MYSORE GOVERNMENT MUSEUM,

Bangalore, dated 14th October 1939.

FROM

M. S. RAMCHENDRA RAO, Esq., B.A.,

Director of Industries and Commerce, Mysore Government Museum, Bangalore.

To

P. H. KRISHNA RAO, Esq, M.A.,

Secretary to the Government of His Highness
the Maharaja of Mysore,
Development Department,
Bangalore.

SIR,

I have the honor to forward herewith the report on the working of the Mysore Government Museum, Bangalore, for the year ending 30th June 1939.

Museum Advisory Committee.—The Museum Advisory Committee met twice during the year. At these meetings a programme of work for the year was formulated and the progress made in improving the different sections was reviewed. The Members of the Committee were also consulted in regard to the acquisition of specimens and

their display.

Well as unnecessary specimens and renewals which was commenced last year made steady progress. In respect of the Archæological and Geological sections, such work was completed during the year and substantial progress was made in respect of Agricultural and Industrial sections. The condition of specimens as a whole was considerably improved. Much work, however, still remains to be done in the Natural History section in which case a thorough overhauling is called for involving a heavy expenditure.

Three hundred and twenty-six new specimens were acquired for the different sections during the year, as

shown in Appendix 'A.'

Archaeology.-Most of the duplicate specimens found in the armoury section have been eliminated. The photographic views of Mysore Architecture and sculpture and other maps and charts that were got drawn last year were installed in appropriate places making use of the available

wall space.

The representative collection of electro-type casts of coins of Mysore were silver and gold plated so as to give an idea of the metal from which their originals had been minted. The re-arrangement of the coins in the showcases has been taken up and will, when completed, tell the story of the coinage of Mysore from the earliest to modern times. Three silver coins of Aurangazeb, being issues of the Akbarnagar and Surat mints, were presented by the Director of Industries and Commerce, Central Provinces.

The Museum has since a long time been wanting a collection of sculptures representative of the different styles available in Mysore. A selection has been made of pieces of sculptures available at the 'Kedareswara' and other temples at Halebid that could be acquired for the Museum and these will form the nucleus for further collections which would go to form a Sculpture Gallery.

Geology. - The entire collection of specimens of fossils which was foreign and occupied nearly half the floor space allotted for the section was transferred to the Central College, Bangalore, where it can be usefully studied both by the students and the staff of the Geology Department. It is proposed instead to exhibit a select group of specimens of fossils of Indian origin arranged in the evolutionary order. The accommodation released by the removal of the fossils was made use of for the re-arrangement of the minerals and rocks in an intelligible manner. Bi-lingual labels in English and Kannada have been introduced to explain the exhibits displayed. A number of local cut gem stones used in jewellery were purchased. The 'Story Method' is being employed in the illustration of the metal and other industries of the State.

Agriculture.—All the old samples of the Botanical section were removed and fresh samples were substituted. Combed samples of seven different varieties of cotton grown in the Mysore State showing their fibre length were

arranged in glass topped wooden cabinets.

With a view to demonstrating the usefulness of Agricultural Chemistry, a dozen varieties of Chemical manures are displayed in inverted glass jars. The method of making 'Compost' from agricultural and habitation waste is described in the photographs exhibited. The effects of faulty as opposed to balanced manuring is also portrayed in two pictures of the tobacco and sugarcane crops.

The Government Serum Institute sent for exhibition ten specimen bottles containing the Sera, Bacterin and Vaccines used in combating the various cattle diseases together with booklets in Kannada giving an account of the origin and spread of those diseases. These specimens are all labelled in Kannada. These exhibits have been found of much educative value to visitors from rural parts.

Zoology.—A thorough scrutiny of the condition of specimens in the section was carried out. Specimens to be eliminated have been marked and proposals for the further improvement of the section are under

consideration.

The fresh water fishes collected during the survey of the Kadur District conducted last year were studied in detail. The identification, mounting and labelling of 41 specimens fit for display is complete. Government have approved an Ornithological Survey of the State by the Bombay Natural History Society. The Society have promised to write out a report on the birds that inhabit Mysore and supply to the Museum a collection of skins of birds from among the duplicates collected. It will then be possible to renew many of the old and worn-out specimens now on show in the bird gallery.

Botany.—A set of 14 charts to illustrate the life history of the different kinds of plants are under preparation. As soon as the charts are ready they will be displayed along with specimens mounted in glass jars which would help to demonstrate the various stages in the

evolution of plant life.

An interesting specimen of a three-chambered cocoanut shell found at Manaparai in the Trichinopoly District of the Madras Presidency was presented to the Museum.

Forest.—A scrutiny of the exhibits of the section revealed that many of them had deteriorated and were out of date. Those to be eliminated from amongst them were noted.

The present display of timber specimens and finished products is pronounced to be practically of an obsolete type

and it has been decided to exhibit the specimens of commercial and semi-commercial timbers of Mysore in the most attractive modern form. It is also proposed to have a few articles made out of local woods to illustrate the display of grain, colour and lustre as also the effects of good and bad seasoning. The work relating to the overhauling and improvement of the section will be taken on hand in the near future.

Health Section.—A rat-proof model house made of wood with a plan worked out on a plank showing the details of the rat-proof arrangements was received from the Department of Health and arranged in the gallery. The model is said to be fit for adoption both in the 'Malnad' and 'Maidan' areas.

Industries and Industrial Art.—With the receipt during the year of the cabinet from the Mysore Spun Silk Mills, Ltd., Chennapatna, consisting of specimens relating to the manufacture of waste and spun silk, the improvement of the Sericulture section is well nigh complete. Samples of spun silk shirting and waste silk coating cloths were added to the series.

A beginning was made in the collection of materials to illustrate the history of the 'Gota' (Nakki) industry. Some representative samples of sari borders have already been acquired and the raw materials made use of in the manufacture of 'Gota' are shortly to be received.

An ivory figure of 'Nataraja' (Siva dancing), one of the fine specimens of ivory carving done at the Sri Chamarajendra Technical Institute, Mysore, which was purchased, forms an important addition to the Industrial Art section.

Educational Work.—The guide lectures to students from primary and other schools in Bangalore was continued, and the response was highly encouraging. As a result of the development of Museum service in this direction, the number of visits from organised parties of school children has practically doubled as compared with the previous year. An aggregate number of 5,139 students belonging to 133 schools accompanied by 150 teachers were conducted round the galleris. A scheme to develop a course of instruction in guide lecturing to teachers from primary schools in Bangalore City is under consideration. This would, when given effect to, equip the individual teachers to be in a position to conduct his classes round the Museum, whenever occasion arises.

A special feature of the educational work of the year was the explanatory talks given to groups of illiterate visitors. It has been found that these talks are very much appreciated and attract large numbers of interested hearers. The insufficient moving space in the Museum makes it difficult to allow large congregation to gather in one place as they would block free passage to other visitors and result in damage to show-cases in which specimens are displayed.

There has been uniform appreciation of this aspect of Museum work from all quarters but further progress in this direction can only be achieved if additional space is provided and the appointment of a staff of guide lecturers

specially meant for the purpose is sanctioned.

Restoration and Preservation.—It was observed that most of the stringed musical instruments were badly damaged and needed restoration. The necessary repairs were got done and all of them were treated with a preservative coating of varnish. The periodical cleaning, brushing and re-arrangement in the different sections were attended to.

Loan of Specimens .- One of the new features of work undertaken was the loan of specimens to Exhibitions. The Geological charts, maps and the polished cubes of local ornamental and building stones were put on show by the Mysore Geological Department at the Dasara Exhibition held in Mysore. The proof-sheet of the Proclamation by the Marquess of Dalhousie on the capture of Sebastapol, issued from his camp at Bangalore in 1855, which is one of the earliest known pieces of printing work done at the Government Central Press, Bangalore, was also taken out for display at the Dasara Exhibition and the Exhibition of manuscripts and books arranged in connection with the 'Press Day' at Bangalore. Loan specimens to educational and other institutions for temporary periods is a part of the activities of Museums in foreign countries, where separate travelling collections which cater to the needs of students are maintained.

Building.—The question of improving the lighting and ventilation of the Museum building was considered and proposals were made to Government in the matter. Government have been pleased to sanction the illumination of the building by means of electric lights and the provision of exhaust fans at an estimated cost of Rs. 3,146. This measure will satisfy one of the long felt wants of the

Institution.

Library.—The additions consisted mainly of departmental publications and annual reports of other Museums. A total number of twenty-six reports and other publications were received either through exchange or presentation. The 'Report on the Museums and Art Galleries of the British Isles' by S. F. Markham presented by the Secretary, Carnegie United Kingdom Trust, is a useful acquisition.

The library is kept open to visitors for consultation on all working days, except Sundays, between 12-30 and 5 p.m. On Sundays it is open from 8 a.m. to 11 a.m.

Visitors.—The Museum continued to be popular and was visited by 299,776 persons. Of them the number of school children once again recorded a rise from 3,059 of the last year to 5,139 during the current year. The number of literate persons visiting also shows a rise from 14,505 to 15,670. This is an evidence of the increasing interest shown by the educated public with regard to the Institution. The crowds during the 'Karaga' and other local festivals remained unabated.

Among important visitors to the Museum mention may be made of H. H. the Junior Maharani of Nabha and party, the Thakur Sahib of Kotda Sangani and Mr. S. H. Prater, Curator, Bombay Natural History Society, Bombay.

Staff.—During the year Government sanctioned the proposals of the Director of Industries and Commerce for a reorganisation of the staff. An additional Assistant

Curator has since been appointed.

Stock Registers.—The general register, registers of exhibits and furniture and other books of the Institution

have been written up-to-date.

Maintenance.—The Government grant for the upkeep of the Institution was Rs. 4,864, of which a sum of Rs. 4,673-0-9 was spent during the year (Details are furnished in Appendix 'E').

I have the honour to be,

Sir,

Your most obedient servant,

M. S. RAMCHENDRA RAO,

REPORT ON THE WORKING OF THE MYSORE GOVERNMENT MUSEUM, BANGALORE, FOR THE YEAR ENDING 30TH JUNE 1940.

Museum Advisory Committee.—With a view to enable the Museum to have the expert advice of the Members of the Committee, the term of the Museum Advisory Committee which expired by the 13th July 1939, was extended for a further period of two years with the existing personnel by Government in their Order No. 111009—Mus. 13-38-2, dated 30th June 1939.

The Committee met twice during the year under report and was helpful in formulating the programme of improvements to be effected in the various sections and in the acquisition of specimens and their display. The progress made so far was also reviewed by the Committee.

Galleries.—In accordance with the suggestions made by the members of the Museum Advisory Committee from time to time, the work of elimination of deteriorated and antiquated specimens was continued. The condition of specimens in the Museum was satisfactory and there has been a steady increase in the number of instructive exhibits. Two hundred and sixty new specimens intended to be of educative value to the students and the general public, were acquired during the year for the different sections.

Archaeology.—The Director-General of Archæology in India was pleased to present the Museum with a representative collection of Antiquities from Mohenjodaro in Sind. All the specimens received have been labelled and exhibited in the "Archæology" Section of the Museum. A descriptive list of the specimens is found in Appendix A.

The Curator of the Museum was deputed for a short period to work with the excavation party of the Mysore Archæological Department on the ancient site of Chandravalli near Chitaldrug. A representative collection of antiquities unearthed during the excavations will be displayed at the Museum soon after they are cleaned and studied in detail. These specimens will throw a

considerable light on the condition of life of the people of Mysore nearly two thousand years ago. The collaboration of the Museum in the researches of the Archæological Department will be of value to the staff of the Museum to correctly interpret the value of the specimens to the enquirers.

The Curator of the Central Asian Antiquities Museum, Delhi, presented two copper coins of Vasudeva to our Museum. A silver coin of Allauddin Mahamad II and another silver Maratha coin were also received as presentations from the Director of Industries and Commerce, Central Provinces and the Government of

Bombay, respectively.

Geology.—As a part of the plan to acquire exhibits that would both be interesting and educative to the visitors, the construction of a Relief Map of the Mysore State on a scale of eight miles to an inch was taken up. The Geological formations will be depicted on this Map. The model is sure to attract popular attention.

Agriculture.—A close scrutiny of the specimens of the section revealed the necessity for a thorough overhauling and increase of exhibits especially, those connected with Agricultural Botany. A detailed note on the improvement of this section has been prepared and action is being taken to arrange for the acquisition and display of exhibits in an instructive manner.

Botany .- The marginally noted charts depicting the

I-Volvocales.
II-Ulothrix, Oedogonium, Spirogyra, Desmids, Chara.
III-Brown Alge and Red Alge.
IV-Fungi.
V-Riccia, Marchantia and Porella,
VI-Bryales.
VII-Lycopedium, Selaginella.
VIII-Equisetum, Ophioglossum.
IX-Adiantum.
X-Cycas.

life-histories of plants were prepared during the year. The charts together with specimens illustrating the evolution of plant life go to form a collection of exhibits under systematic Botany.

Horest.—All the old specimens of wood, both indigenous and exotic that were on show were transferred to the Forest Research Laboratory, Bangalore, for purposes of study. Instead, a decorative wall panelling with ebony border, comprising of seven species of Mysore wood, the sketch showing the rising sun against clouds with mountains in the foreground and blue sky as the background was got constructed. Sixty-one types of samples of

Mysore timber labelled in English and Kannada have been arranged at the bottom of the panel. It is proposed to exhibit a few articles made out of local woods to illustrate the display of grain, colour and lustre and the effects of good and bad seasoning.

Health.—The preparation of a farm model house for

exhibition in the section is under consideration.

Industries and Industrial Art.—In furtherance of the scheme for the illustration of the principal industries of the State in the Museum, steps were taken to acquire the raw materials, stuff in various stages of manufacture of pulp, and samples of finished paper of the Mysore Paper Mills. A model of the buildings of the Paper Factory has also been received.

Educational Work.—The interpretation of the exhibits to school children and illiterate visitors is engaging the attention of the staff of the Museum. Regular guide lectures to students from the Primary and other schools in Bangalore were delivered as usual. The number of such lectures was twenty.

Lately, the students of the Intermediate Colleges in Bangalore are making use of the Natural History collections of the Museum for study. A total number of 4,564 students from 133 schools and colleges accompanied by 138 teachers were shown round the institution during the

vear.

Restoration and Preservation.—Most of the specimens of the Armoury Section that showed signs of rusting were cleaned and treated with a preservative coating of varnish. The periodical cleaning, brushing and re-arrangement of exhibits in the show-cases were attended to.

Loan of Specimens.—There was a great demand for the loan of some of the the loan of some of the educative exhibits of the Museum during Works.

4. Flexible Sand-stone.
5. Cast of Cullinan Diamond.

There was a great demand for the loan of some of the educative exhibits of the Museum during Exhibitions. The exhibits of the Geology

section noted in the margin were taken out by the Mysore Geological Department for display at the Dasara Exhibition held at Mysore. The rat-proof model house was lent on two occasions to the Department of Health for purposes of Exhibition. All the exhibits including the model of the buildings of the Paper Factory were displayed by the Mysore Paper Mills at the "War Fete Exhibition" in Bangalore.

Building.—As per resolution of the Museum Advisory Committee, Government were addressed regarding the immediate need for increased accommodation for the Museum. It has been decided that the present building does not admit of extensions as it would spoil the architectural beauty of the building. The question of putting up a separate building for the Museum on a suitable site is under the consideration of Government.

Due to war conditions, the original estimate for the provision of electric lights and fans to the Museum building had to be revised. Government were pleased to sanction a revised estimate for Rs. 5,127. The illumination of the buildings with electric lights was completed. The provision of exhaust fans in the ground-floor has helped to improve the ventilation to a great extent.

Library.—The additions consisted mainly of departmental publications and annual reports of other Museums, in and outside India. The Museums Journal and the Journal of the Bombay Natural History Society were continued to be subscribed for.

Visitors.—The institution was visited by 285,404 persons during the year under report. The number of school children that visited the Museum was 4,564. But the number of literate persons visiting stood at 15,844 during the year as against 15,670 of the previous year, thus showing the increase in popularity of the Museum amongst the educated public. As usual, large crowds visited during "Karaga" and other local important festivals.

The Rajkumar of Kænjhar visited the Museum on 24th July 1939. Rao Bahadur K. N. Dikshit, M.A., F.R.A.S.B., Director-General of Archæology in India, paid a visit to the Museum in company with the Director of Archæological Researches in Mysore, during the year, and the opportunity was availed of to consult the Director-General regarding the improvements to be effected in the Museum.

Staff.—There was no important alteration in the staff of the Museum during the year under report.

Stock Registers.—All the registers of exhibits and furniture have been written up-to-date.

Maintenance.—The Government budget grant for the upkeep of the Institution was Rs. 4,456, and the actual expenditure during the year was Rs. 3,905-7-11 (details are furnished in Appendix "F").

AMERICAN ALERON ALERON

REPORT ON THE WORKING OF THE MYSORE GOVERNMENT MUSEUM, BANGALORE, FOR THE YEAR ENDING 30th JUNE 1941.

Museum Advisory Committee.—The Museum Advisory Committee met once and reviewed as usual the progress made in the improvement of the different sections of the Museum during the previous year. The Committee was also helpful to a great extent in scrutinising the proposals made by the members of the Committee and outlining the programme of work to be undertaken during the year under report. Since the appointment of the Advisory Committee by Government, it has been found possible to effect a good number of improvements in the Museum.

Galleries.— The work of elimination of worn-out and superfluous specimens as also the acquisition of exhibits of popular and educative value which commenced four years back maintained steady progress. The question of renewing many of the deteriorated specimens of the Mammal gallery is engaging attention. The specimens in the bird gallery were re-arranged and all of them have been re-labelled. Particular attention was paid to the labelling of specimens in the Natural History section in general. A total number of two hundred and seventy-two fresh specimens of scientific and cultural interest were acquired during the year. (A descriptive list of specimens acquired is furnished in Appendix 'A'.)

Geology.—The preparation of the Geological relief map of Mysore undertaken last year was completed and the model has now been displayed in the Museum. Another exhibit, instructive both to the students and the general public, is the model of Ore-crushing and Stamping mill plant, designed to demonstrate the actual process on a small scale. This exhibit is sure to rouse great attention.

Zoology.—A collection of two hundred and twentynine specimens of birds, being examples of species obtained by the Bombay Natural History Society during the Ornithological Survey of the Mysore State carried out by them, were received from Government for exhibition in the Museum. These specimens are really valuable as they form an authentic record of the types of bird-life that inhabit the Mysore State. Arrangements are being made for the mounting and display of the specimens in a suitable manner.

Botany.—With the preparation of the marginally noted Botanical Charts, the set of 13 Charts meant to illustrate the life histories of plants is complete. It now remains to label the Charts and

frame them for display. The Charts, together with a collection of specimens relating to the same that is being made, will offer the visitors a correct idea of the history of plant life.

Agriculture.—Half a dozen typical specimens of fresh water fishes of Mysore were added to the fish section. The collection of fresh water fishes now displayed is fairly representative of the fish-life of Mysore. With a view to impress on the minds of the visitors the importance of bee-keeping as a subsidiary occupation, it is proposed to exhibit a bee-hive box and a set of bee-keeping appliances, properly labelled to explain the scheme. Proposals for the renewal and increase of exhibits of Agricultural Botany on up-to-date lines are under consideration.

Forest.—In furtherance of the scheme for the display of specimens of Mysore timbers on modern lines, a set of articles made out of local timbers were put on show. This group of exhibits gives an idea of the different uses to which Mysore timber could be put. A miniature model of a modern forest Inspection Lodge acquired during the year is an interesting acquisition. The small magnifying apparatus for the illumination of microphotographic plates depicting sections of Mysore timbers displayed in the section, is one of the very few of its kind in India.

Archæology.—At the suggestion of the Director-General of Archæology in India, eleven plaster of paris casts of Mohenjodaro Statuary were purchased for the Museum. The Statuary form an important collection in as much as they throw a flood of light on the condition of Indian Art nearly five thousand years ago. A map of Mysore showing places of historical and archæological interest in the State was got prepared to satisfy the needs of interested visitors especially from outside the State.

Amin-ul-Mulk Sir Mirza M. Ismail, K.C.I.E., Dewan of Mysore, was pleased to present an old map of the island of Seringapatam which in all probability belongs to the last decade of the eighteenth century.

The Superintendent, Government Museum, Madras, presented four gold coins of the Vijayanagar period, one of Haider Ali and a silver coin of Kerala Ravivarma. A gold coin of Prithvi Deva was also received from the Director of Industries and Commerce, Central Provinces.

Restoration and Preservation.—The preservation of historical and other pictures received attention. Many of the pictures were cleaned and provided with wooden backing. The periodical cleaning, brushing and rearrangement of exhibits displayed in the various sections were attended to as usual.

Educational Work.—With a view to make the Museum serve an educative purpose, active steps were taken to afford increased facilities for the interpretation of the exhibited series of specimens to the school children and the large number of illiterate persons who visit the Museum. Apart from the regular guide lectures that are being delivered to students from the Primary Schools in Bangalore City, the Staff of the Museum spared no pains in explaining the significance of the exhibits to parties of students from other schools and colleges as well as groups of illiterate visitors, as and when occasion arose. The increase from year to year in the number of schools availing of the facilities afforded, is a sure indication of the popularity of this aspect of Museum work. More than 4,232 students belonging to one hundred and sixtyseven (167) educational institutions in and outside Bangalore, accompanied by 182 teachers paid regular visits for purpose of study.

Loan of Specimens.—The demand for the loan of exhibits of educative value for exhibitions and other displays was met with as far as possible. Some of the exhibits acquired for the Geological Section during the last three years were taken out by the Mysore Geological Department for show at the Dasara Exhibition. The model of the buildings of the Mysore Paper Factory and samples of raw materials, etc., used in the manufacture of paper were also lent for purposes of exhibition.

Building.—Government have been pleased to sanction the construction of a work and store room for the use of

the Museum. This satisfies a long-felt want. In view of the limitation imposed on the proper expansion of the Museum due to the insufficient accommodation in the Museum building, the question of putting up a separate building on a suitable site is under the consideration of Government.

Library.—The new acquisitions consisted mainly of Departmental publications and annual reports of other Museums in and outside India. The Museums Journal and the Journal of the Bombay Natural History Society are amongst the important publications subscribed for. (Details are furnished in Appendix 'B').

Visitors.—A total number of 282,712 persons visited the Museum during the year. The number of school children that visited during the corresponding period was 4,232. Of the total number of visitors, the number of literate persons, as recorded, is 16,124. This shows a slight preponderance over the last year's figure of 15,844, thus revealing the increasing interest shown by the educated public with regard to the Museum. There was a large concourse of visitors during the 'Karaga' and other important local festivals. The popularity of the institution remains unabated. (Vide Appendix 'C' for details).

Staff.—The Curator of the Museum was placed in charge of the stalls of the Department of Industries and Commerce at the Mysore Dasara Exhibition, which necessitated his stay out of headquarters, for nearly a month. There was no alteration in the staff of the Museum during the year.

Stock Register.—The general register and registers of Library and furniture have been written up-to-date.

Maintenance.—The budget grant of the Department for the year was Rs. 4,720 and the actual expenditure amounted to Rs. 4,289. (For details Vide Appendix 'E').
