legendary figure known as Khiyimey Ana "mother test" whose tomb was discovered in the reign of 'Abd al-Ḥamīd II at the village of Čehârghembe (Čeşme) in the mālûy of Dumnâni, in the district of Ine-Gul (Sīyāṣāl, i. 86). We do not know if this discovery is due to the zeal of an inventor devoted to the old dynasty or to the persistence of a local tradition which cannot be substantiated. The very name Khiyime Ana is suspicious.

In Sūreyyā Bey's list, the title of "sultanah" first appears in the case of Gûlbehār, mother of Bâyâzîd II, which in itself is not impossible but we have already seen that she had the title of khâtun.

The following is this list with a few changes and a list of the buildings erected by the Wālīde Sūlṭāns interested in building (Nos. 7, 8, 11, 13, 15, 16, 21 and 23). The references refer only to these buildings. Abbreviations: m. = mother; s. = sultan; Ḥad. Lâwâni = Hâkim Hâsim b. al-Ḥâdidī Jamâl al-Awânsârî, Ḥad. Lâwâni, Constantino-pol, Ramâdad 1281, 3 vol. (transl. by Hammet, Histoire de l'Empire Ottoman, vol. xviii.); Cuinet = Vital Cuinet, Le Turquie d'Antie, 1924, 4 vols. in-4°.

1. Mâlkhum Râhâh Khatun (or Malikhatun), daughter of Shaikh Edebalî, m. of Orkân-Bey (and of the vizier 'Ali ad-Dîn); 1276 (1226-1236).

2. Nîlâfer, daughter of tekbâr of Yâr-Hisrâr, m. of Murâd I.

3. Dewlet Khatun (Sûreyyâ: Sultan Khatun), daughter of Germany Oghuî, m. of Mehmed I.

4. N., daughter of Isfendiyâr, m. of Mehmed II (cf. however Isfendiyâr) where Hâfiz, daughter of Mahbîr al-Isfendiyâr and wife of Murâd II, is given as mother of Hisân, killed in 855).

5. Gûlbaneh, m. of Bâyâzîd II.

6. 'Āshâ b., m. of Sultanam the Magnificent; 14th Ramâdad 940 (March 19, 1544).

7. Nûr Bâbû, b., m. of Murâd III; 21st Dhu-l-Ka'da 991 (December 6, 1585; according to Shâhâr Tâhirî: December 7).

Buildings: in Scutari in Asia (Top-taghi quarter): mosque called 'Alâlīç (atâ-lâmî), with madrasa, primary school (mekâbûs-i şubnâr), hospital (ďer esh-kestâbâ) with in-patient school (dîr al-'âbdâh), school for the Korân (dîr al-'âbdâ), a hostel (ma'îsûr-âlamî); cf. I. Dârî, ii. 182-184 and 218-219; Hammet, xviii. 89, No. 749; p. 94, No. 781; p. 114, No. 54; Cuinet, iv. 639-640.

10. Mîh-Firaq (s.), m. of O'câmân III.

12. N., m. of Mâşafat I.

13. Turhan Khatülde (Turhan Hatûte), s. of Russian origin, m. of Mehmed IV; Tuesday Shu'âbân 10, 1094 (Aug. 4, 1683; according to the Shâhâr Tâhirî, ii. 116 sqq., date confirmed by the Relations de Donado; cf. the Bibliography; otherwise, Sûreyyâ Bey, Ahmed Reçi in Turhan Valide, p. 424; 10th Radjah).

Buildings: in Stambul (Emin Öâli quarter, Bagçe-kapul, dominating the well known bridge of Karakoy or Galata): the famous mosque Yêni gûmânî or Yêni wàlîde gûmânî (begun by Sâfiyya s. (No. 8) and finished in 1074 (inscription); on the Dardanelles: completed the building (inscription of 1070) of the citadel begun by Mîh-Peiker Kösum No. 11; cf. Had. Lâwâni, ii. 109, No. 3; v. Hammet, xvi. 89, No. 748; Pitton de Tournefort, Relation d'un voyage du Levant, Lyon 1712, i. 106; Charles Pertuiset, Promenade pittoresques dans le Constantinople et sur les riviers du Bosphore, Paris 1815, p. 185-189; Gabriel, Les Mosquées de Constantinople, in Syria, 1946; Ahmed Reçi, Wâlîde Dîwânî-i Ivi, Yêni Dîwânî, in Yêni Mevâni, No. 10, p. 189-192 (according to the Shâhâr Tâhirî, i. 218 and 390, the building of the mosque was resumed in 1071 and finished on Friday 20th Râbî II 1076 [October 30, 1665] (according to the Shâhâr Tâhirî, i. 218). On Sunday 22nd Şafar 1101 (December 4, 1669).

14. Sûhîye Dil-Ashûb b., m. of Süleîmân II; 22nd Muḥarran 1101 (according to the Shâhâr Tâhirî, ii. 484, Sunday 22nd Şafar 1101 [December 4, 1669].)

15. Gülbâhâr (or Gülûbâm) Emet-ullah s. (often wrongly called Ummetullah), of Cretan origin from Retimno (of the Vertzanos family, according to Donado), m. of Mâşafat II and of Ahmed III; 10th Dhu-l-Ka'da 1127 (November 6, 1716), according to Had. Lâwâni, ii. 188; Tuesday 8th Dhu-l-Ka'da = November 5).

Buildings: in Mecca: Kháşkeıye 'inâret, fountains and wells on the pilgrims' road, at Galata: Yâhiçî...
The 1117
WALIDE SULTAN

The mother of Mehemd II was the daughter of Ifendi (cf. de Salaberry, Histoire de l’Empire Ottoman, Paris, l. 148; cf. No. 4, above, in the list of the Walide Sultan). The very interesting but always credulous and often mendacious Ewliya Celebi admits in spite of everything (l. 106 sqq.) that Mehemd II was the son of Ifendi’s daughter, the “Alime Khannum” (it may be noted that this is the name given to the alleged French princess) but to arrange matters he makes the king of France’s daughter the concubine of Mehemd II and the mother of Bayazid II. He also says that his father had known a certain Sukemerli Mustafat, bagh­-i-khan of Janissaries, who was related to this princess and on this account used to receive presents from France. On the other hand, Cantimir (1743, ii. 410) records, without however believing it, another version of the story in which a grand­daughter of a king of France enters the hareem of Suleyman the Magnificent. It was obviously the Turks themselves who invented these fables, to explain the favoured treatment accorded the “padişah” of France in Turkey.

More recently the French and Turkish governments have had to deal from time to time with people desirous of having their relationship with the old Ottoman dynasty recognised. Mehemd II was, it was said, the son of Al­-Umar, a leading officer in the Buç de Rivery, a Creole of Martinique and a relative of the Empress Josephine (see below). The impossibility of this has been proved from official documents: Sultan’s harem behind 215 at the time of the attack on the Balkans on 1550, and had seen in Nantes in 1788, when she was a witness to and signed the marriage contract which is still in existence. The thesis was however abandoned on this account; it was simply modified. Aimee de Buç de Rivery — whose admission to the hareem of Suleyman was refused by the Sultan, he died in Constantinople after the death of Abd al-Hamid I. It is a hypothesis which has little chance of ever being proved. We know actually that at the accession of Mehemd II his mother, who was brought to Constantinople from the old seray to the new (Magal Cola Pasha, viii. 1288, 424; Mustafat Sedicim, p. 122). It is unlikely that the honours of the walide aleay were ever accorded to what might be called honorary Walides, like the nurses or adoptive mothers of the sultans. Moreover, according to the Moniteur Unis’c, in 1817 she was about 50 years old; at that time A. de K. must have had an age of 41 years.

The customs of the hareem of the Kedives were almost exactly copied from those of Constantinople. As in the Ottoman seraglio, the viceroy’s concubines were numbered and called birinji, ibinji (female) and according to the Arabic pronunciation birinji, ibinji etc. "first, second", etc. The title of "mother of the Kedive", or as they say in the official French of Cairo the "Kedive’s Mother" (in Turkish also walide-i khidir) was modelled on that of mother of the sultan with the substitution of "pasha for sultan. It was also the only case in which the title pasha was borne by a woman, for it is a case of an honorific epithet and not of an expression meaning "mother of the pasha", which would be in Arabic Walidet al-Basha and not Walidat Bagha.
In the wealthy Khojivli family of Egypt, the Wálida Pasha was no less rich and her dâ'irâ of offices for the administration of estates was very important. Two streets in Cairo bear the name Wálida or Wálida Bagha. On one of them stood the palace of the last Khojivli Mèreâ, Emînê Khañâm, mother of 'Abbâs Ûlîm II, daughter of Ihlâm Pasha and grand-daughter of the viceroy 'Abbâs I. She died in her country house at Bebek near Istanbul on 18th June 1931. The present king has broken with the Turkish custom by acknowledging his own wife as the queen of the empire. This is a consecration of the principle of monogamy and of association on the throne. The widow of the Sultan Ûsînân enjoys an analogous position by right of survival.

Bibliography: (for the more famous Wálida Sulthanâ see the general histories of the Ottoman Empire. We have been content here to give a few isolated bibliographical references to supplement those in the text of the article): Michel Bandier, Histoire Générale du Serrail, et de la Cour du Grand Seigneur Empereur des Turcs, Lyons 1859, p. 84 (book 1, chap. xii.), p. 95 (chap. xii.), p. 101 (înî, in four).; Richert, History of the present state of the Ottoman empire, chap. iv. (relating to Mâk-Keiser Kösem s., N°. 9, 11 of our list); J. B. Tavernier, scavenger Baron d'Anbon, Nouvelle relation de l'intérieur du Serrail du Grand Seigneur, Paris 1691, chap. xviii.; De l'entrenée a Constantinople of the Sultan's mère du Grand Seigneur, appehare par honneur la Válida le 2 juillet 1668 (Târkhân or Târkhân Khâdîlé, N°. 13 of our list); Relation del nobil uomo Gambattista Donato quondam Nicolò (1684), in Barozzi e Berchet, Relazioni degli ambasciatori e balli veneti a Constantinople, Venice 1781, il. 303 sqq. (N°. 11 and 15 of our list); Demetrius Cantimir, Hist. de l'Emp. Othomân, Fr. trad. de Jonquière, Paris 1743, iii. 228, p. 450 sqq.; Bonnois, Notice sur la Cour du Grand-Seigneur, Paris 1804, p. 11 sqq. (relating to Mîhrî Shâh s., N°. 18 of our list); Adam Nesse, Voyage en Allemagne, en Pologne et en Turquie, transl. from the English, Paris 1818, il. 169 to 185 (the same sultana); Moungdre d'Oboum, Tabhâm de l'Emp. A. le Grand-Vizir, K.-M.-P., 1840-1870, Paris 1875, p. 130, 271 sqq. (relating to Bezmî-‘Aleâm s., N°. 21 of our list); Osman-‘Ali, alias Major Vladimir Andrievitch (= Descour- demanche, son of M-me Kibriili-Mehmet-Pacha), Les Femmes en Turquie, Paris 1878, p. 267 to 273; Paul de Réglia, La Turquie officielle, 1891, p. 264–265, 260, 282; Ahmed Reîfî (Ahmet Reîfî), Kadîîlar Sallıamati, 4 vols. in-12. 1 (years 999 to 1027), il. (1027 to 1049) — Istanbul 1337; il. (1049 to 1058), il. (1058 to 1094) — Istanbul 1924; by the same, Turkish women (in Turkish characters), Istanbul 1931, 424 pages in-12; Mehmed Zihni (Djihînî), Mehbûtîn Nûn-Nîsî; Lucy M. J. Garnett, The women of Turkey, il. 393–397.

The quotations from Na’tîn’s history are taken from the 4th ed. (cf. Babinger, G. O. W., p. 246); those from Râghîd, from the edition by Drîbîlî Mûsâdarîqa, of 1553; those from Wâṣîlî, from the new edition of Bilîbî, 1246 (cf. Babinger, G. O. W., p. 337); those from the Sûltântâr Târîh from the edition of T. T. E., in 2 vols., 1928.

We shall not give here the abundant literature relating to the "wâlida sultanâs" (Aîmêc du Buc de River), It will be sufficient to mention those who have written on the subject, Xavier Eyuz, Juzy, Sidney Daney, Dr. Cahân, Pakistan Burton, author of The Veiled Emperoi, New York 1923, Marc Hélay. The majority of these writers reveal a remarkable credulity. We find more criticism displayed in the lengthy articles by M. Renê Faucaux in Le Temps of Oct. 7 and Nov. 10, 1923. A résumé of the subject was given by M. Albéric Cahaut in L'Illustration of Nov. 21, 1931, p. 382–383. The theory by which Nakûbî-Dîl was the adopted mother of Sulthan Mahmut II. is defended in the recent work of Mme. A.-M. Martin du Tiche, Silhouettes et documents du XVIIe siècle (Martinique, Périgord, Lyonnais, Ile-de-France), Périguex 1932, 138 pp. in-4° with illustrations (p. 7 to 46: Aîmêc du Buc de River, Sa mystérieuse destinée).

The Wálida Sulthanâ could also, it seems, be studied in the novel: V. Smînnow quotes in Vostornya sâmîbîthi, p. 56, Begyttî vâghad na nansyârtiyi in roughly essay, note 1, a novel by Coskayon, in Zurna dîha fetevrey, 1884, N°. 5 and 6; cf. also the novel by Nizameddîn Nâzîî, Armandin dîâmî, pub. in the feuilletons à Veîî, beginning November 11, 1931. (J. Dey).
The subject was also taken up in Ottoman Turkish by Bibiğit (a contemporary of Bayazid II; mistake in Gibb) who put it in his 'Hammer and probably prepared it from the versions of 'Unsuri and 'Asfahani, and by Lami (d. 937 = 1530 or 938 = 1531), also probably from 'Unsuri. Gibb (H.O.P., iii. 357 sqq.) has given an analysis of the latter poems: 'Wāmik, son of the emperor of China, falls in love with 'Adharah, daughter of a king and sets out to find her again through all kinds of difficulties which he overcomes with the help of fairies. He finds his beloved princess then, is taken prisoner by the enemy, taken to India where the natives try to burn him; the flames do not touch 'Wāmik, whom the Indians worship as a god. The hero escapes, finds 'Adharah again and marries her.

Wān, town in Turkey on the Armenian plateau on the eastern shore of Lake Wān.

The town of Wān is not found in the Arabic sources which deal with the Roman conquest. Lake Wān is usually named the Arabs after the towns on the northern shore, Ardiqkū and Akhīrāt.

In Hawkal alone (p. 250) mentions the Arturund, Ibn Dairān, lord of Zawāsa, of Wān and Wosfān. Yākut, iv. 895, mentions a fortress of Wān but makes it a dependency of Erzerum and locates it between Akhīrāt and Tūfīs (?)

For the Muslim conquest of Armenia see that article. The important fact is the campaign of Baghāl al-Kabīr who in 238 (852) overran the whole of Armenia including Allābī (at the source of the Great Zāb) from which he carried off the Arturund prince Ashūr Arturani.

In 885 the Bagratid Ashūr was recognised as king of Armenia by the caliph and later by the Byzantine emperor and the princes of Waspurakan became his vassals. Of these the principal were the Armanis whose hereditary see was Hadamakert in Allābī.

In the ninth century colonies of Arabs had settled in Armenia, like the Amirs of Manako (Malizgīr) whom the Armenians call Kañakkī (< Kāi), and who ruled on the northern shore of lake Wān (Apshuniq, in Arabic "الأسفيقه") and the 'Ogjmanūs (in Armenian: 'Ogjmanākī) on the northeastern shore of the lake, at Begri and Amiuk. Towards the east, Waspurakan was exposed to the attacks of the Arab governors of 'Ahrābādjiša. The Sādījī (916) Ashūr occupied Wān and Wosfān and summoned envoys as governors there (cf. Thomas of Artunian, transl. Brosset, p. 221).

In 916 the Sādījī Yūsuf executed the Bagratid king Sinbat in Dwīn (cf. Stephen Asolik, History, ill., chap. iv. -v., transl. Macer, p. 18 - 24). Before this catastrophe, the Arturund prince Gagik (through his mother a nephew of Sinbat) had enrolled himself in Yūsuf's suite and by this manoeuvre was able to assert the independence of Waspurakan against Sinbat's successors (kings of Kars and Ani). The Arturund kings were overlords of the principalities of Mokh (now: Moku) and Andizvank (cf. Markwart, Südarmenien, p. 359 - 358).

The Arturund princes are several times mentioned in Ibn Miskawī's Chronicle. In 326 (937), the troops of the Dailami chief Laḫšen were defeated near 'Āṣḥab al-Fanān by Atom b. Dūrđīn (-Gurgen), lord of Zawāsa (Ibn Miskawī, l. 402; Ibn al-Alsūh, viii. 262). This Atom belonged to the elder line of the Arturundas which was eclipsed by that of Hadamakert. In 330 (940; ibid., ii. 33); Gagik, prince of 'Āṣḥababādjiša, took refuge with Dūrđīn b. al-Dirān (Gagik b. Dūrđīn). L. 342 (953; ibid., ii. 151), Ibn Dairān and 'Īṣāb (probably "Dūrđīn b. Gagik") surrendered Daisam to the Mūsāfār al-Murāzānī.

In 1004, the Arturund Seneqerim being pressed on all sides ceded Waspurakan to the emperor Basil II who gave him in exchange Stwān to which 40,000 Armenian families followed their king. Byzantine domination was of short duration: the battle of Melizgirt in 463 (1071) lost the Byzantines the last of their possessions in Armenia (cf. a brief account in Lynch, Armenia, l. 334 - 367).

The name of Wān is briefly mentioned among the towns of *the province of Akhīrāt* which the Khwarizmshāh Dānjīl al-Dīn besieged after the capture of Akhīrāt in 626 (1229) (Barghi, Manako, Bīlīs, Waspurakānd, Wān, Woṣfān, Yūsuf). In the Mongol period (after Arghun Khan, 1284 - 1291), the region of Wān was close to the summer encampments of the Mongol Ilkhāns (on the mountain of Ala-Tagh, the ancient Nafīs, Tendürek, to the N.E. of Lake Wān) but the local authority of Wān must have been in the hands of the Kurd chiefs of Hakkārī (cf. below).

The Naḥṣat al-Kalābī, p. 102, says that *Wān is a fortress while Woṣfān (Ostan) has been a large town but now is a medium sized one*, *its climate and its fruits are good, its water comes from a mountain; its taxes amount to 33,400 dinārs (Urmiya 74,999 dinārs and Ardabil 85,000 dinārs)*.

Towards the end of the viith (xivth) century, the rule of the Kāra-Koynūn Turkomans whose hereditary centre was at Ardiqkū, was extended over Wān but the direct administration remained in the hands of a family of Kurdish begi. In 787 (1387) Timūr had plundered the Kāra-Koynūn encampments of Ardiqkū (Ibn Dairān). In 1402, he ordered the destruction of the fortress but *this building of the city of Shaddād* resisted his efforts. Timūr made *Iṣṣ al-Dīn, lord of the fortress, governor of the Wilāyāt of Kurdistān* (Zafar-šāhī, l. 421 - 424.). The *Iṣṣ al-Dīn, here referred to in the Zafar-šāhī, was an important figure and took part in many of the events of his time (cf. Maftūh al-Salāmeh, transl. Quatremère, in N., E., xiv. 110, 153 - 180). The son of *Iṣṣ al-Dīn Muhammed was well received by Shīth Rukh in 824. Under Uzun Hasan [v. i.] the Ak-Koynūn troops conquered Hakkarī and placed it under the Dombol tribe: the Nestorian Christians restored the power to a scion of the old family.*

After the coming of the Şafawids, prince Zāhid b. *Iṣṣ al-Dīn II entertained friendly relations with Shīth Ismā'īl.*

In view of the rival propaganda of the Şafawids the Ottoman empire must have endeavoured to strengthen the very loose organisation given to Kurdistān by Idris, but the incorporation of the distant frontier district of Wān, filled with foreign elements, was full of incidents.
In 1534, during the offensive of the great vizier Ibrahim Pasha against Tabriz, delegates from Wān gave him the keys of the fortress. But as soon as the cold weather forced Sultan Sulaiman's army to withdraw, the Persians advanced to Wān and soon afterwards occupied this town and Ardijeh ('Ašām-ar-ūn, p. 51 [according to Ewliya Celebi, iv. 174 the Persians retook Wān in 933=1526]).

The situation during the 14 years from 1534 to 1548 is not very clear but when, at the instigation of the Persian prince Alīshār Mirza, Sulaiman again marched on Tabriz, he laid siege to Wān in 955=1548 (Aug. 1548). The town surrendered through the mediation of Alīshār Mirza and the dīdarān Čerkes lakedner Pāghā was appointed governor (cf. v. Hammer, ii. 309; cf. Ewliya Ecelbi, ii. 174).

From this period date the walls of Rustam Pāghā at Wān and a mosque of 975; cf. Džižān-nāma.

The dates inscribed on the šāh-i-{dārān of the sixteenth century (cf. Lynch, ii, fig. 131-132, and Bachmann) have now disappeared.

With the appearance of the Ottoman mir-i mīrān at Wān, the Kurd chiefs retired to their fiefs of Džjālmak and Wostān. On the intervention of the mir-i mīrān in their affairs, cf. Şeraf-šīrāz, l. 99.

In 1013 (1604) Cighīlā-Żade, appointed commander-in-chief against Persia, established his head-quarters at Wān (of which he had previously been wāli in 1585; cf. v. Hammer, ii. 552). He was besieged there by the Persian troops under the command of Allah Werdī Khān and escaped from the fortress by boat. Very soon he undertook a new campaign against Tabriz but it ended in a complete debacle in the autumn of 1604; cf. Alm-ūrā, p. 474-476, and the article TABBĀR, Hammer, G. O. A. R., ii. 678, 660; Gover, Relation des voyages des voyageurs, French transl., Rouen 1649, book ii., ch. xvi., xvii., p. 208—286; Arakel de Tauris, Livre d'histoire, transl. Brussels, St.-Petersburg 1874, ch. vi., p. 303-307.

About 1600 the administrative organisation of Wān was described by Koçja Nişanci (1528-1567) who in his Tābihāt quoted by Hājjī Khānī included in this cihlešt some places now belonging to Persia (e. g. Salmās), and by Alī, 'All (cf. Tischendorf, Das Lahrwesen in d. osm. Staaten, Leipzig 1872, p. 72) who numbers in Wān 13 sandjaqs and 1 ḥākimān, including in all 1,115 large and small individual fiefs (šahīd).

Ewliya Celebi, who in 1065 (1655) accompanied his uncle Ahmed Meliek, who had been appointed Wāli of Wān, has given us a very full description of the cihlešt of Wān (iv. 130-190). It is curious that the text is silent about the Christian population unless this information was suppressed by the censors under ʿAbd al-Ḥamīd.

Ewliya (iv. 165) gives 37 feudal sandjaqs in Wān of different dimensions and with different privileges. The most important were the ḥākimān of Hakkār (with an army of 47,000, including 10,000 with guns), of Bīlīš, Mahmūtli and Pīryānīsh.

The description in the Džižān-nāma, faṣl 41, p. 110 (Ermeniye) is much shorter.

In the autumn of 1236 (1821) the heir to the Persian throne, 'Abd al-Ẓamir, took advantage of some complications with the Ottomans to invade the Turkish territory of Bāyarid as far as Bīlīs. Diplomatic complications and more particularly the epidemic of cholera arrested the Persian operations and the status quo was re-established (cf. Mirzā Taḥrīr Sābūrī, Taḥrīr-i Kāflūhā, Tebriz, 1, under the years 1286—1287; cf. Watson, A History of Persia, vol. 1, p. 1117-1221). After the Russo-Japanese war the Ottomans in their turn advanced claims to the "unredeemed" territories and in July 1907 Vīver-Pāghā occupied many districts of the region of Salμā (q. v.). The status quo was however re-established after the Italian war (Ottoman note of Oct. 12, 1912) and gives legal sanction after the delimitation of 1913-1914 (on the basis of the Final Protocol of Nov. 17, 1913).

As a result of the Armenian movement which had broken out at the end of 1895 in many areas inhabited by Armenians, trouble broke out on a large scale at Wān between June 3 and 11, 1896 which cost the lives of 500 Armenians and 250 Muslims (cf. Blue Book, 1896, No. 8).

During the Great War, Russian troops occupied Wān on May 20, 1915. On Aug. 4, the Turkish counter-attack forced them to evacuate the town, but at the end of the month they returned to their lines till the armistice of Dec. 18, 1917.

Statistical. It was only at the beginning of the sixteenth century that the first European travellers penetrated into the region of Wān. Schala, who visited Wān in 1829 estimated that it contained 10,000—12,000 houses. In 1889 Mayovsky counted 4,953 houses in the town of which 2,012 were Turkish and 2,887 Armenian.

Cuimet, La Turquie d'Asie, ii. 1891, p. 629—756 for the wilayah of Wān gives the following figures (from the Turkish sīlahāri):

<table>
<thead>
<tr>
<th>Sandjak of Wān</th>
<th>Sandjak of Hakkār</th>
</tr>
</thead>
<tbody>
<tr>
<td>11,530 sq. km</td>
<td>10,000 sq. km</td>
</tr>
<tr>
<td>number of towns</td>
<td>155</td>
</tr>
<tr>
<td>number of villages</td>
<td>724</td>
</tr>
</tbody>
</table>

The number of inhabitants in the wilayet was 28,000. Kurds 210,000, Armenians 79,000, Nestorians 92,000 etc.; total 430,000.

Mayovsky (about 1900) is probably more accurate: the wilayet of Wān had an area of 62,820 sq. km. in two sandjaqs: that of Wān (in the west near Lake Wān) and that of Hakkār (in the east along the Turko-Persian frontier).

The vicissitudes of the Great War, the deportations of the Armenians, the expatriation of all the Nestorian population to Persia and later to Mesopotamia and the trials in which the Kurds were exposed from the Christian militia in the Russian army left the wilayet of Wān in ruins, and we are still (1932) very ill informed regarding present conditions there. After the reorganisation of the wilāyets, the old sandjaqs of Wān and Hakkār were made into separate wilāyets.

The Turkish official annuals of the years 1921—1926, 1926—1927, 1927—1928 (Türkiye Dışişleri Dairesi Sihhat-i Vilâyeti [Vilâyet]) reflect the changes in the administrative system. According to that of 1927—1928 (with numerous mistakes in the Roman transcription), the wilayet of Wān has an area of 21,915 sq. km. and 75,437 inhabitants. Its 4 kadās are: Wān, Ardijeh (Erdoji), Rash-Kal'a, Shatak, Kiwāsh, Mūrad-i, Saray (Mahmūd).

The wilayet of Hakkār has an area of 15,505 sq. km. and 25,246 inhabitants. Its 4 kadās are: Hekār, with the chief town Džjālmak (Callemark), Buzj-i Shab (capital Elī), Shemdināb, Gavār (Gower).

It should be noted that the two wilāyets do
not coincide with the old sancjak. The old boundary between them followed the meridian while the new follows the parallel. The vilayet of Wān (which includes Baḥr-Kāla) is situated in the north and the vilayet of Ḥekkārī in the south on the frontier of that part of Kurdistan which belongs to the Irāk.

Biography: Cf. the art. ARMENIA and the very full bibliography in Lynch, Arménia, ii., 1901. The early travellers are fully used in Ritter, Erkundige, ix. (1840), 972—1009; 639—687 (Hakkārī); x. (1843), 285—356; Lehmann-Haupt, Armenien einst und jetzt, iii., 1926 (very full study of the antiquities); on the excavations at Wān during the Great War: Marx and Orbelli, Archeologische expedizjiya v Wān, Petrogad 1922, Markwart, Streifzüge, and Markwart (Marquart), Südarmenien und die Tigrisquellen, Vienna 1930, contain many topographical and genealogical details in the Kaisānī, Upmanīkī etc. The most detailed description of the vilayet of Wān is by V. T. Maykovskiy, Foyenstatisticheske opisanie Wanzgo in Bitisskago vilajetov, Tiflis 1904. (V. Minorsky)

WANKULI, Mehmed b. Mustafə Al-Wāni, a famous Ottoman jurist in the time of Muḥāfīd Mūsā (1095–1121) who especially distinguished himself in the field of piyyut, lexicography and literature. Born in Wān, he acted as a number of towns (Constantinople, Rhodes, Mānas, Salonika, Amasia, Kutahia, Yemashir) as muftī, kādi and mulla, and died in 1090 (1591–1592) as mulla of Medina, to which he had come in 998 (1590) in succession to Saʿuddī. In his long period of 30 years service, he displayed great activity in writing and translating. His principal work is the translation of the ʿAṣāfīr of ʿAbd al-Qayyīm ibn Saʿīdī [q.v.] which is regarded as the most correct Arabic lexicon and is more esteemed by many than the ʿAṣāfīr of Fīratbādī. This work, which is briefly called Wānuṣī, brought him the most enduring fame. It was printed in 1141 by İbrahim Mutaferrika, as one of the first books printed in Turkey. A new edition appeared in 1168. His translation of ʿAbd al-Qayyīm ibn Saʿīdī (which according to M. Ṭūhir is also attributed by many to Nasawi) was celebrated. In addition to a few brochures like his Tārtib-i Bāstār wa-Tārtib-i Siyāsat, he wrote commentaries on the Durur-i Ḥāmar and on the Wānent entitled Miṣṣāf al-Najafī. Bibliography: Maḥmūd-i Wānūṣī, in vol. i. of the edition of 1141; Saḥīḥ-i muwatāya, Dhaiy of ʿAbbī, p. 316—317; Ṭurayyī, Siyaylī-i ʿAbdullāh, iv., 130; Brusàlī M. Ṭūhir, ʿOṯmānī Mūlīsīrī, ii., 48; Séma, Rūmān al-Aʿlām, vi., 4678; v. Hammar, G. A. L., i., 575. — The Turkish translation of the Saḥāb: should be added in Brockelmann, G. A. L., i., 128.

AL-WANSHARISI, nisba from the land of Wan Sharis, a montane region in western Algeria to the south of the Wādi Shalaf (Chelif) known to modern geographers in the corrupt transcription Ouarens.

1. Abū l-ʿAdīrābāb Ahmad b. Ṭahīya b. Muḥammad b. ʿAdī Al-Ṭahīya b. ʿAlī Al-Thimṣānāb Al-wansharīsī, a famous Mālikī jurist of the Maghrib, born at Tlemsen, studied under celebrated teachers, like Ibn Marṣaṣa b. Kaṭīf and Abū l-ʿAdīrābāb. Khānṣām al-Uḫbānī. In 874 (1469) after some trouble with the government of Tlemcen of which we do not know the details, he left his native town to settle in Fās where he devoted himself to teaching and gave lectures to numerous pupils. It was in the northern Moroccan capital where he spent most of his life that he died at the age of 80 in 914 (1508).

The most important work of Ahmad al-Wansharisī is a voluminous collection of legal opinions (fatwās) entitled Kitāb al-Mīyar al-mughīr wa l-Dāmīr al-mughrī ammiṣ taṣwīmīratun Fatātun man ʿāyā fin wa ʿAladīn wā la ʿAladīn. This work, which is a regular corpus of the non-buṣrī jurists of North Africa and Muslim Spain, contains a mass of material of considerable value from the legal as well as sociological point of view. It has been lithographed at Fās in 12 vols. (1315 A.H.); a partial translation was published by E. Amar, Conciluliones jurisprudentiae fatwān du Maghreb, in A.M., vol. xii, Paris 1908. The biographers of Ahmad al-Wansharisī also mention among his works: 1. Kitāb al-Fāsī wa l-Wānisī; 2. Tārīkh Al-Maṭbāb ilā Ṭadiṣ al-Imām Muḥammad b. Abī al-ʿAlā; 3. a supplement (tārīq) in three volumes to the Muḥassar of Ibn al-Hajjī [cf. the article]; 4. a commentary on the Bāṭalīa of al-Fihrist; 5. a commentary on the work of his teachers (farrā). Bibliography: Ahmad Bābā, Ṣulḥ al-ḥaqq, Fās, p. 74; Ibn al-Kāli, Dijāwāt al-ṭalās, Fās, p. 80; Ibn ʿAskar, Dawḥat al-Naghīr, Fās, p. 37; Ibn Maryam, al-Bṣūr, Algiers, p. 53, transl. Provençal (Algiers 1910), p. 57; Muḥammad b. ʿAbī Ṣafar al-Kattānī, Salwāt al-Anfārī, Fās, ii., 153; Brockelmann, G. A. L., ii., 248; M. Benchenebe, Études sur les personnages mentionnés dans l'Isāyaf du cheikh Abd al-Kader al-Fāry, § 711; E. Lévy-Provençal, Les Manuscrits arabes de Rabat, Paris 1921, p. 70, no. 217. II. Abū Muḥammad ʿAbd al-Wahhīd b. Ahmad b. ʿAyyāb b. ʿAlī al-Wānisī al-Zakātī al-Fāsi, son of the preceding, a learned legist of Fās, where he held the office of ʿāṣīf along with that of muftī and a teaching post. He had been a pupil of his father and of the principal teachers of the Moroccan capital. He was celebrated for his independence of character; for example, having to preside at the sūhqīa in the open air on the occasion of one of the canonical fasts and the Marīmā sūhqīa being late, he was not afraid to begin the solemn service before the sovereign arrived. In the course of the troubled period which immediately preceded the occupation of the capital by the Saṭṭānas, when brigandage was practised in it with impunity, he was assassinated on the threshold of one of the doors of the mosque of the Kairāwānīn (Dīmān al-Karawīnīn) at the end of Dhu l-Ḥijjah 955 (1540). He was about 70. He left a number of works of a legal nature.

WARĀṢA b. NAWFAL b. ʿABD AL-KURĀSHĪ, a cousin of Khādījih, who encouraged and possibly influenced Muḥammad in the first years of his mission.
All we know concerning him has the colour of legend: he is classed with the (artificial) group of Meccans known to tradition as the ḫudayyin, who, abandoning paganism, resolved to seek for the true religion of Abraham. Waraka became a Christian; he was astownomous, knew Hebrew, studied the Bible, and had written down the Gospels in Hebrew (in the Hebrew alphabet?).

In his relations with Muhammad he is endowed with supernatural powers, like the hermit Bahira. The fictitious woman who offered herself to ‘Abd Allah in order to become the future prophet’s mother, is described as a sister of Waraka, who had seen on ‘Abd Allah’s forehead the sign of his son’s mission. It was Waraka who found the infant Muhammad when he strayed from his nurse. Khađja consulted him on her marriage, of which Waraka warmly approved. One of the earliest confidants of the first revelation, he told Muhammad that Jesus had predicted his mission, that he had been visited by the Nāsīrī whose return to Moses, and foretold his career and final triumph. It was also Waraka who conspired Hilāl, tormented by his pagan master.

Tradition however admits that Waraka was never converted; this is rather feebly explained by making him die in the second or third year of the mission, before Muhammad had been ordered to preach and make converts. He was probably an independent religious thinker, unlikely to follow a young and less learned enthusiast. In the last years of his life Waraka became blind. After his death Muhammad had a dream of him in white robes, meaning that he was in heaven.

Waraka died too early to transmit any traditions: Muslim authors on ḥadīth denounced as apocryphal the brief account of Gabriel’s appearance which Ibn Ṭab‘īn claimed to have heard from him.

**WARĀMĪN** (or Warāmī, cf. Yakhūn, Mu‘jamāt, iv. 918), a town about 40 miles (Yakhūn, c. 30 mlt) S.S.W. of Tēhrān, now the capital of the district of Khwār-Wa-Warāmīn. The plain of Warāmīn watered by canals from the Dīlgūrān was regarded as the granary of Tēhrān. The town lies to the south of the great road from Raîy to Khurāsān passing via Khwār (near Ṣāfā) and Simnān (cf. Ibn Khurādhībī, p. 222; only in the Mongol period did the road from Sulīhūn to Khurāsān run via Raîy-Warāmīn-Khwār; Nūserat al-Khālit, p. 173). On the other hand in the ninth and tenth centuries, Raîy was connected with Iṣfahān and Karajār (cf. sūr ‘Alī) by Warāmīn (Yakhūn, iv. 918, also puts Warāmīn on the route taken by couriers from Raîy to Iṣfahān). The route took this detour to the east apparently to avoid the low lying Hawīl-Ṣulān which before becoming a brackish lake was probably a salt-impregnated desert. Iṣkhāk, p. 290, mentions the little town of Warāmīn as a dependency of Raîy but does not explicitly say that it is on the Iṣfahān road. The Omeley MS. (B.G.K., iv. 414) alone contains a later addition saying that Warāmīn had a large market; from Raîy to Warāmīn it was once an important and prosperous country (except for a stretch of 2 farsakhs) and from Warāmīn to Dīlar-dīlīgī (according to Tomasevich to the south of the Khwār) a main road through the desert which faces the Kargakād; (from there the road went to Kīyāl and Kūm) (cf. also the statements regarding the journey of the celebrated Rūzīdī viserc Ibn Ṭab‘īn, who on the way from Raîy to Iṣfahān passed through Warāmīn ["a village like a town"] and then through a village called Namshābīr; Yakhūn, iv. 817). Muḥammad, p. 401, places Warāmīn 2 marjāl from Raîy (via Kākān) and 6 marjāl from Karajār (via Awa; cf. the article Nāwā). Cf. particularly Tomasevich, Die Wege durch die persischen Wüsten, in Stammesgesch. Wien. Akad., phil. hist. Classe 1885, 11., p. 125–128.

Warāmīn does not appear to be specially mentioned in ancient times but situated between the great city of Raîy [q. v.] and Khwār (the ancient Xwār, Xwār; cf. Markwart, Südasienkunde, Vienna 1930, p. 410) it must have lain within the settled and civilized area.

L. G. Pérand to whom we owe a detailed map of the region found no traces of a large town having disappeared, but excavations made to a depth of 10–15 feet brought to light Sasanian ruins (of a Tapa-Mīl). "There is no doubt that there are in deeper strata... between Tēhrān and Warāmīn much older remains." It seems that the site of Tapa-Mīl shown on the map by Pérand to the north of Īshālādār as the city of Mōsāvarīs has recently described as "palace of Afrāīsīs" to the south of Khav-yi nāh and 15 miles from Tēhrān; cf. Revue des arts asiatiques, Paris 1931, p. 20–22.

Warāmīn had a period of fame in the Seldjūk, Mongol and Timurid periods. We have no exact information about the inhabited and administrative centres of the region of Raîy but the many monuments of Warāmīn show that even when Raîy was at the height of its glory important buildings were being erected at Warāmīn. The destruction of Raîy by the Mongols must have contributed to improve the position of Warāmīn which was less affected by events. It was a long time before Tēhrān [q. v.] finally triumphed over Warāmīn as the successor to Raîy. In the Nūserat al-Khālit (740 = 1340) Warāmīn is called "the capital of the town of Raîy... Its climate is better than that of Raîy and Warāmīn produces cotton, wheat and fruit just like Raîy... The inhabitants are Twelver Shi‘is very arrogant in their dealings". L. G. Clavijo (transl. M. Shangre, p. 306) describes Warāmīn ("Watami") as a large town without walls and considerably depopulated. We may regard as echo of the Shi‘is tendencies of the people of Warāmīn the fact that we have in its neighbourhood this to-day Turkish tribes who follow Aḥl Allāh teaching (Ahl-i Ḥaḳḳ); cf. Minorsky, Notes sur les Aḥl-i Ḥaqq, in R. M. M., xi, 1920, p. 48, 63.

The architectural features. Pérand mentions 18 ancient buildings in the neighbourhood of Warāmīn. Among them is the great square citadel of Khā‘r-yi Gāb, to which Pérand ascribes "great antiquity" (Sarre: to the 7th century). Then there are the great sepulchral towers called after the
WARMIN — WARGLA

Shott and Adjadja to the E., and Rominat, the most important in the S. E. The settled population consist of the proprietors of the palmgroves who cultivate them as "hummus" (paying a rent of a fifth) on behalf of merchants of the Maghreb and to a lesser extent by the nomads who lead a nomadic life in this part of the desert. Of Berber origin, and still speaking a Zend dialect, the original purity of their stock has been much affected by intermarriage with negroes. The "Wargha" as they are called, have retained certain ancient customs, particularly in connexion with marriage and a kind of carnival ("chat al-iwwal") corresponding to the first fortnight of the month of Muharram. Alongside of these are negroes, Mahdis, and a few Jews. The population of Wargla and of the 5,149.

History. We have no information about Wargla before the Arab conquest. At that time the land was occupied by Zenata tribes. According to Ibn Khaldun, the Beni Wargla (Berber Beni Uq dal) came from the N. W. along with other Berber elements (Iren Maghrébwa) and founded several little towns in these regions which combined to form the town of Wargla. The people adopted Islam doctrines so thoroughly that after the destruction of the Roman kingdom of Triet by the Fatimids at the beginning of the tenth century A.D., many Khāridja came to settle in Wargla and founded the town of Sedrata, the ruins of which still exist buried under the sands half a day's journey to the S. W. At the same time Abu Ya'qub, the "man with the ass," who had rebelled against the Fatimids recruited many followers in this region. The Ilājī had nevertheless in the xiith century, as a result of conflicts with the orthodox and perhaps under the pressure of Arab elements, to abandon the region of Wargla and migrate to the Tamenrasset, where they finally settled and created the oasis of the Māţā [q.v.]. Ilājī, however, continued to survive at Wargla, where in the xviith century it still had a few representatives.

During this period, Wargla, according to the traveller al-Ayyūbi, was ruled by the Beni Tuq'un dynasty, seems to have been a prosperous city enriched by trade with the Sudan (Ibrī, trans. de Goeje, p. 145). The Ilājī invasion marked the beginning of a troubled era. In the course of the wars between the Hammādis and the Aḥmad, with whom the people of Wargla had contracted an alliance, the dynasty of the Beni Tuq'un was overthrown and the town destroyed. Rebuilt a short distance from the original site it suffered later in the wars between the Almohads and the Beni Ghānīy. In the viiiith century, although under the suzerainty of the Beni Masm, representatives of the Ḥafṣids in the Zag, Wargla was practically independent under the rule of sulţāns belonging to the family of the Beni Aḥbāb, of the fraction of the Beni Waggūn (Ibn Khaldūn, Histoire des Berbères, transl. de Sane, ii, 256). At the end of the viiiith century, these sulţāns were extremely wealthy but according to Leo Africanus (ed. Schaefer, book vi, vol. iii, p. 146) they had to pay heavily for the protection of the nomadic Arabs. Wargla at this time still preserved the commercial importance which it owed to its situation as a "port of the desert," to use Ibn Khaldūn's phrase (loc. cit.). It was a market where the produce and slaves of the Sudān were exchanged for the merchandise bought from Tunisia.
and Constantine. Leo Africanus remarks on the beauty of the houses, the number of artisans and the wealth of the merchants. This opulence attracted the attention of the Turks to Wargla. In 1552 'Salāh Re's at the head of an army of Turks and Kurdish advanced as far as Wargla, the inhabitants of which offered no resistance and he returned after plundering the town and imposing on the sulān an annual tribute of 30 negroes. The expedition of 'Salāh Re's was followed by a new period of troubles which ended, it seems, at the beginning of the 17th century by the proclamation of a new sulān Allahham, to whom local tradition attributes a Sharī'ī origin; his descendants held power down to the middle of the 18th century. But the real masters of the country were the nomad Shamshān, Ben Tar, and Sālid Otha, whose continual interference in the quarrels of the two jufis into which the settled population was divided kept up the disorder and made the authority of the sulān illusory. The latter had even to recognize the supremacy of the Ben Bahār, hereditary chief of the oasis of Nguda, which they did not cast off till 1847. But ten years later, a new cause of trouble arose. Muhammad b. 'Abd Allāh (the shāfiq of Wargla) raised the tribes of the Sahara against the French who entrusted the task of reducing the rebels to the Shāikh of the Ulema Sulṭān Shāikh, Si Hamza. The latter occupied the town in the name of France in 1853 and was given supreme command of the Sahara tribes. But the participation of the people of Wargla in the rising of the Ulema Sulṭān Shāikh in 1854 forced French columns to intervene on several occasions in the region. Another rebel, Ben Shābha, nevertheless succeeded in establishing himself in Wargla in 1854. The suppression of this rebellion resulted in the final establishment of French authority in 1872.

Warith. [See Mirkahf.]

Al-Warka, a ruined site in southern Iraq, was 15° 25’ N. Lat. and 31° 10’ East Long. (Greenw.). Vahid (M’plaw., ed. Wüstenfeld, 1922) knew al-Warka as a place which belonged to the district of Kaskar and the circle of Zawāj in the area of the two southern Babylonian Euphrates canals called Zibba (cf. Strick, Babylonien nach dem arak. Geographik, in, Leyden 1900, p. 32; G. Le Strange, The Land of the Eastern Caliphate, Cambridge 1905, p. 27; 73). According to a Muslim tradition, Ibrahim, the Abraham of the Bible, was born in al-Warka (see Yavhb, iv. 922, aq. and cf. also Lofthus, op. cit., p. 161 sqq.). At the same time however, a whole series of other places are mentioned as Ibrahim’s native place. As Sall b. ‘Umar records in his Kitāb al-‘Ukīd (see Yavhb, iv. 922, aq.?) the first encounter between Arabs and Persians at the beginning of the Muslim campaigns against the Sasanian empire took place at al-Warka.

Warka is the largest of all the groups of ruins in Southern Babylonia. It marks the site of the town of Ur or (Sumerian Uruk) of the cuneiform inscriptions, which, with Nippur, Ur, Kish and Lagash, was one of the oldest towns in the country and played a prominent part in the religious life of the Babylonians from the most primitive times to the Parthian period. Alongside of Ur we sometimes find the form Arku for the name in inscriptions (cf. the ethnic Arzakû in Ezra iv. 9). Besides this reference, Urk occurs only once in the Bible in the form Erakh where it is mentioned with three other towns as a part of the dominions of Nimrod (Gen. x. 10).

Of the epoch of Babylonian history before Hammurapi, we know five dynasties of Urk, of which however, the first, to which belongs Gimmong, the hero of the famous epic which bears his name, is mythical. The end of the fifth dynasty of Urk is to be dated about 2300 B.C. Urk remained an important town under the rule of the Persians, Seleucids and Arakids; many cuneiform documents of this late period have been found here. Pliny, Nat. Hist., xxvi. 123, 130 and Strabo, xvi. 739, know Orchoe, Ḥarrān (ethnic Orcheni, Ḥarrān) as a great centre of Chaldaean astrology (cf. also the reference in Ptolemy, v. 19, 21, vili. 20, 19).

Urk was not a Hellenistic town like Babylon, but it is very possible that it had a considerable Greek community within its walls. Even in the later Parthian period only a small portion of the extensive site of the old town was still inhabited, under the Sasanians the town must have become more and more ruined. By the time of the Muslim invasion, it was presumably completely deserted and abandoned.

The most exact examination and description of the ruins we owe to W. K. Lofthus (see Bibl.). He was three times in Warka in 1850 and 1854; on his second and third stays there he conducted excavations for three weeks and three months respectively. Of further visitors we may especially mention: W. H. Ward (1885); see J. P. Peters, Nippur or Explorations and Adventures on the Euphrates, i. (New York 1898), p. 349–350 (Peters himself also visited Warka; see op. cit., ii. 98–99); also E. Sachau (1895); P. Anastasie Carme (1900), see Bibl. The examination of the ruins of Warka entered into a new phase with the scientific expeditions of the Deutsche Orientgesellschaft.

Lofthus gave an excellent account of the topography of Warka (see his plan, op. cit., p. 160; repeated e.g. by Hommel in his Gesch. Babylonien und Assyrien, p. 208 and in Zeich., fund., p. 59, 1904). Andrae prepared a later plan. The new plan made in the winter of 1912–1913 for the Deutsche Orientgesellschaft’s expedition is still more accurate and shows even more details; see

Uruk must have been a very populous town at its zenith when it extended for a period beyond the walls around it, which can still be recognized today, as is shown by the mounds of ruins and other traces of habitation outside them; cf. Loftus, op. cit., p. 185; Scahau, op. cit., p. 24.

In Babylonian antiquity, either the Euphrates itself flowed past Uruk or else an arm of it, which might be identified with the now entirely silted river-bed of the Shatt al-Kar (in the N.W. of Warka), supplied the town with its water by a canal. Jordan thinks the latter can be identified with remains of the Shatt al-nil which comes from the north and runs along the N.E. city wall. The modern Euphrates flows south of Warka at a distance of over 4 miles, reckoning from the nearest point on the bank. The easiest road to the ruins is now from Khalid on the north bank of the river, a station on the Baghdad—Baṣra railway. The ruins lie in a completely deserted region which is only occasionally visited by Bedouins pasturing their flocks.

The expedition of the Deutsche Orientgesellschaft in the winter of 1912—1913 found a considerable number of small bullae and seal impressions which throw an instructive light on the style of the mixed Babylonian and Hellenistic culture: they also obtained ceramics of the late period (especially clay figures, terracotta animals), and among other things a hoard of 196 coins of the Parthian king Gutazes (40—51 A.D.); the number of cuneiform documents was particularly large but they came mainly from the Seleucid period (cf. Jordan, Uruk-Warka, p. 39, 57—70 and in the Mittell. d. Deutsch. Orientgesellschaft, No. 66, p. 12—17). In 1929—1931 were found numerous clay tablets with pictographs.

Besides these things found as the result of official excavations, we have a considerable number of objects (mainly inscriptions but also sculptures) which have been brought to light through the plundering by the Arabs, tempted by the gold of the dealers in antiquities. This systematic pillaging began before the excavations by the Deutsche Orientgesellschaft (1912) and was continued before the Society could resume their work in 1928; through the market these finds of Arab burrowings found their way into various European and American museums and private collections, in Paris, London, Brussels, Berlin, Newhavn (Vale Babylonian Collection), Baltimore (Goucher College), Pierpont-Morgan Library, Nies Collection etc. On a number of especially remarkable objects found cf. Unger, op. cit., p. 36.

In the last two decades, numerous cuneiform texts from Warka, among which documents of the late period (late Babylonian to Parthian) predominate, have been published in specialist periodicals and in separate works.

WARRAK, ABI TAI ł Muḥammad b. ḤABīn, an independent thinker, who finally was accused of 'zandaqa, was like his friend and pupil, Ibn al-RAWANDI [cf. al-RAWANDI], at one time a theologian of the Mu'tazila school. Victims of the same persecution, both died in exile in Abwāz in 297 (909).

His theological vocabulary only makes mild concessions to Hellenistic philosophy, but his dialectic is powerful; and his documentation of an objectivity and exactness unknown in this period enabled him to write a manual of the history of religions, the Kitab al-Maḏali, the only source (unfortunately lost) of al-BIRUNI and al-SHahrASTAMI for certain Iranian heresies and Jewish sects. His critical examination of the three branches of Christianity of his time, a little book of great accuracy, has survived under the title Kitāb 'l-Radd 'ala 'l-Fira'aq al-thalāth, the methodical refutation of which was attempted by the Jacobite philosopher Yahiyya b. Adī [Bibl. Nat. Paris, MS. Arab, No. 167]. His Kitāb al-Maḏali is lost.

(Louis Masson)

WASHMIGR B. ZIPYR, ABI ṬALIN (and according to his coins ẒIYAR AL-DAWĪL) or better WUSJMI, if the name means "catcher of quails" (cf. al-MAṢūDĪ, Murūjī'is, iii. 50, note), second ruler of the Ziyarīd dynasty, reigned 935—965. He only left his native land in Jīlān, after his brother Mardawīdī [q.v.] had come to power, and had lived until that time the primitive mountaineer life of his people (Ibn al-Attīr, viii. 182). Under Mardawīdī he conquered ʿĪṣāfān and drove from there ʿAlī b. Būye, who had taken that town when he was in Mardawīdī's service. After Mardawīdī had died in ʿĪṣāfān (323 = 935), Washmīr went to Rāy, where his brother was buried with great solemnity; there he was proclaimed Mardawīdī's successor by the population.
and by the Dailamite army that had been previously sent to Khurusan in order to march on Bagdad. Until about 328 (940) Washagh was able to keep together the territory conquered by his brother; he corresponded with the vizier Ibn Muhla about an advance to Bagdad in order to drive out Ibn Ra‘i, and tried to extend his influence to the west by supporting the Kurid Dailam b. Shakhir in his endeavour to reconquer Ahdashdjan. In the year mentioned, however, Washagh came into conflict with the Sainids in consequence of his alliance with Makan b. Kaki [q. v.], who at that time had made submission to the Sainids but had received in 936 from Washagh the government of Djurdjan and also of the country round Safiya (Siri) on account of previous good relations. Makan then renounced his allegiance to the Sainids and the Sainid ruler sent against him his general Abd Allah ibn Mu‘tadi. The latter invaded Djurdjan and at the same time the Buyid brothers 'Ali and Hasan ('Imad-al-Dawla and Rukh al-Dawla) took the opportunity to seize Isfahan and even Ra‘i. Washagh and Makan mobilised in Sariya an army composed exclusively of Dailamites and Dijlas to meet the Sainid army. In the battle of Ishakabad near Danghkan, however, Makan was killed (Dec. 25, 940) and Washagh retired to Amal, leaving Ibn al-Mu‘tadi to take Ra‘i in his turn.

In the following years Washagh got into difficulties through Makan's nephew Hasan b. Fairuzan, who at first had taken the Sainid side in order to recover his uncle's possessions, then made an attack on Ibn al-Mu‘tadi and was already retiring troops, so that he was able to make himself master of Djurdjan, while Washagh recovered Ra‘i for the last time. But soon Hasan turned against him, while the Buyid Rukh al-Dawla seized Ra‘i again. Washagh had to fly for protection to the Sainid ruler Nuh b. Na’ir in Khurusan and so lost his political independence. The protection sought for was readily given and until Washagh's death Nuh was constantly helping him with reinforcements against Hasan b. Fairuzan and Rukh al-Dawla; in this way Tabaristan became a useful buffer state between Safiyadids and Buyids. Washagh all the time remained a loyal ally of the former dynasty, Hasan being the candidate of the Buyids. About 950 he was attacked by Rukh al-Dawla in Tabaristan and had to retire; in 954 a last endeavour was made to recapture Ra‘i, together with Ibn al-Mu‘tadi. After the failure of this expedition he was again driven back to Khurusan, but soon reinstated by a Sainid army. In 962 the same thing happened again; Washagh had to leave Sariya and withdraw to Djurdjan. At last, in 967, great military preparations were made by the Sainid Mankur b. Nuh to attack Rukh al-Dawla; the Sainid general Muhammad b. Ibrahim Sina‘i joined Washagh in Djurdjan. Washagh was to be chief commander of the expedition, but before it came to an end Washagh was killed by a mobl in Muharram 357 (December 7, 967). He was succeeded by his son Kilbus b. Washagh [q.v.]. Washagh had won the reputation of an able and good ruler and the Ziyyarid dynasty is not seldom called after him the dynasty of Washagh. As his biography shows, he did not excel in the arts of war, which accounts for the dwindling down of the large territory originally conquered by Mardawij. At times, however, he was undisputed ruler of Tabaristan and Djurdjan, although, as Ibn Hawkal (p. 274) points out, there remained strongholds which he had never been able to subdue.

AL-WASHSHA', ABI 'L-THABRI MUHAMMAD b. A'MAD b. JUSJUK b. YAHAYA, Arabie philologue and bel esprit, pupil of Muhammad and of Thabrah, who earned his living as a teacher in an elementary school, but in the most important of his works that has survived to us, the Kitab al-Mowahhabah (ed. R. E. Brunnnow, Leyden 1886, reprinted as Kitab al-Zaraf wan 'l-Zarafyi, Cairo 1324), prepared a handbook of rules of good society for the aristocrats of Bagdad. In addition there survives by him a letter-writer: Tufkiri al-Mudaff al-Sabab al-Wazif al-I‘ara‘y or Saurif al-Mudaffa wa 'l-Alahi fi Rasid al-Azhari in the Berlin MS., Akademi Vers., No. 8678. He was probably also the author of the Kitab Washiyya Mafal al-Arabi fi 'I‘dhisriyya, the first part of which was printed in Bagdad in 1322, although Yahaya al-Washsha' is named in it.

WA$kI. [See Washya.]

WASI ‘ALISI or ‘AI, an Ottoman author, scholar, poet, and calligrapher of Philippopolis. His full name is: ‘Ali al-Din ‘Ali Celebi b. Salih or Sahib-aside al-Rumi, known as ‘Abd al-Was‘i ‘Alisi or Was‘i. ‘Alisi (from the middeeris Mewlabin ‘Abd al-Wasq whose assistant [weibin] he had been). He was middeeris in various medreses in Brussa, Adrianopel and Constantinople, then was’i. He died in Brussa in 950. His fame is mainly based on the elegant and pompous translation, surpassing even the Persian original, of the Amurat-i Sukulli of Husain, Hadi Kâhi, [f. 317], which in turn is a translation from the Arabic version of the Kitbl wa-Dimmah of ‘Abd al-Mugaffa being based on the Faksitcentara. On the complicated process of the Kitbl wa-Dimmah see that article. The manuscript of a version of the Kitbl was-Dimmah done directly from the Arabic is No. 1807 in the Laleli Library in Stambul. The Turkish translation by Was‘i. ‘Alisi called Humayun-nimes with its pompous and elegant style and the interspersed verses was regarded as one of the most important prose-works of the old school, a masterpiece which could not be equalled and a model of tasteful
style and composition. While the grand vizier Luqif Pasha (945—947) accepted the dedication of the work to which Wāṣif had devoted his whole life with the reproachful remark that he would have done better to have devoted his time to legal treatises, Sulṭān Sulaimān, whose attention was called to it by the historian Raṣūl-Allāh b. ʿAbd Allāh (d. 930—938), appointed him to the important office of kāhi of Brussa. He died there only a year later.

The Ḥumāyūn-nāma was printed in Bīlāū in 1535. One of the two synopses made by Oṭūmān-šēde Ahmed Ṭāḥī (d. 1536—1723) appeared in 1542 under the title Zāmīr al-ʾAʾārīr. Another synopsis was made by Muṣṭafā Vāḥīy Efendi.

WĀṢĪF, Aḥmad, official historian of the Ottoman empire, belonged to Baghdad, early entered the service of high Ottoman dignitaries, for example Keš Ahmed Pasha and Ahāzā Meḥmūd Pasha, for whom he acted as librarian. He was captured by the Russians and his fortune was made when he was sent with letters from Catherine the Great to the grand vizier. He finally acted as secretary (waṣīʿ muṣṭafā; q. v.) at the court of Bucharest (1772). In Iʿtībāʾ ʾHājīdīja 1192 (Oct. 1783) he was appointed imperial historian (waṣīʿ muṣṭafā; q. v.) in place of Enver [q. v.] Efendi. Five years later he was sent on an extraordinary mission to Madrid, which fully described by him. As the Russo-Turkish war had broken out in the meanwhile Enver was again appointed official historian during his absence in Spain and Edhi his deputy. Wāṣif on his return had therefore to be content with an office in the Porte until in 1205 (1791) he was able to take a very active part in the peace negotiations, for which he was granted the important post of Anān al-ʾumār, Muṣṭafā waṣīʿ ʾumārī. Later we find him leading a lonely and wretched life in Stamīl, maintaining a constant fight with poverty. He was then banished to Mytilene but recalled on a change of government and, again given the post of imperial historian (1213 = 1798). In Dīmāyād 1220 (July 1805) he was even promoted to reʾiz ʾumārī. Sickness and bad health crippled him however and he died on 7th Rābī 1 1221 (May 24, 1806). He was not an attractive character because he was greedy, envious and malicious to a degree but rightly enjoyed a great reputation as an historian. As he had taken an active part himself in important events, his accounts are of peculiar historical value.

His style is noble and sonorous and was regarded by his contemporaries as a model of impressive writing. From his pen we have four state chronicles known as Ḥumāyūn names, appendices, because they follow on to ʾIṣṭaʾiʾs work [q. v.]. The history, printed under the title Muḥāsin al-ʾAṭḥāb wa-Ḥāfiẓ al-ʾAlāʾī (on the various editions cf. Babinger, G. O. W., p. 337), runs from 1166 (beg. Nov. 5, 1752) to 1st Radjab 1188 (Sept. 7, 1774) but the greater part of the second volume (1185—1188) is from the pen of Enverī. As to the appendices themselves, the first which follows on to Enverī's fourth part deals with the concluding events of the year 1197 (end of 1793) and ends with the month of Shaban 1201 (June 1787). The second appendix begins with Selim III's accession (Radjab 1239 and April 1789) and ends with the beginning of the year 1209 (beg. July 29, 1794). The third appendix covered the period for 1213 (beg. June 15, 1798) to 1217 (beg. Mūh. 4, 1802); it seems to have completely disappeared. The fourth and last appendix runs from Rābī 1 1217 (July 1802) to the end of Shawwal 1219 (Jan. 1805). In conclusion Wāṣif wrote a brief account of Napoleon's invasion of Egypt. It is one-sided and therefore of no value as history. Wāṣif also prepared translations from the Arabic, for example, he translated Zamākhshārī's [q. v.] Nāwāṣī al-Kalīm into Turkish.

FRANZ BABINGER

WĀṢĪL B. ʿAṬĀ, Aḥmad Ḥusaynī al- Ḥaẓāza, the chief of the Muṭaṣīla [q. v.]. Biographical facts concerning this personality are meagre, especially from early sources, yet without considerable divergencies. Born in Madina in 80 (699—700), where he was a client of the Banū Ḥabīb, and of the Banū Makātihn, he migrated to Baṣra, where he belonged to the circle of Ḥasan al-Baṣri [cf. al-Ḥasan b. Abī l-Ḥasan al-Baṣri], and entered into friendly relations with notable personalities such as Dāhīm b. Sāfīn [q. v.] and Bashāh b. Burd [q. v.]. With none of these men, however, these relations remained undisturbed.

His father was a sister of ʾAmr b. ʿUbayd Abī ʿUthmān [q. v.], next to himself the most celebrated of the earliest Muṭaṣīla. He had the guttural pronunciation of the ʾt; on account of his mastery of the language he succeeded in avoiding this letter, in ḥaṣf and ṣawāt, and his sayings, specimens of which are preserved. Further he was conspicuous for his giraffe-like neck, an object of satirical lines by his former friend Bashāhīr.

He received the ḥabīb al-Ḥaẓāza because of his frequenting the spinners' market in order to bestow alms upon the poor women who exercised that métier. He was praised for being very scrupulous in touching money.

Wāṣīl's deviation from the views of Ḥasan is said to have become the starting point of the Muṭaṣīla. The origin of the name of the sect cannot, however, be based on that fact [see Muṭaṣīla].

Four theses are ascribed to Wāṣīl: Denial of Allah's eternal qualities [cf. the art. SHIFA]; the doctrine of free will, which he shared with the Kudarites; the doctrine that the Muslim who commits a mortal sin enters into a state intermediate between that of Muslim and that of a kāfīr; the doctrine that one of the parties who took part in the murder of ʿUṯmān, in the battle of the Camel and that of ʾUṣfr was wrong, just as in the case of ʾIṣraʾ [q. v.] one of the parties must be considered to swear a false oath.

The last doctrine is made by the author of the Ḫitāḥ al-ʾIntifār the starting point of Wāṣīl's
system. He represents it in this form: The intention to kill a çâhil [cf. ašqâs] does not render a Muslim fâsil (p. 170). Yet he admits to having been rebuked for this representation, on the ground that Wâṣî was considered the intention to kill one of the çâhil as khurf [cf. kharf].

In this connection it may be noted that the passage on Wâṣî in Dhî‘îq Bayân suggests more important deviations from orthodox Islam than those mentioned in later sources.

Lack of contemporary information is the cause of our not being able to say more of this.

It is said that Wâṣî propagated his ideas through missionaries whom he sent to different parts of the Muslim world. Al-Shahrastâni states that in his days a sent called al-Wâṣîyya was living in the Maghrib. Yet the Wâṣîyya are not mentioned in al-‘Aṣâr’s Matbâ‘i, where the name of Wâṣî occurs once only (ed. Ritter, l. 722). He is said (see e.g. Ibn Khallîkâ) to have written several books of pamphlets on the theological and political questions of his day. He died in 131 (749–750).

Wâṣî, once of one of the most important cities of the Trak in the center of which it stood. The city was a creation of al-Ḥâdjīdî b. Yûsuf [q. v.]. As to the date of its foundation, the statements of the Arab writers vary between 83 (702) to 84 (703). Yâqût is probably right in saying that the building of it occupied the years 83–86 (702–705). Al-Ḥâdjīdî was certainly living in his new city by the year 84. On the date of its foundation cf. Streck, op. cit. (see Bibli.), p. 324; 325; Pârîer, op. cit., p. 258; Manûtî, B. G. A., viii. 360.

On the immediate reasons which led to the building of a new town and the choice of its site see the story in Tabart, XII 1125, 72 sq. (transl. in Streck, op. cit., p. 323 sq.). Al-Ḥâdjīdî wished by creating a fixed camp for the Syrian troops, his best soldiers, to strengthen their morale and by separating them from theIrâq to avert friction between their new garrison town was also intended to keep in check the tumultuous military colonies of Kûfû and Bâṣâr, for it was built equidistant between them (cf. Mu‘allâ, Der Islam im Morgen- und Abendlande, Berlin 1885–1887, l. 394); Wallhausen, Das arabisch Rîch und sein Stûne, Berlin 1902, 136; Pârîer, op. cit., p. 205 sq.; Reitemeyer, op. cit., p. 40 sq.). Being immediately above the Bôs’âm [q. v.], Wâṣî was also intended to facilitate the effective control of these somewhat inaccessable regions.

According to the usual statement, al-Ḥâdjīdî himself chose the name Wâṣî as "middle" for his new city, because it was roughly midway between the two principal cities of the Trak, Kûfû and Bâṣâr, and was a similar distance from al-Ahwâz, the capital of Kûfû.

According to another story, however, there had previously been a village named Wâṣî al-Kaṣâb (the Wâṣî of the Reed) on the site chosen by al-Ḥâdjīdî [cf. Streck, op. cit., p. 322 sq. and Pârîer, op. cit., p. 206 sq.].

In the Muslim east, at least where Arabic numeracy prevailed, there were over 20 places called Wâṣî in the time of the Abbasid caliphate. The most important of all these was Wâṣî al-Ḥâdjīdî, as the town is often called to distinguish it from others of the same name; it is also particularised as Wâṣî; al-‘Umrân ("Great Wâṣî") and Wâṣî al-Trak [cf. Streck, op. cit., p. 233].

Even if we reject the somewhat doubtful existence of a place named Wâṣî al-Kaṣâb, the immediate vicinity of al-Ḥâdjīdî’s town was already inhabited in the Sâ’dânian period; Wâṣî was built on the west bank of the Tigris while opposite it on the east bank lay the town of Kusár.

In the story of the foundation of Wâṣî which has been embellished with legendary details a not inconsiderable part is played by the great magician Abû Allâh b. Hilûl, whom al-Ḥâdjīdî brought specially from Kûfû (cf. Ya‘qûb, iv. 885, 4 sq. and W. Z. K. M., vii. 255). Considerable sums were required to build the new city (cf. Streck, p. 325; Pârîer, p. 208 and Reitemeyer, p. 47–48). The palace built by al-Ḥâdjīdî was surmounted by a towering golden dome which got the name of al-Khumhâ b. al-Kumhâ (square in general form, the measurements of the sides, the dome) afterwards served as a model to the caliph al-Mansûr in building his palace in Baghûdâ; the latter was therefore also called al-Khumhâ b. al-Kumhâ (Beside his palace al-Ḥâdjīdî built the chief mosque; al-Mansûr also copied the proportions of this in his chief mosque likewise built beside the palace in Baghûdâ, as Herzfeld points out in Sarre-Herzfeld, Arch. Relig im islamischen und türk. Gebiet, ii. (Berlin 1919), p. 135).

Among the buildings erected by al-Ḥâdjīdî in Wâṣî must be mentioned the large prison called Dimûs (presumably Greek δεμός, "prison") (see Streck, op. cit., p. 326). Al-Ḥâdjīdî died in 95 A. H. (714) in Wâṣî and was buried there. At first al-Ḥâdjīdî would only allow Arabs (preferably Syrian) to settle in his new capital; much later he settled there Transoxanian Turks (mainly from Bukhûr originally) from Bâṣâr where a considerable number had settled, sometimes as prisoners and sometimes as voluntary emigrants (cf. Pârîer, r. Wâṣî).
The decline of the city seems to have gradually begun in the 18th century. This was mainly the result of a change in the direction of the water to the two arms of the river at the old bifurcation of the Tigris at Kūt al-Aswad. It may be mentioned that the Turkish geographer Hāmid Khālīṣ, who lived in the first half of the 18th century, gives an account of the city in his Līhāț-e-namā (Latin version by Norburg, Lund 1818, p. 70) records of Wāṣīṭ that it lies in the middle of the desert and that the canal there is famous for the pens made out of its reeds.

The population of the town in the days of its prosperity was certainly very considerable. Yāḥūt who was several times in Wāṣīṭ shows that in the early decades of the 18th century it was still a large place. The al-Abbāsids, the Persian landowners, were still in Yāḥūt’s time (see B.G.A., VII. 322), i.e. about 907, living in the old town of Kaskar. The Christian element must have been not inconsiderable in Wāṣīṭ in the Muslim period; their quarters were probably in Kaskar, as in the Sasanian period. Here there was in any case a Jewish colony before the Arab invasion. Benjamin of Tudela, who visited Babylonia about 1170, found a strong Jewish community in Wāṣīṭ which he estimated at 10,000 people, the same as in Bāṣra. The bulk of them presumably lived in a small quarter of the old eastern city.

The region in which Wāṣīṭ was built is said to have been unfertile before the settlement by al-Ḥāḍiṣiyy. The latter improved the soil of the surrounding country. The result was that conditions of life became much healthier and sanitation was improved so that the climate of Wāṣīṭ was regarded as healthier than that of Bāṣra. The Arab geographers agree in their panegyrics on the countless orchards, extensive groves of date-palms, the water flowing everywhere, the plenitude of fish, and the very frequent yield of the soil of the region of Wāṣīṭ. Much corn was exported from the granary of Wāṣīṭ and in times of famine Baghdad had to be supplied from here (cf. the accounts of Isakhrī, Ibn Ḥawšalṭ, Maḏ芝加哥, Yāḥūt, Kaswīnī, Ibn Baṭṭūṭa in Streek, op. cit., p. 328–330).

Wāṣīṭ was also an important centre of communications, partly from its location on the navigable Tigris and its position in the centre of the ‘Irāq and from the fact that important roads ran north, south and east from it, one along the Tigris to Baghdad, another through the Bithl and to the third to al-Ahwāz (Ḵāṭirān), Wāṣīṭ was therefore bound to become an important commercial centre; as Maḏ芝加哥 mentions, it had fine bazaars; among other things, valuable textiles were manufactured here (or curtains) which were known as Wāṣīṭi-fabrics (cf. St. G. A., IV. 375 and Salmon, L’Introduction topographique à l’histoire de Bagdad, Paris 1904, p. 135). Shipbuilding also played a part in the activities of Wāṣīṭ in view of the busy traffic on the river; al-‘Arabīya is still found in the ‘Irāq as the name of a kind of boat, cf. Loughat al-‘Arab, v. (Baghdad 1921), p. 494; see also.

Wāṣīṭ also took the place of its predecessor Kaskar as capital of one of the twelve districts into which the Sasanians had divided the ‘Irāq for taxation purposes (cf. thereon Streek, op. cit., p. 15; 18, 332).

Wāṣīṭ was not only a strong garrison town but an important agricultural and commercial centre. It also distinguished itself in the cultivation of knowledge, particularly of Muslim theology. Among its inhabitants in the time of Maḏ芝加哥 (c. 895) were mullahs, jurists and Qur‘ān readers; the study of the sacred book was especially carried on here (B. G. A., I. 118, 119, note). Ibn Baṭṭūṭa (ii. 9, 90 and cf. Streek, op. cit., p. 330–331) who was in Wāṣīṭ in the first half of the 18th century, is full of praise of the pious citizens, most of whom knew the Qur‘ān by heart and recited it correctly. The subject of tafṣīl al-Qur‘ān (q. r.) was studied with especial enthusiasm. A representative of the art of reading the Qur‘ān belonging to Wāṣīṭ was Ismā‘īl b. ‘Ali (d. c. 1291; cf. Brockemann, G. A. L., I. 411)

It may be mentioned that the mystic theologian al-Hallāj who was born in Fārs, spent his youth in Wāṣīṭ (cf. L. Massougnou, al-Hallaj [Paris 1922], i. 30 sq.). In this connection it may be noted that the founder of the Kermānī sect of the Baḥrīya, Abū Ḥātim, made his first appearance in 395 (908) in the wa‘ādi of Wāṣīṭ (cf. above, art. BAGLIVA).

In Wāṣīṭ was also studied the history of the town and of that of the adjacent Baṭṭāra. Aslam b. Sahb Bahlīṣ (d. 904) wrote a local history, consisting mainly of biographies (see Wüstenfeld, Die Geschichtsschreiber der Araber, in Abb. G.G.W., 1882, No. 83; Brockemann, G. A. L., I. 138). The history of Ibn al-Maghdūl al-Djailī (d. 1139; see Wüstenfeld, op. cit., p. 240) was probably a continuation of this. An appendix to the latter work was probably the local chronicle of Abū al-Raḥmān Maḥammad b. Sa’d al-Maghzī al-Dubḥī (c. 1239); see Wüstenfeld, op. cit., No. 323; Brockemann, G. A. L., I. 330; Z. S., ii. 107.

As to the history of the mūṯ̂ al-‘Aṭāf, we have columns of the town from its foundation (85 = 704) down to the period of the Mongols of Persia (cf. e.g. St. Lane-Poole, Catal. of Oriental Coins in the British Museum, vol. x., p. xxvii.–xviii. (years 85–126 = 704–937 or 701–770 = 1301–1368) and O. Codrington, Manual of Muslim Numismatics (London 1904), p. 194.
In conclusion we have still to discuss the site of Wāsit. Its exact location is one of the most difficult and most important problems of the historical geography of mediaeval Babylon. We know definitely that the twin city of Wāsit-Kashar stood on the Tigris on either side of it. All the Arab geographers of the ixth- to the xith centuries agree in this (cf. the passages in Strack, op. cit., p. 319 sqq., to which we may add Mas'ūdī, B.G.A. viii. 53, 57 and also Suhrab [Ibn Serapion], who about the middle of the tenth century described the river and canal system of the Yemen fully; see his Khidā An-Nozul 'An Tahālīn al-sha'ab [ed. Māzik, Leipzig 1930] p. 118, = F.R.A.S. 1895, p. 9, 9, from below). In order to identify the site of Wāsit the first thing necessary is to establish the course of the mediaeval Tigris. It must be pointed out that the arm of the Tigris on which Wāsit stood, the main stream of which since the xth century has been gradually diminishing and sinking to be a secondary arm, as the bulk of the water was gradually diverted from below Kūt al-'Amāra into the eastern bed, is to be considered the real lower course of the Tigris.

The Shāṭ al-Hayā (better Shāṭ al-Gharaf) which branches off at Kūt al-'Amāra S.E. from the main stream, has been usually said to be the mediaeval Tigris (on this water course cf. especially the art. DIQALA, 'IRĀQ and MAŠĀN). It forks again a little below the town of Kūt al-Hayā (also known briefly as Hayā) into two arms, one of which is now called Aḥn Ḫāšāris and as a rule sinks to the only one to contain water, and the eastern Shāṭ al-Amāra. Both unions again at the village of Shāṭ al-Khurāf (Kūt al-Hayā and khurāf (Kūt al-Hayā and khusāra). Between the two there is a small island about 30 miles long called Djarat al-Halir on maps. Herzfeld has rightly pointed out in Sarre-Herzfeld, op. cit., p. 247, that the Shāṭ al-Hayā forms the greatest crux in the ancient geography of the 'Irāq. Is it really the mediaeval Tigris or is it only a secondary arm? Perhaps we have to see in it a canal which was dug in ancient times to give a convenient connection between the Euphrates and the Tigris. The little that we have so far learned from European travellers about the ruins of Wāṣīt is against locating it on the banks of the Shāṭ al-Hayā and therefore against identifying the latter with the mediaeval Tigris.

Unfortunately the whole canal and river system of the Shāṭ al-Hayā, especially the wide territory between it in the west, the Tigris in the east and the Euphrates in the south, has been very insufficiently investigated from the geographical point of view and the maps to be consulted for the region of Wāṣīt are very defective. Of these the following have been used here: F. R. Chesney, *The Expedition for the survey of the rivers Euphrates and Tigris* (London 1850), Atlas, plate ii., (pertinent text in vol. i. 36-37); Ed. Sachau, *Das Euphrat und Tigris* (Leipzig 1900), plate ii. and cf. p. 69 sqq.; *Lower Mesopotamia between Bagdad and the Persian Gulf* (1:1,000,000), London, War Office, 1907 (also reprinted by the cartographical section of the German General Staff, Berlin 1915); *Karte von Nordmesopotamien* (temporary edition; 1:200,000), sheet 9; Kūt al-'Amāra, Berlin (cartograph. Abteilung der preussischen Landesaufnahme), 1918; *Karte von Mesopotamien* (temporary edition; 1:400,000), sheet 54, Bagdad, Berlin (Ibid.) 1919.

A number of European travellers visited the actual site of the mediaeval Wāṣīt in the xth and xth centuries; their accounts however are rather brief. The first to be mentioned are the English officers Ormby and Elliott who stopped in Wāṣīt in 1831. On their information are based the statements in Chesney, op. cit., i. 37; J. R. Wellsted, *Travels in the province of the Caliphs* (London 1840, p. 171) (an edition of the author's diary) and J. B. Fraser, *Mesopotamia and Assyria*, Edinburgh 1842, p. 155. R. Kohlweg and R. de Liedekerke-Beaufort, who fell in 1916 in the War, also visited Wāṣīt on an archaeological expedition in 1886-1887; but so far nothing has been published of their observations. Count Aymer de Liedekerke-Beaufort, who fell in 1916 in the War, also visited Wāṣīt on an archaeological expedition in 1913-1914. His valuable account of the district in question was published by Violeaud, in *Babiloniaca*, vi., Paris 1922, p. 105-116 unfortunately without a map. We therefore really have only two brief descriptions of the ruins of Wāṣīt, one of 1831 and the other of 1913-1914.

The former going back to Ormby and Elliott gives (according to Chesney) the following data. The old dry bed of an arm of the river can be followed for a few miles below Kūt al-'Amāra; this flows S.S.E. through the ruins of Wāṣīt and then goes on in the same direction under the name of Shāṭ al-Hurām, and rejoins the Euphrates midway between the Shāṭ al-Hayā and Khuras. That this rivercourse should be recognised as the Tigris proper, on the banks of which Wāṣīt lay, is suggested by the breadth of the ancient bed and the ruins on both sides of it; some of Wellsted's notes supplement this: mounds of ruins are to be seen everywhere; the ground is covered with fragments of buildings (pillars, architraves, friezes, glass and ceramic). Special mention may be made of a fairly well preserved little domed building in the style of the period of the caliphs, very probably a mosque; the channel which cuts through these ruins is of the breadth of the Euphrates. Fraser finally tells us that in the vicinity of the old town there has arisen a little village of 40-50 wretched houses built out of the material of the ruins and inhabited by fishermen.

As to A. de Liedekerke-Beaufort's description 50 years later (see op. cit., p. 115-116) it may be noted that this traveller came to Wāṣīt from the old Babylonian site of Zerguhl (Surgiyl), 4 miles N.E. of Shāṭa; striking N.E. After 3 hours' march from Zerguhl he crossed the old filled up bed of the Tigris of the 'Abbasid period which the natives call Shāṭ al-Khādir. He met again at the ruins of Wāṣīt. Among the shapeless mounds of ruins there the only remarkable thing was a fine brick portico. According to A. de Liedekerke-Beaufort, Wāṣīt lies 25 miles west of Hayā (Kūt al-Hayā). This remark must be due to an error or rather to a slip of the pen, for it must be east of Hayā (cf. above, art. KĀNA). Our traveller thinks that the Tigris in ancient times used the Shāṭ al-Hayā as far as Jīlatseker (meaning Kalut Sikkar on the Shāṭ al-'Amāra), then followed the lakes of the swamps (hūrā: cf. above, art. MĀṢĀN) of Tellūn al-Habiş and Surgūl, finally entering the sea at the side of the modern Hūr al-Hammūt (cf. above, art. MĀṢĀN); in the Muslim period on the other hand, it created for itself this eastern bed on which Wāṣīt lay.
According to the already mentioned map of Mesopotamia, sheet 54, Baghdad, the geographical position of Wasit is 32° 15' North Lat. That this town is probably to be placed north and not south of 32° N. Lat. was already proved by Wagner (in N. d. G. G. W. phil.-hist. Kl. 1902, p. 272–279) from the statements of the mediaeval Arab itineraries. On the above mentioned map the ruined site of Wasit is crossed by a channel running S.E.; three further channels enter it of which those still in use take their water from the Nahis Djudjel. Quite close to Wasit is marked a place Belej, presumably the fishing-village mentioned by Ormsby and Elliott in Frascati.

The Djudjel (or little Tigris) leaves the Tigris about 6 miles below Kut al-Amara. It might be identical with the ancient, now dried up arm of the river which Ormsby and Elliott were able to follow and which they took for the mediaeval Tigris of Wasit (see above). In Stieler’s Handatlas sheet 50 (1913), this water course is marked as Sharqi al-Wasit and Wasit itself is marked on it in 32° 15' (according to the map of Mesopotamia, leaf 9, Wasit lies 4–5 miles south-west of the river Djudjel). The distance between Wasit and Kut al-Haiy is, according to the map of Mesopotamia sheet 54 and that of Babylonia, sheet 9 (see above), and sheet 59 in Stieler’s Handatlas, about 15 miles as the crow flies; A. de Liedekerke’s estimate (35 miles) is decidedly too high. The distance Wasit–Kut al-Amara is about 45 miles as the crow flies.

The question of the site of the mediaeval Wasit would therefore seem to be solved with considerable certainty by the above considerations. The town was at one time sought on the bank of the Shatt al-Haiy or at least in its immediate neighbourhood; modern native geographers of the Trak like Hashim al-Sa’di and Abd al-Razak al-Hassani still hold this view. It is a fact that the place-name Wasit is still found in the district in question, especially around Kut al-Haiy as well as to the south in the island formed by the two arms of the Shatt al-Haiy, quite near the eastern arm, the Shatt al-Amara, Cheyne (op. cit., l. 36 and Atlas, plate ix.) knows the “mountains Nebagat Wasit” in the neighbourhood of Kut al-Haiy to the west of it. On the same position Lofthus puts Wasat in the map accompanying his Travels and Researches in Chaldæa and Susiana (London 1857); Streck therefore also at one time (1911, see above, L. p. 677) considered locating Wasit near Kut al-Haiy. Hashim al-Sa’di (Liwa‘iyyat al-Trak al-Haditha, 2nd ed., Baghdad 1927, p. 145) has obviously the same region in mind when he places the ruined mounds (tells) of Wasit on the banks of the Shatt al-Amara near the town of al-Haiy, ‘Abd al-Razak al-Hassani (Rihla li l-Trak, 2nd ed., Baghdad 1925, p. 29) holds a similar view; he lays stress on the existence of numerous tells and pieces of buildings, still visible at the present day. The same author says in his more recent work Mijdje Trak al-Buldan al-Ha‘aya (Baghdad 1930, p. 119) that al-Haiy is identical with the ancient Wasit.

Cuinet’s authority (see his La Turquie d’Asie, iii. 313) says that half-way between Kal‘at Sukar (the already mentioned Djelatseker in A. de Liedekerke = Kal‘at Sikkar; a little below 32° N. Lat.) and Kut al-Haiy one comes to an area covered with mounds, which may be presumed to contain old ruins; the most important is ‘Hai al-U’asit’, the celebrated town of Wasit; there one can still see the door of a palace which the local Arabs call al-Menare. With this statement in Cuinet, I would take a note in L. Massignon, Le passion d’al-Hallaj (Paris 1922, i. p. 23) which is based on a communication by a Bagdadí, a former inspector of the domains in the region of al-Haiy. According to the latter, the now abandoned ruins of Wasit, which lie on the bank of a dead water-course named Rašid, consist only of a few old tombs and a minaret in ruins (apparently that mentioned in Cuinet). The reference here is probably to the same ruins as are mentioned by Cheyne and the two modern Arab geographers. In keeping with these views Wasit is placed by Kiepert, Carte générale de l’Empire Ottomans (Berlin 1892), on the eastern bank of the Shatt al-Haiy, in 31° 55’.

We also find marked on maps (e.g. in Cheyne, plate ix. and in Stieler’s Handatlas, loc. cit., in the latter in about 31° 45’ N. Lat.) on the already mentioned Shatt al-Haiy island a village of Wasit al-Haiy, which no doubt still exists. It is about 25 miles south of Kut al-Haiy and at least 4 miles from the Shatt al-Amara which probably at one time flowed directly past it. This is the Wasit of the map Lower Mesopotamia, several times already mentioned, which marks also in 31° 45’ on the east bank of the eastern Shatt al-Haiy, near a Kal ‘at Shakhî Djewaid with the addition “al-Wasit”.

It must be left for future thorough topographical study on the spot to establish what these villages or ruins near and on Shatt al-Haiy are. The existence of two places called Wasit, one in the vicinity of Kut al-Haiy, one much further south (Wasit al-Haiy), seems to be proved; but it also seems safe to assert that all these places in the region of the Shatt al-Haiy have nothing to do with the mediaeval Wasit. The occurrence of the name Wasit in this region could, in my view, be explained most simply by saying that they are settlements by emigrants from the old mother city. When their existence became more and more threatened by changes in the course of the Tigris, many, if not the majority, of the inhabitants must have abandoned the city and settled on the banks of the Shatt al-Haiy which presumably gained in importance with the decline of the Tigris at Wasit in volume and importance. To distinguish it from the ancient Wasit, a colony of people of Wasit on the Shatt al-Haiy may have been called Wasit al-Haiy.

On the antiquity of the town of Kut al-Haiy nothing is exactly known, but I do not consider it probable that it goes far back into the middle ages; while it may have existed then as an insignificant village, it only began to come to the front from the xvth century with the decline of Wasit. It may in a way be described as the successor of the ancient Wasit. Kut al-Haiy is now developing rapidly; it is the largest place in the whole valley of the Shatt al-Haiy and at the last census had about 10,000 inhabitants (cf. ‘Abd al-Razak al-Hassani, Musta‘in, etc., 1929, p. 119).

(M. SUTREK)

WASIYAH (A.), commission; as a technical term,
last will, testament, legacy; wasi, the per-
on empowered, particularly the executor of a will.

1. The wasiyyah of the pre-Islamic Arabs was
less concerned with the distribution of the estate
than with orders and instructions to the survivors;
its principal interest lay in the spiritual testament
of the dying man, with the religious sanction of
the community at large. It is the responsibility of
the wasi to see that the deceased's wishes are
complied with and that his estate is not
breeched. The wasi must be a Muslim, and
must act in accordance with the teachings of
the Prophet Muhammad.

2. In so far as the term wasiyyah was of signifi-
cance in connection with the law of property
in Muslim society, it must have consisted in the
consideration of more remote heirs — something
between legal will and an expression of wishes —
alongside of the qay'a which are called upon first
to inherit (cf. MSR.HI). According to Surah 3.50
(of the second Meccan period) to draw it up
before death was the obvious duty of a Kuranah
merchant. Such a wasiyyah is expressly ordered
by the believer in Surah 2.176 qpp. in favour of parents
and "relatives" (Surah 4.37, which, without using
the term demands the same thing, adds also the
so-called confederates); at the same time any
alteration falsifying it is forbidden, and no friendly
interference in the interests of the deceased is
allowed; Surah 2.241 goes decisively beyond the
old Arab usage, makes provision for the widows
by a wasiyyah a duty. These three passages date
from about the same time, the year 2 A. H. Surah
105 qpp., apparently later, prescribes for the
wasiyyah, which it presumes to be usual, two wit-
nesses, the method of swearing them and the
manner of challenging their evidence.

3. The later thorough regulation of the law of
inheritance was doubtless intended to replace
the earlier rules for the wasiyyah (cf. MSR.HI); a tradition
which expressly states: this was very early in-
terpreted to mean that a legacy in favour of an heir
at-law is inadmissible at all; the former verses
were therefore considered abrogated by the latter.
Along with this prohibition the restriction of the
legacies to one third of the estate is prominent
in the traditions. Neither of these rules is traced
to Muhammad; it is true, but they obtained recog-
nition so early and so generally that only the
slightest traces of divergent views are to be found
in tradition (e.g. al-Nu'man, Wasiyah, Dan 8, 14,
66; Karna al-Mu'inaddil, viii, No. 5409). The question
was more disputed, following Surah vi. 12—15;
whether the legacies should be handed over before
the payment of the debts or vice versa; the
second alternative predominated and quite early.
Further traditions reveal two opposite views on
the making of a wasiyyah; on the one hand it is
urgently recommended and, on the other one is
advised against it; in any case, an unjust wasiyyah
is regarded as a breach of the law and a just one on
the contrary as a good deed. To insert pious
advice in the wasiyyah (cf. section 4) is regarded
as commendable. — Stress is laid upon the state-
ment that the Prophet died without making a
wasiyyah — against the Shi'a view (cf. Lammens,
Fatima, p. 110 qpp.).

4. According to the teaching of the Fakih, every
Muslim may make arrangements by will that:
a. one or more individuals shall settle the business
of the estate as wasi; this wasi represents the
estate, actively and passively, may not however
beber the property, and enjoys the privileged
position of the amir; that, he or another wasi
must be named as wasi al-mamluk to administrate the property
of his infant children (or grandchildren); for
this office the mother usually comes first; although
according to the Shafi'i school, the property of
infant children, in the absence of any other
claim, is placed in the hands of a guardian
appointed by the judge (cf. Mar., 64); but may
not pledge or dispose of his land or house in case of obvious advantage or absolute
necessity, and when the latter reaches his majority
he must render an account; in both cases a.
and b. the persons named are urgently recommended
to accept the appointment as wasi (the so-called
`as') and if possible to do the work of the office
without payment; in case of necessity the faikin,
the public authority, represented by the `asdi,
extends the appointment of a wasi, who in this case
is usually called hawiyah; the `asdi is also empowered
to supervise the wasi and if necessary to dismiss
him; that, e. legacies which in all must amount to
more than a third of the estate after payment of
debts (cf. MSR.HI, 60) are to be paid; if it turns
out that they amount to more than a third of
the estate they are cut down pro rata unless the
eas al-intisat, to whom the remaining two thirds go, confirm the provision of the deceased
after his death. Under the same limitation come
certain gratuitous business transactions which the
wasiyyah has undertaken in a condition of severe illness (maraj al-mawzaw') or, according to the Shafi'i and Maliki,
also under any other serious threat to his life, if
its death results from it; a legacy in favour of
a person who is also an heir of the testator to
be valid needs the approval of the other heirs;
it is further demanded that the person who draws
up the will should be capable of doing business
(with the exception of the spendthrift under age)
and act under no pressure; that the legatee at the
time of making the will is in a position to accept
the bequest (except an unborn child, which is
born within the next six months) and survives
the testator and further that a transfer of property
in the subject of the legacy is possible (but it need
not yet lie in existence at the death of the testator,
for example the produce of a piece of land); the
wasiyyah can be used not only for individuals
and groups of individuals but also for public purposes
or even assume the form of a foundation (wasfiyyah):
but in this case its purpose must be one approved
by law; a definite form is not prescribed for
drawing up a will but the Muhammadan law of
evidence requires two witnesses even in the case
of a written wasiyyah; lastly for validity acceptance

by the legatee after the death of the testator is necessary; the testator on the other hand retains while alive the power to alter the waṣṭa.

5. The limitation of gratuitous disposal of property in case of mental illness to a third of the estate is the answer of the šikh to attempts to obtain real liberty of bequest by evasions; other plans however, which are still in use at the present day, could not so easily be prohibited. Among these is the irrevocable acknowledgment (šahr) which may refer to all kinds of obligations, admits no counterpart and in case of a mental illness as well as, at least according to the Šāfīists, in favour of an heir, may be completely rejected; only in case of obvious impossibility is it invalid. The next two evasions are only effective before being overtaken by mortal illness. They are the so-called kilihi bi ʿwāf, i.e. a gift, in return for which another, even if insignificant, gift is stipulated or given, which cannot be regarded in law as the purchase price (this gift is complete and irrevocable even if the giver does not own it to his death), and the annulment (waṣṣ) the yield of which the founder can allot quite freely to any one legally qualified and (but this is only according to the Šāfīists) earmark during his own lifetime for his own support or the payment of his debts. A simple gift (kilihi) from one man to another cannot also be used to circumvent the restriction to a third and sometimes the waṣṭa is actually put in the form of a kilihi, for which as far as possible the approval of the nearest blood relation is obtained (both usual in the Dutch East Indies). Further possibilities of evasion by fictitious transactions are given in the Šāfīī-litigation. In many Muslim countries however, in contrast to these endeavours there is a decided objection to the waṣṭa, e.g. in Somaliland.

WAṢṬA, a Persian historian, properly Wsatt al-Hādrat "pamogrist of the court", the name by which Sharaf al-Dīn ʿAbd Allāh b. Naṣr Allah of Shiraz is known. Employed as a tax collector under the Mongols, he became the protégé of the minister and historian Rażīd al-Dīn and also presented him to Īljan in (1721 = 1225), when the Ilkhan was in Sultānābād. His history, the Tarikh-i Waṣṭa, is the continuation of the Tabīkh-i Dīnjākh-wāgh of ʿAbd Malik Dīnjākh; it is called Tabīkh-i waṣṭa i. e., "division of the towns and propagation of the centuries" and covers the period 1257—1328.

Although it contains an authentic account of contemporary events, its value is diminished by the lack of method and the artificial and bombastic style, imitated by his successors. J. von Hammer edited the first volume with a German translation (Vienna 1856). The whole text has been lithographed in Bombay in 1269 (1853).

WADAT or WATID, "a peg", meaning in prosody 1. a group of two vocalised consonants followed by a quiescent consonant (watid muṣnmin); 2. a group of two vocalised consonants, separated by a quiescent consonant (watid waṣṣ). Each foot ought of necessity to have a watid followed or preceded by one or two ʿayd (q.v.).

Bibliography: See the article ʿAYD. (MOHAMMED BEN CHERKES)

WAṬHĪKH BI LLĀH ABD ALLĀH EL-MAṬUŠIŅ, ʿAbūsārī Caliph. He was given the name Hārūn after his grandfather Ḥārūn al-Raṣīd; his mother was a Greek slave. On the day that his father al-Muṭashi in bi llāh [q.v.] died (18th Rābiʿ I 227 = Jan. 5, 842), al-Ṭawīkh was proclaimed as his successor. Before al-Muṭashi in's death an alleged descendant of the Umāyiyyah, named Abū Ḥarb, usually called al-Muḥāṣr in, "the veiled" from the veil which he always wore, had provoked a dangerous rising in Palestine, and Raḍźi in b. Ayyūb al-Ḥāḍrī when al-Muṭashi in sent against him could at first make no progress. Soon after the accession of al-Ṭawīkh, Damascus also became the scene of a great rising; the rebels shut the governor up in the citadel and encamped on the plain of Marzā Rāḥi not far east of the town, but they were very soon routed by Raḍźi in who had been recalled to meet the danger from Palestine.

Next turned his attention to al-Muḥāṣr in. After a section of the latter's followers had left him because the season for sowing the fields was approaching Raḍźi in succeeded in defeating and capturing him. The Beduins around al-Medina also gave the Caliph trouble. When the Banū Sulaim plundered the market places of the Hijāz the governor of al-Medina sent a large army under Ḥammād b. Djārīr al-Fahhār against them; but he was defeated and slain so that al-Ṭawīkh had to turn to the tried general Bogha al-Kahf [q.v.]. In Shawwāl 2390 (April—May 845) Bogha entered al-Medina and after defeating the Banū Sulaim and taking the prisoners to al-Medina he performed the pilgrimage to Mecca, and then turned his attention to the Banū Ḥillāf, who had also taken part in the rising. The most guilty were imprisoned in al-Medina and the others pardoned. Bogha then turned against the Banū Murra and the Banū Faṭhr, who had seized the town of Fadak, but as soon as he appeared they abandoned the town and took to flight (231 = 845—846). In the meanwhile the prisoners escaped from al-Medina and killed their warders but were cut down by the citizens of the town with the help of the many negro slaves in al-Medina. In the following year, Bogha had also to fight against the Banū Numair in al-Yāmān and only subdued them after much
difficulty. There were also troubles among the Khārijīs and the Khurāsānīs. Al-Wāthīk died on the 25th Dhu l-Hijjah 322 (Aug. 10, 847) at the age of 34, or according to others 34 or 36. He had not the gifts of a great ruler and his brief reign was not distinguished by remarkable events. The Caliph's character also was not such as to make him beloved. It is true that he was liberal to the poor in Mecca and al-Medīna and he also treated the ʿAlīids with great benevolence and took a considerable interest in poetry and singing; for the rest he is described as covetous, intolerant and devoted to sensual pleasures. He extorted huge sums of money from the high officials and as an ardent Muʿtazilī he persecuted the orthodox theologians. In the circumstances, it is not remarkable that the generally respected Ahmad b. Naṣr b. Muḥammad al-Kaẓāfī prepared a plot to dethrone the Caliph and put a check to the arrogance of his Turkish officers. By an accidental signal, the plot was given too soon (Shabīb 231 = April 846); the authorities were therefore able to discover the conspirators without difficulty and Ahmad b. Naṣr was executed.

(K. V. Zettersten)

WATṬĀSĪS (BANU WATṬĀS), a MOROCCO dynasty of the xvth and xviith centuries. The Banū Watṭās were a collateral line of the great family of the Banū Marīn, to which also belonged the Banū Abī Ḥakīm, founders of the dynasty generally known as the Mūsāidī dynasty [q.v.]. After leading a nomadic life on the edge of the Sahara and the high plateau of the Central Maghrib the Banū Watṭās settled in the xviith century in eastern Morocco and soon established themselves in the Rif, of which they were became practically independent rulers, when their relatives the Banū Marīn had replaced the last Almoravid rulers in northern Morocco. Henceforth their history is at first linked with that of the Marinids and afterwards closely connected with the Christian attempts to conquer territory in Morocco and with the events which led to the accession of the Saʿdīan princes to power in the middle of the xviith century.

During the whole of the Marinid dynasty, the Banū Watṭās, on account of the bonds of relationship which connected them with the ruling family, had been overwhelmed by the latter with honours, dignities and offices which they held either at the court of Fāṣūd or in the principal towns of the country. In 833 (1420) Sulṭān Abī Saʿīd Ṭāḥṣim was assassinated and Morocco was left in complete anarchy and exhausted by civil war. Spain had now been almost entirely reconquered by the Christians; the Portuguese had seized Ceuta: several pretenders supported by Timūrī or Granadan were endeavouring to restore for their own advantage the unity of the kingdom of Fāṣūd. It was then that one of the outstanding members of the family of the Banū Watṭās, Abū Zarkarīyāʾ Yāḥyā b. Zayyān, who was governor of the town of Sawda', took control of the destinies of the country. He proclaimed and succeeded in getting recognised a son, still a minor, of Sulṭān Abī Saʿīd, Abī Muḥammad Abū Ḥakīm. Abū Ḥakīm, and ruled the country in his name as vizier. This regency was continued, far beyond the minority of Abū Ḥakīm. When Abū Zarkarīyāʾ (called in his latter Abū Zekrī) died in 1448, he was at first replaced as mayor of the palace by his cousin Abī Bakr ʿUṯmān, then by his son Yāḥyā b. Zayyān. When the regent of the Portuguese on the Moroccan coast soon produced throughout the country a revival of religious sentiment which found expression in summons to a dīkhāt and in arousing the fanaticism of the masses by marabouts and descendants of the Prophet. The Watṭāsī regents at first turned to their own advantage this feeling among the people by taking the lead in the holy war and organizing the struggle against the Portuguese. While Abū Zarkarīyāʾ succeeded in inflicting a severe defeat on the latter in 1437 and taking the Infanta Fāṭimah prisoner, Abū Bakr ʿUṯmān was less successful and could not prevent the fall of al-ʿAṣīr al-Saghdīr. In Fāṣūd, the Idrīsid ʿAlī b. Muḥammad [q.v.] saw his power growing daily. At the same time the regency of the Banū Watṭās had come to an end; two months after he had assumed power in 1458, Yāḥyā b. Zayyān, the third Watṭāsī vizier, was assassinated along with most of his family. The Marinid Sulṭān Abū Ḥakīm then tried to govern directly but he very soon alienated the people of the capital by his mistakes, such as appointing the Jews Ḥārūn as vizier. In 869 (1465), he was assassinated and with him the Marinid dynasty ended.

But two brothers of the vizier Yāḥyā b. Zayyān had been able to escape the massacre of their family in 1458. One of them, Muḥammad b. al-Sāliḥ, had taken refuge in Arrūs (Aṣfīl), and had been able to create an increasingly important party in the highlands of northern Morocco. On the death of Abū Ḥakīm, he made up his mind to take Fāṣūd, under a Mūnīdī government, and after a six years' struggle, he entered the ancient capital of the Watṭāsīs and was proclaimed sulṭān there in 1452. He reigned until 1504 but had to face many difficulties. The capture of Granada by the Catholic kings in 1492, the foundation of Mazagán [q.v.], and of Safa [q.v.], by the Portuguese had only exasperated still further the religious movement in Morocco and encouraged on all sides the rising of pretenders who used the dīkhāt for their own private ambitions.

On his death, Muḥammad b. al-Sāliḥ was succeeded by his son Muḥammad, called al-Burtūkālī (the Portuguese), who managed to hold the throne of Fāṣūd until 1524. But events were moving rapidly; the Saʿdīan shortlives, after consolidating their authority in the extreme south of Morocco, advanced rapidly northwards and in 1573 seized Marrākūsh. The struggle between Watṭāsīs and Saʿdīans was only to end in the final triumph of the latter. The successors of Muḥammad al-Burtūkālī, his son Abū ʿĪsā b. Abū Ḥakīm (1526 and 1547–1549) and his grandson Muḥammad al-Kāsīrī (1545–1547), vainly endeavoured to check the vigorous progress of the Saʿdīan
WATTAŚIS — WAŻIR

pardon the poet. In 547 (1152—1153) he incurred the wrath of Atzin and was banished from the court of Kha‘ rim but was restored to favour on addressing a poem to him. He died in this town in 578 (1182—1183) aged 97 lunar years, it is said. In addition to poems, he left works in prose. the Ma‘īlī Kull Tālibī, a translation and paraphrase in Persian of the two sayings of ‘Ali, which has been edited and translated into German by H. L. Fleischer (Leipzig 1877), and the Ḥadi‘ī al-Sibī‘ “gardens of magic”, a treatise on rhetoric based on the Targumim of Ballūghāt, “the interpreter of eloquence” of Farrukhī, used by E. G. Browne in the introduction to vol. ii. of his Literary History of Persia (London 1906). His Divan contains 7,000 verses.

WĀṢĪR, 27th or 26th (when it precedes ḥa‘), is a word for a type of Arabic word, selected from the pronoun of the 6th or 7th century. For its palaeographical pedigree, see Hādī, plate i. I. It belongs to the group of the labials (al-ḥārūf al-ḥaʃafu‘īya) as well as to that of the soft letters (al-ḥārūf al-ḥa‘ī). It is pronounced like English w. In the north-Semitic languages and sometimes in Ethiopic, its place at the beginning of words is taken by y. In a few cases it corresponds with m (cf. mughamā‘ “purple” with Aramaic yôn and Hebrew yôn‘).

WAŻIR, vīzīr, title of ministers of state and of the highest dignitaries, especially in the Ottoman empire. The word and the ideas come from Iran. In the Avesta vīrō means “decider, judge”, in Pehlevi i(ī) ‘jāz “judge, decision”. The Arabs undoubtedly took over the term in the Sassanian period and it was only in later times that modern Persian took back ważir from the Arabic as if it were really Arabic. Under the Umayyads the usual name of the secretary of state was kātī; it was later replaced by ważir (cf. Et. Quatremerre, Histoire des sultans Mamlouks de l’Egypte, ii/2, Paris 1845, p. 377 sqq.; W. Björkman, Beiträge zur Geschichte der Staatslehre im islamischen Agypten, Hamburg 1928, p. 6; on the origin of the name cf. also Th. Nöldeke, Geschichte der Perser und Araber zur Zeit der Sassaniden, Leyden 1879, p. 53, note 1 and p. 444, note 3; where for the abstract significance we may compare sūfān). The first ważir was Abū Salama Ḥafs b. Sulaimān al-Khallīl appointed by al-Saffār, who was in office from Rabi‘ I 132 (Nov. 749) but was killed in the 4th Rajab (Feb. 27, 750) (cf. E. v. Zamburi, Manuel, p. 6 and Ibn Khallikan, Kītāb Wa‘īfā‘ī al-‘A‘īn, 4733.)
ważik — wedżilli

transl. by W. MacGuckin de Slane, i. 497). Under the caliph the vizier managed the chancellery (dirvān al-vazīrīn), later, as business increased, jointly with the head of the dīwān. It meant a considerable increase in the power of the vizier when the caliph al-Raṣād gave Diṣḥar b. Yāhāy al-Barmakī (d. 128 = 105) the right to decide petitions (tawfiq 'ala l-ṣaṣṣ; cf. W. Björkman, op. cit., p. 6 sq.). A full list of the viziers under the caliph is given by K. v. Zambur in his Manuel de géologie et de chronologie pour l'histoire de l'Islam, Hannover 1927, p. 6—9. The last was 'Alī al-Dīn Džwālī in 661 (1263).

The name of the viziers of the governors of Baghdad. The highest ranking of the vizier's office (cf. Ibn Bāḍir, ed. R. Dowe, p. 244). A history of the vizierate under the caliph with its varying importance and scope has not yet been written. A list of the more important sources is given in the Bibliography. A history of the vizierate in Persia and under the Sālṭāns, cannot be given here, although the importance of the vizierate was greater than elsewhere, as may be seen from the distinguished names among the Persian and Sālṭāns viziers.

Under the Oṭṭōmanns the first vizier is said to have been 'Alī al-Dīn, brother of the second sultan Urğān. The historians give 726 (1326) or 725 (1325) as the date of the inauguration of this office, with what justice we do not know. Among the Sālṭāns the office was called firāwānī, lit. "command, advice," which is also used in old Ottoman. The power of the earliest Ottoman viziers was considerably restricted. In 786 (1385) Timūṛtash Pāşā appears as the holder of the highest office in the kingdom. He bore three horses as a distinguishing badge. He is regarded as the first grand vizier of the Ottomans (šahīd vazīr) and henceforth every Pāşā of three tails bore the title vizier (cf. J. v. Hammer, G. O. W., i. 199). The number of the viziers was constantly changing. In the reign of Muḥammad II the number was not allowed to exceed seven but could be less. Down to the conquest of Constatinople there was only one vizier. The viziers with the grand vizier (šahīd vazīr) in xvith century documents and later in popular usage, qādrū or ʿalāmā in official language) were called ṣabīl-ṭāwīlibīrī "viziers of the dome" because they sat with the grand vizier, whose name they shared but not his power, under the same dome in the Diwān (so J. v. Hammer, Des Osmannischen Reiches Staatsverfassung und Staatsverwaltung, ii. 50 sq.). They were called in order of rank, second, third, fourth etc. vizier.

As a rule, vizier in later times was simply a title of the other high officials like the niṣbāni, the defterdar, the Kapudan Pāşā, sometimes even of the Ağha of the Janissaries. The grand vizier was usually chosen from among them. They appeared together before the sultan, only the grand vizier could speak about official business. The other viziers stood silent beside him with hands crossed.

In war time the viziers of the dome commanded armies and were then called sīrād or sev"iše and had extensive powers, such as filling empty offices and siefs. They had even the right to issue firāwān from their camps in the name of the sovereign and to place the sultan's ūqūna (q.v.) upon them. Their income did not exceed 200 aspers. In the reign of Ahmad III the institution of viziers of the dome was abolished on account of the great confusion which they caused and only the Kapudan Pāşā (q.v.) retained the title of vizier (cf. on the preceding J. v. Hammer, Staatsverfassung, etc., ii. 81). Afterwards it was given to the four chief pASHAS of the empire, the governors of Rumelia, Anatolia, Baghdad and Egypt, but has gradually extended to all the governors of the Ottoman empire as soon as they were promoted from the rank of a pASHA of two tails to that of pASHA of three tails. On extraordinary occasions such as the marriage of a sultan's daughter, according to J. v. Hammer, op. cit., p. 82, viziers used to be appointed in whose name only without any official power. With the abolition of the viziership of the dynasty, the power of the grand vizier increased greatly and only began to lose its prestige, with the introduction of reforms in the reign of Selim III. The external symbol of omnipotence among the Ottomans also was the sovereign's seal, which the grand vizier kept and handed on to his successor on his dismissal. On the honours which used to be enjoyed by the grand vizier as well as the insignia of his rank, cf. J. v. Hammer, op. cit., ii. 83 sq.; on the different names, ibid., p. 84.—The history of the grand viziers of the Ottoman empire has been sketched by a number of authors. Cf. the list and biography of the grand viziers in: F. Babinger, G. O. W., p. 105, 254 sq., 259, 267, 292, 306, 314, 315, 364, 365, 396, 368. Lutfī Pasha (d. 1564) who had himself been a grand vizier, wrote a special work (Afnahrāče) on the duties of the office of grand vizier; on it cf. F. Babinger, G. O. W., p. 80 sq. With the dissolution of the Ottoman empire after the Great War, the office of grand vizier naturally disappeared.

Franz Babinger

Al-Ważik al-Maghribī. [See Al-Maghribī.]

Wedyji, Husain, an Ottoman poet and historian. Husain whose maghribī was Wedji, came from Baghād Serf in the Crimea at an early age to Stambul where he became seal-bearer (muhābīr) to the later grand vizier, then Kapudan Pāşā, Kara Mustafa Pashā. He died in 1671 (Sept. 6, 1660) in Stambul and was buried before the Adriankopel gate. Wedji left a history and a Dāri which has not been printed. The former begins in the year 1047 (beg. May 20 1637) with the description of the conquest of Baghdad under Murād IV, then describes the reign of Ibrahim I fully, as well as the first twelve years of the reign of Muḥammad IV. It ends with the year 1070 (beg. Sept. 18, 1656). The concluding portion for the year 1070 is especially

valuable because there is a gap here between the works of the imperial historians Nāmis and Rashīd. There are manuscripts of the stuff included chronicle of the period and the note in the Library of St. Mark in Venice entitled: ‘Bonding delle invasioni del genere ‘imperio bizantino nella penisola principianti all’ anno di Miroplitio 677 fino 1277, e dell’Italia Nobile Signori 1280 sino 1290, composta in lingua toscana da Domenico’ (Venetia e tradotta nell’idione Italiano di Giovanni Turina, Drogameno veneto, in Pera de Constantinopoli, il 26 ottobre 1275). Extracts from this Italian translation were published by N. Jorga, in Annali dell’Accademia Romana, xcv. 331.

Husain Wālīšah is sometimes wrongly called Husain Wālī jihād.

Bibliography: F. Babinger, G. O. W., p. 208 and the references there given.

FRANZ BARRÉTH

WEGA (Vega) (al-Nakr al-Wāqf). The Arabic name al-Nakr al-Wāqf, the “falling eagle” — in Latin always reproduced as Volucris cadens, in Greek ἡ αἰρός ἀναβατησίας, although wāqf is undoubtedly the eagle not the vulture — is the name first of the brightest star (first magnitude) in the constellation of the Lyre and secondly of the whole constellation of the Lyre itself. The name Vega, a corruption of wāqf, is found in this form as early as the Almagest of Ptolomeus. *Lucida super papullum defensam et est Alcorae et dicatur Wega*. The expression papilla defensa which here occurs for the first time in the Latin translations from the Arabic is to be explained, as Ideler (Sternnamen, p. 71) has shown, by a confusion of the word wāqf with the similarly sounding wāqf “eye, pupil”: defensa is, especially in mediæval Latin, frequently used synonymously with oculum. The Alcor or the Alkor in the Arabic Alcorān, which again is identical with the classical Greek ἀλκώρ, which was applied to Vega and also to the whole constellation.

The Arabic name al-Salâyq or al-Sulayq [q.v.] also applied to both star and constellation, to which al-Kawzān gives first place, is probably an Arabic corruption of the Greek ἅλκαοπ (or ἅλκατ) “torquoise”, which we find for example in Arabia as a synonym of ἅλκα. The equation of the ἅλκατ and ἅλκαοπ is based on the legend of Mercury, according to which the god made the first lyre from the shell of a tortoise; cf. Hyginus, Hom. in Mercurium. Sulayq (in al-Suffi, Ulugh Beg etc.) is the Arabic name of the tortoise (from Pers. ṣulāq, “tortoise” = ṣūlāq, sūlāq); it is therefore equivalent to al-Salâyq.

For the whole constellation, more rarely for Vega alone, we find in Arabic literature also the names al-ḥarām (“sacred, grove”), al-Mafzūf (“unstrung instrument”) and al-Sarāf (“stringed instrument”); the latter word represents the arabized form of the Persian name of the constellation Capricornus (Greeck zēm). The name is found in the Latin translation of Al-Birūnī as Assange and also from a wrong reading (cf. Ideler, op. cit., p. 382).

In the Arabic conception of the constellations al-Sulayq al-wāqf is a companion piece to the “flying eagle” (al-nakr al-qāf) as an eagle falling down from north to south with wings folded, the two wings being represented by the stars ε and ξ Lyrae which together, according to al-Sufi, are popularly called al-Abārī or “the Triad”.

Figurative representations of a later date frequently show the figure of the flying eagle that of an eagle hovering in the lyre. (Gundel points out [Pauls-Wissowa, Stuttgart 1935, vol. iii, article Lyra] that possibly Abu Ma’shar had already thought of this combination when he in his Arabic text, published by Tyrnoff in Boil, Sphaera, p. 527 mentions the lyre as paranastum to the third decan of Sagittarius and gives the explanatory note: “I.e. the Tortoise, and it is also called the falling eagle.” This assumption however, is not certain for in the text the two pictures are mentioned successively and not as a combination.

The oldest Arabic representation of the sign of the Muslim period, the fresco in the dome of the Kūshār Aīma (cf. Sais-Berel, The Zodiac of Qu我们知道, Oxford, 1932, and art. ANTIQUARIA), shows the constellation as a Lyre; the fine manuscript of King Alfonso X’s Book of Stars and the Arabic globe of the heavens of the 13th century in Florence shows it as a tortoise, as do several other Latin MSS. of astrological works (cf. Boil, Sphaera, p. 432).

Vega was quite well known to the ancient astronomers, among the Babylonians the star (β Lyrae) is identified as “mistress of life” with the goddess Ishtar; (cf. JENNIE, Gotterkultur, p. 283); in Chinese it is often mentioned as chih-ēn (the “woman weaving”). It is one of the brightest stars in the northern heavens and therefore forms an extremely favourable object of observation for the astronomer. Among the Arabs it plays an important part as an astrological star (cf. al-Sufi: al-Kawzān wa l-Salayq; in astrology however, it is of minor importance in view of its great distance from the ecliptic and is only rarely taken into account in horoscopes.

WILĀYA (ṣ.) a maghab for malūk “to have power over something”, according to others a substantive like ḫīla, a general term for any “conserver of power”, generalisation. Tāʾfīf, p. 275, defines it as “the carrying through of a decision affecting a third person whether the latter wishes or not”.

1. In constitutional law it means the sovereign power (ṣūlāt; Ibn al-Sikīn [d. 453 = 857], in Ḳaṣāf, s.v.) or the power delegated by the sovereign, the office of a governor, a malūk. The wilāya is derived from går (v. 62): “O ye who believe, obey God and obey the Prophet and those in authority amongst you” (v. 62). It is regarded as granted by God and is a ṣūlāt “stewardship of the House.” A distinction is made between a general and a special wilāya. The innās (ṣ. v.) or ḥālīfīt (ṣ. v.) possesses the general power. According to Mawrid, the viziers and governors of provinces have the general wilāya, the latter for their provinces. On the other hand,
military commanders, judges, imams (i.e. the lawful ones of the faith), the leaders of the jehdg, financial officials etc. have a special wilaya. The possession of a wilaya must be made of full age (zālij), he in full possession of their mental faculties, have no physical defects, must be 'āli and be fitted by education and knowledge for the office in question; there are also still further conditions for particular offices (e.g. the 'āli must be a free man).

Wilayāt then comes to mean the appointment or the certificate of the appointment of an official. The different kinds are: (i) wilayāt fully by Kallakshandah, Sāhīb al-dāli, Makhāyā, q. (cf. the statement of contents in Rüttmann, Neudruck der Geschicthe des Staatswesens, Hamburg 1928, p. 144 sq.). In this connection we may note the designating of his successor by the reigning caliph, called wilayāt al-mahāz, which was first done by the caliph Sulayman b. 'Abd al-Malik and became the rule in the Aḥmīdī period; every heir apparent is still therefore called wilāt al-mahāz.

Wilaya in has in time come to be applied to the area of a wa'fi's authority: thus in the Mamlūk period in Egypt and Syria it meant the smallest administrative area, at the hand of which was a wa'fi of the rank of a 'āli al-mūlikhān (Kallakshandah, Sāhīb al-dāli, p. 133 sq.). In Persia it means the largest administrative area which provinces are divided; in Turkey, however, whereas in the 19th century the name has been given to the largest administrative units (also called 'āliyād) under Beglarbegi, later waris (Turkish pronunciation wilāyat).

1. In personal law every free man possesses wilāyat (arab. pronouced wila'āt; cf. Liddæ, s.v.), the power of disposing of himself (cf. e.g. Sarāqib, Mak hü, xxv. 137, 138 sq.). In certain cases this power can and must be transferred to another. But even then the Islamic jurists speak simply of a wilāyat. We have this wilāyat in the case of the administrator of wa'fī properties, the executor of a will, a father with respect to his infant children and particularly in the case of wilayāt al-mīthā (see n. 2) and waris al-māt, guardianship. We shall deal only with the latter here.

a. Mālmarsh, himself an orphan, was always in the protection of orphans, e.g. in the later Mamlūk period in Sūr xxvi. 30 = al-3. 153: "Yours is the property of the orphan, except for his good, until he is grown up." In the Medīna period we are told that one should deal fairly with orphans (iv. 216), be good to them (iv. 40; ii. 77, 211) and treat them as brothers (ii. 218-219) and support them for the love of God (ii. 172). Mālmarsh set aside the fifth of the booty for orphans among other objects (viii. 447; cf. lxxii. 7). The principal clause however is Sūr, iv. 234: *And give to the orphans their property; substitute not worthless things for that which is good, and devour not their property after adding it to your own; for this is a great crime.* (4) And entrust not to the incapable (i.e. in money matters; rukūt) your substance which God has placed with you for a support but maintain them therewith and clothe them and speak to them with kindly speech; and (5) and make trial of orphans until they reach the age of marriage; and (6) ye perceive in them a sound judgment (rūh) then hand over their substance to them; but consume ye not wastefully or hastily (6) (out of fear that) they are growing up. And let the rich guardian abstain [from it]; and let him who is poor use it for his support (not of it) with discretion. (7) And when ye make over their substance to them, then take witnesses against them . . . (8) Behold, they who swallow the substance of the orphans wrongfully, shall swallow it only into their bellies and shall burn in the flame*. The pertinent traditions only contain certain developments of the Korānic idea (cf. Wenstink, Handboock, s. v. Wa'il and Waris).

2. The doctrine of the wa'fic in the Fikh.

a. The wa'fi (i.e. the "bound") is either an orphan minor or a mentally deficient person (mubāfīt) or a spendthrift (mutfīt or mukaddikīz). The wa'fi was only added about the end of the first or beginning of the second century A. H. The Korān (cf. above) speaks, it is true, of the wa'fī but not yet in the later technical sense; the oldest exponents of the Korān (Muqaddhīsī [d. 100 = 718], al-Hakam [d. 115 = 732], Kazīs [d. 117 = 736], al-Sudhīr [d. 127 = 744]) only understand thereby women and children or one or two of these two. Tabari still criticises this interpretation at considerable length and defines the wa'fī as "one who on account of the disruption of his fortune, his immorality, his injury to and mismanagement of his fortune requires control" (Tabārī, v. 153). Abd al-Hamīd still refused to put the wa'fī under a guardian.

b. The guardian should be appointed should by law be the paternal father or grandfather, who is also entitled to appoint a guardian by will, the so-called wālī (who may also be the mother). In other cases the guardian (bābiyyā) is appointed by the kāfi. The guardian must be a Muslim, who has attained years of discretion and is in full possession of his mental faculties, of good repute (sāli) and able to understand the office. Guardianship is a religious duty and can only be declined for important reasons approved by the kāfi.

c. The obligations imposed on a guardian.

He has to administer the estate of his ward and act here as wa'fī. Among his powers are that of arranging marriage or divorce and making of a will etc. He has to champion the interests of his ward; he may invest his ward's estate in business enterprises but not in his own business. He can only mortgage or sell land or house and the approval of the kāfi. He cannot enter into any business dealing between himself and his ward and cannot give anything away of his ward's property.

4. The guardianship is ended by the death of the guardian or of the ward, by deposition of the guardian for faultless conduct or when the ward attains years of discretion (mājiza, as a rule at 14) or becomes rādīdī, i.e. capable of administering his estate himself (and according to the Shāfī view also possesses the ability to recognise the true faith). The guardians have then to give his ward an account of his stewardship.

WIRD (Ar. pl. awīrāt). The technical term wīrd (etymologically "to go down to a watering-place"; not to be vocalized wār) means, in a definite time (wāḥēd) of day or night, which the pious believer devotes daily to God in private prayer (in addition to the five prescribed prayers). It also means the formula of prayer recited on this occasion, called properly żākh (pl. żākih; cf. Makkī, ʿĀdīt al-Kabīrī, i. 82), or i. 4)? The simplest wīrd consists of a żākh, with the recitation of a seventh of the Qurʾān, but, very early, in private devotional prayer (ṣalā): Sunna as well as Shiʿī, cf. Kulaiz, Kāfī, at the end — and Ḥadrī, cf. Ḥaddī, Ḥadrī al-Khawāṣṣ, iii. 397—416) there were added litanies, either isolated phrases (ḥammāl, tahīl, ṣabāḥ, ṣaʿīl, ṣaʿīfl, ʿṣāḥīf, ʿṣāḥīfl), or isolated words (Arabic names of God; Allāh, ṣaddīqah, and invented or cabalistic names) because they were found to be efficacious.

When, in the 7th century, Islamic congregations were formed which took up the Sharia laws of the initiated ḍāhirīs, the Sunna to teach the novices on the day of his initiation (ṣalātū ḍāhir = ṣabāḥ al-wīrād) a special wīrd (cf. for the first appearance of this term i. Massagun, K. M. R. 1929, p. 107, i.) which became the distinctive żākh of each congregation.

In practice the wīrd is divided into two: wīrd ʿumūm (żākh ʿumūm), an exoteric formula often of some length (several hundred sūra, ḍāhir, etc. several times a day: after the ḍāhir and maghrīb among the ʿĀlamiyyah, and wīrd ʿumūm ʿumūm ʿumūm, "secret" name of God [e.g. ʿAbd ʿAbd, among the Sunnaḥah], which the ʿĀlamiyyah does not communicate to the initiate as a great mystery (cf. Ḥasan Ḥadī, Ḥadrī al-Khawāṣṣ, p. 27—28; Ḥadrī at the end of the ṣalāt ʿumūm of Ibn ʿAbd al-Muqqālam, Tāmī, Nahḍа, 1339). The term ḍāhir of żākh is used by preference for the assemblies of the brethren for common recitation (old term ʿumūm; now ṣalāt ʿumūm).

Since the sixth century special collections have been put together, in the style of the ṣalāt ʿumūm, containing the wīr of the principal Sunni ṭarīqa with the tenād of the transmission of the imitiation.

The oldest, the Rūḥ al-ṣalāt ʿumūm of Ahmad b. Abī Ḥāmid Ṭawāsh of Akūnāk, compiled shortly after 822 (1419) (cf. Ḥadī, Q. M. R., ii. 75, 109, and Kattānī, Kīrīya, i. 337; ii. 7—174, 506—331, 531—331, remodelled and brought to date successively by the Ṭāhirīs Ḥādīsh and Ḥādīsh, d. 970) = 1562; in Ḥanāfī and Ṭarīqa, Abū l-Muʾmālī Ṣtāwāna (d. at Medina in 1728 = 1629; in ʿArbaʿ al-ʾAbūs, ʿArbaʿ al-Ābās, Ahmad Ḥadī, d. 1661; cf. Ḥadī, Q. M. R., ii. 214—222, and Kattānī, Kīrīya, i. 336—337; ii. 150, 193—195, 396, culminated in the famous manual, still unpublished, of ʿAbd, called al-Ṣalāt ʿumūm (cf. the article ʿArbaʿ and L. Massagun, K. M. R. 1921, p. 159—171) where everything is downed to the "wīrd of the Arabian Virgin". These collections of żākh, brought from Mecca by pilgrims with Ṣtāwāna, have spread them throughout the Muslim world.

Bibliography: The essential work is Abī Ḥāmid Ṭawāsh, Fihār ʿArbaʿ al-Ābās, Fī Ṣaḥīf, 1346, 2 vols. (LOUIS MASSAGUN)

WIRT. In the treatment of ceremonial law in ʿArbaʿ and ʿArbaʿ this term is applied to the odd number of ṭāqīs which are performed at night. For details see below.

I. a. Wirt (ṣabāḥ also is admitted) does not occur in this sense in the Qurʾān, but is often used in ʿArbaʿ, which in this case also discloses to us a piece of the history of the institution, which is probably a continuation of the history of the fixation of the daily ʿṣāḥīf, as the traditions on it presuppose the five daily ʿṣāḥīf. Some traditions even go so far as to call wīr an additional ʿṣāḥīf of an obligatory nature (see also below, II). When Muḥammad b. Džabāl, at his arrival in Syria, perceived that the people of this country did not perform the wīr, he spoke to Muʿawiyah on this subject. When the latter asked him: Is then this also obligatory? Muḥammad answered: Yes, the Apostle of Allah said: My Lord has added a ʿṣāḥīf to those prescribed for me, namely prayer, its time is between ʿṣāḥīf (cf. msgr. 47) and daybreak (Abū Ḥanīfah: Al-Qurūb, v. 242). In accordance with this tradition it is reported that wīr, when it had been forgotten or neglected, had to be recovered (Abū Ḥanīfah, ii. 206; Ibn Mū苇, Ṣtāwāna, b. 122). Ḥādīs al-Ṣanīt [q. v.], on the other hand, denied the obligatory character of wīr, on account of a different tradition (Abū Ḥanīfah, Al-Qurūb, v. 345—347, 349).

A second stage in the position of wīr is expressed in those traditions in which Muḥammad admonishes his people to perform wīr: "Our Allāh is wīr (viz. One), and He loves wīr" [e.g. Abū Ḥanīfah, i. 110].

The third stage of ṭarīqa, which was to become the point of view of all muḥāsāt with: one exception, is represented in those traditions which call this ṭarīqa ṭarīqa. Many traditions of this kind expressly deny its obligatory character and are consequently of a political nature; they are frequently ascribed to 'Ali [e.g. Abū Ḥanīfah, i. 86, 98, 100, 115, 120, 145, 148 etc.]. It may be that this question, like other ceremonial points, belonged to the polemical repertory of the early Sunna.

b. The time of wīr is mentioned in ṭarīqa in connection with different parts of the night. "Wirt consists of parts of ṭāqīs, who either fears ṭāqīs, will have to add a ṭāqīs in order to make the total number odd," [Abū Ḥanīfah, ii. 3, 9, 10, 75]. In other traditions three ṭāqīs are mentioned in order to avoid the ṭāqīs [be-ṭāqīs, al-ṭāqīs bi-fistamāt, e.g. Abū Ḥanīfah, ii. 71]. The number of thirteen ṭāqīs occurs also (Tirmīdī, Wīr, b. 4), and in general wīr is supposed not to be allowed after ṭāqīs al-ṭāqīs (cf. Mālib, Mālibaʾ, Wīr, trad. 24—28, and Ṣaʿīfl, NH, 2192: "No wīr for him who has not performed it before ṭāqīs").

Wīr is also frequently mentioned in connection with the first part of the night [cf. below, II]. Abī Ḥāmid al-Hurayqī performed it before going to sleep, on Muḥammad's order (Tirmīdī, Wīr, b. 3). Muḥammad himself is said to have performed this ṭāqīs in any part of the night [e.g. Tirmīdī, Wīr, b. 4]. The time between ṭāqīs and daybreak appears as the largest space accorded to wīr in ṭarīqa (Abū Ḥanīfah, v. 243). It is prohibited to perform more than one wīr-ṭāqīs in one night (Abū Ḥanīfah, iv. 23 bis).

c. Tradition frequently mentions the ṭāqīs, prayers, invocations and formulas by which wīr has to be followed (e.g. Ṣaʿīfl, Ṣaʿīfl, i. 51, 54; Abū Ḥanīfah, i. 199, 350).

d. The chief regulations of ṭarīqa as fixed by the different muḥāsāt show insignificant divergencies only (see Ṣaʿīfl, p. 198, 429), with the single exception, that wīr is declared obligatory
by the Hindus, whereas in all the other maulidi's it is _maun_ (cf. above, I. a). The rules of the Shi'ah's school are as follows: the number of _raza_ may vary between the odd numbers from one to eleven, _iaja _[q. v.] is required; after every two _raza_ and after the last a _sahaj or _tanbih is performed. The best time is immediately after _tanbih_[q. v.] for those who do not perform this _pratit_ in the first third of the night. In the second half of Ramadán [see _takdir_], it is prohibited by _wafat_[q. v.].

**WIZARA** [See Wala].

**WUPLI** (A.), the minor ritual ablation which gets rid of the condition of "minor" ritual impurity (_haqijah_, q. v.). Regulations for ritual ablutions based on a belief in demons and on animistic ideas were known to the Arabs as a survival from the older Semites but in Muhammad's time they were no longer carefully observed. The regulation in _Surah_ v. 8, of the late Medina period, already betrays Jewish influence: _Ye, who believe, when you purify for the _sahaj_, wash your faces and your hands up to the elbows and rub your heads and your feet up to the ankles_. Muslim regulations for purity based on this _sahaj_ and the next verse v. 9 (in part identical with iv. 38) developed in all details under the influence of the corresponding regulations of Judaism, but on the whole are less exacting than the Jewish system. The material for the study of their origins is contained in an unusually comprehensive body of traditions, in the transmission of which Ahmad b. Hanbal had a particularly large share; in it we find on the one hand às, to some extent, antimasonic tendency and on the other an endeavour to regulate everything in minute detail and lastly the harmonious tendencies of the moderate elements.

The text of the _Karim_ taken literally prescribes a ritual ablation before each _wuzu_. This is actually maintained to be obligatory by the Zaidites and and _Shi'a_. The four orthodox maulidi's however are agreed that a _wuzu_ is only necessary to men if a _pratit_ valid in case of a "minor" _haqijah_. This view, which was even encouraged to support by an insertion in the text of the _Karim_ ("while ye are in the conditions of _haqijah_"), represented a concession to actual practice, which had already been very slack since ancient times. According to the law, a "minor" _haqijah_ is produced by: 1. touching the skin of the other sex (sexual intercourse itself causes _wudu_(_haqijah_)) even as the two persons are related in a way that prohibits marriage; 2. relieving menses; 3. loss of cosmetics and sleep apart from a _wuzu_ while sitting; 4. touching the sexual organs and in several other ways.

The essential elements of the _wuzu_ are according to the Shi'a teaching: 1. washing the face; 2. washing the hands and the forearms up to the elbows; 3. rubbing the wet hands on the head; 4. washing the feet; 5. observing the water in the process; 6. formula or the intention (_niyyah_) performed on the _wuzu_ before beginning. Other actions recommended by the Sunnis are the previous washing of the hands, rinsing of the mouth and clearing the nose (before 3); stroking through the beard with the wet fingers, rubbing the ears and washing the neck (before 4); uttering certain formulae at the separate actions, beginning with the right side of the body and performing certain actions three times. As a rule the _wuzu_ takes barely two minutes to perform; many people do it hurriedly and confine themselves to the essential points. The demands to which the water intended for ritual ablutions must conform, are fully discussed in the _jish_ books. If the believer has no suitable water available or on account of illness or wounds cannot perform the usual _wuzu_, it is sufficient to rub the face, hands, and forearms with sand or dust (fayyamut, q. v.).

All the orthodox maulidi's permit a man who is at a permanent abode, once in twenty-four hours, and if he is on a journey, thrice in twenty-four hours, to rub his foot-covering instead of washing the feet at the _wuzu_. If the feet when last covered were washed clean and put into clean shoes, which must be impermeable and fit tightly. This process of _wasq_ _ala_ _l-haqqah is not permitted by the Kharijites nor by the Shi'a; as one of the most important external distinctions between Sunnis and Shi'a, this has attained a considerable religious significance and among the Sunnis, its recognition is an absolute essential of the profession of faith. The practice of _wasq_ _ala_ _l-haqqah is very old and it is perhaps one of the alleviations of ritual introduced by the Muslim armies. There is besides a difference of opinion regarding the ritual treatment of the feet at the _wuzu_. In the Sunnis, the Kharijites and the Zaidites demand, that they should go on without the _wuzu_ in the other hand, rubbed only; the former view, which is in keeping with the sense of _Surah_ v. 8, is no doubt the original one, while the latter represents an attempt to extend it in keeping with the literal text of the _Karim_, which caused the representatives of the older view to produce tortuous explanations.

WUKUF or WAQAF (A.), "halt!", means in particular the halting of the pilgrims at any spot they choose within the plain of 'Arafah; it begins on the afternoon of the 9th Dhu 'l-Hijjah and lasts till sunset. This wukuf is considered the most essential part of the hajj. The imam of the hajj usually introduces it (before the beginning of the combined '.controllers and 'aar jalal') with a khatbah; his words can of course only be heard by those in his immediate neighbourhood. The pilgrims for their part recite portions of the Koran, say prayers—mainly for forgiveness of sins—and cry labbaik! (q.v.) and other religious formulae. The ceremony ends with the running (tribe) to Muzdalifah. A similar halt, spent in prayer and also called wukuf, is made in the early morning of the 10th Dhu 'l-Hijjah in Muzdalifah before the running to Minah, also on each of the 11th, 12th and 13th Dhu 'l-Hijjah after the throwing of stones on the "little" and "middle" heaps. The stop, spent in prayer on the elevations of al-Safa and al-Marwa in the running (saya) between these two sacred places is also occasionally called wukuf.

The significance of the wukuf in the Muslim hajj is clear: it is a kind of common worship, a "standing before God" (cf. Riff, p. 141). But the form of the ceremony goes back to pre-Islamic rites. For the monotheism preached by Muhammad would in itself have had no reason to invent the sacred rite in 'Arafah and with it the most important part of the hajj. It might however be supposed that Muhammad wished, with the help of this act of worship to fill in gaps which may have arisen from the omission of some ceremonies of the pagan pilgrimage, and to this extent the wukuf may have in a way been a new creation of his. But this hypothesis loses its probability when we reflect that the wukuf (except in the last halt on al-Marwa, which follows the last saya) seems always to precede a ritual running and to be connected with it (cf. ibn al-Athir, viii. 192: wukuf in contrast to "Sahasr"). Now, since the ceremony of ritual running certainly goes back to pre-Islamic rites, the same may be presumed for the wukuf. The original significance of this custom is however not thereby explained. This much nevertheless seems to be probable, that the wukuf took place on holy ground or at least in the neighbourhood of such: the wukuf of 'Arafah was perhaps located at the foot of the hill later called Djbal al-Rahma, the special sanctity of which continued under Islam. The sojourn of the Israelites at the foot of Sinai described in Exodus six might in a way be compared with it. The Muslim theory, according to which the whole of 'Arafah (or Muzdalifah) is musafir (place of wukuf), perhaps points to the very fact that this was not the case before Islam. This statement, it is true, is easily explained as a concession to the multitude of Muslim pilgrims who could not all find a place on a restricted area. It may also from the first have served the purpose of destroying the influence of an old pagan sanctuary within 'Arafah (or Muzdalifah). The repulsion that the wukuf in its original form presupposed the making of a sacrifice cannot be maintained, so far as the present evidence goes.

Y

YĀDĪJĪ, 28th and last letter of the Arabic alphabet with the numerical value of 10. For palaeographical details, see *Arabic*, i. 354, 355, 354a, and plate 1. It belongs to the 6th letter (Gematria of *al*); its pronunciation is that of English y.

YĀDĪJĪ wa-MĀḏĪJĪ (the forms Yādījī and Māḏījī, occur also), *Gog* and *Magog* (cf. *Gen.* 2: 17; Ez. xxxviii. xxxix), two peoples who belong to the outstanding figures of Biblical and Muslim eschatology. Magog in *Gen.* 2. is reckoned among the offspring of Japheth; this name is also found in Arabic sources (e.g. *Baqīṣ* on sûra xiviii. 92. There are different traditions as mentioned); this much only may be said here, that the Bible as well the Arabic sources connect these peoples with the North-East of the ancient world, the dwelling-place of peoples who are to burst forth from their isolation in the Last Days, devastating the world southwards, until they will be destroyed in the land of Israel (cf. H. Graeven, *op. cit.*).

In Muslim eschatology this picture is repeated with many, partly fresh, details, and connected with the reappearance of *Ish* on the earth. Yādījī and Māḏījī will be an enormous that they will drink all the water of the Euphrates and Tigris or of the Lake of Tiberias. When they have killed the inhabitants of the earth they shall shoot their arrows against heaven, whereupon God will send storms into their nostrils, necks or ears, which will kill them to the last man in one night, so that the smell of their corpses will fill the earth (Muslim, *Fitan*, trad. 410; Ibn Māḏījī, *Fitan*, bòb 33, 59; Ahmad b. Hanbal, i. 375; ii. 450; iii, 77; iv. 182; Tabarī, *Tafṣīr*, xvi. 63, 64, 65). Or a host of birds will catch them and drown them in the sea (Tabarī, *Tafṣīr*, xvi. 64). They are cannibals (Chos:al, p. 330) and dwell behind the mountains of Armāniya and Aḏārḏāʾ (Tabarī, *Tafṣīr*, xvi. 12).

The traditions of the Arabic sources are largely connected with sûra xxi. 96: "*until Gog and Magog shall have a passage opened for them in the Last Days* and they shall hasten from every high hill" etc. Here is an allusion to the connection of Gog and Magog with the dam which was built by Alexander the Great, as it is said in sûra xxi. 92 sqq. And be [Alexander] prosecuted his journey from south to north, until he came between the two mountains, beneath which he found certain people, who could scarce understand what was said. And they said, O Dhu ‘l-Khurain, verily Gog and Magog waste the land; shall we then pay their tribute, on condition that thou build a rampart between us and then? He answered, The power wherewith the Lord hath strengthened us is better than your tribute; but assist me strenuously, and I will set a strong wall between you and them. Then the last goes on to relate how Alexander built the dam or gate behind which Yādījī and Māḏījī should therefore be shut up till the Last Days. Every night they will try to dig under the wall in order to escape, and every night the sound of their tools is heard. But God repairs before the morning the breach they have made (Tabarī, *Tafṣīr*, xvii. 64).

Yādījī and Māḏījī are of three kinds: one as tall as cedars; the second as aspect as they are tall; the third can cover their bodies with their ears (Tabarī, xvi. 16).

Tradition relates that one day Muhammad came in a hurry into the room of Zainab bint Jahši b. 'Abd Allāh, saying: So much has been opened of the dam of Yādījī and Māḏījī, making a sign with his thumb and index finger. She said: Shall we perish, there being so many good people? He answered: All evil will be widespread (Baqīṣ, *Hist.*; *Tafṣīr*, b. 23; *Hīdāyāt*, Fītan, b. 94; Ahmad b. Hanbal, ii. 341, 359 sqq.; vi. 428, 429).

According to de Goeje (cf. *Bibligraphy*), the story of the dam (which is found in the Syriac Legend of Alexander; *cf. Bibl.*) refers in reality to the wall which surrounded a part of the Chinese empire, and which had a gate in the South, called the jasper gate. He mentions reports of travellers who visited the wall, especially in the times of the caliphate.

The term *Bāḥr* Yādījī wa-Māḏījī, which occurs in the *Rājī bi Ghānum al-Nasir* (Cairo 1547, ii. 50 sqq.), apparently applies to the Caspian Sea.

Yaffa or Yafa, Joppa, Yaffa, a town on the Mediterranean, the port of Jerusalem. It occurs in the form 'Yfpp in the law of the 4th century B.C., in the list of towns in Palestine taken by Antipater III, W. Max Müller, in M. V. 63 G., xili, 1907, i, p. 31, p. 62. In the Amarna tablets and among the Assyrians, it was called Yappi or Yaffi, in Phoenician inscriptions as Yp, in the Bible Yafah; Yaffah is the present port of Jerusalem in the Bible, to which king Hiram sent in floats the wood destined for the building of the temple. Before the conquest by Senacherib (701 B.C.) it was subject to the king of Ascalon. It was not till the time of the Maccabees that the ancient Canaanite city came under Jewish rule. The legend of Jonah which is localised here and among the Phœbes and Andromeda are probably connected with some very early cult of a fish-god in Yaffa.

In the year 15 (636) Amur b. al-'Aṣīl (according to others Mār'awiyya) took the town (al-Bala'iburt, ed. de Goeje, p. 138). The importance of the old harbour of Jerusalem further increased when the Umayyad Sulaimān b. ʿAbd al-Malik founded the new capital of Jund al-Filiste, in Ramla, some 14 miles S.E. of Yaffa. Yaffa with the rest of Filistein passed in 626 (878) into the hands of Abū Hāmid b. Ṭalhah b. Quraysh a-[q.v.], and remained under the rule of the Fatimids of Egypt until 848. It passed to the Abdhabl al-Makaffar. After Dinār f. Fathā had conquered Syria for the Fatimids of Mu'āwiyah (756), the Karmīmīs penetrated in 360 (971) under Hāsan al-ʿAṣāma as far as Yaffa in which the troops (11,000 men) sent by Dāwābīr b. ʿAbd Allāh were blockaded. After the Karmīmīs had been driven out of Egypt in 362 (971) Yaffa was relieved and the garrison brought back to Egypt. The Turkish emir Atār b. Abū Maʿīn, in 463 (1071), took al-Ramla but Yaffa and Ašdalah did not come into his power.

The possession of the town was hotly disputed during the Crusades. The Franks who made it a vassal of the king of Jerusalem were able to hold it until the Third Crusade (1199-1187). The vizier al-Aṣāl sought by various means to take it from them in 1101, 1105, 1113 and 1115. After his murder, the caliph al-Amir besieged the town in 1122 but it was driven back, and again in 1123 as a result of the destruction of his fleet by the Venetians. After the battle of Ḥīṣn (Aug. 1123) most of the coast towns surrendered to Saladin, and Yaffa to his brother al-Malik al-ʿAdil. Richard of Coeur-de-Lion recaptured it for the Crusaders in 1127 (1114). Saladin besieged it in 1192 and regained it for the Saracens; he could not however take the citadel, and Richard, who hurried to the help of its garrison, drove Saladin's troops out of the town and refurbished it. At the time of al-Ramla the Christians were in possession of Yaffa.

By 593 (1197) however, al-Malik al-ʿAdil had again taken Yaffa, destroying the fortifications and, it is said, killing 20,000 Christians in the fighting. In the following year Saxon and Brabant troops temporarily occupied the town, but abandoned it in 595 again whereupon al-ʿAdil regained it by a coup de main. After the Fourth Crusade (1204) the town was again in the hands of the Franks. The Emperor Frederick II restored the fortifications in 1228; as did Louis IX in 1230 after his release.

In the Mamluk period Yaffa belonged to the district of al-Ramla, one of the four districts of the coast, which were part of the mamluks of Dimashq; for a time however (under Saladin's successors) it was under that of Ghazza (al-Dīnāš, ed. Mehet, p. 250).

Barbars attacked the town unexpectedly on 20th Dāwālīl II 666 (March 8, 1268) and took it and its citadel in one or two days (inscription on the White Mount at Ramla, ed. van Berchem, Inscriptions Arabes de Syrie, Cairo 1897, p. 57-64). It destroyed the town with all its houses, walls and the citadel. A certain emir Dūnād al-Dīn... b. ʿIṣāk, according to an inscription preserved in Yaffa, built there in 736 (1335) the sanctuary of Kuβbat Shāki, Murād which is still in existence (Clermont-Ganneau, Materialia inlektis pour servir à l'histoire des Crusades, Paris 1876; do., Archéological Researches in Palestine during the years 1877-1874, ii., London 1886, p. 154). When the kings of England and France were planning a new crusade in 1336, al-Naṣr had the harbour of Yaffa destroyed to make it impossible for the Franks to land there. For the same reason, the town as well as the harbour, was destroyed in 1345 (Tolkovsky, in Journ. Pal. Orient. Soc., 1925, p. 82-84).

The Arab geographers describe Yaffa as a small, strongly fortified coast town which was the port of Jerusalem and al-Ramla, enjoyed thriving trade and busy markets in times of peace. In times of war it was greatly exposed to enemy raids, in the first centuries of Islam, for example, to attacks by the Byzantine fleet, the Mardamites and the Kiryvragotes. To protect the coast against these raids, watch-towers (aghetti) were built, like those of Byantium from Laodicea to Constantinople, from which were signalled by smoke or fire to the capital, al-Ramla, the approach of Byantine ships, which also used to visit the ports from Ghazza to Acre to ransom prisoners (al-Majdūs, ed. de Goeje, p. 177).

After the battle of Dālib on 922 (1516) the whole of Syria passed to the Ottomans. Yaffa, which was in ruins, only began to revive gradually in the second half of the xviiith century, especially after its quays were built. From 1770 for several years the Pasha of Dimashq fought the English and Aḥī Bey and his followers for the town in which, the Mamluks perpetrated a frightful massacre on May 19, 1776. The French behaved even worse after the capture of the town by Napoleon (March 6, 1799); 4000 prisoners were shot on the shore. Immediately after the entry of the garrison the plaque broke out in the French army which suffered heavily. Dir'ūm Pasha, son of Mehemmed ʿAli, in 1831 occupied Yaffa, which passed to the Turks again in 1840. An earthquake in 1838 destroyed many houses and a portion of the defences.

On Nov. 16, 1917 Yaffa was occupied by the English (Anzac Corps). Since the war the town has grown very little (44,000 inhabitants), but its northern suburb, the Jewish colony of Tel-Aviv, founded in 1909, has rapidly developed into a modern town, which is already the size of the old town. To the northeast of the town are the German Templar colonies of Wilhelm and Saron founded in 1868 and to the south Jewish agricultural colonies. The plan of building a new harbour, accessible to modern ships, instead of the old and useless one which is surrounded by reefs,
has so far not materialised owing to the expense; it would enable the town to compete with Halfa, which is growing rapidly.

(E. Hoigmann)

AL-YAFFI. "Abd Allāh b. Abī N. "Abd al-M. Fallāh al-Shāfīī, Alī b. Abī Dīn Abū al-Sā'īda Abū l-BaRakāt, a Sūfī and an author, was born one or two years between 1300 (1301) in the Yemen though the place of his birth does not appear to be known. He studied first under the tuition of Muhammad b. Abū al-Din al-Baqillānī and Abū al-Hasrā, Kāšf of Abū al-Husnā. These studies comprised probably only the Korān and theology, but his ascetic inclinations must have developed early and have guided his whole life. As early as 712 (1313) he made his first pilgrimage to Mecca and there he associated himself with "Abd al-Tawāḥa whom he remained his chief sheikh. In 1226 he settled in Mecca and married. The following years he spent partly in Mecca and partly in the Hijaz, and in 734 (1335) he made a journey to Jerusalem and Damascus and came also to Egypt. After his return to the Hijaz he remained some time at al-Madinah and then came to Mecca where he married a second time. Later he made a short journey to the Yemen to pay a visit to his old teacher al-Tawāḥa. Sukhī in 747 (1346) made his acquaintance on the occasion of the pilgrimage and it was there that he died on the 29th Dhu al- Ḥijjah 768 (Feb. 21, 1367). Sukhī gives as the date of his death Dhu 1 767, probably an error.

He had rejected the shāhīda of a Sūfī from several masters. Biographers praise his devout mode of living and his kindness towards his pupils, and his reputation as a pious and learned man was widely spread during his lifetime. While the older biography as yet known, nothing of his karābi (q. v.), later works are fairly full on this point. His leisure in Mecca permitted him to write a large number of works, especially upon Sūfism and the principles of faith. He made a point of defending the doctrines of al-Ashārī and among other works wrote a treatise against Ibn Taimīyā, which brought upon him the hostility of the adherents of the latter. He is said to have had a very high opinion of the Spanish Sūfī Ibn al-ʿArabī. The works of al-Yaḳūbī which are accessible prove him to be the main a compiler of the works of the Sūfis with very little originality on his part.

1. His principal work is a treatise entitled Rawl al-Riyāḥān fi Risālah al-Šāfīīī (also called Nahun al-Čūyā al-muwaṣṣar wa-Tahdīl al-Kullāb al-haṣārī) in which he gives biographies of five hundred saints and Sūfīs. Pious narratives outnumber in it by far the historical data. The work has been printed several times (Būlāk 1286; Cairo 1301, 1307 etc.). Of this work a number of abbreviations are in existence and it has in addition served as a source for later works of similar tenor, the latest perhaps the Karūmāt al-Awāliyyā by Yūsūf b. Isāmah al-Nabhānī (printed in Cairo 1329 in two volumes).

2. His historical work Mirāt al-Dīnān wa-Tāʾir al-Yaqqūtā (printed in H̲al̲d̲a̲r̲āb̲ād̲h 1334-1339 in four volumes) serves also principally biographical purposes. As Yaqqūt, according to his own statement, was content with extracting the chronicle of Ibn al-Aṯīr and the works of Ibn Khallikān and Dhabābī, we find hardly anything new in it. The book has however a certain value as long as we have no edition of the large biographical works of Dhabābī. Only at the end of the work he gives a few biographies of his teachers in the Yemen, but in these notices one is hardly able to pick the few historical details out of a volume of empty words; dates are quite a secondary consideration. There are several abbreviations and excerpts of the work in existence, some with later additions, among them the Ghārīb al-Zamān by Abu ʿAbd Allāh Husain b. Abī al-Raḥmān al-Aḥalāl (died 885 =1480), which deals principally with South Arabian saints; also an extract by a certain al-ʿAbbās al-Sūfīlī, who lived about 1100, contained in a Berlin Ms.

Najār al-Maḥāsīn al-ḍallīyya fī Faqī al-Muṣṭalḥ al-Čūyā, mentioned at the end of the Mirāt al-Dīnān. This work has been printed in the margin of the Karūmāt al-Awāliyyā of Nabhānī (see above) and contains like the Rawl al-Riyāḥān accounts of pious Sūfīs and seems to be a first draft of his larger work. The purpose of this work, according to his own statement, was to furnish a proof that the Sūfīs and Sūfism can be made to agree with one another. For this reason he gave to this book the second title of Kīfayat al-Muṣṭalḥ al-Muwaṣṣar di al-Muṣṭalḥ al-Muwaṣṣar (Mirāt, iv. 335).

Markham—H. al-amūnīyya fī Rājī'at Idrī' Idrī' al-Muṣtaṭta fī al-Burhān al-Sūfīs al-waṣfīyya. This work he composed at the instigation of Negānī al-Dīn. 'Abd al-Rahmān b. Yūsūf al-Iṣ̲h̲āfānī (died 750 a. H.), collecting material from all manner of sources, he attempts the refutation of the doctrines of the Muṣťalḥa, which had existed any longer in his time. The work has been printed to the extent of about two thirds in the Bibliotheca Indica, 1910-1911. The title is wrong in Brockelmann, G. A. L., and wrongly corrected on the title-page of the printed edition.

5. Al-Ṭāhir wa l-Tāhir fī Faqī al-Aḥlāf wa-Tarjumāt Kihāyāt l-ʿĀtīf. Composed before the Mirāt, the title indicates the contents.

A short treatise concerning the advantage of reading the Qur’an and of prayer. Printed in Cairo 1322 (1905) and later.

In addition he composed a large number of poems of religious content and generally with long titles, partly preserved in manuscript or only known by name. Two are printed at the end of the Ma‘ṣūmiyyat. Mū’ūṣā ibn Muhāfizāt al-Muḥāfizāt al-Ma‘ṣūmiyya fi Madhī Shuyūkh al-Yaman al-Muṣaffa’ī. 8. Muhāfiz al-Ma‘ṣūmiyya fi Muhāfiz al-Shuyūkh ʿAbd al-Qādir ibn Abī ʿAbdallāh al-Ma‘ṣūmiyya, etc. 9. Muslim al-Ma‘ṣūmiyya. 10. Muslim al-Ma‘ṣūmiyya. 11. Muslim al-Ma‘ṣūmiyya. 12. Muslim al-Ma‘ṣūmiyya. 13. Litterarische Quellen.

In addition several treatises of the contents to which are unknown to me:

(F. Karrenk)

YĀFĪTH, the Saphet of the Bible, is not mentioned in the Qur’an; but the exegesis of the Qur’an and legend are familiar with the names of the sons of Nūḥ: Sām, Hām, Yafrīth (exceptionally Yafrīth: Tabart, i. 222). The Biblical story (Gen. xix. 20–27) of Hām’s sin and punishment and the blessing given to Sām and Yafrīth is known in Muslim legend but it is silent about Noah’s planting the vines and becoming intoxicated. Al-Kasīr’s completely transforms it: in the Ark Nūḥ could not sleep from anxiety; when he came out he fell asleep on Sām’s bosom; the wind revealed his nakedness, Sām and Yafrīth covered him up but Hām laughed so loudly that Nūḥ was awakened; he uttered the following blessings and curse: prophets shall be born descendents of Sām, kings and heroes of Yafrīth and black slaves of Hām. But Hām’s descendents intermarry with Yafrīth’s family; thus the Abyssinians, Hīdī and Sīdī were born to Kābīr b. Hām; the Cópsis are the descendents of the union of Kūh b. Hām with a descendant of Yafrīth. Nūḥ divided the earth among his three sons: Yafrīth received the district of Fasum (Fashum). His descendents are variously given, either exactly as in the Bible (Tabart, i. 317 sqq.) or partly (al-Kasīr, i. 101) or quite differently. He is usually regarded as the ancestor of Yadjiḍah and Maṣraḥi, the Tarks and Khazars, more rarely of the Ṣaṭākalī [q.v.]. Persia and Rūm are sometimes traced to Sām, sometimes to Yafrīth; to Yafrīth also e.g. Cyrus, who killed Belshazzar b. Evilmerodach b. Nebuchadnezzar, and Yerdigirt. Briefly Sām is said to be the father of the Arabs, Yafrīth of Rūm (or Yadjiḍah-Maṣraḥi), Hām the father of the Slavs.

Of the three, Semitic tradition naturally prefers Sām. But Yafrīth is rarely spoken of unfavourably as in Tabart, i. 232 where we are told that nothing good comes from Yafrīth and his descendents are deformed. On the other hand, the 72 languages are divided as follows: 15 to Sām, 18 to Hām and 36 to Yafrīth. He is the blessed son of Nūḥ.

YAFUR B. `ABD AL-KĀDIR (also YAFAR) b. KHAIR AL-HAWLĪ (on the disputed vocalisation of the poem in van Andenak [see Bibl.], p. 234, note 3), founder of the dynasty of Yafurids or ʿHawalādīs who claimed to be descended from the Tulbes, the ancient Himyarite kings. Their ancestral home Shihám, called Shihám ʿAbd al-Muʿtāsir or Shihám Kawftán to distinguish it from other places of the same name, is described by geographers as a well cultivated hilly country. In the caliphate of al-Muʿtāsir, i.e. c. 900–927 (842–863), Yafur began to show his independence of the Abbasid governors who were succeeding one another rapidly; in 927 (861) Yafur had succeeded in driving the government Himyar b. al-Hārith out of Ṣanʿah and extending his rule over the highlands southwards as far as Djanad. The accounts, full of obscurities even in the special histories of the Yaman, show at least one thing clearly: the lack of unity in the dynasty from the first. By 956 (870) Yafur’s son Muḥammad appears as lord of Ṣanʿah, as the acknowledged governor for the caliph Muʿtāsir. He was, however, slain about 979 (889) by his own son Ibrāhīm presumably at the instigation of the aged Yafur himself who had been thrust aside by Muḥammad, but he himself henceforth disappears from history. Ibrāhīm’s son ʿAzād was still lord of Ṣanʿah; but the two-fold Aud law penetrated by the Karmanis and Zaidites raised up new enemies, so that he had only two successors in office. Some younger princes established themselves for a time in the Tahmān and in the mountains round Ṣada.

YAGHMÁ DIJANDÁKI, pseudonym of the Persian poet Abu T-Hájan Rahím b. Hādžih Ibrāhīm Kált. He was born about 1156 (1782) in the village of Khātūn in the oasis of Djanad or Biyāhān in the middle of the central desert of Persia. He began his life as a camel-herd but by the age of 7 his natural gifts had been noticed by the owner of the oasis, Ismāʿil Khān ʿArab-i Ṭamīr whose secretary (mamāliq-bāshā) he ultimately became. His first nom de plume was Maḍjūnūn. In 1216 (1802) Ismāʿil Khān after a rising against the government had to flee to Khurāsān, while Djanad was occupied by Duḥu T-Khātūn, representative of the governor of Simān and Dīmghān. Yaghmā was forcibly conscripted as an ordinary soldier but at Simān his gifts obtained him the post of secretary to the governor. In 1808 as a result of a false charge, the poet
received the bastinado and his property was handed over to be plundered (ydžāh) by the soldiers. The poet’s innocence was proved and he regained his freedom but the act of injustice had embittered him. He then assumed the pen-name of Yaghma and composed a satire, Nafdasīn, on Īlba fi-Ṭīlar Khān, full of coarseness beyond all bounds. Exiled, he wandered in Persia and via Khūzestān and Yezd reached Teheran where fortune showed upon him again, and he gained the good graces of Ḥādīṣī Miʿrāz Aḵ̄āṣī, the first Minister of Muhammad Shāh. Yaghmā was appointed wāzi to the governor of Kūhān but a new satirist (Khrāfāt al-sīmāh) against a family of Kāfān nobles made him ostracise again and he was denounced as a hāfiz from the pulpit of the mosque. His wandering life was resumed. We know that he accompanied Muhammad Shāh to Haráz. He only returned to his native land as an octogenarian to die at Khūr in the 16th Raʾīsī II 1276 (Nov. 16, 1859) and was buried near the tomb of Sahlīd Dīnābādī.

Yaghmā’s works in prose and verse were collected in a diwan and published at Teheran (?) in 1283 (1866) with a preface by Ḥāfīẓī Muḥammad Ḥanīfī. (380 fol. pp.)

Yaghmā practised all varieties of verse and his poems (ghazal, jingles, ḥīf, nafdasīn) show a great mastery of language and form. The most original part—perhaps of his work—is in the field of funeral chants (gafl-bāzīn) which he invented. They were obviously intended for the public lamentations in Muharram [cf. Tāʾlīf]. They are in the form of a maqāṣid in which each line is prolonged by a refrain which the audience is intended to murmur as a spontaneous echo. These maqāṣid are composed in simple and unaffected language. E. G. Burchard, op. cit., iv. 540, mentions the popularity of this genre among the poems of the revolutionary period (1905–1911).

Yaghmā’s most characteristic works however are his slanderous and obscene satires. Berthelot sees in them a revolt against the political and social iniquities of old Persia but the poet never seems to rise above his own personal grievances. If his wit is exercised even at the expense of his benefactor Ḥādīṣī Miʿrāz Aḵ̄āṣī it is because the poet is simply carried away by his satirical humour and too fluent tongue. Yaghmā has not yet anything of the revolutionary. His grievances included fits of pessimism and of piety. The Gojūn Museum at Teheran possesses a Kurān written on a single sheet of cloth (about 8 feet x 4½ feet) and arranged in complex geometrical figures. This is ascribed to Yaghmā (cf. the specimen of his hand in Browne, op. cit., v. 174).

Yaghmā made little use of Arabic and in several of his letters set himself the task of writing pure Persian. He considerably added by his annotations to the dictionary Burāhāf-i ṣāḥib, the manuscript of which is in possession of his grandson.

Bibliography: Rüd. Kâtīb Khān, Maqāṣid al-Famāl, ii. 588; Ethel, in Grundrisse der Persischen Sprache, ii. 374; Browne, A Literary History of Persia, iv. 356–344; Berthelot, Oeuvres persanes (Histoire du), Leningrad 1932, p. 98–99; Habib Yaghmā (a grandson of Yaghmā), Shāh-i Ḥājī Yaghmā, Teheran (c. 1927), first appeared in the periodical Arbaʿa, v. 10, no. 7–9; on p. 31 the author quotes a letter from Yaghmā repudiating the authorship of a large number of poems included by his future editor in the collection. This declaration, however, being made by the poet "in his old days" (dar maʿaṣīra-i muʿīn) to escape the denunciation of sensuality is not very convincing.

Yahūd, the Jews. The message which Muhammad as an "admonisher" brought to his people was believed by him to come from the same source of revelation as the Torah and the Gospel. If the "Arabian version" of the new scriptures was only a confirmation of what preceding "scriptures" taught, the new Prophet was referred for instruction to the Jews and Christians. The idea of the "try of judgment" which continually recurs in the early Meccan period, makes him speak of the 19 guardians of the body (in order to confirm those to whom the scripture was given) of the truth of the Kurān (lxvi, 10–12) from which it may be deduced that Muhammad at the beginning of the first Meccan period was already engaged in trying to win over the Jews. Of them he already knew that they "studied" their scriptures. (lviii. 37. dawrana). It is in keeping with this that he also speaks of the prophets Nūḥ and Muṣā (lxviii. 19), i.e. he knew that Jews and Christians ascribed to Abraham the composition of sacred books (Ṭabīṭ, an. 27; Abīl-dārā, 14; Fāṭirin, " méthana, Vett. Text., Hamburg Text, 1840, p. 1–400). Hebrew expressions are already increasing; e.g. il-tawāmūn = il-tawāmūn, al-mākhsūs for mahākhsī (iii. 54), il-fāṣīdān for fāṣīda (lxviii. 18), güm for "garden", wilmūn for "inhabiter" and masūna (lv. 40), which perhaps corresponds to the Talmudic epithet of God, hamūda ("Ashād-i ashād, 40th.

The desire to produce a book of revelation makes Muhammad at the beginning of the second period frequently speak of "books" in which all that has happened is written down (lv. 43, 51–53). The first reference to the "children of Ishrāf" whom Allah saved from Firʿaww and whom he chose "in his knowledge" in preference to all the world (cf. Amos, i. 11; Aphraates, Huma, 16, 2d. Wright, p. 334) is in Sura xiv. 29–32. The story of Mūṣā in Sura xx, which contains Jewish legends (vs. 41–43, 51, 18) thrice mentions the "children of Ishrāf" (verses 40, 42, 55) who Firʿaww is to release, who received the revelation and of whose sin the calf Mūṣā complains to Hārūn. Sura xxxi: four times mentions the "children of Ishrāf" (verses 16, 21, 59, 197) in connection with the story of Firʿaww and the revelation of the Kurān which "is the right road among the children of Ishrāf" (Calvis. Mund. Ishrāfīn = hašāb al-Ībārīn) shall recognise. Sura xiv. 59 mentions "the descendants of Ibrāhim and Ishrāf" whom Allah guided in the right path and in this connection the wulūt līrahka is put alongside of the revelation as of equal worth. Just as Jews and his people are an "example" in the bad sense for later generations (xlili. 56), Ibn who desired
to be nothing but a servant of Allah is an "example" in a good sense for the "children of Israil" (Allii. 57-59). The conception of God, formulated by Muhammad at this time (xxiii. 117), seems to be of purely Jewish origin and be at this time decisively rejects the idea of Christ being the son of God (Allii. 57-93, xvi. 26). The story of Ishrithm destroying the idolaters (Allii. 82), which is now given in detail (xxiv. 97), is also occasionally found among Christians (see. Abraham, ed. Bonneteac, p. 100), and Philostratus, De harvies, p. 97) is therefore rather of Jewish origin (Gen. x. 35-39). Jewish expressions which now appear are hur (xxv. 19), with which we may compare Alter, ii. 5; Yehele 37. The "children of Israil" according to the revelation granted them are to recognize none except Allah (xxv. 2), according to the scripture revealed to them, they shall twice cause ruin (verse 4) on the earth, and once live in the holy land (verse 106). Perhaps it was also Jews, who at this time wished to induce Muhammad to leave his country (verse 8). According to Muhammad's view however, only the Qur'an could succeed over the disagreements among the "children of Israil" (xxxvi. 78). It is in keeping with this that the story of Mshah in this Seria (xxiv. 27) has a distinctly Jewish stamp as has the story of Sutaiman (verse 17 et seq.; cf. Targum Sham). As late as the beginning of the third Meccan period Muhammad was frequently reminding the "children of Israil" of the revelation granted them through Mshah (xxii. 23, 29), but Allah gave them leaders and preferred them but the Israilites fell out among themselves when the "knowledge" came to them, and now Allah has placed Muhammad over them as arbiter in religious matters (xxiv. 15-17). Jewish expressions in the story of Yisraft which (Seria all) like the story of Nuh (xxi. 27 et seq.) can be proved to be of Jewish origin are beh to for "suffer" (xlii. 65, 72) and Yisraft nikiya for Yisraft hasadabi (xlii. 46). The Hebrew word misgul was probably taken over by Muhammad at this time with the meaning of "story" (xxxix. 24). The Meccans however are still only to dispute in the "best fashion" with the "people of the scriptures" to whom they are to closely bound as regards religion (xxxvi. 45). Allah has indeed granted the "children of Israil" a safe habitation, provided them with all good things (x. 93) and gives them the "sevenBasel, the east and the west of the land" (vii. 133). Muhammad however now calls himself the nasir, the prophet of the ummat Nabi-Salama, whose coming was foretold by Tora and Gospel. He now considers the food prohibitions of the Jews as a punishment for their rebellion (vi. 147). The Medina period made Muhammad more acquainted with Jews and Jewish conditions and he gradually drew the barriers between the "peoples of the book" and the new community of Islam. Muhammad then turned to the "children of Israil" with the demand that they should keep their bond with Allah (ii. 38-93), the conscience of their having been chosen, remember they were saved from the hand of Fir'awn (ii. 48). The Jews, if they only believe in Allah and the last judgment, are still mentioned along with beholding Christians and Sabaeans (li. 59) but we already have it indicated that their scriptures are forgeries (li. 70). They write down with their own hands and say: "it is from Allah" (lii. 73). But in reality there are uneducated people among them who do not know their scriptures at all (xxxvii). The punishment of hell which must overtake them is regarded by them as being only temporary (lii. 74). The "children of Israil" have broken their bond with Allah (lii. 77). They drive one another out of the country but on the other hand ransom their prisoners (li. 79). Mockingly they say to themselves: "our hearts are unmanculated" (li. 82). They made ambiguous speeches who against their will they had to accept the Tora (lii. 87: "Samul Na-awais instead of shabrad Na-awais"). They cling to life and many would like to live a thousand years. Instead of the mocking vayt with which they address the prophets, they are to speak clearly aqalana (li. 98). At this time many Jewish ideas came to Muhammad, e.g. sahfaa T-dineel for aseyt doom (lii. 28, 78) and khalid for h'leel Na-khli (li. 96). The Jews believe, the do the Christians, that they alone will enter Paradise, without being able to prove it (li. 105). From this time onwards Muhammad calls the Jews of his time al-Yahud, a term by which they were already known before his time (Allii. 67, 118, 216, 217). Levil. 73; Urwa, xli. 13) uses the root khal, while by "children of Israil" he means their Old Testament ancestors. Muhammad noticed how Jews and Christians reproached each other with the worthlessness of their religion (li. 107) and he sees that neither creed will be satisfied with him until he follows their religion (li. 114). But they are not to profess Judaism or Christianity but only the religion of Israil, which professed the true religion (li. 129). But neither Israil, Isma'il, Iska, Ya'qub nor the tribes were Jews or Christians (li. 134). The Jews now refuse to follow on the path of Allah, that is, to fight in battle for him, and the "children of Israil" acted similarly when they asked for a king after the death of Mshah (li. 247). Yet Allah had always given the "children of Israil" many clear signs (li. 207). An expression taken over from the Jews at this time is fardoon for "distinction" (li. 181). Muhammad had heard the Jews boasting of their scriptures although in his opinion they often did not know them (lii. 73). But the "same" for those who are laden with the Torah and will not carry it is that of an "ass carrying books" (lii. 8: faham war et-torin). The Jews should desire death rather than assert they are the "friends of Allah" (lxii. 6; cf. 1. Chr. xvi. 13 et seq.) Tora and Gospel are only confirmed by the Qur'an which is to be regarded as fardoon (li. 2). Isram has already taught the children of Israil Tora and Gospel "book" and "wisdom" (lii. 43) and Muhammad is the confirmer of the Torah (lii. 44). The dispute about the millata Israilitan is therefore meaningless. Tora and Gospel were only revealed after it (liii. 58) and Israim was neither Jew nor Christian but a Muslim (lii. 60). His real followers are Muhammad and his community (lii. 61). The reference is obviously to the Jews in Seria iii. 69, where there is mention of those among the "people of the scripture" who will not readily give back property entrusted to them, saying "there is no obligation upon us towards the unnasikal (unnasikal Na-Salama). It is they also who are represented by Muhammad as relying upon scriptures which do not belong to the "scripture" at all, the reference is probably to the so-called "oral Tora" (T-din ne-akal lii. 78). In reality the prophets have
already solemnly pledged themselves to recognise the "apostle" who will one day appear (iii. 75), and compared with the Millerite breach all previous revolts are alike (iii. 78). In the dispute with the "children of Israël" regarding what is forbidden or permitted, Muḥammad actually challenges them: "Bring the Tora and read it if you are speaking the truth" (iii. 87). The Jews, however, distort the sense of the words of the scriptures (iv. 48), and if the "people of the scripture" demand from Muḥammad as a sign of his mission that he should bring a book down from heaven (iv. 152) their ancestors once asked Musā to do an even greater thing: as proof of his mission (ibid.). The Jews required Muḥammad to bring back to life one of his followers; they left Allah's way and practiced magic although it was forbidden them (iv. 158—159). Muḥammad however holds out prospect of a great reward to those among them who believe in Allāh, the last judgment and in the new mission (iv. 160). In this period falls the fighting between Muḥammad and the Jewish tribes in which, in spite of their strongholds, numbers of them were forced to emigrate (ix. 2. 336), or were taken prisoners (xxxii. 28). Their land became Muḥammad's booty (xxxii. 27). After he had laid down the boundaries between the new Islaam and the "people of the scripture", he mentions as enemies of the believers Jews, Christians, Saracens, Magians and polytheists (xxxii. 17). Muḥammad in this period attributes hateful things to the Jews. They worship 'Usir as "Allah's son" (ix. 30), cf. Ez. xvi. 9, 14, worship their rabbis as the Christians do their monks along with Allāh, who want to "exterminate Allāh's light with their mouth" (ix. 32). Jews and Christians are wrong in saying "we are the children of Allāh and his favorites" (v. 21), since Allāh punishes them for their sins (ibid.). The Jews to Muḥammad are "listeners to liars and listeners to others" (v. 45), who falsify the words of their scriptures (ibid.) and quote their Tora against Muḥammad's mission (v. 47). But all the apostles of God, who ever legislated truthfully according to the Tora, the prophets, rabbis and teachers, were Muslims (v. 48). Believers should therefore not accept the Jews and Christians as friends (v. 36). The Jews wrongly believe "that Allāh's hand is tied" (v. 69). Muḥammad finally turns to the "people of the scripture" and assures them that they have "nothing to stand upon" if they do not recognise the revelation thrice given in the Tora, in the Gospel and in the Qur'ān (v. 72). But the children of Israël have always followed the apostles of falsehood (v. 74), even to them was only Allāh's servant (v. 76), and the infidels among them were once cursed by Dawūd (v. 82). Muḥammad finally finds that the Jews and idolators are the greatest enemies of the believers, while the Christians are friendly to Muḥammad and his community (v. 85). — The Hebrew expressions and terms used by Muḥammad in the late Meccan period are: ṣaddās from the Jewish liturgical ṣaddās (ix. 23); ṣaddās from ṣaddās (xv. 35); ṣeḥārat for ṣeḥārat (ix. 31, 34); ṣeḥārat for ṣeḥārat (xv. 35); ṣeḥārat for ṣeḥārat (v. 49, 99); ṣeḥārat for ṣeḥārat (v. 48, 68); and frequently ṣeḥārat for ṣeḥārat (iv. 47, 48). — See also the article Dhimma.

YAHUDI. [See Mithridates.]

YAHYÂ, John the Baptist. This prophet plays a fairly prominent part in the Qur'ān, which mentions him with Jesus, Elijah and other prophets among the just persons who serve as arguments for the oneness of God (Sūra vi. 83). The history in the Gospels of his miraculous birth is twice given (iii. 33—36 and xix. 1 f); God gives him to his parents Zacharias and Elisabeth in spite of their years. There is a kind of announcement to Zacharias: "O Zacharias, we announce a son to thee; his name shall be Yahyâ; no one has borne this name before him" (xix. 7). Yahyâ speaks in his cradle and, like Jesus, has wisdom from his childhood. God gives him the title of lord (miyâd), which according to the commentators means merciful. His characteristic qualities are gentleness and humility. In the plot discussion it is the phrasing in Sūra xix. 13: "O Yahyâ, take the book with steadfastness", which seems to mean thatMuḥammad thought that John had received a revealed book. The commentators, however, do not admit this meaning; they are of the opinion that the book mentioned here is the Tora, the Pentateuch, and that Yahyâ did not receive a special revelation but had as his mission only to "confirm the word of God" (iii. 34). Zarnakhshar simply says that God gave him understanding of the Tora. — The Qur'ān does not mention his role of Baptist, and does not tell the story of his death.

The legend of John the Baptist among the Arabs presents different features according to different authors. Talari says he was the first to believe in Jesus; he makes him survive Jesus and says that he was put to death at the request of Herodias, niece of Herod or daughter of his wife, for having said to the king that he could not marry her. A curious episode developed at length by Talari, is that of the bailing of the blood of the decapitated Baptist. The blood boiled not only in the dish on which the head is presented but on the tomb of the martyred prophet and can only be restored to its normal condition after great calamities. The blood and the decapitated head speak.—The legend is evidently in some way connected with the Nespalian cult of the blood of St. Januarius.

Marzûf relates of Elizabeth, John's mother, the story of the flight into Egypt which the Gospel tells of Mary. Elisabeth fled with her infant son to escape the wrath of a king. John sent to a prophet to the Jews by them and put to death. Later, his "blood" is avenged by a king named Kherdîsh who massacre many
of the Jews. Mas'udi knows the episode of the baptism of Jesus by John, the scene of which he puts in the Lake of Tiberias, or in the Jordan. Al-Biruni mentions among the festivals of the Syrian calendar that "bathing" of John the Baptist on the 29th of the month Xiib, and he records that, according to al-Harawi, there could be seen in front of the "Pillars Gate" in Jerusalem a pile of stones said to have been passed by the passers-by to restore John's blood to a normal state, but the blood would not cease flowing and continuing to do so until a Persian king had sent a general who put many men to death on the prophet's grave. Al-Biruni thinks, like Tabari, that this general was an Aghlabian.

At the present day there is still shown a tomb of John the Baptist in the great mosque of Damascus, where is also a tomb of Zacharias mentioned by the Batuflis.

As to the "Christians of St. John" or Mandaeans, the Kur'an and the Arab writers hardly know them; if they do refer to them, it is not by those names but as "Sabia" [q.v.]. They regard them as a sect intermediating between the Jews and the Christians and admit that they have a "book"; they do not however give them the title of their prophet but Noah.

YAHYA, a Turkish poet of Albanian origin of the time of Soliman. A scion of the noble north Albanian family of Dakagin, to which also belonged the Turkish poet Dokagin-zade Almud Bey, Yahya was taken under the droghirna for the Janissaries and brought to Stamboul. He himself speaks in his Gemedine-i Riz of his being conscripted in this way, a thing that was only to bring him good and when an old man he still recalls his Albanian origin. In Stamboul he was put in the corps of "Adjem-Oghlan, in which officers for the Janissaries and Spahis were trained and he attained the rank of Vaya Bashi and Bilbil Bashi of the Spahis. Sahhâ al-Din, the Kâti of the Janissaries, soon recognised his poetic gifts and allowed him a great deal of freedom for his literary inclinations. Later he gained access to the intellectual coteries of Tim Kemal, Djâf Yelkeni, Kadi Efendi and to those of the two great Macedonians Ibrahim Pasha and Iskender Celebi. When the latter fell into disgrace the poet boldly intervened for him with the grand visier Ibrahim but could not save him.

Yahya was a bitter enemy of the court poet Khayali Bey whom he had first encountered in 945 (1539) and with whom he had a poetical feud as well as with Khatti. He wrote a zaptia against Khayali, which he gave to Soliman on a Persian campaign and it so delighted the grand visier Rustem Pasha, the declared enemy of all poets, simply because of the contempt poured on Kayali in it, that he made Yahya administrator of several foundations in Stamboul and Damascus. But when Yahya, in his usual fearless fashion endeavoured to save a life of prince Magafa, who was popular with army and people alike and felt a victim to the intrigues of the grand visier and the sultan Khurram, but without success, and then wrote an elegy on the prince after his execution which was sent on every one's lips, Rustem did all he could to get Yahya executed but only succeeded in depriving him of his offices. When the grand visier summenced him and prepared a trap with the question, how could he lament a man condemned by the Pasha, he is said to have replied with great presence of mind that he condemned him with the Pasha but loved him like the people. When his enemy Rustem died, Yahya would not lose the opportunity of writing a satirical lament upon him.

The poet later retired to a large fief (ülâmi) of 27,000 ağahe annual income, which he had at Lmrâ in the sandjak of Zvornik in Bosnia. Here the octogenarian worked at the collection of his dîwân, at which the historian Ali found him engaged in 982 (1573), a year before Yahya's death (according to others he did not die till 986 or 990). After his death Ali was given the preface to the dîwân to examine, in keeping with a wish of the deceased.

Besides a dîwân of his ghâzals which does not rise above the average, Yahya left five considerable poems, which placed him beside the great knickers. The five titles are Sahhâ al-Din, a pure love; 4 MSS in Vienna, Fligel, No. 688-691; Yahya ur-Emad (written on the pilgrimage to Mecca), Kilâbî-i Ujûl (or Usâhînâme), Gemedine-i Riz (mystical; on this the poet Nûru Akseki wrote a dîwân of 2,000 verses entitled Sahhâh Sâyi'ah, Gemedine-i Emâr. These are also attributed to him as Nûr al-Niyâs and an unfinished Usâhînâme in 2,000 verses). The three last parts of the ghames are not romances but consist of moral aphorisms on morality and rules of life, etc. The two first which were published at Stamboul in 1284 have only the title in common with the works of Hifâl and Djâmî of the same name, and, besides, treat their subjects in quite an individual and independent fashion. Yahya himself on one occasion says that he has no wish to eat ha'zâm from the dead Persians. This independence along with his frankness and courage is the most notable trait of our Albanian and makes him an attractive figure to us. These qualities are also in keeping with his bravery as a soldier which was celebrated, and which he displayed for example in the fighting at Temesvar, and the Turkish literary historians mention him as representative of a type which admirably combined the sword with the pen. For him the frequently much abused droghirna was the cause of his rise to fame in these days when birth counted for nothing and good luck and particularly not mean anything.

YAHYA b. 'ALI b. YAHYA b. 'ABD MANSUR b. MUKTAFI, 'ABD AHMAD, was one of the best known theorists of music of the old Arabian (classical) school. He belonged to a learned family who were authors, several of whom wrote on, or were interested in music. His grandfather (d. c. 831) was the famous astronomer at the court of al-Ma'mun [q.v.]. His father (d. 886) had "particular skill in music (ghānīn)" says Ibn Khallikan, writing in his magnificent biographical dictionary of Arabian scholars (al-Muwafaq) [q.v.], and wrote a book entitled Kitāb 'Abhānī fa Ḥabībī fa Ammīnī.[q. v.]. That 'Ali was also acquainted with the theory of music is evident from the fact that so eminent a theorist as Ḥabīb b. Khuras [q.v.] consulted him on the ʾīlim al-muḥāfaqī. His uncle, Muḥammad, was also commended for his "knowledge of music (ghānīn)". Yahya b. 'Ali was born in the year 850, and, like his father, became a "boon companion" of the caliph, beginning this career in the service of al-Muwafaq, the brother of the Caliph al-Mu'tamid [q.v.]. He is praised by most biographers on account of his knowledge of the literature and sciences of the Greeks (awā'il). This evidently gave him his pronounced taste for philosophy, in which sphere he shone as an exponent of the Mu'izzil school. He was also a gifted poet and an accepted theorist of music. He died in the year 912.

According to the Fihrīst, the best known book of Yahya was the Kitāb al-ʿAbhānī ("Book of the Illuminating"), which dealt with the poets who were half-castes. He left it unfinished, but his son completed it. Specimens of his poetry delivered before the caliph al-Mu'tamid [q.v.] and al-Muktafi [q.v.] have been preserved by al-Mu'taṣir. Abu 'l-Farrāj al-ʿAṣrārī [q.v.] quotes a treatise on music by Yahya entitled the Kitāb al-Naḡmān ("Book of Melodies [or Notes]"") in an authoritative sort of way. This is probably the work that has come down to us in the solitary example in the British Museum bearing the title: Risāla fī l-Muṣībī (Treatise concerning Music). This latter is, with the Risāla fi ḡuṣna al-awṣāyins al-Muṣībī of al-Kindī in the Staatsbibliothek, Berlin, the only work that throws any light on the music theory of the old Arabian (classical) school, the technical phrasing of which crowds the pages of the Kitāb al-Aṣrārī of Abu 'l-Farrāj. This treatise, which is of the utmost importance, is being edited by the present writer, and will form a volume of his Collection of Oriental Writers on Music. In its pages will be found a complete explanation of the so-called "Finger Modes" (ghusnî), and their "Courses" (mudāfi'), and divisions (farrūkh), in which the melodies (awṣāma) of the various vocal pieces (ṣūrūt) were composed.

His son, Abu 'l-Hasan 'Abd, a ḍabā (lawyer) of the school of Abu Da'far al-Tabari [q.v.], was famed as a writer. A nephew, 'Ali b. Ḥārith (d. 965), wrote a Risāla fī l-Farrāj bīn Ḥabībī b. al-Muṣībī wa-l-ʿAbhānī al-Muṣībī fī l-Aṣrārī (Concerning the Difference between Ikhtībī, il-Habīb and ʿIshāq al-Muṣībī concerning Music), whilst a copy of the latter compiled a Kitāb Muḥāfaqī fī l-ʿAṣrārī (Book of Choice Songs).

YAHYA b. KHALID, a Barmakid. In the 'Abbasid caliphate we find Yahya already prominent in the reign of al-Mu'tadid, who in 158 (774-775) appointed him governor of Al-Jaharbadjan or, according to another account, Armenia. Three years later, the caliph al-Mahdi appointed him tutor to his son, the young Harun, and in 163 (779-780) the latter was appointed governor of the western half of the empire, i.e. of all the provinces west of the Euphrates, with the addition of Armenia and Al-Jaharbadjan, and Yahya was put at the head of his chancellery. According to al-Mahdi's original arrangements, his older son Mi'ad was to succeed him on the throne and Harun only to be considered in the second line of succession. Shortly before his death however, he decided to make a change in favour of Harun. Mi'ad however was not satisfied; after the death of al-Mahdi in 169 (Aug. 785), Yahya gave his protege Harun the wise advice to retire voluntarily and pay homage to his brother whereupon Mi'ad was acknowledged as caliph with the name al-Hadi. Nevertheless relations between the latter and Yahya were very strained. The new caliph was thinking of cutting Harun completely out of the succession and having homage paid to a known son Dja'far as the successor designate. This plan however met with vigorous opposition from Yahya which went so far that al-Hadi had him imprisoned. According to the usual story, he was kept in prison until the caliph died in Kafir 1, 170 (Sept. 786). When Harun had ascended the throne, he appointed Yahya as vizier with unlimited power in all branches of the government. Yahya's period of office lasted seventeen years, then the catastrophe—probably long planned—came like a flash of lightning from a clear sky. At the end of Mulhammad or the first night of Safar 187 (Jan. 23, 803) or according to another statement, probably due to a copyist's error, 188, the caliph had his till then practically all-powerful vassal Dja'far b. Yahya suddenly executed without legal proceedings. Soon afterwards Yahya and his other sons were arrested and their property confiscated. Yahya was kept in prison till his death on the 3rd Mulhammad 190 (Nov. 29, 805) in al-Rafid at the age of 70 (G 74). Cf. the article BARMAKI.

(K. V. Zettersteen)
YAKUB, the patriarch, the son of Isaac in the Bible, is in the early Meckan Suras (xxi. 50; xxxi. 72; xxix. 42) the brother of Ishmael, son of Ishmael; the genealogy: Ishmael, Isaac, Ishmael, Yakub, the (12) tribes (b. 1390, 1343), is more true to the Bible. Yakub is numbered among the Prophets (xiv. 50). He is once or twice mentioned in the Yusa Sura: Yakub orders his son not to go through a town (xii. 99); he becomes blind through sorrow and regains his sight when Joseph's coat touches his eye (xii. 93, 94).

Post-Koranic legend relates that Yakub and Esau fought already in their mother's womb, that Yakub was to be born first but to share his mother took second place. Yakub was really entitled to the rights of the first-born (Tabari, 1, 350). Yakub's journey to Haran is mentioned and his stay with Laban are told as in the Bible but in several versions Yakub only marries Rachels after Laban's death. The Yusa Sura receives many embellishments. On hearing that a wolf has torn Yusa to pieces, Yakub wishes to see the wolf; the brothers bring the first wolf they can find, but this beast mauls itself to pieces and exposes its dent. Many reasons are given as to why Yahweh has to suffer. Yakub writes a letter to the king of Egypt. After eighty years of separation, Yakub recognizes a distance of 50 parasangs the heavenly sum of Yusa. The beggar is known according to which, from and in which place, in Markophia, then to meet the blessing, then shall not meet the curse, the curse. (Yusa, 1, 339, very slightly 338; late parallel in Gerber, Legenda der Propheten, p. 374, 442).

YAKUB, B. AL-LAITH. [See Saffah.] YAKUB BEY. [See Gursheh Othman.] AL-YAKUBI AHMAD B. ABU YAKUB B. IBN ISMA'IL AL-ARTABAN, an Arab historian and geographer, a descendant of the YakaB, a Semite and one of the seven nations of the Levant, as well as a number of other Arab tribes. He was the son of 12 years old, and later of his father, the Caliph Al-Mansur, after whom the family takes the name Al-Atrash. Like his ancestor, he as a servant of the Caliph, held his life for the protection which he gave to the Caliph Al-Mansur. After his father's death he abandoned the Al-Mansur and was a student at the University of Al-Mansur. In 1902, he went to the service of the Caliph Al-Mansur, and when he returned, he became a student at the University of Al-Mansur. He was a student at the University of Al-Mansur, where he wrote his history of the world, which he brought down to the year 259 (872) while in the east. It begins with the history of the Patriarchs of Israel, and then goes on to the story of the Messiah and the Apostles, of the rulers of Syria, Amurath and Babylonia, the Indians, Greeks and Romans, Persians, Eastern peoples including the Turks, Chinese, Egyptians, Berbers, Abyssinians, and Greeks. The second part, almost twice as long, begins with the birth of the Prophecy, and is the history of the year 259 down to 259 (872).Besides the 259th anniversary, which he used to mention for himself, he mentions his sources and his account of contemporary events is confined to very few brief references. In addition to the Cambridge MS. from which M. Th. Houtmans edited the work (Lwa'di, see biographical historical 2, vol., Leyden 1883), another is now known in Top Kapu (R.S. iv. 708); cf. M. J. de Googe, Uber den Text und den Stand der Abhandlung, in Travaux de la Soc. de St.-Petersburg 1887, ii. 133-166; M. Klauser, Der Aussage aus der Evangelien bei dem osmotischen Jahai in Furtwangen, zur Einheitsrichtung der Bibeltexte, 1885; cf. Uber die Aussagen aus griechischen Schriften.
After the fall of the Ṭabūrīs, Yaḥyā Ṭubullū went to Egypt where he died in 284/897. In 278/981 he wrote there his geographical work Kitāb al-Buldān, for which he had been collecting material by research in literature and making enquiries of travellers. His interests are predominantly statistical and topographical; he gives the planners only roughly in days' journeys and pays special weight on giving the yields of taxation. He begins with a detailed description of Baghdād and Šāmrār, then goes on to Iran and Tūrān with northern Afghanistan, Kufta with west and south Arabia follow, then Baṣra with Central Arabia, but this part with the description of India, China and the Byzantine Empire is now lost. The description of Syria with its military colonies was followed by that of Egypt, Nubia and the Maghrib. The concluding part is a section on the governors of Siyūqān down to the death of al-Munṣūr, with which this province lost its independence and became amalgamated with Khurāsān, and of Khurāsān to the end of the Tāhrids. His style is simple and his text free from the fables so beloved by the geographers of the time. See M. J. de Goeje, Specimen e litteris orientalibus distinctae descriptionum al-Maghribīorum santonum et literarum regionum al-Jaṣṣaḥ, Leyden 1860; Kitāb al-Buldān mutsara ʿAbd al-Malik bin ʿAbd al-Qaḥṣah bi-Ṭubullū al-Khitāb fi-Ṭubullū al-Jaṣṣaḥ, ed. M. J. de Goeje, B. G. A. vii., ii, 1892. His works quoted on the Geography of the Byzantine Empire and on the history of the conquest of Africa are lost.

Yaḥyā al-Rumī, or, according to a genealogy which he assumed later, Shihāb al-Dīn Abū ʿAbd Allāh Yaḥyā bin Abū ʿAbd Allāh al-Ramāwī, the famous Arab encyclopedist. Born in 757/1359 in Byzantine territory of non-Arab parents (hence his ethnic al-Rumī), he was captured when a boy, sold as a slave in Bagdad and purchased by a certain ʿAskar b. ʿAbd al-Rahmān, a merchant in the capital of the caliphs, ʿAskar gave Yaḥyā, who added to his name his master's ethnic, a good education and a few years later sent him to trade in the Persian Gulf in the island of Kīshān (q.v.), Umān and Syria. Maimaitiri in 596/1199 and estranged for a time from ʿAskar, Yaḥyā took to copying for a living, attended the lectures of the grammarians in al-Ḫubšt (d. 616 = 1219), became reconciled with his old master and resumed his trading journeys for him, settled in Bagdad on his death and became a bookseller. In 610/1215 however, he again resumed his life of travel. We now find him in Tabrīz, next year in Syria and Egypt, and in 612/1215 at Damascus again, where he was nearly lynched for his anti-ʿAlī views but he escaped to Aleppo, Mopsel, Kufta and Marv. He spent nearly 2 years in this town, rantacik the libraries. He now began to put together the material for his principal books. At the end of 615 (1218) he left his studious residence and visited Ḥārār (the modern Ḥārār). Hearing however of the coming of the Mongol hordes led by Čiṅgī-Ḵān in 616 (1219) he fled hurriedly, abandoning all his property, to Mopsel where he arrived completely destitute in Raḏāb 617 (Sept. 1220). He wrote a

the Turks so long as the latter held firm control of the Yemen.

2. Name of a Mkhīlīf in the Yemen, which included the sphere of influence of the tribe of Yām.

3. Name of a mountain in the Yemen Dīwāl between the wādīs of Ḳhārid and al-Verja.

(Adolf Grohmann)

YAMAK. See JANIBAHRAS.

al-YAMAMA, a district in Central Arabia, which was originally called Dīwāt ("the bottom of a valley"). The name of Yamama is said to go back to the seven Sabītā al-Yamama, who played a prominent part in the story of the decline of the tribes of Tasm and Dīwāt. The district was first of all called after her Dīwāt al-Yamama, then simply al-Yamama. The statement that al-Yamama lies on the long ridge of the Ṭārīq, to which belongs its chief wādī Ṭārīq, which runs through the district, shows, like the long list of place-names and not least the very considerable yield in taxation, 510,000 dinars according to Kudāma b. Dīfār, that it must have been an extensive area, which included a considerable portion of the range now called Dīwīl Tūwaḥ. The boundaries given by Jomard, who understands the statements of Ḳarīf and Abu l-Fida’i to mean that al-Yamama included the provinces of al-Ṭārīq and al-Khuraj, are probably too extensive. It is not however possible to define exactly the limits of this region which was very important in ancient Arabia; the Dāftār however was the frontier on the east.

The name al-Yamama is now given to an oasis in the Wādī Ḥaḍramawt on the southeastern slope of the Dīwīl Tūwaḥ, which consists of a palm-grove, a mile square with four villages, in front of which lies an extensive area covered with the ruins of palaces and dwelling-houses. Herefore seeks to locate the ancient Yamama in the region formed by the Wādīs Ḥanifa and Nīsāh. Its first capital was al-Khīrīma in the Wādī ʿIrāq (or Wādī Ḥanifa), later in the second half of the fourth century A. H. the market town of Ḥaḍr al-Yamama or al-Ḥaḍrj, which was however already in ruins in the time of Ḳurān. The following places in it are also mentioned:

Orientaux, preface to the Geographie d’Abdnalla (Paris 1848), i. cxxxv. 260; in J. d. I. 1860; Het, dichter, geograaf, Quellen in ‘Iṣrāʾ il-ʾAqvāl, Worterbuch (Strassburg 1898); Brockelmann, G. A., i. 479—481; Huart, Litt. arabe, p. 301, 303. (R. Blachere)

YAKUT-AL-MUSTAṢSIM, DIRMĀL-AL-DIN ABDUL MAJID B. ḲABīR AL-ĆALĪF, a famous calligrapher, was a slave of the last ‘Abbasīd caliph of Bagdād, al-Mustaṣsim, who had brought up and educated, whence his surname. His origin is unknown; some say he was a Greek from Amsīa; he was probably carried off on a razia while still very young. He was a cadi. He died at Bagdād in 658 (1260) at the age of 80 (lunar years) which would make him born in 615 (1219). The continuator of Ibn al-Mawlawī, he was called ‘Iṣrāʾ il-ʾAqvāl, "model of calligraphers", and was head of a school; he also wrote in prose and verse; he had by him a Kitāb Akhkhār, an anthology written in 662 (1264) and the Afī‘īṣ al-Huṣainī, a collection of aphorisms (printed at Constantine in 1300). Kurānī, said to be copied by him, are in the following libraries: St. Sofia, 654 (1260); Hamdīyya türbe at Bīgha-Kop (Constantinople, 662 (1264); Cairo (Moritz, Ns. 80); Paris, Bibliothèque Nationale, fonds arabe, Ns. 6082; Fesṭel Collection, 681 (1282) etc.

Bibliography: Halib Emdali, Kaṣīf a-Shaṭṭār, Constantinople 1805, p. 31; Mirāt Senāghlī, Imām al-Fadlī, Tabestan 1291, p. 3 sqq. (not paginated); C. Manfuha, Wahba, al-'Awja, Ghubara, Muhahhamah, al-Ammiriya, Farahin, al-Haddar, Dahik, Tuddib, al-Milkub, al-Sal, Salamia, al-Kuriaya, al-Majdja, Ma'wak and al-Nebb. Al-Khijrma is described as an important town, smaller than al-Madina, but rich in palms and fruit-trees. Among the crops the most important was wheat, which had been sent to the caliph's table (it was known as Bahja' al-Yamania), the harvest also excellent: fruit and dates. The beef was well flavoured as there were fine pastures and the drinking-water excellent. A speciality of al-Yamania was the slave girls who fetched high prices for their complexion — up to as much as 100,000 dirhams.

In the pre-Islamic period al-Yamania was inhabited by the Qudarsi, who had their strongholds in the Idr valley and along with the Tam whose army they destroyed here, were under Himyarite rule. After their defeat, which South Arabian legend narrates fully, we find the Banu Hanifa b. Lufijm who, after being almost annihilated in the battle against the rival prophet Musallima b. Yumama (12 A.H.) submitted to Islam. At a later period al-Yamania was settled by the Numair b. 'Amir b. Abi Jafila b. Ya'fur as well as by the Tami and their clients of other tribes. At this present day the district belongs to the Wahhabite kingdom, has about 2,000 inhabitants and has sunk to a low level. Philby no doubt rightly ascribes the destruction of the old cultivated land to a disastrous flood in the valley of the Hanifa.

al-Yaman, formerly a province, now an imamate in the southwest of the Arabian peninsula. The name is variously explained; some say it was given because the Yaman lies to the right of the Ka'ba or to the right of the sun (al-Bakri, 1556), others because Yaqub b. 'Abir and his companions turned right on separating from the other Arab (B.G.A., v. 331; Yaqubi, iv. 1034), while others again derive the name from the eponymous hero Yaman b. Kahjum (cf. al-Wasi'i, p. 281). Sprenger thinks the Greeks and Romans translated Teman and Yaman by "sana'amon" and "felix" and included under Arabia Felix all the land south of Shattan. This coincides roughly with the delimitation of the Yaman attributed to Mutjammad, who is said to have climbed a mound at Tabbik and pointing to the north said "All this is al-Sham" and turning to the south "All this is al-Yaman" (Sprenger, p. 9).

The greatest extension of the Yaman to the north actually corresponds very well with the boundary of Arabia Felix which, according to Ptolemy, vi. 7, 13 sq., begins about 9 miles south of al-'Aqaba and the northern frontier of which runs from there northwards to the foot of the Sabara range and then turning east, crossing the northern edge of the desert of al-Nafud, ends at al-Najd. Al-Wasi'i (p. 282) also represents al-Yaman as bounded in the east by the Persian Gulf, in the south by the Arabian Sea, in the west by the Red Sea and in the north by the Gulf of Kalma, the Syrian desert and the Irak. The frontiers given by the Arab geographers are considerably narrower. According to Ibn Khardajibb (p. 135, 189) and Idris (p. 143 sq.), the northern frontier of the Yaman ends at the tree called Talat b. al-Malik between al-Muhlijia and Sarum Riff south of Mecca. According to others, it begins below Ta'if, while al-A'ma' (Yaqubi, iv. 1035) makes the northern boundary run from 'Omamah to Najdaj, Hamdani (p. 51), Yaqubi, iv. 1035) more accurately lays it through Yahirin, south of al-Yamania, via al-Hudajara, Ta'if, Djarraj and Kuras to the coast towards Kudummun near Hamiia (175 sq.). Ibn Hawrak (p. 18) who includes two thirds of the Diyaj al-'Arab in the Yaman, puts the northern limit at al-Sirraj, Yalamam, al-Ta'll and makes it run through the highlands to the Persian Gulf; this makes it intelligible why some geographers even include Mecca in the Yaman Thais; towards the east the Yaman extends over Hadramout, al-Shiyar (Mahar), Zafar (Dolfar); even 'Omamah is sometimes included in the Yaman when it is not (as e.g. in Malat, 68) made a separate province. The whole of this extensive territory, which al-Dinwati (p. 216) divides into 24 administrative districts (mirahaf), was in the early days of Islam divided into three: San'a', al-Djanad and Hadramout or Zafar under separate governors. The taxes under the 'Abbsids yielded 600,000 dirhams (B.G.A., iv. 144, 249, 254). After the Yaman broke off from the 'Abbsid empire its area diminished considerably and its administrative divisions varied substantially; sometimes the Sunn Tihama with its capital Zabid was actually independent of the Zaidi highlands with San'a' as capital. When C. Niebuhr travelled in the Yaman he ascertained that the following districts were independent:
1. Yaman in the narrower sense with San'a';
2. 'A'dan with its hinterland;
3. Kawakabah;
4. Hadsah and Bakl;
5. Abi 'Arab; 6. the lands lying between this and the Hidjira; 7. Khaswah;

The geographical definition of the Yaman becomes still narrower under Turkish rule. The wilayet according to the provincial law of 15th Rabii II, 1331 comprised the sandjak of San'a' with the kads of Haraz, Kawakabah, Anis, Hadsah, Jabbars, Yarm, Reba and Amara, the sandjak of al-Hudaydah with the kads of Zabid, Luhiyah, Zaidiya, Jabal Rimah, Hadjir, B't al-Fakhir and Bakil, and the sandjak of Yaf. With the kads of Tabuk, 'Udaim, Ka'bah, Hadjirwah, Makhad and Kasima. In the north it was extended towards 18° N. Lat. by the independent districts of Abi 'Arab, Kasaj, Wada'a, Bal'd Yaman (Najdaj), in the east by the Halad Khaf, Baraj, the oasis of Khabb, al-Djawf with Arlub and Nihm and also Mrib, Khabilin, Harb, Barijan and Yafi as well as the Fuji region, and
in the south by the historical 'Aden, which is under the protectorate of England and since the Anglo-Turkish frontier agreement of 1902-1905 has ambitious to push its boundary northwards, which tendency has been repeatedly opposed by the Muslim Yezidis b. Hadid & Elimi in recent years; its kingdom is bounded in the north by the Jaffa and Nabk, and in the east at about 45° Long. by Hajdomeh which the town regards as within his sphere of influence. The official Turkish estimate of the area of the province of Yaman is 191,100 sq.km, but both higher and lower estimates are given. If we include the hinterland, which is the land of Kainari, Perin, Sokotra and the Yemeni mountains which belong to India (Bombay), we get roughly 213,000 sq.km. The estimate of the population vary quite as much. The English figure is 1,000,000 for the Yemeni, and 100,000 for the protectorate of 'Aden. E. Glaser (Zögervolg, ill., 1846, p. 35) gives the Turkish Yemeni 1,000,000 inhabitants, at war 8,500,000. The population of the Yemen is, apart from about 60,000 Jews and a few Christians, and Persians, entirely Muslim, but of different schools. The highlands between 35°, Yaman and 'Alhaida and the whole of the east including al-Madina are Zaidi, the Yemani, Ta'iz and Hajdomeh, Sharii. The Zaidiyya includes among its followers the musulmans of Nasir, Hamdan, Ta'iz, Hara, Shari and the neighborhood of Yaman. The Yemeni east is followed in the vicinity of the Wadi阿拉伯.

The anthropological classification of the population is not yet settled. There is undoubtedly a strong Hamitic element of the same type as the North Africans, alongside of which the Melrophophalans Semitic race of southern Arabia and the short and broad, large-nosed race of Nabas Asia, nor to mention a Negro element, form a strong component in the racial mixture of South Arabia, at the basis of which there is probably an ancient pigmy people.

The sharp distinction between the low lying coasts and the highlands of the Yemen had already been noticed by the Arab geographers. The former, 25-45 miles in breadth, passes into an unfruitful area of sandy, hilly country with occasional ridges and some standing out like islands, which is succeeded by the bordering expanse of foot hills, then an arid interior thronged, on which abates the curved and broken edge of the Arabian plateau. An inner trench, fruitful in the Yemeni, forms the transition to the eastern highlands.

The Yemeni highlands, the scene of a great upheaval, in the angle of two great depressions, has become a great mountain area which contains the highest peaks in Arabia (about 10,000 feet) and has towns (Matth. San'a) at a level of 3,500 to 7,000 feet. The extensive desert known as Ru' al-Khali which bounds the Yemen on the east and stretches in the form of a wide valley between Nadif and Hajjame, has only been made better known recently through the exploraions of D. Thomas and J. Rehm. Al-Yaman has not unjustly been called the 'Green' (al-Khaja'i). A fairly extensive system of agriculture is possible not only in the plains of the coast (especially producing millet and maize) but also in the bordering foot hills, which are very favourably climatically and have a luxuriant vegetation. An aridous but intensive system of cultivation is carried on artificial terraces. The most valuable article of cultivation is the coffee plant, the eastern slopes of the coast hills are permanently cultivated once perennial BXr and springs ensure irrigation and walls make possible an intensive rear-cultivation. The fertile canyons of the inner valleys have in place led to a dense population than on the outer hills. On the edge of the eastern highlands at the mouths of the valleys there are extensive woods which grow dates (Djow, Marri). The centre of culture in ancient Arabia (Sabat, Mas'ud) grew up here due to the great skills in irrigating works, of which the site of Marri is an example. Among the articles grown may be mentioned wheat, fruit, olives, figs, and dates. The extent of 4,000 feet is cultivated, an average of 1,000 to 2,000 square yards. The chief centres for dates were Ujai, Ta'iz, Khaibam, Dhamra, Ra'ay and al-Subai. The Yemeni still produce 50-400 fold sheep, and soda strasses a.g. the site of Marri could be cultivated, if they had a better system of irrigation. Numerous fruits (apples, quinces, bananas, lemons, apricots, peaches, plums and mangoes etc.) grow in the Yemen, especially in the Wadi Dakh at San'a, the date and vine have also been cultivated some ancient times. Vineyards are often mentioned in the early south Arabian inscriptions and the geographers mention them in San'a, Hadhram, Atakha and in the Wadi Dakh. Among the growing plants are flax and in particular at Marri, wares in trade, the date and honey. A widely distributed plant which leaves of which are used for weaving is fik (Zogervolg, ill., 1846, p. 36). The tree and shrubs which produce drugs and gums, especially of special importance in antiquity, especially frankincense and myrrh. The export of their wares paid for the foundation for the prosperity of South Arabia; these were also the same, as an especially fine quality of which was found in Sokotra; commercial wealth is also to be found in the Yemen. Gold is obtained in considerable quantities from the sands of the rivers and mines, among which varieties of copper and cornelians were esteemed. The high degree of culture also raised the level of local industries. The weaving was particularly good, high prices were paid for striped slacks from San'a and Hibaam. Cotton was made as early as the sixth century A.D. Tanning and the manufacture of leather was general and increased considerably in the period of Persian rule. Yaman leather and book-bindings were greatly appreciated. The chief manufacturing towns were San'a, Sabah, Djabal and Yaman. The manufacture of weapons was also a flourishing one; swords and armor from the Yemen, which were highly prized as were the safety-locks still manufactured there. Other products of the Yemen which were exported were drinking vessels from Hadhram, palm leaf baskets from Dhamra, and copper from Mahdiyay (B. G. A., III. 68). The lowered position of the Yemen as a centre of trade for Indian products and valuable perfumes, which it held down to the middle ages, is now lost, probably for ever. Coffee, indigo, drugs, and textiles still have some importance in the export trade. The most important harbours are 'Aden, al-Hudayda, Marah, Lahj and al-Siba. The internal trade is still mainly confined to caravans. The building of the first railway in the Yemen from al-Hudayda to San'a (begun in 1912) was stopped by the Great War in 1915; the railway from 'Aden via Lahj has only reached
The difficulties in the internal transport of goods occasionally lead to disastrous famines but the economic development of the country is probably only a matter of time.

It is not possible here to trace the varied history of the Yemen through all the stages of its development from the conversion of the land to Islam which began as early as 9 A.D. (cf. the articles ‘An‘a and Sana‘ and the short sketch of ‘Jemen im Islam’ in M. Hartmann, Die arabische Frage, p. 530—541). On the other hand, since conditions in the Yamam are much involved in general questions of Eastern politics, it seems advisable to give an outline of events since the reconquest of the Yamam by the Turks. The incentive to more energetic action against the Yamam, which had been again administered as a vilayet by the Turks since 1849, was given by the opening of the Suez Canal and the desire to command the E. coast of the Red Sea. In 1870 the Wali Hajj Ali Pasha defeated the emir of ‘Aṣir Muhammad b. ‘Abd Allah, who was threatening al-Mahfad. At this time the Turks held only al-Mahfad, Lubayna, Zabid, Bābih al-Ṣa‘īd, Bābih al-Ṣa‘īd, Majrī, Jijāt, and half of Liţāb Rima. The Turkish force was sent out from Ḥudaydah. After a six days’ siege the Turkish commander Redif Pasha was killed, and a force under the Emir ‘Aṣir left to attack the Emir who had established himself there but had to surrender after a six days’ siege. The Turkish commander Redif Pasha had him put to death immediately after his surrender.

‘Aṣir was now occupied by the Turks. Ahmad Mūhammad Pasha had asked for an armistice after Redif Pasha’s death, and the Turkish army crossed the Red Sea. In the south the ‘Asir entered ‘Aṣir, where ‘Aṣir had established himself but he had to surrender after a six days’ siege. The Turkish commander Redif Pasha had ordered him put to death immediately after his surrender.

‘Aṣir was now occupied by the Turks. Ahmad Mūhammad Pasha had asked for an armistice after Redif Pasha’s death, and the Turkish army crossed the Red Sea. In the south the ‘Asir entered ‘Aṣir, where ‘Aṣir had established himself but he had to surrender after a six days’ siege. The Turkish commander Redif Pasha had ordered him put to death immediately after his surrender.

The province was to be divided into two separate vilayets: the one comprising the highlands with ‘Amrāb, Ḥudaydah, ‘Aṣir, and ‘Adan, was to be directly administered by the Imam, the other part including the coast to be put under a new wall. The two governors were to be independent and rule with the assistance of Ḥudaydah and native gendarmerie according to the Shari’a; the net yield from taxation was to be taken to Constantinople and separate accounts kept. ‘Aṣir was to be the main Turkish garrison town. The scheme of reform was upset by new risings in ‘Aṣir, which although put down by the son of the Imam Shara‘ al-Din, Muhammad Abū Na‘īb, gave a pretext to the Turks to resort to force once more. The policy of violence pursued by Muhammad ‘Ali Pasha had a disastrous effect for it produced a general rising, which became all the more dangerous when Sāyi‘id ‘Abd al-‘Azīz also attacked the Turks (1910). The struggle was finally concluded by the agreement of De‘fīn in 1911, which was concluded between ‘Izzat Pasha and Imam Yahyā and contained 20 articles (Wāhi‘, p. 236—239; Sāyihān, p. 98 sq.). In this, the territorial status quo under Ahmad Mūhammad Pasha was recognised, the appointment of Zaidī judges by the Imam and the establishment of a court of appeal recognised; the Imam handed over a tenth to the government according to the Shari‘a, while his territory was recognised as autonomous. The war between the Porte and Italy led to the blockade of the Yemen coast and the bombardment of al-Mahfad, but the military assistance given by the Imam strengthened his relations with the Turks. Sāyi‘id Muḥammad al-Idrīsī, the ally of Italy, was defeated by the Imam’s troops. This alliance was further strengthened by the World War. In 1915 (or even 1914?) Turkish troops and Yemen volunteers led by Sahīd Pasha put down the rebellion but in 1915—1916 war broke out again in the north, and the two following years there was considerable unrest in the land; piracy in the Red Sea even led to a demonstration by Italian cruisers before al-Mahfad (1920). The chaos of isolated actions only produced a serious movement when the present Imam Mahfūz Yahyā b. Humdī al-Din, a fanatic and vigorous man, undertook the leadership in 1904 and proclaimed the dīwān against the Turks. ‘Aṣir was invaded by the forces of the Imam; the fighting outside the town continued against the Turks and in April 1905 an agreement was reached by which ‘Aṣir and the vicinity passed into the hands of the Imam and the Turks agreed to withdraw. Monēshī, Ta‘īr, ‘Abd al-Muqtasir, Kā‘bīyāt and Redī‘ alone remained in Turkish hands; the Porte however did not approve of the conditions of the peace but decided to send Ahmad Faid Pasha to reconquer the lost territory; he retook ‘Aṣir after a march right across Arabia but lost it again after fierce fighting. The losses in men in this, the most serious thing, were so considerable that they were forced to negotiate with the Imam, missions being sent from Constantinople to the Yamam and vice-versa. In the meanwhile the governor Ahmad Faid Pasha was replaced by the politic ‘Isān Ta‘īr Pasha who endeavoured to come to a satisfactory agreement with the Imam. At the Sultan’s request a deputation of Yamam nobles came to Constantinople; the very excited negotiations however came to nothing in spite of the willingness to consider the Imam’s claims to independence. After the victory of the Young Turks (1909) they appeared to be ready in Constantinople to carry through a complete reorganisation of the Yamam.
his capital first to al-Rawda (Aug. 1918) and then to Su‘a'. The English bombarded al-Faradiya which they gave to their friend Suliyy Idri. The Imam that attacked Aden and took several places in the hinterland, but an arrangement was soon come to. In 1934 there was fighting in Salwi with ‘Abd al-Aziz b. Sa‘id, but Yahu‘ succeeded in taking al-Faradiya and al-Thama, and in the following year a treaty was concluded by Sir Gilbert Clayton between England and the Imam. More recently Italy's active policy has involved the Imam in her sphere of interest and this has been emphasized by Italian Yaman now of influence.

**YANBU** (VANBU), a little port and also a town some distance inland on the west coast of Arabia; the former is also called Yanbo' al-Bahr or Sherem Yanbn and the latter, 6-7 hours journey N.E. of it, is called Yanbo' al-Nakhla. The port, which has now replaced the old harbour of al-Dijar as the port of al-Madinah, lies on a shallow bushy flat land with good anchorage and protected from the sea by an island outside it. The town is divided by an arm of the sea into two parts and defended on the land side by a wall with towers, which has two gates, the Bih al-Madinah on the east and the Bih Masr on the north, as well as several others on the sea side. The houses are badly built and the mosques insignificant. The harbour lives mainly by the trade of Al-Madinah which goes through it and does a busy traffic with Sawed, Kusair, and Kene on Upper Egypt by native sailing ships. The inland town of Yanbo', written al-Yanbū, in Ibn Djuhain, is an old settlement and probably identical with the ‘Ummah‘a saq of Ptolemy. The town, which was celebrated for its house, is described by the geographers al-Iṣṭakhbī, Ibn Hawqal and al-Muqaddasi as large, well populated and rich in palaces and had a strong castle. It was inhabited by Amu‘, members of the Banū Djuhain and Lathth, the Prophet is said to have conducted the war in its mosques. The round lies at the foot of a row of hills and owes its prosperity to a stream coming from them. Vegetables, dates and tobacco are grown; the greatest care is devoted to the date palm groves which have been cultivated since these ancient times; the houses lie scattered among them. The tradition that the harbour of Yanbo' is a later foundation from Yanbo' al-Nakhla, where leading Yanbohwans have data-groves and country houses, still survives among the people. The name 'Yanbo' or Yanbo' (spring) is attributed to the wealth of the place in springs.

At the beginning of Islam, the attitude of the Yarubi was that of hostile reserve. They did not dare declare openly against the powerful prophet of Madina. But on his death they were the first to rebel. The prophetess Safiyya (q.v.) was one of them (the tradition which makes her wedding to the Taghlib seems to have little authority). To the Yarubi also belonged the two brothers Musliim and Mutammam bin Sawars whose relations with Khalid b. al-Walid made such a stir. After the suppression of the 'eids, however, the Yarubi like the rest of the Tamim proved faithful to Islam and took an active part in the conquests; but their turbulent and rebellious nature was revealed in the considerable support they gave to the Kharijites: in the Kitab al-Ahka'am, vi. 4, it is noted that at the battle of Dawaib, in 652, where the forces of the Arraqs were crushed, the leaders of the two parties, 'Ubayd Allah b. Baghir al-Sallah and al-Rabi b. Amr al-Ghuzlati were both of Yarubi. The many details that we possess of the deeds of the Yarubi during the wars of the tribal wars of the Islamic period, but survived mainly because these wars are mentioned in the verses of Djarin (who belonged to the clan of the Kulaib b. Yarubi) and also because his commentators discuss them fully.

The Yarubi moreover gave to the poetry of the pre-Muhammadan period and of the first century A.H. quite a number of remarkable poems; in addition to those given at the end of the article TAMIM we may mention Sulaiman b. 'Abd al-Rahman b. al-Alayli (cf. especially Aysnayat, ed. Alwardt, No. 76), Hani b. Badr al-Ghuzlati, al-Sumamari b. Shaik, of the Banu Thalaba b. Yarubi.

Bibliography: see the articles TAMIM.

(G. LEVY DELLA VIDA)

AL-YARUMUK, a river in Syria, now called Shurait al-Mani'dah (from the Bedouin tribe 'Arab al-Mani'dah). It rises in the Haws, flows west through a deeply cut valley of erosion, the Wadi al-Kamal, which describes a flat curve open to the south, to the Ghas, where it flows into the Nahr al-Thurah (the Jordam) below Lake Gennesareth at Djar al-Mudiqar. Pityis calls it (Hist. Nat., v. 74) Hieronum or Hieronima (Godara Hieronem prosternunt, var. Hieronom; the now so popular form "Hieronimus" is not recorded).

On the 12th Rajab 15 (Aug. 20, 636 A. H.) in the celebrated battle on the Yarmuk or army of some 50,000 Byzantines was decisively defeated by an Arab force, probably half as strong, under Khalid b. al-Walid. The battlefield lay near the junction of the Nahr al-Khulud and the Yarmuk not far from al-Wikala (the modern al-Uqla). According to Theophanes (Chron., ed. de Boor, p. 329), the disaster to the Byzantine army took place near wa'ir al-Ghazali (al-Qubayyy, now Ghaswi (q.v.) zur 'esur. This battle was sometimes confused with that of Dhamrada (q.v.) of 28th Djanmash 1, 13 (July 30, 634), perhaps because the battlefield lay not far from Khirbet Yarmuk, this Biblical Yarmuth (I Sam., north of Wadi 'l-Sim'; cf. de Goeje, Mémoires sur la conquête de la Syrie, Leyden 1900, p. 59 sqq.). Castaels explains the confusion in the accounts of the battles as a result of the erroneous assumption that Abu 'Ubaydah was present as early as the first siege of Damascus and proposes, following Mednikov, to emend the otherwise unknown Adjudathin to Dhamraibatin. The accounts of the two battles are fully treated
and analysed in his *Annali dell’ Istana*, iii., p. 24—51, § 17—67 (Adiadies); i:vii., p. 499—
613, § 11—124 (al-Yarmūk). — Near the battle-
field Isy Dair al-Khill, where the Arabs encamped

(YARUB, Yaʿrub b. *Kahfān* b. Ḥad, the
grandson of the prophet Ḥūd, who is also
regarded as the ancestor of the *Himyarites*,
is one of the mythical rulers of the Yemen.
He is said to have conquered the *Adites* who
occupied Maʿrib and thus to have become the
founder of the Sabean kingdom. His name is
derived by the genealogists from *drub* to speak
correct Arabic (i.e. with the Fr.), as he is also
said to have been the first to speak Arabic,
for his father Kahfān still spoke the original language
of Sām b. Ḥūd.

2. Yaʿrub b. Mūllīk, the ancestor of the
Yaʿrubid dynasty of Umān whose capitals
were al-Rustîk, Yabruʿ and al-Harrām,
they ruled from 1054—1154 (1624—1740). They
succeeded one another as follows:

<table>

The last member of the dynasty, Saif b. Murshid, was set up as a pretender against Saif b.
Saif with the help of Aḥmad b. Saʿīd and chosen imām. The greater part of Umān fell to
him and Saif b. Saif could only hold out in Maṣqat which lost much of its importance to the
rival port of Maṭrjāf favoured by Saif b. Murshid. In fighting with the Persians who came to his
hearts, his opponent Saif b. Murshid was slain and after Saif b. death which took place soon after,
the governor of Saifār, Aḥmad b. Saʿīd, who had

married a daughter of Saif b. Saif, became imām
of Umān (1154 = 1741).

(YAHHRIB. [See al-MADINA.]

YATIM (AK), the orphan, i.e. fatherless
minor child. The improvement of the social
position of orphans, who were particularly numerous
in ancient Arabia, played a large part in Mu-
hammad’s scheme of social reforms. The vigour
with which the Prophet had to intervene on
their behalf is significant of the conditions which
he found. When relations did not take charge
of them, the care of orphans fell upon the muṣābīh
of the tribe (Lammas, *Arabica de Propheta*,
p. 248); his obligations were based upon the
Prophet as leader of the community (Lammas,
*La Mequje à la veille de l’Hégire*, p. 153). In
Sūra viii. 6, 9 (of the first Meccan period) the
Prophet is reminded that he himself as an orphan
was protected by Allāh and admonished on his
part not to oppress the orphan. The Kūrukic
passages which make good treatment of orphans
a duty and forbid their oppression cover a long
period: Sūra vii. 2; xv. 15; lxxix. 18 (also of the first Meccan period); xvii. 36; lxxvi. 3;
xxvii. 3 (of the second Meccan period); viii.
153 (of the third Meccan period); ii. 77, 175,
211, 218 sq. (of the year 2); iv. 9—11, 40 (of
the years 3—5). In Sūra viii. 43, and lxx. 7 (of
the years 2 and 4 respectively) the orphans are
allotted a share in the fifth part of the *ghamima*
[q.v.] or in the *far‘* [q.v.], Illegal appropriation
of the property of an orphan — apparently by
his guardian — is specially condemned in
Sūra iv. 11 even threatened with the punishment
of death. Sūra iv. 2—7, 126 (also of the year
3—5) is particularly directed against such crimes;
hence we have the fullest reference to orphans:
2. And give to orphans their proper property; substitute
not worthless things in place of their valuable
ones, and devour not their property after adding
them to your own; for this is a great crime. 3. And
if ye are apprehensive that ye shall not deal
fairly with orphans, then, of women who seem
good in your eyes, marry by two, or three, or
four; and if ye still fear that ye shall not act
equitably, then one only; or the slaves whom ye
have acquired: this will make justice on your
part easier... 5. And make trial of orphans until
they reach the age of marriage; and if ye perceive
in them a sound judgment, then hand over their
substance to them; but consume ye it not waste-
fully, or in order to anticipate them before they
grow up. And let the rich guardian not even
touch it; and let him who is poor eat of it with
discretion. 7. And when ye make over their
substance to them, then take witnesses in their
presence; Allāh also maketh a sufficient account”.
Verse 126 apparently refers to verse 3: “Moreover,
they will consult thee in regard to women; say:
Allah shall instruct you about them; and His will is rehearsed to you in the Book, concerning female orphans to whom ye give not their legal due, and whom ye refuse to marry; also with regard to weak children; and that ye deal with fairness towards orphans. Whatever ye do of good, verily God knoweth it. It is probable from this that verse 3 also deals with orphan girls, where marriage with their guardian is in prospect; the exact interpretation is uncertain. The two verses are interpreted in this sense in a tradition ascribed to 'Ali, but the details are not reliable. Another tradition not dependent in wording on the Qur'an (in Ahmad b. Hanbal) forbids the guardian to force an orphan girl who is his ward to marry him. Other traditions simply repeat the substance of the Qur'anic prescriptions, for example paradise is promised as a reward for conscientious performance of one's duties as a guardian, or dishonest administration of the property of an orphan is numbered among the "grave sins".

The idea of protecting the orphan is also at the basis of a hadith, which makes the Prophet dissuade 'Abd Dhu'ran as the type of the pious and experienced man from undertaking a guardianship. In two points the tradition shows a development of the doctrine. In the first place the question is raised when the position of being an orphan may be considered to end (it is out of this that the conception of attaining years of discretion developed; cf. al-Bukhari); various answers, some emphasizing age, others discretion, are put in the mouth of Ibn 'Abbas and 'Ali; of the later law schools the Malikis and Shafis make the power of disposing of his own affairs in one who has attained his majority dependent on his wish, while the Hanafis drop this condition after his 25th year. There were also differences of opinion as to whether the money of orphans (and especially of minors) was liable to sadaq or not; the latter view is still held by the Hanafis and the former by the other schools; it is justified not only by the direct statement that 'Ali in such a case paid sadaq but also by the demand attributed to the Prophet or to 'Omar that the guardian should trade with his ward's money so that the sadaq should not gradually consume it. On the doctrines of the fikhi on orphans cf. the article Wali. It is worth noting that the right of the poor guardian to use the orphan's estate is limited to receiving compensation for his trouble. The Qu'anic command to produce witnesses of character has lost its raison d'être through the fact that the guardian must be a trustworthy person (amun).

YAZD, a town in Persia, in the province of 'Irak, formerly called Katha. It has the name of the area of which it was the capital. This area was formerly in the district of Istakhr in the province of Fars (Ibn Hawqal, Vakht). Katha had a citadel and a suburb on the edge of the desert. It had two iron gates, the Gate of Isid (Izad) and the "gate of the mosque", so-called because it was near the cathedral mosque which was in the suburb. It is surrounded by subterranean channels bringing water into cisterns and reservoirs of remarkable workmanship. It has a temperate climate; the town is very clean, because the refuse is removed daily and taken to the fields as manure. The inhabitants, formerly Shafis, were almost all weavers. Cotton garments used to be exported. At the present day it still produces highly esteemed brocades (Pulak, Persien, l. 105).

Saiyid Ghiyath al-Din 'Ali, minister of Shah Abü Ishâk Indir (d. in 752 = 1351), and Sharaf al-Din 'Ali, author of the Za'far-nâme, were natives of Yazd.

YAZDÂN (v.), God. This word comes from the sphere of Zoroastrian ideas (cf. Avestan yazata, Sanskrit yastya = "worthy of reverence", a Vedic epithet of gods, e.g. Agni, Indra, Savitar, and also of objects). Old Persian used for "god" the word bâgha (cf. Avestan bagha, Sanskrit bhaga, Pahlavi bagh). The Avestan yazata as an adjective means "worthy of reverence" and as a substantive "god"; it is used of Ahuramazda himself (he is called the "Greatest of the yazatas") as well as of the divine beings subordinate to him, like Mithra, Sraosha etc. (cf. Bartholomae, Ahuramazda, Worterbuch, col. 1279 sq.). In Pahlavi Yazdûn (the plural; this form corresponding to the later Sasanian period) means: "the gods, the good powers, who are under Ohrmazd"; i.e. the same significance as in Avestan. Cf., e.g., from the beginning of the Pandanamak-Zarvûst the sentences: Ohrmazd khvârî hom ayat-î Ahramanâ? Yazdûn khvârî hom ayat-î dhvâna = "Am I Ohrmazd's or Ahraman's? Am I the gods 'or the demons'?" The singular of the word also is found in Pahlavi and survives in the modern Persian zad and in proper names like Yazdîfird. The Pahlavi pronunciation of this singular form at the end of the Sasanian period was probably also zad; the yaz in some proper names must represent an older form.

The meaning of yazdân, in the modern Persian literary language, "God" is the sense of the one God, must have developed already in Pahlavi. The transition in meaning probably took place through the aspects of the powers of the divine beings becoming comprised under yazdân; at least it is very improbable that in the final syllable of the modern Persian word we have a suffix other than the usual Pahlavi and modern Persian plural. The word yazdân in the meaning "God" is already connected with the Madjûs [q. v.] of the middle ages in Shahrastânî (Khihit al-Milal, ed. Cureton, p. 181 sq.); according to this author, Yazdan is the name of the principle of light in contrast to that of darkness, the Ahramanic. The term is therefore synonymous with Ohrmazd. The Kayumariyas sect of the Magians assumed that the principle of good, Yazdan, was uncreated (ibid., p. 182) while the Zoroastrian sect taught that both Yazdan (= Ohrmazd) and Ahraman were created, so that darkness (Ahramân) had to be understood not as a principle but as a necessary consequence of the existence of light (ibid., p. 186).

In the Lexicon Shâhnamânimnûm of 'Abd al-Kâdir al-Baghildî (ed. Salemann, p. 244 sq.) the opposites Yazdân and Ahraman are also attributed to the Manichaean system. The passage from a lexicographer in Vollers, Lexicon, ii. 1515 sq., perhaps
YAZDAN — YAZID b. MU’AWIYA

... goes back to the same source. The Iranian Manichaean actually used the word yazid, plural yazidin, for the "gods" of their system. We also find bag, plural bagdan. In proper names borne by Manichaeans we find the singular yazid (e.g. in Yazidmaz, name of a Manichean priest; cf. W. K. Müller, Ein Doppelblatt aus einem manichäischen Hymnenbuch, p. 16 and 17) as well as the plural (e.g. Yazidanbagh, the name of a Manichean teacher; cf. Fikrit, ed. Flügel, I. 334, 337, 338).

In the modern Persian literary language, yazidi means, as already mentioned, God and is synonymous with šaḏdā. "Abd al-Kādir (cf. zia) glosses the word šaḏdā we-yaṣurāḥu and yazidāb- yaṭarīfī and Allah in the language of the epic (Firdawsi and his imitators), yazidi is the most usual term for God, often with the epithet ẓāhe. In poetry other than epic the word is used along with other names signifying the deity.

(V. F. BUCHNER)

YAZID b. 'ABD AL-MALIK, Omaiyad Caliph, who came to the throne in Feb. 720. The reign of this prince so devoid of energy is a striking contrast to that of his immediate predecessor, the conscientious 'Omar b. 'Abd al-Asir (q.v.). Son of 'Abd al-Malik, grandson of Yazid I through his mother 'Atika, he had inherited none of the qualities of his Saffānī ancestors which had made them popular in Syria. His brother, the caliph Sulaimān, had favoured the Yamaniyya. Yazid was imprudent enough to declare for the Kaisīs and by this tactless step attracted the hostility of the Yamaniyya, i.e., the great majority of the Syrians. The relations of Yazid b. al-Omānibah (q.v.) embraced Maslama, brother of the caliph, and the Syrian troops to leave for the 'Irāq. While they were putting down the rebellion, the impressionable caliph fell under the influence of two women musicians of Medina, Sallāma and Ḥabāla. To escape remonstrances, Yazid withdrew to the district of Balkā' east of Jordan. The death of his favourite Habāba broke his heart. Yazid followed her to the grave a week later, at Bait Rūs (q.v.) after a reign of four years. He died on Jan. 26, 724 and was still under 40.

YAZID b. MU'AWIYA, second Omayyad Caliph and successor of Mu'awiya, born about 642. As a prince he had commanded the Arab army at the siege of Constantinople. Immediately after his accession (April 680) there broke out in the Hindēs the rising which the genius of Mu'awiya had so long prevented. At Medina, 'Abd al-Allāh b. 'Ali and 'Abd al-Allāh b. al-Zubair refused to recognise the new caliph and took refuge in the inviolable territory of Mecca. Very soon letters from old partisans of 'Ali and from the chieftains of the 'Irāq, jealous of the hegemony of Syria, decided his supporters to leave his asylum in Mecca and set out for Kufa with about a hundred relatives and friends. Yazid had ordered the governor of this town, 'Ubayd Allāh b. Ziyād, to take steps to disarm them and prevent them entering the 'Irāq and stirring up trouble there. No one stirred

among the 'Allid partisans in Kufa. Ḥusain and his handful of devoted followers foolishly attacked the very superior forces sent to disarm them; the latter then manoeuvred to surround them and force them to lay down their arms. The son of 'Ali and the more stubborn of his companions only succeeded in meeting their deaths (Oct. 10, 680). This is the tragedy of Karbala' (q.v.) annually commemorated by the Shi'is.

Medina, no less than Kufa disliked Syria; it accused the latter of depriving her of her title as capital. In a great assembly in the chief mosque the Meccan proclaimed Yazid deposed. After having vainly tried negotiations, the caliph had to have recourse to arms. The command of the expedition was entrusted to Muslim b. 'Ukhī (q.v.). This general encamped before Medina, in the Harrā, a plain covered with volcanic debris; hence the battle was known as that of al-Harrā (q.v.). The Meccan were having the best of it at first when a detachment of Syrian cavalry going round the town attacked them in the rear. This was the signal for the collapse of the defence (Aug. 26, 683). The Syrians entered Medina. The three days of loot promised by Yazid and the horrible scenes invented by hostile tradition belong to the domain of legend. Next day, Muslim assembled the citizens to make them renew the oath of loyalty. He then went on to Mecca to suppress Ibn al-Zubair. On the way the illness which had been troubling him since he left Syria took a turn for the worse and he died at Mecca, where his tomb long continued to be stoned. His successor, Muslim b. al-Numair, led the army against Mecca and began the attack on it.

The inhabitants soon found themselves shut up in the town. Siege-artillery was placed on the surrounding hills and hurled a continuous shower of stones on the town. Ibn al-Zubair had made his headquarters in the courtyard of the great mosque. A wooden structure covered with mattresses protected the Ka'ba. The carelessness of a Meccan soldier set this on fire. The burning of the Ka'ba did not interrupt the siege. It had lasted for two months when Yazid died at Huwārah, in Nov. 11, 683. Ibn al-Numair led his men back to Syria.

Yazid was not the frivolous prince, the thoughtless ruler depicted by the historians who are inspired with the rancour of the Shi'is, or the political feuds of the 'Irāq and the Hindēs, or who are too much impressed by the catastrophes of his very short reign. He tried to continue the policy of Mu'awiya and retained his surviving collaborators. A poet himself, and fond of music, he was a Maecenas of poets and artists. He completed the administrative organisation and the military defences of Syria by creating the jund of Kinnasir (q.v.) in the north of the country. He reorganised the finances, lightened the taxation on the Christians of Nadjarin (q.v.) who had been arbitrarily expelled from Arabia by the caliph 'Omar. On the other hand, he abolished the exemption from taxes granted to the Samaritans as a reward for the services they had rendered at the time of the Arab conquest. He was interested in agriculture and completed the system of irrigation of the Ghīyūt (q.v.), the oasis of Damascus, where he dug the upper canal which waters the suburb of Šalihiyya, and is called Nahr Yazid after him. Alone among the caliphs he earned the title of muqaddim, "water-engineer". The author of the Continuatio s. n.
gives a far from commonplace picture of him: 

Vazidi, jucundissimos et cumtur nationalibus regni ejus 

subditis ejus gravissimo habuit, qui nullam uquam 

alius regalis fasculi causa gloriam apud ipsos 

communis ut omnibus civilibus vis. 

Extremem ille uia 

affable, quite devoid of conceit, lowly, and all 

those under his authority, hating the pomp of royalty, 

living among the people, no "citizen... *No 

called*", says Wellhausen, "received such a panec 

fing; it comes from the heart".

(H. Lammens) 

**YAZID B. AL-MUḤALLAB b. AḥD ṢIFRA AL-AZXI, 

GOVERNOR OF KHRURSAH.** Vazidi was born in 

53 (672—673) and after the death of his father al-

ṣūf al-Muḥallab [q. v.] at the end of 52 (702) was 

appointed governor of Khorrasan. With his brother-in-law, the powerful al-Ḥadidjāb b. ʿĀṣuf [q. v.], his relations were strained and in 55 (706) the caliph ʿAbd al-Malik, after some hesitation, was 

persuaded by the latter to remove Vazidi from his office which was given first to his brother al-

ṣūf al-Muḥallab and a few months later to the able Kūtaiba b. Mūslim [q. v.]. In the following year the caliph died and was succeeded by his son al-Walid. In the same year al-Ḥadidjāb had Vazidi thrown into prison where he was exposed to all kinds of humiliation and when his sister Ḥind, wife of al-Ḥadidjāb, showed sympathy for him she was divorced by her husband. It was not 

until 90 (768—769) that Vazidi succeeded in escaping and went to al-Ramlah where Salāmah, the caliph's brother, lived. The latter afforded him protection and interceded for him with al-Walid so that al-

Ḥadidjāb had to leave him in peace. After the 

accession of Salāmah in 96 (715) Vazidi was 

appointed governor of the Ṣafār and settled in 

Waiṣ. The supporters of Ḥadidjāb, who had died in 

the meantime, had now to pay for the decision 

with which he had treated Vazidi. But when Vazidi asked the caliph to relieve him of the administration of the taxation, Salāmah placed an official of the chancellery named ʿṢūd b. ʿAbd al-Ḥakām at the head of the finance department and the latter refused to satisfy Vazidi's extravagant demands on the treasury, so that Vazidi began to turn his eyes towards the adjoining province of Khorrasan. 

He succeeded in being appointed governor of 

Khorrasan while retaining the supreme command in the Ṣafār (97 = 715—716). Shortly after his 

arrival in this province, he permitted all kinds 

of cruelty to be practised on the relations of Kūtaiba and the officials appointed by him. In the following year he undertook a campaign against Dūrūn and Ṣafārūn; the people of Dūrūn escaped on paying a sum of money. But when Vazidi later suffered heavy losses, they rebelled and fell upon the Muslim garrisons which he had left. He had as a result to conclude peace with the lord of 

Ṭabaristan and turning against Dūrūn wreaked a 

bloody vengeance on its people. He made himself 

generally hated by his exertions in his province and Salāmah is said, just before he died, to have been 

thinking of sending some one to Khorrasan 

to have a reckoning with him. After ʿOmar b. 

Abd al-ʿAzīz ascended the throne in 99 (Sept. — Oct. 717) he had Vazidi arrested because 

the latter could not produce the fifth of the booty 

from Ṣafārūn and Ṣafārūn the amount of which he had much exaggerated out of vanity; shortly 

before or after the death of the caliph, he escaped 

from prison and went with a small body of followers 

to al-Bayrā. When the negotiations which he began 

with the governor ʿAṭī b. ʿArjān at first came to 

nothing, the decision had to be left to force of 

arms. In the first encounter ʿAṭī fled and took 

refuge in the citadel. This was stormed and ʿAṭī 

taken prisoner (Rudjaḏan 101 = March—April 720). 

Vazidi then began to preach open war on the 

Omayyads; the rebellion spread and in a short 

time Vazidi seized Waiṣ but was defeated on 

14th (or 12th) 102 (Aug. 24 or 22, 720) at 

al-ʿAṣr near Waiṣ by al-ʿAzīz b. al-Ḥakīm, who 

had come with a large army from Syria. Vazidi 

himself fell and wherever he was everywhere 

outstripped by the greatest vigour.

**YAZIDI, Yazıdı, the name of a Kurd 

tribal group and of their peculiar religion which shows 

ancient characteristics.** 

**Area of Distribution.** The Yazidis are 

found scattered over a wide area usually leading a 

settled life but also slipping into nomadic clans: 1. in the district of Ṣafārūn in the northern Ṣafārūn, in Assyrian proper, in the district of Shalik. Special 

mention may be made of: Bāʿidhī b. Bāʿidhī, Bāʿidhī about 40 miles N. of Ṣafārūn, the residence of the chief emir, their political head; three hours 

to the north at Lālles in the valley Shalik ʿAdī 

is the tomb of their chief saint Shalik ʿAdī, their 

national sanctuary and the centre of their national 

and religious life; Bahazantye, north of Alkās 

at the foot of the hill on which is the Chaldaean 

monastery of Rabbūn Hormund; and also Bāʿašīgī 

(Bāʿašīgī, Ba Ḥadīke) N. E. of Ṣafārūn, the centre 

of the tombs of the shaliks; 2. on the Ṣafārūn 

Sinīdar, 100 miles west of Ṣafārūn, a range of 

hills in the middle of the desert, which is the 

great bullwark of their efforts for freedom and 

independence; the chief Sinīdar-Shalik lives in 

the Belid Sinīdar (picture of the citadel in P. 

Schlitt, Zweisammen Nil und Kaukasus, p. 135). 

Formerly its residence was in Milik (Mišir); 3. in 

the district of Dihābaḵ, N. and N. E. of the 

Tigris; 4. in the district of Aλlepo, W. of 

the Euphrates, at Kullis and ʿAʿĩdāb; 5. in
Russian Armenians (Kars, Erivan) and in the Caucasus (at Tiflis)—There are also Yazidis in Persia.

**Numbers.** The total number can only be approximately estimated; there can hardly be more than 60,000-70,000 altogether, while only half a century ago they numbered 20,000-150,000. According to the Turkish census of 1922-1924 (apparently exclusive of Sindjar which was only joined to the *İraq* at the end of 1932) they numbered 26,657 in the *İraq*, while the Turkish census of 1923, which deliberately emphasized the Muhammedan element, only gave 18,000 Yazidis, compared with 264,000, or 450,000 Kurds, which corresponds to the English figures. In 1912 the Turkish statistics for the 6 wilayets in question gave 27,000 Yazidis. Nurī in 1905 estimated 35,000 Yazidis for Sulaimān and Sindjar (Menzel, *Op. cit.*, p. 189). According to figures which are undoubtedly exaggerated, Sindjar which is now joined to the *İraq* contains 36,000 Yazidis (O. M., xii. 502). There are only a few hundreds in Persia.

The Russian census of Dec. 17, 1926 gave for the Caucasus (Tiflis, Erivan and Kars) 14,582 Yazidis compared with 54,000 Kurds. In spite of the ascensions during the war their number has fallen compared with that of the Russian census of Feb. 9, 1897: 44,796 Yazidis and 55,175 Kurds while in 1901 in Russian territory there were 25,000 Yazidis compared with 125,000 Kurds.

As to their numbers at an earlier date, Karow in 1884 gave exact figures based on quite reliable statements of the *Janwās* (Menzel, *Op. cit.*, p. 116).

**Name.** The name Yazidi, which the Yazidis themselves feel to be modern, seems to have nothing to do with Yazid b. Muwilay or with Yazid b. Umama, with whom it is connected, and as little with the name of the Persian city of Yazd. It probably comes from the modern Persian *yazid* (angel, deity), Avestan *yazata* (being worthy of worship), Pahlavi *yazata* (sacrifice). Pahlavi *yazata* appears three times in the name of a God, *Avesta yazata* and *Pahlavi yazata*, yazana of which yazat is the natural phonetic development while yazana represents an Avestan word brought through ritual into modern Persian.

The Azidi, Iszidi or Iszi would therefore be as they themselves say "worshipers of God", an etymology known to the Yazidi, and quoted as early as Campanile, *Storia della regione del Kurdistan*, Naples 1818, p. 145, in *Saggio di yazida* (Iszid). The Yazidi popular etymology of the name from *az da* (*for dām*) baduah ("God created me") is useless, as az or da is not used in Yezidi, only *ma* ("it").

Evolved from the name Yazidi we find in legend an angel *Iszidi* and a yazidam among the ancestors of the Yazidis as well as the term yazidi for the first Yazidis.

With this we may perhaps connect Iszidi, the name of a sandjak in the form of a man made from grapes (Menzel, *Op. cit.*, p. 184).

According to Marr (Zapisiki Vost. Otd. Arch. Oktob. 22, 1999), Celebi was the former name of the Yazidis (cf. Barthold, above i., p. 833). In Neuhauher also Celebi is given as "devil".

The Yazidis call themselves *Dzin, Dzami, Dzami, Dzami*, plu. Dzaw עדין, Dzawżam, *Dzawżam*, probably from the name of an old Nastican diocese. In 1534 Salzba Sulaimān gave the Yazidi chief

Husain Beg Dazlāt, who was later executed, the sandjak of Arbūl and the wilayet of Sohrān. Among the Syrians, the Yazidis are called Dazlātī or to be confused with Dazlātīn, the followers of Bardossam of Edessa; cf. Vargent, in *F.S.O., xi.* 271, among the Armenians, Tchoudiakos and Polichasses. Before the days of Christianity they were called *judjort* (idol-worshippers) according to the *Masbah* note.

The defunct name given them quite unjustly in *judjort* or *ahed-i jorî* ("idol-worshipers") although they should rather be called "angel-worshippers", and *bragh condêv* ("light-eating"), *fêrghi* or *kouderi* ("dog-eating")

**Tribes.** Although the Yazidis hold no communion with the neighbouring tribes and in particular do not intermarry with them, they look exactly like Kurds, even those who live in Syria in the centre of an Arab-speaking area, although the two types are to be distinguished among them: one, their own traditional type, Assyrian-Semite with particularly thick hair and beard and the other more an Indo-Germanic type. In any case traces of the early inhabitants of the country still survive in them. They have some physiological similarities with the earlier Wav Armenians: an Armenian mixture is not to be denied.

Their thick hair earned them from the Turks the nickname *sandàl Ívar* ("shairy Kurds") and *cizî ïhsûf* ("rightfold bearded") because hair grows on the lips, eyes, brows, nostrils and chin.

The Yazidis are a handsome, long-haired, proud type, with the feeling of independence that is characteristic of the mountain-dweller, and usually of powerful physique. The unenvied women have remarkably regular features. The Yezidis were formerly dreaded rebels and brigands who resisted fearlessly all attacks and onslaughts by their neighbours. Their faithfulness to their word and their loyalty was recognized even by their enemies. They are industrious tillers of the soil and cattle-reapers, who are superior to their neighbours in skill and activity. Special mention may be made of the meritorious cleanliness of their persons and houses, which is in great contrast to the filth of the other Kurds.

They are organized like the Kurdish tribes, with an *emir* or chief of the tribe (leegha-n *a*) at the head. According to Karow, the tribe is divided into bodies of elders (*musj'id*). Every family or sect forms a unit by itself. On the tribal organization, the taxes and labour given to the chiefs, the law of inheritance, *prémogoture*, but restricted by the condition of worthlessness, and the patriarchal life of the tribe, settled and nomadic, see Jegensinow, *Kurdish grammatical and *kurd*, in *Zapiski*, xlii., Tiflis 1901, who gives very full data (Menzel, *Op. cit.*, p. 251); also Minorysky above s.v. *kurd*, says Joseph and Lampson.

Language. The language of the Yazidis is almost without exception Kurdish, an idiom related to Persian, with a number of dialects which are particularly closely related to Kurmandjit Kuraic. But the differences are often so great that another language has to be called in to make the parties intelligible to one another, for example Turkish in the case of Goktai Yazidis in intercourse with the Ararat and Bayazid Kurds (Wagner). In consequence of their different religion they form a people sharply distinguished from the Kurds. The Yazidis of the Sindjar also speak Arabic. The supposition that
at least a portion of the Yazidi formerly spoke Arabic and migrated from Syria and Babylonia, as tradition has it, is not to be rejected offhand.

Religion. The origin and evolution of their peculiar synthetic religion have not yet been fully explained but it seems to include old pagan elements (but no worship of the sun and moon), Iranian-Zoroastrian elements (echoes of Persian dualism), Manichaean and Persian gnostic elements (prohibition of certain foods), features from Christian sects, especially the Nestorians (baptism, a kind of euthanizer, breaking of bread, visiting of Christian churches at weddings, permission to drink wine), also Muslim elements (circumcision, fasting, sacrifice, pilgrimage, Muslim inscriptions on tombs), Sufi-Neilotic features (secrecy of doctrine, ecstasy, reverence for a large number of Sufi-Shahiffs), Serai (transmigration of souls) and Shamanistic features (burial, interpretation of dreams, dances).

Sacred Books. The spoken language is used throughout in worship. It is therefore all the more remarkable that the text of the two sacred books, said to have been in existence before the Creation and to have been learned from the original copies, was in Arabic, although only the priests and the šahwis learned some Arabic. These are the Kitab al-Diliwa [q. v.] (Kitab-i Diliwa) "the Book of Revelation" and the Maqaf ʾayat [q. v.] "the Black Book". "Black" seems to imply worthiness of veneration.

One cannot conceal a certain disappointment in becoming acquainted with the sacred books. A hymn in praise of Shaikh Âdi [see šadi] in 80 verses of considerable theological merit, written in Arabic, is also regarded as a kind of sacred book.

Religion. Whether, though it is very improbable, there has survived to the present day in Yazidism a remnant of the old Iranian Zoroastrianism whose views have been in course of time fundamentally altered by the adoption of foreign elements, or whether the Yazidis are former Manichaees or Nestorians and Jacobites or survivors of the old Syriac community, which settled on the Sinjar and in their isolation became contaminated by Muslim and other ideas, is uncertain.

According to Speiro, Yazidism is descended from Manichaees, which has been affected by Assyrian, Persia, Christian and Muslim elements. In any case, the Iranian element plays a considerable part for it appears to be the main basis for the development of Yazidi doctrine, in which many points approximate to Christianity and still more to Islam.

In the actual doctrinal system, the six minor deities seem to disappear completely and to be replaced by the daelims between God and Malak Tânis, the peacocks (angels). God is only the Creator, not the preserver of the world. He is passive and does not trouble about the world. The active, executive organ of the divine will is Malak Tânis, with whom Shaikh Âdi who has risen to divinity through transmigration, seems to form one. Malak Tânis is God's alter ego and is the active aspect of God's being. He is one with God and inseparably bound up with Him. To this extent Yazidism is monotheistic but there are also semi-divine and divine beings, intermediate between God and man.

According to Horton, the religion of the Yazidis is a pure worship of light and represents a victory over the old Persian dualism. Malak Tânis is not the principle of evil but on the contrary the denial of evil at all, which forms an indis-
is cut into the wall at the entrance door of the sanctuary. On the same wall are carved a number of peculiar figures: rings, daggers, a peculiar kind of cross, or a seven-armed sceptre, hands, spoons, crozier, combs. They are probably family or tribal marks, as the little houses for pilgrims scattered all over the valley bear the same marks on the walls.

It is significant that at the present day in Sinjär the quarrels of the emirs for power seem to concentrate around the possession of a sandal, guaranteeing a regular income.

Exclusiveness. The idea of their complete separation from the rest of mankind held by the Yazidis is remarkable. They are convinced that they are descended from a child (Shahid u. Dâyêr) or twins, developed from the seed of Adam only in a jar which was kept closed for nine months, while the jar with the seed of Eve who was disputing for priority produced only vermin. On this is based the belief of the Yazidis in their unique position which does not allow them to mix with the rest of mankind who are descended from Adam of Eve. One cannot become a Yazidi, one must be born one. This strict isolation is intensified by a rigid caste system within the Yazidis.

The most dreadful punishment for a Yazidi, which can only be completely realised when we remember this fact, is excommunication, expulsion from his people, because this also settles the fate of his soul.

Moral, religious usages. In spite of all the slanders of their neighbours, the Yazidis are really on a much higher level of morality than their Christian and Muslim neighbours. The superstitious anxiety of the Yazidis to have a circle described around them by which one can put them on oath seems to be a fact (cf. Goldscheider, Zeitschrift f. Völkerkunde, in the Kuhn-Festschrift and Z. O. M. G., xxx. [1915]).

The prayers consist of a Kurdisti main prayer and a morning prayer at sunrise, which has to be said at a distance from members of other creeds, and turned towards the sun (Creed, art. 3). They ought at the same time to walk round a stone put up for the purpose. The principal prayer is addressed to Malak Tâ'ûs and shows that the latter is regarded as identical with the Christian and Muslim God. The seven divine angels are addressed. The erroneous view that the sun and moon are worshipped arose from the fact that the supreme deity (Malak Tâ'ûs) is called "Lord of the moon and of the darkness" and "Lord of the Sun and Light".

A three days' fast (j, 2, 3) is observed in December, the fast being broken by drinking wine with the proper shaykh or pir. The performance of prayer, however, is—apparently under Sufi influence—not regarded as a strict duty.

According to the Yazidi catechism, Saturday is the day of rest and Wednesday the holy day. Once to three times yearly the Yazidi villages are visited by the sandal amidst great celebrations.

The annual pilgrimage to the tomb of Shait 'Adi on Sept. 15—20 of the Greek-Julian calendar is a strict religious duty. This pilgrimage to the national sanctuary is the principal expression of the national and religious isolation of the Yazidis. The feast of the pilgrimage is celebrated with ritual ablutions: by bathing in the river, by washing or dipping the sandal, with processions, music (haut, drum and tambourine), hymns, ecstatic songs and dances by the priests, which recall the Shaiti jâher and Shamanistic rites, the lighting of hundreds of sesame oil-lamps at all the saints' graves, by offerings and special foods (karis, kawaf), the cooking of a sacrificed ox (kudslaj). The blessing of Shait 'Adi is important for the rites, i.e. little balls of earth or clay from the tomb of the saint, and consecrated water from the water in which the sandal has been dipped for the living and the dead.

The little balls of earth are used as talismans and as a medicine, and as extreme atonement for the dying. All eyewitnesses agree as to the devoutness and dignity of all these ceremonies in the outer court of the sanctuary. The ceremonies within the sanctuary, which seem to include the reading of sacred books, have never been witnessed by an outsider.

Trees, at the sanctuary mulberry trees, are also honoured, surrounded with walls and visited by the sick. These trees have their own personal names.

Non-obligatory pilgrimages are made to the tombs of several other saints, mostly Shait shahids.

The most important festival of the year, the feast of the New Year: sar-i adel, sarâli, sarâliye, on the first Wednesday in April, is celebrated with great solemnity, as among the Harmanis, at the tomb of Shait 'Adi but without music. An attempt has been made to trace this to the Assyrian festival of wagwa. Red flowers over the doors play a great part in it.

The obligatory institution of the brotherhood of the next world, which corresponds to our system of godfathers (each Yazidi must have a brother and sister of the next world), binds one to a daily kiss of the hand and presence in the dying hour. The collar of the new shirt, which unlike other eastern shirts is always buttoned behind, must in any case be opened by a sister of the next world.

In marriage, endogamy is strictly observed and the limitations imposed by the caste system are very marked. Marriage is as a rule monogamous, except in the case of the emir, who is allowed several wives. It is marriage by purchase with simple ceremonies performed by the local shahid or pir, who breaks a loaf in two and gives it to the two parties. The bridegroom on her entering the house gives her a blow with a stone as a sign of her subjection. Drums and files are necessary. Here and there the old system of marriage by capture survives, but it is now forbidden.

The punishment for adultery used to be death. Divorce is rendered difficult through the necessity of having three witnesses. The widow may be remarried six times. If a Yazidi remains more than a year abroad, he cannot live with his wife again nor can he receive another Yazidi woman to wife.

Baptism is a characteristic ceremony: it is performed by a shahid or pir plunging the child three times into the azam-ezam in a dark vault of the sanctuary in the first week after birth. In the case of Yazidis living at some distance away, consecrated water brought by the kawalls is used.

Circumcision, which takes place soon after baptism, seems to be more a matter of choice—"in
some Yazidi tribes it is said to have fallen into disuse some time ago, probably to escape military service.

The burial ceremonies are peculiar. The corpse is buried immediately after death with arms crossed and pointing to the east. In the case of persons of rank, a rough wooden figure is hung with the deceased’s clothes and carried for three days in procession with music. The tomb is repeatedly visited by the mourners. On the 3rd, 7th and 40th day and the anniversary memorial services are held.

After death, an answer to the question of the rebirth of the soul of the deceased is sought from the interpretation of a dream of a priest or köçek. The Kurdish system of blood vengeance exists to the present day in a somewhat milder form among the Yazidis.

Theocratic structure of society: The whole structure of this people, small and scattered but extremely well organised, is theocratic. The Yazidis fall into two very distinct classes:

1. The laity (mardis) who form one great caste whatever be their wealth and among whose members there is no distinction in principles. In spite of the division into common Yazidi notables (emirs), so that marriage between them is possible and frequent. Every Yazidi is the novice or disciple of a definite shaikh or pir, whose hand he must kiss every day, with whom he must break his fast by drinking wine and who has to perform the various rites of worship for him. On the institution of brotherhood of the next world, see above.

II. The clergy, priests, rügan, bahanu, who enjoy extraordinary respect and reverence. The cleric must not cut his beard nor crop his hair. As regards duties the clergy are divided into six classes and as regards exclusiveness into three rigidly marked classes. It is impossible to move from one caste to another and marriages between the different castes are forbidden. Still more unimaginable is it for a layman to enter the clerical class and vice versa. This rigidity is a dogma of belief as the Yazidis rely upon it for the purity of their sects. Every one must live and die in the caste in which he is born. In certain cases the priesthood may pass by inheritance to women.

The rügan are divided into the following classes:

1. The shaikhs who are descended from only five families in all are believed to be descended from pupils or brothers of Shaikh ‘Adi. Their dress is white with a black wound turban; a red and yellow or orange cloth is flung round the body. The houses of the shaikhs serve as the places of worship of their charges.

2. The pirs, priests of less exalted descent. Their dress is black, the turban white with black feather or wound round with red.

The shaikhs and pirs are the regular clergy and pastors, they enjoy immunity of person and various privileges. It is their duty to teach their charges good and restrain them from evil. They have to perform religious duties on festival days, at feasts, at marriages, births, circumcisions, in illness (treatment with sacred earth), at death and in anguries, for which regular fees (syrkat) are due to them.

The so-called motiv or imam, who claims descent from Hassan al-Hasiri, is said alone to have the right to read and write. At one time he had charge of the sacred books but they are now kept for safety in Sindjar.

Writing is strictly forbidden to the common Yazidis by custom, probably in order not to profane it, since according to the Marash, xxxi, God himself puts creation on record.

3. The fahır or harabah ("Blackheads", on account of their black headgear), a kind of order, a voluntary brotherhood, recruited from the shaikhs and pirs and under a head called šâk, "master", who lives in Aleppo and receives the income of the šâkjiš Yazi. They wear a black garment of hair and a turban with red band. They live on alms and play a part as negociators and peace-makers. A fahır is said to act as deputy of the chief emir. There is also said to be a sisterhood called febray, the head of which is called hânà.

4. The hawwals: singers, clergy of minor rank. There is a guild of musicians said to number 50 men, which has to take part in all religious festivals by singing hymns (we have two of these with the music), playing the flute, tambourine or drum. They also act as misrari dominici of the chief shaikh and chief emir. They are farmers of the sacred images, the sanduk, for which they had to pay an annual rent (before the war about £T 6,000) and with which they went regular definite circuits through the different Yazidi districts in order to strengthen the faith of the Yazidis and keep them together and to collect offerings. An undeniable similarity to the ponders is found in the trade which they carry on in balls of earth from the tomb of Shaikh ‘Adi and in holy water. Of the contributions levied on behalf of the emir half goes to the tomb of ‘Adi, a quarter to the emir and a quarter to the hawwals.

They wear white, rarely coloured, dress and black turbans. Many Yazidis consider it meritorious to sanctify their new clothes by giving them to the hawwals for a time.

5. The šâk, dancers, who serve in considerable numbers at the tombs of Shaikh ‘Adi (the estimates vary between 30 and 300) and as ministers of the hawwals carry the sanduk to the villages on their circuits and dance at festivals in frenzied ecstasy with their long hair unbound.

Not to be confused with them are the šokh, who have the same name and crop up occasionally; they were a kind of Mahdi, usually religious fanatics of the nomadic Yazidi tribes, who endeavoured to influence and impress those around them by interpreting dreams, falling into trances and seeing visions and believed they were called upon to play the part of religious leaders. In drought and famine they acted as rain-makers, in rebellions and military enterprises they sought like the old prophets to inflame their people and assume the leadership. At the same time they used to their own advantage the belief that Shaikh ‘Adi will appear once again in a rebirth. For this reason therefore they were hated not only by the Turkish Government but also by the real chiefs themselves and not infrequently betrayed to the Turks, who disposed of them without mercy.

6. The lowest class of clergy: the awbâns or awán (deacons) and abfatân-e oïbek of Shaikh ‘Adi, the servants at the tomb of Shaikh ‘Adi, together with a farrâj (sacristan to look after the oil-lamps) and 4 or 5 hânowtâf (hawwals): doorkeepers who serve in the sanctuary. Each Yazidi village
also has a dâr al-mašrûl to maintain order. The head of the servants at the tomb is the dâr-ül-mesleki of Merke (Menzel, op. cit., p. 147, note 1).

At the top of this theocratic organisation there are a religious and a secular head:

1. The chief Şâli: mîr-i şâlihân, known as Şâlih Nâşir, who is said to be descended from the family of Hasan al-Râki or from a brother of Şâlih 'Adî and lives in Lâlîsh. He takes precedence of every one and the supreme spiritual influence is in him. He is infallible on questions of belief. He is the chief authority on and expositor of the holy scriptures; he alone gives legal decisions, and — with the approval of the chief of the tribe — sentences to the severest punishment, excommunication. He can summon to the holy war — this recalls the gâhidh — but the leadership devolves on the chief emir. The Mîr-i Şâlihân has a claim to thrones but their place is taken by voluntary offerings. He wears white and a black turban. Only the daughters of a family descended from 'Abd al-Kâdir Gilînî are considered equals in rank. His house is the most venerated gârah of the Yazidis next to the tomb of Şâlih 'Adî.

2. The Mirzâ Beg or emîr-i amârâh, the prince of the Yazidis, who according to the Muğhâf is regarded as a descendant of Shapur but is usually called a descendant of Yazid and exercises the highest political and secular power. He lives in Erbil. His person enjoys immunity and he receives voluntary offerings (according to Hroeski ET 8,000 a year). His word is final on all secular matters. He alone represents the Yazidis to the outer world. He occupies the same position with respect to all Yazid tribes that the tribal chief has to the individual Yazidi.

Since the loss of independence in 1352 the emîr has to obtain recognition from the Turkish Government. The present emîr of the Yazidis is Sa’d Beg, son of 'Ali Beg, murdered in 1913, who was the son of Husain Beg (d. 1878), son of 'Ali Beg murdered in 1832.

History. We are quite in the dark regarding the first appearance and early history of this people who reveal so many diverse elements. According to the chief shâlih, the Yazidis, Layard tells us, have a chronology of their own, an era beginning in 292 A.D. which could without difficulty be connected with the year of Manî’s death (276). But as we have no further confirmation and no historical records or annals of the Yazidis are known which might throw some light on the point, the correctness of the statement may legitimately be doubted.

It is not clear what part the caliph Yazid b. Mu‘awiya (60-66 = 680-683) really plays in Yazidiism; according to the origin of the name already given, he can have had nothing to do directly with their foundation. Gudzi howel holds — in contrast to the views hitherto held by European scholars — that the connection of Yazidism with Yazid can no longer be doubted, and regards the Yazidis as having at one time been Muslims, a view which has always been held by Muhammadan theologians.

According to the Yazidi view, Yazid was not the real founder of the Yazidiya, but only the restorer of the original sect, founded by Shâhid b. Djarâkh, the only son of Adam. According to the legend, Yazid abandoned Islam to devote himself exclusively to Syria to the sect named after him. It cannot be denied that there are historical relations in this connection between Syria and the 'Irâq and the Kurdish movement. There are still villages of Yazidis who speak Kurdish near Aleppo. By transmigration Yazid became 'Adî, who will come to earth again. In 1917, when Djarâkh is mentioned, whom God sends from Syria to Lalish, but not Yazid. An attempt has been made to dispose of the difficulties which arise out of the caliph Yazid by making the Yazidi disciples of Yazid b. Umâra, on the authority of a statement in Shahrestâni’s (490–548 = 1091–1153) Kiltî al-Milâz wa-l-Nishâ, mainly because a prophet from Persia was expected by the ’Ashafî sect of the Yazidiya founded by Yazid b. Umâra. But even this does not remove the difficulty.

It seems no less peculiar that the Yazidis should have chosen as a national saint a Shîfi Shâlih like 'Adî b. Musâfir [q. v.] recognised without qualification throughout the whole Muhammadan world, whose orthodoxy, as we find it in his works, could hardly have led to the foundation of a sect so heterodox and foreign to the nature of Islam as Yazidism actually is. It appears impossible that a Muslim Shîfi order could degenerate into a religion so different from Islam as Yazidism is.

In any case, the Yazidi movement seems to have begun in the time of the Umayyads in Syria. According to the tradition still alive among them, they came from Bâara and the lower Euphrates in the time of Timîr at the end of the xivth century and gradually advanced into the Sindjar which they did not inhabit before the xvth century, and into Kurdistan and there became kurdisised.

As, strange to say, unlike Muslims, the Yazidis never laid stress on their possession of sacred books, they were not regarded as privileged Aib al-Kiltî. Down to recent times, they were connected from their name with the hated caliph Yazid and branded as Muslim heretics.

It was from this point of view that the various authoritative fawâis were issued which unanimously declared the land of the Yazidis dâr al-karb and proclaimed the destruction of the Yazidis and the confiscation of all their property permitted and meritorious from the religious point of view. These served as justification for the numerous attempts at conversion and extermination by the Turkish pâshas and the Kurdish tribes. I may mention the fawâis, published by Sha‘râf al-Dîn, of Musulmân Şâlih for Shâlih ‘Abd Allah al-Rubâkî (1) of the year 1159 (1746) and the fawâis of ‘Abd al-Salâm and that of Muhammâd al-Darâkî al-Kurdi.

The memory of these atrocities, which are unparalleled even in the blood-stained history of Kurdistan, may have played a part in the final separation of the Mûsul territory from Turkey. For the Yazidis were as determined as the eastern Christians to migrate if the disputed area became Turkish again. The union with the ‘Irâk was therefore hailed with all the more enthusiasm.

The resolution and strength of character of the Yazidis is remarkable; in spite of centuries of persecution they have never abandoned their identity nor their faith.

Bibliography: I refer the reader to my Yazidi-Bibliography, published in my work Ein Beitrâg zur Kenntnis der Yaziden, in H. Grothe's
As a poet al-Yazidi followed exclusively the classical tradition, especially under the influence of al-Mutanabbi (q.v.), in whose popularity in Syria he was a leader in the ninth century. He has selected material for a commentary on al-Mutanabbi, which was edited after his death by his son Ishāh (al-Aṣyf, al-Bayyad fī Dīwān aḥādīth al-Ṭayyibāt, Bābiṭ 1882). Al-Yazidi's odes are in form and matter modelled exactly on well-known classical metres; even the šāmishkēh type was foreign to him. The elegies are full of stock sentiments. He was particularly fond of chronograms and plays on words in which he could display his extraordinary command of language and form. His poems were collected in three volumes (on the first see Fleischer, in Z.D.M.G., viii., 1893, p. 279); the best edition is that by his son Ishāh (al-Nuḥbāt fī al-Aṣf, Bābiṭ 1904, with the biography written by his grandson Amin al-Haddād; 2. Nuḥbāt al-Kāshānī, Bābiṭ 1898; 3. Ţālīfāt al-Kamārān, Bābiṭ 1903, not mentioned in F. al-Bustānī, cf. cit., p. 452).

Al-Yazidi acquired particular fame in the east and in Europe as the last great representative of the writers of maṯāmah (q.v.). His collection of 60 maṯāmah, Maŷma bi-Ṭabārān, still enjoys great popularity in Syria (first edition, Bārīṭ 1859, the best that by his son Ishāh of 1873 and often reprinted). It arose gradually. Following a question in the Fārāzīs, al-Yazidi, who was a member of the maḏāḥiḥ in Bābīṭ, he began to study the maḏāḥiḥ of Hārī in Silvestre de Sacy's edition (1821–1822) and as a result put together his emanations (ed. by A. F. Mehren as Epistola critica Nāṣir al-Yazidi Berytensis ad Di Sacyrum, Leipzig 1848; s. also Reisner and Dehnan, Les éditions de Hārī, 1855, i. 72 sq.; cf. V. Chauvin, Bibliographie des ouvrages arabis, ix., Libge 1903, p. 150). In the early fifteenth he began to write maṯāmah of his own; the whole collection was finished in 1855 and was very well received in Europe (Chauvin, op. cit., p. 123, 234); one of them had been translated by Fleischer as early as 1851 (Z.D.M.G., v. 1851, p. 96–103; also Russian translation by A. Krymsky, Drevnaya poezia, Moscow 1906, p. 322–328 and fig. Krackowsky, in the periodical沃sto, ii., 1923, p. 31–34). Like those of Hārī his maṯāmah are not only of linguistic and lexicographical interest but they also contain much material of ethnographical value (see also Th. Chemey, The Assemblies of al-Hariri, London 1857, i. 98–104).

Although his own outlook and works were very conservative and traditional, al-Yazidi nevertheless exercised a very great influence on modern Arabic literature. He is with justice reckoned with his younger contemporary Bābīṭ al-Bustānī (q.v.) among the founders of the new movement in Syria. He was not a populariser of European knowledge or European methods like the latter or Riffa' al-Tawfik; language only in the wide sense was his field. By a mastery command of language, by his verses, maṯāmah and schoolbooks, he showed and taught that the old saying al-ʼarabya ʼaš-šāmAṣṣṣqir (the Arabic language cannot be christianised) no longer held true. Every Arabic speaking Christian must as a member of the Arab race play his part in the renaissance of his fatherland. In this respect al-Yazidi did a great deal to pave the way for the later Arab nationalist movement.

2. Several members of the numerous family of
Shaikh Nāṣīf attained a literary reputation. His son Silu (b. March 2, 1847; d. Dec. 28, 1906) is specifically described as an etymologist and a jurist who did a great deal for modern Arabic terminology. He revised or edited many of his father's works and published a number of articles, mainly of a linguistic nature, in the periodicals edited by him in Syria and Egypt (e.g. al-Tāhī, 1884—1888; the article on Dāsu in Dāsu's Supplement was translated by Fleischer in 1881, see Kleinerer Schriften, iii. 605—641; especially al-Bayān, 1897—1898, see M. Hartmann, The Arabic Prize of Egypt, London 1899, p. 56 sq., 60 sq. and O. L. Z., i., 1898, col. 225; al-Dīwān, 1898—1906, see M. Hartmann, O. L. Z., ii., 1899, col. 57—59; iii., 1900, col. 311—316, 340—346); a number of his letters on literary matters and chronograms were collected by his friends (Ruṣū al-ʿAṣīdī, Cairo 1920) as were his poems (al-ḥulul, ibid., n.d. publ. in a facsimile of the original Ms.). Most of his larger works were unfinished. He took a great interest in Arabic printing and even invented, as is mentioned in his letters and signs and monograms, a type which was put up to him in Bairūt in 1924 (see Mach., xxii., 1924, p. 637—638; a description with photographs in the magazine al-Maʾarr al-dīlamīdā, iv., No. 8, p. 336).

3. The youngest son Khālīl (b. 1858, d. Jan. 23, 1889) is best known as the author of one of the first original tragedies in Arabic with a subject from ancient Arabia, al-Murawwābat wa-l-waṣīfī (written in 1876; first produced in 1878; first edition 1884; second Cairo 1902); a second was never printed (see Sarkis, op. cit., col. 1333). In 1881 for a time he edited in Cairo the Miṣr al-Ṣirīk, later went back to his native land where he taught and prepared a new school edition of Kitāb al-Dimma (1885). He is known as a poet from his collection Naṣṣamīl al-Awālīk (Cairo 1888—1890 but never printed as in G.A.L., ii. 695 note—and 1908). His great dictionary of the spoken language was never finished.

A daughter of Shaik Nāṣīf named Wārdā (b. 1838, d. Jan. 28, 1924) was one of the first women writers in Arabic of the sixth century. She married Fransis Shāmīn in 1866 and lived most of her life in Egypt. Her collection of poems (Hudūq al-Ward, Bairūt 1867, 1887, Cairo, n.d. [1332 = 1913]) shows considerable fluency in the style of her father but of course without his power; as regards subject-matter they are mainly mere d'occasion which are of no little value for the chronicles of the ʿAṣīdī family.

5. The Shaik's eldest son Ḥābīb (b. Feb. 15, 1833, d. Dec. 31, 1870), author of a commentary on one of his father's books, was a translator; his death was the occasion of the last elegy written by his father, now crippled with age.

(Yon. Kratschikowsky)

YAZIDJÎ-OGHŁU or YAZIDJÎ-ZADE, the epithet of two early Ottoman poets and mystics, both sons of a certain Yāzidi (i. e. kātib) Šalāḥ al-Din. He is said to have come from Boli and spent most of his later life in Angora. Šalāḥ al-Din wrote in addition to works on mysticism, a treatise on medicine called Semeiyah and a poetical calendar of 3,000 couples of no literary value, but perhaps of linguistic interest, on the omens of certain phenomena in the heavens such as rainbows, eclipses, lunar rings, falling stars etc. The work was published in 814 (1412) and dedicated to a certain Kaṣīb 'All. The author mentions the celebrated physician Hādijī Pasha as his patron. It seems to be better known under the title Malhim; manuscripts are rather rare (cf. J. v. Hammer, G. O. D., i. 73 n. 99 with details of contents). There are old and good copies in Berlin,
there is also a French MS. translation, and Vienna).
2. Arrowr al-Kāshīn completed at the beginning of
Muhammad 855 (Feb. 1451) in Gallipoli, a Turkish
poetic version of his brother's Arabic Maqālib
al-Zamān (see above). The work has been repeatedly
printed: Stambl 1261, Karan 1861, Stambl (1291 lit.), and Biliş 1300. A detailed account
of its contents is given by J. v. Hammer in the
3. Ardijr al-Maḥijjāt, dealing with the wonders
of creation. In the introduction the author says
that in the time of Alexander the Great, the wise
men of the earth arranged to describe the wonders
of the universe. In the time of the Imam Shāhī,
this book was translated from Hebrew into Arabic.
He himself, at the suggestion of Hāджījī Bairām,
translated it, he says, into Turkish for the benefit
of his countrymen who did not know Arabic, at
the time when Sultan Mahommed captured Stambl,
i.e. 857 (1452). A superficial comparison
with Kârin's book of the same name shows its complete
dependency on it, as Kâin has clearly shown
(Cat. of Turkish MSS. in the Brit. Mus., p. 106 ff.).
The book is quite common in MS. e.g. in Dresden,
Leipzig, London, Upsala and Vienna. 4. Mustaṣâb,
a mystical work on the exact content of which
nothing has been published. There was a manu-
script in the bookshop of Kâhil Efevin in Stambl.

YAZURI, ABU MUHAMMAD AL-HUSAYN B. 'A]()
YAZURI, ABU MUHAMMAD AL-HUSAYN B. 'ALI, vizier and chief kāfī of the Fatimid
caliph al-Mustanṣir bi 'llah. His father was a vizier in comfortable circumstances of Yazuri,
Were a little town in Palestine near Ramla. It was in his native town that he began his administrative
career in the office of kāfī. In this capacity he
attained the attention of an officer in the service
of al-Mustanṣir's mother, by reporting to him an in-
justice done by the chief kāfī of Egypt and it was
even probably as a result of this that he was transferred
to the capital and a post in the official hierarchy.

After the assassination of the Jew Abū Sa'd al-Tustar, superintendent of the estates of the
Caliph's mother, in 439 (1047), Yazuri was appointed to succeed him. His ambition seems now to have
become apparent, for the grand vizier Abu 'b Barakāt al-Husayn Dja'alījī appointed him in 441 (1049)
chief kāfī, purposely to exclude him from the
visirate Yazuri retained his post as superinten-
dent, the duties of which were performed by his
eldest son Muhammad.

In the following year the caliph gave him the
visirate, which he was to hold for eight years.
This period was marked by important events in
foreign politics. The year 445 (1051) saw the
break between the Zirids and the Fatimid empire.
Yazuri in revenge sent the Beni Hilal and the Beni
Salaim to ravage North Africa. A rising of the
tribes of the Benahia was suppressed. In the east
there was the rising of Arab al-Baṣāri against the
Abbasid caliph al-Kāfīn, to which Yazuri gave considerable financial assistance. These events
are related elsewhere; we need only mention that
the taking of Bagdad by the Turkish adventurer caused the authorities in Cairo to lose their heads. To receive the captive 'Abbasid in the Egyptian capital, the caliph Mustansir hurriedly had a new palace built. This unfortunate step was to have serious consequences for the Sufi lords of Egypt. The Salsongs were not content with reestablishing the 'Abbasid caliphate in Mesopotamia, but a few years later extended the boundaries of the empire as far as Damascus.

This affair also had a more direct result, the execution of Yezdigar. Did he put to his own use a part of the considerable sums allotted to the enterprise or did he perhaps play a double game by conducting secret negotiations with sultan Tughril Beg in spite of his official position? Both charges weigh upon his memory. The caliph threw him into prison with all his family in Muhamrram 450 (March 1058), and the following month the former vizier was executed at Tinnis.

The rise to power of Yezdigar marks the first disastrous stage in the reign of Mustansir which began so well: cf. for example the enthusiastic descriptions by Nizari Khusrav who spent the first year of Yezdigar's vizierate in Cairo, Yezdigar exhausted the resources of the state, as we have seen. The year 454 (1064) was also marked by a serious famine.

The Arab historians say that Yezdigar's name was put on the coins but so far no such coin has been found. On the other hand, his name appears on a piece of cloth in the Elahberg collection, as "Abu Muhammad al-Husayn ibn 'Ali ibn 'Abd [al-] Kullämun" (J.R.A.S., 1930, p. 765 and pl. xii).

(See Janissaries.)

YEŞİL-İRMAK (written "green river"), a river in Asia Minor (the ancient Ionia) formed by the confluence of the Gligit coming from Kara-Hisar-Shahr and Nigisâr and the Tuzâl from the west, i.e. from the direction of Amasia. It runs straight north, enters the sandjak of Dünjk (willâyet of Trebizond) and flows into the Black Sea opposite Samsûn. Its length is about 60 miles from the confluence of the two rivers.

(See Janissaries.)

YEZDEGERD. [See Sassanians.]

YILDIZ KÖŞKÜ (written "Yildiz Kiosk", properly the "Kiosk of the Star" or more popularly in Turkish usage, "Yildiz Sarayı" "Palace of the Star", or simply Yildiz, the imperial residence consisting of a vast and somewhat chaotic agglomeration of pavilions and gardens situated in the northeast of Istanbul (Constantinople) on the heights which command Beşiktaş (Begiktaş) and Ortaköy.

The surrounding walls is adjoined in the east by the Ortaköy quarters, in the south by the Çerâgan (Çeragan) quarter and in the west by the slopes known as Sirriye Bey yeşilhâs. Yildiz may be reached from above by the gate (gates: Kastil-bâbâ, Selçuklu s., Harem-bâbâ, Sâmit-bâbâ), passing the Hamidiye mosque, which belongs to the palace, on the right, or from below (gate: Meşidye bâbâ), by the gardens which run down almost to the road running along the European bank of the Bosphorus between Beşiktaş and Ortaköy. For the topography see the map of Dolfina-Baghe in Baedeker, Konstantinopol und Klein-Asien, Leipzig 1905, p. 84-5.

It was under Sultan 'Abd al-Hamid II that Yildiz attained its greatest development and its greatest renown (up to 12,000 occupants), but at the beginning of the xixe century it was already a park as is evident from a fountain bearing the tughrâ [g.v.] of Sultan Selim III (1806-1807) (information supplied by Selim Nûrîyet Bey).

The earliest buildings date from Sultan Mahmûd II who surrounded them with a garden. According to Doryas, they were built in 1814; but in reality they are before 1826, for Andréeoyos mentions "Yildiziaziokou" [as served by the Baghe-Köy aqueduct] in his work Constantinople et le Bosphore de Thrace pendant les ans 1824, 1813 et 1814 et pendant l'année 1826, Paris 1828, p. 424.

Mahmûd II's kiosk was demolished by his son and successor 'Abd al-Majid (1829-61) and replaced by others which were called Molla koçlu, Cadır b. (Kiosk of the Tent) and Atçam k. (Persian Kiosk) or Yeâr koçlu (New Kiosk). According to Doryas and Osman Nûrî who wrongly followed him, the k. and the Cadır k. were only built under 'Abd al-'Azîz; according to the Guide Jeanne, the same is true of the Yeâr koçlu.

Sultan 'Abd al-'Azîz (1861-76) built the palace of Mâyvon (the Court). It was he also who joined the Çerâgan palace built in 1874 to the Yildiz park by a bridge over the Beşiktaş-Ortaköy road (Osman Nûrî, ii, 450).

All the other buildings belong to 'Abd al-Hamid II (1876-1909). This ruler, who never built a palace in the proper sense of the word, delighted in multiplying light buildings, often of cement, and these pavilions, chalets and kiosks were sometimes run up very quickly.

Before his time, Yildiz was a pleasure resort: only the mother of 'Abd al-Majid, the Wâlide Sultan Bezî-îlem (d. 1853), seems to have lived there regularly (Moritz Busch, Die Türkei, in Lloyd's Reisestudien, vi, Trieste 1860, p. 199).

'Abd al-Hamid II moved there soon after the beginning of the Russo-Turkish war. He gradually stayed there more and more until he finally never left it and made a fortified camp and a regular town out of it. The park was extended and the surrounding wall raised (in 1868). The name of Yildiz contrasted or superimposed on that of Sublime Porte, became a synonym for the government of the Palace and the Hamidian régime.

Three main portions of Yildiz are distinguished:

1. the Palace proper with its immediate annexes,
2. the Inner Garden (or Park) (Il bâchî) and 3. the Outer Garden (or Park) (Açlık bâchî).

1. The buildings of the Palace in the strict sense comprise:

Mâyvon, already mentioned, an elegant building, the largest in the Yildiz (whence its name of Büyük Mâyvon), situated outside the walls so that it is seen in its entirety on arriving from the west, on the left of the Hamidiye mosque. 'Abd al-Hamid set it aside for the private secretaries (müfleymiç) of the Palace. It was also called the "Ambassadory's pavilion" or Yildiz par excellence (see illustration).

Selâmîh, private apartments of the sultan (þanîlah).
played 60 workmen and produced most of the
furniture of Yıldız kiosk. (Abd al-Hamid had a
passion for carpentry at which he himself worked).

Merkmil "imperial stable"; there were
five kiosk (arlante "kiosks") at Yıldız (Abd
al-Hamid had a passion for horses).

Museum of (staffed) animals, near the Merkmil
kiosk, dovecotes, poultry houses, not to mention
greenhouses, menagerie, bird cages, kennels, hospital
for dogs, horse training ground, hamams.

The palace had two mosques, a large work
department (ta'mir kiosk), with saw-mill, foundry,
locksmiths' shops etc. which employed 300 workmen
not counting the foremen; the princes used to work
there sometimes.

The domestic staff (hendegân, çadıkes) lived
near the palace, but outside the walls.

Independent of the buildings above mentioned,
two were which we have not identified:
Ferhan kiosk and the Little Trianon.

There were two ponds in the Outer Park, one
called Ceviz kiosk, "pond of the valley" (between
Büşhâvan and Orazköy), 500 feet long and 30-
100 broad; the other near Ceviz kiosk, about
5,000 sq. yards.

In the Inner Garden is a pond or rather an
artificial stream, 300 yards long and 80 broad.

Yıldız now belongs to the prefecture of Istanbul (J. Sekretni) which has leased a part of it
(Merkmil kiosk) to a casino.

There is some talk of the resumption of the
Merkmil kiosk again by the municipality to give
it to the National Assembly of Turkey which would
make it a meeting-place for international conferences
(Athens, May 10, 1933). Several schools are
established in the old buildings or annexes of
Yıldız: Harbi akademisi "Military school", Milliye
mektebi "School of political sciences" (in the old
seviller dairesi "rooms lodgings"), Polis mektebi
"Police-school", Harimiyeti milleye gazet kiosk
"Boarding-school of national sovereignty".

The melancholy reputation of Yıldız has
produced several novels and pamphlets which
however contain no information of definite value:
Paul de Rêgas, Les secrets d'Yûldiz, novel in-8,
2nd edition; Mourad Bey, former imperial
commissioner of the Ottoman Public Debt, Le Palais
de Yûldiz et la Sublime Porte; - Le véritable
and Dirham al-Mawjul (d. 842) are said to have been his pupils. Among his books were a Kithā
darfurra Yūnus (“The Unique Book of Yūnus”), a Kithā al-Kifān (“Book of Singing Girls”),
and a Kithā al-Nughayl (“Book of Melodies”).

As a composer Yūnūs has a place among the
great musicians of the classical era, as we know
from the high esteem accorded his Zaynāb. As
a singer, he must have had considerable ability
to have roused the jealousy of so great a performer
as Ibn Kithā. It is however rather an account
of his “famous books on songs and singers” as the
author of the Fihrist says, that Yūnūs deserves
particular praise. Abu T-Farej al-Iṣḥāq, the
author of the Kithā al-Aṣḥāb, testifies that Yūnūs’
book concerning the songs was one of his chief
sources of information. It was, in fact, the first
attempt made to collect the Arabic versified
melodies (ṣāḥib) and rhythms (ṣūba) of songs.

Yūnūs b. Mattāl, the prophet Jonah,
son of Amittai (II Kings xiv. 25). In the
Kūfah he is four times mentioned as Yūnūs, with
his father’s name being given, once as Dhu l-Nūn
(xxi. 87), once (xxviii. 45) as ṣāḥib al-ḥāl, “he of
the fish”. The Fihrist explains why Yūnūs is
the only one of the major and minor prophets
who is mentioned in the Kūfah; a prophet who is
swallowed by a fish naturally attracts attention. Mahμμad names Yūnūs among the apostles of God (iv.
161; vi. 86). Surā x. is called after Yūnūs, and
tells of the town which comes to believe and
therefore its fate is averted from it (x. 98). Yūnūs,
an apostle of God, fled on a ship which was over-
loaded. He was condemned by lot and a fish
swallowed him. He was worthy of blame. If he
had not praised God he would have remained in
the fish’s belly until the resurrection. So We threw
him sick upon a barren shore, and caused a gourd
to grow up over him, sent him to a hundred
thousand people; and they believed and We gave
them respite for a further period (xxviii. 139-142).
Rasūls Dhu l-Nūn, how he departed in wrath and
thought We could exercise no power over him;
then he called out of the darkness: There is no
God but Thee, praise be unto Thee, I was one
of the sinners. Then We heard him and rescued
him (xxi. 87-88). Await patiently the judgment
of thy Lord; be not like him of the fish, who
tried out when he was in distress; had the grace
of his God not been granted to him; he would
have been shamefully cast upon the barren shore
but the Lord heard him and he became one of
the righteous (lxviii. 48, 49).

Buhārī and Nawawī also quote as divine
revelation not put in the Kūfah the utterance:
“No one can say he is better than Yūnūs b. Mattāl,
even if his genealogy goes back to his father”
(Nöldeke-Schwally, Geschichte des Islam, b. 257); Muslim legend further develops this material.
Why was Yūnus enraged? 1. He was angry with the sinners; 2. he was angry because the calamity he had prophesied was delayed at the last minute and he appeared as a liar worthy of death; 3. because the angel Gabriel did not even allow him time to mount a steed or put on a shoe. His ship could go neither forward nor backward. He confessed his guilt but the sailors would not throw him into the sea; three times the last lots and then threw him into the waves (Thaläh). Finally Yūnus threw himself into the jaws of the whale (Ibn al-Áthir), which says he has come from India on account of Yūnus (Kisā'ī). God commands the whale, saying: I do not give thee Yūnus as food, I give thee him that you may shelter him as in a mosque (Tabari, Annals, i. 683). The threefold darkness of the fish, the sea, and the night envelops Yūnus. The fish is swallowed by another fish (Tabari, Tafsír, etc.). God makes the fish transparent so that Yūnus can see the wonders of the deep. He hears the songs of praise of the seamounts just as the angels hear his from the inside of the fish. It is disputed whether Yūnus remained 3, 7, 20 or 40 days in the fish. Hurled out upon the shore he is given shade by a gourd tree, and suckled by a goat (Ibn al-Áthir), or antelope (Thaläh), or a gazelle (Kisā'ī). When they disappear Yūnus laments. Then God reproaches him for not having had sympathy with over 100,000 people. This admonition is imposed upon him deeply by other ways also; by fruit-tree tarts up, by the example of a potter who is anxious about his pots and a sower who is anxious about his seeds. The city of the prophet is in despair because he does not come back. Then Yūnus has a shepherd announce his approach: the earth, a tree, an animal of his herd, all bear witness to the truth of the message.

Al-Kisā'ī extends the miraculous to the earlier history of the Prophet. His father was 70 when Yūnus was born. His mother, who became a widow soon after, had nothing left but a wooden spoon, which proves to be a cornucopia. As a result of a miraculous dream he marries the daughter of Zakariyyah b. Yahyā. He loses his wife, both his sons and his property. He therefore will not pray with the others on the ship. Everything is miraculously restored to him.

BERNHARD HELLER

YŪRŪKS, the general term for the wandering Turkish tribes in Asia Minor, also found sporadically on the Balkan peninsula. The name in Turkish means "wanderers", i.e. nomads in general, and some scholars (first v. Strahlenberg 1730), then J. v. Hammer and H. Kiepert) held the view that the same word was contained in the name of the Yūrūk (Yörük), a people described by Herodotus (iv. 22), who lived by hunting, roughly in the southern Ural. J. H. Nordmann has similarly referred the account by Kimma in the annals driven by the Emperor Manuel I in 1575 from the region of Eski-Sháhr (q.v.) to the Yūrūks. According to Hasluck, the word Yūrūk was first applied by Ryzant, to the nomads of the Trodin (History of the Turks [1857], ii. 138).

The Anatolian nomads are usually called by the settled Turks, Yūrūks, Gōčes or Türkmen, or after the tribal confederation to which they belong (e.g. Afşāhr, Bāyātā, Kāzātā, Shekliāt, Warakāt, etc.) or after the particular tribe (e.g. Aδīnī, Anamasī, Gīk Munālī, Harmandārī, Kārā-Kečīlī, Karā-Koyulan, Kūrzmī, Kosamī, Sarī-Kečīlī, Zīlī, etc.). The tribal organisation is rather important. A tribal confederation (naktur) at the head of which is a bey or šākh is divided into clans (kabba) and again into septs (mnahīl).

A strong tribe often subdues a weak one and even down to the Tanẓamāt [q.v.] the Yūrūks were usually ruled by their own boys. Some of these boys in Rumelia were given fiefs (išğāt; q.v.) (cf. 'Ain-i 'Alt, in Tischendorf, Das Lehrbuch etc., p. 63 and Ewliya Celebi, III. 394).

In his monograph on the Yūrūks Dr. M. Tzykyrov has given a full list of 88 tribes (reproduced by Hasluck, ii. 475–477) of whom the majority were in his official district of Sivas and the adjoining wilayet of Aδīnī. There are also numerous Yūrūk tribes in Southern Anatolia (around Mentešche oder (Mugala), Adalia, Alaiye and Adama) in the districts of Sivas and Konya; also in east and southeast Anatolia (in the wilayets of Urfa, Diyābār and Mārdīn); their distribution is connected with the distribution of pastures.

As early as Bāyārīn Ta's reign, the Yūrūks were coming to Europe (to the district of Philippopolis (Plovdiy) and in time they spread over Thrace and Macedonia as a number of place-names show. Since the wars of recent years, however, these Yūrūks have for the most part gone back.

Although they do not form a single homogeneous stock, the Yūrūks are predominantly Turks and have retained the old Turkish type, as well as many old words better, than the settled Ottomans. They speak as a rule different "coarse" Turkish dialects, which are as a rule not essentially different from those of their settled neighbours (cf. i.e., p. 921): only a few tribes speak Kurdish.

On the religion of the Yūrūks nothing certain is known. Under the influence of Sunni or Şī'ī propaganda they have become nominally Muslims, but they are more attached to their primitive animistic religion, in which the worship of trees, shrubs, springs and mountains plays an important part. In any case they pay more heed to their old rites and customs than to the prescriptions of Islam.

The occupations of the Yūrūks are decided by local conditions. In the steppes and along the coast where they spend the winter, they rear sheep and goats, and sometimes cattle, which they take in the summer to high-lying pastures. Some tribes are good breeders of horses and camels. In forest country the Yūrūks are more frequently woodcutters (tahafād; q.v.). Many tribes are hunters and in certain circumstances practise a little agriculture. The women engage in cooking, making clothes, spinning, basketwork, weaving, weaving of felt, mats and carpets. The Yūrūks live in tents woven of dark goats' wool or in primitive huts.
Their total number is estimated at 300,000. According to ‘Ain-i ‘Ali (op. cit.), the Rumelian Yürük in the xviiith century had 1,204 of the same, i.e. 33,840 men (1 adalı = 30 men). In the xviiith century they provided a contingent of 57,000 troopers under their own leaders (Perry in Hasluck, p. 130).

All attempts by the Turkish government to make the Yürük settle permanently have had very little success for obvious reasons.

**Bibliography:**

(FEHİM BAŞKARTAKİYEV)

**YÜŞHA** s. **NÜN**, the *Joshua of the Bible*. The Koran does not mention him by name but alludes to him. When Moses wished to lead his people into the holy land and Israel was afraid to fight with the giants, they were encouraged by two God-fearing men (v. 27-29), who may be recognized as Joshua and Caleb. Neither can it be doubted that the young man (v. 28, 30, Exod. xxxii. 11) who accompanied Moses on a journey to Khaḍir (not named) (Sura xviii. 59-64) is no other than Joshua.

Muslim legend has supplied the figure of Yüsha' with features not found in the Bible. Yüsha' is given the task of summoning the Egyptians to their final fate. To enable Moses to depart this life without anxiety, Yüsha' is installed as prophet in his lifetime. The Arab tradition varies as to whether the victory over the giants was won in the time of Moses or not till that of Yüsha'. The credit is usually given to Yüsha', Balaam supports the giants (in Ibn al-Athir the story is embellished: Balaam’s wife is bribed to incite him to evil). When Yüsha' is successfully fighting the giants, Friday evening comes. If the Sabbath begins, the fighting cannot be continued and the victory will be incomplete. Yüsha' wishes to stop the sun but first it refuses, saying it is fulfilling divine orders just as Yüsha' does; finally the sun agrees. After the victory Yüsha' collects the booty as a sacrifice but no flame comes down from heaven to consume it. There has been some dishonesty. Moses summons the heads of the tribes. The hand of the sinner sticks to the hand of Moses (al-Kısa‘i records another divine judgement; each tribe has a mark on Aarón’s robe and the mark of the guilty tribe becomes twisted). A bull’s head studded with pearls and jewels is found in the sinner’s possession and added to the booty. Flames now consume the booty, the bull’s head along with the sinner. Yüsha' cannot cross the Jordan for 40 days. At his prayer the two hills on the banks become a bridge, across which the people pass (al-Kısa‘i). Jericho is besieged for six months and in the seventh the walls fall at the blowing of trumpets.

In Tabari (Leyden, t. 558) we have the isolated tradition that the dead man conjured up by Tātūt (Saul) was Yüsha'.

**Bibliography:**

**YÜSUF I.** [see also Al-Mahdi (s. *Al-Mahdi*).]

YÜSUF bin MUHAMMAD AL-HAKAM b. Abī ‘Abd al-Mu’min al-Saffah, governor of the *Irāq*. Yüsuf was a parent of the famous al-Ḥajjāḍī b. Yüsuf, q.v. and governed the province of the Yemen for many years before he was transferred to the *Irāq* by the caliph al-Hāshim b. ‘Abd al-Malik. On Ramāḍān 27, 106 (Feb. 15, 725) he arrived as governor in the Yemen and in Dhu‘ al-Hijjah 1, 120 (April–May 728) he was appointed governor of the *Irāq*, and took up his quarters in al-Ḥira while his son al-Salṭ remained as his deputy in the Yemen. In al-Ḥira he acquired the reputation of a blood-thirsty tyrant; all kinds of stories, some almost incredible, were told of his cruelty. The first notable victim of his hatred was the former governor of the *Irāq*, Khaṭṭāb b. ‘Abd Allāh al-Kārī, q.v. In 122 (740) the ‘Alā‘ Zāhī b. al-Husayn b. ‘Alī raised a dangerous rebellion in al-Kūf which, however, ended in a fiasco [cf. HISHĀM b. ‘ARUJ AL-MALIK]. After order had been restored, Yüsuf is said to have asked the caliph for permission to lay waste the town of al-Kūf, but the caliph refused. He endeavoured to bring suspicion upon the able Naṣr b. Sā‘yār, whom Hāshim had appointed governor of Khurāsān on the fall of Khaṭṭāb, in the hope that he would succeed in getting him dismissed, and then combining his governorship with his own. For this purpose in 123 (740-741) he sent al-Jaḥām b. al-Salṭ to the caliph to turn him against Naṣr and ingratiate himself with him. Hāshim, however, was not deceived but left Naṣr in office. After the assassination of al-Walīd II, the Khūţabī, Djamāhur was appointed governor of the *Irāq* and as Yüsuf found no support among the government troops and the Khūţabī made common cause with the Khūţabī, there was nothing left for him but to take to flight. He set out for Syria and reaching al-Balḵ in Transjordania, he tried to hide among the women of the harem but was discovered by the soldiers of the caliph Yazīd III and brought to Damascus. Here he was imprisoned and remained there till the outbreak of civil war on the death of Yazīd. But when Marwān b. Muhammad, q.v., after his victory over Sulaymān b. Hāshim, who led the followers of the late caliph, approached the capital, Sulaymān had Yüsuf as well as Walīd II’s two sons murdered before himself seeking escape in flight. This happened in Dhu ‘l-Hijjah 126 (Sept.-Oct. 744), or according to another statement not till the following year (beg. Oct. 744). Yüsuf was then about 60. According to the Muslim historians, he did not lack literary training; as to his appearance we are told that he was small in stature and had an unusually long head.

(K. V. ZETTERBERG)

**YûSUF b. TâSHFîN.** [see ALMIRAVIUS.]

**YûSUF b. YÁKîB, the Joseph of the Bible,** is a favourite subject of Muslim legend. In Sûra xii. Muhammed deals with the whole of Yûsuf's story, claiming that it is the most beautiful of stories. It is the real foundation of the Tâshfîns, because of the lesson concealed in it, on account of Yûsuf's generosity and its wealth of matter, in which prophets, angels, devils, djâns, men, animals, birds, rulers and subjects play a part.

Yûsuf in the Kûrân. Yûsuf is mentioned twice outside of Sûra xii. Once (v. 84) as one of the pious ancestors; farther in Sûra xli. 36: Yûsuf came with clear proofs but they doubted him and after his death it was thought that God would never send another prophet, Sûra xili. contains more and less than the Bible. Let us first consider the additions to the Biblical story.

Yûsuf is warned not to tell his brothers his dream (verse 5). Yaâqûb is afraid for Yûsuf on account of the wolf (15). Yaâqûb does not believe the story of his death (17, 18). Yûsuf returns the love of the temptress; only a sign from his Lord keeps him from sin (24). Yûsuf's coat is torn from behind and a windstorm proves his innocence from this (25—28). The nation who speak evil of Yûsuf's temptresses are so dazzled by the angelic beauty of Yûsuf when he comes in that they cut their own fingers instead of the food (31). Yûsuf proclaims the true faith in prison (37—40). The seven fat and seven lean years are followed by a prolific year with a good rainfall (49). Yûsuf interprets Pharaoh's dreams while still in prison and will not come to court until his innocence is recognised (50, 51). Yûsuf asks Pharaoh to appoint him over the treasures of Egypt (55).

Yaâqûb orders his sons not all to come in at one gate (67). Yûsuf at once reveals himself to Benjamin (69). When the goblet is found in Benjamin's sack the brothers cry out: If he be a thief, his brother has already been a thief (77). Yûsuf sends his coat to his father, Yaâqûb recognises the smell of it from a distance and regains his sight from it (93—95). Yûsuf's parents bow down before him thus fulfilling his dream (101).

For most of these additions to the Biblical story, Geiger, Grünbaum, Neumann and Schapiro have shown a Haggadic origin; on the other hand, we find Muhammadan influence in the later Jewish legend.

On the other hand, we do not have in the Kûrân the description of his character. Remarkable also is the omission of the dream of the brothers' sheaves which bow down before Joseph's sheaf (Gen. xxxvi. 5—7). This dream is replaced in post-Kûrânic legend by a miracle. A tree grows near Yaâqûb's house, on which a new branch sprouts whenever a son is born to him. None grows near Yûsuf's birth. At Yaâqûb's prayer, Gabriel brings a branch from Paradise, which surpasses the others and blooms and bears fruit. The Yûsuf Sûra is strikingly uncertain and hesitating in that it mentions no one by name except Yaâqûb and Yûsuf and gives no numbers or times. The only references are to one of the brothers or at best the eldest of the brothers, a king, a noble, his wife, a witness. Yûsuf is sold for a paltry sum; the number of his brothers is not given. This gives the expositors of the Kûrân an opportunity to search for the anonymous and undefined (muhkamât) (see vol. 14, *Die Richtungen der islamischen Koranallegorie*, Leiden 1919, index, s. v. Muhrakâm).

**Yûsuf in post-Kûrâní legend.** When the Kûrân cautiously says "one of the brothers was sold or did something", in legend we find Reuben, Judah, Simeon and in Zâshîr and Benâjâl also. During the course of time we have Benjamin with his ten or three sons. Sometimes Judah, sometimes Reuben, sometimes Simeon is represented as possessing a terrific temper which can only be calmed by a hand of the house of Jacob. The man who buys Joseph from his brethren is called Mâlik b. Da'r and the Egyptian to whom he is sold Kitâf, Iftâr, Iftân, Kitâsr, Kittiân, Kitifân; his wife is called Râ'il, later (as in Firdawûs and Kitâvâ'z Zâlîka, Zulâika. The king of Egypt: whom Yûsuf converts to Isâlam, is called Kâyân b. Wâlid, his butler Nâbû, his baker Ma'dîlîb. The abjâd, the witness, becomes a relative of the tempers or even a baby who miraculously proves Joseph's innocence from his cradle. Even the names of the eleven stars which bow down before Joseph are given. Muslim legend knows how old Yûsuf was at the time of the dream, how long he was kept in the well, where the well was and what he was sold for on each occasion. The letter telling him and Yaâqûb's letter to Yûsuf are both given, though not full.

A reason is given for everything that is unexplained in the Kûrân. Why did Yaâqûb suffer? Because he killed a calf before the eyes of his mother, because on one occasion he did not share his meal with a hungry man, because he separated a slave from her parents. — Why does Yûsuf suffer? Because of his vanity; later, because he appeals to the butler instead of to God. — When Yûsuf is warned not to communicate his dream, how do the brothers learn of it nevertheless? From Yûsuf's aunt, and so on.

We also find the legend developed by the storyteller's art without any foundation in Kûrân or Haggadah. Yaâqûb touchingly recommends the little Yûsuf to the cure of his brothers. They pretend to be very gentle when in sight of the father but very soon ill-treat him, break the jug out of which he wants to drink, tear his coat from his back, which he begs as a shroud, and tell him to appeal to the sun, moon and stars of his dreams. Gabriel takes pity on the deserted boy, finds him the cloak with which Abrahâm was protected from the burning flame. A caravane loses its way and comes to the well. The brothers ask the purchaser to put Yûsuf in chains, nevertheless Yûsuf takes leave of them with dignity. On the way he throws himself from his camel on to the tomb of his mother Rachel, which they pass. — The efforts to seduce him are described in glowing language. Yûsuf sells corn to the Egyptians. During the years of famine however, Yûsuf starves also so that he may feel what it is like to be hungry: he partakes only lightly of Pharaoh's banquets. When Yûsuf is questioning the alleged magic cup, Benjamin asks him to enquire if Yûsuf still lives. — He lives, you will see him. — When
Ya'kub receives a message from Yüsuf, he asks how it is with Yüsuf? — He is king of Egypt. — That is not what I am asking; I mean how is it with his faith? — He is a Muslim. — Then my happiness is perfect. — Yüsuf enquires how his father could abandon himself completely to grief, as he did not believe in a reunion after the resurrection? — I believe in it but I was anxious lest you had abandoned your faith so that we should remain separated in the next world.

The Kur'an tells nothing of Yüsuf's death and sarcophagus. Muslim legend, however, has taken stories of this from Haggada. Yüsuf's sarcophagus was sunk in the Nile. At the Exodus Moses went to take it with him but could not find it until an old woman (Serrach, a daughter of Asher) showed it to him. In Itsam, the legend seems to have been further developed; it tells of the people living on the banks of the Nile disputing over the sarcophagus, which is finally sunk exactly in the middle of the river so that both sides may equally share its virtues.

Islam is very proud of its story of Yüsuf. The Hadith says that the Yüsuf Sûra surpasses the Topšû Ringût. The Kısî tells us that God has given the Yüsuf Sûra to every prophet, but the Jews concealed it until Muhammad revealed it as evidence that he was a prophet. — The Sûra do not recognise Sûra xii.

YÜSUF KHAŞŞ HAĐİB of Balkashghu, a Turkish author, who wrote the mirror of princes, Kütaşhâdî Bîlîg in 468 (1070—1070) for the sultan of Kâshghar. Tawarghâ KhaBân Abû 'Ali Hasan b. Sulâman Arâdân [see BUGHÂRÂN] and was given the title of chamberlain as a reward. This, the first classic of the Turkish poetry of Central Asia, is completely under the influence of Persian literature. The author no longer uses the symbolic measure of Turkish popular poetry but experiments with a new and somewhat clumsy imitation of the mutâbâh and says in his preface that the Iranians would call his work a Sâhâhâna. In style also he is influenced by the Persian lyric, especially in the song of spring with which he introduces the praise of his prince. Whether the elaborate form which he has given his work is his own invention or what model he followed has not yet been discovered. There is no proof of the influence of Chinese literature which was at one time suspected. The author puts his instruction into the mouth of allegorical figures: the prince Kân-'Toghân, who represents justice, the vizier 'Alî-'Îsdî, the representative of good fortune, his son Öktûrûmîn and his friends 'Alîg and Öktûrmîn. For his social ethics and occasional medical references, the author is completely dependent on Ibn Sinâ, as O. Alberts first pointed out. The author cannot be denied a certain originality for the way in which he applies these principles to the conditions of his people. In spite of all their pedantry his expositions are a valuable source for the sociology of the Turks of Central Asia. The language of the book appears to be that of Kâshghar, but it is an artificial language which had become strictly conventional in form in court circles under Iranian influence and was already superior to the dialects; it is based on a somewhat younger form of Turkish than that which Kâshghar gives in his Divân Lâgâhî al-Turkî; really it is not strictly Uighur as was once thought. On the other hand, one cannot say with certainty in what script the work was originally written, whether in the so-called Uighur, which is based on the Nestorian Syriac alphabet, in which the Vienna MS., the only one known down to 1897, is written, or in the Arabic script used for the fragment in the National Library in Cairo and the manuscript found by Zeki Welldî Bey in 1914 at Nemesân. Sections of the Vienna MS. were published by Vânsbîr as Ùrgsîc Sprîçmûnimmânt u-des Kudatû Bîlîg, Uighûr. Text with Transcription and Übersetzung 1. Ùrgsîc-Deutsch, 2. Ùrgsîc, 1870. W. Radloff published a facsimile of the whole manuscript St. Petersburg 1890, the text in transcription in 1891 and in 1900 text and translation from the MSS. in Vienna and Cairo followed. While Radloff in his transcription and in the form of the title Kudatû Bîlîg had used the pronunciation of the northern dialects, V. Thomsen in his essay Sur le système des consonnes dans sa langue ougovire, in Ëskîl Sîmêc, ii. 241 sqq. showed from the rhymes of the Kûtâshâdî Bîlîg, that it had completely preserved the phonetic system of the Orkhan inscriptions with its wealth of sonants and spirants, which was confirmed by the MS. in Arabic script.

(C. Brockelmann)

MAWLANA YÜSUF, manûshî of the Great Moghul Humâyûn (1530—1556), probably identical with Yüsuf b. Muhammad Yüsuf Harâsî, the celebrated physician of Bâbur and Humâyûn. He acquired a place in Indian literature with his well-known letter-writer Badî'û al-Insâfi, which he composed in 940 (1532—1533) for his son Râfî al-Dîn Husain and several other fûllâs. The book begins with a mukaddima on the different
YUSUF — AL-ZAB

kinds of modes of address which must be regulated by the relation of the correspondents to one another in rank; Yüsuf then divides the different kinds of correspondence (mağâne) into three parts: letters to persons of higher rank (mağan-i hâs), of the same rank (mağan-i ahd) and to those of lower rank (râfîh). Then comes a series of forms of letters which are divided into sections, such as Sultan to Sultan of higher, equal or lower rank, princes to Sultans and princes, princes to princes, amirs, grand-viziers, viziers, officials of the Divan, secretaries (mağâne), sayyids (sâlât), shaikhs, judges, poets and astronomers. Then come what one might call private letters: to relations and friends on various occasions, e.g. if a reply has not been received when on a journey, or on grief at separation, longing for home, the tone of the letters showing faithlessness, reconciliation, excuses, congratulations, condolences etc. A hâfiz gives examples of addresses (fânâwâ). The book, which is also known as "İnâkiy Yüsufi," was lithographed in Delhi (1845); manuscripts are fairly common. If Yüsuf is really the same man as the physician Yüsufi, he is also the author of a number of medical works among which we may mention the "Tibb-i Yüsufi" (lit. Cawnpore 1874), "Tibb-i Al-Mawli (lit. 1863), Muğâbârî, Tihib-i Al-Mawli (lit. 1879), Dalvâr al-Nâbî (lit. 1874).

Z

ZAB, ZAB, 11th letter of the Arabic alphabet, with the numerical value of 7. For its phonographical pedigree, see ARABIA, plate 1. It belongs to the abjad, the "abjad-i anâni," and corresponds to the same sound in the other Semitic languages. It is pronounced like English and French z. In the spoken Arabic of to-day z may also represent other sounds of the classical language, such as dā and f. In Persia and Turkey Arabic z is often pronounced z. Bibliography: W. Wright, Comparative Grammar of the Semitic Languages, Cambridge 1890, p. 57; A. Schande, Sûhâbirî's Lautlehre, Leyden 1911, index; C. Brockelmann, Grundriss der vergl. Grammatik der semitischen Sprachen, Berlin 1908, l. 128 sqq.; id., Précis de linguistique témérite, transl. by W. Marçais and M. Cohen, Paris 1918, p. 71; Lidin al-Arab, vii. 167. (A. J. Wensink)

AL-ZAB, the name of two left bank tributaries of the Tigris.
1. The Upper or Great Zab (Zab al-dûr or al-âkar) was known already to the Assyrians as Zabû izzû, the "Upper Zab." The Greeks called it Lyhas (Weissbach, s. v., No. 12 in Fauly-Wissowa, R. E., vol. xii., col. 2391 sqq.; on the name see J. Markwart, Südarmenien, Vienna 1930, p. 429 sqq.), the Byzantines however have again Zâsâs (Theophylact, Chron., ed. de Boor, p. 318, 320). In Syriac it was called Zâghab, in Armenian Zav (Thomas Arcrumi, ed. Parkinson, iii/iv, p. 145; transl. Broset, in "Collection d'hist. Arméniens, l. 123"). The Kurds at the present day call it Zâbû (C. Hoffmann, Ausflugs, p. 236, note 1884). On account of its torrentous course the Arabs called it Al-Musabîr. According to the Arab geographers, it rises in the mountains of Alkabârî and in Al-Musabîr, Al-Musabîr, p. 52 and Yâkhû (Mufâjam, ii. 902

read this for Mughârî and cf. G. Hoffmann, op. cit. p. 228). Its water is said to be red at first (cf. however G. Hoffmann, p. 234, note 1886). It then flows via Zarkûn and Bâdgâsh (Sy. Bîth Baghâsh in Hzâràysh, now probably Bich Kûf in Albûkk, then via Bisharrat, two days journey from Al-Mawli, to the district of Hâfîn, where it makes a turn before leaving the hills and flows through the Jârâ of al-Marjâ until finally it enters the Tigris at the monastery of Unîr Bârkanî below Al-Mawli, a farasîr above al-Haditha. Hâfizî Khalîfî says it is formed by the streams of Kâwâr (now Nehîl-es) and Djârîl. After their junction it flows along the hills past the Sandjak (in the turn of the river to the S. E.) and through the district of Zâfâr of the region of al-Tâmahî. Then it turns again S. W. at its junction with the Râwandcles. Shortly before joining the Djîdîs below Nîmîrûd, the ruined site of the Assyrian Kalakh, it is joined by its right bank tributary, the Khâzîr, which has previously been increased by the waters of the Gömeîl-es (Greek: Buomolos) from Tell Gömeîl (Gaagombala).

The Great Zâb plays an important part in military history. It is several times mentioned in the campaigns of Maurice and Heraclius (Theophylact, Simok., ed. de Boor, iv. 117, according to whom the lower course is navigable iurâ, see, p. 150), p. 9, 11 v. 5, 6, 6, 6, 8, 8, 8; Geor. Kadren, ed. Bonn, i. 730, Theophylact, Chron., loc. cit.). On its tributary al-Khâzîr was fought in Muhammed (Aug. 686) the battle between Ibrahim and Ubâdî Allah (Cantini, Chronografa islamica, Fasc. v. 781, a. h. 67, 7, 2). On the Great Zâb itself Marwan was decisively defeated in the battle of 2nd-11th Djumâda II 132 (January 16-25, 750) (Haarr, Hist. des Arabes, i. 259 sqq.; Cantini, op. cit., p. 1696 sqq., a. h. 132, 12).
2. The Lower or Little Zab (al-Zab al-aṣīfah or al-aṣāfah) is called in Assyrian Zabu ḥaṣpāṭu, "the lower Zab", in Greek Καπνίς (Weissbach, art. Καπνίς, No. 2 in Pauly-Wissowa's Realenzyklopädie, vol. x., col. 2121, Byzantine Greek ἱππίς Zabas; (Theophan, Chron. ed. de Boor, p. 320, according to whom there were four bridges over it) or ἱππίς Zabas; (Theophyl. Simok., ed. de Boor, v. 8, 9). According to the Arab geographers, its source was in the district of Dahrut (Syrac. .DataType.débar, Débar, on the modern Dibbûr-yah near Sidikin) and in the mountains of Sallakh (Syra. Sallakh) in Adharbajjân not far from Shahrizur, and it flowed into the Tigris at milî above al-Sinâ (Syra. Şenââ) at Dair Ibn Gamih (Syra. Dâir Bâr Gâmih). The Little Zab is formed by the confluence of a number of small streams, which rise in the hills between Lâhidjân south of Lake Urmia and the pass of Awromân. The main stream is now called Altûm, in its upper course Aşâr or Kâlî. On the lower course is Mûnûnpûr, just below its junction with the Tigris is Kalat Dâhabî.

(E. Honigmann)

ZAB, a region of Algeria. The name Zab (plur. Zîbûn) is given to the area around Biskra measuring about 125 miles from W. to E. and 30 to 40 from N. to S. It is a rather flat plain sheding in the south into the Sahara and bordered on the north by the southern slopes of the Saharan Atlas, but having easy communication with the depression of the Hôdina and the plateau of Constantine through a wide gap which opens up between the hills of Zab and the Ahras. Being subject to desert influences Zab has only rare and irregular rainfall, insufficient in ordinary times for the cultivation of cereals, but the streams from the mountains and subterranean supplies Sustain an oasis vegetation at many places, which contain nearly 800,000 palma.

Three parts of Zab are usually distinguished: Zab Şarîk or Eastern Z., between the foot of the Ahras and the Shôçî Mêhrî; the Dahrut or northern Z., between the hills of Zab and the Wâd Dîjî, and lastly Zab Gueblî (םוֹבִּל). Southern Zab, separated from the preceding by a strip of sand and marshes, Zab Şarîk is watered by the waters of the Ahras, Wâd al-Âbiyâd, Wâd al-Ârab which irrigate on leaving the mountains the oases of Zerîblât al-Wâd, Badis and in the plain those of Sidî İbrahîm, Seriâna and Oumâich. The Zab Dahrut, owing to the springs which are dotted along the foot of the hills, contains the most prosperous oases, Bu Shiblûn, Ishaman, Farâar and particularly Tolga, which is regarded as the capital of this part of the country. To Zab Gueblî belong the oases of Wâd Dîjî, Oureilal and Doucen, the magnificent palm-groves of which form a striking contrast to the miserable oases of Millû and Bigû which are half buried in sand.

The population (93,000, not counting the inhabitants of the commune de plain exercise of Biskra) is for the most part settled in the oases but we also find in the Zîbûn wandering shepherds belonging almost all to the tribes of the Arab Sherags, who in the spring go up into the Hodina and the Tell with their flocks. The settled population does not find sufficient resources in the country. They have therefore always been in the habit of migrating temporarily to the towns of the Tell. In the Turkish period natives of the Zîbûn under the name of Biskra formed an important corporation in Algiers, where there are still about 2,000 of their compatriots.

History. We know practically nothing about Zab in the pre-Islamic period and during the first four centuries of the Hulja. The Romans never occupied and colonised the country but were content to establish forts on the Wâd Dîjî, at Biskra and at the southern exit of the valleys of the Ahras. As to the name Zab itself, it should perhaps be connected with Zabi, a Roman town in the region of Hodina, which was in the fifth century A.D. the see of a bishop. Al-Bakri (Marâlàh, p. 64, transl. Fagnum, p. 133) mentions among the towns of Zab, Toluna, Tolga, Talhûda, Doucen; Idris (transl. de Goeje, p. 109) describes Tobuna [q.v.] as the capital of Zab. It seems however that at this period, or in any case in the period immediately after it, political preponderance passed to Biskra [q.v.] in which lived influential families like the Banû Kummân and the Banû Sidiâj, who controlled the region's affairs in turn. The country suffered greatly from the Arab invasions of the 7th and 8th centuries. A Hâlîlît group, the Athîbî, ravaged the country and drove out a number of the former inhabitants. Driven back into the south at the beginning of the 9th century by the Almohads, they abandoned their nomadic for a sedentary life; they were forced to recognise the suzerainty of the Wâd Muhammad (Dawâwida), a section of the Sulam, who settled in Western Zab while another group, the Karrû, settled in Eastern Zab. An Āthîbî family finally became supreme; this was the Banû Mozni to whom the Ḩâfîds entrusted the government of Zab and who took advantage of the troubled times in the 9th century to make themselves almost independent (cf. Ibn Khallûdîn, Barberis, transl. de Sânî, iii. 155: History of the Beni Mozni). In this period the name of Zab is no longer applied only to the region south of the Atlas between Doucen to the S. W. and Badis in the N. E. Ibn Khallûdîn credits it with a hundred villages each called Zab distinguished as Zab of Tolga, Zab of Biskra etc.; cf. Ibn Khallûdîn, esp. cit., i. 77). Leo Africanus gives Zab the same boundaries as Ibn Khallûdîn and mentions in it 25 towns in addition to large
numbers of villages (Les Afriques, Description de l'Afrique, ed. Scheffer, iii. 250).

Freed from Hajihi's authority, Zab escaped Turkish rule in this part of the country, although a garrison was established at Bikstra. Effective agitation for two centuries and a half was in the hands of the chief of the Arab family of Bit Okkar to whom the Turks allowed the title of Shihkh al-Arab but against whom in the second half of the sixteenth century, they opposed another family, that of the Ben-Gann. The rivalry of these two families kept the country in a state of anarchy, aggravated between 1835 and 1840 by the intervention of Abd el-Kadir. Disorder came to an end only in 1844 with the occupation of Bikstra by the French and the suppression of the rebellion stirred up in 1845 by Bu Zian at Zaachia, from which date the Ziban may be regarded as definitely pacified.

(G. Yver)

ZABAG (ذا), inaccurately transcribed Zaboj < Sanskrit Javaka, the name of an island. The Arabic transcription, so far as I am aware, goes back to the ninth century A.D. We do not know why the Arabic has rendered by a sonant the guttural occlusive sound of the Sanskrit. The fact that we might be dealing with a form borrowed from a highly sonorous Prakrit hardly seems to me to require to be considered here. The Chinese knew this place-name as early as the seventh century under various forms which are reproduced in Chinese characters in L'Empire sommatrani de Činjaya: She-li Feshe < Skr. Sṛt Vījaya or shortened form Fe-sh < Skr. Vījaya (Ying-shing, Hoé-sing and Vajrabodhi); She-lē Feshe = Sṛt Vījaya (Sin t'ang chun, T'ang hui yao, Tō fu yun kuai); San-fē-lē (Cui fan le of Čau Ju-kue, Sung chie or History of the Second Sung, Ming she or History of the Ming, Tae yu le of Wang Ts'ai, Ying yai chang lau of Ma Huan, Foo Shing (fan of Fei Sin, Tung yu chang la)). In Malay, the island of Sumatra is called Pillaw Emas "Island of Gold" (cf. Chin, kinh tuow, Arabic sawmā darb, an arabisced form of the Sanskrit svamāraṇa, with the same meaning). We only know the early history of Čavaka = Zaboj = Sṛtivijaya = She-li Feshe from inscriptions and a few oriental texts. We need not then be surprised that there are many lacunae.

At the beginning of our era, the Raṣmāyapa, composed some time earlier not definitely known, places in the Far East a Yava-dvīpa "Island of Yava!", the island of gold and of silver (cانا māryāyabadhāyum), embellished with gold mines (svamārayaśāsaṃśātan), which has usually been identified with Java. Its wealth in gold however makes me identify it with Sumatra for which alone we have evidence of extraordinary wealth in precious metals. In 132 A.D. Chinese texts mention an embassy from the king of Ye-tiao, old pro-
nunciation *Yap-dir = Yavadvipa = Sumatra, to the court of China. It is this form that Ptolemy reproduces some years later in the Prakrit form *tajahēo < Yavadvipa: 140—250 B.C. In the surviving fragments of the Fou-san lū yin tao of Kang T'ai, there are several references to the land of Ča-po, old pronunciation Ča-hak, defective transcription of *Zab-o < Skr. Žabaka. It was probably about this time that Madagascar was colonised by Sumatrans who had been influenced by Hindu culture. The modern Malagasy language still bears clear traces of this.

In 410 on the occasion of the Synod of Isaac, there is mentioned a metropolitans of Dāheg and of Ča and Manas (J. B. Chabot, Synodal of orientalis, Paris 1902, p. 620). Four years later, Fa-Hsien returning from India via Ceylon arrived in a country which he calls Ysjo-po = Yavadvipa, which I also locate in Sumatra, as well as the She-li Feshe mentioned in the Kao yung iwan composed in 319.

According to a Malay inscription of 605 Saka = 683 A.D., an unnamed ruler who ruled in Sṛtivijaya went on an expedition to institute a magic ritual, i.e. to seize the suzerain state of which he was a vassal. In Saka 606 = 684 A.D., a king of Sṛtivijaya (read: Sṛtiyanaga) ordered a garden to be made called Žarakesa = "auspicious field". In 608 Saka = 686 A.D. another Malay inscription records that the stone was engraved at the time when the army of Sṛtivijaya was setting out against the land of Java which was not in subjection to Sṛtivijaya.

From 670 to 741, the She-li Feshe sent embassies to China. In 742, She-li Fos-pao = Skr. Sṛtivadavanam, king of Sṛtivijaya, sent an ambassador to China. In 742, the king of Feshe = Vījaya, Linh-t'eng-wei-kong (?), sent his son to the Chinese court.

At a date which is uncertain, the Tamil poem Maippinchatamí mentions a town Nāgāpuram (city of the nāga), in Čavaka-nūru or land of Čavaka < Skr. Čavaka and the names of two of its kings: Bīhamākbara and Puyyuraja, who claimed descent from Indra.

In 671—692 A.D., the famous Chinese monk Vi-neng went from India to China and back. He wrote his travel stay of six months in She-li Feshe in 671—672 and another of four years in 685—689 and a third, equally long, on his return from Canton. There he studied Sanskrit grammar. "In the fortified town of Fo-Sha", he says, "there are over a thousand Buddhist priests, whose thoughts are devoted to study and good deeds. They examine and study all possible subjects just as in India; the rules and ceremonies there are identical [to those in India]. If a Chinese priest wishes to go to India to hear lectures there and read the original Buddhist texts, he would do well to spend [first] a year or two at Fo-sha and to practise the proper rules there; he could then go on to Central India". But this is not all. This mastery in the teaching of Malay, of Sanskrit and of the Law which is a sure sign of a high level of intellectual development was accompanied by equal skill in naval and military matters. Trade and the mercantile marine were no less flourishing. Lastly, if we may judge by the attitude of the mahārāja of Zaboj to the conquered Cambodians, the noble morality and political wisdom of these Sailendra rulers can-
not be too highly admired. Such was the position of the Sumatran empire at the end of the seventh century A.D.

In 717, Srivaśiṇa was visited by the monk Vajrabodhi and probably about the same time by the Chinese monk Hui-jie on his way from China to India.

A Sanskrit inscription found in Java of 654 Saka = 733 A.D. mentions "an excellent island, incomparable, called Yava, fertile in cereals and other grains, rich in gold mines (kamakābharā)"...

This looks like a repetition of the Rāmāyana.

A Sanskrit inscription from Ligor (eastern Malay peninsula) and dated 775 A.D. celebrates a supreme king of kings, head of the family of the Silendara, called Śri Mahārāja (the rest is fragmenting).

In 844-846 we have the first mention known to me of the Mahārāja of Zābāg in an Arabic text (Ibn Khurdabāb). The merchant Sulaimān (851) also mentions Zābāg and adds that the land of Kalih (= Kar) on the western Malay peninsula and Zābāg are ruled by the same king, Iḥāt b. Iḥrin, d. in 907, and mentions the camphor of Zābāg. Ibn al-Fakhrī (902) and Ibn Rosteh (ca. 903) give some information about the location, products and customs of Zābāg. Abū Zaid al-Husān (ca. 916) gives a somewhat detailed description of Zābāg and the mahārāja's court, and tells how the victorious campaign of the mahārāja against Cambodia was carried through (Mas'ūdī, Pātraitīs d'or, l. 169 sqq., expresses himself in identical terms). Cf. on this subject my suggestions in J. A., Oct.-Dec. 1932, p. 275 note. The Lieux des mervelles de l'Inde (ed. van der Lith, transl. Marcel Devic, p. 174-175) records that in 334 (945) the Wawūk (q.v.) i.e. Sumatrans, came with a thousand ships on a raid on the east coast of Africa to procure the products of the country and Zandj slaves (cf. J. A., Oct.-Dec. 1923, p. 298).

In 960 and 961, the king Śri Hira du-ta Hia-li-lian = Malay: Śri kuda Harijana (not) sent an embassy to the court of China. In the following year another embassy was sent by the king Śri Hira Wu-ye = Skr. Śri Vija (not). Other embassies arrived from China from Hia-le = old Malay hadji “king” in 980 and 983. In 1003, the king Śri-Śri Cū-la-mu-nil-i-ma-ni-tos-ku-nu = Skr. Śrīcūlamaviyavarmava and his son and successor Śri-Śri Mu-lo-fi’s (sic) = Skr. Śrīcūlamaviyayottovagavarnav in 1008 sent an embassy to the emperor of China. These two Sumatran sovereigns are also known from the Tamil inscription known as the “large Leyden scroll” which commemorates the donation of a village to a Buddhist temple at Negapattam. The building of this temple was begun by Cūlamaviyavarmava and finished by his son and successor. It may be noted that this temple was built at the town of the nuqṣa and that the Malay rulers who built it, belonged to a royal family, the Silendara, who were descended from a nūqṣ. The choice of this Indian town was a very natural one for their pious works.

In 1017 there came to the court of China, ambassadors from Hia-le Su-nil-i-pu-mi = Hadji Sumatrahatthinī “king of the land of Sumatra”. The modern name of the island appears here for the first time.

In his geography of the world compiled in 1154, Idrisi records that “the people of the isles of Zābāg come to the land of the Zandj on small and large ships... for they understand one another’s languages”. And also: “The people of Komī (= Madagascar) and the merchants of the land of the Mahārāja (= Sumatra) come among them (the people of Sūfāla and the east coast of Africa), are well received and trade with them (J. A., Oct.-Dec. 1932, p. 299-300).

The other Arabic and Persian texts (Vākīl 1224, Kāzwinī 1203-1204, Ibn Sa'alī the XIIth century, Kūth al-Dīn al-Shārdhī d. 1311, Dimashqī c. 1325, Ibn Al Fī discharge 1273-1325, Ḥāmid Allāh in Muṣfurâl 1340, Ibn al-Wardī c. 1340, Ibn Muṣfurâl at the beginning of the XVIth century, and al-Misirī, only supply a few notes on the natural or imaginary flora and fauna of Sumatra and the products of the country, especially gold and camphor. We have to come down to the XVIIth and XVIIIth centuries to get accurate and detailed information in theNarrativa Mutilatique of Ibn Mūḍīq and Sulaimān al-Mahīr which I have translated and published.

From the XVIIIth century, the oriental texts of other origins should be studied and annotated again. They will be given in the Bibliography but no use has been made of them here as our space is limited.

Ces Kûllî’s in his King Wai-ti-su ta (1778) and Cao Jo-ku in his Cu fan tu (1295) deal at length with Xam-fu-tî. The latter includes even the foreign countries dependent on him and mentions Ceylon among his conquests, which is unexpected and does not appear to be confirmed by history. The statement that the Mahārāja is king of the islands like Zābāg, Kalah (= Kar on the eastern Malay peninsula), Sirindib (= Ceylon) etc., three centuries before the publication of the Cu fan tu is also devoid of historical value. The only thing that seems certain is that in the XVIIIth century A.D., the glorious Sumatran empire collapsed. Malay in the help of the Javanese regained her former suzerainty which had been lost in the seventh century; and the Thais of Sukhothay came down on the lower Menam and seized all the colonial possessions of San-fu-ni on the Malay peninsula.

(GABRIEL FERRAND)

ZABANIYA. [See MALÌTIK] ZABID, a town in the Tihāma of Yaman, on the road running from north to south from Mecca to Aden, halfway between the Yaman highlands and the Red Sea, about 16 miles from the coast. At this distance the country is suitable for agriculture in view of the better water-supply, and the town itself is adjoined by two wādīs, in the north the Wâdr Rima’ and the south the perennial Wâdr Zabid, from which it has taken the name which has replaced the original al-Husain. In contrast to the rest of the Tihāma it is famous for its gardens with date-palms,
a little corn, indigo and various medicinal plants; the hides of Zabūd are also well known. Along with Bait al-Faţīhī and a few smaller places, it is an important centre for the weaving of garments.

Zabūd has always been the capital of a district (miḥlāt). It adopted Islam in the year 10 (631) and its first governor was Khālid b. Sa‘d b. ‘Abd-Azīz. It took no part in the Nījiṣa wars. It became important under the Ziyādids as the capital of an independent province. Muhammad, a descendant of Ziyād b. Abī Sufyān (b. Abī Huibah), granted the Tihāma by the caliph al-Mu‘āmin, gave the town in Shā'bān 204 (beg. 820). its circular form with four towers (it is still called al-Mu‘ammmara) and made the squaddīs from the wāis al-Ṭihāma were followed from 954 (1026-1029) by the Abyssinian Mamlikūs, the Bani Naṣīr b. Abī Sufyān. Both dynasties remained under ‘Abbāsid suzerainty and were Sanṭṭe, but the capital itself was for a time in ‘Umayyad hands; at the end of the third century it was burned by the Kaṭāranī ‘Abī b. ‘Abd-Azīz and about 579 (898) taken for a time by ‘Abd Allah b. Kaḥfūn of the Bani Ya‘fur [q.v.]. The latter acknowledged the Fāṭimid caliphate, as did the Ṣuḥālī [q.v.] who came down from the highlands and interrupted the rule of the Bani Naṣīr in Zabūd for the greater part of the years 452-481 (1060-1088). They did not however become their successors; but after the interlude of the Khālid Muhādīs [q.v.] the Egyptian successor of the Fāṭimids, the Ayyūbīd Saladin, sent his brother Tīrāshīnāsh there at the beginning of 570 (1175), and he had the Mahdī Abī al-Nabī executed. When the third Ayyūbī of the Yaman, Ismā‘īl b. Yaghūqīn, who wanted to play the part of an independent caliph, came down in 580 (1201) by his own Kurdish soldiers at Zabūd, rule practically passed into the hands of the ‘Abbāsids until Umar, son of ‘Abī b. Ṣarāf, the Ayyūbīd governor of Mecca, in 620 (1220) founded the Rasa’ilī sūfīkhahīn. This was followed in 858 (1454) by the Tahiri who claimed to be ‘Umayyad descended from the caliph ‘Umār b. ‘Abd al-Aswā. After a temporary occupation by the Meccan ‘Abhīrāb Abū Nūnīn Muhāmmad (922-1316) and then by irregular troops during the fighting between the Egyptian Mamlikūs and the Ottomans, the latter had governors there from 943-1045 (1536-1635). The Zaidis [q.v.], the only Yaman power that had survived all previous dynasties and had made a previous attempt to gain a footing in the Tihāma, were able to drive the Turks from the coast also.

After the second Ottoman occupation (1529-1358 = 1872-1918), the Zaidis again became lords of the Tihāma after fighting the Ikhrids [q.v.] of Aswā. Zabūd has many important buildings dating from the days in which this town was a royal residence. These buildings have stood very well as they are mostly built of brick, which gives the town a rather gloomy look. Even in Niebuhr's time however, the town had decayed considerably and the chronicles record much damage by fire and also from wars and even numerous showers of volcanic ash that have fallen upon it. When the Turks moved the capital to the Tihāma and made the road run further north, starting from the fort of Hodālā [q.v.] and later founding Zabūd, its trade fell considerably. In the adult Zaidi state which has expanded into the kingdom of Yaman, Zabūd is merely a provincial town. It retains a certain importance as the home of Sufī's tradition, from which the spiritual welfare of the non-Zaidi part of the country is cared for. The nīkāh Zabūdī is still a common one among Yaman scholars.

(R. Skrothmann)

**ZABŪR (n.),** probably a loanword from the South, but already used by pre-Islamic poets in the sense of: "will"; in this sense it is still found in al-Farandāz, Nadīh b. MA.XX.I. From the second Makkān period onwards, Muhammad uses the plural sabīr in order to denote the revealed books (Surās 181; xvi. 46; xxiv. 23) as well as the heavenly writings, in which human deeds are recorded (Surās 43, 52). The singular sabūr, on the other hand, occurs in the Qur'ān exclusively in connection with Dāwūd. In the early Qur'ān xvii. 57 Muhammad says that Allah has given Dāwūd one sabūr. The same sabūr he mentions another time, vix. in Surā iv. 161, and in Surā xxi. 95 he quotes from this sabūr Psalm xxxviii. 28, in an almost literal translation. Possibly the pre-Islamic poets were already acquainted with Dāwūd as the author of the sabūr; it is e. g. not impossible that this is meant by Imra‘ al-Ka‘ī when he mentions a "sabūr in the books of the monks" (ku‘āhā sabūr ‘alā fi masjīdī hu allahū, lxi. 4). At any rate, this use of the term sabūr (apart from the question whether Muhammad was the first to make use of it) is based on its affinity in sound with Hebrew masūrān, Syriac masūrān, Arabic masūrārīn, and in analogy with Arabic sabūr, was identified with the latter's meaning "writ". Apart from Surā xxi. 95 the Qur'ān contains other passages bearing a close resemblance to verses from the Psalms, even from Psalm civ. Moreover the majority of the passages in the Qur'ān which remind us, by sense or sound, of the Bible, are from the Psalms. The commentators on the Qur'ān recognise that the sabūr mentioned in Surā iv. 161 is the book of Dāwūd bearing this name; it is only some of the Kūfīn commentators who propose to read the plural sabīr in the sense of "writings". Tabari rejects this view (Tabari, Tafsir, vi. 15). Ahmād b. Abī Allīh b. Sa‘lām, a sabūr of the caliph Hārūn, it is said, identifies the sabūr with the masūrārīn.
ZACHARIAS. [See ZAKARIYAH.] 

ZAPAR, 1. now a group of towns near an insignificant village in southern Yaman, about 10 miles S.W. of Yarith, celebrated in ancient times as the capital of the Himyar kingdom (also called ZAPAR'; see Yarth, Muq'im, iii. 576; i. 196; South Arabian inscriptions give the radicals r-f-f-r; it is reproduced in Ethiopic as ZAFAR). The royal city is mentioned by Pliny, *Nat. Hist.* vi. 104 as regia Sappara and in the *Periplus Mar. Erythrae*, § 23 as *Σαφαρ*, to which *μαζευτα* (Kara'ot) ["king of the Homerites (Himyar) and Sabaeans"] referred. Of that dynasty, which, succeeding the kings of *Saba* under the name "kings of *Saba* and *Qud Ridda*" was predominant in South Arabia from earliest times, the last of the second century B.C. According to this evidence of the *Periplus*, the Sabaeans were already subjects of the Himyar kings and there was still a Himyar kingdom in the time of Pliny's sources.

The next reference to the capital Zafar in Graeco-Roman literature is *Ptolemy*, v. 7, 41 (viii. 22, 16) where among the towns of the interior of Arabia Felix *Σαφαρ* (vulg. Σαφαρ) is noted which is mentioned i.e. exactly as in the *Periplus*. Of the two variants in the MSS. for the longitude in *Ptolemy*, 78° and 88°, the former is to be preferred: it is also given by al-Hambani, *Sia Djawat al-^Arab* (ed. D. H. Müller, Leyden 1884, p. 28) while in his *Titi* (in D. H. Müller, *Die Burgen und Schlösser Süd arabiens*, in *S. A. Ab. Wiss., xci.* [1879], 417) he gives "77°. As the coast town *Mecca* in *Ptolemy* has the longitude 87° 30' (var. 88° 10' and 88° 30') and the same latitude 14° as Zafar, E. Glaser, *Die Geschichte und Geographie Arabiens*, Berlin 1890, ii. 180 said this variant in the longitude of Zafar was clearly only a mistake by a copyist of the post-Ptolemaic period, who confused this Yaman Zafar with the Zafar which had meanwhile arisen in the east near Moscha. This supposition is based on Glaser's erroneous location of Moscha (see No. 3); it is also from the first probable that in the transmission of *Ptolemy* we have had a mistake in the numeral for 7 just as in the variant in the longitude of Moscha. His statement that "we can only allocate to the Sabaeans the Metrocopi mentioned by *Ptolemy*, because its situation will not fit the then undoubtedly very limited Himyar territories" and that "in the period of the 'kings of *Saba* and *Qud Ridda* Mardii was undoubtedly the royal residence" and that this city had been in ruins "for centuries by *Ptolemy's time" (*op. cit.*, p. 240, 242) are only the results of his views on the chronology of the development of the Himyar kingdom and are moreover in contradiction to the testimony of the classical sources just quoted, with which latter the inscriptions can best be reconciled (cf. also the article MARDII).

The *Σαφαρία* (in most MSS. Σαφαρία) according to *Ptolemy*, v. 7, 45 living near the Homerites were the inhabitants of the town and district around it, i.e. the ruling stock. There are no references to Zafar as a district in Arabic literature, e.g. in *Jārist*, but it is no longer found as a tribal name (*Spranger, Die alte Geographie Arabiens*, Berne 1875, p. 311). A road may have branched off to Yarith and Zafar from the road mentioned in the *Periplus* which led east from the port of Mokhā; that the capital played a part in commerce is intelligible. On the road in *Ptolemy's* map see *Spranger*, *op. cit.*, p. 183 sq.

It is to this Zafar that Philostorgius (first third of the fifth century), *Hist. eccl.* iii. 4, refers in telling of the conversion of the Homerites to Christianity c. 354-355 in the time of Constantius II (357-361; cf. the extract in *Nicene Histories Callistus*, ix. 18) at whose insigilation Theophilus,
later bishop, obtained from the Himyar rulers permission to erect churches in Täqṣaṣ, 'Aden and Hormut. In opposition to this definite statement, Glaser (op. cit., p. 181) considered that Täqṣaṣ did not mean the Himyar city but the one on the coast (No. 2), a term similar to Himyar, Bertholdo, Berlin 1840, viii/xii, p. 65). There is however not the slightest probability that Philostorgius was wrong in identifying this Zafr with Yathrib. The conversion of the Himyar king to Christianity is put by Theocharidou, xp, 217 (cf. Nicephoros, xxxii, 37) in the reign of Anastasius (491-518). A Syriac geographical literature is connected with the name of Gorgonius, bishop of Zafr about the middle of the sixth century, Zafr is also mentioned by Amainius Marcellinus (end of the fourth century) xxiii, as Taphurah, and by the Ravenna geographer (seventh century), ii, 6, as Tafra; the latter calls Himyar Omalitita; it finally appears as Taphra in Stephano's Byzantine s.v., who, as a grammatical, is only concerned with the form of the name.

About the middle of the fourth century the Himyar kingdom had been conquered by the Axumites, but by the last quarter of the century most kings again gained the upper hand. The ruler of Zafr mentioned by Philostorgius as friendly to the Christians was therefore either a governor appointed by the Axumites (cf. macedeni, macedeni: Glaser, De Albigensi in Arabi et Africa, Munich 1893, p. 160) like Samsah in the year 525, or the reconquest of the country, the rulers of which were still the Axumites according to an inscription put up shortly before 356 (cf. Saba, iv, p. 49) had already been successfully begun by the Himyar between 355. It was not till 525 that the Abyssinians again won supremacy over Himyar but about 570 they were overthrown by the Persians. Tull then Zafr had been the capital of South Arabia. The last Persian governor in Sana was a convert to Islam in 628.

According to Ibn Khurdadshlim, p. 143; al-Mašídi, Muruj, iii, 175; Yakh, iii, 577 (ii, 234) there was an inscription on the gate of Zafr to this effect: "Who held royal sway over Zafr? The excellent Himyar. Who became lord afterwards? The wicked Abyssinians, Who came next? The noble Persians. For whom had they to make way? The Kurashi, the traders. Who will next win the lordship of Zafr? It will again fall to the Himyar." This expresses very neatly the history of the changes in the hegemony of South Arabia. That Zafr was the capital of the Himyar kings is testified, in enumeration of the Greek and Roman authors, by the Arab geographers, historians and lexicographers, e.g., Ibn Khurdadshlim, vi, 140; al-Ma'ésteddi, ii, 177; Jazawari, s.v.; Yakh, iii, 577 (812 in the quotation from a poet); the Kamar, s.v.; Tad al-'Arab, iii, 370; the Lakhm-nawadd. The royal capital of Raidah in Zafr is mentioned by Ibn Khurdadshlim, p. 140, who notes the verse of Imron's K-kaiz (206a) in Ashurād, Tih Dhuwar, al-Hamdani in Jih, p. 410 and 414 (in the verse from A'sad Tubba), al-Bakri's Maqāla, s.v.; Yakh, ii, 385; iii, 442. (where the form Zaidan is altered by D. H. Müller in Jih, p. 410, as a mss. reading, to Raidan [of the same form in Ritter, xii, 253 from Istidi]).

Sāh There is below on Glaser's explanation of the Raidah (the inscriptions). Iridi, I, 478 sq. (ed. Jaubert, Paris 1856) also describes Zafr as one of the most important and most celebrated towns in Yemen, which was the residence of the kings of Yemen. According to him, it is in the district of Yathrib, which was also called Zafr. Ma'gidshla, H.G., iii, 70 (55) in his survey of the two parts of the Yemen, al-Thāima and al-Najjar, mention Zafr among the towns of Najdi. Sprenge, Die Pest und Reisezweige der Ostrom, ii, 435, L. Kunde der Morgenl., iii, 3, Leipzig 1864, p. 109 though this referred to Zafr. This identification which is also found in H. C. Kay, Tawar, its early medieval History, London 1894, p. 246 (and on his map) is not convincing; he also wrongly writes Yathrib. Yathrib (Yahṣib) is the name of Māighdi (cf. besides Iridi also Yakh, ii, 385), who says the city of Raidah is in this Māighdi and gives the further detail that in Zafr was in Yahṣib and quotes the verses of A'sad Tubba in Jih, op. cit., p. 414, according to which Zafr with the tribal capital of Raidah lay in the plain of Yathrib. According to Jih, p. 410, Zafr was known as Ḥāl (plateau) of Yathrib. In Ṭab, iv, 436 there is a reference to Yathrib al-Aw, Zafr. Sprenge's explanation of the statement in Ibn Khurdadshlim (op. cit.; "Yathrib is the name of the town and the castle where the king..." is called Zafr") (Perestemo, op. cit., p. 147) is wrong. The meaning is rather: "Yathrib, in it (of the town of Zafr and its castle Raddah)."

According to Iridi, this castle was in his time a remnant of the royal palace there; he speaks also of other traces of its ancient prosperity. In Tabari, ed. de Goeje, i, 326, the foundation of Zafr is traced to the Himyar kings; al-Hamdani gives in Jih (op. cit., p. 412) a description of the situation of Zafr on the slope of a hill near the town of the Sakhir (Mankath; there are still ruins in the village of Munkat, near Zafr with Himyarite inscriptions found by Seetzen; cf. D. H. Müller, op. cit., p. 370) he quotes there (p. 414) a line of "Amz b. Tutha" who mentions inscriptions in Zafr and lines from "Alkama which refer in laudatory terms to Zafr. In the Siba, p. 203, he mentions Zafr among the celebrated places of the Yemen with old castles. As an illustration of his remarks on the reduction of degrees of longitude in Ptolomy, to those of the eastern astronomers, he chooses the position of Zafr and deals (op. cit., p. 27) with the Ptolemaic positions of this town and of Sana, both of which are on the same meridian (so also p. 28 and 44; cf. also 45), Zafr being about 3 days' journey farther south (which on the whole agrees with Niebuhr's estimate that Zafr is 21 south of Sana). On p. 201 he gives from the geographical point of view nothing more definite than that Zafr is in the neighbourhood of Sana, similarly Yakh, iii, 577 (where he adds that some hold the view that Zafr was Sana itself), the Khudami, s.v. (cf. Jazawari, s.v.) and the Tad al-'Arab, iii, 370, which quotes Yakh. D. H. Müller, Burschev, p. 69 shows that Yakh, iii, 422 compares Zafr with Sana ' (but see No. 3). The Arab tradition of the history and genealogy of the Himyar kings, the Tuba's, is for the most part unhistorical.

Yakh distinguishes in the Muqaddim (cf. iii, 577) between this Zafr and the place of the same name on the coast (No. 4) in the Muqaddim.
distinction is not pointed out. Arab writers occasionally confused the two towns, as have some modern authorities. C. Niebuhr, Beschreibung von Arabien, Copenhagen 1772, p. 230 and Ritter, cit., p. 254 and others have lamented this; the latter however makes the same mistake, cf. p. 65 and 253. Abu 'l-Fida' in his description which confuses the two towns (other cases under No. 2) only says that Zafar is in Yaman; all his other statements apply to the coast town.

Al-Hamdani in ittîbil, op. cit., p. 416 and with variations, al-Bakri, op. cit., p. 464 and Yâkût, ill. 577 give in the form of a brief anecdote to explain the saying “Who comes to Zafar must understand Himyar” (or “Zafar belongs to the Himyars”) as an example of specifically Himyar idiom. The Arabs distinguish between the sons of the older, younger and nearest Himyars, i.e. between Himyars, in the widest, usual and strictest sense (Sprunger, Geographie, p. 72 cf.). One may only speak of a Himyar dialect (on some peculiarities, see Sprunger, p. 74) among the Himyars in the narrowest use of the name. In the tenth century AB. are mentioned as districts in which pure Himyar was spoken, the territory west of San'a, and south of Hadramaut as far as Ḥaḍītā (ill. an area which includes Yârîm and Zafar (references for Himyar areas in Sprunger, Das Leben... der Mohammaden, Berlin 1863, ill. 438). Himyar and the mixed speech of the adjoining districts used, according to Frennel, to be inaccurately called Yâkût, a term which was wrongly extended also to Mehri and the Ḫaḍîr dialect (Ḥaḍîr) or to what Glaser calls Shâhr. The language of the old Himyar inscriptions in the strict sense is closer to Saqaf than the language of the second great group of South Arabian inscriptions, Minaean.

These two pure Himyar districts are fertile and well suited for agriculture. The soil of Zafar also yields a semi-precious stone: the onyx of Zafar is mentioned by al-Hamdani, ittîbil, p. 415 (with quotations from the poets); Dżahwarî, Yâkût, ill. 577; Lütne al-'Arab, vi. 192; Kâmilî, Tâbîb, loc. cit. (cf. Lane in. v. gata on the meaning of the word and Sprunger, op. cit., p. 62).

After the last occupation of Zafar by the Abyssinians, of which we have a full account in the Martyrium Aethiopum and after the extinction of the South Arabian kingdom and still more after the rise of Islam the former royal capital gradually fell into decay, especially as it was cut off from the main routes of traffic. In the later history of the Yaman it plays with its mountainous surrounding a subordinate role as a fortified place in connection with military operations. When, for example, after the Ziyâdî dynasty had died out (409 = 1018) and naqājî had taken Zabid and assumed the royal title (412), the walis there held out in their strongholds in the mountains; among these were (according to 'Ummâr al-Hakami, Tâbîb al-Yaman, ed. Kay, op. cit., p. 12) al-Nâqîl ("pass"), which Kay, p. 246 explains as Naqîl Sumâra near Zafar.

The information supplied by modern travellers agrees with the statements of the Arab authors. Cf. also: Niebuhr, Beschreibung von Arabien, Copenhagen 1772, p. 94, 236, 290; Ritter, Beschreibung von Arabien, 1. 400; the article SABA', iv. p. 15-18; D. H. Müllner, Sabaïsche Denkmäler, Vienna 1883, p. 85; Plate VI (inscription); W. Harris, A Journey through the Yaman, Edinburgh-London, p. 35; Glaser, Die Abessinier, p. 58, 100, 116; do., in M. V. A. G., 1897, iv. 41; do., Skt. s. ii. 41; Schramm, Handbuch der altarabischen Altertumskunde, Copenhagen-Paris-London 1927, p. 21, 88; Hommel, Ethnologie und Geographie der Alten Orienten, Munich 1926, p. 650, 711; Onniander, in Z. D. M. G., xix. 1865, p. 180; C. J. S., iv. 8, No. 312.

2. A ruined site S.W. of San'a. The Tâbi' al-'Arabs (ill. 370) mentions from al-Saghâma, in addition to the two towns of the same name (see No. 4), also two castles named Zafar, one north, the other south of San'a.

3. A fortified hill about 20 miles N.W. of San'a near Kawakabân.

4. Name of a very old town, which has been in ruins since the end of the middle ages, and of the plain around it, in the corner of S. Arabia on the Indian Ocean now usually reckoned to Mahra. Ibn Khalidî, Tâbîb (see the extract in Kay, op. cit., p. 133) gives the localisation Zafar and al-Mâqîrî, De valle Hadramaut, ed. Berlin 1866, p. 69, says it should be pronounced Zofar as does Maluza in the introduction to his edition of Wende's Reise in Hadramaut, Brunswick 1873, p. 24, 39; it is pronounced Zâfīr, Z robe and now occasionally also Zofar. That the town is already referred to in Greek literature is practically certain; it is to be sought among the places mentioned by Ptolemy on the sea-coast. Sprunger, who emphasises that Ptolemy used information given by travellers from India and along the Arabian coast for his description of the south east coast of Arabia, is probably right (Geographie, p. 95 sq.) in pointing to the place on Ptolemy's map (vi. 7, 11) which corresponds to the location of Zafar, namely the monteîn A'rabîsî, mentioned among the towns of the Eyyûzûn which contains a translation of al-Kammar ("Diana") which we also find in Dżâbîl al-Kammar "Mountains of the Moon", Ghubbat al-Kammar "Bay of the Moon", on which Zafar actually lies. The position of the "Oracle of the Moon" according to Ptolemy's statements brings us quite near Raisîl (called Kârnâz [Parœën] in Ptolemy just before), the former port. From this place stretches a well watered plain about 9 hours' journey in length and an hour's journey wide at Tâka, where it is broadest. It also runs into the hills and is now called Zafar (Sprunger, op. cit., p. 96). Carter (see below) found the ruins of some six towns there. Whether these were the successive capitals of Zafar, as Sprunger thought, is another question which can no longer be answered.

Sprunger also conceded the impossibility of ascertaining where the "Oracle of the Moon" had been situated. With reference to the statement of Ibn Bâjî, op. cit., ii. 203 that there was a sanctuary with the tomb of Had (see also i. 205) half a day's journey from the latter: Zafar (i.e. Manfra) and a mosque on the coast in a fishing village, Sprunger thought that this mosque and tomb were the "Temple of the Moon". The latter however could only be recognised in one of the two buildings, presumably only in the former. Its position, according to Sprunger, agrees with Tâka in 54° 22' East Long., 17° 2' N. Lat., "on an inlet, which could be used as a harbour for rafts and boats". This location should be modified in the light of Bent's statements and the ancient
Zafar he sought in a ruined site east of Taka (see below).

We cannot support Glaser's view (Stenz, ii. 97, 180) that the Abinaa wall mentioned by Ptolemy immediately after μαυρίων ἀρχιπελάγος which Sprunger, op. cit., p. 97 said was the port of Zafar and identified with Mirbat, was Zafar itself and Moscha, Periplus, p. 32, its harbour (the latter already suggested in Rüter, op. cit., xii. 329; also Glaser, Abessinien, p. 90 sq.; Hommel, Ethnologie, p. 654); identical with Khor el-Beidh, and that the name Zafar probably only appeared in the district after the time of Ptolemy, either for Abissa polys or for Moscha (Stenz, p. 180; Abessinien, p. 187 sq.), against these topographical arguments, which, by the way, still leave undecided the place to which the name Zafar is said to have been transferred, is the fact that there is not the slightest probability in its favour and also that it is in direct contradiction to Ptolemy's map and that of the Periplus and that, as Glaser himself has to confess, Moscha, which Ptolemy puts west of Cape Syagros (Ras al-Fartak) must, according to the Periplus, which Sprunger prefers to Ptolemy for the description of the Shīrīr coast, be sought about 10 miles west of Mirbat. There is now no harbour at Khor el-Beidh, but a lagoon (Glaser, Stenz, p. 181); on the other hand Moscha in Ptolemy as well as in the Periplus is described as καιρός and this significance is particularly emphasised in the latter. Moscha is probably Maqishi, a harbour in East Long. 51° 52' 'less than an hour's journey west of Ras Fartak and sheltered from the south wind' (Sprunger, op. cit., p. 85). Sprunger's assumption that in the transmission of Ptolemy the true position of Moscha has been dropped out is possible but not, it seems, necessary. His location agrees with the statement of the Arab authors, e.g. Yalghi, iii. 577; iv. 481, that the harbour of Zafar which had no suitable anchorage (so also Ibn Khalduhn, op. cit., p. 135 ed. Kay) was Mirbat, about 5 parasangs distant and much visited by merchants, and also with the fact that the Ras Fartak near which he would locate Moscha and of which Ibn al-Mudjāwar tells us that it is built at the entrance to the 'Gulf of the Moon' and that there is a landing-place there for ships from India, is in modern times the first landmark for which steamers from Bombay make (Sprunger, op. cit.). New material for a confirmation of this view is given, in part unintentionally and unconsciously, by Th. Bent, Southern Arabia, London 1900, p. 240 sqq. He says it is certain that the ruins on the coast at the modern al-Balad (el-Beld, according to Glaser, Stenz, p. 181; also Abessinien, p. 184 [so also Fresnel, Attil of the English chart]) about 2 miles east of the present capital al-Ḥāfa (Dhufar) are those of the old capital of this territory. When he adds that there is no difficulty in following Sprunger in identifying this town with the μαυρίων ἀρχιπελάγος, he is inaccurate in as much as Sprunger expressly distinguishes Taka, where he sought the original Zafar, from al-Balad to the west of it, the presumed site of the later Mançuṣ. This ruined site, according to Bent, containing ruinins of Sabean temples, last inhabited during the Persian invasion about 500 A. D., is the largest and most interesting in the whole plain. Bent who (p. 265) gives inaccurately Glaser's identification of Abissa polys and Moscha, further says that the point on the coast near the river Kori, which is particularly broad at its mouth (so in the map he gives of the Zafar territory [*from a survey by Imam Shairsh, Khan Bahadur*, his travelling companion]; the description of the water as Kho Koury in Bent, p. 270 is wrong; see Glaser, Abessinien, p. 185; the English chart has Kho Reeri, Crutcheden: Khoore Kiri) and the rocky island of Khatiya on the coast is Abissa polys and also Moscha. But only a little west of this point in 54° 25' is Taka (54° 22') at which Sprunger sought to locate the μαυρίων ἀρχιπελάγος and later Glaser, Abessinien, p. 187, Abissa polys, which left him for 'the Oracle of the Moon', which Bent very arbitrarily thought lay in the ruins of a Himyar town in the Wadi Naḥas not far from al-Ḥafṣ, "only Alkabūd or Robat or one of the ruined sites farther inland, e.g. in the Wadi Nefsa" which is not plausible. We may look for the site of the ancient Zafar and of the *Oracle of the Moon*, perhaps also of the sanctuary mentioned by Ibn Battuta, in the ruins which Bent (p. 269) found east of Taka a little further west than Sprunger and at the adjacent river mouth, the Khor Kori, the landing place for the town. Glaser's statement (Stenz, p. 184) "the ruins of Zafar are at Alkabud, Alkhabūd, Ṭallūd and Khor el-Beidh" is insufficent. Bent was also wrong about Mārṣqa, which he identified with Mokhi, "as not unusual name for harbours on the Arabian coast". He took no account of the inaccuracy of the statements about the Shīrīr coast in the text of the Periplus as transmitted to us (§ 32). That the latter means Raṣīṭ by the centre of the Sachallite frankincense trade is not so certain as it is usually assumed to be. The mistake, which is repeated by Bent, arises from the fact that this place is called Moscha.

The lord of the frankincense country under Himyar rule at the time of the Periplus, § 32, was the king of Ḥaṭramūt. That Ptolemy refers to Ḥaṭramūtians between the Omanites and the merchants of al-Maḥramūt does not justify the deduction that the frankincense coast properly (from Zafarward) was wholly or in part a Ḥaṭramūtian colony.

The coast town of Zafar is most probably older than the Himyar capital, it was long ago with great probability identified with "Sephar, a mount of the east" of Genesis x. 30.

The Araš sometimes place Zafar in Mahra, with which the present attribution agrees, sometimes, which comes to the same thing, in the Shīrīr territory (coast of Mahra), so Yalghi, iii. 577, Abu l-Fida (see Hommel, op. cit., p. 30), Ibn Khalduhn (ed. Kay, op. cit., p. 132), Tāfriḥ, iii. 370, sometimes, less accurately, in Oman (Sprunger, Geographie, p. 92). According to Ibn Battuta, ii. 196, it is at the extreme end of Yaman (l. 205, it is simply called a town of Yaman); in a note in a manuscript of the Maragid (quoted by Wustenfeld, Arab. Studi, v. 24) it is described as the remotest town of Yaman; Mahra [q.v.] is included in the Arab geography of Yaman. Yalghi, iii. 577, after mentioning the capital of Yaman, speaks of the celebrated town of his time by the same name on the coast of the Indian Ocean (this location also in iii. 432, iv. 481 [where the form Zifr is used; cf. the reading in Ibn Khurāṣhī, B.G.A., vi. 146], in Ibn Battuta and Tāfriḥ, iii. 370); in the last mentioned passage Yalghi describes it in general terms as situated between Ḥaṭramūt and Oman (cf. l. 196 and the addenda in B.G.A., iv. 432 to Ibn Hawṣkal, p. 32 [also on the distance between
Zafar and Mirbajj, the Zaman briefly; near Mirbajj.
In the principal passage, Yakut tells us that in the mountains at some distance from the town of Zafar, frankincense grows and a share in the proceeds is given to the independent lord of the town who has established a monopoly of trade in it; then follows remarks on the gathering of the frankincense which has to be taken to the town (a similar account briefly in iv. 481).

Zafar is in the frankincense district proper; its extent as given in Yakut is much too small, as is evident from the statements of other Arab geographers and especially from Carter's investigations, whose western boundary at 52° 47' to 55° 23' East Long, is too far east, as we know from Glaser's survey, who corrected his own figures in course of time and from Bent, Hirsch and the South Arabian expedition of the Vienna Academy.

The name Zafar ("aromatic plant") originally perhaps meant simply the idea which the Greeks expressed by Αἴθαυρα. Fresnel's idea (Sur la géographie de l'Arabie, Lettre, iv., in J. As., sec. iii., vol. iv., 1858, p. 518), followed by Ritter (xii. 252, 260), that the Himyar town was called Zafar after the coast town out of rivalry of it, was wrong. Probably this name was used for the former in another sense, as the "victorious", as in the lines of As'ad 'Tabba', Dibbil, op. cit., p. 410 (= Al-Bakri, p. 464). Accounts of the frankincense country were brought to Europe by Portuguese seafarers; we find an echo of these in Camoës, Os Lusiadas, x. 101, s.: "Olha Dofar insignes, porque manda O mais cheiroso incenso pera nos".

Yakut (li. 881) speaks in almost the same words as al-Hamdani (Qashrati, p. 51) of a coast road that leads from 'Aden via Zafar passing Raïat on the left to Omân, Ibn al-Mud'jar who visited Zafar c. 619 A.H. gives the various stages on the road from Shiham in Hadramout to Zafar with the distances (fuller details in Spruner, Portraits, p. 144: do., Geographie, p. 164). He observed that pepper, sugar-cane and numerous kinds of fruit flourish at Zafar and that between Hadramout and 'Oman there were traces of old terraces on which the frankincense tree had been planted; this latter remark is confirmed by Bent. He tells of a safe caravan route from Baghdad to Zafar, by which the Beduins twice a year bring horses which they exchange for spices and costly robes. According to him, Ahmad b. Abû Allah (618 = 1221) destroyed Zafar and built Mahfûr not far from it to which the name Zafar later passed; in his time the district was in possession of the Hadramoutis. According to Ibn Khalidin (Kay, op. cit., p. 133), the destruction took place in 619 and the name (al-Ahmadiya) of the new Zafar was given from the name of the destroyer.

In Abu l-Fida's account, the confusion in which (see above) was recognised by Niebuhr, Beschreibung, p. 236 and Hommel, op. cit., p. 30 sqq. (with references to the earlier literature) showed in more detail, without being himself completely free from errors, we are told of the coast town in addition to what has already been mentioned, that it lies at the top of a gulf and has trade with India, is surrounded by gardens (cf. Ibn al-Fakhri, B.G.A., v. 109) and betel and cocoa grow there. Ibn Batuta's description is similar (li. 196 sqq.). The latter about 730 (1329-1330) sailed from Kilwa to Zafar, over a century after the destruction of the old town. He tells us that the town stood isolated on a wide plain (cf. Yakut, iv. 481) but gives noteworthy details about the rich orchards and spice yielding trees and plants (betel, cocoa) in the neighbourhood and their economic importance. The Zafar described by Ibn Batuta was also an important commercial centre.

With reference to the ancient history we may here mention a suggestion by Glaser, that Zafar was the old Hābabī capital (cf. Khīra, p. 181; Hommel, Ethnologie, p. 654). It is certain that in the early middle ages, like South Arabia generally, it passed for a time under Persian influence. Its importance at a later date was the Persian attempt at invasion in 665 (1265) when the emir Maḥmūd b. Ahmad al-Kūst, lord of Hormūz, conquered and plundered Zafar. Soon afterwards Shāh b. Idris, ruler of Zafar, quarrelled with al-Maqsūr, the second ruler of the Muqaffarid dynasty. His troops were defeated by those of Yaman in 678 (1278) and Zafar surrendered (Kay, op. cit., p. 311, on Ibn Khalidin, p. 132). In Ibn Batuta's time, Zafar was independent of Yaman.

Marco Polo, the contemporary of Abu 'l-Fida, had heard of Zafar as one of the most important sources of frankincense. Niebuhr, Beschreibung, p. 236, 262, rightly distinguishes between the two towns of the same name but he could learn nothing of the second except that there was "on the S.E. coast of Arabia a town and harbour" of Zafar, similarly p. 286 where he refers to the export of frankincense (p. 143 sqq. on the growing of frankincense). The first more accurate particulars of this region in modern times were given by the English Coast Survey Commission, J. R. Wellsted who came here in 1833, describes Mirbat and the coast west of it (Travels in Arabia, London 1838, ii. 453 sqq. and Travels to the City of the Caliphs, London 1840, ii. 129 sqq.). In 1837 C. J. Cruttenden went by land from Mirbat to al-Dakhira, the chief town of the coast region of Zafar (see Journal of an Excursion from Marseill to Dyre, in Proceed. of Bombay Geog. Soc., 1837, p. 70 sqq. [Transactions... 1844, p. 184 sqq.]). He established what Fresnel from his information in Ldidda and Haines confirmed that in his time there was no longer a town of Zafar but that, as is still true, the district from Mirbat to Raïat bears this name.

At about the same time Fresnel (see his Lettres, op. cit., p. 251 sqq.) learned from Muljain, his adviser on linguistic points, that the ruins at el-Belid which the latter had visited, still retained traces of the splendid of an old city of Zafar (i.e. probably Mansīt) and that there were now only three or four houses standing. Fresnel wrongly took this Zafar for the Himyar capital (like Ibn Khalidin) and el-Belid for its harbour. Wellsted's Travels are supplemented by Capt. S. B. Haines, Memoir of the South and East Coasts of Arabia, J.R.G.S., London 1845, xv. 104 sqq. Wellsted's information came partly from the observations made by Haines's expedition and published preliminary but without the latter's authority (see Ritter, xli. 668 and the extract p. 645 sqq.). H. J. Carter, whose account (A Description of the frankincense tree of Arabia, in J. Bombay Br. R.A.S., 1847, lii. 380 sqq.) was too late for Ritter, xlii. 356 sqq. to use, gave further details of the occurrence of the frankincense tree. Glaser gives (Skicse, p. 180 sqq;
Abeyesiner, p. 184 sq.) from his own explorations several places on the coast called Zafar of which the only evidence has been mentioned by Fresnel, Curtenden and Haines.

Our knowledge of the plain of Zafar was simplified by Bent who travelled in 1849-1850 along the coast (see the section Dhour and the Gour Mountains in his book p. 237 sqq.). He gives several places hitherto unknown and fixes the frankincense area more definitely; its size, he says, is not much bigger than that of the island of Wight. The Wāt of al-Haṣa is the de facto lord of the plain of Zafar; the land is only nominally under the sultan of ʿOman, as belonging to the inamite of Masqūt (cf. also Glaser, Abeyesiner, p. 126). Yākūṭ, Ibn al-Mudājāwir and Ibn Raffīl (see above) also mention an independent sultan of Zafar and of modern travellers, Niebuhr. (op. cit., p. 287) already mentions the "independent shah" there. The district never came under Turkish rule; the Tur- kish attempt to subdue it towards the end of the last century failed. Bent describes the frankincense trade as unimportant; the Khāz Beduins (Glaser, Abeyesiner, p. 185 also gives the native pronunciation Khāz) bring the frankincense from the mountains to the coast on camels (this recalls ʿUqayl, iii. 357). He saw stores of frankincense at al-Haṣa. The road to the mountains runs through an area which is full of frankincense trees and has a rich vegetation generally. In ancient times the cultivation of frankincense was probably not much more extensive, Myrrh also is found in the mountains. He tells us, like Carter, that the savage Beduins live in caves in the mountains; this gives modern confirmation of the statement in the Fihrist, § 32 regarding the Troglodytes [see wanJā]. They seem to be the representatives of the earliest inhabitants. Their language is not understood by the Arabs; this recalls what al-Ṭāḥāṣīr, al-Dīri and Ibn al- Mudājāwir say about Ṭehā [see MAHRA]. — Bent is supplemented by C. Cranford, The Dhour District, in Geogr. Journ., London 1919 (p. 101 sqq., a description of the ruins of al-Badlī). Glaser was the first to devote attention to the language of the people of the plain and mountains of Zafar (cf. Abeyesiner, p. 182 sqq.) on his accurate reproductions of ʿArabī see Hommel, Ethnologie, p. 153. The specimens of language in Bent, op. cit., p. 275 sq. are to be used with a certain amount of caution. A series of texts was taken down by N. Rhodokanakis from the mouth of a native in 1904 in Vienna; they are published in vol. viii. of the Sūkrūbarī Expedition, Vienna 1908 (Der sudanarabische Dialekt im Ṭafir (Zafār); vol. x. 1911) contains the glossary and grammar. In vol. vii. of the same series D. H. Müller published texts in the language of the hill people from the same native authority (Sawārī-Texte, 1907); see also M. Bittner, Studien zur Ṭafir-Sprache, 1-iv., in S. E. Ak. Wien, 1919-1925.

Bibliography: The information in the Arabic, Greek and Roman authors and the works of Sprenger, D. H. Müller (Glaser, Hommel) has already been quoted with bibliographical details. We may further mention on 1 and 4 the references to earlier literature in Ritter, xii, 64 sq., 251 sqq., 260 sqq., 293 sqq., 311, 343, 650 sqq., 728, 770 (with many inaccuracies in view of the insufficiency of his sources, quoted in the index to vol. xii. under 10 different heads) and in A. Zehme, Arabien und die Araber

640-642, Halle 1875, passim. On 1 see the article ḪIMĀR, ii., p. 310-311 by J. H. Mordtmann, on 1 and 4 my full treatment of many details in Pauly-Wissowa-Kroll's Realen, der klass. Altertumswiss., v. 7, Saha (col. 1372 sqq., 1378-1379, 1437 sqq., 1452 sqq., etc., HABR, iv., p. 3-151); on 4, the article The Exploration of Southern Arabia, in Townsend, The Advancement of Science, 1895, p. 492 sqq., Exploration of the Frankincense Country, Southern Arabia, in Geogr. Journ., London 1895, vi. 199 sqq.; The Land of Frankincense and Myrrh, in Nineteenth Century, 1895, p. 595 sqq.; finally the Bibliography to MAHRA.

J. TESACH

AL-ZAFAYAN, nickname of the rājār poet Aṭāqib, b. ʿUṣāid Abū 'l-Ḥaṣb (according to another reading: Miṣkām). He belonged to the Banū ʿUṣāra, a branch of the tribe of Sūd b. Zaid Manāt b. Tawm, whence he was known as al-Sūdī or al-Tamūn. It is clear from one of his poems that he went through the rising of Abī Fudālik (738-792) and was roughly a contemporary of al-ʿAdīddi.

AL-ZAFIR. [See ʿAṬIMAT.]

AL-ZAHIR. [See ʿABDALLAH, ʿAṬIMAT.]

AL-ZAHIR AL-AMAR ALLĀH ABĪ ṢĀID MUḤAMMAD B. AL-NĀṢIR, an ʿAbbāsid Caliph. As early as Šaṭfall 585 (March-April 1189) the caliph al-Nāṣir had designated his eldest son Muhammad as his successor. Later however, he changed his mind in favour of his younger son ʿAlī but since the latter died in 612 (1215-1216) and al-Nāṣir had no other male heirs, he had to come back to Muhammad and again have homage paid to him as heir-apparent. Regarding the treatment given the future commander of the faithful in his father's house we are told in Ibn al-ʿAlīrī, xii. 287: "He was watched and guarded and could do nothing of his own accord." After the death of al-Nāṣir at the end of Ramadan 622 (beg. October 1225), Muhammad ascended the caliph's throne with the name al-Zahir bi-Amr Allāh but his reign lasted only nine months and fourteen days; for he died on 14th Rajab 623 (July 11, 1226). He was succeeded by his eldest son al-Mustasir. The Muslim historians bestow the highest praise on al-Zahir for his high moral qualities. He is described as god-fearing, benevolent, just and gentle and compared with the Umayyad ʿOmar b. ʿAbd al-ʿAziz who is celebrated for his piety. In politics however, he played an insignificant and subordinate part, after his accession ʿAbd al-ʿAziz, and he exercised no influence worth mentioning on the course of affairs.

AL-MALIK AL-ZAHIR ʿUṣāid, an ʿAṭīfāhī, second son of Saladin [q.v.]. Born in 568 (1172-1173) he was installed as nominal governor of ʿHlab immediately after its conquest by Saladin at the beginning of 579 (1183), but a few months later Saladin handed over the town to his brother al-ʿAdīl [q.v.]. Three years later al-
Zahir was definitely given Halah and several other towns so that his rule extended northwards to the frontier of Armenia, eastwards as far as the Euphrates (at Manbij) and southwards to near Hama. He therefore had the task of defending the northern frontiers against any invasions of Byzantines, Armenians and Crusaders; he strengthened the fortifications [cf. ii. p. 233] and Halab remained a bulwark of Islam and one of the most prosperous places in the Ayyubid kingdom. In the wars with the Crusaders he loyally assisted his father and later his brother al-Afdal [q.v.] and his uncle al-Afdal [q.v.] in Jumhuriyya II 584 (Aug. 1188) he took the fortress of Sarmin from the Christians, liberated many hundreds of prisoners and had all the inhabitants who could pay their ransom massacred and the defences razed to the ground. In the fighting that followed for 'Akka and Jaffa al-Zahir played an energetic part and displayed great bravery. After the death of Saladin on the 27th Safar 589 (March 4, 1193) he hesitated in loyalty between al-Afdal, who had inherited Damascus and Syria, and al-Adil who had received the two fortresses of al-Karak [q.v.] and al-Shawbak [q.v.] with other places in Mosul and who played the part of mediator in the war between his nephews. After al-Afdal in 921 (1195-1196) had given up Damascus and Saladin's third son, al-Aziz who had inherited Egypt, had been killed in Muharam 595 (Nov. 1198), there was nothing left for al-Zahir but to recognize al-'Adil's suzerainty along with the other members of the family; nevertheless he supported his attempt to reconquer Damascus. At the end of 597 (1201) the two brothers besieged this town which might have fallen into their hands if they had not quarrelled and al-Afdal disbanded the troops under his command, and when al-'Adil threatened Halab in the following year, al-Zahir was forced to submit once more and surrender some of his possessions. In Shaban 599 (April/May 1203) by threats he forced al-Afdal to surrender 'Kallat Nadjin to him without compensation. Al-Zahir died on the 7th Jumhuriyya II 613 (Sept. 3. 1215) after arranging that his three year old son al-Malik al-'Aziz Muhammed, with whom his wife Dufa, the daughter of al-'Adil, had presented him, should succeed him to the exclusion of an older son. His stattbeg Shihab al-Din Toghril took over the government as guardian of the young prince. Another daughter of al-'Adil's, al-Ghawsia, whom al-Zahir had married in 582 (1186-1187), had succeeded him without leaving male heirs. Ibn al-Athir praises al-Zahir for his benevolence to poets and for his eminent political gifts, but at the same time says he was hard hearted and scrupulous in his choice of means.

AL-ZAHIR [See the articles Bairar I, Barqis, Fathishe, Supra, i. 955]

Zahir al-Din (Saiyid) al-Mar'ashi, son of the Saiyid Nasir al-Din, descendant of a family of Saiyids, Persian statesman and historian, born in 815 (1412), was at the court of Muhammad, Sultan of Gisâr, for whose son Kâgî Mîrzâ 'Ali he composed the Chronicle of Tabaristan from the earliest times to 881 (1476). The sovereign employed him on various missions, sent him to the help of Malik Iskandar, son of Malik Kayonarm of Rustamdar, who was fighting his brother Malik Ka'ib and entrusted him with other military expeditions; among these he led an army against the fortress of Nîr which he besieged unsuccessfully in 868 (1463).

Zahir-i Fârâbî, Abu 'l-Fadl 'Ali Muhammad, a Persian poet of the 10th century, born at Fârâb near Bakht in 551 (1156), a pupil of Kâhidhi of Sarnâshand, entered the service of Ardâshir b. Hasan, sipâh-bashi of Mâzandarân (d. 607 = 1210), then went to the court of Toghân, prince of Nishâpur (d. 582 = 1186); after being imprisoned for six years, he left Khurâsân for 'Irâq 'Adâmî where he wrote panegyrics on the Atabek Kâhid-ı Arslân b. Idigira about 583 (1187). Towards the end of his life, he retired from the world and led a life of devotion in Tabriz where he died at the end of 598 (1201) and was buried in the cemetery of Sârûsh-Abî; he was a Sunni. His Divan includes fâqih, some ghazals and a few fragments, in all 115 pieces and 97 quatrains. His style resembles that of the court poets; it is polished and graceful but somewhat insipid. On him was made the verse which has become a proverb: "If you find Zahir's Divân, steal it, even in the Ka'ba".

CL. Huart

Zahir al-OMAR. In Syria he is called Zahir (local pronunciation of Zahir) al-OMar, from the name of his father ' Omar, a shi of the Banû Zaidât, nomads who had settled in the district of Sa'ad [q.v.]. In 1750, Zahir lord of Tiberias and the upper Jordan, came to an arrangement with the Metwals of Galilee to drive out the Turkish officials by degrees; after which he seized the ruined port of 'Akka which was to serve him as an outlet for the export of cotton and silk. He repopulated the town and hurriedly rebuilt the strong walls made by the Crusaders, which were not completely demolished at their departure. Zahir did not wish to break with the Porte, to whom he continued to pay the taxes (mirâj) without their going through the hands of Turkish agents. He bore no resemblance to the typical marauding Beduin. Wishing his authority to endure, he endeavoured to base it on the prosperity of the country. He protected the peasants and encouraged their industry. Tremendously active, spending his life on horseback, he was never daunted by reverses.

His establishment in 'Akka earned him the hostility of the Divan at Stamboul. To help him
to face the storm, Zahtir entered into relations with 'Ali Bey (q.v.) who had just revived in Egypt the government of the beys of Mamluk. Abī Dīkah, 'Ali Bey's lieutenant, hurried to Syria, took Damascus and then rebelled against 'Ali Bey whom he forced to seek refuge with Zahtir, his recent ally. The latter quite unlaunched began by routing the troops of ʿOthmana Pasha, Turkish governor of Damascus; after which he took Saïda. The Porte raised a large army; Zahtir could rely on the help of the Mamluks of a few hundreds of Mamluks who had accompanied ʿAli Bey, and finally on the Russian squadron under Admiral Orlow which had been cruising in the eastern Mediterranean since 1770. The encounter took place along the coast, near Saïda. The fire of the Russian ships decided the day (May 1772). The Russians then went on to bombard Bairut which they plundered. Taking advantage of this great success, Zahtir hastened to extend his authority over the Palestinian provinces. From Saïda to Ramla all the country acknowledged his authority. The tide now began to turn against him. ʿAli Bey foolishly allowed himself to be drawn back to Egypt, where he was defeated and put to death. ʿAli Bey being disposed of, Abī Dīkah reappeared in Palestine. After taking the places on the coast which belonged to Zahtir, he was advancing on Akka, when death overtook him (June 1775). The Turkish fleet however after taking Saïda, blockaded Akka, where Zahtir had shut himself up. The bombardment had no effect on the old walls built by the Crusaders but Turkish gold had more success. During a mutiny in the garrison a shot killed instantaneously the old Beūmi chief (Aug. 1775) who had for over a quarter of a century directed the authority of the Porte. His name remained popular in Syria. The Christians whom he had protected were not the last to regret him.

Lammons, La Syrie, précis historique, Baitūt 1921, II. 103—112. (H. Lammons)

AL-ZAHTIRYA, a school of law, which would derive the law only from the literal text (ṣāhir) of the Kurān and Sunna. In the "branches" of law (fuṣūl al-ṣāhir) it still further increased the number of canonically detailed regulations by many divergences peculiar to it alone. More important is its significance for the principles of legislation (māhil al-ṣāhir), the development and elucidation of which it considerably furthered by its uncompromising fight against rūf al-fikr, ishāq dāh, istiḥkām unt akhād (q.v.). In the Ṭūbīt the Zahtir waṣīfh, also called Daʿūd after its founder [see Dāʿūd b. Ǧalāl], became organised as a regular school the influence of which spread to Beirut and Khurṣan while in Spain Ibn Ḥasan remained practically isolated. Only in the reign of the Almoravid Yaʿqūb al-Manṣūr (580—594 = 1184—1199), was the Zahtir school recognised as the state code. But there had always been Zahtirs in outlook, although not organised as a school or called one, and there continued to be such, after the school itself, in spite of all the concessions it was forced to make to the principles of its rivals, had failed in the solution of problems, which had not cropped up in the circle of the Prophet or the earlier transmitters of the Sunna. As late as 728 (1330) a Zahtir outbreak is recorded in Syria, where the waṣīfh itself never was and in Egypt we still find Maʿārī in writing in the Zahtir spirit. The Zahtirya attitude could be maintained, especially in theory, by people who were not in contact with the little matters of everyday life and disliking the cannuities and quarrels of the schools did not adhere to a particular school. It is therefore not remarkable that it is a mystic, Shaqīz (q.v., no. 1), who has preserved many decisions of the historical Zahtirya. It is true that commentators on the Kurān, notably Fakhr al-Dīn al-Rāzī, and on the collections of traditions (ṣaḥīḥ) in particular the party of Zahtir, but especially, but on the other hand, the later jurists no longer take their former rivals seriously and are silent about them, at least in the special literature of the ḏahīd al-Fīlāḥ that has survived. Shaqīz however puts Dāʿūd in the radiant rossete in his Mīrāb (see Bībik), p. 44, between Ibn Ḥanbal and Salīḥ b. ʿUyain and on the parallel roads to the gate of Paradise (p. 47) between Ibn Ḥanbal and Abū Lālī b. Saʿd. As no manuscripts of a Zahtir lawbook are available we give as specimens of the distinctive features mentioned by Shaqīz from Book I those relating to ritual purity.

Details. P. 98, 92: Gold and silver vessels are forbidden for eating and drinking. According to Nawawī, commenting on the Sunna of Muslim (Cairo 1854), iv. 416 and Abū Ḥanīfa and Abū Ḥanīfa; Ammānī (ed. Rask, ii. 262), the Zahtirs on the authority of the ḏahīd in question, which only mentions drinking, permitted eating from such vessels. — P. 98, 93: The use of the toothstick is necessary; according to Ḥabīb b. Rāhwāli, Daʿūd's teacher, [the Syrian] jurists, and some of his contemporaries, neglect of this actually renders the practice invalid. — P. 99, 99 sqq., and ii. 163, 164: Saltine is not impurity and forbidden. — P. 103, 107, 107: A person in a state of minor ritual impurity (ḏahāt, q.v.) may take up and carry a copy of the Kurān. — P. 105, 107: Any contact of a man with a strange female, even a baby girl of an hour old, produces ḏahāt and the minor ablation (waṣīd) is necessary. — P. 107, 107: There is no regulation that in relieving nature we should turn the face or the back in the direction of the bībā; it is therefore permitted. — P. 108, 108 and 113, 108: T. Ṣawīla is according to Ḥabīb Allāh al-Qabīṣ, a Zahtir ṣawīla in Khurṣan (d. 376 = 986), only valid for 5 prayers (a certain Ḥabīb b. ʿUmar laid it down that it was only valid for one). — P. 109, 109: The mentioning of the name of God at the ṣawīla is not only recommended but necessary. — P. 109, 109: According to some authors, this also applies to the washing of the hands whenever purification is necessary. — P. 110, 110: The Ṣawīla does not extend to the elbows (Zafr b. Ḥudhail, d. 258 [774], who was in close contact with Abū Hanbal, however also held the opposite view). — P. 113, 113: The major ritual ablation (ḏahāt, q.v.) is only necessary after actual effluvia semenis. — P. 114, 114: If a woman is in a state of major ritual impurity (ḏahāt, q.v.) and then enters
the שד [q. v.] she must perform two שד. —
P. 114, 32 and 122, 22: In spite of שדAnyone any
one, even a woman during שד, may recite the
פּרָגָן as he pleases. — P. 115 ff.: Rubbing with
sand (סְפֶלֶק, q. v.) actually removes a
שד. — P. 120, 31: The wearing of only the
foot-gear is valid even if it is much torn. — P. 122,
3: A similar partial שד suffices for the woman to
fulfil the demands of פּרָגָן ii. 222 so that
intercourse is permitted even during the שד (to
also אֲשָר).

As these examples show, the שבת המָכָה
cannot be briefly summed up as "light or heavy". שֵׁרִית has sometimes to describe it as the
mildest and sometimes as the strictest of all.
The field in which many of the jurists found
their main object, to make allowances, was one
it could not enter upon and for example it insisted
upon the literal text of the passages in the
פּרָגָן and Tradition against unbelievers to
a degree of complete intolerance. It does not work
systematically, for it forbade inquiry into the
reason for a regulation and did not allow it to be
extended to an analogous case or from the
individual to the class. It absolutely refused to
weaken the words of the religious sources by
parallels from passages in pagan poets and aimed
at creating the true שד al-שדית out of the
religious texts, with the assistance of a special
Muslim philology and lexicography. That of מַלְק seemed to it to be שד equally with that of אֶבֶן
חַנְשֶׁת; שֵׁרִית, from whom it had itself started,
had only disciplined, not abolished שד. שדית
(q. v.) could only be defined as the consensus of
the Early Companions. It made no distinction in
degrees of prohibition or commandment; the
impressive, in other systems not infrequently interpreted
as mere permission and recommendation or simple
disapproval, meant for the absolutely obligatory
or completely forbidden. It naturally used a great
mass of Tradition and it has been charged with
not examining carefully what it took over; on the
other hand, it was itself forced to criticism of
tradition against many שדית favourable to שד
which were finding recognition or against that of
difference of opinion as a grace, but the school
saw in this rather the disruptive influence
of subjective methods against which it regarded itself
as the champion of the lost unity of primitive
Islam. In spite of Ibn Ḥazm, the שביתuya never
attained theological unity. In general it maintained
an attitude of cautious neutrality and aloofness
in theological disputes and in keeping with its
intention for the literal sacred text accepted the
utterances about God without going into any
exegesis.

(R. Strothmann)

ZAID b. 'ALI ZAIN AL-'ABIDIN [q. v.] gives
his name to the Zaidiyah [q. v.], who reveres
him as a political and religious martyr; he was the first 'Ali after the catastrophe which
overwhelmed his grandfather al-Husain b. 'Ali
[q. v.] at Karbela to endeavour to deprive the
Umayyads of the caliphate by armed rebellion when
he placed himself at the disposal of the קַצְרָא as
Îmām. Except for an interval of two months when
he was secretly seeking adherents in Baṣra, he spent
a year in preparation in Kūfa, hidden in constantly
changing hiding-places. But when he was ready
to begin, the governor يافع b. ' Omar al-Thākif, although at the time away in Ḥira, proved so
well prepared that only a few hundred men joined Zaid,
although many thousands had taken the oath of
loyalty to him. After several days' street fighting
he was mortally wounded; the place of conceal-
ment of his body buried under water was betrayed
and the body exhibited in Kūfa, the head in
Damascus, Mecca and Medina. Tabari has preserved
from Abū Mūhammad very vivid and full accounts
from the few survivors of the details of the fighting.
The date, beginning of 122 (740), is however not
quite certain, apparently because Zaid had to begin
his revolt a few days before the date arranged in
view of the excellence of the official secret service;
when 121 or even 120 is given, it is suspiciously
neglects the long period of preparation. The Umayyad
police force, by no means large, owed its success
to the remarkable irresolution of the Kūfān
conspirators. They had gathered together in the great
mosque, allowed themselves to be shut in and did
not support Zaid's efforts, which several times prom-
ised to be successful, to release them. They were
not homogeneous but simply a mass of discontented
opponents of the government, including even
Khāridjīs, while further all those who simply wanted
an 'Alīd to be caliph did not come to the support
of Zaid, although the story that many deserters
appealed to his brother Muhammad al-Bukhārī as
true Îmām is probably coloured by ante-dating
later troubles within the Shi'a. Moreover Zaid
himself was not the real leader of the movement; he
did not come to Kūfa of his own accord. He was
in al-Rūṣafī with the caliph Hishām b.
'Abd al-Malik [q. v., to whom he had turned in
his poverty, when the governor had summoned
him to Kūfa about a debt case. Zaid himself had
misgivings about his prospects; after the first four
months he wanted to withdraw completely from
the enterprise and had reached al-Kārânah on his
way back to his native city of Medina, when he
was persuaded to return by some Shi'a who had
hurried after him.

A number of writings and fragments have
survived which go under Zaid's name; these
include elucidations of passages of the קַצְרָא, and
of problems of the îmām and the pilgrimage
and especially a complete compendium of
fīḥ; but in its present form, they contain too
many theological, ritual, legal and political contra-
dictions within themselves and to such principles
of the later Zaidi literature as are given the
authority of Zaid. There is however the same evidence
that he had a certain amount of learning; while
we need lay no special stress on his honorary
title, בָּשד al-Kūfān, or on the Zaidi tradition
that Abū Hanîfah studied under him and supported
him in the rising by a few words and money, yet it is evidence of
legal experience that he conducted as a skilled
advocate for the Husainids long suits against the
Husainids about the family endowments.

Zaid was much celebrated in song, even as
early as by al-Sayyi'd al-Himayr [q. v.] and in
old muṣṭaf books (martyrologies); legend endeav-
Though dead before Islam, Zaid was considered by *hadīth* a true believer; Muhammad, declaring him to be in heaven, allowed prayers to be said for him.

**Zaid b. Hāritah b. Shahrūn al-Kalbī, Aḥū Usamah, was brought as a slave to Makka by Hākim b. Ḥizām b. Khuwairil, a nephew of Khadijā, who had bought him in Syria and sold him to her. Khadijā made him a gift of friend to Muhammad before his mission. His father Hāríth came to Makka to obtain his freedom, but Zaid refused to leave Muhammad, who thereupon freed him and adopted him. He was thenforward known as Zaid b. Muhammad, and was often associated in his adopted father’s commercial enterprises.

About ten years younger than Muhammad, Zaid was one of the very first converts to Islam, perhaps the first. He came from a tribe settled near Dūmat al-Ḍandal, where converts to Christianity were plentiful and Jewish influences felt; his influence on the Prophet’s religious development may have been considerable.

In Madīna Zaid was joined in brotherhood to Ḥanūfa b. ʿAbd al-Muṭṭalib. In 1 a. h. he went to Makka to accompany Sawāda bint Za‘um and Muhammad’s daughters to Madīna. A brave warrior, Zaid fought at Badr, Uhud, al-Khandaq, was at al-Hudaybiya, commanded several expeditions (al-Andalus in 2 a. h., al-Djauṭīn and al-Itis in 6, etc.) and was often left in command at Madīna when Muhammad was on some military expedition. For his marriage to, and divorce from, Zainah bint Djaḥḥah see Zainah. Following this divorce, the verse in the Qur’ān abolishing adoption (xxix, 40) was revealed. After Zainah, Zaid married Umm Kullāh bint Ḥaṣa, who bore him Zaid and Kušaylī, and Durr bint Abī Lāhah, both of whom he divorced; Hind bint al-Awrawk and Muhammad’s freedwoman, the negroid Umʿ Abūn, who bore him Usma.

Zaid died in 8 a. h., aged about 55, as commander and standard-bearer, of the unfortunate expedition of Mu‘a. Muhammad mourned him and planned to avenge him (see IṣLAMA b. ZAIĐ).

His place in *hadīth* is important, both on account of Muhammad’s affection for him, which induces orthodox tradition to set him up as the Prophet’s favourite, against his dislike by the Qur’ānic form, and by his reason of the name being mentioned in the Qur’ān.

(V. VACCAN)

**Zaid b. Ṭabīb, Aḥū Ṭabīb b. Abī Munkir b. Abī Dafūl al-Aṣāfri, one of the Companions of Muhammad, best known through his part in the editing of the Qur’ān. His father was killed in the battle of Bu‘āth (q. v.), five years before the *hidra*, when Zaid was six years old. His
mother was al-Nawār, daughter of Mālik b. Muʾāwiya b. ʿAdi, also of a Madīndjdl family.

It is said that the boy knew already a number of Sūra when Muhammad settled in al-Madīna. At any rate he became his secretary, who recorded part of the revelation and settled the correspondence with the Jews, whose language or script he is said to have learned in 17 days or less. His quickness of understanding, his sagacity and his knowledge are praised by his contemporaries; he was called "the rabbi of the community".

After the death of Muhammad, Zaid acted in several capacities of greater or lesser importance. He was entrusted with the government of al-Madīna by ʿUmar and by ʿUthmān, when they went to perform the ḥajj. He accompanied ʿUmar to Syria. He regulated the division of the booty after the battle of the Yarmūk [q.v.]. He made the lists of those who were inscribed in the ḍawwār, when ʿUmar founded this institution. He was kāfī in al-Madīna and finance minister to ʿUthmān. After the latter's death he kept aloof from ʿAbd, although he showed him due honour. It is said, however (Tabari, b. 3070, 3072), that he refused to do homage to him. He is known as the part he took in the editing of the Kūfī [cf. kufi, §§ 7, 8]. — He was a specialist on the subject of hereditary law.

Zaid died in 45 (663–666); the years 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, and 56 are also mentioned. The qāfī over his corpse was held by Marwān b. al-Hakam.

(A. J. Wensinck)

ZAIĐĀN (in modern pronunciation Ẓālīn), Dājūq, an Arab scholar, journalist and man of letters, born in Bāhirāt on Dec. 14, 1861, died in Cairo on Aug. 21, 1914. Born in a poor Christian family, he had no regular education and in almost all branches of learning he was self-taught. He spent some time at the Protestant College and received the diploma in pharmacy. Soon afterwards he went to Egypt where for about a year he was on the staff of the newspaper al-Zawīla. In 1884 he served as a delegate on the expedition to the Siida to the relief of Gordon, and then returned to Bāhirāt. After a brief stay in London (1885), he finally settled in Cairo where for some years he taught and was on the staff of the al-Mahkūmah newspaper. Except for his two journeys to Europe (1886, 1913), his literary activity was in Egypt; for political reasons it was only after the revolution that he was able to visit Turkey (Stambul 1908, Palestine 1913).

His first work was of a linguistic nature: "Philosophy of Language and the Arabic Language" (1886, 2nd ed. 1904). Rather naive on some points, it represents the first meritorious effort to apply the principles of comparative philology to the Arabic language. He returned again to the same subject in his book "The History of the Arabic Language" (1904). He then turned to historical works and textbooks: "History of Modern Egypt" (2 vols., 1889), "History of Free-masonry" (1889), "General History" (first vol.), "History of Greece and Rome", "History of England", "Geography of Egypt", "Genealogy among the ancient Arabs". They had no great success. — In 1891 appeared his first historical novel "The last Mamlūk" (German transl., by Martin Thilo, Barnem 1917), and in 1892 he began the publication of his literary periodical al-Miḥrāb. From this date till his premature death his life was closely bound up with this work. He displayed tremendous activity. Not only were the majority of the articles written by himself (the most important of them were republished by his sons in three vols. Miḥrāb, 1919–21; he himself collected and published the articles of a biographical nature in 2 vols. 1900–1923; 2nd ed. 1910; 3rd ed. 1922). Every year he wrote a new novel and a volume of a popular educational nature. Al-Miḥrāb gradually became the most widely circulated Arabic periodical and Zaiḍān's name as a novelist and historian became known not only in Arab speaking countries but throughout the Muslim east.

The majority (17) of his novels (22 in number) deal with the earlier history of Islam from the Arab conquest to the dynasty of the Mamlūks (xiiith cent.). The scene of three others is laid in the xvith–xviith centuries, one in the nineties in Egypt and in the period of the Turkish revolution. Several were written through several (up to four) editions; almost all were translated into Persian, Turkish, Hindustani and Aqṣābatbājī, some into other Oriental and European languages (besides Thilo's translation cf., for example *Le sourc du Khaliṣ* with Claude Farrère's introduction, Paris 1912, and *Allah veuille*, Paris 1924). The main value of these works lies in their popularising of history. Written in easy and fluent language, they afford pleasant and interesting reading. To European literary tastes they do not appeal greatly. Their style of composition is somewhat old fashioned and sentimental.

Of his numerous historical works by far the most important is his "History of Muslim Civilisation" (5 vols. 1902–1906). It is based on the well known European works by Seddīlīt, Krémer, Goldziher and others with many additons from Arabic sources and supplemented by the author's knowledge of the modern life of the east. For Muslim lands it was an achievement of the first rank and it was natural for the book to be translated into other languages (Persian, Turkish, Hindustani) (cf. Bouvet in J. A. ser. x., vol. xix., 1912, p. 401–402). Even a European scholar can frequently find details which are not given elsewhere (cf. de Goeje, in J. A. ser. x., vol. xxii, 1904, p. 356–359). The fourth volume was translated into English by D. S. Margoliouth (G. M. S. iv., Leyden 1907). A supplement to this work is his unfinished "History of the Arabs before Islam" (1908) which has all the merits and defects of the larger work.

No less important for the east was his last great work "History of Arabic Literature" (4 vols. 1911–1914, with index 1922; abbreviated edition
in one vol. (1924). This was the first work in Arabic, designed on European principles. Basing his work on those of Brockelmann, Haart etc., Zaidân also used Egyptian collections of MSS. and here and there produced new materials for European scholarship. His use of the European sources is not always above criticism as was shown by the reviews by Shakhâh (al-Muhtâb, iv., 1914, p. 392–395; xv, 1925, p. 561–560; xvi, 1925, p. 572–574) and P. Anastase (Laqâgî al-Ârâbî, i, 1912, p. 392–397; ii, 1913, p. 52–62, 139–146, 205–209; iv, 1913, p. 82–90; cf. also M. J. Haikal, Fi Arbat al-Firâq, Cairo 1925, p. 221–227). The fourth volume is the most important for European scholarship; it gives a good survey of Arabic literature in the sixteenth century and with the corresponding works of Shakhî and Tarrâzî is our only source for the study of this period.

Of his other works the following may be mentioned: "Science of Physiology", "Categories of Nations", "Wonders of Nature" and the description of his journey to Europe (in al-Hilâl, reprinted separately 1923). His "Memoirs" which he left, and which to judge from the extracts published are very interesting, are shortly to be published by his sons, who are continuing the publication of al-Hilâl.

Zaidân was not an original investigator yet he was of epoch-making significance for Arabic speaking countries, acquainted with European methods. He made accessible many and varied subjects and showed that every Arab must take an interest not only in the advance of European technique and exact sciences but also in his history and literature. He was no revolutionary in the intellectual field, but of a very fine and noble character. The sharp criticism, which his works frequently met, was for the most part superficial (cf. e.g. Antar al-Madani, Nahkh al-Hadhâyân min Târîkh Dîjirî Zaidân, Bombay 1907, or Vâsif Tabâhi, al-Burûbân fî 'ulûm Riwâyat 'Adhâr Kwarîq, Cairo 1900, and particularly Shibli al-Nu'manî, Tanbih Kull Târîkh al-Tamaddun al-Islâmî, Cairo 1930). Conservatism Muslims could not forgive the fact that he, a Christian, wrote on specifically Muslim subjects, as was amply shown by the attacks on his being offered a professorship in the Universitè Égyptienne. The purists (like Ibrahim al-Ya'qût) criticised his language and style in the most fault-finding spirit. The first quarter of the sixteenth century has shown how great a part Zaidân played; his name will never be forgotten in the history of modern Arabic literature and society.

A general characterisation and biography based on personal relations with special reference to his novels is given by Ign. Krautkowsky in the article "Der hebräische Roman in der modern arabischen Literatur," Leipzîg 1930 (= W. L., v. 11, p. 60–79); the Arabic biography with portrait in Iyân Zaidhî, Murâd al-Ârîf ft. Târîkh wa-nahwîn abîdî al-Ifâdh li-Ma'i, Cairo 1867, p. 457–464 and in the appendix to the fourth posthumous volume of his History of Arabic Literature (Cairo 1914, p. 325–326; a list of his works is also given there). The biography has been reproduced in an extended form (with five portraits) as an introduction to the first volume of his Ma'ârîf (Cairo 1914, p. 1–512); cf. also al-Hilâl fî 'arbâ'ah Sana (Cairo 1937, p. 9–40). His personality is undoubtedly worthy of a systematic monograph.

(Leo Kratzkowsky)

AL-ZAIDÎYA, THE PRACTICAL GROUP OF THE Sîrîts, distinguished from the Ithnâ 'Ashîyâ [q.v.] and the Sahâba [q.v.] by the recognition of Zaidân b. 'All. After the latter's death they took part in several 'Alid risings but were not united. Writers on heresy distinguish eight schools among them: from Abu 'l-Dîrî, who combined warfare activity with apologetics of the imams and belief in a Mahdî, to Salama b. Kuhlai whose Zaidânism was watered down to a simple Sîrît point of view.

It was the same as regards theology. The Zaidîs only became a united community when 'Alid claimants to the imamate themselves took over the spiritual leadership. As far as can be ascertained this was the work of two men: 1. al-Hassan b. Zaidân [q.v.], founder about 250 (864) of a Zaidist state in the south of the Caucassian Sea, and 2. al-Kasîm al-Rasîd, Ibn Ibrahim Tahâsh b. Ibrahîm al-Dîwâdî b. Ibrahim b. al-Hassan b. al-Hassan b. 'All b. Abî Târif (d. 246 = 859). While the works of al-Hassan b. Zaidân are only known indirectly from quotations, we possess some by al-Kasîm, who was however quite inaccurate in the political sphere, although his name has not yet become better known in connection with his polemics against the Christianos (Di Matteo, in A.S.O., xx, 191–1923, p. 301–364) and against Ibn al-Mukaffâs (M. Gaidal, La lettre tra l'Islam e il manichëismo, Rome 1927). The school founded by al-Kasîm and developed by his successors, now the only surviving school, is Mu' tazil in theology, in ethics anti-Murtûzî with a puritanical trait in its rejection of mysticism; indeed orders are forbidden in the modern Zaidist state. In worship it has certain 'sectarian' features in common with the other Sîrîts: the call to prayer "come to the best of works"; the fivefold 'ghâthî in the funeral service; rejection of the mock 'ala 'l-šâbûfain (wiping the covered foot as a substitute for washing), of the impious leader at prayer and of the eating of the meat, killed by a non-Muslim. In family law they prohibit mixed marriages, on the other hand they do not allow wara' [q.v.]. As their opponents were almost entirely Muslims they observed in theory, at least, the regulations for dealing with Makhrî, those who refused obedience to the imams; but as there was in addition the distinction Muslims and Munafikûn and Sunnîs, the Zaidîs only allowed wara' to the believers in contrast to them just as they called their wars ghâthî with the corresponding legal consequences. As a result of the scattered distribution of the original Zaidân, we find the most
diverse views on legal questions, which were not fundamental for the sect as such. These are registered by later writers without the accusation of heresy in their simple delight in ijtihād al-ḥakīk, and we find individual Zaidis appearing with individual Sunnis against other Zaidis and other Sunnis in changing combinations, so that the Zaidi mautkhāb practice is a fifth alongside of the four. The Zaidi Abu 'l-Ḥasan 'Abd Allāh b. Mīthāf gives a vivid picture of this in his al-Muntakbāt al-mukātkār min al-Qādī mālātā mālātā (vol. I, Cairo 1328).

In the present day Zaidi state there must of course be greater uniformity: this is brought about by the use of al-Askār fi Fīh al-ʾAmmār al-tārikh (Broekelman, G. A. L., ii, 187, v, s) of Ahmad b. Yahyā b. Muṣṭafā [see below] and al-Ruwāt al-maṭlaʾ (see Bihār) as official text-books.

The essential demands on the imām are: a. Membership of the Abī al-Batū with no distinction between Ḥasanids and Ḥusainids, i.e. no succession by inheritance; b. ability to resort to the sword if necessary for offence or defence so that neither a child nor a concealed Mahdi can be considered; c. the necessary learning: how seriously this is taken, is shown by the vast mass of writings of imāms at all times. As there could therefore be no dynastic tradition, and individual success was in the end the deciding factor, we have no series of imāms without a break; we find rather the possibility of an age without an imām recognised with a sense of the realities, while we also have the opposite: several imāms at one time, i.e. the frequent appearance of an anti-imām; if the latter can oust his predecessor, the former's deposition or abdication is recognised as legal: if there is a turn in the tide he however comes back. If the qualifications for the imāmate are not completely possessed, he cannot be recognised as full imām; we thus have imāms of war or of learning only. Leaders whose strength is only sufficient to keep alive the Zaidi claim are called ṣāḥib al-tikāḥ, ṣāḥib al-tikāḥ, etc. The uncertainty as to who is really to be considered an imām is seen in the list of those among 'Alī pretenders who have been chosen by the later Zaidiyas as a state to preserve a connection with the original Shīʿa. In the first list preserved, that of the founder of the Zaidi kingdom in the Yemen, we have: 1. Allāh; 2. al-Ḥasan and 3. al-Ḥusayn; then 4. Zaid b. 'Allāh; 5. his son 5. Yahyā; then the three brothers 6. Muhammad b. 'Abd Allāh [q.v.]; 7. 'Ibrāhīm [q.v.], also 9. Yahyā who appeared in Dailam after fighting alongside 8. al-Ḥusayn b. 'Allāh b. al-Ḥasan; lastly 10. Muhammad b. Ibrāhīm, who rebelled with Abu l-Sarḥayyā and 12. his brother, the already mentioned al-Kāsim al-Ṣaḥīḥī; later lists add as many as 10 more names; among them the most interesting for the theory of the imāmate is Idīrās [q.v.], another brother of 6, 7 and 9, who, although he fulfilled the qualifications for an imām, founded a kingdom in the Maghrib which remained Sunni.

The political ambitions of the Zaidiyas have been realised in two places: On the Caesian Sunnites, see part al-tikāh; in the Zaidi state of the Yemen was al-Ḥusayn b. 'Ibrāhīm, grandson of al-Kāsim al-Ṣaḥīḥī. It has survived all the kingdoms of the Yemen although it has frequently been driven back into its starting point Ṣa'da, for example at the beginning of the fourth (tenth) century on the death of al-Najīr ʿAbd al-Muṭṭalib b. al-Mahdi al-Ṣaḥīḥī, who had died in 618 (1223) in a battle against the Malakites (q.v.); he was called al-Daʿī because his original sphere of activity had been among the Caesarian Zaidis. He was a descendant of Zaid b. ʿAlī; it is therefore inaccurate to describe the Yemen imāms as Rassīhī. It was not till 518 (1123) that a successor to him appeared (vii 566 = 1170) in al-Mutawakkilī b. Ṣulaymān of the family of al-Ḥadī; in addition to his military campaigns which took him as far as Nadirān, he conducted a literary campaign against the theological heresy of the Muṣṭafis. The disorder of the tenth (eleventh) century is seen in the fact that al-Mahdi ʿAbd al-Ḥusayn of the family of Abu 'l-Barakāt b. Muḥammad b. al-Kāsim al-Ṣaḥīḥī was murdered in 618 (1223) by his own people after being imām for ten years. Al-Mahdi Ibraḥīm b. Tādī al-Din ʿAbd al-Muṭṭalib had the rival imām in Yahyā b. Muḥammad of a quite unknown Ḥasanī family of al-Ṣaḥīḥī and he himself fell in the prison of the Rasūlīd [q.v.] al-Muṣṭafār Sālāb in Taʾās while al-Mutawakkilī b. Yahyā, again of al-Ḥadī's line (d. 699 = 1299), is famous as al-Muṣṭafār b. ʿIṣāma, because a cloud enabled him to escape from the pursuers Rasūlīd al-Muʾayyad Dāwūd when he was on a dangerous retreat into Khawās. The succession in the imāmate to his son al-Mahdi Muḥammad and his grandson al-Muṭṭahar was interrupted by several strangers, for example al-Muʾayyad Yahyā b. Ḥanām, descendant of the “Twelve” imām ʿAlī al-Ridā [q.v.]; his writings filled “as many sheets of paper as there were days in his life”. No less prolific as a writer was al-Mahdi Ahmad b. Yahyā b. al-Muṣṭafā (d. 856 = 1452), imām for several days only. After several imāms had fought with one another and with the Ṣāḥibīs, his grandson al-Muṭṭawakkil Yahyā Sharaf al-Dīn had to retire for a time to Tulhī before the invading generals of the Egyptian Mamlūkī (in 933 = 1527). His son al-Muṭṭahar was temporarily able to regain all land lost as far as al-Tīmān. In the meanwhile Ottoman suzerainty had been established and his grandson entered in prison in Stambul, as did in 1004 (1595) al-Najīr al-Ḥusayn b. ʿAlī of a different line from al-Ḥadī, after maintaining himself in al-Ahmānī for seven years as imām.

At the end of this year al-Muṣṭafā b. Muḥammad, also of the house of al-Ḥadī, opened a new era in Zaidi history with his call to arms and fought successfully till his death in 1029 (1620), and in the reign of his son al-Muʾayyad Muḥammad (d. 1054 = 1644) the Ottomans abandoned the Yemen (1045 = 1635). As a rule, the imāms since then have belonged to the family
of this al-Kāsim, although genuine Zaidī families which had once produced imāms, successfully came to the front again after centuries; there were however from the domestic fields in which the different Arab tribes were played off against each other. The death of al-Muṣayyad Muḥammad b. ʿAbd al-Walī b. al-Kāsim (1097 = 1686) was for example attributed to poisoning by his nearest relatives. A state of order was restored under al-Muḥammad ʿAbd al-Muḥammad b. al-Manṣūr al-Ḥasan (d. 1159 = 1755); Ṣaʿīd b. ʿAbd al-Muḥammad b. al-Manṣūr b. al-Ḥasan (d. 1124 = 1809) in whose time the Wahhābīs penetrated to al-Tihāmah, was incapable, his grandson al-Muṭawakkil ʿAbd al-Muḥammad was able to restore order in Šanān, although al-Tihāmah passed to the Khalifate of Mecca; he built a treasury and a university. The latter's grandson al-Manṣūr ʿAlī b. al-Muḥammad ʿAbd Allāh (from 1525 = 1853) is as unfavourably described even by the Zaidī themselves as by C. J. Ruttenstein, who calls him a drunkard (F. A. G. S., viii., 1838, p. 284). His by no means innocent grandson Muḥammad b. ʿAbd Allāh, threatened by an anti-imām, took the fatal step of summoning the Turks from al-Tihāmah and they entered Šanān in 1624 (1817) but were driven out by the people who had risen in rebellion. Risings of the tribes and raids by the Karmāṭians increased the general disorder. Then three deceased imāms, originally enemies, joined against the imām al-Muṭawakkil Muḥammad b. ʿAbd al-Muḥammad and on Safar 16, 1289 (April 25, 1812) played Šanān again into the hands of the Turks. While Muḥammad's son Muḥammad wanted to be imām there with Turkish approval and in Turkish pay, the Ḥasanīd al-Ḥādī Ṣafar al-Dīn Muḥammad, a descendant of the above mentioned Ṣayyid b. Ḥamza of the viith (xvith) century, maintained an independent imamate in al-Ḥaṣm and Šaḍa from 1296 to 1307 (1879–1890). Then al-Manṣūr Muḥammad b. ʿAbd Allāh Ṣaʿīd al-Dīn, starting from Šaḍa and al-Ḥaṣm by much fighting and also diplomatic negotiations with the Turks contended for the right of the Zaidīs in Yemen generally to live according to the Zaidī Sharīʿa. His son al-Muṭawakkil ʿAbd Allāh who succeeded on Rabīʿ I 1320, 1332 (June 4, 1904) was still more vigorous. In obedience to his summons the tribes at once attacked the Turkish strongholds. Šaʿīd b. ʿAbd Allāh was surrendered in 1904 and could only be reconquered after a regular war. ʿAbd Allāh did not take advantage of Turkey's difficulties after the war in Tripol, but on Safar 1337 (Nov. 1918) he was able to occupy Šaʿīd. In 1341 (1923) he successfully resumed his fight for Šaʿīd with the Idrīsids of Ḍirāṣ. This proximity to the protectors of Šaʿīd involved the new king of the Māran, Zaidī imām and şowr al-mawṣūma, in the wider sphere of international politics. His latest attempt at expansion is directed against the Karmāṭians of Najdīstān just as one of his earliest victories was the ʿaṣf of the Karmāṭians around Menṣūka. This fighting made the imāmate of the present Šaʿīd recall, as is in many other points, even the true Zaidī tenor of his encyclopaedia (see in ʿAbd al-Walī, c. Bibl., that of the first Šaʿīd al-Ḥādī). He is reckoned — which may help to throw light on the theory of the imāmate — his descendant in the 26th generation, but counting partially recognized and anti-imāms about his 100th successor in office. Of his ancestors his father al-Manṣūr Muḥammad was an imām. His grandfather Ṣayyid Ḥamīd al-Dīn was a visier and in 1293 (1875) was imprisoned by the Turks in Šanān with many other scholars and notables. For ancestors of note we have to go back to the seventh, Muḥammad, and the eighth, ʿAbd al-Ḥusayn, both learned commentators on legal works; it is not till the ninth that we have a new imām, Ṣaʿīd al-Kāsim (d. 1029 = 1620) who fought the Turks. Going further back still we find in the ninth (xixith) century, the eleventh ancestor al-Ḥusayn al-Ṣaḥbar, who had however only the rank of emir and as imām, whose title was however not indissolubly, in the fourth (xith) century the 22nd ancestor al-Kāsim, the 23rd dāʾir Yūsuf and the 24th Šaʿīd; the 25th was the full imām al-Nūrī Ṣaʿīd and the 26th al-Ḥādī Šaʿīd himself.

(ER. STROTHMANN)

ZAILA', a port on the African coast o t he Gulf of S Dead. It lies on a narrow tongue of land, which is cut off from the mainland at high water and is the only harbour of importance in British Somaliland. Formerly an important trading centre and one of the largest ports of export for the slave trade with Arabia, the town now only possesses modest remains of buildings of the middle of the xixth century like the tomb of ʿAbd al-Ḥaṣan ibn ʿAbd al-Ḥaṣan, which is decorated with the west of it by the Indian government, the palace of ʿAbd al-Ḥaṣan ʿAlī of which only the ground-floor and the first story survive and a mosque. Alongside of the ruins of the old Arab houses, which only one or two are habitable, stand hundreds of rectangular huts of straw (ʿaral). The town covers an area of 40–50 acres, the part below of stone covers barely a fifth of this. The town was formerly surrounded by a stone wall; its ruins were used to build the quay of the harbour which can only be approached by
Arab sailing ships at high water. At the entrance to the harbour is the customhouse and the gourdhouse as well as the old residency, southeast of this was a mission station which later fell into ruins. Numerous tombs of sheikhs surround the town, among which that of Shaikh Dinn b. Sa’d al-Din is held in special veneration. The population reveals a considerable mixture of Hamitic and Semitic blood and is estimated at 7,000. The coral reefs around Zaila, which contain many pearl oysters, give the inhabitants a remunerative industry. Merchants of Zaila finance the pearl fishers who come from Zaila and the opposite Arabian coast. The yield is quite considerable. Until the rise of Djibuti about 35 miles N.W. of Zaila, which is now connected by railway with Harar, Zaila was the port of export of Abyssinian coffee, but its trade has now declined considerably. The main articles of export are the smaller domestic animals and hides, which go mainly to India.

In ancient times the ancient site of Zaila; it attained increasing importance after the foundation of the Axumite kingdom and was in direct relations with India. The Arab geographers Istakhri, Ibn Hawqal and al-Mukaddasi describe Zaila as the port of Abyssinia for trade with the Yaman and Hijaz. Goat-skins were the chief exports, which were calculated in great quantities with the tremendous development of the leather industry under Turkish rule.

When Ibn Battuta visited the town, it was considered the metropolis of the kingdom of Adal; at the beginning of the xvi century, it fell into the hands of the Turks, who were defeated in 1516 by the Portuguese, who burned the town. About 1525 it attained a new importance under Muhammad Grai, [q.v.], ruler of Adal, then passed into dependence on the sherifs of Makkah. In 1848, it passed to Ali Sharmakali, who paid tribute to the governor of Makkah. On his death it went to Abukr Muhammad Pasha, whom conquered by Egyptian troops in 1870 and visited by General Gordon in 1875. The town was then very prosperous and controlled the whole trade with the interior. In 1884 the Egyptian troops evacuated the town and since 1885 it has been an English possession first under the India Office, then the Foreign Office and now under the Colonial Office.

ZAIN Al-ABIDIN. [See Ali, Al-Abidin, Al-Tunisl.]

ZAIN Al-DIN AL-BAKR Muhammad ibn Muhammad Al-KHAWAFI, founder of an order called after him Al-Zainiyah, which traced itself to Djunaad, was born in 737 (1336) at Khawaf (between Bughaddj and Zazan) in Khurasan, and was buried in 838 (1435) at the village Malin (two parasangs from Herat); whence his remains were transferred to Darwischbad, and thence to the Idgah of Herat, where a mosque was built over them. He obtained authorization (jihat) in Egypt from Nur al-Din 'Abd al-Rahman al-Milzat (Nasif al-Usir, No. 505), and returned to Central Asia, but visited Egypt again, whence he sent in 822 (1419) a gravestone for Khwaja Muhammad Pasha, who died in Madina, and from one of whose letters our authorities derive some of their information about him. In Egypt he made a disciple of 'Abd al-Rahim b. al-Amir al-Marrifinli, who accompanied him to his home; in Jerusalem of 'Abd al-Latif b. 'Abd al-Rahman al-Makbuli, and one 'Abd al-Muttalib, a Maghribi. A fourth disciple was Khwaja Sa'd al-Din of Kashghar, the most celebrated native of that place. (I. 340 = 1456; Relation de l'ambassade au Khurram, transl. C. Schefer, 1879, p. 164.)

ZAIN Al-Din was the author of several works: Risala al-Wajiz al-Khadija, composed in Jerusalem, al-Aswar al-Zainiyah, and a treatise on asceticism. A grandson of his, also called Zain Al-Din, was a courtier of Babur, and translated his Memoires into Persian.

ZAINAB. [See Al-Mu'ayyad, son of Muhammad, husband of the Prophet's daughter Fatima.]

ZAINAB BINT DJA'BH B. RUKH, Muslima, one of the Prophet's wives, was the daughter of Ummay bin 'Abd al-Muttalib; her kunya was Um'm al-Hakam and her name had been Barra. One of the first emigrants to Madina, she was a virgins (some traditions say a widow) when the Prophet gave her in marriage to his freedman and adopted son Zaid b. Haritha.

In 4 a.H. Muhammad, calling on Zaid in his home, saw Zainab alone and fell in love with her. Zaid divorced her in order that the Prophet might marry her; the latter's scruples were set at rest by the revelation of Kur'an xxxiii. 30–39. Zainab received a dowry of 400 dirhams. She was proud of the circumstances of her marriage, and used to say that Muhammad's other wives had been given to him by their fathers and brothers, while her union had been brought about by special divine revelation. The Ayyat al-Kursi (xxxiii. 53) is said to have been revealed on the occasion of Zainab's wedding feast and Kur'an lixi. 1 is also referred to by some to Zainab and to the other wives' envy of her.

Zainab was a friend of Khadija's, and, next to her, Muhammad's favorite. She accompanied him on the expedition against Khawar. Her charity is celebrated; Muhammad's prediction "the longest-handed of my wives shall be the first to join me in paradise" alludes to this. She had received 12,000 dirhams from 'Omar in 20 a.H., but left no money, having given all to the poor.

Zainab was about 35 on her marriage to Muhammad, and died at about 50, in 20 or 21 A.H.

The episode of the Prophet's infatuation with her adopted son's wife was made much of by Christian propagandists (see Maracci, Reptutio Alcorani, p. 562); modern Muslim biographers and commentators of the Kur'an have tried to present the episode in a seemlier light, e.g. Muhammad 'Abdul in Tafsir al-Fakih wa-Muhammad al-Kur'an, Cairo 1330, in the chapter entitled Taruff Masarullah Zaid we Zainab; and Mawlawi Muhammad 'Ali in his biography Muhammad the Prophet, Lahore 1924, p. 249–250.

Bibliography: Ibn Sa'd, ed. Sachau, viii. 71–82; Caetani, Annali dell' Islam, 1 a.H.
ZAINAB BINT KHUZZAIMA, one of Muhammed's wives, had borne the name of 'Umm al-Maṣūkīn since the Diḥḍhiltiyya. Her first husband, al-Tufail b. al-Harith, had divorced her; the second, 'Ubayda b. al-Ḫithir, was killed at Badr. Muḥammed married her in Ramadān 4 A.H. and gave her a dowry of 400 dirhams; she died 2 or 8 months later, the first of his Madīnan wives to die before him, and was buried in the cemetery of al-Makārah. Bibilography: Ibn Sa'd, ed. Sachau, viii., 82; Caustani, Annuari dell' Israim, 4 A.H., p. 16 and § 22; al-Tabari, ed. de Goeje, i. 1775—1776; Ibn al-Athir, Usd al-Qāhira, v. 466—467. (V. VACCA)

ZAINAB BINT MUHAMMAD, one of the Prophet's daughters, said to have been the eldest, was married before her father's mission to her maternal cousin Abu 'l-Ḫaṣṣ b. al-Rahbi. She was in al-Timār, at the time of Muhammed's Aggra, and did not follow him to Madīna; her husband, still a pagan, was taken prisoner at Badr. Zainab sent a necklace which had belonged to Khadūj to ransom him, and Muhammed freed him on condition that Zainab should come to Madīna. On her way thither she was maltreated by al-Ḫalībūs b. al-Aswad, and had a fall which caused her to miscarry (some authors place this accident in 8 A.H. and attribute her death to it). Her husband was taken prisoner a second time in 6 A.H. in the expedition of al-Ḫāzir, and freed by his wife's intercession. He became a Muslim in 7 and was reunited to his wife by a second marriage. Zainab died in Madīna in 8 A.H. She had two children, 'Ali who died in infancy, and Umāma, married to 'Ali b. Abī Ṭalib after Fāṭima's death. Bibliography: Ibn Sa'd, ed. Sachau, viii., 20—248; Caustani, Annuari dell' Israim, Intro., § 160, NO. 1; § 349, NO. 1; § 20; 8 A.H., § 9; 7 A.H., § 3; 8 A.H., § 85, 81, 201; al-Tabari, ed. de Goeje, ii. 2307—2307; H. Lammens, Fatimah et les filles de Mahomet, Paris. (V. VACCA)

AL-ZAINABI, Abū 'l-Ḫaṣṣ 'Ali b. Ṭirāz b. Muhammed, a vizier of the 'Abbāsid. He and his family had the name Zainabi because they were descended from Zainab bint Salsalimah b. 'Ali b. 'Abd Allāh b. Aba Ḫaṭṭāb, the cousin of the two first 'Abbāsids, who was held in great honor among the 'Abbāsids. In Rādīq 453 (July—Aug. 1061) his father Ṭirāz was appointed chief inspector (nasība al-Ḫalifah) of the 'Abbāsid sharifs and after his death, in Shawwāl 491 (Sept. 1098), 'Ali al-Zainabi inherited this office with which was combined in 517 (1123—1124) that of the Alīid chief inspectorate (mašūba al-Ḫalifah). After the dismissal of the vizier Ḥašib al-Din b. Ṣadıkā in Djamāl 316 (July—Aug. 1122), al-Zainabi administered the vizierate for some months but was not actually appointed vizier. It was not till Rabī' II, 572 (April 1162) that the caliph al-Mustarshid gave him this office; in 526 (1131—1132) however, al-Zainabi was dismissed and Amīrābāward b. Šahāl appointed in his place. In the meanwhile al-Mustarshid was assassinated and his son al-Raḥīl succeeded him (529—1135). But the very next year the latter was declared unfit to rule by an official fatwā of a number of theologians and legins at the instigation of al-Zainabi and when the Sāḥib Sulṭān Mas′ūd b. Muḥamad applied to al-Zainabi to ask who was best fitted to be caliph he proposed al-Raḥīl's uncle Muḥamad b. al-Muṣṭahfi, and the latter was proclaimed commander of the faithful under the name of al-Muṣṭafī; then he made al-Zainabi his vizier. But the new caliph and his vizier quarreled after a time. The latter therefore went to the court of Sulṭān Mas′ūd with whom he appeared to be in particular good terms and although the caliph summoned him to return and recom- mend himself to the court, of which he had been dismissed, he refused to return. He was therefore dismissed in 534 (1140—1140). Through the intervention of Sulṭān Mas′ūd however, a reconciliation took place and in 536 (1141—1142) al-Zainabi was allowed to return to Bābil. The caliph however had no further need for him and in Ramadān 538 (March—April 1144) al-Zainabi died in great poverty. Bibliography: Ibn al-Alḥiṣr, al-Kamīl (ed. Tornberg), v. 431; vi. 310; XI. 1251, 191, 507, 357, 425, 455, 460, 480; XI. 27, 75, 35, 59, 64; Ibn al-T Ḫāqān, al-Fihrist (ed. Demerouche), p. 406, 411 ii. 414—418; de Slane in his translation of Ibn Kathirīhā, iii. 153 ff. (K. V. ZETTERSTEN)

ZAITÜN, a town in the southeast of Asia Minor. It is the chief town in a land of the wildyets (formerly sandjaks) of Marāš and is (or was before the recent persecutions) inhabited for the most part by Armenians, who call it Ježou or Unia, usually however simply Kehş (hillage). The name Ulni (Unia) is also used for the whole of the mountainous country on the Djebān between Karatula (S. W.; of Albistan) and Be בצ. Whether Unia was originally the name of Zaitūn or Furnus to the S. W. of it, in the neighborhood of which is mentioned a monastery of the martyr Stephen of Ulni, is doubtful. An Aplough, i. e. Abū al-Karīf, of Fornos is mentioned at the beginning of the reign of Leon I of Little Armenian (1129—1137) (Rec. Hist. Creæn., Doc. Arm., i. 636; iii. 636). On the other hand, the town of Zaitūn is first mentioned after the capture of the last Kupenid (1375). According to local tradition, the inhabitants came from the fortress of Ani or Ani-ďazor, which probably lay in the Cilician plain. The earliest mention of the town which Alighiā could find is in 1326 (Bishop Nasars of Zejian; Stiicmm., p. 199, 201). Paul of Aleppo calls Zaitūn in 1669 "the well-known town of the Armenians". The inhabitants, a brave, liberty-loving, mountainous people, were for long (till about 1864) able to maintain a certain independence. A rising broke out in 1819 as a protest against the heavy taxes imposed by the Porte. The people of Zaitūn resisted İbrahīm Paşa on behalf of the Turks. The troubles of 1863 lasted till 1872 and broke out again in 1878 and 1884. In the summer of 1876 the residence of the governor was burned down; it was rebuilt in 1877. The confiscations of Sept. 22, 1884 and July 26, 1887 were much worse and almost the whole of the town was destroyed. New unrest was caused by the outbreak of smallpox, from which 400 children in Zaitūn died in 1890; its spread was ascribed to the carelessness of the Turkish doctor. The worst was the rising in 1895—
The editors of the Encyclopaedia propose to issue the Supplement immediately after the completion of vol. IV, in fascicles the number of which is estimated at 4—5.
was translated into French in 1886 by O. Houzé under the title: Le Maroc de 1811 à 1852 (P.E.O.R., 2nd series, vol. xviii). It is a narrative, in parts a résumé, of events in Morocco from the foundation of the 'Alid dynasty to the early years of the 19th century. A more detailed version of this part of the Tarjumâna, in which he dealt specially with events in which he had himself played a part or of which he had been a witness, was later prepared by al-Zayâni, and he gave it two different titles: Douârat Awâlîd Mamlûkîyya ‘Ali ibn Yûsuf, and al-Rawâfa‘ul-mirâbihîyya fi Dhîrik Miftâh al-Dawla bi-hamâ‘a‘ala wa-man tadhabûrma min al-Dawal bi-tahlîlîyya. — Another important work by al-
Zayâni was à very full account of his various journeys to which he added all kinds of digressions, literary, historical, and biographical, and gave it the title of al-Tarjumâna al-sabîra al-Àli al-dâwâri‘i‘i Akhâr Mudân al-Ashâr bârîn ma-bârîn. This book which is of the nature of both riba‘î and fahûma is also a very curious geographical treatise, with maps (e.g. a map of the sea, which is reproduced in my Historien des Chrest, between p. 188 and 189). All these works of al-Zayâni are to be found in manuscript in Morocco in various private libraries. A complete list is given, ibid., p. 167-168.

Al-Zayâni’s work is the principal source we possess, with the recent Kifâyat al-istiqâb of al-
Nâṣir al-Sulâiwarî (cf. the article al-Sulâiwarî), for the history of the ‘Alid dynasty of Morocco. It is full of valuable details and deserves serious study. It gives throughout an impression of accuracy and precision in historical as well as topographical matters. Information is given about migrations and social reforms and about the monumental history of the towns of Morocco. Al-Zayâni also shows a very remarkable acquaintance with events in Europe. Finally all that he tells us about what he saw on his journeys to Constantinople is worth publishing in full.

ZAKÂNI ‘UBAID. [See ‘UBAID ZAKÂNI.]

ZAKÂRIYÂ, the father of John the Baptist, is reckoned in the Korâne (v. 65) along with John, Jesus and Elisî among the righteous. Muhammad gives the substance of Luke i. 5-75 as follows: Zakâriyâ guards the Virgin Mary and the name (nâmê) and always finds fresh fruits there. He prays to God; angels announce to him that a son will be born to him, Yahyâ, a name never previously given to anyone, a pious man, a prophet, Yahyâ’s heir, pleasing to God. Zakâriyâ thinks he is too old. As a sign to him he is struck dumb for three days (Sûra iii. 32, 36; v. 1-15; xxi, 59-90).

Later legend expands the Gospel story and says that Yahyâ was the announcer (Luke i. 16) and that ‘Zakâriyâ was struck dumb as a punishment for his doubts (v. 20). It elaborates the details as follows: 19 people anxious to take charge of Maryam write their names on a reed; these are thrown into the pool of Siloam, and the reed with Yahyâ’s name comes to the top. Zakâriyâ now old and resigns his office of custodian which Kalâmasus gives to Joseph the carpenter (Thalathâ, p. 236). In Mary’s niche there is winter fruit in summer and summer fruit in winter; this encourages Zakâriyâ to pray that his aged body also may be fruitful out of season (Thalathâ, p. 237).

Muslim legend makes Zakâriyâ as a prophet die the death of a martyr. After Yahyâ’s death he escapes into a tree which opens for him. But the hen of his coop remains outside the tree. Ilahi betrays him, the tree is drawn down and with it Zakâriyâ (Thalathâ, p. 240; Ibn al-Athîr, p. 120). This is modelled on the Haggada and the martyrdom of Isaiah (Pal. Sabathî, s. v. 286; Ebel, Sabathî, p. 1018; Kântzsch, Apokryphen und Pseudepigraphen, ii. 123; Isaiah, Djemâliûd, Zakâriyâ).

Muslim legend seems to identify the Zakâriyâ of the Gospel with the prophet Zachariah of whom the Haggada records that his blood boiled until Nebuchadnezzar’s general Nebuzaradann came. The latter sought to calm it with the blood of the sacrificed victim and with the best of Israel, but in vain. Only his appeal calms it. Muslim legend tells this of the blood of Yahyâ b. Zakâriyâ.

ZAKÂT (a), the zimzât, one of the principal obligations of Islam. By this the law means a tax, which is levied on definite forms of property and is distributed to eight categories of persons. Muslim scholars explain the word from Arabic as meaning “purity” or “increase”. In reality it was borrowed in a much wider sense by Muhammad from Jewish usage (Hebrew-Aramaic zimzât). In the east among the religiously inclined, the giving away of worldly possessions was regarded as a particularly pious act, the possession of earthly riches on the other hand almost as an obstacle to salvation; the same word that denoted virtue and righteousness in general could therefore also be used for benevolence and charitable gifts. Muhammad, who had become acquainted with this form of pious acts as one of the marks of the religion of revelation, from the first laid stress on the practice of benevolence as one of the chief virtues of the true believer; cf. Sûra xxii, 22; xxxvi, 26: “those (who have of what we have given them spend out secretly and openly)” (many similar passages); Sûra lxx. 24 sq. “those, who acknowledge that the beggar and the needy have a determined claim on their possessions”; also
passage became the basis for the later laws about the distribution of the zakāt. The collectors hence mentioned had to receive the zakāt of the Bedouin tribes who had adopted Islam; for the latter the zakāt from the first was hardly anything but an obligatory impost, the amount of which was usually fixed definitely in the agreements made with the Prophet; the reluctance of many Beduins to pay it is fought in Sūra ix. 99 ṣy. The transformation of the zakāt into a state treasury, now beginning, was limited by Muhammad to the irreducible minimum; essential elements of the later regulation are unknown to the Kūrān and a part of the traditions. The Kūrān answers the question of the believers as to what they should give without any limitations: "the superfluity" (Sūra ii. 217), and a further revelation of the last year of the Prophet's life threatens with the punishment of hell "those who hoard gold and silver and do not spend it for Allāh's purposes" (Sūra ix. 54 ṣy.). Tradition also ascribes to the Prophet utterances which imply no limitation to the obligation of zakāt; among the Companions of the Prophet, Abu Dāhir is held to have championed the view that one should only keep as much property as one needs. 'Alī is said to have fixed the maximum value of property allowed at 4,000 dirhams, and the opinion is even ascribed to so late an authority as Mālik b. Anas that all wealth is forbidden (būrān). The Kūrān (e.g. Sūra ii. 211) and Tradition repeatedly describe as recipients of the zakāt parents, relatives, orphans, poor, travellers, beggars and slaves; but according to Tradition, a zakāt given to the rich, thieves and prostitutes can also be meritorious, since it is the mere fact of giving which is the first consideration. The nature of the objects liable to zakāt is not further defined in the Kūrān. Tradition knows of cases of paying zakāt, which cannot be fitted into the later system. In any case, the character of zakāt in the time of the Prophet was still vague and it did not represent any of the taxes demanded by religion. After Muhammad's death many Bedouin tribes therefore refused to continue to pay zakāt and they considered their agreements cancelled by the death of the Prophet, and many believers, among them 'Omar himself, were inclined to agree with this. Only the energy of Abu Bakr made the zakāt as a regular tax a permanent institution, which through the establishment of a state treasury contributed greatly to the expansion of Muslim power. Ardent believers continued as before to regard it as their right to bestow their zakāt as they thought fit; but very soon the development and centralisation of the state made this impossible in practice. When the obligations of a Muslim had been definitely laid down the zakāt was established as a religious tax and regulated in all its details; the views put forward on this occasion have left their effect in Tradition. In this connection may be mentioned the detailed regulation of zakāt, which is usually ascribed to Abu Bakr, sometimes to the Prophet or to 'Omar or 'Alī.

According to the Shāfiʿi school, the main regulations of the zakāt laws are as follows (On Muslims pay zakāt (according to this Hanafis only those who have attained years of discretion and are in full possession of their faculties) and on the following kinds of property: 1. fruits of the field, which are planted for food; 2. fruits, grapes and dates being especially mentioned in Tradition; 3. cattle, i.e. camels, oxen and smaller domestic
animals (according to the Hanafis also horses); 4. gold and silver; 5. merchandise. On the two first classes the zakat is to be paid at once at the harvest, on the last three, after one year's uninterrupted possession; a condition for liability to zakat is the possession of a certain minimum (mizab). On the first and second class the mizab is 10/15 (when artificial irrigation is used 5/15), the mizab for 5 camel-loads (waqid). There are complicated rules for the third category, which are based mainly on Al-Hakim Bakh's zakat ordinance and take into consideration not only the number but also the kind of animals; the mizab is 5 camels, or 20 cattle, or 40 smaller animals; the animals are only liable to zakat if they have grazed freely during the whole year and not been used for any work. The zakat on the fourth and fifth category is 3/15; the mizab for precious metals is calculated according to the weight and amounts for gold to 30 milrad (or dinar = c. 84 grammes = 1,320 grams), for silver seven times this, 200 dirhams (for gold and silver ornaments the commercial value is the deciding factor); the value of merchandise must be estimated at the end of the year in gold and silver; in this case also there is no liability to zakat if the precious metal or merchandise has not been kept for a full year unused as treasure. Hence the surrender of precious metals obtained from mines as well as of treasure trove is regarded by the best authorities as zakat (cf. F. F. Schmidt, Die scapura im islamischen Recht, in Isr., i. sect. iv. and v.). It is permitted to hand the zakat direct to the persons who have claimed it; it is however preferable to hand it to the Muslim authorities for regulated distribution. If the zakat is collected by the government, one is bound to pay it to the collector (amil) even if the character of the government is no guarantee of a proper distribution (according to some, especially Hanafi scholars, in this case to satisfy one's conscience, the zakat should be collected a second time and distributed direct). The right of the government to demand the zakat is however limited to the so-called zahir possessions, i.e. the visible articles of the first three categories; in the case of which the amil can fix the amount of the zakat from his own observation; the so-called batin properties on the other hand, i.e. the hidden articles of the two last categories, are expressly withheld from this control and the zakat is left entirely to the conscience of the individual. — The yield of the zakat is destined only for the eight classes mentioned in Sura ix. 60 (excluding the family of the Prophet, in contrast to the ghastina and fas), and after deducting a fixed salary for the collectors is to be distributed in equal parts to the other seven categories so as they exist in the country (so according to the Shafi'is, while according to the other schools various necessities may be considered). The distinction that is made between "poor" and "needy" is quite an arbitrary one; at any rate, the legislists usually interpret the definition in such a way that they themselves belong to one of these classes. Whether after the time of the Prophet there were still persons "whose hearts have to be conciliated" is disputed among the schools. By the slaves who have a claim to a share in the zakat are understood (except by the Malikis, such as have concluded a contract to purchase their liberty (mukatta), by debtors (with the Shafi'is) especially such as have taken upon themselves to wipe out a debt for God's sake. The part set aside "for Allah's purposes" is to be devoted to the fighters for the faith who voluntarily take part in the jihadi for not belonging to the regular troops. These categories have been drawn up as a result of a schematic interpretation of the passage in the Koran. — The articles (bint) to avoid payment of zakat are according to the Maliki and Hanbalis invalid, according to the Hanafis and Shafi'is sinful but valid.

Actual practice differed considerably from the theory of zakat in the different Muslim countries. The high imposts and taxes (munakat) not foresaw by the Shafi'is made the collection of the zakat usually difficult or impossible so that it, particularly on khatim property, was either not paid at all or not to the prescribed extent. Frequently its collection led to extortion and other abuses. Nor was the yield in the majority of cases applied according to the law; the collectors themselves or the amils kept the larger portion. Sometimes the zakat on the fruits of the field under the name of "tithe" (mizab; q. v.) became a purely secular tax. Nevertheless the legal obligation to pay zakat is everywhere recognised and where the peasant is not overburdened with other taxes, he pays it at least on khatim property as far as circumstances permit, although with many abuses in details. By zakat al-fitr (zakat of the breaking of the fast) is meant the obligatory gift of possessions at the end of the month of Ramadan, which according to Tradition was ordered by the Prophet in the year 2 and fixed as regards the amount (the latter is however not certainly historical). There were differences of opinion regarding the relation of this zakat to the general one and regarding the question whether it was obligatory. According to the view which finally prevailed, the zakat al-fitr is obligatory (according to the Maliki only under the most exceptional circumstances permit, although with many abuses in details).

ZAKÁZÍK, an unimpressive, but busy commercial town in the Egyptian Delta, in the administrative division (mutatawya) of Sharkiya. Along with Damahirr it is one of the towns which do not constitute fiscal units for purposes of land tax. The town, an important railway centre, has an extensive trade in grain and cotton. There are oil refineries and a large market for dates, oranges and onions. It is 48 miles from Cairo, and is connected with it by rail. Its inhabitants in the time of Boinet Bey numbered 35,715, but in 1927 the total population had increased to 54,351. Tuesday is market day. There are several mosques and a modern Theological Institute (opened 1925); while the various Christian bodies, Coptic, Greek, Catholic, Maronite and Protestant (American) have their places of worship. There are also government and community schools, hospitals and missions. The place is well supplied with and irrigated by canals which join with the Nile. The Ma'âz Canal (Mahr Ma’as) is the former Tanitic branch. A certain kind of small fish which is caught thereabout is called a zákàrt. The situation of the town is very favourable owing to the fertility of the surrounding country. Within the last century it has accordingly developed considerably in importance and wealth. In the neighbourhood are the ruins of Tell Bajia (the ancient Baharth), where amid fallen granite blocks and masonry lies all that remains of the famous Temple of Bast.

ZAKRÜM. (See Djabaham.)

AL-ZALÁLKA, the name given by the Muslim historians to the place near the town of Badojus (q.v.) or Abtalyame, where the armies of the Almoravid sultan Yüsuf b. Tashfin (q.v.), assisted by Andalusian contingents, inflicted a memorable and severe defeat on the troops of Alfonso VI of Castile on Friday 12th Radjab 479 (Oct. 25, 1086). This famous battlefield is now known as Sagrassas on the banks of the Rio Guerero about 8 miles N. E. of Badojus. Almost all the Muslim historians of Spain devote a large space in their works to the account of the battle of al-Zaláhlka, but the most circumstantial account is that incorporated by Ibn 'Abd al-Mun'im al-Himyari in his historical and geographical compilation entitled al-Rawāf al-mu'tar which reproduced almost in its entirety in his Naft al-Tib. On the circumstances which led up to the battle of al-Zaláhlka and resulted in the landing of Yusuf b. Tashfin in Spain as well as for an account of the battle itself see the article VUSUR in VANDENPLAS.

AL-ZALZALA, the title of the Sura xlix., taken from the opening words.

AL-ZAMAKHSHARI, Abu 'l-Khâmîs Mâmilûd 'Omar, a Persian born Arabic scholar, theologian and philologist. Born in Khâshzîm on 27th Radjab 467 (March 8, 1075), in the course of his travels as a student he came to Mecca, where he stayed for some time as a pupil of Wâhâsh, hence his epithet Dâ'ûr al-âlûh. He must however have achieved a literary reputation before this; when he passed through Bagdad, he was received with hospitality. He died in al-Dhahrûn in Khâshzîm on the day of 'Arafa 538 (June 14, 1144). Ibn Bajâsî (Paris ed., iii. 6) was still able to see his tomb there.

His principal work, completed in 528 (1134), is his commentary on the Qur'an, al-Kashshâf 'an Hâchî al-Tawâlî, which in spite of its Ma'arif bias — at the very beginning he declares the Qur'an created — was widely read in orthodox circles. The author devotes most attention to dogmatic exegesis of a philosophical nature, paying only slight attention to tradition. Besides giving the purely grammatical exposition, he devotes special attention to pointing out rhetorical beauties and thus supporting the doctrine of the Rûqàa of the Qur'an. He gives particular care to the lexicographical side of his work; going fully into the readings and supporting his explanations by ample extracts from the old poetry. His work still retained a place in literature when Bâlûqawi produced his own as the orthodox counterpart and tried to surpass him in the accuracy of the grammatical exposition and in quoting variant readings. Even in the western lands of Islâm, where his dogmatic point of view gave particular offence to the Ma'istik, Ibn Khaldûn placed it high above other commentators; it is not however an accident that manuscript copies of his work are rarer in the west than in Islam. The first edition by W. Nasau Leiden, the Mawlâws Khâdîm Ùsâin and 'Abd al-Hâli (Calculta 1856, 2 vols.) was followed by the printed editions at Bâlûq, Cairo 1307, 1308, 1318. To the 15 glosses quoted in Brockelmann, G. A. L., i. 290, of which that of 'Ali al-Dhajarî (3486 = 1413) was printed on the margin of the Cairo editions of 1308 and 1318 we may add — setting aside uncertain statements in

A Khâlî al-Kaibih fî l-Kaibih, 99 as far as I know nowhere else, is according to R.A.D., vili. 738 in the library of Khâtîb al-Sayîfî, ‘Oghmân in Tunis.

Of his grammatical works, al-Mu’affqâl written in 513—515 (1119—1121) has become celebrated for its succinct yet exhaustive and logical exposition; it was published by J. B. Broch, Christiania 1829, 1879, with glosses and appendices by Muhammad Va’qîl Râshî, Delhi 1891, by Hamza Fâth Allâh, Alexandria 1201, Cairo 1323, with Shawâdîl commentary by Muhammad Ba’r al-Dîn Abî Firdâs al-Nâsîr al-Hâlî, to the commentaries mentioned in G.A.L., l. 209, of which one published by G. Jahn, Leipzig 1882 in 2 vols., written by Ibn Ya’qûb (d. 643 = 1245) is the best known, may be added: 1. al-Mu’affqâl by Abu l-Hâlîh ‘Abd Allâh b. Abî ‘L-Hâlî Allâh Hassan al-Ukhûtî (d. 616 = 1219), ‘Ifrîjît, Cairo, l. 157; 2. al-Mu’affqâl by ‘Abîl-Walîd b. Abî al-Anfîl, Escorial, Denkbourg, N° 61; 3. al-Mu’affqâl by Muhammad b. Sa’d al-Marvâzî (Hâlîbî Khaliﬁ, vi. 38—39), Brill—Houtsma, N° 1344; 4. Qâlib Ma’sûr al-Mu’affqâl ‘ad al-Mu’affqâl by Ibn Ma’llîk (d. 673 = 1273) in Damascus, A. Ziyâyî, Khâtîb’în al-Kutub, 64—55, on the versets by Fakhr al-Dîn al-Karîmî, ibid., p. 86, 87; 6. by Muhammad b. Muhammad b. Fâhîl al-Farrâshî, Brit. Mus. Or. 7472 (Descre. Or. N° 50); 7. al-Mu’affqâl fi Shâhî al-Mu’affqâl by Muhammad Abî al-Ghâmi, Calcutta 1322 (1904) by Abî ‘L-Hâlî Muhammad al-Siddîqî al-Andalusî in Stambul, Salim Agha, N° 1157. An imitation of the Mu’affqâl with the same title was written in 670 (1271) by ‘Abînâ’îh b. Bahrîn h. Mâlîqî, MS. in the Brit. Mus., s. Oriental Studies presented to E. G. Browne, p. 148, N° 826. In addition to a treatise on syntax, al-Mu’affqâl fî l-Mu’affqâl, which had a small circulation and is known only from the Stambul MSS. Köprülü, N° 1393, Liliçî, N° 5740 (see Reischer, in M.S.O., xiv. 31), he also wrote the short handbook al-Ummâlahâfî, which attained great popularity; see de Sacy, Anthologie grammarica, p. 99 sqq.; A. Fischer, in Centurio s. n. s. n.s. 3, p. 151. It was also autographed by Fakhîr, Christiania 1857, pr. Thirât (1) 1269, Thirât (1) 1275, Cairo 1289, Stambul 1299 (following al-Madînî’s Nâssî al-Kaibîh, in a ‘Lamînî al-Muhammedî, Thirât 1883). Among the commentaries on it, the best known is that of Muhammad b. ‘Abîl-Ghâmi al-Andalusî, whose date of death is not known (certainly not 647, as in the Fakhîrît, Cairo 4, l. 123, as no MS. is known before the year 1000), printed Bullât 1256, in a Persian Masudi’s 1279, in the Arabic 1310, in the manuscript of ‘Abî ‘L-Hâlî al-Muhammedî, 1290. In addition to the commentary on Sa’d al-Dîn al-Bardâ’s (for MSS. see G.A.L., l. 791) may now be mentioned that by his pupil DIjjî al-Dîn al-Masûkî, Brit. Mus. Or. 6290 and the two modern ones al-Fârî al-Shâhî al-Ummâlahâfî by Muhammad Ul. A."Akar, Cairo 1299, and Oneât al-Sarîrî by ‘Ibrâhîm b. Sa’d al-Kâibih, written in 1298 (1880), Bullât 1312. For a work on grammatical pithies and another on prosody see G.A.L., loc. cit. Here also may be mentioned his commentary on the Nâsîrî al-‘Arabî of Shâhîrî: ‘Abîr al-‘Afbâf fi Sharh Nâsîrî al-‘Arabî, printed with the commentary of Muhammad, Stambul (Djâwâbi) 1300, alone Cairo 1324, together with a series of other commentaries, Cairo 1328.

His wonderful knowledge of the language was shown in a series of collections of sayings which enjoyed great popularity. A collection of old proverbs is contained in the still unprinted al-Mu’affqâl fî l-Mu’affqâl, which exists in numerous MSS. in Stambul, in addition to those given in G.A.L., l. 292 (see Reischer, in M.S.O., xvi. 23, R.O., iv. 708, M.O., vii. 97, 102), in Brusa (cf. Z. Z. M. G., xvii. 56) and Scutari (ibid., 58) a selection from it entitled Zabîl al-Mu’affqâl was made by M. ‘Umarî al-Galîpolî (l. 1024 = 1615) in 999 (1591) with Persian commentary and Turkish glosses (see G.A.L., l. 425). He made three collections of apophthegmas, composed by
himself with particular care and all the fine artificialities of rhetoric: 1. Nawbiágh al-Kalím (Anthologia cententellarum orientalium cith scholia Zamačwari, ed., verit, illustrat. H. A. Schultens, Leyden 1772; Les Poesies de Z, texte arabe, ..., par C. Barbir de Meynard, in J. A. ser. viii, vol. vi., p. 313 sqq.; cf. de Goeje, in Z. D. M. G., xxx, 369 sqq.; lib. Stambul 1866; pr. Cairo 1287, 1303; Bafrîr 1306). Of the commentary the best known is that of Sa’d al-Din al-Taftânî (d. 792 = 1390) entitled Nuzhâ al-Muqaddâmât, lib. Stambul 1831, Cairo 1287, with glosses by Muhammad al-Bairîrî, Bafrîr 1306; that of Abu l-Hasan b. Obâl al-Wahhâb al-Khaîwâî, written about 770 (1368), was printed in Kâsim in 1314. In addition to the commentaries mentioned in G. A. L., i. 302 by al-Khayrî (8th century), the prince of Yaman al-Nâsir li l-Haqq al-Mulûm, written in 728 (1328), and, by al-Khosâî about 1000 (1591), we have also those of Muhammad b. Dîhânhâl al-Nasîfî, which Schultess, loc. cit., mentions, and that of Muhammad b. Ibrahim al-Kabîrâ (d. 972 = 1564; see G. A. L., ii. 368), written in 976 (1560), by Lévi-Provençal, Les Mus. arabs. de Rabat, No. 421, and the Turk. transl. by Yusuf Sidîkfeh Etendi, pr. Stambul 1283: 2. Kâbîl al-Abrâm zül-wâsara 3-l-Kâminât wa l-Affâr (cf. v. Hummer, Winter Jahrb., iii. Ann. Bl., ii. 331), pr. Cairo 1292, a synopsis with additions from other sources prepared by Muhammad b. al-Khayrî al-Kâsimî (d. 940 = 1533; see G. A. L., ii. 429) and entitled Nuzhâ al-Mukhtáz, Bârûr 1279, 1288, Cairo 1327, 1328, 1329: 3. Aâshâf al-Diniân (Samâwîsh al-Mukhâshârân, Wadihâli Dahlan, Bârûr), compiled by the unknown Ahmad b. Muhammad b. Muhammad al-Nâsîrî, who was also cited in the Kâmâshât, in Leyden MSS. No. 2153 and Brit. Mus. Suppl. No. 100 (see de Goeje, in Z. D. M. G., xxx, 569), pr. Bârûr 1324, with Turk. transl. Stambul 1286, with commentary Kâbîl al-Abrâm zül-wâsara 3-l-Kâminât wa l-Affâr by Muhammad al-Nâsîrî, pr. Cairo 1327, 1328. Speculations on time (or space) as the highest principle of the world, with which Islam was acquainted from Hellenistic and Persian tradition, were of course strictly avoided. The doctrine that time, like space, was one of the five principles of the All was widely known, if it found little acceptance. Similar sentiments, with different components and names, are found among different the philosophical and hermetic wisdom (cf. J. Kroll, Die Lehren der teut. Philosophen, in Bôr. u. Gesch. d. Philosoph. d. M. A., xii. 2-4, Münster 1914, p. 67 sqq.), among the âshâfîs and al-Qâdîs, among the iqâmîs, the al-Qâdirîs, the ādîs, the Ahmadis, etc. (S. Guzîr, Fragmente relativis à la doctrine des islamîs, in N. É., xxiii, Paris 1874, p. 331 sqq. and Der Druze, in Kâbul 1306, ed. C. Schott, Leipzig 1802, p. 68). The physician Râzî (d. 932 or 933) gives them in the following order: 1. God-Creator; 2. World-Soul; 3. Original Matter; 4. Absolute Space; 5. Absolute Time (Allâtâni’s “India, ed. E. Sachau, London 1887, p. 163; Ibn Heath, Kâbul al-Mâlih wa l-Nîshâbî, Cairo 1317, i. 14 sq. [where mulla should be read mullah for absolute time]). As, according to Muslim belief, only God is absolute, infinite eternal, this doctrine was condemned as heresy.

The metaphysical potential (God, etc.) found an analogy in physics. Al-Yâ’âbî (second half of the third or second century) says with reference to the Aristotelian system of physics that there are five things (nâshîh) in all the beings of nature, namely matter, form, space, motion and time; the last three however are accidents (al-Yâ’âbî, ed. Houtsma, i. 148). Al-Kindî (d. after 870 = 1466) wrote a small book, which survives only in the Latin
between the separate acts (a'ni') (Dis diegnatlichen Lehren der Araber des Islam von al-Bahr'), ed. H. Ritter (Bibl. Isl., IV), Constantinople 1930, ii, 443). Similarly Maqtab al-Sif al-Makdisi says that in the Muslim view time (samâ) is the movement of the sphere of heaven and ma'âd between actions (af'd). (Le livre de la creation et de l'histoire d'Abou Ezê Ahmad ben Sahl el-Rakkhi, ed. C. Huart, Paris 1899, i, 41). On the other hand, musâda means duration in the Kifâ Mas'ûlî al-Uilm (ed. G. van Vloten, Leyden 1895, p. 177 sq.) where we read: "Time is a duration (musâda) which is counted i.e. measured, by movement, as by the motion of the spheres of the stars and other things in motion". Strictly we have the above mentioned distinction between perceptible time measured by bodily motion and abstract duration which cannot be measured, but is perceived by the soul and directly experienced (cf. H. Bergson's distinction between temps and durée; musâda is also found in Kâûn's terminology (cf. al-Burûjî, op. cit.), and the Ikhwân al-Safa'. In the Sûbâ l-x., already mentioned, they speak of [physical] time as a duration which is measured by the motion of the sphere of heaven).

Musâda as the pure duration of life of the soul should probably be described as a mean between samâ (accident of bodily motion) and dâhâr (duration of the spirit). This leads us to metaphysical considerations of the relation between time and eternity. The terminology here varies not only because they endeavour to bring Aristotle and Plato into harmony with one another but also because each writer and especially the mystic likes to use his own terms.

In a metaphor in the Timâûs Platon conceives of time as the image and emblem of eternity (cf. Die vergangenen Theologie des Aristoteles, ed. F. Dieterich, Leipzig 1882, p. 107, with Timothei, p. 39 sq., and H. Leisegang, Die Begriffe der Zeit und Ewigkeit im späten Platonismus (Brill. a. Geiss. d. Philos. im M. A., xiii, 4), Munich 1939, p. 195 sq.). Only after the creation of the world-soul did the argument of the chaotic matter of the world did time begin with the regular movement of the sphere of heaven. The beautifully planned world and with it time will probably not come to an end. From Platonic tradition, especially through the intermediary of the Pseudo-Plutarch and Galen, came the doctrine of beginning without end, and also speculations about time as identical with the motion of the sphere of heaven or with the sphere of heaven itself or even with the world-soul. If time was identified with the sphere of heaven and with the world-soul, it was called a substance (contrary to Aristotle who called it an accident).

After Aristotle became known, the suspect philosopher was recognized by his doctrine of the beginninglessness of time. Following the neo-Platonists, the followers of this doctrine were convinced that it was a reality. In the form of a stage-case and it was therefore obvious that every kind of being has its own time or eternity. Only God is in the proper sense eternal, not supereternal. That being and doing coalesce in the first cause (God) was certain to the philosophers, following Aristotle. God is eternal and therefore removes the world. The first creation, intelligence (jâh: Le livre de la creation [see above], i, 154 sq. gives it as a Muslim conception, that higher time was the first creation,
ZAMÂN (pl. azəmən, azəmun, azəmənlə), time.

As a guide to the distinction in use between azəmən (common to the Semitic languages) and wakt (only Arabic with the meaning of "time") the following rules may be deduced from the Arabic works of a scientific nature, although they appear to be not infrequently broken even in works that have been compiled with great care. Zəmən is used predominantly for time as a philosophical or mathematical conception in contrast to mağazən, "space" (the similarity in sound between these two words has possibly not been without influence on the preference given to azəmun over wakt in this connection), for longer periods, centuries, length of reign of dynasties, historical epochs, and also in astronomical usage for the numerical value of a period of time which is variable by nature, e.g. the longitude, which differs with latitude and season of the year, of the "temporal hours" (al-əṣṣat al-səmənən, Gr. ἀπὸ καινοῦτος, Lat. horæ temporales sex inaequalis) which, in contrast to our "equinoctial hours" which are always of the same length (ṣūbaṭ al-ti'dāl, Gr. ἐπαυσί προμήγιον, Lat. horæ aequinoctiales), are obtained by dividing the period of daylight into twelve; in this case they also talk of azəmən (more rarely wakt) əṣṣat azəmun ve lajızən al-səmənən. In contrast to this, wakt (pl. waktə) means in astronomy definite points in time, also (usually constant) spaces of time (wakt ədviq əl-waktə, the astronomical noon; wakt ədviq əl-lajızə, midnight; both meanings are found together in al-Battānī, Opus Astronomicum, ed. Nallino, iii. 192; al-wakt ["space of time"] ədviq al-ti'dāl, ədviq əl-lajızə, ədviq əl-kənənt əfərə wakt ["point of time"] at-ti'siṣal), and in general, periods of time of short duration, e.g. the length of a man's life or of a generation. Wakt is also used with the meaning of wakțə for the "correct time"; it may also mean the astronomical time of observation, but in this meaning the technical term wəṣṣāt (pl. wəṣṣənə) from the same root is more usual, which in turn can also mean the art of compiling calendars and the time of prayer [see əfəqər]. Zəmən and wakt are also both found meaning "seasons of the year" as synonyms of wakt.

In his Amrərə al-Tanəsəl ve Arərə al-Tau'əsil (ed. Fleischer, Leipzig 1846, i. 105) al-Ba'da, discussing the word wəṣṣāt in the Kənən, Sūra ii. 185, gives the following definition of mənəda, zuwənən and wəṣṣa: al-mənəda means, strictly speaking, the period of revolution of the sphere from beginning to end (i.e. it means the totality of time, "from eternity to eternity"); al-zəmən is subdivided mənəda (i.e. a considerable space of time) and al-wakt the zəmən chosen for any purpose (i.e. wakt arises out of zəmən by further subdivision and means definite shorter intervals or points)." This schematic definition coincides in essentials with that above given.

Calculation of time. a. The pre-Muhâmadan Calendar. Our knowledge of the early Arab method of reckoning time is based on scattered references in what remains of the old poetry; it is still very incomplete and cannot by any means be regarded as satisfactory on all points. There is much in favour of the view — especially the meaning of the majority of the old names of the months (Ṣafar I, Ḳa'b I, Rabi'I II, Džumādā I, II,
ZAMĀN

Ramaḍān) — that the old Arab year was lunar in character and resembled in some degree the Jewish year (‘Tīght year’). We must however make this limitation that it is hardly safe to assume a uniform division of time for the whole of Arabia in the early period. Among the Arab Bedouin tribes as well as among other nomad peoples, there was originally a calendar based on the moon only — a so-called pure lunar year, and the adaptation to the solar year only took place later. This assumption is also supported by the statements of various Muslim scholars (used by Mahmoud Efendi in his article in ‘Abd, 1856, ser. v., vol. XI); for example al-Biruni (Al-Qāhirah, 1857-1878) regarding with Abd Ma‘shār ibn ‘AbdAllāh al-Balighī (Kitāb al-‘Uṣūl fī Bayāt al-Nulūd) with whose work he was acquainted, mentions that the transition from pure lunar years to lunar-solar years took place about two centuries before the Hijrīa under the influence of the Jewish year. The later theory adopted by F. K. Gmelin (Chronologie, i. 245) from Mahmoud Efendi (Mém. des savants étrangers de l'Académie royale de Belgique, xxx., 1861) which assumes the existence of a pure lunar year in the period immediately before the Hijrīa cannot be quoted as a sound argument against the preceding, as it is not sufficiently established that the conjunction of Jupiter and Saturn in March 571 — the ‘conjunction of religions’ (dirān al-dīn) — actually took place before the birth of the Prophet and that we have not here to deal with a later conjunction. The Arab lunar year, like the Jewish, began in autumn; the year itself consisted of 12, in later years 13 months, which were reckoned from al-‘Uṣūl al-Nulūd (new moon). The intercalation of the thirteenth month which was necessary to fix the beginning of the year at a definite period in the solar year was done empirically from time to time, on the average every two or three years. The much disputed word wāri (Sūra ix. 37) indicates, as Moberg has recently conclusively shown (Axel Moberg, An-Ne’er in der türkischen Tradition, Lund 1931), this intercalation of the extra month; this was first expressly prohibited by Muhammad in the year 10 A. H. (Kurān, loc. cit.). The time of the hādhā [q. v.] originally associated with autumn — i.e. fixed by the solar year — was fixed presumably by the cosmic setting (anvār; pl. anvāl) of one of the 28 stations of the moon (mukātāl); this method of fixing the lunar dates is also found at a later period (cf. the Calendar of Corregid de l'année 976’, ed. Doyé, Leyden 1873) and we find it also in early periods in other parts of the world (China, India, Egypt). In Muhammad’s time however as a result of an insufficient skill in observing and intercalating, the lunar year had advanced so far in front of the solar year that the beginning of the year, with the month Dhu ’l-Hijdāj which preceded it and the time of the hādhā fell in the spring. In the later period of the Djihiyya the names of the months were already fixed as we know them in the Muslim period, except that al-Muharram [q.v.] in the latter took the place of Ṣafar; they were Ṣafar I, Šafar II, Ṣaḥr I, Ṣaḥr II, Djamādār I, Djamādār II, Rajab, Sha‘bān, Ramaḍān, Shawwāl, Dhu ’l-Ka‘da, Dhu ’l-Hijdāj; it is to be noted that the first half year consisted of three double months. The names of the early Arab years as given by al-Birunī are quite different; these, supplanted by those just mentioned, were: al-Mu‘āmār ( = Šafar I), Djamādār, Huwa‘, Ṣaḥr, Shawa‘r, Ṣaḥr, Djamādār, Rajab, Šamā‘r, Ramaḍān, Shawwāl, Dhu ’l-Ka‘da, Dhu ’l-Hijdāj. In addition to these, al-Birunī, al-Ma‘ārif and the Sahāsīh inscriptions give many other names of months, which differ considerably with the different tribes and sources so that no deductions can be made from them about the earliest period of the Arab calendar.

According to Wellhausen (Revis. arabisch. Heidentumms, Berlin 1897, p. 96 sq.), the year was originally divided into three months: the period of rain, of drought and of heat. In the old Arab poetry we find a division into four, Khurṣ or Rabī‘, Shawwāl, Dhu ’l-Hijdāj and Rajab, roughly corresponding to our autumn, spring and summer; it is possible there was also a fivefold division into Rabī‘ (late harvest), Khurṣ (autumn), Shawwāl (winter), al-Rabī‘ al-thānī (early harvest), Saf (early summer) and Ka‘b (summer).

The use of the week of seven days can be proved to have existed at a very early period among the pagan Arabs. According to al-Birunī (Al-Qāhirah, p. 64), the old names of the days of the week were Awwal (Sunday), Ahwān, Djihiyya, Djihiyya, ‘Arba‘a, Khurṣ and Shahār. It should not however be assumed that the seven day week was an original invention of the Arabs; on the contrary, many things point to its having been taken from Babylonia or the Jews, among whom it was established at a very early period.

The days were grouped within the month into ten groups of three each, the names of which, reckoned from the new moon (al-‘Uṣūl) were Ghurar, Nasīt, Tussa’; ‘Ushar, Djihiyya, Dhu’l-Qa‘da, Dhu’l-Muha‘arram, Dhu’l-Muha‘arram and Muharram (cf. al-Birunī, op. cit., p. 65 sq.). The day itself began at sunrise among the Jews and as was later the custom in Islam. There is no evidence of the division of the day into 24 hours in the pre-Muhammadan period.

Epochs. The fixed points or epochs used in the pre-Muhammadan period from which to reckon years seem to have been very numerous. Al-Birunī mentions: battles, memorable events, the year of the restoration of the Ka'b etc.; as epochs of the different tribes (op. cit., p. 34). More general seems to have been the reckoning from the "days of treason", anṣār al-Đagār (probably between 585 and 591 A.D.), and from the year of the Elephant, anṣār al-Đalīl (probably about 570 A.D.), the latter, being according to some authors, the year of Muhammad's birth (571).

The Calendar in Islam. By the already mentioned prohibition of the wāri' in the year 10 A. H. by Muhammad there came into use the system of reckoning by pure lunar months which is characteristic of Islam (one pure lunar month = 29 days; 12 synodic months of 29.5 44.2 in 3 = 354.5 48.1 56 are the term lunar year is really stupid). An adaptation to the actual course of the sun was now no longer possible and the beginning of the Muhammadan year therefore falls about 11 days behind each solar year, coming back to the same solar time in about 33 years; 33 lunar years are therefore almost equivalent to 32 solar years. From this proportion we get the approximation formulæ
for transforming years A. H. into years A. D. and vice versa:

A. D. = 4 1/2 A. H. + 622 or A. H. = 4 1/2 (A. D. — 622).

For exact calculations the Vergleichstafelten by Wüsteufeld and Mahler are indispensable (see Bibli.).

According to the Kari (Sirs x, 5, etc.) which expressly makes the moon the measure of time, the beginning of the month and of the year must be established as in ancient times by actual observation of the new moon and as a matter of fact the popular calendar still does this at the present day. For reasons which are readily intelligible, at quite an early period a cyclic reckoning established itself which, starting from the fact that the period of two lunations is approximately 59 days, gave the months alternately a length of 30 and 29 days so that 1 (Muharam), 3, 5, 7, 9, 11 have each 30 days and 2, 4, 6, 8, 10, 12 have 29 days. The ordinary year thus has 354 days. The difference of 30 48 36 (almost exactly 11 days) by which the astronomical lunar year is longer was made good by intercalating 11 days (yawm al-hijah) in every 30 lunar years. The most widely disseminated in Muslim lands is the practice of making 2, 5, 7, 10, 13, 16, 18, 21, 24, 26 and 29 in the cycle of 30 leap years (jana kalbata). The intercalated day itself is always given to the month Dhu 'l-Hijja which in the ordinary year has 29, in leap year 30 days (on other systems of intercalation, especially the Turkish eight year cycle, see Ginzel, Chronologie, 1, 255).

The day (i.e. the yawn al-hashem, al-yawm bi-lashrith) in the period of the Dzhihliya was reckoned from sunset; as al-Farghatan emphasizes, this method of counting comes from the fact that the first day of the month is fixed by the hili (first light of new moon) which is always to be observed at sunset. The division of the yawn al-hashem into 24 hours is however to be traced to Greek influence. In ordinary reckoning of time temporal hours (see above) alone are used, on the other hand the astronomers very often use equinoctial hours and always expressly describe them as such.

Instead of the old names of the days of the week, we find in Islam simply the cardinal numbers in altered form (from Sunday to Thursday), Friday becomes "the day of assembly" and Saturday the "Sabbath", as follows: Yawm al-Ahmad (Sunday), Yawm al-Ijman (Monday), Yawm al-Thulathah (Tuesday), Yawm al-Arba'ah (Wednesday), Yawm al-Khamis (Thursday), Yawm al-Juma'a (Friday), Yawm al-Sabt (Saturday). (In the days of the week it should be remembered as already explained that Yawm al-Ahmad begins on the evening of our Saturday, Yawm al-Ijman on the evening of Sunday, and so on so that the Arabic and European names do not cover exactly the same 24 hours).

In Muslim chronology the year begins on 1st Muharram of the year in which the Prophet made his Hijra from Mecca to Yathrib (not the day of the Hijra itself or of the arrival in Medina, which is usually taken to be the 8th of Rabi' I, i.e. Sept. 20, 622). It was Thursday (Yawm al-Khamis) July 18, 622 A. D., called Tahir al-Hijra (in the Julian reckoning by days, day 1, 648, 439). The introduction of this era only took place under the Caliph 'Umair.

Besides the reckoning by years from the Hijra, the most varied foreign era were also in use [see Tahir]. The most important was the Alexandrian era (called Tahir al-Khit — "Copts", Egyptians — or Tahir al-Shahid — "of the Martyrs") reckoned by the ghakar al-Khit which was the earliest in use. This is a solar era, unlike the Muslim. The year, the length of which, like the Julian, is 365 1/4 days, has 12 months of 30 days not dependent on the phases of the moon, in which 5 days were added to the last month and 6 in leap years. Every fourth year is a leap year. The Egyptian names of the months, some in corrupt form, were used. According to al-Battani (Op. Att., II, 160) they were: Tis (in the Greek historians 220), Darya (222), Atur (225), Kiyakh (229), Tilin (231), Amahr (234), Barnnath (238), Barnin (242), Afkh (246), Mihr (249). The five or six intercalated days were called as among the Copts the "little month", al-ghakar al-shaghir. The years of this era are generally reckoned from 254 A. D., the year of the accession of the emperor Diocletian; on the other hand in al-Battani from Friday, Aug. 18, 359, c. (Nallino, i, 244 gives an explanation of this). — Another era in frequent use is the Seleucid called Tahir al-Khit or Tahir al-Ishkar, usually Tahir al-Dzi l-Karmean after the "two-horned Alexander". It is usually reckoned from Monday, Oct. 1 (in al-Battani, from Saturday, Sept. 1) 312 A. D. and uses the Julian year and the Julian intercalation, with the Syrian-Arabic names of the months, ghakar al-Khit, so-called because each of these months corresponds to one in the Roman calendar, as follows:

These names of months are also used in the calendar of the Syrian Christians. On other eras see al-Battani, ch. xxxii. and Nallino's notes, i, 244 sqq.

The Arabo-Egyptian land-tax year (al-zama al-kharaziybe), which was introduced after the conquest of Egypt by the Arabs and used for long periods, was a solar year, the beginning of which coincided with that of the Egyptian solar year. The years were counted from the date of the Hijra; there thus arose differences between the number of Hijra years and those of the kharaz-year, which frequently caused confusion in dating. In Egypt itself this form of year was also in everyday use among the people (for further information see Ginzel, op. cit., i, p. 264—265).

The Turkish financial year (milley year) which, along with the Hijra (lunar) year used mainly for religious purposes, was the official year, is in form — apart from its date of commencement — identical with the Julian year. The names of the months have slight variations the same as those of the Syrian-Arab year already mentioned. The year begins on March 17; Feb. 29 is the intercalated day and also the last day of the year;
there again, the šāhīd, in 378 (988-989) after taking Leon, laid siege to the Christian prince in Zamora; Bermudo fled and the inhabitants handed the town over to al-Mansūr. A little later in 385 (1099), the šāhīd placed a Muslim population in Zamora and gave the government of the town to Abu 'l-Aywy Ma'n b. 'Abd al-'Azīz [q.v.] al-Tudjīt. This occupation did not last long, for Zamora was attacked by the second 'Amīrīd šāhīd 'Abd al-Malik al-Muṣaffar in his expedition of 395 (1095) against Galicia. After this the Muslim chroniclers make no mention of Zamora, which was now to play an important part in Castilian history down to the end of the middle ages, especially in the period of the Cid.

ZAMORA, the sacred well of Mecca, also called the well of Ismā'īl. It is in al-kabrī al-sharīf S. E. of the Ka'ba opposite the corner of the sanctuary in which the Black Stone is inserted. It is 140 feet deep and is surrounded by an elegant dome. The pilgrims drink its water as health-giving and take it home with them to give it to the sick. Zamora in Arabic means "abundant water" and zamaam "to drink by little gulps" and "to mutter through the teeth".

Muslim tradition connects the origin of this well with the story of Abraham. It was opened by the angel Gabriel to save Hagar and her son Ismā'īl, who were dying of thirst in the desert. Hagar was the first to catch its water by building a well around it. It is at least certain that it was held in reverence at a very early period. In the pre-Islamic period the Persians used to come there as a line of an old poet says: "The Persians muttered their prayers around the well of Zamora from the earliest times". According to another poet, the well was visited by Sāsān son of Bāshād, the ancestor of the Sāsānids.

In the period of paganism, the Djūrhumis filled in Zamora and threw all their treasure into it. Mas'ūdī however remarks that the Djūrhumis were poor and that the treasures buried there must have been brought not by them, but by the Persians.

The well was rediscovered and dug out by 'Abd al-Muṭjilla, the ancestor of the Prophet, who provided it with walls of masonry; he took out of it two galleys of gold, some "Ka'īya" swords and some cuirasses. With the swords he made the door of the Ka'ba, which he covered with plates of gold made from one of the galleys and he put the other inside the sanctuary. The water of the well was distributed to the inhabitants of Mecca.
In 297 (909) Zamzam overflowed, a thing which had never been known before and several pilgrims were drowned.

ZANDAKA. [See ZINDA.]

ZANDJ, the name of the negro tribes of the east coast of Africa, given by the Arab historians to the rebel slaves who, having previously rebelled in 75 (994), for fifteen years (255-270 = 868-883) terrorised lower Mesopotamia.

This rising is very important for it is a war of a classical type, a regular "social war" directed against Baghdâd like those of Eunus (140 B.C.) and Spartacus (73-71 B.C.) against Rome, like that of Toussaint Louverture in Haiti (1794-1801), like the strikes of Natal coolies led by Gandhi (1906-1913) against European colonisation.

The rebels were, according to Tabari, our principal source, employed as navvies (zamin); the task was to make lower Mesopotamia amble, to remove the zêlick and to pile it up in mounds to make the nitric lands of the Shat-‘al-‘Arab cultivable (zâhrîfyya, from zâhara, niter, a Persian term used also in Omân; cf. de Goeje, Glossaire de Tabari, s. v. hâ-m, following the Kitâb al-‘Uyûn).

They were mainly recruited from imported negro slaves and from the peasants of the country, grouped in gangs of 500-5,000 labourers and penned there homeless and hopeless, all their food being a few handfuls of "flour, semolina and dates*. Through contact with the islâm of their masters, by a process of spiritual induction, these unfortunate creatures learned that they had a right to exist and to a minimum of justice; the influence of the Muslim cénobites of the neighbouring hermitages of 'Abâbdîd was perhaps also felt. These slaves then found a leader who was resolved to put an end to their misery, an 'Alîd pretender with a disputed but perhaps genuine pedigree, for al-Brûnû says that the Shi‘îs still celebrated his festival on Ramazân 26; he took the name of ‘Ali b. Muhammad b. Ahmad b. Isâ b. Zaid b. 'Abd b. ‘Ali b. Husain b. ‘Ali and was called al-Burkûtî "the veiled*). Assisted by a certain Rashîd Kûrmutî (perhaps connected with the Karmâchi propaganda then just beginning), by a miller and a lemonade seller, he had the oath of fealty sworn to him by his runaway slaves (akhbâd) in an oath bi 't-‘âlîk in the Karmâchi fashion [cf. Karmâchais, sura-Kiyya], he raised the standard of rebellion on the 7th Ramazân 255 (868) and uttered the Kûrnic verse called of the shu‘rât (ix. 112) devoting himself to war to the knife (khâfîd ghâfîd bi ‘lâh).

Our sources unfortunately give few details of his system of government which was of a communist type. They refer almost exclusively to the course of the war which was waged mercilessly on the Zandj by the ‘Abâbdîd regent Muwaffâk. Setting out from Dîhsbâd, the Zandj leader divided his forces, armed with slings, into two divisions (i. the Zandj in the strict sense, 2. fûrâtina, Karmâchāya, Nûba) and supported by the Arab tribe of the Banû Tamîm with a fleet he took in succession Ubu'll, ‘Abâbdîd, southern Ahwâz and finally the great city of Basra. He advanced as far as Wâstî (264 = 877), Dîhsbâd, Nû’matiya, Dîhsbâd‘ayn and Ramûnmarûn, the regent, realising the greatness of the danger, mobilised all his forces for a second offensive. It took him three years to finish the war; first he broke through the five encirclements of the camp of Man‘îr, then laid siege to the Zandj headquarters at Makhtûrâ (268 = 884) on the canal Abu ‘l-Khaṣth south of Basra; it only capitulated in 269 (882) and al-Burkûtî was killed on 2nd Safar 270 (883). The rebellion was savagely suppressed, those who had fled returned and the old order was restored.

ZANDJÂN, a town in the northern Persia, capital of the province of Khâms which lies between Khâwîn, Hamadân, Adâbarbâdîn and Ghûmân.

Geography. The town of Zandjân is situated on the river Zandjârût (the old name of which, according to the Nuskhâ al-Kulûb, p. 221, was Mâlûrd), which runs from east to west and joins the Safîf-rûd [q. v.] on its right bank. Zandjân is an important station on the great road from Adâbarbâdîn to Khâwîn and thence to Tîhrân and Khûrûsan. Zandjân is also at the junction of several other roads: to the north, that to Ardabûl [cf. tâkon] and Ghûmân (via Masûla); to the S. W., that to Marâghâ [q. v.] and to Sa‘ûn-Kal’a [q. v., No. 1]; to the south, that to Hamadân. This last road used occasionally to be used by pilgrims coming from the north who wished to avoid the proximity of Kûrîlîn.

The country to the south of Zandjân which is under it has been rarely visited by travellers but is represented on our maps with sufficient clearness. In 1880 several engineers worked there on behalf of the Persian government, who had learned that there were deposits of gold there.

The 17 districts of the province of Khâms are as a rule named after the rivers of the Safîf-rûd basin (H. Schindler): Adâbar-rûd (cf. Ya'kût, i. 104, in Persân; Awhûr, explained as "mill water"); its waters flow to the plain of Khâwîn, Do-dânge, Khoštâbândel, Sadvâr-rûd (cf. Ya'kût, ii. 40 and Ispâhâr, p. 196; the present capital is Madjâl-dîbâd), Sohraward (Ya'kût, iii. 205: سرود شهربانوی, i.e. often confused with شهربنای, Shahrâsûn; q. v.), Idjarût (to the south of the Zandjân–Tâjkhî-Sulâmân road), Khîslâ-ghârî-rûd, Angûrûn, Oryûn (Oyrat), Gûlûbâr-rûd, Bûzûn-rûd, Kûnî-bâlû, Armaghûn, Tûrîm [q. v.], Khûyûn-wây, Gûrmen, Zandjânâtârîn.

Although Zandjân lies considerably to the east of Adâbarbâdîn, it belongs to the Turkish linguistic zone (cf. Forbes'ce, The Western Elburz, in G. Z. 1924, April, p. 310). The province is mainly inhabited by Adâbars [q. v.] whose amirs were still able to play a part in politics in 1914-1916. Besides the Afghûs, there is the tribe of Doweyrûn, who consider themselves Shât-sewûn [q. v.].

History. Andreas (Pâuly-Wissowa, Realencycl., i. 731) has very ingeniously identified Zandjân with
ZANDJAN — ZANZIBAR

AL-ZANDJANI, ITC AL-DIN 'ABD AL-WASSENA "IRHAMIN 'ABD AL-WASSENA 'ABD AL-MAL 'A AL-KHAJAJIBI, also called AL-TI, an Arabic grammatical, who lived in the first half of the 13th (al-ti) century. The place and date of his birth are unknown and the date of his death is also uncertain. The few facts that we know of his life are given us by Haidji Khalifa, who in giving the works of al-Zandjani adds what the latter says about their date and place of composition. We thus know that he stayed in Mysal in 637 (1239) where he finished his al-Mu'rib "Arifin al-Sahih = al-Mu'rib, a work on the dictionaries Sahih and al-Maghrib. Later he was in Baghdad, where, as he tells us at the end of the works, he finished the commentary called al-Ihati on his grammatical work Mubalaj. He died in 654 (1256) and the two volume commentary al-Ka'fis on his grammatical work al-Hadii = al-Nasakhi. He also finished his Minas al-Hadii = al-Nasakhi = al-Tafari at the same time. Next year he completed a commentary on the Kanusi = al-Nasakhi of al-Zamakshari, called Tajribi = al-Musajjir = al-Nasakhi. According to Haidji Khalifa, he died some time after 655 (1257) but we do not know the exact date. Besides these other works on grammar, he wrote a book on the use of the astrolabe and made a collection of Arabic poems. The latter book, called al-Majdil bihi ala ghairi Alahi, is an anthology on the lines of the Hamam of Abu Tamunah or of al-Bahjani. It contains verses by Arab poets of the time of the Djihlyas, of the Maghazamis [see Maghazam] and of the post-classical period, which he took from their diwans and earlier anthologies. A commentary on it was written by 'Ubayd Allah b. 'Abd al-Kafi b. 'Abd al-Majdil al-Bahjani. Neither Haidji Khalifa nor al-Suyuti, who mentions al-Zandjali in the Bughyat al-Wa'izi fi Tahqiq al-Lughayatin wa'l-Nasakhi (Cairo 1326, p. 318), mentions this collection.

ZANDJAN. [See ZANJ].

ZANZIBAR (AL-ZANJIBAR), capital of the island of the same name, which lies off the east coast of Africa in 6° South Lat. The town is on the west side of the island 26 miles N.E. of the harbour of Hagamoyo in 6° 9' S. Lat. and 35° 15' East Long, and forms a triangular peninsula 1/4 miles in length, which runs from west to east and affords a rocky anchorage, one of the best in Africa. The peninsula is connected with the mainland of the island by a narrow isthmus on which there is a cemetery; on the bay is the native quarter of 'Gamo and there is also an Indian and a European quarter. The town which, since the Anglo-German Agreement of July 1, 1890, has been the centre of the judicial, military and administrative authorities of the English protection and at the last census (1931) had 43,470 inhabitants, owes its rise to Sultan Sayid Sa'id of Muskat and Zanzibar who made it his capital in 1832 and by able policy made it the principal commercial centre of
East Africa from Cape Guardafui to Delagoa Bay. He and his successors have also done a great deal for the architectural development of the town. Sa'id himself built a palace in Zanzibar and at Mtoni, three miles away, Sultan Barghash built a new palace in Chukwani, which was connected with Zanzibar by a railway, and other buildings in the town and brought water from Mtoni to Zanzibar. The town is noted for its fruits: bananas, lemons, mangoes, oranges, cocoa-nuts; it is connected by good motor roads with the towns of Mkokotoni, Chwaka, and Pumbaa and by seven miles of railway with Babubu. The Eastern Telegraph Company maintains a cable between Mombasa [q.v.] (Mombasa) and Zanzibar which secures communication with the ports of East and South Africa, *Aden*, Egypt, India, China and Europe. There is wireless telegraphy between Pemba and Zanzibar, which are also connected by telephone. Connections by sea are maintained by a number of steamship lines, such as the Clan—Ellerman—Harrison and Ellerman—Bucknall lines, the German East Africa line from Hamburg via the Cape of Good Hope and Suez, the Compagnia Italiana Transatlantica with Genoa, Majawwa, *Aden*, Italian Benadir and Kenya, the Navigazione Libera Triestina with Venice via the Cape of Good Hope and Suez, the United Netherlands Navigation Company with the Dutch Indies and Holland, the Koninklijke Paketvaartmaatschappij with Java, the Osaka Shikai Kaisha with Japan and South America, the Cowesjee Dinshaw & Brothers with Kismayo, the British India Steam Navigation Company with Bombay and Durban. In 1921, 346 ocean steamers with a total tonnage of 1,407,000 tons called at Zanzibar as well as 316 coaster steamers of 125,000 tons, 5,562 schooners with a total of 69,000 tons. The principle article of commerce is the cloves, the cultivation of which was introduced by the Arabs in 1820, and copra. It is to these that Zanzibar owes its wealth. The other local products play a smaller part in the export trade, hides and leather, pepper, soap and copal. Articles imported for export to the mainland are cotton goods, rice, colonial products, petroleum, soap and provisions. Imports from Africa consist mainly of copra, ivory, hides, leather, copal resin, which are sent to England, India, America and Europe. The harbor is a base for whale-fishers in the Antarctic seas and as such of considerable importance. Zanzibar is also the headquarters of all the firms that trade with the mainland, English, German, Portuguese and Indian. Among the population the industrious Indians with 10,000 take second place after the 22,468 Africans. The Persians, mainly from Bombay, are the largest contingent. Some of them engage in intellectual professions but they are mainly merchant officials and officials in the English service. The Muslim population is Sunni of the Shafi'i school; only the ruling dynasty and its relatives are of the Ibadhi sect [see ARABIANS]. Zanzibar has three Christian missions. The Church of England's Mission to Central Africa (founded 1854) maintains a hospital, a training school for teachers and a high school; there is also a cathedral. The Roman Catholic Père du Saint-Esprit have had a mission in Zanzibar since 1856.

II. The Swahili population.

Swahili, a name nowadays generally accepted to mean the mixed race—a blend of the aboriginal coast natives, slaves brought from the up-country region, and Arabs— which lives in most of the towns on the coast and in Zanzibar" (Ingrams, p. 30; for a list of the principal tribes referred to, see p. 220). The word is evidently derived from Sawaandé (pl. of Sawa), a name used from the earliest times by Arab writers to denote the east coast of Africa, but it is not clear when it was first applied to the people, who are usually called Zandy [q.v.]. Strandes points out (p. 161) that the name "Swahili" nowhere occurs in the Portuguese records. The mixed race originated as early as the beginning of the Christian era, probably earlier; since the author of the Papyrus mentions it as an established fact that Arab traders settled on the coast and married nativen women (Schoff, p. 28). Of post-Islamic settlements, the most northerly would seem to be the oldest; Pate, if tradition can be trusted, was founded in 69 (889). Swahili in general seem to look to this northern area as the country of their origin (mchi ya asi) and consider the dialects of Lamu and Mombasa as, in a sense, classical. The language of the older poems, which has supplied the conventions of modern poetry, is called Kingwa and is said to have been spoken in the district about Maitindi (Steere). Durante Barbosa mentions that the "Moors" of Kilwa spoke Arabic, and this has continued to be the case with recent immigrants and those Arab families who have kept this descent unmixed; but, with the prevalence of slavery and the multiplication of half-castes, many, if not most, whom attained the status of free men, a language gradually grew up, African in structure, but strongly influenced.

As regards vocabulary, the language, naturally, would vary locally, according to the tribes with whom the Arab settlers were chiefly brought in contact, or whence their slaves were drawn, but it is clear that these were mainly, if not entirely, Bantu-speaking. It is true that, according to Lamu tradition, the natives found by the first settlers on the island of Pate were Balononi, a hunting tribe who still inhabit the forests of the Tana Valley, speaking a non-Bantu language, of which very little has hitherto been recorded. Whether this is so or not, no trace of Bantu speech seems to be discoverable in Swahili.

It is clear that no distinct "Swahili" tribe existed prior to and apart from the extraneous infiltrations above indicated—Arab, Persian (possibly pre-Islamic and certainly dating from, at least, the settlement of Kilwa, 977 A.D.; Ingrams, p. 76, 146; Hollis, p. 275, 253) possibly Indian and Indonesian. — A Swahili, at the present day, may be pure African, without a trace of Arab or other foreign descent.

As might be expected from the circumstances, there is no uniform physical type, but nearly all,
except a minority of pure Arabs, show definite African characteristics. Within the same family there may be various gradations of colour, while some members have woolly hair and others wavy or straight. Burton's description (p. 414 sqq.) appears somewhat of a caricature, and this applies still more to his account of their character; but he was apt to look on everything African with a jaundiced eye (cf. Ingram's, ch. xivii.). All Swahili, with a few insignificant exceptions (conversions to Christianity are very few), are professed Muslims, usually Sunniis of the Shafi' school; the Arabs are all, or mostly, Du'ali (Ingrams, p. 188—193, 433). But, as elsewhere, among the less instructed, there is a considerable infusion of animism. At Mombasa, e.g., vows and offerings are made at the grave of a saint known as Shebe Jundani, usually in order to injure some enemy. Ingrans (p. 435 sqq.) enumerates various superstitions and magical practices, with references (p. 501, 505) to some abnormal occurrences (apparently related on good authority), which have never been satisfactorily explained.

The Swahili language, as already stated, is essentially African — and specifically Bantu — in structure, though it cannot be said to be based on any one Bantu language. The Pokomo of the Tana Valley would probably be the tribe with whom the early settlers of Pate and Lamu came most in contact, and, certainly, the influence of their language on the Lamu dialect of Swahili is unmistakable. On a superficial view it would seem that they were the only Bantu-speaking tribe within the reach of the northern Arab settlements until the sixteenth century, when, according to their tradition, the "Nyika" tribes moved south-westward from "Shungwaya". But there is no evidence that this place (now included in Italian Somaliland) was their original home. There is no reason to doubt that this migration was preceded by unrecorded movements from the south or the west. Ingrans's argument (p. 64) that the natives mentioned in the Periplus could not have been Bantu is hardly conclusive; it must be borne in mind, inter alia, that "Bantu" is no more a racial designation than "English-speaking peoples" would be.

The general characteristics of the Bantu languages may be summed up as: aggregative structure, the system of noun-classes and absence of grammatical gender. The noun-classes in Swahili have undergone considerable attrition, indicating a long course of development and, also, extensive foreign contact. One is struck by the comparative rarity of vocal images (Lautbilder), so remarkable a feature in e.g., Zulu, Nyanja and Yao, and also by the development of the relative clause — a stumbling-block to European students, which is absent in the more primitive forms of Bantu speech.

Of foreign elements in the Swahili vocabulary, the Arabic is obviously the most conspicuous. It has played the same part in Swahili as Latin in the Teutonic tongues, more especially in English. As might be expected, many are technical terms of the theology or ritual: dawu, usuali (beg the invariable prefix), kusayfu, imani, horuba, etc. The adoption of such words as yamini, umini, dola is an obvious necessity, also names of objects introduced by the Arabs: sabani = plate, safarini = metal pot, ofo = upper story of a house, jumba = sailing-ship, and many more. In some cases the introduction of an Arabic word seems quite unnecessary, e.g. amadi, for the old Swahili and = fish (found in Pokomo as muni), wali for jka = arrive, wali for nka = return (cf. Zala = barya), amadi for bale = long ago, sabali for pontos = place. Arabic influence on Swahili grammar is confined to the introduction of prepositions and conjunctions (parts of speech noticeably wanting in Bantu), such as hata, lhatini, muda, (kwa) zabolli, hila, etc., which may be said to supply a felt want and certainly facilitate literary composition.

The pronunciation of Arabic words has, naturally, been considerably modified, largely by the introduction of vowels between two consonants, as riziki, from rizik. Since all Swahili syllables are open. An interesting point emerges in connection with the words karafu (asf) and karafu (arinu, where the aspirate, in popular pronunciation, has taken the place of -it is omitted by some speakers, which, indeed, is considered more correct). Elsewhere -i is reduced to a mere glottal stop, or simply disregarded; -ë — except by pedantic Arabizers — is pronounced sometimes as 0, sometimes as k. The vocalisation of Arabic verbs has occasioned some perplexity: uwekha from raspia, safiri from safara. But, as Seldel has pointed out (p. 104), Arabic verbs in Swahili are taken from the imperfect, not from the ground-form. Persian loan-words occur sporadically, some, possibly, imported at an early stage, e.g., boma, "a fortified enclosure"; pomba, "cotton"; biduo, "hippopotamus" (but primarily the whip made from the animal's hide), from bidub. Some have probably come through Arabic, as soroali, "trowsers"; swarufi, "corsal"; swataki, "garment". Loan-words from Portuguese are not numerous: mesa, "table"; gericu, derived from igreja, but now used to mean "fort" or "prison"; soroa, from vinhos, and several words connected with card-games. Recently there have been extensive borrowings from English.

It is uncertain how long the Arabic script has been in use for writing Swahili. Though yet discovered would appear to be more than 200 years old, yet such a poem as the Isimbihaghi, which Taylor (Stigand, p. 94) conjectures to have been composed earlier than 1498, can hardly have been orally transmitted, and, in fact, presupposes a long period of culture. The Arabic script is still extensively used for correspondence, especially at Zanzibar and the towns north of Mombasa, though an increasing acquaintance with the Roman character, acquired in Mission and Government schools, is tending to displace it, indeed, is far better adapted for rendering the sounds of Swahili.

The Persian  and  are very generally used for  and  j, though less educated writers sometimes employ  and  j, e.g., f, for jest, vitu. C. (fi) is rendered, sometimes by  j, j, sometimes, chiefly by Northern scribes, by  j, j by  j occasionally by  j, and  j by  j. A nasal before another consonant (as in the common combinations m, n, m) is usually omitted (thus nyamu is written  nyama), but nd is frequently rendered by the sign  j (  j for kwenda). It follows that Swahili in Arabic script cannot be read with-
out the vowel-points, and even with them, if carelessly placed. An example of the confusion thus produced is quoted by Steere (p. 6).

The existing Swahili literature (apart from that produced, under European encouragement, during the last few decades) is confined to poetry. The lyrics ascribed to Liongo Fumo, if genuine, probably go back to the sixteenth century at latest. Of the numerous poems collected by the late C. J. Büttner, three were published by him in *Anthologie*, and one, since his death, by Meinhold, in *E. A.* (1897, 1899). The collections of the late W. E. Taylor still remain in MS. The art of poetry is still being cultivated, as shown by the recent work of Muhammad b. Abū Bakar b. ʻUmar (Kijima) at Lamu and Iwana Silimut at Mombasa.

The metric system, originally borrowed from Arabia, has been modified in accordance with the genius of the language, with its uniform penultimate stress and richness of vocalisation.

It must not be forgotten that, side by side with these products of conscious literary art, we find a living stream of folk-poetry, comparable to that of Southern Europe. Specimens of such folk-songs have been collected by Zach, Velten and others.

(Alice Werner)

**ZAR** is in Arabic a loanword from Amharic, as the popular beliefs in the genus *zur* were imported from Abyssinia into the Islamic world. Similar ideas about genii who may temporarily become incarnate in particular human beings, are found in various Muslim countries of Asia and Africa where they have special names: such as *biri* (Nigeria and Tripolitania) and *amoh* (Malaya). This article, however, is concerned only with the habits of the *zur* adopted with that name in Egypt, Hijāz and ʻOmān, besides Abyssinia.

In *Abyssinia* itself the name *zur* is of non-Semitic origin. *Zar* is very probably derived from the name of the supreme deity of the pagan Khruits, the God-Heaven called in Agnaw (Bitena): *yde*; and in Sidra languages (Kaffa): *yad*; (Burno): *dor*. The ancient pagan god became in christianized Abyssinia a malevolent genius; and in this way the animistic practices, which in the paganism of the Khruits were directed only to the minor superhuman beings, passed into Abyssinian Christianity (and then into Islam) with the proper name of the God-Heaven who had been reduced to a minor rank.

In Abyssinia Christians and Muslims believe that the *zur* (who lives especially in rivers, streams and other running waters) may be driven out of the body of the possessed person by the incantations of amanets or rites common to both religions. During these rites the *zur* is summoned to tell his name; because that would cause him to lose his power.

By the peoples of Southern Ethiopia (Galla and Sidama), however, besides these exorcistic rites, there are other ceremonies intended to force the evil spirit to enter the bodies of initiated persons. When the evil spirit has possessed these persons, they prophesy and each word or gesture by them is believed to be a revelation by the spirit.

In *Egypt* the ceremonies connected with the *zur* were probably imported in the sixteenth century; and their Amharic name *zur* and their exorcistic character are clear evidence of their origin from Northern (Semitic) Abyssinia. (The popular Arabic etymology recorded by Zurner for *zur* because he is a ["minor"] visitor" has of course, no real basis.) The exorcistic ceremony is often conducted by a woman: the *zākābā* or *hārija al-thikē*.

The spirit must be differently treated according to its place of origin (they distinguish genii from Cairo, Upper Egypt, Su'dan etc.). It is necessary, therefore, to get the right melody, the right song and right clothes", all these things being different for the Cairnese or Sudanese etc. spirits. The songs are accompanied by little drums and dances. A sacrifice of fowls is also usually offered to the spirit. The ceremony may last, in special cases, many nights. Pamphlets condemning the *zur* practices have been printed in Cairo.

In the *Hijāz* the belief in the *zur* was imported, according to Snouck Hurgronje, by Abyssinian slaves. It has the same characteristics as in Egypt and is widely diffused among Neccan women. The *zākābā*, who conducts the rites, tries to ascertain the nationality of the *zur* by questioning him either in vulgar Arabic or in a particular language known only to initiated persons.

To ʻOmān the *zur* has come in the same way. A plural (ṣūrīn) of the name *zur* in the dialect of ʻOmān seems to be unknown elsewhere.

In *Somaliland* only do we find, besides the exorcistic rites, other ceremonies intended to procure the incarnation of the genus (called in Somali: *zur*).

77
ZARANDJ, a town in Farsia, the former capital and principal town of Sūlānštān on the south of Hāṣt, at a distance of ten days’ journey in a desert traversed by canals led from the river Hindmend (Hilmend). Attacked by al-Rādi b. Ziyād al-Ḫāṣibi in 30 (655), he left it to the Saracens on payment of 200 slaves, each carrying a basin of gold. At the end of 41/42 years, al-Rādi was replaced by ‘Abd al-Rāḥmān b. Nāṣr who besieged the town in the citadel and made peace on payment of 2,000,000 dirhams and 2,000 slaves. At one time fortified and surrounded by a ditch as was its suburb, it had five iron gates: the new gate and the old on the Esfān side in the west, the gate of Karkūy on the Khudān side in the north, the gate of Nīkāk on the Hūst side and the gate of Ta’am towards the villages. The houses were built in vaulted porticoes of brick (mādī mawštāda) because wood was there eaten by ants. It had been a palace of Yabhū b. Lāṭṭī, the white Saffārīd [cf. Sāfīrīd] and of his brother ‘Amr inside the town was a building called Arag (fortress), erra] which was the treasury built by ‘Amr. There were markets around the principal mosque; one of them was built by ‘Amar who made it a waqf of the mosque; a hospital, and a mosque called Ḥusnā. There were canals inside the town. Two great reservoirs of running water supplied the greater part of the private houses and gardens. The two minarets of the great mosque were famous.

It was taken by Tūthūr in 285 (1383) and destroyed; its inhabitants were massacred. Its ruins lie around the modern villages of Zāhādīn (remains of a tower) and Ṣhahrānī, along the old bed of one of the canals led from the Hindmend and dried up since the middle ages.

Zarandj was, in early times, the name of the province (tāwūla) and of the people who inhabited it (Zarandj, Ardian).

al-ZARUNDJI, ḪurṭIK al-Dīn, Ṭabab Abū al-אמנות, Chef des écoles, 1295. His name is not known and his period can only be approximately stated. Alward was in the Berlin Catalogue under B. 114, says that ʿAlī b. Sāliḥ al-Kaffawī (d. 990 = 1585) in his Alīn al-Asbūr min Fuḥūk al-Mamlūk bān performing in the twelfth century of the Šāfīites and from this calculation that he flourished about 620 (1223). In agreement with this is the fact that ʿAlī b. ʿAbd al-Rāziq b. Ziyād b. Aḥmad al-Mīrī (d. 1070), as a pupil of the author of the Hibd, the Niʿmat al-Ṣafī, i.e. ʿAbd al-Rādo b. Aḥmad b. Farghūl al-Marghwānī (q.v.). The latter died in 592 (1193); and al-Zarundji in fact quotes him in his Tawāsim al-Muṣālāmīn several times as his teacher and with the analogy for the dead. The other authorities cited in this book, so far as their dates are known, also confirm Alward’s date. For example al-Zarundji mentions ʿAbd al-Ḥamīd al-Ḥāmīd b. Māʾṣūr al-Farghūl of the Faḥūk (q.v.), who died in 592 (1193), as his teacher. In another passage he records that the ʿAlī b. ʿAbd al-Ḥamīd al-Ḥāmīd b. Māʾṣūr al-Farghūl received verses before him (i.e. Tūthūr), G. A. L., i. 439. It is not surprising that the ʿAlī b. ʿAbd al-Ḥamīd al-Ḥāmīd b. Māʾṣūr al-Farghūl received something to him and according to G. A. L., i. 439, he lived about 600 (1205). If we take all these data together, we come to the conclusion that our author flourished a little earlier than Alward thought but his work was certainly composed after 593.

The only known and only surviving work of Al-Zarundji, Tawāsim al-Muṣālāmīn, is a little vadumeum for students to teach them the ethical outlook of the man of learning. The whole book consists simply of utterances of earlier writers but they are not unskilfully chosen and presented in an attractive way. This fact and the brevity of the book are the causes of its tremendous popularity, on the details of which see G. A. L., i. 432. It is interesting to notice that the authorities cited by the author, so far as they do not belong to the first century, are almost without exception Ḥanafī, although the subject matter has practically nothing to do with the doctrine of any maḥkāb – i.e. Isnādī’s commentary was printed at Cairo in 1311.

Bibliography: given in the article.

ZĀTĪ, one of the most important Ottoman poets of the preparatory classical period. His real name was ʿĪsā b. al-Abbas or Yakhūt (according to Lattī). Born in 876 (1472) in Balkhù (in the Afghan) he followed the same trade. He had no education, in spite of all obstacles his poetical ability displayed itself. He was a born poet. In the time of Sulṭān Bāṣārī he came to Constantinople. As his original plan of becoming a kūfi after some training fell through on account of his deafness, which also prevented him from obtaining any public appointment, he lived the life of an unattached poet, supporting himself by the presents his poems brought him from the sultan and the nobles. He dedicated Ḵātūā to the three Sulṭāns in whose reigns he wrote, Sulṭān Bāṣārī, Selīm I and Selīmīn al-Ḵānānī, in return for which he received presents and even a fief which was however later taken from him as he did not give military service.

His talent brought him a large number of patrons and friends, among the grand vizier ʿAlī Pāšā, the Kāpākhaner Muḥāṣṣel-e, the Nīqānīs-e, the Tāalīs of the Īsāfār Celebi, the Deftdār and later grand vizier Pārī Pāšā, Kāfī Efendi, etc. But as they in turn lost their offices or their lives, he was left penniless. He therefore worked as a scribes, and wrote matuls (safak-e, q.v.). He had his booth first of all in the court of the Bāṣārī mosque and later besides Koṭī-i Lāḥīmī Bāšā’s baths. There the intellect of Constantinople used
to gather, including the poets Khayat, Vahiy, Bâlî, and others. Zâtî was for a period a recognised leader and master. He lived in great poverty, besides he drank. He was celebrated for his ready wit and in spite of his ugliness was a popular companion. He died in Ramadân 953 (Nov. 1546) and was buried outside of the A’drianople Gate.

Zâtî’s poetic output was prodigious. This was partly the result of his poverty which forced him to write. Lajîf credits him with 3,000 ghazals, 500 qaṣidas and 1,000 râhî’s and čîṣa’s. Zâtî’s own figures however are 1,600 ghazals and over 400 qaṣidas (according to Kínâlî-râde). In the Diwân collected by Firi Čelebi there are 600 ghazals and 50 qaṣidas."

Zâtî also wrote two menâwîs: Şohîw-êr Përvûnêt (Kenhî) and Añêzêt-i Mêhêmûd (rëylî); a Şeh-nêvûks of A’drianople, a Ferâh-nâmê; Pâ-i Füdr-i Szîrê-rêhêti; Şhâr-i Nîhî; a Mêvûǜlê; Lâqûlîs (puzzles); a Mûfûdî-i Lâfu ‘îfî; and a collection of anecdotes about his contemporaries. None of his works has been printed. His Diwân is very scarce; there is a copy in the Hamdîye Library in Constantinople.

In view of his lack of training and education, Zâtî’s high poetic gifts are surprising: the vigour of his poems and the power and richness of his language especially in his best period. Later he became feeble and artificial and continually repeats himself. With Ahmäd Pâhü and Nêflûti he is considered a master in the use of proverbs. Many of his sayings have in their turn become proverbial.

Zâtî was the chief of those who prepared the way for the perfect classical style, as typified in Bîhî. After Ahmäd Pâhü and Nêflûti, he is the third-founder of the Ottomân poetic language. He surpassed all his predecessors in power of language and poetic conception. The depth of his religious conviction, which is evident in his poems, may be mentioned. He belonged to the Welfî order.

**ZATI (ıSLAAMîN), a Şfît Oott ottoman poet, of Gallipoli (not Brassa, as often stated), khalîfa of Shaikh Isâmîl Hâkki. He died in 1151 (1738) as pîşt-i-rûmî of the Khalîfî monastery in Kêshan. He left a Diwân with Şftî poems and a treatise in verse: Sarnîbî-i Iwanûlîvî fi Mu’âzî fi A’nasîr (printed together); and two prose works: 23 Edres-i mülkâyavânîsî ezrâvû-nâmê and Mîtrîh al-Masîlî.

**Bibliography:** Brusell Mehméd Tahir, ‘O’mmênîl Mu’âzîlîrî, i., 72–73; Thûrîgî, Edresî, ‘Ommênîl Mu’âzîlîrî, ii., 342; Samî, Khâmîa al-A’âmîn, iii., 2224.

(TH. MENKEL)

**NASA, a town in Persia, in Khûrân-nâr, near Nasûhî. In the time of Ūmahaddîs, it was a rural district which did not contain a town; but later (sixth century) there was a fine town there with a citadel built of brick. It contains the tomb of the shaikh Kûbî al-Dîn Hâdîsî, who was still alive in 617 (1220) whence the name of Turbat-ı Hâdîsî now given to the town. Ūmahaddîs mentions a town of the same name near Gihîza (B.G.A., iii., 50, 297).

(CL. HUARD)

**AZAWA.** [See ins Mu’tî.]

**ZAWILA, the name of two towns in North Africa.**

1. Zawîlat al-Muhîdîya (according to al-Bakri: Zuwilla) built by the Fâtîmid Ubûd Allah al-Mahîdî (d. 1001) 21 miles 322 situate a bowshot distant from al-Muhîdîya, of which it was a suburb. According to Idrîsî the two towns formed one. It had fine bazaars and buildings and many merchants resided there who went to their businesses in Mahdyia in the day. The town was surrounded by a wall even on the side facing the sea; the last side was further protected by a great ditch. The wall built by al-Mu’izz b. Bîdî Şhîrîf al-Dawla (d. 1015) 143 was 2 miles long and had iron gates weighing 1,000 cwt, 30 spans high, each studied with 6 lbs. of heavy nails. In the vicinity of Zawila were hamlets, farms and country houses, belonging to the people of the town who practised agriculture and cattle-rearing here; the principal products were barley and olives, the oil went to the Levant.

2. Zawîlat al-Sûdân (according to Idrîsî: Zawilla), capital of Fazzân, 10 days’ journey north of Wadaûn on that frontier of the ûlûd al-Sûdân which adjoins the province of Africa. The town, which lay at an important road junction in the middle of the desert, had no walls, had a mosque, baths and bazaars, palmgroves and cornfields, which were watered by canals. The Muslims who lived here were ûlûd. Many traders from Khûrân-nâr, al-Kûfà and Ba’sra used to come here. The export was slaves and merchandise. The town was taken by Ujba b. Nârî, a general of Amr al-As. The poet Diûlî b. ‘Ali al-Khûzî is buried here.

(A. GROTHMANN)
ZAWIYA, properly the corner of a building, was at first applied to the cell of the Christian monk (cf. the Greek ὥτασις), then to a small mosque or praying room; the word still has this meaning in the Muslim east in contrast to a more important mosque (μουσέος or ἱλικόν). On the other hand the term zawiya has retained a much more general meaning in North Africa and is applied to a building or group of buildings of a religious nature, which resembles a monastery and a school. An excellent definition of the Maghribi zawiya was given as early as 1847 by Daumas (La Kabylie, p. 60) and it seems to be in essentials appropriate at the present day (cf. the quotation in Mr. E. de Saulles's work). All or several of the following are found in a zawiya: a room for prayer with a nibāgha, the museom on a marabout or Shari'anic saint, which is surmounted by a dome (kubba): a room set aside exclusively for the recitation of the Qur'an; a maktab or Qur'an school; finally rooms for the guests of the zawiya, pilgrims, travellers and students. The zawiya is usually adjoined by a cemetery with the tombs of those who have during their lifetime expressed a wish to be buried there. "The zawiya," says Daumas, "is to sum up a religious school and a free hostel, in these two respects it has much in common with the medersa monastery." The conception of a zawiya has, it seems, undergone a somewhat characteristic change since the middle ages, at least in the Muslim west; in the east on the other hand the term very soon acquired a definite meaning so that it was applied only to the more humble mosques and is not there used as a substitute for the more precise terms like dar, khanaka or na'ībā, which are used particularly for monastic institutions which as a rule owe their origin to Persian Muslim mysticism. In the Maghrib on the other hand the term zawiya appears about the xiith century as synonymous with rībā, i.e. hermitage, to which a holy man retired and where he lived surrounded by his pupils and devotees (cf. G. S. Colin, transl. of al-Budda's Maqāmāt, in A. M., xxvi. [1926], p. 240, s. v.). This zawiya of rībā is however not always identical with the rībā, an institution which served another purpose and was primarily of a military character. In this connection however we may note a statement of Ibn Marritk of Tiemcen (d. 781 = 1379), who in his monograph on the Marinid Sultan Abu'l-Hassan 'Ali, al-Munawād al-wadā al-hassan, devotes the 42nd chapter to the zawiya built by this ruler and says the zawiya corresponds to what in the east is called Rūbā or Khānūkā. It may be added that the word rūbā is also found in Morocco used for institutions in which the military activity was particularly directed to spreading Islam among heretics with the sword: this for example was the case with the rībā Asfi (cf. Asfī) and Siddi-Sherker on the Wādi-Tansaf. The first zawiya hermitages undoubtedly developed very quickly and became not only places of refuge from the world but also centres of religious and mystic life, where the togausouf, hitherto the sole possession of urban scholars, was to be brought nearer the masses. They now became centres of attraction, religious schools and to some extent free hostels for travellers in search of spiritual perfection. This explains how Ibn Marritk could say when speaking of the zawiya of his time: "It is clear that with us in the Maghrib the zawiya serve to give shelter to wanderers and food to travellers" (cf. also Asfī). In Muslim Spain we find no zawiya before the time of the Nasüids of Granada. They therefore belong to the same time as those of the Marinid sultan Abu'l-Hassan and their foundation must have met the same needs. In 990 W. and G. Mārqaṭ put forward the attractive hypothesis that the Maghribi madrasa were in the intention of their founders, the Marinid and Ābd al-Wālid rulers of the xivith century, only an "official recognition" of the schools attached to the zawiya. It is perhaps more possible that these rulers endeavoured by their foundations alongside of the great centres of religious instruction (notably the Djamāl al-Karawīyīn in Fās) to weaken to some degree the competition already caused in the towns and outside of them by the zawiya schools.

At the present day the most important North African zawiya, whether they are now in the large towns or in the country — where little townships have almost always grown up around them — are the mother houses of branch settlements of the Marabout or Shari'anic religious brotherhoods (see ẓarīqa and shajara).

In addition to their religious and intellectual influence the zawiya of the Muslim west have exercised a direct political influence on the population of the country in areas remote from the seat of the central government. The most striking example of this is the zawiya al-Dīthi (in the district of Tādā, in Central Morocco on the banks of the Umm Kālib), the heads of which took advantage of the troubled times after the fall of the Sche'īd dynasties (in the second half of the xvith century) to extend their secular power over the greater part of the district which was dependent on Fās. In more recent times the example of the Berber zawiya of Iltih in Tāhurt and Aḥānjīl in the Central Atlas can be quoted.

— On the modern North African zawiya there are a number of monographs, e.g. E. Douste, Les Maraboutes, Paris 1900; L. Rumm, Marabout en Khom. Algiers 1884; O. Depom and H. Coppolani, Les confréries religieuses maraboutes, Algiers 1897. (E. LÉVI-PROVENÇAL)

ZAY. [See ẒAY.]

ZAYANIDS (BANU ZAYAN or BANU ZIYĀN), the two vocalisations of the names and zayān are classical; we also find zayam, a Berber dynasty of kings of Tiemcen, who reigned over central Maghrib from the xith to the xith century A.D., whose claim to noble descent from Idris is disputed (cf. Hist. des Berbères, transl. de Slane, iii, 348 and simil., the words attributed to Yaghourrūa). They are called by the chronicles also 'Abd al-Wālid al-Sālihi and Zayān were two of the ancestors of the kings of Tīmīčen, centuries apart however, the former living before Idris and the latter being the father of Yaghourrūa (end of the xith [xiiith] century).
ZAYANIDZ — ZE'AMET

After Yaghmurraan (first independent king of the dynasty from 633 = 1236) and beginning with his son Abu Sa'id 'Othman I, four kings, all direct descendants of Yaghmurraan, occupied the throne in succession till 737 (1337). The kingdom of Tlemcen was then twice conquered and occupied by the Marinids from 737 to 749 (1337-1348) and from 753 to 760 (1352-1359).

The first Zayand restoration (749 = 1348) brought to the throne the brothers Abu Sa'id 'Othman II and Abu Tahlib but it was their nephew Abu Hammi I (son of their brother Abu Ya'qub 'Yaqub) who in 760 (1359) restored the dynasty to its old position; his descendants ruled till the Turkish conquest in 962 (1554).

The only genealogical difference between the two ruling branches of this dynasty is that the first consisted of the direct descendants of Yaghmurraan, through his eldest son 'Othman I while the second line consisted of the direct descendants of his younger son 'Abd al-Rahman.

There is no reason — and no document to justify it — to believe with Barges (cf. Tlemcen, anc. cap. etc., p. 194 and Hist. des B. Zeïyan, transl. Introd., p. xii.) that it was only the kings of the younger line who took the name of Banu Zayyan (from 794 = 1348); all being direct descendants of Yaghmurraan, were Zayandids as well as 'Abd al-Wadids, for both lines included among their ancestors 'Abd al-Wad and Zayzan.

As to the relationship of these kings to the Marinids (q. v.) of Fizan, it has been established by the Muslim genealogists who place Wasin, grandfather of Abu al-Wad, among the ancestors of Marin b. Wurtajin, ancestor of the Marinids (cf. especially Ibn Khaldun, Hist. des Berberes, ii. 240; transl. iv. 25; al-Dhahabi al-Aswani, p. 10).

ZAYIRDA, an astrological magic table common in Morocco, the making and use of which is usually described by Ibn Khaldun in the Muqaddima. The word is connected with Ziyd (q. v.); its fuller name is Zayjirut al-Alam. The invention is said to have been the work of Abu Tahir al-Attar, (i.e. of Cenya) who lived in the time of the Almohad Ya'qub al-Mansur, i.e. at the end of the vih (sixth) century. The table has on one side a system of concentric circles with divisions corresponding to the signs of the zodiac and others for telling fortunes and answering questions on important matters, with a corresponding system of zadi, filled with numerals and letters. On the reverse of the table is a rectangle, divided into 55,131 small compartments, some empty, some with letters in them. Two verses by Malik b. Wuhail are used in connection with it; the letters in them are used as starting points in the consultation.

from the Byzantines but from the Saldžiık. I ought indeed to have mentioned the latter (cf. c. 1574, p. 462) and it was quite natural for the institution to have been transmitted from them to the Ottomans.

It is nevertheless true that it is difficult to admit that an occupation, so closely bound up with the soil as this could have disappeared from Anatolia with the fall of the Byzantine empire to be replaced by another of the same kind. The Byzantine organisation was not only amalgamated with the Saldžiık organisation but continued to operate its influence on that which the successors of the Saldžiık in Asia Minor adopted. The fiscal system of the املی bears clear traces of this. This Byzantine influence was perhaps less strong than in the west, but it is not, however certain that the organisation of the military fiefs of the Saldžiık themselves was not influenced by that of the Byzantines who preceded them (the use of cuirassiers, in full armour or گیش, in particular, goes back to Rome itself). At the present day, we can see how easily military practices are borrowed from one country by another and Turkish military organisation as a very early period attained a perfection which enabled it to accept improvements from foreign countries without hurting the national amour-propre.

While giving due credit to the importance of the Saldžiık organisation we would ask that the Byzantine elements should not be omitted in a study of the Turkish املی.

The few notes that follow are intended to supplement the article املی.

زئبک — According to a MS. note by the late René Basset in his copy of Kazımirkâl's Arabic-French dictionary, the word زئبک also means "superior" or "convict guard" (Ghanawârâ, p. 4). It would have to be investigated how far this term is connected with امت or maritime fiefs. The same remark applies to the word امت used for a kind of ship in the Red Sea.

A Turkish saying has it: امک اکن امت اوچم چهصی "He is dressed like a امت text"; cf. the French "un homme une chasse" (Tekeşade: M. Sait [Sa'd], Adayite, 1348, p. 55). This saying shows that the tents of the امت were very luxurious.

There was a style of head-dressing called امت (cf. Ahmet Rasim, Osmanlılar, p. 236 and 473).

The name امت is given to the امت of the Palace chosen from the امت of the province. Cf. Ahmad Rafii, Fâtihine sarayə, ibid.: dârûnm of June 8, and 12, 1923.

A specimen of an imperial era granting a امت is given in Belin, Du régime des fiefs... p. 109.

طیم کریز — Köprüüsizâde Mehmed Fu'a'd (op. cit., p. 238-239, note) observes rightly that, contrary to what I have said, the word امت has in Saldžiık texts the meaning of "grant of land" but he himself admits that this term has a vague meaning in the passages cited. The same vague meaning is found in texts referring to the beginnings of the Ottoman Empire (cf. Aslıpşahzade, passim).

On the expression امکام امک "to pay homage" cf. Aslıpşahzade, ed. Giese, p. 56, l. 15.

ZEIEBEK, the name of a Turkish tribe in the region of Smyrna. The origin of the Zeibeck has not yet been fully explained. Just as it is used to be the custom to say the Tchakchi [q.v.], were descendants of the earliest inhabitants of Asia Minor, so the ancestors of the Zeibeck were sought in the remnants of Thracians who had settled around Trailes. In favour of this we have also the fact that they were called جام by orthodox Turks (Lord Keppel, op. cit., l. 256). This view, however, is undoubtedly wrong; we must rather see in the Zeibeck one of those Vlach tribes, who settled in considerable numbers in the west of Anatolia although their descent still requires elucidation in detail. Religious usages may have played a part in the settlement of the Vlachs [q.v.] in the particular district of Aidin eli [q.v.] and F. W. Hasluck has called attention to the connection in his study Hetudos Tribes of Asia Minor (in the Journal of the Royal Anthropological Society, li. [1921], p. 310 sqq., reprinted in Christianity and Islam under the Seljuks, in Oxford 1934, p. 134 sqq., cf. esp. p. 127; cf. at the same time F. Babinger in It., xi. [1921], 100 and xii. [1923], 103). Older views on the origin of the Zeibeck have been collected by M. Taskyrogli in his little book Hesl Ioovuna (Athenaustin, 1903), p. 13 sqq. and 22. The name has been connected in meaning with the Greek παλικαρί (παλικαρί) (cf. W. V. Dietz, Reisen und Forschungen im westlichen Kleinasien, i. 27), but hardly with justice. So far we have no early notices of the coming of these warlike and turbulent highlanders whose peculiar dress — disproportionately high head-dress, short trousers, which leave most of the legs uncovered, heavily coloured coats, richly embroidered, called امت — distinguishes them from their neighbours. The earliest references to them are found in the travellers of the xvith and xivth centuries. It looks as if the Zeibeck were at one time connected with the Derebey [q.v.], around Smyrna and with the Kar [Qo'man-oglu] [q.v.] and served them as
soldiers. With the disappearance of this family under Sulṭan Murād II the Zeibek military was disbanded; the Ottoman governor Şehir Pasha forbade them to serve as soldiers and also prohibited their striking dress. The result was a dangerous rising under their leader (cefe) Kel Mehmèd, in the course of which many Zeibeks lost their lives and they had finally to yield to superior force. Down to modern times the Zeibeks were recruited as a kind of auxiliary police to support the zaptiya, whose chief duty was to convey travellers. They were remarkable not only for their dress but also for their usually slim, powerful figures. Gradually they lost all the features of their neighbours and their picturesque dress fell more and more into disuse. In the post-War period the name Zeibek again attained notoriety when the Turkish president Mustafà Kemal Pasha endeavoured to make the dance peculiar to this tribe (zeibek ajm) a Turkish national dance.

Further literature is given by W. Heßening, in *Isth., xiii. 251*, where reference is made to further illustrations; J. H. Mordtmann, in *Vier Verträge über Vorderasien und die Türkei*, Berlin 1917, p. 101 (according to whom there were also Zeibeks in the wilayet of Brussa).

( Franz Baringer)

**ZENATÁ.** The Arab historians of the middle ages give this name to one of the two great groups into which the population of Barbary falls. According to the genealogical fiction which formed the frame-work of their ethnical classification, the Zenata, who are descended from Madigia al-Aatár, are distinguished from the Sanhajia who are descended from Borens; Borens and Madigia were the sons of one father, Berr. Other theories connect the Zenata with a certain Shara or Djana, who was said to be either the line of Kana'en, son of Shem, or of that of Goliat (Djibri). The desire to have an imposing Biblical pedigree is sufficient to explain this claim which seemed to be to some extent justified by the kind of existence led by the majority of the Zenata. While the majority of the Sanhajia led a settled life, the Zenata groups were mainly nomads, "in the manner of the Araris", rearing camels and living in tents. They were found scattered throughout Barbary but mainly in the steppes and deserts from Ghadames to the extreme Maghrib. The west of the central Maghrib and the adjoining Saharan regions seemed to be and were to remain their particular domain. They were distinguished from other groups by language. The Berber dialects spoken in the oases of M'aâr, Warghès, Wed Righ, in the west of Algeria, including the massif of Wassenis, and in the east of Morocco are still called Zenatitga.

As in the case of the Sanhajia [q.v.], the chroniclers distinguish several Zenata stocks or rather several waves of population which after living obscurely in the nomad state emerged in succession to the light of history, favourable circumstances enabling them to found empires or impose themselves upon the great existing empires, either as allies or as enemies.

To the first stock of Zenata belonged the Djarrwa, the Banû Ifren, the Maghrāwa, the Wassan and the Bajri. The Djarrwa were said to have their main centre in the Awaras, where the celebrated Khân (q.v.), their queen, played in the second (viii.ii) century, her well known part in the resistance to the Arab conquest. When this resistance, of which the Awaras was one of the strongholds, took the form of the Kibris, the Zenata Banû Ifren (q.v.) were its most stubborn champions. Abû Kirra the Ifrenid founded in the second (vii.b) century a Kibris kingdom at Tiemcen. In the fourth (v.b) century the Ifrenid Abû Yazid, "the man with the ass" (q.v.), raised the people of eastern Barbary, including the Awaras, against the Fâtimid caliphs in the name of the ancient heresy. At the same time Igân (12 miles S. W. of Mascara) and Shelia near the site of the future Rabat were capitals of two principalities of the Banû Ifren.

The most powerful of the Zenata of the first wave were those who belonged to the great tribe of the Maghrāwa. Among the latter special mention may be made of the Banû Kazhar, whose lands lay in the plains of Orania and eastern Morocco. Vassals of the Omeyyads of Cordova, they resisted not without difficulty throughout the tenth century and a part of the eleventh (i.e. 9th A.H.) the repeated attacks of the Sanhajia, supporters of the Fâtimids of Ifriqiya. One of the chiefs of the Banû Kazhar, Zirî b. Aṭiya, had installed himself in Fès, after the fall of the Ifrīsids, and held out there till the coming of the Almoravids (445 = 1053). The eleventh century also saw the flourishing of the other little Maghribi kingdoms, that of the Banû Yâṭî of Tiemcen, that of the Banû Khardjīn of Sidj mâlsâ, to which the Almoravid conquest was to put an end.

After this, the history of the Zenata of the Central Maghrib enters upon a obscure period. We have a struggle between two claims of the same stock: the Umayyad and the Wasmâni. The latter were to bring the Almohads into the country of Tiemcen.

The Zenata only became important again with the decline of the successors of Abû al-Mu'āmin, when the Zenata of the second wave came to the front. They were regarded as forming part of the group of the Banû Wâsân, whom the thrust of the nomad Arabs (Banû Hilal), at first lords of Ifriqiya, had driven westwards, in the south of Orania and Morocco. In the course of the first half of the viiith (xii.) century, the Zenata Banû Wâsân, who had only just abandoned a nomadic life, took from the Almohads the central Maghrib and the extreme Maghrib. The Meridins founded the kingdom of Fès (q.v.), the 'Abd al-Wâlaids the kingdom of Tiemcen (q.v.). The latter who were in the traditional territory of the Zenata tribes, had much difficulty in subduing their brethren,
especially the Banat Tadjik. The latter, much weakened in the plains where they had become the serfs of the nomad Arabs, were still quite powerful in the Wursenai, but they led a settled existence there. Their descendants are still to be found in these mountains. The name given to the Berber dialect which they speak survives as one of the few memories retained by the Zenda of the period of their glory.

(M. Streek)

ZELEND-ÈU, one of the principal rivers of central Persia. Its source lies about 60 miles W. of Isfahan in the province of ‘Abbasia (Khuzistan) in the Zardest-Kh e, "the yellow hills" (i.e. called after the yellow limestone found there) which are included among the Bakhtrian mountains, in which also rises the Kuran (q.v.), the greatest river of southern Persia. After leaving the mountains the Zende-Rûd flows through the district of Isfahan after which it is often called Isfahan-Rûd, "the river of Isfahan," and flows about 30 miles E. S. E. of Isfahan into a large backwater swamp called Gâño Khâneh. According to the erroneous view of the mediæval Arab and Persian geographers, the river continued on a subterranean course and reappeared about 60 farsâb (= ca. 40 miles) from where it disappeared and then flowed to the sea. Hamd Allah Mustawfi was the first to point out this error (cf. thereon: Schwartz, op. cit., iii. 216–217).

On entering Isfahan the Zende-Rûd separates Isfahan proper from its north bank from its southern suburb, Djalif (q.v.) or New Djalif. The connection between the two is maintained by three great bridges (cf. ii, p. 529 and also the description in A. Macauley, op. cit.; Stack, op. cit., p. 233; C. J. Wills, In the Land of the Lion and Sun, London 1883, p. 194 sqq.; J. Deneufoy, La Perse, la Chaldaie et la Susiane, Paris 1887, p. 154–155; J. Bassett, Persia, the Land of the Persians, London 1887, p. 154–155; Carussin, op. cit., ii, 44–50 and E. Aubin, La Perse d’aujourd’hui, Paris 1908, p. 289). In Isfahan during the summer months the bed of the river, which is much used for irrigation purposes, is frequently dried up completely. The river-system of the Zende-Rûd, especially its upper part, still requires more careful exploration; cf. Stack, op. cit., ii, 23, 84 sqq. and Bishop.

The name Zende (Zenda-Rûd) (cf. Vullers, Lexicon Persico-Latinum, i. 151, 152) means "river of life," for the Zæynde (Zayende-Rûd) is "life-giving river," i.e. the river that invigorates or fertilizes the land, is now more common. At an earlier period we also find the name Zamm-Rûd = "golden river," and the reason for this name nothing definite is known; it may be added that a valley quite near the source of this river is called Zamin valley (cf. Bishop, op. cit., i. 265).

ZENG6I, BAŠI al-DIN b. KAMIS AL-DAWLA AL-ASOQOR b. ABU AL-MAWI al-JALÁL al-DIN, 1241–1259, 1256–1260, 1282–1283, and 1284–1285. He was the son of Al-Mu‘ammād ibn Al-Mu‘awwād, one of the most distinguished emirs of the Saljuq period. He was the son of Asoqor al-Hājib ("the chamberlain"). A Turkish Mamluk in the service of Sultan Malikshah [q.v.], had received from the latter the town of Halab as a fief; but when Asoqor on the death of Malikshah rebelled against his brother Tunsh [q.v.], he was taken prisoner and put to death (287 = 1094) and the young Zengi, who was then only ten years old, lost his father's estates which went to Tunsh and the emirs who had sided with him. Zengi several times distinguished himself under the next ruler of al-Mawṣil and as a result was appointed governor of Halab in 1121 (1122–1123) by the governor of Baghdad. Asoqor al-Burakk, who then supervised the whole of Iraq, and later received in addition the governorship of Baṣra. In 1124–1125 Asoqor was transferred from Baghdad to al-Mawṣil but in Dhu l-Kadhāb 520 (Nov. 1126) he fell a victim to the dagger of the Assassins, who hated him as an ardent supporter of the caliphs and Saljuqs. In the following year his son Malikshah also died, probably poisoned by one of the Syriac princes with whom he was on terms of enmity. A minor brother of Malikshah now came forward as heir to the governorship of al-Mawṣil and his claims were supported by the command in al-Mawṣil, one of Asoqor's Mamluks, named al-Dīwān. When the latter sent men of al-Mawṣil to Baghdad to recommend Malikshah's young brother to the sultan Malikshah, the two envoys to whom al-Dīwān's plans seemed by no means free from difficulties, were won over by a relative of Zengi's to his side and he was appointed governor of al-Mawṣil and made his formal entrance into the city in Ramadān 521 (Sept.–Oct. 1127). The sultan gave him his two sons Alp Arslan and Fara ḫuṣṣān to educate and Zengi therefore received the title of al-Dīwān. In the same year he took possession of Dżirayr Ibn 'Umar, Naftân, Sinjâr and Harrân. In Maḥmûrd 522 (Jan. 1128) he took the town of Halab [q.v.] where utter anarchy reigned until Zengi appeared and restored order. In the following year he got possession of Hamāt [q.v.] through treachery; on the other hand, he fell against Himâ and Damascus. Of his other enterprises in this period special mention may be made of the capture and destruction of the fortress of al-Aḫārîsh between Halab and Anṭîkh, which was occupied by the Crusaders. In the struggle for the sultanate between the Saljuq prince Malikshah b. Muḥammad [q.v.] and his brother Saliḫ, Zengi sided with
the former (526 = 1131—1134) and when the uncle of the two brothers Sandjar [q. v.] wished to exert his suzerainty he was joined by Zengi and Dubais b. Sadaqa [q. v.]. The attacks of the two latter on Baghda were however unsuccessful and the caliph al-Mustarshid was equally unsuccessful in his attempt to take al-Mawsil, which he besieged for three months (537 = 1132-1133).

When his successor al-Ra‘id quarrelled with Sul‘tan Mas‘ud, Zengi at first joined the former but was persuaded to approve of the deposition of al-Ra‘id and paid homage to al-Mu‘tazli. In 531 (1137) Zengi after besieging Himy for several months in vain, attacked the fortress of Ba‘rini (Monserrandus). The Christian commander appealed for help to King Fulko of Jerusalem but the latter was routed and Ba‘rini had to surrender. A new enemy now appeared in the field, namely the emperor John II of Constantinople, who had first of all intended to reduce to obedience the rebel ruler Leo of Little Armenia and his ally Raymond of Antioch, but after making peace he made an alliance with the leaders of the Crusaders. After taking the fortress of Bussa, he advanced against Halab but soon abandoned his plan of subduing it by a long siege and attacked Shiraz. But when the inhabitants defended themselves bravely, the emperor accepted the commander’s terms and returned to Antioch (Rasmidin 532 = May—June 1138) pursued by Zengi who took many prisoners and much booty. In the same year after long negotiations, the ruler of Damascus Shihah al-Din Mahmud handed over to Zengi the town of Himy. In Dhu ‘l-Qa‘da 533 (July 1139) Zengi undertook a campaign against Basalbek; after a vigorous resistance the garrison had to capitulate and were for the most part massacred, although Zengi had promised them liberty to depart. The object of all his efforts was still however the rich city of Damascus and in Rakhi‘ 534 (Oct.—Nov. 1139) he laid siege to the town. The ruler of Damascus Djamal al-Din Mu‘ammad was not inclined to exchange Damascus for Himy and Basalbek and after what had happened at the latter town could not fully trust Zengi. When he died a few months later, the new commander Mu‘in al-Din who acted for the minor Mudjar al-Din b. Djamal al-Din applied to the Crusaders and offered them the town of Basalbek if they would assist him, whereupon Zengi raised the siege and returned to al-Mawsil. After he had taken several strongholds in Northern Mesopotamia, he quarrelled with Sul‘tan Mas‘ud, who finally declared war on him. Zengi gave in however and purchased peace (535 = 1143—1144). In Dhu‘l-Qa‘da 535 (December 1144) he took the important town of Edessa from the Crusaders and two years later attacked Ka‘st Dja‘bar in Mesopotamia when he was murdered by some Mamlikas on the night of 4th—5th Rahib II (Sept. 13—14), or according to another story, on the 15th Rahib II 541 (Sept. 24, 1146). He was succeeded in al-Mawsil by his son Salf al-Din Ghizir I and in al-Halab by another son, Nur al-Din Mahmud. The Oriental historians bestow the highest praise on the political qualities of astheg Zengi; on the other hand they are well aware of his unscrupulousness. Ibn al-Akhir (xi. 72) vividly describes how prosperity returned under his care to lands which had been threatened by the Franks and impoverished by the exertions and frequent changes of governors.

ZENITH, the vertical point, i.e. the highest point in the visible sphere of the heavens in the direction of the vertical (plumb line) above the observer, at the same time the upper (visible) pole of the horizon.

The technical astronomical term for zenith in Arabic is samt al-ar‘a‘ or samt al-ar‘at, which means "direction (samt) of the hand", corresponding to the Greek κέφαλις or κέφαλις κεφαλής. Plato Thratinus reproduces samt al-ar‘a‘ in his Latin translation as zenith capitii or zenith capitum, the Spanish translation of al-Battani by el somet (el somet) de la cabeza (el al-Battani, Opus astronomium, ed. Nallino, ii. 337, i. 294) and was Golius early noticed, the form zemit seems to owe its origin to a slip of the pen which made the in samt (zemit) into ni: somet > zenith. The same word samt — in the plural samui — is found in the astronomical term asuun [q. v.], Ar. samt, i.e. mien d‘irat al-ar‘a‘, "direction on the circle of the horizon", calculated in degrees. Libros de sabios a astronomia translate samt usually by somte, and samt al-ar‘a‘ by cenit.

The (invisible) pole of the horizon directly under the observer, the counter-pole of the zenith, is called nadir [q. v.], from Ar. matr. The largest circles which go through zenith and nadir are called vertical circles; among them two are specially distinguished, the meridian (jalab mi‘t al-nahar, & mu‘allaqas) in whose plane the axis of the earth lies and which cuts the horizon in the south and north points and the first vertical which stands perpendicular on the plane of the meridian, cutting the horizon in east and west. The east and west points are also the poles of the meridian, south and north points the poles of the first vertical.

The spherical coordinates of a star calculated in the horizon-zenith system are azimuth (al-samt) and altitude (irtif‘a‘, i.e. ‘u‘m d‘irat al-ar‘a‘); while modern astronomy defines the azimuth as the length of the arc between the vertical circle covered by the star and the meridian, measured on the horizon from S. to W. N., E. to S. from O°—360° — or, if the direction in the heavens is given, from S. via W. and S. via E. to 180° — the Arab astronomers (which it is important to remember) take the first vertical as the circle of reference, i.e. reckoning from the east or west point of the vertical. The a l i t i t u d e of the star is the length of the arc of the star from the horizon, measured on the vertical circle which passes through the star. It is calculated from O° (on the horizon) to +90° (on the zenith) or —90° (on the nadir); negative altitudes are frequently called depressions. The altitude is
frequently replaced by its complement, the distance of the zenith which represents the length of the arc measured on the same vertical circle from the zenith. The zenith distance of the pole of the heavens is equal to the altitude of the equator in the meridian and equal to the complement of the altitude of the pole or geographical latitude \( \phi \), i.e. \( 90^\circ - \phi \).

A plane parallel to the horizon intersects the visible sphere of the heavens in a circle, which connects all points of the same altitude. Such a circle is called in astronomy a horizontal circle or — using an Arabic loanword — Al-nukastarat (i.e. al-nukastarat) [q. v.].

(WILLY HARTNER)

ZENTA (formerly Hungarian Szenta; Turkish زانتا), [Xamli al-As'han, iv. 2425] and also جنتا [in Khalil Edhem, Dicweli ishanniyah, 1927, p. 332; Serbo-Croat Senta], a flourishing town on the right bank of the Theiss in the Bačka (since 1929 in the Danube banate) in Jugoslavia, with 30,044 inhabitants (1931), first mentioned in 1218 and made a free city in 1351. After the battle of Mohacs (1526) Zenta became Turkish and belonged to the sajdeg of Szigetvd (Szigető; cf. e.g. Fekete, Türkeische Schriften, der Hafiz II., 1552, p. 110 and 324). Ewlija Celebi (vii. 363) who visited Zenta in the 13th century, describes it as a small palanka (fortress) in the above mentioned sajdeg and proposes a childish etymology (ستنی باست) of its name.

Zenta is celebrated in history as a battle-field. When Mușața II was retiring from Peterovtsi, when Prince Eugène of Savoy had shut himself up, after an unsuccessful siege, he wished at first to attack Szigető but soon decided to cross the Theiss at Zenta and go to Temesvár. Káčuk Djă'ar Pasha (on him see Siddihat, id. cit., ii. 75) was taken prisoner by Prince Eugène and was threatened with death by the Sultan's plans. Prince Eugène then advanced rapidly to Zenta and surprised the grandvizier Elnás Mehmed Pasha (cf. above iii. p. 692 and the article Muhammed Esse"l Esma) just as he was about to cross the river (the greater part) of his army to the left bank. After the onslaught of the imperial troops, the Turks made a wild rush for the bridge, which was being heavily bombarded and it soon collapsed; the Turks were thus cut in two and by evening utterly routed (Sept. 11, 1697). Besides the grandviziers, four other viziers, 13 beglerbegs and about 30,000 men fell or were drowned. The Sultan himself only escaped with difficulty. In the popular mind this defeat became a synonym for any disaster, as may be seen from the Serbo-Croat proverb Prvekepas ban turki can ou Senti ['he has met the fate of the Turkish emperor at Zenta']. The defeat at Zenta forced the Turks to the peace of Carlowitz [q. v.] and meant that they were now definitely driven back into the Balkan Peninsula.

(FEHIM BAJRAKETOVIC)

ZER MAHBÜB, "beloved gold", a Turkish gold coin (sequin). In the reign of Ahmed III (1145—1145 = 1703—1707) a new gold sequin was issued weighing 40 grains (2.6 grammes), in addition to the older sequin of 53 grains (3.44 grammes) (fıngul altadlı) which continued to be issued alongside of it. This coin, known as the zer mahbûb, remained in circulation till the great Mejlûly recasting of 1250 (1844), being reduced in weight to 37 grains (2.44 grammes) by Selim III (1253—1257 = 1839—1847) and to 35 grains (2.65 grammes) in the last years of Mahmud II (1253—1255 = 1839—1853). Double, quadruple and half and quarter pieces of this denomination were also issued.

ZI'A'IJA. [See Zu'xMET.]

ZIKRAWAII b. MIHRAWAII, a Karmažian. After 'Abdân, the brother-in-law and secretary of the founder of the Karmazan sect Hamdân Karmaz [q. v.], had been disposed of in 286 (899), Zikrawah took his place as a Karmazan missionary. Out of fear of the energetic caliph Al-Mu'tašid [q. v.], he had however to remain in concealment and is said to have lived in a hiding-place for four years and only to have come out into the light of day after Al-Mu'tašid's death in Rabî' II 289 (April 902). In the meanwhile the Karmazan emissaries had succeeded in winning numerous followers among the Bani 'Ulayla, a clan of the great Beduin tribe of Kalb b. Wabar in the Syrian desert, and towards the end of 289 (902) a large army set out against Damascus. Syria was at this time under the rule of the Tâlibun, but the general Tughdid in Damascus was almost independent of the central government in Egypt. On the approach of the Karmazan troops he set out against them but underestimated the greatness of the danger and when he came to give battle, was forced to flee and return to the capital. Soon afterwards the grand vizier of the Karmazans (al-zihî al-âshâr) fell at the siege of Damascus: he was succeeded by his brother, the al-zihî al-khari, who forced the people of Damascus to purchase peace and then continued northwards, plundering and murdering as he went. Several towns like Hamât, Ma'arrat-al-Nu'mân, Belbeik and Salamyin were sacked, the men massacred and the women and children carried off as slaves. Finally however, the new caliph's general Muhammed b. Subâla succeeded in completely defeating the Karmazans; the al-zihî al-khari was taken prisoner and brought to Bagdad where he was killed. The caliph had him executed in the cruelest fashion. But the power of the Syro-Irânian Karmazans was not broken. A disciple of Zikrawa's, Ahtân b. Allah b. Sa'd, who had taken the name Nayr, stirred up the Kalb Beduins; they joined the Karmanzans proper and ravaged the country east of the river Jordan as far as Damascus. When the caliph's troops approached, the Karmazans retired into the desert, filling up the wells so that their pursuers could not reach them for want of water. But when an army under Muhammad b. Ishâq b. Kandâjîk finally penetrated to their
camps in the desert, they had to give in, murdered Nga and sent his head as a token of submission to the victor, Zikrawaih then at last came out of his hiding-place, appointed al-Kāsim ib. Ahmad leader of the Irākī Karmājans and had himself worshipped as a saint, never allowing himself to be seen unveiled. In Ḍu‘u ‘l-Hijjāj 293 (Oct. 906) they advanced on Kffa, entered the town and massacred the people in the streets but after desperate fighting with the troops of the governor Ishāq b. Imam had to give way and return to the district of Kādīiya. In the very same month an army which the caliph sent against the Karmājans at Ishāq’s request was defeated near Kādīiya; but when al-Mukaffa equipped a new army under the command of Muḥammad b. Ishāq b. Kusālādā, they retired into the desert to waylay caravans. In Maharram of the following year (Oct.—Nov. 906) Zikrawaih fell upon the great pilgrim caravan returning from Mecca; his people killed not only the men but also a number of the women and carried off the rest. In Rab‘i‘ I, according to the most probable statement on the 22nd (Jan. 10, 907), the caliph’s troops led by Wāsif b. Sūmnārgin came upon the Karmājans near Kha‘fān in the district of al-Kādīiya and fought them till sunset without a decision being reached. On the following day Zikrawaih was wounded in the head, whereupon his followers fled on all sides. On the way to Baghdād he succumbed to his wounds and his corpse was exhibited in the capital. — Cf. also the article Karmājans.

ZINĀ (A.), fornication, i.e. any sexual intercourse between persons who are not in a state of legal matrimony or concubinage. To the pre-Islamic Arabs, zinā was not a sin but regarded in certain circumstances as an injury to the rights of property of a fellow-traveller. In the Kur‘ān, however, apparently under Jewish or Christian influence, warnings are uttered against zinā and chastity represented as a mark of the believer, e.g. Sura xvii. 34; xxv. 68; xxxiii. 30. Zinā is then dealt with more fully in Sura iv. (probably of the period after the battle of Uhud in the year 3). *(10)* If your women be guilty of whoredom, then bring four witnesses against them from among yourselves: and if they bear witness to it, shut them up in their houses until death releases them or Allah gives them a way. *(20)* Punish both of these among you who commit this sin; but if they repent and mend their ways, let them be for Allah is the pardoner and the merciful: *(29)* *(The believing slave-girls whom you marry) shall be chaste and modest and have no lovers*. Verse 20 is sometimes with less probability referred to sodomy. A new law was made as a result of ‘Abigail’s celebrated adventure in the year 6 in Sura xxiv.: *(2)* Scourge each of the fornicators with a hundred lashes and have no mercy upon them in Allah’s religion, if you believe in Allah and the last day; a number of the believers shall attend their punishment. *(3)* The whoremonger shall only marry a whore or an idolatress and the whore shall only marry a whoremonger or an idolator. Such marriages are forbidden to the believers*. Sura iv. 30 must be later than the law in xxiv. 2, of which it is a continuation: *But if after marriage they commit adultery then inflict upon them half the punishment of chaste (free married) women*. Sura xxxii. 30 (probably dating from the last part of 5 A.H.) refers to the punishment in the other world. Sura xxiv. 33 cannot be exactly dated but certainly Medinese *(Force not your slave-girls to prostitution, if they wish to remain chaste, from a desire for gain in this life; if any one forces them, then after they have been compelled, Allah will be forgiving to them)* and Sura lxv. 1 is also later (divorced women must not be driven out of their houses during the *idda unless they have committed proved adultery*). The so-called *verse of the stoning* is said to have been an original part of the Kur‘ān as it was acknowledged as such by the caliph ‘Omar: *If a man and women who by have reached years of discretion commit adultery, stone them in every case, as Allah’s punishment*. It is improbable that this verse is genuine, the traditions relating to it and the mention of ‘Omar are clearly tendentious; the stories that the Prophet punished by stoning are also unworthy of credence. This punishment, which must have entered Ḥadīth quite early, certainly comes from Jewish law (Deut. xxii. 23) as can still be seen in a hadīth. Other traditions emphasize the rules of the ‘Arab and develop them; zinā is not compatible with belief, profit from zinā and prostitution is uncleanness; sodomy etc. are included under zinā; the stoning, which remained as a punishment alongside of stoning is combined with a year’s banishment. In the system of ‘ādām and already in many traditions stoning and flogging are separated as *ḥadd* punishment for zinā in two categories of criminals, according as they are mukābān or not. By mukābān the law means in this case every individual who has reached years of discretion, is in possession of his faculties, is free and has had sexual intercourse in a legal marriage; they however always remain mukābān even after their marriage is dissolved; the distinction is therefore not based on any moral grounds. According to Ḥanafīs and Ḥanбалts, both the guilty parties must fulfill these conditions; the Ḥanafīs also demand that the mukābān should be a Muslim, while the Mālikīs consider neither of the punishments applicable to a non-Muslim. The banishment for a year after the flogging is limited by the Mālikits to the man, by the Ḥanafī left to the discretion of the impresario. Slaves are punished with fifty lashes, and according to the ‘Ashāfīs banishment for six months. Zinā can only be proved by the evidence of four male, competent witnesses; as they must report all the details of the incident and, if their evidence is not sufficient, are liable to the *ḥadd* for zinā [q.v.], the *ḥadd* for zinā in practice can hardly ever be inflicted, unless the culprit himself confesses his guilt. According to the Ḥanafīs and Ḥanbalts, this confession must also be made four times, and according to the general teaching can be withdrawn. Marriage within the forbidden degrees is simply zinā as is rape, which can also be regarded as doing bodily harm. If the husband kills the guilty couple in *flagrante delicto* he is not liable to punishment. In practice the place of the legal regulations was often taken by summary and usually secret action either by the authorities
or by the relatives of the guilty woman; in this case drowning was a common form of punishment.

ZINDIK (pl. zindikah; abstract zindak), the term used in Muslim criminal law to describe the heretic whose teaching becomes a danger to the state; this crime is liable to capital punishment (by the application of tâlîf v. 37: xxvi. 40; cf. K. M. M., 1909, ix. 99–103) and to damnation (the Maliks think it useless to ask the culprit to recant [fitna] contrary to the Hanafis; tabfi, often (theoretical), is not strong a term as zindak).

The term was borrowed in the tr. of the Fr. translation of the Shi'i administration; Schwedt, correcting Darmesteter, has shown that Mas'ud (followed by Haydari) was right in saying that among the Madaens, zindak was the heretic, who introduced a new gloss, an allegorical interpretation of a passage in the Avesta (cf. in the ninth century, the zindik Al-Othli, studied by Barthelmé; cf. Mithridat, xxvi. 16: Shahyati & Shahyati, vi. 7); and more especially the Manichaean, follower of Mani (testimony of the Armenian writer on heretics Eznik, of the fifth century, transl. Schmidt, p. 95), or, in a more restricted sense still, the follower of the Manichaean schismatic Mazzad (according to Khawarizmi).

The term being of Arabic, A. Siddiqi has shown that we must reject the Aramaic etymology (naddik) suggested by Bevan as well as the Greek (yewrysth) proposed by Vellera. The word zindik must have become arabeised in the mixed Arabo-Islamic society of the mawali Hamara of Hira and Kufa (cf. the exiling of the Madaens to Hira, in which we can see the explanation of the Shi'i gnostic of Kufa in the following century). Indeed it appears for the first time in the Irak in 125 (742) in connection with the execution of Djjd b. Djamal; then from 167 (785) to 170 (788) as an official inquisition was instituted by the 'Abd Allah caliph under a special order (urj); it was then that Bashir b. Burd and Sidi b. 'Abd al-Khaddar were executed. The term became a technical one and literary tradition designates three famous writers, Ibn al-Rawandi, Tawhid and 'Abd as the three zindikah of Islam'. But in general use, the term lost its precision and if the official definition of the zindik (a dualist ascetic, then a Muslim who is secretly a Manichaean), according to the caliph Mahdi (Tabari, ed. de Goeje, iii. 588), is already carelessly applied to the three first men executed mentioned above, it is clear that it does not at all explain the psychology of the three zindikah of Islam'. In practice, the polemics of the conservative describe as a zindik or 'free thinker' any one whose external profession of Islam seems to them not sufficiently sincere (cf. the poet D. S. Zahabi in Baghdad or the critic Taha Husain in Cairo). This is the meaning in which it is already used by 'Abd in his Risala al-Ghafiri. The chief works representing this free, radical way of thinking have been brought to light by P. Kram (Ernighazi, Abu 'Isha Wazir, Ibn al-Rawandi, Rumi, Thughuri); they are preserved in Ismailite refutations.

The evolution of the term is explained by its political character; it brands the heresy which imperils the Muslim state (this is already clear in the trial of al-Halladji); and as the only crime systematically punished by the Prophet himself by death had been zab al-rastil, the jurists more and more made zindak an intellectual rebellion insulting the Prophet's honour (cf. Ibn Taimiya and Ibn Hadjar al-Haitami).

The stage of this evolution can be better closer together by summing up the definitions given of the word zindak by the various Muslim schools.

The Hanbalis, according to Khawarizmi (d. 535 = 877), recognise five sects of zindikah: mawalli, who deny the creation and the Creator, reducing the world to an unstable mixture of the four elements; mawaliyya (Manichaean) and mawaliyya (what dualists; 'asabiyah (vegetarian Ismai ascetics of Kufa; cf. Massignon, Revue, vii. 11–12) and tawhidiyah (four sects ecclesiastics, who seek to free themselves from the constraint of observances and laws by an amorous union of the soul with God, a union denounced as implying identity of nature between the Creator and his creatures; in this Sunni mystics like Rabih and Rabi'a are ranged alongside of an Ismai alchemist like Ibn Hayydan. Ibn Hanbal himself describes Djam as a zindik for having maintained that the spirit of God is an immaterial emanation, therefore divine.

The Maliks of the west (Spain and Morocco) studied by Millot and Lavi-Provengal and institutes of zindak, especially for 'insults to the honour of the Prophet' (trial of Abu 'I-Khair at Cordova in the reign of al-Hakam II, of Ibn Hatim al-Andalusi at Toledo in 457 (1064) and later of Ibn Zakari at Fes). Similarly the Hanafis, especially during the Ottoman empire (futwah against the Shī'at al-Kabīr in 934 (1527); cf. Nabulsi, Ghiyath al-Ma'ani, Ms. folio 77).

As to the theologians, the term 'naddik in first sanaa an amorous devotion, seeking liberation from obligatory duties (cf. Thumma, in al-Baghdadi, Fark, aab. and ed. Hitt, p. 105), then a tendency to the khala of the Khurramis; Ghazzli defines it as a tendency to asceticism.

The Shi'is were early persecuted as zindakah in view of their doctrine of the divine love (trial in the year 262 (875) of Nuri; execution of al-Halladji); al-Halladji (cf. Tawhid, v. 2) himself recognises in a curious psychological analysis that on the threshold of transforming union, mysticism obtains a feeling of identity with God, which is zindak (Akhbar, No. 35, p. 89, I. 7).

The moderate Shi'is like to describe the extremist Shi'is, for an analogous reason, as zindak (emotions that unite with the divine: dunya al-'ur'udiyah). The Zaidi imam Kays is credited with the authorship of a refutation of the zindik Ibn al-Ma'asri (v. v.) which Guidi has edited and translated.

Lastly, in his Fikrist (ed. Filz, p. 338), Ibn al-Nadim has given a very heterogeneous list of zindak (the value of which is sometimes overestimated, it is already imaginative; G. Vajda is
preparing a critical study of this subject) in which Marwān II. and the Barmeccides are found alongside of Isma'īlīs, like Abū Sa‘īd Allī and Džāhilān, an Imāmī like Nāṣīrī and an independent critical faction like Abū ʻĪsā al-Warrāq [q.v.].

(Louis Massignon)

ZINDJIRLI, a village in Northern Syria in the valley of the Karashī between the Amān and the Kur Dagh not far from Işlāhye. Near the village is a tell, the ruins of the old Aramaean town of Sham'al, the capital of the little North Syrian state of Yādī (Assyr. Yandī). It was discovered in 1883 by Hamdī Bey, E. v. Laschān and O. Puchstein and excavated in 1888, 1890-1891, 1894 and 1902 by the Berlin Orientkommitee under the leadership of K. Humann, E. v. Laschān and F. Winter with the co-operation of J. Euting and W. Koldewey.

The citadel of Sham'al was surrounded by two concentric circular walls. In addition to the remains of earlier fortifications, columns and bulla, there were found at Zindjirli and the adjoining tells of Ğerđīn (Gerđīn) and Tābkit Bīyar several Aramaic inscriptions in old Canaanean script and a stele of Assaradding of Assyrā in which we learn the names of several rulers of the 6th and 7th centuries B.C. of Sham'al-Yaḏī, namely Gabbārū, Bāmušu, Khiγyā, Shu‘ā, Kīlamāwā, Kusāl, Panāmagā (Pa-μuμaγa) I, Bāzūr, Panāmagā II and Barkekk. The finds from Zindjirli are for the most part preserved in the Vorderasiatische Abteilung of the State Museums in Berlin; the remainder are in the Museum in Stamūlī.

In the Arab period there is no trace of Zindjirli rulers unless we have a corruption of this name in that of the fortress of Zandjīra mentioned in al-Nuwindī, Paris Bibl. Nat., Ma. arab., No. 1579, fol. 161r, quoted in Muṣafādāl b. Abī l-Faṣṭīlī, Histoiire des Sultans Mamelouks, ed. Blochet, in Païœnt. Orient., xiv. (1920), 602, note 2).

(Zirids, the name of two medieval dynasties of the Muslim west. 1. The Zirids or Bani Ziri, a Berber dynasty which held a part of Eastern Barbary from the end of the fourth (tenth) century to the middle of the sixth (sixth) century. The Zirids were connected with the great confederation of the Sanhājāt [q.v.] and led a settled existence in the central Maghrib. Zir b. Manṣūr had founded Aṣḥār [q.v.] in the mountains of Titteri about 940. He made it the capital of his territory and a bulwark against the attacks of the Zanjids Maghrib [q.v.]. The rule of the Umayyads of Cordova by the resistance to the Zanjids, the Zirids rendered considerable service to the plans of the Fatimids of Iḥrījīya. Their most signal service was the relief of al-Mahdiyya when it was besieged by the Kharāji agitator Abū Za‘īd. The timely assistance which they rendered to the Fatimids on this and several other occasions was rewarded. When the Umayyad caliph al-Ma‘ṣūr left Iḥrījīya for Egypt in 973 he appointed Bulqagī b. Ziri governor of Iḥrījīya and gave him by anticipation investiture all the lands which he might conquer from the Zanjids. Against these hereditary enemies the struggle was continued under Bulqagīn [cf. Bulqagīn] who marched victoriously through the Maghrib and seized all the important towns with the exception of Ceuta, under al-Maṣūr b. Bulqīgīn (373-385 = 984-995) and under Bādīs b. al-Maṣūr (385–406 = 995–1016). During the latter emir’s reign took place the division of the Zirids into two kingdoms: one in the west went to the Hamālīs who lived in the Kasa and the other in the east to the Zirds with Kafrāwān as capital. An amicable arrangement regularising the division was made in 408 (1017) under al-Ma‘ṣūr b. Bādīs [q.v.]. In spite of this loss of territory, eastern Barbary enjoyed an undeniable economic prosperity during the reign of al-Ma‘ṣūr (406–454 = 1010–1062) which enabled the emir to enrich Kafrāwān and Shāb, the official city, with very fine buildings (ceilings and maqṣūra of the great mosque of Kafrāwān). This wealth encouraged al-Ma‘ṣūr to cast off Fatimidd suzerainty and to repudiate their doctrine which the people of Iḥrījīya had only accepted with great reluctance. The caliph in Cairo punished this sedition by sending in 444 (1054) against the rebels the Arab nomad tribes of the Bani Hilīl and Bani Ṣulas [q.v.]. This was the great disaster. The open country was rained completely; al-Ma‘ṣūr had to leave Kafrāwān.
and seek refuge in al-Mahdiya. While the Arabs held the plains, the towns formed republics and independent little principalities. Al-Ma'in's son Tamim (545-561 = 1102-1118) tried without much success to regain possession of his kingdom and to thwart the ambition of the Hamudaids. His successes were to continue this difficult task. What really gives interest to the later Zirids, Tamim b. al-Ma'in, Ya'qub b. Tamim (591-609 = 1156-1174), Ali b. Ya'qub (509-515 = 1116-1121), al-Hasan b. Ali (515-563 = 1121-1167), is the maritime activity developed by these former nomads now pasty at the main harbours and the repeated attempts made by them to recapture the command of the sea from the Normans of Sicily. This struggle which generally took the form of pleasant enterprises did not however end to the advantage of the Zirids. After an effort to come to an agreement with the Normans, the emirs could not prevent the enemy raiding the coast of Ifsikiyah and plundering the coast towns. In 543 (1148) al-Mahdiya was taken by George of Antioch. Al-Hasan driven from his capital sought refuge at Tlemcen, then in Algiers. He was reinstated in al-Mahdiya by the Almohad caliph Abi al-Mu'min and spent eight years there before being again exiled, to die in obscurity in the extreme Maghrib in 563 (1167).

2. ZIRIDS OF SPAIN, a secondary branch of the Berber family of the Banū Zirr of Ifsikiyah, who founded an independent principality with Granada as capital at the time of the dismemberment of the Umayyad caliphate of Cordova. The establishment in Spain of the Şahbadd family had taken place only a few years previously. It originated in the rebellion in Ifsikiyah of the members of the family of the Zirid princes Balqubq and al-Maṣīlī who had been deprived of their positions. These malcontents gathered round one of Zirr's sons, Zawi, who persuaded them to leave Ifsikiyah. They offered their services, which were at first welcomed, to the 'Amirid Ḥassāq of Cordova, Abi al-Malik al-Maṣūfarr [q.v.]; accompanied by numerous followers they went to Spain where they soon played an important part in the Berber army raised by the 'Amirids in which they formed one of the main elements. When the caliph Sulaiman al-Musta'in at the beginning of the 6th (10th) century distributed lands to his principal auxiliaries, he gave the Banū Zirr the district of Elvira [q.v.], the old capital of which was gradually being supplanted by Granada, a town of quite recent foundation mainly peopled by Jews. Zawi b. Zirr without adopting the sovereign title at once began to act as an independent ruler in Granada. Taking up the cause of the pretender to the caliphate 'Abi b. Ḥasan (q.v.), he invited on the supporters of another candidate, Abi al-Rahman al-Muradiyy, in 1007 (1016-1017) a serious defeat in the region of Granada. His authority was naturally strengthened by this success; it is therefore all the more difficult to explain the decision he soon took to abandon his principality and return to his native land of Ifsikiyah. It was dictated no doubt by the ancient hatred, still alive in Spain, which had divided Africs into anti-Fāṭimids and pro-Fāṭimids. The Zemprut was daily gaining ground in Spain, where they occupied the mountainous region of the centre and west of Andalusia. Zawi however retook Kairouan with only a very small body of followers in 410 (1025).

On the departure of Zawi b. Zirr, his nephew Ḥabīb b. Mabkis assumed command of the Zirids in Granada. He adopted a sovereign title, that of Ḥassāq, and the honorific Ḥabb b. Saif al-Dawla. He reigned for over 10 years until 429 (1038). He concluded alliances with the petty neighbourhoods of Andalusia and at his death had increased his kingdom by the districts of Jaen (q.v.) and Cabra. He entrusted the conduct of his kingdom to a Jewish vizier, Samuel Ibn Naghão, a thing unprecedented in Muslim Spain. The name of this vizier, not yet an able minister, but author of many original works in Hebrew, spread far, and in 1027 the Jews of Spain revived for him the princely title of naghdī.

On the death of Ḥabīb b. Mabkis, power passed to his son Bādis b. Ḥabīb, whose long reign marks the culminating point of Zirid power in Spain. He began by inflicting a bloody defeat on the prince of Almeria, his former ally Zabārī [q.v.], who lost his life in the battle fought in the pass of Alpuente (429). Emboldened by this success and by the victories which he won without difficulty over the troops of the prince of Valencia and Seville, Bādis b. Ḥabīb threw off the suzerainty (at best only nominal) of the petty Hamūnīdd caliph of Malaga and annexed his dominions (c. 450 = 1058). The years following were marked by the anti-Berber policies of the Arab king of Seville, al-Muṭarjad [q.v.]. Ibn 'Abdāb, who successfully annexed the little Berber kingdoms of Ronda [q.v.], Jerez (Ar. Sharqī [q.v.]) and Acins. As a result the power of the Arabs in Spain increased considerably and the only bloc of Berber resistance which was still really solid was that of the Šahbadd Zirids of Granada. Bādis could not help being disturbed by this advance of the 'Abbādīd kingdom in the east of Andalusia and at the same time by the increasingly marked signs of dissatisfaction among his own Arab subjects. Bādis in these improprious circumstances and against the advice of the vizier Samuel, whom he had retained on his accession, went to war with Seville, but without success. A Seville army led by the prince al-Muṭarjad was fortunately checked in its advance on Malaga.

On the death of the vizier Samuel, his son Joseph succeeded him as Bādis's first minister. Unlike his father, the new vizier soon turned against himself not only the Arabs of the Zirid kingdom but also the Berbers themselves, by his extravagance and the luxury with which he surrounded himself and the favours he bestowed on his co-religionists. If
we may believe: the Arab historians, his ambitions increasing, he had the heir presumptive of Bâdis poisoned, his son Bâlûq âi, succeeded in excusing himself with his master and for a time thought of creating a Jewish kingdom in Spain for his own advantage. He was in secret correspondence with the lord of Almeria, Ibn Sumâdî, and offered to surrender Granada to him, on condition that Almeria became the capital of a Jewish principality of which he should be ruler. The reaction was inevitable and rapid. On the appeal of the Arab poet Abû Isâq al-Ibrî in a poem that became famous, a conspiracy was got up against the Jews of Granada and on 6th (March) Dec. 1066 Joseph Ibn Naghâli and 3,000 Granada Jews were massacred and their houses plundered.

The reign of Bâdis b. Hâbûs lasted till 468 (1073). Granada now became an important city grouped around the citadel which stood on the west bank of the Darro; it had been built by Hâbûs b. Mâkûs and enlarged by Bâdis. The residence of the latter, according to local tradition, was called "house of the weathercock" (jâr ilâh ul-ihrâh) which is preserved in that of "casella del Gallo". A bridge over the Darro still called "Puente del Caillo" was built in 447 (1055) by the Ulama of Granada Ali b. Muhammad b. Tawba. A maqâla of Bâdis b. Hâbûs, Mu'amâl, left his memorial in Granada in several public works also built in the Zirid period.

When Bâdis b. Hâbûs died, he left two grandsons, Ta'mâm, then governor of Malaga, and "Abd Allâh b. 'Abd Allâh the latter assumed power in Granada while his brother set up as an independent ruler in Malaga. This division was to be maintained till the end of the Zirid dynasty. Events were however soon to move rapidly with the advance of Christian arms. The taking of Toledo [q. v.] in 1085 by Alfonso VI was followed next year by the famous victory won by Yûsuf b. Ta'bûs at al-Zallaqâ [q. v.] in which Tamûm and "Abd Allâh took part with their contingents. When in 1090, Yûsuf returned to Spain, one of his first cares, after the failure of the siege of Aledo, was, on the advice of the Ulama of Granada Abû Dja'tar al-Kulâi, to seize Granada and dethrone "Abd Allâh. The latter abandoned by all had to go to the Almoravid sulûk who made him a prisoner and soon afterwards dethroned his brother Tamûm in Malaga. "Abd Allâh was exiled to Aghmât [q. v.] on the northern borders of the Moroccan Great Atlas. Tamûm was forced to live in Marrakesh where he died in 488 (1093). Almoravid governors were installed at Granada and Malaga to mark the completeness of the fall of the Zirid dynasty in Spain.

ZIYÀ GÖK ÂLP [Mehmed Ziya Bey], Turkish author and poet, sociologist and nationalist leader. Born in Diyarbekr in 1875, from a family of Ottoman government officials, he attended the veterinary school in Constantinople; becoming compromised through his relations with the Revolutionary Committee, he was obliged to leave the capital, and return to his province. After the revolution of 1908 he figured among the members of the Union and Progress Committee, took part in the Salonic Congress (1909), and began to spread his social and nationalist ideas through the review Genç Kültürel, which was published in that city. From 1913 he occupied the chair of Sociology at the University of Constantinople, was among Enver Pasha's supporters during the European war, and was exiled to Malta during the Allied occupation of Constantinople.

In spring of 1917 he returned to Anatolia and remained a year at Diyarbekr, where he published the review Kültürel Meşrûmâ; he was then appointed president of the "Translation and Composition Committee" at Angora; he was among the heralds and supporters of the People's Party (Kültürel Fırâhî), founded by Muşâtâ Kemâl Pasha, and resumed his teaching at the University of Constantinople, where he died, still young, October 25, 1924. His funeral, celebrated by the Great National Assembly of Angora, to which he belonged as member for Constantinople, was a tribute from the whole nation to his memory. Ziya Gök Alp was a son of his times, and in a certain sense an anticipator of events, which his strong national feeling foresaw in examining the history of the people and the fortunes of the Ottoman Empire. Especially after his death he was recognised as the father of Turkish nationalism. There is however an evolution in his thought from 1908 to 1924, which bears a relation to the events in his country. From his early manifestation of a spirit of modernism and freedom, justified by "Abd al-Hamid's tyranny, he passed, under the influence of books and of currents already dominating the westernized Turkish classes, to the preaching of Panturanism. This programme appears in almost all his early works, it still prevails in the later, and is embodied especially in the poem Turku, published in 1914 in the collection Kâtîb Elma, which ends with the lines: "The fatherland of the Turks is neither Turkey nor Turkestan, our fatherland is a great and eternal country: Turan". Ziya Gök Alp dreamed of a Turkish fatherland, an Ottoman empire, comprising the provinces it still possessed in 1914, a Muslim empire with a constitutional Sulûk, where Ottomans would be preeminent politically and intellectually, and which would give rise to a new civilization, capable of influencing the other peoples of Turkish race, and absorbing them to the point of creating an immense Turanian empire. These same ideas are poetically rendered in the poem Kâtîb Elma, which gives the volume its title, and in the prose writings mentioned below. Prose and poetry, for Ziya Gök Alp, are slightly different expressions of an identical idea.

In his later years, after the loss of the Ottoman
Empire's provinces, the writer's hopes centred around Mustafa Kemal's form of democratic dictatorship; the Panasorean ideas remain in the distance, as a far-away goal, and he tries to strengthen a pure Turkish nationalism, modernising and westernising: Ziya Gök Alp departs from the Edibübey-i Şefiye school and opens the contemporary movement; he has, however, a singular individuality, which distinguishes him from his contemporaries and from his predecessors. He is a narrator in his works, which are the fruit of individual study and feeling; it is not difficult to discern the influence of European writers, especially French, whom he mentions, e.g. the sociologists G. Tarde and E. Durkheim, and, in history, L. Cahen. An interesting side of his literary activity is its simple and melodious form; some of his poems seem deliberately written with a pedagogical purpose, but they are inspired by strong feeling, and between the lines flash bold conceptions.

Ziya Gök Alp is also one of the first, if not the first, Turkish writer to have perceived the importance of folk literature as a fount of inspiration for a sincere national culture; in his works are also to be noticed mystical motives. In language, he favours simplicity and a thoroughly Turkish vocabulary and syntax.

He was a supporter of modernisation in religious and political matters; in this he has been far surpassed by recent Turkish Reforms.

Works: Ziya Gök Alp's writings are scattered in many Turkish reviews of the last 20 years, some of which, like Zorlu Kaynak, Yeni Medemülük, and Türk Zevki, received from him their special character. Many of these articles have been reprinted in his chief works, which we enumerate in chronological order:

to the ground, his eye ever open for events happening in his immense viceroyalty. Amirls and collectors of aphiornias frequently hesitate between the two, when they do not quote both, to point a lesson of high politics; Ziyād is numbered among the four dāhīyas, great statesmen, of the century. The other three are Muḥammad (q.v.), al-Mughṭira b. Šuʿba (q.v.) and ʿAmr b. al-ʿĀṣ (q.v.). In Kūfa he had to keep an eye on the 'Alīd meetings. He came into conflict there with the agitator Ḥudīr b. 'Adi (q.v.), an everyday incident exaggerated out of all proportion by anti-Omayyad tradition, especially by the šiʿa. He checkedmate the 'Alīd opposition and that of the Arab tribes settled in the irāq, Ziyād had recourse to transplantation. He moved 50,000 Beduins to Ḥurraṣān. He died of the plague at Kūfa in 53–57.

For our information about Ziyād we have to rely upon the historical school of the Ṣīrāk. The bias of the Ṣīrāk annalists, very hostile to Ziyād, is inclined to place his birth several years after the Hidjra, in order to be able to dispute his claim to the title of ṣaḥābī, Companion of the Prophet. As, on the other hand, he could not have been born long before the Hidjra we may credit him with being about 60 at his death. The best testimony to Ziyād's ability is seen in Muʿawiyah's decision to hand over to his charge the eastern half of the Arab empire, notoriously the most difficult to govern, the most rebellious against Omayyad ideas. The great manager of men, the active ruler, so strongly will to do his own relative, summoned Ziyād to assist him in the exercise of his power and imposed upon himself, so to speak, the tolerance of not interfering in the affairs of the Ṣīrāk in the lifetime of his lieutenant. The constant favour, the loyal support given by Ziyād to the Omayyad dynasty are sufficient to explain the bitterness of the 'Alīd writers against the memory of the Ṣaḥīfa statesman.

ZIYĀD ALLĀH b. IBRĀHĪM. [See Aḥżāb LABIDERS.]

ZIYĀDĪ, a Yamani dynasty of 204 to 371 (819–921) or 409 (1018) with capital in Zabīd (q.v.). They were regarded as descendants of Ziyād b. Abīth b. Abīth. But as the latter's genealogy is uncertain, so not even the name of the father of the founder of the dynasty, Muḥammad, has been handed down with certainty. The caliph Maʿnūn was harassed by his uncle Ibrāhīm b. al-Mahdī; at the same time tribes in the Yamani became rebellious. The fact that there were 'Alīd schemes about there and indeed shortly before Ibrāhīm al-Djāzār, a brother of 'Ali al-Riṣā (q.v.), had been plundering in ʿSanʿa', may have decided the caliph to abandon completely his previous 'Alīd policy and to entrust the affairs of the Yamani to a member of the Banī Ziyād, whose hostility to the family of ʿAli was well known, even if he had been himself in the service of the house of Omayya. A scion of the latter house was associated with Muḥammad, as was Muḥammad b. Ḥārīn of the tribe of Ṭagḥīb, whose descendants, the Banī Abī ʿĀṣāma, held the office of kāfīn in Zabīd during the whole rule of the Ziyāds and of the Banī Nadīm who followed them. The execution of all three men may have been already decided upon in the interests of 'Abbasid policy; they now oblige its supporters. The Ziyāds always recognised the suzerainty of 'Abbasid.

Accompanied by trustworthy Kjurākūn troops and cavalry and in particular supported by an able freedman Djaʿfar, Muḥammad b. . . . Ziyād was able to get a firm grasp on the coast, as far, it is said, as Shīb in Ḥajramawt. The lords of the fortresses in the highlands, in Djanad and al-Mudāṣkhārīkha, recognised him. But in the interior of the highlands the Baghdād government continued to send special governors to ʿSanʿa' until the Banī Yaʿfūr (q.v.) made themselves independent there from 247 to 289 (859–901). The second Ziyādī, Ibrāhīm b. Muḥammad (245–289 = 859–901), had to hand over Ḥajramawt and Djanad to Muḥammad b. Yaʿfūr, although in return for tribute. The first interruption followed Ibrāhīm's death. While the possession of ʿSanʿa' alternated between Zabīd and Karmaṭjīn Shīpas, the latter under 'Ali b. al-Faṣād took possession not only of Djanad and al-Mudāṣkhārīkha but for a time of Zabīd itself also, neither the name nor the length of reign nor fate of the third Ziyādī is exactly known. The dynasty revived under Ibrāhīm's other son Abū 'l-Dījaḥ Ibrāhīm in his 80 years' reign (c. 291–371 = 904–981). About 350 (961) even the Ḥamūdī chief al-Dahāḥakī, then lord of ʿSanʿa', paid homage to him, but in 379 (989) Abū ʿAbd Allāh b. Kāṭb, who restored the power of the Banī Yaʿfūr for a short time, by taking and burning Zabīd put an end to the dynasty of the Ziyāds. The actual ruler was by now no longer the young fifth Ziyādī, whose name also is uncertain, who followed Abū 'l-Dījaḥ, but the Abyssinian Mamālīk vīzīr al-Husayn b. Salāmīa, who was able again to save the land from catastrophe and secured a fame which has lasted to this day by making pilgrim roads with mosques and domes through the mountains and the plain. Of no importance was the transfer of the title to a sixth minor Ziyādī, probably Ibrāhīm II, as Ibn Salāmīa was followed by his Mamālīk Muḥammad as independent vizier, who in turn divided the government between his two slaves: Nadīm in the northern provinces and Naṣir (or Anis) for the southern including the capital. The latter seized the crown himself and had the young king and his aunt Hind immured alive (409 = 1018). It was however not that he founded a dynasty but Nadiḥ (q.v.).

ZIYĀNIDS. [See ZAYNIDS.]

ZIYĀNIYA, branch of the Shāḥbīl Order, has its headquarters at Kandahār; lists of the heads are given by Rinn, loc. cit., Dupont and Coppulani, Confrérie, p. 498, and Cour, loc. cit.;
in the second work a specimen is given of the diploma of *mushaffad* conferred by the hand of the order, with seal. Their practice is said to differ from those of the other Shāfi‘īs only in details; their ordinary *gākhr* is reproduced by Rīnū, loc. cit., p. 411, and consists in the repetition of certain formulas, a hundred, others a thousand times. Their speciality is the guiding and protection of caravans and travellers against brigands; in Rīnū’s time (1854) “no trader would venture to send a consignment of goods southwards” without having assured protection in the form of a Ziyārī rider bearing a letter with the seal of a *mushaffad*, whom the brigands would be afraid to offend.

Hence he calls them the pillars of the Sahabah. Much the same is said by A. Bernard, writing in 1815, &c. (Le Maroc, p. 205). The community appears to be a little known outside French Africa; lists of their saūsīyā in Algeria with an account of their diffusion in Morocco are given by Depont and Coppolani, loc. cit.

The order was founded by Muḥammad b. ‘Abd al-Rahmān Ibn Abū Ziyān, died 1145 (1733). In the R. M. M. *sül.* 360–379 and 571–590, A. Cuir published in French some extracts from a MS. biography called Ṭabāruit al-Afnās wa l-Arāb al-qawāf al-fintarniyah wa l-Ṭarīqah al-Ziyāniyyah al-Shāfi‘iyah, itself an abridgment of an earlier work. This is chiefly a record of miracles, but furnishes certain details supplementing those collected by L. Rieu, Marabouts et Khalūn (1884, p. 408–415). He was born at Thatha near Kenfūs (S. W. of Fesigue in Morocco), studied with Sidi Mubārk b. ‘Aza in Sīdījlūs and after his death went to Fes, where he studied for eight years under Muḥammad b. 'Abd al-Karīm al-Firān (died 1140 = 1724). Al-Ḥāmid b. al-Muḥīdī (died 1199 = 1787), and others; according to Rīnū, he was expelled from Fes by the emperor on the ground of sorcery, fled to Tūfīl, where the *mushaffad* of the Naṣīyyah branch of the Shāfi‘is ūd admitted him to the order, after which he made the pilgrimage to Mecca, and then on his return established himself at Kenfūs, where he founded a saūsīyā. Besides introducing some modifications into the Shāfi‘i ritual, and acquiring a reputation for saintliness, he appears to have dug wells and organized irrigation; his most celebrated miracle, which determined the future of his community, consisted in the suppression of brigands. His fame and talents attracted numerous visitors, who presently formed a flourishing colony. Like other Islamic saints, he was the head of a family, and left the headship of his order to his son.

*Biography:* given in the article.

(See *History of Islam*, vol. iii, p. 219.)

**ZIYĀRĀ (A.), visit, in the religious sense the visit to a holy place or to the tomb of a saint, especially to Muḥammad’s tomb in the mosque of al-Madīna, which even under the Wahḥābi rule is paid by those who perform the ḥajj [q. v.]. The *ziyāz* paid to the tombs of the saints was among the *hida* which were combated by Muḥammad b. ‘Abd al-Wahḥāb [cf. WAKHNA]. For details cf. W. R. van Dijck, Der heer der Wahhabsiten, doctoral dissertation, Leyden 1927. That the Wahhābis were not the first in Islam to question the legality of visiting tombs, and of the practices connected therewith, appears from the materials preserved in *hādith* [cf. Wensinck, A Handbook of Early Muḥammedan Tradition, *a. v.* Grave(s) and from later literature [cf. Taimiyya].

(A. J. Wensinck)

**ZIYĀRĪS, a dynasty of vassals of the Sāmānīs [q. v.], which reigned over Ἰράκ, Adjami, and Ta‘bārisan, then over Qurāya from 316 to 470 (928–1077). It took its name from Ziyār, father of Wāridhīn, vassal of Gīlūs, who was the father of Mardawīd, its founder. The following is the genealogical table:

<table>

</tbody>
</table>

|-------------|---------------|-----------|

1. Mardāwīd, see the separate article.
2. Wāridhīn, see the separate article.
3. His son Zāhir al-Dawla Abū Ma‘ājīr Barūfīn made peace with Rukk al-Dawla; he died in 368 (976) in the town of Qurāya.
4. Kānsī 1, see the separate article.
5. Minūchīr, by arrangement with ‘Alī al-Dawla, had returned to Kāṣī; there he was attacked by Sulṭān Muḥammad who pursued him into the mountains but made peace on payment of 3,000,000 dirhams and recognized Muḥammad as his suzerain (420 = 1039). It was to this prince that the poet Minūchīr [q. v.] dedicated his early poems and from him he took his name.
6. Anūsī-Rawān [cf. Anūsī-Rawān] recognized the suzerainty of Ma‘ālī, son and successor of Muḥammad; but in 433 (1041–1042) he was attacked by Tughrīl Beg the Sūçīqkh who took Qurāya from him. He shut himself up in a fortress where he died in 441 (1049). During his reign his uncle Dārā, also called Iskandar, was governor of Qurāya and Ta‘bārisan in the name of Sulṭān Ma‘ālī (426 = 1035).
7. The son of Dārā, Kānsī 2 ‘Unsur al-Ma‘āli, son-in-law of Sulṭān Muḥammad, accompanied the latter on his Indian campaigns. He died on an expedition led by the emir Fālidūn Abū T-Sawār of the dynasty of the Banū Shi‘ād against the Abbāsīd, which ended disastrously in 462 (1069). He was the author of the *Al-Ahmar-nama*, a book of good advice addressed to his son Gilīn-Shāh, which was translated into German by Fr. v. Diez (Berlin 1811) and into French by A. Querüy (Paris 1856).
8. His son Gilīn-Shāh reigned over the moun-
tamous country only, for Tughril Bey before marching on Baghdad had occupied Tabaristan. He was deposed by Malik-Shah and died in 470 (1077).

Farhad is given as the son of Mandawid but his paternity is uncertain and he was not summoned to succeed his father or any of his cousins. In 414 (1023), when he must have been at least 88, we find him a vassal (muktaf) in Borsagird. In 417 (1026) he accompanied Al-Ash Shamsi the Khayyam on his campaign against the Kurds and remained his faithful ally. He fell in battle against the army of Sultan Mas'ud (425 = 1034).

(CI. Huart)

ZOTT (pronounced Zoff in Damascus), the name of a people [cf. also NAWZ]. The etymology is certain: zoff >Pers. Jost (for a similar change cf. Pers. khwm *home >Arabic khun = *rubb-lin*).

Firdawsi (d. 1024) relates in his Shahnamah that Bahram Gur, king of Persia (420-438 A.D.), asked the king of India to send him 10,000 Luri, men and women, expert at playing the lute (transl. Mohi, vi. 60 sqq.).

In his Geschichte der Perser und Araber zur Zeit der Sassaniden, transl. from the Arabic text of Tabari (829-832), Noldeke has full confidence in this tradition. De Goeje quotes his opinion and adds that there is no reason to suspect Firdawsi's statement (cf. the contrary view expressed by John Sampson, The Dialect of the Gypsies of Wales, Oxford 1926, p. 29, note 1, who wrongly regards the statements as pure legend).

At an earlier date than the Persian poet, Badraddi (d. 892) says that the Saiyadibads [q.v.] had been settled in the ports [of the Persian Gulf since] before Islam. It was the same with the Zott' ed. de Goeje, p. 373, i. 2 infra.

The historian Hamza al-Ijshah (early tenth century) who, he tells us, was very well acquainted with the history of the Sassanids, says the same thing (ed. and transl. by M. E. Gottwald, p. 55 text and p. 40 transl.) as Firdawsi who wrote half a century later.

Many Zott had settled in the marshes between Wasiit and Basra. In the reign of al-Mu'tamid (813-833) they were strong enough to rise in open rebellion against the caliph's authority and cut communications between Basra and Bagdad; they only submitted in 834 on condition that their lives and property were spared (de Goeje, p. 23 sqq.).

In his Memoire sur les migrations des Turges a travers l'Asie (Leyden 1903), de Goeje used the texts which he supplemented from the Littoral, the Tadj al-Arabs and a number of Arab geographers. As the title of his Memoire shows, he follows the migrations of the gypsies through Asia, which I need not do here. We need only remember that, according to Arabic and Persian texts, the Zott migrated for some reason or other from India into Persia and from Persia into Hitber Asia and Europe.

On the east coast of Madagascar there is a tribe called Ondaditi, generally written in Arabo-Malagasy ADtt or odt. The old pronunciation of the three forms is *un-daditi*. Ond- (pron. s-), is the Malagasy toneless article; daded, in modern Malagasy, goes regular, back to an original tadi (the change of t->d in a toneless final is regular).

These are a people, whose ancestors came, they say, from beyond the sea. Although I have been in personal relations with them for several years, I have a feeling that they have not informed me fully about their manners and customs; they have always shown themselves reticent. Their Malagasy neighbours in the southeast say that the Ondaziti practice incest in secret. The identity of the forms Ondaziti, Dadd and Zotta is too complete to be accidental; it is worth recording.

The region in Asia in which the modern Djas are mainly found is defined roughly as follows: in the north by the lower ranges of the Himalaya; in the west by the Indus; in the south by a line extending from Hindurabd (South) to Ajmer and Bhopal; in the east by the Ganges. Beyond the Indus there are a few Djas at Pathaawar, in Baluchistan and even west a few Djas at Pathawar, in South India making the Talum range. Finally in Kirmun and the 'trak we have a mixed population of Ljuds and gypsies. There are some 50,000 more in Makran and Afghanistan (Kalika-Kanjjan Qumando, History of the Jats, Calcutta 1925, i. 1).

Bibliography: given in the article.

(Gabriel F. Ferrand)

ZUBAIDA BINT DQAR B. AB DQAR AL-MANJUK, UMM DQAR, wife of the caliph Harun al-Rashid and mother of his successor Muhammad al-Amin [q.v.]. She was born in 762 (782-793) and her real name was Amat al-Asia "the slave of the Almighty", but on account of her youthful and fresh complexion she was nicknamed by her grandfather, the caliph al-Mansur, and despite (diminutive of salwa *cream*), "fresh butter"; also the name of a plant (Zotou). Her marriage with Harun was celebrated 765 (781-782) and she died in Bagdad in Djamad I 216 (June—July 831). On account of her love of splendour, her liberality to poets and scholars and the public works carried out by her, she is little less famous than her husband. Among other things, she had an aqueduct ten miles long laid into Mecca, when it was suffering from a dreadful lack of water.

(K. V. Zetteker)

AL-ZUBAIR B. AL-ÀWWAM B. KHWIALID

B. ASCAD B. AB AL-ÀWWAM B. KHWIALID, B. ASCAD, B. AL-ÀWWAM, B. ASCAD, B. AL-ÀWWAM, with the surname of al-Jawwadi (i.e. the Apostle, an Aethiopic loanword). His mother was Saffiya bint Ab al-Mutzalab, so that he was a cousin of Muhammad and a nephew of Khalid (hus Khowialid). Al-Zubair was one of the earliest converts to Islam; according to tradition, he was the fifth who, while still a child, recognised Muhammad as a
prophet; he is also one of the ten to whom Paradise was promised by Muhammad.

Of his seven Aqsa, the daughter of Abu Bakr, is renowned for her Spartan attitude to her son 'Abd Allah [q.v.]. Another son she bore him was 'Umay [q.v.]. The third of al-Zubair's sons who also plays a part in the history of Idrisi is Mujaah [q.v.]. Al-Zubair is said to have stuck to Muhammad under hardships and to have taken part in the two hijjas to Abyan. He also accompanied his kinsman to Madina. He is recorded in broderhood with Ibn Mas'ud, or, according to other reports, with 'Ali or with Ka'b b. Mālik. He further took part in all the great battles and campaigns during Muhammad's career, being renowned for his gallantry. His epithet al-Haswari (cf. above) was given him by Muhammad on account of his services as a spy in the conflict with the Kuraishi [q.v.], with the words: "Every prophet has an apostle and my apostle is al-Zubair." For his attitude, exploits and death (the latter took place in the Battle of the Camel, at an age which is given with variations from 50 to 67) under the caliphate of Abu Bakr, 'Umar and 'Uthman, we may refer to the art, fatāli, because what is said of the latter holds also good of al-Zubair.

Tradition emphasizes the high esteem in which Muhammad held him, by pointing to the fact that Mas'ud is speaking to him, once made use of the formula latka al-mummi. He obtained, it is said, special permission to wear silk. For his testament, cf. Ibn Sa'd, iii.75 sqq.; Boháč, Khurās, tabs 13.

ZUBUR. [See ZUBAK].

ZUHAIR b. ABĪ SULMA RAIS b. RAṢĀḤ b. QIYARA b. MUQAM (the genealogy in Ibn Kuttal is wrong, as it is frequently the case) was an Arabic poet of the time before Idrisi and by native critics considered, together with Irna b. al-Kāsid and al-Ṭalhah, as one of the three great poets of antiquity. Though he was of the tribe of Mun tallah, he was born among the tribe of 'Abd Allah b. Ghaṭafān and spent the whole of his life among them. His father Rais' had married a sister of a certain Ka'b b. Hasād of the clan of Murra b. 'Āwī b. Sa'd b. Dughaym and had settled among them. He left them owing to a quarrel over some plunder taken in a raid under the tribe of Ṭayy and took up his residence among the kindred tribe of 'Abd Allah b. Ghaṭafān. Here Zuhair was born and married his first wife, a sister of the poet Baghīla b. al-Ghadrī. This may be the Emn 'Awī whom he mentions in several of his poems, and to whom he addressed a poem of regret when he had divorced her. All children by this wife died in infancy. The second wife, Kārīb bint Annas, of the tribe of 'Abd Allah b. Ghaṭafān, was the mother of his sons Ka'b, Qadd and Sakīn. The first and second were princes of the tribe of their father and lived in the days of Idrisi. Zuair being an early convert, while Ka'b [q.v.] failed to atone for his hostility to the Prophet by his celebrated poem, often called the Rūmī. The third son, Sakīn, died as a youth through falling from a horse sent to his father as a present. Zuair lived during the period of the disastrous war between 'Abd and Qubayn, two clans of Ghaṭafān, called the war of Dūbās. His most celebrated poem, which has found a place in the collection of the Muṣallāt, is in praise of the two chiefs of the tribe of Murra b. Ghaṭafān, al-Ḥārith b. 'Awī and Harīm b. Sātiq. They had undertaken to pay the whole of the blood-money due to families in both clans for those slain in the fratricidal struggle and even undertook a further payment when the action of al-Ḥanās b. Qubayn nearly doomed the treaty of peace to failure. In earlier poems Zuair celebrates the father of one of these two chiefs, Sātiq b. Abī Ḥārith, and his Īsā also contains an elegy upon his death. His poems, as far as they are contained in the collections preserved, do not contain a single poem dealing with his own tribe of Mun tallah, though his poems are perhaps preserved better than those of any other ancient Arabic poet. Nearly all his poems refer to affairs of the tribe of Ghaṭafān or personal events. There are three poems concerning a slave and cattle robbed from him by al-Ḥārith b. Wārīq al-Saidawī of the tribe of Azad. Others are addressed to various tribes with a view of deterring them from making raids against Ghaṭafān; one is addressed to the tribe of Tamūn (Ahlwardt, No. 63), another to the Banū Shijāh (Ahlwardt, No. 19) and another to the Banū Sulaq. There is also one poem addressed to the king of al-Hira, al-Nu'man b. al-Mundhir (Ahlwardt, No. 37), but according to al-Aṣma'i it is not in the style of Zuair and is by Suma al-Anṣārī, a poet otherwise unknown. Two poems in the collections of his poetry are also attributed to his son Ka'b (Thulab, No. 17 and 41). Of the former verses are cited in the Liwan al-ʿArab, and elsewhere sometimes in the name of one or the other. As Zuair is stated to have been a man of wealth, we do not find in his Šīrīm, poems in which he tries to obtain praise from rich person. Native critics praise him for not indulging in undue praise nor using uncommon words in his verses. In his poems we find also a pious strain which has by some modern critics been assumed to be an indication of his being a Christian, but all we can assert is, that probably he may have been influenced by Christian thought, which must have been not unknown in the Arabian steppe. In Zuair and his family we have an example of the art of poetry inherited for several generations, an instance which is by no means isolated in early Arabic poetry. Zuair is reputed to have been the riṣālet, transmitter of poetry, of Anwār b. Ḥudayr, who in turn was riṣālet of Ṭūfāl al-Ghazawī, but from several sources we
learn: that he inherited the art from his brother-in-law Bashāma b. al-Ḍalīlī. As already stated, his two sons Ka'b and Budair were poets, so his father had been before him, and so was his sister Salmā (Kitāb al-Ḍalīlī, p. 12). His grandsons Sa‘īd and ‘Ukba, his sons al-Mu‘āmar and al-Ḍawwār, were also poets, so were his great-grandsons ‘Amr b. Sa‘īd and al-Sawwār and al-‘Awārī, sons of ‘Ukba. The latter three had forsaken the desert and lived in al-Baṣra and with them the poetical talent seems to have died out in the family. The poems of Zuhair have come down to us, apart from the Mu‘āllaqā, in three collections, the oldest by al-Sukkārī (died 275 = 888) preserved in the unique MS. Socin in the possession of the German Oriental Society, the recension by the Kāfīr grammarians Thālab (d. 291 = 904) preserved in two manuscripts in the Escorial and two or three copies in Stambul and a third abbreviated text with the commentary of the Spanish scholar al-‘Aṣān (d. 476 = 1085). The printed editions all are based upon the latter, which is supposed to contain the text as edited by the Bāṣṭānī grammarian al-Asma‘ī. As the latter employed methods which obscured the ancient tradition more than elucidated it, by making selections, it is highly desirable that we should have a new edition of the poems of Zuhair based upon the two older recensions, which are in the spirit of the older school of Arabic scholars. The work of K. Dyroff has only partly cleared the issue, especially as he did not recognise that we had two entirely different recensions in the texts which he used.

The name of Zuhair is not uncommon among Arabic poets and as their verses are sometimes incorporated among the fragments added to the Divīn, as e.g. by Alwardt, a short notice of the most important may be added.

**Zuhair b. Dīnār b. Hūba al-Kalīmi**, also a poet of the time before Islam and belonging to a generation earlier than Zuhair b. Abī Salmā, he is reckoned among the long-lived umma (su‘amārūrān) and as he is brought into contact with Kulaib Wā‘lī and Mahallī he must have lived in the later part of the sixth century of the Christian era. The accounts concerning his life are however so legendary that no reliance can be placed upon them. Also in his family the art of poetry was inherited for several generations and Abu ‘l-Faraj al-Iṣbahānī enumerates several, the latest in date being perhaps al-Musayyab b. Risāfī b. Hārūth al-Dīnār b. Ka‘b al-Kalīmi b. Dīnār b. Zuhair b. Dīnār who in some verses, cited in the Kitāb al-Ḍalīlī, boasts that one of the members of his family had slain Yāsīd b. al-Mu‘allāhīn in 112 a.h. (Kitāb al-Ḍalīlī, xxi, 93-104; Muṣafahāyat, ed. Lyall, Nō. 117).

**Zuhair b. Dājūma b. Rawḍūz al-Kalīmi**, one of the chiefs of the tribe of ‘Abs, was slain by Kālid b. Ka‘b (Nabūdah, p. 284; Muṣafahāyat, ed. Lyall, p. 788; Kitāb al-Ḍalīlī, x. 12-17).

**Zuhair b. ‘Ala‘ al-Durā‘ī, better known by his nickname al-Musayyab (Muṣafahāyat, ed. Lyall, Nō. 91).**

**Zuhair b. Ma‘ṣūd al-Darībi (Kitāb al-Tamā‘ūs, al-Babi al-Bakri, ed. Shāhānī, Nō. 22).**

The native lexicons cite verses of all these poets.

**Zeal.**

The native lexicons cite verses of all these poets.

**F. KARKOW.**

**ZUHAL, the planet Saturn.** Zuhal (without nunciation) is derived from the Arabic root 31-63 “to remove”; the planet takes its name, according to the Tājī al-Aʿrābī, from the fact that it is “far removed, in the seventh heaven”. Another name found in texts from Spain and N. W. Africa is al-Maḥrīl “the warlike”, just as we have there al-Ḳāṭīb “the writer” alongside of the usual name Ḥurūbūr for the planet Mercury (cf. the note on al-Ḳāṭīb in the article 31-63). In Sumner’s, according to Kugler, the name of Saturn was Lu‘ūm, in Accadian Lu·bat Sīqat = Kūmmān (Kūrum); the latter is obviously the source of the Hebrew name of the planet 31-63 Kūrum (Amos v. 26) = 31-63 and the modern Persian 31-63 Kūram. According to Maspero, Hist. asc. des peuples de l’Orient, Paris 1884, p. 78, the Egyptians called Saturn Har ha-her, i.e. “the Creator from above”, but according to the same author in his Hist. asc. des peuples de l’Orient classique, published 15 years later, they called it Ḫūrīrī (cf. L. M. Antonini, L’astronomie égyptienne, Paris 1934, p. 94). Achilles Tatius in his Logegor, ch. 17, mentions that the Egyptians called Saturn “star of Nemea” (ἐν Νεμέαν), i.e. that it was sacred to the corresponding Egyptian deity. The Greek name of Saturn is Φαύρος, “the brilliant”, also (but only in the later period) τὸ Φαύρος ἄκρος; the first name, according to Achilles Tatius, loc. cit., was also used in Egypt “in spite of the low degree of its brilliance”. The Latin name is stella Saturni or Saturnia. In the Talmud it is called Shabbatot.

In Arabic astronomy, Saturn (as in Pythagoras and Ptolemy) is placed in the seventh sphere (falaqā) from within, which is also the outermost sphere of the planets; its inner surface is bounded by the sphere of Jupiter. While its outer surface touches the sphere of the fixed stars. The period of sidereal revolution of Saturn is, according to Kauwitz, 31-63, 29 years, 5 months and 6 days; a total of 10,750 days; this is about 9 days less than the true figure (10,759 days, 24 hours). Al-Battānī (Opus astronomicon, ed. Nallino, ch. 50) observes that the apparent diameters of the planets in perigee and apogee are as 13:12, i.e. 7:5. From this he calculates, on a basis of the distance of the apogee of Jupiter which he—however, it is taken to be identical with the perigee distance of Saturn—had previously calculated to be 1,200,240 radii of the earth on a basis of successive reckonings by
analogy (cf. AL-MUSHxrT), the distance of Saturn in apogee at 18,094 radii of the earth and from these two data he gets the mean distance from the earth as 15,509 radii of the earth. The actual
geocentric distance is about 14 times larger (224,000 radii of the earth). The corresponding figures of other Arab writers for the least, greatest and mean distance of Saturn are given in the following table:

</table>

(for the authority for the above figures and for the assumptions of the various authors regarding the magnitude of the earth's radius, see the article AL-MUSHxrT).

The apparent diameter of Saturn in mean distance is, according to al-Battāt, following Ptolemy and later authors, 1/6 of the sun's diameter. From this he calculates with the help of the numerical value of the distance the true diameter at 47/4 times the diameter of the earth (modern: 9.4 radii of the earth); this figure raised to the third power gives the volume of Saturn as 79 times that of the earth (modern: 850 times).

The motion of Saturn is represented, as in the Almagest, by four circles ("epheres" αερῆ) (cf. al-Battāt, Op. attr., ch. 31). The astronomical tables take for its mean daily sidereal motion the value 2'.

The greatest observed northern geocentric latitude is given by al-Battāt (ch. 47) as 3° 2', the greatest southern at 3° 5' (according to Ptolemy).

Zuhal in astrology. Zuhal is ruler of the Нуwyd al-Djatdy (Capricorn, daytime) and al-Dalat (Aquarius, nighthouse), also day-ruler of the third muthallatha (triplye) consisting of al-Qwma (Gemini), al-Munā (Libra) and al-Dalat, the night-ruler of which is Mercury. He is also the companion (σελήνη) of the ruler of the first muthallatha. He has its χαρτώ (exaltation) in the 21st degree in Pliny, Firmicus and the Hindu Varahā-mihira erroneously in the 20th degree) of al-Maṣū, his ḥaṭb (declination) in 21st of al-Hamal (Aries). According to al-Kazwīnī, μενέλας (p. 27, "the astrologers call Zuhal "the larger star of misfortune"
(αλ-μας al-ahbar), because its malevolent influence is greater than that of Mars (called al-maṣ al-ahbar) and they ascribe to it "devastation, ruin, grief and cares". The Arab astronomers refer to Saturn and Mars together as al-Nuwhyd "the two planets of misfortune" and contrast them with the "two planets of good fortune", Venus and Jupiter, al-Ṣolṭān (q.v.). In alchemy Zuhal means lead.

Bibliography: see the articles "CEFAR" and MUNTA." (Willy Hartert.)

ZUHARA, THE PLANET VENUS. The Arabic name comes from the root s-h-r "to shine, to illuminate" and is given on account of the extraordinary brilliance of the planet. In Samerian it was called (according to Kugler, Sternhaufen und Sternsichten in Babylon, 218, in Accadian Dilbat (see also with Fenzler in Heschel's, v. 558). The Egyptians called it (according to Maspero, Hist. anc. des peuples de l'Orient classiques, Bonn "bird", and as evening star Uloth and as morning star Tuw-nustiri. (Maspero, Hist. anc. des peuples de l'Orient of 1884, gives Bimou as evening star and Doh as morning star: cf. E. M. Antonianî, L'astronomie égyptienne, Paris 1934). According to Achille Tatianus, ἔργον, ch. 17, and Plutarch, "Euvnéphas", ch. 19, Venus was worshipped by the Egyptians and Greeks as the personified goddess of love (μόρφος Ἀφογης; Aristotle also uses this term as well as Ἀφογης, "l'Amour"). The Greek name of the planet is: Ευρεφής or Φούρεφής (for Venus as morning star): we also find (in Plato Epsilon) Ευνήψ (evening star). Býkus is said by Achilles Tatianus to have contradicted the two names Ευρεφής and Ευνήψ into one. In Latin the planet is called Stella Veneris or simply Venus; Pliny (Hist. Nat., ii. 8, 9) further gives the synonymus Lucifer, Vesper, Iberus (see this article in Paulus-Wissowa, Realencyclopädie, also Stella lu-neris, modris deum, Iustus. In Persian, Venus was called Nāthūs, in Hebrew Mōlah ha-Shomayim, "Queen of the Heavens", Ḥešr ben Ṣabāḥ, "the morning-star" (Is. xiv. 12) is sometimes identified with Venus and sometimes also with the moon (⇒ Arabic Ḥiṣr, "new moon"; in the text of the Bible however the reference can only be to the crescent of the old moon visible in the morning sky) or with the sun; the assumption that Möni (1 Es. iv. 11) refers to Venus is hardly tenable (cf. B. Suter in Enc. Toud., Vol. III. art., ASTRONOMICS). The Talmud calls Venus Kechebet "star" or Negu "splendens" or Kecheb Nege. Venus in astronomy. The identity of the morning with the evening star was well known to the ancients — Babylonians, Egyptians and Greeks — and we very rarely find the same name applied to both appearances of this planet. In Pythagoras, Ptolemy and the Arab astronomers, Venus occupies the third position from the centre (in the geocentric system). Its sphere (σφαῖρα) is bounded on the inner side by that of Mercury and on the outside by that of the sphere of the sun. This arrangement was already familiar to the Egyptians (according to Dio Cassius, Hist. Rom., xxxvii. 19); on the other hand Macrobius (Comm. in Somn. Scip., l. 19) gives the following order: "Moon, Sun, Mercury, Venus, Mars, Jupiter, Saturn", but mentions immediately following — in a way that is not quite clear — that Mercury and Venus according to the Egyptians appear sometimes above and sometimes below the sun; it would certainly be going too far if we were to deduce from this passage alone that the Egyptians regarded these two planets as satellites of the sun and had broken down the geocentric system. The Babylonians moved Venus to the second innermost place: "Moon, Venus, Mercury, Sun, Mars etc. Plato (Timaeus and Epiméthēs) gives Venus and Mars as evening star and Doh as morning star: cf. E. M. Antonianî, L'astronomie égyptienne, Paris 1934). According to Achilles Tatianus, ἔργον, ch. 17, and Plutarch, the following table gives a view of the least,
mean and greatest distances of Venus from the centre of the earth, expressed in terms of radii of the earth, according to al-Battânî, al-Farghânî, Ibn Rusta, Abûhâmîn bar Hiya, also for India, according to al-Bîtiţî; in the last row we give for comparison the modern values (for the references and the length of the earth's radius in the authors named see the articles AL-MUGHÂRÂT AND 'UṯûR).

The Arab values are only about 1/40 of the correct values; it should be observed however that the figure of the proportion of the least to the greatest distance (1/30) as given by al-Battânî, with the help of which the latter was calculated from the former, agrees remarkably with the modern figure. Al-Battânî gives the apparent diameter of the Sun as 8° (Opera Astr., ed. Nallino, ch. 50) as 1/50 of the diameter of the Sun; the true diameter of the sphere as 1/50 of the diameter of the earth (both from the Almagest); from this the volume of Venus is calculated at 1/30 of the volume of the earth (modern figures, proportion of diameter of Venus to that of the earth = 0.97, proportion of the volumes = 0.91).

The motion of Venus is represented like that of the other planets by Ptolemy. From the inclination of the deferent measures 36° 30', that of the epicyclic 4° 30', the maximum value of the observed Northern or Southern latitudes is according to al-Battânî (Opera Astr., ch. 47) 5° 36'. For the mean daily motion in anomaly the tables give 3°. This corresponds to a synodic period of revolution of 534 days, which agrees with the actual figure (the synodic period of revolution of Venus was already known with considerable accuracy to the ancients; it is given as 537 days in Assyro-Babylonian texts).

Venus in Astrology. Zuharâ is ruler (rabū') of the Sign of Libra (Libra, day-house) and al-Thawr (Taurus, night-house), also day-ruler of the second mutthuqata (triplet), consisting of al-Thawr, al-'Ashūr (Virgo) and al-Diyya (Capricornus) as also day-ruler of the fourth mutthuqata (al-Sarafin, Cancer, al-'Akhūr, Scorpio and al-'Asr, Pisces). Zuharā has its qayyūf (exaltation) in 27° of al-Hūr, its khabûd (declination) in 27° of al-'Aṣakh. The astrologers call it (according to al-Kawthari, Ahl) "the smaller star of good fortune," al-Sâd al-Allâh, in contrast to al-Mughattat (Jupiter), "the larger star of good fortune," al-Sâd al-Abhar; the two auspicious planets are comprised under the term al-Sâd al-'Abhar (q.v.).

In alchemy al-Zuhara means copper.

(WILLY HARTNER)  

**ZUHD, a technical term in Muslim mysticism,** the virtue of a dalam (pl. dalâîm, zâhidh; Sûrâ xli. 20 seems very far from this meaning); abstinance: at first from sin, from what is superfluous, from all that estranges from God (this is the extreme that the Hanbalis admit); then abstinance from all perishable things by detachment of the heart (and here we enter into the mystic), complete asceticism, renunciation of all that is created. Thus the term zuhd, taking the place of misk (its synonym in the older texts), clearly means more not only than bâdâ' (abstention and control of one's desires), but also than wârâ', scrupulous abstention from the use of everything doubtfull in law (a Hanbali virtue). In arranging the gradation of the virtues, Miṣrî notes that the "stage of wârâ' brings one to misk" which Qâzâîl places after fâsîr and before tawâkhl.  

It was in the second century of our era that the conception of misk, deepened from Ḥasan al-Baṣrî to Dârânî, became fixed; renunciation not only of dress, lodging, and pleasant food but also of women (Dârânî). Then introspective analysis progressing with Mâhâsîlî (and with the Metamathya), stress is laid on inner and subjective asceticism, renunciation of intentions and desires, which leads to the concept of tawâkhl.  

Interesting examples of misk taken from the biographies of the most illustrious Šûfis will be found presented in an ironical and hostile way in Ibn al-Djâwri, and in the Shâïhîl Ibn Abîabd Rûndî a carefully considered collection of cases of ascetic conscience. On the question of borrowing by Šâîlî of ascetic observances from Christianity, Manicheism or Hinduism, cf. L. Massignon, Essai sur les origines du lexique technique, Paris 1922, p. 45-80.

(LOUIS MASSIGNON)  

**AL-ZUHÎRî, MUHAMMAD b. MUSLîM b. 'UBâDA ALLâH b. 'ABD ALLâH b. SHIbîH, known as Abû Shuîb, a celebrated traditionist, was born probably in 50 (670) or 51 — according to others, 56, 57, 58 — and received his niha as a member of the Meccan clan of Zuhra. His grandfather had taught at Badr on the side of the Kuraish against Muhammad and inflicted a wound on the Prophet at Uthmân; his father had been a partisan of 'Abd Allâh b. al-Zuhîr but the son made his peace with the Umayyads. When still quite a youth, he had paid his respects to Marwân**
As a result of his untiring enquiries among young and old, men and women, high and low, al-Zuhri collected vast masses of traditions and not only endeavoured to establish the genuineness of the Prophet but also that of the Companions. He is described as the first to fix hadith in writing; but this was only done under pressure from his Western contemporaries; in an utterance given by his pupil Ma'mar, he says: "We had a disassociation to write down the knowledge, but these men forced us to do so". Unlike many of his teachers, who could only be brought to speak with difficulty, al-Zuhri was very ready to communicate his knowledge to others; he even went so far as to allow his hearers who had copied down the traditions given by him to transmit them again without waiting to examine their copies. Among his teachers, even specially mentioned 'Urwa b. al-Salih and Sa'd b. al-Musayyib; for two years he never left the latter's side (Ibn Sa'd, ii. 131). When he had added his own knowledge to that of his teachers, he was regarded as the most learned traditionist by later generations. "What a man is al-Zuhri, would that he had not harmed himself by intercourse with princes" says Makhzūmī. Al-Zuhri's interests were not entirely devoted to the transmission of hadith; he also dealt with chronology and was a critic of poetry (see above); cf. also Fischer, Biographien, p. 71. He is also one of the chief authorities for the Sunna and was Ibn Ishāq's most important teacher. The latter, like al-Wāhīdī, Ibn Sa'd and Tabarī, owes much of his information to al-Zuhri; in Tabarī he also appears not infrequently as an authority for the events of the two first decades after the death of the Prophet. According to older authorities, he only wrote one book, a Kāfīk Nāmā Khumāshī. Khālidī Khallīfī Khallīfī is the first to credit him with a Kāfīk al-Margsūsī, but it is clear that al-Zuhri's compilations were confined to collections of traditions; he did not write a regular book like his pupil Ibn Ishāq. In the stories traced to him he often gives his authorities but as frequently omits them; and when he gets from several authorities a record that agrees in essentials in all of them, he does not separate the different versions but makes one out of them, giving the names of all the authorities; this was the first modest attempt at an independent editing of the material transmitted.

Z.D.M.G., l. 474; Sachau, introduction to Ibn Sa‘d, iii, xi, xii; do., in M. S. O. S. A., vii. 11 sqq.; Fück, Muḥammad Ibn Ṣa‘d, p. 9 (J. H. Kovenite).

ZUḤŪRĪ Nūn ʿal-Dīn Muḥammad Tūḥūqalī, a Persian poet of the school of Herš, who lived for a long time in India and was assassinated in a rising in the Deccan at the same time as his father-in-law Malik of Kunm (1024 = 1615, 1025 = 1616 or 1027 = 1618). His poetry is not much esteemed in Persia but is admired in India as is especially his prose with its very florid phrasology. His chief works are a Dīwān, Gulzūr-i Ṣurūk, Khalqī, Khilqāt, Abūlīyā, lithographed several times in India, and a Sahāmīnī, "Book of the Cup-bearers", dedicated to Burkhān Nāṣīr Shāh ii of Aḥmadnāsh. (999 = 1590–1594) His works in prose have been annotated by Abu l-Yāmin ʿAbd al-Karāzāk b. Muhammad Ṣa‘īd Ḥusaynī Sirātī (lithographed at Cawnpore 1873).

ZULĀʿI, a Persian poet at the court of Shāh ʿAbbās ii, born at Khūnāsūr to the north of Isfahān, died in 1024 (1615), wrote seven muḥâjah which were collected after his death under the title Saʿdī Sayyāra, "The seven Planets"; they include Majmūʿ u-Ayar, begun in 1001 (1502–1503), finished shortly before his death in 1024 (1615), lithographed at Lucknow in 1290, Maihānī "The Tavern" and Ḥarrār u-Khawāridh "The Atom and the Sun". — Luft ʿAlī Beg (ʿAṣḵābād, p. 139) mentions a poet of the same name, born at Heršī.

ZŪN, an Indian deity, of whom there was a famous idol at Zamin-Dāwar in the country of Zābul, east of Sistān.

In 33 (654–55) ʿAbd al-Raḥmān b. Samura, appointed governor of Sistān, arrived at Dāwar and laid siege to the hill of Zūn (ʿUmar al-Zūn). He entered the sanctuary of Zūn where there was an idol of gold with two rubies for eyes. ʿAbd al-Raḥmān cut off an arm and took away the rubies but left the remainder to the local mūazzamīn, saying that his only object was to show the impotence of the idol (Baladghūri, p. 394).

Marquart found in Chinese sources a mention of the temple of Deve Sa‘n in the kingdom of Tso (= Zābul) before, which was placed the skeleton of an enormous fish through the ribs of which one could ride on horseback. The king of Tso wore a crown decorated with the head of a fish in gold and sat on a throne adorned with a golden horse (Peti-shī, ch. 97, fol. 3, where the position of Tso is not well indicated). On the other hand, Christian sources also mention a stronghold of Yūnana (Theophanes, Chronography, ed. de Boué, p. 163) or of Zanabaz (Vizcarit Tales Medemplemenes chronic, Chron. minora, ed. Mommsen, ii, 194). Marquart restores these names as Zamin-Dāwar and Zūn the Judge and thus derives the name of the district of Zamin-Dāwar (in Arabic Bīlūd Dāwar) as well as that of king Zābūl or Zanabīl (i.e., in place of Ruthul given by al-Djavālī, al-Mawāra, ed. Sachau, p. 73).

The name of the god Zūn sometimes zul has been mentioned in the Arab poets such as Ḥusain and Ḍáir and it seems that there was another sanctuary of this Indian deity in the Ḍā, which was a port which traded with India (cf. Abu l-Fath Naṣr b. ʿAbd al-Raḥmān al-Ikandāri, d. in 360 [1164–1165], quoted in Yākūt, ii. 960). According to the Liʾān al-ʿArabi, xvii, 16, in Persian the name al-Zūn is pronounced Zūn. Marquart locates the sanctuary of Zūn north of Ḥilmand, east of Ḍīlahān.

ZUNNĀR. In the form zuwnār this word occurs in Aramaic; in Syria it is as old as Ephraem and means a girdle worn by monks. It comes obviously from a derivative of the Greek τόμη. In classical Arabic it denotes any girdle, especially that worn by ḥālāzim, Christians, Jews, Magians, etc. (As a rule only one or two of the protected religions are named by our authorities but, unless the contrary is stated, it is to be assumed that the statements apply to all.) In modern Arabic it means the looks of hair worn by Jews at the "corners of the head" (Lev. xii. 17, in Persian the sacred thread of the Brahman and in Sufi poetry the external practices of religion. The zuwnār was thick and it is usually distinguished from mintāba. Ṭabārī also uses it as a synonym though properly it means the patch worn on the dress and not the belt. The Patriarch Māramma (c. 26 = 647) is said to have hidden scholars wear the zuwnār (Pat. Or. 13, 630).

The imposition of this badge was commonly ascribed to ʿUmar i, but it is not mentioned in the early treaties. If these are later fabrications, the argument against the early use of the zuwnār is strengthened. In 89 (705) the Ḥijādījīs bound themselves to wear Arab dress. So we must agree with the conclusion reached by Caestani: "I do not think it possible to accept the traditional statement that he (ʿUmar) imposed on the conquered the use of a distinctive dress". Baladghūri says that ʿUmar ii. vexed the Christians, forbidding them to ride on saddles and to wear the dress of soldiers, i.e., Arabs. It is also stated in the Ḥiṣb afṣārī that he forbade Christians to wear turbans or to copy the dress of the Muslims in any way. Ḥārūn al-Raṣīd ordered the ḥālāzim in Baghdaḏ to differ from the Muslims in dress and manner of riding. Apparently then ʿUmar II forbade the ḥālāzim to copy Arab dress and Ḥārūn introduced distinctive badges for them. Later the enforcement
of these rules depended on the temper of the ruler, who was either caliph or governor. The colour peculiar to the ḍhimṣs was that of honey-yellow. In the time of Mutawakkil they had to wear yellow scarves (jausūma) with belts, and two lustrous on the tall cap (balamun) and their slaves had to wear two yellow patches, one on the front and the other on the back of the outer garment. So Christians were called “special”. The colour of the cap was different from that worn by Muslimas.

In Egypt yellow was at first the ḍhimṣs's colour, though blue is mentioned, but under al-Ḥakim the Copts wore black turbans and belts. At one time he ordered the Christians to wear their neck-covers across one cubit long and five raṭḥs in weight and the Jews to wear black turbans and to carry hiltets of wood weighing five raṭḥs. He also commanded the Christians to wear crosses and the Jews bells in the baths. At times ḍhimṣs were not allowed to wear the Persian jacket (šīlā) or turbans or silk clothes.

Other restrictions were imposed on them. They might use only a special kind of saddle, or marked with two bells behind it, donkeys or horses. They had to cut their hair short on the forehead. When tribute was due they were marked by a leaden seal on the wrist; this, it seems, was removed when the whole payment was made. It is possible that some of these regulations were in force at one time and all over the caliphate.

Other meanings of the word will be found in the dictionaries.

(A. S. Tarrton)

Zūrkhānā (v.), "house of strength", the Persian gymnasion. There are zūrkhānā in many Persian towns and are often also in several quarters of a large town. From the architectural point of view these gymnasiom recall an eastern bath lit by a skylight in the centre of the little dome. The area (qānd) lies below the level of the floor. The superstructure and the spectators take their places in niches cut in the walls; sometimes there is a kind of gallery reserved for the public.

Among the members of a zūrkhānā various degrees are distinguished: a nūtse "novice", nūm-bārī: "beginner", pākūthūnu: "athlete", wāṣīdī: "referee and instructor" (usually the champion of the establishment), wāṣīdī: "director" (also called

khanī: "director") who conducts the exercises by beating a little drum and reciting appropriate verses (the quatrains are called gīrū:). The wrestlers wear drawers (long) or short trousers of heather or some white material (jenkūn) on which the hand is often represented (that of Allah). These are supported by the strap of the belt with which the wrestlers catch one another (this is unknown in western wrestling). From the arms are hung amulets against the evil eye and with the same object the wāṣıdī hangs seeds of wild rue (ṣāqūhī).

The programme at each performance begins with exercises for suppleness and exercises with weights (Ṣāqūhī) and with Italian clubs (qāli). The wrestling comes at the end of the performance; it goes on until one of the competitors touches the ground with his shoulder blades (ṣāqūhī: "is made to count the starn"). The wrestling is followed by exercises with a kind of bow on the cord of which are strung very heavy rings (ṣāqūhī); the bow is not drawn but is moved from side to side above the head.

The organisation of the zūrkhānā is marked by a very elaborate terminology, by a spirit of chivalry and by a strictly observed semi-religious ritual.

In putting on or taking off the costume, the combatants embrace (cf. šīrāzī). Only the perturbed bows may be used; the contest finished, the wrestlers touch their foreheads; the one who has been wrestling with the wāṣīdī kisses his hand.

There are a number of patron saints of wrestling whose names are invoked. The principal patron of wrestlers is Pātraya (?) Wašt. Among famous wrestlers, Husain Wašī mentions the Prophet who wrestled with Abū Djal; the imām Ḥasan and Ḥusain; the goetic (ṣirīf) Mahmūd Makhkār (or Bīlyūr) and the Shāhī Šāh al-Dīn Ḥıbrān Ḥamān. The same author distinguishes two kinds of wrestling: ḫaṣī (or ḫhasī-mūt) in vogue in Shūrān and the Ṭīrā or Ṭīrā (or dalām-Ṭīrā) cultivated in Dalām and Shīrāz.

Wrestling is a noble exercise. In Niebuhr's time the notables of Shīrāz devoted the mornings to it and their afternoons to riding. A monument in the form of a lion used to be built on a champion's tomb.

The beginnings of wrestling in Persia go back to a very early period. In the Ṣāh-nāma (ed. Möhl, iii. 303—4 = Valbers, ii. 1049) the heroes are shown wrestling by seizing one another's hands (hant dān kādūh yāq yāq); and three gripping one another by the girdle (ṭīrā-yāq khān). In Sa'd's Gulistan, the old wrestler is represented as knowing 360 tricks (cf. in Husain Wāšī: 1081 = 360 × 3); cf. several other quotations in Canard.

The organisation of the zūrkhānā gives wrestling very special features. As M. Canard rightly points out, the zūrkhānā seems to have grown up out of the corporate movement and its special chivalry (futunwās). This movement is closely related to the Shīʿite mysticism. In the course of a performance a collection (ṣirāj) is taken twelve times in the name of each of the 12 imāms. It is worth noting that H. Wāšī's treatise is called Futunwāt-nāma; cf. Thornong, Hellige s. Konvintz d. islām. Veröffentlichungen, Berlin 1913 and the articles Futūwā and Shīrāz; Tanscher, Futunwā-Studien, in Islamica, v, 1933, p. 285-333; ibid., Die islamischen Futunwānen, in Z. D. M. G., 1933, p. 6—49.
