THE DESIGN

A TREATISE

ox

THE PLANTS OF INDIA.

BY THE PRESIDENT.

THE greatest, if not the only, obstacle to the progress of knowledge in these provinces, except in those branches of it, which belong immediately to our feveral professions, is our want of leifure for general refearches; and as ARCHI-MEDES, who was happily master of his time, had not space enough to move the greatest weight with the fmallest force, thus we, who have ample space for our inquiries, really want time for the purfuit of them. "Give me a " place to fland on, faid the great mathematician, " and I will move the whole earth:" Give us time, we may fay, for our investigations, and we will transfer to Europe all the sciences, arts, and literature of Asia. " Not to have despair-" ed," however, was thought a degree of merit VOL. III.

in the Roman general, even though he was defeated; and, having fome hope, that others may occasionally find more leifure, than it will ever, at least in this country, be my lot to enjoy, I take the liberty to propose a work, from which very curious information, and possibly very solid advantage, may be derived.

Some hundreds of plants, which are yet imperfectly known to European botanists, and with the virtues of which they are wholly unacquainted, grow wild on the plains and in the forests of India: the Amarcosh, an excellent vocabulary of the Sanfcrit language, contains in one chapter the names of about three hundred medicinal vegetables; the Médini may comprife many more; and the Dravyábhidhána, or Dictionary of Natural Productions, includes, I believe, a far greater number; the properties of which are diffinctly related in medical tracts of approved authority. Now the first step, in compiling a treatife on the plants of India, should be to write their true names in Roman letters, according to the most accurate orthography, and in Sanscrit preferably to any vulgar dialect; because a learned language is fixed in books, while popular idioms are in constant fluctuation, and will not, perhaps, be understood a century hence by the inhabitants of these Indian territories, whom future botanists may confult on the common appellations of trees and flowers: the childish denominations of plants from the perfons, who first described them, ought wholly to be rejected; for Champaca and Hinna feem to me not only more elegant, but far properer, defignations of an Indian and an Arabian plant, than Michelia and Lawsonia; nor can I fee without pain, that the great Swedish botanist considered it as the supreme and only reward of labour in this part of natural history, to preserve a name by hanging it on a bloffom, and that he declared this mode of promoting and adorning botany, worthy of being continued with boly reverence, though fo high an honour, he fays, ought to be conferred with chafte reserve, and not prostituted for the purpose of conciliating the good will, or eternizing the memory, of any but his chosen followers; no, not even of faints: his lift of an bundred and fifty fuch names clearly shows, that his excellent works are the true basis of his just celebrity, which would have been feebly supported by the stalk of the Linnaa. From what proper name the Plantain is called Musa, I do not know; but it feems to be the Dutch pronunciation of the Arabick word for that vegetable, and ought not, therefore, to have appeared in his lift, though, in my opinion, it is the only rational name in the muster-roll. As to the fystem of LINNÆUS, it is the fystem of Nature, fubordinate indeed to the beautiful arrangement of natural orders, of which he has given a rough sketch, and which may hereafter, perhaps, be completed: but the distribution of vegetables into classes, according to the number, length, and position of the stamens and pistils, and of those classes into kinds and species, according to certain marks of discrimination, will ever be found the clearest and most convenient of methods, and should therefore be studiously observed in the work, which I now fuggest; but I must be forgiven, if I propose to reject the Linnean appellations of the twenty-four classes, because, although they appear to be Greek, (and, if they really were fo, that alone might be thought a fufficient objection) yet in truth they are not Greek, nor even formed by analogy to the language of Grecians; for Polygamos, Monandros, and the rest of that form, are both masculine and feminine; Polyandria, in the abstract, never occurs, and Polyandrion means a publick cemitery; diacia and diacus are not found in books of authority; nor, if they were, would they be derived from dis, but from dia, which would include the triacia; let me add, that the twelfth and thirteenth classes are ill diftinguished by their appellations, independently of other exceptions to them, fince

the real distinction beween them confists not so much in the number of their stamens, as in the place, where they are inferted; and that the fourteenth and fifteenth are not more accurately discriminated by two words formed in defiance of grammatical analogy, fince there are but two powers, or two diversities of length, in each of those classes. Calycopolyandres might, perhaps, not inaccurately denote a flower of the twelfth clais; but such a compound would ftill favour of barba ifm or pedantry; and the best way to amend fuch a fystem of words is to efface it, and fupply its place by a more fimple nomenclature, which may eafily be found. Numerals may be used for the eleven first classes, the former of two numbers being always appropriated to the stamens, and the latter, to the pistils: short phrases, as, on the calyx or calice, in the receptacle, two long, four long, from one baje, from two, or many, bases, with anthers connected, on the pistils, in two flowers, in two distinct plants, mixed, concealed, or the like, will answer every purpose of discrimination; but I do not offer this as a perfect fubflitute for the words, which I condemn. The allegory of fexes and nuptials, even if it were complete, ought, I think, to be discarded, as unbecoming the gravity of men, who, while they fearch for truth, have no bufiness to inflame their imaginations; and, while they profess to give descriptions, have nothing to do with metaphors: few passages in Aloisia, the most impudent book ever composed by man, are more wantonly indecent than the hundred-forty-fixth number of the Botanical Philosophy, and the broad comment of its grave author, who dores, like Octavius in his epigram, to speak with Roman simplicity; nor can the Linnean description of the Arum, and many other plants, be read in English without exciting ideas, which the occasion does not require. Hence it is, that no well-born and well-educated woman can be advised to amuse herself with botany, as it is now explained, though a more elegant and delightful fludy, or one more likely to affift and embellish other female accomplishments, could not possibly be recommended.

When the Sanscrit names of the Indian plants have been correctly written in a large paper-book, one page being appropriated to each, the fresh plants themselves, procured in their respective seasons, must be concisely, but accurately, classes and described; after which their several uses in medicine, diet, or manufactures, may be collected, with the affistance of Hindu physicians, from the medical books in Sanscrit,

ON THE PLANTS OF INDIA.

and their accounts either disproved or established by repeated experiments, as fast as they can be made with exactness.

By way of example, I annex the descriptions of five *Indian* plants, but am unable, at this feason, to re-examine them, and wholly despair of leisure to exhibit others, of which I have collected the names, and most of which I have feen in blossom.

I. MUCHUCUNDA.

Twenty, from One Bafe.

Cal. Five-parted, thick; leaflets, oblong.

Cor. Five petals, oblong.

Stam. From twelve to fifteen, rather long, fertile; five shorter, sterile. In some slowers, the unprolifick stamens, longer.

Pist. Style cylindrick.

Peric. A capfule, with five cells, many-feeded.

Seeds: Roundish, compressed, winged.

Leaves: Of many different shapes.

Uses: The quality, refrigerant.

One flower, steeped a whole night in a glass of water, forms a cooling mucilage of use in virulent gonorrheas. The Muchucunda, called also Pichuca, is exquisitely fragrant: its calyx

is covered with an odoriferous dust; and the dried flowers in fine powder, taken like snuff, are said, in a Sanscrit book, almost instantaneously to remove a nervous head-ach.

Note. This plant differs a little from the Pentapetes of LINNEUS,

II. BILVA OR MA'LU'RA.

Many on the Receptacle, and One.

Cal. Four, or five, cleft, beneath.

Cor. Four, or five, petals; mostly reflex.

Stam. Forty, to forty-eight, filaments; anthers, mostly erect.

Pift. Germ, roundish; Style, smooth, short; Stigma, clubbed.

Peris. A spheroidal berry, very large; many-seeded.

Seeds: Toward the furface, ovate, in a pellucid mucus.

Leaves: Ternate; common petiole, long; leaflets, subovate; obtufely notched, with short petioles; some almost lanced.

Stem: Armed with sharp thorns.

Uses: The fruit nutritious, warm, cathartick; in taste, delicious; in fragrance, exquisite: its aperient and detersive quality, and its efficacy in removing habitual costiveness,

have been proved by conftant experience. The mucus of the feed is, for some purposes, a very good cement.

Note. This fruit is called Srip'bala, because it sprang, say the Indian poets, from the milk of Sri, the goddess of abundance, who bestowed it on mankind at the request of Iswara, whence he alone wears a chaplet of Bilva flowers; to him only the Hindus offer them; and, when they see any of them fallen on the ground, they take them up with reverence, and carry them to his temple. From the first blossom of this plant, that I could inspect, I had imagined, that it belonged to the same class with the Durio, because the silaments appeared to be distributed in five sets; but in all, that I have since examined, they are perfectly distinct.

III. SRINGA'TACA.

Four and One.

Cal. Four cleft, with a long peduncle, above.

Cor. Four petals.

Stam. Anthers, kidney-shaped.

Pift. Germ, roundish; Style, long as the filaments; Stigma, clubbed.

Seed: A Nut with four opposite angles (two of them sharp thorns) formed by the Calyx.

Leaves: Those, which float on the water, are rhomboidal; the two upper sides unequally notched, the two lower, right lines. Their petioles, buoyed up by spindle-shaped spongy substances, not bladders.

Root: Knotty, like coral.

Uses: The fresh kernel, in sweetness and delicacy, equals that of the filberd. A mucus, secreted by minute glands, covers the wet leaves, which are considered as cooling.

Note. It feems to be the floating Trapa of LINNEUS.

IV. PU'TI CARAJA.

Ten and one.

Cal. Five-cleft.

Cor. Five equal petals.

Peric. A thorny legumen; two feeds.

Leaves: Oval, pinnated.

Stem: Armed.

Uses: The seeds are very bitter, and, perhaps, tonick; since one of them, bruised and given in two dotes, will, as the Hindus affert, cure an intermittent sever.

V. MADHU'CA.

(See Afiat. Refearch. vol. I, page 300. Many, not on the Receptacle, and One. Cal. Perianth four, or five, leaved. Cor. One-petaled. Tube inflated, fleshy.

Border nine, or ten, parted.

Stam. Anthers from twelve to twenty-eight, erect, acute, subvillous.

Pift. Germ, roundish; Style, long, awl-shaped.

Peric. A Drupe, with two or three Nuts?

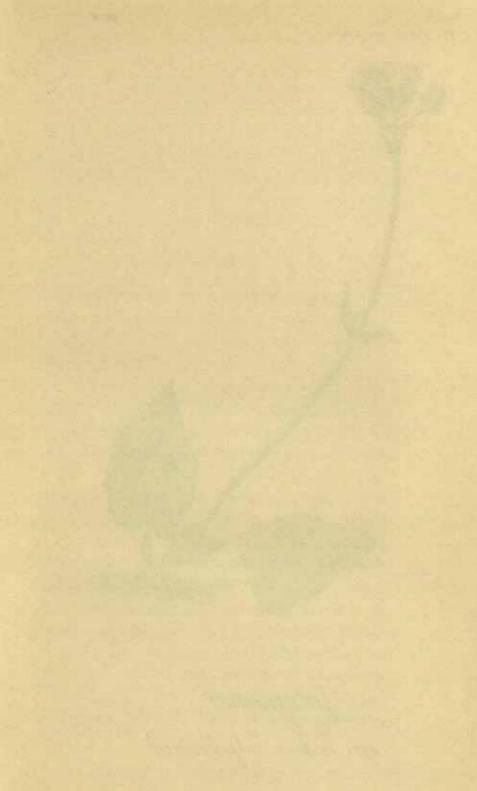

Leaves: Oval, fomewhat pointed.

Uses: The tubes, esculent, nutritious; yielding, by distillation, an inebriating spirit, which, if the sale of it were duly restrained by law, might be applied to good purposes. An useful oil is expressed from the seed.

Note. It refembles the Baffia of KOENIG.

Such would be the method of the work, which I recommend; but even the specimen, which I exhibit, might, in skilful hands, have been more accurate. Engravings of the plants may be annexed; but I have more than once experienced, that the best anatomical and botanical prints give a very inadequate, and sometimes a very false, notion of the objects, which they were intended to represent. As we learn

a new language, by reading approved compofitions in it with the aid of a Grammar and Dictionary, fo we can only study with effect the natural history of vegetables by analysing the plants themselves with the *Philosophia Bo*tanica, which is the Grammar, and the Genera et Species Plantarum, which may be considered as the Dictionary, of that beautiful language, in which nature would teach us what plants we must avoid as noxious, and what we must cultivate as salutary, for that the qualities of plants are in some degree connected with the natural orders and classes of them, a number of instances would abundantly prove.

Vol.3

The Petals are White

Jatamansı . or Indian Spikenard .

SPIKENARD OF THE ANCIENTS.

BY THE PRESIDENT.

IT is painful to meet perpetually with words, that convey no diffinct ideas; and a natural defire of avoiding that pain excites us often to make inquiries, the refult of which can have no other use than to give us clear conceptions. Ignorance is to the mind what extreme darkness is to the nerves: both cause an uneasy fensation; and we naturally love knowledge, as we love light, even when we have no defign of applying either to a purpose effentially useful. This is intended as an apology for the pains which have been taken to procure a determinate answer to a question of no apparent utility, but which ought to be readily answered in India, " What is Indian Spikenard?" All agree, that it is an odoriferous plant, the best fort of which, according to PTOLEMY, grew about Rangamritica, or Rangamáti, and on the borders of the country now called Butan: it is mentioned by Drosco-RIDES, whose work I have not in my possession;

but his description of it must be very imperfect, fince neither LINNEUS nor any of his disciples pretend to class it with certainty, and, in the latest botanical work, that we have received from Europe, it is marked as unknown. I had no doubt, before I was personally acquainted with KOENIG, that he had afcertained it; but he affured me, that he knew not what the Greek writers meant by the nard of India: he had found, indeed, and described a fixth species of the nardus, which is called Indian in the fupplement to Linnæus; but the nardus is a grass which, though it bear a Spike, no man ever fupposed to be the true Spikenard, which the great Botanical Philosopher himself was inclined to think a species of Andropogon, and places, in his Materia Medica, but with an expression of doubt, among his polygamous plants. Since the death of KOENIG I have confulted every botanist and physician, with whom I was acquainted, on the fubject before us; but all have confessed without reserve, though not without fome regret, that they were ignorant what was meant by the Indian Spikenard.

In order to procure information from the learned natives, it was necessary to know the name of the plant in some Asiatick language. The very word nard occurs in the song of

SOLOMON; but the name and the thing were both exotick: the *Hebrew* lexicographers imagine both to be *Indian*; but the word is in truth *Persian*, and occurs in the following distich of an old poet:

A'n chu bikhest, in chu nardest, an chu shakhest, in chu bàr, A'n chu bikhì payidarest, in chu nardì payidar.

It is not easy to determine in this couplet, whether nard mean the ftem, or, as Anju' explains it, the pith; but it is manifestly a part of a vegetable, and neither the root, the fruit, nor the branch, which are all separately named : the Arabs have borrowed the word nard, but in the fense, as we learn from the Kamus, of a compound medicinal unguent. Whatever it fignified in old Persian, the Arabick word sumbul, which, like fumbalah, means an ear or spike, has long been substituted for it; and there can be no doubt, that by the fumbul of India the Mufelmans understand the same plant with the nard of PTOLEMY and the Nardoftacbys, or Spikenard, of GALEN; who, by the way, was deceived by the dry specimens, which he had feen, and miftook them for roots.

A fingular description of the sumbul by ABU'LFAZL, who frequently mentions it as an ingredient in *Indian* perfumes, had for some time almost convinced me, that the true Spike-

nard was the Cétaca, or Pandanus of our botanists: his words are, Sumbul panj berg dared, ceb dirázii án dab angosbtestu pabnái seb, or, "The fumbul has five leaves, ten fingers long, " and three broad." Now I well knew, that the minister of ACBAR was not a botanist, and might eafily have mistaken a thyrsus for a single flower: I had feen no bloffom, or affemblage of bloffoms, of fuch dimensions, except the male Cétaca; and, though the Persian writer describes the female as a different plant, by the vulgar name Cyóra, yet fuch a mistake might naturally have been expected in fuch a work: but what most confirmed my opinion, was the exquisite fragrance of the Cétacaflower, which to my fenfe far furpaffed the richeft perfumes of Europe or Afia. Scarce a doubt remained, when I met with a description of the Cétaca by FORSKOHL, whose words are so perfectly applicable to the general idea, which we are apt to form of Spikenard, that I give you a literal translation of them: " The Pandanus " is an incomparable plant, and cultivated for " its odour, which it breathes fo richly, that one " or two Spikes, in a fituation rather humid, " would be fufficient to diffule an odoriferous 64 air for a long time through a spacious apart-" ment; fo that the natives in general are not " folicitous about the living plants, but purchase

" the Spikes at a great price." I learned also, that a fragrant effential oil was extracted from the flowers; and I procured from Banáres a large phial of it, which was adulterated with fandal; but the very adulteration convinced me that the genuine effence must be valuable, from the great number of thyrsi, that must be required in preparing a fmall quantity of it. Thus had I nearly perfuaded myfelf, that the true nard was to be found on the banks of the Ganges, where the Hindu women roll up its flowers in their long black hair after bathing in the holy river; and I imagined, that the precious alubajter-box mentioned in the Scripture, and the fmall onyx, in exchange for which the poet offers to entertain his friend with a cosk of old wine, contained an effence of the fame kind, though differing in its degree of purity, with the nard, which I had procured: but an Arab of M.c.a, who faw in my fludy fome flowers of the Cétaca, informed me that the plant was extremely common in Arabia, where it was named Cadhi; and feveral Mahomedans of rank and learning have fince affirred me, that the true name of the Indian Sumbul was not Cétaca, but Jatamansi. This was important information: finding therefore, that the Pandanus was not peculiar to Hindustan, and confidering, that the Sumbul of ABU'LFAZI, differed from it in

the precise number of leaves on the thyrsus, in the colour, and in the feafon of flowering, though the length and breadth corresponded very nearly, I abandoned my first opinion, and began to enquire eagerly for the Jatamans, which grew, I was told, in the garden of a learned and ingenious friend, and fortunately was then in bloffom. A fresh plant was very foon brought to me: it appeared on inspection to be a most elegant Cypirus with a polished three-fided culm, an umbella with three or four enfiform leaflets minutely ferrated, naked proliferous peduncles, crowded spikes, expanded daggers; and its branchy root had a pungent tafte with a faint aromatick odour; but no part of it bore the least resemblance to the drug known in Europe by the appellation of Spikenard; and a Muselmán physician from Debli affured me positively, that the plant was not Jatamanst, but Sild, as it is named in Arabick, which the author of the Tohfatu'l Mumenin particularly diftinguishes from the Indian Sumbul. He produced on the next day an extract from the Dictionary of Natural history, to which he had referred; and I present you with a translation of all that is material in it.

"I. Sup has a roundish olive-shaped root, externally black, but white internally, and so fragrant as to have obtained in Persia the name " of Subterranean Musk: its leaf has some re-" femblance to that of a leek, but is longer and " narrower, ftrong, fomewhat rough at the edges, " and tapering to a point. 2. SUMBUL means a " fpike or ear, and was called nard by the Greeks. "There are three forts of Sumbul or Nardin; but, when the word stands alone, it means " the Sumbul of India, which is an herb with-" out flower or fruit, (he fpeaks of the drug " only) like the tail of an ermine, or of a small " weafel, but not quite fo thick, and about the " length of a finger. It is darkish, inclining to "yellow, and very fragrant: it is brought " from Hindustán, and its medicinal virtue lasts "three years." It was eafy to procure the dry Fatámánsi, which corresponded perfectly with the description of the Sumbul; and though a native Muselman afterwards gave me a Persian paper, written by himfelf, in which he reprefents the Sumbul of India, the Sweet Sumbul, and the Jatamansi as three different plants, yet the authority of Tobfatu'l Mumenin is decifive, that the fweet Sumbul is only another denomination of nard, and the physician who produced that authority, brought, as a specimen of Sumbul, the very fame drug, which my Pandit, who is also a physician, brought as a specimen of the Jatamansi: a Brabmen of eminent learning gave me a parcel of the fame fort, and told me that it was used in their facrifices; that when fresh, it was exquisitely sweet, and added much to the fcent of rich effences, in which it was a principal ingredient; that the merchants brought it from the mountainous country to the north-east of Bengal; that it was the entire plant, not a part of it, and received its Sanscrit names from its refemblance to locks of bair; as it is called Spikenard, I suppose, from its refemblance to a Spike, when it is dried, and not from the configuration of its flowers, which the Greeks, probably, never examined. The Persian author describes the whole plant as refembling the tail of an ermine; and the Jatamansi, which is manifestly the Spikenard of our druggists, has precisely that form, confisting of withered stalks and ribs of leaves, cohering in a bundle of yellowish brown capillary fibres, and constituting a spike about the fize of a finall finger. We may on the whole be affured, that the nardus of PTOLEMY, the Indian Sumbul of the Ferfians and Arabs, the Tatamansi of the Hindus, and the Spikenard of our shops, are one and the same plant; but to what class and genus it belongs in the Linnean fystem, can only be ascertained by an inspection of the fresh blossoms. Dr. PATRICK Russel, who always communicates with obliging facility his extensive and accurate knowledge, informed me by letter, that "Spike"nard is carried over the defert (from India I
"prefume) to Aleppo, where it is used in sub"stance, mixed with other perfumes, and worn
"in small bags, or in the form of essence, and
"kept in little boxes or phials, like atar of roses."
He is persuaded, and so am I, that the Indian
nard of the ancients, and that of our shops, is
one and the same vegetable.

Though diligent refearches have been made at my request on the borders of Bengal and Bebar, yet the Jatumánsi has not been found growing in any part of the British territories. Mr. SAUNDERS, who met with it in Butan, where, as he was informed, it is very common, and whence it is brought in a dry state to Rangpur, has no helitation in pronouncing it a fpecies of the Baccharis; and, fince it is not possible, that he could mistake the natural order and effential character of the plant, which he examined, I had no doubt that the Jatámánsi was composit and corymbiferous with stamens connected by the anthers, and with female prolifick florets intermixed with hermaphrodites: the word Spike was not used by the ancients with botanical precision, and the Stachys itself is verticillated, with only two species out of fifteen, that could justify its generick appellation. I therefore concluded, that the true Spikenard was a Baccharis, and that, while the philosopher had been fearthing for it to no purpose,

Trod on it daily with his clouted shoon,

for the Baccharis, it feems, as well as the Conyza, is called by our gardeners, Ploughman's Spikenard. I suspected, nevertheless, that the plant, which Mr. SAUNDERS described, was not Yatamansi; because I knew that the people of Butan had no fuch name for it, but diffinguished it by very different names in different parts of their hilly country: I knew also, that the Butias, who fet a greater value on the drug than it feems, as a perfume, to merit, were extremely referved in giving information concerning it, and might be tempted, by the narrow fpirit of monopoly, to millead an inquirer for the fresh plant. The friendly zeal of Mr. PURLING will probably procure it in a flate of vegetation; for, when he had the kindness, at my defire, to make enquiries for it among the Butan merchants, they affured him, that the living plants could not be obtained without an order from their fovereign the Dévarája, to whom he immediately dispatched a messenger with an earnest request, that eight or ten of the growing plants might be fent to him at Rangpur: should the Dévarájà comply with that request, and should the vegetable flourish in the plain of Bengal, we shall have ocular proof of its class, order, genus, and species; and, if it prove the same with the Jatá-mánss, of Népal, which I now must introduce to your acquaintance, the question, with which I began this essay, will be satisfactorily answered.

Having traced the Indian Spikenard, by the name of Jatámánsi, to the mountains of Népal, I requested my friend Mr. LAW, who then refided at Gayá, to procure some of the recent plants by the means of the Népalese pilgrims; who, being orthodox Hindus and poffeffing many rare books in the Sanscrit language, were more likely than the Butias to know the true fatámánsi, by which name they generally diftinguish it: many young plants were accordingly fent to Gayà, with a Persian letter specifically naming them, and apparently written by a man of rank and literature; fo that no fuspicion of deception or of error can be justly entertained. By a mistake of the gardener they were all planted at Gaya, where they have bloffomed and at first seemed to flourish : I must, therefore, describe the Jatamanss from the report of Mr. Burt, who favoured me with a drawing of it, and in whose accuracy we may perfectly confide; but, before I pro-

duce the description, I must endeavour to remove a prejudice, in regard to the natural order of the spikenard, which they, who are addicted to fwear by every word of their mafter LINNÆUS, will hardly abandon, and which I, who love truth better than him, have abandoned with fome reluctance. Nard has been generally supposed to be a grass; and the word stacbys or spike, which agrees with the habit of that natural order, gave rife, perhaps, to the supposition. There is a plant in Java, which most travellers and fome physicians called spitenard; and the Governor of Chinfura, who is kindly endeavouring to procure it thence in a state fit for examination, writes me word, that "a Dutch " author pronounces it a grafs like the Cypirus, " but infifts that what we call the fpike is the " fibrous part above the root, as long as a " man's little finger, of a brownish hue inclin-" ing to red or yellow, rather fragrant, and " with a pungent, but aromatick, fcent." This is too flovenly a description to have been written by a botanist; yet I believe the latter part of it to be tolerably correct, and should imagine that the plant was the same with our Jatamansi, if it were not commonly afferted, that the Javan spikenard was used as a condiment, and if a well-informed man, who had feen it in the island, had not assured me, that it was a fort of Pimenta, and confequently a species of Myrtle, and of the order now called Hesperian. The refemblance before mentioned between the Indian fumbul and the Arabian Súd, or Cypirus, had led me to fuspect, that the true nard was a grass or a reed; and, as this country abounds in odoriferous graffes, I began to collect them from all quarters. Colonel KyD obligingly fent me two plants with fweet fmelling roots; and, as they were known to the Pandits, I foon found their names in a Sanferi dictionary: one of them is called gandbasat'bi, and used by the Hindus to fcent the red powder of Sapan or Bakkam wood, which they scatter in the festival of the vernal feafon; the other has many names, and, among them, nagaramastac and gonarda, the fecond of which means ruftling in the water; for all the Pandits infift, that nard is never used as a noun in Sanscrit, and fignifies, as the root of a verb, to found or to ruftle. Soon after, Mr. BURROW brought me from the banks of the Ganges near Heridwar, a very fragrant grafs, which in fome places covers whole acres, and diffuses, when crushed, so strong an odour, that a person, he says, might easily have smelt it, as ALEXANDER is reported to have fmelt the nard of Gedrosia, from the back of an elephant: its bloffoms were not preferved, and it cannot, therefore, be described. From Mr. BLANE of Lucnow I received a fresh plant, which has not flowered at Calcutta; but I rely implicitly on his authority, and have no doubt that it is a fpecies of Andropogon: it has rather a rank aromatick odour, and, from the virtue ascribed to it of curing intermittent fevers, is known by the Sanscrit name of jwarancus'a, which literally means a fever-book, and alludes to the iron-book with which elephants are managed. Laftly, Dr. Anderson of Madras, who delights in useful pursuits and in affisting the purfuits of others, favoured me with a complete specimen of the Andropogon Nardus, one of the most common grasses on the Coast, and flourishing most luxuriantly on the mountains, never eaten by cattle, but extremely grateful to bees, and containing an effential oil, which, he understands, is extracted from it in many parts of Hindustan and used as an atar or perfume. He adds a very curious philological remark, that in the Tamul dictionary, most words beginning with nár have some relation to fragrance; as nárukeradu to yield an odour, nártum pillu, lemon-grass, nártei, citron, nárta manum, the wild orange-tree, nárum panei, the Indian Jasmin, nárum alleri, a strong smelling flower, and nartu, which is put for nard in the Tamul version of our Scriptures; so that not only the nard of the Hebrews and Greeks, but even the Indian root: to this I can only fay, that I have not met with any fuch root in Sanscrit, the oldest polished language of India, and that in Persian, which has a manifest affinity with it, nar means a pomegranate, and nargil (a word originally Sanscrit) a cocoa-nut, neither of which has any remarkable fragrance.

Such is the evidence in fupport of the opinion given by the great Swedish naturalist, that the true nard was a gramineous plant and a species of Andropogon; but, fince no grass, that I have yet feen, bears any refemblance to the Jatámánsi, which I conceive to be the nardus of the ancients, I beg leave to express my diffent, with fome confidence as a philologer, though with humble diffidence as a ftudent in botany. I am not, indeed, of opinion, that the nardum of the Romans was merely the effential oil of the plant, from which it was denominated, but am strongly inclined to believe, that it was a generick word, meaning what we now call atar, and either the atar of roses from Cashmir and Persia, that of Cétaca, or Pandanus, from the western coast of India, or that of Aguru, or aloe-wood, from Afam or Cocbinchina, the process of obtaining which is described by ABU'LFAZL, or the mixed perfume, called abir, of which the principal in-

gredients were yellow fandal, violets, orangeflowers, wood of aloes, rose-water, musk, and true spikenard: all those essences and compofitions were coftly; and, most of them being fold by the Indians to the Persians and Arabs, from whom, in the time of OCTAVIUS, they were received by the Syrians and Romans, they must have been extremely dear at Jerusalem and at Rome. There might also have been a pure nardine oil, as ATHENEUS calls it; but nardum probably meant (and KOENIG was of the same opinion) an Indian essence in general, taking its name from that ingredient, which had; or was commonly thought to have, the most exquisite scent. But I have been drawn by a pleasing fubject to a greater length than I expected, and proceed to the promifed description of the true nard or Jatamansi, which, by the way, has other names in the Amarcofh, the smoothest of which are jatilá and lómasà, both derived from words meaning bair. Mr. Burt, after a modest apology for his imperfect acquaintance with the language of botanists, has favoured me with an account of the plant, on the correctness of which I have a pertect reliance, and from which I collect the following natural characters:

AGGREGATE.

Cal. Searce any. Margin, hardly difcernible.

Cor. One petal. Tube fomewhat gibbous. Border five cleft.

Stam. Three Anthers.

Pift. Germ beneath. One Style erect.

Seed Solitary, crowned with a pappus.

Root Fibrous.

Leaves Hearted, fourfold; radical leaves petioled.

It appears, therefore, to be the Protean plant, VALERIAN, a fifter of the mountain and Celtick Nard, and of a species, which I should describe in the Linnean style: VALE-RIANA JATA'MA'NSI floribus triandris, foliis cordatis quaternis, radicalibus petiolatis. The radical leaves, rifing from the ground and enfolding the young ftem, are plucked up with a part of the root, and being dried in the fun or by an artificial heat, are fold as a drug, which from its appearance has been called fpikenard; though, as the Persian writer observes, it might be compared more properly to the tail of an ermine: when nothing remains but the dry fibres of the leaves, which retain their original form, they have fome refemblance to a lock of bair, from which the Sanscrit name, it seems, is derived. Two mercantile agents from Butan on the part of the Dévarájá were examined, at my request, by Mr. HARRINGTON, and inform-

ed him, that the drug, which the Bengalese called Jatámánsi, " grew erect above the furface e of the ground, refembling in colour an ear " of green wheat; that, when recent, it had a " faint odour, which was greatly increased by es the fimple process of drying it; that it " abounded on the hills, and even on the plains, " of Bután, where it was collected and prepared " for medicinal purpofes." What its virtues are, experience alone can ascertain; but, as far as botanical analogy can justify a conjecture, we may suppose them to be antispasmodick; and, in our provinces, especially in Bebar, the plant will probably flourish; so that we may always procure it in a flate fit for experiment. On the description of the Indian spikenard, compared with the drawing, I must obferve, that, though all the leaves, as delineated, may not appear of the fame shape, yet all of them are not fully expanded. Mr. Burr affures me, that the four radical leaves are bearted and petioled; and it is most probable, that the cauline and floral leaves would have a fimilar form in their state of perfect expansion, but unfortunately, the plants at Gayá are now shrivelled; and they, who seek farther information, must wait with patience, until new stems and leaves shall spring from the roots, or other plants shall be brought from Népál and

Bután. On the proposed inquiry into the virtues of this celebrated plant, I must be permitted to say, that, although many botanists may have wasted their time in enumerating the qualities of vegetables, without having ascertained them by repeated and satisfactory experiments, and although mere botany goes no farther than technical arrangement and description, yet it seems indubitable, that the great end and aim of a botanical philosopher is, to discover and prove the several uses of the vegetable system, and, while he admits with HIPPOCRATES the fallaciousness of experience, to rely on experiment alone as the basis of his knowledge.

ADDITIONAL REMARKS

ON THE

SPIKENARD OF THE ANCIENTS.

BY THE PRESIDENT.

NEARLY at the time when the result of my first inquiries concerning spikenard was published in the second volume of our Afiatick Refearches, there appeared in the Philosophical Transactions an account of the Andropogon Twarancusa, the specimen of which Dr. BLANE had received from Lucnow, and which he supposes to be the true Indick nard of Dioscorides and GALEN: having more than once read his arguments with pleafure, but not with conviction, I feel it incumbent on me to state my reasons for diffenting from the learned phyfician with all the freedom of a fearcher for truth, but without any diminution of that refpect, to which his knowledge and candour justly entitle him.

In the first place, there is a passage in Dr. BLANE's paper, which I could not but read with furprife; not because it is erroneous or difputable (for nothing can be more certain), but because it is decisive against the very proposition, which the writer endeavours to support: " DIOSCORIDES mentions the Syriack nard, fays " the doctor, as a species different from the " Indian, which was certainly brought from some " of the remote parts of India; for both he and "GALEN, by way of fixing more precifely "the country, whence it came, call it also " Gagnites." We may add, that PTOLEMY, who, though not a professed naturalist, had opportunities in Egypt of converling with Indian merchants on every thing remarkable in this country, diftinguishes Rangamati, as producing the true spikenard; and it is from the borders of that very district, if we believe modern Indians, that the people of Butan bring it yearly into Bengal (a). Now it is not contended, that the new species of Andropogon (if it be a new species) may be the Indick nard of Diosco-

⁽a) PTOLE ME E distingue le canton de Rhandamarcotta, en ce qu'il fournit la plante, que nous appellons Spic nard, ce qui peut convenir a Rangamati; et des différentes espéces l'Indique est bien la plus estimée.

RIDES, (b), because it was found by Mr. BLANE in a remote part of India (for that folitary fact would have proved nothing); but it is learnedly and elaborately urged, that it must be the true Indian spikenard, because it differs only in the length of the stalks from the nard of GARCIAS, which, according to Him, is the only species of nardus exported from India, and which refembles a dried specimen seen by RUMPHIUS, and brought, he fays, among other countries, from Mackran, or the ancient Gadrofia, the very country, where, according to ARRIAN, the true nard grew in abundance; for " the Phenicians, " he fays, collected a plentiful store of it, and " fo much of it was trampled under foot by the " army, that a strong perfume was diffused on " all fides of them:" now there is a fingular coincidence of circumstances; for our Andropogon was discovered by the scent of its roots, when they were crushed by the horses and elephants in a hunting-party of the Vazir A'su-FUDDAULAH; fo that, on the whole, it must be the same with the plant mentioned by ARRIAM: but it may be argued, I think, more conclusively, that a plant, growing with great luxuriance in Gadrosia or Mackran, which the doctor

See RETZ. III. Fafcic. 43. and v. 21.

⁽b) Dr. ROXBURGH with great reason supposes it to be the Muricated Andropogon of Koenig, who mentions the roots as odoriferous, when sprinkled with water.

admits to be a maritime province of Persia, could not possibly be the same with a plant confined to remote parts of India; fo that, if GAR-CIAS, RUMPHIUS, and ARRIAN be supposed to have meant the fame species of nard, it was evidently different from that of DIOSCORIDES and GALEN. The respectable writer, with whose opinions I make so free, but from no other motive than a love of truth, feems aware of a little geographical difficulty from the western position of Macrán; for he, first, makes it extend to the river Indus, and then infers, from the long march westward and the distresses of ALEXANDER's army, subsequent to the discovery of the spikenard, that it must have grown in the more eastern part of the defert, and confequently on the very borders of India; but, even if we allow Gedrofia, or Gadrofis, to have been the fame tract of land with Macran (though the limits of all the provinces in Persia have been confiderably changed), yet the frontier of India could never with any propriety be carried fo far to the west; for not only the Oritæ and Arabitæ, but, according to MELA, the whole province of Ariana, were between Cadrosis and the Indus; and, though Macran (for fo the word should be written) may have been annexed to India by fuch whimfical geographers as the Turks, who give the name of white Indians to the Persians of Arachosia, and of yellow Indians to the Arabs of Yemen, yet the river Indus, with the countries of Sind and Miltan on both fides of it, has ever been confidered by the Per fians and Arabs as the western limit of Hind or India; and ARRIAN himself expressly names the Indus as its known boundary: let Gadrosis, however, be Macran, and let Macran be an Indian province, yet it could never have been a remote part of India in refped of Europe or Egypt, and, confequently, was not meant by GALEN and Dioscorides, when they described the true spikenard. It must be admitted, that, if the Siree of RUMPHIUS, which differs little from the nardus of GAR-CLAS, which corresponds for the most part with the new Andropogon, was ever brought from the province of Macran, they were all three probably the fame plant with the nard of Arrian; but, unfortunately, RUMPHIUS thought of no country less than of Persia, and of no province less than of Macran; for he writes very distinctly, both in his Latin and his Dutch columns, that the plant in queition grows in Macian, which he well knew to be one of the Moluccas (c): I am far from intending to give

⁽c) Hi flores sæpe, immo vulgo sere, observantur in vetustis Siree stipitibus, qui in Temata, Motira, et Mackian crescunt. Vol. 5. Lib. 8. Cap. 24. p. 182.

pain by detecting this trifling mistake; and, as I may have made many of greater consequence, I shall be truly obliged to any man, who will fet me right with good manners, the facred laws of which ought never to be violated in a literary debate, except when some petulant aggressor has forseited all claim to respect.

ARRIAN himself can by no means be underflood to affert, that the Indian spikenard grew in Perfia; for his words are a fragrant root of nard (d), where the omission of the definite articles implies rather a nard, than the nard, or the most celebrated species of it; and it feems very clear, that the Greeks used that foreign word generically for odoriferous plants of different natural orders: but ARRIAN in truth was a mere compiler; and his credit, even as a civil historian, seems liable to so much doubt, that it cannot be fafe to rely on him for any fact in the history of nature. "We can-" not, fays the judicious and accurate STRABO. " give easy credence to the generality even of " contemporary writers concerning ALEXAN-" DER, whose fame was astonishingly high, " and whose historians, preferring wonders to " truth, wrote with fecure negligence; well "knowing, that, as the farthest limits of Asia

" were the scene of his actions, their affertions " could hardly be difproved." Now ARRIAN's principal authority was Aristobulus of Caffandra, whose writings were little prized by the ancients, and who not only afferted, "that " Gadrosis produced very tall myrrb-trees, with " the gum of which the Phenicians loaded many " beafts," (notwithstanding the slaughter of them from the distress of the whole army), but, with the fancy of a poet describing the nest of a phenix, placed myrrb, incense, and cossia, with cinnamon and spikenard itself, even in the wilds of Arabia: " The fruitfulness of Arabia," fays ARRIAN, " tempted the king of Macedon " to form a defign of invading it; for he had "been affured, that myrrh and frankincense " were collected from the trees of that country; "that cinnamon was procured from one of its " fhrubs; and that its meadows produced fpon-" taneously abundance of spikenard." HEROporus, indeed, had heard of cinnamon in Arabia, where the Laurus, to the bark of which we now give that name, was, I verily believe, never feen: even the myrrh-tree does not feem to have been a native of Arabia, and the publick are now informed, that it was transplanted from Abysfinian forests, and has not flourished on the opposite shore; but, whatever be the countries of myrrh and cinnamon, we

may be certain, that any learned Arab would laugh at us, if we were to tell him, that the Sumbulu'l Hind grew wild in abundance on the plains of Tabámab. It feems a bold allegation of GARCIAS, that he has exhibited " the only " species of nardus known in India, either for " confumption by the natives or for exportation " to Persia and Arabia:" if he meant, that any plant was either used in this country or exported from it by the name of nard, he had been strangely deceived; and if he meant, that it was the only fragrant grafs used here as a medicine or as a perfume, his error was yet more grofs. But, whatever his meaning might have been, if the nard of GARCIAS and of ARRIAN was one and the same plant, it is wonderful, that it should ever have been exported to Persia and Arabia, where it grew, we are told, in fo great abundance. The nard of Arabia was, probably, the Andropogon Schananthus, which is a native of that country; but, even if we fuppose, that the spikenard of India was a reed or a grass, we shall never be able to distinguish it among the many Indian species of Cypirus, Andropogon, Schænus, Carex, and other genera of those natural orders, which here form a wilderness of sweets, and some of which have not only fragrant roots, but even spikes in the ancient and modern fenses of that emphatical

word; one of them, which I never have feen in bloffom, but suppose from its appearance to be a Schænus, is even called Gonarda, and its dry root has a most agreeable odour; another, which RHEEDE names Bálaca, or Remacciana, or white Iriceli, and which BURMAN thought a variety of the Schænanthus, is a confiderable article, it feems, of Indian commerce, and, therefore, cultivated with diligence, but less efteemed than the black fort, or Carabála, which bas a more fragrant root and affords an extremely odoriferous oil (e). All those plants would, perhaps, have been called nards by the ancients; and all of them have stronger pretensions to the appellation of the true spikenard, than the Febrifuge Andropogon, which the Hindus of Bebar do not use as a perfume. After all, it is affuming a fact without proof, to affert, that the Indian fpikenard was evidently gramineous; and, furely, that fact is not proved by the word arifta, which is conceived to be of a Grecian origin, though never applied in the same sense by the Greeks themselves, who perfectly well knew what was best for mankind in the vegetable fystem, and for what gift they adored the god-

⁽e) 12 Hort. Malab. tab. 12. and 9 H. M. p. 145. See also the Flora Indica, and a note from HERMAN on the valuable oil of Serce.

defs of Eleufis. The Roman poets (and poets only are cited by Dr. BLANE, though naturalists also are mentioned) were fond of the word arista, because it was very convenient at the close of an hexameter, where we generally, if not conflantly, find it; as HOMER declares in LUCIAN, that he began his Iliad with Mann, because it was the first commodious word that presented itself, and is introduced laughing at a profound critick, who discovered in that fingle word an epitome of the whole poem on the wrath of ACHILLES: fuch poets as OVID and LACTAN-TIUS described plants, which they neve had feen, as they described the nest of the phenix, which never existed, from their fancy alone; and their descriptions ought not seriously to be adduced as authorities on a question merely botanical; but, if all the naturalists of Greece and Italy had concurred in affuring us, that the nard of India bore an ear or spike, without naming the fource of their own information, they would have deferved no credit whatever; because not one of them pretends to have seen the fresh plant, and they had not even agreed among themselves, whether its virtues resided in the root or in the bufky leaves and stalks, that were united with it. PIETRO DELLA VALLE, the most learned and accomplished of eastern trayellers, does not feem to have known the Indian

fpikenard, though he mentions it more than once by the obsolete name of Spigonardo; but he introduces a Sumbul from Khatú, or a part of China, which he had feen dry, and endeayours to account for the Arabick name in the following manner :- " Since the Khataian se Sumbul, fays he, is not a spike but a root, " it was probably fo named, because the word " Sumbul may fignify, in a large acceptation, or not only the spike, but the whole plant, whatever berb or grass may be fown; as the Ara-"bick dictionary (f), entitled Kamus, appears " to indicate:" The paffage, to which he alludes, is this; " SUMBUL, fays the author of the " Kámús, is an odoriferous plant, the strongest of " which is the Suri, and the weakest the Hindi; " but the Sumbul of Rium has the name of nar-" I fuggested in my former paper, and shall repeat in this, that the Indian spikenard, as it is gathered for use, is in fact the whole plant; but there is a better reason why the name Sumbul has been applied to it. By the way, Della Valle failed, as he tells us, along

⁽f) Giacchè il Sombol del Cataio e radice e non è Spiga, potremmo dire, che così s'i chiami, perchè forse la parola Sombol possa piu largamente significare non solo la spiga, ma tutta la pianta di ogni erba ò biada, che si semini; come par, che il Camùs, vacabolario Arabico, ne dia indizio.

the coast of Macran, which he too supposes to have been a part of Gedrofia; but he never had heard, that it produced Indian spikenard, though the Persians were fully acquainted with that province; for he would not have omitted fo curious a fact in his correspondence with a learned physician of Naples, for whose fake he was particularly inquisitive concerning the drugs of Afia: it is much to be wished, that he had been induced to make a short excursion into the plains of Macran, where he might have found, that the wonderful tree, which ARRIAN places in them, with flowers like violets, and with thorns of fuch force and magnitude, as to keep wild beasts in captivity, and to transfix men on borfeback, who rode by them incautiously, was no more probably than a Mimofa, the bloffoms of which refembled violets in nothing but in having an agreeable fcent.

Let us return to the Arabs, by whom Dioscorides was translated with assistance, which
the wealth of a great prince will always purchase, from learned Greeks, and who know the
Indian spikenard, better than any European, by
the name of Sumbulu'l Hind: it is no wonder,
that they represent it as weaker in scent and in
power than the Sumbul of the lower Asia, which,
unless my smell be uncommonly defective,
is a strong Valerian; especially as they could

44

only have used the dry nard of India, which loses much of its odour between Rangpur and Calcutta. One question only remains (if it be a question), whether the Sumbulu'l Hind be the true Indian spikenard; for, in that case, we know the plant to be of the natural order, which LINNEUS calls aggregate. Since the publication of my paper on this fubject, I put a fair and plain question severally to three or four Muffelman physicians, " What is the Indian " name of the plant, which the Arabs call * Sumbulu'l Hind?" They all answered, but fome with more readiness than others, Jatámánsì. After a pretty long interval, I shewed them the spikes (as they are called) of Jatamansi, and asked, what was the Arabick name of that Indian drug: they all answered readily, Sumbulu'l Hind. The fame evidence may be obtained in this country by any other European, who feeks it; and if, among twelve native physicians, versed in Arabian and Indian philology, a fingle man should after due consider. ation give different answers, I will cheerfully fubmit to the Roman judgement of non liquet. My own inquiries having convinced me, that the Indian spikenard of Dioscorides is the Sumbulu'l Hind, and that the Sumbulu'l Hind is the Jatámánsi of AMARSINH, I am persuaded, that the true nard is a species of Valerian, pro-

duced in the most remote and hilly parts of India, fuch as Népál, Morang, and Butan, near which PTOLEMY fixes its native foil: the commercial agents of the Dévarája call it also Pampi, and, by their account, the dried specimens, which look like the tails of ermines, rife from the ground, resembling ears of green wheat both in form and colour; a fact, which perfectly accounts for the names Stacbys, Spica, Sumbul, and Kbushab, which Greeks, Romans, Arabs, and Persians have given to the drug, though it is not properly a spike, and not merely a root, but the whole plant, which the natives gather for fale, before the radical leaves, of which the fibres only remain after a few months, have unfolded themselves from the base of the stem. It is used, say the Butan agents, as a perfume and in medicinal unguents, but with other fragrant fubstances, the fcent and power of which it is thought to increase: as a medicine, they add, it is principally esteemed for complaints in the bowels. Though confiderable quantities of fatámánsi are brought in the caravans from Butan, yet the living plants, by a law of the country, cannot be exported without a licence from the fovereign, and the late Mr. Purling, on receiving this intelligence, obligingly wrote, for my fatisfaction, to the Dévárája, requesting him to send eight or

ten of the plants to Rangpur: ten were accordingly fent in pots from Tafifudan, with as many of the natives to take care of them under a chief, who brought a written answer from the Raja of Butan; but that prince made a great merit of having complied with fuch a request, and my friend had the trouble of entertaining the messenger and his train for several weeks in his own house, which they feem to have left with reluctance. An account of this transaction was contained in one of the last letters, that Mr. Purling lived to write; but, as all the plants withered before they could reach Calcutta, and as inquiries of greater importance engaged all my time, there was an end of my endeavours to procure the fresh Jatamansi, though not of my conviction, that it is the true nard of the ancients.

BOTANICAL OBSERVATIONS

ON THE

SPIKENARD OF THE ANCIENTS,

INTENDED AS A SUPPLEMENT TO THE LATE

SIR WILLIAM JONES'S PAPERS ON THAT PLANT.

BY WILLIAM ROXBURGH, M. D.

VALERIANA JATAMANSI.

GENERIC CHARACTER. FLOWERS triandrous, leaves entire, four-fold, the inner radical pair petiol'd, and cordate; the rest smaller, sessile, and sub-lanceolate; seeds crowned with a pappus.

V. Jatamansi of Sir WILLIAM JONES. See Asiatick Researches, vol. 2, page 405, 417, and vol. 4, page 109.

NOVEMBER 6th, 1794. I received from the Honourable C. A. BRUCE, Commissioner

at Coos-Beybar, two small baskets with plants of this valuable drug; he writes to me on the 27th September (so long had the plants been on the road), that he had, the day before, received them from the Deb Rajab of Bootan, and further says, that the Booteabs know the plant by two names, viz. Jatamansi, and Pampê or Paumpé.

I need fcarce attempt to give any further history of this famous odoriferous plant than what is merely botanical, and that with a view to help to illustrate the learned differtations thereon, by the late Sir WILLIAM JONES, in the 2d and 4th volumes of these Researches, and chiefly by pointing out the part of the plant known by the name, Indian Nard or Spikenard; a question on which MATHEOLUS, the commentator of Dioscorides, bestows a good deal of argument; viz. Whether the roots, or ftalks, were the parts esteemed for use, the testimony of the ancients themselves on this head being ambiguous. It is therefore neccffary for those who wish for a more particular account of it, to be acquainted with what that gentleman has published on the subject.

The plants now received, are growing in two small baskets of earth, in each basket there appears above the earth between thirty and

forty hairy, spike-like bodies, but more justly compared to the tails of Ermines, or small Weafels*; from the apex of each, or at least of the greatest part of them, there is a smooth lanceolate, or lanceolate-oblong, three or fivenerved, short-petiol'd, acute, or obtuse, slightly ferrulate leaf or two shooting forth. Fig. 1. represents one of them in the above state, and on gently removing the fibres, or hairs which furround the short petiols of these leaves, I find it consists of numerous sheaths, of which one, two or three of the upper or interior ones are entire, and have their fibres connected by a light-brown coloured membranous fubstance as at b. but in the lower exterior sheaths, where this connecting membrane is decayed, the more durable hair-like fibres remain distinct, giving to the whole the appearance of an Ermine's tail: this part, as well as the root itself, are evidently perennial+. The root itself (beginning at the

^{*} The term spica, or spike, is not so ill applied to this substance, as may be imagined; several of the Indian grasses, well known to me, have spikes almost exactly resembling a single straight piece of nardus, and when those hairs (or slexible arista like bristles) are removed, PLINY's words, "frutexradice pingui et crassa," are by no means inapplicable. See Fig. 2, from a to b.

⁺ The above described perennial hairy portion of the plant, is clearly the Indian spikenard of our shops; but

furface of the earth where the fibrous envelope ends) is from three to twelve inches long, covered with a pretty thick, light-brown coloured bark: from the main root, which is fometimes divided, there iffues feveral smaller fibres. Fig. 2, is another plant with a long root; here the hair-like sheaths, beginning at a. are separated from this the perennial part of the stem, and turned to the right side; at the apex is seen the young shoot, marked 6, which is not so far advanced as at Fig. 1; cc c show the re-

whether the nardus of the ancients, or not, I leave to better judges to determine; however, I believe few will doubt it after having read Sir WILLIAM JONES'S Differtations thereon, and compared what he fays with the accompanying drawings of the perennial hairy part of the Rem of this plant, which are taken from the living plants immediately under my own eyes: the drawing of the herbaceous, or upper part of the plant, is out of the question in determining this point, and only refers to the place the plant bears in our botanical books. While writing the above, I defired an Hindu fervant to go and buy me from their apothecaries shops a little Jatamansi, without faying more or less: he immediately went and brought me feveral pieces of the very identical drug, I have been describing; a drawing of one of the pieces is represented at Fig. 4, and agrees not only with. those I have taken from the living plants, but also exceedingly well with GARCIAS AB ORTA's figure of the nardus indica, which is to be found at page 129, of the fourth edition of Clusius's Latin translations of his history of Ladian daugs, published in 1693.

mains of last year's annual stem. When the young shoot is a little further advanced than in Fig. 2, and not so far as in Fig. 1. they refemble the young convolute shoots of monocotyledonous plants. June 1795. The whole of the abovementioned plants have perished, without producing flowers, notwithstanding every care that could possibly be taken of them. The principal figure in the drawing marked Fig. 3, and the following description, as well as the above definition, are therefore chiefly extracted from the engraving and description in the fecond volume of these Researches, and from the information communicated to me by Mr. BURT, the gentleman who had charge of the plants that flowered at Gaya, and who gave Sir WILLIAM Jones the drawing and description thereof.

Description of the Plant.

Root, it is already described above.

Stem, lower part perennial, involved in fibrous fheaths, &c. as above described; the upper part herbaceous suberect, simple, from fix to twelve inches long.

Leaves four-fold, the lowermost pair of the four radical are opposite, sessile, oblong, forming as it were a two-valved spathe; the other pair are also opposite petiol'd, cordate, margins waved, and pointed; those of the stem sessile, and lanceolate; all are smooth on both sides.

Corymb terminal, first division trichotomous.

BraEls awl'd.

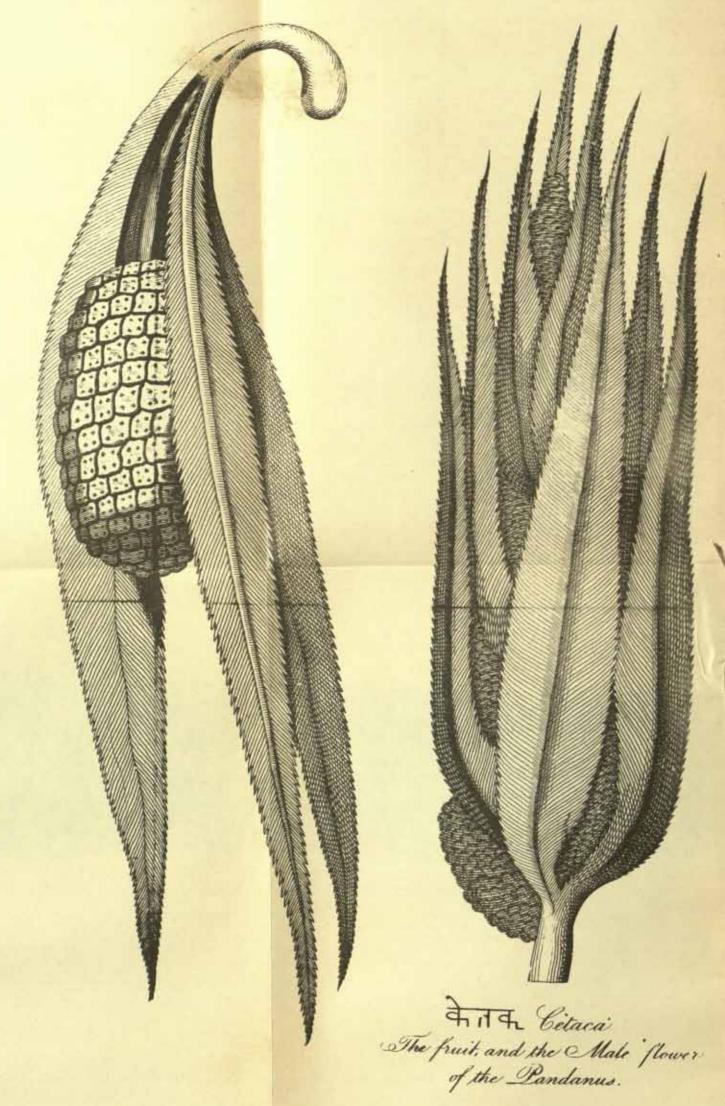

Calyx scarce any.

Corol one petal'd, funnel-shaped, tube somewhat gibbous. Border five-cleft.

Stamens, filaments three, project above the tube of the corol; anthers incumbent.

Piftil, germ beneath. Style erect, length of the tube. Stigma fimple.

Pericarp, a fingle feed crowned with a pappus.

Muslew. jeuly."

THE FRUIT OF THE MELLORI.

NO.CR

BY THE PRESIDENT.

As far as we can determine the class and order of a plant from a mere delineation of its fruit, we may fafely pronounce, that the Leram of Nicobar is the Cádbi of the Arabs, the Cétaca of the Indians, and the Pandanus of our botanists, which is described very awkwardly (as KOENIG first observed to me) in the Supplement to LINNEUS: he had himself described with that elegant concifeness, which constitutes the beauty of the Linnean method, not only the wonderful fructification of the fragrant Cétaca, but most of the flowers, which are celebrated in Sanscrit, by poets for their colour or fcent, and by physicians for their medical uses; and, as he bequeathed his manuscripts to Sir Joseph BANKS, we may be fure, that the publick spirit of that illustrious naturalist will not suffer the labours of his learned friend to be funk in oblivion. Whether the PANDANUS Léram be a new species, or only a variety, we cannot vet positively decide; but four of the plants have been brought from Nicobar, and feem to flourish in the Company's Botanical Garden, where they will probably bloffom; and the greatest encouragement will, I truft, be given to the cultivation of fo precious a vegetable. A fruit weighing twenty or thirty pounds, and containing a farinaceous fubstance, both palatable and nutritive in a high degree, would perhaps, if it were common in these provinces, for ever fecure the natives of them from the horrors of famine; and the Pandanus of Bengal might be brought, I conceive, to equal perfection with that of Nicobar, if due care were taken to plant the male and female trees in the fame place, instead of leaving the female, as at prefent, to bear an imperfect and unproductive fruit, and the diffant male to spread itself only by the help of its radicating branches.

A CATALOGUE

OF

INDIAN PLANTS,

COMPREHENDING THEIR SANSCRIT,

AND

AS MANY OF THEIR LINNÆAN GENERIC NAMES AS COULD
WITH ANY DEGREE OF PRECISION BE ASCERTAINED.

BY THE PRESIDENT.

A CA'SABALLI', Caffyta. Achyuta. Morinda.

A'cranti Solanum.

Acfha.

5 Agastya, Æschynomene. Agnis'ic'há. Aguru, Cordia.

Alabu, Cucurbita.

Alamvusha, Bryonia.

10 Alarca, Asclepias.
Alpamárisha.

Amalá.

A'malacì, Phyllanthus.

Ambasht'ha.

15 Amlana, Gomphrena?

Amlalónica, Oxalis.

Amlavétafa, Hypericum.

Amlica, Tamarindus. Amra, Mangifera.

20 Amrátaca, Spondias.

Anco't'a.

Ans'umáti.

An'u, Oryza.

Apamarga.

25 Aparajita, Clitoria.

Arca, Asclepias.

A'rdraca, Amemum.

Ariméda.

Arishta, Xanthium.

30 Arjaca, Ocymum.

Arjuna, Lagerstroemia? Arushcara, Semecarpus. A smantaça. Asoca, a new genus.

35 A'sp'hota, Nyllanthes. A us vrihi, Oryza. Atavifha. Atichara. Atimucla, Banifteria.

40 A vigna, Cariffin? Bacula, Mimufips. Badari, Rhamnus. Bahuvaraca. Bahvanga, a new genus.

45 Bala. Bala. Bandhuca, Lora, Banga, Cannabis? Bata, Ficus.

50 Bhadramustaca, Cyperus? 85 Canda, Dracentium. Bhanga, Goffypium. Bhanti, Clerciendrum. Bhavya, Dillenia. Bharadwaji.

55 Bhuchampaca, Kampferia. 90 Cantala, Agave? Bhujambuca. Bhulavanga, Jufficua. Bhurandi, Ipanaa? Bhurja.

60 Bhuftrina, Andropogon? Bhutavel, Nyclanthes. Berbera. Bimba, Brionia? Bimbica, the same?

65 Brahmani, Ovieda.

Brahmafuverchala. Brahmì, Ruta. Bilva, Cratava. Biranga.

70 Cacamachi. Cacangi, Aponogeton? Cachu, Arum. Cadali, Musa. Cadamba, Nauclea.

75 Califara, Nymphea. Cala. Cala. Calambi. Calami.

80 Calaya Calinga, Cucurbita. Calpaca. Camalata, Ipomera. Campilla, a new genus. Canchanara, Baubinia.

Candarala. Candura, Dolichos. Canduru, Scilla ? Cangu.

Capila. Capitt'ha, Limonia. Caranjaca, a new genus.

95 Caravella, Cleome? Caravi, Laurus. Caravira, Nerium. Carmaranga, Averrboa. Carnicara, Pavetta.

100 Carparain, Alse? Carpasi, Goffypium. Carpara, Laurus. Caruna, Citrus. Cifa, Saccharum.

5 Cásbmirá.

Chtaca, Strychnos.

Catp'hala, Tabernæmon-

72/164

Catu.

Cémuca.

10 Célara, Crocus.

Cétaca, Pandanus.

Chacrala.

C'hadira, Mimofa.

Ch'hatraca, Agaricus.

15 Champaca, Michelia.

Chanaca.

Chandá.

Chandana, Santalum.

Chandrica.

20 C'harj'ara, Phænix.

Charmacashia.

Chavaca.

Chitra.

Chitraca, Plumbago.

25 Chorapushpì, Scirpus.

Cirita.

Codrava.

Corangi.

Covidara, Baubinia.

30 Clitaca.

Cramuca.

Criffina.

Crishnachura, Peinciana.

Cihiruvi, Afelepias ?

35 Cihuma, Linum.

Culaca, Strychnas.

Culmasha.

Cumbha.

Cumbhica, Piftia.

40 Cumuda, Menianthes.

(Cuncuma, Crocus) ?

Cunda, Jafininum.

Curubaca, Barleria.

Curuntaca.

45 Curuvaca.

Cus'a, Poa.

Cushmanda, Cycumis?

Cufumbha, Carthamus.

Cutaja, Jasminum.

50 Cuvalaya.

Cuvéraca, Swietenia?

Damapana.

Dantica.

Dhanyaca.

55 Darima, Punica.

Dasi.

Dévadaru, Unona.

Dhataci.

Dhuftura, Datura.

60 Dona, Artemifia.

Dracfha, Vitis.

Durgaja'ta, Ophiogloffum.

Darva, Agroftis.

Dwipatri, Impatiens.

65 ETa, Amomum.

Elabáluca.

Eranda, Ricinus.

Gajapippali, a new ge-

nus?

Gambharl.

70 Gandali.
Gandhara'ja, Gardenia.
Gandira, Solanum?
Gaurichandra, Hedyfarum.

Ghantapa'tali.

75 Gho'nta', Rhamnus. Gho'fhaca'. Gra'nt'hila. Grinjana, Daucus. Go'cantaca, Barleria.

80 Gódha padì.
Go'dhuma, Triticum.
Go'jihva', Elephantopus.
Gólómi, Agroftis?
Gónarda, Cyperus?

85 Góraefha'.
Gova'cfhí.
Góvara', Eranthemum?
Guggulu.
Guha'.

90 Gunja', Abrus.
Guva'ca, Areca.
Haimavatl.
Halaca, Nymphea.
Hanu.

95 Haricus'a, Acanthus. Haridra', Curcuma. Haridru. Haritaci, Terminalia. Haritala.

200 Haryanga, Giffus.

Hémapushpica', Josminum.

Hémasa gara, Cotyledon.

Hilamóchica . Himavatì.

5 Hingu, Terebinthus. Hingulì, Solanum. Hinta'la, Elate. Hólicà. Jambíra, Citrus.

Jatama'nsi, Valeriana.
Java, Terminalia?
Jayap'hala, Myristica.
Jayanti, Æsebynomene.

15 Icfhu, Saccharum.
Icfhura.
Icfhwa'cu.
Jimúta.
Indívara, Tradefeantia?

20 Jiraca. Jivanti. Indrava runi. Ingudi. Irba'ru.

25 I's'watamúla, Ariftolochia. Lacucha, Artocarpus? Langalì, Nama? Lata'rca, Allium. Lafuna, Allium.

30 Lavalì, Averrhea.
Lavanga, Caryophyllus.
Lódhra.
Madana, Pijonia.
Madhúca, Baffia.

35 Madhúlaca. Madhúraca. Madhusìgru, Guilandina. Maha'ja'lî. Maha'ſwéta.

40 Malapu.

Ma'latí, Jafminum.

Mallica', Nyelanthes.

Ma'naca, Arum?

Manda'ra, Erythrina.

Marcati.

Maricha, Capficum.

Marunma'la'.

Ma'faparni.

50 Ma'fha, Phafeolus. Ma'fhandari, Callicarpa. Mafúra.

Ma'tulanga, Citrus. Mauri.

55 Mayúra.

Muchucunda, Pentapetes.

Mudga.

Mudgaparni.

Múlaca, Raphanus.

60 Mundaballi, Ipomæa. Mura'. Murva', Aletris. Muftaca, Schænus? Na'gabala', Sida.

65 Na'gaballì, Bauhinia. Na'gacéfara, Mefua. Na'gada'na, Artemifia. Na garanga, Citrus. Nala, Ariftida?

70 Nali. Na ranga. Na rice'la, Cocos. Nichula, a new genus. Nilí, Indigofera.

75 Nilótpala, Pontederia. Nimba, Melia. Niva'ra, Oryza. Pa'cala. Padma, Nymphæa.

80 Pala'ndu, Allium.
Pala'fa, Butea.
Panafa, Artocarpus.
Parna'fa, Ocymum.
Pa'tali, Bignonia.

85 Pa'tóla, Solanum?
Paura'.
Pichula, Tamarix.
Pílu, Aloë?
Pinya'.

90 Pippala, Ficur. Pippali, Piper. Piya'la. Pitafa'la. Placsha, Ficus.

95 Priíniparní. Priyangu. Pótica, Phyfalis. Punarnavà, Boerhaavia. Pundaríca.

900 Pundra. Púticaraja, *Guilandina*. Ractamúla, *Oldenlandia* Ra'ja'dana. Rajaní.

5 Ra'fica. Ra'fhtrica'. Ra'fna', OpMonylum? Rénuca. Riddhi.

Róchana'.

Róchana'.

Róchana'.

Sa'eótaca, Trophis.

Sahaca'sa, Mangifera.

35 Sahachari.
Sailéya, Mufeur.
Sairíyaca, Barleria.
Saivala.
S'a'la.

20 S'a'lanchi.
S'a'lmali, Bonibay.
Samanga', 2?
S'ami, Mimofa.
S'amira, Mimofa.

25 Samudraca, Aquilicia. Sana', Cratalaria. Sancarajata', Hedyfarum. S'anc'hapushpa, Gièx. S'ara.

30 Sarala. Sarana'. S'atamúli. S'atapuflipa. S a't'hi.

35 S'ep'ha lica', Ny Santhes. Septala', Ny ctauthes. Septaparna, Echites. Serfhapa, Sinapis. S'imbi, Daliebos.

40 Sindhuca, Fiter. Sirifha, Mimofa. Sifu, Croton? Sīva'. Sóbha'njana, Guilandina.

45 Sómalata', Ruta?
Sómara ji, Pæderia.
S'olp'ha.
S'ótraca, Bignonia.
Sringa'taca, Tropa.

50 S'riparna. St'halapadena, Hibifeus. S'uca. S'ucti. Sunifhannaca, Marfilea.

55 Surabhi. Suryamani, Hibifcut. Suvernaca, Cuffea. S'ya'ma', a new genus. S'ya'ma'ca.

60 Tala, Beraffus.
Talamúlaca, Cochlearia?
Tali, Corypha.
Tamala, Laurus?
Tambúli, Piper.

65 Ta'mracúta, Nicotiana.
Ta'raca, Amounem?
Tartini, Aloë.
Tatpatri, Laurus
Tila, Sélamam.

70 Tilaca.
Tinduca, Diefpyres.
Tinfa, Ebenus?
Trapusha, Cucumis.
Trayama'na'.

75 Trivrita'. Tubarica'. Tula, Marus. Tunga. Udumbara, Ficus.

80 Ulapa, Ariftida?
Upódica.
Urana, Caffia.
Utpala?
Vajradru, Eupherbia.

85 Valvaja, Andropogon? Vanacéli, Canna. Vanamudga. Vana'rdraca, Coflus? Vanda', Epidendrum.

90 Vanda', Loranthus. Vanda', Vifcum. Vanda'ca, Quercus. Vans'a, Bambos. Va'rahì.

95 Vara'ngaca, Laurus. Va'runa. Va'faca, Dianthera. Va'falyà. Va'stuca, Amaranthus?

400 Vafu.
Va'taca.
Vatsa'dani, Menispermum.
Va'yasoli.
Vétasa, Barleria.
5 Vétra, Calamus.

Vichitra', Tragia. Vida'rì. Vidula. Virana, Andropogon.

Vifta'raca, Convolvadus.
Vrithi, Oryza.
Vya'ghranac'ha.
Vya'ghrapa'da.

Yava, Hordeum.
Yavafa, Poa?
Yucta'rafa'.
Yút'hica', Jafminum.

BOTANICAL OBSERVATIONS

ON

SELECT INDIAN PLANTS*.

BY THE PRESIDENT.

'IF my names of plants displease you, says the great Swedish botanish, choose others more agree- able to your taste,' and, by this candour, he has disarmed all the criticism, to which as it must be allowed, even the critical parts of his admirable works lie continually open: I avail myself of his indulgence, and am very solicitous to give Indian plants their true Indian appellations; because I am fully persuaded, that Linneus himself would have adopted them, had he known the learned and ancient language of this country; as he, like all other men, would have retained the native names of Asiatick regions and cities, rivers and mountains, leaving friends or persons

^{*} This paper was announced in the specimen of an Asiatick Common-place Book, which the President added, in the third volume of these Transactions, to Mr. HARRINGTON'S proposal for an improvement of LOCKE's useful plan.

of eminence to preferve their own names by their own merit, and inventing new ones, from diftinguishing marks and properties, for fuch objects only as, being recently discovered, could have had no previous denomination. Far am I from doubting the great importance of perfect botanical descriptions; for languages expire as nations decay, and the true fense of many appellatives in every dead language must be lost in a course of ages: but, as long as those appellatives remain understood, a travelling physician, who should wish to procure an Arabian or Indian plant, and, without asking for it by its learned or vulgar name; should hunt for it in the woods by its botanical character, would refemble a geographer, who, defiring to find his way in a foreign city or province, should never inquire by name for a fireet or a town, but wait with his tables and instruments, for a proper occasion to determine its longitude and latitude.

The plants, described in the following paper by their classical appellations, with their synonyma or epithets, and their names in the vulgar dialects, have been selected for their novelty, beauty, poetical same, reputed use in medicine, or supposed holiness; and frequent allusions to them all will be found, if the Sanscrit language should ever be generally studied, in the popular and sacred poems of the ancient Hindus, in their medical books and law tracts, and even it the

Védas themselves: though unhappily I cannot profess, with the fortunate Swede, to have seen without glasses all the parts of the slowers, which I have described, yet you may be assured, that I have mentioned no part of them, which I have not again and again examined with my own eyes; and though the weakness of my sight will for ever prevent my becoming a botanist, yet I have in some little degree atoned for that satal desect by extreme attention, and by an ardent zeal for the most lovely and sascinating branch of natural knowledge.

Before I was acquainted with the method purfued by VAN RHEEDE, necessity had obliged me to follow a fimilar plan on a finaller scale; and, as his mode of fludying botany, in a country and climate by no means favourable to botanical excursions, may be adopted more succefsfully by those who have more leifure than I shall ever enjoy, I present you with an interesting passage from one of his prefaces, to which I thould barely have referred you, if his great work were not unfortunately confined, from its rarity, to very few hands. He informs us in an introduction to his third volume, " that feveral " Indian phyticians and Brábmens had compofed "by his order, a catalogue of the most cele-" brated plants, which they diffributed according to their times of bloffoming and feeding, " to the configuration of their leaves, and to

" the forms of their flowers and fruit; that, at "the proper feafons he gave copies of the lift " to feveral intelligent men, of whom he fent " parties into different forests, with instructions " to bring him, from all quarters, fuch plants " as they faw named, with their fruit, flow-"ers, and leaves, even though they should " be obliged to climb the most lofty trees " for them; that three or four painters, who 66 lived in his family, constantly and accu-" rately delineated the fresh plants, of which, in " his presence, a full description was added; "that, in the meanwhile, he had earnestly re-" quested all the princes and chiefs on the " Malabar coast to fend him such vegetables, as " were most distinguished for use or for elegance, " and that not one of them failed to supply his " garden with flowers, which he fometimes " received from the distance of fifty or fixty " leagues; that when his herbarifts had collected "a fufficient number of plants, when his " draughtimen had sketched their figures, and " his native botanists had subjoined their de-" fcription, he fubmitted the drawings to a little " academy of Pandits, whom he used to con-".vene for that purpose from different parts of " the country; that his affembly often confifted " of fifteen or fixteen learned natives, who vied " with each other in giving correct answers to VOL. III.

" all his questions concerning the names and " virtues of the principal vegetables, and that he " wrote all their answers in his note-book; " that he was infinitely delighted with the can-"did, modest, amicable, and respectful debates " of those pagan philosophers, each of whom " adduced passages from ancient books in sup-" port of his own opinion, but without any " bitterness of contest or the least perturba-" tion of mind; that the texts which they " cited were in verse, and taken from books, " as they politively afferted, more than four "thousand years old; that the first couplet of " each fection in those books comprised the fy-" nonymous terms for the plant, which was the " fubject of it, and that, in the fubsequent " verses, there was an ample account of its " kind or species, its properties, accidents, qua-" lities, figure, parts, place of growth, time of " flowering and bearing fruit, medical virtues, " and more general uses; that they quoted those " texts by memory, having gotten them by " heart in their earliest youth, rather as a play " than a fludy, according to the immemorial " usage of fuch Indian tribes, as are destined by " law to the learned professions; and on that " fingular law of tribes, peculiar to the old Egyptians and Indians, he adds many folid and 4 pertinent remarks." Now when we complain, and myself as much as any, that we have no leisure in *India* for literary and philosophical pursuits, we should consider, that VAN RHEEDE was a nobleman at the head of an *Indian* government in his time very considerable, and that he fully discharged all the duties of his important station, while he found leisure to compile, in the manner just described, those twelve large volumes, which LINNÆUS himself pronounces accurate.

I. TA'RACA:

VULG. Tárac.

LINN. Amomum.

CAL. Perianth spathe-like, but sitting on the germ; tubular, one leaved, broken at the mouth into sew irregular sharp toothlets; downy, striated; in part coloured, in part semipellucid.

Cor. One-petaled, villous. Tube thort, funnel form. Border double. Exterior three parted; coloured like the calyx; divisions oblong, striated, internally concave, rounded into slipperlike bags; the two lower divisions, equal, rather deflected; the higher, somewhat longer, opposite, bent in a contrary direction, terminated with a long point. Interior, twolipped (unless the upper lip be called the filament); under lip revolute, with a tooth on each side near the base; two-parted from the middle; divisions axe-form, irregularly endnicked. Nectaries, two or three honeybearing, light brown, gloffy bodies at the base of the under lip, just below the teeth; erect, awled, converging into a small cone.

STAM. Filament (unless it be called the upper lip of the interior border), channelled within, sheathing the style; dilated above into the large sleshy anther, if it can justly be so named. Anther oblong, externally convex and entire, internally slat, divided by a deep furrow; each division, marked with a perpendicular pollen-bearing line, and ending in a membranous point.

Pist. Germ beneath, protuberant, roundish, obscurely three sided, externally soft with down. Style threadform, long as the filament, the top of which nearly closes round it. Stigma headed, perforated.

Per. Capfule (or capfular berry, not burfting in a determinate mode) oblong-roundish, three striped, smooth, crowned with the permanent calyx and corol; with a brittle coat, almost black without, pearly within.

Seeds, lopped, with three or four angles, very fmooth, enclosed within three oblong, rounded, foft, membranous integuments, conjoined by a branchy receptacle; in each parcel, four or five.

Interior Border of the corol, pink and white; under lip, internally milk-white, with a rich carmine stripe in each of its divisions. Seeds aromatick, hotter than Cardamoms. Leaves alternate, sheathing, oblong, pointed, keeled, most entire, margined, bright grass-green above; very smooth; pale sea-green below. Stem compressed, three or four feet long, bright pink near its base, erect, ending in a beautiful panicle. Peduncles many slowered; bracts few lance-linear, very long, withering. Root sibrous, with two or three bulbous knobs, light brown and spungy within, faintly aromatick.

Although the Taraca has properties of an Amomum, and appears to be one of those plants, which Rumphius names Globba, yet it has the air of a Languas, the fruit, I believe, of a Renealmia, and no exact correspondence with any of the genera so elaborately described by Koenig: its essential character, according to Retz, would consist in its two parted interior border, its channelled filament, and its twocleft anther with pointed divisions.

2. BHU'CHAMPACA:

Vulg. Bbúchampac.

LINN. Round-rooted KÆMPFERIA.

CAL. Common Spathe imbricated, many flowered; partial. Perianth one leaved, fmall, thin, obscure.

Cor. One petaled. Tube very long, slender, fub-cylindric below, funnel form above, somewhat incurved. Border double, each three parted: exterior, divisions lanced, acute, dropping; interior, two higher divisions erect, lapping over, oblong, pointed, supporting the back of the anther; lower division, expanding, deslected, two-cleft; subdivisions broad, axeform, irregularly notched, endnicked, with a point.

STAM. Filament adhering to the throat of the corol, oblong below, enlarged, and twolobed above, coloured. Anther double, linear, higher than the mouth of the tube, fixed on the lower part of the filament, conjoined round the piftil, fronting the two cleft division of the border.

PIST. Germ very low near the root, attended with a nectareous gland. Style capillary, very long. Stigma funnel form below, compressed above; fanshaped, twolipped, downy, emerging a little from the conjoined anther.

PER. and SEEDS not yet feen.

Scape thickish, very short. Corol richly fragrant; tube and exterior border milkwhite, divisions dropping, as if sensitive, on the slightest touch, and soon yielding to the pressure of the air; interior border purple, the higher divisions diluted, the lower deeply coloured within, variegated near the base.

One or two flowers blow every morning in April or May, and wither entirely before funfet: after the fpike is exhausted, rise the large leaves keeled, broad-lanced, membranous nerved. Root with many roundish, or rather spindleshaped bulbs.

This plant is clearly the Benchapo of RHEEDE, whose native affistant had written Bhu on the drawing, and intended to follow it with Champá: the spicy odour and elegance of the slowers, induced me to place this Kæmpferia (though generally known) in a series of select Indian plants; but the name Ground Champac is very improper, since the true Champaca belongs to a different order and class; nor is there any resemblance between the two slowers, except that both have a rich aromatick scent.

Among all the natural orders, there is none, in which the genera feem less precisely ascertained by clear essential characters, than in that, which (for want of a better denomination) has been called scitamineous; and the judicious Retz, after confessing himself rather distaissed with his own generick arrangement, which he takes from the border of the corol, from the stamen, and principally from the anther, declared his fixed opinion, that the genera in this order will never be determined with absolute certainty

until all the scitamineous plants of India shall be perfectly described.

3. SE'P'HALICA :

Syn. Swoabá, Nirgudi, Nilicá, Nivárica.

Vulg. Singabár, Nibári.

LINN. Sorrowful NYCTANTHES.

In all the plants of this species examined by me, the calyx was villous; the border of the corol white, five-parted, each division unequally fubdivided; and the tube of a dark orangecolour; the ftamens and piftil entirely within the tube; the berries, twin, compressed, capfular, two-celled, margined, inverse-hearted with a point. This gay tree (for nothing forrowful appears in its nature) fpreads its rich odour to a confiderable distance every evening; but at funrife it sheds most of its night-flowers, which are collected with care for the use of perfumers and dyers. My Pandits unanimously affure me, that the plant before us is their Sép'bálicá, thus named because bees are supposed to seep on its bloffoms; but Nilicà must imply a blue colour; and our travellers infift, that the Indians give the names of Párijática or Párijáta to this useful species of NyEtanthes: on the other hand, I know that Párijáta is a name given to flowers of a genus totally different; and there may be a variety of this with blueifb corols; for it is expressly declared, in the Amarcósh, that, "when "the Sép'bálica has white flowers, it is named "Swétasurasa, and Bhútavés'i."

4. a. MAGHYA:

SYN. Cunda.

LINN. Nyctanthes Sambac.

See RHEEDE: 6 H. M. tab. 54.

Flowers exquisitely white, but with little or no fragrance; stem, petioles, and calyx very downy; leaves egged, acute; below rather hearted.

B. SEPTALA:

SYN. Navamallicá, Navamálicá.

VULG. Béla, Muta-béla.

BURM. Many-flowered Nyctanthes.

See 5 RUMPH. tab. 30. 6 H. M. tab. 50.

The bloffoms of this variety are extremely fragrant. Zambak (so the word should be written) is a flower to which Persian and Arabian poets frequently allude.

5. MALLICA;

Syn. Trinafulya, Malli, Bhupadi, Satabbiru.

Vulg. Dési-bélá,

LINN, Wavy-leaved NYCTANTHES.

Berry globular, fimple, one-celled, SEED large, fingle, globular.

According to RHEEDE, the Brabmens in the west of India distinguish this slower by the word

Casturi, or musk, on account of its very rich odour.

6. ASP'HOTA:

SYN. Vanamalli.

Vulg. Banmallica.

LINN. Narrow-leaved NYCTANTHES.

The Indians confider this as a variety of the former species; and the slowers are nearly alike. Obtuse-leaved would have been a better specifick name: the petals, indeed, are comparatively narrow, but not the leaves. This charming slower grows wild in the forests; whence it was called Vanajáti by the Brábmens, who assisted Rheed; but the Játi, or Málati, belongs, I believe, to the next genus.

7. MA'LATI:

SYN. Sumaná, fati.

Vulg. Málti, fáti, Chambeli.

LINN. Great-flowered JASMIN.

Buds blushing; corol, mostly with purplish edges. Leaves feathered with an odd one; two or three of the terminal leastlets generally confluent.

Though Malatt and Jati are fynonymous, yet fome of the native gardeners distinguish them; and it is the Jati only, that I have examined. Commeline had been informed, that the Javans give the name of Maleti to the Zambak:

which in Sanscrit is called Navamallica, and which, according to RHEEDE, is used by the Hindus in their sacrifices; but they make offerings of most odoriferous slowers, and particularly of the various Jasmins and Zambaks.

8. Yur'HICA':

Syn. Mágadbi, Ganicá, Ambasht' bá, Yút'bì. Vulg. Jút'bì, Júi.

LINN. Azorick JASMIN.

Leaves opposite, three'd. Branchlets cross-armed.

Umbels three-flowered. Corols white, very fragrant. The yellow Yút'bìcà, say the Hindus, is called Hémapushpicà, or golden-flowered; but I have never seen it, and it may be of a different species.

9. AMLICA':

SYN. Tintidi, Chinchá.

Vulg. Tintiri; Tamru'lbindi, or Indian Date. LINN. Tamarindus.

The flowers of the Tamarind are so exquisitely beautiful, the fruit so salubrious, when an acid sherbet is required, the leaves so elegantly formed and arranged, and the whole tree so magnificent, than I could not refrain from giving a place in this series to a plant already well known: in all the flowers, however, that I have examined, the coalition of the stamens appeared so invariably, that the Tamarind should be removed, I think, to the fixteenth class; and it were to be wished, that so barbarous a word as Tamarindus, corrupted from an Arabick phrase absurd in itself, since the plant has no sort of resemblance to a date-tree, could without inconvenience be rejected, and its genuine Indian appellation admitted in its room.

10. SARA: or Arrow-cane.

SYN. Gundra, or Playful; Téjanaca, or Acute, Vulg. Ser, Serberi.

LINN. Spontaneous SACCHARUM.

CAL. Glume two-valved; valves, oblonglanced, pointed, fubequal, girt with filky diverging hairs, exquifitely foft and delicate, more than twice as long as the flower.

Cor. One-valved, acute, fringed.

STAM. Filaments three, capillary; Anthers, oblong, incumbent.

PIST. Germs very minute, ftyles two, threadform. Stigmas feathery.

FLOWERS on a very large terminal panicle, more than two feet long, in the plant before me, and one foot across in the broadest part; consisting of numerous compound spikes, divided into spikelets, each on a capillary jointed rachis, at the joints of which are the flowerets alternately sessile and pedicelled. Common peduncle many-furrowed, with reddish joints. Valvelet of the corol purple or light red; stamens and pistils ruddy; sigmas, purple;

pedicles, of a reddish tint; finely contrasted with the long filvery beard of the calyx. Leaves very long, striated, minutely fawed; teeth upwards; keel fmooth white, within; fheathing the culm; the mouths of the sheaths thick, set with white hairs. Culm above twenty feet high; very fmooth, round and light; more closely jointed and woody near the root, which is thick and fibrous; it grows in large clumps, like the Venu. This beautiful and fuperb grass is highly celebrated in the Puranas, the Indian God of War, having been born in a grove of it, which burft into a flame; and the gods gave notice of his birth to the nymph of the Pleiads, who descended and suckled the child, thence named Cárticéya. The Cásá, vulgarly Casia, has a fhorter culm, leaves much narrower, longer and thicker hairs, but a fmaller panicle, less compounded, without the purplish tints of the Sara: it is often described with praise by the Hindu poets, for the whiteness of its bloffoms, which give a large plain, at fome distance, the appearance of a broad river. Both plants are extremely useful to the Indians, who harden the internodal parts of the culms, and cut them into implements for writing on their polished paper. From the munja, or culm, of the Sara was made the maunji, or holy thread, ordained by Menu to form the facerdotal girdle, in preference even to the Cus a-grass.

II. DURVA :

SYN. S'ataparvicà, Sahafraviryà, Bhárgaví, Rudrá, Anantá.

VULG. Dúb.

KOEN. AGROSTIS Linearis.

Nothing effential can be added to the mere botanical description of this most beautiful grass; which VAN RHEEDE has exhibited in a coarse delineation of its leaves only, under the barbarous appellation of Belicaraga: its flowers, in their perfect state, are among the loveliest objects in the vegetable world, and appear, through a lens, like minute rubies and emeralds in conftant motion from the least breath of air. It is the fweetest and most nutritious pasture for cattle; and its usefulness added to its beauty induced the Hindus, in their earliest ages, to believe, that it was the manfion of a benevolent nymph. Even the Véda celebrates it; as in the following text of the A't' harvana: "May " Durva, which rose from the water of life, " which has a hundred roots and a hundred " ftems, efface a hundred of my fins and pro-46 long my existence on earth for a hundred

Durva Agrostis linearis of D. Kvenig.

"years!" The plate was engraved from a drawing in Dr. Roxburgh's valuable collection of Indian graffes.

12. Cus'A; or Cus'HA:

SYN. Cut'ba, Darbba, Pavitra.

Vulg. Cusha.

KOEN. Poa Cynosuroides.

Having never feen this most celebrated grafs in a state of perfect inflorescence, I class it according to the information, which Dr. Rox-BURGH has been fo kind as to fend me: the leaves are very long, with margins acutely fawed downwards but fmooth on other parts, even on the keels, and with long points, of which the extreme acuteness was proverbial among the old Hindus. Every law-book, and almost every poem, in Sanscrit contains frequent allusions to the holiness of this plant; and, in the fourth Véda, we have the following address to it at the close of a terrible incantation: 'Thee, O Darbba, the learned proclaim a divinity not fubject to age or death; thee they call the armour of * INDRA, the preserver of regions, the destroyer of enemies; a gem that gives increase to the field. At the time, when the ocean refounded, when the clouds murmured and lightnings ' flashed, then was Darbha produced, pure as a ' drop of fine gold.' Some of the leaves taper to a most acute, evanescent point; whence the

Pandits often fay of a very sharp-minded man, that his intellects are acute as the point of a Cus'a leaf.

13. BANDHU'CA:

SYN. Ractaca, Bandbujivaca.

Vulg. Bándbútì, Ranjan.

LINN. Scarlet IXORA.

CAL. Perianth four-parted, permanent; divisions, coloured, erect, acute.

Cor. One-petaled, funnel-form. Tube, cylindrick, very long, flender, fomewhat curved. Border four-parted; divisions, egged, acute, deflected.

STAM. Filaments four, above the throat very fhort, incurved. Anthers oblong, depressed.

Pist. Germ roundish, oblate beneath. Style, threadform, long as the tube. Stigma two-cleft, just above the throat; divisions, externally curved.

PER.

SEEDS:

FLOWERS bright crimfon-scarlet, umbel-fasctcled. Leaves oval, cross-paired, half-stemclasping, pointed; pale below, dark green above, leathery, clothing the whole plant. Stipules between the opposite leaves, erect, linear. Stem russet, channelled.

The Bandúca-flower is often mentioned by the best Indian poets; but the Pandits are

Arangely divided in opinion concerning the plant, which the ancients knew by that name. RADHACANT brought me, as the famed Bandbuca, fome flowers of the Doubtful PAPAVER; and his younger brother RAMACANT produced on the following day the Scarlet IxokA, with a beautiful couplet in which it is named Bandbuca: foon after, SERVO'RU showed me a book, in which it is faid to have the vulgar name Dop'bariya, or Meridian; but by that Hindustáni name, the Muselmans in some districts mean the Scarlet PENTAPETES, and, in others, the Scarlet Ilibiscus, which the Hindus call Súryamani, or Gem of the Sun. The last-mentioned plant is the Siasmin of RHEEDE, which LINN BUS, through mere inadvertence, has confounded with the Scarlet Pentapetes, described in the fifty-fixth plate of the same volume. I cannot refrain from adding, that no Indian god wsa ever named Ixona; and that Iswara, which is, indeed, a title of SIVA, would be a very improper appellation of a plant, which has already a classical name.

14. CARNICARA.

SYN. Drumótpala, Per yadha.

Vul.G. Cáncrá; Cat'bachampá.

LINN. Indian PAVETTA.

It is wonderful, that the Pandits of this province, both priests and physicians, are unable to VOL. III. bring me the flower, which Ca'lida's a men tions by the name of Carnicara, and celebrates as a flame of the woods: the lovely Pavetta, which botanists have fufficiently described, is called by the Bengal peasants Cancra, which I should conclude to be a corruption of the Sanferit word, if a comment on the Amaracosh had not exhibited the vulgar name Cat'ha-champa; which raises a doubt, and almost inclines me to believe, that the Carnicara is one of the many flowers, which the natives of this country improperly called wild Champacs.

15. Ma'shandari':

Vulc. Mafandarí in Bengal; and Bastra in Hindustán.

LINN. American CALLICARPUS; yet a native of Java?

CAL. Perianth one-leaved, four-parted; Divifions pointed, erect.

Cor. One-petaled, funnei-form; border four-cleft.

STAM. Filaments four, thread-form, coloured, longer than the corol. Anthers roundish, incumbent.

PIST. Germ above, egged. Style thread-form, coloured, longer than the stamens. Stigma thickish, gaping.

PER.

SEEDS.

FLOWERS minute, bright lilack, or light purple, extremely beautiful. Panicles axillary one to each leaf, two-forked, very fhort in comparison of the leaves, downy. Bracks awled, opposite, placed at each fork of the panicle. Leaves opposite, perioled, very long, egged, veined, pointed, obtufely-notched, bright green and foft above, pale and downy beneath. Branches and petiols hoary with down. Shrub, with flexible branches; growing wild near Calcutta: its root has medicinal virtues, and cures, they say, a cutaneous diforder called másba, whence the plant has its name. Though the leaves be not fawed, yet I dare not pronounce the species to be new. See a note on the Hoary CALLICARPUS, 5 RETZ. Fascic. p. 1. n. 19.

16. SRINGA'TA:

SYN. Sringátaca.

Vulg. Singbara.

LINN. Floating TRAPA.

I can add nothing to what has been written on this remarkable water-plant; but as the ancient Hindus were so fond of its nut (from the borns of which, they gave a name to the plant itself), that they placed it among their lunar constellations, it may certainly claim a place in a series of Indian vegetables.

17. CHANDANA:

Syn. Gandhafára, Malayaja, Bhadrasri.

VULG. Chandan, Sandal, Sanders.

LINN. True Santalum; more properly San-dalum.

SEED large, globular, fmooth.

Having received from Colonel FULLARTON many feeds of this exquifite plant, which he had found in the thickets of Midnapur, I had a fanguine hope of being able to describe its flowers, of which RUMPHIUS could procure no account, and concerning which there is a fingular difference between LINNÆUS and BURMAN the younger, though they both cite the same authors, and each refers to the works of the other; but the feeds have never germinated in my garden, and the Chandan only claims a place in the prefent feries, from the deferved celebrity of its fragrant wood, and the perpetual mention of it in the most ancient books of the Hindus, who constantly describe the best fort of it as flourishing on the mountains of Malaya. An elegant Sanferit stanza, of which the following Version is literally exact, alludes to the popular belief, that the Vénus, or bambus, as they are vulgarly called, often take fire by the violence of their collision, and is addressed, under the allegory of a fandal-tree to a virtuous man dwelling in a town inhabited by contending factions: " De-" light of the world, beloved CHANDANA, stay

" no longer in this forest, which is overspread "with rigid pernicious Vans'as, whose hearts are unsound; and who, being themselves confounded in the scorching stream of slames kindled by their mutual attrition, will consume not their own families merely, but this whole wood." The original word durvans'a has a double sense, meaning both a dangerous bambu, and a man with a mischievous offspring. Three other species or varieties of Chandan are mentioned in the Amaracósha, by the names Tailaparnica, Gósirsha, and Herichandana: the red sandal (of which I can give no description) is named Cuchandana from its inferior quality, Ranjana and Rasta from its colour, and Tila-

18. CUMUDA:

SYN. Cairava.

VULG. Ghain-chu.

RHEEDE: Tsjeroea Cit Ambel. 11 H. M. t. 29.

parni or Patránga from the form of its leaves.

CAL. Five-parted, longer than the tube of the corol, expanding, permanent; divisions, awled.

Cor. One-petaled. Tube, rather belled; border five-parted; divisions oblong, wavy on the margin; a longitudinal wing or foldlet in the middle of each. The mouth and whole interior part of the corol shaggy. STAM. Filaments five, awled, erect; Anthers twin, converging; five, alternate, shorter, sterile.

Pist. Germ egged, very large in proportion; girt at its base with five roundish glands. Style very short, if any. Stigma headed.

PER. Capfule four-celled, many-feeded.

SEEDS round, compressed, minute, appearing rough, with small dots or points.

Leaves hearted, subtargeted, bright green on one side, dark russet on the other. Flowers umbel sascicled, placed on the stem, just below the leaf. Glands and Tube of the corol yellow; border white; both of the most exquisite texture: Cumuda, or Delight of the Water, seems a general name for beautiful aquatick flowers; and among them, according to VAN RHEEDE, for the Indian Menianthes; which this in part resembles. The divisions of the corol may be called three-winged: they look as if covered with silver frost.

19. CHITRACA:

SYN. Pát'b' in, Vabni, and all other names of Fire,

Vulg. Chita, Chith, Chitrá.

LINN. PLUMBAGO of Silan.

CAL. Perianth one-leaved, egg-oblong, tubular, five-fided; rugged, interspersed with minute pedicelled glands, exuding transparent glutinous droplets; erect, closely embracing the tube of the corol; mouth five-toothed; base protuberant with the valves of the nectury.

COR. One-petaled, funnel-form. Tube fiveangled, rather incurved, longer than the calyx. Border five-parted, expanding. Divisions inverse, egg-oblong, pointed, somewhat keeled.

Nectary five-valved, pointed, minute, including the germ.

STAM. Filaments five, thread-form, inferted on the valvelets of the nectary, as long as the tube of the corol. Anthers oblong, oblique.

PIST. Germ egged, very fmall; at first, when cleared of the nectary, smooth; but assuming, as it swells, sive angles. Style columnar, as long as the stamens. Stigma sive-parted, slender.

PER. None, unless we give that name to the five-angled coat of the feed.

SEED one, oblong, obscurely five-sided, inclosed in a coat.

Racemes viscid, leafy. Calyx light green. Corol milkwhite. Anthers purple, seen through the pellucid tube. Leaves alternate, egged, smooth, pointed, half sheathing, partly waved, partly entire; floral leaves, similar, minute. Stem flexible (climbing), many-angled, joined

at the rise of the leaves. Root caustick; whence the name Vabni, and the like. Chitraca means attracting the mind; and any of the Indian names would be preferable to Plumbago, or Leadwort. The species here described, seems most to resemble that of Seilan; the rosy Plumbago is less common here: the joints of its stems are red; the bracts three'd, egged, equal pointed, coloured.

20. CAMALATA':

SYN. Surya-canti, or Sunshine, 11. H. M. t. 60.

Vulg. Cám-latá, Ifbk-pichab. LINN. IPOMOEA Quamoclit.

The plant before us is the most beautiful of its order, both in the colour and form of its leaves and slowers; its elegant blossoms are celestial rosy red, love's proper bue, and have justly procured it the name of Cámalatá, or Love's Greeper, from which I should have thought Quamoclit a corruption, if there were not some reason to suppose it an American word: Cámalatá may also mean a mythological plant, by which all desires are granted to such as inhabit the heaven of INDRA; and, if ever slower was worthy of paradise, it is our charming Ipomoea. Many species of this genus, and of its near ally the Convolvulus, grow wild in our Indian provinces, some spreading a purple light

over the hedges, some snowwhite with a delicate fragrance; and one breathing after funfet the odour of cloves; but the two genera are fo blended by playful nature, that very frequently they are undiffinguishable by the corols and stigmas: for instance, the Mundavalli, or Beautiful Climber, of RHEEDE (of which I have often watched the large spiral buds, and seen them burst into full bloom) is called Ipomoea by LINNEUS, and Convolvulus (according to the Supplement) by KENING; and it feems a shade between both. The divisions of the periantb are egg-oblong, pointed; free above, intricated below; its corol and tube, those of an Ipomoea; its filaments of different lengths, with anthers arrowed, jointed above the barbs, furrowed, halfincumbent; the stigmas, two globular heads, each globe an aggregate of minute roundish tubercles; the stem not quite smooth, but here and there bearing a few fmall prickles; the very large corol exquisitely white, with greenish ribs, that feem to act as muscles in expanding the contorted bud; its odour in the evening very agreeable; less strong than the primrose and less faint than the lily. The clove-scented creeper, which blows in my garden at a feafon and hour, when I cannot examine it accurately, feems of the fame genus, if not of the fame species, with the Mundavalli.

21. CADAMBA:

SYN. Nipa, Priyaca, Halipriya.

Vulg. Cadamb, Cadam.

LINN. Oriental Nauclea.

To the botanical description of this plant 1 can add nothing, except that I always observed a minute five-parted calyx to each floret, and that the leaves are oblong, acute, opposite, and transversely nerved. It is one of the most elegant among Indian trees in the opinion of all who have feen it, and one of the holiest among them in the opinion of the Hindus: the poet Ca'LIDA's alludes to it by the name of Nipa; and it may juftly be celebrated among the beauties of fummer, when the multitude of aggregate flowers, each confifting of a common receptacle perfectly globular and covered uniformly with gold-coloured florets, from which the white thread-form flyles conspicuously emerge, exhibits a rich and fingular appearance on the branchy trees decked with foliage charmingly verdant. The flowers have an odour, very agreeable in the open air, which the ancient Indians compared to the scent of new wine; and hence they call the plant Halipriya, or beloved by HALIN, that is, by the third RA'MA, who was evidently the BACCHUS of India.

22. GANDI'RA:

Syn. Samasbi'bilà, Lavana-bhantáca,

VULG. Lona-bbant; Ins; Sulatiyà.

LINN. SOLANUM. Is it the Verbascum-leaved?

CAL. Perianth one-leaved, cup-form or belled?

Obscurely five-cleft, downy, pale, frosted, permanent. Divisions egged, erect, pointed, very villous.

Cor. One-petaled. Tube very short. Border five-parted. Divisions oblong, pointed, expanding, villous.

STAM. Filaments five, most short, in the mouth of the tube. Anthers oblong, furrowed, converging, nearly coalescent, with two large pores gaping above.

Pist. Germ roundish, villous. Style threadform, much longer than the stamens. Stig-

ma obtuse-headed.

PER. Berry roundish, dotted above, hoary, divided into cells by a fleshy receptacle with two, or three, wings.

SEEDS very many, roundish, compressed, nest-

ling.

Leaves alternate, egg-oblong, pointed, rather wavy on the margin, delicately fringed with down; darker and very foft above, paler below with protuberant veins, downy on both fides, mostly decurrent on the long hoary petiols.

STEM shrubby, scabrous with tubercles, unarmed. Flowers umbel-fascicled. Corols white.

Anther, yellow. Peduncles and pedicels hoary with deciduous frost.

This plant is believed to contain a quantity of lavana, or falt, which makes it useful as a manure; but the fingle word Bhantaca, vulgarly Blant, means the Clerodendrum, which (without being unfortunate) beautifies our Indian fields and hedges with its very black berry in the centre of a bright-red, expanding, permanent calyx. The charming little bird Chatráca, commonly called Chattarya or Tuntuni, forms its wonderful nest with a leaf of this downy Solanum, which it fews with the filk-cotton of the Seven-leaved Bombax, by the help of its delicate, but sharp, bill: that lovely bird is well known by the Linnean appellation of Mota-CILLA Sartoria, properly Sartrix, but the figures of it, that have been published, give no idea of its engaging and exquisite beauty.

23. SAMUDRACA:

SYN. Dhota-famudra.

Vulg. Dból-famudr.

LINN. Aquilicia; but a new species.

CAL. Perianth one-leaved, funnel-shaped, fivetoothed, short, the teeth closely pressing the corol; permanent.

Con. Petals five, egg-oblong, feffile, greenish; acute, curved inwards with a small angled concave appendage. Neclary tubular, sleshy,

five-parted, yellowish; divisions, egg-oblong, doubled, compressed like minute bags with inverted mouths; enclosing the germ.

STAM. Filaments five, smooth and convex externally, bent into the top of the neclary, between the divisions or scales, and compressing it into a globular figure. Anthers arrowed; the points hidden within the nectary, surrounding the stigma; the barbs without, in the form of a star.

PIST. Germ roundish. Style cylindrick. Stigma obtuse.

PER. Berry roundish, flattened, naveled, longitudinally furrowed, mostly five-celled.

Seeds folitary, three-fided, externally convex.

Cymes mostly three-parted. Stem deeply channeled, jointed, two-forked. Peduncles also jointed and channeled. Fruelification bursting laterally, where the stem sends forth a petiol. Berries black, watry. Leaves alternate, except one terminal pair; hearted, pointed, toothed; twelve or sourteen of the teeth shooting into lobes; above, dark green; below, pale, ribbed with processes from the petiol, and reticulated with protuberant veins; the full-grown leaves, above two seet long from the apex, and nearly as broad toward the base; many of them rather targetted: this new species may be called large-leaved,

or Aquilicia Samudraca. The species described by the younger Burman, under the name of the Indian Staphylea, is not uncommon at Crishna-nagar; where the peafants call it Cácajanghá, or Crow's foot: if they are correct, we have erroneously supposed the Cóing of the modern Bengalese to be the Cácángi of the ancient Hindus. It must not be omitted, that the stem of the Aquilicia Sambucina is also channeled, but that its fructification differs in many respects from the descriptions of Burman and Linnaeus; though there can be no doubt as to the identity of the genus.

24. SO'MARA'JI:

Syn. Avalguja, Suballi, Sómaballicá, Cálamésti, Crisbnaphalá, Vácuchi, Váguji, Pútip'balli.

Vulg. Sómráj, Bacuchi.

LINN. Fetid PEDERIA.

The character as in LINNÆUS, with few variations. Calyx incurved. Corol very shaggy within. Style two-cleft, pubescent; divisions contorted. Stem climbing, smooth. Leaves opposite, long-petioled; the lower ones oblong, hearted; the higher, egg-oblong; veined, with a wavy margin. Panicles axillary (except the highest), cross-armed. Flowers beautiful to the sight, crimson, with milk-

white edges, refembling the Diantbus vulgarly called Sweet William, but refembling it only in form and colours; almost scentless to those who are very near it, but diffusing to a distance a rank odour of carrion. All the peasants at Crishna-nagar called this plant Somráj; but my own servants, and a family of Bráhmens from Tribéni, gave that name to a very different plant, of the nineteenth class, which I took, on a cursory inspection, for a Prenanthes.

25. SYA'MA':

Syn. Gópí, Sárivá, Anantà, Utpalafárivà, Gópá, Gopálicà, Gópavallt.

VULG. Syámá-latá.

RHEEDE: in Malabar letters, Puppál-vall.

CAL. Perianth, one-leaved, five-toothed, erect, minute, permanent.

Cor. One-petaled, falver-form. Tube, itself cylindrick, but protuberant in the middle with the germ and anthers; threat very villous. Border five-parted; divisions very long, lance-linear, spirally contorted, fringed, closed, concealing the fructification.

STAM. Filaments, if any, very short. Anthers, five, awled, erect, converging at the top.

PIST. Germ above, pedicelled, fpheroidal, girt with a nestareous ring. Style threadform, rather awled. Stigma fimple.

PER. Capfule one-celled; one-feeded, roundish, hispid.

SEED oval, very minute, gloffy.

Flowers raceme-panicled, greenish-white, very small, scented like those of the hawthorn, but far sweeter; and thence the Portuguese called them boney-flowers.

Peduncles axillary, ruffet; pedicels many-flowered. Branchlets milky. Leaves opposite, lance-oval, pointed at both ends, most entire veined; above dark green; below, pale. Stipules linear, axillary, adhering. Stem climbing, round, of a ruffet hue, rimmed at the insertion of the short petiols.

The ripe fruit of this elegant climber, which CA'LIDA's mentions in his poem of the Seasons, has been feen by me only in a very dry flate; but it feemed that the hispid appearance of the capfules, or berries, which in a microscope looked exactly like the burrs in VAN RHEEDE's engraving, was caused by the hardened calyxes and fringe of the permanent corols; the feeds in each burr were numerous and like black shining fand; for no fingle pericarp could be difengag ed from it, and it is described as one-seeded merely from an inspection of the diffected germ. Before I had feen the fruit, I thought the Syama very nearly connected with the Shrubby Apo-CYNUM, which it refembles in the leaves, and in parts of the corol.

Five of the Sanscrit names are strung together, by the author of the Amaracofh, in the following verse;

Gópi syama s'ariva fyadanantotpala fariva: and his commentator observes, that the last name was given to the Sáriva from the resemblance of its flowers to those of the Utpala, which I thence conclude to be a Menianthes; especially as it is always described among the Indian water-plants. The other synonymous words are taken from Vachaspati.

26. A VIGNA, or Avinga:

SYN. Crishnapácap hala, Sushénas, Caramardaca.

Vulg. Carondà or Caraundà in two dictionaries; in one, Pûniamalà.

LINN. CARISSA Carandas.

CAL. Perianth five-cleft, acute, very fmall, coloured, perfiftent.

Con. One-petaled, funnel-form. Tube longish; throat swoln by the inclosed anthers. Border five-parted; divisions oblong; one side of each embracing the next.

STAM. Filaments five, extremely short. Anthers, oblong, erect

Pist. Germ above, roundish. Style threadform, short, clubbed. Stigma narrower, pubescent.

PER. Berry, elliptoïdal, two-celled.

ed. Flowers milkwhite, jasmin-like. Fruit beautiful in form and colour, finely shaded with carmine and white; agreeably acid. Branches two-forked. Leaves opposite, short-petioled, elliptick, obtuse, most entire, smooth; some small leaves roundish, inverse-hearted. Thorns axillary, opposite, expanding; points, bright red. Peduncles twin, subterminal, three-slowered; pedicels, equal. The whole plant, even the fruit, milky. We have both species of Carissa in this province; but they melt, scarce distinguishably, into each other.

The Pandits have always brought me this elegant plant, as the Carcandbu mentioned by JAYA-DEVA; but, judging only by the shape and taste of the fruit, they seem to confound it with the RHAMNUS Jujuba; and the confusion is increased by the obscurity of the following passage

in their best vocabulary:

Carcandbú, vadari, cóli; cólam, cuvala ph'énilé, Sauviram, vadaram, ghóntá————. All agree, that the neuter words mean fruits only; but some insist, that the Ghóntá is a dis-

tinct plant thus described in an ancient verse: The gbontá, called also gopaphontá, is a tree

haped like the Vadari, with a very fmall

fruit, growing only in forests.' For the g bonta, here known by the name of Sebacul, my fer-

vants brought me a RHAMNUS with leaves alternate egg-oblong, three-nerved, obscurely fawed, paler beneath, and most beautifully veined: floral young leaves crowded, very long, linear; prickles often folitary, fometimes paired, one straight, one curved; a small globular drupe, quite black, with a one-celled nut: the flowers I never faw perfect; but it feems the nineteenth fpecies of LINNÆUS. We have many species of Rhamnus in our woods and hedges; fome like the Alaternus, polygamous by male and hermaphrodite flowers; others, diftinguished by various forms and positions of the prickles and leaves; but the common Badari or Baiar, is the Jujube-tree described by RHEEDE; and by RUMPHIUS called Indian Apple-tree. Its Perfian name is Conar, by which it is mentioned in the letters of PIETRO DELLA VALLE, who takes notice of the foapy froth procured from its leaves; whence it has in Sanscrit the epithet p'bénila, or frothy. To the plant the Arabs give the name of Sidr, and to its fruit, that of Nabik; from which, perhaps, Napeca has been corrupted.

27. CARAVI'RA:

Syn. Pratibáfa, Satapráfa, Chandata, Havamáraca.

LINN. NERIUM Oleander, and other species. Vulg. Canér, Carbir.

A plant fo well known would not have been inferted in this place, if it had not been thought proper to take notice of the remarkable epithet hayamáraca, or borfe-killer; which arose from an opinion still preserved among the Hindus, that a horse, unwarily eating the leaves of the Nerium, can hardly escape death: most of the species, especially their roots, have strong medicinal, but probably narcotick, powers. The blue-dying Nerium grows in woods at a little distance from my garden; and the Hindu peasants, who brought it me, called it Nil, or blue; a proof, that its quality was known to them, as it probably was to their ancestors from time immemorial.

28. SEPTAPERNA, or feven-leaved:

Syn. Vifála-twach, Sáradt, Vishama-ch' bada.

Vulg. Ch' bitavanì, Ch' bátiyán, Ch' bátin, Ch'-báton.

LINN. School ECHITES.

CAL. Perianth five-parted, fub-acute, fmall, villous, permanent; closing round the germ, immediately on the removal of the tube.

Cor. One-petaled, funnel-form. Tube cylindrick below, prominent above with enclosed anthers, very villous in the throat. Border five-parted, shorter than the tube: divisions inverse-egged, obtuse, oblique, reslected, waved on the margin. Nectary, a circular undi-

vided coronet, or rim, terminating the tube, with a short erect villous edge.

STAM. Filaments five, cylindrick, very short, in the throat of the tube. Anthers heart-arrowed, cleft, pointed, forming a star, visible through the mouth of the tube, with points diverging.

PIST. Germ above roundish-egged, very villous, scarce extricable from the calyx enclosing and grasping it. Style cylindrick, as long as the tube. Stigma two-parted, with parts diverging, placed on an irregular orblet.

PER. Follicles two, linear, very long, one-valved. SEEDs numerous, oblong, compressed with filky pappus pencilled at both ends.

NOTE.

The whole plant, milky. Stem dotted with minute whitish tubercles. Leaves mostly sevened in verticils at short distances, very fost, oblong inverse-egged, some pointed, some obtuse, some end-nicked; some entire, some rather scallopped; with many transverse parallel veins on each side of the axis; rich dark green above, diluted below. Petiols surrowed above, smooth and convex beneath, elongated into a strong protuberant nerve continually diminishing and evanescent at the apex. Stipules above, erect, acute, set in a coronet round the stem; the verticils of

the leaves answering to the definition of fronds. Flowers rather small, greenish white, with a very particular odour less pleasant than that of elder-flowers. Peduncles terminal with two verticils pedicelled umbel-wife, but horizontal. Pedicels fix, headed, many-flowered; highest verticils fimilar to those heads, more crowded. Tree very large, when full-grown; light and elegant, when young. This plant fo greatly refembles the Pala of VAN RHEEDE (which has more of the Nersum than of the Tabernæmontana) that I suspect the genus and species to be the fame, with fome little variety; that author fays, that the Brabmens call it Santenu, but his Nagari letters make it Savánu, and neither of the two words is to be found in Sanscrit. With all due respect for PLUMIER and BURMAN, I should call this plant NERIUM Septaparna: it is the Pule of RUMPHIUS, who enumerates its various uses at great length and with great confidence.

29. ARCA:

Syn. Vasuca, Asp'bota, Gonarupa, Vicirana, Mandara, Arcaperna; and any name of the Sun.

VULG. Acand, Anc.

LINN. Gigantick ASCLEPIAS.

Nectaries with two-glanded, compressed, folds, instead of awled bornlets at the summit; spi-

rally eared at the base. Filaments twitted in the folds of the nectaries. Anthers flat, smooth, rather wedge-form. Styles near half an inch long, fubcylindrick. Stigmas expanded. Flowers terminal and axillary umbel-fascicled; amethyst-coloured with some darker shades of purple on the petals and nectaries; the flarred corpufcle, bright yellow. Leaves opposite, heart-oblong, mostly inverse-egged, fubtargeted, very rarely stemclasping, pointed, villous on both fides, hoary beneath with foft down; petiols very fhort, concave and bearded above; with a thickish conical stipule. The whole plant filled with caustick milk. A variety of this species has exquifitely delicate milkwhite flowers; it is named Alarca or Pratapaja, and highly efteemed for its antispalmodick powers. The Padmárca, which I have not feen, is faid to have fmall crimfon corols: the individual plants, often examined by me, vary confiderably in the forms of the leaves and the tops of the nectary.

30. PICHULA:

SYN. J'bavaca.

Vulg. Thau.

KOEN. Indian TAMARIX?

Flowers very fmall, whitish, with a light purple tinge, crowded on a number of spikes, which form all together a most elegant panicle. Stem generally bent, often straight, and used anciently for arrows by the Persians, who call the plant Gaz: the celebrated shaft of ISFENDIYA'R was formed of it, as I learned from BAHMEN, who first showed it to me on a bank of the Ganges, but afferted, that it was common in Persia. The leaves are extremely minute, sessible, mostly imbricated. Calyx and corol as described by LINNEUS; five silaments considerably longer than the petal; anthers lobed, surrowed; germ very small; style, scarce any; stigmas three, revolute, but, to my eyes, hardly feathered.

Nothing can be more beautiful than the appearance of this plant in flower during the rains on the banks of rivers, where it is commonly interwoven with a lovely twining ASCLEPIAS, of which the following description is, I hope, very exact:

31. DUGDHICA': or Milkplant;

byn. Cshiravi, Dugdbica.

Vulg. Kyirui, Dúdbi, Dúdb-latá,

LINN, Esculent Periploca.

CAL. One-leaved, five-parte 1; divisions awled, acute, coloured, expanding.

Con One-petaled, falver-form, startike; divifions five, egged, pointed, fringed.

Nestary double, on a five-cleft base, gibbous

between the clefts, protruded, and pointed above, furrounded with a bright green villous rim: exterior five-parted; divisions egged, converging, attenuated into daggers; each concave externally, gibbous below the cavity, which is two-parted and wrinkled within. Interior, a five-parted corpuscle, lopped above, five-angled, furrounding the fructification.

STAM. Filaments scarce any. Anthers five, roundish, very minute, set round the summit

of the lopped corpufcle.

PIST. Germs two, egged, pointed, erect, internally flat. Styles none, unless you so call the points of the germs. Stigma, none but the interior nectary, unless you consider that as a common stigma.

PER. Follicles two, oblong; in some, pointed; in others, obtuse; inflated, one-valved; each

containing a one winged receptacle.

SEEDS numerous, roundish, compressed, crowned

with pappus.

To each pair of leaves a peduncle mostly twoflowered, often with three, sometimes with sive, flowers. Calyx reddish. Corol white, elegantly marked with purple veins; fringe, white, thick; anthers, black. Leaves linear-awled, pointed, opposite, petioled with one strong nerve; stipules, very soft, minute. Stem smooth, round, twining; the whole plant abounding with milk. 32. LA'NGALI':

SYN. Saradi, Toyapippali, Saculadani.

Vulg. Cánchrà, Isholángolyá.

RHEEDE: Chéru-vallél?

LINN. NAMA of Silán.

CAL. Perianth one-leaved, five-parted, villous; divisions, lanced, pointed, long, permanent.

Cor. One-petaled, nearly wheeled. Tube very fhort. Border five-parted. Divisions egged.

STAM. Filaments five, awled, expanding; from the mouth of the tube, adhering to the divifions of the border by rhomboidal concave bases convergent above. Anthers large, arrowed.

Pist. Germ above, egg-oblong, two-cleft. Styles two, azure, funnel-form, diverging almost horizontally. Stigmas lopped, open.

PER. Capfule many-feeded.

SEEDS very minute.

Stem herbaceous, branchy, smooth, pale, creeping. Leaves alternate, short-petioled, most entire, lance-oblong, smooth, acutish. Peduncles mostly axillary, sometimes terminal, villous, often many-slowered, rarely subumbelled, three-rayed, with involucres general and partial. Corols bright-blue, or violet; Stamens white. The plant is aquatick; and by no means peculiar to Silàn: I have great

reason, however, to doubt whether it be the Làngali of the Amaracòsh, which is certainly the Canchrà of Bengal; for though it was first brought to me by that name, yet my gardener insists, that Canchrà is a very different plant, which, on examination, appears to be the Ascending Jussieua of Linnæus, with leaves inverse-egged, smooth, and peduncles shorter: its sibrous, creeping roots are purplish, buoys, white, pointed, solitary; and at the top of the germ sits a nectary, composed of sive shaggy bodies arched like horse shoes, with external honey-bearing cavities.

33. UMA:

SYN. Atasi, Cshuma.

Vul.G. Tist, Mafana.

LINN. Most common LINUM.

CAL, Perianth five-leaved. Leaflets oblong, acute, imbricated, keeled, fringed minutely, having fomewhat reflected at the points.

COR. Small, blue; petals, notched, striated,

wavy, reflex, imbricated.

STAM. Anthers light-blue, converging, no rudiments of filaments.

PIST. Germ large. Style pale-blue. Stigma fimple.

PER. Capfule pointed. Furrowed Root simple.

Stem. Herbaceous, low, erec., surrowed, knotty? naked at the base.

Leaves linear, threenerved, alternate croffwise, fessile, fmooth, obtuse, reslected, stipuled, glanded?

Stipules linear. Q. a minute gland at the base.

34. Mu'rva':

Syn. Dévi, Madhurafá, Móratá, Téjani, Survá, Madhúlicá, Madhusréni, Gócarni, Piluparni;

Vulg. Muragà, Murabara, Murgabi.

LINN. Hyacinthoid, ALETRIS.

CAL. None.

Cor. One-petaled, funnel-form, fix-angled. Tube short, bellied with the germ. Border fix-parted. Divisions lanced; three quite reflected in a circle; three alternate, deflected, pointed.

STAM. Filaments fix, awled, as long as the corol, diverging, inferted in the base of the divisions. Anthers oblong, incumbent.

Pist. Germ inverse-egged, obscurely threefided, with two or three boney-bearing pores on the flattish top. Style awled, one-furrowed as long as the stamens. Stigma clubbed.

PERICARP and SEEDS not yet inspected,

Root fibrous, tawny, obscurely jointed, stolonbearing. Scape long, columnar, sheathed with leaves, imbricated from the root; a few fheaths above, flraggling. Leaves fleshy, channelled, fwordform, keeled, terminated with awls, the interior ones longer; mostly arched; variegated with transverse undulating bands of a dark green hue approaching to black. Raceme erect, very long; Flowers, from three to feven in each fascicle, on very short petiols. Bracts linear, minute. Corols, pale, pea-green, with a delicate fragrance, refembling that of the Peruvian HELIO-TROPE; fome of the Sanscrit names allude to the honey of these delicious flowers; but the nectareous pores at the top of the germ are not very distinct: in one copy of the Amaracosha we read Dhanubireni among the fynonyma; and if that word, which means a feries of bows, be correct, it must allude either to the arched leaves or to the reflected divisions of the corol. This ALETRIS appears to be a night-flower; the raceme being covered, every evening, with fresh blossoms, which fall before funrife.

From the leaves of this plant, the ancient Hindus extricated a very tough elastick thread, called Maurvi, of which they made bowstrings, and which, for that reason, was ordained by Menu to form the sacrificial zone of the mili-tary class.

35. TARUNI:

SYN. Sabá, Cumári.

Vulg. Ghrita-cumári.

LINN. Two-ranked ALOE, A Perfoliata, P?

Flowers racemed, pendulous, fubcylindrick, rather incurved. Bracts, one to each peduncle, awled, concave, deciduous, pale, with three dark stripes. Corol fix-parted; three external divisions, orange-scarlet; internal, yellow, keeled, more fleshy, and more highly coloured in the middle. Filaments with a double curvature. Germ fix-furrowed. Stigma fimple. Leaves awled, two-ranked; the lowest, expanding; fea-green, very fleshy; externally quite convex, edged with foft thorns; variegated on both fides with white fpots. VAN RHEEDE exhibits the true Aloe by the name of Cumári; but the specimen, brought me by a native gardener, seemed a variety of the two-ranked, though melting into the species. which immediately precedes it in LINN #US.

36. BACULA:

SYN. Céfára.

Vulg. Mulfari or Mulafri.

LINN. MIMUSOPS Elengi.

CAL. Perianth eight-leaved; leaflets egged, acute, permanent; four interior, simple; four exterior, leathery.

Cor. Petals fixteen, lanced, expanding; as

long as the calyx. Nectary eight-leaved; leaflets lanced, converging round the stamen and pistil.

STAM. Filaments eight (or from feven to ten), awled, very short, hairy. Anthers, oblong, erect.

PIST. Germ above, roundish, villous. Style cylindrick. Stigma obtuse.

PER. Drupe oval, pointed; bright orangefcarlet.

Nur. Oval, wrinkled, flattish and smooth at one edge, broad and two-furrowed at the other.

With too strong a perfume to give pleasure in an apartment: since it must require the imagination of a Burman to discover in them a resemblance to the face of a man, or of an ape, the genus will, I hope, be called Bacula, by which name it is frequently celebrated in the Puránas, and even placed among the slowers of the Hindu paradise. Leaves alternate, petioled, egg-oblong pointed, smooth. The tree is very ornamental in parks and pleasure-grounds.

37. As'o'ca:

SYN. Vanjula.

CAL. Perianth two-leaved, closely embracing the tube.

Cor. One-petaled. Tube long; cylindrick, fubincurved; mouth encircled with a nectareous rim. Border four-parted, divisions, roundish.

STAM. Filaments eight, long, coloured, inferted on the rim of the tube. Anthers kidney-fhaped.

PIST. Germ above, oblong, flat. Style short,

downy. Stigma bent, fimple.

Per. Legume long, compressed at first, then protuberant with the swelling seeds; incurved, strongly veined and margined, sharp-pointed.

SEEDS from two to eight, folid, large, manyshaped, some oblong-roundish, some rhomboidal, some rather kidney-shaped, mostly thick, some flat.

Leaves egg-oblong-lanced, opposite, mostly fivepaired, nerved; long, from four or five to twelve or thirteen inches.

The number of stamens varies considerably in the same plant: they are from six or seven to eight or nine; but the regular number seems eight, one in the interstices of the corol, and one before the centre of each division. Most of the slowers, indeed, have one abortive stamen, and some only mark its place, but many are perfect; and VAN RHEEDE speaks of eight as the constant number: in fact no part of the plant is

constant. Flowers fascicled, fragrant just after funfet and before funrife, when they are fresh with evening and morning dew; beautifully diverlified with tints of orange-scarlet, of pale yellow, and of bright orange, which grows deeper every day, and forms a variety of shades according to the age of each bloffom, that opens in the fascicle. The vegetable world scarce exhibits a richer fight than an Asoca-tree in full bloom: it is about as high as an ordinary Cherry-tree. A Brabmen informs me, that one species of the Afoca is a creeper; and JAYADE'VA gives it the epithet voluble: the Sanscrit name will, I hope, be retained by botanists, as it perpetually occurs in the old Indian poems and in treatifes on religious rites.

38. S'AIVA'LA:

SYN. Janalili. S'aivala.

Vulg. Simár, Syálá, Pátafyála, sebálá.

LINN. Vallifneria? R.

CAL. Common Spathe one-leaved, many-flowered, very long, furrowed, two-cleft at the top; each division end-nicked. Proper Perianth three-parted; divisions, awled.

Cor. Petals three, linear, long, expanding, fleshy.

STAM. Filaments invariably nine, thread-form.

Anthers erect, oblong, furrowed.

Pist. Germ egged, uneven. Styles aiways

three, short, awled, expanding. Stigmas three, simple.

Per. Capfule very long, fmooth, awled, onccelled, infolded in an angled Spathe.

SEEDS very numerous, murexed, in a vifcid mucus.

Flowerets from fix to fourteen, fmall. Scape compressed, very narrow, sleshy, furrowed in the middle.

Pedicel of the floweret, thread-form, crimfon above; proper perianth, russet; petals, white; anthers, deep yellow. Leaves swordform, pointed, very narrow, smooth, and soft, about two feet long, crowded, white at the base. Root small, sibrous. It flourishes in the ponds at Crishna-nagar: the refiners of sugar use it in this province. If this plant be a Vallisneria, I have been so unfortunate as never to have seen a semale plant, nor sewer than nine stamens in one blossom out of more than a hundred, which I carefully examined.

39. Pu'ticaraja:

SYN. Pracirya, Pútica, Calimáraca.

Vul.G. Nátácaranja,

LINN. GUILANDINA Bonduccella.

The species of this genus vary in a singular manner: on several plants, with the oblong leaslets and double prickles of the Bonduccella, I will see only male slowers, as Rheede has

described them; they were yellow, with an aromatick fragrance. Others, with similar leaves and prickles, were clearly polygamous, and the flowers had the following character:

MALE.

CAL. Perianth one-leaved, falver-form, downy; Border five-parted, with equal, oblong divifions.

Cor. Petals five, wedge-form, obtufely notched at the top; four equal, erect, the fifth, depressed.

STAM. Filaments ten, awled, inferted in the calyx, villous, very unequal in length. Anthers oblong, furrowed, incumbent.

HERMAPHRODITE.

Calyx, Corol, and Stamens, as before.

Pist. Germ oblong, villous. Style cylindrick, longer than the filaments. Stigma fimple.

Per. and Seeds well described by LINNÆUS.

Flowers yellow; the depressed petal variegated with red specks. Bracts three-fold, roundish, pointed. Spikes, set with floral leastets, lanced, four-fold, reslected.

40. SOBHA'NJANA:

SYN. Sigru, Ticsbna, Gandbaca, Acshiva, Mocbaca.

Vulg. Sajjana, Moranga.

LINN. Guilandina Moringa.

CAL. Perianth one-leaved. Tube fhort, unequal, gibbous. Border five-parted. Divifions oblong-lanced, fubequal; first deflected, then revolute; coloured below, white above.

Cor. Petals five, inferted into the calyx, refembling a boat-form flower.

Wing-like, two, inverse-egged, clawed, expanding.

Awning-like, two, inverfe-egged, erect; claws, fhorter.

Keel-like, one, oblong, concave; enclosing the fructification; beyond it, spatuled; longer than the wing-petals.

STAM. Filaments five, fertile; three, bent over the piftil: two shorter, inserted into the claws of the middle petals. Anthers twin, rather mooned, obtuse, incumbent. Five sterile (often four only) alternate with the fertile, shorter; their bases villous.

Pist. Germ oblong, coloured, villous; below it a nectar-bearing gland. Style, shorter than the stamen, rather downy, curved, thicker above. Stigma, simple.

PER. Legume very long, slender, wreathed, pointed, three-fided, channelled, prominent with feeds, one-celled.

SEEDS many, winged, three-fided.

TREE very high; branches in an extreme degree

light and beautiful, rich with cluftering flowers. Stem exuding a red gum. Leaves mostly thrice-feathered with an odd one; leaflets fome inverse-egged, fome egged, fome oval, minutely end-nicked. Raceme-panicles mostly axillary. In perfect flowers the whole calyx is quite deflected, counterfeiting five petals: whence VAN RHEEDE made it a part of the corol. Corols delicately odorous; milk-white, but the two central erect petals beautifully tinged with pink. The root answers all the purposes of our horse-radish, both for the table and for medicine: the fruit and bloffoms are dreffed in caris. In hundreds of its flowers, examined by me with attention, five stamens and a pistil were invariably perfect: indeed, it is possible, that they may be only the female hermaphrodites, and that the males have ten perfect flamens with piftils abortive; but no fuch flowers have been difcovered by me after a most diligent search.

There is another species or variety, called Medhu Si'gru, that is Honey-Sigru; a word intended to be expressed on Van Rheede's plate in Nagari letters: its vulgar name is Muna, or Racta Jaijana, because its slowers or wood are of a redder hue,

LINNÆUS refers to Mrs. BLACKWELL, who represents this plant, by the name of Balanus

Myrepfica, as the celebrated Ben, properly Bán of the Arabian physicians and poets.

41. Co'VIDA'RA:

Syn. Cánchanára, Chamarica, Cuddála, Yugapatra.

Volg. Cachnar, Rasta canchan.

LINN. Variegated BAUHINIA.

CAL. Perianth one-leaved, obscurely five-cleft, deciduous.

Cor. Petals five, egged, clawed, expanded, wavy; one more distant, more beautiful, striated.

STAM. Filaments ten, unequally connected at the base; five, shorter. Anthers, double, incumbent.

PIST. Germ above, oblong. Style incurved. Stigma simple, ascending.

PER. Legume flattish, long, pointed, mostly five-celled.

SEEDS mostly five; compressed, wrinkled, roundish.

Leaves rather hearted, two-lobed; fome with rounded, fome with pointed, lobes. Flowers chiefly purplish and rose-coloured, fragrant; the sweet and beautiful buds are eaten by the natives in their savory messes. We have seen many species and varieties of this charming plant: one had racemed flowers, with petals equal, expanding, lanced, exquisitely

white, with a rose-coloured stripe from the base of each to its centre; anthers, four only, fertile; fix, much shorter, sterile; a second had three fertile, and feven very short, barren; another had light purple corols, with no more than five filaments, three longer, coloured, curved in a line of beauty. A noble Climbing BAUHINIA was lately fent from Népál; with flowers racemed, cream-coloured; ftyle, pink; germ, villous; stamens three filaments, with rudiments of two more; ftem, downy, four-furrowed, often fpirally. Tendrils opposite, below the leaves. Leaves two-lobed, extremely large: it is a fout climber up the highest ARUNDO Venu. The Sanscrit name Mandara is erroneously applied to this plant in the first volume of VAN RHEEDE.

42. CAPITT'HA:

Syn. Grábin, Dadbitt'ba, Manmat'ba, Dadbip'bala, Pushpap'bala, Dantas'at'ba.

Vulg. Cat'b-bel.

KOEN. Crateva, Valanga.

CAL. Perianth five-parted, minute, deciduous; divisions expanded, acute.

COR. Petals five, equal, oblong, reflected.

STAM. Filaments ten, very short, with a small gland between each pair, awled, surrowed.

Anthers, thick, five times as long as the filaments; furrowed, coloured, erect-expanding.

Pist. Germ roundish, girt with a downy coronet. Style cylindrick, short. Stigma simple.

PER. Berry large, fpheroidal, rugged, often warted, externally, netted within; many-feeded.

SEEDs oblong-roundish, flat, woolly, nestling in five parcels, assixed by long threads to the branchy receptacles.

Flowers axillary, mostly toward the unarmed extremity of the branch. Divisions of the Perianth, with pink tips; petals, pale; anthers, crimfon, or covered with bright yellow pollen. Fruit extremely acid before its maturity; when ripe, filled with dark brown pulp agreeably fubacid. Leaves jointedly feathered with an odd one; leaflets five, feven, or nine; fmall, gloffy, very dark on one fide, inverse-hearted, obtusely-notched, dotted round the margin with pellucid specks, very strongly flavoured and scented like anise. Thorns long, fharp, folitary, afcending, nearly crofsarmed, axillary, three or four petiols to one thorn. KLEINHOFF limits the height of the tree to thirty feet, but we have young trees forty or fifty feet high; and at Bandell there is a full-grown Capitt' ba equal in fize to the which the vulgar name has been taken: when the trees flourish, the air around them breathes the odour of anise both from the leaves and the blossoms; and I cannot help mentioning a singular fact, which may, indeed, have been purely accidental: not a single flower, out of hundreds examined by me, had both perfect germs, and anthers visibly fertile, while others, on the same tree, and at the same time, had their anthers profusely covered with pollen, but scarce any styles, and germs to all appearance abortive.

43. CUVERACA:

Syn. Tunna, Tuni, Cach ba, Cantalaca, Cuni, Nandivricsha.

VULG. Túni, Tún; absurdly, Viláyati Nim.

LINN. Between CEDRELA and SWIETENIA.

CAL. Perianth one-leaved, five-cleft, minute, deciduous; divisions roundish, concave, vil-

lous, expanding.

Cor. Rather beiled. Petals five, inverseegged, obtuse, concave, erect, white with a
greenish tint, three exterior lapping over the
two others. Nectary short, sive-parted; divisions roundish, orange-scarlet, bright and concave at the insertion of the stamens, rather
downy.

STAM. Filaments five; inferted on the divi-

fions of the nectary, awled, fomewhat converging, nearly as long as the style. Anthers doubled, some three-parted, curved, incumbent.

Pist. Germ egged, obscurely five-cleft. Style awled, erect, rather longer than the corol. Stigma, broad-headed, flat, bright, green, circular, starred.

PER. Capfule egged, five-celled, woody, gaping at the base. Receptacle five-angled.

SEEDS imbricated, winged.

Leaves feathered, scarce ever with an odd one; pairs from fix to twelve; petioles, gibbous at their insertion, channelled on one side, convex and smooth on the other. Stipules thick, short, roundish; leastess oblong-lanced, pointed, waved, veined, nerve on one side. Panicles large, diffuse, consisting of compound racemes. Nectaries yielding a fine yellow dye. Wood light, in colour like Mahagoni.

44. NICHULA:

SYN. Ambuja, Ijjala.

VULG. Hijala, Badia, Jyuli.

CAL. Perianth one-leaved, belled, fleshy, downy, coloured, permanent, five-parted; divisions erect, pointed.

Cor. Five-petaled; petals egged, short-pointed, revolute, downy within and without.

STAM. Filaments ten, five mostly shorter; in

ferted in the bell of the calyx; awled, villous.

Anthers erect, oblong, furrowed.

Pist. Germ egg-oblong, very villous. Style thread-form, curved. Stigma headed, with five obtuse corners.

PER. Drupe subglobular.

Nut scabrous, convex on one side, angled on the other.

Leaves feathered; pairs, from five to nine; leaflets oblong, daggered, notched. Calyx pale pink. Corol darker pink without, bright yellow within. Cyme terminal, spreading.

45. ATIMUCTA:

Syn. Pun'draca, Vásanti, Mádbavilatá.

Vulg. Mádbavilatá.

LINN. Bengal BANISTERIA.

RHEEDE: Dewenda. 6. H. M. tab. 59.

CAL. Perianth one-leaved, five-parted, permanent; divisions, coloured, oblong-oval, obtuse; between two of them, a rigid glossy honey-bearing tubercle, hearted, acute.

Cor. Five-petaled, imitating a boatform corol; wings, two petals, conjoined back to back, involving the nectary, and retaining the honey.

Awning, large concave, more beautifully coloured. Keel, two petals, less than the wings, but similar. All five, roundish, elegantly fringed, with reflected margins, and short oblong claws. STEM. Filaments ten; one, longer. Anthers oblong, thickish, furrowed.

Pist. Germs two, or three, coalesced. Style one, threadform, incurved, shorter than the longest filament. Stigma, simple.

Pen. Capfules two or three, mostly two, coalesced back to back; each keeled, and extended into three oblong membranous wings, the lateral shorter than the central.

SEEDS roundish, solitary.

Racemes axillary. Flowers descately fragrant;
white, with a shade of pink: the large petal, supported by the nectareous tubercle, shaded internally with bright yellow and pale red. Bracts linear; Wings of the seed, light brown; the long ones russet. Leaves opposite, eggoblong, pointed. Petiols short. Stipules linear, soft, three or sour to each petiol. Two glands at the base of each leaf. Stem pale brown, ringed at the insertion of the leaves, downy.

This was the favourite plant of SACONTALA, which she very justly called the Delight of the Woods; for the beauty and fragrance of its slowers give them a title to all the praises, which CALIDA'S and JAYADE'VA bestow on them; it is a gigantick and luxuriant climber; but, when it meets with nothing to grasp, it assumes the form of a sturdy tree, the highest branches

of which display, however, in the air their natural flexibility and inclination to climb. The two names Vásantì and Mádbavì indicate a vernal flower; but I have seen an Atimucta rich both in blossoms and fruit on the first of January.

46. A'MRA'TACA:

SYN. Pitana, Capitana.

VULG. Amdá, pronounced Amrá, or Amlá. LINN. Spondias Myrobalan β. or a new species.

The natural character as in LINNEUS. Leaves feathered with an odd one; leaflets mostly five-paired, egg-oblong, pointed, margined, veined, nerved; common petiol, smooth, gibbous at the base. Flowers raceme-panicled, yellowish white. Fruit agreeably acid; thence used in cookery. VAN RHEEDE calls it Ambado or Ambalam; and, as he describes it with five or fix styles, it is wonderful, that HILL should have supposed it a Chrysobalanus.

47. HE'MASA'GARA; or the Sea of Gold.

VULG. Himfågar.

LINN. Jagged-leaved Cotyledon.

CAL. Perianth four-cleft; divisions acute.

Cor. One-petaled: Tube, four-angled, larger at the base; border four-parted; divisions, egged, acute. Nectary, one minute concave scale at the base of each germ.

STAM. Filaments eight, adhering to the tube;

four, just emerging from its mouth; four, alternate, shorter. Anthers erect, small, furrowed.

PIST. Germs four, conical. Styles, one from each germ, awled, longer than the filaments. Stigmas fimple.

PER. Capfules four, oblong, pointed, bellied, one-valved, burfting longitudinally within.

SEEDS numerous, minute.

Panicles terminal. Flowers of the brightest gold-colour. Leaves thick, succulent, jagged, dull sea-green. Stem jointed, bending, in part recumbent. This plant slowers for many months annually in Bengal: in one blossom out of many, the numbers were ten and sive; but the silaments alternately long and short.

48. MADHU'CA:

Syn. Gurapushpa, Madbudruma, Vánaprast ba, Madbusht bíla, Madbu.

Vulg. Maüyála, Mabuyá, Mabwá.

LINN. Longleaved BASSIA

49. CAHLA'RA:*

SYN. Saugandbica, or Sweet-scented.

Vulg. Sundbi-bálá, or Sundhi-bálá-náli.

LINN. NYMPHEA Lotos.

^{*} According to the facred Grammar, this word was written Cablhara, and pronounced as Callara would be in ancient British. When the flowers are red. the plant is called Hallaca and Ratla fandhaca.

Calyx as in the genus.

Con. Petals fifteen, lanced, rather pointed and keeled; the exterior feries green without, imitating an interior calyx.

STAM. Filaments more than forty; below tlat, broad; above narrow, channelled within, fmooth without; the outer feries erect, the inner fomewhat converging. Anthers awled, erect; fome coloured like the petals.

PIST. Germ large, orbicular, flat at the top; with many (often feventeen) furrows externally, between which arise as many processes, converging toward the stigma: the disk, marked with as many furrowed rays from the center, uniting on the margin with the converging processes. Stigma roundish, rather compressed, session in the center of the disk, permanent.

PER. Berry, in the form of the germ expanded, with fixteen or seventeen cells.

Seeds very numerous, minute, roundish. Flowers beautifully azure; when full blown, more diluted; less fragrant than the red or rose-coloured, but with a delicate scent. Leaves radical, very large, subtargeted, hearted, deeply scollop-toothed. On one side dark purple, reticulated; on the other, dull green, smooth. Petiols very smooth and long, tubular. The seeds are eaten, as well as the bulb of the

RHEEDE to the whole plant, through the word Camala, which belongs to another Linnæan species of Nymphæa, be clearly engraved on his plate in Nágarì letters. There is a variety of this species with leaves purplish on both sides; slowers dark crimson, calycine petals richly coloured internally, and anthers stat, surrowed, adhering to the top of the silaments: the petals are more than sisteen, less pointed and broader than the blue, with little odour.

The true Lotos of Egypt is the NYMPHEA Nilufer, which in Sanscrit has the following names or epithets: PADMA, Nalina, Aravinda, Mabotpala, Camala, Cuséshaya, Sabasirapatra, Sárasa, Pancéruba, Támarasa, Sarasiruba, Rásiva, Visaprasuna, Pushcara, Ambbóruba, Satapatra. The new-blown flowers of the rose-coloured PADMA have a most agreeable fragrance; the white and yellow have less odour: the blue, I am told, is a native of Cashmír and Persia.

50. CHAMPACA:

SYN. Chámpéya, Hémapushpaca.

Vulg. Champac, Champa.

LINN. Michelia.

The delineation of this charming and celebrated plant, exhibited by VAN RHEEDE, is very correct, but rather on too large a feale:

no material change can be made in its natural character given by LINNÆUS; but, from an attentive examination of his two species, I fufpect them to be varieties only, and am certain, that his trivial names are merely different ways of expressing the same word. The strong aromatick fcent of the gold-coloured Champac is thought offensive to the bees, who are never feen on its bloffoms; but their elegant appearance on the black hair of the Indian women is mentioned by RUMPHIUS; and both facts have fupplied the Sanscrit poets with elegant allufions. Of the wild Champac, the leaves are lanced or lance-oblong; the three leaflets of the calyx, green, oval, concave; the petals conflantly fix, cream-coloured, fleshy, concave, with little fcent; the three exterior, inverfe-egged; the three interior, more narrow, shorter pointed, converging; the antbers clubbed, closely fet round the base of the imbricated germs, and with them forming a cone; the stigmas, minute, jagged.

Both Mr. MARSDEN and RUMPHIUS mention the blue Champac as a rare flower highly prized in Sumatra and Java; but I should have suspected, that they meant the KEMPFERIA Bhuchampac, if the Dutch naturalist had not afferted, that the plant, which bore it, was a tree resembling the Champaca with yellow

bloffoms: he probably never had feen it; and the *Brábmens* of this province insist, that it flowers only in paradife.

51. DE'VADA'RU:

Syn. Sacrapádapa, Páribbadraca; Bhadradáru, Dubcilima, Pítadáru, Dáru, Púticásht'ba.

Vulg. Dévadar.

LINN. Most lofty UNONA.

52. PARNASA:

SYN. Tulasi, Cat' binjara, Cut' béraca, Vrindá.

VULG. Tulosì, Tulfi.

LINN. Holy OCYMUM?

The Natural Character as in LINNÆUS.

See 10 H. M. p. 173.

It is wonderful, that RHEEDE has exhibited no delineation of a shrub so highly venerated by the Hindus, who have given one of its names to a sacred grove of their Parnassus on the banks of the Yamuna: he describes it, however, in general terms, as resembling another of his Tolassis (for so he writes the word, though Tulassi be clearly intended by his Nagari letters); and adds, that it is the only species reputed boly, and dedicated to the God Vishnu. I should, consequently, have taken it for the Holy Ocynum of Linnæus, if its odour, of which that species is said to be nearly destitute, had not been very aromatick and grateful; but it is more

probably a variety of that species, than of the Small-flowered, which resembles it a little in fragrance: whatever be its Linnæan appellation, if it have any, the following are the only remarks that I have yet had leifure to make on it.

Stem one or two feet high, mostly incurved

above; knotty, and rough, below. Branchlets cross-armed, channelled. Leaves oppofite, rather small, egged, pointed, acutely fawed; purple veined, beneath; dark, above. Petiols dark purple, downy. Racemes terminal; Flowers verticilled threefold, or fivefold, cross-armed; verticils from seven to fourteen; Peduncles dark purple, channelled, villous; bracts feffile, roundish, concave, reflected. Calyx, with its upper lip orbicular, deeply concave externally. Corol bluish purple. The whole plant has a dufky purplish hue approaching to black, and thence perhaps, like the large black bee of this country, it is held feered to CRISHNA; though a fable, perfectly Ovidian, be told in the Puranas concerning the metamorphofis of the nymph Tulasi, who was beloved by the paftoral God, into the shrub, which has fince borne her name: it may not be improper to add, that the White OCYMUM is in Sanscrit called Arjaca.

53. PA'TALI:

SYN. Pátala, Amogbà, Cáchaft bali, P'bali-

rubà, Crishnavrintà, Cuvérácshì. Some read Móghá and Cálást háli.

Vulg. Páralá, Pàrali, Párul.

LINN. BIGNONIA. Chelonoides?

CAL. Perianth one-leaved, belled, villous, withering, obscurely five-angled from the points of the divitions, five-parted; divisions, roundish, pointed, the two lowest most distant.

Con. One-petaled, belled. Tube very short; throat, oblong-belled, gibbous. Border sive-parted; the two bigber divisions reflected, each minutely toothed; convex externally; the three lower divisions, above, expanded; below, ribbed, surrowed, very villous. Palate nearly closing the throat. Nectary, a prominent rim, surrounding the germ, obscurely sive-parted.

STAM. Filaments four or five, incurved, inferted below the upper division of the border, shorter than the corol, with the rudiment of a fifth or fixth, between two shorter than the rest. Anthers, two-cleft, incumbent at obtuse angles.

PIST. Germ oblong-conical. Style thread-form, as long as the stamens. Stigma headed with two folds, often closed by viscidity.

PER. Capfule one-celled, two-valved, twelve inches long at a medium, and one inch thick; rounded, four-fided, pointed, incurved, rather

with ashy specks, here and there slightly prominent, striated; two stripes broader, very dark, at right angles with the valves.

REC. A feries of hard, broadish, woody rings, closely strung on two wiry central threads.

SEEDS numerous, forty-eight on an average, three-angled, inferted by one angle in cavities between the rings of the receptacle, into which they are closely pressed by parallel ribs in the four sides of the capsule; winged on the two other angles with long subpellucid membranes, imbricated along the sides of the receptacle.

Tree rather large. Stem scabrous.

with small white lines. Leaves feathered with an odd one; two or three paired, petioled. Leaslets opposite, egged, pointed, most entire, downy on both sides, veined; older leaslets roughish, margined, netted and paler below, daggered. Petiols tubercled, gibbous at the base; of the paired leaslets, very short; of the odd one, longer. Stipules, linear. Flowers panicled; pedicels opposite, mostly three-slowered; an odd slower subsessible between the two terminal pedicels. Corol externally, light purple above, brownish purple below, hairy at its convexity; inter-

nally, dark yellow below, amethystine above; exquifitely fragrant, preferred by the bees to all other flowers, and compared by the poets to the quiver of CA'MADE'VA, or the God of Love. The whole plant, except the root and stem, very downy and viscid. The fruit can fcarce be called a filique, fince the feeds are no where affixed to the futures; but their wings indicate the genus, which might properly have been named Pterospermon: they are very hard, but enclose a white sweet kernel; and their light-coloured fummits with three dark points, give them the appearance of winged infects. Before I faw the fruit of this lovely plant, I suspected it to be the BIGNONIA Chelonoides, which VAN RHEEDE calls Pádri; and I conceived that barbarous word to be a corruption of Pátali: but the pericarp of the true Patali, and the form of the feeds, differ fo much from the Pádri, that we can hardly consider them as varieties of the fame species; although the specifick character exhibited in the Supplement to LIN-NÆUS, corresponds very nearly with both plants.

The Pátali blossoms early in the spring, before a leaf appears on the tree, but the fruit is

not ripe till the following winter.

54. GO'CANT'ACA:

Syn. Palancashá, Icshugandhá, Swadanshtrá, Swadaucantaca, Gócshuraca, Vanastriigáta.

Vulg. Gócshura, Gókyura, Culpi.

RHEEDE: Bahél Chulh.

LINN. Long-leaved BARLERIA?

CAL. Perianth one-leaved, hairy, five-toothed; upper tooth, long, incurved, pointed; two under, and two lateral, shorter, subequal, winged with subpellucid membranes.

COR. One-petaled, two-lipped. Tube flattish, curved, protuberant at the mouth. Upper lip erect, two-parted, reflected at the sides, concave in the middle, enclosing the fructification. Under lip three-parted, reflected, with two parallel, callous, hispid bodies on the center of its convexity; Divisions, inverse-hearted.

STAM. Filaments four, inferted in the mouth of the tube; connected at their base, then separated into pairs and circling round the pistil; each pair united below, consisting of a long and a short filament. Anthers arrowed.

PIST. Germ awled; pointed, furrowed, with prominent feedlets, fitting on a glandular pedicel. Style thread-form, longer than the stamens, incurved above them. Stizma simple.

PER.

Flowers verticilled; Corols blue, or bright vio-

let; center of the under lip yellow. Verticils, each furrounded by fix thorns, very long, diverging, coloured above; under which are the leaves, alike verticilled, lanced, acutely fawed, pubefcent, interspersed with bristles. Stem jointed, flattish, hairy, reddish; furrowed on both sides; broader at the joints, or above the verticils; furrows alternate.

55. SINDHUCA:

Syn. Sindbuvára, Indrafurifa, Nirvandi, Indranicà.

Vulg. Nisindà.

LINN. Three-leaved VITEX; or Negundo?

CAL. Perianth five-toothed, beneath, permanent; toothlets acute, fubequal.

Cor. One-petaled, grinning; Tube funnelfhaped, internally villous; border two-lipped; upper lip broad, concave, more deeply coloured; under lip four-cleft; divisions, acute, fimilar.

STAM. Filaments four; two shorter, adhering to the Tube, villous at the base. Anthers half-mooned.

PIST. Germ globular; Style thread-form; Stigma two-parted, pointed, reflex.

PER. Berry (unless it be the coat of a naked feed) roundish, very hard, black, obfcurely furrowed, with the calyx closely adhering.

SEEDS from one to four? I never faw more than one, as RHEEDE has well described it.

FLOWERS raceme-panicled; purplish or dark blue without, greyish within, small. Racemes mostly terminal; some pedicels, many-flowered.

STEM distinctly four-fided; fides channelled; jointed, bending. Stipules egged, scaly, thickish, close. Branchlets cross-armed.

The tube of the corol is covered internally with a tangle of filvery filky down, exquifitely beautiful; more denfe below the upper lip.

This charming thrub, which feems to delight in watery places, rifes to the height of ten or twelve, and fometimes of twenty, feet; exhibiting a most elegant appearance, with rich racemes or panicles lightly dispersed on the fummit of its branchlets. On a comparison of two engravings in RUMPHIUS, and as many in VAN RHEEDE, and of the descriptions in both works, I am nearly perfuaded that the SINDHUCA or Nirgandi, is the VITEX Negundo of LINNEUS; but it certainly refembles the three-leaved VITEX in its leaves, which are opposite, egged, acute, petioled; above mostly threed; below mostly fived; paler beneath; rarely fawed and very flightly, but generally entire: they are very aromatick, and pillows are stuffed with them, to remove a cold in the head and a head-ach

occasioned by it. These, I presume, are the shrubs, which Bontius calls Lagondi, and which he seems to consider as a panacea.

56. CA'RAVE'LLA:

Syn. Cátillaca, Sufhavi.

Vulg. Beng. Hurburiya; Hind. Carailá.

LINN. Five-leaved Cleome?

CAL. Perianth four-leaved, gaping at the base, then erect; leastess egg-oblong, concave, downy; deciduous.

COR. Cross-form. Petals four, expanding, claws long; folds wrinkled.

Nectary, from fix to twelve roundish, perforated glands, girding the gibbous receptacle.

STAM. Filaments fix, threadform, hardly differing in length, inferted on a pedicel below the germ. Anthers erect, pointed, furrowed.

Pist. Germ erect, linear, long, downy, fitting on the produced pedicel. Style very short. Stigma headed, flat, circular.

PER. Silique one-celled, two-valved, fpindlefhaped, with protuberant feeds; crowned with the permanent style.

SEEDs very many, roundish, nodding. Receptacles linear, often more than two.

The whole plant, most distinctly one piece. Root whitish, with scattered capillary sibres. Stem herbaceous, pale green, in parts purple, rairy, cross-armed, produced into a long raceme

crowded at the fummit. Branchlets, fimilar to the stem, leaf-bearing; fimilar, but smaller leaves rifing also from their axils. Leaves fixed, roundish-rhomboidal, notched, pointed, hairy, dark green, the lower pairs respectively equal, the odd one much larger, strongly ribbed with proceffes from the petiol-branches, conjoined by the basis of the ribs, in the form of a starlet; each ray, whitish and furrowed within. Calyx green. Petals white. Anthers covered with gold-coloured pollen. Pedicels purplish. Brasts threed, fimilar to the cauline leaves. The fenfible qualities of this herb feem to promife great antifpafmodick virtues; it has a fcent much refembling assa fatida, but comparatively delicate and extremely refreshing. For pronouncing this Cleone the Caravella of the ancient Indians, I have only the authority of RHEEDE, who has exactly written that word in Malabar letters: as to his Brahmanical name Tiloni, my vocabularies have nothing more like it than Tilaca, to which Cshuraca and Srimat are the only fynonyma.

57. NA'GACE'SARA:

Syn. Chámpéya, Céfara; Cánchana, or any other name of gold.

Vui.G. Nagafar.

LINN. Iron MESUA.

To the botanical descriptions of this delight-

ful plant, I need only add, that the tree is one of the most beautiful on earth, and that the delicious odour of its bloffoms justly gives them a place in the quiver of CAMADE'VA. In the poem, called Naishadba, there is a wild, but elegant, couplet, where the poet compares the white of the Nagacefara, from which the bees were feattering the pollen of the numerous goldcoloured anthers, to an alabafter wheel, on which CA'MA was whetting his arrows, while fparks of fire were dispersed in every direction. Surely, the genuine appellation of an Indian plant should be substituted for the corrupted name of a Syrian physician who could never have feen it; and, if any trivial name were necessary to diffinguish a fingle species, a more absurd one than iron could not possibly have been felected for a flower with petals like filver and anthers like gold.

58. S'A'LMALI:

SYN. Pich' bilá, Púrani, Móchá, St' biráyush.

VULG. Semel.

LIN. Seven-leaved BOMBAX.

59. S'ANA':

SYN. S'anápushpicá, Ghant'áravá

Vulg. San, pronounced Sun.

LINN. Rushy Crotalaria.

CAL. Perianth one-leaved, villous, permanent; fhort below, gibbous on both fides, with

minute linear tracts. Upper teeth, two, lanccd, preffing the banner; lower tooth, boatform, concave, two-gashed in the middle, cohering above and below; sheathing the keel, rather shorter than it; pointed.

Cor. Boat-form.

Banner, broad, large, acute, rather hearted, with two dark callofities at the base, and with compressed sides, mostly involving the other parts: a dark line from base to point.

Wings inverse-egg-oblong, with dark callous bodies at their axils, two-thirds of the banner

in length.

Keel flattened at the point, nearly closed all round to include the fructification, very gibbous below to receive the germ.

STAM. Filaments ten, coalefced, cleft behind, two-parted below; alternately short with linear furrowed erect, and long with roundish, anthers.

PIST. Germ rather awled, flat, villous, at a right angle with the ascending, cylindrick, downy Style. Stigma pubescent, concave, open, somewhat lipped.

PER. Legume pedicelled, fhort, velvety, turgid, one-celled, two-valved.

SEEDS, from one or two to twelve or more, round-kidney-form, compressed.

Flowers deep yellow. Leaves alternate, lanced,

paler beneath, keeled; petiols very short; stipules, minute, roundish, villous. Stem striated.

Threads, called pavitraca, from their supposed purity, have been made of Sana from time immemorial: they are mentioned in the laws of Menu.

The retuse-leaved Crotalaria, which Van Rheede by mistake calls Schama Puspi, is cultivated, I believe, for the same purpose. Rumphius had been truly informed, that threads for nets were made from this genus in Bengal: but he suspected the information to be erroneous, and thought that the persons who conveyed it, had consounded the Grotalaria with the Capsular Corchorus: strong ropes and canvas are made of its macerated bark.

The Jangal-s'an, or a variety of the watery Cro-TALARIA, has very beautiful flowers, with a greenish white banner, purple-striped, wings, bright violet: Jtem, four-angled, and fourwinged; leaves egged, obtuse, acute at the base, curled at the edges, downy; Jipules, two, declining, mooned, if you chuse to call them so, but irregular, and acutely pointed. In all the Indian species, a difference of soil and culture occasion varieties in the flower and fructification. to. JAYANTI':

SYN. Jayá, Tercári, Nádéyi, Vaijayanticá.

VULG. Jainti, Jábi; some say, Arant.

RHEEDE. Kedangu.

LINN. ESCHYNOMENE Sefban.

CAL. Perianth one-leaved, rather belled, fivecleft; tootblets, awled, erect, subequal, more distant on each side of the awning; permanent.

COR. Boat-for

Awning very broad, rather longer than the wings, inverse-hearted, quite reslected so as to touch the calyx; waved on the margin; furrowed at the base internally, with two converging hornlets, fronting the aperture of the keel, gibbous below, awled upwards, acute, erect, within the wings. Wings oblong, clawed, narrower above, obtuse, spurred below, embracing the keel and the hornlets of the awning.

Keel compressed, enclosing the fructification, inflected nearly in a right angle, gashed below and above the flexure; each division hatchet-

form; beautifully striated.

STAM. Filaments simple and nine-cleft, inflected like the keel; the simple one curved at the base. Anthers oblong, roundish.

PIST. Germ compressed, linear, erect as high as the flexure of the filaments with visible

partitions. Style nearly at a right angle with the germ, awled, inflected like the stamen. Stigma rather headed, somewhat cleft, pellucid.

PER. Legume very long, slender, wreathed when ripe, smooth at the valves, but with feeds rather protuberant, many-parted, terminated with a hard sharp point.

SEEDS oblong, rather kidney-shaped, smooth, flightly affixed to the suture, solitary.

Stem arborescent, rather knotty. Leaves seathered, pairs from nine to fifteen, or more, often alternate; leaflets oblong, end-nicked, some with an acute point, dark green above, paler beneath, with a gibbolity at the infertion of the petiols; fleeping, or collapfing, towards night. Racemes axillary; pedicels with a double curvature or line of beauty; flowers small, fix or seven; varying in colour; in some plants, wholly yellow; in others, with a blackish-purple awning yellow within, and dark yellow wings tipped with brown; in some with an awning of the richest orangescarlet externally, and internally of a brightyellow; wings yellow, of different shades; and a keel pale below, with an exquisite changeable light purple above, striated in elegant curves. The whole plant is inexpressibly beautiful, especially in the colour of the buds and leaves, and the grace of all the curves, for there is no proper angle in any part of it. The Brahmens hold it facred: VAN RHEEDE fays, that they call it Cananga; but I never met with that word in Sanscrit: it has parts like an Hedysarum, and the air of a Cytisus.

61. PALA'SA:

SYN. Cinsuca, Parna, Vatapot ha.

Vulg. Palás, Plás, Dbác.

KOEN. Butea frondosa.

CAL. Perianth belled, two-lipped; upper lip broader, obscurely end-nicked; under lip threecleft, downy; permanent.

Cor. Boat-form.

Awning reflected, hearted, downy beneath; fometimes, pointed.

Wings lanced, ascending, narrower than the keel.

Keel, as long as the wings, two-parted below, half-mooned, afcending.

STAM. Filaments nine and one, ascending, regularly curved. Anthers linear, erect.

PIST. Germ pedicelled, oblongish, downy.

Style awled, about as long as the stamens. Stigma small, minutely cleft.

Per. Legume pedicelled, oblong, compreffed, depending.

SEED one, toward the apex of the pericarp, flat, fmooth, oval-roundish.

Flowers raceme-fascicled, large, red, or French scarlet, filvered with down.

Leaves threed, petioled; leaflets entire, stipuled, large, rhomboidal; the lateral ones unequally divided; the terminal one, larger, equally biffected; brightly verdant. A perfect description of the arborescent and the twining PA-LA'SA has been exhibited in the last volume, with a full account of its beautiful red gum; but the fame plant is here shortly described from the life, because few trees are considered by the Hindus as more venerable and holy. The Palafa is named with honour in the Védas, in the laws of MENU, and in Sanscrit poems, both facred and popular; it gave its name to the memorable plain called Plaffey by the vulgar, but properly Paláfi; and, on every account, it must be hoped, that this noble plant will retain its ancient and claffical appellation. A grove of Palásas was formerly the principal ornament of Crifbnanager, where we still see the trunk of an aged tree near fix feet in circumference. This genus, as far as we can judge from written descriptions, seems allied to the Nissolia,

62. CARANJACA:

SYN. Chirabilva, Nactamála, Caraja.

Vulg. Caranja.

RHEEDE: Caranschi, 6 H. M. tab. 3.

GAL. Perianth one-leaved, cup-form, obscurely five-toothed, or scalloped, beaked.

COR. Boat-form.

Awning broad, end-nicked, striated, rather spirally inslected, with two callosities at its base.

Wings oblong, of the fame length with the awning.

Keel rather shorter, gibbous below, two-parted. STAM. Filaments nine in one body, gaping at the base, and discovering a tenth close to the style. Anthers egged, erect.

PIST. Germ above, oblong, downy. Style incurved at the top. Stigma rather headed.

PER. Legume mostly one-seeded, thick, rounded above, flattish, beaked below.

SEED oblong-roundish, rather kidney-form.

Racemes axillary. Awning pale; wings violet.

Leaves feathered with an odd one, mostly two-paired; leassets egg-oblong, pointed, keeled, short-petioled; brownish on one side, pale on the other. Common petiol gibbous at its base. The seed yields an oil supposed to be a cure for the most inveterate scabies.

63. ARJUNA:

Syn. Nadisarja, Virataru, Indradru, Cacubba. Vulg. Jaral.

RHEEDE. Adamboe; 4 H. M. tab. 20, 21, 22.

LINN. Beautiful MUNCHHAUSIA?

Koen. Queen's-flower LAGERSTROEMIA?

CAL. Perianth one-leaved, fix-cleft, top-shaped, furrowed, with protuberant ridges, downy, permanent; divisions, coloured, with points reslected.

Cor. Petals fix, roundish, somewhat notched, expanding, wavy; claws short, inserted in the calyx.

STAM. Filaments coloured, numerous, capillary shortish, obscurely conjoined in six parcels, one to each division of the calyx; Anthers thick, incumbent, roundish, kidney-shaped.

PIST. Germ above, egged. Style coloured, longish, thread-form, incurved. Stigma obtuse.

PER. Capfule egged, fix-celled, fix-valved. SEEDs numerous.

Panicles, racemed, terminal, erect. Flowers violet or light purple, in the highest degree beautiful. Leaves alternate, leathery, some opposite, egg-oblong, stipuled, most entire, shortpetioled, smooth, paler beneath. Branches round and smooth: I have seen a single panicle, waving near the summit of the tree, covered with blossoms, and as large as a milkmaid's garland. The timber is used for the building of small boats.

64. VANDA:

Syn. Vrieshadani, Vriesharuba, Jivantica.

Vulg. Bándà, Persárà, Perasárà.

These names, like the Linnæan, are applicable to all parasite plants.

LINN. Retufe-leaved EPIDENDRUM?

CAL. Spathes, minute, straggling.

Cor. Petals five, diverging, oval-oblong, obtufe, wavy; the two lowest larger; the three highest, equal, bent towards the nectary.

Nectary central, rigid: Mouth gaping oblique:

Upper lip shorter, three-parted, with a polished honey-cup; under lip, concave in the middle, keeled above, with two smaller cavities below; two processes at the base, incurved, hollow, oval-pointed, converging, honey-bearing.

STAM. Filaments very short, Anthers round, flattish, margined, covered with a lid, easily deciduous from the upper lip of the nectary.

Pist. Germ beneath, long, ribbed, contorted with curves of opposite flexure. Style very short, adhering to the upper lip. Stigma simple.

Per. Capfule oblong-conick, wreathed, fixkeeled, each with two fmaller keels, threecelled, crowned with the dry corol.

SEEDS innumerable like fine dust, affixed to the Receptacle with extremely fine hairs, which become thick wool.

Scapes incurved, folitary, from the cavity of the leaf, at most seven-flowered: pedicels alter

nate. Petals milk-white externally, transparent; brown within, yellow-spotted. Upper lip of the nectary fnow-white; under lip, rich purple or light crimfon striated at the base, with a bright yellow gland, as it seems, on each process. The flowers gratefully fragrant and exquifitely beautiful, looking as if composed of shells or made of enamel; crisp, elaftick, viscid internally. Leaves sheathing, opposite, equally curved, rather fleshy, swordform, retuse in two ways at the summit, with one acute point. Roots fibrous, fmooth, flexible; shooting even from the top of the leaves. This lovely plant attaches itself chiefly to the highest Amras and Bilvas; but it is an air-plant, and lives in a pot without earth or water: its leaves are excavated upwards, to catch and retain dew. It most resembles the first and second Maravaras of VAN RHEEDE in its roots, leaves, and fruit, but rather differs from them in its inflorescence. Since the parafites are diffinguished by the trees, on which they most commonly grow, this may in Sanscrit be called Amaravanda; and the name Baculavanda should be applied to the Lorantbus; while the Viscum of the Oak, I am told, is named Vanda fimply and transcendently, the Vandáca, or Oak, being held facred.

65. AMALACI':

SYN. Tifbyap'balá, Amritá, Vayaft bá.

Vulg.

LINN. PHYLLANTHUS Emblica

66. GAJAPIPPALI':

Syn. Caripippali, Capiballi, Colaballi, S'réyas'i, Vas'ira. Some add, Chavicá or Chavya, but that is named, in the Amaracósh, as a distinct plant, vulgarly Chava or Chayi.

Vulg. Pippal-j'hanca, Maidab.

Male Flowers.

CAL. Common Perianth four-leaved; leaflets, toundish, concave; the two exterior, oppofite, finaller; containing from eight to fourteen florets. Partial calyx, none.

Cor. None. Nectary, many yellow glands

on the pedicel of the filaments.

STAM. Filaments from eight to eighteen in each floret, connected by a short villous pedicel, threadform, very hairy. Anthers large, netted, irregular, inflated, containing the pollen.

PIST. Rudiments of a germ and flyle, wi-

thering.

Female Flowers.

CAL. Common Perianth as in the male, but fmaller; containing from ten to twelve florets.

Partial calyx, none; unless you affume the corol.

Cor. Many-petaled, belled. Petals erect lance-linear, fleshy, covered within, and externally with white hairs. Nectary, yellow glands sprinkling the receptacle.

Pist. Germ oval. Style cylindrick, curved at the base. Stigma headed.

PER. Berry globular, one-feeded.

SEED, fpherical, fmooth.

Flowers umbelled, yellow from their anthers. Leaves mostly oblong-lanced, but remarkably varying in shape, alternate. Both flowers and fruit have an agreeable scent of lemonpeel; and the berries, as a native gardener informs me, are used as a spice or condiment: it was from him that I learned the Sanfcrit name of the plant; but as balli means a creeper, and as the Pippal-jbanca is a tree perfectly able to fland without support, I fuspect in some degree the accuracy of his information; though I cannot account for his using a Sanscrit word without being led to it, unless he had acquired at least traditional knowledge. It might be referred, from the imperfect mixed flower, to the twentythird class.

67. SACOTACA:

SYN.

Vui.G. Sy'ura, or Syaura, Koen. Roughleaved Trophis?

MALE.

CAL. Common imbricated; leaflets fix or eight, egged, acute, small, expanding, withering, containing generally from five to seven flowerets. Partial four-parted; divisions egged, expanded, villous.

Cor. None, unless you assume the calyx.

STAM. Filaments mostly four, (in some, three; in one, sive) awled, sleshy, rather compressed, spreading over the divisions of the calyx, and adhering to them at the point. Anthers double, folded.

The buds elastick, springing open on a touch.

FEMALE.

CAL. Four-parted; divisions egged, concave, pointed, permanent, propped by two finall bracts; unless you call them the calyx.

Cor. None; unless you give the calyx that name.

PIST. Germ roundish. Style very short, cylindrick. Stigma long, two-parted, permanent.

PER. Berry one-feeded, navelled, smooth, somewhat flattened.

SEED globular, arilled.

Leaves various, fome inverse-egged, some oblong, some oval, pointed, irregularly notched, alternate (some opposite), crowded, crisp, very rough veined, and paler beneath, smoother and dark above. Berry, deep yellow. The Pandits having only observed the male plant, insist that it bears no fruit. Female slowers axillary, from one to four or five in an axil.

68. VIRANA:

SYN. Viratara.

Vulg. Béná, Gándár, Cata.

RETZ. Muricated ANDROPOGON.

ROXB. Aromatick ANDROPOGON.

The root of this useful plant, which Call-Das calls usira, has nine other names thus arranged in a Sanscrit verse:

Abbaya, Nalada, Sévya, Amrinala, Jalas aya, Lámajjaca, Laghulaya, Avadába, Ishtacapat ba. It will be fufficient to remark, that Jalafaya means aquatick, and that Avadába implies a power of allaying feverish heat; for which purpele the root was brought by GAUTAMI to her pupil SACONTAL'A: the slender fibres of it, which we know here by the name of C'bas or Kbajkbas, are most agreeably aromatick, when tolerably fresh; and among the innocent luxuries of this climate, we may affign the first rank to the coolness and fragrance, which the large hurdles or fcreens in which they are interwoven, impart to the hottest air, by the means of water dashed through them; while the strong southern wind fpreads the scent before it, and the quick evaporation contributes to cool the atmofphere. Having never seen the fresh plant, I guessed from the name in VAN RHEEDE, and from the thin roots, that it was the Asiatick Acorus; but a drawing of Dr. Roxburgh's has convinced me, that I was mistaken.

69. SAMI':

SYN. Sactu-p' bala, S'ivá.

VULG. Sáën, Bábul.

LINN. Farnefian MIMOSA.

Thorns double, white, black-pointed, flipular. Leaves twice-feathered; first, in three or four pairs; then in pairs from fourteen to fixteen. Spikes globular, with fhort peduncles; yellow, perfuming the woods and roads with a rich aromatick odour. A minute gland on the petiols below the leaflets. Wood, extremely hard, used by the Brábmens to kindle their facred fire, by rubbing two pieces of it together, when it is of a proper age and fufficiently dried. Gum femi-pellucid. Legumes rather fpindle-shaped, but irregular, curved, acutely pointed, or daggered, with twelve or fourteen feeds rather prominent, gummy within. Seeds roundish, compressed. The gum of this valuable plant is more transparent than that of the Nilotick of Arabian species; which the Arabs call Ummu'lgbilan, or Mother of Serpents, and the Persians, by an eafy corruption, Mugbilan,

SAMIRA means a fmall Sami; but I cannot learn to what species that diminutive form is applied.

LAJJA'RU (properly Lajjálu) fignifies bashful, or sensitive, and appears to be the word engraved on a plate in the Malabar Garden; though VAN RHEEDE pronounces it LAURI: there can be no doubt, that it is the swimming Mimosa, with sensitive leaves, root enclosed in a spungy cylinder, and slowerets with only ten filaments. Linnæus, by a mere slip, has referred to this plant as his Dwarf Æschynomene; which we frequently meet with in India.—See 9 H. M. tab. 20. The epithet Lajjálu, is given by the Pandits to the Modest Mimosa.

70. CHANDRACA:

SYN. Chandrapushpa.

Vulg. Ch'bota Chánd, or Moonlet.

RHEEDE: Sjouanna Amelpodi, 6 H. M. t. 47.

LINN. Serpent OPHIOXYLUM.

CAL. Perianth, five-parted, small, coloured, erect, permanent: divisions, egged, acutish.

Cor. Petal, one. Tube very long in proportion; jointed near the middle, gibbous from the enclosed anthers; above them, rather funnel-form. Border five-parted; divisions, inverse-egged, wreathed.

PIST. Germ above, roundish. Style thread-

form. Stigma irregularly headed; with a circular pellucid base, or nectary, extremely viscid.

PER. Berry mostly twinned, often fingle, roundish, smooth, minutely pointed, one-seeded.

SEED on one fide flattish, or concave; on the other, convex.

Flowers fascicled. Bracts minute, egged, pointed, coloured. Tube of the corol, light purple; border, fmall, milkwhite. Calyx, first pale pink, then bright carmine. Petiols, narrow-winged. Leaves oblong-oval, pointed, nerved, dark and gloffy above; mostly threefold, fometimes paired, often four-fold near the fummit; margins wavy. Few shrubs in the world are more elegant than the Chandra, especially when the vivid carmine of the Perianth is contrasted not only with the milkwhite corol, but with the rich green berries, which at the fame time embellish the fascicle: the mature berries are black, and their pulp light purple. The Bengal peafants affure me, as the natives of Malabar had informed RHEEDE, that the root of this plant feldom fails to cure animals bitten by fnakes, or flung by fcorpions; and, if it be the plant, supposed to affift the Nacula, or VIVERRA Ichneumon, in his battles with ferpents, its nine fynonyma have been strung together in the following distich:

Náculi, Surafá, Ráfná, Sugandbá, Gandbanáculi,

Náculéshtá, Bhujangácshí, Ch' batrica, Suvabá, nava.

The vulgar name, however, of the ichneumon-plant is Rafan, and its fourth Sanscrit appellation fignifies well-scented; a quality which an ichneumon alone could apply to the Opbioxylum; fince it has a strong, and rather a fetid, odour: the fifth and fixth epithets, indeed, feem to imply that its fcent is agreeable to the Nacula; and the seventh (according to the comment on the Amaracash), that it is offensive to fnakes. It is afferted by some, that the Rásan is no other than the Rough Indian ACHYRANIHES, and by others, that it is one of the Indian ARISTO LOCHIAS. From respect to LINNEUS, I leave this genus in his mixed class; but neither my eyes, nor far better eyes than mine, have been able to discover its male flowers; and it must be confessed, that all the descriptions of the Opbioxylum, by RUMPHIUS, BURMAN, and the great botanist himself, abound with erroneous references, and unaccountable overfights.

71. PIPPALA:

SYN. Bodbi-druma, Chala-dala', Cunjarás'anas, Anwat'tha.

VULG. Pippal.

LINN. Holy Ficus: but the three following are also thought boly. Fruit small, round, axillary, sessile, mostly twin. Leaves hearted, scalloped, glossy, daggered; petiols very long; whence it is called chaladala, or the tree with tremulous leaves.

72. UDUMBARA:

SYN. Jantu-p'bala, Yajnyánga, Hémadugdbaca. Vulg. Dumbar.

LINN. Racemed Ficus.

Fruit peduncled, top-shape, navelled, racemed.

Leaves egg-oblong, pointed, some hearted, obscurely sawed, veined, rough above, netted beneath. VAN RHEEDE has changed the Sanscrit name into Roembadoe: it is true, as he says, that minute ants are hatched in the ripe fruit, whence it is named Jantu-p'hala; and the Pandits compare it to the Mundane Egg.

73. PLACSHA:

Syn. Jati, Parcati.

VULG. Pácari, Pácar.

LINN. Indian Figus citron-leaved; but all four are Indian.

Fruit feffile, fmall, mostly twin, crouded, whitish.

Leaves oblong, hearted, pointed, with very long flender petiols.

74. VATA:

SYN. Nyagródba, Babupát.

VULG. Ber.

LINN. Bengal Ficus, but all are found in this province, and none peculiar to it.

Fruit roundish, blood-red, navelled, mostly twin, fessile. Calyx three-leaved, imbricated.

Leaves fome hearted, mostly egged, obtuse, broadish, most entire, petiols thick, short; branches radicating.

The Sanscrit name is given also to the very large Ficus Indica, with radicating branches, and to some other varieties of that species. VAN RHEEDE has by mistake transferred the name Aswatt'ba to the Placsba, which is never so called.

. 75. CARACA:

Syn. Bhaura, Ch'hatráca.

VULG.

LINN. FUNGUS Agarick.

This and the *Phallus* are the only fungi, which I have yet feen in *India*: the ancient *Hindus* held the fungus in fuch detestation, that YAMA, a legislator, supposed now to be the

judge of departed spirits, declares "those, who "eat mushrooms, whether springing from the ground or growing on a tree, fully equal in

" guilt to the flayers of Brábmens, and the most

" despicable of all deadly finners."

76. TA'LA:

SYN. Trinarajan.

Vulg. Tál, Palmeira.

LINN. BOKASSUS.

This magnificent palm is justly entitled the king of its order, which the Hindus call truna druma, or grass trees. Van Rheede mentions the bluish gelatinous, pellucid substance of the young seeds, which, in the hot season, is cooling, and rather agreeable to the taste; but the liquor extracted from the tree, is the most seducing and pernicious of intoxicating vegetable juices: when just drawn, it is as pleasant as Poubon water fresh from the spring, and almost equal to the best mild Champaigne. From this liquor, according to Rheede, sugar is extracted; and it would be happy for these provinces, if it were always applied to so innocent a purpose.

77. NA'RICE'LA:

SYN. Lángalin.

Vulg. Nárgil, Nárjil.

LINN. Nut-bearing Cocos.

Of a palm fo well known to Europeans, little more needs be mentioned than the true Afiatick

M

name: the water of the young fruit is neither fo copious, nor fo transparent and refreshing, in Bengal, as in the isle of Hinzuan, where the natives, who use the unripe nuts in their cookery, take extreme care of the trees.

78. GUVA'CA:

SYN. Ghóntá, Púga, Cramuca, Capura.

Vulg. Supyári.

LINN. ARECA Catechu.

The trivial name of this beautiful palm having been occasioned by a gross error, it must necessarily be changed; and Guváca should be substituted in its place. The inspissated juice of the Mimos A C'hadira being vulgarly known by the name of Cat'b, that vulgar name has been changed by Europeans into Catechu; and because it is chewed with thin slices of the Udvéga, or Areca-nut, a species of this palm has been distinguished by the same ridiculous corruption.

A

GRAMMAR

OF THE

PERSIAN LANGUAGE.

چو عندليب نصاحت فروشد اي حانظ تو قدر او بسخن ڪفتن دري بشکن

PREFACE.

THE Persian language is rich, melodious, and elegant; it has been spoken for many ages by the greatest princes in the politest courts of Asia; and a number of admirable works have been written in it by historians, philosophers, and poets, who found it capable of expressing with equal advantage the most beautiful and the most elevated sentiments.

It must feem strange, therefore, that the study of this language should be so little cultivated at a time when a taste for general and disfusive learning seems universally to prevail; and that the fine productions of a celebrated nation should remain in manuscript upon the shelves of our publick libraries, without a single admirer who might open their treasures to his countrymen, and display their beauties to the light, but if we consider the subject with a proper attention, we shall discover a variety of

causes which have concurred to obstruct the progress of Eastern literature.

Some men never heard of the Afiatick writings, and others will not be convinced that there is any thing valuable in them; fome pretend to be bufy, and others are really idle; fome deteft the Perfians, because they believe in Mahomed, and others despise their language, because they do not understand it: we all love to excuse, or to conceal, our ignorance, and are seldom willing to allow any excellence beyond the limits of our own attainments: like the savages, who thought that the sun rose and set for them alone, and could not imagine that the waves, which surrounded their island, lest coral and pearls upon any other shore.

Another obvious reason for the neglect of the Persian language is the great scarcity of books, which are necessary to be read before it can be persectly learned: the greater part of them are preserved in the different museums and libraries of Europe, where they are shewn more as objects of curiosity than as sources of information; and are admired, like the characters on a Chinese screen, more for their gay colours than for their meaning.

Thus, while the excellent writings of Greece and Rome are studied by every man of a liberal education, and diffuse a general refinement through our part of the world, the works of the Persians, a nation equally distinguished in ancient history, are either wholly unknown to us, or considered as entirely destitute of taste and invention.

But if this branch of literature has met with fo many obstructions from the ignorant, it has, certainly, been checked in its progress by the learned themselves; most of whom have confined their study to the minute researches of verbal criticism; like men who discover a precious mine, but instead of searching for the rich ore, or for gems, amuse themselves with collecting fmooth pebbles and pieces of crystal. Others miftook reading for learning, which ought to be carefully diftinguished by every man of fense, and were satisfied with running over a great number of manuscripts in a superficial manner, without condescending to be stopped by their difficulty, or to dwell upon their beauty and elegance. The rest have left nothing more behind them than grammars and dictionaries; and though they deferve the praises due to unwearied pains and industry, yet they would, perhaps, have gained a more shining reputation, if they had contributed to beautify and enlighten the vast temple of learning, instead of spending their lives in adorning only its porticos and avenues.

There is nothing which has tended more to bring polite letters into discredit, than the total insensibility of commentators and criticks to the beauties of the authors whom they profess to illustrate: sew of them seem to have received the smallest pleasure from the most elegant compositions, unless they found some mistake of a transcriber to be corrected, or some established reading to be changed, some obscure expression to be explained, or some clear passage to be made obscure by their notes.

It is a circumstance equally unfortunate, that men of the most refined taste and the brightest parts are apt to look upon a close application to the study of languages as inconsistent with their spirit and genius: so that the state of letters seems to be divided into two classes, men of learning who have no taste, and men of taste who have no learning.

M. de Voltaire, who excels all writers of his age and country in the elegance of his style, and the wonderful variety of his talents, acknowledges the beauty of the Persian images and sentiments, and has versissed a very sine passage from Sadi, whom he compares to Petrarch: if that extraordinary man had added a knowledge of the Asiatick languages to his other acquisitions, we should by this time have seen the poems and histories of Persia in an

European dress, and any other recommendation of them would have been unnecessary.

But there is yet another cause which has operated more ftrongly than any before mentioned towards preventing the rife of oriental literature; I mean the small encouragement which the princes and nobles of Europe have given to men of letters. It is an indisputable truth, that learning will always flourish most where the amplest rewards are proposed to the industry of the learned; and that the most shining periods in the annals of literature are the reigns of wife and liberal princes, who know that fine writers are the oracles of the world, from whose testimony every king, statesman, and hero must expect the censure or approbation of posterity. In the old states of Greece the highest honours were given to poets, philosophers, and orators; and a fingle city (as an eminent writer * observes) in the memory of one man, produced more numerous and splendid monuments of human genius than most other nations have afforded in a course of ages.

The liberality of the Ptolemies in Egypt drew a number of learned men and poets to their court, whose works remain to the present age the models of taste and elegance; and the writers, whom Augustus protected, brought their composition to a degree of persection, which the language of mortals cannot furpais. Whilst all the nations of Europe were covered with the deepest shade of ignorance, the Califs in Asia encouraged the Mahomedans to improve their talents, and cultivate the fine arts; and even the Turkish Sultan, who drove the Greeks from Constantinople, was a patron of literary merit, and was himself an elegant poet. The illustrious family of Medici invited to Florence the learned men whom the Turks had driven from their country, and a general light fucceeded the gloom which ignorance and fuperstition had spread through the western world. But that light has not continued to shine with equal fplendour; and though fome flight efforts have been made to restore it, yet it seems to have been gradually decaying for the last century: it grows very faint in Italy; it feems wholly extinguished in France; and whatever sparks of it remain in other countries are confined to the closets of humble and modest men, and are not general enough to have their proper influence.

The nobles of our days confider learning as a fubordinate acquisition, which would not be consistent with the dignity of their fortunes, and should be left to those who toil in a lower sphere of life: but they do not reslect on the many advantages which the study of polite letters would give, peculiarly to persons of eminent rank and high employments; who, instead of relieving their fatigues by a series of unmanly pleasures, or useless diversions, might spend their leisure in improving their knowledge, and in conversing with the great statesmen, orators, and philosophers of antiquity.

If learning in general has met with fo little encouragement, still less can be expected for that branch of it, which lies fo far removed from the common path, and which the greater part of mankind have hitherto confidered as incapable of yielding either entertainment or inftruction: if pains and want be the lot of a scholar, the life of an orientalist must certainly be attended with peculiar hardships. Gentius, who published a beautiful Persian work called The Bed of Roses, with an useful but inelegant translation, lived obscurely in Holland, and died in misery. Hyde, who might have contributed greatly towards the progress of eastern learning, formed a number of expensive projects with that view, but had not the support and affistance which they deferved and required. The labours of Meninski immortalized and ruined him: his dictionary of the Afiatick languages is, perhaps, the most laborious compilation that was ever undertaken by any fingle man; but he complains in his preface that his patrimony was exhausted by the great expence of employing and supporting a number of writers and printers, and of raising a new press for the oriental characters. M. d'Herbelot, indeed, received the most splendid reward of his industry: he was invited to Italy by Ferdinand II. duke of Tufcany, who entertained him with that striking munificence which always diftinguished the race of the Medici: after the death of Ferdipand, the illustrious Colbert recalled him to Paris, where he enjoyed the fruits of his labour, and spent the remainder of his days in an honourable and eafy retirement. But this is a rare example: the other princes of Europe have not imitated the duke of Tufcany; and Christian VII. was referved to be the protector of the eastern muses in the present age.

Since the literature of Afia was so much neglected, and the causes of that neglect were so various, we could not have expected that any slight power would rouze the nations of Europe from their inattention to it; and they would, perhaps, have persisted in despising it, if they had not been animated by the most powerful incentive that can influence the mind of man: interest was the magick wand which brought them all within one circle; interest was the charm which gave the languages of the East a real and folid importance. By one of those revolutions, which no human prudence could have forefeen, the Perfian language found its way into India; that rich and celebrated empire, which, by the flourishing state of our commerce, has been the fource of incredible wealth to the merchants of Europe. A variety of causes, which need not be mentioned here, gave the English nation a most extensive power in that kingdom: our India company began to take under their protection the princes of the country, by whose protection they gained their first settlement; a number of important affairs were to be transacted in peace and war between nations equally jealous of one another, who had not the common instrument of conveying their fentiments; the fervants of the company received letters which they could not read, and were ambitious of gaining titles of which they could not comprehend the meaning; it was found highly dangerous to employ the natives as interpreters, upon whose fidelity they could not depend; and it was at last discovered, that they must apply themselves to the study of the Perfian language, in which all the letters from the Indian princes were written. A few men of parts and tafte, who refided in Bengal, have

fince amufed themselves with the literature of the East, and have spent their leisure in reading the poems and histories of Persia; but they found a reason in every page to regret their ignorance of the Arabick language, without which their knowledge must be very circumscribed and imperfect. The languages of Asia will now, perhaps, be studied with uncommon ard ur; they are known to be useful, and will foon be found instructive and entertaining; the valuable manuscripts that enrich our publick libraries will be in a few years elegantly printed; the manners and fentiments of the eastern nations will be perfectly known; and the limits of our knowledge will be no less extended than the bounds of our empire.

It was with a view to facilitate the progress of this branch of literature, that I reduced to order the following instructions for the Persian language, which I had collected several years ago; but I would not present my grammar to the publick till I had considerably enlarged and improved it: I have, therefore, endeavoured to lay down the clearest and most accurate rules, which I have illustrated by select examples from the most elegant writers; I have carefully compared my work with every composition of the same nature that has fallen into my hands; and though on so general a subject I must have

made feveral observations which are common to all, yet I flatter myfelf that my own remarks, the disposition of the whole book, and the pasfages quoted in it, will fufficiently diftinguish it as an original production. Though I am not conscious that there are any essential mistakes or omissions in it, yet I am sensible that it falls very fhort of perfection, which feems to withdraw itself from the pursuit of mortals, in proportion to their endeavours of attaining it; like the talifman in the Arabian tales, which a bird carried from tree to tree as often as its purfuer approached it. But it has been my chief care to avoid all the harsh and affected terms of art which render most didactick works fo tedious and unpleafant, and which only perplex the learner, without giving him any real knowledge: I have even refrained from making any enquiries into general grammar, or from entering into those subjects which have already been so elegantly discussed by the most judicious philosopher*, the most learned divine +, and the most laborious scholar of the present age ‡.

It was my first design to prefix to the grammar a history of the Persian language from the

[#] See Hermes.

⁺ A fhort Introduction to English Grammar.

[‡] The grammar prefixed to the Dictionary of the English Language.

added a copious praxis of tales and poems extracted from the claffical writers of Persia; but as those additions would have delayed the publication of the grammar, which was principally wanted, I thought it advisable to reserve them for a separate volume, which the publick may expect in the course of the ensuing winter. I have made a large collection of materials for a general history of Asia, and for an account of the geography, philosophy, and literature of the east rn nations, all which I propose to arrange in order, if my more solid and more important studies will allow me any intervals of leisure *.

I cannot forbear acknowledging in this place the fignal marks of kindness and attention, which I have received from many learned and noble persons; but General Carnac has obliged me the most sensibly of them, by supplying me with a valuable collection of Persian manuscripts on every branch of eastern learning, from which many of the best examples in the following grammar are extracted. A very learned Professor † at Oxford has promoted my studies with that candour and benevolence

See the History of the Persian Language, a Description of Asia, and a Short History of Persia, published with my Life of Nader Shah in the year 1773.

⁺ Dr. HUNT.

which so eminently distinguish him; and many excellent men that are the principal ornaments of that university have conferred the highest favours on me, of which I shall ever retain a grateful sense: but I take a singular pleasure in confessing that I am indebted to a foreign nobleman* for the little knowledge which I have happened to acquire of the Persian language; and that my zeal for the poetry and philology of the Asiaticks was owing to his conversation, and to the agreeable correspondence with which he still honours me.

Before I conclude this Preface it will be proper to add a few remarks upon the method of learning the Persian language, and upon the advantages which the learner may expect from it. When the student can read the characters with sluency, and has learned the true pronunciation of every letter from the mouth of a native, let him peruse the grammar with attention, and commit to memory the regular inflexions of the nouns and verbs: he needs not burden his mind with those that deviate from the common form, as they will be insensibly learned in a short course of reading. By this time he will find a dictionary necessary, and I hope he will believe me, when I affert from a long experience, that,

^{*} Baron REVISEA.

whoever possesses the admirable work of Meninski, will have no occasion for any other dictionary of the Persian tongue. He may proceed by the help of this work to analyse the passages quoted in the grammar, and to examine in what manner they illustrate the rules; in the mean time he must not neglect to converse with his living inftructor, and to learn from him the phrases of common discourse, and the names of visible objects, which he will soon imprint on his memory, if he will take the trouble to look for them in the dictionary: and here I must caution him against condemning a work as defective, because he cannot find in it every word which he hears; for founds in general are caught imperfectly by the ear, and many words are spelled and pronounced very differently.

The first book that I would recommend to him is the Gulistan or Bed of Roses, a work which is highly esteemed in the East, and of which there are several translations in the languages of Europe: the manuscripts of this book are very common; and by comparing them with the printed edition of Gentius, he will soon learn the beautiful flowing hand used in Persia, which consists of bold strokes and flourishes, and cannot be imitated by our types. It will then be a proper time for him to read some short and easy chapter in this work, and to

translate it into his native language with the utmost exactness; let him then lay aside the original, and after a proper interval let him turn the same chapter back into Persian by the affistance of the grammar and dictionary; let him afterwards compare his fecond translation with the original, and correct its faults according to that model. This is the exercise so often recommended by the old rhetoricians, by which a fludent will gradually acquire the flyle and manner of any author, whom he defires to imitate, and by which almost any language may be learned in fix months with ease and pleasure. When he can express his sentiments in Persian with tolerable facility, I would advise him to read fome elegant history or poem with an intelligent native, who will explain to him in common words the refined expressions that occur in reading, and will point out the beauties of learned allufions and local images. The most excellent book in the language is, in my opinion, the collection of tales and fables called Anvah Sobeili by Aussein Vaez, surnamed Cashefi, who took the celebrated work of Bidpai or Pilpay for his text, and has comprifed all the wifdom of the eastern nations in fourteen beautiful chapters. At some leisure hour he may desire his Munshi or writer to transcribe a section from the Gulistan, or a fable of Cashefi, in the common broken hand used in India, which he will learn perfectly in a few days by comparing all its turns and contractions with the more regular hands of the Arabs and Perfians: he must not be discouraged by the difficulty of reading the Indian letters, for the characters are in reality the fame with those in which our books are printed, and are only rendered difficult by the frequent omission of the diacritical points, and the want of regularity in the position of the words: but we all know that we are often at a loss to read letters which we receive in our native tongue; and it has been proved that a man who has a perfect knowledge of any language, may, with a proper attention, decypher a letter in that idiom, though it be written in characters which he has never feen before, and of which he has no alphabet.

In short, I am persuaded, that whoever will study the Persian language according to my plan, will in less than a year be able to translate and to answer any letter from an Indian prince, and to converse with the natives of India, not only with sluency, but with elegance. But if he desires to distinguish himself as an eminent translator, and to understand not only the general purport of a composition, but even the graces and ornaments of it, he must necessarily learn the Arabick tongue, which is blended

with the Perfian in fo fingular a manner, that one period often contains both languages, wholly distinct from each other in expression and idiom, but perfectly united in fense and construction. This must appear strange to an European reader; but he may form fome idea of this uncommon mixture, when he is told that the two Afiatick languages are not always mixed like the words of Roman and Saxon origin in this period, "The true law is right reason, conformable to " the nature of things; which calls us to duty " by commanding, deters us from fin by for-" bidding ";" but as we may suppose the Latin and English to be connected in the following fentence, " The true lex is recta ratio, conform-" able naturæ, which by commanding vocet ad " officium, by forbidding à fraude deterreat."

A knowledge of these two languages will be attended with a variety of advantages to those who acquire it: the Hebrew, Chaldaick, Syriack, and Ethiopean tongues are dialects of the Arabick, and bear as near a resemblance to it as the Ionick to the Attick Greek; the jargon of Indostan, very improperly called the language of the Moors, contains so great a number of Persian words, that I was able with very little

^{*} See Middleton's Life of Cicero, vol. III. p. 351.

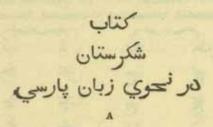

difficulty to read the fables of Pilpai which are translated into that idiom: the Turkish contains ten Arabick or Persian words for one originally Scythian, by which it has been so refined, that the modern kings of Persia were fond of speaking it in their courts; in short, there is scarce a country in Asia or Africa, from the source of the Nile to the wall of China, in which a man who understands Arabick, Persian, and Turkish, may not travel with satisfaction, or transact the most important affairs with advantage and security.

As to the literature of Asia, it will not, perhaps, be effentially useful to the greater part of mankind, who have neither leifure nor inclination to cultivate fo extensive a branch of learning; but the civil and natural history of fuch mighty empires as India, Perfia, Arabia, and Tartary, cannot fail of delighting those who love to view the great picture of the universe, or to learn by what degrees the most obscure states have risen to glory, and the most flourishing kingdoms have funk to decay; the philofopher will confider those works as highly valuable, by which he may trace the human mind in all its various appearances, from the rudest to the most cultivated state: and the man of taste will undoubtedly be pleafed to unlock the stores

of native genius, and to gather the flowers of unrestrained and luxuriant fancy*.

* My professional studies having wholly engaged my attention, and induced me not only to abandon oriental literature, but even to efface, as far as possible, the very traces of it from my memory, I committed the conduct and revisal of this edition of my Grammar, and the composition of the Index to Mr. Richardson, in whose skill I have a perfect considence, and from whose application to the eastern languages, I have hopes that the learned world will reap no small advantage.

The second and sourth columns of these letters from the right hand are used only when they are connected with a preceding letter; as Mohammed. Every letter should be connected with that which follows it, except these seven; I alif, a dal, a zal, ra, j za, j zha, and y vau, which are never joined to the following letter, as will appear from the words where a leaf, a dominion.

Though the perfect pronunciation of these letters can be learned only from the mouth of a Persian or an Indian, yet it will be proper to add a few observations upon the most remarkable of

them.

OF CONSONANTS.

It will be needless to say much of the three first consonants if ince their sound is exactly the same as our b, p, and t, in the words bar, peer, and too, which would be written in Persian if and it.

ث

This letter, which the Arabs pronounce like a th, has in Persian the same sound with a wors, as let Leis, a proper name. It might, therefore, have been rejected from the Persian alphabet without any inconvenience;

but it is useful in showing the origin of words, as it is seldom, or never, used in any that are not Arabick. The same may be observed of the following letters, which rarely occur in words originally Persian.

and &

The first of these letters answers to our soft g in gem, which a Persian would write or to our j in jar : the second of them founds exactly like our cb in the words cherry, cheek; as Chirkés Circassia.

7

refled in our characters by a double b, as hhál a condition.

خ

is formed in the throat, and has a found like the German cb; but the Persians pronounce it less harshly than the Arabs, and give it the sound of c before a, o, or u in the Tuscan dialect, as chan a lord, which a Florentine would pronounce like can. This is the word so variously and so erroneously written by the Europeans. The sovereign lord of Tartary is

neither the cham, as our travellers call him, nor the ban, as Voltaire will have it, but the khán, or cán, with an afpirate on the first letter.

S

ی answers exactly to our d in deer

ن

This letter, which the Arabs pronounce db, has in Persian the sound of z, and is often confounded with it; thus they write and guzeshten to pass: It is seldom used but in Arabick words; though it sometimes occurs in words purely Persian, as liquid Azarbijan the province of Media, so called from lazar, an old word for fire, because the adorers of fire, if we believe the Asiatick historians, first built their temples in that province.

1

and the three liquids ن م و are pronounced exactly like our r, l, m, n; as اراء arám reft, الله láleh a tulip, مار már a ferpent, نان nán bread. But ن before a ب has the found of m, as منبر kumbed a tower, عنبر amber ambergris.

j

j has the found of our z, as الالمزار lalehzár a bed of tulips.

ز

This letter has the found of our f in the words pleasure, treasure; and corresponds precisely with the soft g of the French in gens, or their j in jour. It may be expressed in our characters by zb, as all j zhaleh dew; for it has the same relation to z which sb has to s.

ow and om

س and ش are our s and sh, as سليم شاء Sclim shah king Selim.

ظطفىص

These four letters are pronounced by the Arabs in a manner peculiar to themselves; but in Persian they are consounded with other letters. oddiffers little from on as own Saddar the name of a Persian book; and be has nearly the same sound with one as our effence; a word often used in English, since our connection with India, to denote the precious persume called otter of roses. The word is Arabick, as the letters c and be sufficiently prove. of and be differ very little from j; but they are pronounced more forcibly, and may be expressed by zz, as well is Nezzami the name of a poet; Khezzar the name of a prophet in the rastern romances.

s and s

These two letters are extremely harsh in the pronunciation of the Arabs. The sound of z, says Meninski, est vox vituli matrem vocantis; but in Persian it is a sort of vowel, and answers generally to our broad a, as if Arab the Arabians; in a sound like our o, as in the word before-mentioned, it is commonly pronounced in Persia like our hard gb in the word gbost, as if gholam a boy, a servant.

ف

in has the found of f in fall, as il an omen.

ك and ق

is another harsh Arabick letter, but in Persian it is often confounded with color c

ش

When has three points above it, the Perfians give it the found of g in the word gay, as gulistán a bed of roses; but these points are very seldom written in the Persian manuscripts; so that the distinction between k

and ig can be learned only by use: thus they often write write water, and pronounce it gulab.

00

See the remark on These letters are the liquids 1, m, n, r.

5

behar the spring, which is pronounced almost like bear; Herat a city in the province of Corasan, which the Greeks call Aria: therefore is the b of the French in bonnete, whence came our bonest without an aspiration. At the end of a word it frequently sounds like a vowel, as a ke, which has the same sense and pronunciation as the Italian che which.

OF VOWELS.

The long vowels are او مر and may be pronounced as a, o, ee, in the words call, stole, feed; as اورا khán a lord, اورا ora to him, نيز neez also; but the short vowels are expressed by small marks, two of which are placed above the letter, and one below it, as ب as ba or be, ب be or bi, ن bo or bu; thus,

0

أَكُوْ أَنْ تُرْكِ شِيرازي بَدَسْت ارَد دِلِ مارَا بَخَالِ هِنْدُويشَ بَخْشَمْ سَمَرْتَنْد وُ بُخَارارا

Egher an turki Shirazi bedest ared dili mara Bekhali hinduish bakshem Samarcand u Bokharara.

The mark placed above a confonant shows that the syllable ends with it, as Samar-can-di a native of Samarcand; the first of which syllables is short, the second and third long by position, and the last long by nature: but this belongs to the prosody. These short vowels are very seldom written in the Persian books; and the other orthographical marks are likewise usually suppressed except Medda , Hamza , and Teshdid; the two first of which are most common.

Medda above an I gives it a very broad found, as I aun: Hamza supplies the place of S in words that end in ; it therefore sometimes represents the article, as all names a book, or denotes the former of two substantives, as will naster mushk a bag of musk; or, lastly, it marks the second person singular in the compound preterite of a verb, as all dades, which would regularly be Sala dades i thou hast

given. Teshdid shews a consonant to be doubled, as turreh a lock of bair.

The omission of the short vowels will at first perplex the student; since many words that are compounded of the same consonants, have different senses according to the difference of the vowels omitted: but until he has learned the exact pronunciation of every word from a native, he may give every short vowel a kind of obscure sound very common in English, as in the words sun, bird, mother, which a Mahometan would write without any vowel, sin, brd, mthr; thus the Persian word with bd may be pronounced like our bud.

and Ya (are often used as consonants, like our v and y; thus, وال Van a town in Armenia; إلى juvan juvenis, giovane, young; Yemen, that province of Arabia which we call the bappy; خدايار Khodayár, a proper name signifying the friend of God. و before l often loses its sound, as خوان

I would not advise the learner to study the parts of speech until he can read the Persian characters with tolerable sluency; which he will soon be able to do, if he will spend a few hours in writing a page or two of Persian in English letters, and restoring them after a short interval to their proper characters by the help of the al-

phabet. I shall close this section with a piece of Persian peetry written both in the Asiatick and European characters: it is an ode by the poet Hasiz, the first couplet of which has been already quoted; and a translation of it shall be inserted in its proper place.

بدر ساتي سي باتي كه در جنّت نخواهي يانت كنار آب ركناباد و ثكثشت مصلّرا

Bedéh fákée mei bákée ke der jennet nekháhi yaft, Kunári ábi rucnabád va gulghfhéti mufellára.

که بر نظم تو افشاند فلک عقد ثربارا

Gazel gufti va durr fufti beá va khosh bukhán Hafiz

Ke ber názmi to affháned felek ikdi furiára.

In this specimen of Persian writing the learner will observe a few combinations of letters, which he must by no means forget; as I lamelif, compounded of I and I a, in the word mosella: but the most usual combinations are formed with TET which have the singular property of causing all the preceding letters to rise above the line, as in akcheer,

nakhara. tas-hech. The letters

The Arabick characters, like those of the Europeans, are written in a variety of different hands; but the most common of them are the المنتخب Nifkhi, the تعليق Tâlik, or banging, and the aim Shekesteh, or broken. Our books are printed in the Nifkhi hand, and all Arabick manuscripts, as well as most Persian and Turkish histories, are written in it; but the Perfians write their poetical works in the Tâlik, which answers to the most elegant of our Italick hands. As to the Shekesteh, it is very irregular and inelegant, and is chiefly used by the idle Indians, who will not take time to form their letters perfectly, or even to infert the diacritical points; but this hand, however difficult and barbarous, must be learned by all men of business in India, as the letters from the princes of the country are feldom written in any other manner. A specimen of these different forms of writing is engraved, and inferted at the end of this Grammar.

OF NOUNS; AND FIRST, OF GENDERS.

THE reader will soon perceive with pleasure a great resemblance between the Persian and English languages, in the facility and simplicity of their form and construction: the former, as well as the latter, has no difference of termination to mark the gender, either in substantives or adjectives: all inanimate things are neuter, and animals of different sexes either have different names, as puser a boy, puser a boy, iner a girl, or are distinguished by the words in ner male, and who made female; as in theeri made a lioness.

Sometimes, indeed, a word is made feminine, after the manner of the Arabians, by having added to it, as after mashuk a friend, amicus, as in this verse:

كل دربرومي بركف ومعشوته بكامست

Flowers are in my bosom, wine in my hand; and my mistress yields to my desire.

But in general, when the Persians adopt an Arabick noun of the feminine gender, they make it neuter, and change the final s into ; thus inimet a benefit is written and almost all the Persian nouns ending in , which are very numerous, are borrowed from the Arabs,

OF CASES.

The Persian substantives, like ours, have but one variation of case, which is formed by adding the syllable by to the nominative in both numbers; and answers often to the dative, but generally to the accusative case in other languages; as,

Nominative, بسر pufer a child.

Dative and Acc. بسر puferra to a child or the child.

When the accufative is used indefinitely, the fyllable ا is omitted, as گل چيدن gul chíden to gather a flower, that is, any flower; but when the noun is definite or limited, that fyllable is added to it, as گلرا چيد gulra chíd he gathered the flower, that is, the particular flower. There is no genitive case in Persian, but when two fubstantives of different meanings come together, a kefra or short e () is added in reading to the former of them, and the latter remains unaltered, wis the musk of Tartary, which must be read mushke Khoten. The fame rule must be observed before a pronoun possessive; as يسر من pusere men my child: and before an adjective; as تابناك shemshire tabnak a bright scymitar. If the first word ends in | or , the letter & is affixed to it; as پاشاي موصل pasha a basha, پاشاي موصل pashaï Mousel the basha of Mousel. ميوهاي سنوهاي شيرين mivaha fruits, ميوهاي شيرين mivahaï shireen sweet fruits: if nouns ending in s come before other nouns or adjectives, the mark Hamza is added to them, as حيوان cheshméï heyván the fountain of life.

The other cases are expressed for the most part, as in our language, by particles placed before the nominative, as

Vocative, پسر ai pufer O child. Ablative, ابزیسر az pufer from a child.

The poets, indeed, often form a vocative case by adding I to the nominative, as ساقيا sakia O cup-bearer, شاها shaha O king; thus Sadi uses bulbula as the vocative of بلبل bulbul a nightingale.

بلبالا مرده بهار بيار خبر بد ببوم باز بكذار

Bring, O nightingale, the tidings of fpring; leave all unpleasant news to the owl.

In fome old compositions the particle mer is prefixed to the accusative case; as اورا ديدم mer ora deedem I saw bim; but this is either

obsolete or inelegant, and is seldom used by the moderns.

The reader, who has been used to the inflexions of European languages, will, perhaps, be pleased to see an example of Persian nouns, as they answer to the cases in Latin:

gul a rose, rosa. Singular.

Nom. Na rose, rosa.

Gen. Nof a rose, rosæ.

Dat. It to a rose, rosa.

Acc. It the rose, rosam.

Voc. الكاثرا O rose, ô rosa.

Abl. Ji from a rose, rosa.

Plural.

ارگ roses, rose. ارگ of roses, rosarum. ایک to roses, ross. ایک the roses, rosas. ایک نام O roses, ô rosa. از گل from roses, ross.

Singular,

Nom. and Gen. July a nightingale.

Dat. and Acc. بلبلرا to a nightingale.

Voc. بلبلا (Poet بلبلا) O nightingale.

Abl. از بلبل from a nightingale.

Plural.

Nom. and Gen. بلبلان nightingales.

Dat. and Acc. بلبلانرا to nightingales.

Voc. اي بلبلان O nightingales.

Abl. از بلبلان from nightingales.

ساتي بيار باده كه آمد زمان كل تا بشكنيم توبه دكر در ميان كل حانظ وصال كل طلبي همچو بلبلان جان كن نداي خاك ره باغبان كل

Boy, bring the wine, for the season of the rose approaches; let us again break our vows of repentance in the midst of the roses. O Hasiz, thou desirest, like the nightingales, the presence of the rose: let thy very soul be a ransom for the earth where the keeper of the rose-garden walks!

I shall in this manner quote a few Persian couplets, as examples of the principal rules in this grammar: such quotations will give some variety to a subject naturally barren and unpleasant; will serve as a specimen of the orien

tal style; and will be more easily retained in the memory than rules delivered in mere profe.

OF THE ARTICLE.

Our article a is supplied in Persian by adding the letter of to a noun, which restrains it to the singular number; as guli a single rose;

One morning I went into the garden to gather a rose, when on a sudden the voice of a nightingale struck my ear.

Without this termination igul would fignify roses or flowers collectively, as

Call for wine, and scatter flowers around.

When a noun ends in s the idea of unity is expressed by the mark Hamza, as مُشِهِ cheshmeï a single fountain.

OF NUMBERS.

From the two examples in a preceding fection it appears that the Persian plural is formed by adding of or to the fingular: but these terminations are not, as in many languages, wholly arbitrary; on the contrary they are regulated with the utmost precision. The names of animals form their plural in ol, as

وك gurk a wolf.

gurk a tyger.

gurkan wolves.

pelenkan tygers.

but words which fignify things without life make their plurals by the addition of the fyllable 19, as

pal a wing.
المحل fahil a shore.
المحل balha wings.
المحل fahilha shores.

Both these plurals occur in the following elegant distich.

کجا دانند حال ما سبکباران ساحلیا

The night is dark; the fear of the waves oppress
us, and the whirlpool is dreadful! How should
those, who bear light burdens on the shores,
know the misery of our situation?

There are, however, a few exceptions to these rules: the names of animals sometimes make their plurals in (a) as well as in (b), as sim shutur a camel, with shuturha and (c) shuturan camels; and on the other side the names of things sometimes have plurals in (c), as the leb a lip, (c) leban lips.

Names of persons ending in lor form their plurals in الله والله و

If the name of a thing ends in s, the final letter is absorbed in the plural before the fyllable lo, as ail khané a house, khanha bouses.

In fome modern Perfian books, as the Life of Nader Shah and others, the plural often ends in or in if the fingular has a final s.

Singular.

nüwazish a favour. نوازش kalat a castle.

Plural, Plural, نوازشات nüwazifhat favours. فلعجات kalajat cofiles.

But these must be considered as barbarous, and are a proof that the late dreadful commotions which have ruined the empire of the Persians, have begun to destroy even the beautiful simplicity of their language.

It must not be omitted, that the Arabick fubstantives frequently have two forts of plurals, one formed according to the analogy of the Persian nouns, and another after the irregular manner of the Arabians; as use aib a vice, kalah تلعه ; avaîb vices عوايب kalah عيبها a caftle, قلعها kalaha and قلعها kalaa caftles; nayib a viceroy, plur. نواب naváb, which our countrymen have mistaken for the fingular number, and fay very improperly a nabob. This is one argument out of a great number to prove the impossibility of learning the Persian language accurately without a moderate knowledge of the Arabick; and if the learner will follow my advice, he will perufe with attention the Arabick grammar of Erpenius* before he attempts to translate a Persian manuscript.

^{*} There are two fine editions of this grammar, the first published by the very learned Golius, and the second by the late Albert Schultens; both these Orientalists have added a number of Arabick odes and elegies, which they have explained in excellent notes; but these editions are scarce, and Meninski has inserted in his grammar the substance of Erpenius, with many new remarks.

OF ADJECTIVES.

The Persian adjectives admit of no variation, but in the degrees of comparison. The positive is made comparative by adding to it, and superlative by adding variation, as

خوبتر khub fair, خوبتر khubter fairer, خوبترین khubterin fairest.

Our than after a comparative is expressed by the preposition jl az, as

The brightness of thy face is more splendid than the cheek of day; the blackness of thy locks is darker than the hue of night.

The moon is bright, but thy face is brighter than it; the cypress is graceful, but thy shape is more graceful than the cypress.

An adjective is fometimes used substantively, and forms its plural like a noun, as

فرو مانند پري رويان زآن عارض خجل ڪشتند سمن بويان زآن ڪاڪل

The damsels with faces like angels are dejected at the fight of that cheek; the nymphs with the fragrance of jessamine are filled with envy when they view those curls.

OF PRONOUNS.

The personal pronouns are these which follow;

الم men I. Sing. من men I. Plur. له ma we. Obl. الم merá me.

to Thou.

Sing. je to thou.

Plur. ham fhumá you or ye.

Obl. ترا tura thee. humará you. شهاراً

ه او He.
Sing. ه او be, she, or it:
Plur. ایشان ishan they.
Obl. اورا ora him, her, or it.
ishanra them.

The poets often use شان for ايشان, as

I went, and bruised their helmets; I disfigured their beautiful faces.

After a preposition of is often changed into or or oe, as

When the king of the world showed his face, the general kissed the ground, and advanced before him. Ferdust.

Sometimes after the preposition in, the letter is inserted to prevent the hiatus, as bedo for it; the same may be

observed of بدان bedån for بدان bean in that,

in this بآين bedeen for بدين

The possessives are the same with the perfonals, and are distinguished by being added to their substantives; as

Sing. کل مین dili men my beart.

dili to thy beart.

or وی dili o bis or ber beart.

Plur. الهاي dilhaï ma our bearts.

dilhaï fhuma your bearts.

تان .Poet

ايشان dilhaï ifhân their bearts.

Poet. olm

They are often expressed in the singular number by these final letters, em, et, and esh, and after an lor by lam, elat, and and after an lor by lam, elat, and as last as last

Omne crede diem tibid illuxifie fupremum.

^{*} In the fame manner and from the fame motive the old Romans added a d to many words followed by a vowel; thus Horace, if we adopt the reading of Muretus, uses tibid for tibi.

إغرامة ام jámeï am my robe. جامة ام jâmeï at thy robe. إغرام jâmeï ash bis or ber robe. إغرامة اش mûïm my bair. مويت mûït thy bair.

In poetry, and fometimes in profe, the oblique cases of the personal pronouns are also expressed by and as, as

خوشا شيراز و وضع بي مثالش خداوندا نكهدار از زوالش

Joy be to Shiraz and its charming borders! O heaven, preserve it from decay.

These oblique cases are joined to any word in the sentence which the poet finds convenient; thus in the couplet just quoted the pronoun it is added to j; so in the following distich, the dative of it thou, is placed after the conjunction gher if.

بهي سجاده رنڪين ڪن ڪرت پير مغان ڪويد که سالک بيخبر نبود زراه و رسم منزلها Tinge the facred carpet with winc, if the mafter of the feast orders thee; for he that travels is not ignorant of the ways and manners of banquet-houses.

Our reciprocal pronouns own and felf are expressed in Persian by the following words, which are applicable to all persons and sexes; as

> خودش or خود Nom. خویش or خویشتن خوي or خويشتن

خودرا .Obl خویشتن را

thus we may use

من خود myself. tbyself. تو خود bis or berself!

ما خون ourfelves. بنا خون yourfelves. بنان خونه themfelves*.

* I here use his self and their selves instead of the corrupted words himself and themselves; in which usage I am justified by the authority of Sidney, and of other writers in the reign of Elizabeth: self seems to have been originally a noun, and was, perhaps, a synonymous word for soul; according to Locke's definition of it, "Self is that conscious thinking thing, which is sensible or conscious of pleasure and pain, capable of happiness and misery:" if this

is also joined like the Latin ipse to every person of a verb, as

Singular.

Singular.

ipse veni.

ipse venisti.

ipse venit.

Plural.

ipfi venimus.

ipfi veniftis.

ipfi venerunt.

The word خود feems to be redundant in the following beautiful lines of Sadi,

داني چه گغت سرا ان بلبل سحري تو خود چه آدسي كز عشف بيخبري

Dost thou know what the early nightingale said to me? "What fort of man art thou, that "canst be ignorant of love?"

When is used as a pronoun possessive, it answers to the Greek oceresos, and signifies my, thy, our, your, his or her, and their, according to

the person and number of the principal verb in the sentence; as in this couplet of Hasiz,

I see no man, either among the nobles or the populace, to whom I can trust the secret of my afflicted heart.

The demonstrative pronouns are the following:

این this.

Sing, این this.

Plur. اینان thefe,

or اینان ا

Oblique cases, اینان ا

or اینان ا

or اینان ا

or that.

Sing. آ that.

Plur. ان الله ا

Oblique cases, اینان ا

or انان ا

or انان ا

or انان ا

When leen is prefixed to a noun, fo as to

form one word, it is frequently changed into im, as اسشب imsheb to-night;

تعالي الله چه دولت دارم امشب که آمد ناکهان دلدارم امشب

Heaven! how great is my happiness this night! for this night my beloved is come unexpectedly!

and lore imrûz to-day;

روز عیش وطرب وعید صیامست امروز کام دل حاصل وایام بکامست امروز

"This day is a day of mirth, and joy, and the feast of spring; this day my heart obtains its defires, and fortune is favourable."

The words of and of prefixed to pronouns personal, change them into possessives, and are read with a short vowel, ani to or ez ani to, i. e. thine, as

ماه کنعان من مسند مصر آن تو شد

O my moon of Canaan (O Joseph) the throne of Egypt is thine.

The relatives and interrogatives are supplied by the invariable pronouns as ke and as che, of which the former usually relates to persons and the latter to things: in the oblique cases of these pronouns the final s is absorbed before the syllable 1, as

Nom. هے who.

هے which.

Obl. اے whom.

and چي are interrogatives, and are very often joined to the verb است, as who is it? چيست what is it?

یا رب آن شاهوش ماه رخ زهره جبین هر یکتای که و کوهر یکدانه کیست

O heaven! whose precious pearl, and whose inestimable jewel is that royal maid, with a cheek like the moon, and a forehead like Venus?

kudám is alfo an interrogative pronoun, as

میخواره و سر کشته و رندیم و نظرباز وانکس که چنین نیست دیر این شهر کدامست

We are fond of wine, wanton, diffolute, and

with rolling eyes; but who is there in this city that has not the fame vices?

Our soever is expressed in Persian by or or presixed to the relatives, as

and هونكه whofoever. هوكه and هويه whatfoever.

OF VERBS.

The Perfians have active and neuter verbs like other nations; but many of their verbs have both an active and neuter fense, which can be determined only by the construction. These verbs have properly but one conjugation, and but three changes of tense; the imperative, the aorist, and the preterite; all the other tenses being formed by the help of the particles and or of the auxiliary verbs or to be, and خواستن to be willing. The passive voice is formed by adding the tenses of the verb fubstantive نشكن to the participle preterite of the active; خوانده شد it was read. The inflexions of these auxiliaries must be here exhibited, and must be learned by heart, as they will be very useful in forming the compound tenses of the active verbs.

The present tense of this verb is irregular, but very easy, and must be carefully remembered, as it is the model for the variations of persons in all tenses.

Indicative Mood, Present Tense.

Sing. ام I am. إلى المنت be is.

Plur. ايم we are. ye are. ايد tbey are.

This tense joined to nouns, pronouns, or adjectives often coalesces with them, and loses the initial I elif; as with pronouns,

> Sing. منم ego fum. tu es. ille eft.

Plur. مايم nos fumus. vos eftis. شمايد vas eftis. ills funt.

With adjectives,

I am glad. شادم thou art glad. شادی be is glad.

we are glad. wou are glad. wou are glad. whey are glad.

The negatives are formed by prefixing as or or, as as I am not, &c. but is commonly written is not, as

راهیست راء عشف که هیجش کناره نیست

آنجا جز انکه جان بسپارند چاره نیست

"The path of love is a path to which there is "no end, in which there is no remedy for "lovers, but to give up their fouls." Hafiz.

Second Present from the defective to be.

Sing. هستم I am. thou art. هستي be is.

Plur. هستيم we are. په you are. په they are.

Preterite.

Sing. بودم I was. دری thou waft. he was. Plur. بوديم we were. you were. بوديد they were.

Preterite Imperfect.

. که سي بود سي بودي سي بودم

Compound Preterite.

Sing. بوده ا بوده ا بوده ام I have been. و نوده اي thou hast been. بوده است he has been.

Plur. بوده ايم we have been. you have been. بوده ايد they have been.

Preterpluperfect.

Sing. بوده شدم I had been. پوده شدې thou hadst been. he had been.

Plur. بوده شديم we had been. you had been. بوده شديد they had been.

Future.

Sing. خواهم بود I will be. thou wilt be. خواهي بود he will be. Plur. خواهیم بود will be. you will be. خواهید بود they will be.

Imperative.

Sing. باش or بو be thou. or باشد let him be.

Plur. باشیم let us be. باشید be ye. باشند let them be.

Subjunctive or Aorist.

Sing. بوم or بوم I be.

or بوي thou beest.

por بوك he be.

Plur. بویم or باشیم we be. you be. بوید or باشید they be. they be.

Potential.

Sing. بودسي I would be. thou wouldst be. بودي he would be.

Plur. بوديدي we would be. you would be. you would be. they would be.

Future Subjunctive.

Sing. بوده باشم I shall have been.

بون، باشي he shall have been.

Plur. بون، باشيه we shall have been.

Plur. بون، باشيم we shall have been.

you shall have been.

they shall have been.

Infinitive.

Present, بود by contraction بودن to be

Preterite, وكن شكو to have been.

Participles.

being. باشا

vos been.

سن to be, used in forming the Passive Voice.

Indicative Present.

Sing. مي شوم I am. thou art. مي شوي he is.

Plur. مي شويم we are. you are. مي شويد they arc.

Preterite.

Sing. شدم I was. د شدی thou wast. be was.

Plur. شايم we were. you were. شايد you were. Preterite Imperfect.

used in forming the Compound Future of verbs.

Sing. خواهم I will.

thou wilt. خواهي

he will.

Plur. خواهيم we will.

you roill. they will.

The other tenses are formed like those of the regular verbs.

OF TENSES.

All regular infinitives end in رسيدن, as رسيدن to grieve, ترسيدن to grieve, ناليدن to fear.

The third person of the preterite is formed by rejecting in from the infinitive, الميد he arrived, ناليد be grieved, ترسيد be feared.

I faid, is the zephyr breathing from the garden? or is a caravan of musk coming from Khoten?

The letter ب prefixed to this tense is often redundant, as ببرد و برنت جامعر be took the mantle, and departed.

From the preterite is formed the imperfect tense by prefixing the particles or or as arriving.

In the third persons the impersect tense is

Plur. men let us be. ليه be ye. Wigh let them be.

Subjunctive, or Aorist.

Sing. men I be.

Com thou beest. Jain be be.

Plur. we be.

De me you be.

wigin they be.

Infinitive.

with to be.

to bave been.

Participles.

اچش being. عدش having been.

to be willing.

Aorift.

used in forming the Compound Future of verbs.

Sing. خواهم I will.

thou wilt.

he will.

Plur. خوآهيم we will.

you will. they will.

The other tenses are formed like those of the regular verbs.

OF TENSES.

It will here be useful to exhibit an analysis of all the tenses of a Persian verb, and to show in what manner they are deduced from the infinitive, which is properly considered by the oriental grammarians as the spring and sountain of all the moods and tenses, and which, therefore, is called in Arabick masses masses or the source.

All regular infinitives end in رسيدن, as رسيدن, as رسيدن to arrive, ناليدن to grieve, ترسيدن to fear.

The third person of the preterite is formed by rejecting in from the infinitive, he are rived, if be grieved, if be feared.

شختم مشر صبا زچن رسید یا کاروان مشک زراه ختن رسید

I faid, is the zephyr breathing from the garden? or is a caravan of musk coming from Khoten?

The letter ب prefixed to this tense is often redundant, as ببرد و برفت جامدر he took the mantle, and departed.

From the preterite is formed the imperfect tense by prefixing the particles or or or as be was arriving.

In the third persons the impersect tense is

fometimes expressed by adding \(\) to the preterite, as ناليدندي he was grieving, ناليدندي they were grieving; this form is very common in prose, as

بطرب و نشاط مشغول بودندي و نغههٔ ترانه - از زبان چنک و چغانه اشتهاع نهودندي

"They were immerfed in pleafure and delight,
and were conftantly liftening to the melody of the lute, and of the cymbal."

The fame letter \subseteq added to the first and third persons of the past tense forms the potential mood, as illustrated illustrated in might, could, should or would grieve, is we might, &c grieve; so Ferdusi in a love-song,

شبي در برت ڪر بر آسودمي سر فخر بر آسهان سودمي

"If I could fleep one night on thy bosom, I "should feem to touch the sky with my ex"alted head."

and Hafiz,

آن طرّه ڪه هر جعدس صد نانه چين ارزد

خوش بودي اڪر بودي بويش از خو شخوي "Those locks, each curl of which is worth a "hundred musk-bags of China, would be

" fweet indeed if their fcent proceeded from

" fweetness of temper." .

The participle preterite is formed from the infinitive by changing into s, as رسید arrived, اشده frinkled; from which participle and the auxiliary verbs من and بودن and the auxiliary verbs من and the paffive voice; as بودن I have fprinkled, پاشیده ام I had fprinkled, پاشیده باش I had fprinkled, پاشیده باش I had fprinkled, پاشیده باش I was fprinkled.

هم جان بدان دو نرکس جاداو سپرده ایم هم دل بدان دو سنبلهندو نهاده ایم

We have given up all our fouls to those two inchanting narciffus's (eyes), we have placed all our hearts on those two black hyacinths (locks of hair).

The Persians are very fond of the participle preterite; and it is very often used by their elegant writers to connect the members of a sentence, and to suspend the sense till the close of a long period: in poetry it sometimes is used like the third person preterite of a verb, as in this sine couplet:

فروغ جام و قدیم نور ماه پوشیده عذام مغیمان راه آنتاب زده

"The brightness of the cup and the goblet ob"fcures the light of the moon; the cheeks
"of the young cup-bearers steal the splen"dour of the sun."

In the ode from which this couplet is taken every distich ends with the word odj for dj he struck.

In composition the infinitive is contracted by rejecting ن, as شد خواهم I will be; so Hafiz,

نغس باد صدا مشك نشان خواهد شد عالم پير دڪر باره جوان خواهد شد

The breath of the western gale will soon shed musk around; the old world will again be young

This short infinitive is likewise used after impersonal verbs, as it is possible to do; it is possible to do; thus Hasiz, the Anaereon of Persia,

بسعي خود نتوان برد ڪوهر مقصود خيال تست ڪه اين ڪار بيجورده بر آبد

"It is impossible to attain the jewel of thy

" wishes by thy own endeavours; it is a vain

" imagination to think that it will come to

" thee without affiftance."

and the poet quoted in the history of Cazvini,

"The life of man is a journal, in which he "must write only good actions."

The imperative is regularly formed by throwing away the termination if from the infinitive, as if arrive: the letter is often prefixed to the imperative, as is often prefixed to the imperative, as fear thou; fo Ferdusi in his noble satire against a king who had slighted him;

ایا شاه محبود کشورکشاي زمن څر نترسي بترس از خداي خيږيدي چرا خاطر تيز من نترسيدي از تيغ خون ريز من

O king Mahmud, thou conqueror of regions, if thou fearest not me, at least fear God! why hast thou imlamed my wrathful temper? dost thou not dread my blood-dropping sword? It must be here observed, that the negatives as and i are changed in the imperative into and and and and and and as and as and as as and as as a do not as as a do not a do no

"I have telt the pain of love; ask not of whom:
"I have tasted the poison of absence; ask
" this from whom."

Before verbs beginning with I elif the letters is and are changed into and are changed into and and are used such bring thou, as before if are used such bring;

ساقیا ساغر شراب بیار یکدو ساغر شراب ناب بیار

"Boy, bring a cup of wine; bring a few more cups of pure wine."

کو شبع میارید در این جهی که امشب در مجلس ما ماه رخ دوست تمامست در مجلس ما عطر میامیز که جانرا هر دم زسر زلف تو خوش بوی مشامست

" Say, bring no tapers into our affembly, for this night the moon of my beloved's cheek

" is at its full in our banquet; fprinkle no
perfume in our apartment, for to our minds
the fragrance that constantly proceeds from
thy locks is fufficiently pleasing."

The contracted participle used in compound epithets is exactly the same with the imperative, as انكيز excite thou, عشرت انكيز mirth-exciting; أفروز inflame thou, أفروز world-inflaming, Getiafrose, the name of a fairy in the Persian tales translated by Colonel Dow.

The participles of the present tense are formed by adding of, I or ow to the imperative, as and an arriving; which last participle is often used for a noun of action, as a player.

From the imperative also is formed the conjunctive tense or agrift by adding to it the usual personal termination, as from of come thou,

"When the fun of the wine shall rise from the "east of the cup, a thousand tulips will

" fpring from the garden of the cup-bearer's

" cheek."

By this affected, yet lively allegory, the poet

only means that " the cup-bearer will blush " when he shall present the wine to the guests."

For the most part this form of the Persian verb, which the grammarians properly call the acrist, or indefinite tense, answers to the potential mood of other languages, and is governed by conjunctions as in Latin and English: this will be seen more clearly in the following example taken from the life of Nader Shah;

بر دانین رموزاکاهی و دقیقه یابان حکمتهای آلهی واضح است که در هر عهد و اوان که اوضاع جهان مختلف و پریشان و چرخ ستهکر بیام ستهکیشان کرده کداوند یکانه که مدبر این کارخانه و مقلب اوضاع زمانه است از فیض بی منتهای خود سعادتهندیرا موید و در عرصهٔ کیتی مبسوط الید کند که بهراهم مراحم و رافت بالتیام جراحات قلوب ستهدیدگان پردازد و مذاف تهنای تلخیکامان ژهر حواد شرا میراده و بشهد عدالت شیرین سازد

[&]quot; It is evident to the discerning and intelligent

" part of mankind, that, whenever the affairs

" of the world are thrown into confusion, and

" fortune favours the desires of the unjust

" the great Disposer of events, in the effu-

" fion of his endless mercy, selects some for-

" tunate hero, whom he supports with his

" eternal favour: and whom he commands

" to heal with the balm of benevolence the

" wounds of the afflicted, and to sweeten

"the bitter draught of their misfortunes

" with the honey of justice."

in which period the words کرد kerded, میازد perdázed, and پردازد perdázed, and میازد sázed, are the aorifts of کردن kerdíden, کردن perdákhten, and کردن fakhten, governed by the conjunction ماختن that,

The present tense is formed by presixing وي or ميدانم to the aorist, as ميدانم I know, he knoweth:

اي باد صبا بڪذر آنجا ڪه تو ميداني و احوال دلم به شو پيدا ڪه تو ميداني

O gentle gale, pass by the place which thou knowest, and disclose the secrets of my heart which thou knowest.

زين خوش رقم كه بر كل رخسار ميكشي خطّ بر صحيعة كل كلزار ميكشي With that sweet hue which thou bearest on the rose of thy cheek, thou drawest a line over the face of the garden-rose.

The particles and are sometimes joined to the verb, and sometimes separated from it, according to the pleasure of the writer, as

Pursue thy pleasures eagerly, for while thou canst close thine eye, the autumn is approaching, and the fresh season is passing away.

The letter prefixed to the aorist restrains it to the future tense, as برسم I will arrive; thus Nakshebi in his work called موطى نامه or The Tales of a Parrot, Night 35,

نخشبي جد و جهد بايد كرد چونكه مردم بيار خود برسد هر كه در كارها كند جهدي عاتبت بر مراد خود برسد

O Nakshebi, a man who desires to enjoy his beloved must be active and diligent: whoever labours diligently in his affairs, will at last attain the object of his wishes.

After having given this analysis of the Perfian verb, it will be necessary to add a table of the moods and tenses as they answer to those of European languages.

Verb Active, پر سیدن porsiden to afk.

Indicative Mood, Present Tense.

Sing. مي پرسم I afk. thou afkeft. مي پرسي he afks.

Plur. مي پرسيم we afk. you afk. مي پرسيد they afk.

Simple Preterite.

Sing. پرسیدی I asked. پرسیدي thou askedst. be asked.

Plur. يرسيدي we afked. you afked. پرسيديد they afked.

Compound Preterite.

Sing. پرسیده ام I bave asked.

I bave asked.

or برسیده ای bou hast asked.

or پرسیده است he has asked.

or پرسیده است

Plur. پرسیده ایم we have asked. you have asked. پرسیده اید they have asked.

Preterite Imperfect.

Sing. مي پرسيدنم I was asking.

thou wast asking.

he was asking.

Plur. مي پرسيديم we were asking. you were asking. o you were asking. they were asking.

Preterpluperfect.

Sing. پرسیده بودم I had asked. پرسیده بودي thou hadst asked. he bad asked.

Plur. پرسیده بودیم voe bad asked. پرسیده بودید you had asked. پرسیده بودند they had asked.

First Future.

Sing. بيرسم I shall ask. thou shalt ask. بيرسي be shall ask.

Plur. بپرسیم we shall ask. you shall ask. بپرسید they shall ask. Second Future.

Sing. خواهم پرسید I will ask. خواهم پرسید thou wilt ask. خواهی پرسید he will ask.

Plur. خواهیم پرسید we will ask. you will ask. خواهید پرسید they will ask.

Imperative.

Sing. پرس or پرس ask thou. let bim ask.

Plur. پرسیم let us ask. ask you. پرسید let them ask

Conjunctive, or Aorist.

Sing. پرسم I may ask. thou mayst ask. be may ask.

Plur. پرسیم we may ask. you may ask. پرسید they may ask.

Potential.

Sing. پرسیدی I might, &c. ask. پرسیدی thou mightst ask. پرسیدی he might ask. Plur. پرسیدیی we might, &c. ask. you might ask.

پرسیدیکی they might ask.

Compound Future.

Sing. پرسیده باشم I shall bave asked.

د باشی thou shalt bave asked.

د باشد he shall have asked.

We shall have asked. پرسیده باشیم we shall have asked. you shall have asked. پرسیده باشند they shall bave asked.

Infinitive.

پرسید to ask, contracted پرسیده Preterite, پرسیده بودن to have asked.

Participle.

Prefent, پرسان and منس asking.

Preterite, مرسان asked or having asked.

Paffive Voice.

Indicative Present.

Sing. پرسیده مي شوم I am asked. پرسیده مي شوي thou art asked. ایرسیده مي شود he is asked.

Plur. پرسیده مي شویم we are asked. you are asked. پرسیده مي شوید they are asked. Preterite.

Sing. پرسیده شدم I was asked. یرسیده شدی thou wast asked. د سیده شد he was asked.

Plur. پرسیده شدیم we were asked. you were asked. پرسیده شدند they were asked. Preterpluperfect.

Sing. پرسیده شده بودم I bad been asked. پرسیده شده بودي thou hadst been asked. پرسیده شده بود

Plur. پر سیده شده بودیم we had been asked.
you bad been asked.
پر سیده شده بودید
they bad been asked.

Aorist.

Sing. پرسیده شوم I may be asked. پرسیده شوي thou mayst be asked. be may be asked.

Plur. پرسیده شویم we may be asked. you may be asked. پرسیده شوید they may be asked.

Second Future.

Sing. پرسیده خواهم شد I shall be asked.

I shall be asked.

پرسیده خواهی شد be shall be asked.

VOL. III.

R

Plur. پر سیده خواهیم شد we shall be asked. پر سیده خواهید شد you shall be asked. پر سیده خواهند شد they shall be asked.

Infinitive.

Prefent, پ سیده شدن to be asked.

Preterite, پ سیده شده بودن to bave been asked.

Negative verbs are formed by prefixing as or it to the affirmative in all the tenses, as

Sing. نبي دانم I do not know, nefcio. د داني داني thou doft not know, nefcis. ه نبي داند he does not know, nefcit.

Plur. نهي دانيم we do not know, nescimus. you do not know, nescitis. you do not know, nesciunt.

ندانم از چه سبب رنگ آشناي نیست سهي تدان سيه چشم ماه سيهارا

I know not why the damfels, tall as cypresses, with black eyes, bright as the moon, have not the colour of love.

Hafiz.

OF IRREGULAR VERBS.

In the ancient language of Persia there were very few or no irregularities: the imperative, which is often irregular in the modern Persian,

was anciently formed from the infinitive by rejecting the termination يدن eeden; for originally all infinitives ended in od den, till the Arabs introduced their harsh consonants before that fyllable, which obliged the Perfians, who always affected a fweetness of pronunciation, to change the old termination of some verbs into ten, and by degrees the original infinitives grew quite obsolete: yet they still retain the ancient imperatives and the aorists which are formed from them. This little irregularity is the only anomalous part of the Perfian language, which, nevertheless, far surpasses in simplicity all other languages, ancient or modern, of which I have any knowledge. This remark on the formation of the Perfian imperatives from an obsolete verb, may be useful to those who are curious in ancient dialects; as it will enable them to trace out a confiderable part of the old Persian language or Pehlevian (Salar, which has the fame relation to the modern (5,0) or Perfick, as the Icelandick has to the Danish, and the Saxon to the English; and which was, perhaps, spoken in the age of Xenophon. This is the language in which the works of Zeratusht or Zoroaster are preserved, and into which the fables of Bidpai or Pilpai were first translated from the Indian: but as we rejected the Saxon alphabet to admit the Roman; fo the Persians, when they embraced the religion of Mahomet, adopted the characters in which the Alcoran was written, and incorporated into their language a multitude of Arabick words and phrases.

The Persian verbs that form their imperatives, and consequently their agrists, from obsolete infinitives, may be distributed into the following classes: the old infinitives may be found by adding weeden to the imperatives, and the agrists by adding to them the personal terminations.

I.

Irregulars that form their imperatives by rejecting of or ir

Infin.	Imper.	Aorist.
todraw a fabre	T	آخم
to fow together اژدن	اژ	اژم
to rebuke	٦ زار	آزارم

Example of an irregular verb.

يانت yaften to find. Contracted infinitive يانتن

Prefent Tense.

Sing. مي يابم I find.

د يابي thou findeft.

د الله له الله be finds.

Plur. مي يابيم we find.

الله you find.

الله they find.

Preterite.

Sing. يانتم I found.

یانتی thou foundest.

be found.

Plur. یانتی we found.

you found.

یانتید you found.

Future, or Aorist.
Sing. يابم I shall or may find.

یابی thou shalt or mayst find.

الله be shall or may find.

Plur. یابیم rve shall or may find.

یابید you shall or may find.

یابید they shall or may find.

Imperative.

باي or بايب find thou. مياي find you.

Participles.

Present, الله or يابا finding.
Preserite, يانته having found.

آن به که زصبر رخ نتابم باشد که مراد دل بیابم

It is better for me not to turn my face from patience; it may happen that I may find what my heart defires.

The contracted participles, as it has been before observed, are of great use in the composition of words; as عشرت انگیز mirth-exciting,
from عشرت which in Arabick signifies mirth,
and the participle of انگیختن to excite: but
of these elegant compounds I shall speak at
large in the next section.

OF THE COMPOSITION

AND

DERIVATION OF WORDS.

ONE of the chief beauties of the Persian language is the frequent use of compound adjectives; in the variety and elegance of which it surpasses not only the German and English, but even the Greek. These compounds may be multiplied without end according to the pleasure and taste of the writer; they are formed either by a noun and the contracted participle, as where and contracted participle, as beart-alluring, or by prefixing an adjective to a noun, as where sure fixed participle is sure fixed. It is a sure fixed participle in the sure of t

Since one of the nouns in a compound word is often borrowed from the Arabick, a man who wishes to read the Persian books with satisfaction, ought to have a competent knowledge of both languages. I shall subjoin a list of the most elegant compounds that I car recollect; but I must express most of them in English by circumlocutions; for though we have some compound epithets which give a grace to our poetry,

yet in general the genius of our language seems averse to them. Thus from from an fawn, and an eye, a Persian epithet, which answers to the Greek identify, seems very harsh in English, if we translate it fawn-eyed; Lady Wortley Montague's translation * stag-eyed is not much better, and conveys a different idea from what the eastern poets mean to express by this epithet.

Adjectives compounded of nouns and participles.

gul efshân shedding flowers.

الفشان durr efshân sprinkling pearls.

goher efshân scattering gems.

goher efshân scattering gems.

goher efshân scattering gems.

iteeg efshân brandishing a scymitar.

khôn efshân dropping blood.

الفشان خون افشان كن dil azâr afslicting the heart.

الما خون افشان افكن jân azâr twounding the soul.

الما خود افكن افكن tâb ef kén darting stames.

الما في beekh ef kén tearing up roots.

الما في في افكن افكن seng ef kén casting stones.

الما خود افكن شاك افكن merd ef kén overthrowing heroes.

الما خود افكن amber âghéen full of ambergris.

^{*} See her Letters from Conftantinople.

furûr aghéen full of pleasures. سرور آخین murâd aver fulfilling our desires. مراك آور dil aver stealing hearts.

jehán arâ } adorning the world. & عالم آزا

mejlis arâ gracing the banquet.

Jo dil arâ rejoicing the heart.

אט dil arâm giving rest to the heart. nebérd azmâ experienced in battle.

rûh asâ appeasing the Spirit.

jân asâ giving rest to the foul.

khon alûd Sprinkled with blood.

gubar alûd covered with dust.

khatá alûd stained with crimes.

ruh efzâ refreshing the spirit.

bihjet efzå increasing chearfulness. بهجت افزا fhehr ashôb disturbing the city;

elegantly applied to beauty, to which likewise the poets give the following epithet,

rûz efzûn increafing daily. روز افزون fer efrâz raifing his bead. سر افراز gerden efrâz exalting his neck. أوران افراز alem efrûz والمان افروز وإفاض افروز jehán efrûz

VOL. III.

giti efrûz inflaming the univerfe. گیتنی افروز mârikeh efrûz kindling the fight. فعرکه افروز bostân efrûz inflaming the garden:

a beautiful epithet for the anemone.

a beautiful epithet for the anemone.

dânish amûz skilled in science.

kar amûz expert in affairs.

اموز muzhdeh ameés mixed with joyful tidings.

This participle is used in a great variety of compounds.

ráhet ameéz giving rest. راحت آمیز fitem ameéz full of threats. ستم آمیز fhehd ameéz mixed with bowey. رنگ آمیز reng ameéz mixed with colours, that is, deceitful.

pertu endáz darting rays.

إن انداز dehshet endáz striking with fear.

انداز atesh endáz casting out fire.

انداز teer endáz shooting arrows.

انداز zulmet endûz gathering dark
ness, an epithet of the night.

ibret endûz attracting wonder. عبرت اندوز iltifât engeéz exciting respect. التغات انگيز khulûs engeéz promating fincerity.

fitne engeéz raifing a tumult. فتنه انثيز khejlet engeez caufing blufhes to rife.

انگيز khefekan engeéz making the

irshâd engeéz producing safety. ارشاد انگیز merdum ôbár devouring men. مردم اوبار jân afcreén that created the soul. جان افرین dil ber a ravisher of hearts. سایه پرور sáyeh pervér bred in the shade,

an epithet for an ignorant young man who has not feen the world.

علما پرور ulema pervér cherishing learned men. تن پرور ten pervér nourishing the body.

الافران خور ishk báz sporting with love.

الافران باز puzish pezeér accepting an excuse.

الافران بانه پرداز turáneh perdáz composing tunes, a musician.

أسخن پرداز fekhun perdáz composing sentences,

nekil bend compiling narratives, an historian.

adu bend that enflaves his enemies. عدو بند fitne beez spreading fedition. atar beéz shedding perfume. عطر بيز nádereh peerâ collecting memorable فالدره پيرا events.

عبون پیوند afomân peyvend reaching the sky.

alem tâb inflaming the world, an epithet of the fun.

deuletjúï wishing prosperity. ولتجوي gul cheen gathering roses.

gul cheen gathering roses.

shukûfeh cheen cropping flowers.

fekhun cheen collecting words,
an informer.

المحرخيز feher kheez rifing in the morning.

khosh khân sweetly singing.

jéhandâr possessing the world.

jéhandâr possessing the world.

inukteh dân skilful in subtleties.

khurdeh been seeing minute objects.

fekhun rân lengtbening his discourse.

لامران kamrân gaining his defires. كامران khûn reez shedding blood. خون ريز sheker reez dropping sugar. شكر ريز goher reez scattering jewels. اشك ريز ashk reez shedding tears.

العن فالمنت والمناف المناف ال

لرشناس له المشاه kar shinas skilful in business. كار شناس sheker furush felling sugar. شكر فروش له المخود فروش له المخود فروش المخود فروس المخود فروس المخود فريب المخود والمخاص المخاص المخود المخاص المخاص

aurung nisheen sitting on a throne.

viranéh nisheen inbabiting a desert.

rehnumâ showing the way.

ghereeb nuvâz kind to strangers.
غريب نواز
berbut nuvâz tuning a barp.

kâm yâb that finds what be desires.

II.

Words compounded of adjectives and nouns.

جوب روي khob rûyi with a beautiful face. ياكيزه خوي pakeezeh khúi baving pure intentions.

khosh khúi of a sweet disposition.

pakdámen with unblemished virtue.

jej pakdámen with unblemished virtue.

khob avâz with a pleasing voice.

khob rayhe with a pleasant scent.

خوب رایحه

khosh elhân with sweet notes;

an epithet of the nightingale, as in this elegant distich,

رونف عهد شبابست دائر بستانرا میرسد مرده کل بلبل خوش الحانرا

The brightness of youth again returns to the bowers; the rose sends joyful tidings to the nightingale with sweet notes.

خوش رفتار khosh reftår walking gracefully. خوش رفتار shireenkår with gentle manners. شیرینکار shireen dihen with a fweet mouth. شیرین دهن siah cheshm black-eyed.

The compounds of this form are very numerous, and may be invented at pleasure.

III.

Adjectives compounded of two nouns. Each of these epithets is a short simile.

peri ruyi) with the face of an پري روي peri peyker } angel.

peri rukhsar with the cheeks of an angel.

Gemshid kulah with the diadem of Gemshia.

Darius. Dara hishmet with the troops of

سیمین سات fimeen sak with legs like filver. شکر لب fheker leb with lips of fugar.

tuti guftar talking like a parrot.

ين guncheh leb with lips like rose-buds.

المهن بوي femen bûyi with the scent of jessamine.

femen ber with a bosom like jessamine.

قلرخ gulrokh with cheeks like roses. قلروي gulruyi with a rosy face. قلروي mushk buyi with the scent of musk. ياقوت لب yakût leb with lips like rubies. شير دل sheer dil with the heart of a lion.

When we consider the vast number of epithets that may be compounded after these three forms, and that those epithets are often used for substantives without a noun being expressed, we must allow that the Persian language is the richest in the world. These compounds are thought so beautiful by the Persian poets, that they sometimes fill a distich with them, as

ماه روي مشكبوي دلكشي جان فزاي دلفريبي مهوشي

A damfel with a face like the moon, scented like musk, a ravisher of hearts, delighting the soul, seducing the senses, beautiful as the full moon.

The particle hem together, prefixed to nouns, forms another elegant class of compounds implying fociety and intimacy, as

اشیان hemáshiyán of the same nest.

hemásheng of the same inclination.

hembezm of the same banquet.

hempister lying on the same pillow.

hemkhåbeh sleeping together.

hemdem breathing together, that is,

very intimately connected.

The particles i not, المناس, are placed before nouns to denote privation, as المناس, as المناس ná umeéd hopeless, المناس ná signorant, مناش ná shukûfteh a rose not yet blown; لم عقل kembeha of little value, كم عقل bee bak kem akil with little sense; لمناب bee amân merciless: this particle is often joined to Arabick verbals, as يا المناس bee terteeb irregular.

Example.

بعد ازين نام ترا در هر كجا خواهم نوشت بي حقيقت بي مروّت بي وفا خواهم نوشت

Henceforth, wherever I write thy name, I will write false, unkind, and faithless.

Names of agents are generally participles active in منا, as منازنده fazendeh a composer; or they are formed by adding رُوّر ger, و gár, or الله bân, to a substantive, as وَرَكُّر a gold
fmith, المُعْنِين a writer, واغنان a gardener.

Nouns of action are often the same with the third person preterite of a verb, as و خرید buying and selling, امد و شد coming and going.

Adjectives implying possession or plenty are formed by adding to nouns the terminations سار sár, مان keen, مند mend, ناك nák, و var or و ver, as شرمسار basbful, فيكين basbful, اميدوار veromous, زهرناك learned, كانشيند hopeful, جانور having life.

The Arabick words of zu, walle fahyb, and del ehl prefixed to nouns form likewise adjectives of poffession, as July o majestick, dignitate præditus, المام beautiful, venustate præditus, اهل حكيت wife, sapientia præditus. We may here observe, that the Indians use a great variety of phrases purely Arabick, some as proper names and titles of chiefs and princes, and others as epithets or constant adjuncts to substantives; such are the names Nej- الدوله ,Shujaheddoula شجع الدوله meddoula, شهس الدولم Shemfeddoula, سراج عامل Serájeddoula, which fignify in Arabick the force, the star, the sun, and the lamp of the flate; fuch also is the title which they gave Lord Clive, اللك Zubdatulmulk the flower of the kingdom; in the same manner they

Teldom mention the province of بنثاله Bengála without adding, by way of epithet, جنّت البلاد jennetulbelâd the paradife of regions, an Arabick title given to that province by آورنگ زیب Aurengzeeb.

Some adjectives are formed from nouns by adding من as زرین fiery, زرین golden, imade of emeralds.

The termination ail added to substantives forms adverbs that imply a kind of similitude, as ailula prudently, like a prudent man, courageously, like a man of courage.

Some adjectives and adverbs are formed by nouns doubled with the letter I elif between them, as سراسر from the beginning to the end, عوناتون or رنگارنگ or موناتون

Example.

روضة مآء نهرها سلسال دوحة سجع طيرها موزون

ان پر از لالهاي رنگارنک واين پر از ميوهاي څوناڅون

A garden, in which were the clearest rivulets, an orchard in which the notes of the birds were melodious; the one was full of many-coloured tulips, the other full of fruits with various bues.

The two first lines of this tetrastich are in pure Arabick.

The termination فام fam, as well as ثون goon, denotes colour, as ثلغام or ثلغام rose-coloured, ومردفام emerald-coloured.

From the compounds above mentioned, or any other adjectives, compounded or simple, may be formed abstract substantives by adding C, as

المرسار bafbful,
المنان learned,
المنان black,
المنان bafbfulnefs,
المنان learning.
المنان blacknefs.

If the adjective end in s the abstract is made by changing s into ييكانكي new, بيكانكي novelty.

Other abstracts are made either by adding

to the third person of the past tense, as الميدار fight, وفتار figech, وفتار motion; or by adding ثغتار to the contracted participle, as شايش rest, السايش praise, انهايش temptation.

The letter I elif added to some adjectives makes them abstract nouns, as warm, warm,

warmtb.

Nouns denoting the place of any thing are formed by the terminations استان iftán, دای dán, ایتان gah, or جا já, as

negaristán * a gallery of pictures. فثارستان behâristân the mansion of the spring. والستان gulistân a bower of roses.

شكردان fhekerdân a chest of Jugar.

fumbulistan a garden of hyacinths. شبرستان sheeristan the country of lions.

* The five first of these names are the titles of as many excellent books: the Beharistán and Gulistán are poetical compositions by Jámi and Sádi; the Negaristán is a very entertaining miscellany in prose and verse; and the Shekerdán is a miscellaneous work in Arabick upon the history of Egypt: as to the Sumbulistán, I have seen it quoted, but recollect neither the subject, nor the name of its author. The Greeks sometimes gave these slowery titles to their books; thus Pamphilus published a treatise on different subjects, which he called Assum published a treatise on different subjects, which he called Assum a gardan of violets, or a collection of proverbs and sentences.

ginnistân fairy-land. جنستان gulzár a bed of roses. الالهزار lalehzár a border of tulips. الالهزاد ibádetgáh a place of worship. خواب جا khab já the place of sleep, a bed.

The learner must remember, that when these compounds are used as distinct substantives, the termination of the plural, and be of the oblique case, must be added to the end of them, as Sing. Nom. مثيرين دهن عندا a girl with sweet Obl. اشيرين دهنرا دانه دانه المالية الما

Plur. Nom. شبرین دهنان girls with fweet
Obl. شبرین دهنانرا lips.

اقرار کون ikrár kerden to confess.
انتظار کون intizár kerden to expect.
انتظار کون rujû kerden to return.
انتظام کون temâm kerden to complete.
المون por kerden to fill.
اترک کون terk kerden to leave.
المون کون tulû kerden to rise (oriri).

Thus Hafiz,

صبحست ساتيا تدمجي پر شراب ڪن دور فلک درنگ ندارد شتاب ڪن خورشيد مي زمشرف ساغر طلوع ڪرد ڪربرک عيش ميطلبي ترک خواب ڪن

It is morning; boy, fill the cup with wine: the rolling heaven makes no delay, therefore hasten. The sun of the wine rises from the east of the cup: if thou seekest the delights of mirth, leave thy sleep.

hujum åverden to affault. المجوم آوردن yád åverden to remember. يال آوردن yád åverden to remember. ajeb dashten to wonder. معذور داشتن mâzúr dashten to excuse. معذور داشتن hesed berden to envy. اعتقاد بردن itikád berden to believe.

غم خوردن ghemm khorden to grieve.

feugend khorden to fwear.

rúshen sakhten to enlighten.

ter sakhten to moisten.

ter sakhten to moisten.

iltisát numûden to esteem.

medhûsh geshten to be aftonisbed.

ويدن gemnák gerdíden to be afflitted.

pedeed âmeden to appear.

ihfan deeden to be benefited.

perverish yaften to be educated.

kerar griften to be confirmed.

The verbs فرمودن and فرمودن are very frequently used in composition, as نعره زدن fikr fer-muden to consider; thus Gelaleddin Ruzbehar,

While the nightingale fings thy praises with a loud voice, I am all ear like the stalk of the rose-tree.

and Hafiz,

فكر معقول بغرما كل بيخار كجاست Confider attentively; where is a rose without a thorn?

Some of the particles, with which verbs are compounded, are fignificant, and others redundant and ornamental, as

اوردن der åwerden to carry in.
اوردن der khåften to require.
ام المنان der khåften to require.
ام المنان der yåften to understand.
ام المنان ber åmeden to ascend.
المنان ber åsúden to rest.
المنان ber åsúden to rest.
المنان baz dashten to with-bold.
المنان furúd åmeden to descend.
المنان våpes dashten to detain.
المنان er dåden to banish, to confine to a

In the present tense of a compound verb the particle is inserted between the two words of which it is composed, as you to fill.

Sing. پر سي کنم I fill. پر سي کني thou filleft. پر سي کنده he fills. Plur. پر سي کنيم we fill. you fill. پر سي کنيد they fill.

Sometimes the two words of which a verb is compounded are placed at a great distance from each other, as

"O western breeze, say thus to you tender fawn, thou hast confined us to the hills and deferts."

where wold in the preterite of wolds. The noun is has a number of different senses, and is therefore the most difficult word in the Persian language; it signifies the head, the top, the point, the principal thing, the air, desire, love, will, intention, &c. and sometimes its meaning is so vague that it seems a mere expletive, though the Persians undoubtedly feel its force.

There are derivative verbs in Persian, as in Hebrew and Arabick, which may be called causals; they are formed from the transitive verbs by changing النيدن into النيدن, and sometimes into

تابایانیدن and تابانیدن to shine. تابانیدن and تابانیدن

to cause to arrive. رسانیدن to cause to ar-

یارب آن آهوي مشکین بختن باز رسان وآن سهي سرو خرامان بچهن باز رسان

O heaven! bring that musky fawn back to Khoten; bring back that tall waving cypress to its native garden.

OF PERSIAN NUMBERS.

THE numerals and invariable parts of speech belong more properly to a vocabulary than to a grammar; but for the use of such as will take the trouble to learn them by heart, I will here subjoin the most common of them:

1	1	yek یک	one.
۲	v	90 du	two.
m	100	am feh	three.
3	5	chehar چهار	four.
D	8	penge viz	five.
4	9	fhesh mm	fix.
٧	-	heft هفت	Seven.
٨	7	hefht هشت	eight.
9	ط	ai nuh	nine.

- 60	ي	₹O deh	ten.
- 11	يا	yázdeh يازده	eleven.
14	يب	عرازه duázdeh	
lm	7	اسيز انعلام fizdeh	thirteen.
18	يد	cheharde چهارک	
10	يه	panzedeh پانزده	
14	يو	hanzedel شانزک	
IV	يز	befdeh هغده	
IA	1	hefhdeh هشده	eighteen.
19	يط	nuzdeh نوزده	nineteen.
. 11	5	beeft	twenty.
11	5	فيستيك	ktwenty-one.
μ,	J	Sm fee	thirty.
٤١	-	chehel چهال	forty.
ים	Ü	penjah پنجام	fifty.
41	Ou	fhefht ششت	fixty.
V	3	heftad هنتاد	Seventy.
٨٠	ع	hefhtåd هشتان	eighty.
91	00	navéd نود	ninety.
111	ت	مد fad	a bundrea.
111	1	dûfad دوصد	two bundred.
۳,,	m	chain feefad	three bundred.
811	=	cheharfa چهارصد	d four bundred.
D11	ت	panfad پانصد	five hundred.
411	ż	ششصد fhefhfad	fix bundred.
VII	5	heftfad eine	Seven bundred.

ORDINALS.

nukhust first.

ما المناسخة nukhust first.

ما المناسخة fecond.

المناسخة fium third.

المناسخة cheharum fourth.

المناسخة penjum fiftb.

All the other ordinals are formed in the same manner, by adding , to the cardinal numbers.

ADVERBS.

اندك besíar much. اندك endek little. اندك eenjá here. اينجا

جان نیز آثر فرستم آنجا آن تحفهٔ مختصر چه باشد

If I could fend my foul to that place, how trifling a prefent would it be!

ez cenjá hence.

eensú hither.

اینسو دریان اوری اینسو دری اینسو دری اینسو می اینسو اینس

نوازنده بلبل بباغ اندرون کرازنده آهو براغ اندرون

The nightingales were warbling in the garden, and the fawns were sporting on the hills.

or بالا below. بالا balá above. ان بلا نبود كم از بالا بود That evil which comes from above is not evil.

المحال bamdâd بالمحال bamdâd المحرثاء fehergah in the morning.

شامتناه fhamgah in the evening. دی dee yesterday.

yeish before.

اکنون eknun now.

The following fix adverbs are nearly fynonymous, and fignify as, like, in the fame manner as;

> hemchú, پنین cheneén, پنین chenancheh, پنانچه hemchun, hemcheneén, پنانکه chenankeh.

cu where?

ez behri che on what account?

ور الله والله وا

CONJUNCTIONS.

u or va and.

ال ya or.

ال ya or.

ال hem, or نين neez alfo.

ال egher, or gher if.

ال eghercheh, هي ghercheh though.

ال ال emma, الما الديل leiken, الما bel, ملا belkeh but.

ال ال belkeh but.

ال ال ال berabereén therefore.

ال ال ال المال المال

يرا غورت júz except.

PREPOSITIONS.

jl ez or j from, by, of. mes after. a beh, or u be, joined to the noun, in, to. ba with. pehlevi near. راي bejehet for. ez jehet, از جهت از جهت ez jehet, از جهت meian between. forud beneath. zeber above. یا aber, or بر upon. peish before. ي bé without. ال der in. Swii toward. zi zeer under. ن nazd near.

INTERJECTIONS.

ايا eiá, ايها ayoḥa ob l دريغ or دريغ dereega alas l ah ab! Thus in the tale of the merchant and the parrot by Gelaleddin Rúmi,

Alas! alas! that so bright a moon should be hidden by the clouds!

efsús are likewise interjections that express gries: thus in a tetrastich by the sultan Togrul Ben Erslan,

دبروز چنان وصال جان فروزي و امروز چنين فراف عالم سوزي افسوس که بر دفتر عمرم ايام آثرا روزي نويسد اينرا روزي

Yesterday the presence of my beloved delighted my soul; and to-day her absence fills me with bitterness; alas! that the hand of fortune should write joy and grief alternately in the book of my life!

This great hero and poet was the last king of the Seljukian race: he was extremely fond of Ferdusi's poetry, and in the battle in which he lost his life, he was heard to repeat aloud the following verses from the Shahnama:

> چو برخاست از لشکرکش کرد رخ نامداران ما کشت زرد

من این کرزیکزخم برداشتم سپهرا هم انجاي بگذاشتم خروشي برآورد اسبم چو پیل زمین شد پریشان چو دریاي نیل *

When the dust arose from the approaching army, the cheeks of our heroes turned pale; but I raised my battle-ax, and with a single stroke opened a passage for my troops: my steed raged like a surious elephant, and the plain was agitated like the waves of the Nile.

^{*} These lines are quoted by d'Herbelot, p. 1029, but they are written differently in my manuscript of Ferdus, which I have here followed.

OF THE PERSIAN SYNTAX.

THE construction of the Persian tongue is very easy, and may be reduced to a few rules, most of which it has in common with other languages. The nominative is usually placed before the verb, with which it agrees in number and person, as in this pious sentence of a Persian philosopher,

از بهر چه آمدهٔ اکر آمدهٔ که علم اولین و احرین بیاموزی این راه روا نیست این همه خالف داند و اکر آمده که اورا جوبی آنجا که اوّل قیام بر گرفتی او خود آنجا بود *

Wherefore art thou come? if thou art come to learn the science of ancient and modern times, thou hait not taken the right path: doth not the Creator of all things know all things? and if thou art come to seek him, know that where thou first wast fixed, there he was present.

yet it is ren arkable, that many Arabick plurals are confidered in Persian as nouns of the singu-

^{*} See the Bibliotheque Orientale, p. 950.

lar number, and agree as fuch with verbs and adjectives, as

از آمدن بهار از رفتن دي اوراف حيات ما ميكردد طي

By the approach of fpring, and the return of December, the leaves of our life are continually folded.

where اوراق the plural of ورق a leaf, governs میکرده in the fingular.

There is another strange irregularity in the Persian syntax; the cardinal numbers are usually joined to nouns and verbs in the singular, as a thousand and one days.

نسیم زلغت اکر بگذرد بتربت حافظ زخاک گالبدش صد هزار لاله برآید

If the gale shall wast the fragrance of thy locks over the tomb of Hasiz, a bundred thousand flowers will spring from the earth that hides his corse.

These idioms, however, are by no means natural to the Persian, but seem borrowed from the Arabs, who say, all a thousand and one nights. In Arabick too a noun of the plural number, if it signify a thing without life, requires a verb in the singular, and that of the

feminine gender, for the Arabick verbs have distinct genders like nouns, as

خرت الانهار والاغصان مالت للسجود

The rivers murmured, and the branches were bent to adore their Maker.

ذاغت اقداحهم كاحداتي

Their cups overflowed with wine, and my eyes with tears.

Most active verbs require the oblique case in

اگر آن ترک شیرازی بدست ارد دل مارا بخال هندویش بخشم سبرقند و بخارارا

If that fair damfel of Shiraz would accept my heart, I would give for the black mole on her cheek the cities of Samarcand and Bokhára.

It has before been observed (see page 201) that the j is omitted if the noun be indefinite or general, fill a cup; but that it is inserted, if the thing be particular and limited, he filled the cup; examples of this occur in almost every page.

All nouns or verbs by which any profit or acquifition is implied govern the oblique case, as

بلي هر جا که شود مهر آشکارا سهارا چز نهان بودن چه يارا Yes! whenever the fun appears, what advantage can there be to * Soha, but his being hidden?

The following remark relates to the position rather than to the syntax: in a period of two or more members, each of which might end with an auxiliary verb, the first of them commonly contains the verb, which is understood in the rest, as

The disadvantages of haste are many, and the advantages of patience and deliberation (are) innumerable.

The adjective is placed after its substantive, and the governing noun is prefixed to that which it governs, as بوي a beautiful face, مو ي خوب the scent of a rose; but if this order be inverted a compound adjective is formed, as خوب روي fair-faced, خوب روي rose-scented.

Conjunctions which express conjecture, condition, will, motive, &c. require the conjunctive, or potential mood, as

^{*} Soha is the Arabick name for a very small and obscure star in the confiellation of the Great Bear.

If I had known that thy absence would have been so forrowful and afflicting, I would not have departed from thee a single day; I would not have left thee a single moment.

Prepositions and interjections are fixed to nouns in the nominative case, as

شنوده ام که دو کبوتر با یکدیگر در آشیانهٔ دمساز و در کاشانهٔ همراز نه از غبار اغیار بر خاطر ایشان کردي و نه از محنت روزگار در دل ایشان دردي

I have heard that two doves lived together in one neft, and whifpered their fecrets in one chamber; the dust of jealousy had never sullied their minds, and the anguish of missortune had never pierced their hearts.

پرده داري ميكند در تصر قيصر عنكبوت بومي نوبت * ميزند بر كنبد افراسياب

توبت * an Arabick word fignifying a turn, a change, a patch, exembia: bence نوبت زدن in Perfian, and نوبت

The spider holds the veil in the palace of Cæsar; the owl stands sentinel on the watch-tower of Afrasiab.

These are the principal rules that I have collected for the Persian language; but rules alone will avail but little, unless the learner will exemplify them in his own researches: the only office of a grammarian is to open the mine of literature, but they who wish to posses the gems must endeavour to find them by their own labours.

in Turkish, signify to relieve the guards by the sounds of drums and trumpets. This office is given by the poet to the owl, as that of one copies have instead of instead of which reading would make very good sense, but destroys the beauty of the allusion.

A PERSIAN FABLE.

باغبان و بلبل

The GARDENER and the NIGHTINGALE.

اورده اند كه دهقاني باغي داشت خوش و خرم و بوستاني تازهتر از كلستان ارم هواي آن نسيم بهار را اعتدال بخشيدي و شهامهٔ ريحان روح نزايش دماغ جانرا معطر ساختي

نظم ڪلستاني چو گلزار جواني ڪلشن سيراب آب زندگاني بواي عندليبش عشرت انگيز نسيم عطرسايش راحت آميز

و بر یک کوشهٔ چهنش کلبنی بود تازه تر از نهال کامرانی و سرافرازتر از شاخ شجرهٔ شادمانی هر صباح بر روی کلبن گل رنگین چون عذار دلغریبان نازک خوی و رخسار سهنبران یاسهین بوی بشکفتی و باغبان با آن کل رعنا عشف بازی آغاز نهوده کفتی

A literal translation of the foregoing Fable.

THE GARDENER AND THE NIGHT-INGALE.

It is related that a husbandman had a sweet and pleasant orchard, and a garden more fresh than the bower of Irem. The air of it gave mildness to the gales of the spring, and the scent of its herbs that refreshed the spirits, conveyed persume to the very soul.

VERSES.

A bower like the garden of youth, a bed of roses bathed in the waters of life, the notes of its nightingales raising delight; its fragrant gale shedding perfume.

And in one corner of his garden there was a rose bush fresher than the shrub of desire, and more losty than the branch of the tree of mirth. Every morning on the top of the rose bush the rose blossomed, coloured like the cheek of heart-alluring damsels with gentle minds, and the face of lily-bosomed maids scented like jessamine. The gardener began to show an extreme fondness for these excellent roses, and said,

بيت

ڪل بزير لب نهيدانم چه ميگويد ڪه باز بلبلان بي نوارا در نغات مي آورد باغبان روزي بر عادت معهود بتهاشاي ڪل آمد بلبلي ديد نالان ڪه روي در سحيغهٔ ڪل مي ماليد و شيرازهٔ جلد زرنڪار اورا بهنغار تيز از يكديگر مي كسيخت

بيت

بلبل که بکل درنگرد مست شود سر رشتهٔ اختیارش از دست شود

باغبان پریشانی اوراف گل مشاهده نهوده گریبان شکیبای بدست اضطراب چاک زده و دامن دلش بخار جثردوز بیتراری دراویخت روز دیگرههان حال وجود گرفت و شعلهٔ فراف گل

مصراع داغ دُثرش بر سر آن داغ نهاد روز سيوم بحركت منتار بلبل

A DISTICH.

I know not what the rose says under his lips, that he brings back the helpless nightingales with their mournful notes.

One day the gardener according to his established custom went to view the roses; he saw a plaintive nightingale, who was rubbing his head on the leaves of the roses, and was tearing assunder with his sharp bill that volume adorned with gold.

A DISTICH.

The nightingale, if he see the rose, becomes intoxicated; he lets go from his hand the reins of prudence.

The gardener viewing the scattered condition of the rose-leaves, tore with the hand of confusion the collar of patience, and rent the mantle of his heart with the piercing thorn of uneasiness. The next day he found the same action repeated, and the slames of wrath occasioned by the loss of his roses

AN HEMISTICH.

added another fcar to the fcar which he had before.

The third day, by the motion of the nightingale's bill,

ع گل بتاراج رفت و خار بهانده

خارخاری از آن بلبل در سینهٔ دهقان پدید آمده دام فریبی در راه وي نهاد و بدانهٔ حیل اورا صید کرده در زندان تغس محبوس ساخت بلبل بيدل طوطى وارزبان بكشاد وكفت اي عزيز مرا بچه موجب حبس کردهٔ از چه سبب بعقوبت من مایل شدة أثر صورت بجهت استهاع نغهات من كردة خود اشيانة من دربوستان تست دم سحر طربخانهٔ من اطراف کلستان تست و اکر معنی دیگر بخیال گذرانیدهٔ مرا از ما في الضبير خود خبر ده دهقان گفت هیچ میدانی که بروزگار من چه کردهٔ و مرا بهارقت یار نازنین چند بار ازردهٔ سزای آن عمل بطریف مکافات همین تواند بود که تو از دارو دیار ماند، و از تغرّج و تهاشا مهجور شده در کوشهٔ زندان می زاری و سن هم درد هجران کشیده و درد فراقت حانان چشيده در كلبه احزان مي نالم

AN HEMISTICH.

the roses were plundered, and the thorns only remained.

Then the refentment caused by the nightingale broke out in the breast of the gardener, he set a deceitful springe in his way, and having caught him with the bait of treachery, he confined him in the prison of a cage. The disheartened nightingale opened his mouth, like a parrot, and said, Oh, Sir, for what cause hast thou imprisoned me? for what reason hast thou resolved to distress me? if thou formest the defire of hearing my songs, my own nest is in thy garden, where in the morning thy bower shall be the house of my musick; but if thou hast another idea, inform me of what thou hast in thy mind (an Arabick phrase).

The gardener faid, Dost thou not know how thou hast spoiled my fortune, and how often thou hast distressed me with the loss of my favorite rose? it is right that thy action should be requited, and that thou being separated from thy friends and family, and secluded from all joy and diversions, shouldst mourn in the corner of a prison; whilst I, afflicted with the anguish of separation from my darling slowers, weep in the cottage of care.

بيت

منال بلبل اثر با منت سرياريست كه ما دو عاشف زاريم وكار ما زاريست بليل ثفت ازين مقلم در ثذرو بر الديش كه من بدين مقدار جريه كه كلي ال پريشان كرده ام محبوس كشته ام تو كه دلي را بريشان مي سازي حال بوچون خواهد بود

نظم

ڪنبد ڪردنده زروي قياس هست به نيڪي و بدي حق شناس هر ڪه نڪوي ڪند آنش رسيد وهر ڪه بدي ڪرد زيانش رسيد

این سخن بر دل دهقان کارکر آمده

یلبلرا آزاد کرد بلبل زبانی بازادی کشاد

و بثفت چون با من نکوی کردی بحکم

هل جزا الاحسان الا الاحسان مکافات آن

باید کرد بدان که در زیر درخت که

ایستادهٔ آفتابه است پر از زربردارو در حوالیج

خود صرف کن دهقان آن محلرا بثاوید

وسخن بلبل درست ،افت گفت ای بلبل

A DISTICH OF HAFIZ.

Mourn, O nightingale! if with me thou regrettest the loss of thy friend, for we are two mournful lovers, and our employment is weeping.

The nightingale said, Depart from that resolution, and consider, that if I am imprisoned for such an offence as tearing a rose, what will be thy punishment if thou tearest a heart asunder?

VERSES.

He that formed the sky by exact measure, knows the right rewards for good and evil; whoever does well, good will come to him; and if he does ill, evil will attend him.

This discourse taking effect upon the heart of the gardener, he set the nightingale at liberty. The bird tuned his voice in his free state, and said, Since thou hast done me this service according to the sentence (in the Alcoran), Is there any recompense for benefits, but benefits? it is necessary to reward thee for it. Know, that under the tree where thou standest there is a coffer full of gold; take it, and spend it to supply thy wants.

The gardener fearched the place, and found the words of the nightingale to be true; he then عجب كه آفتابهٔ زررا در زير زمين مي بيني و دام در زير خاك نديدي بلبل گفت تو آنرا ندانسته كه

اذا نزل القدر بطل الحذر

ع با تضا ڪارزار نتوان ڪرد

چون تضاي آلهي نزول يابد ديده بصيرترا نه روشني ماند و نه تدبير و خرد نفع رساند faid, O nightingale! what a wonder it is, that thou couldst see the coffer of gold beneath the earth, and not discover the springe upon the ground!

The nightingale faid, Dost thou not know that (an Arabick sentence) when fate descends, caution is vain?

AN HEMISTICH.

It is imposible to contend with fate.

When the decrees of heaven are fulfilled, no light remains to the eye of understanding, and neither prudence nor wisdom bring any advantage.

عروض

OF VERSIFICATION.

THE modern Persians borrowed their poetical measures from the Arabs: they are too various and complicated to be fully explained in this grammar; but when the learner can read the Persian poetry with tolerable case, he may receive further information from a treatise written professedly upon versification by Vahidi, who was himself no contemptible poet.

There are nineteen forts of metre which are used by the Persians, but the most common of them are or the iambick measure, or the iambick measure, or the iambick measure, and or the trochaick measure, and which the ancients called Emispires, and which are composed of iambick feet and spondees alternately, as amatores puellarum. In lyrick poetry these verses are generally of twelve or sixteen syllables, as

ببوي نانهٔ كاخر صبا زان طرّه بكشايد زجعد زلف مشكينش چه تاب افتاد در Běbūī nā | fěī kākhēr | sěbā zān tūr | rě būcíhāyēd

Zi jādī zūl | fī mūshkīnēsh | chi tāb ūstād | ŭ dēr dīlhā.

When the zephyr disperses the fragrance of those musky locks, what ardent desire inflames the hearts of thy admirers!

They fometimes confift of fourteen fyllables in this form,

---1---1---1---

28

تا غنچهٔ خندانت دولت بکه خواهد داد ای شاخ کل رعنا از بهر که میرویی

Tā ghūnchě | ĕkhēndānēt | dēvlēt bě | kě khāhēd dād

Aī shākhĭ | gulī rānā | ēz bēhrĭ | kĕ mīrūyī

Ah! to whom will the finiling rose bud of thy lips give delight? O sweet branch of a tender plant! for whose use dost thou grow?

or in this,

--- | --- | --- | ---

25

حوشم ههه بر قول ني و نغهت چنڪست چشهم ههه بر لعل تو و كردش جامست Göshēm hě | mě bēr kūlĭ | něy ū nāgmă | tǐ chēnguēst

Chēshmēm he | me ber lali | to ū gherde |
shi jamest

My ear is continually intent upon the melody of the pipe, and the foft notes of the lute: my eye is continually fixed upon thy rubied lip, and the circling cup.

This kind of measure is not unlike that which Sappho uses in those elegant lines quoted by Hephestion,

> Γλυκεια ματες, ούτοι δυναμαι κςεκειν τον ίσθον Ποθω δαμεισα ωαιδος βραδιναν δὶ 'Αφροδιταν.

which he scans thus,

Γλυκεια μα | τερ, ούτοι δυ | ναμαι κρεκειν | τον ίσθον Ποθω δαμει | σα ωαιδος βρα | διναν δὶ 'Α | φροδιταν.

Other lyrick verses contain thirteen syllables in this form,

n-n-1---1---1--

23

صبا به تهنیت پیر میغروش آمد که موسم طرب و هیش و ناز و نوش آمد

Sebā be teh | neītī peer | ĭ meīforosh | āmēd Ke mūsimī | tārbū eīsh | ŭ nāzŭ nosh | āmēd

The zephyr comes to congratulate the old keeper of the banquet-house, that the season of mirth, joy, wantonness, and wine is coming.

or,

as

صبا بلطف بشو آن غزال رعنارا که سر بکوه و بیابان تو دادهٔ مارا

Sebā belūtf | bogoū an | gazali ra | nara Ke ser becoūh | va byaban | to dadei | mara

This couplet has been translated in another part of the grammar. See p. 274.

The Perfians fometimes use a measure confifting of trochees and spondees alternately, like these verses of Catullus and Aristophanes,

Cras amet qui nunquam amavit, quique amavit cras amet.

'Ο σις ήμων τας 'Αθηνας έκκεκωρηκας βοων.

thus Hafiz,

ابر اذاري بر آمد باد نوروزي وزيد

Aber âzari ber âmed badi neurúzi vazeed

The vernal clouds appear, the gales of the pleasant season breathe.

But the most common Persian verse contains eleven syllables, as

چونکه گل رفت وگلستان درگذشت نشنوي زان پس زبلبل سرگذشت

Chúnkeh gul reft va gulistán derguzesht Neshenvi zan pes zebulbul serguzesht

When the roses wither, and the bower loses its fweetness, you have no longer the tale of the nightingale.

In this last measure are written all the great Persian poems, whether upon heroick or moral subjects, as the works of Ferdúsi, and of Jámi, the Bostan of Sadi, and the Mesnavi of the excellent Geláleddin. This sort of verse answers to our common heroick rhyme, which was brought to so high a degree of persection by Pope, and which the English poets will do well to retain, instead of adopting the less harmonious measures of other nations.

I have dwelt the longer upon the different forts of verse used in Persia, because there are few books or even common letters written in the Persian language, which are not interspersed with fragments of poetry; and because all the Persian verses must be read according to the pauses of scansion: thus the following elegant couplet quoted by Meninski,

تبا در چین هر تاري بود زلف ترا صد

که سازي برگل سوري زسنبل پوده چين بر چين

must be pronounced,

Tebader ché | ne her tareé | buved zulfeé | tera fad cheén

Ke fazee bér | gulcé fureé | zefumbul pú | de cheen ber cheén

with a strong accent upon every fourth syllable; and it may here be observed, that the Persians, like the French, usually accent the last syllables of their words.

As to their profody, nothing can be more easy and simple; their vowels I elif, van, and ya are long by nature; the points, which they commonly suppress, are naturally short; and every short syllable that ends with a consonant is long by position; as with a consonant is long by posit

vě ī āftādǔ muſhkīlhā, ولي انتاد مشكلها and معال حال ما دانند حال ما cŭjā dānēndĭ hālī mā.

They also shorten some long syllables at pleafure by omitting the vowels I elif, vau, and ya; thus بيرون beërun, which is a fpondee, becomes an iambick foot when it is written برون berun: in the fame manner برون is used for بودن and برون for بودن for بودن is put for مراه for انشان for انشان as in this beautiful couplet,

مي خواه و شلغشان کن از دهر چه ميجويي اين شغت سحرشه شل بلبل تو چه مشويي

"Call for wine, and scatter flowers around;

"what favour canst thou expect from for
"tune?" so spake the rose this morning; O

nightingale! what sayest thou to her maxim?

النشان is used for كالنشان shedding flowers, and المحرثاة for المحرثاة the morning.

I shall close this section with some examples of Persian verses from the مصراع or bemistich, to the غزل or ode, which differs from the قسيده or elegy in nothing but the number of the distichs, of which the ode seldom contains sewer than sive, and the elegy seldom sewer than twenty. I shall not set down these examples

at random, but shall select such as are remarkable for beauty of sentiment or delicacy of expression.

el oan HEMISTICH.

ڪل نچيند ڪسي ڪه ڪارد خار He that plants thorns will not gather roses.

Cu A DISTICH.

ڪاروان رفت و تو در خواب و بيابان درپيش ڪجا روي ره زڪه پرسي چڪني چون باشي

The caravan is departed, and thou fleepest; the desert lies before thee; whither wilt thou go? of whom wilt thou ask the way? what wilt thou do? how wilt thou exist?

A TETRASTICH.

هنڪام سپيده دم خروس سحري داني زچه رو هي ڪند نوحه ڪري سني که نهودند در اينهٔ صبح ڪز عهر شبي ڪذشت و تو بيخبري At the time that the dawn appears, dost thou know for what reason the bird of the morning complains? He says, that it is shown in the mirror of the day, that a whole night of thy life is passed, while thou art lost in indolence.

Another.

خواهي كه نباشي بغم ورنج ترين بشنو سخن پاكتر از در ثهين از دهمن آزرده تعانل منهاي و زصاحب كبر و كينه ايهن منشين

Dost thou desire to be free from sorrow and pain? hear a maxim more valuable than a precious gem: Despise not thine enemy, though he be distressed; and trust not thy friend, if he be proud and malevolent.

In all the Persian elegies and odes the two first hemistichs have the same rhyme, which is continued through the whole poem at the end of every distich. A short piece of poetry, in which the two first lines do not rhyme together, is called a fragment; as this elegant sable of Sadi on the advantages of good company:

گلي خوشبوي در حمّام روزي رسيد از دست محبوبي بدستم بدو گفتم که مشکي یا عنبري
که از بوي دلاویز تو مستم
بشختا من څل ناچیز بودم
ولیکن مدتي با څل نشستم
کیال هینشین در من اثر کرد
وکر نه من ههان خاکم که هستم

One day, as I was in the bath, a friend of mine put into my hand a piece of scented clay*. I took it, and said to it, "Art thou musk or "ambergris? for I am charmed with thy de-"lightful scent." It answered, "I was a "despicable piece of clay; but I was some "time in the company of the rose; the "sweet quality of my companion was com-"municated to me; otherwise I should have been only a piece of earth, as I appear "to be."

When both lines of each couplet rhyme together through a whole composition, it is called مثنوی as in the following examples:

> چنین است آئین کردنده دهر نه لطغش بود پایدار و نه تهر

^{*} ghili khoshbûi, a kind of unctuous clay, which the Persians persume with essence of roles, and use in the baths instead of soap.

نه پرورد کسرا که آخر نکشت که در مهر نرم است و در کین درشت

Such is the nature of inconstant fortune, neither her mildness nor her violence are of long duration: she exalts no one whom she does not at last oppress; for she is light in her affection, but most harsh in her hatred.

> فریدون فرخ فرشته نبود زمشک و زعنبر سرشته نبود بداد و دهش یافت آن نیکویی تو داد و دهش کن فریدون تویی

The happy * Feridun was not an angel; he was not formed of musk or ambergris. He gained his reputation by justice and liberality: be thou just and liberal, and thou wilt be a Feridun.

جواني پاڪباز و پاڪرو بود که با پاڪيزه روبي در ڪرو بود

* An ancient king of Persia, highly celebrated for his eminent virtues. The learned and excellent d'Herbelot has made a nostake in his translation of these lines (see the article Farrakh in his Bibliotheque Orientale) for not recollecting the sense of it, and tells us that Farrakh was a man whom the Persians consider as a persect model of justice and magnanimity.

چنین خواندم که در دریای اعظم
بیردابی درانتادند باهم
چو ملاح آمدش تا دست ثیرد
مبادا کاندر آن سختی بهیرد
هیی گفت از میان موج تشویر
مرا بیذار و دست یار من ثیر
درین ثفتن جهان بروی دراشفت
شنیدندش که جان می داد و می ثفت
حدیث عشف از آن بطال منیوش
که در سختی کند یار فراموش

There was an affectionate and amiable youth, who was betrothed to a beautiful girl. I have read, that as they were failing in the great fea, they fell together into a whirlpool. When a mariner went to the young man that he might catch his hand, and fave him from perishing in that unhappy juncture; he called aloud, and pointed to his mistress from the midst of the waves; "Leave me, and take "the hand of my beloved." The whole world admired him for that speech; and when he was expiring he was heard to say; "Learn not the tale of love from that wretch "who forgets his beloved in the hour of "danger."

These examples will, I hope, be sufficient to undeceive those who think that the Afiatick poetry confifts merely in lofty figures and flowery descriptions. There is scarce a lesson of morality or a tender fentiment in any European language, to which a parallel may not be brought from the poets of Asia. The verses of eleven fyllables, which are used in the great Persian poems, always rhyme together in couplets. It is unnecessary in this section to give an example of the Persian course or elegy, as it differs only in its length from the J; or ode, except that the Cassideh often turns upon lofty subjects, and the Gazal comprises for the most part the praises of love and merriment, like the lighter odes of Horace and Anacreon. The most elegant composers of these odes are جامى Jâmi and Hafiz, each of whom has left an ample collection of his lyrick poems. I may confidently affirm that few odes of the Greeks or Romans upon fimilar fubjects are more finely polished than the fongs of these Persian poets: they want only a reader that can fee them in their original dress, and feel their beauties without the disadvantage of a translation. I shall transcribe the first ode of Hasiz that offers itself, out of near three hundred that I have paraphrased: when the learner is able to understand

the images and allusions in the Persian poems, he will see a reason in every line why they cannot be translated literally into any European language.

> كل بي رخ يار خوش نباشد بي باده بهار خوش نباشد طرف چهن و طواف بستان بى صوت هزار خوش نباشد رقصیدن سرو و حالت کل بي لاله عذار خوش نباشد با يار شكولب كالاندام بی بوس و کنار خوش نباشد باغ کل و ملّ خوشست امّا بی صحبت یار خوش نباشد هر نقش که دست عقل بنده بى نقش ونكار خوش نباشد جان نقد محقرست حافظ از بهر نثار خوش نباشد

The rose is not sweet without the cheek of my beloved; the spring is not sweet without wine.

The borders of the bower, and the walks of the

garden, are not pleasant without the notes of the nightingale.

- The motion of the dancing cypress and of the waving flowers is not agreeable without a mistress whose cheeks are like tulips.
- The presence of a damsel with sweet lips and a rosy complexion is not delightful without kisses and dalliance.
- The rose-garden and the wine are sweet, but they are not really chaiming without the company of my beloved.
- All the pictures that the hand of art can devise are not agreeable without the brighter hues of a beautiful girl.
- Thy life, O Hafiz, is a trifling piece of money, it is not valuable enough to be thrown away at our feaft.

The last distich alludes to the Asiatick custom of throwing money among the guests at a bridal feast, or upon any other extraordinary occasion: the Persians call this money inisar, and him who collects it تثار چين nisar cheen.

I shall conclude this grammar with a translation of the ode quoted in the section upon the Persian letters; see p. 196.

- If that lovely maid of Shiraz would accept my heart, I would give for the mole on her cheek the cities of Samarcand and Bokhara.
- Boy, bring me the wine that remains, for thou wilt not find in paradife the fweet banks of our Rocnabad, or the rofy bowers of our Mofellâ.
- Alas! these wanton nymphs, these fair deceivers, whose beauty raises a tumult in our city, rob my heart of rest and patience, like the Turks that are seizing their plunder.
- Yet the charms of our darlings have no need of our imperfect love; what occasion has a face naturally lovely for perfumes, paint, and artificial ornaments?
- Talk to me of the fingers, and of wine, and feek not to disclose the secrets of futurity; for no one, however wise, ever has discovered, or ever will discover them.
- I can eatily conceive how the inchanting beauties of Joseph affected Zoleikha so deeply, that her love tore the veil of her chastity.
- Attend, O my foul! to prudent counsels; for youths of a good disposition love the advice of the aged better than their own fouls.

Thou hast spoken ill of me; yet I am not offended; may Heaven forgive thee! thou hast spoken well: but do bitter words become a lip like a ruby, which ought to shed nothing but sweetness?

O Hafiz! when thou composest verses, thou seemest to make a string of pearls: come, fing them sweetly: for Heaven seems to have shed on thy poetry the clearness and beauty of the Pleïads.

The wildness and simplicity of this Persian song pleased me so much, that I have attempted to translate it in verse: the reader will excuse the singularity of the measure which I have used, if he considers the difficulty of bringing so many eastern proper names into our stanzas.

I have endeavoured, as far as I was able, to give my translation the easy turn of the original; and I have, as nearly as possible, imitated the cadence and accent of the Persian measure; from which every reader, who understands musick, will perceive that the Asiatick numbers are capable of as regular a melody as any air in Metastasio.

A PERSIAN SONG.

Sweet maid, if thou wouldst charm my fight, And bid these arms thy neck infold; That rofy cheek, that lily hand Would give thy poet more delight Than all Bokhára's vaunted gold, Than all the gems of Samarcand.

Boy, let yon * liquid ruby flow, And bid thy pensive heart be glad, Whate'er the frowning zealots say: Tell them their Eden cannot show A stream so clear as Rochabad, A bow'r so sweet as Mosellay.

Oh! when these fair, perfidious maids, Whose eyes our secret haunts infest, Their dear destructive charms display, Each glance my tender breast invades, And robs my wounded soul of rest, As Tartars seize their destin'd prey.

In vain with love our bosoms glow; Can all our tears, can all our fighs New lustre to those charms impart? Can cheeks where living roses blow, Where nature spreads her richest dies, Require the borrow'd gloss of art?

Speak not of fate—ah! change the theme, And talk of odours, talk of wine,

^{*} uncled ruby is a common periphrafis for wine in the Perfian poetry. See Hafiz, ode 22.

Talk of the flow'rs that round us bloom:
'Tis all a cloud, 'tis all a dream;
To love and joy thy thoughts confine,
Nor hope to pierce the facred gloom.

Beauty has fuch refiftless pow'r,
That ev'n the chaste Egyptian dame*
Sigh'd for the blooming Hebrew boy:
For her how fatal was the hour,
When to the banks of Nilus came
† A youth so lovely and so coy!

But ah! fweet maid, my counsel hear; (Youth should attend, when those advise Whom long experience renders sage). While musick charms the ravish'd ear, While sparkling cups delight our eyes, Be gay; and scorn the frowns of age.

What cruel answer have I heard!
And yet, by heav'n, I love thee still:
Can aught be cruel from thy lip?
Yet say, how fell that bitter word
From lips which streams of sweetness fill,
Which nought but drops of honey sip?

Go boldly forth, my fimple lay, Whose accents flow with artless ease,

^{*} Z leikha, Potiphar's wife.

[†] Joseph, called by Perfians and Arabians Jusuf.

Like orient pearls at random strung;
Thy notes are sweet, the damsels say,
But, oh, far sweeter, if they please
The nymph for whom these notes are sung!

END OF THE GRAMMAR.

A CATALOGUE

OF

THE MOST VALUABLE BOOKS

IN

THE PERSIAN LANGUAGE.

Oxf. The Publick Libraries at Oxford.

Par. The Royal Library at Paris.

Lond. The British Museum at London.

Priv. The Collections of private Men.

HISTORY.

كتاب روضة الصغا تصنيف امير خواند شاه

The garden of purity, by Mirkhond.—A general history of Persia in several large volumes. Oxf. Priv.

اكبر نامه ابو فضل

The history of the life of Sultan Acber, by the learned and elegant Abu Fazl. Oxf.

كتاب آيين اكبري

A descript of the Indian empire, written by the order of Sultan Acber by a society of skilful men.—A translation of this book would be extremely useful to the European companies that trade in India, as it contains a full account of every province and city in the dominions of the Mogul, of his revenues and expences, both in peace and war, and of all the customs and ceremonies in his palace; together with a description of the natural productions of his empire. Oxf.

واتعات بابري

The actions of Sultan Baber; written either by himself, or under his inspection.—This book contains a minute account of that prince's wars, and a natural history of his dominions. Oxf.

تاريخ ڪشهير

The history of Cashmir, by a native of that extraordinary country.—A very curious and entertaining work. Oxf.

تاريخ عالم اراي عباسي

The history of the lives of the Persian kings, from the head of the Sesi family to the death of Abbas the Cruel, improperly called the Great. Oxf.

تاريخ څزيده

The felect chronicle.—This work is an excellent vol. III.

history of Persia, and has been translated into Arabick and Turkish. Oxf.

خلاصة الاخبار

A fhort history of Persia, in one volume, by Khandemir, a learned and agreeable writer. Oxf.

لب التواريخ

The beart of histories.—A copious history of the Persian empire, written in the middle of the sixteenth century by Abdallatif, a native of Cazvin.

ظغر نامه

The book of victory.—A history of the life of Timur, commonly called Tamerlane, written in a most beautiful and elegant style.

An account of the lives of the Persian poets, by Devletshah of Samarcand. Par.

The history of the life of Nader Shah, king of Persia, written by Mirza Mahadi, and translated into French by the author of this grammar.

POETRY.

شاه نامه فردوسي

Shah Nameh. A collection of heroick poems on the ancient histories of Persia, by Ferdusi. See the Treatise on Oriental Poetry, in Vol. VIII. Oxf. Priv.

كليات خاتاني

The works of Khakani, a fublime and spiritea poet, Oxf. Priv.

ديوان حافظ

The odes of Hafiz: fee the treatife above-mentioned. Lond. Oxf. Par. Priv.

كليات سعدي

The works of Sadi; containing or the bed of roses, equipped or the garden, and or the rays of light. The two first of these excellent books are very common; but I have not seen the last: they are all upon moral subjects, and are written with all the elegance of the Persian language. Oxf.

كليات احلي

The works of Ahli; containing,

John lawful magick, a poem.

the taper and the moth, a pocm. a book of elegies.

a book of ode كتاب غزليات

ڪليات جامي

The works of Jámi; containing, among others, the chain of gold, a poem in three books.

Selman and Abfal, a tale. andi with the life of Alexander.

the loves of Joseph and Zuleica, a very beautiful poem.

the loves of Leila and Megenun. ميوان جامي a collection of odes. the mansion of the Spring. the gift of the noble. the manners of the just. Oxf.

ديوان خسرو

A book of elegant odes, by Mir Chofru. Oxf.

مثنوي تصنيف جلال الدين رومي

A poetical work called Mesnavi, upon several subjects, of religion, history, morality, and politicks; composed by Geláleddîn, surnamed Rúmi.—This poem is greatly admired in

Perfia, and it really deserves admiration. Oxf. Priv.

ديوان انواري

The poems of Anvári, which are quoted by Sadi in his Gulistán, and are much esteemed in the East.

كليات نظامي

The works of Nezámi; containing fix poems:

المرار العاشقين the fecrets of lovers.

المعنف بيكر the loves of Chofru and Shirin.

المعنف المحالف المحا

پند نامم

Pendnáma, a book of moral fentences, not unlike those of Theogenis in Greek, by عطّار Ferideddin Attar. 'Lond.

كليات كاتيي

The works of Catebi, containing five poems:

باب کا the ten chapters.

فر عشف beauty and love.

beauty and love.

the conqueror and triumpher.

as the loves of Baharam and

Gulendam.

There are many more histories and poems written in Fersian; but those above-mentioned are the most celebrated in Asia. The poets of the second class were Roudeki, who translated Pilpai's fables into verse; Reshidi, who wrote an art of poetry called he inchanted gardens; Label Ahmedi, who composed an heroick poem on the actions of Tamerlane: not to mention a great number of elegiack and lyrick poets, who are very little known in Europe.

PHILOSOPHY.

انوار سهيلي كاشغي

The light of Soleil or Canopus.—A very elegant paraphrase of Pilpai's tales and sables, by Cashes. Oxf.

عياردانش

The touchftone of learning; a more fimple translation of Pilpai, by Abu Fazl. Oxf.

هزاريك روز

The Persian tales of a thousand and one days, translated into French by Petit de la Croix.

تثارستان جويني

Negaristân the gallery of pictures, by Jouîni.—
A miscellaneous work upon moral subjects, in prose and verse. There is a beautiful copy of this book in the Bodleian library at Oxford. Marsh 307

دانش نامه

A fystem of natural philosophy, by Isfahani. Oxf.

جواهر نامه

The natural history of precious stones. Uz,.

There are many books in Persian upon Geometry, Algebra, Astronomy, Mechanicks, Logick, Rhetorick, and Physick; all which deferve to be read and studied by the Europeans. The Persians are very fond of elegant manufcripts; all their favourite works are generally written upon fine silky paper, the ground of which is often powdered with gold or silver dust: the two first leaves are commonly illuminated, and the whole book is sometimes persumed with essence of roses or sandal wood. The poem of

328

Joseph and Zuleica in the publick library at Oxford is, perhaps, the most beautiful manufcript in the world: the margins of every page are gilt and adorned with garlands of flowers; and the hand writing is elegant to the highest degree: it is in the collection of the learned Greaves, No. 1. The Afiaticks have many advantages in writing: their ink is extremely black, and never lofes its colour; the Egyptian reeds with which they write, are formed to make the finest strokes and flourishes; and their letters run fo eafily into one another, that they can write faster than any other nation. It is not strange, therefore, that they prefer their manuscripts to our best printed books; and if they should ever adopt the art of printing, in order to promote the general circulation of learning, they will still do right to preferve their classical works in manuscript.

I shall conclude with a Persian ode in three Asiatick hands, and shall add a few remarks; upon each of them.

I. NISKHI.

This is the only form of writing that we can imitate exactly by our types; it is the hand of the Arabians, who invented the characters; and it must, therefore, be learned before we attempt to read the other hands: it is frequently used by the Persians, and the history of Nader Shah was written in it

II. TALIK.

This beautiful hand may eafily be read by Europeans, if they understand the Persian language; and if they do not, what will it avail them to read it? In this form of writing the strokes are extremely fine, and the initial letters i are fometimes scarcely perceptible. The characters are the fame with those used in printing, except that (and (are often expressed by a long stroke of the reed, as in the third word of the fecond line, which answers to there are also two examples of this in ساقى the third line. As the Persians always write their lines of an equal length, they are obliged to place their words in a very irregular manner; if the line be too short, they lengthen it by a fine stroke of the reed; if too long, they write the words one above another. In the Perfian poems the transcribers place both members of a couplet on the same line, and not the first above the fecond, as we do: a Persian would write the following verses in this order,

With ravished ears The monarch hears,
Assumes the god; Affects to nod.

It must be confessed, that this irregularity in writing, joined to the confusion of the diacritical points, which are often placed at random, and sometimes omitted, makes it very difficult to read the Persian manuscripts, till the language becomes familiar to us; but this difficulty, like all others in the world, will be insensibly surmounted by the habit of industry and perseverance, without which no great design was ever accomplished.

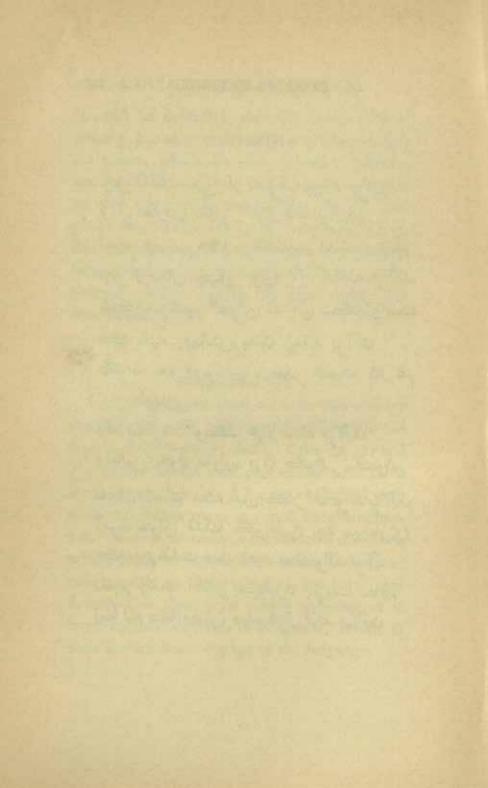

III. SHEKESTEH.

In this inclegant hand all order and analogy are neglected; the points which diftinguish if from i, i from i, and i from i, and i from i and i and these feven letters, i are connected with those that follow them in a most irregular manner. This is, certainly, a considerable difficulty, which must be surmounted before the learner can translate an Indian letter: but I am persuaded, that those who chiefly complain of it have another difficulty still greater, which is their impersect knowledge of the language.

NISKHI.

چو آنتاب مي از مشرف پياله برآيد زباغ عارض ساتي هزار لاله برآيد نسيم در بر ڪل بشڪند کلاله سنبل چو از ميان چهن بوي آن کلاله برآيد شڪايت شب هجران نه آن شڪايتهاست ڪه شههٔ زبيانش بصد رساله برآيد ڪو نوح نبي صبر هست در غم طوفان

ADVERTISEMENT.

THE following Index will be found, it is hoped, of confiderable use to learners, to those in particular who are unprovided with dictionaries; since it is not only intended as a literal alphabetical explanation and analysis of the extracts and authorities from the various writers interspersed through the Grammar, but as a vocabulary it may be employed to advantage, by imprinting on the memory a number of useful words.

It may not be improper, however, to inform those who have made but little progress in this language, that, in consulting any dictionary, there are a variety of inseparable particles prefixed and annexed to words, which must be analysed or separated before the meaning can be found: for example,

which literally fignifies to defire is must not be looked for under the letter, but under s, the prefixed being the inseparable preposition for, to, in, implying defire, Esc. and com (for lumb) the third person present of to be.

It is unnecessary to multiply examples, but it

will fave the learner much trouble if he keep in mind, that the principal of these prefixed particles are,

I the Arabick particle the.

efore words beginning with 1) the characteristick of the first future, and sometimes of the imperative.

or i the preposition in, to, for, &c.

prefixed fometimes by way of pleonafm, to which no translation can give any precise meaning.

b with.

without.

j"(for از) from, with, by, &c. S (for as) which, what.

fent tense.—These characteristicks of the prefent are frequently omitted by the Persian authors.

of (or before words beginning with 1) the negative prefixed to imperatives.

before words beginning with the general negative prefixed to all other tenfes*.

Notwithstanding the above observations, which will save the learner some perplexity in consulting dictionaries, many of the compounded words, and such oblique tenses as differ most from their infinitives, are for his greater case and satisfaction inserted in this lindes.

The particles which are commonly annexed to words are as follow:

The possessive pronouns

our and my, mine. la our

ים יו or יון tby, thine. בי your.

his, her, its. on or on their.

of the plural of nouns having reference to living creatures.

the plural of inanimate nouns.

I or L the poetick vocative.

b the termination of the oblique cases.

the third person present of بودن to be.

is fometimes equivalent to our a or one; and at other times after nouns ending with 1 or it marks that the following noun is in the genitive case; and it is then equal to our of.

The Perfian writers make frequent use of the contracted infinitive; when the learner therefore cannot find such words as ترسیده or پرسیده in the Index, let him look for ترسیده پرسیده

^{**} The A prefixed to some words in the Index shows that they are of Arabick original.

ADVERTISEMENT.

THE greatest part of the following Piece was designed to be added to a Grammar of the Persian language, which was printed in 1771. It might easily have been swelled into a larger treatise, by adding more copious extracts from the Persian writers, both in prose and verse; but, as the change of style may be seen as well in ten lines as in a thousand, it seemed equally useful and less ostentatious, to exhibit only a few chosen specimens from the best authors, and chiefly from the Poets, who, in all nations, have taken the greatest pains to harmonize and improve their languages

THE REPORT OF STREET

Section 1977

HISTORY

OF

THE PERSIAN LANGUAGE.

MOST of my readers will apprehend, that, in attempting to trace the progress of the Persian language, through a period of two thousand years, I am entering into a subject, which will afford them neither amusement nor instruction. and can be agreeable only to those few men, who apply themselves to the obscurer branches of literature, and have very little intercourse with the rest of mankind. The title of my piece feems, indeed, to give a reasonable ground for their apprehensions; and the transition appears rather abrupt, from the history of Monarchs to the biftory of mere words, and from the revolutions of the Persian Empire to the variations of the Persian idiom: but it shall be my endeavour to remove, as far as possible, the dryness of the subject, by interspersing the narrative with a variety of Eastern anecdotes; and, as to the second objection, it may be alledged, that a considerable change in the language of any nation is usually effected by a change in the government; so that literary and civil history are very nearly allied, and may often be used with advantage to prove and illustrate one another.

The History of the Persian tongue may be divided into four periods, like that of the Empire; not that the language was immediately altered upon every revolution of the state, but it is observable, that, under each Dynasty of which we have any monuments remaining, there was an apparent change in the dialect of the kingdom, especially under the two last, namely, the Sassanian and Mohammedan dynasties: and these, indeed, are the only periods, of which we can speak with any degree of certainty.

It is natural to suppose, that, in the infancy of the Persian Empire, under Caiúmaras and his descendants, no great pains were taken to cultivate and polish the language, which in that rude age must needs be thought sufficiently elegant, if it were sufficiently clear and intelligible; and we are assured by Herodotus, that, even after the reign of CYRUS, the whole education of the Persian youth, from the age of sive years to twenty, consisted in three points only, riding, throwing the javelin, and the practice of moral virtue;

which account is also confirmed by Xenophon. The story mentioned by Diodorus of the old volumes of parchment, on which the Persians were obliged by a certain law to write the annals of their country, was probably invented by Ctefias, that he might give an air of authenticity to his impertinent fables; for fuch literary impostures were as frequent among the Greeks, as among us, who imitate the Ancients in nothing but their failings. We are far from contending, however, that the ancient Persians, especially those of the second period, were entire strangers to the art of composition either in verse or profe; for there never was a nation fo rude and unpolished, who had not a custom of celebrating the noble acts of their ancestors, and inciting one another by songs and panegyricks to an imitation of their virtue; and Strabo, a very different author from Diadorus, afferts, that the Persians used frequently to sing the praises of their ancient Heroes and Demigods, sometimes with a musical instrument, and sometimes with the voice alone: but what their language really was, what were their rules of verification, or what was the course of their studies, no mortal can pretend to know with any shadow of exactness.

The Greek Historians can give us no light on this subject; for neither Themistocles, who spoke the dialect of Persia like a native, though he

had spent only one year in learning it*, nor even Xenopbon, whose intimacy with the younger Cyrus could not have been contracted without a knowledge of his language, feem to have read the works of the Perhans, or even to have known their characters; but were perhaps contented to express their sentiments in Persian with eafe and fluency. Nor are we much enlightened by the writers after Alexander; not even by those, who have described the life of that Hero: for Curtius, who compiled his rhetorical History from the Greek authors, seems to have known as little of Perfian as of Scythian, though he dreffes up a number of speeches for the chiefs of those nations, which certainly were never spoken by them. A few words, indeed, are here and there interspersed in these histories, which are still used in the modern idiom of Persia +; but we can no more form an

^{*} Themistocles omne illud-tempus (anni unius fpatium) literis fermonique Persarum dedit, quibus adeò eruditus eff, ut multò commodiùs dicatur apud Regem verba fecisse, quâm hi poterant, qui in Perside erant nati. Corn. Nep. in Themist.

Hoshan Purizada Purizada Purizada which fignify, Splendid, a Star, Angel-born. Pasargades, or, a Prince of the Blood, appears to be compounded of Peser a Child, and Gada, a House: i. e. a child of the Royal Family. To this we may add, 1. that Art or Ard Ard which begins many Persian

idea of a whole language from a list of broken phrases or detached epithets, than we can judge of a poem or piece of oratory, from an unconnected line or a single member of a period.

Since the Greeks afford us so little information, nothing remains but to consult the Perfians themselves; and the great traveller Chardin,
whom every Orientalist must always mention
with reverence, seems to have enquired very
diligently into the ancient language of the people, among whom he resided so long, and whose
manners he describes with so much copiousness
and learning: but he declares, after all his researches, "That the old Persian is a language
"entirely lost; in which no books are extant,
"and of which there are no rudiments remain"ing: that the Guebres, who are the remains
"of the Parsis, or Adorers of Fire, have an
"idiom peculiar to themselves; which is sup-

names, fignifies Strong; as Ardeshir, Artaxerxes, fignifies Strong; as Ardeshir, Artaxerxes, The strong Lion, Ardeván or Ardeban The strong Guard, &c. 2. that the termination dates, as Mithridates, &c. is the Persian dad and answers to the dwg of the Greeks, as Equadopo, and the like. If it were possible to recover a whole Catalogue of these old Persian names, such an enquiry would be little more than learned trifling; for to collect a number of solitary words, without any books which they might enable us to read, would be like procuring at random a multitude of keys, without any casket which they might help us to unlock.

" posed, by the Persians in general, to be rather " a jargon of their own, than a part of their an-" cient tongue: that, if you believe their own " account, the Magi, who refided at Yezd in " Carmania, have preferved this language from " father to fon, after the diffolution of their " Monarchy; but that, for his part, he has " found no reason to give any credit to their " ftory: that they have, indeed, fome books in " strange characters, but he cannot perfuade " himself that they are old Persian letters; es-" pecially, fince they bear no kind of refem-" blance to those on the famous monuments at " Persepolis." The authority of this excellent writer is decifive, and puts an end at once to the controversy lately started, concerning the authenticity of the books ascribed to Zoroaster, which a French adventurer, who translated them from the translation of a certain Gipfy at Surat, has had the boldness to send abroad as genuine: but, to avoid any suspicion of misrepresenting the passage, it seems necessary to transcribe the very words of Sir John Chardin, which the reader may see at the bottom of the page *.

^{*}Quand d'l'ancien Persan, c'est une langue perduë; on n'en trouve ni livres ni rudimens. Les Guébres, qui sont les restes des Perses ou Ignicoles, qui se perpetuent de pere en fils depuis la destruction de leur Monarchie, ont un Idiome particulier; mais on le croit plûtôt un jargon que leur ancienne langue. Ils disent que les

From this we may reasonably conclude, that the gibberish of those swarthy vagabonds, whom we often fee brooding over a miferable fire under the hedges, may as well be taken for old Egyptian, and the beggars themselves for the priefts of Isis, as the jugglers on the coast of India for the disciples of Zoroaster, and their barbarous dialect for the ancient language of Persia. But let the rosy-cheeked Frenchman, to give him his own Epithet, rest happy in the contemplation of his personal beauty, and the vast extent of bis learning: it is fufficient for us to have exposed his follies, detected his imposture, and retorted his invectives, without infulting a fallen adversary, or attempting, like the Hero in Dryden's Ode, to flay the flain.

We have no genuine accounts then of the Persian language till the time of the SASSA-NIAN kings, who stourished from the opening of

Prêtres, qui se tiennent à Yezd, ville de la Caramanie, qui est leur Pirrée et leur principale place, se sont transmis cette langue jusqu'ici par tradition, et de main en main; mais quelque recherche que j'en aïe fait, je n'ai rien trouvé, qui me pût persuader cela. Ces Guebres ont à la verité des livres en caracteres et en mots inconnus, dont les figures tirent assez sur celles des langues, qui nous sont le plus connuës; mais je ne saurois croire que ce soit là l'ancien Persan, d'autant plus que le caractere, dont j'ai parlé, est entierement disserent de celui des inscriptions de Persepolis. Je donnerai des ectypes de l'un et de l'autre caractere, dans la description du sameux monument qui reste en ce lieu-là. Chardin, Tom. V. Chap. III.

the third century to the middle of the seventh; in which period an Academy of Physick was founded at Gandisapor, a City of Khorasan, and, as it gradually declined from its original institution, it became a school of poetry, rhetorick, dialectick, and the abstract sciences. In this excellent seminary the Persian tongue could not fail of being greatly refined, and the rusticity of the old idiom was succeeded by a pure and elegant dialect; which, being constantly spoken at the court of Beharam Gur in the year 351, acquired the name of Deri, or Courtly, to distinguish it from the Pehlevi, or, Language of the Country.

It must not, however, be imagined, that the use of the ancient dialect was wholly superseded by this more polished idiom; for several compositions in Pehlevi were extant even after Mabomed, which appear to have been written by order of the Sassanian Princes. Anushirvan, surnamed The Just, who reigned at the close of the sixth century, having heard from some travellers, that the Indian Monarchs had a collection of moral sables, which they preserved with great care among their archives, sent his chief Physician Barzuieh into India, with orders to make himself master of the Sanscrit language, and not to return without a translation of those sables. These orders were punctually executed;

Barzuich learned the Indian tongue, and, having at a great expence procured a copy of the book, translated it into the Poblevian dialect: about an hundred and forty years after, his work was turned from Pehlevi into Arabick, by order of Almansur, second Calif of the Abbasides; and this is the volume which we see in every language of Europe, under the name of Calila was Demna, or, The fables of Pilpay. There is a fine copy of the Arabick version in the publick library at Oxford; and if the work of Barzuich could be found, we should be enabled to recover a considerable part of the old Persian language; the same, perhaps, which was spoken in the second period by Themistocles and Xenophon.

In the reign of Anushirván, who protected the arts and sciences in his own dominions, MAHOMED was born; who, by the force of his Eloquence, and the success of his Arms, established a mighty Empire, and spread his new religion from the wilds of Arabia, to the mountains of Tartary and the banks of the Ganges: but, what belongs more particularly to the subject of this discourse, he polished the language of his country, and brought it to a degree of purity and elegance, which no Arabian writer since his time has been able to surpass. The battle of Cadessia in the year 656 gave the last blow to the Persian Monarchy; and the

whole Empire of Iran was foon reduced under the power of the first Mahomedan Dynasty, who fixed the seat of their government in Bagdad, where the Arabick language was spoken, for many ages, in its utmost perfection: but the ancient literature of Persia, which had been promoted by the family of Sassan, was expressly discouraged by the immediate successors of Mahomed, for a reason, which it is proper to explain.

At the time when the Alcoran was first published in Arabia, a merchant, who had lately returned from a long journey, brought with him fome Persian romances, which he interpreted to his countrymen, who were extremely delighted with them, and used to say openly, that the stories of griffons and giants were more amusing to them than the moral lessons of Mahomed: part of a chapter in the Alcoron was immediately written, to stop the progress of these opinions; the merchant was feverely reprimanded; his tales were treated as pernicious fables, bat-ful to God and his prophet; and Omar, from the fame motive of policy, determined to destroy all the foreign books which should fall into his hands. Thus the idle loquacity of an Arabian traveller, by fetting his legends in competition with the precepts of a powerful Lawgiver, was the cause of that enthusiasm in the Mahomedans, which induced them to burn the famous library of Alexandria, and the records of the Persian Empire.

One book, however, besides the fables of Pilpay, escaped the sury of these unmercisul zealots: it was an History of Persia in the Pehlevian dialect, extracted from the Sassanian annals, and composed, it is believed, by the command of Anushirvan. Saad, one of Omar's Generals, sound this volume, after the victory at Cadessia, and preserved it for himself as a curiosity: it passed afterwards through several hands, and was at length translated into some other languages of Asia*.

It was a long time before the native Persians could recover from the shock of this violent revolution; and their language seems to have been very little cultivated under the Califs, who gave greater encouragement to the literature of the Arabians: but, when the power of the Abbasides began to decline, and a number of independent Princes arose in the different provinces of their empire, the arts of elegance, and chiefly Poetry, revived in Persia, and there was hardly a Prince, or Governor of a city, who had not several poets and men of letters in his

^{*} This story is mentioned in the life of the Poet Ferduf, pretized to an edition of his works.

train. The Persian tongue was consequently restored in the tenth century; but it was very different from the Deri or Pehlevi of the Ancients: it was mixed with the words of the Alcoran, and with expressions from the Arabian Poets, whom the Persians considered as their masters, and affected to imitate in their poetical measures, and the turn of their verses.

That the learned reader may have a just notion of this new idiom, it seems necessary, first to produce a specimen of pure Arabick, and, afterwards, of the purest Persian that can be found; by which means he will form a more accurate judgement of the modern Persick, in which both languages are perfectly incorporated.

The following ode was written by a native of Damascus: it contains a lively description of an Eastern Banquet; and most of the couplets are highly elegant in the original.

لنا مجلس ما نيه للهم مدخل ولا منه يوماً للهسرة مخرج تضهن اصناف المحاسن كلها فليس لباغي العيش عنه معرج غناً، الي الغتيان اشهي من الغنا به العيش يصغو والهوم تغرج بيف له حلم الحمايم صماية

ويصبو اليه الناسك المتحرج وروض كان الغطر غاداه فاغتدي يضوع مسكى النسيم ويارج ترى نكت الازهار فيه كانها كواكب في افق تنبير وتسرج وتذكرني الاحباب نيه بدايع من النور فيها نرجس وبنفسي تراه كها يونو اليك بطوفه اغر غضيض فاتر الطرف الاعبي غريب افتنان الدل والحسن لم يزل يعقرب اصداغا له ويصولج ومعشوت نارنج يريك احهراره خدود عذاري بالعتاب يضرب كؤس كها تهوي النغوس كانها بنيل الاماني والمادب تهزج كان الغناني والصواني لناظري نجوم سہاء سابرات وابر ہ

that is; "We have a banquet, into which for-"row cannot enter, and from which mirth can "never depart. It comprises every species of "Beauty; and he, who seeks the joys of life,

" cannot rife beyond it. A fprightly Song gives "more pleasure to youth than Riches*: here "the stream of life is unfullied, and all our " cares are dispersed. Here the mildness of " our gentle darling gives ease to our love; " and here the timid dervise becomes an Apos-" tate from his faith. We have a hower, on " which the dew-drops sparkle; and in which " the breeze becomes fcented with the fra-" grance of musk. You see the various blos-" foms, which refemble stars blazing and glit-" tering in the firmament. Here the wonderful " beauties of the flowers, among which are the " narciffus and the violet, bring the fair objects " of my love to my remembrance. You would " think you faw my beloved looking mildly on " you with her foft, tender, languishing eye: a " nymph, in whom every charm and every "perfection is collected; whose curled locks " hang always dangling, black as the fcorpion, " or the mace of ebony (with which the Afia-" ticks strike an ivory ball in one of their fa-" vourite plays), the pomegranate brings to my " mind the blushes of my beloved, when her se cheeks are coloured with a modest resent-" ment. Our cups are fuch as our fouls defire;

^{*} The fame word Ghana in Arabick fignifics both Singing and Wealth

"they feem to be filled with the streams of friendship and cheerfulness. The goblets and vases of China appear to my fight, like the stars of heaven shining in the Zodiack."

I might here have felected a more ancient example of Arabick, either from the poets before Mahamed, or from the illustrious Abu Temám, who flourished in the ninth century*; but the language has remained unaltered from the earliest antiquity to the present time, and it would not have been easy, without a number of notes, to have made an ancient Ode intelligible in a literal translation.

The oldest *Persian* poems, which have come to my knowledge, are those of *FERDUSI*, of which it will not be improper to give a short account, as far as they relate to my present subject.

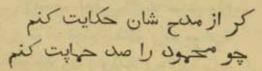

At the close of the tenth, and beginning of the eleventh centuries, Mahmud reigned in the city of Gazna: he was supreme ruler of Zablestan, and part of Khorasan, and had pene-

^{*} Abu Temam published an excellent Anthologia of Arabick verses, entitled Hamasa, of which he gave a copy to an Asiatick Prince, who presented him in return with five thousand pieces of gold, and made him at the same time this elegant compliment, if My present is less valuable than thy poems.

trated very far into India, where by this time the religion and language of the Arabs and Perfians had begun to prevail. Several poets were entertained in the palace of this Monarch, among whom was FERDUSI, a native of Tûs or Mefhed. This most learned man, happening to find a copy of the old Persian History abovementioned, read it with eagerness, and found it involved in fables, but bearing the marks of high antiquity: the most ancient part of it, and principally the war of Afrafiab and Khofru, or Cyrus, seemed to afford an excellent subject for an Heroick Peem, which he accordingly began to compose. Some of his episodes and descriptions were shown to the Sultan, who commended them exceedingly, and ordered him to comprise the whole History of Persia in a series of Epick poems. The poet obeyed; and, after the happiest exertion of his fancy and art for near thirty years, he finished his work, which contained fixty thousand couplets in rhyme, all highly polished, with the spirit of our Dryden and the fweetness of Pope. He presented an elegant transcript of his book to Nahmud, who coldiy applauded bis diligence, and difmiffed him. Many months elapsed, and Ferdusi heard no more of his work: he then took occasion to remind the King of it by fome little epigrams, which he contrived to let fall in the palace;

but, where an Epick poem had failed, what effect could be expected from an Epigram? At length the reward came; which confifted only of as many small pieces of money, as there were couplets in the volume. The high-minded Poet could not brook this insult: he retired to his closet with bitterness in his heart; where he wrote a most noble and animated invective against the Sultan, which he sealed up, and delivered to a Courtier, who, as he had reafon to suspect, was his greatest enemy, affuring him, that it was a diverting tale, and requesting him to give it to Mahmud, when any affair of state or had success in war should make him more uneasy and splenetick than usual*. Having thus

* See a translation of this Satire in a Treatise on Oriental Poetry, added to the Life of Nader Shah in French, Volume X.— This poem is not unlike the Xagares of Theorritus, who, like the impetuous Ferdusi, had dared to expose the vices of a low-minded King. The Persian poet has this couplet in his Satire,

that is; Had I written as many verses in praise of Mahomed and Ali, as I have composed for king Mahmud, they would have showered an hundred blessings on me. A thought like that of Shakspeare in Wolsey's celebrated speech:

Had I but serv'd my God with half the zeal
I serv'd my King, he would not in mine age
Huve left me naked to mine enemies. Hen. VIII.

given vent to his just indignation, he lest Guzna in the night, and took refuge in Bagdad, where the Calif protected him from the Sultan of Zablestan, who demanded him in a furious and menacing letter.

The work of Ferdusi remains entire, a glorious monument of Eastern genius and learning; which, if ever it should be generally understood in its original language, will contest the merit of invention with Homer himself, whatever be thought of its subject or the arrangement of its incidents. An extract from this poem will exhibit a specimen of the Persian tongue, very little adulterated by a mixture with the Arabick, and, in all probability, approaching nearly to the dialect used in Persia in the time of Mahomed, who admired it for its extreme softmess, and was heard to say, that it would be spoken on that account in the gardens of Paradise.

یکی دشت بینی هه سن وزرد کزان شاد کرده دل راد سرد هه بیشه وباغ وآب روان یکی جایکاه از در پهلوان زمین پرنیان وهوا مشکبوی کلاب است کویی مکر آب جوی خم آورده از بار شاخ سهن

صنم کشته از بوي کلبن چهن خرامان بکرد بر کلان تذرو خروشنده تهري وبلبل زسرو ازین پس کنون تا به بس روزکار شود چون بهشت آن لب جویبار پریچهره بینی همه دشت وکوه بهر سو بشادي نشسته كروه منيؤه كجا دخت افراسياب درخشان كند باغ چون آنتاب ستاره دوم دختر کی نشین همه با کنزان وبا آفرین بیاراید آن دشت دخت کزین ستاره زند بر کل ویاسمین هه دخت تركان پوشيده روي ههه سروقد وههه مشكهوي هه رخ پر از کل چشم پر زخواب همه لب پر از می ببوي کلاب اکر ما بنزدیک آن چشنگاه شویم وبتازیم یک روزه راه بكيريم از ايشان پريچهره چند بنزديك خسره بريم ارجهند

that is; "Seeft thou yonder plain of various " colours (Perf. red and grey); by which the " heart of a valiant man may be filled with de-" light? It is entirely covered with groves and " gardens and flowing rivulets; it is a place be-" longing to the abode of Heroes. The ground " is perfect filk, and the air is fcented with " musk: you would say, Is it role-water which " glides between the banks? The stall of the lily " bends under the weight of the flower; and " the whole grove is charmed with the fragrance " of the role-bush. The pheafant walks grace-" fully among the flowers; the dove and night-" ingale warble from the branches of the cy-" press. From the present time to the latest " age, may the edge of those banks resemble "the bowers of Paradife! There you will fee, " on the plains and hills, a company of damfels, " beautiful as fairies, fitting cheerfully on every " fide. There Manizba, daughter of Afrafiab, " makes the whole garden blaze like the Sun. " Sitara, his fecond-daughter, fits exalted like " a Queen, encircled by her damfels, radiant in e glory. The lovely maid is an ornament to " the plains; her beauty fullics the rofe and the " jasmine. With them are many Turkish girls, " all with their faces veiled; all with their bo-" dies taper as a cypress, and locks black as " musk; all with cheeks full of roses, with eyes

"full of fleep; all with lips fweet as wine, and "fragrant as rose-water. If we go near to "that bower, and turn aside for a single day, "we may take several of those lovely nymphs, "and bring them to the noble Cyrus."

This is part of a speech by a young amorous Hero, the Paris of Ferdusi, who had reason to repent of his adventure with the daughter of Asrasiab, for he was made captive by the Turks, and confined in a dismal prison, till he was delivered by the valour of Rostam.

Of these two languages was formed the modern dialect of Persia, which, being spoken in its greatest purity by the natives of Pars or Farsistan, acquired the name of Parsi*; though it is even called Deri by Hafez in the following couplet;

چو عندليب نصاحت فروشد اي حافظ تو قدر او بسخن كغتن دري بشكن

that is; "While the nightingale, O Hafez, "makes a boast of his eloquence, do thou lessen the value of his lays by singing the Persian "(Deri) strains."

Nearly in the same age with Ferdusi, the great Abul Ola, furnamed Alámi from his blindness, published his excellent Odes in Arabick, in which he profesfedly imitated the poets before Mahomed. This writer had so flourishing a reputation, that feveral Persians of uncommon genius were ambitious of learning the Art of Poetry from so able an instructor: his most illustrious scholars were Feleki and Khakani*, who were no less eminent for their Perfian compositions, than for their skill in every branch of pure and mixed Mathematicks, and particularly in Aftronomy; a striking proof, that a fublime Poet may become a mafter of any kind of learning which he chuses to profess; fince a fine imagination, a lively wit, an easy and copious style, cannot possibly obstruct the acquifition of any science whatever, but must necessarily assist him in his studies, and shorten his labour. Both these poets were protected by Manucheher, Prince of Shirvan; but Khakani was always averse to the pleasurable and diffipated life of a Court, fo that the Prince was obliged to detain him by force in his palace, and actually confined him for fome time in prison, left he should find some opportunity of escaping.

The works of these authors are not very scarce; but it seems needless to give any extracts from them, which would swell this discourse to an immoderate length: it will be sufficient to say, that, in this and the following century, the Persian language became altogether mixed with Arabick; not that the pure style of the ancients was wholly obsolete, but it was the sashion among the Persians to interweave Arabian phrases and verses into their poems, not by way of quotations, but as material parts of a sentence. Thus in the following distich,

سري طيف من بجلو بطلعته الديجي شكفت آمد از بختم كه اين دولت از كجا

The phantom of her, whose heauty gives brightness to the shades, appeared to me at night: I wondered at the kindness of Fortune, and said, Whence came this prosperity?—the first line is pure Arabick in the style of the ancient poets.

This elegant tetrastich is of the same kind:

درين ظلمت سرا تا كي از بهر دوست بنشينم

كهي انكشت بر دندان كهي سر بر سر زانو بيا اي ساقي فرخ بيار مرده دولت عسي الايام أن يرجعوا قواما كالذي كانوا

In this mansion of darkness, how long must I sit expecting my beloved; one while with my singer on my teeth, one while with my head bent on my knee? Come, O fortunate cup-bearer, bring me the tidings of joy: who knows but my days may again be prosperous, as they were before? Where the last line is taken from an Ode in the Hamasa of Abu Temám, which begins,

صعحنا عن بني ذهل وقلنا القوم اخوان

We pardoned the fons of Dhohal, and faid, The tribe are our brothers.

At the opening of the twelfth century lived Anveri, a native of Abiurd in Khorasan, whose adventures deserve to be related, as they will show in what high esteem the polite arts were held in Afia, at the time when learning first began to dawn in Europe. Anveri, when he was very young, was fitting at the gate of his college, when a man richly dreffed rode by him on a fine Arabian horse, with a numerous train of attendants; upon his asking who it was, he was told, that it was a Poet belonging to the Court. When Anveri reflected on the honours conferred upon Poetry, for which art he had a very early bent, he applied himself to it more ardently than ever, and, having finished a poem, presented it to the Sultan. This was a prince

of the Seljukian dynasty, named Sanjar, a great admirer of the fine arts: he approved the work of Anveri, whom he invited to his palace, and raised him even to the first honours of the state. He found many other poets at court, among whom were Selman, Zebir, and Reshidi*, all men of wit and genius, but each eminent in a different way; the first for the delicacy of his Lyrick verses, the second, for the moral tendency of his poems, and the third, for the chastity of his compositions; a virtue, which his predecessors and contemporaries were too apt to neglect.

But of all the cities in the Persian Empire, none has given birth to more excellent poets than Shiraz; which my noble and learned friend Baron Revizki justly calls "the Athens "of Persia+." SADI, a native of this city, flourished in the thirteenth century, when the Atabegs of Parsistan encouraged men of learning in their principality: his life was almost wholly spent in travel; but no man, who enjoyed the greatest leasure, ever less behind him more valuable fruits of his genius and industry. A fine manuscript, about two hundred years

⁺ See Specimen Poeseos Persica. Vindobonæ 1771. Proæm.

old, was lately put into my hands, containing a complete collection of his works; among which are feveral pieces, both in verse and prose, which have never been mentioned by the Scholars of Europe. The following extract from his Gulistan, or Bed of Roses, will show how the Persian and Arabick languages were mixed together in his age:

شعر وربّ صديف لامني ني ودادها الميرها يوماً نتوضح لي عذري

" Tai*; that we may fold up (Tai) the gloomy

" volume of those, who want generosity. This

" wine, which gives a lively tint to the Arga-

" van (a purple flower), communicates its

" fweet nature from my beloved's cheek to her

"heart. Attend; for the musicians of the

" bower have begun their concert, joining the

" notes of the lute and harp to the melody of

" the dulcimer and flute. Bring thy Sofa into

" the garden, for, like active attendants, the

" cypress stands before us, and the green reed

" has tucked up his girdle. O Hafez, the

* fame of thy sweet alluring forcery has reached

" from the extremity of Rei and Rum, to the

" limits of China and Egypt."

There is nothing, which affords a stronger proof of the excellence of the *Persian* tongue, than, that it remained uncorrupted after the irruption of the *Tartars*, who, at different times,

^{*} An Arabian Prince, celebrated for his extreme liberality.

and under various leaders, made themselves masters of Persia; for the Tartarian princes, and chiefly Tamerlane, who was a patron of Hafez, were fo far from discouraging polite letters, like the Goths and Huns, that they adopted even the language and religion of the conquered country, and promoted the fine arts with a boundless munificence: and one of them, who founded the Mogul Empire in Hindoftan, introduced the Persian literature into his dominions, where it flourishes to this day; and all the letters from the Indian governors are written in the language (I do not fay, in the style) of Sadi. The Turks themselves improved their harsh dialect by mixing it with the Persian; and Mahomed II. who took Constantinople in the middle of the fifteenth Century, was a protector of the Persian poets: among these was Noureddin JAMI, whose poem on the loves of Joseph and Zelikha is one of the finest compositions I ever read. The following description will ferve as a specimen of his elegant style:

> سحر چو شب زاغ پرواز پرداشت خروس صبحکاه آواز پرداشت عنادل لحن دلکش برکشیدند لحاف غنچه از کل درکشیدند

سهن از آب شبنم روي خود شست

بنغشه جعد عنبر بوي خود شست

زليخا همچنان در خواب نوشين

دلش را روي در محراب دوشين

نبود آن خواب بل بيهوشيش بود

زسوداي شبش مدهوشيش بود

کنيزان روي بر پايش نهادند

پرستاران بدستش بوسه دادند

نغاب از لاله سيراب بکشاد

خهار آلوده چشم از خواب بکشاد

کريبان مطلع خورشيد ومه کرد

رمطلع سر زده هر سو نکه کرد

زمطلع سر زده هر سو نکه کرد

"In the morning, when the raven of night had flown away, the bird of dawn began to fing; the nightingales warbled their enchanting notes, and rent the thin veils of the rofe-bud and the rofe: the jasmine stood bathed in dew, and the violet also sprinkled his fragrant locks. At this time Zelikha was sunk in pleasing slumber; her heart was turned to-wards the altar of her facred vision. It was

^{*} A metaphor taken from the custom, which prevails among Mahomedans, of turning their faces, when they pray, towards the temple of Mecca.

" not fleep; it was rather a confused idea: it was a kind of phrenzy caused by her nightly melancholy. Her damsels touched her feet with their faces; her maidens approached, and kissed her hand. Then she removed the veil from her cheek, like a tulip besprinkled with dew; she opened her eyes, yet dim with fleep. From the border of her mantle the fun and moon arose; she raised her head from the couch, and looked around on every side."

This poem contains about four thousand couplets, and deserves to be translated into every European language: though I shall have neither time nor inclination to translate it myself, yet I may perhaps be induced, some years hence, to present the Original to the learned world, which any man, who has the advantage of greater leifure, may take the pains to interpret.

In the same Century with Jami, slourished a poet named CATEBI, who was highly honoured at the court of Mirza Ibrakim, one of Tamerlane's descendants. Mr. d'Herbelot tells a very pleasing slory of this writer, which deserves a place in this essay; though, in order to understand it, we must remember, that the Persians frequently end their couplets with the same word, which is often continued through a long poem; but in that case, the rhyme falls upon

the preceding fyllable. "Catebi, fays he, "having composed an Elegy, each verse of "which ended with the word, Gul, a rose, or any flower, repeated it to the prince Ibrahim, "his Patron; who, being extremely delighted with it, could not forbear interrupting him, by saying, From what hower did this tuneful "nightingale (meaning the poet) take its slight? "that is, without a metaphor, In what city were you born? to which Catebi, without hefitation, replied in a couplet of the same meafure with the poem, and with the same
"rhyme, as if he had only continued to read
"his Elegy:

هنچو عطّار از كلستان نشاپورم ولي خار صحراي نشاپورم من وعظّار كل

"that is, Like Attar*, I came from the rose-"garden of Nishapor; but I am only the thorn of "that garden, and Attar was its most beautiful "flower."

This distich, though delivered extempore, is at least equal to any of the rest in spirit and elegance. The poem confists of about thirtysive couplets, the first of which is the following:

^{*} Attar a Persian poet, author of the Pendnama.

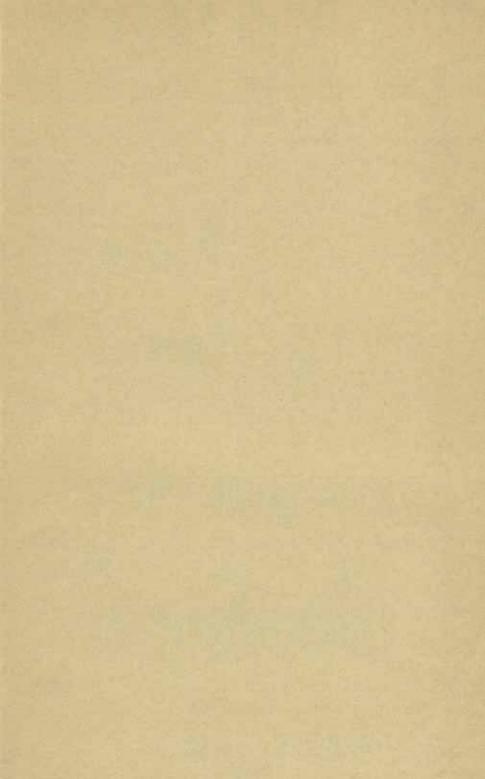

باز با صد برك آمد جانب كلزاركل ههچور نركس كشت منظور اولي الابصار كل

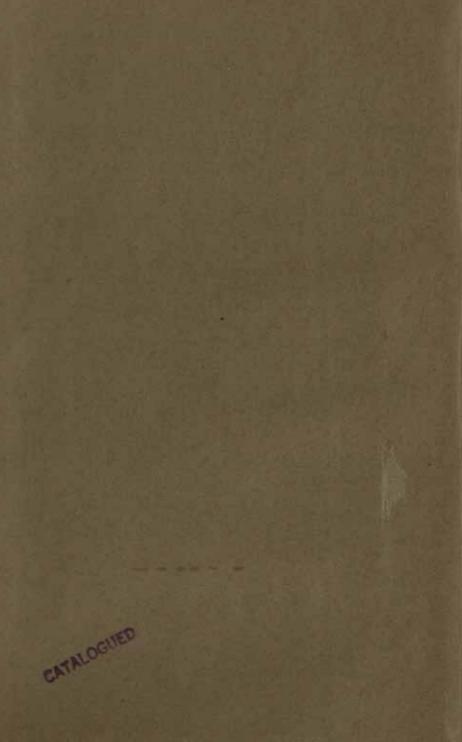

that is; Again the rose advances towards the bower with an hundred leaves; like the narcissus, it is a charming object to every discerning eye.

In the fixteenth and feventeenth Centuries, under the family of Sefi, the Perfian language began to lose its ancient purity, and even to borrow some of its terms from the Turkish, which was commonly spoken at Court. As to the modern dialect, no specimen of it needs be produced, since the Life of Nader Shah, which was written in Persian about sourteen years ago, and translated into French by the author of this Volume, may be consulted in the original by the learned reader.

END OF THE THIRD VOLUME.
