LIST OF ILLUSTRATIONS

PLATES

I. a. View of the Ancient Capital, from South-West.
     b. Temple of Laksana Devi, from North.
II. Temple of Laksana Devi, Façade.
III. Image of the Bull Nandin, height 6 ft. 1 in.
IV. Image of Narasimha, height 3 ft.
V. Image of Ganesa, height 3 ft.
VI. Image of Laksana Devi, height 4 ft. 1 in.
VII. Image of Sakti Devi, height 4 ft. 6 in.
VIII. Architectural Details of Sakti Devi Temple.
IX. Wooden Pillars of Laksana Devi Temple.
X. Temple of Markula Devi, Udaipur.
XI-XII. Façade of Inner Shrine of Markula Devi.
XIII. Central Part of Ceiling of Manḍapa.
XIV. East and South Panels of Ceiling.
XV. North and West Panels of Ceiling.
XVI. Panels on both sides of Window.

1. Woman from Pangi. Un-Indian costume .......................... 47
2. Fountain Stone from Sai. Un-Indian ornament .................. 53
3. Sûrya Image from Gurû. Type of the Sasanian Sun-god ........... 60
4. Detail of Brick Platform; Chamba Town. Late Gupta ......... 62
5. Temple of Gautam Rishi, Gosal, Kulu. Gupta Style adapted to Local Folk-art .. 62
7. Lintel of Window, Manali, Kulu. Post-Gupta Style of 7th century .. 64
8. Wood-carving, Maylang, Lahul. Yaśovarman Style ............. 67
12. River Goddess (Gaṅgā?) from the Temple of Avantisvāmin, Vantipor, Kashmir
     Prototype of the façade of Markulā Devi ........................ 111
FOREWORD

The magnificent stone temples of Kashmir which once adorned the banks of the Vitastā, as far as they still exist, now present the sad spectacle of desolate ruins. The valley of the Ravi, on the contrary, which until 1948 constituted the ancient hill State of Chamba, owing to its more sheltered situation, still contains numerous well preserved temples, some unique brass images of excellent workmanship and an incredible number of Sanskrit inscriptions on rocks, stone slabs and copper-plates. In the years 1902-1908 it was my good fortune to explore this treasure-house of historical relics. In 1911 the Government of India authorized me to publish my Antiquities of Chamba State, Part I, in which fifty inscriptions of the pre-Muhammadan period were edited. It was my intention to bring out another volume on the inscriptions of the Muslim period and to devote a third volume to the ancient temples. But my appointment in Leiden and subsequent resignation from the Archaeological Survey of India in 1914 rendered it impossible for me to carry out the proposed scheme.

Thanks to the co-operation of the Director General of Archaeology a suitable arrangement was made for the further publication of the antiquarian materials collected in Chamba though not in as sumptuous a shape as was first envisaged. The copper-plate inscriptions of the Muslim period are being edited in the form of a Memoir by Dr. B. Ch. Chhabra, Deputy Director General of Archaeology, who as a Government Epigraphist and Editor of Epigraphia Indica has amply shown his competence in Indian epigraphy.

The Kern Institute undertook to publish the present monograph on the three earliest temples of Chamba, remarkable as rare examples of timber architecture and on account of their sculptural decoration. These three sanctuaries all pertain to the worship of the Goddess under various names. This is not a matter of accident. Devī is indeed the deity most widely worshipped by the rural population of the Panjab Himalaya. At Brahmor, the ancient capital, she is called Lakshaṇā Devī, but her image pictures her in the familiar shape of Pārvati Mahishamardini, i.e. the Victress of the Buffalo-demon. The second temple at Chatrarhi, a village halfway between the town of Chamba and Brahmor is dedicated to Śakti Devī. This name designates her as the personification of divine power. The third temple belongs to Chamba-Lahul, a lonely tract of the upper Chandrabhaga valley where Hinduism and Lamaism meet. The goddess residing in the temple is worshipped by the Hindus as Kāli and by the Tibetans ar rDorje phagmo (Sanskrit Vajravā-
rāhi), but she is usually indicated by the name of Markula Devī after the neighbouring village. It is surprising to find in this remote place a sanctuary surpassing even the two temples of the Ravi valley by the beauty and variety of its wood-carved decoration. These three ancient temples have marvellously withheld the rigours of the climate and the even greater perils of human vandalism, but they bear evident traces of reconstruction and partial renovation.

The brass statues of Lakṣaṇa and Sakti, on account of their workmanship and size, are no less remarkable than the edifices in which they are enshrined. Both bear inscriptions stating that Mahārāja Meruvarman caused them to be made by the workman Gugga. Two more brass images found at Brahmor, representing Gaṇeśa and Nandini the vehicle of Siva, were dedicated by the same king and fashioned by the same craftsman, as appears from the inscriptions incised on their pedestals. The epigraphs of Meruvarman are not dated but on account of palaeographical evidence may be ascribed to the eighth century A.D.

Large images, both Brahmanical and Buddhist, of gold, silver and other metals must once have existed all over India, but such objects were the first to attract the cupidity of iconoclasts. None of them has survived and this imparts a unique interest to the idols of Gugga which up to the present day are worshipped in the Ravi valley.

Dr. Hermann Goetz, the author of this monograph, has been closely associated with the Kern Institute from the time when he was attached to it as a Conservator and did excellent work in the editing of the Annual Bibliography of Indian Archaeology. After proceeding to India in the autumn of 1936, he was for many years in charge of the Baroda Museum and Picture Gallery, of which he has made a model institution. At present he is Curator of the National Gallery of Modern Art at New Delhi. During an uninterrupted stay of eighteen years in India he has availed himself of every opportunity to study the ancient monuments of that country both in the plains and in Kashmir, Chamba and the other Hill States of the Western Himalaya. The results of his investigations have been laid down in numerous scholarly papers.

In the present volume he has not only described the ancient temples and images of Chamba from an aesthetic and iconographical point of view. But he has also traced their relations to the medieval art of India and unravelled the problems presented by the Vaimśāvalī of the Rajas of Chamba in connection with our knowledge of contemporaneous Indian history. The sources of this knowledge are lamentably restricted and uncertain. Dr. Goetz will be the first to admit that his conclusions are therefore bound to be largely conjectural. But his historical reconstructions are ingenious and based on all evidence available.
FOREWORD

The photographs reproduced in this volume were mostly taken under my direction in the course of my frequent tours in Chamba in 1902-1908. It is with profound gratitude that I remember His Highness Sir Bhuri Singh, to whom my Antiquities of Chamba State was dedicated. His enlightened interest in my work and never failing assistance greatly facilitated my researches. The Museum founded at Chamba the 14th September 1908 under his auspices perpetuates his name.

The members of my staff who accompanied me on my wanderings in Chamba still live in my grateful memory. They never complained of the hardships experienced on many a stiff march along primitive mountain paths and in uncongenial surroundings. My photographer Ghulam Nabi of Lahore in particular deserves to be mentioned. He had often to do his work under trying conditions, as in the temple of Markula, but his resourcefulness proved always adequate to his task.

I wish to express my indebtedness to the Director General of Archaeology for permitting us to publish the photographs taken by his Department, including the two reproduced in plates IV and V, which were recently taken by his Office. They do full justice to the aesthetic qualities of the figures of Lakshanā Devī and Sakti Devī here reproduced. The view of the pitoresque façade of the temple of Lakshanā (Plate II) I owe to the friendship of my former colleague Mr. A. H. Longhurst. The twelve text illustrations are line-drawings supplied by Dr. Goetz and mostly prepared from his own photographs. Our special thanks are due to Mrs Kuenen-Wicksteed and to Dr. P. H. Pott, Curator of the Leiden Museum of Ethnology, for their welcome assistance in making this work ready for the Press. The editorial work has greatly benefited by the advice of the Manager and Assistant Manager of Messrs E. J. Brill. For valuable information regarding the musical instruments pictured in some of the panels of the Markula Devī temple we are indebted to Dr. A. A. Bake, Reader in Sanskrit in the University of London.

The present work on the Early Temples of Chamba is intended to initiate a series of monographs on various subjects relating to the archaeology and art of India proper and Greater India. An enormous number of ancient monuments still remain to be adequately described and illustrated, not to speak of the treasures of art and history still buried in the numberless ancient sites scattered all over the subcontinent. The prevailing interest in prehistoric explorations should not make us forget how many problems of the historical period still await solution.

J. PH. VOGEL
PREFACE

The monuments discussed in this book were explored more than half a century ago by Professor J. Ph. Vogel, at that time Superintendent of the Northern (Panjab) Circle of the Archaeological Survey of India. Dr. Vogel realized their great importance for Indian archaeology and mentioned them in his *Annual Progress Reports*, the *Annual Report of the Archaeological Survey for 1902-3*, the *Chamba State Gazetteer*, his *Catalogue of the Bhuri Singh Museum*, and finally in the first volume of his * antiquities of Chamba State Inscriptions of the Pre-Muhammadan Period*. Unfortunately unfavourable circumstances prevented the second volume from being published.

Thus the early temples and other ancient monuments of Chamba State did not receive the public attention which they deserved. In those years the foundations of a scientific history of India had just been laid, and archaeological evidence was beginning to accumulate. The study of Asiatic art as a whole was still in its infant shoes, and modern ethnological and art critical methods had not yet been developed. There was as yet no background to show up the key position occupied by Dr. Vogel's discoveries in the reconstruction of the period to which they belong. This may be summarized in the following points. Firstly Chamba represents one of the few comparatively undisturbed areas where we can follow the course of political and cultural events, with very few interruptions, from the golden age of the Guptas through the middle ages and the Muslim conquest to Mughal rule and our own times. Secondly for this reason we are able to obtain some most revealing glimpses into the otherwise almost unknown barbarian frontier civilizations imported by the Hüna-Gurjara invasions. Thirdly, this area has bequeathed to us practically unique remnants of later Gupta and Kashmiri art, otherwise almost lost. Finally we have an opportunity of witnessing the death of medieval Hindu art and the birth of the Rajput art which flourished in Mughal and Sikh times.

When in 1936 I came first to India, Dr. Vogel suggested me to resume the work on the *Antiquities of Chamba State* where he had been compelled to abandon it. After a first informal visit to Chamba in the early summer of 1937 an agreement was reached in 1938 between the State authorities and Rao Bahadur K. N. Dikshit, Director General of Archaeology in India, entrusting Dr. B. Ch. Chhabra with the epigraphical side, and myself with the historical and archaeological side
of the task. I spent most of the summer of 1939, from April to August, in Chamba, visiting Chamba Town, Khajiar, Udaipur, Rajnagar, Saho, Mehla, Chatrarhi and Brahmor. A good part of this time was spent merely in searching for the clues to classify and date monuments the history and art-historical position of which was shrouded in utter obscurity. The result of these investigations was a draft manuscript more or less on the lines of the previous volumes of the Imperial Series, dealing with the monuments not yet described by Dr. Vogel, and elaborating their historical background already published in his and Dr. J. Hutchison's many monographs, later collected in the *History of the Punjab Hill States*. As I penetrated deeper into the subject, this draft was recast into an elaborate political and art history of Chamba and the neighbouring Hill States.

The second World War and its aftermath of economic difficulties, social unrest and political changes made the publication of the book impossible, notwithstanding the sincere efforts of Rao Bahadur K. N. Dikshit and of Dr. R. E. Mortimer Wheeler, his successor as Director General of Archaeology. It became increasingly clear that the book had no chance of being printed in its originally envisaged form. In consequence it was agreed to abandon the original scheme and to break up the manuscript.

This unfortunate delay and repeated recasting of the text had also their beneficial side. For they permitted the collection of much additional documentation. The early Chamba monuments first seemed to be entirely without context in spite of the inscriptions of Meruvarman, and his inclusion in the Chamba *Vamsāvālī*. These early inscriptions do not lead us very far, and every historian knows that, though generally he can accept the bare facts mentioned in the *Vamsāvālīs*, he can trust neither their arrangement nor their interpretation. Even the most superficial analysis of the Chamba *Vamsāvālī* reveals that it is an artificial reconstruction of the 16th-17th centuries. The only way to proceed was an attempt to frame a comprehensive picture of the historical situation in the past, and then to see how the facts mentioned in the *Vamsāvālī* and in the inscriptions would fit in.

The most essential, but complicated question arose from the fact that the early Chamba temples belong to a time still very near to the Hunā-Gurjara invasion. And the deeper I delved into the subject, the more it became evident that they were in some way connected with this delicate and controversial problem. I believe that scientific honesty demands to face it. We cannot first acknowledge the fact of this immense barbarian avalanche, and then behave as if it had spent its strength without leaving any vestiges behind. Nor can we hide behind such terms as "local tradition" or "folk art" when strange and apparently un-Indian features appear in the ethnographic picture of the Western Himalaya. Such features always
are the sediment of great historical events in the past. Comparative ethnology and art history have replies to such problems. I have endeavoured to solve these problems by making use of all evidence available. I believe this solution is much nearer to the truth than the hitherto accepted traditional picture which cannot stand criticism. But I do not pretend that my historical reconstruction is the full truth. Research not only in the archaeology, but even more in the ethnology of the Western Himalaya has been sadly neglected, and equally the investigation of all the nomadic tribes, such as Gūjars, Mers, Rabaris, etc., and derivative castes once connected with these barbarian movements. Such studies are of vital importance in a case where historical records are often deceptive, because they merely tell us what the new ruling classes pretended to be, not what they actually were. The more recent Rajput pretensions of the Marathas, Gorkhas, Manipuri rajas, etc. should caution us, as well as parallel phenomena in connection with the barbarian invasions into ancient Egypt, Babylonia, China and the Roman Empire. If the solutions possible at present are not satisfactory, they can at least be signposts for further research. It is only more research, fieldwork in the full awareness of the historical implications at issue, fieldwork in ethnology, folk art and archaeology which can bring us nearer to the historical truth.

I have myself tried to undertake as much of such fieldwork as was possible without any official support. In 1947 I paid another visit to Pathankot, Chamba, Taragarh, Basohli, Nurpur, Kangra, Jwalamukhi, Nadaun, Tira-Sujanpur and Baijnath; in 1948 to Kumaon, especially Dwarahat, Katarmal and Jagesvar; in 1950 to Kashmir and Jammu; in 1952 to the Simla hills, Bilaspur, Tira-Sujanpur, Mandi, Kulu, Kangra, Guler and Nurpur; and in 1954 to Nepal. Other research tours were made in Rajasthan and Central India, likewise significant areas for those same problems. I have hitherto been able to work up and to publish only a fraction of the material collected during those tours. But it has helped very much to clarify the problems of Chamba history and archaeology.

The archaeological data especially were easier to interpret when seen in a sufficiently broad perspective. I had often to use very fragmentary evidence, as of innumerable ancient monuments only some stray sculptures or echoes in folk art are left. Yet I believe their systematic survey has permitted me to build up a fairly accurate picture of the early art history of the Himalaya, at least so far as it deals with Hindu art. Details, of course, may need reconsideration. Again I could not help anticipating certain classifications and new terminologies which only in future studies I shall be able to discuss more in detail.

Before concluding these remarks, I wish to thank all those who have helped me in the completion of this book. In view of its long antecedents it is impossible
to mention all persons who in the course of years have in one way or another added their share now indistinguishably absorbed into a material so often recast. Some of them have already been mentioned. Neither should I forget my wife without whose inexhaustible patient help and co-operation not only this book, but all my other research would never have been possible. But above all I thank sincerely Professor J. Ph. Vogel. He has inspired this book. He has placed at my disposal much material collected during his own research tours, especially detailed notes on Brahmor, Chatrarhi and Marul-Udaipur; the photographs (the negatives of which have partly been lost during the secession of Pakistan) for the plates and for part of the line drawings, not to mention his earlier publications. He has assisted me with valuable hints and not less with sober criticism. He has made the publication of the book possible in the face of endless difficulties. And last but not least, he is actually the first explorer of the monuments here discussed.

New Delhi, the 31st January 1955.

CHAPTER I
INTRODUCTION

Though superficially well known today, the Himalayas still are little explored. And yet they offer a highly rewarding field of research. For like all great mountain ranges they have in the course of time offered a refuge to races, cultures, religions and arts which elsewhere are forgotten, wiped out or merged beyond recognition into other social units or later forms of civilization. Many most interesting problems which confront the ethnologist, historian and archaeologist, may await their solution in those valleys. For where gorges, torrents, forests and snowfields place endless difficulties in the path of the traveller, communications are slow and not very intensive; migrations of peoples, therefore, have been slow and conquests ephemeral, cultural influences have come late, and the isolation of valley from valley has facilitated the survival of the peoples and civilizations occupying them.

Of course, the Himalayas are not everywhere the same. But they always share these characteristics. The outer hills (esp. the Siwaliks) rise only slightly above the level of the Indian plains. It is a lovely country, not much cooler, but much more fertile than the plains, for the monsoon hits it with all its strength, enveloping it for two to three months in a mist of clouds and torrential rains, whereas during the rest of the year the springs of the mountain forests and the glaciers of the inner valleys provide a never failing water supply. Rice-fields, gardens, plantain and bamboo groves, palm trees, etc. form a scenery of an opulence vying with the Malabar coast, Java and Bali. But they are the product of hard work, of innumerable irrigation channels winding along the hill sides, and of terrace over terrace held by stone and earth embankments. Wherever these are neglected, or where the debris every year brought down by the mountain streams render their construction impossible as in the Tarai, dense jungle and swamps soon cover the country side, infested by mosquitoes, breeding malaria, harbouring tigers and leopards. In many places this jungle has made the access to the hills difficult and not without danger. The outer ranges form further obstacles. For in most places they are a labyrinth of nullas and gorges, covered with cactus jungle, alternating only here and there with a forest-covered low ridge. Beyond, there are smaller or vaster fertile plains enclosed by hills. But most of this territory again is a mass of
gorges, sometimes cut into the soft conglomerate or loess hundreds of feet deep, where decaying terraces and crumbling cliffs and hill sides create a wild scenery, not seldom evoking the romance of the mesas and canyons of New Mexico and Arizona. This is the scene of most of the ancient Rajput States, from the Indus down to deep into Nepal. On these hills cut out by the rivers, and on the plateaus squeezed in between the river gorges and the hills there are their castles, fortresses and little towns, whereas all around the slopes are covered with villages in the midst of rice terraces.

Beyond, the next set of mountain ranges rises much higher. Their slopes are covered with deciduous trees, higher up with various pine trees and at last with gigantic deodar cedars; and more than half of the year snow decks the bare rocks and sparse grass of their summits. Here, too, is fertile land. But it is found only in amphitheatres separated by deep, almost impassable gorges. These amphitheatres have been formed by the confluence of the mountain rivers, on terraces into which later on the water has cut a narrower gorge, or on the slopes of debris accumulated by some subsidiary rivulet. Each of these oases of agricultural land gives subsistance to one or two, nay even to some dozen villages. Often they lead an almost isolated life, as they can be reached only by gorges through which the road has to be blasted out of the cliffs, or through valleys where it has to be reconstructed time and again after the devastations of landslides and avalanches; or where it has to pass over high meadows and morasses, thick forest or passes high up in the mountains which the snow keeps closed at least for half of the year. Occasionally wider valleys are formed like the main section of Kulu; and here small kingdoms once developed, exercising a loose control over the surrounding valleys. But the less accessible valleys generally retained a considerable measure of independence, small republics revolting against any interference with their internal affairs, though accepting some allegiance to the nearest power.

Beyond the following mountain ranges the scenery again changes. The high valleys are reached only by the last remnants of the Indian monsoon, while being also exposed to the cold winds and snow storms of Central Asia. Only grass and a very thin, though often beautiful flora cover the bottom of the valleys, and very occasionally some small oasis of arable land can be found. All around them pine forests, cliffs and glaciers can be seen and, beyond, there rise the majestic snow peaks of the inner Himalayan ranges in a pure sky of an incredibly glowing blue, or in a grey mist over which dark shreds of clouds are driven. Villages still are rare and far between. The shepherd competes with the agriculturist, the Tibetan with the Indian, Lamaism with Hinduism. Politically these poor, but grandiose valleys have changed hands time and again, being overrun by the
horsemens of Central Asia and again colonized by Indian peasants, traders, Rajputs and sadhus.

Still further, the Tibetan highlands are reached, the endless bare desert plains with their salt-lakes, separated by low ranges, but from time to time losing themselves in canyons of wild mountains interspersed with unexpected oases: the land of the nomads and caravans, and of the Lama monasteries and small trading towns.

It is in the forest zone that the most interesting problems await the ethnologist, historian and archaeologist, although the other zones are also highly rewarding. In the fertile outer hills, between the Siwaliks and the snow ranges, we find the most numerous vestiges of ancient and of later Hindu civilization, from Kushân and Gupta times up to the flourishing of "Kangra" art in the late 18th and early 19th centuries. The innermost zone of barren high valleys has been the theatre of the clash and interaction between Hindu and Tibetan civilization. But it is the intermediate zone of secluded valleys amidst high mountains and deep forests which has sheltered the most interesting remnants of peoples and civilizations which elsewhere are lost or can be traced only in sparse vestiges. Within this zone Chamba is of special importance because in the upper Ravi and the middle Chandrabhaga valleys natural protection has been exceptionally potent. In consequence Chamba has harboured a great number of monuments which shed a revealing light on some of the obscurest and yet most crucial chapters of Indian history and art, amongst them the three temples of Brahmor, Chatrarhi and Markula-Udaipur to the study of which this book is devoted.

Chamba town is easy of access, at least during the summer. For it is not far from Dalhousie, the beautiful hill station on a high shoulder of the Dhaulá Dhar, which stands in ample motor connection with Pathankot, the terminus of the broadgauge railway from Delhi via Jullundur (Jâlandhar) and Mukherian, or Amritsar, from where the motor roads to Kashmir and Kulu, and the small railway line to Kangra-Nagroat branch off. Since 1947 another motor road, passing along the Ravi gorge deep below it, connects Dalhousie also with Chamba town, and a beautiful bridle path leads to the same place, through a wonderful deodar forest and over the charming mountain lake of Khajiar with its romantic snake temple. But in olden times both these routes, like a third one via Nurpur, Taragarh and the Chuari Pass, were difficult enough to discourage an invasion, though quite passable in peaceful times. Chamba town, on the junction of the Sal with the Ravi, though a few times occupied by enemy armies, has, on the whole, suffered much less than any of the old towns in the outer hills. But it also shared their culture sufficiently to offer little of exceptional interest.
But higher up the situation is very different. Churah along the Syuhl river is protected by the passes of Bhalai-Jundh and Pukhi-Dhundh; Brahmar-Trehta on the upper Ravi and its tributary, the Budhal, can be reached only with the greatest difficulty through a series of forbidding gorges between Mehta-Basu and Chatrarhi, or by crossing a high pass from Dharmasala in the Kangra Valley. Other approaches are from Lahul in the half-Tibetan upper Chandrabbaga Valley. But that part of Lahul is, itself, rather difficult of access, and not directly connected with the adjoining Tibetan (Ladakhi) province of Zangskar. Both the roads down from Kyelang, the centre of trade with Kulu, Spiti and Zangskar or up from Kilar in Pangri from where other routes lead to Padar (down the Chandrabbaga), Zangskar or Churah, are very strenuous, and in some parts even extremely dangerous. All around high mountains, especially the Manimahesh massif in the east, the Dhauladhar and its extension, the Chattar Dhar and the Pir Pansal, in the centre, and the Zangskar range in the north, form a forbidding barrier of ice, rocks and forests.

Whereas the narrowness of the Trehta Valley permits of only few settlements, the wide Budhal Valley, in which Brahmar is situated, resembles the most beautiful parts of Switzerland. Its people, the Gaddi shepherds and cowherds, their wooden houses with balconies like Swiss chalets, their milk production complemented by some poor millet fields, vegetable gardens and bee keeping, likewise create an illusion of Switzerland. The neighbourhood of Chatrarhi repeats this setting on a minor scale. At Mirkula-Udaipur, in Chamba-Lahul, the junction of the Maiyar Nala with the Chandrabbaga forms a smaller oasis of similar type.

But amidst this “Swiss” scenery there stand, in all three places, Hindu temples, constructed of heavy beams of the fragrant deodar wood, and erected, as all the evidence proves, in the 7th-8th centuries. The very fact of the existence of wooden temples which, though repaired more than once, still are vestiges of a time twelve to thirteen centuries ago, is amazing enough. They are moreover richly decorated with wooden reliefs, and enshrine brass statues contemporaneous with and hardly less beautiful than the Central Indian art of the Buddhist and Hindu cave temples of Ajanta, Aurangabad, Ellora, etc. forming an invaluable contribution to our knowledge of Indian art. For those Central Indian monuments are generally acknowledged as creations of the Golden Age of Indian art, the Age of the Imperial Guptas and of their successors, the Vakatakas, Chalukyas and Rashtrakutas.

On a closer analysis the subject proves even more interesting. Since the middle of the 5th century the Gupta Empire had begun to crumble under the impact of a barbarian invasion which temporarily overran it down to Bihar, Malwa and
Gujarat. Like the Roman Empire, Gupta civilization withstood this invasion of
the Huns, Gurjaras and other semi-nomadic tribes for several centuries, but at
the price of a progressive militarization and absorption of the barbarians into
its own ranks.

But whereas we are comparatively well informed concerning the art of this
period in Central India, the Deccan and the South, in northern India we have to
scrape together the evidence from stray finds here and there, all that is left after
the endless destruction wrought by the wars between the successor dynasties of
the Guptas, the invasions of the barbarian leaders Mihiragula and Toramâna, the
Gurjaras under the semi-barbarian Pratihâras, the Pâla kings from the East, the
Râshtrakûtas from the South, later of the Chandellas from Central India, and at
last wave after wave of Muslim conquerors from Central Asia. But these stray
remnants show that this was one of the most beautiful and most interesting
phases of Indian art, when the foundations not only of medieval Hindu, but also
of Greater Indian and of Buddhist-Chinese art were laid.

This destruction of all historical and archaeological documentation is worst in
the Panjab which had to bear the brunt of all the successive barbarian invasions.
But just here in the Panjab we are in face of a set of richly decorated and beau-
tifully preserved wooden temples and their brass images, thanks to the seclusion
of the inner Himalayan hills. And these very temples belong to a period which
hitherto has been almost a blank in our knowledge of India's past. As we shall
see, they present quite a number of most interesting problems.

Yet the temples of Brahmor and Chatrarhi have been known for more than a
hundred years, as Sir Alexander Cunningham had visited them as far back as
1839. All of them were explored fifty years ago by Dr. J. Ph. Vogel. Their
inscriptions have been published in his Antiquities of Chamba State, (Calcutta
1911); the historical results, derived from the Chamba and Kulu Vâmśâvalîs
(genealogies) and other sources have been incorporated into J. Hutchison and J.
Ph. Vogel, History of the Panjab Hill States (Lahore 1933), and other antiquities
and works of art have been described in Dr. Vogel's Catalogue of the Bhuri Singh
Museum (Calcutta 1909). It is, therefore, a pity that the second volume of the
Antiquities never appeared, notwithstanding so many efforts, and that such
important temples never found the attention which they deserve.

1 A. Cunningham, A.S.R., XXI, p. 109, pl. XXVIII.
CHAPTER II
THE BRAHMAPURA KINGDOM AND THE BEGINNINGS OF THE CHAMBA STATE

Before giving a description of these wooden temples, it will be desirable to analyze their historical setting. No monument can be really understood except in the context of its historical background. And this problem is of special importance in the present case where the monuments appear to be suspended in a sort of vacuum, though even so we know much more about them than about many splendid temples in other parts of India like the Teli-kā-Mandir at Gwalior and the temple of Bhitargaon, the date and circumstances of which are a matter of pure speculation.

The Brahmar and Chatrarhi temples still possess their original images, and these idols bear inscriptions of a raja Meruvarman who is mentioned in the Chamba Vamśāvalī as one of the earliest and foremost rulers of the Varman dynasty of that once not unimportant Panjāb hill state. It is mainly on this evidence that Dr. Vogel has attributed both Meruvarman and the sanctuaries erected by him to the two last decades of the 7th century. Unfortunately the short inscriptions supply very few facts, partly contradicted by the traditions collected in the Vamśāvalī.

This state chronicle \(^1\) was composed as late as the end of the 16th century by Paṇḍit Ramāpati, son of Surānanda Sarma and chief minister of king Balabhadravarmān (1589-1642). It is based on an earlier Vamśāvalī in the stricter sense of the word, i.e. a pedigree of the royal house, and on various traditions then still alive, especially in the leading temples. On the whole, the vamśāvalis \(^2\) prove amazingly reliable, so far as the mere handing down of events is concerned. But they have to be accepted with considerable reservations. As products of an age of a very low standard of literacy they are utterly unscientific and uncritical; and events, though correctly mentioned, often enough are transposed into the milieu and outlook of very different later times; thus, political events of all-Indian importance are dragged down to the level of the ordinary local wars and feuds, or the names of ancient tribes and towns are replaced by those of a later period.

---

As court products they tend to suppress whatever is detrimental to the prestige of the dynasty for which they have been composed, so that reigns full of defeats and disasters are simply registered as uneventful. Victories and successes, of course, are mentioned; but also victories gained by those princes merely as vassals in the armies of mightier rulers, are represented as independent achievements. Finally all vaṃśāvalīs start with a mythical pedigree culled from the great epics and the Purāṇas, in order to prove the divine origin of the ruling house. Add to this the fact that regnal years are hardly mentioned, and that parallel reigns are treated as one subsequent to the other, and it is evident that such vaṃśāvalīs can be used only if they are constantly counterchecked with the help of other vaṃśāvalīs, inscriptions, and in the light of the general background of the times.

Before analyzing the inscriptions of Meruvarman and the early Chamba traditions, therefore, we must first survey the general situation in the Panjab during those centuries. For the Panjab then had no stable population. When Alexander the Great invaded it in 327-26 B.C., he met a great number of small tribal kingdoms and republics. Soon after his death all these small states were incorporated into the gigantic Maurya Empire and placed under the control of a viceroy residing at Taxila. However, about 185 B.C. the empire disintegrated, and northwestern India was successively overrun by the Bactrian Greeks, the Indo-Parthians and the Indo-Scythians, at last becoming an integral part of the Kushān Empire (ca. 70-250). During these chaotic times many tribes of the Panjab were pushed towards the east, some, like the Malloi (Mālavas) as far as Central India. Of these various peoples very little is known. The geographical lists in the Mahābhārata, the Purāṇas and other sacred books of the Hindus merely provide us with names. Many tribes evidently were Indians of the utmost West, but the Bāhlikas, Sakas, Kushānas (the majority of the ruling class), Tukhāras and Parthians were Iranians, and others like the Kushāna kings and the Muruṇḍas seem to have been of White Hun or Turkish stock, though of half-Iranian culture. The principal ethnic group in the Himalaya seems to have been the Mongoloid Khašās, whose settlements extended from eastern Turkistan (Kashgar) over Kashmir to Nepal and Assam (Khāṣis). To them also the Audumbaras and the Kunin-

---

3 These abuses, well known from modern war publicity, are common also in ancient Indian inscriptions.
5 Bactrians: but also a mere variant of Bābikas = aliens.
das (Kulindas) 9 probably belonged who in these centuries formed not unimportant local republics in the area of the Ravi, Beas and Sutlej. Later on part of the Kunindas seems to have moved to Kumaon, whereas on the Sutlej we find the Vrishnis, on the Beas still the Audumbaras and Kapisthalas, on the Ravi the Kathas and Darvas, on the Chenab also Darvas, Khasas and Rajanyas.

Most of the time these tribes were vassals of the Kushans. But on the decline of the Imperial Kushan the Kunindas formed an alliance with the Yaudheyas and Arjunayanas 10 of the Panjab and made themselves independent. Soon, however, they reverted to the yoke of the Sasano-Kushan kings of Afghanistan, and then came under that of the Imperial Guptas. First Samudragupta (328-376) established his power over the eastern Panjab up to Sialkot, including Kumaon and the Himalayan republics, and then the great Chandragupta II Vikramaditya (378-414) conquered the whole area up to the Indus and overawed the Sasano-Kushans.

During the last years of Kumara Gupta (ca. 445-55), however, a Druggu (Tunguse = T'u-ku-hun) chieftain, Mihiragula I (Mu-rik-an = Mu-li-yen) 11, invaded Khotan, Kashmir and Gandhara (Swat Valley) and attacked the Gupta Empire. As he cannot be identical with the well known Ephthalite king Mihiragula, son of Toramana, these Tunguse probably were the same as the Pushyamitras who according to Indian sources fell on the Gupta Empire before, and then in company with the White Huns. Mihiragula I later on returned to his home country. Those Tunguse who had joined the White Huns seem to have settled at last in Marwar and Gujarat 12. Mihiragula I was followed by the Ephthalites, a semi-Iranian people, who for some time had been vassals of the Central Asian Huns, and therefore were also called “White Huns” 13. By 427 they had established

11 Yang Hsien-yi, Oriental Art, I, no. 4, p. 166 ff. The references quoted from the Pei shih and Sung shu prove that he invaded Kashmir soon after 445, i.e. ca. 446-452.

12 The 6th century Gupta sculptures from Devni Mori, Sambalji district, Idar (H. Goetz, J. Gujrat Res. Soc. XIV, no. 1, p. 1 ff.) and the Jain bronzes of the 7th-8th centuries recently discovered at Akota and Vasantgarh reveal a pronounced Mongol type which even today can be traced in some castes; two Ambikā images represent the goddess on a typical nomadic pony (See U. P. Shah, in B. Subbaramo, Baroda through the Ages, Baroda 1955, p. 97 ff.). This Mongol type is found also in sculptures up to Jaisalmer between the 7th and 9th centuries.

an empire in Turkistan, and bands of them soon joined the Pushyamitrás. About 470 at last they likewise invaded the Gupta Empire and defeated Skandagupta (ca. 455-76) who, however, at last succeeded in beating them off. His death was followed by a succession of weak princes on the imperial throne. The empire broke up, and the Ephthalite viceroys Toramāna and Mihiragula II overran northern India up to Pāṭaliputra (Patna in Bihar), Malwa and Gujrat. Again the Indians succeeded in stemming this avalanche about 527, but apparently at the price of tremendous sacrifices. The now all-powerful military governors of the provinces became independent, and soon the last puppet emperors were superseded by several dynasties of military rulers, all of whom struggled for the defence of India against the barbarians. First about 527 Yaśodharman of Malwa defeated the Ephthalites who retired to Kashmir. And even from there he expelled them temporarily. Ultimately the nucleus of the Ephthalites seems to have been absorbed into the Turkish ruling class of Afghanistan, the Turki-Shāhīs. But whole tribes were apparently settled in the interior of India, and later merged into the various Rajput clans.

But at the very time that the Ephthalites disappeared from the scene, the Gurjaras appeared upon it. They seem to have been dragged into India by the White Hun invasion. In order to weaken the Ephthalites, the Indian statesmen apparently had played them out against their former leaders in encouraging them to set up their own principalities. But soon they became no less a nuisance and danger to the Indian kingdoms than the Ephthalites. The Pushyabhūtis of Thanesar, the Maukhari of Kanauj, the later Guptas of Malwa, and the Maitrakas of Valabhi (Saurāshtra) were kept busy holding them in check. Slowly they formed a series of states along the Thar desert, the Takka kingdom in the Panjab west of the Ravi, the Pratihāra kingdom of Mandor and Bhinmal in Marwar (Jodhpur), that of Broach in Gujrat, and another at Nasik in northern Mahārāshtra. Yet, these states do not yet exhaust the expansion of the Gurjaras. For other clans, ancestors of the Kachhwaha and Tomar Rajputs, must have settled in the Jaipur-Gwalior area, and, as we shall see, also in the Panjab Himalaya. Towards the end of the 8th century the Pratihāras of Avanti, a branch of the Bhinmal dynasty, began to absorb all other Gurjara kingdoms and to expand their empire over the whole of northern India, from the borders of Bihar to the Ravi in the Panjāb.

15 The Turks crushed the Ephthalites ca. 565, in alliance with the Sasanian Khusrau Anushirwan.
17 G. A. Grierson, *op. cit.*
the Mahi in Gujarat and over Saurāṣṭra. Henceforward nothing more was heard
of a Gurjara upper class, because it became merged into the Rajputs 20. Only its
most backward nomadic brethren have preserved their identity, the Gūjars who
today are found in the Northwest Frontier Province, the western Himalaya, the
Panjāb, Uttar Pradesh (United Provinces), Rajasthan, Malwa, Gujarat and Sau-
rāṣṭra 21.

As already mentioned, the military dynasties which had succeeded the Imperial
Guptas, kept also the Gurjaras outside the heart of Hindu civilization. Prabhā-
karavardhana and later Harshavardhana of Thanesar 22 and Iśvaravarman of Ka-
nauj inflicted severe defeats on the Huns, whereas Iśānavarman Maukharī over-
came the Śūlikas “who had an army of countless galloping horses”, some time in
the second half of the 6th century, and his successor Sarvavarman “had thrown
aloft in battle the troops of the Hūnas” 23. It is under these circumstances not easy
to define the exact western frontier line between Indians and barbarians. From
the Nirmand 24, copperplate grant of Mahārāja Mahāsāmanta Samudrasena, as
well as from excellent late Gupta sculptures found at Agroha near Hissar 25,
Kapalmochan and Pinjaur 26, we may conclude that Indian rule extended up to
the Sutlej, perhaps even as far as the upper Beas Valley. The empire of the great
Harshavardhana of Thanesar (606-647/8) extended up to the Ravi 27. But those
western territories, i.e. the kingdoms of Jālandhara (Trigarta-Kangra in the Beas
Valley), Brahmapura and Šatadru (on the Sutlej) were merely vassals acknowledging
his suzerainty. Kulūta (Kulu) seems to have been under his direct control;
but the manner is not quite clear. What happened during the chaotic years sub-
sequent to Harshavardhana’s death, is not known. But when about 730 Lalitāditya-
Muktāpiṇḍa of Kashmir attacked Yaśovarman of Kanauj (ca. 725-52), he had to

fight for three years until he could advance on the latter’s capital. This seems to show that also Yaśovarman’s empire had extended far to the west, probably likewise up to the Ravi. After his defeat in 733 Yaśovarman became Lālitāditya’s vassal, but seems to have acted as his Indian viceroy, when in 747 the invasion of the Tibetan king Khri-Ide-btsug-brtan-mes-ag-tshoms (705-55) called the king of Kashmir home and to Central Asia. Archaeological evidence makes it appear probable that Yaśovarman and his successors continued to rule over the eastern Panjab until ca. 770.

The kings of the Āyudha dynasty of Kanauj, and later the Pratihāras seem to have maintained the same frontier line. Dharmapāla (ca. 770-815) and Devapāla (ca. 815-854) of Bengal advanced deep into the western Himalaya, Kumaon (Kedarnath and Gokarna) and probably even further west. Thus, when Chakrāyudha was installed at Kanauj, he was acknowledged also by a great number of tribes in the Panjab, including the Khāras in the western Himalaya. According to the Pehoa (Karnal district) inscription (A.D. 862), Mihira Bhoja I Pratihāra (836-85) controlled all the provinces up to the Ravi. Archaeological evidence corroborates these conclusions. Late Gupta architecture and stray sculptures (7th-early 8th centuries) can be traced in the Simla States, Kulu, Kangra, Chamba, even at Asarur (the Gurjara capital of Takkadeśa) west of the Ravi, but not beyond. The original Sandhyā Devi temple of Jagatsukh in Kulu belongs to a style group which we have to associate with the Kanauj of the Āyudha dynasty, and Pāla bronzes have been found both in Kulu and at Chattrarhi in Chamba.

From all these facts we can conclude that despite periodical barbarian invasions the eastern Panjab up to the Ravi, including Kangra and Kulu, the southern and eastern borderlands of Chamba, belonged to the Kanauj (-Thanesar) empire, whether under Yaśodharman, the Maukhari, Pushyabhūtis, Yaśovarman, the Āyudhas or Pratihāras. However, it should be noted that in none of these later documents any of the ancient tribes of the eastern Panjab Himalaya are mentioned any more. That they cannot have completely disappeared, is evident from the fact

32 Cp. G. Bühler, Ep. Ind. I, p. 184. Pehoa = Prithūdaka is in the Karnal District, but one of the contributing parties, subjects of Bhoja, was the inhabitants of Sārakhadika = Shārakpur in Lahore Dt. See also the Sirsa inscription of Bhoja’s reign (D. R. Sahni, Ep. Ind. XXI, p. 293).
that the Khaṇas and Kunindas (Kanets) exist even today. But in later centuries they were reduced to serfs, ruled over and exploited by a new ruling class of Rāṇās and Ṭhākurs, claiming to be also kshatriyas. It is true, the Ṭhākurs were latecomers, mainly refugees immigrating after the defeat of Prithvi Rāj III Chauhān by the Muslims in 1192. But the Rāṇās are a much older social class, though of unknown origin, as there is no reliable evidence of their Rajput rank before the 10th century. In part of the mountains at least, however, Gurjaras must have settled.

For the Western Pahāri dialect which now is spoken in Bhadrāwāh, Padar and Pangī on the Chandrabhaga (Chenab) in Chamba, Kulu, Mandi, Suket, most of Bilaspur and in the former Simla States, lower Bashahr, Sirmur and Jaunsar-Bawar in Kumaon (up to some miles west of Mussoorie) differs but slightly from Gūjarī, the language of the Gūjars, the descendants of the ancient Gurjaras. Both the Bharata Nāṭyaśāstra and Varāhamihira observe that the Khaṇas adopted the “Bahlika” language which, in this case, can mean only Gūjarī, as the Gurjaras had come from Central Asia, and as there are no vestiges of any other language from the Bahlika country, Balkh. But as all such impositions of a new language in the course of history were the result of colonization or conquest (e.g. Latin in Spain and France, Arabic in North Africa, French in Canada, Dutch in South Africa, English in Canada, Australia and India), the introduction of a Gūjarī dialect like Western Pahāri can be understood only as the result of a Gurjara conquest or occupation.

In the same area — and, to some degree, also in the adjoining districts to the east and west — a very characteristic type of costume predominates which elsewhere is not known in India except with some of the Gūjars, nor in the adjoining Tibetan highlands, but which has affinities with eastern Afghanistan, the Pamir region, and even with sporadic ethnographic remnants farther west. The sole exception in this respect is the Brahmor area; but even there the same costume must originally have been worn, as the present population, the Gaddis, have a tradition that they had immigrated from the plains not very long before

38 Some parts of the female costume of Kulu are similar, especially the skirt, but the headdress not at all.
the Muslim conquest of northern India, i.e. probably about 1000\(^{39}\). Likewise, the archaeological monuments both of western Chamba (Churah and Pangí) and of Kulu show non-Indian features which point to Central Asian sources, distantly related to, yet different from the Iranian tradition\(^{40}\). The anthropological evidence, unfortunately, is less satisfactory, as at present the population in most areas is very mixed. However, even in this respect in Bhadrawah, Churah, Pangí, Kulu and western Kumaon an ethnic strain related to eastern Iran and the Pamir Hindukush region (Galchas, Wakhanis, Kafirs\(^{41}\)) can be recognized. All these features fit in exactly with what we know about the ancient Gurjaras, or at least what we have reasons to surmise with regard to them.

However, a Gurjara occupation of the Western Pahári area can have taken place only in the 6th or 7th century. For it is in the 6th century that the Gurjaras are first mentioned among the barbarians sweeping down on the late Gupta world; in the 7th century they had already settled down in kingdoms of their own, whereas between the 8th and 10th century they again vanished from the historical scene. May we assume that the Western Pahári area had once been also a Gurjara kingdom? It would not be surprising. For although the adjoining Panjab has not preserved such clear linguistic traces of Gurjara occupation as the Western Pahári area, we know that from the 7th to the 10th century the middle Panjab, west of the Ravi, formed the Gurjara kingdom of Takka, (Taki)-deśa, under princes bearing the Avar-Turkish title\(^{42}\) Ālakhāna (Il-Khán). The memory of this kingdom still survives in town-names like Gujrat and Gujranwala. Other place-names indicating original Gurjara occupation are found through the mountains west of the Ravi up to the frontiers of the former Chamba State all over the territory of the old Balor-Basohli principality.

But if such a Gurjara kingdom had existed, we should expect at least some reference to it, even though its identity might not be evident immediately. Now, our two principal sources for the geography of India in the 7th century, the Brihat-Saṁhitā of Varāhamihira\(^{43}\), and the itinerary of the Chinese pilgrim Hsiüang-tsang (Hiuen Tsang)\(^{44}\), mention no Gurjaras in the Panjab Himalaya, but among a number of unidentifiable other tribes a prominent kingdom of Brah-

\(^{39}\) Chamba State Gaz.; Hutchison-Vogel, op. cit. I, p. 273 (Second tradition; the first, referring to the Gaddi Brahmins and Rajputs, will be discussed below).

\(^{42}\) W. M. Mac Govern, op. cit.

mapura. As the ancient name of Brahmor in Chamba was Brahmapura 46, and as the most interesting monuments there belong to the 7th century, it is tempting to identify Brahmor with the Brahmapura of Varāhamihira and Hsüan-tsang. But the matter proves to be not so simple. Hsüan-tsang does not mention Brahmapura in Chamba at all, though he gives detailed descriptions of its next neighbours, Kulu as well as the Jālandhara kingdom which then covered the Kangra valley. On the other hand, he speaks at length of Brahmapura being 300 li (i.e. 50-60 miles) north of Mātipura on the Jamna, not far from the present Hardwar. Moreover two copperplate grants found at Tālēśwar 47 in Kumaon purport to have been issued from a town Brahmapura, not far from Kārttikeyapura, the present Baijnath in Kumaon. Cunningham sought the Brahmapura kingdom in that district. But though quite a number of places have been proposed by various scholars, it has proved impossible to identify Brahmapura with any archaeological site in Kumaon 47. Moreover, the distances given by Hsüan-tsang do not work out, and even the situation of the hypothetical Brahmapura had to be changed to the north-east of Mātipura, whereas the pilgrim mentions it as being due north of it. The most decisive objection, however, to this identification is that Hsüan-tsang mentions a vast kingdom, and that also Varāhamihira lets it appear to have been an important state, whereas the identification with a place in Kumaon permits only of the existence of a tiny and obscure principality.

We have, therefore, to approach the problem from another angle. Hsüan-tsang's description refers, in the first place, not to a town Brahmapura, but to a kingdom, 4000 li in circuit "with mountains on all sides" 48. Now, the old Chinese li was something like $\frac{1}{5}$ or $\frac{1}{6}$ of a mile. The Brahmapura kingdom, therefore, must have had a circumference of 630 to 800 miles. These measurements, of course, cannot be taken too literally as at that time exact cartographic surveys were unknown and as we do not know the exact course of the frontier line of Brahmapura. Nevertheless, some estimate is possible. In the whole course of Indian history the Himalayan kingdoms hardly ever expanded into the plains and rarely into the Tibetan highlands. From Hsüan-tsang's account it is clear not only that Brahmapura was situated within the mountains, but also that the outer Himalayan hills were included in other kingdoms, Takideśa (Che-kia), Jālandhara (She-lan-tu-lo), Satadru (She-to-tu-lo). Thus the Brahmapura kingdom can

45 Vogel, Antiquities, p. 7, A.S.R. 1902-03, p. 239.
48 The circumference of Brahmapura town is stated to be only 20 li, i.e. ca. 3-4 miles.
not have had a diameter of more than 50-70 miles. If we should thus roughly allot twice 50 or 70 miles to its southeastern and northwestern frontiers, 500-700 miles still are left for its northeastern and southwestern frontiers. In other words, the Brahmapura kingdom must have extended over 250-350 miles, i.e. it must have covered most of the Panjab Himalaya, from western Kumaon up almost to the Banihal Pass.

Now this is practically the area of the present Western Pahārī dialect, extending from some miles west of Mussoorie to Bhadravah on the Chandra-bhaga and to the mountain ranges enclosing the Kashmir Valley on the southeast. In other directions the parallel is also striking. In the districts which in the 7th century are mentioned as belonging to other kingdoms, Jālandhara or Satadru, today not Western Pahārī, but Panjabi is spoken; and upper Bashahr whither — as we shall see later on — during the Gurjara occupation the indigenous rulers of Kulu are reported to have retreated, likewise is outside the sphere of Western Pahārī.

Finally, both Hsüan-tsang and Varāhamihira mention that north of Brahmapura there was Suvarṇagotra or Suvarṇabhū(mi), the "Gold Country". This

49 Much confusion has been created by the pre-conceived idea that all these hill states had been small. Hsüan-tsang's express statements of the considerable size of all these kingdoms (Kashmir 7000 li circumference, Kulu 3000, Nepal 4000) have, therefore, been disregarded. This misunderstanding apparently is due to a projection of modern political concepts into the so different conditions of India's past. The ancient Indian state consisted, on the average, of a rather small territory direct under the suzerain king or emperor (corresponding to the medieval European royal demesne) surrounded by a vast territory ruled by vassals, tributary tribes and principalities acknowledging merely a nominal affiliation. The frontiers were utterly undefined and overlapped with those of the neighbouring powers, as the peoples of the frontier belt paid allegiance and tribute now to this, now to that overlord. In consequence, a state could be most extensive under a strong ruler, to shrink to almost nothing under a weak prince. Such conditions have obtained in India even in the 18th century, and in Nepal up to the present day. Hsüan-tsang, accepted the maximum claims. For as a Chinese he was accustomed not only to the administration of vast provinces, but also to an ideology which treated independent small states either as rebels or as insignificant barbarians tolerated by the indulgence of the Son of Heaven. On the whole his statements can be accepted. Under the Gonandiya and Karkoṭa rulers Kashmir was the suzerain of part of the Panjab and Panjab Himalaya and probably even of part of Afghanistan. Nepal was under Arthuvarman at the zenith of its power. The claim of Kulu, however, seems to have been in abeyance in Hsüan-tsang's time, but may have been correct in the preceding century. Because of the overlapping of the various claims for suzerainty, however, the aggregate of Hsüan-tsang's figures is much too high. Cf. Sunil Chandra Ray, Ind. Hist. Qu. XXX, p 89 f.

Varāhamihira's approach is different. Living in one of the new, not yet stabilized Gurjara kingdoms, he disregards those maximum claims of suzerainty accepted by Hsüan-tsang. He mentions the countries or towns which by virtue of their cultural superiority exercised it, and enumerates the tribes surrounding them, however avoiding to define their ephemeral political affiliations.

50 G. A. Grierson, op. cit.

51 Hsüan-tsang gives its position: To the east Tu-han (Tibet), to the north Khotan, to the west Sun-p'o-ha, i.e. Mo-lo-po = Marpo = Ladakh.
is Sarthol 52, the "Gold Country" of the Tibetans east of Rudok, known both to Greeks and Indians by hearsay from earliest times. Very little gold trade could pass through Kumaon 63, and the principal trade routes from Sarthol to India were along the Sutlej or through Lahul and Kulu 54, and thus went through the Western Pahārī area 55. The ancient Brahmapura kingdom, therefore, must have been identical with the present area of the Western Pahārī dialect. And as we have to make allowance for a frontier belt in which the Gūjārī-Western Pahārī language could not get a firm hold, we may add Lahul 56 (later reconquered by the Tibetans). And this Brahmapura kingdom must have been a Gūjārī kingdom, which is corroborated by the other, ethnological and archaeological evidence already mentioned 67.

However, where the capital of this kingdom, Brahmapura proper, was situated, is a more difficult question. Naturally we should infer that this must have been Brahmapura-Brahmor in Chamba, situated in the very heart and in the best defensible valley of the state. And this may possibly have been the case, at least since the later 7th century. But all the earliest monuments of Brahmor were erected by raja Meruvarman who, for reasons elsewhere to be discussed, has been dated in the late 7th century, and as temples are an essential part of a capital, this makes the impression that he was the actual founder of Brahmor. This is also the interpretation given by the Vāṁśāvalī which says that the site was selected by Meruvarman's father Ājyavarman, a short time before his abdication and death. Un-

63 For transport through Kumaon only the gold washings of Daba (31° 12': 79° 55') on the upper Sutlej and on the Manasarowar Lake (30° 40': 81° 30') can be considered, the first are rather unimportant, the second extinct today (Information supplied by the Geological Survey of India).

54 Kulu had an old treaty with Ladakh for the import of iron, copper, also of silver and gold.
55 Much of the gold was also brought to Kashmir via the Indus-Dras route.
56 According to Hutchison-Vogel, op. cit. II, p. 476, Lahul was occupied by Brahmor ca. 600.
57 These Gurjaras are mentioned neither in the Rājātarānginī nor by Varāhamihira. But Kalhaṇa's account of the Gondadya dynasty, under which alone they could have been in contact with Kashmir, is very poor and incomplete. Even in his later chapters Kalhaṇa mentions other states only in case of war or other incisive events. But as there seem to have been no wars between Kashmir and Brahmapura, he had no reason to mention it.

Varāhamihira, on the other hand, mentions neither the Gurjaras of Takkadeśa nor those of Bhīmāl or Broach, though they are well known from other reliable documents. Thus his silence in this respect is not conclusive. For, as I shall demonstrate later on, Gurjara was merely a collective term for the most different tribes, dragged into the same political movement. Varāhamihira, however, enumerates those individual tribes.
fortunately this king is not found in Meruvarman’s own inscriptions who calls his father Devavaran or Diväkaravarman. The latter is known also to the Vaimśāvali, but separated from Meruvarman by an interval of four other princes, including Ājyavarman. If any truth can be culled from this confused tradition, it is only this that Brahmar had been founded just before the accession of Meruvarman. Now, it is interesting that the Vaimśāvali mentions the foundation of an earlier Brahmapura by a legendary king Maru who in this late chronicle has taken the place of the real ancestor of the Brahmar dynasty, Mūshūnavaran. But the earlier Brahmar is said to have been in Kashmir. Whether such a place ever existed, is difficult to say. Perhaps we come nearer to a solution when we realize that the name Brahmapura occasionally was given to any town where Brahmins were settled. And as the Gurjaras seem first to have acknowledged the suzerainty of Kashmir, Brahmapura may originally have been the name of a moving royal camp where also the Brahmins attached to the king were living.

In any case, in the early 7th century Brahmapura was not far from Matipura-Hardwar. Hsüan-tsang’s statement, A.D. 643, that the kingdom was 300 li (i.e. 50-60 miles) north of the latter place, may refer merely to the frontier. For exactly there, in Chaunsa-Bawar, some 6 miles west of Mussoorie, the area of the Western Pahāri dialect ends.

But it seems probable that also its capital cannot have been very distant from the place where Hsüan-tsang learnt so much about it. Possibly this eastern situation of the Brahmapura capital may even have been enforced by the Indian overlord who thus hoped easily to overawe and control his vassals.

In this connection the Taleśwar grants appear in their proper light. They are forgeries, but old ones not later than the 8th century, probably even of the 7th century. Their contents seem genuine and their royal seals are cast from a genuine earlier seal: probably they were merely illegal substitutes for genuine copperplates accidentally lost in those troubled times. They mention a capital Brahmapura not far from Kārttikeyapura, the present Baijnath in Kumaon, and a number of

58 Dr. Vogel believes for very convincing reasons that Ājyavarman and his three predecessors were in reality the successors of Meruvarman. See Hutchison-Vogel, op. cit., vol. I, p. 276-81.
59 Hutchison-Vogel, op. cit., I, pp. 72, 105; II, p. 416; also A. Cunningham, Ancient Geography of India, pp. 137, 144, 145. Kashmir was then ruled by the “Gonandiya” dynasty according to Kala-pha. However confused its record, so much is clear that the famous Hūna leaders Mihiragula and Toramāna were reckoned to it, and also most other princes must have been half-barbarians.
61 Also the population of this area resembles the Dogras but not the Kumaonis.
villages most of which can likewise be identified. This Brahmapura, tentatively identified with Lakhanpur, may indeed prove to be the Gurjara capital of Hsüantsang’s time.

But what is most interesting, is the names of the kings Vishnuyavaran, Vrishavarman, Sri Agnivarman and Dvijavarman, or Dyudivarman, of the lunar race (Somavānsa). These names are different from those of the earliest Suryavarni (solar race) kings of Brahmapura-Brahmor, notwithstanding the common suffix varman. They represent a related, but evidently different, earlier dynasty of which, however, only “Sri” Agnivarman seems to have been of some importance. The dates of their successive reigns are not known as the two grants merely refer to the regnal years of Dyudivarman and Vishnuyavaran (who, moreover, in grant B is treated as the last ruler, whereas in the seals he is counted as the earliest one).

More results can be expected from an analysis of the Brahmor-Chamba tradition. For although the Chamba Vaimśāvali is not free from serious errors and misconstructions, it is, on the whole, corroborated by the inscriptions and the traditions of the neighbouring states, and it contains some amount of most valuable information which justifies at least a tentative reconstruction of the history of the obscure period with which we are concerned.

The pedigree of the Brahmoor kings in the Vaimśāvali is as follows: Maru (immigrated from Hindustan to Kalāpa and then founded Brahmapura I), Jayastambha, Jalastambha, Mahāstambha, Ādivarman, Devavarman, Mandāra, Kāntāra, Pragalbhaka, Ājyavarman (settled at Brahmor), Meruvarman (built the Brahmor temples), Suvanavarman, Lakshminivarman (pestilence, Kīra invasion, fall of the Brahmor State), Mūshanavarman (lost on the flight and found in a cave, grows up at the court of Suket, reconquers Brahmor), Haransavarman, Sāravarman, Sainyavarman (Senavarman), Sujanavarman, Sāhilavarman (founder of Chamba town), Yugakaravarman. The later rulers we need not discuss in this context, as with Sāhilavarman and Yugakaravarman fairly safe historical ground is reached. But most of the preceding rajas would otherwise be unknown, except those mentioned in the inscriptions of Meruvarman which, on palaeographic grounds, are to be placed somewhere about A.D. 700.

The pedigree of Meruvarman’s inscriptions and of the Gūm (Sivapuri) inscription of Sāmanta Āshādha-deva reveals a number of interesting divergences: Moshūna as the ancestor of the dynasty, next comes an undefined gap, then Ādityavarman, Balavarman, Divākaravarman, Meruvarman. King Maru is not

63 Vogel, Antiquities p. 78 ff.
64 Ibid., p. 97 ff.; A.S.R. 1902-03, p. 239; Hutchison-Vogel, op. cit. I, p. 278.
65 Vogel, Antiquities, p. 145, pl. XI.
mentioned at all. This is not surprising. For Meruvroman had merely claimed to be a Suryavarnaśi. However, the authors of the Vamśavali felt it necessary to trace the complete pedigree of the dynasty back to its divine origin. Now in most Rajput vamśavalis king Maru, the "restorer of kshatriya rule at the end of the Kali (barbarian rule, but also Buddhist-Jain) Age" is made the hero eponymos of Marudeśa (Marwar), the early home of the Gurjaras in India and of the first Gurjara-Pratihāra kingdoms of Mandor and Bhinmal, thus linking up the mythic pedigrees of the Purānas and epics with the ruling Gurjara families.

Though this link is artificial, there are no sufficient reasons for doubting the subjective honesty of the Rajput claim to descent from the early divine heroes of the epics and Purānas. We know that those sagas had a very long growth before they were put down in writing, and that during this period of oral tradition the heroes of many tribes and states were included who in reality could never have had a share in the original "War of the Ten Kings" mentioned in the Rigveda. As Indian tribes were living even in the Pamirs and in the heart of Afghanistan, and as not only Buddhism, but also Saivism, Vaishnavism and other less orthodox cults flourished there, we have to surmise that in those western frontier areas of Indian civilization the great Indian epics were known also. For quite a number of these people, even the distant Kāmboja nomads of the Pamir, are mentioned amongst the participants in the great battle between the Kauravas and Pāṇḍavas, or in the wars of Krishna. But in the versions circulating amongst these frontier tribes, probably the achievements of the local princes had been more elaborated, and their status glorified. Primitive chieftainship always claims divine origin, and as in Muslim times some of these local dynasties claimed descent from Iskandar (Alexander the Great) we may likewise assume that in earlier times they boasted of Rāma, Arjuna, Kṛishṇa, etc. as their ancestors. But, as the Indians east of the Panjāb looked down on these frontier people as semi-barbarians, it is not surprising that those stories were not incorporated into the epics and Purānas known to us, but that likewise the same claims were revived when the frontier tribes invaded India proper.

However, although in the Vamśavali Mūśhūṇa was transformed from the earliest known ancestor of Meruvroman into a considerably later descendant, the traditions connected with his name were preserved. And these are highly revealing. For his mother is said to have lost the newly born infant on her flight after the disastrous defeat of Lakshmīvarman by the Kīras and the fall of Brahmor, that the child was found in a cave in the company of many mice, and that later on it

66 The situation has been exactly the same as with the "catalogue of ships" in Homer's Ilias, or with the subsidiary epics to the Shāhnāma.
grew up, unknown, until Mūshūṇavarnam could recover his kingdom. This story contains all the traditional elements of a primitive hero-founder of a dynasty and state, the foundling (Moses, Gilgamesh, etc.) amongst animals (Romulus and Remus, etc.) and the youth in obscurity and difficulty. What here is interesting, is the story of his discovery in a cave full of mice, a typical rationalization of a barbarian totemistic ancestor myth. In the Vaimāsavali this story was transferred to a place after Lakshmīvarman because the, apparently historical, capture of Brahmar offered just the suitable background for the legend. Another raja with a somewhat similar name was eliminated from the royal pedigree, namely Mṛityuṇjayavarman, whom we know from the Prolī-rā-galā inscription.

The next successors of Maru-Mūshūṇavarman also look barbarian. Jayastambha, Jalastambha, Mahāstambha. Names ending in the word stambha elsewhere are unknown in India, with the exception of two dynasties, the Sūlakis of Kedālaka in Orissa (Dhenkanal-Talcher); Kāñchana Stambha, Raṇa Stambha, Jaya Stambha, Kanoḍa Stambha, Kula Stambha, Nidaya Stambha, and a Mlecha dynasty in Assam: Sāla Stambha, Vigraha Stambha, Pālaka Stambha, Vijaya Stambha, etc. Unfortunately very little is known about these dynasties, though they seem to belong to the same period, i.e. the 6th-8th centuries. But the name of the Sūlki dynasty proves a most valuable clue; they were Sūlīkas. In the second half of the 6th century (554?) the Maukhari emperor Isāna varman of Kanauj routed the Sūlīkas "who had an army of countless galloping horses". There has been much speculation as to who these Sūlīkas were. They have been identified with the Mūlikas—an also unidentified people—with a tribe in Kaliṅga, with the Chālu kyas of the Deccan, the Cholas of South India, the Solankīs of Gujurat-Rājasthān, the Sūlīkas mentioned in the "north-western region" in Varāhamihirā's Brihaspatimita and in the Vāyu puṇā, the Saulika of the Mārkandeyapurāṇa. However, the identifications with the Chālu kyas, Cholas and Solankīs stand on more or less hazardous etymologies only, and cannot explain how the name

67 Moreover, if the rationalization of the killed king-father has to be eliminated, the story points to a matriarchal society structure, vestiges of which can be traced everywhere in Rajput tradition (O. R. Ehrenfels, Mother Right in India, Hyderabad-Bombay 1941).

68 Vogel, Antiquities, p. 148, pl. XI.

appears in the "north-western region" which according to the terminology of that
time comprised Afghanistan, the Pamirs and Western Turkistan. We do not know
of any migration from the south in the direction of Afghanistan. On the other
hand the invasions of nomadic tribes from Central Asia were the life problem
of those days. And that the Śūlikas "had an army of countless horses", shows but
too clearly that they were one of these tribes. The Śūlakīś of Orissa we know
only from a few copperplate grants; they are nowhere mentioned as a tribe or
people of south-eastern India. They seem to have been no more than a military
clan, and may perhaps be regarded as descendants of the invaders attacking Ṭśaṇa-
varman. After their defeat and subjection they may have been used as mercenaries
of the Maṅkharis in distant Orissa where, as aliens, they could not become dange-
rous, but in those troubled times succeeded in setting up a shortlived principality,
probably under the suzerainty of the Bhauma kings. Similar groups are mentioned
in the Deccan by Tāranātha.\(^{72}\)

Unfortunately all these facts do not shed much light on the question who the
Śūlikas had been. However, they seem to have come from Central Asia. For the
Bṛihatāristamāṇa it connects them with the Gandhāras and Vokkaras (people of Wakh-
ān); the Māṅsāparīṇa says that they came from the Chakṣū (= Vakshu,
Oxus). The Śūlikas suddenly appear and disappear in the course of successive
Hūna and Gurjara inroads. Probably they were no more than a clan temporarily
rallying round them a part of the heterogeneous host of turbulent nomadic and
seminomadic tribes then on the move from Central Asia towards the centres
of Indian civilization. We shall return to this matter later on.

With Mahāstambha's successor Adivarman we first reach historical ground.
For whereas Meruvanman seems to have thought it wise to pass over in silence
his barbarian ancestors, he mentions Adivyavarman as his great-grandfather. Prob-
ably he was the first completely Hinduized prince of the house. It is, therefore,
most important to fix his approximate date. Dr. Vogel has tentatively assigned
him to the third and fourth decades of the 7th century.\(^{73}\) This calculation is based
on the average of twenty years for each reign, derived from a survey of later
Chamba history. But it is obvious that such a calculation can be no more than a
temporary expedient in absence of better evidence. In reality some reigns may
have been much longer — e.g. Balabhadraparman of Chamba reigned for sixty-
two years (1589 to 1641), others very short. We must therefore try to
stabilize these dates by synchronisms, either direct correlations with datable other
happenings or at least with general political constellations in which the recorded

\(^{72}\) Ind. Ant. IV, p. 364; B. Ch. Law, J. Ind. Hist. XX, p. 65.
\(^{73}\) Hutchison-Vogel, op. cit., I, p. 274 ff.
events could have been possible. There is a tradition that the Rajputs and Brahmans of Brahmr immigrated from "Delhi" in the reign of Ājyavarman who, according to Dr. Vogel's calculation, would have ruled in ca. 760-80. As such traditions generally are reliable, however misunderstood they may be in detail, we shall have to discover the historical situation in which such an immigration can have taken place. Delhi then did not yet exist, but it stands apparently for the capital of Northern India which then was Kanauj. Now we know from the Rājatarangini that in 733 Lalitāditya of Kashmir took Kanauj, and that in his campaign all over India he sent political opponents and hostages back to Kashmir. That people would voluntarily have emigrated from Kanauj to lonely Brahmar, is most improbable; but that political exiles in Lalitāditya’s time might have been forced to settle there, is quite acceptable.

Such an interpretation is corroborated by the tradition of the Suket, Mandi, Keonthal and Kashtwar States. The first ruler of the mother state Suket, Virasena (Bir Sen), A.D. 765, is said to have been a descendant of the Senas of Bengal. Now such an early Sena dynasty is not known. But a Bengali brahmin tradition identifies this Virasena with a raja Adisūrya. Adisūrya = Ādisena, however, points towards Āditya (= Sūrya)-sena, the founder of the later dynasty of Imperial Guptas in Magadha (Bihār-Bengal). As Lalitāditya of Kashmir deported Jīvitagupta II, the last ruler of the same line, to Kashmir, it would not seem improbable that other descendants of Ādityasena were exiled to other parts of the Himalaya. Birsen of Suket would have been one of them, carving out his own small state after the death of Lalitāditya in 756.

However, if this is correct, we have to shift the reign of Ājyavarman from ca. 760-80 down to somewhere about 730-35, i.e. the time of the fall of Kanauj. We must confess that such a date does not stand on very strong foundations. But it works out very satisfactorily. For in this case the reign of Meruvarman, the founder of Brahmar, has to be fixed somewhere about 650, i.e. a few years after the death of Harshavardhana of Thanesar. And Ādityavarman would have lived in the last decades of the 6th century, probably a contemporary of Sarvavarman Maukhari.

This being granted, we might reconstruct the history of the Brahmapur kingdom like this: Already Iśvaravarman Maukhari had fought with the Sūlika-Gurjara. His successor settled part of these invaders, after their defeat, in the Himalayan

---

74 Hutchison-Vogel, op. cit., I, p. 273; Chamba Gazetteer, p. 60.
77 Rājatarangini, IV, 322 ff.
valleys between the Chenab and Sutlej, in the same manner as the later Roman emperors settled defeated Teutonic tribes, as frontier guards, in the devastated provinces along the Rhine and Danube. About the reign of Śarva-varman Maukhari 78 Hindu cultural influence had sufficiently penetrated so that the leading Śūlika families accepted orthodox Hindu religion and assumed Hindu names ending in the suffix varman like those of their overlords, the Maukharis 79. The ruling family probably were the Somavaṃśī Varmans of Tāleśwar-Brahmapura in Kumaon. The Śūryavaṃśī Varmans then may have been their vassals somewhere, perhaps in the western districts of the kingdom. Possibly the stronger direct control of Harshavardhana of Thanesar over Kulu in the early 7th century may have made them practically independent of Tāleśwar-Brahmapura.

When that place was apparently destroyed by the Tibetan king Srong-btsan-sgam-po (600-650) in the chaotic years 80 subsequent to Harshavardhana’s death (A.D. 648), Divākaravarman retreated into the inaccessible Budhal valley, declared his independence and, in assertion of this claim, founded another royal capital Brahmapura-Brahmor. His son Meruvarman then reconquered the whole Brahmapura kingdom and embellished his new capital with the richly carved temples and brass images which are discussed in this book. Under his successors the state again declined. Their names (Mandāravarman, Kāntāravarman, Pragabhavarn, i.e. the Mountain Varman, the Forest Varman, the Bold Varman) seem rather barbarian. In Bāna’s Kādambarī there is a hardly veiled reference to the loss of Kulu which was conquered by Chandrāpiḍa (713-20) and Tārāpiḍa (720-24/5) of Kashmir 81.

Ājayavarman must have lived in the early reign of Lalitāditya of Kashmir, as already mentioned. That he had become a vassal of Kashmir can be concluded from archaeological evidence. At Manali in Kulu there are vestiges of a fortress guarding the Rohtang Pass in which some sculptures (Fig. 9, p. 67) in the Kashmir style of Lalitāditya’s reign have been discovered. Two carved wooden reliefs (Fig. 8, p. 67) in the mixed Kashmir-Kanauj style of the same period stand at Maylang in Lahul. Further down the Chandrabhaga, in Chamba-Lahul, vestiges

79 At that time the Pusyabhihūtas of Thanesar seem to have been subordinate to the Maukharis; their sphere of influence extended more in the direction of the southern Panjāb and Rāja-sthān. The first to rise to real importance was Prabhākaravardhana (died 604).
of Kashmir art can be traced at Markula-Udaipur \(^{82}\) and at Triloknath \(^{82}\). Thus a whole line of strongholds and temples can be traced from the Rohtang Pass through Lahul and probably Pangí, Kashthwar and the Maru-Wardhwan Valley to Kashmir, guarding the empire of Lalitādiya against the Tibetan raiders. Brahmor was, naturally, situated inside this defence line. In Brahmor itself the top gable of the Lakṣanā Devī Temple \(^{84}\) and the bust of “Sakti Devī” (a Bodhisattva?) at Chatrarhi tell the same tale.

However, the tradition of the settlement of exiles from Kanauj permits of some other important conclusions. These newcomers could become the leading aristocracy only if the old Sūlika-Gurjara nobles and the earlier Brahmin families had, at least partly, disappeared. Either they had been slain in the wars of the time, or they had been deported in their turn to other parts of India, to some of the Kashmir garrisons in the heart of India or in Central Asia. In any case it must have meant a dangerous weakening of the state. Under Ājayavarman and under his son Suvarṇavarman, who likewise seems to have been a vassal of Lalitādiya, the dangerous consequences of such an imperial interference were not yet apparent. But under Lakṣmīvarman (after 760) the Brahmapura kingdom collapsed.

With the rapid disintegration of the Kashmir empire after the death of Lalitādiya A.D. 756 in Sinkiang, the disorganized Brahmar State lost its sole support. A virulent epidemic, probably brought home by the soldiers returning from the emperor's last exhausting campaigns in Central Asia, depopulated Brahmar and a good part of the Brahmapura kingdom. Next Kumaon broke away. Kulu was lost. Then the Tibetans overran Brahmar, Lakṣmīvarman was slain in the last desperate battle, and his queen had to flee to Kangra and finally to Suket.

In the last decades of the 8th century Kumaon returned to the rule of its native princes. The Bāgeśvar (Vyāghrēśvara) and Pāndukēśvar inscriptions record a line of princes no more called Varman, but bearing typical Katyūrī names (Nimbāra, Ishtaganadeva, Lalitāsuradeva, and Bhūdeva) and again residing in the old Katyūr capital Kārttikeyapura \(^{85}\).

Kulu was likewise reconquered by its native rajas. Like the early history of all these hill states, that of Kulu is rather confused; yet it is very clear as to the point that during the same period Kulu was several times invaded by the “Gaddis” and

---

\(^{82}\) These oldest vestiges are preserved only in copies of the 11th and 16th century; see below.

\(^{83}\) Most of the temple is much later, but the column bases of the original porch of the sanctuary are of a very special type characteristic of the reign of Lalitādiya.

\(^{84}\) The relief, representing Vishṇu as Vaikuṇṭhanāth, is not in its original position; it belonged to another temple and was added to the façade of the Lakṣanā Devī temple during a much later repair.

occupied by them for a considerable time — at least for 150 years. First, Chamba with Ladakh, Suket, Bashahr, Kangra and Bangahal are said to have conspired to make Gaṇeśpāl, an illegitimate son of Brahmpāl, raja. In the reign of Śrī Dateśvarpāl a Chamba army under an otherwise unknown prince Amar [var-
man?] invaded the valley and killed the raja of Makarsa (Makaraha, old name of Kulu). After his father’s death Amar made himself independent, but was again defeated by the Chamba troops and slain with his eldest son, whereas the younger son, Sitalpāl, fled to Bashahr. Śrī Jareśvar-Pāl, sixth descendant from Sitalpāl, at last returned and liberated Kulu from Chambyal rule. Some generations later, in the time of Nāradpāl, the “Gaddis” again invaded Kulu through the Rohtang Pass, built a fort at Majnakot and besieged Manali Garh, but were at last expelled or annihilated.

The tradition, such as it has come down to us, evidently is coloured by later conditions. For at that time neither Chamba nor the Gaddis existed; Chamba town was founded only in the 10th century and the Gaddis immigrated not before 1000 into the Brahmor Valley. The traditions, therefore, must refer to the old Gurjara-Sūlika kingdom of Brahmapuraka-Brahmor. Our difficulty is the chronology of the time. As Bhūpāl, second successor of Nāradpāl, is mentioned as a contemporary of Bīrsen of Suket after 765, we might count back twenty years on the average per reign which would bring the first mention of Chamba down to 300 and the first invasion from there to 560. However, it looks as if part of the dynastic lines had been not successive but parallel, and that other reigns were very short. The first mention of Chamba in the reign of Gaṇeśpāl is so little in harmony with known historical conditions that we had better leave it aside. But the conquest of Kulu by prince Amar seems to record the Gurjara-Sūlika invasion, and Amar’s revolt is compatible with the loose political structure of such a barbarian horde. That his surviving younger son Sitalpāl fled to Bashahr, likewise fits into the picture. For Bashahr lies outside the pale of the Western Pahāri dialect and, thus, did not form part of the Brahmapura empire. That Kulu thereafter formed part of the kingdom, appears from Viśakhadatta’s drama Mudrā-
rakṣasa, in which the king of Kulu (Kulūta) is called Chitravarman. No such

86 Hutchison-Vogel, op. cit. II, p. 434.
87 Ibid., p. 435.
89 The name, if historical, creates the impression that his mother had been a princess of the original Kulu dynasty, and that after the suppression of the rebellion by the leading Sūlika clan, he took the side of his mother’s family. However, the Pālas can have been only one of several old families, as is proved by the coin of king Viṭayasa (A.S.R. 1907-08, p. 265; and Cunningham, Coins of Ancient Indus, p. 67, pl. IV, 14) and by the Salanu inscription of Śrī Chaṇḍeśvarahastin Vatsa (A.S.R. 1902-03, p. 14).
king is otherwise known to us, and the name may be imaginary; but its suffix varman indicates that he was a Brahmapura feudatory, not an indigenous prince. The reconquest of Kulu by Sīr Jareśvarpāl we may tentatively place about 650, the time when the older Brahmapura in Kumaon had been destroyed by the Tibetans of Sron-btsan sgam-po. The utter silence about his next five successors may be due to the fact that they were again subjected by Meruvvarman of Brahmor, though tolerated as vassals. For the very fact that the new Brahmapura capital was founded in the inaccessible Budhal valley, shows that Meruvvarman did not feel too safe, and therefore tried not to estrange the reconquered areas unnecessarily. However, under Meruvvarman’s obscure successors this overlordship seems to have soon ceased. Bāna’s novel Kādambarī narrates that king Tārapīḍa of “Ujjayini” conquered Kułūta, took the princess Pattralekha prisoner, and that his queen Vilāsavati made the princess betel-bearer to prince Chandrāpiḍa. Now, these are only slightly disguised allusions to the political expansion of Kashmir under the Karkoṭa kings. And the subjection of Ājyavarman of Brahmor by Lalitāditya proves to be but the last link in a long chain of diplomatic and military moves, by which his predecessors Chandrāpiḍa and Tārapīḍa had already broken up the Brahmapura kingdom.

The last Kulu-Brahmor war probably took place late in the reign of Suvarṇavarman of Brahmor or early in that of Lakshmīvarman, soon after the death of Lalitāditya. Bīrsen, who had founded Suket State ca. 765, in his later years conquered Saraj, the southernmost province of Kulu, and subjected its raja Bhūpāl. As this cannot have happened earlier than ca. 780, and as Bhūpāl’s predecessors Shīshpāl and Narottampāl seem to have reigned only for a short time, Nāradpāl must have lived somewhere about the middle of the 8th century. The war is said to have lasted twelve years and again to have weakened the Brahmapura forces badly. The tradition of the destruction of a Brahmor army in the gorge of Rahla-Kothi near the Rohtang Pass appears very fantastic, but is borne out by the local conditions.

The Kīra invasion which gave the coup de grace to the Brahmapura kingdom, can be identified with certainty. The term ‘Kīra’ generally was used for the hardly known tribes in the hinterland of Kashmir; in the middle ages, when the

---

90 Hutchison-Vogel, op. cit. II, p. 416.
91 Dr. Vogel’s attempt to synchronize it with the later “Kīra” (Tibetan) invasion under Khri-sronglde-btsan seems to me untenable because Sīr Jareśvarpāl was the eighth predecessor of Bhūpāl, the contemporary of Bīr Sen of Suket, ca. 765-80, and the descendant in the sixth generation of prince Amar who must have lived somewhere about 570, i.e. the reign of Isānavarman Maukhari.
92 Hutchison-Vogel, op. cit, II, p. 416 ff.
93 Ibid., I, p. 342.
Dards, Bhauxrs, etc. were already known, it referred mainly to those Tibetans who were not the immediate neighbours of the Himalayan Indians. Since their conversion to Buddhism under Srong-btsan sgam-po in 638 the Tibetans had become restless. This king seems temporarily to have overrun northern India. Then king rMang-srong-mang-btsan (650-679) warred with the Turks and Chinese; Gung-srong 'du-rje (679-705) invaded the upper Hoangbo Valley, Khotan, Baltistan and Nepal; Khri-lde-btsug-brtan-mes-'ag-tshoms (705-55) attacked China and Kashmir and could be kept at bay only with the utmost difficulty; Khri-srong lde-btsan (755-97) at last annihilated Lalitāditya of Kashmir in Sinkiang, looted the Chinese capital Ch’ang-an, and occupied Hsi-an fu and Szuy-ch’uan. Khri-srong lde-btsan’s hordes overran also Brahman, Kulu and Mandi. Tibetan inscriptions of this time are found on some rocks at Ghosan in the Budhal Valley not far from Brahman, others in Kulu, on the road between Manali and Katrain. Ravalsar, 20 miles south of Mandi on the Suket road, is even today visited by Tibetan pilgrims as the Zahor of Padmasambhava, the spiritual guide of the Tibetan conqueror, and the actual founder of Lamaism. However, under Khri-srong lde-btsan’s weak successors the Tibetan empire rapidly declined, and after the assassination of Dar-ma dbyig-dur-btsan by a monk in 842, it was divided and soon even subdivided. Thus, the conquests of the Tibetans in the Indian Himalaya were again lost after a few decades.

The fact that Lakshmiravan’s widow fled not down the Ravi valley to the western provinces of the kingdom, but to Kangra and Suket, shows that these States first had made themselves independent. For all practical purposes the Brahmapura kingdom had ceased to exist.

94 Vogel, *Antiquities* I, p. 99; Kiras are mentioned also in the Kangra Valley, especially at Kiragrama-Baijnath. But these were merely some scattered groups of unknown origin. They may represent a residue of the Tibetan invasion of the late 8th century, or may have been settled by Sāhilavarman of Chamba after his victory over the Kashmiri-Hindu Śahi invasion in the 10th century.

97 Vogel, *Antiquities*, p. 255: a reference in the T’ang annals (T’ang-shu) that the Tibetans then held Po-lo-man, probably refers not to Brahman = India (?), but rather to Brahmapura.

98 Vogel, *Antiquities*, p. 253. According to A. H. Francke the title “Garuda Lord” was used only under the early kings of Tibet.

However, the *Vamsāvali* records that on her flight through Trehta (ancient Trighaṭṭaka), the upper Ravi valley, the widow of Lakshmivarman at Garoh bore a son who had to be left behind, but was miraculously saved by the wazîr and purohit. The miraculous circumstances of his birth and recovery in a cave full of mice obviously refer to the earliest known ancestor of the Brahmar dynasty, Mūshūṇa or Mūshaṇavarman. But whether the whole legend of that mythic Gurjara-Sūlika hero has been inserted here by the authors of the chronicle, changing the name of the prince, or whether the latter had in fact been named Mūshaṇavarman (II) after his ancestor, we cannot decide. It is possible that the name of Mūshaṇavarman has been substituted by the authors of the chronicle for that of Mrityuṇjayavarman which is absent in the *Vamsāvali*, but known to us from the Proli-ra-gala inscription 101. However, as the characters of that inscription resemble those of the grants of Vidadhavarman (ca 960-80), the sequence of the rulers must have been altered. This is, of course, possible, as in their reconstruction the authors of the chronicle had to find not only a ruler with a somewhat similar name, but also a suitable historical situation such as the Kīra invasion indubitably had been. On the other hand, the possibility of the exposure and recovery of a baby during such a precipitate flight cannot be rejected, the more so as the place of the event still is shown, and then only the picturesque details may have been taken over from the old myth.

Also the later history of Mūshaṇavarman II 102 looks romantic and may be mere romance, but is in keeping with similar strictly historical episodes. He grew up in obscurity at Kangra and later at Suket, until he was discovered, married to a daughter of the raja of Suket and at last could reconquer his patrimony with the help of a Suket force. But we should cherish no illusions as to the importance of these events. Suket was at that time a rather powerful state, controlling also the whole area of later Bilaspur, Mandi, Kulu, and eastern Kangra. Mūshaṇavarman’s principality cannot have comprised more than the Budhal Valley and some adjoining section of the Ravi Valley; and he was no more than one of the many feudatories of Suket, in its turn a vassal of the Pratihāra empire of Kanauj 103. It is, therefore, not surprising that of his next four or five successors we know only the names. They were not sovereign princes at all, and might have been forgotten if in the 10th century Sāhilavarman had not founded the Chamba kingdom which claimed to be the heir of Brahmar and lasted until our own day.

103 Tibet seems to have retained some control deep into the 9th century, *see ibid.* p. 375 f.
Despite this claim to continuity Chamba State has, therefore to be regarded as a new foundation independent of that of Brahmor. Although the documents and traditions about Sāhilavarman are exceptionally copious, the circumstances of this second foundation of the state are likewise mysterious. How could an obscure feudatory of a small vassal kingdom of the Pratihāra emperors suddenly become a formidable power in the Panjab Himalaya? Even a highly gifted personality could achieve this only under exceptionally favourable circumstances. But on these subjects both documents and traditions are rather reserved. Some useful clues can be gathered from the Vaiśāvalī: “He, engaged in severe austerity with his lawful wife on the southern slope of the Himalaya, attained his object and became accomplished in yoga. Then there appeared wizards, eighty-four in number, to give him a boon”, allegedly because he had no sons. Two grants issued by his descendants Somavarman and Āsaṭavarman, the sons of Sālavāhanavarman, in 1056-66, mention him as a great warrior, the protector of Kulu and Trigarta (Kangra), the victor over Kīras, Durgaras, Saumatikas and Turushkas (Turks), and as a pious donor at holy Kurukshetra. Now it is interesting that the two grants, written not much more than a century after his death, know nothing of Sāhilavarman’s interest in yoga. Of course, it is very probable that he went to Kurukshetra just as a pilgrim. But why was he absent for an apparently long time? From where could he collect such numerous troops as to beat off several formidable invasions into the western Himalaya? Why did he get the support and advice of the saint Charpatnāth and of his Siddha-yogis? From where could he draw the considerable revenues necessary to build a new capital with an establishment of temples such as no other place in the Himalaya between Kashmir and Kumaon could boast of in his time? All this was beyond the outlook, resources and possibilities of a small and dependent local chieftain such as the Brahmor rajas had been at that time.

The only possible explanation is that Sāhilavarman, discovering a better field for his energies than his tiny patrimony, had become an officer in the Pratihāra army, and at last was made a general and governor of part of the western frontier of the empire; and that, when that empire began to disintegrate, he founded a strong kingdom of his own by annexing the valleys around Brahmor, though still owning allegiance to the weak Pratihāra emperors and thus responsible for the safety of the western frontier. On this account he had his capital moved to Chamba from where he could easily control Pangj, Churah, Balor, and the exits of the Ravi and Beas Valleys into the plains.

The times were favourable to such a career. Under Bhoja Ādivarāha (ca. 840-90) and Mahendrapāla (893-907/8) the Pratihaṇāra empire had reached the zenith of its power. Then a period of weak or short reigns followed, even the sequence of which is disputed. Bhoja II Mahipāla I was attacked by Indra III Rāśṭrakūta (914/5-917) some time before the latter’s coronation, and by Saṁkara-varman of Kashmir (883-902), and had to flee from Kanauj. Until about 954 the suzerainty of the Rāśṭrakūtas extended up to Kalinjar and Allahabad (Prayāga), not far from the gates of Kanauj; and by the occupation of Chitorgarh they controlled Rājasthān, also the original home of the Pratihaṇāras. After Mahipāla I there followed a series of princes whose reigns rarely lasted for more than a few years, and whose sovereignty even extended only over some parts of the weakened Pratihaṇāra empire. When about 954 the Rāśṭrakūtas were expelled, and when Mahipāla II was brought back to Kanauj by Dhaṅga Chandela, the Pratihaṇāra emperors had become powerless puppets in the hands of their mighty vassals who divided the empire between them, the Chandelas and Haihayas, Paramāras, Chauhāns, etc. This loose confederacy broke up under the inroads of Mahmūd of Ghazni.

As we have seen, under Bhoja I and Mahendrapāla the Pratihaṇāra empire had extended up to the Ravi, whereas west of that river the Gurjara kingdom of Takkadeśa formed a vassal buffer state.

Further to the west Kashmir seems to have retained its control over Afghanistan and the western Panjab, at least nominally. But in 786 Kabul was taken by a Muslim expedition, and about 870 the indigenous Turki Sāhi princes, descendants of the Kidāra-Kushāns and White Huns (Ephthalites), were superseded by the Brahmin Sāhi dynasty founded by Lalliya. In the meantime Avantivarman (855-83) of the Utpala dynasty had restored the power and prosperity of Kashmir. His son Saṁkaravarman (883-902) revived the claims of Kashmir over Afghanistan and the Panjab and defeated Lalliya, the Gurjara Ālakhāna

108 The account in the Rājatarangini seems to imply that Saṁkaravarman acted in alliance with the Rāśṭrakūtas against the combined forces of the Pratihaṇāras, the Ālakhāna of Takkadeśa and Lalliya of Kabul. This favours the assumption of an earlier campaign about 885 when Krishna II was on the Rāśṭrakūta throne, — in case our traditional dates for Saṁkaravarman and Lalliya be correct. For is it probable that Saṁkaravarman could defeat the great Mahendrapāla and the Sāhi? And we know nothing of any successful Rāśṭrakūta campaign under Krishna II.
109 H. C. Ray, Dynastic History of Northern India (Early Mediaeval Period), Calcutta 1931-36.
110 M. A. Stein, Rājatarangini, Westminster 1900, Book V.
(Il-Khan) of Takkadeśa and, temporarily at least, Prithvichandra of Trigarta at the time when Bhoja II Mahipāla I was expelled from Kanauj by Indra III Rāṣṭrakūṭa. After Sañkaravarman’s death Prabhākaradeva, minister of queen Sugandhā, undertook an expedition to Kabul and installed Lallīya’s son Toramāna-Kamaluka as a vassal of Kashmir about 904. Diddā, daughter of Siṃharaṇa of Lohara, who was the queen of Kshemagupta (950-58) and de facto ruler over Kashmir until 1003, probably was Toramāna’s granddaughter.

Thanks to this connection with the royal house of Kashmir the Sāhis took over the provinces in the Panjab, including Takkadeśa. Though first Sāhi Jayapāla (965-1001) succeeded in expanding his rule over the eastern Panjab and the Kangra Valley, it seems probable that already Toramāna (902-4—ca. 940) and Bhīmapāla (ca. 940-65) had tried to add the territories beyond the Ravi. The crisis of the Pratihāra empire, continuing after the combined attack by Indra III and Sañkaravarman, must have been too tempting.

On the other hand, the tradition of Pratihāra greatness was not yet dead, and thus there were generals who were eager to defend the frontiers, but who had also to fend more or less for themselves, without more than the moral support of the emperors. One of those military governors of the western Pratihāra frontier Sāhilavarman seems to have been, whom his acquaintance with local conditions must have recommended for the post. Thus he rescued Trigarta, and defeated the lord of Durgara and the Saumatiṣkas (Vallāpura-Balor), the guardians of the frontier on the Kashmir side. Who the Kīras in this case had been, we do not know for certain. As the term applied mainly to the semi-barbarian tribes of the hinterland of Kashmir, they may have been Dards, Ladakhis or other mercenaries in the Kashmir service. Possibly Kiragrāma (Baijnāth) in the Kangra District was a colony of prisoners of war settled there by Sāhilavarman. The Turushkas can have been only the Turkish soldiers of the Sāhi army.

But when the Pratihāra empire more and more dissolved into a confederation of former vassal states, Sāhilavarman must have consolidated his governorship into a semi-independent kingdom, apparently not without opposition from those who had accepted him as a mere Pratihāra governor. For he is represented not only as the protector of Trigarta and Kulūta, but also as the victor over these states.

As the centre of this kingdom Sāhilavarman selected Chamba, on a terrace

112 Hutchison-Vogel, op. cit., II, p. 518.
113 Ibid., II, p. 590.
above the junction of the Sala river with the Ravi, and at the foot of the Chuari Pass, not far from the passes to Churah and the entrance of the Ravi into the gorge leading to the plain. At the back protected by the steep Shah Madar hill, on the river by not less steep slopes, towards the upper Ravi and the Sala valleys by ridges projecting from the Shah Madar hill, the place was a natural fortress according to the standards of those times. The high Sarota valley supplied it with drinking water. The foundation of the town encountered considerable difficulties. A local raṇa (chieftain) who had his fort on a hill on the other bank of the Sala, had to be dispossessed; a grant of land to Brahmins had to be converted into a permanent tax-rent; a human sacrifice — Sāhilavarman’s own rani — was needed to propitiate the spirits displeased with the channel leading the waters of the Sarota into the town. But soon splendid temples arose, in fact the most monumental group of Pratihāra temples in the whole western Himalaya west of the Sutlej, and the marble for the idols was brought from afar — the “Vindhyas” —, again at the cost of the life of two sons of the ruler.

In all this planning Sāhilavarman was advised by “eighty-four wizards” led by the saint Charpaṭnāṭh (Charpaṭi, Charpaṭa). Here two different traditions seem to have been mixed up. Charpaṭnāṭh (Charpaṭi) is known both to the Mahāyāna Buddhist and Saiva tradition as a guru respectively of the “Siddhāchārya”, or of the Kānphaṭa yogī (Gorakhnāṭhi) sect. Unfortunately the time of his life is most uncertain. Tucci has attributed him to the 10th century on the evidence of the Chamba chronic. But Dr. Benoytosh Bhattacharyya, another great authority on Tantric Buddhism, has pointed out that Tāranāṭha’s History of the Eighty-Four Wizards (i.e. Siddhāchāryas) mentions him as a contemporary of the famous Lui-pā, and the guru of Kukkurīpāda (Kakkuti). On other evidence he has dated Luipā about 669 and Kukkurīpāda about 693. In other words, the saint Charpaṭnāṭh would have been a contemporary of Meruvarman of Brahmor, and not of Sāhilavarman, the founder of Chamba town. As a Saiva, or Buddhist Tāntrik, Charpaṭi would probably have been connected with the foundation of Saiva and especially Sākta temples, such as those of Brahmor. Also the peculiar activities of the saint and of his eighty-four (sic!) disciples would fit much better into the cultural context of Meruvarman’s time. And finally the shrines of the

116 This reference to the Vindhyas has been questioned. However, if Sāhilavarman was a Pratihāra military governor, it is not impossible that the marble was fetched, if not from the Vindhyas, at least from northern Rajputana.

117 G. Tucci, JASB, n.s. XXVI Letters, p. 125, where other literary references to Charpaṭi are quoted.

118 B. Bhattacharyya, Śādhanamālā, II, p. XLIII, CII, Baroda 1928.

119 A. Grünwedel and Bh. N. Datta, Mystic Tales of Lama Tāranāṭha, Calcutta 1944.
eighty-four wizards are actually at Brahmore, not at Chamba. Thus it appears that the original Charpaṭi legend referred to the foundation of Brahmore by Meruvanman. However, it is not impossible that the saint was connected also with the foundation of Chamba, not of the capital of Sāhilavarman, but of an earlier settlement. For fragments of the foundation of a late Gupta temple have been discovered not far from the Lakshmi-Nārāyanā temple. Moreover there is no reason to reject the story as far as it is connected with Sāhilavarman. Indian gurus not seldom are named after the founder of a sect, whose spiritual successors they are. The fact that in the tradition the derivative form Charpaṭa alternates with the original Charpaṭi, makes it probable that the guru and adviser of Sāhilavarman was a later Kāṇphaṭa saint of the same sect. It is worth mentioning that in the Pratihāra empire the Gorakhnāth (Kāṇphaṭa) sect has exerted an enormous influence as religious and cultural missionaries, especially in the western, half-barbarian provinces. We can well imagine that the Pratihāra government, unable to support Sāhilavarman otherwise, had sent to him a “political and cultural mission” of experts. That this mission cannot have been composed exclusively of Saiva ascetics, is evident from the predominant role of the Vaishnava state cult of Lakshmi-Nārāyanā in the new capital.

Sāhilavarman's successor Yugākaravarman (ca. 940-60) seems still to have kept his father's kingdom intact. The erection of the Gauri-Saṅkara temple at Chamba, with its magnificent brass idol, by the king, and of the Narsingh temple at Brahmore by his queen Tribhuvanarekha speaks for a time of peace and prosperity. But under his successors Vidagdharavarman (ca. 960-80) and Dodakavarman (acc. ca. 980) the kingdom must have quickly declined, and under the next two rulers Vichitravarman and Dhairyavarman passed through another serious crisis. The absence of big monuments and, after Dodakavarman, of all evidence beyond the names of the next rulers points to a rapid disintegration. About 965 Jayapāla had come to the Śāhi throne, a vigorous prince who expanded his kingdom, threatened in the west by the Muslim rulers of Ghazni, over the eastern Panjab, moved his capital to Bhatinda and probably also occupied Kangra Fort, the capital of Trigarta. For on the heels of the Śāhis there followed the

120 Now transferred to the Bhuri Singh Museum.
121 This seems to be an old confusion; e.g. the Agamapurāṇa of Yāmunāchārya spells the name Charpaṭa (see Tucci op. cit., p. 125 ff.).
124 The last monuments are the later Tur rock inscription (Vogel, Antiquités, I, p. 147 f., pl. XII), the Sungal and Sai grants of Vidagdharavarman and of Dodaka (ibid., p. 172 f., pl. XIXa), possibly also the Proli-ra-gala inscription of Mrityunjayavarman (ibid., p. 148 ff., pl. XI).
Muslim invaders. Jayapāla was not able to stem the advance of sultan Sabuktégīn in the battle of Lamghan (980), notwithstanding substantial support from the various Rajput kingdoms still acknowledging the last Pratihāras as their nominal overlords. His successor Ānandapāla (1001-13) was expelled from the Panjab. Trilochanapāla (1013-21) failed to reconquer it, though supported by an army under Tunga, the general of Saṅgrāmarāja (1003-28) of Kashmir.

Thus soon after 964 — the last date in an inscription of Vidagdhavarman — Chamba must have lost its hold on the Kangra Valley. And also elsewhere its authority collapsed. For Lakshmansen of Suket invaded Kulu. Soon afterwards Kulu became an aggressive state, its rajas Santokhpāl, Teghpāl and Uchitpāl attacking Ladakh, Baltistan and Tibet. In the west, Churah was lost to the Balor kingdom, as early in the 11th century (1028/9, 1041) we find it under the control of Trailokyadeva. The worst disaster, however, seems to have been the result not of the attacks from the surrounding states, but of a mass invasion by the present Gaddis of Brahmr. The Gaddis (Gadhāiyas) were a semi-nomadic tribe inhabiting the Panjab, probably Takkadeśa, though originally they may have come from the Hindukush region, as they have many affinities with the Kafirs. Whether the earlier advance of the Sāhis or the Muslim invasion had driven them into the Kangra valley, we do not know. But when Sultan Mahmūd attacked Nagarkot, most of them seem to have moved beyond the Dhaulā Dhar into Brahmr which since then has become the Gaddi country par excellence (Gadarān). Finally Chamba, so badly weakened, was invaded by king Anantadeva (1028-63) of Kashmir, and its raja Sālavāhana defeated and killed in 1059/60.

Chamba recovered again under Somavarman (ca. 1060-80) and was a flourishing hill state until the Muslim invasion, was then subjected by Trigarta, recovered again between 1330 and 1623, was again subjected by Nurpur, and in 1641-45 became the modern Chamba State, which survived until 1948. But with this later history we are not concerned.

125 When Sultan Mahmūd attacked Nagarkot in 1009, it was one of the last Sāhi strongholds.
127 Ibid. II, p. 438.
130 They are not a homogeneous group, and part of them are associated also with the Ahirs and Ghosis.
What interests us here, is the Gurjara kingdom of Brahmapura, from the end of the 6th to the second half of the 8th century. We have discussed the second Pratihāra-sponsored Rajput kingdom of Sāhilavarmān and of his successors only, because its relationship with and contrast to the older Gurjara state are essential for the understanding of many problems of the latter. Despite the claim of dynastic continuity, the Brahmor kingdom has not been identical with Chamba State. It had been a political and cultural phenomenon of a very different character, and though its heritage has had much influence on later Chamba, it has to be interpreted in quite another light.
CHAPTER III
THE REMNANTS OF "GURJARA" CIVILIZATION

From our historical analysis it has become most probable that the Brahmapura kingdom was not a normal Hindu state, but a frontier state founded by barbarian invaders and then slowly integrated into Hindu society and civilization. This process was partly peaceful, through the adoption of orthodox Hindu customs, class ideals and claims, cults and arts, finally through intermarriage; partly brutally enforced by the decimation of the barbarian upper class who were sacrificed as soldiers, or deported, in small units, to other parts of India, and by the settlement of exiles from the Indian plains in their stead. It was intensified by the devastation of the areas of both the old capitals which, naturally, would have been the principal targets of any enemy attack. Taleśwar-Brahmapura disappeared after the death of Harśavardhana of Thanesar, and its Gurjara population must have fled or perished, as today its site lies outside the Western Pahārī-Gūjarī linguistic area. Brahmo-Brahmapura was resettled in the reign of Ājayavarmān by Lālitāditya of Kashmir, devastated by the Tibetans and at last occupied by the Gaddis so that for almost a millennium it forms a separate ethnic enclave in the Western Pahārī area, although the Gaddis have adopted the dialect of that area. But outside those centres of power, the isolation of the valleys of the middle Himalayan zone has reduced outside interference to a minimum, and rendered the infiltration of orthodox Hindu civilization slow and superficial. Everywhere we find it mainly in the old state capitals and district centres, whereas in the rural districts proper the older forms of life, Khāṣa, Gurjara or Gaddi, have survived at least up to the time of the great Muslim invasion on the eve of the 13th century. This permits us to reconstruct, to some extent, the civilization of the old Brahmapura kingdom.

As we have already seen, the close relationship of the Western Pahārī dialect with Gūjarī, as well as the history of the Brahmapura kingdom prove that the dominant population there in the 6th-8th centuries had been Gurjaras. But this

1 A check-up of the latest known settlements of the former barbarian conquerors, Hūgas, Ahirs, Śūlikas, etc. leads us to Oriissa, Mahākosala, Malwa, the Deccan, Soraṭ, etc., whereas the peaceful or backward masses of the same invaders still survive in the N.W. Frontier Province, the Panjab, Western Himalaya, Rajasthan and Gujarāt.
does not lead us very far. For up to the present day the identity of the Gurjaras represents an unsolved problem. They have been claimed to have been Indians, Iranians and even Turks. Obviously something can be said for each of these theories. And yet none of them works out satisfactorily, perhaps because they tend to simplify the problem too much in equating the Gurjaras merely with one ethnic group.

For we should not lose sight of the character of such barbarian mass migrations. Wherever we have more detailed information, whether about the invasions of the Hyksos or of the “Sea Peoples” into Egypt, of the Teutons, Huns, and Slavs into the Roman Empire, or of the Tatars into China, it always was an avalanche of tribes of the most different racial and cultural type, fleeing one before the other, pushed onward in order not to be subjected, dragged on as vassals or voluntary associates of the victor, constantly changing their leaders, federations swelling to countless numbers with victory, breaking up with defeat, reforming under new leaders, part of them settled at last on the frontier as defenders against the next impact of the same avalanche, or deported to distant provinces where they would be harmless amidst a foreign population. Of the Hun invasion into Europe only the nucleus was genuine Huns, of the Mongol invasion into China or the Muslim countries only the picked cavalry were actual Mongol nomads.

The same seems to have been the case with the barbarian invasions overrunning the Gupta Empire. At first we hear only of the Pushyamitrás and Hūnas; the Gurjaras are not mentioned. After the victories of Yaśodharman the Huns were broken up, and abruptly we are confronted with the Sūlikas, who again were superseded by the Hūnas, and these, in their turn, definitively by the Gurjaras. Obviously it is always the same host of barbarian tribes, but under the alternating leadership of various clans and chieftains who got the upper hand and were able to promise pasture and loot. It is, therefore, doubtful whether even

---

minor units had been homogeneous, as remnants of defeated tribes were absorbed, as sub-clans, by more successful groups. The tribal names of certain Rajput sub-clans point to developments of this kind.

The first leading group had been the Pushyamitrās whose identity is so uncertain that scholars even disagree whether they were Indians or frontier barbarians. The fact that the Pushyamitrās were the first to attack the Gupta Empire and later on co-operated with the Ephthalites (White Huns), makes it possible to identify them with the Tunguse Druggu or T'u-ku-hun under their king Mu-li-yen (M<ululikan) who emigrated from Manchuria to the border of the Taqlamaqan about 250, and according to the Pei shi and Sung shu, invaded Khotan in 445 and occupied Kashmir ca. 446-452. This Mu-lyen must be identical with the Mihirakula who “several centuries” before Hsiian-tsang’s time attacked Gandhāra from the east, killed its king and destroyed numerous monasteries and at last invaded India where he was defeated by Bālāditya. This Mihirakula is not identical with the Ephthalite Mihiragula, the son of Toramāna who almost two centuries later likewise became a scourge of the Gupta world. Mu-li-ya returned to Central Asia, but part of his horde seems to have joined the Ephthalites, and at last to have settled in Marwar and southern Gujarat. The sculptures of Devni-Mori, Idar (early 6th century), the Jain bronzes from Vasantgarh and Akota (ca. 7th century), and stray stone sculptures of the 7th-8th century from Jaisalmer and Kiradu down to Gujrāt prove the presence of a pronounced Mongol race in this area. People of this type are found in Gujrāt and Sorath (Saurāshṭra) even today.

The successors of the Pushyamitra-Druggu were the Ephthalites or White Huns, so called because of their previous association with the (Black) Huns [Hiung-nu = Chionites] of Central Asia. Early in the 5th century they had migrated from Zungaria where they had been vassals of the Avaś, into Kashgaria and Sogdiana and finally attacked the Kidāra-Kushān kingdom of Bactria (Tur-

---

4 The date and identity of Mihiragula the son of Toramāna are fixed by the Mandasar, Eran and Gwalior inscriptions, (Fleet, Gupta Inscriptions, p. 142 ff.). The assumption of two Mihiragułas is not more objectionable than that of several Toramānas; and we know of at least three Toramānas.
5 H. Goetz, J. Gujrāt Res. Soc. XIV, p. 1 ff.
6 U. P. Shah, A Note on the Akoqā Hoard of Jaina Bronzes (in B. Subba Rao, Baroda through the Ages, Baroda 1953, p. 97 ff.).
kistan south of the Oxus-Amu Darya). About 425 they set up their capital in the Badhaghis district near Herat and defeated the emperor Bahram Gur (420-38), advancing deep into the Sasanian empire. Bahram Gur, Yazdagird (438-57), Firuz (459-484), and Kubad (488-531) had to pay tribute to them, notwithstanding several futile attempts at regaining their independence. At last Khosrau Anushirvan (531-579) succeeded in annihilating their power in 565, in alliance with the Northern Turks who in 552 had thrown off the Avar yoke and had founded their own empire.

In 465 the Ephthalites conquered the Kabul Valley and Gandhara whither the Kidara-Kushanas had fled after their defeat, and about 470 they began their attacks on the Gupta Empire. The Tunguse Mihrakula had undertaken his Indian raids in the last years of the peaceful and prosperous reign of Kumaragupta I (413-455), and had been able to overrun the empire practically unprepared. But this crisis led to a military reform, and at last Skandagupta (455-467) succeeded in expelling Mihrakula, perhaps partly because, at the same time, the Ephthalites pressed on the western outskirts of Mihragula's conquests. Then the dissensions between Skandagupta's weak successors opened the door to the invasion of the Ephthalites. By 500 most provinces had become practically independent. Soon afterwards the Ephthalite viceroy (Tegin) Toramana, already lord of the Panjab and Rajasthan, began the attack on the Gupta Empire. Malwa, Gujarat and much of northern and central India were occupied about 510. Subsequently (between 510 and 526) Toramana's son and successor Mihragula (II) was defeated in the East by Bhagugupta (or Narasimhagupta), and in the West by Yasodharman Vishnuvardhana, the Kalki of Puranic tradition, had to retire to Kashmir and died about 542. After the fall of the Ephthalite Empire in Turkistan in the year 565 its Indian dependency disintegrated.

The identity of the Ephthalites has also given occasion to many controversies, but now is more or less certain. Their name offers no clue, as they had assumed it merely from the founder of their empire, Hephthal I. They were a race of semi-nomads, Indo-Europeans, "blue-eyed and red-haired", not Iranians, but probably somehow related to the Tokharians. The royal images on their coins show a very peculiar type, a very high skull, a receding forehead and pronounced nose. Similar sculls have been discovered in cemeteries of the beginning of the Christian era south of Turfan, near the "homeland" of the White Huns, and

10 Remnants seem to have lived there also later. See A. von Le Coq, Chotscho, pls. 22, 28, 29.
at Taxila. Certain silverplates of Sasanian type, but evidently not Sasanian origin, depict the same type, and it can still be traced amongst the Tajiks of Eastern Turkistan. During their connection with the Huns and Avars, moreover, they had to some extent mixed with the latter. Their coins show the same mixture, generally Iranian type, semi-Sasanian costumes, Pahlavi and Tokharian legends, but with occasional Turkish titles. Primitive polyandrous nomads, they were in the opinion of Byzantine observers not as barbarian and destructive as the "Black Huns" of Attila. Though they wiped out the refined culture which the caravan cities of Central Asia had evolved under Kushān rule, they otherwise fitted quite well into the life of Bactria and Afghanistan. The average Afghan hill peasants and shepherds of the mountains have always lived on a primitive cultural level. The Scythian conquerors originally had been nomads. The Pahlava and Persian interlopers were likewise enthusiastic horsemen. The Yue-chi and Tokharians had been precursors of the Ephthalites. The Kushān princes who had ruled over them, were of almost the same race. Ephthalites, Kushāns, Persians, Scythians were sunworshippers. Buddhism, so strong in this country, was tolerated by them. Thus, the Ephthalites proved to be merely one more conqueror class imposing itself on a mixed society of a not very different character.

Without these affinities even the duration of the Ephthalite empire for one and a quarter centuries would be inexplicable. The original Ephthalite horde consisted of only ca. 100,000 people. During their spell of power they waged continuous wars with the Sasanians, Kidāra-Kushāns and Indians. These wars must have cost endless casualties. For both the Sasanians and the — now completely militarized — late Gupta Indians were brave and efficient warriors, and the advance of the Ephthalites was interrupted by many temporary, though serious reverses. Without recourse to the man power provided by the indigenous warlike tribes of their empire, the later successes of the Ephthalite armies would never have been possible. Their invasion of the Gupta Empire especially must have been undertaken mainly with non-Ephthalite troops. Thus, when at last they were decisively defeated, merely the Ephthalite command and organization in India crumbled away, giving place to another ruling class, the Gurjaras.

Here we are again at the crucial problem: Who were the Gurjaras? Before

---

11 See Marshall, op. cit. — The Ephthalite type is still frequently found among the Sikhs and Afghans.

14 Southern and Northern Chinonites.
15 The physiognomics, on the coins, of Toramāṇa and Mihiragula on the one hand, of Kanishka and Huvishka on the other are almost the same.
attacking this question, it will be wise to study what other evidence we have regarding their character. And there we can make two interesting observations.

1) The Indian Gurjaras were not a homogeneous people at all. The most famous Gurjara kingdoms of the 7th century were those of Broach, Bhimnal-Jalor, and Mandor. And it is just in this area and in this very period that we find, as the principal foreign immigrants, people of Mongoloid type (probably the Tunguse-Pushyantris) and a typical nomadic house ornament, horse-heads at the doors [16]. Further to the north, in Jaipur and Bikaner, we find a comparatively fair-skinned type of Gujar, even today making cross-stitch embroideries, a technique hardly known elsewhere in India, but most common in the Caucasus, southern Russia and the Balkans [17]. Further to the north, the Gurjaras of the ancient Takkadesa were so fair and good-looking that their women [18] were in great demand for princely and aristocratic zenas. Their descendants apparently are found amongst the present Jats and Sikhs, though they do not call themselves Gurjaras anymore [19]. More to the east in Jaipur, Gwalior and Bundelkhand, in the areas once occupied by the Tomar and Kachchhapaghatha Rajputs who, too, are believed to be of Gurjara origin, we likewise find a tall, mesocephalous population and an ancient ornament style related to that brought by the Ostrogoths, Visigoths and Longobards to the early medieval Mediterranean. In the Panjab Himalaya, finally, Gujar are small and dark-skinned [20], though their costume is half-Iranian. On the contrary, other people there, e.g. the Kułavīs and the inhabitants of Churah and Pengi, reveal features pointing to a relation with the Tokharians.

Linguistically the situation is similar. Mewārī, Mewāti, Dhundhārī, Gujarī and Pahārī form one closely related dialect group, of which Gujarī and Western Pa-

---

[16] This lends some probability to the claim of the Pratihāra rulers to Brahmanic descent (see Dasharatha Sharma, Poona Orientalist, II, p. 49 ff.). That an outsider imposed himself on a homogeneous clan or tribe, seems very improbable; that he could organize a medley of broken-up barbarians, appears plausible. Since the 8th century the Mongoloid type disappeared again from the monuments. The majority of Marwaris now is dolichocephalic.

[17] H. Goetz, Art and Architecture of Bikaner, Oxford 1950; the only other example is the Kasuti work of the Karnatik. Cf. K. S. Dongerkery, The Romance of Indian Embroidery, Bombay 1951; however, the claim that it is indigenous, is not warranted.

[19] The Jāts are generally regarded as immigrants of that time, identified with the Getae of Ptolemy (?), the Jattii of Pliny and Zanthi of Strabo (see Ibbetson, Maclagan and Rose, op. cit.; also James Tod, Annals and Antiquities of Rājasthān, ed. W. Crooke, London 1920, I, p. 74, 127 f.; II, p. 1124. Other tribes to be mentioned here are the Gaddiāy-Gaddis, Rabaris, Meds (Mers), Kathis, Bhatis and Ballas, which today are found scattered over the whole of Western India.

[20] Most of those still calling themselves Gujar in the Himalaya are late Muslim immigrants from the plains (see Ibbetson, Maclagan and Rose, op. cit., and Gazettes).
hārī are nearest to each other 21. But it is an Indian language, though already of a frontier type. On the contrary the names of the early Gurjara and Pratihāra kings are claimed to be of a distinctly Scythian character 22. In short: the name Gurjara-Gūjar covers tribes of frontier-Indian, Iranian-Scythian, Mongoloid and possibly even European origin.

2) The name Gurjara became common only in the 7th century and went out of use more and more after the 8th century. In the 5th and early 6th centuries only the Hūnas are mentioned. In the 6th the Śūlikas 23 appear. First in the 7th we meet the Gurjaras, although as a people settled in India for at least a hundred years, in the inscriptions of the Gurjaras of Broach and Nasik, Bāna’s HARSHABHĀRITĀ and Varāhāmihira’s BRIHATSAṃHĪTĀ 24. In the 8th we find the name connected with the Pratihāras of Bhinmal-Jalor and Mandor, and in the 7th-10th with the Takkadeśa kingdom of the Panjāb. Since the establishment of the Pratihāras at Kanauj it was abandoned, and we hear subsequently only of various Rajput clans, though the name survived even then in certain subclans 25.

From all this it appears that in India the name Gurjara did not refer to a particular tribe or people, but was a collective appellation for various tribes of very different origin, all come to India with the Ephthalite invasion. As a conqueror generally does not care much for the various ethnic sub-groups of his subjects, we might expect that barbarian conquerors like the Ephthalites would have labelled all their subject auxiliaries with one common name. As names like Gurg, Gurj, Jurj, Gur, Garj are common in Afghanistan and Khurasan, once forming the core of the Ephthalite Empire, and as the Arab geographers and historians called the Gurjara-Pratihara Empire Gurj or Jurz, it seems possible that Gurj (ara) had been this common appellative. When that empire collapsed, this name was not yet in common use, as most barbarian tribes had not yet forgotten their original identity. As the chaos in northwestern India continued, when tribes were decimated, merged or deported, their original names soon became meaningless or of secondary importance, and thus Gurjara became the common appellative. But when these warriors became Hindus, they tried to get rid of a name stamining them as unclean barbarians, and it stuck only to the most backward groups, mainly

22 H. D. Sankalia, op. cit.
23 See above; they seem to be of Scythian origin (Sogdians?).
24 Varāhāmihira, however, applies the name only to the most backward groups in the North, West and Northwest.
25 Rajputs supposed to be of Gurjara origin are the Parihārs, Paramārs, Chauhāns. Kachhwāhas, Tomars, Chaulukyas, Chāvadas, etc.
shepherds and cowherds. Thus it happened that the foreign name Gurjara (Gūjār) survived with those tribes most of which must be of Indian origin, probably Kāmbojas. For before these migrations the Kāmbojas had been a numerous and mighty tribe of horse-breeding Indian nomads in the Pamir-Hindukush area; later they disappeared, expelled by the Tokharians. And as there is no evidence for their annihilation, they must have been a great, though not the sole, contingent forming the Gurjaras 26).

Thus it is not surprising that on a closer inspection the Gurjara settlement in the Brahmapura kingdom which the linguistic and historical evidence we adduced seemed to have established, again appears problematic. The “Gurjaras” again dissolve into many tribes who obviously had formed part of the great Gurjara movement 27, but of whom it is difficult to say how far they were real Gurjaras, Tokharians, or frontier Indians.

Varāhamihira merely mentions the Gurjaras amongst many other tribes of the “North-eastern” and “North-western Regions” 28: Abhisāras, Anuviśvas, Bhallas, Chīnas, Dāmaras, Daradas, Dārvās, Gandharvas, Ghoshas, Kāśmīras, Kaunindas, Khāṣas, Kīras, Kirātas, Kuchikas, Kunaṭhas, Pauravas, Sairindhas, Taṅganas, Paśupālas, Chirānvīśanas, Divisētas, Jaṭāśuras, Ekacharaṇas and Trinetras. How far these tribes really existed, and which of them inhabited the Brahmapura kingdom, we cannot ascertain. A number of these names evidently are semi-mythological, such as the Gandharvas or the Dwellers in the Sky, the Demons with Matted Hair, the Onefooted People, the Three-eyed People; and others are vague descriptions like Forest-dwellers, Wearers of Bark, and Cattleherdsmen. Others again are known to us, e.g. the Bhallas, Abhisāras (Hazara), Dārvas, Kāśmīris, Kaunindas, Ghoshas (Gaddi subgroup), Khāṣas, Kīras, Kirātas, Kuchikas (inhabitants of Kucha in Eastern Turkistan), Kunaṭhas, Pauravas, Sai-

26 S. B. Chaudhuri, Ind. Hist. Qs. XXVI p. 118 f. Devapāla’s claim to suzerainty over the Kāmbojas may merely refer to such Kāmbojas as had immigrated into the Punjāb with the Ephthalites, but had not yet lost their identity in the Gurjara movement.

27 Already the Bharata Nātaṇastra and Varāhamihira (G. A. Grierson, Linguistic Survey of India, IX, 4) observe that the Khāṣas of the Himalaya adopted the “Bahlikā” language.

28 J. F. Fleet, Ind. Ant. XXII, p. 169 ff. See also E. Sachau, Alberunt’s India, London 1910, I, p. 299 ff. Varāhamihira’s geography is somewhat confused. The centre of his topography is Marudeśa (Marwar), but apparently not Bhimtal, rather some place west of it. Moreover, in his classification the Northern Region is in the Northnorthwest, and the Northeastern in the Northnorth-east. Kulūta and some other places are quoted repeatedly, in the Northern or Northwestern, and also in the Northeastern Region. In the case of tribes such a repetition may merely mean that groups of the same tribe were living over a vast area, but in the case of countries his knowledge sometimes must have been vague. The introduction of mythological names like the Country of the Dead, the Dwellers of the Sky, indicates hearsay information. Notwithstanding all this, the Bṛihatsamhitā is an invaluable source; but it has to be used with considerable caution.
rindhas, Taṅganas. But many of them were inhabitants of other parts of the Hima-
laya, and we can neither be sure whether Varāhamihira might not have copied
some of these names from earlier sources. The tribes which may be connected
with the Brahmapura kingdom are, besides the Gurjaras and Śūlikas, the Taṅga-
nas, Ghoshas, Kulūtas and Khaśas, possibly also the Sairindhas and Kunāthas. That
these people were barbarians, is evident from Hsüan-tsang’s description: “Brahma-
pura (Po-lo-hih-mo-pu-lo) has a rich flourishing population. The people have
rough ways, they care little for learning and pursue gain; there are five Buddhist
monasteries, but very few Brethren; there are above ten Deva temples, and the
sectarians live pell-mell” 29. And the only certain conclusion which we can draw
from all this evidence is that all of them probably may have formed part of the
host of restless frontier barbarians, known under the general label Gurjara.

For ascertaining the role of these various ethnic groups in the history of Brahm-
apura-Chamba we shall have to examine the ethnological and archaeological
evidence still available on the spot. However, in doing so we have to exclude,
at least to some degree, the very population of the Brahmor district. For as we have
already seen, the military and priestly aristocracy of Brahmor had been deported
from Kanauj to Brahmor by Lalitāditya of Kashmir about A.D. 733, as the first
step towards the disintegration of the original Gurjara state. And the Gaddis
themselves came even later, occupying a then thinly populated out-district of the
early Chamba kingdom. The real remnants of the old Gurjara kingdom must be
sought in areas which were no centres of political power, and the population
structure of which has since then been hardly disturbed, e.g. Churah and Pangī
in the west, and Kulu 30 and the Simla Hills in the east.

Of course, the original social and cultural structure has since long disappeared,
at least so far as it conflicted with the conscious ideals of Hindu society. But as
always in such cases, certain groups, institutions and customs adjust themselves
only superficially, and others come to be regarded as merely of local character,
nobody feeling them to be remnants of a barbarian past. Thus they offer most
valuable information to the ethnologist, historian and archaeologist who
approaches them with modern methods.

Now, in these Himalayan valleys we can easily distinguish four main cultural

29 Watters, On Yuan Chwang’s Travels, I, p. 329.
30 Kulu might likewise be regarded as a historically disturbed area. But it is far less so than one
would expect. From the plains it is sufficiently protected by the mountain forests of Upper Kangra,
Bangahal, Suket and Māndi. Most invasions came from the Tibetan side; but the Tibetans found
the climate too hot, controlling the valley for several centuries, but never settling down, though
Tibetan blood has infiltrated into the population, especially in the northern half of the valley.
strata 31. The first two are represented by the aboriginals. The Kolis who form ca. 30 pct. of the population, have since long been degraded to low-castes. They appear under various caste names, such as Koli, Hali, Sip, Chamr, Dunna, Barwala, Megh, Darain, Rehara, Sarara, Lohar, Bhatwal, Dhaugri (Dagi), Chanal, etc. Several of these names are well-known to us, either as generic terms, e.g. Chanal [Chandala], Chamr, or as names of primitive jungle tribes, e.g. Koli or Megh, or as professional names which always had been outside the pale of respectable society, e.g. Lohar (blacksmith). Not much higher stand the Kanets, the descendants of the ancient Kunindas (Kulindas), representatives of the South-Himalayan Mongoloids (Khüshas, Khash), until recently forming a numerous class (ca. half the population in the eastern areas, a quarter in the western) of agricultural serfs. However, division lines are difficult to draw. Illegitimate blood mixture and social degradation have almost wiped out the physical differences between them and the social groups next higher up the social ladder. In their costume and ways of life they have likewise adjusted themselves to the latter. But probably they were the original carriers of the Devi, Naga and demon cult, still so strong in the inner Hindu Himalaya.

At the other end of the social ladder is the old court aristocracy which had adopted the Mughal-inspired costumes, customs and religious ideas of the Rajputs of the outer hills. They are mainly Rajputs and Brahmins, on the average no more than ca. 8 pct. of the population, in the inner valleys even much less. Some of them immigrated in recent times, others were refugees from the Muslim conquest of northern India about the turn of the 12th to the 13th century; hardly any have a genuine pedigree older than the 8th-10th centuries.

The groups of interest to us are the intermediate classes, the Thakurs, Ranas and Rathis. Not only are they the most important social groups, as they represent the overwhelming majority of the landed aristocracy and the backbone of agriculture; they are also historically the most interesting. They claim to be Kshatriyas, but nothing certain is known of their history, except that everywhere they are mentioned as the earliest landholders and local chieftains, like the medieval knights of Europe, petty rulers over estates of a few villages at the utmost, involved in endless feuds with each other, submitting to Rajput princes whenever forced to do so, and then serving in their armies, but reasserting their independence at the first opportunity. Most of them were reduced as late as the 17th century, a number retained their independence along the various state frontiers up

31 See the various Panjab States Gazetteers; Kangra District Gazetteer; Kumaon Gazetteers; Atkinson, op. cit.; Ibbetson, Maclagan and Rose, op. cit.; A. Cunningham, A. S. R., XIV, p. 125 ff., 1882, etc.
to the end of the 18th century, and only in Lahul, Bashahr and some other out-of-the-way districts they have survived until recent years. The dividing line between these groups is difficult to draw. The Rānās are evidently identical with the old Rājānarakas, the court aristocracy of pre-Rajput times. Inscriptions mention them occasionally as early as the 7th, oftener after the 10th-11th century. The Thākurs are more difficult to define. The name means 'lord', and may originally have applied to any petty chieftain or his descendants, whether he had been a successful interloper from the lower classes or an immigrant from outside, the Indian plains, or Tibet. Thākurs of Tibetan origin are well known to us from Lahul, Kulu and Spiti; on the average, however, their descent may be not so different from that of the Rānās. The Rāthis, finally, do not belong to the aristocracy, but are yeomen agriculturists. As their name, i.e. Rāshṭriya, i.e. people of the kingdom, implies, they, too, belonged to the ruling class, though only in its inferior ranks. In other words, the Rānās and Rāthis, and a good portion of the Thākurs are the remnants of the ruling class which preceded the Rajputs and Brahmins, but superseded the older primitive Koli and Khaśa tribes. Historically, they must, therefore, be identical with the people who ruled over the Western Himalaya in the period between the fall of the Gupta Empire and the development of Rajput society under the Pratihāras, and, therefore, be the descendants of the "Gurjaras" of the Brahmapura kingdom.

Now it is interesting that the general impression of the population of Churah and Pangi in Chamba, Kulu, Mandi and the Simla Hills up to Chaunsa Bawar in Kumaon is very much the same. In Kulu perhaps the varieties are greatest, from the purest Mongolian and Tibetan to Indian gipsy and South- and Central European types. The last-mentioned resemble mainly Nether Bavaria, Lotharingia, Eastern France and Southern Belgium types. In Churah they resemble to some degree the Tajiks, Hunzas, Kafirs and Wakhanis of the Hindukush. In Pangi a strong admixture of Tibetan blood is obvious, in Mandi, Suket and the Simla hills a Khaša strain is discernible. The Chaunsa Bawar people resemble the Dogras in the West, many of whom look almost like Castilian Spaniards.

The costume differs also fundamentally from that of the Indian plains,

---

32 Ibbetson, Maclagan and Rose, op. cit., II, p. 460.
34 For descriptions cp. the various gazetteers. The present analysis is mainly based on first-hand observations on the spot. See also J. Ph. Vogel, Antiquities I, fig. 21.
Tibet, Persia and Afghanistan. The male dress is a wide shirt or coat reaching down to the knees, closed crosswise over the breast, and kept together by a felt belt. Over it often a felt cape is worn. On the head there is a flat cap with a narrow, vertical or rounded rim. Except for the cap, this costume does not differ much from that of the Gaddis of Brahmar and Kangra or from that of the Dards, Baltis, Hunzás, and the Kafirs of the Hindukush. Much more interesting is the female costume (fig. 1). Over the shirt a “skirt” is worn, consisting of a front and a back piece, the latter overlapping the first on both sides. The upper body is likewise covered by two similar pieces, kept together by annular brooches (fibulas). Today, the Indian choli (brassière) or a sleeveless sewn jacket or vest are worn instead. The same costume is found among the Gujars, as far as they have not yet adopted Panjabi or Kashmiri dress, in Pangi, Kulu and in the Simla Hills. The cap of Gujari women has a pointed tip hanging down on the neck; women in Kulu and further east wear a scarf in western Gypsy manner.

The two-piece skirt is different from the coat and apron of Tibetan women. The cap, on the other hand, is found amongst the Hunza women of the Hindukush, the Kurdish women of Persia and the Circassian women of the Caucasus. In the past this female flat cap can be traced among the “Iranians” of Turfan, in Persian manuscripts of the Mongol period and in medieval Europe (13th century). Probably it goes back to an East-Iranian prototype, as it is a common head-dress of the Bactrians and even of the Persian kings on Achaemenian reliefs. The two-piece skirt is found also on the reliefs of the old fountain stones of Churah. It is not known anywhere else

---

35 This costume is common in Kushāna sculpture both of the Gandhāra and Mathurā school (for the latter e.g. Mathura Museum F. 38 and Lucknow Museum B. 147). It occurs occasionally also in Central Asia, e.g. at Turfan (see Le Coq, Choscho, pl. 38b). It is fundamentally identical with that of the Mughals and Mughal-inspired Hindus, Rajputs, Sikhs, Marathas, etc. The Rajput dress with pointed rim occurs already in the Hadda stucco reliefs.

36 It appears in Kushāna sculpture, e.g. in the Bacchanalian group from Pali Khera, Mathurā.

37 As a male headress it is common in Nepal; and in olden times it seems to have been the headress of the Indo-Scythian Kshatrapas of Western India; and from it the present “Gandhi” cap seems to have developed.

38 A. von Le Coq, Choscho, pl. 13.

39 F. R. Martin, Miniature Painting and Painters of Persia, India and Turkey, London 1912, II, pl. 28; from Khurasan, the area of former Gurjara settlements? A.D. 1310.

41 J. Ph. Vogel, Antiquités, I, pl. XXXIII, fig. 27.
in India nor in Iran; the nearest relatives, curiously enough, are the costumes unearthed from prehistoric tombs in Denmark and Ireland. Also the annular or penannular brooches (fibulas used for pinning together the two pieces covering the upper body are otherwise unknown in India, but recur in ancient Scandinavia, Scotland, Ireland, France and Berber North-Africa.

The religious situation also is abnormal. There is a host of curious godlings, such as Sindhu-Bīr, Mundhlik, Mahāsu, Jamlū, Narsing, Siddhas, etc. whose antecedents are difficult to trace. But some figures dominate. In all the Himalayan valleys the cult of the terrible mountain goddess prevails, very often in heterodox forms of yakṣīs or rākṣasīs, but also in her orthodox aspect as Chāmunḍā (iconographically as Durgā Mahishamardini or Kālī). The latter form, however, is a product of historical times, as almost all Chāmunḍā temples appear to be foundations of princes from the late Gupta period to the last century. On closer investigation, however, these temples also prove to be nothing but modernized old sanctuaries, often connected with some sacred tree, and not seldom the name, even some idols reveal the earlier, pre-Hindu cult which seems to have been originally Khaśa. Sacred trees, female goddesses and snakes can be traced on the early Audumbara coins.

The other aboriginal cult is that of the snake gods and goddesses, the Nāgas. Whereas today in the plains the snakes are mainly earth deities, in the mountains they preside over rivers, fountains, lakes, rain and clouds. In Kulu, Mandi, Suket and the Simla Hills they have often also been Hinduized as “Rishis.”

42 J. A. Worsae, The Industrial Arts of Denmark up to the Danish Conquest of England, London 1882. Also Ibbetson, etc., op. cit., p. 460, point out the similarity of the Kulu costume to various aspects of the Scotch national dress.

45 At least the cult of the terrible mother goddess demanding human sacrifices and often also orgiastic rituals can be traced over the whole area originally occupied by Khaśas, from Khotan and Gandhāra to Kāmākhyā in Assam, Bengal and Orissa. The very name of Pārvatī, the mountain goddess, points to the Himalaya, the “father” of Pārvatī, whereas that of Vindhyavāsī, the “resident of the Vindhya mountains”, is distinguished from Pārvatī. Tree cult is still known. See Ibbetson-Maclagan-Rose, Glossary, I, p. 135 ff., 318 ff.

48 B. R. Beotra, op. cit.

Probably this may represent the Kolî layer of South-Himalayan religion.

Sivaism became common at least in the 6th-7th century but first in a Kushâna form (Sûlapâîni). Orthodox Vaishnavism was introduced not before the 8th-10th centuries, Sûrya and Kârttikeya worship in the 6th-8th centuries, and the name of Krishna became common in the 12th century (though merely as an epithet of Vishû). The cult of Krishna Gopâla-Vâmsîdhara appeared in the 16th century, but did not come into fashion until the 18th century. Râma worship (Raghubîr, Raghunâth) became the royal cult by the middle of the 17th century.

In Churah the fountain-stones of the 11th and 12th centuries reveal a quite exceptional pantheon. The highest god of heaven and of justice is Varûna. By his side there appear female water goddesses, not of the fountains, but of the rivers, in one case at least identified with the holy rivers (Gaṅgâ, Yamunâ, Sindhu and its tributaries) of Hinduism. As third deity in Churah, though not on the fountain stones, a godling on horseback, Gûgâ, appears, but he remains rather shadowy. Now, Varûna had been the Indian god of heaven and justice only in Ṛgvedic times (ca. 1200-800 B.C.), later on to be reduced to the position of a digâlā, one of the eight guardians of the four principal and four secondary points of the compass. The river goddesses generally likewise played an important part mainly in Vedic religion, and even the cult of Gaṅgâ, Yamunâ (and Sarasvati) went out of fashion as early as the Pratihâra period (ca. 9th-10th centuries). Gûgâ has never become an orthodox Hindu deity; he is, however, a common village godling also in Râjasthân, and though identified with one, if not two semi-historical Chauhân heroes, seems originally to have been a Gurjara deity. In other words, the cult of Churah up to the Muslim invasion had been a remnant of a very early stage of Indian religion. It should be observed that in ancient Churah other indigenous cults were absent, even those of Châmuṇḍâ and

of Nāgas. It is true, that an interesting Chāmunḍā temple stands at Devi-ri Kothi; but it was founded only as late as 1754.\textsuperscript{60} The orthodox Hindu deities, Śiva, Viśnu, Sūrya, Gaṇeśa and Brahmā, are represented also on a few fountain stones\textsuperscript{61} and images\textsuperscript{62}. But these “orthodox” fountain stones and idols were erected by local chieftrains in frequent contact with the courts of Chamba, Balor and Kashmir; and the Padri Pass is on an old main route through the hills from Kashmir to the Gangetic plains. These monuments, therefore, do not represent the religion of the local people, but that of the more “international” ruling families.

Outside Churah only in Pañgi something of this religion has survived, but mixed with the indigenous cult of the mother goddess. In the other areas of the old Brahmapura kingdom no vestiges have hitherto been traced. Fountain stones occur also in Chamba, Brahmor, Chatrarhi\textsuperscript{63}, Basu, etc. and even in Kulu\textsuperscript{64}, but are of no special interest.

On the other hand, the cult of Sūrya seems to have played quite an important role in olden times. The veneration of the sun as a prominent deity is generally regarded as Iranian (Mithra, Helios, Sol invictus) and has in India been connected with the Indo-Scythians\textsuperscript{65}. In any case the oldest images of Sūrya, in Scythian dress, belong to the Kushāna school of Mathurā\textsuperscript{66}. But the Purāṇas\textsuperscript{67}, the still existing sun temples and most Sūrya images rather point to the late Gupta and Gurjara-Pratihāra period (6th-10th centuries) as the Golden Age of solar worship in Northern India\textsuperscript{68}. It is, therefore, not surprising that one of the most interesting Sūrya images (6th century) has been found at Guṇḍ\textsuperscript{69}, halfway

V}, 114 ff. The Teli-Kāmandir, Gwalior Fort, was a temple of Sūrya-Nārāyaṇa; the Mārtand temple in Kashmir founded by Lalitāditya-Muktāpīḍa, A.D. 725-56. Pratihāra sun temples and Kuṣāṇa are found over Northern and Central India, Rājaśṭhān and Gujārāt. The sun temple of Modhera was founded in the same period, though most of its structure is later.

between Brahmr and Chamba. Though in the Gupta style, its costume is Sasanian-Persian, and its conception is closely related to that of the sun god excavated at the Khairkhana Pass near Kabul (Sasano-Kushān style). In Kumaon 70 Barā-Āditya (Sūrya) temples are common, e.g. at Katamal or Kheti Khan. But, as in Rajputana, also in the Himalaya, the Sūrya cult was in the 10th century superseded and absorbed by that of Lakṣmī-Nārāyaṇa (= Sūrya-Nārāyaṇa).

The so-called folk art represents a similar and even more interesting aspect. Folk art rarely is an independent creation. Generally it represents the simplified and stylized residuum of some former upper-class art, and in this respect it proves a most valuable substitute where historical or archaeological evidence fails. The folk art of the Panjaban Himalaya is not of a uniform type, but belongs to at least two distinct groups which, however, prove closely related when seen in the historical perspective.

The first of these is the folk art of Kulu such as it survives mainly in the wood carvings of the local temples 71. Their plan and the general lay-out of their façades go back to later Gupta art. But though the Gupta motifs can still be discerned, they are interpreted in a very curious manner, and are intermixed with motifs of non-Indian origin. All scroll-work dissolves into hammer (pelta) or “mushroom”-shaped leaves, carved in a very peculiar, oblique cutting technique unknown in Indian art, but quite common in the Muslim art of Iran and Iraq under the later “Abbasid caliphs and the Saljuqs 72. Obviously quite a number of the other motifs belong to this Muslim art of the 8th-11th centuries 73. But such a derivation does not work out satisfactorily.

First of all, in the Kulu decorations as well as in part of those from Churah 74, quite a number of motifs appear which obviously form an integral part of the same decorative system, but are unknown in Muslim art, mainly spirals, plaitwork, the “tree-of-life”, animals, especially “soul birds” and snakes, horsemen, etc. On

70 D. R. Sahni, A.S.R. 1921-22, p. 50 ff. Further examples two Sūrya images at Bajaura in Kulu, the Śūrājāmukha Līṅgām at Brahmr and the Markulā Devi Temple at Udaipur, Lahul, originally dedicated to Sūrya; an exceptional late image from Baijnāth, ca. A.D. 1240.

71 Based mainly on my own observations on the spot. I hope to publish a more detailed analysis of the art of Kulu in the near future.

74 Vogel, Antiquities, I, pls. XXI, XXVII, XXXIV, XXXVII, fig. 27.
the other hand, the same style in 'Abbasid and Saljuq art has no roots in the preceding Muslim art and has been recognized as a barbarian intruder from Central Asia. As the 'Abbasid power was based mainly on the support of the Persians, especially of the population of Khorasan and Turkistan, and as the most important Iranian dynasties of the post-'Abbasid and Saljuq period had likewise flourished there, there are strong reasons for the surmise that this style must have originated in Khorasan and southern Turkistan. As we have already seen that Khorasan and southern Turkistan seem to have been the homeland of at least part of the Indian Gurjaras, it looks very much as if these two interrelated style groups in the folk art of Kulu merely represent two successive phases of the same art tradition, one brought by the Gurjara immigrants of the 6th-7th century to the Western Himalaya, the other imported by the Ghaznavids into the Panjab, and from there infiltrated into the Hindu Himalaya, where it was accepted because of its close relationship to the local art already customary.

On the fountain stones of Churah and Pangi we likewise find motifs taken from contemporary Hindu art; but the barbarian style trends and decorative motifs predominate (fig. 3). However, the latter are somewhat different. The leading ornament is the simple or reduplicated plaitwork, such as we know it from a peculiar group of early medieval European art, i.e. the architectural decoration of the Ostrogoths, Visigoths and Longobards immigrating into the disintegrating Roman Empire from the South Russian steppes, and of contemporaneous Byzantine art, especially the Hagia Sophia at Constantinople and the churches of Ravenna. By the side of this plaitwork also the obliquely cut hammer-scroll work of Kulu is occasionally found, and also the “soul-birds”, “tree-of-life” motifs. The human figures, whether Varuna or other gods, or the deceased, either on foot or on horseback, are represented in the same primitive manner,

75 J. Strzygowski, op. cit. As in 1917 the Tokharian problem was still unknown, Strzygowski, though fundamentally on the right way, tentatively called the whole style group “Saka”.
76 Strzygowski, op. cit., figs. 171-173; Cambridge History of India, III: Turks and Afghans, 1928, pl. I, fig. 1 (“Ghazni Doors”, Agra); A.S.R. 1906-07, pls. L-LI.

likewise reminiscent of Teutonic sculptures of the Migration period, such as they appear on certain Visigothic, Frankish and Lowgobard reliefs.

How far these motifs occur outside Kulu, Churah and Pawgi, it is difficult to state, in the absence of any research work on the subject. In Mandi and

Suket \(^{82}\) quite a number of them can be traced, less apparently in Chamba proper and Brahmar; in Lahul they appear in the wood carvings of the Markula Devi temple \(^{89}\), in the Simla States they probably were likewise known as far as some occasional observations permit conclusions.

Even outside the Panjab Himalaya these foreign art motifs are not wanting.\(^{84}\)

\(^{82}\) Mainly in the Triloknâth and Sîtalâ temples at Old Mandi, and the Asambhûnâth Mahâdeo north of Purana Nagar, Suket.

\(^{83}\) In the woodcarvings of the last reconstruction of the Markulâ Devû temple this is not surprising, as tradition ascribes it to the master who built the Hirâm Devû temple at Manali in Kulu, and as historical and art-critical evidence confirms this tradition. But plaitwork motifs appear also in the 11th century shrine façade, mainly a late Hindu-Kashmiri creation.

\(^{84}\) These problems, too, will be discussed with more evidence in a separate study.
The plaitwork, transformed into a long garland of Nāgas, is found in late Gupta, Pratihāra and Kachchhapaghāta temples of north-eastern Rājasthān (Osian, Amber, Gwalior, Jageśwar in Kumaon); and as a complicated mass of intertwisted snakes in Jaisalmer, Southern Marwar, Gujarat, Sorath (Saurāshṭra), Malwa, and even Orissa. In many Pratihāra and early Solanki temples the gavakśa motif, reduced to a continuous surface ornament, becomes a mere band design, without any similarity to the arched windows from which it had developed, but of the same type as the inscription friezes on Muslim mosques. In the Kachhwāha temples (e.g. the Sāsbhū at Gwalior) the decorative sculptures likewise lose all modelling, being transformed into a flat black-and-white pattern by the drill cutting out a shadowed background behind a light-exposed, but otherwise flat foreground; such an approach, in utter contrast to Indian tradition, is elsewhere found mainly in the Hagia Sophia at Constantinople, at Ravena, in Byzantine-Syrian churches and at the Qaṣr-al Mushatta in Jordan 85, but there also represents a barbarian innovation. Finally the birds (parrots and peacocks), the tree-of-life, the horsemen, etc. recur, all, in early Rajput art (16th-early 17th century).

From where these techniques and motifs came, it is difficult to say. For they are not characteristic of the traditional art of Central Asia. Curiously enough, the only area where they were at home, is prehistoric Europe, especially the Bronze and Iron Age Celtic civilization 86. Here the spiral ornament, the hammer and mushroom-shaped leaf or arabesque, the obliquely cut relief, the plaitwork ornament are indigenous 87. The tree-of-life and the soul-birds belong to the earliest Balkan tradition. The horseman figures, of course, were bound to develop in any nomadic art 88.

85 Strzygowski, op. cit., figs. 70, 187, 188. Ch. Diehl, Manuel d'Art Byzantin, Paris 1926.
86 H. Hildebrand, The Industrial Arts of Scandinavia in the Pagan Times, London 1892, fig. 72 (Celtic); Margaret Stokes, op. cit.; G. Baldwin Brown, The Arts and Crafts of our Teutonic Forefathers, London 1910, figs. 112, 113, 122; E. A. Parkyn, An Introduction to the Study of Prehistoric Art, London 1915, figs. 278, 282, 292, 294, 295, 310, 314, pl. 16, 3 and 4; Pijoan, History of Art, London 1933, II, figs. 262-265 (Ireland); R. P. Hinks, op. cit. fig. 109; Stuart Piggott and Glyn E. Daniel, Ancient British Art, Cambridge 1951, figs. 39, 40-42, 44, 48. — Hinks calls the hammer or mushroom-shaped ornament Pelta or double-axe and derives it from Minoan art; it was also common in Carolingian and Romanesque art.
87 Another striking parallel is the door knobs of Kulu temples, identical with those of Romanesque Europe.
Such a link between the folk art of the Brahmapura kingdom, as it survives in Kulu and Mandi-Suket, Churah and Pangí, and in a lesser degree in the Simla hills and even Lahul, with prehistoric Celtic Europe, may seem far-fetched and fantastic, if it were not corroborated by other observations. We have already pointed out that the Brahmapura kingdom covers the area of the Western Pahārī dialect, the nearest relative of Gūjāri, that the Brahmor dynasty seems to have been Sūlikas, a tribe leading the Central Asian invaders after the fall of the Ephthalites and before the emergence of the Gurjaras; that the Gurjaras came from the settlement-area of the Yue-chi (allied or identical with the Tokharians) in the former Kushān Empire.

Moreover, historians, linguists and archaeologists have already come to the conclusion that in all probability the Tokharians \(^8^8\) were a European people, probably Celts with an admixture of Teutonic tribes who in prehistoric times moved by way of the Black Sea to Turkistan and the Tarim Basin, at last invading China and leaving their mark as far as Dongson in Indochina and Nias in Indonesia. Later the Yuechi-Tokharians of Central Asia were again pushed back to Bactria where the upper Oxus Valley preserved the name Tokharistan deep into Muslim times. Other Celtic tribes seem to have joined them later on through the Balkans and Asia Minor. May we thus explain these “Celtic” elements in the folk art of the Panjaban Himalaya as products of Tokharians swept into India by the Ephthalites \(^9^0\)?

Thus the indirect evidence pointing to a barbarian state founded by a Gurjara horde, Tokharians as well as frontier Indians, under the leadership of Sūlika princes, in the 6th century and disappearing between the 8th and 10th centuries, is considerable. Nevertheless, it will be wise to be cautious. For as long as the crowning evidence of incontrovertible historical records cannot be discovered, we can speak only in terms of greatest probability, not of irrefutable facts. And that these records will ever be found is improbable. For those who might have left us

---

\(^9^0\) Whether polyandry in Kulu (see E. von Ujfalvy, op. cit., p. 37, map IV; Harcourt, op. cit., Kangra District Gazetteer I and II) might be connected, in the present context, with the Ephthalites, or was imported from Ladakh, is a moot point. It is worth observing that it occurs mainly in Saraj where Tibetan influence did not penetrate. Also everywhere in Rajasthān vestiges of mother-right, generally connected with polyandry, can be traced. See O. R. Ehrenfels, Mother Right in India, Hyderabad-Bombay 1941.
such a record, had all an interest to wipe out the memory of a past of which they must have been not too proud. For more than thirteen hundred years Hindu civilization has moulded those foreigners. Those who might have spoken, have since long disappeared, and their descendants mixed with the indigenous people and with later immigrants. Those who survived, were illiterates for many generations, of weak historical memory and narrow geographical outlook. No more than the Ahirs or Gujars, or even many Rajputs, these hill people remember anything of their empire-building ancestors. They have become the natives of the country, of older standing than the Rajput princes and Brahmins who subjected them to their rule; they likewise regard themselves as orthodox Hindus according to their lights. And why not? Hindu civilization has found a place for so many people, Hindu religion includes also the gods who are the patrons of the Himalayan mountains, fountains and rivers, and in Indian art the traditions of the Himalaya have been reduced to local folk styles.
CHAPTER IV

THE COMING OF HINDU ART IN THE HIMALAYA

Indian art in the Himalaya has been a late-comer. In olden times the inhabitants of the Himalaya were regarded as degraded *kshatriyas* and outcastes who did not take part in the orthodox Hindu cults and customs. In consequence the influence of Indian art was feeble, and archaic forms persisted much longer than anywhere else in the country. No monuments of this art have survived as all of them seem to have been of wood. But the coins of the Audumbaras (ca. 2nd-3rd century) ¹ depict railings like those round the early Buddhist *stūpas*, but enclosing sacred trees (*chaityavrikshās*), and hut-like shrines, and also snakes and images of female goddesses, as are still found in Himalayan folk art. Railings round sacred places have been discarded since the victory of orthodox Hinduism. Yet they have not completely disappeared; for the lotus roundels filled with divine, human and animal figures which are so familiar to us from Bharhut, Sanchi, Bodhgaya and Mathura, continued to be used as a decoration of fountain-stones up to the 12th century ², and in the folk art of the Brahmor and Chatrarhi districts as late as the 18th century. Under Kushān rule the art of the plains slowly began to penetrate the hills, as is evident from the ruins of a *stūpa* at Chetru ³ near Kangra and two rock inscriptions in Brāhmi and Kharoshṭhī at Kanhiara and Pathyar ⁴, probably also from a bronze statuette of Sūrya in the Svetoslav Roerich Collection, in a Scythian costume, but with certain particularities of the early Gupta period.

What monuments the Imperial Guptas left, is difficult to say. Temples with sloping roofs of stone slabs, similar to the Lād Khān and Durgā temples at Aihole, still stand at Jageśvar, Bageśvar, Dvarahat (Maniyar Group), Baijnath

¹ A. Cunningham, *Coins of Ancient India*, London 1891, pls. IV, 1, 2, 7, 8, 12, 13, V, 1-3; Coomaraswamy, *History of Fine Art in India and Indonesia*, London 1926, figs. 116-117.
² Vogel, *Antiquities*, pl. IV, XXVII, XXXIV, XXXVII, figs. 11, 12, 14.
(Banni Deo) in Kumaon, and at Pandukeshvar in Garhwal. Likewise the prototype of the wooden "hill temple" seems to have been introduced in Imperial Gupta times. For although the extant structures are no more than a few centuries old (on the average 15th-19th century), the cella, enclosed by an open pillar-supported Pradakshinapatha (circumambulation gallery) crowned by a pyramidal or gable roof, closely resembles the stone temples of Nachna-Kuthara, Gop and Aihole.

First in the 6th-8th centuries, under Yasodharman, the Maukharis and Pushyabhutis, and finally under Yasovarman of Kanauj, Gupta art gained a strong foothold in the Western Himalaya. Unfortunately our knowledge of later Gupta art is so fragmentary that any chronological survey can be only tentative. Between the 4th and the 8th centuries the transition from the cube-like early Gupta shrine to the medieval temple tower was completed; but the number of surviving monuments is very small, the dates of most of them have not yet been ascertained, and others are known only through Greater Indian, especially early Cambodian and Javanese copies and free imitations. Of later Gupta sculpture we can state so much that in the 6th century a ponderous "Baroque" style prevailed and in the 7th century a slim, somewhat effeminate elegance, whereas in the 8th century figures regained their strength, but also developed a certain rigidity and exaggerated postures and movements. However, there exist a number of deviations from this general rule, the full extent of which has not yet been defined. Moreover in a backward area such as the Himalayan valleys then had been, art often was "provincial" and lagged behind the developments in the plains. But as the length of this timelag was conditioned by political circumstances of which we can infer only the crudest outlines, in most cases we have to reckon with the possibility that the monuments in question may be one or even two centuries later than their style seems to indicate.

Likewise few archaeological monuments of the Himalaya have been critically analyzed. Only one or two exceptionally well preserved temples, such as those of Bajaura and Masrur, have been described. Of others only short descriptions,
occasional photographs or illustrations are available, e.g. of Jageśwar and Dwara-rahat, Brahmo, Balor (Vallâpura), Martand, Malot, and Amb. But a number of later stone temples have been erected on late Gupta or Pratihâra substructures, wooden temples in the folk style of the hills encase earlier ruins, and stray sculptures, — last remnants of vanished shrines — can be traced, built into the walls of later temples, or lying about in villages and fields. In the following outline I have, therefore, to rely not less on — anything but exhaustive — personal observations than on the scanty information published by others or culled from the photographic archives of the Archaeological Department of India. And I have to take the risks arising from all the uncertain factors enumerated above.

As far as we can judge at present, even the Hindu art of the 6th century is very sparsely represented. In the Panjab plains we may mention a fine temple at Agroha (Hissar District), the fragments of which now are in the East Panjab Museum, Buddhist or Jain pieces at Pinjaur, and finally the ruins of Kapatamochan. In the Himalaya the Lakha Maṇḍal (in Chaunsa Bawar, Kumaon) Praśasti mentions a Siva temple erected by Iśvarā, a princess of Singhapura for her deceased husband Śri-Chandragupta, son of the Yādava king of Jālandhara (Kangra Valley and adjoininc districts in the plains) about A.D. 600; unfortunately this temple has been replaced by later, more pretentious buildings. But the Gupta sculptures found there, especially a fine group of Siva and Pārvati, can very well be fragments from this shrine. The copperplate grant of Mahārājā Mahāsāmanta Samudrasena (beginning of the 7th century?) in the Paraśurāma temple at Nirmand mentions a temple of Śiva Sūlapāñī as well as a village Sūliṣāgrāma; there are still some small early Śaiva shrines of this very time at Nirmand, but it is impossible to decide which of them was that of Śiva Śula-

pāni, and which the Kapāleśvara of Sarvarman Maukhari. Finally, at Thava above Nagar in Kulu the plinths of two (?) small Gupta shrines are now incorporated in the substructure of the vimāna of the Murlidhar temple.

To these few ruins we may add some isolated sculptures traced here and there, remnants of lost sanctuaries. The most important of these are the Buddha from Fatehpur, and the above mentioned Sūrya image from Guhm, in the Ravi Valley, halfway between Chamba and Bramnor (Fig. 3). The Fatehpur bronze statuette, inlaid with silver, combines features of the late Gandhāra and the Gupta style. The Guhm image, though in the Gupta style and technique, has Sasanian costume and locks. Probably both sculptures should be connected with the early Brahmapura kingdom when Maukhari-Gupta influence had not yet

25 J. F. Fleet, Gupta Inscriptions, p. 147, 149, 286 ff.; J. N. Banerjea, Proc. 13th All-India Or. Conference, Bombay 1949, p. 298 ff. — The epithet Sūlapāni is interesting. For as such bynames often were selected as allusions to the names of the chief donors, Sūlapāni might refer to a Sālika family.

28 Though this treatment of the hair was in vogue also with the later Guptas the Sasanian fashion differs from that of the Guptas. The latter was comparatively compact, and rather flat on the crown of the head. The Sasanians wore the curls high on the top, and loosely floating down over the shoulders.
ousted the preceding impact of the Sasano-Kushān art of Afghanistan. In Kulu a Hāriti idol from Bajaura, in crude technique but with typical Gupta hair style, seems to belong to this period. From the plains we may perhaps add the above mentioned sculptures found at Agroha.  

The 7th century, on the contrary, is represented by many monuments of later Gupta art. As the great Harshavardhana of Thanesar then was the overlord of all the states east of the Ravi, we may safely regard him as the ultimate inspirator of this special style. But in the plains so little is left of the art of his reign, that the Himalayan temples and sculptures of this time, like those of Nepal, have to serve us as substitutes in order to gain an idea of what the Harshavardhana style had been like. First, in Kumaon, there are the slim and elegant bronze statues of the so-called "Pauñrajás" at Katarmal and Jageśwār which probably represent the Bodhisattva Lokeśvara. Their gilt bronze, inlaid with silver foil, is of the same type as that of early Nepalese work, previous to Kashmiri and Pāla influence. Further west the Lakha Maṇḍal sculptures have already been mentioned. The substructure of the Shanmukheśvar temple at Bilaspur on the Sutlej may be connected with the vassal state of Satadru. For its plinth shows the repetition of angular and cushion mouldings characteristic of the late Gupta ruins of Sarnath, Saheth-Maheth, etc., whereas the lintel of its door has a frieze of flying deities (fig. 6) very similar to those of the Lakṣaṇā Devī temple at Brahmor. To the Jālandhara vassal kingdom belong the small Mahāyāna stūpas of Chetru (Chaitru) some miles from Kangra town, the fine, but badly defaced reliefs of the river goddesses on the Darshan Darwāza of the Kangra Fort, the image of a ten-armed goddess (Mārīchī?) on a pedestal-chariot drawn by seven horses, and some reliefs representing mainly Siva and Pārvati, now collected in the enclosure of the Bhavānī temple at Bhavan, the inscribed pedestal of a Vajravārāhī image from Chari, and finally the wooden figures of the goddess Deshamucha at Haripur.

29 A.P.R., Northern Circle 1920-21.
30 The main monuments still preserved are at Nalanda. At Thanesar it would be worth while to undertake trial excavations on the site of a vast fortress of rectangular groundplan which was perhaps Harshavardhana's residence. See A. Cunningham, A.S.R. II, p. 212. Other related monuments are those of Pulakesin II Chāluaka at Aihole, Badami, and Ajanta.
31 A.P.R., Northern Circle 1913-14 and 1915-16; according to J. C. Powell-Price, J.U.P. Hist. Soc. IV, pt. 2, p. 5 ff., 1930, the Pauñ Rajas reigned ca. 250 B.C.; the attribution, therefore, has no more value than the more common reference to the Pāṇḍavas.

34 A. Cunningham, A.S.R. V, p. 177; Kangra Gazetteer.
35 Apparently not goddesses, but a couple of Scythian donors. Photograph Archaeological Department, Delhi.
Next we can connect with the Brahmapura kingdom not only the temples and images of Brahmr to which this book is mainly devoted, but also the platform (fig. 4) of a brick temple in Chamba town and the tradition of the wooden

36 Now in the Bhuri Singh Museum, Chamba.
temples of Kulu. These temples, all only some centuries old, are typical works of "folk" art, sometimes adapting 'Abbasid-Saljuq, Mughal and early or late Rajput motifs, but generally conserving that strange (Tokharian?) ornament style connected with Central Asia and prehistoric Europe which we discussed above. But on the other hand, the general plan, lay-out and even many decorative motifs on their doors, windows and cornices faithfully conserve the tradition of late Gupta art (fig. 5). Generally the characteristic temple tower (pagoda type) of some Kulu temples, with its three successive roofs, is believed to have been imported from Nepal where it is common even today. But as Nepalese sculpture is so strongly indebted to the Harshavardhana tradition, the question arises whether the pagoda tower also did not come from the Indian plains, and from there was introduced both into Nepal and Kulu in the course of the 7th century. For the oldest example of the pagoda type was Kanishka's stūpa at Shahji-ki-Dheri near Peshawar (2nd century). As the excavation has revealed, its platform has certain peculiarities, circular corner projections (probably subsidiary stūpas, as in Nalanda and Burma), and steps in the centre of each side. Similar platforms of the later Gupta period have been discovered also at Sanchi, Saheth-Maheth, etc., and probably they had a wooden superstructure like Kanishka's stūpa. Stone stūpas of the same period corroborate such a development. Is was also applied to Hindu temples, as may be inferred from the Meru of Hindu colonial art in Bali as well as from the Panchāyatana type of Hindu stone temples in which the corner stūpas have been transformed into small chapels. As we shall see, there are reasons to infer that Meruvarman's temples at Brahmar and Chatrarhi originally had such pagoda roofs, though all the hill temples were too small to stand on platforms with subsidiary chapels. A comparison with the Kulu temples reveals the complete identity of the lay-out of the entrance frames, with their five receding bands of alternately ornamental and figurative, flat and round mouldings, and also of the windows with their

41 E.g. the Mahābodhi and Mingalazedi at Pagan.
42 A.S.R. 1912-13, I, pl. VI, (Building 19).
43 A good example is the Avantiśvara temple, Vantipur, Kashmir. A later development is represented by the Baijnath temple on the way from Palampur to Mandi and its derivatives all over the hills.
miniature columns, in a less degree also of the cornice. In all these cases parallels can be drawn with later Gupta and post-Gupta architecture. Finally the brass images of Meruvarman, notwithstanding certain barbarian peculiarities, follow the canon of ideal beauty prevalent in 7th century sculpture, viz. excessively slim, overelongated bodies, rather small heads, affected hand gestures, elegant, quiet poses, highly stylized costumes, etc. In this respect they remind us not only of sculptures from e.g. Kaman (now in the Ajmer Museum) \(^{44}\), and of the murals of some Ajanta caves \(^{45}\), but also of the best early Nepalese bronzes \(^{46}\). Stone temples, however, have not survived. A small Siva temple in the Chaṇḍī Devī compound at Nirmand seems to be a much repaired ruin of this time. Beautiful fragments of a window piece and of a lintel are lying in the old fort at Manali (fig. 7); their fine ornaments link up, on the one hand, with the Brahmoor temples,

Fig. 7

on the other, with the art of early Java and Cambodia. A great enigma are still the fine Vishṇu statue from Sultanpur \(^{47}\) and the curious images of Vishṇu, Gaṇeṣa and Durgā in the niches of the Bajaura temple \(^{48}\); probably they are 11th century copies of broken images of the 7th century. Also in a small Siva temple at Zaharpur, Kulu, imitations of 7th century reliefs can be traced. Whether a Mahishamardini, of early Chālukya type, at Jagatsukh belongs to this or a later date, it is difficult to say.

Still further to the west, we find the influence of 7th century Gupta art in Kashmir, in the substructure of the Rāṇeśvara temple (the cemetery of Bahāud-

\(^{48}\) *A.S.R.* 1909-10, p. 18 ff., pl. VII.
din) at Srinagar, the Pandrethān stūpas and the sculptures discovered at Bijbehara and now preserved in the Srinagar Museum.

With the first half of the 8th century we reach the last phase of the Gupta art tradition, which we may connect with Yaśovarman of Kanauj (ca. 723-753), and with an invasion of the early Kashmir style to be attributed to the influence of Lalitāditya of Kashmir (725-756). The Gupta canon is still more or less intact. But new architectural motifs appear which we can trace also in contemporary Chālukya buildings, e.g. at Pattadakal, and in the earliest stages of Rāshtrakūta (e.g. Ellora) and Pratihāra art (e.g. Osian). Sculpture assumes a rather pompous vitality, with exaggerated postures, but also an increasing hardness and mannerism. Ornament becomes much more ostentatious and florid. In other words, a bold parvenu spirit has replaced restrained refinement and culture.

The most important monument of this style known to us is the Teli-kā-Mandir at Gwalior, probably the chief temple of Yaśovarman’s court at the time when, after the loss of Kanauj, he had become viceroy of Lalitāditya of Kashmir. This political dependence was also responsible for the admixture of Kashmiri features in the monuments of the same period in the eastern Panjab (up to the Ravi) and of Gupta (Kanauj as well as Magadha) motifs and types in the contemporaneous art of Kashmir and of the western Panjab.

The first group comprises the remnants of a temple plinth in the compound of the Raṅganātha temple at Bilaspur on the Sutlej, very similar to two small later Chālukya shrines at Aihole and Pattadakal, and in particular two of the finest monuments in the Himalaya, the temple of Bisheshwar Mahādeo at Bajaura in Kulu, and the “Ṭhākurdwāra” at Masrur, between Kangra and Baijnath. The latter is a rock-cut shrine, in which the four subsidiary chapels of the Gupta Panchāyatana temple are fused with the main shrine into one building of cross-shaped groundplan, a concept which is found in India at Paharpur, but more commonly outside India, in early Javanese and Khmer sanctuaries. In the Bajaura temple, on the other hand, the same subsidiary shrines are already included in the main temple, but have not yet been reduced to mere image niches as in

53 K. N. Dikshit, Excavations at Paharpur, Bengal, Delhi 1938.
54 Image niches were already known in classic Gupta temples, e.g. at Deogarh; but they never project from the wall.
medieval architecture and still preserve the character of genuine chapels; this gives the temple a somewhat clumsy appearance which, however, is compensated by its beautiful late Gupta reliefs.

Whereas at Bajaur typical Kashmiri features still are absent, at Masur they appear occasionally. In stray reliefs at Bhavan near Kangra, Nagar, Sarai and Manali in Kulu, and at Maylang in Lahul, Kashmiri gables frame figures of otherwise pure late Gupta type (fig. 8 and 9).

West of the Ravi, the Kashmir style, evolved under Lalitaditya, dominated the scene principally in Kashmir proper and the adjoining districts of the Panjab, especially the Salt Range, and to a less degree east of the Chenab. In Kashmir there are Lalitaditya's great sun temple at Martand, the temples, chaitya and stupa of Parihasapura, and finally the temples of the Takht-i-Sulaiman, Ladu, Narasathan, Wangath and Bhuniyar, and, in the plains, the temples of Malot and Amb (smaller temple). Here Gupta influence is noticeable only in the sculptures, and even here it was soon ousted by the new indigenous style. The architecture of Lalitaditya, too, is based on the Gupta tradition, yet not on the Kanauj style alone, but also on a fusion of earlier (6th century?) and Magadha (8th century). Gupta forms with elements from Gandhara (earlier Kushān, as well as late Kidāra-Kushān motifs), early Byzantium (Syria as well as Constantinople) and even T'ang China.

Further to the east we have the Triloknāth temple in Lahul which goes back to Lalitaditya's time, but was transformed into a Buddhist shrine by Padmasambhava at the end of the same century, and was rebuilt and repaired several times; its present Lamaistic image of Avalokiteśvara-Trilokanātha cannot be earlier than the 12th century.

At Brahmor the upper gable of the Lakṣaṇā Devī temple is a characteristic Kashmiri product. As it represents Vishnu in his three-headed form, whereas the temple is dedicated to the Devī, it seems to be the last remnant of a Vishnu temple erected in Ājyavarman's reign, re-used, after its destruction, for filling the gable of the simple roof with which the Devī temple was covered in later repairs. Probably the Narsingh image at Brahmor, enshrined in the 10th century by queen

---

55 The three-headed Vishnu image at Bajaura seems to be a Pratihāra copy of an original of the 7th century.
58 Hutchison-Vogel, op. cit., II, p. 475.
59 However, not yet the standardized later type; it can, therefore, not be later than the middle of the 8th century.
Trihuvanarekhā, may belong to Ājyavarmān's reign, or at least go back to such a prototype 60. Finally at Chattrarhi the brass bust of “Sakti Devī” must be mentioned. The Markulā temple in Lahul may also date from this time, though no original work of so early a date survives. But part of the latter has been copied during repairs in the 11/12th and 16th centuries, e.g. the Trivikrama of the eastern window panel, and the Nāgas beneath his feet, or the more conspicuous semi-Gupta groups of Gandharvas and Apsaras on the ceiling of the mandapa.

The Harihara temple at Balor, the Kāli temple at Babbor-Thalora 61 and the relief of a curious dancing Vishnu (?), with three heads, between two dancing goddesses, found in the local rana's fort at Mulkihar in Churah, belong however to a later age, particularly to the reigns of Avantivarman (856-83) and Samkaravarman (883-902) of Kashmir. To this period should be assigned the numerous threeheaded Vishnu

60 For a detailed discussion see the next chapter.

images 62 found all over the Panjab Himalaya, and even beyond, which developed from the form of Vishnu worship prevalent in the 6th-7th centuries with its accent on Sūrya, Varāha and Narasimha. It can be traced first in the 7th-8th century 63, but became standardized not before the 9th century 64. Finally the last and hitherto hardly known phase of Kashmiri art in the 11th-12th centuries, in its transition to the Lamaistic art of Western Tibet, is represented by the inner façade of the Markulā Devī temple at Udaipur, Lahul.

With the disintegration of Lālitāditya's empire new political and cultural influences became felt in the Panjab Himalaya. About 770 the Āyudha kings superseded the last weak successors of Yaśovarman and seem to have maintained the frontiers of the kingdom at least in the West. But they became subject, in their turn, to the control of stronger powers, especially of the Pālas of Bengal and of the Pratiharas of Rajputana, and, therefore, the art developing under those dynasties began to infiltrate into the Himalaya. There are some monuments which we cannot classify with certainty, but which belong to a transitional style of the late 8th century. These are the Momal Mahādeo temple at Purana Nagar near Suket, the ruins of Aurh near Bilaspur, another temple substructure in the Raṅgānātha compound in Bilaspur proper, and the Sandhyā Devī temple at Jagatsukh (Nāst), the oldest known capital of Kulu 65. The Momal Mahādeo temple unfortunately is very badly "restored". At Aurh only remnants of three chapels on a platform are left, low walls of heavy blocks, round doorjamb mouldings of the usual Gupta type and lintel fragments with curiously degenerated, half-moon-shaped gavākṣha motifs. The temple substructure in the Raṅgānātha at Bilaspur seems unique, in so far as it is the only known Indian counterpart of Chaṇḍi Asū in Java (early 9th century) 66. The Sandhyā Devī temple at Jagatsukh 67 represents a similar case. Though it is comparatively well known, its real character has not yet been recognized because its original ruins are completely encased in a wooden

hill shrine, erected, according to an inscription of 1428, by raja Udham (or Udhran) Pāl. This shrine, however, has in its turn been replaced by a comparatively modern structure with "Mughal" pillars and primitive Nāga and other woodcarvings. What is still visible of the original temple, are walls, entrance, windows and subsidiary chapels in a style intermediate between the last Gupta and the earliest Pratihāra type. The entrance is on one of the shorter sides of the rectangle, as in the Phnom Bāyāng, the subsidiary shrines remind us of those of early Javanese temples, the windows of those of the Paraśurāmeśvara at Bhuvaneśvar in Orissa, or of Cambodia, the roof seems to have had some similarity with that of the Teli-kā-Mandir at Gwalior, the sculptures are not very different from the earliest work at Osian in Marwar. We may perhaps mention in this connection the step-roof temples of Kātarmal and Jagešvar in Kumaon, as well as the Navadevi and Sūrya shrines at the latter place, with their roofs similar to the Vaitāl Deul at Bhuvaneśvar and the Bhūmasena and Nakula-Sahadeva Rathas at Māmallapuram. In an article published elsewhere I have tentatively connected them with the rise of the Chand dynasty in Kumaon after the fall of Kanauj. Finally we must consider the Buddhist bronzes in the early Pāla style found both in Kulu and Chamba (Chatrarhi) which probably were left behind by pilgrims, when the dependence of the Ayudha kings of Kanauj on Dharmapāla and Devapāla, and the expeditions of the former into Kumaon had opened the way to official and non-official visitors and cultural influence from the Bengal-Bihar kingdom.

The conquest of Kanauj by Nāgabhaṭṭa II Pratihāra in 814 and the consolidation of the Pratihāra empire by Ādivaraḥa Mihiya Bhoja completely changed this situation. Whereas under Vatsarāja and even Nāgabhaṭṭa II, Pratihāra art had still been eclectic, a very definite, strong and manly style developed in the reign of Bhoja and spread over all the vassal states owing allegiance to the emperors of Kanauj. This 9th century art is heavy: massive temples with rather short bee-hive sikharas, sculptures with stout muscular or voluptuous bodies of a rustic earthiness, deities of a terrible majesty, a ponderous, but restrained ornate.

74 Several fine examples in the Svetoslav Roerich Collection.
mentation. It was not until the second quarter of the 10th century that Pratihāra art was to rediscover elegance and lightness.

In Kumaon the Jageśvar, Mrītyunjaya 75 and some smaller temples at Jageśwar, the Ban Deo, Mrītyunjaya, Kacherī and part of the Maniyar group of shrines at Dwarahat 76, the original sun temple of Katarmal and the temples of Baijnath (Almora district) belong to this Pratihāra style of the 9th century 77; in the Simla States the main temple of Lakha-Manḍal 78 and some images and votive reliefs in front of the Shanmukheśvar temple at Bilaspur; in Kulu some of the shrines of Nirmand, the small Surya temple and a Mahishamardini relief at Jagatsukh, fragments of a temple at Churu, sculptures at Bajaura, Nagar and Manali, and finally the fine mask of Mujānī Devī at Nirmand 79; in the Kangra Valley the Kangra Fort and Bhavan; in Chamba the temples of Sāhilavarman and Yugākaravarman in Chamba town, and those of Sāhilavarman and of queen Tribhuvanarekhā at Brahmr; west of the Ravi the temples of Babbor-Thalora 80.

Here we can only briefly mention the temples of Chamba and Brahmr. As set forth in the preceding chapter, the amazing restoration of the former Brahmr dynasty and the foundation of Chamba town and state can be explained only on the assumption that Sāhilavarman had been installed as a frontier governor by Mahīpāla of Kanauj or by one of his near successors. This also enables us to understand the exceptional number and size of his temples 81 i.e. the Lakshmi-Nārāyaṇa, Chandragupta, Trimukha, Kāmeśvara and Champāvatī. But when compared with the Pratihāra monuments of the plains, their architecture and sculpture are clumsy and provincial, and in fact still follow the taste of the reign of Bhoja half a century earlier. The same applies to Sāhilavarman’s Manimahēśa and Tribhuvanarekhā’s Narasimhara temple 82 at Brahmr. Yugākaravarman’s brass image of Gaurisāmakara at Chamba, on the contrary, despite certain provincial weaknesses, has all the elegance of 10th century Pratihāra court art. More provincial works are the Chandrasekhara temple 83 and the Vishnu image 84 at Saho, and finally the Bhagavatī image of Rājānaka Bhogata at Svaṁ (Himgiri, Churah) 85.

85 Ibid., p. 248, pl. XXXIXa
The later history of medieval art in the Himalaya does not concern us here. In Kumaon the Pratihāra style seems to have survived into the 11th and 12th centuries, side by side with examples of imported Gāhadavāla architecture, such as the Badrināth temple at Dwarahat or the Har Gaurī temple at Adbadri, Garhwal. Chauhān art also spread into the hills, as is proved by the wooden capitals of Katarmal in Kumaon, the chief temples of the Raiganātha group at Bilaspur and the Kāladhera near Babbor. On the other hand a characteristic local style, clumsy and exaggerated, but not without a weird grandeur, developed from 9th century Pratihāra art within the sphere of influence of the old Trigarta kingdom. Besides the impressive temple ruins in the Kangra Fort and at Bhanvan, nearby, we should include in this style the Baijnath temples on the way to Mandi, the temples of Khajjar (oldest fragments) and Chamba town (Bhagavati and Hari Rāi) in Chamba, as well as stray sculptures from Fatehpur and Haripur (Kangra district), Baijnath, Jagatsukh and Nagar in Kulu, and Chatrarhi in Chamba, Devi-ki-kothi in Churah, and the Kāladhera (Siva) temple near Babbor. Further to the west the Kashmir style seems to have predominated until the Muslim conquest.

CHAPTER V

THE EARLY TEMPLES AND IMAGES OF THE FORMER CHAMBA STATE

Our investigations in the preceding chapters may seem to have led us far from the central theme of this book, i.e. the analysis, interpretation and appreciation of those unique wooden temples in the former Chamba State: the Lakshaṇā Devī temple at Brahmor, the Śakti Devī temple at Chatrarhi, and the Markulā Devī temple at Markulā-Udaipur (Mārul). But the historical, ethnological and archaeological investigations were most necessary. For these unique monuments which first seemed to emerge, like mysterious apparitions, from the impenetrable darkness of a past lost in utter oblivion, now have been anchored in a background of political events, social movements and religious and artistic activities which, however abnormal they may appear, fit into the general picture of Indian history and civilization in the agitated transition period between the fall of the Gupta empire and the rise of the principal medieval power of northern India, the Prātihāra empire of Kanauj.

Though a number of details still need further corroboration, though others can at present claim to represent only the most probable links in the chain of evidence of a working theory, the key facts can be regarded as having been established: Brahmor was the last capital of the great Brahmapura kingdom known both to Varāhamihira and Hsüang-tsang. That kingdom was a Gurjara state, like Takka-deśa, Bhinmal, Mandor and Broach, founded late in the 6th century, later a vassal of the Maukharis and of Harshavardhana of Thanesar, then of Lalitādiya of Kashmir, and destroyed by the Tibetan invasion under king Khri-srong lde-btsan. Meruvarman, the founder of Brahmor, was a scion of a Śūlika family who first had been vassals of the earlier Somavāmśi kings of Brahmapura residing at Taleśvar in Kumaon. He was the greatest ruler of the last Brahmapura dynasty, and the restorer of the kingdom after the death of Harshavardhana and the destruction of Taleśvar by king Srong-btsan sgam-po of Tibet. Today this dynasty would have been forgotten if a distant descendant of Meruvarman, Sāhilavarman, had not founded the Chamba kingdom in the 10th century, as a frontier general and governor of the later Prātihāras of Kanauj. The “Gurjara” population of the Brahmapura kingdom seems to have been a medley of undefinable barbarian
Early temples and images of the former Chamba State

Tribe, some with cultural traditions derived from Central Asia and even prehistoric Europe, most of them, however, frontier-Indians from the Hindukush and Pamir area. From the end of the 6th century, but especially in the 7th century, Hindu civilization, religion and art penetrated fast. When Śāhikavārman founded the Chamba kingdom, the majority of the former “Gurjara” aristocracy had already been extinguished, killed in wars or deported, whereas the survivors had mixed with Indian kshatriya families so much that they could claim to be Rajputs. The rest of the “Gurjaras”, however, was merged into the hill population as Rāṇās and Rāṭhīs, preserving part of their old characteristics up to the time of the Muslim invasion, or even to the present day.

In this context the character of the early temples of Brahmor, Chatrarhi and Markula becomes clear. Primarily they represent not a local style of architecture and sculpture, but a conscious import of the highly refined post-Gupta art into a barbarian country, comparable to the churches and other religious equipment executed by Syrian, Byzantine and Italian architects and artisans for Charlemagne and his successors or the early churches and monasteries of Kiew designed by Byzantine masters and monks for the first Russian princes of the house of Rurik. But as, with the employment of indigenous assistants, barbarian elements in interpretation, expression and even in ornamental motifs slipped into this Byzantine colonial art of early medieval Europe, various primitive features penetrated the post-Gupta art imported into the Brahmapura kingdom. In the end a new art developed, in the West the Romanesque and Russian, in the Panjab Himalaya the Trigarta and Kashmiri styles.

But, before going into a detailed analysis of these various cultural and artistic trends, it will be desirable to obtain a clear picture of the three temples under discussion, i.e. the lakṣaṇā Devī temple and statue, and the images of Nandi, Ganeśa and Narasimha at BrahMor, the temple and statue of Śakti Devī at Chatrarhi, and the temple of Markulā Devī at Markulā in Chamba-Lahul.

BrahMor is situated on the shoulder of a hill projecting into the Budhal Valley, everywhere surrounded by fields and pastures (Plate 1a). It is a small village, and probably it has never been much more. Though the BrahMor buildings, like most in the Himalaya, are of wood, walls and corner pilasters normally are constructed of wooden caissons and frames filled with rubble which would have left some vestiges if the place had once been more extensive. But there are none. In all probability BrahMor had been not a town, but rather a political meeting place and religious centre like the “civitates” of ancient Gaul and Britain, or a “Palatium” like the palace-castles of the Carolingian and Saxonian emperors of

1 Vogel, Antiquités, pl. II.
medieval Europe, while most of the population lived on the farms and in the small villages spread all over the Budhal Valley. In fact, such a situation would fit very well into the general picture of the ancient Brahmapura kingdom.

The heart of Brahmar is the precincts of the holy "Chaurāśī", partly shaded by gigantic deodar cedars. Its center is occupied by the Maṇimahaśa temple, a monumental stone temple with a high beehive sikhara of the middle Pratihāra type, decorated with hardly any sculptures. It is very similar to the earliest temples of Chamba town and, like them, had been built by Sāhīlavaran (ca. 920-40). But the king had merely rebuilt, in the style of his age, an earlier wooden maṇḍapa-temple of Meruvarman, as the brass statue of Siva's bull Nandi, which still stands under a wooden roof in front of the Maṇimahaśa, bears an inscription of Meruvarman. Its right ear, tail and bell are broken, scars left by the Tibetan invasion to which the earlier temple had fallen a victim. The same applies to the very similar, but smaller Narsingh temple, on the side of the Chaurāśī towards the declension of the hill. It was erected by Tribhuvanarekhā Devī, the queen of raja Yugākaravarman (ca. 940-60), for an image which, though not as early as Meruvarman's time, seems to go back at least to the reign of Ājjavarman. Meruvarman's brass image of Gaṇeśa behind the Maṇimahaśa temple, has to be content with a primitive wooden shed (10' 8" by 10' 3") with some imitations of the woodcarvings of the Lakshaṇa shrine. This Devī temple alone, though likewise rebuilt as a modern hill temple, has preserved most of its ancient glory, as its interior and façade are still intact. It stands on the hillside of the Chaurāśī, next to various old fountain stones (most of a rather late date) and of the shrines of the eighty-four Siddhas who are said once to have accompanied the saint Charpaṭnāth and Sāhīlavaran to Chamba. On the western side of the Chaurāśī, finally, there stands the Koṭhī (mansion) of raja Prithvī Singh (1641-64) and Umed Singh (1748-64), an interesting work of Rajput hill art. However, local tradition asserts that the ancient palace of the kings of Brahmapura had been situated on the open ground (Chaugān) between the Chaurāśī and the village which still bears the name Bāḍī (Sanskrit Vaṭikā = a garden), and where old

---

2 The same is probably true of the earlier capital, Taleśwar-Brahmapura, which according to Hsüan-tsang had a circumference of 20 li, i.e. 3½-4 miles. A similar case, on a much vaster scale, seems to have been the early Pratihāra town Osian (Marwar), apparently once an immense camp, but with massive monuments only near the princely residence and at some other rallying points.

3 Vogel, Antiquities, p. 96, fig. 16.

5 As already mentioned, Charpaṭnāth seems to have been rather the guru of Meruvarman, but he and his Siddhas may later on have been mixed up with other Kānpaṭha yogis who acted as advisers to Sāhīlavaran.
bricks and coins are said to have been washed out by the monsoon rains.

**a) The Lakṣaṇā Devī Temple at Brahmor.**

Like so many ancient sanctuaries in India, the Lakṣaṇā Devī temple is a ruin kept in good repair because its cult has never been seriously interrupted. But these repairs have been executed without any proper understanding of the original design, in the technique and taste of the local peasant architecture (Plate I b). Thus today the temple appears as a simple hut of wood-and-rubble construction with a broad, far-projecting gable roof covered with slates, very similar to many local shrines all over the hills, but especially to those in Kulu. In the centre of its front, however, there rises a masterpiece of woodcarving, still most impressive despite its present deplorable condition: a richly carved entrance frame on which rests a three-storeyed pediment, in its turn crowned by a triangular gable (Plate II). Inside, there is a rectangular mandapa supported by four pillars interlinked by railings on both sides. And behind the mandapa there opens the quadratic cela, again with a richly carved entrance between two other pillars, enshrining the “brass” (aśtadhatu) statue of Lakṣaṇā Devī.

It is not easy to describe the façade of the temple; for the snow and rain of thirteen centuries have utterly corroded even the resistant deodar wood, so that only the stronger fibres of the carved surface remain. Thus, from some distance the figures, deeply carved, appear quite distinct, but if one approaches in order to study the details, the definition becomes more and more indistinct. For an exact explanation of Indian religious images the identification of their costume, hair style, crowns and various emblems is necessary, but only an approximate explanation of the decoration is now possible.

In its general lay-out the temple entrance follows the average pattern of the later Gupta temple, such as, in the Himalaya, still survives in the, much later, wooden temples of Kulu. It consists of a sequence of alternating ornamental and figural frames, successively receding from the enclosing wall to the deep niche of the door proper. The first frame, slightly projecting from the enclosing rubble wall, is a semi-circular moulding carved with rich floral scrollwork. Near the

---

6 Brick buildings in the Panjab Himalaya are very rare, and all belong to the late Gupta period, e.g. the platform of a temple in Chamba town, the stūpa of Chetru near Kangra, and the stūpas of Pandrethan in Kashmir. Also at Lakhanpur and Talesvar in Kumaon old bricks are said to have been found.

7 These silver coins, buried in a copper vessel, had been distributed to sādhus and, therefore, can no more be identified. As the local people declare, however, that they bore Persian inscriptions, they have nothing to do with the ancient Brahmapura palace. They may have been Mughal pieces possibly buried in the time of Prithvi Singh’s or Úmed Singh’s stay at Brahmor.

upper corners, where the jambs of the entrance turn into the lintel, it projects to the right and left, in order to offer room to two winged lions. These lions are treated in a heraldic manner, so that their sitting figures rise to a height almost four times the breadth of their basis. The next frame consists of two jambs covered with figures and of a lintel of flying godlings. On each side there are four deities, each standing on its own pedestal, and at the bottom a kneeling yaksha supporting, with his arms, the whole doorjamb. The figures are so deeply carved that they seem to be almost separate sculptures placed in front of the background; but unfortunately they are so badly damaged that they can no more be recognized. The deities of the lintel apparently are Gandharvas, five couples on each side, each Gandharva holding musical instruments in his hands and carrying his mate, with some sacrificial gifts in her hands, on his back. Only the central figures hold what seems to be a feathered crown. The next frame is again a rounded moulding of vegetative scrolls from which, in the centre of the lintel, emerges a kirtimukha mask. Then follows another frame consisting of four standing figures on each side, and of a supporting yaksha at the bottom. Though these figures are of somewhat smaller size, some of them can still be identified. For, being deeper in the recess of the entrance, they have been less exposed to the weather. The two statuettes at the bottom represent the goddesses of the holy rivers: Gaṅgā, standing on a makara, to the left, and Yamunā (Jamna), on a tortoise, to the right. Both are attended by a small maidservant who originally must have held a parasol. Of the other figures one seems to represent a three-headed Siva, another Vishnu with human, boar and lion head, and a third possible Śūrya. On the lintel four couples of flying godlings carry garlands to a central flower (padma?), possibly a symbol of the mistress of the shrine. The innermost, broad and flat frame consists of highly stylized leaf scrolls arranged in oblong medallions formed by the long stalk from which these scrolls branch off.

In order to relieve this beautiful entrance from the pressure of the pediment, the latter has been mounted on a long beam anchored in the rubble wall on both sides. It likewise is a very heavy piece, rising in three storeys. The lowermost storey consists of ten miniature niches of round arches supported by short pilasters.

---

8 The tradition of these heraldic lions has survived in the Brahmin district until comparatively recent times. They are found also at the Gaṅgā temple and, as balcony supports, in village houses, e.g. at Khani, though in a curiously misunderstood form, even with human faces.

10 Such crowns appear also on the lintels of the Sakti Devi temple at Chatarbhi, of the Thākurdwāra of Masur, and of the Śaṅkumukhēśvar at Bilaspur. The last one looks exactly like a medieval European crown. This crown motif seems to have been characteristic only of this area and this period, and may possibly have been of foreign origin.

11 The open lotus flower corresponds to the yoni and (double) triangle as a yantra of the Sakti, the female cosmic principle.
with “pot-and-foliage” capitals. And in each niche there stands a couple of lovers (mithuna), each in a different attitude of wooing, embracing or kissing. The second storey has a similar number of niches, but without arches. These niches are framed by eleven dancing Caryatids, standing on consoles projecting above the pillars of the preceding storey and again holding the brackets supporting the top storey. And in each niche there sits some godling in a miniature chapel with a threefold roof. This last storey resembles, to some degree, that at the bottom, but the columns are lower, the arches depressed, and the niches are occupied by squatting figures with human or animal heads (ganas?). The projecting cornices of the last two storeys are decorated with a frieze of suspended knobs (opali), a motif found also in other hill temples 12.

On this pediment rests the gable, a triangular panel enclosing a trefoiled niche in which an impressive deity is seated. This gable is supported by a frieze of nine deities sitting, with crossed legs, in very low arched niches. Apparently these are the Navagraha (Nine Planets). The other two sides of the triangle are ornamented with a rounded cornice moulding of highly stylized scales or leaves. In the arch Vishnu is sitting, held up by his vahana Garuda, while on both sides two rather distorted chamaras (fly-whisk)-bearers are standing. Garuda, with very short legs and almost prostrate, is quite inconspicuous, hardly more than a variant of the yakshas on the pediment. Vishnu, with three faces (boar, human and lion) amidst a mass of ringlets, once had twelve arms holding in their hands the symbols of his power, though now many of them are broken. Of his right arms the uppermost holds a parasol, the second probably a mace or a lotus flower, the third an arrow, the fourth rests on the attendant, while the last two are lost; of his left arms the uppermost carried a lotus or trident, the second a disk, the third a bow, the fourth rested on the other attendant, the two lowermost are likewise broken 13. The whole gable triangle, however, is again framed by two richly carved cornice boards.

The interior of the temple is much simpler. The pillars (thamb, skt. stambha) of the maṇḍapa are plain quadrangular wooden posts up to about two thirds of their height (Plate IX). Then a broad and two small ringbands decorated with

---

12 E.g. at Chattrarihi, Markula and almost all Kulu temples. But it can be traced also in quite a number of medieval temples, especially in Rajputana and Central India.
13 According to the Rāpaṇadāna, a compilation of the time of mahārājā Kumbhakarna of Mewar, this would represent Vishnu’s aspect as Ananta (the endless); see M. R. Majumdar, Ind. Hist. Qu. XVI, p. 524 ff. How far these late classifications can be applied to images of the 7th-9th centuries, cannot be decided before the contemporaneous Kashmir theology will have been properly studied. The three-faced type of Vishnu has already been discussed in the preceding chapter. As the entrance frame of the Lakshana temple and an image at Bajaura prove, it was not invented in Kashmir, but became there the dominating orthodox form.
kārtimukha masks, flowers and string-courses, then a capping covered with lotus petals, and at last a simple pot-and-foliage capital and a flower-decorated abacus follow. The Śrīdhara brackets above are decorated with a central piece (on top of the capital) representing some Hindu god with his vāhana sitting in a niche formed by two miniature columns and a round arch rising from the snouts of two makaras\(^{14}\). The lateral pieces, only slightly rounded off at the lower edge of the end, have reliefs of flying minor deities, and, on the level of the arch, a decorative frieze ending in a scroll. The ceiling is of the “lantern” type so common in India. By covering each corner with a triangular slab extending from the centre of one side to that of the next, the square of the ceiling is reduced to a smaller, diagonally placed square; which is again reduced by the same procedure until the central opening has become small enough to be covered with a single slab. These slabs are all richly carved with ornaments, geometrical borders along the edges, and flower, kārtimukha and makara motifs in the centre of the triangles. The central slab finally is filled by an immense lotus rosette, the various rows of petals of which are partly treated in a naturalistic manner, partly dissolve into various other ornaments.

The entrance to the inner sanctuary repeats the decoration of the exterior entrance in a much simplified form. There are no figures except the lions in the upper corners of the, here much broader, round moulding. This moulding is covered with a scale pattern, at a few points interrupted by square panels decorated with rosettes. The rather narrow second and the very broad last, innermost frieze have a rich, but very uniform decoration of leaf scrolls, which in this case is not divided into medallions by the spirals of a connecting stalk.

The object of worship\(^{15}\) is a fine brass statue, 3 feet 4 inches high, on a pedestal of 9 inches in height (Plate VI). Lakṣaṇa Devī (Bhagavatī) is an aspect of Durgā\(^{16}\), also called Bhadrakāli in the Vāmśāvalī. Today this name is interpreted as referring to Bhadrakāli of Basohli. This seems to be a comparatively modern association, as Basohli was founded only in the early 17th century. Its predecessor Balor, ancient Vallāpura, is not known before the high middle ages, and even the temple of Mallā Devī (an aspect of the Śaradā Devī of Kashmir) at Sukral, the great centre of pilgrimage in the former Basohli State, is of the Muslim period. The only old Kāli temple there is not at Balor, but at Babor (ancient Babbāpura) between Jammu and Ramnagar-Bandhralta, which, however, is not earlier

\(^{15}\) Vogel, *A.S.R.* 1902-03, p. 239, fig. 2; *Antiquities*, p. 138, 141 ff., pls. VII b, X.

\(^{16}\) The victory of Durgā over the Buffalo demon is described in *Durgāsaptakalī*, chapters II and III.
than the late 9th or early 10th century. Moreover Bhadrakāli is venerated in more places in the Panjab Himalaya, and is, in her turn, identified with Jvālāmukhī or Jalpadevi, the great goddess of the Kangra Valley. But of the cult of Jvālāmukhī we have no historical evidence earlier than the age of Maḥmūd of Ghazni (early 11th century), though, of course, the local priestly tradition claims for it a hoary antiquity. Although the latter is highly probable, the cult seems long to have been of no more than local importance. Thus Lakṣaṇa Devī of Brahmore surely cannot be a derivative of the cults either of Basohli-Vallāpura or of Babor or of Jvālāmukhī, but must in reality have its oldest known centre in the Panjab Himalaya. The dedicatory inscription on the image says that “the illustrious lord Meruvarman has caused the holy image of the goddess Lakṣaṇa to be made by the workman Gugga”, in other words, it goes back to the second half of the 7th century.

As in most of the temples, the goddess is represented as Durgā Mahishamardinī, the “Slayer of the demon Mahisha”, a form which we can trace first in the Udaygiri caves 17 near Bhilsa (Malwa) and in the Gupta temple of Bhumara 18, but which became common under the Chālukyas of Badami 19 and the early Rāṣṭrakūṭas. As a matter of fact the Brahmore image also follows the iconographic concept of the high Chālukya period (i.e. the 7th century), i.e. the goddess puts her right foot on the head of the killed buffalo demon, after having run her trident into its neck, while with her left hand she catches the buffalo’s tail and lifts its whole body up almost vertically 20. In every other respect, however, the Brahmore image belongs to late Gupta art, in the proportions of the figure, the anatomical treatment, the hair style, the costume, ornaments and emblems. The goddess wears a high jatāmukūṭa (crown of matted hair), or rather an immense wig, the hair being piled-up in a slightly oblique protuberance bound together by strings of pearls and various pieces of jewelry, thence to fall down on the shoulders and neck in innumerable ringlets. A similar costly belt with attached pearl strings and pendants, and a sort of pearl-studded girdle pressing-in the belly, hold a skirt of very fine muslin. A diaphanous shawl falls down from the shoulders in innumerable fine folds, and a necklace of golden disks hanging from a string of pearls, embossed bracelets from which dangle short strings of pearls and jewels, wristlets and anklets, complete the costume. The eyes of the goddess are inlaid

20 Another image of the same iconographic and stylistic type is in the Sandhyā Devī temple at Jagatsukh, Kulu.
with silver, and her four arms hold, in the upper right hand, a trident (*triśūla*), in the lower right a sword (*khaḍga*), in the upper left hand a bell (*ghaṇṭā*) and in the lower left the tail of the buffalo demon.

b) **Meruvarman’s other Images at Brahmor.**

As already observed, the Lakṣaṇā Devī temple is the only fairly well preserved monument still left of Meruvarman’s capital Brahmapura. Of the other temples only part of the images survives. What these originally had been, we know from a group of reliefs 21 on a boulder in the Brahmani Devī Nala on the way from Brahmor to Khani. They show Lakṣaṇā Devī, Siva standing in front of his bull Nandi, Gaṇeśa and a *liṅga*. Today only the brass idols of Lakṣaṇā Devī, Gaṇeśa and Nandi exist, and possibly also the *liṅga* if we may identify it with the Rāmeśvara or Sūrajmukh (Sun-face) *liṅga* still held in high veneration at Brahmor 22. It stands on a large copper *yoni* once set with some ornaments; if these might have been small silver flowers, as it seems, such a late Gupta motif would fit well into the time of Meruvarman and prove the identity of both pieces.

The statue of Siva has disappeared, and only the Nandi belonging to it is left; the statue seems to have had some resemblance to the Siva from Avantipur in the Srinagar Museum 23, though it had not the somewhat effeminate elegance of the latter.

The other reliefs are not exact reproductions of the images of Meruvarman. Both the Devī and Gaṇeśa look heavier and coarser, the first rather similar to the early Mahishamardini of the Udaygiri hill. As a matter of fact the whole style of the reliefs is different from that of Meruvarman’s time, being more like that of the Saiva reliefs along the road leading up to the Sūraj Pol of the Gwalior Fort. Unfortunately the date of these Saiva reliefs is not exactly known, but cannot be later than the 8th century.

On the other hand, it is interesting that among the reliefs of the Brahmani Devī Nala the figure of Narasimha is absent, whose idol likewise forms one of the treasures of Brahmor. Thus, it cannot have been in existence in Meruvarman’s time and not even in the early 8th century. Actually, it is the only metal statue which bears no inscription. Dr. Vogel, therefore, regarded it as contemporaneous with the stone temple in which it is housed. According to the Brahmor grant of Yugākaravarman 24 that temple had been erected by his queen Tribhuvana-

---

21 Vogel, *Antiquities*, p. 252 f., fig. 29.
22 This *liṅga* is, as *Suryāmāha*, attributed by the Vaiśāvalī to Meruvarman.
24 Vogel, *Antiquities*, p. 159 ff., pl. XVI.
rekhā by the middle of the 10th century. But the wording of the inscription is vague and may refer to the temple alone not less than to the idol with its shrine, whereas local tradition attributes the image to Meruvarman's reign. As, moreover, the style of the figure differs strongly from the only brasswork of Yugākaravarman's reign that we know, the Gaurī-Saṅkara group at Chamba, it rather appears that the Narasimha image, though later than Meruvarman, had already been in existence when queen Tribhuvanarekhā provided it with a temple. For a more accurate assignment we can, thus, rely only on the internal evidence provided by the image itself, and it will be better to postpone the discussion of this problem until we have been able to analyze the figure in detail.

Evidently all these idols once had wooden shrines of a type similar or at least related to that of Lakṣhaṇa Devī. We have already seen that these were burnt down in the general destruction of Brahmr by the Tibetan king Khri-srong ldetsan in the later 8th century. Why, then, has just Lakṣhaṇa Devī's temple been saved, why at least the idols of the other shrines, and why has only Śiva's statue disappeared? It may have been mere accident. But when we take into account such general conclusions as a careful analysis of Muslim temple destructions in India permits us to draw, we form a different inference. Generally an invading army had not the leisure to wipe out all monuments; during the short time of its stay, most of it preoccupied with looting, rape and carousals, it had to concentrate its attention on such monuments as had been the symbols of power of the defeated state and religion, but would respect whatever appealed in some way to its own beliefs or superstitions. The Manimahesh temple fell as the great state sanctuary or Brahmapura. If the other temples were not spared, the images of Ganesa, Narsingh and Nandi may have been salvaged, because they reminded the Tibetan Lamas of more esoteric deities of their own pantheon, Vighnāntaka, Hayagrīva and the bull of Mahākāla-Bhairava. But Lha-mo (Kāli) was held in superstitious awe by all the Tibetan warriors, and so Lakṣhaṇa Devī's temple may have escaped, though badly damaged.

The idol of Lakṣhaṇa Devī has already been discussed. Let us now examine the two other images dedicated by king Meruvarman at Brahmr. The first is Śiva's bull Nandi 25, a brass (or more correctly ashtadhatu = mixture of eight metals) statue, 5 feet high, and 5 feet 10 inches long (from the nose to the tail), on a copper pedestal, 13 inches high (Plate III). A statue of Nandi is usually found in front of Śiva temples, except where the god is represented riding or leaning on it. But always it is represented lying leisurely on its four drawn-in

25 Cunningham, A.S.R. XIV, p. 112; Vogel, A.S.R. 1902-03, p. 239 ff, fig. 6; and Antiquities, p. 140, 143, pls. IX-X.
legs. But our statue is unique: a standing bull! This represents a survival of an earlier iconographic practice peculiar to northwestern India. For on the Kushâna, Kidâra-Kushâna and Kushâna-Sasanian coins Siva, the trident in one of his hands (Śūlapâni!) always stands in front of an upright bull, whereas this type had been almost unknown not only in India outside the Kushâna empire, but also to the Ephthalites. As the reliefs in the Brahmani Devi Nala prove, our Nandi once stood behind a statue of Siva (ca. 8' high!) which, to conclude from these reliefs, seems to have been of a type known to us from Kashmir. The Siva-Nandi group of Brahmo, thus, represents a revival, after the fall of the Ephthalites, of a cult-form once flourishing amongst the Hindus of the Kushân Empire.

In other respects the Nandi statue also makes an odd impression. Its body is like a barrel, and its neck and hump are not less unnatural; even the snout is more like that of a pig, and also the legs and hooves are curiously clumsy. Nandi's ornaments, on the other hand, are of the usual type, chains with alternating disk- and bell-shaped pendants, and a cover ending in a "woven" border. The eye-sockets at present are empty and, as in the case of the lions on Aśoka's pillar at Sarnath, once must have been inlaid with crystal. The pedestal has the shape of a Gupta plinth or platform. As already mentioned, an ear and the tail have been broken during the Tibetan invasion.

Finally we should mention the idol of Gañēśa. It is a "brass" figure, 3 feet high, on a copper pedestal, 14 inches high, and bears, like all the other images except the Narasimha, an inscription of king Meruvarman. Gañēśa (Plate V) is represented as a fear-inspiring deity with a very stout, muscular body, elephant-
head and four arms. In these he holds (upper right) a rosary, (lower right) his second tusk, (upper left) a hatchet with a dagger-shaped blade and (lower left) a vessel filled with sweetmeats (laddū) of which he picks up one with his trunk. Like Śiva he has three eyes, the third at the root of his trunk, while his staring eyes, standing-out ears and tense arms appear as if he were prepared any moment to spring into action. He wears a crown of pinnacles connected by strings of pearls resembling half-moons, enclosing a mukūta. His necklace consists of the same disks which we have seen on the images of Lakṣana Devī and Nandi. A snake serves as the yajñopavīta, the cord which marks every Brahmin as “twice-born”. Around his waist a lion’s or tiger’s skin is wound, tied together by a knot of two paws, the head on the right, the tail on the left side. The lower body is covered with a dhoti decorated with lotus flowers which are visible only on the fragment at the foot of the pedestal, as the legs and feet were broken during the “Kīra” invasion under Khri-srong lde-btsan. Gaṇeṣa sits on a lion throne (simhāsana) very similar to those used for Buddhist and Jain images, only with the difference that the “Wheel of the Law” is replaced by a very queer-looking gana. Also the two lions sējant are grotesque products and have very little resemblance to the real animal. Finally, the simhāsana is decorated with a cloth-cover with fringes, hanging down in a quartercircle in the centre, such as is common on similar Buddhist and Jain pedestals.

c) The Narasiṁha Image at Brahmar.

On the first impression the image of Narasimha 31 looks like the exact counterpart of Gaṇeṣa (Plate IV). The Man-lion avatāra is one of the terrible aspects of Vishnu, the destroyer of Hiranyakaśipu and saviour of Prahlāda. And indeed, the monster looks most horrible, especially in the ghostly front light coming through the temple door. It is a short, plump human figure with a heavy lion’s head, sitting on a throne with wide-spread legs, two arms folded under the chin, two held up with extended claws, staring forward with wide-open eyes and half-opened mouth. The legs are tense as if prepared to jump up at any moment, the extended arms seem to wait for the moment when they can bury their long claws in the victim, the hands under the chin are pressed together as if they could hardly suppress the lust of blood glowing in the wild eyes, the tense ears and the slavering mouth vibrate in tensest expectation, the mane stands out like a flaming halo. There are no special symbols of the horrible, no sculls, bones, skeletons, as in Śaiva iconography, only the royal crown (of “Gandhāra–Kashmiri type), the

31 Vogel, A.S.R. 1902-03, p. 239 ff., fig. 4; and Antiquities, I, pl. VIIIb.
royal jewelry and costume, and, on the foot of the pedestal, the laid-aside emblemata of Vishṇu, the mace and the disk, the lotus and the conch. And yet, in its concentrated tension, this masterpiece embodies all the irrational terrors of inscrutable cosmic power.

To this mighty figure the socle forms a curious anti-climax. It is a massive bench decorated with reliefs of mountain peaks stylized in a manner unknown in India, but common in Eastern Turkistan and China. And to the right and left the head of a lion is peeping over the mountains, again stylized in an extraordinary manner, to some degree copied from the face of Narasimha, and yet more reminiscent of dragon masks in early Chinese art.

The height of the statue is exactly the same as that of Gaṇeśa, the physical type also links up with the latter’s, and even technically hardly any difference can be discovered. But there is no inscription of Meruvarman as on all the other idols executed by master Gugga for that king, and no relief of it in the Brahmani Devi Nala. The Narasimha, therefore, cannot have formed part of the images and sanctuaries set up at the foundation of Brahmor.

However, this is not so surprising. Meruvarman’s religion was purely Śaiva (Śākta). And the Nandi image even gives us a hint why this had been so. The type of Śiva, trident in hand (Sūlapāṇi) and set in front of his standing bull is Kushān. And when we trace the other Hindu deities venerated in the Kushān empire we find that Siva, Sūrya and also the Great Mother in various forms were quite common, but that Vishṇu, who played such a prominent role in the Gupta Empire, was hardly venerated. Meruvarman, being a Śūlika prince, must have been a devotee of Śiva Sūlapāṇi.

Vishṇuism penetrated only with Gupta and post-Gupta influence. At Taleśvar-Brahmapura it must have been known, as at least one king bears the name Vishṇuvarman. In Brahmor it must have been introduced at least before the overthow of the “Gurjara” kingdom by the Tibetans, because the last prince slain by them, Lakshmivarma, was named after Vishṇu’s consort Lakshmī. Now the impact of late Gupta civilization, and especially of its religion had been strongest at Brahmor in the reign of Ājyavarman, when Lalitāditya of Kashmir settled brahmins and kshatriyas from Kanauj there. These exiles must have been cultured persons connected with the court of Yaśovarman, for otherwise Lalitāditya would have had no interest to deport them to such a lonely place as Brahmor. However, as the Vishṇu cult had been most prominent in Gupta civilisation, we may regard these exiles as the bringers of Vishṇuism to Brahmor. And even this Vishṇu temple

---

32 The Nirmand inscription of Samudrasena mentions a temple of Siva Sūlapāṇi; likewise his cult was popular with the Sulkīs of Orissa.
can be traced, at least in one important fragment, i.e. the gable now built into the façade of the Lakshana temple, which, for a number of other reasons adduced above, must go back to the time of Laitadiya and Ajyavarman.

But what, then, had been the idol of this Vishnu temple? It can only have been the just discussed statue of Narasimha. The combination of Gupta and Kashmiri features which it reveals, was possible only in those days. Moreover, Varaha and Narasimha were the favourite avataras of Vishnu during the later Gupta period, often enough overshadowing Vishnu's divine aspects themselves. For, originally adapted from barbarian deities, both had become patrons of the struggle against the Ephthalites and Gurjaras, and protectors of the Indians against the Mlechchhas. Thus they were fused into one new aspect of Vishnu, with three heads, human, lion and boar, which was especially favoured in Kashmir and remained popular there much longer than in the rest of India.

A clash between both systems, Saivism and Vaishnavism, was avoided by a syncretistic theology, until by the 9th century the orthodox Hindu system was evolved. Out of a number of abortive attempts by the leading sects to absorb their opponents, there developed an equilibrium, in which first Siva, Brahma, Surya and Kubera were treated as the four orthodox Hindu gods. But Brahma was superseded by Devi, and Kubera by Ganesa. In Brahmar we find, thus, the final system already in the reign of Ajyavarman: a closed Quaternity consisting of Siva as the nirguna, absolute godhead, Vishnu as the saguna, creating god, Ganesa as the divine power active in the visible universe, and the Devi as the lakti, prakriti, the womb of the material world.

From Pratihara times onwards the cult of Narasimha fell out of favour, and his image, though not forgotten, was relegated to the conventional friezes of Vishnu's avataras. With the foundation of the great Lakshmi-Narayana temple at Chamba by Sahniharman the aspect of Vishnu as the kinggod was introduced. And though the erection of the Narasimha temple at Brahmar had been a reflection of this Vaishnava revival in Chamba, queen Tribhuvanarekhara would surely not have selected such an obsolete avatara, if Ajyavarman's idol had not been already in

---

33 One of the last Gupta emperors bore the name of Narasimhagupta; see also Udayagiri, Eran, the Badami caves, Mammallapuram, etc.

34 Varaha probably had been a Hun deity, Narasimha a Scythian or Gurjara god or at least came in fashion because of similar Hun or Scythian gods. The lion, the royal animal of southwestern Asia, had been the emblem already of the Western Kshatrapas. Both seem to have been of a solar character.

35 At Brahmar, Chatrarthi and Bajaura the type can be traced already in the 7th century. See above, p. 68.

36 As far as my knowledge goes, the texts have not yet been studied from this point of view; but the evidence of iconography is very clear.
existence and in need of a decent shrine. Only in popular religion Narsingh is still venerated, but merely as a spirit 37.

d) The Sakti Devi Temple at Chatrarhi.

Very similar to the Lakshanā Devī temple at Brahmor is that of Sakti Devī at Chatrarhi. Chatrarhi is a village in Pau ‘ilāqa, lying in a fertile upland on the slope south of the Ravi, two-third of the way from Chamba up to Brahmor, not far below the juncture of the Budhal and Tundehn Nalas with the Ravi. The village is inhabited by brahmins and musicians connected with the temple and with the great Mela celebrated in the month of Bhādon when dancing goes on day and night, after the idol of the Devī has been bathed in water brought by runners from the Manimahes lake beyond Brahmor. For the Chatrarhi temple is regarded as one of the most holy sanctuaries of the hills, competing with those of Lakshanā Devī at Brahmor and of Bhavānī at Kangra. And certainly it is one of the oldest. Tradition attributes its foundation to Mūshūna, the legendary ancestor of the old Brahmor dynasty. But the inscription on the idol mentions Meruvarman, the founder of Brahmor, and another tradition says that the temple was the last work of Gugga, the master-artisan of Meruvarman.

This statement is more or less borne out by archaeological evidence. For the building resembles the Lakshanā temple at Brahmor in many respects. But there are also a number of differences both in its plan and decoration. For it has no separate mandapa, but only one large shrine (16 ft. 1 in. by 16 ft. 1 in.) which, however, seems later to have been subdivided into a cella and a mandapa. This nucleus is surrounded by an open gallery, i.e. a pradakshina-patha supported by twelve massive wooden columns. But the interstices between the columns have later been filled in with whitewashed rude masonry of rubble blocks and clay strengthened by a number of horizontal beams. Instead, new wooden galleries have been constructed in front and on the right side. And the whole (30 by 29 ft.) is covered by an almost flat pyramidal roof of well-cut slates.

Only the sanctuary proper and the, once open, gallery surrounding it belong to the original temple. The rubble masonry was last renewed after the earthquake of 1905, and old photographs show an almost flat gable roof in place of the present pyramidal one. The later wooden galleries have the elegant, but decadent forms of the 18th century, with columns in which medieval pot-and-foliage capitals, 16th century Rajput brackets and scaly Mughal pillar shafts in the style of Muḥammad Shāh have been blended into a quaint product of “folk art”.

37 Sardaru Balhari, Ind. Ant. XXVIII, p. 84 ff.; Kangra and Chamba Gazetteers.
38 A. Cunningham, A.S.R. XIV, p. 113; A.S.R. 1905-06, p. 25; 1906-07, p. 17; Chamba State Gazetteer, p. 43 ff.; Vogel, Antiquities, fig. 3.
As already mentioned, the original shrine is surrounded by a gallery (measuring inside 24 ft. 10 in. by 25 ft. 2 in., and, up to the lowest beam 8 ft. 2 in. high) supported by twelve heavy pillars (1 ft. 6 in. thick) of deodar wood, very similar to those in the Lakṣaṇā Devī temple at Brahmor. But their decoration is somewhat richer and more elegant, the design more fluid and variegated, but also more mannered, and the individual motifs more interesting, though less numerous (Plate VIII). In comparison with the Chatrarhi pillars those of Brahmor look stiff, geometrical and almost clumsy. On the śrīdhara brackets lions and other animals alternate with flying Gandharvas, and stylized flower scrolls with the deities of the central-niche panels. On the exterior side, of course, these carvings are very badly corroded by the weather, whereas the fringe of stalactite knobs (ōpali) along the edge of the roof must have been renewed in the course of time.

The entrance to the gallery and that to the interior shrine are both of the same type as those of the Lakṣaṇā temple. Yet the rich pediment and gable of the façade of the latter are absent, while the sculptures of the door frames proper are less elaborate. The exterior entrance is rather simple: first a small border, then a frieze of decorative bosses and finally a set of four, now badly damaged, deities on both sides. When the pillared gallery round the sanctum was still open, this frame must have stood, almost detached, also in the open. We can trace such arrangements in some later hill temples, though always in connection with a mandapa in front, but it is unknown in the rest of India, and possibly this exterior entrance, though an old piece, has been transferred from another, lost shrine. This seems plausible because there exists another ancient idol at Chatrarhi, likewise known as Sakti Devī, but actually the bust of a male deity. The door might thus have belonged to the vanished temple of this image.

The entrance to the sanctum is much more interesting. The outermost frieze projects to the right and left at the top corners, enclosing two sitting lions. The next frame consists of two jambs alternately decorated with three standing deities and three smaller crouching gaṇas (?) each. Of the latter two are ox-headed, two lion-headed, one has elephant ears and one a face on his belly. Among the deities Kārttikeya, with six faces and a peacock, Indra with his vajra and the elephant Airāvata, possibly also Śiva can be recognized on the left, and Brahmā, four-armed and with a rosary and vessel in his hand, accompanied by two bāṁsas, on the right. The lintel again is decorated with flying Gandharvas, those in the centre holding a crown, the rest various unidentified objects, each carrying his mate on

his back. On the jambs of the next frame again four, somewhat smaller, standing deities are represented on each side. Most of them unfortunately cannot be identified; on the left jamb (from top to bottom): a figure holding an object which might be a garland, veil or noose (Vāyu or Yama?), Durgā Mahishamardini, Viṣṇu with human, lion and boar heads and four arms holding his emblems, i.e. the disk, conch, lotus and mace, and at the bottom the river goddess Gaṅgā; on the right jamb: an unidentified goddess(?), a god with a club (Bhairava?), again a god or goddess, and finally the river goddess Yamunā. The corresponding lintel shows thirteen sitting figures, most of them four-armed and, as the tenth from the left, a big head in profile, with matted hair and well-executed ear-rings. This permits the group to be identified as the Navagraha, including Rāhu the dragon demon causing the eclipse of the moon, and, on the right, the four Lokapālas, the guardian deities of the four cardinal points. The innermost frame, finally, is decorated with highly stylized scroll-work sprouting from longdrawn creeper spirals growing out of the mouths of two sitting yakshas at the bottom.

The idol of Śakti Devī 40 in the sanctum is a fine brass statue, with its socle 4 feet, 6 inches high (Plate VII). This copper socle is much lower than that of Lakṣaṇā, as the goddess stands on a big lotus, with reverted over-ripe petals, such as is a very common convention in Nepalese and Tibetan art. She has a very slim, elegant body covered only with a transparent skirt falling down to the ankles and forming some folds between the legs, held by a rich belt (mekhālā) with a kind of girdle and strings of pearls of the same type as that worn by Lakṣaṇā Devī. Also the scarf hanging over her shoulders, her necklace, armlets, bracelets and ear-rings are of the same sort. But besides these, a long string of pearls hangs down from her neck between the heavy breasts to her thighs. And on her head she wears a high diadem, consisting of a golden circle decorated with two jewelled flowers above each ear, from which bands flow down, and a pile of five jewels above the forehead from which plumets emerge to the right, left and top. In her two right hands Śakti Devī holds a lance (sakti = a lance, but also power, energy) and a lotus (life), in her left hands a bell (aether, space) and a snake (death and time).

As already mentioned, another old idol exists at Chatrarahi, believed to represent Śakti Devī. It is likewise a fine old brass image, but only a bust from the waist upward emerging from the usual copper pedestal. It cannot be an image of the Devī, as it is a male figure, holding a lotus and a rosary in its hands. It wears a high mukūṭa of piled-up hair, while long ringlets float down on the shoulders;

40 Vogel, A.S.R. 1902-03, p. 239 ff., fig. 3; Antiquities, p. 140, 145 ff., pls. VIIa and X.
a diadem is placed on the forehead, ending above the ears in two small flowers and rising above the temples in two high pinnacles. The eyes are inlaid with silver. Probably this bust represents the same deity as Balabhadra\'s similar brass image at Harsar near Brahmar, i.e. Siva\(^4\). Its style is characteristically Kashmiri, and stands very near to the Sūrya reliefs of Martand. It must, therefore, belong to the reign of Ājyavarman, or soon after.

Only slightly later we have to place two copper statuettes of yoginīs, attendants of the Great Goddess. They are rather short, stout figures, with excessively short legs and small feet, a fat body and big head, and with two large staring eyes and an awkward smile (Fig. 10 and 11). And yet they do not belong to primitive art; on the contrary, they are representatives, though degenerated and provincial, of a highly refined tradition. The treatment of anatomy and postures, the beautifully chiselled costume, the hair style, the jewelry diadems, the silver-inlaid eyes, the oval halo, the type of the pedestal, all this places them still in the late Gupta tradition, and yet the stout roundness of the figures already has all the rural earthiness of early Pāla and Pratihāra art. Moreover, the excessively short legs, small feet, big heads are characteristic features of the dissolution of every

\(^4\) Vogel, *Antiquities* p. 251 f., pls. XXXIXb, XL.
late style; the artist still knows how to do every individual part, but has lost the sense of the whole, and accentuates the various parts of the figure according to their interest, naturally emphasizing the head and eyes as the centres of expression. We may, therefore, interpret these figures as products of the transitional style from Gupta to medieval art and may place them in the period of indirect Pāla influence, via the dependent Ayudha kingdom of Kanauj, a vassal of which the Brahmar State must have been in the years between the fall of the Kashmir empire of Lalitāditya and the Tibetan ("Kīra") invasion. In this respect they are contemporaneous with the Pāla bronzes which have repeatedly been found in Kulu.

e) The Markulā Devi (Kālī) Temple at Markulā-Udaipur in Lahul.

Margul or Mārul 42, ancient Markulā, is a village in Chamba-Lahul, at the junction of the Maiyar Nala with the Chandrabhaga. About 1695 it was renamed Udaipur, when raja Udai Singh (1690-1720) raised it to the status of a district centre in the part of Lahul which his father Chattar (or Satru) Singh (1664-1690) had annexed to the Chamba State. The place is not of much interest, except for its unique temple of Kālī, called Markulā Devi after the name of the village.

Like the shrines already discussed, it does not look impressive from outside, as its exterior shell, exposed to all the inclemencies of a climate hardly better than that of the Tibetan highlands, had to be renewed time and again (Plate X). It stands on a mountain slope, the usual structure of rubble filled-in between wooden rafters (33 by 23 ft. inside; 12 ft. high), on the south side resting on a platform (6 ft. 7 in. high), on the north side almost dug into the hill, as the interval between the wall and the hill has been filled-up with stones and earth, probably in order to reduce the danger from snow pressure and avalanches. In its western half there is the sanctuary proper, a cella (10 ft. 4 in. by 10 ft. 6 in. outside) detached from the enclosing wall by a circumambulation passage; the eastern half is occupied by a mandapa with a broad balcony window on the south side and a ceiling supported by six pillars. The entrance is on the east side. The whole temple is covered with a steep gable roof (17 ft. high) of shingles, which over the sanctuary proper rises to a height of 45 feet above the ground in a steep pyramid (26 ft. 5 in. high), resembling the sikhara of Hindu temples in the plains. Curiously enough, all the roofs are asymmetrically constructed, leaning over to the north, perhaps in order to increase the capacity of resistance to possible avalanches.

The interior, however, presents one of the most extraordinary views. The

42 Vogel, Antiquities, p. 15; Chamba Gaz., p. 43 ff.
richness and interest of the carvings exceed the monuments of both Brahmrar and Chatrarhi, though the artistic quality cannot compare with them. Even a first survey reveals that the deodar wood carvings do not all belong to the same period, but may be roughly divided into an earlier and a later group. The first comprises the façade of the shrine, the ceiling panels of the maṇḍapa and the four main pillars supporting that ceiling. To the latter must be reckoned the panels on both sides of the window, the architraves of the ceiling, two additional pillars on the west side, opposite the sanctum, and the two huge dvārapāla (Bhairava) statues (6 ft. 4 in. high) flanking the façade of the sanctum.

Let us first study the second group, as it is the less interesting one. The two dvārapālas are rather crude work, looking even worse, as they are smeared with the blood of the goats and rams sacrificed to the goddess. Much richer are the reliefs of the four architraves, representing various scenes from the Mahābhārata and Rāmāyana, likewise in a rather crude, though somewhat better style. Unfortunately they are so situated that it proved impossible to photograph them.

Eastern Side (from right to left): At the end of the beam a framing pillar almost looking like a castle. Two warriors standing on their chariots, drawn by four horses each, and shooting arrows one at the other. In front of the right chariot is a standard with a monkey figure (Kapidhvaja), and behind the warrior there sits god Vishnu-Krishna on his vāhana Garuda; the warrior, therefore, must be the hero Arjuna; his opponent who is taking an arrow from his quiver, probably is Karna, the son of Sūrya. Between the two there stands a tower-like structure, beneath which two foot-soldiers are fighting each other with sword and shield. The next scene depicts a double row of animals, one row placed on top of the other, each consisting of three bullocks, two horses and two camels, with a driver behind; perhaps the capture of king Virāṭa's cattle by the Kauravas (Gobarana-parvan). In the last scene a warrior is shooting an arrow from his chariot at five opponents (in similar position, but seen from the back); between them there are two cows and four flying birds, placed one above the other. The scene probably represents Duryodhana or some other Kaurava hero (Drona, Karna or Suṣarman, king of Trigarta) attacking the five Pāṇḍavas. The treatment of the warrior on the chariot is peculiar, and seems inspired by some idol of Sūrya. The gigantic hero, with the charioteer in front, stands on a diminutive chariot, a platform resting on two high poles with lotus-shaped wheels, the horses being squeezed between these two poles. At the end of the beam again a tower-like pillar.

Western side: This relief frieze, likewise framed by tower-shaped pillars,

---

43 The scenes have been identified by Dr. Vogel.
represents scenes from the Rāmāyana (Sundarakāṇḍa and Yuddhakāṇḍa), from right to left. Two rows of five figures each, the foremost being Rāma and Lakshmana, armed with bow and arrow, the others monkeys. The two small monkeys in front of Rāma probably represent Hanuman twice, when receiving Rāma’s message to Sitā, and preparing for his leap to Lankā. In the next scene Hanuman, now large-sized, is seen jumping from the top of Mount Mahendrā across the ocean, indicated by a pair of fishes, to Lankā; with one left hand he carries a piece of the mountain, with the right one he holds his tail, while the other hands are empty; this scene refers to a later incident in the epic when Hanuman brings the whole mountain with its medicinal herbs, in order to heal Lakshmana who had been seriously wounded by Rāvana’s lance. In the following scene Hanuman, again a small animal, is visible in the trees of the aśoka grove of Lankā; then he climbs a tree under which a woman with a vessel, evidently Rāma’s abducted wife Sitā is sitting, while in a separate compartment three females are represented, probably the Rākshasa women attending on and keeping guard over Sitā. In the next scene Hanuman addresses Sitā who sits on a couch, attended by the Rākshasis, one of them waving a chāmara (yaktail-flywhisk). In the centre of the architrave a large building of several storeys, evidently intended to symbolize Lankā town, is depicted and, on its roof, Hanuman, his tail aflame. The punishment inflicted by the Rākshasas on Hanuman now turns into the disaster of Lankā, the burning of the demon town. In the following scene Hanuman, sitting on the top of a pillar, addresses the giant Rākshasa king Rāvana, with his ten heads (the uppermost one that of a horse), four feet and twenty arms swinging various weapons. On both sides a group of two demons forms the king’s bodyguard. The last scene shows the awakening of Kumbhakarna, several people beating drums and cymbals and blowing trumpets at his ears while elephants are driven over his body.

Northern side (from right to left): The Swayamvara of Draupadi (Mahābhārata, Adiparvan). First king Drupada of Pañchāla and his queen are seated on a throne, attended, on each side, by a female with a chāmara. On both sides the Pāṇḍavas are standing, on the right three of them, two with a sword, one with a mace (Bhīma), and on the left two, one with a sword, the other with a bow and arrow (Arjuna). In the next scene the king is again seated on his throne, attended by a chāmara bearer, who is raising a jewel (?)-box with his left hand. Opposite the king stands a lady with folded hands, apparently his daughter Draupadi; a man touches her left arm as if to lead her away, while a box and a string of pearls are depicted above her. In the third scene an archer (Arjuna) shoots an arrow straight upwards, thus piercing a fish on a pole. In the fourth scene the
successful Arjuna bends his bow, and in front of him another, kneeling figure (Kṛiṣṇa?) touches with his left hand the lower end of the bow. Over the latter figure there is a small representation of the four-armed Viṣṇu on Gaurūḍa, perhaps in order to indicate that the kneeling figure is indeed the incarnation of Viṣṇu. In the fifth scene five persons stand in a row, each with a staff in his right and a parasol in his left hand (like the Vāmana avatāra on the window relief). The sixth group depicts the rājaḥbhisheka, the anointment of the new king, attended by four priests of whom one is pouring water from a vessel over his head and another is fanning him. Another person, to the left of the group, salutes the king with raised arm. In the last scene Arjuna(?), standing on his war chariot, fights with three opponents, probably Karna, Bhīṣma and Śalya.

Finally, to this group of later wood carvings the two big relief panels on both sides of the balcony window should be reckoned (Plate XVI). They are treated as the shafts of pilasters, rising from a base and ending in a capital (6 ft. 8 in. high, 2 in. broad).

The relief on the eastern side represents the Trivikrama avatāra of Viṣṇu. He is the chief figure, dominating with his outstretched legs two thirds of the whole scene. The extended toes of his right foot touch the snake godlings (Nāgas) of the Nether Region (Pātāla), whereas his left leg, swung up with overwhelming energy, reaches Brahmā in the heaven of the gods. Beneath Trivikrama, Viṣṇu’s initial disguise as a dwarfish (Vāmana) brahmin is depicted, standing modestly, a parasol in his left hand, before the Asura king Bali, who sits on a small throne in his audience hall, the entrance of which is guarded by two almost nude warriors carrying sword and shield. Vāmana requests Bali for as much ground as he might cover with three steps, and Bali solemnly confirms the gift by pouring water from a (now broken) sacrificial vessel. Suddenly the disguise falls, and the god, a terror of tense energy, three-headed (lion, human and boar face) and four-armed, with all the attributes of his power, the royal diadem (Gandhāra-Kashmiri type), disk and lotus, mace and conch, seizes the three worlds. His lower foot passes over the richly decorated border of the panel at the bottom wherein two Nāga kings, with many-headed cobra-hoods, swing their human upper bodies on the double coils of their lower snake tails. Both are four-armed, but three of the lower arms unfortunately are broken, while one upper arm touches Trivikrama’s foot. The symbols still preserved are not quite clear, but emphasize their chthonic character: two ploughs, a fruit and a staff or bow. In the upper region the gods are grouped in three rows, of which, however, the two lower ones are interrupted by an unfinished patch. This is said once to have been covered by a round metal mirror which was stolen in one of the invasions coming down the valley from the
direction of Kulu (probably somewhere between 1650 and 1670). The gods are not easy to identify, and apparently the sculptor and his priestly advisers have not been too well acquainted with the intricacies of Hindu iconography. The big figure in the right upper corner, near Trivikrama’s left foot, must be Brahmapā, three-faced (the fourth face at the back being invisible), sitting, with his staff, a rosary and water-vessel on two hāṃsas. But his heads, not bearded (as it would generally be the custom in North Indian art) rather evoke the appearance of Siva. The next figure, holding a trident, a rosary (akṣamālā) and a vessel, sits on two parrots. Whereas the trident and rosary are symbols of Siva, the parrot is the vāhana of Kāma. The next figure, sitting on a buffalo, carries the scull-sceptre of Siva, but Siva generally has no flag emblem (perhaps Yama?). The last figure in the top row, with sword and shield, sits, cross-legged, on a prostrate yaksya and might, therefore, be Kubera; but the iconographic description again does not work out. In the second row only one figure is clear: a four-armed god, carrying a bow and a lotus-flower, an axe (or plough) and a conch, possibly Balarāma. The scarf of the next, destroyed, figure might indicate Vāyu. The identification of the third figure is doubtful. But in the lowermost row Sūrya is recognizable, cowering on his chariot drawn by seven horses.

The details of the panel on the opposite (western) side of the window are hardly less confusing, though its general meaning likewise is clear: the Churning of the Ocean (Amṛitamanthana) and the Defeat of the Asuras (Mahābhārata, Adi-parvan; Rāmāyaṇa, Bālakāṇḍa). The panel is divided into seven rows of figures, of which the sixth and part of the fifth describe the myth itself, while the upper rows depict the world of the gods, the lowermost one the underworld (Pātāla) of the defeated demons. In the sixth row the mountain Mandara, resembling a bunch of sprigs, is placed on the back of the Tortoise (Kūrmāvatāra of Vishṇu) seen in front. The snake-king Vāsuki is slung around it, held by two gods in the same and two in the preceding row, and, on the other side, by a sitting Asura (Rāhu?), whose attention, however, is preoccupied with a game, the pawns of which are standing between him and another sitting figure. All these figures wear crowns and royal or divine costumes. In the bottom row there are

---

44 Hindu iconography of the Muslim period has to be approached from an angle different from that valid for the pre-Muslim Middle Ages. Whereas during the Middle Ages (8-13th centuries) iconographic details had mirrored various theological trends and, therefore, had a distinct meaning, Northern Indian Hindu art under Muslim rule represented a conscious revival of a lost tradition. Imagery was a reconstruction, and its manifold types merely an expression of antiquarian pride or a hardly understood convention. Errors and mistakes are very common, and often enough the artist has just followed his own imagination. Attempts at classifying such “problematic” images, therefore, are useless. This is the case especially in the Himalaya where the standard of Sanskrit scholarship was rather low in the 16th and 17th centuries.
tive more kneeling, bitterly lamenting figures which look as if originally they had been intended to represent women. The centre of the fifth row is occupied by the wooden frame of a round metal mirror, a likewise lost counterpart to that which once had been mounted on the Trivikrama panel. To its left some of the costly objects which emerged during the churning are depicted, the wish-fulfilling tree (Kalpadruma), Indra’s elephant Airāvata, and a cross-legged figure, possibly Dhanvantari, the physician of the gods, with the _amṛita_-vessel. The four upper rows are occupied by the gods; but, with a single exception, only the fourth row depicts individual deities. In the centre Siva, three-headed and four-armed (emblems: trident and rosary, mirror and fruit) sits on his bull, at his side Pārvatī, crowned and dressed in skirt and scarf, stands combing his hair. At her feet her lion is lying. To the extreme left there stands a crowned figure, perhaps Virabhadra, holding a trident and a fruit (or flower or mirror?) in his two upper hands, his two other hands have been broken. To the right of Siva Kārttikeya, six-headed (Śaṅkumukha) and four-armed (emblems: trident, not a lance! rosary and vessel) sits on his peacock, and on the extreme right stands a man playing an ancient Indian harp, apparently the sage Nārada. The upper three rows consist, each, of five male figures sitting with crossed legs, wearing a crown, raising their right hand in _abhaya-mudrā_ and in the left holding some divine emblem, a trident, a staff decorated with a skull, a plough, a flower, a flag, an arrow, a battle-axe, a sword, etc. Only the figure in the right upper corner wears no crown, and its big head, with protruding eyes and a broad grinning mouth is severed from the body. In the left corner, on the other hand, stands a young figure in “archer” (*ālīdha*) position, carrying in his four hands a disk, a flowerbud (?), a mace and a conch. This must be Vishnu while the figure at the other corner must be Rāhu. This justifies some conclusions as to the other thirteen figures: the Navagraha and the four Lokapālas, which we have already encountered on the lintel of the Chatrarhi temple. But Rāhu belongs to the Navagraha group.

Now we can turn to the study of the earlier woodcarvings, in the first place those on the ceiling of the _maṇḍapa_. This ceiling consists of nine panels of unequal size and shape, of which eight (four smaller squares, 2 ft. 8 in., decorated with a conventional lotus, and four oblong rectangles, 8 ft. 5 in., resp. 7 ft. 7 in. by 2 ft. 8 in., with figural scenes) form a border enclosing the great centre-piece (8 ft. 5 in. by 7 ft. 7 in.). The latter (Plate XIII) is of the same “lantern” type as in the Laksaṇa and Sakti temples, i.e. by means of two sets of four triangular corner pieces, each decorated with ornamental borders and highly stylized _kirtimukha_ masks and _makaras_, the opening to be covered by the centre-piece is reduced to a quarter of the original surface, the last aperture being closed by a square panel
carved into a gigantic lotus-rosette of very high relief, a masterpiece of woodcarving. The spandrels between this rosette and the corners of the quadrangle are filled with reliefs of flying godlings. The rosette proper consists of four circles of petals enclosing a centre-piece with another border of petals. But these petals are so much stylized into various ornamental patterns that only in one circle would their original character be evident outside the context of the whole. And in one circle the petals have even been replaced by a chain of vajras (thunderbolts) of the traditional type well known in Lamaistic art.

The most interesting pieces of the ceiling, however, are the four figural panels on the east, south, west and north sides. That on the eastern side (Plate XIVa) is again subdivided by a raised border into a frieze of four larger, almost square panels and a much smaller frieze of five partitions, three filled with figures, two with lotus-rosettes. The four square panels in the upper frieze are decorated with flying couples of Gandharvas. Apparently they sit on big lotus flowers, but as the artist seems to have encountered some difficulty in squeezing the thrown-backward legs of the godlings into the square panels, this has been merely a device to indicate that they are not on the ground but in heaven. For the lotus under a deity or semi-divine being plays in Indian and Buddhist art also outside India the same role as the cloud cushions in Christian paintings. Moreover, the sculptor had to accommodate the Apsarases on the Gandharvas’ left knees, though their relationship varies considerably, some behaving very “respectably”, others indulging in amorous intimacies. The Gandharvas are, all, four-armed, embracing and patting their mates, and holding various objects, crowns, bracelets, jewels or chāmaras. They wear the princely costume of the late Gupta period, the Gandharvas big wigs and wreaths, the goddesses crowns, and all of them necklaces, bracelets and beautifully decorated dhotis and skirts. The three lower figural friezes consist of musicians playing a flute (vaṁśī) and cymbals, and of dancers in lively poses and early medieval costumes.

The southern panel (Plate XIVb) resembles the preceding one both in the general arrangement and the subject. But the Gandharvas and Apsarases of the four upper square panels play a somewhat different part. The two six-armed Gandharvas in the central panels are busy with the pūjā of a small Sivalinga which is placed on a stand mounted on the back of a Nandi which, again, rests on a lotus-cushion pedestal with four legs. With their six arms they pour ghee on the linga, fan it with a chāmara, burn incense, ring the vajra-bell, hold a box of saffron powder or a scull. The Apsarases accompanying them play the cymbals or the early Indian harp. The couples in the lateral panels are just making the music to the pūjā. These Gandharvas, four-armed, play the early Indian bow-
harp (vaidūryadandā vīnā) and the staff cithara (kairātā vīnā). In their other hands they hold the same symbols as the godlings on the eastern ceiling panel, i.e. chāmara, crown, bracelets, etc., while the Apsarases accompany them with cymbals. The smaller lower frieze consists of only one panel filled with sixteen tiny musicians and dancers. The dance poses are those of the classical Bhārata Nāṭya, the musical instruments a conch trumpet (śāṅkha), cymbals, hautboy (sānayī), violin (sāraṅgī or sārīṇḍā), flute (vaṁśī), straight drum (pakbāvaja), hourglass drum (damaru) and convex drum (mridānga or dhobolaka) 45.

The western ceiling panel (Plate XVb) is likewise divided into an upper and a lower frieze. But the upper frieze consists of only one monumental Saiva panel 46, whereas the bottom frieze is filled by thirteen ganas dancing to the accompaniment of a mridānga and pakbāvaja drum. The central figures are Śiva Nāṭarāja and Gaurī, accompanied by five minor figures. Śiva plays a staff cithara and swings his other fourteen arms in the dance, stamping the ground with two feet, and beating time with two other ones. The ten-armed goddess, dancing by his side, swings in her hands a trident and elephant-goad, sacrificial knife, skull-staff, cobra, and sacrificial vessel. On both sides, to the right and left, there stand two male figures, three-eyed like Śiva and his consort and four-armed, apparently the alter egos of Śiva, the “Bhairavas” who not rarely are shown accompanying him. That on the left, separated from Śiva Nāṭarāja by the diminutive bull Nandi, holds a trident, rosary, mirror and fruit; that on the right a mace(?) and skull-drum (damaru), a skull-staff (khaṭvāṅga) and cobra. Both ends of the panel are occupied by Śiva’s and Pārvati’s family, on the right probably Virabhadrā with skull-staff dancing wildly, on the left Gaṇeśa, four-armed and with his usual emblems, sitting by the side of the Devi’s lion, and, below, Kārttikeya(?) a skull-staff in his hand. Generally the costume is very similar to that of the preceding reliefs. The Devi and the Bhairava to the left wear a crown, Śiva the jatāmnukuta (pil of matted hair), and the Bhairava to the right as well as Virabhadrā a crown of skulls, the ganas “Gupta” wigs 47.

45 Curt Sachs, Die Musikinstrumente Indiens und Indonesiens, Berlin-Leipzig 1923 (2nd ed.).
46 V. A. Smith, History of Fine Art in India and Ceylon. Oxford 1911, p. 366, pl. LXXX. The author with reference to the western panel suggests the ninth or tenth century as its date but admits the possibility of the seventh century on account of the wig-like hairdressing, worn by the little demons (gana) in the lower band of the frieze.
47 Hardly any of the figures in this ceiling or in the façade of the shrine fits exactly into the conventional iconographic classifications. But a consultation of the hitherto known iconographic texts reveals considerable differences between various parts of India. Kashmiri Hinduism, however, deviates in so many respects from the cults prevalent in the rest of India that we have to expect also considerable iconographic peculiarities. In the present state of our knowledge we are not yet in a position to define these and have to content ourselves with such observations as the accessible material permits us to make.
Curiously enough the ceiling panel on the northern side (Plate XVa) is of an utterly different character. For it represents the “Assault of Māra” (Māra-dbar-
shaṇa, cp. Lālita-viṣāṇava, XXI; Bhuddhacarita, XIII) 48. In the centre the Buddha sits on the diamond throne (vajrāsana) at Bodh Gaya, impassive, merely calling the earth-goddess to witness (bhūmisparsa-mudrā) his victory over the Lord of Lust and Death. On both sides a group of two daughters of Māra is trying to arouse his sexual desires by provocative poses. In front four demons try to overthrow the diamond throne with the aid of tridents, but these break in the effort. Others hold snakes over his head, and others blow trumpets into his ears. A host of demons, some with human, others with animal heads, make a hellish noise with drums and cymbals, staff-citharas and violins. To the left Māra himself approaches on a curious war-chariot (very similar to that on the eastern architrave), a platform standing on posts with lotus wheels drawn by four lions(?), and shoots the arrow of sinful love at the Buddha. He is accompanied by two of his daughters, sitting cross-legged on little pedestals. On the opposite side we see the same chariot, but the lions roll on the ground in utter confusion, and Māra has collapsed in despair, letting his bow and arrow sink down, while his daughters try to comfort him. Apart from the subject, however, the panel does not differ from the preceding one; costumes and other details, technique and style are the same.

The façade of the Markulā Devī shrine is the richest and most intricate of all those we have discussed (Plates XI-XII). The outermost set of doorjambs is each divided into three arched niches of varying type. Those at the bottom (supported by miniature yaksbas between two lions) have a complicated gable of late Kashmiri type, with a centre-piece like the pinnacle of a stūpa or temple and with peacocks in the corners and kinnaras above the gable ends. In these very elongated niches (3 ft. 6 in.) Gaṅgā stands on the left side on her makara, holding in her four hands a vessel, rosary, book and a long lotus stalk, and on the right side Yamuna on her tortoise, with similar emblems in her four hands. The next set of niches is much smaller (1 ft. 10 in. high) and ends in big kirtimukha masks evolving from the foliage of the arches. That on the left encloses a standing four-
arméd figure holding a lance, lotus and watervessel, whereas one hand rests on the hip. The figure in the right niche is its exact counterpart, although with many small differentiations. The top niches, ending in foliage scrolls, are again somewhat lower (1’ 8” high) and enclose rather stout, likewise four-armed figures, the one on the left side holding a trident, rosary, mirror and a fruit (sīthāphala =

48 J. Griffiths, The Paintings in the Buddhāś Cave Temples of Ajanta, London 1896, I, pl. VIII.
custard apple), and the other a *makara*-staff, a skull-bowl, a skull-staff and a symbol now lost. It deserves notice that these two figures have the same emblems as the satellites flanking the dancing Siva and Pārvatī in the western panel of the ceiling. Next comes a frieze composed of flowers strung up in an Indian wreath, then another border with flame or lotus-petal design.

The next set of door-jambs, naturally much smaller, consists of five niches on each side, four ending in scrollwork arches, the topmost in a horizontal lintel, on which a broad capital of Roman-Kashmiri type rests. In these niches the ten *avataras* of Vishṇu are arranged, on the left (from bottom upwards) Matsya (fish); Narasimha (four-armed); Vāmana with staff and parasol; Kṛishṇa as Vishṇu with lion, human and boar head, and four arms holding the usual attributes; and at the top, Buddha in bhūmisparśa-mudrā; on the right Kūrma (tortoise); Varāha boar-headed and four-armed; Paraśurāma, with battle-axe and *yajnopāvita*; Rāma, with bow and arrow; and, on top, Kalki on horseback, a battle-axe in his right hand.

There follows another richly carved, round moulding and a frieze decorated with a winding creeper. The inner jambs, likewise ending in late Kashmiri capitals, are divided by flower scrolls into four medallions, each framing the figure of a dancing Apsaras. Finally a frieze of scroll-work frames the door of the sanctuary proper.

The lintel, capped by the ornamented mouldings next to the extreme door-jambs, connects the highest niches and capitals of the middle set of jambs. It consists of five miniature chapels separated by a screen of short "pillars" dissolving into plaitwork ornaments (or interlaced snakes?). Each chapel consists of an image niche enclosed by a depressed arch resting on two slim fluted columns, while on the crown of the arch a *kalaša* ending in a high pinnacle stands; this niche again is covered by a towering gable, either of the Kashmiri type, i.e. two superposed capped triangles, with a bird in each of the lateral corners, and an āmalaka on top; or of a more archaic type, a central ogival vault resting on two short pillars, and two lateral half-vaults, i.e. the front of an early Buddhist chaitya-hall. In the niches five deities are seated, cross-legged (from left to right): 1) a crowned four-armed god on a lion, holding a staff and rosary, vessel, and hand in *abhaya-mudrā*; 2) a similar deity, but with attributes inverted; 3) a crowned four-armed god sitting on Garuḍa, holding arrow and trident, vessel and battle-axe; 4) a figure without crown, big head, protruding eyes and grinning mouth, sitting on a lion, holding staff and sword, trident and shield (possibly Rāhu); 5) a crowned, two-armed god sitting on a prostrate *yaksha*, one hand holding a staff, the other in *tarjani-mudrā* (threatening). The chapel gables project from a frieze of *haṁsa*
(geese) carrying a long pearl string in their beaks; this frieze is continued over the capitals of the middle jambs.

The lower lintel, resting on the capitals of the innermost doorjambs, consists of three similar, but somewhat bigger chapels, connected by decorative dwarf pillars either dissolving into plaitwork, or consisting of coupled slim columns connected by a diaper covering the whole length and breadth of the shaft. The crowned, four-armed deity sitting cross-legged, on a ram, in the left chapel, holds two tridents, a sceptre and a water vessel; the central one, over seven rearing horses, is the sungod Sūrya, holding a sceptre and a vessel; the crowned figure in the right chapel again sits on a lion, holding sword and sceptre, shield and water vessel in its four hands. Dr. Vogel identifies the deities in the eight chapels with the group of Grabhas, regularly placed over the entrance of Hindu temples, although their usual number is nine.

Beneath this lintel is another frieze of five single figures projecting from the ornamental friezes between the capitals of the innermost doorjambs and round the cella door. The prominent central carving again represents the sungod on his chariot drawn by seven horses. The others show Gandharvas, playing cymbals, bow-harp and staff-cithara, and must be regarded as the musicians accompanying the dance of the Apsaras in the panels of the adjoining door jambs.

The silver idol of Kāli, in her aspect as Mahishamardini 49, probably is contemporary with the later woodcarvings on the architraves and window panels, but of a very different type. An inscription in late Sāradā characters on the pedestal states that it was cast by one Pañjamānaka Jinaka from Bhadravāh in the Sāstra (?) year 4645 = A.D. 1569-70 and dedicated by Ṭhākur Himapāla. It is a rather primitive and clumsy work, despite its elaborate character. For the goddess is represented eight-armed, standing on the defeated buffalo-demon whom her threefold lion attacks from behind. To the right stands a small figure of the donor, a caricature of similar statuettes in Rājasthān. But the bodies of the goddess and of the buffalo look bloated, notwithstanding the thin legs and arms. Kāli’s head is much too big, and her mukuta looks rather like the ceremonial crown of a Tibetan lama, her girdle like that of a Lamaistic terrible deity. The enclosing frame suggests brass idols of the 15th and 16th centuries from Rājasthān, the top of it the backs of early Mughal thrones. The influence of Mughal and Rajput art is not surprising in the 16th century; it penetrated probably via Balor which then had some control over Bhadravāh; the Tibetan element is understandable in a frontier-area where the Tibetan Lahulis venerate Markulā Devi as rDo-rje phag-mo (Sanskrit Vajravārāhi).

49 Vogel, Antiquities, p. 249 ff., pls. XXXIVc, XL.
CHAPTER VI

THE STYLE AND ARTISTIC HISTORY OF THE EARLY TEMPLES IN
THE FORMER CHAMBA STATE

We are now sufficiently acquainted with all the details of the main monuments
of the ancient Brahmapura kingdom, to venture upon a critical analysis of their
style and of their position in the history of Indian art. Vague as the local temple
traditions are, they prove to be fundamentally correct. Chatrarhi is claimed to be
the earliest cult centre of all the three ¹, but the temple proper is said to have been
erected by the same master, Gugga, who had previously built the Lakshanā temple
at Brahmor. And the Markulā Devī temple in Chamba-Lahul is stated to be
younger than that of Chatrarhi, but older than the famous Hirnā temple at
Manali in Kulu; yet the master artisan who had constructed the Manali temple, is
likewise reported to have built, at a later date, the temple of Markulā Devī. But
this contradiction is merely apparent as we have already observed that the sculp-
tures of the Markulā temple belong to two sets of widely differing ages.

In analyzing the Lakshanā Devī temple at Brahmor, we have, first, to keep in
mind that it is no longer in its original condition. The interior evidently is more
or less intact, but the exterior shell is modern, and there are sound reasons for the
conclusion that the present façade is a quite arbitrary later reconstruction.

The gable does not fit in at all. It is too small, so that carved planks had to be
added on both sides in order to bring its breadth approximately in harmony with
the pediment; but these planks do not really fit, especially at the bottom where the
yaksha frieze proves that the gable must once have rested on an even narrower
support. The style of the gable is utterly different from the rest of the façade,
representing the rich mixed Kanauj-Kashmiri style which flourished in the empire
of Lalitāditya (middle 8th century). And finally the image of Vishnu could never
occupy the main gable of a Devī temple. As already observed, the gable must be
the last remnant of the Narasimha temple erected in the reign of Ājayavarman by
the exiled Brahmins from Kanauj, and salvaged from the destruction of the Kīrā-
Tibetan invasion.

It is not less doubtful if the pediment originally belonged to the façade.

¹ According to one tradition it was already founded by Mūśhīna. Though the historical value of
such a statement is not great, it shows at least that the cult place existed before Meruvarman’s reign.
Though in its size it fits tolerably well on the entrance façade, it is a completely separate piece, and its projecting ends look as if once they had been intended not to anchor it in a wall, but to dovetail with other beams joining it at a right angle from the back. Moreover, in Kulu where alone the same art tradition is still alive, though in much later repetitions, we have nowhere any façade with such a pediment. Instead, there is a window on top, similar to those on both sides, and this arrangement would be in harmony with a not uncommon practice in the late Gupta period, a window on top of the entrance lighting up the idol in the sanctuary. But a decoration of the same type as our pediment (though of course, in 16th century or later taste) is common in Kulu around the lowermost storey of the “pagoda” crowning the sanctuary proper. It seems, therefore, most probable that only the broad door-frame once embellished the façade of the Lakshaṇā temple, as is the case also at Chatrarhi; the maṇḍapa had a considerably lower gable roof; and above the garbhagriha there rose a “pagoda” of several roofs decorated, in the storey between the roof of the pradaksinā-patha and the first tower roof, with a sculptured decoration on all four sides, of which the present pediment is the only surviving remnant. This explains also the gradual projection of the carved niches and bracket-figures of the pediment. For a similar projection is found in corresponding reliefs on the wooden temples of Nepal.

As already stated, this temple type is not characteristic of the Himalaya, though the abundant supply of wood there has indubitably made possible its survival. Like the similar temples in Nepal and Malabar, the Chinese pagodas and the Merus of Bali, it is a last remnant of a Gupta tradition. And as all the wood-carvings of the Lakshaṇā, Sakti and Markulā Devī temples imitate forms otherwise known to us from stone monuments, we are in a position to compare them in detail and draw our conclusions as to their position in the Gupta tradition. Or rather the other way round: as this special phase of Gupta art, i.e. that of the age of Harshavardhana of Thanesar, and shortly thereafter, is very little known, we can interpret the Lakshaṇā Devī temple as an, imported, rare monument of that special style.

Let us first study the architectural details: The framework of the entrance, with its sequence of receding flat and round moldings, figural doorjams and lintels, is characteristically Gupta; yet it differs from older similar entrances by the greater number and richer differentiation of lintels and jams, a richer scrollwork decoration with oval tendril spirals (as at Masur) instead of circular ones. The figures on the jams are more detached from the background and stand on more projecting brackets (as at Masur) than in earlier monuments. The

---

2 It is the last remnant of the large chaitya-griha window of the early Buddhist caves.
groups of Gandharvas on the lintels are more closely knit; instead of one Gandharva or Apsaras flying behind the other, each Gandharva is bearing an Apsaras on his back (as also in the ceiling slabs of the Durgā temple at Aihohe, second quarter 7th century; or at Masrur, early 8th century). A new feature, however, is the crown which the two central groups are holding up. The kirtimukha mask in the centre of the innermost lintel is not characteristic of earlier Gupta art, but common in the 7th and early 8th centuries (Aihohe, Badami, Pattadakal, Manali, Jageśwar), and last but not least in the art of Greater India (the “Kāla” of Java). The lions in the corners have replaced mithunas (amorous couples) previously occupying those spots (Bhumara, Ajanta, Aurangabad); their posture still reminds us of those on the Pallava (Mamallapuram, Conjeevam) and Chālukya (Pāpanātha at Pattadakal) monuments (7th-early 8th centuries) in which the first had become popular. The friezes on the lowest pediment storey correspond to the cornice of the Viśvakarmā cave at Ellora (ca. 600). The niches of the second storey are similar to those at Bhumara, those with makara heads on the capital brackets, reminding us of Sarnath, Ajanta (XIX), Pattadakal, Ellora, but those of the top storey reveal some influence of the Gandhāra tradition; the threefold miniature pediments above the seated figures of the middle storey recur in the Pāpanātha, more developed in the later temples of Pattadakal, the Daśāvatāra at Ellora, Osian, the Teli-kā-Mandir at Gwalior, and Bajaura. The pot-and-foliage capitals, still in transition from cushion capitals with a rich abacus and interlinking figures or wreath at Ajanta (I, chapel outside XIX), Aurangabad (III), Ellora (IX and XII), still combined with a lotus half-roundel, at Jhelam, Jageśvar, Bilaspur (Shaṅmukheśvar), Nirmand, Bajaura and Babbor-Thalora are already fully developed. The predilection for strings of pearls as ornamentation and, in the last instance pearl jewelry, is also characteristic of the late Gupta period and dominates the later Ajanta murals too. The over-slim proportion of all figures also had been a characteristic fashion of the 7th century, whether with the successors of the Guptas, the Chalukyas of Badami, the Pallavas or the Kushān-Sasanians (Fondukistan and Bamiyan), only the Gurjara kingdoms of western India forming an exception with Mongoloid figures (again dis-

9 R. Ch. Kak, Ind. Art & Letters, n.s. VII, p. 65, pl. IX.
carded between the 8th and 9th century). Our figures however reveal a strength which is lacking in most of the work of this period. In contrast to these slim figures, the dwarfs were in accordance with the taste of this period, as is proved by Ajanta, Aihole, Badami 10, and Gop.

Taken all together we get a picture of Gupta art such as we should expect on the basis of other considerations. The perfect harmony of the classic style is generally followed by a pompous, ponderous and yet in some way introvert style ("Baroque"), to be superseded by a light and rather frivolous, but very cultured elegance ("Rococo"), then by a reckless and rakish mannerism ending in the dissolution of the style. In Gupta art, the 5th century represents the classical, the 6th the Baroque, the 7th the Rococo, the early 8th the last glorious mannerism, the later 8th century the dissolution and transition into the Pratihāra and Pāla styles. At Brahmor we are confronted with the third of these phases, much more involved, much more lavishly decorated, with stronger movement, light and shadow effects, than classic Gupta art, but light and elegant, and already on the way to the mannerism of the early 8th century. In its contents also this style differs from classic Gupta art. The iconography has been more systematized; where in the 5th century we find only groups of undefined deities, now an elaborate hierarchy of higher and lower gods and goddesses is spread out over the façade, brackets, etc. New forms appear which, so far, we know only from the Pallava and Chāḷukya kingdoms of the South. Whether they really had been imported from there, we can not say at present; they might equally well have come into fashion in the South under late Gupta influence; for at least in the Chāḷukya kingdom Gupta art had been imported on a vast scale in the reign of Pulakesin II, the contemporary and opponent of Harshavardhana. Even the slight admixture of Gandhāra elements fits into the picture of the time. Though Gandhāra elements in late Gupta art, as in the Lakshana temple pediment or in the Buddha statuette from Fatehpur (Kangra) are rare, the last stages of the Gandhāra style are flooded with Gupta inspirations and adaptations (Hadda, Bamiyan, Fondukistan in Afghanistan, and Khotan, Kucha, Ming-Oi, Qumtura in Eastern Turkistan). Even more decisive Gupta influence is apparent in 7th century Nepal, indeed, to such a degree that it has left its mark on the whole later development of Nepalese art. The amazing aesthetic affinity between the art of the Brahmor kingdom and Nepalese art is due not to any interrelations, but to a common dependence on the Gupta style in the age of Harshavardhana. This is not surprising. In that period Gupta art spread far and wide, over Greater India, Kashmir, Nepal, Tibet, Afghanistan, Eastern Turkistan, China and Indonesia; and within a less extensive

10 R. D. Banerji, Bas-reliefs of Badami, Calcutta 1928, pls. Ic, Iib, VII, IXa-b, XVII.
area late Gandhāra art did the same. This is the common phenomenon of all declining civilizations. The devastations of successive barbarian invasions—in this case Tunguses, Hephtalites, Gurjaras, Turks and Tibetans—as well as the crushing taxation needed for vast armies to keep the barbarians at bay, and the civil wars developing between the war lords caused a shrinking economy, unemployment and a refugee problem just at a time when the luxury professions had developed most lavishly. Artists were forced to emigrate and to adapt themselves to novel conditions. But the prestige of their culture, just when it was politically and economically declining, made it easy for them to find work even amongst the barbarians who were superseding the sinking great power. The Lakṣaṇā temple at Brāhmor is but one of many monuments of this exported late Gupta art.

But the temple of Śakti Devī, though still belonging to the same tradition, seems already to represent the transition to a local school. That the plan of this temple differs from that of the Lakṣaṇā Devī, does not matter. Whether it once had a “pagoda” roof or not, we can no longer ascertain though it seems probable. But the garbhagriha, surrounded merely by a covered pradaksinā-patha, was also a common temple-type of the Gupta period, the most famous example being the great temple of Gop in Saurāshtra. And naturally, with several types of temples available, the architect would not repeat the same plan without serious reasons. The more subtle differences are the real interest. The number of individual art motifs in the Śakti temple is much less, though this may be accidental, as there is no pediment corresponding to that of the Lakṣaṇā shrine. But also the artistic variety of the figures on the entrance frame cannot compare with the latter. On the other hand, the system of deities is more elaborate, the decorative motifs actually used are more varied in the details, the whole ornamentation is richer and more interesting, and its execution more fluid and elegant. Compared with the corresponding parts of the Śakti Devī, the decoration of the Lakṣaṇā Devī looks somewhat plain and stiff. Thus, whereas the influx of basic inspirations begins to dry up, the mastery over the forms really absorbed has become greater. These observations confirm the tradition that the Śakti temple was the last work of the same master who had previously built the temple of Lakṣaṇā Devī.

Whether he was Gugga, as the tradition wills it, is another question. There is no inscriptive evidence as to who had been the architect. But in Meruvarman’s inscriptions Gugga is mentioned as the master-craftsman who cast the brass images of Lakṣaṇā, Śakti Devī, Nandi and Gaṇeśa. Before going into this question, we

---

shall have to analyze the style of these images. Fundamentally, it is the same as that of the woodcarvings. And yet, there is a curious inequality both in technique and style. The three idols are masterpieces of late Gupta art; the pedestal of Gañeśa and the whole figure of Nandi, on the other hand, are grotesquely clumsy work. In the latter case the difficulty of casting such a big statue, especially the bulky body of the animal, may be considered as an extenuating circumstance. But then, why have even the head and feet been mismodelled so badly that one doubts if the artist had ever seen a cow? And the same applies to the Gañeśa pedestal and its absurd figures. The form of Gañeśa’s pedestal was at that time much more common in the art of Central and Eastern Asia than in India, and also the monstrous, squatting semi-human figure in its centre fits better into the former. Possibly this may have been the work of an assistant of Inner-Asian extraction, probably a Tokharian, which would explain the mismodelling of Nandi; for cows are hardly known in Central Asia.

These same foreign features we find, later on, in the socle of the Narasimha statue. For the decoration of mountain peaks is a motif unknown in India, but common in the Buddhist art of Eastern Turkistan, especially in the old Tokharian kingdom of Kucha, whereas the lions remind us of Chinese terra-cottas. In the reign of Ājayavarman and Lalitāditya, when we can find Chinese influence also at Pandrethan and Parihasapura, this appears not so extraordinary.

But all the other work of Meruvarman’s bronzes is obviously from Gugga’s hand. Its workmanship is excellent and expert. The figures of the two goddesses have the same slim elegance which distinguishes the wooden statuettes and reliefs of the entrances to their shrines; they wear the lavish jewelry of the late Gupta period; Lakshaṇā Devi’s ḍatamukuta is not a tangled mass of natural hair, but a fashionable Gupta wig (alaka); and Sakti Devi’s lotus socle is one of the glorious symbols which later Buddhist art inherited from the Gupta period. And yet, as in the woodcarvings, here too other features point to the art of the Deccan in the 7th century. Lakshaṇā Devi represents the early Chāḷukyan concept of Mahishamardini (Aihole, Badami, early Ellora caves). And the athletic muscles of Narasimha and Gañeśa are familiar from the sculpture of Pulakeshin II. The head of the former finally links up, on the one hand, with Badami, and on the other, with Kashmir sculpture of the 9th century.

But even here non-Gupta features break through. Whether the crowns, with

13 They were a mannerism also in early Gandhāra art (2nd-4th century) and again in the Avantivarman style of Kashmir sculpture in the 9th century.
14 R. D. Banerji, op. cit., pl. XVIIIa.
their reminiscences of Gandhāra art, represent an outside element, or a fashion of Harshavardhana’s reign, inspired by contact with the barbarians, we cannot at present decide. But in Gugga’s modelling there is also a tendency to simplify surfaces and masses, and to add details by engraving slightly indicated lines and dots, a procedure very characteristic of Iranian sculpture. Was this Gugga’s own aesthetic reaction? Like all late Gupta artists, he must have been guided very much by drawings and models taken from the famous prototypes. And probably his best work was modelled on masterpieces, since lost, of late Gupta sculpture. But Gugga was certainly not a native Indian, as his name shows. For Gugga or Gūgā is a Gurmara name, today surviving in several semi-mythic sagas connected with the Pratihāra, Paramāra and Chauhān Rajputs, i.e. the “Fire Pit Races”, and with a village godling still venerated in Rājasthān, the Panjab and the Himalaya by Jats, Gūjars, Mers, and other clans apparently immigrated from the West.

So much is clear that Gugga cannot have executed all the construction work, wood-carving and brass casting himself. The more so as as the original number of richly decorated temples at Brāhmir seems to have been greater. For the Sūrajmukha Līngam, Śiva Śūlapāṇi and Gāṇeśa must have had temples similar to that of Lakshaṇa Devī. He can have been merely the most expert master and guiding supervisor of a whole group of artists. The temple entrances are indubitably his own work. But in the pediment of the Lakshaṇa temple two other hands can be traced, one an Indian, probably an old man, as his style is much more conservative than that of Gugga, and another with Central-Asian (late Gandhāra-Chinese) training; he is probably the same person who helped in casting the brass images. And in the pillar capitals of both temples we can detect a fourth hand, somewhat clumsy and lifeless, but very careful, possibly a local pupil of Gugga.

What afterwards became of this Brāhmir studio, we cannot say, though the Narasiṁha image and Markulā may offer some clues. The image reveals the tradition of Meruvarman’s reign still alive, but its style has the hard vigour and violence of the 8th century, though enriched by new inspirations from Kashmir and Central Asia. The Markulā shrine is the last wooden temple known to us.

15 The name is found also in the Siya-Dudhar fountain stone inscription, see Vogel, Antiquities, p. 242, pl. XXXVI.
17 In this respect it is utterly different from the elegance of 10th century Pratihāra art which we find also in the Gauri-Sārīkara group of Yugākaravarman, the husband of queen Tribhuvanarekhā who had built the Narasiṁha temple.
in fundamentally the same tradition. For although wooden hill temples were also constructed later in Chamba, as well as in the rest of the Panjab Himalaya, their art belongs either to local folk art or to the Rajput court tradition, or imitated the later Hindu stone architecture (e.g. Khajiar and Katarmal pillar fragments), which, in the high Pratihāra style, was introduced in Chamba by Sāhila. Nevertheless the Markulā temple poses such difficult problems that we must be very cautious in drawing conclusions.

We have already pointed out that its sculptures belong to two different sets, an earlier one consisting of the façade of the garbhagriha and of the ceiling and four main pillars of the mandapa; and a later one, comprising two additional pillars, the dvārapāla statues on both sides of the façade, the window panels and the architraves supporting the ceiling. Add to this that, as in the case of the other temples, the whole exterior shell of the Markulā temple is comparatively modern. In other words, the temple, as a whole, is not so very old, but a reconstruction making use of the fragments left from an earlier temple on the same spot. The date of this reconstruction can be fixed with considerable certainty. As already mentioned, in 1569-70 Ṭhākur Ḥimapāla dedicated a new silver idol of Kālī to the temple. This must have occurred not long after the conquest of western Lahul by raja Pratāp Singh (1558-1582) of Chamba. Previously, Lahul had been for several centuries under the rule of Ladakh, and the temple was then dedicated to rDo-rje phag-mo (Vajravarāhī) 18, under whose name Tibetan pilgrims still venerate Kālī. It is, therefore, evident that the Kālī idol was set up when, after the return of Lahul under Hindu rule, the then Lamaistic sanctuary was reconverted into a Hindu shrine. An image of Kālī was apparently selected not only because of its superficial similarity to that of Vajravarāhī, but also because the backward local population hardly made any distinction between the Lamaistic and Hindu interpretations of the Great Goddess.

Now, the last set of sculptures is executed in the same Hindu revivalist style that flourished in Chamba under Pratāp Singh. Also the selection of subjects from the Mahābhārata and Rāmāyana is characteristic of this time. Moreover, a local tradition asserts that the Markulā temple was the work of the master who in 1553 had erected the very interesting temple of Hirmanā at Manali for Bahādur Singh of Kulu. As a matter of fact, there is a remarkable similarity of many figures and other details of these later wood carvings to the reliefs of the Hirmanā temple. And as Pratāp Singh was the son-in-law and close friend and ally of Bahādur Singh, it seems highly probable that the master of the Manali temple

---

18 It formed part of the Mar-skul monastery, renewed not long before the annexation of Lahul by Pratāp Singh. See A. H. Francke in Vogel, Antiquities, p. 254, 257.
had indeed been also the architect and sculptor of the present Markulā Devī temple. The need for such a thorough renovation of the sanctuary must have facilitated its reconversion into a Hindu temple very much, in contrast to Triloknāth which up to the present day is both Lamaistic and Hindu.

The matter, however, is not quite so simple. The two great window panels of Trivikrama and of the Churning of the Ocean, though betraying the hand of the Manali master, resemble much more the earlier ceiling panels. Whereas the figure of Pārvatī combing Siva’s hair is a typical Manali detail, all the other gods on the same panel, and also the gods in the upper part of the Trivikrama panel are careful, though not too successful imitations of the gods in the Saiva and Buddhist panels of the ceiling. But the despondent Asuras and the Nāgarājas at the bottom of both panels, despite their clumsy execution, reveal a later Gupta prototype; and the figure of Trivikrama must go back to at least an early medieval Kashmiri prototype because of its three heads and its crown; and its general concept reminds us rather of Badami II and III 19 or of an early stela from Eastern Bengal 20. In other words, the Manali master merely copied badly damaged older window-panels which had been executed in the style of the ceiling panels, but which, as we shall observe in the still existing original pieces also, in their turn had been partly copied from prototypes of the 7th-8th century.

The general character of these ceiling panels is that of 11th-12th century Hindu art. The charming friezes of dancing gānas on the east, south and west panels especially would fit into any North Indian temple of that time. And yet, the equation is not altogether satisfactory. The Gandharva-Apsaras panels, notwithstanding their Śaiva character, are merely variations of mithuna panels in the Ajanta (XVII) 21 and Badami 22 caves; the ringlet wigs, bow-harps and staff-citharas of the Gandharvas belong to the Gupta tradition; the crowns they are holding, we have already seen in the 7th-8th century monuments at Brahmr, Chatrarhi, Masur and Bilaspur; the crowns and massed hair of the Apsaras, like those of the other gods, are characteristic of the 7th-8th century. The dancing gānas at the bottom of the Śaiva panel resemble similar friezes at Ajanta XXIII-XXIV, Aihole and Badami 23; and their hair style is definitively late Gupta. The principal figures of the same panel would stand isolated in Śaiva iconography of the high middle ages; but they are closely related to the Magadha-Gupta, Pal-

21 J. Griffiths, op. cit., vol. I, pl. LXI.
22 R. D. Banerji, op. cit., pl. XII.
23 Banerji, op. cit., pl. VII.
lava and early Chālukya tradition of the 6th-7th centuries. The sixteen-armed
dancing Śiva has his counterparts at Badami (Cave 1)\(^{24}\) and in the Dacca Mu-
seum\(^ {25}\). The dancing Devī recurs at Aihole and Badami (unpublished single
sculptures); the two Bhairavas on both sides are a common feature in the early
Pallava caves\(^ {26}\) and in all the Śaiva caves of Elephanta (late 7th century) and
Ellora (late 7th—early 8th centuries). Taking all together, it is evident that
these high medieval panels also are no more than free copies and elaborations of
lost earlier prototypes of the 7th century.

However, in the façade of the shrine we are confronted with a pure and un-
adulterated monument of this same high medieval style. As this had been the
product of a natural evolution from late Gupta and early medieval art, this
façade repeats all the features of the shrine entrances of Brahmor and Chatrarhi.
But in the meantime these features have undergone a remarkable elaboration and
reinterpretation. The whole façade is flooded with a fantastic wealth of restless
ornaments, of complicated architectural motifs and of slim and elegant, very
mannered figures, arranged not over a succession of receding frames, but in an
irregular, though well balanced rhythm of strong accents between broad surfaces,
and major or minor depth-and-shadow effects: projecting pillars and capitals,
niches and individual figure groups. Nevertheless even those accents do not be-
come tangible; every architectural or decorative motif dissolves into minor orna-
ments, every figure into masses of jewelry, symbols or attendants. The columns
dissolve into flowers, wickerwork, small panels, jewelry, the cornices and capitals
into strings of pearls or friezes of baṁsas carrying a pearl string, the lintels and
jambs into sets of complicated medallions, image niches and chapels, the arches
into exuberant leaf scroll-work, and this again into kīrtimukha masks; the gables
are broken up into complicated architectural settings enlivened with jewels,
flowers and birds. And the medallions are filled with dancing Apsarasas\(^ {27}\), the
niches and chapels with gods and goddesses, and Gandharvas play their instru-
ments on the lintel underneath the habitations of the higher deities. All the cha-
acteristics of a late style: over-elaboration, restless dynamism, open form,
picturesque organization, playful lightness are represented.

But what style is this? On the one hand we can trace many links with Kashmir.

---

\(^{24}\) Banerji, *op. cit.*, pl. IIa.

\(^{25}\) Bhattachari, *op. cit.*, pl. XLII, XLVII.

\(^{26}\) A. H. Longhurst, *op. cit.*, I, 1924, pl. XVb, XVII, XVIIIa; II, 1928, pl. IVb, XXVI.

\(^{27}\) This is a common motif also in the contemporaneous Western Chālukyan art of the Deccan,
see H. Couzens, *Chalukyan Architecture*, 1926, pl. LXVIII (Lakkundi), CXVa (Balagamve),
CXXXV (Unkal).
The pillars, capitals and cornices are related to those of Avantipur and Patan\textsuperscript{28}, the arches and gables to those of Avantipur, Pandrethan, Narastan, Patan (miniature temple)\textsuperscript{29}. The river goddesses and other deities are descendants of those in the temples of Martand\textsuperscript{30} and Avantipur (Fig. 12). And yet even the richest of all these Kashmir monuments are simple and classic when compared with the exuberance of the façade of the Markulā Devī shrine.

![Fig. 12](image)

The other link is with the art of Western Tibet in the age of the great religious and cultural missionary Atiśa (Phul-byung)\textsuperscript{31} in the second quarter of the 11th century. The entrance of the rNam-par-snang-mdzad temple at Alchi (Ladakh) reveals many similarities with the Markulā shrine façade, door jambs with similar niches, an inner frame with similar figures projecting from the capitals and lintel, with a more emphasized central figure, an upper lintel with five chapels, the same involved gables, the same wickerwork knots, of course, all covered with Buddhist images\textsuperscript{32}. The woodcarvings of the gSum-thsag temple\textsuperscript{33} in the same place have

\textsuperscript{28} R. Ch. Kak, *Ancient Monuments of Kashmir*, London 1933, pls. I, LXVIIa, LXXII.
\textsuperscript{29} Kak, *op. cit.*, pls. XLIV, LII, LVII.
\textsuperscript{30} H. Goetz, *Art & Letters*, XXVII, no. 1, p. 1 ff., 1953, pl. IV.
\textsuperscript{32} A. H. Francke, *op. cit.*, I, pl. XXXIXa.
\textsuperscript{33} *Ibidem*, pl. XXXVIIa.
the same ornamental friezes, the same cornices, the same capitals with projecting friezes, and the Buddhas there remind us of the central figure in the Māra-dharsba-na of the Markulā maṇḍapa. Two richly carved Buddhist panels found at Tabo Monastery in Spiti have exactly the same double-arched Kashmiri niches, with a trilobed inner arch crowned by a pinnacle, and an exterior gable with little birds in the lateral corners; and the over-elongated, undulating figures are of the same type as the river goddesses of Mārul. The door of the rBrom-ston temple, though simpler, represents the same tradition. A painted terra-cotta of Buddha accompanied by Vajrapāni and Avalokiteśvara in the bDe-mC’ag temple at Tsaparang (Gugé) has a triple arch very similar to that of three of the chapels in the upper Markulā Devī lintel with the same slim, undulating figures, and a carved wooden door, in the Red Temple there, is again a simpler example of the same school.

We cannot conclude from these similarities that the high medieval Markulā temple is a work of Western Tibetan art. The very fact that it is a Hindu shrine, with Śūrya as the presiding deity, and the various forms of Siva and the Devi, the avatāras of Vishnu, and various minor gods in subsidiary position, exclude a Tibetan connection. The bulk of even the old Tibetan art in Ladkh, Spiti and Gugé is of a different, and in every respect late type. Only those monuments which, as Tibetan tradition expressly states, were creations of Kashmir artists summoned to Tibet by king Lha-chen Byang-chub-sems-dpa’ (ca. 1020-50) of Ladkh and the kings Lha-lde and ’Od-lde of Gugé are executed in a style comparable to that of the façade of the Markulā shrine.

The latter must, therefore, be a work of Kashmir art of the period soon after the death of queen Diddā (1003), probably of the reign of Anantadeva (1028-63) who, after the preceding years of chaos, had made a vigorous attempt to restore Kashmir’s suzerainty over the Panjab Hill states. Though Lahul is not mentioned, it must also have been amongst his conquests, as at least two adjoining states, Kashtwar and Chamba, had become Anantadeva’s vassals. It would otherwise

41 Vogel, Antiquities, p. 103.
be difficult to understand how a pure Kashmiri temple of first-rate quality could have been erected or reconstructed there 42.

But there are reasons to conclude that it was not king Ananta but his queen Sūryamatī who built the Markulā Devī temple. Sūryamatī 43 was a princess of Trigarta, a very pious Saiva devotee, and the foundress of many temples. Whereas for Kashmiris Lahul has little significance, it is a holy land of tīrthas to the Saivas of the Panjab Himalaya. Sūryamatī, therefore, would have had an interest in restoring a sanctuary of hoary antiquity there. Its dedication to Sūrya might have something to do with the queen’s name Sūryamatī, while the pronounced Saiva emphasis in the ceiling relief 44 may be due to her intense devotion to Śiva. Moreover, as the conflagration of the Vijayēśvara temple 45 in the tragic civil war with her son Kalaśa proves, wooden temples must have been common then. And the medieval Markulā Devī temple probably was no more than a small and modest replica of what the destroyed Vijayēśvara temple had proclaimed in all its glory.

Some decades later king Lha-chen Utpala (ca. 1080-1110) 46 invaded and conquered Kulu, and apparently also Lahul, as up to the 17th century we find the latter in Ladakhi hands. May we assume that after this conquest the Markulā Devī temple was converted into a shrine of Mārīchi-Vajravāraḥi, the Lamaistic light-goddess? And that on this occasion part of the ceiling, probably broken by an avalanche 47, was replaced, i.e. the centre-piece with the vajra-petal frieze and the “Assault of Māra”? For the differences in style between this Buddhist panel and the other, Hindu, ceiling panels are almost imperceptible, so that they can be only separated by a few decades at the utmost.

42 It could be argued that Lahul then might have been under Chamba which under Somavarman (ca. 1060-80), the successor of Sālavāhana whom Ananta had overthrown and killed, had recovered fairly well. But even if Lahul had been under the suzerainty of Sālavāhana, it must have been lost after his defeat. And as Somavarman, too, continued to be a vassal of Kalaśa of Kashmir (1063-89), he can hardly have had any opportunity to recover Lahul. Moreover, in Chamba not the Kashmiri style, but a degenerated variety of the quite different Trigarta style was used in architecture (e.g. in the Vajrēśvarī and Hari Rāi temples). Would it appear probable that Somavarman had erected in distant and poor Lahul a shrine much finer than any in his own capital? For Sālavāhana and Somavarman see also Hutchison-Vogel, History, I, p. 290; and Vogel, Antiquities, p. 182.

44 E.g. the small lingas in the square Gandharva ceiling-panels on the south side look very much like a later adaptation, as such linga stands were common in the high middle ages, but not in the Gupta period. Possibly the lost originals simply had flying Gandharvas, as in the other square panels.

46 Francke, op. cit., II, p. 96.

47 This is the only possible explanation. As the temple had been repaired not long ago, no part could be worn out; there are no vestiges of conscious destruction, but the north and central panels were evidently those most exposed to snow pressure in case of an avalanche.
But then, why can we not trace parallels to the early Markulā Devī temple in Kashmir proper? A survey of Kashmir’s history and monuments will give a sufficient answer. The Kashmir valley is a rather small country, and notwithstanding its great fertility, can, therefore, provide only limited resources; the revenues of the Kashmir kingdom, thus, depended on the extent of control over the neighbouring districts and states, in the Himalaya as well as in the plains, and this again depended on the internal stability of the kingdom. In the late 7th century the princes of the Kārkotā dynasty built up an empire expanding first over the Himalaya, then the Panjab and Afghanistan, finally over most of northern, western and central India which, however, disintegrated again after the death of Lalitāditya in 756. The early rulers of the Utpala dynasty restored the control of Kashmir over the Panjab and Afghanistan during the second half of the 9th and the first quarter of the 10th century, after which the empire was again lost, mainly to the Hindu Sāhis. In the 11th century the first rulers of the Lohara dynasty revived at least some control over the Himalayan states, before Kashmir definitively sank down to the status of a third-rate power.

These political vicissitudes are reflected most faithfully in the monuments still existing, that is, the temples in stone. The majority of them — and they are the finest ruins of all — are creations of the Kārkotā dynasty, especially of the great conqueror Lalitāditya, e.g. at Parihāsapura, Pandrethān (stūpas), Malot, Wangath, Narastān, Buniyar, etc. The second series, less in number and size, though more lavishly decorated, belongs to the Utpala dynasty, e.g. Avantipur, Patan, Pandrethān (stone temple), Bumzu. Of the Lohara dynasty, finally very few and modest monuments survive. And yet, from the Rājatarāṅgini it is evident, that all the time building activities never ceased, that in fact they had been very intensive. But most of these buildings were executed in cheaper and more perishable materials. Obviously the resources of kings of whom several had recourse to pillaging the temples of their predecessors, did not permit of such a solid, but also expensive, construction as stone blocks of often gigantic size. But this cannot have been the only cause. Most of the reigns were short and insecure, and most of the rulers were concerned more with the maintenance and enjoyment of their precarious power, than with their posthumous fame. This desire for enjoyment in the first place generated a refined luxury subject to repeated changes of fashion; and, therefore, developed a very rich and refined style of art. But the execution had to be rapid, and this meant the use of either stone quarried from older monuments, or of wood. The chronicle of Kashmir, therefore, is a long record of towns, temples and palaces laid in ashes. Add to this the systematic intentional destruction and not less the indifferent despoiling for building purposes, of Hin-
du ruins in Muslim times, and it is obvious that only the mightiest monuments, or such forgotten in lonely and hardly accessible places have escaped destruction. Thus, it is the luxurious later Hindu art of Kashmir that has almost entirely disappeared, and we have to reconstruct it from a handful of remnants, occasional stone images and bronzes in Kashmir itself and the wooden architecture, wood-carvings, stucco reliefs and murals executed by Kashmiri Buddhist missionaries in Tibet and preserved there in some ancient monasteries and temples.

How this wooden architecture had looked, it is difficult to say in the absence of any complete monuments. The Markulā temple cannot be accepted as a specimen, as its present shape is a product of the 16th century, whereas its 11th century lay-out merely copied the original temple of the 7th-8th century, as the many more or less free imitations of older reliefs prove. However, we have some clues with regard to the Buddhist sanctuaries. The peculiar type of the indigenous Muslim mausoleum and mosque of Kashmir has already puzzled many observers. It is a gigantic blockhouse square in groundplan, enclosing one vast hall without any pillars, or two halls, one on top of the other, under a slightly sloping roof from the centre of which a curious pyramidal spire rises. The one-storeyed hall exactly corresponds to the cult hall of a Tibetan temple, the two-storeyed hall, with galleries instead of a complete floor, to that of a Tibetan temple enshrining a gigantic image, the roof and spire to the top section of a Chorten. Even certain details, such as the wooden bells at the four corners, are a reminiscence of Lamaistic practices. In other words, the indigenous Muslim architecture of Kashmir seems to be nothing else than an adaptation of the preceding Buddhist architecture to the needs of a new religion. How far also Hindu wooden temples followed the same plan, or had been of ordinary hill type, we do not know. The delicate playful architectural forms represented on the façade of the Markulā temple or on the Tabo panels were hardly fit to stand even a single Kashmir winter. And it looks as if things had been rather the other way round, i.e. that these delicate architectural dreams were then used mainly for the interior decoration of temples either of the above blockhouse type or of the hill type, and that they could assume such fragile delicacy and such intricate patterns just be-

48 R. Ch. Kak, op. cit. pl. VI: Shāh Hāmadān, pls. IX-X; Jāmiʿ Masjīd, pl. XLVI; Pāmpur Mosque. J. H. Nicholls, A.S.R. 1906-07, p. 161 ff. Perhaps the most characteristic building is the mausoleum of Madīn Sāhib at Srinagar, built in stone, with medieval Kashmiri Hindu pillars at the corners, but otherwise of exactly the same type.

49 Also the chaityagrama of Laitāditya at Parihāsapura must have been like this, see D. R. Sahni, A.S.R. 1913-16, p. 52; H. Goetz, Jl. Bombay Univ. XXI, pt. 2, p. 63 ff.

50 Such adaptations have been quite common in Muslim art, e.g. the Mosque of the Rock at Jerusalem, and the Turkish mosques, slight variations of the type of Byzantine churches, the Persian aiwān mosques and madrasas, and in India the Muslim architecture of Gujarat and Bengal.
cause they had lost all genuine structural function. Within these limits we can accept the façade of the Markulā Devī shrine as a characteristic example of the interior of a wooden Hindu temple under the Lohara dynasty.

For the development of sculptural art we have at least two clues: king Saṁka-ravarman's brass frame for an image of the Buddha avatāra \(^{51}\) found at Devasar, and the group of the Bodhisattva Padmapāṇi accompanied by Tārā and Bhrikuṭi (?), consecrated in the reign of queen Diddā (980-1003) \(^{52}\), both in the Srinagar Museum. They clearly reveal the slow transition to the style of what we generally call Tibetan art. The Padmapāṇi group shows a remarkable similarity of treatment to the façade of the Markulā shrine.

With the adaptation of Kashmiri wooden architecture to Muslim needs and with the export of the other refined arts of Kashmir to Tibet the historical circle which opened with the Hūṇa-Gurjara invasion of the 5th-6th century was closed. When the Tunguse and Ephthalites overran north-western India, a great age of human civilization disappeared in blood and fire. The refined late Kushān civilization and art of Central Asia was almost wiped out, though thanks to its links with eastern Turkistan it could enjoy a last "Indian summer" in the small Bamiyan kingdom of the 6th-7th century. The Gupta Empire likewise collapsed. But Gupta civilization, though mortally wounded, resisted for several centuries, defeating the barbarian invasions and absorbing the nomadic hordes into its own cadres. In this struggle it lost more and more of its original character and changed into the society and civilization of medieval India. But at the same time it recovered the vast territories lost to the barbarians by conquest, conversion, colonization and cultural infiltration. Successively Yaśodharman, the Maukharis and Pushyabhūtis threw back wave after wave of predatory hordes, and since the late 6th century the frontiers of the kingdom of Kanauj were held at the Ravi, while the southern front was held in Saurāshtra and Gujarat by the Maitrakas and the Chālukyas of Badami. The next important steps forward were the hinduization of the Gurjara kingdoms of Broach, Bhinmal, Mandor and Brahmapura and the emergence of a strong Hindu state in Kashmir under the Kārkota princes. With the conquest of northern India first by Lalitāditya of Kashmir and then by the Gurjara-Pratihāras, two Hindu empires were built up which successively united the highly cultured countries of central and eastern India with the semi-barbarian and barbarian countries of the West, up to the frontiers of the ʿAbbāsid and T'ang-Chinese empires. Thus the best achievements of late Gupta and medieval Hindu

---

52 R. C. Kak, Handbook Srinagar Museum, 1923, p. 70. The fine Maitreya group, p. 72, cannot be from Ladakh, as Kak assumes, nor from Kashmir, but is a very characteristic Pāla work.
civilization were again introduced into most of the territory once controlled by the Kushāns. And even when the western countries relapsed into their former isolation, these cultural links were maintained, until one after the other the medieval Hindu states were conquered by the Muslims.

In this expansion of Hindu civilization to the West the Brahmapura kingdom formed an important link. A “Gurjara” state in the 6th century, it was more and more hinduized, and by the 8th century had almost completely lost its barbarian character, at last to develop into a pure Rajput vassal state of the Pratihāras in the 10th century. Its art, such as we can study it in the temples and brass idols of Brahmor and Chatrarhi and some echoes in the later-reliefs of Markula, was an offshoot of the late Gupta style in the age of the great Harshavardhana of Thanesar, mixed with certain influences from the Deccan. Then it was merged into the mixed Gupta-Kashmiri art such as it developed in part of Lalitāditya’s empire, in the provinces under the regency of Yaśovarman of Kanauj; next superseded by Kashmir influences which are still visible in the gable of the Lakshaṇa temple, and at last, in Sāhilavarman’s reign, by the art of the Pratihāra empire. In the meantime the style evolved in Kashmir under Lalitāditya, increasingly refined first under Avantivarman and Śāṅkaravarman, then under Diddā, Anantadeva and Kalaśa, penetrated the Panjab and the Himalaya west of the Ravi in the 9th and 10th centuries, and Lahul and Tibet in the 11th.

For us, however, who have to pick up and to piece together the torn threads of history from the meagre and scattered fragments still left, the art history of the Panjab Himalaya assumes a much greater importance. For where the great masterpieces of the past have been lost, their echoes in the art of the provinces have to serve as substitutes. As the ruins of Pompeii, preserved, undisturbed, for posterity by the eruption of Vesuvius, permit us a rare glimpse into the civilization of the Roman Empire at its zenith, or as the Ajanta frescoes, long forgotten in some inaccessible cave monasteries of Central India, give us some idea of the glory of classic Gupta and Chālukya art, in the same way the temples and images of Brahmor and Chatrarhi, sheltered by the snowy peaks and gorges of the Himalaya, are representatives of that later Gupta art which was the source of most of the earlier art of Nepal and Greater India, and of Buddhist art in Eastern Turkistan, China and Japan. And Markula-Udaipur in lonely Lahul proves for us the last remnant of that lost later Kashmiri art which was one of the main sources of the Tibetan tradition. For this reason, these temples and sculptures are of more than local interest; they are the keys to the great periods in the art history of Asia and of the world.
APPENDIX

ADDITIONAL NOTES BY THE EDITOR

At my suggestion the author has consented to omit diacritical marks in modern geographical names. The correct transliteration of some of them is as follows: Baijnâth, Basôhî, Bhadravâh, Bilaspur, Bi(y)âs (Skt. Vipâsâ), Buḍhal, Chhâtrâhî, Garhâl, Jâlandhar, Kângrâ, Kaśmîr, Kûlû (Skt. Kulûta), Maṇḍî, Nîrmanḍ, Nûrpur, Pângî, Panjâb, Pâthân-kôt, Râvi (Skt. Iravati), Satluj (Skt. Satadru), Suk(h)êt, Trêhtâ (Skt. Trighatôka). On the map of Chamba State, reproduced from my Antiquities, Plate V, the palatals have been rendered by c and ch.

P. 64. The Vishnu image, reproduced by B. Bhattacharya, Indian Images (1921), frontispiece, as originating from Sultanpur, the capital of Kulu, is also published by A. K. Coomaraswamy in his History of Indian and Indonesian Art (1927), Pl. LXIX, fig. 222. This author (p. 244) notes it as follows: — "Viṣṇu from Sultaṇpur, now in the Lucknow Museum. Buff sandstone, 3'5". Tenth or eleventh century". On p. 110 he says: — "As may have been gathered from the foregoing description, the culture of the Chandels in Central India was preponderantly Brâhmanical, and most of the temples and sculptures are of a corresponding character (cf. fig. 222)". The image has no connection whatever with Kulu, but was found in the village of Seor, in the Kurebhar tahsil of the Sultanpur district, Uttar Pradesh. Cf. J. Hyderabad Archaeological Society, 1919-20, p. 47.

P. 75. Sir Alexander Cunningham in his note on the temple of Lakṣṭhânâ Devi (A.S.R., vol. XIV, p. 111) observes: "Over the middle of the door are fixed a pair of large ibex horns; smaller ones are placed at intervals with numbers of small trisuls and rails of iron". The ibex horns and also horns of rams and goats are plainly visible on Plate II. We may add to account for their presence that Devi is regarded as the mistress of the wild animals. The huntsman (shikâri) has to propitiate her by the sacrifice of a goat or a ram, and also for other purposes the villagers endeavour to win her favour in the same manner. The flesh of the victim is consumed by the sacrificer(s) and the chelâ, and the horns of the animal are attached to the shrine of the goddess. The little iron tridents noticed by Cunningham are votive offerings which are believed to be agreeable to the goddess
whose favourite weapon they reproduce. A large iron trident stands in front of her temple and a smaller specimen adorns the ridge of the sloping roof (Plate I b). The man sitting at the entrance is the chelā of Lakṣaṇā Devī.

P. 95. As with the camera at our disposal it was impossible to obtain a photograph of the whole central portion of the ceiling, a partial view of it has been reproduced twice in Plate XIII in order to impart a total impression of this marvellous work of art.

P. 97. Mr. Sivaramamurti, M.A., Superintendent of the Archaeological Section, Indian Museum, has sent me the following note on the deities represented in the western panel “The whole group appears to be a glorification of Mahēśa in his naṭaṇa aspect and since Devī is also shown dancing beside him she may be taken to be Manonmani. In the Lalitaśahasranāma Devī is described in the line Maheśa vandanaṇaṇaṇaṭṭapā as dancing with Mahēśa. We can take the other forms of Siva, excluding the Devī, which number five in all as Iśāna, Tatpurusha, Aghora, Vāmadeva and Sadyojāta, all five making up the Mahēśa complex. Tatpurusha carries a mātulunga fruit in his left hand and an akshamālā in his right hand. Aghora carries a khaṭvāṅga and a kapāla. Vāmadeva carries a sword (khaḍga) and shield (kheṭaka). Iśāna carries an akshamālā, a śūla and a kapāla. The Saiva-kāraṇāgama and Rāmapaṇḍana differ as regards the weapons attributed to these five forms of Siva, known as the Pañcabrahmas.

P. 99 f. Brindavan C. Bhattacharya, Indian Images, 1921, pp. 31 f. supplies valuable information on the iconography of “the Nine Planets” derived from Hemāḍri, Vishnudharmottara and Matsya-purāṇa. This enables us to identify most of the figures in the eight chapels. The deity in the centre of the upper row must be Budha (Mercury) who is stated to be similar to Vishnu. The two on his left side may be safely identified with the demons Rāhu and Ketu. The first figure of the second row is Maṅgala-Bhauma (Mars), who according to the Matsya-purāṇa is similar to Agni, his vāhana being a ram and his weapons a lance and a trident. As it is very improbable that Sūrya and Chandra, the two principal members of the group, have been omitted and the separate figure over the doorway, whose hands are broken, appears to be the solar deity, we may perhaps assume that the person immediately above him represents Chandra, though not in his orthodox appearance. The identity of the three remaining grahas is also uncertain, but Brihaspati (Jupiter), who is stated to resemble Brahmā, may perhaps be recognized in the first figure of the upper row on account of his attributes. In his neighbour who has the same attributes — a gourd (kamanḍalu), a rosary (akshamālā) and a staff it is tempting to see Sukra (Venus) who is the purobhita of the Asuras. If this is correct, it follows that the deity to the right of the sup-
posed Chandra must be Sanaśchara. The śloka regarding Rāhu quoted by Bhattacharya from Hemādri — Kambalaiṁ pustakaiṁ kāryaṁ bhujanaikena saṁyutam — is evidently corrupt. I propose to read — kevalaṁ mastakam kāryaṁ bhuje-naikena saṁyutam.

The Grahas are also found in a frieze under the gable of the temple of Lakshana (p. 77) and over the entrance to the shrine of Śakti Devī (p. 88). They occur also on the façade of the temple of Hiḍimbā at Dhungri near Manali in Kulu and on a small temple in the village of Prinī between Manali and Jagatsukh.
