THE INDIAN ANTIQUARY,
A JOURNAL OF ORIENTAL RESEARCH.

VOLUME XXX. — 1901.

THE PRESENT POSITION OF INDIAN HISTORICAL RESEARCH.

BY J. F. FLEET, I.C.S. (RETD.), Ph.D., C.I.E.

It is well known now, in certain circles, that our knowledge of the ancient political history of India is derived, not from historical works bequeathed to us by the Hindus, but almost entirely from the patient examination of a large number of records, not written as a rule with any deliberate intention of relating history, that have survived to our time in the shape of inscriptions on stone and copper. And we are chiefly dependent on those records, not only for the political history, but also for nearly all the chronological details that we require in connection with the linguistic, paleographic, literary, religious, social, and administrative developments, and, in short, in connection with every department of research into the past of India.

It is, however, not so well known what these records are, upon which we are thus dependent, and why they have come down to us in such large numbers, and how it is that they help us so much. Nor has there been exhibited, by those to whom service and residence in India give opportunities which many other scholars do not enjoy, so general a willingness, as might have been expected, to co-operate in collecting and exploring the records. Nor do the specialists in literature, philosophy, and some other lines, seem to realise how useful to them, if they would only peruse the published versions of the records, would be the results that can be brought forward from that source. And some of the objects of the present paper are to explain the nature of these records and the extent to which they help us, and to show the paramount importance of them in the various lines of research that have been indicated, with the hope of creating a more general interest in them and of persuading more workers to join in the exploration of them.

We want to arouse a more general and practical interest in the epigraphic records among the specialists in literature, philosophy, the history of the religions, and other lines. It can only be imagined that the reason for which the records have not yet appealed more to the specialists, is, that the nature and possibilities of them have never been brought forward with sufficient prominence. And we hope to do something now towards supplying this deficiency. It is not always, of course, that a single inscription, taken by itself, establishes anything of special importance; and we must not expect to make a great discovery in every separate one that we examine. The value of the inscriptions results more from the way in which they all work in, one with the other. But we may mention here two cases which illustrate the results that can occasionally be obtained from even isolated records.

One is the case of Lakulīśa. Among the Śaivas, there was an important school, known as that of the Lakulīśa-Pāsapata, whose views were thought worthy of being explained by the well
known Sāyaña. A historical record connected with this school, known as the Cintra Prāsasti, composed during the period A. D. 1274 to 1296, was edited some eight or nine years ago by Dr. Bühler, who, however, found that he could not tell us anything about the early history and initial date of the school. The required clue is supplied by one of the southern records, an inscription of A. D. 1035 at Balagāmi in Mysore, which shows that Lākṇaḷasa was then alive, and was at Balagāmi, by the simple fact, which it registers, that a grant, which was then made for the rites of a temple there, was made to him. And, with this to guide us, it was easy to trace another mention of him in a record of A. D. 1019 or 1029, and to determine that he began his career at Melippadi in the North Arcot district, Madras, where, doubtless, he laid the foundations of the reputation and influence that he subsequently acquired, that from there he went to Balagāmi, and attached himself to one of the great Śaiva establishments at that place, namely the college of the Kajāmukhas of the temple of Pañchalinga, and that later on he proceeded to Gujarāt, and then, settling at Kārvān in the Baroda State, founded there the school of Pāṣupatas which carried on the memory of him for so long a time.

The other is the case of the revival of Śaivism in the twelfth century A. D. In the Kanarese country, there is the important sect of the Līṅgāyāts or Vira-Śaivas. Their tenets are explained in the Bāvanaupurāṇa and the Channabasaupurāṇa, which give the general account of the establishment of the sect and of the revival of Śaivism which it accompanied, attributing both to a certain Basava and his nephew Channabasava, who are represented as having held, in succession, the office of prime minister under the Kaḷachurya king Bijjala of Kaḷyāṇi (A. D. 1156 to 1167). Skepticism as to the correctness of these accounts had been created by the fact, that no mention of Basava and Channabasava is to be found in any of the numerous epigraphic records of that period that have been brought to light. The fact that the Channabasaupurāṇa would place the death of Basava in A. D. 785, four centuries before the true time of Bijjala, was not calculated to allay suspicion. And any amount of uncertainty and speculation might have been the result. The matter, however, has been settled by an inscription at Abhir in the Dhārwar district. The events narrated in this record are referred, by the connection of them with the well known names and period of Bijjala and the Western Kaḷaḷukya king Śomēśvara IV., to the latter half of the twelfth century A. D. The record shows that it was then, indeed, that the revival of Śaivism took place. But it shows also that the person who actually effected it, was the Brāhmaṇa Eruṇāḍa-Rāmayya, born at Aland in the Nizam’s Dominions. And it gives a very racy and interesting account of the circumstances in which he lived and worked, and illustrates pointedly how quickly, in India, real historical events may come to be overlaid with what is purely imaginary and mythical. And, in connection with this record, we take the Managōli inscription of A. D. 1161, and there, in the person of a certain Basavaraya who founded a Śiva-temple, evidently of some considerable size and repute, in the neighbourhood of the alleged birth-place of the founder of the sect, we may find the original of the Basava of the Līṅgāyat Purāṇas.

As an instance of the more general use to which the details of epigraphic work may be applied, we may take the case of the Bower Manuscript,—an ancient document written on leaves made from dried birch-bark. It had been obtained through excavations at “the foot of one of the curious old erections of which several are to be found in the Kuchur “district.” It was secured and brought to notice by Lieutenant Bower, from whom it derives its name. And Dr. Hoernle has shown that, in this manuscript, we have a veritable original document, which is a relic that has come down to us from the period A. D. 400 to 450. The contents of this work, which include a medical treatise, a Buddhist tale, and a collection of proverbial sayings, may or may not be of practical value. But it is neither uninteresting nor

unimportant, to have it proved to our satisfaction that, under favourable conditions, a document written on so frail a material as birch-bark can survive for fourteen centuries. It would, however, have been difficult, if not impossible, to establish this conclusively, without the help, for the palæographic examination of the document, of the photo-lithographic reproductions of ancient records which were given as an accompaniment to the texts and translations of them in my volume on the Gupta inscriptions.

And there is one other matter, illustrating still more pointedly the general value of the inscriptions and the hopelessness of attempting to deal finally with any Indian questions without their help and guidance, which is worth noting here, because of the bearing that it has been supposed to have on the history of Sanskrit literature. We mean the Vikrama legend. One of the principal reckonings of the Hindús is an era which runs from B. C. 57. A Hindu legend tells us that a celebrated king Vikrama or Vikramaditya of Ujjain, in Málwa, began to reign in that year, and founded the era, which, on that view, runs from the commencement of his reign. Another version of it asserts that he died in that year, and that the reckoning runs from his death. In either version, the legend appears to be of Jain origin. It is common to both the Digambaras and the Svetámbaras. And the Gáthás or Prákrit verses, upon which the earlier portions of some of the Jain Pañcadvátis or successions of the pontiffs are based, pretend to put forward such details about Vikramaditya as that “for eight years he played as a child; for sixteen he roamed over the country; for fifty-six” — (? fifteen) — “he exercised rule, being given over to false doctrine; for forty years he was devoted to the religion of the Jina and then obtained heaven.” An addition to the legend connects Vikramaditya with some foreign invaders of India who were called Sakas; and this, again, appears in two versions: one version represents him as regaining the kingdom of Ujjain after the Saka kings had dispossessed his father and had reigned there for four years prior to B. C. 57; and the other, — as reported by Albérini in the eleventh century A. D. — brings the Sakas on the scene a hundred and thirty-five years later, and asserts that Vikramaditya marched against the Saka king, and put him to flight and killed him “in the region of Karár, between Multán and the castle of Lónl,” and that, in celebration of this, there was established the Saka era commencing A. D. 73. And another addition asserts that at the court of Vikramaditya there flourished the “Nine Gems,” namely, the poet Káliása, the astronomer Varáhamíhira (died A. D. 587), the lexicographer Amarasíkha, and the various authors Dhanvantari, Gáthákarpasa, Kahapána, Sańka, Vararuchi, and Véšálabháṣṭa. Such is the legend. And Mr. Fergusson, led away by the belief, — justifiable enough at the time, forty years ago, — that no inscriptions of any early

1 Vol. XXI, above, p. 71; and see Vol. XX. p. 339.
3 Sachau’s Translation of Albérini’s India, Vol. II. p. 46.
4 The authority for this is a well-known verse, for which no period can be fixed at present. It is to be found in the Jñánaśrīdevabharana, which claims to have been composed by Káliása himself (Jour. Bo. Br. R. As. Soc. Vol. VI. p. 96), but is really to be attributed to the sixteenth century A. D. (Weber, Sanskrit Literature, p. 201, note). But it appears to be “a mere word and strain, that has come from nobody knows where” (Weber, ibid.), like various other verses that are floating about the country, for instance, the verse about the amásíkha or ring-finger (Vol. IV. above, p. 83, and Peterson’s Second Report on Sanskrit MSS. p. 62, which quotes it from the anthology of Harikavi called Harirādžavali). If we could place any reliance on an inscription which is said to have been on a stone as Bódh-Gáyá and to have been copied by Mr. Wilkins in 1785, and of which a translation was published by Wilkins from the copy attributed to Mr. Wilkins (As. Rez. Vol. I. p. 99, reprint of 1788), we should have a general reference to “the Nine Gems,” with the mention of one of them, Amaraśéva (Amarasíkha), carried back to A. D. 948. But the translation represents an extraordinary record, which purports to give an epitome of the Vídyyavája in respect of the account of Buddha as an incarnation of Vishnu, and to register the building of a temple of Buddha by Amaraśevá. It does not indicate in any way the style of a genuine record of the tenth century. And Sir Alexander Cunningham could not find the alleged original inscription at Bódh-Gáyá (Archæol. Surv. Ind., Vol. I. p. 5, 12). He seems to have subsequently arrived at the conclusion that a copy had been made of a forged inscription, which afterwards disappeared. But it appears more probable that some fraud was practised on Mr. Wilkins, and that he has been mistakenly described as copying the text from an original stone, and that there was painted on him an imaginary copy of an alleged original which did not actually exist at all.
period, dated in the Vikrama era, could be produced, propounded the theory that the era was not actually in use from B.C. 57, but was invented in the tenth or eleventh century A.D. His ultimate conclusions were, that there was a king of Ujjain named Harsha-Vikramaditya, reigning, according to him, in the period A.D. 425 to 530. — that the battle of Karur was fought in his time, — that the real date of that battle may have been A.D. 534, — that the Hindus of later times, however, made a mistake of twenty years, and placed it in a year answering to A.D. 544, — that they wished to have a new reckoning which should supersede the Saka era, and, for certain conveniences of chronology, should run from an earlier epoch than that era, — that they created an apparent reckoning from B.C. 57 by counting back ten cycles of the sixty-year system from A.D. 544, — and that they found a name for the era in one of the appellations of Harsha-Vikramaditya of Ujjain.11 Now, we have no epigraphic evidence of the existence of a king Vikramaditya of Ujjain who was reigning B.C. 57, and no reason whatever to believe in the existence of such a person. And, on the other hand, all the epigraphic evidence strongly negatives the possibility of there having been any king Harsha-Vikramaditya of Ujjain in, or at any time near to, the period A.D. 405 to 530 which was worked out by Mr. Fergusson, or even between A.D. 76 and 111 which is the period in which the Rājatarangini would place him.12 Also, an examination of some erroneous postulates assumed by Mr. Fergusson at starting, and of some of the untrustworthy data used by him, quickly exposes the fallacious nature of his theory. But, apart from any considerations of that kind, both the legend, and the theory propounded in the place of it, have been disproved by the results of Professor Kielhorn’s examination, from the data supplied by the inscriptions, of various question connected with the era.13 He has shown that the earliest instances of the use of the era all come from eastern Rājputānā, and chiefly from that part of eastern Rājputānā which borders on, or is included in, Mālwa. He has shown that the era was known in A.D. 472 and 532 as “the reckoning of the Mālavas,” and in A.D. 879 as “the Mālava time or era,”; and that records of A.D. 738 and 1169 speak of it as “the years of the Mālava lord or lords.” He has shown that the word vikrama is first found coupled with it in a record of A.D. 842 which speaks of “the time called vikrama,” and that we hear for the first time of a prince or king named Vikrama, in connection with the era, in a poem composed in A.D. 993, the author of which gives its date by saying that he was writing one thousand and fifty years “after king Vikrama had ascended to the pure dwelling of the immortals.” And he has shown that the first specific mention of the era as having been established by Vikramaditya, is in a record of A.D. 1196. He has pointed out that these facts “would seem to indicate that the connection of Vikrama with the era grew up gradually, or was an innovation which took centuries to become generally adopted.” And he has put forward the very reasonable opinion that the word vikrama, — from which the idea of the king Vikrama or Vikramaditya was evolved, — most probably came to be connected with the era by the poets, because the years of the reckoning originally began in the autumn, and the autumn was the season for commencing campaigns, and was, in short, the vikrama-kāla or “war-time.” To upset Mr. Fergusson’s theory, there was only needed a date earlier than A.D. 544, actually recorded before that year, and distinctly recognizable as a date of the so-called Vikrama era. And we have two such dates, of A.D. 472 and 532; and we have also two other dates, of A.D. 371 and 423, which cannot be referred to any other era, though they happen not to mention the name of the reckoning in which they are recorded. As regards the legend, all the results of epigraphic research emphatically support Professor Kielhorn’s opinion that “the era was neither established by, nor designedly invented in memory of, a king Vikramaditya.” And the dates that he has been able to use, from the inscriptions, point to the period between A.D. 842 and 993, as the time during which the first crude rudiments of the full legend were evolved, or at least were brought into something like a substantial story.

12 See Vol. XX, above, p. 461 ff.
13 See page 15 below.
We epigraphists, however, not only seek to interest the specialists in the results of our work; we want also to enlist more scholars who will participate in our work, and more supporters of it. When Sir Walter Elliot died in 1887, and General Sir Alexander Cunningham in 1889, there passed away two scholars who, though they did not themselves aim at the critical editing of epigraphic records, recognised, as fully as anyone could, the importance of them, and were always ready to use to the utmost their influence to help on that special line of research. In Mr. Ferguson, Mr. Thomas, Mr. Gibbs, and Colonel Yule, again, we have, within the last fifteen years, lost very cordial and influential supporters. And our own ranks have become lamentably small; and some of us are under obligations to deal more with results than with details, which will greatly curtail the time that we can give to the editing of records. In 1888 we lost a most valuable coadjutor in Pandit Bhagwanlal Indraji, a Native gentleman who was working with great application and much critical skill and from a pure desire for the advancement of knowledge. And only in 1898 there passed away, in the person of Dr. Bühl, one who was a leading worker in the field. We want urgently, now, to recruit our ranks, so that the opportunities that are available may be utilised more fully than is being done at present. And we want to be in a position, when the time comes for any reconsideration of the existing archeological and epigraphic arrangements, to satisfy the Government of India that official encouragement has been fully responded to, and that, so far from any curtailment of it being possible,—an issue which would entail a greater misfortune than can at present be realised,—we require and deserve, and can utilise, still greater facilities for exploration and publication. The Government of India and the Provincial Governments maintain an Epigraphic Staff and Archeological Surveys, through which materials for work, in the shape of impressions and photographs, can always be obtained by those who have no access to the original records. And they maintain also a special Journal for the publication of the results that may be produced, either from materials obtained through the agencies indicated above, or from materials collected in any other way by private energy. That Journal is the Epigraphia Indica. It was started as a separate official publication in 1888 or 1889 by Dr. Burgess, who then held the post of Director-General of the Archeological Survey. From 1894 it has been carried on in connection with the Indian Antiquary,—and in consequence, largely, of the liberal support given by Colonel Temple, the proprietor of the Indian Antiquary,—under the direction of the Government Epigraphist, Dr. Hultzsch. And, by the size of its pages and the freedom with which facsimiles are issued, and in other features, it is better suited than any other Journal for the publication of the epigraphic records. Nevertheless, in the five volumes of this Journal that have now been completed, we find the names of only six writers,—(and one of them, Dr. Bühl unhappily now dead),—who can in any way be referred to as habitual contributors. The six writers alluded to, have supplied no less than a hundred and eighty-seven out of the total number of two hundred and thirteen articles included in the five volumes. And we cannot point to any contributions to other Journals, during the same period, which indicate any appreciable activity on the part of other scholars in the same line elsewhere. The pages of the five volumes in question have been filled to very good purpose. But it is extraordinary that so few habitual workers can be found in so interesting and important a line of research. And it is extraordinary that such results as we have been able to put forward in those five volumes and in other publications, should have received, as far as we can judge from any published use of them, so little recognition at the hands of specialists in other lines than that of the political history, who would find much to interest them, and to repay them for the trouble, if they would only examine the five volumes of the Epigraphia Indica of which we speak, and the other publications to which we allude. We want to induce more workers to join us. And we look for recruits specially to the class of scholars who have a certain knowledge of Sanskrit to start with; because, though most of the records are not in Sanskrit, that tongue is more or less the key to the languages in which they were written, and a general knowledge of Sanskrit literature and mythology is essential to a proper understanding of many of the allusions in the records.
At the same time, anyone who has made himself conversant with one of the vernaculars in its archaic form and ancient literature, has necessarily acquired, by that process, a considerable acquaintance with the Sanskrit vocabulary, and can easily master, by general reading, what else is wanted. A preliminary knowledge of Sanskrit itself, therefore, is by no means absolutely indispensable. As regards other leading languages, in Kanarese, at any rate, we have, in the Rev. E. Kittel’s Kannada-English Dictionary, a scholarly and admirable compilation which has now placed it in the power of all Western students to understand fully, and do justice to, the beauties of that highly polished and powerful tongue; and in Dr. Hultzsch’s South-Indian Inscriptions, Vols. I. and II. and Part I. of Vol. III., we have a number of carefully edited versions, a study of which would go far towards removing any difficulties in the way of grappling with the epigraphical peculiarities of Tamil. It is no specially difficult matter to now approach the epigraphic records. And a very brief study of some of the versions that have been most recently edited, and of the results brought forward from them, would quickly teach the lines on which it is desirable to deal with the records so as to produce the uniformity of treatment that is requisite, and would inevitably awake an interest that would induce a steady desire to co-operate in the work that we have in hand.

As has been intimated above, we are indebted but very little, and not at all for the more ancient periods, to any historical works compiled by the Hindus themselves. And it is very questionable whether the ancient Hindus ever possessed the true historical sense, that is to say the faculty of putting together genuine history on broad and critical lines. As we shall see, they could write short historical compositions, concise and to the point, but limited in scope. But no evidence of their possession of the faculty of dealing with history on general lines has survived to us, in the shape of any genuine historical work, deliberately written by them as such, and also accurate and reliable. The experience of the Arabian writer Alberuni, in the eleventh century A.D., was, that “the Hindus do not pay much attention to the historical order of things, they are very careless in relating the chronological succession of their kings, and when they are pressed for information and are at a loss, not knowing what to say, they invariably take to tale-telling.” And, certainly, such attempts as have been made by the Hindus of more recent times, do not display any capabilities from which we might infer that their early ancestors possessed the faculty, even if they did not exercise it. Early in the present century, there was put together, — apparently, quite spontaneously, and not in consequence of any lead given by Western inquirers, — a Kanarese compilation entitled Rājāvālikātha or “the story of the succession of kings,” which purports to trace the history of Jainism, especially in connection with the province of Mysore on the political history of which, also, it pretends to throw light, from the earliest possible times; the published extracts from this work, however, show that it is simply an imaginative production, of the most fanciful kind, based on the wildest legends, to which no value of any sort can be attached for early historical purposes. At apparently some earlier time, as yet not fixed, there was drawn up, in the same part of the country, a Tamil chronicle entitled Koṭugudēvarājākālī or “the kings of the Koṭugu country,” which purports to give a connected historical account of Mysore from the first century A.D.; but in this case, again, the fanciful nature of the work, and its utter want of reliability for any purposes of early history, are disclosed at once by the very slightest thoughtful examination: for instance, at the outset, not only does it give, as real facts, the fictitious

14 Sachau’s Translation of Alberuni’s India, Vol. II. p. 6. 
15 See Mr. Rice’s Insera, at Sran.-Bēl. Introd. pp. 3 ff., 16 f., 61. 
16 For the one illustration of this, see Vol. XXI. above, p. 157; and regarding the apocryphal character of one of the earlier works on which it may be based, the Bhadrakāshikā, see Es. Ind. Vol. IV. p. 25, note 1. 
17 For Prof. Dowson’s abstract of the contents of this work, see Journ. R. As. Soc., F. B., Vol. VII. p. 1 ff. He has spoken (p. 2) of a translation of it, “in the volume of MSS. at the India House”; this, if it could be found, might perhaps throw some light on the period of its compilation and on its connection with the spurious records of Mysore. It also appears (1544, 1544) that another translation of the work was made by the Rev. W. Taylor.
pedigree and history with which we are familiar from the spurious copper-plate grants of the Western Ganga series, but also, before the first of the fictitious Ganga kings, it places, in the period A.D. 82 to 178 and before that time, some of the Rashtrakutas kings whose dates really lay between A.D. 675 and 956. Notices of other chronicles, relating for instance to the Chola, Pallava, and Pandya territories and to the Teliangana country, are to be found in Prof. H. H. Wilson’s Descriptive Catalogue of the Mackenzie Collection. These have, perhaps, not yet been criticised in detail. But a perusal of the notices discloses features very similar to those of the Rajaivalikathe and the Konjugudarambukal. And, though they may be of some use in the geographical line of inquiry, we have no prima-facie reason to expect to find in these works also, anything of the slightest historical value for early times.

And yet there were, undoubtedly, genuine materials in abundance, from which histories of the most valuable kind might have been compiled in early times.

In the first place, we know how, in India, pedigrees are always forthcoming, even in the present day, to an extent that is unknown in Western countries. Among families connected in any way hereditarily with the administration, even the Ganga or Pala and the Kulkarnis, the village headmen and accountants, can always bring forward,—whenever there is any inquiry into their watan or rights and privileges, or any dispute among themselves,—generational tables, unquestionably not altogether unauthentic, which exhibit the most complicated ramifications of their houses, and often go back for two or three centuries; and even the death of an ordinary cultivator usually results in the production of a similar table, though of more limited scope, in the inquiry that is held to determine his heirs. Every maha or religious college of any importance preserves the succession of its heads. Among the Jains, we have the Patavalis or successions of pontiffs, for a full and incident notice of some of which we are indebted to Dr. Hoernle; they purport to run back to even the death of the last Tirthankara Vardhamana-Mahavira in, let us say, B.C. 527; and, though the earlier portions of them were put together in their present form not before the ninth century A.D. (because they exhibit the Vikrama-legend) and with results that are capable of considerable adjustment, they are, no doubt, based upon more ancient and correct lists that were then extant. The preservation of pedigrees and successions has evidently been a national characteristic for very many centuries. And we can, not doubt that considerable attention was paid to the matter in connection with the royal families and that Vanavastivalis or Rajavastivalis, lists of the male successions of kings, were compiled and kept from very early times. In fact, the matter is not one of speculation, but is capable of proof. We distinctly recognise the use of such Vanavastivalis,—giving the relationships and successions of kings, but no chronological details beyond the record of the total duration of each reign with occasionally a coronation-date recorded in an era,—in the copper-plate records. We trace them, for instance, in the introductory passages of the grants of the Eastern Chalukya series, which, from the period A.D. 918 to 925 onwards, name the successive kings beginning with the founder of the line who reigned three centuries before that time, but do not put forward more than the length of the reign of each of them; and, from certain differences in the figures for some of the reigns, we recognise that there were varying recensions of those Vanavastivalis. We trace the use of Vanavastivalis again in the similar records of the Eastern Gangas of Kaliuga, which, from A.D. 1058 onwards, give the same details about the kings of that line with effect from about A.D. 890, and one of which, issued in A.D. 1296, includes a coronation-date of A.D. 28.

23 See page 3 f. above.
25 See P. Ind. Vol. IV. p. 188.
1141 or 1142. And there is other proof also. There has been brought to light from Népál a long Vanshávali, which purports to give an unbroken list of the rulers of that country, with the lengths of their reigns and an occasional landmark in the shape of the date of an accession stated in an era, back from A. D. 1703 to even so fabulous an antiquity as six or seven centuries before the commencement of the Kali age in B. C. 3102. It contains gross mistakes in chronology; for instance, it places B. C. 101 to 34 Anúśvarman, of the Thákuri dynasty, who, we know, was ruling in A. D. 635 and 649 or 650, and partly through committing one of the usual leading faults of Hindú compilations, namely of treating contemporaneous dynasties as successive dynasties, it places about the end of the seventh century B. C. a certain Vrishadháva, of the Súrya Varáshi or Lichchhávi dynasty, who, we know, was a contemporary of Anúśvarman. And, as was pointed out by Pandit Bhagwanlal Indrají who brought the full Vanshávali to notice critically, "it possesses no value whatever as a whole," and "no single one of its several portions is free from the most serious errors," and it is useless for reconstructing the earlier history of Népál even by adjustment with respect to any names and dates that are known from other sources. But, in connection with the above-mentioned Vrishadháva, and in spite of the error in respect of his date, it teaches one thing which is of use. From him, whom it places No. 18 in the Súrya Varáshi dynasty, to Vasantadáva, No. 23, it gives correctly a list of six successive names, which we have verified from epigraphic records. It allocates to each of these rulers, it is true, a length of reign which not only is impossible in itself, but also is disproved in one case at least by the epigraphic records. But the fact remains, that the names are given correctly and in the right order. This short list was certainly not based on some ancient charter read by the original compiler of this portion of the Vanshávali. What would have happened, if that had been the case, is suggested plainly enough by the Konnúr inscription from the Dhárwar district, which purports to be the reproduction of a charter, dated A. D. 860, of the time of the Ráshtrakúta king Amoghavarsa I. Here, we have a record on stone, which says that it was embo
died in that shape in accordance with a copper-plate charter that was read and explained by a certain Jain teacher named Víranádín, the son of Meghachandra. Partly from the characters of the record, and partly from the known fact that Meghachandra died A. D. 1115, we know that this record was not put on the stone before the twelfth century A. D. We do not dispute the alleged fact that Víranádín drafted the stone record from some ancient charter on copper. But we find either that he could not read that charter correctly, or that he did not take the trouble to interpret it aright; for, not only has he misstated the relationship of some of the Ráshtrakúta kings whom the stone version does mention and omitted others whom it ought to have included, but also, — probably from a wrong interpretation of some verse which we have not as yet found in a genuine record, — he has placed at the head of the Ráshtrakúta genealogy a purely fictitious person, whom he has called Príchchhákárjá. If the list from Vrishadháva to Vasantadáva in the Népál Vanshávali had been put together in the same way from some ancient deed, the compiler of that part of the document would undoubtedly have committed some similar mistakes. And we have no hesitation in saying that he took these six names from some genuine early Vanshávali, accessible to him, which had survived from the time of the rulers to whom it referred; and probably the duration of the reigns was given correctly by him, and was falsified subsequently by some later compiler, to suit his own scheme of the whole chronology. The Bower Manuscript has shewn us how long even perishable documents may survive. And we may not unreasonably hope that an exploration of some buried city, or even of one or other of the numerous private collections of ancient manuscripts that still remain to be examined, may some day result in the discovery of some of the early and authentic Vanshávalis. Meanwhile, we have to be very cautious in accepting what we do obtain in this line. We have before us the example, not of this Népál Vanshávali, but also of some Vanshávalis from Orissa, which do not indeed pretend to quite such fabulous antiquity, but which nevertheless purport to present an unbroken list of the kings of

18 Kalhana, writing in A. D. 1148-49, mentions lists of kings of Kashmir which had been put together by Káshmírdrá and Hfhirjá (see page 11 below). But we do not quote these as proof of our present point, because they were compilations, not original lists prepared under the dynasties to which they belonged.
that province, going back from A.D. 1871 to the commencement of the Kali age, with the length of the reign of each, and with certain specified dates as epochs. And the results put forward by them, and by the palm-leaf archives of the temple of Jagannatha at Puri, have been supposed to give at any rate certain definite and reliable landmarks in the early history. But an examination of them and of the archives has shown that, for at least the period anterior to about A.D. 1100, they are utterly fanciful and misleading, and that they were devised, chiefly from imagination, simply to magnify the antiquity and importance of the temple of Jagannatha and of all its surroundings and connections. These local annals are not correct even in respect of so radical a point as the building of that temple. They attribute it to a king Anangabhimna, whom they would place A.D. 1175 to 1202; whereas we know, from the epigraphic records, that it was built by a predecessor of his, Anantavarman-Chodganga-Gangesvara, in the period A.D. 1075 to 1114 or 1142. Farther, they actually divide this latter king into two persons, - Chodganga and Gangesvara, - to whom they would allot the periods A.D. 1132 to 1152 and 1152 to 1166. For the period anterior to him, they do not incorporate any ancient and authentic lists of rulers, but simply bring forward, amongst a host of fabulous names, a few historic kings, some of them not even connected with Orissa at all, whose dates they grossly misplace. And thus these records, again, are absolutely worthless for any purposes of ancient history.

In the genuine early Vasishvanis, materials must long have been extant, which could have been turned to most valuable account, if only for the bare outlines of political history. But there were plainly more ample materials than these. Of course, the elaborate routine of modern times had not been devised. Still, with the great advance towards civilisation which the Hindus had made even in the fourth century B.C., and with the careful and detailed system of administration which is disclosed by the epigraphic records, there must have been, from early times, a fairly extensive system of official records. In any such state of advancement, there are certain precautions and arrangements, indicated by common sense, which would inevitably be adopted. Copies of important orders issued must be kept on record in the issuing office, as a reminder to make sure that instructions given are duly and fully carried out. And orders received must be filed in the receiving office, to be produced in justification of any particular measures taken in giving effect to them. The specific terms of treaties and alliances must be reduced to writing, and copies must be kept for reference by each of the contracting parties. Diaries of some kind must be kept by local governors, from which to prepare from time to time the periodical reports on their administration. A record must be kept, on both sides, of tribute paid by the great feudatory nobles and received by the paramount sovereign. And, even under a system of farming the revenues, accounts of some kind must be framed, of the proceeds of provincial customs and taxes and of village revenues, and of the expenditure incurred on the collection of them. Notes of all these matters must have been preserved in some form or another, in all the various offices. But it is probable that they were kept in the shape of general day-books, - something like the Diaries of the Peshvas of the eighteenth century, dealing with all matters mixed, rather than according to any system of separate ledgers and files for each branch of business. Except on the hypothesis of such a system of day-books, it is difficult to account for the manner in which, for instance, the date of a record of A.D. 1008 at Tanjore cites the one hundred and twenty-fourth and one hundred and forty-third days of the twenty-fourth year of the Chola king Rajaraja I., and the date of a record of A.D. 1113 at Tiruvur in the Tanjore district cites the three hundred and fourth day of the fifth year of the reign of his descendant Vikrama Choladeva, for such a detail to be cited conveniently, there must have been available some such books, in which the days were entered and numbered, and the events of them were posted up, as they ran.

29 For a sample of these Diaries, see the Extracts relating to Political Matters from the R:jinit or journal of the Peshwa Sahib from A.D. 1713-14 to 1734-35, which have been recently published. I understand that we are indebted to Mr. Ganesh Chimanji Vaid for the compilation of the extracts, and that they are being printed by the Dekkan Vernacular Translation Society, Poona.
32 A rather curious instance of citing the days is furnished by the Tiruppurasram grant of the Pandyas king Jatvarama-Kulasakharas, which mentions the four thousand three hundred and sixtieth day of his thirteenth year.
In such day-books and other records, valuable items of historical information would abound. The compilation, however, of any general history from them would, no doubt, be a somewhat complicated and laborious matter. But there were, plainly, other materials of a more concise kind, that might have been used with great facility, in the shape of dynastic archives and chronicles, which, in some cases at least, survived for a considerable time after the disappearance of the dynasties to which they belonged, and from which comprehensive and very valuable accounts might easily have been put together. It can only have been from ancient archives, of considerable fulness of detail, which had fallen into their own hands, that the Western Chalukya kings of Kalyani derived the knowledge that they possessed, and exhibited in some of their records, of the earlier Chalukya dynasty of Badami, — separated from themselves by an interval of three centuries, during which an extraneous dynasty possessed the sovereignty, — from which they claimed to be descended; this is pointedly illustrated by the mention, in the Kautilya grant of A.D. 1009,\(^1\) of Mangalaka, who was not in the direct line of descent, and therefore might easily have been lost sight of in a mere Vanidevali, and by the preservation, in the same record, among certain other details which tradition alone, or a mere list of kings, would not account for, of the memory of the conquest by him of the territory of Revashvanpara, and by the way in which the record glosses over his attempt to break the direct and rightful senior line of succession in favour of transmitting the crown to his own son, by representing him as simply a regent during the minority of his nephew Pulakośa II, to whom, it says, he eventually restored the throne in pious accordance with the custom and laws of the Chalukya kings. And the Silahara princes of the Southern Koikana must have kept a careful record of their paramount sovereigns, the Rashtrakutas, as well as of themselves, to account for the statement about the rise of their own family under Krishna I., and for the full account of the Rashtrakuta genealogy, as well as of their own pedigree, that is given in the Kharepadan grant of A.D. 1008,\(^4\) issued by the Silahara Bāṭaraja in the time of the Western Chalukya king Irvabedanta-Satyaśrī. These cases indicate distinctly the compilation and survival of dynastic chronicles, which were doubtless carried on chapter by chapter after the death of each successive king or prince, and which we may actually recognise the copy of a chapter, or of the draft of the beginning of a chapter, of such a chronicle, compiled most probably from day-books or other miscellaneous sources, in the Udayagiri inscription of B.C. 151,\(^5\) which gives a succinct account of the career of Khairavēla of Kaliṅga from his birth to the thirteenth year of his reign: it tells us that he spent fifteen years in princely sports, — that for nine years he enjoyed power as Yuvardja or hair-apparent and appointed successor, — and that he was crowned to the succession at the end of his twenty-fourth year; and then it briefly enumerates, year by year, the principal events of his reign, and certain large items of expenditure on public works and charity, as far as the thirteenth year. In this department, again, we may hope that future explorations will result in discoveries that will give us reading of a particularly interesting kind.

These materials did not remain altogether unutilised. We can trace a use of at least the Vanidevali in the historical chapters of the Purāṇas, which, composed apparently before the ninth century A.D. (because they do not include the Vikrama legend),\(^6\) do certainly indicate a desire on the part of the ancient Hindus not to ignore general history altogether, and are clearly based upon ancient archives which had survived in a more or less complete shape and were somehow or other accessible to the composers of those works. At the same time, it is not much, in the way of reliable history, that we gather from those chapters. In the first place, some of the necessary materials were apparently not available to the authors; and some of the dynasties are omitted altogether: for instance, the Purāṇas do not include (at any rate, in anything like its proper place) any reference to the line that

---

\(^{4}\) See page 3f. above.
was founded by Kanishka; nor do they mention the great dynasty of the Early Guptas, unless they speak of those kings as the Gotas of Magadha, whom they would place more than three centuries ahead of the present day; nor do they make any reference to the great Harshavardhana of Thanesar and Kanauj, "the warlike lord," as the southern records call him, "of all the region of the north." In the second place, while the authors have usually given us the supposed duration of each dynasty, and in some cases even the lengths of individual reigns, they did not think it worth while to give us any fixed points in the shape of dates recorded in any of the Hindū eras. Thirdly, some of the materials that were used by the authors had apparently become imperfect; for instance, the Purāṇas assign only a hundred and thirty-seven years as the period of the Maurya kings; whereas we know, from the Udayagiri inscription of Khāravāla, that the Maurya dynasty lasted for at least twenty-eight years longer; for, it is only in consequence of the continuance of the Maurya sway, not only in the original territory of the dynasty but also over the conquered province of Kāliṅga, that that record could be dated, as it is, in the hundred and sixty-fifth year of the time of the Maurya kings. In the fourth place, even allowing for corruption by successive copyists, it seems plain that, — be the cause what it may: for instance, sometimes inability to decipher ancient characters, — the authors have not always given us even the names of their kings with accuracy; compare, for instance, the Purāṇic lists of the Andhra-bhūriyās, with each other, and still more with such information about those kings as we have obtained from the epigraphic records. And, finally, the extravagant chronological results that these chapters present, show that the authors here, again, committed the usual Hindū fault of treating contemporaneous dynasties as successive: thus, to take only a part of the whole list, from the beginning of the Mauryas to the end of the Kailākula-Yavanas the Vīhārapuṇḍarīka gives us a total period of two thousand five-hundred and fifty-five years; apply this to B. C. 315, as the most probable exact year of the accession of the first Maurya king Chandragupta, and we have the end of the Kailākula-Yavanas in A. D. 2240; three centuries and a half in the future from even the present time; and we have to place after that a variety of other rulers, including the Guptas of Magadha, who, the same work says, followed the Kailākula-Yavanas. While, therefore, the historical chapters of the Purāṇas undoubtedly have some basis of truth, the treatment of the subject in them is sketchy and meagre, the details are incomplete, inaccurate, and extravagant, and we cannot bind ourselves to follow them even in the general outline of the alleged succession of the various dynasties.

The only other indication, that has survival from any antiquity, of an attempt on the part of the Hindūs to put together anything in the shape of a general history, is the Rājastāranirṇāti, on the first eight cantos of which Kāliṅga was engaged in A. D. 1148-49. Kāliṅga mentions certain previous writers, — Suvrat, whose work, he says, was made difficult by misplaced learning; Kāśyapa, who drew up a list of kings, of which, however, he says, no part is free from mistakes; Nilamuni, who wrote the Nilamatuṇḍarī; Hālātāja, who composed a list of kings in twelve thousand verses; and Srīmiṇhira or Padmanabhira, and the author of the Srīchchanda. His own work, he tells us, was based on eleven collections of Rājakathās or stories about kings, and on the work of Nilamuni. He says he sought to remove all errors by consulting charters issued by ancient kings, and laudatory inscriptions on stones, and manuscripts. And he has presented us with a detailed account of Kashmir, including...
occasional items of external history, which purports to go back to B. C. 2448, and has given us the alleged exact details of the length of the reign of each successive king from B. C. 1182 onwards. We may expect to find him fairly correct for his own time, and for the preceding century or so. But an examination of the details of his work quickly exposes its imaginative character, and its unreliability, for any early period. It places the great Maurya king Asoka a thousand years before his real time. It places B. C. 704 to 634 Mihrakula, the great foreign invader of India, whose real period was closely about A. D. 530. It places about eight centuries after Mihrakula a Tāramāṇa, the original of whom can be none other than Tāramāṇa the father of Mihrakula. And, though Kāliṣṇa could put forward such exact details as four years nine months and one day for the duration of the reign of Mātrijīptu (A. D. 106 to 111, as worked out by Dr. Hultsch), he was obliged to allot to Rāṇāditya I., a reign of three centuries (A. D. 205 to 505), simply, as Dr. Hultsch has put it, in order to save his own chronology.

With these exceptions, — namely the historical chapters of the Purāṇas and the Rājatarangini, — the ancient Hindus seem to have never made any real attempt to deal with history on general lines; they have left us to gather what we can from their ordinary literary works, into which they have occasionally introduced historical matter, but, as can clearly be seen, only as an incidental detail of quite secondary and subordinate importance.

In the body of their literature, the Hindus do not help us much. The plots of some of the plays, the classical poems, and the collections of imaginative stories, were woven round historic names, both of persons and of places. But it is seldom, except in the geographical line, that such allusions can be put to any practical use. They help us to locate places, and to fix the limits of countries; for instance, we know, from other sources, that the ancient Tāmalipti is the modern Tamluk in the Midnapur district, and thus the incidental statement in the Divakumāracharita that Tāmalipti was in the Suhma country, gives us a more precise indication, than is obtainable elsewhere, as to the exact part of Bengal that was known by the name of Suhma. And they help us to establish the antiquity of places; thus, we know, from the Aihole inscription of the time of Pulakésin II., that the celebrated poet Kālidāsa flourished before A. D. 634; and, so, the mention by him of Gūkras, in the North Kanara district, Bombay, carries back the existence of that place, as a famous Śaiva site, to at least the beginning of the seventh century A. D. In the historical line, however, the allusions teach us little, if anything. The works do not give dates for what is told in them; and naturally enough; the similar productions of other countries, also, do not aim at being historical records, and at including chronological details. The works in question are of use historically, only when the date of an author happens to be known, and we are enabled thereby to fix a latest possible limit for a historic name, mentioned by him, for which we have otherwise no specific date at all.

There are, indeed, a few compositions, which put forward certain distinct historical pretensions, but which cannot, in truth, be taken as anything more serious than historical romances. In Sanskrit, we have the Harshacharita of Bāṇa, and the Vikramādityadevacharita of Bihāra. The first deals with the achievements or career of the great northern king Harsha, Harshādeva, or Harshaardha of Thānēsvar and Kanauj (A. D. 605-605 to about 648); and the second deals, in the same way, with an equally great southern king of later times, the Western Chālukya Vikramāditya VI. of Kalyāṇī (A. D. 1078 to 1126). And they thus both aim at being historical chronicles of these two periods. But they do not present the plain straightforward language of sober common sense. They imitate the classical poems, with all their elaboration of diction, metaphor, and imagery. They weave into their stories mythical and supernatural matter of the most fanciful kind. And they give us some charming reading in the poetical line. But they offer us not much beyond that. The historical information contained in the Harshacharita might be summed up very briefly. That in the Vikramādityadevacharita is more extensive; mixed up, on the other hand, with more imaginative matter than is found in Bāṇa's work. But neither author has given us a date for anything that is mentioned by him.

We do not blame them for this: the authors of the modern European historical novels rarely give dates; and, when they do, we should hardly accept their statements for quotation without verification. We only remark that no dates are given. Bāna, for instance, tells us that Harshavarudha was born "in the month Jyāśthīha, on the twelfth day of the dark fortnight, the Pleiads being in the ascendant, just after the twilight time, when the young night had begun to climb;" but he has not given us any statement as to the year. And Bihāra tells us that, when Vikramaditya was born, "flowers fell from the sky, Indra's drum resounded, and the gods rejoiced in heaven;" but he does not even name the month and day. Neither author has given us even his own date. And, if Harshavarudha and Vikramaditya were not known from more exact sources of a different kind, we should not even know to what period to refer the poets and their patrons. In the same category we must place the Tamil historical poems, the Kalavatī, the Kāliyugattai-Purāṇī, and the Vikrama-Chollai-Ula, for our introduction to which we are indebted to Mr. V. Kanakasabai Pillai. In these, again, there is much of interest, and a good deal of importance. But here, also, there are no dates, and, so, no means in the works themselves for determining the periods to which they belong.

These works, the dramas, the classical poems, the imaginative stories, and the historical romances, are invaluable for the study of manners and customs, trade and commerce, methods and routes of communication, and the details of domestic, social, public, and religious life. They would furnish excellent materials for articles such as those which the Rev. T. Foulkes has given us on the Dekkan in the time of Gautama-Buddha. And they supplement the epigraphic records admirably. But that is all they do. It is only in the introductions and colophons of their literary works, for a knowledge of which we are indebted largely to the detailed reports of the late Professor Peterson, and of Dr. Bhandarkar, on Sanskrit manuscripts, that the Hindus have thought it worth their while to give us any dates to accompany such historical details as they put forward. Here, the dates are useful enough. But we find that the historical matter is introduced only incidentally, to magnify the importance of the authors themselves rather than of their patrons, and is not handled with any particular care and fulness. As typical illustrations, we take the following cases. Śomadēva tells us, in the colophon of his Yasovati-lakā, that he finished that work in the month Chaitra, Saka-Samvat 881 expired, falling in A.D. 959, during the rule of a Chāhūkya prince who was the eldest son of Arikāśarī and was a feudatory of a king Krishnājaśāda. But he does not take the trouble to tell us the name of the prince, presumably his immediate patron, or to state the family or even the parentage of the king, or to indicate the territory of either the sovereign or his vassal. In this case, as it happens, we learn more about the family to which the prince belonged, from the Vikramājyavijaya or Pampa-Bhadra of Pampa, who, writing A.D. 941-42, mentions, as his patron, the aforesaid Arikāśarī, and gives his pedigree for seven preceding generations, with apparently a tolerably definite hint as to the part of the country to which he belonged. As regards the king Krishnājaśāda, we knew, from the epigraphic records, the Rāṣṭra-kula Ring Krishnā III, for whom we had dates in A.D. 940 and 956. And, there being no extraneous objections, we did not hesitate to identify Śomadēva's Krishnājaśāda with this Krishnā III, and to extend the reign of the latter to A.D. 959, even before obtaining for him a later epigraphic date in A.D. 961. In this way, Śomadēva's literary reference usefully supplemented the inscriptions. But it teaches us, in itself, little enough. And, by the way, he might plainly have told us even a good deal more than he has. The preamble of the letter issued by his hero king Yaśodbhāra, particularly in its introduction of the titles "supreme lord of the town of Padmāvatipura, lord of the mountain Kanakagiri, and owner of the Kailāsa-crest," as well as in other details, is no mere ordinary epistle, but is an imitation of the formal preamble of a grant; from which we gather that Śomadēva had access to official papers, and used one of the drafts kept on hand for preparing charters of grants. Take, again, the case of Jālāna. In the introduction to his Subhāṣitamukta-ālī, written in the period
A. D. 1247 to 1260, he states carefully the relationships in his own pedigree, but omits to state them in the case of the Devagiri-Yadava kings Bhillama, Singhasha, and Krishna, and their ancestor Mallugi, whom he mentions. And take, finally, the case of Hemadri. Writing in the period A. D. 1260 to 1271, in the time of the Devagiri-Yadava king Maladiya, under whom, as also under his successor Ramachandra, he held the post of Srikaranadhipati or superintendent of the business connected with the drawing up of documents, he aimed, in the introduction to his Vratakhaṇḍa, giving the full pedigree, with incidental historical items, of that branch of the Yadavas from even Purānic times. In spite, however, of the free access that he must have had to the chronicles and official records of the family, within the historical period, he has omitted, several times, to state the exact relationships of the successive members of the family; he has apparently passed over altogether one of them, Senuddiya, whose existence is established by an epigraphic record; and, as tested by an inscription of A. D. 1191 at Gadan, he has suggested an altogether wrong inference regarding the parentage of Bhillama, the first paramount king in the family, within only a century before the time at which he was writing.

The dates which are given in the introductions and colophons of the literary works, in connection with the composition of those works, may of course be accepted as reliable. And any genealogical and historical items put forward in the same places, ought to be correct for a few preceding generations. But it would be a very extraordinary and imperfect history of India that we should put together from such references, and from the Purānas, the Rājatarangini, the historical romances, the general body of literature, such Vaiśeṣika as have been obtained from Orissa and Nēpāl, and the few items of alleged history that are incidentally given in the Paññāvali. We should doubtless recognise that the successions of kings given for India itself by the Purānas, for Kashmir by the Rājatarangini, and for Nēpāl by the Vaiśeṣika, should be taken as separate successions, in territories the histories of which must be treated separately. We should not know exactly what conclusion to arrive at in respect of the annals of Orissa, which is a province of India itself. But, having regard to the preposterous duration allotted to each of the reigns from B. C. 3102 to 57, we should doubtless decide that all memory of the true history of that period had been lost in Orissa, and that from the next fixed point, A. D. 78, Orissa was an independent province with a history and a line of kings of its own. We could scarcely fail to detect the occurrence, in the Purānas, the Rājatarangini, and the Nēpāl Vaiśeṣika, of one particular name, that of Asoka, which ought to establish a definite synchronous point in the histories of the three countries. We should not be able to deduce the date of Asoka from the Purānas. But we should find that the Rājatarangini would place him somewhere about B. C. 1260. We should find, indeed, that the Nēpāl Vaiśeṣika would place him, roughly, about B. C. 2600. As, however, that list does not mention him as a ruler of Nēpāl but only as a visitor to the country, we should probably infer a mistake in that account, and prefer to select the date of B. C. 1260. And then we should set about arranging the succession of the kings of India itself, from the Purānas, with B. C. 1260 for the approximate date of the accession of Asoka as our starting-point.

89 Bhandarkar's Report for the years 1878-98 to 1890-91, Notices, p. 7.
91 See my Dynasties of the Kanooree Districts (in the Gazetteer of the Bombay Presidency, Vol. I. Part II.), p. 110. Hemadri seems to have adopted here some mistaken tradition which appears also in some of the later epigraphic records.
92 A beginning was actually made, almost in the manner suggested above, by Sir William Jones: see his dissertation on the Chronology of the Hindu, written in 1778 (As. Res. Vol. II. p. 119, reprint of 1790). But he took a different starting-point, and fixed it in a different way. His paper was based on a work entitled Purudārāmpārakāda, which was composed, shortly before the time at which he was writing, by Pandit Radhakant Sarma, and which seems to have been based, in turn, chiefly on the Bhāgavata-purāṇa. In the first place he brought forward a verse given to him from a book entitled Bṛhadāvatīya, composed "by a learned Gosain," which purported to fix the Kaliyuga year 1002 expired as the date of the manifestation of Buddha. With this he coupled an assertion in the same book that, two years before that date, there occurred the revolution which placed on the throne Pradyotana, the first king in the third dynasty before that of the Mauryas. And he thus exhibited a chronology which, taking the accession of Pradyotana in B. C. 2100 as its starting-point, placed the accession of Siṃhāsena in B. C. 1600, the accession of Nanda in B. C. 1300, and the accession of Chandragupta (the grandfather of Asoka) in B. C. 1500, and made the dynasty of the Andhrabhātīya as from B. C. 968 to 462. But he considered that the figures put forward by the
We should then examine the other available sources of information. And probably we should first note, from the Jain Patākavāsī, the king Vandarāja, who is said to have founded Bhilwād in Gujārāt, in A.D. 746; and we should obtain the alleged succession at Bhilwād after him, with an initial date for each king, to A.D. 1304, from the Pracñachana-parikshā of Dharmasīgha.55 From the literary works, we should obtain a few names, with fixed dates, such as the following. Jinaśāna tells us in the Jain Harivamsa, in connection with the date of that work, that in A.D. 783-84 there were reigning, in directions determined with reference to a town named Varhamānapura, there which is to be identified with the modern Wadhwa in the Jhālāvād division of Kathiawar, in the north, Indrāyukha; in the south, Srivallabha; in the east, Vatsarāja, king of Avanti (Ujjain); and, in the west, Varaha or Jayavāraka, in the territory of the Sauryas.56 And from the Channakesavapurāṇa we have (but, in this case, falsely) a king Bijala reigning at Kalyāṇi, in the Nizam’s Dominions, contemporaneously with them. Guṇabhadra gives us, in recording the date of the completion of his Utaraparāṣā, a king Aklāvazara, with the date of A.D. 897. Panḍu gives us a Chāluṇya prince Arikāsārin, with the date of A.D. 941, with his pedigree for seven generations, and with, apparently, a hint that he was ruling the territory round the modern Lakshmeshwar in the Dhrāvār district. Somaśēva gives us a king Bhāha, with the date of A.D. 983.57 Ranna gives us a king Ṣivaṇa, who was reigning A.D. 988.58 A later Somaśēva gives us a Bhāja, who was ruling the Kālpāpur territory in A.D. 1205.59 And Jñānāsīvara gives us a Rāmaṇchandra, who was reigning A.D. 1290; while another work gives a date for the same king in A.D. 1297, and shows that the Kōṇkaṇa was a part of his dominions.60 In the way of definite names with uncertain dates, we should have, from Hāmādri,61 another king Kṛṣṇa, with his predecessors Mallogi, Bhūllama, and Sīnghaṇa, whom we could not place in any particular period from his information alone. And we should have, from Hāmādri, a much longer list, in which we should recognise the same names, without, however, here again the means of referring them to any particular period. We should probably obtain the right clue here from the fact that Hāmādri elsewhere mentions, as the successor of his king Mahādeva, a Rāmaṇchandra, who we should guess, ought to be identified with the Rāmaṇchandra of A.D. 1290 and 1297. But in the case of Bāna’s Harsha or Harshavardhana and Bhīhaṇa’s Vikramāditya, we should at all probability go completely wrong; the temptation would be almost irresistible, to identify Vikramāditya either with a Vikramāditya who is mentioned in the Rājaraṇī as a contemporary of Praśāpathita of Kashmir in the period B.C. 180 to 148, or else with the Vikramāditya of Ujjain of the legend, who is supposed to have died or to have begun to reign in B.C. 57, and to identify Harsha with a certain Harsha-Vikramāditya, king of Ujjain, who is mentioned in the Rājaraṇī as a contemporary of Hiraṇya and Mātrigupta of Kashmir in the period A.D. 76 to 111. We should look in vain in the Purāṇas, for any of the names obtained from the literature and the Patākavāsī. But we should, to the best of our ability, work those names, and the dates connected with them, into the list obtained from the Purāṇas and in continuation of it. And we should possibly be working into it also some quite modern inventions, such as those of the bards of Kathiawar, which were at one time supposed to be “old-world tales,” but which really sprang

Purāṇas were excessive, both for generations and for reigns. And, adjusting those figures according to his own estimate, and taking, as a starting-point, B.C. 1027 for the date of Buddha as fixed by the Chinese authorities as interpreted by De Guignes, he submitted a revised scheme, which placed Pradyūṇa B.C. 1029, Nanda B.C. 899, and the rise of the Andhārāhāryyas in B.C. 149. — (In this revised scheme, a specific date was not proposed for Chandragupta, whose importance had not been recognised at that time). — He further suggested other corrections, which would place Pradyūṇa B.C. 872 or 17, and Nanda A.D. 13 or 313. But he pointed out that this arrangement would take the Andhārāhāryya on to at least the sixth to the tenth centuries A.D., “without leaving room for the subsequent dynasties, if they reigned successively.” And it does not seem to have recommended itself to him at all favourably.

into existence within the last twenty-five or thirty years, and owe their origin only to certain preliminary speculations, put forward by Pandit Bhagwanlal Indrajit, that found their way to the bard through an educational treatise. In this way, we should build up a chronological list of the rulers of India, and of some of its provinces, with B. C. 1260 as a starting-point. And then, sooner or later, we should be met by the discovery that Chandragupta, the grandfather of Asoka, was known to the Greeks as Sandrokottos, and that his date is fixed by the Greek writers. We should thus learn that Asoka could not be placed before about B. C. 275. All the early part of our arrangements would be upset by a thousand years. And the subject would become a maze of bewilderment, confusion, and speculation, to be approached afresh from an entirely new point of view.

Fortunately, the discovery about Chandragupta was made and announced,—by Sir William Jones, in 1793,—before speculation into the ancient history of India had gone very far. And, fortunately, a few of the inscriptions had already begun to come to notice. From that time, more and more attention was paid to them; and particularly from the time when they were taken in hand by Mr. James Prinsep, who first succeeded in deciphering the records of Asoka, and, in that and other ways, laid the real foundations of the whole superstructure that has been subsequently reared up. And it is with relief that we turn to them, and lay aside any further consideration of the position in which we should have found ourselves without them.

This is not the occasion for entering into any detailed exposition of the historical results that we have obtained from the inscriptions. The subject would require a volume to itself, and will be dealt with hereafter in that way. But we may point to the first two hundred or more pages of Miss Duff's book on the Chronology of India for a general résumé of those results, in a form which will be most useful and indispensable to any student of Indian history. And we may say that, though many details still remain to be filled in from future exploration and research, we have now a very fair knowledge in outline of the political history of India from about B. C. 300 to A. D. 550, and a very full knowledge of it from the latter time onwards. And we are indebted for this, in respect of the earlier period, a good deal to coins taken in connection with the epigraphic records, but, in respect of the later period, almost entirely to the epigraphic records.

We must have, however, some idea as to what the inscriptions are,—as to the extent of territory that they cover,—and as to how they help us so definitely. And, to make the first and third of these matters clear, we must present a classification of the records from two points of view, according to the materials on which they have been preserved, and according to the objects to which they were devoted.

As regards the materials on which they have been preserved,—among the records there is one that stands by itself, in respect of the peculiarity of being engraved on iron; namely, the short poem on the iron column at Maharan, near Delhi, which constitutes the epitaph of the great king Chandra. With this exception, the records are to be divided into those which are on copper, and those which are on stone.

The former usually describe themselves by the name of tārastasana, or "copper-charters." And they consist sometimes of a single plate, but more usually of several plates strung together on a large signet-ring which bears generally the seal of the authority who issued the particular charter. Many of them have come to notice through being produced by the modern possessors of them before

---

72 Published by Archibald Constable and Co., Westminster: 1890.
73 For some of the numismatic researches which are most useful for historical purposes, see, in particular, The Coins of the Greek and Scythic Kings of Bactria and India by Messrs. Gardner and Poole (1887), General Sir Alexander Cunningham's Coins of the Indo-Scythians, Sakas, and Kushānas (1886, 1890, 1892), his Coins of Ancient India (1891), and his Coins of Medieval India (1893), and Mr. Rapson's various writings, especially his Indian Coins (1897), Part III, B, of Vol. II. of the Grundriss der Indo-Arischen Philologie und Altertumskunde.
official authorities in the expectation of establishing privileges which, it is hardly necessary to say, have long since ceased to exist through the lapse of time, the dying out of the families of original holders, rights of conquest, and the many changes of government that have taken place; and it is still in private hands that we must look to find the majority of those that remain extant but unknown. But others have been found buried in fields, and hidden in the walls and foundations of buildings; and the decay of old erections, and the excavation of ancient sites, may at any time yield a rich harvest in this direction.

The stone records usually describe themselves by the name of śilāśāna, “stone-charters,” śila-
lokaḥ, “stone-writings,” or prahasti, “eulogies.” They are found on rocks, on religious columns such as these which bear some of the edicts of Aśoka and others which were set up in front of temples as “flag-staffs” of the gods, on battle-columns or columns of victory such as the two at Mandaśor, on the walls and beams and pillars of caves and temples, on the pedestals of images, and on slabs built into the walls of temples or set up in the courtyards of temples or in conspicuous places in village-sites or fields. And they are often accompanied by sculptures which give the seal of the authority issuing the record, or mark its sectarian nature, or illustrate some scene referred to in it.

As a matter of convenience, we know the copper records best by the name of “grants,” and the stone records best by the name of “inscriptions.” But there is no radical difference between the two divisions, such as might be inferred from these two names.

As regards the extent of territory that they cover,—the inscriptions come from all parts of India, from Śāhābigarhi on the north, in the Yusaizai subdivision of the Peshāwar district, to the ancient Pāṇḍya territory in the extreme south of the peninsula, and from Kāthiāwar in the west to Assam on the east; and, from beyond the confines of India itself, we have some from Nēpur, others from Ceylon, and others from Cambay in Indo-China. And they are very numerous. Professor Kiernan has lately put together a list, with dates, names, and some other leading details, of more than seven hundred from Northern India; that is to say, chiefly from the territory lying on the north of the Nerbudda and Mahārādi rivers. And they are still more abundant in Southern India, where the Māsulmāns, in consequence of being somewhat remote from the great centres of fanaticism, lived formerly, as now, more peaceably with the Hindūs, and did not do so much damage to the temples and their stone records. Sir Walter Elliot, who first systematically collected the southern records, compiled manuscript copies of no less than five hundred and ninety-five from the Kannarese country, in addition to a large number of others from the Telugu provinces. Dr. Hultzsch, in his first two volumes of South-Indian Inscriptions, and in Part I. of Vol. III., has published nearly three hundred, chiefly from the Tamil country. And further inquiries in the Kannarese country have disclosed the existence of a wealth of materials there, the extent of which can hardly yet be gauged; from the province of Mysore, Mr. Rice has given us texts and abstract translations of a hundred and forty-four records at the great Jain centre Sravaṇa-Belgola, and has dealt, in two volumes of his Epigraphia Carnatica, with one thousand seven hundred and sixty-five from the Mysore district alone, and he has still eight volumes to issue; from the Belgaum and Dārāwār districts, in the Bombay Presidency, impressions of nearly a thousand inscriptions were obtained under my own direction; and the southernmost parts of Dārāwār, which are very full indeed of such materials, and some parts of the Belgaum and Bijāpur districts, still remain to be explored.

And the inscriptions help us so definitely, partly because, from the middle of the fourth century A. D., they are nearly all specifically dated in the various Hindūeras, the initial points of which are now so well known that,—by means of various writings by Dr. Schram, Prof. Jacob, Prof. Kielhorn, and Mr. Sewell and the late Mr. Shankar Balkrishna Dikshit,—we can determine the dates of the records without any doubt, and partly because of the voluminous, varied, and practical

nature of the matter presented in them. To understand the latter point, however, we must now proceed to a further classification of the records according to the nature of their contents, following, however, only some general lines, without aiming at an accurate completeness of subdivision which would be beyond the scope of our present objects.

We may place first those which are plain statements of events, sometimes perhaps containing allusions to religion and to donations, but not directed to any such ends. In this class, some of the best instances of purely historical narratives are, the Udayagiri cave inscription, already referred to, which summarizes the career of Kāḷarāva of Kālinga as far as the thirteenth year of his reign, and presents us as a chapter, or the beginning of a chapter, of a dynastic chronicle; the eulogy of Samudragupta on the Ašoka column at Allahābād, which recites his pedigree, describes his conquests in Northern India, mentions some of the foreign tribes with which he had relations, and gives us a considerable insight into the political divisions of Southern India; and the short poem, in grand diction, on the two columns of victory at Mendasōr, which describes the triumphs of Yāsōdharmān, including the humbling of the great foreign invader Mihirakula "who had never before that bowed his head in obeisance to any save the god Siva." To the same class belong some of the epitaphs; for instance, the short charming poem on the iron pillar at Mēha-raul, which preserves the memory of the great king Chandra, and the panegyric of the great Western Gaṅga prince Neḷalumbāntaka-Mārasinaka at Sravaṇa-Belgoḷa, and the epitaphs of the Jain teachers Prabhāchandra and Mallasēna at the same place. To the same class we may refer some of the records of the carrying out of public works; for instance, the two fine rock inscriptions at Jumāgal, which record the repairing of the embankment of the great lake Sudaṣana in the time of Raudrādaṇa and again in the time of Skanda-gupta, — the former of them reciting, also, how it had once before been repaired by a brother-in-law of the great Maurya king Chandra-gupta, and had been embellished by a local governor of Ašoka. In the same class we have some of the monumental pillars and tablets commemorating the death of heroes in battle; for instance, the small pillar at Eran, which gives us the name of king Bhīnu-gupta, as a preliminary to recording how his follower Goṇarāja died in fight and how Goṇarāja's wife accompanied his corpse onto the funeral pyre, and the virgols or "hero-stones" of Central India, Bombay, and Malāra, as illustrated by the Tērahi stones which recite how Chandaṇya, the governor of a fortress under Goṇarāja, was killed in a fight between Goṇarāja and Undahāla, — by the Ablār stone, which commemorates the death of the brothers Mācha and Gōma, fighting valiantly on the occasion of a cattle-raid against their village, — and by the Kil-Muṭṭaṛūr and Ambūr tablets, which preserve the memory of other heroes killed on occasions of the same kind. In the way of more miscellaneous records referable to this same class, we have the Maṇḍāl Hill rock inscriptions, which record the construction of a tank by the order of Kūpadēvī, the wife of king Ādityasena; the Bihārā pillar, which was set up as a boundary-piller between the territories of the Mahārāja Hastin and the Mahārāja Sarvanātha, and the record on which enables us to synchronize the families to which those two princes belonged; another stone at Kil-Muṭṭaṛūr, which marks the spot on an embankment at which a local hero killed a tiger; the Kōtuṛ inscription, which narrates how a Saiva ascetic immolated himself in the fire; and the Bejaṭūn inscription, which tells the pathetic tale of how, in spite of the remonstrances of her parents and her relatives, the widow of a local governor entered the flames, to accompany her dead husband to the world of the gods. In the same class we may notice two inscriptions at Śiyannāgalaun and Tīrvaṭṭūr, which give an interesting insight.
into the administration of criminal law in the twelfth century A. D.\textsuperscript{31} one of them recites how a certain individual by mistake shot a man belonging to his own village, whereupon the governor and the people of the district assembled together, and decided that the culprit should not die for the offence committed by him through inadvertence, but should burn a lamp in the Tūmāḷī temple at Sālal, and accordingly he provided sixteen cows, from the milk of which ghee was to be prepared, to be used in burning the lamp; and the other records that a man went hunting, and missed his aim and shot another man, whereupon the people of the district assembled and decided that the culprit should make over sixteen cows to apparently the Tūmāḷī temple. We may further include here two inscriptions at Chinga, which embody political compacts of alliance for purposes of offence and defence.\textsuperscript{32} And, though it does not contain any narrative, we may conveniently note here the seal-matrix of Sālal, cut in the rock at the hill-fort of Bhāltāgadi,\textsuperscript{33} — the mould in which there would be cast the seals for copper-plate charters issued by him, — which, by its existence there, which in that direction, the kingdom of Kie-lo-na-su-fa-la-na mentioned by the Chinese pilgrim Huen Tsiang.\textsuperscript{34}

For practically all such records as those mentioned in the preceding paragraph, we are indebted to a historical instinct which found expression more or less fully in them. And some of them illustrate how well the ancient Hindūs could put together brief historical narratives, concise and to the point, but limited in scope. But the records of this class, though fairly numerous in themselves, are but few in number in comparison with the others that we have yet to deal with. And, for the great bulk of the epigraphic records that have come down to us, we are indebted, not to any historical instinct of the Hindūs, but to the religious side of their character and their desire for making endowments on every possible occasion.

We shall notice next those for which we are indebted to religious motives alone. And we may place first those which promulgate religious doctrines. Here, however, we can bring forward, prominently, only the well known rock and pillar edicts of Aśoka, scattered about at various places that were of importance in his dominions, from Shahbazgarhi in the north to Siddāpur in Mysore on the south and to Dhau and Jangala on the east. The object of them was to propagate, under royal endorsement, the Buddhist faith. But, in addition to mentioning the foreign kings Antiochus II, of Syria, Ptolemy Philadelphus of Egypt, Antigonus Gonatas of Macedonia, Magas of Cyrene, and Alexander of Epirus, — by means of which the period to which they belong is fixed, — they yield a little history, in giving the names of some of the peoples of India, particularly the Chōlas, the Pāṇḍyas, and the Andhras,\textsuperscript{35} and in recording the conquest of Kaliṅga, and in putting forward, apparently, a date, the year 256,\textsuperscript{36} which represents the tradition of that period as to the number of years that had elapsed since the nirvāṇa, or else the death, of Buddha.

In another class of records for which we are indebted to religious motives alone, without the accompaniment of endowments, we may cite the following instances. We owe the Taxila plate of the Satrap Patika\textsuperscript{37} to the installation of a relic of Buddha. We owe the Kura inscription of Tūmāḷī\textsuperscript{38} to the building of a Buddhist monastery. And we owe the Nanā Ghaṭ inscription, of the Asurabhājīya series,\textsuperscript{39} to the desire to commemorate the great sacrifices that had been celebrated, and the costly sacrificial fees that had been given, by queen Nāyānikā. For the inscription of Tūmāḷī on the chest of the stone boar at Erāp,\textsuperscript{40} which establishes his conquest of Central India, we are indebted to the building of the temple, in the portico of which the boar stands; and to the same motive we are indebted for the Gwālior inscription

of his son Mhirakula,⁴ for the Ahojé inscription of Pulakéśin II.,⁵ which contains a great deal of important matter, and for the Valisimal inscription,⁶ which settles the first four generations of the family of the Western Gaṅga princes of Taľakă. It is to the restoration of a temple that we are indebted for the important Mandasār inscription,⁷ which gave us what had so long been wanted; namely, a date for one of the Early Gaṅga kings, recorded in an era, capable of identification, other than that which was sparsely used by them in their own records. We owe another important record of the Early Gaṅgas, the Raśa pillar inscription,⁸ which gives us the name of Budhagupta and one of the dates which help to fix the exact initial point of the Gaṅga era, to the erection of the column as the “flag-staff” of the god of the temple in front of which it stands. We owe the Shaṭapar record,⁹ which gives us the date of king Adityasena in the Harsha era, to the installation of an image. We owe the important inscription at Tāḻghur,¹⁰ which gives the account of the origin of the great family of the early Kadamba kings of Banavasi, to the construction of a tank in connection with a temple. And we owe the record which proves the historical existence of the dynasty of the Soṅgas,¹¹ to the building of a gateway of the stūpa at Bhāchut. A dispute between two priests, each of whom claimed the ownership of a particular plot of land for his god, has given us an interesting record of a trial by ordeal in an inscription at Kūttār.¹² The settlement of a sectarian dispute has given us an inscription¹³ which narrates how king Bhukkaraya of Vijaṇanagāra brought about a reconciliation between the Jains and the Vaishnavas of Brāhmaṇa-Belgola, and embodies a compact under which the Jains were to enjoy equal freedom and protection with the Vaishnavas in respect of their rites and processions. The necessity for reforming the sacred law on a certain point, has given us an inscription at Vīrhāchāriyapura¹⁴ embodying an agreement fixing the law of marriage among the Brāhmaṇas of the Pādāvilīa country, by which they bound themselves that marriages among their families should only be concluded by kanyādāna, that is to say by the father giving his daughter gratuitously, and that any father accepting money, and any bridegroom paying money for his bride, should be subject to punishment by the king and excommunication from caste. The desire of pilgrims to commemorate their visits to sacred sites has given us a number of records, which are of considerable value in the geographical line of inquiry.¹⁵ And the presentation of caskets to hold relics of Buddha has disclosed to us, in the inscriptions found at the Bhamiprōju stūpa,¹⁶ a peculiar variety of the Asoka alphabet, which has not been met with elsewhere, and which has an important bearing on the question as to the antiquity of the introduction of the art of writing into India.

Still more numerous are the records of which the object was to register religious donations or endowments, to gods, to priests on behalf of temples, and to communities. The inscriptions of Daśaratha, the grandson of Asoka, in the caves on the Barabar and Nāgarjuna hills,¹⁷ were engraved to record the presentation of the caves to a community of ascetics. The Nāṅk inscription of Uśāvadāta, son-in-law of the Kshaharāta king Naḥapāna,¹⁸ was engraved to register the presentation of the cave, with large endowments in money, to a community of monks. The object of the Bhitari pillar inscription of Skandagupta,¹⁹ and of the Kūrām grant of Paramesvaravarman I.,²⁰ was to register grants of villages to gods. The Cōchin grant of Bhāskara-Rāvimarman,²¹ which establishes the existence of a colony of Jews in the Travancore State, was issued to record the bestowal of a village on the Jews, with the right to use certain religious paraphernalia. We should not have had the Abhir inscription, which discloses the

real originator of the movement that led to the revival of Saivism in the twelfth century A.D., but for the fact that the ultimate object of it was to register the names of the villages that had been granted to Ēkṣánta-Bāmaya for the purposes of the temple that he built. For the date of Lakuḷiṣa, we are indebted to a record the object of which was to register the grant of a field to a temple, to the establishment of which he was then attached. The Īndōr grant of Skanda-gupta was issued simply to record an endowment to provide oil for a temple of the sun. And so on with innumerable other instances, in which history has been recorded only as an incidental matter, in connection with the primary topic of religious benefactions.

And finally we have the records which register secular grants to private individuals. As instances in this class, we may cite the Vakkaḷī grant, which gives the full direct lineal succession of the Western Chālukya of Bādami, from the first paramount king Pulakesī I. to the last of the line, and was issued to register the grant of a village to a Brāhmaṇa, and the Hirahadagalli grant of the Pallava king Sāva-Skandavarman, which was issued to endorse the holding of a garden by certain Brāhmaṇas, and to fix the share of the produce that each of them was to take. In this class we have to place, amongst numerous other records, the majority of the virgals of Mysore, which, differing in this respect from the similar records elsewhere, mostly record grants of land in addition to commemorating the deserts of heroes; for instance, the Rāgar stone not only records the death of the commander of the Nāgattara troop in a battle that was fought between the forces of Ayyapadēva and those of Viramahendra, but also records the appointment of his successor and registers the grant of various villages to him. The supplementary inscription on the Atakūr stone gives another instance of a grant of villages, in recognition of bravery in the battle-field, to a hero who fought and survived. And we learn from it that grants of this kind were sometimes accompanied by the ceremony of washing the warrior’s sword, just as religious grants were usually accompanied by the ceremony of laying the feet of the priest into whose hands the donation was actually given.

Now, the donative records are by far the most numerous of all. And, as the result of this, we arrive at the point that in the vast majority of the epigraphic records we have a mass of title-deeds of real property, and of certificates of the right to duties, taxes, fees, perquisites, and other privileges. The copper-plate grants are the actual title-deeds and certificates themselves. The stone inscriptions are usually of the same nature. But they sometimes mention the concurrent bestowal of a copper-plate charter. And in such cases they are, rather, a public intimation that the transaction had been made complete and valid by the private assignment of the necessary title-deeds and certificates.

The essential part of the records was, of course, the specification of the details of the donor, of the donee, and of the donation. And we have to bear in mind that, not only are the donative records by far the most abundant of all, but also, among them, by far the most numerous are those which we may call the records of royal donations, by which we mean grants that were made either by the kings themselves, or by the great feudatory nobles, or by provincial governors and other high officials who had the royal authority to alienate state lands and to assign allotments from the state revenues. The reason for this, no doubt, is that which was suggested by Dr. Burnell, namely, the tendency for gifts to take the place of the sacrifices which, according to the epic poems, and in fact according to some of the earlier records, the kings of India used to have performed, in order to acquire religious merit or to attain other objects. But, be the reason what it may, the fact remains, that the records of royal donations, whether for religious purposes or for other purposes, are the most numerous of all. And many of them register, not simply the gift of small holdings, but grants of entire villages, and large and permanent assignments from the public revenues.

19 See page 2 above. 20 See page 17 above. 21 Gupta Inscrip. p. 68.
22 Vol. VIII. above, p. 26; and Ep. Ind. Vol. V. p. 200. While giving the full descent from father to son,
25 South-Ind. Paliogr. p. 94.
It is to these facts that we are indebted for the great value of the records from the historical point of view. The donor of state lands, or of an assignment from the public revenues, must shew his authority for his acts. A provincial governor, or other high official, must specify his own rank and territorial jurisdiction, and name the king under whom he holds office. A great feudatory noble will often make a similar reference to his paramount sovereign, in addition to making his own position clear. And it is neither inconsistent with the dignity of a king, nor unusual, for something to be stated about his pedigree in charters and patents issued by him or in his name. The preceps of the law-books, quoted by Dr. Burnell from the chapters relating to the making of grants, prescribe, in fact, that a king should state the names of his father and his grandfather, as well as his own. This, no doubt, is a rule deduced from custom, rather than a rule on which custom was based. But we find that, from almost the earliest times, the records do give a certain amount of genealogical information. More and more information of that kind was added as time went on. The recital of events was introduced, to magnify the glory and importance of the donors, and sometimes to commemorate the achievements of recipients. And so, not with the express object of preserving history, but in order to intensify the importance of everything connected with religion and to secure grantees in the possession of properties conveyed to them, there was gradually accumulated almost the whole of the great mass of epigraphic records, from which, chiefly, the ancient history of India is now being put together.

Such are the nature and extent of the materials with which we are working. And the above sketch will suffice to give some idea of the results that we have already accomplished from them. But, though so much has been achieved, a great deal still remains to be done.

In the first place, only a small part of the mine of epigraphic information has been as yet explored. For the earlier period, before A. D. 350, we are looking forward to the results of excavations, still to be made, which should, and undoubtedly will, enable us to get at many an important record now hidden from sight. For the period onwards from that date, we have still to trace many additional copper-plate records, not yet brought to notice, which unquestionably exist in private hands; and, from the enormous number of stone records, we have to select those which will best repay the trouble of editing them in full,—dealing with the others by means of abstracts that shall bring forward every point in them that can be turned to practical account.

In the second place, we must before long make a start towards bringing the records together, in chronological order, in volumes according to the dynasties and periods to which they belong, on lines such as those adopted in the volume of Gupta Inscriptions, prepared as Vol. III. of the intended Corpus Inscriptionum Indicarum which, however, has not gone beyond Vols. I. and III. It is very difficult to exhaust any particular line of research from texts which are scattered about in the volumes of different Journals, among extraneous matter of all sorts and without any attempt at or possibility of general arrangement according to dates, and many of which are printed in Native characters which do not lend themselves to the use of capitals, thick type, and other devices for marking points that are to be specially attended to. To a great extent, of course, this scattered and unsystematic disposal of our results has been unavoidable. As an inevitable consequence, however, not even the department of political history has been dealt with as fully as might be the case even from such materials as we already have for reference. Much has been done by the Epigraphia Indica towards minimising the difficulties entailed by having to search the volumes of so many different publications. But more is needed. We must set about bringing together, in the manner indicated above, such records as have already been published,—inserting, at the same time, any others of each series that can concurrently be prepared for publication. We want, for instance, one volume devoted to the records of the Western Chalukyas of Badami, with those of the early

27 Smith-Ind. Palaeogr. p. 91.
Kadambas of Banawasi and the Pallavas of Conjeeveram, and with some others of the same period which are not numerous enough to make up a volume by themselves. We want another volume for the records of the Eastern Chalukyas, — another for those of the Rāṣṭra-kulās, — and others for those of the Kalachuris and the Gāhāda-vālas, — and so on, each with the miscellaneous records of the period brought in. When such compilations have been made, we shall have the basis of a systematic arrangement, by means of which the materials can be examined far more conveniently and exhaustively than at present. And it will then be an easy and simple matter to insert in such volumes, in the proper places, references to further records which, of course, must continue to be published in the present detached manner until sufficient materials for supplementary volumes accumulate. Most urgently, perhaps, we want the contemplated volume, devoted primarily to the records of the Indo-Scythian kings and of the Kātra-trapas, which was intended to be Vol. II. of the Corpus Inscriptionum Indicarum. Still, as a beginning, a valuable service would be rendered by anyone who would compile the records of the Mātrakas of Valabhi, — revising the published texts, transliterating into Roman characters such of them as have been edited in native type, and giving a critical translation of at least one complete record illustrating each of the different standard drafts of that series, and similar translations of the varying parts of the other records, with an exhaustive Index, and with an Introduction sketching the history and other matters deduced from the records. And such a compilation would doubtless be welcomed as an Appendix to a volume of the Epigraphia Indica, if we cannot, by the time that it is ready, propose any other arrangements for publishing it.

In thus re-arranging the records already edited, we have to revise the published texts, and bring them up to date on an uniform system according to our latest knowledge and experience. Even among the most recently issued versions, there are but few that could be finally reprinted simply as they stand. We require to have both the texts and the translations dealt with critically according to an absolutely uniform method of treatment. The same passages in different records have to be translated in identically the same words, according to whatever final renderings may be determined on. And technical titles and expressions require to be recognised, and to be used as they stand without attempting to render them by English words which may, indeed, be literal translations, but the meanings of which do not suffice to convey the ideas intended by the originals. There are many points in the records, which will not be recognised until we begin to deal with the records on the lines indicated above. There are, also, many allusions in the records, which are only now beginning to understand. And, as a very suitable instance of what an up-to-date revision can effect, we may point to the case of the Ahole inscription of A.D. 634-35, of the time of the Western Chalukya king Pulakesin II. It was first handled fully by myself, some twenty-five years ago. It seemed, then, that at any rate all the historical matter in it had been brought out fully and correctly. But it remained for Professor Kielhorn, in lately examining the record anew and re-editing it with the advantages of experience and wider knowledge, to remove some mistakes made by me, and to discover still two more historical items in it, in the mention of the Kollur lake and of the territory on the north of the Bhirni, and, further, to detect and explain two recondite allusions, one to a grammatical rule of Pāṇini and the other to the traditional precepts for the behaviour of kings in exile, and to bring out various interesting points in which the writings of the poet Kālidāsa were used and imitated in this record and in some other early ones.

For reasons which have been explained elsewhere, the palaeographic inquiry has to be taken a step further than even the point to which it has been brought by the labours of the late Dr. Bühler. And, as one way of helping to this end, the occasions of publishing more final revised texts and translations of records already dealt with, must be utilised to substitute real facsimiles of at least the more representative originals, in the place of the manipulated and sometimes misleading lithographs that have occasionally been issued.

As has been said, even the political history has not been yet worked out from the published records as fully as might be done. And there are other lines of inquiry, of general historical interest, — particularly in the geographical, administrative, and fiscal departments, — which have hardly been touched upon at all to any purpose. The geographical line, indeed, has received a certain amount of attention. But the researches in this line have been made chiefly with the object of trying to identify places, countries, and tribes mentioned by foreign writers, namely, the Greek historians and geographers, the Chinese pilgrims, and the Arab travellers, and of constructing maps of ancient India from their writings. A map of India has still to be put together from the epigraphic records and other native sources. That map will give us the first reliable means of proceeding to apply properly any information that may be derivable from foreign sources. And, in the results that have been put forward from the inquiries that have been indicated above, there is much to be cancelled.

There seems to be an idea, in some quarters, that we can and must still find an existing representative of every ancient name recorded by the foreign writers. But tribes die out and disappear; and towns decay and are deserted. Seaside emporia sometimes shift. And the names of cities are liable to change in the course of time, even though the places themselves survive. The records of the Indian campaign of Alexander were written mostly by persons who actually went to India. And yet there are but few of the ancient places, mentioned in them, that have been identified with any real approach to certainty. The author of the Periplus of the Erythraean Sea evidently sailed in person round the coast of India. But we cannot expect to find, now, every place on the coast mentioned by him. And, — as regards his inland details, — his statement that Paithan, which is really about two hundred miles almost due south-east from Broach, lies south of the latter place, at a distance of a twenty days' journey, quite suffices to shew that, for places away from the coast, he was at least sometimes dependent on information which was liable to be of a very vague kind, and leaves us free to exercise considerable latitude of choice in respect of the direction, in applying his immediately following assertion that Tagara, at a distance of a ten days' journey from Paithan, was on the east of Paithan. It is with but little confidence that we can use Ptolemy's work, with only our present means of applying the information given in it, towards reconstructing the early geographical and political divisions of India. Ptolemy, who wrote about the middle of the second century B.C., had not even the opportunities of personal observation which the author of the Periplus enjoyed, but only compiled from the reports of travellers and navigators, and from the works of previous writers, of whom some may have enjoyed such advantages, but others had simply put together information obtained similarly at second-hand. The writer of the geographical part of the article on Ptolemy in the Encyclopaedia Britannica, Vol. XX., has told us that Ptolemy's geographical knowledge is strikingly imperfect, even in regard to the Mediterranean and its surroundings, and that it is especially faulty in respect of the southern shores of Asia, in connection with which he had obtained — (as we can readily detect) — only a vague acquaintance with extensive regions, based on information which was indeed to a certain extent authentic, but which had been much exaggerated and misunderstood. Ptolemy — (we are told) — recognised the importance of utilising, to check and adjust results, any positions of places that had been determined by actual observations of latitude and longitude. But there was not any appreciable number of such places. And thus "the positions laid down by him were really, with very few exceptions, the result of computations of distances from itineraries and the statements of travellers, estimates which were liable to much greater error in ancient times."

11 Ancient India, its Invasion by Alexander the Great, by J. W. McRindell.
12 For Mr. McRindell's translation of this work, see Vol. VIII., above, p. 106 £.
13 He has there shown grounds, which seem conclusive, for placing the work between A.D. 80 and 89, though by other authorities it has been placed somewhat earlier, in Ptolemy's time (A.D. 23 to 79), and, on the other hand, considerably later, after A.D. 161. The writer of the geographical part of the article on Ptolemy in the Encyclopaedia Britannica, Vol. XX., has placed it "about A.D. 80." (p. 94).
14 See the extract from Ptolemy's Geography of India and Southern Asia, with a commentary, given by Mr. McRindell, Vol. XIII., above, p. 313 £.
15 It appears that the first recorded observation of this celebrated mathematician, astronomer, and geographer, was made in A.D. 127, and the last in A.D. 151 (Encyclopaedia Britannica, Vol. XX., p. 87), but that he was still alive in A.D. 161 (Smith's Classical Dictionary, p. 627).
"than at the present day." Moreover, in addition to placing the equator at a considerable distance from its true geographical position, and accepting a prime meridian which made all his eastern longitudes about seven degrees less than they should have been, he made a still more serious mistake, which "had the effect of vitiating all his subsequent conclusions," in taking every degree of latitude, and of longitude measured at the equator, as equal to only five hundred stadia or fifty geographical miles, instead of its true equivalent of six hundred stadia or sixty miles. And, as the result of the last-mentioned error, "he had arrived at the conclusion from itineraries that two "places were five thousand stadia from one another, he would place them at a distance of ten degrees "apart, and thus in fact separate them by an interval of six thousand stadia." The curious and utterly erroneous conception of the shape of India, formed by Ptolemy, is well shown by the map which accompanies Mr. McCrindle's extracts from his work. And the general distortions that resulted from his data and method of work, are admirably exhibited in an ingenious form in the Encyclopaedia Britannica, Vol. XV., in Plate viii., between pages 516, 517, which shows Ptolemy's idea of the world superimposed upon an actual map of the corresponding portions of the world: his results, exposed in this way, place Paithay (on the Godavari) well out to sea in the Bay of Bengal; they make Ceylon an enormous island, stretching from the equator to about the twelfth degree of north latitude, and covering the position of the northern half of Sumatra and of part of the Malay Peninsula; with a large area of the Bay of Bengal including the Nicobar Islands; they make the Mahanadi river run over Siam and Cambodia; they make the Ganges run over the very heart of China, flowing towards the sea somewhere near Canton; they carry Palibothra, which is Patna (on the Ganges), to the east of a line from Tonquin to Pekin; and they make the Himalayan range, as represented by the Imaas and Emblos mountains, run north of Tibet, through the north of China, across the Yellow Sea and Korea, and into Japan. It is obvious that, before we can do anything substantial with Ptolemy's work, in the direction of utilizing it for even the outlines of the early political geography of India, we need something more in the way of an exposition of it than even that which Mr. McCrindle has given us, and we require an adjustment of Ptolemy's results for India similar to that which Captain Gerini has given us in respect of his results for the countries beyond the eastern confines of India. And—(passing on to a still more definite source of information)—there is still much to be done in connection with the writings of Hsuen Ts'ang, who travelled through practically the whole of India between A. D. 629 and 645 and kept a very close record of his peregrinations. The territorial divisions mentioned by Hsuen Ts'ang are fairly easy to locate, more or less approximately, with the help of certain hints from the epigraphic records and other sources. But his cities, or such of them as survive, are more difficult; especially because he has often not given the names of them. Before his writings can be fully utilised, we want better readings of some of his names, and a clearer exposition as to how the "li" is to be interpreted as a measure of distance, or as an indication of distance by the time occupied in travelling, in different styles of country. And, with reference to the understanding, which is no doubt quite correct, that the distances and directions given by him are the distances and directions from each capital to the next capital, we have to bear in mind, in the first place, that, even a slight difference in bearings will lead to a wide divergence in position, when the bearings are set out on a long line, and, in the second place, that, whereas it is impossible that every capital can have been due north, east, south, or west, or due north-east, north-west, south-east, or south-west, from the preceding capital, he—(if we judge by the present translations)—recognised no points of the compass beyond those eight, and very seldom, if ever, gave the bearings except as if they were due north, etc., or due north-east, etc. We have by no means yet found—(if we ever can

---

26 Vol. XIII. above, p. 329. 27 Jour. R. 'As. Soc., 1897, p. 551 ff. 28 Histoire de la Vie de Hsuen-Ts'ang (1838), and Memoires sur les Contres Occidentales par Hsuen-Ts'ang (two volumes, 1837 and 1838), by M. Stanislas Julien, with an examination of the geographical results by M. Vivien de Saint-Martin; and the Si-yu-ki or Buddhist Records of the Western World (two volumes, 1884), and Life of Hsuen Ts'ang (1838), by the Rev. Samuel Bell. 29 The translations represent Hsuen Ts'ang as indicating the directions, in the large majority of cases, in the following terms, (1) "li" (to the east), "a l'ouest, au sud, au nord" (for instance, Julien's Contres, Vol. II. pp. 64, 83, 165, 166), corresponding to which we have, in the English translation of the same passages, "going east, going west,
find) — every city mentioned even by Huen Tsang. And some of the most confidently asserted identifications of places spoken of by him, are unquestionably wrong. Take, for instance, the case of the capital of Kalinga, which he visited and mentioned without, apparently, recording its name. M. Vivien de Saint-Martin felt satisfied that it is represented by Kalingapatam on the coast, in the Gajam district, — an identification which was practically, if not absolutely, endorsed by Mr. Ferguson. While General Sir Alexander Cunningham arrived at the conclusion that it must be Rajamahendri on the Godavari, the headquarters of a subdivision of the Godavari district. But the epigraphic records make it clear that neither was it either of those two places, nor even was it — (as one might be tempted to think) — identical with the Kalingamagaram which figures in records of A.D. 677-78 and onwards and is represented by the modern Mukhalingam and Nagarikataram in the Gajam district; they show that it can only be Pithapura — the headquarters of a zamindar or estate in the Godavari district, eleven miles almost due north of Coemanda, — which is mentioned as Pithapura in the Aihoole inscription of A.D. 634-35 and, before that, in the Allahabad pillar inscription of about A.D. 880. For the ancient geography, as for everything else connected with the past of India, we are really dependent primarily and almost entirely on the epigraphic records. It is from that source that it must be mostly worked out. And we can only fill in additional details from extraneous sources, such as those discussed above, when we have arrived at some more definite idea of at least the general features from the indigenous materials.

There is, thus, plenty of both original research and revisional work still to be done in connection with, and by the help of, the epigraphic records. And the leading desideratum is, certainly, to get those records explored more fully and published in larger numbers. But systematic co-operation in other lines of study would help very greatly, even towards a more accurate understanding of the records. And there are various ways in which much valuable assistance towards the ends that we have in view, might be given by scholars who are not inclined to undertake the editing of the records or even the detailed study of them. In connection with the general literature, there is still a great deal to be done in discovering, and bringing to notice by texts and translations, the historical introductions and colophons, the value of which has been indicated above. We want a compilation of all the historical and geographical hints, and any other practical matter, that can be derived from the epics, the plays, the classical poems, and the collections of imaginative stories. And we want succinct abstracts of all the similar matter contained in the historical romances. Life is too short for the historian to examine all these sources of information in the original texts, or even, in every case, to go thoroughly through translations of them. An editor of a text, on the other hand, could do all that is wanted in a day or two of extra work, the results of which would be embodied in an introduction and an index.

going south, going north” (Beal’s Si-yu-ki, Vol. II. pp. 185, 200, 217, 260) ; and (2) “an nord-ouest” (to the north-west), “an sud-ouest, un sud-est, au nord-est” (for instance, Condré, Vol. II. pp. 84, 90, 124, 168), corresponding to which we have, in the English translation of the same passages, “going north-west, going south-west, going south-east, going north-east” (Si-yu-ki, Vol. II. pp. 201, 266, 284, 271). Beal’s translation sometimes suggests a less specific statement in the original ; for instance, it presents “in a south-easterly direction” (Si-yu-ki, Vol. I. p. 50), and “going eastwards, going eastward, going in a south-westerly direction, travelling northwards” (Si-yu-ki, Vol. II. pp. 181, 194, 204, 283) ; but Julien’s translation of the same passages presents the specific terms “au sud-ouest” (Condré, Vol. I. p. 18), and “à l’est, à l’est, un sud-ouest, un nord” (Condré, Vol. II. pp. 71, 74, 88, 168). And I find — (on, of course, a cursory examination) — only one case in which both the translations agree in presenting a direction that is not quite specific : Julien has given “dans la direction de l’est” (Condré, Vol. I. p. 17) ; and Beal has given, in the same passage, “‘eastward” (Si-yu-ki, Vol. I. p. 31). — We may credit the Chinese pilgrims with any amount of accuracy in the perception of the directions in which they were travelling. But it seems plain that Huen Tsang recorded directions which were only approximate. And, while we may not go so far as to deliberately substitute, say, “north-east” or “south-east” for “east,” still, in dealing with such a statement as “going east” or “à l’est,” we are at liberty to consider how much deviation we may make towards the north or towards the south, without diverging far enough to arrive at a point which he would most probably have indicated by saying “to the north-east” or “to the south-east.”

82 Mémoires sur les Condré Occidentales, Vol. II. p. 305.
84 Ancient Geography of India, p. 515.
85 As shews by Mr. G. V. Ramanaruti (see Madras Jour. Lit. Soc., 1889-98, p 68 ff., and, more finally, Ep. Ind., Vol. IV. p. 187 ff.)
And a student of any particular book might, on finishing his perusal of it easily put together an instructive and valuable note which would be welcomed as an article in this present Journal, in the pages of which it would at once attract the attention of those who could use it for general purposes. The Paññāvīlas require to be examined more fully, especially with a view towards determining how far back we can carry the verses on which the earlier portions of them were based, and to what extent those portions of them are imperfect or erroneous and open to adjustment. The geographical lists of some of the Purāṇas still remain to be exhibited, on lines similar to those adopted in respect of the topographical list of the Bhārat-Saṅhitā; at present we have, beyond that, only the list of the Iśvara-carṇyānaya; and, though it may be difficult to find many such lists the value of which is enhanced and made specific by our knowing the exact periods during which they were composed, as is the case with the list of the Bhārat-Saṅhitā, still they will all come in usefully in some way or another. And there is, no doubt, many a Mahāmya or Stalapurāṇa that will be useful for local geography and the identification of places, in the manner in which the Mahakātāmaḥādhāya helped in establishing the identity of the Vātāpi of the records with the modern Bāhāmi.

There is, in short, a vast amount of work still to be done, in all the various lines of research connected with the past of India. We hope, in particular, that the present sketch of the position at which we have arrived, may do something towards attracting more attention to the principal materials, the epigraphic records, and towards inducing more scholars to join us in exploiting them. But we hope, also, that other may be induced to cooperate, by examining more methodically and critically the subsidiary sources of information, and by bringing forward the results in such a way as to make them available for being used in work in which the special results derivable from the epigraphic records. The principal materials are the epigraphic records. And a very brief study of some of them will suffice to show the specific importance of them, and to excite a desire to join in exploring them. But the subsidiary materials, also, are numerous and interesting. And anyone who will take any of them in hand systematically, with just enough knowledge of the results derived from the epigraphic records to show the objects that require to be kept in view and the general lines of work that should be followed, can render assistance the value of which will be made clear enough when his results are put forward in an accessible form, even if it may not be fully realisable by him while he is actually at work.

---

NOTE ON JAINA MYTHOLOGY.

BY JAS. BURGESS, C. I. E., LL. D.

The mythology of the Jainas has been very little studied by Europeans, and perhaps even by native scholars outside the Śrāvaka denomination. It would probably repay investigation on the part of those who have local opportunities and access to their literature. Important works have been printed by themselves, at Bombay and Ahmādābād, within the last forty years; and they deal with the ritual and mythology of their cult in a form that would open the way to a scientific study. Of the Śrī Rāmaśrī, the second bhāg, a volume of 766 pages (Bombay, Sav. 1923), fell into my hands many years ago; but the first part I have not seen. The work, besides much other matter, contains a sort of inventory of the mythology. At p. 696 of bhāg 2, is a list of the 24 Tīrthankaras of the past, present, and future maha (trībachenśrīmāṇa), followed by nine other lists of 24 Jinas each, connected with these three series of Tīrthankaras, being the corresponding Jinas in the divisions of the Dvātukihaṇḍa and Pūrṇakaravīpa and in the Avāya section of Jambuvīpa. These give 720 Jinas — all invented except Mahāvira perhaps. At pages 706-26 we find the twenty-four Jinas of the present aricarpini or age, tabulated with 56 particulars relating to each of them, such as — chaucan-tithi, vimāna, jananagar, jnanatithi, pitānām, mātā, jnanakshtra, bhārana, vipāka, vyaktra, etc. In this Journal, Vol. XIII, p. 272, some of these details were given.

---

The attendant Yakshas and Yakshinis, who have their shrines or images close to or in the temples of the Jinas, had perhaps their analogues in Buddhism. But besides these, we find a regular pantheon about such places as Satrunjaya and Girnar in Kāthiawār, at Abu, Pārvatā, and other sacred places.

They divide the gods, all of whom are mortal, into four classes:—(1) the Bhavanavāsins or Bhūnayikas, of which there are ten sub-divisions, Āsuṟakumāras, Nāgakumāras, Suvārakumāras, Vidyakumāras, etc., each governed by two Idras; (2) the Vyantarās, who live in woods, and are of eight classes,—Piṣāchas, Bhūtas, Yakshas, Rākṣasas, Kinnaras, Kīṁpurushas, Mahoragas and Gandharvas: these we know also in the Hindu pantheon; (3) the Jyatis or divinities of the sun, moons, nāks, planets, and stars; and (4) the Vaimānikas who are divided into Kālapagas, or those born in the heavenly Kālapas, Kālapātiti or those born in the regions above them; the Kālapagas live in the twelve Kālapas after which they are named: viz.—Ṣaṇḍhāra, Iśāna, Saṇākumāra, Māhendrā, Brahma-loka, Lantaka, Mahāsukla, Sahasrāra, Āṇatā, Prāṇatā, Āraṇa and Aṣṭaceta. The Kālapātiti are sub-divided into the Sāvaṇyaka gods, and the Annuttara gods of five kinds, viz.: the Vijayas, the Vaiṣṇavas, the Jyotis, the Aparamit, and the Sarvārthasiddhas. —(Colebrooke, Essays, Vol. II. p. 221 l., and Uttarādhyayanaśatra.)

Here there is a classification; can any of your readers fill out the details of individual gods, of their respective cults and iconography? The field is open to the investigator. Since the essays of Colebrooke and H. H. Wilson, very little has been added to our information on this subject. Much of it is directly borrowed from Hinduism, but new roles and conditions are imposed on the gods, they are shorn of their honour and made the servants of the Jinas; and the details of such changes have an interest. Jaina temples are covered with sculptures and the parīgaras in their shrines are filled with devatās: a study of these would yield much fresh material.

EXTRACTS FROM THE BENGAL CONSULTATIONS OF THE XVIIIth CENTURY RELATING TO THE ANDAMAN ISLANDS.

BY R. C. TEMPLE.

(Continued from Vol. XXIX. p. 378.)

1792.—No. IX.

FORT WILLIAM, 26th October 1792. The Secretary lays before the Board Copies, which he has received from Lieutenant Blair, of his Instructions to Lieutenants Roper and Wales, when the Viper was dispatched to the Andamans.

Instructions to Lieuts. Roper and Wales, 19 October.

To Lieut. George Roper, Commanding the H. C. Snow Viper.

Sir,—Agreeable to the Accompanying Order you will be pleased to proceed, and consider the delivery of the Accompanying Dispatch for the Honble. Commodore Cornwallis as your principal Object. It will be necessary that you look into Port Cornwallis (formerly North-East Harbour) where if you do not find H. M. Ships, you will proceed without loss of time to Old Harbour, [now Port Blair] and wait the arrival of the Commodore.

The Native Overseer the twenty Laborers and the Tenta you carry down, you will deliver over to Lieut. Wales, also such Laborers as can be spared from the Settlement the Sepoys, and Mr. Clark the Gunner, with two Months' provisions for the whole, to execute the inclosed Order. You will then remain with the Viper for the protection of Old Harbour, until you receive further Orders which will probably be about the end of November.

Calcutta, OCTR. 19th, 1792. Wishing you a Speedy passage, I remain, etc.,

(Signed) Archibald Blair.
To Lieutt. John Wales, Commanding the H. C. Snow Ranger.

Sir,—On the arrival of the Viper at Old Harbour, formerly Port Cornwallis, you will receive from Lieutt. Roper One Native Overseer and twenty Laborers also such proportion of the Se- poys and Laborers as can be spared from the Settlement with two Months Provisions; you will also embark as many of the Articles which you were desired to prepare for the new Settlement as you can Stow. You will then proceed to Port Cornwallis (formerly Northeast Harbour) and begin clearing, at the north or northwest point of Chatham Island, employing on this Service besides the Laborers such as can be spared from the duty of the Vessel, with the promise of extra pay as an encouragement.

It will be proper for some time to avoid intercourse with the Natives, and to be on your guard against hostilities, and the better to prevent surprise, you will carry the Leeboard with you, and employ her occasionally in enquiring about the Harbour to observe their motions.

Should the Honble. Commodore Cornwallis visit the new Settlement you will communicate your Instructions and obey his Orders.

By the end of next Month you may expect to receive further Orders from this place.

Calcutta, Wishing you Success, I remain, etc.,
Octr. 19th, 1792. (Signed) Archibald Blair.

Read a Letter from Lieutt. Blair.

My Lord,—I have the honor to lay before your Lordship a Plan of a Harbour situated on the northeast coast of the Great Andaman, which I accurately surveyed in March 1791. It will be observed by examining the Plan, that it is abundantly capacious, containing above eight square nautical Miles, of excellent and safe anchorage. Both the Ingress and Egress are rendered remarkably easy, by the range of the Harbour having a Northwest direction; by which the S. W. and N. E. monsoons, which are the prevailing winds, blow across, and are consequently fair, for either entering or quitting it; being thus ventilated it will also cool and purify the air, which will no doubt be favorable to the health of the Settlers and the Fleets which may visit it.

The entrance is so wide and so clear of danger that Ships may enter or quit it even in the night; as a proof of this assertion the Union and Viper run into this harbour, in a dark squally night in the height of the S. W. monsoon.

At the Head of the Harbour there are two small Basins, one between Ariel and Wharf Islands the other to northwest of Pit Island, which would contain six or eight Ships closely moored: into these places, an inferior Force might retire under cover of Works on the Islands, which appear admirably situated for the defence of the Basins.

The most eligible place for the Settlement, I conceive to be Chatham Island, and its insularity would in a great measure prevent predatory Visits from the Natives.

Though I did not find any Streams of fresh water in the Harbour, I have yet great hopes that there may be several; and I am led to this Opinion from observing the contours of several valleys which wind down from the Saddle, the highest land on the Andamans, into the Harbour. In one towards the sea three leagues south of the Harbour and noticed in the General Chart I found abundance of fresh water. The bottom of the valleys in the Harbour are very difficult of access, from the Mangrove and excessively entangled Underwood which environ the Shores and will require considerable labor to penetrate.

The face of the country like the other parts of these islands, is very uneven, consisting of abrupt and irregular risings with intermediate Valleys, some pretty extensive. The Soil appears the same as that in the Vicinity of the other harbour, which I found highly productive in excellent tropical Fruits, Vegetables and Grain.
The situation of this Harbour being on the east coast and near the north extremity of the Island, will make the communication with Bengal, more expeditions than from any of the other Harbours of the Andamans; the vicinity of the Cocos and of Diamond Island which abound with Turtle may also be mentioned as a convenience; and the Parts of Persia [Bassein] and Rangoon, with proper management and the necessary attention to prejudices, might afford supplies of Provision, an excellent breed of Cattle, Teak Timber, and many commercial Articles which might be conducive to the prosperity of the Settlement.

In quitting this harbour in the S. W. monsoon the situation may be a little disadvantageous; for I apprehend the most probable rout, to secure a passage to the Coromandel Coast, will be, to proceed to the southward, round the little Andaman; consequently the time required of working from Port Cornwallis to the Old Harbour will be the difference of time against the former; but if the passage to the northward of the Andamans should be found practicable, which I apprehend it may, there will be no disadvantage in point of situation, in quitting Port Cornwallis at this Season. The Approach to this Harbour in the S. W. monsoon appears to me easier and safer than to any of the others. For the cluster of Islands which forms the north extremity of the Andamans are sufficiently high to be seen at the distance of seven leagues, the Cocos are seven leagues to N. E. of those, and these form the broad and clear Channel which I recommend for Ship[s] bound to Port Cornwallis during this stormy season. By steering as near as possible to the latitude of 18-47 it is hardly possible that a Ship could pass through this Channel, without seeing the northern Cluster or the Cocos (even in dark weather); either of which with the soundings will be sufficient guide for steering to the Southward for the Harbour; some further examination which is necessary to complete the General Chart of the Andamans, will throw further light on this important consideration.

Being intimately connected with this subject, I hope to be excused, for also laying before your Lordship, a Plan for a Dock, on somewhat new principles, and particularly applicable to the Harbours of the Andamans, which gave rise to the idea. It is a high gratification to me the reflection that it may possibly prove of public utility and I hope will plead in excuse of my presumption, for intruding on your Lordships time.

Calcutta, October 25th, 1792. (Signed) Archibald Blair.

Ordered that the Chart received from Lieutenant Blair be deposited in the Secretaries Office, and that his Letter shall lie for Consideration for the present.

1792. — No. X.

Fort William, 5th November 1792. The Governor General delivers in the following Minute.

The Board having Resolved, in Compliance with Commodore Cornwallis’s recommendation to establish a Naval Arsenal at the North East Harbour in the great Andaman Island, and the preparations for removing the Station from Port Cornwallis being now in great forwardness, I submit the following Propositions to their Consideration.

1st. — That the Union Snow and the three Pilot Vessels, which have been fitted out for the purpose of conveying Artificers, Stores, etc., etc., to the Andamans, be dispatched forthwith, under the Orders of Lieutenant Blair, who shall be instructed to attend to such directions as he may receive from the Commodore, and remain in charge of the new Settlement until the arrival of the Officer appointed to take that command, after which Lieut. Blair shall proceed to Bombay to resume his station; and as his attention and abilities in the management of our first establishment at the Andamans claim our warm approbation, and as he has stated that he has been subject to considerable expense by the distance of those Islands from Bengal, and other Countries from whence he could procure Supplies, I think that he should receive one hundred and fifty Rupees a Month in addition to his Surveyor’s allowances from the time of his first taking possession of Port Cornwallis until he shall be relieved from
the command, and that his Surveyors allowance should be continued to him till he shall arrive at Bombay.

2dly. — It is very essential in establishing a Settlement, which is likely to be permanent, and may eventually be of great importance for the security of our Asiatic possessions, that the situation for public and private buildings should be judiciously chosen, and the spots which it may hereafter be advisable to fortify, should as early as possible be ascertained. I recommend that Captain Alexander Kyd of the Corps of Engineers, in whose honor and integrity I place the highest confidence, and of whose merits in his profession I have been myself a Witness, should be appointed to the temporary Command, and that, with the pay and full Batta that his Rank entitles him to, he should receive an allowance of one thousand Rupees a month as Superintendent.

3rdly. — A Subaltern Officer of the Corps of Engineers should accompany Captain Kyd to the new Station; and as one or perhaps two Companies of Sepoys must be sent thither, it will be proper to select a careful and intelligent Officer of Infantry to command them, not only for the purpose of assisting Captain Kyd in making his various arrangements, but to take charge of the Settlement in the event of his temporary absence from it.

Agreed and Ordered in conformity to the Propositions laid before the Board by the Governor General.

(To be continued.)

FOLKLORE IN THE CENTRAL PROVINCES OF INDIA.

BY M. N. VENKATASWAMI, M.R.A.S., F.R.I.S.

Simu sachi kha daga,
Namali duka mogni,
Muri chettu ramvati,
Kuli kalu irigai,
Vaniah kunjha kaliposi,
Ladi kalu kaluirigai,
Vaitto nila kaila kala aukai,
Jonna saina purungattai,
Pardarajuksa buda dighai,
Padda dorosamiki pistanu kumai,
Pardaralu Pammadalu tutta antakumai?

Once upon a time a peahen reared an ant, which became so attached to her that every day she would precede her foster-mother home from the fields, whether the peahen had gone to fetch the ant her daily food.

One day said the ant: — "Mother dear, I am going to make some aresalulu3 for you tomorrow morning."

"Don't make it, don't make it, darling," said the peahen. "You will fall into the pan."

But the ant paid no attention and made the aresalulu, and began drawing them out of the pan: one, two, three, four, but at the fifth draw there was an accident and she fell into the pan of boiling oil.

1 These lines mean:— The ant tilted itself, the peahen sorrowed, the banyan-tree exudes, the crow's leg has gone the elephant's legs have lost their power, the deer's knee-joints are broken, the waters of the river are disturbed, the millet-field is insect eaten, the great king has hydrocele, the queen's seat has stuck to her, the basket has stuck to Pardaralu Paddam.
2 To make aresalulu. Pound some rice to a coarse powder, mix into a cake with boiled molasses while still liquid place the cakes in a pan of boiling oil, when cooked fish up with an iron ladle and serve the cakes as aresalulu. Aresalulu are used on ceremonial occasions, such as betrothals, marriages, and so on.
In due time the peahen returned as usual, but for a long while she searched in vain in every nook and corner for the ant. At last she found the poor little ant quite dead in the burning oil and set up a great lamentation. In her sorrow she sat down under a banyan-tree lamenting, and this made the tree say: —“O peahen, peahen, you have always been joyous: what is the matter today?”

“O banyan-tree. O banyan-tree, don’t you know?
The ant died,
The peahen grieves,
The banyan-tree weeps.”

The banyan-tree began at once to weep at every pore, and a crow that always used to perch on one of its branches began to enquire: — “O banyan-tree. O banyan-tree, you were always hearty: what is the matter today?”

“O crow, crow, don’t you know?
The ant died,
The peahen grieves,
The banyan-tree weeps,
The crow has lost a leg.”

Immediately one of the crow’s legs fell off and it began hopping on one leg miserably. An elephant saw it and said: — “O crow, crow, you were always perky: what is the matter today?”

“O elephant, elephant, don’t you know?
The ant died,
The peahen grieves,
The banyan-tree weeps,
The crow has lost a leg,
The elephant has lost all.”

Immediately all power went out of the elephant’s legs and he began to crawl cumbersomely here and there. In this plight a deer saw him and said: — “O elephant, elephant, you were always strong: what is the matter today?”

“O deer, deer, don’t you know?
The ant died,
The peahen grieves,
The banyan-tree weeps,
The crow has lost a leg,
The elephant has lost all,
The deer broke her knees.”

Instantly the deer fell on its knees by the river-side in great pain. Said the river: — “O deer, deer, you were always blithe: what is the matter today?”

“O river, river, don’t you know?
The ant died,
The peahen grieves,
The banyan-tree weeps,
The crow has lost a leg,
The elephant has lost all,
The deer broke her knees; The river bubbles.”
When the river began bubbling, said the millet-field along side:—"O river, river, you were always smooth: what is the matter today?"

"O millet-field, O millet-field, don't you know?
The ant died,
The peahen grieves,
The banyan-tree weeps,
The crow has lost a leg,
The elephant has lost all,
The deer broke her knees,
The river bubbles,
The millet-field is blighted."

A great blight at once settled on the millet-field and the king who was there said:—"O millet-field, O millet-field, you were always full of corn: what is the matter today?"

"O king, king, don't you know?
The ant died,
The peahen grieves,
The banyan-tree weeps,
The crow has lost a leg,
The elephant has lost all,
The deer broke her knees,
The river bubbles,
The millet-field is blighted,
The king has gone lame."

The king began at once to go dot-and-go-one and when the queen saw him, she said:—"O king, king, you were always sturly: what is the matter today?"

"O queen, queen, don't you know?
The ant died,
The peahen grieves,
The banyan-tree weeps,
The crow has lost a leg,
The elephant has lost all,
The deer broke her knees,
The river bubbles,
The millet-field is blighted,
The king has gone lame,
The queen stuck to her seat."

And sure enough the queen had at once to carry her seat about with her, and Paidarallu Peddamma seeing her in such a plight said:—"O queen, queen, you were always sprightly, what is the matter today?"

---

2 In the story as usually told this passage runs:— Into the millet-field the king used to go for the purposes of nature.
3 The vernacular version has:— the king has hydrocele.
4 The vernacular has: — when the queen saw that the king had hydrocele, she said, etc.
5 In Telugu folk-tales, the keeper of the cow where the hero or the heroine, as the case may be, lodges and board and gets the first information of the country he or she is visiting.
"O Paidarallu Pedamma, don’t you know?
The ant died,
The peahen grieves,
The banyan-tree weeps,
The cow has lost a leg,
The elephant has lost all,
The deer broke her knees,
The river bubbles,
The millen-field is blighted,
The king has gone lame,
The queen’s seat stuck to her,
And the basket has stuck to Paidaralli Pedamanna."

THE DERIVATION OF THE WORD PANTHAY.

Now that both domestic and foreign troubles are falling thick upon the Central Chinese Government at Peking, it is probable that we shall hear of the Panthayas again. They are Chinese converts to Islam, and large numbers of them are found in the Provinces of Shensi, Kansuh and Yunnan. In former two Provinces, they are known as Tungani or Hui-hui. In Burma and the adjoining Shan States, the Muhammedians of Yunnan are known as Panthay or Pang-ye. They are a fine and warlike race, and held Yunnan against Imperial troops from 1855 to 1873. In raising a British regiment at Wei-hai-wei, Chinese Muhammedians are much sought after by the recruiting sergeants.

In Northern China, the Chinese call the converts to Islam Hui-hui, 回回, and the Yunnanese call them Hui-tau, 回子. There is a great deal of contempt and hatred implied by the Chinese character 回 as distinguished from 回 as the first part of the former means "a dog." Evidently the compliment is a reciprocal one, because the favourite epithet used by all Muhammedians in addressing the followers of other religions is "infidel dog." The Yunnanese also call the Chinese Muhammedians Fan² Pan³ 反叛 or rebels. Both the Burmese word Panthay¹ and the Shan word Pang-ye are evidently derived from fan² teol² 反叛, which means "a rebellious brigand."

The derivation of the word Panthay appears to be one of the vexed questions of Sinology, and I trust that the above solution will be acceptable to Chinese scholars. In this connexion, the appended extracts bearing on the subject under discussion will be of interest.

Rangoon, June 18th, 1900. TAW SEIN-KO.

¹ Pronounced "Pungay" by the Chinese and Shans.
as a Burmese term for Mahommedans generally. Garnier says that the word Pha-si, which the Burmese have corrupted into Pan-thé according to Colonel Phayre, is the same as Parsî or Farsi, which, in India, is applied to the Mahommedans, and that this denomination is very ancient, as Colonel Yule pointed out that in a description of the kingdom of Cambodia, translated by A. Remusat, a religious sect is described, called Pâsî who were distinguished by wearing white or red turbans and by refusing to drink intoxicating liquors or to eat in company with the other sects; but that distinguished Chinese scholar, Sir T. Wade, derives the term Pan-thay from a Chinese word Puntai, signifying the aboriginal or eldest inhabitants of a country; and Garnier mentions that a people called Pen-ti are found on the eastern side of the Tali Lake, and in the plain of Tang-tehuen, to the north of Tali. They are a mixed race, descended from the first colonists sent into Yunnan by the Mongols, after the conquest of the country by the generals of Kublai Khan.

Mr. Cooper tells us that the term Pachee, or white flag party, as distinguished from the Hungee, or red flag, or imperialists, was also used to designate the rebels in the north of Yunnan, and Garnier frequently applies these terms to the contending parties. The termination ze in the name Khwai-ze, as in Mant-ze, Thibetans, Miaou-ze, hill tribes, and Khwai-ze, foreigners, seems always to imply political and tribal separation from Chinese proper. These names occur in the curious prophecy of the Four-ze Wars, quoted by Cooper."

Extract II.

Colborne Baber's "Travels and Researches in Western China," pp. 150-160.

"The word Panthay has received such complete recognition as the national name of the Mahommedan revolutionaries in Yunnan that I fear it will be almost useless to assert that the term is utterly unknown in the country, which was temporanerly under the domination of Sultan Sulman, otherwise Tu Wen-hai. The rebels were and are known to themselves and to the Imperialists by the name of Hui-hui or Hui-tau (Mohammedans), the latter expression being slightly derogatory.

The name of 'Sultan,' utterly foreign to the ordinary Chinese, was never applied to their ruler, except perhaps by the two or three hadjias among them. The name 'Sulman' is equally unknown. The Mohammedans of Yunnan are precisely the same race as their Confucian or Buddhist countrymen; and it is even doubtful if they were Mohammedans except as far as they professed an abhorrence for pork. They did not practise circumcision, though I am not sure if that rite is indispensable; they did not observe the Sabbath, were unacquainted with the language of Islam, did not turn to Mecca in prayer, and professed none of the fire and sword spirit of propagnetism.

That they were intelligent, courageous, honest, and liberal to strangers, is as certain as their ignorance of the law and the prophets. All honour to their good qualities, but let us cease to cite their short-lived rule as an instance of the 'Great Mohammedan Revival.'

The rebellion was at first a question of pork and of nothing else, beginning with jealousies and bickerings between pig butchers and the fleshers of Islam in the market places. The officials, who were appealed to, invariably decided against the Mussulmans. Great discontent ensued and soon burst into a flame.

The first outbreak seems to have originated among the miners, always a dangerous class in China, who were largely composed of Mohammedans. The usual measures of extermination were adopted by the officials; their Confucian hostility against any faith or society which possesses an organisation novel to or disconveniented by the Government, was aroused; a general persecution ensued; the Mohammedans made common cause, excited, it is very possible, by their traveller hadjias; and so began the period of disorder and disaster with which we are acquainted.

Regarding the faith of these unfortunate people, Dr. Anderson writes: — 'Our Jamadar frequently lamented to me the laxity that prevailed among them, and my native doctor held them in extreme contempt, and used to assert that they were no Mussulmans.'"

NOTES AND QUERIES.

SOME BIRTH CUSTOMS OF THE MUSLIMANS IN THE PANJAB.

On the birth of a daughter no intimation is given to the relations and friends of the father.

After the 7th day, when the dinner ceremony, called usually dhameygh in the Panjab, is over, the woman resumes her usual avocations, at least those do who are strong and have to work for their living. Many, however, do not recover strength for a month.

CHAPTER V.

The Narrative Revelations.

Narrative fragments in the oldest revelations — Historical recollections — Morals of the stories — Alterations of Biblical tales — Intentional obscurities — Various methods of narration — Analysis of various narrative addresses — Transition of the descriptive period — Al Fatiha.

In the development of the Qur'an, the part of which we are going to treat in this chapter stands above others of the Meccan period as far as variety of topics is concerned, and was undoubtedly more effective than any of the preceding ones.

Although the East is the home of the public narrator (and Muhammad's aim was to instruct and overawe rather than amuse), yet in Arabia he was able to inaugurate a new era in the art of the story-telling. In pre-Islamic times public recitations were poetic, but prose narratives cannot have been quite unknown, at any rate in certain cursive inscriptions, since the Meccans used the Greek term αστιρ for stories, which they disparagingly applied to those told by the Prophet.

The reason why Muhammad introduced tales into his sermons is obvious. A large part of his knowledge of the Bible was of historical in character. He could not fail to realize quickly that by inserting small historical fragments he aroused the curiosity of his hearers. Although these served at first solely as examples to illustrate his warnings, they became gradually longer, and ultimately — being provided with a rich stock of tales of prophets and others who could easily be stamped as such — he simply reversed his tactics. Thus the tale became the chief object of the address, and the morals to be drawn were interspersed.

The short quotations from other books to be found in earlier revelations gave Muhammad opportunities of showing an acquaintance with past events and miracles which must have come as a great surprise to the Meccans. In the primary stages of Islam, however, tales would have been out of place. Muhammad's first object was to introduce himself as the Messenger of Allah, to preach His unity, and to confirm his own position. When all he had to say on these points was exhausted, repetition would have wearied and repelled his most faithful adherents. Interesting tales were, therefore, not only a powerful attraction for his old friends, but an effective means of gaining new ones. They were suited to every capacity, and in an agreeable way induced reflection, whilst working considerably on the superstition of untutored savages.

In the preceding chapter we noticed that these early historical fragments refer to the ancient tribes of Ad and Thamud. Legendary reminiscences of the latter were extant among the Arabs, who had lost the faculty of reading the records engraved in the stones of Al Hijr. The frustrated expedition of King Abraha gave rise to Sura cv., but although the incident had occurred within the memory of living persons, Muhammad dared to transform the plague which had decimated the forces of the enemy, into birds sent down from heaven. In Sura lxxxv. 18, Pharaoh is mentioned for the first time, and in other places either alone or together with other persons. Abraham and Moses were encountered in connection with the Suhuf ascribed to them. It must, however, be noted that the two passages in question belong to the confirmatory period, and are not again repeated. I believe this is not accidental. Muhammad may have found it necessary to show that he knew of the existence of previous prophets and their books, but he may not have cared to speak too much about them at that time. He was more interested in

— S. lxxxv. 18; xxi. 11.
 — S. lixii. 16; lixii. 17; lix. 9; liv. 41.
 — Cf. S. lxxix. 9.
 — S. lxxvii. 19; lix. 37; cf. Ch. IV.
trying to focus all attention on himself and his new doctrine. People had to become accustomed to see in him first and foremost the bearer of the monotheistic idea, whilst other prophets moved like satellites around him. Finally “the people of Noah” appear in Sūra liii. 55-56

The Qoranic tales in so far resemble their Biblical models, as they show a marked tendency to demonstrate that the believer is rewarded whilst the infidel meets with severe punishment. Both are portrayed in such vivid colours, that the moral of the story stands out sharply defined against the background. It frequently appeals to the lowest instincts in human nature. When the tales become longer, the thread does not run smoothly, but is at certain intervals interrupted by contemplations.

To demonstrate more clearly the meaning of the first verses in Sūra lxviii., Muhammad relates an anecdote of two agriculturists whose harvest was destroyed as a punishment for their having announced their intention of reaping without having exclaimed first: if Allāh please! and with the determination not to give any to the poor. Somewhat later but still of a very early period are v. 34–52 with an allusion to Jonah, “the man of the fish.”

The first revelation of distinctly narrative character is Sūra li. The beginning reminds us of a good example of the declaratory period. Then follows a brief description of the torments of hell and the pleasures of paradise. To an observant person signs of a divine Providence are to be found in the earth as well as in man’s own soul. This is illustrated by a résumé of Gen. xviii. The comparison of the account as given in the Qorān with its legendary form in Rabbinical literature has been made by Geiger. Evidently in order to make the sermon a little longer, brief accounts of the wickedness of Pharaoh, the people of ‘Ad, Thamūt, and the generation of Noah are added. The keynote of the address is probably to be found in v. 52: “There never came a Messenger unless they said: he is a soothsayer or mad.” This shews that not only had the old reproach been revived but another had been added, viz., that Muhammad was prompted by a desire for material gain. The latter he refuted in the concluding verses winding up with a threat for the wicked.

If the narration of the strangers’ visit to Abraham be examined a little more closely, we observe that Muhammad altered his original to suit his purpose. The message they brought to him with regard to the birth of a son is treated as a matter of secondary importance, whilst their chief object is represented as being to inform Abraham of their intention to destroy a wicked people among whom there is only “one house of Muslims” (v. 36). The whole is meant to represent a “sign” for those who fear the punishment.

There is scarcely a single revelation of narrative character in which the “sign” is not mentioned. This proves how keenly Muhammad felt the disappointment of being still unable to perform a miracle. Hence the employment of ḍāʿa, the term for “sign” also for “verse.” The “sign” is the main object of all the Meccan sūras following and many Medinian ones. Not less than ten Meccan sūras, all of which are narrative, begin with the words: “These are the signs of the manifest Book,” or something similar. A veritable lecture on the sign is

---

81 Cf. S. lxvi. 1 more in detail.
82 To this rule even S. xii. makes no exception, e.g., v. 34, 38, 40, etc.
83 See Ch. VIII.
84 V. 10 ḍāʿa; cf. lxxxv. 4; lxx. 16; lxiv. 19, 20. Nohl, l. c. p. 83 regards v. 21 sqq. as a later addition.
85 Waṣḥat Muhammad, etc., p. 119 sqq. Beidh, draws attention to the grammatical character of ḍāʿa, which is used for sign, and plur. alike. It is possible that Muhammad chose a singular form on purpose with respect to Gen. xviii. 3, which gave the Jewish commentators also opportunities of attaching remarks to it. — Another direct reference to the original is to be found in v. 20 ḍāʿa = ḍāʿa ṭīḥa; ibid. v. 9.
1 Application of v. 39.
2 Cf. I. Isr. p. 1000 and the interview of Othba with Muhammad; cf. Nohl, p. 185 sqq. and Qor. xii. 1 to 3; xxxvii. 86.
3 Meccan S. x. to xv. lxvi. xxvi. xxvii. xxxi.; Medinian: xxiv. xlii.
Sūra xxvi., which is as elaborate as it is methodically constructed. In the beginning the speaker describes his mental condition as follows: 4 —

1. Those are the Signs of the manifest Book.
2. Haply thou art vexing thyself to death that they will not be believers.
3. If we please we will send down upon them from heaven a Sign, so that their necks shall be humbled thereto.

This most impressive introduction 5 is followed by a very detailed relation of the message of Moses to Pharaoh. As credentials he and Aaron receive Signs in word and deed similar to Exod. iv. 1-17. They perform their task to the astonishment of all present, and lead the Israelites through the sea. The tale ends then with the same words as v. 7, which return regularly as refrain after the stories of Abraham, Noah, 'Ād, Thamûd, Lot, and Sîn. The appearance of each prophet being connected with a “sign” wrought upon the people to whom they were sent, was to prove to the Meccans that Muhammed’s knowledge of those facts was miraculous, and therefore likewise a “Sign.” This can be inferred from the following words:

v. 192. And verily it is a revelation from the Lord of the worlds.
193. The faithful spirit came down with it.
194. Upon thy heart, that thou shouldest be of those who warn.
195. In plain Arabic language.
196. It is [to be found] in the sūra of the ancient. 7
197. Shall it not be a Sign unto them, that the learned men of the children of Israel recognize it.

There is an obscurity in these verses which is intentional rather than accidental. Such strange things as the sūra and “the faithful Buh” were better left unexplained as food for general contemplation and wonder. The assurance that the revelation had been brought down “in plain Arabic language” did not help to make matters clearer, nor did it follow that everyone understood it. It is, on the contrary, an endeavour to hide the un-Arabic look of the whole paragraph. The same assurance is repeated about half a dozen times in the next few years, 8 and three times at the beginning of addresses. As a Sign must also be regarded that already “the learned of the children of Israel” know it. 9 This is as vague an expression as can be, since, as we have seen, the Children of Israel were for Muhammed only a historical reminiscence and nothing more. The Meccans were the last to know anything at all about them.

The verbosity of Sūra xxvi. is in itself a sign of the severe struggle which raged in the bosom of the Prophet. He saw himself compelled to amend the deficiency in quality by quantity. He represents himself as being sent to warn his nearest kinsmen and to spread his

---

4 As to the initials see Ch. XIII.
5 V. 6 descriptive. — The verses 7 to 8, 9 to 18, 10 to 11, 12 to 12, 13 to 14, 15 to 16, 17 to 18, 19 to 12, 13 to 14, 14 to 15 do not form a single narrative which include the seven narrations. The intervals (9, 10, 11, 12, 13, 14, 15 verses) are so unequal that this sūra does not give much to support O. H. Müller’s assertion. — C. p. 49 sqq. — It is to me more than doubtful that Muhammed, in the composition of this sūra, followed any tradition of earlier times. The sūra has a second refrain, etc. v. 196, 197, 198, 199, 200: “I expect no reward.”
6 ʿAlī, s. v. 198. In theolder passages ʿAll (سورة) is only mentioned in the connections with the angels (اپه); cf. S. xxi. 4; lxx. 1; xxviii. 38; cf. also xxi. 2 (and standing alone, xxviii. 79). ʿAll (سورة) without ʿAll (سورة) lxx. 28; xxviii. 79. All these passages do not go beyond the declaratory period. Al-Râzî in, of course, the same as in Exod. xxi. 3, etc. — The name of the sūra is not mentioned until xxi. 106 (descriptive). The original Arabic form is ʿAll (سورة).
7 ʿAlī, s. v. 199. The verses 79 to 84 appear to be a reflex of various paragraphs from the Jewish prayer called “Amidah, or “Eighteen Benedictions.”
8 xx. 112; xiii. 1; xli. 1; xxi. 2; xxv. 29; xxvii. 11; xvi. 105; liii. 2. See Ch. I. p. 8.
9 Suffic in ʿAll (سورة) refers to ʿAll (سورة) (v. 199).
wings over all those who follow him in belief (v. 214 to 215), but is not responsible for the perdition of the disobedient (216). These words betray more self-confidence than real potency. Muhammad was hardly able to protect himself, much less others, and, indeed, he could not have succeeded in giving shelter to one of them, had they not enjoyed the protection of influential families. It is therefore better to take v. 215 purely in a spiritual sense, with which the admonition of v. 217, to put his trust in Allah, agrees very well.

If one peruses the narrative revelations, it is soon perceived that these are of two classes. Some there are which name quite a number of prophets, to each of whom only a few verses are dedicated, whilst others mention but one or two alone with far more detail. Yet even those of the latter class seldom give complete biographies, but are contented with one or two episodes out of the life of the prophet under discussion, whilst they save other noteworthy incidents concerning the same prophet for other occasions. Thus it happens that larger episodes of the lives of men like Abraham, Moses, and Jesus are scattered piecemeal through the whole book. Muhammad exercised a wise economy in not exhausting his material too quickly in order to sustain the interest of his hearers with an ever fresh display of learning.

The narrative element is so essential, that it must be carefully investigated especially with regard to its bearing on Islam in general. Since the bulk of it belongs to the Meccan portion of the Qur'an, we may conclude that those who had the greatest influence on Muhammad's theological views, were the persons who are oftenest discussed. Now the foremost of these is Moses who is mentioned about twenty times; then follows Abraham with fifteen, Noah, Lot, and John with ten to seven. The birth and mission of Jesus are mentioned in the Meccan sūras only twice, but both times without acknowledgment of his divinity (xix. 35; xlili. 89-9). This proves that Muhammad was little influenced by the New Testament. In the face of this fact Wellhausen's assertion, that Christianity had sown the seed of Islam, is untenable. Nor was it Judaism, but Messianism of which Islam is a weak imitation. Therefore Moses and Abraham are frequently placed before Believers as the representatives of an uncompromising monothecism.

Here again method and systematic dealing manifest themselves, and out of the apparent chaos of incoherent stories emerge distinct forms which Muhammad has set up as his models. It is not accidental that those who appear next in frequency to Moses and Abraham are Hūd and Sālih, the two legendary prophets of 'Ad and Thamūd, because they are taken from the history of Muhammad's own country; nor is it even by chance that the latter is mentioned not only alone, but earlier and more in detail than the former, probably because the ruins of their dwellings in Al Hijr were known to all travellers.

Typical of older narrative sūras is liv. Beginning with a solemn reminiscence of the declamatory period it announces that "the hour is near and the moon rent; although they might now see a Sign, they would turn away and say: 'deception without end'!" Subsequently the speaker mentions the people of Noah, 'Ad and Thamūd, without, however, stating the names of the apostles belonging to the two last, a proof that Hūd and Sālih have allegorical meanings, i.e., Penitent and Fious. Sin and punishment of Thamūd are more minutely described than of the others, including Lot and Pharaoh. The narrator also bestowed a certain amount of care on the forms. The stories are divided into paragraphs each ending with a refrain which runs:

16. Then how was my punishment and my warning.
17. We have made the Qur'an easy as reminder — but is there anyone who will mind?16

16 I believe the sermon ended v. 220, whilst v. 221 to 228 form an independent address.
11 The number of prophets mentioned in the Qur'an, is five and twenty (IQân, 796), whilst there occur about forty names of persons.
12 Böcher's "Dech even zis schon is wrong.
13 "plur. of ژان; cf. Ch. II.
14 V. 21 to 22, 23, 40. Also here I can see no strophes, as the paragraphs are of very unequal length. Besides the refrain in Vv. 30 to 43 is interrupted by v. 31, which describes the punishment of the Thamūd. The whole is a rhetorical play. Palmer omits the refrain several times.
Sûra xxxvii. begins with a completely declamatory introduction to support the proclamation of the Unity of Allâh. Signs would be disregarded by the infidels who hold that death is the end of everything.16 "When they are told, there is no God beside Allâh, they behave haughtily and say: shall we forsake our gods on account of a mad poet?" (v. 3414 to 35)? This charge which had evidently not died out yet, provided Muhammed with another opportunity of a very realistic description of the pleasures of Paradise and the tortures of hell.

After this hemistic overture follows the essential part of the lecture which is of narrative character. Having briefly mentioned Noâh, the sermon proceeds to relate the rabbinical legend of Abraham's adventure with his father's idols.17 On this occasion the speaker treats on an episode in Abraham's life differing from that given in Sûra xxvi. Whilst the tone in the latter is solemn and pathetic, the former is anecdotal and in part even satirical. Abraham taunts the idols as well as their worshippers, and the latter construct a furnace into which he is thrown. Being rescued by divine interference, Abraham recites a prayer and receives tidings that "a son" is to be born unto him.18 In a dream he is commanded to sacrifice his son (v. 101 to 104), but finally he is absolved from performing this painful task and is rewarded for his obedience.

In the course of the sermon Moses and Aaron are alluded to, and Muhammed hurries on to introduce a new personality in the figure of the prophet Elijah.19 The citation of this man in the Qurân has another interest for us, as the worship of Ba'al is mentioned in connection with his name.20 There can be no doubt, that Muhammed's acquaintance with the history of Elijah could only have come from Jewish sources, as ba'al in Arabic is only known in its original meaning of husband.

It is rather confusing to find in this part a few verses devoted to Lot and his wife,21 but Muhammed had another new person to introduce, viz., Jonah. We read about his adventures on the ship, his being swallowed by a fish, his illness,22 his guard, and his mission to hundred thousand23 people who are saved from destruction by embracing the true faith. — A general feature to be noted in the latter part of the sura is the refrain which terminates the account of each messenger in the words: Peace be upon N., N., etc., which at the end of the sura is repeated in a more comprehensive manner thus: Peace be upon the messengers, and praise to Allâh, the Lord of the worlds.

13 Of v. 51 and xlii. 34 opposed to v. 56; see Ch. III.
14 The passage is one of the two expressing the Dâr, see Ch. II.
15 The anecdote is reported in full by Geiger, l.c. p. 129 seqq. — Moslem theologians of the Zahrîte school (see Goldschiâfer, die Zahrîte, p. 118 seqq.), which interprets the Qurân strictly according to its literal sense, are greatly concerned about several apparently sinful sayings and doings of Biblical persons. Ibn Haam, therefore, takes the trouble to remove these difficulties. Abraham, he points out, made several mistakes, viz., S. xxxvii., 97; vi. 76; xxi. 64, to which Ibn Haam adds Abraham's statement that Sarah was his sister. The last statement does not occur in the Qurân, but Ibn Haam must have learnt it from a private source, which did not reveal him Gen. xx. 12. As a consequence of his rigid method of exegesis Ibn Haam's explanations are rather hair-splitting. In a similar manner he treats Adam's disobedience, Noah's error (ê xi. 47), and Lot's impious remark (ê xi. 86). The untruth Joseph's brothers told their father (ê xi. 8 to 18) is dismissed with the declaration that they were not prophets. In the same way Ibn Haam speaks of the transgressions ascribed to Moses, Jonah, David and Solomon (p. 335 to 337).
16 This son is not Isaac but Israel, as the former is mentioned, v. 112 sq.
17 Mentioned only once more (v. 85).
18 Baghawi 59 who Muâmm lâm lâm kawâna yâjîdâhâu laâlâ tahmîsin minbâdîm biwâlîk qâlihuma min âmmârat wâkîna wâlîm hâlalâb, ilâmake laâlâ hâmâr biwâlîk qâlihuma min âmmârat wâkîna. In the Qurân itself occurs several times in its original meaning husband (pl. p. 597; xi. 73). Sûra xi. 73, 75, however, seems to be translation of (Gen. xviii. 12) we mâna. The assertion of Al-Baghawi that lâlâ means in the dialect of Yaman must be of no consequence, as the original meaning of this word had then already undergone great transformation.
19 V. 135 is exactly like xxi. 171. The wife is not mentioned any more.
20 Jonah iv. 8, 9, 10.
21 V. 109, 120, 130, 181.
Of very similar construction is Sura xliii. The "Book" was sent down in "a blessed night." Then follows a rhapsody ending with the words: There is no Allah beside Him; He quickens and kills. (He is) your Lord and the Lord of your fathers. — The reproach that Muhammed is only "a trained madman" (v. 13), is refuted by the reproduction of a story of Pharaoh to whom "a noble messenger" came who was in fear of being stoned (v. 19). This is evidently a reflex of Exod. viii. 26. Then follows the rescue of the Banu Israel "whom we have chosen" on account of our knowledge of the world (v. 31), and gave them the signs. — The objection raised by Meccans that man dies only once, is met by reminding them of the fate of the people of Tobba, whose history was sufficiently known in Arabia. — The address is then concluded by a description of hell, particularly of the tree Zaqqum, which is in so far significant, as it is mentioned in two preceding addresses.

I here add Sura xxxviii., the revelation of which, according to some commentators, stands in close connection with the conversion of Omar. V. 5 evidently refers to the final seclusion of the Qoreish who remonstrated that so complete a repudiation of every polytheistic relic was unheard of in "the last religion." This paves the way for the argument that also the people of Noah, Ad, and Pharaoh ("the man of the stakes") had refused to become believers, as well as the Thamud, the people of Lot, and of Al Aika. Quite a new personality is introduced in "our servant David, the man of power." The mountains and birds which praise (Allah) with him are reflexes of verses like Ps. cxvi. 11 to 12, cxviii. 8, etc. The fable related in 2 Sam. xii. 1 to 6 is reproduced by Muhammed in the light of a real incident, but is evidently confounded with 1 K. iii. 27. Another novelty is the introduction of Solomon, whose love for horses (1 K. x. 28) is hinted at, as well as his predilections for enjoyments as shown in Eccles. Ch. ii. The building of the Temple remains unnoticed, although Muhammed, a little later, alludes to his nightly journey to the same, but the rabbinical legends of Solomon's rejection, repentance, and his dominion over spirits are touched upon, being more entertaining.

New likewise is "my servant Job" (cf. Job xlii. 7 to 8) who is told by God to stamp with his foot, and a spring gushing forth from the ground should cure him of his disease. There exists no Biblical or rabbinical equivalent for this, but I believe Muhammed had the story of Naaman, whose leprosy was cured by bathing in the Jordan, in his mind (2 K. v. 10 to 14). An allusion to this was in so far very appropriate, as the Syrian general had been under the impression that the prophet Elisha (mentioned below) would apply a charm to free him from his disease, and the confusion of the two cases is therefore probable. Subsequently we meet "our servants" Abraham, Isaac, Jacob, Ismael and Elisha. Who Dul-Kif may be, cannot be made out. The name owes its origin apparently to some misreading on the part of Muhammed of which we have had several instances.

The lecture ends in a sermon on the paradise, "the day of reckoning" and hell. The verses which follow are of special interest; I therefore give the translation.

v. 65. Say: I am only a warner, and there is no god beside Allah, the One, the Victorious.
The Lord of the heavens and the earth, and what is between them, the Mighty, the Forgiving.

Say: It is a grand story, (68) but ye turn from it.

I had no knowledge of the exalted chiefs when they contended.

Now the last verse contains a bold statement. Muhammad pretends to have been till then unacquainted with a discussion which took place between the heavenly hosts concerning the creation of man. What he really did know was a rabbinical legend on this subject, connected with Gen. i. 26 (“let us make”), but he did not reveal it fully until a Medinan sermon (ii. 28). In this place he confines himself to reproduce, in Biblical terms, the divine intention of creating man, to which he adds the rabbinical tradition that Adam being superior to the angels, the latter had been ordered to pay homage to him. Satan, however, refused to do so, and was cursed and banished. In conclusion Muhammad found it necessary to repeat that, like previous prophets, he asked no reward for his ministry, nor was he prompted by mercenary motives. This assertion, which no one will deny, was meant to place him in contrast to professional soothsayers, and could not but be useful to him.

We now come to a batch of sūras, which are distinguished by certain features which they have in common. They have no declamatory prologue, and the refrain, which marks the paragraphs, is also missing. Finally they all begin with reference to the “Signs of the Book and a manifest Qurān.” Of these revelations I mention first Sūra xxvii. 4 to 59, in which the refrain has not been omitted entirely, but is visibly disappearing. After a short introduction of irrelevant character we hear quite a new story, viz., Moses' vision of the burning bush. He is instructed how to perform the two signs, which shall be among the “nine Signs” (to be shown) to Pharaoh and his people (v. 12). Subsequently David is mentioned, then Solomon, who informed mankind that he had received the power of understanding the speech of the birds (v. 16). In the same sermon the speaker inserted the history of Solomon's meeting with the Queen of Sheba in legendary form, which in the following generations has developed into a beautiful fairy tale. It is interesting to observe that Muhammad puts the formula of Unification into the mouth of the hoopoe. A few verses later we come across the formula which Muhammad subsequently placed at the head of all documents, and which also stands at the beginning of each sūra, and since heads every book or document written by Muslims. — To this story are attached short accounts repeating the missions of Shīb, the prophet of Thamād, and of Lok.

Sūra xxviii. having no other beginning than the verse mentioned above, at once proceeds to relate the history of Moses. Pharaoh (v. 2) is charged with oppressing the inhabitants of the earth by slaying their sons and outraging their daughters; he and his adviser Hamān must therefore be punished. Moses' mother is advised by Allah to nurse her child, and if she fears for his safety, to throw him into the sea without any misgivings. Pharaoh's men find him in the water, but his wife takes great liking to the boy, and persuades the king to adopt him.

---

62 Spreeger, li. 216, regards v. 68 to 70 as belonging to the time when the mentor had disappeared; cf. p. 236.
63 Baghd. See 'Irashāth Rabīd to Gen. i. 26.
64 V. 29; cf. (v. 29 and) Gen. ii. 7.
65 Cf. above.
66 Only v. 14 (not after v. 45); v. 52 is an echo of xxvi. 7. v. 69-95 form an independent address, beginning, and ending with the ascribed to Allah.
67 Confused with the seven plagues which are called ṣawwān. Exod. vii. 2; x. 1.
68 V. 29. The words 'alā al-ṭurūq evidently form an intentional contrast to v. 28.
69 V. 60-61. I believe this piece forms a separate sūra belonging to the descriptive period, cf. 10!
Moses' mother is well pleased, and appoints her daughter to look after the boy. Muhammed evidently forgetting that the latter was already with the royal couple. The child refusing to be fed by a native woman, his sister offers to find a place where he could be reared, and subsequently he is sent to his mother's house. He grows up, and kills the Egyptian, but repents his transgression (6 to 16). The next verses (17 to 18) read almost like a translation of Exod. ii. 13 to 14. An unknown man from "the remotest end of the city" warns Muhammed against the danger which threatens his life. Afterwards there is a great confusion in the narrative. Muhammed flees, and meets two women whom he assists in watering their flocks. These are not only confounded with Lot's two daughters, but also with those of Laban, since the father of the two girls, whom he had assisted, offers him one in marriage on the condition, that he serves him eight or ten years. Then follows the vision of the burning bush, and Muhammed receives his call (v. 29 to 33). Pharaoh's command to Haman to build him a tower on which he could ascend to Muhammed's God is evidently a reflex of Gen. xi. 4, Isaiah xiv. 13, and perhaps also Esther v. 14.

In none of the preceding accounts of Muhammed's mission was allusion made to the revelation on Sinai. This does not seem to be accidental, since Muhammed was well acquainted with its history, but reserved it for use on another occasion. An opportunity soon arose for alluding to the scene, but he did not reproduce the Biblical tale, because, to judge from v. 43, several Meccans knew it already, and wished him to arrange a similar ceremony. Being unable to comply with the demand, he at least gave a clever answer, asking whether Muhammed himself had not met with disbelief.

Now in contradiction to earlier theories concerning man's own responsibility, we read here among observations attached to the story in question that "Allah does not guide the wicked." This maxim subsequently gained preponderance over the other, and was adopted by the orthodox school. The long sermon of contemplative character, which then follows — and in which the Creed is repeated twice — is broken only by a remark on Qur'ān's rebellion, and the fabulous wealth attributed to him by the Talmudical tradition.

It would be both irksome and unnecessary to analyze every sūra which belongs to this group, and we must therefore be content to draw the main features of each. Sūra xv. repeats after a homiletic introduction the story of the disobedience of Iblīs (Satan, 28 to 50), and then proceeds to relate the visit of the angels to Abraham (51 to 77). After this the people of Al Aika are briefly mentioned (78 to 79), and the "people of Al Hijr," viz., the Thamūd, whose sepulchral caves (v. 82) Muhammed mistook for houses (80 to 86). A short sermon closes the sūra.

A visible effect must have been produced on the hearers by these tales, which not only increased Muhammed's eagerness to recite them, but also induced him to arrange them more carefully for this purpose. Nor did he fail to prepare his hearers for an extraordinary treat, when the story they were going to be told, promised to be of unusual interest. Now an incident had occurred which spurred Muhammed to show his histrionic talent in its best light. Tradition relates that Al Nadhīr b. Hārith, one of the Prophet's bitterest enemies, endeavoured to outrival Muhammed's stories by telling the Meccans the adventures of Persian heroes. Al-Nadhīr himself, accompanied by Qūba b. Abu Mo'ātī, were sent to Medina in order to make enquiries about Muhammed's prophetic powers of the Jewish Rabbis of this town. The latter

---

70 V. 23, 36, 37, is evidently translation of Gen. xix. 31. Geiger overlooked the double confusion.
71 Cf. xl. 28 to 29 more elaborate than x. xxviii. 38 and therefore probably later.
72 V. 44 to 46.
73 V. 48.
74 V. 50 to 53; cf. Ch. III.
75 V. 70 and 88.
76 Cf. Doughby, Notes et Variétés, xix. p. 473.
77 V. 87, "seven of the mabāthiš"; cf. Geiger, l. c. p. 58. V. 98, invites to joining the preacher in prayer.
are said to have given the messengers certain queries to be put before Muhammed who replied by narrating the stories of the Seven Sleepers of Ephesus, contained in Sura xviii. 69

However sceptical our attitude may be towards this tradition, thus much is true, that Muhammed was somewhat downhearted, when he began this sermon. "Haply, he says (v. 5), thou grievest thyself to death after them, if they believe not in this (following) communication." It is very probable that the rivalry of Al Nadhr in entertaining his followers with the attractive tales of daring deeds made his spirits sink. The story of the Seven Sleepers (v. 8 to 23) which he related, was by its miraculous character not only calculated to outdo tales of the most perilous adventures, but was introduced by the words of Allah (v. 12) "We relate unto thee their story in truth." A homily attached to the tale takes the form of two parables. The following piece (v. 48 to 58), recapitulating the disobedience of Ibis, is perhaps directed against Al Nadhr, especially the second part of v. 48. The fabulous journey of Moses and his servant (v. 59 to 81) which then follows, is, I believe, based on that of Tobias, interwoven with anecdotes heard elsewhere. The series of tales ends with an account of the journey of the "Two Horned," generally supposed to be Alexander the Great, who is requested by a people of strange speech to protect them against the encroachments of Jâjâ and Mâjâ. 68

The finest and best rounded tale in the whole book is the recitation styled "Yasul," which fills out Sura xii. Muhammed begins with the reference, quoted above, to "the Sign of the distinct Book," and proceeds again: We will relate to thee the finest of stories with which we reveal to thee this Qurân. The harmony of the composition is, however, impaired by the daring assertion (v. 103).

"This is one of the stories of the unseen which we inspire thee with, though thou wert not with them when they agreed in their affair, when they were so crafty — and yet most men, though thou shouldst be urgent, will not believe." — Another new tale, the birth of Jesus, is related in Sura xix. Muhammed tells of nothing but the nativity, because he regards the Founder of Christianity in the light of a monotheistic prophet alone, and quotes only such teachings as relate to his mission as a servant of God. He is in possession of "the Book." He is a blessed prophet, charged to teach the propriety of praying, giving alms, honoring parents, and the hatred of oppression. On ecumenical failure to be stick-straight with the careful manner in which Muhammed weighed each word when lecturing on this delicate subject, and we have here the best opportunity of noticing, how conclusions may be drawn from things which he left unsaid as well as from those which he said. Vv. 34 to 36 show clearly the attitude he adopted towards the New Testament. In v. 38 he speaks of the various sects and their differences. 70

The story of Jesus being rather short, Muhammed reverts to the history of the Patriarchs. Moses, Aaron, Ismael (v. 55), Idris (v. 57), Noah, and "his descendants Abraham and Israel." 71

68 See J. Q. R. Vol. X. p. 106 sqq. 69 Cf. S. xxi. 2. 70 See Ch. VIII. 71 "They are foes of yours," etc.

Geiger, l. c. p. 171, confesses that he is unable to discover the sources of the story. It is to be remembered that Moses bears in Talmudic tradition the name of Tobias (S. 36, fol. 127b). According to Iqân, p. 793, the Ma'm of this story is not identical with the Biblical Moses, but is a son of Manasseh, which is evidently confused with Exod. vi. 19. — There is another explanation possible. According to a Rabbinic legend, R. Joshua b. Levi, a famous Talmudic authority, meets the Prophet Elijah, who journeys with him through paradise and hell. In a parallel Moslem tradition by Al Bokhari (ed. Krehl, Ill. p. 276) Moses and Joshua b. Nun meet Al Khidr (the prophet Elijah), who advises them on their journey. Now while the Rabbinic legend is focussed round the person of a Rabbi (who from a collector of legendary traditions became their hero), the Moslem counterpart of the same tale clung to the better known Biblical Joshua, whose master Moses became the chief person concerned in the legend.

68 Noldke, l. c. p. 106, seems to have given the right explanation of the name. 71 V. 2, "Arabic Qurân.

Gen. x. 2; Ex. xxxvii. 2; xxxix. 6.

70 V. 34 refers to the resurrection of all flesh in Messianic times, or Muhammed would have stated otherwise. Cf. Luke 20, sqq. and S. xli. 57 to 59.

71 Cf. xliii. 67; fuller definition of āmūzāb is given in xxxviii. 12, xi. 5.

72 For the etymology of the name see Geiger, l. c. p. 106; Iqân, 793.

73 V. 59; Gen. xxxii. 23 was evidently not known to Muhammed.
A conspicuous feature of this sūra is the employment of the term Al-Rahmān for Allāh no less than eighteen times. Spranger is of opinion that the term stands for Christ. This is however, impossible, since Maryam herself places her hope in Al-Rahmān before Jesus is born (v. 18). Besides most of the passages in which that name occurs treat of other prophets.

If the Syrian Christians employed raḥmānū for Jesus, they did the same as the Jews did in speaking of God. Al-Rahmān in the Qurān is therefore nothing but a synonym for Allāh or Al-Rabb. As long as Muhammad lived in Mecca he treated the name Isa (Jesus) as one belonging to an ordinary mortal, and it was only when he came to Medina, and had nothing more to fear, that he substituted Al-Masīh for it. On the other hand Al-Rahmān is scarcely used at all after the narrative period, since it is rare in the descriptive group. In Medinian revelations it is only mentioned twice (ii. 158, lix. 22); both times in the earlier revelations of this epoch, and used as an attribute in the Creed, and not as name at all. Muḥammed explains this clearly in Sūra xvii. 110, where he characterizes Al-Rahmān as another word for Allāh, because the Meccans had charged him with adoring two gods. In another place Al-Rahmān is identified with Huma (xiii. 29), and cannot therefore be due to Christian influence at all.

Muḥammed could not conclude his sermon without referring to the doctrine of the fatherhood of Al-Rahmān (v. 91 to 93).

The brief account of Jesus given in Sūra xix. is supplemented in Sūra xliii. 14 to 15, but in a rather antagonistic spirit. Subsequently Abraham and Moses are quoted as examples of true servants of Allāh, after which the discussion on Jesus is resumed.

Very similar to the preceding two sūras is Sūra xxi. both as regards matter and composition. The chief subject of discussion is the Unity of Allāh which Muḥammed, as intimated above, endeavours to demonstrate by way of syllogism. V. 23, "He shall not be questioned concerning what He does, but they shall be questioned," is a reflex of Job ix. 12 (Eccl. viii. 4) a verse made popular through insertion into a Jewish prayer for the Day of Atonement. V. 25 we have mentioned as one of the early attempts to formulate the Creed; v. 26 re-echoes the verse xliii. 59, v. 27 ("they do not speak until He speaks, but at His bidding do they act") is a distinct reflex of Ps. cxxii. 20 to 21. The whole passage together with the words "they shrink through fear" (v. 29) may be borrowed from the Jewish morning prayers preceding the reading of the Sūra, since there can hardly be any doubt, that the Jews in the Hijaz recited the same every day. In spite of these purely theological observations, to which may be added the denial of man's immortality (35 to 36), the narrative character of the Sūra is maintained in the second half. Moses and Aaron are briefly stated to have received the Quran (v. 49). This word which occurs here for the first time, stands for Törēh, as it does in all Medinian revelations, excepting S. viii. 42 where it maintains its Aramaic meaning "victory." Muḥammed evidently confounded the latter signification with that of Perāqīn into which the Pentateuch was divided for liturgical purposes, and which also guided the interpretations given to the word by the Muslim Commentators. The rest of the Sūra is taken up with tales of Abraham and other Biblical characters. In v. 105 Muḥammed shows his acquaintance with the Psalms by quoting Ps. xxxviii. 29. 85

93 Cf. S. xvii. 107, 111; the resemblance is more noticeable in the spelling than in the pronunciation.
94 See Spranger, II. p. 196 (misprint for Ps. xxxviii. 29) and S. xxi. 105. The Hebrew text has not "śaddāk" but ʿśēḏādām.
The foregoing sura is a fine example of Muhammed's endeavours to relieve the monotony of narrative sermons by introducing meditations on all sorts of subjects. The same policy is observed in Sura xiv., which begins with the remark that no messenger is dispatched except he speak the language of his own people (v. 4). This is a variation of the phrase "Arobi Korán" usually employed. Another and still more noteworthy feature of the sura is that it is rich in parables, which are of Jewish, and indirectly of Biblical, origin. The merely narrative element in the address offers nothing new, except that Abraham prayed to Allah to make "his house (Mecca)" safe (v. 40).

Sura xx. is more drawn out. It begins with a very detailed account of the message of Moses, which is so far of interest, as the Israelites are reminded of the covenant received "on the right side of the mountain" as well as of the Manah and quails. The description of Allah as "Living and Eternal (alhayyu olqayyimu)" is new. An account of Adam's sin and forgiveness with the admonition belonging to it close the sura.

Sura xi. commences with a sermon in which the speaker alludes to the creation of heaven and earth in six days, and "His throne upon the water" (v. 9). Now it appears that one circumstance mentioned above, viz., that the stories relating to one and the same person were rich in variations, had given rise to the suspicion that Muhammed took liberties with the facts. This reproach he endeavours to refute in v. 15: "Haply thou art leaving part of what is revealed to thee and thy breast is straitened thereby, lest they should say: why is not a treasure sent down to him? or why did not an angel come with him? thou art only a warner, and Allah is guardian over all."—16. Or they will say: he has devised it. Speak: Bring ten Sûrahs like it devised, and call upon whom ye can beside Allah, if you do tell the truth, etc."

This challenge we have already discussed, as also the theological dogma derived from it. A rather stale parable (v. 26) closes the homiletic part of the sura, which then becomes broadly narrative, and takes its name from the first prophet mentioned in it, viz., Hud. His story (52 to 63) is followed by that of Salih (64 to 71), Abraham and Lot (72 to 84), Shoeib (85 to 98), and Moses (99 to 112). A feeble attempt at a refrain is made by repeating the admonition placed at the beginning (v. 3): "Ask pardon of your Lord, then return to Him" three times. This is a proof of the unity of the sura. At the conclusion Muhammed receives the assurance that all these stories had been revealed to him in order to strengthen his heart (v. 121).

In the following suras the narrative element is visibly on the decline. To these belongs S. xxxiv. in which only the first portion (v. 1 to 20) contains references to Biblical persons and is otherwise partly descriptive, partly homiletic.

Several portions, of which Sura vii. is composed, belong to the latest revelations of this period, and are only welded together by a common rhyme. The usual introduction calculated to attract the attention of the hearers contains the phrase (v. 6): "Now let us narrate to them the Meccans' knowledge, for we (Allah) were not absent." In a mixture of narrative and descriptive style the creation of the earth and man is touched upon, followed by a repetition...
of the fall and expulsion of Adam and his wife from paradise (1 to 24). This gives an opportunity of apostrophising the "sons of Adam" into paragraphs of exhortative character with reference to their past life. The middle portion of the sûra contains a succession of tales dealing with Hûd, Šâlih, Lot and Shooib (v. 57 to 100), and closes with the repeated assurance that the knowledge of all this is of divine origin. After this, and evidently belonging to the same piece, follows a long account of the mission of Moses. It is interesting to note that Muhammed mentions five plagues or "Signs" (v. 130), viz., the flood (either confounded with that of Noah, or the drowning the Egyptian army), locusts, lice, frogs, and blood. Muhammed's information on this subject was, however, so deficient, that later on he confessed them with the "nine and manifest Signs," which Moses performed before Pharaoh. Otherwise the narrative closely follows the lines of the Biblical original. The piece comprehending v. 186 to 205 being an independent homily on the "Hour," and stated to have formed one of Muhammed's answers to Al Nadhr b. Al Ħârith, was probably placed here on account of v. 194 being similar to v. 178. The sermon to which the latter belongs is, however, Medinian. It contains a historical outline of the evolution of man from one pair and the child born to them. The words of v. 189 "they called on Allâh, their Lord" recall Gen. xxv. 21 to 22. V. 198: "Ereavour to pardon command that which is merciful, and shun the ignorant" represent the first attempt to formulate a sentence, and this became subsequently of great importance both in theology and jurisprudence. V. 294 has some slight resemblance to Deut. v. 5 to 7, whilst the last three words, of the sûra also recall a phrase of the Jewish prayer book.

Apart from the first vision of Muhammed (spoken of in Ch. III.) he now tells of a second, namely, his nightly journey to the Temple in Jerusalem, which under the name of the râdâ'î has become famous in Musalm tradition. This forms the beginning of Sûra xvii. which was, I believe, very short originally, and only assumed its present bulk through the insertion of large pieces belonging to the following Meccan periods. The mention of the Temple in Jerusalem (v. 1) gives Muhammed an opportunity of surveying briefly the two chief phases of the Israelitish history (v. 2 to 8). The concluding part of the sûra (v. 103 to 111) is narrative, although entirely disconnected from the first piece, whilst several words in v. 166 running parallel to v. 7 and v. 108 to v. 5 show the reason why these two pieces were put in one sûra. Here is to be placed Sûra lixiii. 15 to 19. According to the Commentators v. 110 (of S. xvii.) was misconstrued by the infidels into a charge of dualism. This suggested the revelation of the doctrine that "the most beautiful names" were those of Allâh (fîbîd.), of which the legend counts not less than ninety-nine besides "Allâh.”

Sûra xi. is of equally compound character, the portions 1 to 6, 24 to 35, 38 to 59 being narrative. Pharaoh is here not represented as a historical figure at all, but stands as the prototype of a wicked and daring person, combining the characteristics of Nimrod and Nebuchadnezzar. The verses 36 to 37 stand for themselves to represent Joseph as a prophet, thus supplanting Sûra xii. in a very important omission. The prophethood of Joseph is evidently an afterthought, as through the romantic character of his history Muhammed had neglected to stamp him as a prophet. For the rest of the sûra see below.

66 V. 26, 28; v. 29 and 33 are younger and only placed here on account of the same beginning.
67 V. 301 .
68 V. 154 = Exod. xviii. 26 (together with Numb. xi. 24) (footnote 74) 69 See above.
70 See below.
1 See Palmer, L. p. 181, rem.
2 Cf. Mierafi.
3 Bend the knee and prostrate and give thanks.
4 Cf. Misdâz and Sprenger, II. 527 sq.
5 The verse treat also of Pharaoh; cf. v. 18.
7 The phrase "O my people," "v. 50, 51, 54 and again vv. 41, 42, 44.
8 Joseph's prophethood, which distinguishes him from his brothers, is made the object of discussion by Ibn Hârm, vol. 3.
9 V. 66 seqq., an independent sermon beginning with [٥١] but placed here on account of [٦٧]
To the same period also belongs Sūra xxix. 13 to 42. From the reappearance of Pharaoh with Hāmān we may conclude that the speech in question was revealed almost simultaneously with the corresponding portion of Sūra xii. A fine parable breaks the sameness of the topics. V. 47 contains the famous assertion that prior to his ministry Muḥammad had been unable to read and write.

The second and smallest portion of Sūra x., recapitulating the missions of Noah, Moses and Jonah, shows an attempt at chronological order, which is repeated in S. xxiii. 23 to 52 with Noah, Abraham, and Moses. The piece was inserted here on account of al-fūk ("shhips," v. 27; cf. v. 22).

I have to mention here several pieces of narrative character which the compilers have inserted into Medinan sūras, but which undoubtedly are of Meccan origin. It is improbable a priori that Muḥammad should have revealed new discourses in Medina on the old topics recited during the service in the Meccan sūras, besides which the ministry of Muḥammad was of more practical nature, and it is unlikely that he would have returned to these tales. The style is the same as in the other narrative sūras. These pieces are x. 20 to 35 on ‘Ād and Moses, and ii. 200 to 210 without reference to any particular person.

An isolated narrative speech we find inserted in Sūra v., which is of Meccan origin in spite of the place allotted to it by the compilers (v. 23 to 38). It consists of two parts, the former (v. 23 to 29) giving a condensed account of Numb. Ch. xiii. to xiv. 34. The second (v. 30 to 35) reproduces Gen. iv. 2 to 9 with the aggadic already exposed by Geiger, who also discloses the source of v. 35. The next three represent probably the moral drawn from the foregoing tales, and are meant to impress Meccan foes. The punishments threatened were not executed in Medina, but they had only to choose between conversion and execution.

It was the narrative period of the Qurʾān which, as I believe, gave birth to the short sūra which heads the book and is known under the name al-fātiḥa. It consists almost entirely of verses which occur frequently in revelations belonging to this period, and which Muḥammad selected in order to form them into a short prayer. V. 1 is one of the two sentences which are used to invite the audience attending sermons to start praying, and is found both at the beginning and at the end of many discourses. It is at the commencement of Sūras xviii., xxxiv., xxxv., and xxvii. 60 which evidently marks the beginning of a new speech. In the last named sūra the phrase also ends the sermon, as it does in S. xxxvii., xvii., and x. 67 (end of a sermon) and xxxix. Sūra ii. 48 is a combination of both sentences used for the purpose, whilst S. x. 10 to 11 informs us that

10. Their prayer therein (in paradise) shall be celebrated be thy praises (sukhānaka) oh Allāh, and their salutation shall be: Peace!

11. And the end of their prayer shall be: Praise to Allāh, the Lord of the worlds!

This is quite in accordance with the instances given in other places.

The verses 5 to 6 (of Sūra i. ) appear in S. xiii. 42, xi. 59, vii. 15; xlii. 52 to 53, etc. Now although it is very difficult to fix the date of the sūra with accuracy, that given to it by Nöldeke is evidently too early.

(To be continued.)

NOTES ON AN ARCHÄOLOGICAL TOUR IN SOUTH BIHAR AND HAZÁRIBÁGH.

BY M. A. STEIN.

In September, 1892, I applied to the Government of Bengal for permission to utilize the approaching Pájá vacation for the purposes of a short archäological tour through portions of the Patna, Gayá and Hazáribágh Districts. The main object I had in view was to acquaint myself personally with the most important of the ancient sites contained in this part of old Magáda and to test by their examination the materials available for the study of its ancient topography. In the course of my preliminary labours for a comprehensive account of the ancient geography of Northern India my interest had naturally been attracted towards Magáda, both on account of the historical importance of this territory and the detailed descriptions which the Chinese pilgrims have left us of its Buddhist topographia sacra. I therefore wished to use the first opportunity that offered to obtain that personal acquaintance with the actual localities and their extant remains, which previous experience elsewhere had shown me to be of no small advantage for researches of this kind. An additional reason for the proposed tour was that it offered a convenient opportunity to visit certain ancient remains previously unsurveyed in the Hazáribágh District, upon which I had been asked to report to Government.

The proposal regarding my tour received the ready approval of Sir John Woodburn, K. C. S. I., Lieutenant-Governor of Bengal. The Local Government accordingly agreed to bear the travelling expenses connected with it and to make the services of a Sub-Overseer of the Public Works Department available for survey purposes. For the liberal assistance thus rendered to me I beg to record my grateful acknowledgment.

Introductory.—Owing to its wealth of ancient remains and the fullness and accuracy of the records left by the Buddhist pilgrims already alluded to, Magáda has since the days of Káitaka received an exceptionally large share of attention on the part of those Indian Archæologists who have worked in the Gangetic Valley. As a result of their labours, and particularly of the extensive researches of General Cunningham, we possess more or less detailed descriptions of all sites, the identity of which with sacred localities mentioned in the Chinese itineraries has hitherto suggested itself, or which have otherwise attracted antiquarian notice. The fullest and on the whole most reliable of these accounts are due to General Cunningham, and, having been embodied in various volumes of his Archæological Survey Reports, are conveniently accessible for reference. In dealing with the sites visited by me I shall, therefore, be able to restrict my remarks to the points, which have a direct bearing on questions of ancient topography, and to those objects of archæological interest, which have either been left unnoticed or been insufficiently described in the above accounts.

I commenced my tour in Magáda on the 9th October at Nawádah, which, as a station on the newly-opened South-Bihar Railway and the headquarters of a sub-division of the Gayá District, formed a convenient starting point for a visit to the series of old localities ranged along and between the Rájgir chain of hills. Thanks to the kind attention of Mr. E. W. Oldham, C. S., Collector of the Gayá District, I found ample arrangements for transport awaiting my arrival and was hence able to march without delay to Giryek, at the eastern extremity of the Rájgir range.

Giryek : Indrásailaghá.—The archæological interest of Giryek is due to the fact that the rugged hill rising immediately to the west of the village, can be shown beyond all doubt to be identical with the Indrásailaghá mountain of Huen Tsang and Pá-hian. It was sacred to Buddhist tradition as containing the cave in which Buddha had answered the forty-two questions of Indra, Lord of the Devas. This identification, first proposed by General Cunningham,

---

1 See Archæological Survey Reports, Vol. i. pp. 16 sqq.; iii. pp. 146 sqq.
traced in this part of Magadha, wherever prominent natural features of the ground assist us in checking the distances and bearings recorded in their itineraries.

Hsien Tsiang, whose account is, for these parts, throughout more detailed and exact than that of Fa-hsien, places the hill "of the rock-cave of Indra" at a distance corresponding to about 10 miles south-east of Nalanda. "The summit has two peaks which rise up sharply and by themselves. On the south side of the western peak between the crags is a great stone house, wide but not high." On the top of the eastern peak was a monastery and before it a Stūpa, which, from a pious legend connected with the site, was called the Hatnas or Goose Stūpa. In Fa-hsien's description, which, though far briefer, agrees in all essential points, the distance to the hill is reckoned as nine yojanas in a south-easterly direction from Pālaiputra or Patna.

The distances and bearings indicated by the two pilgrims correspond closely to the actual position of Giriyek relative to Budgaon, the undoubted site of Nalanda, and to the modern city of Patna. But more convincing proof for the correctness of General Cunningham's identification is obtained by an examination of the rocky spur in which the northern of the two parallel ranges known as the Rājgir Hills terminates opposite the village of Giriyek. Ascending from the bed of the Panchāna River, which washes the eastern foot of the spur, an ancient walled-up road, still traceable in many places along the steep scarp, leads up to the ruined Stūpa known as "Jarāśandha's seat (baitarka)." This structure, accurately described by General Cunningham, occupies a commanding position on the eastern end of the ridge, and is, notwithstanding its ruined condition, still visible from a considerable distance (see Fig. I.). About a hundred yards to the south-west of the Stūpa the ridge culminates in a small summit, which was undoubtly occupied by buildings. The thickness of the thorny jungle, which covers the summit, did not permit a close inspection. But a broad flight of steps leading up to it from the Stūpa and massive terrace walls on the west can clearly be seen through the jungle. The position of these remains corresponds so closely to that indicated by Hsien Tsiang for the Stūpa of the Goose and the Vihāra behind it, that their identity with the structures seen by the Chinese pilgrim can scarcely be doubted.

The ridge continuing further to the west gradually rises again and forms at a distance of about 400 yards a second summit covered with large rocks, many of which show flat tops and thus curiously resemble seats. It is possible that it was this natural feature, apparently not noticed in previous accounts, which suggested to the eyes of the pious "the traces on the top of the mountain ridge where the four former Buddhas sat and walked." 4

Indrasailaghā. — Descending from this point on the southern face of the ridge towards the valley which separates the two ranges of the Rājgir Hills, I reached the small cave known as Gidhadvārī, already fully described by General Cunningham. By position and appearance it corresponds exactly to the cave, which we find mentioned in Hsien Tsiang's account as the scene of Indra's interrogation of Buddha. The cave itself shows no trace of human workmanship, but at its entrance, which is reached by scrambling over some precipitous ledges of rock, there is a small platform about 20 feet in length supported by a wall of old masonry. It is useful to note the total absence of any marks that this natural fissure in the rock was once a place of worship and pilgrimage. This observation may offer some assurance with regard to the identifications we shall have to propose for some other caves to be mentioned thereafter.

Rājgir : Rājaghra. — From Giriyek I marched on the 12th October along the northern foot of the hill-range to Rājgir, the ancient Rājaghra, once the capital of Magadha and the site of many notable events connected with Buddha and his church. In view of the exceptional historical interest attaching to the locality, it is indeed fortunate that the survival of its ancient name in Brahmāna and Jaina tradition and in the modern form Rājgir has from the first assured its correct identification. But even if the old designation of the place had completely disappeared in

---

the course of a history reaching back over 2,500 years, we should find no difficulty in locating it. So detailed are the descriptions which the Chinese pilgrims have left us of the unalterable natural surroundings of the ancient capital, and so clearly marked their agreement with the position of Rājāgir.

The modern village, to which the name Rājāgir properly applies, is built on the site of the city which King Ajātasatru, Buddha’s contemporary, had founded as his residence. This city was distinguished in the days of Fa-hian and Huen Tsang as “the New Rājāgirha” from the far more ancient capital, originally known as Kuśāgarapura, which occupied the valley between the two parallel ranges of hills already mentioned, immediately south of the present village. Kuśāgarapura was a desolate waste of ruins even when Fa-hian visited its sacred spots about A. D. 400. But the five hills, which he describes as completely encircling the valley “like the walls of a city,” and the lines of ramparts still traceable through the jungle, leave no possible doubt as to the position and extent of the old capital. The new site, too, to which Ajātasatru (c. 6th Cent. B. C.) removed the royal residence, was destined to become deserted. From Huen Tsang’s record we learn that already King Aśoka changed the capital of Magadhā to Pāṭaliputra and gave the city of Rājāgirha to the Brahmans. These were the sole inhabitants at the time of his visit (c. A. D. 637), and as their number is given as only a thousand families, we see to what modest dimensions the “New City” had already then dwindled.8

Tirtha of Rājāgir.—The mention of this Brahmān population at Rājāgirha is a point which deserves special attention with regard to the historical topography of the place. It is easily explained by the fact that the site of Rājāgir has, evidently since early times, borne the character of a Hindu Tirtha. Even now a very considerable portion of the population of Rājāgir consists of Brahmān Pūrūtās living on the pilgrims attracted to the place. The celebrity which Rājāgir still enjoys, as a place of popular pilgrimage for Hindus of all sects and classes, is undoubtedly due to the numerous hot springs, which rise in and near the gorge leading from the north to the site of the “Old City,” and which, like similar springs throughout India, are worshipped as special manifestations of the divine power. The full description, which Huen Tsang gives of the numerous temples constructed around the springs and of their pilgrim visitors, corresponds closely to the present appearance of the place. It shows plainly that apart from all Buddhist associations Rājāgirha was then, as now, a popular Tirtha.

This fact, it appears to me, deserves more consideration than it has received hitherto. On the one hand it may explain to us the true reason for the presence of the numerous Jaina shrines which still crown the heights around the old Rājāgirha, for throughout India we find the local worship of the Jaina community attracted to places which Hinduism at large has invested with a sacred interest. On the other hand it must direct our attention to the extant Māhātmya of the Tirtha as a useful source of information on the ancient topography of the place. My researches in Kashmir have shown me what valuable help can often be obtained for the study of the ancient local nomenclature by a critical examination of the Māhātmyas of particular Tirthas.8 The Rājāgirha-māhātmya now in use, which purports to be taken from the Agnipūrāṇa, may not be in itself a very old production. But the fact that it has preserved a series of local names, which can be proved from independent sources to be of genuine antiquity (e. g. the names of the hills Vaibhāra and Vipula, the name of Rājāgirha itself, etc.), indicates sufficiently that its evidence deserves consideration in studying the old topography of this part of Magadhā.

The Walls of “Old Rājāgirha.—The importance of Rājāgirha as the ancient capital of the country is forcibly brought home to us by the wide extent of the ground over which it remains spread. The lines of ruined walls still traceable through the thick jungle of the central plain

between the two hill-ranges indicate the site of the inner city of “Old Rājagṛha” or Kuśāgarapura, with a circuit of about five miles, as described by Fa-hien and Huien Tsang. But outside this inner city we find the crests of the hills north and south crowned far away with walls of massive masonry, which undoubtedly belonged to a system of circumvallation intended to protect the capital. These lines of walls, rendered difficult of access by the rugged character of the hills and the thick jungle which covers their slopes, have not yet been properly surveyed. But the relative distances of the points, where their remains are easily distinguished and accordingly have been noted by General Cunningham and other observers, strongly support the correctness of the estimate of Huien Tsang, who gives to the external defences of Kuśāgarapura a circuit of about 150 li or 30 miles.10

Within the area enclosed by the hills which gave to old Rājagṛha the characteristic epithet of Girirāja, “the mountain-girt city,” all was “desolate and without inhabitants” already in the days of Fa-hian. This accounts largely for the scantiness of ancient structural remains now visible above ground, and the difficulty we consequently experience in regard to the exact identification of the numerous sacred spots connected with Buddha and his church, which the pilgrims describe within the valley and near its entrance from the north. With the limited time at my disposal no attempt could be made to scrutinize all the identifications which General Cunningham, and partly his Assistant Mr. Beglar, had proposed for these particular sites.

Position of the Sattapāna Cave. — Among the latter none is historically more interesting than the place where the First Council of the Buddhist Church was held, the famous Sattapāna Cave. As the question of its exact position had been the subject of much speculation and controversy, I was anxious to utilize the opportunity offered by my short stay specially for its examination. According to the uniform testimony of all the Buddhist canonical records the First Great Council, which was convened by Kāśyapa soon after the demise of Buddha to fix the principal tenets of the Church, took place near Rājagṛha in a cave in the Vebhāra Hill, which bore the Pali name of Sattapāna or Sattapāṇi. The Mahāvastu, which gives the Sanskrit name of the cave as Saṣṭaparnā, furnishes the additional detail that the cave was situated on the north of the hill, which is called there Vāiharā.11

For more exact indications we must turn to our Chinese guides. Fa-hian, starting from the north side of the Old City, takes us first to the Kālanḍavānuvana Vihāra, which from a comparison of Huien Tsang’s record can safely be located within or close to the defile leading from new Rājagṛha to the Old City.12 He then continues: “Striking the southern hill and proceeding westwards 300 paces there is a stone cell called the Fippala Cave, where Buddha was accustomed to sit in meditation after his midday meal. Still further west five or six li’ there is a stone cave situated in the northern shade of the mountain and called Che-ti. This is the place where five hundred Arhats assembled after the Nirvāṇa of Buddha to arrange the collection of sacred books, etc.”

Huien Tsang describes the place of the great convocation as “a large stone house” situated in the middle of a great bamboo forest, which occupied “the north side of the southern mountain, about 5 or 6 li to the south-west of the [Karaṇḍa]-Vesuvana.” Before the “large stone-house” there was to be seen an old foundation-wall. This edifice was ascribed to King Ajātashatru, who made it for the accommodation of the assembled Arhats. Though Huien Tsang’s words are not as precise as we might wish, it seems highly probable that here, as elsewhere, he means a natural cavern,13 and that only the edifice marked by the foundation wall in front was structural.

12 See Map of Rājagṛha, plate xii., of Archæol. Survey Reports, III.
13 Compare the use of the same expression for the small cells in the rocks of Mount Grłurakuta (Si-yu-ki, ii. p. 164); for the cave in the Indrasailaguhā Hill (Giriyek, iv. ii. p. 180); for the cave now known as Rājipip, near Jethlan (see below), etc.
Previous views regarding the Sattapanä Cave.—General Cunningham, who was the first to take up the search for the traditional site of that great event in Buddhist history, was much influenced in his views by considerations connected with the artificial excavations known as Sönbhāñḍār, "the Treasury of Gold." These excavations are situated at the south foot of the Baibhār (Vaibhāra) Hill, about one mile to the south-west of the gorge leading from New Rājgṛha to the site of the "Old City," and have often been described. They consist of two comparatively small chambers cut out of the solid rock and highly polished inside. They show in their architectural features so close an affinity with the Barābara caves of Aśoka and Daśarathe, that the opinion of Mr. Fergusson and Dr. Burgess, which attributes their construction to the period of the Maurya dynasty, has everything in its favour. In his first Archaeological Survey Report, for the year 1861-62, General Cunningham wished to identify the Sönbhāñḍār with the Pi-po-lo Cave, referred to in the above extract from Fa-hian's account, and also mentioned by Huen Tsang. In accordance with the direction indicated by Fa-hian, he was then prepared to look out for the Sattapannī Cave on the Northern face of the mountain; at the distance of about one mile from Sönbhāñḍār, as the supposed cave of Buddha's meditation.

When publishing in 1871 his Ancient Geography of India, Gen. Cunningham had come to locate the Sattapannī Cave itself at Sönbhāñḍār, and to this belief he subsequently clung, notwithstanding the manifest impossibility of making the position of Sönbhāñḍār agree with the uniform testimony of the pilgrims, which distinctly points to the northern side of the Vaibhāra Hill as the site of the famous cave. This serious objection, to which Mr. Basil, the English translator of Huen Tsang, and others had rightly called attention, was in no way weakened by General Cunningham's discovery, recorded in his Report for 1871-72, of the Pi-po-lo stone cell and the Asura's cave behind it at the eastern end of the Baibhār Hill. For although the distance of the Sönbhāñḍār from this second site would approximately correspond to the 5-6 li counted by Fa-hian between the Pipalo and Sattapannī Caves, yet a glance at General Cunningham's own map will show that the bearing from the former cave to the Sönbhāñḍār is nearly south, and not west as indicated by Fa-hian.

In the cold season 1872-73 Rājgir, with a series of other localities in Magadha, was visited by Mr. Beglar, General Cunningham's assistant, who in his account of this tour published in Vol. viii. of the Archaeological Survey Reports has returned in detail to the question of the Sattapannī Cave. He describes there how, realizing the obstacles in the way of the proposed identification with Sönbhāñḍār, he searched for the cave in the direction indicated by Fa-hian, i. e., by going to the west from the Pi-po-lo Cave at the entrance of the gorge which leads to Kuśāgarapura, and then skirting the north foot of the Baibhār Hill. There he came across a series of fissures in the rock all facing to the west and forming a row of little chambers from 4 to 10 feet wide and equally shallow. Owing to a peculiar configuration of the rocks, which a rough plan and section attempt to illustrate, these recesses are said to escape notice on going from east to west, but to be distinctly visible for an observer moving in the opposite direction. They are described as being "less than a mile from the Pippal (Pipalo) Cave, and to the west of it;" and as situated "in the middle third of the hill."

This collection of rock fissures, which elsewhere is spoken of as "a large natural cavern" "divided by natural Septa of rock into compartments," was taken by Mr. Beglar to be the true Sattapannī Cave. In support of this belief we are referred to the etymology of the name Saptaparnis, the designation of a plant, the Alstonias scholaris, but literally meaning "Seven-leaved," and to the statement that by the side of the six recesses seen by the explorer there was room for a seventh on a part of the rock-face hidden by impenetrable jungle.

15 Ancient Geography, p. 463.
16 The argument in favour of the identification of the Sönbhāñḍār and the Sattapannī Cave is taken up at length in Arch. Survey Rep., iii., pp. 140 sqq.
A perusal of Mr. Baglar's description of this remarkable spot conveys the impression that his visit had been of the most hurried character. It is, therefore, to be regretted that when he subsequently revisited Bājigir in the company of General Cunningham, no steps were taken to obtain exact facts as to the alleged site of the Sattapanā Cave. General Cunningham in the Preface to the Volume declares the theory broached by his assistant regarding the Sattapanā Cave to be quite untenable. But we are not informed whether he actually saw and examined the rock recesses mentioned in the description above summarized. Mr. Baglar himself in a note prefixed to the Report informs us that he has been constrained to abandon what he considered as the main arguments against the identity of the Sābbhājār with the Sattapanā Cave. His words leave us in some doubt as to the value which he would still have us attach to his own discovery of the “Seven-leaved” Cave.

This brief retrospect on a much vexed question will explain why the interest of my short stay at Bājigir specially turned on the examination of the Baibhār Hill. The words of our Chinese guides make it quite clear that the cave, which was shown to them as marking the site of the First Synod, was on the northern side of this very hill. Yet I knew from communications of my friends Dr. Grierson and M. Sylvain Lévi that they had both failed to trace Mr. Baglar’s rock-cavern, the only cave so far described, which by its position would seem to correspond to the one seen by the pilgrims. The only information I had been able to obtain by my preliminary enquiries among the local Purūhitas and others referred to two caves, briefly mentioned also in the entry of the List of Ancient Monuments of Bengal concerning the Baibhār Hill. They were said to exist close together on the rocky scarp of the hill below one of the Jain temples which crown its south-eastern ridge.

Caves on the north face of Baibhār Hill. — Ascending the road which leads to these temples, I first reached the remarkable square platform of unshewn, but carefully fitted, blocks which General Cunningham has noticed under the name “Jarāsandh-ki baithak” and correctly identified with the Pi-po-lo stone-coll. If the tradition is genuine, which made Buddha dwell in one of the cells of this remarkable structure, we have in it indeed the oldest Indian stone building of which the date is approximately known. Its position and distance relative to the road leading from the north to Kusāgārapura, is exactly as indicated by Fa-hian.

The road marked in numerous places by ancient masonry then rises steeply along the north-easterly extremity of Baibhār and, leading generally in a westerly direction, reaches the flatter portion of the ridge where the Jain temples are situated. They are quite modern in their superstructures; but the massive platforms on which they are built seem old, and in any case we know from Himen Tsiang’s reference to the “naked heretics” (Nirgranthas), who frequented the top of Mount Pi-po-lo (Vaiṭhāra), that the sacred character of this hill for the Jainas is not a feature of modern growth.

The caves, to which my Purūhita guides referred, are situated near the temple dedicated to Xdīnāthe, which is the fourth in order from below and according to a rough estimate at a distance of about a mile from the commencement of the ascent. A path, which descends the rugged northern scarp of the ridge to a level of about a hundred feet below the temple, leads to a long terrace, which, notwithstanding the luxurious vegetation covering it at the time of my visit, clearly betrayed its artificial origin. The wall, which supports it towards the lower slope, is composed of large unshewn slabs and can be traced for fully a hundred feet running in the direction from N. E. to S. W. along the face of the slope. The average width of the terrace is twenty-five feet. Where, at the south-west end, the supporting wall is lost in thick jungle, a narrow path strikes off towards a natural cave in the rock face overhanging the terrace. It runs in the direction...
W. N. W. to E. S. E. and is 40 feet deep in its open portion. The height is about 12 feet at the entrance and 10 feet further in. The cave is widest at the middle, where it is about 16 feet broad. The cave, though undoubtedly due to a natural fissure in the rocks, may have been somewhat enlarged by rough excavations at the sides. At least, there is a suggestion of this in the presence of flat low ledges of rock which line the sides.

Along the same wall of rocks, at a distance of about 50 feet further to the south-west, is a second and somewhat larger natural cavity. It is 47 feet deep, 25 feet wide at its broadest and ten to eleven feet high. Its end is lost in a narrow fissure which is said to extend much further. Several large detached rocks lie in front of the caves.

The ancient wall, which supports the platform in front of the caves, is at present the only proof that these natural fissures were inhabited or visited at an early date. Their position relative to "the Pipolo stone cell" corresponds close enough to the indications which the Chinese pilgrims give as to the traditional site of the First Great Council. But for a definite identification, we may well demand further evidence. It can scarcely be expected that this should be forthcoming in the form of structural remains, seeing that Huen Tsang found nothing but an old foundation wall at the spot. It would, however, be undoubtedly a point of negative evidence, if it could be shown that the northern face of the Baibhar Hill does not contain any other caves, natural or artificial, in the position indicated. My Purūkāta guides, as well as the Rājwar coolies accompanying me, who had often grazed cattle on the jungle of the hillside and were thus well acquainted with the locality, denied all knowledge of any other caves.

In order to see myself as much as possible of the northern face of the hill, I descended towards the Rājgir plain by a circuitous path. The jungle which covers the hill is thorny and thick, but not very high. Though it was thus possible to examine the slope closely from more than one projecting point, yet I could not trace any indication of a cave. Nor did I succeed in discovering the rocky recesses described by Mr. Bégjar, although I moved subsequently along the foot of the hill in the direction he indicates, from west to east, and took special care to examine all rock-faces with a pair of field-glasses. I do not assume that my examination of the Baibhar slopes has supplied the negative evidence above alluded to in an absolutely conclusive form. But I think its result helps to show that at present only the site below the Adināth Temple has a claim for serious consideration in our search for the famous Sattapāṇi Cave.

Ancient Sites South-west of Rājgirha. — The questions, which I was next anxious to examine during my short stay at Rājgir, are connected with a series of ancient localities situated at some distance to the south-east of the old capital. Huen Tsang had visited them as he marched from the neighbourhood of Gayā towards Kuśārqapura, but they had so far not been traced with any certainty. Huen Tsang’s account of these sites may thus be briefly summarized.36 Proceeding from the Kukkuṭapāda-giriö “Cocks-foot Mountain,” with which we shall have to occupy ourselves hereafter, for about 100 li to the north-east he reached a mountain called Buddhavana, which contained a store chamber once inhabited by Buddha. Going about 30 li to the east “amongst wild valleys,” the pilgrim came to a wood of bamboos called Yashṭivana (“the forest of the staff”), the site of various Buddhist legends. In the midst of this wood was a Stūpa built by Aśoka. South-west of the Yashṭivana “about 10 li or so and on the south side of a great mountain” two warm springs are noticed, which were visited for their healing powers. To the south-east of Yashṭivana, about 6 or 7 li and on the transverse pass of a mountain, there was a Stūpa marking a spot where Tathāgata explained the law. To the north of this mountain 3 or 4 li the pilgrim mentions a solitary hill where the Rishi Vyāsa had once lived in solitude, and again about 4-5 li to the north of this hill another in which there was a large cave. “In this place Tathāgata, when living in the world, repeated the law for three months.” Apart from a

36 See Sū-yu-ki, ii, pp. 145-149.
large and remarkable rock above the cave, reference is made by the Chinese pilgrim to a lofty cavern in the south-west angle of the cave, which a local legend supposed to lead to the “city of Aaras.” Near the cave were seen the remains of broad passages which King Bimbisāra had constructed through the rocks and along precipices in order to reach the place where Buddha was. “From this spot proceeding eastward through the mountain about 60 li we arrive at the city Kuśāgarapura.”

General Cunningham, who alone seems to have concerned himself with the identification of the localities above described, had, while examining in 1852 the remains of Rājgir, obtained information which induced him to identify Yashtivana with a spot known according to him as “Jakhtiban,” and the warm springs with those still existing at Tapoban, a short distance to the south. He thought to recognize Buddhavana in a locality called Budhain about 8 miles to the south-west of Rājgir. General Cunningham’s brief notices, contained both in his Ancient Geography and Vol. iii. of the Archaeological Survey Reports, show clearly that he had not visited the places himself. He also acknowledged his inability to trace either the caves or the particular structures referred to by Huen Tsiang. It is hence scarcely necessary to explain here in details the topographical errors contained in these notices, and the impossibility of bringing the alleged positions of the modern localities mentioned into agreement with Huen Tsiang’s well defined distances and bearings.

General Cunningham, himself, was evidently well aware of the insufficiency of the data collected by him; for on a subsequent occasion he specially directed the attention of Mr. Beglar to the exploration of the valley which stretches to the west of the site of Kuśāgarapura, and in which he supposed the localities he had heard of to be situated.

Mr. Beglar informs us that he “twice attempted to penetrate the pathless jungle which literally chokes up the valley, but on both occasions without success.” Looking down subsequently from the top of the Balbār Hill Mr. Beglar thought he could make out in the distance, where the two hill-ranges enclosing the valley seem to meet, “a small tumulus having precisely the appearance of a Stūpa.” This he assumed to be the “stupa near Jakhtiban” mentioned by Huen Tsiang. But “from the valley through the pathless jungle” he found it impracticable to get to it.

March to Jethian. — The indications furnished regarding this supposed stūpa were too vague to warrant a search on my part. I accordingly decided to make first for the village of Jethian, which had been mentioned to General Cunningham as close to “Jakhtiban,” and the name of which seemed a manifest derivative from the ancient Yashtivana. Two routes were available to Jethian, one skirting from Rājgir the outer foot of the northern range of hills and then crossing the latter into the valley by the pass called Cakra Ghāt. The other, more direct but also decidedly more difficult, leading from the site of Kuśāgarapura straight through the jungle-covered valley towards Jethian.

As I was anxious to look for any remains that might be hidden in the valley west of the old city, I chose the latter route when setting out for Jethian on the morning of 14th October. The dense jungle I encountered, soon after proceeding beyond the line of the inner ramparts of Kuśāgarapura, sufficiently explained the decided objections which my Rājgir guides had at first raised to my use of this route. Once started, however, they did their best to find a tract, though even from the back of the elephant I used, a look-out could be obtained only at rare intervals.

Budhain Hill. — After a march of close on three hours I reached a rocky ridge which traverses the valley in the direction from N.-E. to S.-W. and culminates in the Hanđia Hill, marked as a Trigonometrical station (elevation 1,473 feet) on the Survey Map. The pass by which I crossed this ridge near its north-eastern end, where it joins the main northern range of the valley, was called Budhain by the Abhis who accompanied me. This name may possibly apply also to the high rocky eminence of the main range, which rises to the north of the pass. But a glance at the map will show that its
identification with Buddhavana of Huen Tsang is manifestly impossible. The pilgrim tells us that he reached Yashśīvāna by going to the east, whereas Jēthian and the neighbouring Jōshītīban, which, as we shall see, corresponds undoubtedly to Yashśīvāna, lie to the south-west of Budhain.

After crossing the pass the jungle gradually disappeared, until I reached, near the large village of Kirī, some three miles from Budhain, the open plain of the valley. The latter is here in marked contrast to the jungle-covered sylvan waste near Rājgir, fertile and well-cultivated. Proceeding through rice fields and green pasture lands two miles further to the south-west I arrived at Jēthian, a populous and evidently thriving village. A short halt made here, for the purposes of local enquiries, enabled me soon to trace the real position of the main localities, which Huen Tsang's account mentions.

In the first place I ascertained that Jōshītīban (not "Jākhtīban" as recorded by General Cunningham) is the name generally given to the western slope and foot of the hill, in which the transverse ridge already mentioned ends about ¾ of a mile to the east of Jēthian village. There could be no doubt as to this name being a slightly modified form of the ancient Yashśīvāna, of which Jēthian itself is an old Prakrit derivative. Tapoban with its hot springs mentioned by Huen Tsang was found to be situated about two miles to the south-west of Jēthian village, that is, exactly at the distance which the pilgrim indicates by his measurement of about 10 fā or so from Yashśīvāna. I next obtained information regarding a large cave known as Rājpiṇḍ and already previously mentioned to me, which, by its position in a hill situated about 2 miles to the north-west of Jēthian, was clearly marked as identical with Huen Tsang's cave containing the lofty cavern called "the Palace of the Asuras."

The Springs of Tapoban. — Time did not permit me that day to pay more than a flying visit to the hot springs of Tapoban, but I was able to re-visit them on my subsequent march to Kurkūhār. They issue at a spot, which lies outside the valley and is approached after crossing the southern range of hills by a pass known as the Jēthian Ghāṭ. Their position at the south foot of this range corresponds to Huen Tsang's words. There are four springs in all issuing at the rocky foot of the hillside at short distances from each other, but only two, towards the east, have a large flow. The largest and the one first approached from the east is called Samatkumarākunda. It is, like the rest, enclosed by a stone wall and steps evidently built of old materials. To the west of it stands a small temple of modern date, said to have been built by Bahā Gopāl Singh, a local Zamindār. Between the temple and the spring already mentioned rises a mound, measuring 75 by 81 feet at the base and 45 feet square on the top. Its height is about 10 feet. The top is covered with small square mounds marking the Samādhis of Sannyāsins and adorned in places with fragments of ancient sculpture. It seems probably that this large mound represents the remains of the stūpa, which Huen Tsang mentions as having been erected "by the side of the springs to mark the place where Tathāgata walked for exercise."

The springs are visited by pilgrims in connection with the Tirthas of Rājagṛha and also by many sick from the neighbourhood who seek here relief. A great Yātrā takes place at the Meṣa-sāmkrānti date, when, as in the days of Chinese pilgrim, "men from far and near flock here to bathe, after which those who have suffered from disease or chronic affections are often healed."

Jōshītīban : Yashśīvāna. — After returning through the Jēthian Ghāṭ (on the top of which I noticed under a tree a collection of small reliefs, all of ancient work and some distinctly Jaina) I proceeded, under the guidance of an intelligent village Gūmāṣṭa, to the locality known as Jōshītīban. It forms a small undulating plateau, partly grassy, partly covered with low jungle, the west foot of the hill, which is the last offshoot of the Haṅgils ridge in this direction. No ancient remains could be seen above ground, but at a particular spot, designated as Phal-Jēthian, I was shown low mounds and furrows which, according to the statement of the villagers, mark the site, from where, some thirteen
years ago, old bricks were dug out by people from Kiri. The excavated foundation walls seem to have belonged to a building about 45 feet square, correctly orientated. At a distance of 33 feet eastwards there are traces of some circular structure with a diameter of 43 feet. The place is popularly supposed to be the site of an old Rājā's Palace. Hīuen Tsiang informs us of Yashṭivanā, that “the bamboos that grow here are large; they cover the hill and extend through the valley.” Bamboos still grow plentifully in the tangled brush-wood of the hill above Jēṣṭhībān, though they cannot be found on the cleared grazing land properly designated as Jēṣṭhībān. Of the stūpa which, according to Hīuen Tsiang, Aśoka had built here to commemorate the spot “where Tathāgata had displayed for seven days great spiritual wonders for the sake of the Devas,” I could find no distinct evidence.

Considering the open nature of the ground and the vicinity of several large villages, requiring stone materials for the bands which protect their storage tanks, the complete disappearance of such a structure could not cause surprise.

The almost perfect preservation of the ancient form of the name Yashṭivanā in Jēṣṭhībān appears to me to be a distinct argument for placing here the sacred site mentioned by Hīuen Tsiang. It is particularly at places of a sacred interest that we find older forms of the local names often preserved through the quasi-learned tradition of priests and their records. This observation is amply supported by my enquiries into the ancient toponymy of Kaśmir.29 Whereas at the village which derived its name from the sacred spot there was nothing to stop the regular phonetic transition of Skr. Yashṭivanā into Jeṣṭhībān, its Prakrit derivative, the sacred site itself, was likely to retain better the traditional form of the name Jeṣṭhībān.

Cakra Ghāṭ. — The day was too far advanced and the distance to Rājgir, where I had to return, too great to allow me to extend my search for the other sites which the pilgrim's itinerary mentions in this neighbourhood. For my return march I chose the route, which leads from Kiri across the northern range of the hills into the open plain beyond. The pass through the range is known as the Cakra Ghāṭ, and has evidently since early days been a much frequented line of communication.

Already, when ascending through the defile which leads up to the pass from the south, I had thought I could notice foundations of ancient walls flanking the present bridle-path. The remains become far more distinct on the north side. There, for a distance of several hundred yards, and close to the east of the path, the foundations of two parallel walls are distinguishable, each about 7 feet in thickness, and keeping at a distance of 14 feet from each other. In the space between the walls there are the remains of an old paved road. The construction of these walls closely resembles that of the fortifications around Kuṣāgārapura, showing rough but well-set stone work.

There can be no doubt that the walls flanking the path across the Cakra Ghāṭ were intended for defensive purposes, to protect those using the route from attacks, for which the steep hills on either side would else offer great advantages. I have traced protecting walls in exactly corresponding positions along the ancient road which leads over the Shākāṭ Pass into the Swāt Valley, and similar old fortifications existed on the Malakand Pass before the construction of the modern works. In the hills of the Swāt Valley — a borderland since ancient days, with conditions evidently resembling those of the present Afgān frontier — the prevalence of such elaborate ancient defences is easily accounted for. But it is curious to meet their counterpart in the centre of old Magadha, apparently so peaceful and centralised.

In several of the villages of the fertile plain through which I passed on my return to Rājgir, particularly at Simraur, fragments of ancient sculpture could be seen collected at rustic places of worship. Most of them were distinctly Buddhist. But small Liṅgas of old appearance were also among them.

EXTRACTS FROM THE LOG OF A VOYAGE ALONG THE COAST OF INDIA IN 1746.

BY R. C. TEMPLE.

(Continued from Vol. XXIX. p. 561.)

II.

Preliminary Remarks on the Log.

We may now fairly turn our attention to the main part of the volume, viz., the log, or rather the logs, contained in it. They are all in one hand-writing, and relate to the voyages of "the Ship Wake, Captain Robert Norton, Commander," from Calpia on the Huglhi below Calcutta, round the Indian Coast as far as Tellicherry, en route to Bombay, between August 15th, 1746, and December 30th 1746; on which latter date the account comes to an abrupt end, the remainder of the story having been apparently written into some other book.

There are really six separate logs, thus:—

Log I., 31 pp., from Calpia towards Madras.

Log II., 20 pp., from Pulicat to Vizagapatam, as the vessel never got to Madras, for reasons to be explained later on.

Log III., 24 pp., from Vizagapatam towards Bombay, but carrying us only as far as Colombo on "the coast of Zeloan." This time the vessel avoided the Coromandel Coast and went out to sea, for reasons to be explained.

Log IV., 19 pp., from Colombo to Anjengo.

Log V., 7 pp., from Anjengo to Cochin.

Log VI., 9 pp., from Cochin to "Callicute" and "Tellechery."

As above said the whole of the logs are in one handwriting, which is shown by the internal evidence of the MS. to be that of the chief mate, Mr. Macmehone. Thus, at the very beginning of the first voyage there is an entry, on Sept. 16:—"Came on board the Captain," which shows that some other hand than his made it. There follow innumerable other such entries, proving that Captain Norton, Commander of the Wake, had no part in keeping the log.

He seems to have been a martinet, and towards the end of the log there are three entries, which show both this fact and the name and identity of the actual writer:—

(1) Nov. 28:—"att 8 A.M. was ordered Down to his cabin as a prisoner Mr. Macmehone Chief Mate for asking Civility for his privilege which is usually allow'd by the owners of this Ship."

(2) Nov. 29:—"I was sent on board by a Guard only Going ashore to ask the Governor libertie to Stay ashore for the recovery of my Health and att the same time Asking Captain Norton about my Privilege. Upon which he order'd me on board with a Guard of soldiers and there to be made a prisoner."

(3) Dec. 20:—"This Day I was ordered Down to Close Confinement for Observing with a passenger's Quadrant, and also threaten'd to put me in Irons by Captain Robert Norton."

To follow the story of the logs. On "Fryday, Aug. 15, 1746" the Wake started from Calpia on the River Huglhi on a voyage to Madras, and proceeded peacefully as far as Vizagapatam. While lying there news was received by "the Looavain, Captain Macmath Bound to Bengall" of the now well-known historical attack of La Bourdonnais on the British Settlement of Madras in 1746. To quote the quaint wording of the log:—"a gives as an account the 18 Instant, he was obliged to run of [i.e., off] out of Madras road the place being attack'd by eight sail of French ship's under the Command of Monsieur Lebourdenie." Finding the coast to be nevertheless pretty clear and going
cautiously, the ship is taken quietly down it as far as Pulicat, where the Vernon is met, "who gives us the unfortunate relation of the taking of Madras by the French [i.e., in Sept. 1746] on Thursday the 11th Instant after a seige of 4 Days only, and not but six men kill'd at the most, and not above 8 Sail of French Ships, the 2 Biggest 60 Guns, the rest of 30 each and old Ships formerly merchant Ships." The Vernon seems to have rescued "100 Soldiers and Gunners, who made there Escape from Madras after the taking of the town," at Pulicat.

The first log winds up with the ominous statement "by which unfortunate News we are Oblig'd to bear away to some other port," and accordingly we find the Wake retracing its steps as far as Vizagapatam, which was reached on September 21st. From the 2nd October onwards we are treated to a very interesting series of notes as to the steps taken to meet "Dreadful and Dempestuous Weather," which was clearly caused, from the description given, by what we should nowadays call a cyclone to the southward.

Captain Norton after this evidently made up his mind to continue his voyage southwards by sailing past the then politically dangerous Madras Coast well out to sea. He accordingly set sail, as his log says, "towards Bombay," on Nov. 18th, making direct for the coast of Ceylon, and keeping a sharp look out for "the Enemy." The ship, naturally at such a time of year, met the full force of the North-East Monsoon, and we find the log to be chiefly made up of notes of bad and squally weather, till the ship hits upon the Little Basses, off the S.E. coast of Ceylon. Colombo was reached on "Wednesday, Nov. ye 5, 1746," and there was learnt what had been the effect of the "Dreadful and Dempestous Weather" of the 2nd October at Madras. The cyclone had evidently struck the coast at Madras Town (just as the present writers saw one strike it on the 2nd May, 1872), and sent the French fleet to destruction.

The story, as given in the log, is particularly interesting, as it is given at first hand, for, to use the words of the writer:—"This I Copy'd from a letter which the Governour of Colombo was so good as to Interpret it to me in His own House 4 of Nov., 1746. All in french."

The accuracy of the facts stated in the log of the Wake can be gauged by a comparison with Orme's account of the period.11

"Early in the mourning of the 25th June (1746), the English squadron, cruising to the Southward of Fort St. David, near Negapatam, descried that of the French arriving on the coast of Coromandel" (p. 62). There was then an indecisive action and both parties went off to refit at Trincomalee12 and Pondicherry respectively. "On the 18th of August the French squadron appeared and cannoned the town, but without doing any damage, they attempted to take a ship belonging to the English Company out of the road, but she moved into shoal-water so near the batteries of the fort, that the French did not venture to attack her with armed boats, and it was evident, from the unskilfulness of their operations during this cruise, that Mr. De La Bourdonnais did not command them in person: he was at this time in Pondicherry confined to his bed by sickness." . . . . "The Protection of the English Settlements on the Coast of Coromandel was the principle object for which the English squadron had been sent into India, and their appearance before Madras was at this time thought so necessary to its defence, that the inhabitants were in hourly expectation of seeing them, although they received no intelligence of them, since they were last seen six days before by Mr. De La Bourdonnais. The consternation of the town was therefore little less than despair, when it was reported that they had appeared on the 23rd August 30 miles to the northward of Madras, in sight of the Dutch Settlement of Pallavicino, from whence they had again put out to sea and disappeared. They proceeded to Bengal, for the 60 gun ship was so leaky, that it was feared that the shock of firing her own cannon would sink her, if she should be brought into an Engagement" (p. 66).

11 History of the Military Operations in Indostan, 1861, which is a reprint of the Ed. of 1838, and so far as the matters herein mentioned are concerned follows verbatim the first Ed. of 1766. The quotations are from the Ed. of 1861.

12 Trincomalee in Orme, p. 63.
The result of this was that "on the 7th September the French began to bombard the town. . . . The 10th Sept. the Deputies returned to the French camp, and after some alterations, consented to the articles of capitulation, which had been dictated to them in the first conference. It was agreed that the English should surrender themselves prisoners of war: that the town should be immediately delivered up: but that it should be afterwards ransomed. Mr. De La Bourdonnais gave his promise that he would settle the ransom on easy and moderate terms. The capitulation was signed in the afternoon. . . . There was not a man killed in the French camp during the siege: four or five Englishmen were killed in the town by the explosion of the bombs, which likewise destroyed two or three houses" (p. 67 f.).

Fortunately Messrs. Duplex (then the French Governor-General) and De la Bourdonnais fell out, and not so much harm was done, as would otherwise have resulted to British interests. Finally Madras was handed back to England in August, 1749, pursuant to the treaty of Aix la Chapelle. (p. 130).

As to De la Bourdonnais' strength. It consisted of nine ships, of 70, 36, (3) 34, 30, (2) 28, and 26 guns. The crews were 3,300 men, of which 700 were "either Caffres or Lascars." The English squadron was of five fighting ships, of 60, (3) 50, and 40 guns, with crews of about 1,600 men. "But the English had greatly the advantage in the weight of their cannon, by which the fortune of engagements at sea is at present generally decided. And they likewise sailed better than the French, and were worked with much greater skill" (p. 62).

As to the cyclone of the 2nd October, we read: — "On the 2nd October the weather was remarkably fine and moderate all day. About midnight a furious storm arose and continued with the greatest violence, until the noon of the next day. Six of the French ships were in the road when the storm began, and not one of them was to be seen at day-break. One put before the wind and was driven so far to the southward, that she was not able to regain the coast again: the 70 gun ship lost all her masts: three others of the squadron were likewise dismayed, and had so much water in the hold, that the people on board expected every moment to perish, notwithstanding they had thrown overboard all the cannon of the lower tier: the other ship, during the few moments of a whirlwind, which happened in the most furious part of the storm, was covered by the waves, and foundered in an instant, and only six of the crew escaped alive. Twenty other vessels, belonging to other nations, were either driven on shore or perished at sea.

"All the merchandizes and a part of the military stores, belonging to the East India Company, together with all the naval stores found in the town had been laden on board the French ships: these articles, according to the computation made by the French, amounted to 130,000 pounds sterling: the half of the artillery and military stores was estimated at 24,000 pounds sterling: all the other effects and merchandizes were relinquished to the proprietors of them. . . . The storm ruined the French marine force in India, and preserved the English establishments from imminent danger" (p. 70 ff.).

A minor point noticed by Orme is also confirmed by the Log: — "The other two ships, laden with part of the effects of Madras, together with the three lately arrived from Europe, were at anchor in the road of Pondicherry, where they felt no effect of the storm, which was raging at Madras" (p. 70).

From Colombo Captain Norton set sail for the now little known Settlement of Anjengo on the Malabar Coast, cautiously and in much fear of the French, where he stayed trading from "Monday, November ye 17, 1746" to "Wednesday, Dec : 3 : 1746." Thence he went unexpectedly to Cochin in about four days, and sailed thence for T LLCticherry, all fear of the French having by that time seemingly disappeared.

Though out of touch with Europeans, the English sailor of that time had evidently a lively life. It seems to have been the custom either to bully or run away from any ship that was casually met at sea. There are instances galore in the Log. Thus on Aug. 26, we find Captain Norton "firing a Gun" by way of bringing to and stopping two passing "paddy Boats," meaning by
that term native sea-going craft carrying rice, as may be seen from the next instance I give of firing
on a passing sail. — "Sunday, Sept. 14, 1746. Att 4 P. M. fired 2 Guns at a Vessel, which we
took for a paddy Boat, being Desirous to get some Intelligence from Madrass and after having
brought her too, found her to be the Vernon." So again, the Wake, on Oct. 29th, fires a gun after
dark, by way of inducing a Dutch sloop to give up what news she had. In both these last two cases
we see first a British and then a Dutch ship doing all they knew to avoid contact with a larger vessel
flying British colours.

On the other hand, on the very day the Wake brought up the Vernon she had herself to run
away, as is thus described: — "Sunday, Sept. 14, 1746, 11 (P. M.) Saw a large Ship on the Beam
which [obliged us] to make what sail we can and leave the Vernon to Shift for themselves."

On the 24th and 25th of October the crew had a very lively time of it in the open sea. — "Fryday,
8r, 24, 1746. Att a 11 A. M. Saw a large Ship bear SbW. from us Dist. abt 4 leagues upon the
sight of which we haul'd Close upon a Wind when we first saw her she was standing 80E. but
after hawling our Wind she haul'd up likewise upon her larboard Tack and stood for our Wake. She
appears to be full of Hands and Carry's a tear of Guns. — "Saturday, 8r the 25, 1746. The aforementioned Ship finds she Cou'd not gain any thing to Windward of us she wore and stood to the
Eastward."

On the 27th and 28th November, the times were still more exciting, while lying off Anjengo:
— "Thurday, 27. have Intelligence of the French being upon the Coast. — Fryday, Nov. 28, att 2 P. M.
the Captain Came on and upon the Sight of two large Vessels to the Southward weighed our Anchor
and Warped into 4½ fm. Do13 Borrow'd from the Shore 4 two pounders Six Muskets 6 pr of pistols
with a 100 Shot and 24 Cartriges got every thing Clear to Defend our Selves against them if they
shou'd Come. Do13 Kept a Very Good look out all night att 10 P. M. the (deed) wrote a letter to
our Captain to lett us Know the Vessel we Saw a Dutchman from Colombo bound Cochin."
Everything being now safe, the mate proceeds to business at once, and records that he "Receiv'd on
board 13 Quoils of Quoer Cordage," and so on, as he quaintly puts it.

In addition to all this the Captain of the Wake was naturally nervous all the way from Madras
to Vizagapatam, and with good reason; for on "Saturday, Sept. 20. 8 [A. M.] Saw a sail which we
took to be the Vernon bear 80E. The Ship we took to be the Vernon is a strange Ship upon
her tacks and Standing towards [us] we haul'd up ESE. and upon her Hauling her Courses up and
showing Dutch Colours and then making all the sail she cou'd carry after us and likewise being Very
full of Hands judg'd her to be an enemy by her Action So made what sail we cou'd to gett away: att
Noon she bore N.W. hull too [?]."

And again we read: — "Wednesday 24. Sent the pinnace to speak to a boat which came from the
So wh who informs us of a Large Ship Lying att point Guardaware, which I take to be the Ship that
Chas'd us some Days ago."

A curious point to note is the manner in which deaths on board are recorded. There
are several instances in the log, all of native seamen: — on the 13th Nov., 23rd Nov., 2nd Dec., and
28th Dec. In each case the report is accompanied with a rough figure of a death's head and cross-
bones, accompanied by a scythe and an hour-glass. The record is worded in the formal manner of the
time: — "depart'd this life so and so," and "we committ'd his body to the Deep." These formal
words arise no doubt out of a superstitious dread of mentioning death and burial in direct terms.

There are many other points of interest raised by a study of this valuable old log, but they
can best be dealt with as they arise, by way of notes to the text of each portion thereof. For this
purpose I will now divide the general log into six separate logs, and annotate each separately.

(To be continued.)

13 This means at the same hour as before, viz., 2 P. M.

(MISCELLANEA.

AURANGZEEB'S FAMILY.—DATE OF HIS DAUGHTER ZINAT-UN-NISSA'S DEATH.

It is usually asserted that the Princess Zinat-un-nissa, daughter of Alamgir Aurangzeb (+1707) died in the year 1123 H. (1710-11). We know from the Maqasir-i-'Alamgiri, the best authority for his reign, that the emperor had four daughters, of whom only the second, survived him. This lady, Zinat-un-nissa, was still living at the date the Maqasir was written; and from the statement on p. 69 (printed text) we know that it was completed in 1122 H. (1710-11).

Now, although Zinat-un-nissa is spoken of as still living in a book completed in 1122 H. (1710-11), it is quite possible that she may have died in that very year. The book may have been finished early in the year, she may have died before the year ended, and the author, though he lived for fourteen years longer, may have left his work as it stood originally.

The usual statement that Zinat-un-nissa died in 1122 H. (1710-11) seems to have been arrived at in the following manner. In the city of Dhihli, in the quarter known as Daryagani, stands near the Jamma a mosque called the Zinat-ul-masaajid, which was used at one time as the government store-house for commissariat bread. In the court of this mosque is a tomb with an inscription. The words of this inscription are given both in Sayyad Ahmad Khan's Anwar-ul-khand, edition of 1864, p. 78, and Supplement, p. 44, and in T. W. Beale's Maqasir-ul-tawarikh, Lucknow edition of 1867, p. 297. The words on it are (omitting four lines of Arabic):

"Munis-i-madar lahad fazi-i-khudd tanhaa bas ast,
Sajah az abr-i-rahmat kahroosh-i-mab zar ast,
Umedvar-i-hum-i-Fatiimah-i-khalinah Zinat-un-nissa Begam
Bint-i-Baddah Muhi-ud-din Muhammad "Alamgir Qadir
Andr-ulah burhana hu
Sanah 1122."

"My sufficient solace in the solitary grave is the grace of God,
"The shade of the clouds of Mercy is grave-cover enough for me;
"One awaiting the favour of the perfect Fatimah,
"Zinat-un-nissa, daughter of the emperor,
"Supporter of the Faith, Muhammad
"Alamgir, the Champion, (may God
"Enlighten her understanding), year 1122."

Upon this inscription Beale finds his entry, Oriental Biographical Dictionary, p. 288, that she "died in 1710 A.D., 1122 H." The statement that the lady died in 1122 (1710) is also made by Franklin, Shah Autum, p. 207, and Major W. Thorn, Memoirs of the War in India (4to, London 1818), both apparently on the same data. On the other hand, Mr. S. Lane-Poole in the table on p. 21 of his Aurangzeb (Rulers of India series), guide-book to Dhihli in Urdu, and Carr Stephen, Archaeology of Delhi, pp. 261-3.
places her death in 1708 A. D., which corresponds with part of 1119 H. and part of 1120 H. This latest authority thus agrees neither with the inscription nor with the *Maḍir-i-Ālamgir*, nor with what I believe to be the true date of death.

Zinat-un-nissā was in the emperor’s camp at Aḥmadnagar when Ālamgir died there on the 28th Zul Qa‘dah 1118 H., 2nd March 1707 N.S. She took an active interest in the cause of her full brother, Āẓam Shāh, the deceased emperor’s second surviving son, and accompanied him in his march from the Dakhin to Hindustān. She was left behind at Gwalīyār when Āẓam Shāh went on to fight their eldest brother, Muhammad Mu’azzam Shāh, afterwards Bahādur Shāh. The battle took place on the 18th Rabī’ II 1119 H. (18th June 1707 N.S.) near Jājāu, a place between Dholpūr and Agrah. After the battle, the victor, Bahādur Shāh, sent for the baggage and those adherents and relations of Āẓam Shāh who had been left at Gwalīyār. Zinat-un-nissā, among the rest, reached Agrah about the end of Rabī’ II (July 1707), and on the excuse of her mourning for Āẓam Shāh, declined to send any congratulations to Bahādur Shāh. The latter, in spite of his vexation at this slight, doubled his sister’s allowances and created her Pādshah Begum. In a short time the Begam was despatched to Dīhil under the charge of Asad Kān, Ālamgir’s waqfīr, the new minister, Mun‘īm Kān, escorting her for some miles on her way.

As good proof as can be wished that a person did not die in a particular year, is to show that he or she was alive in a subsequent year. This we can easily do in the case of Zinat-un-nissā. Accordingly we find* that in Jahāndar Shāh’s reign, which lasted from 21st Safar to 18th Zul Hijjah 1124 H. (29th March 1712 to 10th January 1713), the emperor quarrelled with his aunt Pādshah Begam (i.e., Zinat-un-nissā) and refused to visit her, because no invitation had been sent to his concubine, Lāl Kuniwār. Again in the following year, after Farrukhsāyīr had succeeded, we find that he visited Pādshah Begam. The date was the 21st Muḥarram 1125 H. (16th February 1713) and the authority is Kāhīr Khān’s *Tabkhirah-i-samālīkh-i-chaghtaiiyah* under that date. His former indentant Sa‘dullāh Kān, first of all styled Hiḍayatullah Kān then Wazīrat Kān, lost his life as a consequence of this visit. The lady upbraided the young monarch for having taken the life of Zul‘īqār Kān, Jahāndar Shāh’s waqfīr. Farrukhsāyīr retorted that he had her letter advising him to take that step. She protested that she had written quite contrary. It was then discovered that Su‘dulīlah Kān (a personal enemy of Zul‘īqār Kān’s) had substituted another letter for the one prepared by Zinat-un-nissā’s orders.

Strangely enough, we find evidence of the Begam’s existence subsequent to 1122 H., in the correspondence of the East India Company’s embassy to the Delhi Court under John Surman.* The Armenian Khvāraj Karthik in July 1713 procured the intercession of Nāsir Khānemух who present office is to attend Pādshah Begam, daughter of Aurangzīb.

Then in Shawwal 1133 H. (August 1721) in the 3rd year of Muhammad Shāh, we have a statement as to the disposal of Zinat-un-nissā’s property, which Muhammad Shāh had as usual taken possession of upon her death. Shāh Dāys, Manavār-i-Kalām, British Museum, Oriental MS. No. 26, fol. 73b, says:— “An elephant canopy (‘indān’) with gold spike (kajāl) and a chandīl (kind of litter), belonging to the estate of the deceased Begam, daughter of His Majesty resting in Paradise (i.e., ‘Ālamgir’), with a pearl coverlet, were granted as a gift to Mir-un-nissā, known as Mir Parwar” (she was one of the widows of Shāh ʿAlam, Bahādur Shāh). Of course, this entry does not prove the exact date of Zinat-un-nissā’s death, but it raises a presumption that she had not died in 1122 H., that is, eleven years before the disposal of her movable property. But to make the matter certain we have the direct statement of a very accurate man, Mirzā Muhammad, in his *Tārīkh-i-Muhammad*. Under the year 1133 H. he has the entry, “Zinat-un-nissā Begam, daughter of ʿĀlamgir, died in the 22nd Rajab in Dīhil, age 80 years.” This is equivalent to the 18th May 1721. As Zinat-un-nissā was born on the 1st Shawr-bān 1053 H. (‘Abd-ull-ḥamid, *Buddhaṃ-sahāmā*, Vol. II. p. 343), the age of 80 years given in this entry corresponds exactly to her true age in the year 1133 H. After this can there be any doubt left that she did not die in 1122 H., but did die eleven years afterwards, in 1133 H. ?

With reference to the figures (1129) on the bomb of Zinat-un-nissā I would suggest two explanations, the first of which seems the most probable. First, then, the figures 1129 may stand for the date of making the tomb and not for that of the princess’ death; or secondly, the second stroke of the last two figures may have been obliterated by the wearing away of the stone, leaving them to be read as 7 instead of 4, thus turning 1127 into 1117.

WILLIAM ISFINI.

NOTES ON AN ARCHAEOLOGICAL TOUR IN SOUTH BIHAR AND HAZARIBAGH.

BY M. A. STEIN, Ph.D.

(Continued from p. 63.)

On the 16th October I moved my camp to Jethian in order to continue my examination of the sites described by Huen Tsiang in connection with Yashtivana. In detailing the result of my search I shall for convenience of reference follow the topographical order indicated in the pilgrim's account.

Stupa at Sahudrastham.—Huen Tsiang mentions to the east of Yashtivana, at a distance of about 6 or 7 li, a great mountain and, before a transverse pass of it, a stupa marking the spot where Buddha had explained the law. The position here indicated corresponds exactly to that of a modern place of worship, called Sahudrastham, first mentioned to me in the course of the enquiries I made at Jethian village as to sites of local pilgrimage in the neighbourhood.

At a distance of about 1½ miles east-south-east of Jethian and 3/4 of a mile south-east of Jeshiban, there is a gap in the main hill-range known as Saffi Ghat. Through it leads a bridle path used by people proceeding towards Hava and the villages to the south-east. Almost due north of the pass there ends the south-western off-shoot of the Handian Range, which we have noticed above in connection with the position of Jeshiban and Phal-Jethian. Just opposite to this point a small spur descends from the main range of hills in the south, flanking the approach to the Saffi'Ghat on the west and leaving only a narrow gorge between itself and the off-shoot of Handian.31

At the end of this small spur at a height of about 100 feet above the Harhar stream, which flows westwards through the gorge just mentioned, is the place of worship known as Sahudrastham, apparently Sanskritized by Purhitas as Sahodarastham. It consists of a small brick enclosure containing three broken Vihara images of an ancient appearance. The shrine rests on a square platform of old bricks, which measures, as far as exposed, 15 feet from north to south and 20 feet from west to east. The structure to which this platform originally belonged must have been far larger. For the slopes below on all sides of the projecting end of the spur are covered with fragments of ancient bricks, which undoubtedly have been removed from the structure just noticed.

Nowhere else in the vicinity of Jethian are similar remains now visible above the ground and in view of the close agreement of position, bearing and distance, I think the identity of the Sahudrastham structure with the stupa which stood 6-7 li (i.e., about 1½ miles) to the south-east of Yashtivana cannot reasonably be doubted.

The position of Sahudrastham commands an extensive view on all sides, except the south. The stupa, which once occupied it, must hence have been a very conspicuous object. A little below the Sahudrastham, on a small shoulder of the spur to the north-east, stands now a Linga of uncertain age worshipped as Harharnath.

Further striking evidence for this identification is supplied by an ancient paved road, carried over a walled foundation, which begins immediately below the Sahudrastham and can be traced very clearly for a distance of about 600 yards along the hill-side to the west. Owing to the earth carried down from the hill-side and the thick undergrowth, the original width of this road cannot be estimated with any certainty. In some places it is still 4½ yards broad, and along the whole distance the level terrace formed by it is distinctly noticeable. The wall of old rough masonry which supports this road is in places still 10-12 feet high and partly borders on a large tank situated to the north and known as Lirában.

31 This translation given in Beal's footnote for the "cross-ridge" of the text, is the one adopted by Julien, Si-yu-sti, ii. p. 18 and preferable in sense.

32 The position indicated can be easily fixed on the Revenue Survey Map, Bihar Sheet, No. 15, one mile to one inch.
There are no traditions about the origin and object of this ancient road or terrace. But we cannot fail to recognize that it is the same structure which Huien Tsiang intended to describe in his notice of the stūpa now identified. "Then King Bimbisāra wished to come to hear the law. He cut away the mountain, and piled up the stones to make steps in order to ascend. The width is about twenty paces and the length 3-4 li."

**Rock-Dwelling of Vyāsa.** — "Three or four li to the north of the great mountain," mentioned in connection with the now identified stūpa, Huien Tsiang notices "a solitary hill. Formerly Rishi Vyāsa lived here in solitude. By excavating the side of the mountain he formed a house. Some portions of the foundations are still visible."

The direction here given points clearly to the hill which forms the south-western end of the Haṃḍia Range. It just faces Saffi Ghāt from the north and is separated by a deep gap from the spur running up towards Haṃḍia. The name of this isolated hill is Bhāluāhī. Its distance from Saffi Ghāt is about half a mile, which corresponds accurately enough to Huien Tsiang's "3 or 4 li." One old Aḥir, living below Sahindrasthān, knew of an excavation at the south foot of this hill. Reaching the spot with some trouble through the thick jungle I found a natural recess formed by the rocks of the hill-side over-hanging their base at a height of about 15 yards. This recess, known as Fānsabāda, is probably just deep enough to afford sufficient shelter against rain and heat. I could hear of no other excavation, natural or artificial, on this hill or further up the valley of the Harhar stream, and I think that, in the absence of information regarding any other likely locality, the rock recess just described has a good claim to being considered the rock-dwelling of Rishi Vyāsa.

**Rājpīṇḍ Cave.** — "To the north-east of the solitary hill 4 or 5 li, Huien Tsiang tells us, "there is a small hill also standing alone." In the side of this hill he describes a stone chamber, large enough to seat a thousand persons, where once Tathāgata for three months had explained the law. At the south-west angle of the cave the pilgrim noticed a lofty cavern, which a popular legend supposed to lead to the "city of the Asuras." By the side of the cave he mentions a remarkable road made of wood. It was apparently ascribed to King Bimbisāra who, in order to reach the spot where Buddha was, had cut out a passage through the rocks, opened up the valleys, levelled the precipices, and led a way across the river-courses, built up walls of stone, and bored through the opposing crags."

The large cave of Rājpīṇḍ, to which my attention had been called already on my first visit to Jethian, by its relative bearing and distance as well as its natural features, accurately answers this description. It is situated on the north face of a rocky hill called Caṇḍu, which rises in the Haṃḍia Range about 1½ miles south-east of the village of Kīri. The distance of Caṇḍu, from the "solitary hill" in which the range ends opposite to Saffi Ghāt, is about one mile, and the bearing is to the north-east, which corresponds exactly to Huien Tsiang's statement.

Coming from Kīri I ascended the rubble-covered natural slope of the hill for about ten minutes before I reached the old road leading to the cave, of which I had already heard at the village. As soon as we struck it, my guide pointed out this road which, supported by walls of massive masonry, runs along the hill-side westwards in the direction of the cave. It is between 2 and 4 yards broad and rises with a very gentle gradient, until after about 500 yards it reaches a platform, partly walled up, which gives a very fine view over the valley. The supporting walls of the road near this platform measure about 18 feet in height. The road, cut out in places from the rocky hill-side, then descends towards the cave, the entrance of which is reached at about 150 yards from the platform. In front of the cave the road widens out to a terrace, 16 feet broad, resting on a massive wall.

The cave of Rājpīṇḍ is about 91 feet deep in its open part and 20 to 25 feet high. Its breadth, about 20 feet near the entrance, increases to 37 feet at its inner end. The ground in the interior is deeply covered with animal refuse. From the south-west corner of the cave a high fissure runs upwards, which could only imperfectly be lit up with the materials I had at hand, but which evidently extends much further.
The people believe that this fissure reaches far into the mountain, just as in the days of Huen Tsia, who was told of adventurous youths having travelled in it for 30 or 40 li before they reached the silver and golden walls of the magic city of the Asuras. The cave is popularly supposed to have been used by the king, whose palace was at Phal-Jethian, for holding his naunches. Dr. Grierson, who describes the cave in his very instructive account of the Gaya District, mentions a Mula which is annually held at the cave and a legend related of it.

Above the entrance of the cave there is a large perpendicular mass of solid rock, which, in the days of Huen Tsia, received the notice of the pious. The gods Sakra and Brahman were supposed to have pounded sandal-wood on the great and remarkable rock above the stone-house and to have sprinkled the body of Tathagata with it. The surface of the stone still emits the scent of the perfume,—an observation as to the correctness of which at the present day, I regret, I am unable to offer an opinion.

The above details will show how closely the Raping cave corresponds to Huen Tsia’s description. It is true we can no longer find "the wooden way, about 10 paces wide and about 4 or 5 li," which he saw "by the side of the stone house." But on the other hand the actually extant road with its walls and platforms on the precipitous hill-side fully bears out the more general points in Huen Tsia’s account of Birhaisara’s road-making already quoted. It is possible that the walls still extant once bore a wooden superstructure widening the road to the dimensions which the pilgrim indicates, but I was unable to find any proof of this. On the other hand the statements of the villagers seem to show that there are traces of the old road extending beyond the easternmost point at which the path now used strikes it. But a clearing of the thick jungle would be necessary in order to follow up this part of the road, which may, perhaps, have led down into the valley with an easier gradient.

Buddhavana. — Huen Tsia distinctly tells us that he reached Yashivana, i.e., Jethian-Jethibana, by going 30 li to the east through the wild valleys of the Buddhavana mountains. This makes it quite clear that General Cunningham’s proposed identification of Buddhavana with Buddhain is untenable, as the pass (or hill) designated by the latter name lies fully 6 miles to the north-east of Jethian, i.e., in the direction almost opposite to the one which the pilgrim indicates. It appears to me highly probable that the Buddhavana mountain, “with its peaks and cliffs lofty and precipitous,” must be looked for in that portion of the southern range which lies to the south-east of Jethian, near the point marked by the entry “Shahpoor,” in the Revenue Survey Map. Here the hills rise once more to a fair height and project small transverse spurs all covered with jungle. The central and apparently highest point of this portion of the range is at a direct distance of about 5 miles from Jethian.

My enquiries in the neighbourhood did not bring to my notice any local name that could be connected with Buddhavana, nor could I hear anything of the cave which Huen Tsia mentions on this mountain. All the pilgrim tells us of it is that there was “among the steep mountain cliffs a stone chamber where Buddha once descending stayed; by its side is a large stone where Sakra and Brahma Ja poured some oxehead-sandalwood and anointed Tathagata with the same.” In view of the vagueness of topographical information here furnished a personal search for this cave offered little hope of success within the limited time available. I accordingly decided to proceed from Jethian direct to Kurukhur, where a far more important question concerning the position of Huen Tsia’s “Cock’s-foot Mountain” required close examination.

On the 17th October I crossed once more the southern range of hills by the Ghat close to Jethian and marching along their foot to the south-west, past Tapohan, reached the large village of Amaithi at a distance of about 9 miles. A small modern shrine by the roadside at the latter place contains three old images, covered with red-lead, one among them apparently representing Avalokiteshvara. I found a similar collection, consisting mostly of ancient liangas, of small size from 3 feet downwards, at a modern temple facing a large tank about one mile to the east of the village of Orli. One of these small liangas shows a much effaced head on one side, and another emblem is adorned with four heads,
evidently representing those of Brahman. My attention was attracted to these features, as, though apparently common in Ancient Liṅgas of Bihār and elsewhere in the east, they had never been noticed by me in the very large number of Liṅgas I have examined in the Panjāb and in Kā śmir.

**Kurkhiār.**—Kurkhiār, which occupies rising ground amidst a wide expanse of well-irrigated rice fields, is a village of large size. It must evidently have been a place of considerable importance also in old days, judging from the extent of its ruined mounds and the remarkable amount of old sculpture, carved building stones and ancient bricks, which have been and are still being extracted from them.

General Cunningham, who examined the site twice, during his tours 1861–62 and 1879–80, has given sufficiently detailed accounts of its topography and of the sculptures which were then visible, in Vols. III. and XV. of the *Archaeological Survey Reports.* Referring to these accounts for a general description of the place, I may turn at once to the question which my visit to Kurkhiār was mainly intended to elucidate.

Huen Tsang, in his itinerary of the Buddhist places of worship situated between Gayā and Rājaγha, mentions the **Kukktapādāgiri** or “Cock’s-foot Mountain” immediately before Buddhavana and the sites around Yashūvāna, and gives us a lengthy account of the religious interest attaching to it. On the top of the three-peaked mountain Kāsyapa, the chief of Buddha’s disciples, was believed to have removed himself from mortal eyes to await the coming of Maitreya, the future Buddha. The sides of the mountain are described to us as “high and rugged, the valleys and gorges as impenetrable. Soaring up into the air are three sharp peaks; their tops are surrounded by the vapours of heaven and their shapes are lost in the clouds.”

**Supposed Site of Kukktapādāgiri.**—This sacred mountain, from which Buddhavana lay about 100 li to the north-east, was supposed by General Cunningham to be identical with the site of Kurkhiār. He based this identification mainly on the modern name Kurkhiār, which he believed was to be derived from an assumed earlier form *Kukktapādāgiri* vihāra. There seemed, indeed, a very serious obstacle to this identification, viz., the fact which General Cunningham himself felt obliged to acknowledge, that no three-peaked mountain is to be found in the neighbourhood of Kurkhiār. He believed, however, that Huen Tsang’s description could fairly apply to the “three large and rugged hills which rise boldly out of the plain about half a mile to the north of the village, and touch each other at their bases.”

General Cunningham, though he reproduced this identification also in his *Ancient Geography,* seems yet to have felt not altogether assured of it. In 1879–80 he, therefore, paid a fresh visit to Kurkhiār, chiefly with the object of exploring the hill to the north of the village. On this occasion he specially looked for remains of the stūpa, which, according to Huen Tsang’s account, was built on the top of the mountain where the peaks had closed at Kāsyapa. These remains he believed to have found “in a square basement which still exists on the highest or middle peak of the *Murali Hill* surrounded by quantities of broken bricks.”

The difficulty involved by the proposed identification of Kukktapādāgiri with Kurkhiār had struck me already before, when searching in vain on the available maps for any indications of hills in the immediate vicinity of Kurkhiār, which could possibly be supposed to correspond to Huen Tsang’s description of the three-peaked mountain. My doubts had increased after I had ascertained the exact position of Yashūvāna and thereby indirectly also that of Buddhavana. For though the portion of the hill-range south-west of Jeṭhān, where Buddhavana must be located, lies indeed to the north-east.

---

23 See Vol. III., pp. 14-16, with plate XII.; Vol. XV., pp. 4-6. 24 See Beck, *Si-yu-ki,* ii. p. 142. 25 See p. 469. 26 See *Arch. Survey Rep.,* xv. p. 5. The name *Murali* here used must be due to some confusion. It is unknown to the people of Kurkhiār as a designation of the low ridge meant by Gen. Cunningham. *Murali* is the name of a large village about three miles due north of Kurkhiār and at the foot of the high hills of the Southern “Rājgir range” trending from the north-east. Is it possible that this name, spelt Murali, got mixed up somehow with Gen. Cunningham’s notes about the Kurkhiār ridge?
of Kurkihār, yet the distance, in a direct line only 5-6 miles, could not possibly be represented by 100 ½ in Huen Tsang's itinerary, unless we assume a serious mistake in the pilgrim's reckoning.

The visit, which I paid on the morning of the 18th October to the three hills mentioned by General Cunningham north of Kurkihār, confirmed my misgivings. I found that those "hills" were in reality only low rocky ridges, such as we find cropping out "kopje"-like through a great part of the Gayā District. They are situated a little over a mile to the N.-N.-E. of Kurkihār and are so insignificant in height and extent as to make their omission even from the large scale Revenue Survey Map easily intelligible. The middle hillock, on which General Cunningham looked for the hiding place of Kāśypa, rises about 150 feet above the level of the rice fields. Its top forms a small plateau 125 feet long from S.-E. to N.-W. and 55 feet broad. On it there is a small platform with a dozen old sculptures of small size, among them a figure about 1½ feet high representing perhaps Māyā or a Śakti, and another of a Bodhisattva, one foot high. The rest of the collection is made up of small Liṅgas and broken Bhadrapūtas. Near the centre of the little plateau stands a black Liṅga, of old appearance, about 1½ feet in height, and worshipped by the people of the neighbouring hamlet of Pāṭārā under the name of Rāmānātha. All these sculptured remains are said to have been found on the spot and within the recollection of the people.

The ridge which adjoins the middle one on the south-west is even smaller, rising only to 80 feet; the third to the north-east is only 20-30 feet higher than the middle one and equally insignificant in its other dimensions. All are almost completely bare of vegetation, the hard rock of the slopes being easily washed clear of detritus by the rainfall, and thus retaining no soil for the growth of jungle. Actually in view of these rocky hillocks, it was indeed impossible to believe that they could be meant in Huen Tsang's description of the Kukkuṭapādaṇi, of which we are told: "Tumultuous torrents rush down its sides, thick forests envelope the valley, whilst tangled shrubs grow along its cavernous height."

My visit to the supposed site of Kāśypa's mountain finally convinced me that the identification of Kurkihār with the "Cock's-foot Mountain" was impossible. But its result was not purely negative. From the elevated position of the Pāṭārā ridge I could not fail to notice the high hills rising above the plains further away to the south-west, and culminating in the peaks of Taṅdwa and Mahār. Their direction and distance seemed to agree singularly with Huen Tsang's indications regarding the relative positions of Buddhavana and the "Cock's-foot Mountain," and the following pages will show that this observation had guided me rightly.

_Sculptures at Kurkihār._—Though Kurkihār must be denied all claim to the distinction of marking the site of Kāśypa's legendary resting place, it still deserves a special notice on account of the remarkable abundance of ancient remains which it contains. Carved slabs of large size and architectural fragments of all kinds can be found in plenty, walled into the houses of the village. Votive Stūpas of varying sizes, carved in granite, are seen in great number on the edge of the large tank adjoining the village on the south, where they now serve as washerman's stones, as well as in other places. From the ruined mound marked A on General Cunningham's plan great quantities of large bricks of ancient make are still being extracted, and an inspection of the houses of Kurkihār shows that probably most of them have been built with similarly obtained materials.

In the course of these excavations sculptures are frequently discovered. Some well-preserved ones have been removed, through the care of Rai Lakshmi Narāyan, the local Zamindār, to his adjoining Bungalow. The most interesting of these is reproduced from a photograph in Fig. II. The relievo, which is 3½ feet high with a greatest breadth of 3 feet, represents a teaching Bodhisattva seated within a trefoil-shaped niche of rocks between two female attendants. The frieze above the main image represents worshippers approaching a stūpa with offerings. The top of the relievo shows five Bodhisattvas in different attitudes, each in a small niche. Below the three middle ones are seen couples of grotesque figures. The composition of the whole relievo shows a curious resemblance
to that of many later products of Greco-Buddhist art in Gandhāra, though in respect of the modelling of figures and other details the difference is sufficiently marked.

The flat moulding just below the lotus-seat of the principal figure shows the usual Buddhist formula Ye dharmakshetraprabhava, etc., in characters which appear to me to belong approximately to the 9-10th century of our era. The lower band of the moulding is inscribed with characters which have become much effaced, and which have not allowed me to make an impression sufficiently clear to be made out completely. It appears to contain a dedication. This sculpture is said to have been discovered in 1898 during excavations on the mound close by.

Another relief measuring 2 feet 9 inches in height represents a female divinity, apparently a Sakti. The characters of the formula Ye dharmam, etc., which is engraved round the head, and those of a short dedicatory inscription below the proper left foot, show close resemblance to those of the Aphasis inscription (circa 675 A.D.) reproduced in Professor Bihler’s Indian Palæography. The dedicatory inscription Degadharmam yathā Sākyabhikṣuṇī sasanamataḥ (sic) marks the statue as the gift of a Buddhist nun (bhikṣuṇi), but does not furnish further information. A third relief, also excavated not very long ago from the neighbouring mound, 2 feet 3 inches high, shows a six-armed male figure, holding lotus, rosary, cakra, couch, and what looks like a bowl. It is supported on either side by a female attendant.

Apart from these sculptures, which are well-preserved and ought without difficulty to be secured for the Imperial Museum at Calcutta, there is an older collection of similar spoils in the open courtyard of the temple of Bhagaratī, the north-eastern corner of the village. This has already been described by General Cunningham. Fig. III shows the principal relief representing a Buddha in meditation. Its height is nearly 4½ feet. The characters of the formula engraved on the halo seem to belong to about the 10th century of our era. The word Akṣobhya engraved to the proper head of the Buddha seems to indicate that the Buddha intended is Akṣobhya, one of the five eternal Buddhas of the Mahāyāna creed.

The conviction, which I arrived at after my examination of Kurkhiār, was that Hiuen Tsiang’s Kukkutāpadālpāla had to be looked for further to the south-west in the direction of the hills mentioned. On the 19th October I accordingly moved my camp to the large village of Wazirganj, situated about 3 miles to the south-west of Kurkiār and conveniently near to the site of Hasra, which I had already before singled out for closer inspection. Hasra is the name given to a low ridge extending at the northern extremity of a higher range of hills, which rise boldly from the plain at a distance of about 4 miles S.-S.-W. of Wazirganj (marked “Hasra” on Atlas of India Sheet, No. 104). The maximum elevation of the ridge to the north is about 200 feet above the plain. In the little defile which separates the ridge from the hill to the south, and which is known as Köl, Mr. Beglar had already noticed a considerable number of mounds, from which ancient sculptures of superior workmanship had been extracted at various times. He had given a brief description of these, accompanied by a plan, but had not been able to trace any tradition or other evidence that might throw light on the original character and name of the site.

The Hasra Site. — Proceeding to Hasra on the afternoon of the same day I found the conclusion I had drawn from Mr. Beglar’s account as to the importance of the site fully confirmed. The whole of the little valley, which measures about a quarter of a mile in length, is strewed with ancient building materials extracted from numerous ruined mounds. Referring to Mr. Beglar’s plan for an indication of the approximate position of these mounds, I may mention that the one near the western entrance of the valley, marked D on his plan, measures fully 133 feet in length by 56 feet in breadth and thus evidently marks the position of a building of some dimensions. Again, close to the south foot of the lower ridge and near the centre of it, I came upon a large circular brick-mound, corresponding apparently to the structure marked H in Mr. Beglar’s plan, but not described in his text. Though

---

18 See Arch., vol. xii, p. 158.
19 See Arch., vol. viii, p. 104 with plate II.
evidently used as a quarry by the villagers even quite recently, it still rises to a height of about 25 feet above the level-ground of the valley. The appearance of the mound distinctly suggests its having been a stūpa, and as it measures on the top 92 feet from north to the south and 75 feet from east to west, the dimensions of the original structure must have been very considerable. The bricks found on the surface are mostly broken, but appear originally to have measured about 10 inches in length with a thickness of 2 inches.

Much ancient sculpture is said to have been found in the course of the excavation for bricks which the poorer inhabitants of the neighbouring villages are in the habit of carrying on here. But those in fair preservation have apparently all been removed to the rustic shrines of the vicinity. Small broken pieces of reliefs and ornamented bases of statues are found on rubbish heaps at several places, particularly near the narrow eastern end of the valley. Among these there are several showing rows of small Bodhisattva figures, and thus indicating plainly the Buddhist character of the buildings from which they had been extractal. On the mound marked K by Mr. Beglar I could no longer trace the pedestal of a statue inscribed with the Buddhist formula. But close to the circular mound A at the western entrance of the defile there lies a broken relic of very good workmanship about 2 feet high, showing a Buddha (now headless) seated in meditation and on its pannelled base (broken) four small images of Buddhas in varying attitudes. The formula engraved on the leaves of the lotus-seat occupied by the principal figure is in characters of about the 10th century. The sculpture deserves preservation.

Even a cursory inspection of the site proved that it must have been once occupied by an important Buddhist religious establishment. But a point of special interest was revealed by a closer view of the hill rising with rugged jungle covered slopes immediately to the south of the Haśra-Köl. When approaching Haśra from the north-east, I had already noticed that the hill behind it was connected at its highest point on the east with two other spurs of about equal height, all three radiating from one central eminence covered like the rest with dense jungle. The view, supported as it was by the contours of the hill shown on the Survey map, and in conjunction with the extensive remains at the foot of the hill, naturally suggested to me that I had really found in the latter the "Cook's-foot Mountain" of Huen Tsiang.

In order to arrive at a definite opinion regarding this identification it was necessary to proceed to a closer examination of the hill itself, and this I was able to effect on the following morning. Before, however, detailing its results it will be useful here to review briefly the statement furnished regarding the sacred hill by Huen Tsiang, as well as by the earlier pilgrim Fāhian.

Chinese accounts of Kukkutapadāgiri — Huen Tsiang, whose account is far the most detailed and accurate, starts in his description from the immediate vicinity of Bōdhgaya: 30 "To the east of the Mahī river (the present Mahā Nādi) we enter a great wild forest and going 100 lī or so we come to the Kukkutapadāgiri ('the Cock's-foot Mountain') or Gurupadāgiri ('the mountain of the venerable teacher'). The sides of this mountain are high and rugged, the valleys and gorges impenetrable." After referring, in the words already quoted, to the thick forests in the valleys and the tangled shrubs, which grow along the heights of the three sharp peaks of the mountain, Huen Tsiang informs us that "behind these hills the venerable Mahā-Kāśyapa dwells wrapped in a condition of Nirvāṇa. People do not dare to utter his name, and therefore they speak of the 'Gurupadāh.'"

Kāśyapa, as Buddha's chief disciple had, when the master was on the point of attaining Nirvāṇa, received from him the commission to preserve the law. For this purpose he summoned the great convocation we have already referred to in connection with the Sattapaniši Cave, "and then continued for twenty years. Then in disgust at the impermanence of the world, and desiring to die, he went towards the Cock's-foot Mountain. Ascending the north side of the mountain he proceeded along the winding path, and came to the south-west ridge. Here the crags and precipices prevented him from going on. Forcing his way through the tangled brushwood he struck the rock with his staff and

— See Beal, St-yu-kī, ii, pp. 142 sqq.
thus opened a way. He then passed on, having divided the rock, and ascended till he was again stopped by the rocks interlacing one another. He again opened a passage through and came out on the mountain peak on the north-east side. Then having emerged from the defiles, he proceeded to the middle point of the three peaks. There he took the Kāshāya garment of Buddha and expressed an ardent vow. On this the three peaks covered him over; this is the reason why now these three peaks rise up into the air.” The pilgrim next relates the legend how, in future times, on the coming of Maitreya, the next Buddha, Kāśyapa will issue forth from the mountain and, delivering to him the garment of Buddha, enter Nirvāṇa. “Now, therefore, on the top of the mountain is a stūpa built. On quiet evenings those looking from a distance see sometimes a bright light as if it were of a torch; but if they ascend the mountain there is nothing to be observed.”

Two and a half centuries before Hiuen Tsiang’s visit Fa-hian had already described the “Cock’s-foot Mountain,” which was then a pilgrimage place for Buddhists from many countries. Kāśyapa, he tells us, “divided the mountain at its base so as to open a passage. This entrance is now closed up. At a considerable distance from this spot there is a side chasm; it is in this the entire body of Kāśyapa is now preserved.” Arhats were supposed to take their abode on the hill after the setting of the sun and to favour pilgrims who were in spiritual difficulties with their advice. “The thickets about this hill are dense and tangled. There are moreover lions, tigers, and wolves prowling about, so that it is not possible to travel without great care.” Fa-hian places the mountains 3 li to the south of Boddhagya, which implies a manifest error of record, such as unfortunately is not uncommon in this pilgrim’s itinerary.

**Kukkuṭapādaśiri identified with Sōbhānaṭ Hill.** — On the morning of the 20th October I approached the hill, in which I think we must thereafter recognize the legendary resting place of Kāśyapa, once more from the side of Hasra. Crossing the dėbris-strewn Kōl valley, I ascended the north slope of the spur immediately overhanging the latter by a rugged track leading through thick jungle. On the ridge, which was reached after a brisk climb of about 20 minutes, all traces of a path disappeared, and further progress to the east, where the spur culminates, was much impeded by a tangled mass of jungle trees, bushwood and high grass. The northern spur, from its middle part where I struck its ridge, rises towards the east in three distinct shoulders formed by massive rocks and in places difficult to climb. When approaching the highest portion, it became quite clear that it forms also the radiating point for two other spurs trending to the south-west and north-east. After climbing up a steep slope of rugged rocks I found that the central summit of the three spurs is surmounted by a square parapet, 9 to 10 feet high, built of rough walls, but sufficiently solid to prevent its being overgrown by the luxuriant jungle. The platform or terrace thus formed measures 75 feet on each side and is correctly orientated.

On its top I found a mound about 10 feet high, apparently circular at one time, but much dilapidated. Its present diameter is about 20 feet. It is composed of large bricks which, according to my guide’s statement, were quarried by villagers at the time of a famine within his recollection. From the appearance of this mound it is clear that it represents the remains of the stūpa which Hiuen Tsiang mentions on the summit of the Cock’s-foot Mountain. One of the bricks exposed measured 10 × 9 × 2 inches. The centre of the mound had been dug into a depth of 4-5 feet. In the cavity thus formed, which is about 10 feet broad, lie five large granite pillars, 9 inches in square thickness, half buried by débris.

From the top of the mound the relative position of the three spurs radiating from this central eminence could be seen most distinctly. Besides the spur, by which I had ascended and which runs almost due west, there is a lower but equally rugged spur descending to the south-west and also showing a number of shoulders. This is continued in the same direction by a series of detached rocky hills, which connect it with the Mahār group of hills about five miles to the south-west. The third spur, which is far shorter, trends in the direction of north-east and is soon lost in the plain.

*See Fo-hsia-kii in Psal. Si-yu-kii, i. p. 136.*
I had no means of ascertaining the exact height of the central peak, but judging from the time occupied in climbing it and the comparison of the highest point of the Mahâr Hill, marked 1,618 feet above sea level in the Survey Map, I came to the conclusion that its relative elevation above the plain may be about a thousand feet or a little more. The hill top is known by the people by the name Sōbnāth, and the fact of its bearing an ancient mound is also generally known. But no definite tradition attaches to it, and all I could ascertain was that the well in the centre of the mound had been seen in this condition for the last twenty years.

The natural features of the hill strikingly illustrate the origin of the legend related by Hiuen Tsiang as to Kâśyapa’s ascent. The position of the spurs corresponds closely to his account, which mentions, besides the northern side of the mountain, ranges to the south-west and north-east. In the confused masses of rocks heaped up all along the crest lines of the three spurs we can look for the passages which Kâśyapa was supposed to have opened with his staff. The tangled brushwood, which surrounded the hill in the days of both pilgrims, still covers it in remarkable thickness and in the narrow gorges which lead down between the spurs, the rainy season must indeed produce tumultuous torrents. That the name “Cock’s-foot Mountain” (Kukkuṭapāḍāgiri) is likely to have been derived from the three spurs resembling in relative position the foot of a cock has already been noticed by Hieun Tsiang’s translators. It is impossible to look down from the top of the central peak or even to examine the shape of the hill on the map without being struck with the appropriateness of the simile.

It only remains to point out that the distances and bearings given by Hiuen Tsiang with reference to the “Cock’s-foot Mountain” are in full agreement with the position now ascertained for it. From east bank of the Mahâ opposite Bōdhgaya to the Kukkuṭapāḍāgiri the pilgrim reckoned 100 li or so, the direction being to the east “through a great wild forest.” Measuring on the map the direct distance from the Sōbnāth Hill to the bank of the Mūhana Nādi opposite Bōdhgaya we find it to be close on 14 miles. This distance, with the addition of one-fourth required to compensate for the excess measurement on ordinary roads from village to village and taking the li at its ordinary value of about \( \frac{1}{2} \) mile, brings us as near as we can expect to the 100 li of the Chinese pilgrim. The true direct bearing, it is true, is to the north-east, not to the east. But then a glance at the map will show that a traveller from Bōdhgaya would have to proceed first nearly due east to Mahâ in order to avoid crossing on his route the hills called after the latter place, which lie in the direct line between Sōbnāth and Bōdhgaya.

Again after leaving the “Cock’s-foot Mountain” Hiuen Tsiang counts about 100 li in a north-easterly direction to Buddhavana. Accepting the position I have above approximately marked for the latter locality and measuring the direct distance on the map, we find it a little over 11 miles and the bearing north-east. The slight difference here noticed in the two values in Hiuen Tsiang’s “100 li is easily accounted for by the fact that in proceeding to Buddhavana the pilgrim had to cross the southern Râjgir range at a point where it is comparatively high and rugged, as his own reference to “peaks and cliffs lofty and precipitous” clearly indicates.

After I had completed my tour and returned to Calcutta, I learned from my friend Lt.-Colonel L. A. Waddell, I. M. S., that he, too, had on a visit paid several years ago to Haæra arrived at the same conclusion as to the identity of the “Cock’s-foot Mountain.” In view of Col. Waddell’s keen power of observation, testified by the important results of his researches into other points connected with Hiuen Tsiang’s itinerary, it is a source of special assurance to me to know that the above identification had been arrived at by us both independently.

**Sculptures at Bishanpur.** — I descended from the Sōbnâth peak by the steep gorge which leads down between the south-western and western spurs to the village of Bishanpur in order to see the sculptures mentioned by Mr. Beglar at this place. It lies about \( \frac{1}{2} \) miles to the west of the

---

41 Its position may be fixed on the Atlas of India map just below the letter D of the name “Tundwa.”
42 Compare Cunningham, Ancient Geography of India, p. 564.
43 See Arch. Survey Rep., viii., p. 105.
peak and contains, in a hall decayed modern shrine designated as the “Bhairavastūrī,” a series of fine sculptures said to have been excavated in the Kōl valley about 25 or 30 years ago.

The largest and best preserved among them are a large-sized Buddha-statue with an attendant figure on each side (see Fig. IV.), the whole having evidently formed one group. The height of the central statue is 8 feet from the base and that of the attendants 3½ feet. The characters of the Buddhist formula inscribed on the pedestal point to the 9-10th century as the probable date of these fine sculptures. The attendant figure on the proper right is clearly marked as Pāñcikābhā. The relieves now lying behind the principal statue evidently formed a panel for it and show like the rest of these sculptures highly-finished workmanship.

Fig. V. reproduces three detached relieves, which must have belonged to pedestals for smaller statues. Their execution is equally good. There are two smaller statues of inferior value in niches of the tumbled-down walls, representing Buddha and a four-armed god, probably Viṣṇu. I was, however, unable to trace the small base-relief, which is mentioned by Mr. Beglar as bearing a short inscription with the name of Mahākāśyapa. In the view of the identification of the Kōl site now arrived at, this name as possibly indicating reference to the local saint would have been of special interest.

I consider that the removal of the Bishanpur sculptures to a place where their preservation could be assured, probably to the Imperial Museum, is distinctly desirable. Judging from the impression I gained by my enquiries, this removal, if accompanied by the offer of some gratuity to the local Purūḥitas could be effected without difficulty. Or, the grant of a small sum might assure the necessary repairs to the shrine, which could then serve as a shelter for the sculptures now placed there. Still more desirable it seems to me that early steps be taken to prevent unauthorized excavations and consequent destruction in the ruined mounds of the Kōl valley, which, by the identification of their site, have now acquired a special interest.

From Warzīrganj I proceeded on the 20th October to Gayā in order to arrange from there for my visit to the Kūluha Hill, situated close to the southern border of the Gayā District, but within the limits of Hazāribāgh. The ancient remains on this hill, previously unsurveyed, had formed the subject of a detailed report submitted to Government in June 1899 by Babū Nand Lāl Dey, Munsil-Magistrate of Chatra, Hazāribāgh, and I had been asked to examine them in connection with my tour. After a short stay at Gayā, required in order to allow my camp to move ahead, I marched on the 22nd October via Shērgāhī to Hunterganj village, situated about 82 miles by road south of Gayā on the left bank of the Lilājan River and not far from the northern border of the Hazāribāgh District. On the following day I proceeded to the Kūluha Hill, which rises about 6 miles to the southwest of Hunterganj, and placed my camp at Haṭwaria, the nearest inhabited place on the west side of the hill.

Position of Kūluha Hill.—The hill known locally as the Kūluha Pahār is formed by a projecting spur of the great range which runs along the northern edge of the plateau of Hazāribāgh. It consists of a series of steep basaltic ridges, running in the general direction of north to south and culminating in a pinnacle of bold crags, which reach to a height of 1,575 feet above sea-level, as fixed by the Trigonometrical Survey. Owing to its height and bold form the hill is a very conspicuous object in the landscape, as seen from the plains of the Shērgāhī Sub-Division.

The fact of the hill being the object of a local pilgrimage is mentioned in Sir W. Hunter’s Gazetteer (Hazāribāgh District) and is also recorded in the List of Ancient Monuments of Bengal. But the merit of having first given a full account of it belongs to Babū Nand Lāl Dey, the local officer already mentioned, whose Report, dated 7th June 1899, was forwarded to Government with a letter from the Commissioner of the Chota Nagpūr Division and duly communicated to me in print. Babū Nand Lāl Dey deserves every commendation for the zeal and trouble with which he has endeavoured, during his short stay on the hill, to note down all those objects which his state of health permitted him to visit, and which he thought might be of antiquarian interest. As, however, his examination of the remains of the place was necessarily rapid and does not profess to have been made with special

archaeological knowledge, it would serve no useful purpose to reproduce it here or to discuss particular statements contained in it. It may, however, be mentioned that Bābā Nand Lāl Dey believed the ancient remains on the hill to be exclusively Buddhistic, and that he was prepared to identify it, on the basis of a supposed etymology of the name, with "the Makula Parvata of the Burmese Annals of Buddhism" where Buddha is said to have passed his sixth rainy season.**

The top of the Kula Hill is approached by two paths only, one leading up from Hācawaria village on the west, and the other from a valley which skirts the hill on the east. Following the former, which I used on my ascent to the hill, traces of the pilgrims' route are soon met in the auspicious sīdārā (read-lead) marks applied to all larger rocks and trees. About half a mile south of Hācawaria, where the path leaves a wooded plateau at the foot of the hill, there is a small mound of stones, and on its top an old relike, measuring 1 foot 8 inches in height by eleven in breadth, which represents the Jina Pārvanātha under the usual snake-hood. The Hindu pilgrims and their Pūrṇāchas know the sculpture by the name of Dyārapāla, "the Guardian of the Gate." For about half a mile further the path crosses an outlying ridge, which is fairly wooded. Then the proper ascent begins over bare basaltic rocks of remarkably large size, which face the whole west side of the hill. They are so steep and so bare of vegetation that for one not barefooted it is a matter of some difficulty to scramble up. After an ascent of about four hundred feet a wall of even steeper, but smaller, cliffs is met. Here a regular path is formed by broad steps cut into the rock. This path leads at a point about 200 feet higher up through the gateway of an ancient wall to the plateau near the hill top.

Plateau of Kula Hill-top.—This plateau or rock basin —for this, name would be equally applicable for a part of the area—is formed by two massive ridges of rock, more or less parallel, which ascend from the south. Before converging towards the bold pinnacle of rock which, as already mentioned, forms the summit of the hill, these ridges are joined by a transverse ridge which runs in the direction from south-east to north-west and at a distance of about half a mile to the south of the summit. The bare rocks, forming the north face of the transverse ridge, slope gradually down towards a natural basin, which contains a small lake about 300 yards long with a greatest width of about 70 yards. The longitudinal direction of the lake follows the dip of the transverse ridge from N.-W. to S.-E. It is said to be fed by springs and always retains its water, the overflow from the monsoon rains being carried off by a small channel at the south-east corner. The presence of this unfailing supply of water in a locality otherwise made so forbidding by Nature had probably much to do with turning the plateau of the Kula Hill into a popular place of pilgrimage.

Immediately above the little lake, with its plentiful growth of lotuses, water-lilies and other aquatic planks, the bare rock rises with steep wall-like slopes up towards the summit. The main ridge on the east ascends to this highest point in a series of bare cliffs, which form a kind of créte and fall off almost precipitously towards the valley below. The ridge on the west is less steep and rocky and is covered in the part nearer to the rock basin with thick jungle growth. Higher up it, too, assumes the form of a precipitous wall of cliffs. The summit itself, which forms the final object of the pilgrimage, consists of a series of enormous boulders heaped up one above the other and frowning down boldly into the valleys.

I have attempted to illustrate the main topographical features of the hill by a site-plan prepared from my rough survey (see Fig. VII.). This, I hope, together with the photograph reproduced

**It will be remarked that, excepting the image of Kulewari, I did not come across the image of a single deity belonging to the Hindu Pantheon: the place is entirely Buddhistic. It is my strong conviction that Kula Pahar is the makul Parvata of the Burmese annals of Buddhism. Buddha is said to have passed his sixth water (or rainy season retirement) on the Makula mountain (see Bigandet's Life or the Legend of Gaudhamala). Kula is simply a contraction and corruption of Makula (or) of (makula) having dropped by lapse of time, and the word kula changed into Kula according to the guttural pronunciation of the people of the district. The word Kula, however, still exists in the name of the goddess Kulewari (Kula + Tawari) which means, as I have stated, the lady of the Mountain Kula.

It is scarcely necessary to point out that the derivation of the name Kula here suggested is impossible on phonetic grounds, and that the connection of the site with the Makula Parvata cannot be maintained in the absence of any direct historical or topographical evidence.
in Fig. VI., showing the summit as seen from Bhimbhār, will help in following the description of the objects of antiquarian interest to which I now proceed.

Sacred Sites on Kuluha Hill. — Reaching the plateau on the west by the path previously described, we notice first the ancient wall which lines the crest line of the ridge on this side. It is 9 feet thick and shows rows of well-cut slabs of stone on the outer faces, while its interior is apparently built of large undressed stones. The gateway, five feet broad, is much decayed, but beyond it to the N.-E. I was able to follow the wall ascending the ridge for a distance of about 750 feet, notwithstanding the thick jungle by which it is surrounded. Immediately to the north of the gate, where there is a natural dip in the ground, the wall is fully 15 feet high. The wall extends to the N.-E. up to the point where the ridge falls off in almost perpendicular cliffs and where thus Nature itself has provided a rampart. The same observation applies to the wall south of the gate, which, adapting itself to the contours of the plateau, extends in a fair state of preservation for about 700 feet, up to a point on the above-mentioned transverse ridge, where the latter becomes quite unscaleable.

About 130 feet to the S.-E. of the gate by which we have entered, stands a temple sacred to Durgā-Bhagārāti. The name under which the goddess is worshipped here, Kuleavāri, is supposed to be connected with the designation of the hill Kukha. The temple, which consists of a cella about 12 feet square inside and an outer chamber 10 feet deep and 3 feet broad, is up to a height of five feet from the ground built mainly with stone materials removed evidently from some old structure. Among these large ornamental slabs are found in considerable number. The rest of the extant temple is built with bricks which seem also of old make, and is covered outside with a thick layer of churan.

A broad platform in front of the temple, which faces south, as well as a large dilapidated shed to the west of it, are similarly constructed with ancient carved slabs, while more of the latter lies in front of the building. The present temple is said to have been built by a Rāja Candraketu of Dāntār, as to whose date no information was forthcoming. Judging from its appearance, it can scarcely be older than a couple of centuries. On the other hand the materials used in its construction show that it has probably replaced an earlier structure of more imposing dimensions. One old slab in the wall measures 4½ feet in length and one foot in height.

The Purāhitas or, as they are locally called, Pāsālas of the shrine reside at Dāntār and ordinarily take their turn of worship for half a week. The pilgrims, by whose dukhiṇā they mainly subsist, visit the hill at particular days auspicious for the 'Yatra.' Such are the 9th day of the bright half of Caiatra, when about 5,000 people are said to assemble, and the day of Māgha known as Śripaścanni. There is no Māhātya or legendary use, but the priests are in the habit of relating to the pilgrims the stories of the Mahābhārata, which local belief connects with particular sites of the hill.

About 125 yards to the south of the temple and on the rocky crest of the transverse ridge a large isolated boulder known as Bhimbhār is visited by the pilgrims. Bhima, the epic hero, is believed to have put it there to take rest in its shade. About 40 feet to the N.-E. of it is a platform 21 feet long and 14 feet broad built of large dressed slabs. The place which is called the “wall of King Virā,” offers a splendid view over the Līlājan valley westwards.

About 18 yards to the north of Bhimbhār is a small grotto about 4 feet high and 3 feet broad, formed by a boulder overlying a fissure in the rock. Inside is a well-preserved image of the Jina Pārvanāttha, seated and surmounted by the usual snake-hood. The little sculpture, which is about 2 feet high, is carved in a black basaltic stone and seems distinctly old. The interstices between the rocks serving as sidewalls and the boulders are filled with bricks 9 inches square and 2½ inches thick. Close to the west of this is another small grotto containing a seated Jina in the conventional posture. As the Chhāa engraved on the pedestals is effaced the Jina intended cannot be ascertained. Judging from the red-lead marks on these sculptures they seem to enjoy the orthodox attention of the pilgrims.

Descending from Bhimbhār towards the temple a small rock-ground tank is passed, and near it two small images placed below a tree. They measure 1½ feet in height, and though damaged by exposure
are yet clearly recognized as representations of Jinas. The pedestal of one of them bears a short inscription of which, however, only the date Samvat 1443 can be made out with any certainty.

A path skirting the western side of the little lake above described leads to the East Gate of the hill plateau. It opens a passage through a wall of similar construction to that on the west and is of identical dimensions. The outside facing of the wall consists of well-carved slabs, several of which measure above 5 feet in length. The eastern gate occupies a depression in the ridge, and as the latter soon rises both on the south and the north into cliffs presenting a precipitous face to the east, the wall which was intended to guard it, does not extend very far.

Retracing our steps from the east gate to the eastern end of the lake we strike the path leading to the sacred sites which the pilgrims visit on the higher portion of the east ridge. Here, close to the lake, is a small well-like fissure in the smooth rock, where rain water accumulates. It is worshipped under the name of Suraj Kund. By the side of it lies the fragment of an image broken above the knees, which must have undoubtedly represented a Buddha or Bodhisattva. It measures 11 inches across the knees. The pedestal attached is 16 inches broad and represents a group of worshippers, bringing offerings. The outside panels are occupied by crouching lions. The interest of this little sculpture lies in the fact that it is the only trace of Buddhist worship I could find on the hill. That it is Buddhist is proved by the few words of the Buddhists formula still legible above the base.

Pārāśārī Temple. — Ascending then over an absolutely bare shoulder of rock for about 180 yards a small modern temple is reached called "Pārāśāra." It consists of a square cella, enclosed by chunnam-covered walls which measure 14 feet outside, and is raised on a platform about 3 feet above the ground. On the south wall of the interior, which faces the entrance, is a small raised platform, which is covered with small bricks and stones. Above these can be seen fragments of a small Jina statue, which seems to have measured about 9 inches across the knees. According to the information supplied by the Purūtis who accompanied me, common folk from the jungle villages of the neighboring hills are in the habit of depositing stones at this shrine on their pilgrimage with a view to removing them again, if the object of their pilgrimage is attained. Customs of a similar purport prevail at other Indian pilgrimage places known to me.

The little temple is said to derive its name from an image of Pārāśāra, which was once placed in it. The high bulb-shaped dome which surmounts the shrine shows so modern a form and the chunnam with which it is covered is also in such good condition, that I do not think we can assign to the whole structure, as it now exists, a greater age than about a century. Yet the Purūtis were unanimous in asserting that the builder or date of the temple were quite unknown to them, and that in their recollection it has always been in its present deserted condition. The name and style of the building afford clear proof that it was erected by Jainas, which agrees entirely with the facts to be recorded thereafter.

About 80 yards to the N. E. of this deserted Jaina shrine there is a large boulder, the top of which forms a comparatively smooth and only slightly rounded platform. It is known by the name Mačava-Mačā or Maṇḍava-Maṇḍā. Here is shown a hollow about 3 feet square cut into the rock to a depth of about 4 inches, which is supposed to have been used as a Vedi or altar at a sacrifice of the epic king Vīraṭa. Around it can be seen 9 round holes, each 1\(\frac{1}{2}\) inches in diameter; they are explained as having been made to serve as sockets for the staffs which supported the "Maṇḍapa" required at

43 I mention this point, specially because Babu Nand Lal Dey, who here as elsewhere took the Jina image for one of Buddha, has been led to give to the custom a significance which is quite foreign to it, and to base upon this further communications.

"I was given to understand," he says, "that whoever visits this temple throws a stone at the image of Buddha. This is very significant. If it ever be proved that the temples and other buildings of the Buddhist period of this place have been destroyed, ... it was certainly owing to Hindu hatred, and not to Moslem bigotry." Assumptions of this kind will not readily disappear as long as the historical text books ordinarily accessible to educated Indians continue to find room for theories about the forcible extermination of Buddhism unsupported by historical evidence.
the Pratiśṭhā ceremony. Close to this spot there is a line of very shallow and now almost completely effaced Devanāgarī characters engraved in the rock, of which only the letters र (sukra) can be made out with any certainty. We have here evidently a mere sgraffito of some visitor. To the east of this spot is an oblong platform, supported by walls on which King Virāś is said to have celebrated the marriage of his daughter Uttarā.

The Daśāvatāra Rock-sculptures. — A steep ascent over boulders for about 250 yards in the direction of N.-N.-E. brings the pilgrim to a series of rock-sculptures known as the Daśāvatāra. They are carved on the perpendicular west side of a large fissured rock, in two groups. The one first approached shows in a deep continuous niche five seated relief figures of Jinas, each 10½ inches high and 11 inches broad at the knees. Their modelling and carving is comparatively rude and affords no certain clue to their age. Below each figure is carved a relief representation of a śīhāsana, showing in the centre the cīhva or characteristic emblem of the Jina intended. These lower reliefs are cut very shallow and as they have in consequence much suffered by exposure only two cīhvas, horse and elephant, are now recognizable. Above the third, fourth and fifth figures, from the left, there is seen a faintly incised sgraffito in Devanāgarī characters, of which only the syllables द्रास्त्र... पु can, however, be read.

A few yards to the north, and on a slightly lower level, the rock-face shows ten more relief representations of Jinas of similar style and execution. Five, on the left, are seated and of the same dimensions as those described before; those to the right are standing and measure 2½ feet in height. All the figures have on their breast the usual diamond-shaped mark and are accompanied by small attendants holding caryatids. The Cīhvas below these figures have either not been engraved, though there is room for them, or have completely worn away. Only crouching lions can be made out in the shallow reliefs intended to mark pedestals.

From the rock of the Daśāvatāra the path leads up very steeply towards the summit of the hill. Before reaching the latter, and at a height of about 100 feet above rock-carvings just described, there are noticed foundations of ancient walls which must have originally formed a square of about 18 feet inside. The walls are exposed on the north, east and south, and consist of carefully placed ancient bricks measuring 11 × 8 × 2 inches. In the inside of the square a hollow has been dug out, apparently in a mound of loose stones. The west side is occupied by a flat mound of small stones, which is evidently artificial and rises fully 5 feet above the present level of the wall on the east. I was unable to arrive at any definite conclusion as to the object of this structure. It is certainly of ancient date, and cannot have had any defensive character, as the east escarp of the ridge at this point is quite inaccessible.

The Ākūsalocana Rock. — About 80 feet higher up the summit is reached over a series of large crags heaped up by Nature as if to form stairs. One large rock can be scaled only by means of shallow footholds cut into the smooth rounded surface. On the top of the highest crag, which is known as Ākūsalocana, there is seen a pair of footprints or pādākūs cut into the rock to a depth of about half an inch. The toes, which are but slightly marked, face to the north; the length of the footprints is 8 inches. There is no inscription or trace of ornamentation near these marks, and this fact, together with the simplicity of design, suggest that the carving dates from an early time. The footprints are described by the Purāhitas as those of Vishnu, but in view of what we shall have to note thereafter, they are likely to have been originally worshipped as those of a Jaina Tirthamkara.

That the hill must have in earlier days been a prominent Tirtha for Jinas is made abundantly clear by the fact that apart, from an apparently modern image of Durgā in the temple first mentioned, which I could not see closely, and the Buddhist fragment already noticed, all sculptures on the hill, whether detached or rock-carved, represent Tirthamkaras. Yet local information was unanimous as to the absence of Jinas among the present visitors of the Tirtha.

Jaina tradition about Kuluha Tirtha. — I should have been obliged to leave this interesting question unsolved had not the enquiries I subsequently made among the small Jaina community of
Patna helped me to a clue. The Jainas consulted, though otherwise well-informed of places of sacred interest for their sect, had never heard of Kuluha. But going through a handbook for Jain pilgrims which they showed to me, I came upon a notice, which showed that until recent times a tradition regarding this Tirtha must have survived in some quarters. The little publication referred to bears the title of Srī tīrthaṁkāra Anolkorutnta, and was printed in 1893 by Rana Narayan Pal, Tulasaṭṭi, Calcutta, from which place I was, however, subsequently, notwithstanding repeated efforts, unable to obtain a copy.

The handbook, which is written in Hindi and provided with a curiously primitive map, describes correctly enough the route from Gayā to Kuluha and mentions that the name of this place is given "in the Sastras" as "Bhaddalapuranaagara." "There the tenth Tirthaṁkara, Sitalasvāmin, was conceived, born, received initiation, and obtained his enlightenment." The author refers to a temple which "was once adorned by an image," but states that the Tirtha is now deserted.

I regret that other labours and my inability to consult competent Jain ecclesiastics in Calcutta have prevented me from following up, in older Jaina texts, the indication here furnished. I have little doubt that those specially acquainted with medieval Jaina literature bearing on the subject of Tirthas may be able to trace earlier references to the sacred site above described.

But even without awaiting the result of such enquiries, the identification of Kuluha as a Jaina place of worship is of considerable interest. We have here a distinct instance how, even with a sect so remarkably tenacious in its traditions and customs, a once well-known sacred site has become completely forgotten within comparatively recent times. In the course of my studies regarding the ancient topography of Kaśmīr it has been more than once necessary for me to re-discover, once famous but now entirely forgotten, places of pilgrimage solely by the means of antiquarian research. The instance of Kuluha shows that, even in parts of India proper, where the religious conditions of the population have undergone no marked change, we must reckon with such alterations of the topographia sacra.

I may add, in conclusion, that though everything points to Kuluha having been a place of special interest and attraction to the Jaina community, yet the worship of the site was probably always shared also by the mass of the Hindu population in the neighbourhood, just as we find indubitable evidence of the same peaceful condominum from early times at Rājgir, Girnār and many other well-known Tirthas.

I returned to Gayā on the 28th October and used a short halt for visits to the most prominent of the shrines at this ancient Tirtha. Descriptions of them have been given by General Cunningham, whose identifications of the sites mentioned by the Chinese pilgrims at and around Gayā seem in full agreement with the topographical indications. At Būdhgaya I revisited the remains of the most famous shrine of Buddhism still extant in India, amply described in the publications of General Cunningham and others.

The Remains of Bakraur. — Crossing from Būdhgaya the Lilājan River to the east I inspected at Bakraur the remains of a large stūpa which Gen. Cunningham had already correctly identified with the "stūpa of the perfume elephant" described by Huen Tsiang "to the east of the Bodhi Tree, crossing the Nairāṇjana."46 It forms the starting point for that portion of Huen Tsiang's itinerary, which we had followed above in the reverse direction from Girtek to the "Cock's-foot Mountain." The top of the mound, which rises to a height of 25 feet above the level ground, measures fully 153 feet from north to south, and thus shows the large dimensions of the original structure. The pool which the pilgrim mentions to the north of the "Gandhabasti Stūpa" I was unable to trace, but at a distance of about 500 yards to the south-east of the stūpa there are the remains of a large tank marked by ancient embankments. On the north bank of this tank stands now the temple of Mataṅga, one of the numerous Tirthas visited by the Gayā pilgrims.

The remaining few days of my vacation were devoted to an examination of the famous caves of Asoka and Daśaratha in the Barābar hills, north of Gayā, and the ancient remains in their neigh-

46 St-xu-ki, ii. p. 138.
bouhhood, as well as to a brief visit to Patna, the ancient Pātaliputra. In regard to the former sites, which have also been fully dealt with in the Archaeological Survey Reports, I can restrict myself to a few observations concerning their ancient topography.

It has been duly noticed before that the Caves of Barabar, notwithstanding their connection with a family famous in Buddhist annals, have not been mentioned by the Chinese pilgrims. This circumstance is easily accounted for by the fact that the site possessed no special interest for Buddhists. An illustration of this is afforded by the dedicatory inscriptions of Aśoka’s Caves, which, as we now know, specially record the offer of these cave-dwellings to mendicants of a non-Buddhistic sect (Ājīvikas).

Siddhesvara Hill. — A further indication may be found in the fact that the highest of the Barabar hills is occupied by a shrine sacred to Siva Siddhesvara, which has a distinct claim to considerable antiquity. This temple, to which General Cunningham only briefly refers, is still the object of an extensive pilgrimage from the neighbouring tracts. The present structure, which seems to have undergone numerous changes, rests on an ancient basement measuring 17 feet on the east side, where it is still well preserved. It there reaches to a height of 5 feet 2 inches from the ground, and is constructed of only three courses of large granite slabs, some of them over five feet in length and 1½ feet thick. This basement projects in the centre by 6 inches for one-third of its length and is decorated with a remarkably bold moulding which indicates its antiquity. The upper portion of the temple contains also numerous carved slabs, which must have been taken from some earlier structure, but the greatest part is so thickly covered with chumam that a close examination is impossible. It appears, however, that the original building consisted of a square cela of the dimensions indicated by the well-preserved east basement.

It has been suggested by Mr. Beglar that the hill occupied by the Siddhesvara temple is identical with the great mountain of dark-coloured rocks, on which a small stūpa about ten feet high marked the place where Buddha had entered into meditation. No trace of the stūpa can now be found on the hill of Siddhesvara. Yet its relative position to another site mentioned by Huen Tsiang in the neighbourhood, which I believe Mr. Beglar to have quite correctly identified, favours the above suggestion. Huen Tsiang describes a monastery “to the north-west of the mountain 30 li or so, on a declivity of the mountain; it is flanked by a high precipice, and the lofty walls and towers stand up in intervals of the rocks.” The position here ascribed to the monastery, with which Buddhist tradition connected a legend of the Buddhissattva Gunaṃati, agrees most accurately with that of the ruins near the village of Dharavat, about 4 miles by road to the north-west of the Siddhesvara Peak. The ruins which occupy the steep slope of a rocky ridge facing a great tank to the north, had been described already by General Cunningham, whom, however, their identity with Gunaṃatī’s monastery had escaped. His and Mr. Beglar’s accounts make it unnecessary to notice this interesting site in detail. It may, however, be mentioned that the destruction of the remains by the villagers excavating for old bricks has since proceeded considerably and is likely to efface soon the last traces of the lofty terraces and buildings, which once occupied the picturesque hill-side down to the edge of the water.

My two days’ visit to Patna was mainly devoted to a rapid inspection of the sites which Col. Waddell’s highly successful researches have shown to be of special importance for the study of the topography of ancient Pātaliputra, the capital of Aśoka. In view of the fact that the results of Col. Waddell’s prolonged explorations and of the excavations begun on his initiative are about to be published in a full report, it would be presumption to detail here the observations which my short visit permitted me to make. They entirely confirmed the opinion first advanced by that scholar as to the remains of the old city being preserved in all probability deep down in the alluvial ground south of the old river-bed known as Gunaṃatī. The excavations which have already yielded some very interesting results, if carried on under the supervision of a competent archaeologist on the spot, are likely to bring...
to light conclusive evidence as to the exact position of the various structures and sites described by
the Chinese pilgrims. In the meantime, I hope, the impressions gathered by a personal inspection of
the great Gangetic site will assist me when dealing with the ancient topography of Magadha in the
publication which my Introductory remarks referred to.

In concluding this account of my short tour in Magadha I feel it a pleasant duty to record my
sincere obligation for the manifold assistance I received from the local authorities. I owe the advantages thus
accorded to me primarily to the kind offices of Mr. E. W. Oldham, I. C. S., Collector and
Magistrate of Gayā, who, himself deeply interested in the history and antiquities of South Bihār, spared
no effort to facilitate my movements and enquiries within the short time at my disposal.

NOTES ON THE SPIRIT BASIS OF BELIEF AND CUSTOM.

BY SIR J. M. CAMPBELL, K.C.I.E., I.C.S.

(Continued from Vol. XXIX. p. 387.)

Hand.—A bright open brass hand tops the saddle of many Neapolitan cab-horses and a
small hand in gold, coral or silver open, or with horned and figged fingers, guards many a
Neapolitan girdle and watch chain.

The hand wards the evil glance not because it is a symbol of the Almighty or an emblem
of justice or a type of the Prophet Muhammad and his first four successors in the post of
caliph or viceroy. But because the hand is one of the greatest guardians, the hand is the
chief of weapons and of tools, the great bread-winner, a sign-centre among early tribes more
useful than the tongue. Open brass hands with a hanging equestrian amulet against the
Evil Eye in use among Egyptians, Etruscans, Greeks and Romans. Perhaps the oldest
sign of luck is the open red hand on the wall of the Dordogne cave in Central France.
American Indian chiefs had the mark of an open red hand woven into their robes. In India, a red
right hand may be seen stamped on the festive shoulders of both Hindus and Musalmāns. In
Europe, the red hand has been raised to honour as the sign of the British baronet, of the Prov-
ce of Ulster, and of the Sultan of Constantinople. Among Hindus the carved hand is
worshipped as the sign of the sāti or pure widow. Both Musalmāns and Christians have
been able to continue hand worship, Musalmāns by, among Sunnis, treating the thumb as the
Prophet and the four fingers as his four successors; and among Shiās as the Prophet, his daughter
the Lady Fātimah, her husband Ali, and her two sons Husain and Hasan. Christians have
continued the worship of the hand either by making the open hand the sign of power and
justice and so of the Almighty or by considering the hand with three stretched fingers a symbol
of the Trinity. The guarding power of the hand is increased by making it take certain shapes.
Of these shapes the Italians recognise and employ three. The fig-hand, manu fica (supposed
to be of phallic significance), that is, the thumb tip pointing down and grasped between the first
and middle fingers. Among the Romans and western Latin nations this gesture was known as

12 The Egyptian hand of Justice was the left hand. According to Apuleius (A.D. 150) in the procession of Isis
the fourth noble carried the emblem of Justice, the left hand, with the palm open, which on account of its natural
inactivity and its being endowed with neither skill nor cunning has been judged a more fitting emblem of Justice
than the right hand.
13 Examples are figured in Elworthy, The Evil Eye, p. 241.
14 According to King (The Goddess, p. 222 and note 1) the Brahmins considered the open hand an emblem of the
crysta or yoni.
15 Compare the sixth century mosaic from Ravenna in north-east Italy figured as No. 107 in Mr. Elworthy's
Evil Eye, p. 243, and the hand raised in ecclesiastical blessing with the thumb, first and second fingers outstretched.
The Gipsies say:—"When the Golden Hand shines out of the clouds over two lovers it means good luck." See
the fig-hand because the fig is phallic. The name fig-hand is in use in Italian, Spanish and French, and, though the name is not used in Germany and England, the gesture is understood. Like other evil-scarers, gestures to thrust forward the fig-hand against any one was a gesture of abuse since it implied that the person against whom the sign was made was, or was haunted by, an evil spirit. A second guardian hand in south Italy is the horn-hand, manus cornuta, with the first and fourth fingers straight, and the thumb, middle and third fingers bent to the palm and clasped by the thumb. A third guardian hand, the priest's blessing hand, has the thumb and the first and middle fingers straight and the third and little fingers doubled. This hand which is worn at watch chains is a pre-Christian amulet. It is called manus pantes or combine hand because on it are collected many guards against the Evil Eye. The interest of this combine hand, like the south Italian earthen-ware discs covered with close-packed guardian shapes, is that the figure of each guardian, whether painted, carved or embossed, adds his share to the virtue of the whole. The rude but clear focusing of virtues on these hands and discs shows how, under more elaborate management, the greater deities have gathered to themselves local guardians and inheriting the fame of the local guardians have continued them as symbols. Like the pantea or all-focusing hand, rural guardian influences leaving their homes in stream, stone, tree and beast centred in one human shape which gathering to itself every influence became Pan or All. Another guardian use of the hand was to shoot out the middle finger, doubling the others back into the palm. The middle finger so shot out was either a phallicus or a horn. It came to be called the inquisitus, that is, the ill-famed, or the impudicus, that is, immodest finger, because shooting it against any one implied that the person shot against was a devil or was possessed.

Honey. As the early man's food, as a source of liquor, and as a healer, honey has a virtue which secured it an early place among the protectors against the Evil Eye.

14 Compare Dean Ramsay's "Reminiscences," quoted below. The Talmud (Jewish) variety of the fig-hand is to place the thumb of the right hand in the left hand and the thumb of the left hand in the right hand. Compare (Shoavab's "Talmud de Jerusalem," p. 456): "If, in entering a city you fear the Evil Eye, place the thumb of the right hand in the left hand and the thumb of the left hand in the right hand and say, 'I am of the race of Joseph on which the Evil Eye has no effect.' Where the phallic thumb seems to be considered as a spirit-home rather than as a spirit-scarer, and so the thumb was vailed to prevent evil spirits entering through it.

The practice and the meaning of "showing the fig" among the Italians of Greater Greece suggests an explanation of the Greek eukophanes literally fig-shower but meaning sycophant or tale-bearer. The ordinary explanation that the hateful character got its name from informing on persons who evaded the duty on figs is admitted to be a manner-making of little more value than a pun (compare Liddell and Scott's "Greek Dictionary," s. v.). The South Italian practice of showing the fig—that is, the fig-hand—to keep off an evil influence, suggests that the sense of the word eukophanes or fig shower is the man who forces one to show the fig, that is, either a phallicus, wood or the fig-hand.

15 In a Ravenna sixth century mosaic the Alnayith is shown as a hand, piercing the clouds, the first and fourth fingers pointed as in the manus cornuta. See Fig. 115. Elworthy, "The Evil Eye," p. 265. Fig. 115 (op. cit., p. 267) shows a Hindu goddess with the right hand in the manus cornuta attitude.

17 These details illustrate two laws: (a) that the virtue of charms grows by massing them; (b) that the local guardian, losing his individuality as a healer and savior, merges into the younger wider-ruling deity and thus, under the title of symbol, acquires a dim and doubtful continuance of worship. In connection with these two laws it may be suggested that such merged local guardians are called symbols, that is, things thrown together, because by those who have the spread of the religion at heart as many as possible of the earlier local guardians are merged in the new guardian, so that together they may supply the attributes and draw the worshippers required to secure steadiness to the newly established throne.

18 Horace's "Cities of Southern Italy," p. 111, says: "The most popular antidote to the Evil Eye in Italy is a little coral hand with one finger stretched out, the hand of Saint Jennaro, with which the shops at Naples are full. These charms are specially in request whenever Vesuvius is in a state of eruption."

Horn. — The horn, the glory and the guardian of so many of the nobler animals, would raise in men an early feeling of worship. To this respect experience added the healing virtue of horn in cases of spirit-possession, burnt, soaked into hartsbough or drunk in fine scrappings to drive out a witch-sent spirit. 23 These two sources of worship have combined to make horn a leading scare of evil spirits all the world over. Among the Romans a horn was the symbol of good luck, bonus eventus. Macrobius (A. D. 350) says: — "Nothing is so powerful to avert evil as horn." 24 The horn of plenty is a widespread amulet among the peoples both of northern and of southern Europe. 25 Perhaps from its value as a sudorific and therefore an antidote to the feverishness caused by the breathless and parching Scirocco wind horn has gained and kept in South Italy the highest place among guardians. 26 A hand grasping a horn forms one of the nine elements in the compound Neapolitan amulet the cima-ruta or rupspray. 27 In South Italy, the word horn of itself drives off or prisons the evil glance. The name horn is given not only to the ox horns that guard crofts, fields, dwellings and vegetable shops; 28 to the ram and goat horns that save the stock of the wine-seller; to the stag or if possible elk horns that guard the stores of the grocer and druggist; and to the natural horns miniaturized in coral, gold, silver, mother-of-pearl and lava and worn at the girdle or watch chain. The name horn is extended to crab and loyster nippers, to cock spurs, to the claws of birds and to the teeth of animals including tigers' teeth and boars' tuskes. Even horse-shoes, half moons, and shapes probably originally phallic are known as horns. Finally the favourite Neapolitan guardian hand, the first and the little finger stiff and the middle and third bent to the palm and clasped by the thumb is known as manu cornuta, the horn hand. 29

As in the case of the Hand and the Horse-shoe the virtue of horn amulets and charms has been traced to their being symbols of the horns of the Moon and so connected with the worship of Diana perhaps with the worship of Isis. But as has been noticed above the virtue of horn passes behind the symbol stage and has an unborrowed guardian power as the protector of animals and as the healer of sickness. Horn is honoured in countries where neither the name of Diana nor the name of Isis has ever been known. It may not be safe to say that the belief in the guardian virtue of animal horns is older than the belief in the guardian virtue of the moon's horns. Still it seems safe to say that the origin of the two beliefs is distinct and that the iron horns and crescents found among the Ashantees in West Africa are in origin unconnected with moon worship and represent the brow and horns of an ox, a favourite and widespread crop-guard and scare. 30 That in the high religion of Egypt

---

23 Compare Murray's "Handbook of Spain" in Elworthy, The Evil Eye, p. 25, note 43.
24 Neville Rolfe, Naples in the Nineties, p. 58. In Ladakh, in Central Asia, ram's horns are fastened to fruit trees. Trees so guarded yield wonderful crops of fruit. In North India, pieces of jackal and antelope horn are worn to keep off the Evil Eye. Crooke's Popular Religion of Northern India, Vol. II, p. 35.
26 The scrapings and rasplings of the horse of the common male deer are used in decoctions: harte-horn jelly is nutritive and is given in diarrhoea; the white earth made from calcined harte-horn is used in dysenteries; and to lighten labour pains; the salt of harte-horn is a great sudorifice and is given in fevers with success. Encyclopaedia Britannica. "Harte-horn." Horn is largely used as a medicine in India, New Guinea, Madagascar, and South Africa.
27 Neville Rolfe, Naples in the Nineties, p. 54. Mr. Rolfe compares (op. cit.) Zedekiah (2 Chronicles, xviii, 10) presenting the king of Israel with horns of iron in token he would win if he went to battle. Rannoil Gilbead.
28 In the horn of an ox of the domesticated which Homer's fisher caste into the sea as he lets down with a long rod his bait for a snake to the little fishes below, merely a bob or float or does the floating horn keep off the evil influences which might hinder the fishes taking the bait? Butcher and Lang's Odyssey, Book XII.
29 The horn hand keeps off the risk that attends the mention, even the thought, of an ill-named person. Compare Crawford's Sozomenus, p. 210: — "The old Marquis made the sign of the horns with his forefinger and little finger as though to protect himself against the sinister influence invoked by the mention of the hated Count Spina." The sense of the widespread saying, that an injured husband should wear horns, seems to be the husband's special need of protection against the Evil Eye. Its glance would naturally affect a lodging in one so faint-hearted as the nature of his misfortune shows the husband to be.
30 The Ashantees wear crescents (No. 88) in Elworthy, The Eye, Evil, p. 215. The tribes of the West Nile keep the Evil Eye from their crops by sticking the bleached skull of an ox on the end of a pole. Bergloff, Full Talul Gazette, May 1st, 1899, p. 2. The same practice prevails among the wilder tribes of Western India.
early local crop-guarding animal horns may be assimilated as moon-horns and symbols of Isis illustrates the special interest of the study of the Evil Eye, namely, that the charms and amulets are worn from their personal and original virtue against evil influences and not from the dim and reflex honour of being symbols of some elaborate far-reaching faith.  

Horse. — Three experiences combine to make the horse a leading guard against the Evil Eye. To horse-owning peoples his willing strength, intelligence, spirit and devotion make the horse a guardian of the higher or self-sacrificing type. Among tribes to whom the horse is strange his size, power and fury make him a fiend requiring and rewarding the process of squaring. To all who have dealings with the horse his nervousness, his delicacy, his liability to strange sweatings and other sudden sicknesses show that the horse is a favourite home for spirit-influences and that against such influences he requires special protection. In most countries of Europe a horse-head is a favourite scarf pin or other personal decoration. A brass rearing horse is a common guardian on a Neapolitan saddlebow. The sense is, the horse is a favourite Evil-Eye house and this shining, capering collar-horse draws the Evil Eye and saves from its influence the horse on whose collar it gleams. Again, the horse is a scare because the horse is a guardian. Horse-heads and stuffed horses ornamented the approaches to early German places of worship and to Tartar tombs. Besides his value as a servant and instrument the horse, to the tribes who knew him well, was a healer. Among the Romans a horse-tooth kept evil influences from a teething child, his foam cured itch, earache, galls and women’s diseases, the ashes of his dung staunched blood and healed sores, and horse urine mixed with the water of a forge cured madness. In England, to pass a child under the belly of a piebald horse cures whooping cough. In Ireland, a wound heals if the wounded part is put in a horse’s mouth. In India, one sickness or form of possession the horse is believed to cure is barrenness. Of the class of horse-worshippers who revere the horse because he is strange to them the early tribes of India, the American Indians, and the people of the Solomon Islands are examples. To those who are familiar with the horse, its nervousness and liability to sudden sickness and sweating make the horse seem a specially favourite spirit-home and therefore to require particular protection. It is perhaps because climatic influences affect their horses with sudden sickness, like the stroke of the land wind so harmful to horses in some parts of India, that the Neapolitans are specially careful to guard and adorn their horses.

Horse-shoe. — The horse-shoe combining the guardian virtues of iron, of the horse, and of the hoof of the horse whose parings burnt or soaked are not less sovereign against spirit-possession than hartshorn, is an universal guard against the Evil Eye. In England (1660), it was common to nail

51 Similarly the corner brass-plated wooden horns of the Jewish altar (Exodus, xxvii. 2) and the stone corner horns in classic altars seem to have their origin in such animal horns as adorn and guard local shrines in India, Afghanistan, Beluchistan and Persia. Compare Crooke’s Popular Religion of Northern India, Vol. II. p. 255.

52 King, The Gnostics, p. 158. (Among Greeks and Romans) the horse’s head was a favourite device for signets. King considers the horse-head as a memento mori, and compares the death head as much in fashion in Cinque-cento jewellery. The value of both horse and death heads seems to be neither symbolic nor moral but as spirit-homes.

53 Grimm, Teutonic Mythology, Vol. II. p. 630, notices how ruling a belief was the worship of the horse among Celts, Teutons and Slavs. The respect continued in the practice of hanging horse-heads about stables to keep off night hags and cattle plagues. It remains in the carved horse-heads on the roofs of dwellings in Saxony.

55 Henderson’s Folklore, p. 143.

56 Scott’s Border Minstrelsy, p. 450.

57 Compare Crooke’s Popular Religions of Northern India, Vol. II. p. 207. The horse’s power to cure barrenness seems connected with the belief held by Indian Musalmans that the horse is the pure male, pabba wawal, that is, that the horse is the only male animal who has no bodily signs of the union in him of the two sexes.

58 Horse-worship is notable among the hill tribes of Gujarát and the early tribes of the Central Provinces who own no horses. Compare Hyllop’s Tribes of the Central Provinces, pp. 3, 7, and 31. The American Indians to whom the horse was a stranger at once worshipped Cortés’ horse as the god of thunder (Rancefort, Vol. III. p. 482). In 1888 the first horse was brought to the Solomon Islands. The horse was towed ashore over a coral reef with immense difficulty. The Natives showed the greatest dread of the gigantic creature and could not be induced to go near it. Soon the horse became unmanageable and wandered at will, a terror to the neighbourhood. A month or two after arrival, to the intense relief of the Natives, the horse died. Solomon Island Report, 1898-99, in Sectaman, 9th November 1899.

59 In Ireland the hoofs of a dead horse were held sacred. Brand’s Popular Antiquities, Vol. III. p. 305.
horse-shoes on the thresholds of doors to prevent witches entering the house. In Somerset, horse-shoes are still fastened over house doors to prevent a witch overlooking a house. In Italy, a horse-shoe is worn on the watch chain along with a coral or metal horn to guard against the Evil Eye. In the case of the horse-shoe as in the case of the horns the value of the study of the Evil Eye is that the articles which control the influence of the Evil Eye owe their worship to their antique and personal virtue as guardians and not to any borrowed lustre which their crescent shape may seem to draw from being a symbol of the Moon. The value of the horse-shoe passes behind the late stage of religion when all crescent shaped guardians are grouped under the crescent spirit which again is made a symbol of some later and more general deity. Such shapes as the horse-shoe, even when absorbed as symbols, bring their guardian virtue with them: they do not draw their guardian virtue from the deity to which they are attached as symbols or attributes. It follows that in his relation to earlier local guardians the younger deity is a compound amulet which, under the name of symbols, emblems and attributes, draws to itself the virtues as well as the worshippers of earlier and more local guardians.

**Hunchback.** — The hunchback or gobo is a popular protector against the Evil Eye in South Italy, either as a four-inch brass figure on cab or cart horse saddles or as a minute image in silver, coral, mother-of-pearl or lava fastened to the watch chain or girdle. Hunchback figures were worn as amulets in Egypt and Phoenicia and are now worn in Constantinople. The Indian belief, probably an early belief, is that the cause of a child having a hunchback is that some spirit has taken a fancy to the child before or after birth and making his abode in the child disfigures it so that no human may be tempted to fall in love with the child and rob the spirit of the child's affections. In return for the possession of his loved dwelling the spirit in the hunchback sees that no ill-luck befalls the child's home. Some rich families in Bombay believe they owe their success to the luck of having a hunchback child. The hunchback Funch has a spirit-lodger who supplies his special stores of wit and wisdom. The gambler before entering the gaming house loves to touch the hump of a hunchback that any ill-luck in the gambler may pass into the hump. It is because the hunchback is a favourite spirit-home that a small image at the watch chain or girdle turns the evil glance from the wearer to itself. The image supplies the wearer with the protection which in former times the company of his dwarf secured to the king.

**Hyena.** — The skin from a hyena's brow is worn in Italy to keep off the Evil Eye. His mad laughter, his fondness for graveyards, his odd appearance, his dislike of the light combine to make the hyena seem possessed. The Buda blacksmiths of Abyssinia were supposed to turn into hyenas. The natives of the Egyptian Sudan fear to shoot a hyena lest they should commit a murder.

**Incense.** — In Italy, the fumes of incense are used to cure the Evil Eye.

**Iron.** — The importance of iron as a charm has been noted in a previous paper. The unique spirit-scarifying power of iron is shewn by the dread and dislike of iron attributed to even the highest guardians.

**Key.** — The key is an old amulet shewn in miniature in the Bologna Etruscan museum. In Scotland, a key is still applied to the back of a child's neck to stop bleeding at the nose. The root of the key's virtue is probably its guardian power as a tool and as the protector of what is closed. Its shape would add a phallic virtue. In the higher religions the key became a symbol of the greater guardians to whom belong the openings of life and death. Isis, Diana, Janus, and St. Peter hold keys. One of the nine elements in the Neapolitan child's charm, the rue-sprig or cima ruta, is a key.
Mask. — The Romans hung little masks, oscilla, of Bacchus on trees to keep off the Evil Eye. Some Etruscan vases are studied with grinning masks. The favourite mask of the ancient Romans and Greeks was the Gorgon or Medusa face, at first terrible, dripping gore, with snake tresses, a nightmare of hate and pain; then through the glamour of the sixth and fifth century smile, passing to a face of sadness and beauty, the tresses sometimes snakes, sometimes plain, sometimes twisted horns. That the meaning of the Medusa's face on Athene's buckler was neither ornament nor to terrify enemies into stone, but to house or prison influences that might annoy or damage the deity, is shown by the ever-recurring Medusa head in Etruscan (B.C. 1200-200) funeral monuments and over Etruscan house doors to keep away evil spirits. The beautiful Medusa faces carved on the bucklers and graves of many of the imperial statues (A.D. 300) in Rome and Naples were likewise to guard the wearers against evil influences, as were the Sun face and other badges that marked and guarded the Roman legions. With the history and interest of the Medusa face in Western Asia and in East and South Europe the history and interest of a guardian human face in India closely corresponds. These guardian faces are found all over India and their use extends in time from the earliest rock-cave or part Greek remain (B.C. 250) to the latest Brahmanic, Jain or other Hindu temple or public building. The guardian face has many names: Kirtimukh, that is, Rumour or Fame face; Singhmukh, Horn face; Sinhmukh, Lion face; Suryamukh, Sun face. These faces vary in character. The Rumour a round head; human face the Sun a round kind of human face may owe some of their character to Greek or Roman influence. But the Lion and Horn faces have horns, goggle-eyes and fierce open mouth and tushes that curving sideways mix with whiskers and pass into flowing festoons of spray and leaf seem a local fancy rising from the tree through the animal to the human. These faces look out coarse and ugly from the roof-tree and caves ends of modern Hindu temples. But they gain interest and refinement in the Jain temples of the seventh to the eleventh century A.D. filling the ceiling corners, which unadorned are so apt to become a haunt of evil spirits, embellishing the flat keystones of the cross-cornered domes, and grinning or frowning from belts round the richly carved temple shafts, from the paved floor at the entrance doors, and from the slab in front of the shrine door. In all these positions, though the usual answer is that the Horned Head is for show, an occasional priest or worshipper more intelligent or more outspoken will furnish the true explanation, namely, that the horned head is carved in those places to keep off evil spirits or to keep off the

81 Virgil Georgics, Book II. v. 389 — "To thee, Bacchus, soft (that is, waxen) masks hang from the lofty pine." The phallus was similarly hung to guard fruit-trees. Elworthy (The Evil Eye, p. 145) suggests that masks may be masks or phalli with the general sense of amulet. According to Grimm (Teutonic Mythology, Vol. III. p. 1045) — "In the old German laws the notion of a sorcerer and a mask meet. Sireg quod est macto, a witch which is a mask." Grimm (op. cit., Vol. III. p. 1082) would refer the word mask to the Italian maschera, masticate, because the witch devours children.

82 Compare the Annia Vasa figured in Dennis, Cities of Etruria, Vol. II. p. 318.

83 Valuable information and figures of the different Medusa are given in Elworthy's The Evil Eye. Compare the tusked bulling-tongued Etruscan Gorgonion. Dennis, Cities of Etruria, Vol. II. p. 221; also Vol. II. pp. 441-442.

84 Miss Margaret Symonds, The Story of Perugia, pp. 271, 273. Miss Symonds says (p. 273): "The Etruscans commonly used the Medusa to keep away evil spirits. Her face is usually calm and often lovely." In one instance it is calculated to strike terror as well as admiration. Dennis (Cities of Etruria, Vol. II. p. 343) notes in the inner chamber of a tomb near Chiusi a wall painting of a hideous mask or Gorgon's face with tongue hanging out. In the case of the Medusa as in other instances the scare was also the house. Both in the 'European Medusa' and in the Indian Flame Face the open mouth and staring squint eyes of certain of the masks are to house rather than to scare. Compare Figs. 39 and 40 in Elworthy, The Evil Eye, p. 145.

85 According to Mr. Elworthy, The Evil Eye, p. 127, these badges were to defeat the glances of the enemy. In addition the brilliant badges of the legions would draw to themselves and so imprison not only the evil glances of the foe but the crowd of ancestral spirits that came to help the hostile army and also the spirits of the spells which the enemy's sorcerers had woven against the legions. King (The Greece, Plate X. cut 5, and p. 223) figures a Gorgon's Head with the legend "I protect Bhoru manares" (some Persian or Armenian). He adds — "This inscription is most important as it explains why the Gorgoneion is so frequent a personal decoration, being reputed the most efficacious of amulets."
Evil Eye. In addition to the Horn heads and other building protectors, the mask figures in two important branches of Hindu worship in their temples and in their homes. In most temples the leading image is of stone, and on certain great days over the stone face is drawn a metal mask of brass, silver or gold according to the sanctity of the day or the wealth of the shrine. Metal masks are also common among Hindu household gods, some kindly and smiling to represent the leading guardians, others savage and fierce night-mares in brass to house some dead and hostile member of the family who causes them terror and sickness.

Milk. — Story mentions milk first among articles used in Italy to overcome the Evil Eye.

Mirror. — It has been said above that the shadows in mirrors caused fear to those to whom mirrors were strange but that mirror-shadows ceased to cause fear when they were seen to be mere surface reflections. This view is correct in drawing a contrast between the mirror and the eye. Still, even after its newness ceases to cause dread, the mirror has an interest and a virtue as a spirit-home. Spirits go into the mirror, the home of reflections and shadows, and are housed and contained. Again, the mirror may be filled with the guardian sunlight and flash like a search-light and scare evil influences. In Northern and Western India, fragments of mirror are worked into women's robes, and by flashing the blessed sun scare evil influences. Thumb rings have a piece of mirror set in them to house and to scare. In Scotland, mirrors are veiled after a death: in Bombay, among both Hindus and Musalmans, mirrors are veiled at night. In both practices the sense is to prevent evil spirits passing into the mirror. The interest of these practices is their earliness, the feeling that even if housed the influence does not become guardian but remains hostile and dangerous.

Monkey. — In China, monkeys are kept at the entrance to cattle sheds to keep off the Evil Eye.

Mouth. — The mouth as the chief entrance is a leading home and prison for evil influences. Among the Classic Greeks and Latins masks with open mouths, with or without lolling tongnes, were leading evil traps. The importance attached to the open mouth appears in the Italian stones carved into front human faces and with an open mouth the whole known as beca or mouth. Holed stones which are hung near windows to keep off the Evil Eye in the villages near Amalfi in South Italy are called pietre bozate or mouthed stones. It is the same belief that evil influences are drawn to them and do not come out again that makes holed stones lucky in India, in England, and over most of the world.

Nail. — From its material which gives its control over spirits and from its imprisoning the evil spirit which has been passed into it when it is driven into some sacred tree or building an iron nail, even the word defequer, drive (a nail) home, is a leading guardian against the Evil Eye.

With the Indian foliage-touched and leafy-whiskered Horn Face compare in Taormina, a Greek (B.C. 666-260), a Roman (A.D. 100-400), and later (1066-1400) a Saracenic-Norman town, about thirty miles south of Messina in Sicily some curious carved heads. One of these in a palace in the south-west corner of the cathedral square probably of the early seventeenth century a puffed-cheeked goggle-eyed face with open grinning mouth. And from each corner of the mouth a tusk circling into horn-like points with other tusks stretching sideways and passing into festoons of sprays and roses. Also bearing the balcony of a handsome perhaps fifteenth century dwelling on the south side of the Corso Umberto eavated human heads with blown cheeks and goggle eyes and horns with open mouth and lolling tongues all notably like Indian heads. A remarkable flowing whisker and leaf head is carved over the entrance to a medieval palace in Girona in South Italy.

With the mask as a home of the Hindu dead compare in Chiusi in Etruria (Tuscany) in Italy the ashjear or canopi with a human head as a lid which according to Denis (Cities of Etruria, Vol. II. p. 308) were rough likenesses of the dead.

Gray's China, Vol. II. p. 58.

Compare Aubrey, England (1620) (Miscellanea, p. 140):—"A flint with a hole in it hung from the manger keeps the night hag from riding horses."

Elworthy, The Evil Eye, p. 329. Compare the scraping of a witch above the breath and the scraping of the gum in toothache by a nail as a means to get into the nail the familiar of the witch and the gnawing tooth-worm.
Numbers. — In South Italy, the lucky numbers 3, 7, 8 and 9, even if spoken, keep away the Evil Eye.²² Besides the guardian powers of certain numbers, cards with combinations of numbers are worn because like patterns they puzzle and hold the Evil Eye.

Onion. — The onion is one of the charms worn in Italy to keep off the Evil Eye.²³

Palm. — In Southern Italy, palm leaves blessed at Easter are burnt to keep off the Evil Eye.²⁴

Phallus. — The phallus shares with the eye the first place among guardians against evil glances. Like the little masks of Bacchus phalli were made of fig wood were hung from fruit-trees to keep off the Evil Eye. Among the Romans and Greeks one favourite form of amulet, hung from the necks of children, was a phallus or the phallic hand, that is, the thumb tip caught between the first and the middle finger.²⁵ A phallus was hung from the triumphal car to guard the conqueror. In Italy, Sicily, Greece and Egypt, the phallus was carved on walls to keep off the Evil Eye.²⁶ It was a favourite scare and symbol among the Egyptians, the Phoenicians, and the Etruscans. In India, the phallus or liñgam is perhaps the widest worshipped and most important of guardians, whether as a temple, a shrine or a family god, or worn round the neck or upper arm as an amulet. In the form of the Satirica Signa it is shown over blacksmiths' shops in Pompei.²⁷ The high importance of the phallus as a guard against the Evil Eye among the Greeks and Romans is shown by its name baskauros or fascinum, that is phallus, meaning evil-scarer, as if the phallus was the fascinator that outfascinates the Evil Eye. Among the Romans evil effects were prevented by merely saying the word fascinum or profascinum. In a play of Plautus a young man who praises a girl's beauty is reminded that to his praise he should have added the word profascinum.²⁸ The sense seems to be that the word fascinum or the phrase profascinum, beware of the fascinum, is addressed to any evil influences that may have been tempted to seek a lodging in the beautiful girl. In a somewhat similar way Germans avert from themselves the ill effects of selfboasting by the phrase unbefugen, you (spirits) are not wanted. The difference between the force of the words profascinum and unbefugen is that the Roman profascinum is of itself enough to scare evil influences since it embodies the word fascinum or unbidden spirit, while to be effective the German suggestion, you are not wanted, must be backed by a table-rapping accompaniment, an early music from

The nail with the evil influence in it should then be driven into an oak. Aubrey's Miscellanea, p. 128. Compare also the value of the nail into which as into the cross the spirit of the crucified was believed to have passed. In Republican Rome at the close of each year the spirit of the dead year was nailed into the wall of the temple of Janus. In India, nails are driven into the threshold to prevent the return of the angry dead.

²² Elworthy, The Evil Eye, p. 404.
²⁴ Hare's Cities of Southern Italy, p. 10. The use of palms to keep off danger is noted by Pliny, Natural History, Book XIII. 9. 2. It is because the palm is a guard against the Evil Eye that winners in games and warriors in triumphs were given a palm, since the time of triumph is the time of special danger from the Evil Eye. Greek ladies in the dangerous time of child-birth guarded themselves from evil influences by holding a palm branch. Starke's Travellers' Guide, 1835, p. 78, note 1.
²⁶ Elworthy, The Evil Eye, p. 155. In Pompei, an occasional phallus indicates the superstition of the Evil Eye. A tavern has a large phallus towards the street to avert the Evil Eye. Hare's Cities of Southern Italy, pp. 206, 212. Dennis (Cities and Countries of Etruria, Vol. II, p. 119, and footnotes) holds that the object of carving the phallus on city walls was probably to guard against the Evil Eye. The old Etruscan city walls give numerous examples, also tombs in Etruria, Naples and Sicily. The Pelasgians worshipped the phallic Hermes and introduced his worship into Greece.
²⁸ Andrew's Latin Dictionary. Profascine; Ainsworth, Op. cit. Ainsworth's reference is Plautus' Rud. 2, 5, 4. and Plautus' Asin. 2, 4, 84. He translates profascine, “give me leave to say” or “I may say it in a good hour.” He quotes from a Latin author. Before praising our forefathers said profascine. This word warded envy or fascination. It was an old opinion that one who praised himself over freely or being present was overpraised ran a certain risk of fascination (fascinum).
whose sounds sends flee. The origin of the power of the phallus to turn aside the Evil Eye has been traced to the mirth-provoking element in the indecent. Plutarch (Greece, A.D. 150) says the efficacy of objects that keeps off witchcraft depends on their strangeness and ridiculousness which fixes the mischief-working eye on themselves. That the strange and the ridiculous attract spirits may be admitted. At the same time many of the articles which to the philosophic and modern-minded Plutarch seemed strange and ridiculous were early guardians and spirit-prisons, whose early worshipfulness was forgotten. Elworthy refers to the phallus as a comic amulet and quotes Dodwell in support of the view that its oddness is what makes the indecent useful. Still, like the eye, the horn and the horse the original connection of the phallus with the Evil Eye belongs not to the time when the indecent was considered comic but to the early stage of thought when the phallus was considered a great guardian home. That there is nothing indecent or mirth-provoking in the early worship of the phallus is shown by the solemn and decent ritual connected with the accepted worship of the Indian hīgam.

**Prayers.** — A chief safeguard in Naples against the Evil Eye is to invoke the aid of Nemesis, that is, vengeance, whose earlier characteristic was envy. Other prayers which help to turn the evil glance are the good prayers of those who do not gaze with admiration on or bepraise others: and the blessing of those who wish to inspire courage.

**Rites.** — Under the head of rites for turning aside the Evil Eye may conveniently be brought the rule of doing something unpleasant so as to dissemble good fortune. In Greece and Rome and in Modern Italy, to do something unpleasant saved from the Evil Eye. The doing of something unpleasant is a form of the device of belittling, which is so useful a counteractive to the poison of admiration. To avoid the risk caused by admiration the Hindu mother calls a boy who is born after several children have died Stone or Dirt-heep or Girl, so that the hostile spirit who has slain his brothers may think it not worth his while to attack the new child. In England, in caressing children, scamp, rascal, witch and devil are used in the tenderest tones. Mr. Story suggests that this abuse has its origin in an old faery dread. He compares the abuse with the Corsican practice of applying to children the word rascal and outcast. The Corsicans explain the abuse by saying that children are open to fascination if they are blessed or praised. Indian parents who mark their infants' faces with lamp-black when they take them out of doors and Egyptian Muslim parents who dress their children meanly or smear their faces with dirt to lessen the risk of the Evil Eye conform to the same rule. Other cases of belittling are at Roman funerals the practice of mixing satire and ridicule with the praises of the dead, and at triumphs of seating a slave beside the conqueror reminding him of death. Also among northern nations the fool making fun of the king.

*(To be continued.)*

---

62 Rapping on wood is a spirit-scaring music. In Italy, before A.D. 550, when bells were first set in Christian Churches, the sacred or scaring noise was made by beating wood. In Tibet, the spirit-scaring instrument at Buddhist monasteries is a wooden song.
72 Op. cit. note 247. King (The Genealogies, p. 118) adopts the view that the diverting is the best guard. He adds: — "For such an end could anything serve better than the strange absence and unlikely to be exposed phallus?"
73 Among Hindus one of the family dead lives in the house kīhī; some warrior or murdered man or woman live in the shrine kīhī; some ruler or high priest and his host of followers live in the temple kīhī.
74 Elworthy ( *The Evil Eye*, p. 137) figures a man squatting and shewing his bare back; this he notes as an instance of the comic indecent being useful against the Evil Eye. The more correct explanation of such figures seems to be that the back parts, the os sacrum or holy bone, like other private parts, were held to have a guardian virtue and so scared the Evil Eye. The Italian sailor shews his bare back to stop a contrary wind (Basset, *Legends of the Sea*, p. 142). The insult attaching to the exposure of the back or other private part, like the sense of other abusive words and attributes, is that the person, before whom the parts are exposed, is considered as an evil spirit or as haunted by an evil spirit.
NOTES ON INDIAN HISTORY AND GEOGRAPHY

BY J. F. FLEET, L.C.S. (BETD.), PH.D., C.I.E.

Raktapura.

This town is mentioned in some inscriptions on stone at the Jain temple called Sañkhabasti at Lakshmimáshwara, — the head-quarters of the outlying tálka of the same name of the Senior Míraí State, within the limits of the Dhárwar district, — which purport to register charters issued by the Western Chalukya kings Vikramáditya II. in A. D. 735, and Vijayáditya in A. D. 730, and Vinayáditya in A. D. 687.¹ And I have said that Raktapura appeared to be another early name of Lakshmimáshwara itself.²

But the first two passages both assert that Vikramáditya II. and Vijayáditya, respectively, made certain grants of land (at Lakshmimáshwara) for the benefit of the Jain temple, — called Sañkhatirhavasati in one passage and Sañkhajinendra in the other, — of the city of Pulikaranaagara, when their victorious camps were at the town of Raktapura. Here, we have Lakshmimáshwara mentioned by its usual ancient name Puligere or Purigere, in the Sanskritised form of Pulikaranaagara.³ It would be somewhat unusual that it should be mentioned by a second name also in the same passages. It is not necessary that, for the kings to grant lands situated at Lakshmimáshwara, their camps should be either at that town or anywhere in that neighbourhood.⁴ And Monier-Williams' Sanskrit Dictionary gives rakth as equivalent to lākṣa, with the same meaning as alakaska. My opinion, therefore, now is that Raktapura is simply another form of Alaktakanagara, equivalent to Alaktakanagara; that is to say, that it was another name for the modern Alíshā, about twelve miles east-north-east from Kólpur.⁵

The Kógaí country.

The earliest mention that we have of this territory is in the Nilgund inscription of the time of the Western Chalukya king Taila II., dated in A. D. 932.⁶ The record speaks of a certain Kannapa or Kannapa, who, by the favour of Taila II., had been ruling parts of the Banavasi province, namely, the Bejvola three-hundred and the Purigere three-hundred,⁷ and “the land (that had the name) commencing with Kógaí.” And, in editing it, Prof. Kielhorn quoted a suggestion, made by me, that the word Kógaí might perhaps be a mistake for the Kégaí of other records, the chief town of a five-hundred district. At

¹ Vol. VII. above, p. 110, the third part of the record, lines 61 to 82, and p. 112, the second part, lines 23 to 53, and the fourth part, lines 69 to 87.
³ The Sanskritised forms Purikarpura and Purikaranaagara — (with r in the second syllable) — occur, the former in the spurious Súdi grant (Ep. Ind. Vol. III. p. 180, text line 67), and the latter in a Balagámi record of A. D. 1096 (see Ep. Ind. Vol. V. p. 248, note 8). It seems worth mentioning that, while the older form of the name occurs, indifferently, as Puligere or Purigere, and while — (with the usual change from p to h) — Haligere occurs freely in the later records, I cannot quote a single case in which we have Haligere, with the r in the second syllable combined with h in the first.
⁴ For instance, the Vakkalieri plates of A. D. 737 record the grant by Kértivarman II. of a village in the Hángal tálka, Dhárwar district; but, when he made the grant, his camp was at Bhágdragāvite, on the river Bhunaráth, which is the 'Bundarkowth' of the Indian Atlas sheet No. 40 (1822), on the Bhud, in the Shépípur tálka of the Shépípur district, in lat. 7° 22', long. 75° 44', about twenty miles south-west from Shépípur. And again, when, in A. D. 915, the Deshkrásra king Jūdra III. granted the villages of Tenna and Umbará in Gujarát, he was at Kurundákaka (Jour. Bo. Br. R. As. Soc. Vol. XVIII. p. 209); and Kurundákaka is the modern Kurundwáj near Kólpur.
⁵ See Vol. XXIX. above, pp. 274, 277.
⁷ These two districts are spoken of in this record as "the two three-hundreds," — in a verse, in Sanskrit. The more customary expression of this kind, in Kanarese prose at any rate, was "the two-three-hundreds," meaning "the two three-hundreds which together made up a six-hundred;" — see, for instance, Vol. XII. above, p. 271, text lines 7, 8.
that time, however, I was not aware of the other references to the Kōgali country which I now give.

One of them is in an inscription of A.D. 1071 at Bālāgāmi in Mysore. Here, we have (line 33 ff.) a verse in the somewhat unusual Akkara metre, which runs:—

Eṣeva Kōgali-nāḍo-olagaṇa Tumbigeroya mūṇaṇa simey-ọlagę
Mōsalemaḍuṇinu paduvana simey[n-N]aṅgavaraṇ Svayaṃbhū-nil[alaya]m!
jasada Balipura-varada[!] Yōgavaraṇa Harihariditàyaṃ Vāssayanam-ėmba
peara dévaraṃ dévāḷyaṅgala[n-n]aṃ mūṇaṇaṛ![N]aṃsida[rā]m 9-Guṇagalla-dēvara 11

Translation: — "Guṇagalla dēva founded (a temple of) Nāṅgavara (?) and an abode of Svayaṃbhū within the eastern boundary of Tumbigero in the beautiful Kōgali country and in the western boundary of Mōsalemaḍu, and temples of the gods named Yōgavara and Harihariditàya and Vāssayana (i.e., Vāhśayana, Vishṇu) at the famous Balipura (Bālāgāmi) the best of towns."

The other is in an inscription of A.D. 1108 at Dāvagrere in Mysore. Here, we have (line 21 ff.) a verse in the Utpalāmālīka metre, which runs:—

Kōgali-nāḍo-aggad Kādaṃba-disyāraṇ-dīgarāṅgalō
dēgalkaṃ Jīnīyalāyakā-varavagam kepy bāvi satrakam 1
rūgadā tanma pannayada suṅkadolān dāsvanavaṃ-ṛitaṃ-ṛitaṃ

Translation: — "In the Kōgali country, in various places or abodes of the pre-eminent region, the best of regions, of the Kādambras, the famous Bammaraṣa joyfully gave the dāsavana 12 on the whole of his own customs-duty of the pannayag, — to continue as long as that tax 13 should last, — for a temple and a shrine of Jīna and a garden, and for a tank, a well and an alms-house."

The fact that the Kōgali nāḍ is thus mentioned in these two records at Bālāgāmi and Dāvagrere without any indication that it was a distant country, is a hint that it was somewhere not far from those two places; and the second record perhaps locates it, at that time, in the Noḷambhavādi province, since it describes Bammaraṣa or Barmaṛasa as a Mahāmāya and Akhupannāṇaḍhikāḍhī ḍyāga or superintendent of the customs-duty called akhupannaya, 11

9 My Pīki, Sanskrit, and Old-Canarese Inscriptions, No. 159; and see Mr. Rice's Mysore Inscriptions, p. 145. — The name of the metre, Akkara, is specified in the original. For some schemes of the Akkara metres, see the Rev. F. Kittel's edition of Nāṅgavaran's Kanarese Prosody, p. 102 ff. The present verse appears to be a Pirły-Akkara, or "great Akkara," though it seems not to answer quite exactly to the scheme there discussed.
11 P. S. O.-C. Insers. No. 137; and see Mysore Insers, p. 13. The metre here distinctly marks the vowel of the first syllable of the name Kōgali as long.
12 Dīgalaḥ is plainly equivalent to dīvāra.
13 Dāsavana seems to be the same as the modern dāsavanda or dāsāvanda, which has been explained by Mr. Rice as meaning "land granted to a person for repairing or building a tank, on condition of paying in money or kind one-tenth or some small share of the produce" (Mysore, revised edition, Vol. II. p. 547), or "land granted at one-tenth of the usual rates to a person in consideration of his constructing or repairing a tank" (Ep. Carn. Vol. IV. Introd. p. 19). But here it seems to have more the meaning of one-twentieth of the proceeds of the pannayag-customs. — In the word pannayag, the vowel of the second syllable seems to be only shortened by metrical license. Lines 15, 17, and 33 of the same record use, in prose, the usual form pannāya, with the long a.
14 The word gara, or that combination of akharas, occurs three times in this passage. In the first place, it is the tālibha-corruption of āgara, 'a house, a dwelling, a place.' In the third place, it is the tālibha-corruption of akara, 'a mine.' Here, in the second place, we must find a third meaning; and we must evidently divide, and take gara as used more or less justifiably (to suit the āṣekā) for kara, 'tax.' — ā garam, = ā karaṃ, "that tax." the grant could, of course, only last as long as Bammaraṣa himself should continue to manage and receive a share of the pannāya.
who was "governing" or managing the ṁanāga-customs of the ṇolambaṉādi thirty-two-thousand by the command of the Mahdvāṃantāvipetā, Mahāpradhāna, Bhāṇasaśvergāde, and Daṇḍanāyaka Anantaśālāyana, a high official of Vikramādiyā VI. And, with that hint as to the neighbourhood in which to look, coupled with the actual occurrence of the name Kogala within a reasonable distance, it is easy to identify Moseḷmaṇu with the modern ḍagi-Mosalawādi,—the 'Raggy Mosalwand' of the Indian Atlas sheet No. 59 (1828), in lat. 14° 36', long. 76° 57',—a town or large village in the Harpanbāḷḷi tāluka of the Bellary district, about ten miles almost due north from Daṇvangere (the 'Dāvankairesa' of the map), and Tumbirage with the modern village of the same name,—the 'Toombeegerry' of the map,—two miles on the west of ḍagi-Mosalawādi.

Kogala, a large town or village in the Hūvina-Hadagalli tāluka of the same district, is shown in the same map in lat. 14° 56', long. 76° 13', twenty-eight miles to the north-by-east from ḍagi-Mosalawādi. If it does not actually represent the ancient capital of the Kogali rāda, it at any rate preserves the name of the ancient district. And the Kogali country may now be identified with the Hūvina-Hadagalli and Harpanbāḷḷi tālkas of the Bellary district, with perhaps also the inclusion of some territory more to the east, as Kogala is on the east bank of the river Hagari. It lay immediately on the south-east of the Delvola and Purigere districts. And the boundary-line was, doubtless, the river Tungabhadra, as at present.

The Kaniyakal three-hundred district; the Kaniyakal three-hundred district is mentioned in the inscriptions of A. D. 1064 and 1072 at the Jaṅga-Rāmēsvara hill in the Mōla-kīlmura tāluka of the Chitalroog district, Mysore. And the general purport of the first of these records places it in the ṇolambaṉādi thirty-two-thousand province.

The records register grants that were made for the god Rāmēsvara of the Bālgōtī tīthu, meaning, of course, the place where there stand the two shrines near which the records are.

By the first record, there was granted a village named Kiriya-Dakivadunakā in the Dakivadunakā seventy in the Kaniyakal three-hundred. And by the other there was granted the village of Bāṇakāl in the Kaniyakal three-hundred.

The Jaṅga-Rāmēsvara hill is shown in the Indian Atlas sheet No. 59 (1828) as 'Jesing Ramishwar,' in lat. 14° 56', long. 76° 48'. Kaniyakal, the town from which the three-hundred district took its name, is evidently the 'Gunnasull' of the same map, the 'Kanakallu' of the Madras Manual of the Administration, Vol. III. p. 766, and the 'Kanikkallu' of Mr. Sewell's List of Antiquities, Madras, Vol. I. p. 112; it is in lat. 14° 48', long. 77° 3', on the

14 Mr. Sewell tells us (List of Antiquities, Madras, Vol. I. pp. 107, 109), that there are remains and inscriptions at both Kogala and ḍagi-Mosalawādi. — He has written the first name with the ordinary l, Kogala; but we are probably quite safe in substituting the ṭ, from the ancient spelling. — As regards the other name, he has written it Mosalawādi, with the vowel a in the first syllable; but I think I am safe in substituting o, from the Indian Atlas, endorsed as it is by the ancient record. As to the components of the name, ṭroṭi, 'the raggy-grain,' is of course a modern prefix, probably adopted to distinguish the place from another Mosalawādi, twenty-one miles almost due north of this one; maṭu is doubtless the Kannarese word, which means 'deep water, a deep place in a river, a pool,' (the map shows a large bank at ḍagi-Mosalawādi, with others on the stream that feeds it), — and why it should have passed into adga, 'a town or village,' is not apparent; maṭu is perhaps a variant of moseḷ, moseḷu, 'an alligator, a crocodile.'

15 I have not at hand any map that shows the eastern boundary-line of the two tālkas in question, separating them from the Kōḷligi tāluka. — The Hagari river, mentioned here, is not to be confused with the Chinnas-Hagari or 'Janagallu' river which skirts the south-east corner of the Kōḷligi tāluka, or with the large river Hagari or Vēlavaḷi which flows through the Bellary tāluka.

17 In the preliminary edition of the revised quarter-sheet of the same map, N. W. (1895), the name has been omitted.
west bank of the Hagari or Vēdavāti river, in the Rāyadurg tāluka of the Bellary district, Madras,—twenty-two miles east-half-south from the Jaṭiṅga-Rāmēśvarī hill. And Baṇṭakal is, no doubt, the 'Bennacakl' of the map, six miles on the north of 'Cumacakl.'

Of the other two place-names no traces can be found in the map, whether with or without the Dāki and Kiriya-Dāki, which seem to be prefixes representing the names of the founders of the villages.16

Taḍigapāḍī; Daḍigavāḍī.

The Chōla records mention among the conquests of Rājakēśarivarman-Rājarāja I., whose reign commenced between the 25th June and the 26th July, A.D. 985,18 a country the name of which is presented in them in the various forms of Taḍiyavāḷī, in a record of his fourteenth year,20—Taḍivalī, in a record of his sixteenth year,21—Taḍigapāḍī, in a record of his seventeenth year,22—and Taḍigopāḍī, in a record of his twenty-ninth year.23 It is always mentioned in connection with the well known Gaṅgavāḍī and Noḷambavāḍī countries. And Dr. Hultzsch has told us that most of the inscriptions of Rājarāja I. give the name of it in the form of Taḍigapāḍī.24

We can now identify this country with a territory named Daḍigavāḍī, which is mentioned in an inscription at Koppa, on the Simēṣa river,—brought to notice by Mr. Rice, and referred by him to "? about 1060 A.D.,"—in the Nellikere or Nelligere hōbli of the Nāgamaṅgala tāluka in the Mysore district.25

The record, which is a short one in praise of an ascetic named Goheyaḥaṭṭaraka, uses the expression "Noḷambavāḍī and this Daḍigavāḍī." This plainly places Koppa itself, which is sixteen miles towards the east-south-east from Nāgamaṅgala, in the Daḍigavāḍī country. And we have another trace of the name of the country, with another village to be located in it, in the name of the modern Daḍga, in the same hōbli,—the 'Dudga' of the Indian Atlas sheet No. 60 (1825),—a village, with a fairly large tank, about ten miles towards the north-northwest from Nāgamaṅgala. There are records at this place. And one of them,26 referred by Mr. Rice to "? 1400 A.D.," gives its original names as Daḍiganakere, and claims antiquity for it by describing it as an anādiy-grahāra, "an agrahāra that never had any beginning, an agrahāra that had existed from time immemorial."

It seems, at first sight, rather curious that the Chōla records should mention the conquest of Daḍigavāḍī in addition to the conquest of Gaṅgavāḍī and Noḷambavāḍī; because, the Gaṅgavāḍī country being a ninety-six-thousand province, one would expect that it would include the whole of southern and eastern Mysore outside such portions of it as were included in the Noḷambavāḍī thirty-two-thousand. We know, however, that the numerical components of the ancient territorial names greatly exaggerated the numbers of the cities, towns, and villages in the provinces and districts.27 We must evidently accept the Daḍigavāḍī country as a well established division of Mysore, which is at least not necessarily included whenever mention is made of the Gaṅgavāḍī country. And, looking to the two villages which, as pointed out above, were plainly in the Daḍigavāḍī country, and to the general topographical features, we may probably define it as a territory which was bounded on the east by the Simēṣa,—on the south

15 We have Dāki in the form Dākaras in the illustration to Kēśirāja's Sādhanapāda, aṣṭa 82 (Mr. Kittel's edition, p. 75).
by the Kâvēri, from where the Simâshâ joins it on the east to where the Hêmâvatî joins it on the west, — and on the west by the Hêmâvatî, up to about the point between Hoîle-Narsipur and Channârâyapața where that river, flowing from the west, turns to the south. Probably the northern boundary left the Hêmâvatî there, and, following more or less the course of the northern boundaries of the present Krişhâparâyaţâ, Nâgamaṇgâla tâlukas, run to the Simâshâ in the neighbourhood of Nellikere. And this would make the territory consist of a well defined area, comprising the present Krişhâparâyâpêl, Nâgamaṇgâla, Maṇḍya, Seringapatam, and Maḷâvalli tâlukas of the Mysore district. Whether it may be extended any further to the north, remains to be seen when the records of the Hassan and Tumkur districts are available for examination.

There is, no doubt, a connection of some kind or another between the Dađigavâdi territory and the name of the fictitious Dađiga, whom the legends, embodied in the eleventh century A. D. in the fall Purâṇic and pseudo-historical genealogy of the Western Gaṅgas of Taļâkâd, would place in or about the second century A. D. 28 But we can hardly imagine that this territorial name, the existence of which is taken back to any date about A. D. 1000, was derived from the name of an imaginary person whose alleged existence is first put forward by a record dated three quarters of a century later. However, for the present we need only point out that, just as Gaṅgavâdi means “the country of the Gaṅgas,” and Nâlambavâdi means “the country of the Nâlambas,” and Râṣṭravâdi means “the country of the Râṣṭras,” so Dađigavâdi seems to clearly mean “the country of the Dađigas,” and that the word dađiga has the meaning of ‘a man who bears a club, staff, or cudgel.’ We can carry the word back, as a personal name, to just after A. D. 794, in the case of a certain Dađigarasa, who was governing a ndâ or district, in which was Guḍigere (within the limits of the Dâhârâ district), under a Gaṅga named Mânasâlaḥ (and in Sanskrit Mârâsar) who just at that time was claiming to exercise paramount sovereignty in that part of the country. 29 And it is possible that that Dađigarasa may have been the original of the fictitious Dađiga. This, however, is all that can be said at present on that point. For a later time, an inscription at Sûdî, in the Rûp tâluka of the Dâhârâ district, mentions, with the date of A. D. 1113 or 1114, a certain Mahâsâmanata Dađigarasa, son of Gaṇjarasa, who was descended from Lêkarasa, of the Bâlîvânts, lord of the Dađigamaṇḍala country.

FOLKLORE IN THE CENTRAL PROVINCES.

BY M. N. VENKATASWAMI, M.F.L.S., M.R.A.S.

No. 15. — The Too-punctilious Brahman.1

A most punctilious Brâhman once accidentally trod on a leaf that had been used as a plate. “Alas, alas, what have I done?” said the Brâhman, and proceeded at once to journey to Kâlâ (Bengala) to expiate the sin he had committed.

On the road he met a Sûdra, of whom he enquired his destination. “I am going to Kâlâ,” said the Sûdra. “So am I,” said the Brâhman, and they began to journey together. At the first halting-place the Sûdra went to the bādar and purchased half a seer of rice and two piec worth of ght. He cooked his rice and fried some ranjopodi; he had with him, and was soon in a deep and long sleep

---

19 See an inscription at Guḍigere, which will shortly be published in the Epigraphia Indica, Vol. VI.

1 [Stories against the Brâhmans are as common in the South as in the North of India. Indeed, there would seem to be everywhere a silent under-current of exasperation against the tyranny of caste, of which the Brâhmans are the impersonation. — Ed.]

1 To make ranjopodi: take some dried prawns, chillies, garlic, and salt and reduce the whole to powder in a mortar.
after his customary bath and meal, The Brâhmaṇa went to the bâdār, where he purchased rice, pulse, gîh, chillies, salt and turmeric and set to work to cook. But his ceremonies were so many that when the Sûdra had awakened from his sleep he was still at his meal. At last, after much cogitation, the Brâhmaṇa asked the Sûdra how it was that he managed to get through his cooking and meals so rapidly. “O it’s all on account of the rangapodi which my mother made for me,” said the Sûdra. “What is rangapodi,” said the Brâhmaṇa. “Well, you had better try it,” said the Sûdra, and thereafter the Sûdra was careful to let the Brâhmaṇa have a ladleful of rangapodi at every meal. The Brâhmaṇa was delighted with so savoury an addition to his food, and by and by the rangapodi gave out. So the pair started off to the bâdār to get some ingredients for more. The Sûdra led the way to the Bestîwâdî, where dried fish of all sorts were kept for sale. “What a stink!” said the Brâhmaṇa, “why have you come here?” “For prawns for the rangapodi of course,” said the Sûdra. “Prawns for the rangapodi,” exclaimed the Brâhmaṇa in great horror. “What have I been eating? For merely treading on a used dining-leaf I started to journey to Kâśi, and here have I been eating prawns! O fate, fate!” And he parted company with the Sûdra, with a vow to eat no food for three days as an expiation for his fresh sin.

On the third day he felt extremely thirsty, and begged a betel-nut from an old woman he saw working at a spinning-wheel. She took one from her wallet and threw it to him. The Brâhmaṇa put it into his mouth and broke it between his teeth. “Well, you must have teeth of iron,” said the old woman, “I got that nut at my wedding. I and my husband, my six brothers-in-law and all their wives have tried our teeth on that nut and have never been able to break it.” Here then was yet another sin, for which the Brâhmaṇa determined to go without food for a further day and a half.

Continuing his journey the Brâhmaṇa reached a city, and after buying some rice and pulse and his other necessaries, asked where the Bapanammâ resided. A house was pointed out to him and he went there and asked the woman to cook his purchases sharp, as he was very hungry. When the most welcome meal was finished he saw a barber’s case of instruments in the house and at the same time quite unsuspectingly asked the Bapanamma where her husband was. “At the palace,” she replied. Then it flashed upon him that he had been directed to the barber’s house and had taken his meal at the hands of the barber’s wife! “O what have I done now? Surely Sâni is pursuing me. This sin is greater than the others. I must make all the haste I can to reach Kâśi and wash them all away.”

So the Brâhmaṇa put his best foot foremost and soon reached the holy city one morning very early. Now, he had no intention of paying the heavy fees demanded for purification in the usual form, and so he took his way to the opposite side of the river and began his dippings and devotions at an unfrequented spot. It happened that just at that hour and at that spot a large number of people were consigning to the holy river the ashes of a cremated Madiga. At the same time his wife was to be formally made a widow. But out of the river arose the Brâhmaṇa, “Your husband come to life again,” said the astonished people. “How fortunate!” “Nonsense,” said the Brâhmaṇa, “I am not her husband.” But it was of no use. The people were not to be robbed of the miracle, and the widow was not going to lose her chance of being restored to the comforts of life; and thus the poor Brâhmaṇa was carried off in triumph to the woman’s house, where the marriage-booth was erected and before he

---

2 Bestîwâdî is the the street where the fishermen live.

4 Bapanammâ, a Brâhmaṇa: one who will look after stray Brâhmaṇas. The point in the tale is that he was not understood and the barber’s house, because the owner’s wife was named Bapanammâ, was shown him.

6 Sâni, the god of ill-luck.

6 Madiga, a shoe-maker: being workers in leather the caste is a very low one.
knew where he was the *mangalasutra* was tied round the woman's neck and they were man and wife. Thus the end of the Brâhman's scruples was that he had to become a Madiga.

(To be continued.)

DATE OF BUDDHA'S NIRVANA.

The date of the Parinsibba or demise of
Buddha has been long since fixed, with very
considerable probability, by Prof. Max Müller.
His date for this event, on which much of the
chronology of Buddhism depends, is 477 or 478

In the Mahaanuva we are told that Asoka
summoned the great Buddhist Council of Patiliputra
in the 17th year of his reign. At the close
of that Council the Thero Majhatiko deputed
two theras, Sona and Uttara, to the Sowanahulmi
country. In the Kalyani inscriptions of Pegu-
dating from 1476 A. D. — the arrival and success of
these missionaries is related, as in the Mahaanuva,
adding — "Thus was religion established in this
country of Banaishadesa by the two Theras in the
236th year that had elapsed since the attainment
of Parinibbana by the Sammasambuddha."

Now Asoka's reign is generally assumed to date
from B.C. 260, and his 18th year — when the
missionaries might arrive in Burma, would coincide
with 242 B. C. If now we apply 236 years to this,
we have 478 B. C. for the date of the Nirvana, as
derived by Prof. Max Müller from the chronology
of the Hindu rulers previous to Chandragupta.
The Burmese date is probably derived from the
Singalese chronology in the Mahaanuva, which
place 236 years between the landing of Vijaya
and the accession of Devanampiya Tissaya, but it
antidates the latter event by about 65 years as
compared with Asoka's council determined from
Chandragupta's time. The interest of this is that
it supports what has been derived from other
date, — upsetting the Singalese date from Singa-
lese sources.

The period between Buddha's Nirvana and
Asoka with his contemporary Devanampiya Tis-
nya, has been filled up with Vijaya and his suc-
cessors in six reigns and an interregnum: this
must be regarded as constructive chronology.
The period only has been derived from Indian
sources.

Walogambahu was restored to the throne, and
the doctrines of Buddhism first reduced to writing
in Ceylon, in the 277th year after the mission
from Asoka. This date must have been about 25
B.C. and not, as has been assumed, 88 B. C.
How much further the error in Singalese chroni-
cale continues should be investigated.

JAS. BURGESS.

A Sanskrit Epic Text Society.

At the Xlth International Congress of Orientalists, held at Rome, in October 1899, the pro-
posal printed below was laid before the members of the Indian Section. At the instance of Col.
Temple a Committee was formed which decided

(i.) that it was desirable to found a Sanskrit Epic Text Society, (ii.) that its first work should be an edition of the Mahābhārata in the South-Indian recension, (iii.) that a sub-committee be formed consisting of Col. Temple, Sir Raymond West, Profs. Bendall, Eggeling, Rhys Davids, Dr. Fleet, and Dr. Hoernle, who are to act in concert with Syed Ali Bilgrami, the representative for India, and with Dr. Winternitz of Prague, the author of the scheme. It is in the hope that the scheme may find warm friends and supporters in India, especially in the South that we give below in extenso the Proposal presented to the Congress in No. 3 of its 'Bulletins.'

A Proposal for the Formation of a Sanskrit Epic Text Society laid before the Indian Section of the XLIth International Congress of Orientalists, held at Rome, in October 1889.

At the last Congress of Orientalists in Paris, I read before the Indian Section of the Congress a paper on the South-Indian Mahābhārata MSS. in the Collection of the Royal Asiatic Society of Great Britain and Ireland, in which I tried to show that these MSS. represented a distinct recension of the Mahābhārata, which students of the Hindu Epics could not afford to neglect.

I have since published, in the Indian Antiquary (March, April, May 1889), an analysis of some portions of the Adiparvan of the Mahābhārata, contained in two of these South-Indian MSS. An Analysis of the Adiparvan according to one Malayalam MS. of the Royal Asiatic Society's Collection, and one Telugu MS. of the India Office will shortly be published in the same Journal. In my paper on the Adiparvan I was able to point out important omissions in the South-Indian MSS., which made it more than probable that certain passages at the beginning of the Mahābhārata, found in our editions, are later interpolations. In the Sahāparvan, on the other hand, the Malayalam MS. offers a much fuller text than our editions, containing a considerable number of chapters of which there is no trace in our texts. Many of these additions differ, as regards their style and language, so little from other parts of the text, that if they happened to be included in our Bombay or Calcutta editions, they would undoubtedly be considered to be as genuine and as old as the bulk of the accepted text of the Mahābhārata. The Telugu MS. does not share all these additions; in fact, it represents a text which on the whole has more in common with that of the Northern editions than with that of the Malayalam MS.

But the materials, which have so far become accessible, are by no means sufficient to enable us to form a clear idea of the exact relations of the South-Indian recension to the Northern text. This much, however, is clear even from the few extracts from South-Indian MSS. hitherto published, that the text of the Mahābhārata, as found in our Bombay and Calcutta editions, is an utterly insufficient basis for critical researches concerning the great Hindu Epic, and that the text on which all Mahābhārata studies have hitherto been founded, is not the text but only one of the texts of the Mahābhārata.

When Protag Chandra Roy published his popular edition of the Mahābhārata, he was blamed by a Pundit of Southern India for having published an edition which was "sadly defective in the text," and which was detrimental to the religious interests of the people of Southern India "as many portions supporting the Advaita and Vasishtha-advaita doctrines, but unfavourable to the Sakti worshippers of the North, had been omitted." The Pundit complained that "many verses quoted by the great philosophers of the South in support of their respective doctrines, are not to be found in Mr. Protag Chandra Roy's edition." These charges, which are extremely characteristic of the way in which native Hindu scholars look upon the text of such books as the Mahābhārata, were answered by Mr. Protag Chandra Roy, who pointed out "that there could be no edition of the Mahābhārata, however carefully edited, that would please scholars of every part of India," He declares that he is quite willing "to consult any approved manuscript of Southern India," but concludes by saying: "The fact is, the divergences of manuscripts are so great that it is perfectly impossible to produce an edition that could at once satisfy both Aryavarta and Dakshinātya.""

Now, what we really need, and what seems to me to be the sine quâ non for historical and critical researches regarding the text of the Mahābhārata, is a critical edition which should neither satisfy the people of Northern India nor those of the Dekkhan, but which should satisfy the wants

1 See the covers of Part XXIX. (1887) of Protag Chandra Roy's Translation of the Mahābhārata.
of Sanskrit scholarship. I repeat what I said at
the last Congress in Paris, that "a critical edition
of the Mahabharata, made by European scholars
according to the principles followed in editing
any other important text, is wanted as the only
sound basis for all Mahabharata studies — nay,
for all studies connected with the epic literature
of India."

Yet such an edition must, for a long time to
come, remain a pious wish. For there can be no
doubt that an actual critical edition of the Ma-
ahabharata is at the present moment out of the
question, inasmuch as the preliminary work
necessary for such an edition has never yet been
begun. Nay, it may even be doubted whether a
critical edition, in the ordinary sense of the word,
will ever be possible of such a work as the Mahab-
harata. But what is certainly possible, and
what cannot be delayed much longer if Mahabha-
rata criticism is to lead to any satisfactory
results, is to collect all the materials necessary
for textual criticism — to collect and collate
any old and original MSS. of the Mahabharata
found in different parts of India — to
compare the text or texts offered by MSS. and
editions with that used by the different
commentators. We should at least be able to say of
any important passage whether it is found in all
the different versions of the Mahabharata, or only
in some of them. And where there are different
versions of one and the same passage, if we cannot
say which was the original one, we should at
least be able to compare all the existing versions
with one another. More especially, the text of
the old Bengali MSS. (of which Dr. Soereensen
has given us a specimen), and that of the South
Indian MSS. ought to be made generally accessible.

Such a thorough investigation of all authentic
MSS. of the Mahabharata, is a task far beyond
the power of one single scholar, even if he devote
ed to it all his time and energy. What is wanted
in order to accomplish it, is a division of labour
on a large scale. And this division must be a
systematic one. The work to be done must be
clearly mapped out, and many workers must be
enlisted, each of whom will have to choose his
own portion of the work. It seems to me that
there is only one way to bring about such a
systematic division of labour, and that is the
formation of a Sanskrit Epic Text Society which
should be the centre of all researches relating to
the ancient Hindu Epics.

If once such a centre were formed it would not
limit itself to the work of which I just have
spoken. The Society would also find ways and
means for the publication of texts connected in
any way with the history of the Mahabharata.
The numerous abstracts of and extracts from
the Mahabharata existing in Sanskrit MSS.,
and the various translations into the vernaculars,
even such works as the Persian and
the Javanic versions of the Mahabharata, if
they were made generally accessible by authentic
translations (into English or German or French),
are likely to prove of considerable interest for the
history of the Mahabharata.

Moreover, no student of the Hindu Epics can
be unaware of the numerous points of contact
existing between the Epic and the Puranic litera-
tures. But as regards the Purasas — which apart
from their intrinsic value for the religious history
of ancient India, are of such great importance
on account of their manifold relations to
the epic literature — textual criticism has hardly
yet begun to be applied to them, and of their chron-
ology we know next to nothing. Here, too,
many hands are desired to accomplish all the
work that has still to be done. And if a centre
were formed for the systematic investigation of
the Hindu epic literature, the critical work re-
quired for the Purasas might well fall within the
range of the same centre.

It is hardly necessary to add that the proposed
'Society' would also promote the critical study of
the RamaYana, and I see no reason why the
final restoration of the original text of Valmiki's
poem, which Professor Jacobi has proved to be
quite practicable, should not become a fact.

On all these grounds, I beg to propose that the
Indian Section of the XIIth International Con-
gress of Orientalists sanction the formation of a
Sanskrit Epic Text Society whose aims
might be summed up as follows:—

1. To raise the funds necessary for the
accomplishment of the Society's work.

2. To inaugurate a systematic collection of
MSS. of the Mahabharata, and other
texts relating to the Hindu Epic poetry
from all parts of India.

3. To gather together and assist competent
scholars who are willing to undertake
the copying or collating of MSS., the editing or translating of any epic texts,
or to contribute any critical or histori-
cal researches relating to these texts.

* See J. D. M. G. Vol. 31, pp. 903 sqq.
(4) To provide for and superintend the publication of texts, translations, or any treatises tending to further the objects of the Society.

I propose that the Indian Section of the Congress should (I.) appoint a Committee to take the necessary steps for the formation of a Sanskrit Epic Text Society, and (II.) express its view of the desirability of such a Society meeting with every possible financial support on the part of Governments, Academies and Learned Societies both in Europe, America, and especially in India.

A learned Hindu has recently told us that "It is no exaggeration to state that the two hundred millions of Hindus of the present day cherish in their hearts the story of their ancient Epics. The Hindu scarcely lives, man or woman, high or low, educated or ignorant, whose earliest recollections do not cling round the story and the characters of the great Epics . . . . . Mothers in India know no better theme for imparting wisdom and instruction to their daughters, and elderly men know no richer storehouse for narrating tales to children, than these stories preserved in the Epics. No work in Europe, not Homer in Greece or Virgil in Italy, not Shakespeare nor Milton in English-speaking lands, is the national property of the nations to the same extent as the Epics of India are of the Hindus. No single work except the Bible has such influence in affording moral instruction in Christian lands, as the Mahabharata and the Ramaiana in India." If this is so, and if indeed (as the same author assures us) these poems "have been the cherished heritage of the Hindus for three thousand years," and "are to the present day interwoven with the thoughts and beliefs and moral ideas of a nation numbering two hundred millions"—then, surely, any studies devoted to the Epics of ancient India deserve the most serious attention and the most eager support of the rulers of India. Nor should the assistance of Learned Societies in Europe and America be wanting in furthering the critical and historical researches connected with a work which, apart from containing some of the most interesting specimens of ancient poetry, is an invaluable storehouse of information about the history, religion, philosophy, the laws and customs, and the civilization of ancient India.

NOTES AND QUERIES.

HINDU SUPERSTITIONS IN THE CENTRAL PROVINCES.

1. Nail-parings are always thrown into some frequented place that they may be destroyed by the traffic. If they are thrown into a damp spot they will grow into a plant which will ruin the person from whose body they came. About twenty years ago there lived one Viraswami in Nagpur, who is said to have been ruined by the accidental growth of a finger nail-paring in a flower-pot in his house.

2. When a new grindstone is bought, a handful of wheat must be ground on it and the flour sprinkled in circles on a road-way, so that passers-by may destroy them. This makes the stone to grind well in the future.

SEPOY.

Here are some good early MS. references to this word.

1746. — They surprised the camp with about 200 Europeans and as many seapies. — Letter from Vizagapatam, 29th December, in Bengal Consultations.

R. C. TEMPLE.

THE TRADE IN ANDAMANSESE SLAVES.

There is an old story of a systematic slave trade in Andamanese with the Malay Peninsula all through the 18th and early 19th Centuries. The following interesting extract from the Bengal Dispatches, dated 26th April, 1792, is evidence of the trade:

"Concerning the Officer of a French Merchant Vessel offering several Inhabitants of the Andamans for Slaves.

"We have read Captain Light's Letter of the 1st of April 1791, concerning an offer of Moner. St. Croix, an Officer of a French Merchant Vessel, to some Natives, or others, from the Andamans, for sale, and approve of your having caused Copies of it to be sent to Europe to Colonel Montigny."

R. C. TEMPLE.
The Descriptive Revelations.

In the first proclamation, as we have seen, only one item out of the Biblical narrative for the Creation of the World was made use of—the one item essential for Muhammad's immediate requirements, viz., the Creation of Man. It was not Muhammad's intention, however, to omit the rest of the narrative; he only reserved it for reproduction on later occasions, as the opportunity or need should arise. He would have neglected an ethical factor of great importance, had he omitted to remind his bearers how much gratitude they owed their Maker for having given them the means of living a comfortable life. So far from making such a mistake, he took the earliest opportunity of touching on this subject, immediately after the first proclamation had been made, although at first only in slight reference.

The descriptive element in the Qor'as, therefore, is nearly as old as the book itself, although it is not particularly noticeable till the latter part of the declamatory period. It becomes more prominent in the narrative period, when Muhammad's style had lost the charm of novelty. It is impossible to draw a line clearly separating the descriptive from the preceding classes of revelations, since many verses of a descriptive character are interspersed among the narrative lectures. Yet these sermons, in which descriptions of Nature and its bounties form the foremost topic, are distinctly of later date.

Although divergent in character the descriptive revelations agree with the narrative revelations in one important point, that is, in the endeavour to demonstrate the "Signs of Allah," and to form another substitute for miracles which the Prophet was unable to perform. It seems that Muhammad wished to convey to his hearers, that as so many "Signs" of the divine omnipotence already existed, new ones could be dispensed with. The scope of descriptions being rather limited, the number of revelations of this class is smaller than of any previous one, but they also follow Biblical models and abound in repetitions.

Apart from the brief allusion to the Creation contained in the first proclamation, the oldest pieces of descriptive character are found in a few verses in the declamatory Sura lxxx. 18

24. But let man look unto his foods,
25. Verily we have poured the water out in torrents,
26. Then we have cleft the earth asunder,
27. And made to grow therefrom the grain
28. And the grape and the hay,
29. And the olive and the palm,
30. And gardens closely planted,
31. And fruits and grass—
32. A provision for you and your cattle.

Ixxvii. 25. Have we not made the earth to hold
26. The living and the dead
27. And set thereon firm mountains reared aloft, and given you to drink water in streams?

18 See also S. Ixxvii. 25 to 27.
I regard the last portion of S. lxxix, which looks like a hasty recapitulation of Gen. Ch. I. as the first independent piece of this class. It speaks of heaven, night and dawn, the earth, water and pastures, man and beast.

Sūra lxxxi. contains a rather original description of Nature ascribed by Muhammed to Noah. In spite of the narrative beginning, this chapter cannot be placed among the narrative revelations, because with the exception of the first few verses the rest of the sūra (the bulk of which is of descriptive character) reproduces a prayer in which Noah tells of his unsuccessful endeavours to make his people believe in God.

The inner connection which exists between the first proclamation and the descriptive revelations of a much later period is unmistakably illustrated by S. lv., which cannot be as old as Nöldeke believes it to be. Now, for this new species of lectures Muhammed required new models. Having chosen for the preceding the form of prayer, he composed this sūra after the fashion of Ps. cxxxvi. with a refrain introduced gradually and repeated afterwards at the end of each verse. For a descriptive sermon Muhammed could only use few verses of the body of the Psalm, which I place in parallel columns with the corresponding verses of the sūra:

**The Sūra.**

4. The sun and the moon have their appointed time. 5. And the stars and the trees adore.
6. And the heavens, He raised them and set the balance.
9. And the earth He has set it for living creatures.

**The Psalm.**

8. The sun to rule by day: for, etc.
9. The moon and stars to rule by night.
5. To Him that by wisdom made the heavens.
6. To Him that stretches out the earth, etc.

The sūra gives a more comprehensive synopsis of the Biblical account of the Creation, and that is the reason, why the first proclamation is repeated, and, as a matter of course, placed at the beginning in the words: AlRahmān taught the Qurān (2) He created man, (3) taught him plain speech. — Another proof of the imitative character of the sūra is that the refrain does not speak of "Signs" but of "Bounties." Part of the contents of the sūra are taken from another Psalm which will occupy our attention anon. When the material was quite exhausted, Muhammed resorted again to pictures of hell and paradise.

The style adopted in S. lv. is one of great contemplativeness on the Creation, interspersed with a narrative reminiscences, which also afford an opportunity for the introduction of a fine metaphor. Descriptions of Nature are adorned with pictures of the Last Day which, in this short sūra, is mentioned by not less than five different appellations.

Another lecture on the "Signs" is S. xlv., discoursing on the earth and the animated beings that move on it, on the change of night and day, the food sent down from heaven (through rain), and the wind. Dry land as well as sea, the hosts of heaven and earth which serve men, are all subjects which lend themselves to treatment in the usual style.

Nearly contemporaneous with this one is S. xiii., in the rather long introduction of which the "Arabic Qurān" (v. 5) is alluded to, and Divine Providence appears several times.

---

17 Also Nöldeke. Q. p. 87, regards this piece as the later portion of the sūra.
18 Nöldeke, p. 85, sees in this sūra a fragment of a larger sermon.
19 Ibid. p. 83, cf. Sprenger, II. p. 219, with the tradition connected with it. Verse 1 = xvi. 2, but Rabbiša replaced by AlRahmān.
20 The refrain is evidently nothing but the attempt of a rendition of AlRahmān. The dual ifās has no particular significance, and was only chosen on account of its yielding a rhyme to Rabbiša. Verses 7 recalls Isaiah xi. 6.
21 Verse 59 contains a fine metaphor; see Ch. VIII.
22 Verses 1 to 11, 14 to 15, 37.
23 Vers. 15, see Ch. VIII.
24 See Ch. IV.
25 Verse 9, see Ch. VIII.
26 Verses 11 to 12, legislative. Verses 28 (cf. xlv. 3) and 31 begin with Wās and "Lā nūm al-Anābān." — Verses 52 to 53, see Ch. V.
(vv. 18, 20, 23) as Kalima.36 Both the Kalima (v. 45) and “Arabic Qurān” (v. 2) also appear in S. xili., of which several portions (vv. 8 to 11, 37 to 40) are descriptive, and contain, besides, a sketch of hell and paradise. The introduction treating of the “Arabic Qurān” is, in the course of the lecture, supplemented by a verse (44),37 which is intended to explain more clearly an idea expressed some time before,38 but it only makes it more obscure. It runs thus:

“And had we made it a ‘foreign Qurān’, they would have said: ‘unless its signs be detailed [we will not believe]; is it foreign and Arabic?’ Say: ‘It is, for those who believe, a guidance and a healing; but those who do not believe, in their ears is dullness, and it is blindness to them. Those are called to from a far off place’.”

The revelation seems to be an excuse for employing a certain number of foreign words in the “Arabic Qurān.” Perplexity shuffles.

Sūra xxxv., being of a distinctly descriptive character, begins with the statement afterwards repeated, that Allāh makes the angels His messengers. This is nearly a literal translation of Ps. civ. 4. The same psalm is also re-echoed in other verses.39 Similar topics, but in shorter form, are discussed in S. xxxii., lvii., and xxv.40 I mention the last two together, because their common superscription masks them both as hymns to the Creator.41 In S. xxv., Muhammed replies to a charge that he was but an ordinary mortal eating food and visiting the fair.42 This charge was not imaginary, but seems to have been made repeatedly, since it is refuted twice (vv. 8 and 22) in this sermon. A final answer is not given until S. xxiii. 53,43 in which messengers in general are bidden to “eat good cheer.” Of this sūra the first and last parts (vv. 1 to 22, 53 to 118) form one address, but vv. 27 and 34 show why the piece was inserted after v. 22.44 From the more elaborate arguments employed we gather that this sūra is later than xxv. The homily embodied in the last part (v. 98) consists only of repetitions, the most important of which is the attempt to demonstrate the Unity of Allāh by argument.45

Two verses of this part (99 and 100) contain expressions for exorcising (“I take refuge”) Satanic influences, and give perhaps a clue to the placing of the S. cxiii. and cxiv.,46 which are formulas of the same character and with the same commencement.

Sūra xvi. marks the apogee of the descriptive revelations. It not only unites all descriptive recitations scattered through other sermons, but places them before the reader in a really

---

36 See Ch. I., note II.
37 From Behdāwī’s remarks we infer that the reading is uncertain, as other authorities have.
38 See S. xvi. 198 and Ch. I. — The sense of the passage seems to be the following: Had we revealed the Qurān in a foreign tongue, their disbelief could not be greater than it is; cf. xvi. 105.
39 E. g., v. 10, 13, 14. The two, three and four pairs of wings ascribed to angels are evidently modelled after Is. vi. 2 together with Ezehch. i. 6. As to the paraphrastic imitation of Ps. civ. see below.
40 The creation of the world in six days is also mentioned in xi. 9, 1.37, xxv. 60. As to v. 4 see lx. 4 and Ch. IV.
41 The expressions and نبأت and فرَانِأ (v. 1, cf. Geiger, l. c. p. 30) seem to be taken from the Jewish prayer called Qaddīlah.
42 Verse 1: “Blessed be,” etc., see lvii. 1; ibid. v. 5: With “lamps” cf. Gen. i. 16.
43 The verses 8, 9 and 22 (cf. xxiii. 34) seem to be a justification directed against Exod. xxxiii. 28. Whether the Muhammed was really expected to live for some time without food, is hard to say, but this seems to have been the case, and it is supported by a tradition of Bagh. (on v. 22) on the authority of Al-Dḥabīḥ and Ibn Abbaṣ, that the Qurātāth revived the prophethood of a man who consumed food. The matter is probably to be understood as follows: Some Meccan critic had a superficial knowledge of the statement that Moses had passed a certain time without food, and inferred from it that a prophet who could perform miracles, must also be able to dispense with eating and drinking.
44 There are also other points of connection between the two sūras; cf. xxiii. 1 to 11, and xxv. 64 to 77.
45 Verse 21, إِلَّا ذَٰلِكَ أَكْبَرُ, cf. v. 34, 35; v. 22, إِلَّا ذَٰلِكَ أَكْبَرُ, cf. vv. 26 to 29.
46 Cf. verse 117, and Ch. II.
47 Cf. S. xxiii. 99 to 100, xvi. 100, vili. 199.
artistic form. Muhammad must have bestowed much care on its composition, as it is beautiful, although not quite original; it is in fact an imitation of Ps. civ. with the verses differently arranged. We must naturally expect to see Muhammad adapt his rendering of the Psalm to the conditions of life in Arabia, as also to his particular theological purposes. The latter are represented by a strong Muslim tendency, and teachings are inserted which are not to be found in the original. Those verses of the Psalm are therefore omitted which describe animals and plants unknown to Meccans. I place the verses side by side:

**The Sura.**

2. He sends down the angels with the spirit

(which is part) of his Amr upon whom He will

of His servants (to say): Give warning that

there is no God but Me; Me therefore do ye

fear!

3. He has created the heavens and the earth

in truth! Exalted be He above that which they

join with Him.

10. He it is Who sends down water from

the sky, whence ye have drink, and whence

the trees grow whereby you feed your flocks.

11. He maketh the corn to grow for you,

and the olives, and the palms, and the grapes,

and some of every fruit—verily in that is a

Sign unto a people who reflect. 13. And what

He has produced for you in the earth varying

in hue, verily in that is a Sign for a people who

are mindful. (See also vv. 69 to 71.)

12. And He subjected to you the night and

the day, and the sun, and the moon, and the

stars are subjected to His bidding. Verily

in that are Signs to a people who have sense.

16. . . . and by the stars too are they

guided.

14. He it is Who has subjected the sea,

that ye may eat fresh flesh therefrom, and ye

bring forth from it ornaments which ye wear;

and thou mayest see the ships cleaving through

it; and that ye may search after His grace, and

happily ye may give thanks.

**The Psalm.**

4. He maketh His angels winds (spirits);

His ministers a flaming fire.

2. Who covereth [Thyself] with light as

with a garment, Who stretcheth out the heavens

like a curtain.

5. Who laid the foundations of the earth,

etc.

3. Who layeth the beams of His chambers

in the waters; Who maketh the clouds His

chariot; Who walketh upon the wings of the

wind.

14. He causes the grass to grow for the

cattle, and herb for the service of man, that

he may bring forth food out of the earth. 15.

And wine that maketh glad the heart of man,

and oil to make [his] face to shine, and bread

which strengtheneth man's heart.

19. He appointed the moon for seasons,

the sun knoweth his going down. 20. Thou

maketh darkness and it is night, wherein all

the beasts of the Lord do creep forth.

25. This great and wide sea wherein are

things creeping innumerable, both small and

great beasts. 26. There go the ships, [there

play therein.

---

8 Cf. S. xxxv. 1. — Verse 43 may serve to fix the date of the sūra, and probably refers to the isolation
Muhammad's followers had to suffer for some time in Mecca, or to the emigration of a number of them to Abyssinia.
As to the details see Sprenger, II. 128 sqq. — Verse 110 sqq. I regard (against Sprenger) as Medinian.

9 اخبار tha "اخص" refers to those who had shared the Hijra to Medina, but the piece was placed here on account of these two words.
The verses 115 and 119 are nothing if not Medinian, since they were of no interest for a Meccan audience.

10 Muhammad renders روح by "Aρωγ", being unaware of the circumstance that it also means wind.

Verse 1 being introduction, is Muhammad's own; the same is the case with vv. 6 to 8, bearing on the habits of
travelling merchants.
15. And He has cast firm mountains on the earth lest it should move with you, and rivers and roads, haply ye may be guided. (See also v. 83.)

40. They swear by their most strenuous oath: Allâh will not raise up him who dies, etc. . . . . 50. Do they not regard whatever thing Allâh has created, its shadow falls on the right or the left adoring God and shrinking up? 67.  And Allâh sends down water from the sky and quickens therewith the earth after its death; verily in that is a Sign to a people who can hear. 72. God has created you, then He lets you die, etc.

44. Those who are patient and upon their Lord rely. 46. Whatever is in the heavens and in the earth, beast or angel, adores Allâh, nor are they big with pride.

52. They fear their Lord above them, and do what they are bidden.

63. If Allâh were to punish men for their wrong-doing, He would not leave upon the earth a single beast, etc.

87. Do they not see the birds subjected in the vaults of the sky? none holds them in but Allâh, verily in that is a Sign unto a people who believe.

8. They go up by the mountains, they go up by the valleys unto the place which Thou hast founded for them. 18. The high hills a refuge for the wild goats, and the rock for the conies.

29. Thou hidest Thy face they are troubled. Thou takest away their breath, they die and return to their dust. 30. Thou sendest forth Thy spirit, they are created, and Thou renewest the face of the earth.

27. These wait all upon Thee, that Thou mayest give them their meat in due time.

33. I will sing unto the Lord as long as I live: I will sing praise to my God while I have my being.

34. My meditation of Him shall be sweet, I will be glad in the Lord.

35. Let the sinners be consumed out of the earth and let the wicked be no more. Bless thou the Lord, O my soul; praise ye the Lord.

12. By them the fowls of the heaven have their habitation, which sing among the branches.

17. Where the birds make their nest, [as for] the stock, the fir trees are her house.

Muhammed almost betrays the imitation in his own words; for he not only mentions the Zühur (Psalms) “that had been sent down before” (v. 46), but at the end of the sermon (v. 105) he, apparently without necessity, defends himself against the charge of plagiarism. The traditionists give a number of names as possible sources of this accusation, but it is useless to repeat their extravagant and unreliable tales on the point. To conclude from Muhammed’s words (“We know that they say: only a mortal man teaches him”), the rumours were only circulated secretly, but he was a match for his foes, and turned his knowledge of their suspicions into a prophetic faculty which made him acquainted with their slanderous whispers.

It is quite in accordance with Muhammed’s methods of preaching, that so fine a rhetorical performance should be repeated. Thus some descriptive portions of S. xiii. not only recall in the original which allows a conclusion as to how the Arab Jews pronounced ٖ ث : another instance of the same kind is ٖ ث ٖ ث ٖ ث ٖ ث ٖ ث ٖ ث ٖ ث ٖ ث ٖ ث ٖ ث ٖ ث ٖ ث ٖ ث ٖ ث ٖ ث ٖ ث ٖ ث ٖ ث ٖ ث ٖ ث ٖ ث ٖ ث ٖ ث ٖ Th (Cf. Ch. V.).

Verse 46 is to be joined to ٖ ث ٖ ث ٖ ث ٖ ث ٖ ث ٖ ث ٖ Th (v. 45), whilst the words ٖ ث ٖ ث ٖ Th as far as ٖ ث ٖ ث ٖ ث ٖ Th form a parenthesis.

The traditions are collected by Springer, III. 379 nqq. Cf. xxxvi. 76. See Ch. II.

The sûra is one of those beginning with the “Signs.” According to Fihrist, p. 251, it is Medinian.
several imitations of verses of Ps. civ. quoted before, but supplement others which he had omitted. To the former belong the verses 2, 3, 4, 18. Of the latter group are:

The Sūra.

13. He it is who shows you the lightning for fear and hope, and He brings up the heavy clouds.

14. And the thunder celebrates His praise, and the angels too for fear of Him, and He sends the thunder-clap and overtakes therewith Him will.

The Psalm.

7. At Thy rebuke they flee, at the voice of Thy thunder they haste away.

32. He looketh on the earth and it trembles, He toucheth the hills and they smoke.

The first part of S. x. (vv. 1 to 57) belongs to those addresses which begin with a reference to the "Signs." A parable inserted here is also of descriptive character. The piece next to it owes its place also to some descriptive verses, but seems to be of Medinian origin. The best sermon with text on the "Signs" is S. xxxi. (1 to 10, 19 to 34). The descriptions are of the usual style, but there is a piece inserted (vv. 11 to 15), which interrupts the description and is altogether out of place. In v. 22 the speaker is advised not to take the unbelieving of the infidels to heart, an advice repeated in the following sermon, S. xxxvi. (v. 76), which is thoroughly descriptive. The homiletic introduction includes a parable of narrative character. After this follows a discourse on the "Signs" (vv. 33, 37, 41). New is the remark on the change of night and day as well as on the stations of the moon, and an observation on the eclipse of the sun.

Now these three paragraphs (v. 33-36, 37-40, 41-44) greatly resemble strophes of four verses each though without metre. This lapse into old habits either revived the reproach that he was a poet, or Muhammed saw the danger in good time, and wished to prevent any misconception. He therefore declared (v. 69) that he had never learnt poetry, nor was it suitable for him. The verse mentioned above, advising him not to be grieved about disbelief, seems to stand in connection with this. Verse 78 has a historical background. Ubayy b. Khalaf came to Muhammed with a decaying bone and asked who could quicken it. The affair seems to have caused some sensation, as several years later it was made the subject of an attack against the Qoreish by the Medinian poet Hassan b. Thabit.

The descriptive period further includes S. xxxvii, 60 to 95 — an independent sermon; further S. xxxix., the second part of which is a discourse on death. Some of these verses

---

46 Verses 22 and 34, مـربـوـت~ respectively; see above.
47 Verse 25, cf. Ch. VIII.
48 Verse 25 [O ye men, now had to you counsel from your Lord, etc.] is spoken in the style of an introduction to a sermon; cf. S. i. 1. — Verse 41, مـربـوـت~; cf. v. 76.
49 This is of legislative character and in the form of admonitions addressed by Loqman to his son (see Ch. VII.). The sūra derived its name from this piece which seems to have been placed here on account of the rhyme. Cf. Nöldeke, p. 117, who only entertains doubt as to v. 18.
50 V. 12 sq., see Ch. VIII.
51 Verse 39, cf. Ch. I. Palmer's translation of the verse is hardly correct. I believe Muhammed wished to express the idea that the movements of the sun and the moon were so well regulated, that it is the latter which "reaches" the former, and not vice versa. The commentators refer to the variety of the sphere. "Bugh, رقاب السماء ينغيثونها أعماق ~ in this place and the globe, for there is no place high enough to keep them, nor is there a place high enough to keep them up." 51
52 Hassan b. Shabbh, Diwan, ed. Tanzi, p. 81.
53 Ubayy has acquired here a from his father on the day when the Messenger detached himself from him.
54 Verses 64 — Ps. civ. 2; v. 72 — S. x. 66, xxxi. 22.
are regarded by Weil as interpolated. The chronology of this sūra as well as S. xxx. is pretty distinctly fixed by two respective remarks on parables "struck" before (xxxix. 28, xxx. 58). The latter sūra, though commencing with an allusion to a defeat which the Byzantine army had suffered at the hand of Persians, is an elaborate homily on the "Sign," as seven verses commence with the words: To his Signs belong, etc. 64

Sūra xxiii. 1 to 13 and 62 to 71 are two fragments belonging to the descriptive group, whilst all the rest is Medinan. A certain connection between the two pieces is visible in vv. 3, 8, 67 respectively, where those who "wrangle about Allāh" are mentioned. Finally the verses ii. 158 to 162, although placed in a sūra commonly regarded as Medinan, has all the marks of the revelations of the descriptive Meccan period. 65

Chapter VII.

The Legislative Revelations.

Meaning of the term — Relation of the legislative to previous periods — Isqmān — Laws given to mankind — Character of special laws promulgated in Mecca — Abrogation of Jewish ritual law.

The term "legislative" in this chapter applies to those passages in the Meccan portions of the Qurān, which are in any way admonitory, and are discussed chiefly with regard to the place they occupy in the book. In the same way as the Old Testament provided laws to meet all the requirements of the Israelites, so the Qurān forms the principal source of the moral, ritual and juridical codes66 of the Faithful. The regulations dictated in Mecca are limited to such as could be given to a religious community which owed allegiance to temporal powers of a different kind. As it was impossible to foretell whether the Prophet would ever be in a position to wield a temporal sceptre, administrative ordinances are entirely excluded from Meccan revelations. 67 As regards ritual laws the Meccan period produced hardly any besides those relating to prayers and other forms of divine worship.

We have seen above that Muslim tradition itself places the descriptive revelations before those of legislative character, but this is not always rigidly adhered to. Some of the former, being mere recommendations, do not aspire to the authority of laws. The belief in Allāh and His Prophet is, of course, an injunction of the earliest date, but it appears in the nature of an axiom meant to carry conviction. Religious observance being of more practical character could not be expected until the former was firmly established in the minds of the believers.

The precepts which Muḥammed thought fit to reveal in Mecca had long been under preparation, but it was impossible to promulgate them in anything like a systematic fashion as long as the struggle for the acceptance of the first maxims lasted. After all, the foregoing periods are nothing but a variety of endeavours to end this struggle. During this time the want of a religious code had to be supplied by the example set by the Prophet himself, or by his predecessors with whose stories believers were made acquainted. Nay, Allāh Himself serves as example by imposing mercy upon himself in the style of a commandment as it were (S. vi. 12). 68 In the same speech the Prophet is bidden to declare that he was commanded to be the first Muslim (v. 17). A second speech (v. 46 to 73) follows the same train of ideas. We

62 Verses 31 to 32, 43, see Ch. XIII. Verse 31 is quite out of connection both with the preceding and following verses. The homily ensuing after it has no marked character, and is therefore difficult to fix. Perhaps vs. 74 to 75, the concluding words in particular, may help to place the portion somewhat nearer to the narrative period.
64 Verses 19 to 24, 45.
65 Nöldeke, p. 31, also regards the verses as Meccan.
66 See Sachau, Altere Quellen des muhamm., etc. The original meaning of sīh is "tenets of belief."
67 The passage, vi. 118 to 121, is Medinan.
68 The speech ends v. 45.
hear again “that Allah has imposed mercy upon Himself.” The Prophet is ordered to state
that he is forbidden to worship the idols of the Meccans, but that he and his friends are
commanded to be Muslims, to recite prayers, and fear Allah (vv. 70 to 71).

An instance of how legislation was at first given in very small doses, is to be found in three
verses attached to S. xci. 61

v. 9. But as for the orphan, oppress him not,
10. And as for the beggar, drive him not away,
11. And as for the favour of thy Lord, discourse thereof.

The last verse is a reminiscence of the descriptive revelations.

It is indeed most interesting to observe how cautiously Muhammad proceeded to
acquaint his hearers with regular religious observance. He knew the characters of his
friends sufficiently to perceive how dangerous it would be to overwhelm them with religious
duties, and the following are instances of his attempts to achieve his object in a somewhat
circuitous manner. In one sermon he describes the life of “the servants of Allah,” naturally
in order to teach:

S. xcv. 64. And the servants of the Merciful are those who walk upon the earth lowly
and when the ignorant address them, say: Peace!

65. And those who pass the night [adoring] their Lord in prostration and
standing:
66. And those who say: O our Lord, turn from us the torment of hell, etc.
67. And those who when they spend are neither extravagant nor miserly, but
who ever take their stand between the two.
68. And those who call not upon another god with Allah, and kill not the
soul which Allah has forbidden, save deservedly, and do not commit
fornication; for he who does that shall meet with a penalty.

72. And those who do not testify falsely, and when they pass by frivolous
discourse, pass by it honourably, etc., etc.

The admonition addressed by Loqmân23 to his son is nothing but a variation of the same
endeavour. Being first himself reminded of the gratitude he owed to Allah, this legendary
sage instructs his son — in the fashion of the author of Proverbs, ch. I. to VII. — to believe
in the Unity of God, to honour his parents, to lead a virtuous life, and to recite prayers
commandments which are all within the scope of religious prescriptions taught in Mecca. The
piece which justifies reproduction runs thus:

xxx. 11. And we did give unto Loqmân wisdom saying: Be grateful to Allah; for he
who is grateful to Allah, is duly grateful for his own soul, and he who
disbelieves, verily Allah is independent, worthy of praise.

24 S. vi. 54. Cf. the passage in the Talma (Borakb, fol. 7v): God prays. What prays He? B. Zutrab. Tölöyâh says on behalf of Rib: (He prays): Be it my will that my mercy overcome mine anger; let my mercy
prevail over my (other) attributes, that my conduct with my children be merciful and that I deal with them leniently.

25 Ibid. 53, 67, 80; xvii. 80 to 87.

26 These verses do not belong to the preceding part of the sûra — from which they differ as to the rhyme —
but are placed here on account of their (another) attributes, that my conduct with my children be merciful and that I deal with them
leniently.

27 Concerning the personality of Loqmân see Sprenger, L. xxvii sqq. Besides Balaam, with whom he is identified
on account of the synonymity of the names, also Job and a negro slave "with thick lips" serve to personate him
in the opinion of various commentators. The name seems to me to be a corruption of Soleimân, the letter s being
omitted. The introductory phrase, “we have given to Loqmân wisdom,” is in favour of this suggestion as well as the
semblance of the whole speech to the first chapters of the Book of Proverbs. As to the fables ascribed to Loqmân
see Derenbourg, Fables arabes et françaises. Berne, 1870.
12. And when Loqmân said to his son while admonishing him: O my son, associate none with Allâh, for, verily, such association is a grave iniquity.

13. And we have commanded man [to honour] his parents; his mother bore him with weakness upon weakness, and his weaning is in two years; be thankful to me and thy parents, for unto me [shall your] journey be.

14. But if they strive with thee that thou shouldst associate with me that which thou hast no knowledge of, then obey them not, etc.

15. O my son, verily if there were the weight of a grain or mustard seed and it were [hidden] in a rock, or in the heaven, or in the earth, Allâh would bring it [forth], etc.

16. O my son, be steadfast in prayer, and bid what is proper, prevent what is objectionable, be patient of what befals thee, for this is due of the determined affairs.

17. And twist not thy cheeks proudly, nor walk in the land haughtily, verily, Allâh does not love every arrogant boaster.

18. And be moderate in thy walk and lower thy voice: verily the most disagreeable of voices is the voice of ass.

Another variation is to be found in a series of admonitions given to mankind in general, although there can be no doubt, that Muhammed only had his small Muslim community in view. The sermon in question forms a part of S. viii., v. 28 to 56, and contains rules to be observed in connection with the places of public worship (v. 28 to 30). But fearful, as it were, lest Believers should be discouraged by laws which might only be the forerunners of more arduous ones, Muhammed deemed it expedient to assure his friends that no soul should be burdened with more than it could bear (v. 40). Yet he does not conclude the sermon without a warning to “call on your Lord humbly and secretly, not to do evil on earth, and to invoke Allâh with fear and earnestness” (v. 53 to 54).

There is hardly any group of legislative revelations in which the respect due to parents does not find a place. This forms the nucleus of a short lecture which was placed at the beginning of S. xxix. 1 to 13, and xlvi. 1 to 19.

It is not in the least surprising that Muhammed endeavoured to imitate the Decalogue, or, rather to adapt it to the requirements of Islam. This has not only been recognized by European scholars, but also by Muhammedan, commentators. Discussing the Decalogue in his Kitâb AlArîs AlThalâthâ, concludes with the remark that Allâh had also given it to Muhammed, and quotes the two places in which it is reproduced in the Qur'an.

Of these two recensions the earlier seems to be that inserted in S. xvii., of which it forms the whole middle portion. The following reproduction of the chief part shows that several verses are nearly literally translated from the Pentateuch:

v. 28. Put not with Allâh another god, or thou wilt sit despised and forsaken.

Muhammed was so well versed in the subject, that he altered it freely, substituting for commands which were out of use in Arabia others of more practical value. The prohibition of murder gave

---

63 This is the only recommendation introduced here by ۱۰۳،۱۰۳،۱۰۳،۱۰۳. It is repeated in S. xlvi. 14 to 16.
64 Cf. Talmud Yebûn, fol. 3va (with reference to Lev. xix. 3): It is the duty of each of you to honour me, etc.
65 Cf. S. x. 62, xxxiv. 8.
66 This phrase occurs here for the first time, but is very frequent later on, especially in Medinan sûras.
68 See Ch. VIII.
69 See Nöldeke, Q. p. 118.
70 Spranger, II. p. 438.
71 Cod. Brit. Mus. Add. 18,508 fol. 139.
72 Cf. S. vi. 153, xxii. 66.
73 See Beiträge, p. 19 e.77.
him an opportunity of denouncing the burying of female infants alive (v. 33), and it is due to him that that barbarous custom was abolished. He forbade the spoliation of orphans, and ordained that agreements must be kept, true weights and measures must be given (v. 36 to 37), etc.

The second and more elaborate reproduction is given, S. vi.: —

152. Say, Come! I will recite what your Lord has made inviolable for you (1) that you may not associate with him anything; (2) kindness to your parents; (3) and do not kill your children through poverty; (4) and draw not nigh to hideous sins, either apparent or concealed; (5) and kill not the soul, which Allah has made inviolable, save by right; that is what He has ordained you, haply you may understand.

153. (6) And draw not nigh unto the wealth of the orphan, save so as to better it, until he reaches full age! (7) and give weight and measure with justice; (8) and when ye pronounce, then be just, though it be the case of a relative; (9) and Allah's compact fulfill ye; that is what he has ordained you, haply you may be mindful.

154. (10) That this is my right way, follow it thou and follow not various paths to separate ourselves from his way; that is what he has ordained you, haply you may fear.

The sentences are instructive not only for what they contain, but for what they omit. The omission of Exod. xx. 2 is not surprising, as it implies no commandment, and allusion to the exodus of Egypt is of still less use for Islam. The contents of verse 7 are rather against the spirit of Islam. Frequent enunciations of the name of Allah formed and still form a powerful means of implanting belief in the hearts of the Faithful. Numerous traditions exist of the benefits derived from frequent repetition of the formula: There is no God beside Allah. Finally, the law of Sabbath was not required. It is not difficult to discover why Mahomet looked upon the Jewish Sabbath as a punishment for disobedience, and characterized it as being "laid upon those who disputed" (xvi. 125). The reason why a day of rest did not gain ground in Islam seems to be a social rather than a religious one. Although the creation of the world in six days is frequently mentioned in the Koran, the interruption of work on the seventh day is as regularly omitted. In a country where agriculture is of small account, and hard work altogether unknown, a day of rest has no raison d'etre. It is possible that some vague notion had reached Mahomet that among Assyrians the seventh day was called an "evil day" on which no work should be done. In a Medinan revelation, Mahomet calls those, who

---

13 Cf. S. vi. 138 (I. I. p. 58), vv. 119 and 112 containing regulations with respect to killing animals for food are Medinan.

16 Seems to be an independent piece, and placed here on account of its beginning with مِنْ, like many other paragraphs of the sūra.

17 Al Bei'dh. on S. xvi. 125: The celebration of the Sabbath and giving oneself up entirely to worship was incumbent upon those who contended with him, viz., their prophet. These are the Jews whom Moses commanded to confine themselves (on this day) to worship, etc. Thus Al Bei'dh. refers مِنْ not to the Sabbath, but to Moses (see S. xvi. 34, where مِنْ refers to آدَم), and evidently had Exod. xv. 34 in his mind. Rabbinic interpretation, as is well known, refers, ibid. v. 25, to the command of the Sabbath, and the words which, as in the sūra, reflect perfectly the idea which Mahomet had conceived on the celebration of that day. Cf. Rokh L. 224, a tradition according to Abu Huraira: تَأْكُلُوا مِنْهُ وَلَا تَأْكُلُوا مِنْهُ وَلَا تَأْكُلُوا مِنْهُ وَلَا تَأْكُلُوا مِنْهُ وَلَا تَأْكُلُوا مِنْهُ وَلَا تَأْكُلُوا مِنْهُ and the like. The precise character of the tradition speaks for its value. The Moabites, while adopting Friday as a day of public worship, lead both Jews and Christians. On the name خَلْعَة. — See Bei'dh. on Qor. Ixii. 9 (Medin.). It appears that the day of aldraba, which is the ancient name for Friday, was kept as prayer-day before Islam. According to Bei'dh., Ka'b b. Lu'ayy gave the day that name, because people used to congregate on it, probably for mercantile purposes. Mahomet then retained both the ancient custom and the name. I regard S. xvi. 133 as Medinan, cf. ii. 61 and iv. 59.

18 See S. xvi. 50 and below.
celebrate the Sabbath, “cursed.” He evidently formed his opinion from seeing that the Jews observed the Sabbath by abstaining from work on that day. While the spiritual side of the celebration remained hidden to him, he saw that it involved great inconvenience in domestic and public life, and impressed him as something very undesirable. By singling out one day in the week, employed from time immemorial for gathering, as the day of public worship, he followed the Jewish and Christian customs to some extent. It is, however, very improbable that he chose Friday in order to eschew either the Saturday or the Sunday. Following the reproduction of the Decalogue, v. 155 seems to be a free rendering of Exod. xxxi. 13. The bounty attached to it formed evidently part of the same speech. V. 160 looks like a rebuke on the multitude of Christian sects, whilst v. 161 again returns to the Decalogue, being a kind of reflex of Exod. xx. 5 to 6.

(To be continued.)

THE LADAKHI PRE-BUDDHIST MARRIAGE RITUAL.

(Translation and Notes.)

BY A. H. FRANCKE, LADAKH.

Some time ago I published in Mémoires de la Société Finno-ougrienne, Helsingfors, some translations in German of folktales and of extracts from a Tibetan MS. relating to the Kesar Myths of Western Tibet. The publication of the Marriage Songs of the Ladakhs now undertaken is another step in the same direction. My object in these publications is to present means to the scientific world for unveiling the hitherto hidden treasures of the Pre-Buddhist Religion of Tibet. I was fortunate indeed to get hold of these wedding songs, just before they had vanished altogether. In Central and Upper Ladakh only mere reminiscences, are left of them, although the gorgeous dress of the Nyopas and the scene before the house are still in vogue. In Lower Ladakh the songs have been preserved much better, but a large portion of them have ceased to be intelligible to the people. Thus whilst the first nine of the songs I collected were, certain passages excepted, generally understood by the ordinary man, the latter half of the collection consists more or less of a succession of unintelligible sounds. The reason may be, that the wedding ritual proved too hard a trial on the patience of the party and was cut short in many cases.

The method of reading has been as follows. All the songs were dictated slowly by the leader of the Nyopas to the village Munahi of Khaltse, Yeshes Rig ’adzin, who wrote them down according to the actual sound. This copy proved to be very useful as far as Yeshes Rig ’adzin himself had understood the words. For disentangling the more obscure passages, however, the assistance of the mission schoolmaster of Loh, Shamuol aByorldan, and of other Ladakhis, possessed of common sense, had to be requisitioned. In this way, the first half of the collection has become fairly intelligible, whilst the latter half is still full of obscure passages.

It is necessary for the proper comprehension of these songs to direct the attention of the readers to the fact that the four points of the compass play a rather important rôle in the wedding songs, as well as in other Pre-Buddhist literature (vide Ladakhi Songs No. XV.). This

---

13 See Spenger, II. 483. The Jewish dietary law appeared to Muhammed likewise in the light of a chastisement for frowardness. Abstemiousness from so many articles of food as are tabooed by the Jewish law naturally appeared strange to a people whose supply was rather scanty, and did not despise fallen camels. This latter custom was abrogated by Muhammed in Qur. vi. 146, who also did away with several old usages connected with the eating of certain animals (see vi. 146 to 147). He further forbade the eating of animals over which, when being slaughtered, the name of Allah had not been mentioned (vi. 118 to 121). Nöldeke, p. 119, regards this verse as misplaced. "As to the Jews," Muhammed adds (v. 147). "we have forbidden them to eat everything that has a solid hoof, and of oxen and sheep did we prohibit them to eat the fat, save what the backs of both do bear, or the inwards of what is mixed with bone" (cf. S. xvi. 119). Muhammed reveals here a close intimacy with details of the Code, which he could not have gained from his own knowledge of the Pentateuch alone. I therefore regard all these passages as Medimian.
is very natural, for as has been pointed out in the paper on the Kesār-Myths, the Pre-Buddhist Religion must have been a system of sun and nature worship. Now it is the sun, who creates the four points of the compass. All of them are different manifestations of the sun and hence the importance attached to them in a physiological religion. This fact suggests a solution to the difficult problem of explaining the ancient mystic emblem of the Bon Religion, yungdrung \( \frac{\text{sun}}{\text{compass}} \). This emblem was in my view invented to represent the sun as the creator of East, South, West and North, the little mark at the end of each line indicating the inclination of the sun to proceed from one point to the other.

It is not an easy matter to give a satisfactory explanation of the word yungdrung, but I dare to offer one, in favor of which there is at least some probability. In the Kesār-Myths an old name of the sun, bya Khyung dkrung nyima, occurs. This means literally 'the bird Khyung, the disc, the sun.' In course of time the name Khyung dkrung may have degenerated to become yungdrung, especially at a time when the idea of the emblem had ceased to be generally understood. Laws of sound cannot be of much avail here, because we are dealing with a proper noun. A few suggestions, however, might be made in favor of this derivation:—

1. a word yung is absolutely non-existing and cannot be found in any dictionary;
2. there exist a few cases of k being dropped when preceding y, thus kyang = yung, kyig yi, kyin = yin;
3. there is only a very slight, hardly perceptible, difference in the pronunciation of dkrung and drung. Of course, this explanation of the emblem rests on the theory, that it is always the same sun, which appears in the East every morning, and is in opposition to the theory shown in Song No. I. B. 7, post, p. 155. However, the study of other physiological religions has proved plainly that the most contradictory theories may dwell in them side by side.

While on the point of derivation; in regard to the change from khyung to yung, it may be compared also to the following corresponding words in Jäschke's Tibetan Dictionary: khyapa-yabpa, both 'cover' in Ladakhi; akhyarba-yarba, both 'go astray;' akhyampa-yampom, both 'be unsteady; akhyigpa, 'to fetter;' ygigpa, 'to be hindered;' akhyurba, 'to be separated;' yurba or yurma, 'pall out' (weeds, etc.); akhyompa, 'to wave;' yompa, 'be swinging,' swing. The y of yung and ygigpa is a silent prefixed letter and is often omitted in writing.

In the figures a and b below is shown the yungdrung in both positions: the natural and the reversed. The Rev. A. W. Heyde of Ghum tells me that the yungdrung as a monogram is said to be composed of the two syllables \( \frac{\text{sun}}{\text{sutti}} \) and \( \frac{\text{sun}}{\text{svasti}} \).

According to Waddell, Lamaism in Tibet, both the established Buddhist church and the adherents to the Bon Religion have a yungdrung of their own, the one under a being the emblem of Lamaism, that under b of the Bon Religion. It is most natural that a alone should correspond to the actual course of the sun, for it is probably the older one. Indian Buddhist missionaries may have fought in vain against the use of the symbol, and finally agreed to introduce it into their own system by regarding it as a monogram, containing the three syllables su sutti in Indian characters. Afterwards in opposition to Buddhism and at a time when the leading ideas of the once physiological religion had vanished, Bon priests made the emblem turn the other way; just as the custom of circumambulation was altered by the Bonpas from right to left.
In the drawings below showing the *yungdrung* as an ornament in Native houses in Khalatse, Lower Ladakh, it will be seen turned both ways.

However all this may really be, on the whole I feel obliged to say, that my explanation of the *yungdrung* must not be taken for more than a mere guess at its interpretation from a Tibetan point of view. I have no means in this remote land of collating these speculations with the mass of literature on the *svastika*.

The *yungdrung* is thought to be of great importance at the wedding ceremony, and both bride and bridegroom have to sit on carpets showing the emblem. It is indeed in universal use in this connection, for in a copy of the wedding-songs, which I received a few days ago from Phyang the *yungdrung* is used for punctuation instead of the full stop.

**Song No. I.**

*bagra buttanga nyopa gaola buttageesi*  This is the book of the songs, which are sung at the door by the *Nyopa*, when the bride is given.

---

1. The orthography of the songs has been brought into accordance with that of Ladakhi letter writing. In all doubtful cases, however, the spelling of the first MS. will be given.

2. A *chuunga* is indicated by an apostrophe.
Om, may you be blessed! May the blessing come unto you speedily!

The people of the house say:

A.

1. duba sgonmo de stengdu rgyugpa ci'i don.
2. duba sgonmo de bardu rgyugpa ci'i don.
3. duba sgonmo de 'ogtu rgyugpa ci'i don.
4. duba sgonmo de sharla rgyugpa ci'i don.
5. duba sgonmo de lhoru rgyugpa ci'i don.
6. duba sgonmo de byangdu rgyugpa ci'i don.
7. duba sgonmo de nyalu rgyugpa ci'i don.
8. duba sgonmo de mkhardu rgyugpa ci'i don.
9. duba sgonmo de yulla rgyugpa ci'i don.
10. duba sgonmo de grongdu rgyugpa ci'i don.

B.

1. phyinas landu.
2. duba sgonmo de stengdu rgyugpa de lhai dbangpo rgya bzhinla rgolba ma zhus sam
   bsangshug phulba'i don.
3. duba sgonmo de bardu rgyugpa de bisan ams skyabs bdunla rgolba ma zhus sam
   bsang shug phulba'i don.
3. The blue smoke
Is falling to the ground,
I think, that the Water-King,
\textit{rocgo}'s anger may not be
provoked,
It is an offering to him.

4. The blue smoke
Is spreading towards East,
I think, that the eastern \textit{rDorje}
\textit{sems dp'as}'s anger may not be
provoked,
It is an offering to him.

5. The blue smoke
Is spreading towards South,
I think, that the southern \textit{Rin-
chen byung ldanla}'s anger may
not be provoked,
It is an offering to him.

6. The blue smoke
Is spreading towards North,
I think, that the northern \textit{Don-
yodgrubpa}'s anger may not be
provoked,
It is an offering to him.

7. The blue smoke
Is spreading towards West,
I think, that the western \textit{sNangba mthayas}' anger may
not be provoked,
It is an offering to him.

8. The blue smoke
Is rising to the castle,
I think, that \textit{rtSeilha snyanpo}'s
anger may not be provoked,
It is an offering to him.

9. The blue smoke
Is spreading over the country,
I think, that \textit{Yuithsa snyanpo}'s
anger may not be provoked,
It is an offering to him.

10. The blue smoke
Is spreading over the peasants' [houses],
I think, that \textit{Phalha snyanpo}'s
anger may not be provoked,
It is an offering to him.
Notes on the Tibetan Text.

Nyopa, buyer, because the bride was bought in ancient times. The salutation in classical language Om bhrasihpar, etc., is exchanged after each strophe, but will not be repeated in these pages.

I. A. In all verses c'te don means literally; it is the meaning of what? II. B. As regards the meaning of names and general position of the heads of the Pre-Buddhist cosmology, see my paper on the Kesar-Myth in Mémoires de la Société Fanno-obiéenne, 1900, No. XV. The syllable sam I was first inclined to translate by 'or,' but people told me, that they understood it to mean 'think,' in favour of which might be pointed to the people's response: Well thought, you mighty friends. In v. 4, 5, 6, and 7 the gods, who govern the four directions, are mentioned.

They are the properly Tibetan lka-pa-las, in Lamaism three of them have become Dhyani-buddhas, whilst rDorje sems dp'a has become their president. That their relationship to the four points of the globe has not yet quite been lost in Lamaism, is shown by the Padma-thang-yig, see Grünwedel, Mythologie des Buddhismus, pp. 98, 99.

The names in literal translation mean:
4. 'The thunderbolt with the courageous soul.'
5. 'The producer of great price.'
6. 'Fulfiler of the aim, he has.'
7. 'Eternal light.'
With the exception of 6, all the names point plainly to the different manifestations of the sun. 7 in particular goes back to the idea, that the West is the receptacle of all the suns, which have been born up to the present day. This idea is too natural a one to have been imported from Persia. Instead of ma zhas the original rendering was probably msa zhun, the imperative being used for the optative.
8. rTselha, god of the summit.
10. Phalha, god of the fathers, i.e., family.

Notes on the English Translation.

It might be well to say a few words about the scene, which forms the background of the songs. The Nyopas (i.e., friends of the bridegroom, who were sent to buy the bride) come on horseback and clad in gorgeous dress (side plate) before the house of the bride and ask for entrance. This is refused to them unless they are able to answer certain questions. All the people of the house are armed with sticks and the Nyopas are beaten unmercifully as soon as they fail to prove their respectable origin by answering the questions satisfactorily. The people of the house light a fire of the wood of the pencil cedar and concerning the smoke of this the first questions are asked.

After the questions regarding the principal deities have been settled, in 8, 9, and 10 the local deities come in. Though in ancient times idols do not seem to have had a place in the Bon Religion, we can see how the idea gradually crept in. As we know from the Kesar-Myths, the Iha's or gods used to visit the earth frequently. High hills became known as places of the gods' descent, and to honour them properly, white altars were erected. By and by these altars or lha-thos were considered as being the dwelling places of certain lha's and at last the idea was developed, that wherever a lha-tho was erected, a lha would soon take his seat. So we have a lha on the hill (near the castle) in 8, and the family (father) lha in 10. In 9 the word lha might point to a rough idol, compare Jäschke's Dict. tsho-tha. All of them have the epithet snyan-po — well sounding.

Song No. II.

A.

II. A. lege bsams dbang nyi bo. nangmas.

1. phru yar 'zaig 'ang ganga chu dkar po de sn dang gang gi chang.

II. A. Well thought, you mighty friends.

People of the house say:

1. Look over there to the upper valley! That white glacier water, What and whose beer is it?
2. gyasla yar yizigs ‘ang
   yy’a chu khral khorl de
   su dang ganggi chang.

3. mdor yar yizigs ‘ang
   ytsang chab sgonmo de
   su dang ganggi chang.

4. yyonla yar yizigs ‘ang
   chumig kyal kyil de
   su dang ganggi chang.

5. sbrulmgo ma chab kryanla
   yang dkar naskyi khbde
   su dang ganggi chang.

The Nyopas answer:

II. B. 1. Look over there to the upper valley!
That white glacier water
Is the beer, nourishing the
ice-lion.

2. Look over there to the right!
That foaming water among the
stones
Is the beer, nourishing the young
deer.

3. Look over there below!
That blue river water
Is the beer, nourishing the little
fishes.

4. Look over there to the left!
Those wells here and there
Are the beer, nourishing the
mother-fields.

5. And in this large jar with the
snake’s head,
The fluid [made] of white barley,
Is the beer of the Nyopas or the
seven brethren.

Notes.

A. 2. gyochu, this word is used here, so
people tell me, for water with stones, not for
stagnant water, khralkhor, noisy.

4. kyalkyil scattered about.

5. ma, mother, used for
everything large, here the large jar.

B. 4. ma zhing, motherfield, a very fertile
field. Instead of kyalkyil-parpur is also used
in the same sense.

A. 5. The mouth of the jar is formed like
a snake’s head. B. 1. The ice-lion with the
blue locks [or mane] was originally the glacier
itself, later on it developed into a fabulous be-
ing, which was thought to live there. 5. The
number of the Nyopas ought to be seven.
III. A. snyan gyanar mdzodcig.
1. dgung dang dbyibskyi mjalthsul de
   su dang ganggis byas.
2. shar dang snukkyi mjalthsul de
   su dang ganggis byas.
3. lho dang byanggli mjalthsul de
   su dang ganggis byas.
4. steng dang 'oggi mjalthsul de
   su dang ganggis byas.
5. phu dang mdoyi mjalthsul de
   su dang ganggis byas.
6. mkhar dang yulgyi mjalthsul de
   su dang ganggis byas.
7. 'zhis dang ynasgkyi mjalthsul de
   su dang ganggis byas.
8. phyi dang rangggi mjalthsul de
   su dang ganggis byas.

III. A. Now listen with your ears!
1. The existence of the high heaven
   and of the forms [plants, animals],
   By whom and how was it
   created?
2. The existence of East and West,
   By whom and how was it
   created?
3. The existence of South and
   North,
   By whom and how was it
   created?
4. The existence of height and
   depth,
   By whom and how was it
   created?
5. The existence of an upper and a
   lower valley,
   By whom and how was it
   created?
6. The existence of castle and
   village,
   By whom and how was it
   created?
7. The existence of hearth and
   home,
   By whom and how was it
   created?
8. The fact, that some people are
   outside and some inside,
   By whom and how was it
   created?

B.

phyimas landu.
III. B. 1. dgung dang dbyibskyi mjalthsul
   de
   nyi zla ynasgkyi byas.
2. shar dang snukkyi mjalthsul de
   khri yduugs nyimas byas.
3. lho dang byanggli mjalthsul de
   zla mthsan dkarpos byas.

The Nyomas answer:

III. B. 1. The existence of the high
   heaven and of the forms
   Was created by sun and moon.
2. The existence of East and West
   Was created by the sun, the
   umbrella of the throne.
3. The existence of South and
   North
   Was created by the Moon, the
   whitener of the night.
4. The existence of height and depth
Was created by the dewy soaking
rain.

5. The existence of an upper and a
lower valley
Was created by skyeser, the wind.

6. The existence of castle and village
Was created by the king and the
ministers.

7. The existence of hearth and home
Was created by you, our friends.

8. The fact, that some people are out-
side and some inside,
Was created by the Nyopas, the
seven brethren.

Notes.

A. 8. This question refers to the scene
created by the arrival of the Nyopas. B. 2.
The sun is often called an umbrella on account
of his circular shape. 3. Though the moon as
representative of the night can be made to
account for the North, it is difficult to see
her relation to the South.

B. 4. Perhaps on account of the fact, that
clouds show great varieties of altitude. 5. A
strong draught is felt in every valley.

Song No. IV.

A.

This is about the origin [of the Nyopas].

IV. A. 1. adir byon rams shargyi gling-
nas Yongtsas
shar phyogs rgyalpo suzhig
bzhugs
bran dang 'akhor yug ciia dkar

4. steng dang 'oggi mjalbsul de
sbang char zilbes byas.

5. pho dang mdoyi mjalbsul de
skyeser° rhunpo byas.

6. mkhar dang yulgyi mjalbsul de

bran dang 'akhor yug ciia dkar
dbyigs dang chaluigs ciia 'adra.

° Having been questioned meanwhile by Regierungsrat Dr. E. Schlagintweit about the equation Kesar = skyogser,
I wish to state the following facts: This equation was not worked out by myself, but received ready made from
the natives, who explain the name in this way. According to a letter from Rev. Fr. Peter, Kryelang, the popular
pronunciation of the same name is Kysar in Lahaul. In a collection of popular songs which I received from phyang
three days ago, the king's name is invariably spelled Kysar. In Lah ordinary people pronounce the name Kesar,
but educated people, who know the myths from the spung, pronounce it Gesar. All the changes from Kysar to Gesar
can be accounted for, see my Ladakhi Grammar, introduction, Kysar = giirzo.
3. kyed rnams nubkhyi glingnas yong-stsana

B.

The Nyopas answer:

IV. B. 1. When we came here from the eastern

country,

Yul 'akhor srung was king there in the East.

For the sake of their religion we may

call his subjects and servants white.

Their shape and custom are good.

In the East there dwells the sun, the

umbrella of the throne.

If you want to hear some news, ask

him!

2. When we came here from the southern

country,

'aPhagsk'byed was king there in the South.

For the sake of their religion we may

call his subjects and servants white.

Their shape and custom are good.

In the South they enjoy all kinds of

grain.

If you wish to hear some news, ask

that!

3. When we came here from the western

country,

'aPyam mig bzang was king there in the West.

For the sake of their religion we may

call his subjects and servants white.

Their shape and custom are good.

In the West there are all kinds of

medicines.

If you wish to hear some news, ask

them!
Notes.

A. 1, etc. *cin da*, ought to be spelt according to the views of Ladakhis *ei mda*, *mda* (or perhaps *ada*) meaning 'about.' The names of the kings mean B. 1. protector of the country, 2 and 4. the high-born one, 3. good eye. Very likely the original name of 4 had been lost and that of 2 was inserted instead. Each verse may also have a seventh concluding line: *ngag ngye bo rnam la skad pa bshad gyu med,* we friends do not know any news; *'dzom po* = *'dzom po,* plentiful. Instead of *bdelegs* the original has *bdelegs.*

A. 1, etc. White is the colour of the Ihat's and of all good things. B. As regards the products of the different countries, they are mentioned in about the same manner in Ladakhi Songs No. XV. Harvest festival at Skyurbuchan. They are perhaps more of a practical than of a mythological interest.

The three names, given in this song, do not seem to be of Tibetan origin. They are probably the Tibetan names of the Indian ākapālas. Though there can be no doubt as to the pre-buddhist origin of this song as a whole, the names of the kings may be later Lamaist interpolations. I am rather inclined to believe, that an ancient version of this song had the names of those kings, who actually reigned in the respective regions many years ago. In this connection it may be added, that in Song No. X., where the four points of the compass come in again, actual geographical kingdoms, for instance China and India, are mentioned. Regarding the names, given in IV., compare Grünwedel, Mythologie des Buddhismus, p. 181; *spyun mig btsan,* instead of *mig mi btsan,* is probably a corruption, as it does not correspond to the Indian *virūpākṣa.*

Song No. V.

12. phu ngan duba che
13. mgon ngan ring du mehis
14. rinchen dbyugpas char cig phob
15. nam bz'a rincang yi lducig phob.

3. If you beat us with these three kinds of wood.
4. Breaking our helmets, you must return them a thousandfold,
5. Hurting our body, we shall return it a thousandfold,
6. Breaking our earrings, you must return them a thousandfold,
7. Breaking our saddles, you must return them a thousandfold!

Well thought, you mighty friends!

People of the house say:

V. B. I. This elastic stick of the turquoise willow, which is in my hand,

2. Arose in India, its birth-place.

3. It grew in dBus in Tibet, its growing place.
4. Its flexible yellow upper half looks like gold.
5. Its blue tip was made of turquoise.
6. By the king of the gods, rGya bzhin,
7. [There was issued] an order to beat [with it].
8. If you ask, what holy prophecy he gave regarding it,
9. ' A son of sun and moon may follow [you]!
10. The moon and the stars may be before [you]!
11. Bad speech ought to be blamed.
12. If [the fire] is badly blown, there is much smoke.
13. A bad guest be far away!
14. Now let go down a rain [of blows] with the costly sticks.
15. Beat them on their costly dress!
Notes.

A. 4. *Idem*, said to be the golden hat of the Nyopas, is called *Idem* either on account of its stiff shape or because of its being an emblem (allegory) of the sun. As will have been noticed in the preceding songs, the Nyopas have to play the part of the sun god. 5. *phe* = *phye*, perf. tense, of *'byedpa*, to open, thus 'if you beat an opening of the body, "a wound," the verb being used as a noun.

B. 3. *ltha*a, finishing place, when applied to men, it is the country, where maturity is attained. 4. *yeerla yod*, it belongs to gold. 5. *'gyula byas*, it was made [turned] into turquoise. 6. *'abra nga* = *'abra nga*, imperative tense. 10. instead of *ndanda* the original has *ndas*, instead of *mekha* it has *che* and *che*; the same must be said of *mekha* in B. 13. *namsa*a, Ladakhi for *nab'sa*. 11. perhaps the same as *ldur ldur* in Jäschke's Dictionary.

Song No. VI.

A.

VI. A. 1. shing grama giangma lcangma gyum
2. de gyum shing dang ma rdung-skig
3. de gyum shing dang rdung zerna
4. moyi Idem 'achagna Idem 'achag stong dang len
5. Inkuyi phe ralha pherai stong dang len
6. snrangyi gyu 'achagna gyu 'achag stong dang len
7. 'oggi sga 'achagna sga 'achag stong dang len.
legs bsama dbangri nysbo.

B.

VI. B. 1. bdaggi lagtu yodpai shing gyu lcang angponpa
2. skyedpa sngompom gyula byas
3. lo 'adab 'adzamging ni yul khyab

Notes.

Because at the end of each verse in IV. the Nyopas failed to give a satisfactory account of the four countries, this is taken as a sufficient cause to beat them. For their defence they recite V. A., VI. A., and VII. A., and find fault with the sticks. On the other hand the bride's party praise their sticks as having been approved of by the king of heaven V. B., a king of the earth VI. B., and the king of the underworld [waters] in VII. B.

B. 9 and 10 is said to the procession of the wedding party.

People of the house answer:—

VI. B. 1. Of this green stick of the turquoise willow, which is in my hand,
2. The blue middle was made of turquoise.
3. The leaves of the tree cover all 'Adzamging the country of men.
4. By the king, the owner and lord of the earth
5. [There was issued] an order to beat [with it].
6. If you ask, what holy prophecy he gave regarding it,
7. 'A son of the king may follow [you]!
8. The moon and the stars may be before [you]!
9. Bad speech ought to be blamed.
10. If [the fire] is badly blown there is much smoke.
11. A bad guest be far away!
12. Now let go down a rain [of blows] with the costly sticks,
13. Beat them on their costly dress.

Notes.

In B. two lines seem to have been lost, because for all the rest this song is in conformity with V. B. or perhaps V. B. 2, 3 are later additions. In 4 the king is mentioned as representative of the earth, an older version may have had Mother skyabs bdun, compare Song No. I. B. 2, ante, p. 134.

Song No. VII.

A.

phyinbas
VII. A. 1. shing starbu 'ambu thserbu ysum
2. de ysum shing dang ma rdang-zhig
3. de ysum shing dang rdang zerna
4. mgoyildem 'achagna 'dem 'achag stong dang len
5. luakyi phe ralna pherla stong dang len
6. snyangyi gyu 'achagna gyu 'achag stong dang len
7. 'oggi sga 'achagna sga 'achag stong dang len.

rangbas
VII. B. 1. bdaggi lagtu yodpai shing gyu 'lhang sgonpo!

The Nyopas say:

VII. A. 1. The walnut-tree, the tamarisk and the thorn,
2. With sticks of these three kinds of wood do not beat us!
3. If you beat us with these three kinds of wood,
4. Breaking our helmets, you must return them a thousandfold,
5. Hurting our body, we shall return it a thousandfold,
6. Breaking our earrings, you must return them a thousandfold,
7. Breaking our saddles, you must return them a thousandfold!

People of the house say:

VII. B. 1. Of this green stick of the turquoise willow, which is in my hand,
2. The white root was made of a shell.
3. The roots [of the tree] cover all the lower underworld.
4. By the wise and glorious Cogpo, King of the Underworld,
5. [There was issued] an order to beat [with it].
6. If you ask, what holy prophecy he gave regarding it,
7. 'A young kLu may follow [you]!'
8. The village idol may be before [you]!
9. Bad speech ought to be blamed.
10. If [the fire] is badly blown, there is much smoke.
11. A bad guest be far away!'
12. Now let go down a rain [of blows] with the costly sticks,
13. Beat them on their costly dress!

Notes.
If we look at V. B. 4, VI. B. 2, and VII. B. 2, we see, that the stick of the turquoise willow is identified with the tree of the world, which we find in so many mythologies. The roots of this tree cover the underworld, VII. B. 3, the leaves cover the earth VI. B. 3, and the top reaches stanglha.

Song No. VIII.

A.

The Nyopas say:—

VIII. A. 1. The soup-spoon, the gravy-spoon and the black-nosed poker.
2. With these three sticks do not beat us!
3. If you beat us with these three sticks,
4. Breaking our helmets, you must return them a thousandfold,
5. Hurting our body, we shall return it a thousandfold,
6. Breaking our earrings, you must return them a thousandfold,
7. Breaking our saddles, you must return them a thousandfold!
Because the people of the house do not know what to answer, the Nyopas say:

VIII. B. 1. A wood to beat us, friends, does exist.

It is a wonderfully elastic wood,

It is a marvellously elastic wood.

There is a tree, the root of which has three stems.

These three stems have [together] six boughs.

2. On the first bough

There is the nest of the huge bird khyung.

Not breaking the golden egg,

Not destroying the bird's nest,

Not frightening the bird,

Take a stick and come!

With this stick do beat us!

With this stick do whip us!

If you beat us with this stick,

Breaking our helmets,

You need not return them a thousandfold.

Hurting our body,

We shall not return it a thousandfold.

Breaking our earrings,

You need not return them a thousandfold.

Breaking our saddles,

You need not return them a thousandfold!

3. On the second bough

There is the nest of the wild eagle.

Not breaking the turquoise egg,

Not frightening the bird,

Not destroying the bird's nest,

Take a stick and come!

With this stick do beat us! etc (see 2).
4. yalga yasampa
mgobo ldog dkar thsangs
dung sgong ma bcagpa

7. yalga dagpapa
khra skya dkarmoi thsangs
lcegs sgong ma bcagpa
bya thsangs ma bshigpa
bya de ma 'agrogpa
shing de snammas byon
de dang rdung mgdro cig, etc.

Notes.

This song seems to contain a further description of the tree of the world. It is remarkable that the tree of the world is said to have six boughs, for I have not yet met with the number six in other books relating to Bonpa mythology. In this connection I should like to mention that according to the Edda there are six animals (a goat and five stags) feeding on the leaves of the tree of the world, and that the Edda (not Snorri) speaks of six worlds.

A. 1. The expressions given here are colloquial Lower Ladakhi for spoon-spoon, tablespoon and pokers. B. 1. hala = hala, hala the same as hala. rtsen means originally 'top.'
2. sgong = sgonga, egg. The termination pa in bcagpa, bshigpa and 'agrogpa is Ladakhi for par, the aspirate being used here in a gerundial sense. 5. mkhal dkar, white kidney, i.e., the feathers over the kidney are white.
6. rbya, another name of the same bird is lhabya.
Song No. IX.

A.

IX. A. 1. khyed nyebo me ma khrul
2. da nang yongba gangnas yongs
3. 'agroba nyideag gangdu 'agro
4. sdodpai bde iiec gangna yod
5. dgospai skudon sula yod
6. γzhungyul 'adira ciia byon.

phyimas.

IX. B. 1. yong da ngazha sharpṭyogs bde-
chen glingnas yongs.
2. 'agro da ngazha nubphyogs
urgyan glingdu 'agro
3. sdodpai bdelce de sa γnas 'adina
yod
4. dgospai skudon ni γzhungyul
'adina yod.
lege bsams dbanggi nyebo.

B.

IX. A. 1. Now, friends, do not let the fire
fall down!
2. Now, you, who enter, from where
do you come?
3. Then, where will you go to?
4. Where will you be pleased to sit down?
5. For whose sake do you come?
6. Why did you come here into the
middle of the village?

The Nyopas say:

IX. B. 1. We come from a happy country
in the East.
2. We go to the country of the
paradise in the West.
3. We shall be pleased to sit down
here.
4. Our aim is here in the middle of
village.
Well thought, you mighty
friends!

Notes.

A. 1. me ma khrul, do not let the fire fall
down, proverbial expression, for 'do not break
down now, show your ingenuity!' 4. The
original has sula instead of gangnas, the lines 4
and 5 having been confounded. B. 2. urgyan,
here in Lower Ladakh is understood to mean
either Padmasambhava or the Western
Paradise.' 1 and 2 again show, plainly, that
the Nyopas have to play the part of the sun.

This song IX. is generally the conclusion of
the scene before the house, the Nyopas are
invited to enter and tell the name of the girl.
Then the bridal party, the Nyopas and the
whole village sit down for a great feast, when
the Chang giu (the continuation of the wedding
song, given above) is sung. On the following
morning a Buddhist Lama appears and reads
a scripture portion from an orthodox Buddhist
book. People tell me that he may read any-
thing, he likes, because neither the Lama nor
the bride are able to grasp the meaning, and
the chief thing is the correct pronunciation.
Then the bride and the Nyopas mount their
horses and ride to the house of the bridegroom,
where another feast is given.

Conclusion.

Having thus arrived at the end of the first
intelligible half of the wedding ritual, it will
be as well to add a few words about the other
less intelligible half, though the latter is not
yet ready for publication. After a study of the
verses contained in it, which can be
understood fairly well, I have come to the conclusion that the so-called second half of the
ritual is not the continuation of the first; but a composition apart. It is in reality a new
ritual dating from the time of the introduction of Buddhism into Ladakh, and is an
attempt to replace the ancient Bonpa ritual by another, which, though not entirely Lamaist,
tries to introduce Buddhist ideas by placing them side by side with Bonpa ideas. That this
compromise has proved a failure, is shown by the fact that people have never been able to grasp it in full and are now on the point of abandoning it altogether.

As might have been expected, my interpretation of the Kesār-Myths has been criticised as being unscientific. There can be no doubt that there are no scientific means available to prove the solar origin of many a hero. It is much easier to prove the descent of all of them from great ancestors. However, a certain amount of common sense, now and then, speaks in favour of a solar descent. In my notes to Wedding Song No. 1, I said, that the name of the northern Loksa, pāla-Donyodgrubpa could not well be explained as a manifestation of the sun, but my critics have helped me to bring him into the system. From the Kesār-Myths we learn, that Kesār, the supposed spring-hero, had a different name before his birth on earth, that is, during winter. Then, whilst in heaven, he was called Dongrub, 'the fuller of the aim.' This name is, so to say, a prophecy, it indicates the future doings of the hero. There can be no doubt that the year and the day have certain parallels, and the winter of the year corresponds to the night of the day. Is it wonderful then, that the Lokapāla of the north (i.e., the place where the sun is during night) should have the same name as the spring-god during winter? Donyodgrubpa means 'the fuller of the aim, he has.' The original name Dongrub was changed into a four-syllabled one simply to bring it into accordance with the four-syllabled names of the other Lokapālas. Thus we see, that the name of the supposed spring-hero Kesār, before his entering into action, is in accordance with the name of the sun before his starting his day's work. Does this fact not suggest a possible solar origin of Kesār?

Hitherto certain schools especially have considered it scientific to compare the mythologies of certain nations only with those of such nations as are related to them by language. However, religion overlaps the barriers of linguistic relationship, and there is no necessity to believe that a solar mythology had been worked out by a single nation and was carried to others by her missionaries. On the contrary, solar mythologies may have arisen in many countries and later on the different nations have borrowed one from the other.5 The existence of the Neβelungensage not only among the Uighurs, but also among the Tibetans is an established fact. Compare G. N. Potanin: Vostoenye mitovyj v srednezhovnomyj evropejskom epoch. Moskau, 1899.

Bijanagor; ann. 1516; s.v. Narsina, 474, i.
Bijanagar; s.v. Chinapatam, 153, ii.

4 This remark refers only to private letters from certain professors; if I had had the pleasure of seeing Prof. Dr. Gramsch's most interesting review of the Kesār Myth [published in the Glebe, August, 1900], I should certainly have modified my expressions.

5 Just like the Wandermärchen.

(To be continued.)

MISCELLANEA.

SOME OLD INDO-EUROPEAN TERMS FOR BOATS.

BY R. C. TEMPLE.

These remarks have arisen out of a statement and an illustration occurring in a MS. of 1669-79 by T. B[atheman], usually quoted as "T. B., Asia, etc.," fol. 100. "A purgoa: These Vse for the most part between Hugly and Fpylo and Ballasore: with these boats they carry goods into y? Roads On board English and Dutch, etc., Ships, they will line a longe time in y? Sea: beinge brought to anchor by y? Storee, as there Vseul way is."

This passage is quoted in Anderson's English Intercourse with Siam, p. 263, who was given it by Yule with this remark: — "J. [i.e., T. B.] the author, gives a rough drawing. It represents the Purgoa as a somewhat high-sterned lighter, not very large, with five oar-pins a side. I cannot identify it exactly with any kind of modern boat. of which I have found a representation. It is perhaps most like the pairwat. I think it must be an Orissa word, but I have not been able to trace
it in any dictionary, Upiyá or Bengali." The modern Indian palować (Malay, paluwa) is a skiff, and would not answer the description. Anderson, loc. cit., mentions that in 1686 several "well-laden Pargoes" and boats had put in for shelter at Ramawaram on the northwest of Madapollam," i.e., on the Coromandel Coast. There seems to be no such word known there now.

I think, however, that the term purgo is probably an obsolete Anglo-Indian corruption of the Portuguese term barco, barca. Thus, 1510. "Into the Island Cuaquim [Çuaquim] they imported many spices from India and there they embarked in shallops [galua-jalip] (which are a kind of bargues [barcoes], like caravelas which ply in the Straits) and there they took passage in barges [barcaes] and in a few days' time reached Cairo." Dalboquerque, Hak. Soc. Ed., II, 230. In 1498, Vasco da Gama, Hak. Soc. Ed., p. 107, in his Malayan Vocabulary translates barca by çambuco [sanbúq Ar.], sailing boat for going ashore, and he habitually used the word for any kind of sailing boat (op. cit. 240). At p. 77 occurs "about a league below Calcutt about seventy boats [barcaes] approached," which barcaes Castanieda called tonas. These the Hak. Soc. Editor calls by a mistake "rowing-boats." The dhony dhoney, Tam. tôní, is a large shallow sailing boat, 70 ft. by 20 ft. beam.

The above quotations seem to establish the fact that barca was used for any kind of sailing boat by the early Portuguese visitors to the East.

The prow, with all its variants, paro, parao, pharso, proe, provoe, praw, pairau, and its double derivation from the Malayalam pāru and the Malay prau, prahu, has all along been used as a generic term for any kind of sailing vessel, especially for those taking cargoes and passengers to and from the early travellers' ships.

To the many quotations given by Yule, Hobson-Jobson, s.t. prow, I would add the following referring to the pāru of the Indian West Coast. 1608: A parao filled with the corpses of the principal Moors, who had been killed in action was sent drifting to shore towards the city." Dalboquerque, Hak. Soc. Ed., II, liii. 1633: October the sixteenth. In the Morning we discern'd four Ships of Malabar Rovers near the shore (they called them Faroes and they goe with Oars like Galeota or Foista). Della Valls, Hak. Soc. Ed., II., 201. The foist, Port. fusta, was a small sailing vessel. But the identification of parao with the Malayalam pāru is shown by Pyrard de Laval (1611). "The Portuguese call their own galiots Navires (navios) and those of the Malabars Pairaus. Most of these vessels were Chelligs, that is to say merchantmen. Immediately on arrival the Malabars draw up their Pados or galiots on the beach. I was witness to the most gallant behaviour on the part of one of these Pados which was returning from war." Hak. Soc. Ed., II, 345.

Then again there was the Anglo-Indian par or parra suggesting the Dakhani word parwa (cf. palwa and palwā above), used for a large boat. 1884: Jan. 12 Reed. a General from Vizagapatam p a Parr dated 4th instant . . . . Nov. 3. Also Several Parras and other large boat in our River break and blown beyond Recovery. Mad. Curs. Pringle's Ed. pp. 6, 132, and note, p. 115 f.

There were, therefore, several words of varying origin, closely allied in sound, in use for small sailing-vessels and large boats, which were used also for boats generally. Indeed the variants seem endless: vide Linschoten, c 1684. "In small boats called Tones and Pallenges [or Palegas] bring them abord." Hak. Soc. Ed., II, 191.

But the prow from its Malay derivation of prahu was mixed up with the pirogue (French for a canoe) and possibly the Portuguese peragiu, a fast sailing-vessel. 1703: They saw also near the City of Bantam above sixty little Barks which the Inhabitants call Pras, Prawen or Piroguis. The Sails and Tackling are the same with those of the Jonques. These were Fishermen Boats." Coll. of Dutch Voyages, 145. Elsewhere, loc. cit., p. 138, 144 (misspelt pirouge) and 157 ("the Crew of the Lion met with a little Pirogue or Indian Boat"), the compiler nearly always uses pirogue for prahu, though sometimes for a canoe or small boat (p. 282).

The old French writers do not, however, seem to have themselves used pirogue in the East for a canoe. In the Premier Livre de l'Histoire de la Navigation aux Indes Orientales par les Hollandois, 1809, we find, fol. 8: "Il en font de Canoes [elsewhere in the book always Canoas]
ou Barques, de moyenne grandeur, d'une seule pièce." Fol. 13: — "Ainsi naviguons en compagnie de Paraoe nous vinmes la où nous trouvâmes trois ou quatre Canoes." Fol. 20: "En un Gophe ou pays de Iava vissemus un Ionco, qui est un bateau de Iava." On fol. 23 there is a "Delineation sur le riv de a light between the Dutch fleet and 24 paraoes et ioncos de Iava where the paraoes are armed boats and the ioncos sailing vessel. Chap. 33: fol. 35 ff. is entitled "Des Fustes, Galéotues, navires ou Ioncos, Paraoes, Barques de guerre & esquifs en Iava & lieux circonvoisins & les lieux où pour le plus basty," with an illustration which shows the ioncos to be ships, the paraoes to be sailing-vessels or barques, and the fishing boats (cancaes) to be outrigged canoes. In 1696 the Voyage de Siem des Peres Jesuites, p. 138, says: — "Cependant il venoit a toute heure a bord une infinité des Canots se Jetons qu'ils appellent Praux" with an illustration of the "Rade de Bantam" showing a sailing Praw and a Canot or fishing Praw (outrigged Canoe). In the Journal en suite du Voyage de Siem (Amsterdam reprint, 1697), under 16 Août (1685) we read: — "Le Chevalier de Fournin est parti ce matin à une heure après minuit dans le canot" (p. 117). And under Septembre 26, "A huit heures du soir est arrivé un petit canot Siamois." The English translation of the Voyage de Siem, London, 1688, p. 95, has: "In the mean time vast numbers of the Javaners Canoes, which they call Praux, came on Board of us every minute." And it gives the plan of the "Rade de Bantam" in facsimile.

All this information is exactly on a par with that from Lockyer. 1711: — "The large Proes, or fifteen Tun and are chiefly implov'd in profitable Voyages to the Coasts of Pegu, Malacca, etc. But their flying Proes are only for fishing, coasting and visiting the Islands therabouts." — Trade in India, 45. But at p. 62 he has: — "4 Cochin-Chinese Galleys with Prows, which mounted to in all 65 and in them about 300 Soldiers."

That the Malay prahu was used for any kind of sailing vessel is nearly evidenced by a queer contribution to Asiatic Researches, 1818, Vol. XII. p. 125 ff., on the "Maritime Institutions of the Malay." At p. 130, we read, "these are the Laws to be enforced in Ships, Junkes and Prahu's;" but throughout the Rules that follow prahu is used for every kind of ship indiscriminately. This is of course evidence independent of the direct statement of all Malay scholars, Raffles, Marden, Crawfurd, Maxwell, Swettenham, etc., that prahu, prahu is a generic term for a vessel of any kind on the water.

As regards purgoe, purgeo, purga, purgo, byrgoe, the evidence is as follows: —

1669-70. — T. H. shows in the text above quoted that the purgoe was a lighter for goods at "Huigly, Pyple and Ballasore." It probably could also sail.

1690. — "A porgoe drove ashore in the Bay about Peple, laden with the Company's Petre." Mad. Consul. See also Yule, Suppl. s e porgo. No doubt these boats were identical with those T. B. alluded to.

1683. — "The Thomas arrived with ye : 28 Bales of Silk taken out of the Purgoe." — Heigha, Hak. Soc. Ed., I, 65. At p. 65 we read: "forcing away y Master and all ye men of ye boat whereon ye remainder of our Decca fine cloth and 25 Bales of Silk were laden." So the purgoe was a "boat" of the lighter class. At p. 61 it was "ye boat we brought from Huigly."

1685. — Anderson's statement above quoted from the Madapollam Records presumes the purgoe to have been a freight-boat.

1685. — Pringle notes in Mad. Cons. for 1684, p. 165: — "(porgo occurs) in Hoogly letter to Fort St. George, dated 6th February 1684-5 coupled with bora (Hind. bhar, a lighter), but in his 1685 vol. he does not quote the letter.

The purgoe then was a barge (barca) confused with the bark (barco), just as the sail-less barge and the sailing bark have been confused in the West. Vide Lognat, 1692, Hak. Soc. Ed. I, 167: — "We were to build a pretty big Boat. . . . . Our Bark was twenty Foot long at the Keel six broad and four deep, we rounded it at both ends."

I close these notes with two useful quotations towards the history of the word Prow.

1686. — The natives are very ingenious beyond any people in making Boats or proes, as they are called in the East Indies, and therein they take great delight. [Describing a canoe with an "outlager," i.e., outrigger]. — Dampier, New Voyage, 2nd Ed., 1697, p. 298 f.

NOTES AND QUERIES.

Screevore — Secretary.

Ante, Vol. XXIX. p. 116, I explained that the word screevore was, in its various Anglo-Indian forms, a corruption of the auctioneers' and furniture-dealers' word scrivitoire for a fancy writing-table (bureau). I give here a still further corruption of it from a furniture-dealer's book. A would-be antique book called "The Compiler | Furniture and Decorations | Choice and select Designs | from the best Authors | Compiled and Published | by R. Charles designer | 14 Fulham Road South Kensington | London, 1879" has come into my hands. At p. 109 are two designs copied from Ince of fancy writing tables. Putting Ince's date at about 1750 we get at a date for the quaint heading of the designs.

1750. — "Lady's Secretary's. W. Ince inv. et del. M. Darly sculp. (Designed by W. Ince, contemporary to Chippendale.)"

R. C. Temple.

SOME HINDU SUPERSTITIONS IN THE CENTRAL PROVINCES.

1. When a sick person is at the point of death, the howling of dogs, or the hover or scream of kites, denotes that celestial beings are about to take the departing soul up into the heavens.

2. If a mother complains of failure of milk, the old women of the household go at once to the nearest well, circumambulate it, burn incense and make offerings of coconut and libations of milk and water. At each libation the following prayer is offered: — "O merciful Gāndhi, fill my breasts with as heavy a volume as thine own bosom bears."

3. Weapons of all sorts are supposed to bear animosity, as such, towards human beings. The way to secure yourself against the enmity of any particular weapon is to knock it several times against Mother Earth.

4. The slaying of a cat is a great sin, and to expiate it, you must eat its tail, or, if you can afford it, you should make a golden cat and give it in charity to a temple.

5. Drought is said to be caused by throwing pieces of iron out of the house during a shower of rain. There is, however, a doubt about this, and some say that it is a good thing to do as the pieces of iron will act as lightning conductors.

6. The surest way of bringing about a drought is to bury a female corpse with a fetus in its womb. The only cure for this is to exhume the body and take the fetus out and then bury it again. If a woman is buried when pregnant at a time of year which is not the autumn there will be no rain in consequence during the next rainy season.

7. If a child is afflicted with a bad cold it is sufficient for the mother to seat it in the lap of a brother or sister, or of any old woman failing the first two, and pour into the child's nostrils a mixture of sesame oil boiled with flies and garlic.

8. When a child is learning to walk and falls on the ground, the mother should spit on the spot and kick it and at the same time abuse the ground. This she should do to drive away the hungry imps and devils that are always prowling about to do mischief and have brought about the fall of the child.

M. R. Padlow.

SOME CORRUPTIONS OF ENGLISH FROM PORT BLAIR.

1. "Portland Cement" becomes simin, simint and sirmit.

3. Kwangyung, the name of a local ship, becomes Kultin.

4. Bablance quīc is the form on a menu that bubble and squeak, the favorite dish of the native cook, sometimes assumes.

R. C. Temple.
BOOK-NOTICE.

Professor Macdonell has given us a thoroughly interesting and readable account of a great subject. His book is a popular book in the best sense of the word; but it is much more than this. The judiciously selected bibliographies, which he has added to his chapters, will be of the greatest utility to the student, who wishes to make a more minute investigation of any particular branch of Sanskrit literature.

Such a book, giving a comprehensive view of the whole, and, at the same time, affording a clue to the study of the different parts, was very greatly needed in English. European students, indeed, knew enough German to be able to use German works, and they had had for the last thirteen years Prof. L. von Schroder's Indisches Literature und Cultur, the scope of which is much the same as that of the present work. But Native Indian students are not, as a rule, similarly equipped; and everyone who has had to teach Native students must have experienced a difficulty which will now be removed by this hand-book.

Summarizing, as it does, the results of a host of special monographs, Prof. Macdonell's book contains in many respects, and especially in regard to the Veda, a much fuller account of the gains of modern scholarship than is to be found elsewhere in any one volume. For example, his accounts of the composition of the Rig-Veda, of the criteria by the application of which the relative ages of its different parts may be discovered, of the Vedic metres and their development within the Veda itself, etc., together constitute a most useful résumé of the results of highly specialised research.

The great change which has of recent years come over the investigation of the history of Indian culture lies in the recognition of the fact that the Aryan in India possessed greater originality than he was previously credited with. Formerly he was allowed to have an infinite capacity for "brooding over" ideas which he had conveyed from others, but his power of initiating such ideas was denied. It was almost assumed that the invasion of Alexander the Great and the settlement of the Bactrian Greeks in Northern India had completely dominated all subsequent Indian culture. Now, on the other hand, it is difficult to mention any science or art in which some original efforts and some degree of progress are not, by general consent, conceded to India. Astronomy, mathematics, law, grammar, coinage—all these had beginnings and a more or less perfect development in India itself. Especially true is this of every branch of literature. As Prof. Macdonell points out, "The importance of ancient Indian literature, as a whole largely consists in its originality. Naturally isolated by its gigantic mountain barrier in the north, the Indian peninsula has ever since the Aryan invasion formed a world apart, over which a unique form of Aryan civilization spread, and has ever since prevailed." In this remark on the literature generally, Prof. Macdonell includes the drama, thus agreeing with the greater number of scholars nowadays that the Indian drama had an independent origin. The attempt to derive it from a Greek source, like the attempt to trace the influence of Greek novelty in the Sanskrit romances, was really only one manifestation of what was, at one time, an almost universal bias, singularly ill-supported by any kind of tangible evidence.

The statement on p. 413, that Kaniñaka was a Čaka king and the founder of the Čaka era should be modified. On his coins he is called a Kushana, not a Čaka. The whole question of the origin of the Čaka era is at present in a great state of uncertainty, and it cannot be said that recent contributions to the discussion have done much to enlighten us on the subject.

Professor Macdonell is to be congratulated on his courage in omitting what has hitherto been a constant feature of all works on Sanskrit literature—Goethe's little poem on Çakuntala, like Schopenhauer's equally exaggerated estimate of the Upanishads, it has lured many an honest soul on to bitter disappointment.

E. J. RAPSON.

The intervals, the denizens of the humbler parts of the house regarded themselves with Turkish delight, while their more fortunate brethren in the foreign partook of Turkish coffee (actually served, in one instance, at least, c. 1900 A.D., by a real live Turk) and smoked Turkish cigarettes. He will have just as good an argument for its Oriental origin.
NEW RESEARCHES INTO THE COMPOSITION AND EXEGESIS OF THE QURAN.

BY HARTWIG HIRSCHFELD, PH.D., M.R.A.S.

(Continued from p. 131.)

CHAPTER VIII.

The Parable in the Qur'an.

Real poetical element in the Qur'an — Critical value of the mathal in the Qur'an. — Its development and distribution through the various period — Views of Arab authors on the mathal — The shorter aphorisms collected — Parable and dogma — Parables chronologically arranged — Application of mathals — Biblical mathals in the Qur'an — Anthropomorphism — Muslim views on the subject — Repetitions of mathals in altered forms — Mathals in Medinan revelations.

Appendix: The Mathal in Tradition.

Apart from those few cases already notified, in which Muhammad betrayed his inability to alienate himself completely from certain traditions of the national poetry, we find his sermons embellished to a surprising extent with poetic gems. The Qur'an is studded with them — to use his own phrase — like "with hidden pearls." The pathos of the declamatory period would hardly bear artistic criticism, but the case is quite different as regards the parables, poetic comparisons, and figures of speech which kept unsought upon his tongue, and by their simplicity and appositeness give an undeniable charm to many passages otherwise forced and tedious.

When speaking in aphorisms Muhammad introduced no new element into the literature of the Arabs, since proverbs and epigrams are prominent in their oldest productions. His own share is unusually large, and Muslim theologians and literati eagerly compiled an enormous number of sayings and parables which they attributed to Muhammad, but with the exception of those occurring in the Qur'an itself, it is difficult to establish the authenticity of any of them.

The Arabic term for aphorism is mathal. The various definitions of this word, given by Moslem authors, commence with the idea of similitude, like the Hebrew mishal, but the mathal also includes fables and short tales, which on account of some peculiar feature have become proverbial. The mathal therefore comprehends every allegory, tale, and sentence containing anything worth remembering. To these the Qoranic mathals adds, under certain conditions, the interpretations of description and example. It afforded the Prophet numerous opportunities of alluding to persons and incidents in the guise of a parable or fable of his own invention.

Muhammad's employment of the mathal as an element of rhetoric was undoubtedly a concession to the familiarity of his people with this feature of national poetry, although its fictitious character should have placed it in contrast to the reality of the revelations. Indeed, Muhammad limited the fictitious appearance of the mathal as much as possible. The aim of his speeches was practical, and the effect of the mathals intended to be drastic rather than artistic. Eloquence for its own sake was not the Prophet's chief object, and in using figures of speech he never sought to be poetic.

See above Ch. L. To the plays upon words mentioned by Noldeke, I. e. p. 32, should be added Qur. vi. 26.

See Appendix to this chapter.

11 Kashshaf ii. 15: Al Bashi. often.

13 Qur. vii. 176, xvi. 62: for further classification cf. Ith Fiona, p. 361 e.g.
Besides this the mathals of the Qorän have a literary importance also, as they assist in the critical treatment of the book. In some cases they serve to fix the periods of the addressees of which they form a part, and their dispersion through the book reveals the following interesting facts. In older portions they are extremely rare. None, or hardly any, occur as early as the confirmatory period. It is plain that, when the Prophet was engaged in building up the framework of the new faith, he could not at the same time adorn it, and he may also have feared that mathals of any kind would be suggestive of poetry. They, however, gradually crept into the declamatory period in the form of very brief comparisons, whilst real parables could only find a place amidst longer discourses of doctrinal character. The oaths taking as witnesses the sun, moon, stars, dawn, day, night and similar subjects, cannot be regarded as aphoristic expressions, because they are merely high-flown invocations of natural phenomena. Even the appeals, to the "Elevated Qorän," the "Book," the "Day of Judgment" in its various descriptions, and other transcendental objects are based on matters which the Prophet taught were real. His pictures of the transformations of Nature, of the Last Day, of the pleasures of paradise and the tortures of hell have also substantial backgrounds. Hence there are considerably more paradigms in the shorter and less pompous period of narrative revelations, whilst the bulk of the Meccan mathals belongs to the periods of the descriptive and legislative addresses. They are still more frequent after the Hijra until the battle of Badr, after which they are not so often met with. We thus see that the mathal in the Qorän developed gradually. It reached its apogee, when Muhammad's hitherto purely doctrinal mission assumed a political character. Of those which appear later, some are almost repetitions of former ones, some are evolved from personal experiences, others are manifestly borrowed, one is of questionable authenticity, and all of them have little or no fictitious element.

The mathal as one of the characteristic features of the Qorän has hitherto received no attention from European students; yet its importance did not escape several Muslim writers of repute. Fourteen shorter aphorisms were collected by Abu Manṣūr Al Tha'labi. Al Suyūṭī in his Itqān entered more deeply into the subject proper. According to his statement, based on earlier authorities, Muhammad is said to have given the mathal a place among the five ways in which revelations came down, and to have advised believers to reflect on their meaning. He further states that Al Māvérdi, commenting on this, teaches that study on the mathal holds the foremost rank among the studies of the Qorän, however neglected it may be, and that "a mathal without its application is like a horse without bridle and a camel without strap." Of the views of other authors, quoted by Al Suyūṭī, on the importance of the mathal, I will only mention one, viz., that the mathals represent abstract reflections in concrete form, because the human mind grasps by means of the tangible. The purpose of a mathal is therefore the comparison of what is hidden to something that is manifest, and comprises the various degrees of approval and disapproval with their consequences. "Therefore," concludes Al Suyūṭī, in his introductory remarks on the topic, "has Allāh inserted in the Qorän as well as in His other books many mathals, and one of the chapters of the Gospel bears the name: Chapter of the Parables."

The difference between shorter comparisons and figures of speech, and the parable proper, has already been pointed out by Al Suyūṭī, who treats on both in different chapters of his work, dividing the former into various classes which there is no need to be detailed here.

It is of greater importance to note that the mathal had to be submitted to a kind of dogmatic treatment. Some objected to the employment of the mathals of the Qorän for profane purposes. The poet Hariri was blamed for having interwoven one of the Qorānic comparisons in one of his Madānat, because, according to Al Zarkashi, it is not lawful to transfer Qorānic mathals to other works. We conclude from this that Muslim critics had some notion of the poetic element which was hidden in aphorisms and parables, but being accustomed to judge according to the exterior of things, they considered nothing poetic which was not written in verse and rhyme.
We will now proceed to give a list of the most striking comparisons and aphorisms. Although it does not claim to be exhaustive, it is yet sufficient to show Muhammad's purpose in introducing them. The parable proper will be discussed afterwards. The first group is arranged according to the sequence of sūras in our editions, the Medinian passages being marked by an asterisk.

* ii. 9. In their hearts is a sickness.

* 69. They (your hearts) are as stone, or harder still; there are some stones from which streams burst forth, and there are others, when they burst asunder, the water issues out.

* vi. 35. We have prescribed to the children of Israel that whose kills a soul, unless it be for another soul, or for violence [committed] in the land, it is as though he had killed men altogether.

vi. 32. The life of this world is nothing but a game and a sport.

66. To every prophecy is a set time.

125. Whosoever Allah wishes to guide. He expands his breast to Islam; but whosoever He wishes to lead astray, He makes his breast tight and straight, as though he would mount up into heaven.

164. No soul shall earn aught against itself; nor shall one bearing a burden bear the burden of another.

vii. 38. Until the camel enters the eye of a needle.

* vili. 22 (57). The worst of beasts are in Allah's sight the deaf, the dumb, those who do not understand.

24. Allah steps in between man and his heart.

x. 24. Your wilfulness against yourselves is but a provision of this world's life.

28. As though their faces were veiled with the deep darkness of the night.

xiii. 17. Shall the blind and the seeing be held equal? or shall the darkness and the light be held equal?

xvi. 79. Nor is the matter of the Hour aught but as the twinkling of an eye or nigher still.

94. Be not like her who unravels her yarn, fraying out after she has spun it close.

xvii. 86. Everyone acts after his own manner.

xx. 36. Every soul shall taste of death.

104. As the rolling of the Sijill for the books.

* xxii. 32. He who associates aught with Allah, it is as though he had fallen from heaven, and the birds snatch him up, or the wind blows him away into a far distant place.

xxiii. 55. Each party rejoices in what they have themselves.

THE INDIAN ANTIQUARY.

The weakest of houses is the house of the spider.  

The most disagreeable of voices is the voice of the asses.

No soul knows what it shall earn to-morrow, and no soul knows in what land it shall die.

Like one fainting with death.

The plotting of evil only entangles those who practice it:

Until it (the moon) becomes again like an old dry palm-branch.

As though they (the maidens) were a hidden egg.

Its spathe is as it were the heads of devils.

Shall those who know be held equal to those who know not?

Good and evil shall not be deemed alike.

He who wishes for the tillth of the last world — the tillth of this world.

The ships that sail like mountains in the sea.

Some suspicion is a sin; would one of you like to eat his dead brother's flesh?

We are nigher to him than his jugular vein.

Boys of their's as though they were hidden pearls.

As though they were locusts scattered about.

As though they were rubies and pearls.

Bright and large-eyed maids like hidden pearls.

As though they were a compact building.

They desire to put out the light of God with their mouths.

Like timber propped up.

As though they were palm stumps thrown down.

The heaven shall be like molten brass (9) and the mountains shall be like flocks of wool.

As though they flock to standards.

As though they were timid asses which flee from a lion.

Thou wilt think them scattered pearls.

It throws off sparks like towers, (33) as though they were yellow camels.

As though they had only tarried an evening or the noon thereof.

Men shall be like scattered moths, (4) and the mountains shall be like flocks of carded wool.

The list is long enough to reveal a poetic element of considerable strength.

We now come to those parables which Muhammed introduced by the term malhal. These are more elaborate and contain a moral. I have thought it advisable to discuss them in an approximately chronological order, which will allow us to observe the development of the

Qoranic mathal. The first does not appear until in the narrative S. xviii., in which two occur at once. In the former, the wealthy unbeliever is contrasted with his poor but pious neighbour in the following manner:—

v. 31. Strike out for them a mathal: two men for one of whom we made two gardens of grapes, and surrounded them with palms and put corn between the two. Each of the two gardens brought forth its food, and did not fail in aught. (32) And we caused a river to flow between them, and he (the owner) had fruit. He said to his friend, who competed with him: I am wealthier than thou, and mightier of household. (33) And he went in unto his garden having sinned against himself. Said he: I do not think that this will ever come to an end. (34) And I do not think that the Hour is imminent, and surely, if I be sent back unto my Lord, I shall find a better one than it in exchange. (35) His friend who competed with him — said to him: They hast disbelieved in Him who has created thee from dust, and then from a clot, and then made thee a man. (36) But He is Allah, my Lord, and I will not associate anyone with my Lord. (37) Couldst thou not have said, when thou didst go into thy garden: What Allah pleases! There is no power save in Allah. If thou lookst at me, I am less than thee in wealth and children. (38) But haply my Lord will give me [something] better than thy garden, and will send upon it a thunderbolt from the sky, so that it shall become bare slippery soil. (39) Or on the morrow its water will be deeply sunk, so that thou canst not reach it. (40) His fruits were encompassed so that on the morrow he wrung his hands for which he had spent thereon, for they (the fruits) had perished on their trellises; and he said: Would that I had never associated anyone with my Lord! (41) Yet he had not any party to help him beside Allah, nor was he helped.

The second mathal consistently teaches the vanity and short duration of earthly pleasures. It is as follows:—

v. 43. Forge for them a mathal of the life of this world; [it is] like water which we have sent down from the sky, so that the vegetation of the earth is mingled with it. On the morrow it is dried up, and the winds scatter it. Allah is powerful over all. (44) Wealth and children are the adornment of the life of this world, but the lasting pious deeds are better with thy Lord as a recompense and better as a hope.

The application of both mathals is easily found. The opulent but wicked man represents the stubborn opponent of Islam, whilst the less wealthy neighbour is the Prophet himself. It is to be noted that, in his censure of his rich rival, the other repeats the chief words of the first proclamation (v. 35 = S. xvi. 1 to 2).

Further, the double allusion to the loss of Muhammad's

---

* The fictitious character of parables being objectionable to the Muslim Commentators, they endeavour to explain them as bearing on real persons or events. Thus Al Bagh reproduces a tradition (without Insaid) according to which this parable refers to two brothers in Mecca of whom the believing one was Abu Salama b. Abd Asad, foster-brother to Mohammed, who died A. H. 4, and whose widow Umm Salama became the wife of the Prophet (see Sprenger, I. 433). Others (Ibn Abba) are of opinion, that the mathal in question was revealed on account of the Fazara chief, Uyeima b. Hijj (Sprenger, III. 369 sq.) who was converted to Islam shortly before the conquest of Mecca, and of the Persian Salma and the friends of both. The subjects of the mathal are said to have been two Jewish brothers (see also Kashi). Since all these traditions deserve but little credence, I refrain from entering more fully into them. Biblical parallels to the mathal are to be found: Isaiah, xl. 7; Ps. ciii. 15-16.

9 Palmer: "his next door neighbour," which is hardly correct; he seems to have read أربع.

11 Cf. ixx. 17-19.
two sons (v. 37 and 44) in their infancy, as well as that of his former wealth, is too plain to be misunderstood. This melancholy narrative is particularly applicable to his own position a short time after the death of his wife Khadija, when he also lost his uncle Abû Tali'b, his only protector. The date of the revelation in question could thus be fixed at (the summer 619) about three years before the Hijra.

The comparison of the vicissitudes of human life to the growth and decay in Nature appeared so appropriate to Muhammed, that he not only repeated the last quoted mathal in a more elaborate form, but also gave it a didactic tendency. The following instance is particularly interesting:

x. 25. Verily the likeness (mathal) of this world is like water which we send down from the sky, and with it are mingled the plants of the earth from which men and cattle eat, until when the earth puts on its ornament and becomes garnished, its inhabitants think that they have power over it. Our order comes by night or by day; we make it mown down, as if it had not been rich yesterday — thus do we detail the signs unto people who reflect.

One of the most natural and therefore very common topics in Muhammed's sermons is the contrast between unbelievers and the faithful. This is sometimes expressed in allegorical form, as in the following mathal. The infidels are likened to the blind and deaf, while the believers are those who see and hear; shall the two classes be held equal (xi. 26) ? The comparison of unbelief with blindness, deafness and dumbness being quite Biblical, is one of the commonest in the Qur'a;n.13 Mentioning dumbness alone it occurs again, and in a more developed form, in a mathal to be touched upon later.

Unquestionably modelled on Biblical māsh'āl are the following two contained in the (narrative) xivth Sūra. The one (v. 21) represents the works of the infidels as ashes which are blown about on a stormy day.14 This is clearly a reflex on Ps. 1. 4 (Is. xi. 7). The other mathal, occurring in the same address (v. 29 to 31) compares a good word to a good tree whose root is firm and whose branches are in the sky. It gives its fruit at every season by the permission of its Lord — Allâh draws parallels for men, haply they may be mindful. The likeness (mathal) of a bad word is as a bad tree which is felled down above the earth and has no staying place. — This parable is a free rendering of the verse in Ps. i. preceding the one upon which the foregoing mathal is based (see also Abîth, III. 17; Jer. xvii. 6 to 8). The phrase, it gives its fruit at every season, marks the origin without doubt.

Besides the two comparisons mentioned above,15 S. xvi. counts not less than three mathals. The first stands in connection with two others placed together in S. xiii., of which the second is somewhat earlier, but the first nearly contemporaneous with the one under consideration. It is introduced by a rebuke, directed against the pagan Arabs for their manifest aversion to female children, many of whom they destroyed in infancy. "When any of them," he says (xvi, 60), "is informed [of the birth] of a girl, his face turns black, and he is choked with wrath." In the parallel passage, which also contains a warning against the offence of ascribing daughters to Allâh (S. xiii. 15) stands instead of "girl" the phrase: — "that which he (the pagan Arab employs as a mathal for the Rahmân" (v. 16).16 Subsequently Muhammed declares (S. xvi. 62) those who do not believe in the "last world" are the mathal (prototype) of evil,17 whilst Allâh is

12 Ammud; cf. xvi. 1-2.
13 Cf. above, p. 188, where the blind and seeing are compared with one another, but this mathal is realistic.
14 Ibt. 565.

16 See p. 183.
17 Al Jâhid (Abstracts from Kif. Allîyan wa'allîyan, Constantinople, 1801, p. 175, says with regard to this verse: Allâh strikes a mathal on account of the inadequacy of the language and in order to promote understanding, even going so far as to compare His people to women and children.
18 سلسلة الصور (cf. xvi. 176, سلسلة الصور) which I translate: "a bad example!" Kash., صفة الصور ; cf. Al Dugh-
the highest mathal. It would be difficult to understand what Muhammed meant by this vague expression, did he not explain it a few verses later in the distinct prohibition (v. 76): — You shall not forge a mathal for Allâh, behold Allâh knows but you do not know. In contrast to this prohibition stands the assertion (S. xliii. 57 to 59), that the Son of Maryam was set up as a mathal, "he is but a servant upon whom we have bestowed our mercy, and whom we have made a mathal for the children of Israel."

Now here is a distinct restriction laid down, which serves not only to emphasize the monotheistic idea, but also to cavil at the anthropomorphistic metaphors used in the Bible. As a sincere convert to monotheism Muhammed disapproved of any attempt to explain divine attributes in the light of human faculties; in other words, he wished to be more monotheistic than the Bible whose anthropomorphistic terms he took literally. In a tradition handed down by Al Shahristâni Muhammed is said to have declared: — "The Musahabhiya (those who personify Allâh) are the Jews of this nation," which means that Moslems who represent Allâh after the fashion of human qualities follow the sinful custom of the Jews. The Prophet, however, had only one side of the question in view, and Kremer blames him unjustly for contradicting himself. Though it must be admitted that Muhammed did not investigate the question of anthropomorphism thoroughly, yet all passages in the Qurân dealing with the subject are not of one stamp. Muhammed rejected that form of tasbih (personification), which in the Bible refers to God individually. Allâh is never spoken of as a "Man of war" (Exod. xv. 3), "the Rock who has borne thee" (Deut. xxxii. 4), or "the Fountain of living waters" (Jer. ii. 13), or as "Father." The last named appellation, so common in both Testaments, appeared to Muhammed as sheer blasphemy. He therefore took an early opportunity of declaring that Allâh had neither a child nor any equal. The title of "Father" is accordingly scrupulously avoided in all the lists of the "Most Comely Names." It seems to me more than accidental that, when Muhammed related his alleged vision, that he did not mention any name of God, but circumscribed it by the epithet of "Mighty of Power." The Commentators refer this expression to the Archangel Gabriel, although at that period Muhammed had not shown any knowledge of him, and in the verse in question evidently alluded to Allâh himself. To prevent misunderstanding that similitudes of Allâh should not be made, Muhammed cautiously stated that any other title of Allâh used by him was but one of the "Most Comely Names" which belonged to Him. In this way he kept his hand free to employ that other, and rather subordinate, form of anthropomorphism with which he was quite unable to dispense. He certainly tried to do without it, but only succeeded during the first period. Allâh thus speaks and writes, possesses hands, sits on his throne, which is borne by angels, loves, hates, and is even cunning towards the

18 The Commentators see in this verse only the prohibition to compare Allâh with another being. In that case would be placed side by side with him, Kash.

20 Geschichte der herrschenden Ideen, etc. p. 17.

21 In the first part of his Kinder Mîdâl âlimân (fol. 300) Ibn Hazm, in his criticism of the O. T., gives a translation of Exod. Ch. xv., and remarks that to describe Allah as a "strong man" is heresy. He pretends to have urged this point to a Jew of his acquaintance, who replied that in Qur. xxiv. 35, Allâh is styled "the Light of heaven and earth." While admitting this, Ibn Hazm referred the Rabbi to a tradition, according to which Abû Darr asked Muhammed if he had ever seen Allâh? The answer was "yes," but this "light" did not mean a visible light, but an invisible one. Ibn Hazm therefore explains the "light" in question as guidance for the inhabitants of the earth, but "light" is to be wanted among the names of Allâh. It is, however, not difficult to see that in the expression "light" there is an inconsistancy which even embarrassed Muhammed's interpretation. Al Beidh endeavours to show that, in this passage, "light" virtually applies to Allâh only and stands for "he gives light." Cf. also Mawqîf, p. 189. In several Moslems (xx. 113, xxi. 117) and Medinian (lx. 23) revelations Allâh is styled "King," but this offers less difficulty for abstract interpretation: cf. Al Beidh. on lxx. 23, Mawqîf, p. 162, and Al Qastallîni (ed. Bûhiq. x. p. 316) who explains: "Possessor of government." See also on this subject my article: "Muhammed and Criticism of the Bible," J. Q. R. XIII. p. 226 sqq.

22 Cf. Qur. xxiii. 3; cf. xxiii. 34, viii. 101, etc. See Jedhene, J. R. A. S. 1890.

23 See Ch. IV.
wicked. All this is quite in harmony with the Biblical style. Traditions of a more sensual character are to be received with scepticism as to their authenticity. The famous tradition according to which Muhammed said: — The heart of a believer is between the two fingers of the Merciful is by no means more realistic than the verse (S. xxxviii. 73) : "I have created with my hand," or any of the numerous passages in which Allah sees, hears and speaks.

The Qoranic anthropomorphism is but a variety of that in the Bible, which Muhammed considered he had improved on, but which otherwise he accepted without much reflection during the time of his training. Later Moslem theologians, who had gone through a similar course of studies, naturally looked upon anthropomorphistic revelations with a different eye, and endeavoured to explain, that they were inbred doctrines. Inconsistency was the result. The punctilious Zahirite school did not allow the "Ninety-nine most comely names" to be surpassed, and put up a long list of names not suitable for Allah. Schools of more liberal ideas took no heed of this restriction, but observed a certain restraint in names which Allah did not attribute to himself either in the Qorán or in tradition. On the other hand the Zahirites follow the more free thinking theologians to some extent in the allegorical explanation of human faculties with which Allah is endowed, and only one class goes so far as to take even those literally.

The warning that Allah must not be made the object of mathals is at once illustrated by a parable set up by Himself in the following manner: —

v. 77. A bond slave who is quite unable to do any work, and another whom Allah has provided with every good provision, and who gives alms from it secretly and openly; are these two equal?

78. And Allah has forged a mathal: two men, of whom one is dumb and able to do nothing, a burden to his master, wherever he turns, he does no good; is he to be held equal with him who bids what is just and who is on the right way?

The parable of the servant was very popular both among Jews and Christians. I only mention those of Abóth, I. 3, and St. Matth. xxiv. 45 and xxv. 14 sqq. Both mathals in question have the same object in view, viz., to show that man, whilst dependent on Allah, should be charitable and righteous. In both parables also allusions to practical religion are not wanting, viz., in yunqud (give alms), ya'amara hibrud (bids what is just) and pirisin mustaqimin (right way), through which the general character of the mathals is considerably limited.

The last mathal in S. xvi. (v. 113) furnishes an instance of the manner in which it developed in a later repetition. It speaks of a city which was safe and happy, whilst its provisions were flowing in from all sides; but it would not acknowledge, that all these had been sent by

Ps. xviii. 27; Qor. viii. 50; cf. Al Beidhawi: It is not lawful to use this term without restriction.
31 Kremer, Gesch. p. 18 sq., places reliance in some traditions on that matter, which are fictitious, but even if they had been authentic, Muhammed would not have referred them to Allah.

39 The Mu'snia in question is re-echoed in the numerous assertions of Muhammed that he expected no recompense for his ministry. See Ch. V.
40 Cf. Iyyá, I. p. 249, I. 8, Al Suñuti mu'afander explains the two men (v. 78) to Usaid b. Abil 'Is and 'Othman b. 'Affán. Al Beidh. sees no allusion to any individual in either mathal.
Allah. He therefore affected the inhabitants with hunger and fear for their wickedness. Then one of their town-fellows approached them in the character of a divine messenger, but was not believed. Thereupon the city was overtaken by heavy punishment.

The parable is, of course, perfectly clear. The happy and wealthy city is no other than Mecca, whose merchants traded in all directions. The messenger out of their midst is Mohammed whom they called an impostor, but dire punishment is in store for them. The threatened famine will also become clear presently.

Now this parable is repeated in a later and considerably altered form. The alteration was necessary, probably because the threatened punishment had not taken place, whilst the situation of the Prophet had meanwhile become much more difficult and dangerous. I give the translation of the mahal in full:

Surah xxxvi. 12. Forge for them a mahal: the inhabitants of the city, when the messengers came to them, (13) when we sent to them those two, but they called them both liars; so we strengthened them with a third, then they said: verily, we are sent to you. (14) They replied: You are only mortals like ourselves, and the Merciful has revealed nothing to you, you are naught but liars. (15) They said: Our Lord knows that we are sent to you; (16) we are only charged to clearly convince you. (17) They answered: We have augured concerning you; if you do not desist, we will surely stone you, and painful punishment shall be inflicted on you by us. (18) Said they: your augury is with you, what if you have been warned? but you are a sinful people! (19) And there came hastily from the remotest parts of the town a man who said: O my people! follow the messengers. (20) Follow those who do not ask for reward from you, whilst being guided. (21) What ails me that I should not worship Him who created me, and to whom you will be made to return? (22) Shall I take other gods beside Him? If the Merciful desires harm for me, their intercession will not avail me at all, neither can they save me. (23) I should then be in manifest error. (24) I believe in your Lord, therefore hearken unto me! (25) When they had killed him] it was said [to him]; Enter thou into paradise; said he: O, would that my people did but know, (26) that Allah has forgiven me and made me one of the honoured ones . . . (27) it was but a single noise, and lo! they were extinct.

Although this parable is told in the usual legendary style of prophetic messengers, it is a variation of the preceding one with a historical background. It speaks about the city and the messengers who at first number only two, and are later on supported by a third. The mahal seems to be of Christian origin, but Mohammed made the mistake of putting the attribute of Allāhmad in the mouth of the heathenish townpeople.40 He had evidently the tale (Acts xi. 22 to 30) in his mind, and some Commentators rightly declare the city to be Antioch,41 whose pagan population forms the exact parallel to Mecca. The application of the mahal is given in v. 29: Alas for the men, there comes to them no messenger, but they mock at him!
A couple of rather forcible mathals taken from the social life of the infidel Meccan citizens are the following (S. xxx. 27): The Prophet asks the people, if they would feel inclined to regard their slaves as their equals, and allow them to share their property. The meaning is that Allah cannot be expected to look upon the idols, which are made by man's hand, as His equals! In one more complicated, or rather confused, form the mathal re-appears in a later revelation as follows (S. xxxix. 30): One man has partners who disagree with each other, whilst another is entirely subservient to one who is his master; are these two men (the one who has partners and the slave) to be considered equal? By no means. — The first man represents Allah to whom the heathen Meccans attribute associates. The last figure in the parable is evidently also meant for Allah. The hostility prevailing between the various idols very appropriately expresses the narrowness and diversity of the powers with which they are endowed.

A fine parable, connected with a descriptive passage, is the following (S. xiii. 18): Allah sends down rain from the sky, the water-courses flow according to their bulk, the torrent carries along with it foam that swells up. A similar foam arises from the fire kindled by men when melting metals and craving ornaments and utensils. Thus does Allah hit the truth and the falsehood, viz., the foam disappears in nought, whilst that [solid part], which profits man remains on earth. This is Allah's way of forcing parables.46

It appears that Muhammad's opponents responded to his parables with similar ones, particularly with reference to resurrection. To such remarks he had a kind of constant reply which appears twice in the same form, viz. (S. xvii, 51 and xxv. 10): Look how they forge for thee parables, but they err, neither can they find a way to refute thee. — On the other hand Muhammad boasts (S. xxv. 35): They bring thee no mathal, unless we (Allah) brought thee the truth and the best explanation. — As a demonstration he reminds his audience of the cities and peoples which had been annihilated, and adds (v. 41): For each have we forged the mathals,46 and each we have crumbled to pieces. — Such general references to mathals mentioned previously in detail confirm the comparative lateness of the passages just quoted, and one of the latest must therefore be the following summing up (S. xxxix. 28): Now we have forged for men in this Qur'an all kinds of mathals, haply they are mindful.47

With this the series of mathals in the Meccan part of the Qur'an concludes. The comparatively large number found in the last two periods is still surpassed in the first year after the Hijra, when they suddenly became extremely numerous. This is certainly not a mere coincidence, and shows the critical value of the mathal in general for researches on the composition of the Qur'an. The Medinan mathal, moreover, stands in close connection with Muhammad's altered position and the new tone of his speeches. He soon became aware how much more critical and analyzing this new audience was. His addresses now being calculated to win the Jews of Medina as well as its pagan inhabitants, he dared not offer them hollow declamations, which, even for the Meccan world, had only served for a certain time. He himself had also become wiser, and his aim lay clearer before his eyes. The moral success won by the invitation of the Medinians, his own personal safety and daily increasing authority gave his word a power hitherto unknown. Above all, he had had more than ten years' practice in preaching,

45 See above.
46 V. 19 contrasts him who knows the truth with the blind man; v. 35 of the same sura contains a "mathal of the garden promised to the pious," which is but a description: cf. Kash. بانلأ القسم الححظية من نصص الأولاء انثارا، إضافا.
47 See Q. xvii, 52, xxvi, 78.
48 Al Bith. refers it to the various titles of poet, soothsayer, sorcerer and madman given to Muhammad by the Meccans.
49 Al Bith.
whilst his own knowledge augmented continually. It is of no small moment that the space of time between the Hijra and the battle of Badr, that is to say, the time before Muhammed became an important political factor, should be richest in parables. *Sūra* ii., which consists of the oldest Medinan sermons, contains no less than eight parables, six of which are of indisputable originality. The language also, if not poetic, is yet fluent, and abounds in allegories. The first Medinan *māthāl* is taken from the daily occupation, and is as follows (v. 15): Those who buy error for guidance— their commerce brings no profit, neither are they guided— (16) their *māthāl* is like him who kindles a fire, but when it lighted up his surroundings, Allah carries his light away, and leaves them in darkness, so that they cannot see. (17) They are deaf, dumb and blind, so that they cannot turn round.— To this *māthāl* is immediately joined the following (v. 18): Or they are like a stormcloud from the sky in which is darkness and thunder and lightning; they put their fingers in their ears because of the noise of the thunder for fear of death; Allah encompasses the unbelievers. (v. 19) The lightening all but takes away their sight; as often as it shines for them, they walk therein, but when it becomes dark around them, they stand still; and if Allah so pleased, He would surely deprive them of their hearing and their sight; Allah is almighty.

It seems that some Medinan critics had taken exception to Allah's employment of animals, particularly insignificant ones like spiders and flies as the subjects of *māthāls*. Muhammed shows how undeserved is their censure in the dignified manner (ii. 24): Behold Allah is not ashamed to forge a *māthāl* on a gnat or what is above it [in size]. Those who believe know that it is the truth from their Lord; but the unbelievers say: what means Allah with such a parable? He leads many astray with it, and guides others, but he only leads astray the wicked.

Muhammed was so little prepared to cease composing parables about animals, that he invented several more of the same kind. In *Sūra* ii. 161 the infidels are compared to a man who shouts to that which hears naught but a noise and a cry, they are deaf, dumb and blind and without sense. The Commentators have already seen that the metaphor stands for the word "cattle."

The fly re-appears in a revelation of somewhat later date. "O men," he says (S. xxii. 72) "a parable is forged for you, so listen to it. Verily, those whom they adore beside Allah could never create a fly, if they all united together to do it, and if the fly should despoil them aught they could not recover it from it— weak are both the seekers and the sought."

Several of Muhammed's Medinan opponents, Jews in particular, when hearing one of the above mentioned *māthāls* (S. ii. 24) enquired what its meaning was. They also questioned him about one of the earlier revelations (S. lxxiv. 33) in which it is stated that nineteen angels were appointed to watch over the hell fire. "Those in whose hearts there is sickness" and the infidels ask: What does Allah mean by this as a *māthāl*? Muhammed's answer is rather unsatisfactory, as the number nineteen seems to have been chosen at random, a fact which he dared not admit. But thus much is clear that both questions as well as the answers to them date from about the same time, viz., the first year after the Hijra, although the one was placed by the compilers next to the revelation which it was meant to explain.

---

48 See p. 168.
49 Second *māthāl*, although the term is omitted.
50 1 Sam. iii. 11; 2 K. xxii. 12.
51 The animals mentioned in *māthāls* are birds, camel (twice), spider, ass (twice), locusts, moth, dog, fly.
52 ْبَابَتْ صَمَّرف، كَبْرِيَاءَ. Al Reis. "much more so." Al Reis.
54 Al Reis; Nöldeke, Q. p. 11, regards vv. 161-6 as Moslem, but this cannot be concluded from *lā* اِلْحَقْف_REQUIRED* since this is also a common Jewish phrase.
55 Viz., the Jews; cf. Ch. IX.
56 Lit., what means Allah with this as a *māthāl*? The Commentators are at a loss to explain the construction of the phrase. *Kash.* takes اِلْحَقْف REQUIRED as *tābut* to *hadī* or as *Hādī*. Vv. 31-34 are undoubtedly Medinan, and were only placed here on account of their reference to v. 30.
Many of those who rallied round the Prophet in Medina, particularly emigrants from Mecca, were extremely poor. Although liberally supported by the more wealthy inhabitants of the town who had joined Islam, they looked forward to raids on Meccan caravans as a means of gaining some property of their own. Robbery was so little regarded as anything illegal or immoral, that Muhammad not only sanctioned raids by participating in them himself, but did not hesitate to violate the sacred month in order to make believers "walk in the path of Allah." There were plenty of people anxious to enrich themselves by plunder in honour of Allah, but they lacked the means to carry out their plans. Muhammad, therefore, continually urged the wealthy to raise funds for this purpose, with promises of ample reward hereafter. The admonition sometimes took the form of a parable as follows:

(S. ii. 263) The likeness of those who spend their fortune in the path of Allah is like a grain which produces seven ears, in every ear a hundred grains, Allah gives twofold to whom He pleases; Allah is bounteous and omniscient. But those, he continues, who give alms while taunting and annoying the receiver — as a man would do who only gives for appearance's sake — are compared (v. 266) to a rock covered with dust which a shower washes away, leaving the stone bare.

This fine parable which seems in part to be built on St. Mark iv. 5 sqq, is followed by a third not less striking, on the same topic in the following manner:

(v. 267) Those who lay out their wealth merely to obtain the grace of Allah, and as an insurance for their souls, are like a garden on elevated ground. Rain waters it richly, and its crops grow twofold. Should rain fail, dew irrigates them.

These mathals, intended to encourage believers to spend their fortune to increase the Prophet's worldly power, contrast strangely with two others which gave little comfort after the defeat at Uhud. As for unbelievers, he says (S. iii. 112), their wealth shall not profit them, neither their children, against Allah, they shall be the companions of hell fire, and they shall dwell therein for ever. (113) The likeness of ways they way out in this present life is as a wind wherein there is a cold blast; it affects the corn-fields belonging to people who have injured their own souls and destroyed them.67

Still more pessimistic is the following68 (S. lvii. 19): Know ye that this present life is but a toy and vain amusement and pomp and affectation of glory among ye,69 and multiplying of wealth and children — like rain which astonishes the husbandman70 by its fertility, but then the vegetation withers until thou seest it turn yellow, and become dry stubble — but in the last world there is heavy punishment.

Here we have to notice several mathals, which show how bitter Muhammad felt against Jews and Christians. "The mathal of Jesus is in the eye of Allah like the mathal of Adam, whom he has created from dust" (S. iii. 52). Still more spiteful is an epigram hurled against the Jews, whose power was considerably weakened after the expulsion of the tribe of the B. Qainoqa. "They are hardened, he says, with the Torah, which they do not observe, they are likened to the ass which carries books" (S. lxxii. 5).71

To this period belongs a mathal which contains an attack against a certain individual not mentioned by name, and is so densely veiled that even the Muslim Commentators are at a loss to establish the identity of the person in question. It is evident that Muhammad pointed

68 See v. 22, lxxiv. 11, and Nöldeke, Q. p. 145.
69 See above, Al Qastal ix. p. 237.
70 See Al Beidh.
at a man of high station and education, otherwise he would hardly have described him as one “whom we have given our signs, but he stepped away from them; had we wished we would have exalted him thereby, but he crouched upon the earth and followed his lust. He is likened unto a dog, whom if thou shouldst attack, he hangs out his tongue, and if thou shouldst leave him, hangs out his tongue too” (S. vii. 174 to 175).

From the text of the mathal it is clear that the person to whom it refers, had been given opportunities of embracing Islam, but had not made use of them, and thereby set “a bad example to the people who declare our signs to be lies” (v. 176).

Following Arab Commentators, Sprenger suggests that the mathal refers to the poet Omayya b. Abi ‘Salt of Tā‘if, who was a gifted and well educated man. According to Arabic tradition he was an apostate from paganism, but refused to follow Muḥammad from jealousy. It is, however, clear that Muḥammad did not refer to him. He admired his poems, and would not have used such offensive language about him. The words “whom we have given our signs,” and “they declare our signs to be lies,” can only refer either to a Jew or a Christian, but since the passage belongs undoubtedly to a Medinian revelation, very probably a Jew is meant, which would agree with the remarks of Al-Beidhāwī, that he was one of “the learned of the Jews.”

It seems to me that this man was no other than the poet Ka‘b b. Al Ashraf, the chief of the B. Al Nadhir, who was very active in stirring up Muḥammad’s enemies. After the battle of Badr he went to Mecca to incite the Qureish to take revenge on those who had slain their kinsmen, and composed songs in which he denounced Muḥammad and Islam. I see an allusion to Ka‘b’s poems in the simile of the dog that hangs out his tongue. Moreover the alliteration of the name Ka‘b with kalb (dog) appears to be intentional rather than accidental. Finally we must bear in mind that Ka‘b was assassinated shortly afterwards by order of the Prophet.

The expulsion of Ka‘b’s tribe which was to follow, had to be abandoned for the moment owing to the defeat of the Muslims at Uhud. It was carried out shortly afterwards as being conducive to the prestige of Muḥammad who celebrated it in the following two mathals. In the first (S. lix. 15) the expelled are compared to people “who had shortly before tasted the evil consequences of their conduct,” which means that the B. Al Nadhir had to share the fate of their brethren of the Banū Qainqā. In the second mathal (ibid. v. 16) they are likened to Satan, who first entices men from the faith, but then withdraws and pretends to fear Allāh.

This mathal misrepresents the facts. The expulsion of the two Jewish tribes, and the subsequent slaughter of the B. Koreiza were acts of treachery, for which Muḥammad wanted an excuse. Although the Jews refused to acknowledge his mission, still they were monotheists, but we shall see later on, how Muḥammad tried to impugn pagan doctrines to them. The weakness of his arguments is perceptible in his comment on the foregoing mathal. “Had we, he says (v. 21), revealed the Qurān on a mountain, one would have seen this mountain humble itself and split for fear of Allāh, such are the mathals which we forge for men, haply they may consider.”—This verse reads like the fable of the fox and the grapes. Muḥammad was ill satisfied that revelation did not come to him like that on Mount Sinai; but we must remember, that according to a tradition originating from his own statement, the received the first revelation on mount Ḥirā.

---

33 I. I. 270 has other persons in view; other interpreters infer Balaam; cf. Al Beidh. Al Ghazālī in Jami‘ al-Qurān also refers the mathal to Balaam (it. 4229).
35 Kit. Al Aqṣā‘, III. p. 187 sqq. (cf. Sprenger, I. p. 110, sqq.). According to Al Zobeir he had read the Bible, did not believe in idols and forbade the drinking of wine. The last item is evidently added from religious tendency.
36 Cf. R. J. x. p. 19. The hanging tongue is also made a symbol of poetic satire (Rajīf) in the traditions on Hāsā‘ir b. Thābit, Aqṣā‘, iv. 3-4.
37 Q. lix. 11 sqq.
38 Confusion of Mount Sinai with Zach. xiv. 4; cf. Ps. cxiv. 4.
Mohammed liked to compare unbelievers, and Jews in particular, to people who walk in darkness. When inculcating the precept, which makes it unlawful to eat flesh from an animal "over which the name of Allah has not been pronounced," he asks (S. vi. 122): Is he who was dead, and we have quickened and made for him a light that he may walk therein amongst men, like him who finds himself in darkness which he cannot emerge from?—It seems that the material of this mathal is derived from Isaiah ix. 1.

The more the Prophet of Allah became merged into a worldly potentate, the more his speeches assumed the tone of manifestor. It seems all the more strange to find a group of three rather fine mathals attached to Mohammed's endeavour to vindicate the honour of his wife 'Aisha, whom public opinion had accused of infidelity. The verses in question (S. xxiv. 34 to 40) may not, indeed, have been revealed on this occasion at all, but it appears, as if Mohammed, after having gone through that disagreeable affair, was anxious to change the subject. The first of these mathals (which are all taken from scenes met with in travelling, and with the exception of third probably recollections of his own journeys) has already been discussed above, and gives an impressive, but not very detailed account of incidents of bygone days. This is followed (v. 39) by a neat comparison of the unbelievers to a mirage in a plain (desert) which looks like water to the thirsty traveller, until he approaches it, when he finds nothing. The infidels are further (v. 40) compared to darkness in a deep sea, in which one wave covers another; dark clouds rise above it increasing the darkness to such an extent, that we cannot see one's outstretched hand. They are again likened (S. lxvi. 10) to the disobedient wives of Noah, and Lot to whom (v. 11 to 12) are opposed the wife of Pharaoh and Maryam as models of piety and chastity. Here Mohammed's Biblical recollections became rather confused. Instead of Noah's he seems to have had Job's wife in his mind. For Pharaoh's wife Geiger has already rightly substituted his daughter.

There only remains one more mathal occurring in a verse the authenticity of which as an original Qoranic revelation is doubtful to me. It has, however, been embodied in the official text of the Qor'ān; we must, therefore, discuss it here, whilst reserving the investigation of its authenticity for later on. The verse in question (S. xlvii. 29) forms an appendix to a sura which was revealed concerning various events of the seventh year of the Hijra, and is entirely out of connection with the context. It is easy to see why the compilers of the Qor'ān placed the verse here, from the preceding one, which states that "Allah has dispatched His messengers with the right guidance and the true faith, in order to exalt the same above every other creed, and Allah is sufficient as witness." This verse evidently formed the conclusion of an address, and quite unexpectedly we read the following announcement (v. 29): Mohammed is the messenger of Allah, and those who are with him, are fierce against the unbelievers, but merciful towards one another. Thou seest their bowing down and adoring, seeking favour and good will from Allah. The Sign [they wear] upon their faces is an emblem of the worship; such is their mathal in the Toráh. Their mathal in the Gospel is as a seed which puts forth its stalk, makes it grow and strong, so that it rises upon its stem, and astounds the sower, etc.

Now only the second part of the verse, bearing on the New Testament, is a real parable, and is taken from S. Mark iv. 8, whilst the first part belongs to those cases in which mathal is to be taken in a wider sense, as is also done by the Commentators. The words evidently describe some external adjustment of the Jews during worship, which would not have remained unknown either to Mohammed, or to any one who visited a Jewish house of prayer. I can refer the words in question to nothing else but to the phylacteries derived from Deut. vi. 8,

---

23 Nödeko, Q. p. 137, leaves the question undecided.
24 Cf. Ch. xi. The parable is explained in a scholastic manner in Ibn Sinâ's Risâla, ed. Constant. 1898 H. pp. 85-86. See also Al Ghaz. Kit. Almâdîn; Hg. 566.
20 Not expressly styled mathal, but introduced by ka; cf. Hg. 565.

21 Ch. XI [p. 1]
xi. 18,74 and styled "Sign." Although our verse only mentioned the one worn on the forehead — the other placed on the arm probably being covered by the garment — the term "sign" was applied75 to both by the person whom Mūhammad might have been asked about their character. The Commentators explain this mathal as a description, which it undoubtedly is, and it seems to me that its proper place should be among the traditions appended to this chapter.

Appendix to Chapter VIII.

The mathal in Tradition.

Apart from the mathals in the Qūdan a large mass of sayings and parables supposed to have originated with Mūhammad lived in the recollections of the first generations of Believers. This increased marvellously as the sacred and polite literatures of the Arabs developed. To endeavour to establish or refute the authenticity of these would be a hopeless task, the means of testing them being much smaller than those we have for traditions on religious and historical matters. Mūhammad was obviously fond of speaking in parables and metaphors when pronouncing revelations, and from this we may conclude that he employed the same method of instruction when discoursing with his friends, or addressing Believers from the pulpit. Although many of the sayings attributed to him may be authentic, only a few can be substantiated with any certainty.

The apocryphal sayings of Mūhammad may be divided into two classes, viz., those embodied in the Hadīth or religious tradition, and those registered by secular writers. This division is, however, superficial only, and does not touch the greater or lesser veracity of either class. In the following pages I have collected as many as I could find, but have only mentioned such works as I have been able to examine. I do not therefore claim to have exhausted the subject.

A series of "Speculations and Table Talk" of Mūhammad, containing proverbs and general remarks, has been compiled by Mr. Stanley Lane Poole, London, 1882.

At the head of my collection I place two comparisons which are chronicled in all standard works on Mūslīm tradition. Both of these are connected with the manner, in which revelations came down to Mūhammad. In the one he stated that he heard the voice of revelation "as the chiming of bells," in the other the first revelation came down to him as "the dawn of the morning" (Bokhārī beginning, Mu'āutta, p. 86, etc.). Although a large number of these sayings are dispersed in the Ḥadīth works of Al Bokhārī (died 256 H.) and Mūsāmā (died 260 H.), these authors did not devote much attention to them. Al Tirmīdī (died 270) however in his collection of traditions has a special chapter on fourteen mathals which I reproduce here (after the edition of Bālāq, 1875, Vol. II. p. 143 sqq.).

1. [From Jābir b. Nufīr from Al Nūwās b. Sinān Al Kūlī:] Fantastic description of the "Right Path" (Qer. I. 5).

2. [Jābir b. Abd Allāh Al Ansārī:] The Prophet once heard in a dream a discussion between the Archangels Michael and Gabriel on the following parable: Thou [O Mūhammad] and thy people are compared to a king who chose a city of residence, where he built a palace. In this he placed a table and then he sent messengers to invite the people to partake of the repast he had spread thereon. Some of them accepted the invitation, but others refused. The King is Allāh, the residence Islam, the palace is Paradise, and thou, O Mūhammad, art the messenger. Whosoever accepts thee, enters Islam, and is received into Paradise where he enjoys all that affords him pleasure.

It is possible that this parable is modelled on a Talmudical one (Sanhedrin, fol. 38r) of great popularity, in which an explanation is given why in the creation of the component parts

74 Cf. Exod. viii. 13.
75 They is in this instance rendered by ʿaṭṭa, because the latter has its fixed Muslim terminology.
of the world, the earth, stars, and animals preceded man, who, being the noblest creature, found *a garden* prepared for abode, and food ready, when he appeared on the earth. The moral of both parables is nearly the same.

3. [Muḥ. b. Bishār from Muḥ. b. Abī Adīy from Jaʿfar b. Maimūn from Abū Tamīl Al Hujaini from Abū Othmān from Ibn Masʿūd:] Muḥammed said: My eyes are asleep, but my heart is awake. (see I. Hish. p. 375, Kāmil of Al-Mubarak, ed. Wright, p. 77 and 741). This saying is evidently a mistranslation of Cantio. v. 2 caused by mis-hearing ʿanī “my eye” instead of anī “I” (see my article: Historical and legendary controversies, ed. J. Q. R. x. p. 105). A mawah following this sentence deals with the same subject.

4. Another and shorter repetition in a somewhat modified form, also on the authority of Jābir b. Abī Allāh.

5. [Muḥ. b. Ismāʿīl from Muḥ. b. Ismāʿīl from Abān b. Yazīd b. Abī Kathīr from Zeid b. Abī Sālim from Al Ḥārith Al Ashārī:] The infidel is compared to a man who buys a slave. He brings him to his house, and instructs him in the work he has to do, but the slave (instead of following his instructions) works for somebody else. Which of you wishes to be Allāh’s servant? Allāh has commanded you to pray, so do not turn away from him, since he turns his face towards that of his servant, while the latter is engaged in praying. Allāh has further commanded you to fast. He who fasts is compared to a man in a turban, who has in his possession a bag with mast, the odour of which makes everybody wonder. The odour of the breath of a fasting man is pleasant to Allāh than the smell of mast. Giving *ansa* is further illustrated by the parable of a man who was taken prisoner. He is loaded with chains and ill treated, but afterwards ransomed for a small sum. The *saying of the Diʾr* is finally compared to a strong castle, which gives refuge to a fugitive, who is surrounded by his foes. Man can guard himself against Satan only through the *Diʾr*. — This group of *matha* seems to betray Christian influence. For the author of *Ṣūdūr Al Māmin* (Brit. Mus. Or. 3855, fol. 12) has the following version: Muḥammed said: Allāh commanded John to teach the Israelites five sentences; among them is the *Diʾr*. This is compared to a man who is persecuted by his enemies, but finds refuge in a fortress.

6. [Anās from Abū Mūsā from Muḥammed:] A Muṣlim who reads the *Qurʾān* is likened to a citron, whose fragrance and taste are both good, but a Muṣlim, who does not read the *Qurʾān* is likened to a fruit which has no fragrance, though its taste is pleasant. The hypocrite who reads the *Qurʾān* is likened to a fragrant plant of bitter taste, but the hypocrite who does not read the *Qurʾān* is likened to the coloquint which smells as badly as it tastes bitter. — This parable is to be found in nearly all works of Ḥadīth of Bokh (ed. Krehl, III. 401; Muṣlim, (Butag 1394).) IV. p. 81; Mishk. 276). The sundry recensions show slight variations. See also Loe Poole, l. c. p. 154.

7. [Al Ḥāsān b. Aliy Al Khilāl and several others from Abd Allāh b. Razzāq from Muḥammed from Al Zāhri from Saʿd b. Al Musayyab from Abu Hureira:] Muḥammed said: The believer is likened to the sapling, which the winds incessantly try to upset. The believer is also continually exposed to trials, but the hypocrite is as the cedar which is not shaken until the time of the harvest comes. In Muḥammed (x. p. 267) this tradition is reproduced with the same (very unreliable) Ḥanāfī, but is twice repeated on the authority of Kaʿb b. Mālik, the “tree” being replaced by an “ear of corn.” Since this *matha* seems to be, at least in part, modelled on that in Ḥadīth. III. 17, the version with the tree seems to be the more authentic one.

8. [Iṣḥāq b. Manṣūr from Maʿn from Mālik from Abd Allāh b. Dinar from Ibn Omar:] Muḥammed said: The Believer is likened to a tree whose foliage does not fall off. — This tradition, which is badly authenticated, is followed by a discussion of the species of that tree.

9. [Quteiba from Al Laith from Ibn Al Ḥādi from Muḥammed b. Ibrahim from Abu ʿAlī Al Ṣalama from Abdal Rahman from Abu Hureira:] Muḥammed said: If anyone had a river
passing by his gate, he would bathe five times a day; could, then, any uncleanness remain on his body? No! This is the likeness of the five daily prayers, with which Allah washes away the sins.

10. [Quteiba from Hāmid b. Yahyā from Thābit al Banāni from Anas:] Muhammad said: My people is likened to the rain, no one knows whether its beginning is more pleasant or its ending.

11. [Muhammad b. Isma’il from Khilad b. Yahyā from Bashir b. Al Muhājir from Abd Allah b. Boreida from his father:] Muhammad threw down two dates and asked: "What does this mean?" No one knew. "The one," he said, "is hope, the other fulfilment."

12. [Al Hasan from Al Khilāl from Abdal Razzāq from Mu‘ammar from Al Zuhr from Salīm from Ibn Omar:] Muhammad said: Men are likened to camels; among a hundred thouest but one fit to ride on (see Muslim II. p. 275; Al Tha‘alibi, Syatagama ed. Valeton, p. 7).

13. [Quteiba b. Sa‘id from Al Maghira b. Abdal Rahnān from Abu Zinād from Alhāraj from Abu Hureira:] Muhammad said: I and my people are likened to a man who kindles a fire in which flies and butterflies are caught. Thus I seize your race, and you are thrown into the fire (see Muslim, II. p. 206).

14. [Musaddad from Yahyā from Sufyān from Abd Allah b. Dinār from Ibn Omar from Muhammad, who said:] You, O Muslims, the Jews and Christians are symbolised in the following parable: A man hired labourers to whom he said: "Who will work for me until noon for one carat?" The Jews did it. Then he asked: "Who will work for me until the afternoon (prayer time)?" The Christians did it. "Then you, O Muslims, shall work for me from the afternoon till evening for two carats." They answered: "We give the most work for smallest pay." "Have I," asked he, "wronged you?" "No." "Thus," he replied; "do I bestow my favour upon whom I choose." — The reader will have no difficulty in recognizing in this parable an adaptation of the Parable of the Householder (St. Matthew xx. 2) as far as it suited the situation. (See also Mishkāt, Engl. trnsl, II. p. 814.)

To these mathāls I attach a few more which are dispersed in the collections of traditions. One of the best known of these, which is also mentioned in most modern works, is the comparison of a reader of the Qurān to a man who owns a camel. If he keeps it fastened, it remains with him, but if he loosens it, it runs away (Mu'attā, 88, Al Nawawi, Kit. Al Tibyān, p. 81; cf. Sprenger, III. p. xxxv.)

Ibn Abbas handed down the tradition that Muhammad said: He who has in his inside nothing of the Qurān is compared to a desolate house (Tibyān, p. 14).

[Musād from Wahb from Ibn Tā’ūs from his father from Abu Hureira:] The Prophet said: The niggard and the almsgiver are compared to two men clad in coats of mail from their breast to their collar-bone. On the almsgiver it grows until it covers the tips of his fingers and obliterates his guilt. On the niggard, however, every buckle keeps firm in its place, so that he cannot loosen it (Bokh. ii. 158, iii. 21). — For qāl which gives no sense, I read qāl "guilt." The text of this parable shows several corruptions, which may be taken as a sign of its old age, and probable genuineness. Al Nawawi's corrections (ibid.) are of little assistance — The same tradition with a different Isnād, likewise going back to Abu Hureira, Bokh. ibid. The mathāl is an imitation of Qur. ii. 263, 257: see above, p. 172.

The worshipper of idols is likened to a thirsty traveller, who sees a mirage in the deserts, but cannot reach it (cf. Qastalānī, viii. p. 183). This mathāl is fashioned after Qur. xxiv. 39 (see above, p. 174).

[Abu Bakr b. Abi Shaiba and Abu Amīr Ash'arī and Muhammad b. Al Atā (the wording being that of Abu Amīr) from Abu Usāma from Boreid from Abu Borda from Abu Misā from Muhammad:] My mission to guide knowledge is likened to the rain which reaches the
earth. Part of the latter, which is good, absorbs the water, and produces herbs and other vegetation in abundance. Some parts of the earth are hard, and therefore retain the water, which serves for man to drink therefrom, and to water their flocks and herbs. Another part is [barren] level ground, which neither holds the water nor allows anything to grow. This is typical of those who accept the Law of Allāh. He allows them to benefit by my mission, to learn and to teach. But the likeness of him, who does not raise his head and does not accept the guidance of Allāh, who was entrusted to me (Muslim, II. 206).

In connection with Qur. lvii. 19 Al Qastalānī (ix. 237) quotes a comparison, handed down by Muslim as follows: Muhammad said: If one of you dips his hand in the sea, let him see what remains on it, when he takes it out again. — [Abu Hureira:] Muhammad said: I and the prophets before me are likened to a building which a man has erected and beautified. People surround it, and say: We have never seen a finer building, except one brick [which is Muhammed], Muslim, ibid.

[Abu Borda from Abu Mūsā:] Muhammad said: I and my people are likened to a man who said to his people: “I beheld an army, and I warn you to escape; and now you may depart in ease.” One portion obeyed and was saved, but the other which refused to believe him, was surprised by the enemy and destroyed. — Follows application [Muslim, ibid.].

Of other authors who have embodied larger and smaller collections of alleged sayings of Muhammed I have quoted the following:

The famous Amr b. Bahr Al Jāḥiz of Basra (died 255 H.) in his Kitāb Al Maḥāsis wa'l ʿaḥlād (ed. van Vloten, Leyden, 1898) quotes many dicta ascribed to Muhammed on liberality, niggardliness, and other subjects. More sayings are to be found in Abstracts of the same author's work, Kit. Al Bayān wa'l Tihān (Constantinople, 1883).

A small collection of dicta is contained in Al Belājorī's Kit. Futūḥ al-bulūbān (ed. de Goeje) p. 557, but much more are dispersed throughout the Kāmil of Al Muḥarrīd (ed. W. Wright).

In the Kit. Al Muytānī of Ibn Dorei (died 321) sayings attributed to a number of persons, beginning with Muhammed (pp. 2 to 4) are collected. The sayings are accompanied by annotations.

The works of Abd Al Malik Al Ḥaḍālibi (died 429) are very rich in alleged sayings attributed to Muhammed, viz.:

1. Kit. al-jāz wa'l jāz (ed. Valeton, 1894, and Cairo, 1301). The same work is recorded under the title, Kitāb wa'adat al ḥakim (Brit. Mus. Add. 9369).

2. Al Latāif wa-l 'ardif ḫa-l aḥḍād and Al yamāqīt ḫa baidā'-mawāqīt prepared by Abu Nāṣr Al Muqaddasī (Cairo, 1883). Sayings in praise or blame of all sorts of things.

3. Thimār al-qulāb (Add. 9558), a volume which contains a large amount of interesting information on every imaginable subject, concerning anecdotes, folk-lore, proverbs, etc. The author draws largely on the writings of Al Jāḥiz, and is therefore of great importance for the literary study of the latter.

5. Barī al-Abbād, Cairo, 1883, arranged according to the number of subjects mentioned in each saying.

Abu Abd Allāh Muhammed b. Salama Al Qudāl Al Shafā'ī (died 454) wrote a work titled Kit. Al Shāhād, which contains a thousand dicta supposed to belong to Muhammed (Add. 9692).

Al Ghazâlî reproduces in his Ihyâ 'ulâm al-dîn a very elaborate parable attributed to Muhammed on the life of this world. This parable has been translated into German in Kremer's Geschichte der herrschenden Ideen, etc. p. 158. Shorter sayings to be found in the same work are the following (I. p. 279):

1. Anyone who speaks the Dîkhr amongst those who neglect it, is like a green tree in the midst of barren ground.

2. Anyone who speaks the Dîkhr amongst those who neglect it, is like one who fights in the midst of those who run away.

3. The Dîkhr of Allâh in the morning and evening is better than the clashing of swords in the war path of Allâh, or spending one’s fortune in lavish expenditure.

The same author’s work Jawâhir Al Qorân (Add. 9433; cf. Itqân, p. 843) contains many mathâls on behalf of Muhammed. The work was composed after the Ihyâ which is quoted fol. 119, 1. 11, and forms a very important supplement to the author’s theological treatises.

The best known of all collections of sentences attributed to Muhammed is undoubtedly to be found in Al Maidâni’s famous work Amthâl Al Arab (ed. Freytag. III. pp. 607 to 617. The same chapter has been reproduced by Ahmad Al Damahûri in his Kit. sâlib ‘alîshâd (Alexandria, 1871), pp. 62-66.

The Kit. Al musawwakhâd by Al Washshâd (ed. Brûnnow) is likewise to be mentioned among the works concerned in this subject. The same is the case with the Taṣfi’îl al muhaddithún by Al Askari Al Lughawi (Br. M. Or. 3082), who endeavours to be critical with regard to the authenticity of the sayings handed down.

Some mathâls attributed to Muhammed are to be found in Hariri’s Maâqâm, ed. L. Derenbourg, p. 48, l. 16.

There are still to be recorded an abridgment of Al Farâbî’s ‘Khulûsât Al Khâliqa by Al Badakhshâni (Kazan, 1851). Forty sayings attributed to Muhammed are also collected with a Persian commentary in a richly illuminated MS. of the Brit. Mus. Or. 5081. The work is printed under the title Jâmi’, Firozpur, 1887. (To this my attention was called by Mr. A. G. Ellis of the British Museum.)

EXTRACTS FROM THE BENGAL CONSULTATIONS OF THE XVIIIth CENTURY RELATING TO THE ANDAMAN ISLANDS.

BY E. C. TEMPLE.

(Continued from p. 31.)

1782. — No. XI.

Fort William, 13th November 1782. Agreed that the following Instructions be given to Lieut. Blair Proceeding to the Andamans.

Lieutenant Archibald Blair. 12 Nov.

Sir, — You are already informed that, in compliance with the Recommendation of Commodore Cornwallis the Governor General in Council has determined to establish a Naval Arsenal at the North East Harbour of the Great Andaman Island, and you have been acquainted that three of the Company’s Sloops have been Sailed from the Pilot Service to Assist, with the Union Snow, taken up on Freight for 4 Months in transporting the Artificers, Stores and Provisions from Bengal to the Andamans and from the Place hitherto called Port Cornwallis [Port Blair] to the Harbour above mentioned.
The Sloops which are called the Seahorse Cornwalls and Juno are Commanded by Messrs. John Petman C. Crawley and T. Dorrington who will remain in Charge of them during the Trip and are informed by the Master Attendant that they are to obey such Orders as you may give them. The Union Snow is also under your directions.

The four Vessels being reported to be in Readiness to take their Departure, and the Weather having now a Settled Appearance it is His Lordship’s pleasure that no Time should be lost in their dispatch, and that they proceed forthwith under your General Command keeping Company with each other on the Way direct to the North East Harbour now called Port Cornwallis where as soon as may be convenient after your Arrival, you will begin the work of establishing a Settlement for the East India Company clearing the Country progressively from the North East of Chatham Island towards it’s Southern Extremity unless any obstacles, at present unforeseen should make it appear to you advisable to deviate in any manner from this Directions. You are Authorized to erect a small temporary Redoubt for Defence should you find it necessary, and such temporary Buildings as can be most quickly finished for the Reception of the Provisions Ammunition, and other Stores.

When these Articles which indispensably require to be well Attended to shall have been Secured against Injury from Weather, and as much as possible from vermine you will choose a proper Spot of Ground for a Garden, and have it prepared for the Reception of the Fruit Trees Plants, etc., that you take from Bengal or can be sent from the Old Harbour where you will order a few People to remain to take Care of the Garden until all the most useful Trees and plants, etc., have been removed from it to be placed at the new Settlement; and during that Time one of the Vessels is to remain at the Old Harbour for the Protection of the People I have mentioned. It is wished that while they are there they may be able to prevail on the Natives to cultivate upon the Stock that will still be left of Fruit Trees and Vegetables, so as to introduce them gradually into General Demand.

You will of course send to the Old Harbour when you arrive at the New, the two Natives whom you brought with you to Bengal and who are now returning in the Union and you will cause any small Articles that you think will be Acceptable to the People to be Distributed amongst them when you evacuate the Settlement, which must be done as soon as the Stores, etc., that are to be moved from it have been interely (sic) taken away.

It is hardly necessary to acquaint you that your former orders for observing the most humane and conciliatory conduct towards the Natives of the Country and adopting the best means of securing a friendly intercourse with them, are still in force. Your endeavours to this End were in a great deal successful at the place you are now to leave, and afforded the Board much Satisfaction.

The Circumstances of your Situation on the Bombay Establishment rendering it of Consequence to you to be on the Malabar Coast, and the Services of a Surveyor being now less wanted at the Andamans than those of an Engineer I have orders to acquaint you that Captain Kyd has been appointed to be Superintendant of the Andamans, and is to receive Charge of the Settlement on his Arrival which will probably be in five or Six Weeks. With his concurrence and if your time should admit, you are authorized to finish the Survey of the Andamans and to ascertain the relative position of the Southern Nookbar with the Acheon Island which has not been hitherto well determined.

You are then at liberty to proceed to Bombay to resume your Station in that part of India coming first to Calcutta to Settle your Accounts if you think your Presence here necessary for that Purpose. The Board have instructed me to acquaint you that it is at present their wish to have the Marine at the Andamans under your Care, when the Service which takes you to the Malabar Coast is ended, and that they mean to write upon the Subject to the Governor in Council.

I am particularly instructed to mention to you that Notwithstanding the Directions in this Letter, you are to Attend carefully to all orders that you may receive from Commodore Cornwallis who has
expressed his readiness to assist, with his Majesty's Ships in Establishing the Settlement on the great Andamans at the North East Harbour.

The Board have desired me to signify to You that as your Attention and Abilities in the Management of the Company's first Establishment at the Andamans claim their fullest approbation and as you formerly stated that you were Subject to Considerable Expence by the distance of these Islands from Bengal and other Countries from whence you could procure Supplies, they have been pleased to grant you an Allowance of One hundred and fifty Sicca Rupees per Month in Addition to that Which you receive of Surveyor, from the Time of Your first taking Possession of Fort Cornwallis, Vizt., the 5th of October 1789, Untill you shall be relieved from the Command, and further, they have determined that Your Surveyor's Allowance Shall be continued till your Arrival at Bombay.

It is the desire of Government that the Pilot Schooners may be returned to Bengal (where they will be much wanted) either together or Separately, as soon as they can be Spared from the Service, upon which they are Sent excepting the Sea-horse, which is to be Sunk in the Salt-Water, to remove, if possible, a Quantity of Vermin and white ants that are in the Vessell and could not be expelled by any Means that have been taken here, and you are Requested to Assist by issuing such Orders as you think it necessary to give Effect to the Experiment One of a Similar third [?] kind is understood to have Succeeded in the Instance of the Viper.

I wish you a Safe and Speedy Passage, and am, Sir, Your, etc.,

Fort William, 12th November 1792.

(Signed) Edward Hay, Secy. to Govevt.

1792. — No. XII.

Agreed that the following Letter be written to Commodore Cornwallis and, Ordered that it be dispatched under Charge of Lieutenant Blair.

To Commr. Cornwallis. 12th Novr.

The Hon'ble William Cornwallis, Commander in Chief of his Majestys Ship in the East Indies.

Sir,—We think it proper to inform you that the opinion expressed by your Excellency in favor of an Establishment at the North East Harbour of the Great Andaman in Preference to the Place which was first chosen for [the] Company's Settlement upon that Island has induced us to determine on removing it, and we accept with due Acknowledgments, the offer made by your Excellency to Assist with such Part of his Majesty's Squadron as can be spared to Effect that Purpose.

Your Excellency will receive with this Letter, a Copy of the Instructions given to Lieutenant Blair, in which he is directed to Attend carefully to all orders you may be pleased to give him.

Fort William, 12th Novr. 1792.

1792. — No. XIII.

Fort William, the 19th of November 1792. Read a Letter and its enclosure from Lieutenant Archibald Blair.

To Edward Hay, Esqre., Secy. to Govt.

Sir,—I have the satisfaction to inform you, that six Months Provision with the necessary Stores are embarked, and that the Settlers agreeable to the enclosed Return, are well accommodated, and in perfect health and Spirits.

Union James and Mary, Novr. 17th, 1792.

I have the Honor to be, etc.,

(Signed) Archibald Blair.
Enclosure in Lt. Blair's letter, dated 17th Novr.

Return of the People engaged for the new Settlement at the Andamans Embarked on board the Union, Viper, Cornwallis, Juno, and Seahorse:

13 [Should be 362. — Ed]
NOTES ON SPIRIT BASIS OF BELIEF AND CUSTOM.

BY SIR J. M. CAMPBELL, K.C.I.E., I.C.S.

(Continued from p. 105.)

Salt. — Salt sprinkled, thrown into the fire, or melted in water is deadly to the Evil Eye.\(^{41}\) In Scotland, to correct an evil glance, holy water, exorcism and the smoke of incense were used.\(^{42}\) Tweed fishermen salt their nets to keep off evil influences.\(^{43}\) No Isle of Man seaman (1700) will sail without a piece of salt in his pocket.\(^{44}\) In South Italy, children wear bits of rock-salt round their necks to keep off the Evil Eye.\(^{45}\) It is the wholesome and healing influence of salt, especially its power to put to flight the demon of corruption, that makes it so valuable and so widespread a guardian against evil glances.

The Scapo. — The goat and other scapes come close to Evil Eye charms since the object of both is to house evil glances. In England and Scotland, a he-goat is kept in horse stables near the entrance as he is a favourite Evil Eye home.\(^{46}\)

Sea-horse. — The sea-horse, caballo marino, both dried and figured in metal, is worn as an amulet and fastened to harness in Naples.\(^{47}\)

Serpent. — Besides being one of the most powerful guardians the fascination of the snake’s eye over birds and other prey makes the snake a specially valued protection against the Evil Eye.\(^{48}\)

Shell. — As a spirit-home the shell Concha veneris is a favourite guardian against the Evil Eye.\(^{49}\)

Siren. — A special Neapolitan amulet is the Sirene or Siren seated on a single or double sea-horse. This is worn by children and women and is also hung in the window or other part of a house.\(^{50}\)

Skeleton. — A miniature skeleton is a favourite wearing charm in South Italy. Among the Greeks and Romans the skeleton was a favourite charm.\(^{51}\) The moral explanation of the Roman practice of carrying a skeleton round the feast room when the drinking of wine began, namely that the guests might remember death, is probably a later meaning-making of a

---

\(^{41}\) Compare Mrs. Rozankoff’s Rites and Customs of the Graeco-Russian Church, p. 325.

\(^{42}\) Dalyell’s Darker Superstitions of Scotland, p. 11. These rites may be a survival of the Catholic ritual. At the same time exorcism, holy water (that is, water with salt in it) and incense smoke are cures for spirit-possession earlier not only than the Christian but than the classic religions. The details of the non-ecclesiastical and apparently non-Christian use of salt and water in Evil Eye ailments in Scotland in the beginning of the present century are interesting. In Scotland (1860, Brand’s Popular Antiquities, Vol. III, p. 47), if any member of a family was suffering from an evil glance a sixpence was borrowed. On the borrowed sixpence salt was heaped and the salt split into a tablespoon full of water. The sixpence was dropped into the spoon and the patient’s soles and palms were moistened with the salt water. The operator thrice sipped the salt water, drew his forefinger across the patient’s brow and threw the contents of the spoon over his shoulder, into the back of the fire with the words “Lord keep us from scath.”

\(^{44}\) Hars’s Cities of Southern Italy, p. 10.

\(^{45}\) Compare the monkey kept in China as a safeguard to cattle. Gray’s China, Vol. II, p. 58. Compare also the regimental animals to which attaches a feeling of luck.

\(^{46}\) Compare Elworthy, The Evil Eye, pp. 211, 255, 296.

\(^{47}\) Compare Elworthy, The Evil Eye, pp. 312, 350.

\(^{50}\) Elworthy, The Evil Eye, p. 122; King, The Greeks, p. 137.
practice whose sense, like the sense of the Roman shower of rose leaves, was to free the banquet room from the spirits which had throned to the wine. The skeleton cleared the air of spirits because more than even wine the dead are a tempting spirit-home. "Tis certain," says Aubrey (1660), "the touch of a dead hand has wrought wonderful effects." At Stow in Somersetshire, a painter cured a wen on his neck by asking a blessing, saying the Lord's prayer, and stroking the wen with the hand of a dead woman. The sense is, the spirit was tempted from the wen into the more attractive dead hand.

Skull. — As a tempting spirit-home the human skull is a favourite early ornament. Necklaces of skulls decorate Hindu deities, and skulls adorn and protect coffins and tombstones. A miniature human skull is a common charm and scarf ornament in Naples. The tribes of the White Nile keep the Evil Eye from their grain fields by setting on the end of a pole the blessed skull of an ox. The same practice prevails among the wilder tribes in Western India.

Spitting — has been and is an almost universal practice to counteract evil influences. Pliny (Rome, A. D. 70) says: "Spitting into the urine or into the right shoe before putting it on keeps off the Evil Eye." In Italy, if a child has been blighted by an evil glance and the person who did the mischief is known, the child is brought before the person and spits thrice into his mouth. According to a Somerset saying, "You should spit thrice if you meet anyone with a north or Evil Eye." Compare the Roman and English plan of spitting into the hand before fighting or beginning to work: also spitting on the first coin earned during the day. The Afghans spit on the ground to wash away the evil glance.

Sulphur — one of the greatest cleaners and scours, is a chief Italian remedy for an attack of the Evil Eye.

It seems odd that a skeleton or dead body should be a favourite spirit-home. Two attractions combine. First, the dead body is a spirit-home without a tenant. Lodgings to let is stamped on the lifeless body. The second attraction is corruption which so tempts the coarser order of spirits that their love for the nasty drives them to haunt grave-yards and other unclean places. Evil spirits were believed to haunt unclean places when with the exhalation of the guardian spirit the character of the non-guardian spirit was degraded. That non-guardian spirits were unclean and loved corruption was supported by the experience that the unclean caused sickness, evil smells and flies, three leading proofs of the presence of evil spirits. The belief rules Russia in the form of the dreaded vampire, a spirit who finds its way into a dead body and revives it, so that the dead haunts its own home and lives on the noble blood of its inmates. The vampire belief in turn finds support in the experience of consumption and other diseases which seem to suck the patient's blood, and the other experience of bodies long after burial found fresh and bleeding. Of the fondness of evil spirits for the unclean and the ill-smelling, Aubrey (1660, Miscellanies, p. 162) says: "Evil spirits are pleased and allured and called up by suffumigations of henbane and other stinking smells which witches use in their conjurations."

Miscellanea, p. 125.

Examples have been given in a former article on spitting as a spirit-scourer. Other instances will be found in Elworthy, The Evil Eye, pp. 412-414. Compare Theocritus (Sidly, B. C. 290), Idyll VII, Banks' translation, p. 69: "May the old woman be at hand by spitting to keep afar what is not good." Also Idyll XX., op. cit. p. 165, Eunica says: "Away lest you contaminate me," and spat thrice in her breast. Also Idyll XXXIII., op. cit. p. 274: "The heartless girl who spat on the body of her dead lover:" and Polyphemus, Idyll VI., (op. cit. p. 36): "Who after excessive admiration of his own beard and eye and teeth spat thrice into his breast in case he should bewitch himself."

Quoted in Elworthy, The Evil Eye, p. 419. The spitting into it prevents any evil influence passing into the urine and so affecting the person whose issue it is. The spittle in the shoe drives out of the shoe any lurking influence which might cause weariness.

Stor's Castle of St. Angelo, p. 196. The sense of this practice is that the spirit sent into the child by the owner of the evil glance is in the child's spittle. When the child's spittle passes into the mouth of the owner of the evil glance a communion is established between the child and the owner in virtue of which any damage done to the child must equally affect the owner of the Evil Eye.

Bell's Afghanistan, p. 287.

Stor's Castle of St. Angelo, p. 206. Among Greeks and Romans sulphur was a favourite purifier. After the babe Hercules strangled Juno's dragons, Tiresias, among other rites, advised that the house should be purified with clear sulphur. Banks' Theocritus (E. C. 290), Idyll XXIV., Bohn's Library, p. 120.
Surface. — The Surface or Surya-mukh is one of the chief guardians against evil in India, being carved in temples and carried in procession worked on banners. A surface was worked into many of the badges worn by the Roman legions whose guardian glances would overcome the spells of the enemy.

Tongue. — The tongue is as great a fascinator as the eye. In one view the tongue is an even greater fascinator than the eye, since it not only blasts with slander that is spoken envy but is also the source of the admiration and flattery which with envy form the two main channels of evil influence. The Aegyptians or early Chaldeans prayed their guardians to save them from the Evil Eye and the spiteful tongue.¹¹ Virgil (Eclogae VII.) advises the young poet to bind clown's spikenard (bacchar) round his brow lest any evil tongue should harm him; and Horace (First Epistle) talks of harm done by the skew glance and by the bite of the evil tongue. At Roman sacrifices the Priest called Fawete linguis, favour with your tongues, that is, keep silence. Etruscan and Indian masks and images and the masks and images of many early tribes and peoples have lolling and split tongues.¹ To thrust out the tongue against any one is a widespread sign of derision with the usual meaning that the person thrust or loll at is a devil or is devil-haunted. Another instinctive thrusting out of the tongue tip when something has been indiscrately said seems a form of unbarujen as if to scatter the rumour spirits who might spread the wrongly published news.

Thread. — A red thread was tied round the necks of Roman infants as a charm against fascination.² In Afghanistan, the Evil Eye is kept from horses by tying white and blue threads to their tails.³ Among Indian Moslems a blue thread and in Scotland as in Rome a red thread keeps off the Evil Eye.⁴

Tooth. — A boar's tusk is a favourite charm against the Evil Eye in Naples.⁵

Water, the universal cleanser and healer, is a favourite Italian cure for an attack from an evil glance.⁶ Evil glances like other evil influences fear nothing so much as holy water. But both among Classic Greeks and Christians the main virtue of holy water rests in salt.⁷ Though water cures Evil Eye attacks (so far as has been ascertained) neither water nor picture nor sign of water is used in Naples to keep off an evil glance. In Florence, new houses, which are tempting Evil-Eye lodgings, bear the early waving Etruscan sign of water apparently for luck.⁸ The Jews hold that the Evil Eye cannot pass through water. According to the Talmud fish are free from the Evil Eye because they live under water.⁹

Wolfskin. — A strip of wolfskin fringes many parts of the harness of a Neapolitan horse. The belief in the guarding virtue of a wolfskin is old. Pliny (A.D. 70) says: — “A wolfskin fastened to a horse's neck makes him proof against weariness;¹⁰ a wofstail is also a protection.”¹¹ In Scotland, a girdle of wolfskin is a cure for epilepsy.¹² Here, as in other cases, the

¹¹ Lenormant, Chaldæan Magic, pp. 11-17. ¹² Compare Elworthy, The Evil Eye, pp. 162-163, Figure 59.
² Persius, Satires, I. v. 31.
³ Bellow's Afghanistan, p. 237. ⁴ MS. Notes.
⁵ Nevile-Bolsoe, Naples in the Nineties, p. 53.
⁶ Story's Castle of St. Angelo, p. 263.
⁷ Compare in Theocritus (B.C. 280, Idyll XXIV., Dale's Translation, p. 139) the order given by Tiresias after the baby Heracles had throttled Juno's dragon:—“Sprinkle the house from a green branch dipped in plenty of pure water mixed as usual with salt.”
⁸ MS. note from Col. Selby, R. E. Neither the Moslem name of eye (‘ain) for a free flowing spring nor the German saying (Grumm, Vol. I. p. 146, n. 1) “You must not look into running water, it is God's eye,” seem to be used to give water as an eye a special glamour or casing power over an evil glance.
¹⁰ Elworthy, The Evil Eye, p. 330. The sense is, weariness is the result of evil influence through a human glance or by other channels passing into the horse. The guardian wolfskin soars or draws to itself (that is, prions) the devil of weariness and the horse keeps fresh.
trust in the wolf is not the result of the belief that a wolf suckled Romulus: it goes back to the stage when, assembled and fend, the wolf became the herdman's protector and therefore gained the credit of saving the guardian of Rome.

Words. — Besides by articles evil glances can be scared or punished by uttering certain words. These words are the names of certain evil-sounding articles or the names of some of the greater guardians. The uttering of the names of spirit-sounding articles scares spirits because in the name part of the spirit, or, in earlier phrase, one of the spirits of the article named lives. To name the name of the greater guardians — Classic Hebrew, Christ, Muslim, Hindu — is admitted to scare evil and has no special reference to the Evil Eye. What is of interest in connection with the Evil Eye is that, though they belong to a much earlier stage of faith, certain of the local and lower guardians have such a weak power over evil that even the portion of their spirits that serves to keep their names alive suffices to guard against evil. Of the early guardians whose name can turn the evil glance the chief are the phallus, the horn, the nail and certain numbers. Fascinus or more usually prefascinus is a word which saves from an evil glance. The guardian virtue of the word prefascinus equalling forfascina, that is, glamour avant, might seem to be the tone of command. But no evil influence would heed this tone or form of command unless the word fascinus was the name of the phallus, the chief of spirit-homes, so tempting that the name by itself is enough to draw spirits into it. It is for this reason, namely, to house and so dispose of evil influences, that among Hindus at the spring or Holi festival and among the early Romans in the Fescennine and other guardian songs the singers were enjoined to shout phallic words, the use of which at other times would have been deemed unseemly. So great is the phallic power of horn in south Italy that to utter the word horn takes the harm out of an evil glance. So powerful a home or jail of evil glances is an iron nail that to utter the word deftere, that is, drive it home, scares evil. Among numbers 3, 7, 8, and 9 are so lucky that to name one of them turns aside an evil glance. In the east of Scotland, for a fisherman to name 'canid iron' is enough to scare any influence who may have gathered in consequence of the use of some unlucky word. In this and in other cases the word is the name and so is part of the thing named.

Writing. — Words written have power as well as words spoken. Arabs, Jews and other Asiatics wear holy words in a hollow amulet. A little canvas bag containing a prayer to the Madonna or a verse of Scripture is frequently tied to the head stall or saddle of a Neapolitan horse. To keep off the Evil Eye, Muslims in Egypt wear amulets engraved with mystic characters. In Egypt, between B. C. 300 and A. D. 300, the name of the guardian Serapis carved in gems baffled the Evil Eye. In Abyssinia, passages from the Sacred Writings are worn in a leather case.

In Europe, the evil influence of compliment is turned aside by saying "God be praised." The Turk says: "Ma-sha-Allah, what God wills (happens)," The Persian and Indian Musalmans say: "God be thanked." If any one praises his child, an Italian name says: "Thank God." Compare Story, Castle of St. Angelo, p. 159. In Spain, Greece, Turkey, Palestine, Egypt and Algiers, if you praise a child, you must add "God preserve it." Dalyell's Darker Superstitions of Scotland, pp. 12-13. Prayer to guardians is also an universal safeguard against the Evil Eye. As early as B. C. 1309 the Accadians (or primitive Chaldeans) called on their guardians to turn aside the Evil Eye. Lenormant's Chaldean Magic, p. 5. The Greeks and Romans prayed to Nemesis to ward off the Evil Eye. Pliny in Story's Castle of St. Angelo, p. 150. The early Nemesis was envy, not retribution. Nemesis becoming a guardian is a case of the guardian being the squared find.

11 In Europe, the evil influence of compliment is turned aside by saying "God be praised." The Turk says: "Ma-sha-Allah, what God wills (happens)," The Persian and Indian Musalmans say: "God be thanked." If any one praises her child, an Italian name says: "Thank God." Section IV. — Local Details.

This summary of local beliefs connected with the Evil Eye begins with India, because in India, the early dread of the Evil Eye is unweakened: and because the Indian details are fuller than those available for other countries. In Western India, the blast of the Evil Eye is believed to be a form of spirit-possession. In Western India, most witches and wizards are said to be evil-eyed. Among ordinary persons those only who are born under the following conditions are evil-eyed. Hindus believe that a pregnant woman has peculiar longings either from the day of conception or from the fifth month after conception. These longings are due to the development of the foetus. They consist of a wish to eat certain fruits and sweetmeats: to walk in deep shade or in gardens with running water; or to wear rich clothes and ornaments. If these desires are not gratified the child is born weak and greedy, and is believed to have an Evil Eye. If a person who has an Evil Eye sees a man or woman eat anything for which he has a longing the eater vomits or falls sick. In the Konkan, near Bombay, the belief is general that, at the time of dinner, if any one enters the house without washing his feet and sees the inmates at their meal, the eaters become sick or vomit their food or lose all appetite till the Blast of the Evil Eye is warded off. An unwashed outsider brings with him evil influences because he comes from wastes or roads or places where three or four roads meet. As he passes any of those spirit-haunts the haunting spirits buzz about his heels like gnats, and, unless he washes his feet before entering a house, the spirits enter with him into the house and make for the food and the eaters. A man who comes into a house with unwashed feet is said to enter bharalya prayāne, that is, with full feet.

In Western India, the chief devices and rites for baffling the blast of the Evil Eye are:

1. Salt and water are mixed, waved three or seven times round the face of the person affected, and thrown on the road or at a spot where three roads meet.
2. Cowdung ashes are taken to a Brahman or to an exorcist, who sprinkles the ashes on his left palm and turning the thumb of his right hand several times over them charms them by saying incantations and then rubs them on the forehead of the person affected.
3. Chillies are powdered and the powder is thrown on burning charcoal laid in a tile and the whole is waved three times round the face of the patient. When a child of one month old sickens its mother takes in her hand some salt and mustard seed, waves them thrice round the child's face, and throws them on the fire. If the smell is very strong the mother knows that the blast of the Evil Eye was very severe.
4. That a child may not be witched Hindu women mark its brow with lamp-black, and some mothers tie round the child’s neck a string of bajrabattu seeds, or a garland of garlic, cloves, marking-nuts or shells.
5. If a man while taking food believes that the glance of some one present has struck him, the eater offers some of the food to the suspected person. If the suspected person eats, the ill-effect of the glance ceases. The sense of this belief is that the eating of a portion of the food by the suspected person rehouses in him the evil spirit that passed along his glance into the food. By this means the spirit cannot continue to harm the original eater without equally harming the second or suspected eater, that is, the spirit’s own house, and that is itself. When it is not known whose eye affected the sick man he is taken to a charmer who utters mystic verses over part of the food which the eater believes to be the cause of his sickness. The charmed food is kept alung from the ceiling for a night and next morning is given to the sick man to eat. Sometimes the food which has disagreed with the patient is divided into three parts and one of the parts is divided into three morsels. Each morsel is lifted to the sick man’s mouth as if to feed him but instead is set on the ground on the right of the sick man. If the spirit has no smell of chillies the man is believed to be witched. If the

* The seeds of the talipot palm, Corypha umbraculifera.
smoke smells of chillies the sickness is believed to be due to natural causes and not to possession. (8) Seven pebbles picked from a place where three roads meet, seven leaves of the khajuri or date-palm, and seven leafy branches of the bār (Zizyphus jujuba) tree are brought. The date-palm leaves are waved round the patient's face and then knotted by a member of the family or by some one else who knows the charm which should be repeated during the tying of the knot. The knotted palm leaves, the bunches of jujube leaves, the seven pebbles, and a morsel of food are then waved round the face of the patient and put in a vessel filled with water. The sick man is told to spit into the vessel and to drop into the water a lock of his hair or the paring of one of his nails. The neck of the vessel is stopped with erand or castor leaves and a cloth is tied over the mouth. The vessel is waved three times round the sick man's head and is set on the fire to boil. As soon as it boils it is placed under the patient's cot. A broom and a shoe are also brought, struck thrice on the ground, and placed under the cot close to the pot. Next morning the cloth over the mouth of the vessel is untied, the vessel is taken outside the house and its contents are spilt. If the water has turned red the man is believed to have been witched: if the water has not turned red the patient is suffering from some bodily disease. (9) Boiled rice is laid on a plantain leaf, red powder is scattered over the rice, and a small lighted torch or wick is stuck on the rice. The whole is thrice waved round the patient's face and is carried to a well or pond, the bearer being careful not to look back or to speak to any one on the way. He sets his charge near the water, washes his hands and feet, and goes home. In this and in the other instances quoted the object of waving fire or lights round the patient is to draw the spirit into the light and so to house or prison it. Housed in the light the spirit is taken to the edge of a stream or pond, or to where three roads meet, and the spirit in his lamp-house is left at this spirit-resort which is a prison as much as a home. It is worthy of note that in these rites fire is treated not as a spirit-scare but as a spirit-prison. (10) A child who cries too much is witched. The mother takes burning charcoal in a tile or pot-sherd and laying chillies on the charcoal in the evening sets the sherd at the meeting of three roads. When a grown person is affected by the Evil Eye a small earthen lamp is lighted, set on a piece of cowdung, waved round the patient's face, and left at a place where three roads meet. Among the Kunbis of the Bombay Dakhan, black threads, shells, marking-nuts or an old shoe is tied round the neck or leg of a pet bullock to keep off the Evil Eye. 24 Among Gujarāt (Bombay) Shrāwaks or Jains the bridegroom wears a black silk thread tied round his right ankle to keep off the Evil Eye. A Gujarāt mother calls a boy who is born after several children have died Stone or Rubbish or Girl. The mother's object is that no spirit may be tempted to come and live in the boy, or rather that the envious spirit of some former wife or other family ghost whose ill-will killed the elder children, may be cheated into leaving this boy alone. A high class Gujarāt Hindu child is believed to suffer either from its own gaze or from the gaze of some fond relation. 25 In Gujarāt, the Hindus who have the most hurtful form of Evil Eye are those possessed by Vir, the spirit of a dead warrior. 26 The strict sub-sect of Varjuddi Vaishnavas in Gujarāt keep their drinking water where no one can see it. 27 Both among Musalmāns and Hindus the belief prevails that during the dark spirit-haunted hours of the night the eye of the sleeper becomes charged with evil influences. The Gujarāt Muslim on awakening should cast his first glance on gold, silver or iron: if his waking glance falls on a man the man will sicken. 28 Another saying is: the first glance should fall on an ornament, the second on the wearer. 29 Gujarāt Muslims are careful not to take their meals in presence of strangers, otherwise the food is sure to disagree with the eater or to be thrown up. 30 In Gujarāt, a glance of admiration is known as mīthī nazār or sweet glance. If a stranger casts a sweet glance on a child, the nurse or parent wards the evil glance by saying: — “See there is dirt on the heel of your shoe.” The spirit which might have passed from the admirer's

eye into the child is turned to the supposed dirt on the heel. The belief is general that the admiring glance of a parent may damage a child as much as a stranger’s sweet look. Another glance that harms is the strong man’s glance. Like the glance of love the strong man’s glance has a koshish or drawing power. According to the Gujarat Musalmans as the tiger draws the deer and as the snake draws the bird so the glance of a strong eye drains the strength of a weak eye.\footnote{31} When an Indian Musalmán is complimented on his health he says:—“God be thanked.” Indian Muslims bind a blue thread round a child’s neck or wrist to keep off the Evil Eye.\footnote{32} In North Gujarat, the belief is common that the fine bullocks for which that part of the Province is famous, are specially liable to suffer from admiration. In 1888, a pair of Rádhanpur bullocks gained a prize at a cattle show at Ahmedabad, the capital of the Province. So many people looked at and praised the bullocks that one of them sickened. The keeper tied a green and black cotton thread round the fore-leg of the sick animal and it recovered.\footnote{33} In Dhárwár, in the South of the Bombay Presidency, if a person praises a child the mother (to avert the Evil Eye) says:—“Look at your foot, it is covered with filth.”\footnote{34} The Karnátak Liúgáitís, like the Gujarat Shrávakás, do not allow any stranger to look at them while they are eating, lest any evil glance may pass into the food. Most Hindus, when they offer náivedya or food to their house gods, close their eyes, draw the left hand over the closed eyes, and wave the right hand in front of the gods. In European practice, the evil, that is the evil spirits, in the worshipper is prevented from passing into the object of worship by signing the Cross in front of the eyes or simply by bowing the head. Among Hindus, the issue of an evil influence from the worshipper’s eyes is prevented by the double precaution of closing the eyes, and of drawing the left hand in front of the closed eyes. The waving of the guardian right hand clears any evil influences that, without its protection, might pass from the worshipper to the worshipped. In Bengál, at the first pregnancy ceremony, a cloth is hung between the husband and wife.\footnote{35} The place where sacrifices are performed must be sheltered by a shed.\footnote{36} In worshipping the bones of Krishna at Jagannáth the priest covers his eyes.\footnote{37} Among the Hindus, an elder brother never looks at a younger brother’s wife.\footnote{38} Among most Hindu women, it is a mark of respect to turn the back on a man or to turn away or veil the face,\footnote{39} the object being to prevent evil influences passing from the eyes of the woman into the person to be honoured. In Cashmir (1831), the traveller Vigné was told that spots of quartz in a trap rock were a disease caused by the Evil Eye.\footnote{40}

The Evil Eye is dreaded by the Malayá.\footnote{41} In China, when a pregnant woman sees a child the mother rubs the child with betel-palm paste to prevent her child’s soul passing into the unborn infant.\footnote{42} To avoid the Evil Eye and admiration the Japanese dress their children shabbily.\footnote{43} The Musalmán women of Turkistán wear dark thick veils of horse-hair.\footnote{44} The Evil Eye is much feared in Afghanistan. It causes all manner of mishaps to animals as well as to men. The Evil Eye of animals and of men, especially of Englishmen, is bad; but the Evil Eye of the invisible genii and fairies is worse.\footnote{45} The evil glance may be avoided by spitting, by wearing charms, and by tying white and blue threads to horses’ heads and tails.\footnote{46} The ancient Persians considered the Evil Eye an aqídhá or demon.\footnote{47} Zoroaster (B. C. 600) ordered that if any one saw a pleasing object he should say over it the same of God.\footnote{48} When his health is praised a Persian Musalmán says:—“Thanks to God.”\footnote{49} In Chaldean, as far back as the time of the Accadians (B. C. 2000), guardians were besought to keep away the Evil Eye.\footnote{50} Another Accadian
pray ev beseeches the gods to keep at a distance evil spirits, ill-wishing men, plague, fever, the spiteful tongue, and the Evil Eye. Among the Arabs, the early Ishmaelites (B.C. 1200) decked their camels with crescents to keep off the Evil Eye. The Prophet Muhammad (A.D. 600) accepted the general belief that the Evil Eye caused diseases and death. The modern Arab believes that the horse and still more that the camel is apt to suffer from the Evil Eye, They guard their animals with eye-shaped amulets and with talismans containing passages from the Kur'an. In the Levant, the poorest ask passers to share in their meal.

Among the Jews King Solomon (B.C. 1000) (Proverbs, Chap. XXIII. v. 6-8) describes the man with the Evil Eye: — "Eat thou not the bread of him that hath an Evil Eye, neither desire thou his dainty meats. For as he thinketh in his heart so is he. 'Eat and drink,' saith he to thee; but his heart is not with thee. The morsel thou hast eaten thou shalt vomit up and lose thy sweet words." So in the New Testament, Christ says: — "The light of the body is the eye. If thine eye be evil the whole body shall be full of darkness;" and, again, "Is Mine eye evil because I am good?" Christ's view that an Evil Eye is the outcome of evil spirits in a man is shown by the passage: "For from within out of the heart of men proceed evil thoughts, adulteries, fornications, murders, thefts, covetousness, wickedness, deceit, an Evil Eye, blasphemy, pride, foolishness. All these evil things come from within and defile the man." This description that, like other desires and impulses, the Evil Eye comes from within may seem in agreement with the later scientific view that such impulses and appetites are material, a necessary result of the body, and are not caused by any outside spirit that has made its abode in the man. Still the statement that the greedy longings of the Evil Eye come from within is in no way opposed to the view that the greedy thoughts or other evil impulses are the temptings of the devil, or, in still earlier phrase, that they are spirits that have come into the man from outside. This view is illustrated by the passage that follows the verses quoted where an evil spirit who lived in a man left his lodging, came back, and finding his old lodging comfortable called other spirits and they lived together in the man. Out of this man, from his lodgers, that is from within, would come the Evil Eye, the uncleanness and the other unwilled and hurtful influences that made the second state of the man with his table-stake of spirit-lodgers worse than his first state with only one tenant. The Jews professed that the race of Joseph were above the power of the Evil Eye. Still to keep off the Evil Eye, the Talmud advises that, in entering a city, the thumb of the right hand should be placed in the left hand and the thumb of the left hand in the right hand. Further, to keep off the Evil Eye, the Jews, after their re-establishment (B.C. 440) in Jerusalem, adopted the wearing of guards or phylacteries, that is, little boxes containing passages of Scripture. The Jews of Tunis take the strictest precautions that no Evil Eye shall gain access to a new-born son. They hide the babe behind curtains, keep the room full of smoke, and hang about flaming hands and outspread fingers, pieces of bone and cowry shells. The Phenicians (B.C. 1000) used an eye as an amu-

51 Lenormant's Chaldean Magic, pp. 16, 17. 52 Judges, Chap. VIII. v. 22. 53 Arab Society in the Middle Ages, p. 94. 54 Elworthy, The Evil Eye, pp. 124, 323, 341. 55 Dallyell's Darker Superstitions of Scotland, p. 14. 56 St. Mark, Chap. VII. v. 21, 22. 57 Schwab's Talmud de Jerusalem, Vol. I. p. 456. Though in theory the Jew was exempt from the Evil Eye the glance of a Jew might be an evil glance. "If," says the Talmud, "any one is afraid of casting an evil glance let him look at the left side of his nose." (Op. cit., loc. cit.) The sense seems to be that the spirit in the left or unlucky eye will pass into the first object seen, that is, the looker's nose, and so do no harm. 58 Op. cit., loc. cit. 59 The sense seems to be that, by veiling the phallic thumb by the hands, the entry of evil spirits is prevented. At the same time the root meaning of the open hand in India (see King, The Gnostics, p. 222) suggests that the protection is purely phallic. 60 The late date of the adoption of the practice explains the use of a Greek word for the guard. King (The Gnostics, p. 116, n. 2) suggests that the use of texts took the place of earlier Ephesian spells. 61 Elworthy, The Evil Eye, p. 426. Of the dread of praise, as opening an attack from the Evil Eye, Langwill (Children of the Ghetto, p. 39) gives the following example in his account of the poor Jews of London: — "It is a fine child, unbeschir, only it won't be its mother's fault if the Almighty takes it not back again. She picks up so many ignorant love women who come n and blight the child by admiring it aloud, not even saying unbeschir" (unbeschir apparently is a Dutch form of the German unbereis, unsummoned).
let to guard against the Evil Eye. The Carthaginians (B.C. 500), mainly a Phoenician colony, were fond of pottery in the shape of animal heads with an eye on the neck. The Carthaginians also used an ornament closely like the Etruscan and Neapolitan rue-sprig, or *cinamorta.* Dread of the Evil Eye was ever present among the ancient Egyptians (B.C. 2000-500). Both the living and the dead wore, and on the walls were painted, the eye of Osiris, the hieroglyphic a'ta. In Middle- Age Egypt (B.C. 600- A.D. 600), during the centuries before and after Christ (B.C. 300- A.D. 300), Serapis was considered a special guardian against the Evil Eye. The name of Serapis carved in gems baffled the Evil Eye. In modern Egypt (A.D. 600-1900), the women blacken with kohl or antiquity the edge of the eyelid above and below the eye. The blackness is said to cool the eye. The practice suggests the belief that the black fringe scared spirits from attempting to enter the eye. When a Muslim Egyptian salutes a saint he holds his hands before his face like an open book. To keep off the Evil Eye, in which he fears enchantment, the Egyptian Muslim wears amulets called *teleia* or talismans with mystic characters engraved on them. The Egyptian Muslims have a saying: "The food that is coveted or on which the Evil Eye has fallen, carries no blessing." To guard their children from the Evil Eye, Egyptian Muslims either have them shavenly clad, rubbing dirt on their clothes; or they sew on their head-dress coins, feathers, gay lappets or charms, so that the evil glance may be drawn to the ornament. The Abyssinian Budas, potters and iron workers, who turn into byzanas, are supposed to have the Evil Eye. Charms and amulets against the Evil Eye are written and worn in leather cases in Abyssinia. The Nubians, the Abyssinians, and the Negro tribes of the White Nile have a firm belief in the power of the Evil Eye. The Evil Eye is supposed to harm cattle and horses and to bewitch men that they constantly miss their aim. Pliny (A.D. 50) says that the glance of African sorcerers causes trees to wither, cattle to perish, and infants to die. During Denham's journey across the Sahara from Tunis towards Lake Chad in 1812 a she-camel suddenly fell dead. "The Evil Eye," said the Tunis Arabs, "God be praised, God is great, powerful and wise, those looks of the desert people are always fatal." In parts of Africa no one eats in public in case he may be envied by some hungry man. At Dahomey, in Central Africa, during a ceremonial when the king drinks, two of his wires stretch a calico screen in front of him. Another pair of wires open small parcels to hide the king's figure. Guns are fired, the Amazons tinkle bells, rattles are sprung, ministers clap their hands, commoners turn their backs, dance like bears or swarm like dogs. When the wife of a Dahoman serves her husband with food or drink, she touches the ground with her forehead and bends before him with averted face. Among the neighbouring tribe of Loangos, when the chief drinks, the people bury their faces in sand. No one may see the contents of any dish served to the chief of the Moubattas in Central Africa. In East Africa, the Mwapwas wear an apron with a fringe of thongs to keep off the Evil Eye and other witchcraft. The Moursaks of Central Africa set the head of an ass in their gardens to keep off the Evil Eye. In Madagascar, no food is carried across a road without being covered. If you say to a Madagascan woman that her child is pretty, the mother, to turn aside the Evil Eye, says: "No the child is ugly or nasty." The Ashantees of West Africa set in their fields iron standards with horns and a brow

64 Arabian Society in the Middle Ages, p. 71.  65 Serapis, p. 64.  66 Teleia is the Arabo form of the Greek *eptelsa*, planet influence. A talisman both gained love and guarded mischief: an amulet (amulet, bracelet) only guarded mischief. See King, The Gnostics, p. 112.
67 Lane's Modern Egyptians, p. 145.
69 Elworthy, The Evil Eye, p. 11.
like an ox-skill to protect the sown crops from evil spirits. In the Congo Country, in South-West Africa, if any one looks at the chief while the chief is eating, the looker is killed. The people of Guines in West Africa are described in 1558 as reverencing their king wonderfully and never daring to look him in the face. When Monte-Lumo of Mexico (A.D. 1550) dined in a gilt wooden screen was drawn in front of him that no one might see him eat. Mexican women turned their backs on the men when they gave them drink. In Nicaragua (1530), the belief was common that some persons' looks were mortal and that the glance of certain eyes was fatal to children. In Peru (1530), worshippers covered their eyes while adoring sacred objects. The priests kept their eyes on the ground and their backs turned to the god when they sacrificed.

In Europe, among the ancient Greeks (B.C. 1500-150), the Evil Eye was greatly dreaded. The Greeks and Romans held that the eye carried disease and death as well as love and delight to men, animals and trees. The Evil Eye was called baskanos, a word of doubtful origin, connected by some with an early Greek word bako, go: according to others, baskanos is a Chaldean word meaning phallus. The Chaldean origin is supported by the fact that the phallus was called baskanos, perhaps with the sense that it fascinated fascination, poisoning or turning aside the evil glance. The Greeks worshipped Nemesis or Fortune in her early character of envy as a guard against the Evil Eye. The ancient Greeks were impressed with the danger of self-fascination. Besides the case of Narcissus, Theocritus (B.C. 260) makes Damietas and Plutarch (A.D. 150) makes En DELIADAS fascinate themselves by looking at their own faces. According to Pliny (A.D. 50) the glance of an Illyrian who had double eyebrows was mortal. According to Plutarch (A.D. 150) the glance of certain eyes harmed infants and young animals. The Cretans and people of Cyprus had special power to cause harm, and the glance of the Thetian Evil Eye might slay a grown man. In its milder form Plutarch seems to have found the casting of envious glances general. "The common people," he says, "are envious or evil-eyed. They are vexed in their minds as often as they see the cattle of those for whom they have no kindness, their dogs, or their horses in a thriving state. They sigh, they grum, they set their teeth and shew all the tokens of a malicious temper when they behold the fields, of those for whom they have no kindness, well tilled or their gardens adorned or beset with flowers." In A.D. 380, Heliodorus, Bishop of Thrace, noticed the danger of being struck by the Evil Eye if you went among crowds. The Bishop held that when any one with an Evil Eye looked at what was excellent he filled the surrounding atmosphere with a pernicious quality and transmitted his own envenomed exhalations into what was nearest to him. In modern Greece, the Evil Eye is called hakomati. Mud is rubbed on the brow of a new-born babe to keep off the Evil Eye. If a stranger looks at a Greek child the mother spits into the child's face or into her own bosom. Like the ancient Greeks the ancient Romans prayed to Nemesis or Ano to guard them from the Evil Eye. Canon Iorio, an eighteenth century Italian authority on the Evil Eye, says: "In the vast field of amulets against the Evil Eye every one was known to the Ancients; the moderns have not added a single horn." The word baskanos, which the Ancient Greeks used both for the Evil Eye and for the phallus, appears in Latin as fascinus or fascicium, and is the origin of the English fascinate. Virgil (B.C. 40) says: "I know not what eye witches (fascinat) my young lambs." Like baskanos, fascinus was used with the sense of phallus,

72 Op. cit. p. 4. As envy seems to be Nemesis before Nemesis was raised to Divine Vengeance, this worship of Envy, like the widespread use of an eye to guard against the Evil Eye, is a case of the religious law that the guardian is the squared fowl. Envy propitiates can imprison in itself all envious thoughts and glances.
73 Damietas (Iyll VI. Bohn's Libraries, Theocritus, p. 36) speaks in the character of Polyphemus: "Lately I was looking into the sea and beautiful was my beard and beautiful my solitary eyebrow and beautiful my teeth whiter than Parian marble. That I might not be witched I spat thrice upon my breast." The case of En DELIADAS is quoted in Plutarch's Symposium V.: Compare Elwthorpe, The Evil Eye, p. 14.
76 Pliny, A.D. 50, in Storv's Castle of St. Angelo, p. 150.
77 Elwthorpe, The Evil Eye, p. 264.
apparently because the phallus out-fascinated or imprisoned the evil glance. Like the phallus the Romans (A. D. 40) used oscilla or little masks of Bacchus to guard trees against the Evil Eye.\(^3\) Pliny notes that if any one sickened without cause people said: — "Mantis te vidit, A grasshopper has seen you." Pliny also records that a piece of wolfskin fastened to a horse's neck makes him proof against weariness.\(^5\) And that to spit into his urine or into his right shoe before putting it on guards the spitter from the Evil Eye.\(^6\) This spitting cure is a case of the use of the term Evil Eye in the general sense of evil influence. The sense of spitting into urine is to prevent Evil Eye or other influences coming into the urine and so through the urine into the body of the spitter (according to the early belief that in any issue lives one of the souls or part of the soul of the person from whom the issue has come, so that any harm done to the issue injures the issuer). The sense of spitting into the right shoe before putting it on is to drive out any evil influence that may have lodged in the shoe, since such spirit would pass from the shoe into the foot and cause weariness or other harm.

No nation of modern Europe takes more pains to guard both people and horses from the Evil Eye by wearing charms and using evil-scarred and housing gestures and words than the Italians. In Italy, if any one is complimented on his good health, he will say — or if a child's healthy look are praised, the nurse will say: — "Thanks be to God."\(^7\) The names of the leading articles, gestures and words in general use against the Evil Eye have been noted above. One of the most striking sights in Naples and in the country towns near Naples is the brightness and the variety of the articles fastened to harness to protect horses from the Evil Eye. The beliefs and practices connected with the Evil Eye are specially common in South Italy, Sicily, and Corsica. According to the Neapolitan belief the jettatore or caster of the evil glance is born with the power: he cannot get rid of the power: as a rule he does not know that his glance is evil.\(^8\) According to Mr. Story, in Italy, the belief in the power of the Evil Eye is universal. Every coral shop is filled with amulets and every body wears a charm, ladies on their arms or at their belts, men on their watch-chains, beggars on their necks.\(^9\) Dumas in his Impressions de Voyage describes the Evil Eye as a fundamental article of social faith in Naples.\(^10\) One theory is that the eye cannot of itself have an active fascinating power. But that, through the eye, the spirits of evil persons may fascinate and send forth contagion by means of a poisonous exhalation.\(^11\) Another theory is that the jettatore or thrower cannot command the evil glance. The glance blights the first object it lights on. In Naples, women used to be supposed to throw the most poisonous glances: now the glance most dreaded is that of a mean-looking and morose man.\(^12\) In the seventeenth century (1660), Aubrey wrote: — "In Spain, France and other southern countries, nurses and parents are very sly to let people look upon their young children for fear of fascination." In Spain, they take it ill if one looks on a child and say: — "God bless it." They talk of mal de ojos.\(^13\) In Spain, the glances of a woman are most dreaded. The cure is to drink horn-shavings.\(^14\) If a stranger looks at her child a Turkish or a Greek woman will either spit into the child's face or into her own bosom.\(^15\) In Russia, a child who suffers from low spirits, loss of appetite, and restlessness is believed to be witched. The wise-woman or mid-wife is called. She takes a vessel of water, drops into it a cinder or two, and a pinch of salt, makes the sign of the cross over the water, says a long prayer over it and begins to yawn. She crosses the water again, takes a sip, spits it thrice over the patient's face, makes him drink, and washes his face and head.\(^16\) Russian children are blasted by admiration. If any one says: — "What a fine, healthy babe," the nurse says: — "Do you wish to witch the child?"\(^17\) A kind-hearted

evil-eyed Slav father blinded himself that his glance might not harm his children. In South Russia, many amulets have been found with markings representing eyes. In Germany, the witch is, in theory, almost the only medium of evil influences. The Evil Eye is perhaps more characteristic of the German witch than of any other witch. According to Grimm, you can tell a German witch by seeing your image upside down in her pupil. Though in theory the Germans have focussed evil influences in the glances of witches the common boast-saving phrase (accompanied by table rapping), "Ein neuer drei unberufen, Once, twice, thrice, you are not wanted," implies the belief that unhoused spirits swarm in the air and are ever on the lookout for likely lodgings. The words achselauge squint-eye, samba-blick glimmer-blink, and boschaft evil glance, further show that in common German belief the power of the Evil Eye is not limited to witches. In South France, the presence of any one with the Evil Eye is supposed to put silkworms off their feed.

In England, in the seventeenth century, according to Lord Bacon, the Evil Eye most hurts when the person envied is beholden in glory or triumph: because, in the time of glory or triumph, the spirits of the person envied most come out and meet the blow. Near Salisbury, in South England, in 1685, in charging a jury in a witch case, a Justice said:—"The nature of some people are corrupted by atrabilis, or something unknown, so that their look when fixed many times on a living object destroys the object by a certain poison." This result may be contrary to the purpose of the miserable persons who sometimes affect their beloved children and oftener their own cattle. The Judge knew one Christian Malagrid, who had an Evil Eye. He and his children and all his cattle were lean. The only fat animal about the place was a dog who kept himself out of sight in the barn among the beans. In Yorkshire, in 1810, boys put the thumb between the first and middle fingers pointing downwards to guard against the Evil Eye of a witch. In 1699, in Somerset and Devon, the phrase 'wished' is used of any illness or other misfortune which, appearing unnatural, is taken to be due to some artificial overlooking. In Somerset and Dorset, the maas of the people are as firm believers in witchcraft and the Evil Eye as were the swains of Theocritus and Virgil. In Somerset, they say:—"Sip three times if you meet any one with a north or Evil Eye." That horse-shoes are fastened over house doors to prevent a witch overlooking the house and that the use of coral and bells is to guard the child is known and admitted. A Somerset woman who thought herself overlooked would pull her shirt over her head, turn the shift against the sun three times, and three times drop a live coal through the shift. [Here the evil influence is drawn from the woman into the shift by turning the shift three times against the sun.] Then the live coal passing through the shift scours the evil spirit from his lodging in the shift. The practice in English cavalry regiments of the officers arching their swords over the bride as she passes from the altar is probably to guard the newly married couple from the Evil Eye and other influences. Two scaring powers unite in the sword, the power of the iron and the divinity or worshipfulness.

19 Chamber's Encyclopaedia, Article "Evil-Eye."
21 The rap under the table is apparently used to scare evil influences.
22 A Little Stepdaughter, p. 127. The scene is the south of France. The belief that evil influences enter by other passages than the eye is shown by the silkmaster's order (op. cit.) against allowing any unaimed or deformed (and thought possessed) person to enter a silkworm shed, maymantere. Another silkmaster's rule (op. cit.) is never to give light or drink to any one asking at the door of a silkworm shed. The sense of this rule is that in the fire or in the drink's portion of the song or some or one of the souls of the silkworms passes to the receiver and enables him by saying charms over the gift of fire or of water to pass some evil influence into the fire or water and so into the silkworms.
23 Essay on Envy.

30 The shift as a protector from cold is a great guardian and spirit-home. Compare among the Germans the luck and the baseless shirt, the golden shirt that saves from drowning and the spell-proof shirt spun by a maiden. Grimm's Teutonic Mythology, Vol. III. pp. 1095-99 and notes 1 and 2.
of the weapon. According to Mr. Baring Gould, Mr. Hawker, Vicar of Morwenstow in Cornwall, in the early part of the present century, believed in the Evil Eye. Whenever he came across any one with a flinty eye or with a double pupil or with eyes of an unequal size he would hold the thumb and the fore and middle fingers in a peculiar manner to ward off the Evil Eye.

"I do not pretend," he said, "to be wiser than the word of God. I find that the Evil Eye is reckoned with blasphemy, pride and foolishness as things that defile a man."

Towards the close of the seventeenth century in the western islands of Scotland, all the islanders and thousands of the neighbouring mainlanders were of opinion that some particular persons had an Evil Eye which affected children and cattle, causing frequent mischances and even death. The people tied Molucca beans (which the Gulf Stream leaves on their shores) round their children's necks. If an evil glance was aimed at it the bean turned black. Another device for turning the Evil Eye was to carry a piece of coal. About the same time (1690) the people of the mainland of Scotland believed that a man might destroy his own cow by looking at it the first thing in the morning and praising the cow's fatness. The experience that persons with an Evil Eye as often damage themselves as their neighbours seems to have led to the rule that in witch-trials no evidence might be taken that the accused had an Evil Eye. The sensible line was drawn between the overlooker whose evil influence was unwise perhaps unconscious and the witch who by careful and disreputable scheming, had secured as a lodger an evil influence ready to be sent to ruin any one the witch disliked or envied. In eighteenth-century Scotland, the belief that the Evil Eye is a form of spirit-possession was general. When a person was struck by the Evil Eye, exorcism, holy-water and the fumes of incense were used to drive out the evil influence. About the same time (18th century) certain unchristian stealing rites were also in use. An old sixpence was borrowed and heaped with salt. The salt was split into a tablespoonful of water into which the sixpence was dropped. The patient's soles and palms were thrice moistened with the salt water. The operator three times tasted the salt water, dipped his finger into the spoon, and drawing his wet finger-tip across the patient's brow threw the contents of the spoon into the back of the fire saying:—"Lord, save us from scath." In North Scotland (1800), it was believed that great praise of a child or of people, animals or crops fore-speaks them, that is, laid them open to Evil-Eye attacks. "Hold your tongue or you will fore-speak the child," was the local saying to avert the risk. Early in the present century, in the Scottish Highlands, if a stranger admired a cow, some of the cow's milk was given him to drink to break the spell. At that time the belief was general that during the spirit-haunted night evil influences passed into the sleeper. To free their eyes from these evil tenants it was usual on waking to say in Gaelic:—"Lend God bless my eye and my eye will bless all it sees. I shall bless my neighbour and my neighbour will bless me." In Scotland (1825), to keep off the Evil Eye or ill-ee, people rolled a red thread round their finger or neck and stuck a rowan twig in their hat.

23 The extreme scaring power of iron has been noted in the article on Iron. Some additional examples are given by Mr. Elworthy (The Evil Eye, pp. 220-225). All the examples seem to find their explanation in the spirit horror of iron. Young children should not have their hair or nails cut by anything made of iron since the iron might scare their frail spirits out of them. Such is the strength of the iron influence that the Jews and apparently the early Christians doubted their guardian's power to withstand it. No stone in the altar at Jerusalem had been touched by iron, and Christian Martyrs after being saved from fire and wild beasts fell victims to the sword of the executioner.

24 The Vicar of Morwenstow, p. 192.

28 Compare op. cit. p. 7, where Dalyell writes:—"I know of no example of the charge of an evil Eye forming one of the charges against the accused in a Scottish witchcraft case."

31 Walter Gregor, p. 91.

32 In Elworthy, The Evil Eye, p. 9. The sense is: In the milk, the issue of the cow, some of the cow's spirit lodges. By drinking the milk the cow-spirit passes into the stranger. If the cow-spirit has suffered from the stranger's glance, after drinking the milk, the stranger suffers as much as the cow. He is therefore anxious to withdraw the spirit from which the cow is suffering.

33 Guthrie's Old Scottish Customs, p. 196.

Still (1890), in West Scotland, the edge of the evil glance is turned by carrying a rowan twig or five-leaved clover or by wearing a garment outside in.\textsuperscript{45}

In Ireland, the legendary king Midé, though possessed of a magic sword, was beaten by Balor of the Evil Eye.\textsuperscript{46} In the sixteenth century, according to Camden, Irish eye-biting witches were executed for making children and horses and cattle suddenly sick.\textsuperscript{47} In the seventeenth century, the Evil Eye was common in Ireland. Its effect was known as overlooking, eye-biting, and fascination. In 1661, Mary Langdon charged with eye-biting pleaded that unless she touched the victim her simple overlooking could do little harm.\textsuperscript{48} In the eighteenth century, the Irish had the custom in all weathers of throwing the doors open when at dinner as it were inviting all strangers.\textsuperscript{49} In South Ireland, in 1820, it was believed that on May eve the fairies or good people had power and inclination to do all sorts of mischief without restraint. The Evil Eye is then also deemed to have more than its usual vigilance and malignity. The nurse who on May eve would walk in the open air with a child in her arms would be reproved as a monster. All old and young, were liable to the 'Blast,' a large round tumour which was thought to rise suddenly upon the part affected from the baneful breath cast on it by one of the good people in a moment of vindictive or capricious malevolence.\textsuperscript{50} The belief that children and cattle are eye-bitten still prevails.\textsuperscript{51}

FOLKLORE IN THE CENTRAL PROVINCES.

BY N. M. VENKATASWAMI, M.P.L.S., M.E.A.S.

No. 16. — Why the Mala is the lowest caste.\textsuperscript{1}

In the beginning the Mala was the milkers of the cows of Indra and the supplier of milk to the celestial nymphs, his daughters. This was their sole food, and what was over the Mala was allowed to take himself. One day he came across some cream in his share, and finding it most delicious, assumed that the creature that could produce so sweet a thing must be sweeter than the product. So he went at once and killed the cow that had produced the milk, and proceeded to eat it. Indra found this out, drove the Mala out of heaven and made him the progenitor of the lowest caste.

No. 17. — The Legend of the Colair Lake.\textsuperscript{2}

Once upon a time Parnashvar was wandering about the earth in the form of a poor man and came to the country over which flows the Colair Lake. It was then a highly prosperous land wholly given up to pleasure. The god asked for a drink, but no one would give him any water, and he was repulsed from door to door by the pleasure-seekers. He was about to go away when a poor woman not only gave him some water to drink but also to wash his hands and feet. Then she brought him some food. Pleased at her hospitality the god asked her to follow him, and she followed. And lo! the country they had left was a flaming fire. The fire burnt on till there was a great hollow in the ground and into the hollow the waters flowed and formed a great lake.

\textsuperscript{45} MS. Note, 1st January 1884. The luck in turning a garment inside out is somewhat dim. The sense may be to little one's prosperity by showing the seamy side of one's coat. A saying given by Grimm (Teutonic Mythology, Vol. III. p. 1699) supports this explanation. The coat is so handsome, the apple so red, no Evil Eye can look upon it.

\textsuperscript{1} The most persistent form of folklore in India is the attempt of the lower castes to show by idle tales that they were once of higher estate. Such attempts are usually based upon a foolish folk etymology. — Ed.

\textsuperscript{2} The Colair Lake [Kollur] is a large shallow depression between the delta of the Kistna and the Godavery, formed by the land-making activity of those great rivers in combination with the action of the monsoon on the sandy foreshores. The lake is half swamp, half lake, and is fed by four rivers. The remarkable legend given above no doubt alludes to the formation of the lake within historical times. — Ed.]
SPURIOUS INDIAN RECORDS.

BY J. F. FLEET, L.C.S. (RETD.), Ph.D., C.L.E.

The substance of this article was read, under the title Curiosities of Indian Epigraphy, before the Indian Section of the Twelfth International Congress of Orientalists at Rome, on the 10th October, 1899.

Publication was reserved for the Indian Antiquary.

In a previous paper on the Present Position of Indian Historical Research,¹ we have explained the nature and given some idea of the extent and possibilities of the materials, namely the epigraphic records, from which, chiefly, we are working out a knowledge of the ancient history of India.

But we have to exercise discrimination in using those materials. For, just as there are numismatic and even literary forgeries,² so also there are spurious, counterfeit, or forged records, as well as genuine ones. Some of these spurious records have imposed on us in the past. From accepting them, as well as from giving too ready a credence to the pseudo-historical legends which exist in abundance in so many parts of the country, to the fantastic Vashisvavat and archives of Orissa and similar documents obtained elsewhere, and to imaginative chronicles such as the Kṣögudāśarājākka and the Rājāvalikathā,³ a good deal of false matter has been

¹ Page 1 ff., above.
² We have, for instance, in the way of literary forgeries, the Jñānadvīdabharana, which has already been mentioned (page 3 above, note 10); and Dr. Peterson has spoken of forgeries, against which he had been warned by Dr. Bühler, of the Sahkāryāna reduction of the Bṛhāda (Second Report on Sanskrit Manuscripts, p. 4). It does not appear necessary to treat as forgeries such works as the Sahgāmādivamshāhima (see note 22 on page 207 below) at any rate, when, as in that case, they do not seem to make any pretension to having been actually composed at the fanciful dates put forward in them. They are simply more or less modern compositions, which may be found of use in respect of geography (see page 27 above), but which present only imaginative history and dates when they attempt to deal with history and dates at all.
³ See page 6 above, and notes 16, 17. As regards the Kṣögudāśarājākka, I have, I think, omitted to mention, on any previous occasion, that Dr. Burnell had, before me, arrived at a similar opinion of it. He said that it is very little use to accept it as an authority, because it bears evident signs of being a very recent compilation from grants and local traditions most clumsily put together (South-Ind. F. Soc., 1874, p. 28, note 1, and second edition, 1878, p. 33, note 1). The Rev. W. Taylor's translation of the Kṣögudāśarājākka is to be found in the Madras Jour. Lit. Sci. Vol. XIV, 1847, p. 1 ff.—With the Kṣögudāśarājākka and the Rājāvalikathā we may compare, on a smaller scale, a document, produced by the astrologers of Belgaum and Mandi, of which I have given a translation, under the title a Chronicle of Toragal, in Vol. V, above, p. 33 ff. It opens by mentioning, as contemporaries, Vira-Bukha, by whom it means of course Bukharāya L. of Vijayanagar (A. D. 1543 to 1579), and an alleged king Jayāśēkhara, for whom it puts forward a date in the Kalya antesāma, Śālavāhara-Sāka-Saṅvat 1088 (expired), in A. D. 1056. It then runs through an incomplete list of the kings of Vijayanagar. Then, after reciting two occurrences placed in A. D. 1565 and 1516, it mentions the last five members of the Adil Shāhī dynasty of Bijapur (which came to an end in A. D. 1686 or thereabouts). It then enumerates some of the Haralāders and Killāders of Toragal. And then, reverting to earlier times, it gives a long passage reciting how, in A. D. 1066, the alleged king Jayāśēkhara, who was enthroned on the mountain Fārsāraravala — (this evidently means Parasagad, in the Belgaum district) — granted to the astrologers a village named Puvalli, by which, making a very curious mistake, it means Hāli (close to Parasagad and Samdattī), instead of any place now known as Hubli. It was afterwards ascended by me (see Vol. VII, above, p. 290) that this part of the document had become known, many years before, to Mr. Munroe, who communicated it to Mr. Wathan, who published Mr. Munroe's abstract translation of it (see Jour. R. As. Soc., F. S., Vol. II, p. 388, No. 5, and Vol. V, p. 173). Mr. Wathan understood that it had been obtained from some ancient building in the Kanarese country. And I (then a beginner in epigraphy) expressed the opinion that it had evidently been taken from some copper-plate grant or stone inscription, but made the suggestion that probably the whole document was not to be accepted as entirely true and accurate, but belonged to a class of papers which might at least be of interest in showing how far history could be correctly dealt with by the Natives of India. The original of any such record, however, has not come to light. And I should say, now, that this part of the document is not based on any record, genuine or spurious, which does or did exist, but is a purely imaginative composition, put together on the lines of some of the later records. — If we look about for them, we shall probably find imaginative compilations like the Kṣögudāśarājākka, the Rājāvalikathā, and this Chronicle of Toragal, and compositions like the Sahgāmādivamshāhima (see note 22 on page 207 below), all over Southern India; and in fact we know of several others, from the Mackenzie Collection of Manuscripts. And, no doubt, some beginners in the study of Indian antiquities will, from time to time, still be deluded by them, as also by spurious records; and some of those beginners will never acquire the knowledge to recognise, or possess the courage to admit and rectify, their early mistakes.
introduced into the history of India. And, with a view to working out that history on sound lines, we have, in trying to prevent the introduction of any more such matter into it hereafter, as well as in eliminating the fables that have already been imported into it, to be specially on our guard against such materials as falsely purport to be ancient official records or vouchers issued by official authority.

The recognition of the existence of spurious records is not a matter of simply modern date. There is a mention of such a record in the Madhuban grant of A.D. 631-32, issued by king Harshavardhana of Thaneswar and Kanaunj, which tells us,⁴ that it was ascertained, on inquiry, that a certain Brāhmaṇa was in the enjoyment of a village named Sūmakudikā on the strength of a kūtaśāna or forged charter, and that, consequently, that charter was broken up, and the village was taken away from him and was given to others. Here, we have a distinct reference to a forged grant. And it may be added that the practice of manufacturing kūtaśānas or forged charters is recognised in the laws of Maunu, which prescribe death as the penalty for the fabrication of them.⁵ There is, further, an emphasis on the same kind in the Tarāchaydī rock inscription of A.D. 1169 or 1173,⁶ in which the Mahādyaṇaka Pratāpadhavala of Jāpala instructs his descendants⁷ that some Brāhmaṇas had obtained, by bribery and corruption, from a certain Deu, a servant of king Vijayananda of Kanaunj, a kūtamra or bad or fraudulent charter for two villages named Kalahanḍi and Badapilā. — that the said charter was not entitled to any credit, — that the said Brāhmaṇas were in every respect absolute persons, and had not the right to even so much land as the point of a needle could pierce, — and that, therefore, the said villages were to be resumed, and his own descendants were to levy and enjoy the proprietor's share of the produce and the like. Here, however, the reference seems to be to a charter issued dishonestly by a corrupt official, rather than to a forgery.

In the present day, the real nature of some of the spurious records was not recognised until quite recently. Fortunately, however, as the result of extended experience, it is now not difficult to detect them. They betray themselves in a variety of ways. Very often, the first feature that attracts attention and excites suspicion, is bad formation of the characters. It is not unreasonable to suppose that skill and neatness in writing and other details were qualifications required from clerks and engravers in ancient times, just as now. In fact, in the large majority of the genuine records, whether on copper or on stone, we have beautiful samples of extreme regularity of work and careful finish. And we find that some of the persons who prepared these records prided themselves on their work, and expressed their pride or were commended for the execution of what they turned out: for instance, Karṇabhadra, the engraver of the copper-plate grant of Vaidyadēva king of Kāmarūpa, is described in the record as an accurate workman,⁸ and an inspection of the published lithographic reproduction of his work will show that he fully deserved the commendation; and Koḍelāchārīya, the writer of one of the grants of the Eastern Chalukya king Amma II., likens himself, in respect of the fine sample of his handwriting that he has given us, to Viśvakarman,⁹ the mythological artist and artificer of the gods, and the special deity of all craftsmen.¹⁰ Even when the characters present the required types, an indifferent formation of them is enough to raise doubts as to the nature of a record. But there are other features also, not so conspicuous at first sight, by which the spurious records betray themselves. They do so by paleographic slips, in attempts to imitate the ancient characters; by using characters which are known to have been developed after the

⁵ Mānasākarmadāra, ix. 232.
⁹ Vol. XIII. above, p. 236, text line 37.
¹⁰ In the spurious records of the Western Gaṅga series from Mysore, the writers of the Tanjore, Merkhrā, Hōtrā, Devarahali, and Halleger grants, went a step further, and, to enhance the value of their work, called themselves by the actual name of Viśvakarman. They have given us decidedly good work in the Devarahali and Haḷēgera plates, and probably also in the Hondr grant, but not in the Tanjore and Merkhrā instances.
periods to which the records would assign them; or, sometimes, to have become obsolete before those periods; by orthographic blunders; by corrupt language; by peculiar words and forms; by faulty terminology in respect of titles; by abrupt and ungrammatical transitions between Sanskrit and the vernaculars; by the use of eras which were foreign to the series to which they purport to belong; by the false dates which they put forward for kings whose real dates are known; by presenting pedigrees which are known to be fictitious; and in diverse other details.

We shall not, on this occasion, go into an exposition of the details by which the spurious records betray themselves. We have only to start with the fact that the spurious records exist. But the question naturally presents itself, as to what was the reason for their existence. The answer is readily found, in the point at which we have already arrived on page 21 above; namely, that in the vast majority of the epigraphic records we have, not historical narratives intentionally written simply as such, but a mass of title-deeds of real property, and of certificates of the right to duties, taxes, fees, perquisites, and other privileges. Nearly every one of the spurious records is a counterfeit title-deed or certificate. And they were fabricated, not to produce history, which is only an incidental feature in them as in the genuine records, nor to falsify history, but to establish claims to property; sometimes, no doubt, to support bona fide rights in cases in which the original title-deeds and certificates had been lost, and sometimes as a means of putting forward fraudulent claims.

And they can be fabricated, whether with that same object or with others, and with a pretence to antiquity, even in the present day. Among the spurious records of Mysore, there is one, known as the Suradhēnapura grant, which was at one time supposed to be an ancient record and to establish the date of A. D. 807 for the Western Gaṅga prince Śivamāra II. But we now know that it is not of any antiquity at all, and that it was fabricated within the last thirty years, on knowledge derived from some of the other forgeries of the same series, for the purpose of production before the Inām Commission or court of inquiry into alienated holdings, in order to establish an actual right or an asserted claim to certain property; it claims that, in the time of Śivamāra II. and in a year which it specifies, the village of Suradhēnapura, which it appears to call Suradhēvapura, was constituted an agrahāra consisting of twenty-four shares which were apportioned among thirteen Brāhmaṇas, who are fully specified in it by names and other details; and the person who fabricated it, or who procured the fabrication of it, was, no doubt, prepared to supplement it by producing either the required pedigree establishing his standing as a descendant of one of the alleged original grantees, or else a deed of gift or sale or some such document purporting to have been executed by some descendant of an alleged original grantee. This Suradhēnapura forgery was concocted with the object with which almost all the ancient spurious records were fabricated; namely, to serve as a title-deed. But,—a still more extraordinary thing,—we find that spurious records can be fabricated in the present day to invent imaginary history, in order to gain the favour of those who are inquiring into the past of India. There is a plate in the Library of the Asiatic Society of Bengal which does not contain anything of the nature of a title-deed, but aims at being only a record of a purely historical character, and simply purports to record a war between the Bharrs of Bundelkhand and the Lōdhia, terminating in A. D. 1347 with the overthrow of the Bharrs. This document, while only pretending to be of the fourteenth century A. D., is written and engraved in characters which aim at being those of one of the varieties of the Aṅkika alphabet of the third century B. C.; it makes the mistake of coupling, with the use of these characters, the Sanskrit language, which was not the epigraphic language of that period; and it betrays itself as an absolutely modern production by the use of modern

12 See, more fully, Ep. Ind. Vol. VI. p. 55. I quote the details of this document from a copy of the text of it, which Mr. Rice kindly sent me.
numerals, by specifying the characters by a name, Pāñj, that was only applied to them in the present century, and by following in its spelling of the name of the Bhāraś a quite recent refinement of English transliteration. And, in connection with this curious production, we may note that, at the end of his observations on it, Dr. Rajendra Lal Mitra made a remark which is worth quoting and bearing in mind, not only in respect of this particular case, and not even only in respect of spurious records in general; he said 14 — “It might be asked what would be the object of such a piece of imposition? But from the days of Wilford there have been so many attempts of the kind made by Pādīlits, that it is scarcely necessary to dwell upon it at length. The smile of a Sahib of high rank and the reward expected are quite sufficient to account for such wicked acts.”

The reason for which the ancient spurious records were fabricated, was, in almost every case, that they should serve as title-deeds and certificates. And it is easy to trace the principal occasions for the fabrication of them. Incidental occasions, of various kinds, may have occurred at any time. The accidental loss of an original title-deed, and the feeling of insecurity resulting therefrom, might lead at once to the fabrication of another, perhaps from memory or perhaps from a manuscript copy of the original, to be substituted for it and to be produced when necessary. A public disaster might easily lead to a more extensive manufacture of such instruments; for instance, to take a modern illustration, some twenty years ago a building at Poona, containing many records and other papers, was destroyed by fire, and the courts of at least one neighbouring district were immediately afterwards inundated with forgeries, of which some were fabricated to replace genuine documents which unquestionably had been destroyed in the fire but which, it was then represented, had not been deposited in the building at all, while others were fabricated simply because the occasion gave the opportunity of putting forward claims which would have been disproved at once by genuine documents which had been destroyed. But, in ancient times, the principal occasions must have occurred whenever there was a change of dynasty, or a temporary but appreciable loss of power by local feudatories. The donative records usually contain mandates to future kings and governors to uphold grants that have been made, and beneficent and imprescriptible verses asserting the merit of continuing grants and the sin of confiscating them. And these were, evidently, no mere formulae. They were protests against the too early occurrence of what the donors plainly foresaw would happen sooner or later. We have one explicit reference to what did happen in this way from time to time, in the Nasārī grants of A. D. 915, which recite the fact that, on the occasion of his coronation, the Rāṣṭrākūṭa king Indra III. had himself weighed against gold, and, while still in the scales, gave away, not only Kurundaka and other villages together with twenty lakhs and a half of ḍrāmmas, but also “four hundred other villages which had been confiscated by previous kings.” 15 We also have an express statement in the records, that the Western Chalukya king Vikramāditya I. had occasion to restore grants to gods and Brāhmaṇs, which had been confiscated by the confederate kings from the east and south who had invaded and conquered his territory and had retained possession of it for a time after the death of his father Pulakāśin II. 16 And we may refer the spurious Kāndalingā grant (No. 27 in the list given at the end of this article), which purports to have been issued in the fifth year of Pulakāśin II., either to the period of the foreign occupation, as an attempt to prevent confiscation of a property the title to which could not be otherwise proved, or to the period after the restoration of the Western Chalukya power at Bālām, as an attempt to regain, or to fraudulently acquire possession of, the village which it claims. Again, towards the end of the eighth century A. D., the Rāṣṭrākūṭa king Dhriva had occasion to imprison the Gaiga prince of Mysore, and the province was apparently administered for some fifteen years by foreign viceroys appointed by the Rāṣṭrākūṭa king. This occurrence, also, offered two opportunities for the fabrication and production of spurious title-deeds, — one for the deception

of the Rāśṭrakūṭa governors during that period, and the other for the deception of the Gaṅga princes when their authority had been restored to them by Gōvinda III. On the downfall of the Rāśṭrakūṭa dynasty at the end of the tenth century A. D., there was another successful invasion of Western India, when the Chōlas occupied Mysore, which, otherwise, would have passed into the possession of the Western Chālukyas of Kalyāṇi, and overran the southern parts of the Bombay Presidency. The records tell us that the Chōlas then destroyed temples, and slew Brahmans and old men and children, and spilt the caste of women, and did other wrongs. Of course, they also confiscated endowments, both religious and private. And some of the spurious records from Mysore and the south of Bombay may have been fabricated during the period of that occupation, in an attempt to prevent confiscation. But a more general occasion for the fabrication of them there probably occurred later on, in the second half of the eleventh century, when, again we know from the records, the Chōla invaders were driven out, and the temples were rebuilt under the Western Chālukya kings, and there occurred a specially great opportunity to regain confiscated endowments and to acquire fresh ones.

Such were the reasons and the principal occasions for the fabrication of the large majority of the spurious records. The introduction of false historical statements into them, whether they were fabricated on such occasions or during the continuance of a dynasty, is also easily to be accounted for. The persons who fabricated the spurious title-deeds and certificates could not forge with any safety in the name of a reigning king or of one of his feudatories or officials, or even, under ordinary conditions, in the name of a very recent king of the same dynasty, or, again, of one of the feudatories or officials of such a king, unless the dynasty had suffered some reverse meanwhile. The frauds would have been detected at once, by the knowledge of local governors, or by an examination of the official records. The forgers were obliged to put forward a certain amount of antiquity. But they usually had not access to any of the official archives and chronicles. And so they had to draw upon whatever they might happen to know about past events, sked out by the power of their imagination and their ability to decipher any genuine grants that might be available to them as a guide. And this is why we meet, in these spurious records, sometimes with real kings with wrong dates attached to them, and sometimes with purely imaginary kings and fictitious pedigrees, and with alleged historical occurrences, to imitate the general style of the genuine records, which may occasionally have a basis of truth, but are nevertheless very likely even then to misrepresent occurrences of which only an imperfect memory can usually have been preserved by the people at large.

And that is the point of view from which we must regard the spurious records. We are considering them, of course, only in respect of their possible bearing upon history and all its surroundings, — putting them aside altogether, except in the general discussion of their nature and merits, in respect of the value that was intended to attach to them as title-deeds. The latter point of view is one which concerns, not the antiquarian, but only any Courts before which the ancient records may be produced as documentary evidence; and, in that connection, it is only necessary to say, in respect of the spurious records, much the same as what has

17 The generally prevailing belief in connection with the ancient records, whether on copper or on stone and whether genuine or spurious, is that they contain clues to hidden treasure. But they are sometimes produced before the authorities, or appealed to, in the expectation that they will still establish rights and privileges, and occasionally in the most shameless connection. The Pimpalwadi plates (No. 25 in the list) were produced with the idea that they would substantiate a claim to a Pidli’s union (see Vol. IX. above, p. 266). And the Haribhane plates (No. 26) were produced before the Superintendent of the Inam Settlement in support of an alleged endowment by king Bukkarraya of Vijayanagara (see Vol. VII. above, p. 185). The two sets of plates in the Bangalore Museum were found, one (No. 40) among the records of the Chief Commissioner’s office, and the other (No. 51) among the records of the Assistant Commissioner’s court: the two sets of plates from Mallobaali (Nos. 50, 51) were produced in one of the Bangalore courts; one set of plates from the Galijh district (No. 4) was received from the Collector; and the set of plates from the Karānī district (No. 8) was obtained from the Collector’s office: no doubt, these six sets, also, had been produced and filed in support of some claims. In the Madras Presidency, in particular, most of the known copper-plate records seem to have come to notice in this way; see numerous entries, describing plates as being in various courts and offices, in the Lists of Antiquities, Madras, Vol. II. pp. 1 to 83.
already been said in respect of the genuine records, namely, that, whatever may have been accomplished by means of the spurious records originally, there can be but few cases, if any, in which they have not long ago lost all effective value as title-deeds, through the dying out of the families of original holders, through confiscation, through conquest, or through any others of the changes that attend the lapse of time. We deal with the facts recited in the ancient records, whether spurious or genuine, only from the historical point of view. Some of the spurious records certainly contain a good deal of purely imaginative genealogical and historical matter. But, except in the introduction of untrue dates, there are, — as has already been intimated, — no general grounds for assuming any deliberate falsification of such items of real history as may be referred to in others of them; for the simple reason that neither the recording of history, nor the wilful misrepresentation of it, was in any way a leading object in the fabrication of them. And there are undoubtedly some historical truths in some of the spurious records. For instance, the corrupt verse in the spurious Kurtakoti and Haidarabad grants (Nos. 30 and 39 in the list), which mentions the Pallava kings Narasimhavarmam I, Mahendravarman II., and Parameswaryavarman I., in connection with the Western Chalukya king Vikramaktiya, is in perfect accordance with what we know, from other sources, regarding the actual history of the period, and in all probability represents an unskilful reading of the verse in some genuine record following a draft which has not yet come to our notice. But the Kurtakoti grant goes on to cite for Vikramaktiya I. a date in A.D. 608 (or 610), nearly three-quarters of a century before his real time, which is not based in the same way on any genuine record and can hardly be attributed to even an unintelligent reading of a genuine date. So, also, the spurious Altén grant (No. 35) puts forward for Palakésin I. a date, in A.D. 488, about the same distance before his real time; and the spurious Pimpala grant (No. 25) puts forward a still more erroneous date, in A.D. 368-69, for a king Satyásrāva, by whom it certainly intends either Pulakésin I. or his grandson Pulakésin II. We have to explain hereafter, why these particular exact years were selected in these three cases, and other similar specific years in some others of the spurious records. For the present, we have only to say that, in some cases, the persons who drafted the spurious records very likely had a rough knowledge of the approximate periods that they ought to cite, and were helped thereby in the process in which they selected the exact years. But in other cases they were plainly actuated by only a general desire to establish as great an antiquity as possible for the charters under which they sought to claim. That is why we find the spurious Srīraṅgapur inscription (No. 28), the frame of which had evidently not even a rough idea as to the period that he ought to select, putting forward so altogether absurd a date as that of A.D. 109 for a king Satyásrāva, by whom it, again, certainly means either Pulakésin I. or Pulakésin II. That is why we find the Bhinmankatī or Tirthahallī, the Bēgū, the Kuppagādeje or Sirab, and the Annapāpur or Gauj grants (Nos. 41, 42, 43, 44) postposenously claiming to have been issued by the epic king Janañāyaka, — one of them in, specifically, B. C. 3014. We find that, for the same reason, the forged grants of the Vījayamgara series usually purport to have been issued by Bukkarāya, the popularly accepted first king of the dynasty; and they further generally antedate his real time by periods varying from one hundred to two hundred years. And we find the same desire displayed even in modern times. At the temple of Mahākālti or Ambāli at Kollāpur there apparently is, or formerly was, an undated inscription which mentions three Chalukya prānc named Karna, Veṅgiddēva, and Sēnadēva, whom it connects with

18 See my Dynasties of the Kanara Districts (in the Gazetteer of the Bombay Presidency, Vol. I. Part II.), pp. 287, 382. This verse and the four verses that follow it have now been critically examined and restored by Prof. Kielhorn; see Glittmmer Nachrichten, 1900, p. 341.
19 Satyāśrāva was a brother of or nearly all of the Western Chalukyas of Bēgū. But it was certainly remembered best, in later times, as an appellation of the two Pulakésins. — Regarding the date asserted by this record, see note 59 on page 216 below.
20 For some general views on this point, see Sp. Ind., Vol. 1. p. 73. For an exact possibility in connection with the Kurtakoti date, see id. Vol. V. p. 179, note 1.
Saṅgamāśwar in the Ratnāgiri district. It was brought to notice, many years ago, by Bal Gangadhar Shastree, who obtained his first knowledge of it from the priests of the temple. And he has told us that, in the transcription which he received from one of those priests, there was interpolated an imaginary date, Śālivāhana-Saka-Saṅvat 60 (expired) = A. D. 138-39, for which, on inspection of the original, he found no authority whatever, and which, he recognised, had been inserted simply with a view to "assigning to the temple as high a degree of antiquity as possible." It is, perhaps, in the dates, more than in any other details, that many of the spurious records are so untrustworthy as sources of history. But, though it was no object of the

22 See Dyn. Kan. Diatra. p. 457, and note 1. As stated there, neither my own man, nor Mr. Comens' man succeeded in obtaining an impression of this inscription; they could not find it. And it is to be remarked that Major Graham, who published in 1834, nine years after Bal Gangadhar Shastree, while giving a translation of this record or alleged record (Statistical Account of the Principality of Kolhapur, p. 459) which was certainly not borrowed from the Shastree's translation, did not present any text of it, though he did present texts of the other inscriptions dealt with by him, -- giving, kind of reproduction of the original characters, from, apparently (see page 524), hand-copies made by a Native friend. Bal Gangadhar Shastree, however, said that the second transcription of it, obtained by him, was "carefully compared by myself with the original in the temple of Mahalakshmi, "commonly called Ambābāī, the mother," and, he added, "the analogy of the character would not justify me in "pronouncing this inscription older than the tenth or eleventh century of Śālivāhana" (Jour. Ro. Br. R. As. Soc. Vol. II. p. 263): also, his translation is headed "Translation of an inscription on a stone in the temple of the "godess Mahalakshmi" (ibid. p. 270), without, however, anything to shew whether it was on a structural part of the temple, or whether it was on a separate tablet. It is evident, therefore, that an original or alleged original, did exist in the Shastree's time, and was seen and believed in by him. As regards the merits of the record, we can only say that the versions given by the Shastree and by Major Graham do not put forward a familial date, and that there is no particular reason why there should not have been a prince Shālikya, claiming Chālukya descent, in the Koṅkaṇ, in the thirteenth or fourteenth century A. D.; for, on the plates from Torna, in the Ratnāgiri district, gives us a prince Kāmadevaṇavarāya, also represented as a Chālukya, with a date in the Bandara Sanvat-sara, Saka-Saṅvat 1182 (expired), in A. D. 1280 (see Dyn. Kan. Diatra. p. 466), and there does not seem to be any particular intrinsic reason for questioning it, unless one is perhaps to be found in the fact that it further describes Kāmadevaṇavarāya as "born in the lineage of the Karna of the Kali age," which, however, may be the origin of, and not drawn from, the other local allusions to an alleged Chālukya king Karpa. But, without a sight of the origin, or of an impression of it, it is not possible to arrive at any final conclusion as to whether any such record, as is alleged really exists or has existed at the temple of Mahalakshmi or Ambābāī, and much less as to whether it is genuine or spurious. -- R. J. Sahib V. N. Mandlik obtained from a friend at Kolhipur some verses, "which form part of an inscription on the temple of Mahalakshmi," and of which he published the text, with a translation, in the Jour. Ro. Br. R. As. Soc. Vol. XI. p. 108. These verses say that from king Chālukya there sprang Karpa, whose younger brothers were Naga and Śīgahaṇa; they put forward for Karpa the date of Śālivāhana-Saka-Saṅvat 30 (expired), = A. D. 106-107, they say that he built "this abode of Śīrā" (the temple of Mahalakshmi), and that he built also a similar temple, of Mahalakshmi, at Saṅgamāśwar in the Koṅkaṇ; they add that, after spending some years at Karavra (Koṅkāpura), to the pleasure-house of Nāmanī (Lakṣamī), he went again to control the Koṅkaṇ; and after them there was a reign of thirty years which says that "these three verses have been written and set up at the temple of Karpēvra in the holy Saṅgamāśvarakshetra." The R. J. Sahib has told us that "these verses have not been found on the "walls of the present Karpevra temple" (loc. cit. p. 104). And no such record at Koṅkāpura has been mentioned either by Bal Gangadhar Shastree or by Major Graham, or has, to my knowledge, been found there. Further, the R. J. Sahib brought those verses to notice in connection with his account of the Saṅgamāśwaratīmaya, of which he has given us the text, with a translation (loc. cit. p. 167 ff.). This work asserts that in Śālivāhana-Saka-Saṅvat 10 expired, = A. D. 38-39, there was a king Śīgahaṇapura. From him was born Śāṭakumāraka, who reigned for twenty-five years. From him, Śāṭakumāraka, who reigned for twelve years. From him, Indukriti, who reigned for eighteen years. Then there came some kings, beginning with Brahaman and ending with Chālukya, who covered thirty-four years. And Chālukya had three sons, Karpa, Naga, and Śīgahaṇa. Towards the end, the Mūkṣaṇya says that Karpa established his rule at Rāmakēttra in Śālivāhana-Saka-Saṅvat 100 expired, = A. D. 178-79 (verse 76), and that he, who had built the temple of Mahalakshmi at Karavra (Koṅkāpura), built here (in Rāmakēttra) the temple of Karpēva (verse 80). And it asserts that he granted nine villages, specified, to the temple of Karpēva (verses 73 to 74), and one to a temple of Śimēśa, and one to temples of Sāmēś and Kādēra jointly (verse 75). This Mūkṣaṇya was evidently composed partly in order to magnify the reputation of the locality and to establish antiquity for it, and, no doubt, partly to account for the possession of, or to support a claim to, the villages named in it. The verses given to R. J. Sahib V. N. Mandlik as forming part of an inscription on the temple of Mahalakshmi or Ambābāī at Koṅkāpura, may be dismissed as simply a familial epitome of part of the Mūkṣaṇya, with the introduction of a date which does not even agree with that put forward in the Mūkṣaṇya.

23 Jour. Ro. Br. R. As. Soc. Vol. II. p. 268. Through the same proclivity, perhaps, we must account for the date of Śālivāhana-Saka-Saṅvat 732 (expired), = A. D. 810-11, -- disbelieved by Mr. Sewell, -- which has been put forward, in a transcript, as the date recorded in an inscription at Bāpatī in the Kistna district (Lists of Antiquities, Madras, Vol. I. p. 82, No. 16).
persons who fabricated them to falsify real history except perhaps in respect of dates, the spurious records cannot possibly possess, with reference to any of the details asserted by them, the authoritative value that attaches to the genuine records. It is obvious that, if we accept at all any of the historical statements put forward by the spurious records, we can only admit them with great doubt, and not as in any way conclusive without very considerable corroboration from the genuine records. And it is more likely that it would be safer, as regards the historical point of view, to set the spurious records aside as curiosities, with which we can do little more than determine, if it is ever found worth while, how far the true history was known to the persons who fabricated them. In the geographical and other lines of inquiry, they may perhaps be of some more use, not for the periods to which they refer themselves, but for the periods in which they were fabricated. For instance, from the spurious Alámah grant (No. 35) we certainly gather some authentic information, for (speaking roughly at present) some time about A.D. 1000, regarding the local territorial divisions and the existence of certain towns and villages in the neighbourhood of Kōlāhpūr. But, even in such respects as these, the details given in the spurious records are not always trustworthy. For example, from one of the genuine records we know that about A.D. 900 the Kōmgajān̄d province was an eight-thousand province, — that is to say, a province including, according to fact or tradition or conventional description, eight thousand cities, towns, and villages; whereas, the spurious grant in the British Museum (No. 55) describes it as a two-thousand province, though it is not at all likely that the extent of it was altered between A.D. 900 and the time at which that spurious record was fabricated. We must, therefore, by no means place implicit reliance on the spurious records, even in connection with the miscellaneous items of information in respect of which they are more likely to be correct than in respect of historical details.

On page 214 ff. below, I give a list of the spurious records, as far as it can conveniently be completed up to date; without including the alleged Bōdh-Gayā inscription, purporting to be dated in the Vikrama year 1005 in A.D. 948, which is probably only a modern fraud, and the two specified above, — the Surādhānupura plates, and the plate in the Library of the Asiatic Society of Bengal, — which are certainly of absolutely recent fabrication, and the modern forgeries at Rāmāshāwaram seen, recognised, and mentioned by Dr. Burgess, and any other records, obviously spurious if they ever did exist, with reference of which we really do not know whether they have actually existed or not. I range the list according to the localities from which these records were obtained and at which most of them are still to be found. I include in the list some records as to the spurious nature of which there is really no doubt, though they may not yet have been actually proclaimed to be spurious. Of unpublished records, I include a few which are at my own disposal for publication. There are some others, unpublished, known to me, which I do not include, because they are not in my hands for publication, and I do not wish to anticipate whatever anyone, editing them, may wish to say about them. And I omit also a few records, as to the nature of which there may still be any possibility.

26 See Vol. XXIX. above, p. 273 ff. 27 See page 3 above, note 10. 28 From Kalviyūr in the Tirumēkkēla-Narasapur tālūka, Mysore district, we have (Ep. Cora. Vol. III., TN. 47) what purports to be a copy of a stone inscription which claims the grant of a village named Koppāl by a minister of an alleged king Vijaya-Vidya-Dvāraṇya of Anegundi (Vijayanagara) in the Pāgala satvātara, Śālavāhana-Saka-Samvat 819 (expired), in A.D. 928. This document employs the expression Śālavāhana-Saka for a time nearly four centuries before the time for which the introduction of it into epigraphic records can be established (see Vol. XXXV. above, p. 150). I may remark, here, that the supposed instances of A.D. 1173 and 1181, from the Kōrgō inscription, set aside by Prof. Kielhorn as suspicious, do really not exist; the dates in the Kōrgō inscription present the usual expression Saka-nukshaka, not Śālavāhana-Saka-nukshaka. And it uses declensional and conjugal forms, and expressions, which show that it cannot have been composed before about A.D. 1450. It may be based on some fabricated about that time. Or it may be of much more recent invention. But we are told that the stone, on which the inscription is said to have been engraved, is not now to be found, and that the copy, being supplied by the people, cannot be relied on (loc. cit. Intro. p. 22). And so we can hardly treat it seriously and place it in the list of spurious records, the present or past existence of which is established.
of doubt. I am obliged to omit the numerous forgeries of the Vijayanagara series, because I have as yet no knowledge of the details of them; apparently, they have not yet been published. And I am not able to include some spurious records, purporting to be of the time of the Rāṣṭrakūta king Kṛiṣṇa III., which are found in the neighbourhood of Saundatti in the Belgaum district; they are so palpably spurious, and so seemingly uninteresting (or, at least, I thought so), that I did not take the trouble either to transcribe them or to make impressions of them.

The principle followed in framing the list has been to include in it, with the reservation stated above in the case of some unpublished specimens, all those records more or less ancient, as far as we can trace them and as far as a final decision can now be passed upon them, (1) which present as an essential part of themselves, not simply by quotation or by a mistake which is plainly attributable to mere careless blundering, some detail or another which involves something that is palpably not true, such, for instance, as a reference to a fictitious king as the authority from whom a record has emanated, or such as the attribution of a fictitious pedigree to a real king in similar circumstances, or such as a date, not necessarily wrongly recorded in respect of its details (a point that may or may not be of importance), which is known to be false, or can be recognised as false through its being incompatible with the evident true period and general nature of the particular record; (2) which, by the characters in which they have been written, or in any other way, shew that they are not original synchronous vouchers for the matters recited in them, and which also disclose some feature or another which makes us recognise that they are not reproductions, that have received the official imprimatur, of such vouchers; (3) which, in any way whatsoever, are to be recognised as having been put together in such circumstances that, whether they were drawn up from actually fraudulent motives or not, they can only be characterised as counterfeit documents which are essentially forgeries. There are plenty of records, — like the Managūli inscription of A.D. 1161 with a passage in it dated in A.D. 1142, and like the Abhūr inscription of A.D. 1104 with a passage in it dated in A.D. 1101, and like the Siyādōni inscription, in Central India, with passages in it which present no less than ten dates ranging from A.D. 903-904 to 968-69, containing passages of various dates, which, ye can recognise, were not engraved on the stones consecutively from time to time according to the recorded dates, but were brought together and put on the stones, for the unification of titles, at the time of the latest date given in each case. Such records may be appropriately described in the terms applied by Prof. Kielhorn to the Siyādōni inscription, which he has defined as "a collective public copy of a series of deeds." The passages of them which contain the earlier dates, are not original synchronous vouchers for the matters recited in them. And they are not unquestionable and conclusive authorities for those matters; for the reason that mistakes may always be made in compiling such records. But when, as in the Managūli, Abhūr, and Siyādōni instances, we can see that the introduction of the passages containing the earlier dates has been more or less officially authorised, and there is nothing of an obviously suspicious nature in those passages, then we cannot well class the entire records as spurious records, and thereby stamp them as possibly of a dishonest nature. And, among records of this sort, there are some which include passages that do present false or fictitious matter, but which, nevertheless, are not to be classed as spurious on that account. For instance, at Aminbhāvi, in the Dhārāwār district, there was, some fifty years ago, a stone inscription of A.D. 1113, including a passage which asserts that grants were made to a temple there in A.D. 566 or 567 in the time of the Western Chalukya king Pulakēśin II. This false date, forty years before even the commencement of the reign of Pulakēśin II., was of course taken, together with the assertions connected with it, from some spurious record or incorrect archive. But there is nothing of a suspicious nature about that part of the record which belongs to the year A.D. 1113. We can see that the official who authorised the drawing up of the whole record in that year, accepted as genuine and correct the spurious record or incorrect archive relating to A.D. 566 or 567, and allowed it in good faith to be incorporated in the entire record. And there is no reason for stamping the entire record itself, put together in A.D. 1113, as a spurious record. So, also, at Kūḍāḷāpur, in the

SPURIOUS INDIAN RECORDS.  

209  
of doubt. I am obliged to omit the numerous forgeries of the Vijayanagara series, because I have  
20 had no knowledge of the details of them; apparently, they have not yet been published. And  
21 I am not able to include some spurious records, purporting to be of the time of the Rāṣṭrakūta king  
22 Kṛiṣṇa III., which are found in the neighbourhood of Saundatti in the Belgaum district; they are  
23 so palpably spurious, and so seemingly uninteresting (or, at least, I thought so), that I did not take  
24 the trouble either to transcribe them or to make impressions of them.

25 The principle followed in framing the list has been to include in it, with the reservation  
26 stated above in the case of some unpublished specimens, all those records more or less ancient, as  
27 far as we can trace them and as far as a final decision can now be passed upon them, (1) which present  
28 as an essential part of themselves, not simply by quotation or by a mistake which is plainly  
29 attributable to mere careless blundering, some detail or another which involves something that is  
30 palpably not true, such, for instance, as a reference to a fictitious king as the authority from whom a  
31 record has emanated, or such as the attribution of a fictitious pedigree to a real king in similar  
32 circumstances, or such as a date, not necessarily wrongly recorded in respect of its details (a point  
33 that may or may not be of importance), which is known to be false, or can be recognised as false  
34 through its being incompatible with the evident true period and general nature of the particular  
35 record; (2) which, by the characters in which they have been written, or in any other way, shew  
36 that they are not original synchronous vouchers for the matters recited in them, and which also  
37 disclose some feature or another which makes us recognise that they are not reproductions, that  
38 have received the official imprimatur, of such vouchers; (3) which, in any way whatsoever, are  
39 to be recognised as having been put together in such circumstances that, whether they were drawn  
40 up from actually fraudulent motives or not, they can only be characterised as counterfeit documents  
41 which are essentially forgeries. There are plenty of records, — like the Managūli inscription of  
42 A.D. 1161 with a passage in it dated in A.D. 1142, and like the Abhūr inscription of A.D. 1104 with  
43 a passage in it dated in A.D. 1101, and like the Siyādōni inscription, in Central India, with passages  
44 in it which present no less than ten dates ranging from A.D. 903-904 to 968-69, containing passages  
45 of various dates, which, ye can recognise, were not engraved on the stones consecutively from  
46 time to time according to the recorded dates, but were brought together and put on the stones, for  
47 the unification of titles, at the time of the latest date given in each case. Such records may be  
48 appropriately described in the terms applied by Prof. Kielhorn to the Siyādōni inscription, which  
49 he has defined as "a collective public copy of a series of deeds." The passages of them which contain  
50 the earlier dates, are not original synchronous vouchers for the matters recited in them. And they  
51 are not unquestionable and conclusive authorities for those matters; for the reason that mistakes  
52 may always be made in compiling such records. But when, as in the Managūli, Abhūr, and Siyādōni  
53 instances, we can see that the introduction of the passages containing the earlier dates has been  
54 more or less officially authorised, and there is nothing of an obviously suspicious nature in those  
55 passages, then we cannot well class the entire records as spurious records, and thereby stamp  
56 them as possibly of a dishonest nature. And, among records of this sort, there are some which  
57 include passages that do present false or fictitious matter, but which, nevertheless, are not to be  
58 classed as spurious on that account. For instance, at Aminbhāvi, in the Dhārāwār district, there  
59 was, some fifty years ago, a stone inscription of A.D. 1113, including a passage which asserts that  
60 grants were made to a temple there in A.D. 566 or 567 in the time of the Western Chalukya king  
61 Pulakēśin II. This false date, forty years before even the commencement of the reign of  
62 Pulakēśin II., was of course taken, together with the assertions connected with it, from some  
63 spurious record or incorrect archive. But there is nothing of a suspicious nature about that part  
64 of the record which belongs to the year A.D. 1113. We can see that the official who authorised  
65 the drawing up of the whole record in that year, accepted as genuine and correct the spurious  
66 record or incorrect archive relating to A.D. 566 or 567, and allowed it in good faith to be  
67 incorporated in the entire record. And there is no reason for stamping the entire record itself, put  
68 together in A.D. 1113, as a spurious record. So, also, at Kūḍāḷāpur, in the

20 See page 212 below.  
21 See page 217 below, note 65.  
22 Ibid. p. 213.  
Mysore district, there is an inscription,36 which purports to have been written and engraved in A. D. 1148, and which includes a passage that asserts a previous grant of the village in A. D. 104 by "Koṅgaṇīvarman, the first Gaṅga." Hereto, it is extremely doubtful whether the entire record is a genuine record, really drawn up in A. D. 1148. But we waive that point at present. And, assuming that the entire record was really drawn up in A. D. 1148, we have only to say that, in respect of the assertions about the year A. D. 104, it simply puts forward, in good faith, a false statement successively palmed off on the officials of A. D. 1148 by someone who was interested in setting up a previous assignment of the village, and that the entire record is not to be stamped as a spurious record simply because it quotes that false matter; to which we have to add that historically, as regards the Gaṅgas, the entire record, whether genuine or not so, is worthless, except in perhaps showing that, by A. D. 1148, the specific date of A. D. 104 had come to be connected with the imaginary Koṅgaṇīvarman. Again, to take a somewhat different case, at Komūr, in the Dhārvār district, there is an inscription,37 written about the middle of the twelfth century A. D., which purports to record that the Rāṣṭrakūṭa king Amoghavasāha I. made certain grants to a temple at that village in A. D. 860. This record gives a true and correct date for Amoghavasāha I. But it misstates the relationships of some of the Rāṣṭrakūṭa kings whom it does mention, and omits others whom it ought to have included; and also, probably from misinterpretation of some verse which we have not as yet found in a genuine record, — it places at the head of the Rāṣṭrakūṭa genealogy a purely fictitious person, whom it calls Prichhehbhakara-raja. And, in view of these mistakes in connection with the Rāṣṭrakūṭas, we do not know how far it may be trusted in respect of what it says regarding the feudatory family of the Mukula princes. It does not, however, make any pretence of having been written and engraved on the stone in A. D. 860. It distinctly asserts that it is only a reproduction of a copper-plate charter, which, presumably, did claim to have been written and issued in A. D. 860, and quite possibly was so written and issued. We accept that assertion, and account for the mistakes in the record by assuming either inability to decipher the characters of the original charter correctly, or indifference about taking the trouble to read it carefully. And, therefore, while setting the record aside as unreliable for historical purposes, we do not stamp it as a spurious record in the sense in which the records included in the list are spurious. Again, at Naregal, in the Rūn tāluka, Dhārvār district, there are two inscriptions38 which might easily be taken as seeming to connect dates in A. D. 949 and 950 with the Western Chalukya kings Vikramāditya VI. (A. D. 1076 to 1126) and Perma-Jagadēkamalla II. (A. D. 1138 to 1149) and with a feudatory of those kings. But that is not their real purport. The first of them recites that, in the reign of Tribhuvanamalla-(Vikramāditya VI.), while the Sinda prince Permaḍī I. of Yelgara was governing his hereditary territory, a religious discourse was held, in the course of which Permaḍī I. decided that every religious grant ought to have its charter.39 And it then proceeds to state that, in Saka-Saṅvat 872 (current), in A. D. 949, a temple of the Mālakṣaṇa god was founded at Narayanagāl, and a village-headman named Munḍeyara-Srīvantagavunjī gave some land to a Brāhmaṇa for the purposes of that god, as a grant to the god Paramāvāra. This record does not really purport to connect the given date with Vikramāditya VI. and Permaḍī I. It only puts it forward as the alleged date of the founding of the temple, and of the granting of the first property that is claimed by the record. The second of these two records recites, according to strict interpretation, that, in the reign of Jagadēkamalla II., while the Sinda prince Permaḍī I. was governing his hereditary territory, in Saka-Saṅvat 872 (expired), in A. D. 950, a resident of Narayangāl, named Hiriyahannasina-Tippakayya, gave some land to a Brāhmaṇa for the god Tippanēvāra. By literal translation, this record does put forward the given date as a date of Perma-Jagadēkamallā II. and

36 Ep. Carn. Vol. III. Nl. 120.
39 The words in text line 34 ff., — Purnamāśada-varanat...purikānam-saṇa dharmasau-gaṇaṁ-śā-dālī dharmasau-gaṇaṁ-śā-dālī sa[44] sa-namā-dāla-veṛkham-sudha kṛṣṇapram-paṇaḥ — should be rendered by "Purnamāśada-varanat...while preserving the ancient ordinances, was kind enough, on the occasion of a discourse about religion, to say that there ought to be a charter for all religious gifts; and therefore." And then, to introduce what follows, there should be understood any such words as "it was placed on record that."
Permadji I., because it does not include the passage about the propriety of providing all religious grants with their charters. But it was obviously intended to be read in connection with the other record, and to be understood as implying that it was put on the stone under those same circumstances. And it, evidently, simply puts forward the alleged date of a grant made before the time of the above-mentioned king and prince. Accordingly, whatever may be the truth here, as in the Konnur inscription, as to the alleged facts, these two records, also, are not to be classed as spurious records. On the other hand, there are two inscriptions at Lakshmihawar (Nos. 37 and 38 in the list), written during the eleventh century A. D., which recite grants alleged to have been made to local temples in A. D. 687, 728, 730, 735, and 968-69, and which do not put forward any such explanation as that given in the Naregal inscription, and do not suggest in any way that they are merely copies or substantial reproductions of original records, but read distinctly as if the various passages were written and engraved in those years. It is quite possible that these two records recite real grants, brought together for the unification of titles. And, to what has been already said elsewhere about them,—in the way of pointing out that, though they are spurious records, they are questionable as dishonest ones only in so far as they may put forward fraudulent claims to property, and a fairer measure of the writers of them have substituted names of properties and grantees and other details, to suit their own purposes, for original names and details standing in original genuine charters,—it may be added that the omission to introduce the names of subordinates in the dates of the Western Chalukya passages of A. D. 687, 723, 730, and 735, is decidedly suggestive that genuine original charters may have been reproduced in those passages, and may have been transcribed correctly as well as intelligently. But we know, from the characters, that the various passages were not written and engraved on these stones at the times at which, from the absence of any hint to the contrary, they distinctly purport to have been written and engraved, and that, therefore, they are not original synchronous vouchers for the matters recited in them. Also, the irregular order in which the passages were arranged, indicates pretty plainly that these records were not drawn up under any official supervision: on one of the stones, there stands first a passage of A. D. 968-69, then there comes an undated passage, apparently intended to belong to the period A. D. 600 to about 642, and then follows the passage of A. D. 735; on the other, the passages stand in the order of A. D. 723, 730, 968-69, and 687. And further, that one of them which commences with the passage of A. D. 968-69, presents in that passage a part of the fictitious Western Gaiga pedigree as an essential part of the record, and thus introduces matter which we know to be false and which shows that that passage was at any rate not simply reproduced from a genuine record of A. D. 968-69. And these facts stamp that record as a spurious one, and bring its companion into the same category. Again, the Devagiri inscription (No. 29 in the list), which is referable to the tenth century A. D., probably records a perfectly genuine bit of local history of that period. But it is preposterously and falsely dated in A. D. 600; and it reads as if it was drawn up and engraved in that year. And these facts turn it into a spurious record. So, also, the Gahtavadi inscription (No. 45) may recite items of local interest which are true and correct for the period to which it really belongs. But, whereas it was really drawn up and engraved at some time about A. D. 1000, it is falsely and still more preposterously dated in A. D. 192-93; and it reads as if it was drawn up and engraved then. And these facts make it, also, a spurious record.

In examining the list, we detect one noteworthy point in the fact that, out of a total number of fifty-nine spurious records, only five are on stone (Nos. 28, 29, 37, 38, and 45); all the rest are on copper-plates. The reason for this is not far to find. The stone records of India mostly stand in very conspicuous places. Even spurious records on stone would have to be exhibited in the same way. And, except occasionally inside the precincts of temples, the establishments of which might include individuals qualified for each step in the manufacture of such records,—both the preparation and the erection of them would entail a great amount of publicity, and the connivance of many more persons, including at least village-officials, than those actually interested in the successful accomplishment of the fraud. On the other hand, the fabrication of a copper-plate charter, which remains in
obscenity in private hands until the time when it is actually wanted for production, is a hole-and-corner business, easily confined to one or two accomplices,—one of whom, the artisan who does the engraving of what is traced on the plate by the writer, need not know anything about the purport of what he is doing. And, for these reasons, the spurious records of India, or at any rate such of them as were fabricated from fraudulent motives, will, no doubt, always be found far more frequently on copper than on stone.

Another point which attracts attention, is, that, though the spurious records are found in many different provinces and districts, we have obtained a comparatively large number of them from Mysore. Out of the total number of fifty-nine, no fewer than nineteen (Nos. 41 to 59) come from that province and belong to it; while two more certainly (Nos. 10 and 40), and perhaps also a third (No. 11), belong properly to that same province, as they claim to convey villages in the territories from which the province has been formed, and they must have originated there and travelled from those villages to the places where they have been found. Thus, twenty-one, at least, of the fifty-nine spurious records originated in Mysore. And the spurious records of Mysore include some of the most barefaced specimens (Nos. 41 to 44), purporting to be nearly five thousand years old. It does not necessarily follow that the practice of fabricating spurious records was always more rife in Mysore than in other parts of the country: we can only compare the numbers of known specimens; and we do not know how many spurious records still remain to be discovered and allocated elsewhere as well as there. But the fact stands, that Mysore, or some particular part of it, has on various occasions been markedly prolific in the production of epigraphic forgeries,—roughly about nine centuries ago, and in connection with certain historical occurrences which have been glanced at above. And, apparently, some neighbouring part of the country has, somewhat later, been still more productive of the same class of documents; since Mr. G. R. Subramiah Pantulu tells us that the forgeries of the Vijayanagara series are probably nearly as plentiful as the genuine grants, which, he says, are themselves extremely numerous.

And finally, fifty-six, at least, of the fifty-nine spurious records shown in the list, distinctly claim to be title-deeds of landed property. As has already been intimated, they are not necessarily all fraudulent title-deeds, fabricated in order to substantiate false claims. But, at the best, they are all spurious title-deeds, not issued by the authorities by whom they purport to have been issued. Thirty-seven of these spurious title-deeds (Nos. 1 to 11, 22 to 27, 30, 32 to 36, 39, 40, 42

---

41 We have a pointed instance of the way in which copper-plate records are liable to travel, in the Vakkaléti plates, which contain a charter issued by the Western Chalukya king Kirtivarman II. In A.D. 752 (Ep. Ind. Vol. V. p. 269). The grant was made, and probably the plates themselves were prepared and issued, at a camp at a certain town in the Shilapuri district; namely, at Bhapalgarwitej age on the northern bank of the Bhimarathi, which is the modern ‘Bhimdarkowale’ of the Indian Atlas sheet No. 40 (1852), and the ‘Bhandar Kavtha’ of the same sheet, N.E. (1866),—representing, no doubt, Bhasalira-Kaushiya,—on the north bank of the Bhima, in lat. 17° 27', long. 75° 44'; about twenty miles south-west from Shilapuri. The charter conveyed a village in the immediate vicinity of Hangle in the Dharmyar district. The grantee must have resided somewhere close to the property that was given to him, and must have had the plates in his possession at his residence. And the plates have eventually come to light from a village in a distant part of Mysore.—The fact is, the find-places of the copper-plate records frequently have no connection with the records themselves, and do not help us except in indicating the localities in which we may look first in endeavouring to identify places named in those records. The fact that a record on copper is found at a certain place, does not establish the sovereignty, in that part of the country, of the king who made or authorised the grant, unless the property itself, granted by him or by his authority, is identified there. And we shall have, some day, to rename all the copper records according to the properties that they conveyed. The so-called Vakkaléti plates would be more correctly described as the Sulilýtri grant.

42 The records make this quite clear, even when the villages claimed by them cannot be actually identified. Vol. XXVII. above, p. 277. — We must, of course, await further information, before we can allocate the forgeries of the Vijayanagara series, we have to learn where they come from, and to determine the places in which they originated. — As regards any question of general comparison, according to the numbers actually before us, Madras presents, up to date, nominally twenty specimens (Nos. 2 to 21), without including any of the Vijayanagara series. The Madras Presidency, however, is a very large territory. Out of the twenty specimens obtained in it, one certainly (No. 10), and perhaps also another (No. 11), originated in Mysore. And ten others (Nos. 12 to 21) really reduce themselves to only two separate and distinct acts of forgery,—one represented by the two plates dated in A.D. 1686, and the other by the eight plates dated in A.D. 1689. — The Bombay Presidency presents seventeen specimens (Nos. 22 to 38), spread over the Presidency itself and the Native States which are more or less inherent parts of it.
to 44, 46 to 48, 53 to 55, and 57 to 59) claim grants of entire villages. And nineteen of them (Nos. 12 to 21, 28, 31, 37, 38, 41, 49, 50, 52, and 56) claim allotments of land not amounting to entire villages. One other (No. 45) seems to be a record of the same kind, as it apparently claims to define and mark out lands set apart as the remuneration attached to the office of village-headman. And to this list of fifty-six or fifty-seven spurious title-deeds, we ought in all probability to add one more (No. 51); but we may set that aside as undetermined, on the grounds that the essential part of it is illegible. Only one of the total number of fifty-nine spurious records, namely the Dêvâgêri inscription (No. 29), does not claim any landed property, but purports to be the certificate of the right to perform a certain sacrifice. Fifty-six, at any rate, of the fifty-nine shown in the list, are spurious title-deeds. Fourteen of them claim religious grants. Of these one (No. 3) names a Saiva priest as the donee, on behalf of a village-god; one (No. 26) does not name any individual donee, but claims a village for the purposes of the worship of a form of Siva and for sustentation by ascetics residing in the temple of the god; another (No. 41) similarly does not name any individual donee, but claims the grant of a property to ascetics for the purposes of the worship of the god Sirâkâma; five (Nos. 23, 24, 27, 32, and 34) claim grants of villages to Brâhmans for the purpose of the celebration of certain specified sacrifices; five (Nos. 31, 35, 37, 38, and 40) claim grants of villages and lands to Jain priests on behalf of Jain temples; and one (No. 57) claims the grant of a village on behalf of a Jain temple, perhaps with, perhaps without, the indication of a Jain priest as the actual donee. Forty-two of the records have no connection with religion, but claim properties on behalf of private individuals. One of them (No. 7) specifies a minister as the donee; one (No. 28) claims a grant of lands to village-headmen; two (Nos. 46 and 49) claim grants, to the son of a village-headman and to a banker or merchant, in recognition of prowess in battle; another (No. 48) claims a grant to the son of a village-headman in recognition of some personal service apparently rendered in battle; twenty-seven (Nos. 1, 2, 4 to 6, 8 to 11, 22, 25, 30, 33, 36, 39, 42, 43, 44, 47, 50, 52, 53, 54, 55, 56, 58, and 59) claim grants to Brâhmans for themselves; and the remaining ten (Nos. 12 to 21) claim other individual properties. And one more (No. 45), which, again, has no connection with religion, seems to claim property partly as a private and partly as an official holding, as it apparently purports to mark out and define land attached to the hereditary office of village-headman.

These remarks complete all that need be said for the present about the spurious records. There are certain other records, which are of doubtful authenticity or value. Some of them will probably, on fuller examination, have to be included in the list of spurious records. Some of them are, by their own admission, reproductions of original records; and we have only to decide how far the historical and other matters put forward in them may be accepted as authentic. And others of them, while not admitting that they are reproductions, plainly are such, with, in some cases, the evident introduction of matter that cannot have been in the originals. And there are also genuine records which have been tampered with, in order to make them serve purposes other than those originally intended by them. A pointed and easily recognisable instance of this last class of records, is the Sâmângad grant of A.D. 754.44 It originally granted a certain specified village in the Koppara five-hundred district. The historical matter in the record has not been tampered with; nor the date of it; nor the name and other particulars of the original grantee; nor even the name of the district. But the name of the village that was granted, and the names of the villages mentioned in defining the boundaries of it, have been altered. And so, though we can identify the substituted villages, we are not able to say that the identifications are of any use, from the geographical point of view, in locating the district. The records of doubtful value will be dealt with on some subsequent occasion.

44 Vol. XI. above, p. 166; and see Dyn. Kan. Distra p. 390. So, also, the Pailhan grant of A.D. 794 was tampered with in respect of the names, etc., of the grantees (see Ep. Ind., Vol. III. p. 196, note 7): and the Dêgâl grant of A.D. 940 was tampered with in respect of the village granted and its boundaries and district, as well as in respect of the name, etc., of the grantee (see id. Vol. V. p. 199, note 2). For a spurious record apparently treated in the same way, see note 47 on page 214 below.
A LIST OF SPURIOUS INDIAN RECORDS.

BENGAL PRESIDENCY.

Gaya District.

1. — The Gayā plate, which claims that Samudra Gupta (Early Gupta) granted to a Brāhmaṇ, duly specified by his name and gōta and dākhā, a village named Rēvatīka in the Gayā vishaya, in the (Gupta) year 9, in A. D. 328. — Published, Gupta Inscriptions, p. 254.

MADRAS PRESIDENCY.

Gaṇjām District.

3. — The Chicacolo plates, which claim that Satyavarman, son of Devendravarman (alleged Eastern Gaṅga of Kaliṅgānagara), granted to a Gūraka or Saiva priest, as an agraḥāra of the grāmasīra or tutelary village-god and as a Saivasīrācāra or Saiva property, a village named Tārugrāma in the Gakela vishaya, in the year 351 of the Gaṅgāya race, in A. D. 941-42. — Published, Vol. XIV, above, p. 10; and see Dyn. Kan. Distrs., p. 297, notes 6, 8.

4. — A set of plates which claims that Prithivivarman, son of Mahindravarman (alleged Eastern Gaṅga of Kaliṅgānagara), granted to a Brāhmaṇ a village, the name of which is doubtful, in the (?) Janūra vishaya. — Published, Ep. Ind. Vol. IV, p. 108.

Visagapatam District.

Kistna District.

6. — The Pedda-Cherukuru plates, which claim that a king Vīșṇuvardhana (Eastern Chalukya of Veṇgi; apparently Vīșṇuvardhana II, is intended) granted to a Brāhmaṇ an agraḥāra named Iṣkuhu or Iṣkuhpura, of which he was a resident.

7. — A set of plates which claims that Vīșṇuvardhana-Tāla (alleged Eastern Chalukya of Veṇgi) granted to a minister of his named Kuppayanaya, of the Pallava lineage or of the lineage of Pallavamalla, a village named Śrīpūṇḍi (with perhaps some other properties) in the Velanāḍu vishaya.

Karnāl District.

82 Except when the contrary is noted, it may be understood that the records always give names and other details sufficiently to fix the identity of the alleged grantee more or less fully, and so to enable the holders of the records to establish their claims by producing pedigrees or other evidence.

83 Here the alleged grantee are simply mentioned as "three hundred Brāhmaṇs of the Vājasāñyā charaṇa and many gōtras."

84 There are some indications, in lines 8 and 12 to 14 of the text, that, in addition to the record being originally a fabrication, it was subsequently tampered with, so as to claim a property other than that which was at first claimed by it.

85 This record is mentioned in Sewell's Lists of Antiquities, Moderns, Vol. I. p. 84. I quote it, however, from ink-impressions, for which I am indebted to Dr. Hultzsch.

86 I quote this record also, from ink-impressions received from Dr. Hultzsch.
North Aroor District.

Tanjore District.

Coimbatore District.

11. — Tho Kômaralingam plates, which claim that Râvîdatta (an alleged descendant of Punnâtârâjâ or of the kings of Punnâla) granted to some Brâhmaṇa a village named Punganâgo in the east-central district in the Kuḍugâr sad in the Punnâda vishaya, and other villages, or share in other villages, named Koḻir, Koḍamânu, Dvârajeyânur, Taṇâgundâr, and Pâṭal, — Published, Vol. XVIII. above, p. 382; and see Ep. Ind. Vol. III. p. 163, note 2.

Miscellaneous.52

13 to 21. — Ten plates in the Central Museum at Madras, of which the general purport is as follows. They recite that a certain Vîra-Sâṅgâravîyân (alleged Chôla) had constructed an agraḥàra for Aýakâyâr, Aýakâyâr, or Aýakapâyâr, and an agraḥàra for Dirunipuram-Kîjapamâchchhariyân; but another king came and destroyed the agraḥâras, and, on the sites of them, dug a tank, and constituted a district named Pâñçhapenmânu, Pâñçhapapânû, or something like that, consisting of four divisions, one of which was a village named Mantâvotâ, Mantâvotâ, or something like that.

This is the modern Varâkoṭu, in the Mysore district and tâluka.

51 Kômaralingam, or Kumâralingam, is the 'Comarigum' of the Indian Atlas sheet No. 62 (1816), in lat. 10° 29', long. 77° 25', in the south of the Coimbatore district. The record, however, has not necessarily any connection with that part of the country, except in respect of having been found there. And the details given in it distinctly allocate it elsewhere. — Punnâla or Punnâ is well known as the name of a six-thousand province, — (on the point that it was a six-thousand, not a ten-thousand, see Ep. Ind. Vol. VI. p. 62, note 7), — which was a division of the territories of the Western Gaṅgas of Taḷâkâd. The Punnâla or Punnâla six-thousand included some of the extreme southern parts of Mysore, below the Lakshmanathri and the Kâveri, inclusive of the Gupplûpâ tâluka. The Kuḍugâr sad of this spurious record seems likely to be identical with the Kuḍugâr sad of certain other records. An inscription of A. D. 1315 (Ep. Carol. Vol. IV., Gu. 11) speaks of "the Vâryâna agraḥatâ or the Kuḍugâr sad, "Kâlaṇâmba, the present day exist as a town about six miles east of Gupplûpâ. And it thus becomes possible that the Kodamânu or Koḍamânu of the spurious record may be the modern 'Kodâsâga', about seven miles towards the south-east from Gupplûpâ. This identification, of course, cannot be looked upon as at all final; especially, as we cannot find, in that neighbourhood, any others of the villages mentioned in the record. And we have still to decide whether the Punnâla or Punnâla six-thousand was the whole of the Punnâla country, or was only a part of it. However, the record specifies "the people of the ninety-six-thousand vishaya," that is to say the Gaṅgâvîyân ninety-six-thousand of the Western Gaṅgas, as the witnesses to the grants asserted by it. And this closely connects the record with Mysore. — The grant purports to have been made when Râvâdatta was encamped at a town named Kâlitâpuram, probably by mistake for Kâlitâpuram. This town is not necessarily to be placed either in the Kuḍugâr sad or in the Punnâla vishaya. Mr. Rice has proposed (Mysore, revised edition, Vol. I. p. 312, note 6, and Vol. II. pp. 229, 289) to identify it with the modern Kâlitâr, a large village on the right bank of the Kâmâni, about seven miles south of Hoyâprâddârâkâmâ in the Mysore district, and twenty-seven miles towards the west-north-west from Gupplûpâ. And, as there is an inscription at Kâlitâr, dated in A. D. 1579 (Ep. Carol. Vol. IV., Hg. 52), which speaks of the place as "the eturnal town Kâlitâmohinapurâra which is Kâlitâr," the proposal seems likely to be correct.

52 A remark in Archael. Surv. South. Ind. Vol. IV. p. 187 indicates that there are three more spurious copper-plate records in the Museum at Madras, the contents of which are still to be made known. And the same volume seems to include two other spurious records on copper; namely, on page 107, No. 29, a plate in the District Court of Madura, which purports to be dated in A. D. 1583; page 182, No. 12, of the plates in the Madras Museum, which purports to be dated in A. D. 1456; and page 181, No. 55, not dated; they do not appear to contain any matter of any particular interest from the historical point of view.
And they then either claim the subsequent reallocation of portions of the said village, or else specify portions of it as belonging to alleged descendents of alleged original grantees. Two of these plates connect with Vira-Sangudu-dayan the date of Kaliyuga-Samvat 4187 (expired) and Saka-Samvat 1068 (expired), in A.D. 1086; and the other eight give a date three years later, in A.D. 1089. — Published, *Archaeol. Surv. South. Ind.* Vol. IV. p. 187 ff.

**BOMBAY PRESIDENCY.**

**Kāthiaśvār.**

**Kairā District.**

**Broach District.**

**Khāndēśa District.**

25. — The Pimpalkhār plates, which claim that Satyāśraya (i.e. Pulakēśin I. or II.; Western Chalukya of Bādami) granted to some Brāhmaṇs the town of Fippalasagara in Saka-Samvat 310 (expired), in A.D. 388-89. — Published, Vol. IX. above, p. 293; and see *Dyn. Kan. Distra.* p. 344, note 6.

**Nāsik District.**

53 Some of them name the alleged holders; the others apparently leave it to be assumed that the person who could produce one of the plates should be taken as the possessor of the property named in it.
54 This is the ruined village, known as "old Dhinikī," in the Ochhämpanal division; and Bhūmilikā is Bhūmil, Bhūmbhīri, or Bhūmī; a deserted capital in the Bara hills (see Vol. XII. above, pp. 152, 153, 154).
55 This is the modern Nagdū, near Kamūraj or Kamrūj (Kamapāla) which is somewhere near Surat (see Vol. XVII. above, p. 184, and note 5).
56 This is the modern Bāivī, in the Asīkhiāwar tālūka (see Vol. XVII. above, p. 193, note 37).
57 See also note 69 to No. 33 on page 217 below.
58 This is the modern Pimpalkhār itself, the head-quarters of the Pimpalkhār tālūka.
59 The explanation of this date may possibly be found in the Kalachuri or Chōli era, with the epoch of A.D. 248-49, which, we know, was still current in the northern territories of the Western Chalukyas of Bādami up to A.D. 739; for, A.D. 248-49 + 310 = A.D. 558-59, in the true period of Satyāśraya-Pulakēśin I. (see Vol. XVII. above, p. 193, note 37).
60 This is the modern Belgām-Tarājī, in the Igatpuri tālūka.
61 No names or any other details are given.
62 The characters of this record are good; and the language and orthography are mostly correct. But the record allots to Pulakēśin II. the well-known charger of his son Vikramāditya I., Chitrakathā, which, moreover, is misnamed Kāthiāśivāra. And, as only for that reason, the record must now be finally relegated to the list of spurious records. The Dharāśraya-Jayasimhavarman whom it puts forward, seems to have been evolved out of the real person of that name, a son of Pulakēśin II.
27. — The Kândalaon plates, which claim that Pulakâsin I. (Western Chalukya of Badâmi) granted to a Brâhman for sacrificial purposes a village named Pirigîpa in the territory of Râvatidvipa, in the fifth year of his reign, in A. D. 614. — Published, Vol. XIV. above, p. 380; and see Dyn. Kan. Distra. p. 358, note 1.

Belgaum District. 63

28. — A stone inscription at Scraûgpur near Samadatti, which claims that Satyâsraya of the Chalukya race (meaning, no doubt, Pulakâsin I. or II.; Western Chalukya of Badâmi) granted some land to the village-headmen of Modâlür as remuneration for the discharge of their duties, in the Vilambin samîôtsuras, Saka-Saîvat 31 (expired), in A. D. 109. — Not yet published.

Dhârwar District.

29. — A stone inscription at Dêvâgâri, which records that the Mahâsamantâdhipati [Sâ]jâivarman, of the Màjrâ race, came to the village of Palûr in the Kâlâyuktû samîêtsuras, Saka-Saîvat 522 (expired), in A. D. 600, and granted to the villagers the right to perform a certain sacrifice, in return for their supplying forage for his horses and elephants. — Not yet published; noticed in Ep. Ind. Vol. V. p. 172, and note 2.

31. — The Sôdi plates, which claim that Bûtuga II. (Western Gaiga of Tâlakâd), at the request of his mistress Divâlambâ, granted to a Jain some land at Sânctî in the Sûtvâvat seventy (i. e. the Kisukâd seventy) for the purposes of a Jain temple at that village, in the Vikârà samîêtsuras, Saka-Saîvat 860 expired, in A. D. 938. — Published, Ep. Ind. Vol. III. p. 158; and see Vol. XXIV. above, p. 187, No. 75, note 13, and Ep. Ind. Vol. V. p. 167, note 2.

Miscellaneous.

32. — The set of plates of the Library of the Bombay Branch of the Royal Asiatic Society, which claims that Dharasâna II. (Maitraka of Valabhi) granted to Bûtuga for sacrificial purposes a village named Nandisarka or Nandisaraka in the Kantârâgravàna sixteen-hundred vihaya, in Saka-Saîvat 400 (expired), in A. D. 478. — Published, Vol. X. above, p. 277.

33. — A set of plates, which claims that a king Krîshna (evidently intended, as mention is made, before him, of Dantidurga, Amâhavarsha, Góinda, and Pâlîgadêva, i. e. Baddigadêva, Vâdigidêva, to be Krîshna III., Râshtrakûta of Mâlkhâd) granted to eighty-four Brâhmañs a village or other place named Khairôdîsthâna, in Saka-Saîvat 633 (current), in A. D. 710. — Not yet published.

64 Râvatidvipa was a territory which took its name from the ancient form of the name of the modern Rûjâ in the Vengûla tâluka (see Dyn. Kan. Distra. p. 347, and note 2).

65 At Hirî-Kunani and Sattigeri in the Parasaqâ tâluka of this district, and at Sûrkôr or Sûrkôr in the neighbouring Bândurg State, there are spurious copper-plate charters, without dates, which purport to have been issued by a king Krîshna-Kanhâra who is intended for the Râshtrakûta king Krîshna III. They have been noticed in Dyn. Kan. Distra. p. 356, note 6. But I have not any further details about the contents of them.

66 This is the modern Madîr, close to Sûrângipur. — The record does not put forward the names of the village-headmen.

67 This is the modern Kurtakôti itself, in the Gadag tâluka.

68 This is the modern Sôdi itself, in the Rûjâ tâluka.

69 Apparently from Khânhâra or somewhere in that direction. They were sent to me, for examination, by the Rev. J. E. Abbott, in 1887. As regards the date put forward in them, with Saka-Saîvat 633 (expressed in words) there is coupled the Sârvadhrâ (i.e. Sârvadhârin) samîêtsura. But Sârvadhârin would be S. - S. 613 current by the northern luni-solar system, or S. - S. 611 current according to the southern luni-solar system. The name appears to be a mistake for Sâdhâra, which would be S. - S. 633 current according to the southern luni-solar system.

70 No names or other details seem to be given.
Baroda State.

Kolkhurpur State.

35. — The Altem plates, which claim that Pulakotin I. (Western Chalukya of Badami) granted to a Jain priest for the purposes of a Jain temple at Alaktakanagari (Altem), the chief town of a seven-hundred district in the Kuhundra vishaya, allotments of land at Narindaka and other villages, and also Buvika and three other entire villages, in the Vihaha samratasara, coupled with Saka-Samvat 411 expired, by mistake for 411 current or 410 expired, in A. D. 488. — Published, Vol. VII. above, p. 209, with a lithograph in Vol. VIII. p. 340; and see Dyn. Kan. Dist. p. 344, note 6, and Vol. XXIX. above, page 278.

Miraj State.

37. — The stone inscription at Lakshmesvar, within the limits of the Dharwar district, which claims that Nalambantaka-Marasinha II. (Western Gaiga of Talaakad) in Saka-Samvat 890 (expired), in A. D. 968-69, and Vikramaditya II. (Western Chalukya of Badami) in Saka-Samvat 656 expired, in A. D. 735, granted allotments of land at Puligore or Pulikaranagara, i.e. at Lakshmesvar itself, to Jain priests for the purposes of Jain temples at that place, and that Duriganta (alleged Sena), in the time of Satyashraya, meaning, apparently, Pulakotin II. (Western Chalukya of Badami, A. D. 609 to about 649), granted some land for the purposes of one of the same temples. — Published, Vol. VII. above, p. 101; and see Ep. Ind. Vol. VI. p. 80 ff., and page 211 above.

38. — Another stone inscription at Lakshmesvar, which claims that Vijayaditya (Western Chalukya of Badami) in Saka-Samvat 645 expired, in A. D. 723, and again in S.-S. 651 expired, in A. D. 730, and Nalambantaka-Marasinha II. (Western Gaiga of Talakad) in S.-S. 890 expired, in A. D. 968-69, and Vinayaditya (Western Chalukya of Badami), in S.-S. 608 expired,

11 This is the modern Bagumra itself, in the Paasha taluka of the Nausari district; see where published, page 184.
12 I have previously treated this record as claiming to have been issued by Amoghavarsha II., son of Indra III. (Dyn. Kan. Dist. p. 416, note 6). The case, however, is as follows. The record takes the genealogy from Dantidurga to Indra III. Then, after two verses about him which contain nothing of any importance, there comes the passage: — Yachya cha sri-Kirtinatrajanah sri-Manjunatrinetrab sri-Rajamartiottajab sri-Rajakandipatiyab samahhabavat Sa cha paramabhajitena kshi Amoghavarshadivah Yeleyavatipama-graha(m) maharajajihirajab datavram. And, comparing the corresponding passages in the S ogóln grant of A. D. 935 (Vol. XII. above, p. 254, text line 23, and p. 251, line 35 ff.) and the Kharja grant of A. D. 973 (ibid. p. 265, line 26, and p. 266, line 37 ff.), we now see that the record puts forward Amoghavarsha, wrongly, — with Kirtinatraja and Rajamartta and Rajakandipati, correctly (see Ep. Ind. Vol. VI. p. 176), — as a brother of Indra III., and that it thus claims to have been issued by Indra III. — It may be added that the record asserts that, when he made the grant, Amoghavarsha, i.e. Indra III. had come to Kurunda for the festival of his coronation. This place is mentioned, in the same connection, as Kurunda, in the Nausiri grants of Indra III.; issued in A. D. 915. It is evidently the modern Kurundwad, about twenty-three miles on the east of Kolkhurpur.
13 The alleged grantees are mentioned as "Madhavachanvaraditkshita of the Kamajja lineage and the Kayapa palace, together with a thousand Brahman; no other details are given.
14 This is the modern Yeleyvi, in the Thaggaon taluka of the Shattrah district.
15 In this case, no individual grantee is named.
in A.D. 687, granted allotments of land at Puligere or Pulikaranagara to Jain priests for the purposes of a Jain temple at that place. — Noticed, Vol. VII, above, p. 111; and see Ep. Ind. Vol. VI, p. 80 f., and page 211 above.

NIZAM’S DOMINIONS.

39. — The Haiderabad plates, which claim that Vikramaditya I. (Western Chalukya of Badami) granted to a Brāhmaṇa a village named Chintakuntha in the Kampa vishaya. — Published, Vol. VI, above, p. 75; and see Dyn. Kan. Distr., p. 364 (No. 4) and note 8, and Göttinger Nachrichten, 1900, p. 341.  

PROVINCE OF COORG.

MYSORE STATE.

41. — The Bhimankaṭṭi or Tirthahalijji plates, which claim that the epic king Janamejaya granted to the ascetics (presumably Brāhmaṇa) of the locality, for the purposes of the worship of the god Sitārāma, some land constituting a property named Muniyindakshētra in the place called Sītpura-Vikūdarakshētra on the west of the Tuṅgabhadra, in the Plavangā saṅkṣetra, the year 89 (current) of the Yudhishtīrī-Saka or era of Yudhishtīra, in B.C. 3614. — Published,

[17 When I edited this record, in 1877, I considered that, at any rate as far as line 34, the characters appeared to be genuinely antique (Vol. VI, above, p. 75). More recently, in 1895 or 1896, I have said that, in consequence of the type of the characters and the partial corruptness of the language, the authenticity of this grant is not altogether free from suspicion (Dyn. Kan. Distr., p. 327, note 4, and p. 364, note 8). Prof. Kielhorn has expressed the opinion that the mistakes in the verses do not justify the suspicion that the plates may be a forgery, and that the case with which the true readings can be restored tends to prove that the verses were taken from a correct copy of the grant (Göttinger Nachrichten, 1900, p. 345). We may waive that point. But, while the record is, no doubt, an early fabrication and may quite possibly refer to a real grant, the bad shapes of the characters, and the irregularities in the writing, which are not affected in their general features by the fact that the lithograph is a manipulated reproduction, and not an actual facsimile, suffice to show that the record is not the original, synchronous, and official voucher for the matters set forth in it. And it must, therefore, be finally stampled as spurious.

[18 This village still exists, under the same name, in the Chamarajangar taluks of the Mysore district.

[19 Their names, etc., are not put forward.

[20 Tirthahalijji is the head-quarters of the Tirthahalijji taluks in the Shimoga district, on the north bank of the river Tuṅgā, about thirty-five miles above the confluence with the Bhādra. The Bhimankaṭṭi saṅkṣetra is four miles higher up the river, above Tirthahalijji (see Mysore, revised edition, Vol. II, p. 480). And the passage defining the boundaries of the Muniyindakshētra, which is defined as being, amongst other things, on the west of the Tuṅgabhadra, meaning here the Tuṅgā as it flows to the north.

[21 According to the popular view, as exhibited in the native almanacs of the present day, the era of Yudhishtīrī is the first three thousand and forty-four years of the Kaliyuga, that is to say, the period from the beginning of the present age in B.C. 3162 to the commencement of the so-called Vikrama era in B.C. 58; see, for instance, the passages about the era in the introduction to Ganpat Krishnā’s Paṇḍhārya for Śaka-Samvat 1799 (expired), = A.D. 1877-78. On the other hand, according to the astronomer Vridhā-Garga, as reported by Varāhamihira (died A.D. 587 in his Brāhmaṇaḥ-sūtṛ, xiii, 2, the duration of the era of Yudhishtīra was two thousand five hundred and twenty-six years; and Kalaṇa, quoting Varāhamihira’s verse in his Rājaśatruśīlī, i. 56, shows, by a previous verse, 52, that he, by himself, in A.D. 1148-49, it was understood that the era began (and the commencement of the reign of Yudhishtīra took place), two thousand five hundred and twenty-six years before the commencement of the Śaka era in A.D. 77; that is to say, that the era began in B.C. 2440 or 2448 (see Vol. XVIII, above, p. 66). The mention of the Plavangā saṅkṣetra in the date pat forward in this record, shows that the date was put together according to the popular view, with B.C. 3162 as the commencement of the era. — Buchanan has mentioned two inscriptions at the temple of Madhukṣēravā at Ranawadi in North Kanara, of which, according to the accounts of them given to him, one is dated in the year 168 of the era of Yudhishtīra and claims that
42. — The Bègûr plates, which claim that, at the beginning of the sarpayâga or snake-sacrifice, Janamâjyâya granted ten villages to a thousand and three-hundred Brahmans of Bègûr in the northern Edênañêp seventh in the Banavasi twelve-thousand province. — See Vol. VIII. above, p. 91, Mysore Inscri., Introd. p. 70, and Mysore (revised edition), Vol. II. p. 427.

44. — The Gauj or Anantapur plates, which claim that, at the point of the snake-sacrifice called pûrhâhitattadâgañama, Janamâjyâya granted the twelve villages which constituted the village of Gautamagrama to thirty-two thousand Brahmans of Gautamagrama in the Sântalige.

45. — A grant of land to the god Madhukanûtha was made by 'Simharnâ Buśa' of the family of Yudhishthira, and the other is dated in Vikrama-Sanvat 90 (Journey through Mysore, Coonra, and Madabur, Vol. III. p. 231). He has also mentioned (ibid.) three inscriptions at Balajâminy in Mysore, of which two were presented to him as being dated in the reign of Yudhishthira himself, and the third was presented as being dated in Sâlikavanâ-Śaka-Sanvat 90 in the reign of 'Trênetra Cadumba.' And he has said (ibid. p. 411) that the Jain of Śrâvañâ-Belgola gave him a copy, on palm-leaves, of what they said was a copy of a record on copper dated Kaliyugâ-Sanvat 606 in the reign of 'Râjâ Mulla, king of the South.' It is difficult, however, to say whether these statements really indicate the existence of any such spurious records, or whether they are simply based on ignorant or fraudulent readings of genuine records of probably about the eleventh century A. D., or on gratuitous insertions or additions as in the case of the imaginary date inserted in a reading of one of the Kûlûhpûr inscriptions (see page 206 f. above). — Mr. Sewell has mentioned an inscription on stone at 'Yuppurna,' in the Kistna district, professing to date from the 2,906th year of the Kaliyuga, and to be a grant of a village by 'Tripti Palla' (Jills of Antiquities, Madras, Vol. I, p. 85). We have, however, no further details of it.

82 The full text of this record has not been published; and so the names of the ten villages are not yet available for identification. There is, however, no reason for expecting to find them anywhere except in the immediate neighbourhood of Bègûr itself, which is in the Shikhpur tālūka of the Shimoga district.

83 Names, etc., are put forward only in respect of four of them.

84 As can be recognised from an identification of some of the ten villages themselves, and of some of the surrounding villages named in the passage defining the boundaries of them, Pushpagañḍe was the former name of Kuppagañḍe itself, which is in the Sorab tālūka of the Shimoga district.

85 Names, etc., are put forward only in respect of four of them.

86 In Vol. I. above, p. 573, this record is represented as claiming to have been issued in 'the year III.' That, however, is only based on a supposition that, in the expression kâkakasvâkali, the syllables ka, k, k imply i, i, i, according to the Śaipâyâdi system (for which, see Vol. IV. above, p. 207). In the same way, a suggestion has been made that the ka, k, k, w imply i, i, i, 5, giving a clue to Śaka-Sanvat 1115 (expired), = A. D. 1198-94, as the real date of the concoction of this record and some others in which the same expression occurs (see Mysore Inscri., Introd. p. 71, and Mysore, revised edition, Vol. II. p. 427). But we have no reason to suspect anything of the kind. — It seems, by the way, doubtful now, whether the above-mentioned expression should be divided, as hitherto, into kâkaka and svâkali, 'unbound, loosened, opened, blossoming, appearing,' etc., or whether we should divide it into kâka and svâkali, 'a word with the sense of 'sent, impelled,' which Prof. Tawney has brought to notice in his translation of the Kathâkâvat, Pref. p. 22. In either case, however, the meaning is simply 'a camp was pitched,' as remarked on a previous occasion (Vol. XIV. above, p. 141).

87 As can be recognised from an identification of nearly all the surrounding villages named in defining the boundaries of the property that is claimed, Gautamagrama is the modern Gauj itself, which is in the Shikhpur tālūka of the Shimoga district.

88 Names, etc., are put forward only in respect of four of them. — These thirty-two thousand Brahmans of Gautamagrama are a reproduction or imitation of the thirty-two thousand Brahmans of Mahâjânas of Tâljund, in the Shikhpur tālūka, who are mentioned in records of the eleventh and twelfth centuries A. D. at Tâljund; the records speak of them as dehtrinâsatakaprâjya-sanâtha, 'the congregation of thirty-two thousand Brahmans' (P. S. O. C. Inscri. No. 219, line 66-67, and see Mysore Inscri. p. 193, and vidatirkhsâhâvāvah-mahâjânaś Need), 'the thirty-two-thousand Mahâjânas' (ibid. line 55), of Sthânâgâdhâra-Śrâvañâ (Tâljund) ; and one of them (P. S. O. C. Inscri. No. 221, and see Mysore Inscri. p. 195) attributes the origin of them to 'thirty-two households of Brahmans (vipra), purified by thirty-two thousand agra[h]a-sacrifices,' whom Mukkapâ-Çâdamba brought to the south from the agra[h]a of Abhiçchhattraka and established at the great agra[h]a of Sthânâgâdhârapura, which he made.

45. — The Gaṭṭavāḍi stone inscription, which claims that, during the reign or rule of a certain Ėrēhavamṇaži, the village-headman and others 60 of Gaṭṭavāḍi united for, apparently, the purpose of defining and marking out lands that were set apart as remuneration for the duties of the office of village-headman, in the Angiras saṅvatāra, coupled with Saka-Saṅvat 111, by mistake for 114 (expired), in A.D. 192-93. — Published, Ep. Carn. Vol. III. Nj. 199; and see Dyn. Kan. Distr. p. 301, note 1 (No. 1).

46. — The Tāgaḍuru plates, which claim that Harivarman (alleged Western Gaṅga of Taḻakādī), granted to the son of a village-headman, as a reward for prowess displayed in the battle of Ĥēṇjeru, a village named Abbāqal 51 in the Toṛēbāḍagareṇaṭu viśaya, in the Viḫavā saṅvatāra, coupled with Saka-Saṅvat 198 expired, by mistake for 170 expired, in A.D. 249. 52— Published, Ep. Carn. Vol. III. Nj. 122; and see Dyn. Kan. Distr. p. 301, note 1 (No. 2).

47. — The Mudiyaṇur plates, which claim that Malladēva-Nandivarman (alleged Bāṇa) granted to twenty-five Brāhmaṇaś ṣahvāṭara, the village of Mudiyaṇur 54 in the Hodali viśaya, in the Viḷaṁbi saṅvatāra, Saka-Saṅvat 261 (current), in A.D. 338. — Published, Vol. XV. above, p. 172; and see Vol. XIX. p. 39 and Vol. XXVI. p. 10, No. 167. — This record is, in part at any rate, a palimpsest.

48. — The Harihar plates, which claim that an unnamed son of Viṣṇuṇāpa (alleged Western Gaṅga of Taḻakādī) granted to the son of a village-headman, in recognition of some service rendered by him in apparently the battle of Ĥēṇjeru, the village of Đēvaṇur 55 in the Kāraṇḍ district, in the Sāḷihāraṇa saṅvatāra, coupled with, apparently, Saka-Saṅvat 272 (expired), in A.D. 351. — Published, Vol. VII. above, p. 173; and see Mysore Insr. p. 293, Vol. XXIV. above, p. 181, No. 4, note 3, and Ep. Ind. Vol. III. pp. 169 (No. 2), 162, 170, and Vol. VI. p. 74.

50. — The Mallohaḷḷi plates, which claim that Koṅgagirājā or Koṅgātimahārājā, son of Mādhava II. (alleged Western Gaṅga of Taḻakādī) granted to a Brāhmaṇa some land which is perhaps

59 In Vol. I. above, p. 377, this record, also, is represented as having been issued in the year 111. — Note 86 above, however, applies here again.
60 No names are put forward.
61 The name Toṛēbāḍagareṇaṭu means "the district on the north bank of the river." The village claimed, Abbāqal, is either Chik-Abbāqal or Dōd-Abbāqal, near the north bank of the Kāvāṭ, and about four miles on the east of Soṣil which is in the Tirmukbāḷḷa-Nāraṇāḷḷī tāḷūka of the Mysore district.
62 Or, we might say, "in Saka-Saṅvat 188 expired, in A.D. 297, coupled with the Viḥavā saṅvatāra by mistake for the Viyāya saṅvatāra."
63 Names, etc., are put forward only in respect of four of them.
64 Some of the place-names mentioned in this record are not unique. But, as was pointed out by Mr. Rice (Vol. XV. above, pp. 172, 174), the village claimed is Mudiyaṇur itself, in the Mūlīqal tāḷūka of the Kāḷīr district.
65 The text has He[ṇ]iṭaḥ-ṛiṇiḥ-ṛiṇiḥ, "having pierced Ĥēṇjeru."
66 As was pointed out by Mr. Rice (Vol. VII. above, p. 111), this is Dēvaṇur in the Nāṭāḷḷa tāḷūka of the Mysore district.
67 This is, most probably, the 'Halvāḍi of the Indian Atlas sheet No. 63, S. W. (1932), in the Māṇḍya tāḷūka of the Mysore district.
specified as lying below the tank of a village named Milur, in the Jaya sañvatara, the twenty-ninth year of his reign. — Published, Vol. V. above, p. 156; and see Mysore Inscr., p. 289; and Ep. Ind. Vol. III. pp. 160 (No. 3), 162.

51. — The plates, in the Museum at Bangalore, which claim to record a charter issued, in the third year of his reign, by Koṅgāpalāhiḍa, son of Koṅgāpalāhiḍa-hiraja, son of Madhava II. (alleged Western Gaṅga of Taḷakāḍ): the concluding portion of this record is said to be quite illegible; but the last words of the legible portion make it practically certain that it claimed to record a grant of some kind or another to a Brāhmaṇ who was a resident of a town named Mahāsāma-pūrṇa. — Published, Vol. VII. above, p. 174; and see Mysore Inscr., p. 294, and Ep. Ind. Vol. III. p. 160 (No. 5).

52. — The Māllohaḷī plates, which claim that Durviniṇa (alleged Western Gaṅga of Taḷakāḍ) granted to a Brāhmaṇ a property called Iśvarasthāna at a village named Bempūra in the Kejale nād, in the Vijaya sañvatara, the thirty-fifth year of his reign. — Published, Vol. V. above, p. 138; and see Mysore Inscr., p. 291, and Ep. Ind. Vol. III. pp. 160 (No. 6), 163.

53. — The Hoṣūr plates, which claim that Satyārāyaṇi, i.e. Pulakāśī II. (Western Chalukya of Bāḍām), at the request of an alleged daughter or son named Ambērā or Ambērā, granted to thirty-one Brāhmaṇa a village named Poriyāḷa in the Koṅkai nāḍa. — Published, Vol. VIII. above, p. 96, with a lithograph in Vol. IX. p. 304; and see Mysore Inscr., p. 298, and Dyn. Kan. Distr. p. 358, note 1.

54. — The Hallāgore plates, which claim that Sivamāra I. (Western Gaṅga of Taḷakāḍ) built a bridge or dam across the Kījine river on the north of Keregōḍu in the Keregōḍu viśāya, and took two villages named Koṅdegōḍa and Bēkore on the south of that river and two villages named Bembampāḷ or Bembappāḷ and Paṇḍepaṇṭi on the north of the river, and made them a village named Pallavatākā, and divided that village into sixty-six shares, which he then granted to thirty-one Brāhmaṇa, in Saka-Sahāva 635 expired, in A. D. 713, in the thirty-fourth year of his reign. — Published, Ep. Carn. Vol. III., Md. 113; and see Dyn. Kan. Distr. p. 301, note 1 (No. 3).

55. — The plates, in the British Museum, which claim that a certain Eregaṅga, who may be represented as a governor under Sivamāra I. (Western Gaṅga of Taḷakāḍ) or may perhaps be intended for Sivamāra I. himself, divided into three shares and granted to Brāhmaṇa a village named Paṇekkōḍupāḍi, which — (we must understand from the record) — was in either the Toreṇāḍa five-hundred, or the Koṅkalāḍa two-thousand, or the Male thousand. — Published, Vol. XIV. above, p. 229; and see Ep. Ind. Vol. III. pp. 160 (No. 9), 163, 169.

56. — The Hoṣūr plates, which claim that Sriparāsha-Muttaraṇa (Western Gaṅga of Taḷakāḍ) granted to a Brāhmaṇa some lands at four villages named Eḷaṇi-Gūḍalūr, Marāṭhā-Gūḍalūr, Paṇguvi, and Sripura, in Saka-Sahāva 684 expired, in A. D. 762.

---

57 This town is mentioned again, as the residence of one of the alleged grantees, in the Hallegere plates, No. 54 below. The name may be another form of the name Karīkīkṣapuram, which occurs in the case of a village in the Kārīkīkṣa sarndhrā in the North Aroor district, Madras, or it may be the Sanskritised form of some vernacular name now beginning with ḍoda or ḍirr.

58 This may be 'Begur,' in the Closepet tālukā of the Bangalore district; or it may be 'Begur,' in the Nelamangala tālukā of the same district.

59 No names are given; we are only told that thirteen of them belonged to the Atīkṣya pōṭa, five to the Kauṣika pōṭa, three to the Kāḍaṇa pōṭa, three to the Kauṣika pōṭa, three more to the Kāḍaṇa pōṭa, two to the Bhavaṇika (Sāvarṇika) pōṭa, one to the Bhavaṇika pōṭa, and one to the Sāvarṇika pōṭa.

60 It seems likely that Keregōḍu of this record is Keregōḍu in the Maṭyiya tālukā of the Mysore district.

61 The original actually says "to the Kāḍaṇa (Kāḍaṇa) pōṭa," — meaning, no doubt, to some Brāhmaṇa belonging to that pōṭa; no other details are given.

62 This is probably the modern ' Hanagod,' on the Lakṣaṃṭīrthha river, in the Hunsūr tālukā of the Mysore district.

63 This was really an eight-thousand province; see page 208 above.
57.—The Đevarahļi plates, formerly known as the Nāgamaṅgala plates, which claim that Sripurusha-Muttarasa (Western Gaṅga of Taḷakaṭā), at the request of Paramagūḷa-Prithuvi-Nirguṇḍarājā, granted for the purposes of a Jain temple called Lōkatiḷakā66 founded by Kundāchchhi, wife of Paramagūḷa-Prithuvi-Nirguṇḍarājā, at a town or village named Sripura, a village named Ponnaļi in the Nirguṇḍa viṣaya, in Saka-Saṃvats 698 expired, in A. D. 776-77, in the fiftieth year of his reign. — Published, Vol. II. above, p. 155, and Ep. Carn. Vol. IV., Ng. 85; and see Mysore Inscrip. p. 287, and Ep. Ind. Vol. III., pp. 160 (No. 8), 163, 164.

58.—The Gaṅjām plates, which claim that, with the consent of the Taḷakaṭā Pratīha-raṇas, alleged son of Śivamāra II. (Western Gaṅga of Taḷakaṭā), two alleged Pallava princes Nījarāmā and Nāyadhīrā, sons of Kali-Nojambhādhārāja-Kollīyara, granted to a Brāhmaṇa a village named Tippeṇur. — Published, Ep. Carn. Vol. IV., Sr. 160.

59.—The Gaḷīṅgēsara plates, which claim that Raṇavikramaya, alleged son of Rājamaṭa Western Gaṅga of Taḷakaṭā, granted to a Brāhmaṇa a village named Koḷa-Neḷḷur. — Published, Ep. Carn. Vol. IV., Yd. 60.

NEW RESEARCHES INTO THE COMPOSITION AND EXEGESIS OF THE QORAN.

BY HARTWIG HIRSCHFELD, PH.D., M.R.A.S.

(Continued from p. 183.)

CHAPTER IX.

Medinan Revelations up till the Battle of Badr.

Features common to Meccan and Medinan revelations — Differences of both classes — Muhammad’s attitude towards the Jews — Revelations of the period.

The features common to Meccan and Medinan revelations are few but important. They comprise — similarity of diction and form, the same aggressiveness of tone, the tenets of the religion and the doctrines of its ethical code. If we had no other critical aid, it would frequently be quite impossible to distinguish between Medinan and later Meccan revelations. Moslem authors on the subject are unreliable, if not directly misleading, and the anecdotes which they relate in connection with many revelations must be received with caution. Medinan addresses, like the Meccan ones, abound in declamatory, narrative, and parabolical passages. Many of these have been handed down as Medinan, though it is doubtful if they should so be classified, and there is not sufficient evidence to justify their removal from their present position in the official text. The legislative revelations are less difficult to place, as those bearing on ritual (except some on prayer and almsgiving), or legal matters are of distinctly Medinan origin.

The Medinan portions of the Qorān must not be criticised from the same standpoint as the Meccan ones, on account of the altered circumstances under which they appeared. It is impossible to get a clear insight into the events connected with the Meccan sermons; therefore so far as they are concerned, we have no satisfactory background to work upon. The case is different as regards the Medinan revelations, which are illustrated by facts recorded in exegetical and historical works. Unfortunately the authors of these works were remarkable for religious zeal, rather than for their capacity for distinguishing between truth and fiction, whilst many of the authorities on whom they relied were not always veracious. Thus, a large number of Medinan revelations have been linked with persons and

66 No individual grantee is named, unless we are to understand that the village was actually conveyed to the Jain priest Viṇaḷaśaṇḍuṛṇḍhārvya, at whose suggestion the grant purports to have been made or the temple was built.
affairs with which, in reality, they had no connection, whilst the resemblance between various military expeditions is responsible for a certain confusion which defies all attempts at disentanglement. We may hope to be more successful in matters exegetical, and it must be conceded that the better a passage is understood the greater is the chance of ascertaining to what it refers, and the place to which it belongs in the order of revelations.

Another difference between the two chief portions of the Qorain is due to the change which had taken place in the author himself. His aims were not precisely the same as they had been. Whilst the teachings promulgated in Mecca affected the church exclusively, many of the Medinian ones were devoted to the organisation of the State. Without the Hijra Islam would probably never have outstepped the limits of a religious sect, and might at best have lingered on within an insignificant and powerless minority. Muhammad's merit as founder of the State is not less than as the creator of the faith. The most powerful ethical idea cannot be effective for any length of time, unless it is established on a material basis, because those who are called upon to uphold and propagate it, are in most cases actuated by personal interests and inclinations. The people who will accept the true and the ideal for its own intrinsic value alone are rare, but many will receive it when tendered in a gilded casing, or when they are compelled to do so. In Medina, Islam was fortunate enough to be able to employ both methods in the furtherance of its objects, and this is the secret of its rapid progress all along the line.

Finally, in contradistinction to the Meccan revelations, the Medinian ones unfold the network of the hierarchio constitution, comprising religious as well as administrative measures. Under the care of Moslem theologians it developed into a minutely worked out code of laws which, similarly to the Jewish one, holds the whole life of the believer under its sway, drawing purely legal matters within the province of religious decision. The first impulse towards this course of action in Islam was, however, given by Muhammad himself. For, without it he would not have been able to achieve the most urgent reforms. By intermixing juridical expositions with pastoral admonitions he placed the former above the ancient customs of his country.

There are, however, other circumstances, which could not fail to affect the general tone of Muhammad's utterances as soon as he entered the precincts of his new abode. Having been invited to come by many of the leading citizens, his life was not only safe, but he became possessed of a worldly power which was absolute within the circle of his admirers. His wish was a command, his censure condemnation. Speaking with the authority of a man who was blindly obeyed, his eloquence lost its excited character, and assumed the calm tone of a legislator. "Obedience to Allah and His Messenger" is the Leitmotiv of nearly all Medinian speeches.

As for the new adversaries of Islam, they were divided into two large groups of very different nature. Those Arabs who adhered to the old pagan belief were not such fanatic opponents as the Meccans, because Islam endangered no institution which was a source of wealth or influence to them. Only sundry chiefs, who feared that the spread of Islam might deprive them of their power, offered individually an obstinate resistance. Many antagonists belonging to this class, not having the courage to resist the growth of Islam openly, agitated against it secretly, whilst showing outward submission, but even they saw the power slip gradually out of their hands. It did not take the Prophet long to recognise the real attitude of the "Hypocrites," as he styled them, and the trouble they gave him during the whole remainder of his life is faithfully reflected in the virulent rebuffs he administered to them from time to time.

The foes Muhammad feared most were the three Jewish clans, which had settled in and around Medina. Circumstances had not only favoured the spread of their faith among the Arabs, but had also drawn the ties of kinship closer through intermarriage with their pagan compatriots. By keeping in touch with their religious literature they had gradually acquired the leadership in spiritual matters, and they still maintained it, although their temporal influence had received a severe check shortly before Muhammad crossed their path.²⁷

²⁶ Cf. Qur. ii. 283 sqq. and often.
²⁷ Beitrage, ii. 47 sqq.
Wherever the Jews wandered, in the Diaspora, they took with them at least those portions of the Old Testament, which form part of the liturgy. These not only comprise the Pentateuch, but also such sections of the Prophets, as were selected for Haftáróth, the Psalms and the Five Scrolls. One of the consequences of this practice was the preservation of the Hebrew language both for prayer and study, and however much Jews of the Hijâs may have adopted manners and customs of the Arabs, and although many lived in great ignorance, Hebrew was never forgotten among them. Of this unmistakeable evidence exists. From a tradition repeated on various occasions by Al-Bukhâri we gather, that the Jews in Arabia read the Tôrâh in Hebrew, but interpreted the same to the Moslems in Arabic. — From this, first of all, we may conclude, that the Pentateuch — probably the whole of the Old Testament — was studied and publicly interpreted in the [Beth] "Midras." When Muhammed heard of this, he was so perplexed, that he did not know, at first, what policy to pursue. He therefore simply forbade his followers either to confirm or to refute the Jewish interpretation, giving as his reason that the Jews had altered the law, written the Tôrâh with their own hands, and stamped the same as God's original work. The less discreet Abu Bakr, however, could not abstain from entering the school-house by force and assaulting the Rabbi engaged in teaching. From these traditions which receive confirmation from yet another one, we gather, that the Jews in Medina not only practised writing, but made copies of the Tôrâh, and endeavoured to work upon the Moslems in private and public discussions. From the concluding words of the tradition mentioned above, as well as from many verses of the Qur'an, it is certain that they also had at their disposal the Mishnâh, which is traced back by Rabbinical teaching to oral communication given to Moses on Sinai as a supplement to the written Law.

From several almost literal quotations from the O. T. in the Qur'an the question arose, whether an Arabic translation of the former existed in Arabia. Whilst Sprenger is convinced that this was the case, or that at any rate certain portions of it had been translated, Prof. De Goeje, in a recent article, arrives at a negative result. The latter theory is undoubtedly correct. Had such a version existed, Muhammed would have certainly succeeded in procuring one, and his renditions of Biblical passages would have been more verbal, and less intermixed with agadic ornamentation. Since this was not the case, we must assume that he gained the bulk of his Biblical knowledge from intercourse with the people. In his earlier years he may have had opportunities of seeing Hebrew books, but, not being a skilled reader, misread several words. These he subsequently rendered in a corrupt fashion. He had scarcely set foot in Medina, when he took pains to display before the Jews a grand knowledge of the Bible and later Jewish writings, which he had picked up secretly.

It is almost certain that the Jews in Arabia were acquainted with an Aramaic version — either Targum or P'hitâ — of the Pentateuch. Through Talmudical channels Aramaic elements penetrated their religious terminology, and even their name Yahôd is an Aramaic form. We may gather from

62 See Ch. II.; also sabb (Sabbath) represents the Aramaic form.
this that the Arab Jews possibly exercised a certain indirect influence on the construction of the Talmud. Some paragraphs in the Mishnah refer exclusively to the Jews of the Peninsula. It was
considered lawful for them to live in Bedouin tents, and their women were permitted to go out on Sabbath wearing a veil. The Talmud also alludes to the custom of circumcision among Arabs, and twice mentions Arab foot gear.

The maintenance of the spiritual — and probably also commercial — intercourse with the centres of Jewish culture in Palestine and Babylon prevented the process of assimilation beyond the external conditions of life, although as far as these were concerned it was complete. At this period the Jewish standard prayers had long been settled, and it is certain that they also constituted the prayers of the Arab Jews, probably in the original Hebrew. These Jews, however, did not produce any liturgical compositions of their own, at least none survive either in Hebrew or in Arabic. But they have left a large number of poems in pure Arabic, containing a few allusions to Biblical books. Otherwise these poems do not differ in style and tone from those of the pagan Arabs, and are of about the same stamp. Finally it is to be remarked that they preferred Arab names to Hebrew ones, and in a list handed down by Ibn Iṣḥāq only few specifically Jewish names are to be found. This corresponds to a custom found among Jews everywhere in the diaspora, but in Arabia it was more prevalent, because they numbered among themselves many proselytes who did not change their names or those of their children when converted.

There is a good deal of evidence that the art of writing was practised to some extent among the Jews of North Arabia, and that not only they themselves wrote Arabic in Hebrew square characters but also several Christian Arab tribes who lived near Syria. Other Arab reports trace the invention of the Arab alphabet back to the same origin. A tradition handed down in the name of Zeid b. Thabit, Muhammad’s secretary, informs us that the latter ordered him to learn the kitāb of the Jews, which he did in two weeks satisfactorily, that he wrote to the Jews [letters dictated to him by Muhammad] and read the letters they wrote to him. From this we can safely conclude that in North Arabia Arabic was written in square characters long before any other form was used, and it is only in the continuance of this custom that Jewish authors of Arabic works during the Middle Ages used the same. The majority of Jews living at present in Arabic-speaking countries have little or no notion of the Arabic alphabet.

In spite of the wealth and influence ascribed to the Arab Jews, they could never forget that they were living in exile; for before the rise of Islam they were frequently reminded of this fact by buffets and petty tyrannies. This position must have been anything but pleasant, because they were always longing for Messianic deliverance. The two Arab tribes of Alans and AlKhurayj, their fellow-citizens in Medina, were perpetually at loggerheads, and the various Jewish inhabitants were distributed on both sides. Being rather inclined to peaceful handicraft, palm-culture, and trade, these everlasting feuds and occasional raids on their property were not to their taste, and they used to say: “The time is near, when a prophet is to come, whom we will follow, and with his help we will defeat you.” The Muslim tradition connects this word of hope somewhat remotely with Muhammad, and it is possible, that the rumours of the new prophet, which had reached the ears of the inhabitants of Medina, were looked upon by some Jews as the culmination of their hopes. But the essence of the tradition is probably only an echo of some paragraphs in the Jewish prayer-book which refer to a Messianic future. However, as soon as the Medinan Jews heard of the Meccan prophet, they considered it

NEW RESEARCHES INTO THE QORAN.

worth while to make enquiries concerning his person and mission, but the accounts of these enquiries and their results as given by tradition are so eccentric that they deserve little credence, at least as regards many of the details. Now if the Medinian Jews were interested in Muhammed, he was at least equally concerned about them, and sought to win them over either by persuasion or force. Shortly before the Hijra six Medinian Arabs made a pilgrimage to Mecca. Muhammed at once questioned them whether they were friends of the Jews. When invited in the following year to emigrate to Medina, it appears that one of the conditions made by Muhammed was that the alliances with the Jews should be dissolved. From the resistance which Muhammed experienced from the Meccans who were ignorant in religious matters, he could easily gauge what a struggle was in store for him with the "People of the Book." The friendly sentiment he expressed towards the Jews in some of the earliest Medinian revelations seems to have been an attempt to soothe a dangerous rival, rather than a desire to show sympathy for a cognate faith. Also the Jews on their part are said to have made enquiries about the new Messias, but what they had learnt on this occasion, as well as what they found out later on personal observation, showed that a struggle was imminent. Muhammed's having come to Medina by invitation must have led him to believe that the pagan population of that city would be won over with comparative ease. He was aware that the Jews lived in exile, and languished under the wrath of Allah. This conviction furnished him the cue for remonstrances, and he was not loth to remind them as often as possible that they were "cursed." The alleged friendly attitude Muhammed assumed towards the Jews is peculiarly illustrated in the following list of abusive titles which he hurled at them during the Medinian period:

Sura ii. 6. Allah has sealed their hearts.
8. They try to deceive Allah.
9. In their hearts is sickness.
11. Doers of evil.
15. Those who buy error for guidance.
17. Deaf, dumb and blind.
82. Allah has cursed them.
259. Their patrons are Tagut.

iii. 177. They have murdered the prophets undeservedly.

iv. 53. They devise lies against Allah.
85. The bitterest foes of the Believers.

xlivii. 27. Those who turn their backs, after guidance has been manifested to them,

lvii. 15. Allah is wrath with them.

In addition to these unflattering epithets we have to mention others of a more general character such as: "Those who disbelieve," which refers to Jews and Christians indiscriminately, or "the Possessor of the Book," those to whom the Book (or the "Knowledge") was given, and finally: "The worst of beasts in the eyes of Allah are the unbelievers" (viii. 57). 16

One of the most frequent of the derogatory descriptions of the Jews is that "Allah has cursed them." With this Muhammed evidently wished to show off his acquaintance with those passages of

14 Cf. ii. 85, iii. 77; Lam. ii. 20; Matth. xxiii. 34.
15 Cf. iii. 88; also vii. 21, 93, 145 (Meccan), etc.
16 Refers also to the Jews; cf. iv. 4-5 and below.
the Pentateuch which deal with the subject,17 in order to impress upon them the feeling that they were forsaken by God, but had now an opportunity of being redeemed if they acknowledged his mission.

After these preliminary remarks we now enter upon the discussion of the Medinian revelations, and begin with those which, form Sura ii., and which, according to both ancient and modern authors, represent the oldest speeches held in Medina. As to the first section (vv. 1-19a) the Moslem Commentators leave undecided whether it refers to the Jews or “Hypocrites,”18 but since the latter are not mentioned in the whole of the sūra at all, it is probable that in the section in question the former are alluded to.19 It is hardly likely that these “Hypocrites” were prominent at that time. Cant is always slow to detect. Those Medinians who, from political motives, had embraced Islam whilst waiting an opportunity to shake it off again, were careful to appear as good Moslems in Muhammad’s eyes, and we cannot wonder if he was somewhat credulous. A positive evidence, however, also exists that the verses in question refer to the Jews.20 Verse 6 is a reproduction of Isaiah vi. 6, and vv. 10-11 repeat the old reproach launched against the “Sons of Israel” in a Meccan revelation (xviii. 4). Finally the phrase (v. 12), “shall we believe as fools believe?,” evidently reproduces words actually spoken by some Jews who ridiculed Muhammad, whilst the “Satans” (v. 13) represent the Rabbis who abetted such behaviour. The two parables, with which the address concludes, are similar in tendency to that which precedes.

The portion following (vv. 19b-37) is in no way connected with the address just discussed, since v. 24 in which the use of the minutest animals in illustration of parables21 is justified, cannot refer to saathāla mentioned in the verses 16-19a which deal with fire and lightning. Nöldeke is inclined to reckon this address as belonging to the Meccan period, but the renewed challenge (v. 21), to produce anything like the Qorān, is evidently directed against the Jews. In v. 25 Muhammad denounced certain practices of the Jews, it having appeared to him that they had broken laws laid down in the Tūrah.22 This was the old reproach of having altered the Law, and it gave Muhammad an opportunity of saying that they “did evil on earth.”23 After this the story of Adam24 is repeated with such details as could only be appreciated by a Jewish audience. The words: “We celebrate Thy praise and hallow Thee” (v. 29), recall the words of the “sanctification” in the Jewish prayer-book.25 To this speech another is joined in which the Bant Isrāl are addressed (vv. 33-58), but where the Jews are meant. They are told that they “recite the Book.” This probably refers to the custom of reading portions of the Bible during public worship. They are also reminded of the miraculous delivery of their ancestors from Pharaoh’s bondage (vv. 46-47), of Moses’ forty days’ stay on the mountain, of the making of the golden calf (v. 48),26 and the grant of the protecting clouds, the Mannah and the quails. Then follows a verse (55) which has puzzled all interpreters, and has not even yet been satisfactorily explained.27 I now believe that the Commentators are right in considering that the ‘city’ mentioned in the verse refers to Jerusalem, whilst the words, “enter ye the gate worshipping, and say hatta, we might forgive you your sins,” describe the moment when the High Priest on the Day of Atonement entered the “Holy of Holies” in the Temple.28 The word hatta is probably taken from the formula of confession of sins recorded in the Maimā (Yāmā iii. 8; iv. 2; vi. 2). The “alteration”29 for which Jews are again blamed in connection with this matter is probably of liturgical character, since the formula just alluded to has a different text in the ordinary prayer-book, but Muhammad lost no opportunity of repeating the hackneyed reproach as often as possible.

---

17 Levit. xxvi. 14-43; Deut. xxvii. 15-26; xxviii. 15-66.
18 V. 13 permits a reference to the “Hypocrites,” but see v. 71.
19 Nöldeke, Q., p. 128, refers v. 1-19a (1-25) to the “Hypocrites” and therefore place the address in the earlier part of the year 2 H. — V. 8-9 and 15 need not be referred to the mawṣūfān, because they can just as well aim at the Jews.
20 Cf. V. 17 and vi. 46.
21 Cf. Ch. VIII.
22 Cf. Ch. VIII.
23 Cf. Ch. VIII.
25 So called Qaddāsh.
26 See Geiger, I. c. pp. 154-5; cf. v. 177-185. V. 52 was misunderstood by Geiger. In the Qorān it is the people who desire to see God, whilst Muhammad confounded Exod. xx. 10 with xxxiii. 18 and Numb. xvi. 30-35.
27 My own previous endeavours (Pellegrino, p. 54) included.
28 Levit. xvi. 22. Maimā, Yāmā, v. 1; Qor. iv. 133; the same command is given in connection with the words we hold over them the mountains at their compact.”
29 The Commentaries endeavour to explain the “alteration” in a different way.
The compilers of the Qurān have placed between this address and the following one a verse (59) which stands detached, and represents an attempt to bring Jews, Christians and "Sabaeans" on a line with Believers. The same verse, though shorter by a few words, occurs again in a longer speech (S. v. 73), where it has equally little connection with the text. The verse can only be explained as a casual remark made at a moment when Muḥammed relaxed his hostile attitude, and hoped to win dissenting monotheists by kindness. It is very improbable that Muḥammed spoke in this way more than once, or later than the second year. The verse is, therefore, instructive to show the way in which the Qurān was compiled. It was kept in memory, and communicated to the compilers in two slightly varying versions, which both had places allotted to them in Medinan speeches. There can be no doubt that the verses v. 71-8831 also belong here, containing, as they do, a call to the prophet to preach, which resembles that in the earlier Meccan period. There was ample reason for the repetition of that call. In Mecca Muḥammed had preached only to his own people. The Medinan audience, however, was less homogeneous, and included numerous Jews and Judaeo-Arabs. Lest these should imagine that his ministry was addressed exclusively to the pagan inhabitants of Medina, the "Messenger" is commanded to preach (v. 17); for if he did not do so, Allah would not hold him free from men. The next verse shows that these words were also meant for the "Possessors of the Writ," who were sadly in want of a new message, since they neglected to "stand fast by the Torāh and the Gospel and what had been revealed to them by their Lord." The preacher is quite aware that his appeal will only increase their rebellion and unbelief, but must not feel annoyed at it (ibid.). As to the Jews, they had, in spite of the covenant made with them, either disbelieved, or murdered their prophets32 (v. 74), being struck with blindness and deafness (75). In a similar manner the Christians fell into disbelief by identifying Allah with the Masih, whilst the latter had only taught them to worship Allah, his and their Lord (v. 76). Allah cannot be One of Three, but only One (v. 77), and the Son of Mary is but a Messenger like those before him (v. 79). One sees clearly that v. 78 forms a complete contrast to all verses just discussed, and owes its place among them only to some accident. The rest of the speech is in the same tone, except that in the last verse (85) the Jews are styled the bitter foes of the Believers, whilst the Christians stand as "nearest in love to the Believers." This spark of kind feeling towards the Christians is undoubtedly due to the gratitude Muḥammed felt for the King of Abyssinia for having protected a number of early Meccan Believers in Islām. Muḥammed perhaps flattered himself that this hospitality was only the beginning of still closer relations, and possibly an ultimate acceptance of Islām. It is further probable that the words in question were also meant for the Christian Arabs, some of whom had been moved to tears when hearing recitations from the Qurān (v. 86). This assertion was probably based on a real incident out of which Muḥammed made as much capital as possible (v. 87-88).

The address (S. ii. 60-77) which seems to come next consists of various sections, each of which begins with the phrase: We "took" a covenant with you (vv. 60, 77, 78, 87).33 The whole sermon records laws given to the Israelites, but the speaker first recalls their transgression which brought about the transformation of the desecrators of the Sabbath into apes (v. 61). The interpretation of this verse has caused considerable embarrassment both to the traditionists and modern authors. Geiger has remarked that in Jewish writings no trace is to be found of such transformation.34 The Talmud speaks of the transformation of a class of sinners into apes and evil spirits, but I doubt whether Muḥammed knew of this legend. The matter seems to me to rest on a misunderstanding on the part of the compilers, or those who copied the revelations from the original notes. The word in question, qirādatan [قاردن], "vermin" (and in the archetypic of that passage the difference between these two readings was probably difficult to distinguish), the verse would be a mistaken rendition of Exod.

---

30 As to the term al-lawḥ min harada see Ch. II., Beitragte, p. 16.
31 V. 78 on account of v. 72, "Possessors of the Writ."
32 Cf. ii. 85, iii. 177, and above.
33 V. 77 has "the children of Israel;" v. 87 repeats: "and we held the mountain over you" (cf. iv. 153), which is taken from the Midrāsh that God when giving the law on Sinai took the children as a pledge (Shir Hamaḥātām R.)
34 L. c. p. 184.
35 Sanhedrin, fol. 169v.
xvi. 20, 24. The mistake was probably caused by the circumstance that the transformation of living human beings into apes seemed much more fitting than into worms. Now the reason of the transformation is, in the Qur'an, disobedience in connection with Sabbath, which is the same cause as mentioned in the Pentateuch. Instead of the food left over night, Muhammed has the disobedient persons transformed. The words, "those who go too far," are perhaps a rendering of Exod. xvi. 29, and refer to a given space of ground in the sense of the Rabbinical interpretation (Mishnah, Erubin, ii. 3). The tales invented by the Moslem traditionists for the purpose of explaining the verse do not concern us now any further.

It is rather surprising to observe the knowledge which Muhammed suddenly betrayed regarding the ordinance of the "red heifer" (v. 63-65), as this practice had fallen into desuetude long before his time. Whoever taught him about it probably also explained the purpose of that ritual. Muhammed, however, seems to have forgotten this, and confounded the cow of Numb. ch. xix. with the calf of Deut. xxi. 1-9. The reason for reproducing this law in a very broad dialogue seems to be that it left an impression, that even Moses himself had occasionally to ask information from God (Numb. ix. 8 and ch. xxvii.), — Attached to this passage is the reproach (v. 69) that the people had "hardened their heart so that it was like a stone or even harder for verily of stones are some from which streams burst forth, etc.," which comparison is but a reflex of Exod. xvii. 6; Numb. xx. 10.

"Some of you," Muhammed continued (v. 70), "hear the speech of Allâh, then they alter the same." This verse stands in connection with another (v. 87) which probably belongs to the same sermon, and contain the following words: "They say 'we have heard,' but disobey (mayyîn wa-watiqân)." On a somewhat later occasion (S. iv. 48) we read the same reproach, viz., some Jews (min a'tlidina haddâ) alter the words from their places and say: we have heard but disobey, and hear! that which cannot be heard, etc. (49). But had they said: We have heard and obey, and hear! and look upon us! it would have been better for them and more upright, etc.

The verses just quoted throw a flood of light upon the way which Muhammed had pursued to gain his knowledge of the Pentateuch. The reproach that the Jews had altered the Law becomes a standing phrase, but the strange rebuke that they should have bluntly admitted shriving disobedience to the divine command is much more than a reminiscence of the frequent murmurings of the people of Israel in the desert; and the censures passed upon them in consequence. We have here a most interesting misinterpretation of the words of the Pentateuch (Deut. v. 27) weshâhânu'a wa-'dânu'â "and we will hear and do [it]." Muhammed had, on some previous occasion, heard, or possibly read, these words, and from their resemblance to Arabic words thought that he understood them. He therefore identified 'dânu' with Arabic 'asâinâ which gives the opposite sense. Now it appears that some years later Muhammed became aware of his mistake. To correct it was, however, impossible, since the true version did not suit his purposes at all. He therefore replaced the faulty word by "we obey," placing this avowel into the mouth of the Believers "who believe in Allâh, His angels, His Books, and His Messengers (we make no difference between any of His Messengers) and they say: We hear and obey" (S. ii. 285), etc. The Commentators see in this verse an allusion to those Median pilgrims who had an interview with Muhammed shortly before the Hijra, and invited him to exchange his place of abode with theirs. It is, however, clear that Muhammed owed the correction of his mistake to some converted Jew. The verse in question can not therefore have been revealed till the year 8 or 9 of the Hijra, or shortly before Muhammed's death.

35 Cf. v. 16.
37 ممن معاوية. The word ٌلملك is according to AI Dâni one of those in which the َل مي prolongation is omitted. AlBeidhâvi also records the reading ٌلملك; see v. 16.
38 Cf. i. 10, etc. "Do thou listen without hearing" does not render the original accurately.
39 Cf. ii. 235, see below; cf. v. 10; xxiv. 50.
40 Likewise instructive for the pronunciation of sibilants; see Ch. VI.
41 Cf. V. 247 where Moses says to the Israelites إل مي، and xlvii. 21.
42 See I. Hish. pp. 286-288. S. v. 11 seems to refer to the same persons.
The next address (vv. 98-115) contains the verse on which the principle of Abrogation is based, and touches also upon a subject which formed an important factor in Muhammed's subsequent conduct towards the Jews, viz., his discussions with the Rabbis. These controversies have been preserved in a large number of traditions, but many of them were made in order to serve as explanations for verses in the Quran not accounted for otherwise. By comparing himself to Moses (v. 102) who also had to listen to questions asked in a rebellious spirit, Muhammed removed the chance of any disrespect which might have resulted from such questions, and turned the affair into another proof of his prophethood. "Do you," he asked, "wish to question your Messenger, as Moses was questioned in former times?" The Jewish custom of restricting the use of the name of God, alluded to above, led the Prophet to make a grave charge of irreverence (v. 108). He represented this self-imposed restriction as a law forbidding the name of God in places of worship, and took the same opportunity of intimating the necessity of changing the Qibla from Jerusalem to Mecca (v. 109). In another address delivered for a similar purpose, corrupted Christianity and Judaism are contrasted with Abraham's pure monotheism. On the ground of this supposition, and in spite of the anticipated objection of "the fools among men" (v. 180), the alteration of the Qibla was made law (vv. 138-147).

With v. 168 commences a series of ritual prescriptions which comprise things lawful or unlawful for food, the law of retaliation or the acceptance of a fine instead, the rules concerning the will of a dying person, and the regulations for the fast of Ramadhan. The prohibition of "eating" solid food during this month concludes with a metaphorical admonition not to "eat your wealth among you vainly" (v. 187).

There can be no doubt about the date of the group of regulations (introduced by the phrase: "They will ask thee"), which now follows, because one of them refers to the raid which Abd Allah b. Ja'far undertook at the behest of Muhammed two months before the battle of Badr, towards the end of the month of Rajab. Muhammed saw himself obliged to condone the violation of the sacred month as best he could. It is more difficult to fix the right date of the regulations contained in the vv. 224-243, as it seems that they were placed here solely on account of their legislative character.

The next address (vv. 274-288) was, like the preceding one, delivered with a view to teach contempt of death in the struggle with the Meccans whom Muhammed had now resolved to attack. Believers must devote their lives as well as their fortunes to the holy cause. The various paragraphs of the sermon are illustrated with instances from the records of the past. Verse 244 evidently stands in connection with 261, both containing recollections of the vision of Ezech, ch. xxxvii., and teaching the revival of the dead by the will of Allah. The sketch of the election of Saul which is confounded with the story of Gideon, and of David's combat with Goliath, have a similar tendency. A set off against the rather feeble tone of the exhortation is the fervent style of verse 256 which, under the name "Verse of the Throne," is held as one of the holiest revelations of the Quran. The speaker reminds his hearers of Abraham who informed his aggressor without fear, that it was Allah who revived the dead, and was therefore favoured with the vision related in Gen. ch. xv. This

---

43 See Ch. I. 44 Probably alluding to Exod. v. 21; Numh. xiv. 3; Ch. XVI., etc.
45 It is hardly justifiable to refer the verse to the Kh'ba and the endeavours of the Qoreish to prevent Muhammed from holding a service there in the sixth year after the Hijra. The text speaks of "places of worship." The phrase, "أين يذكر منهم اسمه," recalls Exod. xx. 24. 46 See Nöldeke, p. 131.
48 Vv. 148-157 are justly placed by Nöldeke after the battle of Uhud, but v. 158 belongs to a much later revelation on pilgrimage (see also vv. 186-199). Muhammed not only performed the ceremonies himself when he made the pilgrimage in the year 7, but encouraged others to follow his example. See Moslem quoted by Sprenger, III. 522, rem. As to V. 154 see I. Hist. p. 382.
49 Nöldeke only mentions three, but there are four.
50 Nöldeke regards V. 184 as a fragment of a long revelation, but this is not necessary.
51 See Sprenger, III. 107 sq. Nöldeke detaches vv. 212-3 but without valid reason, as they form an introduction to v. 214. The sublity of the discussion is characteristic of the situation.
52 See Palmer, and Beiträge, p. 39.
53 V. 257 should be compared with Abôth, II. 23: Make not thy prayer compulsion.
tale, however, is in so far modified, as "the two birds," although divided in many pieces, are brought to life again. The importance of spending one's fortune for the purposes of the holy war is finally illustrated by two parables.\(^{55}\)

The section vv. 269-281 hardly offers any clue as to its date. The repeated admonition to give alms only explains the reason of its place after a speech of similar tendency. V. 271 seems to be an answer to some Jewish scoffer who had told the fugitives that Islam would keep them in poverty for ever. "The devil" is one of those mentioned in v. 13. The allusion that the evil-doers have no helpers (\textbf{ansār}, v. 273) is evidently an attempt to draw the Medinan Moslems, who had received the honouring title of \textbf{ansār}, away from their Jewish allies. The latter Muhammad was not bound to guide (v. 274). These words perhaps belong to the period following the battle of Badr, when affairs already began to assume a more settled aspect. The regulations with regard to money transactions mentioned in the same speech seem to belong to a time, when the spoils of victory had increased the wealth of the Believers,

\(\text{To be continued.}\)

AN UNPUBLISHED XVIII CENTURY DOCUMENT ABOUT THE ANDAMANS.

BY R. C. TEMPLE.

Since communicating Capt. John Ritchie's remarks on the Nicobars to this \textit{Journal} under the title of "An Unpublished Document about the Nicobars, ante, Vol. XXIX. p. 341, I have discovered that it formed part of a MS. in the India Office entitled "Remarks upon the Coast and Bay of Bengal, the outlets of the Ganges and interjacent rivers, according to Surveys by John Ritchie, Hydrographical Surveyor to the Honourable the United India Company." This MS. now numbered C.10, is endorsed on the cover as follows:— Captain Ritchie's Nautical Remarks for which I have given a Receipt to the Secretary the 25th March 1820, Jas. Horsburgh." It relates to the work done by Ritchie in 1771.

The contents of the MS. are as follows:

\begin{tabular}{|l|l|l|}
\hline
No. 1. & Point Palmiras, and the Road of Ballasore, with the tract of Ships into it & 1-17 \\
& The Braces, and Entrance of Hugly River, with remarks on the Pilotage & 17-29 \\
& Rivers, from Hugly to Rymongull, and their outlets, etc. & 30-46 \\
\hline
No. 2. & Rivers from Rymongull to the Magna, with the nature of the Coast and Islands, at the east corner of the Bay & 47-67 \\
& Coast of Chittigong with the Islands shoals, etc., of Kirtipdeaux & 67-72 \\
& Tempests, to which the head of the Bay is subject, with two examples of their force and effects & 73-80 \\
& Present state of the navigation of the Bay, with remarks upon Chittigong, considered as a place of shelter for ships & 80-84 \\
& Coast of Aracan & 85-94 \\
& Coast of Ava, Cape Negrais, etc., etc. & 94-104 \\
\hline
No. 3. & Preparis and Cocco Islands & 105-110 \\
& \textbf{Great Andaman Islands}, together with the situation of Narcandam with respect to Negrais, etc. & 111-126 \\
& \textbf{Little Andaman Island} & 127-129 \\
& Carnicobar, and Nicobar Islands, with the fine Harbour Noncevery & 130-143 \\
& Some remarks on Particular Places, at the West side of the Bay of Bengal & 145-152 \\
\hline
\end{tabular}

\(^{55}\) Vv. 263, 265, 267, sec Ch. VIII.
For the present purpose I shall content myself with communicating the contents of pp. 111-129 relating to the Andamans and Narcondam, nowadays included in the Administration of the Andaman and Nicobar Islands.

To his general volume Capt. Ritchie prefix some quaint introductory remarks in the self-depreciatory fashion of his day, which are here reproduced:—“Preparatory to the remarks, it is necessary to observe, that the first part relative to the head of the Bay of Bengal; from point Palmiras to the southern extremity of the Coast of Chittagong, are observations, made in the Course of a regular Survey: it is hoped therefore, that these will be found tolerably complete, the latter part, which begins with the coast of Aracan, contains broken remarks upon a running survey: these are very lame, but if the writer should ever be enabled to make any addition to them, the most trivial parts shall be expunged, to give place to others of greater importance. As to the language, the Will must be taken for the deed, the writer being very sensible of his inability that way. Writing is neither his talent, nor profession, and the remarks, in their present form, are only the work of a few days.”

Great Andaman Island together with the Situation of Narcondam with respect to Negrais, etc.

Great Andaman Island,¹ is situated from 11° 20' to 13° 35' north Latitude, being 135 miles long, and how broad I cannot tell; at the South end where I had opportunity to examine it, the width at a mean is about 20 miles, but towards the middle it must be a great deal broader. The Island is generally mountainous, and in some places very high, particularly a double peak'd hill at the east side [Saddle Peak], which I have seen at 70 miles distance the whole Island is covered, or rather loaded, with Timber, except where the hills are nearly perpendicular, and there the rains washing the earth down, shows it to be of a reddish colour.

There is, no doubt, continued soundings between the Cocos, and Andaman; altho we had one cast with no ground, at 80 fathoms. The eastern part of the north end of the Island, bears from the middle of Little Cocco S. 25 W, and the distance is 30 miles. I do not here mean, the little Island [Landfall Island], at the north end of Andaman, which lies in the same direction from Cocco, but the distance to it is only 23 miles: it is said that there is a very good passage [Cleugh Passage] between Andaman and this Island, but I can say nothing of it from my own knowledge. The bank which joins Cocco's and Andaman, extends about 25 miles to the eastward of the Islands, in the parallel of the passage, but along the east side, of the Andaman, there is no soundings at the northern part: except perhaps, very near the land, where it has not yet been sounded. The course of the shore for about 20 miles from the north end of Andaman along the East side, is S. ½ E: this part seems to be broken into divisions, if we might judge from the two mouths, or inlets, which appear upon the eastern shore [Cadell Bay and Port Cornwallis]. The land hereabout is high, and very scrappy, rising almost perpendicular from the water. In the Latitude 13° north, there is a very fine inlet [Stewart Sound], with two Islands at its mouth; the northernmost of which is pretty large and rises gradually on all sides, to a moderate hill; it is every where covered with trees, very thick; and at a distance, appears as if only covered with grass. The Southern Island is very small, with open scrappy trees upon it. The inlet bends round to the southward, behind a point upon the left hand side of entrance, and seems to promise a good Harbour [Bacon Bay]. It was my intention, to examine this place closely, altho I had much to do, and little time to do it in; but happening to come to it in the evening, and there being no soundings in the offing, nor any probability, that we could get into anchoring depth before night, or rather before dark; we were obliged to ply in the offing, untill morning, and daylight shew'd us, that we were drove 10 miles to the southward by a Current: this untoward circumstance, was unlucky enough at this juncture, and we endeavoured to repair it by Plying to windward, for two days, and nights, under every sail the Vessel could bear; it was all in vain; the wind and current was too much to struggle with; and

¹ [The five main islands forming to this day, the Great Andaman, were to Ritchie all one island.—Ed.]
the Weather became so threatening, that we were obliged to provide for the safety of the vessel and ourselves, in case of an easterly gale. — Just to the southward of the inlet, the land juts out, into a round point to the eastward, and rises into a high steep hill [M. Diauolo]; if the depth be moderate there will be found, a good Anchorage by the shore, between this point and the inlet, for the S. W. monsoon; and indeed, this inlet might be as easily examined, in that monsoon, as in the northern one.

Before I proceed, it may be usefull to settle a point, which hitherto has been only guess'd at: I mean the Situation of the Island Narcandam: this is a high mountain, rising almost perpendicular out of the sea, and is used as a mark, to direct ships from the southward, for Negrais, or Syriam River. The north Peak of the Saddle hill, upon Andaman, we observed to be in the Latitude 13° 10' N., it bears S. 13° Wt, distance 50 miles, from little Coco Island, and by collecting the Meridian; distances, from Island to Island, between this peak and Cape Negrais, as I have stated the Situations, it will appear, that the whole meridian distance between these places, is 72 miles; and that they lie SSW., and NNE. from one another, very nearly. The observed Latitude of the Peak of Narcondam is 13° 23 North, consequently the difference of Latitude, between the Peak of the Saddle, and it, is only 13 miles. The journal of Wednesday 29th of January 1771, Says, that at noon the Latitude observed was 13° 32' N., The Peak of Narcondam bearing S. 79° E., and the Peak of the Saddle upon Andaman S. 59° Wt. By this Position, the meridian distance, between the Vessel and Narcondam, was 46 miles: and between the vessel, and Saddle 37 miles; making in all 83 miles, for the meridian distance of the Peaks; and by the difference of the Latitudes, they must lie, N. 81° east, and opposite, distance 84 Geo. miles. It may be worth observing, that by a run from the north end of Andaman, to Narcondam, and estimating the distance of the vessel, from the shore at each Island, our log gave 82 miles, for the distance between the Islands, which was exceedingly near the truth. As a proof that the saddle upon Andaman is very high, I shall just observe, that the journal of the just mentioned day says, that at Sunset the peak of the Saddle bore S. 69° 30' Wt, and that of Narcondam, Ebs. 14 or 15 miles distant, at this rate we must have been 70 miles from the Saddle at the time. Since the difference of Meridians of the Cape Negrais, and the Saddle hill of Andaman, is 72 miles; and that of Narcondam, and Saddle hill 83 miles; it follows, that the meridian distance between Cape Negrais, and Narcondam, is only 11 miles: and so much, the latter is to the eastward of the former; the bearing, therefore, is N. 4° West and opposite, and the distance 152 miles. I might here give the Situation of Syriam bar, from Narcondam; but as I have already said, that the information I have, about the extent of the Coast of Pegu, is only that French manuscript plan; it is, I think, the best way to let every Navigator, settle this point for himself, 'til better authorities can be obtained.

From the elbow before mentioned, in Latitude 12° 50' north, to what we have called Diligent Strait, the course of the Shore, is South a little Westerly; and in the Latitude 12° 38', there is a fair bay not very deep [Cuthbert Bay], but the land is high all about it, and would be a tolerable good anchorage in the SW. monsoon: from the South point of this Bay, begins a fine bank of Sand, and mud; which runs off SE. upon this bank, we had the first soundings about the east side of the Island; (except at the north end which I have mentioned) and the depth, at about 2 miles from the land, is between 20, and 25 fathams; it is consequently, fine anchoring ground, in the SW. monsoon.

Between the Latitudes 11° 55', and 12° 15', north, lies a great Cluster of Islands, detached from Andaman, by a Passage, which in the plan, is mark'd, Diligent Strait.6

5 Author's f. note. — Major Rennell, Surveyor Gen'l, informed me that he had made a mistake, in the copies of my plans which were sent to Europe; and had placed Narcondam, a whole degree from its proper situation.
6 [Saddle Peak is 2,400 ft. and Narcondam 2,320 ft. — Ed.]
7 [Originally named Ritchie's Archipelago but now unhappily Andaman Archipelago. — En.]
This place is an excellent harbour for ships of all dimensions, at any time of the year: the narrow of the Strait, is in the Latitude 12° 10' north, and is less than a league over; the southern part is a Spacious Bay, fit for the whole Navy of England to ride in, the northern part has three small Islands, with a spit of hard ground in it, but nevertheless is a very good harbour, which we experienced for five days in very bad weather. As this circumstance gave us the only opportunity we ever had, of seeing any of the natives of Andaman, I shall relate it nearly as it stands in my Journal. On the 16th of January 1771, at 3 in the afternoon, we anchored in the northern part of Diligent Strait, in 19 fathom water, and soft ground. At 1 o clock of the morning, of the 17th, Came on, a very heavy squall of wind, and rain, attended with much Thunder, and lightning, from the S. E. quarter; the strength of the squall, continued about half an hour, at which time the wind abated, but the rain continued; and in short it seems that for all that day, and the two succeeding ones, it rained without intermission, and, at times, the wind was boisterous and equally. During all this time we saw no ships, nor was there the least appearance of houses, or cultivation, any where upon the land about the place; in the nights indeed, the shore was lighted up with hundreds of Torches, which made an appearance, as if we were in the middle of a great Lake, surrounded by houses lighted up. The morning of Sunday the 20th was fine weather, and at 8 o clock a Canoe paddled off, from one of the eastern Islands, and came very near us; we made what signs we could to them, to come on board; this they took little notice of: and fearing lest they should give us the slip, I order'd our boat to be hauled up, at the side opposite to that where the Canoe was and manned with European Seamen, the moment the people in the Canoe saw our boat put off, they took to their paddles, and with all their might, pulled towards the nearest land: they were soon overtaken, and two of them jumped into the sea, and swam to the shore with amazing swiftness, the other two (for there were only four men) staid in the Canoe, and stuck at our people with their paddles. An old lascar, who had been a prisoner in Arecan, and who pretended to understand the Birmah language, at his own request, was sent in the boat as a linguist; this man went into the Canoe, and stood between the two people; but while he spoke to the man before him, the other behind, took up a torch made up of Rushes and Dammer, and after blowing it up as much as he could, held it to the Lascar's bare breech; the poor old fellow soared out in a horrible manner, and leaped into the sea, to cool his posteriors: the boats crew could easily have prevented the firey attack, made upon the lascar's hinder parts; but a little mischief and a great deal of mirth suited them best. When the two Strangers were brought on board, surely never were people more terrified; they were two lads about 14 years of age; and no doubt, thought that they would be immediately sacrificed; despair was strongly painted in their faces, and neither of them could support their weight, but fell upon the deck, as if they had lost the use of their limbs; a very little time however, brought them too; fear, and terror, gave place to wonder, and amazement! their countenances cleared up, and we could soon perceive, that the observations they made, were mixed with a degree of pleasure. Boiled rice was offered them to eat, but this they only turned over with their hands, and certainly, did not know what it was: I then thought of coconuts, and had some open'd for them; this they eat greedily of; but I observed that of one nut, which was not opened in their Presence, they would not eat; this convinced me, that they dreaded poison. They soon found the use of their legs, and being convinced that we intended to do them no injury, began to walk about, and stare at everything in the vessel; the difference of colour between the Europeans, and lascars, was a matter that took up much of their attention. Between 10, and 11 o clock, another Canoe paddled off towards us, and when they came near, we made the two lads call to the men in it, and they soon came alongside, and were only two, an elderly man, and a lad; the latter came in immediately, but the old fellow made some difficulty; two lascars went over to help him up, and got him upon the Bends of the vessel; but he turned short about, and caught each of the lascars by the neck, under his arms; and plunged into the Sea! they went down altogether, for about a minute of time,

* Author's note: — This will appear to be strange weather, for the Bay of Bengal, at this time of the year.
* Author's note: — There must be a great deal of this resinous substance produced upon the island.
and then the lascars came up on each side of the old man at some distance; they said he was the devil and much stronger than 10 men. The old man swam about for a little time, and then went forward to the Cable, and came up of his own accord. He stared at every thing, as much as the young ones had done, and several times tried to pull the ring bolts out of the decks; and roar'd, and whoop'd like the American warriours. Sometimes he laid his hands upon the great guns, crying Coo. — Coo. — Coo. At 11 o'clock we spied two large Canoes, paddling of, from where the two men swam on shore, these had 8 men in each; and we soon perceived, that they were war boats; for the upper end of their paddles, were bows; they being in this form 8. They came pretty near, but not alongside, and were careful to expose their paddles to our sight, as little as possible; we had no doubt, but they came with an intent to rescue the two lads that we took in the morning; however they showed no menacing Signs; but lay by at small distance, and talked to the two lads; and sometimes with the old man, who now became perfectly satisfied with his treatment. I had given those we took, pieces of coarse cloth to wrap round them; for these people were all stark naked: and when they seemed desirous of going into the Canoes, to their friends, they were permitted to do so; but they no sooner got into the Canoes, then they threw the pieces of cloth into the old canoe that they were taken in; and leaving it behind, they pulled toward the shore, with great swiftness. The old man and his companion were still on board, nor did they seem under the least apprehension of being detained; but they laughed very heartily to see the others in such a fright. I gave them some nails, and bits of old Iron, which pleased them much; and about 3 in the afternoon, they went into the Canoe, and tried hard to pull the Chain plates from the vessels side, they went astern when this would not do, and dragged strongly, and long, at the smaller chains; but these were too well fixed; and at last, they went towards the shore at an easy rate, looking at their nails, and singing all the way.

There were only 20 in all of these Andamaners, which we saw; and all of them were Caffories; 9 it woody heads be the characteristic of caffories; their noses were not flat, like the Africans; but they had thick lips, as these have; and if all the inhabitants of this great Island, be of the same cast; it is not to be doubted but they are a race of people, very distinct from those of the adjacent countries.

Trifling as this account is, it is all I am able to give concerning the natives of Andaman; for no other of them came near us, while we were about the Island, and our time was so very limited that we could not enter into any close enquiries; besides, at that time I did suppose, that the Island would have afterwards been further enquired into, respecting its harbours, produce, inhabitants, and every thing else, necessary to be known.

The coast of Andaman Island, from Diligent Strait, to the South end, is S. 15° degrees, West; the land is regularly high, until near the south end, and there are several inlets upon this side, the most remarkable of which, is not far from the south end, in Latitude 11° 30' north; and as we afterwards found, that there is another inlet upon the west side, nearly opposite to this, it should seem that the Island is cut thro' here;10 at any rate, I think, it promises a good harbour, and I hope some one will in time Enquire into this matter.

At the South east corner of Andaman, lie three small Islands [Cinque Islands], but very high, and like the rest, covered with trees; they are nearly in a line SbW., and NbE., the nearest being about 2 miles from Andaman; we went through this pass [Mannar's Strait], (as our tracts shews) and had no ground at 40 fathoms; there was a strong current in it, which looked like breakers; I mention this, that any ship taken short by bad weather, or otherwise, may run thro' without fear, if there be occasion. The south end of Andaman, is beset with great rocks; which however, do not extend to any great distance from the land, for the soundings here, as in other places, I must refer to the tract pricked in my plan; and hope the Navigators who may have occasion to come this way, will not hold me accountable for any changes of depth, they may happen to meet with at a distance from that tract: they will remember, that soundings are very variable, at small distances in rocky ground,

---

8 This is roughly the form of the Andaman bow when unstrung. — Ed.
9 [Old Anglo-Indian for Kaffir, Caffre, meaning any black man, negro or negroid. — Ed.]
10 [He means here Maipherson’s Strait, dividing Ratland Island from S. Andaman. — Ed.]
and that our knowledge of this Island is very superficial. The land of Andaman, at the South end rises gently on all sides, to a moderate high Peak [The Whale Back], with some hummocks about it; the whole is evenly covered with trees, and has a very pleasant appearance. At the S. W. corner of the Island, and detached from it, by a Channel 4 miles broad, lies a patch of great black rocks under water; on which, we had no less than 7 fathoms water, with sudden overfalls of two or three fathoms. I have marked our tract over it, and it does not appear to be dangerous; however, I wish that ships may avoid it, at all times, because, among such great pointed rocks, there may be some much nearer the surface of the water, than any that we met with. The Channel between this bank and the Island, is fair soft ground, having 13 or 14 fathoms water in it. NWbW. from the south west corner of Andaman, lies a fine low Island covered with trees; it is a league long, and two miles broad; and if we may judge from the multitude of lights seen upon the shore at night, it is well inhabited; this Island is marked N. Sentinel in the plan; and is between the Latitudes 11º 32', and 33' N. a ship may anchor in very good ground, at the east side of it, in the S. W. monsoon, should there be occasion. Between the Latitudes 11º 24', and 11º 41' N., at the west side of Andaman, there are eight Islands of different magnitudes [The Labyrinth Islands], for the Situation of all which I refer to the plan, only observing that the land is much indented here, and there appears to be good harbours for the N. E. monsoon; particularly where 33' N. is marked [Port Moutai]; and a little farther to the southward, within side the Islands where the Inlet, or what I suppose to be a passage thro' the Andaman is [Macpherson's Strait]. I have traversed the whole ground over, westward of these Islands, as far to the northward, as the Latitude 12 N., and have marked the soundings regularly upon the Plan, to which I must refer for the depths, and only observe that the bank is fine soft oozy ground. The land about this place is not so mountainous as at the east side; it appears hummocky, and Scraggy, with fine reddish cliffs near the shore [Fort Campbell]; but the whole is covered with trees, except where the hills are too steep for any thing to grow upon them. We saw here multitudes of lights every night, and I have no doubt but the whole of this great Island is well inhabited; but what is somewhat singular, we saw but few houses like houses or habitation upon the Island, nor was so much of a landing place clear of wood, as the men could stand upon: I do not mean to insinuate that there is no such thing; on the contrary, there must, I think, be plenty of both; but the nature of our trip would not allow time for minute enquiries, as I have already mentioned. We were obliged to leave Great Andaman, without making further discoveries about it, the gale set in strong at N. N. E., and obliged us to beat, under close reef'd Topsails against a current, with the Vessel laid gunwale too; so that in twenty four hours we could not gain a league; and it being then the 29th of January, it became necessary to proceed to the southward, in pursuance of our orders, but before I quit the subject of this Island, I shall, I hope, be excused, if I offer the following observations.

And first the great Andaman is, evidently, an Island of a very different nature, from what it has hitherto been represented; for all had agreed, to make it a place where no soundings could be obtained, and consequently no anchorage had about it. The natives it was said, were a terrible cast of people, who came out in their Canoes and attempted to board every ship that came near the Island; that they shot their arrows to a great distance, and seldom missed their mark. Now very little, if any thing at all of this is true; for except at the east side, between the Latitude 12º 30', and 13º 30' North, we have had soundings every where near the land; Anchorage, we had almost every night, when we chose to bring too, and that was very often. The people may be dexterous perhaps, but they are not fierce; and we could observe, by their observations upon our guns, that they knew the use of them; and had, no doubt, been taught it in a manner, that does no great honour to those, who were their preceptors.11 Until a farther examination of this Island takes place, the only use my remarks can be of, is confined to ships in distress, or those who would skreen themselves for a few days, from tempestuous weather: in such cases, they may be very useful; and to such, I recommend them, but there are other matters, not less worthy of attention, altho we can only guess at them; I mean, the probability of getting excellent timber for building, upon this Island. Timber is an

11 [Probably Malays. The italics are the Author's.—Ed.]
article, which all the Company's Settlements about the Bay, are destitute of, especially the kinds which serve the purposes of ship-building and Fortification. Andaman offers fair, to supply this article plentifully, if we may judge by the quantity it is loaded with; there is variety of grounds upon the Island, high, and low; and who would doubt of there being variety of Timber, surely it is an object worth enquiring into; considering the vast sums, sent annually to Pegu, for this very article; and the disadvantageous, not to say dishonourable manner, in which the Poguers treat us. If ever the French take possession of Andaman, we shall then see the value of it; the Island in general, is naturally disposed to be fortified and a little art, properly bestowed, may produce Moora's, and Havana's enough; it is difficult to fix an Idea of the importance of this Island, in the minds of those who have not seen it; and yet its situation and extent bespeaks attention, when considered in a political light; for who does not know that our restless Neighbours want only ground to build their Indias projects upon; there is here ground enough, to occasion subsequent differences; and a Mauritius in the Bay of Bengal might become troublesome.

Little Andaman Island is separated from the Great one, by a passage 9 leagues broad; I have mark'd it Duncan's passage, because a Captain Duncan is said to have sailed thro, between these Islands many years ago. The small Islands and soundings in this passage, are marked upon my Plan, to which I must refer, as I must also, for the situation of the southern Sentinel. The Island itself, is situated between the Latitudes 10° 30', and 10° 52' north, being full 7 leagues long, and barely 3 leagues broad, bearing from the south end of great Andaman, S. 8° Wt. This Island is low, and flat, at the north end, and rises gradually to the southward, where it is a kind of flat hill. In a little Bay at the west side of the Island, there is a very good Anchorage for the N. E. monsoon; here ships may Anchor in 12 fathoms water [Ekiti Bay], within half a mile of the shore, there is a sandy beach here upon which we saw five or six people, walking about. The land here is totally covered with trees, but I think the soil must be very different from that of the great Island. At the S. W. corner of little Andaman, 2 ½ leagues distant, lies a patch of great rocks [Dalrymple Bank] with about 9 fathom water upon them; they are not dangerous, as far as we saw, but a look out should be kept here about, because there is no sounding at a small distance to the south and westward of them, there is between 15 and 20 fathoms water, with very coarse ground, between this patch and the Island.

At the south end of Little Andaman, there is no soundings within less than a mile of the land, to the westward; but the bank projects further off at the S. E. corner; there is also, reefs of rocks above water, at this end, but these run no great way off, and in the Plans I have marked their utmost extent. In all the old Plans, this Island is drawn as two Islands, lying near one another; I will venture to say, that the Person whoever he was, that gave the sketch of little Andaman in that manner, had never seen the Island, except perhaps, at a great distance; and the same may be said of Great Andaman, for with respect to both, the only thing that the old Charts are right in, is that there are Islands somewhere about the places assign'd in them.

Little Andaman agrees exactly with the descriptions given of Barbadoos when it was first discovered; the dimensions, the face of the Island, and the Climate, agree; and I have not the least doubt, but the former would be equally fertile with the latter, if equal pains were taken to make it so; in its present state there are many inhabitants upon it, I should suppose, from the many lights seen on it in the night: what the ground produces, for their subsistence, I cannot say; doubtless, they have food in great plenty, of whatever kind it be; and foreign invaders have not yet disturbed their peaceful habitation.

I now proceed to the Island Carnicobar. N. B. Barren Island is not mentioned here because it was too far out of our way to make any enquiry about its situation in so very little time as was allowed us.
THE SATRUNJAYA MĀHĀTMYAM.

(A contribution to the history of the Jains by Professor Albert Weber.)

EDITED BY JAMES BURGESS, LL.D.

It was intended to include among the "Papers on Satrunjaya and the Jains" (ante, Vol. II. pp. 14 ff., 134 f., 193 f., 268 f., 354 f., and Vol. XIII. pp. 191 f., 276 f.) the analysis of the Satrunjaya Māhātmyam prepared and published by Prof. Weber, now many years ago. The following translation was made, and also an analysis of other portions of the work was made from the Sanskrit, by Mr. Krishṇa Śāstri Godbole, in extension of the contents of the "Beitrag."

Dr. Weber's introductory remarks on the origin of the Jains and the date of the Kalpa sutra, etc., are now no longer of special interest, and are therefore omitted. For the rest the German work is followed (from p. 14), with the additions just referred to in square brackets. — J. B.

The Satrunjaya Māhātmyam professes to have been written by a Jain teacher — Dhanesvara, at Valabhi, under the protection of Silāditya who is said to have reigned 477 years after Vikramāra, who again is placed 470 years after the Nirvāna of Vīra. [These data would place it in A. D. 431; but as Silāditya I. ruled so late as A. D. 605, this date cannot be accepted; and the work bears internal evidence that is against any very early date for it. Still its contents are valuable for its mythological lore and its philological features.]

The work is placed in the mouth of the last Jina, called Vardhamāna or Vīra, who, on the occasion of a solemn assembly upon the Satrunjaya itself, at the request of Indra, relates the legends connected with the mountain sacred to Rishabha, the first Jina. In this, however, he takes a very wide sweep so as to include not only the strictly Jain myths, relative to the history of their principal patriarchs, such as Rishabha and his family, together with Ajitavāmin, Śanta, Nemi, Pārśva, but he also brings in the whole Brahmansical series of myths of Rāma, as well as of the contest of the Kurus and Pāṇḍus and the story of Krishnā, and parts of these are metamorphosed in a highly arbitrary style; but ther details belonging specially to the Purāṇa cycle are wanting.

On the whole the language of the poet is noble and powerful and compares worthwhile with that of the Bhaṭṭikāvya, which also claims to have been composed at Valabhi during the reign of one of the four Śrī Dharasenas, — which of them is uncertain (Bhaṭṭikā, xxii. 35). As may readily be imagined, many words are met with in Dhanesvara, not only applied in peculiar senses belonging to Jain terminology — like sangha, sanghapati, sanghosta, chaura, śrīka, sudhāra, sambhasvaram, i. 201, 204, xiv. 65,1 desad, xiv. 65, 74, 339, śīna, xiv. 71, 72, samyakta, xiv. 67, 75, 80, mithyāta, xiv. 79, 80, 340-41, mithyadeva, xiv. 175, 224, 232, mithyateva, xiv. 21, 55, 70, etc., — but also many other peculiarities of language. Such are the application of ituk ituk cha at the beginning of a new section, e. g., i. 64, 222, 511, ii. 454, iii. 4, v. 3, vii. 1, ix. 4, 99, etc., - chavala for kevala, e. g., i. 17, 368, 388, 401, etc., whilst kevala is used along with it partly in quite a special sense, conf. xiv. 64, kevalin, x. 140, and partly also in the usual signification, as in x. 141, 147; — the śīla which Westergaard had vouched for only in the Bhaṭṭikāvya), xiv. 149, 166, 298 (?); — apachi, 'south,' i. 56, 283; — angin — dehin, xiv. 82, 336; — the simple denominative forms, like kimkaranti, xiv. 40, 81, jatati, piyūshañi, abhiti, mitranti, xiv. 81, 82. Grammatically the periphrastically formed, perfects ikṣheta, x. 137, and juvijñijñara, x. 168, are remarkable; also the Parasmaipadam in ikṣa is irregular, — it is, however, to be met with still oftener, e. g., x. 171, xiv. 142 (ikṣiṣhaya); 181 (ikṣayati). So also udeśiṣhaya, xiv. 234; udeśiṣhaya, xiv. 140; tāpyiṣhaya, xiv. 179; asmat, xiv. 91; vimūṣhaya, xiv. 345; suṣṭha for suṣṭpayita, x. 156. But the passage x. 163 — tad eva na smarāmy asmi, is especially interesting: compare with it the similar examples in Böhtlingk-Both, p. 536. As is known the four composite aorist forms of the Sanskrit and Pāli have originated from a like juxtaposition and terminative

1 Wilson, Maccenzie Coll. Vol. I. p. 150.
combination of the auxiliary verb ... Generally the work yields rich material to the Lexicon also by its the rarely used words which it employs, — e. g., asāyampayē, mātāvārana, puṣpadantau, etc. The frequent confirmation of a statement by the concluding assertion that the contrary is not the case, — is a peculiarity of the style, — p. 96, xiv. 95, 262, 289. The juxtaposition of homophonous words is extremely frequent, e. g., i. 30, 50, 165, 294, 380-82, ii. 6, 8, 13, 17, etc., real plays upon words are also not rare, as in i. 3, 6, 26, 44, 56, 160, etc., but nowhere are these so strained and forced as in late poetry.

Sarga or Chapter I. (526 vv.).

Āśārayairūdhkhanēvarasārīvarāchīte mahātīrthāsatrunjayamādhatmya giri-Kaṇḍumuni-bhagavatamā (va) saravyādevi-dyānavavarañya namā prathamah sargaḥ, — describing the mountain, the history of Kaṇḍumuni, the solemn session of Vira, his sermon, and his description of the groves.

The poet begins with a laudatory invocation of the five principal Jinas;3 of Yugaḍīna (the first), Śānti (the 16th), Nemi, Pārśva, and Vira (the three last); in v. 6 venerates his predecessor Puṇḍarika; and in v. 7, addresses his devotion to all Jinas — Ādiśvara at their head, to all Munis, Puṇḍarika,3 etc., and to the beings called Sasanadevi (Hemach. 46). In 8, 9, he relates that, at the desire of Yugaḍīn, his gaja-leader Puṇḍarika had formerly composed a Mādhīmam of the Satrunjaya in 100,000 pāda, and that at the direction of Vardhamāna (his gaja-leader Sudharman) had made an abstract from it, and (v. 10) from this abridgment consisting of 24,000 verses, Dhanesvara — humiliating the Buddhists by means of the system of yielding4 had composed his work (vv. 11-15) by command of Siśadītīa5 the king of Sarnātha and ruler over eighteen princes. Then follows (vv. 16-25) a short panegyric of the mountain and its propitiatory power, after which the narrative begins:

Formerly Vardhamāna (Vira) surrounded by the Vrindāraka (gods, Hemach. 88), visited Satrunjaya. Then the seats of the Viśājās (Indra, Hemach. 171) quaked, compelling them as it were to bow before the Jina6 (v. 27). Sixty-four of them, namely, 20 Bhavanasendra (Hem. 90), 32 Vyantarādhipa (Hem. 91), 2 Jyotirindra (H. 92), and 10 Urdbhvalokanivāsin approached in haste with their attendants and vowed their admiration of the mountain, describing it (26-48) and its environs (49-63). According to this it has 108 summits: Svarnaṛti, Brahmaṛti, Udaya, Arbuda, etc. Fourteen rivers belong to it — the Satrunjaya (v. 738, 749) [flowing from the hill to the eastern sea, that is, the gulf of Khambat and a stream from Talāj hill falls into it], — the Aindri, Nagendri, Kapilā, Yamala, Taladvaṭi (54), Yaghāṅgi (or Kapardikā — on the north), Brahmī, Māheśvari, Sabhrmati, Sadvalā, Varatoya, Ujjayantika, Bhadrā. Also various groves are upon it, — on the east is the Sūryodyāman (see 511; ii. 3, 599, 602); on the south the Svargarūdhāṇa; on the west the Chandrōdyāman; on the north the forest Lakshmitālīvīlasam. Likewise certain lakes (sāras), the Aindram — (formerly made by Dhanada at the request of Saudarmendra).

3 Probably the five Parameshthiin mentioned in x. 23, xiv. 208, 237.
4 Not in Hemachandra, but see v. 6, 5, 499, xiv. 186, and compare Purushapuṇḍarika in Hemach. 606, as the name of the 6th black Vāsudeva.
5 "Svādīsa dhāvantataḥ — on the strength of the system of admitting as possible," — see Hemach. 25, 651. 'Scepticism' which is distinctly negative and doubting, can hardly be meant by this word, as Boeckhling-Rieu translates it in v. 681, but on the contrary the admission that the opponents may possibly also be right; consequently it implies only an abnegation of the unconditional orthodoxy of one's own opinion; see Wilson, Vishnu Purāṇa (Hall's ed.) Vol. III. p. 209. A similar resignation, it is true, belongs to the Buddhists in general, but it appears to be characteristic of the Jains, who, by means of it, placed themselves as to dogma midway between the deīka, Brāhmaṇa, and the sarvaśca or śāntavīdanā, Buddhists; it also explains the circumstances of their being able to live peaceably among the former, to whom they accommodated themselves also in matters of caste, whilst the latter were obliged to yield.
6 The MS. has in all cases the short ी, probably by mistake, since ी, 'stones' is not meant, but ी, 'virtue.'
7 Or, is jīva synonym to be explained from jīvāna (sec. plur.), rather than from jīva, so that the vrindāraka would also be included? s. v. 165.
the Bhāratam — by Bharata, the first Chakravartin; the Sarāḥ Kapardiya-khaśya (conf. xiv. 210 f.); the Sarvatīrthāvatāram, etc.

“That wise Ādhyātmik performs his penance; listen attentively to the history of his wonderful life!” continues the poet (v. 64), without intimating who speaks (also v. 163) or who is addressed: this immediately follows the praise of the mountain sung by the gods, as an argument for its holiness, without, however, belonging to that praise. The poet, as it were, interrupts the gods, and now the legend follows in all its circumstantiality as far as v. 164.

Formerly there was a wicked king in Chandrapura named Kāṇḍu. [On account of his virtues in a former birth, he had obtained great wealth; but he became consumptive (kṣaya) and emaciated in body. As he sat in his court surrounded by wicked persons and considering how he might annoy others, a leaf of the Kalparāṣṭha fell before him, on which was written the verse —

प्रभृतिसिद्धान्वितोऽक्षणे निःसिद्धिः ॥
कथे रुग्नान्वितेऽपि कर्तरास्त्रीहृदयतः ॥ ७२॥

From religion obtained — wealth; religion, too, who destroys,
How can it be well with him? this benefactor-destroying sinner!

The king understood that his disease was the fruit of his sins and reflected that he had been caught in the net of this world by the bait of wealth. Leaving his royal state in the night Rāja Kāṇḍu went out wishing death. While he was considering whether he should throw himself into the sea or take the Bhairava leap, a cow (named Surabhi) attacked him furiously. Kāṇḍu in anger cut the cow in two with his sword; but from it arose a female figure of terrible aspect with red eyes, who challenged Kāṇḍu to fight. At first he scornfully refused, but at length fought and was defeated. Then he sorrowfully asked himself, — “Why did I fear the cow when I had come out to die? I have only added another sin.” The Dev, then addressed him, — “Ah sinner you remember religion now; but your heart is not free from evil. I am your Kula-devi Ambika, come to test you, and I find that rage still burns in you. Go to places of pilgrimage in many countries, when the time for religious service comes, will tell you.” She disappeared, and Kāṇḍu, conceiving some hope from her appearing to him, set out on pilgrimage, and at length reached Mount Kollāka. In the last watch of the night, a Yāksha, his enemy in a former birth, appeared. His aspect was terrible and he carried a mace in his hand. Addressing the Rāja in anger, he said, — “Enraged man, you killed me and took away my wife; do you remember? Think upon your Ish-ā-deva, you must die.” The Raja’s passions had become subdued and he made no answer; and the Yāksha seized him and bearing him through the air took him to a mountain cave where he confined him and beat him cruelly. Kāṇḍu considered that he was thus expiating his former sins. Sometimes the Yāksha exposed him on a pinnacle, sometimes cast him into the sea, sometimes on a thorn bush; and at last left him in the cave. The Rāja, as the fruit of his good deeds in a former life, recovered, and he considered that his sufferings were but the leaves of the tree of evil which he had planted, and that the flowers and fruit of it had yet to appear in a brute birth or in hell. Thus repenting, he went in search of a place of pilgrimage]. And as he wandered, the protecting goddess of his race (gotrādevī) Ambika (v. 108) or (as in 123) “sāsana-sundari (conf. kāsana-deva, v. 7, and Hemach. 46) taryā-māt” appeared and advised him to go on pilgrimage to Satrunjaya, — “[There your sin will be destroyed. Because of the devotion

1 The Yatis at Satrunjaya point out the Aindrā, and Bharata Kuṣṇas; the Kavā or Kapardiyaksha-saro-var; and the Śrīya and Chandra Kuṣṇas. — J. B.
2 Does he stand in any relation to the Brahmanic namesakes? Or have the Jainas adopted him only for their own glorification?
3 A rock over a precipice on Mt. Girnar, called also Rāja-meladā-pathar; see Notes of a Visit to Somandīk, Girnar, etc. (1889), p. 47; Bomb. Gazetteer, Vol. VIII, p. 441. — J. B.
of your ancestors, I sent you the verse; now I show you a place of pilgrimage. Except at Sattrunjaya, your sins, which are deserving of hell, cannot find remission. By the conquest of your anger you are now worthy to go thither. It is the chaṭuri of those who would marry maṅkti: you will there obtain liberation." He then set out under a vow of fasting till he reached the mountain.

On his way he met a Mahāmuni who fully instructed him. By the ascent of the mountain he overcame his enemy sin10 (160), and now after long and severe penances he is about to obtain true knowledge and with it, at the same time, liberation. "Thus have I (who?) heard, O ye gods! from the mouth of Srimat Simandharamīhin, when once I went to Kṣetram Mahāvidēham (163, a. e. 295). Any and ever so great a sinner is pardoned by adoring Sri Sattrunjaya and, like this Kaḷḍaṇa, becomes a partaker of perfection" (v. 164).

Still more gods advanced (165) to do obeisance to the Jina; then an extended description of the solemn assembly, also Rīpumalla son of the Gohil rāja, of the Yadava race, lord Giri-Durgā (ii. 8) appeared to worship. We again find him in ii. 660, when Vira points to him and says to Surapati (Indra) "to his (Suryamalla's) race this king Rīpumalla belongs, who, living there by the side of the Rāivata mountain will through (i.e., after) three existences arrive at liberation." Did the poet perhaps intend a compliment to a contemporary prince or to one of the 18 vassals of Śīlādīya?11 (See beginning of Ch. II.)

Now when all were seated according to rank (223) greedy to suck in with their ears the nectar of the words which they were about to hear from Vira; Saudharmendra first begins to praise him (224-43); whereupon follows a sermonising exortation by the Jina (244-65) on the pious ecstacies of the assembly; then Saudharmendra — always indefatigable for what is good — by the appearance of the Sattrunjaya-trtha, by the arrival of the lord, by the statue (archā) of Sṛt-Yugāḍijina (Rishabha), by the milk-dropping Rājāḍān tree,18 by the two shoes (pāḍukā) placed under it, etc., is incited to propose to Vira the astounding questions (269-73): — "What salvation, and how may it be obtained on the mount? When did the mountain originate? By what pious person was this new temple built here? By whom was this image (pratīmā — statue) lovely as moonshine made? Who are the two gods standing sword in hand at the door before the lord (Rishabha)? Who are the two figures on his right and left? And who are the other gods? Also that solitary Rājāḍān tree? Whose are the two footmarks (pāḍukā) under it? What kind of peafowl14 image is this? And who is the Yakṣa standing here? Who is the goddess that enjoys herself here? And who are the Muni: assembled here? What rivers and mountains are these? And the trees? To what Muni does that tank there belong? And the other wells? And whence came this sap-well (? rasākūṭi — mineral spring), gem-cave? Whence these grottoes? And who are these five men with their wives made of plaster?14 Who are the people chanting the superlative virtues of Nāḥbhyā (1st Jina, Rishabha)? What mountain is that to the south and how did it originate? What summits and towns around it are these? How does the sea come here — from thence? Who Purushottama (Jina) has been here? How long would they yet stay? How long will this mountain yet maintain (?) itself? How many exaltations,14 most wise one, will yet occur here (274-85)?"

---

18 A play upon words with the name of the mountain, containing at the same time its true explanation.
11 Śīlādīya is styled ārātwadātreṣa (v. 14), but Rīpumalla merely ārāṭdātreḍāśāndāthā, and otherwise Giridurgāṣa.
12 Gujarāḍi Rājakā; Hemachandra makes the Rājakā synonymous with the Priyāda, and Böhtlingk and Bien thought it to be the Buchanania latifolia. Dr. Böhtlingk therefore identified the Rājakā or Rājakā as the Missanae henequ-thread (Rech.). — See Temples of Sattrunjaya, p. 21, n. 1. — J. B.
13 On the sacredness of the peafowl among the Jainas, see Wilson, Vish. Pur. (Hall's ed.) Vol. III. p. 208, and below, ii. 20.
14 Or in leporisvīnas simply — 'painted.'
15 The word udāhāra is a real Proto, sometimes it means some one's spiritual elevation, sometimes the founding, raising glorifying Jainas sanctuaries by someone, and often both are melted into each other; likewise the verb udāhāra itself. The MS., however, reads almost throughout udāna, udāra, as vīrdhik for vīrdhādī.
These questions, to some extent, embrace the contents of the entire Saivamjaya Mahatmyam, as it were, in a nut shell, and at the same time give a fairly comprehensive view of the theatre of the work, namely, the mountain itself. The two gâdaka under the Râjâlân tree are the symbol of the dominion of Yugaśîra (conf. x. 159) just as in the Ramâyana, ii. 123, Bharata, places the two shoes of Râma upon the throne vacant in his absence.

Fortunately, in his answer Vira takes a wide sweep, by which we learn much that is interesting.

"This part of the world (dévā) which is 100,000 yojanas broad is called Jambûdvipa, because the eternal Jambû tree stands on it,18 which, with the abundance of its creepers, dance, as it were, for joy because Jainā-châityas are in its twigs." According to the Jainas the inhabited world consists of "two and a half continents and two seas" (Kalpaśîra, Stevenson's tr. p. 94), "namely, Jambûdvipa, Dhâtuki-kânga, and Urdha-Pushkar, and the salt and fresh water sea, — all our earth." So also Hemachandra in his explanation to 1074, places Dhâtukâhânga and Pushkaravârâvâdhe17 beside Jambûdvipa (in which the same regions and mountains are said to exist as in Jambûdvipa, only in double numbers). The same division seems to be the origin of jambûdvipa-châityeshu, dhâtukâhabadhesu, pushkaravârabodhesu, 342-43. Probably these two and a half continents are meant by the expression trikângâ, x. 313, xiv. 309. Colebrooke also mentions these three names only, though he speaks of "numerous distinct continents" of which the world consists. The Brâhmans, as we know, have seven devas, among which are Jambûdvipa and Pushkaradipâ; with them Dhâtukâ appears as the name of a prince (Vish. Pur. Hall's ed. Vol. II. p. 201) from whom one of the two regions (varsha) of Pushkaradipâ took its name, — the other from his brother Mahâvira. Among the Jainas, however (see v. 343), the devâ appears to be so called from a dhâtukâ-tree,19 as Jambûdvipa from the jambu upon it.

"There are six mountain ranges (varsha-holders) which are measured (i.e. their inner limits are defined) by seven regions (varsha). These are called, — Bhârâtâ,20 Himavatam, Harivârâh, Videhâkâm, Ramâyânam, Airanyavatam and Airâvatam. The six mountains are Himavant, Mahâhimavant, Nishadha, Nilavant, Rûpya and Shikharin, which touch the eastern and the western seas, and are adorned with châityas (322-34). The same data are found in Hemachandra’s scholion, 946-47, in Böhltingk-Rieu, p. 377, — only there we read Irânya and (Colebrooke, Vol. II. p. 223) Airâvata, Nila, and Rukmin (for Rûpya). In the text itself he enumerates only Bharatâ, Airâvata and Videhâ, assuming also as known, — which is at least surprising: did the names seem too obscure or partly abnormal? In v. 1074 he similarly gives only the laukika names of the devântara seas. The seven varshas of Jambûdvipa recur also in the Purânas; but there they stand in a different order and partly have other names (Wilson, Vish. Pur. Hall's ed. Vol. II. p. 111) such as Bhârâtâ, Kimpurnâma, Harivâram, Ilâvritâ, Ramâyânam, Hirañyâmayam, Uterakuru. Hence the first, third, and fifth names agree with those above; the second is different; in Hiranyamayam and Ilävritam the radical forms of Airanyavatam and Airâvatam are probably presented. Videhâkâm corresponds to Utterakuru, which, according to Hemachandra 946, includes the Kuru, since it gives Kuru vînâ as Karnabhandî, and since the Kuru with the other four varshas not enumerated have to pass as phalabhâmis. Besides, Videhâkâm is regarded as the centre of the whole of Jambûdvipa, being according to the Brâhmans formed by Ilâvritam. The reason for this preference for Videhâ22 with the Jainas (as with the Buddhists, who also call one of their four devas by it) is probably a historical one, the remembrance that Buddhism originated among the Videhas

19 Only half of Pushkaradipâ is accessible to mankind, the remoter half being separated by an impassable range of mountains called Mahâmauttara parva (Colebr. Ed. Vol. II. p. 222). Similarly with the Brâhmans, See Wilson, Vish. Pur. (Hall) Vol. II. pp. 2011, 293, where the mountain is called Mahâmauttara (see below, v. 843).
20 Grisea loxontoma.
21 Usually written here with short a.
22 Conversely the Videhas appear as an unclean caste in Manu; see Huet, Sprêk. Lîter. p. 276.
(also Jainism). Mithila the town of the pious Janaka is considered the principal residence of Vira (Kalpasutras, p. 91; Berlin Cat. Sans. MSS., p. 372). In the Purāṇas the six mountains are called, — Himavant, Hemakāta, Nishadha, Nila, Sveta, Śrīgiriṇī, where the 2nd and 5th names are quite different. Nilavant for Nila (so also Hemach. in schol. 947) and Sikkharin for Śrīgiriṇī, are only variants. The serial order remains the same. The addition — “which touch the eastern and the western sea,” corresponds to the salt (lavasa) sea of the Purāṇas, which surrounds Jambudīvīpa on all sides. In material points, therefore, this entire description agrees with the Purāṇas, whilst that of the Buddhists is quite different. They have four deipas; in their midst is Muru and round it seven circular mountain ranges, which, however, have quite different names. (Sp. Hardy, Mem. of Buddh., pp. 4, 12; Ind. Stud. Bd. III. S. 123.)

“In the middle of Mahāvidhakhaṇḍa rises a golden mountain adorned with 100,000 summits, called Muru, 100,000 yojanas in height, and is on the navel of the earth. It is ornamented with a crown of eternal Arhat-chaitiyas shining with the splendour of jewels” (295-96). This is quite as in the Purāṇas, only Nālvarītam is mentioned as the respective varsham.

“The Bhūrata vārsham we regard as the producer of purity,22 because its inhabitants strove after purity even in the time of the Duhshhamas.23 There, among all countries the land of Surāshtrā is markedly pre-eminent; in it sin is feared to shame, all plagues are absent, and men are united together in love” (297-98). The name Surāshtrā appears almost throughout as feminine; compare also Ptolemy’s Saurashtra. The land seems to have been early distinguished by its Brahman civilization: comp. Ind. Stud. Bd. III. S. 220. Here naturally it is characterized as the chief seat of Jainism and designates, as in Ptolemy, the peninsula of Gujarāt in which Satrunjaya, as well as Valabhi, is situated. From its position, this district has always been extremely accessible to Western influences. Thus, for example, according to native legends the princes of Udayapura, the capital of Mewar, are said to be descended from a Byzantine princess Maria, daughter of the emperor Maurice (A.D. 583-602 — consequently a contemporary of Silādītya I.) the spouse of a son (or rather grandson) of Nūshirvan the Great (A. D. 531-79) converted to Christianity, who had fled to India and there founded a kingdom (Tod, Ann. of Rajasth., Vol. I. p. 236 f.). Accordingly it would not be in itself impossible that Christian elements may have early mixed with Jainism in the same way as with Buddhist worship, which originated exactly here. Wilson has already (Macken. Coll. Vol. I. p. 347) ascribed to the same source some legends of Sālivaḥana who ruled at Pratishṭhāna on the Godāvari.

Next follows (298-327) an elaborate panegyric of this province and to it is joined a similar one about Mount Satrunjaya itself, which forms, as it were, the crown of it, and expiates many sins even by only thinking upon it (328). Of its 108 names twenty-three are given (331-35), viz., Satrunjaya itself, Pundarika, Siddhkeshiram, Mahābala, Surakāla, Vimalādri, Puyarāsī, Syānpadam, Parvatendra, Subhadra, Dridhākṣṇiti, Akarmaka, Muktigaham, Matārthiham, Śāvates, Sarvākamada, Pushpadanta, Mahāpadma, Prīthvīpitam, Prabhōhpadam, Pātatamula, Kālaśa, Kahītimandaśanamandana. Of all these, Hemachandra (1050) mentions only two, Satrunjaya and Vimalādri. Among these Pundarika, Siddhkeshiram (Siddhadri, Siddhabhūṛi) are specially often used in the work, and the others but seldom.

“Whatever purity may be obtained in any other artificial places of pilgrimage (tīrthas), towns, groves, mountains, etc., by prayers, penances, vows, gifts, and study, tenfold as much is

---

22 A play upon words, Bharatam; bhārītam is probably formed from bhaṅga, loud, like tarākita from tarakā.
23 This is the penultimate spoke of the anusarpin period, see Hemach. 131, Būltīngk-Rien, 5. 903. The codex reads here duhkham, as in xiv. 165, 318, 328 (also Colebrooke, Vol. II. p. 215), duṣkham, xiv. 314, and only in 322, duṣkham. The context with duṣkha (duḥka) appears also in “ekāntam mahiddhikānāṃ yas tad,” xiv. 98, by which the ekānta dwākham is designated, and it is perhaps really questionable whether this derivation is not to be preferred to Hemachandra’s from duḥ (that is sa) + saṃd. A saṃdīṣa suffix saṃ is certainly extremely uncommon.
obtained in Jina places of pilgrimage; a hundredfold as much at the chaitya of the Jambū tree (comp. 291); a thousandfold as much at the eternal Dhātuki-tree, at the lovely chaitya of Pushkaradvipa at Mount Afjana.24 Yet tenfold more is acquired at the Nandīśvara, Kṣṇadēvi, Mānushottara-praparvata; twenty proportionately ten thousandfold more at the Vaihārā (358; v. 953; xiv. 100) Sambhata (iii. 349), Mēna, Rāivata25 and Ashtāpada (see vi. 358; Colebrooke, Vol. II. p. 208; according to Hemach. 1028, Kailāsa). Infinitely more, however, is obtained at once by the mere sight of Satrunjaya. Lastly all that is secured by devoting one's self to the worship of it is unspeakable" (341-46). Besides this and other sacred mountains mentioned in and here in what follows, there are yet Girināragiri (ii. 8, xiv. 89), Śrīśaila (xiv. 89), Chandraprabhāsa (xiv. 89, 254).

To this is annexed a list of the 21 mountains belonging to the same range with Satrunjaya, viz., Satrunjaya itself, Rāivata, Siddhikṣhetram (322, a name of Satrunjaya), Sutrīthā, Dānka, Kapardin (52, 61), Lahnītya, Tālādēva (50), Kadambaka (v. 714), Bāhubali, Māruḍeva (śrīgī 500, and viii. 699), Sahasrākṣya, Bhagiratha, Ashottarsatākṣa, Nagesa, Sataparaksa, Siddhārā, Sahasrapatra, Punyarāti Surapriya, Kāmādyān (352-54). Satrunjaya is the name of the principal summit upon which all tīrthas — Meru, Sammeta, Vaibhāra, Ruchaka (Wilson, Vījaip. Vol. II. p. 117), Ashtāpada, etc., are united (357).

Next follows a long eulogium of the mountain under the name of Pūndarika. Only towards the end of the chapter (from 496 and ff.) does Vira turn to a cursory reply to some of the questions put before him in detail, many of them he ignores; they are answered, however, in the later portions of the work. According to v. 499 the two figures on the right and left of the lord Rishabhā are the first gaja leaders — Śrī Pūndarika (xiv. 86, and above v. 6-8).

Śarga or Chapter II. (662 vv.).

Mahāpāla Mahāpāladharitavaranano nāma. — describes the history of the prince Mahāpāla.

Surendra, having now heard the speech of the Bhagavant, is filled with great joy and respectfully requests him to recount the other separate histories also; and firstly that of the lake at the Śrīva grove mentioned at the end of the first chapter (v. 511).

Vira now begins a long story which has nothing whatever to do with the subject in hand, and he returns to Indra's question only as far on as v. 598. Such is generally the method of the whole work. Satrunjaya with its sanctuaries always forms the mere background, which occasionally becomes more prominent and here and there it is quite largely dealt with. But the mythic and fabulous tales claim the principal interest. But why the history of Mahāpāla26 should here take precedence of all the other stories, even of that of Rishabhā himself, the patron divinity of the mount, is difficult to explain, unless we suppose the poet to have had some special personal motive. Hence I suspect he intends to pay a compliment to the king Ripunalla (ante) by the glorification of his ancestor.

24 See Bühlingk-Booth, A. V.
25 See above.
26 The Vaihāra is mentioned by the Buddhists of the Southern school also; see Schol. to Dhaṃmapadā, v. 188.
27 Colebrooke, Vol. II. pp. 212-13: Sammey or Samet-Sikha, called Pāramāṇa is among the Bengal hills, in Hazaribāgh, Lat. 22° 52' N. long. 86° 11' E. Its holiness is great in the estimation of the Jainas, and it is visited by pilgrims from the remotest parts of India. The last Jina but one obtained Nirvāṇa on it.
28 Rāivata (Girnā) is mentioned (352) as the second of the summits belonging to Satrunjaya, in v. 868, x. 8, as the fifth of them. The Sargas x.-xx. of the Brhat. Māh. are devoted entirely to its glorification, and therefore bear the special title of Raivottarkhala-Mahābhīma. It is the same as Ujjayanta (x. 116, Hemach. 1881); Wilson, Vījaip. Pur. Hal's ed. Vol. II. p. 141, note; Colebrooke, Vol. II. p. 212; Lasen, Bd. III. S. 549. Nemi is specially worshipped on it.
29 Mahāpāla was the name of more than one of the kings of Junagadh or Girnār; one Mahāpāla, known as Rāk Kavā, ruled A.D. 1215-79; another about 1430; and there may have been earlier princes of the name. — J. B.
In Śrī Surāśṭra, beneath mount Gīrinā (Gīrna, xiv. 89) is the town of Giridurgā adorned with Jaina temples. There once lived Śūryamālla a descendant of Samudravijaya of the Yādava race, a pious and valorous lord. His spouse Sāntilekha, a devout worshipper of Śri Nemi, once, when her husband had gone on a Jaina pilgrimage to the mountain, saw a peafowl playing with her young. By this the desire of children was stirred in the lady; her husband advised her to address her prayers to this intent to the Jina. In consequence, through the grace of “Ambā jagadambā, Mother, of the mother of the world,” they soon had two sons, Devapāla and Mahipāla.

According to the Jaina idea (i. 7; Hemach. 44-46) each Jina has his own “Śaṇana-devi or goddess, who does his bidding.” Among the 24 names of these given by Hemachandra, is Ambikā belonging to the 22nd Jina, Nemi, the same as is here spoken of; hence this Ambikā must be meant by “Ambā jagadamba.” We shall meet with her frequently in the work (v. 200, x. 150, 152, 157, 158, xiii. 320; comp. also above i. 108, 129). Though this whole Jaina idea may quite naturally be referred to the Brahman worship of the mātāras, — especially Ambikā, the spouse of Śiva, and all the more so since other names of this last are also met with among the 24 īśanadeviś (e. g., Kālika, Mahakāli, Chandā); at the same time one is strongly tempted also to think of Christian elements contributing here, the influence of which abstractly has already been remarked on, and in Surāśṭra as the most advanced post of Jainism geographically, must be considered possible. The Buddhists know nothing of similar Buddha halves. As the Jaina teaching was particularly favoured by the female sex (conf. remarks on xiv. 94, 95), in conformity with its general character for mildness, it seems to have assigned a higher position to the sex, in favour of which the view regarding the īśanadeviś, may be a testimony. But as the Brahman example shows, a sexual connection is not necessary here. While female goddesses, however, which generally obtain a prominent position in the post-vedic pantheon of the Hindus, are constantly advancing in an ascending development (comp. the Sākta), the position of the wife, on the other hand has, strangely enough, sunk more and more deeply.

Mahipāla distinguished himself in every respect above his brother Devapāla. Among the numerous adventures which he met with when roaming about in the forest, his conquest of the Rākhas Mahakāla, whom he subsequently instructed in the true law (160 f.) is told in much detail (141 ff.).

“*Avoid injuring, exercise pity, observe the eternal ordinance even with [thy] own body being brought to creatures*” (186).

“*Against an enemy even exercise not enmity, neither for [one’s] own advantage*” (188).

Here we have quite Buddhist ethics . . . Of course it is easily conceivable that in spite of the dogmatic ahiṣed among Buddhists and Jains, there was no want of enmity towards those of another religion, but it never became a dogma.

The Yaksha (or Rākhas), greatly pleased, promised to Mahipāla that henceforth “the god Jinn, the pious teacher, and the pity-enforcing law, should continue his constant Triad” (191). Here is the Buddhist trinity, — Buddha, the Sāṁgha and Dharma.

---

29 These Śaṇana-deviś are also known as Yakshapās; see the list in Ind. Ant. Vol. XIII. p. 276. — J. B.
30 "Mother of the world" or jagadambā, "of the worlds," as the Jinas themselves are called — triyajdayur, yajyajyakāla. In these extracts from the Srtr. Māh. I find only Chakrēvard, the Śaṇana-devi of the first Jina mentioned; but in l. 7, they are spoken of collectively.
31 Suddhārvāśādana, the guardian angel of Śalivāmuni who brought about his conversion, — is perhaps the neglect analogue to these devīs. — J. B.
32 This name has probably been selected in allusion to Śiva worship.
Now the prince resolves to look round him in the world. After a few days he arrives at the town of Sundara (199), where he lies down to rest under trees at a Chaitya dedicated to Ambika. Startled, he delivers Gunasundari (240) daughter of Kalyanasundara (238), king of Kalyanakaṭaka in the Kanyakubja country (237), and of Kalyāṇasundari (239), from the hands of a Vidyādhara who had carried her off through the air intending to kill her; he conquers the Vidyādhara in combat, converts him, and causes him to take the maiden back to her father's house. The Vidyādhara then relates his own history (349 ff.). On mount Vaitādhyā, in the town of Ratnapura, lived king Manichuda, the father of Ratnaprabha and Ratnakāntī, etc. Hereupon the prince proceeds to Kalyāṇakaṭaka in order to assist at the self-choice of Gunasundari (367). He gains her in the subsequent competition (when the author puts into his mouth a remark inimical to the adherents of the Sāṅkhya doctrine, — 383), and starts with her on his homeward journey (453). On the road, however, in the country of Mālava (454), his rivals attack him with Naravarman at their head (389, 411, 416, 476). He overcomes them all, subjects them to himself, and sends all to their homes (476), himself also returning to his country.

Other stories are also inserted, such as that of king Trivikrama, son of Triśākū of Sravasti (275), and of king Srinivasa of Sripura (547) who killed a Rishi in the forest and there built (573), as an expiation of the deed, a four-faced chaumukha temple of Śrīśāntī the (16th) Jina-snyata (254), but nevertheless he descended to the seventh hell (saṃptama na narakāvanī).

As already mentioned, Vira reaches only at v. 598, his short reply to Indra's question concerning the Sūrya grove below Satranjaya. The sun-god had once-devoted himself there to the service of the Jina during 60,000 years: hence the name. The water of the well in it, called Sūryāvara, is consecrated by the nectar of the aspect of the statue of Nabhaya statue placed there. Vidyādhara Manichuda with his friend (Mahāpāla?) proceeded also at the spring festival to the Vimalāchala (Satranjaya) and worshipped the Jina, visited the Sūryavāna, honoured the Nabhaya statue in it, and took away some of the water from the holy well (603).

After king Mahāpāla had lived 104 years, he abdicated his government and surrendered his kingdom to his son Sripāla (conf. Mac. Coll. I. 192, II. 118; Verz. d. Berlin Hdbchr. 1382) and the Sindhu country with Jaladurge to his nephew Vanaṇāla. [Devapāla had married Vanaṇāla, the daughter of Naravarma Rāja, and died at Satranjaya, leaving a son Vanaṇāla.] Mahāpāla then withdrew with his spouse to the Satranjaya, where, being instructed by the Muni Śrīkṛiti, he became at the end of his life a partaker of liberation (from separate existence).

"To this race [of Vanaṇāla], O Indra, belongs this king Ripumalla whose spirit is consecrated by great glory and virtue. This highly favoured one, dwelling by the side of Raivata will assuredly attain liberation (660) through (i.e., after) three (further) existences."

SARGA OR CHAPTER III. (822 VV.).

Sri Rishabhavāmin janmādiyābhisheka-dikṣā-uṣṭāvatpattānaṃ. Bharatudīvijaya-bhrātridikṣāh-tatpravrddhyāvānena nāma: describes the birth and crowning of Rishabhavāmin the first Jina), his consecration and attainment of true perception, the conquest of the various parts of the world by Bharata, the consecration of his brother and the surrender of the kingdom to the sons.
Bharata, the son of Rishabhadeva, ruled in Ayodhya. He led an army north from Satrunjaya, and engaged in battle with a Mlechha raja of great power. In the first battle Bharata was defeated, in the second the Mlechha raja was beaten and fled to the river Indus "as a child in distress flies to his mother." Bharata was preparing to pursue him, but the Mlechha sought the aid of Megha Kumara, who attacked Bharata's army for seven days. At last Bharata sent a yakshe against Megha-kumara, who satisfied the latter that he could not prevail, and brought him to pay obeisance to Bharata. Upon this Bharata returned home. His minister Sukheena afterwards took a fort north of the Indus between the sea and the mountains.

Vira now continues uninterruptedly to relate to Indra the origin of the wonderful excellence of the Satrunjaya tirtha during the Avasarpini period (2, 3). Here in Jambudvipa, in the right half of the Bharata (varsha), in the middle region between Gaṅga and Sindhu, was Vimalavāhana, the first of the ancestral fathers. His son was Chakshushmanta, father of Abhichandra, whose son Prasenañjita was the father of Marudeva also called Nabhí, and from the womb of his spouse Marudevi the lord of the world took birth by means of his omnipotence, at the end of the third spoke of the Avasarpini period (4-5) under the name of Rishabh or Virasahasena (225).

The Purāṇas also mention Nabhí and Marudevi as the parents of a Rishabhah, but attribute to Nabhí himself another descent (namely with Agniratha son of Priyavrata for his father,—Wilson, Vīṣṇ. Pur. Vol. II. pp. 100-103). We find Vimalavāhana again as the name of the last prince of the fifth spoke (xiv. 318-19), so that the first and the last prince bear the same name and perhaps purposely so! Prasenañjita appears in the Rāmāyana, I. 70, as the eleventh descendant of Ikshvaku (otherwise in Vīṣṇu. Pur. Vol. III. p. 265 f.) and uncle of a Bharata. According to Wilson (Vīṣṇ. Pur. Vol. IV. pp. 171 n.), this was the name of the father of Sṛnipaka, who was a contemporary of Vira. The Buddhists also recognise a contemporary of Buddha of this name, but with him also a much younger prince, the father of Nanda (Burnouf, Introduct. 2nd de, p. 320). The Purāṇas thus name even Suddhodana's (Buddha's) grandsons (Vīṣṇ. Pur. Vol. IV. p. 170 f.). Hence it appears not improbable that the Jainas made use of this name, highly respected among the Buddhists, so as to secure for the pedigree of their Rishabhah a well sounding point of attachment. —The same is probably the case with Marudeva, who is mentioned in the Purāṇas (Vīṣṇ. Pur. Vol. IV. p. 165) as the twelfth ancestor of Suddhodana (Buddha). The Rāmāyana mentions one Maru (i. 70) as the eighth ancestor of Rāma; so i. 71 (Vīṣṇ. Pur. Vol. III. p. 331) as the eleventh ancestor of Sīta. The Vīṣṇu Purāṇa quotes a Maru as the 24th descendant of both of them, "who, through the power of devotion is still living in the village called Kalāpa, and in a future age will be the restorer of the Kṣatriya race in the solar dynasty. (Vīṣṇ. Pur. Vol. III. p. 325.)

Besides other children35 by other wives Rishabhah had, by his spouses Samaṅgalā and Sunandā, a twin pair by each; by the former (65) Bharata and Brahmi (śudā, 264, 269), by the latter (67) Bāhubali and Sundari (śrawakā, 265, 269); and the latter (67) Bāhubali and Sundari (śrawakā, 265, 269); comp. Wilson, Mack. Coll. Vol. I. pp. 145-6. It is his image erected by Bāhubali (xiv. 177, 266) which imparts peculiar sanctity to Satrunjaya, and accordingly we find the two summits of the mountain in question called after his mother Marudevi (or odeva) and after his son Bāhubali (i. 353); compare also Bharatam saras (i. 60). —The Brahmanic legend of Rishabhah's final anchorite life (Vīṣṇ. Pur. Vol. II. p. 130 f.) has, as the Bhāgavata Purāṇa asserts (see Wilson's note, p. 104), most probably given rise to the entire view of him by the Jainas as their first Jina. Stevenson (Kalpa Sūtra, pref. xv., xvi. and 99) not only took him for a really historical personage, but to be also the ideal founder of Jainism: Pārśvanātha to be the real founder, inasmuch as he "practised austerities in very ancient times, which the Jainas in after ages imitated."

35 E. j. Dravida, vi. 1; Kuru, x. 399.
SARGA OF CHAPTER IV. (671 vv.).

_Bharata_ Bāhubalisañgrāmavārṇano _nāma_ — describes the combat of the two brothers Bharata and Bāhubali.

Vira continues his narrative to Sakra, and speaks next of a pilgrimage of Bharadhiṣa to the holy mountain.

[Sri Somayata son of Bāhubali built the temple of Rishabha Deva.]

SARGA OF CHAPTER V. (982 vv.).

_Sri Bharatatirthayaṁāṁtirthadākara_ (Deva Cod.)_varṇano _nāma_ represents the pilgrimages and pious foundations of Bharata.

"As thou hast just heard of his victory over the external enemy, listen now to the victory of Chakrin over the internal enemy, to his _tīrtha_-perfection and to his presence at all (i.e., to his pilgrimages to all tirthas?)."

This chapter treats very particularly of Satrunjaya and the Jaina shrines (comp. i. 60) erected on it by Bharata, as well as of Raivata (759, 868) that is Ujjayanta (732, 930), Kādambarakagiri (714), Vaiśāraṅkagiri (953), etc.

[On the 15th of Chaitra the great Muni Pundarika became a siddha; from that day the 15th of Chaitra became a holiday and the mountain received the name of Pundarika (53).

(Persons going to the tīrtha: — When the hill comes in sight the Saṅghvi should perform the _pañcāṅga namakāra_, the other members of the Saṅgha following him. If a person returns from the van with the information that the hill is in sight, he should be presented with gifts for the good news. Then gifts of gold, silver, etc., should be thrown towards the hill. Then descending from their conveyances, the pilgrims should perform _pañcāṅga_ and worship the hill as the feet of Jina. When the saṅgha halts there, the pilgrims must fast; next day they should dress themselves handsomely after bathing, and, accompanied by their wives, and taking with them their household goods, they should prepare to visit the temples on the mountain. They should carry with them incense; the women should sing _gītas_; and gifts should be made to beggars. The Jati should precede and the Saṅghvi should follow him. They should take _naivedya_ and garlands of flowers. First, they should worship the mountain, then the saṅgha. They should cause _nataka_ to be performed at the temples; the Saṅghvi and his wife should be worshipped; and the Saṅgha should feast and listen to the Guru's _Dharmakathā_. The Saṅgha should ascend the mountain next day carrying with them instruments of music; they should rest at the Chelam sarovara.)

[When Bharata came to the Satrunjaya tīrtha he founded Anandapura on the borders of Saurāṣṭra and built there a temple of Rishabhadeva. He presented it to his relative Saktisimha, who then ruled in Saurāṣṭra. Bharata repaired an old tank he found there which was afterwards called Bharata kunda.

["Bharatādhipa gave Saurāṣṭra for the worship of the Tirtha; and from that day this country was called Devadessa in the earth region" (42). "What hill is this which shines before, in the Vayu direction? asked Bharata. In reply Saktisimha said (81) 'lord, of old Vidhyabhir Bahara, of wicked mind and with rakshasi skill, made his residence here (82). That wicked Rakshasa Bahara, O lord, seized this great and famous mountain, giving it his own name. This wicked one — terrible, surrounded by the terrible — he heeds not my orders. By his sky-going power he travels in the air, he injures the country." Hearing this, the angry Chakrin spoke to Sukheṣa, — "To conquer him, lay the Chakrin's order on the head of the charioteer — the general." Coming forth in a chariot, as if he would seize the car of the sun, the

26 Bharata is the first chakravartin. Hemach, 692.
general arrived (83-85). Perceiving Barṭaka asura with many Rākṣasas, he prepared for battle. In a moment encountering and binding the Rākṣasas, he cast down their leader in his own chariot. The rest fled, and Sukhena having obtained the victory speedily before the Chakrin’s feet at Rākṣasas — humbled, and sorely downcast, tightly bound and with bursting veins. Having seen him, the merciful Saktiśimha then spoke, — “You planted the asura root of life-destruction; and that tree of sin has borne these flowers; its fruit will be Naraka. If even now you will abandon the destruction of life, — if you will obey my order, I will permit you an escape from fear: in truth I will obtain your release” (86-91). “O lord!” spake the Rākṣasas, “I will make your order my head-ornament.” The Rāja caused him to be released by the Chakrin. The Rākṣasas also in his mountain began with joy to build temples, lofty as Meru, to Adinātha and Arishtanemi (93-94).]

SAGA OF CHAPTER VI (296 vv.).

Sri Vṛṣabhavāmanī Sri Bharatācchārīṣaḥsaṁhāra (P. ed. Cod. P. sūr. yāsaḥ sūr. vāsāna nāma. — describes the nirvāṇa of Vṛṣabhavāmin, of Bharata, the consecration of the (mountain) Aśvatthāla (comp. i. 342 and Colebrooke, Vol. II. p. 208), the walk [in life] of Sūryasya (the son of Bharata).

After Bharata had rejoiced Somayānas, the son of Bāhubali (x. 303) and others, by a donation of land and dismissed them (3), he again turned towards the government.

The death of Vṛṣabhavāmin, etc. (17 ff.).

As from Vṛṣabhavāmin the Ikṣvāku race descended, so that of the Sūryasvaṁs is from Sūryasvās (285). On the Somavās, see x. 303.

From Bharata arose Ādityasvaṁs (Sūryasvaṁs) and further Mahāvaṁs, Atibala, Balabhadra, Balivaliya, Krtivariya, Jalavariya, and Dāṇḍavariya as the eighth. Throughout [the life of?] these men the Śrāddhā-celebration lasted (288-9).

From Bharata downwards all his descendants were pious princes as far as Ajitavāmin, the second Jina (viii.), and erected Tirthas and built Jain Chaityas.

SAGA OF CHAPTER VII (400 vv.).

Dṛḍhavā-sūr. Valikhilla-chaṭṭathvaḥdāravāmano nāma, — represents the walk [or life] of Dṛḍhavā, and Valikhilla, and also the Tirthas erected by them.

A son of Vṛṣabhavāmin was also called Dṛḍhavā, from whom the Dṛḍhavā country, fertile in grain, takes its name. His two sons Dṛḍhavā and Valikhilla fell out with each other and made war, but afterwards they were reconciled (171) and undertook pilgrimages to Satrunjaya. This chapter treats also of Dāṇḍavariya (see above).

[Hastinal-devi destroyed all the temples on the Satrunjaya and retired to Hastisenanagara. She was a flesh eater and was accompanied by many false religionists.]

SAGA OF CHAPTER VIII (374 vv.).

Sri Ajītasvāmin—sūr. Sagarasvā-Rājītijāna-Chakradharaśādīmaḥāpuruṣasvā-Mahāpuruṣaḥdāravāmano nāma, — describes the Tirtha establishments of Ajītasvāmin (the 2nd Jina), Sagarasvā, Sānti (16th Jina and at the same time the fifth Chakravartin), Chakradhara, and of other great men.

---

27 The Purāṇas have quite different names for these. See Wilson, Vṛṣaṇa Purāṇa.
28 [This seems to point to a foreign raid from Dēhil.—J. B.]
29 Second Chakravartin of Hemach. 862 ff.: the first is Bharata.
30 Chakradhara is not a title here (as in x. 401) but a name; comp. 722, nirvāṇa Sāntijānasvaḥ śrītā chakradhara śripad.
31 Mahāpurusha corresponds here to the sahaḥpurusha of Hemach. 700.
The birth of Ajitasvāmin in Ayodhya from Jitāsātru and Yaśomati, is described in detail, like that of Rishabha (in iii.) and of Parāva (in xiv.). The usual dreams indicate to the mother the high honour which is conferred on her (25). Fifty-six Dikkmārasyas arrive in haste to venerate her (30), and Saudharmanḍra himself took him in his lap (35); the father gave to him the name Ajita and to the other son the name of Sagara.

Sarga of Chapter IX. (539 vv.).

(In this the Sriṣṭrunjaya māhātyayaprathamaḥ khaṇḍaḥ ends.) SriRāmaprabhṛitimaḥ purushवावर्णां नुम, — describes Rāma and other great men.

Whilst hitherto, as relates to Rishabha and Bhara, we had only to deal with personalities of the Jaina legend itself, we now reach the appropriations from Brāhmaṇ legends by the Jainaś, which have been made, partly at least, in a very arbitrary way. In this the principal object seems to be to refer all these ancient heroes back to Rishabha as their ancestor, from whose two grandsons Suryayāsas and Somayānados the solar and lunar races are derived. The Hari-race (see Colebrooke, Vol. II. p. 207; Wilson, Mack. Coll. I. 153) is a branch of the latter.

Vira continues: “listen further, O Sakra, to the history of this Ikṣvākuvaṇa, as also to that of the mountain. I tell the histories of Śrī Suvarṇatānḍra (the 20th Jina, comp. x. 320), of Nārāyaṇa, Rāma and Rāvaṇa.

After many kings in the family of the Ādityas had passed, the Ayodhya prince Vijaya ruled; by his wife Himachīla, he had a son named Vaijrabha, who begat Purandara; and he begat Kṛitādhara. His son Saṅkula abdicated the government in favour of his pregnant wife, and became an ascetic (7). After Nāguhaṇa, Sodasa, Śikharatha, Brahmaṇa, Hemartha, Satartha, Vārīratha, Indratha, Ādityaratha, Māṇḍhātar, Vīraṇasa, (Virāṇasa, MS.), Pratimanyu, Padmabhandhu, Vīmāna, Kuveradatta, . . . Kakuṭātha, Raghu, Anaraṇya, Aja, Anantaṭhā, we come (92) to Dāsaratha. Of these names but few are known to the Brahmānic pedigree of the Rāmāyaṇa and Purāṇas (Lassen, Ind. I. p. iv. ff.; Wilson, Vīś. Pur. Vol. III. p. 314), which Brahmānic genealogies, however, do not agree with one another, and the order of succession differs in them. Here, probably, we have to deal in all three instances only with invented names, which except in a few merely general traits cannot be expected to agree.

To Dāsaratha, in addition to his three wives Kauṭalya, Kekayatmāja, and Sumitra, a fourth is here ascribed, namely Suprabha, who becomes the mother of Satrughna, whilst Sumitra bears only Lakshmana. Rāma is called Padma, and Lakshmana — Nārāyaṇa (94-98, — we should rather expect the reverse); the former is the name of the ninth Chakravarthini in Hemachandra (v. 693), as also of the eighth white Bala (demigod), ib. 698 (the ninth is called [Bala]Rāma); the latter that of the eighth black Vāsudeva (Ardhachakravarthini, Schol. to v. 695), ibid. 697, whose enemy is Laukeśa, i. e., Rāvaṇa, ib. 699. The Satr. Māh, does not seem to know anything of a similar classification (after Vāsudeva, Bala); on the other hand, chakrādhara, chakrabhrī, occur in the sense of chakravarthini, see x. 401, 403, also chakra, i. 2. v. 2, vi. 3. x. 143, 728. The Kalpaśūtra has the names of Vāsudeva, Baladeva (Stevenson, pp. 36, 65).

Prince Janaśka of Mithila is here called Vāsuvaketu son of Vipulā and of the Harivaśa (v. 99).

Rāma’s sons are called Lavaṇākṣuṣu (643) . . . . (To be continued.)

CORRESPONDENCE.

ASPECT OF HINDU WORSHIP.

TO THE EDITOR OF "THE INDIAN ANTIQUARY."

Sir,—At Vol. XXIX. p. 272, a question is asked regarding the Hindu aspect of worship at noon and evening and towards the north. I feel inclined to solve the problem contained in it thus:

In the Vedie period, in which Nature alone in her bare outlines was the source of worship and when no work of representation was yet admitted into or invented by the admiring curiosity of the primeval beings, there was but one single direction (i.e., if there was any at all), to which worshippers turned their faces at the time of offering their simple yet sincere prayers. The rosy dim light of the dawn and the immediately succeeding dazzling light of the sun impressed their images so vividly on their infant minds that they began to pour forth their natural feeling of adoration to these phenomena, regarding them as so many deities in subsequent periods. During the whole Vedie period, moreover, though we find respectful mention made of other gods and goddesses, yet nowhere is to be traced any other direction to which the worshipper turned his face at the time of prayer. But as ritualistic tendency increased and forms were conjoined to prayers, in the succeeding ages of the Brahmanas, and more especially the Sûtras, days, the worshipper had to pay attention to other quarters as well. Then, according as the preéminence of certain deities was to be considered the chief factor of worship, directions were resorted to ceremoniously. Thus all the eight quarters of the universe are dedicated to eight — and even more according to some writers — deities that are looked upon as presiding over them for fulfilling the objects in view of worshippers. In a work, in which various quarters are assigned to various deities, it is stated that the god Brahma

---

1 एवं निम्बुक्ष राज्यावति कर्णिन्द्र संविदाभवः।
दिशासंगममात्र स्थितम्यमथर्म भरत: ॥ २ ॥
पुष्पाणि तित्तरं खेल वृक्षार्दशनं जनाति: ॥
दिशार्या समुच्यायं राज्यां च सीमन्तेऽपः ॥ २ ॥
दक्षिणमा महाराजस्व किन्नरम पवित्रवते: ॥
स्ये श्रेष्ठवर्ग नाम राजावर्ग सीमार्येऽपः ॥ २ ॥
distributed bit by bit the portions of the universe, and appointed guardians of different directions. In consonance with this belief, prayer is offered to each in the direction consecrated by his residence. There is no rule of guidance, be it remarked in passing, for facing toward directions in the ordinary daily performances that are known as Nitya Karman. In a Kāma or Naṣmāṇika Karma, the worshipper has to invoke that deity from whom he intends to seek his boon with due ceremonials. In the former description, however, he has to pay some regard to directions and such other forms, but an unconscious neglect of any of them does not deserve to be met by any penalty. The turning of the devotee’s face towards a particular direction depends, to a great extent, upon his choice of the deity. Siva, the supreme God of Destruction, is adored in the north, and the Sun, the vivifying agent of the animal and the vegetable world, is adored in the east during the hours of morning. The latter is worshipped in the north when he is in his full meridian, and in the west, in his decline. A Brahmāna, for instance, offers his Ārāgya, in the course of his performance of the Sandhyā ceremony, to the Sun in these three directions, the east, the north and the west, during mornings, noons and evenings. In funeral ceremonies, however, the deities that are invoked to preside over the ceremonies are worshipped in the south, because of its being dedicated to Yama, the God of Death.

The subject demands fuller treatment than can be given in a mere letter, and I hope to return more fully later on in a set paper.

MISCELLANEA.

THE POPULAR VIEW OF GANESHA IN MADRAS.

Ganēśa, the God of Wisdom, and the eldest son of Siva and Parvati, is the remover of obstacles and difficulties, and the most popular of all the domestic deities of India. His shrine is in every Hindu village, and he is worshipped in every Hindu house. Every school-boy commences his lessons after making his usual prayers to Ganēśa. The following two prayers are usually given to him by a Brahman boy:

“Gajāmanana bhūta ghanatī śeśitum
Kapitha jambu paladra bhakṣhitum
Umaāntam ioka vindaśa īkramam
Namāmi Vi śvāparsadapakṣyam.”

“Muskiśavijanado mādaka hastā
Chāmaśatradā Viṣṇu bāta sutvā
Vāmanā rupī Mahēśvarapatī
Viṇavīlaṇaya padnānastu.”

Every merchant enters on his business after first propitiating this deity. In marriages and in every kind of religious ceremony Ganēśa is the first god whose help is invoked. Almost all the standard works in the Sanskrit and Vernacular languages begin with an invocation of the help of this God of Wisdom.

Ganēśa is represented as elephant in face and man in body. The elephant’s head is the emblem of sagacity. He has four arms, and they hold an elephant’s trunk, a mouse, a discus, and modaka (rice-pudding). He wears a crown. His ears are adorned with jewels, and in the forehead he wears the vībūlī (the sacred ashes).

He is worshipped under different names, as Ganēśa, Gaṇāpati, Viṇāyaka and Pillayar (Tamil), by all Hindus. In all the Śaiva temples there is a shrine attached to him, and in the Vaishnava temples he is worshipped as Tumbik-kai Aivar — the sage with the elephant’s trunk — and as Viśvāksena. He has also temples of his own in many places, and as the favourite son of Siva he receives honours equal to him. His image is adored by men and women alike with sincere devotion. He is, in fact, the personification of sagacity, shrewdness, patience and learning.

As an instance of his sagacity, it is popularly narrated that, when he was a child and playing in company with his brother Subrahmanya, Siva promised to present a mango-fruit to him who made a circuit round the world and returned first. Subrahmanya summoned his vāhana the peacock, mounted, and was ready for the journey. But Ganēśa calmly went round Siva, his father, and then demanded the fruit. “But you never went round the world,” said Siva. “What is the world, but your own holy self. I went round you, therefore I went round the world,” was Ganēśa’s wise reply. Siva was, of course, convinced, praised Ganēśa for his shrewdness, and gave him the fruit, which, however, he shared with Subrahmanya.

The peculiarity of the worship of Ganēśa is that it is combined as it were with that of every other god and all sects unite in claiming him as their own. The largest temple built in South-
ern India in honour of Ganésa is the famous and beautiful rock temple built in Trichinopoly known as the Uchhipillayar Kovil.

Vinañakachavuvi is the day on which Ganésa was born—the fourth day of Bhādrapad, and on that day there is, of course, a birthday feast in his honour, and clay images of him are made for worship as the worship of mrītiṇa or earth is enjoined by the Ṛgvedas. In respectable families a magnificent image, richly gilt and adorned, is prepared and placed in the central part of the house and decorated with all kinds of flower garlands. Old and young bathe early in the morning and sit near the priest, who consecrates the idol by reciting incantations from his books and throwing on it red-coloured rice or mastrak-stilas. Food, sweets and fruit are offered to the image, and the god is invoked to partake of the offerings. In the evening the rest of the ceremony is performed by the master of the house through the priest, who invokes the god to bless the whole of the family and remove any calamity that may be threatening them during the year. The next evening the image is carried to a tank and committed to the water with expressions of regret for the departure of the god till the next year.

On the day of this feast, the Hindus are prohibited from looking at the moon; and if by accident they should see it, they get their neighbours to revile them in the hope that the calamity likely to follow may be limited to this abuse. This feast is observed with still greater pomplivity and music in the Bombay Presidency, and kept up there for ten days.

NOTES AND QUERIES.

WEeping AS A FORM OF GREETING.

Amongst the Andamanese the well-known method, often reported, of greeting a relative after a prolonged absence is to sit round him and weep audibly and visibly. Lately, while I was looking on at a scene of this kind with some Panjābī police, who were both Sikhs and Musalmāns, I was surprised at their telling me that weeping was a common method of receiving very near relatives after a long absence in the Panjāb also.

R. C. TEMPLE.

CORRUPTIONS OF ENGLISH IN PORT BLAIR.

1. Bhā, the Hindustani word for "twenty" is used by some of the convicts in giving their numbers; thus, when asked his name and number a man will reply:—"Bhā 172." By this he means "No. 172 B." A good many years ago the numbering of the convicts was recommenced from the beginning and the second series were distinguished by the English letter B.

2. Among building terms the following are commonly in use:—Halpilé for wall-plate.
5. Kirnīs for screen.

R. C. TEMPLE.

HINDU SUPERSTITIONS IN THE CENTRAL PROVINCES.

1. Some old women are always sweeping the house or yard although there is a saw against it:

   "As oft thy house or yard thou sweepst,
   So oft a dear one's loss thou steepst."

2. No woman will sweep out the house at night for fear of sweeping away Lakṣumī, the goddess of wealth.

3. If the umbilical cord quickly falls from the child after birth it foretells liberality; if it is slow in doing so it foretells closeness.

4. Directly a child is born and before it is washed, one of the women present, usually an old member of the family, smiles on the child and besprinkles it with water. In doing this she has a two-fold object: to muddle the character of the child to her own model, and to prevent any ill effects, should the child sneeze before it is cleaned. A sneeze in such conditions is a terrible thing, for it prognosticates a death among those who surround it, and in any case upsets the business of any one who happens to hear it.

5. It is a common practice to pass a newly purchased fowl three times round the domestic hearth. This is sometimes varied by taking a little salt and, after passing it three times round the fowl, throwing the salt into the fire. The object in either is the same. By this means the fowl is induced to stay at home, and there is no need to clip its wings or to keep it shut up for a time.

NOTES ON INDIAN HISTORY AND GEOGRAPHY.

BY J. F. FLEET, I.C.S. (Retd.), Ph.D., GIE.

The Sindavadi country.

An inscription at a temple called Jodakalasadagudi, "the temple of the two similar pinnacles," at Suji, in the Boin taluka of the Dharwar district, records that, on Soma-vara (Monday) the full-moon day of the month Magha of the Vikram Samvat, 981 (expired, according to the southern lunar-solar system of the cycle), — that is to say, in January, A.D. 1690, — the Western Chalukya king Trailokyamallä-Ahavamallä-(Soma-vara I.), having made a state progress through the south, and having conquered the Chola, turned back, and, while continuing his progress, at Puliyappayanavida which was a village included in the Sindavadi nad, on the occasion of an eclipse of the moon, gave the village of Sivunär which was included in the Kusakad sevanta, by a ladamadasa or copper-plate charter; and, having obtained it, the Mahaduna-dhipati and Manervapa, the Davanagaka Nagadeva, who had the birata of Ahavamallakasari, "the lion of Ahavamall," — and who was then governing the Kusakad sevanta, the Toragare sixty, and Bagulikar-Ijagna and other (unnamed) bhattachdras, according to the savadakyanatarasiddhi, gave the village of Sivunär by a sitidasa, or stone charter, to Somenavarapajita, of the temple of the god Nagasvaram, founded by himself (Nagadeva), and attached to (pratibhddha) the temple of the god Nagasvaram of the royal city or capital (rajadhana) Sudi, — for the rites and repairs of the temple of Nagasvaram, and for the feeding of ascetics, and other purposes.

The Sindavadi country is mentioned again in an inscription of A.D. 1079 at Amantapur in the Shimga district, Mysore, brought to notice by Mr. Rice, which places it in the agrahara, the name of which is given in the published translation as "Kambagad Belgali," but in the original is really, — Mr. Rice has told me, — Kauchagura-Belgali.

Kauchagura-Belgali is easily identified with the 'Kunchagar Bellagul' of the Indian Atlas sheet No. 58 (1827), on the east bank of the Hagar-Vedavati river, in lat. 15° 31', long. 77° 2', eighteen miles towards the north-west-by-west from Alur, the head-quarters of the Alur taluka of the Bellary district.

With this identification established, we can see that the Sindavadi country included at any rate the Alur taluka of the Bellary district, and doubtless also the Adoni or Adwani-taluka, on the north of Alur, up to the Tungabhadra. The name means "the country of the Sindas." And we shall probably find hereafter that the Sindavadi country included much

2 Mention is made, further on, of an eclipse of the moon, which has to be taken in connection with the above details. The date, however, has not been recorded altogether correctly. On the specified full-moon day, there was a total eclipse of the moon, visible in India; but the day was not a Monday; it was Thursday, 26th January, A.D. 1690 (see Von Oppolzer's Canon der Finsternisse, p. 396, No. 2665, and Sewell's Eclipses of the Moon in India, p. xxiv). — A year later, there was a partial eclipse of the moon, visible in India, on Monday, 8th January, A.D. 1691; but this, though again the full-moon of Magha, was in the Savarana avastha, Saka-Samvat 983 (expired).

3 Dukhiya-rip-vijayan-paya Chodana jayatani-paya mauple bijayan-paya putulita. — Regarding the meaning of vijayan-paya and bijayan-paya, 'to go in triumph, to make a state progress, to visit,' see Ep. Ind. Vol. VI. p. 51, note 5. It is just possible, however, that, while rendering bijayan-paya in that way, we should translate vijayan-paya by 'to conquer,' at least in some passages.

4 Sindavadi-nilka baliya prasami Puliyappayanavida-vinda. — Kusakad-guptata baliya Sivunär.

5 In connection with my remarks about namasa and swamasa in Ep. Ind. Vol. VI. p. 108, note 11, it may be noted that a verse in this record presents the word dana, — Sind-pada-pada-dana-vida-prithipalita, "and for students who bow down to the feet of Siva."

6 Mysore Inscriptions, p. 305.

7 The prefix in the name serves to distinguish the place from 'Sadur Bellagul,' thirty-two miles towards the north-east, and 'Kerris Bellagul,' forty-nine miles towards the east-north-east, and 'Huttas Bellagul,' nineteen miles to the south-east-by-east, from 'Kunchagar Bellagul.'
more than the territory indicated just above, and that the latter had some more specific name, marking it as a subdivision of the whole Sindavaḍi country. For, in the first place, immediately on the west of the Hāgari-Vādavati river there was a district known as the Ballakundance three-hundred,—taking its name from the ‘Ballakoondy’ of the map, in lat. 15° 32’, long. 77°, in the Bellary taluka, but having Kūrgōḍ as its chief town,—which, though in A.D. 1010 it was in the administrative charge of Iriva-Noḷambhādhirāja under Vīknāmāditya V, was in A.D. 1173 and 1181 in the possession of the Māhāmāyālēvara Pīriya-Rāchamalla and his grandson the Māhāmāyālēvara Irmāṇi-Rāchamalla, son of Iravagula, belonging to one of the branches of the Sinda family that claimed descent from ‘the long-armed Sinda;’ and another clear indication of the territory belonging to the Sindas seems to be furnished by the name of the ‘Sindunoor’ of the map, a town in the Nizam’s Dominions, on the north of the Tungabhadra, in lat. 15° 46’, long. 76° 49’. Further, Puliyappayappavēṇi is now by far more safely identified with the ‘Hoolybeede’ of the map, three miles almost due north of Alur. 9 ‘Hoolybeede’ appears to be only an ordinary village, not a town. But Puliyappayappavēṇi is itself described in the record as only a village (vēṇi); and the map shows several large tanks, within easy reach from ‘Hoolybeede,’ as well as smaller ones at ‘Hoolybeede’ itself and at ‘Toomeybeede’ close by, which would make the locality convenient for the encampment (kēlu, vēṇi) of an army.

We can also now identify the village of Sivunur in the Kusukād seventy. The boundaries of it are fully laid down in the record. The passage does not include any village-names. But it places on the south-west, west, north-west, and north, a stream called perkata, ‘the big stream,’ and on the north-east the uppina-palla, ‘the salt stream.’ 10 The record entrusts the guardianship of the grant to the six Gāravagrea the eight Settis of Sūdi, which indicates that Sivunur must have been somewhere quite close to Sūdi. This, and the mention of the two streams, suggests at once the ‘Jegulloor’ of the Indian Atlas sheet No. 41 (1859), the ‘Jigloor’ of the Map of the Dhrāwär Collectorate (1874), six miles west-south-west from Sūdi, 11 and lying just south of the confluence of a large stream and a smaller one. And, whether we take the actual spelling of the modern name as Jigalar or as Jigalar, we can now recognize that the two names Sivunur and Jigalar or Jigalur are in fact identical. For the occasional change from s into t, at any rate in composition, we have the authority of the Subdahanamādarpana, sītra 86, the examples to which give us pon + surige = ponjurige, ‘a golden knife or dagger,’ mun + stir = muniyir, ‘the front coves of a house,’ mun + sērya = muniyera, ‘the front end of a female’s garment,’ and tūn + sōgar = tanjodar, ‘an extinguished lamp.’ For the interchange of s with l and t, we may quote the well known name of the Kālachurya king Bijaṇa or Bijala, and baṇa, baṇa, ‘a branch of a family,’ etc., 12 and the variants maṇaḷ, malal, maṇaḷa, also maraḷ and maraḷ, all meaning ‘sand, gravel.’ For the interchange of r and g, the Rev. F. Kitto’s Kannada-English Dictionary gives us toral, tol, togal, ‘the skin, a hide, leather;’ and we may compare, from the same authority, the connection of bēnu, bēhu, ‘spying,’ with the Tamil and Malayālam evu; and we have a cognate interchange of b and g in gombe, bombe, ‘an image, idol, puppet, doll,’ and goḷaḷi, boḷaḷi, ‘husk, chaff,’ and gōbbula, gobbula, ‘a kind of Acacia.’ The Sūdi inscription of A.D. 1060 itself furnishes another instance of the interchange of r and g: among the enemies whom, it says, the

9 Regarding certain erroneous proposals to identify Puliyappayappavēṇi with Huliyaṛ in the Tankur district, Mysore, and Sivunur with Savunur, the chief town of the Nāvī State of the same name within the limits of the Dhrāwār district,—(the former has been repeated in Mysore, revised edition, Vol. I, p. 325),—reference may be made, if wanted, to Dus., Ksh., Distra. p. 441, note 6.

10 On the south of Sivunur it places —pēdēya kēryya laṁjaya mayya kōṇya-laṁjaya maṇg-pudige, —‘three heaps (of stones) at a bōrsi-tree (or, perhaps, three clusters of bōrsi-trees) on the south side of the tank called Gēdsairi, the tank of the Gēdsa, or of the Gēsairi.” The tank is not shown in the map, and perhaps does not now exist. For the word gōdēṣi, see Ep. Ind. Vol. VI. p. 255, and note 2.

11 I take here, of course, as everywhere else, the distance from village-site to village-site. The eastern boundary of the lands of ‘Jegulloor, ‘Jigloor,’ is only two and a half miles away from the southern half of the western boundary of Sūdi.

Danḍāndiyāka Nāgādeva conquered for his sovereign, it names Bhōja and the Gūrjara and Sēgūṇa; this Bhōja is the Paramāra king Bhōja of Dhārā; 12 and Sēgūṇa can only stand for the well-known Sēvūṇa and denote the contemporaneous Yādava prince of the Sēvūṇa, Sēvūṇa, or Sēvāṇa country, in the direction of Nāsik and Khāndēsh. 14 And the inscription of A. D. 980 at Sogal, in the Belgaum district, 15 presents the ancient name of that place in the forms of Soval and Sōl. We have also a cognate change illustrated by the passing of the old name Bēpur into the modern form of Bēgūr. 16

The Kisukād seventy district.

I have described the Kisukād seventy as a small district of which the chief town was Paṭṭadakal, the ancient Kṣisuvala and Paṭṭada-Kissa vala, in the Bādāmi tāluka of the Bijāpur district; 1 and, again, as the country round Paṭṭadakal in the Bijāpur district. 2 There can be no doubt that Paṭṭadakal was the original capital of the district; and it was probably always its real capital. The district included, however, other towns of considerable importance. And the reference to Paṭṭadakal alone does not give a sufficiently accurate idea of the position and extent of the district. These two points will be made clear in the present note.

Paṭṭadakal is mentioned by both the forms of its name in the Paṭṭadakal inscription of A. D. 1163, of the time of the Sinda prince Chārvūṇa II. That prince is there described as ruling, together with the princes (kumāra), that is to say, his sons Āchidēva III. and Permāṇa III., — the Kīsukād seventy, the Bāgādā seventy, the Kēlavēdi three-hundred, and other (unnamed) districts. The record first introduces Paṭṭadakal, in prose, as Paṭṭada-Kissa vala, and describes it as the ḍīkṛṣṭa-pattāra or “town of government” of Dēmalādēva, the pirīyaras or “senior queen” of Chārvūṇa II., and of the prince (kumāra) Āchidēva III. 3 It then mentions the town four times, in verse, as simply Kissa vala; 4 and the first of these four passages places it in the Kissa kāḍa nādu, which, again, it locates in the Kuntala country. And then again, in prose, it mentions it once more as Paṭṭada-Kissa vala, the rājadhāni-pattāra or “royal town” which Dēmalādēva and Āchidēva III. were governing; 5 and, further on, once more as Kissa vala, ” which had caused itself to be called the Dākṣiṇa-Vaṇa or Benares of the South,” — in connection with “the god Viṣvēśvara of Kissa vala who was a most glorious incarnation (or local form) of the god Viśvēśvara.” 6

This god Viṣvēśvara was the god to whom the grants registered in this record were made, and was the god of the temple at which the record itself stands, though that temple has come to be known as the temple of Saṃgamāvēśvara. 7 There are two records on pillars, structural and still standing parts of the temple, referable to approximately the period A. D. 875 to 900, which mention the god by the corrupt names of Bhījayēśvara and Biṣāvēśvara. 8 A record on another structural part of the temple, — on the west wall of the centre hall, on the right or north side of the door leading into the shrine, — and referable to a somewhat earlier date,

---

13 Noticeid, id., pp. 428, 533.
14 See id. p. 511 ff.
17 Jour. Bo. Br. B. As. Soc. Vol. XI. p. 572; and text lines 55 to 56. — The date of this inscription has not been correctly recorded. The passage gives certain details in “the Subhāna anuvartara, which was the one thousand and eighty-fourth of the Śaka years.” But Śaka-Saśvat 1064 (expired) was the Chitrabhānu anuvartara; and Subhāna was 8-8. 1065 (expired). If we accept the Śaka year, the date should fall in May, A. D. 1162; while, if we accept the anuvartara, it should fall in May, A. D. 1163; but the details do not work out correctly for either year (see Prof. Kielhorn’s examination of the date, Vol. XXIV. above, p. 18, No. 187). As it is more likely that a mistake should be made in reference to the number of a Śaka year than in the name of an anuvartara, it seems best in cases like this, in which the matter cannot be decided either way, to follow the anuvartara, and, accordingly, treat the present record as a record of A. D. 1163, rather than of A. D. 1162 or, somewhat inconveniently, of A. D. 1162 or 1163.
18 Ibid.; and text lines 62, 63.
19 Ibid.; and text lines 62, 63. Viśvēśvara was a form of Śiva, especially as worshipped at Benares.
21 Vol. X. above, p. 170, Nos. 112, 113.—It is, however, possible that, in the first form, the bh may be a mistake for a damaged r, misread and wrongly dealt with in preparing the lithograph.
mentions the god, again not quite correctly, as Vijēśvara. And we learn from the Paṭṭadakal inscription of A. D. 754 that the temple was founded, as a temple of the god Vijēśvara, by the Western Chalukya king Vijayādiśa in the period A. D. 686 to 733-34. The record of A. D. 1163 thus proves that Kusūval and Paṭṭada-Kusūval were the ancient names of Paṭṭadakal; and it places Paṭṭadakal in the Kusūkaṇa seventy; and it shows that, at any rate at that particular time, Paṭṭadakal was the seat of government, that is to say the chief town or capital, of the district.

Paṭṭadakal is immediately on the north or left bank of the Malparbhā river, about eight miles towards the east by north from Bādāmi, the head-quarters of the Bādāmi tāluka of the Bijāpur district. Close on the north of it, there are large ranges of hills, stretching out to the north-east, north-west, and west, as well as to the north, very difficult to traverse even along the few paths and roads that have been opened out, and with but few village-sites in them even in the present day. The range, or some particular high hill in it, is mentioned in line 71 of the record of A. D. 1163, by the name of Parvārābaṇḍa, as forming the northern boundary of the first allotment of land that was made. And the same passage shows that towards the east the lands of Paṭṭada-Kusūval extended as far as the lands of Ayyavālo, which is the modern Aihoḷe in the Hungund tāluka, about eight miles north-east-half-east from Paṭṭadakal. And we may take it that the district of which Paṭṭada-Kusūval was the capital, included the whole of the narrow strip between the hills and the Malparbhā, from opposite Aihoḷe on the north-east to the ford near Banaśāṅkarāi on the south-west. But, in consequence no doubt of the natural features of the country on the north of Paṭṭadakal, the greater part of the Kusūkaṇa district lay on the south of the Malparbhā.

It is not unlikely that the district included Aihoḷe, which is on the south bank of the Malparbhā. An inscription at that village, dated in A. D. 1163-70, mentions Bījala and Vikrama, the sons of the Sind prince Chāruṇḍa II. His wife Sirīyādēvi, as then ruling the Kusūkaṇa seventy, the Bāgadage seventy, and the Keḷavādi three-hundred. The essential part of this record being lost, we can only speculate as to what the contents of it may have been. But it presumably registered a grant of land at Aihoḷe itself to some temple at that village. If so, the introductory part places Aihoḷe in one or other of the three specified districts. And then, as Aihoḷe was certainly not in either the Bāgadage or the Keḷavādi district, it can only have been in the Kusūkaṇa district. This, however, cannot be taken, for the present, as more than a probability. The other records at Aihoḷe, as far as they have been explored, do not seem to help: the earlier ones, which are the better preserved, belong to the period before the time when the country was divided into an elaborate system of districts and provinces; the later ones are a good deal damaged and more or less fragmentary, and they require to be examined again to see if any geographical information can be found in them.

About eight miles towards the south-south-east from Aihoḷe there is the village of Araśiṇḍa, the 'Arasībida' of the Indian Atlas sheet No. 58 (1827), in lat. 15° 54', long. 75° 59', also on the south of the Malparbhā and in the Hungund tāluka; from Paṭṭadakal it lies about nine miles east-south-east-half-east. Inscriptions at Arasībida mention the place as Vikramapurā. And one of them, dated in A. D. 1058, tacitly, but unmistakably, places it in the Kusūkaṇa seventy. It describes the Western Chalukya princess Akkādēvi as ruling the Kusūkaṇa seventy, and it then records grants of land, on the south of the village, that were made to the forty-two Mahājanas of the

---

9 This record has been mentioned in Ind. Ant. X. p. 169. I quote from an ink-impression obtained since that time.
11 We have probably to understand, however, that the actual boundary between the two villages was the river Malparbhā.
12 Vol. IX. above, p. 97.
13 The a (meaning, usually, the short a) in the second syllable of the name as presented here, must be due to a carelessly written or.
14 A separate note on the contents of them will be given hereafter.
 NOTES ON INDIAN HISTORY AND GEOGRAPHY.

JULY, 1901.

brahmmapuri or Brāhmmapuṇḍrī, quarters of the rājadāni or royal city or capital Vikramapura. And such a coupling of the two names Kusukāḍi and Vikramapura can only mean that Vikramapura-Aranibidā was in the Kusukāḍi seventy. And it may be added that an inscription of A.D. 1074-75 at Sudi, mentioning Vikramapura as the place at which the Western Chālukya king Śrīnaśavara II. laved the feet of a certain priest in making grants to a temple at Sudi, does explicitly place it in the Kusukāḍi seventy. It may also be added that a passage of A.D. 1047, in another of the Arasibidā inscriptions, places sud in the Kusukāḍi seventy a village named Gaṇada-Hāḍūṛ, which is evidently the ‘Gaṇadauṭū’ of the map, three miles on the south-east of Arasibidā.

Thirteen miles or so towards the west-south-west from Arasibidā, there is the village of Bēḷūṛ, in the Bādhāti taluka, also on the south of the Malparbāhī, and about seven miles south-south-west from Paṭtadakal. The Bēḷūṛ inscription of A.D. 1022 in the same way tacitly, but unmistakably, places Bēḷūṛ, which it mentions as the Pērūr agrahāra, in the Kusukāḍi seventy. It again, refers to Akkādevī as governing the Kusukāḍi seventy. It then records that she founded a hall (āḍīle) of the god Traipūraśā, at the Pērūr agrahāra, and that houses and lands at Pērūr were granted for the purpose of feeding and clothing (and housing) the five-hundred students of that hall. And here, again, the coupling of the two names of Kusukāḍi and the Pērūr agrahāra can only mean that Pērūr-Bēḷūṛ was in the Kusukāḍi seventy.

The next step takes us further south to Sudi and its neighbourhood, in the Rūṇa taluka of the Dhārwar district. Sudi lies about fifteen miles towards the south-south-east from Paṭtadakal. Close on the west-south-west of it is the village of Jigalūr or Jigalūr, which we have identified with the ancient Sivumārṇa which the record of A.D. 1060 specifically places in the Kusukāḍi seventy. And Sudi itself is specifically placed in the Kusukāḍi seventy by the spurious Sudi grant, purporting to be dated in A.D. 938, which mentions Sudi as Sudi or Sudi, a nagari or city which was the chief town, or a chief town, of the Sullāvāṭi seventy villages. And now that Sullāvāṭi is the Sanskritized form of the name Kusukāḍi. And, though I do not at present find in any of the genuine records at Sudi a passage which explicitly places Sudi in the Kusukāḍi seventy, still there are ample reasons for which we need not hesitate about accepting the statement of the spurious grant on this point. Whether the record is really correct, even for the particular period to which it belongs, in describing Sudi as the chief town or capital of the seventy district, — if, indeed, it really does so, instead of simply putting it forward as one of the principal towns of the district, — is open to question. Various other records, however, at Sudi, describe it as a rājadāni or royal city, and thus mark it as a place of leading importance. And one of them, the record of A.D. 1060, also styles it, in verse, a puramara, a ‘best of towns, an excellent town, a chief town.’

The next step takes us to Nidagunḍi, in the same taluka, — the ‘Nidagunḍi’ of the Indian Atlas sheet No. 58, and the ‘Nidagunḍi’ of the Map of the Dhārwar Collectorate, — four and a half miles south of Sudi. An inscription at Nidagunḍi, dated in A.D. 1076, mentions this village as the agrahāra Nidagunḍi, and specifically places it in the Kusukāḍi seventy.

Two other records take us about twelve miles to the south-south-west from Sudi. They are the two inscriptions of A.D. 1122 and 1144 at Kōḍikop, a hamlet of Naregal in the

18 Kusukāḍi-rāğaṭāṇa bālīya āga ṭānaḥ Putkramapuraṇadāl.
20 Vol. XVIII. above, p. 270.
21 Vīṣṇu, the triad composed of Brahma, Viṣṇu, and Śiva. — The meaning probably is that she founded a hall attached to the temple of those gods.
23 Kusukāḍi-āga ṭānaḥ bālīya agrahāraḥ Nidagunḍiḥ, — Another inscription at Nidagunḍi, of the period A.D. 1156 to 1187, styles the village a mahāagra ṭānaḥ or ‘great agrahāra.’ A later one, of A.D. 1229, on the same stone, elevates it still further, and speaks of it as an aukāṣy-agrāḥāra, ‘an agrahāra that never had any beginning, an agrahāra that had existed from time immemorial.’ And another inscription, of A.D. 1286 or 1289, describes it in the same way.
Röq tāluka. They mention Kočikop as Kiru-Nareŋgaŋgal or the lesser Nareŋgaŋgal, in distinction from Naregal itself which is mentioned in the earlier of them as Hiriya-Nareŋgaŋgal. And they specifically place Kiru-Nareŋgaŋgal in the Kisukād seventy.23

And the last record that we can at present utilise with confidence in this matter, takes us about thirteen miles to the west of Sūqi. It is an inscription at Röq, dated in A.D. 1179.24 It specifically places in the Kisukād district the village of Hiriya-Maniyur.25 And statements in the record show that this is the modern 'Heerē Mūnnoor,' 'Heerē-Mūnnoor,' of the maps, four and a half miles on the west of Röq. At the same time, Röq itself, though lying directly between Sūqi and 'Heerē Mūnnoor,' 'Heerē-Mūnnoor,' was apparently not in the Kisukād district. An inscription at Röq, on a vīrāl or monumental tablet of a hero, dated in A.D. 942,26 speaks of the Western Gaṅga prince Būtuga II., — whom it describes as the Mākānandaṅga Pernanādi-Būtasya, the brother-in-law (bhārata) of Kannyaṛadeva-(Krishna III., — as governing the Gaṅgavādī ninety-six-thousand, the Belvola three-hundred, and the Purigere or Puliqere three-hundred. And this statement has the effect of placing Röq in one or other of those three territorial divisions, and, of course, in the Belvola three-hundred.27

It is true that another inscription at Nidagunji, dated in A.D. 1174, would place in the Kisukād seventy Eriṅbarage,28 which is the modern Yelbarga in the Nizam's Dominions, — the 'Yelboorga' of the Indian Atlas sheet No. 58, in lat. 15° 36′, long. 76° 4′, — twelve miles towards the south-east from Sūqi. In one of the introductory verses, it says that in Kuntala, — Kisukād-ṇāḍu sayipna nele rājasirppā-daṅgo bhvanva-stuṇa-rajaṅhāni chelavina kanivā-nāḍa-Eriṅbaragenge29 Sinda-kul-āravāy-ampi tōyuguin, — "there shines the Kisukād district; in it there is seen agreeably the capital, praised in the world, Eriṅbarage, a place of beauty, the abode of the family of the Sindas." And somewhat similarly, but perhaps more appropriately, another inscription at Nidagunji, dated in A.D. 1229 or 1233, speaks of — Kisukād-ṇāḍa epattara volaje rājaṅhāni ensida Eriṅbarage, — "Eriṅbarage, which has caused itself to be called the capital, or a capital, in the seventy of Kisukād." But, though Eriṅbarage-Yelbarga is mentioned in various records as a capital (neleṇiṇi and rājaṅhāṇi), in connection with which the Sinda princes are described as ruling sometimes the Kisukād seventy alone, and sometimes that district along with the other component parts of their territories, no other passage has been met with, explicitly placing Eriṅbarage, or tending to place it in, the Kisukād seventy. Towards the south-east corner of the Kisukād seventy, there intervened between it and Eriṅbarage, a smaller district known as the Karivići or Karimidi.

24 Elliot MS. Collection, Vol. II., Edin. p. 221, Lond. p. 915; corrected in respect of the date from an ink-impression.
25 Kislakid-ṇāḍa baliya ḍaḷaṅk Hiriya-Manaṅyur.
26 Not published; I quote from an ink-impression. The tablet is at the house of Puṇapaganaḷa bin Lappagaṇda.
27 We know that Būtuga II. held also the Kisukād seventy (see page 256 below). And the omission of that district in this record, tends to make the ordinary purport of the passage all the more specific.
28 This name was originally read by me, in publishing the Naregal inscriptions, as 'Rambargi' and 'Rambargi,' in circumstances that would justify that reading. I afterwards found that the name had been read somewhat more correctly as 'Yerbargi' by Sir Walter Elliot. The exact correct form of it, Eriṅbarage, — or, as actually written in the particular record, Yerbarage, — was first disclosed by an inscription at Ahole (Vol. XII. above, p. 99). — The identification of Eriṅbarage with Yelbarga was made by Sir Walter Elliot (see Madras Jour. Lit. Soc. Vol. VII. p. 267, and Jour. R. As. Soc., F. S., Vol. IV. p. 15). — As regards the modern form of the name, of determining which by local inquiry I have not had an opportunity, the 'Yelboorga' of the Indian Atlas, and of Thornton's Gentry of India, Vol. IV. (1854), points of course to Yelbarga, rather than to the Yelbarga which, after some hesitation, I now adopt. Another name with the same ending, in connection with which there is an equal amount of uncertainty or variety of practice, is that which, in my opinion, is probably in its correct form Kulbarga. I notice that Major King has given 'Yelbarga' and 'Kulbarga' in the map which illustrates his history of the Bahmani dynasty (see Vol. XXIX. above, p. 4), but in his Index to the map he has given 'Yelbarga' and 'Kulbarga.' — Since writing the above, I have noticed that the Biharī text of the Extracts from the Pāṭhāsāstra Divīrī, Political Matters, p. 10, presents Kulbarga, exactly as we should expect.
29 At first, Eriṅbarage was written and engraved here. The ḍaḷaṅg was then corrected into ḍaḷaṅk. But the vi was left unaltered.
thirty. An inscription at Abole distinctly mentions a district called the Erumbarage nāḍ. And we may, think, safely dismiss any idea that Erumbarage was in the Kisuvala district according to its strict and original limits.

We thus see that the Kisuvala seventy district included at least three towns of leading importance, Pāṭṭadaḵal, Arasibidi, and Sūdi. Each of them is spoken of in the records as a vādyadāka. And each of them was, no doubt, liable to be the seat of government for the district from time to time. But the most ancient of them, — or, at any rate, the one for which we can actually prove the greatest antiquity, — was Pāṭṭadaḵal. The existence of this place, under the name of Kisuvala, is carried back to A.D. 602, at which time it was only an ordinary village, granted, with nine others, to the god Mukulisvaranatha of one of the group of temples now known as Mahākūṭa, and it seems to be mentioned as Kisuvala or Kisuvala in the Pāṭṭadaḵal inscription of A.D. 754, or in a slightly later addition to that record. The ancient temples and inscriptions at Pāṭṭadaḵal prove it to have been a place of great consequence from at any rate the period A.D. 696 to 733-34, and in fact indicate that that was the time when it rose to importance. And the word kala, which figures so prominently in the names both of the town and of the district, indicates pretty plainly, in conjunction with the other facts, that the town was first made a local capital, and that the territory then attached to it was fitted with a name which should match the name of the capital and also should suit the nature of the territory.

Regarding the etymology and meaning of the names of the district and its chief town, the following remarks may be made. The full name of the town was Pāṭṭadaḵal-Kisuvala. By that name alone can the modern name Pāṭṭadaḵal be accounted for. But that name was evidently of somewhat late invention, as it cannot at present be carried back earlier than A.D. 1163. — by the inscription of that year noticed on page 259 above. The prefix pāṭṭa is the genitive case singular of the word pata, evidently used here in the sense, given to it in the Rev. F. Kittel's Kannada-English Dictionary, of "the frontlet or fillet, with a golden tablet, with which a king is decorated at coronation and his principal wire at the time of marriage." That it is to be taken in this way, is in fact shown by a verse in lines 58, 59 of the record of A.D. 1163, which speaks of the town as "the patjaradhana-nilayga, or abode for giving increase by the patja, i. e. the coronation-place, for Nṛgī, Naṭhubha, Naḷa, Purūravas, Sagara, and other kings." And this point again indicates the paramount importance of Pāṭṭadaḵal among the leading towns of the district.

Whether, however, the termination kala in the modern name represents kal, kalla, 'a stone,' and points to some particular stone on which it was customary to perform the ceremony of conferring the pataja, or whether it is simply an abbreviation of Kisuvala, is doubtful. In the other part of the
name, — the original complete name, — Kisuvolal, vojol is the form, in composition, of polol, hojol, polol, hojol, 'a dwelling-place; a town, a city.' As regards the first component, kisu, I must withdraw a suggestion that I made in 1881, that it may mean 'a ruby.' As has been mentioned above, we have now obtained the Sanskritised form of the name Kisuköd, namely, Suivatvi.

Here, the Sanskrit ajarī is simply the translation of the Kanarese kād, kādu, 'a forest, a jungle, a wild;' and sutra is the tadāhora-corruption of the Sanskrit śute, śula. We have to take sutra, śute, here in its meaning of 'copper;' which is the nearest approach to the meanings of kisu, which are 'redness; a dark-red or coppery colour.' And, as one of the records at Aurasibidj, dated in A.D. 1053, registers the grant of, among other things, "sixty-four matters of kivewina-bhāmi or red land," we may probably finally explain the kisu in the names of Kisuvolal and the Kisuköd district as having reference to the red-sandstone of the hills near Paṭṭadakal and Bādāmi, and to the red soils which are abundant enough in that part of the country and are met with, though perhaps not so frequently, in that part of the Dhārvār district which was included in the Kisuköd seventy. As regards the kēsu which we have, quite unmistakably, instead of kisu in the oldest form of the name of the town, Dr. Kittel's dictionary gives such a word only as the name of a certain plant: but Reeve and Sanderson’s dictionary gives it as an ancient Kanarese word meaning 'red, purple;' and I suppose that we may accept it as an established variant of kisu.

As regards the extent of the Kisuköd seventy, we have seen that it reached on the south as far as Kodikop in the Rōg tālūka, about twenty-five miles from Paṭṭadakal. At that point, it intruded somewhat into the Beluga district; for, the Kodikop record of A.D. 1122 places in the Beluga three-hundred both Nareyāgal, that is to say Naregal, which it describes as the chief town of a group of twelve villages and which is from half a mile to a mile on the east of Kodikop, and also Abbegere, which is about three miles towards the west-north-west from Kodikop. And Kodikop was doubtless the furthest village included in the Kisuköd seventy in that direction. The western boundary must have run up from Kodikop more or less due north as far as the north-east corner of the lands of Rōg, very likely following the eastern boundaries of Abbegere and Rōg. At that point, it must have turned west, along the northern boundary of Rōg. If then turned south, far enough to include 'Heereh-Munnoor,' 'Hereh-Munnoor.' And very probably it then followed the course of a large stream called Hīrī-Halla, which runs northwards on the west of that village and flows into the Malparbhä about four miles on the west of Bēlūr. On the north, the Kisuköd district doubtless included, as has been already remarked, the whole of the narrow strip of land between the Malparbhä and the hills on the north of Paṭṭadakal, from the ford near Bānashākari on the south-west of Paṭṭadakal to some point opposite Aihōle on the north-east. And probably the boundary-line here either was the southernmost range of those hills, or else was constituted by some well-defined natural features along the back of that range. At any rate, the district cannot have extended far in that direction. To the west and north-west of Paṭṭadakal, there was the Keḷavādī three-hundred district. On the north and north-east of that, there was the Bāgādage seventy. And a record of A.D. 1049 at Sirūr, about ten miles almost due north of Paṭṭadakal, places that village, which it mentions as Srīpura, in a group of villages known as the Ponugunda thirty, which evidently took its appellation from the original name of the modern

---

26 The word for 'ruby' is, really, not kās along, but kīrugāl.
26 From the spurious Bōhi-plates, published in Ep. Ind. Vol. III. p. 138 ff. In Hne 71 and 83 of the text, and in the translation on page 134, read Suivatvi, instead of the Sudhājvi there given by me. The ancient subscript Kanarese v and ṇā are often liable to be confused. It is the recognition of the Sanskritised name which has shown that, in the passages in question, I ought to have taken the sign as meaning v.
26 The next village is Kōṭumachci, in the Gadag tālūka, two and a half miles to the south-west from Kodikop. The Kodikop record of A.D. 1122 mentions it as Ummachige; and the record of A.D. 1144 seems to mention it as Ṣuivatvi. At Kōṭumachci itself there are two records of A.D. 1112 and 1142 (Elliot MS. Collection, Vol. I., Edin, pp. 510, 564, Lond. pp. 839, 931) which again mention it as Ummachige, the latter of them also describing it as an egrākara; but the transcriptions do not show any geographical details.
26 I quote from an ink-impression.
Hungund, the head-quarters of the Hungund taluka. Towards the east, the Kisukāṭ district very likely included Aihole, as we have remarked above, and certainly included Arasibidī. And the eastern boundary probably ran more or less due south from Arasibidī along the present dividing-line between the Bijāpur and Dāwar districts on the west and the Nizam’s Dominions and the outlying Mudhāl property of Gajendragad on the east, and, passing round the ‘Atkerra’ or ‘Halkere’ of the maps, in the Rūmī taluka, so as to include that village in the seventy district, joined them the southern boundary, which then ran along the northern boundary of the lands of Naregal to meet the lands of Kīru-Narayanaṇal, i.e. Kodikop, as, at that time, a separate village.

In respect of the history of the Kisukāṭ seventy district, we have the following facts. The existence of the district, under the name of Kisukāṭ and as a seventy district, is carried back to about A.D. 940-50 by the subsidiary record on the top of the stone at Ātakur containing the inscription dated in that year. That record tells us that the Bhārtakukā king Kiśāna III, gave the Kisukāṭ seventy, along with the Banavasi twelve-thousand, the Belvola three-hundred, the Purigere three-hundred, and the Bāgenād (or Bādagade) seventy, to the Western Gaṅga prince Būtga IV., as a reward for killing the Chōja king Rājdirāya.39 And the Hebbal inscription, dated in A.D. 975, may doubtless be taken as carrying back the existence of the district to an earlier date,—probably about A.D. 910,—because it recites that, in the time of Kiśāna III. (between A.D. 978 and 911-12), Amoghavarsha-Badhagadēva, the father of Kiśāna III, gave the Kisukāṭ seventy, along with the Purigere three-hundred, the Belvola three-hundred, and the Bāge (or Bādagade) seventy, to Būtga II. as the dowry of his wife Rāvakṣānamadī, the elder sister of Kiśāna III.40 In A.D. 997, the district was in the administrative charge of the Maḥādāmanā Tailapanaṅakāka-Bhimarasa, who was then governing the Banavasi twelve-thousand, the Sāntalige thousand, the Kisukāṭ seventy, and the Samasi-Gādāgāre āprahāra, under the Western Chālukya king Taila II.;41 and the same person was still holding it in A.D. 1005, when he was governing the Kisukāṭ seventy, the Banavasi twelve-thousand, and the Sāntalige thousand, under Ijivasatānga-Satyaśāraya.42 In A.D. 1010 the Kisukāṭ seventy was being administered by the Western Gaṅga princess Akkadaevi, under her elder brother Vikramakidītya V.;43 and she was still governing it in A.D. 1020 under her younger brother Jayasimha II.44 A record of A.D. 1043 mentions it as being in the hands of the Maḥādāmāṇī Tailapanaṅakāka Sīṅgapadēva, who was then ruling the Kisukāṭ seventy, the Māṇḍa (i.e. thousand), the Banavasi twelve-thousand, and the Sāntalige thousand, up to the western ocean, under Sōṃesvāra I.45 But in A.D. 1050, under the same king, it was again in the charge of Akkādevi, who was then governing the Kisukāṭ seventy, the Toragaris sixty, and the Māṇavādi hundred-and-forty;46 and she was still administering the same three districts, under the same king, in A.D. 1053 or 1054.47 In A.D. 1069, in the time of Sōṃesvāra II., the Kisukāṭ seventy was being ruled, together with the Nojambavādī thirty-two-thousand province, by a certain Sīṅgapadēva, whose full appellation seems to have been Nojmba-ādhārā-Permahaṇaṇa-Jī Śīṅgapadēva, and who had the hereditary title of “lord of Kānchipuram the best of towns.”48 In A.D. 1076, still in the time of Sōṃesvāra II., the Kisukāṭ seventy...
was in the hands of a Mahāmanḍalēvara Śrīgaṇa, who may be identical with the person mentioned just above or may be the Samdar prince Śrīgaṇa, younger brother of Āchūgī I; and, at the same time, Suggalādēvi, daughter of Sōmēśvara I, and younger sister of Sōmēśvara II., was governing the Niṣadgūḍi agrahāra, in the Kusākād, seventy, according to the tribhūgādhyātanarasiddhī.49 A passage dated in A.D. 1085, in one of the records at Arasibidī, is the first which definitely connects the Sindas with the Kusākād district; it recites that, in the specified year, in the time of Vikramaditya VI., there was a certain Mahāśāmata Barmadēvarasa, son of Sindaśarasa, who belonged to the Sinda family and had the hereditary title of “lord of Bhogavatipurā the best of towns,” and that Barmadēvarasa’s Suṇkāvīrajēde Barmāna made an annual allotment from the sūkha or customs-duty of the manimaya and the paṇḍuga of the locality, for the support of the members of the establishment of the Jain temple called Göndabedāṅgīya-Jīnālaya at Vikramapura:50 this passage, however, does not establish more than that a member of the family of the Sindas had some local authority at Vikramapura-Arasibidī. A passage dated in A.D. 1087, in another of the records at Arasibidī, mentions a certain Mahāśaṅkṣipati and Daṇḍāṇḍavaka, the Mahāśāmataśaṅkṣipati Lavarasas, 49 “who had the favour of the goddess Mahālakṣmi,”51 and who was then governing the Kusākād seventy and the Karividi thirty, under Vikramaditya VI.52 An inscription at Sūḍi mentions a certain Mahāśāmata Daḍigara, son of Gaṇḍarasa,—who was descended from Lōkarasa of the Bālīvānas, lord of the Daḍigamaṅgala country,—as making a grant in A.D. 1113 or 1114, from some local property belonging to him, to a temple at Sūḍi;53 but the record is much damaged, and it cannot be said, at present, whether this Daḍigara had the administrative charge of the district: he may perhaps have been a prince of the Daḍigavaḍ country in Mysore, possessing some outlying property at Sūḍi, just as, we know from the Ātukūr inscription, Būtanga II. gave to Maśalera a village in the Belvola district, in addition to the Ātukūr group of twelve villages in the Maṇḍya tāluk, Mysore.54 The next record shows the district in the hands of the Sindas of Yelbarga. It is the Kōḍikop inscription, dated in A.D. 1122, which tells us that the Mahāmanḍalēvara Āchūgī II., of that family, was then, as a feudatory of Vikramaditya VI., ruling the Kusākād seventy, and Nareyaṅgal which was the chief town of a group of twelve villages in the Belvola three-hundred, and Abbegere, and some other (unnamed) towns.55 And the district seems to have continued in the possession of the Sindas from that time. The other Kōḍikop inscription tells us that in A.D. 1144 Permaḍī I., son of Āchūgī II., was ruling the Kusākād nāḍ, the Bagaḍage nāḍ, the Keḷavajī nāḍ, and the Nareyaṅgal nāḍ, as a feudatory of Perma-Jagaḍēkamañalla.56 The Paṭṭadakkal inscription shows that in A.D. 1163, Permaḍī’s younger brother Chāṇḍaḷa II.,—in conjunction with the princes (kuṁrār), that is to say his sons Āchūgī III. and Permaḍī II.,—was ruling the Kusākād seventy, the Bagaḍage seventy, the Keḷavajī three-hundred, and other (unnamed) districts, and that his pīrīyaras or senior wife Dāmalāḍe, and Āchūgī III., were exercising local powers of government at Paṭṭadakkal.57 Another of the Niṣadgūḍi inscriptions, which refers itself, without any specific date, to the reign of the Kalačhurya king Bīḷaḷa, that is to the period A.D. 1156 to

49 An inscription at Niṣadgūḍi in the Būp tāluka; noticed in Dyn. Kan. Distri. p. 574.—From the records at Sūḍi and Niṣadgūḍi, it appears probable that the words atma taṁnati Sīṅga-mahālakṣaṇa-putī in line 19 of the Paṭṭadakkal inscription of A.D. 1158, were not really intended to introduce, as they certainly do if interpreted simply as they stand there, a second Śīṅga orŚīṅha as a younger brother of Brahma son of Āchūgī I, but refer back to the Śīṅha who is mentioned in line 18 as one of the younger brothers of Āchūgī I.
50 Elliot MS. Collection, Vol. I., Edin. p. 138, Lond. p. 77 b; endorsed by my own reading of the original record.
51 This is somewhat suggestive of a connection with the Śīlākāras of Karhūj, whose family goddess was Mahālakṣmi.
52 Elliot MS. Collection, Vol. I., Edin. p. 197, Lond. p. 77 b; endorsed, and corrected in respect of the name of the thirty district, by my own reading of the original record.
53 I quote from an ink-impression.
55 Ibid. p. 253. The original record might be examined again, to ascertain, if possible, whether any particular place is named, in line 18, as the seat of government of Permaḍī I.
56 Ibid. p. 372. Regarding the date, see note 3 on page 259 above.
1167, speaks of Chāruṅa II. as governing the Kusakad seventy, the Bāgacage seventy, the Kālavadi three-hundred, the Narelagallu twelve, and the Kariviḍi thirty, according to the "tribhōgyāntarasiddhi", and ruling at the capital "nevelūda" of Eranaharage. The Aihole inscription mentions Bijaḷa and Vikrama, who were the sons of Chāruṅa II. by his other wife Siriyaḍēvi, as ruling the Kusakad seventy, the Bāgacage seventy, and the Kālavadi three-hundred, in A.D. 1159-70. Another of the Nidaṇgaḍi inscriptions mentions Bijaḷa again, as governing in A.D. 1174 Eranaharage, which it would place as a capital (rēṣahāṇi) in the Kusakadu "ndēnu." An inscription at Rōṇ mentions Vikrama as ruling at the capital of Eranaharage, and governing the Kusakad seventy according to the "tribhōgyāntarasiddhi", in A.D. 1179, under the Kālavadiya king Sākakama. And, finally, another of the inscriptions at Nidaṇgaḍi, which refers itself to the reign of the Dēvagiri-Yadava king Sīnghaṇa, mentions his Mahāpurandhāna, the Mahāyāsiya, Paramarāśāṇi, and Bhuddaraṇyāgāyipati, the Sarvārakāravīṇa Vāsudēvaṇayaṇa, as ruling, in A.D. 1229 or 1233, Eranaharage, "which had caused itself to be called the capital, or a capital, in the seventy of Kusakadu." The Sinda princes had evidently then passed away.

The Kariviḍi thirty district.

This small district has been mentioned on page 266 and just above, under the date of A.D. 1087 and the period A.D. 1156 to 1167. The Nidaṇgaḍi inscription of the latter period presents in two forms the name of the town from which, evidently, the group of villages took its appellation. In lines 49 and 50, it describes the Sinda prince Chāruṅa II. as governing the Kusakad seventy, the Bāgacage seventy, the Kālavadi three-hundred, the Narelagallu twelve, and the Kariviḍi thirty, according to the "tribhōgyāntarasiddhi", and ruling at the capital (nevelūda) of Eranaharage. The object of the record is to register various grants to a temple of the god Dāṣěvāra at Nidaṇgaḍi. Lines 79 to 85 register grants at Nidaṇgaḍi itself, made by Chāruṅa II. and the Uroḍya or village-chief of Nidaṇgaḍi. Lines 85 to 90 register grants at a village named Sirigappe, made, in one case by Chāruṅa II. in conjunction with the Uroḍya of Sirigappe, and in the other case by Chāruṅa's sons Bijaḷa and Vikramaṇḍiya in conjunction with the same Uroḍya. And then lines 90 to 94 register a grant which was made, in the presence of the sixty-eight (Mahājana) of the great agrahāra Kariviḍi, by the Mahāmaṇḍalēvāra Homaṇḍiyaṇara, — meaning Permiḍii II., another son of Chāruṅa II., — in conjunction with the Mahāpurandhāna, the Duṇḍaṇyaka Acheṇaṇya.

This last grant consisted of an allotment in the dasakandha-lands of Chāruṅa II. and

Vol. IX, pp. 98, 99. 60 On this point, see page 262 f. above. 61 This record is rather curiously dated in the Vijaya samvatsara, coupled with the Saka year 1112. Vijaya was Śaka-Saṅvat 1112 current, — A.D. 1229-30, according to the northern luni-solar system of the cycle, which, however, had long ceased, by that time, to be in use in that part of the country. According to the southern luni-solar system, then in use there, Vijaya was S.-S. 1156 current (1155 expired), — A.D. 1229-34. The remaining details of the date are Adityavāra (Sunday), coupled with the full moon day of the month Chaiitra. And those details happen to be correct for both the years. On the first occasion the gives 56 ended at about 12 hrs. 54 min. after mean sunrise (for Searjain) on Sunday, 11th March, A.D. 1229. On the second occasion, it ended at about 11 hrs. 58 min. on Sunday, 27th March, A.D. 1233. 62 On this point, see page 262 f. above. 63 In the penultimate syllable, the vowel may be either the short e or the long ū; there is nothing in this record, or in the Arasbīḍi record of A.D. 1067, to mark it either way. We ought perhaps to take it as the long ū, as is the case in the name of Arasbīḍi. But the etymology of both the names is not settled yet. 64 We have already met with the word dasabandha in the dasabhara-form dasabandha; see page 107 above, and note 12. The present record gives it twice in the form dasabandha, and once in the form dasananda. It is the Sanskrit dasabandha, which occurs in Mārasamōnyabharattra, viii. 197, in the sense of 'a tenth part of the total sum.' C. P. Brown's Telugu-English Dictionary (1852) gives dasabandha, dasananda, as meaning 'an indemnity, or copyhold, taxed at one-tenth of the produce.' And H. H. Wilson's Glossary of Indian Terms (1855) gives dasabandha (by mistake for dasabandha), as meaning 'a deduction of one-tenth of the revenue, on account of compensation for some public work, as the construction of a tank, etc.' The Madras Manual of the Administration, Vol. III. p. 259, has followed Wilson's explanation of the meaning.
Achaṇayya, which were in the daṇamātha-lands, measuring three hundred mātrās, of the village of Karimidi. In the specification of the boundaries of this grant, we are told that the eastern boundary-mark was a līṅgoda-kallū, or stone marked with a līṅga, on the west of the limit of the lands of Muduvāḷal. And we can now see that Karividi or Karimidi is the 'Kurumudi' of the Indian Atlas sheet No. 58 (1827), in the Nizam's Dominions, five miles on the west of Yelbarga, and about the same distance south-east by east from Nīḍānumidi. About a mile and a half on the north-east of 'Kurumudi' there is 'Moodola,' which answers to the Muduvāḷal of this record and the Muduvolal of one of the Naregal inscriptions.3

It is thus evident that the Karividi or Karimidi thirty was a small district lying, in part, between Yelbarga and the south-east corner of the Kismakād seventy district. The village of Siriguppe, mentioned above, is evidently the 'Sirigopa' of the map, about six miles north-west from 'Kurumudi.' Subsequent passages in the same record mention two other villages, capable of identification. One of them is Koḍaganār, which is evidently the 'Goodugunoor' of the map, five and a half miles on the north of 'Kurumudi.' And the other is Magere, which is plainly 'Magoyru,' about four miles towards the north-west from 'Kurumudi.' These three villages are to the east of the boundary of the Rūn tāluka. And they were, doubtless, all in the Karividi or Karimidi thirty, though the record does not actually say so.

ON THE HISTORY OF RELIGION IN INDIA, — A BRIEF REVIEW.

BY ALBRECT WEBER.

(Translated from the original German by G. A. G.)

The great charm of the science of Natural Philosophy lies in the opportunities which it affords for the observation of gradual coming into existence, — for the investigation of the development from first to last of a single germ. So also, in the study of the history of Religion, we are enabled to follow the different phases undergone by an idea from its first inception to its culminating point. But between the two cases there is this great distinction; that, while in the domain of Nature everything develops from that which is simple to that which is perfect, in the history of Religion it is often exactly the reverse. Here, that which is at the beginning is not only simple: it is also The Better, The Right, The True. But, in the course of its development, foreign elements continue to make their influence felt, till, when we reach our goal, we are frequently confronted with something altogether opposed to the propositions from which we started. Superstition has made itself master of the situation, and, like the fabled mermaid, we see 'a lovely maiden ending in an ugly fish.'

No land in the world is so full of instruction in regard to the origin and development of religious ideas as India. Its colossal literature, reaching as it does over several thousands of years, presents to us, in rich abundance, and ready for examination, specimens of each stage of their progress from the earliest times to the present day.

Through it we are led directly back to the Indo-Tohtonic period. The time and locality of this are, it is true, still veiled in the most complete darkness. When we talk about it we can only deal with periods of thousands of years, and each step that we make on this ground is feeble and insecure. Some writers, such as Adolbert Kuhn and Adolf Pictet, have indeed attempted to construct a picture of the primitive Indo-Tohtonic times, but on each occasion criticism has shown how difficult it is to attain to any certain results. It is to the labours of Otto Schrader that we are specially

3 See Jour. Br. R. As. Soc. Vol. XI, pp. 237, 238. The real modern form of the name must, of course, be Mudbhō, as in the case of the chief town of the Mudbhō State, which, from the only guide then available, namely the mention of "the road to Muduvolal," was then wrongly put forward by me as probably being the Muduvolal of the record.

1 In submitting to the readers of the Indian Antiquary, this translation of Professor Weber's admirable monograph, — the summary, so to speak, of one of the many sides of his learning and his genius, — the translator can only express his regret that it has not been found possible to entrust the task to the hands of one more worthy to deal with it, by reason of his greater familiarity with the subjects treated of, and with the language in which it is composed. The translation has been revised by the author.
indebted for enlightenment in regard to this question. In former times it was universally assumed that the original seat of the Indo-Tuentic race should be sought for in Asia, either on the Caucasus or on the Hindū Kush. A more recent opinion maintained with equal decision that this locality must be looked for in Europe itself; nay, some went so far as to say, in Germany. The steppes of south Russia, on the banks of the Don and of the Volga, have also been suggested; while, quite lately, we have been led back again to the old theory, and have had Armenia and the country round the Oxus and the Jaxartes pointed out to us as the place of origin.

Aided, however, by a comparative study of vocabularies, and, more especially, of habits, customs, and conceptions typical of a people's everyday life, we can draw a picture of the state of civilisation in which the primitive Indo-Tuentic people existed; and this picture shows them to us, not, it must be admitted, in a remarkably high state of material culture, yet still in possession of deep-seated spiritual theories and beliefs regarding their relations to the divine Powers of Nature under whose rule they felt themselves to lie.

These purely symbolical conceptions of Nature bear witness to the existence of a sympathetic power of comprehension, and display, beside all the terror inspired by that Nature's resistless forces, a grateful recognition of its magnificence and of its beauty. The battles of the good powers against those hostile ones, who grudgingly desired to withhold from Man the heavenly moisture and fire, the heavenly light, had in olden times already formed the subjects of poetic efforts.

It is thus that in the Vedic texts of the Indians (not only in the hymns of the Rīk-saṃhitā, but also in many of those fragments in the Atharva-saṃhitā which serve as explanatory introductions to the incantations that form the subject of a hymn, and even in the incantation formulas themselves), we find a rich accumulation of material, which leads us directly back to the conceptions of ancient Indo-Tuentic times. "Comparative Mythology," which once entangled many by its magic, is nowadays fallen into the deepest discredit; for its professors carried their conclusions too far, and insisted on the direct relationship of certain proper names, which further investigation showed was not capable of proof. In spite, however, of its having been convicted of various clearly proved mistakes, we must still admit the accuracy of its main contention that in primitive times there already existed a well-established theory regarding the mutual relationship between Gods and Mankind, and that habits and customs, even formulas and liturgies, which communicated human wishes to the Divine Powers, whose assistance they were devised to induce, were already in full currency. The Terror of the Night,—the Rescue from them by the Breaking of the Dawn,—the Light of the Day, advancing in its victorious power,—the Thrusting Aside of all those heavenly phenomena which, in the shape of the Black Clouds, the Storm-wind, the Thunder and the Lightning, throughout the day menaced the human heart,—the Departure of the Day, and the Inbreak of the Night,—all these were deeply and warmly experienced and were described with lively fancy in the olden time. So also for the occurrences of human life, for Birth, Upgrowth, Youth, the Course of Life, and Death; for the Relations of Sex and of the Family; for the life in House and Field, in Plain and Forest, there existed the most manifold conceptions regarding the dependence of mankind and his powerlessness before that which stood outside and above him.

It is true that but few of the Divine Personalities of this period can be discerned with absolute clearness. Some authorities go so far as to maintain that the only real Indo-Tuentic deities which can be identified are a 'Heaven-Father' and a pair of youthful Gods, the Dioscuri, and that as to the latter we are not even able to describe clearly their peculiar functions. When, however, we confine our attention to the so-called Aryan period, we find ourselves treading on much firmer ground. This period represents the time when the European members of the Indo-Tuentic race had already separated from the Asiatic ones, who later became Iranians and Indians, and while these last still dwelt together as one people, — the Aryans. For this period we are in possession of a double

2 The word Arya literally means 'the befriended.'
set of literary authorities. For the Indians we have the \textit{Veda}, and for the Iranians the \textit{Avesta}, both of which point back to similar or identical conceptions and conditions of existence.

From these we learn that, in this Aryan period, mankind had already advanced beyond the ancient nature-symbolism, and had made the first step in the course of his progress therefrom towards grouping together into one conception the various divine powers with which he was confronted.

It came to be in this way. There was a deity whose origin rested on this nature-symbolism, and to whom, in order to make up the sacred number seven, six companions were given. Together with these he appears as the Bearer of the Divine Order, — the Vedic \textit{riti}, and Zend \textit{aspa} for \textit{artha}.\footnote{Perhaps connected with the Greek \textit{aretê}, virtue (?).} A Semitic influence has recently been suggested as acting in the conception of this group, which has been thought to show a relationship with the seven planets; but this point of connexion has not as yet been satisfactorily proved, more especially as the \textit{Veda} shows no trace of any knowledge of these heavenly bodies. Besides this, the descriptions of this holy Group of Seven are of very different characters in the two sources of our knowledge, and the older form of belief is clearly that shown in the \textit{Veda}. According to it there stands at the head of these Seven, who were themselves known as \textit{Aditya} (\textit{t.e.}, the Free or the Eternal), a Heaven-God who bore the name of \textit{Varuna}.\footnote{In Lesbian, — according to a kind verbal communication from Johannes Schmidt.} The identification of this name with that of the Greek Ouranos has been rejected by some recent authorities on comparative grammar, and it is true that, according to strict phonetic laws, \textit{Varuna} can only represent a Grecian \textit{Oranós}. On the other hand, in the first place, this form, \textit{Oranos}, \textit{does} occur in a Greek dialect,\footnote{To this group should also be referred \textit{'Father Zeus,' Dioskter, Dyoush pitar; also the Greek Trite (Tritogeneia).} \textit{Vedic Triti; and the explanation of the Greek \textit{Akron} by the Vedic \textit{aśman}.} and in the second place, proper-names do not appear to follow strictly the general phonetic laws of comparative grammar.

At any rate, even if we are to abandon the equation of \textit{Varuna} with Ouranos, there can be no manner of doubt about the former word being the name of a \textit{Vedic God of the Heavens}.\footnote{The name of the Greek \textit{Eréthys} corresponds to the Vedic \textit{saryyay}, the fleet, the pursuer.} Moreover it is very simple to derive his later restricted relationship to the waters, the rain or the sea from his relationship to the \textit{Aërial Ocean}. It is, moreover, the \textit{Night-sky}, the nocturnal vault of heaven, which is represented by \textit{Varuna}, who mounts his chariot adorned with brazen columns when the sun sets. The universe \textit{'covered'} by him lies under his protection. He is omnipresent; by his spies, the stars, he sees all that is hidden; he has, too, in his service female spirits,\footnote{Perhaps owing to a popular etymological connexion with the root \textit{mavh}.} from whom nothing is concealed. He is the avenger and punisher of all injustice. Where two discourse one with another, there is \textit{Varuna} between them. In the \textit{Veda} there stands by his side his companion \textit{Mitra}, the kindly \textit{God of the Day-sky}, who mounts his golden chariot at the first gleam of dawn and acts more especially as the protector of all human contracts.\footnote{This word is derived directly from the root \textit{mavh}, which appears to have originally indicated \textit{'lively motion.'} When conjugated in the 4th class it means simply \textit{'to throw, to shoot,' but in the 2nd class it has developed the more general signification of \textit{'to be.'}} He hardly ever appears except in company with \textit{Varuna}, while \textit{Varuna}, on the other hand, in token of his supremacy, is often glorified without any mention of his companion. A pure nature-symbolism lies at the root of the conception of these two divinities, which has, however, in the case of both, developed in the direction of ethics, — the face turned in the direction of mankind. In the case of the five remaining \textit{adityas}, who indeed are seldom referred to, this ethical relationship is carried still further, so as to entirely exclude the original background of nature-symbolism.

The corresponding group of seven holy beings which we meet in the \textit{Avesta} possesses, as compared with that of the \textit{Veda}, a distinctly secondary character. It belongs to a later period, and, as it stands, is the direct creation of an \textit{inspired prophet}, Zarathustra. The Ahura-mazda who stands at their head is certainly derived from the Vedic \textit{Varuna}, a god to whom, in the \textit{Veda}, is especially given the title of \textit{Aura}, the Living One.\footnote{\textit{This word is derived directly from the root \textit{mavh}, which appears to have originally indicated \textit{'lively motion.'} When conjugated in the 4th class it means simply \textit{'to throw, to shoot,' but in the 2nd class it has developed the more general signification of \textit{'to be.'}}} But Ahura's six companions are purely
speculative formations. Mithra is no longer one of them, although in other respects he occupies in the Avesta a prominent position close to him.\footnote{9}

Besides this tendency towards the idea of monotheism in the conception of the Deity, there also appears to have existed in the Aryan period, in a kind of contradiction to it, a tendency towards what may be called anthropomorphism.\footnote{10} While the exaltation of the man who thinks to the rank of an exemplary hero — Father Manu, Manam, (?) the Greek Minos — appears to belong to the original Indo-Teutonic age, we have in the Aryan period the change of the Dawn-Genius (Visasena)\footnote{10} and his twin children, the passing day and the night (Yama and Yam)\footnote{10}, into purely human personalities. Yama is described in the Veda as the first of those who died, and hence stands at their head as their king. In the Avesta, in combination with Ahura, he appears as king and representative of mankind in general. So also the Son of the Waters, Aptya (in Zend Athaya) or Trita (Traitiya) (in Zend Thritha, Thraetoana), 'The Third,' i.e., probably the Heavenly Ocean considered as the third stage of the Heavens, is turned in the Avesta into a hero. In the case, however, of other similar names, such as Kseya Usana (Zend Kava-Usha), Agyaya (Zend Agyaya), we cannot as yet observe any tangible symbolical conception of Nature as their basis.

As a third characteristic of the Aryan period we must notice the special prominence given to two sacrificial rites, viz., the worship of fire, and the reverence paid to a certain plant which produced an intoxicating drink. Fire worship developed so independently in Iran and India that it is evident that only its first beginnings belong to the common Aryan period. The Vedic name for fire, as well as for the fire-god, Agni, is it is true identical with the Latin word ignis, but we are in no way entitled to assume a common deification or a common special fire-worship from this similarity of appellation. This name is altogether unknown to the Avesta, and, on the other hand, the Avesta name for fire, adar,\footnote{11} does not occur in the Veda.

Equally certain is the identity of the Vedic soma with the Avestic haoma. In all likelihood, as far back as the Indo-Teutonic period, people had an intoxicating drink prepared from honey, the Vedic madhâ (matha), mead: Greek meithe, wine.\footnote{12} But, besides this, the Aryans knew already another intoxicating mustilage (compare the German word stein), which they squeezed out from the juicy stalks of a plant, and which they consumed the same day without further preparation. They named it soma, or in Zend haoma, from the root su, to press out.\footnote{11} We should at once identify this intoxicating 'yellow' juice, which was obtained from a 'mountain' plant with flexible tendrils, with that of the

\footnote{9} Mithra had already gained such great popularity in the Aryan period that Zarathustra could not deprive him of his independent position by the side of Ahura. He still remained as a folk-deity along with him, and even concomitant with the monotheistic position claimed for Ahura by the followers of Zarathustra. He was ultimately raised to the dignity of the Sun-god and his influence became extended far and wide. The Magi appear to have been the chief preachers of the worship of Mithra, while the adherents of the cult of Ahura bore the name of Zoroastrians, or 'fire priests.' The Mithra-worship spread itself through Greece as far as Gaul and Rome, and, to the east, advanced even into India.

\footnote{10} This tendency, which makes historical personages, Kings and Epic Heroes, out of the old gods, became especially prominent in later times in Iran.

\footnote{11} Query, from the root su, to consume? For adar with pre-Zedic compensatory lengthening of the vowel. The change must have taken place in pre-Zedic times, for according to the rules of that language, adar would become astar (see Sitzungsberichte der Berl. Ak. 1891, p. 815). A trace of the word has, by the way, been suggested as existing in the Latin stibium (fire-place). At any rate the Avesta name of the fire-priest, astar, unmistakably reappears in the Vedic proper-name Atharvan in spite of the irregular aspiration. This aspiration, indeed, appears in this word with some frequency in manuscripts of the Avesta, even when the r does not directly follow the t.

\footnote{12} The word means either, passively, a mixture, or, actively, perplexing, intoxicating. The Latin madidus, drunk is probably connected with it. Regarding the mem in (?) madíta, a name of the dawn, vide post, note 20. The idea of messana seems to have been first attached to the word in India. See Sitzungsberichte der Berl. Ak. 1892, p. 790, Note 9. Compare, however, the Old Bulgarian medo, honey and wine, and the Lithuanian mìdo, honey.

\footnote{13} This root appears to have had two pronunciations, one with u, and another with i. Compare u-i, to sprinkle, to strain (German sehen); just as there is another pair of roots, su or si meaning 'to saw.' The German saum, a beam (Sanskrit, simam; Greek thumos), which is connected with the latter double root su or si, has an instructive counterpart in Stein, mucillage (sima, hauma). See Sitzungsberichte, loc. cit., and also Königswache,' 1893, p. 38, note 7.
grape, were not the supposition barred by the information recorded regarding the process employed in its preparation; and we are still in uncertainty as to what plant was meant. The drink must, however, have been a very pleasant one, and much admired for its intoxicating, magic, power; for it was adored as a deity both in the Vēda and in the Avesta. So far as regards the Avesta, the deification of the Haoma is as little an essential part of its teaching as that of Mithra or of the Water-God Apān napāt (Vedic apāh napāt), etc., and can only be explained by the theory that these Gods stood in so great popular favour among the Iranians, that Zarathustra, the Prophet of the Avesta, and his followers, were compelled to adopt them in order to secure the general acceptance of their own doctrines among the mass of the people.

Finally, in a fourth direction we come upon instances of very close connexion between the Vēda and the Avesta, which go back to the common Aryan period, but in regard to which each occupies a different position. A whole series of Vedic names for good gods appears in the Avesta as demoniac, evil, beings. Thus, we have Indra (or with the variant Andra); Nāyatyu, Zend Nāomahitya; kārus, Zend kārueas; hari, Zend avarī. This is specially the case with the very words for 'god' and 'demon' themselves,—Vedic dēva, Zend dēva; Vedic asura, Zend akura,—each member of each pair having a contrary meaning. Some writers have had no hesitation in discovering in this difference the origin of the separation of the Aryans into Indians and Iranians. In other words they have traced this separation back to a religious impulse, and have maintained that the Iranians, under the influence of their prevailing monotheistic tendencies, had changed their old nature-gods into demons and devils. So far as regards the Avesta, i.e., so far as concerns the followers of Zarathustra, there may be a certain amount of truth in this theory, but their time is far later than that of the division of the Aryans. That must be set at a much earlier period. Within Iran, there were a number of very different developments, as is borne witness to by the retention of the nature-gods Mithra, apān napāt, etc., already mentioned. Above all, the words dēva and asura are both used in the Vēda in the same good sense as in the Avesta,—the word AURA, moreover, only in this manner throughout the older parts of the Vēda. Thus, long after the separation no difference in this respect existed between the two peoples, and it first became general in historic times, after long continued propinquity and a contact which meanwhile was in part unfriendly. In fact in the texts of the second Vedic period, the so called brāhmaṇas, there appear a number of legends concerning the differences of ritual between the groups of the dvīyas and the anāgirases, in which the former are victorious, as the champions of the Right Observance, while the defeated anāgirases may be taken as the maintainers of Iranian-Avestic views. In the same way, we can explain similar legends regarding the contest between the dēvas and the asuras in which the latter appear as the elder sons of the Creator (Prosjātrap). Note, too, that Kārya Usanas (who corresponds to the Avestan Kava Uṣp) is mentioned in these texts as the Teacher and Representative of the asuras.

It has been recently suggested that the division of the Aryans should be referred rather to political than to religious grounds; namely that the Aryans who were settled in the northern portion of the hitherto common land, influenced by the monarchical institutions which had been already adopted by their Semitic neighbours, may have been themselves persuaded to embrace a similar political condition, and, so led, still further, to monotheistic tendencies. On the other hand, their brethren in the southern tracts of their country, still living a nomadic life, were for this reason induced to wander further, and hence invaded India. As a matter of fact, in the Vedic texts there is no mention of large, established, kingdoms. All that we hear of are numerous small clans, each of which has its own leader. It is not till the second Vedic period, in the just-mentioned brāhmaṇa texts, that there is any reference to great kings and kingdoms. Moreover, this immigration did not take place under the ægis of the group of seven speculative deities who had already been placed at the head of the pantheon in the Aryan seats; but under the leadership of the gods symbolical of Nature, who from ancient times had protected them from hostile powers, and who now, in accord with the warlike progress of the people, advanced again to the foreground. This leads us now more specially into the time of the Vēda, and on to the Land of India.

14 It is an interesting fact that the word kāvē has two meanings in the Avesta, a good and a bad one, while in the Vēda it is used with only the former sense. Cf. the remarks in regard to the Vedic Kāvya Usanas which follow.
At the time to which we owe the songs and texts of the Veda arranged in the form in which we have them at present, the occupation of India by the Aryans was already a completed fact,—it belonged to the past. But various references contained in it, which are in part contemporary with the events with which they deal, show us each phase of occupation, and lead us backwards step by step. A good portion of the older hymns was not composed in India itself, but in the North-Western border-lands, on the banks of the Indus and its affluents, or even still more to the west or north-west, in actual Iranian or Turanian neighbourhoods. The later songs and other texts lead us from the Indus, across the Sarasvati, eastwards up to the Sadanira, the Ganges. The names of the points of the compass (behind = West, before = East, left = North, right = South) mark the direction of their course. ‘Leq’ (northern) is also indicated by a word which means ‘above,’ while ‘southern’ is not indicated in the older texts by ‘right,’ but by words which mean ‘below,’ ‘netherly.’ Each of these has significance in connexion with the descent of the Aryans from the North-West into India.

It is only in the latest Vedic texts that we find the first few traces of the conquest of the south, the Decan, by the Aryans, for in reality this belongs to the epic or Buddhist period.

Now, the development of the religious conceptions of the Aryans went hand in hand with their geographical expansion over India.

At the time at which the existing text of the Rigveda was compiled, Agni, the god of fire, and Indra, the god of the thunderstorm, stood at the head of the Vedico Olympics. The great majority of the songs which compose the collection are dedicated to these two deities, but in such a way that the god of the priestly sacrificial services takes precedence of the god of the warlike mass of the people in the number of hymns dedicated to each, and that therefore the hymns to Agni always stand at the commencement of each section (mandala) of the collection. With regard to their mythological importance,

18 Compare the names showing a connexion with Iran, which are found in so late a document as the list of teachers in the Vedanta-brhamsana of the Sama-veda.

19 It is also characteristic that in the allotment of four points of the compass, each to the guardianship of a tutelary divinity, which we find in the later Vedic texts, the south (and the later we go, the more decided) is made over to Yama, the god of death. This probably refers either to the deadly climate of the south or to powerful opposition on the part of the wild aborigines.

20 In a passage in one of the Brahmanas the Audhres, who in later times are the chief representatives of Brahmanical culture in the south, are mentioned as a barbarous people. The name of the Decan river, Godavari, is altogether formed on Vedic models.

The river-name Med, of which the same may be said, occurs in the Brahmanas of the White Yajur-veda. In this passage mention is made of a prince of that locality who was expelled from a kingdom which his family had already held for ten generations. The reference to the Hari in the Moon in the Yajur-veda is based on the form in which the spots on the full moon assume only in the Decan, where the ‘Man in the Moon’ resembles a hare. Also the legends of Agastya (Chandogya) and Tri-satiku (the Southern Cross) lead us to the Decan.

At the time of the Perigiaeus the most southerly point of the Decan was known under the name of Komara (the Cape Comorin of today), which brings us back to a title of the bride of Sinu, which, though a secondary one, already occurs in one of the dravida texts of the Yajur-veda.

Several of the metremas ending in pura which occur in a list of teachers in the white Yajur-veda turn up again, in the inscriptions of the Andhra-bhuyiya or Chalukya dynasties, as names of kings who flourished in the first centuries of the Christian era. (These kings appear to have taken the names of their pura; Gantamur-pura, Vasthi-pura, Harika-pura, etc. See Indische Studien, iii, 488.) The name, Mhaddha-undina, of a school of the white Yajur-veda is probably capable of being identified with the Madiandawni of Arrian.

21 On the whole, the arrangement of the hymns in the Rigveda, as we have it now, depends on what may be called literary-scientific principles, i.e., the attempt to group the then existing hymn-material, first, genealogically, according to the families of the singers, and, then, according to certain other fixed principles. What was the occasion of this editing, and when it was completed, are matters about which we are still entirely in the dark; but we may perhaps be permitted to suggest that the motive of self-preservation on the part of the Brhmanas had a share in it, or, in other words, that this compilation was intended as a means of defence against attacks. It appears likely that such attacks could only have come from Buddhism. The texts of the second Vedic period seem, in fact, to stand already directly under the influence of Buddhist doctrines (see Sit-Ber. d. Berl. Akad, 1937, pp. 597-98). For the texts of the third Vedic period, the so-called sula-texts, this is certain.

All Vedic texts were originally handed down from one generation to the next by verbal tradition only, and not in writing. The existing code is as it was left by the last hand, and was preceded by numerous preliminary codifications, traces of which are now preserved only in quotations from them. In opposition to J. Halesy, I do not consider that the secondary fixation of the text in anyway prejudices the age or genuineness of the materials contained in it.
however, their position is reversed. As a subject of legend, Indra comes more to the foreground than does Agni. Fire, in its activities and its effects, is too much an object of the senses, too material, too palpable, for its deity ever to play a great mythic rôle. Only its mystic generation by the friction of two pieces of wood, and the downward leap from heaven of the lightning-fire out of the cloud-waters, as well as with its sudden disappearance back again within them (its ‘Flight into the Waters’) form the subjects of mysterious stories. The part taken by fire in the expulsion of the darkness of Night, with its attendant demons, lies too plain before our eyes, and gives no occasion for myths. Nor is the leading part which it plays at a sacrifice less a matter of fact. The gods are brought down from heaven to the earth by means of the flashing flames, and it acts as a messenger between gods and men, carrying up to the former the offerings of the sacrifice, and, in exchange, bringing down to the latter the favour of the deities.

Much more thoroughly does Vedic Myth occupy itself with Indra, the god of the thunderstorm, whose personality is neither visible nor tangible, and can only be gathered from his deeds. Now, these deeds are accomplished, partly in the far distance, in the war with the heaven-climbing cloud-giants, whom he hurls down back with his thunderbolt, and partly, too, close at hand, in spiritual wise, as he stands by the Aryan people and helps it to conquer the new seats for gaining which it has wandered forth, and to crush the opposition of the aborigines whom it pictures as hostile demons. Indeed, to such an extent do these two phases of his activity go hand in hand, that they often overlap each other, and it is not always easy to say distinctly which of the two is being alluded to. The intoxication caused by his quaffing the cups of soma offered to him by his Aryan proteges strengthens him and encourages him in his valorous deeds, just as it acts on them themselves as they follow his example in drinking it, and under his leadership complete the conquest. He is thus peculiarly the favourite national god of the Aryans during their migration into India. His name appears to mean ‘the Strong,’ ‘the Mighty,’ ‘the Lord,’ (compare ini, strong, from root in, to prevail), and probably first gained its full force in the Vedic period, though, in the related form andra, it occurs already in the Avesta.

These two chief representatives of Divine Power well illustrate the contrast between the opposing forces of the migrating Aryans and of the Aborigines with whom they fought and whom they subdued sometimes as ‘the sacrificeless ones’ (‘the ones who do not sacrifice at all,’ and sometimes (from their darker skins and general personal appearance) as ‘the noseless ones’ t. i. e. evidently, ‘subservient.’ By their side there stands a numerous body of other deities, the conceptions regarding whom are based upon the most diverse relations. Among them we may first mention Pushan, who can be considered as a kind of representative of the ‘Plebs,’ of the common folk, as compared with the Agni of the priests and with the Indra of the warrior class. He is the God of the Roads and of the Cattle, who leads the advancing nomad to the right place for him to erect his temporary habitation, and points out the right road by which the cattle are to be taken forth to pasture. In contrast with the soma-drinking Indra, what are offered to him are groats, gruel, and porridge, the food of the common people, and hence the myth describes him jokingly as ‘toothless.’ It is also said of him that he cohabits with his sister and even with his mother, which probably refers to similar immorality among the wandering folk. In the Rig-saṁhitā, which we may fairly say was intended more for the sacrificial service of the higher classes and of the rich, there are not many hymns dedicated to this deity of the common people, but in the ritual formulas, whose composition we can fairly place at about the commencement of the second Vedic period, Pushan regularly appears by the side of Savitri and the two Asvins, and is described as he by whose ‘two hands’ everyone, who at a sacrifice has anything to perform with his own hands, carries out his duties successfully; so that every action of that sort connected with a sacrifice appears to be consecrated by his assistance.

Equally old, and equally the property of the people is the form of the divine ‘Artist,’ Tvasteṣṭri, who always appears accompanied by celestial ‘females,’ his assistants in his work. On the whole, however, his name occurs but seldom. By his side, or, rather, opposed to him as rivals, and even surpassing him in skill, stands a group of three demi-god Smiths (Ribhu), who seem to represent the creative power of Nature during the three periods, the past, the present, and the future.
While Pāșhan and these other gods have no peculiar nature-symbolism for their basis, and their forms appear rather to be products of speculative imagination, this is even more the case with another deity who occupies a prominent place in the songs of the Rik-saḥhitā beside Agni and Indra. His name, Savitri, which means the Impeller, the Stimulator, is as a rule accompanied by the word deya, god, divine. Hence it was still understood as an ordinary adjective, and, as such, occasionally appears as an epithet of Tvasṭrī. It is generally explained as a personification of the life-generating, creative, power of the sun, but to this recent objections have been raised which, so far as the original meaning of the word is concerned, have considerable force. The God Savitri appears much rather intended to replace Varuṇa, who had been thrust into the background by the promotion of the folk-god, Indra. During the migration of the Aryans into India, Varuṇa's lordship over gods and men has been exactly transferred to Savitri. The monothetic speculations which had already arisen in the Aryan period had not been altogether suppressed in the ranks of the emigrants to India. The train of thought, on the contrary, progressed, till it appears to have centred itself round the sun, whose rays we should probably understand under the symbols of the ‘golden hands’ of Savitri, and of his arms upraised in blessing.

Although many, and indeed some of the most beautiful, hymns in the Rik-saḥhitā are dedicated to Savitri, he did not acquire his supreme importance till the commencement of the second Vedic period, at the time when the oldest ritual formulae came into existence. ‘On the stimulation (command) of the divine Savitri, with the arms of the twin Aśvins, with the hands of Pāșhan’ (see above), so runs the formula of consecration dating from this time, with which nearly every sacrificial action must be commenced. Similarly, the prayer recited by the teacher on the reception (upanayana) of a young pupil, which calls upon the God Savitri to stimulate our thoughts, and which under the name of the sacred aśvita, is still in daily use up to the present time, can probably be referred back to this period.

Among the deities of the Rik-saḥhitā, which depend upon pure nature-symbolism, the most prominent are the two Aśvins, the Dawn, and Budra. The first named pair of gods, which has long been identified with the Dioscuri, can, as we have seen, be traced back to the primitive Indo-Teutonic period. In the Veda it is more especially their place in the morning sky which is of importance, a circumstance which is not of equal significance in the case of the Dioscuri, although it appears to be proved to have belonged to the original conception of the pair. For this reason, and more particularly because the two Aśvins always appear as rescuers from the terrors of the night, they have lately been identified with the constellation of Gemini acting as the morning star, at the time of the winter solstice, when this was of special significance. Attempts, based on this theory, have been made to fix, both chronologically and geographically, the original home of the Indo-Teutonic family, and we are led by it to the 4th millennium before the Christian era as the period, and to Armenia and the country below the Caspian Sea as the site.

Along with them, in the older hymns, the Dawn, who figures as their beloved, is celebrated with warmth and poetic animation, the source of the singers' inspiration being more particularly her eternal youth and beauty.

\[20\] Just as Tvasṭrī is a personification of its 'fashioning' power.

\[21\] Can the description of the two Aśvins as mādhu (fond of mādhu), mādhu (wandering in mādhu — the feminine form in both cases is remarkable) have any connexion with the use of the word mādhu to mean 'the morning mist'? See Sitz. Ber. d. Kgl. Ak. d. Wissenschaft, 1898, p. 572. Or, to go still further, can we also connect the name of the Roman goddess Mater (matutata) with mādhu? I admit that hitherto it has usually been connected with mādhu, early, or with māna, in the morning (māna, bonus). The root mātha also appears with an unspirated bennus in the Latin mentula (Sanskrit mātha, manthana, a chewing stick).

\[22\] The usual explanation of the Aśvins and the Dioscuri by the morning and the evening stars destroys their twinnship. Moreover the planets concerned, Mercury and Venus, owing to their different periods of revolution round the sun, continually interchange their roles, and only occasionally appear in the heavens on the same day, the one as the morning- and the other as the evening-star. In short, the circumstance that occasionally on two successive days one appears as the evening- and the other as the morning-star, can hardly be accepted as a reason for their being represented as a pair of twin deities.

\[23\] This is, it is true, a long time ago, but that is hardly an impediment.
While these two deities, the Aśvina and the Dawn, became more and more indefinite and gradually retired into the background, whether referred to directly or in mythic legend, as the Aryans wandered further into India, Rudra, on the other hand, is the god who represents a direct connexion between the Veda and the period which followed it. In the former he appears as a malevolent personality, whose power was greatly feared. The storm-wind, which he represents, is personified in him as the raging horde, which tears up and carries all things off with it as it rushes shrieking through the air. The winds (Marut) are indeed also held in high honour as the warlike companions and helpmates of Indra, and their power is at the same time strongly insisted upon; but Rudra, and his companions, the Rudras, are without that placable element which allows the activity of the Maruts, on account of their association with Indra, to appear as benevolent to mankind. With the ' howling ' Rudra horror and anguish outweigh every other feeling. Men implore him for forbearance; he is not only a subverter of the demons, like the Maruts clustered round the god of the thunderstorm, but is feared as a terrifying demon himself, whose very name it is hardly safe to mention. Nevertheless he has also a kindly, healing, side to his character; for he chases the evil miasmas, and hence counts as a remedy-bringing physician. On this account, principally, but also, no doubt, with euphemistic intent, in order to propitiate him in advance, he, together with his sister and spouse, is appealed to with every kind of endearing appellation. He is the deity who leads us over from the Vedic to the Epic Olympus, the intermediate stage in the progress from the one to the other being found in the formulae collected in the texts of the Yajus-smāhā, which belong to the second period of Vedic literature.

This second Vedic period, in which the entire sacrificial ritual was alike developed and established, was also the time of the rise and consolidation of the brahmanic polity, and of the brahmanic hierarchy. The conquest of their new domicile in India had intensified among the immigrant Aryans the feeling of unity of race in contrast with the aborigines. The opposition which they encountered compelled them to close fellowship. The sacrifice, with its hymns and peculiar customs, formed a strongly defined frontier-line against everything of a foreign nature. Those who were skilled in and administered it, secured through it the favour of the gods, whose goodwill was absolutely necessary in the battles with the children of the soil. Armed with this authority, these men by virtue of their office stood at the head of the nation. Even the people of the higher classes and the rich, for whose benefit they principally interceded with the gods, became more and more subordinated to them. Through intermixture with the aborigines hybrid castes arose and were gradually marked off. The reception of princes and of the more important families of the latter into the Aryan community contributed still greater influence to the priests who contrived it. It finally came to this, that they alone appeared as the proper depositories of the divine commands, nay, even of the divine power, inasmuch as through their sacrifices they could actually exercise and compel the gods to be their obedient servants. Like the gods themselves, so also the entire nation from the princes downwards fell into a condition of absolute submission; while, on the other hand, when princes did so subject themselves, in return for this complacency, they were helped by the priests to the complete possession of royal power over the remaining portion of the people. The old god of the masses, Indra, under whose auspices the Aryans had made their victorious entry into the new land, was thrust aside, and in his place there came forward as representative of the magic virtue of the priestly formulas, and, as a consequence, of the priestly pretensions, a new divinity, Brihaspati.

In a similar manner the forms of the remaining gods became exchanged. The old divinities based on nature-symbolism, it is true, still remained in existence, and continued to prevail still further but they found no natural, genuine, development. The new forms of deities of this period all belong to the class of imaginative speculations, including a large number of names ending in -pati, i. e., ' Master of ... '; like the Brihas-pati just mentioned.

While the number of thirty-three gods, meaning by this merely a large but indefinite total, originated in Aryan, or even in Indo-Teutonic, times, this number was now systemati-

24 See Kuhn's Zeitschrift für vergleichende Sprachforschung, xiii. p. 185.
cally fixed in its details, and different groups of deities were imagined, each of which appeared as representative of one or other of the three worlds (eight Vānas of the earth, eleven Rudras of the air, and twelve Adityas of the heaven). In addition to these there were numerous other groups, the Viśvē devas, All-gods, and so forth. The Manes, also, 'the Fathers,' who, as interesting themselves in the welfare of their descendants, were considered worthy of having sacrifices and oblations assigned to them, were divided into manifold groups. The classification of the gods according to the three worlds under three ruling divinities, Agni, Indra or Vāyu, and Sūrya, now comes into the foreground. This Triad gradually became concentrated into a Unity, whether it was that each was considered as a different stage of development or as a different expression of the powers of one simple, mighty, dimān (soul, spirit), or that all three had entirely fallen under the supremacy of the Savitri (see above) who had taken the place also of the ancient Vāruṇa, and who now, in his turn, appeared under the new name of Prajā-pati or Brahman.

Here it is that we approach the conceptions of the gods which were current in the epic period. On the one hand, the tendency towards monotheism formed itself in the priestly schools into a complete pantheism, that found its goal in the theory of an Absolute which it indicated by the neuter word 'Brahman'; and, on the other hand, amongst the laity, the same direction of thought took, in correspondence with the needs of its votaries, concrete, sectarian, forms, and began to clothe certain of the popular divinities already existing with attributes of the highest might. The gods actually selected for this distinction were the two which represented the earth and the atmosphere, — Agni and Indra (or Vāyu). This, however, so took effect, that to the epithets and legends which centred round the name of Agni there adhered also those belonging to the Vedic Rudra, and from this combination, with the addition of some further popular ingredients, arose the mighty form of Śiva. Similarly, to the fables and legends attached to Indra and Vāyu there accreted those dealing with Viṣṇu, a deity who plays but a small rôle in the Veda, and whose original significance is still somewhat indistinct, but whose name now superseded those of the other two.

The development of the conceptions of these divinities seems to have been specially favoured by the Brahmanas with the object of utilising them to meet a powerful foe who had in the meantime arisen against them in their own ranks. The degradation of the ancient gods under the dominion of the priests, and the weighty pressure of the Brahmanical hierarchy upon all ranks of the people, which had abolished the old healthy joy in living that made men pray to the gods for a life of a hundred years, and which taught instead that earthly life was but misery and woe from which the only release was flight, led ultimately to a tremendous reaction. A certain king's son, who had made himself master of all the wisdom of the priests, renounced his princely rank, and at the age of thirty years appeared under the name of Buddha, 'the awakened,' as a wandering preacher to the common folk. With a bold stroke he gave to everyone the right to free himself through his own exertions from the misery of life and from the further states of existence expected after death. The success which he gained in his mission was immense, although it was really but a kind of intoxication, by which the people could find no permanent happiness, and from which, compelled by the imperious necessity of stilling the needs of their hearts, they soon returned to the creations and imaginations of the past in the very manner which has just been described.

Moreover, Buddhism itself did not long retain its original, absolute, negation of everything divine, but on its part also advanced to the deification of its own creations.

At the same time we get by it the first, indeed we may say the only, certain fixed point in the chronology of ancient India; a fact which is of course for us of altogether inestimable value. In the

---

25 It is still doubtful what ideas lie at the bottom of these definite numbers. This is more especially the case in regard to the eight attributed to the Vānas, concerning whose very attributes we have but the vaguest indications (originally it was Agni, but later it was Indra, who was their leader). The number eleven given for the Rudras may refer to the eleven directions (the four main points of the compass, the intermediate ones, the zenith, the nadir, and the centre). The twelve Adityas may be based on a reference to the twelve months of the solar year.
inscriptions of a king named *Piyadasi*, who confessed the teaching of Buddha and sent forth missionaries to spread his doctrines, there are mentioned the names of different Greek kings, the successors of Alexander the Great, as his contemporaries (or vassals), from which we are enabled to fix his time as the middle of the third century before our era, and the time of Buddha as about two hundred years earlier. From this point, therefore, are we enabled to calculate backwards the progress of the entire preceding historical development.

But it is not only their Buddhistic contents which lend such high chronological importance to these edicts of *Piyadasi*, and make them, owing to the certainty of their date, the only possible starting point of all investigations into the history of the civilization and literature of India; their outer form, the characters and language in which they are written, stamps them also as such.

They, in short, represent the oldest form of Indian writing, from which it can be traced downwards even to the present day, stage by stage, through numerous modifications. This refers, indeed, to only one of the two forms of writing in which the edicts have been preserved to us,—the so-called 'lapidary' form. The other form, which is a cursive script, was confined to a small area. It was formerly called the Aryan character, after the region in which it was found, and occurs not only in inscriptions, but also on coins, and even in manuscripts. It is named *kharoshthi*, i.e., 'asses' lips' (!), but according to Alfred Ludwig, this name is really derived from the Semitic root *kharash*, to scratch in. The script is a corruption of a Syrian form of writing of the fourth century before Christ.

The 'lapidary' character goes back to a much earlier period. Its general appearance is like the ancient Greek alphabet that its first decipherer, James Prinsep, explained as Indian writing turned topsy-turvy. Ofried Müller took an exactly opposite standpoint, in which he has latterly been followed by J. Hafer. Georg Bühlé's enquiries, however, which are based on an earlier treatise of mine that was written in the year 1858, show that the truth is that the similarity of the two characters is merely a proof of their having been borrowed at the same time (about 800 B.C.) from an ancient Semitic alphabet, on each case through the intermediary of the Phoenicians, and that here we have a very useful synchronism, which fits in admirably with the other loans which India seems to have taken from Semitic sources.

Of even greater importance for Indian history is the language of these edicts. They are couched neither in the dialect of the Vedas nor in Classical Sanskrit, but in the vernacular of the people, and, further, in two or three not very widely separated dialects. The reason for this was probably the desire that their contents should be as widely known as possible, which would not have been the case to the same extent if they had been composed in Sanskrit. Sanskrit and the vernaculars represent two concurrent stages of growth of the ancient Vedic speech which were contemporaneously developed. Sanskrit is a form of speech, current only in the circles of those who learned it, which grew out of the study of the Vedic texts, and was brought into its existing shape by being made subject

---

23 No prince in the whole history of the world, not even Constantine or Charlemagne, did so much for the religion which he professed as did *Piyadasi* (or *Aśoka*). He published his religious edicts in all parts of his great kingdom, embracing the whole of Hindostán, on isolated rocks and pillars. The Buddhist synod held in the seventeenth year of his reign dispatched missionaries to every point of the compass, even to foreign countries. His own son, prince *Mahinda*, led such a mission to Ceylon, which from that time became the head quarters of Buddhism, whence, subsequently, it spread itself over the Indian Archipelago and Further India.

27 Antigonus — Antiochus; Antikini (a mistake of the engraver for Antikuna) = Antigonus; *Magas* = Magus; *Tyrannos* = Ptolemaios, i.e., Ptolemy. See *Jütische Studien*, iii. 108, 160. The last of these identifications (compare the Greek pronunciation of the word *Psyche*, as 'Sriki') is of exceptional interest. It allows us to recognise the name of Ptolemy in the *Asvamedha*, who appears in the Mahâbhârata as the artist of the gods in the place of the ancient *Tvastri*, and who is in later times mentioned as the first representative of Indian astronomy; so that under him we find concealed both the prince famed for his magnificent royal buildings, and also the later, equally illustrious, astronomer of the same name.

28 We can gather that *Piyadasi's* desire that the contents of his edicts should be widely known was at least as strong as his intention that the published copies should last as long as possible, from the fact that he proclaimed his edicts in all parts of his great empire on rocks, pillars, and the like. It follows that the knowledge of writing must at that time have been very widely extended.
fixed rules of grammar; while the vernaculars of the people represented the regular continuation of the old Vedic language through dialectic changes. Here, also, although it is impossible to specify any definite chronological period as necessary for the change, as well as for the difference of culture which we remark between the Veda and these inscriptions, centuries are required in order to arrive, stage by stage, at the level of the vernacular of the editors from the form of speech of the Vedic texts. With regard to this, however, it is of the greatest interest to note that the names, which in the Buddhist legends are mentioned as those of contemporaries of Buddha, are identical with the names which appear in the third stage of Vedic literature, — the period of the so-called sūtras, — as those of its recorders. Moreover, this very word, sūtra, was applied by the Buddhists themselves to denote the oldest stage of their own literature.

The sketches of the conditions under which Buddha's life was passed, which we find in these sūtras, present to us a very clear picture of the state of India in his time, from both a political and a social point of view, and by their simplicity and sobriety, leave for the most part an impression of being thoroughly trustworthy. Buddha's activity as a wandering preacher was principally spent in eastern India, in Magadha, but now and then extended into the Deccan. The country appears as still divided amongst different petty kings and princes, although there are already mentioned some great cities about whose foundation legends are related.

Buddhism exercised an important influence on the development of the Indian people. The appeal to the free-will of mankind, by which each individual was summoned to take into his own hands his fate in his next existence, and even to free himself altogether from the pains of existence itself, which was addressed to everyone without exception of rank, caste, or even sex, — for women fell within its range, — did not fail to awaken and stimulate the powers, hitherto dormant and oppressed, of all, and especially of the lower classes.

It happened that the time of the high-tide of Buddhism coincided with that of the opening of the land to foreign influence, especially to the influence of Hellenic culture. While the spiritual discoveries of the Brahmanical hierarchy were jealously confined to their own schools, Buddhism spread not only among every section of its own people, but also showed itself, partly as courteous and compliant towards foreign influence, and partly even as developing a missionary activity beyond the frontiers of its own land.

Here arises the question, which has been so much discussed of late, whether any traces of Buddhist teaching and ideas can be traced in the narratives of our gospels. The essential elements of Christianity would not suffer from such a discovery. The gospel that men are the children of God, which alone of all religions in the world gives that which is needed by the human heart to enable it to face all the necessities of life, is so absolutely different from the ground-principles of Buddhist doctrine, that such historical relations could not interfere with it in any way; but at present none have been determined with any certainty. The date of the composition of the existing Buddhist canon, whether in the recension of the Northern or of the Southern Buddhists, has not yet been fixed so distinctly as to enable us to build any firm conclusions upon them.

39 The position of the saṅgha, or, as we may translate it, 'the congregation of the faithful,' as the highest ecclesiastical authority in the Buddhist Trinity has a solid foundation in definite regulations to that effect, while the Avesta FravMZel (abstratums of the souls) of the believers, as well as the 'Holy Ghost' of the Christian Trinity, have nothing of the sort.

By the bye, the placing of 'The Son' before 'The Father' in the final verse of the second epistle to the Corinthians, xiii. 13, which lies at the bottom of our modern prominent worship of the second Person of the Trinity, corresponds to the position which the Brāhmaṇa texts give to the priestly rōkha (Latin vox), i. e., the logos as a cosmic principle, over Prājñāpati. 'If there is anything higher than Prājñāpati, it is the Vich.' See Ind. Stud. ix. 479.

30 Neither of the two can pretend to represent the recension of the canon as established at the third church-council held in the time of Piyaṇāci, which, moreover, was almost certainly only orally compiled, and in another dialect, namely that of Magadha, or Eastern India, in which Buddha is said to have preached. But both contain very much that is old and authentic, and that, of course, more especially in the portions which are common to both. It must, however, be admitted that the southern canon, which was fixed, according to its own tradition about 80 B. C., by being put into writing in Pali, a dialect of western India introduced into Ceylon by Prāmeśa Mahinda, has a much stronger claim to authenticity than the northern one, which itself professed to have been prepared under King...
In India itself Buddhism reached a high state of prosperity. It was, however, in the end entirely expelled after having endured for about a thousand years, and it is now coming back again into the country as an importation from outside. But, before its expulsion, in the same manner as the Reformation upon Catholicism, it had reacted very favourably upon Brahmanism. It had substantially lessened the number of the bloody sacrifices of animals, and had operated towards the gradual decline of the custom of widow-burning and the total discontinuance of human sacrifices (see Sitz. Ber. B. Akad. 1897, pp. 597, 598). It has, however, also exercised a most benevolent influence in this very direction, as it has sensibly contributed to the absolute sacredness in which the life of the cow is held, to the abstention from flesh-food, and to the universal adoption of the practice of vegetarianism. Through this the physical strength of the Indian people has been very seriously affected. Ever since, it has been the prey of foreign invaders, to whom, in the time of Alexander the Great it had been able to exhibit so powerful a resistance.\(^{31}\)

When Buddhism was expelled from India, there remained behind it a closely related sect, that of the Jains. The origin of this sect is still in the dark. According to some, who base their opinion more especially on the fact that the name of their founder is the same as that of a teacher who is mentioned in Buddhist legends as an opponent and as a predecessor of Buddha, the Jain sect must be considered to be pre-Buddhistic. According to others, it is merely the earliest schism from Buddhism itself, and too much weight is not to be laid on the identity of name, as the traditions regarding the personalities of the founders of the two religions agree in all essential particulars. However that may be, this sect has itself become divided into two groups, which, as is the case in all disagreements between two brother-religions, hate each other cordially. These groups are known as the Digambara (the naked: literally ‘those whose garments are only the quarters of the sky’) and the Svetambara (clothed in white). It is only the canon of the latter which is known at the present day, and it exists in colossal dimensions. The Digambara appear to be the more ancient, for not only in the Śrīraṣṭāpūrāṇa itself (x. 136, 2), is mention made of ‘Wind-girdled Bacchantes,’ muniṇḍa vītāraṇāṇa, but they also appear to be referred to in the well-known accounts of the Indian Gymnosophists of the time of Alexander the Great. Even at the present day we see mendicant Śivites wandering about as naked Yōgins, probably as successors of the companions of Rudra.

Besides their sacred canon, the Jains are also possessors of a great profane literature, especially strong in narratives, in which they even rivalled the Buddhists, although also there in a secondary position. Judging from its contents and form (the language is a dialect far more modern than, for instance, Pāli) as well as from the traditional accounts of its composition, their canon cannot be dated before the fifth century of our era.

The development of the Jain sect belongs moreover to a time and to a locality in which the personality of Krishna was still popular, especially as that of a heroic prince.\(^{32}\) He was then celebrated as a royal scion of the tribe of Yādavas who dwelt at Dwārakā in western India; and he had not yet attained to the rank of a demi-god as we see him in the Mahābhārata, nor had he the shepherding legends, more especially

---

\(^{31}\) It is well known how Buddhism turned into peaceful nomads the Mongolian hordes, who in the thirteenth century devastated the whole of Iran, western Asia, and south-eastern Europe, till the German sword made them halt at Liegnitz (April 9th, 1241). Under Buddhist influence the same people now refuse to shed the blood of any animals, though they do not hesitate to consume flesh which had been slaughtered by others.

\(^{32}\) Can this special connexion with Krishna have such influence that Jainism was able to remain in India, while Buddhism was expelled from it?
the tales of his amours with the herd-maidens, which have been incorporated in the modern Krishna-myth, yet been attached to him. It therefore reaches back to a time which preceded the composition of the existing recension of the great epic. 33

Although Buddhism is essentially contemporary with the third period of Vedic literature, that of the Ṛtra, while the second is that of the creation and the development of the hierarchical Brahmanism as an opponent of which it came into being, we apparently find traces of it already in the latest products of this second period. For the literature of this age, as well as that of the first or śāhāt period, shows itself on closer inspection to be the final result of a series of connected attempts, which had been preceded by a great number of similar texts. These were at first in every case orally preserved and it was only in the course of time that they were set down in writing. This is also true to a like extent of the phase of literature which, on the side of Brahmanism, directly follows that of the Védas, namely the Epic. The Indian epic was also in the olden times merely handed down from mouth to mouth, and hence its first beginnings have been lost. In the texts of the Brahmans, at the various occasions afforded by the ritual, we find mentioned works of an epic nature, which already existed in a definite form (they were divided into parvam), and dealt with mythic occurrences relating to men, demigods, and gods. Again, in the Epic as we have it now, there lie embedded narratives, in both prose and verse, which we can look upon as fragments of older texts. Their antiquity is proved by the fact that the subject matter often refers to the resistance which the members of the royal caste offered to the growing preponderance of the Brahmansical hierarchy; but unfortunately these are fragments and nothing more. It has even been conjectured that the existing contents of the Mahābhārata in no way conform to those of the poem in its original form, — that the victors in the present recension were not the primitive victors, — but that there has been a secondary recasting of the whole work in favour of the former, by which the roles have been interchanged. This recasting must of course have been done in a very thorough fashion, if it was done at all. The theory is that the original saga described the war between the Kurus and the Panchālas, the latter being aided and represented by the Pāṇḍavas, a tribe with which they had marriage connexions. By these last, more over, we should have to understand a wild mountain people of northern India which ruled in Hindostān about the time of Buddha. During the sovereignty of these Pāṇḍavas the epic would have been changed into a poem in their praise (see Indische Studien, ii. 402 and ff.). Simultaneously with this, there would also have occurred the transformation of the Vedic into the Epic Olympus, in which the chief deities are Śiva and Viṣṇu, in such a manner that the person of the latter came most prominently forward, having in some way still unknown to us superseded the ancient Indra. This supersession was assisted by Viṣṇu's identification with Arjuna, an additional name of Indra, and with a human hero peculiar to the west of India entitled Kṛishṇa to whom we have already referred.

We have, moreover, chronological touch with the invasion of Alexander for the time of the epic, just as we have it for that of Buddhism. We have seen that in the edicts of Piyadasi the names of Greek Kings of the time of the Diadochi are distinctly mentioned. In the same way in the Mahābhārata we find the heroes of the poem in close and friendly connexion with certain Yavana kings, who are not, it is true, referred to directly by Greek names, but who nevertheless bear appellations, which seem to stand in some relationship to them. Compare 'Bhadadatta' and 'Apolloides,' 'Dattāmura' and 'Demetrius,' and others. Now, as they are mentioned as ruling in the very localities in the north-west of India which were under the sway of the Diadochi, there can be little doubt that the compilers of the epic knew these princes as their own contemporaries and hence brought

33 The Mahābhārata, in its existing Kṛishṇa-Viṣṇu-wite recension, probably belongs to the first centuries of our era. At least, a work of this name, and of similar extent (100,000 verses, — it originally consisted of only 8,800), is already mentioned in an inscription of the second half of the fifth century. See Bühl, Sitz. Ber. Berl. Akad. 1897, p. 506 note.

34 The epic itself tells us that it originally consisted of only 8,800 verses. The contents of the existing version extend to 100,000 verses and are, as we have just seen, vouched for by an inscription of the 5th century.
them into connexion with their epic heroes. Nay more, it is possible that under the name of the Yavana king Kasrumam, we may perhaps find concealed the name of the Roman Caesar.

The reference made by Megasthenes, who resided for long in Pataliputra in the character of a Grecian ambassador, to the Indian Hercules and his daughter Pandain, can be best explained as a misunderstanding of the epic stories of Krsnaha and of Draupadi, the spouse of the Pandavas. If we add to this the statement of the Periplus that in his time the southern point of India (Cape Comorin) was known as Komara, evidently because there was there a temple of Kuma, the wife of Siva, we have a tolerably secure date for the oldest phase of the epic deities. From this point, both backwards as well as forwards down to the present day, we can trace, stage by stage, the growth of the later divinities, each developing from its preceding form.

Thenceforward, the worship of Siva and the worship of Vishnu have remained the leading forms of religion in India, although much that is foreign has been added to them, partly amalgamating itself with them, and partly remaining as unaltered accretions.

We have seen that the figure of Siva is derived from those of the ancient fire- and storm-gods, and for this reason his worship from the first has borne the twofold character of an especial sacrificial holiness as well as of terror. In the same way there has since been added to it whatever in any way corresponds to or can be connected with either of these two characteristics. On the other hand, the worship of his spouse, Ambikā, who was originally the sister of Rudra, has mainly developed in the direction of the terrible.

Moreover, in a fashion as yet wholly inexplicable, phallic worship has also been connected with the cultus of Siva, and has attained enormous dimensions. According to the Greek accounts of an Indian embassy to the court of the Emperor Heliogabalus, we learn that at the commencement of the third century A.D. honour was paid to an androgynous form of the god. This is the more remarkable, as in contrast with it there also runs a strong ascetic thread through the legends relating to Siva (compare Kālidāsa in the prologue to one of his dramas), which gives the worship of this god a distinct ascendency over the lascivious, sensual, character of the cultus of Vishnu.

Among the oldest and most important of the beings that surround Siva is 'the Lord of Troops,' Gana-pati or Gaṇēśa, a name which was originally borne by Rudra (Siva) himself, and which refers to the 'howling troops' of his companions, the Winds. In later times he was promoted to an independent personality, as lord of the troops of pious devotees, who glorify Siva as they sing and dance before him at the evening temple-service. He has finally developed into the god of learning, and, as a symbol of his wisdom, has been endowed with the head of an elephant.

At his side, retaining the original character of the raging storm or of the devastating fire, stands Skanda, the War-god, in whose name we may perhaps recognize a reflex of the name of Alexander the Great, who burst into India like a veritable god of war. The word means literally 'springing,' 'leaping,'

---

28 So also in the name of the King 'Jalanias,' who according to the Kashmr chronicle fought with the Yavanae, it is possible that there lies hidden a corruption of the name of the Yavana king 'Seleucus.'
29 So, long ago, Lassen.
30 Priapio genius (kumbhāguna, kumbhādunaka) are mentioned by the Buddhists, and in the Atharva-saṃhitā. They probably belong to the lower strata of the people. They have been combined with the śivaśivas who are twice referred to in the Rāja-saṃhitā. Is it possible that the word gahaka as a name of the yaksas, the guardians of the subterranean mineral treasures of the god of wealth (i.e., of the special companion of Siva), is to be connected, not with gahā, calamity, but with gahā, sandals?
31 Thus translated in German verse:—
   'Der da, obwohl ein Leib mit seiner Gattin,
   Hoh eiber sinnenträbten-Bäsren stehet.'
32 The word gana, a troop, finally acquired the additional meaning of 'one who belongs to these troops.'
33 We know that the shortening of the name of Alexander to Skander, which is now customary in the East (as if the first two syllables Ale were considered to be the Arabic article al), was already current in the time of Alexander himself, from the fact that when his soldiers reached the Chandrabhāga, a tributary of the Indus, they mutinied, and refused to cross it. They took the name as 'Sandarphagos,' 'Alexander-devouring,' and saw therein a bad omen. Alexander had to retrace his steps from here.
it is the name of a childish illness, and could scarcely without some special reason become adopted as the name of the deity of battles. He passes as a son of Siva, that is of fire (probably the fire of war), a fact which is explained by an obscene legend (a class of stories in which India is by no means wanting).

The God of Love, who, too, is mixed up in legend, also shows traces of what is possibly Hellenistic influence. It is true that, with his 'bow and arrow' he is already a popular form in the later Vedic period, but in still more recent times he presents conceptions which strongly remind us of the Greek Eros. These conceptions have either been borrowed by the Greeks from the Indians, which is difficult to believe, or the reverse: it is hardly imaginable that both nations should have independently developed such peculiar conceptions of the god. In India his banner is a fish, makara, just as Eros has a dolphin. Thus, he appears in a sculpture in an Orissa temple of the 7th century A.D. as a half-grown boy, squatting by a dancing girl who supports herself with the right hand on a fish's tail, exactly like Aphrodite with Eros and the dolphin. We have the evidence of the author of the Periplo to tell us that 'pretty girls' were sent as articles of merchandise from Alexandria to India, and it is easily conceivable that these, with their midiets, brought with them also the deities whom they served.

Siva's spouse, who is originally represented as starting back in horror from the sight of blood, has in later times become a divinity who has to be appeased with human sacrifices.

Time was when Sivism and Vishnuism fought hard with each other, but the struggle against Buddhism, and, later, against Islam, has welded the two parties into one: only now and then does the old quarrel burst into flame at the present day. Common to both is the absolute abandonment of self to the deity selected for adoration,14 whose favour, together with the complete expiation of all sins, the worshipper secures by austerities of every kind, under certain circumstances extending even to suicide by casting oneself under the wheels of the cars bearing the image of the god while it is being carried about in solemn procession. These are, however, but rare occurrences. In general, so corrupt has the conception of the godhead become, that the mere recitation42 of a short formula of belief or of a string of names applied to the deity which is the object of worship, is considered to be sufficient, without further trouble, for gaining his favour, for the expiation of every sin (even to the murder of one's parents), and for securing eternal happiness.

It is certainly astonishing how, with a general forgiveness of sins so easily earned, a moral life can still exist among the Hindus. In the end, human nature has triumphed over the fictions of a wild imagination, and these are only the leading strings with which priests know so well how to guide the faithful, and above all the sinners. **Nowhere is the power of the priests so strongly and so deeply rooted as in India.** The spiritual leaders of the various sects exercise the most absolute authority among their respective followers, and the privileges which they enjoy are, in part, almost incredible.15 They depend merely on the consent of their adherents. No temporal power extends itself in protection over them. Anyone could, if he had the strength to do so, bid defiance to their ban. But nobody attempts it. The whole nation is so deeply sunk in these ideas, and so strongly forged are the iron chains which bind it, that every attempt to arouse it, whether made by

---

14 In this complete abandonment of self (bhakti) towards the chosen god, which is common to the Indian sects, the influence of Christianity has been suspected by scholars so early as H. H. Wilson. It must be admitted that it forms a violent contrast to the low position occupied by the gods at the close of the Vedic period and the commencement of Buddhism. Nearly connected with this is the doctrine of predestination of the elect, according to which those only can attain to a knowledge of the Atman (i.e., God) whom He has Himself elected; while, according to the other more usual doctrine, everyone who knows God, attains by that very fact to unity with Him.

15 The Buddhists have carried this to the furthest extreme in their 'prayer-wheels,' with the aid of which they turn round and round strips of paper inscribed with the name of the god or with a sentence addressed to him, an act which is considered as efficacious as saying a prayer.

16 The dedication by adherents and pupils of those who have reduced any particular doctrine to a clear issue, is really, from the point of view of a pure recognition of the Deity, a kind of blasphemy: but the sentiment lies deeply rooted in humanity, as a tribute of grateful recognition of the spiritual elevation of prophets and of teachers, and as an humble admission of one's own weakness and imperfections. See Sitzungsberichte der Berliner Ak. d. Wissensch. 1867, p. 603.
great spiritual reformers, of whom indeed India has had no lack, or by external pressure, has been pre-destined to failure. The latter indeed has only welded the bonds more securely, and even the reformers, or at least their successors, have soon discovered that it is more convenient to submit themselves to the incense of adoration, than to raise the stolid masses to a higher level.

So, too, the foreign religions which, each in its turn, sought and found entrance into India, have failed to cause any material alterations in this picture. They either found themselves confined to a small circle, or else they too as they became more widely extended fell in course of time under the same curse — partly of the creations of a too luxuriant imagination, and partly of a pleasant indulgence which allowed itself to be roused only occasionally to some altogether special height of exaltation.

Vishnuism has found its official expression more particularly in the two great epics, — the Mahabharata and the Ramayana, — and in the Puranas ; while Sivism has done so partly in the same works, and partly in the Tantras, a series of texts about which very little is yet known. These Tantra-texts, however, appear to stand in a peculiarly close relationship to Northern Buddhism, although, on the other hand, it is just this Sivism which seems to have been the energetic opponent of Buddhism, and to have effected its expulsion from India. The practice, also, of magic and witchcraft which flourishes to so great an extent in India stands in a remarkably near connexion with these Tantras.

Finally, Sivism appears to have been supported for a period more by the goodwill of the princes than by that of the Brâhmaṇas. A great part of the profane literature, especially the dramatic poetry, belongs to it, or, at least, to men, like Kâlidâsa, whose names show that they are its followers.

The real foundations of Vishnuism are still in darkness. In the so-called Trimurti, or divine Trinity, Vishnu represents the preserving power of God; Siva, the destroying; and Brahma, the creating: but in the practical Vishnuism, Vishnu combines in himself several very heterogeneous ingredients. In the first place, he is a Deity of the older part of the Vedas. Almost the only fact related concerning him therein is his striding over the three worlds in three steps, which is probably a metaphor for the instantaneous illumination of the whole universe by the beams of the rising sun. The later myth, which, however, occurs so early as in the texts of the Brâhmaṇas, speaks of Vishnu on this occasion as a dwarf when he performed the miracle. Again, the huge bird, Suparna, who destroys the snakes (i.e., the darkness), and who in later times is known as Vishnu's steed, Garuḍa, is probably also to be understood as a symbol of the sun; so also, the discus, which is esteemed as Vishnu's peculiar emblem. May we also explain Vishnu's name, Hari, which the Avesta knows as the name of a Demon, Zairi, as meaning 'the Golden,' and connect it with the solar luminary? This word appears in the Veda in the closest connexion with Indra, and would hence lead us to the second stage of the foundation which lies below the Vishnuism of the epic poems, namely to Indra (Arjuna) himself and to the Kṛishna who became identified with him in some manner which we must confess has not yet been explained. To this, in the third place, is to be added what may be called the speculative matter, which, in agreement with the theory of the Trimurti, points him out as the bearer of the universe. First, his identification with the Purusha Nāraṇya, or the Spirit moving on the face of the waters; — his winter repose on Śeṣa, the great world-serpent; — and, above all his ten acūtāras, literally 'descents,' i.e., incarnations of the Deity in the bodies of human beings.

44 E.g., Rāmaṇuja, Nānak, Chaitanya, and others, down to the most modern times.
45 These texts deal more specially with the female half of Siva, his spouse, who under the names of Durgā, Bhavānī, Kālī, and so forth, is adored as his śakti, or energetic power.
46 It is true that Indra himself does not bear this name; but not only are his hair, his beard, his jaws (? the visor of his helmet), described as hari, but even his general appearance (vārasa), his deeds (veta), and his race (śātim). This is certainly very remarkable, for in later times Indra's colour is said to be nīla, dark-blue, blue-black (compare śrīnīla as a name of the sapphire). This is, indeed, also the colour of Vishnu, and specially of Kṛishna, although it is exactly this name, Hari, which is particularly applied to them.
or even of lower animals, either to protect the world against the ill will of demons or for the moral renewal of mankind. Among these incarnations there stand in the foreground those of Rāma (7) and Kṛṣṇa (8); indeed these two figures have become the objects of such fervent sectarian adoration, that we may well assume the possibility of the influence of external elements.

In the personality of Rāma, it is probably Buddhist influence which we have to recognise. Indeed, Buddha himself appears as one of the last (the 9th) incarnations of Vishnu; and the final one, which is still to come,—that of Kalkin,—is easily connected with the Buddhist teachings regarding the Buddha Maitreya who is yet to be awaited in the future. Although the original conception of Rāma may have at base some sort of connexion with either nature-symbolism or the progress of civilisation, this does not preclude us from assuming that the Buddhist ideal of a prince, as he ought to be, influenced the development of Rāma’s personality. It is exactly by the adoption of this conception, and by its adaptation to mythical figures, which were at the time popular among the mass of the people, that the Brāhmaṇas succeeded in wrestling the leadership from the hands of the Buddhists. The cold atheism of the Buddhist doctrines could not permanently satisfy the needs of the human heart, and the folk returned again to their old sentiments, which, by the clever connivance of the Brāhmaṇas, were presented to them in new and more attractive forms. So far as the cult of Rāma was concerned, this is peculiarly the case with regard to the old Vedic figure of his spouse, Sītā, a mythical personification of the plough-furrow, who was appropriated for his worship in order to gain its acceptance among women.

For this it was important that a great poet, Vālmiki, took these popular materials and wrought them to expression in his Rāmāyaṇa, perhaps under the influence of the Homeric sagas, but, if so, certainly in an entirely independent manner. After him, and more especially since the time of Rāmacandra in the 11th century, the worship of Rāma has been secure, and at the present date forms one of the most popular religions in India.

Exactly similar to that of Rāma has been the fate of Kṛṣṇa-worship, but, to all appearance, it is the influence of Christianity which has acted on the special development of this religion.

Owing to the great number of persons who bear this name (‘the black’), it is rather difficult to determine which of them is to be considered as the original object of the cult. His intimate relationship in the Epic with its chief hero Arjuna (‘the white’) leads us to suspect the existence of some

---

47 The following are the ten incarnations of Vishnu:
1. As a Bear he visited the three worlds in three steps, and thus secured its possession to the Gods.
2. As a Vase he led the ark of Manu, the Indian Noah, during the great flood over the earth.
3. As a Tortoise he supports the universe.
4. As a Deer he rescued the earth from the bottom of the sea.
5. As Pariksa Rāma he destroyed the warrior caste which was hostile to the Brāhmaṇas. (After their removal, the Brāhmaṇas were better able to come to terms with the princes and kings of the noble families of the aborigines.)
6. As the Man-lion he destroyed the evil demon Hīranyakasipu, ‘Gold-throne,’ who threatened the Gods.
7. As Rāma he vanquished the Demon-king Rāvana of Lanka (Ceylon), who either represents the aboriginal civilisation hostile to the Aryans or (9) the Buddhism taken to Ceylon by Prince Mahāendra.
8. As Kṛṣṇa he vanquished the Demon-Prince Kṛṣṇa (his maternal uncle).
9. As Buddha he accomplished the destruction of all heretics and wicked people.
10. As Kalkin he will appear at the end of the world, mounted on a white horse, as the Messiah of the future.

The first four of these incarnations rest on Vedic legends. The fifth and following are connected with historical occurrences. (Regarding No. 6, see Indische Studien, ix. 85.) That a god should take the form of an animal or of a man in order to carry out some definite design, is a circumstance which probably reappears in almost every myth or religion; but that he should do it for the salvation of the world, whether of the earth or of mankind, is a conception peculiar to the Hindu cultus-system and to Christianity. Which of the two has borrowed the idea from the other may still be a matter for discussion, but under any circumstances it is quite certain that its full systematisation in India is a secondary process.

48 Compare here the similar teaching of the Jains, who, like the Brāhmaṇa, name their future Messiah Kalkin, and make him ride on a white horse. So also, the Christian legends concerning the Paraclete.

49 This name occurs among the teachers named in the śūtra-work attached to the black Yajur-vēda. After him also the patronymic of the reputed author of the Mahābhārata, Vyāsa Pāṇḍarāya, occurs in the list of teachers of the White Yajur-vēda. Thus, both epics are connected with the close of the Vedic period.
mythic foundation, the more so as Arjuna appears in the Yajur-vēda as a by-name of Indra, ‘Day and night,’ which are occasionally referred to in the Vēda as ‘the black day,’ ahār krishṇam, and ‘the white day,’ ahār arjumān, at once suggest themselves to us, but this identification does not fit in other particulars. So also the explanation of the name Gōvinda by the Vedic legend of the discovery of the stolen herds of cows, representing either the light or the waters, gives us little help.

At the same time, this last suggestion does not seem to be altogether without importance, as it points to a relationship with Indra, who is also called Gōvid in the Vēda. Krīṣṇa’s connexion with cattle and cowherds must most probably contain an ancient allegorical kernel of myth, as it reaches back into olden time. The Buddhist legends bring the names Gōpā, Yaśodhārā, Yaśodhā, Nandā and Rādhā, Kamākā and Kubjikā, which appear so prominently in the Legends about Krīṣṇa, into connexion with Buddha also, and this is doubtless of extreme importance for proving the antiquity both of these names and of their allegorical significance. But, on the other hand, there must also have been a certain warlike personality of the name of Krīṣṇa, of the lineage of the Yādavas and also known under the name of Vāsudeva, who was remembered from of yore as a brave and at the same time crafty and cunning hero, celebrated in many sages, and who hence achieved the honour of being enrolled as a kind of demigod among the founders of a valiant tribe.

Under the name of Krīṣṇa Dēvākṛpatra, ‘the son of the female gambler,’ there appears in an old Upānisljad (the Chīhū ṛgīy) an inquisitive disciple, the scion of a warlike tribe. At the time of the composition of the older portions of the Mahābhārata, and when the Jaina legends were in course of formation (see above), this semi-divinity seems to have enjoyed especial honour. It is evidently on him that Megasthenes bases his account of the Indian Hercules.

Now, when Christianity, by whatever way it arrived (see below), became known to the Indians, the similarity of the names of Krīṣṇa (which in southern India is pronounced Kraṭhtna, with a r) and of Christ seems to have given rise to the identification of the two personalities, and to have caused the transfer of the stories regarding our Lord, the birth of the Babe in the manger, and so forth, to Krīṣṇa, whose mother’s name, Dēvāki, it may be remarked, can also be interpreted as meaning ‘the Divine One.’ It thus happened that, owing to the sensuous phantasy of the Indians, the legends of the birth of Christ among the shepherds and of his childhood spent amidst them have given rise to the most passionate, the most licentious, descriptions of the love adventures of Krīṣṇa among the herd-maidens, — an alteration which is deeply rooted in their (the Indians’) character. In consequence of this misunderstanding and of these misinterpretations, the introduction of the conception of Christ as the companion of the shepherds has done immense harm to Indian morality. As a matter of fact, the cult of Krīṣṇa with its extravagant imaginations forms a striking contrast to the rigorous asceticism which forms the keynote of that of Śiva. On the other hand, it has developed among its followers a gentleness of disposition, a believing faith, which has bred within their hearts a habit of the most sincere resignation to the divine will.

The directions for the ritual of the festival in honour of Krīṣṇa’s birth show their foreign origin by the sharp contrast in which they stand to the legendary accounts of the god’s nativity. According to the latter his mother gives away her child immediately after his birth, in order to save him from the attempts of his uncle Kaṁsa to seize him, but the ritual makes her lie peacefully and happily in her ‘lying-in room’ in the cowherd’s house, holding the suckling child to her bosom, — like the ‘Madonna Lactans,’ — with herdmen and herdmaids round her glorifying her and singing her praises, an ox and an ass by her side, and the redemption-bringing star in the heaven.

52 See my review of Senart’s very thorough presentation of these cycles of myths in Indische Streifen, 1875, iii., 428.
53 In Bengal it is even stronger. Krīṣṇa is there pronounced Kraṭhto. — Trans.
54 Zeitsschrift der deutschen morgenländischen Gesellschaft, 1882, vii. 97.
55 This, after all, reminds us of Herod’s slaughter of the innocents.
56 See my treatise on Krīṣṇa’s Birth-Festival, 1886, pp. 383, 399. Cf. ante, Vol. III., 1874, pp. 21, 45, and VI. 1577, pp. 151, 231, 349. The passage referred to is to be found in Vol. III., p. 47.
The observance of the feast of the birth of Christ in connexion with that of His baptism is traceable in Egypt from the second half of the fourth century up to the year 431 A.D.; and it is natural to assume that it was about this time that the transfer of this kind of festival to India took place, and, with it, the other connected materials which point to Christian legends and conceptions in the story of Krishna. Two ways lay open for this communication. In the first place Indian travellers, merchants, and the like, may have come to Alexandria. There they may have learnt about Christianity, and on their return home may have transferred its legends to their own Krishna, whom they already worshipped in India as a demigod. In the second place Christian missionaries may have gone to India, and have found there among the Krishna worshippers a good soil for the propagation of their doctrines. Traces of Christian teaching have even been sought by some in the Bhagavad-gītā. In the twelfth century the Patriarch of Antioch still appointed the Katholikos for Romogyri (Rāmagiri) in the Deccan, and when the Portuguese discovered India they found Syrian Christians on the Malabar Coast, whom they tried to convert by force.

The period during which the Grecian successors of Alexander, and, after them, the Indo-Scythians, reigned in North-Western India had not only procured admission for Hellenic, and, in later times, Christian, conceptions, but had also directed towards India the followers of the Iranian cult of Mithra, and, curiously enough, had there introduced their sun-worship, also in connexion with the worship of Krishna. The name of their priests, Maga, was transferred in later times also to the adherents of the teaching of Zarathustra, when, in order to escape Islamic persecution, they similarly settled in western India. These latter, coming in great numbers, founded independent communities and colonies (not without also attracting to themselves some Brahmical Pāṇḍits), and still flourish vigorously under the name of ‘Parses’; while, on the other hand, the Magas seem to have visited the country as missionaries only, and were partly adopted, probably together with some members of the other stratum of the Iranian immigrants, into the ranks of the Brahmāṇṇas themselves under the name of ‘Sākdvipya-Brahmaṇṇa.’

While the influences of Hellenic, Christian, and Iranian culture and religious conceptions were essentially only of internal importance, and have as a rule concealed their traces as much as possible, so that it is often rather difficult to recognize them beneath the overgrowth of Indian individuality, Islam, which forced its entrance with all the prestige of violent conquest, has been accompanied by

---

52 Op. cit. 237, 238. Anto. III. 47. 54 The naming of the child forms an integral part of the festival in India also.
53 The Mahābhārata contains a detailed account of the voyage of an Indian sage to the ‘White Island’ or ‘Island of the White’ (Vedōdēpa), where he learned about the monotheistic adoration of Krishna (see Indische Studien, i. 400, ii. 400; others had done so before him).
54 Galen in Hippocr. Epidem. iii. Tom. xvii. par. l. p. 483, ed. Kuhn (I am indebted to Harman Diel for this quotation) tells us of an Indian physician who lived and studied in Alexandria. It would be interesting if the new papyri found in Egypt were also to contribute something on this point. It is probable that we may expect many new discoveries from this source regarding the first centuries after Christ and the times immediately preceding.
55 Only the other day the newspapers circulated the intelligence that 15,000 Christians of the vicinity of Bombay, probably descendants of those who were expelled from Goa by the Portuguese, had dropped the connexion they had hitherto held with Antioch, and had turned to Russian, and had petitioned for a pope to be sent to them. See Protestant, 1899, p. 32.
56 When adopting such materials the Indians have generally shown great independence, and have so thoroughly disguised them under Indian garments that they have become almost unrecognizable. Two examples belonging to the most modern times are classic examples of this. At the eighth Oriental Congress held at Stockholm in the year 1899, the late regretted H. H. Dürra of Banda read an account of a newly discovered Sanskrit translation of Euclid's Elements of Geometry in fifteen books, which, according to his description, actually contained also the lost books. But all that remained of the original was the order of the contents and the substance of the examples. All the rest was Indian. About seven years ago I received a new Sanskrit drama from Southern India, the author of which expressly described it as founded on a Shakespearian play (it was the Midsummer Night's Dream). Without this distinct statement it would have been a difficult task to discover this origin. The whole dress of the piece is altogether Indian. If, then, this occurred in a case in which the author prides himself and lays emphasis on the foreign origin of his work (he evidently wished to give it a certain air of distinction, and to earn some reward from the English Government in recognition of the fact), how easily can we understand to what an extent this was the custom in former times when, as far from the same motives existing, there was every inducement to conceal the non-indigenous nature of the source.
great external success. At the present moment it numbers more than thirty millions of natives of India amongst its followers. It has even been accepted by the Brahmans (and given the lowest place) in an official list of the Indian sciences; the thirty-two vidyās, under the name of the yādanāvatāmatā. It cannot be denied that, on the one hand, it has succeeded in increasing the physical powers of its adherents, — mainly owing to its permitting the consumption of flesh, — and that, on the other hand, by freeing them from the superstitions of idolatry of the Hindūs, and from the bonds of the caste system, it is well adapted to raise them to a spiritually higher level. It has not, however, been able to resist the enervating influence of the Indian climate, or the custom of adorning, or, rather, defiling, holy personages, which is nowadays well nigh universal in that country.

Exactly the same fate also threatens a modern Indian sect, which, while it is the direct result of the Monotheism of Islam, has in the course of time turned its followers into the most active opponents of that faith, and still occupies a prominent position in this respect. I mean the sect of the Sikhs founded by Nānak at the end of the 15th century. They furnish the bravest soldiers of the Indian army, but are equally in danger of falling into that slavish submission to their spiritual preceptors, or gurus, which is now universal in India.

The only Indian sect which has kept itself free from this worship of preceptors as if they were divine creatures is one which arose in the present century, — that of the Brahmans. But it appears to be now dying out, and for that very reason. Its claim, after all, to represent a system which is a pure product of the Indian soil, is unfounded. In reality it is imbued with the genius of Christianity; but it has treated this throughout in such an independent and unrestrained spirit that it has kept itself free from the doctine accretions which centuries have spread over the teaching of Christ, and deserves to be pointed out as a good expression, though concealed under a veil of Pantheism, of Christian principles. If, as appears to be almost certain, its days are numbered, it would be a thing to be lamented in the highest degree. But we see now-a-days even among ourselves, in Europe and America, how people are turning more and more to the cult of ‘The Master of Power,’ of ‘The Master of Power,’ till they have actually developed a system of ‘Master-morality,’ and how the Rights of the Individual are insisted upon in more and more exaggerated language as a necessary result of the opposition to the fever for social equality. Thus, we need not be surprised if in India, where from ancient times the deification of the Man who has out-topped the common herd has been the rule, we find this principle, so destructive of all spiritual freedom, still victorious over it.

For India we can hope no salvation so long as, on the one hand, it has not absolutely broken with this traditional habit, and, on the other, the physical power of its people is not given new life and strengthened by the readoption of flesh as food. In regard to the latter, the Musalmans and the Sikhs have already made good progress; but as yet their example has not borne much fruit.

THE SATRUNKAYA MĀḤĀṬMYAM.

(A contribution to the history of the Jainas by Professor Albert Weber.)

EDITED BY JAMES BURGESS, LL.D.

(Continued from p. 257.)

SARGA OF CHAPTER X. (386 vV.).

Sātrasatrunjnayamāḥāṭmyamantarbhāṣa Raivataćchalāmāḥāṭmyam Bhāmesa-Harivāna-Pāṇḍava-vopatti-Kṛṣṇa-Nemiśajavanarpana nāmu. — describes the history of Bhāmesa of the Harivāna, the origin of the Pāṇḍavas, and the birth of Kṛṣṇa and Nemiśa (the 22nd Jina).

Sections x. to xii. describe the history of the Pāṇḍavas in its main features connected with that of Kṛṣṇa, as this again is with that of Nemiśa, the Jina worshipped on Raivata or Girnar. These sargas are therefore called by the separate title of Raivataćchalāmāḥāṭmyam, because the holy places of that mountain (i. 345-52) are glorified in them.
["Salutation to Arha! May he protect us who knows and sees all, who is easy to be obtained, and removes the troubles of all men, who is honoured by all the gods, possessed of all qualities, witnessing actions like the sun, is infinite," etc.]

In the introduction Indra respectfully saluting Mahavira says,—"Lord! for our instruction thou hast related the history of Satrunjaya, referring to the principal summits, whereby I have been purified. But this mountain has 108 peaks (i. 54), among which twenty-one are principal summits (i. 352-54), which thou hast prominently mentioned; I would now hear the account of the most famous one for the purification of all creatures (2-5).

Accordingly the lord of the trine world begins with the description of the fifth summit of the Siddhâdri, namely Raivata (7-8). [It yields the fifth knowledge (pañcama jñâna), i.e., salvation to worshippers. Gifts and offerings made here from the heart are productive of benefits in this next world as well as in the next. The merit acquired here causes the accumulation of the sins incurred in several transmigrations in this world to dissolve as the heat of the sun melts butter. Here sages who eat not but pass their days in devotion, as well as the gods, daily worship Nemi. Here Apsaras, numerous divine beings—Gandharvas, Siddhas, Vidyâdharas, etc., always worship the Jina Nemi. Beasts mutually hostile, as cats and mice, lions and elephants, serpents and peacocks, live in harmony on this mountain. All the planets, daily appearing to rise and set, move round Nemi to worship him. All the seasons are to be seen here at all times. The tanks, among which Gajendrapada is chief, are filled with nectar by the gods. This Raivata, when remembered, gives happiness; when seen, removes misery; and when touched yields what is desired. Of such a mountain, O Indra, hear the story (41).

The Indra of former days, accompanied by the gods, made a pilgrimage to Satrunjaya on the 15th of Chitra Sudra, and came to the Raivata mountain to praise Nemi on the 15th of Vaisâkha Sudra. After bathing the image with water from the holy tanks, rivers, and lakes, and having worshipped it he came out of the temple; and as he came out a deva approaching him said there was a Muni on the mountain sitting on the jñânaśilâ (stone or rock of knowledge), honoured by men, sages and gods, and engaged in performing severe austerities. Hearing this Indra came to the Jñânaśilâ and saluting the Muni, sat down before him; then the gods with him asked who this Muni was and why he was practising such austerity. Indra, by meditation, knowing his history, answered them (49).]

As an argument for its expiatory power, he relates the story of Bhimasena, the spoilt son of king Vajrasena of Svâvasti and of Subhadrâ (50-227). The contents are interesting in many respects.

Bhimasena went so far in his wickedness as to kill his own father, because, in consequence of a complaint of the citizens, he had been punished by him. After his parricide the inhabitants angrily expelled him and installed his younger brother [Jayasena] as king (64). The prince roamed about and arrived (70) in the town of Prithvipura in Magadha, where, after many thefts, he at length found service with a merchant Ísvaradatta (77) with whom he went to sea. After a month the ship suddenly grounded during the night upon coral banks, and all endeavours to float it again failed. The provisions and water became exhausted by degrees, and the merchant was just preparing to meet his death in the waves, when suddenly a parrot arrived, informing them in a human voice of his being the tutelary divinity of the mountain that was in sight. There was still a means of escape left; one of them must sacrifice his life by swimming to the mountain and there scaring the Bhûrânda-birds. By the current of air

46 Very considerable additions to Prof. Weber's analysis have been made to this sarga,—J. B.

47 The Bhûrândas are called khîlpakâhîs. Does this possibly mean "desert birds"? We find them again in the Mahâbhârata, as flying swiftly (?), xii. 3357, 3519, and also as being endowed with a human face, xii. 6356 (comp. Ind. Stu. Ed. III. S. 149). In the Pancatantra (p. 263, 18 ff.) a bhûrânda appears as a sea bird with a double head. [Comp. the birds in the Yak islands of the Arab. Nights.—J. B.]
produced by the flapping of their wings when flying, the ship would float (89). In consequence of Īśvaradatta's appeal to his men, Bhīmasena offers for 100 dināra to undertake the hazardous feat. It succeeds, the ship floats and of course Bhīmasena is left behind on the mountain. The helpful parrot, however, points out a remedy for him also: he is to throw himself into the sea, where a fish will swallow him and swim to the shore. Should the fish not be inclined to vomit the passenger, he is to thrust an herb given him by the parrot into its throat, when it would open wide, and he would walk out upon the shore. It happened as the bird had predicted, and in this way Bhīmasena reached the island of Ceylon (Sāṅkhala tapam, 97). After wandering about for a while and quenching his thirst from water-holding trees, he met a Brāhmaṇa mendicant (tīrāṇādi, 99) who invited him to accompany him to a mine of precious stones (raumakāndu) upon this dāya Sāṅkala (112) where he promised him rich treasures.

[Bhīmasena thinking one in a Muni's dress must be a good man went with him.] On the road he 100 dināra were spent on travelling expenses. When they reached the mine, the Muni, on a new-moon day (vādyā 14th) let Bhīmasena down into it by means of a cable (v. 115b, 116a are wanting in the MS.), drew up the precious stones the latter collected, and cutting the cable, abandoned him to the guardian dea of the mine, and ran away (118). Hereupon Bhīmasena wandered about in the pit in great distress. He met a very lean man, was addressed by him in a friendly way, and asked whether he also, like himself, had fallen a prey to his greed for jewels, through the instrumentality of the wicked penitent. When Bhīmasena had replied in the affirmative to these questions, and had asked him how he might again get out, — he was told that the goddesses of heaven would come next morning at dawn to worship Ratnacakṣa, the god of the mine, with song and dance and other means, and when the guardian's attention would be wholly absorbed with the songs he might use the opportunity to creep out stealthily with the servants of the goddesses. Next morning all this happened, and in a few days Bhīmasena arrived at Kāhitaṃḍana the capital of Siṅhala (129). There he entered the service of a merchant, but as he could not leave off his old propensity for thieving, he was soon caught and led to the post. There Īśvaradatta recognised him as his deliverer, obtained his liberation and took him on board his ship, which soon afterwards arrived at Prithvipura (134). On landing Bhīmasena met and related his adventures to a foreigner who solaced him, and together they started on a visit to the Rohana mountain. On their way they soon came to a hermitage and bowed themselves to the old Muni Jāṭila by name. Exactly at the same moment a disciple of the latter, called Jāngala, descended from the air, saluted his teacher, and replied to his question that he was come from visiting Sarusākara, where he had, with the Jaina worshippers, assisted at the ceremonial on the Satrjunaya and Ujjia yanta mountains (140), the sanctuaries on which were glorious beyond all description. He was particularly rejoiced by the glory of Ujjayantādri (142), by the worship of which even a mean person might attain all felicity and exaltation, as Aśokacakṣa had done (143). This Aśokacakṣa was a poor serving man of the Kahariya caste in the town of Champā. Being tired of his house affairs he wandered about, and in one of his rambles saw some Jaina penitents and asked them how he might remedy his misfortunes; on their reply that in this world man was tossed about by the force of karmā (i.e., former works: entirely the Buddhist idea and name for destiny), and that he could not liberate himself from this incarceration in karmā except by devout adoration of Raivatādri (145). He started for it, and after a penance of several days there the goddess Ambā (the īḍānādevī of Nemi, worshipped on Raivata) gave him a touchstone (spākopaṇe) the contact of which changed iron into gold (150). Returning home, he engaged servants, soon gained a kingdom, and enjoyed all pleasures. But in course of time he became

---

48 A grotesque appropriation of 'Jonah and the fish,' which is met with twice elsewhere (see Ind. Antiqu., B. III.) in Indian myths, only as late, however, as the twelfth century, namely in Bājjarāntiṣṭi, iv. 503, and Kathāsīrīṣa, xxv. 47, or Tawney's transl., Vol. I. p. 207.

49 Doubtless a certain animosity must have led to the choice of this name for a man who was a deceiver as the sequence shows.
tired of all this which he had obtained by the grace of Ambikā (153), for forgetting whom he repented, and went to Satrunjaya with his people. After worshipping the Jina there, he went again to Raivata (155), where he piously adorned and worshipped the statue of Nemíṣa and of Ambā, jagatām ambā; and as he had now already reigned 300 years by the grace of the god and of Ambikā, he determined henceforth to betake himself to the feet of Śrī Nemi, and to leave the kingdom to his son. He sent him and his people back to Champā; and then took consecration (ākhād) and by pure devotion he soon obtained salvation (ātman). 50

[In concluding, Jàngala said he saw all this with his own eyes and therefore regarded this mountain as a holy place (mahātirtha) which might give to the worshippers, though sinful, every sort of wealth in this world and a best place in the world to come.]

By this story of Jàngala's all the penitents were greatly rejoiced, also the stranger as well as Bhlénaseno. Both of them, however, continued their pilgrimage to the Rohana (167-8) and watched there throughout the night in prayers to the divinity of the mountain; in the morning arriving at a cave, they struck in it (dug?) and obtained two jewels (rātra—169), and set out to sea. Once standing at night on deck, Bhlénaseno noticed the moon and taking his jewel in his hand compared its appearance with it, but lost it by dropping it into the water (171) [when he fainted and began weeping. Seeing this those on board the ship and the sailors came round him and using fans and water restored him to sense, when he told them of the loss of his jewel in the sea, and requested them to stop the ship to search for it]. His companion offered him his own jewel and conspired him saying that Raivata was also here still and there was no occasion for complaining (179). Taking consolation from the words of his friend, and both having crossed the sea they wandered along the shore towards Raivata, losing on the way the other gem and everything they had by thieves. Fatigued, without clothing or nourishment—but nevertheless resigned to their fate, they met a Muni on their journey, to whom they paid their respects and complained of their lot:

As without water a cloud, a body without life, 1
as a flower without fragrance, without a lotus a watertank II (185)
As without her brilliancy the Moon, as without voice the Sanskrit 1
noble birth without modesty, piety without science II
As without house a housewife, prudence without reserve 1
as the night without moonlight, and as a temple without image II
As love without youthful strength, as a leader without armies 1
as a race without a noble son, as riches without liberality II
As statute without compassion, oratory without truth 1
as the face without eye, so — without property is Man II (189).

[The Muni hearing this, felt pity for them and told them they had not acquired merit in their previous life (pūraṇa) and hence suffered misery. Birth in a noble family, good fortune, peculiar felicity, wealth, long life, fame, knowledge, a pleasing wife, horses, elephants, servants, command, and empire, — corporeal beings obtained only through their meritorious actions (dharma); but they should not suffer an untimely death, but visit the Raivata mountain which yields to its worshippers what they desire (190 f.). Then turning to Bhlénaseno he said that in his former life he had teased a Muni for 18 ghotikas (7 hours) and in consequence he had been so long in misery.]

50 Here evidently synonymous with nirvāna, comp. i. 6, 23; ii. 3, 383; vi. 599; in. 533, etc.
He now promises to him that the fortunate turn of his destiny was shortly impending; and he is yet to adorn the world with Jina temples, and none will exist equal to him in felicity (198). Thus comforted, the two pilgrims continue their journey to Raivata (199). Arriving there in course of time Bhimasesa found his younger brother Jayasena, in the Arhat temple there, who had gone on pilgrimage with his councillors, etc. (200), and who received him joyfully, immediately abdicating the dominion, which he had only held in pledge for him. His subjects also were rejoiced at his return; and now he ruled most excellently, spreading blessings and happiness around him [having erected Jina temples everywhere in memory of his parents whom he had foolishly killed], having appointed his brother to be Yuvarāja (crown-prince) and his faithful companion to be his treasurers (219).

[Once he happened to see in a garden a Vidyādhāra worshipping Jina, and learning from him — in answer to his question — that he had come thither from the Satrunjaya and Ujjayanta mountains, he remembered the obligations he was under to the Raivata and was sorry for his ingratitude.] He then surrendered the government to his brother Jayasena (223) and set out with a small following to Raivata as a hermit (227). [On his way he visited Satrunjaya where he erected a Jaina temple called Ashṭāṅkika, and thence came to Raivata and there worshipped the image of Nemi, attending to the fourfold duty of liberality, good nature, austerity, and faith; and being instructed by Jñānachandra Muni, he conducted himself religiously and became a Muni. At the conclusion of this account all the gods reverently worshipped Jina and went to their respective places.]

As Nemi, the Jina first established by Bharata upon Raivata, belongs to the Harivāhana, an account of the history of this race is attached (236-37).

Next follows a tale about king Sumukha in Kauśambi (239), who fell in love with Vanamālī, the wife of Virakuvinda (263). His minister Sumati, with the help of an ascetic sister (parivṛjukṣa) named Ātreyīkā, procured her for the king (270).

[Virakuvinda went mad, and wasseen one day by the pair in rage and pelted by the children. They then repented, but were both instantaneously killed by lightning. But in virtue of their mutual love, they were reborn in the town of Harivāhana and were called Hari and Harini and lived happily in union. Virakuvinda, after the death of the rāja and Vanamālī became quiet and giving himself to religious duties, died and was reborn in the Sandharmakalā as a god named Kīrvishikā (sinful). Remembering his former birth and seeing the rāja and Vanamālī reborn as a pair, in anger carried them to Champāpuri (300).]

The princes descending from Somyāśa (vi. 3) the son of Bāhubali and grandson of the prathamaśodāmin, Vrishabha, are called Somavahāya, and form the Lunar race. To them belongs Sreyāśa (the 11th Jina) (303-4). He first pointed out the duty of liberality by offering to Yagāḍāśa the juice of sugar-cane (śaṇa), whence he and his descendants were called Aikšavaku in the Avasarpani age. After him succeeded in order Sārvabhuma, Subhumā, Sugosha, Ghoshavardhana, Mahānandī, Suraṇaṇī, Sarvabhadrā, Sajbhakar, and other kings unnumbered, some of whom attained mukti and others svarga. The last king of this line was Chandrakṛttrī, who obtained svarga but left no heir. Then while his subjects were assembled to consider the government, the god Kīrvishikā appeared in the air and bid them not lament for the death of their king but accept Hari and Harini timeously brought by him as their king and queen, and supply them with liquor, flesh and fruit. So saying, and blessing them he disappeared.]

King Hari was then consecrated with ceremony in the temple of Sīvalaśāmin (the 10th Jina). From him descended the Harivāhana (312). He conquered the whole earth and married several kings' daughters.]

To him Harini bore Prīthvīpasi, who was followed by Mahāgiri, Himagiri, Vasugiri, Giri, Mitragiri and Suyasas. All these princes were rulers of the three divisions (trikhoṇḍa) of
the earth, zealous Jains, leaders of Saṅgha, some of whom obtained directly the nirvāṇa and the others at least swarga (318-19). Then as an appendix (prasañjita) "the history of the 20th Arhat, Suvarṇa" is related: he belonged to this Harivaṇa and was the son of the Magadha king Sumitra in Rājagrīha (320 ff.).

[Sumitra's queen was Pāḍmādevi, possessed of all inward and outward good qualities. She observed in the latter part of the night of the 15th of Śrāvaṇa the fourteen great dreams indicating the birth of a Jina, and perceived lord Prachetacca descend from the 10th Devaloka. She was delivered of a son Munisuvrata, on the 8th of Jyestha-vadaya in the Śrāvaṇa nakṣatra. His birth was celebrated by Indra and the gods as well as by his father Sumitra. This prince married Prabhāvati the daughter of king Prabhakara of Prthvipura, and after enjoying every kind of pleasure he had a son named Suvarṇa. Placing his son on the throne, Munisuvrata, along with other (1,000) kings, obtained dīkṣā on the 10th of Pālguṇa saṁśaya in Śrāvaṇa nakṣatra, and on the 10th of Pālguṇa-vadaya at Śrāvaṇa nakṣatra a temple was built of the lord Munisuvrata, which was celebrated by Indra and the gods. The lord then set out on foot to instruct the world, and arrived at Pratisthāna (Paithāna); there he discovered (by meditation) that a horse, who had been his friend in the previous life, was to be killed in the morning at an Arvamolla (horse sacrifice) to be performed in the town of Bhriguṣaka, and immediately started off, and on the way took rest for a moment at Siddhapura, where consequently a temple was erected at dawn by king Vajrabhir. Early in the morning the lord reached Bhriguṣaka, a distance of 60 yojanas, and took his station in the Koranṭaka forest, where he was reverenced by gods and by Jitāśastra, the governor of the town accompanied by his army and the horse. The Muni then taught the assembly thus:—"This world is a terrible wilderness; here, surrounded by evil beasts, a helpless being or sojourner is tormented by demons; while walking in the divine path he is tied with four ropes and annoyed by a wicked forester; and he is defended only by a pious and honored man. To protect the helpless is religion and a duty calculated to give all happiness, etc." The preacher being asked by Jitāśastra whom this advice benefitted, he replied — "no one except the horse," King Jitāśastra said, "Master, who is this horse, that has obtained virtue—though a beast?" The muni replied:—"In the past existence I was a king of Champa and this friend of mine was then my councillor by name Matisāguru; but engaging in bad deeds, he died and after several transmigrations he became a dishonest grocer named Sāgaradatta in the city of Padminikaṇḍa, and formed a friendship with a Śrāvaka called Jinaṃdha. They learnt from a Jaina teacher of the advantage a man obtains by erecting an Arhat temple of jewels, gold, or earth, namely the destruction of all the evil deeds in the next life of the builder of such a temple. Accordingly Sāgaradatta erected an excellent Jina-temple outside the town, placing an image in it, and also a lofty Siva-temple to the east of it. On a summer day he went to the Saiva temple where he observed the worshippers taking white ants out of ghi pots and crushing them under their feet. He felt uneasy and began to clean the temple with his own cloth. The chief w.C. shipper continuing his work told him he was perhaps deceived by white-clad heretics as he vainly pretended to protect insects by unseemly means. Sāgaradatta thought with himself that these highly honored but wicked men would ruin themselves and their master (i.e., himself). He died and became this horse of yours; but in virtue of the merit he had acquired in his former life by erecting a temple to the Jina, I have come to save him (365).

Hearing this account, the horse remembered his former life, and fasting in meditation for seven days, he expired and became a god in the eighth heaven—named Sahasra. But while meditating he (the god) remembered his former life and coming down to earth, he placed an image of Munisuvrata in the centre of the gold temple at Champa and an image of a horse at Bhriguṣaka and so fulfilled the desires of the followers of Munisuvrata. From that time Bhriguṣaka became celebrated for its holy place called Asvavabodhaka. So also the Narmada, from Suvrata Arhat having bathed in it, became a holy river with power to make the helpless to become lords.
The Arhat then went to Satrunjaya, and, by walking to them, made all its summits holy places. Then he went to Bhrigukacha, Sauripura, Champã, Patishthañnapura, Siddhapura, Hastinâgarga, etc., and lastly to the top of Sammeta Sihara, accompanied by 1,000 munis. There he obtained *Muktipada* (salvation) on the 9th Y jeshtha-vadya, Śravaṇa nakshatra. This muni lived altogether 30,000 years, of which for 7,500 years he was a prince, 7,500 a ruler, and 15,000 a sages. Here ends the story of *Suvrataśvamin*, who was followed by his son Suvrata and other kings of the Harivaiśa (384).

King Vasu of the Harivaiśa ruled at Mathura on the banks of the Yamna and was followed by his son Brihatdhvaja and others, the last of whom was Yadu, the progenitor of the Yadavas. His son Śriva had two sons named Sauri and Svira. King Śriva, placing Sauri on the throne and appointing Svira crown-prince, obtained *dīkabha*. Sauri giving over the kingdom of Mathura to his younger brother, went to the Kuâvarta country which he ruled and founded Sauryapura as his capital. There he became the father of Andhakavṛṣiṇi, and others. His brother Svira, likewise, gave up the kingdom of Mathura to his eldest son Bhojavṛṣiṇi and went to Sindh, where he became king and founded Sauvira in the Sindhu country as his residence. Sauri afterwards surrendered the government of Kuâvarta to Andhakavṛṣiṇi and went to Supârâva, a mountain supporting Meru, where he became a disciple of the Pratishtamuni and obtained bliss.

The son of Bhojavṛṣiṇi in Mathura was Ugrasena, the father of Kauna (666-63). On the other hand, Andhakavṛṣiṇi in Sauryapura had ten sons by Subhadrâ who were called Daśarâh: 1. Samudravigaya father of Nemi (712) or Arishanemi (346, 48, 76), 2. Akshobhaya, 3. Stimita, 4. Šāgara, 5. Himavant, 6. Āchala, 7. Dharâsu, 8. Pura, 9. Abhichandra, 10. Vasudeva, the father of Krišna by Devaki, daughter of Devakani (461, 498) and of (Bala) Râma by Rohini (679), besides other two daughters (aavâ) Kunti and Madri, wives of Pându (397). Here little agrees with the Brahmanic data: on the other hand, however, the birth, etc., of Krišna is related materially in the same way as in the Purânas. His wives were: 1. Rukmini, the sister of Rukmin, whom he eloped by the strength of his arm; 2. Jâmbavati, daughter of the bird (1) Jâmbavani, whom he carried off, conquering her father while she was bathing in the Jânavi; 3. Lakshmanâ; 4. Susâ; 5. Gauri; 6. Padmâvati; 7. Gândhari; — so according to 933, 35, where eight wives are spoken of, but only seven are enumerated: the eighth is Satyabhâma, mother of Bhânu and Bhâmara (521). The Purânas know only of the four (emphasized), — for the others they have different names.

Not less discrepant is the pedigree of Daryodhana and of the Pâṇḍavas, given in 399 ff., who do not even belong to the Somavâna, but are directly derived from a son of Vrishabhavasvamin called Kuru! From Kuru the Kuakshetra is said to derive its name, as from Hastin the town of Hastinapura. From Hastin descends Visvavirya and also Sanatkumara (the fourth Chakravartin), and Sañti, Kunthu, Ara, who were at once *tirthakrit* (10th to 18th Jinas) and chakradhara (5th to 7th Chakravartins: — see Hemach. 693), and then Indraketu, Kritketa, Vairukulântakrit (or is this an adjective and not a proper noun?), Subhavirya, Suvirya, Anantasvami, his son Krimtavirya, and the 8th chakradhara, Subhâma. After innumerable other princes had passed — downwards everything agrees fairly well with the Purânas — Sântanu was born.54

[Once, dressed in a dark blue coat, he went into the forest to hunt, accompanied by huntsmen and dogs. In pursuit of a deer he left his companions and saw a high temple of gems on the banks of the Gâṅgâ. Surprised by the beauty of the place he entered and, having saluted the image of Yuggestra, he was about to ride off on his elephant when he noticed a very beautiful woman. Enquiring who she was, he was told she was the daughter of king Jâhnu and named Gâṅgâ, and how one...]

54 From this point to the end of this Sarga is almost entirely a condensed version, not given by Prof. Weber. — J.B.
Charanamuni had told her father that King Sāntanu of Hastināpura would marry her on the bank of the Gaṅgā, and that, after the muni left, Jahnu had built this temple and kept his daughter to worship Yogadhiśa. Now Sāntanu had come to fulfill the word of the Muni. Hearing this Gaṅgā smiled and said to Sāntanu that after her marriage she would stay with him only so long as he would regard her wish. Sāntanu assented to this and married her in presence of the Jina. Her father too, being informed, came in haste to celebrate the nuptial festival, and, remaining a few days, returned with his retinue. While the couple was there alone, two Munis came down from the sky to worship the Jina. The king enquired of their residence, etc., and was told they were Vidyādhara Munis — pilgrims to holy places to worship Jinas, and that after visiting Sammeta, Arbuda, Vaibhāra, Ročaka, Ashtāpada, and others, they had been to Satrunjaya and Raivata, and that on going to the fourth summit (of Raivata) named Kāñchana, they saw some one as brilliant as the sun worshipping Nemi. He told them he had once been a Kshatriya living at Sugrāma near the Raivata; but possessed of an evil mind he began to annoy the pilgrims, beating them and telling lies, and, as a punishment, he was attacked by an incurable disease called lāṭī. Fortunately he heard from a Muni the account of this holy place, and accordingly came to this Kāñchana summit and was gradually freed from his physical and mental ailments by bathing in the waters of Udayantī and worshipping Nemi in the temple of king Bharata (after whom this land of India was once called Bharatavahana). At length he died in meditation and obtained this shining body with divine powers. But remembering his obligations to this holy place, he returned to reside here, and by daily worship of the Jina, he would become kāvaya or a Muni and obtain mukti, and again come to abide by Nemi as Siddhi Vinyāka. At the conclusion of this account of himself and of the sacred place, he ascended into the sky.

The twin (Sāntanu and Gaṅgā) after worshipping the Jina happened to notice this beautiful jewel temple, and thought of going to some other tirthas. After the departure of the Munis, Sāntanu was inclined to visit Kāñchana; but his retinue having come he returned home with them in pomp and pleasure (464).

Sāntanu was the father of Gaṅgoyya Bhashma by Gaṅgā, of Chitrāngada by Satyavati, and of Vichitravirya.

[On account of his fondness for hunting against her wish and counsel, Gaṅgā with her son Gaṅgoyya went back to her father’s. Sāntanu regretted his loss and went distracted; but being consoled by his ministers he passed 24 years. King Jahnu received his daughter graciously, and taught Gaṅgoyya every science and art. By the religious instructions of a Jaina preacher he became a Śrāvaka and went to the place where his mother had been married to pass his days in religion and devotion. Sāntanu sometime after came thither a-hunting, and Gaṅgoyya, seeing the birds and beasts in the forest agitated by the king’s dogs and huntsmen, came out of the temple armed, and seeing the king among his huntsmen, addressed him, — “O king, you being lord of the earth, ought to protect the innocent and punish the guilty; this being your duty, how can it be said you are a king while you kill helpless animals? As you allow no wrong to be done within the limits of your kingdom, do I in this forest.” But finding the king regardless of his admonition, with his arrows he killed some of the huntsmen and distressed the rest, when the king challenged him to a duel. While they were fighting Gaṅgā hearing of it from a servant came thither in haste and blaming the king for his fondness for the chase, informed him that his antagonist was his own son. The king then with affection embraced his son, who had fallen at his feet, and requested his wife to forgive him and resume her place with her son. She replied that, as he did not keep his promise, she would not live with him, but he might comfort himself in the company of his humble, dutiful and learned son whom she had come to see. Then in spite of the entreaties of her husband and son she left for her father’s. The king glad at obtaining his son but sorry for his separation from his wife returned home. Sāntanu afterwards, on one of his excursions, went to the banks of the Yamunā, where a most handsome girl caught his eye; on enquiry he learnt that she was the daughter of the head fisherman, a Sarasvatī in knowledge, a Lakṣmī in beauty, a

32 Said to originate from the bite of a poisonous insect.
33 A divinity of wisdom and wealth to fulfill the desires of the worshippers of Nemi.
Kalpaṇīkaha at home, and a maiden who had not found a worthy husband. The king returning sent his wise counsellors to request the fisherman to give him his daughter in marriage; but the fisherman refused compliance, adding that the connexion between a high and a low family was unsuitable, that his daughter, though made queen, would not be so respected as one born in a high family, and, moreover, the king had an able son to succeed him so that his daughter’s children would have neither respect nor authority. Hearing this the king was depressed; but his son Gaṅgeya, when he heard it, went personally to the fisherman and asked his daughter for the king, saying he would respect and treat her just as his mother Gaṅgā, and that for long he had been virākta, and consequently her son, being his younger brother, would succeed the king; and to remove any chance of his (Gaṅgeya’s) sons forcibly depriving her son of the government, he vowed before the Sun and Devas to remain celibate, and they (the Devas) showered down flowers and named him Bhishma because of his bhūma-vrata or hard resolution.

The fisherman then was pleased and gave him the following account of his daughter. There was a king, he said, named Ratnasakihara of the town of Ratnapura, who had this daughter by his wife Ratnavati. But the infant immediately after birth was stolen, and, by some Vidyādharas, left on the banks of the Yamuna; when a voice from the sky declared her parentage, her name Satyavati, and her destined husband Sāntanu. Hearing this voice, he took her home and cared for her as his own (562). Gaṅgeya having thus obtained the fisherman’s consent, returned joyfully home to tell the king of it. Sāntanu praised his son’s admirable and noble conduct, but, for a while was ashamed of his erotic desires. Afterwards on a propitious day he married Satyavati, and had by her two sons named Chitrāngada and Vichitravirya. The king then gave up hunting, visited Sattunjaya and otherirthas and piously breathed his last. Chitrāngada was placed on the throne by Bhishma, but, disregarding the advice of the latter, he went to fight with a mighty Gandharva named Nilaṅgada and was killed. Bhishma then inaugurated Vichitravirya as king and taught him the arts and sciences. But on account of his reputed low birth, he was not invited by the king of Kāśi to the sahayamvara of his three daughters — Ambā, Ambālā, and Ambikā (Ambālikā). Bhishma, in wrath, went in person and by force carried off in his chariot all the three maidens, defeated the assembled kings who opposed him, and came back to Hastinapura to give them in marriage to his younger brother.]

Vichitravirya had (483-84) 1. by Ambikā the blindborn Dhrītarāṣṭra, the husband of Gāndhārī and of her seven sisters (640) and father of Duryodhana (749); 2. by Ambālā, of Pāṇḍu,—by Kunti and Mādri (639) the father of the five Pāṇḍavas (743 ff.); and 3. by Ambālikā of Vidura the husband of Kumudini daughter of Dvākanātipa (642) who died of syphilis.

[The ministers thinking Dhrītarāṣṭra unfit, because of his blindness, made Pāṇḍu king under whose rule the country flourished. One day in summer he went out to look at the scenery of the woods, and being much pleased and walking on, he saw a man under a mango tree constantly looking at a picture and covering it again with his cloth. Pāṇḍu taking it from him found it to be a representation of a beautiful woman, and learned that it was of Kunti the daughter of king Anēkāśvārshnitri of Sauryapura and sister of the ten Arhaś, who was perfect in every way but unmarried, as not having found a fit husband, and that it was drawn by him to please his sight. Pāṇḍu then paid for the picture and went home with it. After passing some days quietly, through modesty but in pain and anxiety, he went out again to divert his mind with the woodland scenery, but wandered in vain for ease; seeing, however, a man senseless and nailed to the ground near a line of Champaka trees, he went up to him and found a sword before him and two rings of medicinal plants. Applying one of them to his body, the nails came out of the ground restoring him to his senses; and applying the other, his wounds filled up and he was perfectly healed. On enquiry he told the king that he was Anēkāśvārshnitri the master of the Vidyādharas, and was deprived of his wife by Asanīvan, another Vidyādhar, whom he consequently pursued and was ultimately left in the condition the king found

84 *Indifferent* to worldly things.
him in. The Vidyadhara requested Pandu his deliverer to accept both the wonderful plants and a ring by means of which he could go in a moment wherever he wished, with a promise to be near him when remembered. The king then returned home, thinking on him and Kunti (620).

The painter from whom king Pandu got the picture of Kunti, went to Sauryapura, and, in presence of Kunti informed the king of the greatness and learning of Pandu. Kunti was so pleased with the account that she determined to marry him. She could not from modesty, disclose her mind to her father, and like a lotus in a waterless country she lost her bloom. Having no hope of getting Pandu as a husband, she went into a garden to hang herself, and prayed to the family goddesses with joined hands:—“O mothers! helpless I now die for Pandu; none else but Pandu would I have in this life for husband. Be pleased to tell him this after my death, and give me this very Pandu as my lord in the next life.” Kunti then put round her neck the noose to strangle herself; but Pandu arrived, by the aid of the ring given him by Anilagati, and recognising her from the picture he had, at once cut the noose replacing it with his arms. Kunti seeing her husband was overjoyed and married him with the Gandharva-riddha rite.62 She conceived by him and told her husband; but both returned to their respective homes, she keeping her condition secret. When she gave birth to a male child, as a matter of necessity, it was put in a box and thrown into the Ganges. The box was carried down to Hastinapura, where a charioteer named Suta found it, opening it, saw a child bright as the sun on a clear day. He carried it home with delight and gave it to his wife Racha as his own. The child was named Karna, and as he grew up he became a favourite of the king Pandu by reason of his qualifications (638).

Andhakavrishni learning of his daughter’s affection towards Pandu gave her to him in marriage. Pandu afterwards got Madri the daughter of the king Madraka at her svayamvara. Subela of Gandhara had eight daughters, the first of whom was Gandhari, and a son Sakuni, and, as instructed by his family goddess, gave the daughters in marriage to Dhritarashtra. Vidura also the third son of Vichitravirya married Kumudini the daughter of king Devaka (643).

King Andhakavrishni handed over his government to his son Samudravijaya, became a disciple of Supratishtha-muni and attained sivairi. Samudravijaya was a liberal, humble and devout man, who supported learning, ruled his country justly, and erected very many lofty temples of Jina. His wife Siva by name was equally good (665).

At Mathura the king Bhajavrishni placed his son Ugrasena on the throne and became a devotee. Ugrasena’s wife was Dharani. Once he asked a Brahmana ascetic who was observing a month’s fast to dine at his house on the day of its completion; but from pressure of business he forgot to invite the Brahmana on the proper day, who consequently had to continue fasting for another month. Ugrasena again invited him to dine for parrat (breaking the fast) and again forgot the day. This being thrice repeated the ascetic died, and to avenge himself entered the womb of Dhara, who, after conception, longed to eat her husband’s flesh. Concluding that the child would be her husband’s enemy, she put it into a box of kanyaka (bell-metal) and threw it into the Yamuna. The box was recovered by a grocer at Sauryapura, who seeing in it a male child, luminous as the sun, and which he named Kausa, as it was found in a kanyaka box, he nursed it. The grocer, observing that Kausa, as he grew up, daily beat the other children, thought him unfit for his business and gave him to Samudravijaya. Kausa reached maturity in the palace where he became a favourite with Vasudova, the king’s younger brother (671).

In Rajagriha ruled Jarasandha son of Bhadratha over the trikhanda. Once he sent Vasudova along with Kausa against his enemy Simharatha, who was defeated and brought bound on a cart to Rajagriha. Jarasandha for this offered Vasudova his daughter Jivayat in marriage. But Vasudova, having learnt from some astrologer that she would be destructive to the families both of her father and Simharatha, told Jarasandha that his enemy had been defeated and brought there by Kausa and not by himself, and therefore it was Kausa who deserved this favour from the king.
Jivayasa accordingly became the wife of Kañsa, who afterwards recalling his previous life and enmity to Ugrasena who was now his father, seized the kingdom of Mathura, with Jarasandha’s permission, and put his father in prison. Atimukta, the younger brother of Kañsa, seeing his father in prison, relinquished worldly desires and obtained *dīśa* (religious consecration). Thus Kañsa became king of Mathura; and the Dasarahas—Samudra and his brothers, with Jarasandha’s leave, went to Sauarsupa. Prince Vasudeva, becoming suspicious of Jarasandha, travelled for a while and on the way married several (a hundred) daughters of petty kings, some for their learning, others because they chose him. Then he went to the *svayamevara* of Rohini and obtained her in presence of Samudravijaya and all the Yadavas. He then came to Sauarsupa and by Rohini had a son Balarama, Balabhadrā or Baladeva. Afterwards, through the importunity of Kañsa he married Devaki, the daughter of Devaka. At the marriage festivities Jivayasa, the wife of Kañsa, got drunk, and while dancing, she noticed the Muni Atimukta, her husband’s brother, whom she embraced erotically, when he pronounced the curse that Devaki’s seventh child would kill her husband and father. At this imprecation she left the Muni in sorrow and privately informed her husband of it. Kañsa, believing that the Muni’s word would not fail, gave liberal gifts and honours to Vasudeva, and obtained a promise from him to make over the first seven children of Devaki as soon as born (688).

Devaki’s first six children, on their birth, were carried off by a Deva—sent by Indra—to a woman named Sulaśa, and her dead children, born simultaneously, were brought back to Devaki. These being sent to Kañsa were dashed by him against a stone. In his way the first six children—named Anikayasa, Anantasesa, Ajitasesa, Nihutari, Devayas, and Satrasena, were preserved in the house of Sulaśa. After this, Devaki, having bathed on her fourth day, dreamed at midnight of a lion, the sun, an elephant, etc., and conceived; then at midnight of the 8th Sravaṇa-vadya, she gave birth to a male child of a dark blue colour, when Kañsa’s guards were fast miraculously asleep; and Vasudeva, at his wife’s desire, took the child to Gokula and gave it to Yasodā the wife of Nanda, bringing back her daughter born at the same time, and with delight gave it to Devaki. The guards, when awake, took that girl to Kañsa, who, thinking the word of the Muni had failed, and fearing nothing from her, cut her nose and sent her back to Devaki. The child at Gokula grew under the care of goddesses and was called Kṛṣṇa from his *kṛṣṇa* dark blue complexion. At play he killed two giantesses—Sakunti and Pūtanā and a giant—Sakaṭa—and uprooted the twin growing Arjuna trees.

Hearing of such deeds by her son, Devaki visited Gokula frequently with other women. And to protect him Vasudeva kept his son Balarama at Gokula (702).

At Sauripura, Śiva the wife of Samudravijaya, dreamt at dawn the fourteen great dreams and at the very time, the 12th of Kṛśaki-vadya, Chitrakāshatra, a great sage descended from a chariot of the Aparajita gods and entered her womb. Then, at midnight of the 5th of Sravaṇa-suddha, Chitrakāshatra, she gave birth to a child of dark colour with the mark of a conch; then on the top of Meru the fifty-six Dikkumās and sixty-four Indras celebrated the birth of the Jina, Samudravijaya also celebrated the event and gave his child the name of Arishthanemi (the 22nd Jina). He was nursed by a crowd of Aparāś and waited on by gods who had assumed his age at Indra’s command. After this Samudravijaya went into the garden to amuse himself, when Indra seeing the Śvāmi in the lap of his mother joyfully saluted him and said to the gods that Samudravijaya, in whose house the Śvāmi Nemi Tirthākara had appeared as a son, was indeed meritorious and happy, praising the lord exceedingly for his bravery. Some of the gods present answered Indra that his praise of the boy before them was unseemly for they had once dried up the whole ocean and had pulverized great mountains with ease; and desiring to see the strength of the Jina, they had come to the garden consecrated by him. There they saw the boy caressed by people, some saying “live long,” some kissing him, some holding his fingers, some making him laugh by nodding their heads, etc. When, afterwards, they found the Jina in his cradle resting alone, they carried him off by stealth up into the sky. When they had gone some thousand kos up, the lord in meditation, knew what they were about, and to

55 The sons of Kubera—Nalakubera and Manigriva—changed into trees by the curse of Nārāyaṇa.
convince them of his powers, sunk them several thousand kos below the ground. Seeing their plight, Indra pitted them, and coming to Nemi requested him to deliver them, as they had committed this fault through ignorance; and, after liberating them and putting the lord in his cradle, Indra returned to Svarga. Samudrabijaya and others witnessing the power of Nemi, were highly pleased and returned home, celebrating a festival befitting the occasion in the Arhatu temple. Henceforward the lord grew up protected by the gods under orders of Indra (737).

In Hastinapura, Gandhari the wife of Dhrityarashtra, being pregnant, longed to ride on an elephant, to kill enemies, to imprison people, and to fail in respect to elders, quarrelling with all Kunti, the wife of Pandu, seeing in dreams Mount Meru, the Sun, the Moon, the ocean of milk, and Lakshmi, had a fortunate conception and longed to do pious actions; and, on a propitious day, when the five planets were in superior conjunction she gave birth to a child, when the gods showered flowers in the house and a voice from the sky was heard that this child would possess all pure qualities — mercy, liberality, etc., that he was a Dharmaputra (son of religion). King Pandu celebrated his son’s birth and called him Yudhisthira (great in war). Again Kunti saw in dreams a flowering Kalpataru planted by the Wind in her own garden, and accordingly had an excellent pregnancy (garbha). Gandhari became impatient at her long carriage, etc., and after thirty months bore an immature child which was kept in a box for six months; and as he had given his mother so much trouble, he was named Duryodhana. In the third portion of the night of his birth, Kunti was delivered of a son, who, by a heavenly voice, was named Bhima. Once king Pandu with his wife went to a mountain for pleasure, when Bhima fell from his mother’s arms and as his firm body struck the stones, they were pulverized as rice by a mill; and despite taking him up not in the least bruised, delivered him to his mother. Kunti, on the occasion of her third conception saw, in her dreams, Indra riding on his elephant, and longed to kill Danavas with arrows; and in due course she bore a child when the gods showered down flowers, beat drums, Apsaras danced, and a voice from the sky declared the child to be the son of Indra named Arjuna. By his other wife Madri, king Pandu had also two sons Nakula and Sahadeva; thus he was the father of five sons, while his elder brother Dhrityarashtra had a hundred, all brave but wicked (765).

Kunti once went on pilgrimage to the city of Nasikya and built there a temple of Chandraprabha-svānil (the 8th Tirthankara) and, after consecrating his image in it and performing other meritorious deeds, she and her husband returned home. Since then Nasikya has become a holy place. It is said of it that “those who fall prostrate to the 8th Tirthankara at Nasikya obtain knowledge (of salvation) and so a first place in the next life” (766).

Kansa, learning from an astrologer that he would be killed by Krishna, who had already slain several demons — Kesi, Haya, Khara, Mesha, Vrishka, and Arishta, and being desirous to see his enemy, began the Sarga bow ceremony, — offering his sister Satyabhama to any one able to use the bow. When none was found able to bend the bow, Anathrishni the son of Vasudeva, set out for Gokula in a chariot, and resting there for the night, at dawn in company with Krishna he started for Mathura; but on the way his chariot was stopped by a tree, which his companion uprooted and threw aside; he (Anathrishni) was astonished at his strength and took him on to Kansa’s dwelling, where he took up the bow but failed to fix it, at which the assembled princes and Satyabhama laughed. Then Krishna, in a rage set the bow in a moment and Satyabhama resolved to marry him. Anathrishni boasted that it was he who strung the bow, and was sent home by his father Vasudeva who was afraid of Kansa. To discover his foe Kansa invited all the kings to witness the athletic contest. Krishna, who had once killed the serpent Kāliya in a pool of the Yamuna, went with Balarāma to see the sport. An elephant called Padmara, set free by Kansa was killed by Krishna, and another, named Champaka, by Balarāma, who pointed out Krishna to all assembled — to Samudrabijaya and the others, as also to Kansa, who became inflamed with rage. Then came into the assembly two wrestlers — Chandra and Mushtika, when Balarāma and Krishna left their seats,—the first killed Mushtika, and the second the other. Kansa at this became excessively angry and called with a loud voice “O base herdsmen! kill them quickly and Nanda who protected them, and those
also who are their friends." To this Krīṣṇa replied with eyes as red as fire—"O Kaṁṣa, don't you see my strength yet? Defend yourself first and then do what you please to Nanda and others." So saying he left his seat like a lion and holding Kaṁṣa by the hair dashed him on the ground. Then came the servants of Kaṁṣa to slay Krīṣṇa, but they ran in all directions when they saw Balarāma coming with a tent pole in his hand to beat them. Krīṣṇa killed Kaṁṣa stamping on his head, and threw him out of the arena. Then came the warriors and kings, dependents of Kaṁṣa, to contend with Krīṣṇa, but fled when they saw Samudravijaya and other kings ready to oppose them.

Placing Ugrasena, the father of Kaṁṣa on the throne of Mathurā, Samudravijaya and the others returned to Sauripura. Jivayata, grieving at her husband's death, went to Rajagriha, resolved to destroy the whole Yādava clan. To Jārāsandha she told the whole story in the most pitiful way, and he consoled her, sending king Somaka to Samudravijaya to demand Balarāma and Krīṣṇa. He was received by Samudravijaya and the others and delivered the message that Balarāma and Krīṣṇa having killed Kaṁṣa had made themselves enemies to the family and ought not to be allowed to remain in the kingdom but should be sent to Jārāsandha. To him Samudravijaya replied that, Jārāsandha being grieved for the death of his son talked so, but was not he (Somaka) ashamed to demand Balarāma and Krīṣṇa who were to the Harivraja as eyes to the body: "Go and tell Jārāsandha not to follow the course taken by Kaṁṣa, his son-in-law, by awakening a sleeping lion." Somaka then left in haste lest he should be killed by Balarāma and Krīṣṇa, and related the whole to Jārāsandha (802).

Afterwards Ugrasena gave his daughter Satyabhāmā in marriage to Krīṣṇa; and on the second day of the marriage, Samudravijaya collected all his kinsfolk and enquired in their presence, of Kṛṣṇa, the best of astrologers, as to the result of their quarrel with Jārāsandha a powerful king. He was told that Hamsa and Krīṣṇa would in course of time slay their enemies and become rulers of the trikāñḍas of Bharatavarsha; but meantime they should retire to the shores of the western sea, and as soon as they reached it the enemy would begin to suffer losses, and that they should settle where Satyabhāmā should be delivered of twin sons. Accordingly, Samudravijaya with eighteen karoras families of Yādavas crossed the Vindhya mountains (809).

Jārāsandha on hearing Somaka's reply, got into a rage, but his son Kāla said:—"Father, what are these Yādavas before me, if permitted I alone will get at them whether they be in heaven, in the fire, or in the sea, and will slay them or not return home to show my face." Jārāsandha sent him with his brother Yavana and five hundred kings with large armies. Seeing Kāla approach like Kāla (death), the protecting goddesses took various forms to deceive him. Somewhere in the Vindya-chaila were formed innumerable funeral pyres and a woman appeared wailing. On being asked by Kāla the cause of her lament, she said that in fear of Jārāsandha the Yādavas were all in despair, and hearing of the approach of the prince Kāla, they entered the funeral-piles and were turned to ashes: in this pile were burnt the ten Arhats, Balarāma, and Krīṣṇa, and she in sorrow at the death of her relations, was about to burn herself, and so saying she entered the fire. Thus deceived by the illusion of the goddesses and remembering his pledge to his father Kāla leaped into the fire and was consumed. Then his brother Yavana and the others returned and informed Jārāsandha king of Magadha of the death of all the Yādavas and also of prince Kāla (818).

The Yādavas, much pleased at this, went on to Saurāstra and encamped to the north-west of Gīrṇāra, where Satyabhāmā gave birth to two sons—Bhānu and Bhārua. Then the Dasañjas worshipped Jina on Gīrṇāra mountain and so purified themselves. Krīṣṇa, on a propitious day, fixed by Kṛṣṇa, bathed and worshipped the ocean-god, and performed the 8th tapas; on the 3rd day, at night, the ocean-god came to Krīṣṇa and asked with joined hands why he was remembered; he then presented to Krīṣṇa a conch called Paṇchajanya, and to Balarāma the conch Sughoṣṇa, and to both necklaces of jewels and clothes. Krīṣṇa in his reply said he had come in time, as the capital of the former Vasúdevas, now covered over by water, was required for habitation. Hearing this the ocean-god went and told Indra, when Indra directed Kubera to build a town for Krīṣṇa. The town was built by Kubera in a single day with numberless palaces of one,
two, three, and many storeys, with innumerable temples of Arhant, and with lakes, wells, tanks, etc. Twelve yojanas was the length and nine the breadth, with a surrounding wall of gold and gems and with four round towers, like mountain tops, at the four corners. After completing this beautiful town like Indra's and called Dvārakā, in the morning Kubera gave to Kṛishna a suit of yellow clothes, a crown, the very precious gem Kauṣūbha, a necklace of 27 pearls, the Nārāya bow, the sword Nandana, the club Karuṇī, and the chariot Garudākṣa. To Balarāma he gave a suit of black clothes, a peacock garland of flowers, the tujastra, etc., the chariot Tāladvijaya, a bow, a plough; to Arīṣṭa he gave a necklace, bracelets, a very precious garland, the earrings Chandraśūrja, a suit of white clothes, and a jewel of great splendour; he gave to Samudravijaya the sword named Chandraśūrja, a suit of the best clothes, and a chariot; to Mahānemi he gave a chariot — Garudākṣa, a spear with a thousand points, a suit of clothes, and a Kauṣūbha gem; to Rathanemi — a bow, an arrow, and a garland; and to the relatives and friends, he gave clothes and weapons according to their dignity. Then Kubera and the other gods with the Yādavas, etc., crowned Kṛishna and Balarāma as kings. They governed this newly settled country in conjunction with the Daśarhas and with the advice of Samudravijaya. At Dvārakā the lord Arīṣṭanemi gradually grew into a young man (847).

Indra, with delight, in presence of the gods, described the peculiar merit of Nemi, men whose of them; questioning his word, came instantly to the world and assuming human forms settled in a town named Surādhiroapura at the foot of mount Raivata. Then they began destroying trees in the gardens and annoying tradesmen and others on the roads. These complaints reached Anādhriṣṭi the eldest son of Vaśudeva, and he without Samudravijaya's sanction, or that of any of the elders, went hurriedly with the instruments of war against the supposed mortals, but was defeated and carried to Surādhiroapura. Then Samudravijaya collected a large army, when Balarāma and Kṛishna requested to be allowed to go in his stead. They too were defeated and carried off prisoners. The people were greatly alarmed when they saw Rāma and Kṛishna, incomparable by men, demons, and gods, thus carried off. Then Kṛishna's wives went to their brother-in-law, Nemi, and said humbly that he, being a Jīna, a Tīrthaṅkara, was of unlimited power, and that though his brothers had been carried off he was unmoved and his valour would be of no account unless it were shown now. Nemi considered for a while and then came out to the assembly, when Samudravijaya who was about to proceed against his enemies was brought back by Kṛishnabha, who told him his efforts would be fruitless as these enemies could be defeated only by a Tīrthaṅkara. In the meantime Mātūla the charioteer of Indra had brought a chariot by his master's orders and told Nemi to mount. He did so with the weapons of war and completely defeated the gods. Indra came down and praised him greatly, requesting that he would pardon the gods for their folly. The gods bowed when they saw Indra and prostrated themselves to the Tīrthaṅkara, who, pardoning them, went to Surādhiroapura and released Anādhriṣṭi, Balarāma and Kṛishna. Indra requested the lord to take them to holy places — Satrunjaya and others for their benefit. The lord, sitting in the vimāna of Indra, went with them to Satrunjaya, told them its history, and thence came to Girnāra and then to Dvārakā. Leaving Nemi and his brothers there, Indra and the others went to their respective abodes (932).

Next Kṛishna, on the advice of Nārada, goes to Vidarbha, and carries off Rukmīṇī the sister of Rukmin; and so on, much as in the Purānic legends.)

SARGA OF CHAPTER XI. (416, vv.)

Raivatāchalamādātmya Pāṇḍavadya dūktrādvisaṁvādaśvādvaranana nāma, — representing the game at dice, the forest life of the Pāṇḍavas, etc. In the invocation in v. 1, Nemi is expressly designated as the 22nd Arhant, in the same way as in x. 320, we find Śuvra named as the 20th. On the whole the contents agree with the Mahābhārata.

SARGA OF CHAPTER XII. (664 vv.)

Raivatāchalamādātmya Pāṇḍavādāsūtra grāmagvaranana nāma, — represents the war of the Pāṇḍavas, etc.
It begins with the delivery of Duryodhana from the power of the Vidyabhrit king Chitrângada, who had in vain prohibited the former from entering the Dvaita lake in the Dvaitavanam, where he had himself encamped while pursuing the Pândavas,—and as he nevertheless did so in company with his brothers, he dragged him away. Their wives turn beseechingly to Yudhishthira, and beg of him as the son of Dharma, to forget their offences and have pity on them. Thereupon, at Yudhishthira's command Arjuna liberates them, conquering Chitrângada. After that Duryodhana is still uncivil and does not salute Yudhishthira, but is, however, forcibly made to incline himself, whereupon the former embraces him and dismisses him kindly. The Pândavas are consequently here set up as a model of Jaina ethics.

Death of Jărásandha (652).

Sarga of Chapter XIII. (720 vv.).

Sri Nemidikshájánanamurá-Páṇḍavoḍhárdádivar-gáno (dvára, Cod) náma,—describes the consecration, wisdom, and nirvánam of Nemi, and also the pious foundations, etc., of the Pândavas.

Krishna and his wives take much pains (83 seqq.) to excite erotic desires in Nemi; in which the former exhibits a pretty libidinous view of life and appears provided with all those epithets applied to him among Bráhmaṇas, and specially as he is directly styled Vishnu (99, 318), thus Sárngapáni (88), Hari (90), Gádádhara (111), Hrishikésa (105), Achyuta (106), Govinda (108, 112), Pitámbha (86); also his 16,000 wives are mentioned (conf. Vísh. Pur. Vol. IV. p. 112; Vol. V. pp. 82, 105).

After long resistance Nemi agrees to marry, and Krishna himself selects a wife for him, namely Rajimati, the daughter of Ugrasena (106). Description of the wedding (120 seqq.), which, however, remains fruitless. After one year Nemi goes on pilgrimage to the Utrákuras (173),—árohanaśvadhih vyadhát.

Prophecy of Nemi (320-405) on the 2,000 years after his nirvánam, by a merchant named Ratna, under the direction of Ambá, concerning the future bringing and adoring of his statue and temple on Háivatsa, etc.

Sarga of Chapter XIV. (343 vv.).

Sri Párvanátmádimaśccharitavágar-váno náma,—describes the pure walk of Párvana, and of other great men.

First to v. 97, the history of Párvana. To the king Avasena in Váñgāra (sic!) after the usual fourteen dreams by his spouse Váma was born Jinesvara Párvana (2-9); this son, in conformity with his father's order, afterwards married Prabhávatí, daughter of king Naravarman (11). Once he recalled a wandering Ascetic Kátha, who followed the system of corpse penitence (?) from his exhibition (?) of a snake tormented by smoke. The snake surrounded by flames and expiring at the appearance of Párvana (comp. i. 4) as Sábhíra-práti (Nága prince), was reborn under the name of Dharana,68 and Kátha as the Ásura Meghámalin (12-14). After the expiration of the 30th year of his life, the lord (Párvana) was seized with a longing for consecration, which he obtained along with 300 (triśati) princes. He observed the first castigation in the Kádambá forest upon the Kaligiri.

67 On these fourteen dreams which the mother of an Arhat sees, comp. Kalpašástra, pp. 25, 26, 42, 52, 65. As the 15th Tisalsa herself appears in Stevenson's frontispiece. According to Wilson, Mack, Coll. Vol. I. p. 148, there are sixteen dreams, as among the Buddhists; S. Hardy, Mon. Budh. p. 3.

68 And his faithful servant,—see continuation. Hence it comes that the emblem of Párvana is a serpent (v. 1 and Hemaeh, 45) and that pronouncing his name is an antidote against snakes (i. 333). His very name Párvana was derived from the circumstance (v. 9) of his mother, when she was pregnant, with him, having seen at her side a serpent crawling (śarpmāvapamam).

69 Thus probably is kágolavarga (51, 319) to be understood? Comp. "neglected his body." Kalpa Sátra, p. 86.
on the brink of a tank (19). The Anga king who came here to reverence him, no longer found him; to console him the gods made a statue of the lord, nine hastas in height. The Angarāja founded a temple there, which was from that time known by the name of Kalikundam, and is celebrated for its holy qualities (to 30). The next castigation the lord kept in Sivapuri (i. 82) in the Kausambika forest. Dharaṇa (the Nāga prince) quickly approached to worship him and held his outspread neck (phāna) over him as an umbrella. From this the town of Abichhatra derived its name (31-35). During the sojourn of the lord at Rajaipur, Īśvarabhūpa came to venerate him, and was informed of his former births and built there a lofty temple and, in commemoration of his former birth, set up a cock-statue,—since which time the tīrtham is called Kukkuṭevam (36-40). On the occasion of another kāyotsarga of the lord, the Kāsthura (who had already been his enemy during ten births) tried in vain to frighten him and disturb his devotions by storms of thunder and showers of rain. On the contrary he (Meghamālin) was obliged to seek protection from Pārśva against the servants sent out by Dharaṇa for the defence of the lord, and thereafter became his faithful servant along with Dharaṇa himself (41-62). Then in the Kāśivana the lord attained the true perception (kevalam,— see Kalpa Sūtra, 20) on the 84th day and began his office as preacher. Aśvasena and other princes, Vāma, Prabhavati, and other ladies, became ascetics; Hāsitōna and others, along with their wives, chose the right path; Āryadatta, etc., were his ten sages (sūrti). He wandered about in the world, creating sanctuaries wherever his foot touched the ground (till v. 69). Thus he came also to Satrunjaya, the most glorious tīrtham, where, like the first Arhat, he raised its height. The lord, of the triumphant world abode also upon Haivata and the other summits, and then returned to Kāśi. In presence of Hāsitōna, his relative, and of the Surenās who came to him (73), he began, with his voice which embraced all languages, a discourse in praise of Satrunjaya (till 82). Hereupon Hāsitōna had himself consecrated as a saṅghapati; and went on pilgrimage to Satrunjaya, erecting there fresh chaityas on every summit,—as also on Chandraprabhāsa (254), Śrīśaila, and Girināragiri (89), everywhere giving rich presents; then he returned to Kāśi.

"Into the number of vīrōṇas (otherwise called dchāraṇa, śādhu, ṣati) 20,000 men were incorporated; into that of the vīrōṇas (also called sūdhei) 38,000 women; 164,000 was the number of śravākas 349,000 (or 377,000 ?) that of the śravikās." The female portion is here considerably predominant, which is interesting. For an activity of 70 years (25,550 days) the numbers are not very enormous,—about 22 converts daily,—they are, however, after all, like Pārśva himself, perhaps only imaginary.

After the bhagavat had protected the world for 100 years, he betook himself to the Sammeta Sālīpā, and was there delivered by monthly fasts called nīrūrītta (comp. nīrūritta—nīrūrīlam in v. 290). Śrī Hāsitōna also gave over the government to his son and withdrew to Satrunjaya (99).

"Now, O Surārāja," continues Vīra, I have told thee of all the munis and saṅghapatis who were zealous about erecting tīrthas, Listen also respecting those who shall come after us till the ekāta mahādukkhaṭha" (98) — This prophecy (all verbs are in the future tense) extends to v. 324, to which a panegyric of Satrunjaya Puṇḍarika is added as far as v. 335: the same forms also the contents of v. 99 which constitutes the transition to the prophecy, which begins at v. 100:

63 Possibly this is the subject of some of the sculptures in Jain Caves at Ellura and elsewhere. — See Caves Temples, pl. lxxxvi. — J. B.
65 See also in Kāla Sūtra, p. 98, where, in the enumeration of Vīra's disciples, there are also found 36,000 female with 18,000 male ascetics, and 318,000 female lay adherents with 182,000 male laics. These numbers steadily diminish from about the sixth to the last Jina; Padmaprabhāsa credited with 420,000 śādhus, 350,000 śravikās, 505,000 śravikās, and 176,000 śrīvanka. — J. B.
67 Hemach, ekādaśadukhama.
"When we shall have obtained the Vaibhāra, then also prince Srenika, on our advice, undertaking a pilgrimage, will there (upon Satrunjaya?) and in the town (—erect? Here the finite verb is wanting, since we can scarcely be allowed to construe v. 100 with 101: hence, probably, a verse is left out in the MS.) chaityas." The sense seems to be: that Srenika, the friend of Vira, is to compare with Hastisena the friend of Pārśva; and as the latter, after Pārśva’s demise on Sammetatḍa, had withdrawn to Satrunjaya, so Srenika, also, would do the like after Vira’s decease on the Vaibhāra (I. 345). The Kalpoṣṭira, however, knows nothing of such a decease on Vaibhāra, but places Vira’s death at Pāpapuri (Pāvapuri): in vaibhāra, ‘unburdened,’ perhaps to be taken appelleatively in the sense of nirvāṇa, muki? Possibly this idea has given the name for the mountain itself.

"Three years 8½ months after our nirvāṇa, O Sakra, the law-confusing painchandra will occur" (101) . . . "466 years and 45 days after this, in accordance with the directions of Siddhasena, will Vikramadatta expiate the earth in conformity with the Jina doctrine, and abolishing my era will introduce, his own" (102-3) . . .

Then follows a long story (to 280) of a pious merchant Bhāvāda, his son and grandson: Bhāvāda Seth will arise in Kāṃpliyapura—a Sāvaka. [His wife will be Bhāvala they will be poor. Two sādhus will come to their house, and Bhāvala having entertained them, will enquire when she will obtain wealth. One of the sādhus will answer that she must purchase a mare that will be brought to her for sale. She tells her husband and he buys the mare, which gives birth to a foal. Tapan Baja purchases the foal for three lakhs, and with the money Bhāvāda trades successfully in horses.] In return for a present of unicoloured horses he obtains from Vikramadatta (124) the town of Madhumatt (Dakṣikum. 158-5) with twelve other towns in Saurashtra-mandala (195). Bhāvāda enters the town in triumph and there a son is born to him, whom he calls Jāvada (133). In remembrance of this he builds a temple of Vira (135-6) in a newly founded town called Abhaṇpri [and an apsarā]. When the boy had attained maturity (or the age of 5 years?) Bhāvāda sends his wife’s brother to Kāṃpliyapura [where many of his caste reside] to find there a wife for him (139). Passing the night on his journey at the foot of Satrunjaya, in Ghaṭagrama, he sees Suktīla, the daughter of Sūra [who is beautiful as an apsara-dewañī, and after enquiring as to her gotra and name] asks her for her nephew. [Sūra is dejected at the idea of his inability to celebrate so high a marriage. His daughter laughing, protests that she will marry no one who shall not first answer four questions to be proposed by her. The messenger carries her home with him rejoicing. Bhāvāda, hearing what has occurred, is greatly astonished, and taking Jāvada with him goes to the Jina’s temple with his relatives. Suktīla is pleased with Jāvada’s appearance and proposes her queries]: these are concerning the definitions of “the four purusahṛthas—subjects of human purpose” — "What is the meaning of dharma, of artha, of kāma, of moksha" (154)? [The youth replies: — "Dharma is to worship the Jina; artha is to keep quite free from destroying life, from robbery, enmity, vain desire (bhoka), sorrow (i.e., care for misfortunes happening in this life); kāma is desire of worldly pleasure and love; moksha is to subdue the mind and be freed from the body, and to purify the soul (159). The kanya, hearing this throws over his neck the war mālā and the wedding is celebrated (161). After some time shall have passed, and Bhāvāda shall have gone to heaven, Jāvada shall, like Dharma, protect his own city (164).]

Now follows a highly remarkable interlude (165-67).

"On account of the evil influence of the Duṣṣṭaham age, the power of the Mūḍgalas will seize upon the earth by force, overflowing it like a stream of the ocean. Enveloping the land, they will seize cows, grain, riches, children, women, men of the middle, lowest, and highest conditions (in)"
Saurashtra, Kaccha, Lata, etc., as they advance. Then ordering the various castes to resume their respective occupations, the Mudgals will distribute great riches, which they will bring into the country.

Even then Jávāda Sēth — of all things provident, and careful of his religion, shall acquire wealth (168), and collecting round himself his own caste, in one locality — as in an Arya stava, he will there erect my temple to which the Munis wandering in Áryan and non-Áryan countries shall flock and be respectfully reverenced by Jávāda. Hearing them say "during the paschmāṇa, the śrīdha founder is Jávāda," he shall ask them whether by this Jávāda he himself or another is meant (172); he shall receive the reply — "The guardians (lords) of Puṇḍarikā in course of time became malicious, living on flesh and intoxicants, and drew a circuit (7) round Puṇḍarikā of 50 yojanas: whosoever oversteps it falls into the hands of the evil Kapardayakharma (175: see 246), therefore Sri-yugadījināsvīra cannot be worshipped; but now the time has again arrived to exalt him, and thou art the fortunate one. Endeavour to preserve the image of the first holy lord founded by Bāhubali (see 266) by the religious worship of Chakresvari-sūrt." Accordingly she appears to him after a month's penance, and directs him to go to the town (draṅgā) of Takaśālī, and there to arrange with prince Jāgannāla; there, before the dharmachakram, he will perceive the image of the Arhat (ārhatam bimbam), and through her favour he will establish a great śrīdha as a mark for sīkharman (orthodox believers) (182). He also succeeds, really by means of bribes, in gaining the favour of the prince of Takaśālī so as to be permitted to carry away in cara the image of Bīśnubahāsvīmin, as well as of Puṇḍarikā (see i. 499) and he succeed is bringing them into the Saurashtra maṇḍala, near to his city of Madhumatt (191). He had before this sent ships freighted with goods to Bhoţa, Mahāchūna, and Chenla. These had been driven by adverse storms to the golden isle, Suvarnapura (where they find that the dust of the ground turned to gold when a fire was lighted, and they had filled the ships with the dust of the islands), and now the whole eighteen came in. A messenger informed Jávāda just when he arrived in the vicinity of the town that they had reached after an absence of 12 years, and another brought the news of the arrival of Sri-Vājaśāvāmin. Without noticing the former he proceeds to salute the latter. While he was still absorbed in the contemplation of Vājra, a god descends from the skies, illuminating the firmament, and appearing like a flash of lightning and bending before him, says (201): — Lord, I was formerly Kapardān [Kapardhān] the son of Suvardana Bāja of "Tirthamānapura, wicked and abandoned to drink; hear how I was saved by thee when I was about to be precipitated into the abyss of my wickedness. [You kindly presented me with the naukara mantra, so that I was delivered. I kept the vows you prescribed.] One day I was sitting in the Chandrasahāla with my wife and sipping the Kādambari wine. While thinking of the naukara, a snake writhing in the talons of a bird [sukant, Guj. sarafi] dropped poison into my cup as I lifted it (207). Not perceiving it, I drank and was thereby deprived of my senses, nevertheless I continued to utter the mantra until I died. I then became a Yaksha and at present an called Kapardā Yaśaka, and am attended by a lakh of Yakshas.

— Prof. Weber discusses the Mudgals, who are apparently placed in an early age, for Jávāda died only 103 years after Vikramaka (v. 290). But possibly the Mahāmasīs are intended, and they first appeared in Gujerat in Sasan. 1080, under Mahnund of Gaural. The inventory of the temples at Sātunjaya states that the precincts of Aśviga in the great temple of the Vimaṇa Tuk was made by Jávāda Bāh in Sasan. 1018. A slight change in the last figures of this date — a copyist's ordinary mistake — would place this 12th uddāra or restoration immediately after Mahnund's iconoclastic raid. This episode is either a later addition to the work, or else — and not improbably — the whole is a comparatively late fabrication. — J. B.

This is the SūryanātSAN of the first Jina (Hemach. 44), also one of the 16 Vidhādevyas is so named by Hemach. 239.

According to this account, the restoration of Jina臃 worship took place from Takaśālī on the Upper Indus which is a surprising piece of information.

Of course Bhoța, Tibet, cannot be reached by sea.

Vājra is the name of the last of the seven Daśasūkhā, Hemach. 34 (comp. Schol. Böhtlingk-Klief. p. 239), who would thus fall into the last third of the 2nd century A. D. [But as Jávāda must be placed in the 11th cent. such an identification cannot be assumed. — J. B.]

The same story occurs in the Patalipūpūsāvari and in Sindibad, see Ind. Stud. Bd. III. p. 350. A similar event is mentioned in an Introd. to Kalpa-Sūtra, p. 12.

Homonymous, not identical with the one mentioned. vv. 175. 246. [1 Guj. Kāvāda Yaśaka.]
and able to perform any work; therefore, O Svâmi direct what work I shall accomplish.” [In his four hands he held a net, a goad, a mālā, a flower, and a garland. He sat on an elephant. His body shone like gold, and he was attended by many devas and yakṣas.] Vajra Svâmi extolled the height of Siddhârâ (Sâtrakâya) and encourages Jâvâda to go thither on pilgrimage and to erect their as; and that himself and the Yaksha will assist him. Jayamâtti, the wife of the keeper of Siddhârâ (Jâvâda) had fever, but Vajrasvâmi cured her by a glance [as the sun removes the darkness of the night]. Kâvâda Yaksha conquered the devas who opposed obstacles to the ascent of Sâtrakâya with the image of the Bhagavant. They arrived at Adipura. The evil devas shook the mountain of Sâtrakâya, as the wind shakes the leaves. Sâtrakâya with akshata, flowers, and water caused the mountain to remain stationary. The Sâtrakâya on a day fixed by Sâtrakâya, placing the image before them, ascended the mountain with much music. The Mithyâti-deva opposed many obstacles, but were overcome by Vajrasvâmi and the Yaksha. Vajra, “by wind, dispels the clouds created by them; their wind, by the mountain; their mountain by wedges (patindra, marg. note vajra); their elephants by lions; their lions by Sarabha; fire by water; snakes by birds.” The sângha found the mountain defiled with blood and bones, the temples fallen in, full of dust, and at the mercy of the winds. [Jâvâda causes the mountain to be cleansed till it was as pure as his own heart.] Then the Asura devas use the night for bringing back the car with the image of the Svâmin from the mountain. Next day, it is true, it again carried up by the people of Jâvâda; but in the following night it is again brought down; and this is repeated for 21 nights continuously, until Vajrasvâmi makes an arrangement with the Yaksha and his following, steeling their members by the vajra formula, that they keep watch in the air, and Jâvâda and his wife praying to Adijina and remembering the five Parameshthi, go to bed under the car by the side of the wheels; and himself remains with the whole sângha; children and women, beside the image, thinking on Adijina, till the morning. On the morrow (245) they carry the image successfully to the temple, and next take care to purify and expiate the sanctuary. The former Kapardin (see 175), surrounded by a few Asuras, conceals himself inside the former image, and as Jâvâda now causes it to be taken out and the new one to be installed, the Asura-swarm is fixed and entranced by the formulas of Vajrasvâmi, so that it cannot rush upon him; but it raises so dreadful a noise that the earth with its mountains begins to vibrate like a wave of the sea, trees and temples fall down, and the mountain itself is split in two pieces — a southern and a northern summit, — and every body loses their senses except Vajra, Jâvâda and his wife. At the direction of Vajra the Yaksha Kapardin takes the vajra into his hand threatening the Asura with it, and the former Kapardin escapes affrighted to the bank of the (nândra?) sea, where he assumes another name in Chandraprabhâsakshetra (254).

Then Vajra will institute the new temple service (to 259). Jâvâda and his wife mount to the summit of the temple to erect the banner, and he praises his destiny, by which he is successful in his arduous task, in which Vajrasvâmi had acted as his teacher, and in consequence of whose injunction, Kapardin had assisted him. From their very advanced age both husband and wife are so overwhelmed with joy at this event that their hearts break. The Vyantara gods immediately take up the two bodies and throw them into the sea of milk. Then Chakrohâvari (s. 177, 180) approaches their son Jajanâga, who is waiting with the congregation, and informs them of what has happened, consoling them in suitable words. Jajanâga worshipping the Jinas upon Râivat and other mountains, and erecting chaitus everywhere, in every way follows the paternal example. — The decease of Jâvâda will take place at the end of the 108th year of Vikramâditya (280).

75 For the first part of these comp. Panchat. III. 12.
76 According to v. 29, this Chandraprabhâsak is in the neighbourhood of Sâtrakâya, so that the demon was not exercised to any great distance. Possibly Chandraprabhâsak is nothing else but Prabhsakshetram (see Mahâb. iii, 6006), as Bomanji has called. The subject here then may be a struggle between Saivism and Jainism in Gujarât, until the latter was aided from Takshashila.
77 Conf. Prabandhakachântma, tr. by C. H. Tawney, p. 135, and note. — J. B.
"After some time will have elapsed, the Brahmans, by their wisdom influencing the princes, and difficult to be conquered by opponents, will gain the ascendancy, put aside all other systems, and, introducing their own doctrine into the world, will annihilate all tirthas (Jaina sanctuaries)" (282).

"Then Dhanesvara arose, the moon of the lunar race, the wise teacher, endowed with the qualities of the gods, and instructing Siladitya, the lord of the town of Vallabhi, in the purifying Jaina teaching, causes him to expel the Baudhás from the country and to erect a multitude of chaityas at the various tirthas. — Siladitya who brings the law to a fresh bloom, lives 477 years after Vikramáraṇa" (286).

Now the prophecy of Vira ought strictly to conclude here, since he could not well give information about things occurring after the time of the author. In spite of this, as far as v. 324, many indications follow which are certainly historical. . . . in v. 200, 1,914 years after Vira and mentioned, and consequently 867 years after Siladitya and Dhanesvara, and in v. 305, still 86 years are added.

"But afterwards Kumárapala, Bāhada, Vastupalavid (?) will be the first in battle, and mighty in this system of doctrine (287). Then the princes will be Mlechhas, their ministers covesous, the people deviating from their customs and endeavouring to cheat each other" (288).

As far as v. 312, very particular details follow about a king Kalkin (and his son Datta) . . . . After Vira's death 1,914 years, on the 8th of Chaitra, about the wshti time, there will be (born) in Pātaliputra, a Mlecha son, called by the name — Kalkin, Chaturvakra, Rudva (? Rudra). Then in Mathura, both the temples of Mulaś (Balarama) and of Kršaṇa will fall in, like an old tree torn down by a storm. The seven plagues — fear, loss of smell and taste, death, discord between princes, innumerable inauspicious omens, — will occur. That Kalkin will become king at the end of the 86th year and will cause the golden stūpa of king Nanda to be dug up. Greedy of treasure, he will dig through the whole town (Pātaliputra), and will obtain great riches, whereby a Lagnadovī, stone cow, will be found to torment the Munis, so that many of them will leave the city. Kalkin, angrily persecuting the Jina Rishis, will be forcibly opposed by the town-divinites. Then a rain of 17 days will inundate the city. Kalkin, the sage Pratipada, and many other believers (śaṅgha) and unbelievers (śōka), will save themselves, but others will be carried away by the flood. Then Kalkine by means of the Nanda treasure, will rebuild the city, and prosperity will prevail for fifty years. Near his end, however, the evil Kalkin will fall upon the Jains by means of heretical — (?). Pratipada the sage, and many believers will have to undergo great sufferings. Sakra, himself, trembling on his seat will assume the form of a nipra (Brahman), in order to convert him: but as Kalkin does not yield, in spite of all admonitions, he will be killed by Sakra, after the completion of the 86th year of his life. His son and successor Datta, instructed by Sakra himself in the Jina doctrine, will erect many Arhat-chaityas under the direction of Pratipada, and also make pilgrimages to Satrunjaya. In the whole trikhaṇḍa (probably "all the deivas") in the Bharata (varaḥa) town and village, in hamlets and market towns, in mountain and valley, in Aryan and non-Aryan countries, king Datta will cause Jina temples to be erected and will always follow the direction of the Guru, careful to harm none. Then also prosperity and abundance will rule everywhere, princes enjoy awe, ministers will be benevolent, and the people observe the law.

Thus the Jina religion will uninterruptedly prevail until the end of the Paśchamāraṇa (313). But further, in the Duṣkaṁāraṇa the people will entirely abandon the law (dharma), will live but short.
lives, will be consumed by diseases, and oppressed by taxes. The kings will be covetous, thievish, and cowardly, the women will be immoral, and the villages like cemeteries. Shamelessly and pitilessly will the people insult teachers and the gods, and will sink lower and lower. The last good ones (persons) during the Duḥṣhamā in the Bhārata (varsha) will be the teacher (āchārya) Duḥṣprasāha, the female teacher (āśwēti) Pāhlavīr, the pious (īrākaka) Nāgīla, the pious (Īrākaka) Sātañgālī, the king Vimalavāhana, the minister Sumukha. Under the direction of Duḥṣprasāha, king Vimalavāhana will also undertake a pilgrimage to the vihāra Vimalādri. Then people will be only two hands high, and will live only 20 years; the clouds will only do their duty here and there, but mostly not at all. Duḥṣprasāha will spend 12 years at home, 8 years in tāra, and will lastly exercise the law by the eighth meal (?) by eating only the 8th meal or once in 4 days: see āṣamaṇḍika, Manu, vi. 19).

In succession — on the forenoon, business; at noon, royal duty; and afternoon, fire will cease (to be alimeted?).

Thus the duḥṣhamā will last 21,000 years. The same measure will hold for the time of the ekānta duḥṣhamā when men will shamelessly dwell in caves and will eat fish (824).

The Satrūṇijāra also will then be only seven hands high, and will reach its former height only in the Utsmaṇḍa period (325). Exaggerated praises of it are then annexed (to 335).

“Having thus raised the nectar of perception over the creatures, Viśva became silent (336) and descended from the top of Vimalāśaka (339); his listeners also dispersed themselves to their respective abodes.”

The conclusion consists of four verses in which the poet boasts of his work, asks forbearance for errors that may have crept into it, and for uncanonical data (utsamram), craves the protection of Ādiṣvī, who again glorifies himself as its author, humilator of the Saṅgha (Buddhist), moon of the ocean of the lunar race; and Śilāditya as the ornamental jewel of the Yāduvaṇaś. Lastly, he desires continued duration for his work so long as the good law of the Jainas, extending emancipation to humanity, watches upon earth, and sun and moon rise to dispel obscurity.

NOTES ON THE SPIRIT BASIS OF BELIEF AND CUSTOM.

BY SIR J. M. CAMPBELL, K.C.I.E., I.C.S.

(Continued from p. 200.)

SECLUSION.

Two widespread laws or practices, Seclusion and Ceremonial Purification, seem to find their explanation and origin in the belief in evil influences, of which belief the dread of the Evil Eye is the strongest and most lasting illustration. The practices both of Seclusion and of Ceremonial Purification have the twofold object (a) of guarding against the person to whom the practice is applied. Of (b) that is, of the need of protection from the person to whom the rule of seclusion is applied, the dread of the glance of the newly awakened, of which details have been given in the preceding Note on the Evil Eye, is an example. During the spirit-haunted hours of darkness, the sleeper is apt to be invaded by nightmares, dreams and other evil spirits. When the sleeper awakes the night spirits gather in his eyes, and pass along his waking glance into the first object on which his glance falls. To prevent this spreading of evil influences the half-awake Hindu and Indian Moslem is careful to let his first glance fall on some guardian substance, gold, silver or iron, into which the evil guests in his eyes pass and are imprisoned. Should his waking glance fall on a man, the man on whom the glance falls
will sicken. So in the eighteenth century the half-awake Scottish Highlander said in Gaelic:—

"Let God bless my eye and my eye will bless all I see. I shall bless my neighbours and my
neighbours will bless me." Similarly in parts of Scotland (1699), a man who on waking looked
at his cow and praised her fatness ran the risk of causing her destruction. Persons who
under these or other conditions become sources of evil influence have to be guarded against:
the interest of their neighbours. Such persons should be secluded. Of (a), the guarding of the
person to whom the rule of Seclusion is applied, an example occurs in the care taken to eat
food in private in order to save the eater from the risk of strange glances. Again, the belief that
in a crowd evil influences abound makes it advisable that persons susceptible to evil influences
should be secluded. The widespread feeling against infants, women and sovereigns appearing
in public is an example of this rule. Among the tribes of the White Nile who dread the blast
of the envious eye, those who have a beautiful child or a fine horse or camel expose them as
little as possible to the outsider's gaze. Plutarch says:— "A Greek mother is afraid to let the
father gaze at his child for fear the child is fascinated." Fathers are apt to harm their
infants not only by their gaze of affection, but by coming home spirit-laden from mixing in
crowds and passing road-meetings and other spots where spirits gather. The avoiding of this
spirit-laden risk by making the father stay at home and keep quiet seems the origin of the
practice known as the couvade, that is, the lying-in father.

The care taken in many countries to guard the sovereign from the glances of the crowd is
illustrated by the sixteenth century Mexican practice of drawing a felt screen in front of the
king when he dined. In Dahomey in Central Africa, when the king dines, the commoners
turn their backs.

If the ruler has to be secluded from evil glances still more should the Guardian or object of
worship be secluded. In India, the Pârâ and the Jain ministar secludes the sacred Fire or
Saint from the evil influence of his breath by wearing a cloth over his mouth. When a Hindu
worships his house gods he closes his eyes and holds his left hand in front of his closed eyes.
In saluting a saint the Egyptian Moslem holds his hand in front of his face like an open book.
Among the Romans the sacrificer veiled his face with his robe and the singers of sacred
hymns veiled their faces. Of later European tribes the Longobards shot backwards at the holy
skin. In the sixteenth century, the Peruvians covered their eyes when adoring sacred objects.
And, in sacrificing, the Peruvian priest kept his eyes on the ground and his back turned to the
god. As the Hindu worshipper, the Roman sacrificer, and the Peruvian priest turned their eyes
from the object of worship, so among many tribes the women serve the men with averted
faces. The Dahoman wife averts her head when she gives her husband food or drink. Mexican
women turned their backs on the men when they gave the men drink. Among many
Hindu women to veil and turn away the face is a sign of respect. In fifteenth century
England, when a witch was arraigned, she went with her back towards the judge. The judge had
to make many crosses when the witch came near the bar.

Of the special occasions on which seclusion is enforced — partly to prevent the person secluded
causing harm, partly to prevent the person secluded receiving harm — the seasons of birth,
coming of age, and mourning are the most marked. The seclusion of the mother and child after a birth may be mainly with the object of guarding the mother and child. At the same time the enforcing of purifying rites after birth implies the belief that only after purification can the secluded mother return to her ordinary duties without the risk of harming others. The seclusion on coming of age, especially the seclusion of a girl reaching womanhood, though generally considered to be enforced for the girl's protection, is, at least among the earlier tribes, as the Koloah or American Eskimo, in great measure the result of the dread that if she is not secluded the spirits that haunt the girl may take possession of others.67

The rules of seclusion connected with marriage may seem a part of the distrust created by the favourite practice of marriage by capture. Thus among North-Indian Moslems the bride is hid from the bridgroom and his relations before the marriage.68 Among the Nerfroceans of New Guinea and among the Zulus of South-East Africa, between betrothal and marriage, the bride and her relations avoid the sight of the bridgroom.69 These practices may be traceable to suspicion aroused by marriage by capture. Still that some of the seclusion rules observed before and after marriage are not connected with hostility caused by marriage by capture appears from the other Nerforean practice that for four days after marriage the husband must leave his wife's chamber before daybreak.70 This Cupid-Pyscher rule is widespread,71 as is natural in a practice based on two such important experiences as the spirit-laden state of the waking eye and the blasting power of the sweet gaze or glance of affection.

The seclusion of mourners may seem too suitable to call for or to justify special explanation. Still death and mourning is so leading a spirit season and the rites that mark the condition of mourners are so important and so minute that it seems difficult to suppose that the object of the seclusion of mourners is not, like the object of other mourning ceremonies, to avoid evil influences, partly on behalf of the mourner, partly on behalf of others. The mourner wants special care, since mourners are liable to hysteria and other seizures, that is, in early thought, to possession. Therefore the mourner should not go into a crowd or along streets or near graveyards or other places where spirits gather. Therefore the mourner should stay at home. Nor should the mourner receive visitors, since visitors are likely to be spirit-laden. That in the interest of others, the mourner should be secluded follows from the belief that mourners are haunted by the spirit of the dead or by other spirits which gather at seasons of death and mourning. If mourners mix with others evil influences may pass along their glance into those they meet. Therefore, in the interest of others not less than in their own interest, mourners should be secluded.

The importance attached to the rule of seclusion suggests that the original use of veils, masks and curtains is as shelters from evil glances. The women of Turkestan wear dark thick veils of horse-hair.72 According to Mr. Elworthy,73 the eastern practice of veiling women cannot be solely due to male jealousy. The women's reluctance to uncover shows the true reason (that is, a fear of the evil-laden public gaze). So the New Caledonian girl, when she reaches womanhood, binds a fringe of shell and bones across her eyes to prevent sorcerers harming her.74 The European bride wears a long full veil as her position of honour makes her admired and envied and, therefore, specially open to the assault of evil influences. The mask is worn partly to guard the wearer from evil influences, partly to coax the mask spirit into the wearer. When he performs a religious dance, the American Eskimo wears an eyeless mask. The object of the eyeless mask is to seclude the mask-spirit who enters the dancer. For so fierce is the spirit that if the mask had an eye the spirit darting through the eye would blast the onlookers.75 That the object of Temple Curtains is to keep off evil influences is in agreement with the practice of the Jews of Tunis who hide their male infants behind a curtain.76

THE DIPAK RAG.

TO THE EDITOR OF "THE INDIAN ANTIQUARY."

Sir,—In the Indian Antiquary, Vol. XXIX. p. 392, a query is reproduced from Panjab Notes and Queries, 1898, regarding the nature of the Dipak Rāg. I send you the following notes regarding the characteristics of this and a few other Rāgas from the Native point of view, which, I hope, will interest your readers.

There are a few legends about this Rāga, which has been wrongly called the 'Lamp Rāga.' Dipaka means that which illuminates.

One such story says that the sacred lamps of a certain temple in Mysore, having been extinguished owing to the negligence of the priest to supply them with oil, were suddenly illuminated, when a well-known musician began to sing this Rāga.

The Afīn-i-Akbār relates a story where the Emperor Akbar commanded his chief court-musician, Nāyak Gopāl, to sing this Rāga. "He endeavoured to excuse himself, but in vain; the Emperor insisted on obedience. He therefore requested permission to go home and bid farewell to his family and friends. It was winter when he returned, after an absence of six months. Before he began to sing, he placed himself in the waters of the Jamnā till they reached his neck. As soon as he had performed a strain or two, the river gradually became hot and at length began to boil so that the agonies of the unhappy musician became unendurable. Suspending for a moment the melody thus cruelly extorted, he sued for mercy, but sued in vain. Akbar wanted to prove more strongly the power of the Rāga. Nāyak Gopāl renewed the fatal song. Flames burst with violence from his body, and, though immersed in the waters of the Jamnā, he was consumed to ashes." Such is the fatality attaching in the public mind to this Rāga!

It is not clear what meaning is to be attached to the fantastic conceptions in which some of the Rāgas are clothed by our ancient musicians. The Rāmāyana relates a story, where one of the seven daughters of a Bishāi (who are figuratively referred to as the seven notes) dropped down dead as soon as a note peculiar to her was sung out of tune by Hanumān, whose pride of his musical abilities was thus humbled by Rāma. Perhaps this is only an allegorical way of insisting on the value of singing in tune.

Varali is a Rāga which is not taught directly by the teacher, as such teaching is supposed to make his education incomplete. This has to be learnt from hearing it sung. Sir W. Osney in his Essay on the Music of Hindustan writes:— "Mia Tonsine, a wonderful musician in the time of King Akbar, sang one of the night-ragas at mid-day; the powers of music were such that it instantly became night, and the darkness extended in a circle round the palace as far as the sound of his voice could be heard."

Ahiri is another Rāga which is supposed to have a similar mystic influence. The singer is supposed to go without food for the rest of the day. A certain musician, defying the power of the Rāga, betook himself to a public inn where the local Rāni herself served the guests with food. As he was about to be served, he burst forth in his extreme joy at the sight of the food, exclaiming that he had, at last, conquered Ahiri. This being the name of his hostess, she felt insulted, disappeared and caused her husband to punish him. But he was set at liberty when he related to him the story of the mysterious influence of the Rāga.

Māgharāṇī is a Rāga which is supposed to be capable of drawing forth rain from the clouds, if sung elaborately.

These are all superstitions which have encrusted themselves round the musical science in the course of its gradual development. Perhaps they are only calculated to give an idea (in a more or less esoteric way) of the nature and characteristics of each Rāga. The early travails of the pioneers of sciences may contribute to the amusement of the aimless dilettante, but to the real student of history, they are the landmarks of progress through which the sciences have passed.

NOTES AND QUERIES.

A SPECIMEN OF MODERN DOMESTIC HINDUSTANI.

"... Sāhib ne kējā dō tarakkī dō pērā chār chirdā; khādā dūn ke khāth men dēnā!...
... Sāhib has sent two turkey cocks and two turkey hens, four birds: to be given over to the khādā dūn!"

Here the English turkey in the guise of tarakkī does duty for the cock bird, while the correct vernacular pērā, meaning precisely the same thing, does duty for the hen.

R. C. TEMPLE.

CORRUPTIONS OF ENGLISH — HANGLING.

My kitchen lately required some repairs to the roof, and as these were being delayed I made some enquiries from the cook, and received the following reply:— kuchh nahī hād; hangling abhi nahī dyād: nothing has been done; the angle-iron has not yet come.

R. C. TEMPLE.

MOTURPHA.

This now practically obsolete term still appears in the annual budget for the Andaman Islands. E. g., in the Revenue items of the Estimate for the year 1900-01 is:— "Moturpha (house-tax) collections." The old moturpha, moturfa, of the Madras Revenue was not a tax on houses but on professions and trades. It was abolished finally quite thirty years ago. The vernacular word is muhitarasa: Ar. hirfa, a handicraft.

R. C. TEMPLE.

BOGUS ANGLO-INDIANISMS.

In Mr. Pringle’s notes to the Madras Consultations for 1881, p. 64, occur the following remarks:— "Grall. (general) The clerical mark of abbreviation which in the manuscript crosses the duplicated l seems to have misled the Editor of Notes and Extracts, Vol. II., on pages 16, 22, 44, 56 and 62 of which the bogus word gratt will be found." This note is made à propos the entry on p. 1 of the Consultations:— "At a Consultation, the Journal of the Grall Book of Accotts: passed." The word General or abbreviated Grall meant usually a "general letter." Thus: on p. 10 we find "At a Consultation, the Grall: letter to the Company read, some additions made and signed." On p. 39: — "At a Consultation, the several books of accounts and registers for July and Gen² to Surat and the Honble Comp² were read and passed." On p. 41: — "A Gen² rec⁶ from Metchp⁴."

I have since come across another good instance of the manufacture of bogus words. This time in MS., clearly through the ignorance or carelessness of the clerk employed in copying. In a MS. Account of the Andaman Islands 1793, by Lieut. Stokoe (India Office, E. I. C., Home Series, Miscell. 388), there occurs this somewhat remarkable passage: — "The only quadrupeds we have seen are Hogs, Rats and the Johnnuemon: the two former commit constant depredations in our garden and granary: the Guinna, a four-footed Animal of the Lizard Tribes, destroys our Poultry, etc."

Here the抄ist has misread and mistranscribed the original writer’s Johnnuemon and turned it into Johnnuemon and also the writer’s Guiana, a common contemporary form of Iguana, and made it into Guinna.

R. C. TEMPLE.

TARRYAR.

In the existing Madrasí village the talári or tāliyary has a fixed position. He is the head village watchman whose duty it is to detect offences, guide travellers and so on. He is always a Pariah. In the revenue administration of the province he is also the village peon and assists the village headman in collecting the revenue officially.

1880. — The Peons and Tarryars sent in quest of two soldiers who had deserted from the garrison returned answer that they could not light of them, whereupon the peons were turned out of service, but upon Verona’s intercession taken in again and fined each a month’s pay and to repay the money paid them for Battie, also the Pedda Naigu was fined in like manner for his Tarryars [the pedda naigu would be the village headman]. — Mad. Consult. in Notes and Extracts, p. 3.

NEW RESEARCHES INTO THE COMPOSITION AND EXEGESIS OF THE QUR'AN.

BY HARTWIG HIRSCHFELD, PH.D., M.R.A.S.

(Continued from p. 232.)

CHAPTER X.

Political Speeches.

CONSEQUENCES of the battle of Badr — Regulations on the distribution of the booty — Revelations on the events of the period — Charges against Jews and Christians — Battle of Uhud — Disposition of conquered property forms an important precedent — Revelations on the Event — Composition of Sūra iv.

The defeat of the Qureish forces at Badr was not only a personal triumph for Muhammed, but also of the greatest importance for the further development of the Moslem Commonwealth. Muhammed’s position was improved in every way, yet he did not, as might have been anticipated, break forth into hymns of thanksgiving, or even deliver a triumphal address. It is true that he immediately attributed the victory to Allāh, but it is characteristic that his first address dealt prosaically with the distribution of the spoils. This was, however, due to the force of circumstances, as many believers were thus relieved from extreme poverty and repaid for the sacrifices they had made for the faith before the Hijra. The expedition had been undertaken with a view to acquire wealth, and this having been achieved, other thoughts were, for the moment, banished from the minds of the victors. This is significant for the condition of Islam at that juncture, as it proved that everything was considered lawful which helped to injure or frighten the enemies of the Prophet.

On the other hand it must be admitted that the financial side of the matter had to be settled at once, and perhaps Muhammed did not act entirely in accordance with his own inclinations when taking this in hand first. Many of the conquerors cared much more for a large share in the spoil than for the glory of the faith. Quarrels seemed inevitable. From the opening words of the first speech dealing with the affair, we gather that questions on the subject of the distribution had actually been addressed to Muhammed, who alludes to them in the following words (Sūra viii. 1а): “They ask thee about the spoil; say: the spoils are Allāh’s and His Messenger’s.”

This was a most important decision to make. If the spoils remained the property of “Allāh and His Prophet,” the latter was free to dispose of them according to his own judgment, and to grant rewards to such persons as he thought proper. The decree was exceedingly statesmanlike, as it not only prevented quarrels, but also created a precedent for lines of conduct in future cases of conquest by Moslems of movable or landed property. Thus the consequences of the battle of Badr form an important factor in the development of Muhammedan law of property.

The chief cause of the Qureish defeat was the lack of discipline in their army. This seems to have been noticed by Muhammed, who lost no time in calling the attention of the Believers to the duty of strict obedience to Allāh and His Messenger (v. 1а-3). He could not refrain from remarking on those Medinians who, in spite of their faith, had refused to join the expedition (v. 5), and blamed those also who were satisfied with making a raid against a caravan, whilst endeavouring to escape a meeting with its armed escort. Such timidity was all the more unexpected, as Allāh had promised to assist the believing corps with a thousand angels (v. 9) to cast dread in the hearts of the infidels (vv. 10-12). At a critical moment during the battle, when Muhammed’s sharp eyes detected that the enemy was

---

56 See L. I. p. 476. — Muhammed chose the expression ُكَلُّ (pl. of كْلَلِ) on purpose. The Commentators explain it as a grant from Allāh (مَثْعَبَةٌ مِّنَ اللَّهِ وَكْلَلِ), see Al Bīdhwī.

58 Wellhausen, Mohammed in Medina (Al Wājidi), p. 77, incorrect.
on the point of retreating, he took up a handful of sand, and threw it at them. The victory must have seemed a real miracle to those who witnessed it, and one of Muhammad's dearest wishes was thus fulfilled. He had been favoured with a miracle! Muhammad had no desire to pass for a great general, and was better served by ascribing the victory to Allah. The handful of gravel which he had thrown at the enemy would not have decided the skirmish "had Allah not shown" (v. 17). It is not difficult to perceive that the superstitions of Meccans, discouraged by having lost many of their leaders in single combat, turned their backs on what they feared to be witchcraft. They found themselves once more opposed to the man who, a few years previously, could be insulted with impunity, but who now commanded a well-disciplined army (vv. 15-26).

It is but natural that after such a miraculous turn of events Muhammad recalled to his mind the humble and perilous position he and his friends were in before the emigration to Medina. He now took an opportunity of admonishing believers to be grateful to Allah, and faithful to His Apostle (v. 26-27). One of his most dangerous enemies, Al Najr b. Al Harith, who had repeatedly ridiculed his tales by imitating him, had been taken prisoner. I believe it was for his and his fellow-captive Oqba b. Moot's special benefit that Muhammad revealed vv. 30-31: "And when the infidels were crafty with thee to detach thee a prisoner, or to kill thee, or to drive thee forth, they were crafty but Allah was crafty too, and Allah is the best of the crafty. And when our Signs were rehearsed to them, they said: We have heard it already; if it pleased us, we could tell the like, verily these are nothing but old folks' tales." — The fate that awaited the two prisoners seems to be predicted in v. 35: "Now taste the punishment for your disbelief." They were executed during the return to Medina.

The next piece (v. 42-46) is the fragment of an address also on the topic of the battle. His first regulation with regard to the spoil Muhammad now amended, so that in future one fifth should be assigned to the church. The statement that Allah had shown the Prophet in a dream before the battle the number of the enemies smaller as it was in reality, was evidently an afterthought. Another speech devoted to the same subject draws lessons for the guidance of believers on future occasions (vv. 47-49), and warns the "hypocrites" (v. 51), the Jews, and the Meccan army, which Muhammad very effectually compared to Pharaoh and his host (vv. 52-56).

Then follows a short address (vv. 57-70) which, I believe, does not refer to the battle of Badr, but to the expedition against the Banu Qainqa. These were among the signatories of the treaty which was concluded between Muhammad on one side, and the pagan inhabitants of Medina and the Jews on the other, but a pretext was easily found for charging a section of the latter with having violated the compact (vv. 57-58). The war preparations alluded to in v. 62 cannot refer to the Qoreish, because they were to be made against "unknown infidels," and such who endeavoured to betray the Prophet (v. 64). The enemies Muhammad had in mind were only to be found in Medina in the ranks of the Jews, and their Arabs who, from political motives, assumed outwardly a friendly attitude towards Islam. The stout resistance the Jews offered to all his endeavours to convert them is portrayed in the same verse: "Didst thou spend all that is on earth, thou couldst not reconcile their hearts, etc." The invitation to the Moslem warriors to fight the Jews is then expressed in a slightly modified reproduction of Lev. xxvi, 8 (v. 67). When the Banu Qainqa had surrendered, Muhammad intended to have them all massacred (v. 68), but yielding to the demand of Allah...
Allah b. Ubeyy, the recognised chief of the Medinan Arabs, whom he did not care to provoke unnecessarily, he merely expelled the vanquished tribe (v. 69), and confiscated their property for the benefit of those who had taken part in the raid (v. 70).

The proceedings which Muhammad had taken against the Banū Qainqāwā were so plainly illegal, that he felt himself compelled to justify them by means of a divine revelation. Their punishment, he explained, was due solely to their treacherous conduct (vv. 71-72). Having thus weakened the hostile forces, the Prophet now took an opportunity of surveying the general situation in Medina, and of criticising the fraternal alliance which had, at his own instigation, been formed immediately after entering Medina between the believing inhabitants of the town and his fellow-fugitives. For some reason, probably in order to be able to deal with the Jews as he thought best, he suddenly dissolved their alliances (v. 74). He apparently felt strong enough also to make a slight distinction between the Medinan citizens and his aristocratic Meccan compatriots.  

The first portion of Sūra iii. must have been revealed soon after Sūra viii. The former statement, that Allāh had shown Muhammad in a dream the enemy to be smaller in number, is now changed into a "Sign" that the Muslim army appeared to the infidels twice its strength. I believe also that a large portion of this sūra was delivered chiefly for the benefit of the Jews, or, at least, those Jews whom Muhammad hoped to win through persuasion. I would, therefore, date it prior to the expulsion of the Banū Qainqāwā. The leading ideas of the address seem to be that Islam so nearly approached Judaism that the Jews should feel no scruples in recognising Muhammad as a true prophet. The conspicuous accumulation of formulas of Unification in a small compass (vv. 1, 4, 16 bis) with Huwa instead of Allāh, and with a supplement so familiar to Jewish ears as "the Living and Self-subsistent" is anything but accidental. In the same speech Muhammad mentions the Tūrah (vv. 2, 43, 44, 58) and the Gospel (vv. 2, 43, 58) for the first time. The allusion to Pharaoh and his nation, standing as they do as the prototypes of wicked people, was calculated to resound nowhere more powerfully than in the minds of the Jews. When Muhammad says (v. 17) that in the eyes of Allāh the Dīn is Islam, "and those to whom the Book was given disagreed not until that there was given to them knowledge," it is clear that he refers to the Rabbinical interpretation of the Law, on the basis of which the Jews used to argue with him (v. 18). The verses 25-26 are rather out of place here, but they are so closely related to Jewish formulas of prayer, that it is not improbable that Muhammad inserted them in this speech intentionally. Whether the censure of the friendly intercourse between Muslims and Jews (v. 27) was originally inserted here, it is difficult to say, as it would have been more in place at the beginning of the open hostilities against the latter.

What was Muhammad's purpose in introducing the stories of the births of John and Jesus in a speech not addressed to Christians (vv. 30-43)? I believe his intention was the same as in the previous sermon, viz., to show that in vital religious questions he stood on the same ground as the Jews, but had authority to "abrogate" part of what had been made unlawful for them (v. 44). "Jesus was a created being like Adam, whilst there is no God beside Allāh." The plenastic form of v. 57: "That we (Muhammad and the Jews) serve no other God than Allāh, and associate no one with Him," makes it manifest that Muhammad, when it suited him, was not loth to side with the Jews against Christians. Later on he also found an opportunity of doing the opposite.

---

66 The verse is regarded as abrogating the preceding one. Nöldeke refers it to the spoils of the battle of Badr, but I cannot share his opinion.

67 Nöldeke denies that v. 73 is abrogated by v. 76; cf. ix. 101.

68 Refers either to viii. 9, 12 or to 45-46. See also al-Fātīma (iii. 2 and vii. 43); iii. 23 af. viii. 51; iii. 47 af. viii. 50.

69 V. 1 af. ii. 256. See also al-Ṭābi'ī alone xl. 67.

70 This again v. 55.

71 See Ch. III. at the end.

72 From v. 23 it appears that they answered Muhammad's hell fire threats with the Talmudical symbolism that the sojourn of the wicked in Gehenna only lasts twelve months; see R'lah Hāsh, fol. 17.  

73 See xxxvii. 34.
On the basis of the strict monothestic view common to Moslems and Jews he invites the latter to return to pure Abrahamism (v. 58), which was identical neither with [Rabbinic] Judaism nor with Christianity (v. 60). The purport of verse 65 is not quite clear to me, although the Commentators try to explain it. Whom should the Jews style “Believers” but their own, people? The Commentators naturally think of the Moslems, and Muhammed may perhaps have meant that also, but the sentence seems to be the result of a misunderstanding on his part. It is not likely that one section of Jews should have encouraged another to profess the Islamic cult in the morning and to abjure it again in the evening.

“Those who barter away the covenant of Allâh and His faith for a small price” (v. 71) is one of the derogatory appellations given to the Jews by the Prophet. The threat that the persons thus described “shall have no share in the final world”10 can only have been calculated to impress Jewish hearers, since the phrase is but the Muhammedan adaptation of a well known Rabbinical one. What Muhammed really aimed at in those remarks was an onslaught against the authority of the Rabbinical code, which he represents as claiming equal authority with the “Book.” Some Jews, he says, pervert the Book in order to reckon to it what does not belong to it (v. 72). Whether, or not, Muhammed was convinced of this he at any rate wished to convey to the minds of Moslems, that the Jewish Rabbis, by making laws,79 placed themselves on a level with God (v. 73), and desired to be worshipped. Allâh, however, never commanded men to take angels and prophets as Lords (v. 74). The point of this criticism lies in the terms Rabbanîyyûn and arbâbân which are both to be interpreted as indicating the supremacy of Rabbinism.

It is not difficult to see how Muhammed imbibed the notion that Jews paid their Rabbis greater homage than was due to mortals. Not only was he aware that they performed many rites solely on Rabbinical authority, but he seems to have seen them pray at the supposed graves of Biblical prophets and pious men in general. In a tradition handed down by Al Bokhârî,80 Muhammed is said to have remarked that Allâh had cursed the Jews because they used the graves of their prophets as places of worship. If this be true, he could not have foreseen to what extent such a custom was destined to prevail in the Moslem world.

Some scholars regard v. 79 as very late,77 but there is no reason to place it much later than v. 17. Since the words are addressed to the Jews (see v. 81), their number and influence in Medina must still have been great enough to make it worth the Prophet’s while to try and convert them (v. 85).78 Verse 87 is supposed to have been the reply to a query addressed to Muhammed by some Jews. The authenticity of this question, with which I have dealt elsewhere,83 is very doubtful. It is, therefore, not quite clear what Muhammed meant by this remark, except that he wished to advise his intimate acquaintances with the Pentateuch, and the passages in Gen. ix. 4 and xxxii. 33 in particular. By bringing one of their scrolls and reciting the verses in question they could convince themselves of the truth of his allegation. The next verse, which concludes the address, brands again post-Biblical prohibitions as “forging a lie against Allâh.”

At about the same time as the first half of Sûra iii., Sûra xlvi. must have been revealed. V. 2, however, is out of connection with the verses 1 and 3, and altogether out of place here.80 The compilers did not, perhaps, care to commence a sûra with a condemnation of the wicked. The victories gained hitherto are made the basis for admonitions and a censure of the Jews.81 In v. 21 Muhammed

10 A distinct allusion to the Jewish oral law is to be found in Tawdûsir (Geiger, p. 51), see also J. Q. R. Vol. XIII., p. 223.
77 Nöldeke, p. 141. His remark, that Muhammed regarded “true Christians” as believers, is incompatible with v. 52.
78 Cf. Numb. xxxii. 18, and Al Bokhârî.
80 Cf. v. 3 refers to the words “those to whom has been given the knowledge” to Ibn Abbas, who cannot be meant by this verse.
settled the formula of the Dikr finally, and gave it for the first time with the introductory command: "Know." It is possibly modelled on verses like Exod. viii. 6, 18, ix. 14, or Deut. vi. 4. Verse 22 in so far differs from the similar one S. ii. 21, that in the former it is the Moslems, who expect a special revelation with regard to the oppression of the Jews. From this we may gather, that the verse was revealed after the expulsion of the Banu Qainuqais. It shows distinctly that Muhammad was resolved to exterminate all the Jews as soon as circumstances permitted. That the Jews were meant, is to be seen from the expression "those in whose heart there is sickness." In v. 23 we see the war against the remaining Jewish tribes decided upon, and their only escape from slaughter-speedy conversion to Islam. Their obstinacy is, then, described (vv. 25-29) in the usual phrases. V. 32 refers to certain emblems (probably connected with the Jewish ritual). The term latni-lkwacli probably alludes to the chanting of prayers and portions of the Pentateuch and Prophets read during service. The prayer-books of the Jews in Arabic-speaking countries show the word luka at the headings of Piyyutim (hymns), in order to intimate the tunes to which they are to be sung. The Jewish custom of chanting prayers is as old as it is universal, and there is no reason to doubt that it also existed in Arabia at the time of Muhammad. The words in question may also refer to a habit of the Medinan Jews of intermixing the vernacular with Hebrew words, especially in discussions on matters religious. Those Moslems, Muhammad continues, who might hesitate to take up arms against their former allies, are warned that their first duty is to obey Allah and His Messenger (v. 35). Since success is certain (v. 36), there is no reason for any Moslem to be behind hand in contributing towards the cost of the expedition against the Jews (vv. 39-40).

The defeat which the Moslem army suffered at Uhud in the third year after the Hijra, caused a momentary diversion in the constant denunciations of the Jews who, in their turn, were not loth to prejudice Medinians, Moslems and pagans alike, against Muhammad. The latter, seeing that his prestige was at stake, took pains to restore the same in a speech which fills out the rest of Sura iii. He warned Believers against intimate relations with the enemies of Islam (v. 114), and admonished them not to lose their faith in the revelations, which had assured them of final victory (v. 115). The misfortune over which their enemies rejoiced (v. 116) was chiefly due to the cowardice of two companies of the Moslem army (v. 118). In order to raise the spirits of his friends Muhammad reminded them again of the victory of Badr, even introducing this name into the revelations in questions (v. 119). The thousand angels who had assisted the Moslems on that occasion (S. viii. 9) is in this speech trebled (v. 120), but they would in the next emergency increase to five thousand (v. 121). Some of the following verses insinuate that the disaster may have been a punishment for "usury doubly doubled " exercised by Moslems (v. 125), and those who felt themselves guilty of this or other crimes (v. 129), must at once invoke Allah's forgiveness (v. 127), and give alms (v. 128). Accidents had happened before (v. 131). Moslems were, therefore, not to give way to grief, and would be victorious in the end (v. 133).

The next group of verses (134-137) reminds Moslems to be always as ready to die for the cause of Islam as they had been once before; and that no soul died save by permission of Allah, and at its appointed time (v. 139). Before the last mentioned verse one is interpolated (v. 138) which has caused much comment among Moslem theologians. The verse, which will occupy our attention later on, is nothing but a copy of S. v. 79a, and not only disturbs the connection between vv. 137-139, but forms a complete contrast to v. 140, which speaks of prophets who did not show themselves weak even in the face of myriads of enemies. The reproach of cowardice is then repeated (v. 145). In order to make similar faint-heartedness impossible for the future, Muhammad lays it down here as a principle that, had they all been in their houses, those who were fated to die, had gone forth to meet

82 See Ch. II.
83 Palmer read |لذ تم كفرو| which is not in the text; he also translated "a decisive sora," but the text has |لذ تم كفرو|.

their doom (v. 148). This verse gives manifest evidence that any fatalistic notions occurring in the Qurān are not the result of theological speculations, but were grown on purely political soil. It was necessary to render another defeat impossible, because Islam could not afford it. The demoralisation after Ujānd was so great that the Moslems made Muḥammad responsible, and charged him with having deceived his friends. He was obliged to defend himself against this accusation (v. 155), but reminded his accusers that Allāh had sent a messenger to them out of their own midst (v. 158), and that their misfortune was their own fault. He described the situation very accurately in saying that “on that day they were far nigher to disbelief than to faith” (v. 160), but those who had suffered martyrdom, were not dead but alive, and enjoyed the pleasures of paradise by the grace of Allāh (vv. 163-168).

In close connection with this speech stands the next which is less severe and rather more hopeful in tone. To turn the general attention from the cheerless subject of the defeat, he makes use of a well worn device in launching another rebuke against the Hypocrites and Jews. In answer to the Prophet’s request for funds to continue the war against the Meccans, they asked sneeringly whether Allāh was poor (v. 177). The question originated, according to tradition, with Fīhān, a member of the expelled Banū Qainūqā, and is evidently only a reflex of Nūmb. xi. 23. Muḥammad, however, taking the sarcasm seriously, placed this alleged blasphemy on a par with the old reproach that the Jews had “killed their prophets undeservingly” (ibid.). Not less sinful, he adds, is the assertion that Allāh had covenanted with them not to believe in a prophet until he had brought a sacrifice which the fire devoured (v. 178). A remark of this kind, whether spoken in jest or earnest, was not founded on any condition laid down in the Old Testament, but entails an allusion to such passages as Jud. vii. 21, xiii. 20; 1 K. xvii. 31. Probably this fire (al-nār) is purposely contrasted in one of the following verses with the illuminating (al-munṣīr) Book (v. 181) and those who are removed from hell fire and brought into paradise (v. 182). Further warnings addressed to the scoffing Jews (vv. 183-186), a fervent prayer, and admonitions to bear the situation patiently, conclude the sūra.

A more powerful lever than speeches was now applied to the drooping spirits of the Moslems by the expulsion of the second Jewish tribe, the Banū Al Nādir, after Muḥammad had caused their chief, Kāb b. Aṣhār, to be assassinated. The Moslem bards hastened to celebrate these two events in various songs, and Muḥammad himself was so rejoiced, that he composed a series of Hallelujāh-Psalms. It is as such — and as imitations of Biblical ones, and Pes. cxvii.-cl. in particular — that I regard the Sūras, iv. 22, 93 lxix., lxixii., lxiv., all of which begin with the words: Praise Allāh whatever is in the heavens and in the earth.” It is rather difficult to fix the order of succession of these five sūras, but this is of little account, as they were all composed at this period. Their poetic element is almost entirely confined to the superscription mentioned, the rest being prose, and we read the demand to give alms from the conquered treasuries (iv. 7). The victory alluded to in v. 10 is no other than the expulsion of the B. Al Nādir. The reverse previously sustained was still fresh enough in his mind to cause him to warn his friends not to exaggerate their joy (v. 22-23). The verses 24-28 refer to Muḥammad’s failure to get the Jews to contribute towards the fine to be paid for the slaying of two men of the Banū Āmīr. The phrase (v. 24) “those who are niggardly, and bid men be niggardly” runs parallel to Abūtī, v. 13, though only by accident. The verses seem to have been placed here because they form a contrast to several of the preceding ones (e. g., 10, 11, 17), in which the topic of giving alms is discussed.

Sūra lxix. begins with a reference to the expulsion of the Banū Al Nādir. The verses 2 and 3 look like an attempt to justify that act by stating that Allāh was responsible for it. If the banishment of those Jews had not been pre-ordained, their fate might have been much worse. So here Muḥammad

92 Nöldeke, p. 164 r., rightly does not refer the sūra to the conquest of Mecca.
93 iii. 147, lxiv. 11.
makes use again of the fatalistic principle, but this time to exculpate an act of open violence. More than this, he had caused the palm groves of the Jews to be cut down and burned. This appeared to them a flagrant violation of the law in Deut. xx. 19, and seems also to have been condemned by public opinion. Muhammad was so conscious of the outrage he had committed, that he found it necessary to shelter those who had executed his will behind the command of Allah (v. 5).

The consequences of this bloodless victory were even greater for the economy of the future State than the preceding ones. The estate of the Banu Al Naif had not been taken by "pressing forward with horse and camel, but Allah authorised His apostle to give it to whom he pleased" (v. 6). In other words, whatever spoil was not taken in open warfare, but by surrender, became the property of Allah and His Prophet. This furnished a very important precedent for future enlargement of Moslem territory by pact or cession. The new lands were the property of the realm. The old inhabitants were left unmolested, but their produce filled the coffers of the state.

This new manner of distributing the spoil placed at Muhammad's immediate disposal large means to reward the poor and lowly, who had cast in their lot with him in Mocca. He declared that they had the first claim to a share in the booty (v. 8), in which the Ansar were not to participate at all (v. 9). It is but natural that Muhammad now taunted the Hypocrites, who, after having encouraged the Jews to offer resistance, had left them in the lurch, so that they had to retire to their castles, and finally surrender (vv. 11-14). Such conduct subjected them to some very unflattering comparisons.

The middle part of the sura being somewhat poor for a Hallelujah-Psalm, Muhammad endeavoured to make at least the end as thrilling as the commencement. Now verse 21 shows clearly that the author had Ps. cxiv. in his mind which, though not being a Hallelujah-Psalm itself, belongs to a group of Psalms which are known in the Mishnah under the name of Halilat, and which occupy an important place in the prayer-book. Through the pathos of verse 21 a faint regret is observable that the Qur'an was not revealed upon a mountain which "would have humbled itself and been split for fear of Allah." Lest, however, any man should think that such a sight had ever presented itself to the eyes of man, Muhammad adds that he had only spoken in metaphor. Very impressive appear the two tawhid and the profusion of divine epithets, many of which are borrowed from Jewish terminology, whilst the "Hallelujah" repeated in the last verse, leaves no doubt that the whole sura forms a continuous sermon.

Sura lxi. begins with a severe reprimand addressed to Believers "who say what they do not do," a thing which is very hateful to Allah. The purport of this reproach, repeated twice, is not quite clear, although the Commentators connect it with a declaration on the part of the Moslems, that they were prepared to sacrifice both wealth and life for the sake of the faith. It appears, however, that Muhammad again alluded to the spiritless conduct of a part of the Moslem army at Uhud. At any rate the recommendation given in v. 4, viz., to fight in future "in closed ranks, as though they were a compact building," throws some light on the meaning of the two preceding verses. The chief function of v. 5 is to introduce v. 6, memorable on account of the new title Ahmad, under which Muhammad states that he was announced by Jesus. I take this name as an attempt at an Arabic rendering of Messias, and to find that formation of the root HMD, which would most appropriately express the character under which Muhammad wished to be known to the following generations. From this we may conclude that he was not called Muhammad, at least not till several years after the Hijra. V. 7 refers again to the Jews who try to extinguish "the light of Allah with their mouth." The certainty Muhammad expresses in the verses 9 and 13,

---

56 See Bokhari, iii. 13.
57 Sprenger, III. p. 104, regards the first portion of v. 7 as interpolated. Muslim authorities declare the verse to refer to other places than the territory of the B. Al Naif.

61 See Cli. VIII.
62 See also the Halfa legend in Ch. II.
that Islam would be victorious in the end "in spite of the objection of the infidels," proves the address to have been spoken after the banishment of the Banū Al Naḍīr, when Muhammad was entitled to hope that, at least in Medina, no one would be able to withstand his rule. V. 14, being a re-echo of S. iii. 45, stands detached, and seems to have been placed at the end of this sūra on account of v. 6.

It is not difficult to recognise that the beginning of Sūra lxii. is closely connected with the conclusion of Sūra lix. The strenuous efforts Muhammad had to make, in order to find material for the psalmody is plainly visible. The sūra consists of two parts of unequal length, which are not in connection with each other. The first portion contains another of the well worn onslaughts against the remaining Jews, as bearers of the Rabbinical law in the shape of an insulting comparison. The verses 6 and 7 are a repetition of S. ii. 88. The latter portion of the sūra, which discussed the duties of the "Day of Congregation," is said to owe its origin to the indignation of the Prophet who saw a caravan, led by unbelieving Medinian citizens, enter the city with great noise on Friday, and cause great disturbance among the worshippers.

The descriptive element in the first portion of Sūra lxiv. is not indicative of Meccan origin, but of a feeble effort to revive the spark of enthusiasm proper for a psalm. The reminiscences of the defeat of Uḥd (v. 11) and the double admonition to be obedient (vv. 12 and 16) leave no doubt as to the place to which the sūra belongs.

It appears that Sūra lv. originally only consisted of the pieces vv. 1-45, 126-129 and 175--177 which treat of legal matters in connection with the rights of women and orphans, and the regulations of wills and bequests. The promulgation of these regulations could not have been undertaken without very careful preparation. It was dictated by the necessity for arranging the rights and duties of a growing community, many members of which had suddenly become wealthy, and which, owing to the various battles, numbered many widows and orphans, who had to be provided for by the commonwealth in whose service their natural supporters had lost their lives. It is therefore probable that the revelations in question cannot be dated earlier than the year five.

Between the portions of the sūra under consideration the compilers have inserted a mass of revelations mostly belonging to the same period for which they could not find more suitable places. To this category belong the ritual precepts in v. 46, being reflexes of Levit. x. 9, xv. 16-18 increased by Rabbinical interpretations. Then follows a vigorous attack against the Jews (vv. 47-72), which appears like an attempt at stamping the banishment of the Banū Al Naḍīr as a religious duty. Muhammad endeavoured to demonstrate that the Jews had so far deviated from the teachings of the Tābūh by altering the same (vv. 48-49), that they were no better than heathens. This, he said, might be deduced from the nearly divine homage they paid to their sages. The point is of importance. "Behold," he says (v. 50), "how they devise a lie against Allāh, and that is manifest sin enough (54). Do ye not see those to whom a portion of the Book was given believe in the Jūbāt and Tābūh, and say to the infidels: these are better guided in the way than those who believe [in Allāh and His messenger] (55). These are those whom Allāh has cursed, and whom Allāh has cursed shall find no helper." — Nöldeke ascribes the words placed in the mouth of the people accused in this verse to some of the expelled Jews who betook themselves to Mecca, and tried to stir the Qorish up to renew their hostilities against Muhammad. This is, however, utterly improbable. Whence did Muhammad gain the knowledge that they had done so? "The infidels" of v. 54 are none others than the Jews.

---

3 See Ch. VIII.
4 See Beisâbi and Bokh. i. 224 according to Abu Hurere. It is alleged that Kāb b. Lāsīy gave Friday the name 'Arbâh, because the people used to congregate on that day. This tradition, which is given on uncertain authority, deserves no credit. Arbâh or Arba'ah is, in the Talmud, a name of Friday (Jerush. Terumah, viii. 10). It almost appears that Muhammad at first intended to use this term for Friday, but discarded it as he did with 'Askūrā. Later tradition, then, gave the word a pagan origin.
5 See Al Beisâbi.
6 See Beisâbi and Bokh. i. 226 and 175.
7 See Geiger, p. 88; Nöldeke, p. 147, is not convincing.

10 See lii. 22, iii. 147.
11 Geiger, p. 56, not quite correct.
12 Cf. ii. 67, 95.
13 Nöldeke, p. 149.
as a whole. The practice of the Rabbinical prescriptions, which went far beyond the bare laws of the Pentateuch, is termed by Muhammed Tāghīt, in the Arabic meaning of this word. Exactly the same idea is again expressed in v. 63, viz., that "they (the Jews) wish to refer their judgment to Tāghīt," i.e., they follow the decisions of the latter rather than that of the Toraḥ. The word Jibt (which does not occur again) has evidently a similar meaning, and belongs to those terms which Muhammed misunderstood from his notes, and distorted beyond recognition.— It is unfortunately not clear whether Muhammed, at any time, met Jews who entertained ideas propagated later on by the Karaites, but as a believer in the Toraḥ he is so unmistakably Karaitic, that this is not improbable.

The verses 73-86 were revealed shortly after the catastrophe at Uhud. Again Muhammed reminded Moslems that the disaster (v. 74) should by no means discourage them (v. 78, 86), since death could occur at any time, but for this misfortune they had only themselves to blame (v. 81). The pieces 87-95 and Sūrah v. 56-63 show Muhammed in possession of considerable power (v. 91, 96-105), and seem, therefore, somewhat later, viz., dating from the time of the siege of the Banū Koreīza (end of A. 4), and, according to the Commentators, the section iv. 96-105 is contemporaneous with them. The group of verses 106-115 is said to owe its origin to a theft committed by a Medinan, who eventually fled to Mecca. If this be true, the date of the revelation in question can be approximately fixed as having taken place after the conversion of the poet Hassān b. Thābit (A. H. 4), who in some verses alludes to this incident as well as to Muhammed's prophetic faculties. Greater difficulties are offered by the verses 116-125. It is, however, hardly justifiable to regard them with Nöldeke as Meccan, because the "People of the Book" are mentioned in them (v. 122), without disparaging epithet or as "friends." The verses 130-133 are of quite uncertain date, and evidently placed here on account of v. 125. Just as uncertain is the date of v. 134, unless, as Nöldeke suggests, it also refers to the affair of the theft, since the friends of the culprit gave false evidence in his favour. V. 139 forms the repetition of an old Meccan revelation, and is now revealed evidently for a similar reason. The words that "Allah deceives the Hypocrites" (v. 141) are, to say the least, drastic. The sermon to which this remark belongs only goes as far as v. 145. The verses that follow up to v. 151 are quite uncertain as to date, although v. 147 might be brought into connection with the adventure of Aīsā, which took place in the year 4. The furious onslaught against the Jews (vv. 152-168) must be somewhat older, because it contains many reminiscences of similar orations of the first year. The same holds good for the remarks applied to the Christians (vv. 169-173). Verse 174 stands detached, and is of controversial character. Some Commentators regard it as the last of the whole Qurān.

(To be continued.)

THE SPRING MYTH OF THE KESAR SAGA.

BY A. H. FRANCKE.

Translated from the Mémoires de la Société Finno-Ougrienne, No. XV, 1900, by George R. Heath.

Preface.

In the following pages one of the Keser Sagas, which are commonly related by the people throughout Western Tibet, is introduced to the public, and a service thereby rendered to science, which will perhaps be of no insignifcant worth. Various travellers and Tibetan explorers have

often reported that so-called Kesar Sagas enjoy great popularity among the Tibetan people; but no one, as far as I know, has told us what the subject of these Sagas is. Even Waddell, who mentions a mythical King Kesar several times in his epoch-making book, *The Buddhism of Tibet*, can give no satisfactory information about his person and significance.

These pages will, I hope, prove the high scientific value of the Kesar Sagas, by shewing that they are one of the chief sources from which knowledge of the pre-Buddhist religion of Tibet may be drawn.²

An attempt has often been made to learn something about Kesar by setting about the translation of the long famous epics which bear this title. But up to the present no one has produced a complete translation. Such a work might well occupy a whole lifetime. If a translation of the whole should in the end be made, it would be of infinite value. Partial translations are not necessarily so, as the Buddhistic cast, which may be clearly discerned in the epic, renders the recognition of the mythological features unusually difficult. From a complete translation of the epic, a confirmation of the mythological ideas contained in the popular sagas may be expected. Until we have one, we are dependent on the sagas alone. That is not, however, to be regretted at the commencement; for the popular sagas are short, clear and free from Buddhistic influences.

The study of the *Spring Myth* leads quite naturally to the desire of becoming acquainted with the corresponding *Winter Myth*. I have now succeeded in discovering this also, and I hope soon to submit it in a German translation.

It has been already mentioned by others that the sagas treated here exist among the people in oral form. In this case, however, the question is not one of a free narration, which runs the risk of being altered in passing from mouth to mouth; but rather of matter learnt by heart, at the recitation of which (according to the respective versions) scarcely a word is altered. A girl of about sixteen years of age, in whose family the stories of Kesar are held in high esteem, related the following sagas slowly, so that the master of the Mission School she attended was enabled, under my supervision, to take them down word for word. This *First Manuscript* is the foundation of the accompanying Tibetan text almost throughout. In the comparison and confirmation of the text, as well as in the addition of some new features, a *Second Manuscript* has also been of great service. This was prepared for me by another Ladakhi who is able to write, and who went to the *Bedas* (a caste of musicians and popular entertainers), and wrote down literally what they related. The two manuscripts deviate a little from one another both in the form of the narrative and in the wording of the songs, but agree perfectly in everything essential.

Something remains to be said on the poetical form of the songs, which are interspersed in the narrative. We find in them different kinds of rhythm as well as of rhyme. The rhythms are almost always formed of trochees, which corresponds to the monosyllabic character of the language. Dactyls, however, also occur, especially when a suffix is added to a disyllabic compound. The *sentence-rhyme peculiar to Tibet* is the one which occurs in almost all the songs (i.e., two or three sentences are formed in exactly the same manner, but different words

² There are sources of a very different character, from which Dr. Lanfer is drawing his knowledge of the Pre-Buddhist Religion of Tibet. I have had great pleasure in studying the following of his writings: Klu' abaus baisnapo, *Memoires de la Societe Pense-Geigne*, No. XI., 1898. — *Uber ein tibetisches Geschichtswerk der Bope*, *Tourn-Poo*, Serie II., Vol. II., No. 1. — *Deutschasien der Kas*. *Akademie der Wissenschaften*, Wien, Phil. Hist. Classe, Band XLVI., No. VII. — Ein Bühndicht der Bope. All these publications show a very far advanced type of the Pre-Buddhist Religion; they show especially in the long lists of *klu' or xabnas*, what a body of priests has been able to make of it. From the Kesar Myths we may learn, on the other hand, what this religion has been to the ordinary man. It would certainly not be right to consider the Kesar Sagas as mere fairy-tales, told for the amusement of the people. This is shown most plainly by a comparison with the Ladakhi Wedding Ritual and the popular Bope Hymnal (*f'ing gis*), which run on the same lines as the Kesar Sagas and are both of a distinctly religious cast.
are placed in the corresponding positions). I have tried in the translation to imitate the sentence-rhyme as far as possible. With regard to the rhythms I have allowed myself greater freedom.  

Finally it should be pointed out that the language of the Tibetan text is not the classical, but the Ladakhi, dialect.

An Abridged Episode from the Kesar Saga.  
Translation.

I.

The first Tale is the Tale of the Agus (heroes).

1. In the land of gLing there were once the wild Agus dPalle and Khromo and dGani. Because there was no king in the land of gLing, deep sorrow came over Agu dPalle. Agu Khromo was a bad man; he rejoiced at the unhappiness of the land. One day the wild Agus went to tend goats. 2. Then dBangpo-rgyab-bzhin also came from the upper kingdom of the gods to tend goats. All at once the black devil-bird appeared, and wanted to carry off the goats. 3. dBangpo-rgyab-bzhin changed himself into the white god-bird, and both fought. 4. The thought occurred to all the Agus:—“The black bird seems to be the devil-bird!” 5. Then Agu dPalle seized the sling, and sang this song:

6. Oh Lling, thou many-coloured sling,  
7. [My] mother spun thee in her time,  
8. [My] mother plaited thee in her time,  
9. When her child, myself, she carried.  
10. Oh come, oh come thou oblong stone,  
11. Hit sure, be there no escape!

12. So singing, he slung [the stone], and hit the black devil-bird on the wing, so that he died. 13. At this dBangpo-rgyab-bzhin rejoiced greatly, and in order to shew love to the Agus, he sang:

14. Men of gLing, kindly are ye come,  
15. dPalle, dGani, kindly are ye come,  
16. A cow and a calf will I give you a hundredfold,  
17. Foal and horse will I give you a hundredfold,  
18. A laden pack-sheep will I give you a hundredfold,  
19. Goat and kid will I give you a hundredfold,  
20. A saddled horse will I give you a hundredfold,  
21. A yak with the nose-ring will I give you a hundredfold!

22. When he had sung this song, the Agus said:—“All that is not necessary.” 23. To Agu dPalle this thought occurred:—“The King of Heaven dBangpo-rgyab-bzhin has three sons; it would be good if he sent one son to the land of gLing as king.” Therefore he asked:— 24. “O give a child as chief to the chiefless land.” When dBangpo-rgyab-bzhin heard that, he went back quickly to the upper kingdom of the gods.

II.

The second Tale is the Tale of dBangpo-rgyab-bzhin’s three sons.

1. The King of the gods, dBangpo-rgyab-bzhin, had three sons, Donldan, Donyod and Donggrub. Because their father loved them very much, he did not like to send even one

---

3 This sentence-rhyme is the same type of parallelism as has become known from Chinese popular poetry.
4 The division into nine parts is my own.
to the land of gling. 2. When therefore he came back to the upper kingdom of the gods, he ate nothing and sat there in anger. 3. Then his son Donidan brought his tea and his food, but the father ate nothing. Donidan said:

"Father!

4. Has the wolf got at the sheep?
5. Has the crow got at the breakfast?
6. Was the sling lost at the hunt?"

The father said:

7. "The wolf has not got at the sheep.
8. The crow has not got at the breakfast,
9. The sling was not lost at the hunt.

10. But thou, my son, wilt thou go as chief to the chiefless land of gling? If thou goest, I will take the tea and the food!"
11. The son said: — "I shall not go!

12. If the dog is angry, the soup is left [uneaten],
13. If the king is full of wrath, the roast is left [uneaten]!"

14. Then came the son Donyod and said: — 15. "Father, eat the food and drink the tea!"
16. The father said: — "Thou, my son, wilt thou go as chief to the chiefless land of gling?"
17. The son said: — "I shall not go!

18. If the dog is angry, the soup is left [uneaten],
19. If the king is full of wrath, the roast is left [uneaten]!"

20. Then came Dongrub, the smallest of all, and asked:

"Father!

21. Has the wolf got at the sheep?
22. Has the crow got at the breakfast?
23. Was the sling lost at the hunt?"

The father said:

24. "The wolf has not got at the sheep,
25. The crow has not got at the breakfast.
26. The sling was not lost at the hunt!

27. My son, wilt thou go as chief to the chiefless land of gling?"

28. The son said: "If I do not listen to the word of father and mother, to whose word shall I listen? I shall go!" 29. Then the father took the tea and the food. Again great sadness came over the father, and he sang:

30. [My] son Donidan, he is the heart of my thinking;
31. It is not right to tear out one's heart and to give it to another!
32. [My] son Donyod, he is the tongue of my speaking;
33. It is not right to tear out one's tongue and to give it to another!
34. [My] son Dongrub, he is the eye of my seeing;
35. It is not right to tear out one's eye and to give it to another!"

36. Then spake the father: — "Before Dongrub goes to the land of gling, all you [my] sons must have a race on horseback one day in the morning, 37. at midday play at dice,
39. So they all had a horse-race in the morning, and the youngest son Dongrub won it. 40. At midday they played at dice, and the youngest son Dongrub won. 41. In the evening they shot arrows, and the youngest son Dongrub won. 42. Then came the time when the son Dongrub was to go to the land of gLing.

III.

The third Tale is the Tale of Dongrub, who is fitted out for the land of gLing.

1. Before the son Dongrub went to the land of men, the high mother gave him a lesson, the high father gave him a lesson. Both said thus: — "Thou needest

2. A horse that always knows the way back,
3. A horse that knows how to fly high,
4. A knife to stab the wicked people,
5. A knife to stab Buddhas,
6. An arrow that always knows the way back!"
7. Then said the mother: — "O yes, it is hard for Dongrub to go to the land of men!

8. rKyangbyung-dbyerpa is certainly
9. A horse that always knows the way back,
10. A horse that knows bow to fly high.
11. The knife "Three-fingers-long" is certainly
12. A knife to stab the wicked people,
13. A knife to stab Buddhas.
14. The blue SrinYZhu is certainly
15. A bow whose arrow flies back again." This is the lesson of the high mother: —

16. "rKyangbyung-dbyerpa, the high horse,
17. And moreover SrinYZhu, the blue bow,
18. Thou wilt find at the house of Uncle brTandsin the Red,
19. Tsetsa-ngangdmar is on the pass;
20. Upon her, O Dongrub, thou wilt spring well
21. And of that, O Dongrub, thou wilt die."

22. So then the son went to fetch the horse, the knife, and the bow, and arrived before the house of brTandsin the Red. 23. There he saw the horse, whose four legs were fastened with chains. When the horse heard a man coming he sprang up. 24. Dongrub spake: — "Uncle, all hail! Give me the horse rKyangbyung-dbyerpa and the blue bow SrinYZhu! I, the son Dongrub, am going to the land of men. I have come here to greet my uncle!" 25. The uncle said: — "The horse rKyangbyung-dbyerpa is here; lead him away! the blue bow SrinYZhu is not here, but in Agu Za's hand!" 26. When he heard that, he went to Agu Za's house, leading the horse. 27. In the middle of the way was a white and a black pool. 28. As he was washing his hands in the black pool, another hand came out of the water, seized Dongrub's hand and held it fast. 29. Then said Dongrub: — "Who is it that seizes my hand?" 30. Out of the water a voice answered: — "Why art thou washing thy hands in our water?" When he heard that, Dongrub spake: — "Please, please let my hand go! I am in haste. I am going in order to become the chief of the chiefless gLing-Land and want to fetch the blue bow SrinYZhu from Agu Za." 32. Then it was said out of the water: — "As soon as thou cryest, saying, 'Agu
Za,' [the giant] will swallow thee. Therefore I tell thee this: In Agu Za's body is the knife and the bow. So take the knife in the right hand and his heart in the left. Then if thou stab his heart, he will cry, 'Come out!' 33. Then [he, she, it?] let Dongrub's hand go, and vanished in the water.

34. When Dongrub arrived at Agu Za's house, the Agu put his hand out at the window, seized Dongrub and ate him up. 35. So Dongrub sat in the body [of the Agu], and seized the knife with the right hand. In the left he took the heart, and stabbed. 36. Then Agu Za cried: — "Who is in my body? Come out!" 37. Dongrub said: — "My good Agu, am I not the son of the king of heaven, rGyabzhhin? When I am going as chief to the chiefless land of gLing and want to greet the Agu and ask him for the blue bow Srinzyhu, the Agu seizes me and swallows me." 38. Then spake the Agu: — "O my heart, all hail! I feel ill! Come out!" Dongrub answered: — 39. "My good Agu, wilt thou listen to my word? If thou listen to it, I will give thee sun and moon to eat for a year. Is that enough?" 40. The Agu said: — "It is enough, O my eye!" 41. Dongrub spake: — "Then I will come out through the Agu's pineal gland, and bring the whole brain out on to the head!" 42. The Agu requested: — "O my eye, please come out by the way thou wertest in!" 43. "Then I will come out at the Agu's sole." 44. "O my eye, rather than that come out by the way thou wertest in!" 45. Then Dongrub came out at the pit of the neck, and had the bow and the knife in his hand. He gave sun and moon to the Agu to eat for a year.

46. While he was going to the chiefless land of gLing, he arrived at the foot of a mountain, and saw the goat Tsotse-ngangdmur lying there. He sprang on to it. 47. The goat was frightened, and carried him on to the summit of three mountains. There it threw him down, and Dongrub died.

IV.

The fourth Tale is the Tale of Dongrub's birth on the earth.

1. When Dongrub had died, he changed himself into hail, and came down to the land of gLing. 2. There he was born to Gogzalhama. 3. Although he was the high king of the land of gLing, he was born in lowly form. 4. His mouth was as large as a well, and [his] eyes black and ugly. 5. On the pillow of [his] mother there was some bad meal. The child suddenly got up, [and] went and ate some of the meal. 6. The mother said: — "He does not give himself time to grow, but eats meal [already]!" She clothed it with a piece of ass's sackcloth, tied a goat's-hair string around it, and put a stone upon it. 7. For the mother was ashamed of the child's lowly form. 8. At the same time the spouse bKur dmamno from the kingdom of the gods changed herself into the mother dKar thigmo and went to prepare some soup for Gogzalhama. 9. Mother dKar thigmo said: — "Well, Gogzalhama, what has been born to you?" Gogzalhama spake: — 10. "Of all that which was or was not born to me there is nothing left. It was born with ugly black eyes and a mouth like a well, and it ate meal without giving itself time to grow. I have clothed it with a piece of ass's sackcloth, and put a stone on it. There it is, under the stone!" Mother dKar thigmo took the child from under the stone, and the child said: —

12. "$"Kinder art thou than water, O Lady dKar thigmo, now listen!"
13. "$"Kinder than even [my] mother, O Lady dKar thigmo, now listen!"
14. After the manner of men, a bowl should be filled with butter;
15. Gogzalhama, however, threw to me buckwheat.
16. After the manner of men, the child should be put in the child-sack;
17. Gogzalhama, however, put sackcloth around me.
18. A son is born to the mother! says he,
19. A son is born to Gogza! says he,
20. And he blows white bands up to the sky.
21. A son is born to the mother! says he,
22. A son is born to Gogza! says he,
23. And he blows red bands across the earth.
24. A son is born to the mother! says he,
25. A son is born to Gogza! says he,
26. And he blows blue bands down to the waters."

V.

The fifth Tale is the Tale of Khromo, who sought to harm Kesar, the King of the Gods.

1. While this was going on, Agu Khromo heard that Kesar, the king of the gods, had been born to Gogzhalamo. 2. Therefore he said to seven priests from the east: — "In that cottage there is a child. If you can kill the child, I will give you half of [my] castle and land." 3. Then the priests from the east disguised themselves as beggars and went to Gogzhalamo’s cottage. 4. Gogzhalamo thought: — "These seven men are beggars," filled a golden and a silver plate for them, and brought it out. 5. The seven spiritual beggars said: — "We need neither a golden nor a silver plate. Give us the child! We want to teach it religion." Then Gogzhalamo gave them the child. 6. Then came Mother d’Kar thigmo, and cried: — "Gogzhalamo, to whom have you given the child away?" 7. Gogzhalamo answered: — "Seven priests, who said, ‘We want to teach it religion,’ have carried it off." 8. Then spake Mother d’Kar thigmo: — "How could you give the child away!" and Gogzhalamo ran to get back the child, till she met the seven beggars. 9. The beggars had bound the child’s arms and legs with chains, had laid fire on his heart, and were pouring boiling water into his mouth. 10. When the mother saw that, she came before the seven beggars, and cried: — "Give me my child!" The child said:

11. Fourfold I lie here not bound:
12. It is a sign: four enemies will fall.
13. On my heart I feel no flame:
14. It is a sign of flaming happiness.
15. Hot water I do not feel on my head:
16. It is a sign of tea, beer [and] milk to come."

17. As he sang this, the child said: — "Hung one, hung two!" broke the chains and ran to his mother. Then Gogzhalamo carried the child home. 18. But the seven priests from the east changed themselves into beetles and devoured the ashes of the fire.

19. So when Agu Khromo knew that the child was not yet conquered, he said: — "I will go myself;" [and] came and asked Gogzhalamo: — "Where is the child? Has he grown big?" 20. The child said: — "My good Agu, I am here!" Whereupon Khromo took the child out of the bed and carried him off. 21. There was a rock of poison there. Upon it he wanted to throw the child. But although Agu Khromo was able to whirl him round, he could not throw him on to the rock. 22. The child said: — "Swing me round, good Agu, do! Throw me off, do!" 23. The Agu said: — "I am tired, I cannot any longer!" 24. Whereupon the child cried: — "Now the Agu’s time for whirling [me] round is past; now it is my turn!" [and]
saying this, he threw the Agu on to the poisonous rock. 25. As the rock was of fiery poison one side of Khromo body got burnt.

26. One day Agu dPalle, Agu dGani and Agu Khromo went hunting together, and killed a wild yak. To the place where they killed it the child came also. 27. The Agus said: — "Go, carry a whole leg at once to thy mother!" The child bit his teeth into a tendon of the leg, carried it off, gave it to his mother, and came back. 28. Then the Agus said: — "Take all the intestines and the inwards also to [thy] mother!" and sent him away. The child wrapped it all up in his hip-cloth, bit with [his] teeth into the upper end of the intestines, and carried it home to [his] mother. Then he returned. Agu Khromo became angry, threw the wooden poker [at him], and hit the child on the mole of the back of the neck, so that he fainted and fell to the ground. 30. Then said Agu dPalle to Khromo: — "He is also a member of our father's brothers. They will avenge him on thee!" Then Agu Khromo was frightened, and spake to the child: — 31. "Listen, Street-boy; get up, please! I will give thee the chief ford of a hundred fords." 32. The child asked: — "Will thou give it [to me], my good Agu?" and got up. 33. When the Street-child had received the chief ford of a hundred fords, it allowed no one, to cross it. 34. One day as Agu Khromo was coming through the water at that chief ford, the Street-child cried: — 35. "Who is coming through the water there?" and threw a stone at Khromo. 36. Agu Khromo said: — "Ow, it is I!" and the child cried smilingly: — "Why didst thou not say that before, my good Agu?" 37. The Street-boy became very powerful. If no part of the mourning-feast was given to him, he let no funeral procession pass; and if no part of the marriage-feast was given to him, he let no marriage procession cross. All that he carried away, and gave it to Gogzallamo.

VI.

The Sixth Tale is the Tale of Maiden 'aBruguma, whom the Street-child met.

1. Now at that time the Street-child went to the upper Groma-field to gather groma⁴ roots, and met there the maiden 'aBruguma and her handmaid Darlagochodma. 2. The Street-child found as many roots as a horse's head or yak's head is great, and made a loaf for himself out of them. 3. Maiden 'aBruguma and Darlagochodma found only one dry root each. 4. As they found no more, the handmaid said to the Street-child: — "Give our Lady 'aBruguma a piece of root-bread too!" 5. The Street-child answered: — "No, little sister, I must nourish my mother!" 6. Then he ate some of the root-bread before the two girls, and spake, "Sitidiremalag!" While he said that, the loaf grew whole again, and he began to eat once more. 7. Then spake he: — "Now Maiden 'aBruguma shall also eat some, but as much as she eats must be brought back again. There, eat some!" 8. Maiden 'aBruguma ate half of the loaf and said, "Sitidiremalag." But although she said that, nothing came back. The mark of the teeth remained. 9. Then spake the Street-child: — "O thou daughter of Father brTanpa, O thou daughter of Mother Chorol! Give me back my bread! If I see a dog, the dog shall hear of it; if I see a man, the man shall hear of it!" 10. When Maiden 'aBruguma heard that, she thought he was angry, and spake to the Street-boy: — "To-morrow we are going to have a feast, and thou shalt take part in it!" 11. The Street-child asked: — "Shall I take part, little sister?" and 'aBruguma said: — "Yes thou shalt be there." 12. On the next day the Street-child went earlier than all [the rest] to 'aBruguma's house, and hid himself behind the upper door-beam. 13. So when all the people had come together to the feast, 'aBruguma said: — "Are we all here? Shut the door before the Street-child comes!" 14. Then the Street-child called out from the beam: — "I have already arrived, little sister!" 15. 'aBruguma spake: — "And I had just said that he had not come yet!" 16. He called out laughing: — "So I just heard [my] little sister say! If I see a dog, the dog shall hear of it; if I see a man, the man shall hear of it!" 17. Then spake 'aBruguma: — "Listen, Street-child, to-morrow we are going to give a friendly beer-banquet. All the Agus are going to come to it. Would thou also be there?"

---

⁴ Groma is a species of potentilla.
18. He spake: — "Little sister, wilt thou listen to my word?" The maiden said: — "I will listen to it."
19. He spake: — "Then thou must say this to Agu dPalle and the others:—

20. Who takes a drink of the beer of life, let him have children beyond measure!
21. Who takes a drink of the beer of blessing, let his life be like that of the gods!
22. Drink without touching the ten finger-tips,
23. And without wetting the silk of the tongue,
24. Nor may'st thou knock the pearls of the teeth;
25. Drink with the soul,
26. Yea, drink with the heart!"

27. So the next morning, when all the Agus had come together, 'aBruguma brought the beer of friendship, came before Agu dGani and said:—

28. "Hail, on [thy] golden throne, O Agu dGani, now listen!
29. See this vessel, filled with thoughts and nine-fold buttered.
30. Who takes a drink of the beer of life, let him be blessed with many children!
31. Who takes a drink of the beer of blessing, let his life be like that of the gods!
32. Drink without touching the ten finger-tips,
33. And without wetting the silk of the tongue,
34. Nor may'st thou knock the pearls of the teeth;
35. Drink with the soul,
36. Yea, drink with the heart!"

Then spake Agu dGani:—

37. "Not wetting the tongue,
38. Not filling the stomach,
39. Not touching the hands,
40. How then shall I drink it? Away with the bowl!"

41. Because he spoke so, the girl carried the vessel to Agu dPalle:—

42. "Hail on [thy] throne of shell, O Agu dPalle, now listen!
43. See this vessel, filled with thoughts and nine-fold buttered!
44. Who takes a drink of the beer of life, let him be blessed with many children!
45. Who takes a drink of the beer of blessing, may he live as long as the gods!
46. Drink without touching the ten finger-tips,
47. And without wetting the silk of the tongue,
48. Nor may'st thou knock the pearls of the teeth;
49. Drink with the soul,
50. Yea, drink with the heart!"

* Literally:— And without tasting with the silken knots of the tongue.
† Lit.:— Not knocking the teeth like milk, like a rosary, like pearls.
* See explanation of the custom, under Yar. Dr. Luscher asks for an analysis of this sentence. The Tibetan text is properly bzęญา bęnpaz d posición ęrpalla ęs bęgyabas dęu bęgyabas ęsk ęyod. This means literally: 'A vessel furnished with thoughts according to the meaning (dęu), smeared by men, smeared ninefold, such it is'; bęgyabas is said instead of yar bęgyabas, it is smeared with butter.
Then spake Agu dPalle:—

51. "Not wetting the tongue,
52. Not filling the stomach,
53. Not touching the hands,
54. How then shall I drink it? Away with the bowl!"

55. Then 'aBruguma said to the Agus:— "Shall I ask the Street-child also?" 56. The Agus spake:— "He is also a member of our father's brothers' [clan]. Ask him also, do!" 57. And 'aBruguma addressed him:— "Yes, listen, Street-child, give me thy bowl!" 58. The Street-child spake:— "Yes, certainly, little sister, just as thou hast said to the Agus, speak also to me!" So 'aBruguma sang:—

59. "Thou on [thy] wooden chair, thou Street-boy there, now listen:
60. See this vessel, filled with thoughts and nine-fold buttered!
61. Who takes a drink of the beer of life, let him be blessed with many children!
62. Who takes a drink of the beer of blessing, may he live as long as the gods!
63. Drink without touching the ten finger-tips,
64. And without wetting the silk of the tongue,
65. Nor may'st thou knock the pearls of the teeth!
66. Drink with the soul,
67. Yes, drink with the heart!"

68. Thereupon the Street-child said:— "Little sister, wait a little!" Then he threw the vessel towards the sky with his stick studded with dog's teeth, and drank the beer out of the sky.
69. While he drank it, he said:— "I feel how the Lord of Heaven, rGYabbzhin, is giving me a drink of the beer of friendship!" Then all the street-folk shouted:— "Now our Street-boy has got Lady 'aBruguma as bride! Hurrah for Love!"

VII.

The Seventh Tale is the Tale of 'aBruguma, who becomes Kesar's bride.

1. The Sovereign of Heaven had heard the shouting of the Street-child, and he came with the whole retinue of heaven and the retinue of the water-spirits, and held a horse-race with all the Agus.
2. The handmaid Darlhaghodma took Lady 'aBruguma to the race-course, and put her on a rock.
3. The handmaid said:— "To-day listen to my word: Upon whose horse thou canst jump at the race, his bride thou wilt be!"

4. Listen to-day to the word of the servant,
5. Listen to Darlhaghodma's word!
6. To-day will the skin be pulled over thy ears; 9
7. Father brTanpa's daughter will receive blows!"

8. Then the king of Heaven, rGYabbzhin, came riding along, and 'aBruguma spake:—
9. "I know neither the man that is riding,
10. Nor even the swift horse underneath."

9 Dr. Lander asks for an analysis of this sentence. The Tibetan has: rgyal rgyon ni bumda rgyal shis bzang yin. The literal translation is: 'To the girl who is like a wet leather-bag, will be given a peeling off of the skin.' In my translation I made use of the corresponding German idiom.
Thereupon the handmaid said:—

11. "If thou knowest not the man that is riding,
12. Know, that is the King of Heaven;
13. And the swift steed underneath
14. Is the god's horse, called the Bay.
15. Man and horse touch not, let them go! If thou jumpest now, then thou committest a great sin against the gods!"

So 'aBruguma did not jump.

16. Then the Earth-Mother, sKyab abdun came riding along. Lady 'aBruguma spake:—
17. "I know neither the man that is riding,
18. Nor even the swift horse underneath."

The handmaid said:—

19. "If thou knowest not yet the man that is riding,
20. See, it is sKyabs bdun, the Earth-Mother;
21. And the swift horse underneath,
22. That is the red earth-horse.
23. Rider and horse touch not, let them go! If thou jumpest now, then thou committest a great sin against the earth!"

So 'aBruguma did not jump.

24. Then lCogpo, the King of the water-spirits, came riding along, and 'aBruguma spake:—
25. "I know neither the man that is riding,
26. Nor even the swift horse underneath."

The servant said:—

27. "If thou knowest not yet the man that is riding,
28. See, it is lCogpo, the Water-king;
29. And the swift steed underneath,
30. That is the blue water-horse.
31. Rider and horse touch not, let them go! If thou jumpest now, thou committest a great sin against the water-spirits!"

So 'aBruguma did not jump.

32. Then all the Agus of the land of gLing came riding past, and 'aBruguma did not jump.
33. Last of all the Street-child came riding along. He had put off his humble form. He had a reddish-violet crown,\(^{10}\) and [his] horse a short, reddish-violet mane. On the man's right shoulder the sun was rising, [and] on left the moon. 'aBruguma spake:—

---

\(^{10}\) Tuft of hair (according to Dr. Lander and Jischke's Dictionary).
34. "I know neither the man that is riding,
35. Nor even the swift horse underneath."

Then said Darlhaogochma:
36. If thou knowest not yet the man that is riding,
37. See, it is Kesar, of gLing the King;
38. And the swift steed underneath,
39. It is the noble rKyangbyung dbyorpa.

40. Now if everything is well carried out, then all people will call me Gochodma [that is: She that fulfills]. If it is not carried out well, then I shall call myself Gomichod [that is: Unfulfilled]. Man and horse let not pass; seize them." 41. So when Kesar came riding on, Maiden 'aBruguma suddenly jumped on to the horse. 42. As the maiden jumped, Kesar put on his humble form again, caused a strong smell of lice, and changed the horse into a female Dzo with broken horns. 43. Then all the street-folk shouted: — "Hurrah for love! Lady 'aBruguma is our Street-boy’s bride! Then 'aBruguma made the Street-child her bridegroom, and took him home.

VIII.
The Eighth Tale is the Tale of Kesar, who teases 'aBruguma.

1. One day 'aBruguma’s mother spread the carpet out the wrong way round, so that it had the front edge towards the wall. 2. The Street-boy said; — “Where the front edge of the carpet is, there the face of the guest must also be,” and sat down with his face turned to the wall. 3. Then spake Faher brTanpa to 'aBruguma: — “The boy is nine times too clever; he will run away yet.” 4. Therefore the maiden covered the Street-boy with a pot, turning it upside down. 5. Now although the handmaid and the maiden herself sat before it keeping watch, the Street-child escaped without letting either hear anything. 6. Before the door he tore his upper garment in pieces near the place where the dogs were kept, killed a goat and poured its blood out. The entrails of the goat he wrapped round the teeth of the dogs. Then he fled into the innermost part of the valley. 7. When Father baTanpa saw that [before the door], he said to 'aBruguma: — “My daughter, go and look for him! The dogs have surely not eaten him!” Then 'aBruguma went to look for him all around on a hundred, [yea] a thousand mountains, and did not find him. 8. The maiden’s dress tore right up to the collar. [Her] shoes tore from the sole right up to the top. 9. As she did not find him yet, she went to Agu dPalle and Agu dGani, and spake:—

11. Early in the morning I began to climb, and came on to the golden hill;
12. In the evening I descended, and came to the copper-field.
13. Did he then come for copper? I would now like to ask the Agu !”

Agu dGani spake: —

14. “If the dogs have devoured the Street-child,
15. Then will the skin be pulled over thy ears,
16. Then indeed will blows be laid on brTanpa’s daughter !”

So 'aBruguma went to Agu dPalle, and spake:—

17. Thou on [thy] throne of shell there, Agu dPalle, then listen!
18. In the morning I began to climb, and came on to the silver hill;
19. In the evening I descended, and came to the lead-fields.
20. Did he then come for lead? I would like to ask the Agu !”

11 Dr. Lauer’s translation, ‘she put him in a pot with his face underneath,’ is impossible; she is the opening of the pot.
Agu dPalle said:

21. "If the dogs have devoured the Street-child,

22. Then will the skin be pulled over thy ears,

23. Then indeed will blows be laid on bTanpa's daughter?"

24. Then spake 'aBruguma: — "Everybody says that!" and went to look for him again. Then she took a stone which had a hole [in it], looked through [it], [to see] whether she could see him, and caught sight of him in the innermost corner of the valley. 25. And he had the reddish-violet crown on, and [his] horse [had] the reddish-violet mane; he had put off his humble form, and was dancing around merrily. 26. Then the maiden ran as fast as ever she could, and reached the place where he was. 27. He said: — "Well, girl, from where hast thou come?" and gave her, in a piece of a broken cup, a loathsome lump of bad meal, which he had kneaded together. 28. He spake: — "If thou eatest this, I will run off again!" 'aBruguma ate it and said: — "Then go, good King, do!" He spake: — 29. "And thou, the rich daughter of a rich man, hast eaten up the whole bad dough.

30. If I meet a dog, the dog shall hear of it. 31. If I meet a man, the man shall hear of it!"

32. Then they both went back to Mother Gogzalhama.

33. One day as the Street-boy was preparing a feast, he slaughtered many sheep and goats.

34. One skinned animal he hid in 'aBruguma's cloak, and said: — 35. "One skinned animal is missing! Who is the thief? Mother, thou hast surely not stolen it?" 36. The mother answered: — "Would I then take anything besides what thou hast given me?" 37. He spake: — "Handmaid, thou hast surely not stolen it?" 38. The handmaid answered: — "Would I then take anything besides what the king has given me?" 39. Then he spake to 'aBruguma: — "And thou wilt surely steal nothing, thou rich child of a rich man? Stand up now, and shake [yourself]!" 40. 'aBruguma said: — "Would I then take anything besides what the king has given me?" All at once she stood up, and as she shook [herself], it dropped out of her cloak. 41. The Street-child said: — "And thou hast stolen it, thou rich child of a rich man! I will not go with thee!" In this way he teased her.

IX.

The Ninth Tale is the Tale of the Wedding.

1. Mother Gogzalhama spread out three carpets, one blue, one red and one white. Then she hung up three ribbons, one white, one red and one blue. 2. She spake to 'aBruguma: — "Shut [thy] eyes tight, take one out of all these ribbons, and go and sit down on one of the carpets! I shall wait for a dream." 3. So 'aBruguma shut [her] eyes tight, took a ribbon and went on to a carpet. 4. She took a blue ribbon, and came on to the blue carpet. 5. [Her] mother said: — "Now is Kesar, the King of the gods, thy portion, Later on the white tents of Yarkand will be thy portion!" This she spake prophesying. 6. In the same moment the Street-child had put on [his] lowly form again. 7. 'aBruguma spake to [her] mother: — "Give me back the man who was just here!" 8. [Her] mother said: — "I will go [and look for him] with thee." 9. The Street-child had been brought to the glorious castle, and been stripped of [his] humble body by [his] father's brothers. 10. Maiden 'aBruguma arrived before the castle and saw the horse Kyangbyung dbyerpas. 11. The horse spake: — "Lady 'aBrugu, enter!" 'aBruguma said: — "I have lost my former husband." 12. Then the horse took the maiden up with his teeth and threw her into the glorious castle. 13. Then King Kesar, got a golden throne, and 'aBruguma a throne of turquoise. 14. Now they were happy, and became stout. Three nights long they celebrated their wedding, and three days long they gave feasts. The tale and the story is at an end.

(To be continued.)
EXTRACTS FROM THE LOG OF A VOYAGE ALONG THE COAST OF INDIA IN 1746.

BY R. C. TEMPLE.

(Continued from p. 67.)

III.

LOG I.

1.

Text.

Log I. occupies 31 pp. of the MS.

Headlines to Pages.

The headlines vary with every few pages, and the four I have picked out below are typical:—

(1) Ship Wake Captain Robert Norton from Calpoo to Madrass.
(2) Transactions of board the Ship Wake Robert Norton Command from Calcut to Madrass.
(3) Ship Wake Robert Norton Comand from Bengal to Madrass.
(4) Ship Wake Robert Norton Command from Bengal towards Madrass.

The Log commences thus:—

Fryday. Aug. 16 1746. Moderate Gales & squally weather with rain att 6 A. M. Weighed from Calpoe att 11 Dº Came too att Kedgrie with the BB Wind SEbE Kedgrie trees NWbW found riding here a Dutch Sloop.

Saturday. The first & middle part of these 24 Hours fresh gales & Squally rainy Weather this Day Capt Hutchesson return'd, having sprung a Leak & Oblig'd to go to Calcut att 10 A. M. Came on board the Capt. & Sloop Load'd with Bales & Bages of Rice Dº Hoisted them in Stow't them Down the Hold.

Sunday. Aug : 17. att 8 A.M. Weigh'd from Kedgrie Wind ENE.

Monday. 18. att 8 Dº [A. M.] passed the upper Buoy of the barrebbull, att 11 past 9 the lower Buoy of the barrebbull WSW att the same time the Buoy of the fair way to be seen of [off] the Deck.

Tuesday. Aug : 19 1746 att 8 Dº [A. M.] Discharg'd the pilot in 13 F & 4 past Dº Carried away our Topmast about 5 foote above the Cap went Directly to work in Clearing the Rigging & by noon got Everything ready to get the other Topmast the Carp Employ'd in fitting another topmast Course per Compass SSW.

From Wednesday, August the 20th, the Log is continued in due form, thus:—

H[our] | Course | Winds | Sound [date and remarks].

Extracts.

14 This mark denotes that there is no stop in the text where one is necessary.
12 I. e., the best bower anchor.
17 I. e., the fore top-mast.
18 This entry shows that the Captain did not write the log.
19 I. e., the carpenter.
Thursday. Aug: 21. 1746. Att sunsett the Extremes of the Land from NbE to SWbW | the bluff point 10 to y Northward of Gangam NW | [Dist.] of 20 Shoar 3 Leagues. Att sunrise the Land from SWbW to NbE | the High Land of Summerwarren being the Northern Extrem | Dist of Shore abt 7 Miles.  

Friday Aug 22. 3 [P. M.] hazey. 8 [P. M.] Fundy Roads NbE. Att Noon the Land from NbW to the Dolphin's Nose | Dist of Shoar 4 Leagues.  

Saturday 23. 1746. Att Orise [sunrise] the Land from SWbW to NNE. Bimlepatam flag staff WbN | of Shore 4 Miles | the Dolphin's Nose & Sugar loaf both in one WSW.  

Sunday Aug the 24 1746. Came on board a Cattermaran from Beimlepatam. 9 A. M. Went away the Capt to Vizaquepatam | a ship in Vizaegupatam Road | SW Beimlepatam flagg | NNE the Sugar loaf.  

Monday August 25 1746. 5 (P. M.) Came of a Cattermaran. found the Ship in the road to be the Loovain Capt Macknath Bound to Bengall | a gives us an account that the 18 Instant he was obliged to run out of out of the Madrass road the place being attack'd by eight sail of french Ship's under the Command off Monsieur Lebourdenie.  

Tuesday Aug: 26. 1746. In Vizaquepatam Road. Att 9 P. M. sail'd the Loovain Capt Macknath for Bengall . . . . . att 8 A. M. sent the pinnace out after paddy Boats, passing by the Road & after firing a Gun they both Brought too & Came in | att 11 D' sent the to the Masters ashore to the Chief [of the Factory] about having informed us of a large Ship Cruizing of Ingeram.  

Wednesday 27. 1746. Land & sea Wind as Usual brought Several paddy Boats & brought on Board there Masters, to Inform us wether they see any Ships of off Ingeram | they all say the Coast is Clear | Assures us there is no such thing as Any Cruizers on the Coast as far as Masulipatam . . . . . Employed in stowing & unstowing the fore Hold & Warping the Ship Nearer the Barr in Case of being attack'd by an Enemy to run her ashore.  

Saturday 30 1746. Att Orise the Ex off Land 21 ENE to NW | Dist of Shoar 3 or 4 Leagues | Dept of Water 18 F' | Att 6 A. M. saw two large Ships right ahead with oblig'd to bear away fear them to be Enemy's | att 7 D' sent the pinnace with orders if friends to make a Sign | all which was accordingly Done seeing first to Hoist Dutch Coulor. Att Noon the Land from P Guard an ogro SWbW to ENE | the two ships SE & E | Distance of Shoar 3 or 4 Miles & from Ships 4 Miles.  

Sunday Aug: 31. 1746. Att 1 P. M. Came on board the pinnace from the Dutch Ships which Come from Botavie | Att Noon the Land from SWbW to the NWbW being P Gardeware | Dist of D 2 or 3 Leagues.  

Monday Sept 1. 1746. Att sun sett the No most land being P Gardeware | att Noon low Land . . . . Nassipore P' at the same time NWbN.  

Fryday Sept 5. 1746. Att sun rise saw the High Land of Carera. Att Noon land from the High Land of Carera | N. B. att 11 A. M. Standing in Shoar Came out of Stiff Clay into hard brown sand but preserved over again into soft ground | we take it to be the tail of the Armegon.  

Saturday Sept 6. 1746. Att sunrise the Body of the High Land of Carera bore NW | No other land to be seen it being Very Hazey.  

10 I cannot trace this spot in any of the sailing directions. Ganjam was practically abandoned as a port in 1815.  
21 We should read "off" here, and in all similar places.  
21 I. e., the extremes of land.
Sunday Sept 7 1746. Att Sunsett . . . the Highland of Correra NNW . . . .
this morning the pinnace went Speak with a paddy Boat in Shoar, but cou’d gott no News from
Madras . . . . att sunsett a small river off of which lay Several Boats att an Anchor bearing
WSW.

Monday Sept 8 1746. When anchor’d att 4 P. M. the land bore from North SW | the High
Land of Correra NNW | Dist of Shoar 3 or 4 Miles | Severall white builde’s all along this Shoar.

Tuesday Sept 9 1746. Came a Chilling from Ramnepatam but no Certain Intelligence
from Madrass.

Wednesday Sept 10. Armigon Hill att De time [sunrise] SW.

Thursday Sept 11 1746. the peak of Armigon Hill WbS^S . . . . all this Afternoon
regular sounding as pr Columns . . . . att 9 De [A. M.] the High Land of Pulicat
SSW.

Memorandum.

Since Our Entering this Chanel between the Armigon & the Shore (Blackwood’s Harbour)
We find nothing remarkable | all along we have had good Sounding but Deepest Water as We always
Edged towards the Armigon Until this Morning when Drawing near the narrow Channell between
the Beef Chitriocr & the S’most end of the Armigon Shoal we found very uneven Soundings
as y Logg untill Deepening to 17 fm Gradually | N. B. If any Person should be for entering this
Channell being bound to the Nw’d it is best to keep along Shore untill the High Land of Pulicat
bear from the two round lumps SWbW to the S’most of D^s SW^S and a small round Hillock before
Spoken off WbN in an offing of 9 or 10 fm | this little Hillock is within the Sandy Beach &
is the Best mark for going in when you bring it to the aforesaid bearings | Steer in NWbN
& you’ll have no less Water than 5 fm | but Several overfalls which you Must not be Surpriz’d
at | after you bring it to bear WbS^S you may be sure you are Clear of the Land reif & tail
of the Armigon | then shape Your Course Accordingly | you’ll have hard Ground | untill
the little Hillock bears SWbW of you | then soft Clay between the Depths of 7 or 8 fm and 17 or 18
on the Armigon.

Saturday Sept 13 1746. Unregular Soundings. The High Land of Pulicat from y^s Kittle
Bottom SW to the 2 round lumps WSW.

Sunday Sept 14 1746. 9, 10, 11 (P. M.). Lay too whilst we sent a boat of provisions to
y^s Vernon | D^s saw a large Ship on the Beam which (obliged us) to make those sail we Can &
leave the Vernon to Shift for themselves. 6 (A. M.). no land in sight. 7 (A. M.), the Ship Vernon
two Leagues astern of us | Att Noon we Judge our Savels to be El^S from Ramnepatam | Dist about
10 Leagues | the Ship Vernon about 3 Leagues astern. Att 4 P. M. fir’d 2 Guns att a Vessell
which we took for a paddy Boat, being Desirous to get some Intelligence from Madrass | & after
haveng brought her too, found her to be the Vernon, who gives the unfortunate relation of the
taking of Madrass by the French on Thursday the 11th Instant after a siege of 4 days
only, & not but men kill’d att the most, & not above 8 Sail of French Ships | the 2 Biggest
60 Guns | the rest 30 each & old Ships formerly merch’ Ships. — this Vessell haveng Drive out
of the Road undr a spritsail as far as Pulicat, & there Demand’d a Small Supply of Water &
provisions from the Dutch, but they wou’d not supply them with any, nor protect them, so that after
haveng taken on board to the Number of 100 Soldiers & Gunners who made there Escape from
Madrass after the taking of the town Came out this morning In order to sail for the first port for
Security, by which Unfortunate News we are Oblig’d to bear away to some other port.
LOG I.

2.

Geography.

The log shows that the ship started from Calpee on the Hughli on August the 15th, 1746, and then stopped at Kedgerie for the rest of the day and till the 17th. On the 18th it passed the upper and lower buoys of the Barrevulle and also the buoys of the Fairway, and went out to sea on the 19th. On the 20th the Black Pagoda and the Jakanort Pagoda were passed.

The ship now began to keep close into the coast, passing the Bluff Point, Gangam, Summer-waaren and Pondy Rocks to Bimlepam, where it anchored on the 23rd. Thence could be seen the Dolphin’s Nose and the Sugarloaf (off Vizagapatam). Here the Captain left the ship for Vizacaquepatam on the 24th, the ship itself following him on the 26th. At Vizacaquepatam there arrived news of ships off Ingeram and Masulipatam. On the 30th a fresh start was made, passing Point Guardewire (Guard-an-ogre in one place), where a ship from Bottave was spoken, Nassipore, and the high-land of Carera, to what “we take it to be the tail of the Armegon” on the 5th September. On the 7th “came a chiling from Ramnepatam.” On the 11th the high-land of Pulclaget is seen, and then there is a description of what is now known as Blackwood’s Harbour, in which appear two queer places, the “Reif Chitracy” and “y’ Kittle Bottom.” At this place, on the 14th September they hear of the taking of Madras, and make sail again for the North.

It is to the elucidation of this Geography and of terms used above that I propose now to devote some space, by way of following up the history of each word, so far as I am able to trace it.

But first there is a point worth noting here. It will be observed that after leaving the Hughli, and making his way across the Balasore Roads, Captain Norton got into soundings off what are now known as the Juggernaut Pagodas and into sight of land, and that he stuck to land for the rest of the voyage towards Madras. It will be observed also that he started on the 15th August. One reason for this course is to be found in Dunn’s Directory, a book of sailing directions, dated 1780.

Dunn says, p. 240:—“From the middle of August to April ships may sail from Bengal to any part of the bay; but either earlier or later it is very difficult to get out of the river [Hughli]. Ships that are going only Eastward or Southward may sail 10 or 15 days later; but those who sail after the beginning of April for the Coast of Coromandel will find it difficult to get Westward and perhaps lose their passage. Ships that sail from Bengal in August or September to the Coromandel Coast will meet with unsettled weather; sometimes moderate and fair, sometimes hard squalls, thunder and much rain; the winds usually SSW and WNW and sometimes SSE. They should therefore keep in from 15 to 30 fathoms close along the shore of Orixa, Golconda, etc., for the benefit of the currents that begin to run along the shore to the SW. The wind, by often blowing from the land, renders keeping near the Shore difficult, especially between Vizagapatam and Armagon, and standing off shore is sometimes very advantageous. Therefore, a ship ought, under these circumstances, seldom or never to go out of soundings.”

In the course of elucidating the Geography of this MS., the system adopted for the identification of the geographical names and vernacular words is the same one of giving their history verbatim from maps and books, from the earliest procurable quotations to the present day. But I have omitted forms and quotations, except where necessary, to be found in so well-known a work as Yule’s Anglo-Indian Glossary (Hobson-Jobson).

LOG I.

3.

Anglo-Indian Terms.

The words and forms contained in this log are those given below alphabetically.

22 I. e., of Orissa and the Northern Circars of the Madras Presidency.
The maps quoted are from a collection, in the present writer's possession, of maps of the
16th, 17th and 18th centuries, relating to India and the Far East. The following is a list of those
quoted in these pages, so far as they relate to Log I.:

1642. — W. Blaeuw.
1644. — Hondius.
1674. — Sanson d’Abbeville.
1687. — Coronelli.

c. 1720. — Van der Aa; general and special maps following the travellers undermentioned:
Lopo Suares d’Albegeria.
Fernando Peres d’Andrade.
Cesare Federici (Cesar Fredericks).
Ralph Fitch.
William Methold.
Nuno da Cunha.
Alfonso d’Albuquerque.
Gaspar Balbi.

c. 1720. — Pierre Mortier.
1740. — Guillaume de l’Isle; and later Ed. 1781.
1764. — Croisey.
1765. — French, probably copy of de l’Isle.
1780. — Rennell.

I would like to say a good word here for the accuracy of the old maps as regards places
on the coasts of India. Though they often give prominence to places now almost unknown, but once
famous, and omit others then unknown, but now famous, in a way that is puzzling to the modern
student, they did hit off the ports and places frequented by mariners with a degree of accuracy that
is extraordinary, considering the means to hand.

Armagon, Armigon.

This place is not noted in Yule's Glossary.

1642. — Aremoga. — W. Blaeuw; map.
1644. — Are mogam. — Hondius; map.

1678. — Mr. [Streynsham] Master started on a land journey to Masulipatam via Pulicat,
observed in his official diary that "the name was Duraspatam." — Pringle, Madras Consultations for
1683, p. 140, n. 74.

1710. — There are several Places along the Coast to the Northward, which in former Times had
Commerce abroad, but are now neglected and unfrequented. Armagon is one. — Alex. Hamilton,

c. 1730. — Armagon. — Van der Aa; map.
c. 1720. — Armego, Armigon. — Mortier; map.
1764. — Armegon. — Croisey; map.
1813. — Armagon or Duraspatsam. In 1625 the English obtained a piece of ground from the Naig or Chief of the District and erected a factory here, which they fortified. On the acquisition of Madras, this place fell into decay. — Millburn, Commerce, Vol. II. p. 83.

1873. — In 1625 the first English Settlement on the Coromandel Coast. The latter (i.e., the Company) gave to this Durgarasapatam the appellation of Armaganulu. The salt used to be exported from Durgarasapatam and Armugam. — Boswell, Nellore District, p. 440 f. Armeghun Shoal is about 10 miles long. — Page 24.

1874. — Armegon, Armogham or Doogorasapatam. — Taylor's India Directory, p. 460.

1891. — Armeghun. — Admiralty Chart.

1893. — Armegam (Armugam, Tamil). Named after Armogam Moodiari, by whose assistance the first English Settlement on the Coromandel Coast, consisting of a factory defended by twelve pieces of cannon, was established at this place in 1628. — Madras Man. of Adm. Vol. III. p. 41. Doogaraaspatam. Skr. Dhruvarajappathana and Yuvarajappathana, called Armegam by the English. On the 24th September, 1761, on the removal of the establishment to Chennacoopam, the modern Madras, the place was abandoned. — Page 281.

Barabullo.

This name is not noted in Yule's Glossary.

1703. — Kitesall or Barabulla Trees (in the 1701 Ed. of the Chart called Parrasoll Trees). — Yule, Early Charts of the Huggill, in Diary of W. Hedges, Vol. III. p. civii. In the chart above quoted Barabulla Head is the name given to the shoal itself. I may also note here that whatever Barabulla may mean, Parrasoll and Kitesall (— Kitisol, see Yule, s. v.) both mean Umbrella, and the trees mentioned were meant to be called Umbrella Trees. This is shown by the following quotations: — 1761. — A chart of Chittagong by Barth. Plaisant marks on the S. side of Chitagong R. an umbrella-like tree, called Kitisol Tree. — Yule, s. v.

1780. — Rennell, in a Military Map dated Aug. 1780, mentions the Barrabulla Flat and both the Upper and Lower Barabulla Buays, and also the Buoy of the Fairway.

1809. — Barabulla and another parallel sand begin at the North end of the Eastern Brace, from whence they stretch Northwards nearly to Ingelree, having very shoal water on them, and 2½ or 3 fathoms in a channel that divides them, the Barabulla being the Easternmost of the two, and forms the West side of the old channel called the Fairway. — Horsburgh, Sailing Directions, p. 358. But on p. 360 we find "Fairway or Western Channel bounded on the West side by the Barabulla. The 2nd or Fairway Buoy was generally placed 5 or 6 miles NNW from it, being then in the channel, a course was steered to the NN Eastward for the Lower Buoy of the Barabulla."

1874. — The Barabulla and other parallel and smaller sands. Western Channel, formerly called the Fairway, is bounded on the W. side by the Barabulla. — Taylor, India Directory, pp. 475, 477.

Bengall.

This spelling is not in Yule's Glossary, but I call the following examples from his Diary of Sir William Hedges:

1677. — [We] have caused three draughts of the same [River Ganges] to be deliver'd, viz: one unto Captain John Goldsborough in the Bengall Merchant. — Vol. III. p. cc.

1682. — Being arrived in the Bay of Bengalla, you are to sail up the river Ganges as high as Hugliy. — Vol. III. p. cc.

31 Pringle, Mad. Consul, for 1833, throws doubt on this derivation. Page 140, n. 74.
33 Stevens, Guide, 1775, has, p. 120, "kooddy-sally."

Also for this last year there is a contemporary quotation:

1703. — The long Pepper grows chiefly in Bengall. — Collection of Dutch Voyages, p. 142.

Bimlepatam, Beimlepatam.

This name is not noted in Yule's Glossary.

1642. — Bimlipatam. — Blaeuw; map.

1644. — Bimlipatam. — Hondius; map.

1720. — Bimlepatam, Beimlepatam. — Van der Aa; map.

B. 1720. — Bimlepatam. — Mortier; map.

1740 and 1781. — Bimlipatam. — De l'Isle; map.

1786. — Bimlipatam. — French map, probably de l'Isle.

1780. — From Visigapatnam and Bimelipatnam or Bimlipatam the coast runs NE 41/4 leagues. — Dunn, Directory, p. 151.

1891. — Bimlipatam. — Admiralty Chart.

1893. — Bimlipatam, Bimlipatam, Hindustani [i.e., Musalmān], Bhimunipatam, Telugu.

Black Pagoda.

This place is not noted in Yule's Glossary.

1676. — We sailed in sight of the Black Pagoda and the White Pagoda. The latter is that place called Jagernat, to which the Hindues from all parts of India come on pilgrimages. — Streynsham Master's Journal in Yule's Diary of W. Hedges, Vol. II. p. ccxxviii.

1764. — Pagoda Noire. — Croisey; map.

1780. — Four leagues EbN of Jagrenat pagoda is the Black pagoda, which at a distance (like the former) resembles a large ship under sail; but on a nearer view it loses somewhat of its magnitude. — Dunn, Directory, p. 158.

1809. — Black Pagoda stands at a small distance from the sea, and ... from the Jagarnath Pagodas ... distant 14 miles. — Horsburgh, Sailing Directions, p. 353.

1777. — Anang Bhim Deo ... who reigned 1175 to 1202 A.D. ... built the present temple of Jagarnath ... grand as this temple is, it falls far short of the marvelous structure, which was raised half a century later in honour of the sun at Kanārak, on the shores of the Bay of Bengal, nineteen miles North West of Puri. This temple known as the Black Pagoda, or rather this fragment, for it was never completed and is now in ruins, was raised by Lingulīya Narsingh. — Hunter, Statistical Acct., Bengal, Vol. XVIII. p. 185 f.

1891. — On the Admiralty Chart the Black Pagoda is shown as the Baleswar Temple between Puri and Kanarak.

Bosavi.

See Yule's Glossary, s. v. Batavia. This is a queer spelling of this well-known place-name.

1619. — On the day of the capture of Jākatra, 30th May, 1619, it was certainly time and place to speak of Governor-General's dissatisfaction that the name of Batavia had been given to the Castle. — Valentijn, Vol. IV. p. 489, in Yule, s. v. Batavia.

1817. — The Division of Batavia, which comprises what formerly constituted the native province of Jakatra or Jokarta. — Raffles, Java, Ed. 1830, Vol. I. p. 10.

Calcutta.

See Yule, s. v. Calcutta.

1730. — Coloot. — Van der Aa; map.

1740. — Coloota. — De l'Isle; map.

1765. — Colcota. — French map, probably by de l'Isle.

1781. — Coloota. — Dezauche, Ed. of de l'Isle; map.

The following three forms, found on old maps as the names of places on the coast of Orissa, probably refer to Calcuta on the Hooghly and not to Calcutta. See Yule, Glossary, p. 771.

1842. — Caleoota. — Blaenuw; map.

1844. — Caleoota. — Hondius; map.

1874. — Cocala. — Sanson d'Abbeville; map.

In 1739, or probably some 20 years earlier, Calcutta is thus referred to: — Culoula, a Market Town for Corn. — Alex. Hamilton, East Indies, Ed. 1739, Vol. II. p. 6.

Calpee, Calpye.

This place is not noted in Yule's Glossary.

1790. — Culppee. — Rennell; military map.

1886. — Entering immediately below Diamond Harbour, or Kalpi Creek, about 6 miles further down. — Yule, Glossary, s. v. Rogues' River.

1889. — It is to be identified with the Kulpee Creek. — Yule, Diary of W. Hedges, Vol. III. p. 398.

1891. — Kalpi Pagoda. — Admiralty Chart.

Carera, Correa, Corera.

This place is not noted in Yule's Glossary.

1679. — 26th (April) about 7 in the morning we came to Careda. . . . The Towne is small and of meane theaht houses and narrow streets. — Streynsham Master's Journal in Mackenzie, Kistna District, p. 150.

1888. — Bundalea Shawe [Bandu'ullah Shah], Governor of Carera and thereabouts . . . . itt is asaied that es soon as with c(on)veniency we Settle a factory att Carera. — Pringle, Mad. Consult. for 1688, p. 72. On this Mr. Pringle notes, n. 85: — Karadu, North of Ramapattanam and a sea port: "the best towne" in Streynsham Master's opinion, which he passed on his way Northwards from Madras (in 1678).

C. 1710. — Carera has the Benifit of a large River that reaches a great Way into the Country. — Alex. Hamilton, East Indies, Vol. I. p. 399,
c. 1720. — Keraro. — Van der Aa; map.
c. 1720. — Kameraru. — Morteir; map.
1764. — Corea. — Croisey; map.

1780. — Six leagues N W from Divellan is Corara or Carera, you may coast it in 8, 9 or 10 fathoms. To the northward of Corara are two very thick woods and in the town a white pagoda. Within land are some high mountains which show themselves 10 or 12 leagues at sea in clear weather. — Dunn, Directory, p. 147.

1809. — Gondigam or Great Ganjam . . . . and 5 leagues further the River Corara, where there is a village and a pagoda . . . . Some of them [charts] place Coreira in the latitude here assigned to Gondigam. — Horshourgh, Directions for Sailing, Vol. I. p. 345. Text repeated in Ed. of 1841, Vol. I. p. 599.

1891. — Koreda in the Admiralty Chart.

Cattermaran.

This spelling is not given by Yule, s. v. Catamaran.

1685. — About 10 o'clock this morning 2 Black Fellows [i. e., natives] on a Cattamaran came off to us with a Note . . . . By ye return of this Cattamaran I wroto to the President Gifford. — Yule, Diary of W. Hedges, Vol. I. p. 181 f.

1695. — And that said letter be sent by a Cattamaran for expedition and duplicate overland. — Pringle, Mad. Consul. of 1685, p. 107, and n. 80.

1699. — On arrival in Madras Roads the following note from the Port Officer is delivered after usual custom by a messenger on a cattamaran. — Yule, Diary of W. Hedges, Vol. III. p. xli. "In answer to ye last Cattamaran note" (p. xlii).

Chilling.

An Indian trader. Yule's references to this obscure term (s. v. cheling) are only for 1667 and 1613. The reference in the text is therefore valuable. See also Yule, s. v. Kling.

The following quotations seem to give the whole history of the word, according to the view taken by Yule:

1690. — A certain Black [native], a Quillinman, commonly called Quillin Panjan, or Long Quillin, came on board (p. 148) . . . . The Dutch being near Bantam, the same Quillin Panjan, Inhabitent of St Thomas of Meliaput a town situated on the Coast of the Coromandel [i. e., Madras] the Governor's Interpreter came to meet them (p. 149) . . . . The Quillins merchants value them very much (p. 182) . . . . There you may see a Meeting early in the Morning of Merchants of all Nations . . . . Quillins (p. 188) . . . . The Malais and Quillins Merchants are Pawn-Brokers and lend money at a vast Interest (p. 198). — Collection of Dutch Voyages, Ed. 1703.

Chitricoory.

This name is not given in Yule's Glossary.

1764. — Cicarechoerie. — Croisey; map.
1780. — From Palincata to Cisara-Hoerea or Srikari-hori the coast runs N. W. 8 leagues. Near this place is a reef, like that of Trifou, which runs as far into the sea, but further along the coast... It is reckoned 26 miles from Cisara-Hoerea to Armegon. — Dunn, Directory, p. 146.

1873. — The upper part of Pulicat Lake, a little above Srikarikota. — Boswell, Nellore District, p. 25.

1893. — Shreeharicote... Srikarikot, Sanskritized from chikireni, Telugu, a tree, albizzia amara, + kotu, Telugu, a fort; from the trees being abundant... A long low island or bank of alluvial and marine deposits, rising only a few feet above the water level [i.e., Armegon Shoal]. — Mad. Man. Admin. Vol. III. p. 832.

Dolphin's Nose.

This name is not given in Yule's Glossary.

1790. — The Dolphin's Nose, which is on the Westernmost point of Visigapatam Road. — Dunn, Directory, p. 308.

1813. — Visigapatam is distinguished by the Headland called the Dolphin's Nose. — Milburn, Commerce, Vol. II. p. 90.

1891. — Dolphin's Nose. — Admiralty Chart.

Gangam.

This name is not given in Yule's Glossary.

1740. — Gaujam. — De l'Isle; map.

1764. — Ganjam. — Croisey; map.

1809. — In this space Ganjam are several small rivers and villages near the sea; that of Calwart or Alatar is 3½ or 4 leagues to the NE. — Horsburgh, Sailing Dir. Vol. I. p. 352.

1891. — Ganjam. — Admiralty Chart.

The old name for Ganjam thus discovered is valuable, for it is to be found on old maps and is not otherwise identifiable. Thus:

1642. — Carepare. — Blaeuw; map.

1644. — Carepare. — Hondius; map.

1720. — Carepare. — Mortier; map.

Gardaware, Guard-an-ogre.

See Yule, s. v. Godavery.

1642. — P. de Godonest. — Blaeuw; map.

1644. — P. de Godonest. — Hondius; map.

1857. — C. Guadavari. — Coronelli; map.

c. 1720. — Guadavari, Goudeway. — Van der As: map.

c. 1720. — Cap de Guadavari. — Mortier; map.

1784. — Pointe de Godvarin. — Croisy; map.
1730. — From Narsapour to Point Godvarin or Gordware. — Dain, Directory, p. 149.
1813. — Point Gordware or Godavery. — Milburn, Commerce, Vol. II. p. 89.
1874. — Gordware or Godavery Point. — Taylor, India Directory, p. 463.
1891. — Godavari Point. — Admiralty Chart.
1893. — Godavery, Gödavari, Telugu. — Mad. Man. Admnr. Vol. III. p. 312. The writer of this article clearly means to infer that the name is goda + evari — boundary river.

Ingeram.

This name is not given in Yule's Glossary.

1642. — Bingeram. — Blaeuw; map.
1644. — Bingeram. — Hondius; map.

1792. — Madras to Ingeram, 399 British Miles. — Rennell, Memoir, p. 326.
1813. — Up the river [Godavery] is the town of Ingram, where the Company has a Chief, and where large quantities of piece-goods are manufactured. — Milburn, Commerce, Vol. II. p. 89.
1878. — Five miles to the south of Coringa are . . . . Injaram. At the latter place was one of the early settlements and a promising factory. — Morris, Godavery District, p. 41.

Jakernot Pagoda.

For this much ill-treated name see Yule, s. v. Jugernaut.

1669-79. — I have seen within some of these great Pagods a large cart and 2 horses with all their appurtenances cut out of an entire stone as bigge as most dungcarts & horses & these they often how to in representation of thirre God Jn? Gernaat [? Janganat for Jagannath] being as he is upon some festivals carried about in a large triumphant chariot most rarely carved painted & gilded by men of which in Order — [In margin "By what Name this Pagod is called "] . . . . MS., Asia, wherein is contained y? situation, cornes, cusa[tum] &c: of many Province[s] &c: in India Pars[ia] Arabia y? y? South Seas. — Experienced by me T: B[ate]man; in y? formentioned Indie [s] Viz: from Anno M. DC. LXIX. to M. DC. LXXIX.

1852. — Ye Captain being desirous to see ye Jagernot Pagodas for his better satisfaction, which we discovered this morning about 8 o'clock. — Yule, Diary of W. Hedges, Vol. I. p. 30.

1709. — Treats of the Sea-coast and some inland Countries in the ancient Kingdom of Oria, by the Natives called Oria [Uriya, Oriissa]; with an Account of the famous Temple of Jagarnath (p. 380). [Two truly wonderful illustrations follow of "The Temple of Jugeronatt" and
"Jaggerynatt's Coach." The Temple is built in the shape of a Canary Pipe, set on End, about 40 or 50 Yards high, about the Middle is the Image of an Ox cut in one entire Stone bigger than a live one (p. 382). — Alex. Hamilton, *East Indies*, Vol. I.

c. 1720. — Jagernat. — Van der Aa; map.

c. 1720. — Jagannat. — Mortier, as the name of a Country North of Orixa [Orissa].

1740 and 1781. — Jagarnat. — De l’Ile; map.

1784. — Pagode de Jagrenat. — Croisey; map.

1795. — Jagarnat. — French map, probably by De l’Ile.

1780. — From Manikpatnam or Jagrenat or Jankarpat more favourable is the course is ENE \(\frac{1}{4}\) E, distance 5 leagues ... Jagrenat is one of the most celebrated pagodas in India. — Dunn, *Dir.* p. 153.

1809. — Jagernaut Pagodas are three circular buildings surrounded by several smaller ones. — Horsburgh, *Sail. Dir.* p. 358.

1888. — Jagurnaut, a corruption of the Sanskrit Jagatnath, Lord of the Universe, a name of Kṛṣṇa, worshipped as Viṣṇu at the famous shrine of Puri in Orissa. — Yule, *v. c.*

1891. — Merely marked as "Temples" near Puri in the Admiralty Chart.

**Kedgeree.**

See *Yule, e. c.* Kedgeree.

1703. — Id. Kedgerry [but it is I. Kedgerye in the photo-litho, of the chart of 1703]; Kegaria of Hedges [1892]; 1701 Ed. of chart, Gajouri; Kidgerie of A. Hamilton [1789]; modern Kedgeree (Khijadi or Kajarj) of the Imp. Gazetteer [1885], but Khajari (i.e., Date-palm place) of the recent Port Trust Survey is perhaps right. The name is Cajcere in Bolt’s Map of Bengal, c. 1770, and in Sayer’s of 1778. — Yule, *Diary of W. Hedges*, Vol. III, p. cvi. With regard to the spelling *Kegaria* attributed to Hedges, the actual spellings to be found in Yule’s Ed. of the Diary are the following: —

c. 1710. — It was inhabited by Fishers as use also Ingellie and Kidgeree, two neighbouring Islands on the West Side of the mouth of the Ganges. — Alex. Hamilton, Ed. 1739, Vol. II, p. 4.

1780. — This place in a Military map, dated Aug. 25, by Rennell, as Cudjeree I, and Cudjee Road.

1809. — Europe ships used to moor in 6 or 7 fathoms close to the land at Kedgeree. — Horsburgh, *Sail. Dir.* Vol. I, p. 358.

1891. — Khijiri in Admiralty Chart.

**Kettle Bottom.**

This name is not in Yule’s *Glossary*. It is a sailor’s name for a round-topped or flat-topped isolated hill; in this case for a point in the Nagari Hills, North Arcot District. It has also been applied to a similar hill in Ceylon, thus: —

1809. — Batikele River. Far inland about 7 leagues to the Westward of the Friar’s Hood, there is a round conical hill, called the Kettle Bottom. — Horsburgh, *Sail. Dir.* Vol. I, p. 322.
The quotations as regards the hill mentioned in the text are the following:

1809. — Inland there is a high chain of mountains, called the high land of Pulicat or Pulicat Hills, at the Southern part having a small piece of table-land or hill called the Kettle Bottom. A little to the Southward of the Kettle Bottom, there is a hill less elevated, remarkable by a small crooked nob on it bent over to the Southward and resembling a horn, which is called Naggy Nose. — Horshburgh, _Sail. Dir._ Vol. I. p. 344 f. This information is copied _verbatim_ in the Ed. of 1841, Vol. I. p. 597; and into Taylor's _Indian Dir._, 1874, p. 460. Nagary Nose, Mukkukonda, Telugu, from mukku, nose + konda, mountain. Highest peak in the Nagary Hills. — _Mad. Man. Adma._ Vol. III. p. 589.

1891. — Kettle Bottom, 2824 (ft), is shown due West of Pulicat and NE of Nagari in the Admiralty Chart.

Madras, Madras, Madras.

See Yule, _v._ Madras. In the old maps the form, where the word occurs, is always Madras or Madraspattam.

1832. — We have made a law for our Towne of Madras. — Yule, _Diary of W. Hedges_, Vol. II. p. cxxviii.

c. 1710. — Fort St. George or Madras, or as the Natives call it China Patam, situated in one of the most incommodious Places I ever saw. — Alex. Hamilton, _East Indies_, Ed. 1739, Vol. I. p. 358.

1711. — The Black City call'd Madras and sometimes by the Moors, Chinnepatam. — Locker, _Trade in India_, p. 4.

1733. — Orme's _History_ spells Madras throughout, and so does the reprint of 1861.

Masulipatam.

See Yule, _v._ Masulipatam. This has, in Indo-European history, been one of the most widely corrupted words of all. See great variations from the standard form in the notes to Log II.

c. 1720.—Masulepatam, Masulipatam, Masulepatnam, Masnipatam, Masalipatam. — Van der Aa; maps.

1740 and 1781. — Masulipatam. — De l'Isle; map.

1754. — Masulipatam. — Croissey; map.

1766. — Masulipatam. — French map, probably by de l'Isle.

1813. — Masulipatam, this district forms the least of the grand divisions of the Circars. — Milburn, _Commerces_, Vol. II. p. 85.

1891. — Masulipatam. — Admiralty Chart.

Nassipore.

This name is not given in Yule's _Glossary_.

1812. — Mr. Flora went to Nassapour Pota. — Flora, _Journal in Morias, Godavery District_, p. 178 f.

1814. — As for our ship, the Globe, she is at present in the river of Yarsupurpota. — Peter Flora, _Letter in E. L. C. Records_, Vol. II. p. 41.
1670. — The Ship that was to sail to Suratte lay six Leagues lower at Rosipor. — Fernandes Navarette in Morris' Godavery District, p. 182.

1679. — The towns of Madapolam and Narsaporo jynie together. — Streynsham Master's Journal in Mackenzie, Kistna District, p. 141.

1681. — Resolved: the Chief and Councell at Madapolam be ordered to sell Mr Fleetwood's great house at Naursapooram for 365 Pagos. — Pringle, Mad. Consult. for 1681, p. 3. In n. 25 Mr. Pringle says: — Narsapur and Madapolam at the time of Mr Master's visit in April, 1679, formed one town. Mr Fleetwood had taken Narsapur on lease some year before.

c. 1720. — Narsapour. — Van der Aa; map.

1764. — Narsapour and Narsipello. — Croisey, map, shown by mistake as two separate places.

1780. — From Massulipatan to Narsapour the course is EbN 1/4 N . . . . Opposite the river of Narsapour is another bank. — Dunn, Dir. p. 149.

1874. — Narsapour or Narsapur Point. — Taylor, India Directory, p. 462.

1878. — Narsaporo, Narasapuram . . . . its Northern suburb is Mada pollam, Madhavayapilom, which is celebrated as one of the earliest places where the English established a factory. — Morris, Godavery District, p. 39.

1891. — Narsapour. — Admiralty Chart.

Pulicat, Pulicat.

See Yule, s. v. Pulicat. The two widely divergent forms of this word are due to the concurrent Tamil and Hindustani forms thereof.

1612. — Obiana, Queen of Paleakato . . . . The Hollander were afraid of their Castle newly built in Paleakato [on account of her committing suttee]. — Floris' Journal in Morris, Godavery District, p. 179.

1642. — Palicato. — Blaeuw; map.

1644. — Palecato. — Hondius; map.

1679. — And with the gold some months past at Pulicat. — Streynsham Master's Memorial in Morris, Godavery Dist. p. 190.

1682. — The ship Golden Fleece sailed out of this road and was driven down to leeward about as far as Pulicat about 6: a clock in the evening. — Pringle, Mad. Consult. for 1682, p. 5.

1687. — Palecato. — Coronelli; map.

28 Whence Madapolam for a species of cotton cloth. See Yule, s. v.

c. 1720. — Pollicat, Palliaccte, Pallacatte. — Van der Aa; maps.
c. 1720. — Pollicat. — Mortier; map.

1740 and 1781. — Pollicate. — De l’Isle; map.

1745. — Pollicate. — French map, probably by de l’Isle.

1780. — The Bank and River of Pollicatt . . . . Keep clear of the bank which lies off Pollicate or Pollicatt . . . . The inland part is high land called by navigators the Mountains of Pallacate (p. 144). In land there are very high mountains called the High Land of Pollicatt (p. 197). — Dunn, *Directory*.

1891. — Pollicat. — Admiralty Chart.

Pundy Rocks.

This name is not given in Yule’s *Glossary*.

1885. — Read a General (letter) from Vizagapatam, dated 2nd Instant, advising of a Town near them called Pundo being ransackt and the Rt Honble Compass Godowns broak(k) upon and Page 310 of their Hons taken away, being part of P 1000 sent thither to provide Rice. — Pringle. *Mad. Consul.* for 1685, p. 166. Mr. Pringle notes on this: — Probably the small Town Pundi in the (modern) Ganjam district.

1887. — Pondy. — Coronelli; map.

c. 1710. — There are several other Places . . . . on the Coast that drive a small trade in Corn, Pondee, . . . . are the most noted. — Alex. Hamilton, Ed. 1739, Vol. I. p. 378.
c. 1720. — Pondy. — Van der Aa; map.
c. 1720. — Pondy. — Mortier; map.

1764. — Poni. — Croisy; map.

1780. — Close in shore before the river of Pondy are 10 or 12 rocks (p. 152). One of our Europe ships going from Bengal to Vizagapatam in January, by not keeping off shore was forced to anchor several days off the high land of Baras or Pondy (p. 245). From Pondy to Barva or Barrar . . . . the distance is 5 leagues (p. 152). — Dunn, *Dir*.

1809. — About 5 leagues farther is the River Pondy or Poondy, having several rocks projecting from it to a considerable distance to seaward. — Horsburgh, *Sail. Dir.* Vol. I. p. 352.

1874. — Poondy or Pudi . . . . At the mouth of a small river . . . . The river Pondy or Poondy has several rocks projecting from it to seaward. Over this at some distance in country the High Land of Pondy is high and uneven. — Taylor, *India Dir.* p. 467.

1891. — Pundi. — Admiralty Chart.

Ramnepatam.

This name is not given in Yule’s *Glossary*. 
1883. — Upon advices that Alley and Au[bea]jy [interlopers] were att Palliacatt, as also by a letter rec'd from the Dutch there, advising that they intended to settle att Armagon, Ramapatam, Krishnapatam, and Gungapatam, which are all under Lingapa's Government. — Pringle, Med. Consul. for 1683, p. 54. Mr. Pringle's note on this is: — Ramapatam, Ramapattanam, midway between Madras and Metchlepatai [Masulipatam]. The English and Dutch in turns possessed and abandoned small houses at this place (n. 75). Lingappa of Poonamalie was a Naik or Poligar, who rented the country round about from the Court of Hyderabad. — Crole, Chingleput District, 1879, p. 144.

1873. — Ramapatam. This is itself a small fishing village, but at the port there used to be in former years a fair coasting trade in grain and firewood. — Boswell, Nellore District, p. 19.

1891. — Ramapatam. Admiralty Chart.

Sugarloaf.

1809. — The Dolphin's Nose may be plainly seen and the other hills around Visagapatam: one of these to the Northward of the road is called the Sugar Loaf, but the highest is several leagues inland from the town. — Horsburgh, Surl. Dir. Vol. I, p. 351.

Summerwarren.

This name is not noted in Yule's Glossary.

c. 1710. — There are several other Places. . . . on the Coast that drive a small Trade in Corn. . . . Sunapore, are the most noted, but not frequented by Europeans. — Alex. Hamilton, East Indies, Ed. 1739, Vol. I, p. 379.

c. 1720. — Sunnawren, Sunnewaron. — Van der As; maps.

1740 and 1781. — Sunnewaron. — De l'Isle; map.

1765. — Sunnewaron. — French map probably by de l'Isle.

1780. — From Barva to Sonnaweron or Ganjam. — Dunn, Dir. p. 152.

1809. — From this place (River Barva) to Ganjam, the distance is about 12 leagues to N. Eastward: the coast between them containing the small river Sonnavern nearest to Barva. — Horsburgh, Surl. Dir. Vol. I, p. 352.

1874. — Sonapur or Soonapoorpettah. . . . about 20 miles from Barwah. — Taylor, India Dir. p. 467.

1893. — Sonnapur, Sonnapurum. . . . is now a port of no importance. — Maltby, Ganjam District, p. 41 f.

1891. — Sonapur. — Admiralty Chart.

Visagapatam, Visagupatam.

This well-known name is not noted in Yule's Glossary. For differentiated forms of it see the notes on Log II.

1642. — Visapam. — Blaeuw; map.

1684. — Visapam. — Hondius; map.

1684. — Returne to the Commissions given them to examine the differences att Visagapatam. — Pringle, Med. Consul. for 1684, p. 32.

1720. — Visagapatam, Visegapatam. — Van der As; maps.

1780. — Visapam. — Mortier.

1740 and 1781. — Vasingapatam. — De l'Isle; map.

1784. — Visgiapatam. — Croisey; map.
1785. — Vasagapatnam. — French map probably by de'Isle.

1780. — Visagapatnam distinguishes itself by a great steep hill (p. 150). There are instances of ships that have stood as above till in the latitude of Visagapatnam (p. 258). Directions for Visagapatnam Road (p. 303). — Dunn, Directory, p. 150.

1809. — Visagapatnam may be known by the bluff called the Dolphin's Nose. — Horsburgh, SAIL. Dir. Vol. I. p. 350.

LOG. I.

4.

Blackwood's Harbour.

In the Log entries for September 11th, 1746, there is a curious and early note of the best method for entering Blackwood's Harbour, which lies behind the Armegon Shoal.

The native (Telugu) name for the anchorage is Monapâlemôru, and it got its European and geographical name from Sir Henry Blackwood, who was Admiral on the Coast at the early part of the XIXth century and caused a complete chart of the Harbour to be made on the representations of Colonel de Haviland. It has wide entrances both on the North and South ends of the Armegon Shoal, and the present soundings are from 4½ fathoms on the mainland shore to 6 and 7 fathoms near the shoal. Such is the account in the Madras Manual of Administration (Vol. III. p. 98), 1893.

But Sir Clements Markham, Indian Surveys, 1871, p. 8, gives a somewhat different account, which is as follows: — Admiral Sir Henry Blackwood, having reported that H. M. S. Leander had been safely at anchor inside the Armegon Shoal, North of Madras, for four days during the Monsoon, Capt Maxfield was sent to investigate the capabilities of the place, which has been since called Blackwood's Harbour. He went there in 1822, on board the Henry Meriton, accompanied by Capt de Haviland, but the conclusion come to at the time was that its distance from Madras was an inconvenience that outweighed any advantage it might have as an anchorage. (See Chart of Pulicat and Armegon Shoals by Capt Maxfield.) In 1823, however, the Madras Government hired a schooner, called the Mary Ann, to ride out the Monsoon in Blackwood's Harbour as an experiment.

A practically lost copy of this Survey I accidentally unearthed in the map-room of the Royal Geographical Society, and have now the pleasure, through the courtesy of the Society, to reproduce it here.

Blackwood's Harbour naturally finds no place in Rennell's Memoir, 1792, nor in Horsburgh's Sailing Directions, Ed. 1809, where directions for sailing along the Coromandel Coast past Armegon or Duraspamet are given in Vol. I. p. 344 f. Indeed, Horsburgh, p. 345, says that the Armegon Shoal "is of considerable extent, but has never been regularly examined: between it and the main there is a channel with 5 and 6 fathoms." This is much what Dunn, Directory, 1780, p. 146, says: — "You find between the coast and this bank [Armegon] a large and exceeding fine channel, which extends NB and SW," and as to the danger of the place, Dunn says: — "You must be experienced herein, or else it is better not to venture."

We find the harbour, however, mentioned by name in the 1841 Ed. of Horsburgh, in a notice copied word for word into Taylor's Directory, 1874, p. 460, thus: — "Between the inner edge of the [Armegon] Shoal and the coast there is a space from 3 to 4 miles wide, now called Blackwood Harbour, with soundings from 4½ fathoms near the shore to 6 or 7 fathoms contiguous to the shoal, where ships might anchor with safety in the fair weather monsoon near the entrance of Armegon River, by passing round the north end of the shoal with the hill bearing W½E."

(To be continued.)
A Stasimetric Survey of Blackwoods Harbour and the Armagon Shoal with the Reef off Point Pondy

By Captain William Maxfield
Honble Company Bombay Marine and 1st Assistant to the Marine Surveyor Genl of India AD 1823

References

A. The best Anchorage.
B. The Anchorage off Armagon River.
C. Two Buoys proposed to be laid to mark the South Entrance.
Point Pondy is situated in Lat 15° 18' 45" N. and Long 80° 35' 30" E. and is distant from Madras 42 Miles bearing from the Flag Staff at Fort St. George N 5° E.
The Tide rises at Blackwoods Harbour about 3 o'clock & it is High Water on full and Change at about 9 o'clock.
The Surf is in General very Trifling, and at no time violent and the Communication is at all times open & safe.

Meridian of Fort St George

Engraved for the Calcutta Journal.
A LADAKHI BONPA HYMNAL.

BY REV. A. H. FRAENCE.

Introduction.

It has become evident, that the ancient religion of Tibet, known as Bonchos, is not yet extinguished, even in those parts of the country which are professedly Lamaist. In such places Lamaism has become the religion of the clergy, but Bonchos has continued to live among laymen.

In all the Ladakhi villages each spring the Kyesar festival is held, when the male population exercises itself in archery. On this occasion the village band has to play and the gling glu is sung.\(^1\) The gling giu seems to be a remnant of the hymnal of the ancient Bonchos, and I have been so fortunate as to come into possession of the gling giu of two villages, Phyang and Khalatse. They are entirely different from each other, although the subject in each is the same, but it is to be remarked that they both consist of nine songs. It is probable, that in ancient times more than nine songs were known in a village; but as nine is the number which predominates over everything, the people were careful to sing neither more nor less than nine songs at a time.\(^2\) And so it has happened that, when many of the ancient songs were forgotten, nine remained living in the minds of the people, simply because a Kyesar festival could not be allowed to pass by without the usual set of nine hymns.

These hymns are perfectly unintelligible to anyone who has not previously studied the Kyesar Myths. But Ladakhi laymen, who know nothing of the life of Buddha, Padmasambhava or Tsongkhapa, know the life-story of Kyesar very well.

It is worth noticing, that in Phyang the Spring-hero’s name is pronounced Kyesar, not Kesar.

THE HYMNS.

Text.

Phyanggi gling giu rnam s rin.

I.

1. steng nang lha yul kun nonpari
   amala bu zhig itams,
2. yog nang klu yul kun nonpari
   gogzalhamola lha phrug rig itams.
3. bar nang btsan yul kun nonpari
   amala bu zhig itams.
4. bsdud nang bsdud yul kun nonpari
   lha phrug cig itamsed lei.

Notes.

1. etc., the termination pari is a dialectical form of the participle and corresponds to mkhannu.
2. gogza may be goza, a parallel case is dagza, ‘now,’ the s of which is often pronounced like z.
3. The word bar btsan, earth, was separated by nang only for the reason to form a sentence corresponding to the others.

Translation.

These songs are the gling gius of Phyang.

I.

1. A son, conquering the land of the gods in the heights,
   Was born to the mother.
2. A godly child, conquering the land of the lower water spirits,
   Was born to Gogzalhamo.
3. A son, conquering all the lands of the earth,
   Was born to the mother.
4. A godly child, conquering all the lands of the devil,
   Is born, hurrah!

Notes.

1. is said to refer to Kyesar’s victory over his two brothers, see Kesarsage II. 36-42. 4. refers to Kyesar’s victory over the giant of the North, who is called bDud.

---

\(^1\) A reference to this festival we have in VI. 5, 6 below.
\(^2\) The people will always play nine sets of Polo, to finish a game.
Lullaby to the Young Kyesar.

II.

1. stod nang stodna, rgyalham chenmoi stangspola stod.
2. aldalotele, singchen rgyalpoi stanga nang grospola stod.
3. stod nang stodna lei shellcam 'abrugumai muzangspona stod.
4. aldalotele, shellcam 'abrugumai shes nang muzangspona stod.

Notes.

1 and 3. nang, in; thus, if you praise in a praise; about rgyalham see Kesdigital, notes 2 and 4. aldalotele, lullaby. nang, within = mixed = together = and.

The Giant's Treasures.

III.

bKur dman rgyalmo:

1. lungpai phushedna norbu chechung tsam 'adug.
2. lungrai phushedna norbu chechung tsam 'adug.
3. norbu chechebo sgola mi shongces yod lei.
4. norbu chungchungbo pangla mi shongces yod lei.

Dongrubkylis:

5. den 'adrai norbu buthsa agarangla sal lei.
6. den 'adrai khyad norbu lagspa dongrubla sal lei.
7. alongthang yeig cig, buthsa ngarang yeig cig.
8. alongthang yeig cig, lagspa dongrub yeig cig.
9. buthsa ngarangla 'agruhlai 'agruham cig sal lei.

Notes.

3, 4. The reiteration of che and chung is due to the metre. 5, 6. The n of den is the initial silent 'a of 'adra, which is pronounced as a nasal with the preceding syllable. 6. lagspa = legspa. 7, 8. alongthang = ring-plain. The mountains of Tibet and the Himalayas are supposed to be the centre of the earth: the navel, these hills are surrounded by a ring of plains. 5, 6, 9. sal = steal, give, respectful.

II.

1. When you praise, praise the ingenuity of the great godly king.
2. Aldalotele, praise the ingenuity and advice of the king, the great lion.
3. When you praise, praise the learning of 'abrauguma, his crystal wife.
4. Aldalotele, praise the wisdom and learning of 'abrauguma, his crystal wife.

Notes.

It is remarkable how well the intellectual capacities of man and woman are characterised in this song: man as being productive, woman as reproductive.

Dongrub says:

5. Such treasures give, please, to me [thy] boy!
6. Such treasures give, please, to good Dongrub!
7. There is one solitary. Alongplain: there is myself, one solitary boy!
8. There is one solitary Alongplain: there is one solitary dear Dongrub!
9. Show me, thy boy, please, a way to walk along!

Notes.

In the first part of the song the mother describes the treasures to arouse Dongrub's covetousness. Then Dongrub starts in search of them and loses his way. In his difficulty he says the prayer, which forms part 2. According to the Winter Myth the giant of the North is in possession not only of a girl, but also of great treasures. It is remarkable that in the eyes of his heavenly mother Kyesar remains always Dongrub.
Praise of 'aBruguma.

IV.

1. blama szangpos choes salbas
2. ngai shecasa ihamo cila mén
3. blemas thamscad mkhyen mdzadpas
4. ngai mdzangsacan 'aBruguma cila mén
5. yari shes nang mdzangsopo lei
6. alam mdun nyad kunla ngouned lei
7. 'oma rigskyi mkh'an 'agroma
8. yari shes nang mdzangsopo lei
9. alam mdun nyad kunla thsa langsod lei
10. 'oma rigskyi mkh'an 'agroma.

Notes.

2. men — ma yin, is not. 5. yari — ya-ranggi — nyidranggi, you, thou. 6. alam, all, a Purig word, mdun yad — yado, companion or people. 7. The n in mkh'an is the nasally pronounced 'u of 'agroma. 9. thsa langsod, rising of envy.

IV.

1. As the good Lama taught [her] religion,
2. Why should my wise goddess not be [wise]?
3. As the Lama made her know everything,
4. Why should my learned 'aBruguma not be [learned]?
5. Thy wisdom and learning
6. is known to all, who are before thee!
7. Oh, thou milk-white fairy!
8. Thy wisdom and learning
9. Is envied by all, who are before thee!
10. Oh, thou milk-white fairy!

Notes.

Without doubting the historical character of Srung-btsan-sgamp, as well as that of his two wives, I feel inclined to believe that Bonpa mythology has added some fresh colour to their characters. Srung-btsan-sgamp's two wives remind us of Kyesar's two wives, above all, as regards their colour. 'aBruguma has lent her colour to the white Tārā; Bamsa'abumskiyid, the wife, first of the Giant, then of Kyesar, to the green Tārā. There is another parallel [within the two groups] as regards intellectual capacities. In both of them the husband is famous for his ingenuity, the wives for their learning.

In this connection I wish to draw attention to the following: (1) In J. A. S. B. Vol, LX. Part I. No. 3, 1891, Karl Marx, History of Ladakh, p. 116, note 13, we read the following interesting statement: 'In the Gyaltrab, Gesar (— Kesar) is referred to as one of the suitors of Konggo, the Chinese princess, who afterwards became the wife of Srung-btsan-sgamp.'

(2) Grünwedel, Mythologie des Buddhismus, note on Abb. 116; 'the crown of the green Tārā often shows the Dhyānibuddha Amoghasiddha. Amoghasiddha is the Tibetan Dongrub. Dongrub is the name of Kesar whilst dwelling in the North. It was in the North, where Kesar married his second wife.'
The Almighty God-Father and God-Mother.

V.
1. phred de yzarpoi 'ona rbab dela shorthas rig 'adug
2. phred ni yzarpoi rbabla shorthas rig 'adug lei
3. yabchen ababai 'ona bk' a staalnas shorthas rig med
4. 'abum khri rgyalpoi bk' a staalnas shorthas rig med lei
5. chu de chennoi 'ona rabschenla bing-thabs rig 'adug
6. chu ni chennoi rabschenla rgaltshas rig 'adug lo
7. yamchen amabai 'ona bk' a staalnas shorthas rig med lei
8. 'abum khri rgyalnoi bk' a staalnas shorthas rig med lei

Notes.
3, 7. the concluding ba in ababai and amabai was added only for the sake of the metre.

Kyesar, Returning to 'aBruguma.

VI.
1. yserri erala sga bstradda
tyemoi chibla bala chen lei
2. dkarpoi glangpochela sga bstradda
nyemoi ria bala chen lei
3. khra skyak dkharmola brizuste
nyemoi barbaia chen lo
4. gyumai phoromla brizuste
nyemoi raya bala chen lo
5. khyogthong m'da phanga rsebabo
darung yod nang lei
6. dohela nachung zurri kha kdingmabo
darung da yod nang lei

Notes.
1. crwn, a horse from Iran, Persia. 2. glangpochela, literally 'large ox,' is used nowadays for 'elephant.' In this connection it is probably a 'riding Yak.' 3. barbaia, the inside of a house; for to mo yserri buchma. 4. phorom = phorog, crow; raya, in Ladakhri not a balcony, but a large fine hall. 5, 6. nang lei, a concluding exclamation like lei and lo. 5. dohela, hallo! kdingmabo, means originally 'scaring.'

V.
1. There is a means of escape from a rolling rock on a steep path,
2. Yes, there is a means of escape from a rolling rock on a steep path,
3. But there is no means of escape from the commandments of the Great Father.
4. There is no means of escape from the commandments of the king of the 100,000 thrones.
5. There is a means of escape on the ford of the great waters.
6. Yes, there is a means of escape on the ford of the great waters.
7. But there is no means of escape from the commandments of the Great Mother.
8. There is no means of escape from the commandments of the queen of the 100,000 thrones.

Notes.
This song shows that the originally physiological deities have become ethical deities.

Kyesar is still undecided, in which of the four ways he ought to travel. The song proper is finished with v. 4; v. 5 and 6 are later additions. They express the idea, that in spite of Buddhism and Mohammedanism the Bon Religion is not yet extinguished and the Kyesar festival is still in vogue. At this festival the girls watch the boys at archery from the roofs of the houses.
VII.

1. nono rang miyulla skyodpas rig dgosug lei.
2. bu dongrub rang miyulla skyodpas rig dgosug lei.
3. sangmoi thasangma ngatanggii byaphran rig rtses yin lo
4. nyi nyi angshar nang byaphran rig rtses yin lo
5. rgyalba rig songa cila rig chen lo
6. ngatang phamse ring songa mi cha nang kha mod rig yin lo
7. ngatang rgyalces mannas pham mi shes lo.

Notes.
1. dgosug — dgos 'adug. 3. byaphran, a little deed, i. e., sham fighting. 5. rgyalba — rgyalbo, conquer. 6. phamse, probably phamse; khamei, no sense.

VIII.

1. ngazha rgyagar yulli mthong shescan yin lo
   om kyenang kyle.
2. ngazha dpalbo yulli nyan shescan yin lo
   om kyenang kyle.
3. ngazhas ma them menne gomparig mi shes
   om kyenang kyle.
4. ngazhas mazho rig menne thungba rig mi shes
   om kyenang kyle.
5. zul pa phanba rig menne ynodpa rig co mi shes
   om kyenang kyle.

Notes.
The refrain of all verses, 'om kyenang kyelo, was explained to me to have been, in the original om makhen 'ang mchyon lei, which might mean: Oh do take, notice of this! 3. ma them, the mother threshold; it is the one belonging to that part of the house, which is called makhen. menne = mannas, besides.

IX.

1. The youngest son himself must go to the land of men.
2. The son Dongrub himself must go to the land of men.
3. In the early morning we will have a little tournament.
4. At the early rising of the sun we will have a little tournament.
5. IfI should be victorious, why should I go?
6. If I am beaten, there is no sense in saying 'I will not go!'
7. But we do not know anything except being victorious: we do not know what it is to be beaten!

Notes.
This song refers to Kyesarage II. 36-42. The three sons of the king of heaven have to fight each other. He who is beaten, must go to the earth. Dongrub, the youngest, in spite of his being victorious, goes of his own accord.

Innocence.

VIII.

1. We know India from having seen it,
   Om kyenang kyelo!
2. We know Nepal from having heard of it,
   Om kyenang kyelo!
3. We do not know a step further than the threshold,
   Om kyenang kyelo!
4. We do not know any beverage besides mother's milk,
   Om kyenang kyelo!
5. We do not know of doing any harm, if it be not for somebody's advantage,
   Om kyenang kyelo!

Notes.
1. India is considered by some people to be 'Bruguma's fatherland. In this case the history of Brong-bsTan-gampo's wife may have influenced 'Bruguma's history. This song should be placed before 'Bruguma's marriage to Kyesar. Some people place it after Kyesar's return from the north; but in that case there would not be much left of 'Bruguma's Innocence: as she gave birth to two children by the king of Yarkand.
The King of Yarkand's Entreaty for his Life.

IX.

1. ngang gling yulla chen dolá gling yulla chen.

2. dbyarla gling yulla basilo rig yod dolá rgyalham chenmo.

3. dgonu ngati horyulla drosa rig yimpas

4. ngang horyulla chen dolá sprulpai rgyalpo!

5. ma’shepa rig songna nyikyas bagar is big sna mas dolá rgyalham chenmo

6. ma’shepa dang m’a mkhaspa songna nyidkys bagar is big mdzad ‘ang mkhyenpai rgyalpo!

Notes.

3. drosa, a warm place. 4. tse, respectful termination. 5. bagar is = bakhshis, gift; the r in aris is not pronounced, and no reason whatever can be given for this way of spelling the word. 6. mkhyen is used very frequently to honour a person, for instance Sahib mkhyen.

IX.

1. We will go to the land of gLing: hulloa, we will go to the land of gLing!

2. There it is cool in summer; hulloa, great godly king!

3. Because our land of Hor is warm in winter.

4. We will go there then; hulloa, incarnated king!

5. If you are very wise, you will accept a present; hulloa, great godly king!

6. If you are very wise and very clever, you will also give me a present, oh acknowledged king!

Notes.

When this song is sung by the king of Hor Kyesar is kneeling on his breast and ready to kill him. The king of Hor pretends to be in good spirits all the same, for which reason he repeatedly sings dolá, hulloa! He cannot yet give up telling lies, for in Hor it is not warm in winter. Originally Hor seems to have been Mongolia; but now it is generally supposed to be Yarkand. In 5 the king of Hor offers his hidden treasures, and the present, which he hopes to receive in exchange of them, in 6, is his life.

SPADES AND DRAGONS.

A STUDY IN CURRENCY.

Readers of the commercial columns in the Indian daily papers will be familiar with the fact that the exchange rate of sovereigns is usually the subject of two quotations, "dragons" bearing a value that falls short of the price of other sovereigns by an anna or two. The Englishman, who has been accustomed to pay out his gold coins at home without considering whether they bear a dragon or a coat of arms on the reverse, is puzzled to find, now that sovereigns are coming into use in this country, that the market value of the coins varies with the device that they bear. It will, perhaps, be no less a subject for surprise to him to learn that these same sovereigns are commonly referred to by the natives who handle them as "guineas"—an epithet which at first seems a trifle misplaced; in fact, it may occur to him that the only reason discernible for calling a sovereign a guinea is that it is not a guinea; and he will be disposed to decide that this is hardly adequate.

With reference to the first of these conundrums, the differential value of sovereigns, varying in favour of those not bearing a dragon on the reverse, enquiries in the Bombay market have elicited the information that, in the opinion of many merchants and brokers of the Western Metropolis, the gold contained in the "spade" sovereigns ("spade" is a useful term for denoting the sovereigns stamped with the Royal arms on a shield of spade shape) is of better touch than that of the "dragons." The opinion is not confined to the bazaars, but is shared by experts in currency questions. This conviction induces purchasers of these coins who intend using them for ornamental purposes, such as forming a necklace by stringing a number of them together, an ornament much affected by the fair sex in India, to offer an anna or two more than the market rate for dragon sovereigns in order to secure the more favourite coin known as a spade guinea.

There is another reason why the "spade" sovereign is more appreciated for ornamental purposes
than its fellow. Musalmans prefer it on account of the "Sunnah" or behest of the Prophet which discourages the wearing of any effigy made in the likeness of a living thing, and equally forbids the possession of pictures or portraits capable of being so described. There was, it would seem, sufficient reason for the issue and enforcement of this behest in the early days of Islam. The conversion wholesale of many of the tribes of Arabia to the tenets of the Founder of this religion was not unaccompanied with a rapidity that left some of the many new converts spiritually little changed in more than the name of their faith, and was for this reason marked by no little backward into idolatrous practices on the part of these half-fledged Muslims. These could not without difficulty at once divest themselves entirely of their early beliefs, dear to them through long practice and hereditary instinct. The primitive form of worship discarded by these converts would appear to have been of the nature of fetish-worship, that early stage in the evolution of religion which may perhaps be described as Pantheism in its esoteric aspect and exoterically Polytheism, known in modern scientific language as Animism.

These "ex-Animists," then, were wont to carry about their persons rude images of their former gods, and, while seemingly bowing down to the Unseen Allah, would secretly worship the forbidden but more familiar deity of their forefathers. It was in order to suppress these waverers and backsliders that the famous "Sunnah" against the use of pictures and effigies was promulgated by the Prophet.¹

It will be seen that this "behest" furnishes a good reason why the orthodox Musalman should select the "spade" sovereign in preference to the "dragon." Critics may urge that the "spade" sovereign also bears an image, that of the Queen or her predecessor, on the obverse. This is true, yet it will be found to be in no way inconsistent with the explanation already given. The Sunnah aimed against images has, by a wise convention, been held not to apply to an incomplete effigy such as a head or bust alone. Expediency seems to have called for this latitude in the application of the law, for otherwise an orthodox Musalman would only be in position to receive payment in coin at a sacrifice of his religious scruples against the medium in which payment is tendered. Without wishing to libel the Mahomedan "in the street," the presumption may be hazarded that his religious scruples would stand but a poor chance in such a contingency.

Thus, a preference for the metal from which they have been coined and the absence of St. George's famous battle scene from the reverse are possibly to no little extent responsible for the higher quotations or sovereigns of the spade type. Other reasons may be known to residents in India who have had their attention drawn to the subject of this note. I have not so far been able to discover them in Bombay. The origin of the term "guinea" for the sovereign, a name that is coming into use in many parts of the country where it was formerly unknown, on account of natives becoming for the first time familiar with sovereigns, a familiarity traceable to the working of the Currency Act which recently made them legal tender in India, is presumably to be explained as a survival from the days when guineas were in circulation. I learn from Captain Hudson, I. M. S., of Her Majesty's Mint in Bombay, that from 1760 to 1785 the guineas in circulation bore the effigy of George III. on the obverse, with inscription Ditis Gratuitas; the reverse showing the Royal Arms, including the Fleur de Lys, and inscribed 1774, M.B.F. et R. Rex F.D., B. et L. D. S. E., I. A. T. et E. The arms were quartered on a scutcheon of irregular shape. From 1787 to 1798 a new guinea, bearing the same obverse and stamped in reverse with the Royal Arms in a spade, was in use. The inscription on the reverse was as before.

The modern spade sovereign is, therefore, sufficiently like its predecessor, the guinea, to suggest a reason for the use of the term by natives in describing it. By an extension of the word such as we are familiar with in the East, e.g., kirkit from cricket, and so applied to tennis and other games played with a ball, etc., "guinea" now denotes sovereigns of all designs—an instance of the development of the common noun which may be interesting to philologists as representing the process by which originally the common term was evolved in speech.

R. E. ENTHOVEN.

November 23rd, 1906.

[ I understand that in Calcutta "guinea" has since the introduction of the Currency Act, come to mean a sum of fifteen rupees, just as "gold mohur" has long been made to stand for sixteen rupees and "pagoda" for three and half rupees. — E. C. TEMPLE.]

NOTES ON INDIAN HISTORY AND GEOGRAPHY.

BY J. F. FLEET, I.C.S. (Retd.), Ph.D., C.I.E.

The places mentioned in the British Museum plates of Vira-Satyārājadēva.

This record has been published by me, with a lithograph, in Vol. XIV. above, p. 140 ff. It puts forward the name of a king Vira-Satyārājadēva, son of Gōvindaśay, whom it describes as the supreme lord of Kālyānāpura, the best of towns, as a sun to the water-lily (flowering in the daytime) that was the family of the Chālukyas, as and as born in the Sōmavāha or Lunar Race. And it further describes him as reigning at Kālyānāpura, and as being engaged, at the time when the record was issued, in a state progress through the southern territories, in the course of which his camp was pitched near (the temple of) the god Kopēvāra.

Kālyānāpura is the modern Kalyān in the Nizam’s Dominions. And the record thus represents Vira-Satyārājadēva as a descendant and successor of the great Western Chālukyas, whose dynasty came to an end about A. D. 1190. It must be remarked that it is not quite certain that this record is a genuine one. All that can be said for the present, however, on this point, is, that there is no particular reason why there should not have been a prince Vira-Satyārājadēva, — in, say, the thirteenth or fourteenth century A. D., which is the period to which the composition of this record may be referred, — claiming Chālukya descent, and possessing a certain amount of power over some of the territories that had formed part of the Western Chālukya kingdom, though he certainly cannot have been actually reigning as a paramount king at Kalyān.

The record goes on to recite that, on a specified day in the Bhāva saṃvatsara, with which, however, no year of an era is coupled, there was granted, apparently by Vira-Satyārājadēva himself, a village named Sēlagēra, in a district called the Mērīṇja three-hundred kamanā, and in a group of villages described as the Kopēvāla twelve. It divides the whole village into certain properties. Of these, one, called the manayya-thalāyvī, seems to be specified as assigned to a certain Bhāmarāya, the madhavati-dararka-śirpa or captain of the guards of elephants. Another was set apart for the purposes of the vītāhāya-tējā-rāya. Others were assigned to the Mūlsthāna god, to the Jinalaya or Jain temple, to the god Mailārāvī, and to the god Brahmadēva. Others were assigned to the Nāgārāvī or headman of the group of villages, and to a certain Bıyānāya, the Mālik or keeper of the garden of the Mūlsthāna god, and to the Sōndra or goldsmith, the Dvārāda or gatekeeper, and the

1 Dakshinyā dikṣārā-dvīpa-dvīpa-dvīpā; see Ep. Ind., Vol. VI, p. 51, note 5.
2 Kadakam-mukhalika; or Kadakam-mukkalika; see page 220 above, note 36.
4 See some remarks, in connection with Somadēva and Khṃvadēvārya, in note 22 on page 207 above. — For some possibilities regarding the actual date of the present record, see the next note.
5 The full details of the date are the Bhāva samvatsara, and Jyaiśhaka kriyā 7 coupled with Sāvatvāra (Monday). — In A. D. 1274, in the Bhāva samvatsara according to the system current in the part of the country to which this record belongs, the given tithi began at about 24 hrs. 40 min. after mean sunrise (for Ujjain) on Monday, 28th May. But there is no apparent reason why the tithi should be coupled, for a time more than two hours after sunset, with the day on which it began. — In A. D. 1214, 1324, and 1324, the given tithi did not touch a Monday at all. — In A. D. 1454, the month Jyaiśhaka was intercalary; and, in the second Jyaiśhaka, the given tithi ended at about 12 hrs. 32 min. after mean sunrise on Monday, 17th June. But the acceptance of this result, or of any other later one, would probably entail the stopping of the record as a spurious one.
6 This part of the record might be taken, at first sight, as meaning that a grant was made of all the villages included in the group. But the real intended purport of the mention of the Kopēvāla twelve seems to be simply to define further the exact subdivision, of the three-hundred district, to which the village of Sēlagēra belonged. The language of the record is ungrammatical.
7 Pahārādāny is explained in Munro-Williams' Sanskrit Dictionary as meaning, in the plural, "armed men who run by the side of an elephant in battle to protect its feet."
Nāsīya or barber. And the last assignment was made, according to the text, to the anāmikā. This word, however, which means 'the ring-finger,' must be a mistake for andnīka, meaning the Mahārā, Mārga, Chāmbhā, etc.

The record then proceeds to define the boundaries of Selagāra. And here it places, on the north-east, the junction of the three villages of Kongulavali, Borovali, and Selagāra; and on the south-east, the junction of Madubāvi, Vorabali, and Selagāra; and on the west-south-west, the junction of Bejavalike, Madakunike, and Selagāra; and, on the north-west, the junction of Kongulavali, Beluvakike, and Selagāra. In this passage mention is also made, in line 40, of a village named Vīrānharavuna, somewhere on the east of Selagāra, and, in line 45, of a hill named Dhargirī or Baragirī, which touched the boundary of Madakunike and was somewhere between the south-east and the west-south-west, and, in line 49-50, of a hill named Andharagirī, which was somewhere towards the west, and, in lines 50, 52, of a hill named Undraparvata, Undragirī, which was somewhere on the north-west.

Mirīne is, of course, the modern Miraj, the chief town of the Senior Miraj State in the Southern Marāthā Country, in lat. 16° 49', long. 74° 42', about twenty-eight miles towards the east-by-north from Kālpāpur. And the Mirīne three-hundred kampāna of this record was perhaps the head-quarters subdivision of the Mirīne territory, which seems to be described elsewhere as a three-thousand province.

Kongulavali is the 'Kongnoolee' of the Indian Atlas sheet No. 40 (1852), — the 'Kog-nooli' of the Postal Directory of the Bombay Circle (1879), and of the Deccan Topographical Survey sheet No. 90 (1883), — the village-site of which is eighteen miles east-north-east from Miraj. The word vāli represents, of course, vālī, = hālī, palī, a settlement, an abode, a hamlet, a village. And we may take the old name of the village as Kongulavali, and the modern name as Konganōli.

Selagāra is the 'Surgul' of the Atlas sheet, and the 'Salgar' of the Postal Directory and the Topographical sheet, about one mile and a quarter on the south of Konganōli. The name of Borovali has disappeared; and the lands of this village seem to have been incorporated into the eastern lands of Salgar. Madubāvi is 'Mudhawee,' 'Madhav,' standing, no doubt, for Madbāvi, Madbhāvi, — six and a half miles towards the south-south-east from Salgar: it is now separated from Salgar by the lands of Bommā, Arlihatti, and Shirur; and some of these lands probably represent Vorabali, the name of which, again, has disappeared. Beluvakike or Beluvānike is 'Belukhoi,' 'Belankhi,' — of which the real spelling seems to be Belvānki, — three miles on the south-west of Salgar. The name of Madakunike, also, has disappeared, unless the village is represented by 'Mutmookee,' 'Mutkuniki,' about seventeen miles away towards the west-north-west from Salgar: that, however, with six or seven
other villages now intervening, seems almost too far away to be concerned in the present matter; and it appears more likely that the lands of the Madakunike of the record are now represented by the lands of the ‘Kuktol’ of the Topographical sheet, about five miles towards the north-west-by-west from Salgar. The name of Viradharavun, again, has disappeared. Dharagiri or Daragiri seems to denote the range of hills, seen best in the Atlas sheet, which comes close up on the west to ‘Lingnoor,’ ‘Lingnr,’ seven miles towards the south-west-by-south from Salgar. Andharagiri is probably the isolated hill close on the north-west of Bejwanki. And the Undraparvata or Undaragiri must be the hill now known as Juna-Panhala or Old Panhala, about three and a half miles west-by-north from Salgar.  

The Konigavalli twelve, originally belonging entirely to the Mirajje country, seems to have been now very much split up in respect of ownership. According to the Topographical sheet, Konigavali belongs to the Junior Miraj State; Salgar and Juna-Panhala belong to Sangli; Madhavi or Madhavali belongs to Ghorpad; and Bejwanki belongs to the Athn tulaks.

As noted above, the record asserts that, when the grant was made, Virasatyashramdeva was encamped near the god Kopalavara. This means that he was at Koppam, a famous battle-field of the Western Chalukyas and the Chola. And I shall show on another occasion that Koppam is the modern Khidrapur, in the Kolhapur territory, near the confluence of the Krishna and the Dulk-Gaiga. Not far away, there was Kudalsangam, another famous battle-field of the same two foes. And in the same neighbourhood there was Karandai, which is the modern Iachal-Karanji, where the Chola king Rajakarivarman-Virarajendra I. expected the Chalukya king Ahavamalla-Samevara I. to come in order to fight him once again at Kudalsangam.  

The places mentioned in the spurious Wadgaon plates.

This record is No. 36 in the list of Spurious Records on page 218 above. It deserves, for various reasons, to be edited. But it has not yet been so dealt with. And I quote it, chiefly for geographical purposes, from ink-impressions made by me in 1891, when the original plates were sent to me by Khan Bahadur Meherjibai Kuvajir Tarapurwala, Diwan of Kolhapur. The original plates were then in the possession of Bajajl and Raghn, sons of Krishnabapikr, of Wadgaon in the Alit subdivision of the Kolhapur State. And they were, presumably, returned to those same persons, when they were sent back by me.

The record claims, in the first place, a grant which, it asserts, was made by a Rashtra-ruja king Amoghavarsa, by whom, however, it really means Indra III. 1 It says that he had come to Kurunda for the purpose of celebrating the festival of his coronation; that is to say, that he had come to Kurundwadi, which place is mentioned in the same way in the Nassar grants of A. D. 915, which tell us that Indra III. was then at Kurundaka for the festival of his coronation. 2 And it claims that, on a specified day in the Bahuchhanya samvat, Saka-Samvat 720 expired, falling in A. D. 738, after performing a mahadhyaga or great sacrifice at the time of conquering the Dravila Rajendrachoda, he granted to a thousand and one Bhemaga, of whom only one is specified, namely Madhavachaneveradilakhita of the Kannada lineage and

---

1. The Gazetteer of the Bombay Presidency, Vol. XXI., Belogum, p. 551, speaks of this as the “Belwanki or Old Panhala Hill,” and places it about six miles north-west of Athni, and mentions a case in it, dedicated to the god Siddhesvara. This account, however, seems to confute it in some way with the hill at Bejwanki. This latter hill is about sixteen miles towards the north-west-by-north from Athni. Juna-Panhala is about eighteen miles from Athni, and more to the north-west. It is not included in the lands of Bejwanki, which, in fact, hardly touches at all. And the Topographical sheet shows it as having a temple of ‘Girling.’

2. See note 73 on page 218 above.

---

1. Jour. As. Soc. XVIII. p. 593. Kurundwadi is only about one hundred and seventy miles from the capital Manyakha-Mukh. — While awaiting the first proofs of this paper, I have noticed that the identification of the Kurundaka of the Nassar records with Kurundwadi had already been suggested, doubtfully, in the Gazetteer of the Bombay Presidency, Vol. I. Part 1. p. 122, note 1, where, however, the name was wrongly taken as Kurundaka. The local Wadgaon record, though spurious, suffices to make the identification certain.
the Kāēyapa goṭra, — Karahāṭa-chattusahaṭra-vishay-antarē Mālakāgrāma-tridaśa-mdhyā Ċristkāvāṛṇa-mahānādi-pūrya-dig-bbāgē Yeleyavāpī-nāma-grāma, — "the village named Yeleyavāpī, in the Karahāṭa four-thousand province, in the Mālakāgrāma thirty, on the east of the great river Krishnavernā." The record asserts that the king gave the village as a mahāgṛahāra or "great agraḥāra," (to be enjoyed according to) the trīkhaḍghāhyantvarisddhī, that is to say, on a joint tenure by Brāhmaṇa, by a god or gods, and by a private person, and that he gave with it its hamlet called Dvijapalli, on the north of it, apparently consisting of twelve houses laid out according to the measure of seven cubits (hastā). And, in addition to saying that each of the Brāhmaṇa donees received twelve nivartaṇas of land, it mentions a tenement of one thousand nivartaṇas according to the rod (daṅḍa) of twelve spans (viśati), which it specifies as prabhūnayya, or "the property of the lord (of the village)," and a tenement of four thousand nivartaṇas, which it specifies as dēvadāyā, or "the portion of the gods."

The appellation Krishnavernā is already well known as one of the variants of the epigraphic name of the river Krishna. And we need say nothing further about the river here, except that, with the description of it in this record as mahānādi, "the great river," we have to compare the Kanarese word perdo, also occurring as peldo, again meaning "the great river," and used to denote the Krishaṇa, without even requiring to be attached to the name of the river. Also, the Karahāṭa four-thousand is known as a territorial division which took its name from the ancient name of Karhāḍ, the head-quarters of the Karhāḍ tāluka of the Šatārā district.

We have, therefore, to find the village, claimed by the record, somewhere within a reasonable distance from Karhāḍ, and on the east of the Krishaṇa. And, with these facts to guide us, (and with the help of some of the details given in the passages in this record which define the boundaries of Yeleyavāpī, we find that Yeleyavāpī is the modern Yelāvī, — the 'Yelāvē' of the Indian Atlas sheet No. 40 (1852), and the 'Yelāvī' of the Bombay Survey sheet No. 270 (1895), — the village-site of which is about five miles on the west of Tāsagun, the head-quarters of the Tāsagun tāluka of the Šatārā district, and three miles from the east bank of the Krishaṇa, and twenty-seven miles towards the south-east-by-east from Karhāḍ.

Among the villages mentioned, and capable of identification, in the passage defining the boundaries of Yeleyavāpī, we have first Nimbāṇi, somewhere on the east of Yeleyavāpī; this is the modern 'Nimmo,' 'Nimmi,' of the maps, the village-site of which is three miles south-east-by-east from Yelāvī, and the name of which we may safely take as Nimpi. Mention is next made of a village named Uragārāma, "the village of snakes," or Paśāhāragārāma, "the village of rock-snakes," somewhere on the south of Nimbaṇi; this name, in either form, seems to be a rather fanciful substitute for Nāgārāma, which would be exactly represented by Nāgāon, also called Nāgāon-Nimpi, about one mile south of Nimpi. Further on, mention is made of a village named Panaše, somewhere on the north-west of Yeleyavāpī; this is

8 Rājend chattusahaṭra. 4 See Vol. XIX. above, p. 271.
9 Mention is often made of the Prabhū of a village; for instance, in the cases of Māhābava, the Prabhū of Māpāvaka-Mādissavali-Nanapāli (Ep. Ind. Vol. V. p. 31), and Rāhgrāmaṇa, the Prabhū of Abhālā-Ahāla (ibid. p. 231). And we also have the mention of a Mahāprabha of an agraḥāra (ibid. p. 29). The office was evidently that of the āgraḥārapati, referred to in Mānanadarmāmaitrī, vii. 119, which says: — "Let him (the king) appoint a lord of one village (pramāṇay a adhikāri), and a lord of ten villages, and a lord of twenty, and a lord of a hundred, and a lord of a thousand." But, whether the functions of a Prabhū or Āgraḥārapati of a village were the same as those of a Gāḍja, Pāṭī, or village-headman, or what they were, has not yet been made clear.
10 See page 376 below. 7 See Ep. Ind. Vol. V. p. 169, note 6, and Vol. VI. p. 328. 11 See page 377 below. The text has dādrisnavāla pāsāhāragārāma-pāsāhāragārāma-pāsāhāragārāma, etc. The language of this part of the record is not altogether grammatical. And reference is made several times, further on, to such land-marks as pādsā, 'a stone,' mahā-ārūṣha-hasti-pādsā, 'a stone bearing the representation of a great elephant with a rider on it,' and pādāhā-sankha, 'a heep of stones.' And so, perhaps, we ought to divide the text, and understand it as meaning "a stone and the village named Uragegrama." But, if there is any Native term corresponding to our 'rock-snake,' then the name may certainly be taken as Paśāhāragārāma.
'Pulloos,' 'Palus,' about four and a half miles towards the north-west from Yelaví. Further on, we have a village named Yanduli or Yandulí, somewhere on the north-east of Panná; this is 'Andlee,' 'Andhalí,' three and a half miles towards the north-east from 'Pulloos,' 'Palus,' and six and a half miles towards the north-east from Yelaví. And finally we have a village or hamlet named Turuturapallí, which seems to be represented by the modern 'Toorchee,' 'Turchi,' three miles north-east-by-east from Yelaví.

Other villages mentioned in the same passage, are, Utsavgráma, Bhagnadhanurgráma, a deserted (śīnya) hamlet named Thanaambalalika, and Távrahulgráma. These names, and that of the hamlet Dvijapalli, seem to have now disappeared. At any rate, the maps do not present anything answering to them.

So, also, the maps do not present any name answering to that of Mallakagaráma, the village from which the group of villages known as the Mallakagaráma thirty took its appellation. And it does not appear that the name Mallakagaráma can be a translation of Tágaon. And it hardly seems likely that the name of Tágaon, can be a corruption of Tisgaon, 'thirty-village.' But the maps show, about five and a half miles on the north of Tágaon, a large village called Visapör, the name of which is capable of meaning 'twenty-town.' It appears that the Tágaon jagir, which existed prior to 1848, consisted of eleven villages. And I suspect that, at some time or another, the original group of thirty villages was broken up into two groups, one of ten villages headed by Tágaon, and one of twenty villages headed by Visapör, and that the name of Mallakagaráma then disappeared.

It may be added that, after the passage defining the boundaries of Yeleyavápi, the record goes on to say that a certain Subhatungá, also called Tuligá and Gandarnirapta and perhaps Kogáda or Kogandá, laved the feet of Varavaranapálita, and made certain allotments of land to various temples and for other purposes. By the name Gandarnirapta, we know that the record here means the Rástrákuta king Kishpa III., a successor of Indra III. The details of these allotments, added together, amount to five thousand nivarmanas. And this part of the record thus seems to put forward a subsequent redistribution of the tenements of one thousand nivarmanas and four thousand nivarmanas, which, according to the first part, were reserved as prabhsnánya and dévaditya. The record concludes by claiming to have been written by Sarvadavá, a servant of Aghóvallabha (sic) of the Raşa (sic) lineage.

The places mentioned in the Karhád plates of A. D. 959.

This record has been edited by Dr. Bhandarkar, with a facsimile lithograph, in Ep. Ind. Vol. IV. p. 278 ff. It recites that, on a specified day in the Kálayukta samvat 880 (expired), falling in A. D. 959, the Rástrákuta king Kishpa III., who was then encamped at Mélpati, granted to a great ascetic named Gaganásiva, a pupil of the Áchárya Isánasiva who was the Sthadapati or head of the establishment of the god Valkalésvara of Karaháta and had issued from the Kárayakhóta succession (of teachers), a village named Kañkén in a group of villages known as the Kali twelve which was attached (pratibhaddha) to the Karaháta province (visaya). The boundaries of Kañkén are specified. And we are told that they were on the north and east a river named Kanahavá, and on the north and south two villages the names of which, according to the published text, were [Penudar]á and Ádhóhám.

Mélpati is the village which is still known as Mélpati, in the Chittur taluka of the North Arcot district, Madras Presidency. The Karaháta of this record, however, is certainly the modern Karhád in the Sátara district, Bombay Presidency, where the plates themselves were

10 'Mullaongaon,' 'Malaon,' a small village on the east bank of the Agrapi river, about eleven miles on the east of Tágaon, does not seem to answer any of the required conditions. And 'Mulgaon,' 'Malgíon,' a large village about five miles north-east-by-east from Miraj, certainly does not.

11 'Vid means an aggregate of twenty considered as an unit by simple men in counting or reckoning, a score; for instance, páchchí vid rupáya, 'five score rupees.' See Molesworth and Candy's Marathi Dictionary, under vid.

found in digging out the foundations of an old and dilapidated house. And we have to find the villages that are named in the record, somewhere within a reasonable distance from Karhāj.

Dr. Bhandarkar was informed that there is a village of the name of Kāñkāl, now included in the Junior Miraj State, some miles to the south-east of Karhāj; and also that that village is bounded on the south by a village named Pandūr, and on the west by a village named Ādhi. It was indicated to him that these villages are in the neighbourhood of a river now called the Agrāṇī. He was further told that there is also a village of the name of Kalī in the vicinity. And, finally, he was told that the twelve villages of which Kalī is or was the chief, have now the following names:

1. Kalī
2. Kāñkāl
3. Ājūra
4. Sijūr
5. Ādhi
6. Salgar
7. Bēkōnkī
8. Titūr
9. Khaṭāv
10. Nīgnur
11. Pandrēgāṃv (Pandūr?)
12. Tāvīs

This information is very circumstantial. But an examination of the details of it, with the help of maps, very soon shows that it is purely imaginative. The Agrāṇī river is a small river the name of which figures as ‘Agurnees’ in the Indian Atlas sheet No. 40 (1852), as ‘Agran’ in the Bombay Survey sheet No. 270 (1885), as ‘Agarni’ in the Survey sheet No. 301 (1897), and as ‘Agarni’ in the Survey Sheet No. 302 (1897). It rises near Khānāpur, which is twelve miles on the east of Vīta (Vītēn), the head-quarters of the Khānāpur taluka of the Sārā district, and is about thirty-five miles on the east of Karhāj. And, flowing southwards, it eventually joins the Kriṣhṇā about eight miles on the south-west of Athū, the head-quarters of the Athū taluka of the Belgaum district. If Kaṅkāl is to be found on the Agrāṇī, the only places where that river makes so decided a bend that it could form both the northern and the western boundaries of a village, are, near the ‘Kuroolee’ of the Indian Atlas sheet No. 40, the ‘Karoli’ of the Deccan Topographical Survey sheet No. 90 (1883), about eighteen miles north-east by east from Miraj, or else at the ‘Kulstee’ of the Indian Atlas sheet No. 40, the ‘Kalot’ of the Bombay Survey sheet No. 301, twenty-five miles towards the east by north from Miraj. But neither there, nor anywhere else along the Agrāṇī, do the maps present any names answering in any way to the four village-names given in the record.

We can, however, identify some of the twelve villages reported to Dr. Bhandarkar as constituting now, or having formerly constituted, the Kalī group. They are to be found in the Indian Atlas sheet No. 40 (1852), and the Deccan Topographical Survey sheet No. 90 (1883), and the Bombay Survey sheet No. 301 (1897). Taking everything together, it is quite obvious that Salgar is the village with which we have dealt on page 370 above, — the ancient Sālāgāra in the Kōṅgulavalki twelve in the Mīrinje three-hundred kāṅgāra, — about one mile and a quarter on the south of Kōṅgānōli, which is eighteen miles east-north-east from Miraj. Ājūra is ‘Ajōor, ‘Ajur,’ seven miles on the east of Kōṅgānōli, and on the other side, the east, of the Agrāṇī. Sijūr must be a mistake for ‘Seepoor,’ ‘Sīpur,’ seven miles towards the south-west by west from Kōṅgānōli, or else for ‘Seeroor,’ ‘Sirur,’ six miles on the east of Kōṅgānōli. Bēkōnkī must be a mistake for ‘Bellokhee,’ ‘Belanka,’’ Belwanki, already mentioned on page 370 above, four and a half miles south-west by south from Kōṅgānōli. Khaṭāv must be the ‘Khuttao’ of the Atlas sheet, — shewn, however, in the Topographical sheet as ‘Kavtha,’ — about eight miles on the south of Kōṅgānōli. Nīgnur must be a mistake, either for ‘Nagnoor,’ ‘Nāgaour,’ eight miles towards the east-south-east from Kōṅgānōli, and, with ‘Ajoor,’ ‘Ajur,’ on the east of the Agrāṇī, or else for ‘Lingnoor,’ ‘Lingur,’ eight miles south-west from Kōṅgānōli. Pandrēgāṃv (Pandūr?) must be a mistake for ‘Pandehgaon,’ ‘Pandegaon,’ about three and a half miles on the east of Kōṅgānōli. And Tāvīs is ‘Taooes,’ ‘Tāoos,’ a mile and a half beyond ‘Nagnoor,’ ‘Nāgnur,’ and, with it and ‘Ajoor,’ ‘Ajur,’ on the east of the Agrāṇī. This accounts for eight of the twelve names given to Dr. Bhandarkar.

As regards Ādhi and Titūr, it can only be said that, while the Topographical and Survey sheets

give very full details, even of hamlets, and are not likely to have omitted any village-name that really exists, any names answering to Adhi and Tittir cannot be found, either anywhere in the locality to which the results shewn above fix us, or anywhere else except in the case of the ‘Adhow,’ Adhiv, of the Indian Atlas sheet No. 40 and its quarter-sheet N. E. (1880), three miles north-north-east from Pdpjharpur in the Sholapur district. It is quite plain, however, that Dr. Bhandarkar’s informants in some way or another hit, more or less accurately, upon the group of villages which is referred to as the Kougulavali twelve in the British Museum plates of Vira-Satyasrayadeva. But the maps do not present, anywhere in the neighbourhood of Kougulavi, any names answering in any way to the four villages-names given in the Khâh record. There is no reason for thinking that the name Kougulavali, = Kougulavâli-Kougulavi, may have been evolved out of the name Kali, and that we may identify Kali with Kougulavi, and assume that the other three villages-names given in the record do not now exist. And also, whether the grant purporting to have been issued by Vira-Satyasrayadeva is genuine or not, there are no reasons for refusing to accept the geographical details put forward in it, and for proposing to place the Kougulavâli twelve in the Karahâ country instead of in the Mirînje country.

A scrutiny of the above-mentioned and other maps, covering the whole of the territory which may by any possibility be considered as having been included in the Karahâ country, failed to enable me to identify the villages named, according to the published text, in the record. It then occurred to me to examine the record itself more closely. And the result is that I find that, while there is no doubt about the names Kâli and Kâkew, the names of the other two villages have not been deciphered correctly.

First, as regards the name which has been read as [Pendu]rân, = Pêndurân, in line 64. An examination of the characters d and ñ throughout the record, shews quickly that the second akhara is ñ, not d. Ñ The first akhara is a rather anomalous one. The consonant does not resemble at all closely any p that I can find in the record. Nor can I find any exact likeness of it. It might be a badly formed lingual ñ; but that letter is hardly admissible as the initial of even a place-name. It might also be a badly formed q. But the closest similitude of it that I can find, is the l as it stands in nabhastral-aika, line 3, and in kumud-dalân, line 5. That is not the proper exact form of the l, which is illustrated clearly enough in the name of Kâli itself, in line 62, or, better still, in kulôldê, line 52, or, again, in kshiti-tald, line 6, with a slight difference due to the prolongation downwards of the left-hand part of the letter. But there are several places in the record, in which the l was formed very indifferently. And it is easy to see how the form presented in nabhastral-aika, line 3, and kumud-dalân, line 5, was arrived at; namely, by omitting the centre stroke, clearly recognisable even in tilakasa-trailôkya, line 3, which properly connects the left-hand and right-hand components of the fully formed l. Here, in the village-name in line 64, we have a very close approximation to the l of nabhastral-aika and kumud-dalân. It differs only in that the left-hand part of the body of the letter was formed rather too high; as the result of which, the râdî or horizontal top-stroke could not be formed as fully as usual. It is quite certain that the consonant here is l. The long sweep down in the left-hand part of the akhara seems, — especially if we regard its disjointedness near the top, — to be certainly meant to mark the vowel è, expressed here according to the older fashion as in Kâkew, line 62, and in various other places, instead of according to the later fashion as in Valkald at the end of line 59 and other places. And I therefore read this name as Louturên, = Louturên.

Secondly, as regards the name which has been read as Adhêm, also in line 64. The consonant of the second akhara is certainly, at first sight, somewhat like the d which we have in mûd-dûla, line 18. But it is at least not identical with it. We have, however, another similitude of it, though again not an exact likeness, in the subscript d of this record, which is exhibited very clearly in âchchhâlava, line 61, and almost as clearly in padasy-êchchhâd, line 52.

It occurs also in krita-êchchhâda, line 13, and êchchhâdi, line 67. But in those places the akhara was not at all well formed.
We have this form of the chh very clearly all through the Kauṭhēṃ plates of A. D. 1009, from the same part of the country, published in Vol. XVI. above, p. 15 ff., with a facsimile lithograph; see, in particular, the full form of it in viśeṣa, line 6,4 and see also the combinations chak in lines 23, 42, 49, and 68, and yeh for chak in line 54. It is the form of chh from which the modern Nāgarī form was almost directly evolved. It differs from the epigraphic dh, — which we have again in mādhā in line 50 of the Kauṭhēṃ record, where, however, it was not so well formed as it was in mādhā-ḥūdrā in line 13 of the present record, — essentially in respect of the open bend that formed the end of the dh being continued to make a closed loop with a kind of a tail below it. The facsimile of the present record shews, even without a magnifying glass, that there was the intention to complete the loop and form the tail here, but the engraver's tool was not properly driven home. It shews also a detail of a still more marked kind; namely, a loop in the upper part of the body of the letter, which makes the character a closer approximation, than even the chh of the Kauṭhēṃ record, to the modern chh. And, in short, it is quite certain that we have here an imperfectly formed chh, and that the name is Aćhān, not Aṭhān.

Now, Kārhaḍ is at the confluence of the Koṇā and the Krīṣhṇa. We know, from various records, that the epigraphic name of the Krīṣhṇa was Krīṣhṇavarna, with the variants of Krīṣhṇavena, Krīṣuṇavasa, and Krīṣhṇavēp; and the form Krīṣhṇavēp occurs elsewhere. As has been stated by me in another place, the name was evidently derived from the confluence of the Krīṣhṇa and the Veṇa, also called Yena, at Saṅgam-Māhull three miles east of Sātārā, — just as the name of the Taṅgabhadrā was derived from the confluence of the Taṅgā and the Bhadrā. And, whether Kaṅhavannā is an absolutely correct Prēkṛit form of the name, or is not so, — (we should expect, rather, Kaṅhavanā, with the lingual s), — there can be no doubt that the Kaṅhavannā of this record means the Krīṣhṇavarna, that is the Krīṣhṇa.

We must, therefore, now look for the places, mentioned in the record, along the west bank of the Krīṣhṇa, at some point where there is so marked a bend in the river that it could form both the northern and the eastern boundaries of a village. The required point, presenting at the same time any equivalents of the names for which we are searching, can only be found opposite the ‘Kalēn’ of the Indian Atlas sheet No. 40 (1852), — the ‘Kāla’ of the same sheet, N. W. (1896), and the ‘Kāla’ of the Bombay Survey sheet No. 238 (1887), — a large village on the Mad nullah, about six miles towards the south-west from Kārhaḍ, and two and a half miles away, at the nearest point, from the west bank of the Krīṣhṇa. The name, thus presented in the maps, is no doubt really Kālēṇ. The Krīṣhṇa, which below Kārhaḍ flows in the general direction of south-east-by-south, but with many bends, makes, opposite Kālēṇ, a very marked loop running two miles almost due east, two miles to the south, and two miles back towards the west. In this loop, the maps show ‘Atkeh,’ ‘Atka,’ ‘Āṭka,’ on the north, on what is there the south bank of the Krīṣhṇa, and, on the south, the khār or smaller or later ‘Retreb,’ ‘Ratre,’ on what is at that point the north bank of the river, with the būdrāk or larger or older ‘Retreb,’ ‘Ratre,’ on the opposite bank. The ‘Atkeh,’ ‘Atka,’ ‘Āṭka,’ no doubt stands for Āṭkēn. And I venture to take ‘Retreb,’ ‘Ratre,’ as standing for Retrebh, with the lingual t. Retrebh-Khurd doubtless owes its existence as a separate village.

1 The disjointed appearance of the character here, and in other places, is due to the copper pressing upwards as the engraver's tool was driven along. This peculiarity is often noticeable in the copper-plate records; and it is useful in showing where the formation of various characters began and ended.

2 The form Krīṣhṇavēp occurs in also the Viṣṇusūrya, see Wilson's Translation, Vol. II. pp. 130, 144; and a footnote to the editor on p. 130 tells us that "Krīṣhṇavēp seems to be almost so common a reading." Page 130 of the same presents the name Krīṣhṇavēp as if it were the name of a separate river. And page 132 mentions a Krīṣhṇa, again as if it were a separate river. — I cannot help thinking, now, that one or other of the variants of the name ought to be found in the Brāhmat-Samhitā, xiv. 14, where the published text gives krīṣhṇavela, which I have taken as meaning the river Krīṣhṇa and the town of Veliḍra. Ellōr (see Vol. XXII. above, p. 132). In that case, the existence of the name would be carried back to the sixth century A. D.

not to the acquisition of additional lands by Rețrēm-Budrūkh, but to the establishment of a
second village-site, for the convenience of the cultivators of that part of the lands of the original
Rețrēm which was cut off from the original village-site by the Krishṇā during the rains. The
area included in this loop of the river is now occupied entirely by the lands of Ātkēm
and Rețrēm-Khurd. And the Survey map does not show any name or site, even of a hamlet,
representing the ancient Kaṅkēm. But I feel quite sure that we have here run to earth the
places mentioned in the record. There is no reason why the ancient name Kallī should not pass
into the form Kālēm. There is no difficulty about Lounjēm passing into Rețrēm; as
instances of the interchangeability of l and r, we have Perur, which has become Bēlur, and
Kādalavāḷḷi, which has become Kādarēḷi, and Nīrgunda, which has become Nīlgund. And
Ātkēm probably represents, not simply Ākhēm itself, but the two names Ākhēm and
Kaṅkēm: the lands of the two villages were made one; and the double name Ākhēm-
Kaṅkēm has been modified and contracted into one through some such form as Ākhēkēm,
which would very likely come to be pronounced Āskēm, just as, in a locality not far away,
the two names Gāḷikūṭṭī and Hāḷalīvāḍa seem to have doubled up into the modern ‘Ghalwār,’
or ‘Ghalvāḍ,’ which is, no doubt, a mistake of the Deccan Topographical Survey sheet No. 90
(1893) for ‘Ghalvāḍ.’

The Karahājēta of this record cannot at present be conclusively identified. But, in
view of all the circumstances, it seems likely that it may be the ‘Kurunjeh’ of the Indian
Atlas sheet No. 40, the ‘Karanja’ of the Bombay Survey sheet No. 270 (1893), on the east
bank of the Agrāṇi, about thirty-eight miles towards the east-by-south from Karhāḍ.

The Karahājēta four-thousand province.

It will be convenient and useful to add here some remarks regarding the Karahājēta
territory, which, we know from other records, was a four-thousand province, that is to
say, a province which included, according to fact or tradition or conventional acceptance, four
thousand cities, towns, and villages.1

The province took its name from the ancient name of the modern Karhāḍ or Karāḍ, the
head-quarters of the Karhāḍ tahsils of the Satārā district, Bombay Presidency, which is the
‘Kurrar’ of the Indian Atlas sheet No. 40 (1852), and the ‘Karā’ of the same sheet, N. W.
(1896), and the ‘Karād’ of the Deccan Topographical Survey sheet No. 58 (1884), in lat.
17° 17’, long. 74° 14’, on the west bank of the Krishṇā, and at the confluence of the Koyṇā with
that river. In the official compilation entitled Bombay Places and Common Official Words (1873),
p. 47, the modern name of the town is certified as Karāḍ, without the h. And I have until
recently used that form. I have noticed, however, that the name is given as Karhāḍ, with the
h, in the Nāgārī text of the Extracts from the Pēshāva’s Diaries, Political Matters, pp. 54, 86,
118. The double rr of the ‘Kurrar’ of the Indian Atlas sheet No. 40 of 1852 was evidently an
attempt to represent rh. And I have considered it desirable to adopt finally the form Karhāḍ,
as the more correct and appropriate modern form.2

---

4 Regarding the numerical components in the ancient territorial appellations, see Vol. XXIX, above, p. 277, and
note 18.
5 It is to be hoped that the gentlemen who have in hand the compilation of these Extracts, will be very careful
to present in the Nāgārī text the exact spelling, given in the original Diaries, of all names, whether of places or of
people. It does not much matter how they may transliterate the names in the English abstract which they give
below the Nāgārī text. The important point is that these should be extreme accuracy in reproducing the original
spelling in the Nāgārī text. And, if that is duly attended to, these Extracts are likely to be of very great value from
the geographical point of view, as well as in other respects. Meanwhile, I must remark that, on page 87, the
Nāgārī text gives ‘Aḷjēṭ, with the long ā, which, if it really stands in the original, must be a mistake for Aḷjēṭ,
with the short a (see Vol. XXIX, above, p. 274, and note 5). Also, on the same page, and in various other place,
it gives ‘Kāḷhāpur;’ whereas I doubt very much (see the same place) whether that form of the name is really to be
considered able to correspond with any such time as A. D. 1740-41, which is the date of the extract on p. 87. I also notice that p. 82
gives ‘Sāḷjēṭ, which is not consistent with the ‘Sāḷjēṭ’ on p. 35.
The fullest form of the ancient name was Karahāṭaka. We have this form in prose in the Sāmāṅgaḍ plates of A. D. 754 and in the Kōhāpur inscription of A. D. 1190, and in metre in the Sravaṇa-Belgoa epigraph of Malliṣhēpa, written not long after A. D. 1129, in a verse which tells us that the town was visited by Samantabhādra, and describes it as full of soldiers, rich in learning, and crowded with people; and it occurs also in metre in the Mahābhārata, in a passage which speaks of "pahāṇḍa Karahāṭaka," "the heretical Karahāṭaka." The shorter form Karahāṭa also occurs both in prose and in verse; for instance, in prose in the Karahāḍ plates of A. D. 929, and in verse in the Miraj plates of A. D. 1056. With the fuller form we have to connect two early Prākrit forms of the name, which present also a metathesis, perhaps due either to the pilgrims not pronouncing the name clearly or to the writers of the records not listening attentively to the name that the pilgrims gave them; namely, Karahākāḍa, which occurs in one of the Kudā inscriptions, and Karahākāṭa, which is met with in one of the Bharat inscriptions.

From the shorter form, we have the Prākrit form Karahāḍa, which occurs, for instance, in the Honwāḍa inscription of A. D. 1054, which speaks of the province as the Karahāḍa four-thousand and in the Nēsargi inscription of A. D. 1219, where mention is made of Karahāḍa kasta, "the cubit of Karahāḍa." As the town is evidently an ancient one, and seems to have been of great religious repute from early times, it is rather remarkable that no reference to it is apparently to be found in the Brihat-Saṅghit, which in all probability does mention, as Kollagiri, the not far distant town of Kollāpura-Kollāpura-Kollāpura.

In the Karahāḍ plates of A. D. 929, the Karahāṭa province is simply called the Karahāṭa vishaya. The Honwāḍa inscription of A. D. 1054, however, specifies it as Karahāḍa-nālakhādāvīra, "the Karahāḍa four-thousand." It is called Karahāḍa-chaturbhasha-vishaya, "the Karahāṭa four-thousand province," in the spurious Wadgaon plates. And it is mentioned again as the Karahāḍa four-thousand in a rather curious reference to it in one of the Mysore records. This last is an inscription at Harihar, of about A. D. 1165. It gives the traditional account, according to the view of one of the branches, of the origin of the Sinda family. It says that, from the union of Siva with (the river) Sindhuv, there was born one son, to whom Siva gave the name of Saindhava, together with the protection of the king of serpents. Considering that, unless he drank tiger's milk, his son would not become a brave man, Siva graciously created a tigress; and so the child drank tiger's milk, and grew up. And Siva gave to his son the goddess Mālatādvī, to be his companion in war, and conferred upon him the second name of Niḍādoḍa-Sinda, "the long-armed Sinda." Then, saying that Karahāṭa, the yopapitha or 'seat of contemplation,' was the proper place for himself, he went there, and drove out all the kings of that place, and by the strength of his arm acquired the whole territory. And so he, the long-armed Sinda, "the lord of Karahāṭa the best of towns," governed many (unnamed) countries, including the Karahāḍa four-thousand. The peculiarity of this reference to the place, lies in its connecting the Sindas with Karahāḍ. No other record, tending that way, or carrying them in that direction at all, is as yet known, with the exception of the Tidgundi plates of A. D. 1012, which record gives us the name of a Sinda prince Muṇḍjarādēva, who is described in it as the lord of the Pratyuḍaka four-thousand country, regarding which see page 380 below.

19 According to the Tirdaṭi inscription of A. D. 1187, there were sixty-two of these yopapithas; see Vol. XIV above, p. 25, and text line 60.
Below Karhâd, the Kṛishṇâ flows, with many bends, past Wälwa (Wälwēn) and Sāṅgīli, and near Miraj and Kurundwâd, in the general direction of south-east-by-south as far as its confluence with the Dūdhgaṅgâ, about fifty-six miles south-east-by-south from Karhâd and thirty miles towards the west-south-west from Athnâ, the head-quarters of the Athnâ taluka of the Belgaum district. There it makes a marked turn and takes an easterly direction, but again with many bends, as far as ‘Biddree’ in the Jamkhandî State, fifty-three miles towards the east-quarter-south from the Dūdhgaṅgâ confluence and twenty-six miles towards the south-west from Bījâpur. Beyond that point, we are not concerned with the river on this occasion, as the Karhâṣṭa four-thousand province lay on the east and north of this part of the river Kṛishṇâ between Karhâd and ‘Biddree.’ Towards the east-south-east from Karhâd, it extended almost as far as Bījâpur; for, the Honwar inscription of A. D. 1054, shews that the Karhâṣṭa four-thousand there included a district, composed of three-hundred or two-hundred towns and villages, which took its appellation from the ancient Kâjāhâbâd or Kâjāhâbad; Kânâmañi or Kânâmâni, and Kâlañâbâd or Kâlâbâdi, the ‘Kunburree’ of the Indian Atlas sheet No. 40, and the ‘Kalamâdi’ of the Bombay Survey sheet No. 301 (1897), in the Athnâ taluka of the Belgaum district, twenty-four miles north-east-by-east from Athnâ, twenty-two miles towards the west-north-west from Bījâpur, and about eighty-two miles towards the east-south-east quarter-east from Karhâd. And the spurious Wadgaon plates show that, in its western part, the Karhâṣṭa four-thousand included the modern Yelâvî in the Tâsgaon taluka of the Sâtârâ district, about five miles on the west of Tâsgaon, and three miles from the east bank of the Kṛishṇâ, and twenty-seven miles towards the south-east-by-east from Karhâd. Also, between Honwar and Yelâvî it included Bâdâchî, the ‘Burchee’ of the Indian Atlas sheet No. 40, about five miles on the east of Athnâ: for, the Kokântûr Kâlachâryâ record of A. D. 1174, though it does not actually mention the Karhâṣṭa province, places Bâdâchî, which it mentions by the ancient name of Vaṭâchî, in the Kâjâhâbad district (jâtras); and this statement refers, of course, to the Kâjâhâbad three-hundred or two-hundred, which we have mentioned, just above, as included in the Karhâṣṭa four-thousand. These are, apparently, the only places that we have at present, to identify and locate in the Karhâṣṭa four-thousand. I do not overlook the Kalli group of twelve villages, mentioned in connection with the Karhâṣṭa province in the Karhâṣṭa plates of A. D. 959, which we have localised on the west bank of the Kṛishṇâ. This, however, is not in any way opposed to what has been said above; namely, that the Karhâṣṭa four-thousand lay on the east and north of the Kṛishṇâ. The Kârâd record explicitly describes the Kalli twelve, not as antaragata or antarcarin, ‘lying in’ the Karhâṣṭa province, but as pratibadhâ, ‘attached to’ it. And it is plain that the Kalli twelve was not in the Karhâṣṭa province proper, but was an outlying annexe to it. The reason for which it was made an annexe of the province, may very likely be found in the fact that Karhâṣṭa-Kârâd, the capital of the province, is itself on the west bank of the Kṛishṇâ, and in the probability that the Kalli twelve included, in addition to Akkû = Añkhēn-Kâñkhēn and Retrēm = Leñtrēn, the villages of Nándlapur, Jakkâvâ, Kâpîl, and Goñshwar, which the maps show as filling the space between the lands of Kâlēn and the southern boundary of Kârâd. We shall probably find hereafter that the rest of the territory on the west of the Kṛishṇâ, from the Koyā on the north, or at any rate from below Kâlēn, to the Vârâ on the south, was a three-thousand or four-thousand province, taking its name from Vañavāda as the ancient name of the modern Wälwa.

The boundaries of the province can at present be only partially indicated. We require much more information, before we can work them out quite in detail. Meanwhile, however, the following points may be put together.

On the west, the boundary of the province proper, excluding the annexe of the Kalli twelve, must have been the Kṛishṇâ, from Kârâd as far as its confluence with the Yerľâ, nine miles on the south-west of Tâsgaon, and about thirty-two miles towards the south-east-half-south from Kârâd.

---

29 See page 373 above.
On the east of the province, there was the Tavadādi thousand, — the name of which also appears in the epigraphic records as Tadavādi, Taddavaḍa, and Tardhavaḍa, taking its appellation from a town which still exists as a small village, Taddewādi, on the south bank of the Bhmā, about thirty-seven miles north-half-east from Biṇāpur, and which is shown as ‘Tadewār’ in the Atlas sheet No. 40 of 1855 and as ‘Tadevadi’ in its quarter sheet N.E. of 1886. The Tavadādi thousand included Biṇāpur itself, and territory on the north-east, east, and south-east of Biṇāpur, with which we are not concerned on the present occasion. We need only note here that we know from the Honwād inscription of A.D. 1054, mentioned above, that, on the west of Biṇāpur, the Tavadādi thousand included Honwād itself, the ancient Ponnauḍa agrobrāha, about nineteen miles almost due west of Biṇāpur, and eight miles south-south-east from Kangabadi, which, as we have seen on page 379 above, was in the Karāhāta four-thousand. The Honwād record places Honwād in, specifically, the Bāgī fifty, a kaṇḍa or minor division of an unnamed six-hundred subdivision of the Tavadādi thousand. The Bāgī fifty took its name, I suspect, from the ‘Tudubbagos’ of the Indian Atlas sheet No. 40, the ‘Tadabāgi’ of the Bombay Survey sheet No. 302 (1897), belonging, I believe, to the Jamkhānī State, about twelve miles almost due south of Honwād, and six and a half miles on the north of the place ‘Biddree,’ on the north bank of the Krishnā, which has been mentioned, on page 379 above, as the point beyond which we need not go on the present occasion.44

Looking to the general features and district details of the country, we may suggest, as the western foundation of the Tavadādi thousand, a line which left the Bhmā at the point, about seven miles on the north-west of Tadewādi, where a small river called ‘Boor’ or ‘Bor’ flows into it, or perhaps which left the Bhmā three miles north of that, opposite Bhāndār-Kaṇḍām,45 and which then ran, in the general direction of south-south-west, somewhere on the west of Karajgi, on the east of Kangabadi, and on the west of Honwād, to join the Krishnā at some point between ‘Biddree’ and Sirhaṭi on the south of Kokaśnūr in the Athī tāluka. And part of such a line must have formed the eastern boundary of the Karāhāta province.

On the north, the Karāhāta province must have been bounded chiefly by another large province known as the Pratyāṇḍaka four-thousand. This province is mentioned in the Tīrīlī plate of A.D. 1082, which name, as the ruler of it, Mauṣgarajadēvā, of the Sindhi family, and which have the effect of placing in it a group of villages known as the Vāyvada twelve, which included a village named Ṭagkalikā.46 The Pratyāṇḍaka country is also mentioned by Hēmādiri, in the first Prāsaṅi of his Vrataṅkaṇḍa, in a verse which describes the Ąravati-Yādvā king Bhūlamana as capturing a town named Srivardhanānagara from a king called Antala, and vanquishing in battle the king of Pratyāṇḍaka, and putting to death Bhilāna the king of Maṅgalāvēṣṭaka.47 As was recognized by Dr. Bhandarkar, Maṅgalāvēṣṭaka certain denotes the modern Maṅgalāvēṣṭa, the head-quarters of an outlying subdivision of the same name of the Sāṅgūli State, about forty-nine miles towards the north-north-west from Biṇāpur. The other two names have not yet been identified. But I think that Pratyāṇḍaka must have been the ancient name of some town near the famous double-peaked hill-fort of Rājśākī in the Western Ghats, about thirty-six miles towards the north-west-by-west from Poona, the two peaks of which are known as Manrāṇjan and Manfrāṇjan and Srivardhan.48 And I feel confident that Pratyāṇḍaka is to

43 See Vol. XIX, above, p. 269.
44 Originally I suggested (Vol. XIX, above, p. 269) that this Bāgī was probably Rājāgirī, the ancient Hāvina Bāga, of the Kūḍap State. But Rājāgirī is on the south of the Krishnā, and was in the Kūḍap three-thousand province.
45 This is an old place, the ancient name of which was Bhamā-Gavītāra; see page 219 above, note 41.
48 See the Gazetteer of the Bombay Presidency, Vol. XVIII, Poona, Part I, p. 4, and Part III, p. 435; also, the list of forts in the Extracts from the Prakrit Literature, Political Matters, p. 164, No. 45. In the Indian Atlas sheet No. 28 (1854), the names are shown as ‘Rajmachi,” ‘Mururumjan,” and ‘Shirwardhan,” in lat. 18° 49”, long. 78° 27”. There is a Srivardhan in the Jaṅjīrī State, a fortified town, and formerly at any rate of some importance, on the coast.
be identified, through some such form as Paratapa, with the modern Phaltan, the chief town of the Phaltan State, — the 'Phulwana' of the Indian Atlas sheet No. 39 (1855), in lat. 17° 59', long. 74° 29', — about thirty-four miles towards the north-east-by-east from Satara, and fifty miles towards the north-north-east from Karhad. 29 And I strongly suspect that Vavyada denotes Wai, the head-quarters of the Wai taluka, a town of great sanctity on the north bank of the Krishna, about nineteen miles towards the north-north-west from Satara, and thirty-five miles to the west-quarter-south from Phaltan. 30 The Pratyandaka four-thousand, which must have been a considerably larger territory than the present Phaltan State, would be very approximately bounded on the north by first the Nira and then the Bhum, as far as some point near Panchaharpur, on the south bank, in the Sholapur district, where it would meet the Maigalaveshhta territory. On the south, it would be very approximately bounded for the most part by the Maag or Mau-Gang river, which rises about fourteen miles on the south of Phaltan and flows into the Bhum between Panchaharpur and Maigalaveshtha; or it may have included the whole valley of the Maag, bounded on the south by a large range of hills running from north-west to south-east, down to somewhere near Atpadi. And the Maag or Mau-Gang would appropriately form, in the lower part of its course, at least part of the northern boundary of the Karhatha province.

The southern boundary of the Karhatha province probably left the Krishna at its confluence with the Yerla, nine miles on the south-west of Tasaon. At any rate, only at that point can we easily recognise a suitable dividing-line between the Karhatha territory and the Mirijne territory. The boundary probably left the Yerla or the 'Kapur' nullah after no great distance, and running south of Tasaon, struck the Agrani river somewhere below 'Sowliji,' 'Sawliji,' which is about twelve miles east-north-east from Tasaon. From that point, it must probably turned back along the Agrani, and followed that river as far as its confluence with the Krishna about eight miles on the south-west of Atpadi; because, as we have seen above, Badsahi, only five miles on the east of Atpadi, was in the Kanavade-Kajambha-Kapabds district, and the latter was a subdivision of the Karhatha province. And then, from the Agrani confluence, it would naturally run east along the Krishna, until it met the western boundary of the Bega fifty in the Tadavadi thousand, somewhere between Sirahta, south of Kokaht, and 'Bildoce.' This, at any rate, is certain; namely, that the Karhatha four-thousand province did not include any territory on the south of the Krishna. Near the south bank of the river, there are Rabya and Tarda. These two places were in the Kund three-thousand province. 31 And close on the east of Tarda there was a district called the Bejugare or Beugalare five-hundred. We learn this from the poet Ramma, 22 who has told us that he was born in A.D. 949-50 at Mudovalalu, a village of the Jambukhandi seventy, which was in the Beugalare or Beugalare five-hundred, which was to the north of a stream flowing into "the great river" at Arekogata to the south of Tadavadi. "The great river" is very well known now as an appellation of the Krishna. 33 Jambukhandi is easily recognisable as Jambukhandi,

about twelve miles south of Jaotia. But it does not seem so likely that that can be the place mentioned by Hamsari. — It is also possible that, by a translation of such a name as Sirivojala by Sirisagarra and with an insertion of tukdhana, Hamsari may have meant Sirwaj, a well-known place, with a group of early Buddhist caves, on the road from Poona to Satara, — the 'Sheerwall' of the Indian Atlas sheet No. 39 (1855), on the south bank of the Nira, and about thirty miles almost due north of Satara. But it seems likely that Sirwaj may have been in the Pratyandaka territory.

29 For the interchange of p and ph, we may perhaps quote the name of 'Phirangai,' a favourite goddess of the lower classes at Kolhapur, the Sanskrit or Sanskritised form of which is said to be 'Prangai,' — meaning probably, Pratyaigari, a form of Durge; see the Gazetteer of the Bombay Presidency, Vol. XXIV., Kolhapur, pp. 309, 312, and Monier-Williams' Sanskrit Dictionary, under prati, prat.

30 The only apparent objection to this, is, that the map does not show, in the vicinity of Wai, any place-name answering to the Takalika of the recent. — Takalika might be 'Takloe,' 'Takli,' two and a half miles on the south-west of Patharpar. But no name answering to Vavyada is to be found there. — The suggestion that Takalika may be 'Takelca,' about twelve miles north-west-by-west from Bijapur, must certainly be discarded. There, again, there is no name answering to Vavyada. And, also, the position occupied by 'Takelke' must have been in the Tadavadi thousand, or else in the Karhatha four-thousand.

31 Regarding Tarda, see Vol. XXXIX., above, p. 237 f.
32 See Mr. Rice's Karhathaobdamiata, p. 23.
33 See page 372 above, and note.
the chief town of the Jamkhandi State, about sixty-six miles towards the north-east-half-east from Belgaum. Muduvaṣalu is Muddhol, the chief town of the Muddhol State, on the north bank of the Ghapatparbha, about twelve miles south of Jamkhandi. "The stream flowing into the great river" is evidently the Ghapatparbha itself, which flows into the Krishna at a point about thirteen miles towards the north-east-by-north from Bagalkot in the Bijapur district and thirty-six miles towards the east-south-east from Jamkhandi. And Arokegaṭṭa was perhaps the name of some pass over the two ranges of hills through which the Ghapatparbha flows from Bagalkot to its confluence with the Krishna. The name of the Belugare or Belugale five-hundred probably has some connection either with Bilgi, the head-quarters of a mahāl in this angle between the Krishna and the Ghapatparbha, twelve miles towards the north-north-west from Bagalkot, or else with 'Gulgurle,' an old village, of some size, on the south back of the Krishna, twenty-three miles north-west from Bagalkot. But we require a more conclusive reading of the name, before we can do more than speculate about this point; at present we can only say that, if the real name was Belugale, it may easily have passed into 'Gulgurle,' through an interchange of b and g analogous to the actual interchange of g and g illustrated on page 258 f. above. This much, however, is certain; namely, that the five-hundred district, mentioned by Ranna, is thus localised. He has rightly described it as lying on the south of the Tardavadi territory. It suffices to fill up all the interval from the north-east corner of the Kundi three-thousand to the confluence of the Krishna and the Ghapatparbha. And thus it is certain that the Karakhāṭa lour-thousand province did not include any territory on the south of the Krishna.

NEW RESEARCHES INTO THE COMPOSITION AND EXEGESIS OF THE QORAN.

BY HARTWIG HIRSCHFELD, Ph.D., M.R.A.S.

(Continued from p. 320.)

Chapter XI.

Revelations on Muḥammed's Domestic Affairs.

Revelations beginning "O thou Prophet" — Marriage with Zeinab — Sermon on the amr — Refutation of the charge against 'Āisha — Regulations concerning women.

Every work on Muslim Tradition, or on the life of Muḥammed, contains special chapters on his personal appearance and characteristics. These works, however, being written more with a view to promote the religious fervour of the reader than to chronicle facts, obscure this point rather than throw light upon it. The Qorān portrays the man Muḥammed more faithfully than any Moslem biography. His real individuality, as well as the transformation of his character during an eventful career may be clearly traced from his own utterances. There we see how great qualities may be marred by grave faults.

Muḥammed was undoubtedly conscious of his own weaknesses, and did what other men in prominent positions have done. He surrounded them with a halo. Among Muḥammed's passions, an ever increasing love of the genile sex was the greatest. Yet, in spite of his ideal calling, he did not endeavour to master it, but allowed it to increase with his years. What clearer sign is needed for the absolute sway he held over the minds of the Believers than his boldness in canonising his passion for women, declaring it to be under the special protection of Allāh (amr)? Muḥammed's domestic affairs form the substrata of a series of revelations dating from the fifth year after the Hijra. They are externally distinguished by the introduction: O thou Prophet! With very few exceptions they refer to matrimonial matters, and form the least edifying chapter in the history of Islam.
The Prophet of Allāh coveted Zeinab, the wife of his freedman Zeid b. Haritha whom he had adopted, and wished to marry her. The two obstacles of her being a married woman and the wife of his adopted son (whom Arab custom made as near a relative as if he had been his real son) had to be removed, if the wish of Muhammad was to be fulfilled. This was, however, easy enough, if in the place of a personal desire, he gave expression to a divine command. Under these circumstances there was no choice left. Zeid had to divorce his wife, and Muhammad had to dissolve the paternal tie which connected him with his adopted son, and to marry Zeinab. The history of this interesting marriage is laid down in S. xxxiii. 1-62. Out of five sections of this sermon beginning with the words: O thou Prophet, four (vv. 1-8, 23-30, 49-52, 59-62) treat on matters of Muhammad's Harem. The spirit of the revelations will be best demonstrated by translating one of them literally:

(v. 7) Allāh has not made for any man two hearts in his inside, nor has He made your wives, whom you desire to repudiate, your [real] mothers, nor has He made your adopted sons your [real] sons. Such is only your way of expressing it, but Allāh speaks the truth, and He guides in the right path.”

He thus abolished the old formula of divorce. After this declaration Muhammad was free to marry Zeinab who, on this occasion, with all the present and future wives of the Prophet, received the honorary title “Mother of the Believers” (v. 6). The marriage having taken place in the year 5 of the Hijra, there is no doubt about the date of the address in question.

Sūra xxxiii. shows some traces of artistic arrangement for which, however, the compilers are alone responsible. The first and largest portion (v. 1-59) is so arranged that addresses to “the Prophet” alternate with those to “the Believers.” Since the different sections of both classes belong to various periods, it is best to discuss them in the order of the events to which they relate.

Section vv. 28-39 also refers to the incident of the marriage of Zeinab. Muhammad now pretended to have advised her former husband not to part with his wife, but Allāh had decreed otherwise, and Zeid was rewarded for his compliance by having his name coupled with that of the Prophet in a special revelation (v. 37).

If Muhammad had merely wished to obtain Zeinab for her own sake, he could probably have achieved this without invoking the aid of Allāh, but I believe that the incident was also meant to increase his prestige by placing him again on a par with one of the Biblical prophets. The marriage of a prophet by special divine command had a befitting precedent in the [symbolical] marriages of the prophet Moses (i. 2, iii. 1-2), which Muhammad interpreted literally. Both cases have several points of resemblance. The wives chosen were not virgins, and the marriages had to serve as object lessons for the populace. The only redeeming feature in Muhammad’s proceeding was his insisting on a proper divorce instead of the objectionable practice of pre-Islamic times. Now the short address which follows (vv. 44-47), being the only one superscribed: “O thou Prophet,” and yet not referring to anything matrimonial, seems nevertheless to bear upon the same incident, and to teach that Muhammad is the herald of glad tidings and a warner, etc. It is unexpected, at this juncture, to see Muhammad again accredited as a prophet, but his words were apparently designed to pacify those supercilious Believers, who considered his behaviour in the affair of Zeinab a sign of human weakness where prophetic self-abnegation should have been. He, therefore, thought it proper to convince his people that in this case also he had acted as Messenger of Allāh. To this he attached a regulation regarding the provisions to be made for a Moslem woman married to a Believer, who wished to divorce her before consummating the marriage (v. 48).

27. As to v. 44 see below.
28. The words were used in the old formula of divorce.
29. The words نَفَلْتُ نسي زيد بنها ولم أرُوا have been quoted by Hassān b. Thābit (Divān, p. 41, l. 11) in a dirge on Othman, but the words refer to Zeid, brother of the poet.
The lessons to be deduced from this marriage were not even then exhausted. According to tradition several guests at the wedding feast, having given offence by their conduct, Muhammed forbade Believers to enter his houses in future without special invitation, to leave as soon as the meal was finished, and not to speak to his wives unless they were veiled (vv. 58-58). The command to be veiled was subsequently given to all believing women (v. 59).

The last address contains the sentence (v. 56) that "Allah and His angels pray for the Prophet." These words seem to be modelled on a Talmudic homily. In v. 41 the same phrase is repeated, but with reference to the Moslems. I believe this verse and v. 42, from which no clue can be gathered as to date, were inserted in this sūra merely on account of v. 56.

The piece vv. 9-27 is of later date. It describes the siege of Medina by the "Confederates," consisting of the Qureish and Ghatafān, assisted by the Banū Kureizā, the remaining Jewish tribe in the environs of Medina (A. H. 5). From verse 27 we gather that the piece was revealed after the annihilation of the B. Kureizā.

The twofold success found an adequate expression in the triumphant address which is somewhat elated and almost dramatic in style (v. 19). — The last section headed "O thou Prophet" (v. 49-51) "makes it lawful for him to marry women who were among the captives or slaves. The first of this class was the Jewess Rehānah, widow of one of the B. Kureizā, whom Muhammed married A. H. 6. The verse placed next to this must, however, be much later, because the speaker takes upon himself not to increase his Harem any further except by concubines. The verse can therefore not have been revealed until the year 7 or 8.

To these speeches the compilers have added three more which form the concluding part of the sūra. Verses 60-62 announce the speedy expiation of the rest of the Jews of Medina. They are declared outlaws and free to be murdered wherever found. The partial concordance of v. 62 with v. 38 explains why the little piece was placed in this sūra. The short discourse on the "Hour" which then follows (vv. 63-68) is quite uncertain as to date, but from v. 64 it would appear that the words were spoken, when the Jews in Medina were still a factor to be reckoned with. The concluding speech (vv. 69-73) seems to stand in connection with that in which Muhammed reproved those Moslems who had caused annoyance at the wedding feast. Moses also had to bear annoyance, "but Allah cleared him of what they said." The Commentators refer this remark to charges brought against Moses by Korah, or other people who suspected Moses of having murdered Aaron. It seems, however, that Muhammed had the incident of Numb. ch. xii. in his mind, because the accusation referred to in this chapter also bears on a woman. — Muhammed then cautions Believers always to speak in a straightforward manner! Verse 72 seems to be built on the framework of a Rabbinical homily.

In spite of Muhammed's strenuous efforts to convince Medinians that the marriage of Zeinab was performed in fulfilment of a divine command, he seems to have been afraid that some sceptics would regard the remarks he had attached to the affair as spoken pro domo. He, therefore, once more took up the subject of divorce in a special series of revelations, and had these also addressed to him personally. It was further necessary to show that matters of marriage and divorce of Moslems altogether stood under the direct providence of Allāh. The address in question is that of S. lxv., also headed by the phrase: O thou Prophet. This short sermon is also a perfect lecture on the amr, which is mentioned not less than eight times in it (vv. 1, 3, 4, 5, 8, 9 bis, 12), being the created Will of Allāh and His Providence over mankind.

31 See p. 79, rem. 59.
32 As to v. 52 see Well, Mohammed, p. 358.
33 Cf. H. 167 referring to all unbelievers, Meccans included.
34 "Give them double torment." Cf. Isaiah xl. 2, a verse very popular in Jewish liturgy.
35 As to v. 57 see v. 53 and Numb. xx. 29, and Midrash Rabbah, ch. xix.
36 See Ch. I. Appendix, Note II.
little homilily appended which repeats hackneyed phrases, only serves to round off the sermon, and there can be no doubt as to the date of the same.

To the group of suras dealing with Muhammad’s personal affairs also belongs S. xxiv., although the customary allocation is omitted. Nearly the whole of the sura is an endeavour to prove the innocence of Muhammad’s favourite wife Aisha who was suspected of having committed adultery during the expedition against the B. Mustaliq. The date of the event is not beyond doubt. It is, however, hardly advisable to place it, as Spranger seems inclined, in the year 4. I believe the incident did not occur till A. 6. The efforts Muhammad made to convince his hearers of his wife’s innocence are visible in the beginning of the sura which, in Medinian speeches, is quite unique. The severity with which he wished adultery to be punished, is calculated to make the impression that it was quite impossible that any person of his household could be capable of such a crime (v. 1-3). It is, however, noteworthy that the punishment of those who charge “chaste” women with adultery, but are unable to bring four witnesses, is not much less severe, beside disqualifying the informer for ever from giving evidence before a judge (v. 4-5).

Of the speeches forming S. xxiv., the first (vv. 1-33) and the last (vv. 57-64) evidently belong together, and are perhaps but parts of the same sermon. Their chief object being the defence of Aisha, they begin with regulations concerning immorality and false charges brought against virtuous women in general, or against one’s own wife. The latter case is obviously modelled on Numb. v. 11 sqq. Now the first section (vv. 1-21) has a kind of ornamental phrase: “And were it not for Allah’s grace upon you,” which divides the section into four paragraphs ending in the verses 10, 14, 20, 21. The verses 27 to 29 repeat the warnings of S. xxxiii. 58, while extending it to all Muslims, and are therefore probably later. This is not the first case where an ordination which had arisen out of a special incident, was generalised for the benefit of the whole community. The verses 30 to 33 and 57 to 64 containing rules for decorous and respectful behaviour towards the Prophet, as well as other Muslims, form too natural an appendix to the subject proper of the sermon to require special discussion.

Between the two portions of the sermon the compilers have inserted a discourse, quite alien to the character of the former, and probably later. The piece v. 34 to 40 consists of a set of parables, which are all borrowed from travels on land or on sea. It appears that the piece was given this place in order to divert the attention of the reader from an unedifying subject. As to its date, only so much may be said with certainty that it was revealed after several places of worship and regular hours of prayer had been fixed (v. 36-37). Verse 41 reflects the Rabbinical metaphor that, heaven, earth, and the creatures thereof sing the praise of God. This verse, as well as the descriptive ones which follow (vv. 42-44) suit verses 39 to 40 very well. Verse 46 sqq. contain another attack against the Jews. To judge from the repeated admonitions to obey (vv. 45, 50, 52, 53) it appears that this piece is later than corresponding verses in S. iv., as the phrase “we are disobedient” is dropped.

Similar in character to the preceding addresses, though of later date, is Sura lxvi. It commences with the characteristic O thou Prophet! and was due to Muhammad’s wife Hafsa having discovered his relations with Maria, a Coptic slave girl in the year 7. In S. xxxiii., 52 Muhammad had reserved for himself the right of adding concubines to his Harem. If in a moment of perplexity he swore to his late spouse to forsake Maria, he believed himself entitled to cancel this oath (vv. 1-2). Since attack is the best defence, he now in his turn reproved Hafsa severely by exposing her as a tale-bearer, because she had promised him to keep the matter secret, but had nevertheless

35 Verse 40, “In their hearts is sickness.”
36 Cf. S. v. 9.
confided in 'Aisha (v. 3). He expected them to repent, because he was supported by Allah, Gabriel, the true believers, and the angels" (v. 4). He was free to divorce his wives and take other, better, and more believing women in their stead (v. 5). In three verses which follow Muhammad extends his admonitions to believers, as well as to infidels. The words that "on the Day of Resurrection, Allah shall not disgrace the Prophet and the believers" sound like an allusion to the disrespectful treatment he had been subjected to on the part of his wives.

The second portion of the sura, commencing likewise with O thou Prophet, evidently stands in connection with the first. There is certainly a hidden meaning in Muhammad's reference to the two women who stand as prototypes of misbelief, viz., the wives of Noah and Lot, who were themselves devout servants of Allah. In contrast to these are two pious ones, viz., the wife of Pharaoh and Mary (daughter of Amram). It is possible that the last name was an allusion to the other Mary, the Coptic slave. As she changed her Christian faith for Islam, she was likewise stamped as a model of piety.

The expedition against the B. Mustalilq mentioned above, also gave rise to Sura ixiii. In consequence of a quarrel between some Meccan fugitives and Medineans, Abd Allah b. Ubeidy, the chief of the latter is said to have exclaimed: 'When we return to Medina, the mightiest will surely drive out the meanest therefrom.' These words were reported to Muhammad who now took an opportunity of landing a severe philippic against the "hypocrites," and criticising the reasonable utterances ascribed to their leader (v. 7–8).

This was not the only incident, however, which showed Muhammad that the old spirit of freedom was far from being crushed in Medina. He has further to experience that it was easier to denounce heathen practices than to stamp them out by a revelation. He would, perhaps, have been more successful in abolishing the old custom of divorcing wives, had his first attempt in this direction not been suggestive of personal motives. It occurred that a woman appealed to Muhammad against her husband who had divorced her in the manner judged unlawful by the Prophet. The latter is said to have declared the divorce valid nevertheless. The woman, having little children to provide for, complained to Allah, who then revealed Surah lviii. 1–4, in which the objectionable formula is definitely abolished. Now although the date given to this incident by the traditionists, viz., A. 7, is not very reliable, the revelation in question seems to be posterior to that of xxxiii. 4. It is hardly credible that Muhammad should have forgotten that he had once given a decision in this manner. I therefore doubt the authenticity of the tradition in question, and believe that Muhammad seized this opportunity of denouncing the old formula of divorce over again in a case with which he was not personally connected. He did this in a form which made it appear that, whilst he personally might acquiesce in the preservation of the old custom, it was Allah who insisted on its abrogation. "Allah," he said, "has heard the speech of her who wrangled with thee about her husband, and complained to Allah; Allah has heard your conversation, behold Allah hears and sees" (v. 1).

In connection with the final decision of the question of divorce Muhammad repeated his warnings against disobedience (v. 9, 10, 14). Remonstrance with the Jews fills up nearly the whole of the remaining part of the sura. From v. 6 we may conclude that it was revealed shortly before the flight against the B. Kureiza, who were to share the fate of those who had been destroyed before them. Of other details in the sura we note the following: Verse 8 being directed against the secret plots of the enemies of Islam, is a kind of reproduction of Abid iii. 2–3. The verses 9 sqq. are lanced against the Jews whom, according to tradition, Muhammad exposed for turning the phrase of greeting into a curse. Believers are cautioned against rebellion, and warned against friendly intercourse with "people who suffer the wrath of Allah!" (v. 15), viz., the Jews. Although Muhammad still feared the influence of the latter to some extent, he expressed his confidence that Islam would ultimately prevail; yet he was cautious enough to phrase it "Allah has written, I will surely prevail, and my messengers" (v. 21). Allah has likewise "written" faith in the hearts of the believers (v. 22), a phrase which recalls sentences as Jer. xxxi. 33; Prov. iii. 3, 7. 3.

(To be continued.)

FABRICATED GEOGRAPHY.

BY J. BURGES, C.I.E., LL.D.

In the thesis of Mrs. M. H. Bode, Ph.D., on A Burmese Historian of Buddhism (1898), we are told, on the authority of Taw Sein Ko (Ind. Ant. Vol. XXIII. p. 103), that the recurrence of Buddhist classical names in Burmese geography "has arisen from the national arrogance of the Burmans, who, after their conquest of the Talaiing kingdoms on the seaboard, proceeded to invent new stories and classical names, so that they might not be outdone by the Talaiings, who, according to their own history and traditions, received the Buddhist religion direct from missionaries from India. The right bank of the Burmese river near Pagåñ was accordingly renamed Sunâparanta and identified with Aparântaka."

Mrs. Bode, in her thesis or analysis of Paññasâmi's Sâsanâvanâsa, calls attention to the Nine Regions (leaving out Siâhâla) to which missionaries were sent immediately after the Council held in the 18th year of Asoka. The Mahââvaló, Dipawâló, and other Pali works repeat the story that after the third convocation the great therâ Moggaliiputta Tissa, in the month Katika, dispatched the following theras to foreign parts:—'He deputed the therâ Majhantika to Kasmirâ and Gandhâra, and the therâ Mahâdhâva (the Sâsanâvanâsa has Mahârâvata) to Mahishamânda; he deputed the therâ Rakkhita to Vanavâsi, and likewise the therâ Yona-Dhammarâkhyita to Aparântaka; he deputed the therâ Mahâ-Dhammarâkhyita to Mahârâsa; he deputed the therâ Mahârâkhyita to the Yona country; he deputed the therâ Majhâma to the Himavanta country; and to Suvarâbhu, the two theras Sona and Uttara; he deputed the therâ Mahâ-Mahinda together with his own disciple Íthiha, Sambala, Bhaddasâla (to Siâhâla).'

These countries are mostly, if not all, satisfactorily identified. Kasmirâ and Gandhâra were outlying provinces of the Mauryan empire on the north-west. Mahishamânda is well known as the Sanskrit name of Mâisur, and is not connected with Mahishmatâ on the Narmadâ, founded by Mahishmat. To the north of Mâisur we find Vanavâsi, a well-known town in N. Kanâra, with an old temple the scene of an annual religious festival and in the court of which is a large slab with a snake sculptured on it, and bearing an inscription of the Sâtakapî dynasty and perhaps as early as the second century A. D. The city is mentioned by Ptolemy (Lib. VII, c. i, § 83), and frequently in inscriptions and in Sanskrit literature. The Town is on the Varadâ river a tributary of the Tungaâhâdra, in lat. 14° 38' N. and long. 75° 5' E.; it was also called Vaijayânti, and was a Kañcâga capital. To the north, if we keep along the coast line, we come to Aparântaka or Aparântaka—a western country; by Târanâtha it is used as an adjective simply meaning countries west of Tibet, but it was applied to the west coast or Kôkâna from Gokarâ northward perhaps to the Tâpâ; its capital was Sûrâpâra, now Sopârâ, not far from Bassein. To the west of Aparânta, lay Mahârâsha—a country of the Marâghâs. Then, going outside India, we have the Yona or Yavana country—whether Baktia or Persia, lying to the west; and to the north Himavanta—probably Nepal, but perhaps also Tibet; and next, to the east Suvarâbhu or Mrauma; and, lastly, Ceylon in the extreme south.

According to the statement Mahâ-Moggaliiputta Tissa ("as if with a special care for the religious future of Mrauma") sent two separate missionaries to their country; but the author of the Sâsanâvanâsa is not satisfied with this, and, doubtless following older Burmese writers, he appropriates all the missions to his own country except those to Kasmirâ-Gandhâra, and Mahishakamaṇḍâla. This is supported by the fabricated geography: Suvarâbhu is identified (as in the Atthakathâ) with Sudhammasâra — that is Thaton in the modern Amherst district; Yona-karaṭhâ is the same as Jat-may or Chien-mai, the country of the Shan tribes about Zimmi,

extending along the valleys of the Me-sam and Me-ping rivers; Vanavasi was applied to the region round Prome; Mahāraṭṭha or Mahānagararaṭṭa is explained as bordering on Siam, the districts of Khaym-yun and Mainghin, or Laos, in which Nāgasena is said to have preached; and Aparanta-raṭṭha is the Burmese Sunaparanta, lying west of the Upper Irawadi, or the upper portion of the Thayt district.

Besides Burma has also its own Mahimsakamandala, a district including Mogok and Khyāpyin. Chinaraṛṭṭha, in the Sāsanavāihan, takes the place of the Himavantapadesa of the Ceylon books; and is applied to the borderland lying north-east of Burma, including the districts of Bhamo and Kaung-sin.

We find also Dvāravati as a name of both Sândówé and Bangkot, Yodvā or Ayuthia—a form of Ayodhia, Amarapura—and other classical names of India, transferred to the eastern Peninsula in order apparently to localise and appropriate the Pāli and Sanskrit legends to Mramma. For example, Bājapuri for Raxaburī, Kosaṁbhi for Nyoong-yuwe, Rāmpuru for Maulmain, Navapuru for Lopahaburi, Channapura for Phitsanulōk, Uttaratirtha for Uttaradīh, Vichitrapurā for Phixit, Kačchanapura for Kanburī, Hamsaburi for Pegu, etc. How far early Indian emigrants contributed to this sort of transference, it may be difficult to say; but we seem to have here something analogous to the modern transference to America, South Africa and Australasia of familiar home place names,—modified, however, by the priestly aim of localising legends.

EXTRACTS FROM THE LOG OF A VOYAGE ALONG THE COAST OF INDIA IN 1745.

BY R. C. TEMPLE.

(Continued from p. 358.)

IV.

LOG II.

I.

Text.

Log II. occupies 20 pp. of the MS.

Headlines to Pages.

These vary with every few pages and the seven I have picked out are typical.

6. Transeactions on board the Wake Capt Norton Commdr att Vizaque.

The Second log commences thus:

Monday Sept 15 1746. I [P. M.]. Lost Sight of the Vernon. Att Sun sett Due point Bore from N č B to NW.

---

¹ Garnier, Voyage d'exploration, pp. 106, 265; Yule, Mission to the Court of Ava, p. 251, Childers identified Mahāraṭṭha as Siam.
Tuesday Sept 16. Att Sun rise the Land from NW to the pitch of Due point WSW | the Outermost part of the breakers Straching out from SW & two Ships in Mussulepatam road.

Wednesday 18 1746. Att 3 P. M. Came too an Anchor in Mussulepatam Road 3| fm | the Dutch flagg Staff bearing NWbW | the french De NWW . . . . found riding here 2 Dutch Ships . . . . received on board this morning 8 Leaguers of Water. A Ship is sight in the Offing which we take to be the Vernon.

Thursday Sept 18. Rec'd on Board 2 Leaguers of Arrack.

Friday Sept 19. Sent 10 Bags of Rice with Dutch pinnace. Rec'd on board the Dutch Lanch one New Quoir Cable.

Saturday Sept 20. 8 [A. M.]. Saw a sail which we took to be the Vernon bear NEbN. Nassipore river N. The Ship we took to be the Vernon is a strange ship | Upon her tack & Standing towards [us] we had Ep S and upon her Hauling her Courses up and Showing Dutch Colours, & then making all the sail She Could Carry after us | & likewise being Very full of Hands judge'd her to be an enemy by her Action | So made what sail we Con'd to get away: att Noon she Bore NbW | hull too (!).

Sunday Sept 21 1746. 10 [A. M.]. Spoke with the Vernon | Att Sunrise the Land from W S to NE by E. The Dolphin's Nose being the Most land in Sight . . . . Saw the Vernon bears EnE | Stood out E to speak with her fearing them to be in Great Want of Water.

Monday Sept 22 1746. 6 [P. M.]. Anchor'd near the Vernon. 4 [P. M.]. Sent o'Shore 28 bales of Gunny belonging to the Company. 8 [A. M.]. Sent on Shore 60 Bales of Gunny belonging to the Company with all the Jute Rope, each 20 | 29 Ropes | in all 116 Bundles.

Wednesday 24. Sent the pinnace to speak to a boat which Came from the Sw | who Inform'd us of a Large ship Lying at point Guardeware, which I take to be the Ship that Chas'd us some Day's ago.

Saturday 27th. Strong Gales from SSW to SW with a Great Swell | Scarce any land wind for the whole 24 hours | Sent on Shore 3 bags of pease with a Chair Palankino | this Morning Weigh'd with a Small Spert of land wind: but presently Dying away Came to an anchor Again | att 10 Do Weigh'd with the Wind att So Indeavouring to get in Shore but the Current Setting so strong to the Northward made an Indiffirent Board so Anchor'd in a | less 12 fm.

Sunday Sept 28, this Morning Weigh'd the Wind att SW to get further to the Sw but the Large Swell Still Continues | Do stood in Shore again & Anchor'd in 12 fm; having Scar'd fetch were we Come from.

Monday 29th 1746. Att 10 Do (A. M.). Weigh'd again & by the favour of a Curr by which we got into the road | att Noon Anchor'd in 7 fm.

Tuesday 30 Sept 1746. Sent a Shore 1 Bag of Collivances.

Thursday 24 Octbr. The first part of these 24 Hours moderate gales & fair Weather | the Middle Cloudy with lights in the NE Quarter | the latter part Strong Gales from NE to E | got Down top Gallant Y & masts.

Friday 3 Oct. The first part of these 24 Hours Imply'd in getting Down Yards & Topmast topsail Yards Down on Deck & making the Ship as snug as possible | the Weather looking so Dreadfull & Demosteous all round | the latter part got Down the Crojick Yard & Main Yard fore & aft & panell'd the fore Yard over the Topmast to be ready the first Statch to run into Deeper
Water, the sea running so very high that we are perpetually swallowed up by it; the 24 hours hard gusts of wind with rain out of the eastern b.

_Saturday 4 Oct._ The first & middle part of these 24 hours the wind the same as before; the latter part somewhat more moderate; the weather turbulent & unsettled all round with thunder lights & rain. This morning, swayed up the fore yard & run into 10 fms where anchor'd; also weighed the _Vernon_ & went over the bar.

_Sunday 5._ The first & middle part of these 24 hours unsettled with heavy showers of rain in the night winds variable all round; the latter moderate winds in the NEbNE board; swayed up fore & mizen topsail; got the F yard up the M & spritsail yard a cross de.

_Monday 6._ People employed in fitting our rigging & drying our sails; came on board with a guard from the chief David Hopkins Soldier as a passenger.

_Tuesday 7._ The middle part somewhat suspicious with lights & some small showers of rain. Thunder lights in the southern board & SW do; came out of the river & past by to the N ward a small ship belonging to some _Moor Marchant._

_Wednesday 8_ Oct. 1746. The weather somewhat squally with light showers of rain from the land.

_Friday 10._ Received intelligence of a French Brigantine having arrived some day's ago at Ingeram being stranded there some day's ago but the crew saved.

LOG II.

2.

Geography.

The log shows that the ship was now taken northwards, hugging the shore, for two reasons:—to have a place of safety at hand, into which to run in case of very bad weather, as the change of the monsoons was due, and to be able to creep in nearer to shore than a hostile vessel, larger than the _Wake_, would be able to go, in case she should attempt to take possession of her. Shoal water was evidently safer in those days for a small vessel than the open sea, if an enemy happened to be about.

On the 14th September, 1746, the _Wake_, with the _Vernon_ following close, probably for safety, made straight from Pullicat for Masselepatsam Road, passing Due Point, where were received on board various leaguers of water and arack, and one new "Quoiz Cable." On the 20th September, the ship was off the Nassopore River, but had to "make what sail we could to get away," because she was chased by a "large strange ship."

On the 21st, the Dolphin's Nose was sighted, and on the 22nd Vizaquepatam, called Vizaque in one place, was again reached. Here were sent on shore some "bales of Gunney belonging to yo Company," and what is much more interesting for the period, "all the jute rope ... 20 ropes, in all 116 bundles." Here news was received on the 24th of a "Large ship lying at point Guardemare, which I take to be the ship that Chas'd us some day's ago."

On the 26th the ship was taken into 15 fathoms, as the master was "expecting Daily the Bring[ing] in of the monsoons." On the 27th they sent on shore a "Chair Palankine," and on the 30th a bag of allivances.

On the 2nd October, the signs of the cyclone that was bursting on Madras town and destroying de Labourdonnais' fleet began to trouble them, and continued so till the 8th. The notes in the log here form a most interesting early account of the manner in which cyclonic weather was met in
those days by small sailing vessels in the outer circle of a cyclone. On this last day "a small Ship belonging to some Moor Merchant" came out of the river at Vizagapatam and "past by to the N'ward," and on the 11th the Wake set sail to reach Ceylon, by way of the open sea, giving the now dangerous port of Madras as wide a berth as she dare.

The geographical problems involved in the account are very few, but there is a goodly crop of Anglo-Indianisms.

LOG II.

3.

Anglo-Indian Terms.

Arrack.

This term means spirits. See Yule, Glossary, s. v.

1703. — They [the Indians] also make Arracée out of it, which is the Indian Wine, and is strong enough, though they drink it like water (p. 140). Within the Palissados of the Church [i.e., Mosque] you see on both sides a great many Women, who call the Sallet call'd Betelle, Aracée, Melons and Bananas (p. 187). — Collection of Dutch Voyages.

1711. — Arrack seems to be an Indian Word for Strong Waters of all sorts, for they call our Spirits and Brandy, English Arrack. — Lockyer, Trade, p. 267.

Collavances.

This is not an Anglo-Indianism, but an old English word meaning a bean. This spelling is not in Yule, Glossary, s. v. calavance.

c. 1700. — The Country is fruitful to Admiration, producing Rice, Wheat, Gram, Doll (dál) Collavances. — Alex. Hamilton, East Indies, Vol. I. p. 333. What was meant by "doll collavances" is explained by the following: — Near Bantam they sell Beans by the Measure of all Colours, White, Black, Red, Yellow, Green, Grey. — Collection of Dutch Voyages, 1703, p. 187. This exactly describes the dál of the present day. "Doll" is quaintly explained by Lockyer in 1711 (Trade in India, p. 258), thus: — Doll is a small grain less than Fitches, contains a Substance like our white Peas and being boil'd with Rice makes Kitcheree (khichri).

1900. — P. & O. S. S. Occena; Breakfast, Jany. 6th ; . . . . "calavance curry." P. & O. S. S. Oriental; Breakfast, Jany. 17th; . . . . "calavance curry."

Due Point. 31

This name is not given in Yule's Glossary.

1679. — Two Sangaries or Gun boats which set us over upon the Island of Don. — Streynsham Master's Journal in Mackenzie, Kistna District, p. 131.

30 A process the present writer has himself witnessed at Fort Blair in the Andaman Islands on the part of native crews of the present day, who still work some of the old schooners of John Company.

31 See also quotations under "shahi."

1717. — The President do give orders for providing all necessaries for taking possession of Divy Island. — Mackenzie, Kistna District, p. 107.

1720. — Dew Pt. — Mortier; map.

1764. — Pointe de Divi. — Croisey; map.

1809. — Point Divy is low . . . forming the Western side of the semicircular Bay of Masulipatam. — Horsburgh, Directions for Sailing, Vol. I. p. 347. The 1841 Ed., Vol. I. p. 600. repeats the information under “Point Divy.”

1813. — From Mootapilly to Point Divy is about 20 Leagues. — Milburn, Commerce, Vol. II. p. 85.

11. — Divi Point. — Admiralty Chart.

Guardeware.

See the quotations under Guardeware in the notes to Log I.

Gunney.

A sack or sacking made of jute. See Yule, s. v.

1676. — And from thereabouts there is brought silk . . . course hemp, gunnyes and many other commodities. — Clavell, Account of the Trade of Hugli in Yule, Diary of W. Hedges Vol. II. p. cxxxix.

1679. — The following is ordered to be sent to Fort St. George from Masulipatam: 6,000 ibs of Gunney . . . August 6th. — Mackenzie, Kistna District, p. 97.

1683. — The Saltpectre having lain a long time in the Godown the bags are grown very rotten . . . It is therefore order’d that what bags is to be shipt on the Josia be new cased over with Gunny to prevent the loss of the Petre. — Pringle, Mad. Consul. for 1683, p. 113.

c. 1710. — Some damaged Gunnings which are much in Use in Persia for embaling goods. — Alex. Hamilton, East Indies, Vol. II. p. 17.

1711. — Bathings and wet Goney being often apply’d with Success to the Relief of the Panting [caused by “the Heats in Summer” in Madras]. — Lockyer, Trade, p. 24. Goneys occur also at p. 243.

1790. — Stores supplied for the outfit of the Snow Viper . . . Gunny Bags. — Bengal Consul. MS.

Jute.

Yule, s. v., says that the word came into English, through Dr. Roxburgh, in 1795, but here we have it used by a ship’s mate in 1746.

Leager, Leaguer.

Usually a wine or spirit cask holding about 50 gallons. Yale only gives the spelling leaguer but this is not the commonest form, as per the quotations following.

1790. — Stores supplied for the outfit of the Snow Viper Rum, 2 half leaguers.

1813. — Arrack is seldom imported as an article of trade, though the East India Company allow 20 leagures to be brought in each ship. — Milburn, Commerce, Vol. I. p. 274. Casks. . . . Leagures packed with hoops R. 20 per leager. Leager staves, Rs 25 per 100 (p. 317).

1835. — The English weights and measures are in general use here [Cape of Good Hope], except for wines, which are mostly sold by the Leager of 4 Ahms or 388 Cannels, containing 50 English Gallons nearly (Vol. I. p. 63). The Dutch Aam, “old system,” contained, as a wine measure, “41 Gallons English wine measure.” It was divided into 64 Stoops of 5.125 English Pints and there was besides a “Legger of 240 Stoops,” or 141 Gallons (Vol. I. p. 10). — Kelly, Cambist.

Monsoon.

It is not always easy to tell, from the definitions usually available, what an old writer meant precisely by the term monsoon. So I here make a collection of old quotations on the subject not to be found in Yale’s Glossary. Pringle, Madras Consultations for 1688, p. 143, n. 90, hits off the general sense of the word very well, which are these: — (i.) The periodical winds, NE and SW. (ii.) The seasons at which the winds blow. (iii.) The periods of change from NE to SW, and vice versa. (iv.) The bad weather at the changes. In the quotations that follow I shall adhere roughly to Pringle’s divisions and separate them under the following heads: — I. — The Term. II. — The Wind and the Season. III. — The Winds. IV. — The Season. V. — The Changes. VI. — The Bad Weather at the Changes.

I. — The Term.

1780. — Monsoons are thus described for the benefit of sailors in Dunn’s Directory for the East Indies, p. 42 ff. XXI. — Of the Periodical Trade-Winds or monsoons. — The periodical trade-winds, or monsoons, are usually said to blow for six months from one quarter, and six months from the opposite quarter; of which there are four in India, viz., the SW and NE, the SE and NW. The SW monsoon blows from about the middle of April to the middle of October . . . . The NE monsoon blows through the same track, from the middle of October to the middle of April . . . .

XXII. — Of the Fair and Rainy Seasons. — All over the East-Indies, the westerly monsoon, as well NW as SW, brings the rainy season, with frequent squalls and dirty weather; and the Easterly monsoon brings fair weather, except on the Coast of Coromandel, and the North part of Zeloon [Ceylon], where the rainy season is from October to January.

XXIII. — Of the Changing of the Monsoons. — The changing of the monsoons is commonly gradual, and some years happens near a month sooner than in others. The change of the NE and SW monsoons is often attended with violent storms, which to the Eastward of Malaca are called Tuffs, and to the westward the Breaking-up of the Monsoons. They seem much the same as West-India hurricanes; but never happen at the change of the NW and SE monsoons, though on those tracks, at that season, there is often very bad weather.
XXIV. — Of the Land and Sea Breezes. — The land and sea breezes prevail, more or less, almost all along the coast of India, during the NE monsoon: they also blow sometimes during the SW monsoon, but not so general.

The valuable quotation XXIII. above given shows that by the term "Breaking-up of the Monsoons" the old pilots and sailors meant cyclones. The term typhoon is as near as Dunn ever got to the modern cyclone. At p. 50 he speaks of cyclones merely as storms: "but devouring storms and tedious calms, almost as bad in their consequences [to sailing vessels] as storms, generally happen at the shifting of the monsoons: that is the storms [cyclones] from the middle of April to the middle of June, and from the end of September to the end of November." In Horsburgh's Directions for Sailing to and from the E. I., Ed. 1809, Vol. II. p. iii. ff., the remarks on the "Monsoons or Periodical Winds" are much more advanced, but cyclones are described on p. vii. as hurricanes. In Vol. II. p. xviii., he has the queer expression "to resist the sudden shocks of the sea during Ty-foong," a spelling not to be found in Yule. In the 1841 Ed. of Horsburgh, Vol. I. p. iii. ff. and p. vii., the remarks are a nearly verbatim reprint of the Ed. of 1809, and cyclones are still called hurricanes. Cyclones, are, of course, correctly described by the synonymous names of "hurricanes, cyclones, typhoons," in Taylor's Indian Directory, 1874, p. 650, as "progressive revolving storms."

II. — The Wind and the Season.

1687. — But yr it shall soe happen you come not to Zocotora in such due tyme as you may conveniently goe to Aden and have that monsone to bring you into the Indies. — Birdwood, First Letter Book, East India Company, p. 251.

1883. — Thursday 18 (Oct.). The Monsoons [to NE] being now changed, and no hope of the arrival of any of the Hon'te Comp's Ships. — Pringle, Mad. Consul. for 1683, p. 94.

1884. — [Friday] 28 [April]. Sloop Cosinsmeer arrived here, having endeavoured to get to Coobloor or Compomeer, but ye [SW] Monsoon being hard set in, could not (p. 31). Tuesday 25 [Nov.]. Since there is no possibility of reaching the Bay this [NE] Monsoon or February or March next (p. 137). — Pringle, Mad. Consul. for 1684.

1685. — Monday 13 [April]. Order'd that Capt John Spencer, Commander of the Emoy Merch't, to give an acc't in writing as far as he can remember of the R't Hon'te Comp's affairs and of his voyage to Bencoolen and Indrapoora [Sumatra] . . . . But the Monsoon [SW] being contrary and many of his people dead and sick he advised him how impossible it was for his Ship to attain that Port. — Pringle, Mad. Consul. for 1685, p. 60.

III. — The Winds.

1689. — Orington's long description of the Mussouns [Voyage to Surat] is really a description of the SW Monsoon on the West Coast of India, and of what are now called the Rains.

It was just the Season of the Mussouns, when we fell upon the Coast of India, which generally is extreme dangerous, because they break out for the most part in such Thunder and Rains and impetuous Winds, that if the Ships are not laid up and in Harbour before that time they incur the hazard of being lost (p. 131). This is the only proper Season for the Year for Rain, which falls here [Bombay] with such violence, and on all the Coasts of Malabar . . . . It continues in these parts for the space of three or four Months from the latter end of May 'till the middle of September (p. 182). When once the Mussouns are past, the other Months are under the severest influence of the Heavens, without one Fertile Cloud for several Months visible in the whole Firmament (p. 137). Which common Fatality [at Suratt] has created a Proverb among the English there that Two Mussouns [Rains] are the Age of a Man (p. 142).

1711. — Ships may ride secure from the South West Monsoon in Batte Cove [on the Coast of Malabar]. — Lockyer, Trade, p. 272.
IV. — The Seasons.

1675. — Never were all our proxies and Bills of Lading left behind before, our Ships never dispatched with greater danger of loosing the Monsoons. — Yule, Diary of W. Hedges. Vol. II. p. cclvii.

1711. — Wherefore in the beginning of the Wet Monsoon. — Lockyer, Trade, p. 270.

V. — The Changes.

1684. — [Sat.] 13 [Sept.] Ship Burneo Merchant Thom Bowry, Master, arrived here from Visagapatam, he being designed for the Bay, but could not proceed thither by Reason of the Monsoons changing [from SW to NE]. — Pringle, Mad. Consull, for 1684, p. 104.

1685. — Augst 31st 1685. Wee your Hon. & C. Councils most humble servants the Commander and Officers of the Pink John and Mary finding your Hon. & C. Council doe designe in fewe dayes to send the said Pink to Piramun on the West Coast of Sumatra Wee think it our duty to represent to your Hon. & C. Council that should the Pink go no how she would fall much about the breaking up of the [SW] Monsoons on that said Coast of Sumatra where the Winds blow very hard and variable with very much Rain (p. 127). Thursday 8 (Oct). The changing of the Monsoon [SW to NE] being near at hand Itt is order'd that the Sloop Mary be carried into Ennor River to secure her till the bad weather is over (p. 141). — Pringle, Mad. Consull, for 1685.

1689. — The [SW] Mussoons are rude and Boisterous in the departure as well as at their coming in, which two Seasons are call'd the Elephant in India, and just before their breaking up take their farewell for the most part in very ruggid huffing weathit. — Ovington, Voyage to Suratt, p. 137.

1704. — Is very plaine and evident to evry impartial man there's no other time if any Limmitt to St. Niche: Waite going to Bombay then the 3 months allowed and appointed to St. Ivo: Gayer, the one month after the Turn of the Monsoon is a Especiall flavour and respect Singly to St. Ivo: Gayer without any coherence relating to St. Niche: Waite, every one of us unwilling interceerung in said affaire expecting that you Gentlemen or the Deputy Governer and Council for the United Trade at Bombay to have notified the true Genuin Time and Turne of the Monsoone as held and Esteemed by the Portugize and other antient European and the Severall inhabitants of Indis for the Queens Men of Warr Rashly coming to this Barr alters not the Annuell Season that by accident may meet with Severe and Calme weather otherwise any Nation may assume an Almighty Power equally with Mr. Burniston or Aislabie. But it being notorous & Certified by all Europeans, Dutch, Frenche, English, Portugese, the Last under a Notary publick, as well as the Moore Account, the Turne of the Monsoone St. Francisco or the Elephant ends att or upon and not before the new moon in 7ber: which fell out this yeare to be the 18th: Ulb, and the new moon the 17th: Ins or the 18th: Ins a full Callender month. — Letter in Yule, Diary of W. Hedges, Vol. II. p. cccxli. 1.

The two references in the quotations for 1689 and 1704 to “the Elephant” are exceedingly interesting instances of folk-stymology. “Which two seasons are call’d the Elephant in India,” says Ovington. “St Francisco or the Elephant ends att or upon and not before the new moon in 7ber,” says the quaint old letter. Here “the Elephant” is the thirteenth lunar asterism of the Hindus; Hathâ as it is called in modern India; Hastâ as it was called in Sanskrit. Hâstâ signifies the hand, and the asterism is properly represented by a hand containing five stars; but Hathâ happens to be a common word meaning an elephant, and hence the mistranslation of the old Anglo-Indians. What these early Europeans were told was that the SW Monsoon “turned” during the asterism Hathâ, i.e., in September-October, which is the fact. With the Elephant was clearly associated the term “St Francisco,” alluding, I suppose, to the Saint’s Day, either of St. Francis of Assisi, the founder of the Franciscans, 4th October, or of St. Francis Borgia, the third General of the Jesuits, 10th October.

2 I.e. reach.

VI. — The Bad Weather at the Changes.

1802. — Thursday 14th: [Sept]. The Resolution being order'd to ride out y° Monsoon upon this Coast & Capt. Wills[lu]w complaining that he shall not be able to ride out y° storm without sufficient Quinetlage [ballast] nor get to Metchp° [Masulipatam] when the bad weather is over without it 'tis therefore order'd that the warehouse-keeper doe lade on board him 100 Tons Saltpetre & what Calliture° wood can be got to stiffen his ship & enable him the better to ride out the storm. — Pringle, Mad. Consult. for 1682, p. 69 f.

1685. — Thursday 26 (Nov). The Monsoon being as to appearance over Itt is agreed that an order be sent to Mr Knowman Master of the Sloop James to bring her out of Ennor River. — Pringle, Mad. Consult. for 1685, p. 153.

Moor Marchant.

Moor is an early term for a Muhammadan inhabitant of India.

c. 1595. — The King of Passarran [in Java] who was a Moor and Mahometan. — Collection of Dutch Voyages, 1703, p. 181.

1672. — There is an astonishingly good description of India and its people by Streynsham Master in a letter from Surat, dated 1672, in Yule's Diary of Sir William Hedges, Vol. II. p. cccv. ff., and from it are the following excerpts:

I have also been at Sea in the vessels of the Country . . . But the English were Masters of the Shipp, that is at Sea, though Imploy'd by the Native Indians, Moors and Banians [Hindu Merchants] . . . This Province or Part of India is principally Inhabited by 3 Nations or sorts of People, that is Moors or Mahumedans, the Hindoos and Parsees . . . .

The Moors or Mahumetans are those that generally have the Ruie and Government of the Country, the Mogulle himselfe being a Mahometan of Tarter Race from Tamerlane, and the greatest part of the Moors in these parts are such as came into this Country with that Conquest, though there be allsoe many of the Naturall Indians, even whole tribes that have turn'd Mahometans since the Conquest. The Mogull Orangetzaeb, (as I have said) is a Mahometan and a great precision in his Religion, soe that he has taken off all customes from the Mahometans and imposed 5 P. Cent. more on the Hindoos than they formerly paid, besides he hath some Persecution against the Hindoos &c. since his comming to the Crowne, and not see much to punish them for the Profession of their owne Religion as to trap and ensnare and even force them to turn Moors (that is to be circumcised, and then they be what they will againe, for many of the Hindoos that have turn'd Moors Retaine
many of their Idolatrous Customes) as is the Practice of Mahometans in most Countryes, Contrary to all humane Reason, and I think to the Economy of all Religions in the World. It seems that some yeares if not ages since, I suppose about the time of the Moors first Conquests, they were severe against the Idolatry of the Hindoos, and set a Poll Tax upon all the Family of Indians, which as I said [many] of them turne Moors, nor was any Pagod or Idolatrous Temple of the Hindoos suffered to stand except the Hindoos at their owne charge made a place for Prayer for the Mahometans adjoining to the very wall of it, and if they did see, then they might build new Pagods, but since those times, especially during the Raignes of Jangeer and Sha-Jeera, the Hindoos were not at all molested in the exercise of their Religion, but were in favour and Preferred to the great and Meane offices of the Kingdome soe well as the Moors.

1672. — There were Weavers of all Sects, Moors, Hindoos and Persees. — Yule, Diary of W. Hedges, Vol. II. p. cxcxi.

1683. — Forasmuch as our affairs have been much interrupted by the insolency of the Moors Government. — Yule, Diary of W. Hedges, Vol. II. p. xx.

1689. — The Portugese proselyte the children of all Persons decauc'd among them, whether their Parents are Moors or Pagans, and seize their Estates into the Church (p. 206). I shall distinguish the Natives here into three sorts. First, the Moors or Moguls (p. 233). — Ovington, Voyage to Suratt, p. 206.

1690. — If you do not take some care to relieve me with Speed I shall be for'd to turne Moore. For the Lord Jesus Christes Sake let me not perish in this hellish Prison. — Charles King in prison to the Bengal Council, in Yule, Diary of W. Hedges, Vol. II. p. cxxviii.

1699. — He is expert in the Hindorstand or Moors Languages [Hindustani]. — Yule, Diary of W. Hedges, Vol. II. p. ecxvii.

1711. — Two Days before our Arrival a Moorman (or a Mahometan, born in the Mogulls Dominions) in the King's Service was accused before the Slabander [at Acheen]. — Lockyer, Trade, p. 57.

1775. — Here [Acheen] are some few English, some Moorish Merchants and several Chinese (p. 87). Under which Cover he [the "Imaan's Shroff" at Mocha] has an Opportunity of adding something to the Money Weight for which he is well paid by the Moors who are the greatest Exporters of Silver (p. 51). — Stevens, Guide to E. I. Trade.

1791. — This will be delivered by Mr. Clark, the Gunner of the Settlement [at the Andamans] who I have dispatched for Calcutta in charge of the Lea board for some Moors. — Letter in Bengal Consulat, dated 24th Nov. 1791, MS.

Musule, Musulepatam, Mussulopeyam, Musulepatam.

These spellings are possibly due to the same false folk-etyymology as brought about the contemporary spellings Matchilapatam and the like, so common in former days. See Yule, Glossary, s. v. Masulipatam. See also ante, s. v. cit., under the first word.

1605. — All or the most pte of thes abovesaid are made aboute Bengalla, Mesepatamya St. Thome Cheremandall or Cambaya & some other pte of the East Indies. — Birdwood, First Letter Book, p. 75.

1605. — These foresaid cloths are always to be had at Bantam, yet at sometimes better than at othersome, but they be made at Bengalla, Mesopotamia, S Thome & Cheromandall. — Danvers, E. I. C. Letters, Vol. I. p. 72.

c. 1617. — At better rates then they fetch it from the fleemings in Messelpotania. — Op. cit. p. 460.

1632. — Intended to be imploied on freight to Muselpatam. — Yule, Diary of W. Hedges. Vol. II. p. ccxxiv.

1658. — Some 40 English miles from the Metropolitan Port and factory which is called Mochulpatam. — Yule, Diary of W. Hedges, Vol. II. p. ccxxvii.

1676. — Proposals to the Agent about the young men in Metcholpatam. Whereas each hath his peon and some more with their Rondells [umbrellas]. — Mackenzie, Kistna District, p. 92.

1678. — If the Ship continues as She is I will take in all that is sent to Metchop1. — Letter from Thomas Pitt in Yule’s Diary of W. Hedges, Vol. III. p. vi.

1679. — There by the River side all the English that were in Metchipatam mett us. — Streynsham Master’s Journal in Mackenzie, Kistna District, p. 131.

1883. — Metchlepattam. The legendary and absurd derivation from machhil [fish] for long fixed this mode of spelling. — Pringle, Mad. Consult. for 1684, p. 64.

Palankine.

A litter carried on a pole. Yule quotes the spelling in the text as early as 1608.

1679. — To ferry over our people Pallankoones and Horses which took up 4 hours’ time. — Streynsham Master’s Journal in Mackenzie, Kistna District, p. 131.

1689. — Those whose Wealth is able to support it are pompously carried upon Men’s shoulders in Palanquins whose carriage is as ease and pleasant as that of our chairs in the Streets of London. — Ovington, Voyage to Suratt, p. 252.

34 The Dutch factory at Masulipatam was established in 1614.
1899. — And desir'd he would privately let him see either in a Pallakeen or on horse to you. — Letter in Yule, *Diary of W. Hedges*, Vol. II. p. cclxvii.

c. 1708. — Beg the Favour that he should pick them out some lusty Dutch Men to carry their Palenqueens and Somercors or Umbrellas. — Alex. Hamilton, *East Indies*, Vol. I. p. 338.

1711. — The better sort of People travel in Palankeens carry'd by six or eight Cooleys whose Hire if they go not far from the Town is three Pence a Day each. — Lockyer, *Trade*, p. 27.

1775. — Palenkee and Horse Hire with the Broker, etc., from the Gott [ghâf or landing-place] (p. 70). Polenkee and Cooley Hire and his Necessaries to the Gott. — Stevens, *Guide*, p. 68.

Quoir.

Cocoanut fibre for rope-making, bedding, etc. The spelling in the text is not given in Yule's *Glossary*, but compare quoil for coals in the log later on, and Quatwall for kotwâl in Stevens. *Guide*, 1775, p. 54. Coir is the usual modern form of the word.

1595. — The Indian Palm Tree, which grows every where in the Indies and is of four kinds. The first is that which produces Coco the most useful Tree in the World ... The Nuts are as big as Ostrich Eggs ... When the Fruit is gathered and dry the shell peels off like Flax of which they make their Cairo, that is all manner of Cables of Ropes for the use of Ships: they likewise caulk their Ships with it in stead of Tow and Mosee. — *Col. of Dutch Voyages*, 1703, p. 138 f.

Shali, Chae.

This important Anglo-Indianism is mentioned in Yule's *Glossary* under choya. I give some additional quotations for it here, because it comes under notice in quotations for Masulipatam, though it is not mentioned in the Log. It signifies the dye known as Indian madder.

35 An old and correct form. In the Andaman Islands the existing form is always kayir. So it is also in the Nicobar Islands, the ancient home of the cocoanut.
1886. — They bring thither [Masulipatam] also much cotton yarn red coloured with a root which they call Saia, which will never lose his colour: it is very well solde here, & very much of it commeth yerely to Pegu. — Ryley, Ralph Fitch, p. 165.

1814. — The red yarn, also by the rognery & covetousness of the dyers, instead of: came, ris, but other chaya half so cheap, which only doth give a fair gloss at first, which with continuance & heat in the ship decays & becomes black, dirty & whitish withal. — Adam Denton, Letter in E. I. O. Records, Vol. II. p. 127.

1879. — To which they were answered yet if they would provide musters [patterns] of all sorts of Choa and white goods and bring them to Matchlepam. — Streynsham Master, Journal, in Mackenzie, Kistna District, p. 151.

c. 1700. — Matchulpotam, being the next Place of Figure lies in the Way along the Sea Coast. It stands on the North-east Side of Diu Point, about 5 Leagues distant from it. . . . The Islands of Diu produce the famous Dye called Shali . . . . For some Disagst he had received from the Inhabitants of Diu Islands. — Alex. Hamilton, East Ind., Vol. I. p. 379.

1700. — If I can but Keep these Cursed fellows from mixing the Southern Chay with the Northern. — Yule, Diary of W. Hedges, Vol. III. p. liii.

1813. — The coarser plain cloths made to the north and south of the Godavery or coloured with Chaya root which grows in the most perfection in the sands overflowed annually by the Kistna (p. 80). Chaya root is a small root from 15 to 20 inches long, very slender, with few fibres, cultivated on the Coasts of Malabar and Coromandel and other parts of India. It is used in dyeing red, purple, a deep clear brown, and to paint the red figures on Chintz. — Milburn, Commerce, Vol. I. p. 277.

Vizagapatam, Vizaquepatam, Vizacquepatam, Vizacque.

See illustrations, s. v., in the notes to the first log. The ordinary current colloquial form of the name in military circles is Vizag.

1869. — The term Vizagapatam is properly Visakkapattanam, the City of Visakha or Kartikeya, the Hindu Mars. — Carmichael, Vizagapatam District, p. 1.

(To be continued.)

SOME SONGS OF THE PORTUGUESE-INDIANS.

BY R. M. LAFRENBAIS.

(Communicated by F. Fawcett.)

The Portuguese who came to India with Vasco da Gama and the other leaders, who followed in his wake, have left their names to their mixed posterity, now to be found along the west coast of India. The language spoken by these people in their homes is still a kind of Portuguese — Portuguese with an odd admixture of the Vernacular Malayalam.

I.

Adeos.

Text.

Adeos, Adeos, Adeos, Adeos,
Men coracao
Alma leva retratado
Para hoje en penar.
Quantas vezes vos me destes
Vossa mão de fina prata
Promet eu do olhe que ser firmo
Como hoje sois engrato.
Ai demim triste coitado
Em que hora ja nasceo
Ja nasceo na huma planeta
Para hoje en penar.
Tu tens olhas de matar
Sobrancelhas de ferir
Tu tens boca de fallar
Coracao para sentir.

Notes.

The first song entitled "Adeos" evidently was originally a farewell serenade addressed by a jilted swain to his false lady love. The air is simple and pathetic, with that peculiar form of pathos characteristic of the lyric music of Spain and Portugal.

The words now given are many of them corrupt, and the manner of their use is such that the difficulties of translating them literally have proved insurmountable, though many individuals, who are well versed in Mongrel Portuguese, have been consulted. Freely translated, the verses mean that the serenader complains of his soul being dejected and of his being "in pain today" (fourth line, first verse).

The second verse is apparently in reference to the hopes held out by the lady to whom the bard addresses his plaintive melody, and to her subsequent ingratitude.

In the third verse, the bard bemoans his hard fate and curses the unlucky star under which he was born.

In the fourth verse he tells the false one that her eyes can kill, her eyebrows pierce and her mouth conquer, but her heart makes others feel.

This song is seldom sung to the same words, improvised renderings to suit occasions being generally composed at entertainments, though some few verses, like those reproduced, are fairly popular.

II.

Britannia.

Text.

O Britannia, O Britannia, O Britannia, linda amor
Britannia linda amor li la lay
Britania linda amor.¹

2
Bark China jada vela capitão querri parte
Bengalina ne moe braco li la lay
Naon cavaie dispidia.

3
Voz ingrata disamarosa, bosa portia na vi
Eu lo vai ne terra estranho, li la lay
Eamolas lo pedi.

¹ This is the chorus of the song: see Translation below.
Vinte anno eu massel, toda terra eu ja olha
Naon achar um minima li la lay
De me propri idade.

5
Vosa alto fantastia quanto temp lo duro
Com o folha se papel, li la lay
Dally vento lo leva.

*Translation.*

*Chorus.*

Oh Britannia, Oh Britannia,
Oh Britannia my love!
Britannia my love, li la le,
Britannia my love.

2
A Chinese barque put up her sails,
For the skipper he wanted to start,
Bengalena was in his arms, li la le,
And from her it was hard to part.

*Chorus.*

3
You are ungrateful and you're unloving,
Your portals I'll cross no more,
In far lands will I roam, li la le,
Begging alms from door to door.

*Chorus.*

4
I have travelled in distant lands,
My age it is twenty today,
No girl have I met, li la le,
Whose age did with mine agree.

*Chorus.*

5
Those fantastic notions of yours
How long, think you, will endure?
The breeze will scatter them, li la le,
As papers lifted from the floor.

*Chorus.*

III.

*Marilhia.*

*Text.*

Onti noite intire eu ne vossa porta
Morrendo cum frio sin acha um reposta.

*Chorus.*

Marilhia dai me consalaçaô
Tirai dor de cocaoca.

* I. e., the first verse repeated.
2
Amor manda chama eu na sabe caminho
Fortuna sercade cum corna dispigna.

Chorus.

3
Amor nouka dava ninguem allegria
Se lagry tristi de noite didia.

Chorus.

4
Fogue de fongou cum agua se paka
Fogue de me peite cum morti se paka.

Chorus.

5
Parmi ja acha um lence riba de consigna
Lance congueside de nossa Rossigna.

Chorus.

6
Parmi tignere un amor tode tignerenoya
A ta na barrack ne boka de soldadi.

Chorus.

7
Olha, qunte vi treze massev curto
Aquely de meio golose de poot.

Chorus.

8
Ja sande candia sin bata azeite
Senhora diati casa coroços de laiti.

Chorus.

9
Ja sei um lua fronte se meu rosto,
Ja vira saphira contre diamonti.

Chorus.

10
Magry massev massev affermada
Eli lo levai parvos enganade.

Chorus.

11
Se querrai tama amor vine minghna terra
Corp fasez bark braço fasez vella.

Chorus.

12
Se querre tama amor, inda vem criança
Deitado ne cole tomar confiança.

Chorus.
Translation.

All last night I was without your gate,
Dying of the cold and unknowing my fate.

Chorus.

Marilhia, console me with love,
And the pain from my heart remove.

2

Love bade me come, but no way can I find,
And a crown of thorns my fortune doth bind.

Chorus.

3

Love yields no bliss, and night and day
In tears am I bedewed alway.

Chorus.

4

Water, the fire of the oven extinguisheth,
The fire of my heart will be consumed but by death.

Chorus.

5

On our kitchen top a kerchief did I find,
And it bore the name of our Rosinha kind.

Chorus.

6

The soldiers in barracks, nay, all men envied me, the love of a girl who greatly loved me.

Chorus.

7

Yonder come three youths of stature all short,
The one in the middle's aye greedy for put. the heart of my hostess, as milk 'tis pure white.

Chorus.

8

Save oil 's in the lamp, it will not shed light,
A moon before my face doth rise,
And sapphire with diamond in splendor vies.

Chorus.

9

Beware the slender youth, the girl-faced boy,
By artful wiles he'll thee decoy.

Chorus.

* This line is evidently very modern. Reference is to the small detachment of a British Regiment which is always stationed at Calcutt. — F. F.

* ‘Nut’ is a kind of cake made with rice, commonly eaten by the poorer class of the Portuguese-Indian community. — F. F.
11
Seek you love, then home come with me,
Your fair form a ship whose sails your arms be.  

\textit{Chorus.}

12
Seek you love, then, come, child to my breast,
Lie still in my lap and fear not to trust.  

\textit{Chorus.}

IV.
Marilia.

\textit{Text.}

Marilia minha Marilia,
Minha doce coração
Abri vossa boca
Dai me consolacao.

2
Cada vez que eu limbro
De vossa bondade
Coração fica triste
Olhos saltais lagre.

3
Eu com vos juntado
Ja fiz hum concerto
Nada morrer longe
Senad vossa puerto.

4
Ai de mino que for fazer
Sendo nada considerar
Sequenmte for amado
Para hoje eu penar.

\textit{Translation.}

Marilia, my Marilia,
My sweetheart,
Open your mouth, Marilia,
And give me consolation.

2
Whenever I think of your welfare,
My heart becomes sad
And my eyes fill with tears.

3
You and I together have vowed a vow
That we should not die apart,
But should always be together.

4
What is there for me to do,
I can think of nothing,
For the sake of love
I am in pain today.
THE TULA-KAVERI-MAHATMYA!  
BY G. R. SUBRAMIAH PANTULU.

Chapter I.

Sapta-prakāra-madhya sarasīya-mukul-ūḍhasamāne vimāne
Kavērī-madhya-dēśe arūrdhara-phājirāg-bhēga-paryönka-madhya 1
Nīlā-mudr-ābhirāmā nāti-nikāta-kirā-pārāvā-sīnasaﬆ-āhastān
Podmā-dhātri-karābhuyā parichita-charagān Raṅgandhānaṁ bhajāmi 11

Sūta spake to Saunaka and other Rishis thus. "Dharmavarmaṇa, a Rājarṣi King of Nichulāpurā, having prostrated before the sage Dālbhya from whom he had heard on very many previous occasions various saintly stories, asked him once more thus:—

'O, all-knowing sage, by what means do people in general become useful progenitors, blessed with long life and prosperity? How are sins washed off? How have they bhakti in the God-head? By following what Dharma would God, the giver of sweet scented daṇḍins, choicest women and other terrestrial happiness, and in the end of celestial Mukti, the Creator, Preserver, and Destroyer of all, be pleased? How in this sin-worn Kali-Yuga could mahāptakas of the type of brahma-hatyā (murder of a Brāhmaṇa) vanish like snow before sunshine and such sinners attain final beatitude? I earnestly request that you will have mercy on me, your disciple, and narrate all these in detail.'"

Sūta began to narrate thus to Saunaka and other Rishis the following, as being told in days of yore by Dālbhya, the best of Brāhmaṇas, to the charitably disposed king-sage Dharmavaran, on being questioned by the latter. "You eagerly longed to hear this excellent soul-stirring story of Vishnu. Your longing therefore enlivens the soul and waxes your bhakti. This is a good question and I shall, as far as my ability permits, give you a succinct account of its philosophy. The same topic was well discussed in days long gone by Agastyā, before the sages on the field of Kurukṣetra, when questioned by King Hariśchandra, and I shall now tell you the same, which be pleased to hear with mute attention. The far-famed King Hariśchandra of Ayōdhya, intent on performing a sacrifice reached the famous field of Kurukṣetra, saw Saunaka and other Rishis of the place, and with excess of joy and humility prostrated himself before them, when they who were in the humble initiation of disciples, well versed in Vedic lore, and lovers of truth, saw him and enquired of him thus. 'O King, have you come here in peace and are your people ruled well? Are your kingdom and metropolis, treasury, granary, armament, army, etc., etc., waxing high in peace and plenty? The king who, out of vicious habits, does not take a sixth part as tax and does not rule the people well in peace would suffer sins for a Brahma-Kalpa and then would take good-for-nothing yamnams as worms, flies, etc. Therefore, it is that a king who pays a high reverence for Brāhmaṇas, who does not pay court to venal beauties, whose fame extends far and wide, who rules his people well, is blessed with long life and prosperity. You are well-disposed towards Vedic Brāhmaṇas, are charitable, the foremost among the best of the race, have the internal and external senses under your control and are therefore extolled by the good.'"

"The Rishis, after having spoken thus, were very hospitable to their guest, King Hariśchandra. The king sat on the seat appointed, with hands uplifted, and with fear and humility spake to them: 'I have become great at the mere sight of you, revered by the whole world. Having heard of your grand assembly I have come here to pay my respects to you. I request a special favour of you. O, twice-born, how can I transgress the illimitable saṃśāra, how attain sustenance and final beatitude, how attain long life, how will the family progress, how will the Lord, the greatest of the Purushas, be pleased? I request you to teach me the quintessence of the Dharmas.'
"Whereupon the Munis replied:—'Your questions being asked with a mind intent always on Dharma are very good. We shall teach you the tatau you like best. The Aśvamēṣa sacrifice, being the reliever from brahmaḥatya and other sins of that order, the giver of bhūkti and mukti, the one that pleases Vishnu most, is by far the best, and if you should perform the sacrifice, you will enjoy every sort of happiness.' "To which the king replied, 'O, the choicest of Brāhmans, be good enough to have the sacrifice performed by me and make me great.'

"In the interim the Muni residents of Naimishāranya came there, led by Śûta. Amongst others were Vasishṭha, Vāmostha, Jāhali, Kāṣṭapa, Bhīru, the resplendent Viśvāmitra, Lurrāsas, the mine of prayer, Hārīta, Atri, Maṅkṣaṇa, Vīthētra, Gālava, Mārkandēya, Asita, Kaṅga, Sita, Yāja, Upāyāja, Bhāradvāja, Gantama, Balva, Parāśara, Vivas, Sāttāma, Mudga, Maudgala, Kavasha, Vālmiki, Vāruṇa, Agastya, Mātanga, Jātukarṇa, Sūtiksha, Śatānanda, Satyavrat, Satyātapa, Āsuri, Nārada, Kavi, Dhaumya, Āigras, Kālinda, Māṇḍavya, Garga, Gata, Hōtri, Dhūnakētu, Jalapātra, Ādbhutāṭa, Mahātējas, Śaṅkha, Likhita, Bōdhaya, Yājñavalkya, Yājñāṅkētu, Maru, Krau, Pulastya, Pulaha, Gaura, Āśvalaya, Āstamba, Yājñāṅśi, Madhavi, Babbūra, etc., etc., with their disciples and hosts of followers. Amongst these patient, sympathetic munis who keep the senses internal and external in check, some were water drinkers, some air eaters, some leaf-fruit-and-root-eaters, some Brahmachārins, some Gṛhsthas, some Sānyāsins, and others Vānaprasthas. These, intent on blessing the world, being close followers of Nyāyaśāstra, well versed in Vedic and Vedantic lore, concentrating their thoughts on that great holder of the vital shears, came there to feast their ears on Tulakavēri-Mahatmya, liked so much by Vishnu. Whereupon the munis residents of Kurukšetra entertained them, as became them, according to Vedic ritual, seated them in the seats allotted, when Harīschandra, the controller of the senses, prostrated before them and with hands uplifted and with tears of love flowing from his eyes, requested of them something in a humble mellow voice. 'My life has been made a model: my host of pitris satiated. Vishnu worshipped by an irreligious, headstrong king of my type, a follower of Adharma, has surely appeared before me. I was able to see you by good deeds done in life past. What is there in the three worlds that cannot be attained while I am in your presence?'

"To which the Rishis replied. 'O, Harīschandra, the devout worshipper of Hari, and the disciple of Vasishṭha, the beauty and sublimity of your powers of speech are indescribable.'

"When Harīschandra took his seat, Śaunaka surveying the whole host of Rishis began. 'This Harīschandra has come here intent on performing the Aśvamēṣa. I request on his behalf that, as you have come here just in time, though accidentally, you would shower your choicest blessings on him and favour me with your views.'

"Whereupon Nārada and Agastya replied. 'This king is the fittest person to perform the sacrifice as he is very intelligent, has a decentralised mind, and holds the senses internal and external in check. But, however, there is one thing to be said. In days long gone, he was obliged to roam about in the forests, sore dismayed, being made a bankrupt by the sage Viśvāmitra, immersed in the deep wide sea of misery, sorely puzzled by the imperious sensations of hunger and thirst, and saw in a forest the resplendent sage Kītaśama bending half in prayer upon his knee, and stood upstared, not for a moment thinking that he should worship the sage. On seeing the king thus, the best of Brāhmans thought 'Is this not the world-famed King Harīschandra, the controller of the indriyas (the senses) and anger, the incessant worshipper of Brāhmans? Why has he not worshipped me?'. So thought he for a time and focussing his thoughts, was able by clairvoyant vision to perceive that his present troubles were the product of Viśvāmitra's deeds, took pity on him and became all-merciful towards him. O, best of Brāhmans, therefore it is that he is not entitled to perform this best of sacrifices, Aśvamēṣa, till he expiates his other sins caused by the Brāhman's curse. Whosoever in thought, word, or deed, causes offence to a Brāhman, at that very instant he loses his life and prosperity, and with his pitris enjoys hell-fire until he expiates all his follies. If the offence is a conscious one, he would become a Brāhmariksha and the sure expiation for it is
bathing in the cold icy waters of the Kāvērī in the month of Tulā. He will be fit for sacrificial rites if he bathes in the Narmādā in the months of Vaiśākha and Mēṣa. Bathing in the sacred waters of the Kāvērī not only expiates all sins but also confers on the bather every sacrificial bliss, every desire and mēṣbha in the end. The sixty-six crores of waters in the fourteen worlds join the Kāvērī in the month of Tulā for the expiation of sins. It is impossible even for Adiśesha (Hydra) to describe the sublimity of Tulā-Kāvērī, though told for ten thousand years in a thousand mouths. The greatest sinner will become a heavenly habitant by bathing for three days in the Kāvērī in the month of Tulā. From its source in the Čhaya mountains till it joins the sea, the Kāvērī is flooded on both sides by Śiva and Kēśava shrines. There are many śāramas of sages on both its sides. The sacredness of Tulā-Kāvērī is indescribable by any except Brahmaṇ, Viṣṇu and Rudra in the three worlds. As the waves of the Kāvērī are a number of rivulets, its beds a number of tanks, its sands angelic habitations, bathing in it would give us the same phala as bathing in innumerable sacred streams. The sacred streams that join the Kāvērī in the month of Tulā are as innumerable as the cosmic atoms, the stars in the heavens, the showers of rain and rankest seeds. A drop in the Kāvērī can be regarded as a stream in itself. As the person that bathes in the sacred waters of the Kāvērī in the month of Tulā is not only relieved of all sins but sits at the feet of the Almighty, O greatest of kings, you will attain everything by such a bath."

The king on hearing such words from Nārada and Agastya became wonder-struck, and said, "As I am your servant, I request by your grace that I be made fit to perform the Aśvamedhā sacrifice. How should the bath in the Kāvērī in the month of Tulā and in the Narmādā in the month of Vaiśākha be performed? Why should these two months be given a preference? What charities must be done during these months? Kindly tell me these in detail."

So said King Hariśchandra to the Rūsha, Dāłbhya to Dharmavaran, and Śita to Śaunaka.

NOTES AND QUERIES.

TOMB.

This curious old Anglo-Indianism means a grain measure still known in Madras as toon. It belongs strictly to the Telugu Districts and in the Southern portion of those districts it is made to correspond to the better known mercahill (vide Yule). The word itself is not in Yule. It represents the Tel. and Tam. tāmu, and may be called the Indian bushel.

1898. — Eight small measures make one Tomb. Five Tombs make one Parra. Eighty Parras make one Goree. . . . the measure to contain one-eighth of a Tomb and all grames, etc., for the use of the Company to be measured upon it gratis, upon request. — Mad. Consult. in Notes and Extracts, p. 24.

R. C. TEMPLE.

KOS — COURSE — CORSE.

c. 1816. — Sir Thomas Roe always has course for kōs.

c. 1825. — "As for Courses they are diversly taken (as Southern and Northerne miles with vs), in some places longer, in other shorter, which causeth scruple in the computation." — Note by Purchas to Roe, Hak. Soc. Ed. Vol. II. p. 541.

1765. — The Gentooos estimate distances by corses, but more commonly by a day's journey, which they reckon five corse, but, as the corses varies in different districts, from one and a half to two and a half miles English, we take the medium days travel at ten English miles. — Howell, Events, etc., p. 192.

R. C. TEMPLE.

* In times when men were scarcely ever induced to travel by a liberal curiosity or by the pursuit of gain, it was better that the rude inhabitant of the South should visit Benares and Prayāga than that he should never see anything but the squalid cabins and uncleared woods amidst which he was born.
NOTES ON THE ROCK CARVINGS IN THE EDAKAL CAVE, WYNAD.

BY F. PAVCETT.

(Assisted by R. C. Temple.)

To the S. W. of the town of Ganapativattam, known as Sultan's Battery to Europeans, from its fort constructed by Tipoo Sultan, in the taluk of the Malabar District called by the Natives Vayanatu and well known to Europeans as the Wynaad, there lies one of the principal hills of the taluk. It is known as a whole as Edakalma or Yedakulma. It is situated about 56 miles from Calicut, about the same distance from Ootacamund, and 4 miles S. W. from Sultan's Battery.

If one starts from Sultan's Battery the hill is reached best by following the path along the watershed from the bungalow of the Knppumudi Coffee Estate. The highest peak of it is known to Europeans as the Battery Rock, and forms a prominent feature in the Wynad landscape, standing some 1,500 feet above the general level of the country round and something over 4,000 feet above the sea. On the Western slope of it near the crest is to be found the Edakal Cave, the subject of these notes.

Once a year the peak is the objective of the local Chetty caste, many of whom live in the neighbourhood. They ascend the hill and scale the peak by a flight of dangerous steps cut in the rock. On the top, where there are at the present day but four posts and two cross pieces, they perform pujja to the goddess called by them Mudjampilli. There are a few small temples about the foot of the hill, one of which is built of slabs of rock, but there is apparently no connection between them and the open-air shrine on the top of the peak. The yearly pilgrimage to the peak, in fact, expresses almost all there is of modern religious interest attached to the Edakalma, which is held to be the home of a couple of minor local goddesses, and of Kutti Chatan, the mischievous imp of Malabar, who sets fire to houses and hay-ricks, upsets things and teases interminably. Kutti Chatan's residence at this spot is explained in this way. Long ago the goddess of Edakalma used to devastate the country round with the help of a large serpent, but at last the goddess of Nellakotta Hill, known to Europeans as the Needle Rock, which lies between Edakalma and the Nilgiris and is about 20 miles distant from the former, determined to destroy the serpent and so give peace to the neighbourhood. So she sent her familiar Kutti Chatan, and he killed the serpent — as the spawns killed cock-robbin — with his bow and arrow. One of the arrows spent on this occasion is still shown as a long stone lying in a flat paddie field at the foot of the Edakalma, which field is known as Ambukuttivayal, i. e., "the swamp where the arrow struck." In some way not now explainable, Kutti Chatan transferred his services to the goddess whose monster he had slain, and took up his residence with her on Edakalma.

The Chetties above referred to must not be confounded with the well-known traders and money-lenders going under that name throughout Southern India. There is indeed a legend of their having come originally from Tinnevelly, but it will suffice to mention here that there favourite pastime is tiger-spearling, in order to indicate the difference between them and the ordinary money-making Chettys of Southern India, the most timid of mankind, who never engages in any sport. In every house of these people is kept a piece of strong netting, several yards long and about six feet wide, and when a tiger, or even a panther, is known to be in the neighbourhood, every one brings out his piece of netting and by a concerted action the jungle around the beast is encircled with a wall of netting six feet high. The circle is gradually made smaller and the animal is eventually killed with spears thrust through the net. Like many another pastime this is closely associated with religion. Permission from their deity is obtained before commencing operations, and when the beast is slain it is hung up, stretched on a pole as if alive, as a sacrifice to him. No amount of money would induce the people to sell the skin of a tiger so slain.

In the last days of 1894, and again at the end of 1895 and the beginning of 1896, I paid visits to the Cave. During the first of these I merely took a few photographs and it was during
the latter that I was able to make the more detailed observations now published. At the first visit the floor of the Cave was found to be covered with a soft vegetable mould to the depth of several feet, which hid the lower portions of the carvings on its interior walls to such an extent as to make it evident that they must be uncovered before they could be usefully photographed. So, on the second occasion, having been duly provided with labour, I had the mould dug out so as to expose the whole of the carvings and make it possible to photograph them in their entirety. This was effected by myself in company with Mr. Colin Mackenzie, who kindly divided the labour with me.

There was an interesting and perhaps significant difficulty in obtaining the labour required on the spot. None of the Kurumbars of the neighbourhood would have anything to say to the Cave, appearing to hold it in some sort of reverence, which they seemed to wish to hide. They always expressed ignorance of its existence and could not be brought to approach it. No matter how hard pressed, and even when actually near it, they somehow or other avoided the approach. From anthropometric measurements I should say that there are three distinct types of Kurumbars in this District, and it was noticed that they all had the same kind of regard for the Cave. Luckily the Paniyas, a totally distinct race of the hills, proved to have no reverence for the Cave, and from among them were found willing workmen to do the digging for us.

The best approach to the Cave is from the Eastern side of the hill through the Kuppu-mudi Coffee Estate. The whole crest is very rocky and is surmounted by an immense dome-like peak of solid rock. In approaching the Cave from the East one has to cross the ridge of the hill through a passage, which is a mere hole under a rock weighing perhaps a hundred tons, and so narrow that a stout man would find some difficulty in making the passage. Such a man would have to take a long walk to the Western slope and ascend the hill through the forest by a fairly stiff climb. Hindus have a strong objection to passing under the rock, as they believe that if they have committed certain sins it will fall upon them.

The Cave is situated on the Western slope of the crest of the hill, about fifty yards from the summit, and is not in the hill itself, but in an immense excrement rock. It lies about N. E. and S. W., the entrance being from the N. E. The entrance is 6 feet to 7 feet high and 4 feet to 5 feet wide, and there is a descent of a few feet into the Cave.

The Edakal Cave is not a cave in the ordinary sense of the word. It is properly a cleft about 96 feet long and 20 to 22 feet wide in the rock, having a fissure a few inches wide at the inner end, leading for some 50 feet to the outer edge of the rock. It is in fact a fissure made by a corner of the rock splitting off from the main body from some natural cause. The depth of both the cleft and fissure is about 30 ft. Thus:

![Diagram of Edakal Cave](attachment:image)

What makes it into a Cave to the ordinary observer is the fact that on the outer portion of the large cleft has fallen an enormous rock weighing several hundred tons so as to form a roof over a large piece of it. Between this roof-rock and the entrance have fallen smaller rocks, which have stuck in the cleft and so continued the roof right on to the entrance. The inner portion of the main cleft and the whole of the smaller one are more or less open to the sky.

On the top of the roof-rock is a large tree, some of the roots of which are to be seen in Plate II, Fig. 2. The following sketch will give the reader an idea of the general plan:

In the sketch the shaded portion is the Cave, roofed in by the fallen rocks. The North wall A has been split off from the South wall B. From B to E and A to D there is an open space shaded by trees. C is the narrow fissure, through which at D is visible Kurumbila, the Central Hill of the Wynaad, about 3,300 feet above the sea.

The rough sketch given in the folding plate attached, taken from the interior open portion, standing between B and D, and looking through to the entrance on the further side of the closed portion, will serve to explain the above account.

That portion of the floor of the Cave, which is under the natural roof, is flat, but the rest of it is somewhat rough, as many small rocks have fallen upon it from above.

The carvings are on the two walls of the Cave under the roof, and on the South wall of the open portion are some inscriptions and a few small figures and symbols. These inscriptions are in appearance much more modern than the old carvings on the walls of the Cave proper: not so carefully cut and not so deeply incised. Dr. Hultsch has been good enough to examine my photographs of the inscriptions, and I give here his report regarding them in full.

"The lower inscription is in Sanskrit and reads 'Sri-Vishnuvarma-kutumbiya-kula-

---

Plate I. 1 and 2, and Plate II. 1."
vardsdhavanasya; of the propagator of the family of the householder Sri-Vishnuvarman. What follows looks like lirita, which may be meant for likhitam, 'the writing.' I cannot make out the two short inscriptions in the first line. To this I have only to add that the characters of the lower inscription are very archaic and that inked estampages of the inscriptions might perhaps enable me to read the whole of them.

Later on Dr. Hultzsch wrote to me as follows:—"The only photographs which show traces of letters are Nos. 1, 6, 7, 9, 10, and 13. Of these No. 14 contains four modern Kannarese characters which look like Sridhapupa (ḳ); No. 15 perhaps contain a short inscription in cave characters, but in order to be quite certain about it and to attempt a reading I should require an estampage. Nos. 1, 6, 7, and 13 contain two lines of writing, the second of which was transcribed in my letter of the 30th June 1897. In the first half of the upper line, the second, third and fourth letters are lapuli and the two last kārī. It is very probable that an estampage made with thick country paper would enable me to read the whole line. To the right of the second line No. 1 shows the signature of a certain C. Kannan in modern Malayālam characters. The characters of the inscription in two lines are early Chalukya or even pre-Chalukya, say about 500 A.D." In reference to the above remarks I may note that the C. Kannan was the work of one of my own men.

After examining the estampages (very kindly reproduced in the Plate of inscriptions attached to these Notes) made by his Kannarese Assistant, Dr. Hultzsch reported as follows:—

"About the beginning of the year 1896 Mr. F. Fawcett, Superintendent of Police, Malabar, discovered a very remarkable natural cave near Sultan’s Battery in the Wynad. The walls of the cave are covered with rude fanciful drawings and bear five short inscriptions. Four of these are in archaic characters. One of them6 runs:—'The writing (ḳ) of the propagator of the family of the householder Sri-Vishnuvarman.' Another10 reads Pala[pulimāna]ntakāri (ḳ) in archaic characters, which are perhaps a little more recent than those of the first inscription. The two next11 are unintelligible to me, but decidedly archaic. The fifth, if it deserves the name, is in comparatively modern Kannarese letters and begins with Sridē. In the above remarks Dr. Hultzsch, however, does me too much honour. I did not discover the Cave, its existence having been known for at least 12 or 15 years past to residents in the neighbourhood.

Dr. Hultzsch has been kind enough to give his attention again to the inscriptions, and under date 5th October 1900 has favoured me with the following note which I here insert:—"On yet further consideration I would make the following remarks on inscription No. 1. The ending varman is restricted to the names of members of the Kshatriya caste. Hence Vishnuvarman was probably a chief or king. Further, the inscription does not give the name of the person whose writing it professes to be. Accordingly I propose to correct it into:—'Sri-Vishnuvarman[nah] Kuṭumabia-kula-var[du]ghanasya li[kh]ita[na];' the writing of the glorious Vishnuvarman, the propagator (i.e., descendant) of the Kuṭumabia family. The word Kuṭumabia will now have to be taken as the proper name of Vishnuvarman’s family, while I had originally understood it to be a corruption of kuṭumbin, a householder. The inscription No. 2 is perhaps Tamil and meant for ‘pul-puli tāntakāri; he who himself has made an end of many tigers.’"

Excavations during the second visit were made all along the walls of the Cave to a depth of 3½ to 4 feet in order to uncover all the carvings. In addition a section was cut to a depth of 7 feet right across the Cave proper to ascertain if there were any traces, lying under the floor, of former habitation, such as tools, weapons, vessels, religious or other symbols. None were.

3 Of these photographs Nos. 1, 6, 7 and 13 are represented by Plate I. Figs. 1 and 2, Plate II. Fig. 1: No. 9 by Plate VI. Fig. 2: No. 10 by Plate VI. Fig. 1.
4 Plate VI. 2.
5 Plate VI. 1.
6 Plate I. 1 and 2, Plate II. 1.
7 Quoted in the preceding paragraph.
8 Madras Government Orders Nos. 1662, 1663, Public, dated 16th August 1897, paragraph 14.
9 Plate I. Figs. 1 and 2, and Plate II. Fig. 1.
10 Plate I. Fig. 1, top line, and Plate II. Fig. 1.
11 Plate I. Fig. 2, top, right = Plate II. Fig. 1, top, right; Plate VI. Fig. 1.
however, found. There was, in fact, nothing whatever found in the soft, fine vegetable mould of the floor, and at 7 feet we came to fragments of broken rock, whereon we stopped work.

The presence of the mould on the floor underneath the roof-rock gives indications of an apparently great age for the carvings on the walls, for it is four feet deep, and can only have come in from the top through the interstices in the rocks. It was certainly not brought in through the entrance, a fact of which we satisfied ourselves on the spot. Now as the rainfall here is not more than 70 inches per annum, the mould must have taken a long time to accumulate to a depth of four feet, and the whole accumulation must have taken place after the rock carvings had been completed and indeed after the place had been abandoned.

Unfortunately, I was unable to take all the photographs of the carvings on the same scale, because this was not possible without first emptying the Cave of its floor of mould, an obviously impossible course for such an object. Also, as may be easily understood, the photographs were taken under great difficulties of light and position. Indeed, in the Cave proper the exposures ranged from 20 to 45 minutes, and artificial light was for obvious reasons out of the question. However, in other respects the time of year chosen was the most favourable for taking the photographs. At any other season than the few weeks immediately before or after Christmas one runs a great risk of rain and fever on this hill-top, and would also have a less favourable light for photography, as it is only at this particular time of year that the sun shines into the Cave through the S. W. opening overhead and gives anything approaching a reasonable light throughout it. But then again the days are then short, as we found to our cost, for we were unable, owing to failing light, to photograph the whole of the objects. Nevertheless, the portion omitted was not of any importance in comparison with that of which we secured a representation.

The carvings clearly represent human and animal figures and objects for human use and symbols, but they so run into each other and are so closely placed together that it takes a protracted and close study to make anything of them. The most interesting features of the sculptures are the frequent human figures with a peculiar head-dress. (See nearly all the plates.)

There are several rather indistinct figures of animals. The usual Indian symbols are of frequent occurrence, e. g., the dacestika in various forms on most of the plates, and specimens of the familiar circular “sun-symbols.” There is evidence also of some magic squares, such as one is familiar with in all Oriental fortune-telling. No doubt such things would be introduced as protecting charms, just as in modern times we see them used everywhere in India.

For the better information of the reader all the recognised figures and symbols have been picked out and reproduced as separate sketches. The clearest way will be to examine each plate and figure separately with the help of the skeleton sketches given below.

Plate I., Fig. 1.

This is from a photograph taken before the excavations and shows some of the inscriptions on the South wall, together with some symbols.

The symbols are what are usually known as the “sun and fire symbols,” vide the late Mrs. Murray-Ainslee’s papers on Asiatic Symbolism, ante, Vol. XV, pp. 61 ff., 89 ff., 117 ff., 217 ff., 258 ff., 321 ff. It will further the present enquiry to repeat here the 32 sun and fire symbols she gives in Plate I. of her paper, ante, Vol. XV. p. 66.

\[
\begin{array}{cccccccccccccccccccccccccccc}
1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & 9 & 10 & 11 & 12 & 13 & 14 & 15 & 16 \\
\end{array}
\]

\( ^{12} \) No. 17 is not reproduced here.
The whole of these may be taken to be developments in various directions of the cross, and for Indian investigations of the swastika. The specimens in this figure are $\uparrow \uparrow$.

There are also two magic squares

Plate I., Fig. 2.

This fig. is a continuation of the inscriptions in fig. 1. It contains one symbol of the swastika type $\uparrow$.

Plate II., Fig. 1.

This figure gives the whole of the inscriptions shown in part in Plate I. The photograph was taken after the excavations. It is much more fruitful in symbols than the previous Figs.

There are two good instances of magic squares

There are also at the bottom of Fig. 1 two figures of animals which may be taken to be deer or dogs, and another close by the magic square.

The swastika turns up in 16 different forms of "sun-symbols":

\[
\begin{array}{cccccccc}
1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 \\
9 & 10 & 11 & 12 & 13 & 14 & 15 & 16
\end{array}
\]

We also here begin to see those human figures which are of such interest. In this Fig. there are four specimens.

Of the above, Nos. 1 and 4 I take to be women. No. 3 shows the lower limbs clad in the fashion of South India in the present day. No. 2 appears to be a man with a feathered head-dress carrying a bow or some such weapon. Assuming the weapon to be a bow, it may be conjectured that possibly the artists of the drawings were ancestors of the present Mollu Kurumbars of the neighbourhood — Védas as they sometimes call themselves.

There is also a childish representation of an animal that may be a dog or any animal of the chase one may fix upon. In Plate V., fig. 2, it turns up again in a different light with another that may be taken to be a deer.

Plate II., Fig. 2.

This is from a photograph taken of the South wall before the excavations, giving a clear impression of the general appearance of the wall in sunlight with the tree shadows across it. The whole wall stands up in relief and the actual appearance of the carvings to the eye are well given. The method does not, however, lend itself to investigation and the carvings are repeated in the next Plate (III., fig. 1).
It will be sufficient to say that of the figures explained under Plate III., fig. 1, Nos. 2 and 4 come out more naturally and clearly in this plate, but No. 5 does not show truly at all and looks like a swastika.

Plate III., Fig. 1.

This repeats the last fig. and is from a photograph taken after the excavations. It was so taken as to show the carvings in their entirety. The interest in this Plate lies in the representations of human beings. There are nine distinct specimens.

Nos. 1 and 2 I take to be women. Nos. 3, 4, 6, and 9 I take to be men dancing in masks or masked head-dresses. No. 5 is an outline figure high up on the wall. Nos. 7 and 8 seem to be persons seated. The head-dresses, the masks, the dancers and the seated figures may represent an ancient "devil-dance" of the country, much as it is still conducted among the
Tuluvas of the neighbouring Districts to the Northward, and throughout Southern India, but especially in Tinnevelly. All this gives force to another conjecture as to the identity of the cave carvers that may well be made. A conjecture that is supported by the distinct cincture round the loins of the female figure and its very narrow waist. In fact the carvings may be merely the work of any one of the “devil”-worshipping castes or tribes of the neighbourhood in a past more or less — probably more — remote.

Plate III., Fig. 2.

This shows another part of the South wall after the excavations. There are six human figures to be made out.

No. 1 is a man dancing in a masked head-dress. Nos. 2 and 5 are also dancing figures. Nos. 3 and 4 I take to be seated figures. No. 6 is a woman in a long garment.

There are also seven specimens of the “sun-symbol” type:

Plate IV., Fig. 1.

This is a photograph of the darkest part of the Cave. It represents part of the Southern wall. The photograph has been taken too close for making out the figures. The human
The figure given below can, however, be made out on the analogy of those in the previous Plates.

Plate IV., Fig. 2.

This repeats the outer portion of the preceding Fig. in a better light. In it is to be seen the human figure just mentioned, which can now be seen to be that of a man fully clothed carrying a palm branch. Next it is the representation of a figure with a masked head-dress, dancing (No. 2). Higher up is a very primitive form of the female type already seen (No. 3).
Plate V., Fig. 1.

This is from a very dark photograph of the North wall. On it, however, the following symbols appear: — ⬠ ⬡ ⬢ ⬢ ⬢ ⬣.

There are two clear masked dancers, Nos. 1 and 2, and signs of what may be meant for a seated figure (No. 3).

There is a curious long-bodied animal, which no doubt represents a hunting dog: —

The circular “sun-symbols” again appear in a more or less distinct form: —

Plate V., Fig. 2.

This is a more distant and more general view of the same carvings as appear in part in Plate II., fig. 1, and in Plate III., fig. 1, and contains the same symbols and figures, human and animal. In addition the following seven symbols can be made out: — ⬢ ⬢ ⬡ ⬠ ⬠ ⬠ ⬠. And also the following additional animal, which may be taken as a deer: —

There are further to be made out in the shadow several animals which are almost certainly deer: —
Plate VI., Fig. 1.

This is rather too near a view of the North wall, showing an inscription. In it are to be seen two forms of the swastika + symbol, and one magic square ♦️ symbol, and two "sun-symbols" ⌀ ⌀.

There are at least eight human figures: Nos. 1, 3, 4, and 5, I take to be women, Nos. 6, 7, and 8 to be masked dancers.

Plate VII., Fig. 2.

This also represents the North wall. It contains four figures of masked dancers.

And two "sun-symbols" ⌀ ⌀.
The above somewhat minute examination of the Plates brings out the following points on the subject of the correct method of reproducing these carvings. It is of little use for any but a preliminary examination of such things to reproduce them by direct photography. The difficulties of getting the camera into a proper position and the tricks played by the light on the carvings preclude all hope of accurate representation. Just as in the matter of reproducing inscriptions so as to make them properly legible, it is necessary to reproduce the carvings by ink estampages and then by carefully taken photographs on a greatly reduced scale, but accurately to scale nevertheless.

Mr. Bruce Foote points out to me that the figures and other carvings on the walls of the Edakal Cave have not been cut out or chipped out but scraped in. This is a most interesting fact, for careful examination has shown that there is nowhere any evidence of chipping or chiselling, the indentations in the surface of the hard rock, giving shape to the carvings, having been produced by the most laborious scraping. Instruments such as might have been used in the work of scraping in the carvings are still to be found under the earth in all parts of the Wynad. On the ridge of Edakilmala itself I found a quartz flake, and Mr. Colin MacKenzie found in 1890, on his coffee estate, about five miles distant to the S. E., a fragment of a well-shaped and polished celt, of which I here attempt a sketch.

Thus far as to the immediate neighbourhood. In the same region and in spots not far distant I have found pieces of worked quartz in small stone cists, containing, within earthen jars, remains, which are probably human, together with iron and other things. There is in my mind no doubt as to genuineness of the worked quartz specimens and I have the support in this opinion of Mr. J. Allen Brown and Mr. Bruce Foote. Further evidence of the presumable
makers of the carvings are to be found in numerous stone circles, marking the East, situated to the West of Edakalmala. I suspect that they contain human remains. Their proximity to the Cave gives them a special interest in the present connection, and I much regret that my official avocations prevented me from making an examination of them with a view to establishing their connection or otherwise with the carvings in the Cave.

The curious reluctance of the Kurumbars to approach the Cave, combined with the simultaneous want of reverence for it both on the part of the Paniyas and the local Hindus, who are, however, very small in numbers and not long resident in the Wynaad, might tempt one to hazard the theory as to the carvings being the handiwork of Kurumbars of a by-gone day. It should, however, be remembered that the Paniyas is a particularly fearless individual, while the Kurumbar is the reverse. The mere existence of the mysterious carvings in the silent unfrequented Cave would suffice to inspire the Kurumbar with a kind of awe and make him afraid to have anything to do with it.

With these remarks as to the possible makers of the curious scraped rock-pictures in the Edakal Cave I leave my subject for the present, satisfied with having been able to draw public attention to what may eventually prove to be a point of value to the student of South Indian anthropology.

LETTERS FROM PORTUGUESE CAPTIVES IN CANTON,
WRITTEN IN 1534 AND 1536.

With an Introduction on Portuguese Intercourse with China in the First Half of the Sixteenth Century.

BY DONALD FERGUSON.

Portuguese Intercourse with China in the First Half of the Sixteenth Century.

When Vasco da Gama reached India in 1498, the Chinese had for many years previously ceased to voyage further west than Sumatra. The first Portuguese visitors to Calicut heard rumors there of this "white" race of people that had formerly carried on a regular trade with India; but it was not until eleven years later that representatives of the most westerly and most easterly countries of the great Eurasian continent actually met. When Diogo Lopes de Sequeira sailed from Lisbon on 13th February 1508, to "discover" Malacca, he carried with him a lengthy set of instructions from the king Dom Manoel, one of which was as follows:—

Item. — You shall ask after the Chins, and from what part they come, and from how far, and at what times they come to Malaca, or to the places at which they trade, and the merchandise that they bring, and how many ships of them come each year, and regarding the fashions of their ships, and if they return in the year in which they come, and if they have factors or houses in Malaca or in any other country, and if they are wealthy merchants, and if they are weak men or warriors, and if they have arms or artillery, and what clothes they wear, and if they are men great in body, and all other information concerning them, and if they are Christians or heathens, or if their country is a great one, and if they have more than one king amongst them, and if there live amongst them Moors or any other people that do not live in their law or faith, and, if they are not Christians, in what they believe or what they adore, and what customs they observe, and towards what part their country extends, and with whom they confine.

2 See Algumas Documentos da Arquivo Nacional, etc. (Lisbon, 1889), pp. 194-195; Anais Maritimos e Coloniaes, Ser. 3 (1945), p. 490.
On arriving at Malacca on 11th September 1509 Diogo Lopes found lying there three or four junks of Chinese, with whom the Portuguese seem at once to have got on friendly terms; but an opportunity for carrying out the king's orders did not offer itself, owing to the hostility of the Malays; and Diogo Lopes was obliged to return to Portugal in 1510 with this part of his commission unfulfilled.

When, on 1st July 1511, the Great Affonso de Albuquerque anchored off Malacca with his fleet, he found there five junks of Chinese, who proved as friendly to the Portuguese as those met with two years previously had been. In fact, their captains offered their assistance to the Portuguese commander in his attack on the city of Malacca; and were of great help in conveying Albuquerque's envoys to and from Siam; and also carried back with them to China a very favourable report of the character and prowess of the Lusitanians. The immediate result of this was, that the uncle of the fugitive king of Malacca, whom the latter had sent as ambassador to the king of China to beg him for help against the Portuguese, was put off with excuses, and ultimately died with the object of his mission unaccomplished. Albuquerque, while sending ambassadors to Siam and elsewhere, for some reason abstained from sending any Portuguese expedition to "discover" China.

The two years that followed Albuquerque's departure from Malacca were occupied with almost continual fighting and unrest; but in 1514 there was an interval of comparative quiet, and advantage appears to have been taken by the new governor of Malacca, Jorge de Albuquerque, to dispatch a pioneer expedition to China. Regarding this first visit of the Portuguese to China we have scarcely any details, the Portuguese historians being almost silent on the subject. Barros is the only one of those that mentions the visit, and he does so casually, after chronicling the arrival at Canton, in June 1521, of Duarte Coelho in a junk from Malacca, when the Portuguese were being dangerously threatened by a Chinese fleet. Duarte Coelho, he tells us, was induced to stop and help his compatriots "principally for love of Jorge Alvarens, who was a great friend of his, who was so weak, that eleven days after the arrival of this Duarte Coelho he died, and was buried at the foot of a padrão of stone with the arms of this kingdom, which he the same Jorge Alvares placed there a year before "Bento Perestrello" went to those parts;
in which year that he was there, he buried a son of his, who had died. And although that region of idolatry consumes his body, yet since for the honor of his fatherland he set up at the ends of the earth that padrão of his discoveries, the memory of his sepulture shall not decay, so long as this our writing shall endure."

The earliest contemporary writer who refers to this visit of the Portuguese to China is the Italian Andrea Corsali, who, in his letter to Duke Giuliano de Medici, dated 6th January 1516, says:

The merchants of the land of China also make voyages to Malacca across the Great Galf to get cargoes of spices, and bring from their own country musk, rhubarb, pearls, tin, porcelain, and silk and wrought stuffs of all kinds, such as damasks, satins, and brocades of extraordinary richness. For they are people of great skill, and on a par with ourselves (di nostra qualità), but of uglier aspect, with little bite of eyes. They dress very much after our fashion, and wear shoes and stockings (l' scape o calzamosti) like ourselves. I believe them to be pagans though many allege that they hold our faith or some part of it. During this last year some of our Portuguese made a voyage to China. They were not permitted to land; for they say 'tis against their custom to let foreigners enter their dwellings. But they sold their goods at a great gain, and they say there is as great profit in taking spices to China as in taking them to Portugal; for 'tis a cold country and they make great use of them. It will be five hundred leagues from Malacca to China, sailing north.

This pioneer voyage is also referred to by another of the Italians then in the Portuguese service, Giovanni da Empoli, who, writing from Cochin on 15th November 1515, says:

From Malacca have come ships and junkes. They have also discovered China, where men of ours have been who are staying here: which is the greatest wealth that there can be in the world. The confines reach to High Tatarian, and are called Malacca. They are all white people like ourselves; they dress like Germans with all their fashions of garments, such as fur-lined caps and jérkins. There are inclosed lands like ours, and houses of stones like ours: they have great order and law, and are very friendly towards us. The country abounds with all fine white silk, and it costs thirty cruzados the cantaro; damasks of sixteen good pieces, at five hundred reals the piece; satins, brocades, musk at half a ducat the ounce, and less. Many pearls of all sorts in great abundance; and many caps, so that from there to here there is made on them a profit of thirty to one. There come from there amazing things; and to tell the truth, I relate to you nothing of what there is there. The ships bring spices from there; so that every year there comes from Zamatra some sixty thousand cantaro of pepper; and from Cochin and the land of Mallibari fifteen to twenty thousand cantaro of pepper alone: it is worth fifteen or even twenty ducats the cantaro. In like manner, ginger, mace, nutmeg, incense, aloes, velvet, our gold thread, coral, woollen cloths, robes. There come from there somedrom, clothes like ours, much white alum, and good vermilion: many horses and large carts are in their country.

Everything is sold by weight, both merchandise and provisions, and live and dead animals; all by weight. They have many grains: the great things are so many that come from there, that they are amazing; so that if I do not die, I

11 Yule, Cathay and the Way thither (Hak. Soc.), I. p. exii, was the first to draw attention to this fact.
12 I quote Yule's translation as given in loc. cit.
13 Regarding whom, see Archives Storico Italiano, App., III, pp. 9-91.
15 Badakshan.
16 I cannot explain this word, which is probably a copyist's error.
hope before I leave here to take a leap thither to see the Grand Khan, who is the king, who is called the king of Cathay; for by land one makes a journey of three months on horseback, all along a river, as is the Rhine, crowded here and there with populous towns and cities, at the end of which one arrives at Zetlon, which is the said king's who resides there.

This year there will go ambassadors to the king with presents of value, and I hope to send thither a quantity of pepper and other things; and the result of all you shall know.

The writer of the above had recently arrived in India in the fleet of the new viceroy, Lopo Soares de Albergaria, which, sailing from Lisbon on 7th April 1515, included among its company, according to Barros, "Simão d'Alcaçova, son of Pero d'Alcaçova, in a ship of private owners for China, of which Fernão Peres d'Andrade, who went with Lopo Soares, was to go as captain-major of this China voyage, and with him Jorge Mascarenhas, son of João Gonçalves Montans, and Joannes Impole, a merchant. To whom Lopo Soares was to give ships in India for Fernão Peres to make this discovery of the country of China." Before this expedition under Fernão Peres de Andrade reached India, however, another man of Italian origin in the Portuguese service, Rafael Perestrello, had made a successful voyage to China.

His brother, Bertolameu Perestrello, having been appointed by Affonso de Albuquerque factor of Malacca, Rafael had accompanied him with orders "to discover China." It was not until after his brother's death in 1515, however, that he was able to undertake the voyage, which he accomplished in a junk belonging to a native merchant at Malacca named Pulate, taking with him a number of Portuguese. We have no details of this visit; but we are told that when Fernão Peres was at Malacca in July 1516 anxiety was being felt there regarding Perestrello and his companions, who, it was feared, had been detained as prisoners in China. A few weeks afterwards, however, anxiety was changed to envy, for the junk returned to Malacca carrying a rich cargo, on which a profit of twenty to one was made. The welcome information was also brought, "that the Chins desired peace and friendship with the Portuguese, and that they were very good people." 

Fernão Peres de Andrade left Cochin in April 1516, and arrived at the port of Pasai in Sumatra, where he found Giovanni da Empoli, who had preceded him, ladng his ship with pepper for China, in company with some Portuguese in junks from Malacca. Unfortunately, by some carelessness or treachery, Empoli's ship took fire, and the whole of the cargo in the hold was destroyed. Fernão Peres, seeing that by this disaster his projected voyage to China would bring much less profit than he had hoped for, resolved to postpone it, and meanwhile to visit Bengal, the "discovery" of which had also been intrusted to him by Dom Manoel. Therefore, after entering into an agreement with the "king" of Pasai for the establishment of a Portuguese factory at that port for the loading of pepper for China, he left for Malacca, where he

19 Rather, an ambassador; respecting whom see infra.
20 The original has projeltar, a copyist's blunder for presente.
21 Dec. III., I.
22 Comment. of Af. Dalb., passion, regarding him.
23 Regarding the Perestrello family, see Amad di S. Filippo's "Biografia dei Vascelliatori Italiani," p. 36. Rafael and Bertolameu Perestrello were connections by marriage (perhaps brothers-in-law) of Columbus.
24 At the end of 1514 or beginning of 1515 apparently.
25 Barros (Dec. III., II. vi.) says that he was sent by Jorge de Albuquerque, the captain of Malacca.
26 Castanheira (III. cit.) says "ten." Correia (II. p. 474) has "thirty."
27 Cast., IV. iv. Barros tells us that in September 1516 Rafael Perestrello arrived at Goa in a brigantine, having shortly before reached Coch in a ship; "and as he came rich from China where he had been, and was a liberal man, and noble, many people joined him." (See further regarding him in footnote infra.)
arrived, probably, in July 1516. The captain of Malacca, Jorge de Brito, however, offered strong objections to the proposed plan of Fernão Peres, and urged the importance of his going to China at once, if only to learn the fate of Rafael Perestrello and his companions.

Reluctantly, therefore, Fernão Peres consented to go to China with what cargo he could get in Malacca; and he left the latter port on 13th August 1516 in the ship Santa Barbara, there accompanying him Manuel Falcão and Antonio Lobo Falcão in two other ships and Duarte Coelho in a junk. Owing to calms, the coast of Cochinchina was not sighted until the middle of September; and shortly afterwards the vessels encountered a storm that compelled them to put in for safety to the coast of Champa. Thence Duarte Coelho, by permission of Fernão Peres, proceeded in his junk to the Monam river, and spent almost a year in Siam; while the rest of the company, after touching at Pulo Condore, ran along the coast of the Malay Peninsula to Patani, where Fernão Peres made an agreement with the governor of that place for mutual facilities of trade. Thence the three ships sailed for Malacca, which was reached in October or November 1516.

Learning, on his return to Malacca, of the success that had attended Rafael Perestrello (as mentioned above), Fernão Peres resolved to postpone his intended expedition to Bengal, and to proceed to China as soon as possible. In December 1516, therefore, he left for Pasai,32 to take a cargo of pepper; Simão d’Alcâova, one of his captains, going on to India to laden his ship there and to return to accompany the fleet to China. Leaving Pasai in May 1517, Fernão Peres returned to Malacca, where he found matters in a very unsatisfactory condition; the captain Jorge de Brito having died, and there being a dispute between Nuno Vaz Pereira and Antonio Pacheco as to which was to succeed to the post. Being unable to reconcile the disputants, and fearful of again losing the monsoon, Fernão Peres left Malacca for China in June 1517 with a fleet of eight sail, viz., the Espéria, a ship of eight hundred tons commanded by himself, the Santa Cruz commanded by Simão d’Alcâova, the Santo André commanded by Pero Soares, and the Santiago commanded by Jorge Mascarenhas; a junk belonging to a native merchant in Malacca named Curiaraja, in command of Jorge Botelho; two other junks belonging to the merchant Palate mentioned above, commanded by Manuel d’Araújo and Antonio Lobo Falcão; and another small vessel commanded by Martim Guedes.34 These vessels were well armed, and carried Chinese pilots.35

The fleet arrived at the island of Tamão or Tamou,36 generally called by the Portuguese alha da veniaga (or beniaga37), “the island of trade,”38 at the mouth of the Canton river, on

32. See Hobson-Jobson, s. v.
33. He arrived at the Canton river in July 1517. (See infra.)
34. Castanheda (IV, xxvii.) alone of the historians relates a serious scandal that was caused by the action of Jorge de Brito, who proposed to use force to prevent Giovanni da Empoli from returning with Fernão Peres to Pasai, which place he had left for Malacca some months before.
36. Barros alone mentions this last man in the list of captains, and describes the fleet as consisting of eight sail: Castanheda and Coer can say that there were only seven. Ant. Galvão (op. cit. p. 129) says that there were “eight sail, four Portuguese, and the other Malay.”
37. The following details of the visit of Fernão Peres de Andrade to Canton are taken from the accounts in Castanheda (IV, xxvii.-xxiii., xl-xlii.), Coerca (II, pp. 229-330), and Barros (Dec. III, II, viii.).
38. See infra regarding the identity of this.
39. Malay buriangga, (to) trade, traffic, from Stk. vajika, merchant, vendu, traffic. The word veniaga was adopted into the Portuguese vocabulary, and is entered in the dictionaries with the meaning of “merchandise”; also verb veniaga, “to sell, traffic.” Yule does not record the word in his Hobson-Jobson; and in a quotation from Maudez Piata, x. v. “Lavash,” he has evidently mistaken it for a place-name. The quotation runs:—“And they demanding of him whence he came, and what he would have, he answered them, that he was of the Kingdom of Siam [of the settlement of the Tamarisim foreigners, and that he came from Veniaga], and a Merchant was going to traffike in the Isle of Quinhua.” The words within brackets are inserted by Yule to supply the deficiency of Cogan’s translation; but he has misunderstanding the Portuguese, which runs:—“Ela veniaga como mercador que trai para a ilha dos Leopóis a fazer sua farta.” The word veniaga is never used by the Portuguese writers by itself as a place name; and the de veniaga simply means “he was going [not came] in trading.”
15th August 1517, passing through the midst of the fleet of Chinese junks that lay off the port to protect the merchant shipping from pirates, and not returning the shots fired at them, which, however, did no damage. At Tamão Fernão Peres found Duarte Coelho, who had arrived from Siam a month before, having had an encounter on the way with some thirty pirate vessels. After applying to the "pio" of Lantau for permission to proceed to Canton, and being told that this would have to come from the officials in that city, Fernão Peres, becoming impatient, took his four ships out of port to the mouth of the river, to be ready to sail up it at the earliest possible moment. Unfortunately, however, a sudden storm struck the vessels, which were only saved from shipwreck by the sacrifice of some of their masts. As the Chinese on shore refused to assist the Portuguese to repair their ships, a shift had to be made by a transference of masts from one vessel to another. When this had been completed, Simão d’Alcâova was left in charge of most of the fleet at Tamão; and Fernão Peres in the ship of Martim Guedes, accompanied by that of Jorge Mascarenhas, and followed by the boats of the other ships, all well armed, crossed over to Lantau. Here he sent Giovanni da Empoli, accompanied by trumpeters and a bodyguard, to press the "pio" for permission to go to Canton. After a day’s delay this was given, and a pilot was furnished; and the Portuguese vessels proceeded up the river to Canton. This was towards the end of September 1517.

In three days the city was reached; and the Portuguese ships anchored off the quay. By order of Fernão Peres, a salute was fired with the cannon, and flags were displayed from the masts. Very soon a message came from the pu-čhêng su’ of Canton, expressing astonishment at such breaches of Chinese custom; to which the Portuguese captain replied, that he had erred through ignorance, and intended only respect. News of the arrival of the Portuguese was sent by the pu-čhêng su’ to the tu-tung, "concán" and "chumpim," who resided in a city 43 some distance inland; and pending their arrival strict orders were given by Fernão Peres that none of his company were to land, all trade being confined to the boats on the river. At intervals of a few days 41 the above-mentioned officials arrived in Canton; and after various communications had passed between them and the Portuguese a day was appointed, when Giovanni da Empoli was sent with much pomp and ceremony, accompanied by a suite and preceded by trumpeters, to explain fully the object of the Portuguese mission. The result of the interview was satisfactory, the Chinese officials promising to write to the emperor respecting the Portuguese ambassador, and granting the latter meanwhile permission to reside on shore. Accordingly, a house was set apart for Thomé Pires, his retinue and servants; and the presents for the emperor were placed there under lock and key. Fernão Peres was also invited by the Chinese officials to come on shore; but he declined, saying that he was responsible to his king for the safety of the ships. He asked, however, the favor of a house near the water's

39 See infra regarding these officials.
40 See Christovão Vieira’s letter infra. f. 120.
41 In order the more to impress the Portuguese, the reception of each in turn surpassing in magnificence that of his precursor. (Barros, D. III., II. viii.)
42 This man had been chosen as ambassador to China by Lopo Soares after his arrival in India, the king having left the choice to him. Thomé Pires was an apothecary, and having shown himself to be a man of considerable ability had been employed by Affonso de Albuquerque on various missions, which he had carried out successfully. Lopo Soares selected him as ambassador, in the hope that he would bring back information not only of Chinese plants and drugs but of more important matters connected with the land of Cathay. His fate is recounted in the first letter given below. Whether he was able to send any report of his impressions of China to India I do not know: if Correia (II. p. 675) is to be trusted, he did send "a book in which he gave an account of the riches and grandeur of the king of China, which appeared doubtless of obedience." Couto, writing in 1611, says in his Decais XII. (cap. iv.) — "And although I have already spoken of this Province of Cathay ..., I shall further on, with the divine favor, give a better description of it, on account of the much more that has nowadays been discovered by the fathers of the Company [of Jesus], who are penetrating to the extremity of China and Cathay, whether no Portuguese ever came, save that ambassador whom Fernão Peres d’Andrade sent to the king of China, who went even to his court, without being able to give an account of that province, nor of any other, because the Chinese that conveyed him led him about by different routes, in which they caused him to spend many months, both in order that he might not be able to give an account of anything, and to show him the greatness of that empire."
edge, where he might offer for sale or exchange some of the goods he had brought. This was
granted; and the factor, his clerk and a few others were sent to carry on the trade. Under
cover of this privilege Fernão Pires sent other men on shore to make their way secretly into
various parts of the city, if possible, and report on what they saw. 43

Two events occurred, however, which caused the Portuguese commander to hasten his
departure from Canton. One of these was the receipt of a message from Simão d'Alcâcer to
say that he had been attacked by pirates, whom, however, he had been able to beat off. The
other occurrence was an outbreak of fever and dysentery among his own company, which lasted
throughout the whole of October, and proved fatal to nine men, the most serious loss being
that of the factor, Giovanni da Empoli. Fernão Pires, therefore, leaving Thomé Pires and his
companions at Canton, returned to Tamão at the end of 1517 or beginning of 1518.

While Fernão Pires was repairing his vessels and carrying on trade at Tamão, there came
thither some junk of Linqui islanders, of whom the Portuguese had already heard at Malacca. 44
In order to gain full information regarding these people and the islands they came from, Jorge
Mascarenhas was dispatched with his ship with Chinese pilots; but, owing to unfavourable
weather, he did not get further than Chwanchau-fu, where, however, he laid the foundation of
a thriving Portuguese trade. 45

Duarte Coelho also was dispatched to Malacca to report the success that had so far
attended the mission. He arrived there in March, and at once a junk was got ready and sent
off, with Jorge Alvares in command, to bring back a cargo, and to convey to Fernão Pires the
news of war with the Raja of Bintang.

On hearing these tidings Fernão Pires sent off a message overland to Jorge Mascarenhas
to request his return, and meanwhile made all preparations for his departure. In due course
Jorge Mascarenhas arrived; and Fernão Pires, having ascertained from the officials at Canton
that the emperor had expressed his willingness to receive the Portuguese ambassador, sailed
with all his fleet at the end of September 1518, and arrived safely at Malacca, one of his ships,
the Santo André, captain Pero Soares, having been lost in a storm in the Gulf of Cochinchina.

Fernão Pires de Andrade had whilst in China conducted affairs with such skill and tact
that he left a very favorable impression of the Portuguese character on the Chinese, 46 and well
deserved the profit he derived from the rich cargo that he carried away. 47 All the good effect
of his conciliatory conduct was, however, entirely destroyed by the arrogant behavior of the
man who commanded the next expedition to China, and who happened to be his own brother.

The arrival, early in 1519, 48 of Fernão Pires de Andrade at Cochín with such a valuable
cargo caused no small stir among the captains; and, although Antonio Correa was then under
orders to proceed to Malacca and China, on the production by Simão de Andrade of a royal
grant authorizing him to go to China after his brother's return Antonio Correa was ordered
by the new governor, Diogo Lopes de Sequeiras, to go to Malacca only, and Simão de
Andrade was appointed to the command of the fleet destined for China.

43 Barros tells us (Dec., III, II, viii.) that one of these men, Antonio Fernandes, took the opportunity one night
when the populace were occupied with a feast of lanterns, to climb the city wall and run right round it, counting
ninety towers therein.
44 See Comment, of A. Dall. (Hak. Soc.), III, pp. xiv. 88. 45 See further regarding this trade infra.
46 One instance given by Barros (Dec., III, II, viii.) is to the effect that before his departure he caused procla-
mation to be made that if any Chinese had received any injury from or had any claim on a Portuguese he was to
come to him and satisfaction should be made.
47 Barros (loc. cit.) says that he entered Malacca "very prosperous in honor and riches, things that seldom go
together, because there are few men who by their labors deserve them by the method by which Fernão Pires gained
48 Corres (tom. 2, p. 539) has 1519 (which is impossible), and this adds other errors.
Simão de Andrade left Cochin in April 1519 for Malacca, whence he sailed for China accompanied by three junks captained by Jorge Botelho, Alvaro Fusoio, and Francisco Rodrigues. With these four sail he arrived at Tamão in August 1519; and at once began to show the Chinese that he was of a very different temperament from his brother. Under the pretext that the Chinese vessels themselves while lying in port were exposed to the attacks of pirate junks, he built on shore a fortress of stone and wood. Even more offensive to the feelings of the Chinese was the erection by him on an adjacent island of a gallows, on which he hanged a seaman who had committed some offence, the execution being carried out with all the formalities usual in Portugal. Further, he insisted on the right of claiming precedence for his vessels over others from Siam, Kamboja, Patani, etc., in trading with the Chinese. But what caused the cup of indignation of the Cantonese to overflow was their discovery, after Simão de Andrade had sailed for Malacca, that many of their children, whom they had given in pledge to their creditors, had been kidnapped by the Portuguese captain and carried away to become slaves.

On arriving at Tamão Simão de Andrade learnt that, in spite of the favorable messages conveyed to his brother by the officials at Canton, the ambassador Thomé Pires had not yet received permission from the emperor to wait upon him. At length, however, after the dispatch of messages at intervals on three separate occasions, and the receipt of as many replies, the ambassador was permitted to set out. He and his suite left Canton on 23rd January 1520, proceeding up the river in three large row-boats having silken awnings and flying Portuguese flags. At the foot of the mountain range the boats were left, and the party proceeded across the Meiling Pass in litters, on horseback, or afoot. Thence they journeyed northward, until, in May 1520, they reached Nanking, where the emperor was then staying. An imperial order was here conveyed to the ambassador, that he was to go on to Peking.

---

41 Barros who alone of the Portuguese historians gives us any account of this man's visit to China says (Dec. III., VI. i.), with a rare double insincerity, that it was "in April 1518 in the time of Lopo Boare's" that Simão de Andrade left India.
42 Another junk, commanded by Jorge Alvares, was detained by a leak, and was obliged to follow later on in the fleet under Diogo Calvo.
43 Barros (Dec. III., VI. ii.) tells us that Simão de Andrade was "of noble presence, very pompous, boastful, and open-handed; all his acts were performed with great dignity, and to such an extent, that he was the first man that ordered Indians to be taught to play on shawms and to make use of them." (See further regarding him in Comment. of J. Doh, passim.)
44 Barros also says (Dec. III., VI. i.) that a principal official who protested against this action was ill-used under Simão de Andrade's orders. This is confirmed by Christóvão Vieira in the letter given below (f. 106v). Gaspar da Cruz in cap. xxii. of his book says: "All the ambassadors that come to China with embassies from kings or princes receive from the king many gifts and favors, and they give them a cap and insignia of a louthia, whereby they have great liberties in the country. They may whip and chastise the Chinese themselves, so long as they do not touch a leuthia lesser or greater; because to touch these is bound to be followed by great inconveniences. This was the cause why, when Fernão Pires D'Andrade came as ambassador to China, the Chinese rose against him, and he escaped in very doleful dumps, losing several ships: because, having executed unaccustomed justice in China and on Chinese, and it being forgiven him, he thought fit to extend his hand to the leuthias." In the translation of this passage in Purchas, Pilgrimes, III. p. 159, it is said that Fernão Pires "escaped with his hands on his head," which is an almost literal rendering of the Portuguese orig. "O filho das mãos nus caboflos." This expression seems to be a variant of "com as mãos nas cabeças," which means "mortified, humbled, ashamed, disappointed." But it will be noticed that Gaspar da Cruz, like so many other writers on this subject, has blundered, mixing up Fernão Pires de Andrade, his brother Simão (the real culprit), Thomé Pires (the ambassador), and Diogo Calvo or Mariza Affonso (who both lost ships). Purchas recognised that there was some error in this account, but was unable entirely to solve it. (See his marginal note in loc. cit.)
45 Barros (ib. ii.) says that it was reported among the Chinese that the Portuguese bought stolen children and ate them roasted. It will be seen that in the letter of Christóvão Vieira below (f. 106v.) the accusation against the Portuguese was that they stole dogs and ate them roasted, — certainly a very venial offence in China.
46 From this pass Thomé Pires sent a letter to Simão de Andrade announcing his safe arrival there, and stating that Canton was but a small affair compared with other cities he had seen on his journey. (Barros, Dec. III., VI. i.) It will be seen from the first letter given below (f. 111v.) that one of the company, Duarte Fernandes, died on the journey.
there to await the emperor’s pleasure. To Peking accordingly the party proceeded, arriving there, apparently, in July 1520.55

In January 1521, the emperor arrived at a small town some two leagues distant from Peking, and there halted to pass sentence on a relative of his who had rebelled against his authority.56 This man having been duly executed, the emperor proceeded to Peking, which he entered in February 1521. Meanwhile complaints had reached the emperor from various quarters regarding the conduct of the Portuguese. Not only were there representations from the mandarins of Canton and Peking concerning the bad behaviour of Simão de Andrade at Tamão, but another ambassador, one Tuwang Muhammad, had come from the exiled king of Malacca57 to lay before his suzerain the wrongs he had suffered at the hands of the “sea-robbers.” To make matters worse, when the sealed letter from Dom Manoel to the emperor was opened, it was found to differ entirely in its language from the letters written by the interpreters under the instructions of Fernão Pires de Andrade. True, the responsibility for these latter was accepted by the interpreters; but the other accusations, it was resolved, should be made the subject of inquiry. The members of the embassy, meanwhile, were ordered not to come near the palace.

While matters were in this state, however, the emperor, who had been ailing since the day after his arrival in Peking, died in May 1521;58 and, in accordance with the custom of the country, Thomé Pires was informed that he must at once leave the imperial city; and that when the new sovereign had assumed rule59 his majesty’s pleasure should be communicated to him. Accordingly the ambassador and his suite set out from Peking on 22nd May, and reached Canton on 22nd September 1521.60

In the meantime events of serious import had occurred at Tamão. After the departure of Simão de Andrade from Malacca (in September 1520, apparently61), the Chinese, as I have said above, were exasperated by the discovery that he had carried off into slavery a number of their sons and daughters. They were not, therefore, inclined to give a very cordial welcome to the next Portuguese vessels that came to the Island of Trade, though at first no ill-feeling was displayed. It was in April or May 1521 that a fleet of Portuguese vessels from Malacca cast anchor in the port of Tamão. This consisted of a ship62 from Portugal belonging to Dom Nuno Manuel and commanded by Diogo Calvo,63 several other ships from Malacca that had not been

53 I infer this from the statement of Christóvão Vieira (f. 1), that on the 2nd of August the ambassador dispatched letters to Canton reporting the progress of the mission.
54 This was the prince of Ning, an uncle of the emperor’s, who had taken part in a rebellion some years before.
55 Or, rather, his son, the Raja of Bintang.
56 Wells Williams (Middle Kingdom, II, p. 356) makes Chinghî’s reign cover sixteen years, 1505–1522; while Boulger (History of China, I, pp. 465, 479) states that his reign began in 1505 and that he died in the fourteenth year of it, i. e., 1519.
57 See Boulger, op. cit. (p. 409) regarding the trouble that was averted, on the death of Chinghî without an heir, by the prompt and resolute action of the empress Chinghwa. A grandson of the emperor Chinghwa, a youth of fourteen years, was chosen by the nobles as their new sovereign, and ascended the throne under the title of Khialing.
58 From the first letter given below (f. 111v.), we learn that a second member of the company, Francisco de Badoya, died on the journey back.
59 The Portuguese historians do not record the date of Simão de Andrade’s departure from China; but in the letter given below Christóvão Vieira states that on 2nd August 1520 the ambassador’s party set from Peking letters which “reached Jorge Botelho and Diogo Calvo in the island where trade is carried on.” From this we may infer which “thunder Jorge Botelho and Diogo Calvo” is the island where trade is carried on. From this we may infer that when the letters reached Canton Simão de Andrade had already sailed. At any rate, we learn from Barros (Dec. that when the letters reached Canton Simão de Andrade had already sailed. At any rate, we learn from Barros (Dec. the news that the letters arrived at Cochinchina at the time that Diogo Lopes de Sequeira was before Diu, that is, probably, early III., VI. Iii.) that he arrived at Cochinchina at the time that Diogo Lopes de Sequeira was before Diu, that is, probably, early 1521. Of the first acts of O. Duarte de Meneses on assuming the governorship in January 1522 was to in 1521. One of the first acts of O. Duarte de Meneses on assuming the governorship in January 1522 was to appoint him to the captaincy of Chaul. One of the first acts of O. Duarte de Meneses on assuming the governorship in January 1522 was to appoint him to the captaincy of Chaul.
60 According to Correia (II, p. 678) it was named Madalena (i. e., Madalena).
61 Who, with Rafael Catanho and Rafael Perestrillo, left Lisbon in 1519 with permission to go to China.

Regarding Catanho and Perestrillo see the footnote further on.
able to accompany Simão de Andrade, and the junk of Jorge Alvares, which, as mentioned above, had been detained at Malacca by a leak. While the Portuguese were engaged in trading, some at Tamão and others in Canton, news came of the death of the emperor; and orders were at once issued that all foreigners should forthwith leave the country under pain of death. Diogo Calvo and his companions demurred to this, as they had not completed their cargoes; whereupon the Chinese seized and imprisoned Vasco Calvo, Diogo Calvo's brother, and other Portuguese who happened to be then in Canton, and attacked and captured a number of Portuguese and Siamese ships and junks, killing very many persons and imprisoning others. They also formed a fleet of armed junks, and proceeded to blockade Diogo Calvo's ship and the seven or eight Portuguese junks that lay at Tamão.  

At this juncture, on 27th June 1521, there arrived off Tamão two junks, one belonging to and captains by Duarte Coelho, and the other to some residents of Malacca. On learning the condition of affairs, Duarte Coelho was inclined to make his escape, leaving his compatriots to their fate; but, as I have mentioned above, he was induced to stay chiefly from his affection for Jorge Alvares, who was then sick unto death. Two days later the five vessels were beaten by a Chinese fleet of fifty junks, the commander refusing all offers of peace, and attacking the Portuguese furiously, only, however, to be beaten off with much loss. After forty days had thus passed, there arrived Ambrosio do Rego in a ship with another from Malacca; and these succeeded in joining the other five. There being now not more than eight Portuguese left in any one of the vessels, Duarte Coelho, Diogo Calvo and Ambrosio do Rego resolved that the junks should be abandoned, their crews being divided among the three ships, which should attempt to break through the investing fleet. Accordingly, on the night of 7th September the three ships set sail; but at daybreak on the 8th they were attacked by the Chinese fleet, and a fierce engagement ensued. The Portuguese would probably have had to succumb to superior numbers; but a sudden gale from the north wrought havoc among the Chinese junks and enabled the three ships to soon outdistance the enemy; and in October 1521 they reached Malacca safely.  

Such was the state of affairs when Thomé Pires and his companions returned to Canton on 22nd September 1521; and we cannot be surprised that the treatment they met with there was very different from what they had experienced before they left for Peking. The indignities to which they and the other unfortunate captives were subjected are so graphically described by Christovão Vieira, that I need not detail them here. After a farcical show of respect for the members of the embassy, extending over some ten months, these were all imprisoned, and the whole of their property and the presents from the king of Portugal to the emperor were confiscated, the lion's share, as might be expected, falling to the mandarins.  

--- 

64 These and the following details are gathered from the letters given below, and from the accounts in Castanha (iii. 342.), Correa (II. p. 878), and Barros (Dec. III., VI. i. i.). 
65 Castanha's, whose brief account of these events was printed in 1563, adds that at Malacca "they reported the news of the rising of China; and regarding this an inquiry was drawn up in Malacca, which was sent sealed to the king of Portugal; in which were set forth clearly some causes of this rising, which, as I have said, I cannot ascertain, and therefore have not related them." Correa's account, written in India a little earlier, is also very meagre; but Barros whose third Decada was issued in 1553, like Castanha's, Apero V., seems to have obtained access to documents not available to the two other historians. 
66 Gonzales de Mendoza, in treating of the reception of ambassadors in China, says, in bk. III., chap. xxiii., of his work (see also Hak. Soc. ed., I. pp. 139-169) that "To those that enter the kingdom with this name [of ambassador] for no offense that they commit (even though it be proved against them); do they do any harm; and it appears to be true, it having been manifestly by experience. For when there came to this kingdom one Bartolomeo [sic?] Peroes a Portuguese and others his companions, sent by order of the viceroy of India, under an embassy from the king Dom Manuel; they were scourged before the viceroy of the province of Canton, and the ambassadors of the king of Malaca (who happened to be there, and came to the court to treat of matters of their king), which testified that the embassy that the Portuguese had brought was a false one, and that they were spies of the viceroy of India, that they came to view the forts of the city, in order afterwards to come against it and take it, as they had done in many parts of India. And carrying still further their wickedness and damnable intention, they requested the viceroy that he should at
News of these disasters had not reached India when, in April 1522, another fleet left Cochin for China: this consisted of four ships, commanded by Martim Affonso de Mello Coutinho as captain-major, his two brothers Vasco Fernandes Coutinho and Diogo de Mello, and Pedro Homem. Martim Affonso carried a commission from Dom Manuel to conclude a treaty of peace with the emperor of China, and to endeavor to obtain permission to erect a fortress at Tamão, where he was to remain in charge of the officials whom he took with him. On arriving at Malacca in July, however, he learnt of the unfortunate change that had occurred in the relations between the Portuguese and the Chinese. Nevertheless, he determined to pursue his voyage and, at his request and that of the governor of Malacca (Jorge de Albuquerque), Duarte Coelho and Ambrosio do Rego were much against their wills, induced to accompany the expedition. Accordingly, the four ships and a junk left Malacca on 10th July 1522, and arrived at the port of Tamão in August.

Before reaching the port, however, they were sighted by a Chinese fleet, which bore down upon them, firing off bombards that did the Portuguese no damage. Martim Affonso had given strict orders to his captains to refrain from acting on the offensive; but these demonstrations on the part of the Chinese seem to have led some of the Portuguese to commit acts of aggression for which they were severely called to account by the captain-major. Avoiding an engagement, the four ships entered the port and cast anchor; and Martim Affonso at once sent word to the officials on shore that he desired peace and trade as before. All his overtures were, however, rejected; and some men who landed to get water were roughly handled and had to escape for their lives, leaving their barrels and jars behind. Duarte Coelho, meanwhile, unable or unwilling to accompany the ships into port, had remained at sea, and, fearful of being attacked by the Chinese fleet, sent urgent requests that the ships would come out and join him.

This Martim Affonso resolved to attempt; and he accordingly weighed anchor, the ships of Diogo de Mello and Pedro Homem, which were smaller than the other two, going in front as ones each and castigate them as such. Who, after having thought thereon, and consulted with the legation of the city, and the judges of his council, ordered them to be seized, and placed in close confinement, taking from them their confessions with much caution and care: and as in these there was found contradiction (because some of them through fear confessed more than they asked of them, and contrary to what was the truth) by reason of the inquiry he sentenced them to death, and sent the sentence to the council that they might confirm it with intent and desire to execute it. The royal council having seen it, and considered the title with which they had entered the kingdom, not only did not confirm it, but sent at once to order the viceroy to release them and to let them return free to India whenever they had come (notwithstanding that the ambassadors of the king of Malacca, who were still at the court, did not get very good service thereby), and to supply them fully with every necessary until they should arrive there: saying in the mandate, that even if all that the aforesaid ambassadors testified were true, and that which they themselves through fear of death had confessed, it sufficed, to do them no harm, that they had entered that kingdom with the title of an embassy. It will be seen that this writer gives a very incorrect statement of the facts connected with the imprisonment of Thome Prins and his companions.

According to Correa (II. p. 674), Martim Affonso's ship was the Conceição, that of Vasco Fernandes the Grylo, and that of Pedro Homem the Sisário. Diogo de Mello was given a ship in India, the name of which is not mentioned.

22 Not to be confused with Martim Affonso de Mello Juarte.
23 Who died 13th December 1521. Martim Affonso and his companions left Lisbon on 5th April 1521 in the fleet that took out the new governor of India, D. Duarte de Meneses.
24 After a stay at Pasai, where he installed D. André Henriques as captain in place of Antonio de Miranda, and loaded a large cargo of pepper for China.
25 Unwilling, doubtless, to lose the chance of making the enormous profits which he had anticipated from the sale of his cargoes.
26 Barros (Dec. III. VIII. v.) says two junks. Castanheda and Correa, however, mention only one junk, that of Duarte Coelho, as accompanying the ships. From the description of subsequent events it would seem that there was in fact only one junk, and that Ambrosio do Rego was on board of it with Duarte Coelho.
27 The following details are taken from Castanheda, VI. xiii.-xv.; Correa, II. pp. 715-720; Barros, Dec. III., VIII. v. (Of also the accounts in the letters infra, f. 121, f. 134-134v.)
28 Castanheda (IV., cap. xiii.) says that Ambrosio do Rego was the chief offender; but Correa (II. p. 718) lays the blame on Duarte Coelho, whom, he adds, Martim Affonso threatened to hang from the yard-arm of his own junk. Barros entirely passes over this unpleasant incident, which, however, seems to be confirmed by the writers of the letters given below. (See f. 121 and f. 134 v.)
guides. The Chinese fleet, however, was on the alert, and at once attacked these two vessels. As ill-luck would have it, a bombard almost immediately set fire to a barrel of powder in Diogo de Mello's ship, which blew up with all on board, only a few escaping with their lives. Seeing these swimming in the sea, Pedro Homem sent his boat to pick them up, hoping that among them might be Diogo de Mello: whereupon, the Chinese, taking advantage of this diminution of his force, succeeded in boarding Pedro Homem's ship, where, after a desperate combat, the brave captain and all his men were either slain or made prisoners, the ship itself being rid of its cargo and fittings. Night having fallen, Martim Affonso called a council of war, and urged that vengeance should be taken on the Chinese for the losses they had inflicted on the Portuguese, but the other captains counselled a more discreet policy, to which Martim Affonso very unwillingly acceded, first requiring a document to be signed by all the captains excluding him from the blame. This having been done, and the dismantled ship of Pedro Homem having been scuttled, the two remaining ships and the junk, after this short but eventful fortnight at Tamão, sailed for Malacca, which they reached safely in October 1522 by the roundabout way of the west coast of Sumatra and Pasai. Thus were shattered the Portuguese hopes of a permanent lucrative trade with China for many years to come.

It was probably while Martim Affonso de Mello and his companions were engaged with the Chinese fleet at Tamão that the imprisonment of Thomé Pires and the rest of the embassy and the confiscation of their goods took place, as described below by Christovão Vieira, on 14th and 15th August 1522. From the same writer we learn that on 1st October of that year three letters—one for the king of Portugal, another for the governor of India, and a third for the governor of Malacca—were handed to the ngean-châ wò of Canton to be forwarded through the exiled king of Malacca's ambassador. The latter, however, was unwilling to undertake the task; but on 31st May 1523 a junk with Chinese and Malaya left Canton for Patani with a message to the exiled king. On 5th September the latter's reply reached Canton; and as a consequence, apparently, twenty-three Portuguese prisoners, who on 6th December 1522 had had boards inscribed with their sentences placed upon their necks, were on 23rd September 1523 executed and

---

78 He was the son of Pedro Homem, Dom Manoel's chief equerry, and, according to Barros, was "in body one of the biggest men in Portugal, and moreover the stoniness of his spirit and his bodily strength were different from the common run of others, which is seldom found in those of his stature."

79 Barros, however, has it that Duarte Coelho had started in advance, and that Martim Affonso only met with him on the coast of Champa.

80 Corres, (II, p. 720) says that Martim Affonso sent Duarte Coelho from Pasai to Malacca with the bad news, but himself remained at Pasai until the monsoon, "when he returned to India in order to return to Portugal; but arriving at Cochyn he died of his sickness." On the other hand, Barros (a. z.) states that Martim Affonso "reached Malacca in the middle of October 1522, and in the monsoon of January 1523 left for India, and thence for this kingdom in the year 1526, where he arrived in safety." Which version is correct, I cannot say.

81 I have mentioned above that in 1519 Rafael Perestrello and Rafael Catahão left Lisbon in company with Diogo Cão, with permission to make a voyage to China. Though, however, Castanheda, Corres and Barros have frequent references to their intended voyage to China, and even inform us that they accompanied Jorge de Albuquerque in 1521 as far as Pasai, where they were to load pepper, we are not told of their actually going to China. Corres, however, says (II, p. 786), that at the end of 1526 or beginning of 1527, when the Raja of Cranganor had begged help of the Portuguese against the Samorins, "Rafael Catahão, who was in Cochyn, who had come from China very rich, strongly urged Dom Luiz to give the help that the king of Cranganor asked for, and offered to go to fight with three hundred Portuguese men, and to pay them at his own expense." In declining the offer, Dom Luiz is made to refer to "some money, which you want to gain at such risk of life." It is possible that one or both of the Raifals visited Tamão during the troubous times described above. Jorge de Albuquerque, also, who left Portugal in command of the fleet of 1519, had received from the king the favor of "a voyage to China, after the manner of Fernão Pires d'Andrade," but he was not able to avail himself of it, in consequence of having to take up the capt春夏 of Malacca. In a fleet that left Lisbon for India in 1520 was another man who had been granted a voyage to China, Pero Lourenço de Amo; he did not, however, leave Cochyn until September 1523, when, on his voyage to Pasai to load pepper, he was wrecked in a storm on an island off the coast of Arakan, and he and all his men were subsequently murdered by a native chief on the mainland, to which they had escaped in the ship's boat. (Corres, II, p. 721; Barros, Dec. XIII, VII, 7).

82 f. 109v.

83 See also the extract from Jorge de Albuquerque's letter of 1st Jan. 1524 given below.
mutilated, in and around Canton. In May 1524, Christovão Vieira tells us, Thomé Pires died of sickness in prison in Canton; and in the same year the Malay ambassador left Canton to return to his royal master (whether or not bearing the letters for the Portuguese authorities does not appear); but being wrecked off Borneo he and all his party were made prisoners. In 1523, we learn from this same letter, the Chinese prepared a fleet of one hundred junks in case the Portuguese should return to avenge the disaster of the previous year; but no Portuguese came; and in August a hurricane destroyed half the fleet. Next year another fleet for the same purpose was got ready; and so in each succeeding year until 1528, after which, owing to most of the junks having by that time been captured by pirates, the attempt to form a fleet was, perforce, abandoned.

Meantime, the Portuguese in Malacca, uncertain of the fate of their imprisoned countrymen, seem to have apprehended the descent on that city of an avenging Chinese fleet, as will be seen by the following extract from a letter written to the king of Portugal on 1st January 1524 by Jorge de Albuquerque, governor of Malacca:

Dom Sancho amarques capitam moor do mar de Malaqva pors vosa alteza foy estar sobre o bhitam na entrada de julho e day foy ter a patam" e ambrosio do regno com ele e outro navio esperar hum juqo que era em syam de voza alerza e sa ber novas da China dos chis que ali vem ter, mandou ambrosio do regno diante e ele ficou ainda la que los junquos nam sam comidos e perguntai lhe por novas da charra responde ho me que lhe disera hum ymgao que antre os chis e os portugueses travata cando estaram de paz disse lhe que eram vvyos doito ate treze portugueses e nom safraram quantos porque hum dize cito e outro dizem treze e que diziam que ho embaixador tome pires que era ainda vivo, vecho hum recado a el rey de bimtam de seu embaixador ho quall omem que o trouxe tornou logoa a fame que el rey de bimtam lancon pela terhe que hos chis aviam de vir sobre malaqva isto nom he muito certo porem sam cousas que podem ser se vieram grande dano faram salvo se o capitam mor acudir a tempoo como lhe eu expere porem ho meu parecer he que tall nom faram que tambem dizem na China que desejam paz com nosqou.

Translation.

Dom Sancho Henriquez, captain-major of the sea at Malacca for your Highness, went to attack Bintang at the beginning of July, and from there went to visit Patani, and Ambrosio do Rego with him and another ship, to wait for a junk that was in Siam of your Highness’s, and to learn news from China from the Chinese that come to call there. He sent Ambrosio do Rego in advance; and he remained there still because the junks are not yet ended, and I asked him for news of the merchant-ship. He answered me what an interpreter who acted between the
Chinese and Portuguese when they were at peace had said to him. He
told him that there were living from eight to thirteen Portuguese, and it was
not certain how many, because one said eight and another said thirteen; and that
they said that the ambassador Thomé Pires was still living. A message came to
the king of Bintang from his ambassador, and the man who brought it soon
returned. The report that the king of Bintang was spreading in the country is
that the Chinese intended to come and attack Malacca. This is not very certain;
nevertheless they are things that may be. If they come, they will do great harm,
unless the captain-major shall come in time, as I have written to him. However,
my opinion is, that they will not do so, as they still say in China that they desire
peace with us.

The anticipated attack by a Chinese fleet on Malacca did not take place, however, any
more than the assault which the Chinese at Canton expected from the Portuguese. The cap-
ture of the stronghold of the Raja of Bintang by the Portuguese forces under Pero Mascarenhas
at the end of 1526, and the death of the Raja in the engagement, gave the garrison at Malacca
comparative rest for a few years; but the Raja of Ujantana was as implacable a foe as his father
had been, and there were enemies in Achin and elsewhere to keep the Portuguese fully occupied.
Though themselves deterred from visiting China, the Portuguese doubtless kept in touch with
that country by means of native traders calling at Patani, and never lost hope of a resumption
of friendly relations. The historians, however, make but scant references to China during these
years, and there seem to be very few documents existing that throw light on the sub-
ject. Beside the extract given above, the following letter is the only document that I have
met with dealing with Chinese affairs at that period:—

Senhor — Despós de ter dado as apontamentos a vossa alteza para por eles me perguntar as cousas da China do alevamento da terra o souberam allumgumas pessoas por o quall me rogaram que se me vossa alteza perguntasse por a riqueza da terra que nam decaresse todo e me calase por que acabando hum partido com vos alheia me faram bom partido e vos alteza he meu rey e deus da terra, olhe bem vos alteza o que fizer para que saiba certo que de haixo do sol tão riqa terra nam ha como a china de todalas mercadorias que pidirem para a boca e baratas e todalas cousas

dinheiro as mercadorias da china nam digo a qui por que por palavra ho direi se

---

98 Correa (III. p. 82) says that Pero Mascarenhas, before leaving Malacca for India in August 1526 to take up
99 the governorship, granted to Duarte Coelho, as a reward for having brought the official documents announcing his
succession to that office, "a royage that he might make to Cunda (go head pepper, and that he might go to China to
make his profit, which was good payment for his good news (sic))." After the capture of the fortress of Bin-
tang Duarte Coelho did indeed sail in company of Francisco de Sá for Cunda; but the voyage was a most disas-
 tries one, and Coelho had to return to Malacca without his pepper, and with his hopes of a voyage to China blasted.

Translation.

Sire,—Since giving your Highness the observations,¹⁰⁰ that you might by means of
them question me on the affairs of China, regarding the uprising in the
country, several persons knew of it, for which reason they begged me that if
your Highness questioned me as to the riches of the country I should not
declare all, and should hold my tongue, because if I lost the chance of favor
with your highness they would do me a good turn; and your Highness is my
king and God of the country. Let your Highness consider well what I did, that
you may know for certain that under the sun there is no country so rich as China
in all the articles of merchandize that are in demand for the mouth and cheap,
and all things for your magazines in India, so that you need not send to
them anything else but sail-cloths, because all the rest is to be had in China
and can come to them very cheaply, namely, yards, masts, pitch, planking,
nails, lead, iron, copper, quicksilver;¹ and the other wares are very rich,
which are too many to describe. This advice I give to your Highness that
you may know what has to be done, and I, sire, not discovered² to tell the
truth to your Highness, because I am alone and without the protection of a
lord. And let your highness know for certain that at this present time they will
allow in China articles of merchandize of your Highness's, because the five years
have already passed, as the king commanded to tell me that no goods should go
until five years had passed;³ for a relative⁴ of mine who was in the kingdom of
Siam told me that the Chinese were desirous of receiving from us pepper and
black wood and pitchuck and frankincense and ivory and saffron, and that they
would now give everything by weight and for money. I do not here tell the
wares of China, because I shall tell it by word of mouth if it shall be for the
service of your Highness to know it from me. And I, sire, have to go to free a
brother of mine whom I left in Canton as hostage for the veracity of the Portugu-
ese, and because they were not willing to obey the orders of the king of China
and wished to make war in China and kill and plunder the country, where much
evil was done. I do not say more to your Highness in this, because you shall
know it from me when I shall go to be of service, who am in this city because of
having no lodging there, and my desires, sire, are to serve your Highness in those
parts, because I know how to deal with⁵ them; and in this I say that in China
eighty good pearls are worth a cruzado in exchange for pepper. I remain praying

¹⁰⁰ These do not seem to be now in existence.
¹ The orig. has "deserberto" for "descerberte."
² The original has "escusas digo aserrarillas." Escusar is unintelligible in this connection, and there is no such
word as aserrar. Perhaps it is a copyist's error for aserrar.

⁴ I do not know who this was.
⁵ The historians do not mention this fact.
to God for the royal estate of your Highness. The 16th of January 1527.
Service of your Highness.

DIogo CALVO.

To our lord the king. On his service. — On the margin: — From Diogo Calvo who was in China which the king should attend to.

There is no record of any attempt by the writer of the above letter to carry out his expressed wish to liberate his brother; and as there is no subsequent mention of him by the historians of Portuguese Asia we are left in doubt regarding the reason of this. In any case, all direct intercourse with China was barred to the Portuguese for several years yet.⁶ In 1533, however, the then captain of Malacca, Paulo da Gama, succeeded, through his ambassador Manuel Godinho, in concluding peace with the Raja of Pahang and Patani, who had been at war with the Portuguese for a period of fifteen years. This Manuel Godinho accomplished, says Castanheda,⁷ “much to the wish of Dom Paulo, and as befitted the service of the king of Portugal, so that it was to the great profit of his revenue and that of his vassals; and these conventions were the cause of their again trading in China, where there were afterwards discovered by our people more than fifty ports better than those of Canton, as I shall relate further on.”⁸

As an outcome of these agreements, we find⁹ that in July 1534 Estovão da Gama, who had succeeded to the captaincy of Malacca on the death of his brother, sent Simão Sodré to Pahang and Francisco de Barros to Patani for the purpose of obtaining provisions for Malacca, of which it stood in sore straits owing to the war with the Raja of Ujantana, son of the late Raja of Bintang. Francisco de Barros remained at Patani, being unable to leave owing to his ship’s having been requisitioned by Simão Sodré to fight the Raja of Ujantana’s fleet. In June or July 1535, therefore, Estovão da Gama sent Henrique Mendes de Vascocondes to Patani to bring Francisco de Barros away, “as also,” says Castanheda, “to give orders that there should go from there to China a junk that he sent there to prove if they were willing to carry on trade as they did in time past.” That the junk actually was dispatched for China we are also told,¹⁰ but as to how it fared we are left in entire ignorance by the Portuguese historians.

It is noteworthy, however, that Vasco Calvo, in his letter given below, writing in October 1536, refers¹¹ to a letter he had received from the person he is addressing, who, from what he says,¹² was then off the island of Hainan. It is evident from this that by some means the Portuguese had succeeded in communicating with the captives in Canton, who, we see, were still hoping for the deliverance that never came. Who Vasco Calvo’s correspondent was we have no means of ascertaining, nor whether he was on the junk sent from Patani in the previous year. The historians seem to have entered into a conspiracy of silence regarding China at this period, their attention being taken up with the doings of Antônio Galvão, the “apostle of the Moluccas” and author of “The Discoveries of the World.”¹³

---

⁶ Correa tells us (III. p. 430), that in 1531 there arrived in India in the fleet of that year from Portugal Diogo Botelho in the Vera Cruz, Manuel Botelho in the Trinidad, and Jan Homem, a Genoese, in the Santa Cruz, who were to go for three years to China and all parts of India factoring for the queen, but he subsequently states, that the governor (Nuno da Cunha) sent these ships back to Lisbon “because China was disturbed.”
⁷ VIII. lxvi. (See also Correa, III. p. 487.)
⁸ This Castanheda did, doubtless, in book IX. or X., both of which are lost.
¹⁰ It was just as if this that the famous engagement took place off Patani between Henrique Mendes and Francisco de Barros and an overwhelming fleet of pirates, whom they succeeded in beating off after great loss. See Whiteway’s Rise of Port. Power in India, p. 390.)
¹¹ f. 124.
¹² f. 128.
¹³ Sir A. Ljungstedt, in his Historical Sketch of the Portuguese Settlements in China, p. 11, says: — “Chinese chronologists have noted down, that in the 10th year of the reign of Kua-ting (1533) one foreign vessel appeared, and in (1537) another on the coast of the gulf of China. The merchants required and obtained permission to land and to raise a few wugs for temporary shelter, and the drying of goods, which had been damaged on board the ships.” I have not found any authority for this statement.
It is not until the year 1542 that we again hear of China, and then in connection with an event of much importance, namely, the rediscovery of Japan by the Portuguese. Couto says:—

There being in this year of 1542, of which we are treating, three Portuguese companions, named Antonio da Mota, Francisco Zeimoto and Antonio Peixoto, in the port of Siam, with a junk of theirs, carrying on their trade, they resolved to go to China, because of its being then a voyage of much profit. And loading the junk with pelts and other commodities, they set sail, and with fair weather crossed the great Gulf of Hainan, and passed by the city of Canton, in order to go and seek the port of the Chinchew, because they could not enter that city; because after that in the year 1515 Fernão Peres de Andrade, being in China as ambassador, flogged a mandarin (who are those that administer justice, which among those heathens is much venerated), the Portuguese became so detested and abhorred, that the king commanded by a general edict: "That the men with the beards and large eyes should no more be permitted within his realms," which was inscribed in large letters of gold, and affixed to the gates of the city of Canton. And thus no Portuguese had dared to go to its port; and some ships at various times afterwards went to some islands off that coast to exchange their commodities, whence, however, they turned them away. Afterwards they went on to the Chinchew, whither these were going, and where they permitted them because of the profit that they derived from the commerce; but they carried on their business at sea, because they did not trust them.

In August 1543, Correa tells us, there was dispatched from India "to go to China" Jerónimo Gomes, a favorite of the Governor's, in a good ship laden with pepper, with great powers as captain-major, that no one should go there except whom he wished; which went there, and made so much money that he talked only of a hundred or a hundred and fifty thousand cruzados: with which there entered into him such pride and vanity, that he said that Fortune had not now the power to deprive him of his hundred thousand cruzados; but God, in order to humble his pride, was pleased to send him such a reverse, that he came from Malacca to India without possessing a shirt.

Another man who had been granted a voyage to China was still more unfortunate, as we learn from the same writer. This was Alonso Henrique de Sepulveda, who in 1544 was at Malacca with a ship laden with pepper waiting for the monsoon in order to make a voyage to China, which the governor of India had given him as a reward for having spent much in the king's service. He was, however, foolish enough to organize an attempt to seize the fort of Malacca by violence after the death of the captain Ruy Vas Pereira, his object being to oust Simão Botelho from his supervision of the custom-house. The attempt having failed, however, Alonso Henrique was sent on board his ship as a prisoner; but when the monsoon set in Simão Botelho gave him permission to go to China. Knowing, however, that if he did this he would have to return to Malacca, where by that time an order might have come from the governor to imprison him and confiscate his property, he sailed for Tenassaram, sold his goods there at a large profit,

15 Port. o Chinchew. See Hobson-Jobson, a. a. Chinchew, regarding the confused use of this word for the port of Changchau-fu and the people of Fúkien.
16 There are three gross errors here. Thomé Pires was the ambassador; it was Simão d’Andrade who maltreated the mandarin; and this outrage took place in 1520 or 1521.
17 I have found no corroboration of this statement, which may, however, be true.
18 Of the extracts below from Gaspar da Cruz. The account in Couto goes on to tell how a typhoon drove the junk to Japan, where the Portuguese were well treated by the natives, exchanged their goods for silver, and returned to Malacca well content.

and left for India, whither he had sent in advance a small vessel to beg the governor's clemency. His ship was, however, wrecked on an island off the coast of Siam, to which country he and his company escaped in the boat, but were put to death by the Siamese. 22

We have seen that commercial relations had been renewed between the Portuguese and the Chinese. 23 We are told by Fr. Gaspar da Cruz 24 that "after the disturbance that Fernal Perea Dandrade caused, 25 business was carried on with much difficulty, they would not allow the Portuguese into the country, and through hatred and abhorrence they called them fuscis, 26 that is to say, 'men of the devil.'" ("Now," he adds, "they do not hold intercourse with us under the name of Portugal, nor did this name go to the court when they agreed to pay customs dues: but under the name of fagim, 27 that is to say, 'people of another coast,'") He goes on to relate how, after "the scandal of Fernal Dandrade," the Chinese that carried on trade by sea with Malacca, Siam, Patani, etc., induced the Portuguese to go to Ningpo to carry on trade; and this proving successful they extended their operations to Chinchew, the islands of Canton, and ultimately as far north as Nanking, the Chinese officials conniving at their transactions owing to the profits they gained thereby. Emboldened by success, the Portuguese began to winter in the islands of Ningpo; and, as might be expected, quarrels took place, leading to murders on each side. Tidings of these evil doings having reached the ears of the emperor, he ordered a large fleet to be prepared in the province of Fukien to drive the foreign robbers once more from the coast. This fleet, being unable through contrary winds to make Ningpo, proceeded to Chinchew, where it blockaded the Portuguese ships that lay there. After some time spent in desultory fighting, the Portuguese, seeing no chance of completing their business transactions, resolved to depart without the cargoes they had expected. The captains of the Chinese fleet, however, learning of this intention, sent a secret message by night, offering, on consideration of a present, to send them some goods. This was of course agreed to: and so matters were settled to the satisfaction of both parts. This took place in 1548.

In the following year, 1549, however, the Chinese fleet blockaded the coast so straitly that the Portuguese were scarcely able to obtain provisions, much less effect an exchange of commodities. Their ships therefore returned nearly empty to India, the unsold goods being left in two junks belonging to expatriated Chinese traders, with thirty Portuguese to guard them. 28 The captains of the Chinese fleet, learning of this rich booty from some merchants on shore, swooped down upon the two junks, and partly by strategy, partly by force, succeeded in capturing them, after killing several of the Portuguese and wounding others. The Chinese belonging to the junks were cruelly treated; and of the Portuguese some were put to death, and four were dressed up and entitled "the kings of Malacca" by the "lithis," 29 for his own glory, and in cages sent about from city to city, until they came to where the haitao was, with whom the "lithis" had agreed to share the plunder. Happily, however, the emperor heard of these doings, and sent some officials to hold an inquiry; with the result that the Chinese malefactors and one or two Portuguese were condemned to capital or lesser punishment, and the rest of the Portuguese were conveyed to the city of "Casi," 30 whence they were afterwards dispersed by twos and threes throughout various parts of the country.

21 This last part reads like a repetition of the story of Pero Lourenço de Mello, given in a footnote supra.
22 In September 1545 Simão de Mello was sent from India as captain of Malacca, "and with him Diogo Soares de Mello, who had been provided by the governor Martin Affonso de Sousa with the captaincy of Patani, beyond Malacca, to make the China merchants come and dispatch their business at Malacca, because, in order not to pay duties, they had formed an emporium at that port, whereby the king's revenue suffered notable loss." (Conto, Dec. VI, I. i.) We are also told by Couto (Dec. VI, V. i.) that in July 1646 Diogo Soares dispatched from Patani for China several Portuguese vessels.

27 At what port is not stated, but apparently at Chinchew.
28 Chin. bao-lyk et. (See infra regarding titles of Chinese officials.)
29 Hanreichu, capital of Cehkiang. (See Yule's Marco Polo, II. p. 193 n.)
Portuguese ships were once more permitted to carry on trade at Canton by a number of these captives, and they were permitted to carry on trade at Canton at a time in regaining their liberty, the Portuguese merchants offering rewards to any Chinese who would assist them to do this.\footnote{21}

It was at this time that Francis Xavier visited Japan and spent some two years and a half there in preaching the gospel. On leaving that country in 1551 he resolved to attempt the evangelization of China; and accordingly, having obtained permission from the viceroy of India, he left Malacca in July 1553,\footnote{22} and arrived in August at the island of St. John (Shanghai-wen), where, however, he soon sickened, and died on the 2nd of December, his body being interred in that desolate island.\footnote{23}

Thus Xavier's mission, which had a political as well as a religious object,\footnote{24} came to naught. However, we learn from Gaspar da Cruz that after the year 1554 Leonel do Souza, a native of Algarve, and married in China, being captain-major, agreed with the Chinas that they should pay their customs dues, and that they should allow them to carry on their trade in their ports.\footnote{25}

And since that time they carry it on in Canton, which is the chief port of China; and thither the Chinas repair with their silks and musk, which are the principal articles in which the Portuguese deal in China. There there are safe ports where they lie quietly without risk and without disturbance from anyone. And thus at present the Chinas observe well their treaties; and now the great and small rejoice much at the agreement with the Portuguese, and the fame of them spreads throughout the whole of China. Wherefore several nobles of the court came to Canton solely to see them on account of having heard the fame of them.\footnote{26}

It will be observed that in the above sketch of Portuguese intercourse with China during the first half of the sixteenth century I have taken no note of the alleged peregrination of Fernão Mendes Pinto in that empire in 1543-1544. Although Faria y Sousa has entered as historical facts in his Asia Portuguesa\footnote{27} various events described by Fernão Mendes, and has accorded him a certificate of veracity, I am afraid that Congreve was only too just when he wrote: 38 "Ferdinand Mendez Pinto was but a type of thee, thou liar of the first magnitude." I do not mean to assert that the whole Peregrinação is a fabrication; but I am convinced, from internal evidence, that many of the incidents related are pure fiction, and that others, genuine enough, either took place before the writer\footnote{29} came to India, or formed no part of his adventures.\footnote{30} I append some instances of sheer mendacities.

\footnote{21} Fr. Gaspar da Cruz, during his residence in Canton, met several of these escaped prisoners, among whom seems to have been Gafieiro Pereira, the writer of the chronicle of China referred to infra.

\footnote{22} After a serious quarrel — for which he was largely, if not entirely, to blame — with the captain of that place, D. Alvaro d'Ataide da Gama. (See Couto, Dec. VI., X. viii.; and Whiteway's Rise of Port. Power in India, p. 70.)

\footnote{23} It was afterwards removed to Goa. (See also Pires, Hist. III., p. 190.)

\footnote{24} Of Couto, Dec. VI., X. vi.

\footnote{25} It is remarkable, that this is the only reference I have found to this important agreement.

\footnote{26} Tratado da China, cap. xxii. (See also Purchas, Pilg. III., p. 190.)

\footnote{27} II., l., etc. See also L., App., cap. viii., where Faria y Sousa quotes Pinto's stories (see infra) of Ines de Leiria and Vasco Calvo, and indulges in some pious reflections on the early propagation of the Catholic faith in China by their means.

\footnote{28} Love for Love, Act II., sc. 1.

\footnote{29} I am extremely doubtful if the whole of the book, not published until 1614 (some thirty years after its alleged author's death and more than fifty after his return from the East), was really written by Fernão Mendes Pinto. I am inclined to share the belief of Mr. R. S. Whiteway that the Jesuits had a hand in its composition, with a view to the glorification of Xavier. It is worthy of note that Couto (Dec. IX., xxix.) records that a certain Gonsalo Mendes Pinto was at Banda in 1574 making some voyages on a contract with Martim Affonso de Mello Pereira, and that the Bandanese made a plot to murder him and his companions and seize their ship and goods, in which, however, they were foiled.

\footnote{30} According to the Peregrinação Fernão Mendes Pinto left Goa on 13th April 1639 for Malacca with Pedro de Faria, who was to succeed Estêvão da Gama as captain of that place. He arrived at Malacca on 5th June, and within the next few months was sent by Pedro de Faria as ambassador to the king of the Batas and the king of Aru. We also read of big fights taking place between the kings of Achiin and Aru and the king of Ujantana and the Achinese, — likewise in 1538. Now it is significant that Correia and Couto are both silent regarding any such events; and it is curious that Correia alone mentions that Pedro de Faria was captain of Malacca at this time. It is also a strange coincidence that Castanheda, Correia, Barros and Couto all tell us that just after Pedro de Faria assumed the captaincy of Malacca in 1638 an ambassador came from the king of Aru asking for help against the king of
In chapter lxv., where the encounter between the Portuguese under Antonio de Faria and the forces of the mandarin of “Nunday” is described, we are told that the Chinese leader “was mounted on a good horse, with certain cuirasses of red velvet with gilt studs of ancient date, which we afterwards learnt belonged to one Tomé Pires whom the king Dom Manoel of glorious memory sent as ambassador to China, in the ship of Fernão Perez Dandrade, when Lopo Soares Dalbergaria was governing the State of India.” This was in 1541 apparently; and I have no evidence to confirm or contradict the statement regarding the cuirasses of Thomé Pires.

But the next incident that I quote can be proved, thanks to the letter of Christovão Vieyra, to be an unblushing falsehood. In chapter cxxi, we are told that (in 1543?) Fernão Mendez met in the city of “Sampitay,” a Christian woman, who informed him “that she was called Inez de Leiria, and that her father was called Tomé Pires, who went from this kingdom as ambassador to the king of China, and whom, through a disturbance that a captain of ours made in Canton, the Chinese regarded as a spy and not an ambassador as he said, and seized him with twelve other men that he had brought with him, and after they had as punishment given them many floggings and tortures, of which five soon died, they banished the others, separating them from one another, to diverse places, where they died devoured by lice, of whom only one was living, who was called Vasco Calvo, native of a town in our country named Alcouchete, for thus she had many times heard from her father, shedding many tears when he spoke of this. And that it chanced to her father to be banished to that district, where he married her mother, because she had some property of her own, and made her a Christian, and during the whole twenty-seven years that he abode there married to her they both lived very catholically, converting many heathen to the faith of Christ, of whom there were still in that city more than three hundred, who every Sunday gathered there in her house for instruction.” Other details are given regarding this pious woman; but the whole pretty story falls to pieces like a house of cards when we remember that, as mentioned above, poor Thomé Pires died in prison in Canton in May 1524.

But the next extract that I would quote goes a step further in mendacity. In chapter cxxvi, we are told that in the year 1544, when he was in the city of “Quanay,” Fernão Mendez encountered “an old man dressed in clothes of black damask lined with the skins of white lambs,” who, after something mysterious had occurred, produced a silver cross, and, falling on his knees, with sobs and tears expressed his gratitude for having been permitted, after so long a time, to once more behold a Christian man. On being asked who he was, this old man replied: “I am, my brother, a poor Portuguese Christian, by name Vasco Calvo, brother of Diogo Calvo who was captain of the ship of Dom Nuno Manoel, a native of Alcouchete, it being now twenty-seven years that I was made a captive with Tomé Pires, whom Lopo Soares sent as ambassador to this Chinese king, and who afterwards came to a

Achín, with whom he was at war. There is a suspicious similarity about these two accounts. Then we are informed that Fernão Mendez, after visiting Pahang and Patani, left the latter place on 9th May 1540 with Antonio de Faria de Sousa on a voyage to Hainan, during which the most marvellous adventures with pirates were experienced. I have only to remark, that no mention is made by any of the above writers of such a person as Antonio de Faria de Sousa, whom I believe to be as much a product of the writer’s brain as the various adventures with pirates, etc., that he is said to have met with. In the Peregrinações the dates of events are mostly unrecorded; but where they are given, especially in the later portion of the book, they are in many cases manifestly absurd and incorrect. It is much to be regretted that no competent scholar has undertaken to properly edit the Peregrinações, showing how much is fiction and how much fact, and of the fact how much is from personal experience and how much stolen from earlier writers. I am astonished that such an able scholar as Mr. Major, in his Introduction to the Hakluyt Society’s edition of Mendez, should, after referring to Mendez Pinto’s alleged adventures in China, conclude: “Upon the whole, his remarks leave no doubt, we think, of the truth of his having been an eye-witness of what he records.”

41 Chap. xxii. of the English translation. 42 Chap. xxi. of Eng. trans. 43 Simão de Andrade. (See supra.) 44 There were nearly double that number, according to Christovão Vieyra (f. 111v.). 45 A pure invention, not one of the unfortunate captives having been removed from Canton. 46 A characteristic touch, intended to give verisimilitude to the narrative. 47 See next paragraph. 48 This may be a fact; I cannot tell. (See next paragraph.) 49 It is not said when he died; but even if it had been in 1544 that would make Thomé Pires’s banishment date from 1517, the year in which he arrived in China with Fernão Perez de Andrade! 50 Chap. xxviii. of Eng. trans. 51 Cf. note supra regarding “the city of Chai.” 52 It was not to “this Chinese king” (Kiahting) but to his predecessor Chingthi that Thomé Pires was sent on embassy.
miserable end through a disturbance by a Portuguese captain." Then, the two having mingled their tears and taken their seats on the ground, "beginning again to tell me all the story of his sufferings, he related to me the whole course of his life, and all the rest that had happened, since he left this kingdom until then, and also regarding the death of the ambassador Tomé Pires and of the rest whom Fernão Pereira Dandrada left with him in Canton to go to the king of China, the which, as he told it to me, does not conform much with what our historians have written." This pseudo Vasco Calvo then conducts Fernão Mendes to his house, to which also his companions are invited, and there they are introduced to their host's wife and four children (two boys and two girls), who after dinner offer prayer in Portuguese before an altar in a secret oratory. Another very touching story: but the writer appears to have forgotten what he had previously invented regarding Thome Pires and so contradicts himself; while, as to Vasco Calvo, we may take it as absolutely certain that he died in prison in Canton within a year or two of writing the letter of 1536 given below.

I shall not enter upon the question of the genuineness of other alleged adventures of Fernão Mendes Pinto in China, Siam, etc., nor discuss whether he was or was not in Japan with Xavier; but I would refer to two statements of his, which, having been recorded as history by Faria y Sousa in his Asia Portuguesa, are still being put forward by writers on the history of China as authentic. These statements are to be found in chapter cxxxi. of the Peregrinagem, where we read that in the year 1542 there took place at "Liampo," — where there was a settlement of three thousand Christians, twelve hundred of whom were Portuguese, and which was practically a Portuguese colony, with a governor, judges and other officials, hospitals, etc., — a terrible massacre by the Chinese, in which twelve thousand Christians (eight hundred of them Portuguese) perished, and immense damage was done to property. Two years later, it is stated, the Portuguese succeeded in establishing a colony at Chinechow; but after two years and a half of peaceful trade a rising of the Chinese took place here also, only thirty out of five hundred Portuguese escaping with their lives, their ships and other property being burnt or plundered. I consider both these stories to be pure fiction, without any basis in fact; and I even feel very doubtful whether such an island as "Lampacau" ever existed except in the brain of the writer.

The Chinese annals do not appear to contain much regarding the early intercourse of the Portuguese with China; and some of their statements are far from correct. The only record of

---

35 Who, we had previously been told, lived for twenty-seven years married in "Sampitay!"

37 Cf. int. al., Sir A. Ljungstedt's Historical Sketch of the Portuguese Settlements in China, pp. 2-9, etc.; the Viscount de Santarem's Memoria sobre o Estatamento de Macao, p. 14; Wells Williams' Middle Kingdom, II, p. 428; Prof. E. K. Douglas's China (Story of the Nations), p. 48; Danvers's Portugal in India, I, pp. 457, 486; Denza's Treaty Ports of China and Japan, p. 329.

38 Chap. Ixxviii. of the Eng. trans. (See also chap. lxvi. of orig., xxviii. of Eng. trans.)

39 That is, Ningpo. (See Yule's Hobson-Johnson, s. v. 'Liampo.') Barros states, in referring to the riches of China: "Finally it is so great, and so well provided with everything, that some of our people, being in a port near the city of Ningpo, in three months saw loaded four hundred bahars of floss and woven silk, which are one thousand three hundred quintals of ours." (Doc. I., IX. i.) As Barros's Primeira Decada was published in 1562, it is evident that the Portuguese had visited Ningpo some years previously; but I have found no record of the exact date of their first visit to that place.

40 The Eng. trans. has "twelve hundred."" That is, twelve hundred.

41 Where, according to the Peregrinagem, the Portuguese carried on trade with the Chinese from some time before 1534 until 1557, when Macao was granted to them by the mandarins of Canton. (Cf. Medi. King. II, p. 428; Ljungstedt, op. cit. p. 9.)

42 M. Fautrier, in his Histoire des Relations Politiques de la Chine avec les Puissances Occidentales (p. 42 n.), after a short and not very correct reference to the embassy of 1517, says: — "Les Annales de Canton disent que la première ambassade Yong-lo (1425) le roi de Portugal, royauté de l'océan occidental, envoyait un ambassadeur en Chine; et que trois années après (en 1428) il lui en envoyait un autre avec un tribut. Celles-ci, si elles étaient réelles, auraient précédé celles de Thomas Firis. There is, of course, some great confusion here.

43 Wells Williams quotes in his Medi. King. II, p. 427, the following as a record of a Chinese work, and adds that the record is still good authority in the general opinion of the natives: — "During the reign of Chingith [1506] foreign vessels from the West, called Fab-Ian-Ki [Franks], who said that they had tribute, abruptly entered the Bogue and by their tremendously loud guns, shook the place far and near. This was reported at court, and an order returned to drive them away immediately and stop their trade."
any value that I have been able to find is one translated by the late Mr. W. F. Mayers in Notes and Queries on China and Japan. Mr. Mayers writes:—

The following brief contemporaneous account of the arrival of Fernão Pires de Andrade at Canton in 1517, when Europeans for the first time landed in China, does not appear to have hitherto noticed, and is not without interest, as the earliest Chinese mention of European visitors. It is quoted in a work on the Art of War, published under the Ming Dynasty, A. D. 1621, in the course of a description of cannon and firearms:—

"Ku Ying-siang says as follows:—Fu-lang-ki is the name of a country, not the name of a gun. In the year ting-ch’ou of the reign Cheng-te (A. D. 1517) I was in office as Supervisor in Kwang-tung, and was Acting Commissioner for Maritime affairs. There suddenly arrived [at this time] two large seagoing vessels, which came straight to the Hwai-yuan (cherishing-those-from-asfar) post-station at the city of Canton, giving out that they had brought tribute from the country of Fu-lang-ki [Feringhi, Franks]. The master of the vessels was named ka-pi-tan. The people on board all had prominent noses and deeply-sunk eyes, wearing folds of white cloth around their heads, like the costume of the Mohammedans. Report was at once made to the Viceroy, His Excellency Chi’en Si-hien, who thereupon honoured Canton with his presence, and who gave orders that, as these people knew nothing of etiquette, they should be instructed for three days in the proper ceremonies at the Kwang Hiao Sze (the Mohammedan Mosque); after which they were introduced. It being found that the Ta Ming Hwei Tien [collected Ordinances of the Ming Dynasty] contain no mention whatever of tribute being received from the nation in question, a full report of the matter was transmitted to His Majesty, who consented to the transmission of the individuals and presents to the Board of Rites. At this time His Majesty was engaged in a tour in the Southern Provinces, and the foreigners were left in the same lodging with myself for close upon a year. When his present Majesty ascended the Throne [i.e., the Emperor Shih Tsung, who succeeded to the Throne in 1521], in consequence of disrespectful conduct on the part of the interpreters was subjected to capital punishment and his men were sent back in custody to Canton, and expelled beyond the frontiers of the Province. During the long stay made by these people at Canton they manifested particular fondness for the study of the Buddhist writings. Their guns were made of iron, and five or six feet in length . . . ."

Who Ku Ying-siang was is not stated in the work from which the above extract is taken; but in all probability, he was one of the progenitors of the celebrated Ku Yen-wu of the present dynasty, in whose biography mention is made of an ancestor who held office at Canton during the reign Cheng Te.

The two large vessels referred to are obviously those which the early Portuguese chroniclers themselves speak of as having been taken to Canton, the two remaining ships and four Malay junk belonging to the Expedition having been left at anchor near the island of St. John’s.

45 "The residence of the Viceroys being at that time Shao-k’ing Fu," says Mr. Mayers in a footnote; but, according to the statement of Christovão Vieira (f. 129), it was at Wuchau that the chief provincial officials resided.
46 The Portuguese historians say nothing of this.
47 Mayers appends the following footnote:—"This was Thomé Pires, who was despatched in charge of the presents from Canton." This is an error; it was the native interpreters who were beheaded, as stated by Christovão Vieira in his letter infra (f. 112).
48 Cf. with this statement of Vasco Calvo in his letter infra (f. 151v.). 49 This is a mistake. See infra.
Though interesting, the extract translated by Mr. Mayers adds but little to our knowledge; and it certainly seems strange that there should not exist among the Chinese annals a full record of the events connected with the first and subsequent visits of the Portuguese to China, especially as the foreigners suffered so severely at the hands of the Celestials,—a fact which the Chinese historians would, one would think, not be unwilling to leave on record.

It was not until after the agreement made in 1554 between Leonel de Sousa and the Canton officials that the Portuguese appear to have been able to obtain detailed and more or less accurate information regarding China and its people. The account given by Castanheda in cap. xxvii. of his Libro III., printed in 1553, is very meagre and not free from errors. The description of Canton in cap. xxxix., however, is full and interesting and, I should think, generally accurate.

The next printed account of China seems to have been that given in the 1561 edition of Francisco Alvares's Historia de Ethiopia, an English translation of which will be found in Major's Introduction to the Hakluyt Society's edition of Mendoza mentioned below, pp. xxxix-li. This relation was given at Malacca in the college of the Jesuits by a man who had been six years a captive in China, and its special value lies in the fact that the narrator describes only what came within his personal cognisance.

A couple of years after the above anonymous relation appeared in print Barros's Decada Terceira was published (1563); and in the seventh chapter of the second book of this decade the great Portuguese historiographer gives, in connection with the visit of Fernão Pires de Andrade, a description of China in general and of Canton in particular. The description of China is, by his own admission, a mere summary; but the author has done his best to make it accurate, having, for this purpose, made use of original documents. The same remark may apply to his description of Canton, which is very much briefer that that of Castanheda.

In 1589-70 there appeared at Evora a small quarto volume in black-letter intitled Tractado em que se contam muito por estes as cousas da China, e suas particularidades, & assi do regno dormus coposto por el. R. Padre frey Gaspar da Cruz de ordem de sant Domingos. Dirigido ao muito paeoso Rey dom Sebastian nosso seño. From the Prologue by the printer, Andre de Burgos, we learn that Dom Francisco Henriquez, captain of Malacca, had some short time previously sent to the youthful king of Portugal a "brief relation" of the things of China; but of this we know nothing more. The "tractate" of Gaspar da Cruz comprises twenty-nine chapters, the author relating

17 The letters of Christovão Vieira and Vasco Cabo were evidently unknown to Castanheda even in 1538. (Cf. footnote supra, and see below as to Barros's use of them.)
18 Possibly he and Celso Porto Pereira (see infra) were among those captured by the Chinese in 1549, as described above.
19 Dom. III., II. vi. and vii., where he explains that he treats fully of the country in his Geography, which, however, seems never to have been completed, and every vestige of which has now unhappily disappeared.
20 From Dom. I., IX. i., we learn that Barros had in his possession "a book of cosmography of the Chijs printed by them, with all the situation of the country in the form of an itinerary, which was brought to us from there, and interpreted by a Chijs, whom we had for that purpose." Again, in Dom. III., II. viii., after referring to the Great Wall of China, he adds—"This wall is entered in a geographical map of that whole country, made by the same Chijs, where are located all the mountains, rivers, cities, towns, with their names written in the letters of those people, the which we ordered to be brought from there with a Chijs for the interpretation thereof and of some of their books, which we also obtained. And before this map we had acquired a book of cosmography of small size with tables of the situation of the country, and a commentary upon them in the manner of an itinerary; and although this wall was not depicted therein, we obtained information regarding it." What became of these books and map, I am unable to say.
21 The details he gives regarding this city, Barros says (Dom. III., II. vii.), he obtained, not only from Fernão Pires de Andrade and others of his company, but "from a drawing of it from nature, which they brought to us from there." I fear that there is little likelihood that this interesting drawing is still in existence.
22 The title-page bears the date 1569, but the colophon has 1570.
23 According to Couto (Dom. IX. xvii.) D. Francisco Henriquez was captain of Malacca from November 1573 to November 1574, when he died; but I can find no reference to his occupying the post earlier.
24 This is evidently the Relação da China mentioned by Barbosa Machado (Bibliotheca Lusitana, II. p. 162), who quotes from Ant. de Leon Pinelo's Bibliotheca Oriental, and confesses his ignorance regarding the author and the work.
25 Regarding whom see Introd. to Hak. Soc. ed. of Mendoza, p. ii.
not only what he himself saw during his residence in China (1566-1569?), but information received from various Portuguese who from time to time succeeded in escaping from captivity. The translated summary given in Purchas's Pilgrimes, III. pp. 166-198, conveys a very fair idea of the value of this work.

Among the escaped captives met by Gaspar da Cruz during his stay in China was one Galiote (or Galeotto) Pereira, a brother of the first Count of Feira, from whom he obtained various items of information regarding the interior of the country. This man also wrote a detailed account of his adventures in China, which, curiously enough, was published in the form of an abbreviated translation into Italian some years before the tractate of Gaspar da Cruz appeared. The title of this work is *Alcune cose del paese de la China saputi de certi Portoghesi ch'ivi furon fatti schiavi e questo fu cavato d'un trattato che fece Galeote Pereira* Gentil uomo persona di molto credito il quale stette prigione nel sudetto luogo Tuchien*80* alcuni anni. (Venetia per Michele Tramezzino, 1565.) An abbreviated translation of this by R. Willes was printed by Richard Eden in his History of Travails in the West and East Indies in 1577; and this was reprinted by Hakluyt in his Principal Navigations, etc., II., II., pp. 68-80, and again, still further abbreviated, by Purchas in his Pilgrimes, III., pp. 199-209.81 Like the anonymous relation referred to above, this man's narrative is of especial value as being drawn from his personal observations.

The last work to which I shall refer is the Historia delas Cosas mas notables, Ritos y Costumbres. Del gran Reyno della China, sabidas asi por los libros delos mismos Chinas, como por relacion de Religiosos y otras personas que en dicho Reyno. Hecha y ordenada por el muy r. p. maestro Fr. Iuan Gonzales de Mendoza della Orden de S. Agustin, . . . . . . En Roma, . . . . . . 1565. As the early English translation of this work, by R. Parke, was reprinted by the Hakluyt Society in 1853-54, edited (not very satisfactorily) by Sir G. T. Staunton, with an admirable Introduction by Mr. R. H. Major,82 I need say little regarding it, beyond the fact that the author has copied largely from previous writers, besides giving the experiences of himself and his companions and other missionaries to China. It will always be of value and interest; and, as Mr. Major points out, it was the earliest detailed account of China ever published in the English language.

I now come to consider the two letters, of which the text and translation are given below. The copies from which the transcript are made are contained in a small quarto manuscript volume in the Bibliothèque Nationale, Paris.83 It is bound in vellum, and has written on the back "12 — Historia dos reis de Bisnaga," while on the front of the cover are the words "Coronica de Bisnaga y Relacion dela china," and below "no 7." On the flyleaf is written "St. Germain franço. 1592;" and there is a modern label affixed, lettered "Port. 65."84 On folio 1 at the top of the page is written "St. Germani apratis N. 2254." From this it is evident that the volume once formed a part of the library of the famous Benedictine monastery of St. Germain-des-Prés near Paris; but how it got there, I am

---

80 Of which the British Museum Library does not possess a copy. (I quote the title from Barbosa Machado, *Bibl. Lusit.,* II. p. 332.) Nor is the book mentioned in H. Cordier's *Bibliotheca Sinica.*

81 Barbosa Machado (loc. cit.) says that the writer was a prisoner in "Tuchien;" but Gaspar da Cruz (cap. viii.) states that Gal. Pereira was imprisoned in "the city of Caí;" which, as I have mentioned above, was an old name for Hangchau. ("Tuchien" may be a misprint for "Fuchien." — Fuchan.)

82 Major, in his Intro. to the Hak. Soc. ed. of Mendoza, pp. liii.-lvi., has quoted copious extracts.

83 In view of the fact Major has given, on pp. xxxi.-xxxvi. of this Introduction, an accurate account of the facts connected with the first visits of the Portuguese to China, it is all the more remarkable that later writers, such as Wells Williams, Douglas and Dauver, should (as mentioned above) have repeated the erroneous statements of Ljungstedt. Major refers (p. xxxv.), on the authority of Barros, to the letters received from the prisoners in Canton; but he was evidently not aware that copies of them were still extant. He also, strangely enough, refers to Remusat as giving "some interesting details" regarding Thibé Fires, the fact being that the French scholar has simply copied these details from Barros and added Mendes Pinto's fabrications. (See *Biographie Universelle,* tome 23, p. 806.)

84 See brief description of it in Morel-Fatio's *Catalogue des Manuscrits Espagnols et des Manuscrits Portugais,* p. 327.

85 This is the numbering of 1660; its number is now 56.
unable to say.\textsuperscript{85} Folios 1-102 contain the \textit{Chronica dos Reis de Bisnaga}\textsuperscript{86} written in an archaic hand; while folios 103-153, which are of thinner paper, contain the two letters from China, the writing being of an entirely different and more modern character.

Apart from their intrinsic value owing to the information which they furnish, these letters possess a peculiar interest from the fact that they were utilized by the great Portuguese Historian \textit{João de Barros} when compiling the \textit{Third Decade} of his \textit{Asia}. In chapters i. and ii. of the sixth book of that Decade Barros has in several places copied almost verbatim from the letter of Christovão Vieira;\textsuperscript{87} while near the end of the second chapter he says: \textit{“And according to two letters which our people received thence two or three years ago\textsuperscript{88} from these two men, Vasco Calvo, brother of Diogo Calvo, and Christovão Vieira, who were imprisoned in Canton,\textsuperscript{89} etc.”} Again, in chap. v. of bk. VIII., he says: \textit{“And according to what some of our people afterwards wrote;” and then follow further quotations from Christovão Vieira’s letter.}

Of the writers of the letters I have no information beyond what they themselves furnish and the fact of the relationship of one of them to Diogo Calvo, as already mentioned. What positions they occupied I do not know; but they both seem to have been men of some social standing and education. With regard to the letters themselves, their value and interest can be judged by the translation I have given.\textsuperscript{90} I may point out, however, that they contain, so far as I know, the earliest detailed account of China and the manners and customs of its inhabitants written after the first visits of the Portuguese to that empire. Considering that the writers were prisoners in the “hells” of Canton during practically the whole of their enforced residence in China, it is not surprising that some matters (such, for instance, as the religious worship of the Chinese) should not have come within their ken: the wonder is, that they should have managed to acquire so much information under such unfavorable circumstances, and should have lived to commit it to writing. It is also marvellous that even one of the duplicate sets of their letters should (even after many years) have reached the hands of the Portuguese. When one remembers the absolutely helpless condition in which the writers were at the time when they penned these letters, the full details which they furnish for the capture by the Portuguese of Canton and a large part of China itself, and their remarks regarding the ease with which the Chinese could be conquered, read somewhat strangely. The descriptions of the sea fights between the Chinese and Portuguese, ending so disastrously for the latter, tally closely with those given by the Portuguese historians; and the “casualty lists,” though now of little value, must have possessed a melancholy interest at the time for the relatives and friends of the persons named. It is unfortunate that so little information is given regarding the journey of the ambassador to Pekin: the reason being, that this had been described in other letters, which have, apparently, been lost. The description of Canton shows that even the terrible siege and sack of that city by the Manchus in 1650 caused little general change in its outward appearance.

\textsuperscript{85} By a decision of the Committee of Public Instruction (23rd April 1795), the manuscripts of St. Germain were deposited in the Bibliothèque Nationale in 1796 and 1798. (Morel-Patio, Cat., Introd., p. x.)

\textsuperscript{86} This important MS. was printed for the first time in 1897 by the Sociedade de Geografia of Lisbon in connection with the quatercentenary of the discovery of India, being edited with an excellent Introduction by Sr. David Lopes. An English translation, edited with a valuable Introduction by Mr. Robert Sewell, I. C. S. (R. E. J.), was published in 1900 under the title of \textit{A Forgotten Empire}.

\textsuperscript{87} Cf. for instance the concluding portion of chap. i. with f. 107 of the letter infra.

\textsuperscript{88} Or “received two or three years afterwards.” (The orig. has “\textit{dahe a deus ou tres annos,}”.) If the latter is the meaning (and so Major translates it in \textit{Introd.} to Hak. Soc. ed. of Mendoza, p. xxxvi.), the statement cannot be correct, since the letters were not written until a dozen to fifteen years afterwards; while, if the other meaning is intended, it is strange that the letters, dispatched apparently at the end of 1556, did not reach “our people” until about 1560. (Barros’s \textit{Third Decade} was published in 1563.)

\textsuperscript{89} As will be seen, the Portuguese original is marked by an absence of punctuation and of capitals at the commencement of sentences, rendering the sense difficult of comprehension. The copyist also has in places blundered. I have tried to make the translation as literal as possible. To Sr. David Lopes of Lisbon I have to express my indebtedness for the kind help he has rendered me in the elucidation of several passages.
It will be noticed that in both the letters (in the first one especially) the titles of various 
Chinese officials are frequently mentioned. Some of these can at once be identified; but others are 
somewhat difficult of explanation. I append a list, giving the various forms of spelling under which 
each title occurs:

(1) pocheney, pochanci, pochuney, pochacy, pocheey, pochacy.
(2) anchaeey, anchaeey, anchaezi, anchunee, anchueey, anchianee, anchanee.
(3) chee, cheh, cuhy, cuhi, chuhi, chehhi, chuhi.
(4) tutoo.
(5) conqom, conquo, conquao, conqom.
(6) compim, campym.
(7) chongpim, chongpi.
(8) haytao, oytao, aytao.
(9) cimeey, chii, ciici.
(10) toci.
(11) thoeey, toemie, tomacie.
(12) amelleace.
(13) lentocim.
(14) conconcapezi.
(15) pio.
(16) ampocheey, ampocheem.
(17) tiquo, tigo.
(18) pachain.
(19) chincheey.
(20) tuitacii.

Cassianeda, in his *Libro III.* (which was published in 1553), gives in cap. xxvii. a brief 
account of the manners and customs of the Chinese, in the course of which he says:

The King of China dispatches no matter of the government of his kingdom, and for all 
matters he has officials who govern for him. In justice, which is the chief depart-
ment of the kingdom, he has three great literate men who are called *coloub* and one is called the grand *colou*, the other the petty *colou*, and the other the lesser *colou*. These are old men and known for very good men, and come to merit these 
posts by letters and by goodness, and first serve in other lower offices until they get 
to be *tutoo*, who are governors of districts, and afterwards *achanciz*, who are secre-
taries, and hence they rise to be *colous*, which is the highest office. And these offices 
of *colous* come to be held by lowborn men, because nothing is taken into considera-
tion except that they be good men and literates. There are other offices that they call 
*tutoo*, and *conques* and *compins*; and all these three are called a council and govern 
cases, and the chief of them is the *tutao*; he has to be a literate man, an old and good 
mian; the *compim* is the second, and is captain of war and is not a literate; the *conques* 
is the third, and has charge of revenue affairs, and is the lowest of this council. With 
these goes another who is called *ceui*, who has to be a literate and known for a good 
mian: this one dispatches with the *tutao* the matters of justice, and has charge of
drawing up general inquiries and depositions which he sends to the king. And he has
great powers, and his office does not last more than a year; those of the others last for
a number of years. There are other offices inferior to these, which are called *puchancis,
amechacis, tocis, itoa, pios* who are admirals, and *ticos* who are employed I know not
how; and of each there are three—great, petty, and lesser.

Fr. Gaspar da Cruz, in cap. xvi. of his *Tractado da China*, printed in 1589-70, says that in
each province there were five principal officials.

The chief of the five is the governor, whom they call in their language *tutom*. To him are
referred all the affairs great and small of the whole province; and on account of the
authority and majesty of his person he does not reside where do the other *louthias*,
that he be not resorted to by them, and so may be more esteemed and feared. To him come
all the revenues of the provinces excepting the ordinary expenses. And by him both
the transactions and all the rents that are gathered and all that passes in the provinces
is referred and sent to court. The second dignity of the province is that of the comptrollers of revenue, who in their language are called *pohasari*. To this one is intrusted
the sending to collect throughout the whole province the taxes thereof, for which
he has many *louthias* under his jurisdiction, who are special officials for the transac-tions
and the collections of taxes. He provides all the ordinary expenses of the province,
and with the remainder goes to the *tutu*, in order that the *tutu* may go to the
court. He can intervene in the serious matters of the other inferior officials, and he
has power over them. To him also come all the affairs and transactions of the province
to be by him referred to the *tutu*. Another dignity below this is the chief justice,
whom they call in their language *anchasari*. And although there are many other officers
of justice, this one is over all, and by him the dispatches are distributed to the others
and everything relating to justice is referred to him, as to the one who has power over
the other inferior ones. Another dignity below this is that of the captain-major,
whom they call in their language *aitao*. To this *aitao* belongs the power to order the
men of war to be got ready, and all that may be necessary of ships, provisions and all
other apparatus against enemies and robbers; to him likewise appertain the affairs of
foreigners that do not relate to revenue. The fifth and last dignity of the great one-
and of the captain-major who puts into execution the matters of war and presides in the
flotillas that the *aitao* remaining on land orders is this: when it is of import, besides
putting matters into execution and order, if the business requires his presence, he
goes in person; and the affair may be so important that the *aitao* himself will go.
This one is called in the language of the country *luthisari*; and because these five
dignities are of very great authority and dignity, and that of the *tutu* exceeds those
of the others, the latter never goes out of his house for the conservation of his authority:
and when he does go out he goes with very great show and with a very great
company of officials and assistants.

Juan Gonzales de Mendoza, in his *Historia de la China*, 1er. III., 1er, ix., says that the
vicerey of each province was called *insanto*, and that the *comon*, or chief magistrate, was slightly
superior to him in rank. In any city where neither of the above resided there was the *tutu*
or magistrate. Then came the *pohasari*, or president of the council of revenue; the *tutos*,
captain-general of all the men of war; the *anchasari*, or president of civil and criminal justice; and the
*aitao*, or purveyor-general and president of the council of war. Besides the above, he says, there
were others of less dignity and jurisdiction, as follows: — The *sautos*, or chief standard-bearer; th-

\[\text{Footnotes:}\]

1 See also Panchus, *Pizg. III.* p. 183.
2 See Hobson-Jobson, *s. v. 'Lioms*, where the following is quoted for Baldwin's *Manual of the Foochow Dialect* —
3 Lutia . . . . (in Mandarin *Lo-yyë*) a general apppellative for an officer. It means 'Venerable Father.'
4 *Lootês* s? !
5 *Lootês* s? !
6 Probably *le tis*, general.
7 *Lootês* s? !
8 Evidently a misprint for *trasanto* = *tsâng-tish*, viceroy.
9 *Lootês* s? !
10 Perhaps *le tis*, both meaning standard.
pochim, or second treasurer; the autzati, or major; and the huaytay, tzia, and tonsay.\footnote{The editor of the Hakluyt Soc. Mendoza suggests that these three may represent "the koo-taus, or treasurer," "the che-taus, or secretary," and "taus, the intendant of circuits."} who were like justices of the king's court in Spain. Another official was the homdin,\footnote{Probably = hung-ting, a local assistant magistrate.} or visiting justice. Lastly, there were certain inferior officers, viz., the tampo,\footnote{Possibly = ching tang, principal officer.} who had charge of the supply of provisions and the fixing of prices for these; the tibico,\footnote{See Middle Kingdom, I. p. 439; Morrison's Chin.-Eng. Dict. p. 680.} who arrested and punished vagabonds and idlers; the quinche,\footnote{See Mid. King. I. p. 426; Mor., Chin.-Eng. Dict. p. 195. (In the Canton dialect quin is pronounced chue.)} or chief constable; and the chomata,\footnote{See Mor., Chin.-Eng. Dict. p. 499.} or keeper of the prison.

Reverting to the list I have given above, it will be seen that Christovão Vieyra, in ft. 120-120v. of his letter, describes the duties of some of the officials mentioned; and in ft. 117 he gives some details regarding their offices.

(1) pochimy, etc. — This is the pu-cheng ss' or pu-ching ss', literally "regulating-government commissioner," usually called the treasurer.\footnote{See Mid. King. I. p. 430; Mor., Chin.-Eng. Dict. p. 195. (In the Canton dialect ss' is pronounced ss,)}

(2) anchoy, etc. — This is the nyan-choo ss' or an-ch'a ss', the "criminal judge."\footnote{See Mid. King. I. p. 425; Mor., Chin.-Eng. Dict. p. 587.}

(3) echi, etc. — This seems to be the same as Mendoza's tzia. I am not certain as to what Chinese word or words it represents.

(4) tutao. — This is the tu-tung, or captain-general.\footnote{See Mor., Chin.-Eng. Dict. p. 499.}

(5) empo. etc. — I am uncertain regarding the identification of this. I think that either the first or second syllable must represent kung.\footnote{See Mor., Chin.-Eng. Dict. p. 820.} Mr. Watters, however, suggests chian-chiin, "general of Manchu forces."

(6) empoim, etc. — Morrison\footnote{See Mor., Chin.-Eng. Dict. p. 820.} has kung-ping, meaning "just, equitable," which may suggest an identification.

(7) choupim, etc. — This evidently represents shoo-pe, "a military officer, about the rank of major."\footnote{See Mor., Chin.-Eng. Dict. p. 820.}

(8) haytao, etc. — The first part of this word undoubtedly represents Hao, the sea;\footnote{See Mid. King. I. p. 426; Mor., Chin.-Eng. Dict. p. 195. (In the Canton dialect ta is pronounced to.)} and the last part seems to be for tao, or taw, head, chief.\footnote{See Mor., Chin.-Eng. Dict. p. 820.} Haytao can scarcely stand for Hao tao, which, according to Morrison,\footnote{See Mor., Chin.-Eng. Dict. p. 820.} means pirates.

(9) casuy, etc. — This, I think, represents kung tsoe, "the son of a nobleman, a term of respect like Master or Mister."\footnote{See Mor., Chin.-Eng. Dict. p. 820.}

(10) topi. — This perhaps stands for to ss' or too see, a military general officer.\footnote{See Mor., Chin.-Eng. Dict. p. 820.}

(11) escoy, etc. — There can hardly be any doubt, I think, that this represents tung see, an interpreter.\footnote{See Mor., Chin.-Eng. Dict. p. 820.}

(12) amelape. — This and Castanheida's amelhaoi seem to be variants of No. 2: otherwise I cannot explain them.

(13) lentoeim. — The last syllable of this word represents the Chinese ss' or see, a general term for government officers;\footnote{See Mor., Chin.-Eng. Dict. p. 820.} and the first two syllables must stand for leung tao, "an officer over the public granaries; a kind of commissary."\footnote{See Mor., Chin.-Eng. Dict. p. 820.}

(14) comconepapi. — This seems to be a combination of No. 5 and some other title that I cannot identify.\footnote{See Mor., Chin.-Eng. Dict. p. 820.}
(15) pio. — This is used only in reference to an official at Lantau, called "the pio of Nantó." Barros (Dec. III., II. viii.) says: "The pio . . . . was a man who filled a post, like among us that of admiral of the sea, and it was the name of the office, and not of the person." Unless there is some misapprehension regarding this title, the only explanation I can suggest is Chin. ping = soldiers, troops, army; and yâ or yée, which might mean an officer.

(16) ampochi, etc. — I cannot explain this.

(17) tiguo. — This also I cannot explain.

(18) pachain. — Perhaps this is intended for fâ-tsâng, an adjutant-general or post captain.¹⁸

(19) shimohae. — This apparently represents tsing-chë, "the hoppo writers."¹⁹

(20) tallaoč. — The first part of this word I cannot explain; but the last syllable evidently stands for kâng, "a watch of the night," kâng leon being "a watchman at night."²⁰

With regard to Tamão or the Ilha de Veniaga, where the Portuguese are said to have first landed, there seems to be some strange misapprehension or confusion. Sir Andrew Ljungstedt, in his Historical Sketch of the Portuguese Settlements in China, says (p. 7): — "Tamão, on the north-west coast of San-shan, was a renowned harbor, to which foreign and Chinese merchants resorted. . . . The ships lay moored at the foot of the hill in which Francis Xavier was [1552] interred. At the end of the monsoon all transactions were suspended, accounts settled, the port abandoned, and the island unoccupied, till the return of the merchants." No authority is given for these statements, the first of which has been copied by later writers,²¹ without apparently any attempt at verification. Castanheda tells us (IV. xxviii.) that "this island is three leagues from the coast, and the Chês call it Tamão, and we that of Veniaga; because in those parts they call the trade in merchandise veniaga;²² and in this island is carried on the trade in merchandise of the foreign merchants who come to China to trade, who lodge in a large town that there is there; and from there no one can go to any of the places on the coast without permission from the Council of Cantão, a city that is eighteen leagues from there; and even when they go they do not enter in, but lodge in the suburbs and there carry on their trade. And for the carrying out of this and the furnishing of the fleets that go to that quarter, the Pio, who is like the admiral of all that coast, resides in a town called Nantó that is three leagues from the Veniaga; and from there he informs the council of Cantão of the junks that come and whence they are and what they want, and what goods they carry; the council determines what is to be done, and if it is a new matter they at once write to the king in order that he may be advised of what passes." Castanheda also states that "the port of Nantó" "is situated at the entrance of a river a league in breadth, and along it up above is the city of Cantão a matter of twenty-five leagues from Nantó." Barros, who calls the island Tamão, Tamou, and Beniaga, only says that it was three leagues from land.

Now here we have certain definite distances given, viz., Tamão, 3 leagues from the coast; 18 from Canton, and 3 from "Nantó;" and this last 25 leagues by river from Canton. There is little difficulty in identifying "Nantó" with Lantau,²³ the large island at the entrance to the

¹⁸ See Mor., Chin.-Eng. Dict. p. 171.
¹⁹ E.g., Danvers, Port. in India, I. p. 338 n.
²² See footnote supra.
²³ Geronimo Roman, factor of the Philippines at Macao, commenting on a letter of Mateo Ricci's written in 1584, says: — "In an island called Lintao, which is situated near this town [Macao], there is an arsenal, the director or hâ-yâo of which is continually occupied in superintending the building and equipment of vessels: The island furnishes timber, but every other necessary for them has to be imported from the continent." (Hak. Soc. ed. of Mendoza's Hist. of China, Introd., p. lxxix.)
Chukiang; so that we must look for Tamão some three leagues in a westerly direction from Lantau. It will be seen at once that the island of Shangchwen (St. John’s) is quite out of the question, being much more than three leagues distant from Lantau. I have failed, however, to locate Tamão, a name which, apparently, represents the Chinese Tamun, to meaning great, and ma meaning water running through a passage between hills. There is, indeed, an island named Taimong entered in the Admiralty chart; but this is too far from Lantau; and, on the other hand, just south-west of Lantau are the islands of Lueng and Nautau, between which is the passage of Nautau-mun; but this could hardly have been Tamão. It should be possible, however, for someone having a good knowledge of the topography of the Canton river to locate the different places referred to.

In conclusion, I append in chronological order a list of the events referred to in the following letters for which dates are given by the writers:

1520. 23 Jan. Portuguese embassy leaves Canton for Peking (f. 104).
" May. Do. do. with king in Nanking (f. 104).
" ? Do. do. ordered to go to Peking (f. 104).
" 2 Aug. Do. do. sends letters to Canton (f. 104).
" ? Mandarin ill-used by Portuguese at Island of Trade (f. 105v.).
" Feb. King enters Peking, and falls ill the same day (ff. 104, 106).
" 21 (?) May. King dies (ff. 104, 106).
" 22 Embassy leaves Peking for Canton (f. 104).
" 22 Sept. Embassy arrives at Canton (f. 104).
" Portuguese ships arrive at Tamão, and Chinese attack Diego Chalvo (f. 107v.).
" " Junks with Portuguese arrive at Tamão, and are captured by Chinese (ff. 108, 118v.).
1522. [Aug.] Martim Affonso de Mello arrives at Tamão: fights, and has two ships captured (ff. 108v., 118v., 121).
" 14 Aug. Thomé Pires and others fettered and imprisoned (f. 106v.).
" 15 Do. do. do. have fetters struck off (f. 107).
" 1 Oct. Letters from Chinese court to king of Portugal, etc., handed to ngan-

cha-ss' (f. 110v.).
1523. Chinese prepare a fleet to watch for Portuguese (f. 118v.).
" 31 May. Junk with Chinese and Malaya leaves Canton for Patani with message to king of Malacca (f. 110v.).

---

34 In Linschoten’s map of the Eastern Seas (reproduced at p. 192 of the Hak. Soc. ed. of Saria’s Voyage to Japan) “L Vesinga,” and “Sanchoan” are distinctly shown as two separate islands. Moreover, Fernão Mendes Pinto, in chap. ccxxv. of his Peregrinações, says that Sanchez “is an island twenty-six leagues from the city of Cantaes, where trade was then [1559] carried on with the people of the country.”

35 Major, in his Introduction to the Hak. Soc. ed. of Mendoza, speaks, on p. xxxi., of “the island of Tamang;” but I can find no support for such a form.

BY E. C. TEMPLE.

(Continued from Vol. XXIX. p. 333.)

From this time, till Sunday the 29th of September, the carpenter and Smith continued to work upon the boat, and the people were busy in getting in from time to time what was thrown up from the wreck.

On the 6th of October they found a fowling piece, this was a joyful acquisition, and tho’ the barrel was much bent, it was soon made serviceable by the carpenter, and used with great success in shooting the birds.

On Friday, October 11, they perceived the gannets which had lately forsaken them, to hover again about the rocks, and were in hopes they would settle to lay their eggs, in which they were not disappointed.

On Sunday, October 20, Mr. Collet, Mr. Webb, and two others, ventured out once more on the float, and it was noon the next day before they could get in. They had now some rainy weather, which proved very acceptable, as they contrived to save some of the water for sea stores; but they were still in great want of bread, having lived many days on short allowance. At last they thought of building an oven, for they had some barrels of flour, in which attempt they succeeded, beyond their expectations, and were able to convert their flour into tolerable biscuit.

This biscuit was at length so near exhausted, that they were obliged to live upon a few ounces a day, without brandy, of which only a small quantity remained, and this they preserved inviolably for the use of the carpenter. They were also so short of water, that of this they were allowed but half a pint a day.

In this condition, however, they happily in a great degree preserved their health and vigour, and on the 16th of February they launched their boat, and called her the Happy Deliverance. The next day they got their little pittance of stores on board, and on the 18th they set sail from the rock, on which they had lived just seven months, and to which at parting they gave the name of Bird Island.

When they embarked in their boat, the Happy Deliverance, at Bird Island, they were twenty two in number, and had on board two butts and four hogsheads of water, two of the hogs that had come on shore from the ship alive, one firkin of butter, ninety pounds of biscuit, and about ten days salt provisions, at two ounces a man per day, but this was quite rotten and decayed.

The joy which they felt at putting off from this dreadful seat of famine and desolation was too great to be expressed, but it was of very short continuance, for as soon as they got to the mouth of the
little channel which led to the rock, the grapnails came home, and they were instantly driven on the rocks, where their boat which had cost seven months incessant labour, struck so often and with such violence, that they expected every moment to be beat to pieces. In this condition, however, it pleased him who the winds and waves obey, to relieve them; a swell of the sea took their boat so favourably, that it lifted her from the rock on which she was beating, and carrying her over the bar, left her in four fathom calm water. Here they immediately anchored to repair their damage, by securing the grapnails, and this was not effectually done till noon the next day.

The next day they stood away in order to make the river of St. Lucia, but for many days were not able to stem the current, which determined them to get back to the cape. They continued their course till Sunday March the 7th, when they were within about a mile of shore. They soon perceived several of the natives coming down from the mountains, which encouraged them to try to land, hoping to get some provisions of which they were in extreme want. Accordingly they sent four on shore at two different times, with some trifles to traffick with the natives, who were very kind, and brought down cattle to the sea shore, but the surf ran so high, that they could neither get provisions, nor the men on shore aboard. Thus they were starving in the sight of plenty, without prospect of relief.

It was now Monday, the 15th of March, and they determined at all events to make an attempt to get into the river, having no provision on board but water. Having waited therefore till it was high water, they sent the little boat to sound a-head, and following her at a proper distance, they at length ventured over the bar, and having happily received no damage, they anchored in two fathom and a half of water.

The natives had now come again to the shore, and the people on board got together some brass buttons, small bits of iron, nails, and copper hoops, as the most likely commodities to exchange for mutton and beef. The copper hoops they bent into bracelets to be worn on the legs and arms. With these baubles, which are prized by these poor savages, perhaps with as much reason as gold and gems are prized by those who hold their simplicity in contempt, the poor famished adventurers hastened on shore, and having soon made the natives understand what they wanted, and what return they would make, two bullocks were driven down to the beach with great expedition, and bartered for about one pound weight of copper hoops, and four brass buttons. Provisions of all kinds were procured in great plenty at the same rate, particularly milk, and a small grain that resembled Guinea wheat.

They continued on shore at this place near a fortnight, and found the natives an honest, open, harmless, and friendly people, ready to do any kind office that was in their power, and always dividing what they brought from the chase. Their manner of living and appearance were the same that have been so often described by those who have given account of the people called Hottentots, who inhabit the cape of Good Hope. It is remarkable, however, that among these People, who are all black, and woolly haired, there was a youth of about 12 or 14 years of age, who was quite white, and had regular European features, with fine light hair. The people of the sloop observed that he was treated like a servant, and also that he disappeared a few days before they left the coast, and therefore they suspected the natives were afraid they should carry him off, nor was one of the natives themselves to be seen the morning that they went away.12

On Monday, March 29, having laid in great plenty of provisions, they got safe over the bar, and made sail for the river St. Lucia, where they arrived on Tuesday, the 6th of April, having found the current more favourable than before.

Having got into the river, and anchored in three fathom water, they went on shore, but they found the People very different from those with whom they last traded.

Among other things, however, which they offered to barter, was a brass handle of a chest, and a piece of a bunten they made their colours of. These happened to be acceptable, and were purchased with two large bullocks, and six good fowls.

12 Nothing of this in Evan Jones's Diary.
The natives of this part of the coast, by their frequent dealings with the Europeans, had learned to be cleanly in their persons and food, dressing their hair up very neatly, and laying aside the grease and garbage with which the others anointed and adorned themselves; but at the same time they had learnt to be proud, crafty, deceitful and dishonest. However, the adventurers stayed with them till Sunday the 18th of April, and then getting on board they weighed and made sail.

Hitherto they had been united by adversity in the bond of friendship, but as they had now a near prospect of deliverance, their minds were less tender, and their different peculiarities of temper and opinion were indulged with less restraint. As they were sailing down the river, a dispute arose about the time and manner of crossing the bar, which was then very near, and it was carried so high, that some of them hauled down the sails, and let go the grapnel close to the brake of a sand, nine of them hoisted out the little boat, and went on shore, swearing that they would take their chance of getting to De la Goa by land, than be drowned in attempting to get over the bar. Those who remained in the sloop were by this accident reduced to very great distress; for being prevented by the delay they suffered from getting over the bar at high water, and the wind and tide both setting out of the river at a great rate, they were very soon forced on the breakers, where there was only eight feet of water, and the vessel drawing five she must inevitably have been grounded and beaten to pieces, before the river was half empty.

It happened, however, contrary to all expectation, that the vessel was brought safely out of the river.

From St. Lucia they took a new departure, and anchored in de la Goa road at 4 o'clock in the afternoon on Wednesday, the 31st of April, having again narrowly escaped shipwreck on some breakers the night before. Here they found the Rose galley, Capt. Chandler, trading for beef and ivory, and most of them begged a passage with him to Bombay.

After they had continued here above three weeks, three of the nine men who had deserted them at St. Lucia, were brought up the river in a small boat of the country, and reported that the other six were waiting, without any covering but a shirt and drawers, on the other side of the bay of Dalagoa, waiting for a boat to bring them over.

On board of the sloop there was the remainder of the chest of treasure, which had been broke open upon the rock, and plundered of what the sailors thought their share of it, upon a supposition, that on the loss of the ship it was become a common property. The officers told Capt. Chandler the affair, who went on board the sloop and secured the treasure, &c. without offering any violence to the people. The people, however, whom they left on board the sloop, fearing they might be taken into custody, weighed anchor and went away in the night.12

On the 25th of May, the officers and the rest of the crew, being on board the Rose galley, she weighed anchor, and proceeded not to Bombay, as was intended, but to Madagascar, the voyage having become necessary to compleat her cargo, because the natives of Dalagoa having sold Capt. Chandler 100 head of cattle, stole them all away again, and refused to restore them without a new consideration.

The Rose galley, soon after she was at sea, made a sail, which when they came up with proved to be the sloop, which had taken in the other six men, that were left behind at St. Lucia, they had been taken on board alive, but three of them were then dead, and two more died the next day.

Two people on board the sloop being convinced, that no harm was intended them, came on board the galley, one of these was the carpenter, to the honour of whose ingenuity be it recorded, that the sloop, which was built on a desolate rock, with the fragments of the ship, fitted together with such tools as were casually thrown on shore, would supply, he now sold to Capt. Chandler, for 2500 rupees, which is nearly equal to 500£, sterling money. From this time the sloop pursued her voyage in company with the galley, and both arrived at Madagascar after a pleasant voyage of two and twenty days.

12 This explains the hiatus between 29th April and 2nd May in the Diary and the confused entries for 2nd May.
Soon as they had anchored at Madagascar they had the pleasure to see the Canarvan, Capt. Hutchinson arrived there in his voyage from London to China, and as the treasure and packets, which had been preserved from the Doddington, were to be delivered at Madras, the officers went with them to the Canarvan, and delivered them, with other private effects, to the company's agents there, on the first of August, 1756.

Wreck of the 'Doddington' — History of the Survivors — 1755-1756.

An Abstract of

The proceedings of the ship Doddington, from the Sailing out of the Downs, Till Unfortunately Lost on Some Rocks on the Coast of Africa Distance From the Cape of Good Hope by the Medium of Six More Journals About 250 Leagues; And Afterwards a Daily Journal of the Transactions, of 23 [twenty three] of the People Who Was [were] Miraculously Saved upon an Uninhabited Island.

Ship Doddington in Distress.

April [April] 23d 1755 Sail'd out of the Down's in Company with the Pelham, Houghton, Streatham and Edgecole.14 In a Weeks Time got Clear of the Channel in which Time Found we had the Advantage of the [other] Ships in Sailing which I believe is [was] The Reason of Capt? Sampson's not keeping Company. The next Day, After leaving the Channel, lost Sight of our 4 Consort, and the Day Following Discover'd Severall [Several] Large Ships, Lying too off Brest, which we was [were] Inform'd by His Majesty's Ship Dunkirk, was Admiral Boscowens Fleet [Consisting] of Twelve Sail of the Line. We met with Nothing worth mentioning after, till the 14 of May When we Made the Island of [Lancerota], and the Next Day Sail'd Through Between the Islands of Teneriffe and Grand Canary And [on] the 20th in the Morning Saw a Sail Which Pro'ved to be the Houghton. And Soon After Made the Island of Bonanisto. The Next Morning we Both got into Porto Brav Bay, and Found Riding there [the] Pelham and Streatham who had Arrived, about two Hours Before us. On the 26th the Edgecole Arrive'd and Anchor'd here. The Next day we Sail'd in Company with the Pelham Houghton And Streatham, Leaving the Edgecole in the Bay. We kept Company with the Other Ships a Day, Steering S B E ½ E Which Course the Capt'd thought too far [Far] Easterly: Therefore Order'd [ours] South, by [which] Means Soon lost Sight of them and Saw them No More. We had a Very pleasant Passage of 7 Weeks from St Jago To the Making of the Cape Land, [and] On the 8th of July Took a Fresh Departure from Cape Lagullas, we Run to the Eward in the Latitude of 25° 30' and 36° 0' S, till I made [we had made by my Reckoning] 12° 16' 45' E! Difference of Longitude and by [the] Med of Six Other Journals 12° 15' 50' Longitude and 33° 0' S Latitude. This day at Noon, the Capt'd Order'd the Course to Be Alter'd from E to E NE. Had Dirty Squally Weather with the Wind from S S W to S S E and a very Large Sea. We had at this Time two Reefs in The Fore Topsails and three in the Main, and all the Stay Sails Stow'd, so that We Run about 6 or 7 Knots an Hour. At Midnight had About 70 Miles on the Board. A Quarter before one Thursday Morning the 17th of July The Ship Struck And in less than 20 Minutes was Entirely Wreck'd, Which is all the time any Body thought Themselves in Danger, Judging Our Selves to be 80 Leagues of the Land; And When the Ship Was a Ground Could not See the Least Appearance of it Seing Nothing but Breakers all Round which did Not discover two Minutes Before The Ship Struck. Upon Which the Helm was Put a Lee Immediately, but by the Time She Came Head to Wind, She was in the Midst of them. She went to pieces in so little Time, that I am Certain Half the People had not Time to get upon Deck, for the I got out of my

14 Here is an erasure. 15 James Samson in Hardy's Register, Ed. 1811. 16 I. e., 30° by present reckoning.
Cabbin the First Stroke She Gave by the Time I Gott Upon Deck, it was Falling in And Other Parts Driving to pieces Faster Than any person Can Imagine. Soon After I got on Deck, Spoke to the Capt? and Asked him Where he Thought we Were, for I must Own the Main Land Never Enter’d into my Head [Thoughts] Nor the Captains [neither], for the Answer he Made me was. He was Sure it Must be Some Rock in the Sea Which Never was laid down, in any Draught for [I did] prick’d of that Day at Noon before he Alter’d [the] Course, as I did my Self After, and Found my Self by my Reckoning to the E’ward of all the East and West Land, 50 Leagues [and dist] from the Land abrest of us 100 Leag. Therefore Saw no Danger in Steering E N E which Course by the Draught Still Run us from the Land. I must not Ommnt Mentioning One thing More the Captain Spoke to Me of Upon the quarter, which was the only part Above Water, and the Sea Every Time it Came Carried Some away with it, that he was Sure, this Must be the Rock The Dolphin was Lost Upon and not one Spar’d to Tell there Fate, which Certainly Would be the Case with us and Indeed Every Sea Threatened it. By this Time There Was not Above 30 People Left Upon the Quarter. He Bid me farewell and Said we Should meet in the Next World, Which Words Were Scarce out of his Mouth, When I was Wash’d off and believe Every Body Else, for I am of the Opinion Most that was Saved was Wash’d of by the Same Sea, for no less than 10 Mett in 3 or 4 Minutes time After they Came on Shore. Therefore was in Great Hopes Should have Seen the Captain As Soon as it was Day. But was Greatly Disappointed for he “har’d the Fate of 247 More, Only 28 Being Saved out of 270 and Most of them Very Much Bruised, my Self Escaping with a Few Scratches. As Fast as we Mett Gott Close together as we Could to keep us warm, for it Was Bitter Cold, and Nothing on but a Wett Shirt. We had not Seated our Selves long on the Sharp Rocks, before we Was Visityed by Some Seals, which Was Taken by the people who first Saw them, to be Wild Beasts. As they Came Nearer to us Some said they Saw 4 Leggs; and Took them to be Hogg’s, by their Making a Noise much like a Hogg. It was all this Time so Dark that you Could Scarcely See the Rocks we Satt we Satt upon, and now it was that I First Thought of the Main, thinking it Impossible for Wild Beasts to be On a Rock in the Sea, how Soever was Obliged to be Content’d with thing’in so Till day Light when we Found Ourselves upon a Small Island, tho’ it Scarse Deserves the Name, distant from the Main Land about 2 Leagues Surrounded by Several Rocks, Some of them two Miles in the Offing on Which the Ship Struck. Soon After day Light Call’d the people alltogether, Found Them to be The Following Persons.

SOME NOTES ON LADAKHI CURRENCY.

BY A. H. FRANCKE.

With reference to Colonel Temple's paper on the Beginnings of Currency, ante, Vol. XXIX. pp. 29 ff., 61 ff., I would like to make a few remarks from my experiences and researches in Ladakh. Before the days of the Dogra War, say 60 years ago, there do not seem to have been many silver coins in the country. The royal treasure was in ingots of silver and the revenue was paid in kind, consisting chiefly of hides, grain, butter and so on, sent to the king's household. Even at the present day it is almost only in Leh that the currency is in silver, i.e., in Indian money. Elsewhere in the villages barter—pure and simple—is still the rule.

However, once a year the taxes due to the Maharaja of Kashmir have to be paid in silver, and for this purpose Rupees have to be collected. This is managed in the village of Kbalatae in the following manner. The people take all their spare grain and dried apricots to the Salt Lakes and there they effect an exchange in salt, thus:

They have a measure of capacity called 'abo.

Four 'abo of grain equal five 'abo of salt; or two 'abo of apricots equal one 'abo of salt. The salt is then taken to Kargil and Baltistan, where rupees are procurable and there exchanged at 24 'abo for the rupee. The rupees when received by the Khalsa sepas are not of much use to him, except for the payment of his revenue, and then only to save him from the inconveniences he would incur if he were to tender his grain or apricots instead. Here we have rather a neat instance where salt in a certain recognised measure is the currency, even where the object is to procure a fixed amount of definite coins.

As regards the ancient tea-money of Tibet, there is a very interesting survival of it in one of the modern Tibetan coins called jau. This name means "a little tea," and was probably once equal in value to a small tea-brick. At the present day, the value of the jau is 3 annas 3 pices.

It is also interesting to mention here that the Tibetan word "rich," phyugpo, means "possessing many cattle," being derived directly from phyugs, cattle. This direct analogy to pecunia is most interesting.

NOTES AND QUERIES.

Here are some useful quotations for the history of this well-known Anglo-Indianism.

1576. — Only warning them not to touch the houses or the substranean storehouses (gudões). — Commentaries of Dalboquerque, Hak. Soc. Ed. Vol. III. p. 127. These are the same gudões as are referred to by Corrèa, 1561, in the passage quoted in translation by Yule, H.-J., s. v. godown.

1618. — Was given me old ruined brick house or godung . . . . . . the same goods to be locked up in the gaddones . . . . the one half of the charges of building and purchasing a godown and houses. — Foster, Letters of the E. I. C. Vol. III. pp. 109, 159, 181.

1618. — Doth promise that if the English will come and trade or build a godown they shall pay no duties at all. — Foster, Letters of the E. I. C. Vol. IV. p. 213. But the Editor has queried the word godown here, otherwise it is the earliest quoted instance of the word in its modern Anglo-Indian form.

Preparations for the Pilgrimage to Mecca. Renewal of Allogianco.

Pilgrimage — Treaty of Hudeibiya — Conquest of Mecca — Messages from Arab Tribes — Conversions — Expedition against the Greek army — Tabuk — Renunciation of treaties (bar'da) — Deuteronomic revelations.

The successes gained in the last few years had obliterated the shame of the Uhud disaster. The enemies of Islam in and around Medina had been vanquished, and the joint attack of the Qureish and their allies against the town had been repelled. Muhammad's power was fast approaching its apogee, and he felt himself strong enough to venture pushing his authority right into the very heart of his enemies. To enter as conqueror into the city, in which he had for many years lived the life of an outcast, appeared like a bold dream. Muhammad was, therefore, careful to disguise his intention by suggesting a peaceful pilgrimage to the Ka'ba. Even this idea had to be broached with great caution, and he endeavoured to suggest it in an address, which forms the largest portion of Sura xxii. This sermon is introduced by some general remarks touching upon the difference between believers and infidels, and the expectations of both classes hereafter.

The compromise made with the heterodox of various types in two previous Medinian revelations, viz., that the Jews, Baptists, Christians and Magicians could be regarded under certain circumstances as believers, is now abandoned, and they are ranked among the infidels (v. 17), whom Allah shall place in contrast to true believers on the Day of Resurrection. The topic of the Hajj is then introduced in a rebuke lanced against the Meccans for preventing Moslems from visiting the sacred spot, which was established "for all mankind (i.e., Arabs) alike, and the sojourner and the stranger" (v. 23). Those who might eye the proposal of worshipping at the shrine of Hobar with religious scruples are reminded that the place was originally established for Abraham with the injunction to shun idolatry, to keep "my house" pure for those making the prescribed circuits, to promote pilgrimage, and to "proclaim the name of Allah therein" (26-29). With these words Muhammad not only boldly claimed the Ka'ba, but also the heathen ritual for Islam — a masterpiece of diplomacy. Another noteworthy feature of this speech is that Allah, to whose service the ritual is to be transferred, officially takes the place of Rabbika. That this is not a mere accident will be shown by the following instances. In verse 31 we find the "sacred things of Allah," in the verses 33 and 37 "the rites of Allah." In the verses 35, 36, 37, 41 the proclamation of the name of Allah (see verse 29) is again touched upon either in the form of a statement or an admonition. In verse 41 Muhammad places in the mouth of those who had fled with him from Mecca the words: Our Lord is Allah. One cannot fail to see in this speech the efforts made to transplant the Meccan shrine and the ceremonies belonging to it into the bosom of the Moslem church. It is now easily intelligible why, in the treaty concluded with the Qureish at Hudeibiya (A. 6), which precluded Muhammad from entering Mecca that year, he raised no objection to the demand of the pagan penitentiary to have the document initiated by the formula: In thy name, O Allah, instead of the usual In the name of Allah. Any difference between these two formulas had now ceased to exist, and far from losing prestige, he had gained considerably. It is, therefore, wrong to place the verses 39-42 before the battle of Badr. A special divine permission to fight the infidels, as Weil and Nöldeke assume, is not to be found in this revelation. This question had already been settled in Sura ii. 214-215 on the occasion of the illegal expedition of Nakhlah, when the jihād was laid down as a command.

50 Nöldeke, Q. 158, regarda vv. 1-24 as Meccan, v. 17 is, however, Medinian on account of... 51 ii. 30; v. 73. 52 See Snouck Hurgronje, Het Meekmakahe Frest, p. 29. 53 As to the text of the treaty see Sprenger, III. p. 246. 54 Weil, Einleitung, p. 80; Nöldeke, p. 166; see Hish, 313 with doubtful authority.
Somewhat older than this is the address contained in the verses 48 to 59, but it cannot be of Meccan origin, because in v. 52 "those in whose heart is sickness and whose hearts are hardened (the Jews)" are mentioned. Verse 51 is generally explained by Muslim teachers as replacing the objectionable verses iii. 19–20 which Muhammad was, according to tradition, obliged to expunge owing to their semi-pagan character. The verse is, however, nothing but a reflex of Zach. iii, 1, very popular in Jewish liturgy, and which Muhammad found wonderfully adaptable to his own career. Now verse 55 re-echoes Zach. xiv. 9 of even greater liturgical popularity, and therefore also speaks for the Mosaic origin of the group in question, which probably dates from shortly after the battle of Uhud (v. 57).

With regard to the last portion (vv. 72–78) of the süra we can only assume that it was placed here for the sake of the beginning, which is the same as in the verses 1 and 48. The mithal of verse 72 probably taunts the Meccans with their alleged success obtained at Ḥudaybiyya. As the verses 76–78 point to a well arranged divine service, they can hardly be older than the group 48–59.

To an incident which happened shortly before the conquest of Mecca the traditionists refer the verses Surát 30 v. 32–44, dealing with the punishment meted out to a thief. There is hardly anything better to be said about the origin of these verses.

An interesting retrospect on the allegiance sworn by the Believers at Ḥudaybiyyah is given in Süra xlviii. 18–28. The phrase under the tree is, as we have seen on a previous occasion, more than a mere historical recollection. Neither is it accidental that the Shekinah is mentioned in the same verse. The following verses are justly considered to refer to the rich spoil made during the raids on the Jews of Khaybar (v. 20), Fadak, Temám, and Wádíl Qurá (v. 21). Muhammad cannot help expressing some discontent at having allowed himself to be persuaded to rest satisfied with so incomplete a pilgrimage, or, what is still more probable, he tried to weaken the treaty concluded with the Meccans by charging them with having hindered the Muslims from sacrificing at the Ka'bah (v. 25). This intention is more clearly expressed in verse 27, where he tells the world of a vision in which he is assured of entering Mecca "if Allah please" in safety, and of performing all rites connected therewith without fear "and He has appointed, besides this, a victory nigh at hand." This victory does not refer to Khaybar, as Palmer thinks, but to Muhammad's firm resolution to conquer Mecca at any price.

The conquest which took place in the following year was accompanied by the address Süra ii. 185–196, which cannot have been revealed prior to this event. Muhammad was only now strong enough to include those who still refused to embrace Islam in the proscription uttered some time since against the Jews and Hypocrites, viz., to kill them wherever found, and to drive them outwhence they drove you out" (v. 187). The last words in particular are unmistakable. Muhammad had made up his mind to treat Mecca as a conquered city irrespective of the treaty which only granted him permission to enter it as a pilgrim. Possibly the defeat which the Muslim warriors had suffered in the Jumáda (September) of the same year at Muta made a retrieval necessary. The expression "drive them out whom drove you out" allows of a literal translation in so far as the treaty of Hudaybiyyah stipulated that the Qureish were to leave the city, while the Muslims performed their devotions within its walls. It seems that Muhammad was waiting for the retirement of the Qureish from the town in order to prevent the re-entrance of all those who still refused to embrace Islam. For it must be observed that he forbade fighting only in the immediate surroundings of the sanctuary

---

64 Nöbler, ibid. p. 158, regards v. 43–56 as Meccan, but v. 57 cannot have opened a new address.
65 See Hitz, 370, and Nöbler, p. 159.
66 Ch. 11.
67 Verse 18, cf. 20.
68 As to the spurious character of v. 29 see Ch. XIII.
69 The address begins with a remark on the new moons which are called "indications of time." This is a translation of Ps. civ. 19.
70 Nöbler, p. 138, rightly places the verse after the treaty of Hudaybiyya. I do not believe that Muhammad was afraid of a violation of the treaty on the part of the Meccans. It is more probable that he looked for a pretext to defy them, and for this very reason accepted conditions apparently so unfavourable to him.
71 See Ch. X. and Süra xxxii. 61.
except in self-defence, or to quell a revolt (v. 187). This, however, is a meaningless phrase, since no enemy was expected to be present. Why should Muhammad suddenly recommend his warriors "to fight them that there be no sedition" (v. 189)? This does not look as if he wished the Quresh to become masters of their town once more. In connection with these instructions Muhammad then describes in detail the ritual to be observed during the Hajj (vv. 190-196).65

How little Muhammad felt himself bound by the treaty mentioned before, will appear from the circumstance that he actually placed himself at the head of an army in order to take Mecca by surprise. His plan was, however, betrayed by a Muslim who informed the Meccans of the Prophet's arrival, the letter which was carried by a female slave being intercepted. Muhammad rebuked the deed in a warning which fills out the beginning of Surah ix.66 Thus far tradition. According to our judgment there could not have been any betrayal in the matter, as the visit of the Muslim army was to take place by agreement and in open daylight. The only person to be charged with perfidy is Muhammad himself. — The verses 10-13 of this surah are of uncertain date, but their tenor coincides on the whole, with the opinion of some traditionsists that they were revealed in connection with the capture of Mecca.

When this was accomplished, it was celebrated in two special sermons which form the first portion of Surah xlvi (1-15).67 To have become master of Mecca was, indeed, a "great victory" (v. 1), although it was won without bloodshed. Muhammad was, however, conscious that the way he had achieved this success was anything but straightforward, and this feeling interfered seriously with the logic of his speech. The next verse reads as if Allah had given him the victory in order to grant him forgiveness for past and future sins, which seems like a premium put on his transgressions.68 Muhammad evidently meant to imply that, being now in a position to fulfill the pious duties of pilgrimage, he had the opportunity to atone for his sins, or some such sophistry. — The verses 4 and 10 contain the reasons why this piece was connected with the older portion beginning with v. 18 to make one surah. The tendency of the words spoken twice (vv. 4 and 7), that the hosts of heaven and earth were Allah's,69 is likewise unmistakable. The conclusion to be drawn from this remark is that Allah was free to give Mecca to the Believers. There is probably also an allusion to the large army fighting for Allah in it. Nothing could have been more appropriate than for Muhammad, under very much altered circumstances, to proclaim himself once more on Meccan soil as Messenger, Witness, Harbinger of good tidings, and Warner (v. 8). The satisfaction he must have felt in recapitulating these words which had been nearly a score of years before uttered by him on the same spot at the peril of his life, is re-echoed in every sentence of this address, and his shrewdness is equally evident. Was it not possible that many who, at that period, became converts to Islam, did so merely in deference to his personal power? He therefore hastened to assure the world that all new comers did not "swear allegiance" to the Prophet, but to Allah (v. 10). The expression "become Muslim" is probably discarded here on purpose.

According to tradition another fear awoke in the breast of many Medinians, viz., that Muhammad might now prefer living in his native town, instead of returning to Medina.70 Should he decide that way, the loss would not only affect the faith, but the town to which the person of the Prophet attracted many deputations and visitors. The farther Islam was spread, the larger became the area of which Medina was an important centre of people, trade, commerce and wealth. It seems to me, that

64 Verse 187: Sedition is worse than slaughter.
65 See Snouck Hurgronje, I.c.; — Nöldeke, p. 132, regards vv. 196-198 as Meccan, but the phrase is undoubtedly Median; cf. iii. 71. There exists therefore no reason to detach the verses in question from the context.
66 See Nöldeke, p. 152.
67 Nöldeke, p. 151. places this sermon immediately after the treaty of Hudsibiya, but v. 12 points to a time after the conquest.
68 Beidawi: for having performed the jihad and checked idolatry.
69 السيدة v. 4 إن بايعوك بناء للشهرة.
70 جذور السموات vv. 4 and 7= ما عَلَّمَهُ الْمَلَائِكَةُ.
71 See Sprenger, III. 334.
these reasons had as much weight with the Medinians as any spiritual ones. Muhammed saw all this, as well as the ingratitude of which he would have been guilty, had he abandoned the town to which he owed so much. With his usual diplomacy he turned the tables, and charged those who deemed him capable of such a course of action, with “evil thoughts, and being people destitute of good” (v. 12).

The second, but short, thanksgiving address is contained in Sūra cx. 72 which, in a condensed form, reiterates the opening sentences of Sūra xlviii. 73 Since the sūra is so small, I reproduce it in full.

1. When the help of Allah came and victory.
2. And thou sawest men enter into the religion of Allah by troops,
3. Then celebrate the praises of thy Lord and ask forgiveness of Him, behold He is forgiving.

These words describe the situation exactly, because after the conquest of Mecca Islam was progressing by leaps and bounds.

According to tradition Sūra xlix. (1-5) was revealed when, after Muhammed’s return to Medina, messengers of the Tribe of the Banu Tamim arrived in the beginning of “the year of the embassies” (A. 9), 76 in order to negotiate with him about the redemption of some members of their tribe who had been taken prisoners by the Moslems. The embassadors are said to have shouted for Muhammed in a disrespectful manner, for which they are rebuked in the verses alluded to. 76 Other commentators think they refer to different incidents.

The next group of verses of the same sūra is said to allude to Al Walid, son of Oqba b. Abi Mocit (who had been executed after the battle of Badr), 77 for having given information against the Banū Mostaliq who had refused to pay the tribute. Muhammed is said to have revealed the verses in which Al Walid is styled a sinner (fanāq). 78 The story which is not very well authenticated, although generally believed to be true, seems to me doubtful, and was probably invented to discredit the Omayyad party, or, at least, Al Walid himself, who as Prefect of Kūfa 79 did not lead a very religious life and was deposed by Othmān. It is not likely that Muhammed would thus have branded a new convert, member of a very influential family, and close relative to some of his nearest friends. Moreover as the whole affair, which was due to a misunderstanding, was subsequently cleared up, Muhammed would not have left so offensive an expression in the Qurān. I believe that the passage (the date of which I am, however, unable to fix) was placed here on account of verse 7 which also contains statements concerning the person of the “Messenger of Allah” in juxtaposition to the messengers of the Banu Tamim. The cause of the revelation of the verse in question seems to have been the same as in both the preceding groups (vv. 9-12), viz., the petty quarrels and jealousies which prevailed among Arab tribes in general, and the Medinians (Anṣār) on one side, and the Meccan Fugitives (Muhājirūn) on the other in particular. These quarrels often threatened to assume dangerous dimensions. The two proverbial observations contained in verse 1260 also tend to denounce suspicion and backbiting, so that they stand in direct connection with verse 6. Contrary to these, verse 13 teaches that not birth and family pride, but piety give, in the eyes of Allah, the highest claim to distinction. The verse appears to imply a criticism of the haughty tone of the verses of Al Zibriqān, 81 the poet of the legation, and of this kind of poetry (jukār) altogether. — In spite of the traditional explanation of v. 14, 82 viz., that...

77 See Ch. X.
78 V. 6. On the authority of Ya'qub b. Rūmān (died about 150) with no further Ja'fād, related by J. I. p. 780; Al Beidhawi, Khamsi, p. 120; Nöldeke, p. 164, v. 224; Spruner, III. 368. I. I. seems to fix the incident prior to the expedition against the B. Mustaliq.
79 See Ch. VIII.
80 Nöldeke, p. 165, adopts this explanation.
it refers to a certain Bedouin tribe which, in exchange for their conversion to Islam, expected to receive provisions from the Prophet during a famine. I rather believe it to be a comment on the preceding verse, and for a good reason. As already intimated, many Bedouin tribes accepted Islam after the conquest of Mecca; but, whilst finding the recitation of the formula of the creed very easy work, they found more difficulty in changing their modes of life for the practical duties of Islam. Here we perceive the civilizing influence of Islam better than anywhere else. Muhammad explained to the reluctant ones that it was not sufficient for Bedouins to say: "We believe" — which was no belief; but they were to say: "we have become Muslims." In this sentence, he evidently contrasts theory with practice, and the passage also offers a valuable instance of Muhammad's own conception of Islam at that stage. As might have been expected, he adds that it consists in obedience to Allah and His Messenger, and sacrificing wealth and personality to the cause of the faith (vv. 15-16). Believers did not, by embracing Islam, benefit either the Prophet or Allah, but the latter benefitted them by his guidance (vv. 17-18). One cannot fail to perceive the altered tone in Muhammad's speech, assumed in the consciousness of his power. It was also quite justifiable in view of the rudeness of the Tannite ambassadors, and fixes the date of the address decisively. The pieces of this exhortation seem to be simultaneous or nearly so.

If Muhammad was able to adopt such language, it is small wonder that he dreamt of leading the now greatly increased forces of the Muslim army against the Emperor Heraclius, who shortly before had made himself master of Syria, and had several Arab tribes, as well as Jews, in his army. It was probably his brother Arabs, whom Muhammad was most anxious to induce to forsake their Christian patrons, since he could hardly hope to carry the Muslim arms beyond the border of Asia. He was, however, fully alive to the dangers connected with an expedition against the better trained Greek troops. This meant warfare on a different scale from that to which he had hitherto been accustomed. As a tentative move he made two speeches, the first of which (Sura ix. 23-27) in some respect resembles the one just discussed. Muhammad repeats that family ties or worldly interest must be second to the love for Allah and His Prophet. Allah had supported them in the past year at Honein with a large though invisible army, just as he had done at Badr, and given them the victory over the infidels.

When Muhammad had set out to take Mecca, many Bedouin tribes had disappointed him. He severely censured those who were "left behind," and, as a punishment, they received none of the spoil gained in the expeditions against the Jewish clans (Sura xlviii. 15). In order to give them an opportunity of redeeming their former laxity, Muhammad summoned them to join the forces which were sent against the Byzantines. I have little doubt that only these are meant by the expression "people of vehement valour" (Sura xlvi. 16), and not the followers of Moselims against whom Muhammad never intended sending an army. Considering the peril of this expedition Muhammad wished to have among his troops only able-bodied warriors who could cope with the Greek soldiers. In the less serious raids undertaken heretofore many had, no doubt, taken part who were not proof against the fatigues of real warfare, but underwent some hardship for the sake of the spoil. The next verse (17) seems to have been revealed in order to keep these people out rather than from purely humane motives. If such persons lost their share of the booty, it mattered little, because they would be rewarded for their obedience with the enjoyments of paradise.

The majority of voluntary and involuntary converts were not yet prepared to risk life and limb from sheer enthusiasm for Islam, and did not respond to Muhammad's call to arms as willingly as he might have expected. He had to bring all his powers of eloquence to bear in order to overcome their reluctance. In a long speech (Sura ix. 33-73) he charges Believers with preferring the comforts of this world to the next. He threatens them with heavy punishment.

---

**Notes:**

83 See Ch. I., App., Note 1. Al Bediwhi: فاَلْيَأْسِرَالْآسِمَانِ اْلْقُبْضُ يُقَدِّرُ وَالْقُوْماَرَةَ فِي الْحَمْرَاءِ رَبُّ کَانَ أَيْضَّاً يُقَدِّرُ.

84 Al Bediwhi: six thousand angels, or according to others, six or eight thousand.
and recalls to their minds how Allah had assisted him, when he, accompanied by a single friend, had hidden himself during his escape from Mecca. While several phrases and expressions in this speech manifest its close relationship with the first part of this sura, it endeavours to re-kindle the zeal of the Moslems for religious war. The words: “He made the word (kalima) of the unbelievers the lowest (v. 40) are undeniably an allusion to the Christian faith of the enemy. If, he says, worldly gain were near at hand, and the march short, they would follow readily (v. 42), and in this manner he goes on blaming those who remained at home under various pretexts, and were therefore classed among the “Hypocrites” (vv. 65, 68, 69).

During the expedition Muhammad returned to the same subject, and expressed his indignation against those who in spite of his entreaties stayed at home (v. 74-81). They were glad to remain behind for such paltry reasons as the heat of the season (v. 82). He declared that he would never again allow them to join any expedition (v. 84), and forbade praying at their graves (v. 85). It grieved him to perceive that the belief of the newly converted tribes was very superficial. He again laid down the rule for those who were exempt from military service, viz., the weak, the sick, and those who were too poor to arm themselves. Yet others who were [able-bodied and] wealthy asked leave to stay behind.

If Muhammad was indignant against those lately converted, he was much more so against Medinians who were guilty of the same dereliction of duty, and set a bad example to others. In the address consisting of the verses 120-128 he censured that portion of the army which was under the command of Abd Allah b. Ubayy, and numbered many Jews among its ranks. The latter are alluded to in the usual term “of those in whose heart is sickness” (v. 126), and believers are expected to fight them.

At any rate Muhammad’s wish to overawe the Byzantine army by an overwhelming Moslem force was not fulfilled, and the expedition terminated in the bloodless demonstration of Tabuk, whence the army returned to Medina. No risk of life had been incurred, and those who had remained at home regretted it, being profuse in excuses which were entirely ignored. In an address on the matter (vv. 95-120) Muhammad was particularly severe against those Bedouins who were “the keenest in disbelief and hypocrisy and readiest to ignore the bounds which Allah has revealed” (v. 98). Others, he said, gave their contribution unwillingly, and were only waiting for the fortune to turn against Muhammad (v. 99), though some of them were sincere Moslems (v. 100). Now here we may observe an interesting phenomenon. The social equality which had established itself during the initial stages of Islam, commenced to undergo a slight change, as soon as the faith was supported by political power. Muhammad himself took the first step to create a kind of aristocracy by giving the “Fugitives” the foremost rank in the favour of Allah. The rank next to them was occupied by the Medinian “Helpers” (v. 101). This was but natural. It would have been an insult to those who nearly twenty years before had given up home and family, and in some cases fortunes, and cast their lot with an outlaw, to rank them with poor Bedouins who now ran after Islam because it paid better than their former trade.

In the verses following these Muhammad describes the “hypocrite” penitents and those who had built a mosque with mischievous intentions (v. 102-108). In opposition to the latter

68 Abu Bakr.
69 Cf. v. 40 with v. 25 and v. 26.
70 The verses 40 and 25 are said to refer to Al Jadd b. Qais, cf. I. p. 286.
71 The verse is said to refer to Abu Abd Allah b. Umayr, and Nöelke, p. 167, regards it therefore as a later addition.
72 Cf. Bóre 40 and above, rem. 82.
73 Palmer’s translation (94): “Gal is there a way against those, etc.” quite misses the point.
74 No parallel to Deut. xx. 1-8.
75 The translation (94): “The stone means the sword as usual. Verse 26 refers according to all authorities to the “Wespera” (vix., seven Asper) who were too poor to procure camels, cf. Wágidi, p. 363; I. p. 195.
76 Wágidi, ibid., I. I. 913.
he places "the mosque founded on piety," as well as the position of the believers, and the fate awaiting them as laid down in Torah, Gospel, and Qur'an (v. 109-113). The next portions of these rather incoherent speeches date from the same time. Verse 114 which refers either to the memory of Abu Talib, or Mahomet's mother, is evidently in some way connected with verse 81, and seems to form the reply to a query based on Sura xix. 46. The interpretation (given in verse 115) that Abraham only promised, but did not actually pray for his father, is cunning rather than dignified, because the tone of the verse alludes to impresses the reader with the idea that Abraham did pray. The word tabarru'a (verse 115) gives a clue why this sermon was joined to the one at the beginning so as to form one sura.65 Verse 119 standing alone, at length grants pardon to some of those censured in a former speech of the same sura (vv. 38 sqq.).

Although the expedition to Tabuk did not bring the desired result, yet it added largely to the number of new converts, or at least subjects of Mahomet on the basis of a treaty. Finding the latter, however, not to his taste, Mahomet, in the following year, gathered his cousin Aliy to meet the pilgrims assembled at Mecca, and to read in their presence a proclamation which declared all compacts made with unbelievers null and void. Although this "Renunciation," which forms the first part of Sura ix, does not appear in the usual form of revelations, it was embodied in the Sura, but without the introductory formula "In the name of Allah the Merciful, the Compassionate." This was, indeed, superfluous, since it is announced as a barda (renunciation) and an adha (proclamation), both emanating from Allah and His messenger (vv. 1-3). It is therefore not Mahomet who violates the treaty, but Allah Himself, the Prophet being only his tool. Exempt were only the holders of a compact until a given term (vv. 4-6). After the lapse of the four sacred months infidels were to be regarded as outlaws, and Muslims were free to kill them by any means in their power, unless they confessed Islam (vv. 5-12). In order not to leave any doubt which months were meant, he explains the matter in an appendix (vv. 36-37), and denounces the pagan custom of changing one of these months with another if more convenient. — There is, however, some uncertainty about the date of the piece vv. 13-22. Noldeke, following Moslem interpreters, is inclined to retrodate these verses to the time before the conquest of Mecca, although the word hadha ("they solicited," viz., to drive thee out, verse 13) speaks against such a theory.66 It seems rather that this verse contains a reminiscence of the unsuccessful attempt undertaken by Mahomet two years before leaving Mecca to spread Islam among the inhabitants of Taif. His wrath against these people was all the greater, as even after the conquest of Mecca they entered into a coalition with the Hawazin tribes to fight against Mahomet. Defeated at Honein (Shawwal A. 9), they retired into their city which the Prophet besieged in vain. It is, therefore, natural that he was not content to entrust their punishment to Allah alone (v. 14), but egged Believers on to continue fighting them with the assistance of Allah. Like other infidels they must not be permitted to "visit" the holy city even outside the sacred season, because this privilege is in future accorded exclusively to Muslims.

A further comment on the same prohibition is given in the section vv. 28-37, in which idolaters are declared to be "unclean," and must therefore not come near the sacred places after the termination of the present year. Such prohibition clashed, however, with the commercial interest of the believing population of Mecca. This was a rather serious objection, which Mahomet could not answer, except by the assurance that Allah would compensate them for any loss of trade sustained in consequence of his command (v. 28).

66 Noldeke, p. 168.
65 Al Beishawi refers v. 12 to the Jews who endeavoured to drive Mahomet out of Medina, but cf. v. 14.
66 Tradition makes him pray for the conversion of the city, I. I. 158.
67 To perform the 'umra, which means an occasional visit to Mecca for the purposes of performing the minor rites, but not accompanied by sacrificers.
68 Cf. Levit. xxii. 8.
After their expulsion from Mecca, many Jews had made common cause with Heraclius, and in Muhammed's eye still constituted some danger to Islam. The Prophet seems to have feared that their spiritual influence might become harmful after his death. We have seen before that on several occasions Muhammed tried to fasten upon the Jews the stamp of paganism. Returning to this old charge Muhammed enjoins Moslems again to fight those who held many things lawful which Allah and His messenger had forbidden, but they did even not follow the law of their own faith (v. 29). In order to bear out the accusation of Jewish heathenism, Muhammed charged them with venerating Ezra as the son of God, in the same manner as the Christians did with Jesus (v. 30). The sole basis for this charge is the circumstance that Ezra was responsible for many institutions in the Rabbinical code, which appeared to differ from the written law, but this alleged soothship is an invention of Muhammed for the purpose alluded to above. If Moslems were to look upon Jews as upon polytheists, their influence in such quarters which stood outside the immediate control of Muhammed or any future head of the Moslem church, was not to be feared. Like unto Christians they took, he said, their Rabbis as Lords (arb ḥ, plural of rab ḥ), and very shrewdly Muhammed described these "Lords" in the same term, as in his own first revelation. "They take their Rabbis and monks as Lords beside Allah, and also the Messiah the son of Maryam, while they have been commanded only to worship one God, there is no God but He, exalted be He above those which they join with him" (v. 31). The theological observations attached to this disclosure explain themselves (vv. 32-33), viz., that Muhammed is the true messenger. Rather sharp is the assertion that many of the Rabbis and monks eat the wealth of men for nought (v. 34), although as far as Jews are concerned it was in mediæval times not the custom to pay the spiritual heads of communities.

I place here the verse vii. 156 which refers to the conversion of some Jews and Christians. This is clear from the words: "they find written down with them in the Torah and Gospel," also the words "making lawful for them what is good and making unlawful evil things and setting down for them their restrictions, and yokes which were upon them" are unmistakable. It seems to me that the verse was revealed chiefly in reference to the conversion of the Jew Abd Allah b. Salām which took place in the year 8.1 The next piece, as far as verse 172, is a homily commenting on the same incident. The conversion of Abd Allah to which Moslem traditionists attach the greatest importance, gave Muhammed an opportunity of proclaiming himself once more the Apostle of mankind in general, and of recalling several episodes of the history of Israel. He mentions the twelve tribes, the command given to Moses to strike the rock,2 and other matters discussed in previous speeches.3 The "Covenant of the Book" (168) bears a striking resemblance to the "Book of the Covenant" (Exod. xxiv. 7). The verses 171-172, speaking of the children of Adam bearing witness against themselves, seem to be based on, or at least influenced by, a Midrash (Canticles I. 4) according to which God, when about to reveal the law of Sinai, demanded from the people a pledge that they would observe it. After rejecting the Patriarchs and Prophets, God accepted the children as hostages.

There only now remains Surā v. which, however, offers difficult problems for the arrangement of its portions in their proper places. Before attempting this task we must briefly survey the conditions under which they were revealed. In the 10th year of the Hijra Muhammed started, at the head of an immense crowd of pilgrims to pay the famous visit to his native city which is known as his last. The dogmas and rites of the Moslem church had then been already settled, not only in the outlines, but also in many details. Muhammed himself was so far advanced in years, as to make him think of his natural end. Knowing the character and prejudices of the Arabs, and being aware that the belief of a large number of believers was but superficial, his mind was filled with apprehensions about his future. Experience had taught him that but for his personal influence the differences of interest and temper would have caused splits in the community which endangered the safety of the faith. Tribal hostilities, so often quenched by

100 Cf. iii. 78. 1 See taba and Ch. II. 2 See Geiger, I. c. p. 164. 3 Cf. ii. 56-61.
his exertions, might break out at any moment when he was removed, and end in civil war. Most of the ritual duties were a heavy burden on the massesa, which were far from grasping their meaning. Not less undesirable was the moral code. It was hard that the smallest bit of pilfering was punishable. Wine and dice were to be abhorred, and the freedom of the chase to be restricted, not to mention other laws. Muhammed was well aware that his people could not be educated up to his ideal with one stroke. The warnings had to be repeated over and over again. Such speeches of a deuteronomic character form the framework of Surâ y., the bulk of which was preached on the occasion of the last pilgrimage in the presence of a huge congregation.

We can take it for granted that Muhammed was acquainted with the Jewish interpretation of the character of the Deuteronomy as a repetitious injunction of the Law (Mishnêh Tôrâh). Why not follow this example? As an exterior deuteronomic feature in the first portion of our Surâ I regard the three instances of asyana ("today") (vv. 4, 5, 7), which in the same application is particularly frequent in the Biblical book of Deuteronomy.

Of this book the reader is already reminded in the opening words of verse 1 of our Surâ.1 Corresponding to Deut. iv. 13, 23: xix. 8, vix., the injunction to keep covenants of which Muhammed had set such a good example by his Será. The regulations with regard to forbidden articles of food (vv. 4-7) stand parallel to Deut. xii. 16, 20, 27; xiv. 3-21. The verses 2-3 are regarded by Nöldeke as having been revealed before the conquest of Mecca, because they ordain that pagan pilgrims to the Ka'bah should remain unmolested. This is, however, hardly admissible. It is not to be assumed that Muhammed would have styled the deity to be worshipped by these heathen visitors as "their Rabb," because he employed just this term from the beginning in a strictly antagonistic sense. The verses refer to future pilgrimages. Muhammed warns Believers not to revive the old hatred, nor to bear grudge against those Meccan families which had been hostile almost to the last, but were now Moslems. The large meetings to be expected at Mecca inspired him with fear that old feuds might break out afresh to the desecration of the holy spot and season, and the same fear rings through a sermon shortly to follow. Verse 5 is the famous "verse of the Dâi," and reflects verses like Deut. iv. 8, and quite a host of others. As a supplement to the prayer ritual appears an ordination to wash the hands with water prior to the performance of the same, or if this should not be within reach, with sand2 (vv. 8-9). Verse 10 is deuteronomic for Surâ ii. 285 and the parallel verses. The topic of verse 3 is with verbal repetition of the case,3 taken up again in the verses 11 and 14.4 The group 15-17 has a similar tendency. Nöldeke leaves a large margin for it between the years 2 and 7, but it seems that Muhammed had Moses' farewell speech in his mind. The "covenant" (v. 15) recalls Deut. xxxiii. 2, and the "twelve chiefs" are alluded to, ibid. v. 5. Allâh's word to the "children of Israel" recalls quite generally the blessing of verse 1 of the same chapter. As a matter of course the tone of Muhammed's imitation is on a level with his own taste, as well as the needs and intellects of his audience. The next verse (16) stating that the Banû Isra'îl broke the compact, and were cursed, and hardened their heart, forged the law and forgot part of it (Deut. xxviii. 15-69), is trite enough, and served to give fulness to the speech. Less worn is the reproach addressed to the Christians that to their forgetfulness it was due that the church was split up in sects betwixt which there existed enmity and hatred "until the Day of Resurrection" (v. 17).

As a supplement to this criticism, the compilers of the Qûdrâ have placed at the end of the Surâ a narrative piece (vv. 109-120) which contains an admonition addressed by Allâh to Jesus. From the "table" mentioned in verse 112 the whole Surâ has its name. The tendency

---

1 The compound character of v. 1 has already been noticed by most Muslim interpreters, cf. Nöldeke, p. 169.
2 مَا ذَيَّنَ عَلَى الْأَنْصَابِ - Levit. xvii. 7; Deut. xxxii. 17.
3 See Nöldeke, p. 59.
4 Cf. ix. 13.
of the narrative is laid down in the verses 116-119, viz., that Jesus commanded to worship only one God. He is, consequently, not responsible for the origin of the dogma of the Trinity which was only due to corruption and forgetfulness (see verse 17). Although it is hazardous to say anything definite with regard to the age of this piece, it seems somewhat older than verse 17 in which we may see a reference to it. Its Medinan origin is, however, beyond doubt on account of verse 110.

Now towards the end of this piece (verse 118) Jesus prays that Allâh may forgive his followers' sins, and to this the verses 18-19 seem to respond. The term "Possessors of the Writ" refers in this instance to Christians alone. It is noticeable that here as well as in verse 17 Muhammed regards the Christians with much complacency. He only reproaches them with forgetfulness, as we have seen, promises them that he, while explaining to them much of the Book made unintelligible by them, will also forgive them much. The following protest against the apotheosis of Jesus is strangely devoid of all sharpness. Even when commenting on the circumstance that [Jews and] Christians called themselves "Sons and beloved of Allâh" whilst they were only mortals (v. 21), he is not so bitter as usual. The reason seems to be that the failure of the expedition of Tabûk had taught Muhammed to abstain from reviling so large a Christian power. The effect Jews could be abused with impunity. Muhammed must certainly have feared that after his death the Muslim armies might be defeated by Christian ones, to the loss of many Arab tribes, which only a little while ago had been converted to Islâm. — Verse 22, of uncertain date, has been placed here on account of v. 18.

Deuteronomic are further the verses 41-55. Verse 45 repeats the idea of Sûra iv. 48, whilst verse 49 is a reiteration of Sûra ii. 178-175, yet modifying it in the way of clemency. This furnishes some evidence that the piece v. 49-55 is later than the other. The verses 64-68 very conspicuously form a repetition of the scathing remarks in Sûra ii. 61, 257-258; iv. 54; ix. 34, reproducing the gist of these verses, as a comparison would show at a glance.

Of very late date is the sermon Sûra vi. 117-151 and partly of deuteronomic character, although nothing definite can be said with regard to the occasion on which it was revealed. The rather detailed denunciation of various heathen rites, such as the killing of children and the restriction observed with respect to using certain animals for food allow the suggestion that this speech also was addressed to the pilgrims assembled in Mecca.

The verse v. 69, being evidently a misinterpretation of some words in Numb. xi. 23, reproaches the Jews with limiting the omnipotence of Allâh. The verse is one of those which on account of its strongly anthropomorphic character caused Muslim theologians considerable difficulties. But just this is an argument in favour of its late date, showing a time when Muhammed had ceased to see any danger in such figures of speech.

Deuteronomic are also the verses 89-90 which repeat, although perhaps not on the same occasion, prescriptions discussed at the beginning of the sûra. Verse 91 repeats in a somewhat extended form the command given in Sûra lxvi. 2. The verses 92-94 recapitulate as well as emphasize the prohibition of wine and gambling, warned against in Sûra ii. 216. The interdiction of statues and divining arrows is also added. The next verses (95-97) treat of the killing of game which is unlawful on sacred ground. The transgression of this command is to be expiated by an offering. In much more precise terms than in Sûra ii. 138 the Ka'ba is now appointed to form the "Qibla for men." Verse 101 is the reply to a query which, the traditionists assert, was asked with regard to the frequency with which Believers were expected to perform the pilgrimage. The angry tone of the answer is, however, unsuitable to the zeal of pious Believers. The query seems to have been of a perplexing nature, and I doubt the genuineness of the whole verse. Verse 102 abolishes the ancient custom of observing rules with regard to the eating of certain camels. One of these classes termed baḥira will make it clear

why Muhammed did not adopt the name Bahira\textsuperscript{10} for himself; the second part of the verse as well as verse 105 seems to refer again to Jews. Finally the regulations concerning wills and bequests (vv. 105-108),\textsuperscript{11} and the warning to be truthful when giving evidence renew commands given long before (ii. 176; vi. 153).

I have still to mention several pieces which are of so uncertain date that it is not possible even to suggest anything as to their places. Of these are the three verses lxxxv. 9-11 which are evidently Medinian, but this is all that can be said about them with certainty. Surd lxxxiii. 20 is a very late repetition of the refrain of Sura liv. (17, 22, etc.), but with a more practical aim. The verse is suggestive of Muhammed becoming advanced in years and more experienced as regards human nature. Long nightly devotions were not so essential for those who kept the chief duties of Islâm.

(To be continued.)

LETTERS FROM PORTUGESE CAPTIVES IN CANTON, WRITTEN IN 1584 AND 1536.

BY DONALD FERGUSON.

(Continued from p. 451.)

\textbf{Trelado de húa carta que da China veo a qual carta escreuço Christouão Vieyra.}

Vasco Caluo que la está captoes os quas forão da companhia dos embaixadores que leuou fernão Perez anno de 1520.

Na era de 1520 a xxiiii, dias de Janeo partimos para o Rey da China em Mayo estaquamos com o Rey em Nanquim dalì mandou q nos fossemos a cidade de Piquim diante para nos la dar o despacho a ij. de Agosto se escreveo a Cantão do que era passado com el rey ate então chegara as cartas a Jorge botelho Diogo Caluo que estaquam em a Ilha onde se faz mercadoria por tanto não se torna a escrever porque o tempo requere brevidade e pouca leitura. Em fevereiro entrou o Rey em Piquim e estuè doente tres meses falleceu do dia seguinte que nos viessesmo a Cantão com ho presente que viria o Rey nosso que erião por elle a outra cidade que nos mandaria o despacho a Cantão / Partimos de Pequim a xxii, de Mayo chegamos a xxii, de Septembro a Cantão porque a guia vinha a sua vontade de vagar / a causa de se não tomar o presente he esta.

Quando fernão perez chegou ao porto da China mandou aos linguas que fizessem cartas como vinha capitão moor e trazia embaixador para o Rey da China os linguas as [f. 104 v] fizerão ao custume da terra assi capitão moor e embaixador vem a terra da Cinha por mandado do Rey dos fangos com parecs vem pedir o selo segundo custume ao anho do mundo filho de Deos pera lhe ser obediente segundo custume por esta carta fomos recebidos em terra, esta he a sustancia da carta que fizerão sem darem conta della a fernão peres nem elle em nenhum tempo ser de tal sabedor somente os linguas deixão que a carta estaua bem feita segundo o custume e a sustancia della Calauço.

Em a cidade de Pinquim foy dentro nas casas do Rey aberta a carta del Rey nosso Sãor e foy nella achado ao Reues do que os linguas escreuerão pareceo lhe a todos que enganosas entraramos na terra da China pera lhe ver a terra que era caso de engano a deferena das cartas foy escrita a carta ao Rey mandou o Rey que não fossemos mais a suas casas fazer Reuerença e tiuassem gente e guarda nes / o custume dos embaixadores em Piquim he meteles em bñas casas de grandes curassas e aly fechados ao primeiro dia da lua e ha 15 dias da lua vão nas casas do Rey delles a pez delles em sendeyros com cabrestros de palha e vão fazer 5. mensuras diante de hum muro das casas do Rey todos em ordem com ambos os joiholes no chão

\textsuperscript{10} See Ch. ll.

\textsuperscript{11} See ii. 175-176; iv. 1-45.
e a cabeça e o rosto na terra debrucas assim: estão aste que os mandão a lençar 5 vezes a esta
de parede dali tornão se a meter nos curraes fechaes a esta venerencia mandrão que não fossemos
mais,

forão os linguas pergutados porq fizerão carta falsa [f. 105] e não conforme a del Rey
Nosso S' desira que as fizerão ao custume da China que a carta del Rey nosso S' vinhça cerrada e
asellada, que se não podia ler nem abrir que aia de ser dada a el Rey em sua mão que eramos
de longe terra e que não sabamos o custume da China que era grande que que ao diante o
saberíamos que elles não tinham culpa pois que fizerão a carta ao custume não se contentarão os
mandarys da reposta forão preguntados cada hum donde erão forão pressos isto tanto que o Rey
falleço e moços seus servidores.

Chegou o Rey a hu'a vida que esta duas legas da cidade de Pim em Janeiro da era de
.MDxxi. estêne ilulgado hum seus parente que se aleunaut contra elle e o mandou queimar
depois de emforcado e aly entrou em despacho nosso porque lhe forão trazidas tres cartas contra
os portuguezes hu'a de douz mandarys em Piquim outra dos mandarys de Cantão outra dos
Melays cujos sustancia são estas 3 mandarys que forão a Ilha de mercadoria a Receber os direyto
per mandado dos mandarys de Cantão fazem saber ao Rey como elles forão em tal anno e dia
era arccadar os direyto virão gentes frangos com muitas armas e bombardsa gentes fortes e
não pagauão os direyto segundo o custume e fazem forças e assim ouuirão dizer q estas gentes
tinhão tomado Malaca a roubada e muita gente morta que o Rey não lhe deuia receber seu pre-
seito e se lho quisesse receber que dissessem com que Regnus confina o Reino dos fanges q os
mandasse. q os não deuia [f. 105 v] de Receber.

Dezia a carta dos mandarys de Cantão que os frangos não querião pagar os direyto e que toma-
unho os direyto aos Syamis e os prendião e lhe asclauão os seus juncos e punhão guardas nelles e não
lhe deixauão fazer mercadoria nem pagar os direyto e tinhad hu'a fortezinha feita de pedra cuberta de
tilha e cercada dartelaria e deno muitas armas e que furtauão cães e que o comião asados e que
vinhão a Cantão por força e que traziam bombardsa em somas descubrindo os Rios que tirauão bom-
bardas diante a cidade e outros lugares defessos.

Dizia os melajo que o embaixador del Rey de Portugal que estaua na terra da China que não
vinha de verdade que falsamente era vindo a terra da China para enganar e que andauamo a ver as
terras e que logo vinham sobre ellas e como na terra punham hua pedra e tinhamos casa logo
saiuão a terra por nossa que assim fizeramos em Malaca e em outras partes que eramos ladrões : dizia
hum mandiry grande que per carta lhe pidiamos asento ou casas em Cantão para estarem frangos que
lhe parecia muito mal que em vez de obediência que lhe pedisão asenta na terra Disse outro mandir-
zym que na era de .MDxxi. na Ilha de mercadoria os frangos lhe quebrara a carapuça e lhe derão
c.exadas e o prenderão indo elle arccadar - os direyto per mandado dels mandarys de Cantão / a estas
coisas respondeo el Rey que esta gente não sabem nossos [f. 106] custumes deão os irão sabendo
disse que ficasse o despacho p estava a cidade de Piquim logo entrou e no mesmo dia adoeço daly a tres
meses falleço sem despachar nada. Desta reposta que o Rey deu não forão os grandes muy contentes e
mandou logo o Rey a Cantão que ha fortaezia que os portugueses tinham feita que lha derribassem e assim
toda a poucação que não queria nenhûa mercadoria com nenhûa nação que se alguém viess que se
mandaria tornar e logo partira caminho de Cantão que tirassem a limpo o que lhe disse o se era
verdade ou não. Os mandarys de Cantão não fizerão assim senão para Roubar fizerão armadas e
por engano delles per força tomarão os que vierem e os Roubarem.

Tanto que chegaram a Cantão nos leuão diante do pochacy e nos mandou leuar a huias casas de
troncos que estião nos faleoques dos mantimentos e n ellas não quis Thome piz entrar e os tronqueiros
nos derão dentro huias casas em que estiemoi trinta e tres días e daqui leuão a Thome piz com seis
pessoas a cade a Pochacy que chamão libanco a mím com quatro pessoas a cade a tomage / onde
estiãoos pressos dez meses em poder de Thome Piz estaua toda a fazenda dauião nos Regra como
seuos eramos muito vigiados em lugares apartados dos pressos neste meio tempo mandara cham-
Thome piz e toda a companhia o amelcâo que entião era assim chamaram os melajos disse que mandaun
o Rei chegasse el Rey nosso Sr. a terra de Malaca aos meus esses que lhe tinhão tomada respondeu Thome piz que não vinha a yssso nem cominha a elle em tal fallar que da carta que [ft. 106 v] trazia lhe daria razão que dal não sabia Perguntou que gente ania em Malaca que elle sabia que avia nella trezentos homens portugueses e que em Conchim pouco mais respondeu que tinha Malaca quatro mil homens armados no mar e na terra hera foram dores herados e em Ceilão que não tinham coto nestas perguntas nos tene de gielos qua horas acabado de se enfadar mandon cada hum a cada onde estava.

A quatorze dias dagostego de MDxxii. lancou o pocháçy a Tome piz cormas nas mãos aos da companhia cormas e ferros nos pees as cormas aceladas nos pulclos e nos tomarão toda a fazenda que tinham assi com cades nos pesquis e per meo da cidade nos levarão a casa do anchucli ali nos quebrarão as prisões e nos deitarão outras mais fortes cades nas pernas cormas aceladas e cades nos peques e dali nos mandarão a esta cada a entrada da cada morreo Antonio Dalmeida das prisões fortes que traziamos os braços inchados as pernas roçadas das cades estreitas / isto com determinação que dali a doos dias nos matarem antes de ser noite deitarão a Thome piz outras de novo e o levarão a elle ao descalço sem barrette / com apujadas de rapazes a cada de cancheufo por ver a fazenda que nos tomarão que se avia descreuer e escreuíao dez e furtuão trezentos os madera escriuens que presente estaualão assi lalões yoy o pocháçy anchucli dizer a hum mandarim chamado eunho que pois portugueses entrarão na Ilha e pera que era ter nos de que vinhamos a ver a terra que eramos ladreos que morresse mos logo / Respondeo o eunho tu queres acabar todos estes sem de embaixada ora seja falsa ora veridxa mandar lhe [ft. 107] logo quebrar as prisões ou escreurey a el Rey segundo sua vontade se fara naquelle seguinte dia nos quebrarão as prisões que se as tineramos mais hum dia todos morreramos e tornarão a trazer a esta cada a Thome piz.

A fazenda assi nos tomarão erio vinte quintaes de Ruybarbo mil e quinhentas ou seis centas peças de seda riquas obra de quatro mil lenços de seda que os chis chamo xpas de naquim e muitos avanos e mais tres aRobs dalmsiquere em poe tres mil e tantos papos dalmiscere quatro mil e quinhentos teças de prata e setenta ou otenta teças doura e outras peças de prata e todos os vestidos peças de preço assi portuguesas como da China o puchu de Jorge botelho incenso Roçamolla cascadse tartarugs assi pimenta e outras mendeas estas forão entregues na feitoria do cancheufo como fazenda do ladreos o presente del Rey Nosso s Jor que manda a ao Rey da China esta na feitoria do Pouchuy a sustancia das peças e quantas e de que sorte me não alebra bem porem a soma be de mil e quinhentos açima porque o caderno com outros papeis de sustancia levarão e as arcas que tomarão de vestidos e meterão com a fazenda / na noa de Diogo calho ficarão as pessoas seguintes Vasco calho, estenão fernandez escritor Agostinho fernandez mestre simão luís despenheiro João dalmaner Joao fernandez Diogo da Ilha do mestre e marineiros Aº aluarez e quatro moços João fernandez gnzarate Po Jano do mestre Gaspar de estenão fernandez Gonçalo de Vasco calho e por serem conhecidos em Cantão e dizerem que erão da embaixada escaparão os outros forão todos presos e metidos nesta cada delles morrerão a fome delles afogados Simão linga e baltante alli forão presss os alli morrerão aqui nesta cada derolhe com hum maço na cabea assi o matarão [ft. 107 v] Simão baralante que estaua no chacheufo morrerão abrantes trazendo já cabas aos pesquis com setecous que morrerão assi os portugueses fazendas e berços que forão com elles tudo forão roubado a menos se oune pera el Rey a fazenda darmação que Vasco calho tinha toda roubada do conconcepaçy que foro pera Pequim de maneira que nada não ficou.

Bertholameu soares que era em pate e Lopo de Goês ê Syon Vicente aluarez criado de Simão daznade o padre mergulho que era em Syon vieram na era de MDxxi. e estando Diogo calho no porto de mercadoria armada dos Chis deu sobre elles porque vinham os juncos ohe hum e de menhãs outru de Syon e forão tomados delles per engano delles pellejando forão levados a Nanto e seus escraos e muitas fazendas tudo roubado e elles feridos o padre mergulho morreo pellejado forão trazidos as cades de Cantão com ferros e prisões aqui forão afogados trazendo taças ja que morsessem por ladreos do mar / aleuantaolhe que se queria erger com as cades não sendo assi tudo no tempo que heguau Martim Aflonso e por não verem os outros portugueses que trazião dos mivos assi forão todos mortos.
Os cinco juncos que no porto de mercadoria ficarão na era de mill e quinhentos e vinte e hum quatro do Rey de Malaca hum do Rey de Patane fhum de francisco roiz outro de Jorge aluares e dois outros e Diogo calvo tanto que partão forão todos roubados da gente darmada esbanão a vista de Diogo calvo a maior parte levou o anchianci e o ampochi e capitães e pro de nato e parte darmada e grande parte oune o Rey e daqui se arelou e se furton muita e se arecadow pera o Rey por fazenda de ladrões / Os Juncos forão repartidos [f. 108] o de francisco roiz Jorge aluares forão dados aos capas e nelles se forão os del Rey de Patane aos malajos e outro aos syames doutro não sei tudo tóy avido por fazenda de ladrões das grossas fazendas que destes innos onuerão os manدارis ordenarão que não escapasse portugues por que em nenhum dessem cõsta destas fazendas que erão roubadas.

No mesmo anno vierão de patane dos outros inuos em que vinha lopo de Goes / os portugueses como já disse mannosamente delles tomados por força e vierão a Nanto e assi com recados falsos sabia a gente em terra e prendião nos porque vinha espalhados oje hum de manhã outro finalmente que todos forão pressos / nos mesmos inuos logo cortarão as cabeças aos capitães mestres pilotes mercadores como tóy fazenda o outro rebotalho trouxeram a cadea em que merrão dizem de mil e quinhentos pessoas abró forão as cabeças dos mortos que era grande quantidade pollos roubar aleumarão lhe que trazião portugueses a terra per estas cadeas de Cantão forão afogados delles muitos mortos as pacadas e a fome nas cadeas de maneira que de toda esta copia de gente que antre todos sêria hum mill não escarparão mais de sesenta bargantes que soltaren e obra de cinquenta mulheres e meninos de que depois morrerão a metade estes se forão pera Syam.

Hum Syane chamado cêncaanto hum seu hirmão e outros tres syames forão na praça descabecados e feitos os corpos em troncos por que deziano que trazião portugueses a terra por cousas falsas q lhe aleumbarão tanto que os mandarís onuerão as fazendas a mão a mão parte e menos pera o Rey não lhe minguou raia [f. 108 v] pera os matar diziano os mandarís que soltassem estes que erão passadas conhecidas que farião elles Syanes cenas contra os mandarís das fazendas que lhes tomarão que os mandarís passarão mal que milhor era dar fundo a tudo por tal que nunca se soubesse / Ordernão de não receber nemhum estrangeiro na china e por esta causa destas fazendas e da dos cinco inuos forão os mandarís muitos ricos estas que furtarão ha gran tempo que não estão em Cantão forão mandados pera outras governaças segundo seus custumes agora som sobidos os mores do Reino.

Na era de MDxxi. Vez ver Martim Affonso de Melo com cinco naos nauios hum inuaco de Malaca / a gente que qua ficou he esta f do nauio de Diogo de melo os que merrão no nauio Manoel chamarrow, João Queorisma, Vasco Gil, R aluare João vaz Lopo gonzalez João soarez P biveau Aluaro perdigão manuel aluz João pintu João carrasco Bastião gonzalez homês darmas hum clerigo João do peral mestre Bras gonzalez contramestre francisco plx marinhoe Aluaro annes condestabre Affons anne bombardeyro João Affonso serrador estes sessenta bremmo rerão no nauio Diogo de Melo capitão Duarte lopez Diogo Carreiro estos feridos recollidos / aos inuos indo peravante por que bradão das feridás e prisões lhe correrão as cabeças nos mesmos inuos Duarte pestana o barbeiro / Benaditio marinhoeiros / Domingos gil gromete / Roque gromete P de o toyal gromete, João griz bombardeyro Joane escrano estos soue forão a Cadea do toccey / P anues piloto / Bertholameu fernandez pedreiro / João de matos A de medina Joane maluco estos grometes Domingos frz Jorge diaz fernão liaro homês darmas estos vierão ter a esta cadea de anchuby donde ora estou.

[f. 109] Gente do nauio de P homen os que morrerão no nauio / P homê, Gaspar roiz / Martim Affonso despenheiro francisco dandrado Diogo martiz, Antonio afliz estes seis homês darmas / Pantalho diaiz mestre João luis contramestre / Bras mraz / P anues / A esteez estes tres marinhoeiros, Aluaro, R., Joane Manoel preto estes cinquo grometes Luis plx carpinteiro e o barbeiro Vasco roiz Jorge diaz tomheiro todas estas dezassei pessoas forão mortas no nauio, João da Syluceira, Domingos serrao, Martinho francisco de meadouro / francisco Ribeiro magalhazes Jorge roiz estes seis forão a cadea do toucey e quatro grometes f Pina e franco, Manoel maluau, Diogo cafre e André caraulho piloto / A de fernandez marinhoeiro / francisco, Antonio grometes e Matheus diaiz, franco monteiro Affonso
diz Marcos Toma fernandez tilheiro-Siasto luis condestalbro estes dez vierão ter a esta cadea / as melhore que tomarão em estes nauíos forão levadas a outras Cadeas e vendidas / finalmente que forão teer a cadea do tomaçi todos morrerão a fome e ao frio não ficarão mais que quatro homens portugueses e hum cafre os quais morrerão nesta cadea em que estamos falecerão seis ficarão dezoito assy os desta cadea como os da cadea do tomaçi / Dia de .S. Nicolao da era de .MDXIIII, lhes lançarão taboas com sentencias que morressem e entroncos por ladrões diziam as sentencias ladrões piqueiros do mar enfiados pelo ladrão grande falsamente sem espiar nos sa terra mourão em troncos por ladrões / hoy recado ao Rey segundo a enformaçao dos mandarís confirmou o Rey a sentença a vinte e tres dias das Septembro de .MDXIIII, forão estas vinte tres pessoas feitas em pedaços cada huía .f. cabeças pernas braços e suas naturas nas bocas o troncodorcorpo em rolundo pella barriga em dons pedaços pelas ruas de Cantão fora dos muors pqa pousação pfias [f. 109 v] Ruas principaes forão mortos de tiro de besta em tiro pera todos os verem assim os de cantão como os do termo pera darem a entender que não tinha em conta portugueses por lo pono não fallarem portugueses. / forão assim nos nauíos tomados as mãos por se não acordarem os capitães ambos e tomados assim todos nos nauíos a todos os mearão e as suas cabeças e naturas forão trazidas as costas dos portugueses diante dos mandarís de Cantão com tangeres e pražeres forão vistas pinuradas pollas ruas e depois deitadas nos tununtos / e daqui ficou não consintirem mais portugueses na terra nem outros estrangeiros.

Os malajos que forão o Piquim forão despachados que se Viesse a Cantão que aqui lhe mandarião o despacho e veio que lhe dessem huía carta pera el Rey Nosso sôbor pera lhe ser entregue malaqua cujo theor he este seguinte trezalada de Verbo ad verbô doutra que os mandarís fizerão em Chim que per ella se fizesse a qual fizerão tres por este theor que se auia de levar pera el Rey Nosso sôbor ao sô governador outra ao capitão de Malaca.

Quenhêî e ohiçi mandarís onuirão dizer que o poder dos frages tinha tomando Malaca fizerão carta ao Rey da China como fora tomado e Roubada e muita gente morta e escreeuo o Rey aos mandarís de Cantão que se fizesse conselho sobre isso depois desta carta chegou outra de Rey de malaca que trouxe Tuão maçame embaixador que foi dada a el Rey da China que deixá na maneira seguinte os frages ladrões com coração grande vierão a malaca com muita gente e tomarão a terra e a destróirão e matarão muita gente e a roubára e outra catinarão e a outra gente que fics esta debaxa da [f. 110] justica dos franges de que o Rey que foy de malaca tem hum coração triste anojado e grande medo tomou o sello do Rey da China e fugio pera bentão donde esta e os mens hirmãos e parentes fugirão pera outras terras o embaixador del Rey de portugual que esta na terra da China he falso não vem de verdade que vem pera enganar a terra da China pera el Rey da China fazer merçe a el Rey de Malaca com coração enojado manda presente pede ajuda e gente pera lhe ser tornada sua terra esta carta foy dada a libro que he o despachador disto despachou o libro que a terra dos franges deia ser cousa pequena chegada ao mar depois que o mundo he mundo nunca viera a terra da China embaixador de tal terra a terra de malaca teem o fem e sello da China e da sua obediência o libro despachou e deu carta ao Rey despacho.

O Rey da China manda carta aos grandes de Cantão que não recebão a nenhum embaixador de portugul a carta del Rey de portuguel he queimada o embaixador e sua companhia ja foy preguntado de como se tomou Malaca não o deixem hir manda carta ao Rey de portugual pera que o saiba e os seus mandarís pã que o saibão logo e entreguem Malaca ao dito Rey de Malaca como o Rey de Malaca for entregue malaca e gente assy como lha tomarão ao Rey de Malaca e como o Rey de Malaca for entregue della deixarião hir ao embaixador e se não entregar Malaca ao dito Rey averse ha outro conselho / esta carta vego do Rey da China ao Tutão e comom e choupim de Cantão os quês a mandarão ao senhitêç pocanhçi e anchaçi que teem o sello ao hayto pão aos outros mandarís charem tuão heallie embaixador del Rey de Malaca e seja perguntado dixe aos mandarís que muita gente dos franges lhe tomarão Malaca sua terra que assy era verdade os mandarís fizerão conselho e mandarão que o embaixador del Rey de portugul fizesse carta verdadeira e fose dada a Tuão [f. 110 v] alemançet embaixor del Rey de Malaca que a
leue a Malaca e daly vaa a el Rey de portugal que lhe entregue e torne sua terra e gente na mão assi como lha tomarão e assi a Tuão mafame e e então mandarão ao embaixador de portugal que se vá como vier carta del Rey de Malaca ao Rey da China que lhe entregarem sua terra e sua gente e se el Rey de portugal não entregar a terra de malaca ao seu Rey na vier carta a terra da China da entrega não deixarão bôr o embaixador e averse ha outro cósenho estando nesta cadea os mandarís mandarão húa carta em Chim que se fizesse em portugues as quas fizerão tres húas pera el Rey nosso só outra pera o governador outra pera o capitão de malaca e se derão em a mão do ançachi ao primeiero dia de Outubro da era de MDxxij.

Os mandarís mandarão ao embaixador de Malaca que tomasse aquellas cartas e as lenasse a malaca como lhe fosse entregue sua terra que viesse com recado o embaixador não quia dizendo que com aquellas cartas lhe cortaria a cabeça em Malaca que lhe dessem licença que queria comprar hum junco piqueno que queria mandar a metade da sua gente saber do seu Rey porque não sabão donde estava porque as mulheres que tomarão nos dois naúios húas dixia que era morto outra que não e que levarão húa carta se a podesse mandar partío o junco piqueno com licença con quinze melajos e outros tantos Chís ao derradeiro dia de maio de xxiiij, chegou a Patane ali tomou algúas melajos e hum capado bengala e tornou recado del Rey de malaca e veio a Cantão a cinq days de Septembro os Chís que leuou o junco ficarão todos em Patane que não quiserão tornar a China a carta de embaixador dezinho as forças assy.

El Rey de Malaca esta em Bintão cercado dos frances pobre desemparado ouhando desolpah mbahã ate noyete por socorro [f. 111] del Rey da China seu aor e se não lhe der escravera os Reis seus vasallos que o ajudem com gente e que mande algúas provisão de mantimento a seu embaixador e cousas a estas semelhantes dizia mais a carta que estando o junco carregado em Patane ouerão os portugueses noticia delle e que viero sobre elle pera e tomar que elles se fizerão ao mar com húa trounda e escaparão sem mais mercadoria e mantimentos que a fom ouerão de morrer no mar com esta carta entrara em Cantão os mandarís os tornarão a despachar qua ambos os embaixadores f. Tuão mafame e coacção e sua companhia se fossem pera Bintão que ja tinham o junco preste e se se não quisessem ir que não lhe auão de dar mantimentos / Divião que não se auão de hir que os matassem e fizessem o que quisessem que os frances tinham la tomado tudo que não podião ir a lugar que os não tomaram mais dixe o linga ao tutação que veu de Patane que auia noua que no ano presente ouerão de vir com veiillas de portugueses pha qual palabra lhe derão vinte agentes por ouar em tal fallar partío e embaixador na era de vinte quatro aqui ouui dizer a hús mercadores que por se arredarem da costa de Patane forão dar nas Ilhas de Borne com tempo e quebrarão o junco e os capturão não sey se foy verdade.

Na naó de Diogo Caluo veyo hum Chím xpô con suá mother chamado Pº este quando vio o desbarate tornou se pera foy e donde erat natural ali esteu escondido tene maneira como oune seguro dos mandarís que lhe dizia a força que os portugueses tinham em malaca em cochin que ele o sabia tudo que sabia fazer poluara bombardas e gales disse que em malaca avia trezentos homens portugueses que em Cochin que não era nada e começou em Cantão a fazer duas galeas fez duas acabadas de todo forão amosstrados aos mandarís grandes achamento õ pendião [f. 111 v] muito que não aproeitava que fazão grande gasto e madeira mandarão que se não fizessem mais lherão mão da obra das gales e botarão nos em nanto a gelfa / achário o que algúas cousas sabia de poluara de bombardas mandaram no ao Rey dou lhe enformação de malaca foy feito honrado con hum piquo de rez de mantimêto dizem que fez em Pequim bombardas porque o Rey tem lêa guerra per guerra jesta pode ser assi que a mím assi ma disserão deste pedr fazer em Pequim bombardas polia enformação teem os Chís os portugueses em pouco por dizer que não sabei pelear em terra que são como pexes que como os tirão dagos ou de mar logo morrem / esta enformação deu bem a vontade do Rey e grandes que elles tinham outra polia qual reação tomarão conhecimento de toma pis de como o entregará pera o trazem a Cantão.
A gente de ficou em companhia de Tomé piz / Duarte fernandes criado de dom felipe / francisco de Budoya criado da sênhora commadaderys e Christonão dalmeida criado de christonão de Tavora Pe de freitas e Jorge ains em christonão Vieira e deze moços servidores, cinco jurabaças / de toda esta companhia não há mais que eu christonão percoro Dormuz hum moço meu de Gois / os que era somos vimos no presente Vasco Caluso, hum seu moço que chamão Gonzalo / como digo nos três que ficasmos da companhia de Tomé piz estes por dizerem que era da embaxada escapação e os que percorrem com nosco aqui nesta cadea entramos treze pessoas como digo são mortos Duarte fernandes quando hamos pe da Pequim fallece na serra hindo Ja doente francisco de beijo quão vinhamos de Pequim no caminho fallece isso três os quatro moços nesta cadea com as prisões fortes como ja acima disse Christonão Dalmeida aí Jorge ains portugueses estãom o escriuão da cadea tomando do vinho o matam a contes fallece em seis dias os lingoas em Pequim forão pressos e mortos e seus servidores [P. 112] dados por escravos aos mandarins por serem de treidores o Jurabaça grade fallece de doença os quatro forão em Pequim descabecados por saírem fora da terra que trouxerão portugueses a terra da China. Pero de freitas nesta cadea e Tomé piz aqui fallecerão de doença Tomes piz na era de MDxiiij. em mayo de maneira que toda esta companhia no presente não há mais de dous aqui como acima digo.

Os nomes que tinhamos Tomé piz capitaão moor quando fainão perez chegou ha China disse que vinha embaixador capitaão moor cuidarão que era tudo hum nome puserão embaixador capitaão moor tirão no nome dembaixador que dizão que era falsa embaixada agora nos a prouamos por Verdadeiro / os mandarins por mal feito o passado e não teem esta magos para os soltar finalmente ficam embaixador capitão moor então que era seu nome a mim chamão trânsito de pina porque ficou aqui trânsito de pina no escriuão foro tirado eu fiquei em seu lugar e nome por estar Jax nos livros dos mandarins escriuão e assim chamo a Vasco Caluso chamão cellambe a gonzalo seu moço a cano Christonão christonão Antonio Antonio e os quais fallecerão deixo de os escreuir quais todos tinham os nomes desvairados porque não se podiam escreuir nem teem letras que se escreuíram os Chás que são letras do diabo e mais não se podiam alear porque erão Jax espalhados por muitas cartas e e muitas casas e fazendo outros parecia em ello e tanto monta assim como assi as mulheres dos lingoas assi as de Tomé piz que ficarão em esta cidad o anno presce forão vendidos como fazendo de treidores aqui ficarão em Cantão espalhados.

A terra da China he deuvida em xv. governações as quais estão pegadas ao mar são Quantão, foquiem, Chequeam, namqui, xantão, Pequim., estas posto que toquem no mar também ise estende dem pola terra firme a redonda, Quincy honão, Cuychuhe he [P. 112] Chenê Cheamcy. Sancy entesios com paquim / estas governações quie están no meio que ancy Vinão honão destas [xv] não quem são as cabeças de toda a terra sobre todas pequim he a principal onde o Rey per ordenança esta dasento Nanquim está em S/ graos ou 22/ Pequim em 38/ a 39/ Cantão foqui corre a costa nordeste sudoeste pouco mais ou menos de foquevate piquim corre a Costa direita ao norte sul vira ha costa que dizem que he muito limpa e de muitos cidades e lugares perto do mar por rios todas estas /15/ governações são debaixo de ham Rey / o melhor desta serra esta por Rios que todos deuem ao mar / não navega ninguém no mar do norte sul he defesso prô Rey por se não deusar a terra per onde fomos tudo são Rios tem baces e maio lados por baixo sem conto de muitos em meu afirme que veiria mais de 30000/ ante grandes e piquemos demandam pouco aos certo são Rios para gales antes pera toda vastalha de Remo de guerra pegado ao mar não teem a terra nenhuma mader nem a 30/ legosas do mar digo a costa de norte Sul he toda a terra baixa todo carretas de mantimentos e nos Rios ha madeira de da terra firme engrampadas e cerca Pequym mais de 100/ legosas ha sirga porque a governança em que o Rey esta não teem madera nem pedra nem tijolo tudo corre de carretas de nanquim em baces grandes se lhe não quem não a corre esse com mantimentos seus ou doutras governações não se poderia sostor Pequym p que ha gente sem conto e a terra não teem aRoz por ser fria e de pomoces mantimentos o Rey esta nesta governança que esta na estrema da sua terra porque teem guerra com gentes chamadas tazas e se o Rey já não estivesse entraria a terra porque mesmo Pequim fay destes tazas e outras governações.
Esta terra da enseada de Canchinum obra de quinze legoas de bairro dentro de quinze ou vinte legoas começa húa terra chama [f. 113] se asseria miçulem ou moulem e corre em leste vay acabar em foque estrema foquem de Chiquiquo estas serras são altíssimas sem arnedo estão lenadas e muito fragosas de maneira que destas serras deude três governanças pera o mar Cançy pagua a terra de Canchi e Cantão e depois foquem estas tres governanças ficão sobre sy. / Das outras Cantão foquem pegam ao mar chegam ate a serra / Canchin jaz antre Cantão e a serra ate Canchin não he pegada ao mar de Canchin toda esta corda de serra que deude estas tres governanças das doze não tem mais de deus caminhos muito ingrems e trabalhosos hum esta desta cidade ao norte per este se serve a governança de cançy e cantão e parte de foquem outro esta la sobre foquem com caminhos cortados de pedreyra muita parte como quem vay a santa Maria da perna e da outra banda onueru tal decis / destas serrarias altíssimas assi ingrems se fazem regatos que depois qua embaixo se fazê Rios que da serra vem descendo pera o mar e quem vem de Cantão pera lá da do meio do caminho sempre vay a siguia com ganchos as vezes por palmo de ago outro tanto he da serra pera outras governanças.

Esta serra da banda de Cantão tem húa cidade e da outra banda outra a serra Jaz no meio avera de húa a outra ate seis sete legoas quanto diz a serra he terra ingreme a muito fragosa he grande pera que toda a terra das doze governanças vem passar por aqui os que vão de Vir a Quiancey e a Cantão em hum dia se passa este caminho em mułatos e asnos / dos regatos destas serras corre em hum cabo como do outro ao pce destas serras dambas as bandas se junta a ago começar a fazer Rios a lugares doos palmos dagoas e as barcaes pio calho vão roçando isto em muiitos lugares obra de oyo ate [f. 113v] dez legoas da serra pera baixo e a lugares he fundo desta serra pera Cantão toda a mercadoria que vem e vay he per este Rio todo omandarum que vem e vay tudo he per este Rio per terra ha caminho em recados de pia e teem algúns Rios de passar que atransesarem por elle eindó pouco porq teem ladoes per todo o caminho e por Rios como digo os caminhos da terra não são seguros. Toda pasajem e caminhos na terra da China he em Rios porque toda a China e cortada dos Rios que não se pode andar duas legoas por terra sem atransarse Vinte Rios ysto he per toda a terra e não teem mais que húa governança que não tinha Rios.

Toda a fustalha de Cantão em q a gente passa e mercadoria pera a serra e pera outras partes destas duas governanças f. Cantão Queancay tudo se faz na cidade de Cantão contra a mar em ingares eercados de Rios de agoa doce e de monte porque de Cantão he serra não ha húa soo arnore de que se possa fazer húa soo barca / em Cançy que he longue daqui fazem algúns barcas de mercadoria grandes e não muitas todo o feito he nestas faldas de Cantão e por derrender de tanço que estas barcas de Cantão forç destroydas não pode as outras governanças vir socorro porque não teç caminhos por terra assi que quem for de termo de Cantão tudo he milho he na faldra do mar e doze, quinze, vinte legoas pia terra dentro tudo isto he esquartijado de Rios per onde pode andar toda cousa de Remo esta he a casa e terra mais apta que todas as do mundo pera ser sometida e todo feito he neste termo de Cantão por certo que he moh honra que a governança da India ao diète se saber que he mais do que se pode escrever / Se tener el Rey nosso sñor a certa verdade e enformação doque he não pasara tato tempo.

[f. 114] Esta governança de Cantão he das milhoes da China de que o Rey recebe muitas rendas porque he daroz e mantimentos sem conto e todas as mercadorias de toda a terra vem aqui deferir por reço da escala do mar e das mercadorias que dos outros Reinos vem e Cantão e to da passa pera dentro da terra da China de que o Rey recebe muitos direitose e os mandaria grandes peitas os mercadores vinem mais limpa mente que nas outras governanças que não teem trato / nenhula governança da China teem trato com estrangeiros senão esta de Cantão e que outras podem teer pollos estremos he cousa pouca porque gente estranha não entra na terra da China nem da China pera fora este trato do mar nobreça muito esta governança e se trato fica nos lavoradores como as outras porém a escala de toda a terra da China he Cantão foquem ha pouca cousa de trato e não vão lá estrangeiros não se pode fazer trato em outra governança senão em Cantão porque pera ysto he mais apta que outras pera trato com estrangeiros.
Esta governança tem treze cidades e sete cheros que são grandes cidades que não tem nome de cidades, teem cem villas cercadas afora outros lugares cercados tudo o milhor Jaz ao longo do mar até aynão per Rios que podemos entrar naus que remem e os que estão arredados do mar estão ante Rios em que outro si pode andar toda a fustalha de remos as cidades e villas que estão per rios que não podem a elles ir senão a sirga não se façia dellos pollo princípio fundamento porque quando o mor obege o menor si não a leuanta como digo debaixo do sol não ha cousa tam despota como esta e de gente sem conto e muito pouoada nestas fallidas por onde estar rios e onde os na não ha não he assi pouoa nem o quinto / de toda sorte de oficnas de todos oficnios mancanis digo carpinteiros calafates ferreiros pedreyros tilheiros serradores entuhaldores finalmente que esta he acima [f. 114v] das cousas que são necessarias para o servico del Rey de suas fortalezas e daqui se podem tirar cada anno quatro, cinqueno mill homens sem fazerm nenhum mingoa na terra.

O estilo desta terra da China he que todo hom que ministra justica não pode ser daquella governança; a pessoa de Cantão não pode em Cantão ter carrego de justica e andão travaçados que os de huñas governanças governa as outras não pode ser justica onde he natural esto he nos letrados e todo o letrado quando alcanço grao comece encarregos pequenos e dali vay sobindo em mais grandes se sabere quando hão de ser mudados e estão aqui de repouso e vê carta sem ele saber he mudado daqui trezentos legos estas mudanças se fazem em Pequim isto he per toda a terra e cada hão vay sobindo daqui vem que nenhum saltador da China não faz verdade porque não ouilha pollo bem da terra senão por furtar porque não he natural della e não sabe quando o hão de mudar pera outra governança daqui vem que nenhum liangas nem preilimos donde governão nem teem amor ha gente não fazem senão roubar mato açuntar por tromentos as pouo e ho pouo mais mal tratado destes mandarís deohe he o diabo no inferno daqui vem o pouo não teer amor ao Rey e aos mandarís e cada dia se andão alenuantando e fazem se ladrões porque o pouo que he roubado não teem vinha nô donde comer he necessário que se faça ladrão destes aleuamentos ha mil em lugares donde não ha rios muita gente se alevaı̈a os que estão anter Rios donde podem ser presos estão quedos por todos desejosos de toda nonidade porque são postos nas cimas de toda sogheio he muito mais doque digo.

Os mandarís Canaleiros posto que seão mandarís não tem carrego de justica destes são muitos são mandarís de suas casas [f. 115] teem ordenado do Rey em sua casa quando cumpre vão pelejar donde os mandarís por qualquer culpa são logo açuntados e atromentados como qualquer outra pê do pouo também estes vão sobindo em nomes e segundo o nome assi teê o manteamento este não saê da terra do seu natural porque não ministra justiça as vezes teem carrego de lugares de gente darmas porem onde quer que estão pouoca cousa entendem de justiça salvo em lugares de pouoações de gente de sua ordenança.

As armas da terra da China são treçados de ferro curtos punho de paço tiracolla de corda desperto isto he pra gente darmas os mandarís tem deste geito mais limpas seja tem o du lanças teem canas os ferros são pregos e ganhos pediaços de paços cascos ou capaçetes destanho de folha de frandes per amor da calma antes de virem portugueses não tinho bombadas somze huñas teitas a maneira de talhas de monte mora cousa de sento. nenhum do pouo não pode ter armas mais que faça sopena de morte a gente darmas pode teer não em sua casa quando cumpre aos mandarís lhas dão em quanto com elles se rente acabado recolhemse a coisa do mandarim tem arcos bestas de paço.

As mortes na terra da China a mais Cruel he posto na cruz allí lhe tirão tres mil fatias e estando vino e depois a abri e tirinha a fresura pera os algozes comerem e fazem todos as pedaços e dam na aos cães que ally estão pera isso dam lha a comer isto a capiçates de ladrões a quem elles querem / a segunha he cortar a cabeça e sua natura cortada e metida na boca e o corpo feito em sete pedaços / a Terceira cortar a cabeça pello tontico / a quarta he afogar, os que teem menos culpa que morte ficão em gente darmas da China perpetuo per filho e neto bisneto; o que he de Cantão mudão no a outra governança muito [f. 115v] longe jamais nunca tornão
a sua lha serve dos homens daramas este he a gente daramas da China daqui, vao a sobrê em mandarins casalhos destes que acima digo dez mil húnas degradados em Vidas per annos e a eles degradados mudam nos pollos gonzarncas a servir nas casas dos mandarins e varrer e asvarradas açoas sêder lenha e a todo outro servirº a servir em obras do Rei e outros serujoº os tornos são tem escapos dalargar borsequi hña ante os pees e dua per fora com cordas com que lhe atormentão os artelhos e com maços dão nas escapos as veze lhe quebrão os artelhos as vezes as canelas das pernas e morrem em húa dia e o dous é mesmo e o semelhante com pões nos dedos das mãos e pees estes teem dor muita não perigão são também acoutados nas pernas nulgas e barrigas das pernas e nas collas das pees e panceadas nas artelhos destes acontece morrem muito sem conto e todos grandes e pequenos andão atormentados teem muito forte costume e o pono anda escandalizado e não faz ninguém carta contra manderim como he meio o açoute he húa cana grossa fendida seca de grosura de hum dedo e de largura de húa palma da mão e lança na m remolho porque escoza mais.

Toda a pº teem terras toda a terra da China he ensortida em partes chamão a cada paro quinte sera terra de semeadura de quatro alqueires daroz obrigado todo o lavrador de pagar desta sua terra certa quantidade daroz ora semem ora não ora aja bons temporaes ora maos como não acodem os temporaes sição pobres vendem os filhos pera pagar se não abasta vendê as proprias propriedades são obrigados cada pº como teem esta geira de terra dar certas pºº pera servirº dos mandarins ou pera cada pº vinte cruzados som obrigados a dar a todos aparelhos de menas tintas cadereias catres, baçios outras mendezas pera as casas dos mandarins [fol. 116] são obrigados os que não teem terras darlie certas pº húa e se não tem pessoa dinheyro e se não teem pº dinheyro eis em pº ha de servir e comer a sua custa e peitar a pº que serve alem destes dirís são obrigados ao seguinte.

Toda a terra da China ora sejão rios ora terra firme em caminhos gerais de Jornada em Jornada estão casas preste com cada húa seu mandarim escruião donde teem arozes carnes pescados galinhas e toda a outra maneira de comer e artifícios de Cozinha e bares com cozinhas mesas cadrás camas teem assí bestas preste remeys pera servirº dos mandarins e toda outra pessoa que passa pollos rios fi todo mandarim ou outra pº que o Rey mancia ou os mandarins com sua gonzarncia leuão carta pº qual lhe dão muito se vay per terra cauados se per mar bares cañais tudo he no jabe as pº são estas casas sortidas as pºº dos termos são obrigados a dar yato de certo tempo húa ora outros per esta razão não lhe fica mensua causa que não despenda e se algo reduza logo he preso e tudo vendido e ele morre na cadea não refusa nemem ao o mandarim manda com a cabeça no chão o resto na terra oune e holh o mandarim como outro relapsando daqui vem o pomo a ser pobre também por qualquer causa são logo acoutados e metidos nas cadeas a menos penna se teet quintes daroz e dous tres e mº de prata, locais e delles pagão quinhentos e mill tates donde creio verdádeiramente que as penas que se arrecadão pera o Rey das pº que prendem he muito grande somma de prata e certo que nas de Cantão ha de contínuo até quatro mill húnas presos e muitas molheiras e cada dia prendem muitos e solámo menos he morrem nas cadeas a fome como bichos daqui vem o pomo a estar em olho com os mandarins a desejo nouidades pera terê libertade.

[f. 116v] As Cidades villas e ingarea cercados da terra da China todos os muros são largos assentados em terra chão, os muros não tem alperços estão sobre a terra a face de fora parte he de pedra sobre a terra ate o mº do muro o mays de tifolo algúms são todos de pedra digo a faze de fora denro não tamyas as portas fente abobodadas grandes e grandes portas sobre as portas forjadas de madereza desmas tamyas perto a terra pera as tamyas ficão os lugares e muros e cauos os que em vy todos vy em terra chão não teem mais fortalezas as cidades e, vamo os lugares que teem muros abremas as portas com sol e cerãose com sol entregaço as chanes ao mandarym que dellas teem carrego a riçtas recebesse e pia menhão toda a porta teem pº que a guarda com dez doze pº de nôças tudo se vigia grandemente temem disas naturaas as casas todas são armadas de marº sobre estílos de madeira, as paredes dellas são desteiras poucas as mais de casas e taipas com
barro faço de cal per çima sobradas de madeira pousas geralmente assim se todas cousas muito fraca e pta major parte toda a parede vinhe de hua porta a dentro todos tem hua alcunha cada parenteira tá hua parenteira por onde se conheçem depois disto tem seus nomes mirandas ou qualquer outro apelido alem de hua aboa hua tem nome proprios seus desta parenteira e pessoas mais velho teer os nomes para dar conta de quantos são e nenhua pessoas pode sair do lugar donde mora de vinte legcas pera çima sem carta dos manders se sem ella he achado prendem no por ladrão porque todos os caminhos e lugares são checos despís pera esta carta dão certa cousa a carta declara que pessoas he e idade e todo que lhe dão he.

A tenta as casas da justiça que ha nesta cidade de Cantão [l. 117] a prima he o cancheufu que he casa da cidade esta tem dozo ou trezo mandaris e çem esquinás todo manderf vinh na casa donde he manderim a casa do pochani terr vinte manderf piños e grandes esquinás chinchas p34 de recado e p30 outras com esquinás teem per todos mais de duzentos a casa do anclary taltos tantos manderf grandes e pequenos esquinás p30 outras a casa do Toqi tem seis ou sete mandaris e muitos esquinás o cehe he hum que teem carrego da gente darmas e do sal que teem esquinás muitos e cuchi q teem carrego de toda a instiça he hua que teem esquinás muitos a casa do tutao e do Cheopi e condam grande e do piqueno e do tiques alem destas ha obra de quinzé ou vinte que não nome no he duvida todos os manderf de Cantão desta cidade terem passar de seto ou oito mil seruèrdes todos pagos a renta do pouo não fallo em outras casas grandes de mandaris que teem ovelhas que não teem carregos q a conta por casas de gente do pouo atente que cada casa destas de mandaris teem terreyros e lagermento pera em cada hua poder fazer hua torre e haqui a pedra talhada de cato pera fazer de hua hua babilonia deixos casas de suas opraçoes e as suas que he quanto talhado sem conto pois madra hua hua casa esta teem pera enmadeyar hua fortaleza com dez torres todos estas casas teem teapições de portas fortes de dentro todo com casas e curras cada casa destas he hum campo pera fazer hua fermosa vila tambem a casa do aytão he muito grande e portas fortes grandes fermosas e a paredes aos conços he no chao / de todas as de Cantão esta he a copia de mandaris e cada dia se vão hua e vè o outros de manu que cada tres annos e mais todos são idos outros vindos depois que estou nesta cidade são muitas esquipações muidas.

Assi como digo de muita pedra assi de muita festalha que ha [l. 117v] nesta governança de Cantão nem hua de guerra toda de paz de tamanho de galees reaes e fussas e bargafis todas de postiças e de esporões e masteadas a maneira de galees se cada hua poserem hua tilha e seus lames e fico galees e fussas bargafis e polla primeira escusação as de cochí Remos remeereis assi sem conto destas se deu tomar os muílar e as mais novas tudo o al queimar de vagar se podem fazer galees reaes toda a outra festalha de remo estas demandão minos agoas que as nossas podem servir assi como as nossas nestes Rios pera o mar não sé quao seguras serão assi que disto se deue fazer fundamento que são muito necessarios até se fazerm outras que andando a cousa ordenado se podem aqui fazer em hum mes dez doze peças de remo porque os officiaes e madeira he mad e majormente como virem boa pagar cumpre muito estas barcas porquê toda a força he nos rios.

Esta terra da China he grande e as mercaderias delas estão em huias governanças delas em outras Cantão tem ferro o que não ha em toda a terra da China segundou sou enformado daqui vay pera dentro da outra banda da serra e o mais jay no termo desta cidade de Cantão daqui se fazê tachos pregadura armas dos Chis e toda a outra cousa de ferro teo também cordas linha e seda pannos salgadão por reão do trato todas as mercaderias acodem aqui porque este era o porto donde estrangeiros acodão per este contrato de mercaderias das governanças pera Cantão e de Cantão pera dentro era a gente mais abestada q as outras governanças todas as mercaderias que a cantão acodião antes de se emburilha esta guerra aguardadas ate verem em que parão as cousas a [l. 118] terra dentro tem muitas sem se poderem gostar porque as farão as vontades de portugueses digo çedas porçolana.
Não se pode sustar esta terra sem trato as mercadorias agora naocem aqui nem ha hy mercadorias nem mercadores como sobião nem o quinto porque todos forão destorados por respeito de portugesses esta cidade por não acodirem estrangeiros não acodem mercadorias das outras governanças estan pobre no presênto se pode fazer bem mercadoria até naocem as de cima como somerê que acodê estrangeiros e tornare ha a teçer o trato em cuido cada dia se a governança de Cantão se aleuast a toda a terra dentro a de fazer outro tanto porquê toda anda festigada por hú theor como as coisas assentar de hú maneira ou doutra a terra fora mercadoria em qto se não fixar a terra de tantas rôdas que hú cousas para não querer / toda a terra he aprobeitada e as mercadorias q estrangeiros trazê são muito necessarias na terra mayormente por darem saýda as suas teem muitas mercadorias e boas a terra dentro muitos maneiras de sedas que ainda não vierão a Cantão porque cuidão que as não contendem e por ser decesso por o Rey que não se vendão mercadorias boas nem de preço a estrangeiros senão cousa bragante assim teem muito Raybarbo deixo isto torno ao que mais releuo.

Em cantão não fazão armadas como fizerão no tpo passado auera ora dezasseis annos que se ailenantarão hús Chins em Junqueô fizerão se ladrôes e Cantão armou sobre elles forão os de Cantão desbaratados fizerão os mandarHas [f. 118v] de Cantão com elles conceito q lhe perderão e q lhe darão terra onde vinesssem com condição que quando se ailenantassem outros ladrões no mar que elles fossem pesar com elles e o que robassem fosse pêra elles resguardando as mulheres e cousas pera o Rey derão assento a estes ladrões delles em Nanto delles em foym delles em aynamêa e outras poulães que estão de Nanto pera Cantão estes todos tinham todos os Juncos de Cantão erão destes ladrões que digo da presa do anno de 521/ dos juncos que ficarão na Ilha forão ricos e da presa de Sêu âo Patane e por o vencimento dos dois mais ao anno de 522/ ficarão tão soberbos que lhe pareção que ja não poda vir ninguém que não desbaratesse qo qual o anno de 523/ fizerão armada de chins juncos aguardando por portugeses a metade estando diante é Nanto outra a metade ao mar anter as ilhas aguardando na fim dagosto de húa troçado nelles que durou hú dia e húa noite que espadouq todos os principaes q estauão ao mar que não escapou nenhun a outra amêade que estava auante é não metese dentro no Rio salinarão de aynamêa que he porto seguro que se todos estiverão ao mar todos se perderão não teem mais juncos nem tiça forma que erastes homês de que não ha nenhû delles e o mys húo per força que lhes não pagavan / na era de 524/ fizerão armada de juncos de sal enq tomarão per força ate que de 525/ fizerão armada forão os juncos deminuindo ate que ha deixarão de fazer e os juncos que escaparão em aynamêa não ha nenhû todo desbaratado de ladrões que depois destes se aleuastão no mar os quais agora vêm a terra com seguro que lhes derão terão obra de sete [f. 119] ou oito ilhas agora não tem outros senão for estes destes homês se amda sem vinos não fazem armada nem tem juncos em que as queião fazer na tem agora mais forças que ha a dois muros de Cantão.

Nesta armada que os chis fizerão aguardando pêta nossa não avia nenhun homem darme dos ordenados de Chins tudo era gente dessas pouânças e juncos tomados por força e gente fraca e vil e o mais meninos porém cada hum delles he milhor q quatro homês darme he causa de zombaria fallar em gestão darme deste terra da China / esta armada que mandaão a Nanto são alguns capitães pareçendolhes que podião tomar portugeses como no anno de 522/ como festa gente for escozida do ferro portugês toda logo he de companhia sem portugês porque mais he gente de bona boya e pouca raiz na terra ou nenhû / esta gente de Cantão he muito raca em comparação doutra gente de dentro que he forte neste Cantão digo pró termo pêta governança como he causa arredado dos rios logo se aleuastão / dam sobre pouânças maio muito gente isto cada dia em muitus lugares e não lhe podem faz damno e mandão per gente a governança de Cançy qu qu asss ao ponente de Cantão chamaão a estes langaõ ou langaõs estes teem muita algãs feição porem tudo he cousa de venio dizem os chis se portugês entrarem que chamarão muita gente desta e não pode vir semão pró rio que venha çem não aproussia nada porque como o rio for despagado da sua fustala e se alimpar e andar nosa fustala com bom-
bardas não a cousa que parece a dez legoa estes Chãs de Cantão quando vão pelejar com gentes que se aleuautão naqua [f. 119r] matão a ladão / saltão per essas casas de ladão matão nelles infundos e trazem as cabeças delles antes muitos preos diz que são ladrões não ha mister mais proua. todos os matão per modo cruel/ isto fazem cada día o pouco he tão sojeito e medroso que não ousa fallar deste geito he per toda a terra da China he muito pior do que digo pro qual toda a gente deseja renovela e vindas de portugueses estes de Cantão.

A ylha de Aynon teem húa cidade e quitorze villas esta a vista da terra da China teem bom porto teem madeyra pêra esta, reça não teem fastalha quando algua gente de luchim se aleuautão em Junquos vay a estes partes fazer soltos pedem socorro a Cantão he ousa muito fraca he da terra China defronte de Aynon ate Cantão ao longo do mar quatro cidades muitas Vás per todo mar per Rios em algua podem entrar nauos em todos podem entrar cousa grossa de remo in todo o tempo se nanega teem ao longo desta costa muitos ylhas frescas que emparão todo o vento ysto he o principal desta governança e sera deus tercos de governança entrançando Cantão no tomou tudo isto he rendido como a cabeça se someter e for tomada teem este Aynon muitos sendeyros tem quoquos e areá que não teem toda a terra da China em Cantão tem tratado com estas areás e quoquos assim daljofre muita copua que não teem toda a terra da China assim que digo que teem sendeyros que os Chãs chamão Cuallos destes hazem pera esta governança daqui se podem ater muitos por ponce preço.

Este Cantão teem obra de duzentos cauallos destes os mandarís pequenos que não podem trazer andor teem cauallo assy [f. 120] os mandarís de guerra cada hum teem seu estes syndeiros são pequenos são dandadura estes no mãos de portugueses podem aproueitar ordenados a gineta e desporas estes Chãs são daquê e desenfebrados tem Cantão mais de vinte e trinta sete officiais pessoas que fazem estrébos são muitos que he gente sem conto cada hum quando ganha dez réis por diá para comer louva a deos deste geito são todos os officiais da China assí como digo estes com os de Aynon podem aproueitar pera a terra val aqui hum destes cauallos de três a dez taes de prata e nhuha pê como mantem ollaes nem podem andar em cauallo digo polla cidade.

O Tutão Compim Conquã são tres pés que teem carrego desta governança de Cantão e Cançy estes são os mayores estão em húa cidade chamada Veho que esta no estreimo dambas estes governâncias esta cidade he de Quençy estão aqui o mais do tio porque teem a guerra e de las governâncias ambos as vezes vem a Cantão estão doua tres meses ora hum ora outro as vezes se passão doua annos que não vem nenhum a esta governança de Quençy anda sempre aleutada muito grande parte sem lhe poderer valer esta he a cousa porque estão las o mais do tempo esta cidade esta no ponente de Cantão obra do trinta legoa per rio porque não tem caminhos per terra e he a terra toda cortada de Rios vão las em cinco dias a muito grande andar com muita gente de sirga e vem em tres andando de noite e de diá / Agoa corre de las pera Cantão teem este caminho húa cidade grande abordada ao Río que se chama Chequy fa per todo este rio pode navegar toda a cousa de remo são per este caminho pouaoções sem conto assí que a qualquer [f. 120v] cousa de guerra de Cantão estes abalão trazem gente como nossa armada, andar no rio eu fico que não venhau ninguém e quemquer que vier per força ha de vir desembarcar defronte desta cidade pegado ha pouaoção deste aratale os mês legoa per este rio acima ao norte finalmente que não pode vir ninguém que não seja apanhado e mormente que todos nanego de dia e não de noite porque os Rios a lugares são baixos e a lugares teem pedra e se vijarem todos jazem na mão postouque mais banquas trazem do que direm.

Tem Cantão mandaris depois destes ho cheuhi e o pocháçy e ameçay tocy que chamão cançy que estão de contino nesta cidade o euchy vem cada anno este não tem a ninguém todos temem a este este vem pera despachar todo o caso pera ver ver qual mandarí faz mai seu mandary que faz erro he pequeno este lhe tira logo as orelhas das diae enformação ao Ray se o mandary he morr esceuen delle ao Ray sua culpa dela vem que não seja mais mandarim porque o rey da enteyro credito a este assi ao tutão e conquão / O Campym não esceu que teem
carregos de gerra o tutão manda em tudo se alguma carta ouver descrever seja a o eucohi porque vem cada anno e não sabe dos roubos que são feitos aos portugueses estes não são senão aluires segundo serem assim lhes fazem mereces em todo despaço sem dar conta ao tutão nem a nenhã mandary.

[f. 121] Martim A de Melo veio na era de 522. a entrada do porto o fez bem de sua entrada dalgú gente que se la matou c artelharia vejo o recado a Cantão assi dezião que elle escrevera hás carta q dezião q fallau bem os márár que tinhao do anno passado roubado a faz da agastaráo com sua vinda começará a embuirhar perguntarão ao Cunhy q lhe parecia se farião mercad à ou não tisse o Cunhy q mercad à como dãses se fizesse / respondeão elles q não auão me do q com esta mercad à se receuessa ao diante algum damno q deitarão mão dalgum lugar o Cunhy não lhe respondeo nada elles sahirão descontentes estes preguntarão outro tão a oytão q tem carrego do mar e dos estrageiros respondeo outro tanto estes dous mandarís q perguntarão hum era o châço outro o anchacy q erão os mayores de Cantão estes márár a oytão q fose pelejar com os portugueses este aytão era nueamante vindo não sabia do passado disse elle q não podia fesse doente mandarão lao o tiquão q faze carrego de estrageiros debaixo do aytão não sey o q la faze estes dous mandarís q pochancy e anchacy dizê q peitarão ao pio de nato ao pacainho darmand a q trabalhassem por tomar algum nauio e trabalhassem por se não fazer paz istu secretamente acôtêgo q por moñha e por os capitães não terã os Chãs a cóta e não terã artelharia atacada nã era ordenada e cada hú capitão tiou pera seu cabo e Di de melo ser primo ferido de hás pedrada que ficou atordando e dizê q toda a gente se meteo debaixo dalçaçaua dos nauios per amor da pedra assi os tomarão os mãos Pó homê estádo armado não lhe acodio ninguém foy morto de pedradas e remesos o mestre contrametre algú marinheryos pelejão não lhe acudia otra gente os iunco erão alterosos finalmente que forão tomados no nauio de Diogo de melo saltarão dentro nello trezentos Chãs a roubar depois de ser a gente recolhida aos iunco derão o fogo no paroi de poluora abrazaua o nauio morrerão todos os Chãs sem ficar nenhum desta nova vejo recado ao aytão de como erão dos nauios tomados e os outros ydao foy logo e veio com gaitas escreuão q aquella gente que morreu do fogo que portugueses a matarão / escreuao ao tutão e o tutão a el Rey vejo a sentença que já disse o aytão e esta vitoria com peita q lhe derão os dous mandarís a elle ao tutão q costiáse mais portugueses na China ficarão estes dous e imigos dos portugueses e outros q forão riquos.

Martim Afnoso vinha ordenado a china com embaixado pera pedir fortalesa se lha não desem procuar se a podia fazer com officias que ja trazia pera a terra e pera o mar não me pareçe que vinha bem ordenado os Chãs não darem fortalesa a nhú pa estrangeira por todo o mundo quanto mais a nos que cuidau que a verlhe a terra somos vindo Tome piz pedia [f. 121v] hás casa em Cantão e na Ilha todo o conselho do Rey he que vinhamos a pedir lhe sua terra porque a terra da china faz em custume estranho sobre aq q não consente estrangeiro na terra sob peña de morte senão he embaixada obediente quão mais darlehe casa a mercadoria não querm que se fazão lugares pousados por não deitarão mão dalgum cousa e mandana fazer por maos lugares despouados e doentios por que são muito ciosas da sua terra assique por nenhum modo do mundo a darão senão for por força e se se casa ouesse de fazer na Ilha de mercadoria secretamente se fizesse forte donde seja aperio cal e peda pedreyros e telha e cousas necessarias officias que com lera seria trabalhosa quanto mais escondidamente que nessia lha pera fazer casas de palha Primeiro que se acabasse he o meio da gente morta mandon que se fizesse algum cartigo ou casa forte o que se não poda fazer logo a gerra era na mão e tolhidos os mantimentos por terra e a terra doentia e mais não se quão se poderia soster assim q não vinha a cousa ordenada.

Martim Afnoso de mello trazia trezentos homes era cousa muito pequena pera leuar anante a empressa que creo que toda a gente morrer a fome e doçā até que nada viera a lume com mais forca de dezentos ou trezentos homes se podera tomar nanto ou hás Va que he muito e mulher chamada Jancangem que esta em hua Ilha cercada de mar de porto e grande altura que esta alo poente de nanto sete ou oytio legaes esta a bordos dagos armurada de grande pousação pegada ao mar esta logo tomada sem matar ninguém daly correio aos rios e des-
baratarlhe a fustalha plos Chis em aperto que desta Ilha as portas de Cantão cousa muito fresca apronuizicada darozes e carnes e todos os pescados he pera abastar vinte mill homed e barato com menos trabalho e mais descanso e sem morte se podia fazer que comecar de nouo a terra que teem tantas cidades e villas e lugares abordados a agra escusado he matar a gente pois q ha de ser por forca de qualquer maner como os Chis viré que os portugueses tomam posse do lugar cercado tudo se ha de comecar de alevantar.

De Nanto vindo pera Cantão no meio do Rio quasi pegado na barra tácaoa Jaz húa grande poucaouão ou tres em húa Ilha que se chama aynáchca tem canto talhado per as ruas igrejas e em cais de que se pode fazer húa. [f. 122] fortaleza como a de gon tem porto seguro de todos os ventos tudo de vaza porto muito seguro aqui era a forca dos juizes esta fortaleza jaz sobre Cantão soliga nanto esta villa que digo outra que se chama Xunteaim daqui podem defender os mantimos e por em aperto câlo se redendera de qualquer maner que o capitão quiser torno a dizer que leuar de peça cantão na mão com forca de dores mil a tres mil homed e melhor digo dores tres mil não que com menos se não acabe a demanda somte he grande cousa e os carrregos de lugares que são necessarios portugueses não abastão seys mil pera render com menos do que digo e acabar a demanda porque os Chis são logo aleuanted contra a cidade com a companhia dos portugueses.

Assi na fustalha q portugueses trouxerê como na que aqui se fizer de seus paraos a nossa guisa sera tal que todos os Rios despejara os Rios despejados os mandarês anse de render por forca ou ao de fugir e despejar a cidade fica logo Cantão na mão e seu termo Isto pode fazer capitanes que trouxerem forca de setecêtos homed até mil e ficar com elle a fustalha e cousa grossa de remo e toda a gente portuguesa e malaueres naos se os trouxer mandalas pera Couchim espídas de Chis oficjaes q achara pera irê dex milhões e se abalar o sor gêder pera o segte logo cantão he nas mãos com toda a governança e deixar nelle fortaleza e lugares q conuem deixar gente portuguesa e malaueres e tornesse có toda sua armada carregada de Chis carpintos pedreiros ferreros telheiros serradores e de todo outro offe có suas mulheres pera deixar por essas fortalezas que pode leuar e sua armada em juncos a terra dez mil homed se fazer mingeos e cada anno podem sahir quatro mil sê fazer moça esta he a causa maranibosa porque por cada portugues pode tomar cem Chis pera as fortalezas.

Cantão dentro nelle tem húa cabêo chão pegado ao muro da bâda do norte e que esta húa casa que têo cinquenta e seis polas faldas deste cabeo dentro seis ou sete igrejas que tem canto talhado pera fazer em dez dias húa vê có muros e casas e das igrejas he sê conto dees tres vigas portas fálo daqui se pode senharcar a cidade outra feita a borda digas na meio da poucaouão onde os mandarês desembarcaro que se pode fazer em cinquenta dias porque he a pedra [f. 122 v] de canto talhada per ruas e casas de instã q he pê fazer húa grande cidade amurada he terrojera outra na igreja que esta no rio assi q pedra e a mader e cal he sê conto pois oficjaes pê isso e servidores em todo mundo não ha tuntos e são bês servidores có pouco jornal pê comer virão e mil e dos seus paraos fazer galees fustas bargálys dalgus se farão galeças có poucos liames que os rios não querer a forca do mar assim que todas essas cousas mais vagar ao mister e se escreuer q empor se por obra a terra desposta esta pê tudo deos quis q estes Chis sejão dondos pera perdêr a terra porq te o precête não tiuera senhori ma elles pouco e pouco forão tomado a terra seus vezinhos e por isso he o reino porque estes Chis são cheos de mta Judaíra e daqui lhes vê serê presêtnos sobertos cruéis e porque ato presente sendo gente comardà faire sê armas e sê nenhu exércio de guerra e sempre forão ganhado a terra a seus vezinhos e não per nós mas por manhas e biocos e cuidião que ninguém lhes pode fazer dano chamo a todo estrangeiro saluaje a sua terra chamão o reino de Do quequer q vier ora seja capitão com frota de dez ate quinze Vellas primas cousa he desbaratar armada se a tiuera a que eu cuido que não tê seja pogo sange medo cruel por este dia sê dar Vida a nenhu pê todo inanco quemado e não se tome ninguê por se não gasarê os matimentos q em todo tipe se acharã có Chis pera húa portugues e isto fô despeijarse ha nâo e logo terão fortaleza e mantimos se quiserê porque logo he na mão e dar có toda armada e aynáchca que esta a barra de táceoa como ja seima digo de bô porto aqui
se acorarão aos naos que no rio e queimarão qualq' fustalha que tiver e depois de tomado se bem parece queimarão o lugar por fazer medo aos Chins antes disto foi venha húa carta per hú negrinho cafre e venha e esta maneira.

O título da pessoa que for fazer saber ao cañi e a cãci de Cantão como acerca ora tantos annos el Rey nosso sr mandou carta ao Rey da China e presente per Tóme piz o q' foi recebido pelos grandes e dos outros q' ê carrego foi lhe dado casa em Cantão dahy foy chamaço do rey da China elle foy e Vío em màguo daly o mandou a Pequim pera la o despachar dizendo que la couinha o despacho nunca mais delle soubemos na era de tantos veyo húa nao em sua busca pagou seus direitos e pagas armamento sobre. [f. 123] ella pela a somarem e na era de tãtos vêrlo em sua busca cinco iúnos carregados de mercadorias e os mandarís armarem sobre elles pera o roubar não fazendo na terra mal nem agrano por os iúnos virem abertos do mar recolherás e os outros nauis e deixarão os júnos no ponto carregados de muitas mercadorias aborrotados sem delles tirarem nada e na era de tantos annos vinha cinco naos com embaixador pera o Rey da China os mandarís de não ordenarão com iúnos de ladrões que enganasse de dois nauis com recados falsos de paz tomarão dois nauis e os três que ficarão não socberão como o embaxador del Rey sr estavia metido nas cadeas e sua companhia e tomado toda sua fazenda e vestidos e em comer nas cadeas como fazenda de ladrões sendo dembaixada assim recebido dos grandes e o presente que vinha pera o Rey recolhido sem querer mandar o embaxador isto não he iusto mas he insta de tres mandarís ladrões a ampoçim o anhanç e lentocim e pio de não que plos roubos que tem feitos querem matar a todos por q' o Rey da China o não soyha veyo isto a minha noticia vim qua em de mehnià serey em Cantão por ver a cidade onde se faz tal iustica o embaxador seja a mim emiado antes de eu chegar a Cantão como for entregue a mim então fallaremos em o que relen e ao que são vindo do que he passado e se não quiserdês fique a culpa sobre vos outros que recebes embaxadores e presê e pio roubar a meteia nas cadeas esta he feita a tâtos dias da lua.

Assi q' escrita a carta e emiado a pregar liberalidade na terra a todos e com toda ouessa de remos entraý o Rio e se tardar o recado se bem parecer por lhe officio a p nào e queimar toda a fustalha que não aprovera pera servico de guerra e morta a gente quem não seguir o bando tres dias que lhe tollão os mantimentos morrerão todo os fome a cidade tem húa grande casa de mantimentos quasi pegada a porta da banda do ponente dentro dos [f. 123 v] muros mas pera repartir pto pono he nada porque povo he sem contro e compra cada día o que ha de comer assim que todos hão de morrer a fome e ase daleuantar contra os mandarís como se gente aleuatar logo a cidade he aleuantada compre teer grande aviso em não receber recados de dilagações por não acudirem muitos para com mantimentos a cidade em Canto ouser recados de vento que som tantos e o pono tanto que se não pode isto ver sobre tudo a fustalha desbaratada no rio não pareça ouessa de Chins que não seja queimada com este tal matar saltara o medo na valia dos mandarís e embutarse contra elles e isto se dene fazer e ser mais breue do que digo porque toda a gente estar esperando por portugéses a cidade per terra não lhe podem acudir mantimentos que os caminhos são logo aleuantados que sem vinda de portugéses o fazem quanto mais neste todo aro a de vir pto rio e cúpre ter vigia pto estreito q' esta pto rio açima ao norte obra de ma logoa por onde lhe pode vir mantimentos e socorro neste se ponha fustalha q' tomado o estreito q' não vinha tudo he na mão se os mandarís oumerem de fugir a de ser por este esteo aqui he sua saução q' este esteo pode estar gailees e deste esteiro vem a cidade por terra que he perto aly vem todo os mandarim e daly o faz saber e entao entra e vem cavallos por terra a dizer aos mandarís da cidade que manderm he entrada feita na era de 534.

[f. 124] Trelado de outra carta que o mesmo Christouão vms escrevou da China.

Oliando sempre vossa carta me desalíua muito minha infirmidade com os esforços que em mergê daa me da causa a ter algum lugar a escrever aiâo em breue não ser muita a leitura repetindo aiâo nesta cidade na qual aiâo digo se a índia estiuesso de maneira que o sr gener-
nardor ordenou o sr. eytor da sylueira com a frota q' cada ano vay ao estrpyto comindo nella tres mill homês trazendo mallauares nella com elles p'c en espanto a gente com verem estes mala- uares com as costas dos portugueses senao tomando a metade da terra da China se ahí ouesse gêste pera sostre tanta cidade e tanta copia de villas que tão fraca gente he e não tão maneira nenhuía de defendimento.

Neste Rio desta cidade podê entrar so naos de duzentos tonelados todo o galião por grande que seja por respeito de demandar pouca agoa / todo este rio sór he de vasa e todo he limpo de pedras que ainda q' fice em seco na releua porque o rio he muito alto fica a cidade sobretida debaixo destas naos / quando a mare encher porão prancha dos galeões e nauios na terra por onde a gente per este rio estão as casas do arabalde metidas com terem amparo por respeito dagos não alagar tudo o q' amparo he de pedra entulhado de terra altura de hum homem e m' homem em ingauges nada por todas partes tem saídas muy fermentas mas todas calçadas de fer- mosa pedra / a qual pedra servirá ao presentse pera fortalezas / porse a ser o fogo na ponte desse arabalde porque venha queimando tudo ao longo do rio por ficar tudo limpo pera a artelharia ingar e porque se não ponhão per [f. 124 v] hi os Chis tirarão com frechas o terê emparo das casas he necessarìa por lhe o fogo que fique tudo limpo sem nenhuía casa ficar.

Com tudo ser oulhe ser bem a principal desembarcação e no meio desse arabalde onde estas hũa casa dos mandaríes quando vão pera algures vão aly desembarcar e embarcar a qual casa têhe hum rebeémeto de quases a qual casa he daredor cerchada de tagya feita de terra posta em altura de hum remessão onde se neste lugar pode recolher soma de gente com mandarem de ribar ao rededor todas as casas porq' fique lugar pera se a fortaleza fazer pera se por artelharia fazendo barato estes tagyas para perem bombardas grossas até se fazer a fortaleza que nesse lugar mesmo se ha de fazer com a fortaleza e ir entestar no rio e vir entestar com a porta da cidade fazendo hũa couraça muito forte e fermenta que vaas tomando sobre a porta da cidade que sogu- gue a cidade toda porque tudo he chã como o palma da mão com artelharia pera hum cabo e pera outro a qual couraça ha de ficar em maneira da ponte dando lugar a hum riosinho que se mete o muro e o arabalde e pera entrer na cidade tem hũa ponte de pedra muito fer- mosa e a couraça a de ser apeçada com esta ponte esta couraça fica sobre esta ponte e toma da ponte e a de ter a seruênia p' ra fortaleza mesmo onde se deue apousetar o alcaide mor.

Tanto ser que a desembarcação for neste lugar oulhe bê q' he perto da porta da cidade ser se a cidade não rende por se a tres camellios e derribarão as portas que são duas estão ábs de duas defronte hũa da outra estas portas ser só foradas de cobre tanto q' entrarem irão ter a casa do pochoqye que he a principal casa que nesta cidade ha que he a casa onde estas a fazenda do Rey onde se achara muita prata que não teem conto e assi muito ouro e mercadorías / esta casa ha de cabeça desta gomera porque nesta casa desde prã menhã [f. 125] ate noite nunca se faz senão pessar prata das rendas que de todos os cabo vem na qual casa se porem duzentos ou trezentos homês com hum capitão que fique posto na cidade até se a fortaleza fazer e assi se he de fazer hũa fortaleza dentro na cidade onde estas hum outeyro pequoeno com hũas igrejas teem em si pedra pera fazer a fortaleza a qual fortaleza ha de ser assentada sobre o muro que Vay pera a banda do norte que he terra firme com hũa terra de quatro sobrados tudo cheo darteelharia que fogue pera o norte e ponente elevant e assy p' a cidade fiquem todos os cabo resguardados com esta fortaleza e a cidade metida e sopeada debaixo desta fortaleza na qual fortaleza ser estarão com homês signa tã forte a cidade que não pode deçer hũa ane que tenha remedio a fogir os quaes e homês serão mudados de tres ou quatro meses ire sky dormara fazerem proucito.

Assi ser ir a dar em hũa feitoria que se chama o concefta onde esse escaparão mil presos o menos se os mandaríes os não matarem por averem medo de se na cidade alleuantar e mata rem os mandaríes assim pello conseguine assim esta chea de prata que também esse recolh renda do Rey e as penas dos presos que são em grã maneira múa prata a qual fazenda ser que nesta feitoria esteuer se mudará desta pera a casa do pohey onde hão de estar estes hones por em mentos se fazer a fortaleza recolherem ahí todo o que se tomar e assi irão a outras duas feitorias
do Rey também tem muita prata de rendas que se arecadão as quaus duas feitorias se chamão per nome nayhay e pônica e se se achar esta fazenda toda se passara ao pocheny a se ahuye aver de guardar até tudo ser assentado / serão avisados que se caso for não acharão prata nenhuma e dentro nessas casa que são grandes acharem algum homem seja perguntado por isso que pode ser estar soterrada em lugar que se não ache que por essas cidades que são coabatidas [f. 125 v] dos ladões assim fazem que a soterrão o deixão por a negação quatro ou cinco mil tães por não andarem os ladões buscando tudo que vão dar com ella.

E assim se perguntara sór plos gndões do aroz q são sete ou oyo casas onde estão três mandaríis pequenos comparuestos allxes as quaus casas teem em si milhões de milhões de piqnos daroz p a regra dos mandaríis e assim outra gente o qual aroz se se possêr a vender a gente da terra farse ao mais de quarenta mil tães de prata pollo qual sór se porão trinta homês com hum capitão e terem guardado este aroz até se a cidade e cousas virem assentar sem se desto aroz bollir delie que se caso for sór não ouner remedio ao presente não acodir aroz ne mantiimentos de fora mouna a gente da cidade toda ha fome / então sór he nee abrirse este aroz e vender este aroz a gente que na cidade estiner e se caso for valer caro desse algú tanto de barato por a gente não teer então per onde o mercar que toda a gêste sór a mais della q nesta cidade viene são todos officíes e mercadores e gente toda q por fazer mercadoria viuem q a gêste sór que he rica e tem terras viuem plos aldeas onde tem a suas terras que as terras aqui valem a pesa de dinheiro este he o respeito por onde a gente morrer a fome não vindo aroz de fora a vender que se não pode esta cidade tres dias que não mouna a gente a fome por ser muito o pouo.

olhem bem.

E assim se dara sór deste aroz aos pedreyros e carpintres e ferreiros e trabalhadores que nas fortalezas andarem dando lhe cada dia tres fôs de seu jornal que são doze fãs por dia e andarão contentes q aqui os mandaríis pera seus servíes lhe dão doas fôs e se não trabalhão dá lhe açoutes como palhas pello qual sórres serão estes trabalhadores bê pagos sem se do del Rey nosso sor tirar nem gastar hum ceitil [f. 126] somente deste aroz se farão com fortalezas nesta terra que toda a casa do mandarym teem pedra esteos pera sobrados de torres e de que quiserem tanto quanto são necessarios tontos.

E assim sór se mandara logo em breue tapar de pedra e qual todálas portas que vão para o norte e assim as de ponente e leonante não deixando nesta cidade somente esta porto por onde se siriue a gêste que ha de vir dar com a fortaleza e o sór capitão moor se tornara a recolher onde se desembarcou com toda a gente salvante os trezês homês que ficarão dentro na cidade na casa do pocheny / he cousa grande e fechado tudo com a fortaleza com os chaues da cidade se darem de noite a este capitão que ê metes que ali estiner em quanto se fação as fortalezas e polia menhãs serão dadas a quem tiuer cargo de guardar aquella porta e de fechar com de noyte vigiarem e tocarem os atabagues como he vso costume.

E assim sór se ordenara com a gêste da terra com se repartir e se ordenar hum homem por cabeça da mesma terra tallacê de muro vigiara a gente que naquellas mias vinher porque assim he seu costume e istjilo com lhe darem atabales que tomarê nas casas destes mandaríis prs menhãs vierão dar conta como he costume aquele capitão q estiner naquella casa tal cabo esta segnro virão outros e tal cabo esta segnro daram as chaues pera abrirê a porto cê sór deixar em segnro o estillo da terra cê cê poré de giolbos aos sórres capitães e assim toda a outra pã que qualq cargo tiuer que o costume da terra assim he e não se perqua q a gente he ma e assim pês consequeintes acoutallhos como não estinerê prestes ao q são obrigados a fazer doutra maneira sera trabalho sotser esta gêste que os madoríis nunca al fazê senão desde polia menhãs ate noite e matar e não podem com elles.

Se caso for sór que poserê per hi algúes baccos e com elles [f. 126 v] tirarem suão a tomalhão que qualquer gente os tomar como virê que saem per esse proposito não esperão que suas armas não cosintê esperarem a cousa de portugueses as espadas são de feição das nossas obra de tres
palmos ferro morto sã terê ponta trazem por armas bajos acolchoados hú capaçete na cabeça feito destanho tirão frechas e não muito bem esta he a sua manza da guerra estes sôr que são apremados a isso que a gente do puno não o sabe fazer somte fechão as portas e não clurão de mays e soterrârem o que teem de prata que cousas de casa não tem somte hú mesa vella e hú oedera toda outra cousa de prata soterram.

E isto sôr nãoa gente do puno não teem cousa nenhú despada nem frecha somente o puno quando se recréa algú aleuatao fechão as portas e cada hú se mete em sua casa e a quê mais pode a esses obedecem finalmente sôr que esta gente com que os mandaríis sostê a terra he desta maneira a qual conta dou em breuo / todo homã que he preso he iulgado a morrer onde assi na cede quatro e cinco annos vô outros mandaríis e se tô o preso prata peita escreue delle ao Rey e os máderíis grandes abremo daquella pena que teem e diolho degredo para todo sempre e assi os fôs fico obrigateiros tãem a este degredo he comparau sôr a homães que em portugal degrado pera as Ilhas o qual homem he comparado a algoz estes homães diolhe cada mes hú piquo dares pera. Comer em sua casa com sua mulher e assi doutros fôs se recréa também fazerê destes homens degradados estes homães desta cidade degradandonos para outra governança os doutras governãças degradão para esta avera nesta governança repartidos pelas cidades, villas e lugares que estão guarcido as portas e cedas e andão pellos rios não se aleuatao [f. 127] pelhas cidades treze ate quatorze mil homães / nesta cidade estarão continuadamente tres mil homães guardando as portas da cidade com capitães pô qual não ha malavar que não peleje com quorenta destes homães e todos os matara que o seu geito toda he como molheres não ha nelles estamago somente apupadas com esta gente sostem os mandaríis esta terra que he o mundo.

Pello qual tanto que a frota se fazera vella pera vir pera estás cidade não ha mandarim que na cidade aguarde a frota no rio os mandaríis deitar oso pellas portas fora misto não ha dunida nenhú senão ser assi no me deste rio esta hú igeja dos chas aqüi esta na frontaria no meyo da cidade sera tamanho como a fortaleza de calequá a qual esta ja feita em húl fortaleza somse erguerê o muro e fazerem lhe torres o qual se deue de fazer húl fortaleza forte de torres ou baluartez porque estando esta fortaleza ally com vinte ou trinta homães he estar o rio e tudo degollão porque daly ha de iulgá a artelharia pera todas as bâdas assíi pera a cidade como pello rio açima como pôr rio abaixo o fundamento que se da judia ha de trazer artelharia que cô qual-buer gente farão facanhas.

Como for assenata a gête na cidade logo em breuo não se passando mais que dous ate quatro dias se tomarão paraoe se concertarão logo fiustas se trouxerem e irão pôr rio açima com lenar soma de artelharia irão queimando quator paraoes e juncos e cousas se achar de villas e ingares fazendo grandes estroyações sem ficar cousa nenhú ao presênte por por espanto na gente que ainda q de cima vênhão os mandaríis grandes com algú gente que se não ache embarcação nenhú nem schê mantimentos nenhú pera a gente [f. 127 v] comer quanto mais eu creo que não ha de deger nenhú nem pode porque se deixarem las os ladrões ao de salera a terra e am de vir roubando e matando o mundo todo como souberê que esta cidade he tomada que se podem aqui vir acoletter e emborrilhada a terra de maneira que apellida toda que logo se ha gente ha de aleuäar pôa governança e não ha dauer mandarim que no mateem pô qual a guerra se faça cremao pelo onde que puderm assi que todas estas tres governãças el Rey da China ha de perder conselhe fazer concerto có os seus capitaes não se pode sostier nem a terra mantar nã andar governada nem pagar direyto ao Rey porque nã pode semear nem se pode fazer mercadoria pô qual fazendo conjunto fazam muito a prouejo do Rey nosso sôr que he dâra el Rey da China hú não carregada de prata cadanno por se não emburrilharem todas quinze governãças ou se demoncer e assi se farã mercadoria como era dantes.

E assi sôr pôa Ilha da vininha faz o caminho pera quatro ou cinco cidades mesmo desta governança e muita vas e pouaço do m² legoa em comprida com muita pono as quases cidades são grandes e de gente riqua e de muita seda e todo o ferro e estanho daily vem e assi sôr que he grade trâto que o Rey trata cô esta sôr que tem nelle grande renda as quases cidades estáo ao
Estas cidades podem ir a elhas em todo tempo assi no invernço como no verão tudo em hú porque, tudo ha de ser galeas, fermosas e fastas e nauias cousa de remo e tudo se nanege pelos rios e per ante jihás que aqui os chás todo o anno navegão / assi pera hum cabo como pera outro / e a gouerança deste cantão e de foquem per hi parte com húa cidade destas que se chama cocheufa da gouerança de foquem esta logo húa cidade que se chama camcheu he cidade ferma e a grande esta esta, no mar he cousa riqua da seda e tafetas e de eifira e muito sal e de grande trafega e tem em si grande numero de inuncios com todo tó podem hir e vir que desta cidade em todo tempo vão e poçXV, XX, dias por este caminho da Ilha este he fermoso caminho por auer muitos villas e pousações tábem tem outro braço entre estas terra de Cantão por onde vão e também bom caminho por todas estas cousas se perguntara aos Chás e tem outros muitos rios per onde vão a outros lugares.

Assi sór por essa banda dessa cõljay onde ora estas estão três cidades as quas se chamão per nome húa lochey outra lenche outra quanchen são la mais metidas pera dentro pera e braço do mar que se maste abre as Ilhas daynão [f. 128 v.] vem dar nestas cidades có dare dor terê muitas Vaz e pousações e são grandes cidades de muitas rendas e também teem algú algo as quas per força ao de obedeçer ao poder del Rey nosso sór e não pode consentir mandários do Rey somente se for por concurso de que os seus capitães fizerê o qual por força darão três terços da renda a el Rey nosso sór e hum terço a el Rey da China por não se queimarem nem destruírem estas cidades e villas que tudo esta a mão poderem fazer quinhentos e seis centos homês com trinta ou centão villas tudo de fastas que artelharia ha de fazer a guerra.

Pollo qual nesta cidade que se chama quancheufu tem grandes serrarias e estes serrarias se recollõe grande soma de ladrôes e derão ja duas vezes nesta cidade e a roubarão toda as quas ladrôes como souberem da tomada desta cidade ao de deger e ao de dar della que não tê então quê a gouerne o mandarão ao de fogir e assi em villas e lugares ao de roubar e matar até que os seus capitães não pônhão nisto proisão não teem este ponn sem virem pedir socorro ao ser capitão moir com pedir portugueses que vão goernar aquella terra não se dannifique dos ladrôes que o ponn não teem defensa somente o mais do pouco meterõe de companhia a roubarão que o mais da gente he gente de vento desamarrada toda de mercadoria cousa de vento assi como sór bi ha gente riqua assi ha gente que não pode alcançar de comer esta ha a resão por tudo são ladrôes.

Pollo qual sór tanto que esta cidade estinher forte com forte[f.129]leza nos lugares õ comprê e da índia Vier gente em todas estas cidades que estinherem abordadas ao mar e com os rios se fara em cada cidade húa forteza forte onde se pônhe hum capitão com cinquenta homês para goernar a terra e recolher as rendas pera el Rey nosso sór com a gente da terra mesmo / os quas portugueses que abí estinherem ao de ter de todos cargo e hão de ser todos riquos, õ ha de ser pró estillo de terra estas Chás õ de ser fýs como sór forem amansados o o portugueses e assi em Vaz se farão também fortezas com sêpre ser tudo corrido co fustalha era ir e vir quanto mais gente quanto mais proueito tãto mais se ha de ir atêado.

De principio sór se meto o ferro nelles e o fogo altam o porã assim se querer os inimigos de princípio e tanto que o sór Capitão mor vier pera entrar no rio seja destruído este lugar que se chama nato onde estão capitães da guerra co obra de dous mil homês destes degredados que por ser frontaria e per estrangeiros ali virem de mercadoria estão abí nesse lugar algumas inuncios seja
todo tomado e queimado esse lugar todo ardido em fogo que a gente que ahí estás não ha despertar / e assim vindo pera quina ao longo da costa estas húas pousão de gente o qual mandarão os bateis quejamuer e tomarão paraos bôes e se teurem iúdos queimámos não queimando os paraos que são sufrêns para correrem rios có elles e assim vindo mais pa diante onde esta húas ilha que se chama aynicha se tomarão pescadores que abôo a entrada da barra a qual ylha he pousada recolhe em si muitos iúnos ião os bateis [f. 129 v] e fustas queimar os iúnos se não forrem fogidos e assim ha mais paraos não desbaratá estes paraos que de principio hão de ser muitos necessários que todo parao destes pode trazer tres bôos e cinco a seis homês portugueses se não contando remeius tudo isto anno será estróiido porque fique tudo limpo que as naos que na barra ficarem ficara tudo seguro e yrão e virão e os bateis cada vez que necessário for sem recuo de nenhu cabó lhe ser feito perfeito irão e virão olhando sór tudo fică resguardado não se pode errar em causa nenhu como pera estes termos e de Christostão Vra se regerá seja sór tudo bem visto não se saindo do que aqui diz tudo seja estróiado não figuem esses inimigos nas costas.

Desist gouveança sór como fortalezas e tudo foy assaltado irão a foquem que he gouveança sobre as que he cousa boa de seda e mercadorias no qual se corre todo anno irão e virão e todas as cidades e vas estão chegadas ao mar se húas armada de galeas e fustas até corenta ou mais em que andem seis centos ou sete centos homês farão por aly facanhas em que farão tudo tributário a el Rey nosso sór todas estas cidades e villas e sór cadanno trazendo de partias hum navio carregado de prata não podem menos fazer por se não destruir e perder a terras per concerto am de partir as rendas pío com el Rey nosso sór que nesta gente não ha ninhu defensão como ouuirá seiro húas bombardas tão se de ir por nos esteiros e olhar o que querem fazer os portugueses ohese quantas riquezas se sem se traçar nem se gustara somente lenarem [f. 130 v] limpammente péras portugáis contra indias se alcançara e de tanto pronteito e per tempo muito mais que recreara mais gente e assim irão alcançando mais e sór todas portugáis muito riquos que a terra o confete assim se de hir a esta foque a banda da ilha donde farão mercadorias por onde desta cidade gouveança são cidades e vas e lugares e pousãoas e assim a foquem com esta frota tudo se corre assim desta Cunção a terra e assim a de foqué tudo sór de hum ferro fáso logo tributário e farse ao grandees destroições em queimarem iúnos que estes foque têm numero de milhões delles e assim em poras as prosas das galeas e fustas nas cidades as bombardadas ainda que venha pedir mil não os deixão sór de principio a saber o que podem fazer o poder do Rey nosso sór na terra pera lhes viram as peras redondas sem rubarão a nenhu tempo de que os seus capitães ordenarão de ter pera isto conhecimento do que lhe podem fazer.

Assi sór ao mar deste foque estão os lequeos que cadanno vendê mercadoria a patane e seio em tempo do rey de malaca ir a malaca são muitas ilhas e onde esta o rey he húas ilha muito grande e não pode sór menos porque as gêes he limpa e fazem iúnos muygrandes as quenas ylhos ab muito ouro e cobre e ferro e muitas mercadorias que ha em malaca e patane que traçan e teem damascos e seda muita e porcellanas desta gouveança de foque a tomarem as primeiras ilhas são tres dias de golfão estes lequeos vem cada día fazer mercadoria sór esta terra de foqué e de foqueu via escondidamente [f. 130 v] ia a fazer mercadoria noquil por tempo podem ir com elles fazer mercadoria e elles virem aqui fazer mercadoria e se via sór teçendo o trato nesta cidade de toda parte de pacô e patane e o pão de ayam se fara aquí outra casa da India que esta terra tem grande necessidade deste pão de ayá agora val aqui muito / outras mercadorias escusarão sór este pão não.

Seão sór estas cartas mostradas aos sórç capítães mores não se embeber sór que se jorge alarex amostrara as cartas que leuana ao sór dom estêuão e de nos suoberão en confão que não estiveramos aqui nesta cades ou ninos ou morrmos em dos annos ou o sór governador onuera de mandar ou de malaca se onuera de ordenar cousa por onde nos daqui tirarão porque se faz sór serviu a el Rey nosso sór buscarse todellos remedios pere nos daqui sór tirarem por tanto eu confio sór em sua merçe com estas lenar não se esperar de portugál a el Rey nosso sór ordenar a vinda a esta terra somente sua merçe acaballo com o sór governador na india pois que
tamanhos desejos el Rey teem desta terra tellos desejos não erra el Rey n. sr. somete estamos espantados como não vê poder sobre esta terra aver tantos annos não sabemos a razão assi sr. de hũa maneira ou doutra com seis naos como em outras cartas se verá se pode tudo acabar ser sendo sobre nossa soltura.

De hũa maneira ou doutra q. ser vieré tâto que esse porto chegarem logo fação os jurabaças as cartas sobre nos não mande ser matar pedindo nos muy altamente que a yso vê [f. 131] assi se causa for vir consa grande assi se ponha nesse porto a nos pedir muito rijo que estes mandarins de nos sr. teem o reço que sabemos a terra esse he o respeito porque nos não soltão e nos teem nesta cada sendo a mais forte que ha nesta cidade não posso ser escreuer mais largo por que tenho a mão doçte de chagas que me arrebentarão e por não ser mais necessário que cristão Vieyra nunca deixas descreve toda las mais cousas / feita nesta cada do Anchã as dez luas e tantos dias de outubro rogando a nosso ser q. vos guarde e vos queira ser levar a salamento como sua mercê desejase.

Servir de sua mercê / Vêo Calno.

Esse homê sr. quẽ sua mercê traz por guias he homê honrado foy homen que teue fazeuza este teu muito tempo preso e liurouse e foy degrado e teue maneyra como se foy a Malaca he ser homê digno de lhe ser feita honra e he homê sufficiente para esta terra seja lhe ser em Malaca dado mantimento e ao jurabaça que são necessários.

sr. n.

Esta gounerança de Cantão sera de sua obrigação em roda de duzentas legoas bem feitas cidades e villas e pousoas tudo esta assentado em terra chãa metjidas pros rios armadas as casas em madeira a gounerança de foquem he mais pequena teem menos duas cidades [f. 131v] sera de sua obrigação em Roda cento e sesenta legoas he cousa muito boa e assi as cidades e villas assentadas do theor deste Cantão estas duas folhas em que estão estas gounerança não se desapegarão porque dizem com estas cousas que aqui vão escritas.

En ser tenho o livro de todas quinze gouneranças cada gounerança quantas cidades tê e vas e outros lugares tudo escrito largamente e o modo e maner que se tê em toda a terra e do regimento della como de todo o mais e cidades como estão assentadas e outros lugares e assi pronunciis del Rey n. sr. esta hum homê estudando eu ser sey leer escreu a letra da terra que estou doente e vejo os Chís e tomo a letra.

Esta folha ser debuxada esta a gounerança de Cantão toda a qual significa os rios as cidades que são dez todas per seu nome ao pe dessa folha é hũa cidade q. se chama Aynão q. quando vê pera este porto fica a mão esquerda tudo são Ilhas como ahí ser vereis nos quais Ilhas esta hũa populosa cidade e tres cheos que são abaixo da cidade e dez Vas q. cada va be mayor que a cidade deura dez vezes mais gente outra va onde estão capitães de guerra como são esses que ê vossa guarda estão destas Ilhas a esta cidade de Cantão avera cinquenta ou sesenta legoas.

Polo ser são quinze grandes cidades e mto grandes pousoas he cousa rica de grandes rendas e de palaemoes e arquaes por respeito destes arquaes e palamares he a milhor cousa que ha na terra da China onde se pese ao aljofre todo em outra parte não no ha salmente nessas [f. 132] yllas as quais Ilhas ser partem da banda do sul com o reino de Cauhaim e desta terra de Cantão pera irê la metese hum braço de mar com bom vento passasse em hum dia e Rui vento día e noyte.

Polo qual ser feita fortaleza nesta cidadê estas cidades são logo leuadas e a mais da gente andar bem e matorê a hũa e a outros porque não ha de ter quem a goumente nê a q. obedecer porque tão de mator os mandarins ou fogirem que a gente he muito pobre e maltratada dos mandarins quê gounerão.

Estas Ilhas e cidades não tê ser nenhûa maneira de socorro fazendo hũa fortaleza na principal cidade com quinhentos homens estantes nelle e com muita fustalha que corra o braço do mar com outros quinhentos homens ficão sometidas a obedecerê a el Rey nosso ser porque do goito com as rendas
que souião a pagar ao Rey destas cidades destas Ilhas tirar-se há grande riqueza em grão manra como a terra assentar que são as rendas muito grandes.

Deneis saber só que mais tov tomarse Goá do que será tomarem estas cidades e sogrigarem por respeito da gente ser muito cara em grão maneira e não tem lealdade cö Rey ne com pay nem mais não andar senão com quem pode mais que cousa tam boa se deixa daleçar assí, pollo conseguinte teem grão copia de gimbibre esta governança tem muito gimbibre muito bom e cancela não he muito fina.

Pollo qual só deixo esta substancia deste A∑não [f. 152 v.] torno sñor a esta cidade de Cantão que he a cabeça desta governança, só está aqui os mandarí grandes todos os réis da justiça aqui vem despachar rendas pró conseguinte he fermosa e populusa cidade he causa muito a mão pera o poder del Rey n. só nella fazer cousas facanhas estes do seito da cidade de Lixa hum galeam que nesta cidade entrara fara render porque mete a cidade debaixo de si não avera homem que apareça como artelharia tirar não avera homem que apareça nem quem governa gente nem menos a cidade.

Viunda hú a frota com tres mil homées farão húa fortaleza na cidade tomando s por el Rey n. só a qual fortaleza farão onde Christouão Vieira escreve com húa couraça que venha sobre a porto de tres ou quatro sobrados que sogrigue a metade da cidade farão dentro na cidade húa fortaleza em hum outeýro onde este húas igrejas dos Chís a qual fortaleza seria do seito da de Caleen tomará sobre o muro da cidade que riy pera a banda do norte com húa torre grande que jogue pera aquella banda e fica a cidade toda sometida debaixo no qual lugar a pedra madeyra e telha pera fazerem duas fortalezas com os pedreiros da terra e serauerem como áreas: Pia praya do mar estarão nesta fortaleza ate çem homées e as chaues da cidade de noita darse ao capitão desta fortaleza as portas que vão da banda do norte e do leste ponente feream se cercaíra pera a banda do rio.

Com fazerem porto em cada porto hum portugues e cinquenta homées da terra que tenham cargo da porta esta gente a solda da cada dia dous fós a seria de pagada que sera pró estello da terra o de saber qua entra na cidade e o que vem fazer e ha de hir pollas e chaunes polla menhão a fortaleza que esta dentro na cidade.

Pera çima desta cidade onde se fazem dons réis se fara húa fortaleza feita de muralhas altas com muita artelharia com duazetas [f. 138] homées e fustalha que se dizem alguma gente que he terão só Rio não tem pera onde possão vir a esta cidade só qual só he mais de soster Goá do que seria soster esta governança e alium del Rey n. só aver grande riqueza toda a outra gente he de ser riqua porque a terra da lugar a tudo prós muitos cargos que na terra hão de ter.

Pollo qual só de principio avere a destes paraes da terra grâdes que são suficientes pera yesso e correrão quantos réis por pi ouner e queimarão quantos barcos acharem e inçam como iste ao presente for queimado e destruído a fome morrerão que não teem por onde lhe venhão mantimentos e se algum caminho teem não ouçam de andar por elle por respeito que tudo são ladões no mundo se não achara terra de riqueza e pera someter debaixo do poder senão esta e não muito poder e se o poder for grande quâsto mais riqueza se alcançara.

De principio só serão altamente castigados com artelharia que fallando agora nella metem o dedo na boca despantados de cousa tam forte por respeito de ser gente que não teem estamago e desque naçê até que morre não toma na mão senão húa face sem ponta pera cortarem de comer salnate só a gente que trazem a soldadada que andão guardando com essa captações os portos e rios de ladões e por se não fazer azum doros grandes por se não aleuatar o pono a fazer ladões porque vêm em grande sogoçião como Christouão Vira da conta nessas cartas que escreve em que só da a conta só toda.

Pollo qual só se fara nesta cidade outra casa da India não trazendo de portugales salvante daqui leuarem não carregada de prata e ouro pera na India fazerem cargo das naos pera portugal e se fazer o gasto na India daqui ira cobre [f. 133 v.] salitre chumbo pedra Vme estopa cabrea todo o ferro pregallura breo todas estas cousas são tanto em abastança que he pera espantar aqui se fara toda armada que na India se ouner mister galees galiões naos ha madeira muita carpinteiros da terra
muitos como bichos e assim ferreiros padreyros telheiro socios officina e pera espantar não ha portuges nenhum de por mão em pedra nem em pão para se fortaleza fazer.

Toda pimenta de paç ê de pedir patane oanda se fara hui grande feitoria de riqueza aqui como a terra asentar porém a pimenta em quinze dezasseis tais que ninguem não ha de tratar com ella somente o Rey nosso sor e assim sor todass mercadorias de Syão tomarão se pão e darlhe ao outros mercadorias porque a feitoria ha de estar chea de mercadoria da terra e assim a mercadoria das parjes farse a numero de riqueza e a gente darmas não lhe necessário tratar com estas mercadorias porque a terra he tamahna e de tamanhos proueitos que se cem mil homens ouner todos terão cargo e todos são pro estillo da terra de peitas e dadinhas muito grandes.

Daqui sor correrão na governança de foquem aqul governança teem oito cidades e setenta Va ponçoes de tres mil vezenhos se não folha salvante causa de muros pro qual se corre com sul tornara quando quiserem que sempre teem monção que entrão por rios pollo qual sor daqui se ordenara capitão moor com trinta villas gales fustas tudo causa de remo e algum galeão e de paredes por estas cidades Vas ponçoes trarão galeo carregados de riqueza com seis centos homens se fara tudo isto.

Porque sor toda a cidade por concerto pagara corenta cinqueenta [f. 134] mill taos de prata as villas vinta trinta mill tães e leuarão mercadorias e trarão mercadoria estas paredes por respeto de não destruírem a terra e desse não aleuante o povo com a governança matando mandaríis e roubaren nas feitorias del Rey que todas estas cheas de prata jã toda a cidade tem feitoria mandarim grande outros tres que governão e teem cargo de justa toda a Va ha feitoria he causa boa esta governança e correrão pola costa cosul com pilotos da terra irão lego dar na governança de chamque que teem onze cidades e oytenta villas he muy riqua governança de muitas e graudes rendas teem muita prata e muita seda com seis centos sete centos homens trarão a frota carregada de prata tudo de paredes esta costa de foquem sor estao as Ilhas dos lequeos tres dias de caminho de foquem são muitas e são riques de muito ouro e cobre ferro vem cada dia fazer mercadoria a esta terra de foquem esta gente em tipo do Rey de Malaca hião a malaca fazer mercadoria e agora vão a patane / estas Ilhas dos lequeos he causa boa e assim que causa grande estão ao mar deste foquem tres dias de caminho muito ouro muitas mercadorias vem fazer cada dia mercadoria a esta terra soão de hir a malaca no tempo do Rey della aora vem a patane fazer mercadoria tambem gasta mà pimenta.

Martim Affonso de Mello sor vinha bem ordenado para faz paz e nos tirar e fazer fortaleza em tal lugar dâo mal enformação a el Rey nosso sor acabara tudo pro que trazia embaixo e vinha pro que aqui estaua quis a moifina de muitos i se fizesse tamanho desarrazão como se feg a mádar assim dous nauios com homens mançeob que se não virão nunca [f. 134 v] em nada pro qual sor cada nauio tiraua pera seu cabo quando tanta copia de inuos virão desmancha forão dar o nauio de Diogo de Mello sem lhe tirarem bombardada nem hêm tirar espa da baixa fazendo zombaria que se armase pera os Rumes Pedro homem socorria a Diogo de mello fôse meter âtre os inuos sem tirar bombardada os juncos sor erão altarios as pedradas os tomarão mantere Po homem e Di de mello nos nauios e outros homens e a outra gente trouxerão a esta cadea a trublados como deos sabe estubirão assim hum anno as vezes acouhdos deste tronquo que tem cargo destas cadeas esperhoâo os mandarís que viessem portugeses que passou a monção leuão nas a matar fazendo feas justicas nelas.

O mundo todo sor não era bastante a tomar hum nauio nosso quanto mais dous se lhe amostrara os dentes esteue meu hirão sor nesse porto tres meses cercado com manter mais que dez ou dous homens sem o poderem entrar porque lhe amoestra os dentes e se foy como sor la sabereis ficandoolhe nesta cidade a gente presa em meu poder passâte de dez mil tães tudo me foy tomado pro qual me salvauo Di por respeto desta fazenda.

Pollo qual sor se o sor governador deixar assim estar esta governança em tanta bonança sem avoir alguma detremanção sobre a vinda bem se pode ordenar de malaca e de paçç cinco villas bem armadas e com mercadorias a nos pedirem có fazer cortes do theor que vay nas cartas de Christuno Vieyra e farse nes tres cartas ao chey pachency anchagy asta o que a yao as manda a el Rey n. sor op l
embaixor e gente que tem nas cadeas que ha vinte annos [f. 185] que não nesta terra sem o Rey nem os mandarins os despacharem e se os não quiserem dar avera el Rey n. ser outro conselho tanto que chegarem os mandarins estes mandarins que guardião o porto e que trazem mercadoria se a quiserem fazer e pagarão seus direitos como erão de principio e se quiserem vir a esta cidade estruila hão toda có artelharia e lhe porão fogo que entrar as casas no Rio e de madeira assi na cidade como de fora sem aver quem a defenda não a hí quem aguare a cousa de frango.

Pedindnemos em todas as cartas que se fizerem seja a primeira materia por nos afgarem que tem grande receo de nos darem em força da terra porque como nos deixarem de pedir hum pouco logo nos hão de afgar que de nos estão temorizados.

Se caso for ser que pareça bem ordenar embaixor não oulha o que he feito na terra que o pago e ser governador lhe dara os mandarins o receberão com presente de chamalotes e veludos e grandes panos darmorargens que tenhora veados e coelhos se deo se acharem não se metendo cousa de aves no presente porque não folgão em isso espelhos grandes coral sandallo cousas que pareçam bem.

Isto ser seja oulhado se farão nissso os seus capitães serveu a el Rey nosso ser neste tempo todo fazer a mercadoria em quanto for o embaixador ao Rey e vier estas cartas são escritas redobradas porque se se perderão húias que fiquem sempre outras.

[f. 185 v] Que o geito da terra he chamado ao seu Rey fo de Dê e ha terra chamão terra de Deco e toda outra gente de fora da terra chamão salvagens que não conhechem Dê nem terra e que todo o embaixor que vem a sua terra que hem obedecer ao fo de Dê e outras vaixades ser que he mio leitura eu como ser digo estou do corpo muito cibado de pontadas e dores e não me da lugar a escrever com pena nossa senão com pena china não se podendo fazer mais declarada letra Christoanão Vra escreve com pena nossa porque esta em boa disposição feita nesta cidade de Cantão dentro nas cadeas enfernas a dez dias de novembro na era de 1536/1537/ annos encômendámos a nosso ser vos leve desta China como desejava vossas merces.

Quando ser se escreuê estou eu sempre em vigia se vem algum Chim não nos topê a escrever que dos meus nossos moço ser nos guardamos porque andão mais deitados aos Chis que com nosco.

De todalls cartas que ser chegarê escreuê chagarei tâtas cartas não se faça mais leitura sobre isso que tendes mto a que escreuê ser ao que homem perguntá.

Toda a carta grande e pequena serão guardadas sem se romper nenhuma nem perder das que 10em pera isso.

Vasco Caluo,

(Continued from p. 456.)

Observations on Bird Island.

The first thing we did was to seek some Cloaths for we Were perishing with Cold and Several, so Bruis'd, that they Could not Sturr. As Soon as we got things to Cover us, the Next thing was to look for Water which we Found in a Butt That drove from the Ship, and as we Were all Very drowthy With the Salt Water we Swallow'd drank very hearty. We then went to work to get a fire and As I had Often heard that Rubbing two peices of Sticks together will fire them Was going to try the Experiment, when on of the people Found a Barrell of powder with the Head out, Notwithstanding Some of it was dry. This gave Some
Encouragement, to look for Utensils and Soon After Found a Small Escurtore\textsuperscript{23} with 2 Gun Flints and a File in it with which we Soon kindled a Fire. This gave us all great Spirits and Indeed I thought the People would Never think they had Candles Enough, a light [a] Box of which was Found with the Escurtore. The People who Were most wounded got Round the Fire and the Rest of us Made A Tent Over them. By the Time this was Done it was Noon and Hunger Put us in Mind of Something to Eat. We gather'd up some pork that was Wash'd on the Rocks and Broil'd Some Rashers for dinner. As Soon as dinner was Over I with those that was Able to Walk went upon the Wreck to See for Something to Subsist On. We Saw Several things Such as Flower, Beer, Wine, and Water but had not strength to get them up, so that all we could do that Day, was to get some Canvass of which we made another Tent, not having Room Enough in the Other for us all. The Wind Southerly and Blows Very Hard And Threatens a Dirty Night and Indeed it proved so Bad that we Got little Rest being half Leg deep in the Tent all Night, it being rised upon Foul weather\textsuperscript{24} I apprehend that on the Spring Tides and Strong Gale it Near Overflows [the Island]. I Shall add no More to this day's Work then that I declare never Wrote a More disagreeable One.

Friday 19 July. The Wind Easterly with Frequent Showers of Rain as Soon as it Was day Light all those that were able to Stir went Upon the Wreck in Order to Save Water and what provisions we Could find to last us the Time we should Stay Here, which I thought could not be less than a Month if those that were well Stay'd for them that was Sick; besides we all agreed the longer we Stay'd there the better it Would be for Travelling as the Summer Season advanced. I went to the places Where I saw the Beer and things yesterday, but to my Great Disappointment found the Sea had Stow'd them all in the Night except a Cask of Beer which we got up. But in looking about found a Small Cask of Flower, which we also got up. We likewise discover'd some Butts of water, which we Endeavoured to get up but could not, for those who escape'd favourable were still very weak, and the cries of the poor souls that is hurt are the most Melancholy I ever heard. While we were Endeavouuring to get the Butt of water up the Tide Flow'd and put a stop to our work. The day being far spent went to dinner on some salt pork as before. We had no sooner satt down than every body began to bewail his baggage and deplorable condition most thing's they should never be able to travel so far as the Cape of Good Hope or Delagoa, which is the only two places there is any hopes of finding of belief. Mr. Collett was consulting which was the best way to go. Saying he thought the Cape the nearest. I answer'd I wish we could find some tools, as the carpenter was saved might build a boat, and from that time nothing was talk'd of but the boat, which gave new life to us all, and before we got up from dinner it was agreed on; that a boat was the only thing that would preserve us from perishing. Upon which some immediately went in search of tools, and others to mend the tent better and it is with great reluctance I end this day's work without finding any tools except one of the ships scrapers.

Saturday 19th July. Wind W'ly and Fair wear Early this Morning. Masterd all the people I could to get't up the water and succeeded so well that we got 4 Butts into safety before dinner and afterwards a cask of brandy and another off flower, with severall other necessaries at the same time. Every body was very diligent in search of tools but found none. notwithstanding do not despair being of opinion the great sea that was continually rowing in must certainly bring some on shore out of the great number in the ship. Gott up our little boat \textsuperscript{25} was always stow'd upon the poop on board the ship and came on shore without being stow'd. Likewise found a firkin of butter, and a barrel of powder. Some of the people

\textsuperscript{23} This word is the forms Serumore, Scritoire, Screwmore, etc., meant a portable writing case or desk.

\textsuperscript{25} So in MS.
that had taken a Walk Round the Island, Came to me upon The Wreck, with the most Pittifull Contenance ever I beheld, and Said the Side of the Island Next the Main was full as bad as this Side; therefore it was Impossible to [get] a Boat [off] without Staving her to peices. I must Own the Pittifull Manner they Told me this Peice of News Damp'd my Spirits at first but Recovering, told them Not to be Disheartne'd, that with Gods Assistance and Our Own Endeavours Should Overcome all Difficultys and as Soon as that I Went Round my Self, hope'd Should bring them Better News. After we got What Things We Were Able, Some of the People went And Gather'd Some Limpitts and Muscles of Which there is Great Plenty, tho' not so good as in England. The Shell of the Muscle is Very Large and the Fish Vastly Small and Yellow. The Limpitts Are Very Large but so Tough, That we Could Scarcely Eat them. I Endeavoured To Persuade the people the Reason of their being Tough, was Owing to Roasting Them, and as Soon as we Found a Kettle to Boil them, Should Find Them Excellent Food.

Sunday 20th July. Wind and Weas as pt. day past, had a Very Successfull Day. Sett Out Early in the Morning and no Sooner got on the Wreck than One of the People Found my Quadrant, and another Almost Whole & a Hamper with Several Sail Needles Files and Gimblets; also the Card of an Azimuth Compass. Soon After I Discover'd part of the Ships Tranom — with a Chest of Treasure on it Mark'd and Number'd Viz. 5. A No. 5. Likewise a Carpenters Chisell and Three Sword Blades. Another pick't up a Carpenters Adze and a Mariners Compass Rectified Which Gave the People Greater Spirits than Any thing Since we have been here. About 10 o Clock we Went to Prayers to Return God Thanks for his Mercies, which as Soon as we had Done, went to dinner. All the Time We Were together our Discourse was About Building the Boat and the Difficult of Launching her. Therefore as Soon as I had Dine'd and Sett the People to Work to get up a Butt of Water Mr Collett and My Self went to See if we Could find a place To Launch our Intended Boat, as There is Nothing else can prevent us from Building One, having now got some Tools, and make no doubt, Shall get Timber and Planks Enough of from the Wreck. It was not Long before we Found a Place, where there was some probability of Getting the Boat of, tho' it will Require Great Labour, to Clear it of the Rock Stones. We Walk'd round the Island Looking every Where but found no place so good as the First when We returned the People had got up a Butt of Water a Hogshead of Beer and One of Cyder and was at Work Making a Tent large Enough to Hold us all, I Told them of our Success and the Inconveniency that Attended it. They Were Greatly Rejoyced and Said they Should not Mind the Trouble. I Took a Turn With some of the People upon the Wreck again, and Found a Smiths Bellows, Which we got up and Part of the Companys Packett. the almost Wash'd to Peices. However it was Taken Care of and put to dry, the First Opportunity.

Monday July 21st. The Wind Westerly and pleasant Weas Sett [out] this Morning With great Spirits and before Dinner got up 5 Butts of water 2 Hogsheads of Brandy And One Cask of Vinegar which was all we Could Find at That Time; also Looked Every where for Tools, But Found None. The Carpenter Employ'd Making a Saw Out of a Sword Blade. Find the People Recover Surprisingly, Considering they Have Nothing to Apply to Their Wounds.

Tuesday July 22nd. Wind at S W blows very hard which Makes a Large Surf. Went upon the Wreck at Day Light in Search of Provisions for as Yet we have not Enough to Last us the Time, the Boat will be a Building. Found One Cask of Pork Another of water which we got up Immediately. Afterwards Went to Work to Carry Plank and Timber to Build the Boat, Sails to Cover the Tent, and Cordage. I and Mr. Collét Took a Turn Round the Island Again, and the Wind being to the Southward, Makes The Place we Pitched Upon
Yesterday for Launching the Boat, the Lee part of the Island, therefore Much Smoother and Now Make no Doubt of Getting her Safe in a Calm Day. Upon Our Return Found the Carpenter had Finish’d the Saw, which Cuts Very Well the People are all Upon the Wreck looking for Water and provissions, Except Two Deans on of Which Says he Served 2 Years of his Time to a Smith and Promises Great Things in Regard to Making of Tools. Therefore Sett Them to Work To Mend the Bellows. This Evening Discover’d a Smoke on the Main, Which Made Us of Some Thoughts of Going over as Soon as Our little Boat is Repair’d. The People Returned from the Wreck without any Success than What’s Mention’d.

Wednesday 23rd. Wind and Wea as p’r day past. The People Employ’d in the Morning Carrying Plank and Timber likewise Some Sails and Cordage, the Carpenter getting What Few Tools he has in Readiness for begining the Boat as Soon as he’s Able to Stand having his Great Toe almost Cut of with the Rocks in Coming on Shore. The Man who, for the future I shall Call Smith, Making his Forge. In the Afternoon it Rain’d so hard that it Sett our Tent all Afloat, Therefore Carrey’d no Plank but got Another Sail Over our Tent and Secured it as well as we Could from Blowing Down, Which I Expected Every Minute; But tho’ it Stood all Night But few of us got Little Rest.

Thursday 24 July. Moderate Breezes W’erly and pleasant Wea. Went to work To Bring up Plank and Some pieces to Make a Keel, and to Our great Joy the Carpenter and Another went to Work. The Smith Finish’d the Forge, and our Next Care is to get Coals Which we Soon procured by the Burning of Firr to Charcoal. The Next place my Self M: Collett and the Carpenter Consulted what Dimensions the Boat Should be of, and was Agreed She Should be 30 foot Keel and 12 Broad. Upon Examining Our Pork found Some of it Stinking and the Rest of it little Better, a Very Disagreeable Discovery but Made the Best of it we Could, by Hanging it up in the Tent & Skimming of it Which Preserv’s it.

Friday 25th. Fresh Gales Wheely & fair Wea. The Carpenter & the Other at Work upon The Keel, Others Making a Stern Next. Got up a Piece of 4 Inch Plank for that Purpose. The Smith Made himself 2 Hammers. People Employ’d bringing Up Wood for the Kiln to Make Charcoal. This Day we all Dine’d on Greens that Grows Upon the Upper part of the Rocks, the Leaf is Much like that of Merry gold; and There is Another Sort, which the People Browse and Dress Their Wounds with, like Mash Mallow’s. We have 8 people Sick Now.

Saturday 26th. Wind and Wea as yesterday the Carpenters have most Finish’d the Keel, and Intend Making the Stern Next. Got up a Piece of 4 Inch Plank for that Purpose. The Smith Made himself 2 Hammers. People Employ’d bringing Up Wood for the Kiln to Make Charcoal. This Day we all Dine’d on Greens that Grows Upon the Upper part of the Rocks, the Leaf is Much like that of Merry gold; and There is Another Sort, which the People Browse and Dress Their Wounds with, like Mash Mallow’s. We have 8 people Sick Now.

Sunday 27th. Wind Variable and fair Wea. Did no Work this day. Kept the Sabbath, Having of Prayers. This Day the Birds Which Left the Island, Settled Again in Such Quantities as Almost Cover’d it. They Are what We Call Gannetta. Knock’d Down Some of them for Dinner; the Flesh is Very black & Eats Very Fishy.

Monday 28th. Calm Pleasant Wea. The Smith Compleat’d a Hamer for the Carpenter & Attempted to Make an Adze but did not Succeed, but however Intends to have Another
Try all for it. The People Employed in the Fore Noon Carrying Planks & in the Afternoon, Making a Tent for the Carpenter, and Mending our Own & One for a Store Tent.

Tuesday 29th. Little Winds Easterly & fair West. Carpenter at Work upon the Boats Stern; the Smith Repairing a Camp Kettle which was pick'd Up this Morning; people Carrying up Wood to the place for Blocks; my Self Looking Round the Wreck for Water & provisions and Tools, but Found Neither, in the Evening Made a Cattamara, and got the Brandy in the Great Tent.

Wednesday 30th July. Light Breezes Easterly & fair West. Carpenter Employ'd as before. Smith Made 2 Gimblets & the People Carrying Wood for the Ship, in the Evening on of the People Attempted to go out on the Cattamaran to Try if he Could Catch any Fish but Managed her so Badly that he was Glad to get her Back Again before he Had got 10 Yards from the Rocks. Our Carpenter is Taken ill which Disheartens us Very Much.

Thursday 31st. Hard Gales at S W with Frequent Squalls, Blow'd the Carpenters Tent down & Uncovered the Store Tent. Our provisions this day was Young Sea Lions As Mr. Anson Calls them, which is very Indifferent eating and I Fear not Wholesome for 5 of the People Fell Sick. The Next day, the Carpenter Continues so ill that This is a Lost day to us.

Friday Augst 1st. Wind and West as p'r Day past. The Carpenter so Much Recover'd That he went to Work. The people Employ'd Carrying Plank, Smith a Repairing a kettle that was Found. In the Evening Dug a Well to Try if there was any fresh Water in the Island but Could not find none that was fit to Drink; tho' What we Met with was Not Salt it had a Very Sour Nasty Taste which I Take it is Occasion'd by the Running from the Hill thro' the Birds Dung. Went to Short Allowance of Bread About 2 Ounces a Man p'r Day.

Saturday 2nd. Wind Westerly and Fair West. This Morning the Carpenter Employ'd Laying the Blocks the People Carrying Over the Keel Stem & Sternpost, Smith Making Bolts for the Scarf of the Keel, in the Afternoon Lay'd it, & Got up the Stem & Stern post, this Day Kill'd a Hogg 7 of them having got on Shore Alive Which I forgot to Mention the First day.

Monday 4th. Wind W S W and pleasant West. The Carpenter Employ'd Bolting The Scarf of the Keel Stem & Stern post. The Smith Made a Mael and Some Bolts. People Carrying Plank to the Building Place, and to the kill [Kiln]. In looking About the Rocks found a Butt half full of Water which we got up Immediately. In the Evening, Mr. Collett thought he Saw a Sail, and Call'd out with a Landable [an audible] Voice, a Sail. I never was so Agreeably Surpriz'd in my Life, And all that was were in hearing Confes'd the Same, and Indeed their Behaviour Shew'd it by Running for Wood & Tarr to Make a Smoak. but upon Looking With the Glass, Discover'd it only to be a Spott [Spot] on the Land that we

*A small raft of logs lashed together.*
had not Observe'd before. This Sudden Turn, had Such an Affect Upon the People that there was no Work done that day.

Tuesday Augst 5. The Wind at N W & fair Wea. The Carpenter Making Moulds For the Floor Timbers; Smith Making Gimblets & Trying Again at an Adze, which I Am in great Hopes he will Finish; People Carrying Up Wood with Nails and Bolts in it, to Burn them Out, Leftwise Plank and Timber for the Boat. The Pork which Was Washed, Upon the Rocks is all Expended. The Birds Which Were so Numerous at our first Coming on Shore, have Entirely left the Island, and the Seals Much Scarcer & Shyer, So that at present have Nothing to live on but an Animal Between Fish & Fowl. There is plenty of them Here and No ways Shy, they Walk As Upright as a Man, These Were Our Food this Day.

Wednesday 6th Augst. The First Part Wind at N W Latter Southerly. People Employed Carrying Plank & Timber Over to the Building Place; Carpenter Securing the Sternpost. And to Our great Joy the Smith Made an Adze, And began an Ax. One Man Attempted to Go out on the Cattamaran & Made no hand of it. Another who was a Combmaker, is Making a Cross Cutt Saw Out of a Sword Blade.

Thursday 7th. The First part Wind N W Fresh Gales and Cloudy Wea' with Some Rain, the Latter Hard Showers which put our Tent a Float. Got Another Sail Over it And Spread another to Save Water. The Smith Finished An Ax, and an Auger; and in the Room of a Better, the Carpenter Finish'd a Gun Truck for a Grindstone, which I hope will Answer the End, After we have Beat Some Sand and Shells, into The Wood. The Combmaker Finish'd the Saw, Which does but Badly, but the Carpenter Says he Can Mend her [it].

Friday 8th. Fresh Gales W' ery with Heavy Rain of Which We Save'd 3 Tonns, Which gave us Great Spirits being in hopes we shall not want water during our Stay here, but there Seldom Comes a Good One, but a Bad One Attend's it, by Preventing the Carpenter from Working. Our food this day was Young Seals.

Saturday Augst 9th. The First Part Fresh Gales at N W & Cloudy Wea latter, Wind Southerly. This day 7 of the People Taken Very ill, Which I Judge is Owing to Eating too hearty of the Seals; for my Part, Live'd Upon Greens; Therefore Escape'd this Time. The Smith and his Assistant are [are] two of them. The Carpenter at Work on the Floor Timbers. Found a Butt of Water & a Hogshead of Brandy, which we got up Immediately. Din'd This Day on Muscles, and in the Evening Kill'd a Large Bird, Which was for Supper. Leftwise Kill'd a Hogg for Sundays Dinner.

Sunday 10th. Wind at S W & fair Wea. In Looking About the Rocks Found a Copper Stewpan. The People Are Much Better, My Self and Messmates Caught as Many Small Fish, with Pin hooks, as Serve'd 10 Men for Supper.

Monday Augst 11th. First Part Wind S E, the Latter N W & Cloudy Wea. 4 of the People quite recover'd. The Smith Made Some Bolts, and two Caulking Irons. The Carpenter as before. The Peope [sic] Clearing a Grapnail, which wash'd on Shore with The Cables; when Clear'd, found it wanted One Fluke.
Tuesday 12th. Fresh gales W'tly & fair Wea'. Carpenter as before. One Man [of our Men] Broke An Ax. People Carrying Plank to the Building Place, & Clear'g a Tow Line To Make a Cable for the Boat but Could Not [effect it].

Wednesday 13th. Wind N W & fair Wea'. The Carpenter Compleat'd all the Floor Timbers And began the Futtocks. The Smith Made Another Ax. The People Employed Clearing a Piece of One of the Bower Anchor which Came on Shore on the Ship's Side. Got it up to Make an Anvill for The Smith, having One of the Steering Sail Boom Irons Before. Likewise Found a Bartell [Barrel] of Pitch, which was Very much Wanted, not Having any Before to Pay the Seams with.

Thursday 14th. Wind and Wea's as pr day past. We are [were] greatly Distressed for provisions. Therefore we Carry'd our Little Boat Over to the Building Place to be Repair'd determining to go out and Try to Catch Fish, tho' the Risk is very Great, by Reason of an Ugly Barr [Bar], to go Over, before there is any [as] Chance of Catching any. Also Enlarge'd the Cattamaran to Carry two men, & Made Another.

Friday 15th. The First part Wind W'tly with Rain, the Latter Southerly and fair Wea'. This Forenoon the Wind Prevented the Carpenter from Working on the Boat, Therefore Employed himself Sharping of his Tools, and Making Tramels. In the Afternoon Went to Work on the Boats Timbers. The Smith Made a Grindstone, out of a Flatt [Flat] Stone he Pick'd up, Building a Tent for the Carpenter to work under out of The Sun.

Saturday 16. The Wind E'tly and some Rain. Carpenter as before. The Smith Finish'd the Grindstone & is Making an Ax. People Employed Carrying Plank for the Timbers. Two of them went on the Cattamaran to try for Fish, but found Too Much Sea, so Come [Came] in Again.

Sunday 17th. Fresh Gales E'tly and Fair Weather. This Morning Saw a Large Smoak to the E'ward on the Main Which Ries Our drooping Spirits a little, being in hopes it is Occasion'd from Burning their Land. Therefore Are in Greater hopes of Success, when our Boat Goes Over, which will be the First Calm Wea', After She is Finish'd. The Carpenter Intends going about her to Morrow. This Day as we dont Work on the Boat All hands is amongst [are Among] the Rocks a Fishing for [endeavouring to catch] Small Fish About the bigness of a Spratt [Sprat]. We had the good Fortune to Catch a few of, and this Week past has Help'd us Greatly.

Monday Augst 18th. Light Variable Breezes, and Fair Wea'. The Carpenter Employed, Mending the Little Boat, the Smith Making an Adze. Two Men went out on the Cattamaran & to our great Joy Brought in Fish Enough for all Hands. The Next (sic) Clearing a Tow line for a Cable. The Smoak Continues Still to the Eastward, therefore Am Confirm'd it is Burning the Land.

Tuesday 19th. The first part Fresh Gales Northerly the Middle Moderate, the Latter fresh Gales at S W; about 11 o Clock two men went out on the Cattamaran and returned in About 2 Hours and Caught 14 fine fish Which we was [were] Glad to See, being in Hopes We Shall not Starve As Our living was Very Bad Before; Wou'd not Miss Any Opportunity to Catch Fish
and Being Encouraged by our good Success, Mr Collett and another [Mr. Yates] went out on the Cattamaran. Towards 4 o Clock, the Wind Freshened to the W'tward but they being to the Leeward of the Island and Finding the Water Continue Smooth did not Apprehend There Would be any Danger of Getting in, therefore Continued Fishing till they Thought they had Caught Enough for 2 days, in Case the Weather Should be bad And Not Able to go out [again]. They then Cut away the Stone which Rid them, because They would be better Able to put in without it, thinking the fish would make the Cattamaran Swim to deep. As it Blows [blew] fresh I was Apprehensive they Could Not get in, therefore Kept a Good look out when they Should Attempt it, Which I had not long done, before I perceive they los’d [lost] Ground, which Made me Very Uneasy. I Soon Alarm’d all the people, and the Only thing I Could think of to save them from driving to Sea, and perishing, was, to persuade two of the People to Venture Out to them, on the Other Cattamaran, with Another Cable & Killock, Taking the Same for themselves, and try to ride till it grew Moderate; And the The danger was so great, that there [there] was Very little probability of their Returning, two of them Attempted to go out, but was [were twice] Wash’d off Ropes Killocks And all. By this time, the Others were Drove a Great way. When I Found it was in Vain to try the Cattamaran any More, I got all the Cordage We had Saved, in hopes a Hogghead would Carry the End to them, but by the Time it was got Ready I Saw plainly it would be Needless to Attempt it, for they Were Almost out of Sight. So had quite given them Over, when [till] One of the men Came and told me, the Carpenter thought he Could make the Boat Swim, with One Man to Bail, [first] Stopping the Holes in her Bottom with Lead. And [at last] Three of the people went out & brought them in Safe, tho’ with much difficulty, for them two [Messieurs Collet & Yates] Getting into the Boat from the Cattamaran, She Swam so well & Leek’d so fast, it was As Much as they Could do to keep her Above Water. [During the Absence of the Boat we] talk’d of Nothing but going to Morrow [after them] if it prov’d Moderate Wea.

Wednesday Augst 20th. The Wind Northerly, and Cloudy Weather. The Carpenter Employ’d On the Small Boat. People Getting up Plank & Timber. We Should have Snapp’d Very Short to day, if Providence had not directed 3 or 4 of the Old Inhabitants of the Island to us, Which we took Sleeping and Made Broth of them for Supper. Saw a Smoak on the Main Opposite us.

Thursday 21st. Hard Gales W’erly & heavy Squalls. Carpenter Finished the Small Boat. People Cleaning & Coiling Some Cordage. This day had Nothing for Dinner but a few greens therefore Kill’d a Hogg in Order to have a good Supper.

Friday 22d. The First part Light Airs W’erly the Latter a Fresh Breeze, Southerly. At Day Light 3 Men Attempted to go out in the Boat a Fishing, but the great Surf on The Barr [Bar] Obliged them to put Back again. About 10 o Clock 2 Men Venture’d thro’ it & Got to the Fishing Ground and Caught 30 Fish, but in Coming in, a Sea Broke into the Boat and Fill’d her So that the men as well as the Fish were Sett [set] A Swimming and with Much Difficulty got Safe on Shore on the Other Island About ½ a Mile from the One we Are one [upon]. A Shoal place from this to that Occasions the Barr [Bar]. At the first [On our first] Discovering this Accident, I was in pain for The Men, thinking they would not be able to gett [get] on Shore, but Soon was Agreeably Decei’d, by seeing them Crawling upon the Rocks. Our Next Care Was to Save the Boat, was in a Great pannick about [which we were in great Pain for], but were Soon Relieved from that, by Sending the Large Cattamaran to Tow her in; and After [Afterwards] Fetched the men From the Island.

22 ‘Mr Yates’ written over ‘another.’ 23 ‘During — we’ written over words erased. 25 A line erased here.
Saturday 23rd. The first part Light Breezes Westerly, latter fresh Gales Easterly. At Day light 4 Men went on the great Cattamaran, and at Noon Brought in 30 Fish. Likewise Sent the Small Cattamaran Over to the Other Island to See what Casks they Were the people Inform'd us they Saw Yesterday; and to Our great joy one of them prou'd to be a Cask of pork, the Other [of] Brandy, the latter Quite Whole, the other Stove, by Which the Pork am [was] damag'd so much that I am [was] Afraid Smoaking will [would'] Scarcely preserve it. Smith Employ'd Making Fishing Hooks and Mending a Saucepan to Boil Salt Water [in order] to Make Salt.

Sunday Augst 24th. Fresh Gales Weryly and fair West. This day it was Agreed that 5 Men Should go Over to the Main the First Opportunity; 3 on the Cattamaran & 2 in the Small Boat. 'Tt Blows [blew] too hard to go a Fishing.

(To be continued.)

WAR SONGS OF THE MÀPPILAS OF MALABAR.

BY F. FAWCETT.

When introducing A Popular Mopla (Màppila) Song (ante, Vol. XXVIII. p. 64), I wrote:—

"The Màppilas of Malabar, ardent and fanatical Muhammadans as they are, are much devoted to songs, mostly religious, about the Prophet's battles and also their own for the most part. . . . The songs are written in the Arabic character, and their language is a curious polyglot patois of Malayalam, the local Vernacular, Tamil, Telugu, Hindustani, Arabic, and of many another tongue, a word of which is here and there brought in for some special use." The song which was then given in translation, "The Story of Hasanu'l-Jamal and Badarud-Munir," is of love and wonderful adventure in the fashion of a story in The Arabian Nights.

I will now consider those songs of the Màppilas which relate to war and stir up fanatic fervour. In quantity they form probably about nine-tenths of their literature — such as it is. But before doing this something must be said of the Màppilas themselves. They were described by the present writer in the October (1897) number of The Imperial and Asiatic Quarterly Review as 'men who exhibit a courage which is absolutely dauntless, and a contempt for death which is rarely paralleled and certainly unsurpassed in any other part of the world by any race.' This was not long after they had given proof of these qualities, when 92 of them met their death near Manjèri, the chief town of the Ernâd tâlîkâ of Malabar. And yet so little was the effect of this terrible punishment on their fanatic fervour that a gang of seven started out the next day, having devoted themselves to death. A strange people truly!

The Manjèri Temple, a shrine of the Hindu Bhàgavati, situated on the summit of a small hill just outside the village of Manjèri, which lies, roughly, between Ootacamund, the summer capital of Southern India, and the sea to the west, has been the scene of more than one little battle. In 1784 this temple and the palace of the Karunamalpâd, its owner, were besieged by a large body of Màppilas, and after three days' fighting utterly destroyed. The rebel Màppilas were attacked by some of Tippu Sûltan's troops, a thousand strong, and were victorious, slaying Tippu's commander. The temple was restored in April, 1849, and in August of the same year during the Muhammadan Ramazân, a body of 30 Màppilas desecrated it, and routed two companies of sepoys, killing 4 Privates and a European Officer, Lieut. Wyse. Their number soon rose to 64, and a few days afterwards they were destroyed fighting gallantly, by European troops, who lost 2 Privates killed and 2 Officers and 6 Privates wounded.

The temporary defeat of our well-armèd troops was effected by the Màppilas with war knives, in shape between a bill-hook and a Gurkhâ kukri. They tie them to the hand and wrist, sometimes one to each hand, while madly rushing at their foes. Of this kind of warfare there has been much in Malabar.

1 This and much of what follows is taken from the article just mentioned.
Even when, in 1894, the British troops were armed with the Lee-Metford rifle and the Police with Sniders, some of the fanatics reached the bayonets ere meeting what they sought: death and entrance into paradise. To the Western mind this devotion to death, which combines tender longing with fiendish fury is altogether incomprehensible. How is it that the severest of all punishments has no effect in preventing one outburst succeeding another, in none of which a Mâppila has ever been taken unwounded? Men, old and feeble, as well as the young and lusty, come on unflinchingly until the bullet or the bayonet ends their existence. The lad, in his father's house quiet and inoffensive until a few hours before he faces the British troops, will rush on as it to the manner born; will throw himself, on the bayonet, if he can, and, covered with wounds, will try to strike at a soldier. Others will leave the plough or sickle, or their cattle, in order to join a passing gang of shahâds, or intending martyrs of the faith. There may have been instances of half-heartedness before a battle, but in the struggle of death no case of flinching or being taken unwounded has ever been known. The man who goes out to die and does not die, even though he seeks death with all the heroism of which a man is capable is never forgiven, and his life would not be safe for a moment among his own people. Father, mother, brothers, sisters and wife would not as much as listen to me when telling how one dear to them a few days before, was lying in Hospital with bullets through his body. "Why did this would-be shahid not die?" is all the notice that a family gives in such a case: or else, "He is gone; he is nothing to us." Just after the outbreak in 1894 when 32 fanatics were shot, of whom but 3 survived — one a convert shot through the spleen, and a boy of 15 wounded in the leg — the mother of one of the survivors was heard to say indignantly: "If I were a man, I would not come back wounded!"

This longing for death, which is so opposed to Western feelings, no matter what the belief in a future existence may be, was evinced with greater strength than ever during the last outbreak; for it was plain that nearly one half of the dead were self-slain, or had been slain by their comrades. They were wounded perhaps by military or Police rifle bullets, but not unto death; determined, however, not to be taken wounded, they asked their comrades to kill them. One survivor, whose left humerus was smashed and who had also a few flesh wounds, was lying on his back. One of his fellows went over to finish him. The keen knife was already on his throat and had severed the skin, when the would-be slayer was shot dead by our men. The killing of Mâppila by Mâppila is, however, a new departure, and somewhat at variance with their ideas.

The tract inhabited by the Mâppilas, who are fanatically inclined (all are not so, but those of a certain tract only), was disarmed some 15 years ago, but the operation has not in the least scotched the spirit of "shahidism." In accordance with it there must be no chance of capture. The position taken up should be chosen most carefully, as it must not be one in which the fighters can be caught like rats in a trap. But of late there here has been, however, some change in tactics, and in the last few outbreaks guns have been used for defence of the position taken up. To secure as many as possible of these the country round is secured by the gang. The war knife is prohibited by law, but a very efficient substitute, and almost identical in shape, is the common wood-chopper of the locality; these and swords are now used.

The band which takes the initiative is composed of men who have, through continuous religious devo tions, assumed an attitude of mind in which the ordinary functions of the brain are stayed by religious ecstasy. The orthodox procedure then is to dispose of all their worldly possessions, divorce their wives, solemnly give up body and soul to God, dress in a long white coat and white cap, and finally to go out calmly in order to seek death whilst fighting. The above directions are not always and strictly followed, for many of the shahids possess nothing but their wives, and these are not divorced for fear of their intentions to fight and die becoming known. With the exception of the unfortunate murder of Mr. Conolly, District Magistrate of Malabar in 1855, the first overt act has been invariably the murder of some landlord or land agent, or of an apostate. Confused ideas as to Mâppila outbreaks being purely agrarian, or purely fanatical, have thereby arisen. Agrarian they are, fanatical too, to a considerable extent, but fixing on any social phenomenon as the product of any single cause is and must be an error.
Before discussing further this portion of the subject let us consider how Islam was brought to Malabar—events which are often referred to in their songs. Ceremonies, too, perpetuate them. For example, the Mahārājā of Travancore takes possession of the throne only “until his uncle returns from Mecca.” The word “Māppila” is said to be a contraction of Mahā (great) and ‘Pillai’ (‘child’, an honorific title; as amongst Nayars in Travancore), and it was probably a title of honor conferred on the early Muhammadan immigrants and possibly on the still earlier Christian immigrants. The Muhammadans are usually called Jonaka or Chānaka Māppilas to distinguish them from the Christian Māppilas, who are also called Nasarāni Māppilas. Jonaka, . . . is believed to stand for Yaranda — Ionian — Greek.” Be that as it may, Māppilas of the tract subject to fanatic outbreak are Muhammadans to a man. It is only in Cochin and Travancore that certain Christians are termed Māppilas.

The following account of the conversion to Islam is taken from Logan’s Manual of the Malabar District:

“All Malayālli accounts are substantially in accord as to the following facts: — The last king or emperor of Malabar was one Chōrāmān Perumāl who reigned at Köntangallūr (Cranganore, the Mouziris of the Greeks, the Muyiri-Kodu of the Cochin Jews). He dreamed that the full moon appeared on the night of the new moon at Mecca in Arabia, and that when at the meridian, she split into two, one half remaining and the other half descending to the foot of a hill called Ahi Kubais, when the two halves joined and set. Sometimes afterwards a party of Muhammadan pilgrims on their way to the foot-print shrine at Adam’s Peak in Ceylon chanced to visit the Perumāl’s capital, and were admitted to an audience and treated most hospitably. On being asked if there was any news in their country, one, by name Sheikh Sekko-ul-din, it is said, related to Perumāl the apocryphal story of Muhammad having, by the miracle about which the Perumāl had dreamed, converted a number of unbelievers.”

And so it came about that the Perumāl wished to unite himself to them. A vessel was made ready and the Perumāl landed eventually at Shahr on the Arabian Coast.

“It is uncertain whether it was here (Shahr) that the Perumāl came for the first time into contact with persons who were to be the prisoners of Islam in Malabar, or whether they or some of them had been of the party of pilgrims with whom he originally set out from Köntangallūr. But, however this may be, the names of the persons have been handed down by tradition as (1) Malik-ibn-Dinār, (2) Habib-ibn-Malik, (3) Sherf-ibn-Malik, (4) Malik-ibn-Kuhib and his wife Kumarieth, with their ten sons and five daughters. The Perumāl apparently changed his name to that which is said to appear on his tomb, namely, ‘Abd-ur-Rahmān Samiri.’

After some time he wished to return to Malabar to spread the new religion and build places of worship, but while the ship was being built he fell ill, and, feeling death at hand, implored his companions to do that which he had intended to do himself, and gave them letters to the various chiefs of Malabar. “And after this he surrendered his soul to the unbounded mercy of God.”

“It has come to notice from the information of an Arab resident near the spot, that the tomb of the Perumāl still exists at Zaphār on the Arabian Coast, at some distance from the place (Shahr) where he is reported to have landed. The facts have still to be authoritatively verified, but it is stated that on his tomb the inscription runs: ‘Arrived at Zaphār A. H. 212. Died there A. H. 216.’ These dates correspond with the years 827-832 A.D.” The Malabar Kēliām Era dates from the departure of Perumāl to Arabia in 825 A. D. The current year 1901 A. D. is 1071 M. E. It is likely he spent two years at Shahr before proceeding to Zaphār.

1 Názāzā, i.e., a Nazarene.
2 Qurān, chap. 54.
3 It will be remembered that the Portuguese grandees who visited Vīḻaṇāgar early in the sixteenth century, coming from the west coast, spoke of this potentate as the Samūrī. Modern usage, through Portuguese, makes the word Zamorin.
The Muhammadan Faith has since greatly spread, and at the Census of 1891 the Muslims in Malabar, almost all of whom are Mappilas, numbered 789, 857 or over 29 per cent. of the population. And the population increases rapidly.

The mosques of the Mappilas are quite unlike those of any other Muhammadans. Here one sees no minarets. The temple architecture of Malabar was noticed by Ferguson to be that of Nepal; nothing like it exists between the two places. And the Mappila mosque is much in the style of the Hindu temple, even to a adoption of the turret-like edifice which, among Hindus, is here peculiar to the temples of Siva. The general use nowadays of German mission-made tiles is bringing about, alas! a metamorphosis in the architecture of Hindu temples and Mappila mosques, the picturesqueness disappearing altogether, and in a few years it may be difficult to find one of the old style. The mosque, though it may be little better than a hovel, is, however, always as grand as the community can make it, and once built it can never be removed, for the site is sacred ever afterwards. Every Mappila would shed his blood rather than suffer any indignity to a mosque. It would be the case of the Malapuran akhada all over again; for, once religious enthusiasm is aroused, death has no terrors, but only alluring smiles.

The Mappilas are Sunnis, and claim to have had their religion from the fountain head. The chief priest in Malabar, the Vaify Tangal of Ponani, styles himself Valiya Zarakhinagal. Sayid Ali bin Abdur-Rahman Vali Tangal Pon ni, is a pure Arab by blood, claims direct descent from the Prophet. Curiously enough he inherits his sacred office in the female line — his nephew and not his son is the successor — after the custom of Malabar, while his family property passes according to Muhammadan law. Other Mappila priestly offices, even that of the Mahadum, the chief representative of learning, who confers religious titles and degrees, are inherited in the same manner; while, as all over South Malabar (among Mappilas) property devolves in the usual way sons, daughters, and widows receiving certain shares: sons an equal share; a widow with sons, an eighth of the whole; a widow without sons, a sixth of the whole; daughters, half a son's share.

The Nair tarwad, in which the devolution of property is through the female line, is the most stable of all arrangements for the preservation of the family and the family property. The Mappilas of South Malabar have followed this custom as regards certain priestly offices, but the Mappilas of North Malabar follow it in respect of property. They have changed their creed, but not their custom of inheritance. In the North they are well off, as every circumstance of the tarwad tends towards aggrandisement. In the South they are very poor, for they are extremely prolific, and they divide up their property in such a way that prosperity is impossible. Their prolificness and mode of inheritance are enough to destroy the most capable people in the world, situated as the Mappilas are.

Not only are they prolific, but their numbers are increased largely every year by fresh adherents from the Hindus, as well as from the inferior races. In the decade preceding 1891 the Hindus increased by less than 8 per cent., while the Muslims increased over 15 per cent. No wonder the man of inferior caste is often induced towards the latter. The position of even the slave-like Cehoman is changed at once when he enters Islam; instead of his very presence carrying pollution to people within 100 yards of him, he can walk where he will and hold his head as high as the best, and what is more, every Mappila will stick to him through thick and thin.

A people prolific and overcrowding, and at the same time wretchedly poor, as are the Mappilas of East Malabar, are most unfortunate subjects for fanaticism; and more especially so when the customary land tenures are, as it were, arranged specially for the purpose of making people discontented. Of this fanaticism I will now say something, and endeavour to account for its existence. In many places people are poor and prolific, but not fanatic. Why then are the Mappilas so?

---

* This includes the Laccadive Islands.
* * Valana-arathengal = belonging to the great shrine.
* Much more so than Hindus. Many a man has 10 and 12 out of one wife; and I know of one, having 3 wives, who is blessed with 83 children.
When a civilized community adopts Islam as a creed, there is no great change wrought in the ordinary course of life. We were told at the Congress of Orientalists in London of 1891, that Muhammad’s Paradise was no more materialistic than that of the Christians as described in Revelations; it was purely spiritual, but clothed in language, the everyday interpretation of which, and not the poetic inference, was accepted. Montaigne had the same idea. Now, whether the civilized entering Islam adopt the exalted interpretation which is said to have been Muhammad’s meaning, or whether, as is usual, religion has very little hold on life among civilized peoples in the towns, the fact remains that they do not feel bound to go out, become shahids, and kill those whose persuasion is not theirs.

In contrast to this prosaic and sensible attitude of the civilized followers of Islam, if the shrine at Mambram or the Malapuram mosque were to be destroyed by order of the Government, there is hardly a Mappila in Malabar, who would not give his blood to avenge the disgrace to “his pearl-like faith.” There would be much bloodshed. The most insignificant shrine, a mosque, even though no better or larger in structure than a hen-house, cannot be moved without much blood being shed. Why is this? When a Hindu temple is desecrated and made abominable by a handful of Mappilas, no one raises a hand to avenge the insult to the religion. Nor will those of that creed stand up to save their temple. The gods or goddesses, Siva and Bhagavati, must look after themselves in these ebullitions of excitement. If their temple is made a place for fish, or even for the slaughter of the sacred cow, the people look on with equanimity. All that is looked for is ceremonies which will make it just as sanctified as ever it was, and the disgrace is swallowed. Why is this? The people are much the same in blood as their Muhammadan fellow-countrymen.

If the difference is not to be found in the blood it is to be found in the creed. During the Soudan War there was unmistakable evidence of the extraordinary influence which Islam has on the lower and uncivilized races. What made the immortal “Fuzzy Wuzzy” of Kipling’s ballad such a “first rate fighting man!” Really nothing but the effect of Islam on his receptive nature. More recent instances of this there have been in China. It is a creed which, as if by magic, turns the submissive into heroes. We have evidence of this here. The Chernams and Kanakams, inferior races in Malabar, are submissive to the last degree; in their lives the most harmless of beings, exemplifying many of the virtues which are supposed to be exclusively Christian, and always in peace. But let one of these adopted Islam and he is changed altogether. The psychic effect is marvellous. A youth shot down in the outbreak of 1894, who recovered, was a convert of only a few months. Two of those shot in 1896 were Chernams and converts: one had become a Mappila only 15 hours before he was shot! The head and front of the last outbreak was a converted Chernam. So it is with Tiyanas and others who join the Mappila’s faith, but the effect on those of the lowest races is the strongest. The localities where the element of danger is greatest are where the Mappilas belong in blood to the lowest races. The most dangerous criminals, the worst dacoits, are also to be found amongst this mixture. In a place called Nääpapuram, in North Malabar, the whole community of Nairs was turned wholesale into Mappilas during the troublous time of Tippu Sultán, but no more peaceable people dwell in the province. The effect on the lower races and on the close mixture with them is altogether different.  

Now, the hold which Islam has fixed on this mixture of lower races is very strong indeed. The foreign or Arab blood in Eastern Malabar is very slight if at all existent. Following M. Broca’s method of indicating the racial position of mongrels or mestizos, if there has been foreign blood it has been eliminated long ago in the locality where fanaticism is alive. True, there are individuals of Arab blood, but, as a rule, they are not among the dangerous ones. To the Arab blood has been imputed the extraordinary fanatic character of the religion of the Mappilas, who are

---

9 The Chernman, it may be said, is barely 5 ft. 2 in. in height (the average for the North Malabar Tiyan being almost exactly 5 ft. 5 in., while the Nair is taller); much darker in colour, his nose is broader, and cranial capacity is much smaller; his head length is 13 in. and the width 13 1/2. Compare this with the Aryan Nambudri, 19 3/4 and 14 3/4.
quite unique among the Muhammadans of Southern India. But this is an error. There are within the same province a class of their co-religionists to called Rowthans (Râvthans), descendants, it is said, of Tippu’s cavalry, who, themselves converts — but not from the inferior races, — settled near Pâghât; but these Rowthans are as cowardly as the Ernaâl Mâppilas are courageous; and if, the fanatic element came from the Arab, we should find it strongest amongst those who are of pure or almost pure Arab blood living on the West Coast, but there we see no signs whatever of it. Not only the pure Arab Mâppilas, but the class calling themselves Bôtkals (Arab traders sailing from the Persian Gulf) are as peaceful as any class in any class in Malabar, and are as little likely to go out and become shaikhs as their so-called brethren in the faith living in England.

It seems to be incontestable, whether in Africa, or in China, or in Malabar, that the fanatical feelings which make people fight quite regardless of life are to be accounted for in the extraordinary effect which Islam has on untutored races. The Mâppila of Ernaâl is certainly exceedingly impressionable and emotional. He holds the truths and beliefs of his faith, as interpreted subjectively, with the very strongest tenacity. The Salvation Army-man, who invites his brethren to embark for the shores of “kingdom come,” chiding those who prefer to hesitate, has not the smallest intention of embarking himself until he is compelled to do so. He is not so strongly affected by the reality of what he sings about as to possess the slightest inclination to be off at once to the meeting by the river, when the path is death. The reality of the unseen, or that which lies in animism, is much stronger in the lower races than it is in the higher, as any investigator may find out for himself. To the Mâppila, the pleasures of heaven which await those who die fighting are not a far off and indistinct vision, or, as with many people, what they think they believe; it is not this, but something which impresses his whole being; it is altogether real; so real that he can, with that kind of confidence which makes his courage sublime, meet death with delight.

The Mâppila is indeed essentially religious, although his religion may be sometimes in the style of the ghâdi. With the shows of the Muharram he has no sympathy, and will have none of them. The Ramazân fast he keeps faithfully, and prayer is never far from him. It is supposed that his devotion to religious teaching is a drag on his advancement in secular education — that so long as he retains it, he will remain behind in the general struggle for advancement in a country ordinarily well ordered and peaceful; but with this I do not at all agree. It is much to his credit that he will have that which he feels with every fibre of his body to be the Word of God before everything else, and will not submit to have anything substituted for it. He is only too glad to have proper secular teaching after a certain portion of the day has been devoted to the Qurâın.

The Mâppila College at Ponâni disseminates darkness where it should give light. The Musafars, who have qualified to “read at the lamp,” and the Tangals are grossly ignorant. And as for the Mullahs, who teach the sacred book to the children, I have never yet met one who had the remotest idea of the meaning of a single word of the Qurâın. Thus the children are taught to read, but not to understand; what they read, incoherent Arabic, is gibberish to them; what they learn is quite another thing. Some time ago the Qurâın was transcribed into Malayalam, retaining the Arabic character; it being then supposed that people would like to understand what they read. This transcription is used on the W. Coast, but not where fanaticism smoulders; there they will not use it, and the book finds no sale, for the influence of the spirit of the Qurâın is felt through mere reading or hearing it in the original, even though not a word is comprehended, to be better a thousand times than any transcription into the vernacular. And, of course, the musafars of the mosques are against it, for if the people could read and expound for themselves, their influence and pecuniary gains would disappear. 10

10 The marked difference between a Mâppila and a Hindu is observable in other ways than those where fanatic venomous comes in view. All the kinds of work requiring pluck, energy and sustained effort are done by Mâppilas. Mâppilas have done the heaviest work and earned the reputation of being the best workmen, steady, tractable, and never troublesome while well treated, in the building of the big iron bridges which the Madras Railway Company have thrown over the big rivers of the Madras Presidency; and in the gold mines of South India the best miners are said to be Mâppilas. They work as Hindus never do.
There survive impressions of the displaced religions of the lower races, whose blood is in the Mappila. There is much vowing in the way that Hindus vow, and prayer is offered to deceased and semi-deified persons, notable priests, tangals and shahids. The most important oath by which a Mappila can swear is “By the feet of the Mamram Tangal,” and many vows are made at the shrine of this great priest, who came from Arabia to spread the faith in Malabar, and died there. On the West Coast, where the Arab blood and influence is strongest, the religion is, so to speak, purely spiritual; in the interior, where there is little or no Arab blood, it is more animistic: the religion is more strongly infused with the once universal ancestral worship and its concomitant phases. For example, on the Coast the favourite “Manulud” ceremony is entirely spiritual in its essence — as an Arab Mappila priest describes it; but in the interior, where we find fanaticism, it is to obtain some favour from a deceased person who is invoked.

With this introduction we may examine their war songs, and we will begin appropriately with one which illustrates their ideas as to how the dead may aid the living. It is entitled “Shahidu Malay Pattu” — a Garland of Songs about the Shahids, the heroes of defence of the Malapuram Mosque being indicated. The poet says his song is “A Hymn of Praise for the benefit of all mankind . . . . Its name is Kaliyath Shifa . . . . As a necklace for kings have I composed it. Those who wear this necklace here will be rewarded by God hereafter with a necklace of gold. I am always praying to God to bless those who repeat this song.” He asks God to forgive orthographical errors for the sake of the Malapuram shahids, and then, naming every ill and misfortune possible to man, asks that for the sake of the same intercessors he may come to no harm. He goes the length of asking that he may be “One of the great men who attend to the wants and defects of the house of God,” and that he too may die a shahid! The song is also intended to be repeated amidst vows in times of sickness. Although any want may be supplied, any disease cured, wells filled, and even cholera driven away simply by invoking the Malapuram shahids, it must not be supposed that these mighty beings are ever consumed with God. “There is no God but God;” nevertheless there is nothing which these cannot do for man, for by means of their glorious death they have been invested with much power. Having given body and soul to God while in this world; they have earned the privilege of obtaining assent from God whenever they ask Him for anything on behalf of those on earth.

The poet’s modest apology for his errors is not uncommon in the Mappila’s songs, and it will not be out of place to mention here for the sake of better appreciation of these that the Mappilas form no class with a fine literature of their own, but that they are the most backward in the Madras Presidency in the matter of education. The poets are illiterate men in the sense that they could not even pass a Lower Primary examination in the Government Schools; and they have procured the facts and legends, which they have woven so strangely into their songs, from tradition and, partly no doubt, from the regular stream of communication with Arabia which is maintained until the present day.

The War Songs.

No. I.

The Song of the Malapuram Shahida.11

“In the name of God I begin this song. I pray to Muhammad the Prophet who is the cause of all created things. I pray also to his relatives and to the Anshabi army. I pray to all Mussalmans.”

The poet goes on to say that “Abu Betir Siddik was the first true shahid. Even the angels of God hold him in high respect. He was a true man and he never exposed his person to anyone until his death. May God always bless him.”

11 Malapuram lies 18 miles north of Tirur on the Madras Railway and about 31 miles east of Calicut.
Omar Bin Katab is the next. He "held the Faith dearer than all his wealth and all his children. The dust in his hand was transformed to musk by the Most High, and the odour of that musk always pervaded his body."

"Uman Bin Alvan is the third great shahid. He had the Prophet's permission to admit anyone he pleased to heaven. He visits every place like the lightning of heaven. He is the most celebrated man in heaven or earth; and he married two of the Prophet's daughters."

Ismail Ali is the fourth. "He is described as a tiger in Bait-ul-Issa. The angels of death fear him. He was the son of Abdullah's brother, the most beloved of the Prophet and the husband of Fatima the Prophet's daughter, dearer to him than eyesight." A tremendous fighter!

"His name is written 'Tiger' on the cot in Aesh" . . . . "He is the gate of the hall of wisdom. May God always bless him."

The story of the Perumal, the last king among kingslets of Malabar, and his voyage to Arabia where he met the Prophet are then told. Then we come to the destruction of the Malaparam Mosque, when 44 Mappillas, the bravest of the brave, fought to death: parents, wives, children, tried to dissuade them, but to no purpose. The wives were told they would by their husbands' death in glory obtain salvation. But what about the present? "Do you not see the sky sustained without a pillar . . . . the frog in the deep recess of the rock, the chicken in the egg, and the child nourished in the womb? Is it reasonable that you will be helpless? Does a man in the grave think of his parents? When we are weighed in the balance who but God will help us? Can one's parents? If men permit sacrilege to their mosque all pains of hell await them; it is only by dying for the glory of God they can obtain heavenly bliss; and then they can bless and aid their families.

"Hail ye brethren! The shahids are most mighty ghosts and bhutas fear them. The wicked Eblis is their enemy. Those who sing their praise obtain salvation from God. Those who slight them will suffer untold misery" . . . . "Nothing is more pleasing to God than sacrificing one's body and soul in defence of God, and none are more honoured than these shahids" . . . . "They did not become shahids under compulsion but of their own faith and conviction; therefore God gave them a special place in heaven and a crown in Taj-il-Okar. Their bodies are always fragrant. God takes special care of them."

No. II.

The Song of Alungal Kandi.

Another of the songs was written by the popular Mappila poet Alungal Kandi Muyankutti Vaidiar, grandson of a convert from Hinduism, of the stock of the old Velan or Vaidiar, a hereditary Hindu physician. The poem begins with extolling Muhammad, and tells how the king of Damascus was convinced of the truth of his mission when the Prophet made the moon rise at the wrong time, ascend the zenith, divide, and each half pass through the sleeves of his coat. Then follows a version of the tale of Joseph and Potiphar's wife, and how the innocent minister ascended to heaven telling the king who suspected him that he would be pardoned if he accepted "the new Veda!" which a prophet was then bringing to men from over the sea.

Regardless of chronology, the poet tells how Islam was brought to Keralat 13 and how eventually a grand mosque was built at Malaparam. 14 Mappillas will not allow even an atom of the kadjan roof of the mosque to be burnt. They will fight to death for it, and they are glad of the opportunity. The poem continues:

13 Extracts only are given of this song. I cannot give here more than a meagre outline of it, and the special characteristics of the Arab shahids can be only alluded to in the briefest manner.
14 The old name of Malabar.
15 An absurdity is that the Perumal is compelled to do the hajj or pilgrimage while Muhammad was alive. Muhammad was dead 200 years before Islam was brought to Malabar or the Perumal, the last emperor, went to Arabia.
"The soul in our body is in the hand of God. Can we live for ever in this world? Must we not die once? Everything will die, but God alone will not. Such being the commandment of God we will have no excuse when we are brought before Him after death; so determine earnestly to fight and die. If we die fighting with the wicked men who attempt forcibly to burn this holy mosque, which is the house of God, we shall obtain complete salvation. The occasion to fight and die for the faith is like unto embarking in a vessel which has come to bear the believer to the shores of bliss. Therefore embark! How well for you that such a vessel has come! It will bear you to the broad gates of heaven. Is it not for the arrival of such a vessel that we should pray? . . . The pleasures of wealth, or family, are not equal to an atom of celestial happiness. Our most venerable Prophet has said that those who die in battle can see the houris who will come to witness the fight. There is nothing in this world to compare with the beauty of the houris. The splendour of the sun, of the moon, and of the lightning is darkness compared with the beauty of their hair which hang over their shoulders. Their cheeks, eyes, face, eyebrows, forehead, head are incomparably lovely. Their lips are like corals; their teeth like the seeds of the *thatimathalam*; their breasts like cups of gold, the pomegranate, or like beautiful flowers. It is not possible for the mind to conceive the loveliness of their breasts and shoulders . . . If they wash in the sea the salt becomes like honey, and as fragrant as attar. If they were to come down to earth and smile, the sun, moon and stars would be eclipsed. Mortals would die if they but heard the music of their voice. When they wear red silk garments bordered with green lace of seventy folds, their skin, bones, and muscles can be seen through them. Such is the splendour of their body. If they clap their hands, the clang of their jewels will be heard at a distance of 500 years' journey. They clap their hands and dance and sing as they come like swans to the battle-field. If a human being were to see their beauty, their smile or their dance, he would die (with longing) on the spot. Gently they touch the wounds of those who die in battle, they rub away the blood and cure the pain; they kiss and embrace the martyrs, give them to drink of the sweet water of heaven and gratify their every wish. A horse caparisoned with carpets set with precious stones will be brought, and a voice will say: — 'Let my men mount; let them dance with celestial houris.' Then the celestial coverings will be placed on their heads; they mount the beautiful horses which will dance and leap and take them away to heaven, where they will live in unbounded joy.'

"Such is the fate which awaits those who die fighting bravely. At the dissolution of the world they will be sped like lightning over the bridge across hell. In Heaven they will attend the marriage of Muhammad. They will be decorated with bunches of pearls and crowns of gold; they will sit on the back of Muhammad's elephant, and enjoy supreme happiness. It is impossible to describe the pleasures which await those who die fighting bravely without flinching. All their sins will be forgiven and God will listen to all their prayers."

Far otherwise is it with the coward. "All his virtuous actions are ignored. He incurs the wrath of God. He will be written down a renegade in the book of God. His prayers are vain. He will die a sinner and be thrown into hell where fresh kinds of torture will be given him. In hell are countless myriads of scorpions, snakes and frightful dragons. It is a pit of everlasting fire." The pleasures of heaven and the pains of hell have been revealed to Muhammad "who in his turn taught his disciples. It is the learned Musailars who now hold this knowledge."

Let it not be supposed that the above feelings are entirely sensual and erotic. On the contrary the Mappilas' version of Islam has had a strong effect for good on his life and morality.

**No. III.**

**The Battle of Bedr**

Another song by the same poet is of Muhammad's famous Battle of Bedr, where he routed the Koreish; also a subject of endless interest to Mappilas. They say that as the battle was fought on the 17th Ramasan in the 2nd year of the Hijra, it is a good day on which to die
fighting. Curiously enough, the month of fasting, during which it is enjoined not to fight unless forced to do so, is the very one in which the Mappila, the ultra strict follower of the Prophet according to his lights, chooses to go out to fight and die. The twelfth day of Ramazân is with them a good day on which to start out under devotion to death and it was selected in a last rising.

The poet describes how the Angel Gabriel told the Prophet that bliss awaited those of his followers who died fighting the infidel. The Prophet then tells them how they could gain Paradise and be met by the houris "whose eyes are like the waxing moon, whose cheeks are like the plantain's leaves who are soft as the petals of the young shoe-flower," by way of inspiring them with courage. The imagery is not quite so happy as before, for the necks of the hürs when they walk "wave to and fro like the neck of a rutting elephant." But their "breast is like a lake wherein are lotus flowers, and they are always 16 years old and very amorous." . . . They come like sporting elephants to bear away those who die in battle and strive with each other saying, 'I will take him — I will take him.' The Prophet swore to his army that such happiness would be theirs if they died fighting bravely." Omar was eating dates; when he heard this he cast them away. The Prophet asked why. He replied that he wished to waste no time in eating dates: "I wish to use my time for fighting;" and so saying he rushed like a lion among a flock of sheep, killed many and died fighting; he met the death he wished for." The father fought against the son, for the bond of the faith is stronger than the bond of blood. The angels of death fought on the sides of the Prophet and the Koreish were defeated.¹⁶

(To be continued.)

NOTES AND QUERIES.

SOOSY — COPOSS.

Anet, Vol. XXIX, p. 339. I have shown that soosy was Anglo-Indian for a mixed silk and cotton cloth. The following quotations from Holwell's Interesting Historical Events Relative to Bengal, etc., 1876, a veritable mine of wealth for the hunter after Hobson-Jobson, go to show the correctness of the identification beyond doubt. Coposs, cotton (कपास), is unnoticed by Yule.

Page 198. — "This district produces raw-silk and coposs (raw-cotton, called, p. 193, "coposs or Bengal Cotton") sufficient only for manufacturing their soosies, cuttaness and gurras."

Page 200. — "The produce of the country consists of shala timber (a wood equal in quality to the best of our oak) dammer Iacca's, an inferior sortment of raw-silk and coposs and grain, sufficient only for their own consumption."

Soosies, cuttaness and gurras were therefore all mixed piece-goods, which is valuable information. Yule quotes the second passage for saulwood (sail), but dammer-Iacca is especially interesting, unless we ought to place a comma between dammer and Iacca, as it goes to show that Bengal dammer (pitch) was made from a resin (Iacca, lac).

R. C. Temple.

SOME FORMS OF FERINGEE.

1879. — "Between 3 and 4 of the morning we set out and about 9 with easy travelling came to Yentapollam, in the way we passed over a place which have been formerly inhabited by Portuguese called Feringee Burane." — Streynsham Master's Memorials, March 19th.

1883. — "Near the line of the old Madras Road is the spot known as Feringhee or Frangula Dubba, the mound of the foreigners, where there was once a Portuguese Settlement." — Mackenzie, Kistna District, p. 206.

R. C. Temple.

JUFFYE — JUMP OF THE CULTH.

Here are two slang expressions for the learned in things Anglo-Indian to exercise their knowledge or ingenuity upon. A common slang expression of contempt among Eurasians towards a native, who apes European manners and dress, is juffye, or jump of the culth or simply a jumper. The term jumper here is explainable as vernacular English for a man who does anything he has no natural or legal right to do, but the other two terms apparently require a good deal of explanation.

R. C. Temple.

¹⁶ The next song is given in full. Here as elsewhere the translation is necessarily somewhat free. The songs were first of all put into Malayalam and then into English. Though nearly every Mappila understands them more or less, few among them are capable of rendering them in the vernacular.
NOTES ON INDIAN HISTORY AND GEOGRAPHY.

BY J. F. FLEET, L.C.S. (Retd.), M.D., C.I.E.

The places mentioned in the Unāțikavātsikā grant.

THIS record has been edited by Pandit Bhagwanlal Indraji in the Jour. B. Br. R. As. Soc. Vol. XVI. p. 88 ff. I am quoting it, however, from ink-impressions made by myself.

The record introduces first a certain Mānānka, whom it describes as “an ornament of the Raśtracāttaś whose fame was adored by a number of many good qualities.” His son was Dēvarāja. Dēvarāja, it says, had three sons; of whom, however, it mentions only one by name,—Bhavishya. Bhavishya’s son was Abhimanyu. And the record recites that,—tānā manuscripts are Śākunvati-mātāpitrāḥ-puṣya-nimitt-Śākunvati-Śākunvati-

The Pandit rendered this passage thus:—“By him, adorning Mānapura by his residence (therein), there is given, with libations of water, in order to increase the religious merit of his parents, the village named Unāțikavātsikā, to the recluse Jatābhāra, (on behalf) of (the god) Dakshīna-Sīva of Pethapaṅgaraṇaka. . . . . . . (This grant has been made) in the presence of Jayasingha, the chastiser of the Kōṭa Harivatsa.”

To this, however, there are objections. In the first place, in order to support such a rendering, there is the obligation of supplying some such word as artha or artha, “on behalf,” to govern the genitive ending with Dakshīna-Sivasīya. And secondly, there is no evidence of the existence of a word kōṭa as the name of any person, family, or tribe. And, on this latter point, the following remarks may as well be made; because the matter is so thoroughly typical of the way in which there have been evolved, in connection with the ancient history of India, so many curious mistakes, some of which are recognised only when the time comes for verifying the assertions in which they are presented, and can be eliminated only by a full examination of the supposed authorities for those assertions. The Pandit gave a certain reference in connection with his rendering of the record with which we are dealing, and in support of a remark, partly based on his estimate of the period to which it should be referred, that “this shows that there were Kōṭa chiefs at least as late as about the fifth century A.D.” And, turning to the place referred to by him, we find that he had already formed the belief,—from a Gupta record which, according to his opinion at that time, was to be referred to the end of the second century A.D., and which we shall notice again further on,—that Kōṭa did exist as a tribal name, and that a Kōṭa king was reigning in Upper India about A.D. 190; also, that he considered that he had obtained Prākrit forms of the name Kōṭa in a word which he read as Koḍa or Kōḍa in an early inscription in Sopārā in the Thāna district, Bombay, and in a word Kāḍa which he found on an early coin obtained by him at Sahāranpur in the Meerut division, North-West Provinces; and also that, on these grounds, he was of opinion

---

1 This seems to be a mistake for puṇya-ābhīvṛiddhi-nimittā or puṇya-ābhīvṛiddhi-nimittā.
2 The Pandit read this name as Unāțikavātsikā, with ṇ in the second syllable. The original seems to be śākunvati in respect of which, as I have before now had occasion to remark, it is often impossible to decide whether it means śākunvati or śākunvati; except, of course, in well-known words such as the Sanskrit śākunvati and koṭaka and the Kanarese gānvi and woṭi. I read the name with ṇ because of the identification of the place, which will be shown further on.
3 Over the ṇ there is a mark, which may be a flaw in the copper, or may be an imperfect attempt to attach a super script ṇ to the consonant.
4 See note 2 above.
5 I do not overlook the facts, that Moster-Williams’ Sanskrit Dictionary, the revised edition, gives us Kōṭapura as the name of a town in Magdāda, from the Lāhaṇu-bhūtācāraṇa, and that two records, Nos. 655 and 656 in Kielhorn’s List of the Inscriptions of Northern India (Sp. Ind. Vol. V. Appendix, pp. 88, 89), give us the personal name of “Kōṭapura,” of the Bhaṣja family.”
7 For, perhaps, the identical coin, see Cunningham’s Coins of Ancient India, Plate II., No. 21; the reading is distinctly Koḍa, on both the obverse and the reverse.
that the Koṭas, Kōṭas, or Koṭas were widely spread over India and had already been a ruling power for nearly three hundred years.\textsuperscript{8} Elsewhere, we have been told that the details adduced by the Pandit \textquoteleft\textquoteleft seem to show that about B.C. 200 the tribe of the Kodas or Kottas, who seem about that \textquoteleft\textquoteleft time to have been ruling near Mirat and afterwards (A.D. 190) near Patna, had a settlement at \textquoteleft\textquoteleft Sopāra.\textquoteright\textquoteright As a rider to this, a remark has been made about an \textquoteleft\textquoteleft apparent relation between the \textquoteleft\textquoteleft Koda of the Sopāra burial circles and the Kols and Gonds of the Central Provinces.\textquoteright\textquoteright And finally, we have been informed that there was an \textquoteleft\textquoteleft early widespread tribe allied to the Gonds known \textquoteleft\textquoteleft as Koṭas and Koṭas in the Central Provinces North Konkan and Delhi,\textquoteright\textquoteright and that their headquarters were probably in the Central Provinces.\textsuperscript{11} But, if we turn back to the reference put forward by the Pandit himself, we find that the origin of all this matter is simply that the Pandit believed that \textquoteleft\textquoteleft Skandagupta's' -- [read Samudragupta's] -- \textquoteleft\textquoteleft inscription on the Allahabad pillar states that he punished the scion of a Kotta' -- [read Koṭa, as shown by the Pandit's Dēvanāgarī rendering of the text, given in a footnote] -- \textquoteleft\textquoteleft family in Pāṭaliputra.'\textsuperscript{12} That, however, is a pure mistake. It was some member of a family named Kōta, whom, the Allahabad record says, in a passage which mentions also Pushapā [pura], = Pāṭaliputra, = Patna, Samudragupta caused (at some time about A.D. 375) to be captured by his armies.\textsuperscript{13} The name Kōta with the dental \textit{t}, is quite distinct from any such word as \textit{kosśa}, with the lingual \textit{f}. And, so far at any rate as anything as yet brought to light may go, we may dismiss entirely the idea that there ever was a ruling power in India known by the name of Koṭa.

Now, on the other hand, in the first place, the construction of the sentence, quoted from the record with which we are dealing, is such that only the genitive \textit{Jatābhāra-pravrajitasya} is necessarily connected in any way with the verb \textit{dattaḥ}, by which it is governed, and that the genitive ending with \textit{Dakshiṇa-Sivasya} is governed in the most natural way by the immediately following word \textit{Uṣṇikavatikā-nāma-grānamō}; and this collocation of the words marks the village \textit{Uṣṇikavatikā} as already belonging to the god Dakshiṇa-Siva at the time when it was conveyed by the record to someone else. And in the second place, the word \textit{kosśa}, as also \textit{kōta}, is well known as meaning 'a fort, a stronghold;' while there is nothing appropriate in speaking of the witness to a deed of gift or transfer as a chattiser of anyone when there is nothing in the record to indicate some such achievement as the motive for the grant, it is quite suitable that he should be described by a title which marks him as a local official; we have the word \textit{kosśapāla}, meaning 'a guard, protector, keeper of a fort, a commander of a fort,'\textsuperscript{14} and \textit{kosśanigrha} or \textit{kosśanigrhaṇa}, in which the second component is from \textit{ni + grāḥ}, 'to hold down, keep or hold back, seize, hold, hold fast,' etc., may quite well be taken as an official title meaning much the same thing. Further, \textit{grānamō} has the meaning of 'a small village.' The word \textit{pravrajita} has the technical meaning of 'one who has left home and wandered forth as an ascetic mendicant;' but it can hardly be fairly rendered by 'recluse,' or by any single word, except perhaps in connection with Jain and Buddhist writings, in which it seems to be used in the sense of 'a monk;' and it has also the general meaning of 'gone astray, gone abroad.' The word \textit{jatābhāra}, which means literally 'a mass of braided hair,' must certainly be taken here, as it was taken by the Pandit, as a proper name; but the word reminds us at once of \textit{jatābhāra}, 'carrying or wearing braided hair,' which is well known as an epithet of Siva; and, while it does not seem either appropriate or probable that a village, specifically described as belonging to a god, should be given away to any ordinary person without a distinct proviso that he should hold it for that god, it might quite suitably be transferred to another form of that god, or to some other god connected with that god.\textsuperscript{15}

\textsuperscript{10} Id. Vol. I. Part I. p. 152. "Delhi" seems to be a mistake for Behar or anything else.
\textsuperscript{12} See Monier-Williams' Sanskrit Dictionary, revised edition, under \textit{kosśa} and \textit{pāla}.
\textsuperscript{13} We seem to have at any rate one instance of an analogous kind. The \textit{Mahabharata} Jayantī gave a village named \textit{Dhavanapālīkā} to certain persons, as \textit{dāvanagrāha} or \textit{dāvanagrāhaṇa}, 'giver of the god,' for the benefit of the god \textit{Vishnu} in the form of \textit{Bhagavat}; see \textit{Gupta Inscrip.} p. 121. And his son \textit{Sarvanātha} gave half the said village to another person for the benefit of the divine (\textit{bhagavat}) goddess \textit{Pisūkapurkādīvī}; see ibid. p. 159.
\textsuperscript{14} See \textit{ibid.} p. 790.
And, for the above-mentioned reasons,—partly suggested, of course, but, I think it will be admitted, fully supported, by what I have to say further on in identifying the god and the places mentioned in the record,—I translate the passage thus:—"By him (Abhimanyu), adorning Manapura by residing at it, in order to increase the religious merit of his parents, the small village named Upśikavātiḍā, of (i.e. belonging to) the god Dakśiṇa-Siva of the Paṅgaraṇa pēṭha, has been given, with the pouring out of water, to the Jāṭabhāra who has left his home and gone abroad (i.e. to that same god who has gone from the place belonging to him as Dakśiṇa-Siva and has settled elsewhere as Jāṭabhāra). . . . . . . (This has been done) in the presence of Jayasaiṅgha, the keeper of the fort of Harivatsakaṭṭa." Or, if it should be considered better to take Jāṭabhāra as the name of a place, then part of the translation would be:—"to him (i.e. that same god) who has left his home (at the place belonging to him as Dakśiṇa-Siva) and has gone abroad to (and settled at) Jāṭabhāra."

Now, the record does not mention the territorial division, in which lay the village Upśikavātiḍā. Nor does it specify the boundaries of the village. Nor do we even know where it was obtained. And so we have nothing specific to guide us in the allocation of it. But the suggestion has been made,—whether by Pandit Bhagwanlal Indraji, or by his editor, is not clear,—that the god Dakśiṇa-Siva may be the god of the great Saiva shrine in the Mahādēva hills in the Hōshaṅgābdā district, Central Provinces, because that shrine is under the management of the petty Chief of a place named Pagāra.16 This suggestion is certainly correct. And, by way of an introduction to what I have to say about the matter in proving the point, it may be conveniently stated here that, in the Indian Atlas sheet No. 71, S. W. (1899), the particular hill which is called ‘Mahādeo’ in it and is marked as 4,834 feet high, and on which there is the shrine in question, is located in lat. 22° 24’, long. 78° 28’, about three miles south-by-west from the well-known hill-station of Pachmarhi in the Sōhāpur tahsil of the Hōshaṅgābdā district, and about fifty miles towards the east-south-east-half-south from Hōshaṅgābdā, which town is on the south bank of the Nerbudda; and that, while the principal of the Bhāpās or hereditary guardians of the shrine is the Chief of the Pachmarhi zamindār, which comprises six villages,17 another of the Bhāpās is the Chief of the Pagāra zamindāri, which consists of twelve villages18 and apparently has its headquarters at Pagāra itself, which is in lat. 22° 31’, long. 78° 29’, about four miles on the north of Pachmarhi and on the road to Pachmarhi from the Paparia or Piparia station on the G. J. P. Railway from Bombay to Jabalpur: from the ‘Mahādeo’ hill, Pagāra is about seven miles north-half-east.

The Mahādēva hills are a part of the Sātpuḍā range; but they are isolated, by precipitous ravines, from the hills which are actually known as the Sātpuḍās. The earliest mention of them that I can trace, is in Hamilton’s East-India Gazetteer, second edition, Vol. II. (1823), p. 161, where they are described as "a range of hills in the province of Gundwana, where stands the "celebrated temple to which the Hindus resort in pilgrimage." They are famous for a peculiar variety of sandstone known as the "Mahādēva sandstone," in connection with which a full account of them, from that point of view, has been given in the Memoirs of the Geological Survey of India, Vol. II. (1862), which work speaks of them as "the Pachmuri or Mahadeva hills" (page 183). And, according to Thornton’s Gazetteer of India, Vol. III. (1854), p. 358, they took their appellation from the temple, and they may be considered as lying between lat. 21° 30’ and 22° 40’, and long. 78° and 80°.

Hamilton’s work speaks also of the Mahādēva temple, which it describes as "a celebrated "Hindoo place of worship in the province of Gundwana, situated among the Mahadeo hills, sixty "miles south-east from Hussingabad, on the Nerbuḍda river." It places the temple, not quite accurately, in lat. 22° 22’, long. 78° 35’. It further quotes Jenkins’ Medical Transactions to the

---

17. See the Imperial Gazetteer of India, Vol. X. p. 502. This chief is described as “a Kurki by caste.”
effect that, at the festival held in February, 1820, more than eight thousand people visited the shrine, in spite of the fact that it could hardly have become known, by that time, that the taxes, which had ranged from one rupee to ten rupees per pilgrim, and even to fourteen rupees in the case of a pilgrim having a bullock with him, had been remitted. And, from all this, we gather that the shrine really is one of considerable repute.

In 1833 or 1834, the Mahâdêva hills were visited, for geological inquiries, by Mr. Spilsbury, of the Bengal Medical Establishment, who then published an account of them in the Jour. Beng. As. Soc. Vol. III. (1834), p. 338 ff., with a sketch-map opposite page 392. He climbed the range denominated "Pugara, a small Gaond village, belonging to a Thakur." He located "the cave of Mahâdeo," — from which we infer that the "temple" is a shrine in a cave, — some four or five hundred feet below a peak, which he mentioned in one place as "Patta Sunkur," but in another as "Jutta Shunkur," and which he further showed in his map as "Jutur Sunkur." He has further told us that the occasion of the annual jâtrâ or pilgrimage is the Sivarâtri, and that the pilgrims assemble, before making the ascent to the cave, at a place named "Bhawun," which, however, is not marked either in his map or in the Indian Atlas-sheet. And he has drawn attention to "a singular shaped hill," near "Bhawun," which is called "Teri Kothi" because "all Gaonds firmly believe the locusts issue" from it. His map locates this hill about four miles on the south-east of "Jutur Sunkur." And his sketch of the hill itself presents what looks like an enormous kâlmna on a huge mound, the combined height of the two being shewn as about a hundred and fifty feet.

We may now consider the details of the record. And we will take, in the first place, the prefix Dakshina in the name of the god Dakshina-Siva, "the southern Siva, the Siva of the South." We have the same prefix in the name of the god Dakshina-Kâdârâsvara, "the Kâdârâsvara of the South," of Balagâmi in Mysoor, which was plainly an image established there as the local representative of Siva in the form of Kâdâra or Kâdârâsvara as worshipped at Kâdârânâth, which is a famous temple and place of pilgrimage in the Halmâlayas, in the Garhâwal district, North-West Provinces. And we have it again in the name of the god Dakshina-Sûmanâtha, "the Sûmanâtha of the South," of Hûligere, i.e., Lakshmîswar, within the limits of the Dhrâvar district, which was plainly a local representative, at that place, of the famous form of Siva as Sûmanâtha at Sûmanâthapaûâna or Pûsâq-Sûmanâth in Kâthiâwar. Evidently, the prefix was customarily used, in a very appropriate manner, to denote certain gods in the Dakshinâpathra or Dekkan, i.e., in the territory on the south of the Nerbudda, which were representatives and namesakes, in that part of the country, of celebrated gods of Northern India. And so far, therefore, as the name of the god is concerned, there is at least no objection to connect the record with the locality suggested by Pandit Bhagwanlal Indraji or by his editor.

To the preceding point, we have to add the fact that the characters of the record are of the southern class of alphabets. And in this respect, again, there is no objection to connect the record with the suggested locality.

But, further, I find a distinct connection between the record and the locality, through what is evidently the real local name of the shrine which is now known as the temple of Mahâdêva, and is probably also the local name for the peak below which the shrine is. Spilsbury's map places that peak just where the Indian Atlas sheet places the peak which it calls 'Mahâdeo.' As has been mentioned above, Spilsbury's printed account speaks of the peak as "Patta Sunkur," and "Jutta Shunkur," and it is shewn in his map as "Jutur Sunkur." The "Patta" is certainly a misprint; compare "Dokkur" three times, on page 392, for the "Dobgur" at the top of the same page and the "Dobgur" of his map, which stands for a name which is given in the Atlas sheet.
as 'Dhupgarh.' It can hardly be questioned that the "Jutta Shunkur" and "Jutur Sunkur," though possibly confused by Spilsbury in some way with the word jātrā, 'pilgrimage,' really mean Jaṭā-Saṁkara, or "Saṁkara (Siva) of the braided hair."28 And we can hardly avoid recognising a direct connection of some kind between that appellation and the name Jaṭābhāra which we actually have in the record. We can also easily understand how the present name of the range came to be established. Evidently, the first European visitor to the locality found it without any particular name of its own; he heard of the existence of a famous and much frequented shrine on some hill in it, and, no doubt, the particular hill was pointed out to him; he asked the name of the hill, or of the shrine or its god, and was told Jaṭā-Saṁkara; this name not being familiar to him, he asked more precisely who the god might be, and was answered Mahādeva; and this well-known name of Siva was readily accepted as furnishing a convenient appellation, first for the particular peak, and then for the entire range of hills.

There is no difficulty about taking the modern name Pagāra as representing the ancient Paṅgaraka.27 We might perhaps take the prefix pētha as meaning 'a market-town.' And, in that case, the epithet pētha-Paṅgarakāya would locate the god Daksha-Siva at the modern Pagāra itself, about four miles on the north of Pachmarhi. But we have no information as to the existence of any god of repute at Pagāra. Also, it would appear from Molesworth and Candy's Marāṭhi Dictionary that the word pēth or pēṭh, in the sense of 'a market-town,' is of Hinduśāti origin. I am more inclined, therefore, to take the prefix pētha as the same word which we find used as a territorial term, in records of the fifth and sixth centuries A.D. from a part of the country not far distant from that with which we are dealing, in the expression "the Maṇināga pēṭha," 29 and which seems to be the origin of the Marāṭhi pēṭha in the sense of a subdivision of a pargāna or of a tāluka. And, from this point of view, I interpret the record, not as locating the god Daksha-Siva at Pagāra itself, but as marking the god as the god of a territorial division which was known as the Paṅgaraka pēṭha and derived its appellation from the ancient Paṅgaraka, now represented by Pagāra, as its head-quarters town.

I take the actual state of the case to be as follows. The locality first derived its sanctity from the hill called 'Teri Kothi,' the summit of which so strikingly resembles an enormous śīlinga, about four miles on the south-east of the peak known as Jaṭā-Saṁkara and Mahādeva; 30 and that summit itself was the original god Daksha-Siva, "the Siva of the South," of the Paṅgaraka pēṭha. The god, in that form, had been endowed with the village of Uṣīkavāṭikā. Subsequently, it was desired to set up an actual image of the god. A suitable place was found in the cave below the above-mentioned peak. Either the god himself was installed there in the more specific form of Jaṭābhāra; or perhaps the place itself was doubly recommended, and was named Jaṭābhāra, in consequence of having, over the entrance to the cave, a mass of gnarled and twisted roots and rocks resembling braided hair; and this name became afterwards modified into Jaṭā-Saṁkara. And, when the god was thus installed in the cave, the previous endowment of the village of Uṣīkavāṭikā was transferred, by this charter, to the new shrine.

28 Monier-Williams' Sanskrit Dictionary, revised edition, gives Jaṭā-Saṁkara as the name of a tīrtha, from the Raṣṭikaraneṣu, xii, 22. — The Postal List of the 'Wardhā' district, Central Provinces, shows a place named 'Jata-Shankar' in the 'Aur' taluk, post-town 'Ashiti.' But I cannot find it in the Atlas sheets Nos. 54, and 72, S. W.

27 There are various other places, in different parts of the country, the names of which are given in maps, etc., as 'Pagara,' 'Pangara,' and 'Pangara.' It is sufficient to state that there are no grounds for identifying any of them with the Paṅgaraka of the record — The Village List of the 'Wardhā' district, Benara, shows a place named Pīta-pongara' in the 'Kolapur' tāluka, post-town 'Pandherkowra.' But I cannot find it, unless it is the Pīta-pungili of the Indian Atlas sheet No. 73 (1896), a small village about eleven miles south-west-half-south from 'Kolahpur.' About forty miles towards the north-west from Pīta-pungili, there is a small village or hamlet called 'Manpur,' in the 'Yootmal' tāluka of the same district. There is, however, nothing to lead us to refer the record to this locality.

30 See above.
As regards Unṭikavāṭikā, I find that it is quite suitably represented by the 'Oontiya' of the Indian Atlas sheet, nine miles towards the north-north-east from Sōhāgpur, and thirty miles north-north-west-three-quarters-west from the Jāṭā-Sāmkara or Mahādeva peak. There is another 'Oontiya' about four miles towards the east-north-east from that one. But it seems to be a larger village. And the record appears to distinctly single out the smaller of the two. These villages are both on the south of the Nerbudda, and within a quite reasonable distance from the shrine, so as to be conveniently managed by the priest or priests of the shrine.

And the fort of Hariwateakōṭa is probably the hill-fort which the Indian Atlas sheet shews as 'Dhupgarh' and places on a peak 4,454 feet high, about three miles on the north-west of the Jāṭā-Sāmkara or Mahādeva peak. The commander of that fort would be a most suitable witness to the transfer registered in the record.

The place which is mentioned as Mānapura cannot be satisfactorily identified. Pandit Bhagwanlal Indraji was at first somewhat inclined to identify it with Mānyakhāṭa-Mālkāhāṭ in the Nizam's Dominions, the capital of the well-known dynasty of Rāṇḍrākīṭas which was founded by Dantidurga about A.D. 750, some three hundred and eighty miles away to the south from the locality to which our results fix us. And, later on, he or his editor has suggested more plainly "Mānpur in the Vindhyā hills;" meaning, I think, a place which I myself had meanwhile proposed, namely Mānpur in Māla, the head-quarters of the Mānpur pargānā under the Bhīpāwar Agency in Central India, about twelve miles south-west from Mhow and one hundred and seventy miles to the west from our locality. Neither of these proposals, however, is really admissible. At the time to which the present record is properly to be referred, namely in or closely about the period A.D. 650 to 700, there cannot have been any independent Rāṇḍrākīṭas at Mālkāhāṭ in the Nizam's Dominions; moreover, the ancient Sanskrit name of Mālkāhāṭ has never yet been met with otherwise than in the form of Mānyakhāṭa. And Mānpur in Māla is put out of the question by its being on the north of the Nerbudda. If the Mānapura of the record was the capital of Abhimanyu, it may possibly be Mānpur near 'Bandhogarh' in Rāwa, about two hundred miles towards the north-east-by-east from our locality, which certainly seems to be the Mānapura that is mentioned in a record of A.D. 462 or thereabouts. But there is nothing in our record to mark its Mānapura as a capital. And the text reads more as if it was simply an ordinary town or village, somewhere in the vicinity of the other places, which Abhimanyu had honoured by camping at it in the course of a tour. The name Mānpur is of frequent occurrence as a village-name in Rāwa, Baghēlkhand, the Central Provinces, the Berar, and the Nizam's Dominions. But I do not at present find in the maps any Mānpur which is reasonably close to the Jāṭā-Sāmkara or Mahādeva peak, and so may have been used as a camp by Abhimanyu for the purpose of visiting the shrine. And I am inclined to think, therefore, that the Mānapura of the record may be not in existence now. It is, however, not impossible that it is, in some way or another, the village which is shown on the Indian Atlas sheet as 'Bhanpor,' on the south bank of the Nerbudda, two and a half miles north-by-west from Uṣṭikavāṭikā—'Oontiya.' And it is also not impossible that Mānapura may have been the older name of Sōhāgpur, or of Sōbhāpur which is a large village six miles on the north-east of Sōhāgpur.

Vol. XVIII. above, p. 233.
I may state that I have recently had occasion to examine sheets of the Indian Atlas covering a great deal of country, especially along the course of the Nerbudda and to the south of that river. In sheet No. 23, N. E. (1894), in lat. 22° 6', long. 73° 7', there is a village called 'Mānpur,' in the Baroda territory, about six miles on the north of Mīyāgān. And, curiously enough, there is an 'Ountī' about two and a half miles on the north-east of this 'Mānpur,' and there is another 'Untī' about seven miles further on in the same direction. With these exceptions, I have not found any other name answering to Uṣṭikavāṭikā (or Uṣṭikavāṭikā). And these places can hardly have any connection with the present record; because they are on the north of the Nerbudda, and some three hundred miles away from the locality to which the other considerations lead us: nothing can be found, in that direction, to represent Pagāraka and the god Daksṇa-Sīrā and the name Jāṭābhāra.

There is no, as yet, any Survey or Topographical map available for testing this point.
The places mentioned in the Paithan plates of A.D. 794.

This record has been edited by Prof. Kielhorn, with a facsimile lithograph, in Ep. Ind. Vol. III. p. 103 ff. It recites that, on a specified day in the year Saka-Saṁvat 716 (expired), falling in A.D. 794, the Bāshtrakṛiti king Gōvinda III. gave to some Brāhmaṇa village named Limbārāmikā, in a group of villages known as the Sārkachchhā or Sānakachchhā twelve1 which was in a territorial division called the Pratishtāna bhakti. And it specifies the boundary of the village as being, on the east, a village named Samatirthaka; on the south, the river Gōḍavari; and on the west, (a village named) Brahmapuri. On the north, the record places a village the name of which has been read as Dhanagrama, with the remark that the consonant of the first syllable may be either ḍh, n, or ḍh, and that of the second syllable may be either n or s; but, in view of the identification that can be made, we may safely say that the real name given in the record is certainly Vēdhagrama.2

Pratishtāna is the modern Paithān, on the north bank of the Gōḍavari, the head-quarters, apparently, of the Paithān sarkār of the Aushāgāth district in the Nizam's Dominions; in the Indian Atlas sheet 38, S. E. (1886), it is shown as 'Paithān,' in lat. 19° 27', long. 75° 26'. As the village that was granted was in the Pratishtāna bhakti, which can only have been a small subdivision of a much larger territory which would be known as the Pratishtāna dēśa, we ought to find it somewhere in the vicinity of Paithān itself. And I find that Limbārāmikā must have stood just about where the maps show a village which is entered as 'Cusnapur' in the Atlas quarter-sheet of 1886 mentioned above, and as 'Sowapūr' in the Decano Topographical Survey sheet No. 17 of 1877, but as 'Kristnapooroo' in the full Atlas sheet No. 38 of 1857, and in the beautiful Survey map of the Paithān sarkār executed under the superintendence of Captain H. Morland in 1842-43. The said village, 'Cusnapur-Kristnapooroo,' is on the north bank of the Gōḍavari, twelve miles west-north-west-three-quarters-north from Paithān. Samatirthaka is evidently a village on the same bank of the Gōḍavari, two miles on the south-east of 'Cusnapur-Kristnapooroo,' which is shown as 'Sowatta' in the Atlas quarter-sheet of 1886 and as 'Sowatā' in the Decano Topographical sheet of 1877, but in the full Atlas sheet of 1857 and in the Paithān Survey map of 1842-43 is shown as 'Savutha,' which probably represents some such pronunciation as Saintha. Vōḍagrama is evidently the village which is shown as 'Vadagoon' in the Atlas quarter-sheet of 1856 and is referred to as 'Wargōn,' in the indication of certain cart-tracks or foot-paths, in the Decano Topographical sheet of 1877, but is shown in the full Atlas sheet of 1857 and in the Paithān Survey map of 1842-43 as 'Vadgoon,' — which stands, no doubt, for Vēdhagoon, with perhaps a pronunciation of the d like the aw in 'Cawnpore' and the aw in 'maund,'3 — three miles towards the north-east-by-east from 'Cusnapur-Kristnapooroo.' And

1 The published text gives Sārkachchhā, with the first two syllables marked as doubtful. The consonant of the first syllable seems to be certainly s. For the possibility of reading the consonant of the second syllable as n, rather than r, compare the n of Pratishtāna in the same line.

2 The name stands in line 56 of the text. There is no question that the first syllable may be read either as ḍh or as ṣ. And the record presents several instances in which there are forms of ṣ and ṭ closely resembling the consonant of the second syllable. But, for the point that the second syllable is really ṣ, compare khogagn, line 4, gajagam for khogagn, line 5, Paṅtya, line 11, and, still more clearly, ḍhugam for ḍhugam, line 31, and ji(ṭh) ḍal-ṭatarūṣha, lines 60-61.

3 When the Paithān Survey map of 1842-43 and the Atlas sheet of 1857 were prepared, the sounds of the short o and the long o were, of course, often represented by o; but also other devices were used, such as on in 'Toandoly,' four miles north-north-east, and 'Poraogon,' sixteen miles towards the north-east-by-east, from 'Vadgoon,' which are shown as 'Tondoli' and 'Porgon' in the quarter-sheet of 1886, and such as the insertion of an s after the consonant, as in 'Donegon,' twelve miles towards the east-north-east from 'Vadgoon,' which is shown as 'Donggoon' in the quarter-sheet of 1886. And on was very often used for ḍ; as in 'Vangwaddy,' seventeen miles towards the east from 'Vadgoon,' and in 'Waknsi,' six and a half miles south-east-by-east from Paithān, which are shown in the quarter-sheet of 1886 as 'Vagwari' and 'Wakwar.' And I do not find any other certain instance in the neighbourhood of the locality with which we are concerned, in which ou stands for o. But the ou of the present day, — while occasionally represented (wrongly) by aw, as in the 'Sawkhāi' of the Paithān Survey map, five miles west-north-west from 'Vandgoon,' which appears in the Atlas sheet of 1887 as Sawkhāi, and even in the quarter-sheet of 1886 as 'Sowkhera,' — was almost always represented by ow or ou, as in 'Kowgoon,' six miles north-east-half-north, and 'Ourunggoon,' five and a half miles north-north-west from 'Vandgoon,' which are shown in the quarter-sheet of 1886
Brahmapuri is perhaps the 'Bramagun' of the Atlas quarter-sheet of 1886, and the 'Brumagovan' of the full Atlas sheet of 1857 and of the Paihan Survey map of 1842-43, about four miles almost due north of 'Cusmapur-Kristnapooree,' it is quite possible that its lands may have originally extended southwards along the nullah on which it stands, so as to include certain other villages which now exist separately under the names of 'Mauzeegun-Mouzeegovan,' 'Lamgoun-Lang-van,' and 'Joginark-Jogoshwur,' so as to reach the Gobhawr on the west of 'Cusmapur-Kristnapooree.' The name Limbhojikka does not seem to exist, now, anywhere on the north of the Gobhawr, in the locality to which these results fix me; nor, I may add, can any such name, or any other names resembling Samatirhaka and the name (no matter how it may be read) of the village on the north of Limbhojikka, be found anywhere else along the Gobhawr in the whole extent of country covered by the Atlas sheets 38, 55, and 56. But it has left a clear trace of itself, in the name of a village on the south bank of the Gobhawr, immediately opposite 'Cusmapur-Kristnapooree,' which is not shown at all in the Atlas quarter-sheet of 1886, but is shown as 'Nimbari' in the Deccan Topographical sheet of 1877 and as 'Limbheko' in the full Atlas sheet of 1857 and the Paihan Survey map of 1842-43. And I suspect that Limbhoj-Nimbari was an offshoot from the original Limbhojikka; that 'Cusmapur-Kristnapooree,' = Krishnapuri, was the dhorpur or 'ward of the goda' of Limbhojikka; that the original brahmapuri, or 'Brahman's ward' of the village, became absorbed into Krishnapuri; and that is why we can now trace the original name only on the south bank of the river.

The appellation of the group of villages known as the Sārākachchha or Sānakachchha twelve seems, not to have been derived from the name of any town or village, but to mean 'the twelve (villages) on the bank or banks of the Sārā or Sānā.' The reference may be to the original name of the 'Ganda,' a small river which flows into the Gobhawr from the north at a point about three and a half miles on the west of 'Vaudgoun,' and, in this case, the name is to be taken as denoting a group of villages on the east bank of that river. Or it may be that the name belongs to a large nullah which passes 'Vaudgoun' on the east and flows into the Gobhawr at a point about three miles on the north-west of Paihan; and, in this case, the name probably denoted a group of villages on both sides of that nullah. Close on the west of the 'Ganda,' there flows into the Gobhawr, also from the north, another small river, the name of which is given in the full Atlas sheet of 1857 as 'Simna,' but in the Paihan Survey map as 'Shev,' and in the Deccan Topographical sheet as 'Shew,' and in the Atlas quarter-sheet of 1886 as 'Siv;' it does not seem that this can be concerned in the matter.

as 'Kaudgoun' and 'Aurangpur.' And, even if the actual modern name of the village should be either Vaudgoun or Vaudgoun, — which I very much question, — there can be no reasonable doubt that it is the village which is mentioned, as Vējāctma, in the record. It may be added that the sound of 'au in 'Cawpore' and of 'au in 'maund' is the sound which the e and o naturally assume when they are followed by an r which has not a vowel after it, and that there is always more or less of an r-sound in the final o. — There seems to be really no end to the variety of those who fix the spelling of place-names for use in maps. The Deccan Topographical Survey sheet No. 17 (1877) marks a road, which crosses the Gobhawr about eight miles on the north-east of Newla in the Ahmednagar district, as going 'to Arrangābād,' and its name in the same words 'in connection with a track from the neighbouring village of' Kalgoun. It really means 'to Arrangābād.' And, in addition to preceding w instead of w and a instead of o in what purports to be up-to-date spelling, it furnishes an instance of a fantastic use of ə for w, exactly the opposite of the use of w for mention ed above.

As I have before now had occasion to intimate, from the maps we can only take the distances and bearings from village-site to village-site, and this only locates approximately the relative positions of the lands belonging to the different villages.

Either term of the name means, of course, Krishnapuri. And I think I am safe in saying that Kanna is actually current as a vulgar or corrupt pronunciation of Krishna. But, both in this detail and in some others which will have been recognized above, the one Deccan Topographical Survey sheet and the supposed up-to-date quarter-sheet of the Atlas are, manifestly, anything but an improvement on the earlier maps. A serious and very unsatisfactory feature in the Atlas quarter-sheet is the introduction of C. for 'great' and L. for 'little'; for instance, in 'G. Shendra' and 'L. Shendra,' eight miles east of Arrangābād, where the full sheet of 1857 shows 'Shindra' and 'Ch. Shindra,' and in 'G. Jalkeh' and 'L. Jalkeh,' seven miles east of Newla in the Ahmednagar district, where the Deccan Topographical sheet No. 15 shows 'Jalkeh B.' and 'Jalkeh E.' Of course, the maps ought to perpetuate the local usage, and to tell us whether the terms employed in particular localities are budrēk and shord, or bīr and chittē, or bād and bādd, and so on.
The passage in the record which mentioned the residences of the grantees, with their names and other details, has been greatly tampered with, for the purpose of reducing the number of grantees, which originally was seven, to four. The following remarks, however, may be made. One of these residences was Pratishtâna-Paiñhâ itself (line 48). Another was a place in respect of which only the last component of its name, bhâdra, can be read, in the same line; it seems to be the 'Umbd' and 'Ambd' of the maps, about twenty-seven miles east-north-east from Paiñhâ. The name of another has been read as Jakali, line 49, with the remark that 'possibly, what is engraved may be Takali; and perhaps the word has been engraved in the place of another name': the name 'Takli,' 'Taklee,' is so common in the part of the country with which we are concerned, that, as I do not find any Jakali, I would certainly read Takali; and the place may be the 'Takli' of the maps, eight and a half miles north-by-west from Paiñhâ, or it may be the larger 'Taklee,' forty-two miles from Paiñhâ in the same direction. Another name, in line 47, seems to be Avitâhâ, with the possibility that the penultimite syllable may be té; this perhaps has some connection with the 'Valoo' and 'G. Wulau' of the maps, on the 'Ganda' river, about twenty-four miles north-north-west from Paiñhâ. The remaining name is Kachchhauraja (lines 52-53); regarding this I cannot at present offer any remarks.

The places mentioned in the Paiñhâ plates of A. D. 1272.

This record has been edited by me in Vol. XIV, above, p. 314 ff. It recites that, on a specified day in the Prajñâpi sahastra, Saka-Sañvat 1193 expired, falling in A. D. 1272, the Dêvagiri-Yâdava king Râmachandra gave as an agrahâra, to fifty-seven Brahmans, a village named Vâdāthâna-grâma, which is described as an ornament of the Sâunâ country (dâsa) and as being situated on the north bank of the river Gôdâvari, together with two other villages named Pâtâra-Pimpalagârama and Vaidyna-Ghôgharagârama. And it specifies the boundaries of the agrahâra as being, on the east, the village of Vâhagânâv; on the south-east, the village of Nâuragânâv; on the south, the village of Dêigânâv, and then the Gângâ; on the west, the Gângâ, and then the villages of Khâtigânâv, Álouganâv, and Nagamathâna; on the north-west, the village of Jântôgânâv; and on the north-east, the village of Vâdakhâla.

The places are found in the Indian Atlas sheet No. 38, S. E. (1886), in the Daulatâbâd sârkar of the Auranâgâbâd district, Nizâm's Dominions. Vâdāthâna-grâma, indeed, seems to have disappeared. But Pâtâra-Pimpalagârama is 'Piplagao,'—the name of which we may conveniently take as Pippalgaon, though possibly it is actually Pimpalgaon,—in lat. 19° 43', long. 74° 25', about thirty-two miles west-south-west-a-quarter-west from Auranâgâbâd; and Vaidyna-Ghôgharagârama is 'Ghogargao,' two miles north of Pippalgaon: the prefixes in the ancient names evidently distinguished these two villages from another 'Piplagao,' seven miles to the west-north-west from Piplagao, and from 'Kali-Piplagao,' ten miles north-north-east from Pippalgaon, and from another 'Ghogaragao,' on the south bank of the Gôdâvari, five and a half miles south-by-west from Pippalgaon. Vâhagânâv is 'Vaigan,' three miles east-by-south from Pippalgaon. Nâuragânâv is 'Newargao,' on the north bank of the Gôdâvari, five and a half miles south-south-east-half-south from Pippalgaon. Dêigânâv is 'Deogao,' on the north bank of the Gôdâvari, four and a half miles south-west from the south-south-west from Pippalgaon. The Gângâ must be the Gôdâvari itself; unless the name can belong to a very small nallah which flows into the Gôdâvari from the north at a point about three and a half miles west-south-west from Pippalgaon. The name of Khatigânâv seems to have disappeared. Álouganâv is 'Awalgaon,' on the north bank of the Gôdâvari, three and a half miles west-by-south from Pippalgaon. Nagamathâna is 'Nagamthan,' on the north bank of the Gôdâvari, five miles towards the west-by-

---

5 It hardly appears likely that it can be represented either by the 'Wakthi' and 'Wakthee' of the maps, three and a half miles on the north of Pippalgaon, or by the 'Madthus Wudgaon' and 'Madthus Wudgaun' of the maps, four and a half miles on the east of Pippalgaon and two miles beyond, and on the east-north-east of, 'Vaigao' = Vâhagânâv.
north from Pippalgaon. Jantegānuv is 'Jathagaon,' five miles north-west-by-north from Pippalgaon. Panīva is 'Panui,' four miles north of Pippalgaon. And the name of Vādakhāla seems to be represented by 'Warkhind,' three and a half miles north-east from Pippalgaon. In the full Atlas sheet No. 36 of 1857, and in the beautiful Survey map of the Daulatabad sarkār executed under the superintendence of Captain H. Morland in 1847, the above-mentioned names are given as Peeplegaon, Gogurgaon, Peeplegaon, Katee Peepulgao and Kalee Peepulgao, Gogurgaon and Gogurgaon, Voygaon, Navurgaon, Daregaon and Davegaon, Auvulgaon, Nagumtan, Jathagaon, Panvee and Panwee, and Warkhad.

The record locates these places in the Sūna country. And Hāmadri has told us, in one of the prānisūlas of his Vṛatākkhanda, that in the same country there was Dēvagiri, the hereditary capital of the dynasty to which Rāmaṁchandra, the maker of the grant recorded in these plates, belonged. Dēvagiri is Daulatabadh, from which Pippalgaon is distant about twenty-seven miles towards the south-west-by-west. And, through the identification of the places mentioned in this record, we now have definite epigraphic proof to support the literary statement as to the exact position of the Sūna country. We have been told that the Sūna country extended from Nāsik to Dēvagiri-Daulatabadh. That, however, is not correct. The Nāsik country was a distinct territory, with a separate name of its own, namely the Nāsika dēsa. And there is every reason to believe that the Sūna country was separated on the west from the Nāsika country by very much the same boundary-line which now separates the Auraṅgbābā district from the Sinnar, Niphād, Yeola, and Nānda gaon taḷukas of Nāsik. The southern boundary of it was doubtless the Gōdāvarī. And the eastern boundary probably left the Gōdāvarī at a point, about thirteen miles north-west-by-west from Paṭhānā, where a small river called 'Ganda' flows into that river from the north, and ran northwards along the 'Ganda' and passed a few miles on the east of Dēvagiri-Daulatabadh.

It has also been suggested that Sūna dēsa was very likely the original name of Khāndēsh, and that the Sūna country may have included parts of Khāndēsh as far north as the Taṭā. There does not appear, however, to be any solid foundation for that suggestion. And we may in all probability take it that the northern boundary of the Sūna country was very much the same boundary-line which now divides the Auraṅgbābā district from the Chāllīgaon and Pāchōna taḷukas of Khāndēsh. The territory will be best defined, and the position of it will be best indicated, if we speak of it as the country round Dēvagiri-Daulatabadh.

Within the area indicated above for the Sūna country, on the west bank of the 'Ganda' river, in lat. 19° 41', long. 75° 16', there is a place which in the Atlas quarter-sheet No. 38, S. E., of 1886, is shown as an ordinary village, but fortified, with the name of 'Sundarwar,' but in the full sheet of 1857, and in the Survey map of the Paṭhānā sarkār of 1847, is shown as a large village or small town with the name of 'Chandrawadā.' It seems worth while that, when an opportunity occurs, local inquiries should be made, to determine what its name really is. 'Chandrawadā' would of course stand for Chandrawadā. And, if the name of the place is Chandrawadā, it seems probable to me, now, that it, rather than 'Chândar,' in the Nāsik district,—of which the real name seems to be Chándod or Chandwad, also representing Chandrawadā,—may be the Chandrādityapura which, according to the Bassin plates of A. D. 1069, was the capital of Driḍhaprāhāra, the founder of the family of the Sūna princes.

NEW RESEARCHES INTO THE Composition AND EXEGESIS OF THE QORAN.

BY HABTWIG HIRSCHFELD, Ph.D., M.R.A.S.

(Concluded from p. 467.)

CHAPTER XIII.

Reason for and method of collecting the Qorâ - Revelations omitted - Alleged integrity of the Qorâ - Interpolated verses - The name "Muhammed" in the Qorâ - Various theories on the initials - Synopsis of initials and conclusions.

Appendix: (Approximate) Chronological arrangement of revelations.

The Qorân is a comparatively small book, and for some time after the death of Muhammed it was not even a book, but the different pieces were scattered about in various private collections, all of which were incomplete. In most instances the revelations were committed to memory by the Believers. The condition of the Qorân faithfully reflected that of Islam in the period immediately following the demise of the Prophet. Everything was out of joint. The Believers had no other guide in religious affairs, which now permeated every action, than their individual knowledge of the Qorân, their recollections of how Muhammed had acted in certain emergencies, and the decisions of the Imam or the Khalifah of the Prophet. This would, however, only describe how matters stood in Medina, the centre of Islam, whilst the provinces were so badly provided with religious ministrations that Islam only took root there with great difficulty.

Muhammed never had any intention of compiling a book. He did not even take any pains to have the revelations put down in writing till a considerable amount of those which were required for the spiritual guidance of the community were in existence. Besides the official oracles, there circulated in the memory of the people a mass of sayings, accessory to the Qorân, which were rightly or wrongly credited to Muhammed. Whenever a man, holding a prominent position, dies, a mass of dicta are attributed to him, and in good faith too, for which he is not responsible. This was the case in a much higher degree with a man like Muhammed, who was the very heart of Islam, and whose most insignificant utterances were regarded as oracles. Official revelations and occasional supplementary remarks to the former lay stored up side by side in the memories of the Faithful, and Muhammed himself may not always have made it quite clear to which of the two classes words that had fallen from his lips, were to be reckoned. A short time after his death it was, therefore, impossible to draw a strict line between revelations and their appendage alluded to, even leaving the large class of fabricated sayings out of consideration.

Of the secretaries whom Muhammed had appointed to jot down revelations for his own private purposes, Zeid b. Thabit was known as the best authority on the matter. For this reason Muhammed’s immediate successors charged him with the compilation of all the speeches he could gather. The history of this compilation is obscured rather than elucidated by a mass of traditions, and does not impress the student with the conviction that it was only composed of such speeches as Muhammed regarded as divine oracles. There are in this matter two facts to be kept in mind — (1) that the first impulse to undertake the task of collecting all available revelations was given by the circumstance that many of the oldest Moslems had passed away, and (2) that when Zeid set to work, he collected the revelations from those who had already started partial collections of their own from the sundry materials, on which he and his fellow secretaries had put them down, as also from the memories of the Believers. The work was superintended both by Abu Bakr and Omar, particularly the latter.

12 See Khamsa, I. p. 454.
From this way of proceeding we must draw our own conclusions. Omar is said to have accepted (on the instigation of Abu Bakr) only such revelations as genuine, as were supported by the evidence of two reliable witnesses, or by two proofs if no living witness was forthcoming. This tradition, which is handed down on behalf of Omar, is so uncertain, that Ibn Hajar interprets the twofold evidence by "known by heart and written down by somebody." Another authority is of opinion that the "two witnesses" had to testify that such verses were written down in the presence of Muhammad, or at least, were revealed in one of the usual ways of revelation.

There is so much vagueness about all this that the tradition in question is scarcely trustworthy, especially as traditionists admit a case in which a verse was accepted on the authority of only one witness. This being so, the memory of the Believers remains a prominent source of Qoranic verses, and we have to judge the matter accordingly. Tradition has, indeed, handed down quite a number of verses which were not accepted as genuine, because their authenticity was not sufficiently attested. A complete compilation of these verses has been made by Nöldeke. Although they are, from religious reasons, placed in the class of "abrogated" revelations (which I have discussed at another place), it is clear that they were either overlooked by the compilers, or treated as merely casual remarks of Muhammad, and omitted on purpose. Considering the way in which the compilation was made, it would have been a miracle, had the Qorán been kept free of omissions, as well as interpolations.

Nöldeke denies emphatically that Zeid b. Thabit or any of the Khalifahs responsible for the redaction of the Qorán had tampered with the book, and regards any view to the contrary as mistaken. Now if omission was possible, why not addition? There was no hard and fast rule to distinguish between divine revelations and occasional utterances of Muhammad, especially as many of the latter are quite Qoranic in tone and style. The famous "verse concerning stoning" may serve as an illustration. It reminds Believers to cling to their families, and to stone to death adulterers though they be advanced in years. Omar is stated to have treated this verse as genuine, but he refrained from inserting it in the Qorán for fear it might be said that he had interpolated it. Here we have the complete contrast to the verse mentioned above, which, according to tradition was accepted on one authority alone. From this we may conclude that individual opinion was also a factor in accepting or rejecting doubtful verses, and it is possible that the "verse concerning stoning" was rejected for other reasons than the one mentioned. The affair which is said to have caused its revelation is closely connected with the tradition relating that the Jews in Medina brought before Muhammad a man who had committed adultery. On the Prophet's enquiry what punishment the Jews were accustomed to mete out for such crime, they answered: scourging. He then asked them whether the Tárd did not command stoning. This they denied. Ahr Allâh b. Salem had a copy of the Tárd brought, and requested the Jews to read it (Qor. iii. 87). The Rabbi (At Mîdrás) placed his hand upon the "verse concerning stoning" (Lev. xxi. 10) in order to hide it, but Abû Allâh pushed it away, and showed the verse to Muhammad who thereupon sentenced the accused persons to death. This tradition is most unreliable for various reasons. Firstly at the time Abû Allâh was converted, the Jews had been completely driven out of Medina, and could therefore not have made Muhammad judge in an affair which concerned them alone. Secondly the Mishnah (Sanhedrin, vii. 3) leaves no doubt as to what was to be done in such a case, even if we interpret the term "Tárd" by any religious code they might have brought to Muhammad. There is no other case mentioned in which Muhammad interfered with the jurisdiction of the Jews as long as they were externally on peaceful terms. As an outcome of Aishâ's adventure, adultery was only to be punished with scourging (Qor. xxiv. 2), and Omar could therefore not accept as genuine a verse which demanded stoning. According to another version Omar asked Muhammad when this verse was revealed, whether he should write it down "and it was as if he would not consent to such practice."

We should think that, if this was an official divine revelation, the Prophet had no choice but to treat it as such; but it is pretty clear that the whole tradition was fabricated in order to justify Omar's course of action.

13 Ilyà, p. 133. 14 Ibid. 15 Al fakhâwi, iibid. 16 Ibid. 17 Q. p. 174 sqq.
Muslim theology holds that the distance which separates the divine oracles of the Qurán, and the Prophet’s other utterances is not very great. Al Shâfî’i (died 204/820), author of an epoch making work on “the Principles of the Fiqh,” and founder of the latest of the four orthodox Mohammedan law schools teaches that everything ordained by Muhammad is deduced from the Qurán, and there exists nothing which cannot be inferred from it, so much so that in the last verse of Súra lxiii. (“Alláh will never respite a soul when its appointed time has come”), an allusion to the sixty-three years which Muhammad lived, is found.

The declaration of Omar, recorded above, is very remarkable. Why should he have feared suspicion? The idea of the possibility of anything creeping into the Qurán which originally did not belong to it, should have been inadmissible. Yet the notion of interpolations was so far from being out of the question that, according to Al Shahrastâni, the Ajárída, a branch of the sect of the Khawârij, maintained that Súra xii. did not previously form part of the Qurán, because it was only a tale — moreover a love story which could not be the subject of divine revelation. This is the most powerful attack ever made by Moslems against the divinity of the Qurán. Ibn Hazm, therefore, places these people outside the pale of Islam. From this denunciation of a whole súra, consisting of 111 verses, we may at any rate conclude that there existed soon after the death of Muhammad a feeling that some persons had tampered with the holy Book.

All this being taken into consideration, no serious objection can be made against the suggestion that the Qurán contains passages which were not a priori intended to be there. If I speak of interpolations, I chiefly mean the shifting of the line which separates the Qurán from the Hadith. This line has never been drawn by Muhammad himself, and it is hard to say, when and by whom it was fixed.

The first to suspect the genuineness of certain verses in the Qurán among European scholars was Silvestre de Sacy, who questioned the authenticity of Sura iii. 138. To this Weil added verse 182; xvii. 1; xxi. 35-36; xix. 57; xlv. 14. Finally Sprenger has his doubts as to the genuineness of lix. 7.

As regards xvii. 1 and xlv. 14 there is not sufficient evidence for a verdict. Different is the case with iii. 138. Although the event which gave the occasion for the recitation of this verse is well known, I reproduce it for the sake of completeness. It is as follows: When Muhammad was dead, great consternation prevailed among the leaders of the community who apprehended great falling off of Believers. Omar said: “Some hypocrites assert that Muhammad is dead, by Alláh, he is not dead, but was exalted to his Lord as Moses, who stopped away forty days, but returned though he was thought to be dead. Muhammad will also return and cut off the heads and legs of those who believe him to be dead.” Abu Bakr, who in the meanwhile had endeavoured to calm the fears of others, emphasised Omar’s words, by saying: “Whoever serves Muhammad — well he is dead, but who serves Alláh — He never dies.” Then he recited the verse alluded to, the people listened attentively, but Omar said he felt as if he had never heard the verse before.

It is rather strange that Omar should have confessed ignorance of a verse which, according to tradition, was revealed to Muhammad during the battle of Uhud when he was struck and lay apparently dead. The Moslems, relates Al Tabari, seeing the Prophet on the ground, called: “If he

---

27 Al Usháhání, Mawir, al had, p. 15. Ibn Barhán (ibid.) teaches that Muhammad has said nothing which can not directly or indirectly be traced back to the Qurán.

31 Journal des Savans, 1832, p. 535 sq.
32 Einleitung in das Korán, 2nd ed. p. 32 sqq.
33 Vol. III, p. 166.
34 Ibn Hish. p. 1012; Bokh. III. 191. Al Shahrastâni, p. 11, gives a somewhat different version according to which Omar threatened to kill anyone who said Muhammad was dead, and compared his ascension to heaven to that of Jesus.
35 Al Ya’qúbí, ed. Houtenis, II. p. 127, gives the story with the following variation. When Muhammad had died, the people said: We thought that the Prophet would not die until he had conquered the earth. Omar made the speech quoted above, but Al u Bakr said: Alláh has announced his death in the revelation (xxix. 51): Thou diest and they die. Omar then said: I feel as if I had never heard this verse. Possibly Al Ya’qúbí confounds this verse with ii. 185. At all events the uncertainty as to which verse Omar’s words refer, should not be overlooked.
36 VL. p. 1319 sq.
be dead, [remember that] all Messengers before him have died." When Muhammed recovered consciousness, he revealed Sūra iii. 138.

I believe neither in the authenticity of this exclamation, nor of the verse in question. This alone, however, is not sufficient to advance us beyond the arguments brought by Weil. The verse contains yet another element which speaks against its authenticity, viz., the name Muhammed. I even go further and assert that all verses in the Qur'ān in which this name, or Ahmad, occurs are spurious. The reasons on which I base my suggestions are the following.

In Chapter II. I have endeavoured to shew that the fabrication of the name Muhammed stands in close connection with the elements of the Bahira legend. If this be so, that name could not have come into practical use until a period of the Prophet's life, when the material of the Qur'ān was all but complete. Now it might be objected that the texts of the missionary letters which Muhammed commenced to send in the seventh year of the Hijra to unconverted Arab chiefs, as well as to foreign potentates, were headed by the phrase: "From Muhammed, the Messenger of Allah, to, etc." — The authenticity of the majority of these letters, one of which will occupy our attention presently, is very doubtful, and besides, even if the genuineness of the texts of the documents be admitted, the superscription may have been added by the traditionists who took it for granted. At any rate I do not believe that Muhammed was an official name till after the conversion of Abd Allāh b. Salām, or a year or two before his death. At the period of the battle of Uhud (A. H. 3) there was certainly no trace of the name, and it is too superfluous to demonstrate how unlikely it was that Muhammed's friends, seeing him prostrate, should have uttered the words quoted above. If they had really thought him dead, they would have run away, as all would then have been lost. If, on the other hand, we assume that the name Muhammed was meant to signify something similar to Messiah, the verse in question is nothing but an imitation of the chief portion of another which was revealed before the battle of Badr (Sūra v. 79) and runs thus: "The Messiah the son of Maryam, is nothing but a Messenger, the messengers before him have passed away ... ." The authors of iii. 138 simply replaced almasīh bīn Māryām by Muhammed, and the verse was ready.

This is, however, not the only Muhammed-verse which stands in connection with the Bahira legend, as in S. xxxiii, 40 we find another reference to it. This revelation is appended to one of the paragraphs which deal with the affairs of Muhammed's wives, though it does not belong to it, the preceding sermon ending with verse 89. As each of these paragraphs commences with the words: O thou Prophet we have seen that they refer to matters prior to the adoption of the name Muhammed. The verse in question runs thus: "Muhammed is no father of any of your men, but [he is] the Messenger of Allāh and the Seal of the Prophets, Allāh knows everything." From its very place we can gather that the verse's only function is the condemnation of the Prophet's marriage with the divorced wife of his adopted son, which event took place in the year four. As to the "Seal of the Prophets," this is surely nothing but a skillful alteration of the "Seal of prophecy" in the Bahira legend.

It is interesting that as a third variation of the Seal the traditionists tell us about a real seal which Muhammed used for his letters, and Weil as well as Sprenger seem to regard it as historic. It is, however, just as mythical as the other two seals, at any rate, in the fashion in which it appears in tradition. Before despatching his missionary letters, we read, Muhammed was afraid that the persons to whom they were sent, would not accept them unless they were duly sealed. Muhammed, therefore, had a seal made of gold, and those of his companions who could afford it, followed his example. On the morrow, however, the Archangel Gabriel came and forbade Muhammed to use

---

24 I. Isb. p. 971. Weil has shown that the letter to Khosrau must have been written prior to the treaty of Hudaybiya. Al Tabari, p. 1550, places it after the same. The authenticity of all these letters is questionable.

25 Although this is not the case with verse 33, I am not at all convinced of its genuineness, because it bears a striking resemblance to verse 62. Besides this the verse has the obvious tendency of freeing Muhammed from obligations which he considered binding for others. Finally, the passage "those who have passed away" must not be overlooked.

26 Al Behdawī refers these words to Muhammed's two sons who had died in infancy, so that he was left without male offspring. "Even if they had lived," he adds, "they would have been his men, but not yours."

37 See Ch. XI.

38 Muhammed, p. 196.
gold. Thereupon they all discarded their seals, but Muhammed had one made of silver on which the words were engraved: “Muhammed [is] the Messenger of Allah,” each word on a separate line.39

The third verse containing the name Muhammed is lxxvii. 2, placed in the introduction of a sūra which was revealed shortly after the battle of Uhud.40 A closer examination, however, cannot fail to disclose the fact that the verse is wedged in between two which belong together, disturbing their logical connection. The translation of the verses in question will make this manifest in the following manner: (v. 1) Those who disbelieve and turn [others] from the [war] path of Allah, He makes their works go wrong. (v. 3) This [is] because the infidels follow falsehood, and those who believe, follow the truth from their Lord — thus does Allah set forth for men their parables. Between these two verses, which according to the usual logic of the Qorān fit exceedingly well together, stands the following: (v. 2) And those who believe and do right and believe on what is revealed upon Muhammed — and it is the truth from their Lord, may He forgive them their iniquities and set right their mind. Can anyone imagine that verse 3 forms a sequence to verse 2? On the other hand the words the truth from their Lord make it clear why the suspected verse was put in a place where it did not originally belong. This would, indeed, only prove that the verse is misplaced; but it is also so weak and invertebrate that we cannot tax Muhammed with its authorship. He is wont to assure Believers of their share in paradise, but not to wish that Allah may pardon their sins. Besides, as the verse begins with “and,” it could not have formed a detached revelation which the compilers did not know how to place. This circumstance is also much more easily explained, if we assume that the verse was fabricated.

There is one more verse containing the name Muhammed, viz., lxxviii. 29. It forms part of a letter which Muhammed is said to have dispatched to the Jews of Kheibar, although it is not stated in which year. It is, however, only necessary to cast a glance at the authorities on whose behalf the document was handed down, in order to recognize its untrustworthiness. It is preserved solely by Ibn Iṣḥaq41 who reproduces it on the authority of: A freed slave of the family of Zaid b. Thābit from Iqrīma or Sa‘wād b. Jubeir from Ibn Abbās. The last name especially, augurs badly for the veracity of the letter. The verse itself, which is not given as a quotation from the Qorān, but as belonging to the text of the letter, has been discussed at the end of Chapter VIII. It stands in no connection whatever with the sūra to which it is appended, and the verse preceding it gives ample evidence why it was placed here. Finally it is to be observed that the words “in order to enrage the infidels” are borrowed from ix. 121 and Ixvii., 9, passages which are very late, having been revealed during the expedition to Tabuk. For so late a period the verse in question is much too clumsy and confused.

Now for what purpose were these four verses embodied in the Qorān? It appears that Muhammed had adopted the name too late to be addressed by it in a revelation, but it was considered necessary to have it officially recorded in the Qorān. The interpolators were sure of not meeting with opposition when offering verses which furnished a name for the mouth-piece of Allah. One might, however, object that an appropriate name for the Prophet was to be found in one of the Hallelujah addresses composed in celebration of the victory of Badr, viz., lxi. 6, where Jesus announced to the children of Israel a messenger to come after him bearing the name Aḥmad. But the genuineness of this verse is not beyond doubt. It is improbable that it was revealed at so early an epoch when there were enough Christians left in North Arabia to contradict it. After the surrender of the northern tribes this was not to be feared. The verse was, however, a convenient battle-cry for the army which was sent to Syria shortly after the death of Muhammed. The form Aḥmad is nothing but a variation of Muhammed, and shows how little the latter name had then become settled in the minds of the Moslems.

There is less certainty about the spurious character of the following verse, but I cannot refrain from making a few observations as regards the suspicious elements of the same. Sūra v. 78 is,

39 Khamsa, II. p. 29; Beḳkār, VIII. 457.
40 See Ch. X.
excepting a slight change in the wording, a verbal repetition of ii. 59:42 "Verily those who believe, and those who are Jews, and the Baptists, and the Christians, whoever believes in Allah and the last day, and does what is right, there is no fear for them, nor shall they grieve." It seems to me that this verse owes its place not to any theological tendency, but to a mistake, and is actually identical with the other. Probably it was found in some collection with the words: they have their reward at their Lord missing, and was therefore regarded as a separate revelation. It is easy to see that the verse is out of place. The preceding one recalls to both Jews and Christians that they stood on nought until they fulfilled the Tora and the Gospel. This being in reality only a variation of the old reproach of tampering with the holy books, it is difficult to understand, how so encouraging a revelation could follow immediately after it.

Verse 101 of the same sura, alluded to on a formed occasion, appears as if it had been composed after the death of the man who found a reply to every question addressed to him. It is quite natural that (before the Sunna was in anything like working order) many questions on religious matters were asked, especially by later converts. What can, therefore, be the meaning of the words: "And if you ask about them when the Koran is revealed, they are made manifest to you?" Evidently that it was too late now to ask questions beyond what was laid down in the Koran itself. The growth of the Hadith then supplemented what was wanting.

In conclusion there only remain a few observations to be made on the mysterious letters which stand at the head of twenty-nine suras, and which have hitherto not found satisfactory explanation. The Muslim commentators of the Koran, it is true, do not fail to give them all kinds of sacred interpretations, but these are without any foundation, and completely valueless. Yet these letters have not only occupied the minds of theologians, but no less a man than Ibn Sina is supposed to have devoted a small treatise to their explanation. He moved, however, so entirely in the ways of scholastic philosophy, that he enlightens us no more than the theologians do. When the letters were put their places, Arab philosophy was yet unborn.

Of the endeavours of modern scholars to decipher those letters, the best known is Sprenger’s who took the five letters standing at the beginning of Sura xix, to mean I N R I. This theory has been finally disposed of by Noldeke. In my opinion the last named scholar made a successful beginning in the explanation of the letters. Unfortunately he gave it up, and adopted the older theory of the late Dr. Loth, who saw in these initials cabbalistic ciphers contrived by Muhammed after Jewish models. In accordance with this view Noldeke takes the letters as mystic signs which stands in relation to the heavenly archetype, and originated from Muhammed himself. This is, however, untenable. Jewish mysticism of this kind does not go back as far as the period in which these initials were written. On the contrary the oldest books of Jewish mystic literature show traces of Arab influence, and are at least 150 years later than the official text of the Koran. Besides, there is no mysticism visible in the whole Koran. Even Suras cxiii, and cxiv, look like protests against magic practices, rather than magic formulas, as they consistently place Allâh in sharp contrast to witchcraft.

If Muhammed were the author of those initials, he must have had an important share in the arrangement of the suras, and this would contradict all we know of the compilation of the Koran. We should also have traditions on the matter handed down by himself, but the few given by Ali Bokhâri in the chapter headed Kitâb tafsîr al-qur'an do not go back far, and reveal a complete ignorance of the meanings of the letters in question. It is also strange that out

49 The tradition given by Al Beidâwi is evidently late and ;abridged, no authority is mentioned for it, and Ibn Hishâb does not mention it at all.
of the more than two hundred addresses (of which the hundred and fourteen sūras of the Qurān are composed) only twenty-nine are preceded by initials, and that they are invariably found at the heads of compound sūras. No one will for a moment make Muhammed responsible for the arrangement of, e.g., Sūra ii. and iii. Finally, if mystic relations existed between the Qurān and its heavenly archtype, why were these restricted to so small a number only, giving these a more sacred character than the majority of addresses?

Thus much is clear that the letters were added when the arrangement of the Qurān in its present form was completed. One can further not fail to observe that sūras with the same (or similar) initials stand in groups. Sūra ii., iii. and xxix. to xxxi. have [ṣ]M; Sūra x. to xv. have [ṣ]R except Sūra xiii. which has [ṣ]MR; Sūra xxvi. to xxviii. have TS and TSM respectively; Sūra xi. to xvi. have HM, except Sūra xliii. which has HM·ASQ; Sūra vii. has [ṣ]M; Sūra xix. has J [or N] ·AS; Sūra xx. has TH; Sūra xxxvi. has J [or N] S; Sūra xxviii. has ẓ; Sūra l. has ẓ, and lastly Sūra lxviii. has Q.

The Sūras ii., iii., xxix. to xxxi. evidently belong together, but had to be separated on account of their unequal length, and we know that the length of the sūras was an important factor in their final arrangement. This is alone sufficient to show that the initials have no sacred characters at all but are, as Nöldeke at first rightly suggested, monograms of private collectors or authorities prior to the official edition of the book. In one of the MSS. of al Dāni’s Kitab altāsir (Cod. Brit. Mus. Or. 3068, fol. 78 v. 12) the letters TH (Sūra xx.) are followed by the words ẓalik as sallatun50 (peace upon him). From this we may conclude that Al Dāni (or the copyist) had a tradition that at least these two letters referred to a person, whilst the sūra to which they belong, has no other name or heading at all. Nöldeke, endeavouring to explain the letters has rightly hit upon Talha, but I believe that only the T refers to him, whilst H, which occurs again in Sūra xix. belongs to another person, probably Abu Hurairah. The meaning of TH would, then, be that Sūra xx. was found in the collections of the two persons named. Such collections, we know, were made or kept by other people also, and probably marked with the name or initial of the collector or owner. At any rate, when Zeid b. Thābit made use of these collections for the compilation of the Qurān, he incorporated them bodily into his volume, but from personal or other reasons kept the initials. This explains the fact that whole groups of sūras are headed by the same letters, and it is easily seen how such a manner of working facilitated the edition of the Qurān. Probably there was much less scrutiny used about it than tradition will have us believe. Even the best readers of the Qurān may not have mastered the whole book, but scanned a comparatively small part of it, so that it was quite possible to intersperse verses of very doubtful authenticity. Now when pieces found in sundry note books were united into one sūra, Zeid collected all initials belonging to them, and placed them together at the head. For, the large majority of addresses which were not contained in any such collections, Zeid had his hand free to arrange on the lines dictated by Omar, or followed his own judgment. This portion, therefore, shows no initials at all, being understood to be Zeid’s.

A parallel to this is offered by the superscriptions of the sūras. Some have none, and the initials attached to them are used as such, viz., Sūras xx., xxxvi., xxxviii., xxvii. Sūra lxviii. is named both after its initials and the first word. Sūra xliii. is titled after the initials and a word in verse 36, and many other sūras have two or more superscriptions. Different collectors probably chose different names, whilst the final compiler of the Qurān followed the same practice as he did with the initials, and preserved them all. Their inferior importance is however, shown by the liberties which were taken with them in subsequent copies.

A very superficial enquiry into this matter will show that the word chosen as superscription is often quite trivial, but the piece serves as nucleus round which other, nameless, pieces are gathered.

---

50 The Codd. Add. 7233 and 9465 have only ẓ.
Endeavouring now to substitute full names for the cyphers, I read with Nöldeke’s first attempt — Z instead of R, but also N for J (¿ for ¿). If we further follow the Arabic custom of regarding cyphers not as representatives of the first letter only, but rather the most prominent of the word, we receive the following — of course only hypothetical — list:

\[ M = \text{Al Mughira.} \]
\[ S = \text{Hafsà.} \]
\[ R [Z] = \text{Al Zubeir.} \]
\[ K = \text{Abu Bakr.} \]
\[ H = \text{Abu Hareira.} \]
\[ N = \text{‘Othmân.} \]
\[ T = \text{Talha.} \]
\[ S = \text{Sâd [b. Abi Waqqâs].} \]
\[ H = \text{Hudayfa.} \]
\[ ʕ = \text{‘Omar [or ‘Aliy, Ibn ‘Abbás, ‘Aisha].} \]
\[ Q = \text{Qāsim b. Rabî’a.} \]
\[ Al forms the article before Mughira and Zubeir, and is to be found with no other cypher. \]

WAR SONGS OF THE MAPPILAS OF MALABAR.

BY F. FAWCETT.

(Concluded from p. 508.)

No. IV.

The Battle of Hunain.

MUHAMMAD THE PROPHET, the founder of Islam and the greatest of all the 128,999 prophets since the time of Adam, was born unto Amina by Abdulla. He was brought up at Mecca, the Queen of cities, the centre of the globe. The heathen Koreish began to speak of him as an imposter, for they feared he would destroy their religion; and they resolved to kill him. But Muhammad, warned by God, fled to Medina.
And God said:—"Convert your own people first, then the aliens. If you are resisted, use the sword and make them embrace the true faith." So the prophet took up the sword against the infidels and was always successful. He came to Mecca with a large army. The Koreish begged for peace for 20 months in order to remove from Mecca. A treaty was then drawn up and signed formally by both sides: no mercy to be given to those violating it. But the treacherous Koreish broke it, so the prophet took up the sword. Two hundred pilgrims taking shelter with the Koreish were treated kindly and then slain mercilessly. The Angel Gabriel related the tragedy to the prophet, who, calling his followers, said:—"Our treaty is broken, we must capture Mecca." Mecca was captured, the Koreish defeated and their idols destroyed, by the fourth minister Imam Ali, the prophet's son-in-law and his father's brother's son.

The Koreish resolved to seek the aid of Malik Bin Awasili, Lord of the monarchs of earth, saying, "he will defeat the prophet and prevent the spread of his religion. Eblis is his minister." They went to Nazareth, near Misooa, where the king was, and saw Eblis, who thereupon drew up a document as follows: — "The followers of Muhammad have forced their way into the sacred temples and destroyed all images, presented to us by kings of old and adorned with gems. Chief of these was Brahman, more than 4,000 kds in height. These have been our salvation, and now they are hacked to pieces. All persons young and old know this. If your highness does not extirpate the Mussalmans, their religion will be the only one in the world. Muhammad is the man for that. His face is more resplendent than the full moon. A lion approaching him open-mouthed would be calmed by the sweet honey of his words. He is clever in witchcraft, and all magic. He would win over your highness. There is not his like among men or angels. We implore your highness to protect us. Who can endure to see their gods mutilated and thrown down? It is said by king that he has no equal in might."

So saying they threw off their coats and caps and lay in the dust, and wept. When he heard them, the king was speechless for an hour; then he roared like thunder, flung aside his crown, and bit his finger in his rage. He changed colour and his hair stood on end. Saying, "there never was done us such a wrong since the world began," he called his ministers to plan vengeance. They said "if we kill Muhammad and Imam Ali we shall be famous, but if we fail, we must accept their religion." The king said:— "Be patient: we will see if he is so powerful." They answered:— "Slight him not. A glance of his eye was sufficient to fill a well, which has never diminished."

Then the king wished to subdue him in war, and wrote to call his warriors. The first letter was to Banitha Minu:—"Muhammad the Nebi and his son-in-law Imam Ali have seized Mecca and deified it: we must wage war on him: come soon." He [Banitha] came with 10,000 armed men before the king, who was pleased. The second letter was to Banihlan, who at once marched with 90,000 men. Others were sent for in like manner. When all had assembled the king burst into tears. Another king enquired the cause and was told that the thought of the destruction of the gods was too distressful. The other king comforted him saying that King Orubah was equal to 10,000 Turks. So Orubah was called, and he came with 20,000 men. Refreshments were served, and King Orubah recited a stoka [i] which meant: "O king, dearer than the pupil of my eye, your charity has pervaded the world as a cooling shower, and tears have been shed by you, so I am prepared to draw blood from Muhammad and his son-in-law. Will the brass of Ashin prevail against us? We will kill him as timber."

The king was pleased, and said:— "Our gods are cut down, but their divine spirit remains. We propitiate them. They will favour us rather than our enemies who have desecrated them." So saying, the king went to the camp and ordered the heads of Muhammad and his son-in-law to be cut off, and their followers to be brought in alive with handcufes so that they might be flayed or burnt.

16 A kdo is the carpenter's measure in Malabar; it corresponds, roughly, to a yard.
17 The poet has forgotten to tell us that the suppliants went before the king with the petition prepared by Eblis.
with hot irons. The army replied they would do so. Then the king ordered his prime minister to open a barrel of liquor. The men drank more than they could contain and fought with each other like lunatics, forgetting their great purpose. Imish, an ascetic, appeared to them as an old Brahman [1]. They asked his advice. He beat his breast and wept:—"Oh warriors, you have become shameful cowards. You come to fight with Muhammad but you have most shamefully indulged in liquor. Muhammad, taking advantage, has enticed some people from our side." Then he beat his breast again and wept. The army enquired who he was. He said he was (in Arabic) "The father of evil speakers" and his native place was Negith, a despicable Hell. They thanked him, and set out to fight. The ascetic clapped his hands and laughed. "You are brave warriors," said he, "but when you go to fight you should take with you your wives and children, all your relatives young and old, male and female, so that you may think of them."

Rebiath, a brave young warrior, said:—"You need not open your mouth to speak nonsense. Go away. A child would not heed you. You would tell us—If we are defeated, Muhammad will capture our women and kinsmen. Who are so hot after women as the Arabs? If our women fall into their hands we cannot receive them back." Then spake Kola Baith:—"What? Is Rebiath mad? What the ascetic says is true. If we have our women with us we will feel vigorous and courageous. We can never withstand a long battle without them." The army consented, and the king ordered the families to be brought. They spread like an ocean. Mothers with crying babies, children carried on the necks of adults, old people with sticks in their hands. Women could not suckle their infants, and beat them; the bigger children cried for food; there was confusion everywhere.

The king paused a moment; then ordered the band to be played, the trumpets also. In the van of the army were kings with golden crowns on horseback, having 18 kinds of weapons. Then came camels, mules, conveyances, and the infantry armed with blowing instruments, noisy bells, 14 kinds of arrows, and swords. They reached a mountain and pitched their tents under it.

They saw other warriors encamped on the hill, their leader seated in their midst. He was a stout blind Kafrir, 300 years old, Duraita by name, the terror of his age, well versed in war; of profound spiritual knowledge, adept in witchcraft, astronomy, physiognomy and other sciences. He asked:—"What is that noise of babies and mothers in the midst of sounds like thunder?" He was told that King Malik had encamped there with his army, and their women and relatives. Thereupon he expressed a desire to see the king. The king came and saluted. Duraita asked who he was. The king then told his name and was asked to be seated. Duraita asked why he had come. He said Muhammad and his son-in-law had defiled their gods, so he had come with his army of 250,000 to overcome him. Duraita said the number was too small: there must be at least five lakhs of men. Malik's ministers displayed indifference and whispered in the king's ear that Muhammad had not more than 1,000 men. Then Duraita spake in anger:—"Believe me, you are not fit to engage Muhammad. Oh king! your minister deceives you. Come; try a fight with my men, 100 in number. If you beat them, you can beat Muhammad." King Malik caught his hands and pacified him:—"Oh great man: be not angry; I will collect as many men as you want."

And he sent out messengers who brought 5 lakhs of men; then he continued his march. They reached the Honin hills and pitched their tents. Then Eblis appeared before Duraita and spoke of the coming battle, and told him he would be slain by a soldier of the prophet's army, Rebiath by name. Duraita was horror struck, but he consoled himself saying, "Oh god! if this is my fate, I have no fear." The king heard this and was sorry; and he said:—"Eblis is a traitor; heed him not; I will help you." Duraita was encouraged, and remained at the foot of the hills.

Now while the prophet was at Medina performing his ablutions and other religious services; seated at noon in the chief mosque, he saw a young man clad in silk and wearing priceless gems approaching on horseback accompanied by 2 men as a bodyguard. The young man asked:—"Where is Muhammad, protector of the world, with his ten beautiful colours?" Imam Ali enquired why he
wanted to know. The young man said:—"To pay my respects." A sayyid pointed out where the Lord of creation, more handsome than white pearls, was seated. When he saw Muhammad who has no shadow of self on earth, the young man dismounted, and said respectfully:—"O Nebi! ocean of charity, the magnanimous, the nearest thing to God as the string to the bow, I long wished to see you, and now I have the honour."

Some of his disciples arose and told the prophet the youth was one who had fled at the battle of Mecca and had been ordered to be killed, and touched their swords. When Muhammad saw this he said that Shaikhuvan should not be killed, although he is wicked: "we must know why he has forsaken his evil companions and come here." He said to Muhammad, who approached him:—"God created you and you have traversed the seven skies and above them. You are a great favourite of God. I have come to reveal my sorrow." The prophet told him to speak. "Oh prophet! you have made the full moon to rise on the new moon night, taken hold of it and split it in two, joined the halves together and sent them back to the skies. You have converted many who saw this. Oh prophet! our father, I have fought against thee and begged forgiveness. Thou hast produced peacocks out of granite and borne the world on the tip of thy little finger. I pray thee bless me that I may fight against heretics." Muhammad stretched out his hand, held it and taught him prayer, and he became a Musullaman.

Shaikhuvan said:—"Oh prophet! Thou hast been laying at the feet of God for 14,000 years without raising thy head. King Malik with 5 lakhs of men has encamped on Mount Hnani to fight thee. Muhammad was thunderstruck. Then the angel of God came, and saluting the prophet, told him the news was true, and that he should at once fight King Malik, and he will have special indulgence in Heaven and Earth. The drums were then beaten, and the prophet explained God's message, saying those who fought for him would go to Heaven. He described Heaven thus:—"There are many pleasures in heaven, but something must be said of the celestial virgins. The beauty of their faces defies the disc of the setting sun, or of the moon. Their bodies are more brilliant than superior gold; in fact, they are so lovely that God has never created and never will create their like. Their hair is blacker and more beautiful than the cuckoo or the wings of the beetle. The jewels on their heads are indescribable. Their eyes are ravishing, fascinating any man and filling him with lust. Their necks are more graceful than the deer's, neat and well shaped. Their mouth is like a fruit filled with honey. A drop of their spit will turn the ocean into pure honey. Their noses are like pointed arrows. Their breasts of admirable shape, resemble two golden cups, are of full size and never fading beauty. Their bodies are well formed and polished. Their waists narrow, slender and charming. Their arms and legs are like the branches of the palm tree. It would take up many pages to describe their jewels, for they wear many. They never menstruate, and they are unceasingly lustful. Those of you who fight along with me and die in battle, will have houris such as I have described, besides other enjoyments."

The army asked Muhammad to lead on so that they might partake the pleasures he had described. He sent them home to bid farewell to their families and return at 6 o'clock the next morning to go to war. They were in all 1,060 men, and they offered prayers to God. Then Muhammad sent his private secretary to bring from his house, banners, arms, armour, horses and other necessaries of war. This was done. Muhammad was mounted on a horse called Trubath. . . . They started for Medina, and camped near it. Muhammad gave the first banner to Subari-bin-alavann, the second to Abitharklophar, the third to Abbas, his uncle, the fourth to Magdhath-bini Aso Dhal Kathi, the fifth to Khalithi binal Holith . . . Each of these ten men recited a verse in Arabic when he received his flag. Then there were with Muhammad, in all, 12,000 warriors, who had joined him in the plain. He set out for war together with his four ministers. When it was time to do so, they assembled for prayers, and then retired to their tents to sleep. But the first minister Abu Bakr Siddik went to Muhammad's tent, and having obtained permission, entered and said the expedition was a splendid one as their army was composed of heroes and more than a match for the enemy's army of five lakhas of men.

*Ma?illa [Mo?illa] fanatics, always bid farewell to their families before going out to di*.
Muhammad was displeased and repeated a religious mantra, exhaustive and deep, meaning that none but God can do anything. He was uneasy and had little sleep, thinking of the words of the first minister. In the morning his uneasiness continued, and after prayer when he had mounted his throne, his father's elder brother Abbas came to him and asked the cause of his gloom. Muhammad said the words of the first minister were unsavoury, and he did not know what evil awaited them. Then the Angel Gabriel appeared before Muhammad and taught him two prayers to be repeated by the whole army. In the evening Muhammad saw a band of Kaffir soldiers, who said they were of the Vanibava tribe and they were going to fight a certain king whose subjects they hated. He then prayed and retired to rest. And God's messenger appeared again before him and taught him a prayer of deep meaning: briefly, that throughout the Hunai War many wonders would be worked by him (Muhammad), and God will avenge his enemies. He was filled with joy and thanked God.

The Kaffir soldiers hid behind the mountain and in the night their chief asked whether they knew the Arabs they had met. They did not. He said they had conversed with Muhammad, the King of Meeooum, who was waging war against their king: would any one volunteer to bring in the head of Muhammad? Some arose in answer, but their leader warned them saying Muhammad was powerful, an athlete and of extraordinary prudence. They said Muhammad's tent was in a lonely place, and two lion-like men went away saying that by the grace of God they would bring in his head. They saw him engaged in prayer under a tree, his hands placed on his belly, a mile distant from his army; and they hid in a hollow of the tree. Muhammad's sword was left leaning against the tree, and he was lying on his face praying. One of them took the sword thinking it was sharper than their own, and aimed a blow at Muhammad's neck. But he saw them with the small eyes on his head, and prayed to God. And a branch of the tree bent down and the sword struck it, and stuck to it and to the man's hand. When he had finished his prayers he looked around and saw the two men lying on the ground. They begged for mercy, invoking his God. He raised them up and let them go, telling them God would punish them with everlasting hell. Ismanli, the lion, the fourth minister, was told by the prophet what had happened. Seized with passion, he begged leave to kill them twice and annihilate the whole army. The prophet said that God would arrange: he would do nothing without God's order. God had saved him from them, and he should likewise save them. He is answerable to God. As the two Kaffirs were going (to lie) to their king, a mighty wind swept them into the sea. The king and his army enquired in several countries what had become of them. Behold! their corpses were found in the sea.

Muhammad with his army encamped near the enemy, and looking round, asked whether any one would spy in the enemies' camp. A man called Raphi stood up and said he would go. In the direct way there were hills, mountains, pits, trees, forests and many difficulties, besides guards were posted. Muhammad said though that way was a difficult one, Raphi should take it. Then Abbas, the uncle of Muhammad, said that Raphi had spoken truthfully. Muhammad said to Raphi that God would take him unto Himself. Again he explained what Heaven was. In it there were many beautiful things, tables, chairs, mattresses, beds; different kinds of music; all sorts of fruits; pure water; valuable jewels for the celestial virgins. "God will give you all these." Then Raphi said he felt confident of all this happiness, but he was grieved to think that if he were killed he would not be able to return with news. While Muhammad was deep in thought the Angel Gabriel appeared and said to him that what he had promised Raphi had already been promised by God 14,000 years before. Moreover, God had sent him to say that Raphi would not be killed.

Raphi then started, and found the kings on their thrones and the army surrounding them. The old blind man Durahta discovered his presence by means of astrology, and by the time Raphi had heard the kings conversing together as to the destruction of Muhammad, and ascertained the number of their flags, they were informed that a spy was in their midst. Search was at once made. Raphi prayed to God and Muhammad to save him. A surprising thing then happened. No one could see
Raphi. Then they mocked the old blind astrologer, but he persisted he was right. The king told him to find the Arab or die on the spot. The old man asked each man to come in front of him and make a certain noise. Raphi was in great anxiety and prayed to God and Muhammad. A man asked him who he was, and he answered he was one of themselves. He was taken before the astrologer to whom he gave a false name. He was told to make the noise. Again he prayed to God and Muhammad and made the noise so that the astrologer did not distinguish him. The king and his men again mocked the astrologer, and said no Arab had entered the camp. The astrologer swore by their gods that there had, and he would not eat until he had found him. He then asked the men to come in pairs, one on his right one on his left, and make the noise. When Raphi made the noise the astrologer held his hand and asked him who he was. He said he was chief of the flagmen. Was he sure? Yes. Then he was let off. The troops clapped their hands and said the old man was childish. The astrologer contended the Arab spy was among them, and that he was invisible through witchcraft.

When the king’s army partook of food Raphi was served with the flesh of sheep and camels to eat, and toddy to drink. He carried it to where the mules were tied. After eating food the army was about to fall in for war when Duraita told them not to march. The king asked why not. He said they should hide under the slope of the hill and by a sudden rush fall on Muhammad’s men before they could take up their arms: there was no other way to conquer such great warriors. So the king ordered Duraita to prepare the army for battle. The attack was to be made in five companies. Cavalry armed with swords and formed in four sections to be in front; each section to assist the others. Men with daggers, also formed in four sections to be behind the cavalry. Men with bows and arrows to be behind these again. Women and children to be in rear.

Naratha Maharishi, that is, Ebli, then told the king the men in front would not fight well if their women and children were so far away, so these were placed behind the men in front. Raphi returned to his camp, all the way invoke Divine help against the Kaffirs. He told Muhammad what he had seen. The Kaffirs were countless and they had 2,000 flags. Muhammad then said that there were as a rule 250 men for each flag, so there must be at least 5 lakhs of men; and he ordered his men to start: the enemy should not be kept waiting for them. He ordered one to go and see if the enemy stood ready. Report was brought that the enemy, horses, camels, mules, etc., with twice their number of men, also women and children, were there. Muhammad said that God’s angel Durari had told him of this, and gave the order to mount and prepare to attack the enemy at the foot of Mount Abuthassali. The army marched to the hill and found there some small temples and big trees, and some men from the king’s army who were doing pujd [1] in the temples. The first minister took the priest before Muhammad who enquired whether the gods in the hill were equal to the great gods of Mecca, or were they greater. The priest replied they were related to the gods of Mecca. Muhammad asked why he worshipped those stones when he might worship the true God. He did not answer and Muhammad ordered him away. Some one said the priest was a Kaffir, and Muhammad said such was God’s will.

Muhammad then ordered Imam Ali to cut down a tree on the top of the hill. Imam Ali did so, and a column of smoke at once rose to the skies. He ran in fear to the prophet who said that 3 jinn were living in the tree and were now leaving it. Then Abias came up and said there was a snake on the hill, so huge that only God knows its magnitude, and flames shot from its mouth. The prophet with a few followers went to see it. The Arabs began to run like sheep before the tiger. But the prophet said:—“Do not fear: stand behind me.” They did so. The prophet looked at the serpent, it lowered its head and creeping towards him knocked its head on the ground, saying, “Oh prophet of world-wide renown, I am not a serpent, but a leader of the jinn. I am a Musulman. There are Kaffirs and Musulmans among the jinn. The prophet knows why we wander in the world: to bite and kill the prophet’s enemies. Give me leave and I will destroy the king’s army.” Then the prophet said:—“We do not need you now. I will tell you if we do. Leave this place and may God bless you.” The serpent fled to another country.
The prophet remained in the hill and next morning left for Hunain, the enemy's camp. The Kaffir king was startled, invoked his gods and ordered his army to pray, and to get into battle array. "God will bless you. If they are 12,000, we are 500,000." The king called his minister called Musa. "Ho minister! Get up this tree and tell me the number of the enemy and their equipments." He climbed the tree and said:—"A man carrying a flag is in front. They come like lightning. Their horses are as if dancing." The king said:—"Who comes in front?" The minister replied:—"Two chiefs on horse-back, each carrying a flag." Of what colour?" "One is white and the other is yellow. Behind comes one with a green flag. All their turbans are green, and their coats are white. Both are very clever." "You know the people of Mecca," said the king, "who are they?" One is Abbas, the prophet's father's elder brother, the tiger of men; a rich man. The other is Pakal, a brave warrior." Looking again, the minister said:—"Oh king! I see something very wonderful; a great warrior comes. His horse is like an eagle and he comes like a lion that has seen a deer. He looks as if he will kill us all." The king asked his name. The minister replied:—"Imam Ali, the fourth minister; there is none so brave in Muhammad's army." The king ordered him to look again. "Great king, I see one whom I am powerless to describe: my tongue fails; my eyes become dim. He will confound your army. His clothes shine like the sun at noon. He rides a huge horse. His beauty is beyond description. The sun and moon cannot be compared to him. His horse's hoofs touch the ground like thunders. His splendour fills the earth and the skies. The clouds are as an umbrella over his head." The king asked:—"Who is it?" "Oh king! it is Muhammad the prophet." Then the king said sorrowfully:—"Ah God! when they see him, my army will not be able to fight." The king and the minister then went to their tent.

The king cried out:—"The prophet has come with his army. Fear not. Be firm." The army answered:—"They are great sorcerers; we are not able to fight them." An angel said:—"Fear not! Adorn your gods and hold them before the army; call out their names and pray, and you will succeed." Seeing that panic seized his army, the king ordered liquor to be brought. The whole army drank, and taking their gods placed them in front. The king said:—"Fear not in battle: if you have any fear, you will lose." And he promised large rewards.

By this time the prophet's army came in sight. The prophet said:—"The enemy deceives us. They are in ambush by the hill." Then the Angels Gabriel and Michael came with a thousand angels and joined the prophet's army. The reason for their coming was this:—The Kaffirs numbered 5 lakhs and the prophet's army but 12,000. The Kaffirs looked at them and laughed, saying, "We should not have brought so many." So the prophet's army was in fear, saying, "We are but a few, and they mock us. Then the prophet prayed to God who sent his angels who descended from the sky on aerial horses. They said:—"The Kaffirs lie in wait. We will go in front; you come behind us. We can see them as fish in a bottle of water. If you come with us they will perish." Then rushing at those who were concealed they killed them all. A few escaped and told the king on the hill top what had happened. Eblis came and took the king by the hand as he said:—"Have angels also come for the battle?" and he began to run. So the king said:—"Who will help us if you run away?" Eblis said:—"I cannot fight against angels." The king implored him, but Eblis shook him off and fled. The king was thrown far and fell on a blind man's neck. The blind man asked:—"Who are you?" "I am the king." The blind man said:—"Will the king fall on a blind man's neck? Liar!" and drew his sword to kill him. But the king swore by all his gods; and both went to the tent.

The two armies fought. A mounted warrior of the king's army, armed with 18 weapons, rushed to the prophet's army and said:—"I am Akubath. Let Muhammad's army come on." The prophet called out Jadagir and said:—"Fight him. God will bless you." There was a desperate conflict. He cut Akubath and his horse in two with one blow. Another Kaffir rushed forward and he too was slain. So the Arab killed 15 Kaffirs. More Kaffirs ventured, but the Arab mocked them, making his horse dance. A valiant Kaffir Makmas said:—"Wretch! I will cleave your skull!" Many wished to engage him, but the prophet prevented them saying he was a mighty warrior and...
called on his fourth minister Imam Ali, who went forward and said:—"I am Imam Ali! I broke your idols." He touched the Kaffir with his sword and as he fell, cut him in two. Another Kaffir came and fought for ten hours and was killed. Twelve others were killed.

Then the king called out his third minister. His helmet weighed 30 lbs. His sword was 14 cubits in length and he was as tall as a coconut tree, and as big as a hill. God never created such a human being. If he fell, 1,000 men would die at once. The Arabs were afraid to see him and prayed to God. The prophet himself was confounded, and said:—"Let the fourth minister meet him. There is no other help." There was a hard fight and the fourth minister cut to pieces his 18 weapons and killed him. The prophet praised God.

The Kaffirs were about to fly, but the king rallied them: and then they said it was by witchcraft and not in fair fight that their hero was killed. A general battle took place, and the fourth minister and 130 Arabs were wounded. But the prophet touched them with his hands and they were at once healed. Suddenly the Arabs fled, for in the front rank of the Kaffirs were kings, and when they were killed the Arabs began to rifle their tents, upon which the Kaffirs sent volleys of rockets [!] amongst them. And there was another reason. The prophet's first minister, Abu-Bakr-Siddik said:—"The enemy are numberless: whereupon, 8,000 of the prophet's army fled. Four thousand were left, and of these only 1,000 fought; the others merely looking on. One said:—"We are 4,000 while they are five lakhs: we will have to run." But a voice from Heaven said:—"Despair not! Let them be ten lakhs." Again they fought, but at last they began to fly. Then Eblis, assuming the form of the second minister, said:—"O ye Arabs! Fly for your lives! You are in a boundless ocean of sorrow. There is no escape but in flight. The prophet is killed. Is there battle without a king?" The prophet's army fled, and there were but seven persons left, and of those, four were the ministers. These ran to the prophet and said:—"We are but seven persons against more than five lakhs. What can we do?" Then the prophet raised his hands towards heaven, lifted his eyes and prayed. He put on his armour and rode on his favourite vehicle. The four ministers stood beside him and God commanded 2,000 angels to descend at once to help the prophet. They came, looking like young men; their coats were white and their turbans were black. The earth shook as they alighted. They stood on 4 sides and ordered the ministers to fight. All fought bravely and the enemy began to fly. The prophet asked a minister to recall his army. Patol said:—"Where can they be found? Call them!" The sound was carried by the air to the ears of the army, and they returned and begged for pardon, saying Eblis had deceived them. Laying their swords to their stomachs, the soldiers said they would kill themselves if not pardoned. An angel from God said they had spoken the truth. The ministers of the king said:—"We cannot defeat the Arabs. The four ministers of the prophet are invincible." They caused our swords to fall, and their horses ran over their heads like lightning. They killed forty to our one. Three lakhs of our army are slain."

Women and children dashed their heads on the ground and said to the king:—"Our husbands, fathers and brothers are killed: send us home."

The king ordered them to be fed. Then he mounted his war horse, and dressed in his brightest gems went out and challenged the prophet. The prophet sent a man Vasir to meet him. The king killed him and four others. A young warrior, Jaffari, with the prophet's permission went to meet him. It was the day after his wedding, and he was 16 years old. The king cut him together with his horse in pieces in the twinkling of an eye. One of his ministers told the king to go back; he would fight in his stead and kill 12,000 Arabs. The Arabs said:—"There is no devil equal to him. With one blow he will kill 1,000 of us." The prophet sent Abdulla, but the Kaffir cut him in pieces. His brother Abdul Keriva went out, and he too was killed. No more Arabs ventured.

Seeing no more coming to meet him, he returned to his tent, and his wife said," Where is the head of Ali?" He replied:—"I will give it to you to-morrow." She asked:—"Is Ali 100 cubits high?" "May be so. There is no such warrior in the prophet's army." "Do not approach or touch me: I will not be your wife until you bring the head of Ali." He was furious, and rushed out
calling, "Ho ye prophet! Send me your best man, or your whole army!" and he beat the ground. The prophet said:— "God will give special benefits to whoever kills this witch. I guarantee it." An Amir went and was killed at once. The Kaffir cried:— "Where are your brave men? Kalid? Suvar? Sayid? Where is the brave Talhat? Where is Abu Bakr? Where is Omar? Where is the world-renowned Ali? My heart beats like the waves of ocean to fight the tiger-like Ali. Oh Muhammad! where is your God!" An Arab, Athussamed, leaped forward but the Kaffir took him by the leg and dashed him to the ground.

Then the prophet said:— "Where is Imam Ali?" "He is fighting on the hill." "Let 500 take his place and send him here." He came. The prophet prayed. The Kaffir asked:— "Oh beautiful youth, who are you?" He replied:— "Imam Ali." The Kaffir said:— "You are his slave. Send him to me and save your life." They fought for 3 days. On the 4th day Ali said:— "Embrace the prophet's faith or I kill you." The Kaffir said:— "You are brave. No one else could have fought me for 3 days." The Kaffir's wife watched the fight from a hill and sent her head dress by a slave, saying, "Cut off the head of Ali, and smear this cloth with his blood, or never come near me again." Then they fought desperately for six days. On the seventh day Ali made a noise which shook the earth and the sky. The Kaffir was stunned, and Ali cut off his head. The prophet asked what was the army doing, and Ali replied it was standing still and the Kaffir army had fled.

The prophet ordered the dead to be counted, and it was found that 1,000 Ashabis had been slain. The Kaffirs told their king:— "For one of them that we kill they kill 1,000. They believe they go to Heaven and do not fear death. Let us make peace. Our gods have not helped us. They have killed our brave men by witchcraft." The king was sad, and threw his crown on the ground. A vassal asked permission and went to the battle-field calling for the bravest of the prophet's men to meet him. An Arab went out, and the king killed him. Then the prophet ordered Imam Ali to fight the king. The king wounded him, but Ali mounted his horse and they fought for 22 hours. At night they separated. Again they met. At night Ali said:— "Oh king! do not lose your life: join the fourth religion. If you do, you will gain Heaven." The king said:— "If you defeat me, I will join your faith. Let us diamount and fight with our hands. If you are victorious I will join you." They wrestled. Ali caught the king by his belt and was about to throw him when he called out, "I am defeated: do not throw me." Ali took him to the prophet and the merciful prophet embraced him, and told him the secret of his faith. Seeing this the Kaffir army fled.

The king wrote and collected 30,000 more soldiers and ordered them to fight. They challenged the Arabs. A leader of the Kaffirs wounded an Arab, but the prophet gently touched his wounds and healed them. There was a general battle and neither side prevailed. Meanwhile the prophet retired alone to a tree a mile distant to pray. A Kaffir approached stealthily to kill him, and raised his sword. In an instant, there was a wall of fire protecting the prophet, and the Kaffir was aghast. The prophet finished his prayers and smiled, saying:— "Ho king! fear not, but come before me." He came, and begged the prophet's mercy, and embraced his faith, and at once fought against the Kaffirs [sic]. The king was alarmed and sent a larger army to seize the prophet and his fourth minister, Ali.

There was a combat between Shaibath and Rabiyyath for 2 days and neither prevailed. The prophet prayed to God, and an eagle carried off the turban of Shaibath the Kaffir. Then Rabiyyath cut off his head. A magic square in his turban had protected him. It was the Angel Gabriel who, in the form of an eagle, carried off his turban. The Kaffir army then fled in great fear. The king rallied his men, and a dreadful battle ensued. For five days and nights it lasted. The Arabs were nearly overcome, when the prophet at the door of his tent prayed to God:— "Oh God, I never began anything without your command. It is said in the Koran that God helps those who carry out His commands. Give courage and strength to my soldiers. We cannot fight the Kaffirs who are coming like dark

* The Muppilas call their religion the "Fourth Veda."
clouds." God granted the strength of 1,000 lions to Ali, and to all the others the strength of from 4 to 40 lions. For seven days the battle lasted, and still the Kaffirs did not give way. Then the fourth minister made a sound which shook the earth and the skies, the sea and the hills. The Kaffirs became deaf and blind. The Kaffirs fled, and after them their king. The Arabs pursued and killed many. Then they returned to camp. One Arab did not return, for he had gone to find the enemy’s hiding place.

The prophet asked how many were killed. His minister replied: — "Three thousand." Such is the will of God. They will obtain paradise." He then asked: — "How many Kaffirs?" His minister said: — "God alone can say." Ordering the corpses to be buried, he enquired where the Kaffir’s army lay hidden. The Kaffirs had taken shelter in the fort of a friendly king. The prophet ordered the spoil to be counted, and sent all the gold to a fort to be there watched; and he commanded his army to march against the fort Tayif. The fort was taken, and the king was captured. Imam Ali offered the captive king the prophet’s faith, or death. His offer was scorned, and he raised his sword to strike the king, when the prophet said: — "He is a king, and must not be killed." The prophet had his chains removed and let him free to go where he pleased. This act of mercy moved the king to tears. He fell at Muhammad’s feet, and embraced his religion. The prophet thereupon restored to him all his wealth and possessions.

Note.—In conclusion I acknowledge with gratitude the invaluable assistance in translation given me by Mr. T. Kannan of Calicut.

THE ASA DI WAR, A MORNING PRAYER OF THE SIKHS.

BY M. MACAULIFFE.

NOTE.

It is said that Guru Nānāk on going to Pāk Pātān in the Panjāb to meet Shōkh Braham, otherwise called Farid Sānī, or Farid the Second, was asked to give religious instruction, and in reply composed the greater portion of the slōks and paurs of the hymns known under the name of Āsā di Wār. Some of the remaining hymns were composed by Guru Angad, the second Sikh Guru. The Āsā di Wār is repeated by religious Sikhs after the Japji and the Hādīr de Shābād as a morning divine service.

The word Wār originally meant a dirge for the brave slain in battle, then it meant any song of praise, and in this collection it means God’s praises generally. Wārs were composed in stanzas called paurs, literally ladders, which were sung or chanted by professional minstrels. In the Granth Śāhī, paurs always follow slōks. A slōk is a verse written in imitation of the Sanskrit measure so called.

The sixth Guru is said to have written in the Granth Śāhī, as a preface to this collection, that it should be sung to the air of "Tundā As Rājā." 1

ASA DI WAR.

There is but one God whose name is true, the Creator, devoid of fear and enmity, immortal, unborn, self-existent; by the favor of the Guru. 2

Guru Nānāk (Rāg Āsā).

This Wār includes slōks. The slōks also were written by the first Guru, and should be sung to the air of Tundā As Rājā.

---

1 As, son of Chitrā, was a holy prince against whom a false charge had been preferred by his lascivious stepmother, which led to his hands and feet being cut off as punishment. One of the many Oriental versions of the story of Potiphar’s Wife.

2 Guru Phulād — See my translation of the Japji for another interpretation of these words.
SLOK I.

Guru Nānak.

I am a sacrifice to my Guru a hundred times a day,
Who without any delay made demi-gods out of men.

Guru Angad.

Were a hundred moons to rise, and a thousand suns to mount the sky,
Even with such light there would be appalling darkness without the Guru.

Guru Nānak.

Nānak, they who very clever in their own estimation think not of the Guru,
Shall be left like spurious sesame in a reaped field.
They shall be left in the field, saith Nānak, without an owner:
The wretches may even bear fruit and flower, but they shall be as ashes within their bodies.

Paurā I.²

God Himself created the world and Himself gave names to things.
He made Mayā by His power; seated He beheld His work with delight.
O Creator, Thou art the Giver; being pleased Thou bestowest and practisest kindness
Thou knowest all things; Thou givest and takest life with a word.³
Seated Thou didst behold Thy work with delight.

SLOK II.

Guru Nānak.

True are Thy regions and true Thy universes;
True Thy worlds and true Thy creation;
True Thine acts and all Thy thoughts;
True Thine order and true Thy court;
True Thy command and true Thy behest;
True Thy favor and true Thy signs.
Hundreds of thousands and millions declare Thee true.
True is all Thy power, true all Thy strength;
True Thy praises, true Thy eulogies;
True Thy might, O true King.
Nānak, true are they who meditate on the True One.
They who die and are born again are the falsest of the false.⁴

Guru Nānak.⁵

Great is His glory whose name is great;
Great is His glory whose justice is true;
Great is His glory whose seat is immovable;
Great is His glory who understandeth our utterances;
Great is His greatness who knoweth all our feelings;
Great is the glory of Him who giveth without consulting others;
Great is the glory of Him who is all in all Himself.
Nānak, his acts cannot be described.
Whatever He did and hath to do all dependeth on His own will.

² The paurās in this collection are all by Bābā Nānak, so in the original his name is omitted at their head.
³ In Sanskrit literature Maya is styled and, without a beginning, hence uncreated, but this is not the doctrine of the Gurus. To believe that God did not create Maya would be to believe in a limitation of His power.
⁴ Kewed — also translated, thou givest and takest life from the body.
⁵ Both is here used as the correlative of such, true.
" In the original — Mahala I. It is so written to mark the distinction between the preceding verses, which are slokas, and the following verses, which are in a different measure.
This world is the True One's chamber; the True One's dwelling is therein.
Some by His order He absorbeth in Himself; others by His order He destroyeth.\(^8\)
Some at His pleasure He withdraweth from mammon; others He causeth to abide therein.
It cannot be even told whom He will regenerate.
Nānak, he to whom God revealeth Himself, is known as holy.

Pauri II.

Nānak, God having created animals recorded their names, and appointed Dharmraj to judge their acts.
At His court the real truth is adjudged; He separateth and removeth those who are attached to mammon.
There the false find no place: they go to hell with blackened faces.
Those who are imbued with Thy name win; the deceivers lose.
God recorded names and appointed Dharmraj to record acts.

Ślok III.

Guru Nānak.

Wonderful Thy word, wonderful Thy knowledge;
Wonderful Thy creatures, wonderful their species;
Wonderful their forms, wonderful their colors;
Wonderful the animals who wander naked;
Wonderful Thy wind; wonderful Thy water;
Wonderful Thy fire which sporteth wondrously;
Wonderful the earth, wonderful the sources of production;
Wonderful the pleasures to which mortals are attached;
Wonderful is meeting, wonderful separation from Thee;
Wonderful is hunger, wonderful repletion;
Wonderful Thy praises, wonderful Thy eulogies;
Wonderful the desert, wonderful the road;
Wonderful Thy nearness, wonderful Thy remoteness;
Wonderful to behold Thee present.
Beholding these astonishing things I remain wondering.
Nānak, those who understand them are supremely fortunate.

Guru Nānak.

By Thy power we see, by Thy power we hear, by Thy power we fear, or enjoy the highest happiness;
By Thy power were made the nether regions and the heavens; by Thy power all creation;
By Thy power were produced the Vědas, the Purāṇas, the Muhammadan books, and by Thy power all compositions;
By Thy power we eat, drink, and clothe ourselves; by Thy power springeth all affection;
By Thy power are the species, genera, and colors of creatures; by Thy power are the animals of the world.\(^9\)
By Thy power are virtues; by Thy power are vices: by Thy power are honor and dishonor;\(^10\)
By Thy power are wind, water, and fire; by Thy power is the earth.\(^11\)

---

\(^8\) By separating from Himself.
\(^9\) Also translated — By Thy power was created animate and inanimate nature.
\(^10\) Also translated — The latter word is for opinna, as so often in the Granth Sahib. Compare with âmraham madd so shiek sañha. He who hath regard for honor or dishonor is not a holy man. (Sir Rāj Guru Arjan, 29; see also Kāshāra Kābīr, 3.)
\(^11\) Dhati khāk. It is probably unnecessary to translate the word khāk.
Every thing existeth by Thy power; Thou art the omnipotent Creator; Thy name is the holiest of the holy.

Saith Nānak, Thou beholdest and pervadest all things subject to Thy command; Thou art altogether unrivalled.

PMURI III.

Man having enjoyed himself becometh asher, and the soul passeth away.

However great and wealthy a man may be, the ministers of death throw a chain on his neck and take him away.

There an account of his acts is read; the Judge on his seat taketh the account and passeth sentence.

Such a man shall find no place of shelter; when he is beaten, who will hear his cries?

Man, blind that thou art, thou hast wasted thy life.

SLÓK IV.

Guru Nának.

In fear the winds and breezes ever blow;
In fear flow hundreds of thousands of rivers;
In fear fire performeth its forced labor;
In fear the earth is pressed by its burden;
In fear Indar moveth headlong; in fear sitteth Dharmraj at God's gate;
In fear is the sun, in fear the moon; they travel millions of miles without arriving at an end;

In fear are the Sidhas, the Budhas, the demigods, and the Nāths; in fear are the stars and the firmament;

In fear are wrestlers, very mighty men and divine heroes;
In fear cargoes of men come and go.

God hath destined fear for every one; Nának, the Formless One, the True, is alone without fear.

Guru Nának.

Nának, the Formless One is without fear; all the Rāmas were dust.

How many stories there are of Kṛishna! how many Vēdas and religious compositions!

How many beggars dance, and fall, and again beat time!

Actors enter the market place and draw forth their appliances;

Kings and queens sing and utter nonsense;

They wear ear-rings worth hundreds of thousands, and necklaces worth hundreds of thousands.

The body on which they are worn, O Nának, shall become ashes.

Divine knowledge is not sought in mere words; to speak concerning it were as hard as iron;

If one be so destined, he obtaineth it; skill and orders are useless therefore.

---

12 The fear of God is, of course, meant.

13 Allāh — from the Sanskrit śādā, The phrase is also translated — In fear is the firmament extended.

14 Literally, God hath written the destiny of fear on the heads of all.

15 Vičhār — see above Slok III., Kudrāt sarb vičhār. Also translated — How many expound the Vēda!

16 Kudrāt hēr — also translated — draw a crowd around them.

17 Bāla ādi pādāl — literally, speak of the upper and lower regions. Ādi pādāl is applied to the language put into the mouths of demons in Sanskrit dramas.

18 Lakh ākādā. Takā is really a double pice, or about a halfpenny of English money, but in the plural it means money in general.
Pauri IV.

If the Kind One look with kindness, then is the true Guru obtained.
The soul hath wandered through many births, and now the true Guru hath communicated the Word.
There is no benefactor so great as the true Guru; hear this, all ye people.
By meeting the true Guru who hath removed pride from his heart, and who preacheth the truest of the true,
The True One is obtained.

Slok V.

Let all the ghars be your milk-maids, and the pahars your Krishna and Gopals.
Let wind, water, and fire be your jewels; and the moon and sun your avatars;
The whole earth your stage properties and vessels, which are all entanglements.
Nanak, those who are derided of divine knowledge are robbed; the minister of death hath devoured them.

Guru Nanak.

The disciples play, the Gurus dance,
Shake their feet, and roll their heads.
Dust dieth and falleth on their hair;
The audience seeing it laugh and go home.
For the sake of food the performers best time,
And dash themselves on the ground.
The milk-maids sing, Krishna sing,
Sitak and royal Rama sing.
Fearless is the Formless One, whose name is true,
And whose creation is the whole world.
The worshipers on whom God bestoweth kindness worship Him;
Pleasant is the night for those who long for Him in their heart.
By the Guru's instruction to his disciples this knowledge is obtained.
That the Kind One saveth those on whom He looketh with favor.
Oil-presses, spinning-wheels, hand-mills, potter's wheels,
Plates, whirlwinds, many and endless,
Tops, churning-staves, countless.
Birds tumble and take no breath.
Men put animals on stakes and swing them round.
O Nanak, the tumblers are innumerable and endless.
In the same way those bound in entanglements are swung round;
Every one danceth according to his own acts—
Those who dance and laugh shall weep on their departure;
They cannot fly or obtain supernatural power.
Dancing and jumping are mental recreations;
Nanak, those who have fear in their hearts have also love.

20 The ghar, a measure of time for which there is no English word, is twenty-two and a half minutes. Three hours make a pahar.
21 Gopāla are herdsmen among whom Krishna used to sport.
22 Jhātā is a woman's head of hair. The actors, who in India are all men, wear female wigs.
23 Bhāt, literally, dowy, when the atmosphere is calm and the heat not excessive.
24 Thali — plates poised on a stick and spun round.
25 Anyth; some explain this to mean buffaloes which tread out corn.
Pauri V.

Thy name is the Formless: by repeating it man goeth not to hell.
The soul and body are all Thine: what Thou givest man eateth: to say ought else were waste of words.
If thou desire thine advantage, do good acts and be lowly.
Even though thou stave off old age, it will come to thee in the disguise of death.
None may remain when his measure is full.

Slok VI.

The Musalmans praise the Shariât, read it, and reflect on it;
But God's servants are they who employ themselves in His service in order to behold Him.
The Hindus praise the Praised One whose appearance and form are incomparable;
They bathe in holy streams, perform idol-worship and adoration, use copious incense of sandal.
Those who are Jôgis meditate on God the Creator, whom they call the Unseen,
Whose form is minute, whose name is the Bright One, and who is the measure of their bodies.
In the minds of the generous contentment is produced in their desire to give.
Others give, but ask a thousand fold more, and still want the world to honor them.
Why mention thieves, adulterers, perjurers, evil and sinful men?
Several depart from here after eating what they had amassed in previous births; shall they have any business whatever in the next world?
The animals which live in the water, dry land, the fourteen worlds, and all creation — What they say Thou alone knowest; for them too Thou carest.
Saith Nânak, the saints hunger to praise Thee; the true Name is their support.
In everlasting joy they abide day and night: may I obtain the dust of the feet of such virtuous men!

Guru Nânak and Shekh Brahm discussed the question of the disposal of the dead.
It is believed the Shekh maintained that a man who was buried would go to hell.

Guru Nânak.
The ashes of the Musalmân fall into the potter's clod;
Vessels and bricks are fashioned from them; they cry out as they burn.
The poor ashes burn and weep, and sparks fly from them.
Nânak, the Creator who made the world, knoweth whether it is better to be burned or buried.

Pauri VI.

Without the true Guru none hath found God; without the true Guru none hath found God.
God hath put Himself into the true guru; He hath made manifest and proclaimed this.
Salvation is ever obtained by meeting the true Guru who hath banished worldly love from within him.
Best are the meditations of him who hath fixed his mind on the True One;
He hath found the Giver of life to the world.

20 Puri — gos is a grain measure.
21 Arch. This word not only means worship, but the idol that is worshiped.
22 Some suppose it to be a noun meaning the lines Hindus draw on the ground to enclose cooking places, within which others are not admitted.
23 Sun, literally, void. Compare the Greek sôllos, hollow, from which the Latin solus, heaven, was obtained.
24 It will be observed here that the jôgis have a different conception of God from the Hindus.
25 And have done nothing meritorious in this birth.
26 This verse is also translated — Several depart from here after spending what they possessed; had they any other business in this world?
27 Ut le jōd, us le pād — The Hindus are burnt, the Musalmans are buried. — Kâbir, Bârsâh, i.
Slōk VII.

In pride man cometh, in pride he departeth;  
In pride is man born, in pride doth he die;  
In pride he giveth, in pride he taketh;  
In pride he earneth, in pride he spendeth;  
In pride man cometh true or false;  
In pride man meditateth evil or good;  
In pride he goeth to hell or heaven;  
In pride he rejoiceth, in pride he mourneth;  
In pride he cometh filthy, in pride he is cleansed;  
In pride man loseth his caste and race;  
In pride is the ignorant, in pride is the clever man;  
In pride one knoweth not the value of deliverance or salvation;  
In pride is mammon and in pride its effect on the heart;  
In pride are animals created.  
When pride is quenched, God's gate is seen.  
Without divine knowledge man worrieth himself by talking.  
Nānāk, the Commander hath thus ordained it;  
As man regardeth God, so God regardeth him.  

Guru Angad.

It is the nature of pride that it produceth pride.  
This pride is a trammel which subjecteth man to repeated transmigration.  
What is the origin of pride, and by what device shall it depart?  
For pride it is ordained that man wander according to his previous acts.  
Pride is a chronic disease, but there is also a medicine for it in the heart.  
If God bestow His grace, man shall avail himself of the guru's instruction;  
Saith Nānāk, hear, O ye men, in this way trouble shall depart.

Paurī VII.

They who have meditated on God as the truest of the true, have done real worship and are contented;  
They have refrained from evil, done good deeds, and practised honesty.  
They have lived on a little corn and water, and burst the entanglements of the world.  
Thou art the great Bestower; ever Thou givest gifts which increase a quarter fold.  
Those who have magnified the great God have found Him.

Slōk VIII.

Men, trees, the banks of sacred streams, clouds, fields,  
Islands, peoples, countries, continents, the universe,  
The sources of production from eggs, cauls, the earth, and perspiration.  
Lakes, mountains, animals — O Nānāk, God knoweth their condition.  
Nānāk, God having created animals taketh care of them all.

---

24 Hānā — literally, egoism.  
25 Also translated:  
(a) Treat men according to their acts.  
(b) Treat others as thou wouldst be treated thyself.  
26 Literally — that it performeth works of pride.  
27 Literally — Have not put their feet into evil.  
28 Compare Guru Angad —  
"Nānāk, chintā mat kārāh; chintā Tāhī kī  
Jaī māh jānī upādāhī; tīnhī bī ḍī jī dī.  
Nānāk, be not anxious; anxiety is for Him  
Who created animals in the water; to them also He giveth their daily food."
The Creator who created the world hath to take thought for it also.
It is the same Creator who made the world who taketh thought for it.
To Him be obeisance, blessings be on Him! His court is imperishable.
Nānak, without the true Name what is a sacrificial mark? what a sacrificial thread?

Guru Nānak.

Man may perform hundreds of thousands of good acts and deeds, hundreds of thousands of approved charities,
Hundreds of thousands of penances at sacred places, sa'haj jāy39 in the wilderness,
Hundreds of thousands of braveries, and part with his life in the conflict of battle;
He may study hundreds of thousands of Vēda and works of divine knowledge and meditation, and read the Purāṇas —
Nānak, these devices would be of no avail; true is the mark of destiny.40
The Creator who made the world hath decreed transmigration.

Paūrī VIII.

Thou alone art the true Lord who hast diffused the real truth.
He to whom Thou givest obtaineth truth, and he then practiseth it.
Man obtaineth truth on meeting the true guru in whose heart the truth dwelleth.
The fool knoweth not truth, and hath wasted his life by obstinacy.
Why hath he come into the world?

Ślok IX.

Guru Nānak.

A man may load carts with books; he may load men with books to take with him;
Books may be put on boats, and pits be filled with them.
A man may read books for months, he may read them for years;
He may read them for life, he may read them while he has breath —
Nānak, only one word, God's name, would be of account; all else would be the senseless discussion of pride.

Guru Nānak.

The more one readeth and writeth, the more he is tormented;
The more one wandereth on pilgrimages, the more he babbleth;
The more religious garbs man weareth, the more discomfort he causeth his body.
Bear, O my soul, the result of thine own acts.
He who eateth not corn41 hath lost the relish of life.
Men suffer much pain through their attachment to mammon.
Those who wear not clothes suffer terribly day and night.
Man ruineth himself by perpetual silence; how can he who sleepeth in ignorance be awaked without a Guru.
Even though man go bare-footed, he must still suffer for his own acts;42
If a man eat filth, and put ahses on his head,
The blind fool loseth respect; without the Name he obtaineth no abiding place.
The ignorant man who dwelleth in the wilderness and at burial and cremation grounds,43 knoweth not God and shall afterwards repent.

39 Sa’haj jāy, in contradistinction to the h’th jāy of the Aphorisms of Patanjali, means keeping the mind fixed on God. See Manni Singh's Life of Guru Nanak.
40 Karm—also translated—God's grace.
41 Several fakirs do not eat corn, some go naked, some practise perpetual silence, some go barefooted, some eat filth, etc., etc.
42 The Gvānās generally translate—If a man go bare-footed, he is merely suffering for his sins. The word upetōna is derived from upōndi shoes, and ṭyānd to leave off.
43 Mūrta is where a saintly Hindu’s body or ahses repose; maṇḍa is a cremation ground.
He who meeteth the true Guru and fixeth God's name in his heart, obtaineth comfort.
Nānak, he on whom God looketh with favor obtaineth Him.
He becometh free from hopes and fears, and destroyeth his pride by means of the Word.

Paurī IX.

The saints, O Lord, please Thy heart, adorn Thy gate, and hymn Thy praises.
Nānak, they who are outside Thy favor, find no entrance and wander in many births.
Some know not their origin, and have an inordinate opinion of themselves.
I am a singer of low caste; others call themselves of high caste.
I only beg of those who meditate on Thee.44

Sākū X.

Guru Nānak.

False are kings, false their subjects, false the whole world;
False are mansions, false palaces, false those who dwell therein;
False is gold; false silver; false he who weareth them;
False the body; false raiment; false peerless beauty;
False husbands; false wives; they pine and waste away.
Man who is false, loveth what is false, and forgetteth the Creator.
With whom contract friendship? Tis whole world passeth away.
False is sweetness; false honey; in falsehood shiploads are drowned.
Nānak uttereth supplication—except Thee, O God, everything is thoroughly false.

Guru Nānak.

Man is then known as true when truth is in his heart;
When the filth of falsehood departeth, man washeth his body clean.
Man is then known as true when he beareth love to the True One;
When man heareth the name and restraineth his mind,45 he shall then attain the door of salvation.

Man shall then be known as true when he knoweth the true way;
Having prepared the field of the body, put into it the seed of the Creator.
Man shall then be known as true when he receiveth true instruction;
Let man know mercy to living things and perform some works of charity.
Man shall then be known as true, when he dwelleth in the pilgrimage of his heart;
Let man after inquiry from the true guru rest and abide in his own heart;
Truth is the medicine for all; it removeth and washeth away sin.
Nānak maketh supplication to those who are in possession of truth.

Paurī X.

Be mine the gift of the dust of the saints' feet: if I obtain it, I shall apply it to my forehead.
Forsake false covetousness; concentrating thy mind meditate on the Unseen One.
Thou shalt obtain a reward in proportion to what thou hast done.
If it have been so allotted from the beginning, man shall obtain the dust of the saints' feet.
Ruin not thyself with scant service.46

---

44 Also translated — I beg for a sight of those who meditate on Thee.
45 Nām sun man rāhiāt — also translated — when one's mind becometh happy after hearing the Name.
46 Compare — Ochā bhakti kaise uttarase pari? How shall he of scant service be saved? — Gaurī Kali, 15.
Slok XI.

Guru Nãnak.

There is a dearth of truth; falsehood prevails; the blackness of this age maketh men demons.

Those who have sown the seed have departed with honor; how can half seed germinate? If the seed be whole, it will germinate in the proper season.

Nãnak, unbleached cloth cannot be dyed without a base.

If the body be put into the vat of fear, modesty be made its base, and it be dyed with devotion, O Nãnak, there will not be a trace of falsehood in it.

Guru Nãnak.

Greed and sin are ruler and village accountant; falsehood is master of the mint.

Lust, his minister, summoneth and examineth men, and sitteth in judgment on them.

The subjects are blind and without wisdom, and satisfy the judge's greed with bribes. Gyãns dance, play musical instruments, disguise, and decorate themselves; They shout aloud, sing of battles, and heroes' praises.

Fools call themselves pandits and with tricks and cavilling love to amass wealth. Pretended religious men spoil their religious acts, and yet want the door of salvation; They call themselves continent, and leave their houses and homes, yet they know not the way.

Every one is perfect to himself; no one admittest himself wanting.

If the weight of honor be put into the scale, then, Nãnak, man shall appear properly weighed.

Guru Nãnak.

Man's evil becometh known, O Nãnak; the True One seeth all.

Every one maketh endeavors, but it is only what the Creator doeth that taketh place.

Caste hath no power in the next world: there is a new order of beings.

Those whose accounts are honored are the good.

Paarî XI.

Those whom Thou didst so destine from the beginning meditate on Thee, O Lord.

There is nothing in the power of creatures; O God, it is Thou who hast created the different worlds.

Some Thou blendest with Thyself; others Thou leadest astray from Thee.

Thou art known by the favor of the guru, through whom Thou revealest Thyself. Those who know Thee are easily absorbed in the True One.

Slok XII.

Guru Nãnak.

Pain is medicine, worldly pleasure is a disease; where there is such pleasure, there is no desire for God.

Thou art the Deer, I do nothing; if I try to do anything, it cometh to nothing. I am a sacrifice unto Thee; Thou abidest in Thine omnipotence.

Thine end-cannot be seen.

Thy light pervadeth creatures; creatures are contained in Thy light; Thou fillest inanimate and animate creation.

Thou art the true Lord; beautiful is Thy praise; he who uttereth it is saved.

Nãnak uttereth the words of the Creator; what is to be done God continueth to do.

47 Unacht Kûkâ. The Kûkâs, a sect of Sikhs, translate this — The Kûkâs are exalted.

48 Swacchâ — so wachâ, it shall be known.

49 Akâl kâl — also translated — Thy power (kâl) is inconceivable (a not, and kadû na know). The words, however, present great difficulty, and no two are agree as to their interpretation.
Guru Angad.

The Jógis deem it their duty to acquire divine knowledge, the Bráhmans to read the Véds,
The Khatria to exercise bravery, the Súdras to work for others;
But the highest duty of all is to repeat the name of the one God.\textsuperscript{49}
He who knoweth the secret of this
Is a bright God himself, and Nának is his slave.

Guru Angad.

There is one God, the God of all gods, the Supreme God of souls.
He who knoweth the secret of the soul and of God,
Is a bright God himself, and Nának is his slave.

Guru Nának.

Water remaineth if confined in a vessel; \textit{but} it cannot remain without a vessel.\textsuperscript{51}
The mind controlled by divine knowledge is restrained; \textit{but} without a Guru there can be
no divine knowledge.

Pauri XII.

If the literate and the illiterate are vicious, the latter are not punished.
As man acteth so shall he be described.
Play not such a game as shall bring thee defeat on arriving at God's court.
The literate and the illiterate shall be judged hereafter;
The obstinate shall be punished in the next world.

(To be continued.)

---

SONGS SUNG BY THE LAMBADIS.

BY F. FAWCETT.

The Lambadís, Brinjáris, or Sugális, as they are variously called in the Madras Presidency,
are well known and need no introduction to the readers of this Journal. It cannot, however, be said
that much is known about them racially, and it has not yet been determined whether they, the Indian
gipsies, are identical with the gipsies of Europe. Here are some of their songs. The translations
given are free renderings, as I experienced difficulty in arriving at a reasonably correct rendering
of the songs, since there occur words in them of which no one can explain the meaning. Some of
the songs themselves and many of the words are not in the least understood by the singers.

The following six Songs now given were taken down by Mr. P. Rama Rao from the mouths of five
women of the Lambáḍi taudás encamped at Ráṭibhávi Vanká, Rayadúrg Taluk, Bellary District,
during 1900. Their names were: Chávalli, aged 50; Lachhmí, aged 40; Gojí, aged 25; Míká,
aged 20; Rámki, aged 30.

Song No. I.

Rámá bi chelé Lachumaná bi chelé sōb cheleñhár,
Jammakh khéló rágo ranajhade Rájá !
Máró maragala namar Sítáñó bovi kevádó,
Rágo ranajhade rájá !

\textsuperscript{49} Also translated — The Jógis speak of divine knowledge, the Bráhmans of the Vedas;
The Khatria of bravery, the Súdras of working for others.
All that they speak is concerning the one God.

\textsuperscript{51} Water cannot remain without a vessel. Compare — kumbr bíndai us tábódí. — \textit{Gauri Kabír}. 
Translation.

Rāma is gone, Lachhmana (his brother) is gone, all are doomed to go (i.e., die).
Let us therefore play the jolly play of a Rājā!

He chased and beat an illusory antelope, but the animal did not die. He chased the buck for Sitā (his wife) who was fragrant with the sweet smell of the snake-flower.
Let us therefore play the jolly play of a Rājā!

Note. — This song relates to a well known incident in the Rāmāyana. Rāma, Sitā and Lachhmana saw in the forest what appeared to be a golden antelope. Sitā wished for it, and Rāma chased it. Lachhmana followed him, and before the brothers returned, Rāvana king of the Rākshasas, abducted Sitā.

Song No. II.

Āsē dappē válēkē lambī lambī phōtī ! vorē kaniyan dékān. Dab chālēdē.
Āsē dappē válēkē tāngma tōdā ! tārē thōdana dékān válēmē rasiyā. Bhūē! Bhāyērē!
Āsē dappē válēkē hátēmē kārādā ! āsē koradāmē délāvālēmē rasiyā. Dab chālēdē.
Āsē dappē válēkē kādimā kanajjōrū ! vuna délā válēmē rasiyā. Dab chālēdē.

Translation.

The loin-cloth of a rich man is too long, seeing his earring [beat drum];
On the legs of a rich man there are silver chains, seeing which I am enamoured, [spoken]
Bhūē! Bhāyērē!
On the wrists of a rich man there are silver bracelets, seeing which I am enamoured; beat drum and let us play.
On the waist of a rich man there is a silver thread, seeing which I am enamoured; beat drum and let us play.

Song No. III.

Abdu yūlārē Malān ! Abdu yūlārē chōgān (chorus)
Sājibare ghīru munang ghammaru ghāl ! Vōrē māljiva khādnhār (chorus).
Mēlā hindōlōghal | mārjāre ghare mēlā hindōlōghal (chorus).

Translation.

Gaurī says to her father: “Abdu father, in this place (here is) open ground.”
In front of His (God’s) house, let us meditate or praise Him; drive back His herd of cattle.

On the upstairs of Mahārājā’s [house — palace] they have a swinging cradle.

-Song No. IV.

Bāgemā ghōujōlo mōlālē. Titārājā,
Bāgemā kanadhōro mōlālē. Titārājā,
Bāgemā sonerī bāgemā hasalō mōlālē. Titārājā,
Bāgemā kōldā mōlā. kadañhāri Rājā,
Bāgemā mungā mōlā, kadañhāri Rājā, sonerī.

Translation.

“O Titārājā, purchase horses in the jungles,
Purchase them with the silver waist thread on your waist;
Purchase them with the gold necklace round your neck,
Purcahse them, oh truth-speaking Rājā, with the silver bangles on your arms,
Purchase them with that coral wreath round your neck.”

1 This is considered one of the sacred services to God.
Note. — This is explained thus by the Lambaḍis: — Titārāja, a Lambaḍ Mahāṭma (!) went to the forest to find his horses, and was killed by a tiger near Annigere in Mysore. His wife, by a species of second sight, knew of his fate and with her kinsfolk went to the place, where they found his bones. These she collected, made a fire and threw herself into it. She sang this song before she died. It is intended to be in praise of her husband.

**Song No. V.**

Sudā savāye Bhaktu pēri | kācē kērō divālō | karpūra keri artimā | mēka mēlēṛi artimā | pavanepaṇi artimā | chānde sūrtāri artimā | jami māthā artimā.

**Translation.**

O thou beautiful Goddess! I thy devoted worshipper, approach thee with a camphor-lighted ḥaliḍharthi, and I worship thee with it; I request thee to pour down rain; I worship thee with clear water. I worship the sun and the moon and the Mother Earth.

Note. — A prayer to the Goddess Dārgā.

**Song No. VI.**

Āndhadiyā Upabhāvāni tāre dārē | gāḍapār nābaththu vājē.  
Āndhadiyā aki sadār Bhāvāni tāre dārē | gāḍapār nābaththu vājē.  
Vānjuva Vupabhāvāni tāre dārē | varī grind sadārō Bhāvāni tāre dārē | gāḍapār nābaththu vājē.  
Kūbādiyā Upabhāvāni tāre dārē | gāḍapār nābaththu vājē.

**Translation.**

O Bhāvāni! a blind man is at your door in your presence. So I beat the drum in your name.

Cure the eyes of your blind devotee, O Bhāvāni! So I beat the drum in your name.

There is a barren woman standing in your presence, O Bhāvāni! Make her carry a child and stand in your presence, O Bhāvāni! So I beat the drum in your name.

There is a hump-backed crooked person in your presence, O Bhāvāni! So I beat the drum in your name.

Note. — Prayer to the Goddess Bhāvāni.

SOME BURMESE EXPRESSIONS AT PORT BLAIR.

The Burmese convicts at Port Blair, of whom there are some two thousand, have made up names for themselves out of their own language, more suo, for various places and matters they have to deal with. E.g., Set-kyun, Machinery Island, stands for Chatham Island, where the Sawmills are. Mingyi-kyun, Commissioner's Island, stands for Ross Island, where Government House and the Head-quarters are. Pá-ta-gaung, One-frog, is a rather ingenuous translation, or perhaps transcription, of the real name of the place, Pahárgáon, Hill-village. Also for some occult reason of sound and recollection, Phoenix Bay is called by the Burmans Myánmlipé, which in their own country does duty for the to them outlandish word and institution, Municipality. Aberdeen has beaten them as a word and is known as Baládín. So also has a daily expression in Port Blair. borrowed from the Indian Courts' jargon: Mushaqattí, a labouring convict, which they call màskàtì.

R. C. TEMPLE.
PAPAYA.

Here are some interesting additions to Yule's description of the uncertain word. Yule calls it American, but the American Century Dictionary calls it Malabar! Yule also calls it an "insipid, not to say nasty, fruit." With this description, as one for many years well acquainted with it, I must beg to entirely differ. It is to my taste most palatable, when ripe, to eat raw; it makes a first rate after-dinner dish when cooked with sugar, and a most welcome vegetable in the tropics when served up cooked whilst unripe—a good substitute then for marrows. Yule remarks on the spelling poppa (άπα) of Sir Lewis Pelly. This is merely Anglo-Madras: in the Madras Presidency, as long as I can remember, it is known as poppy and usually spelt in accounts and letters and so on. By Natives of North India working in the South it is usually, by a natural confusion or analogy, called wrongly papita.

1893. Papaw. Papaya, Mahr.; poppaw, Cone[anji]; poppaw, Hind.; poppaw, Tel.; poppaw, Malay; poppaw, Bopaysi, Too[oo]; popei, Tel.; poppawam, Mallayalam; popo, Singh[alessi]; poppawa, Tam[ili]. Title from Malay. Title otherwise Foreign castor, Melon tree, Papaw mango, Papaya.

Wild papaw [quite another tree].

1899. Papaw Papaya, a name of Malabar origin also written pawpaw. Century Dict., Times Ed., s. v.

1900. The pawpaw is found throughout a great part of Nigeria. Robinson, Nigeria, p. 8 f.

R. C. Temple.

CORRUPTIONS OF ENGLISH AT PORT BLAIR.

Kanbales stands for "convalescent," i. e., a man in a "convalescent gang" of convicts.

Dirmat is, longo intervallo, a form of "Department," and always means in Port Blair the Forest Department.

But "orchid" has been too much for the Forest Department convicts, and they have rather ingeniously translated the word by hawa pattti, air-leaf.

R. C. Temple.

THE BRACES.

c. 1669-1679. This river is so named from ye great towne of Hugli Scituated upon ye banks of it near 350 miles from ye Braces or shoals that lye at ye Entrance thereof. T. B., Asia, etc., MS., fol. 74.

1676. 5th Sept. This night we sailed over ye Sands called the Braces, having never lesse than three sathoms water, and a Swelling Sea. Streynsham Master, Journal, in Yule, Hedges' Diary, Vol. II. p. 292.

1678. 3rd (Dec) Sunday: Wee lay upon the Sands called the Braces all this day, having small wind and very smooth sea. Op. cit. p. 237.

1678. Might with more care goe over the Braces and come up Hugley River then they can goe out of the Downes into the River of London. Walter Clavel in op. cit. p. 239.

1685. January 8. This morning by break of day we weighed Anchor and by 12 at noon came to an anchor upon ye edge or Entrance on ye Westwardmost Branch. At slack water we weighed and stood down between the two Branches. Here we mett with George Herron ye Company's Chief Pliott who came on board and carried us over ye Braces, for which I presented him with 50. Yule, Hedges' Diary, Vol. I. p. 175 f.

1746. A New and Correct Chart, showing the sands, shoals, mudbanks with the going over the Braces from Point Palmyra to Calcutta in the River Hugely In the Bay of Bengal. Title of the English Pilot for that year. Op. cit. Vol. III. p. 205.

1780. The Braces, Sea-reef, Sagar and other sands, eastward of Point Palmyra in the channel between the Braces. Dunn, Directory, p. 207.

1883. Eastern Branch Western Brace. Aden Valley Chart.

1888. Brace an arm; esp. an "arm" of the sea or other large body of water. Brace of Saint George the two arms, esp. the width of the two arms. Oxford English Dict.

Whoevver was responsible for the name of The Braces had no doubt in his mind the former or latter fundamental sense of the word "brace," when he so named the once dreaded and famous arms or spits of sand that run out to the sea from the Hugli River. But it is a pity that this particular sense of the word has missed the astonishing minute investigation of the compilers of the great Oxford Dictionary.
BOOK-NOTICE.

PROFESSOR PISCHEL'S PRAKRIT GRAMMAR. 1

This is a work which it is difficult to review for no one knows the subject of which it treats so thoroughly as does the author. In Prakrit we are all Professor Pischel's pupils, and we are too well aware what a store of learning lies behind each sentence that he has written to permit ourselves to lightly differ from him. Indiscriminate praise in such a case is the only safe course, and I should be tempted to adopt it myself did I not know that this is just what he would least desire. Praise it deserves, — the highest praise, — and if in a few minor points I appear to press views which are not in accordance with those advanced by him, I must begin by expressing my admiration for a book which is one solid mass of thousands of arranged and coordinated facts, now for the first time brought together and digested into a whole with extraordinary skill and clearness.

It is divided into three parts, an Introduction (pp. 1-47), Phonetics (47-241), and Accidence (241-657). It is well supplied with Indexes and full list of Authorities. Regarding Phonetics and Accidence I do not propose to make any remarks. Each of these sections is a wonderful piece of work. Every form of every known dialect which occurs in literature is discussed and accounted for. Only one book of importance (which, however, was published after the grammar appeared), the Kumāra-pāla-charita, seems to have escaped the author's net. For the purposes of reference these portions are therefore as complete as can be. Lassen's great work (though much of it has been out of date for many years) is now finally superseded.

The Introduction is naturally the more generally interesting part of the book. The author first defines what he includes under the term 'Prakrit.' He confines himself to the literary forms of speech, and (by the plan of the series of which the work forms one of the sections) is compelled to abstain from the consideration of the monumental Prakrits, or as he names them the Lena dialect.

For my part, I must express my regret at this omission, and it seems to me a pity that the framework of the Grundriiss could not have been stretched so as to include this language in the present volume. He next gives the various native interpretations of the name 'Prakrit,' the most usual being that the group of dialects is so called because their prakriti or basis is Sanskrit, but does not discuss the question himself, which, however, can hardly be considered of importance.

This is followed by the various lists of Prakrit dialects given by the grammarians, in connexion with which the author explains the correct meaning of the term 'Apabhramśa,' and briefly discusses the connexion of the various Apabhramśas with the modern languages of India. Finally he gives a general account of each Prakrit dialect and of the materials which are available for its study, concluding with a full account of all the known Prakrit grammars compiled by native authors.

Stress is laid on the undoubted fact, hitherto often ignored, that these Prakrit dialects, Sauraseni, Magadhi, and so forth, (though founded on real spoken vernaculars) are artificial products, in so much as they have been altered in important particulars, by those who used them to adapt them for literary purposes. They cannot be considered as representing the actual speech of the people at any epoch, though they are based upon it. Can we go nearer the source? The answer is in the affirmative. We have the Apabhramśa; there wasa Sūrásena Apabhramśa, a Maharāshtra Apabhramśa, a Magadha Apabhramśa, and so on. Each of them was originally the popular speech of the country with whose name it was connected, and is the mother of the modern language of the same tract. It is hardly necessary to say that none of them is a corruption of the corresponding literary Prakrit. Sūrāsenā Apabhramśa was not a corruption of Sauraseni Prakrit, as its name appears to imply, — the reverse would more nearly represent the truth. But these Apabhramśas themselves, when they in their turn could not have been derived from Sanskrit, or based on it. It is of course possible that the word is a paśupit's connection based on a false theory, but that has yet to be proved. To me it seems that the two words prāk-śrit and sahā-s-śrit should be considered as a mutually correlated pair. Each depends on the other. Possibly the best explanation is that prāk-śrit means 'simple,' 'that which grows of itself,' 'unartificial,' in contradistinction to sahā-s-śrit, 'polished,' 'artificial.' This closely agrees with Nāmidinā's interpretation of prākṛita, quoted on p. 14 of the work under review, and also appears to be the opinion of Professor Pischel (p. 32).
became used for literary composition (and of course it is only in literary compositions that they have survived), were subjected to the same process of regularisation as the Prākṛita proper, and hence, though the language of these works is immeasurably nearer the spoken vernaculars of the time than they, we are hardly justified in accepting any of them as a well of contemporary folk-speech undefiled.

Here a small point arises on which I am compelled to differ from Prof. Pischel. On p. 4 he states in so many words that modern Marāṭhī is derived from Māharāṣṭra Apabhramśa, and on p. 2 he speaks of undoubted points of connexion between Māharāṣṭra Prākṛit and the modern languages of Māharāṣṭra. It is thus evident that he considers that there is a close connexion between Māharāṣṭra Apabhramśa and Māharāṣṭra Prākṛit. Again, on p. 25, he equally decisively states that between the modern Māgadhi dialect of Bihār and the Māgadhi Prākṛit there is no connexion. I mention these two statements together to show that he lays no stress on community of name. If he denies the connexion between ancient and modern Māgadhi although their names are identical, he cannot say that Māharāṣṭra and Marāṭhī are connected because their names are identical. Nor does he. For proof of the identity of the two last-named languages, he refers to the well-known review of Weber's edition of Hāla which appeared from the pen of Garrez in the Journal Asiatique for 1872. Now that article was written nearly thirty years ago, and our knowledge of the Indian vernaculars has made great strides since then. I am convinced that Garrez would use very different language at the present day if he were alive. In the article referred to he gives a number of reasons which then appeared to him to be sufficient to show that Marāṭhī is derived from Māharāṣṭra Prākṛit. I take the most important of them:

1. Marāṭhī has a Gerundive in ē, corresponding to the Māharāṣṭra ēn. True, but the same suffix appears in Orijā (cf. jā-una, having gone), which is certainly not derived from Māharāṣṭra.

2. Marāṭhī has a feminine form of the Demonstrative and Relative Pronouns. True, but so have Jaïpurī and Māhrāwārī.

3. Marāṭhī has the emphatic termination ēk, corresponding to the Māharāṣṭra cāta. True,—but so has Ohättigarghī spoken on the other side of India.

Finally, Garrez quoted a number of words which are, he said, peculiar to Marāṭhī and Māharāṣṭra. It may or may not be true that they are peculiar to Māharāṣṭra, but it is certainly not true that they are peculiar to Marāṭhī. All that is true is that Marāṭhī has a good dictionary, while other Indian vernaculars have not. It is unnecessary to go into details.

It hence follows that the proof of the affiliation of Marāṭhī to Māharāṣṭra Prākṛit, which Garrez attempted, has broken down in every particular. Are we then to assume that Marāṭhī is not so descended? I do not say that. I only maintain that it is not proved that it is, nor can it be definitely proved, so far as I am aware, that any particular Prākṛit has any greater claim to be its progenitor than another.

While not venturing to give a decided opinion on this question, I may point out one or two facts which may at some future time help to solve the problem. It has been urged by some, including Hoernle, and others of less authority, that the word Māharāṣṭra does not necessarily mean the Prākṛit of Māharāṣṭra. But Māharāṣṭra Apabhramśa must mean that, and hence it may have nothing to do with Māharāṣṭra Prākṛit. The two words may have no more connexion than the external form common to the two names. Māharāṣṭra appears to have meant Vidarbha,—the Berars. At the present day the language of the Berars is a provincial form of Marāṭhī, and, if Māharāṣṭra Apabhramśa had a recognised literary counterpart, it would probably be what the grammarians called 'Vaidarbhi' or 'Dākhamāgadhī,' about which we know hardly anything at all, except that Rāmatarkavāgghā appears to group it with Māgadhī and Ardhamāgadhī, while Prof. Pischel is inclined to connect it with Sanskrit. No one, so far as I know, has ever traced any relationship between it and Māharāṣṭra Prākṛit.

Whether Marāṭhī is connected with Māharāṣṭra Prākṛit or not, it cannot be seriously argued that it is not derived from Māharāṣṭra Apabhramśa. It itself possesses two important points of differentiation. Its past participle ends in 1 in this agreeing with the eastern languages of Māharāṣṭra.'

Lassen, p. 21.

I take this opportunity of stating that I have long ago abandoned the theory that this i is derived from the Sanskrit in through ēn.
India (Bihārī, Oriya, Bengali, and Assamese), and the oblique form of its strong nouns ends in े, not े, in this agreeing with the dha of Māgadhī Prakrit, with the modern eastern languages, and also with those of Rajputana and Gujarāt, but altogether disagreeing with Māhārāṣṭrī Prakrit. These facts do not prove anything; there are too few of them; but at any rate they altogether fail to show any connexion between the last named Prakrit and Marāṭhī.

We next come to Prof. Pischel's statement that there is no connexion between the Māgadhī dialect of Bihārī (or, as it is more usually called, Magahi) and Māgadhī Prakrit. On the page preceding this statement he gives it as his opinion that 'Māgadhī' Prakrit was not a uniform speech, but included all those Prakrit dialects which had ya instead of ja, ra for ra, sa for sa, and in which the nominative of nouns in -a ended in -a. Now, except the first, all these peculiarities are typical of the modern languages of Eastern India, including Bihārī (of which Magahi is a dialect), some in one and some in another. Let us take them in order.

The change of ra to la is common in Bihārī, especially in Magahi. For instance, in my old district of Gaya, in the heart of Magadh, the town of Lakhmanapura is nowadays called Lakhnau or Nakhbānlī.

In Bengali, a language closely connected with Bihārī, every sa is pronounced as sa. Bihārī, which is the most western of the eastern group of languages, and whose speakers are politically connected with Audh and not with Bengal, has abandoned the old pronunciation of this letter, and has taken to sa. This letter is now a literal shibboleth between the nationalities of Bengali and Hindoostānī, with the latter of whom the Bihārīs have thrown in their lot. But that the old pronunciation was sa is clearly shown by the fact that in writing the national character every Bihārī without exception writes sa instead of the sa which he pronounces. Thus, he says mēs, a mouth, but writes mā (माः).

In old Bengali, and Bihārī the nominative of -a bases ended in -a. An example occurs in the very first line of my edition of the poems of Vidyāpati, where we have śūnād for śūnānī, bathing. In the west we should have had śūnāī.

There are other typical peculiarities of Māgadhī Prakrit which are also found in the eastern Indiāryan vernaculars. The genitive singular in Māgadhī Prakrit ended in dha. In all the dialects of eastern India (including Magahi) its representative, the oblique form, ends in े, not in े as in western Hindoostān. In Māgadhī Prakrit त्वा becomes ७ा. I have more than once pointed out that in wild parts of Gaya I have heard the uneducated use the form pūṣṇa instead of pūṭi, a lease. Finally (to take one of many possible instances in vocabulary), with the Māgadhī Prakrit word केसिता (केसिता), lukewarm, quoted by Prof. Pischel as a typical Māgadhī Prakrit word, we may compare the universal Bihārī word usā, parboiled.

For these reasons I must hold (in spite of Prof. Pischel's great authority) that Māgadhī Prakrit has undoubted points of connexion with the modern language of the country of Magadh, — Bihārī.

I am thus bold enough to state a difference of opinion from him on two points. I hold as not proved the connexion of Māhārāṣṭrī Prakrit with Marāṭhī, and I hold as proved the connexion of Māgadhī Prakrit with Magahi. As to Māhārāṣṭrī Prakrit, I don't believe there ever was such a language, or anything approaching it, spoken anywhere. I don't believe such 'emasculated stuff' could ever have been made the vehicle of oral communication. It was chiefly used for song writing. It was about as intelligible as the language of the modern half-taught tenor of a country drawing-room, of whom we say 'he has such a nice voice, but it is a pity he sings so indistinctly.' This indistinct enunciation is carried to an extreme by Indian singers of the present day. I once sat beside one of the great noblemen of Bihār, a man highly educated and learned in all the accomplishments of an oriental gentleman. A local play was being performed, interspersed with songs in the local dialect, his mother tongue. In vain I tried to follow the words of the singer (a famous Lucknow dēsā). When one of the songs was finished I turned to my host and asked him if he could understand a word of what she had been rendering. 'Of course not,' was the reply given in all simplicity and honesty. He never imagined that he was expected to understand it. So it must have been with Māhārāṣṭrī. It represents an attempt, and a very successful attempt, to record the sounds as they issued from a professional singer's lips. As a language, its only real peculiarity, which differentiated it from Prakrits which were founded on real vernaculars, was the almost total absence of differentiating points. After all, the basis of every phonetic system is its consonants. By their consonants

---

* The nominative in modern Bengali also sometimes ends in े, but this has an altogether different origin.

* Cf. Bihār Peasant Life, sec. 963.
we distinguish Hēmchandra's Apabhramśa from Saurāṣṭrī and Sauraśāṇī from Māgadhī. Mārāśātrī cuts the knot, and reduces itself to a dead level with reference to all dialects, by dropping nearly all its consonantal framework. The native writers, it is true, point out a few grammatical peculiarities, but I have shown above that those which Garcez selected as the most typical ones, cannot (if the testimony of the modern vernaculars is to be received) have all been confined to any one locality in India.

I have already exceeded my limits, and must content myself with a few brief remarks on one other point of interest. I would draw special attention to Prof. Pischel's remarks on Paisāchī. I have long doubted the correctness of the usual theory that we must look for this dialect in the neighbourhood of the Vindhyā range, and am glad to see that he considers that its home is to be found in the north-west of India. May I add a few facts which, at least, do not run counter to this theory? The great Paisāchī work was of course the Brihat-kathā. This collection of stories has obtained its fame through translations made in Kāśmir. The traditions preserved in the Miśāmata purāṇa show that the popular belief was that the aboriginal inhabitants of Kāśmir were Paisāchī. They were almost certainly non-Aryan. The distinguishing characteristic of Paisāchī was its mispronunciation of the Prākrit on which it was founded. In one form of it, the Chīhā-Paisāchī, this mispronunciation consisted in uttering the medial sonant letters as if they were tenues. At the present day the lower orders of Kāśmir when borrowing a word foreign to their Kāśmiri language are apt to mispronounce it in exactly the same way. My head-boatman there used to call my horse's bridle the lākam (Persian lūdam), and even the grammar gives Kāsmīri bāpat as the equivalent of the Arabic bābat. All this is consistent with Paisāchī being, in the main, a Prākrit as mispronounced by a north-western Āryan or non-Āryan people, whose true vernacular was some other language. An interesting parallel to Paisāchī, if considered from this point of view, will be found in the works of a non-Indian dramatist,—Shakespeare. The broken English spoken by his Welshmen follows this rule of Paisāchī Prākrit.

Possibly Prof. Pischel will have excellent rejoinders to much of what I have written in the preceding pages. I should not have raised the questions had I not hoped that a truer idea of the whole case can be gained from looking at both sides of the shield. His point of view is the natural and proper one, and he is standing on ground which he has made peculiarly his own. If I have humbly gazed up at it from the lower level of the modern vernaculars, it is possible that I may have caught lights and shadows which have not presented themselves to his eye. I have touched on a few minor points, and in doing so, I have not concealed the admiration which I feel for this epoch-making work. In conclusion I would express the hope that it will soon be translated into English, and thus be made available to native scholars in India.

I ask permission to add a brief note on a point not touched upon by Prof. Pischel, but which has often elicited wondering comment from other writers. More than once I have seen amazement expressed at the polyglot nature of an Indian drama. In a single scene there may be half a dozen people on the stage at the same time, all speaking different languages, and yet all mutually understanding each other. It is closely paralleled by what we experience at an Oriental Congress, though perhaps we are not all so mutually intelligible at these séances as we pretend. But we need not leave India, for India is unchanging, and the Sanskrit stage only accurately represented the ordinary state of affairs in an Indian nobleman's house both then and at the present day. In such a residence in Bengal we find Oriya-speaking pdikibears, Bhojpuri-speaking daradas, and house-bearers talking Awadhi of Faizābād. Some of the ayees are Dusādhs from Tirhut, speaking Maithili, and others are Ahir-speaking Chamars from the neighbourhood of Delhi. The head of the family may have an upapatan, whose ordinary language is the pure Bāgmati Urdu of Lucknow, but who drops into slum-abuse when she is angry. The gentleman I have in my mind uses high-flown literary Bengali in his own house when I visit him, but on other occasions speaks the colloquial Bengali which is as different from the standard as Saraṇā is from Sanskrit. His wife comes from Birbhum, a hundred miles away, and speaks the curious woman's bōl of that district. His man of business comes from Eastern Bengal, and talks Dākhi, while a couple of boatmen from Chittagong speak Chattachyā. Here we have thirteen distinct dialects (four of them, Oriya, Bihārī, Urdu, and Bengali, distinct languages) all spoken in the same house. Intercommunication is perfectly free, yet every one uses his own home-vernacular, and is understood by everyone else. Rarely do we hear a man speaking the language of the person he is addressing. Once or twice I have heard an up-country constable trying to speak Bengali, and the only possible comparison is the classic one of the Mṛcjchhaṭṭikā about a woman trying to speak Sanskrit.
THE ASA DI WAR, A MORNING PRAYER OF THE SIKHS.

BY M. MACAULIFFE.

(Concluded from p. 547.)

Slok XIII.

Guru Nânak.

Nânak, this body of ours hath one carriage and one driver.
They are both changed in every age: the holy man knoweth this.
In the Sat age contentment was the carriage, piety the driver in front;
In the Treta age continence was the carriage, strength the driver in front;
In the Dwâpar age penance was the carriage, truth the driver in front;
In the Kal age passion is the carriage, falsehood the driver in front.

Guru Nânak.

The Shâma Ved saith that the Lord is white-robed, that men desired truth, abode in truth, and that every one was absorbed in truth.
The Rig saith that God's name is everywhere contained, that it is as the sun in heaven;
That by repeating it sins depart,
And that then, Nânak, man obtaineth salvation.
The Yajur states that Kan Krishpa, who was a Yâda, seduced Chandrâwal;
That he brought the tree of life for a milkmaid, and amused himself in Bindrâban.
The Atharva be gatheth to the Kal age, when God's name was called Allah.
Men then wore blue clothes, and the Turks and Pathânns exercised sway.
The four Vedas are true so far, if they are read and studied with great attention;
But when man hath love and devotion and is himself lowly, it is then, O Nânak, he obtaineth salvation.

Pauri XIII.

I am a sacrifice to the true Guru by meeting whom the Lord is remembered,
Who gave me the salve of divine instruction; with these eyes I then beheld God in the world.
The dealers who leave the Lord and attach themselves to mammon are wrecked.
The true Guru is a boat: few there are who consider this,
And those who do he mercifully saveth.

Slok XIV.

Guru Nânak.

The samal tree of the desert is very tall and very thick.
Why should the birds which go to it with hopes depart disappointed?
Because its fruit is insipid, its flowers unwholesome, and its leaves useless.
The tree that yieldeth sweet fruit is lowly, O Nânak, but its qualities and virtues are exquisite.
Every one boweth to himself; no one boweth to another.
If any thing be put into a scale and weighed, the side which descendeth is the heaviest.

52 Mûra is the large bead on which the two ends of a rosary are joined. Mûr shârâ therefore means man's body, which is superior to that of other animals.
53 Agn, literally fire. This word is often used for wrath, but Guru Nânak has more often inveighed against avarice or covetousness than against wrath; and perhaps it is the former that is taken as a special attribute of this degenerate age. See above, Slok XI., Bhûdhi bhard murdâr.
54 Sêtambar — the Horse or Swan Avatar.
55 Sardar — this word is from the Persian sahara.
56 The man who is lowly is the most worthy.
The wicked man like a deer-stalker boweth twice more than any one else;  
But what availeth bowing the head, if the heart be impure?

The following hymn was composed by Guru Nanak at Banaras on the occasion of a  
discussion with the local pandit who pressed him to dress in the style of the Hindus:—

Guru Nanak.
You read books, perform your twilight devotions, argue, worship stones, and sit  
like cranes;
You utter falsehoods as excellent jewels; you meditate on the Gāyatrī three times a day;  
You wear a necklace, put sacrificial marks on your foreheads, carry two dhōtis, and put  
towels on your heads.
If you knew God's designs, you would know that ours is verily a vain religion.
Saith Nanak, verily reflect that without the true Guru you shall not find the way.

Pauri XIV.
Raiment and pleasing beauty man must leave on earth and depart.
Man shall obtain the fruit of the bad or good deeds he hath done:
He may have exercised sovereignty to his heart's content, yet must he proceed by the  
narrow road.
He shall be sent naked to hell, which will then appear very formidable to him;
And he shall regret the sins he hath committed.

The following hymn was addressed by Guru Nanak to Pandit Hardial, his family priest,  
when he came to invest him with a janēd, the sacrificial thread of the upper classes of Hindus:—

Ślok XV.
Make mercy thy cotton, contentment thy thread, continence its knot, truth its twist.
That would make a janēd for the soul; if thou hast it, O Brāhmaṇa, then put it on me.
It will not break, or become soiled, or be burned, or lost.
Blest the man, O Nanak, who goeth with such a thread on his neck.
Thou purchasest a janēd for four damars 60 and seated in a square fasten it on;
Thou whisperest instruction that the Brāhmaṇa is the guru of the Hindus —
Man dieth, the janēd falleth, and the soul departeth without it.

Guru Nanak.
Though men commit countless thefts, countless adulteries, utter countless falsehoods and  
countless words of abuse;
Though they commit countless robberies and villanies night and day against their fellow-  
creatures,
Yet the cotton thread is spun, and the Brāhmaṇa cometh to twist it.
For the ceremony they kill a goat and cook and eat it, and everybody saith "Put on  
the janēd."
When it becometh old, it is thrown away and another is put on.
Nānak, the string breaketh not if it be strong.

---

61 ḍari — The English word hunter may be derived from ḍari, a killer.
60 Sāndhī — from sāndhī, union (of day and night).
62 Gāyatrī is understood to be for Gāyatrī, the Gāyatrī or spell of the Hindus, so called because it is composed  
of three feet of eight letters each. Hence the Gāyatrī is commonly said to have three legs. The Gāyatrī is as follows:—  
Oṁ, bhu, bhuṇāḥ, eṣaḥ, tā prāchād ēkādām Śrī dhiyā yonā prachādāt, oṁ, Oṁ, earth and air and sky, let us meditate on that excellent sun the bright god, which stimulates our intellects, oṁ.
60 Four damars is one paisā of Indian, or about a farthing of English, money
61 Lakh, literally, one hundred thousand, here used for an indefinite number
Guru Nānak.
By adoring and praising the Name honor and a true thread are obtained. In this way a sacred thread will be put on which will not break, and which will be fit for entrance into God's court.

Guru Nānak.
There is no string for the sexual organs, there is no string for women, there is no string for the impure acts which cause your beards to be daily spat upon.
There is no string for the feet, there is no string for the hands, there is no string for the tongue, there is no string for the eyes.
Without such strings the Brāhman wandereth, twisteth strings for the neck, and putteth them on others.
He taketh hire for marrying; he pulleth out a paper, and showeth the fate of the wedded pair.
Hear and see, ye people, this is strange that, while mentally blind, he is named wise.

Pauri XV.
He to whom the Lord is compassionate and merciful will do the Master's work.
That worshiper whom God causeth to abide by His order, will worship Him.
By obeying His order man is acceptable, and shall then reach his Master's court.
He shall act as pleaseth his Master, and obtain the fruit his heart desireth;
And he shall be clothed with a robe of honor in God's court.

A man at Lahore presented a cow to a Brāhman. The Brāhman took her with him, but had not wherewithal to pay toll at the Sultānpur ferry. He was stopped by the Hindu Khatari toll-keeper. The latter collected the cow's dung, and at once plastered his cooking place therewith.
Mardanā went towards him, but was ordered off, lest he, as a Muslimān, should defile the toll-keeper's cooking place. Upon this Bābā Nānak uttered the following:—

Slōk XVI.
Thou takest toll for a cow and a Brāhman, the cow-dung will not save thee.
Thou wearest a dhōṛi and a frontal mark, and carriest a rosary, yet thou eatest the bread of malcīchās.
Thou performest the Hindu worship at home, thou readest the Kurān in public, and associatest with Muhammadans, O my brother.
Lay aside hypocrisy, repeat God's name, and thou shalt be saved.

Guru Nānak.
Those who have strings on their necks eat men, recite the Muhammadan prayers,
And use knives to cut men's throats.
Although the Brāhmans sound shells in their houses,
And enjoy their viands as they do themselves;
Yet false is their capital and false their dealings.
By uttering falsehoods they maintain themselves.
Far from them is the abode of shame and honesty:
Nānak, falsehood everywhere prevaileth.

63 Also translated — By adoring the Name cotton is produced; by praising God a true thread is obtained.
64 That is, he draws a horoscope.
65 Malcīchās, from mal filth and schād desire — those whose desires are filthy. The word here means Muhammadans, but it is also applied by Hindus to Christians.
66 Sargās Turādī — also translated — Thou art like Muhammadans.
67 Also translated — They who read prayers devour men, and they who wear strings on their necks ply knives.
68 According to the holy books of the Hindus, Brāhmans should not eat in the houses of men who recite Muhammadan prayers.
On their foreheads are sacrificial marks, on their waists reddish\textsuperscript{68} dhūta,
In their hands knives; they are the world's butchers.
Putting on blue clothes, they are acceptable in the Muhammadans' court,
And, while taking bread from the malechans, they worship the Purāns.
They eat goats killed with unspeakable words,\textsuperscript{69}
And allow no one to enter their cooking squares.
Having smeared a space they draw lines around it,
And sit within false that they are,
Saying, "Touch not! O touch not!
Or this food of ours will be defiled."
But their bodies are defiled; what they do is defiled;
Their hearts are false while they perform ablutions after their meals.
Saith Nānak, meditate on the True One,
If thou art pure, thou shalt obtain Him.

\textbf{Pauri XVI.}

All are within Thy ken, O Lord; Thou seest all, and Thou movest them beneath Thy glance.
God himself bestoweth greatness; He Himself causeth men to do good works.
He is the greatest of the great; great is His world; He appointeth all men to their respective duties.
If He cast a backward glance, He maketh monarchs as grass;\textsuperscript{70}
They may beg from door to door and receive no alms.

\textbf{Guru Nānak composed the following slok on being invited by a dishonest shopkeeper of Lahore to attend a shrād or religious service for his deceased father: —}

\textbf{Slok XVII.}

If a robber break a house and sacrifice the fruits of that robbery to his ancestors,
The sacrifice shall be known in the next world, and make out the ancestors thieves.
The hand of the Brāhma go-between shall be cut off; thus will God do justice.
Nānak, it is only the fruit of what man giveth from his earnings and toil that shall be obtained in the next world.

\textbf{Guru Nānak.}

As a woman hath her recurring courses, so falsehood dwelleth in the mouth of the false one, and he is ever despised.
He should not be called pure who sitteth and washeth his body;
Rather is he pure, Nānak, in whose heart God dwelleth.

\textbf{Pauri XVII.}

Caparisoned horses fleet as the wind and women adorned with every aid to beauty —\textsuperscript{71}
Men fix their hearts on them, dwell in mansions, pavilions and palaces, and make display;
They enjoy pleasures to their hearts' content; but they know not God and therefore fail.
They live by their authority, and, beholding their women's chambers, forget death.
Old age hath come and youth hath failed them.

\textsuperscript{68} Kabhār — reddish or partially soiled from frequent washing. The word is also applied to the tucking in of a dhūta in a particular way.
\textsuperscript{69} The Muhammadan expression Biismillah (in the name of God) used when slaughtering animals as well as on other occasions.
\textsuperscript{70} Gāḍha generally translated grass-cutters by the gāḍa; a third interpretation too is possible. In former times men of position appeared before conquerors with grass in their mouths, implying that they were the conquerors' cows whose lives should be saved. Accordingly, the phrase is also translated — and He would cause kings to put grass in their mouths.
\textsuperscript{71} Har rāng, literally, with every color.
A rich man gave a feast to which Guru Nānak and several Brāhmans were invited. During the feast a child was born in the house, whereupon the Brāhmans refused food and departed, deeming the house impure. Guru Nānak remonstrated with the following stōk and hymn:

Stōk XVIII.

If the idea of impurity be admitted, there is impurity in every thing.
There are worms in cow-dung and wood;
There is no grain of corn without life.
In the first place, there is life in water by which every thing is made green.72
How shall we avoid impurity? It falleth on our kitchens.
Saith Nānak, impurity is not thus washed away: it is washed away by divine knowledge.

Guru Nānak.

Impurity of the heart is greed, impurity of the tongue is falsehood;
Impurity of the eyes is gazing on another’s wealth, his wife, and her beauty;
Impurity of the ears is listening to slander.
Nānak, even the pretended saint who practiseth such things, shall go bound to hell.
All impurity consisteth in superstition and attachment to worldly things.
Birth and death are ordained; as it pleaseth God, we come and go.
The eating and drinking which God sent as sustenance are pure.
Nānak, the pious persons who know God have no impurity.

Paauri XVIII.

Magnify and praise the true guru in whom there is all greatness.
If the guru cause us to meet God, we shall behold His greatness.
If it please the Guru, he will cause God’s praises to dwell in the heart.
He putteth his hand on our foreheads; and when he giveth the order, removeth evil from within us.

When God is pleased the nine treasures are obtained.

Stōk XIX.

The Brāhman having first purified himself sitteth in a purified square.
The purified food is placed before him; no one may touch it.
Being thus purified, he beginneth to eat and read Sanskrit verses.
If it is thrown into a filthy73 place, whose fault is that?
The corn was holy, the water was holy, the fire and salt were holy; when the fifth ingre-
dient ghṛt74 was added,
Then the food became pure.
When the food entereth a sinful body, it becometh impure as if spat upon.
The mouth which uttereth not the Name, and eateth even delicacies without the Name.
Consider, O Nānak, as if spat upon.

The following was Guru Nānak’s remonstrance to a man who reviled the female sex:

Guru Nānak.

In a vessel75 man is conceived, from a vessel he is born, with a vessel he is betrothed and married.
With a vessel he contracteth friendship; with a vessel he goeth through the world.
When one vessel dieth, another is sought for; to a vessel he is bound.
Why call her bad from whom are born kings?
From a vessel a vessel is born; none may exist without a vessel.
Nānak, only the one true God is independent of a vessel.

72 Compare—Jal hai sūrak, tha hai sūrak, sūrak opat hai. There is impurity in water, there is impurity in land, there is impurity in whatever is created.—Kābic Gaurī, 41.
73 Kūlāthi—from the Sanskrit kūlāte.
74 Clarified butter, always deemed pure by Hindus and their kindred sects.
75 Woman is meant. The Greeks sometimes used the word ἀκρός in the same sense.
The mouth which ever praisest Him is fortunate and beautiful.
Nānak, that face shall be bright in the court of the True One.

Paurī XIX.

Every one calleth Thee, O Lord, his own; those who do not so call Thee Thou puttest away,
Every one must bear the result of his own acts, and adjust his own account.
Since ye are not to remain in this world, why practise ye pride?
Call no one bad; know this by reading these words.
Dispute not with a fool.

Sūk XX.

Nānak, the mind and body of him who talketh evil are evil:
He is most evil, and most evil is his reputation.
The evil person is rejected in God's court; his face is spat upon.
The evil person is a fool, and receiveth shoe-beatings as punishment.

Bābā Nānak.

If a man, foul within and fair without, puff himself up in the world,
His filth will not depart even though he bathe at the sixty-eight places of pilgrimage.
Those who wear silk within and rags without, are good in this world.
They have conceived love for God and contemplate beholding Him.
In God's love they weep, in God's love they laugh, or are even silent.
They care not for anything except the true Master.
They beg for food at God's door, and only eat when He giveth it to them.
For them there is but one court as there is but one pen; we and you shall meet for
justice.

The accounts of the wicked shall be taken in God's court, and they shall be pressed
O Nānak, like oil in a mill.

Paurī XX.

Thou Thyself didst create the world, and Thou Thyself didst put power into it.
Thou beholdest Thine own work, the losing and winning dice upon earth.
Whatever hath come shall depart; his turn shall come to every one.
Why forget that Lord who owneth life and soul?
With thine own hands arrange thine own affairs.

Sūk XXI.

Guru Angad.

What love is that which attacheth itself to worldly things?
Nānak, call him a lover who is ever absorbed in God.
He who deemeth only what is good good, and what is bad bad,
Shall not be called a true lover if he proceed in this manner.

Guru Angad.

He who offereth salutation and at the same time criticiseth God's works, hath made a
mistake from the beginning.
Both his salutation and criticism are in vain; Nānak, such a person shall not obtain a
place in God's Court.

56 See: suppose that woman is the missing word here, as the preceding sūk is a defence of women, not a eulogy of God.
57 Compare: Aantar mail jā tirath nahāchā, tīs baisānth na jāhun, If a man foul within bathe at a place of
pilgrimage, he shall not go to heaven. - Kabir, Avā 35.
58 That is, there is no mediator between God and man. It is God Himself who decides man's fate.
59 The last line and half is also translated: They who confound mean and tawām shall have their accounts taken
in God's court, and shall be pressed, O Nānak, like oil in a mill.
60 That is, the sinners and the virtuous. The game of chemow or chasam is played with sixteen pieces called
sātras, and three dice called rawāt. The sātras while being moved round the board, like creatures in transmigration, are
called kuchi, unripe; when they reach their goal, they are called pakkā or ripe.
61 He shall not be called a lover, if he rail at God in adversity. This idea often occurs in Oriental poetry.
Pauri XXI.

Ever praise that Lord by worshiping whom thou shalt find happiness.
Why hast thou done such evil deeds as thou shalt suffer for?
Do absolutely nothing evil, look well before thee.
So throw the dice that thou mayest not lose with the Lord,
Nay, that thou mayest gain some profit.

Slók XXII.

Guru Angad.

When a servant while performing service is proud and quarrelsome besides,
And talketh too much, he pleaseth not his master.
If he efface himself and perform service, he shall obtain some honor.
Nának, he who longeth for God shall meet Him, and his longing shall be acceptable.

Guru Angad.

What a man hath in his heart cometh forth; lip-worship is of no avail.
Man soweth poison and expecteth ambrosia; look at that for justice.

Guru Angad.

Contracting friendship with a fool would never be profitable.
He acteth according to his understanding: let any one see and enquire into this.
One thing can fit in a vessel if another thing be first removed.82
Orders will not succeed with God; supplications must be addressed Him.
By practising falsehood falsehood is obtained: Nának, there is pleasure in praising God.

Guru Angad.

Friendship for a fool and love for a great man
Are like lines drawn on water, which leave neither trace nor mark.

Guru Angad.

If a man be a fool and do any thing, he cannot do it well;
Even though he do one or two things well, he will spoil the rest.

Pauri XXII.

If the servant who is employed in service act according to his master's wishes,
His honor is all the more, and he receiveth double wages.
If he vie with his master, he shall excite his jealousy,
Lose his large salary, and receive shoe-beating on the mouth.
Thank Him by whose gifts thou liveth;
Nának, orders will not succeed with Him; the Master must be implored.

Slók XXIII.

Guru Angad.

What sort of gift is that which we obtain by our own asking?
Nának, wonderful is the gift we obtain when the Lord is pleased.

Guru Angad.

What sort of service is that in which the fear of the master departeth not?83
Nának, he is called a servant who is absorbed in the love of his master.

Pauri XXIII.

Nának, God's end is not seen, nor hath He a thither or a hither side.
He Himself createth, and He Himself again destroyeth.
Some have chairs on their necks, and some ride on many horses.
It is God who causeth men to act and who acteth Himself; to whom else shall we complain?
Nának, it is for Him who made the world to take care of it.

82 The love of God will enter man's heart if he first expel worldly love.
83 That is, when perfect understanding exists between master and servant, and the service is performed with love.
Slok XXIV.

Guru Nānak.

It is God Himself who made vessels and He Himself who filleth them.
In some is contained milk; others are put over the fire.
Some sleep on mattresses, and others stand and watch over them.
Nānak, God regenerateth those on whom He looketh with favor.

Guru Angad.

God Himself arrangeth, He Himself putteth what He hath made into its proper place;
Having in this world created animals, He Himself beholdest their birth and death.
Whom shall we address, O Nānak, since God doeth everything Himself?

Paurl XXIV.

The greatness of the great God cannot be expressed;
He is the Creator, the Omnipotent, the Bounteous; He provideth His creatures with sustenance.
Man doeth that work which God destined for him from the beginning.
Nānak, except in the one God alone there is no abiding place.
He doeth what He pleaseth.

NOTES AND QUERIES.

THE EIGHTEEN AGUS.

According to the Prelude to the Kesar-Saga the names of the eighteen Agus (heroes) are the following:—

1. Pasang Idan ru skyes, possessing the Friday, horns growing. Characteristic mark: a goat’s head.
2. Anggar rtsangsapo, Anggar, the lizard. Char. m.: a lizard’s head.
3. Khra mgo khra thung, falcon’s head, short falcon. Char. m.: a falcon’s head.
4. Kha rgyan dagari (nyi), old mouth, day of joy. Char. m.: a white beard.
5. Rkya rgyodpo, wild spoon-spoon. Char. m.: a spoon-spoon instead of a head.
6. Zlabo rtsangpo, good moon. Char. m.: a moon instead of a head.
7. Md’u don po gongma, the high headman of bowmen. Char. m.: an arrow blade instead of a head.
8. Aja gong gol (this means, so I am told, the sole of a boot, the stupid one). Char. m.: the sole of a boot instead of a head.
9. ’abu dmar lamstan, red verum, way leader. Char. m.: a worm’s head.
10. Sheigyi buchung, little boy of glass (or crystal). Char. m.: a concave mirror instead of a head.
11. Dgan (nyi) gongba, day of joy, the collar. Char. m.: a collar instead of a head.
12. Laglag rings, long hand. Char. m.: a hand instead of a head.
13. Rkang rkang rings, long foot (or leg). Char. m.: a foot instead of a head.
14. Bongnag ldumbu, black ass (ldumbu = a plant?). Char. m.: a donkey’s head.

(15) bKa blon Idanpa, the state-minister, the possessor. Char. m.: a man’s head.
(16) dPalle rgyodpo, wild splendour, glory. Char. m.: an old man’s head.
(17) rNa yyu rna ’athal, turquoise earring. Char. m.: a turquoise instead of a head.
(18) Zlabo rtsangpo, white moon. Char. m.: a white shell instead of a head.

To these Kesar or Kyesar has been added as their leader, he is the nineteenth. Holy numbers in the Pre-Buddhist religion of Ladakh are 3, 7, 9 and 18; but it is remarkable, that, whilst the first three of these numbers are always quoted without a following number, the 18 is always followed up by 19. For example: “They digged a pit of 18, 19 yards,” “there appeared 18, 19 priests.”

If we take Kesar, the supposed sun hero, into the account, it is not difficult to identify six of the nineteen Agus with six of the seven days of the Tibetan week. Then the question remains: What could be the probable origin of the remaining 12? Their number seems to point to the months of the year or to the Zodiac; but as I have no means available to compare their characteristic marks with those of other lunar calendars, I should be very glad if competent scholars would offer an opinion on the subject.

As far as I can see, some of the Agus do not possess only a single name, but several, though the characteristic mark will probably remain the same.

The representatives of the week-ays are probably the following:—

No. 19, Sunday; No. 6, Monday; No. 9, Tuesday; No. 12, Wednesday; No. 7, Thursday, No. 1, Friday.

A. H. Francke.
INDEX.

<p>| Abbās, as a Māppila hero | 331 |
| Abdallāhi bin Ubeidy | 386 |
| Abūd Kēriw, a Māppila hero | 355 |
