THE INDIAN ANTIQUARY
A JOURNAL OF ORIENTAL RESEARCH

VOLUME XLIX—1920

EPISODES OF PIRACY IN THE EASTERN SEAS, 1519 TO 1851.

BY S. CHARLES HILL.

(Continued from Vol. XLVIII, p. 228.)

XV.

In the year 1696 the East India Company's ship Mocha (Captain Leonard Edgecumbe) sailed from Bombay for China. The Captain was disliked by his crew and, apparently, was forced to take whatever men he could get to fill vacancies. At any rate sixteen of the new hands were old pirates, who had been trapped by the natives, but had made their escape. Whilst in captivity they had unsuccessfully appealed to the President to effect their release and, being received on board a Company's ship, they saw an opportunity for revenge. When off Achin, on the 18th June, at their instigation the crew mutinied, murdered Captain Edgecumbe and set the loyal members of the crew adrift in a boat, in which after much difficulty they got to shore. The pirates renamed the ship the Resolution and elected Ralph Stout their Captain. Touching at the Nicobars, they picked up one Robert Culliford and his associates. Culliford had run away with another Company's ship, the Josiah Ketch, and going ashore to plunder the natives, the Armourer and other loyal members of the crew had recovered the ship and made off. When the pirates reached the Maldives, Stout attempted to desert, was caught by his comrades and murdered. His successor was Culliford. In July 1697 Culliford came up with the Company's ship Dorrill (Captain Samuel Hyde). We have three accounts of the fight: one by Captain William Willock, a prisoner on board the pirate, which is interesting as showing the absence of discipline on board a pirate ship, and the difficulty their captains had in persuading the men to fight when they met with a tough customer; another by William Soame, apparently the Company's Agent at Achin, which is probably Captain Hyde's account; and a third by Messrs. Solomon Lloyd and William Reynolds, who appear to have been Superintendents on the Dorrill.

Captain Hyde had his colours nailed to the mast. It will be remembered that Captain Wright, when the Caesar was attacked, had his ensign seized to the ensign staff (see ante, Vol. XLVIII, p. 205). The distribution of money amongst his crew during the fight, and not the tot of rum of which one reads in piratical and naval romance, was the ordinary method of encouragement adopted by the captain of a Company's ship.
The pirates hoisted a broad red pendant, i.e., a Commodore's flag, the day before the engagement. This must not be confused with the bloody flag, for it signified merely that the Captain of the Mocha claimed superiority to the Captain of the Dorrill, either as his senior or as commanding a ship-of-war, and was therefore a ruse to get the Captain of the Dorrill to go on board him. The use of pieces of glass, broken teapots, chains, stones, etc., by the pirates to load their guns was probably due to want of shot. They suffered very slightly in the fight, but were frightened of losing a mast and being disabled, and so drew off.

THREE ACCOUNTS OF THE FIGHT BETWEEN THE SHIP DORRILL, CAPTAIN SAMUEL HYDE, AND THE PIRATE SHIP MOCHA, CAPTAIN ROBERT CULLIFORD, ON THE 9TH JULY 1667, IN THE STRAITS OF MALACCA.

1

A narrative about the Mocha Frigatt, written by William Willock.11 a prisoner aboard them eleven months.

"About the latter end of June [July] they [the pirates] met with an Europe ship near to Pullo Verero.72 They came up with her and hailed her, the ship's name I do not remember. They said her Commander was Captain Hide newly come from Europe. Hell was never in greater confusion than was then aboard, some for hoysing French colours, some for fighting under no colours, some for not fighting at all, some for running him aboard without firing a gun. The Captain laid down his charge because of the confusion, then about ship they must goe to chuse another Captain. All this while they were within speech of one another, see that the other ship might hear what they said; but about they went and the English ship made the best of her way from them, but at length they concluded to fight and the Captain resumed his place againe. Then about they went after her againe.

The day before they had layd close by one another within gunn shott, so they saw what they were and provided accordingly. In the morning about 9 o'clock they came up with her againe. They came close up to her on her weather quarter so that they could call to them and asked them what they would have. They answered Money they wanted and Money they would have. Its well, said they, for you may come and take it. So they gave a cheer and went all hands, I suppose, to their quarters. The Pirate first fired his two fore-chase guns into her, but before they had fired another they had received both his broadsides, for he took care to work his ship to the best advantage, and had then, I think, about 30 guns mounted and they were as good as the Pirate's guns. They had not passed above three or four broadsides, I could see the pirates disheartened. Said they, We shall get nothing here but broken bones, and if we lose a mast where shall we get others. They had then received a shott in their foremast, a six-pounder, which had gone right through the heart of it. Says the Captain, We have enough of it to fetch to windward of him. Let us goe about ship for he lyes by for us, and soo he did. Says one, You may put her about yourself and you will, for I'll fight no more. Nor I, says another, Nor I, Nor I was the

11 Master of the Satisfaction, taken by two pirate ships (one under English and the other under apparently Muhammadan colours) off Ceylon, January, 1697, and released 22nd December, 1697.

72 Pulo Barahla, an island off the N.E. coast of Sumatra, known as Pulo Verero in the 17th century.
cry. So they let fall their Mainesail and foresail and stood away from him. The English ship set her sails also and stood away her course to the Eastward."

[Colonial Office Records, 323. 2. 123. viii. India Office Records, O.C. 6473 & 6484.]

"Since my accompanying of the 31st July, arrived here [Achin] Capt. Samuel Hyde in ship Dorrill the 8th instant, giving account that the 7th of July, the day after having been forced to ride fifteen days off of Dyamond Point [N. Sumatra], he spied a sail to windward, bearing down upon him, which coming up under his quarter and giving a Leavit, with the Musick of trumpets, hokeyoys and drum, dropt asterne without haling or anything of parley, but keeping company all the night, next day seem’d inclined to withdraw (by baring away sometime before the wind) till July the 9th in sight of Pulia Varera, springing their Luft [bringing their ship’s head closer to the wind] and haling each other, said their ships name was the Resolution, Capt. Robert Collifer Commander, bound also for China, after which the Boatswain of the Dorrill demanding the reason of their suspitious working, they answered, Don’t you know us to be the Mocha? Wee want neither you nor your ship, but your money we will have, whereunto Capt. Hyde replied that if they had it, [it] should be out of the mussels of his guns, and bid them come up fairly alongside and take it.

Thereupon the engagement began and lasted from about 11 o’clock till past 2 afternoon, when the Mocha wheeled off and left them. Those who have since dyed of their wounds at sea were James Smith, Capt. Hyde’s Cheife Mate, Andrew Miller, Barber, George Mopp, Servant to the Gunner, and Thomas Matthews, Servant to the Boatswaine. Those who continue dangerously wounded are John Amos, who lost one of his legs, and tis feared one of John Blake’s must be cutt off. Their volleys of small shott were small and thick, and allmost incessant, as being extraordinarily manned, and keeping one constantly at topmost head, looking out as supposed in expectation of their associates.

The damages Capt. Hyde’s ship received were loss of her sprit sail and yard, severall shot between Decks, breaking one of her main Beames, a shott into her Bread Roome, damaging most of her Bread, and one or two between wind and water, and most of her rigging cutt. The Dogge [† Dogs or Day] before engagement they put out the King’s Jack, a broad red pennant and Merchant Colours, but fought under none.

After the engagement Capt. Hyde try’d ten days for Malacca, but contrary winds and currents carried him over to the Simbelon [Seminilan] Islands on the Eastern Shoare, from whence, whilst taking in a longboat load of water, which they stood in great need of; a sail to windward appeared making towards them, probably the Mocha’s Associate, but night coming on and steering their course that way, happily lost sight before morning.

---

73 A flourish.
74 See Deposition of Adam Bahlridge for another Resolution. It appears from Kidd’s trial that the Mocha was renamed Resolution by the Pirates (State Trials, XIV, 153).
75 The red ensign.
I am of opinion that Capt. Hyde is forced to relinquish all thought of proceeding for China, and if can reasonably accommodate business of the cargo here, will proceed no farther, being with [?what] offers at present from

Your Honours &c. obedient Servant

WILLIAM SOAME."

[India Office Factory Records, Fort St. George, Vol. 33.]

"Right Honourable Sir and most respected Sirs,

These truly representeth a scheme of what misfortune has befallen us as we were going through the strait of Malacca, in pursuance to our pretended voyage, vizt., Wednesday the 7th July, 5 o'clock morning we espied a ship to windward; as soon as was well light perceived her to bare down upon us. Wee thought at first she had been a Dutchman bound for Acheen or Bengal, when perceived she had no Galleries. Did then suppose her to be what after, to our dreadful sorrow, found her. Wee got our ship in the best posture of defence that sudden emergent necessity would permitt. Wee kept good looking out, expecting to see an Island called Pullo Verello [Pulo Barahla], but as then saw it not.

About 8 of the clock the ship came up fairly within shot. Saw in room of our Galleries there was large sally ports, in each of which was a large gunn, seemed to be brass. Her taffrail was likewise taken downe. Wee having done what possibly could to prepare ourselves, fearing might be suddenly set on, ordered our people to their respective stations for action. Wee now hoisted our colours. The Captain commanded to nail our Ensigne to the staff in sight of the enemy, which was immediately done. As they perceived wee hoisted our colours they hoisted theirs, with the Union Jack, and let fly a broad red pendant at their maintopmast head.

The Pirate being now in little more than half pistol shot from us, we could discern abundance of men who went aft to the Quarter Deck, which as wee suppose was to consult. They stood as we stood, but wee spoke neither to other. Att noone it fell calme, so that [we] were affraid should by the sea have been hove on one another. Att 1 a clock sprung up a gale. The Pirate kept as wee kept. Att 3 a clock the villain backt her sailes and they went from us. Wee kept close halled, having a contrary wind for Malacca. When the Pirate was about 7 miles distant tackt and stood after us. Att 6 that evening saw the lookt for island, and the Pirate came up with us on our starboard side within shot. Wee see he kept a man at each topmast head, looking out till it was darke, then he halled a little from us, but kept us company all night.

At 8 in the morning he drew near us, but wee had time to mount our other four gunns that were in hold, and now wee were in the best posture of defence could desire. He

Lloyd was at Pulo Condore in 1705 when the Macassar soldiers, who had been detained, after their three years' agreement was ended, by the Agent, Allan Catchpole, mutinied and murdered all the English they could get hold of.

77 These had, no doubt, been removed, in order to facilitate the working of the big gun on the poop, so that it was easy to see she was a fighting ship of some kind or other.
drawing near us and seeing that if [wee] would, [wee] could not get from him, he far out-sailing us by or large [in one direction or another] the Captain resolved to see what the rogue would do, see ordered to hand [furl] all our small sailes and furled our mainesail. He, seeing this, did the like, and as [he] drew near us beat a drum and sounded trumpets, and then hailed us four times before wee answered him.

At last it was thought fitt to know what he would say, so the Boatswaine spoke to him as was ordered, which was that wee came from London. Then he enquired whether peace or war with France. Our answer, there was an universall peace through Europe, att which they paused and then said, ‘That’s well.’ He further enquired if had toucht at Atchaeen. Wee said a boat came off to us, but [wee] came not near it by severall leagues. Further he enquired our Captain’s name and whither wee were bound. Wee answered to Malacca. They too and [would have] had the Captain gone aboard to drink a glass of wine. Wee said that would see one another at Malacca. Then he called to lye by and he would come aboard us. Our answer was as before, saying it was late. He said, true, it was for China, and enquired whether should touch at the Water Islands [Pulo Ondan, off Malacca]. Wee said should. Then said he, So shall wee. After he had asked us all these questions wee desired to know from whence he was. He said from London, their Captain name Collyford, the ship named the Resolution, bound for China. This Collyford had been Gunners. Mate at Bombay, and after run away with the Ketch.

Thus past the 8th July. Friday the 9th do., he being some distance from us, About 1/2 an hour after 10 came up with us. Then it grow calme. Wee could discern a fellow on the Quarter, Deck wearing a sword. As he drew near, this Hellish Imp cried, Strike you doggs, which [wee] perceived was not by a general consent for he was called away. Our Boatswaine in a fury run upon the poop, unknown to the Captain, and answered that wee would strike to noe such doggs as he, telling him the rogue Every and his accomplices were all hanged. The Captain was angry that he spake without order, then ordered to haile him and ask what was his reason to dogg us. One step forward on the forecastle, beckoned with his hand and said, Gentlemen, wee want not your ship nor men, but money. Wee told them had none for them but bid them come up alongside and take it as could gett it. Then a parcel of bloodhound rogues clark their cutlases and said they would have it or our hearts blood, saying, ‘What doe you not know us to be the Moca?’ Our answer was Yes, Yes. Thereon they gave a great shout and so they all went out of sight and wee to our quarters. They were going to hoist colours but the ensigne halliards broke, which our people perceiving gave a great shout, so they lett them alone.

As soon as they could bring their chase gunns to bear, fired upon us and doe kept on our quarter. Our gunns would not bear in a small space, but as soon as did hap, gave them better than [the pirates] did like. His second shott carried away our spritt saile yard. About 1/2 an hour after or more he came up alongside and see wee powered in upon him and continued, some time broadsides and sometimes three or four gunns as opportunity presented and could bring them to doe best service. He was going to lay us athwart the hawse, but

78 That is, they were late in making the China voyage and therefore could not afford any delay.  
79 The Josiah ketch.  
80 The notorious pirate Henry Every.  
81 ‘In a small space’ means ‘for a short space of time.’
by God's providence Captain Hide frustrated his intent by pouring a broadside into him, which made him give back and goe asterne, where he lay and paused without firing, then in a small space fired one gunn. The shott came in at our round house window without damage to any person, after which he filled and bore away, and when was about 1/4 mile off fired a gunn to leeward, which wee answered by another to windward. About an hour after he tackt and came up with us againe. Wee made noe saile, but lay by to receive him, but he kept sloof off. The distance att most in all our firing was never more than two ships length; the time of our engagement was from 1/2 an hour after 11 till about 3 afternoon.

When [wee] came to see what damage [wee] had sustained, found our Cheifie Mate, Mr. Smith, wounded in the legge, close by the knee, with a splinter or piece of chaine, which cannot well be told, our Barber had two of his fingers shott off as was spunging one of our gunns, the Gunner's boy had his legg shott off in the waste, John Amos, Quartemaster, had his leg shott off [while] at the helme, the Boatswine's boy (a lad of 13 years old) was shott in the thigh, which went through and splintered his bone, the Armorier Jos. Osbourne in the round house wounded by a splinter just in the temple, the Captain's boy on the Quarter Deck a small shott raised his scull through his cap and was the first person wounded and att the first onsett. Wm. Reynolds's boy had the brim of his hatt 1/4 shott off and his forefinger splintered very sorely. John Blake, turner, the flesh of his legg and calfe a great part shott away.

Our ships damage is the Mizentopmast shott close by the cap and it was a miracle stood sea long and did not fall in the rogues sight. Our rigging shott that had but one running rope left clear, our mainsroods three on one side, two on the other cutt in two. Our maineyard ten feet from the mast by a shott cutt 8 inches deep, our fortopmast backstays shott away, a great shott in the roundhouse, one on the Quarter Deck and two of the roundhouse shott came on the said deck, severall in the steareide betwixt decks and in the forecastle, two in the bread room which caused us to make much water and damaged the greatest part of our bread. They dismounted one of our gunns in the roundhouse, two in the steareide, two in the waste, one in the forecastle, with abundance more damage which may seem tedious to rehearse.

Their small shott were most Tinn and Tuthenage [tutenago, spelter]. They fired pieces of glass-bottles, do. teapots, chains, stones and what not, which were found on our decks. We could observe abundance of great shott to have passed through the rogues foresail, and our hope is have done that to him which [will] make him shunn having to do with any Europe** ship again. Att night wee perceived kept close their lights. Wee did the like and lay by. In the morning they were as far off as [wee] could discern upon deck. Wee sent up to see how they stood, which was right with us. In the night wee knotted our rigging and in the morning made all haist to reparre our carriages.

Our men, seeing they stood after us, [wee] could perceive their countinances to be dejected. Wee cheared them what wee could, and, for their encouragement, the Captain and wee of their proper money did give them, to every man and boy, three dollars each, which animated them, and promised to give them as much more if engaged againe, and did in your Excellency's name assure them that if [wee] took the ship, for

---

** As distinguished from a 'country' or coasting vessel of the East.—Ed.
every prisoner five pounds and besides a gratuity from the Gentlemen Employers. Wee read the King's Proclamation about Every &c. and the Right Honble. Company's.

About 9 o'clock the 10th July wee perceived the rogue made from us, soe wee gave the Almighty our most condigne thanks for his mercy that delivered us not to the worst of our enemies, for truly he [the pirate] was very strong, having at least an hundred Europeans on board, 34 guns mounted, besides 10 pattererers and 2 small mortars in the head; his lower tier, some of them, as wee judged, sixteen and eighteen pounders. Wee lay as near our course as could, and next day saw land on our starboard side which was the Maine [Land]. Kept on our way.

The 12th July dyed the Boatswaine's boy, George Mopp, in the morning. Friday the 16th do. in the evening dyed the Gunner's boy Thomas Matthews. Sunday the 18th at anchor two leagues from the Pillo Sumbelong [Pulo Sembilan] Islands dyed the Barber Andrew Miller. Do. the 31st dyed the Cheife Mate Mr. John Smith. The other two are yet in a very deplorable condition and wee are ashore here to refresh them. . . . The Chinese further report . . . the Mocco was at the Maldives and creaned [careened]; there they gave an end to the life of their commanding rogue Stout, who they murthered for attempting to run away."

SOLOMON LLOYD.
WM. REYNOLDS.

Ateene, the 28th August 1697.

[ India Office Records, O.C. 6430. ]

XVI.

CAPTAIN KIDD'S FIGHT WITH TWO PORTUGUESE SHIPS:
PORTUGUESE REPULSED BY ARABS, 1697.

When the English Government decided to assist the East India Company in the suppression of piracy, it had no ships-of-war to spare and was glad to accept the offer of Lord Bellamont, Governor of New York, to send out one equipped by a kind of private company. As most of the pirates to be dealt with were equipped from New England, it was supposed that Lord Bellamont would be able to find a captain who would have means of obtaining much useful information to assist him in his task, and so, if not to set a thief to catch thieves, at any rate to send a man well informed as to the ways of the thieves. The fact that such a man might turn thief himself was either ignored or supposed to be discounted by giving him forty shares in the undertaking.

Lord Bellamont chose Captain William Kidd, a man who, as far as is known, had a previous good reputation. He received two commissions from the Crown, one dated 11th December 1695 as a privateer against the French, the other dated 26th January 1695-6 enabling him to take pirates wherever he found them. He left England early in 1696 and, after strengthening his crew in New England, sailed for the Cape. What his original

---

---

---

---
intentions were is unknown, but before he reached the Cape he fell in with a squadron under Commodore Thomas Warren, his behaviour to whom was sufficiently turbulent to excite suspicion, though his commission prevented that officer from interfering with him. In April 1697 he arrived at the Island of Johanna, one of the Comoro group, which was a well-known halting place for the Company's ships. There he fell in with some of the latter and behaved in such a way that they expected him to attack them and took all necessary precautions. Apparently he was afraid to do this and they went on their way unmolested. From Madagascar he went to the Red Sea with the intention of attacking the pilgrim ships, and in August came up with the fleet, but was frightened off by the convoy. Next, sailing down the Indian Coast, he took various native vessels, some of which were commanded by Englishmen, one of whom—Captain Parker—he kept on board for some time as a kind of pilot. Being attacked by two Portuguese ships-of-war, he crippled the smaller and better sailer and showed his heels to the other. This does not look like courage on his part, but it does not prove cowardice, for, even if he had fought and beaten the bigger ship, he must have suffered some loss without any prospect of booty, which was contrary to pirate custom.

After eluding the Company's cruisers which were now on the look-out for him, and refitting his ship, he renewed his watch on the coast for a rich native vessel, and, early in 1698, took the Quedah Merchant, commanded by Captain John Wright, with a cargo worth £20,000. He gave back to Captain Wright all his personal property as, it was thought, a reward for making no resistance. With this capture Kidd appears to have been satisfied. He sailed to Madagascar, where he arrived in May. There he met the pirate Culliford, to whom some ninety of his men deserted. At last, thinking his own ship, the Adventure Galley, unfit for the homeward journey he transferred to the Quedah Merchant and sailed for America.

Arriving in Boston in 1699 he assumed all the airs of innocence, but the outcry against him was too strong. He was arrested and sent to England, tried for piracy and murder, and being convicted was, on the 24th May 1701, hanged at Execution Dock.

So far as is known he had never actually attacked English or European ships and never flown any kind of piratical flag, though of course his commission entitled him to fly the broad red pendant. He justified his attacks on native vessels on the ground that they carried French passes. Sir Cornelius Neale Dalton maintains that he had been set an impossible task in which he naturally failed, that the alleged murder of his quartermaster was probably an act necessitated by the requirements of discipline and that no conclusive evidence of piracy was produced at his trial. It is certain that his defence was badly conducted, that evidence in his favour was wilfully suppressed, and that the witnesses against him were absolutely untrustworthy, but I doubt whether there was any actual miscarriage of justice. He appears to have been an excellent seaman and a rigid disciplinarian. His biggest capture, the Quedah Merchant, was not one that would have satisfied a pirate like Every, and the fact that it was his biggest suggests that the stories of his buried treasures have absolutely no foundation.

The concluding portion of the letter describing Kidd's fight with the Portuguese deals with a fight between the Portuguese and the Arabs. It shows that whilst individual Portuguese may have maintained the national reputation, the Portuguese seamen had, as a body, fallen beneath contempt.
Letter from Thomas Pattle to the Council at Surat, dated Carwar, 22 September 1697.

Honble Sir,

These are to acquaint you what lately happened here. The 3rd instant came into this Cove Captain William Kidd in the Adventure Galley. He has on board 140 well men and 36 guns. 'Tis the same man-of-war that the Honble. Company's ships met coming out. He says he hath been at the Mohelas, Madagascar and several other places to look for pirates, but yet hath not met with any, and now is come on the Coast for the same purpose. Since which came to the Factory two of his men, who inform us they have taken an English vessel off of Bombay and that they have got the Commander on board a prisoner. They took out of her about 100 lbs. of gold, some rice and raisins. They're going to Mocho was with full intent to take the Surat ships, had not the Conveys prevented them. They intend to take Abdull Gophore's ship, either in the Cove or watch for her as she goes out. If they do 'twill cause abundance of trouble with the Muhammadan Government.

The men say the ship is very leaky and rotten, so that they intend to take for their use the first good ship they meet with. We believe he intends to lie off here and watch for Abdull Gophore's ship. He sailed hence the 13th instant without doing any harm, neither did we let him know we were come to the knowledge of his evil actions, for fear when he found himself discovered, [he] should do as bad here. We several times sent Captains Perrin and Mason on board of him to pry into what they had done and what intended for the future to do, who we must needs say proved very faithful and true to us. They could never come to a sight of Thomas Parker, being kept close prisoner in hold, nor certainly know where they intend to go, sometimes talking of one way, sometimes of another, but yet we very much fear he will cruise off this place to meet with Abdull Gophore's ship. We are informed at St. Mary's [Madagascar] is settled abundance of these villainous people with their families, and are yearly supplied from New York with all sorts of Liquors, Provisions and Stores, so that when any ship wants men they go therewith and get as many as they please.

He showed his Commission under the Broad Seal of England to Captains Perrin and Mason, wherein he has liberty to range all seas and destroy pirates wherever he meets them. The Captain is very severe and cruel to his people, which causes them to be much disaffected to him. They attempted Captain Mason to take the command of the ship, which he honestly refused. They are a very distracted Company, continually quarrelling and fighting among themselves, so that it is likely in a short time they may destroy one another, neither have they provisions on board to keep the sea a month.

Three of the men run to Goa and acquainted the Viceroy that there was a pirate in Carwar Road, upon which he presently fitted out two ships full of men, one 44 guns and the

other 20 guns, with orders to take him wherever they met him. They imagined to find him in the Road, but he saved them the labour of coming so far and met them half way between here and Goa. He presently perceived what they were and pretended to run from them. The smallest ship, sailing best, followed him with all the sail they could make. The biggest ship lagged astern, and as soon as Kidd perceived he had got the least a good distance from the biggest, he tacked and made to him. When they came near, the Portuguese very valiantly fired into him as fast as they were able, but Kidd's hardy rogues soon gave them enough of it and miserably mauled them before the great ship could come to their help, but as soon as she came near Kidd set his sails and run from them. The smallest ship was very much damaged and abundance of men wounded and killed, and so much embled that she was forced to make her way to Goa again.

The greatest ship came hither to convoy a small ship of theirs that wintered here belonging to the Portuguese Company, and came to an anchor in the Road the 18th instant evening where they had soon information of an Arab ship that was in the River. They presently filled three boats full of soldiers and came into the River to destroy the Arab ship. About 3 in the morning began the fight in sight of our Factory. They took the Arabs unawares, most of the men being ashore, not above ten Arabs and fifteen Lascars on board and them all sleeping unprepared, but, instead of boarding her, they kept at a small distance firing their muskets and bocomortisses and flinging granadoes. The people aboard soon waked and began to make resistance, firing some great guns and small shot at them. This continued above two hours till by an accident, nobody knows how, the powder in one of the Portuguese biggest boats took fire, blew up and burnt most of their people, sunk their boat. Their own granadoes, muskets and bocomortisses all went off, wounded and killed several men, upon which they forbore further attempt and was glad to withdraw. About 14 men were killed outright and as many more cruelly burnt. Upon this the country people were all up in arms, so that with one trouble following the heel of another all business has been hitherto impeded. I am &c. &c. THOMAS PATTLE."

Extract of a letter from the Bombay Council to the Surat Council, dated 30 September 1697.

"Kidd carries a very different command from what other pirates used to do, his Commission having heretofore procured respect and awe, and this being added to his own strength, being a very lusty man, fighting with his men on any little occasion, often calling for his pistols and threatening any one that durst speak of anything contrary to his mind and to knock out their brains, causes them to dread him and withall are very desirous to put off their yoke."

Extract of a letter from the Bombay Council to the Surat Council, dated 14 April 1698.

"Kidd has taken the Quedah Merchant on which was laden, as is reported, a rich cargo of about 200000 rupees by the Armenians and a Moorman."

[India Office Records, Factory Records—Surat, Vol. 13.]

THE NURSERY TALES OF KÁTHIÁWÁR.

(Literally Rendered.)

BY G. B. BADHEKA, BHAVNAGAR.

I

A Parrot and a Kábar.

There was a king. He had a parrot brought from Africa. The bird was of noble birth and gentle mien. He sang so very sweetly that the king loved him dearly and looked after his comforts keenly. For him he made a golden cage, a diamond rock and two bowls of pure silver. The richest fruit that the country produced formed the everyday diet of the lucky bird. The king visited the parrot every morning, opened the cage himself, and seated the bird on his lap. The parrot then sang sweetly, so that the king felt greatly pleased and much satisfied.

Now there lived a kábar on a big nímb (Azadirachta indica) tree opposite the king’s palace in a snug little nest of shreds of cloth and tiny sticks of wood. Every day she saw the golden cage, the diamond rock and silver bowls of water, the king coming to the parrot, opening the cage himself and seating the parrot on his lap, and every day she thought herself very miserable.

At last she grew envious of the parrot of the golden cage. Once she murmured, ‘I wish, oh! I wish I were that singing bird yonder that I might enjoy the proud company of the king and taste the comforts of that priceless cage.’

She thought, then, of entering into the cage and enjoying the pleasures thereof, if ever chance favoured her; and she was always on the look out for the desired moment.

Once, fortunately for the kábar, it so happened that the king after his usual visit to the enchanting songster went about his business without closing the doors of the cage. Just then the parrot took a fancy to go out and enjoy his natural freedom; and away he flew into the vast blue sky.

There was the cage left empty and there was the envious kábar waiting for her chance. Down she flew to the golden cage, entered it and settled herself in her new home. While she was heartily enjoying the pleasures of the cage, she proudly thought, ‘Queen as I am of this golden cage now, there is no happier bird under the sun than mine own self.’ The day she passed there merrily and happily and she stayed overnight in the cage.

Early the next morning the king came there as usual and calling the parrot by his name kasuku, wanted him to sing and please him. But there was no kasuku inside; the songster was gone and the kábar was there in his stead. No bird sang to the king.

The king did not know what had happened and as it was then too dark to see that the kábar was inside the cage, he got a little vexed at the indifference of his supposed parrot friend. He took up a little stick and began in his anger to thrust at the poor little kábar. The queen of the golden cage now realised her true situation, and just to save herself from the approaching misfortune, she thought she should no longer keep silence and said:

"Thrust at me not, oh angry king,
No thrust can make me sweetly sing;
The bird that sweetly sang, has left the cage,
And if two pleases you, two-tue I can make."

1 A speckled bird in Gujarát, very often disliked by the people for her rather unpleasant voice.
   It is always spoken of as female. A woman who is very noisy and over-talkative is often called a kábar. The kábar is a conspicuous character in many a nursery tale of Káthiáwár.

2 A name given to a parrot of Africa, in the Swahili language prevalent amongst the people living on the coast of East Africa. The African parrot is known to be a very good singer and is prized very highly in India.
At once the king knew to his surprise that the bird inside was a kābar. In his rage he flung open the doors of the cage, caught the kābar by her wings, and threw her out on to the hard pavement where she lay dead and was gone for ever.

The couplets in Gujarāti are as under:

"Ghoşkā Ghoşki ma kar Rājā,
Ghoşké amé marié;
Sarāvā sādavālō tō ūdi gayō,
Kēto kal-bal, kal-bal kārié."

A BRIEF SKETCH OF MALAYAN HISTORY.

By SIR RICHARD TEMPLE.

(Continued from Vol. XLVIII, p. 231.)

Borneo and the Philippines have each a considerable history of European occupation. Borneo was the scene at Brunei of a long trade connection, Portuguese from 1522 and Spanish from 1580, until the Dutch appeared in 1604 and the British in 1609. Mismanagement by both Dutch and British ended in the loss of all influence in 1775 and 1809 respectively. This gave an opportunity to organised piracy on a large scale by the natives, which continued until Sir James Brooke put it down in 1844, after having obtained the sovereignty of Sarawak from the Sultān of Brunei, and became the first Raja Brooke (1841–1868). Meanwhile, in 1823 the Dutch had received about half of Bānjermsār (South Borneo) from its Sultān, taking the whole of it later by "succession" in 1860. But in 1847 the British gained permanent ascendency in North Borneo, forcing the Dutch to consolidate their authority in the South. Since 1882 British North Borneo has been administered by a chartered company, and lately, since 1888, North Borneo, Brunei and Sarawak have been British Protectorates.

The Philippines were first entered by the Spaniards in 1521, came under Spanish influence in 1529, and were acquired for Spain by the tact and capacity of Miguel Lopez de Legaspi (1524–1572) as Las Islas Filipinas, so named after Philip II (1555–1598). All this effort was the result of avowedly missionary enterprise. Manila was founded in 1571, and the administration was conducted uneventfully on proselytising lines till 1762, when the whole country fell to the British for two years as an incident in the Spanish War of Charles III with England (1761–1764). Then ensued ecclesiastical rule of the narrowest description, which gradually caused a continually growing dissatisfaction, as contact with the outer world increased, till in 1825 there commenced an era of discontent, which ended in a rebellion (1866) under a highly educated leader, José Rizal (1861–1896), and an insurrection under Emilie Aguinaldo (1896–1901). In both of these the friars and clergy played an unenviable and retrogressive part. In 1898 the Spanish-American War broke out, and in the same year the Philippines passed to the United States' flag. Aguinaldo now became a rebel against the Americans, but since his capture in 1901, the whole area has been governed by them on a republican model.

The Malays have long lost all independence, and at the present moment are under the domination of the British, Dutch and Americans, and also to a small extent of the Siamese, despite German intervention in places between 1884 and 1914.

EPISODES OF PIRACY IN THE EASTERN SEAS, 1519 TO 1851.

By S. CHARLES HILL.

(Continued from p. 10.)

XVII.

FIGHT BETWEEN THE THANKFUL AND MARATHA PIRATES, 1697.

The fight between Captain Perrin and the "Sevajees" illustrates the purely business character of Indian Piracy. The Indian pirates were not broken men and outcasts like European pirates, though many such men found refuge in the towns along the coast, but were simply a sea-faring population, sometimes engaged in agriculture but making a living chiefly by trading, fishing and piracy on foreigners. When the Marathas made themselves masters of the west coast of the Indian Peninsula they made use of these men, nominally to protect trade, but really to attack that of other nations, in much the same way as Queen Elizabeth employed her seamen. Under the Maratha régime the English called these people "Sevajees" after the great Maratha leader Sivaji. In many documents the name is converted into the English word "Savages".

Declaration from Charles Perrin, Master of the ship Thankful, 24 December 1697.

"December the 6th. In sight of Batticola [Bhatkal] saw 12 sayle of Sevajees [Maratha] Grabs and boates, whom at 7 in the morning was close by us. One boat hailed us, we told them we were of Bombay. He went to the rest who presently fired a shott at us. We spread our colours, handed our small sailes and maine saile, they still firing both great and small guns. We fired at them. The fight lasted till one in the afternoon, at which time they retreated about half an hour, and then it was calme. They sounded their trumpets and came on againe, at which time I called to them againe, bid them send one boat on board, look on the ship and then if [they] thought [they] could take her to fight againe. They came and demanded 2000 rupees, without which they would take the ship. I told them I knew of no wars between the English and the Sevajees, but if [there] was we were ready to fight againe, and would not fire againe at them before they came on board. They went with this answer to their Admiral and came againe and askt one hundred rupees and some rice. I told them I would give nothing. They had seen the ship; if they thought [they] could take her, come away for we was ready. They rowed a little towards us and then went away to the Southward, which is all the remarkable hath been seen by.

Your Honours humble Servt.

CHARLES PERRIN."

Suratt, December 24th, 1697.

[India Office Records, O. C. 6473.]

XVIII.

A "MOOR" (MUHAMMADAN) SHIP MISTAKEN FOR A PIRATE, 1700.

The colours ordinarily used by the "Moors," i.e. Indian Muhammadans, were a plain red flag. Since all Europeans used the red or bloody flag as both a signal for attack

95 "We spread our colours and fired a gun to leeward, upon which they spread a Moor's ensign all red &c."—Log of the Charles the Second (Capt. John Dorrill), 31st Oct. 1697.
and also as a sign of "No Quarter" or "No Surrender", in which signification it was also used as an emblem of Piracy, the Muhammadan flag was liable to be misunderstood by the Company's cruisers, especially when a ship carrying it refused to submit to examination. Captain White, being on the look out for pirates, considered it his duty to examine all suspicious vessels, and had, of course, to explain his conduct when regrettable incidents occurred.

Declaration of Captain Richard White and officers regarding a fight with a Muhammadan ship.

"The 23rd day of February 1700 in the latitude of 21 degrees and 26 minutes North and Meridian Dist. West from St. John's 96 degrees 39 minutes, att two of the clock in the afternoone, see a sail to windward of us with his larboard tacks on board, the wind att N. Wt. Wee stood towards him with our starboard tacks, and at four having gained allmost up with him, hoisted our colours, and hee not having satisfied us with a return of his, fired a shott, wide of his forefoot,97 for him to bear downe and acquaint us what hee was. Hee then hoisted red colours for a little time and hauled them down again, but would not bare downe, so wee tackt and weather'd up with him, and shortened saile under his lee, calling to him by one William Thornbury, our Pilott, in the Moors language; to brace too and inform us what hee was. I assured him wee were friends and that if hee was an Indian Trading Shipp or upon any honest account,98 wee were the King of England's shipp and would doe him noe manner of damage, that wee came to protect them by endeavouring to apprehend the Pirates, and told them if they had noe boate on board wee would send ours to satisfy him what wee was and bee informed what they were, but I had noe other answer than two or three shott one after another and without any colours, which entered the mainsyle and foresyle, and immediately thereupon in Moors language (as our Pilott informed us) cald out and bid us, "Goe to Hell! Goe to Hell! Wee wont acquaint you nor trust you. Goe to Hell!"

I bid him have a care what hee did except hee designed to have his shipp sunk, but making the same return of words again and still firing att us, I gave him my larboard broadside and doe suppose itt did some damage, after that backt astern and hauled up to windward of him, and gave him my starboard broadside, which did him noe less damage. I plyed him in this manner till two of the clock this morning, having received severall shot from him in my sayles and rigging, but I thought it in vain, seeing him so resolute, to fire any more till brake of day, having disabled him and therefore [being] sure of him.

I must confess at last I took him for a Pirate or an Arab, who are very insolent in these parts, and firing without his colours, as well as before the evening was sett in as after, did confirm me in the same opinion. I could not conceive him to be a Moors99 ship, because they generally love peace and quietness att sea, and the next morning when I came up with him fir'd severall shott att me without colours. His rashness has caused his shipp to bee disabled, tho I endeavoured what I could to hinder itt if he would have

XIX.

HOW THE DUTCH WERE FRIENDS OF THE PIRATES, 1703.

Madagascar as a base for European piracy in the Red and Indian Seas had the advantage of its great security from attack and the facility with which stores could be replenished and crews recruited, but it was not a good market for booty. Thus the pirates considered themselves fortunate when they found that the Dutch Settlements on the Malabar Coast were quite ready to trade with them, of course sub rosa, taking their spoil in return for cash, stores, wine and provisions. To the Dutch this trade had a double advantage. It furnished them with proofs that the chief pirates belonged to the nation of their hated rivals, the English, and this information they handed on in such a way as to lead the native Government to believe that the pirates were really the ships of the English Company. On the other hand, what they bought cheap from the pirates they could sell again at good prices to their native customers or, if suitable, send to Europe. It was trade made easy as well as lucrative.

Some assistance also, the pirates obtained from the French islands of Bourbon (Mascarene or Don Masarenhas)1 and Mauritius.2 Here, however, the motive for their reception was the inability of the French Governors to offer any resistance.

Extract of a letter from Captain George Wesley3 to Mr. Pennynng, Chief at Calicut.

Dated [Rédjapur] 7 November 1703.

"Three years past one Captain Merrino, a Frenchman and French Company, took a ship belonging to Surat off or near Cape Aden and made a prise of her, wherein was considerable riches, and . . . . sailed for the island of Mascarenha [Bourbon], a general rendezvous for pirates, where the said Merrino is now settled and actually become an inhabitant. This relation I had from some of his own ship's Company, which are Frenchmen and belonged to the ship I was imprisoned in. The same year was taken, off St. John's [Sanjan], a Surat ship by the ship Speaker, whose Company consisted of all nations to my certain knowledge, the major part being now in the Pirates on the Coast, and the same"

1 "The first inhabitantes were pirates who settled here about 1657 bringing with them negroes" (i.e. native Malagasy) women from Madagascar. Bernardin de St. Pierre, *Voyage to the Isle of France*, p. 192.
2 Abandoned by the Dutch about 1712 and settled by the French from Bourbon. See Bernardin de St. Pierre, *Voyage to the Isle of France*, p. 54.
3 Commander of the Pembroke, taken by Bowen at Mayotta (Comoros) 10 March 1703 (Madras Conventions, 31 May 1703).
Commander, John Bowen, here near Callequillon: they took Captain Conaway\(^4\) from Bengal, selling ship and goods in shares, i.e., one third part to a merchant of Callequillon,\(^5\) another third to a merchant of Pore,\(^6\) the other third to Malpa [Tam. Mallappam] the Dutch broker of this place, which relation I had from Captain Bowen and several of his Company; then left the Coast and sailed for the Island of Madagascar, but in the way was lost on the Island of Mauritius, on St. Thomas' Reef,\(^7\) where they were most courteously received and feasted, their sick carried into their fort and cured by their doctor, and a new sloop sold them and supplied with all sorts of necessities for their cutting her and making her a brigantine, which they performed by the middle of March, and took their leave of the Governor, giving him 2,000 pieces of eight, their vessels and necessaries, leaving their lascars with him to be conveyed for Surat, and being invited to make it a place for refreshment, sailed for the Island of Madagascar, where at a place on the east coast called Maritan,\(^8\) the Captain with a gang settled themselves till two Scotch ships or vessels falling in the port were both surprised and taken by them.\(^9\)

"By another gang which was settled at St. Augustine [St. Augustine's Bay] the ship Prosperous [Captain Hilliard] was taken. The remainder went for New Mathelege,\(^10\) where they gave the King their brigantine, where I saw her and left her when the pirates sailed from thence. The pirates, having these three in their possession, in searching after one another, lost one of the Scotch vessels, but at last they met at Mayotta [Comores] where it was my misfortune to fall into their hands and detain by them after they had slain my chief mate and another European and plundered what they pleased, let the ship go and sailed for Marethage; from thence to the islands of Mayotta and Johanna, from thence to the highlands of St. John's, off which and at Surat's river mouth they took two sail of Surat ships from Meca; she at the river's mouth was taken by Thomas Howard in the Prosperous, the other by John Bowen in the Speedy Return, a Scotch ship; having taken the following sums out of each ship, viz., out of her taken at the river's mouth 168,000 pieces of eight, counting each piece of gold two pieces of eight. In the other ship was taken 88,000 pieces of eight, at the same reckoning. One ship they left adrift at Daman\(^11\) without anchor or cable, the other they carried to Raapure.\(^12\)

"Thus by the help of our friends' [i.e., the Dutch of Mauritius] brigantine have been taken six sail of ships and hundreds [of people] ruined. Here in Raapure was both the pirates ships burnt and both Companies transported on board the Surat ship, detaining about 70 lascars, mounting 56 guns and 164 fighting men, of which part

are 43 English, the better part of the Company French, the rest Negroes, Dutch &c. nations that cries yaw 13; from where they sailed to the Coast of Mallabar, and about three leagues to the northward of Cochin they anchored and fired several guns, but no boat coming off, the quartermaster went near the shore and had conference by boat with the people, who supplied them next day with hogs &c. refreshments. And from Malpa [Mallappan] the Dutch broker came a messenger, who advised of the ship Rhima, 14 her being in Mud Bay, 15 and that if the pirates would take her he would buy her of them; this I heard myself, and that they should be supplied with pitch, tar and other necessaries.

"I took an opportunity to ask the messenger, Who sends the things on board? Not knowing but that I was one of the pirates, [he] told me, The Dutch, but he should be sent off with them. But before he brought them on board I got clear of the pirates. There had been several Dutch on board before I got ashore, and since my abode here for my health I have seen no difference [in their treatment] between a pirate and a merchant ship, both black and white flocking off with all sorts of merchandizes and refreshments, jewels, plate and what not, returning with coffers of money. And Malpa, the broker, has been so impudent as to offer them to sail[?sell]a small ship, which they want and asked one Thomas Punt 16 to carry her off to them, who denied him, telling him, now he was not ashamed to show his face, but should he be guilty of so base an action, he must never see the face of his countrymen [again], which made the gentleman change his countenance.

"Thus are these villains encouraged by our pretended friends, which Agha Rhima [Agha Rahmān] cannot chuse but see; and, if at his arrival at Sarat [he] will speak the truth, must declare the same. I would have waited on him to that purpose, but so feared of being taken notice of and lose the benefit of the physician, which at present I am in great need of, I dare not do it.

"These being the heads of what I remember and what I heard and had from their mouths in discourse at several times from the reports of the pirates on board them in my seven months imprisonment, having omitted nothing but the many hazards of life and abuses received from these villains &c. &c. GEORGE WESLEY."

(To be continued.)

THE MUNDEŚVARÍ INSCRIPTION OF THE TIME OF UDAYASENA:
THE YEAR 30.

BY N. G. MAJUMDAR, B.A.: CALCUTTA.

This inscription was discovered near the temple of Mundesvarī on a hill close to the village of Rāmgarh, seven miles south-west of Bhābū in the Bhabū sub-division of the district of Shahābād, Bihar. One part of the stone bearing the inscription was found about twenty-eight years ago, and it was in 1903 that the removal of the débris around the temple

13 People, (Germans and Scandinavians) who say ja ('yaw') for yes.
14 I.e., the ship belonging to Agha Rahmān. See infra.—Ed.
15 Probably the inlet of Machhakund (the Fishpond) off Rājāpur.—Ed.
16 As Captain of the Essex he was captured by the pirate John Halsey in August 1707. Halsey plundered the ship and let her go. Surat Factory Records. Letter from Robt. Adams, 17 Sept 1707.
led to the discovery of the other part. The two pieces were sent to the Indian Museum, Calcutta, at different dates. They were afterwards joined together by an iron band, and are now to be found in the Inscription Gallery of the Museum. A summary of its contents appeared in the late Dr. Bloch's Annual Report of the Archaological Survey, Bengal Circle, for the year 1904, pp. 9-10. It was subsequently edited by Mr. R. D. Banerji in the Epigraphia Indica, Vol. IX, p. 289 and Plate. As Mr. Banerji's transcript and translation of the epigraph can be amended in more than one place and as his conclusions about the age of the record are in my opinion open to some doubt, no excuse, I think, is needed for re-editing the inscription.

The stone consists of four faces. The inscription is on one face only, and above that is sculptured a half five-leaved water-lily; there are traces of bold lettering at the back and also on one of the sides. The inscription consists of 18 lines of well-executed writing covering a space of about 2' high by 1¹⁄₄" broad. Some of the letters between the two halves of the stone, now pieced together, have been broken away and lost. The lower part of the first half containing the last two lines has been destroyed, and the letters of even the preceding line are greatly damaged. Otherwise, the writing is in a perfect state of preservation and is generally legible throughout. The size of the letters in line 1 (which records the date) is larger than those in the rest of the inscription; roughly it varies from 4/5" to 2/5". The characters belong to the northern class of alphabets. They are, speaking generally, similar to those of the Allâhâbâd pillar-inscription of Samudragupta, with some differences in details, e.g. the formation of p, s, l, medial t and e and subscript r. They also bear a family likeness to those of the Meherauli pillar-inscription of Chandra, the Mathurâ inscription of Chandragupta II and the Barâbar and Nâgârjunî caves-inscriptions of Anantavarman. It is a fact worthy of notice that almost all the characters of the Munâmavârî inscription are Early Gupta in type and traceable to the records of that period. The palaeography of the inscription will be discussed later; meanwhile, in regard to the form of some of the individual letters the following points may be worth noting, most of which appear to have been overlooked by Mr. Banerji. The first line contains no less than six box-shaped superscript i-s, but in the following lines it is of the usual cursive type; in vindited, l. 12 we have to note the later type of i-kâra (in di) which is, however, the only instance of the type that the record contains. An exact parallel of the promiscuous use of box-shaped and cursive i-s is to be found in the Meherauli pillar-inscription of Chandra. Interesting also is the form of t (e.g. in -kâtiyam, l. 8) which from about the middle of the fourth century A.D. begins to appear in the Northern alphabet, e.g. in parts IV and V of the Bower MS. (ed. Hoernle, Table II) and the Karmâlâ inscription of Kumâragupta, dated G.E. 117. The medial u is formed by a hook as in the Allâhâbâd pillar-inscription as well as by thickening the lower end of the stem (e.g. in -swagâlam, l. 8). The medial v is of the regular Early-Gupta type as in the Gâjhâ inscriptions of Chandragupta II and Kumâragupta (e.g. in -purâvâyam, ll. 12 and 13 of the two inscriptions respectively). The a is of two superscribed strokes (e.g. in -laila, l. 9) as in the Meherauli pillar-inscription. The characters include the very rare final t in l. 16 and final m in l. 18, and

8 FOI, Pl. IV, B and C.
the rather rare ā and ū in ll. 1 and 16 respectively. As regards ā which occurs twice in conjunct groups, it resembles exactly the same letter c.g. in the Barabar cave-inscription of Anantavarman⁹ (in śārīga, l. 5) and varies in position as it stands (cf. triśā and devīśa⁶, l. 1). The y is invariably tripartite. The superscript r is shown above the vertical; but in the case of y only it is written on the line. The d is added on to a superscribed r. ¹⁰ Particularly interesting is the rare sign of interpunction which occurs four times in the inscription (in ll. 6 and 11). This sign is similar to the one occurring in the Bowe MS., which dates from about the middle of the fourth century A.D. according to Hoernle (cf. Table V). The symbol om is of the dextrorsal form having much resemblance to those occurring in the same MS., and the Barabar cave-inscription of Anantavarman.¹²

The language is Sanskrit prose throughout, excepting the last two lines containing an imprecatory verse of which a portion only is now extant. It is, however, not always grammatically correct and contains at least four solecisms¹³ e.g. the wrong use of the prefix kætvæ in præthayovāda, l. 4; the violation of the rule of euphony in mayatet, l. 6; the irregular case-ending in tanḍula-prastha-dvaya, l. 8; and the use of masculine (or neuter) for feminine in asmin, l. 2, and neuter for masculine in etat, l. 6. In krātaka, l. 6, we have to note the addition of the suffix ka. Cf. Gupta Inscrs., p. 69 and Kiellhorn, Ep. Ind., Vol. VII, p. 159, n. 7. In respect of orthography, the only points that call for notice are the following: the use of a guttural nasal instead of an anusvāra before the palatal t¹¹ in triśat[i]me and devīśatime, l. 1, the use of a labial nasal instead of an anusvāra twice in the word sambatsara, ll. 1 and 2, where we have to note the use of b for v; the doubling of t in conjunction with a following r in pittrāh, l. 5 and of a letter except y after a superscript r in parvāyam, l. 2, t-cherēt, l. 7, and r-vad, l. 13; th becomes th after a superscript r in prārthayivā, l. 4 and nāvedyārtha, l. 8; final t and m are written somewhat lower than the line (e.g. in taset, l. 15 and parvāyam, l. 2); the medial d-stroke varies in length (cf. yathākād, l. 12 and mahād-mamta, l. 2); the absence of an avagraha before nupālanam, l. 18; the change of an anusvāra to a palatal nasal in uktah-chat, l. 16; final m has been retained, where anusvāra should have taken its place, in parvāyam, l. 2 and nīkṣyam, l. 11; and the dh of the conjunct dhv is doubled in -ddhyāsa, l. 12. As regards lexicography, the words koshṭhikā, l. 7, yathākāda, l. 12 and tpodanika, l. 13 deserve to be noted. The first word, viz. koshṭhikā is found probably in a Gandhāra stone inscription (Fleet’s Gupta Inscrs., p. 268, l. 3) and certainly in a Dāmodarapur copper-plate of the reign of Budhagupta.¹⁴ There is doubt that the koshṭhikā of our inscription clearly means ‘store-room’, inasmuch as provision is made for the supply of oil and rice therefrom. The word kothaka (= Sk. koṭhaka) which is found in the Pāli literature, in connection with vihāra, appears also to have the same sense.¹⁶ Mr. Banerji, however, renders the word kóc

¹² FGI., Pl. XXXB, l. 3.
¹³ Such violations of the rules of Sanskrit grammar are characteristic of the documents of the Early Gupta period—cf. Hoernle’s remarks, op. cit., pp. 73-5.
¹⁴ Cf. Bühler’s remarks, Indian Paleography (Eng. Trans.), p. 47.
¹⁵ A transcript of this inscription, which will be shortly published in the Epigrapha, was kindly placed at my disposal by Mr. Radhagovinda Banak. For the Gandhāra inscription, cf. i.f.o.s., p. 23, n. 48.
¹⁶ It has been translated by Jacobi and Rhys Davids as ‘store-room’.—See Vinaya-pitaka, SBE, Vol. XX, pp. 109, n. 1, and 177, n. 1. Cf. also the Sanskrit words koshṭaka and koshṭhikā and Marāṭhī kōtha (Molesworth’s Marāṭhī-English Dict., s.v.) which are all used in this sense.
by 'treasury'. But this interpretation is controvertible as rice and oil are surely not things which may be expected to be hoarded up in treasuries. The next word, viz. yathākāld-ādhāyāsain has been rendered by him as 'who arrive at the proper time', and Professor Sten Konow suggests 'those who come and worship from time to time' (Ep. Ind., Vol. IX, p. 290 and n. 4). Even previous to this the expression was known from a number of epigraphic documents, e.g. the Deobaranark inscription of Jivitagupta, the Khālimpur copper-plate of Dharmapāla, the Lucknow Museum copper-plate of Balavarmadeva and some Orissa inscriptions, such as the Kājak copper-plates of Mahābhavagupta. It occurs again in the recently published copper-plates of Kulaśambha. Fleet translated it as 'those who presided at different times' (Gupta Inscrip., p. 218), and Kielhorn as 'as they may be present from time to time' (Ep. Ind., Vol. IV, p. 250), and also as 'present and future' (ante, 1891, p. 123). The editor of the grants of Kulaśambha, M. M. Haraprasād Sāstrī, most conveniently omits the expression in his translation. I am afraid, however, that its proper sense has not yet been properly understood, and the interpretations proposed are open to criticism. The clue to its real meaning is, in my opinion, furnished by the Faridpur grants (ed. Pargiter, ante, 1910, pp. 195, 200 and 204) which have adhyāsanakāle in the sense of 'during the administration (of)'. Again, whenever in inscriptions the expression yathākāld-ādhāyāsain is used as an adjective, it is invariably found to qualify certain administrative functionaries. For instance, in the Lucknow Museum copper-plate it is an adjective of rājakulas or 'royal dynasties', and in the Kājak copper-plate of Mahābhavagupta, of certain officers like samākhatin, sannīhātin, nīyukti and so forth. The only natural conclusion that suggests itself to me is, therefore, that when it is used adjectively it means, 'those who administer from time to time', and when substantively, 'the successive administrative officers'. In the present record the allusion is most probably to the officers who had to superintend the various affairs of the maṭha. The next word that deserves our attention is tāpovanika. Mr. Banerji wrongly read it asṛ-tāpovanika and took it in the sense of 'the merchants who trade on the waters (?)'. The word should, however, be read as tāpovanika and derived from tāpovana. It would naturally mean the inhabitants of the tāpovana, i.e., the ascetics, who are in all likelihood the mahants or pontiffs of the maṭha.

The inscription refers itself to the reign of the Mahāsāma Mahāprātikāra Mahārāja Udayasena, and is dated, in words, the 22nd of Kārttika of the year 30 of an unspecified era. Its object is to record the erection of a maṭha of the god Viniṭēvara, the daily provision of two praṣṭhas of rice and one pāla of oil for the offering and lamp respectively, as well as certain other gifts of the value of 50 dīndus by the dāsaṇdhānaka Gomībhāja.

But what is the age of the inscription? This question has been discussed by Mr. Banerji (op. cit., p. 285) who is of opinion that the record belongs to the first part of the seventh century A.D. This theory is apparently traceable to the remarks of the late Dr. Bloch in his Annual Report, p. 9. According to him, the date of the inscription, viz. the year 30, 'from the shape of the characters must be referred to the Haraha era' of A.D. 606. This surmise on the part of Dr. Bloch has, however, not been substantiated.

by subsequent research, so far as I know, and I cannot bring myself to accept it. But to prove my point it is necessary to go into details. Our inscription is on stone and comes from Bihar. To study its paleography, therefore, it is but natural to take into cognizance other similar records discovered in the same province. And if the characters of our inscription are found to be essentially similar to those of any other Bihar inscription, whose date is known, we may very well rest assured that the former cannot be far removed in date from the latter. Now, if it be assumed by scholars that the Munḍeśvari inscription belongs to the seventh century A.D., as no doubt Mr. Banerji has done, it is to be expected that the alphabetic characteristics of that epigraph should be found to prevail in other seventh century Bihar inscriptions also. Roughly speaking, they must be found in such stone records as were incised in Bihar at least between A.D. 600 and 800. And such inscriptions are the Bodhgaya inscription of Mahanâman, dated 588–89 A.D., and the śāhâ inscription of Adityasena whose date must fall in the latter half of the seventh century A.D. The question therefore arises: whether the characters of the Munḍeśvari inscription, if it is to be assigned to this period, are similar to those of the above two records. A comparison of the letters k, r, ś, h, y, the medials i and i and so forth of the Munḍeśvari inscription with those of the śāhâ inscription is enough to show that these two records can never be relegated to the same period. The latter, as Fleet rightly says, "really differs but little from the modern Devanâgari" (Gupta Inscri., p. 202), while the former as I have already stated, presents alphabetic forms which are traceable to epigraphs of the Early Gupta period (supra, p. 22). For instance, in the former the letter k consists of a plain curved line intersecting a straight upright, whereas in the latter the right part of the curve develops into a loop. The letter r in the former is a mere straight upright without any appendage, while in the latter not only does its lower end develop into a wedge but the right extremity of even that wedge is elongated. The most interesting letter, however, is y which is tripartite in the former, but a fully developed Devanâgari in the latter. Again, the tails of the curves of medial i and i are in the latter regularly drawn down low and fully expressed, but they are in all cases but one absent in the former. Even setting aside these and other differences in alphabetic forms which it is useless to enumerate, the great fact remains that the Munḍeśvari inscription contains 'right-angled' whereas the śāhâ 'acute-angled', forms of letters. It is, therefore, but reasonable to place the former considerably earlier than the latter. But we may go even one step further and say that it is earlier than even the Bodhgaya inscription of Mahanâman which is also in acute-angled characters like the śāhâ inscription, and likewise presents some modern Nâgâri forms. The paleography of the Munḍeśvari inscription, therefore, leaves no doubt that it is to be placed earlier than at least the latter half of the sixth century A.D. The year 30 of the record cannot be, therefore, referred to the Harsha era of A.D. 606, and as such there remains no other known era to which it may be assigned except the Gupta era of A.D. 318–19. The date of the record thus becomes equivalent to A.D. 348–49.

It seems to me that by not following the above method of settling the date of the inscription Mr. Banerji has placed himself in serious difficulties. In his paper on the Patikella grant of the Mahârâja Śivarâja, dated [G. E.] 283 = A.D. 602 he makes

---

23 FGI., p. 274. 24 ibid, p. 200. 25 For these details see Ind. Pal., pp. 54–5.
the following remark about its paleography: "The characters belong to the northern class of alphabets and are in every respect similar to those of the Munḍēśvarī inscription of Udayasena, from the Shahābād district" (Ep. Ind., Vol. IX, p. 285). This general remark he has illustrated in extenso by definite examples, but they are, I am compelled to say, far from being of a convincing nature. For, he himself admits, for instance, that the letters $y$ (which is tripartite) and $u$ of the Munḍēśvarī inscription are of 'the Early Gupta type'—a point of great importance which seems to have been missed when he assigns the record to the Harsha era and refers it to A.D. 636. This conclusion is based by him on a consideration of the affinity of characters existing between this inscription with those of the years 34 and 39 (of the Harsha era) from Nepal (op. cit., p. 289). But I submit, this comparison, and consequently the conclusion that it leads to, are incorrect. First, because, inscriptions of the same provenance, although they are available, have not been brought together for comparison which is a mistake in any paleographic examination of a scientific nature. There is no paucity of stone inscriptions, which date from the Harsha period and are not distant from the place whence our record comes, such e.g. as the Bodhgayā inscription of Mahānāman and the Apsaṭ inscription of Adityasena referred to above. Secondly, mere similarity of character between any two inscriptions is not enough to show that they necessarily belong to the same period, especially when they are separated by long distances. This important point is undoubtedly admitted by Bühler, who points out that the eastern variety of the epigraphic Gupta alphabet of the fourth and fifth centuries A.D. represented e.g. by the Allāhābād pillar-inscription of Samudragupta is to be found even in Pandit Bhagvanlal's inscriptions from Nepal which belong to the seventh century A.D. But if we follow Mr. Banerji's line of argument we shall be compelled to assign the Allāhābād pillar-inscription to the age of the Nepal inscriptions—a conclusion which I am afraid, no palaeographer can ever bring himself to accept. The Munḍēśvarī inscription cannot, therefore, precisely for the same reason, be brought in a line with the Nepal inscriptions; a fact which is in opposition to the remark of Mr. Banerji that "The paleography of the epoch beginning with the last half of the sixth and ending with the first half of the seventh century A.D. can nowhere be studied with greater advantage than in Nepal." (Ep. Ind., Vol. IX, p. 286.)

It has been stated above that the inscription is throughout in right-angled characters, but the inscriptions with which it has been chronologically grouped by Mr. Banerji, viz. the Bodhgayā and Apsaṭ inscriptions, are in acute-angled characters. This fact is rather interesting as it has an important bearing on the chronology of the records in question. Acute-angled form of letters has been accepted by Bühler as a prominent characteristic of the North Indian epigraphs from the sixth century A.D. onwards, and Mr. Banerji too, does not seem to have disputed it. It is difficult to reconcile this with the fact that the Munḍēśvarī inscription, which is assigned by him to the seventh century A.D., is entirely in right-angled instead of acute-angled characters. In discussing the paleography of the four Faridpur grants which he calls spurious, Mr. Banerji explains

26 Ind. Pol., p. 46. 27 Ibid., p. 49.
28 "The presence of the acute-angle," he admits, "is also another important feature in the determination of the characteristics of the alphabet."—JASB., N.S., Vol. VII, p. 295.
29 The Evidence of the Faridpur grants—Ibid.
it by asserting that "In the Eastern variety of the Northern alphabet the latest use of the right-angled characters seems to be in the Mundesvari inscription." But to my mind this statement has not been proved and should therefore be treated as a personal opinion only. As I have already said, just because this record presents right-angled characters it must be taken to be of an earlier age than the Bodhgaya inscription of Mahanâman which shows the acute-angled form of letters. And does not Bühler in formulating his theory about acute-angled inscriptions, refer to this record as the earliest example? Mr. Banerji no doubt anticipates this paleographic difficulty and in his second paper on the alleged spuriousness of the Faridpur grants, meets it, to my mind unconvincingly, by saying that the Bodhgaya inscription "should never be taken to be the prototype of the Eastern variety of the Northern Indian epigraphs of the sixth century A.D.," because, "it cannot be said that the characters represent the ordinary epigraphic alphabet of the North-eastern India of the sixth century." But what is this specimen of 'the ordinary epigraphic alphabet of the North-eastern India of the sixth century?' This obviously is the Mundesvari inscription, and the Bodhgaya inscription, therefore, can only become extraordinary because, it presents 'much more advanced forms' than those of the former. In my judgment this is putting the cart before the horse. Instead of regarding the Mundesvari inscription as prior to the Bodhgaya record, as logical reasoning would require us, it becomes necessary to maintain that the former is posterior to the latter. The Bodhgaya inscription becomes the ordinary epigraphic alphabet of the North-eastern India of the sixth century if it be but regarded as of a later period. "En passant it may be remarked that Mr. Banerji has used the paleography of this record which he places in the seventh century A.D. as one of the evidences to show that the Faridpur grants are forgeries. But if my contention is proved to be right his arguments would lose much of their force. And there seems no objection to taking the documents as original, as Mr. Pargiter has done. This question, however, I leave aside for discussion in a subsequent paper.

Text.

1 Oṁsanṭare triṃśa[ti]-[Kå]ṛṭīkādvāśāsāte.

⁴⁵ matham = etat—Mr. Banerji. But the reading is very clear both on the stone and the impressions.
⁴⁶ Restore Śrī.
⁴⁷ This sign of punctuation is used also in ll. 11 and 16. The ou after -devakulasya is super-
ficious; it should have naturally come after kārtaṇaṁ.
⁴⁸ Śrī-Maṇḍaleśvarasvāmipādaṁ koshṭhikātaḥ—Mr. Banerji. Restore -pādaṁ-koshṭhikātaḥ and cf. Chitra-
tra [k]ṣaśasmi-pādaṁ-koshṭhikāta in Gupta Inscri., p. 268, l. 3. Fleet, however, reads the passage as
Chitra[k]šasmi-pādaṁ-koshṭhikātaśa and translates it as 'belonging to the entrance of . . . which belongs
unto the feet of the divine (god) Chitrakūṭaśavāmin '. The inscription, which is partially damaged,
says (l. 2) that an image of Anantaśvāmin pāda was installed and that an endowment made ' for the
purpose of providing perfumes, incense, garlands, &c., and of executing repairs ' (l. 2-4). And in connection
with the gift occurs the expression bhāya[vaḥ]-Chitra[k]šasmi-pādaṁ-koshṭhikātaśa. In all these
particulars the inscription resembles so much the Maṇḍeśvar inscriptions that I am led to think that
we would not at all be wide of the mark if the above correction be adopted. Moreover, it is also very
likely that the expression dattā daddāṣaṁ, between which and the above expression there is a lacuna, means
that twelve dīnaṁ were the value of the grant (cf. other Gadhā inscriptions where we find mention of similar
gifts made). I do not think Fleet is right in his conjecture that the gift ' consisted of some land at a
village ' which belonged to the god Chitrakūṭaśavāmin and that this was the same god Anantaśvāmin under
a different name. From Maṇḍaleśvarasvāma I believe was derived the name of the hill which was
probably called Maṇḍaleśvara, and it is just possible that we have an echo of this word in the modern
name Maṇḍeśvara. Similarly, we have in the Gadhā inscription the name Chitrakūṭaśavāmin which
means the lord of the Chitrakūṭa hill (op. cit., p. 268 and n. 1).
⁵⁹ Restore pratidināṁ.
⁶⁰ Read -ārthaṁ.
⁶¹ Should be corrected to dvayaṁ.
⁶² Restore -śrīvaṁ.
⁶³ I am unable to restore or interpret this passage.
⁶⁴ Restore 'nīyadāvām.
⁶⁵ Read with Prof. Konow tāpovaniśaṁ and correct it to (ṣ)ṣaṭpovani-
⁶⁶ yathānibaddhaṣya—Mr. Banerji. Restore yath-ṣaṭpovani-
⁶⁷ baddhaṣya.

Translation.

Oh...

(Line 1.) In the year 30, on the 22nd day of Karttika—on the aforesaid year, month and day, in the reign of the Mahādāmaka, Mahāpratiharā and Mahārāja Udayasena, the establishment of this Vīntesvara-mātha has been made by me, the Dvīryaṇya Gomihīta, after having propitiated the kulapati Bhūgudalana together with the temple-committee (of this place) for the increase of the religious merit of (my) father, mother and myself. (L. 6.) Provision has also been made to supply every day, and permanently, as long as the sun and moon endure, two prāshīnas of rice for the votive offering and one pula of oil for the lamp, from the store-room of śrī-Maṇḍalesvarasavāmpāḍa of the temple of [śrī]-Nārāyaṇa. (L. 9.) And also cow, offering, garland, cooked rice and other articles, of (the value of) 50 dīndras (for) śrī-Maṇḍalesvara-savāmpāḍa are made over to the temple-committee. (L. 12.) Having known this the (above) arrangement should not be transgressed by the (successive) administrative officers or the hermits. (L. 14.) This being notified, whoever acts to the contrary, shall live in hell with great sins (L. 15). Thus according to the decree O! Yudhiṣṭhīra preserve with care . . . . . . . . . . preservation is better than gift.

55 Restore yathād. 59 Restore asa naraka.
60 Restore yath. This portion was left unrestored by Mr. Banerji.
61 I am unable to restore or interpret this passage.
62 The restoration of this customary verse is not attempted.
63 For the association of these titles see Fleet's remarks, Gupta Inscriptions, p. 15, n. 4.
64 Le the mātha dedicated to the god Vīntesvara. The word as a personal name occurs in the Lalitavistara (ed. R. L. Mitra), pp. 4, 6. According to Prof. Lüders, "Names ending in -vara always refer to buildings consecrated to Siva" (Ep. Ind., Vol. IV, p. 337, n. 1). In that case, Vīntesvara and Maṇḍalesvara would be epithets of Siva also. Maṇḍaleśa is the name of a siva referred to in an Arhuna inscription, Ep. Ind., Vol. XIV, p. 302.
65 Cf. names like Gomidermin and Gomika of the Bhāsa seals. ASR., 1911-12, p. 113, No. 57—60, and also Gupta Inscriptions, p. 198, l. 3. 66 i.e. teacher, something like an adhyātyā, see Monier Williams s. v.
68 uponandha. This is a technical word and is probably the same as nibandha which means an 'arrangement' 'or' 'assignment'. The word abhiṣēkōdita, l. 14, is also, I presume, technically used. Cf. abhinvena and nibadha, Kāraṇa and Naik cave inscriptions, Ep. Ind., Vol. VII, p. 68 and Vol. VIII, p. 84; see also Gupta Inscriptions, p. 71, l. 11.
69 This would be the earliest reference to the coin in Indian inscriptions. For other references see Gupta Inscriptions, pp 31-2, 38, 40, 41, 261, 265; the Faridpur grants, ante, 1916, pp. 195, 200 and 304; the five Dāmodarpur grants to be published by Mr. Basak in Ep. Ind.; and a Bodhgaya inscription (ed. Bloch) ASR., 1908-9, p. 133.
70 yath-avādhāraṇayā. The word avādhāraṇa, I find, is similarly used in Mr. Pargiter's Faridpur copper-plates e.g. ante, 1910, p. 106, l. 10 and Mr. Basak's copper-plates from Dāmodarpur.
DEKKAN OF THE ŚĀTAVĀHANA PERIOD.

BY PROF. D. R. BHANDARKAR, M.A.; CALCUTTA.

(Continued from Vol. XLVIII, p. 83.)

APPENDIX A.

The approximate date of the rise of the Śātavāhana Power.

No account of the Dekkan of the Śātavāhana period is complete without a consideration of the most probable date of the rise of the Śātavāhana power, regarding which two theories have been propounded. The one accepted by me in this article agrees with that of Sir Ramkrishna Bhandarkar, and is based upon certain chronological statements of the Purāṇas. These I intend to consider here with a view to show how far they agree with facts taken as established.

The duration assigned by the Purāṇas to the Maurya dynasty is 137 years, and if we take 322 B.C. as the date of its foundation, its overthrow and the foundation of the Śuṅga family must have occurred in 185 B.C. The Śuṅgas are generally stated in the Purāṇas to have reigned for 112 years, and the Kāṇvas 45. But as both ruled simultaneously, we have to deduct only 112 from 185 to get 73 B.C. as the date when the Andhras came to power. This is the view of Sir Ramkrishna, and no argument of any importance has yet been adduced to contradict it. I am not unaware that the inscription of Khāravela, king of Kalīgā, in the Hāthigumpha in the Udaygiri Hills near Cuttack in Orissa speaks of a king called Śātakārni, protector of the West, who has been identified with the third king of the Śātavāhana dynasty described above. Its date is 165th year of the Maurya era corresponding to c. 157 B.C., and it may, therefore, be argued that the date 73 B.C. assigned to the foundation of the Śātavāhana dynasty is impossible when the third ruler of that family, viz. Śatākārni, has to be placed about 157 B.C. But then it must be borne in mind that it is now-a-days being questioned whether Khāravela's inscription contains any date at all,¹ and that Prof. Lüders, who has recently carefully read the record with the help of excellent estampages prepared by the Archaeological Department, emphatically declares that it contains no date at all.² So the opposition to our theory based upon the date of the Khāravela epigraph has no solid grounds to stand upon. I am also aware of the palaeographic difficulty that has been urged against the date 73 B.C. for the rise of the Śātavāhana power. But then if the question is properly considered, it will be seen that the difficulty does not arise at all. Such an illustrious palaeographist as Bühler has told us that the Nānāghat and Sāṅchi inscriptions of the Śatākārni and the Hāthigumpha inscription of Khāravela are exactly of the same period. He has also told us that "the differences between the characters of Gotamiputra Śātākārni's and those of the Nānāghat documents are such that it is not possible to place them, as Pandit Bhagwanlal has also seen, at a distance of more than about 100 years."³ This quotation is from Bühler's article on the Nānāghat inscriptions; but when he wrote it, Bühler was of opinion that Gautamiputra Śatākārni lived shortly before the middle of the first century B.C., and accordingly he assigned these records to

1 JRAS., 1910, 243 ff. and 824 ff.
2 List of Brāhmaṇi Inscriptions, No. 1345. An attempt has recently been made by Mr. K. P. Jayaswal and Mr. R. D. Banerji to revive the theory that the inscription contains a date (JBO, 1917, 449 ff. and 458 ff.) But see also Dr. R. C. Majumdar's criticism on it, Ante, 1918, 223-4.
3 ASWI., V, 73.
What is strange is that when this opinion of Bühler’s about the age of the inscriptions is now quoted, the date he then ascribed to Gautamiputra Śatakarni is entirely lost sight of. Subsequently, however, Bühler changed his mind, and came round to the view of Sir Ramkrishna Bhandarkar that Gautamiputra Śatakarni flourished about A.D. 124. If we now subtract 100 from this 124 to account for the difference of character as proposed by Bühler, we get A.D. 24 as the approximate date for the Nāṇāghāṭ, Sāñchi and Häthigumphā inscriptions. If A.D. 24 can thus be the date of the third king of the Śatavāhana dynasty, this cannot but confirm the date, viz. A.D. 73, we have assigned to its foundation.

APPENDIX B.

Vijivāyakura and Sivalakura of the Kolhapur coins.

Nearly forty-two years ago, certain coins were discovered in Kolhāpur near the hill of Brahmapuri, north-west of the town. Pandit Bhagwanlal Indrājī was the first to give an account of them in the Journal of the Bombay Branch of the Royal Asiatic Society, Vol. XIII, p. 303ff., and identify the names occurring on these legends with those of the Śatavāhana dynasty—an inference which has been more or less adopted by all the scholars that have subsequently written on the subject. The legends on these coins have been read as follows:

Raño Vāsīṣṭhiputasa Vijivāyakurasa.
Raño Mādhariputasa Sivalakurasa.
Raño Gotamiputasa Vijivāyakurasa.

With regard to the reading of these legends no doubt has been or can be raised. It is, however, when the question of identifying these princes turns up that a divergence of views is perceptible. Pandit Bhagwanlal took Vijivāyakura and Sivalakura to be mere titles, identified the first with Vāsīṣṭhiputra Pulumāvi, the second with Mādhariputra Śakasena and the third with Gautamiputra Śri Yajña Śatakarni, and further deduced the conclusion that as Mādhariputra of the Kolhāpur coins re-struck the coins of Vāsīṣṭhiputra, whereas those of the former were in turn re-struck by Gautamiputra, Vāsīṣṭhiputra, Mādhariputra and Gautamiputra succeeded to the Andhrabhritya throne in that order. His views were endorsed by the late Dr. Bühler. In the Early History of the Dekkan, however, Vijivāyakura and Sivalakura are taken to be the names of viceroys and identified, the former with the Bālokoiros of Ptolemy, Vāsīṣṭhiputra with Vāsīṣṭhiputra Pulumāvi and Gautamiputra with Gautamiputra Śri Yajña Śatakarni and not with the father of Pulumāvi, Gautamiputra Śatakarni, who never reigned in the Dekkan. And as Vijivāyakura was the viceroy of two kings, viz. Vāsīṣṭhiputra and Gautamiputra, it is argued that one of these was the immediate successor of the other and Śri Yajña, being the later, must be considered to be Pulumāvi’s immediate successor. Mādhariputra has been therein identified with Mādhariputra Śakasena, who is taken to be a successor, but not the immediate one, of Śri Yajña. Dr. V. A. Smith also regards the princes of the Kolhāpur coins as belonging to the Andhrabhritya dynasty, but identifies Gautamiputra Vijivāyakura, who is styled Vijivāyakura II, by him, with Gautamiputra Śatakarni, and considers the other Vijivāyakura (i.e. Vijivāyakura I) and Sivalakura to be the same as Chakora and Śiva-Svāti

\footnote{Above, 1913, 230.}
\footnote{Above, XII, 273.}
\footnote{Pp. 291.}
(Śātakarṇi) mentioned in the Purāṇas as Gautamiputra's predecessors. It will thus be seen that Vijñavakura and Sivalakura are taken by Dr. Smith as personal names and of kings pertaining to the Śātavāhana dynasty. But Prof. E. J. Rapson, whose is considered to be the most important view expressed on this subject, supposes them to be local titles, and identifies Mādhariputra Sivalakura with Mādhariputra Śakasena and Gautamiputra Vijñavakura with Gautamiputra Śātakarṇi. With regard to the third name, he says the following:—"The identification of No. 1, Vāśhiputra: Vijñavakura, must remain doubtful. The evidence of the re-struck coins shows that he cannot possibly be identified with the best known Vāśishṭhiputra, viz. Pulumāvi, who was the son of Gautamiputra; but this metronymy was common in the dynasty, and there is no difficulty in supposing that it was borne by the predecessor of Mādhariputra in the Kolhapur District."

Such are the views expressed by various scholars of repute with regard to the names occurring in the legends on the Kolhapur coins. I will now put forth my own view of the matter, in order that it might be taken for what it is worth by the antiquarians. In the first place, Vijñavakura and Sivalakura cannot possibly be regarded as viceroys of any kings, if the legends on the coins actually are as they have been read. For what this view comes to is just this, viz. that rāko Vāśishṭhiputasa, rāko Mādhariputasa and rāko Gotamiputasa, the first halves of the legend, are to be supposed as containing the names of sovereigns, and Vijñavakura and Sivalakura, the second halves, as giving the names of their viceroys. Such a division of the legends is arbitrary and unknown to Indian numismatics, so far as my knowledge goes. Whenever coins of any viceroys or feudatories are found, their names are, as a rule, specified on the reverse and those of their sovereigns on the obverse. Sometimes, no doubt, but very rarely, the names of the former alone occur without those of the latter being engraved. But not a single instance can be pointed out wherein the names of both the sovereign and the viceroy are specified in one single line in one and the same legend without the introduction of any word indicative of the subordinate rank of the latter. The numismatic evidence is, therefore, against Gautamiputra, etc., being considered as names of sovereigns and Vijñavakura and Sivalakura as those of their viceroys.

Secondly, this view involves the supposition that Vāśishṭhiputra, Mādhariputra and Gautamiputra can be used by themselves to denote any individuals, and here, in particular, the Śātavāhana princes themselves. But not a single inscription has been found in which any one of these metronymies is used by itself to denote a Śātavāhana. If it is Pulumāvi that is spoken of, he is called in inscriptions not simply Vāśishṭhiputra, but Vāśishṭhiputra Pulumāvi; if he is his father, he is referred to not simply as Gautamiputra, but as Gautamiputra Śātakarṇi. Similarly, Śakasena (Śrī-Sāta) is never called simply Mādhariputra, but Mādhariputra Śakasena (Śrī-Sāta). Gautamiputra, Vāśishṭhiputra, and Mādhariputra of the Kolhapur coins cannot thus, by separating them from what follows and taking them by themselves, be regarded as denoting any Śātavāhana rulers. Nor can it be maintained that, although the terms Gautamiputra, etc., are not used by themselves to denote the Śātavāhana princes, they, especially the metronymic Mādhariputra, were about this period conjoined to their names only. For it was a custom of this period with
personages of the warrior class to state the names of their mothers;⁹ and names of the latter such as Vāsisṭhī, Gautami, Kauśikī, Hāritī, and so forth are met with in many old inscriptions, not as mothers of the Sātavāhana kings only, but also of princes of other families and tribes, such as Mahāraṇī, Mahābhūja and so forth.¹⁰ The name Mādhari also is not unknown to Indian epigraphy of this period. Jaggayyapeṣa stūpa, e.g., has an inscription of the third century a.d., and referring itself to the reign of Virapurushadatta of the Ikshvāku family.¹¹ This king is therein called Mādhariṇḍu. Similarly, the Abhirā prince Āśvarasena is called Mādhariṇḍu in a Nāsik inscription of about the same date.¹² The view, therefore, that the terms Gautāmiputra, Vāsisṭhiputra and Mādhariputra must denote, by themselves in inscriptions of the early period, the kings of the Sātavāhana dynasty only, has no grounds to stand upon.

I shall now proceed to consider the second view which regards Vījāyakura and Sīvalakura as local titles, and Gautāmiputra, etc., as metronymics,—both belonging to the Sātavāhana kings. This view was first started by Pandit Bhagwanlal Indraji, and has been adopted, as we have seen, by Prof. Rapson. But to look upon Vījāyakura and Sīvalakura as local titles is a mere gratuitous supposition without the least foundation in fact. Again, if they had been titles, some explanation would have been offered of them, but, as Prof. Rapson himself admits, “no satisfactory explanation has yet been given of the forms Vījāyakura and Sīvalakura.” Next, a sort of inconsistency is, I am afraid, perceptible in his identification of Vāsisṭhiputra Vījāyakura. At one place, he says, as we have seen above, that the evidence of the re-struck coins shows that he cannot possibly be identified with Vāsisṭhiputra Pulumāvī but with the predecessor of Mādhariṇḍu in the Kollapur District, implying that this Vījāyakura was somewhere between Pulumāvī and Āśkasena (Śrī-Śāta). But at another place he says that “two of Pulumāvī’s predecessors seem to have borne the title ‘Vījāyakura’ in the district of Kollapur only,”¹³ clearly mentioning here that the Vījāyakura in question was prior to Pulumāvī and not posterior to him as implied at first. But what is most inexplicable is that while commenting on the passage of Ptolemy where Pulumāvī and Vījāyakura are mentioned, he says that both “might well be one and the same person,” and adds in support of his statement that “a foreigner might be excused for not knowing that in our country, the Prince of Wales, the Earl of Chester and the Duke of Cornwall were the same person.”¹⁴ This means in unmistakable terms that according to Prof. Rapson, Pulumāvī and Vījāyakura were one and the same person, and how this is to be reconciled with his previous statement that “the evidence of the re-struck coins shows that he cannot possibly be identified with the best known Vāsisṭhiputra, viz. Pulumāvī,” is not quite clear to me.

This theory, again, is open precisely to the same objection to which, as we have said, the view first discussed was open. For, if Vījāyakura and Sīvalakura are mere titles why are they to be taken as referring to the Sātavāhana kings, unless we suppose that the metronymics Gautāmiputra, etc., can, even though standing by themselves, denote these princes only? This supposition has been discussed above and shown to be untenable. These metronymics, as stated above, were at this period used in the case of the persons belonging to the Kṣatriya class generally and were never employed by themselves without the addition of personal names, not even in the case of the Sātavāhanas, as shown by their numerous inscriptions.

⁹ Above, 81.
¹⁰ Lüders’ List, Nos. 1038, 1100, etc.
¹¹ Ibid., No. 1202-4.
¹² Ibid., No. 1137.
¹³ OIC.—AMk, xl.
¹⁴ Ibid., xl and n. 1.
All these objections are applicable even to the identifications proposed by Mr. Smith. In fact, no evidence whatever can be adduced to show that there was any connection between the princes named in the legends on the Kolhapur coins and the Śātavāhana dynasty. Now, it is to be remembered that Ptolemy, the Greek geographer, while describing the cities and villages of inland Ariake, speaks of Baithana as the royal seat of Siro-Polemaios and Hippokouras as the royal seat of Baleokouros. Baithana is, of course, Paithan and Siro-Polemaios, Śri-Pulumāvi of the Śātavāhana dynasty. Hippokouras has not yet been satisfactorily identified. But Sir Ramkrishna Bhaudarkar was the first to identify Baleokouros with Viḷḷivāyakura of the Kolhapur coins, and this identification is universally accepted. It is to be noted that Ptolemy speaks of two different places and of two different kings as reigning there. The two kings, therefore—Pulumāvi and Viḷḷivāyakura—must be taken to be different persons. And to argue that Pulumāvi and Viḷḷivāyakura are the same person, on the analogy that the Prince of Wales, the Earl of Chester and the Duke of Cornwall denoted one individual, is to argue that Pulumāvi is identical not only with Baleokouros (Viḷḷivāyakura) of Hippokouras, but also with Tiastenes (Chashjana) of Özene (Ujjain) and Kerekbothros (Keralaiputra) of Karoura (Kur), the two other kings mentioned by Ptolemy. Tiastenes and Kerekbothros might also be thus taken to be local titles of the Śātavāhana sovereign, and not personal names of different kings.

We thus find that Viḷḷivāyakura and Sivalakura cannot possibly be identified with any princes of the Śātavāhana dynasty, but must be taken to be princes belonging to a different line and ruling separately round about Kolhapur. Now, Pandit Bhagwanlal Indrāji has shown that coins of Vāisāthiputra Viḷḷivāyakura have been re-struck by Mādrhariputra Sivalakura, while those of the latter have been re-struck by Gaṅtamiputra Viḷḷivāyakura. The following is, therefore, the order of their succession:—

Vāisāthiputra-Viḷḷivāyakura or Viḷḷivāyakura I.

Mādrhariputra-Sivalakura.

Gautamiputra-Viḷḷivāyakura or Viḷḷivāyakura II.

It will thus be seen that there were two kings of this line bearing the name Viḷḷivāyakura, and one of these was a contemporary of Pulumāvi. Who that was we have at present no means to determine.

---

**THE SURRESH K. R. CAMA MEMORIAL PRIZE.**

The Committee of the K. R. Cama Oriental Institute invite competitive Essays for "The Surresh K. R. Cama Prize" of the value of Rs. 225 on the following subject:—

"Life of Zoroaster in Pahelvi Dinkard as contrasted or compared with the Persian metrical Zaraθushtrnana."

The Essays should be typewritten or written in a neat, legible hand and should reach the Honorary Secretaries, the K. R. Cama Oriental Institute, Hornby Road, Fort, Bombay, on or before the 15th July 1920. Each Essay should be designated by a motto instead of the writer's name and should be accompanied by a sealed cover containing the name of the competitor and his Post Office address. The competition is open to both Zoroastrians and non-Zoroastrians.

TOWN-MAJOR

"This day according to the Right Honble. Company's order and appointment in their Charter, the Town Major, oldenmen and burgesses met at the Fort in due solemnity, where the Charter was read and delivered to them by the President, as also the Macees [maces of office], &c., after which they were duly sworn to their several charges and handsomely entertained with a good dinner and all requisite to it; after which they marched in their gowns with great gravity and decorum to the town hall to Confirm their new establishment and Consult the good of the Cityye, which God grant it may redound to, and that all the Right Honble. Company's Settlements and affaires may be more auspicious and prosperous then formerly.""

The above letter is of some interest in reference to the duties at that date (1888) of the well-known official called a Town-Major. The Oxford English Dictionary defines the meaning of the term under three heads:

(a) The major of a town-ward, as formerly at Edinburgh.

(b) The chief executive officer in a garrison-town or fortress.

(c) Applied vaguely to the chief magistrate or administrative officer of a foreign town.

For the first the Dictionary gives two quotations in the seventeenth century with regard to the city of Edinburgh.

For the second it has a series of quotations from 1702 to 1876, giving instances of the Town-Majors of various fortresses in England and abroad, including India. That for 1702 is worth quoting in full here:

Mil. Dict., Town-Major, the third Officer in order in a Garrison, and next to the Deputy Governor. He ought to understand the Fortification, and has a particular Charge of the Guards, Ranks, Patrouilles, and Sentinels.

For the third meaning there is another series of quotations from 1748 to 1864, the last of which is also worth quoting in full:

The Town-Major finding them without credentials or passports, ordered them to be carried to prison.

The interest in the letter, under reference, however, is that it shows clearly that in the seventeenth century a Town-Major in India was both the chief executive officer of a garrison town and fortress and also the chief magistrate and administrative officer.

In this connection there is no doubt that, up to quite recently at any rate, this was the view taken by Eurasians and Europeans who had not been in England of the office of Town-Major, for in the nineties of the last century there was a story going about in Northern India of a certain lady, the wife of an official of position, who was going to England with her family for the first time and was asked how she intended to get about when she reached London. She replied that she would have no difficulty because she would go straight to the Town-Major for information.

The Town-Major as the administrative officer of a garrison town, is still in existence whenever the necessity for his services arises: vide the following quotation from the Daily Graphic, London, for the 11th November 1919:

"How British Ladies Live in the Garrison Towns in Germany.

"Not only are there wives of officers and other ranks* living with their husbands in France and Belgium, but the privilege has recently been extended to members of the Rhine Army as well. The concession is a highly popular one, and every day there is a marked increase in the number of those taking advantage of it. Of course the majority are to be found in Cologne, Bonn, Duren and Godesburg, where it is easier to secure accommodation, but a fair proportion will also be met with in the other districts and villages garrisoned by British troops.

"The matter of securing suitable house-room, however, is not too easy, for Germany seems to be as overcrowded as England. If the wife arrives before lodgings have been settled, she and her husband will have to start by putting up at an hotel as a temporary measure. The Town Major arrange this. There is no charge for the husband, but he will have to pay a fixed tariff of 15 marks a day for his wife. This is not so much as it sounds, since it really represents less than three shillings.

"In the following instance, too (extracted from the Times of the 14th November 1919), the Town-Major during the European War comes out as a civil as well as a military administrator of a garrison town.

"Ypres and the Vandals: Town-Major's Appeal for a Fast Cemetery.

"Lieutenant-Colonel Beeckes Wilson, late Town-Major of Ypres, whose efforts to safeguard the ruined city from desecration are well known, returned to Ypres yesterday. To a Press representative Colonel Wilson gave some particulars of the present condition of the place."

R. C. TEMPLE.
BOOK-NOTICE.

Corporate Life in Ancient India, by Ramesh Chandra Majumdar, M.A., Calcutta. 1918.

This is the title of a new book, (pp. vii-4176, Demy), brought out by Dr. Ramesh Chandra Majumdar, of the Calcutta University. The book consists of five chapters, (1) Corporate Activities in Economic Life, (2-3) Corporate Activities in Political Life, (4) Corporate Activities in Religious Life, and (5) Corporate Activities in Social Life. The author has taken great pains to collect evidence, literary (Vedic and post-Vedic), epigraphic and numismatic, to prove the existence of self-governing institutions both under monarchical and republican forms of government, that existed side by side in Ancient India. The cooperative guilds of artisans, traders and merchants with power to elect their own Makhya or president or presidents, to enact their own laws and rules to regulate the work and conduct of their members, to admit new members or to expel members for misconduct and to appeal to the king to restore order in a guild that is likely to degenerate owing to factious spirit of some of its members the political assembly of the people with power to elect, expel, or restore kings, the self-governing villages, the Buddha Sanghas, the Caste system are some of the ancient Indian Institutions that are noticed in detail with regard to their relations to the supreme Government. Accordingly "Self-governing Institutions in Ancient India" would have been a more suggestive and attractive title.

Excellent as is the work as a collection of reliable facts and figures, the author's translation of some of the Sanskrit passages quoted in the book seems to be wrong (pp. 16-17; 22; 89 Vaimaja). In other places his inferences seem to be wrong: (pp. 42; 45). Here 'Viśāpa pati' does not at all imply "the importance of the popular element in the government" as inferred by the author: nor is there any reference in the Cow-hymn quoted in page 45 to any assembly, as stated by him. Again the word 'śabha' (pp. 47, 55, 56) was in many places used in the sense of a gambling, rather than a political, meeting. Similarly, the word 'Pārījāta' means foreign rule as stated in the Arthasastra (text p. 323) and never a non-monarchical form of government.

In noticing the corporate activities in Religious life, the author has confined his attention only to the Buddhistic and omitted the Brahmanic and other communities.

In the last chapter, his description of the evolution of caste is somewhat confused for want of a clear chronological analysis of the subject.

On the whole the book is an excellent and valuable treatise on ancient Indian social and political institutions and deserves to be seriously studied by all that are interested in the history of India.

R. Shamasastro.

NOTES AND QUERIES.

NOTES FROM OLD FACTORY RECORDS.

16. The Chief Watchman discharged for incapacity.

7 July 1718. Consultation at Fort St. George.

The President reports to the Board that Peddanaigue [Peda Nāysk] the Chief watchman of the Town has forfeited his cowle [gaul, agreement] by open and notorious transgressions of every part thereof, that he is become utterly incapable of discharging the duty of that post, having by his extravagance rendered himself unable either to maintain a sufficient number of Talliaras [taliyaqār, watchmen] to watch the city or to make good any Losses that shall happen, as by the Cowl he is obliged to do, that thro' his incapacity as a Watchman to discharge his duty, frequent Robberies have happen'd of late, and one instance of what is usual in these parts, of a Merchant and his Servant murdered in their own house by Robbers; The President added that if a speedy stop was not put to this mischief it would increase upon us till it came to a past remedy. The Cowl was then read, and the violation of every part thereof by Peddanaigue was notorious to the whole Board.

Peddanaigue being call'd in and acquainted with the sentiments of the Board on his conduct, was asked if he had anything to say in his own defence. He only reply'd that he was not able to do better and left himself to the Judgment of the Board. Agreed that Peddanaigue, Chief Watchman of the City, having forfeited his Cowle and being incapable of performing the duty of his Office be dismissed the Hombre. Companys Service. (Madras Public Consultations, vol. 87).

EPISODES OF PIRACY IN THE EASTERN SEAS, 1519 TO 1851.

By S. CHARLES HILL.

(Continued from p. 21.)

XX.

THE STORY OF THE CASSANDRA, 1720—1723.

The story of the Cassandra, which was captured by the Pirate Jasper Seager, is famous in the history of the East India Company's shipping. Her Captain, James Macrae, was an Irishman and, it is said, had been a school-fellow of his captor, who, on turning pirate in order to prey on English commerce, had impudently taken the name of Edward England. James Macrae, in reward for the courage with which he had defended his ship, was made Governor of Madras. Seager was kind to him on his capture, a kindness which caused his own deposition and ruin, so that he died in a state of great misery in Madagascar. Taylor, Captain of the Victoria, a brother pirate, present on the occasion of the attack on the Cassandra, got away safely to America and, possibly in return for an act of generosity, committed whilst drunk, in favour of a distinguished Portuguese nobleman, was received into the Spanish service.

An account of the action by Richard Lazemby, second mate of the Cassandra, affords a good description of the way in which the European pirates used to treat their prisoners, and also of their infamous cruelty towards Asiatics. It also discloses the fact (which one finds it difficult to believe) that the Dutch maintained regular communications with such wrecks, but there is too much evidence for any doubt to exist. It further discloses the cowardly behaviour on the part of Captain Kirby of the Greenwich in deserting Macrae during the fight with Seager and the equally disgraceful flight of Captain Upton in command of the Bombay fleet, which incidents prove that all the Company's Captains were not of the same metal as Macrae, whose reputation is heightened by the terror and rage shown by the pirates as soon as they heard that he was to be put, by the Governor of Bombay, in charge of the operations against them. It is, perhaps, amusing to observe that they considered him guilty of ingratitude to men who, whilst robbing him, had spared his life and given him the means of escaping from Madagascar; but nothing is more certain than that the pirates of this period looked upon seamen that remained faithful to their employers as a kind of blacklegs who supported those rascally capitalists, the merchants, against honest sailors. The pirates were, in short, extremists of a very red dye.

Jasper Seager flew the Black Flag, and, as far as I know, was the first pirate to do so in Eastern waters; the only other recorded instances with which I have met are those of Malay pirates one hundred years later. The first instance which I have found of its use anywhere is by a French pirate from Dominica named Emmanuel Wynne in 1700, who fought Captain John Cranby, R.N., off Santiago in the Cape Verde Islands, but the skull and cross bones usually borne on it appear in the picture of Death and the Young Lady in Hulderich Frolich's Beschreibung ... des Todtentanzes Basels und Berns, published in the year 1667, in which the flag, attached to a trumpet which Death is blowing, bears this emblem. Whether Frolich invented it or actually found it on the walls of the convent he is describing cannot be known, for the Dances of Death there depicted have been destroyed, but it appears likely that the emblem was originally ecclesiastical and not practical. Its use at sea is shown by the fact that many of the commanders of the East India Company placed it as a marginal sign in their Logs to indicate the record of a death. Probably other sea-captains did the same, and so, possibly, it became known to seamen and was by them chosen as an emblem to show that those who had turned pirates were, being dead in law, serving under the banner of King Death. This I believe to have been the case rather
than that they used it as threatening death, for as late as 1723, Captain Hawkins, when a prisoner in the hands of pirates, ascertained that they used it as a sign only of their occupation, and that they hoisted the Red Flag when they intended to give no quarter. It is true that they called it the Jolly Roger, a name of which no satisfactory derivation has yet been given, but if one supposes that that name was originally applied to the Red Flag there is not much difficulty in supposing it to be an English or American perversion of the French "Joli Rouge" (a name which French seamen may well have ascribed to it), which became transferred by English seamen to the Black Flag in ignorance of its exact meaning. There is, however, no documentary evidence which I can produce to prove that this supposition is correct, and there are at least half a dozen other possible -derivations which I will not trouble to enumerate.

1. The Cassandra taken by Pirates, 7 August 1720.

"The account which the Captain of the Cassandra gives to the India Company of the loss of his ship is in substance as follows:—That about the latter end of July last (1720) he with the Greenwich and an Ostender went to water at the isle of Johanna, near the Coast of Madagascar, where they had intelligence that some pirates were at work to fit out a small pirate ship at Ayanotta [? Mayotta], another island about three leagues off, which they resolved to go and destroy. That on the 7th of August in the morning about 8 o'clock they discovered a sail standing into the Bay of Johanna, upon which they immediately unmoored and made clear ships, both Captains having mutually engaged to stand by each other, not doubting but to give a good account of them. The Cassandra weighed and got under sail. The Greenwich cut and did the like, the Pirates then within a mile of them. The Cassandra being under the high land had but a broken wind, but the Greenwich, being open to the valley, had a true breeze and made the best of his way from the Cassandra. They had an Ostender in their company of 22 guns, whose Captain promised heartily to engage with them, and 'tis believed would, had he not seen the Greenwich make the best of his way from them, which he seeing, did the same, leaving the Cassandra engaged with both Pirates, who called several times to the Greenwich to bear down to his assistance and fired two guns at him, but all to no purpose; but when he got about a league from the Cassandra, he brought to and looked on.

'The largest of the Pirates had but 34 guns, and the lesser 30, which encouraged the Cassandra's men to see them of so small force, not doubting but if the Greenwich would have fought to have taken both the Pirates, who having taken just before two rich prizes from Jeddah, which had the value of £200,000 on board, but the Cassandra having no assistance was left to the fury of both the Pirates, from whom no quarter was to be expected, their black and bloody flags being all the time displayed; who notwithstanding their superiority engaged them both above three hours, during which the largest of them received some shot between wind and water, which made him keep at a little distance to stop his leaks; the other endeavoured to board him by the help of his oars, but by good fortune the Cassandra shot his oars to pieces and prevented him, and by consequence saved all their lives.

"About 4 o'clock all the officers and men placed on the Quarter-Deck and Poop being killed or wounded and none left there but the Captain, the other Pirate made up

17 Macrae's own account is given in Johnson's General History of the Pirates, I, 119. This account adds one or two details.

18 A ship of the Ostend Company, which was not, however, formally incorporated until 1722. For a note on its history, see C. R. Wilson, Old Fort William in Bengal, II, 178 n.—Ed.

19 Apparently the crew of the pirate ship Indian Queen (Captain Oliver de la Bouche or Levaure), which had been wrecked.
to the *Cassandra* again, having lain all the time within a cable’s length and given her several broadsides, in order to clap her aboard; when, no hopes remaining, she clapt her helm a-weather in order to run the ship ashore, and, notwithstanding she drew four foot more than the Pirate, yet, by good Providence, the latter stuck fast on the higher ground, her boltsprit reaching almost to the *Cassandra*’s mizen shrouds, by which they were disappointed a second time from boarding her; when a more furious engagement ensued than ever, and the *Cassandra* having the advantage of showing his broadside to the Pirate’s bow and galled him very much, and had Captain Kirby come in even then, ’tis verily believed they had taken both the Pirates, for the *Cassandra* had one of them sure, but the other Pirate, who was still firing at her, seeing the *Greenwich* did not offer to come near, supplied his consort with three boats full of fresh men. At which time, being then about half an hour past four, the *Greenwich* made sail and stood quite away to sea; whereupon Captain Macrae, seeing himself totally deserted, ordered all that could to get into the longboat, under the smear of his guns, and save themselves; and himself went into the yawl, very sorely wounded in the head by a musket ball, so that, some by boats and some by swimming, most of the crew that were able [i.e., unwounded] got ashore. When the pirates came aboard they cut three of the wounded men to pieces, whilst the Captain and a few of his people made the best of their way to Kingstown, about 25 miles up the country, where he heard that the pirates had offered 10,000 dollars to the country people to bring him in, which they would certainly have done, but that they knew the King and his chief people were in the English interest, who in the interim gave out that he was dead of his wounds, which somewhat abated the fury of the pirates, but after ten days when he was pretty well recovered, beginning to consider the dismal condition they were in and the little hopes they had of ever getting a passage from thence, he desired Mr. Cowan, a passenger with him, to go down to the pirates and try if he could obtain their promise for his safety if he came down to them, which they readily granted, some of them having formerly sailed with him, which proved of great advantage to him and was the means of preserving all their lives, for, notwithstanding their promise, they were going to cut them to pieces unless they would enter with them, had it not been for the authority that the chief Captain, Edward England or English, and some others that knew Captain Macrae, had over the rest; and in the end he managed it so that they made him a present of the lesser Pirate Dutch built ship of about 300 tons, called the *Fancy*, and 129 bales of the Company’s cloath, though they refused him a suit of his own cloaths or a shirt.

On the 3rd of September, the Pirates sailed from Johanna, and five days after Captain Macrae with 55 of his men, including 2 passengers, with jury-masts and such odd sails as the pirates had been pleased to leave him, sailed for Bombay, where they arrived after a passage of 48 days, almost naked and half starved, having been reduced to a pint of water a day, and almost in despair of ever seeing any land through the long and continued calms they met with between the Coasts of Arabia and Malabar. At Bombay they found the *London* and *Chandois*. By these accounts it appears that Captain Macrae killed the pirates between 90 and 100 men, and lost himself 13 men and 24 wounded. The pirates had on board both ships when they sailed 300 white men and 80 blacks.

---

20 The two chief villages of Johanna (Comoro islands) were known as King’s Town and Queen’s Town in the 17th and 18th centuries.—Ed.

21 The *Weekly Journal* for the 13th July 1723 notices that the East India Company had made provision for the families of Captains Benjamin Lovelady and Francis Bandle, who were killed fighting pirates on the *Cassandra*, and who were also probably passengers in the ship.
"We hear the owners of the Cassandra have resolved to send the Captain a present to Bombay for his singular gallant behaviour in engaging the Pirates."

[Weekly Journal or British Gazetteer, 22 April, 1721.]

2.

Extract of the Log of the Greenwich, Captain Richard Kirby Commander.

"Sunday, August 7th 1720. At 7 this morning saw two ships standing in for the Road [of Johanna]. At 11 following unmoored, at 12 the Cassandra being under sail cut bower cable in the hawse and then the Ostender weighed, at which time discovered the two ships to be pirates, the one a French built ship of 46 guns, by name the Victory, Captain England. The other Dutch built of 36 guns by name the Fancy, Captain [Jasper] 22 Seager. Got all things in readiness for our defence.

"Monday August 8th 1720. At 1 p.m. the Cassandra, being the leewardmost ship, was engaged by the small ship. They fought under the black flag at the main-topmast (with death's head in it), the red flag at the foretopmast head, and St. George's colours 23 at the Ensigne signe. We tacked and stood in for to assist him, when perceiving the Cassandra aground, tacked and stood off, making the best of our way for Bombay. About 8 following spy'd one of the Pirates in chase after us; she having the land breeze first got almost within gunshot of us before we had the breeze, then we cut away our longboat and lost our yawl, the main giving way, with two sailors in her, by name James Tate and William Prescott. Night approaching, soon lost sight of the Pirate and proceeded without any further attempt. We were not fully satisfied whether the Cassandra was taken or not. The last time we saw her perceived them hotly engaged, but could not come to her assistance."

[India Office Marine Records.]

3.

Narratives of Richard Lazebny of London, Second Mate of the Cassandra; Captain James Maerue, Commander, taken by two pirates; Captain Seager of the Fancy and Captain Taylor of the Victoria.

No. 97. Letter from Richard Lazebny.

"I omit the particulars of our engagement and being taken, because do not doubt but your Honours have had a satisfactory account of that from Capt. Maerue, and likewise in what manner I was taken from him. The first night I came aboard [?the pirate ship] and the time came for these people to sleep, there was a watch ordered on my account, which made some of them so angry as to say that if they saw me out on the deck on any account soever they would knock my brains out, which did not a little concern me. Some who were in the cabin bade me be of good cheer, but not to venture on deck for fear of the worst. The Chief Surgeon in particular, who took care to lay me down on the cabin floor by him, more to prevent my escape than any good nature in the villain, which I found afterwards when I rose in the night by his following me into the gallery and telling me if I offered at escaping they would oblige Captain Maerue to find me or else take all from him again and burn the ship.

"The next morning they unmoored and hove short for sailing. Captain Maerue came on board and interceded much for me, but to no purpose. He left me and soon after they got under sail designing to proceed for India, where they arrived some time in October [1720]. The day before they made the land saw two ships to the eastward, whom at first sight took

22 See Log of the London (Captain William Upton) under date 4 Nov. 1720.
23 The White Ensign.
to be English, whereupon the Captain called for me and threatened to cut me in pieces if I did not immediately tell him the signals between us and our consorts from England. I made him answer I knew of none, or ever had occasion to make any during our company together. He then abused me, calling me scurrilous names, shook his broad sword at me, saying he would plague me like a dog as I was and I [had] better tell him. Then came up with the ships soon after, which proved to be two small Moor ships which came from Muscat with horses, which they took by firing a gun or two. They brought on board their Captain and Merchant, putting them to torture to make them confess of their money, believing they were come from Muscat. They continued all night, rifting and tormenting the people and the next morning made the land. At the same time a fleet in shore plying to the northward, they instantly held a Council what to do with the fore mentioned ships. Some were for sinking them, men and horses in them, others for throwing their sails overboard, others again for cutting away their masts, and all was, they said, for fear of being discovered on the Coast. After their debates were over, they brought them to an anchor in thirty-five fathom water, threw all their sails overboard and cut one of the ship’s masts half through.

"When at anchor one of the fore mentioned fleet bore away to them. They made them and hoisted English colours, the pirates answering with red. The rest of the day they employed in taking all their water from them and at night weighed with the sea-wind, and left the two Moor ships to stand to the northward after the fleet, which they came up with about four the next morning, just as they got under sail with the land-wind, making no stop but ran through them, firing their small arms and great guns on both sides as fast as they could load and fire till day light, then saw their mistake, having all along taken them for Angria’s fleet. They were in great consternation, not knowing what to do, whether to run from them or pursue, being so much inferior to them in strength, having no more than 300 men in both ships and 40 of them negroes, besides the Victory at that time had four pumps at work and must inevitably have perished some time before had it not been for the hand pumps and several pair of standards they took out of the Cassandra.

"Observing the indifferency of the fleet, they took courage to chase rather than run, which they did when the sea-wind came in, but were to leeward about a gunshot, some ahead (especially the great ships) and some astern, which were afraid to tack upon believing them to be fire vessels. The great ships began to gain upon them towards sunset. They continued the same course all night. Do see several boats pass they had cut away. The next morning were all out of sight, only some few Gallevats and a small Ketch to leeward, which they bore away after. The Ketch perceiving it embarked their people on board a Gallevat and set fire to her. They then left off chasing the Gallevats being too nimble for them. About an hour after they see a Gallevat to the north which they chased and took, being come from Gogo and bound for Calicut, loaded with cotton.

21 October 1720. Capt. Harvey came aboard and reported they were the Cassandra and Great French ship [i.e., the Victory] . . . . . . The other two they took to be their prizes. Upon the Anadore’s coming near them, she fired a shot to leeward, they did the same and immediately after hoisted their bloody flag at mast head and fired two shot at her." — Log of the London.

Gogha in the peninsula of Kathiawar, Gulf of Cambay.—Ed.
They asked them after the fleet, believing they were in it, but the fellows told them they had not seen a ship or boat before that day since they left Goa, and notwithstanding the poor fellows' pleading, they threw all their cargo overboard, tormenting them by squeezing their joints in the vice to make them confess of the fleet. They kept the boat with them all that night and part of the next day, but blowing fresh eventually they split the Gallervat's sail, so that they could not keep company with the ship. They then put the people into their boat, having nothing but a small try-sail, no provisions and about four gallons of water half salt, and then out of sight of the land.

They then resolved on cruising southward. The next day were between Goa and Carwar. At noon heard guns fire at Carwar. They instantly came to an anchor, and at night sent their boat to discover what ships there was in the Road, who returned about two in the morning, giving an account of two Grabs at an anchor there. They then weighed and ran nearer to the Bay and anchored again at daylight. The Grabs having sight of them ran out to get under India Diva [Anjidy] Castle, which they did with much difficulty. The pirates were so much displeased at it, wanting water, that they had a Council whether they should make a descent that night and take the island. They could not agree on it, so proceeded to the southward. The next morning see a small ship at an anchor in Onore [Onore, Honavar], which in the evening they took, having no one on board but a Dutchman and two Portuguese, the Captain and his officers being gone on shore. The next morning they sent on shore to acquaint the Captain that if he would supply them with some water and fresh provisions he should have the ship again. At night he sent on board his mate, Frank Harmless, with a letter to them that if they would deliver the ship into his possession over the Bar he would supply them with what water and provisions they wanted and not before. They not liking his proposals the Mate said he would carry them where they should get what they wanted. They not liking to trust him being a stranger, resolved of seeking water at the Lacker Diva [Laccadive] Islands, which they put for directly, where they arrived in three days after. The same day of their arrival they took a small Monchew with the Governor of Carwar's pass on board, who gave them an account that there was no anchor ground among the islands. They then being near the Island of Melindra [Amendavi] they sent their boat on shore to see if there was any water or whether the island was inhabited. They returned giving an account of there being good water and abundance of houses, but that the inhabitants at the sight of the ships were fled off in boats to the adjacent islands, only abundance of women and children, which they found a day or two afterwards hid in the bushes, and forced them in barbarous manner to their lascivious inclinations, destroying their cocoa-trees and everything they met with, setting fire to several of their houses and churches. Had fresh gales of wind whilst there, which occasioned their losing three or four anchors there, the ground being so rocky, and lastly with a hard gale of wind were forced from the island where they left about 70 people, black and white, and most of their water casks. In about ten days they made shift to find the island again, where they filled their water, took their people on board. Provision being very scarce among them, they now resolved of proceeding to Cochin and see what they could get from their good friends the Dutch, who, they said, they were confident would not fail of supplying any of their profession.

(To be continued.)

29 A monchew, the Portuguese name for a cargo-boat on the West Coast of India. See Travels of Peter Mundy (Hak. Soc.), ed. Temple, III. Pt. I, p. 295 n.—Ed.

30 Captain Biden, Master Attendant at Madras, stated in 1848:—"Except on a small bank off Mincow there is no anchorage amongst the Laccadives."—Low, Indian Navy, II, 195.
THE HÂTHIGUMPHĀ CAVE INSCRIPTION OF KHÂRÂVELA.
BY K. G. ŚANKARA AiyAR, B.A. B.L.; TRIVANDRUM.

The Hāthigumpha cave inscription of Khāravela in the Udayagiri hill (Orissa), edited and translated by Mr. K. P. Jayaswal in the Journal of Bihar and Orissa Research Society, 3. 425-504; 4. 304-403, deserves careful study, because it throws light on early Indian history, and because Mr. Jayaswal claims that it compels us to revise our dates for Buddha and the Śaṅkunāka kings of Magadha.

The inscription opens with a salutation to the Arhats and the Siddhas, thereby indicating its Jaina origin. It then introduces us in line 1 to Khāravela, the emperor (अधिपति) of Kaliṅga, whom it calls a lunar king (Aira=Aila), Mahāmeghavāhana (=Mahendra), Mahārāja, and the increaser of the dynasty of King Cheta (चेताराजस्वयंवरेण). The Purāṇas mention, among post-Andhra kings, nine very powerful and wise kings called Meghas in Kosalas (F. E. Pargiter: Purāṇa Text of the Dynasties of the Kali Age, 73). These Meghas must be the Meghavāhanas of Kaliṅga who were therefore emigrants from Kosalas. This is confirmed by an Oriya MS. of the 16th century A.D. preserved in the Indian Museum which states that the Aira kings of Ukala, i.e., Kaliṅga, had come to Khaṅdagiri (Udayagiri) having abandoned Kosalas (कोशलंस्य वस्तुतः गृहस्वत्तमिनि मूडः). And Khāravela, too, is called an Aira. This MS. also informs us that Kaliṅga was first conquered by Nanda, the famous Magadhan king (नंदस्य सहितं यथेष्क ऐश्वर्यं भवेत; नंदराज सूतिस्यति: नभवे विद्येति तत्), that it was later on recovered by another Aira king, the destroyer in Kaliṅga of Nanda’s Vedic faith (नः वेदग्राहिरपरमः ऐश्वर्यं भवेत उस्ति: विद्येति: वेदांविद्यावदः). and that it was again conquered by Aśoka (अशोकस्यनामार्कं ऐश्वर्यं उस्ति: अशोकनार्कं). These are confirmed by Megasthenes’ statements that the last Nanda who was ruling when Alexander arrived at the Hyphasis (Bias) in September 326 B.C. (V. A. Smith: Early History of India, 114) was king of the Prasii (Magadha) and the Gangaridai (Kaliṅga) also, and that in his own time Kaliṅga was a free kingdom (McCrindle’s Translation, pp. 135, 155), and by Aśoka’s claim to have conquered Kaliṅga hitherto unconquered (अनन्तर) by the Mauryas (Rock Edict 13).

Tāranaṁtha says (pp. 34, 38, 41; ch. 6) that Kāṃsāoka conquered the country on the south-eastern ocean (Kaliṅga) and was converted by Yaśas who held a council at the Kusumpurivihāra in Vesāli under King Nandin. The Dvāparaśā (4. 44, 47) and the Mahāvaśā (4. 8) place this Vesāli council of Yaśas in Kāṅsāoka’s eleventh year. Therefore Kāṃsāoka=Kāḷāsāoka=Nandī; and Nandavardhana, who, as we shall show elsewhere, ruled from 401 to 361 B.C., conquered Kaliṅga before his eleventh year, i.e., 401-10=391 B.C.

Since the last Nanda held Kaliṅga till September 326 B.C., it must have recovered its independence between that date and the date of accession of Chandragupta Maurya to whom it was not subject.

In the time of Megasthenes, it was a powerful kingdom. But eight years after his anointing (Rock Edict 13), Aśoka conquered Kaliṅga, and the suffering which his conquest had caused through slaughter, captivity, famine and pestilence stag Aśoka with remorse, and made him forswear for the future all military ambition. Twelve years after his anointing, Aśoka, in addition to his fourteen rock edicts at Dhauli (Cuttaok district) and Jangalā (Ganjam district) in Kaliṅga, issued two edicts special to Kaliṅga adjoining its just government and insisting upon sympathetic and tactful treatment of its wild tribes. In the same year he gave two cave-dwellings, and, eighteen years after his anointing, he gave a third cave-dwelling in the Barabar hills (Gaya district) to the Ājñvikas, a sect of naked ascetics. So Kaliṅga probably continued to be under Aśoka’s rule till his death, and only thereafter became free once more.
The Hāthigumpha inscription then gives a brief and sober account of Khāravela's doings from year to year. When he had completed fifteen years of his age, he was anointed crown prince (श्रवण) and ruled as such for nine years. He had already thoroughly learnt royal correspondence (विलय), currency (रुप), state-accounting (गणना), municipal law (ध्यानशास्त्र), dharma injunctions (विचित्र), and all the arts (विद्या). These facts are related in l. 2 of the inscription. Mr. Jayaswal infers from them that it was then usual to postpone the formal anointing as king to the twenty-fifth year of age, even though the predecessor die long before that time. But the inference is not a necessary one. Khāravela's anointment at that age might have been due to his predecessor having died only then. Mr. Jayaswal argues that his inference would account for the four years interval between the accession and the coronation of Asoka (MV., 5. 21). But the interval might have equally well been due to the struggles between Asoka and his brothers for the succession to the throne, which are dimly reflected in the Buddhist legends about Asoka's destruction of all his brothers before his conversion to Buddhism.

When Khāravela had completed twenty-four years, he was anointed Mahārāja in the third Kaliṅga dynasty for one generation (सुतवतार). (insc. l. 3). The reference to Cheta's dynasty as the third, confirms the conquests of Kaliṅga by Nandavardhana and Asoka. The first dynasty ruled down to the time of Nandavardhana, the second from after the time of the last Nanda to the ninth year after the anointing of Asoka, and the third after Asoka's death. The reference to the anointing for one generation indicates that the people were in theory free to choose their kings for a limited number of generations or for the whole duration of that dynasty, just as they liked.

In the first year of his rule, soon after his anointment, Khāravela repaired the towers, city walls, buildings, and embankments of reservoirs in the Kaliṅganagara which had been damaged by a storm (l. 3), and pleased his subjects, reckoned at three and a half millions. Then in the second year, disregarding Sātakarni, he sent a large army to the west, and, by his army which had reached the Kanhabena, he burnt the Mūshikanganara (l. 4). We will show elsewhere that the Sātakarni here referred to must be identified with Sēri Sātakarni (170-160 B.C.), the third Andhra king of the Purūśa Text (p. 71). The Kanhabena is doubtless the river formed by the junction at Bhandara (Central Provinces) of the Kanhan and the Wainganga which in its turn joins the Wardha. The Mūshikanganara, therefore, was situated in the Central Provinces. This inference is confirmed by Khāravela having sent his army to the west (of Orissa). But the Mūshika kingdom is placed by the Keraṇaṇṭi in South Travancore, and its capital was, according to the Mūshikavamia, Kolam, the modern Quilon (Travancore Archæological Series 2. 106-7). So the Mūshikas of South Travancore were emigrants from the Central Provinces after A.D. 825, the starting point of the Kollam era which marks the foundation of that city ("Srīvallavankodi's insc. Ep. Ind., Vol. 8), since it was the capital of even the first Mūshika king Rāmaghaṭa. In sending an army to the west and burning Mūshikanganara, Khāravela is said to have disregarded Sātakarni, because apparently the latter's sway extended as far east as the Central Provinces.

In the third year, Khāravela entertained the people of Kaliṅganagara with dances, music and feasts (l. 5). In the fourth year, he subdues the leaders of the Rāshṭiṇkas and Bhojakas, apparently Central Indian republican tribes. In the fifth year, he brings into the capital city from the Tanasuliya Road the canal excavated by King Nanda विस्तार (l. 6). Mr. Jayaswal translates the last term by '300 years before', and argues that, since this inscription places Khāravela's fourteenth year in the
Mauryan year 164, Nandarāja must have ruled over Kaliṅga in 325 (Chandragupta’s acc.)—164 + 300 + 14 = 470 B.C. and that this fact is consistent only with his chronological scheme, and the date 544 B.C. not c. 480 B.C., for Buddha’s death. But, in his scheme, even the earliest Nanda, Nandavardhana, ascended the throne only in 449 B.C., twenty-one years later than the date arrived at for him on Mr. Jayaswal’s interpretation of the inscription. And, since Mr. Jayaswal’s scheme professes to be not merely an approximation, but exact, being arrived at by taking into account even fractions of years, this fact alone is fatal to his interpretation. Moreover, even allowing the maximum figures for each king, Nandavardhana’s accession cannot be dated before 325 + 12 + 28 + 43 + 42 = 450 B.C. (Pargiter: Purāṇa Text, 69). On the other hand, it is impossible to take the 300 years to be an approximation, because there is no term to express the meaning ‘about’. There is nothing in the term to express the meaning ‘before’ (पूर्वः) either. On the contrary, the use of the accusative singular can only be consistent with the interpretation ‘in such and such year’. The interposition, moreover, of वर्ष between षड and शत is intentional, to prevent our taking षड to qualify शत. So the term should be translated by ‘in the year 103’. The use of वर्ष here between षड and शत is parallel to the use of मिन्न in 1. 17 between चुड़ा-पञ्चिं and प्रकाश, and to the use of वर्ष itself between पञ्चान्तरिन पाठि and शते in Mr. Jayaswal’s original reading of the dated portion of the inscription. His interpretation of the former term as 64 + 100 = 164, and not 64 x 100 = 6,400 years, and the latter term as 65 + 100 = 165, and not 65 x 100 = 6,500 years, is inconsistent with his principles of numerical interpretation. If the engraver had meant ‘300 years’ he would have inscribed वर्ष-चरणसंख्या or विषमवर्षपंच चरणसंख्या with चरण completely separated from वर्षचरण or with चरण in the end, and with शते or शतखे in the plural on the analogy of पञ्चाष्टी: शतमासेः (=35,00,000 l. 4), वयस्वर्षपन्धिनि : (=90,00 bulls—original reading of 1. 14), शतसतहे : (100,000 l. 7), पञ्चाष्टी: शतसतहे : (=75,00,000, l. 16). And even if the term meant ‘300’, the proper translation would only be ‘in the year 300’, not ‘300 years before’. The year 103 should be counted in the same era as the year 164 in the same inscription (l. 16), since no other era is here referred to. And that era is the Mauryan (मौर्यवर्ग). Mr. Jayaswal objects that King Nanda, who preceded Chandragupta, could not have lived in the year 103 of an era which must have started from the date of accession of the latter, because he was the first Mauryan king. But there is no reason to identify the King Nanda of this inscription with any King Nanda of Magadha. There might have been a later king of that name in Kaliṅga itself. There is nothing unusual in kings of different lands and dynasties having the same name. In fact, much of the confusion in Indian chronology arises from different kings bearing the same name. Finally it is more probable that the canal was extended into the capital city within 164–14 + 5 = 103 years of its excavation by King Nanda, than that it took 300 years to realise the advantages of such extension, even if after all these years, the canal was in existence and in proper repair. This passage of the inscription should therefore be translated by “In the fifth year Khāravela extended into the capital city, from its former terminus in the Tanasuliya Road, a canal excavated by King Nanda (of Kaliṅga) in the Mauryan year 103.”

In the sixth year, Khāravela performed Rājasūya (a sacrifice asserting imperial claims), and, in honour of the occasion, remitted all tax money (करपण) and bestowed many privileges on civic and village corporations (ll. 6–7). The reference to करपण shows that taxes were paid in money also. The reference to civic privileges shows that the imperial government did not interfere with the internal administration of cities and villages, but left it to local corporations. It is usually assumed that Khāravela was a Jaina, but there is
apparently nothing in this inscription to support that view. If he is referred to in l. 12 as paying respect to the Jaina image of Kaliṅga, and in ll. 14-5 as granting maintenance to Jaina professors, and caves for learned Śramanās to meet in assembly, he is, on the other hand, also referred to as performing Rājasūya (ll. 6-7), and, for the success of his expedition to Bhāratavarsha, Vedic sacrifices (l. 10), and as granting gifts of golden Kulp trees, horses, elephants, and houses with fire-altars, and, to make them accepted, lands to the caste-assembly of the Brahmans (l. 9). It is more likely that a Hindu might also have worshipped Jaina images and patronized Jaina professors and Śramanās, than that a Jaina might have performed Rājasūya and other Vedic sacrifices, as Jainism and Buddhism were primarily revolved against Vedic sacrifices. He therefore seems to have been a Hindu, like King Harshavardhana of Kanauj. This is confirmed by the references to him in l. 17 as a restorer of every temple (স্থাপত্য), perhaps mere wooden structures in his time, as a respecter of every sect (সত্যপালকাধিকার), and as one born in a family of Kshatriya Vedic seers (রাজপন্ডकদানিল-সম), and is not really inconsistent with his respecting forms and acts of lay observance (l. 14), because worship and ritual are common to all religions, though the particular forms may differ.

In the seventh year, his wife Dhusi of the house of Vajira gave birth to a son (l. 7). Mr. Jayaaswal identifies Vajira with Alexander's Bazira, west of the Indus (Arrian 4. 27), because in l. 15 Dhusi is called the queen of Simhaprastha (=Simhapura) and Simhapura is placed near Kashmir in the Mahābhārata (Sahā 17-20). But it is unusual to call a queen as the queen of her parental instead of her marital home, though she might be spoken of as the Vajira 'princess'. So Simhapura must be the capital city of her husband's Kaliṅga country itself, though Mr. Jayaaswal thought it impossible to identify the Kalinganagara. And we should expect her parents' country Vajira to be nearer Kaliṅga. The Tamil epics Silappadhikāram and Manimekhalai of the second century A.D. confirm these inferences by saying that Simhapura was a capital city of Kaliṅga (‘ஏனை வேளை வருமானம் இல்லை, சோம்பூரை விளக்கிறாய், பெண்களுக்கு கல்லார், தமிழ் நாடான் புனிதம் எனக்கு விளக்கிறாய்’—Silap. 23. 138-42; "ஏனை வேளை வருமானம் இல்லை, சோம்பூரை விளக்கிறாய், பெண்களுக்கு கல்லார், தமிழ் நாடான் புனிதம் எனக்கு விளக்கிறாய்’—Manim. 26. 15-8), and that the king of the Vajra country 'bounded by the holy expanse of water' gave tribute to the Chola king Karikala ("ஏனை வேளை வருமானம் இல்லை, சோம்பூரை விளக்கிறாய், பெண்களுக்கு கல்லார், தமிழ் நாடான் புனிதம் எனக்கு விளக்கிறாய்’—Silap. 5. 99-100). Adiyārkuṇallār (twelfth century A.D.), who commented on the former work, remarks that the Vajra country lay about the banks of the river Son (ஏனை வேளை வருமானம்) which passes through eastern Bundelkhand and that part of Bihar which lies between Benares and Gaya, and effects a junction with the Ganges (the 'holy expanse of water'), which bounds them on the north, near Patna. So we must identify Vajira with the Vajra country, i.e., South-West Bihar and East Bundelkhand. Adiyārkuṇallār interpreted 'சத்தல் வேளை' to mean 'சத்தல் வேளை' i.e., 'bounded by the sea'. But this is a mistake due to his ignorance of the geography of North India, because neither Bazira nor Vajra was bounded by the sea, and because it is impossible that, in Khāravela's time when the whole of North India and Deccan was practically partitioned between the three powerful sovereigns Śrī Sitakarni who ruled from the west coast to the Kanhabena, Pusiyamitra who ruled from the Indus to the Barabar hills and Khāravela who ruled from the east coast to the Barabar hills and the Kanhabena, the Vajra country could have extended its sway to the limits of the eastern or the western sea. But Vajra is not to be confused with Magadhā, since the Magadhān king is separately mentioned as having also given presents to Karikala after defeat (ஏனை வேளை வருமானம் இல்லை, சோம்பூரை விளக்கிறாய், தமிழ் நாடான் புனிதம் எனக்கு விளக்கிறாய்).
As regards the site of Simhapura, Mr. J. Jayaswal has already shown that the capital city of Kaliṅga could not have been far from the Udayagiri hill and this is confirmed by the Oria MS. already referred to which says that the Āra kings of Kaliṅga had their capital city near Khaṇḍāgiri (Udayagiri) (कालीङ्गकेत्तीलकालीङ्गकालीङ्गकेत्तील).

In the eighth year, having with a large army stormed the Gorathagiri barrier (Barabar hills), Khāravela besieged Rājagriha, which had again become the capital of Magadhā apparently after Asōka’s death, and caused its king to retreat in haste to Mathurā, abandoning his army to its fate, but, owing to a gap in the inscription, the result is unknown (ll. 7–8). The fact that the then Magadhan king, Pushyamitra (as we learn in l. 12) retreated to Mathurā shows that he was not merely, as is usually supposed, a local ruler, but an emperor whose power extended in the west not merely as far as Mathurā, but, if Kālidāsa who refers to Vasumitra’s victory over the Yavanas, in defence of his grandfather Pushyamitra’s sacrificial horse, on the banks of the Indus (दिश्य) (Mālavikāgīnimitra, Act 5. ‘Pushyamitra’s letter to Agnimitra’), and Patañjali, the contemporary of Pushyamitra (Smith: EHI, 214), who refers to the expulsion of Yavanas and Sakas beyond the borders of India (Mahābhāṣya on चुतुर्यासनिवसिन्यानि. 2. 4. 10) are to be believed, as far as even the Indus.

In the ninth year, Khāravela grants gifts of golden Kalpa trees with sprouts, horses, elephants, and houses with fire-altars, and, to make them accepted, he gives lands to the caste assembly of the Brahmanas (l. 9). This shows the unwillingness in his time of Brahmanas to accept gifts at the hands of non-Brahmanas, although they were kings, and also the esteem in which they were held. In the tenth year, after performing Vedic sacrifices, he sends a successful expedition to Bhāratavarsha which must, in his time, have been restricted in its application to the Gangetic valley (l. 10). In the eleventh year, he leads out in procession, in a wooden car, the nim-wood statue of निष्टाकस्मि-

(l. 11). As before, Mr. Jayaswal takes this term to mean ‘Ketubhadra who lived 1300 years before’ and identifies Ketubhadra with Ketumān, the eldest son of the Kaliṅga king, who, as the commander of the Kaliṅga forces in the Bhārata war, died on the field of battle (Makābhārata. Bhishma Par., chs. 17 and 54). But, for reasons already given, this passage also should mean ‘Ketubhadra who lived in the Mauryan year 113’, and the epithet Bhadra indicates that Ketu was a king of Kaliṅga. It is more probable that the people of Kaliṅga honoured the statue of a king who lived 164–14+11–113=48 years only before their time, than that they honoured a prince who died 1300 years before and that his statue came down to them intact through all that long period, even if the art of making statues was known as early as the time of the Bhārata war.

In the twelfth year, frightening the Northern kings (उत्तरकौर) and the people of Magadhā, Khāravela crossed the Ganges from its northern side on his elephants standing end to end across the river, and made the Magadhan king Bahasatimitra bow at his feet (ll. 11–2). ‘Bahasati’ is Prākrit for ‘Brihaspati’, the deity presiding over the Pusya Nakahatra (Sāṃkhyāya Gṛhya-Sūtra, 1. 26 6). Therefore, Mr. Jayaswal argues, ‘Bahasatimitra’ is identical with Pushyamitra, the first Suṅga king, and he establishes the identity convincingly by citing the Mītra coins of Oudh, Gorakhpur, etc. (JASB, 1880, pt 1, pp. 21–8, 87–90; Cunningham : Coins of Anc. Ind., 69, 74, 79, 93; Catalogue of Coins in the Indian Museum, vol. 1. 184) which refer to Pushyamitra by that name. The twelfth year of Khāravela corresponds to the Mauryan year 14–14+12=162. Pushyamitra was therefore living in that year. Since the Purāṇas place him in the Mauryan years 137–173 (Pargiter : Purāṇa Text, 70), this inscription confirms the Purāṇic chronology for the Mauryan and Suṅga kings of Magadhā.
Then occurs the following passage as edited by Mr. Jayaswal:—नंदराजनीति
कालिग्रामन्तः गर्भनान्न प्रधारणीति अभासावस्य नेवालि (l. 12). The plate clearly reads
नंदराजनीति, not नंदराजनीति. The central line is distinctly lengthened to mark the long vowel
and the very small gap between shows the lengthening is intentional. The lengthening is
material, because नंदराजनीति would mean 'brought by King Nanda', while नंदराजनीति may
mean 'taken away by King Nanda'. In the one case, Nanda would be the king of
Kaliiga, and in the other, he may be the king of a foreign country like Magadha. It may
be argued that the inscription mentions only acts of peace or of war in alternate years
and that, the twelfth year being a war year, the events referred to in this passage
should also be war events, and that, therefore, the correct reading should be नंदराजनीति.
But the very next event of the same year, his building towers with carved
interiors is an act, not of war, but of peace. And, in the sixth year, which ought to be a
war year, no act of war is mentioned or even hinted at. The 'न' after 'नीति' connects
नंदराजनीति (immediately before नंदराजनीति) with another predicate which is missing
after 'नंदराजनीति'. Perhaps something like 'serves'. The 'न' after 'नंद' connects this
predicate with नंदराजनीति. Pandit Bhagavanlal reads गर्भनान्न प्रधारणीति, and his reading would
mean 'by doors set with family gems', while Mr. Jayaswal's reading would be meaningless,
unless, like him, we take प्रधारणि in the unusual and unauthorised sense of
'recaptures'. Even then, how are we to construe the instrumental plural प्रधारणि
with the accusative singular प्रधारणि and नंदराजनीति? what are we to supply in the gap,
and how are we to construe the whole passage consistently? On the other hand, with
our reading नंदराजनीति and Pandit Bhagavanlal's reading गर्भनान्न प्रधारणीति, we may translate
it by 'He serves the Jaina image of Kaliiga brought by King Nanda (of Kaliiga) with
doors set with family gems, and brings the wealth of Anga and Magadha'. Finally,
even if the reading be नंदराजनीति, 'नीति' in this term might have the same sense
as 'नंदराजनीति' = 'brings instead of 'takes away', and, in that case too, Nanda would be a
king of Kaliiga.

In the same year, Khâravela built towers with carved interiors, and received presents
of elephant-ships, precious stones like rubies, pearls, etc. from the Pâñjâya king (भरतरा).
The Pâñjâya country was famous for its pearls (l. 13). Then, in the thirteenth year, he
grants maintenance to Jaina professors of philanthropy (खरी) who resided on the
Kumârl hill (Udayagiri), and he respects forms and acts of lay observance like Śrī Jivadeva,
apparently Khâravela's father, of whom he might have been a worthy successor, by
continuing his pious observances (l. 14). He also makes the present cave for learned ascetics
(भक्ति: ) to meet in assembly, and near their residences he builds a palace with beryl-inlaid
columns for Dhusri, the queen of Simhaprashta, to halt in while on a visit to this place (l. 15).
When this inscription was engraved, Khâravela had completed (रूपस्थितिः) the
Mauryan time (दृष्टिठाल) of a 64+100=164 years' interval, i.e., the Mauryan year 164
(l. 16). Then the inscription calls Khâravela by the names 'king of prosperity' (समरा),
'king of increase' (वर्धरा ), 'king of ascetics' (सिद्धरा ), and 'king of Dharma' (दर्मरा),
and refers to him by the favourite idea of kingship, i.e., as rolling his wheel of Dharma
(वर्तमानाम्र), (l. 16-7). With this the inscription comes to a close.

To fix the chronology of this inscription, it is necessary to determine the date of Chandragupta's accession. A passage from Justinus' Epitoma Pompei Trogi (15. 4) relevant in
this connection is translated by Dr. Hultzsch as follows:—"Seleucus carried on many wars
in the east . . . . First seizing Babylon, and then reducing the Bactrians . . . . Thereafter
he passed into India which had, since Alexander's death, killed his prefects, thinking that
the yoke of slavery had been shaken off from its neck. The author of its freedom had been
Sandrokottos, but, when victory was gained, he had changed the name of freedom to that of bondage. For, after he had ascended the throne (siquidem occupato regno), he himself oppressed with servitude the very people whom he had rescued from foreign dominion. Though of humble birth, he was impelled by innate majesty to assume royal power. When King Nanda (Nandos) whom he had offended by his boldness, ordered him to be killed, he had resorted to speedy flight... Sandrokottos, having thus gained the crown, held India at the time when Seleucus was laying the foundations of his future greatness." (JRAS., 1014, 948-9). Since Dr. Hultzsch has omitted in his translation some relevant passages after “he had resorted to speedy flight”, we will supply them from McCrindle’s translation in his Invasion of India by Alexander the Great. “It was this prodigy (of a lion licking him) that first inspired him with the hope of winning the throne, and so, having collected a band of robbers, he instigated the Indians to overthrow the existing government. When he was thereafter preparing to attack Alexander’s prefects, a wild elephant approached him and, receiving him on its back, fought vigorously in front of the army. Sandrokottos, having thus, etc.” The course of events mentioned in these passages may be arranged as follows:

1. When King Nanda ordered Sandrokottos (Chandragupta) to be killed, the latter had resorted to speedy flight.

2. While a fugitive, he met Alexander when the latter was preparing to retreat from the Hyphasis (Bias). Plutarch (first century A.D.) writes in his Life of Alexander (ch. 62):—

   "Androkottus himself, who was then but a youth, saw Alexander himself and afterwards used to declare that Alexander could easily have taken possession of the whole country, since the king was hated and despised by his subjects for the wickedness of his disposition, and the meanness of his origin.;

3. The prodigy of a lion licking him first inspired him with the hope of winning the throne;

4. He then collected a band of robbers and instigated the Indians to overthrow the existing government (obviously of Magadha);

5. He was thereafter preparing to attack Alexander’s prefects when a wild elephant, taking him on its back, fought vigorously;

6. Sandrokottos thus gained the crown;

7. India killed Alexander’s prefects shortly after his death, because if the killing had occurred long after Alexander’s death, the latter event alone could not be said to have made India think that the yoke of slavery had been shaken off from its neck;

8. Sandrokottos, by taking advantage of the confusion caused by killing the prefects to raise a revolt, was the author of India’s freedom;

9. But after Sandrokottos ascended the throne, he oppressed the very people whom he had freed from foreign control;

10. Sandrokottos held India, when Seleucus was laying the foundations of his future greatness.

It is thus clear that, soon after he heard, i.e., in about two months of Alexander’s death at Babylon in June 323 B.C. (Smith: EHI, 114), Chandragupta was preparing to attack...
Alexander's prefects. Then he fought with and killed Nanda and thus gained the crown. The Indians regulated their military movements strictly by precedent. So serious fighting could not have begun before Kārttika in the cold season of 323 B.C. The military operations themselves would take about six months, i.e., till about April 322 B.C. Then only could he have helped the people of the Punjab who had killed Alexander's prefects to revolt successfully. This again would take many months, about a year, if we remember that it took even Alexander nearly two years, from January 326 to October 325 B.C. to conquer the Punjab and the Indus valley. So the accession of Chandragupta, who ascended the throne only after he had freed the Punjab and the Indus valley, could not be dated before 321 B.C. Neither could it have taken place after that year, since, in that same year, in consideration of the changed conditions and the diminished territory, Antipater had to divide the satrapies anew and practically recognise the independence of India by giving the Indus valley, which had been under Peithon in Alexander's lifetime, and the Punjab, as a matter of form, to the Indian kings Porus and Ambhi of Taxila "for, it was impossible to remove them without royal troops under the command of some distinguished general" (Diodorus, 18. 39).

That the accession of Chandragupta must be dated after Alexander's death is also clear from the course of events in the Punjab. When Chandragupta met Alexander as the latter was preparing to retreat in September 326 B.C., the former was still a fugitive. Alexander stayed in India till the beginning of October 325 B.C., when he began his march through Gedrosia. While he was marching through Karmania in February-March 324 B.C., Alexander heard that Philippus, one of his Indian satraps, had been murdered by his mercenary troops who, however, had been slain at once by his Macedonian bodyguard, and directed Ambhi, king of Taxila, and Eudemus, commandant of a contingent on the Upper Indus (Curtius, 10. 1. 11) to assume temporary administration of the province. The murder of Philippus must not be confused with that of Alexander's prefects referred to by Justinus, because the former occurred before, and the latter after, Alexander's death, and since the former involved no loss of territory to the Greeks, like the latter. Nothing more happened till Alexander's death (Smith: EBF., 109-10, 113-4). So Chandragupta's accession must be dated after Alexander's death, and in 321 B.C.

The Purāṇas (Pargiter: Purāṇa Text, 70) assign Chandragupta 24, his son Bindusāra 25, and his son Asoka 36 years. Buddhist works assign them 24, 25 and 37 years (Dīpavāliṣa, 5. 73, 100, 101; 11. 5, 12, 13; Mahāvaṃśa, 5. 18, 19; 29. 6; Buddhaghosha's Samantapādasākhā, Vyasaṭīaka, Oldenberg, 3. 321; Bigandet's Life of Gautama 2. 128), and say Asoka was anointed four years after his accession (DV., 6. 1. 20, 21; MV., 5. 21; Sp. 299; Bigandet, 2. 128). The total for the Maurya rulers was 137 years (Pargiter: Purāṇa Text, 70), but, by adding the figures of individual reigns, we get only 133 years (Vāyu, and Brahmāṇḍa purāṇas). To get the 137 years, we must add the four years' interval between the accession and the coronation of Asoka. On the other hand, the Buddhist works, by adding three years for Bindusāra, and one year for Asoka, count the period twice over. So we should give these kings 24, 25, and 4 + 36 = 40 years. Tāranātha, by giving Bindusāra thirty-five years, confirms the unit figure of the Purāṇas, and probably misread चतुर्वर्ष for चतुष्पद in the decade figures. We may also note that Asoka commenced publishing his 'rescripts on morality' twelve years after his anointing (Pillar Edict 6; Rock Edict 4).
We now give the following Chronological Table to illustrate this inscription:—
c. 400 B.C.—Kalinga conquered by Nandavarshana (401—361 B.C.).
333—321 B.C.—Sumâlya Nanda of Magadha.
326—321 B.C.—Kaliâga freed by an Aira king.
321—297 B.C.—Chandragupta Maurya of Magadha destroyed Nandas, and freed Punjab and the Indus valley from the Greeks before his accession. Kaliâga a powerful and independent kingdom.
297—273 B.C.—Bindusâra of Magadha.
272 B.C.—Accession of Asoka, and struggle between him and his brothers for the throne.
268 B.C.—Anointing of Asoka.
260 B.C.—Asoka conquered Kaliâga, and was converted.
256 B.C.—Asoka’s Kaliâga edicts. He presents two caves in Barabar hills to the Ajivikas.
249 B.C.—He presents another cave in the same hills to the same.
232 B.C.—Asoka died. Probably Kalinga freed under Megha king Cheta of Kosala.
218 B.C.—Nanda of Kalinga excavated a canal with terminus in Tanasuliya Road. He also brought the Jainâ image of Kaliâga. Succeeded by Ketubhadra (208 B.C.).
184—48 B.C.—Pushyamitra Sûrika of Râjagrîha expelled Yavanâs and Šakas, and ruled all North India as far west as the Indus.
194 B.C.—Khâravela (son of Jivadeva ?) born.
179 B.C.—Khâravela yuvârâja after studying लेख, कप, गणन, ब्रह्मचार, धर्म, and विद्या.
170 B.C.—His father’s death. Anointed king for a पहलवुड़. Repaired storm-damaged Siâhâpura. His subjects counted 3,500,000. Accession of Śri Śatâkarṣi, Āndhra king.
169 B.C.—Disregarding Śatâkãmi, Khâravela sent an army to the west and burnt Mâhikânaga on the Kaśîhabena (Central Provinces).
167 B.C.—Khâravela subdues the Râshtrika and Bhojakâ leaders.
166 B.C.—He extended Nanda’s canal into Siâhâpura.
165 B.C.—He performs Râjasaâya, remits tax-money, and bestows privileges on civic and village corporations.
164 B.C.—His queen Dhusi of Vajra house (East Bundelkhand and South-West Bihar) bears a son.
163 B.C.—Stormed Gorathâgiri (Barabar hills) and besieged Râjagrîha. Its king retreats in haste to Mathurâ, abandoning his army.
162 B.C.—Grants gifts to Brahmans, and, to make the gifts accepted, lands to their assembly.
161 B.C.—After performing Vedic sacrifices, he sends a successful expedition to Bhâratavarsha (the Gangetic valley).
160 B.C.—He leads out in procession, on a wooden car, the statue of Ketubhadra of Kalinga-sacc. in Mauryan year 113—208 B.C.; Sātakarṇi dies.

159 B.C.—Frightening the उत्तरायण kings, and the Magadha people, Khāravela crossed the Ganges from its northern side on elephants, and bowed Pushyamitra of Magadha. He presented jewelled doors to Nanda’s Jaina image of Kaliṅga. Brings wealth of Aṅga and Magadha. Built towers with carved interiors. Received presents of elephant-ships, rubies, pearls etc. from the Pāṇḍya king.

158 B.C.—He grants maintenance to वैष professors on the Udayagiri hill and makes the Hāthigumpha cave as an assembly room for learned Śramaṇas. Near their dwellings, he builds a halting-place with beryl-inlaid columns for Dhusi, queen of Sīmhapura.

157 B.C.—The Hāthigumpha cave inscription engraved in Muriya year 164.

MORE ABOUT NICOLAO MANUCCI.

By L. M. ANSTEY.

In his Introduction to the translation of Nicolao Manucci’s Storia do Mogor, 1653—1708 (Indian Texts Series, 4 vols., 1907-08), the late Mr. William Irvine writes (vol. I., pp. lxvi—lxvii): “On January 14, 1712, the president [of Madras]... informed the Board that a special order had come to Pondicherry calling for Manucci’s attendance at Shāh’ Ālam’s court [then at Lāhor]... However, the emperor Shāh’ Ālam’ died at Lāhor on February 27, and the report thereof reached Madras in April 1712; thus, no doubt, Manucci did not start for the court... I have failed to trace Manucci farther at Madras or Pondicherry.”

Since these lines were written three additional references to Manucci have come to light, two of them being later than April 1712.

(2) Extract of a letter from John Scattergood at Madras (“Scattergood Papers, communicated” by Mr. Bernard P. Scattergood, F. S. A.).

8 October 1712. I have sold my garden house to Maunutchc, designing to send my wife home the next year.

(3) Extract of Minutes of Mayor’s Court Proceedings (“Records of Fort St. George, pp. 72-73”).

3 December 1718. Doctor Manuch Enter an Action against Cojee Bauba [Khwāja Bābā] for 400 Pagodas.

Warrant return’d and Served.

Bail’d by Cojee Gregory.

26 December. Petition read.

Ordered that Cojee Bauba be summoned the next Court day.

1 Abbreviations in the documents quoted have been extended.
6 January 1718-19. Answer read, and Petition read.

Doctor Manuch produces Certificates under several Persons hands declaring that Cojee Bauba desired them to send for the said Doctor Manuch to make up the matter between them on Account of what he was indebted by playing at Back Gammon.

The said Manuch likewise produces two Witnesses that declare they several times carried Physick to Cojee Bauba from Doctor Manuch.

Ordered that Doctor Manuch give in next Court day a particular Account of what money he won of Cojee Bauba, and likewise of what physick he gave him and that he take his oath to the same if the Bench require it.

20 January. Doctor Manuch delivers an Account of what Cojee Bauba is indebted to him at Gaming, but it not proving satisfactory, and it being difficult to get a true light into the matter,

Agreed that the affair of the Gaming be thrown out of Court.

Doctor Manuch likewise gives in his bill for what Physick he gave Cojee Bauba, which the Bench are of opinion ought to be wrote in a more ample manner and do not approve of the same.

Order'd that Doctor Manuch deliver in next Court day an Account of what Physick he gave Cojee Bauba drawn up in a proper form when the Bench will consider of the reasonableness of his demand.

30 January. Doctor Manuch delivers in a reply to Bauba[s] answer to the Petition.

The bench having thoroughly Examind this affair, do give Judgment for the Defendant to pay the plaintiff 50 pagodas as likewise the Cost of suit.

The second of the above references confirm Mr. Irvine's supposition that, on receipt of the news of the death of Sháh Álam, Manucci gave up the idea of going to Láhor, and it shows, moreover, that he returned to Madras as a resident.

The third reference finds him still at Madras, six years later, and proves as Mr. H. D. Dodwell remarks in his Preface to the Minutes of the Mayor's Court Proceedings, that the period of Manucci's death must be later than 1717, the date tentatively assigned to it by Mr. Irvine (op. cit., vol. I, p. lxvii).

**THE WORDS VACHA AND VINITA IN THE ASOKA EDICT.**

BY VIDHUSHEKHARA BHATTACHARYA SASTRI; SANTINIKETAN.

In Asoka's Rock Edict VI there are two words, *vachā* and *vinita*, about the true meaning of which some controversy has been started. Mr. Jayaswal (Aste, Vol. XLVII, February, 1918, pp. 53-54) has attempted to interpret them in the light of *Arthaśāstra*, but as regards the second word, *vinita*, Prof. Radha Govinda Basak has satisfactorily proved (ibid., Vol. XLVIII, February, 1919) that the interpretation suggested by Mr. Jayaswal is not correct. I have also a few remarks to offer in this connection which I believe deserve attention.

I am afraid, Mr. Jayaswal has laid too much stress on the Royal Time Table given in the *Arthaśāstra* (pp. 37-39) assuming that it was strictly followed by Asoka. It is quite true, as he says, the chapter of the *Arthaśāstra* in which the Time Table is given emphasises *utdhāna*, 'the quality of energy' and also in the Asoka Edict VI it finds prominence. But
there is no proof whatever that the same daily routine was carried out in practice by him. The fact, as has been related by Megasthenes, that Chandragupta used to receive petitions when he was being shampoed is no evidence that he was in the habit of acting upon the time table enjoined in the Arthashastra. Nor can we agree with Mr. Jayaswal when he says that this “shampooing” naturally refers to the hours before bath. On the contrary, it may safely be said that it refers rather to the hours following not only the bathing time, but also the meal time, i.e., the time fixed for vaivairavikara or mantra in the Arthashastra. We find our support in Kādambarī where it describes the king Śodraka enjoying his shampoo.\(^1\)

Following this, we may reasonably infer that Aśoka was willing to extend the time for receiving reports even to the hours spent in his inner apartment or private room (gabhāgāla, Skt. garbhāgāra)\(^2\) in taking rest or consultation with ministers "पदेश सैनिक निवाससे परित" —Arthashastra, p. 38). It is well known that it was the custom of other kings to employ for this purpose the second part of the day, say between 7-9 a.m. and 9 a.m. (At., p. 37). But all the same there are reasons to think that the daily routine of duties according to the Arthashastra has no connection with the words used in the Edict VI. Prof. Basak has convinced us that the word vinīta cannot mean "military exercise," as suggested by Mr. Jayaswal. Bāhler has taken the word in the sense of a ‘carriage’, but he did not give any particulars about it. According to Prof. Basak vinīta or vinīta might mean either a well-trained (sādhvābhā) horse (Amara, II, 8, 44; Medini, Tāntavarga, 158), or a vehicle which is called vaita in Amara (II, 8, 58) and vaitaka in some other Sanskrit lexicons.\(^3\) But the question occurs to us why the word ‘well-trained horse’ should be mentioned here in place of the general term for a horse, aśva, or why elephants should be excluded which were equally important as a means of conveyance. I, therefore, incline to accept the second meaning proposed by Prof. Basak, i.e., ‘a vehicle’.

But there can be no doubt that some special kind of vehicle is meant by the words vaitaka and vaitaka. Following Amara (II, 8, 58), Prof. Basak rightly calls it a paramparavāhāna which he explains by saying (perhaps relying upon Monier Williams’ Sanskrit-English Dictionary) that it is "a porter carrying a litter or a horse dragging a carriage." This explanation is far from being satisfactory. Paramparavāhāna literally means a vāhana ‘vehicle’ dragged in paramparā ‘succession’ by animals, or in other words, a vehicle dragged by a relay of horses, etc. It is needless to say that this sort of conveyance was necessary in those days for a long journey.

Now, the word vinīta or vinīta (vaitaka, vaitaka), being a common term denoting a particular mode of conveyance, has to be coupled for the definiteness, with some other

---

1. मुश्कल: अवधानमिश्रयमानवासिता। तब कल्याण वाहिन्या... कर्तमुदेन हैं या भान च र या: तन्नायान्ति संगतिविविस्तरपि सिद्धि। यथा: कृपया मुश्कल: अवधानमानवासिता।" Kādambarī, Pūrabhāga, ed. Girishchandra Vidyālakāra, Cal. 1885, p. 33. This passage is important as it agrees with what is prescribed in the Arthashastra (p. 38): "पदेश सैनिक निवाससे परित।" It is to be noted that in this extract the king is described as being attended here with his amityas, ministers, friends, and only those chiefs who were allowed to meet him at that time. Mark also the significance of the phrase "मुश्कलः" ‘for a very short space of time’.

2. Mr. Jayaswal has not offered any proof for his supposition that the garbhāgāra in the Edict was most likely an underground cool room for वधविस्तर in summer. The underground room भुविग्रह (Arthashastra, p. 40) seems to be more for safety on particular occasion than for ordinary rest.

3. Prof. Basak did not give any particular name. But see Monier Williams’ Sanskrit-English Dictionary, s. v. विनीत.
word that describes the special kind of carriage meant by the speaker; as for instance, *rathavinīta*, which means a *ratha* ‘chariot’ drawn in the aforesaid manner. This view will be supported by a Pali passage which is quoted below from the *Rathavinīta Sutta* of the *Majjhimanikāya*, 24 (I, 3; 4; P. T. S., Vol. I, pp. 148-149; Rajwade, Vol. I, pp. 106-107):

"Seyyathāpi āvuso rañño Pasenadissa Kosala Sāvatthiyān pajīvanta Sākete kincid-eva achchāyikāni karaniyam uppajjeyya, tassa antarā cha Sāvatthiṁ antarā cha Sāketāṁ satta rathavinītāni upaṣṭhapayeyya. Atha kho āvuso rājā Pasenadī Kosalo Sāvatthiyā nikkhamitvā antepuradvārā paṭhamaṁ rathavinītaṁ abhirūheyya, paṭhamena rathavinītena dutiyaṁ rathavinītaṁ pāpuṣeyya; paṭhamena rathavinītaṁ vissajjeyya dutiyaṁ rathavinītaṁ abhirūheyya, dutiyena rathavinītena tatiyaṁ rathavinītaṁ pāpuṣeyya, . . . sattamaṁ rathavinītaṁ abhirūheyya, sattamena rathavinītena Sāketāṁ anupāpuṣeyya antepuradvāram."

In the above quotation it is stated that in case the king Pasenadī of Kosalo owing to some urgent business had to go to Sākete, there would be arranged for him seven *rathavinītas* between Sāvatthi and Sākete. Here it is evident that the *rathavinīta*, ‘a vinīta in the form of a ratha’ is a paramparāvāhana. It should be noted that the gender of the word is neuter. According to Amara (II, 6, 58) this word must be used either in masculine or neuter gender. And therefore the word *vinīta* in *rathavinīta* being used in neuter gender cannot mean anything else but a *paramparāvāhana*.

Buddhaghosa explains the word *rathavinītāni* by *vinīta-āsājñiya-yulṭe rathe*, ‘the chariots to which are yoked the horses that are well trained and of good race.’ But, strictly speaking, this explanation does not seem to be quite accurate. For in that case the *ratha* *vinīta* in the original text could not be employed in the neuter gender.

One thing deserves to be pointed out here, and it is this: It is clear from the use of the word in the Majjhimanikāya that the seven vehicles arranged for the king between Sāvatthi and Sākete were separate and that each of them was drawn by a different set of horses. It, therefore, is not unlikely that either a succession of vehicles is meant by Amara in his describing *sainītaka as paramparāvāhana*, or the same vehicle dragged in succession by a supply of fresh animals, or both, according to necessity or convenience. But such distinction is immaterial, the important point being the particular manner of conveyance.

We have clearly seen in the above extract of the Majjhimanikāya that the vehicle named *vinīta* is employed in a long journey. And therefore Aśoka’s meaning is evident in the Edict whereby he proclaims that when travelling a long distance in a vehicle drawn by a relay of horses he will expect his men to report the people’s business to him. This interpretation will be strengthened by what I am going to say about the second word of the Edict, i.e., *vacha*, which has hitherto generally been taken to mean a ‘latrine’.

It cannot be disputed that the Sanskrit equivalent of the word *vacha* in the Edict is nothing but *vraja*. For the Pali word *vcca* literally means excrement and not a ‘latrine’, and to denote the latter, the word *vachakaviḥ* is constantly used in Pali literature. Furthermore, as Mr. Jayaswal rightly observes, “No king in his senses would ask officers to announce the business of suitors in his latrine.”

Through the influence of Paścākha Prākrit, according to Prākrit grammarian (Hem., VIII, 4, 325; Trīvikrama, III, 2, 65) Skt. *vraja*, Pāli or Pkt. *vaja* becomes *vacha*. But what is the meaning of it? Mr. Jayaswal takes it to mean “the royal stables for horses, mules,
bullocks etc., and their breeding farms." Here he himself has gone against the royal business routine fixed in the Arthaśāstra on which he has laid so much stress. The Arthaśāstra nowhere enjoins that a king himself should look through the affairs in the vraja. Moreover, this word in the Arthaśāstra does not necessarily mean a 'royal' vraja, but it refers rather to a common vraja from which the Collector-General is to collect revenue. Then again, we ask why, should Aśoka particularly mention the vraja, i.e., the stables for "cows, buffaloes, goats, sheep, asses, camels, horses, and mules" (Arthaśāstra, p. 60), and not the stables where his elephants were kept which were undoubtedly not less important. This leads me to think that a road, which is one of the meanings of vraja according to Sanskrit lexicons, exactly fits in with the context. If we read it now together with what I have already said about the word vinita, the sense of these two words, vachā and vinita, becomes clear. And I have no doubt in my mind that Aśoka in his declaration means to say that whether the king is on the road for a short walk or journey or being carried to a long distance by the help of successive arrangements of carriages the reporters should report the people's business to him.  

MISCELLANEA.

AN EARLY REFERENCE TO PORT CORN.
WALLIS, IN THE NORTH ANDAMAN
ISLAND.

(Madras Courier, 22 Dec. 1790.)

The Honorable Commodore Cornwallis was at the
Andamans, on board the C hern, when the Ato-
orta came away; and it appears by the account
she has brought, that a new Harbour had been
discovered in one of the small Islands to the North
East, extremely capacious and commodious;
much more so than even the former one which has
been hitherto occupied and known by the name of
Port Cornwallis [now Port Blair]. The name there-
fore will probably be now transferred where it is
best deserved, and the new Harbour established
[now known as Port Cornwallis].

The natives of the Andaman Islands appear
unfortunately to be of an untractable disposition,
not easily made sensible either to benefits and
the kindest treatment or to the superiority of
Force. On the boat of the Crown landing on the
little Islands mentioned above, a small number of
them appeared; and notwithstanding every friendly
demonstration, attempted a determined resistance;
and actually wounded with their Bows and Arrows
some of the Seamen. 1 A few of them, however,
who were taken, being treated with all possible
lenity and dismissed with friendly assurances, it
is hoped they may acquire a disposition more favor-
able both to themselves and us; and that there
may be no inconvenience whatever from a contrary
spirit to the establishment of so good a Harbour
in a situation so eligible.

R. C. Temple.

4 "Goṣṭhādikavacanāḥ vrajaḥ."—Amara, III, 3, 30; Śāstra, Poona, 1918, v. 694; Medinī, Cal.,
1897, Janta, 16; Vṛṣeṇa, Benares, 1903, 3; Kejāvaraṇa, Trivandrum Sanskrit Series, 1176.

5 It may help the discussion to note that I recollect the well-known native magistrate of Mandalay,
U Pe St, helping European officials in 1887 to deal with cases in open Court lying on his face while
being shampooed. The Burmese Court continued many very old Indian customs.—Ed.

1 The tribe met with was the Akakona Tribe of the Northern or Akamerwa Division of the people.
The cause for hostility to strangers is explained in Census of India, 1901, Vol. III, Andaman and
Nicobar Islands, p. 44.
Three days after they left the island they arrived off from Tellicerry where they took a small vessel belonging to Governor Adams, John Fawke Master, whom they brought on board very drunk. He having heard of my misfortune, enquired for me, having been acquainted with him in my former voyage to Bengal in the Duke of Cambridge. He began presently to tell me that my old Captain Maerue was sitting out after them, at which news the Quarter-Master told me to prepare, for the next day, he swore, he would hang me like a dog as I was, not doubting, he said, but if I was cleared from them, I would take the first opportunity to come and fight against them as Captain Maerue had, who, they said, like a villain as he was, they had used so civilly in giving him a ship to carry him from Johanna, and swore for the future, if in his power, he would carry the Masters and Officers of all ships they ever overpowered, to plague them like dogs as they were to abuse civility. They then proceeded to Calicut, where they endeavoured to take a large Moor ship out of the Road, but were intercepted by some guns that were mounted on shore. I was down below as usual, thinking the story Captain Fawke told them was forgot, but, unknown to me, the Captain and Quarter-Master were so malicious to order me to the Bores on the Booms in hopes I should be shot. When they got clear of the Road they called me up to know the reason why I was not on deck according to their order. I replied I had no business there at the time, entreating to be put on shore. The Quarter-Master answered that if ever he knew me off the deck in time of action, he would shoot me through the head. I told him "was better directly to do it than keep me in misery there, at which he begged the Captain to correct me for my impudence, he being lame of his hands. According to his desire, he fetched his cane and began to belabour me unmercifully, which some of their people seeing came to hinder him and said he "might be ashamed to abuse me in such manner for nothing, saying they would do their endeavour to have me put on shore at Cochin with Captain Fawke. The next day in their passage down, came up with a Dutch galliot bound for that place with limestone. They sent their boat on board with Captain Fawke, which the forementioned people seeing, came to the Captain and told him "might as well then let me go as not, and pressed it very hard, but the Captain's answer was that if they had a mind to oversee their proceedings by letting a dog go, who had heard their designs and resolutions for the ensuing year, they might, but he would never consent to it. Abundance of the Captain's party also objected against it, which occasioned a strong debate, and so far enraged the Captain that he swore if I went he would have a limb of me first to his share. He likewise added that my going there might be a hindrance of their having a supply from the Dutch.

"Captain Fawke was sent away in the Galliot. The next day they arrived off Cochin, where by a fishing canoe they sent a letter on shore, and, in the afternoon with the sea-breeze ran into the Road, where they anchored, saluting the Fort with eleven guns each ship, the Fort returning their salute, gun for gun. At night there came on board a large

31 Robert Adams, Chief of the Company's factory at Calicut, and later of Tellicerry
boat laden with fresh provisions and liquors with the servant of an inhabitant of that place, vulgarly called John Trumpet, who told them they must immediately weigh and run further to the southward, where they should have a supply of all things they wanted, as well Naval stores as provisions. They had not been long at an anchor before they had several canoes on board with Inhabitants, as well white as black, which never ceased more or less during their stay there. At night came on board the forementioned John Trumpet, bringing with him a large boat with Arrack, which they received with abundance of joy, asking if they could have any more. He said that he had procured all on the place for them, which was about 90 Legors [leaguers] and 60 bales of sugar [in canes], which they should have off before he left them, which they did in about three days, the boat going and coming as fast as it could. The second day they sent on shore a fine Table Clock which was taken in our ship [the Cassandra], a present to the Governor, also a large gold watch to his daughter, who, in return, sent them ten bales of sugar.

"When they had all on board, they paid Mr. Trumpet his money, gave him three cheers [or huzzas] and eleven guns each ship, throwing handfuls of ducatoons into his boat as he put off from the ship. That night being little wind they did not weigh, and the next morning John Trumpet returned with more Arrack and two large chests of piece-goods and ready made clothes, bringing with him the Fiscal [magistrate] of the place. At noon they saw a sail to the southward which they immediately weighed after and chased, but she, having so good an offer, got to the northward of them and that night anchored a small distance from Cochin Fort, which, in the morning, they had sight of and gave her chase, she standing into Cochin Road and they after her, being assured by the forementioned Gentlemen that they might take her from under the Castle without any molestation, begging with all not to carry her away, for they would purchase her and give as good a price as anyone. The Captain begged them to go into their boats and he would talk with them after he had taken the ship. They stood boldly to board her, but when they were within about a cable length or two of her, the Fort fired two small guns at them, the shot falling close almost to their muzzles, at which they instantly bore out of the Road and made easy sail to the southward, where [they arrived] at night and in their former berth; at night a great boat was sent by John Trumpet to get them water and to let them know if they would stay there some days longer there would be a very rich ship pass by commanded by the General of Bombay's brother.

"That night they spent in getting of water, and in the morning weighed to continue their cruise southward, having disbursed for Liquor, Provisions &c. between six and seven thousand pounds. After finishing their affairs with the Dutch some were for proceeding to Madagascar forthwith, others to stay and cruise for a store-ship for them; the latter at last agreed on, they plying to the southward, where sometime after they see a ship in shore, but she having the wind of them they could not get near her till the sea-wind set in, which was very faint. Night coming on they separated, one ship to the northward and the other to the southward, thinking in the morning to have her between them, but, contrary to their expectation, when day broke, instead of their chase, [they] were very near five sail, who immediately made them signals to bear to them, which put them in great confusion, their consort being three leagues to the southward of them. They immediately stood to

---

23 In his Deposition, Laxinby says this was an assumed name, but does not give the real one.
24 See Laxinby's Deposition, infra.
their consort and joined him, the fleet chasing them. Being at first very much dejected, believing it to be the forementioned fleet commanded by Captain Macrae, they made all sail from them possible, and, after three hours found none of the fleet came up with them, only one Grab, who came very near half way between them and the fleet, they began to take courage and rejoice. It presently after fell calm and so continued till night. When the land-wind came they ran directly off shore and in the morning finding the fleet out of sight, were extremely satisfied, not desiring any of Captain Macrae’s company. They now thinking themselves out of danger, proposed to carouse and keep their Christmas before they would stir any further, which they did in a most riotous manner, destroying all their fresh provisions they had, and two thirds in waste I believe.

This lasted near three days, when they then proposed to go to the island Mauritius, there to repair, their leaky ship [the *Victoria*] being in a very bad condition. That being agreed on made the best of their way there. In their passage expected the leaky ship to sink every day. They were going several times to quit her and I believe had done so, were it not for the scarcity of provisions and water; another thing being there a great quantity of Arrack. The allowance among them at that time was one bottle of water per man a day, and not above two pound of Beef and a small quantity of rice for ten men per day, which, had it not been for the Arrack and Sugar, must the greater part of them have perished.

In this condition they arrived at the Island of Mauritius about the middle of February [1721], where they found very good refreshment, refitted and sheathed their leaky ship, and the 5th of April they sailed in order for the Island Mascarin. They arrived on the 8th ditto in the morning, where they found lying there a large 70 gun Portuguese, whom they immediately took with very little resistance, she having lost all her masts and likewise guns save 21 in a storm they had met with in 13° South Latitude. She had on board, when they took her, the Viceroy of Goa, and several other gentlemen that were Passengers, who came on board that morning, believing they were English ships. Having an account of another ship, an Ostender, that lay to the leeward of the island, they made the best of their way to it and took her. She was formerly the *Greyhound Galley* belonging to London.

There happened a great Cabal among the pirates on the Viceroy’s account, some being for carrying him to Mozambique and make him ransom [himself], others saying they did believe this rich prize they had taken might partly belong to him, and said it was better to take a small ransom there than be troubled with him, which was at last agreed on for 2,000 dollars. I then begged to be set on shore, which was granted. Accordingly was [set on shore] on the 10th with His Excellency and the rest of the prisoners. The Governor of the place interceded, as also the Viceroy, very much to leave a ship [either the Portuguese or the *Greyhound*] to carry the prisoners away, alleging that the island was not in a condition to maintain so many people. They with smooth promises said they would call a Council about it to see what might be done, but contrary to that in the night sailed away, carrying with them the best of the men that they had taken in the two ships, besides 200 of Mozambique negroes in the Portuguese, designing for Madagascar, there to

36 See Deposition.
clean the *Cassandra* and from thence to the Red Sea, where, if they met with no success, they would to their old friends at Cochin and sell their diamonds they had taken in the Portuguese ship (which since as the Viceroy told me, were to the value of between three and four millions of dollars) and thence to make the best of their way into the China Seas, believing there might be men-of-war or other ships fitted out in pursuit of them.

"During my stay on the island there arrived in May two ships from France bound to Madagascar for slaves and from thence to Mississippi. The beginning of June arrived another from St. Malo for China, and in her way to settle the Island of Pullecondore [Pulo Condore], having on board her a Governor, two Engineers and about one hundred soldiers and officers. They made but very little stay. When they sailed I took care to write to China to acquaint your Honours of what is herein mentioned.

"On the first of November last arrived the *Triton*, French ship from Mocha, last from the Island of Mauritius, where had stayed forty days, during which time had taken possession of the said island by erecting a large Cross and leaving a French flag flying." 37

"The Governor of this place had some time before been in expectation of ships from France for that purpose, but none coming had begun to build a small vessel to send up there with people to settle it, much fearing that the Ostenders would do it before them, which he had an account they intended.

"Having now an opportunity, I embarked with the Viceroy and several others for France, but luckily touching at the Isle of St. Helena met Captain [William] Hutchinson [of the *Sunderland*], who was so obliging to take me on board, being almost starved in the French ship.

3-A.

**RICHARD LAZINBY.**

"And this deponent further saith that during his stay at the said island Don Mascarenhas he saw and discoursed with Captain Condon and about forty of his people, who had been a pirating, that they told him they had taken a rich India ship, which they brought to Madagascar and sunk her at or near Fort St. Mary's, 38 and from thence came to Don Mascarenhas on the encouragement of the French King's Act of Grace, that about fifteen of them came from thence taking passage on a French ship called the *Triton*, bound for Europe, on which this deponent also took passage in November last, that Captain Condon and about eighteen more continued on the island and the rest were dead. That this deponent understood from the French Directoire there that the French East India Company's orders were that, if any of the pirates on the island died leaving a wife, his widow should enjoy

---

37 Bernardin de St. Pierre says the French took possession after the Dutch abandoned it in 1712.
38 Commodore Matthews in 1721/2 found at St. Mary's the wreck of a fine Jeddah ship which had been taken by Capt. Condon of the *Flying Dragon* with 13 lakhs of treasure on board. The pirates, in ignorance of or careless of their value, had left all the rest of the cargo, spices, drugs, cloth and guns, lying on the shore. (Biddulph, *Pirates of Malabar*, p. 186.) According to Johnson, *History of the Pirates* (II, 140, 142), the *Flying Dragon* was a former privateer which Condon (or Condent) took from the Dutch off the island of St. Jago. Johnson says that he assisted in the capture of the Viceroy of Goa (which seems unlikely from Lazinby's account) and that he retired to St. Malo where he became a merchant. Condon was in Madagascar in 1720 (see *Miscellaneous Letters Received*, Vol. 12, No. 256).
the effects belonging to the deceased, but, if not, then such pirates were not allowed to give away any of their effects at their death. This deponent saw the Directore take into his possession the effects of two of the said pirates immediately after notice of their decease. And lastly this deponent saith that the ship Triton, in her homeward bound passage, touching at St. Helena, found there the ship Sunderland, belonging to the United English Company aforesaid, on which this deponent came to England.”

4.

Account of Bourbon.

“It is well known that the first inhabitants [of Bourbon or Mascareness] were pirates, who co-habited with negro [native] women from Madagascar. They fixed here first about the year 1637. The [French] India Company had also at Bourbon a Factory and a Governor who lived with them [i.e. the pirates] in great circumspection. The Viceroy of Goa came one day to anchor in the Road of St. Denis and was to dine with the Governor. He had scarcely set his foot on shore before a pirate ship of fifty guns anchored alongside his vessel and took her. The Captain landed forthwith and demanded to dine at the Governor’s. He seated himself at table between him and the Portuguese Viceroy, to whom he declared that he was his prisoner. Wine and good cheer having put the seaman in good humour, Monsieur Desforges (the Governor) asked him at how much he rated the Viceroy’s ransom. ‘I must have,’ said the pirate, ‘a thousand piastres.’39 ‘That’s too little,’ said Monsieur Desforges, ‘for a brave fellow like you—receive from a great Lord like him—ask enough or ask nothing.’ ‘Well, well, then I ask nothing,’ replied the generous corsair, ‘let him be free.’ The Viceroy embarked instantly and set sail, happy at having escaped on such good terms. This piece of service of the Governor was recompensed shortly after by the Court of Portugal, who presented his son with the order of Christ.

“The pirate afterwards settled on the island and was hanged a considerable time after an amnesty had been published in favour of his companions, and in which he had failed to get himself included. This injustice was the work of a Judge who was desirous of appropriating his spoils to his own use. But this last villain, a little while after, came to nearly as wretched an end, although the justice of men did not reach him.

“It is not long [written 21 December 1779] since the last of these pirates, whose name was Adam, died aged 104 years.”

5.

The end of the “Cassandra.”

On the—March 1723 John Freeman, Second Mate of the Ostend Galley 41 deposed that he was taken by the Cassandra at Don Mascarenes in April 1721. The Ostend Galley was taken thence to St. Mary’s in Madagascar, but having been sent down the coast for a mast, the Dutchmen and Portuguese on board, finding themselves with only two pirates, put

39 This would be at the most one quarter of the sum mentioned by Laxinby.
40 It is a pity St. Pierre does not give us the pirate’s name. It may have been Conduit or more probably Labouche who was a Frenchman. Again, if it was Taylor, it would account for his good treatment when he surrendered to the Spaniards.
41 I.e., the old Greyhound. See above, p. 59.
the latter aghore and escaped with the ship. Freeman said that no less than eighty of the pirates died at St. Mary's. In December they sailed thence, the Victoria with 64 guns and 100 men and the Cassandra with 40 guns and 100 men. At Tullear Bay on the west coast of Madagascar they took a French ship of 200 tons and burnt her. Thence they went to St. John's and Dillego (Delagos Bay) then to Mozambique and to Massaleidge, where they parted company, the Victoria, now carrying 220 men, with a small sloop of 20 guns going to St. Mary's and the Cassandra, via the Cape, St. Helena, the Ascension Island, Fernando Po, and the Island Rube, to the Shamblen Keys (?) in the West Indies.

[India Office Miscellaneous Letters Received, Vol. 14, No. 162.]

5-A.

Letter from Jamaica to Humphrey Morrice Esq., 12 May 1723.

"We have received an account from Portobello by a vessel just arrived from thence that a pirate ship of 40 guns and 140 men was lying about thirty leagues to the windward of Portobello. The ship was the Cassandra formerly taken from Captain Mackray in the East Indies. The last place they came from was the Island of Madagascar, having been from thence five months and halfe. The present Captain of the Pirate ship is named Taylor and he has sent down by a small turtle fishing sloop to Portobello, the Doctor of the Pirate ship desiring a pardon. This letter was delivered to the Commander [Captain Laws] of the Mermaid man-of-war, whom he, the Doctor, informed that the Captain of the Pirate ship was not above twelve leagues distance, and he believed if the Captain of the man-of-war would send up an hostage that the Captain of the Pirate would come down aboard the man-of-war, which was readily consented to and the Captain of the man-of-war sent down his brother. Two days after the Captain of the Pirate ship came down aboard the man-of-war and was very solicitous for a pardon. The Captain of the man-of-war treated the Captain of the Pirate very civilly and persuaded him to bring down his ship and go with him to Jamaica and he would not molest him. After two days' stay the Captain of the Pirate ship went to his Concerts to prevail with them to surrender to the Captain of the Mermaid man-of-war. The pirates have got the ship Cassandra into so crooked a place that all the Navy of England cannot hurt her. They have lighted [sic] their ship three feet to get her over the shoals and were six days hauling her in between the rocks [so] that it is impossible for any vessel to come near her. They give out that they can divide in silver and gold £1,200 a man, and to have a great value aboard in diamonds besides a great many rich goods."

5-B.

Letter from James Pearce to Humphrey Morrice, 4 July 1723.

"Captain David Greenhill in one of the South Sea Company's Snows arrived from Portobello two days before we sailed from Jamaica and brings account that the Cassandra Pirate was come into Portobello and the people had a free pardon for themselves and goods [i.e., were allowed to keep their booty], only paying the King's duty, and they were selling their diamonds and India goods there when he came away. They have taken the ship for the King of Spain and christened her with great ceremony."

42 Tullear is on the north of St. Augustine's Bay. 43 St. John's Road, S. W. Africa (Umtiruba). 44 N. W. coast of Madagascar (modern Majanga). See Hamilton's map, I. fig. 1, and correct note on p. 20, ante. 45 Aruba or Oruba, off the Gulf of Maracaibo, Columbia. 46 Gulf of San Blas, Columbia, where there would be a good hiding place for pirates in the Archipelago de las Mulatas.
5-c.

Letter from Captain James Pearce of the "Ruby" Snow to Humphrey Morrice, dated Jamaica 19 June 1723.

"By a sloop belonging to the South Sea Company arrived here from Portobello we have an account that the large Pirate on the Spanish American Coast formerly called the Cassandra have surrendered themselves to the Spaniards allowing 20 per cent. out of their riches."

[India Office Miscellaneous Letters Received, Vol. 14, p. 205 et seq.]

XXI.

ENGAGEMENT BETWEEN THE REVENGE AND BOMBAY GRAB AND A MARATHA FLEET, 1775.

Technically, I suppose, the Marathas engaged in this fight were not pirates, as their commander was a Maratha officer, but practically the whole Maratha fleet engaged in piracy in peace times, and became respectable, like the old Elizabethan privateersmen, when war broke out. The fight described below was altogether one-sided, as the Marathas were no match for the English in garrunery, though they were quite as heavily armed as the English ships. In the circumstances attending the encounter now reported one can, therefore, only admire the courage of the Maratha commander, who sacrificed his ship to save the rest of his fleet.

A Narrative of the Engagement between the Revenge and the Bombay Grab with the Moratta fleet off Cape Dobbs [1st and 2nd February 1775, by a Passenger on the Bombay Grab].

The enemy were seen in the morning of the 1st instant, consisting of five large ships and two ketches with some gallivants. At one in the afternoon the two ketches with three gallivants bore away to the eastward. At four the Commodore [John Moore] made the Grab's signal to chase to the south-west. At ½ past five the ships separated, two departing to the eastward and two to the westward with the remainder of the gallivants. The fifth ship stood on to the south-east, which the Revenge and the [Bombay] Grab pursued.

About ½ past seven in the evening the [Bombay] Grab had the good fortune to get up alongside within pistol shot of the Moratta ship (since found to have been the Sensare Jung [Shamaheer Jang] of forty guns and 350 men), when she began a brisk firing both with great guns and small arms. Some few of both were returned by the enemy, but far short of what might have been reasonably expected from a vessel of her force. The Revenge was at this time far astern, nor could she come up till about ten o'clock, when a brisk firing commenced from her also.

The evening being dark, it was impossible to see the damage she must have received from the Bombay Grab’s cannonading: the shots were heard to strike very forcibly against

47 Probably at the Gulf of San Bies. 48 Two of the Company’s cruisers.
49 By Cape “Dobbs” the writer apparently means the southern point of the mouth of the Vashahti river, from which Dabhul, in Ratnagiri district, is six miles distant.—Ed.
her sides, and as the Revenge had joined us to destroy her, it was reasonably expected she would speedily become a prize to our superior force; and though repeatedly desired not to make any further resistance, yet they [the enemy] refused, preferring to receive a most smart cannonading from both vessels than strike. On her part a very slow fire was returned.

From her keeping so much to the eastward we were of opinion the enemy meant to run their vessel on shore (since we have been informed that was their design), though the [Bombay] Grab followed her into 4½ fathoms rocky ground and anchored, but the Commodore, knowing the Revenge drew less water, he directed the boat from each vessel to tow him up alongside the Moratta ship. It was about ½ before eleven o’clock when the [Bombay] Grab anchored. At ½ past she again weighed and the land wind ... all the vessels out, prevented the enemy running on shore. At ½ past ... she blew up and was continually in a flame from head to stern. The cause of this accident cannot be determined but is reasonably supposed to have happened from the careless manner in which they have their powder or by a hand grenade. Perhaps a shot from one of the vessels struck a bolt in her Magazine, but how it happened is merely conjecture. Sufficient to say that she is totally destroyed.

It is impossible to describe so terrible a picture. The ship itself in flames was dreadful, but more so were the cries of the unhappy sufferers, many of whom after being severely burnt were found swimming, endeavouring to avoid the power of one element by flying to another. Our Commodore sent his own boat and the Bombay Grab’s to relieve as many of the people as they possibly could. To the number of thirty were saved, but many of them such objects that it hurt the nature of man to see them; some shot in different places, others miserably burnt. Many will in all probability die. Every method was used to ease them that was in the power of the Surgeons by the application of such medicine as were proper and suitable.

It is to be remarked how singularly fortunate it was that not a person on board either vessel received the smallest hurt from the enemy, nor did either of our ships suffer, unless from one shot which struck the [Bombay] Grab forward. From the nearness with which the Company’s vessels began, continued and ended the fight, it was reasonably to be expected that greater accidents would have happened than what did. The situation of each vessel was very dangerous at the time of the explosion as well as from the flames of the Moratta ship, but providentially they have both escaped.

It will ever afford me pleasure to relate with what spirit and bravery distinguished both officers and men on this occasion, each endeavouring to convince how much they were interested in the Honour of that Service in which they are engaged.

At the earnest solicitation of the prisoners, when off Gheria, the Commodore made a signal for a boat, which being observed by one going into that port from Vengurla, [Vengurla, Ratnagiri District], she came to the Revenge, when those poor creatures were sent on shore—miserable objects indeed!

50 Gheria or Vijayadrug, a port in Ratnagiri district, Bombay.—Ed.
Whilst lying to off this port, there was seen flying a pendant similar to that which the vessel had we burnt, hoisted only half mast up.\(^{51}\) May it not reasonably be supposed a kind of mourning for either the ship or her commander, as she must be a very great loss to them, being by far the finest ship in their service, new and mounting guns of 18, 12, 9, and 6-pounders, which are said to have been taken from the Saint Anne, Portuguese ship.

Many enquiries made from the prisoners respecting the strength of the enemy's fleet, which they informed consisted of the following vessels, not including the ship destroyed before mentioned, viz.

with two other ketches, whose names they did not know, belonging to Ratnagurry [Ratnāgiri].

They also said that on seeing the [Bombay] Grab come up with them, they had determined to board her\(^{52}\) but were stoppeth therefrom by the quick fire kept up from that vessel, which prevented them from keeping on deck. Their sepoys [Marātha soldiers] went down the Main [hatch or hold] and the lascars sheltered themselves in the Forehold, now and then stealing up to fire a gun or discharging a matchlock.

We learn likewise that on finding themselves so much overmatched, the Moratta Commander resolved if possible to run his vessel on shore, as he observed to his own people, when by them desired to strike, that he could not think of so doing, as he would by such an action incur the displeasure of his superior officer, who would decapitate him if ever he returned to Gheriah.

The Head Subedar\(^{53}\) (the prisoners informed us) left the ship. How many accompanied him we cannot learn, but from the size of the boat concluded but few could have been so fortunate, from whence it may be concluded that the major part of the number have perished.

[India Office Records, Home Series, Miscellaneous, Vol. 120, pp. 5—14.]

(To be continued.)

---

\(^{51}\) The flag at half-mast replaced the black flag as a sign of mourning as early as 1700, but certain countries kept to the old custom much later.

\(^{52}\) The Marathas, like the European pirates, were always much more strongly manned than the English ships of war, and generally, when unable to escape, tried to board in order to use their advantage of superior numbers. The warships, on the other hand, with better disciplined crews almost invariably tried to sink or disable them and so force the pirates to surrender without coming to close quarters.

\(^{53}\) Sūbāhīdār, the commander of the Marātha sepoys.
THE HISTORY OF THE NIŻĀM SHAḤĪ KING OF AHMADNAGAR.

By LT.-COLONEL T. W. HAIG, C.S.I., C.M.G.

The following account of the Niżām Shaḥī dynasty of Ahmadnagar is a translation of the second part of the Burhān-i-Maʿāṣir by 'Ali ibn 'Azīz Allāh Taḥātabādī of Sampān, of which only three copies are known to exist. The first part of this work, containing an account of the Bahmani kings of the Dakan, is merely introductory and has already been translated by Major J. S. King, who published his translation in The Indian Antiquary, Vol. XXVIII, from which it was reprinted in book form in 1900 by Messrs. Luzac & Co., under the title of The History of the Bahmani Dynasty, founded on the Burhān-i-Maʿāṣir.

Meeting Major King in the library of the India Office, in 1909 or 1910, I asked him whether he purposed continuing his translation, and on ascertaining that he had no such intention, I made, for my own use, a translation of the rest of the Burhān-i-Maʿāṣir, which I was then reading. I now offer this translation to readers of The Indian Antiquary.

The author's style is bombastic and prolix in the extreme, and in my translation I have freely curtailed the pompous phraseology of the original. Some passages, such as the description of the festivities on the occasion of a royal wedding, I have omitted altogether, as being void of historical interest.

The value of the work as a historical document is much impaired by its partiality, the author being a panegyrist of the dynasty whose history he professes to tell. The most flagrant instances of his unscrupulous partiality are his impudent attempt to claim for the founder of the dynasty, in the face of the clearest historical evidence, descent in the male line from the Bahmani kings, his fictitious account of a defeat inflicted on Maḥmūd Shāh Begārā of Gujarāt by Ahmad Niżām Shāh, fighting in defence of a mythical Maḥmūd Shāh of Khāndesh, and his praise of the maniac, Murād, Niżām Shāh I.

Nevertheless the chronicle is not without value. It is a record of events in the State in which the author lived, and is probably fairly trustworthy so far as it relates to domestic affairs; and the detailed record of the siege of Ahmadnagar by Akbar's troops is interesting, and is, so far as I know, the only original account of the siege from the point of view of the beleaguered garrison. It contains much information not to be found elsewhere.

Such a work as I have described requires to be carefully compared with other histories and this must be my apology for the number and length of the notes.

Abbreviations.

T. W. G.
I.—Account of the origin of the Nizâm Shâhí kings of Ahmadnagar.

Since God's eternal mercy was closely connected with the preservation of the male line and the continuation of the kingdom and prosperity of the family, founied in vicegerency, who, from father to grandfather, have been crowned kings and rulers since the days of Bahman the son of Isfandiyâr and, before that, as far back as Kayûmars, He saved the firmly founded house of the pillars of the kingdom of the king of the world, Sultan Muhammed Shâh Bahmani, from the inroads of ruin and disintegration, and the misfortune of extinction and decay, by the birth of the successful and fortunate prince, a Faridun with the power of Jamshid, protected by the one God, Abû'l-Mu'azzamar Sultan Ahmad Bahri Nizâm Shâh. Although historians differ much in their accounts of that king of high birth, and the author of this noble work has seen in the royal library of the Nizâm Shâhí kings a treatise in the noble handwriting of His Majesty whose abode is Paradise,1 at the end of which he had written, "The writer of this was Shaiikh Burhân-ud-din, son of Malik Ahmad Nizâm-ul-Mulk, son of Malik Nâib, who had from His Majesty the title of Ashraf-i-Humayûn Nizâm Shâh;" yet that which has come before the eyes of the writer of these lines in some works on the history of the sultâns of the countries of the Dakan, and which he has heard from experienced old men of this country, is the story which is now to be related.

Historians of Ahmad Nizâm Shâh have written as follows:—

When the king of the world, Muhammed Shâh Bahmani, was on the throne, some of the amirs who were, by his orders, employed in collecting tribute from, and in laying waste, the country of the idolaters, captured a beautiful damsel. When they saw that she was worthy of the royal bedchamber, they sent her, with other gifts, to His Majesty. The modest virgin, on her arrival at court, found favour in the king's eyes, and was treated more kindly than any other member of the seraglio, as she excelled them all, not only in beauty, but also in courtesy, modesty, fidelity and understanding. Since it was God's eternal will that that Birqis of the period, that Mariyam of the age, should be the shell which was to contain the gem of the vicegerency and the place of rising of the star of sovereignty, the plant of her hopes, after the Sultan had gone in into her, bore fruit, and became heavy therewith. When her days were accomplished, a prince was born, and the Sultan, on receiving news of the event, rendered thanks to God and gladdened his eyes with the sight of the child. The young prince was entitled Moti Shâh, and received the name of Sultan Ahmad. The king then bestowed gifts on all around him, and commanded the astrologers to draw the young prince's horoscope with the utmost care. They foretold, from the aspects of the seven planets, that the child would become king, and that the further he could be sent from the court and the capital, the better it would be for the interests of the State.

When they reported the result of their investigations, the king, though delighted by the bright future foretold for the child, writhed with anguish at the thought that he must part from him. At last he decided that the interests of the State would be best consulted by his sending the prince and his mother to Malik Hasan Humayûn Shâhî, who ultimately obtained the titles of Majlis-i-A'la Ma'anshab-i-Mu'alla, and Malik Nâib, in order that that Muzir might send the prince and his mother to Ramgir and Mahur, which were parganas far from the capital and held by Malik Nâib, and keep him in that country, taking the greatest pains in his education and in the care of him. Majlis-i-A'la Ma'anshab-i-Mu'alla Malik Nâib

1 Burhân Nizâm Shâh I.
was therefore summoned, and the Sultān took counsel with him on the project. Malik Nāib agreed that it would be best to send the young prince to Rāmgir and promised, as a faithful servant, to neglect nothing that would be for the benefit of him and of his education. The Sultān accordingly carried out his design, and the education of the young prince was entrusted to Malik Nāib.

Some historians say that Sultān Maḥmūd Shāh gave Malik Nāib a slave girl from his karam and that when Malik Nāib took the girl to his karam she was discovered to be pregnant. Malik Nāib of necessity brought the matter to the notice of the king, and it was decreed, with the connivance of the slave girl, that since that royal offshoot had first seen the light in Malik Nāib's house, Malik Nāib should thenceforth be his tutor, and afterwards when Maḥmūd Shāh came to the throne, the young prince (Ahmad) was generally regarded as the son of Malik Nāib. But God knows the truth of all things. 3

Majlis-i-Aʿlā (Malik Nāib) formed great hopes of advancement from the favour which had been shown to him, and sent the young prince with a large retinue to Māhārūr and Rāmgir, which were his own jagirs, and took the greatest possible care of him. The king, too, inquired closely and constantly into the young prince's affairs and devoted much attention to his education, always seeing that he was well supplied with rich clothes, Arab horses, arms, and all that was understood to become his position as a prince, and sending them to him.

When the prince came to years of discretion, having devoted his time to the acquisition of accomplishments and learning, his talk was ever of arms, and the distinction and honour to be gained by their use, and he was ever conversant with them, so that kingship

---

3 Sic. A mistake for Muḥammad.

3 This fictitious account of the origin of the Nişām Shāhī dynasty has apparently been fabricated by the author. The origin of the dynasty is well known. Its founder, Ahmad Nişām-ul-Mulk, who afterwards assumed the title of Shāh, was the son of Hasan, entitled Malik Nişām. Hasan was a Brāhman, originally named Tāmā Bhaṭ, who had been captured in his youth by Ahmad Shāh Bahmanī in a campaign against Vijayanagar in 1422 or 1423. Although he was captured in Vijayanagar territory, he was a Brāhman of the Marāṭha country, his father, whose name is corruptly given as Bhārav, probably a version of Bhaṭrav or Bhaṭra, having belonged to the family of the kalbhāri or paṭvetri of Pāṭhri on the Godāvari, and having fled from that place to Vijayanagar in order to escape the persecution to which he was subjected by the Muslims. From a further corruption of the name of Ahmad's grandfather, the cognomen Bahri, often applied to the dynasty, was formed.

Sayyid 'All cites no authority for his story except some unnamed historical works and the oral testimony of some old men. The evidence on the other side, both positive and circumstantial, is overwhelming. There is the statement of Burhān Nişām Shāh I in his own handwriting, which is mentioned by Fīrūzā (ii, 199) as well as by Sayyid 'All, that Ahmad was the grandson of Malik Nişām; there is the evidence of the historians Fīrūzā and Nişām-ud-dīn Ahmad, author of the Tāhāqūl-i-Ākbar that Ahmad always passed and behaved as the son of Malik Nişām; and there i is the action taken by Burhān Nişām Shāh I in 1518 when he demanded of Alā-ud-dīn 'Imād Shāh of Berar the cession of the town and district of Pāṭhri, then included in the Berar kingdom, in exchange for another district, on the ground that Pāṭhri was the home of his ancestors and that many of his relations still lived there. On Alā-ud-dīn's refusal to cede the district, Burhān I made war on him and annexed it.

The circumstantial evidence is also strong. Had Ahmad been a Bahmanī prince, he would have called himself Bahmanī rather than Bahri, and when the feeble Maḥmūd was completely dominated by Qāsim, Barīn-ul-Mamālik, he would have made some claim to the throne of his ancestors, or at least to the regency. The house of Bahman still commanded much respect, and the rebellion of the provincial governors, Yūsuf Khaṇ of Dījās, Fatūyullāh 'Imād-ul-Mulk of Berar, and Sultan Qul Qul Qul-ul-Mulk of Golconda was a revolt, not against Maḥmūd Shāh and his four feeble successors, but against the tyranny of the none du palais, Qāsim and his son 'Alī Barī I, whose usurpation they resented. A prince of the royal house would certainly have commanded the allegiance of Qul-ul-Mulk and 'Imād-ul-Mulk, and probably that of Yūsuf Khaṇ also. As a matter of fact these three lords were hostile to him.
seemed, as it were, to blossom in him, and to be evident in his speech and actions. Indeed, he soon outstripped all in the use of arms. He attained all this perfection in his twelfth year, when Sultan Mu’mammad Shâh died.

Sultan Muhammad was succeeded, according to his will, by his son, Sultan Mahmûd Shâh. Mahmûd Shâh honoured Malik Hassan Humâyûn Shâh (Malik Nâib) above all his fellows, and promoted him above all the amîrs, so that he became the butt of their envy, and the whole of the management of affairs of State was left in his hands.

II.—ACCOUNTS OF THE EARLY EXPLOITS OF MALIK AHMAD.

While the prince was living happily in Râmgrî and Mûbur, war broke out between Sultan Mahmûd Shâh and the accursed Uriya, who was the chief of the irreligious unbelievers of Tîlang. The king, having resolved on a holy war, set out with a large army for the country of the seditious polytheists, and the rebels prepared to resist him. The dispute came at last to actual fighting, and a disaster befell the (usually) victorious army, the army of Islam being defeated by Uriya the polytheist, so that most of the baggage, nay, some even of the ladies and female servants of the karam, were disgraced by falling into the hands of the enemy. The prince, on hearing of the disgrace which had befallen the king’s army, resolved to go to his assistance, and, assembling his followers, marched in the direction of the enemy, who were pursuing the royal army. He took up a position in a mountain pass which blocked their way, defeated the infidels, and put them to flight. He plundered them and regained possession of the spoil which they had taken from the royal army, including the ladies of Mahmûd’s karam, and sent these to the king. The king was overjoyed to hear that the prince, with so small an army, had defeated the forces of the unbelievers and had redeemed the honour of the house of Bahman by rescuing the ladies of the karam who had fallen into the enemy’s hands by reason of the negligence and quarrels of the amîrs, but a number of jealous and envious men, who were ever at enmity with Malik Nâib on account of the relation in which he stood to the prince, took this opportunity of recalling to the king’s recollection what the astrologers had predicted in respect of the prince, and represented to the king that the prince had now reached years of discretion and that the predictions of the astronomers to the late king were being fulfilled, for strange and wonderful signs of their fulfilment were daily apparent in the prince’s actions. They said further that it would be but prudent to consider what steps should be taken to prevent any mischance.

III.—THE ACCOUNT OF THE SENDING OF THE VICTORIOUS PRINCE TO JUNNÂR AND ALL OTHER PLACES IN THE KONEAN, AS FAR AS THE SEA COAST.

When the king was beginning to be anxious regarding the prince, which anxiety was perceived by Majlis-i-A’lîk Malik Nâib, the subjects in the province of Junnâr and its dependencies complained to the king of the oppression of the unbelievers of Shivner and other

4 Sayyid ‘All again writes Ma’hûd for Mu’hûmad. “The prince” is, of course, Ahmad. Malik Nâib, his father, was at this time governor of Telingâna and the great nur, Mahmûd Gâvân, being suspicious of the loyalty of Malik Nâib and his ablest and more energetic son Ahmad, had induced the king, Mahmûd III, to separate them by giving Ahmad the command of 300 horse and 20,000 men in Mûbur. Another reason for Ahmad’s removal from the court was a connection which he had formed with one of the women of the royal seraglio. This intrigue may have suggested to Sayyid ‘All his story of Ahmad’s royal descent. Malik Nâib checkmated the minister by persuading the king to recall Ahmad to Telingâna, where the court then was, as commander of 1,000 horse, and this was the occasion of his return from Mûbur to the royal camp. The story of the defeat of the royal army is not correct. It was Malik Nâib, governor of Telingâna, who was then living at Râjamahendri, who was defeated by the Râja of Uflâh.
forts in those parts, which were in the hands of the infidels. Malik Nāib seized this opportunity, before the king had issued any orders in respect of the prince, and represented that the prince, who had now come to years of discretion, was the fittest person to be sent to restore order in that country. The king accepted Malik Nāib’s advice, and it was decided that the prince should be sent to Junnār with orders to restore prosperity to that beautiful country, and to do his utmost to this end, applying the plaster of ease and justice to the wounds caused by the swords of the lords of oppression and injustice, thus by his kindness and courtesy consoling the inhabitants of the land.

Malik Nāib, in accordance with the royal orders, issued a farmān to the prince and sent with it a petition of his own, urging the prince to set out for Junnār without delay on receiving the royal commands, as his enemies had been busy at court and had turned the king against him, and it was to be feared that if the prince did not set out at once, an order might be issued, the rectification of which would be beyond human power. The prince, as soon as he received his orders, issued pay to his army and set out for Junnār. When the prince arrived at Junnār he was met by the principal inhabitants, and took his seat on the throne of honour and majesty like an independent sovereign, and opened the doors of justice and mercy in the faces of the cultivators, the inhabitants, and the merchants of that country, thus restoring happiness and prosperity to them. Thus all the inhabitants of that country and all travellers therein, Dakanīs and Khurāsānīs, Hindus and Musalmāns, passed their lives in peace and content, and gladly submitted, in all loyalty, to the prince.

Ali Bālish-Dihl, who had been one of the dependants of Khvāja Jahān Maḥmūd Gāvān, and was at this time governor of the fort of Chākan and its dependencies, when he heard of the obedience and loyalty of the inhabitants of Junnār, and of the prosperity of that country, was moved by envy and jealousy, the fruit of which can be nothing but shame and repentance, to stray from the way of concord and amity with the prince, and entered into conspiracy with his enemies at court, constantly sending to court lying reports and petitions prompted by self-interest, and the prince’s enemies at court taking advantage of this opportunity, persuaded the king that the prince cherished designs on the throne, and thus poisoned his mind against him. The king who was not free from a natural desire to see the prince again, issued an order summoning him to court. The prince marched for Bidar with his troops and was favourably received there, being accorded the honour of the istiqbāl, which was performed by all the amīrs and officers of State, the Sayyids, Shāikhs and learned men. He succeeded in abusing the king’s mind of the ideas which had been instilled into it by his enemies and was received most considerately and affectionately by him, and acquired further honours. He thus became more than ever the object of the envy and jealousy of his enemies.5

When the king heard of the manner in which the prince had treated his subjects in Junnār, and of the satisfaction of all the inhabitants of that country with him, he sent

5 This is a garbled account of what actually occurred. After Malik Nāib had outwitted Maḥmūd Gāvān, the latter, apprehensive of the power of the provincial governors, subdivided the four great tomāfs, or provinces of the kingdom, into eight. Thus Gulbarga was divided into the provinces of Gulbarga and Bijapur, Daulatābād into those of Daulatābād and Junnār, Berar into those of Gāwli and Māhūr, and Telengān into those of Rājamahendri and Warangal, and the powers of the provincial governors were much curtailed. The old governors, and especially Malik Nāib, bitterly resented this reform, and in 1481 Maḥmūd Gāvān’s death was compassed by a band of conspirators of whom Malik Nāib was the chief. Malik Nāib succeeded Maḥmūd Gāvān as minister and sent his son Almad to Daulatābād as governor. These expeditions into the Junnār province were an attempt to reunite the provinces of Daulatābād and Junnār.
for Malik Naib, who had been his tutor and mentor, and privately consulted with him as to what should be done with the prince. On Malik Naib's advice, the king decided that the prince should not remain at court, but should return to Junnar as governor, and on the following day, when the prince waited on the king, he was given a robe of honour and the honourable title of Nizam-ul-Mulk. He was reappointed governor of Junnar and its dependencies, and it was ordered that any forts that he might conquer from the unbelievers should be added to his jagirs. The prince then left the court for Junnar, where he was welcomed by the inhabitants as before. He took his seat on the throne in the royal capital and again employed himself in administering Junnar with justice and mercy.

VI.—AN ACCOUNT OF THE PRINCE'S EXPEDITION AGAINST THE FORT OF SHIVNER, AND ALL OTHER FORTS AND DISTRICTS OF THE KONKAN. 6

Since the prince was ever desirous of raising the standard of Islam, and propagating the faith and sacred law of Muhammad by engaging in a holy war, and stamping out the strife and wickedness of infidels without faith and without righteousness, and most of the forts of the Konkan and the island country of the Dakar were in the hands of the polytheists and idolaters, vile unbelievers who harassed merchants and all other inhabitants of that country, it was necessary for the proper administration of the country that those forts and strongholds should be captured and the infidels punished. The Prince, therefore, with a view to carrying out this work, distributed rewards to the army, and in a short time collected a very large army of horse and foot; and when the army had assembled, the prince ordered that it should march first against Shivner. 7

Shivner is a fortress situated on a high hill in the neighbourhood of the town of Junnar, so strong that it had never before been captured. The prince's army marched against it. After a short siege, in which the prince's army displayed the most determined valour and the infidels offered a stout resistance, the defenders had no choice but to capitulate, and the commandant of the fort and his chief officers came before the prince with swords and shrouds suspended round their necks, and offered him the keys of the place. The prince took pity on them and granted them their lives, and his troops entered the fort, where they recited the takbir and the kalima and, after destroying the temples and dwellings of the idolaters, erected mosques in their place. Much spoil, including jewels, money, rich clothes, merchandise, and beautiful slaves, was taken by the prince's army and presented before the prince, who took what he required for the treasury and remitted the rest to the troops.

The prince regarded this great victory as an earnest of God's grace, and decided to proceed to the conquest of other forts in the Konkan. After appointing one of his trusted officers to the command of Shivner, he marched against the fortress of Jond, which also is in the neighbourhood of Junnar.

6 The circumstances in which this campaign was undertaken are misrepresented. Muhammad Bahmani III died in 1482 and left Malik Naib, by his will, regent of the kingdom and guardian of his infant son Maumud Shiah. Malik Naib transferred his son Ahmad from Daulatabad to Junnar, but also transferred to that province Bir and many other parjans which had belonged to Daulatabad. Ahmad was commissioned to reduce several forts held by Maratha officers who were loyal to the Bahmani dynasty but were not disposed to submit to the regent or to the provincial governors and this campaign was undertaken in consequence.

7 Shivner is the hill fort of the town of Junnar, situated in 19° 12' N. and 73° 52' E.
The army surrounded Jond and captured it without much trouble, much spoil falling to the lot of the victors. The prince handed over the fort to one of his trusty officers, and marched on the fortress of Luhaka, which is known as Lohogárh. 8

Lohogárh is situated on a high and rocky hill, and when the prince reached it he commanded his troops to surround the fortress and to harass the defenders in every way possible. The troops fought with great valour, and the defenders resisted them stoutly, but the army of Islam prevailed. The fort was taken by storm and the defenders were massacred, their bodies being thrown from the high rock on which the fort is built. The temples of the idolaters were overthrown, and mosques were built in their place. Much plunder was taken, and the prince, after appointing one of his officers kotwil of the fort, marched on the fort of Tung and Nikona. 9

When the prince and his army arrived before Tung and Nikona, the garrison, who had both heard of, and seen, the invariable success and victory of the prince, refrained from offering any resistance, and came forth and submitted. The prince had mercy on them and granted them their lives, granting them immunity from any attack by his army. The army, however, obtained much plunder from that place, and the prince, placing one of his trusted officers in command of that fort, marched to Kondhána, 10 which was one of the greatest forts of that time.

As soon as the prince’s army arrived at Kondhána, that fort, like the others, was conquered, and the prince, after appointing one of his servants to command it, marched for Purandhar. 11

The prince encamped before Purandhar and his troops resolutely attacked. The garrison exerted themselves in its defence, but their efforts were of no avail, and the attacking force pressed them ever harder and harder, till they lost hope, and the fort was taken by storm, many of its idolatrous defenders being killed, and their houses plundered and then burnt. The prince bestowed the governorship of that fort and its dependencies on one of his officers and marched towards Bhorap. 12

When the army arrived at Bhorap the prince, by liberally bestowing largesse, encouraged them to attack the place with such spirit that it was at once taken by storm, with much slaughter of the polytheists. Temples were overthrown and mosques were erected in their place, and much spoil fell into the hands of the victors, the wives and children of the miserable defenders being made captives. The prince then made arrangements for the restoration of the fortress by placing one of his officers in charge of it, and marched towards Marabdes.

8 Lohogárh is a fort of some antiquity and importance situated in 18° 42’ N. and 73° 29’ E. It was much used as a State prison by the Nizám Shálí kings.

9 Tung and Nikona are two hill forts, the former five miles to the south by west and the latter twelve miles to the south-east of Lohogárh.

10 A fort situated in 18° 22’ N. and 73° 45’ E. and now known as Singhárh, which name was given to it in 1647 by Siwáji, when he acquired it by means of a large bribe paid to the Muhammadan commandant.

11 A hill fort situated in 18° 17’ N. and 73° 59’ E., now a sanitarium for European troops.

12 A hill fort situated fifteen miles south-west of Lohogárh.
The garrison of Marabdes, who had heard of the fate of Bhorap and all other forts, profited by the example which had been given to them, and showed consideration for their wives and children by opening the gates of the fort and appearing submissively before the prince with shrouds round their necks. The prince had mercy on them and ordered his troops to molest neither their persons nor their property, but to destroy all temples and idols and to build mosques in their place. The prince collected an indemnity from them, and ordered a commandant for that fort, and officers to assist him, to be chosen, and a body of troops to be stationed there for its protection, and for the propagation of the holy law of Muh'ammed. These orders were carried out, and the mind of the prince was set at ease with respect to that fort.

The prince next marched to Juddhan, and the army besieged that fort and attacked it with great spirit. The garrison at first defended that place bravely, but could not long endure the assaults of the prince’s valorous troops, and at length came forth and humbly offered to surrender the fort. Their lives were spared, but the place was sacked, and the property of its inhabitants plundered and their houses destroyed. The prince appointed a trustworthy officer to the command of that fort, and the army then marched to the fortress of Khaj, and encamped before it.

The fortress of Khaj, like all other forts, was captured with very little trouble, all outward signs of idolatry were overthrown, and much spoil fell into the hands of the victors. The army then marched towards Kher Drug.

When the army arrived before Kher Drug the inhabitants were much alarmed, and submitted with great humility to the prince, who mercifully spared their lives and appointed one of his officers to the command of the fort.

The prince next marched on the fort of Moranjan, and cleared that fortress also of the base existence of evil men, uprooting the foundations of polytheism and infidelity, and thence marched for the fort of Tungi and Taroni.

Those forts were very soon captured and much spoil, both in money and kind, was taken by the troops.

Thence the prince marched to Maholi, and, having encamped before the fort, issued orders for an assault. His troops attacked the place with great valour, and at the first assault overcame the garrison and captured the fort, and many of the polytheists were slaughtered. Much plunder fell to the lot of the army of Islam, and the idol temples were levelled with the ground. The prince appointed one of his servants to the command of the fort, and marched on Pili.

13 About thirteen miles north-west of Junnar.
14 About twelve miles south of Poona.
15 A fort about forty-seven miles south-west of Junnar.
16 A fort about forty-five miles west by north of Poona.
Pâli is a fortress situated on a high mountain peak rounded like a dome, extremely strong, and well-nigh impregnable. When the prince arrived before it, he ordered that a regular siege should be undertaken, and that the siege train should open fire upon it. The army set itself to obey these orders, and to capture the fort from its accursed and idolatrous defenders. The garrison defended the fort most strenuously, but to no avail, for weak gnats and ants, how numerous soever they may be, cannot resist the storm wind. At last victory declared for the Muslims; the vile unbelievers were overpowered, and this strong fortress fell into the hands of the prince. The troops proceeded to slay and plunder, granting no quarter, so that a large number of the unbelievers, young and old, were put to the sword, and rich spoil, elephants, horses, money, and goods, fell into the hands of the captors, and the smoke of annihilation rose from the dwellings of the idolaters and unbelievers. After thus wiping out the infidels, the prince appointed one of his trusty officers to the command of the fort of Pâli, with instructions to repair its ramparts and bastions, and marched for Kot Danda Râjpuri, and encamped before the fort.

The fortress of Danda Râjpuri\(^\text{17}\) is a fortress on the shores of the Indian Ocean, so situated that the waters of the ocean come up on two sides of it, and it is approached on the third side by a road across the dry land, but athwart this road runs a deep and broad artificial ditch, connecting the two branches of the sea. The ramparts and bastions of the fort are of stone, and are very high. The garrison of that fort, a band of vile unbelievers, had the greatest confidence in its strength, and contumaciously banded themselves together to oppose the prince. But since the prince was under God's special protection, he was in no way perturbed by the thought of the strength of that fortress, and fearlessly ordered his valiant troops to attack it and send the contumacious miscreants to hell. The army attacked it with great valour, and a terrible fight was fought. The garrison of the fortress discovered that it was useless to attempt to contend with the prince's victorious army, and came forth and humbly submitted themselves to the prince, imploring mercy both for themselves and their children. The prince, in his mercy, ordered the troops to spare the lives of the inhabitants of the fortress, but to plunder their property, in order that they might furnish an example to other contumacious wanderers from the right way, and that nobody might henceforth swerve from obedience, or incline towards disobedience. The army, in accordance with the prince's orders, sacked the place, taking possession of all that belonged to the unbelievers.

In short, in a brief space of time all the forts and districts of the Konkan, both above the Ghats and below the Ghats, were captured by the prince's army, and there remained nobody who had not submitted to the prince's authority, although the infidels had been many and had fought valiantly.

\(^{17}\) Danda and Râjpuri were two forts standing on either bank of the Râjpuri creek, on an island at the entrance of which now stand the fort and village of Janjira, situated in 18° 18' N. and 73° E., forty-four miles south of Bombay Island. Janjira is the capital of the State of the same name.
The prince, having accomplished all this, returned to his royal capital of Jumârâ, where he was welcomed and congratulated by his subjects. He then sent to the king a report of his victories together with rich offerings from the spoil which had been taken by his army. The king of the Dakan, when he heard of the prince's victories, highly praised him before the court, and offered up thanks to God. He bestowed robes of honour on the prince's messengers, and sent by them to the prince a special robe of honour, and a jewelled waist-belt, and bestowed on him in Âdâr all the forts which he had captured. The prince then enjoyed himself, free from care, in his capital.  

(More about Khwâja (Ahga) Petros.

An Addition to Sidelights on Omnichund (ante, Vol. XLVII, pp. 265—274).

By Sir Richard Temple.

In the Life and Adventures of Joseph Emin, Second Edition, edited by Amy Apcar, there is an interesting allusion to the Armenian merchant who remained loyal to the East India Company in 1756-1757 and also a long note (pp. 434—438) giving details regarding Khwâja Petros and his family. Both are worth reproducing as an appendix to my article, noted above.

After an account of how Joseph Emin obtained an Ensign's brevet from Governor John Cartier, President of Bengal, in 1770, the author adds the following remark:

"Emin omitted inserting that when Mr. Cartier favoured him with the brevet, the late rich Armenian Coja Petrus, at that time the earthly god of the other Armenians in Calcutta, being an old acquaintance of the author's father, and hearing of his good success, thought it polite to make him some presents, and ventured to send him a large horse (worth 600 rupees), with rich Turkish silver harness, and a pair of stirrups of the same metal, each large enough to weigh four pounds of silver, together with several fine shauls, the whole of the value of about 2,000 rupees; but Emin, whose spirit was above it, though poor, refused the present, and returned it with the following message:

'Several afternoons, when, in obedience to my father, I used to make you visits, you detained me in your house, in the cold season, till it was dark and foggy, without even offering me a mashal [torch] to light me home; and now, when you see me supported by the English, you send me presents! I return them with many thanks. Be pleased to send me some bread and salt, with a maund of rice, and half a maund of ghee, to confirm our friendship, and to satisfy you that I can forgive all your Asiatic artful methods of setting a father against his son, who was lost, and then found. The same noble nation, through whom you thrive with riches among the Armenians in Calcutta, have provided, and will provide for me, rest satisfied.'

'At this the Armenians were astonished; but the noble-minded English admired it, commending Emin for his disinterested spirit, when they heard his simple reasons, saying.

18 The nature and object of this campaign in the Konkâ are entirely misrepresented. Ahmad was not a chivalrous young prince defending or extending the dominions of his elder brother, but a rebellious provincial governor busy engaged in carving a kingdom for himself out of the disjecta membra of the kingdom of the Bahmanídes and in overthrowing all officers who still remained faithful to that dynasty. The absurdity of the claim of royal descent for Ahmad is once more apparent. Mahmu'd Shah ascended the throne in 1442 at the age of twelve, and according to Sayyid 'Ali Ahmad was his younger brother, so that at the time of this campaign, which occurred in 1482 or 1483, he was not more than eleven or twelve years of age. Ahmad had been, in fact, sufficiently old, before 1478, to become an object of suspicion and was then sent to Mîhûr as a commander of 300 horse. See note 4.
that to take any thing which is given with an ill-will, is not better than exacting it by main
force; for neither Petrus, nor any of the same cast, would do a piece of kindness without
having some low design in it. They are to be pitied rather than blamed, since having once
lost the sweets of liberty, and being kept under exorbitant tyranny for several centuries
they are become like fatherless children, and it is impossible they should conduct them-

selves with the same delicate sentiments as a free or polite nation."

NOTE [BY THE EDITOR, AMY APCIAR].

Khoja Petrus Arathoon, the "earthly god of the Calcutta Armenians," died in 1778.
Emin is perhaps a little unjust to him. He was the Armenian [who] ... supplied
the refugees at Fulta in 1756 with provisions for six months ...  

Pietros Arathoon's tombstone in the south choir of Nazareth's Armenian Church,
Calcutta, is a white marble stone set into the marble flooring with an inscription in an exag-
gerated style, as follows:—"The eminent princely chief Aga Pietros Arathoon of Erivan,
New Julfa, Ispahan, of the family of Abraham, was a lustrous hyacinthine crown of the
whole Armenian nation. He acquired a great fame amongst all peoples to the glory
of his nation. He worked assiduously and expended lavishly. His generosity towards
the destitute orphans and widows was without parallel. By his frequent munificent gifts he
erected handsome and well-embellished churches. He departed in the hope of salvation
at the age of fifty-three, and was placed in this tomb with pomp, in the year of Our Lord
1778, the 29th of August, corresponding with the year 163 of the era of Azariah, the 12th
of the month of Nadar."

The word translated princely chief is Isakhan,—prince, or absolute ruler. There were
no princes, or even "melika" in New Julfa. Next to Khojah Pietros lies his wife, under
a plain stone of blackish grey marble, inscribed with five lines of Armenian, as follows:—

"This is the tomb of Dastagool, the daughter of Aga Minas of the family of Khoja Minas
of Erivan (a parish of Julfa) and wife of Aga Pietros. She departed this life on the
3rd of June 1805."

Pietros Arathoon erected two small altars in the Armenian Church of Calcutta; on the
north and south sides of the sanctuary there are respectively a vestry and a sacristy, and
a flight of steps was introduced in each, leading up to an altar on a higher elevation than the
principal altar. In an Armenian Church there should be only one altar, but apparently
a man of Pietros Arathoon's position was privileged to make an innovation. The inscrip-
tions on the walls facing the congregation above the doors leading from the choirs into the
vestry and sacristy are as follows. In the north choir:—

"This altar in the name of the Apostles S. Peter and S. Paul is [erected] to the memory
of Aga Pietros, the son of Arathoon, a native of Old Erivan, in the year of Our Lord 1763."

In the south choir:—

"This altar in the name of S. Gregory the Illuminator is [erected] to the memory of
Aga Gricor, the son of Arathoon, a native of Old Erivan, in the year of Our Lord 1763,
December 21st."

Both altars were erected in the lifetime of the donor.

Aga Gricor (Gregory), known in Indian history as Gurgin Khan, was the brother of
Aga Pietros. He was in the service of Mir Kasim, commanding his soldiery, and he fought
against the troops of the East India Company. He established a foundry at Monghyr for
casting cannon and manufacturing firelocks. He died by assassination in August 1763,
and his brother erected the small altar to his memory in the same year. Aga Pietros was
also the founder of the Armenian Church at Saidabad, built in 1758.
VINCENT AQUILA SMITH

By SIR RICHARD TEMPLE.

By the death of Dr. V. A. Smith, C.I.E., D. Litt., I.C.S., the Indian Antiquary has lost a valued contributor of more than forty years standing and India itself an eminent student of her history and antiquities. It is fortunate, indeed, that he was spared to complete his invaluable Oxford History of India, a work of the first importance for all who wish to be introduced to an accurate knowledge of the story of that vast country in its many aspects.

His great attainments made it possible for him to take a leading part in the research which led up to his Early History of India from 800 B.C. to the Muhammadan Conquest, first published in 1904. Of this it has been truly said that it "sifted a vast quantity of evidence scattered in many monographs and periodicals and fashioned it into a connected and sane history. It conferred an immense boon on all interested in ancient India, and particularly on scholars, whose special researches made it difficult for them to assess all the information amassled by others. It became authoritative at once, for the want of such a compilation had been sadly felt. The third edition, published in 1914 with careful revision and large additions, will hold its position for many years to come."

Among other important works and contributions to a great number of Journals, he made a Catalogue of the Coins in the Indian Museum at Calcutta in 1906, and writing for Indian students, he compiled an Oxford History of England in 1912. He did not confine himself to political and social history, for in 1911 he produced his History of Fine Art in India and Ceylon, a work of remarkable usefulness. His Life of Akbar the Great Mogul has become very popular as a notable and characteristic account of the great Emperor.

Vincent Smith's connection with the Indian Antiquary dates from 1878, commencing with a query on Śaka and Saṁvat Dates, and since 1885, when this Journal passed into the hands of the late Dr. J. F. Fleet and myself, he was a constant contributor to its pages, his notes and papers being naturally concerned with the details of research. He also constantly favoured this periodical with many valuable notices of books and a number of miscellaneous notes on a great variety of subjects connected with things Indian. His contributions covered his favourite studies in history, chronology, epigraphy, numismatics, art and architecture.

His papers were always illuminating and suggestive, even if at times controversial, and in him the world of students has lost a valiant pioneer in many lines of thought and research, and myself an old and valued friend and coadjutor.

Vincent Smith's principal contributions to the Indian Antiquary.

EPISODES OF PIRACY IN THE EASTERN SEAS, 1519 TO 1851.

By S. CHARLES HILL.

(Continued from p. 65.)

XXII.

A MALAY MUTINY, 1792.

The Malays have been notorious for their readiness to mutiny ever since they were first
employed by Europeans. They are good seamen, but a blow, an insult real or fancied, or the
desire and opportunity for plunder have always been sufficient to cause an outbreak.

---

Piracy and Murder.

It is much to be lamented that this infernal practice seems to be gaining ground in
India. We have in the instance before us to lament the loss of a most deserving young man,
Captain Nelson, who sailed from Bombay in the Snow Betsy, bound for the west coast of
Sumatra and Batavia. A few days after his leaving Bencoolen, the gunner, seacunnies, and
some Malays that were on board formed the plan of cutting off the vessel, and, having
procured arms, in the night, during the Chief Mate's watch, came aft on the quarter-deck,
wounded him on both his sides and cut him several times in the neck.

54 Helmman, from the Ambo-Persian sukīdn, the man who steers the sukīdn, helm.—Ed.
The noise he made caused an alarm, which brought up the Second and Third Officers. The Second Officer was immediately despatched and thrown overboard. The Third leaped overboard and swam for the longboat towing astern. Captain Nelson, finding everything lost, leaped out of the cabin window and got also to the longboat, though we have reason to think he was wounded before he left the cabin.

Having no knife to cut the boat's painter, they threw overboard the mast and some cars and committed themselves to this raft. At daylight they were discovered, and a boat with the gunner, some seacunnies and Malays were sent with a few muskets, who shot Captain Nelson and the officer. On their return on board, there were three Caffries, of whom the gunner seemed apprehensive. They were therefore seized and most inhumanly murdered.

The Syrang, collecting from the conversation of the gunner and seacunnies their intention of carrying the vessel to Manilla, began to be apprehensive for his own and the lascars' safety, and formed the resolution of taking the first favourable opportunity of retaking the vessel, which soon after occurred.

Having made the land and a boat being in sight, the gunner, with four of the seacunnies, the carpenter and his mate and some of the Malays went in the Betsy's boat in order to purchase some provisions. This was not an opportunity to be neglected. The party being weakened, the Syrang happily gained possession of the vessel, putting the seacunnies that remained on board to death. He afterwards fell in with the Jane, Captain Bampton, from China, bound to Bombay. He made a signal of distress which was observed by Captain Bampton, who immediately bore down, and after having learnt all the circumstances, sent an officer on board to take charge of her and conduct her safe to Bombay.

[Madras Courier, 19 July 1792.]

XXIII.

Captain Osborn in his book on Quedah gives this story as told him by an ex-pirate Jaddi (Jaddi), who was employed upon a British ship-of-war. A somewhat similar story of a Malay pirate prahu, which fought to the last when surrounded by Dutch gun-boats in the year 1715, is to be found in Parliamentary Papers, LVI, i. p. 63 (Historical Notice upon the Piracies committed in the Indian Ocean, by J. H. R.-J. P. Corneis de Groot, Secretary General to the Minister of the Colonies, 1846), but, from the date of Captain Osborn's book, this story, if true, must refer to an action which took place at a very much later date—probably about the year 1800.

The courage displayed by the Malays against the Dutch was equally exhibited in their fights with the English cruisers, when the latter began to take their share in the suppression of piracy in these seas, but their peculiar animosity against the Dutch was due to a long record of suffering at their hands. Osborn says (p. 145):—"One example of the Dutch

58 Probably negro or Malagasy seamen.
59 The Syrang (Pers. sarhang, a boatswain) who is the chief of the Indian seamen, was often the man who had engaged them—in many cases from amongst his own kinsmen or fellow villagers.
policy may be quoted, and it is no singular instance of their phlegmatic cruelty:—John Petersen Koen [Jan Pieterszoon Coen], their most illustrious Governor General of the Indies, exterminated the inhabitants of the Banda or Spice Islands\(^{57}\) and replaced them by slaves.... The piratical acts now [1865] committed in the Malay Archipelego are, I firmly believe, the result of the iniquities practised upon the inhabitants in the olden day, and the Dutch, Spaniards and English, even at the present time, are too prone to shoot down indiscriminately any poor devils who, for the first time in their lives, are told, with powder and shot arguments, that war as carried on by them is piracy by our laws."

In Dubois' *Vues des Gouverneurs Généraux.... des Etablissements Hollandois*, p. 69, we are told that Governor Coen took the Spice Islands in the year 1621. The greater part of the inhabitants of "Lonthoir" (Lantor), which was the capital, retired into the interior, but after some years, when a large number of them had been killed, the remainder, owing to want of food, were compelled to leave the island.

It is, however, I think, certain, that the Malays indulged in piracy from the time of their arrival in these seas, and it is equally certain that the only argument for the suppression of piracy to which they would listen was the argument of force, but how far that argument should have been carried is another question.

---

**Narrative of Jaddi, a pirate.**

Long before that action with the English man-of-war which drove me to Singapore, I sailed in a fine fleet of prahuas belonging to the Rajah of Johore [Sultan Mahmūd Shāh]. We were all then very rich—ah! such numbers of beautiful wives and such feasting!—but, above all, we had a great many most holy men in our force! When the proper monsoon came, we proceeded to sea to fight the Bugismen [of Celebes] and Chinamen bound from Borneo and the Celebes to Java; for you must remember our Rajah was at war with them. (Jadee always maintained that the proceedings in which he had been engaged partook of a purely warlike, and not of a piratical character.)

Our thirteen prahuas had all been fitted out in and about Singapore. I wish you could have seen them, Touhan [Tūām, Sir]. These prahuas we see here are nothing to them, such brass guns, such long pendants, such cresces [Malay *kris*, dagger]! Allah-il-Allah!\(^{58}\) Our Datocoos [datuk, a chief] were indeed great men!

Sailing along the coast as high as Patani,\(^{59}\) we then crossed over to Borneo, two Illa-noon\(^{60}\) prahuas acting as pilots, and reached a place called Sambas [West Borneo]: there we fought the Chinese and Dutchmen, who ill-treat our countrymen, and are trying to drive the Malays out of that country. Gold-dust and slaves in large quantities were here taken, most of the latter being our countrymen of Sumatra and Java, who are captured and sold to the planters and miners of the Dutch settlements.

'Do you mean to say,' I asked, 'that the Dutch countenance such traffic?'

---

57 The Banda group of islands lies south-east of Ceram.—Ep.

58 Lālīhā ill'allāh, part of the Muhammadan Creed: There is no God but God. However, it is probable that what Jaddi really said, with the Malay pronunciation, was, Allāhu akbar, God is great.

59 On the eastern side of the Malay peninsula.—Ep.

60 The name of the Mindanau and Sulu pirates, from Ilana Bay in the Illano District of Mindanau.
'The Hollanders,' replied Jadee, 'have been the bane of the Malay race; no one knows the amount of villainy, the bloody cruelty of their system towards us. They drive us into our prahuas to escape their taxes and laws, and then declare us pirates and put us to death. There are natives in our crew, Touhan, of Sumatra and Java, of Bianca [Banka] and Borneo; ask them why they hate the Dutchmen; why they would kill a Dutchman. It is because the Dutchman is a false man, not like the white man [English]. The Hollander stabs in the dark; he is a liar!'

However, from Borneo we sailed to Biliton [island between Banka and Borneo] and Bianca, and there waited for some large junks that were expected. Our cruise had been so far so successful, and we feasted away—fighting cocks, smoking opium and eating white rice. At last our scouts told us that a junk was in sight. She came, a lofty-sided one of Fokien [Fukien]. We knew these Amoy men would fight like tiger-cats for their sugar and silks; and as the breeze was fresh, we only kept her in sight by keeping close inshore and following her. Not to frighten the Chinamen, we did not hoist sail but made our slaves pull. 'Oh!' said Jadee, warming up with the recollection of the event.—'Oh! it was fine to feel what brave fellows we then were!'

Towards night we made sail and closed upon the junk, and at daylight it fell a stark calm, and we went at our prize like sharks. All our fighting men put on their war-dresses; the Illanoons danced their war-dance, and all our gongs sounded as we opened out to attack her on different sides.

But those Amoy men are pigs! They burnt joss-paper, sounded their gongs, and received us with such showers of stones, hot-water, long pikes, and one or two well-directed shots that we hauled off to try the effect of our guns, sorry though we were to do it, for it was sure to bring the Dutchmen upon us. Bang! bang! we fired at them, and they at us; three hours did we persevere, and whenever we tried to board, the Chinese beat us back every time, for her side was as smooth and as high as a wall, with galleries overhanging.

We had several men killed and hurt; a council was called; a certain charm was performed by one of our holy men, a famous chief, and twenty of our best men devoted themselves to effecting a landing on the junk's deck, when our lock-out prahuas made the signal that the Dutchmen were coming; and sure enough some Dutch gun-boats came sweeping round a headland. In a moment we were round and pulling like demons for the shores of Biliton, the gun-boats in chase of us, and the Chinese howling with delight. The sea-breeze freshened and brought up a schooner-rigged boat very fast. We had been at work twenty-four hours and were heartily tired; our slaves could work no longer, so we prepared for the Hollanders; they were afraid to close upon us and commenced firing at a distance. This was just what we wanted; we had guns as well as they, and by keeping up the fight until dark, we felt sure of escape. The Dutchmen, however, knew this too, and kept closing gradually upon us; and when they saw our prahuas baling out water and blood, they knew we were suffering and cheered like devils. We were desperate; surrender to Dutchmen we never would; we closed together for mutual support, and determined at last, if all hope of escape ceased, to run our prahuas ashore, burn them, and lie hid in the jungle until a future

---

day. But a brave Datoo with his shattered prahu saved us; he proposed to let the Dutchmen board her, creese [stab with a kri] all that did so, and then trust to Allah for his escape.

It was done immediately; we all pulled a short distance away and left the brave Datoo's prahu like a wreck abandoned. How the Dutchmen yelled and fired into her! The slaves and cowards jumped out of the prahu, but our braves kept quiet; at last, as we expected, one gun-boat dashed alongside of their prize and boarded her in a crowd. Then was the time to see how the Malay man could fight; the creese was worth twenty swords, and the Dutchmen went down like sheep. We fired to cover our countrymen, who, as soon as their work was done, jumped overboard and swam to us; but the brave Datoo, with many more died as brave Malaya should do, running a-muck against a host of enemies.

The gun-boats were quite scared by this punishment, and we lost no time in getting away as rapidly as possible; but the accursed schooner, by keeping more in the offing, held the wind and preserved her position, signalling all the while for the gun-boats to follow her. We did not want to fight any more; it was evidently an unlucky day. On the opposite side of the channel to that we were on, the coral reefs and shoals would prevent the Hollanders following us: it was determined at all risks to get there in spite of the schooner. With the first of the land-wind in the evening we set sail before it and steered across for Bencool. The schooner placed herself in our way like a clever sailor, so as to turn us back; but we were determined to push on, take her fire, and run all risks.

It was a sight to see us meeting one another; but we were desperate: we had killed plenty of Dutchmen; it was their turn now. I was in the second prahu, and well it was so, for, when the headmost one got close to the schooner, the Dutchman fired all his guns into her, and knocked her at once into a wrecked condition. We gave one cheer, fired our guns and then pushed on for our lives. 'Ah! sir, it was a dark night indeed for us. Three prahus in all were sunk and the whole force dispersed.'

To add to our misfortunes a strong gale sprang up. We were obliged to carry canvass; our prahu leaked from shot-holes; the sea continually broke into her; we dared not run into the coral reefs on such a night, and bore up for the Straits of Malacca. The wounded writhed and shrieked in their agony, and we had to pump, we fighting men, and bale like black fellows [Caffre or negro slaves]! By two in the morning we were all worn out. I felt indifferent whether I was drowned or not, and many threw down their buckets and sat down to die. The wind increased and, at last, as if to put us out of our misery, just such a squall as this came down upon us. I saw it was folly contending against our fate, and followed the general example. 'God is great!' we exclaimed, but the Rajah of Johore came and reproved us. 'Work until daylight,' he said, 'and I will ensure your safety. We pointed at the black storm which was approaching. 'Is that what you fear?' he replied, and going below he produced just such a wooden spoon and did what you have seen me do and I tell you, my captain, as I would if the 'Company Sahib' stood before me, that the storm was nothing, and that we had a dead calm one hour afterwards: and were saved. God is great and Mahomet is his prophet! — but there is no charm like the Johore one for killing the wind!'

N.B.—The charm was worked as follows (see p. 68):—"Hand here the rice-spoon! shouted Jadee, looking as solemn as a Quaker or a haggi [Hajji]. This rice-spoon, by the way, was the only one in the vessel; it was made of wood and used for stirring the rice whilst cooking over the fire; its value to us probably invested it with a certain degree of sanctity. The spoon was brought and I tried to look as solemn as Jadee, who calling to his aid the
sanctimonious Alee ['Ali], placed the spoon upon the deck between him and the wind, and the pair of true believers repeated some verses over it—bound themselves by a vow to sacrifice several game-cocks upon a favourable occasion, and then the precious spoon was stuck through the lanyards of the main-rigging, with the handle to leeward. I think I should have died from the effects of suppressed mirth had not the fury of the squall and the quantity of water thrown on board of us given me enough to do to look after the safety of the craft. Jadee, however, sat quietly watching and waiting for the effect of his incantation. At last down came the rain, not in drops but in bucketfuls, and as usual, the wind fell entirely."

[Captain Sherard Osborn, [Quedah, p. 69.]

XXIV.

CRUELTY OF ARAB PIRATES, 1819.

The pirates mentioned in the following account were known as Joasmees (Juhaami, Juasmi) and were early Arab settlers from Nejd on the 'Omán Coast of the western side of the entrance to the Persian Gulf, opposite Ormuz, where they eventually assumed the chief position among a number of Arab tribes. They appear to have started plundering vessels of the weaker tribes about 1765 and became pirates as regards native ships. In 1797 they first attacked and captured a British war vessel, the Snow Bassin, for which they were punished by the Cruiser Viper in 1798. After this they treated the British flag with respect until 1804, when they came under the influence of the Wāhhabīs. In the next year they captured the merchant ships Shannon and Trimmer, and attacked the Cruiser Mornington, behaving with great cruelty to all captives. Their extraordinarily cruel treatment of European and other prisoners, including Muhammedans, was no doubt due to Wāhhabī fanaticism. The Joasmees continued to be a scourge in the Persian Gulf and neighbourhood for the next five years, and intermittently to give trouble till about 1853.

"Bombay, December 18th 1819. We learn by accounts, dated Okamandar 64 19th November, that some pirates, whether Joasmees or others is not exactly known, have been committing some horrible outrages on that coast. About three days prior to the date of the accounts, a vessel going from Cutch Mandevie [Mandvi in Kachh] to Bate, [Beyt] in which were about 80 Byragees, 65 men and women, had arrived in sight of Bate, when she was unfortunately fallen in with and boarded by the pirates. The vessel had no merchandise on board, being taken up purposely to carry the pilgrims. The pirates cut off the heads of 40 persons and threw their carcasses into the sea, the remainder, with the exception carried off, they wounded with their spears, some in three or four places. The barbarians then

63 According to Logan's Journal of the Indian Archipelago, IV, 690, the Malays have an idea that they can "call the wind," i.e., compel it to come, by sending the cook aloft as high as he can go with a bowl of rice. He then proceeds to make a great noise and scatters the rice about, repeating the ceremony at intervals until the wind comes. Naturally, the opposite effect would be expected from showing an empty spoon to the wind. I suppose the root idea is that the wind can be "called" by a process similar to that which "calls" birds.

64 Okamandar, in Kâthiâwâr, Bombay Presidency.

65 Bairdji, a sect of Hindu religious mendicants.—Ed.
took away the sail and, having driven a hole through the bottom of the vessel, quitted her, in the hopes that she would sink and drown the poor wounded creatures left on board. These latter, however, after the departure of the pirates, which was about dusk in the evening, contrived to prevent the vessel filling. Tying together their few remaining clothes they formed a kind of sail and in that way reached Bate. Every assistance was afforded them by the Company’s officer at that station in binding up their wounds and supplying them with food; six had notwithstanding died, and it was not expected that more than ten would eventually recover.

At the date of our advices there were then six pirate vessels within 2 miles of the shore, one of the Honourable Company’s cruisers was also in sight outside of them, but the shallows and shoals on the coast would preclude her being able to come near them, nor was there any force on shore sufficiently disposable or provided with light artillery to prevent these plunderers from landing at different places on the coast and sacking and pillaging the neighbouring country. There were reports received from the coast of Mekran, which were confirmed by the persons, who had been fortunate enough to escape out of the pirates’ hands, that they intended to attack the temple of Dwarka, where they expected to find great plunder.”

[Calcutta Journal, 12 January 1820.]

(To be continued.)

THE HISTORY OF THE NIZĀM SHAHI KINGS OF AHMADNAGAR.

BY LIEUT.-COLONEL T. W. HAIG, C.S.I., C.M.G.

(Continued from p. 75.)

V.—AN ACCOUNT OF THE EXPEDITION OF THE PRINCE, UNDERTAKEN IN ORDER TO ASSIST THE KING, AND OF THE PRINCE’S WARFARE WITH THE ENEMIES OF THE EVERLASTING STATE.19

While these affairs were in progress, a number of the amirs of the Dakani, being inclined to rebellion against the king of the earth, collected a large army and marched on Bidar with the object of stirring up strife, of which circumstance some mention has already been made. The king of the world at once wrote a farmān detailing the seditiousness and faithlessness of the amirs, and sent it with speed to the prince, whom he summoned to the capital. As soon as the prince had read the farmān he turned his attention to his army, and, having assembled it, set forth for Bidar.

When the prince’s army neared Bidar, the amirs and officers of state went forth to welcome him and attained the honour of kissing his feet. Thence the prince hastened at

19 The whole of this chapter is a perversion of historical facts. Ahmad visited the capital to support his father the regent, who was attempting to crush the foreign amirs, headed by Yūsuf ‘Adil Khān of Bijāpūr. Active hostilities began by a massacre of some of the Turkish troops. Fighting then began between the troops of Yūsuf ‘Adil Khān and those of Ahmad and lasted for twenty days, in the course of which three or four thousand men were slain. The ‘ulamā at length made peace between the factions. Yūsuf returned to Bijāpūr and Ahmad to Juujur but the Dakani faction retained all power in the capital and Malik Naib and Fatḥullāh ‘Imād-ud-Mulk of Berar were regent and prime minister for the next three years.
once to court and humbly saluted the king, presenting to him a suitable *jābākhish* of rich clothes and merchandise, horses and elephants, and receiving in return many marks of royal affection and favour. The king then complained to the prince of the contumacy of his enemies and took counsel with him regarding the suppression of the rebellion. The prince then bade the king take heart, for that he would exterminate the rebels. The king then thanked the prince and prayed to God for his success.

When the rebellious amīrs with their troops neared the capital the king went forth with the prince, Majlis-i-Ā’la, Mānsāb-i-Mu’alla, Malik Nāib, and the amīrs and officers of state from the capital, and the royal forces were drawn up over against the rebel army. A fierce fight ensued, but since the disloyal amīrs were treading the path of rebellion, they were unable to attain their object. The prince displayed the utmost valour in the battle, and sent many, with his own hand, to hell. The rebels fought with great courage, but were at length compelled to give way, and fled. The victorious prince pursued them for several leagues, and put many to the sword, capturing all their property and effects, their horses, and their arms. He then returned and respectfully saluted the king, who embraced him affectionately, bestowed on him the high title of Ashraf-i-Humâyûn, Nizām-ul-Mulk Bagri, and placed on his body a royal robe of honour, and on his head a royal crown, and the prince of the age, Ashraf-i-Humâyûn, Nizām-ul-Mulk Bahri then obtained leave from the king to depart, and set out for his capital. On his arrival there he busied himself in the management of his kingdom and the administration of justice.

On several occasions after this, Sultan Maḥmūd Bahmani was confronted by difficulties and dangers, and always appealed to the prince for help. Sometimes the prince answered the appeal in person, and after rendering such assistance as was required, returned to his capital, and on other occasions he sent to the king’s assistance, with his army, his amīrs, such as Zārif-ul-Mulk, the Afghan, and others as will be clear from what has gone before.

It has already been mentioned that most of the amīrs of the Dakkan were constantly at strife and variance with the prince and with Malik Nāib, his tutor and foster-father, to whom was entrusted the regency at the capital of Bidar, and were speaking against them to the king, but, since the prince was under God’s special protection, their plots came to nought, and the prince prospered ever the more and more, so that the despair and fear of his enemies increased, until, in A.H. 888 (A.D. 1483),20 when the king with his army had marched

---

20 This date is wrong by three years. Malik Nāib, Aḥmad’s father, was put to death in 1486. The amīrs generally were disgusted with his arrogance and complained against him to the king, who was chafing under the restraint to which he was subjected. The king requested Qāsim Barid-ul-Mamālīk, Dastār Dīnār to rid him of Malik Nāib, and the latter, becoming aware of the design against his life, fled from Warangal, where the court then was, to the capital, Bidar, and summoned his son Aḥmad from Jānpūr to his assistance. The king and the amīrs followed Malik Nāib towards Bidar, and Malik Nāib, not being strong enough to meet the royal army in the field, prepared to flee to Jumār, carrying with him the contents of the royal treasury. Dilpasand Kān, governor of Bidar, whom Sayyid ‘Alī calls Pasand Kān, pretended to be Malik Nāib’s partisan, but deceitfully dissuaded him from fleeing and sent a secret message to the king saying that he was detaining Malik Nāib in Bidar and awaited instructions regarding him. The king replied that if Dilpasand Kān was a loyal subject he would send him Malik Nāib’s head. Dilpasand Kān, at a private interview with Malik Nāib, strangled him, cut off his head and sent it to the king. (J. ii, 707, 708.)
against the infidels of Telingâna, the prince not being with him, the ill-disposed, finding Malik Nâib deprived of the prince's support and assistance, took advantage to fasten some accusation on that wise minister, and to accuse him to the king of base acts and wicked deeds, and urged the king to issue orders for his execution. The king harkened to their counsel and issued orders for the minister's death—orders which led not only to remorse, but to the ruin of his kingdom.

When Malik Nâib became aware of the plots of his enemies, he fled from the king's camp, but since fate had decreed his martyrdom, the screen of negligence was placed before his eyes, so that he did not take the way of safety, which lay in the direction of the prince's protection, but, reposing confidence in Pasand Khân, governor of the city of Bidar, who was one of his own protégés, he went to Bidar, and the wretch, Pasand Khân, whose temerity in committing an atrocious act has earned for him the title of karâm bi'dâr, made him a martyr and sent his head to the king.

When the news of Malik Nâib's martyrdom reached Ashraf-i-Humâyûn, Sulţân Aḥmad Bahri, he mourned for him and wept bitterly, and all his amîrs and all his army participated in his grief.

After this calamity the prince displayed greater anxiety than ever regarding the plots of his enemies, and paid more attention than formerly to collecting troops, and to preparing for revenge on his enemies.

Some say that the prince, after the murder of Malik Nâib, left the king's camp with 1,500 horse, all valiant soldiers, and went to Junnâr and strengthened the fortress of Shivner, which had hitherto not been a fortress of any great strength, and increased his forces until he had a most numerous and powerful army.

When the news of the prince's assembling of his forces reached his enemies and opponents, they took counsel together as to the best means of resisting him before he should become too powerful to be resisted, and devoted all their attention to his overthrow. They continued to slander him to the king more than ever, now saying that he had been alarmed for his own safety on hearing of Malik Nâib's death, and that he had withdrawn from his allegiance, and was collecting such an army as would enable him to declare himself independent, and that it was necessary to overpower and disarm him before matters became worse. As has already been mentioned, Sulţân Maḥmûd Shâh Bahmani had, in the later days of his reign, very little power in the state, and was a king only in name, the amîrs managing all public business, the most powerful of them for the time being making himself regent until he was overcome by a combination of the others, and another was set up in his place. Thus the king, as he was too weak to manage any important affair, was induced to issue a fârmân to the prince's enemies, giving them authority to take such action as they might deem best in the interests of the state. Accordingly, these lovers of strife agreed among themselves that a force should be sent, under the command of some of the boldest officers of the royal army, against Sulţân Aḥmad, in order that his power might be broken, and his well-wishers and faithful servants might be dispersed. They therefore selected Shâiḫ Muʿaddi, the Arab, entitled Nâdir-uz-Zamân, who was distinguished above all the officers of the royal army for his valour and intrepidity, to take command of the army to be sent against Sulţân Aḥmad Nišâm-ul-Mulk Bahri, and he accepted that arduous task, while those who appointed them plumed themselves on the courage and
valour of the fool, believing that a lamp could remain alight in the storm-wind, and that a crafty fox would prevail against the teeth and claws of a raging tiger. 21

When the contemptible and impertinent Shaikh undertook the expedition against the prince, he was given the command of 1,200 fierce Arab lancers, who were his own troops, and, taking the road to prison, encamped at Parner. 22 The prince was informed by his spies, of the designs of his enemies, and of the appointment of Nādir-uz-Zamān with his Arabs as an expeditionary force. He assembled his forces, and, opening the doors of his treasures, distributed both to his foot, and to his horse, liberal largesse, gold, horses, and arms, and soon had such an army as would have astonished the god of war. The army having assembled, the prince marched from Jumna to Nakot, so that a distance of not more than four leagues intervened between his army and that of the enemy.

VII.—An Account of the Prince’s Expedition against ‘Ali-Tālis Dīhi, and of that Ill-doer’s Reward for his Errors.

In the midst of these affairs the prince’s informers reported that ‘Ali Tālis Dīhi, 23 who was the governor of the fort of Chākkan 24 and its dependencies, and of whose enmity to the prince some mention has already been made, had taken advantage of the prince’s being occupied with his enemies, to assemble his troops, and was impudently marching to the support of Shaikh Mu‘addī. The prince determined to march first against ‘Ali Tālis and crush him before he could join Shaikh Mu‘addī, and it so happened that the arrow of his design hit its mark, and that his well-conceived plan led to the complete defeat of both armies.

The prince sent for Masnad-i-‘Ali Malik Naṣīr-ul-Mulk Gujarātī, 25 who was at that time vakil and pished, and took counsel with him. Masnad-i-‘Ali highly approved of the prince’s plan, and it was decided that Naṣīr-ul-Mulk Masnad-i-‘Ali should remain where he was, with the main body of the army, and that the prince should take a picked body of men by forced marches against Zain-ud-din ‘Ali Tālis, should fall upon him, crush his army, and put him to death before he could effect a junction with Shaikh Mu‘addī, and should then return to the main body of his army and deal with the Shaikh. The Prince, having chosen the force which was to accompany him, impressed upon Masnad-i-‘Ali the necessity

21 It was at the instigation of Qāsim Barī, who had succeeded Malik Nābī as maire du palais, that this expedition was sent against Aḥmad. Qāsim first tried to enlist the aid of Yūsuf ‘Adī Khān of Bijāpūr, who had been the bitter enemy of Malik Nābī, but it was the system rather than its representative that Yūsuf opposed and he transferred to Qāsim all the ill-will he had formerly borne to Malik Nābī. He not only refused to act against Aḥmad but sent him a message of condolence on the death of his father, encouraged him to resist Qāsim and withdraw a force of 10,000 horse which he had sent to Indāpūr to support Zain-ud-din ‘Ali Tālis, governor of Chākkan, who resisted Aḥmad’s authority. It was on the failure of the negotiations with Yūsuf that Qāsim dispatched the expedition under Shaikh Mu‘addī, whose title is given by Fīrūzta as Bahādur-uz-Zamān. (F. ii., 182.)

22 About 23 miles west by south of Ahmadnagar.

24 Situated in 18° 45’ N. and 73° 32’ E.

25 According to Fīrūzta, Aḥmad had appointed Zarīl-ul-Mulk the Afghān his amir-ul-unward and Naṣīr-ul-Mulk Gujarātī his amir-i-jumla. The appointment of officers with these titles was tantamount to a declaration of independence.
of remaining where he was and of refraining from attacking the enemy. Masnad-i-'Ali promised obedience and declared that he would avoid any conflict with the enemy until the prince returned. The prince, with his chosen force, then set out at night, by forced marches, for the fortress of Chákan.  

'Ali Tálish Díhi was still making his preparations for war and collecting his troops when the prince's force suddenly fell upon him. 'Ali Tálish Díhi came forth to meet them as best he could, and fought bravely against them, but to no avail, for he and his troops, after fighting for some time, could withstand the prince's force no longer, and 'Ali Tálish Díhi was slain and his troops were put to flight. The victorious king put a large number of fugitives to the sword and much spoil fell into the hands of the victors, and was presented, together with the head of 'Ali Tálish Díhi, to the prince. The victorious king, after slaying and plundering his enemies, turned towards Masnad-i-'Ali,  

who having heard of his master's victory, was emboldened to attack Shaikh Mu'addi and his followers. As this action was contrary to the will of the king, the usually victorious troops were defeated and dispersed, and Nasir-ul-Mulk was compelled to retire on his former position, and halt there. The king then arrived with his victorious troops, and was much annoyed on hearing of Masnad-i-'Ali's untimely action and of the presumption of the enemy. He severely rebuked Nasir-ul-Mulk, and told him that disobedience to the commands of one's master could bear no other fruit than mishap and repentance. Masnad-i-'Ali humbly asked for pardon. The king graciously forgave him, and said that with God's help he would crush the rat-eating Arabs.

Shaikh Mu'addi had been rendered over-confident by his temporary success and was devoting himself to pleasure, with no thought of fighting, and the king Ahmad purposely delayed attacking him for a few days, in order that he might grow still more careless; and then marched one night at midnight to attack him. He reached the enemy towards morning and found that they were still sleeping the sleep of negligence. He therefore fell upon him. He took them completely by surprise, and though the Arabs, when they woke, fought bravely, it was of no avail, and Shaikh Mu'addi and nearly all his followers were killed. The few survivors fled, and with much difficulty reached Bidad, while all the camp, the baggage, the horses, and elephants fell into Ahmad's hands.

The victorious king, after thus slaying and plundering his enemies, returned triumphantly to his capital, Jumrār, the inhabitants of which humbly congratulated him on his success.

When the news of the death of Mu'addi and of 'Ali Tálish Díhi, and of the defeat of the army which had been sent against the prince, reached the ears of the king of the world (Ma'búd Shah) and of his amir, great fear fell upon them, and they bitterly repented of their action in sending against so brave and powerful a prince, whose power they had underestimated, a small body of troops. They saw that the prince was growing more powerful

---

20 Firishtá says that Ahmad first sent Zain-ud-Din 'Ali a message proposing a reconciliation to which Zain-ud-Din 'Ali agreed but afterwards changed his mind on hearing of the advance of Shaikh Mu'addi. Ahmad, on learning that Zain-ud-Din 'Ali was awaiting an opportunity of joining the Shaikh, left his army and marched rapidly to Chákan with a small picked force, scaled the walls by night and put Zain-ud-Din 'Ali and the garrison, consisting of 700 armed archers, to the sword.

21 Firishtá says that Nasir-ul-Mulk was successful against a part of Shaikh Mu'addi's force but when he encountered the main body, led by the Shaikh in person, he sustained a crushing defeat and was obliged to retreat and join Zárif-ul-Mulk.
and his followers more numerous every day, while their own army was enfeebled and disheartened. It was decided that the best plan would be to send against the prince a large army of experienced veterans under the command of a cautious but active officer, and that this force should be sent against him before he grew too powerful to be meddled with. Accordingly, most of the amirs and officers who were at the royal court, with eighteen amirs who chose to serve against the prince, were appointed to the army which was to act against the prince. Some say that the first of Sultan Mahmud's amirs to take the field against the prince, was Majlis-i-Rafi 'Yusuf 'Adil Khan, and that a great battle was fought between him and the prince, but in all these wars the prince was victorious. Sultan Mahmud then appointed the eighteen ministers who were always in attendance on him to the army acting against the prince, and 'Ali Talish Dahi came from the fort of Chakan to the assistance of the amirs. The royal army encamped near Wargaoon, and the prince's army was in Wargaoon. Sultan Mahmud's amirs then sent on several of the principal officers of the army with the advanced guard against the prince, and the prince sent Rumi Khan and Chalak Khan to repulse them. These officers overcame the advanced guard of the royal army, slew many, and captured three elephants, which were presented to the prince. The next day the prince marched from Wargaoon and encamped at Kapar, where his spies reported to him that the royal army was drinking morning and evening, and in their pride took no account of the prince's army. The prince accordingly marched at midnight with his army to attack the amirs, and with 'Ali Talish Dahi fell upon them before morning broke. The amirs were captured and stripped to the waist and were then ridden on buffaloes through the prince's army. After that they were let go. The prince highly honoured 'Ali Talish Dahi, and again conferred on him the command of the fortress of Chakan. After a while the prince asked for that fool's daughter in marriage, and 'Ali Talish attempted to put him off with excuses. The prince then led an army against Chakan, captured it, put 'Ali Talish Dahi and his principal officers to death but laid no hands on his daughter, who was in the fort, for 'Ali Talish Dahi when the prince asked her in marriage, had uttered words which changed his inclination to dislike. The prince then levelled the fortress of Chakan to the ground. But God alone knows the truth of the matter.

VIII.—AN ACCOUNT OF THE SECOND EXPEDITION OF THE PRINCE'S ENEMIES AGAINST HIM.

The amirs who elected to fight against the prince (Ahmad), left the capital of Bidar with a large army and marched to the foot of the Meri Ghat. When spies brought the information that they had with them a very large army, the prince, although his views in all contingencies were such that they always proved in the end to be in conformity with what had been decreed by God, summoned Masnad-i-'Ali Malik Nasir-ul-Mulk Gujarati and the officers of his army, and took counsel with them. Some, noted for their bravery.

22 This is a mistake. Yusuf 'Adil Khan did not take the field against Ahmad on this occasion. 'Agamat-ul-Mulk the minister commanded the first force sent against him from Bidar after the defeat of Shaikh Mu'add, but the account here given by Sayyid 'Ali seems to be a confused medley of the records of two or more expeditions.

23 This account, given as an alternative to what has gone before, is incorrect. Zain-ud-din 'Ali did not change sides as described, and he had already been slain. Ahmad certainly did not level the fort of Chakan with the ground, for portions of a structure anterior to the date of the capture of the fort by Ahmad are still standing.
advised the prince to attack the enemy, while others, known for their cowardice, advised another course, but the prince followed the advice of neither. To be drawn unnecessarily into action with an enemy so much more numerous than his own was, he argued, imprudent, while to fly before them would mean disgrace. He therefore determined on a stratagem which would bring disunion between them and throw them into such confusion that they might safely be attacked. The prince then said that his design was to make a forced march on Bidadar, with a picked body, to bring the haram of Malik Naib and his own servants forth from the city, and to carry off the wives and families of the amirs, in order that he might be freed from anxiety regarding the former and might have an opportunity of falling on the latter when they were thrown into confusion by the news of the raid.

The prince therefore marched from Jumnar with his army, and, avoiding the enemy, marched on Bidadar. The enemy, when they heard of his movement, thought that he was flying from them, and gave themselves up to enjoyment, untroubled by any anxiety regarding a battle. The prince, however, pressed on, and in a very few days arrived before Bidadar, and, entering the city by night, before any of his enemies were aware of his movements, gained possession of the children of Malik Naib and his own servants, put them into padis and singhaos, and sent them off to Jumnar under the escort of some trusted troops and eunuchs. He then carried off from Bidadar the families of the amirs who had been sent against him, with the servants and eunuchs who attended them, and sent with them another detachment of his troops, to whom he gave strict injunctions to guard the captives and their honour most carefully, and to attend to all their comforts. The prince followed them with the remainder of his troops, and when all had proceeded one stage from the city the prince had tents pitched for the wives of the amirs and calmed their anxiety. The next day the kotwalis and guards of the city of Bidadar informed the king of the prince’s raid, and of his carrying off the haram of Malik Naib and the wives of the amirs. He accused the amirs, who were at court, of negligence, and sent eighteen of the principal amirs to pursue the prince and recover the wives of the other amirs, nay more, to capture the prince and bring him to court.30

Some of the histories of the prince relate that when the amirs who had been sent against him were defeated, Sultan Mahmud took the field against the prince in person, and marched on Jumnar, with a large army, and that when the prince heard that he had taken the field, he considered that it would not be politic to fight against the king, who was his elder brother, and his father’s heir, and that he left the fortress of Shivner in the hands of one of his trusted officers, and himself marched on Bidadar by way of Daulatabad. When he

30 Sâyyid ‘Ali’s principle apparently is to collect all the conflicting accounts he can find of a campaign and to offer them to his readers either as different accounts of the same campaign, among which they are at liberty to take their choice, or as accounts of different campaigns. What really happened after the defeat of Shaikh Mu‘addi’s force was as follows. Mahmud Shâh, or rather his amir du palais, was much annoyed by the news and sent against the rebel a large force under the minister A‘zam-ul-Mulk, with eighteen other amirs. A‘zam was too weak to meet this force in the field and, eluding it, made a forced march on Bidadar. Having corrupted the guard at one of the gates he entered the city and carried off his own household and the wives and families of the amirs in the manner described by Sâyyid ‘Ali. The amirs dared not attack him now, but sent him a message reproaching him with having warred against women, whereupon he sent his wives and families back to them, and retired to Parmdah.

Mahmud Shâh bitterly reproached the amirs with having permitted the rebel to raid the capital and they, in reply, laid all the blame on A‘zam-ul-Mulk’s incompetence. ‘A‘zam-ul-Mulk was recalled to the capital and Jehangir Khan from Timshâna was appointed to the command of the army and sent to join it at Bîr.
reached Bidar he collected his own haram, which had been left in the capital until then, Malik Naib’s haram, and the harams of those amirs who were in his service, and returned by another way.

When the king reached the neighbourhood of Jumna and learnt of the prince’s flight he set his heart on capturing the fortress of Shivner, and laid siege to it. The kotwal of the fort prepared to defend it, and removed from his mind any thought that he was bound by ties of duty to the king. The king sent a message to the kotwal to say that all forts and districts were in his hands and that the young prince himself was no more than one of his servants. He said that the kotwal was committing an error in refusing to submit to him. The kotwal replied that the prince had entrusted the fort to him, and that if he were false to the prince and surrendered the fort to the king, the latter could thenceforth have no confidence in him.

In the meantime the news of the prince’s raid on Bidar reached the king’s army, and the king was perturbed by the thought that the prince might have seized the capital and placed him in great straits. He set out for Bidar by the road by which the prince was returning, but the prince, turning aside, avoided him. The king then issued a farman summoning the prince to court, and attempted to satisfy him by means of a safe conduct, but the prince sought refuge in plausible excuses and avoided attendance on the king. After this the king molested the prince no more till the day of his death.

It is clear that this story is more probable than the other, for it is more credible that it was in the king’s absence, rather than when he was in the capital, that the prince ventured to go to Bidar and carry off the haram.31

(To be continued.)

ANDAMANESE IN PENANG, 1819.

BY SIR R. C. TEMPLE.

Prefatory Note.

The two following accounts of the same event, namely a visit to Penang of two Andamanese captured by a Chinese junk in 1819, are taken respectively from the Prince of Wales Island Gazette of the 3rd April 1819 and from the May 1867 number of a now extinct journal called Indian Society, published in Calcutta.

Both accounts purport to relate the circumstances of the capture and the visit, embellished by remarks from Hamilton’s article on the Andamans in his East India Gazetteer, published in 1815, his information in its turn being based on Colebrooke’s paper on the Andaman Islands, No. 27 of vol. IV, Asiatic Researches, ed. 1799 and on Symes’ Embassy to Ava, published in 1800. The later version of the story has also further details of the Andamanese taken from Mouat’s Adventures and Researches among the Andaman Islanders, published in 1863.

The first account was written by John Anderson, Secretary to Government, Prince of Wales Island, and the second by his son, Captain T. C. Anderson, Bengal Staff Corps.

The footnotes to the accounts will show where they are in error.

31 In spite of Sayid ‘Ali’s estimate of its probability, this story is incorrect, and Mahmud Shah was in the capital when Ahmad made his daring raid.
I.

On Thursday morning were landed on the beach two Negroes\(^1\) from the Andaman Islands, captured by the crew of a China Junk. Their appearance excited much interest and curiosity as a race of people generally considered as Cannibals.\(^3\) The following account of them has been obligingly communicated to us by a Gentleman who has very humanely taken them under his care.\(^3\)

“\(\text{A Chinese Junk} \) manned partly by Chinese and partly by Burmahs, proceeded to the Andaman Islands to collect Becho de Mar \(\text{[bèche de mer]}\), and lying about 2 Miles from the shore, they observed about 8 or 10 of the Savages approaching the Junk, wading through the water. Upon coming within a short distance of the vessel they discharged several showers of arrows, which severely wounded four of the Chinese. The Burmahs gave immediate pursuit in their boat, and after much difficulty took two of the Savages prisoners.

“During the chase they were frequently observed to dive and to make their appearance at a considerable distance to elude their pursuers. Several of the arrows were picked up by the Chinese, which are now in my possession; they are made of Rattans with a piece of hard wood for a point, and an iron nail or fish bone fastened to the extremity in such a manner as to make it difficult to extract, if it enters the body.\(^4\)

“These Negroes are extremely diminutive in stature, though apparently well formed and their limbs and arms are uncommonly small; one of them is 4 feet 6 inches, the other 4 feet 7 inches high, and each weighing 76 lbs. Avoirdupois. They have large paunches and though so small, are in good condition. One is an elderly man of ferocious aspect, the other a boy of about 17, of a good expression of countenance. They appear dull and heavy, extremely averse to speaking; when conversing, which they only do when left alone and imagine they are unobserved, they make a noise resembling much the cackling of Turkeys.\(^5\) They are of a jet black colour and their skin has an extraordinary shining appearance, and their bodies are tattooed all over; of a most voracious appetite, and crack the bones of fowls with their teeth with the greatest facility. Their manner of ascending a Cocoanut Tree is remarkable, running up like a monkey, and descending with astonishing velocity.”

As some account of the inhabitants of the Andamans may not be unacceptable to our readers, we have great pleasure in submitting the following extract from the \textit{East India Gazetteer}, which, it will be observed, corresponds materially with the description given of the two Negroes abovementioned.\(^6\)

"The population of the great Andaman and all its dependencies does not exceed 2,000 or 2,500 souls: these are dispersed in small societies along the coast, or on the lesser islands within the harbour, never penetrating deeper into the interior than the skirts of the forest.

---

\(^1\) The Andamanese are not Negroes but Negritos.

\(^2\) They are not and never have been cannibals. See Temple, \textit{Census of India}, 1901, Vol. III. \textit{Andaman and Nicobar Islands}, pp. 48 and 44, where it is explained how the error arose and also why the Andamanese first met with by the English were hostile to all strangers.

\(^3\) That is, Mr. John Anderson himself.

\(^5\) This is a gross misrepresentation. Andamanese on growing old are apt to become dull, but are anything but unintelligent while young and in the vigour of life. Their languages are characteristic of savages, but show a long history of intelligent development.

\(^6\) The rest of the description is taken from Hamilton, \textit{East India Gazetteer}, vol. I (ed. 1815), \textit{p.v.}

Andamans.
Their sole occupation seems to be that of climbing rocks or roving along the margin of the sea in quest of a precarious meal of fish, which, during the tempestuous season, they often seek in vain.  

"It is an object of much curiosity to discover the origin of a race of people so widely differing, not only from all the inhabitants of the neighbouring continent, but also from those of the Nicobar Islands; however, the inquiries of travellers have produced no satisfactory conclusion.  

In stature the Andamaners seldom exceed 5 feet; their limbs are disproportionately slender; their bellies protuberant, with high shoulders and large heads; and they appear to be a degenerate race of negroes, with woolly hair, flat noses and thick lips; their eyes are small and red, their skin of a deep sooty black, while their countenances exhibit the extreme of wretchedness, a horrid mixture of famine and ferocity. They go quite naked, and are insensible to any shame from exposure.  

"The few implements they use are of the rudest texture. Their principal weapon is a bow, from 4 to 6 feet long; the string made of the fibres of a tree or a slip of bamboo, with arrows of reed, headed with fish bone or wood hardened in the fire. Besides this, they carry a spear of heavy wood, sharp pointed, and a shield made of bark. They shoot and spear fish with great dexterity, and are said also to use a small hand net made of the filaments of bark. Having kindled a fire, they throw the fish on the coals and devour it half broiled.  

"Their habitations display little more ingenuity than the dens of wild beasts. Four sticks fixed in the ground are bound at top and fastened transversely to others to which branches of trees are suspended: an opening just large enough to admit of entrance is left on one side, and their bed is composed of leaves. Being much incommoded with insects, their first occupation of a morning is to plaster their bodies all over with mud, which hardening in the sun, forms an impenetrable armour. Their woolly heads they paint with ochre and water, and when thus completely dressed, a more hideous appearance is not to be found in the human form. Their salutation is performed by lifting up one leg, and smacking with the hand the lower part of the thigh.  

"Their canoes are hollowed out of the trunks of trees by fire and instruments of stone, having no iron in use among them but such as they accidentally procure from Europeans or from vessels wrecked on their coast. The men are cunning and revengeful and have

7 This is a mistake. They are found all over the islands, obtaining ample food all the year round from fish, fruit, turtle and pigs.  
8 It is now known that they are aboriginal Negritos with probable ethnological connections still existing in the Malay Peninsula and Archipelago, at any rate. For the reason of the long isolation as a race, see Census of India, 1901, vol. III. Andaman and Nicobar Is., p. 51.  
9 They are not negroes at all, nor are they a degenerate race.  
10 For a correct physical description of the Andamanese, see Census of India, op. cit., p. 56; Man, Aboriginal Inhabitants of the Andaman Islands, pp. 4—11.  
11 For Andamanese bows, arrows, spears and manufactures, see Man, op. cit., pp. 135—187. It is entirely an error to suppose that their implements are of the "rudest texture."  
12 The Andamanese cook all their food, except fruit, on wood fires.  
13 For Andaman dwellings, plastering the body with ochre and forms of salutation, see Man, op. cit., pp. 37—48, 184, 79—81.  
14 For canoes, see Man, op. cit., pp. 149-150.
a great hatred to strangers; they have never made any attempt to cultivate the land, but subsist on what they can pick up or kill.\(^{15}\)

"The language of the Andamaners has not been discovered to possess the slightest affinity to any that is spoken in India, or among the other islands.\(^{16}\)

"They appear to express an adoration to the sun, the genii of the woods, waters, and mountains. In storms they apprehend the influence of a malignant being, and deprecate his wrath by chanting wild choruses. Of a future it is not known they have any idea, which possibly arises from our imperfect means of discovering their opinion."\(^{17}\)

II.

A Chinese Junk manned partly by Chinese and partly by Burmans, proceeded to the Andaman Islands to collect Bèch de mer, sea-slugs (a great treat in China) and somewhat resembling a black snail, which the Chinese dry and eat, as well as edible birds’ nests which abound there. The crew of the junk which was lying about two miles from the shore observed about eight or ten of the savages approaching the vessel and wading through the water. Upon coming within a short distance of the vessel, they discharged several showers of arrows, which severely wounded four of the Chinese. I have seen their arrows and can well fancy the wounds caused by them would be of a severe nature. Dr. Mouat in his work alludes to them. The Burmans gave immediate pursuit in their boat, and after much difficulty captured two of the savages. These were brought to Penang by the Chinese.

During the chase they were frequently observed to dive and to make their appearance at a considerable distance to elude their pursuers. Several of the arrows were picked up and found to be made of rattans with a piece of hard wood for a point, and a nail or fish bone fastened to the extremity in such a manner as to render the arrow difficult to extract, if it once entered the body.

These savages were extremely diminutive in stature, though apparently well formed, and their limbs and arms were uncommonly small. One of the savages was 4 feet 6 inches, the other 4 feet 7 inches in height, and each weighed about 76 lbs. Avoirdupois. They had large paunches, and though they were so small, were in good condition. One was an elderly man of ferocious aspect, who afterwards died of cholera on board ship on the way to Calcutta, the other was a boy of about seventeen years of age and of a good expression of countenance. He subsequently died of delirium tremens as he had contracted the bad

\(^{15}\) The mental limitations of the Andamanese are thus described in the *Census of India*, op. cit., p. 59:—"In childhood the Andamanese are possessed of a bright intelligence, which, however, soon reaches its climax, and the adult may be compared in this respect with the civilised child of ten or twelve. He has never had any sort of agriculture nor, until the English taught him the use of dogs, did he ever domesticate any kind of animal or bird, nor did he teach himself to turn turtle or to use hook and line in fishing. He cannot count and all his ideas are hazy, inaccurate and ill-defined. He has never developed unaided any idea of drawing or making a tally or record for any purpose, but he readily understands a sketch or plan when shown to him. He soon becomes mentally tired and is apt to break down physically under mental training."

\(^{16}\) This is quite true as regards the known modern languages of India and the East, except perhaps as regards some of the terms in "Negrito" languages of the Far East.

\(^{17}\) This statement is partly incorrect. For an account of the religion, superstitions, mythology, and initiatory ceremonies of the Andamanese, see *Census of India*, op. cit., pp. 62—64.
habit of drinking. Both of them at first appeared dull and heavy and extremely averse to speaking. When conversing, however, which they only did when left alone and imagined they were unobserved, they made a noise resembling the cackling of turkeys. They were invariably made to sleep in an outhouse lest they should make an attempt on the children's lives, as having been supposed to belong to a cannibal race, they were looked upon with some dread.

On one occasion the old man made his appearance without any hair on his head, and on an attempt being made to find out how he had contrived to do so, it was found that he had scraped off the hair with a piece of broken plate. He had a bad habit of attacking the fowls with his bow and arrow, and on one occasion attempted the life of the domestic goat. The younger lad, who was christened Tom, was more docile, and took an interest in the family. He acquired a knowledge of Hindoostance and Malay. These two natives appear to have been smaller than those captured at Port Blair during Colonel Haughton's time, one of whom was 5 feet 4 inches in height.

My father in a work published by, and under the authority of the Penang Government (and not to be obtained), entitled "Considerations relative to the Malayan Peninsula," says in a paper on a tribe called "Semangs": "There is little doubt that the degenerate inhabitants of the Andaman Islands, in the Bay of Bengal, are descended from the same parent stock as the Semangs, and it is extraordinary that they have preserved the same uniformity of manners and habits through such a series of ages." And again he says of a Semang whom he saw: "This man was at the time of his visit to Penang, when I saw him, about 30 years of age, four feet nine inches in height. His hair was woolly and tufted, his colour a glossy jet black, his lips were thick, his nose flat, and belly very protuberant, resembling exactly two natives of the Andaman Islands, who were brought to Prince of Wales Island in the year 1819."

The two specimens alluded to were of a jet black colour and their skin had an extraordinary shining appearance. They had a most voracious appetite, and cracked the bones of fowls with their teeth with the greatest facility. Their manner of ascending a cocoanut tree was remarkable, running up like monkeys and descending with astonishing velocity.

The population of the great Andaman is very small and is dispersed in small societies along the coast. They never penetrate deep into the interior and their sole occupation seems to be that of climbing rocks or roving along the margin of the sea in quest of a precarious meal of fish, which, during the tempestuous seasons, they often seek in vain.

---

18 Andamanese, like other savages, will drink to excess on opportunity arising. Taking unaccustomed food or drink to excess is common to all wild animals. The writer of these notes, at one time the owner of an extensive aviary, in which food appropriate to many kinds of birds was placed daily, has frequently seen birds gorge themselves to death on unaccustomed food meant for other species, while deserting that to which they were accustomed from birth.

19 See note 2 above. The fear was entirely unfounded.

20 For the shaving methods of the Andamanese, see Man. op. cit, pp.9-10. 114-115. The present writer has undergone the process as an experiment, the razor used being chips from a glass bottle. It is a rough but safe method of shaving.

21 "My father" was Mr. John Anderson of the first account, and this paragraph shows acute observation. For the agreement and physical differences between Samangs and Andamanese, see Census of India, op. cit, p.67: the present writer has been unable to discover any real connection between the languages.
It is an object of much curiosity to discover the origin of a race of people so widely differing, not only from all the inhabitants of the neighbouring continent, but also from those of the Nicobar Islands. However, up to the present time, no satisfactory conclusion has been arrived at. In stature the Andamanese seldom exceed 5 feet; their limbs are disproportionately slender; their bellies protuberant, with high shoulders and large heads; and they appear to be a degenerate race of negroes, with woolly hair, flat noses and thick lips; their eyes are small and red, their skin of a sooty black, while their countenances exhibit symptoms of famine and ferocity. They go quite naked, and are insensible to any shame from exposure.

The few implements they use are of the rudest description. Their principal weapon being a bow from 4 to 5 feet long, the string being made of the fibres of trees. Their arrows are of wood, with a nail or fish bone for the tip, and they are very expert in using them. Some of them are armed with wooden spears. They shoot and spear fish with great dexterity. Having kindled a fire, they throw the fish on the coals and devour it half broiled.\(^{22}\)

Their habitations display etc.

[The remainder of the account is identical with the preceding.]

BOOK-NOTICE.

We, of the now old Indian Antiquary, always welcome any new effort on the part of native scholars in this Country to look into their past and learn what they can about it. It is clear that they are in a better position to do so than are Europeans, however learned and enthusiastic the latter may be. It is therefore with much pleasure that we watch the growth of so many new Societies and Journals all over India, from the Panjab and Bihar to Madras and Mysore, and elsewhere. Burma too has now a flourishing Burma Research Society. They all unearth something of value to History and Ethnology.

The Journal under notice is eclectic in its articles, many being of the ‘magazine’ order and some almost purely literary. On the other hand, it admits some that are true efforts of Research—original articles on original documents. For instance, it is good to see a report on an “Unpublished Inscription of Kumâra Tailapa” and a translation of “Tha Vyãkarã Mahãbhãshya.” There is also, we notice, a novel and interesting suggestion as to the true derivation of “Kapalikas” and “Maisur” and a notice of “The Chronology of the later Gângas.” There is further a suggestive article on “Prakrit and the Dravidian Languages,” all of which and the like are true Research.

Two other articles have attracted the special attention of the present writer. In a note on “The Interrelation of Kannada and TehuGu” are given a number of words meant to show a very ancient relation of these tongues to the languages of Northern Europe by borrowing or otherwise. The article is not very convincing in itself, but it does open up a more interesting speculation. Was there a pre-historic and very ancient immigration of the variety of mankind now called Dravidian from the West into India through Persia in pre-Persian days? Elsewhere, for entirely different reasons than those of the author of this article, the present writer has suggested that there was. Anyhow, the subject is worth pursuing historically, philologically and ethnologically. Let the author seek relationship in the languages of the earliest known inhabitants of the delta of the Tigris and Euphrates and the Coast Eastwards to India—Elamite, Akkadian, Sumerian and the like, through Brahmi (Bahuclietan) to India. There is plenty of evidence of “Dravidian” terms being known to the oldest Sanskrit grammarians with which to carry on the investigation.

The other article is an “Historical Basis for the Kanyakula Purana of the Komatia.” Purânas of this kind are always worth sifting for chance light they may throw on genuine history. They are seldom altogether legendary.

XXV.

A MALAY PRAHU FLIES THE BLACK FLAG, 1820.

I have said that I have found records of only two occasions on which the Black flag was used in Eastern waters. The first was the raid of the pirate Seager or England in 1720, the second was the fight given below between the brig *Pallas* with twenty Malay *prahus*, the leading one of which carried such a flag. I strongly suspect that there must have been a European leader in the Malay fleet, though the Captain of the *Pallas* apparently did not identify such a man. This supposition is strengthened by the fact that whereas the fight with the *Pallas* took place on the 2nd August 1820, the following paragraph appears in the * Asiatic Journal* for April 1820:

"Dutch Pirate. A Dutch pirate has made his appearance in the Eastern Seas. A man named Thunderwoold, formerly a resident at one of the outposts in Java, whose property had been confiscated for some offence against the Dutch Government, has armed two brigs, one mounting 22 guns, and with 6 praus, is committing great depredations in those seas. It is stated that he has attacked and sunk 2 Dutch cruisers and is otherwise annoying their trade materially. A Dutch 74 and a frigate are gone in quest of this marauder, who, it is reported, is now cruising about the straits of Singapore. We do not, however, learn that he has molested any vessel under British colours."

A noticeable point in regard to the fight with the *Pallas* is the absurd smallness of the cruisers, manned largely by lascars, which were sent by the Indian Government to suppress piracy in the Malay Archipelago. The same is true of the Dutch cruisers, but this fact does not wholly account for the long endurance of piracy in these seas. The habit was engrained in the very nature of the islanders and only constant watchfulness and swift punishment could avail to suppress it. The introduction of steam vessels made these possible, and it is almost a truism to say that it was Steam which destroyed Piracy. Little incidents, occurring right up to the present time, show that the spirit and will still exist.

*Defeat of Malay Pirates.*

"We have great pleasure in bringing to the notice of the Public the following account of an affair which does honour to the spirit with which it was maintained, the defeat of 20 Malay pirate prows off Coba on the island of Banca [Koba, on the East Coast], by the little brig *Pallas* of this port [Calcutta] of 150 tons.

Her crew consisted of 24 persons only when she left this port, including the Commander, Chief Mate, Gunner and Seacannies."

Captain Roberts modestly avoids taking notice of the part he bore in the action, but says, 'Too much praise cannot be bestowed on Mr. Smith, the Chief Mate, and his brave little crew for their conduct on this occasion, the whole of whom fortunately escaped unhurt.' We are not aware that the crew had been at all increased, but are informed that five of
the specified number, together with the longboat, were on shore at Coba during the whole of the action."

Extract from the Log of the Brig Pallas. August 2, 1820.

"At 2 a.m. sent on shore the longboat with one Seacunnie and four hands. At 5-30 Captain Roberts repaired on shore in the jolly-boat. At 7 a.m. saw from off deck 20 large Prows standing towards the brig, fired a gun and made a signal for the boats. At 7-30 from hearing tom-toms beating and loud shouting on board the Prows together with their standing on directly for the brig, knew them to be Pirates. Loosed and set sail. At 7-45 came on board the jolly-boat with Captain Roberts, the Prows being then within gunshot. Endeavoured to slip the cable but found that we had not time to make a buoy fast, the Prows being almost alongside. Cut the cable at the 90 fathoms mark for the safety of the vessel as well as the crew on board, and made all possible sail with a light breeze from the S.E., when the headmost Prow hoisted a black flag at her mast head—and one upon her larboard quarter, a white flag with a black dagger and skull. Fired the starboard broadside, loaded with round and canister into the headmost boat, who instantly returned the fire, which was kept up on both sides till 9-30, when a moderate breeze sprung up from the S.W. Set the starboard studding sails and, the breeze freshening, by 10 was out of gunshot.

At 10-15 breeze decreasing and at 10-30 calm, hauled in the studding sails and up courses, the Prows coming up very fast. Shifted 2 guns to the aftermost side ports and at 10-45 the Prows being again within gunshot opened their fire, the Brig not having steerage way. They kept under our stern and, from the constant fire they kept up, cut our sails and standing and running rigging very much. Shifted 2 guns aft to the stern mooring ports and fired upon the nearest Prows, who then pulled up on our quarter, when we kept up a constant fire with the stern guns, two aftermost guns and musketry, the Prows being then within half pistol shot.

At 11 the whole of the Prows having come up, surrounded us completely, when our fire commenced on both sides, which was returned by the whole of them and lasted till 1-30 p.m., when the boat having a black flag hoisted, struck her colours and pulled from us. A breeze springing up at the same time from the W.S.W., made all possible sail, when the whole of the boats, after discharging their guns at us, lowered their sails, ceased firing, and pulled inshore.

In hauling our wind to weather Pallas Isle, gave them our starboard broadside and sunk the boat that had formerly the black flag flying. Perceived that the remaining Prows had pulled and anchored close inshore and blockaded the mouth of Coba River: deemed it expedient for the safety of the vessel to proceed to the first port upon the coast, where of the H.N.M. [Dutch] cruisers might be lying, and knowing that gun-boat No. 17, Captain Kolbe, was then lying at Linga Lest, bore up and made all possible sail for the above port.

... Fired 26 broadsides during the action and found expended two hundred pounds of powder, two hundred and sixty round shot and forty canister ditto and thirty-four bags of musket balls, each bag containing twenty-six, and two hundred and forty-two ball cartridges."

[Calcutta Journal, 18 November 1820.]

XXVI.
LAST FIGHT OF A PERSIAN GULF PIRATE, 1826.

When the Portuguese came to India at the end of the fifteenth century, they found the external trade of the countries bordering on the shores of the Indian Ocean almost entirely in the hands of the Arabs, who, as far as we know, were generally a peaceable class of seafaring folk, but not of a character to submit tamely to injustice at the hands of foreigners, and who strongly resented any intrusion upon what they had hitherto considered a close trade. The overbearing behaviour of the Portuguese soon resulted in the Arabs arming their ships and the next step to piracy was an easy one. As the Portuguese decayed, the Arabs became more formidable, nor did the growing power of the Marâshas in any way check them, but they were no match for Europeans like the British, nor, even when assisted by the Turkish Government, could they make any headway against the European pirates who visited the Red Sea and the Persian Gulf at the end of the seventeenth century. From that date they ceased to be formidable.

At the end of the eighteenth century the Arabs came under Wâhhâbî influence. Their fighting spirit revived, and the Arabs of the Persian Gulf—notably the Joasmees—became the scourge of the Indian merchants, until they were suppressed by the British about the year 1810. The unrest caused by the Wâhhâbis continued for some thirty years longer, finding its vent in internecine piratical warfare.

One of the most notorious of these Arab pirates was Râh mah bin Jâbîr of the tribe known to history as the Uttooobees ('Uttûbi) of Koweit at the head of the Persian Gulf. He was one of the four sons of Jâbîr bin 'Uttûb who joined in an attack on the island of Bahrein in 1784, but being dissatisfied with their share of the spoil, withdrew to Khor Hasan on the Arabian Coast close by and, under the leadership of Râh mah, the abest though not the eldest of the four brothers, betook themselves to piracy. Râh mah always tried to cultivate good relations with the British and also with the Wâhhâbis, but in 1816 he quarrelled with the latter and retired to Bushire and later to the island of Dammâm near Khatif on the opposite coast, being always at war with the Uttooobees of Bahrein. This state of things lasted until the year 1826, when he found himself bereft of all friends and not only old but blind. He determined, however, at any rate to die not ingloriously, and sailing to Dammâm, from which in the interval the Uttooobees had driven him, he forced them to fight him. Meeting his challenge in the spirit in which it was given, a single vessel was sent out for a fight to the finish.

About the end of 1826, finding himself much pressed by his enemies, who had invaded Damaun [Dammâm] Rahmah [bin Jâbîr] proceeded over to Bushire, with the view, if possible, to interest the British authority in his favour, and also to procure an addition to the crew of his Buggalow,11 which had suffered very materially. In his interview with the Resident, this singular old man (although nearly seventy years of age, totally blind and covered with wounds) displayed the same haughty and indomitable spirit which had always characterised him, and he expressed equal ferocity and scorn against his Uttooobee enemies. Failing in his design of inducing the Resident to interfere in his behalf, he set sail from Bushire with a reinforcement of 25 or 30 Beloochees [Baluchis] and proceeded over to Damaun,

where he ordered his vessels to fire a salute—a mark of contempt which so irritated the Bahrein Chiefs, that Ahmad bin Suleman [Ahmad bin Sulaimán], a nephew of the ruling Shaikh, volunteered to attack him in his own Buggalow. His offer being accepted, he laid himself alongside of Rahmah's vessel, and a most furious action took place, the struggle being for life or death. The people of the Uttoobee Buggalow, however, suffered so severely from the heavy and well directed fire of the enemy, that she was under the necessity of sheering off, in order to recruit her exhausted crew from the other Bahrein vessels in the vicinity. Having procured a reinforcement, and refusing the assistance of the rest of the fleet, Shaikh Ahmad again advanced to the attack, weakened as his crew was in the former combat.

Rahmah soon found that he was in no condition to carry on the engagement and that in a short time he must be taken by boarding unless he surrendered—an alternative which was out of the question, considering the atrocious and sanguinary warfare he had so long carried on against Bahrein. Having therefore given orders for his vessel to grapple with the enemy, he took his youngest son (a fine boy about eight years old) in his arms, and seizing a lighted match, directed his attendants to lead him down to the Magazine. Although acquainted with the determined character of their Chief and, of course, aware of the inevitable destruction which awaited them, his commands were instantly obeyed, and in a few seconds the sea was covered with the scattered timbers of the exploded vessel and the miserable remains of Rahmah bin Jaubir and his devoted followers. The explosion set fire to the enemy's Buggalow, which soon after blew up, but not before her commander and crew had been rescued from their impending fate by the other boats of the fleet.

Thus ended Rahmah bin Jaubir, for so many years the scourge and terror of this part of the world, and whose death was felt as a blessing in every part of the [Persian] Gulf. Equally ferocious and determined in all situations, the closing scene of his existence displayed the same stern and indomitable spirit which had characterised him all his life."

XXVII.

THE TREACHERY OF AHMAD BIN DAD KARIM, 1846.

The following extract from the Bombay Records illustrates one of the perils to which Indian trade was exposed during the early nineteenth century, though I do not think many similar instances of treachery can be found among captains to whom Indian Merchants entrusted their vessels.

"In the month of September 1846 a buggalow, belonging to Nansee Thackersee [Nānji Thākurjī], a Bombay merchant, set sail from Muskat for the Presidency [Bombay]. She was commanded by one Ahmed bin Dad Kureem [Ahmad bin Dād Karım] a Beloochee, native of Muttra [Mátrak], subject to the Imam12 of Muskat. Having arrived in the vicinity of the Island of Busheb, 13 Ahmed bin Dad Kureem formed the project of plundering and possessing himself of all the treasure in the vessel. He seems in the first instance to have endeavoured to carry out his purpose by stealth and quietly, for, in the dead of night, whilst the supercargo, in whose charge the money was, was asleep, he repaired to the

treasure chest and was in the act of making off with its contents, when one Moorad [Murâd], a sailor on board, remonstrated with him and caused him to desist. The Nakhdâ's plans being thus frustrated, he resolved to rid himself of his opponents and to perform by force what he was unable to do by stealth. The following night accordingly, at an advanced hour, whilst his unsuspecting victims were in a profound sleep, he, with a number of his followers, fell upon and savagely butchered both Moorad and the supercargo; he likewise put an end to the existence of an unfortunate slave, who happened to be standing by at the time. Some of the crew, affrighted, leaped into the sea; many took part in the bloody deed; and the rest, however well disposed in their hearts to resist, were too much overawed by the fierce brutality and fiendish threats of the Nakhdâ and his accomplices to dream of opposing them.

Ahmad bin Dad Kureem vowed instantaneous death to any man of the party who would not take the oath of Zuntullah [zan talâq] (the most solemn form of oath among Arabs — 'By the divorce of the wife')—to keep inviolate secrecy. They then, one and all, nineteen in number, embarked in the longboat, having previously set fire to the buggalow and collected the treasure in date jars. Six of the men, notwithstanding that they had taken the oath required of them, fell victims to the Nakhdâ's suspicions, and were cruelly slaughtered; two others, fearful of their lives, let themselves down into the sea close to Shinas and swam ashore, whence they proceeded to Lingâh and back to Muttra [Mātrab] their native city. Scarcely had they reached the latter place before they were seized and conveyed to Muskat, as accomplices of Ahmed bin Dad Kureem.

For a length of time they denied all knowledge of the matter, and assured both his Excellency Syud Soweynee [Sayyid Suaimi] and the British Agent that, as soon as the vessel caught fire, they threw themselves into the sea to save their lives; that they knew nothing further. Guilt, however, attached itself too strongly to these individuals to permit of their story being credited. Recourse was had to intimidation, and preparations were even made for inflicting torture upon them, when, upon being promised full pardon and liberty, they turned informers and related all that had occurred.

In March 1847, after endless search and trouble, Ahmed bin Dad Kureem was likewise apprehended and conveyed to Muskat, where, on being examined and told that there was evidence forthcoming to convict him of his dastardly act, he at once confessed his guilt and threw himself upon the mercy of his accusers. The matter of his trial was referred to the Bombay Government, who desired he might be tried before the Native Court in Muskat and suffer such punishment as the judicial authorities in that town might think fit to award.

His Excellency Syud Soweynee, strange to say, did not so much as consult the Court of Justice regarding the punishment to be inflicted, nor did he cause any form of trial whatsoever to be undergone by the prisoner, but simply and plainly pronounced sentence of death upon him. His execution took place on the 5th day of October 1848 in the presence of the whole concourse of the Muskat population."

THE HISTORY OF THE NIZĀM SHĀḤI KINGS OF AHMADNAGAR.

BY LT.-COLONEL T. W. HAIG, C.S.I., C.M.G.

(Continued from p. 91.)

IX.—AN ACCOUNT OF THE THIRD EXPEDITION OF THE PRINCE’S ENEMIES AGAINST HIM, AND OF THEIR CAPTURE BY RŪMĪ KHĀN.

The amīrs, already mentioned, left the city with a large army to take vengeance on the prince, and pursued him, but when the amīrs who had first been sent against him, heard that he had visited Bīdar, and carried off their wives and families, fear and trembling fell upon them and they were divided and scattered, so that the prince’s object was gained. On the receipt of this news, a numerous and well-appointed army was dispersed, and its officers repaired to court complaining bitterly, and in the strongest language of the negligence of the amīrs who had been at court when the raid was made. When the prince’s spies informed him of this approach of these amīrs, and the news of the dispersal of the army, which had been encamped at the Mērī Ghāt, became known in his army, he left the wives and families of the amīrs where they were and marched on his capital by way of Parenda. The king’s troops, who had followed him from Bīdar, emboldened by his marching away from them, followed in his tracks.25

When the prince halted at Parenda,26 he sent for Jalāl Rūmī Khān and told him that his forces were much weakened, for a detachment had gone with the ḫarṣūm, and many, exhausted by his forced march on Bīdar, had fallen out by the way. He then ordered Rūmī Khān to hold Parenda and await the arrival of the stragglers, while he marched on one stage, in order that the royal army might believe that he was fleeing from them, and might pursue him, and not on any account to emerge from Parenda until the pursuers had passed it, in order that he (the prince) might then make a stand while Rūmī Khān issued from the fortress in the enemy’s rear and thus surrounded him. Jalāl Rūmī Khān promised to obey these orders and remained in the fort while the prince marched on one stage, and when the amīrs heard that the prince had passed Parenda, they were puffed up with pride, and pressed on with all haste in pursuit of the prince, until they came to the stream which is known as Alāt Nādi,27 and flows past the town of Parenda. Here they halted and circulated the wine-cup and had music, paying no more attention to Jalāl Rūmī Khān, who was in Parenda, than if he had not existed. So careless were they that they took no heed of anything until they fell into a drunken sleep.

When Rūmī Khān heard of the state of the enemy’s army, he wisely thought that he could best serve the prince by disobeying his orders, seeing that the enemy’s negligence promised him a certain victory and the opportunity was one not to be neglected. He therefore assembled his army and with a strong force, fell upon them when many of them were in a drunken sleep and many more had barely slept off their debauch. Some were sent to eternity from a drunken sleep and some opened their eyes only to be sent by the same road. Not a single man of the enemy had any time to prepare for the fight, and large numbers were sent to hell by Rūmī Khān’s troops. The amīrs and the principal

---

25 This appears to be an account of the operations of the royal troops after Jahāngīr Khān had taken command.
26 Situated in 16° 16’ N. and 75° 27’ E. The fort of Parenda was built by the great minister Maḥmūd Čāvān.
27 Parenda stands between two small tributaries of the Shā, which is a tributary of the Bhīma.
officers of their army who had stirred up strife against the prince, were caught in the clutches of fate and it was the good fortune of the prince that such a victory was gained by Jalāl Rūmī Khān as will be the preface of all the noble gests and deeds of kings till the end of time.

Rūmī Khān, when the slaying was finished, took large quantities of plunder, and took those eighteen persons who had been the chief ṣādīs of the king’s army, mounted on buffaloes, to the prince’s camp.\(^{35}\)

When the news of the victory reached the prince, he first rendered thanks to God, and then, with the sound of trumpets and drum, gave the signal for rejoicing throughout his army. At this moment Rūmī Khān arrived at the prince’s camp with the captive ṣādīs. Rūmī Khān made his obeisance to the prince and was loaded with favours and encouraged to expect great advancement. He received a royal robe of honour, and the king’s ṣādī also participated in the favours bestowed on him, for they received robes of honour and were given leave to depart for Bidar. By such laudable actions the prince captivated the hearts of these men, nay most of the ṣādīs of the king’s army, and made all those who had been his enemies subservient to him, so that in a short time the greater number of the army which had opposed him, both Dakanis and Foreigners, submitted themselves to him and were enrolled among his servants.

The prince, after this famous victory, which was the dayspring of his fortune and the origin of royal reign and kingly power, returned in triumph to his capital and showered favours upon, and executed justice among, the people of Junnār and the districts, until nobody was seen in his dominions with a torn collar, if we except the dawn with its collar torn by the torch, and no blood was seen on any, if we except the gloaming tinged by the ruddy light of the lamp.

X.—An account of Ahmad Shāh’s enthronement on the throne of sovereignty, i.e. his declaration of independence.

It has already been mentioned that in the reign of Sultan Mahmūd Shāh Bahmani the king’s authority was much shaken, and most of the ṣādīs, muliks, and officers, turning aside from the path of obedience and submission took the road to the desert of contumacy and rebellion. Among these was Majlis-i-Rafi’ Malik Yūsuf ‘Adil Khān, who by the king’s authority held the country of Bījāpur and all its dependencies in jādīr. He raised the stan-

---

\(^{35}\) This account differs widely from Firishta’s, who gives to Ahmad himself the credit of the victory. As Jahāngīr Khān’s force advanced, Ahmad fled from Pāranda to Paithan, whence he unsuccessfully sought aid from Fatūlī Bīr Mulk of Berar. As Jahāngīr Khān approached Paithan, Ahmad retired and occupied the hilly country of Jebr, where he was joined by Naṣīr-ul-Mulk Gujarātī from Qādisābād. Jahāngīr Khān marched to Nīkāphū and cut off Ahmad’s retreat to Junnār. The two armies lay within six leagues of each other for nearly a month and as the rainy season had begun Ahmad’s troops suffered severely. But the ṣādīs of the royal army, believing that Ahmad could not escape, neglected all military precautions and gave themselves up to feasting and drinking. Ahmad marched by night to Nīkāphū, arrived there early on the morning of June 19, 1490, and fell on the royal army while most of them were still in a drunken sleep. Nearly the whole of the army was slain, including the ṣādīs Jahāngīr Khān, Sayyid Ishāq, Sayyid Luṭfūllāh, Nīsān Khān, and Fatūlī Khān. The other ṣādīs were captured and Ahmad, after stripping them down to the knees and parading them round his camp on buffaloes, sent them back to Bījāpur. The battle was known as “the battle of the garden,” from a garden which Ahmad laid out on its site. This battle established Ahmad’s independence.
dard of opposition and made the claim "I and there is none beside me." In the same way Majlis-i-A'la Malik Sultân Quli Qutb-ul-Mulk, who, by the king's command, held the whole of the province of Telengana, raised the banner of independence and pride, and regarded none beside himself; Malik Fathullah, 'Imâd-ul-Mulk in the country of Berar, raised the standard of usurpation and pride sky-high, and gave currency to the habit of rebellion. In the same way all the rest of the amirs and maliks, who were in their own provinces, went astray, and Majlis-i-Mukarram Malik Qâsim, Barid-i-Mamâlik, who held the districts of Qandahâr and Ausa and their dependencies, raised the banner of authority and independence in the capital, Bôdar, and took into his own hands the whole administration of the country, leaving to Sultân Maḥmûd nothing but the name of a king. In the meanwhile the amirs were constantly leading their armies from all parts to Bôdar, in the attempt to overthrow Malik Qâsim, Barid-i-Mamâlik. In some of these expeditions matters were compounded without bloodshed or fighting, but sometimes the quarrels of these erring men could not be settled without an appeal to the sword. In several of these expeditions Ashraf-i-Humâyûn Sultân Aḥmad Shâh Bâhri was present in person, allaying strife, and punishing the quarrelsome and contumacious with the sword, as has already been described, until at last, on the date which has already been given, the king of the countries of Dakân, Sultân Maḥmûd Bahmani, bade farewell to this transitory world and took his departure for the eternal abode.

Since Malik Nâib suffered martyrdom at the instigation of the contumacious but still frustrated men, and the stirrers up of strife poisoned the mind of the king of the world, Maḥmûd Shâh Bahmani, against His Highness Ashraf-i-Humâyûn, Sultân Aḥmad Shâh Bâhri, so that armies were several times sent against his highness with a view to crushing him, as has been related, the amirs and officers of the kingdom, who were in the service of His Highness Ashraf-i-Humâyûn, Sultân Aḥmad Bâhri, represented that the disloyal amirs of the king had obtained the supreme power, and that very little authority was left in the hands of the king, while the whole of the attention of these disloyal amirs was devoted to attempts to crush the prince; and therefore the salvation of the prince's rule and of his dominions lay in his proclaiming himself independent and in his ascending the throne of sovereignty and donning the crown of royalty, in order that the administration might be efficiently continued and that the dominion might not depart from the great family (of Bahman).

36 This is not correct. Sultân Quli Qutb-ul-Mulk was of all the great provincial governors the most faithful to the house of Bahman, and though he often refused to recognize the orders issued by Qâsim Barid, he would not formally declare his independence until Maḥmûd Shâh died in 1518 and his young son Aḥmad III was placed on the throne by Qâsim. Aḥmad Nîṣâm-ul-Mulk was the first to propose to the other provincial governors that they should declare their independence of Bôdar, and all, except Qutb-ul-Mulk, agreed.

37 The name of this place is always thus spelt by Muḥammadan historians. The correct spelling is Kandhâr. It is on the Manâs river, about 95 miles north of Bôdar.

38 Situated in 18° 15' N. and 77° 30' E.

39 The date already given is Zîl-l-Hijjah 24, a.h. 924 (December 27, A.D. 1518). See The History of the Bahmani Dynasty by Major J.S. King, p. 147. Firâshât (i, 726) gives the date as Zîl-l-Hijjah 4, 924 (Dec. 7, 1518). Sayyîd 'Ali conveniently ignores the existence of the nominal successors of Maḥmûd, Aḥmad III, 'Alâ-ud-din, Wâli-ullah, and Kaṭîb-ullah, and makes it appear that Aḥmad ascended the throne as a Bahmani king though he carefully avoids describing him as Bahmani and always gives him the distinctive cognomen of his dynasty, Bâhri.
Therefore his highness, the Sulaimān of the age, Ashraf-i-Humāyūn, Sultan 'Abbās Shāh Bahri, who was, in the opinion of his loyal officers, the means of continuing the royal line and the candle of the family of the Khilafat, at a time when the aspect of the sun foretold the continuance of the kingdom and of its glory in his family, that is, A.H. 891 (A.D. 1486) took his seat on the royal throne, and imparted glory to the crown of kingship by placing it upon his head.

When his majesty ascended the throne he was twenty years of age. The amirs swore fealty to the king and tendered their congratulations to him. They scattered gold abroad and received honours and royal favours in measure corresponding to their degrees. After that the king paid attention to the wants of his army and his subjects, and abolished all tyranny and oppression and raised the standard of justice and equity. He made even greater efforts than before to increase his army, in order that he might conquer the hereditary dominions of his father and grandfather, which God destined to be his.

XI.—AN ACCOUNT OF THE WAR BETWEEN 'ADIL KHĀN AND THE KING OF THE WORLD, ASHRAF-I-HUMĀYŪN, AḤMAD BAḤRI.

When Sultan 'Abbās Shāh Bahri ascended the throne of sovereignty, and the fame of his kingdom and justice was spread throughout the world, Majlis-i-Ra'ī, Yusuf 'Adil 'Khān, who was distinguished from all other amirs of the Dakhan by the greatness of his power and the extent of his jagirs and his province, and was intoxicated by the numbers of his army and his pride of place, opened the door of strife in his own face. In short, the desire of power and conquest entered 'Adil Khān's head and he thought that royal robes and the honours of the Khilafat were for every seeker after them, whether he had been externally predestined to them or not, not knowing that the royal umbrella is a humād which spreads not the wing of good fortune over any but the elect, and that lordship over men is an 'amād, which settles not but on the Qāf of the worth of those who have been accepted, and that a kingdom is not administered and maintained solely by means of the abundance of treasure and the number of one's adherents and assistants.

Malik Yusuf 'Adil Khān considered that Ashraf-i-Humāyūn Sultan 'Abbās Shāh Bahri was in one quarter of the Dakhan, and that much land intervened between his province and Sultan Ahmad's, which land could without much trouble be added to his province. It behoved him, therefore, to forestall Ahmad 'Abbās Shāh, and to capture and occupy that country before he entered it. 'Adil Khān, therefore, set out from Bijāpūr, which was

---

40 This date is wrong by four years. The provincial governors had been their own masters since the death of Muḥammad III, but 'Abbās had not technically become a rebel until 1486, in which year his father was put to death, for he had been obedient to his father, who was regent. From the time of his father's death he was in open rebellion, but it was not until 1489 that he, Yusuf 'Adil Khān of Bijāpūr, and Faḍlullah 'Imād-ul-Mulk of Dārār declared themselves, at Ahmad's instance, independent.

41 'Abbās's age is here absurdly understated. Firishta does not give it, but in 1478 he had been considered sufficiently dangerous to be banished from court and cannot then have been less than twenty-five years of age. His father was then at least sixty-five years of age and it is probable that 'Abbās was thirty or even more, so that he was now probably about forty, and in 1490, when he actually declared his independence, forty-four or forty-five.

42 A fabulous bird of happy omen, supposed to fly constantly in the air without touching the ground and to indicate that the head on which its shadow falls will wear a crown.

43 A fabulous bird said to dwell in Qāf or Mount Caucasus. The legend is similar to that of the phoenix.
his capital, with a very large army and encamped before the fort of Rānūbarī. As that fort was not very strong, Ādil Khān formed the intention of capturing it and handing over the command to one of his officers, in order that he might then make it his base of operations against Ahmad Ngām Shāh’s country, and capture that country with ease.

When the king’s spies reported to him Yūsuf Ādil Khān’s expedition, he issued orders for the assembling of his army, and prefects and muster-masters were sent in haste to all parts of the kingdom to bid the amirs and chief officers of the army to assemble at court with their troops. In a short time a very large army was thus collected, with which the king marched against the enemy. When the royal army arrived at Ghāsī Vabalad, near which was the army of Majlis-i-Rafi’ Yūsuf Ādil Khān, the king commanded that the pass at the head of the ghādī through which the invaders must pass, should be blocked, in order that their retreat might be cut off and that they might be confounded in the whirlpool of perplexity.

Although this plan for crushing the enemy was very well conceived, Masnad-i-Āli Malik Nasir-ul-Mulk and the rest of the amirs humbly represented that to close entirely the enemy’s way of retreat would but compel him to invade still further the king’s dominions and to support himself there by plundering the country. The best plan, they said, would be for the royal army to move aside and leave one line of retreat open. The king accepted this advice and ordered the amirs to choose a camping ground for the army. Then the king issued a fārmān to the kōlis dwelling in those parts, authorizing them to plunder and slay the enemy. The kōlis had been hoping and praying for such a permission. The enemy’s camp was surrounded by jungle and brushwood, so dense that an ant could not penetrate it without shedding its skin like a snake. The kōlis crept through this jungle on dark nights and poured showers of arrows into the enemy’s camp and carried off horses and goods without any serious opposition, and when the day broke, took refuge again in the jungle and in their places of retreat, and would then again lie in ambush and attack the enemy with clouds of arrows, and thus in a short time reduced the army of Ādil Shāh 44 to great straits. The enemy’s spirit was entirely broken, and at last, without fighting and without having acquired any honour, they determined to retreat, and set forth on their retreat by that road which passed close to the camp of the royal army. Since the king’s army had closed the enemy’s line of retreat and every pass was occupied by a detachment of royal troops, it was only with the greatest difficulty that Ādil Khān extricated himself alive. The royal army fell upon his troops and defeated them with great slaughter and those of the enemy who dismounted and fled on foot escaped, while those who would not dismount and throw away their arms were slain. The royal army took much spoil from the vanquished, and the king returned in triumph to his capital.

44 Here Sayyid ‘Ali incautiously admits that Yūsuf was as much a king as his hero was.
45 It is not easy to identify this raid of Yūsuf Ādil Shāh’s. The author of the Rūḍūt-un-Sulātān says that Khwāja Jahān of Bijāpur completed the fortress of Parandā in 1487, but there is no mention of any interruption of the work by Ahmad. According to Finisha, Ahmad’s first enterprise after his declaration of independence in 1490 was the reduction of Dānda-Rājpur (Chaul), the siege of which place he had raised on hearing of the death of his father in 1486. The siege now occupied him for ten months or a year, at the end of which time the fortress surrendered and left Ahmad free to march on Duālatābād. (F. ii, 180.) The account can hardly refer to Ahmad’s expedition to Bijāpur in A. D. 1503-04 which was undertaken for the purpose of compelling Yūsuf Ādil Shāh to revoke his ordinance establishing the Shī‘ah religion (F. ii, 19), and it is not improbable that the incident has been invented by Sayyid ‘Ali for the glorification of Ahmad.
XII.—An account of Ahmad Nizām Shāh’s expedition against Daulatābād.

As Ahmad Nizām Shāh was always anxious to capture fortresses, he now turned his attention to Deogir, which is generally known as Daulatābād. This is a very strong fort, situated on a high hill, so strong that it has never been taken. So wonderful is the construction of the fort and so great are the stones used in its bastions and ramparts, that it is the generally received opinion, nay, it is certain, that it is not the work of men, but of some more powerful agency, for it is generally agreed that the work is beyond the power of men.46

Sultān Mahmūd Bahmani had entrusted the kotwalī and governorship of the fort of Daulatābād, with the city and the surrounding district, to Malik Sharq and Malik Wajih, two brothers who were among Sultān Mahmūd’s trusted officers. Since the time when Sultān Aḥmad Shāh Baṣrī had ascended the throne Malik Sharaf-ud-din, rendered confident by the impregnability of Daulatābād, had set foot in the desert of rebellion and strife. As the king was always anxious to conquer his hereditary dominions, he made preparations for the conquest of that lofty fortress. As the capture of this fortress by force of arms appeared to be very difficult, Aḥmad Nizām Shāh determined first to treat courteously and diplomatically with its governors and to endeavour to win their hearts.

He therefore opened communications with them and gave in marriage to Malik Wajih-ud-din one of the daughters of Malik Nāib, who was in his palace, thus establishing friendship with him on a firm foundation. But since Malik Sharaf-ud-din’s star was declining and the days of his prosperity drawing towards evening, he withdrew himself from the friendship which had been established, and his disposition deteriorated so that he committed blameworthy acts, and the brotherly love which had existed between him and his brother, Malik Wajih-ud-din, was changed to enmity. For Malik Sharaf-ud-din had considered the matter and had come to the conclusion that the result of this alliance with Aḥmad Nizām Shāh could lead to nothing but the loss of the command of the fort. Malik Sharaf-ud-din’s wrath increased daily and he was ever resolving plans for the undoing of his brother, until at last he compassed his death.

After the murder of Malik Wajih-ud-din, his widow, the daughter of Malik Nāib, went to Jumnār and appealed to Ahmad Nizām Shāh for justice against her husband’s murderer. The king comforted the victim of tyranny and resolved to revenge her on the tyrant, and to capture the fort of Daulatābād and the country belonging to it; and he set out with a large army for Daulatābād. When he reached Daulatābād he encamped before it, and his army surrounded the fortress and prevented all ingress and egress. The next day the king mounted his horse and reconnoitred the fortress. He perceived that its reduction by force of arms would be very difficult and that a protracted siege would be necessary. He came to the conclusion that it would be better to gain possession of it by stratagem, and he therefore summoned Masnad-i-‘Āli Malik Naṣir-ull-Mulk and all his other amirs and officers, and took counsel with them. When Naṣir-ull-Mulk and the rest of the amirs had heard what the king had to say, they said that his object could best be attained by laying waste and plundering the Daulatābād district every year at harvest time, and thus depriving the fort of

46 The fort was built by Muḥammad Tughlq between 1337 and 1343.
47 Sī, for Malik Sharaf-ud-din and Malik Wajih-ud-din. In subsequent passages I have corrected the names.
48 This, of course, was Aḥmad’s own sister. Her name was Bibi Zainab and she bore to Wajih-ud-din a son named Moti. Sharaf-ud-din, who was governor of the province, while his brother was commandant of the fort of Daulatābād, cherished the ambition of declaring his independence and much resented his brother’s close alliance with Aḥmad, because it strengthened both Aḥmad and Wajih-ud-din and diminished his chances of being in a position to assume independence. He therefore put both Wajih-ud-din and his infant son Moti to death.
supplies, by which process the defenders would be compelled to surrender. The king then issued orders that the plundering should begin at once and the army plundered the city and the surrounding country and destroyed the dwellings of the people. The king then returned to his capital.

XIII.—An Account of the Foundation of the City of Ahmadnagar.

Since the erection of buildings is one of the most essential affairs in the world and one of the most necessary for the comfort of mankind, great kings in all countries have left behind them wonderful monuments by building cities and laying out gardens planted with fruitful trees. The king of the age and the earth (Ahmad Nizam Shah), who was ever solicitous for the welfare of the world and its inhabitants, determined to found a city. As it had been decided that the king should lead an army every year to Daulatabad to plunder and lay waste that province, and it would have been necessary for him on each occasion to traverse the considerable distance which intervened between Daulatabad and his capital, which in those days was Junnar, he determined to found a city between Junnar and Daulatabad in order that he might dwell there until the fall of Daulatabad and his army would not have so far to march. He therefore pitched on the site of Ahmadnagar, exactly half way between Junnar and Daulatabad, in a tract which in climate and in greenness and freshness of its hills and plains, may be compared with Paradise, and is indeed second only to the Paradise on high.

Some historians have given the following account of the founding of the fair city of Ahmadnagar: Ahmad Nizam Shah, who was very fond of hunting and of wandering in the country, was one day hunting with some of his companions and nobles in the plain on which Ahmadnagar now stands. A fox was viewed, and the king ordered the hounds to be loosed on it. The fox tried to save himself by craft, but when this failed, and he was hard pressed by the hounds, he turned on them and faced them, ready to make a fight for his life. The king was much astonished and determined to build his new capital on the spot, deeming that the land which could instil such courage into a feeble animal like the fox, was a fit place for a king's abode. He communicated his design to the ministers and companions who were with him, and they applauded it. He then consulted his ministers and astrologers who declared that the spot was a fit one for the capital.

When it was finally decided to build the capital in that spot, the king halted there and, having ordered the astrologers to select an auspicious day for the beginning of the work, summoned surveyors, architects, and builders from Junnar to lay out and build the city. An auspicious day was selected, and the surveyors, architects and builders obeyed the king's commands, and laid out and began to build the city with its palaces, houses, squares and shops, and laid out around it fair gardens. In a short time, a very fine city was brought to completion under the king's personal supervision.

When the question of the naming of the new city came up for consideration, the king remembered that the city of Ahmabad in Gujrat, which was built by the late Sultan Ahmad of that country, had been so called from the king who built it, his minister, and the Qasim of the sacred law, who all bore the name of Ahmad. In this case also, by a fortunate coincidence, the king's name was Ahmad, the name of his minister, Masnad-i- 'Ali, Malik Nasir-ul-Mulk Gujrat, was Ahmad, and the Qasim of the royal army also bore the name of Ahmad. For this reason the new capital was named Ahmadnagar.

(To be continued.)

49 A similar story is told of the foundation of Bidar, Nizamal, and other towns. In fact there are very few towns in the Dakar, the foundation of which is recorded, of which the story is not told.
THE WIDE SOUND OF E AND O IN MARWARI AND GUJARATI.

BY PANDIT VIDHUSHEKHARA BHATTACHARYA SHASTRI: SANTINKETANA.

The controversy between Dr. Tessitori and Mr. Divatia regarding the above subject leads me to write the following lines which may throw a little light on some of the points discussed by them.

It is a well-known fact that the Sanskrit diphthongs ai and au (ई, ओ) are composed of two vowels, a+i and a+u respectively; and though each of these two groups of vowels has two syllables separately, they form only one syllable in the resultant diphthongs. For a diphthong is a long vowel, and therefore its component vowels must combine themselves in such a way that they may not exceed the regulation quantity of one long vowel. It therefore follows that the component vowels must suffer loss in their original quantity and such loss may be unequal in amount in the mutual adjustment, that is to say, the one portion may occupy longer duration than the other.

This is what the Prātiṣṭākhyaśas affirm when they say that the first element of a diphthong (i.e. a, ऐ) is short and the second (i.e. i or u, ई, ओ) is far longer than the first.1

It has, however, not been strictly followed in the vernaculars, for, as we shall see later on, sometimes the first and sometimes the second element of a diphthong has been lengthened and this has given rise to different words from the original.

Neither the ai (ई) (with a single exception, see Hem., VIII, 1. 161; Trivikrama, II, 2. 74—Shadbhādha, B.S.S. p. 150), nor au (ओ) of Sanskrit is to be found in Prakrita, the former becoming generally (i) a-i, ऐ अ-ः , and the latter a-u, ऑ-उ- , both in two syllables, and sometimes (ii) e, ऐ ए , and o, ओ ओ, respectively.

The Prakritic a-i and a-u in two syllables gradually began to contract themselves into one syllable again, according to the principle of quiescence or disappearance of medial or final vowels—a process the operation of which is seen widely, not only in our vernaculars, but also in the Vedic and classical Sanskrit, about which I have already discussed in detail elsewhere.2 By the word quiescence, for which I have used the Sanskrit term grāsta (प्रस्थ), following Prof. Jogeshchandra Ray in the article referred to, I mean a vowel sound which first becomes inarticulate and then gradually disappears or is deprived of its proper or original quantity. For instance, from the stem or crude form rājan in the singular number fourth case-ending e we have first rā-ja-ne3 in three syllables, and then, according to the principle above mentioned and the rules thereof, the second syllable, i.e., a in ja first becomes quiescent, and finally disappears, giving rise to the form rā-j-e in two syllables, which again in accordance with Sandhi rules coalesces into rāj-e. Let us take another example. The H. chau-tāḥd (चौताः ) is derived from Skt. chaturthaka through the stages as follows:—

(i) cha-tur-tha-ka>(ii) Pr. cha-u-ṭha-a>(iii) cha-u-ṭhā>(iv) chau-ṭhā>(v) chau-ṭhā. Herein the third stage, a tri syllabic word cha-u-ṭhā can never change into the fourth stage chau-ṭhā until the second syllable (i.e. the u of the tri syllabic cha-u-ṭhā) loses its own quantity or maśta and combines with the preceding syllable, i.e. the a in cha. This decrease in quantity is governed by a principle which I have explained in the paper alluded to. For the sake of convenience I shall denote such thinned vowels by putting them above the line. Thus the disyllabic chau-ṭhā is to be written chau-ṭhā and so on.

1 According to Šk. Pr., Banares, XIII, 41, the maśta of the first element (a) is /{$\text{}}$ and that of the second (i or u) is $1{\frac{3}{4}}$. See Śk. Pr., Mysore, II. 26—29. (Ubbasā says $1{\frac{3}{4}}-2$.)

2 Vangya-Sēkhya-Parishat-Patrīkā, Vol. XXV, pp. 26 ff.

3 Vangya-Sēkhya-Parishat-Patrīkā, Vol. XXV, pp. 26 ff.
According to this principle of lessening the quantity of a vowel, new sets of diphthongs have found their way into our vernaculars. But in these, the sounds were changed owing to the shifting of the accent or stress, sometimes on the first and sometimes on the second element, and also because of the peculiarity of pronunciation of the first element, i.e., a, in different vernaculars.

As regards the wide sound of e and o in Marwāri and Gujarāti, I think, it is due to the accent, or stress, on the first part of a i and a u. And so it goes without saying that here I am at one with Mr. Divatia, who has clearly said (Indian Antiquary, Feb. 1918, p. 41) “that when in the vocalic group of अ अ or अ अ is accented the अ अ getting subordinate, the ultimate result is the wide sound अ अ.” But I am at one with Dr. Tessitori in his disagreement with Mr. Divatia when the latter says that “अ अ and अ अ pass through an intermediate step—and अ अ (eventually अ अ and अ अ) before assuming the wide sounds अ अ and अ अ.” As regards the narrow sound of e and o, it owes its existence to the accent on the second part of a i (dissyllable) and a u (dissyllable) and not of a i (monosyllable) and a u (monosyllable). Here the accent of i and u become e and o respectively, and they are narrow, because there are no other elements whatever to widen them; and then the preceding a is assimilated with the following e and o according to the Prakritic rules for assimilation. I should note here what Mr. Divatia has stated (1918) in this connection: “When in these groups (अ अ and अ अ) the अ अ are accented, their prominence leads to the uniting of अ अ and अ अ into the narrow अ अ and अ अ.”

Examples are needed to illustrate what I have to say, but before producing them I must briefly discuss the question of accent above mentioned. At the very outset it should be borne in mind that accentuation of words has undergone a great many changes from the Vedic time downward. The accent which was the cause of original corruption of a word does not necessarily continue to be in its place so long as the word remains either in the same or other form; for it may have a different accent resulting, in some cases, in its assuming a further new form. I do not wish here to enter into details, but simply to say as a general proposition that accentuation in Prakrita has played a great part in forming the words of different vernaculars. Evidence has been given by Sir R. G. Bhandarkar in his Wilson Philological Lectures, of the accent on the penultimate or final syllable, from which a number of new words have found their place in our vernaculars. But he did not cite any Prakritic words in support of his view though such words are not wanting. Mark the following words: वदुल्ला also वदुल्ला (Skt. वदुल्ला), दाऱ्व (Skt. दाऱ्व), वारवारा (Skt. वारवारा). Here the accent is evidently on the penultimate syllable. It can, however, also be shown that sometimes in Prakrita the first syllable of a word is accented. Let me here draw attention to the following words which will support this contention: नवेद्वदुल्ला (Skt. नवेद्वदुल्ला), सारवाचकाचकाह, बिबितोमोक्ताटिक (Skt. सारवाचकाचकाह), शाल्बादाह, p. 47; जवाना or जवाना (Skt. जवाना), जुवाना (Skt. जुवाना), वाद्रापाला, III, 18; जोम्पिया (Skt. जोम्पिया), तहिर तहि (Skt. तहिर तहि), फ्राक्तिपादुवातारा, XII, 78; etc. These words invariably carry the accent on the first syllable which accounts for the doubling of those consonants which have to bear the brunt of the stress. The same thing happens in different vernaculars. Mark the following Bengali expressions: (i) sakkale jāne, ‘all know’; (ii) lakkhanon nā, ‘never’; (iii) kichchhu dibo nā, ‘nothing I will give’; (iv) bākha garam, ‘too hot’; (v) chotho gāchh, ‘a very small tree’; etc. So in Hindi: Kausikā and Gautama for Kausika and Gautama respectively (Hammira-rādo, Nagrīpracārini, p. 9). The subject of accentuation.

3 Sometimes doubling is made to suit a metre. Instances are abundant in Purvdivārāsa.
tion in Prakrit and the vernaculars is a very important one which, if not properly attended to, will leave unexplained several points of word formation in our vernaculars.

With this preliminary remark I proceed to examine a few words to find out the influence of accents in determining the process of corruption:

(i) Skt. khaḍira > (ii) Pr. khaïra > (iii) kha'ra > (iv) H. P. M. khaira, खार (usually so written, but strictly, khair, the final vowel a being dropped and thus the word becoming practically monosyllabic).

Here in the second stage, (ii) khaira evidently contains three syllables (kha-i-ra). Now in the third stage, the word kha'ra, which is dissyllabic (kha'-ra), could by no means be formed unless the second of the three syllables in the second stage was reduced in quantity and thus easily blended with its preceding syllable or vowel (i.e., a in kha-), making the word a dissyllabic one; and this reduction in the quantity of the second syllable in the second stage, (kha-i-ra) becomes logically impossible unless the quantity of the first syllable is somewhat strengthened and lengthened by some stress or accent on it.

Similarly

(i) Skt. chaṭṭaḥka > (ii) Pr. chaïka > (iii) cha'a kka > (iv) H. P. M. chaäka > chaïka, चायक ( = chaïk, चाइक ).

Here the existence of the third stage which is a dissyllabic one depends entirely on the reduction in the quantity of the second syllable in the second stage which is effected by the accent on the first syllable.

In a similar way we may explain the cases where there are aya or ava in a Sanskrit or Prakrit word. Thus:

1. (i) Skt. nayana > (ii) Pr. nayaşa or nayana (with ya-bruti) > (iii) nay-na > (iv) nay-

   na > (v) H. P. na'na > (vi) na'ni or nain ( नैन, नैन ).

2. (i) Skt. kavala > (ii) kavl̥a > (iii) kavl̥a > (iv) kavl̥a > (v) kavl̥ or kavl̥ ( कवल, कवल ).

In the above instances the ya, y̥a, or y, and va, v̥a, or v have gradually become i and u respectively, because they are not accentuated. It is evident from Vedic texts that ya and va undergo sampradāraṇa only when they are not accentuated; on the other hand when they are accentuated they do not do so. For example, from याज्, 'to sacrifice', we have vi-tā on the one side and iya-jā on the other; from वाद्, 'to speak', udi-tā, udayā-te, when the root is unaccented, and vāda-ti when it is accentuated. This fact has been noticed by Dr. T. S. R. I. S. T. G. I. T. O., too, when he says (ante, Sept. 1918, p. 321) "so long as the v in kava-vaṭ retains the stress or emphasis it can never undergo sampradāraṇa." The principle working here is not difficult to understand. Accent or stress strengthens a syllable, which then cannot be subject to a change.

Let us now illustrate what has been said before regarding the wide and narrow sounds of े, ो and े, ॉ in Marwār and Gujarātī.

(i) Skt. vair (dissyllable) > (ii) Pr. va'ra (trisyllable) > (iii) G. vaira (dissyllable) > (iv) va'ra = vair = (with a pronunciation different from that of the Skt. diphthong ai) vēr, वेर.

Here in the third stage, vair, which is derived from the second (va'ra, trisyllable), as shown above, there are two syllables, va' and ra; the accent falls here on the first part of the first syllable, va, i.e., on the va or a of va and not on the whole syllable vai. The accent having
fallen thereon strengthens and lengthens it to some extent, while the following \( i \) though reduced to something less than its normal proportion affects the preceding vowel sound thus making the whole sound of the vocalic group \( (ai) \) somewhat oblique. It may be compared with the \( a \) sound in English, that is, the sound of \( a \) in 'hat' lying half way between \( e \) (or \( \dot{e} \) long) and \( a \) (or \( \dot{a} \) long). The M. H. P. words like \( khār \), \( kār \). (Skt. \( khār > Pr. \) \( khāir \)) should be explained in this way though the sound of \( ai \) in them differs, as has ably been mentioned by Mr. Divatia (ante, Jan. 1918, p. 26).

I have already hinted that the narrow sound of \( \dot{e} \), \( \dot{e} \) has come from disyllabic \( e-i \) and \( a-u \), the process being through the accent falling on the second syllable, i.e. on the \( i \) and \( u \) of \( a-i \) and \( a-u \), they are turned into \( e \) and \( o \) respectively, or in other words, according to the native grammarians, firstly there is the \( guṇa \) transformation of \( i \) and \( u \) into \( e \) and \( o \); and secondly the preceding \( a \) of the original \( a-i \) and \( a-u \) and the subsequent \( a-e \) and \( a-o \) is euphonically coalesced according to the general rules for \( Sandhi \) either in Sanskrit or Pali-Prakrita. As it will take up too much space I purposefully refrain here from explaining these rules in detail, citing, however, only two examples from the Sanskrit grammar, which are well known to all, viz. \( upa+cejate=upejate \), \( upa+osehat=uposhati \) (Pāṇini, VI, 1, 94).

I believe, every \( e \) and \( o \), as result of \( Sandhi \) of \( \ddot{a}+\ddot{i} \) and \( \ddot{a}+\ddot{u} \) in Sanskrit and Prakrita and vernaculars as well, have appeared in this way and in this way only. \( E \) and \( o \) though still regarded as \( Sandhyasāra \) or diphthong in Sanskrit grammars through tradition, had long ago, even at the time of some of the \( Prātiśākhya \) lost that character and become single vowels, which could only be due to the process suggested above.

Sanskrit \( ai \) and \( au \) have generally assumed two forms each in Prakrita, \( ai \) and \( e \), and \( a-u \) and \( o \) respectively. As regards the first forms, \( a-i \) and \( a-u \), it should be observed that they are disyllables, while originally in Sanskrit they were monosyllables. Sanskrit monosyllables \( ai \), \( au \) split themselves in Prakrita into disyllables \( a-i \) and \( a-u \) respectively. And then, in course of time, these disyllabic \( a-i \) and \( a-u \) gradually became monosyllabic \( e \) and \( o \) through the process explained above. Now the whole process stated stands thus:—

(1) Skt. \( kālīṣa > Pr. \) \( kālīsa \) (<\( ka-i-lā-sa \)> \( *kālīsa \) (<\( ka-e-lā-sa \)> Pr. \( kēlīsa \).

Again

(2) Skt. \( kālīṣa > Pr. \) \( kālīsa \) (<\( ka-i-lā-sa \)> (vernaculars such as B.) \( kālīsa \) or \( kālīsa \), usually written \( kālīsa \).

It goes without saying that this process holds good as regards \( o \), too.

Here in the first series Pr. \( ka-i-lā-sa \) continued to be pronounced for some time in four syllables with its accent unaltered. Then the accent shifted on to the second syllable, i.e. on \( i \), changing it into \( e \), the whole form becoming \( *ka-e-lā-sa \). Following the law of economy in pronunciation the preceding \( a \) merged in the following \( e \) which had double strength of a long and accented vowel, and this resulted in the trisyllabic form, Pr. \( kēlīsa \).

A few words of explanation are required about the change of \( i \) into \( e \), and of \( u \) into \( o \) when they are accented. Examples of such cases are numerous, as will be borne out by the following: G. \( gōra \) (<\( gor \)\( ^{2} \)), 'family priest', < Skt. \( gurū \); M. \( mehūṇa \) (<\( mehūṇa \)\( ^{2} \)) < Pr. \( mihūṇa \) <Skt. \( mithūṇa \); S. \( peu \) < Pr. \( piu \) < Skt. \( pītika \); etc., etc. That the \( guṇa \) in Vedic Sanskrit is due to accent is proved beyond any shade of doubt. For instance, \( e-ti \) (from \( \sqrt{\partial} \) \( ( \text{to go} \)\( ^{2} \)) and \( i-hi \); \( bōḍha-ti \) (from \( \sqrt{\text{budh}} \) 'to wake' and \( budhā \); etc. Sometimes \( i \) and
u undergo guña before a conjunct letter; as Pr. peṇḍa < Skt. piṇḍa, Pr. tonaḍa < Skt. tuṇḍa (Hem. VIII, 1, 85, 116). This fact goes to show that the guña in such cases has been caused by the conjunct letter affecting the preceding i, u in the same way as an accent or stress does.

Though it may seem from what has been said above that a narrow é can never come from Pr. a-i, of which the last member i does not change into e, we find in some cases the wide é gradually changing into a narrow é. I quote here the following words of Dr. Tessitori:—“There is in modern Marwari-Gujarati a marked tendency to pronounce é and ò less wide when they are final than in other cases.... In some cases the vowel is actually heard as narrow.” (Italics are mine.) Instances have been given by him (Aute, 1918, Sept., p. 232). The cause of it is a natural one. For the sound of é (= a as a in English ‘hat’) lies, as has been stated above, half way between é and ò. One starting from é cannot reach ò without passing through ò (=a). Thus the gradation is:

(i) é > (ii) ò > (iii) ò.

I cannot, however, say whether ò is actually found in the place of ò in any word of Marwari-Gujarati, but there is possibility of its being so.

The sound é (as) is seen in Bengali in such words as ekha (ekha), ‘one’, pronounced ekha: dekhha, ‘see’, pronounced dekhha; etc. It is seen also in Sinhalese, in which it is further divided into two, long and short, as maṇḍha ‘a ram’ (generally transliterated as meṇḍha, =e in ‘hat’), B. meṇḍhā (generally written meṇḍhā) < Skt. meṇḍha ; nana (=nana), B. saṇ, (though generally written as the following Skt.) < Skt. jñāna ; pankum, ‘mud’, B. paṇkā (written paṇkā or in some quarters pākā) < Skt. paṇka or paṇkaka. This sound, with some diversities, exists in several other vernaculars the treatment of which is not necessary here.

Now it will be seen in the above Bengali words that the sound in question has been expressed, though not adequately, sometimes by é, and sometimes by ò of the elements of which it is made. (The sound ò is a combination of that of é and ò). But sometimes again, it is represented in Bengali by yá; as the same word dekhha is now written by those who intend to represent the sound phonetically, as dyakhha (or dyākho). Instances of this kind of writing abound in old Bengali MSS. In Sinhalese, too, this sound is expressed by a which is open in that tongue together with the symbol of y joined to a consonant. It is, thus, that when the English word ‘manager’ is transliterated into Bengali we come across two sorts of spelling, viz. (i) menejdr, or (ii) myñejdr; while in Hindi it is written manejdr (मनेजर). Sometimes ò is also seen for the same sound in Bengali though not properly; as, ‘Harrison Road’ is written either (i) Hárisón Road, or (ii) Herisón Road, or (iii) Hydrisón Road. Similarly we see the English word ‘catalogue’ written in Gujarati as kelalāgā (केलालागा), and so ‘assistant’ as asṭisānt (आस्टिसांट), ‘malaria’ as meleriyā (मेलेरीया), etc., etc.

As regards ò from ò in modern Marwári-Gujaráti it is to be explained in the following way. Sometimes the second member of the group a-u being accented as stressed turns itself into ò and that ò predominating overcomes the preceding a which now disappears, as has already been stated. But sometimes, specially in compound words, there may not actually be a vocalic group of a-u or a on in spite of its apparent possibility, and consequently the above explanation cannot be applied there. In such cases, in the beginning of the final word of a compound we have an u or ò which being accented changes into a narrow ò, there being nothing to widen it.
Thus, the word राधा is pronounced in Marwāri-Gujarāti राधा (rādhā), with wide ə, but sometimes rādha (rādhā) with narrow ə, as Dr. Tessitori says. Here the original Skt. is rādhva-kāta whence through Pr. gradually came rādhva-ūka > rādha-ūka > rādha-ūka (ka becoming k). Here in this last stage the final ə of the first word and the initial ə of the last one have together əu (= ə), the whole compound word being in three syllables (ra-θa-ka) as already explained, and we have at last rādhora or rādhor. But the derivation of the word rādha may be traced through a different process, viz. rādha-ūka > rādha-ūka > rādha-ūka > rādha-ūka, the accented ə of ər becoming ə.

The same process may be the origin of the narrow ə in such words as aveva (or aevə) etc., as, Skt. avayava > avayeva > ava'eva > av-i-va > av-eva-aveva (or aevə). But nérə (or nərə) is to be explained thus: (i) Skt. nagra > Pr. nagra > na-ra > na-ira > na-era > nera (nərə); or (ii) na-ra > nera, and then gradually nera (nərə) as in the case of the transformation of rādha-ə into rādha-ə, though it is not unlikely that in this last example, i.e. rādha-ə the cause of the change lies in the loss of that element in ə which renders the simple sound an oblique one, i.e. the u of uə.

**MISCELLANEA.**

**PAIŚĀCHI IN THE PRĀKRĪTA-KALPATARU.**

The late regretted S. P. V. Ranganathswami Aryavarsagun was quite correct in his remarks in the important article on Paiśāchī Prākrit in the *Indian Antiquary* for November 1919, so far as they refer to my account in the Bhandarkar Commemoration Volume of Rāmāravavālaśa’s classification of Paiśāchika. I was there quoting Professor Konow’s statements, which, in their turn, were based on Lassen’s *Institutiones*. Since then, I have myself been able to study the India Office Ms. of the Prākrita-kalpataru. Lassen’s “chashka” certainly does not exist, and the correct word, as the Pandit has said, is evidently cātashka. I may add that I have since edited the whole Paiśāchī chapter of the Prākrita-kalpataru, and that it will appear in due course in the Asutosh Mukerjee Commemoration Volume.

I am, however, right in saying that Hemachandra does mention three varieties of Paiśāchī. That is to say, he describes Paiśāchik and two varieties of Chālikā-paiśāchika (see iv, 325, 327).

I regret that in my article in the Bhandarkar Volume, I was compelled to trust to Lassen’s incorrect account of the Kalpataru passage, which, at the time, was the only authority within my reach. That will now be corrected in my forthcoming edition; but the mistakes of Lassen in no way invalidate the main argument of the portion of the article in which they are quoted. It is undoubtedly, as there maintained, that the standard Paiśāchī of Rāmacarkavālaśa, of Mārkandeya, and of Lakshmīdhara was closely connected with the Kṣaiya country.

**A NEW GUPTA INSCRIPTION.**

This inscription was discovered by me a few months ago in the course of my listing tour at Tamalain, a village in the Easgarh District of Gwalior State, situated about forty miles to the west of Eran. Unfortunately the right portion (possibly more than one half) of the inscription is missing and consequently the first part of all the lines is lost. The inscription will be published in detail along with facsimile in the *Epigraphia Indica*. But as this must take some time, I hasten to give here a summary of the contents of the inscription with brief remarks on its historical bearing for the information of scholars.

The contents of the inscription can be briefly summarised as follows:—In the existing portion of line 1 is preserved the latter part of a verse which apparently refers to Samudragupta.

4 That the process rādha-ūka > rādha-ūka > rādha-ūka is also quite possible has already been said.
BOOK-NOTICE

The next verse in line 1 eulogises Chandragupta II as one who conquered the earth as far as the ocean. Line 2 is dedicated to Kumāragupta I here described as Chandragupta’s son, who protected the whole earth as a chaste and devoted wife. Line 3 praises Ghaṭotkacaghupta who is compared to the moon and who is spoken of as having won by (the prowess of) his arms the good fame attained by his ancestors. Line 4 specifies in words the date of the inscription, namely, the year 116 of the era of the Gupta sovereigns, and mentions Kumāragupta as ruling over the earth at the time. The remaining two lines record the construction of a temple sacred to a god (whose name is lost), by a band of brothers, residents of Tumbavāna which is identical with modern Tumain where the inscription was found.

The chief historical interest of this inscription is that, it enables us to recognise with certainty a member of the Imperial Gupta dynasty whose identity was hitherto a matter of surmise only. The person in question is Ghaṭotkacaghupta, a name which was so far known from two documents (1) a seal found at Bāshār bearing the inscription Śrī Ghaṭotkacaghuptaqya and (2) a coin in the St. Petersburg collection which, according to Mr. Allan, bears on the obverse a marginal legend ending in guptaḥ and beneath the king’s arm the name Ghaṭo with a crescent above and on the reverse a legend which seems to read Kramāvidyaḥ. Dr. Bloch was inclined to identify Ghaṭotkacaghupta of the Bāshār seal with Mahārajā Ghaṭotkache, the father and predecessor of Chandragupta I, and this view was approved of by the late Dr. V. A. Smith. But Mr. Allan in his Catalogue of the Gupta Coins in the British Museum rightly points out the difficulties in the way of this identification and surmises that Ghaṭotkacaghupta was probably a member of the Imperial Gupta family and that he probably held some office at the court of the Yuvārāja Govindaghupa who was governor at Vaiśālī (Bāshār) during the reign of his father Chandragupta II. The Ghaṭo of the coin in the St. Petersburg collection is believed by Mr. Allan to be still another Ghaṭotkacaghupta on the ground that the style and weight of the coin place is about the end of the fifth century and that it therefore cannot be referred either to Ghaṭotkache, father of Chandragupta I, or to Ghaṭotkacaghupta of the Bāshār seal. But this conclusion which is arrived at from such general evidence can be only approximate and not exact. It certainly requires to be modified in the light of the new information supplied by our inscription.

Hitherto the identification of Ghaṭotkacaghupta remained uncertain because he was known only from his seal and coin which did not mention his genealogical relations and because he was not referred to in any of the genealogical lists of the Guptas known so far. This want is now supplied by the genealogical list given in our inscription which places Ghaṭotkacaghupta immediately after Kumāragupta I. Unfortunately the word expressing the exact relationship between Kumāragupta I and Ghaṭotkacaghupta, which probably occurred in the inscription, is lost with the missing portion of the stone. It would appear, however, that Ghaṭotkacaghupta was a son of Kumāragupta I and during the reign of his father held the office of the governor of the province of Eran (Artikāra) which included Tumbavāna (the place where the inscription was recorded). This latter was evidently the reason why his name is recorded in the inscription although it refers itself to the reign of Kumāragupta I. Our inscription further gives a definite date for Ghaṭotkacaghupta, namely, G. E. 116 (= A.D. 430). This date is so convenient as to make it almost certain that the Ghaṭotkacaghupta of the Bāshār seal, of the coin of St. Petersburg collection and of our inscription were all identical.

M. B. GANDHI.

BOOK-NOTICE

Bangalore, Government Press.

Mr. B. Narasimhachar, Director of Archaeological Research, Mysore, has produced a creditable and well-illustrated report of energetic departmental work during the year 1919.

1 Director-General of Archaeology’s Annual Report for 1903-04, pp. 102 and 107.
2 Allan’s Catalogue of the Coins of the Gupta Dynasties, etc. in the British Museum, p. 149 and plate XXIV, 3, and Introduction, p. lv.

The somewhat bewildering iconography of South India is again represented in the plates, and it is well that it should be so, for the more European students learn of this, the better will they be able to understand Indian architectural design and ornament. They should also be specially grateful for the illustrations of the māstikāla (memo-
rial) shown on plate V, as these are the counterparts of the family mural tablets and bas-reliefs to be found all over Europe in churches and other sacred buildings. The two fine specimens of the dīpā-stambha or lamp-pillars on plate III are extremely interesting and one is glad to note three good plates of inscriptions of the Gangas and the Hoysalas.

There are however two points in the Report that are of special interest to myself. The inscriptions reported of two of the Nayaks of Ikkeri dated A.D. 1660 and 1662 (Venkatappa II and Bhadrappa), because of the visits to that now lost capital in the days of Virabhadra and Venkatappa respectively by the European travellers Peter Mundy and Della Valle. In such cases we have the records of these ephemeral local dynasties as left by themselves, and the stories of their Courts as they appeared to contemporary European visitors. For instance, Peter Mundy in 1637 thus quaintly describes Virabhadra, "I dare say there is hardly such another grosse proportionable man to bee found in all his owne dominions off aboutt 30 yeares of age." (Travels, ed. Temple, Hakluyt Society, vol. III, p. 82.)

The other point is a note on p. 12 regarding an inscription which is worth quoting in full: "At Rāmpura near Kajaba is an inscription, EC. XII, Gubbi 27, dated 1696, which is of great interest from a sanitary point of view. It states that it was decided at a meeting of the villagers that no corpse should be buried within an arrow-shot of a well that had been newly built, and that in case any burial took place the buriers and the buried should be outcastes in this world and the next. We have some evidence here of the ideas of sanitation which the villagers had about two centuries and a quarter ago."

It is indeed interesting to note that villagers in South India in the late 17th Century A.D. recognized the danger of percolation into wells from insanitary surroundings, considering the universal old world theory in India that water of any kind of itself purifies. But epigraphs such as this are always worth recording wherever found, since one of the things that strikes observers of old and even ancient India and Asia generally is the modernity of the ways and thought of the people. Take the extraordinary "modern-ness" of mind that is in the Arthādāstra of Cāṇakya with its "on and off" drink licence; take the "Domesday Book" of Kulottuṇīga Chola in the very year of that of William the Conqueror (A.D. 1086); take the self-governing municipalities and local areas of ancient India. Even if these last be looked at in the light of relics of the Oriental policy of Alexander the Great, the idea is old enough in all conscience. Take the futile effort on the part of a Babylonian King to stop official corruption; the equally fruitless attempt of a Tibetan ruler to equalize the social position and property of every one in the State; the long War of Liberation in Annam; the close parallel between the rise of the Popes of Rome and the Dalai Lamas, though it is not perhaps generally known that the former long preceded the latter. The fact is that the social methods of civilized man have a family likeness at the various periods and places of his existence, and it is therefore of value always to note them wherever they are found faithfully recorded without any ulterior motive.

R. C. Temple.

NOTES AND QUERIES.

NOTES FROM OLD FACTORY RECORDS.

17. Alligators' Gall and Hunting (Poligar) Dogs.

[February 1882.] Letter from Brāhmaṇ Podala Lingappa [the Brāhmaṇ agent, Podala Lingappa] from Conjevaram [Kānchipuram] to William Gifford, Governor of Fort St. George. I enjoy good health wishing to hear the like from your Worship. His Lordship Brāhmaṇ Accan [the Brāhmaṇ Minister, Akkanna] hath great necessity for one Više [vīsa, visai] weight of Alligators Gaul [a native laxative medicine] and that I should by all means procure it and send it to him and therefore I beg the favour of your Worship to order your Musula and Catamaran [māsula and catamaran, kālmaram, boat] men to use the utmost to get a Više weight of the said Gaul, I earnestly desire your Worship to procure it. Some great Persons who are my freinds at Court have desired me to procure for them some hunting Dogs, and I was enform'd your Worship had some there abouts. If it be soe I desire your Worship to make choice of those which are handsome courageous and fleet to catch wild hoggs, and to send two couple of them, and in so doing it will be as if your Worship had given me a Lack of Pagodas; so I entreat your Worship to send them to me and to keep a continuance of your Love towards me. (Records of Fort St. George, Letters to Fort St. George, 1882, Vol. II, p. 16.)

R. C. T.
WHOLESALE DESTRUCTION OF BORNEO PIRATES, 1849.

The piratical inhabitants of Borneo were of two classes, the Dayaks, whose object was chiefly to secure human heads as trophies, and the Malays, whose object was plunder and also to take as many prisoners as they could to sell as slaves. In 1839-41 the celebrated Rajah Brooke established himself at Sarawak in Borneo, and set about suppressing piracy not only amongst his own subjects, but also amongst his neighbours. After some mistaken opposition, he received the support of the British Government, and the following letter to the Illustrated London News narrates the destruction of a large fleet of piratical praebus on their return from one of their raids. The affair was characteristically described in Parliament as a massacre of practically unarmed men, against whom there was no proof of piracy—much as if one were to call it 'murder to shoot a tiger when, after having gorged itself on its prey, it was seen slinking back to its lair.

To the Editor of the Illustrated London News.

I send you the following account of an expedition against the pirates of the northwestern coast of Borneo.

"Arrangements were made that H. M. S. Maeander,—guns, Albatross, 12 guns, and Royalist, 10 guns, together with the H. E. I. C. war-steamers Nemesis [Captain T. Wallace] and Semiramis, should rendezvous at Sarawak, and furnish boats and an European force of 300 men.

"The Maeander and Semiramis however did not arrive, and the effective force of the Royalist and Nemesis were so reduced by illness, that we could only muster 7 boats, manned by 108 men, including officers.

"All arrangements being completed, it was considered better to proceed, even with this reduced force, than (by waiting longer) to run the risk of being overtaken by the rainy season. Accordingly we started on the 24th July to attack the strongholds of the pirates on the River Rejang, who had been very daring of late. I may mention here that, shortly before we left Sarawak, the pirates of the River Serebus sent an insulting message to the Rajah, Sir James Brooke, asking 'if he were an old woman and afraid, that he did not attack them as he had threatened.' It will be seen in the sequel that this message is not likely to be repeated. The Nemesis towed the Royalist up the Batang Lepar, a noble stream, and moored her at the mouth of the Linga, which falls into the Batang Lepar, to protect a friendly tribe resident there, during the absence of the warriors, who accompanied us on the expedition.

"We left Batang Lepar on the 28th July 1849 and towed the European boats to Banting Marron, a low sandy point separating the Rivers Serebus and Kaluka, [all in Datu Bay] and which had been appointed by the Rajah as the place of rendezvous for the entire force, European and native, previous to starting for the River Rejang.

77 On the west of Borneo.—Ed.
78 Sarawak River, to the south of Rejang River, flows into Datu Bay.—Ed.
79 The Batang Lepar and Linga, two streams, also flow into Datu Bay.—Ed.
On the 27th an old Malay chieftain brought us intelligence that a piratical fleet of 107 pahus, with at least 3,500 men, had left the Serebus the day before our arrival, passing round Tanjong Sirii to attack and plunder such villages on the Rejang as were not powerful enough to resist them. The piratical tribes [Dayaks] reside for the most part very far inland, near the sources of the numerous rivers of this coast, in which situations the streams are very contracted and rapid and the banks elevated and heavily timbered. They take advantage of these circumstances and render the advance of an enemy almost impossible by felling huge trees across the river and by cutting others and keeping them suspended by rattans, so that they can be launched in a moment on a passing boat, crushing her to atoms. On any alarm at sea they immediately retreat to some of these strongholds and sink or otherwise conceal their pahus in some of the innumerable creeks with which the rivers abound. All attempts therefore at intercepting a piratical fleet have hitherto failed. Their practice is to make a raid, and pouncing on some unsuspecting village (as the Malays poetically express it) like the rush of the alligator, to burn it, killing all the men and boys and cutting their heads off (which they value beyond price as trophies) and carrying off the women as slaves. They then, whether successful or unsuccessful, return as speedily and quietly as they issued forth, having plundered any native trading pahu they fall in with and murdered the crew. Advantage was therefore taken of the unusually favourable opportunity now offered, and a plan was immediately laid by Captain Farquhar of H. M. S. Albatross, who commanded the expedition, and the Rajah [Sir James Brooke] for surprising and cutting them off on their return. The Serebus and Kaluka, the only avenues to the country of the pirates, flow into a deep bay [Datu Bay], round the north-east point of which, called Tanjong Sirii, the piratical flotilla must return. The following disposition therefore was made of the force under Captain Farquhar's orders. Very fast spy or scout boats were stationed at Tanjong Siri with instructions to return on the first appearance of the enemy and announce their approach.

The Rajah with a native force of about forty well-armed pahus, including the Singa Rajah, pulling eighty oars, commanded by Sir James Brooke in person, and the Rajah Walli, pulling sixty oars, commanded by the Rajah's nephew and acknowledged successor, Captain Brooke of the 88th Regiment (Connaught Rangers) [afterwards Rajah Sir Charles Johnson Brooke,] as well as the cutters of the Albatross and Royalist, commanded by Lieutenants Wilmshurst and Everest, were stationed in ambush at the mouth of the Kaluka. A large native force of about forty pahus was stationed at the entrance of the Serebus, supported by the three remaining boats of the Albatross commanded respectively by Captain Farquhar, Lieutenant Brickwell and Mr. Williams, and the two boats of the Nemesis, under Messrs. Goodwin and Baker: as well as the Rane, a very inefficient river steamer, commanded by Mr. Wright.

Trying as it was to the patience of all parties, we remained in position until the 31st, during which interval every precaution human foresight could suggest was adopted to secure success. About 7½ p.m. we were engaged in a rubber of whist on board the Nemesis and had almost abandoned all hope of surprising the enemy, when a spy-boat returned at best speed, with the long and anxiously looked for intelligence that the piratical fleet had rounded Tanjong Sirii and was rapidly approaching our position. As yet it was of course uncertain for which river they would make. This question was however soon set at rest.

80 Tanjong (Cape) Sirik, at the mouth of the River Rejang.—Ed.
and a brisk fire of rockets from the cutters and of great and small guns from the remainder of the Rajah's force, stationed at the mouth of the Kaluka, announced that the enemy had attempted to force that river and had met with a warmer reception than they had anticipated. A rocket was now fired by the Rajah, and on this preconcerted signal, Captain Farquhar moved round Banting Marron with the European force under his immediate command to support the Rajah if necessary, and also with a view to enclosing the enemy between two fires, leaving however a strong native force at the mouth of the Serebus to intercept the pirates in case of their passing the European boats and making for this their native river. Finding themselves foiled at the Kaluka, the enemy, gallantly followed by the two cutters and the Rajah's light skirmishing boats (which kept up a constant fire), put to sea, with the intention of running for the Batang Lupar; here, however, no doubt much to their surprise, they encountered Captain Farquhar's boats, and being saluted with round shot and rockets, they divided their force. They yet, however, preserved admirable order. Some returning to the Kaluka (still most judiciously guarded by the Rajah) renewed their attempt to enter, but with the less bad success; others passing in shoal water inside Captain Farquhar, made for the Serebus, and the remainder, having greater speed than his heavily laden boats, succeeded for the present in escaping to sea.

"The Nemesis had hitherto remained at the mouth of the Serebus in position, but ready to move at a moment's notice to any point where her services might be required. She now acted her part, and that right nobly." Perceiving by the fire from Captain Farquhar's boats that the enemy had attempted to put to sea, Commander Wallace gave chase and fell in with seventeen prahus, which had succeeded in escaping Captain Farquhar and were making in a beautiful line for the Batang Lupar. When abreast we saluted them with grape and canister from our 32-pounders, raking the entire line, which we then broke, driving many of them on shore badly crippled, where they fell an easy prey to the Dyak boats, which, headed by Mr. Steele of Sarawak in the Snake, followed the Nemesis, but never interfered with her fire. We then pursued five others and destroyed them in detail, passing round each and pouring in a constant fire of grape and canister, musketry and rifles, until they drifted past as helpless logs, without a living being on board.

"That discharge of grape was a fearful sight as, at point blank range, it crashed over the sea and through the devoted prahu, marking its track with the floating bodies of the dying, shattered prahu, planks, shields and fragments of all sorts. I should have pitied them, but they were pirates, and the thought steed my heart. At this period the scene was exciting in the extreme; fighting was going on in all directions: wherever the eye was turned it met the brilliant double flash of the great gun, the bright quick flame of musketry, the lightning streak of the rocket or the dazzling blaze of the blue-light; whilst the ear was saluted with the boom of cannon, the roar of musketry, the wild tone of the tom-tom, the clear startling note of the gong or the still more fearful war-whoop of the Dayak telling a sad tale of destruction and death. The pirates now, finding themselves surrounded, lost all presence of mind—order was no longer preserved—the flotilla scattered and fled in every direction, the crews jumping overboard and swimming for the shore or running the prahus aground and taking refuge in the jungle. About 12 o'clock at night the fight might be considered as over, although isolated firing continued until midnight [4 daylight]. The entire force under Captain Farquhar's command may be estimated at 3000 men. From informa-
tion subsequently obtained, that of the enemy cannot be taken lower than 120 prahu and 4000 men. The loss of the enemy in the action was 90 prahu and not less than 400 men, whilst we lost but 2 men killed and 6 wounded. In addition, however, to the loss in action, the enemy suffered most severely, being followed in the jungle by the Dyaks, who, like bloodhounds, tracked and hunted them down, cutting their heads off and bringing them in as a proof of victory; and even of those who escaped a violent death, at least one third must have perished before they reached their homes, being altogether destitute of food. The total loss of the enemy may therefore be estimated at 1500 men; they have also lost an immense quantity of brass guns, muskets, gongs and arms of all sorts, with which they were well provided, but which they either threw overboard to lighten their prahu and increase their speed and prevent them from sinking, or abandoned on taking to the jungle. More than a mile of the beach of Banting Marron was strewn with wrecks and abandoned prahu, which were either burnt or carried off as prizes.

"As an instance of the cruelty of these bloodthirsty fellows, I may mention that on the expedition [the piratical flotilla] having surprised the village of Matou, as well as a trading prahu, they, i.e. the pirates, took some heads and one female prisoner. On being compelled to take to the jungle they found they could not carry her off with them: they therefore cut her head off and mangled the body in a most frightful manner, in which state it was found after the action, lying on the beach of Banting Marron, a ghastly object—the legs and arms being nearly separated from the body, which was literally chopped in pieces.

"A considerable force was left at the scene of action to follow the pirates in the jungle and complete the work of destruction, and the remainder moved up the Serebus about forty miles, where the Nemesis and the large prahu anchored, whilst the light boats proceeded up the River Pahoo [Pahu, a tributary of the Saribas] to destroy the fortified villages on its banks before the warriors could return to their defence. The advance was opposed by nine large booms lately thrown across the river. These were with difficulty removed, but at length a monster tree, so hard that the axes scarcely made any impression on it, seemed an almost impassable barrier to further progress. After in vain using every effort to overcome the difficulty, the force was disembarked with the intention of clearing a road through the jungle and marching overland, but they had scarcely landed and commenced operations, when a skirmish took place, in which four natives of our party were killed and amongst them Bunsee and Toojong [Bansi and Thjong], two sons of the Chief of Lundu [in Datu Bay]. We all felt the deepest regret for these youths, as (unlike their comfrtymen) they knew not what fear was, and fell victims to the rashest valour, having, contrary to orders, moved in advance of their party, almost unarmed: one brother was carried in headless, and the other with his face cut off and otherwise fearfully mangled. This untoward event threw such a damp over the spirits of the natives, that it was not deemed advisable to advance until confidence was somewhat restored, and in the meantime the unusually low water enabled the boats to pass under the tree and proceed up the river, where they destroyed Pahoo and several other villages and took some prisoners as well as a great quantity of plunder, amongst which were some ancient jars, 81 which the Dyaks hand down from father to son as heirlooms and prize very highly, some of them being valued as high as £200. It was indeed fortunate the fleet had been destroyed, as otherwise it would have been impossible to perform the service without

"Martabas jars. For a history of this term from a. 748—1880, see ante, Vol. XXII, pp. 363-365.——Epd.
immense loss of life on our side; for a very small party, armed with rifles and stationed in the jungle opposite each boom, could have picked off every European whilst removing the trees and without the loss of a man on their side.

"During the absence of the boats, numbers of the pirates who had escaped in the action but were not aware of our still occupying the river, were cut off by the Dyak boats in attempting to ascend the Srebus, and I then had an opportunity of witnessing the operation of preserving the heads. The Dyaks, having killed their enemy, immediately cut off his head with a fiendish yell; they then scoop out the brains and suspend the head from a rod of bamboo . . . they then light a slow fire underneath, and the smoke ascends through the neck and penetrates the head, thoroughly drying the interior. It is then placed in a basket of very open work and carried suspended from the belt of the captor—more highly prized than ornaments of gold or precious stones. On one occasion I saw five heads on a platform, undergoing the operation, and within two feet of it the Dyaks were coolly cooking some wild boar chops for their dinner and inhaling the mingled perfume of baked human and hog's flesh.

"We now proceeded up the River Rejang, the finest and most interesting of the rivers of the north-eastern coast of Borneo. One glance at the town [either Sariki or Siba] speaks volumes as to the state of this unhappy country and proclaims the lawless character of one party and the insecurity of the other. The houses inhabited by the Milanos [Milansau, Malanau], a race distinct from the Malay and Dyak, are of immense length, some of them containing 300 people. They are erected on pillars of wood, about 35 feet in height, and are only approachable by ladders, which can be drawn up on the appearance of an enemy: each thus forms in itself a perfect fortress. An immense gallery, protected by a musket proof breastwork, runs the entire length of the building; this is used as the common sitting room, and here are collected offensive and defensive weapons of all sorts—brass guns, rifles, spears, shields, parangs, sumpitans, stones &c. and they also pour boiling water and oil on the heads of assailants. I was informed that on the erection of one of these houses, a deep hole was sunk for the corner pillar, and in this (as we place a bottle containing a coin and engraved inscription) they, koreko referens, lowered an unfortunate girl, decked out in all her finery, and then dropped the enormous post on her head, crushing her to atoms, and yet they are now a fine, intelligent race and cordially unite with the Rajah for the suppression of piracy.

"Having obtained a sufficient supply of fire-wood we proceeded up the River Rejang to the Kenowit, up which river the boats advanced about forty miles, and, surprising the enemy, plundered and destroyed the villages and took several prisoners. The boats having returned, we pressed on to the town of Kenowit [on the Rejang river], on the inhabitants of which the Rajah imposed a heavy fine, with a threat of visiting them with his heaviest displeasure in the event of their violating the pledge they now gave to abandon their piratical habits. All prisoners were released with instructions to inform their respective tribes not only that the Rajah had no wish to injure them, but that he would most willingly afford them all the protection in his power if they would only abandon piracy and live at peace with their neighbours.

"We returned to Sarawak on the 24th August, well pleased with the extraordinary success of our expedition. We had destroyed the most powerful piratical tribe on the Coast.

---

under the most unequivocal circumstances of piracy, having intercepted them returning from a desperate foray, with their hands red with the slaughter of innocent and unsuspecting traders—thus inflicting a lesson which will be remembered on the Coast for ages. We destroyed the fortified towns and crippled the resources of several other tribes; at the same time proving to them by sparing and ultimately liberating the prisoners, that we were not actuated by that thirst for blood, which is the usual motive for Dyak warfare. I feel great pleasure in stating that the Rajah was enabled to control our Dyak allies and induce them (much as they have suffered) to spare the women, children and unrestrained men, who, instead of being butchered in cold blood and beheaded, were now, for the first time, brought in as prisoners—a grand step towards the ultimate adoption of the customs of civilized warfare, which had hitherto been invariably outraged.

I remain &c., &c.,

Samuk, August 29th 1849.

XXIX.

A BRUSH WITH CHINESE RIVER-PIRATES, 1851.

The increase of European shipping and the regular appearance of European warships in the China Seas put an end to open piracy in those quarters in the beginning of the nineteenth century, but the mouths of the great rivers were long after infested by a class of river-pirates, who preyed upon the traffic and carried off people for ransom. These men always acted in connection with confederates on shore and—especially in their attacks upon Europeans—it was suspected with the connivance of the Chinese authorities.

Extract from a private letter.

"On the 26th March, Captain Hely, commanding Messrs Dent and Co's Store-ship the Amita, stationed in the River Min, whilst proceeding up the river to the town of Foochow, in two China boats, with eight men, was attacked by six large piratical junk's, carrying forty to sixty men each. They commenced a heavy fire and made sail upon him, evidently with the view of running his boats down, but a well-directed and continued fire from a large swivel duck-gun and muskets by his crews disinclined the pirates to close quarters, though their boarding-nettings were tried up eight feet high. The boat following his own was, however, intercepted by one of the junk's and one of the Lascars was knocked overboard. The hazard was great, but there was no other means of saving the man's life. He ranged his boat right athwart the junk's bow, gave her a raking and engaged in hand-to-hand fighting with the crew.

The struggle was desperate; beside the continual fire of small arms, they heaved stones and stink-pots upon his crew, and wrested the pikes from two of his men's hands. The Lascar was, however, picked up alive, a tow line was made fast to the second boat and Captain Hely had the triumph of saving both his boats away.

\[\text{Fu-chau-fu, capital and port of Fuh-kien Province.}\]

\[\text{Probably the same thing as the 300 pots of powder, which were amongst the ammunition that Faria provided for his fight with Coja Acein. See ante, Vol. XLVIII, p. 163.}\]
and proceeding on his course, the light wind giving him a superiority over the heavy junk. Considering the immense force of the pirates and the time the engagement lasted (half an hour), the escape of Captain Hely and his small crew was miraculous. Seven were however severely wounded whilst alongside the junk by spears and pikes; he himself was struck on the head by a stone, carrying away his cap but without injuring him, and one man only escaped unhurt. Captain Hely had no doubt that the pirates had received timely notice of his intention to visit Foochow, for the shore was crowded with spectators, watching the contest and cheering on the pirates. His fire proved effective, for the Chinese authorities, who were taking measures to secure the pirates, informed him that five were killed and forty wounded, many of them severely.”

THE HISTORY OF THE NIZAM SHAHI KINGS OF AHMADNAGAR.

By Lieut.-Colonel T. W. Haig, C.S.I., C.M.G., C.B.E.

(Continued from p. 108.)

XIV.—AN ACCOUNT OF THE CAPTURE OF THE FORTRESS OF DAULATABAD.

It has already been mentioned that Ahmad Nizam Shah had determined to send an army every year into the Daulatabad district to plunder and ravage the country, to collect all the grain and all agricultural produce and to carry off what was moveable, and burn the rest, in order that the garrison might be prevented from carrying into the fort a single grain which would help to enable to sustain life. These orders were carried out, and every year, at the reaping time and harvest, an army used to invade that country and carry off all that they could, burning the houses and the dwellings of the cultivators and inhabitants.

When some years had passed in this manner, most of the cultivators and labourers of that country were reduced to sore straits by want of food and by the attacks of the royal army, and every day bands of men from the fort, guided by divine grace into the path of wisdom, truth, and righteousness, used to desert the fort and come to the royal court, where their affairs were bettered and they lived free from the anxieties of the times under the king’s protection. Those misguided fools who turned their backs on the good fortune and sought not refuge in the royal court had their recompense from the world-consuming wind of the king’s wrath, and those who were shut up in the fortress were reduced to the greatest straits. At length these turbulent men were compelled to go in a body to the originator of all the strife, Malik Sharaf-ud-din, and to represent to him that it was perfectly evident and clear to all that the heir of the kingdom and of the race of Bahman was none other than Ahmad Nizam Shah, who was too powerful to be resisted. They urged Sharaf-ud-din to submit, in order that their lives and the lives of their wives and children might be safe. Malik Sharaf-ud-din was obstinate and blind to his own interests and would not listen to their advice. Just now, however, Malik Sharaf-ud-din was overtaken by fate, and died, and immediately after his death all the inhabitants of the fortress, rich and poor, great and small, young and old, came forth and submitted to the king, surrendering to him the keys, and beseeching him to spare their lives. The king pardoned their offences, and the fortress of Daulatabad, like
all the other forts which he had attacked, fell into his hands, and he appointed one of his officers to command it. 60

XV.—AN ACCOUNT OF AḥMAD NiẓāM ShāḤ OF BURHĀNpur, AND HIS FIGHTING WITH MAḤMūD ShāḤ OF GUJĀRĀT, AND THE MANNER IN WHICH THE AFFAIR TERMINATED.

Historians relate that during the reign of Aḥmad ShāḤ Bahā Khá, ’Adī ShāḤ Fārūqī, who was the ruler of Burhānpur and its dependencies, died, and according to his will his son Maḥmūd ShāḤ succeeded him.

In those days the ruler of the country of Gujarāt and the coasts of Somnāt was Sulṭān Maḥmūd Bekara, who is also well known as Maḥmūd Nikī, and the rulers of Burhānpur by reason of their nearness to their powerful neighbour and their own weakness were always very submissive to the rulers of Gujarāt. Sulṭān Maḥmūd of Gujarāt was puffed up with pride in his own power and greatness and in the strength of his army, and had strayed far from the path of justice and equity. When he heard that the ruler of Burhānpur had entitled himself Maḥmūd ShāḤ, he was intensely enraged and, summoning his amirs and the officers of his army for the purpose of taking counsel with them in this matter, said to them: ‘What power has the Burhānpurī to make himself the partner of our name and title, or to even himself with us?’ At this time the brother of Maḥmūd ShāḤ of Burhānpur sent letters to the Sulṭān of Gujarāt, professing obedience to him, and securing his friendship by promising that when the army of Gujarāt invaded Khāndesh he would cause the fortress of Asir to be surrendered to it without a blow being struck. Sulṭān Maḥmūd was delighted with this letter and set out with a very numerous army for Asir and Burhānpur. When

60 This is a very cursory account of the capture of Daumlābād, which held out for a long time. Shāraf-ud-dīn took advantage of an invasion of Khāndesh by Sulṭān Maḥmūd Bekara of Gujarāt to send a message to Sulṭān Maḥmūd, imploring his aid against Aḥmad NiẓāM ShāḤ and promising, if it were given, to hold Daumlābād as a dependency of Gujarāt, to remit annual tribute and to cause the Khāndeshī to be received in the name of Sulṭān Maḥmūd. The first message had no result, but on receiving the second, Sulṭān Maḥmūd marched towards the Dakkan and Aḥmad NiẓāM ShāḤ raised the siege and retired to Aḥmādnagar. Shāraf-ud-dīn, in gratitude for this relief, caused the Khāndeshī to be received in the mosque of Quṭb-ud-dīn Mubārak ShāḤ in the name of Sulṭān Maḥmūd, and Sulṭān Maḥmūd returned to Gujarāt. After his retreat Aḥmad NiẓāM ShāḤ hastened, by forced marches, to Daumlābād and the Marāṭhā garrison, who resented Shāraf-ud-dīn’s recognition of the sovereignty of the king of Gujarāt, sent messages assuring him of their loyalty and fidelity. Shāraf-ud-dīn discovered the correspondence and is said in one account to have fallen sick of grief and vexation and to have died within five or six days, when the fort was surrendered to Aḥmad NiẓāM. Another account, given in the Mussulman-ul-Lughāt, Vol. III, attributes Shāraf-ud-dīn’s death, with greater probability, to poison.

61 There was never a Maḥmūd ShāḤ of Khāndesh, and ’Adī Khá Khá II, here described as ’Adī ShāḤ Fārūqī, died on the 28th September, 1601, and was succeeded by his brother Dā’ūd Khá Khá, here described as “Maḥmūd ShāḤ of Burhānpur.” The whole of this account of Aḥmad’s expedition to Khāndesh appears to be a fabrication and its details will be discussed later. What really happened was that Quṭb-ud-dīn, one of the worthless of Dā’ūd Khá Khá’s amirs, invited Aḥmad NiẓāM ShāḤ to assist him in deposing Dā’ūd Khá Khá. Aḥmad, who had at his court a scion of the Fārūqī house of Khāndesh, one Amīn Khá Khá, responded to the appeal and invaded Khāndesh in 1604 with the object of placing his protégé on the throne. Dā’ūd Khá Khá appealed to Mūsā-ud-dīn ShāḤ of Mālwā for assistance and he sent an army under Iḏāhīn, one of his amirs, which expelled Aḥmad NiẓāM ShāḤ and his protégé from Khāndesh. Aḥmad’s campaign against Maḥmūd of Gujarāt came later and brought him no more credit than this one. (See Frishte, passim, and An Arabic History of Gujarāt.)
Maḥmūd Shāh heard of the approach of Sulṭān Maḥmūd, he was much alarmed, for he knew that he was not strong enough to meet the army of Gujarāt, and he therefore appealed for help to Ahmad Niẓām Shāh, and sent him a letter in which he complained of the high-handed conduct of Sulṭān Maḥmūd, and besought him to come to his assistance.53

Ahmad Niẓām Shāh, who was ever ready to help the weak and oppressed, when he read Maḥmūd Shāh’s letter, started at once with his army for Burhānpūr, and refrained from consulting Masnad-i-‘Ali Naṣīr-ul-Mulk Gujarātī, lest he should be opposed to an expedition against the king of his native land. Naṣīr-ul-Mulk, who was accustomed to being consulted in all matters of importance, obtained information of Ahmad’s intention, but although he adduced clear proofs of the danger of entering into this quarrel, the king would not follow his advice.

Ahmad Niẓām Shāh marched to Burhānpūr and encamped there, but Masnad-i-ʿAli was still endeavouring to allay the strife and was ever revolving plans to this end, in order that nothing might happen which should lead to the ruin of the country, or the harassing of the king’s subjects, for the enemy’s army was twice as strong as that of ‘Ahmad Niẓām Shāh, and victory and defeat depended upon the will of the Almighty. It occurred to him that it would be well to open a correspondence with those who were nearest to the person of Sulṭān Maḥmūd of Gujarāt and by this means to try to pour water on the fire of strife which was about to burst into flame. Accordingly he sent a letter to one of his intimate friends who was in the confidence of Sulṭān Maḥmūd, saying that although, in accordance with the decrees of fate, he was in the service of Ahmad Niẓām Shāh, yet he did not forget that Gujarāt was his birth-place, and was a sincere well-wisher of Sulṭān Maḥmūd, and made bold to represent what he thought was for his interest. He wondered, he said, that the person to whom he was writing, who was a wise and prudent man, should have arranged, and was continuing to arrange, that Sulṭān Maḥmūd should engage personally in an expedition concerning so trivial a matter as the affair of Maḥmūd Shāh (of Burhānpūr) whose rank was no more than equivalent to that of one of Sulṭān Maḥmūd’s amirs, especially when Ahmad Niẓām Shāh had come to the assistance of the Burhānpūrī with his powerful army. He said that the Gujarātīs could hardly be aware of the strength and valour of the army of the Dakan, who knew no fear at the prospect of a fight, but regarded it rather as others

53 Major King, in a note to his preface to The History of the Bahmani Dynasty, says that Firishta never mentions the Burhān-i-Ma’dīr, unless he alludes to it under some other title, and adds, “Professional jealousy probably accounts for this.”

Firishta does mention this work, but under another title. In connection with this story of Ahmad Niẓām Shāh’s victory over Maḥmūd of Gujarāt he writes (ii, 189): “In the Waqāt-i-Nizāmshāhkhāyāt which Sayyid ‘All Sāmānī was writing in the reign of Burhān Niẓām Shāh II and which he did not live to finish, it is written (and the responsibility for the account is on him who wrote it), etc.”

Then follows a narrative based on the account here given but connected with Ahmad’s siege of Daulatbād. The story is not exactly copied, as Firishta’s habit is, but corresponds fairly with its original. Firishta concludes the passage with the following criticism, which can hardly be said to err on the side of severity.

“It would appear from the internal evidence supplied by this account that it has been hastily compiled or copied and that no attempt has been made to comment on it. But God know the truth!”

Firishta’s weakness was not professional jealousy, but shameless plagiarism.

It may be added that Niẓām-ud-dīn Ahmad, author of the Taṣbīḥ-i-Akbārī, probably refers to the Burhān-i-Ma’dīr in the following remark appended to his extremely brief notice of the reign of Ahmad Niẓām Shāh:

“As I have seen a long work on the history of this dynasty I have confined myself to this brief account.”
would a social banquet. Victory, he said, depended on the will of God, and it behoved the Gujaräxis to consider carefully what was likely to be the upshot of this affair. Should the victory be theirs, people would say that Sulään Mahmûd had come with an overwhelming army and had overpowered a small force; but if, on the other hand, the reverse should be the case, Sulään Mahmûd's dynasty would incur a disgrace which would never be wiped out till the end of time.

Before the minister's letter reached the Gujaräxis it fortunately happened that Ahmad Niğâm Shâh was able to devise a scheme for throwing the army of the enemy into confusion. The scheme was as follows. The king called a mahaut to him in private and ordered him to make his way into Sulään Mahmûd's camp and there make friends with the mahaut who had the charge of Birî Sâl, the largest and fiercest of all Sulään Mahmûd's elephants, and to persuade him by stimulating his avarice to loose Birî Sâl in the camp in the middle of the night, when Sulään Mahmûd and his army were all asleep, and thus throw the camp into confusion, when the two mahauts would have an excellent opportunity of plundering and of dividing their spoil one with the other. Ahmad Niğâm Shâh also arranged to send on that night with the mahaut a force of rocketeers and musketeers, who were to conceal themselves in the vicinity of the camp and listen for the sound of the confusion in the enemy's camp, on hearing which they were to come forth and fire their rockets and muskets into the camp, at the same time making a fearful noise with drums and trumpets.

Ahmad Niğâm Shâh's device succeeded. The mahaut and the force of infantry set out for the enemy's camp and the infantry lay in ambush, waiting for the mahaut to fulfil his promise. The mahaut, in accordance with his undertaking, made friends with Sulään Mahmûd's mahaut, and then succeeded in persuading him to fall in with his proposals. In the middle of that dark night Birî Sâl's mahaut unfastened his leg chains and loosed the elephant in the camp. The elephant ran about trumpeting hither and thither in the camp, killing people as he went, and shouts of confusion arose from the camp of the Gujaräxis. Ahmad Niğâm Shâh's infantry, who were awaiting this sound, sprang from their ambush with shouts, and with rockets and muskets ready. When the Gujaräxis saw that disaster was looming upon them from all directions and heard shouts from every side, they were convinced that Niğâm Shâh had made a night attack on their camp, but since they could not see their enemy and did not know which way to turn in order to face him, flight was the only choice left for them, and Sulään Mahmûd and his army left their camp and fled in disorder, and did not check their flight until they had covered a distance of nearly twenty miles.

The next day spies announced to Ahmad Niğâm Shâh the joyful news of the defeat of the enemy. And Ahmad Niğâm Shâh marched from Burhânpur and occupied the camp which Sulään Mahmûd had left.

When Sulään Mahmûd learnt that the disgraceful flight of his army had been occasioned by nothing which should have caused alarm, he was overwhelmed with shame. At this moment the letter of Masmâd-i-ʿAli Naṣīr-ul-Mulk reached his camp and was shown to him. As the Sultan already repented of his coming in person, he confirmed the truth of what Naṣīr-ul-Mulk had written and said that what he had written had actually come to pass. He ordered his ministers to write to Naṣīr-ul-Mulk and say that if he would persuade his master to retreat, the army of Gujarâst would return to its own country. A letter in these terms was sent to Naṣīr-ul-Mulk and he showed it to Ahmad Niğâm Shâh. But Ahmad Niğâm Shâh
said that he would not budge until Sulţān Maḥmūd had set out for his own country, for if he did, his retreat would be attributed to cowardice and would be a confession of weakness. A long correspondence on this subject ensued between the Dakani and the Gujarātīs and at last Masnad-i-‘Ālī wrote to the Gujarātīs to say that his purpose was to compose and not to foment the strife, and suggesting that the Gujarātīs should first march two stages towards Idrār, when the Dakani would march two stages towards ‘Imād-ul-Mulk’s country and both armies could then retire to their own countries. This proposal was accepted and the Gujarātīs first marched towards Idrār, and the Dakani then marched towards ‘Imād-ul-Mulk’s country, and Ahmad Niẓām Shāh then returned to his capital.53

The king of Burhānpūr having thus, by Ahmad Niẓām Shāh’s help, been freed from his powerful enemy, was firmly established on his throne in independence, but for the rest of his life he was under an obligation to Ahmad Niẓām Shāh and always deferred to him. Afterwards, when Burhān Niẓām Shāh was on the throne and strife was stirred up between him and Bahādur Shāh of Gujarāt by ‘Imād-ul-Mulk, Maḥmūd Shāh of Burhānpūr, remembering his obligation to Ahmad Niẓām Shāh, used his best endeavours to compose the quarrel, and succeeded in converting the enmity of the disputants into friendship, as will be related in the account of Burhān Niẓām Shāh’s reign.

XVI.—AN ACCOUNT OF THE BUILDING OF THE FORT OF AHMADNAGAR.

After the conquest of Daulatāhād, the king determined to erect a fort in his capital of Ahmadnagar, which he had built. Surveyors and architects laid it out in an auspicious hour, and masons and overseers set to work to carry out the king’s orders. In a short time this strong lofty fortress was completed, and was surrounded by a deep and wide ditch. The slope which formed a berm between the wall and the ditch was scarped, and the approach to the fort, even should the ditch be crossed, was thus rendered inaccessible. In the interior of the fort dwelling houses and other buildings were built, gardens were laid out and planted with fruit trees, flower gardens were planted with herbs and flowering plants, and

53 This imaginary account of a victory gained over Maḥmūd Shāh of Gujarāt is apparently intended to do duty for the history of Ahmad Niẓām Shāh’s two expeditions into Khāndesh. The result of the first, undertaken in 1294, has been given in note 31. The course of the second was briefly as follows:—Dā’ud Khān died on the 29th August, 1608, and his son Ghāzni Khān was raised to the throne but was poisoned after a reign of ten years. With him the direct line of the Fārūqī house expired and the two parties were now formed in Khāndesh, one under Ḥisam-ud-dīn, already mentioned, supporting ‘Ālam Khān, Ahmad Niẓām Shāh’s candidate, and the other under Malik Sa’dān, another trium, supporting another ‘Ālam Khān, the candidate of Maḥmūd Shāh of Gujarāt. The latter ‘Ālam Khān, who may be called, for distinction, ‘Ādil Khān, the title which he afterwards assumed, was a descendant in the fourth generation of Ḥasan, Malik Iltīkār, younger son of Malik Rājā (1382–1399) the founder of the Fārūqī dynasty. Malik Iltīkār had taken refuge in Gujarāt from his elder brother, Nāṣir Khān, and his descendants had lived in that country and had intermarried with the royal family. Maḥmūd Shāh of Gujarāt had promised to place ‘Ādil Khān on the throne of Khāndesh and ‘Ādil Khān II had adopted him as his heir.

Ahmad Niẓām Shāh, invited by Ḥisam-ud-dīn, was first in the field and marched to Burhānpūr, where his candidate, ‘Ālam Khān, was proclaimed. ‘Ālam-ud-dīn Maḥmūd Shāh of Bērār also marched to assist him. Meanwhile Maḥmūd Shāh, with ‘Ādil Khān, invaded Khāndesh from the west and captured Thānān. Ahmad Niẓām Shāh with his protégé and ‘Ādil Khān was enthroned in Thānān. Ahmad Niẓām Shāh, who had now reached the frontier of his own territories, wrote to Maḥmūd Shāh suggesting that his protégé, ‘Ālam Khān, should inherit at least a share of the territories of Khāndesh, but unfortunately for him wrote as one king to another. Maḥmūd was much enraged and would not deign to answer the letter, but gave the unfortunate envoy a message for his master. How dared the son of a slave of the Bahmani kings, he said, write as though he were a king? A humble petition was the only communication that a slave should address to a king. Let Ahmad see that he did not repeat such insolence, or it would be the worse for him. The unfortunate Ahmad Niẓām Shāh retired, humiliated and mortified, to Ahmadnagar, taking his protégé with him.

Sayyid ‘Ali’s unwillingness to give a faithful account of such an event is comprehensible.
fine palaces with arches and domed roofs were erected with coloured and latticed walls, like the mirror of the satin sky, red and yellow, with floors paved with turquoise and lapis lazuli, their courts were like the gardens and their fountains like the springs of paradise.

After the completion of the fort, the king made it the seat of his government and took up his residence there.

XVII.—AN ACCOUNT OF THE DEATH OF NASR-UL-MULK GUJARATI.

THE KING'S PRIME MINISTER, AND OF THE APPOINTMENT OF MIYAN CHANDU (MUHAMMAL KHAN) ONE OF THE KING'S OLD SERVANTS IN HIS PLACE.

After these events the king's faithful, able, and prudent minister, Nasr-ul-Mulk, died, and he bade farewell to his ministry, and betook himself to the neighbourhood of the mercy of a forgiving God. The king was much grieved by the loss of his minister, but as the administration of the kingdom had to be carried on, he appointed to the vacant office of minister, Miyān Chandu, one of his old servants, who had great wisdom and intellectual power and was passably well fitted for the post and moderately generous. He gave him the title of Mukammal Khan, and conferred other favours upon him, and entrusted to him the care of his army and his subjects.

Some historians have said that Ahmad Nižām Shāh predeceased Malik Nasr-ul-Mulk Gujarati, who poisoned him in a quid of betel and was executed for his treason, but the story which has been told above is nearer to the truth. But God knows the truth of the matter.

XVIII.—AN ACCOUNT OF THE DEATH OF SULTAN AHMAD NIŽĀM ShĀH.

Death comes alike to prince and peasant, and Sultan Ahmad Bahri, after he had reigned for nineteen years and four months, or, according to another account, for twelve years, and had waged holy wars and had taken most of the forts and districts of the Dakhân from the idolaters and turbulent men, and made them his own, and had destroyed the temples and places of worship of the accursed infidels and the irreligious polytheists, came at last to the end of his days. The signs of death appeared in his face and the hand of sickness was heavy upon him. His amirs and officers of State, but especially Mukammal Khan, feared that his spirit would take flight from his sufferings and earnestly prayed that God would allow them to die rather than that they should behold the sufferings of their king. Although skilful physicians treated him with all the skill at their command, nothing was of any avail, and the king's power declined day by day.

When the king became aware of the approach of death, he withdrew from desire of worldly kingdom and sent for the prince, Al Mu'ayyad Min'andilāh Abūl Muqaffar Burhān Nižām Shāh, who was then seven years of age, and gave him his counsel.

After that he sent for the amirs and officers of State, and conjured them all to be faithful and obedient to the prince. All the amirs and officers of State, the rest of the army and the subjects of the king promised to be obedient to the prince and swore allegiance to him.

When the king had given his parting instructions to all about him, he died, and great grief fell on the amirs, the army, and all the kingdom. The amirs and the officers of the army made all preparations for the funeral and the king was buried in the tomb which he had built for himself in the environs of Ahmadnagar, in the garden known as the Rausah.54

This calamity happened in A.H. 911 (A.D. 1505-06). 55

(To be continued.)

54 Probably Rausah, in the hills above Daulatabad, and not a garden in the environs of Ahmadnagar.

55 Firishta says (ii, 128) that Ahmad died in A.H. 914 (A.D. 1508-09). Firishta's date must be accepted as correct, for Ahmad certainly invaded Khandesh in 1508, retiring early in 1509, and there is other evidence in favour of the later date. Perhaps Sayyid 'Ali intentionally antedated his death. On page 105 he places Burhan's accession, and consequently Ahmad's death, in A.H. 918 (A.D. 1512-13.)
INTER-STATE RELATIONS IN ANCIENT INDIA.

BY NARENDRA NATH LAW, M.A., B.L., P.R. S.; CALCUTTA.

Prefatory Remarks.

The subject of ancient inter-state relations is evidently very wide, including not merely those inter-state relations that were regulated by inter-state laws corresponding to the international laws of later times, but also those that fell outside the said laws. Light is here attempted to be thrown on the two fields of regulated and unregulated relations in order that a comparative estimate may be made of each in contrast with the other. The recondite nature of the task requires among others a thorough study of the latter half of the Kauśīya Arthaśāstra which happens to be the toughest portion of the whole work. Its English translation has, I must admit with gratitude to its learned translator, helped me a good deal in overcoming many difficulties within a shorter time than I could have done without its aid; but at the same time I have to mention, without the least intention of detracting from the credit of the very useful pioneering performance of the said translator, that there have been very many occasions for me in the course of my research to differ from the translation. A critical perusal of the said latter half of the Kauśīya was undertaken with the object that generalizations made from one of its parts should not run the risk of being contradicted by another. The subject-matter of this portion of the Kauśīya is hardly met with in any other Sanskrit text that I know of with the same elaboration of details, and hence, references to other Sanskrit works in my treatment of the subject are few and far between. It must not however be supposed that I have ignored the evidence available from other quarters, whether law-codes, epics, purāṇas, dramas, codes of polity or documents of any other description. On the other hand, I have always kept my mind on a keen look out for all kinds of evidence on my subject and would welcome them whenever anything fresh comes or is brought within my reach.

The task of refutation of certain opinions rendered current by previous writers who had occasion to touch the subject of “statal circle,” and such other topics pertaining to the present subject, rendered my task doubly difficult. These opinions have become deep-rooted not only by the length of time they have been obtaining currency but also on account of the eminence of one or two of the writers who have lent them their support. In the facility with which the finished products of research are perused, we are apt to lose sight of the great difficulties besetting the stemming of current opinions or the elicitation of facts and generalizations from a confusing mass of evidence, and hence I make no apology for pointing out the following:—

(1) The various states forming the maṇḍala (statal circle) have not hitherto been regarded as a collocation, general in character and applicable to the case of any state whatsoever, surrounded by the rest with mutual feelings of friendliness or enmity issuing from the principle of spacial adjacency.

(2) The madhyama state has been hitherto rendered as “intermediary,” signifying the misconception about its real character.

(3) The state called uḍāśina has also been wrongly rendered as “neutral” as the result of a mistaken notion about its position and function in the statal circle.

(4) A yādavīya is not the same as ari, which again is not identical with śatri. Though the differences among them are not clear in the Kāmendaktivya, they do exist and appear
from the *Kauśītya*. In the English translation of the latter, the differences have not been clearly kept in view.

(5) The term *sandhi* bears in reality various meanings and cannot be rendered by the expression "treaty of peace." Even in the *Kāmandaśīya*, the term has been in one place used in the sense of *alliance*. In the English translation, the various meanings have been missed, giving rise to confusion in several chapters.

(6) The *daydopanata* and the *daydopandysf* are totally different individuals and the confusion between them appearing in the English translation should be guarded against.

(7) One is led to suppose from the English translation that a state could be attacked by another state without any previous provocation. I have attempted to prove this supposition to be baseless.

Section I.

(A). It was usual with the ancient Hindu writers on Polity to commence their discourses on inter-state relations by imagining a number of states with special names, and inclined to one another as friends or enemies, owing to their mutual *special* correlation. The adjacency of one state to another, which is obviously a fruitful source of rivalry and differences, was taken to be the determining factor of their mutual attitude. If A be the state with which we start our discourse and B its immediate neighbour, it would be allowable to infer that ordinarily they would be hostile to each other. The same inference applies to A's relation to any other of the states which, like B, may happen to be its immediate neighbour. The territories of the first neighbours of A therefore constitute a zone of natural enmity towards A. Not so the zone of second neighbours indicated by C. The C's being the immediate neighbours of the B's are hostile to them and therefore friendly to A. The second zone therefore is one of natural friendliness towards A. For the present purpose, we need take into consideration A the central state (*vijñatśhu*) and one state from each of the zones, keeping their adjacency intact (Diagram I). Let us put down in a separate diagram this set of A B C, and by applying the aforesaid determiner of friendliness and enmity, add D, E and F to their numbers (Diagram II). D being in the second zone from B would be its friend, and E and F, for the same reason, friendly to C and D respectively. We can now name the states as follows:

1. A—Central state (*vijñatśhu*);
2. B—Enemy (i.e. of A) [ari];
3. C—Friend (i.e. of A) [mitra];
4. D—B's friend i.e. enemy's friend (ari-mitra).

---

1 "Tasya samantaṇa maṇḍalabhūtvā bhūṃ-santārā ari-prakṛtīb—*Kauśītya*, Bk. VI, ch. 2, p. 203. Within this zone, congenital enemies (ākṣara) are created by common lineage, and acquired enemies (kṛitiva) by actual opposition or causing of opposition (*Kauśītya*, Bk. VI, ch. 2, p. 203).

2 "Tathā-dvīpa bhūṃ-yantārā mitra-prakṛtīb—*Ibid*. Within this zone also, congenital and acquired friends are distinguished (*Kauśītya*, Bk. VI, ch. 2, p. 203).

3 *Vijñatśhu* literally means a state bent on conquests. But as this desire is not the peculiar characteristic of A alone, it is better to attach to the term some colourless signification and to render it accordingly.
(5) E = C's friend i.e. friend's friend (mitra-mitra);

(6) F = D's friend i.e. friend of the enemy's friend (ari-mitra-mitra).

It will be seen that C, D, E, F are equally divided among themselves as adherents of A and B; for in the ultimate analysis, C and E would be on the side of A, and D and F on that of B (Diagram III). It was not generally thought necessary to add to the chain of friendly and hostile states any more, for inter-state relations were not considered generally to bring into operation the active friendliness or hostility of a larger number of states in a particular direction.

In the opposite direction, however, it would be necessary to take into account a number of states, for the reason that if the causa belli occurs between A and B, and they be the actual belligerents, A may be attacked and helped from behind in the same way as we have supposed in B’s case. Four states are therefore set down in the rear, their attitude towards the central state being determined by the usual principle. These states are called

(7) A = Rear-enemy (pāshki-grāha (lit. "heel-catcher");

(8) B = Rear-friend (ākranda);

(9) C = Rear-enemy’s friend (pārśški-grāhāpāra);

(10) D = Rear-friend’s friend (ākrandaśādara).

Thus the two belligerents A and B have each two adherents in front and two in the rear, the total number including the belligerents themselves being ten (Diagram IV).

The reasons for supposing the belligerents to be as adjacent states and not belonging to separated “zones” are perhaps that (1) adjacency was the most prolific source of jealousy and enmity, and (2) the waging of war between two distant states with one or more territories separating them rendered the outbreak of war a difficult matter until the interposing states were persuaded to allow them a free passage of troops and all other necessaries of war through their territories. This was rendered difficult by the fact that the states of the first and every alternate zone of each of them are naturally hostile to it, and should they be persuaded by money or otherwise to admit such passage, severance of supply and communication might arise at any moment; for the hostile states could not be fully trusted, and their temporary accession to a demand might ultimately prove to be a trap for the hazarding parties. (3) If however the hazarding party was very powerful, it might subdue first the interposing states and reach its distant enemy; but such cases must be rare. (4) If the interposing hostile states were won over by money or prospect of material gains to fight on the side of the attacking party against its distant enemy, the situation would then be reduced to one of adjacency of the central state and its enemy, alliance having extended the former’s range of hostile activities to the latter’s door. In these circumstances, it was reasonable to put down the belligerents as adjacent states and determine the mutual attitude of the surrounding territories by the application of the principle of adjacency as the cause of enmity, a principle that has not perhaps yet lost its force.
To the types of friendly and hostile states already named were added two more, viz., madhyama and uddhina. The former is situated within the first zone of both the central state and its enemy, and is therefore within the zone of enmity to each of them. But as expressed enmity to one of them results in friendliness to the other, none of them can consider madhyama as friend or foe until its word or action crystallizes its position. The texts lay down that it helps the central state and its enemy if allied, and can help or destroy each of them when not combined. From this issue the corollary that the strength of this state is much greater than that of either the central power or its enemy, but less than their conjoint resources⁴ (henceforth, we shall call it the medium power or state). The uddhina (henceforth to be termed super-power or state) is the strongest power we have to imagine within the first zone of the central state. It is laid down that the super-power takes a friendly attitude towards the three powers when combined, and can at pleasure help or destroy each of them when separate. This gives rise to the position that its strength is less than the combined strength of the central state, its enemy, and the medium state, and necessarily much greater than the individual power of each of them.⁵ (Diagram V shows the location of the medium and super-states.)

The madhyama is so called from its strength being intermediate between the central state or its enemy on the one hand, and uddhina on the other, the last being the strongest power within the first zone, within which therefore three states besides the central, of gradually higher strength, are contemplated, viz., enemy, medium, and super. This zone, as already stated, is the region where the chances of war between the central and other states are the greatest, and hence the location of two states of higher grades of strength within it, with their special names, to meet emergencies of reference to such powers in the discourse to follow.

⁴ The Kautilya (Bk. VI, ch. 2, p. 259) has this passage “ari-vijigishvah-bhūmy-anantāḥ saḥatayor═saṃgraha-samartho nigrāha ch═saḥatayor═madhyamaḥ.” The expression saḥatayor═saṃgraha-samartho is ambiguous inasmuch as it may be made to signify: (1) “can help the central state and its enemy both when allied with each other, and when not so allied”; (2) “can help the central state or its enemy when allied with other power or powers, and when not so allied.”

⁵ The first meaning gains support from the “Upādhyāya-nirpekhāsaṅkri” commentary (Bibl. Indias) on sarga 8, ṣāṅkra of the Kāmandakīya, and the second meaning from Śaṅkarāyana’s commentary on the same.

The merit of the first interpretation is that it indicates the measure of strength of the madhyama, while the second leaves it obscure. It may be objected that the central state and its enemy cannot easily be transformed into allies which this interpretation implies. To this the reply may be made that the alliance (though it is not an impossibility) is suggested only to show that, should they be allied, the madhyama single-handed will not dare offend them both simultaneously but rather will turn to help them. This indicates that the strength of the madhyama is greater than both that of the central state and its enemy but less than their combined resources. That such a measure of strength in the madhyama was intended to be conveyed by the political thinkers of yore may be inferred, not only from the name madhyama, but also from the location of a higher power than madhyama within the first zone of the central state. This power is called uddhina (literally “sitting on a height”) and is the highest power that we have to keep in view within the aforementioned first zone. With reference to the central state or its enemy on the one hand, and the uddhina on the other, the madhyama comes as a state of medium strength, and hence its name.

⁶ Kautilya (Bk. VI, ch. 2, p. 259) has “ari-vijigishu-madhyamānāḥ vahih prakāśhīhyo bhavattaraḥ.” The Bibl. Indias commentary on Kāmandakīya, sarga 8, ṣāṅkra 19, which uses the words “aṇgālīcāḥ-vahihḥ,” interprets “vahih” as “vijigishor-bhūmy-anantāḥ” i.e. “within the first zone of the central state.”
To render udāśina by “neutral” and madhyama by “mediatory,” i.e. as effecting a mediation between the central state and its enemy would be wide of the mark. The significance of their names has already been indicated. Mediation need not be the special work of a particular neighbour; nor neutrality the special attitude of one of the aforesaid eight states in the hostilities between the central power and its enemy.

A state was analysed by Hindu statesmen into seven constituents, viz., (1) Svāmi (sovereign), (2) Amātya (minister), (3) Janapada (territory with its subjects), (4) Durga (fort), (5) Kosa (treasure), (6) Danja (army) and (7) Mitra (ally).

To gauge the strength of a state, it is necessary to measure the individual excellence of each of the seven constituents. The first constituent, svāmi, signifies the person holding the supreme authority in a state, and in a monarchy the king personally. The excellences of these constituents as enumerated in the Kautilya, make it clear that svāmi signifies a king or any other person in supreme authority in a state, and not any constitutional body or bodies in which the sovereign-power may be vested. In the above scheme of twelve states, each has its svāmi; and if the central sovereign or his enemy wants to measure the allied strength of the other before taking any important political action, the aforesaid attitudes earmarked for the several states may well furnish a basis upon which to calculate roughly the number of his allies. The above calculation will have to be supplemented by gauging the strength of each state from the information previously collected as to the excellence of each of its first six constituents. The twelve states, with five inner constituents in each (the first constituent svāmi being merged in the state, and the seventh mitra in the allies among the twelve states) compose a maṇḍala (circle)—the twelve states being called the sovereign-elements (śrī-prakāśiti)—and the sixty constituents the resource-elements (dravya-prakāśiti), the total number of the two kinds of elements being seventy-two [12 + 12 x 5 = 72].

A general consensus of opinion among the Hindu publicists accepts the above composition of the statal circle as sufficient for the needs of reference to or delineation of the situations arising among the states in their mutual intercourse, the components of the circle with their defined correlation and special nomenclature furnishing the basal concepts and terminology for the performance of the aforesaid task with ease and precision.

There were various opinions inclining to an extension of the range of the statal circle or a different arrangement of its components for the same purpose e.g. (1) the 72 elements form four maṇḍalas of 18 elements each [the central state with a friend, and friend’s friend with inner constituents of each are equal to (3 + 15 = 18) elements composing the first maṇḍala;

---

6 Kautilya, Bk. VI, ch. i, p. 255.
7 The seventh constituent is here left out, as it has been taken into account already.
the second, third and fourth manḍalas being similarly formed by the enemy, medium, and super states with a friend and friend’s friend of each]. (2) The central state, enemy, friend, rear-enemy, medium, and super states form a circle of six sovereign-elements according to Puloman and Indra.

A list of other opinions is given below.

The excellences of the seven constituents are indicated in the Kauṭilya. (1) Those of the sovereign are:— (a) The inviting qualities (abhisamākā-guṇa)—of very high descent, favoured by destiny (daiva-sampāna), intelligent ( budhi-sampāna), steady (in weal or woe) (daiva-sampāna), seeing through people old in wisdom, virtuous, truthful, non-contradictory, grateful, having large aims, highly energetic, prompt, able to control neighbouring states, resolute, served by good men, and self-controlled.

(b) The intellectual qualities (prajñā-guṇa)—desiring to hear what is worth hearing, hearing it, understanding, retaining in memory, discriminating, deliberating, rejecting what does not appeal to reason, and adhering to what is regarded as best.

(c) The energetic qualities (udāha-guṇa)—courageous, justly indignant, quick, and industrious.

---

8 Kauṭīlya, Bk. VI, ch. 2, p. 259. This corresponds to Maya’s view in the Kāmandakīya, sara 8, sk. 20, calling the four principal states mula-prakṛiti (root-elements). The other elements would be called tākkhā-prakṛiti (branch-elements).

9 Kāmandakīya, VIII, 21. The resource-elements have not been calculated.

10 (a) Maya (second view): the usual 12 sovereign-elements with an ally and an enemy of each (12+12=24 sovereign-elements). Ibid., VIII, 23.

(b) Bṛihṣapati: 12 sovereign-elements+an enemy of central state+an enemy of enemy+a friend as well as an enemy of each of the latter two=12+11+1+4=18 sovereign-elements. Ibid., VIII, 26.

(c) Kasyapa (the wise): 18 sovereign-elements mentioned in (b)+5 resource-elements of each=18+5=23 (both kinds of elements). Ibid., VIII, 27.

(d) Viśālakṣa: 18 sovereign-elements+an ally and an enemy of each=18+5=23 sovereign-elements. Ibid., VIII, 28.

(e) 54 sovereign-elements mentioned in (d)+5 resource-elements of each=54+5=59=324 (both kinds of elements). Kāmandakīya, VIII, 29. [M. N. Dutt’s translation of this passage at p. 26 is incorrect. He refers to “three hundred and twenty-four monarchies” which is likely to mislead a reader.]

In this way, the varying speculations of the ancient Hindu publicists mention 14, 6, 36, 21, 48, 10, 60, 50, 2, and even 1 element (Ibid., VIII, 30—40), the generally accepted view as already pointed out being that of 12 sovereign-elements. (Ibid., VIII, 41).

11 Kauṭīlya, Bk. VI, ch. 1, pp. 255, 256.

12 I have consulted Śaṅkarāya’s commentary as well as that called “Upādhyāya-nirapekṣa-sāraṇī” on Ślokas 6—8 of the fourth sara of the Kāmandakīya in translating the above passages of the Kauṭīlya.

13 Cf. Kāmandakīya, IV, 22, 23 with the aforesaid commentaries.
(d) The personal qualities (ātma-sampati)—intelligent, bold in the refutation of arguments, with retentive memory, strong, towering, able to easily dissuade others from evil ways, proficient in arts, able to reward or punish for benefaction or injury in calamities, shrewd, far-sighted, able to utilize the advantages of time, place, and many efforts, resorting timely to alliance, vikrama, concession, restraint upon actions and compacts, and turning into account the weaknesses of enemies; reserved (saṃvrita), noble-minded (adina), treating jests with oblique looks and brow-beating, devoid of evil passions, anger, avarice, idleness, frivolity, haste, and wickedness; able, and talking with smile and dignity, and acting upon the advice of men old in wisdom.

(2) The excellences of ministers have been enumerated at the beginning, middle, and end of the Kautilya\textsuperscript{17}.

(3) The excellences of the janapada are: Extensive, self-sufficing, able to supply the needs of other states in their calamities, provided with sufficient means of protection and livelihood, (with subjects) hostile to inimical states, able to control the neighboring states, devoid of miry, stony, saline, uneven, thorny lands as well as forests with ferocious animals; lovely, containing agricultural lands, mines, timber and elephant-forests, inhabited by energetic people, provided with cattle, other animals, and well-protected pastures; not relying upon rain for irrigation purposes (i.e. containing irrigation works), possessing land and water-ways, large quantities of valuable and variegated articles of commerce, able to maintain an army and bear taxes, inhabited by laborious tillers of the soil and numerous intelligent (abdiṣṭa) owners of properties, and containing numerous people of lower castes and loyal and righteous citizens.

(4) The excellences of forts have been already mentioned\textsuperscript{18}.

(5) The excellences of the treasure are: Acquired honestly by the sovereign himself or his predecessor, containing large quantities of gold and silver, gold coins and varieties of big gems, and able to withstand long calamities and non-replenishment.

(6) The excellences of the army are: Hereditary service, permanent, devoted, contented, maintaining wife and children, not dissatisfied (āvisamuddita) in sojourns,

\textsuperscript{14} The next expression in the text is not intelligible.

\textsuperscript{15} Including prakāśa-yuddha (open fight), kāta-yuddha (treacherous fight) and āsāhā-yuddha (secret fight). See Kautilya, Bk. VII, ch. 6, p. 278.

\textsuperscript{16} "Abhirāsaya-jihma-bhrukutkāhāna" (implying abhirāsaya=abhirāsaya-vihāraya).

\textsuperscript{17} See Kautilya, Bk. I, (mahārāja-praśāda-pratiti), p. 15, and the next chapter, p. 17; the qualities of the caṇḍya lay scattered elsewhere in the work, the word referring to officials like samādhāraṇi and caṇḍikṣāri and not to maṇḍrīs (councillors) alone.

\textsuperscript{18} Kautilya, Bk. II (durva-vikādaṇa), p. 51; Bk. VII, ch. 10, pp. 292, 293.
irresistible everywhere, enduring, experienced in many battles, trained in all modes of fighting and skilful in the use of all sorts of weapons, never failing in adversity\(^{19}\) (sharing equally as they do the weal and woe of the king) and composed mostly of Kshattriyas.

(7) The excellences of a friendly state are:—Friendly from generation to generation, unchanging, devoted, liberal, and responding promptly to call for help.\(^{20}\)

(To be continued.)

MISCELLANEA.

"CONTRIBUTIONS TO THE STUDY OF THE ANCIENT GEOGRAPHY OF INDIA."

A NOTEWORTHY OMISSION.

Our thanks are due to Mr. Surendranath Majumdar Sastrī, M.A., for publishing in the Indian Antiquary of February 1919, a bibliography on the ancient geography of India. While Mr. Majumdar has included such books as Baha Nabin Chandra Das’s Geography of Asia Compiled from the Ramayana, which he himself styles as of ‘no importance,’ it is extremely regrettable that he has omitted from the list by far the most important contribution on the subject made by an Indian. We cannot point to a more devoted scholar in the field of Sanskrit research than the late Mr. Anundoram Baroosh, B.A., I.C.S., Barrister-at-Law, of Asam. His English-Sanskrit Dictionary written in the late ‘seventies was for a long time the only book of that type by an Indian. To the third volume of this Dictionary Mr. Baroosh prefixed a long introduction on "The Ancient Geography of India" and an appendix of "Geographical names rendered in Sanskrit," along with Sir Alexander Cunningham’s monumental work on the subject. Mr. Baroosh’s is regarded as the most valuable; and I have seen editors and commentators of Sanskrit texts quote Mr. Baroosh’s authority in tracing the identity of places mentioned in our ancient classics. The well-known editor of Sanskrit Classics, Rai Sahib Bidhu Bhushan Goswami, M.A., has added a summary of Mr. Baroosh’s "Ancient Geography of India" to his excellent edition of Kalidasa’s Meghadutam. Prof. Max Müller has said about Mr. Baroosh’s work in the Academy of the 13th August 1881:—"Mr. Baroosh has added to the third volume of his English-Sanskrit Dictionary a long and important introduction on the ‘Ancient Geography of India,’ and an appendix of ‘Geographical names rendered in Sanskrit’ both of which will be gratefully received by Sanskrit scholars in Europe." Prof. Cecil Bendall has remarked in Tribuner’s Record No. 245, 1889:—"Not content with commencing such a magnum opus as a dictionary, he added to its second and third volumes two new and original works, his ‘Higher Sanskrit Grammar,’ and a Sanskrit geographical names illustrated by a valuable prefatory essay. Both are thoroughly original works, and rather suffer by being united with the dictionary. The latter is, I believe, still a unique contribution to Indian research."

It is to be regretted that the existence of such a book on the ancient geography of India has not come to the knowledge of Mr. Majumdar, deeply read as he is in Indian antiquities. We hope in future discussions he will not omit Mr. Baroosh’s most noteworthy contribution on the subject.

Here, we may add that we agree with Prof. Bendall when he says that the value of Mr. Baroosh’s "Geography of Ancient India" has suffered by being united with the dictionary. His Higher Sanskrit Grammar was published separately during Mr. Baroosh’s life-time. Could not the lovers of Sanskrit learning, and the various organizations existing all over the country for its promotion and research, see their way to reprint and publish separately Mr. Baroosh’s "Geography of Ancient India" and thus rescue from oblivion this most valuable contribution by an Indian to the ancient geography of the land of his ancestors?

S. K. BHUJAN.

ADDENDA.

(I)

Additional note to Episode V.

JAPANESE DESTROY A SPANISH SHIP, 1640.

Mr. W. A. Woolley gives the Japanese version of this episode as follows:—

"In 1640, on July 7th, a ship from Luzon [Manila] arrived. It was seized and the crew were imprisoned in Deshima [a small island in the harbour], 61 of whom were put to death at Nishizaki on August 3rd, and the ship with its cargo, consisting of 60 kwamme [one kwamme = 10 lbs. Troy or 83 lbs. Av.] of gold, gold ornaments and piece goods was sunk off Sudzure in Nishidomari. Thirteen of the crew, who stated that they had come to Japan against their will, were spared and sent home in a Chinese Junk to inform their countrymen of the fate of their comrades and of the prohibition against the coming of foreigners. In 1663 the sunken cargo was presented to the Machi-doshi-yori, who succeeded in raising over 45 kwamme of gold."

(II)

A Chinese Account of Episode VII.

THE PIRATE COXINGA TAKES FORMOSA FROM THE DUTCH, 1661.

(Communicated by Mr. S. Charles Hill and edited by Sir R. C. Temple, Bt.)

The Dutchman Lang-pêh-tseih-li-ho, (1) after his unsuccessful raid on the coast of Fukien, made sail for Holland; and throwing himself on the mercy of the King, was pardoned. (2)

Kweh-yih, (3) a younger brother of the King’s, burning with anxiety to avenge the honour of his country, was allowed to organize the next expedition which consisted of veteran troops, and which embarked in fifteen transports. Favoured with southerly breezes the flotilla progressed, until on a certain day high land hove in sight, which caused Prince Kwei to enquire whether the China coast was not being approached. An old soldier, one who had served under Lang-pêh-tseih-li-ho, on being appealed to replied, that judging from the colour of the water he surmised that they were on the coast opposite to China; whereupon the Prince ordered the squadron about so that they might determine their position.

An anchorage having been discerned, the Prince was able to make out through his telescope that there were no towns or cities on shore: therefore the ships were anchored in line, guns were run out for use in case of need, and the Prince’s son, Tung-lan(1) landed to recon-

(1) This statement is either a garbled account of the attempt of the Dutch, under Fransoon, in 1633, to trade with Amoy (see Valentyne, Oud en Nieuw Oost-Indien, IV, Formosa, pp. 47, 48) or an allusion to the unsuccessful attack on Macao, in 1660, by Admiral Van der Leen, who subsequently retired to Batavia. But, as the narrator goes on to describe the settlement of the Dutch in Tai-oan in 1624, it seems unlikely that he is referring to the latter incident.

(2) By “Prince Kwei-yih” the narrator means Frederik Coyett, as is evident from the account of the taking of the Dutch possessions on Formosa which follows. But Frederik Coyett, Governor of Fort Zeelandia in 1661, had nothing to do with the first settlement of the Dutch on Tai-oan, an islet on the S. W. of Formosa, in 1624. Moreover, the expedition was made peaceably under Maarten Sonk, who became the first Governor (see Valentyne, op. cit., p. 49; Imbault-Huart, Formosa, pp. 15–33). The right of the Dutch to settle on Formosa was conceded to them by the Chinese, on condition of their evacuation of the Pescadores Islands. A treaty was negotiated by Cornelius Meyeres in 1623 and concluded by Sonk in the following year.
noitre; being accompanied by a guard of one hundred men, each armed with musket, pistol and sword. Nothing but some old ruins being observed at Kwén-shen the party returned to their boats and crossed to the other bank of the river, where after traversing a li, a native came in sight who was armed with a bow and arrow, and who was destitute of clothing. His language proved unintelligible, but by signs he led the way to where his tribe were living. It so happened that at the time one Ho-pin, a linguist, was lying sick in the encampment of the tribe; and on the approach of the Dutch he came forward and explained that the country they had reached was called Tai-wan. He further explained that there were no rulers in the island and that people settled here and there at their pleasure. On learning this the Dutch were delighted beyond measure and took Ho-pin on board ship with them to see Prince Kwei. After questioning the linguist the Prince was highly pleased with him, engaged his services, and made him his right hand man generally.  

In due course he came to inquire as to the distance from Taiwan to China; and on being informed that the Pescadores could be reached in four watches, and Amoy in seven, he replied that he was eminently satisfied, as in the absence of any fixed government in the island he intended to colonize.

From morning till night therefore he proceeded to busy himself with Ho-pin in surveying, and in laying out sites for cities; all with a view to permanent occupation.

Substantial walls were run up at Tséih-kwen-shen, the bricks being well faced, and cemented together with a compound of ground rice and lime; and outside these again a fort [Zeelandia] was erected. On the opposite shore at Chi-khan [Sakkam] a smaller fort [Provincia] was built. The soldiers of the expedition were directed to take women of the Sinkiang aboriginal tribes to wife; whilst three transports were despatched to Holland to convey despatches, and to obtain supplies generally for the new colony.

The land works being completed, attention was next paid to the approaches to the position from the seaward; and as these were found to be comparatively easy, six or seven of the old transports were filled with stones and scuttled in such positions as to render it necessary for a vessel entering port to pass under the guns of the fortifications; otherwise she ran a great risk of striking on the sunken vessels. The above precaution having been taken, the position was deemed to be impregnable.

In the 18th year of Shun-chih (A.D. 1667), Ho-pin, the linguist, having embezzled several tens of thousands of dollars from Kwei-yih's treasury, and fearing lest he be called on to render an account, had recourse to a stratagem. He managed to find out about the intricacies of the river navigation; and, having engaged two vessels to lie in wait for him, he prepared for flight. A feast was arranged to which he invited Prince Kwei and his staff; and whilst the lamps were blazing on all sides, firecrackers were being let off, puppet shows, dancing and feasting were in full swing, he waited for the turn of the tide; and then, feigning to be the worse for liquor, and to have a colic, let himself out by a back entrance, and reaching his vessel made good his escape to Amoy.

Arriving there he called on Cheng-cheng-kung [Coxinga]; and whilst unfolding to him all the advantages to be reaped by the possession of Formosa, he drew from his sleeve and presented him with a plan of the whole Dutch position.

---

81 I have found no confirmation of this part of the story or any mention of "the Prince's" (Sonk's) son.
82 The ordinary Chinese itinerary measure, now reckoned as rather less than a third of an English mile, but it varies in different parts of China and has varied at different dates.
83 This part of the account is substantially correct (see Imbault-Huart, Formosa, pp. 31-32, 55-59).
84 See Imbault-Huart, op. cit., p. 23, for confirmation.
85 An error for 1661. Shun-chih, ninth son of Tien-ming, was proclaimed Emperor in 1664.
86 Kwei-yih here means Frederik Coyeté, Governor of Tai-pau, 1665-1662.
87 For corroboration of this account of Ho-pin, a Fuhkiense interpreter, see Imbault-Huart, op. cit., pp. 58-59.
Cheng was highly delighted with all he heard, and after a deep consultation with his several Commanders, he put to sea with his whole fleet on the 3rd of the moon, bound for Tai-wan [Formosa]. On the morning of the 4th a look-out man at the mast-head discovered the Pescadores, and little after mid-day the expedition reached Neang-ma-king in safety. On the 6th oblations were offered to the sea gods, and a thorough reconnaissance of the adjacent islands was made.

On the 8th the fleet weighed anchor; and on Luh-urh-mun⁵⁵ being descried in the distance, Cheng made prayer for a favourable tide to carry his vessels safely into port. Prayer ended, he directed leadsmen to take a line of soundings, and these returned with the news that the tide had risen fully ten feet higher than on the previous day.

On receiving this intelligence, Cheng fired a gun; and, hoisting signals for a general advance, was followed by his whole fleet. The linguist Ho-pin was posted in the prow of the leading vessel to point out the passage as laid down on the chart he had provided: and eventually, after much poling, sounding and manoeuvring, the fleet came to an anchor with great uproar off the city of Chih-khan [Sakkam].⁵⁶

The Commandant of Chih-khan, Meau-nan-ting? no sooner beheld the martial appearance of Cheng's landing party, than he despatched Lang-ho-ke (?) to Kwen-ahen⁵⁸ for reinforcements, and at the same time opened fire on the fleet from all his guns.

On the 10th Cheng, having directed each soldier of the force to provide himself with a bundle of straw, laid close siege to Chih-khan, and sent two interpreters to the front to inform the Commandant that unless he capitulated the whole place would be set on fire. This menace had the desired effect; as Nan-ting (?) being terrified to a degree, surrendered, and the position [Fort Provincia] was at once occupied by the assailants.

Here it is necessary to pause a moment in order to mention that on the occasion of Ho-pin's feast, Prince Kwei had not the slightest idea but that the linguist's retirement was consequent on his having imbied too freely. Nay, not until the second day, when efforts to find him proved fruitless, could he be brought to believe that he had absconded. Even then he continued to attribute his flight to the embezzlement which he had been guilty of, and could not believe that he would so far turn traitor as to guide an expedition whose ambition was to dispossess the Dutch of their settlements.

To resume—on the 18th a heavy gale sprang up, the waves breaking on shore with a roar which was at once deafening and appalling, and this state of affairs continued till midnight.

At daylight the Prince [Coyett] and his officers mounted the city wall to reconnoitre, and on looking seaward they observed a whale swimming to and fro with a human figure seated on his back. The figure was clad in red garments and its locks were dishevelled.

From Luh-urh-mun the fish started, and after indulging in a variety of gambols, finally passed Chih-khan city and disappeared. The Prince and his staff stood staring at one another, until, finding their tongues, they concluded that they had either been in a trance or had seen a vision.⁵⁹ Their ears were now greated with the sound of heavy guns from the direction of Luh-urh-mun, and on mounting a look out, they discerned through their glasses a whole fleet of vessels approaching with their ensigns and banners floating in the sun light.

---

⁵⁵ The fleet touched at Mž-Kouing, Pescadores, on the 30th April 1661.
⁵⁶ From this and the preceding references, "Kwen-ahen" seems to represent the district where Fort Zeelandia, the headquarters of the Dutch, was situated.
⁵⁸ See ante, Episode VII, Vol. XLVIII, p. 178, for a reference to this apparition.
On seeing the vessels the Prince burst out laughing, and remarked that the Chinese in invading his position in this fashion must have little regard for their lives; and he at once gave orders for the batteries to be in readiness to treat the fleet to a broadside on its nearer approach. Thus he expected to annihilate the invaders at one stroke.

Whilst still chuckling to himself, the tactics of the leading vessel, which were being carefully followed by the rest, came under notice. First she tacked to the north, then went about to the eastward, and again altered her course to the north; until finally she and her consorts came to an anchor without passing under the guns of the batteries. The Prince turning to the staff observed that heretofore the channel which the Chinese fleet had come through was thoroughly impracticable and it was strange that they had not shoaled and come to utter grief. Whilst pondering over these matters, he still gave the order to open fire; but owing to the long range, the firing was ineffectual. His next move therefore, was to direct one of his subordinates, Li-ying-san(!), to thoroughly man the Dutch vessels in port, and to proceed to dispute the advance of the enemy.

By the time the Dutch troops were in order night was drawing on space; and as the tide was flooding, Li-ying-san soon became aware that a whole fleet was investing Chih-khan [Sakkan], and that a landing party had been disposed on shore in fighting array. At this juncture the Prince Kwai [Coyett], fearing lest his own position should be assailed, recalled the force he had sent on shipboard, and directed Li to advance vid Kwen-shin to the assistance of the Chih-khan garrison. On reaching San-kwen-shen, Li was met by Lang-ho-ke who stated that the force he was advancing with was too small to be of any material avail, and who proceeded to report to the Prince that the enemy were such a soldier-like lot that before attacking them it would be advisable to call in, and hold in readiness, all auxiliaries.

In reply, the Prince, after enquiring as to where the enemy had come from, called out all his infantry, and made preparation for marching on the morrow. At daylight Cheng became aware from the bugling and drumming which was audible in the direction of An-ping that the Dutch were about to advance; so, sending for his several Commanders, he informed them that the Dutch would rely principally on their artillery, and he disposed of his forces as follows:—

500 infantry armed with muskets, and 200 heavy gingals100 were formed into three divisions under a Commander, who had orders to march on Kwen-shen-wai and engage the Dutch as they advanced: 500 shield bearers under another Commander were ordered to take up their position to the left of Kwen-shen and to attack the enemy's flank when opportunity offered; another body of troops manned some 20 small junks, and were directed, on observing the Dutch to have passed Tseih-kwen-shen and to be about to open fire, to wave their flags and shout vigorously; at the same time making a feint of attacking the city by heading their boats in its direction. This proceeding it was hoped would be noticed by the Dutch force, and throwing them into a state of perturbation, would cause disorder in the ranks; thus rendering their defeat comparatively easy.

The above disposition of forces having been made, the balance of Cheng's force was drawn up as a reserve.

In due course the Dutch force arrived at Tseih-kwen-shen-wai, and were about opening fire when they were horrified by noticing a movement amongst the junks, which appeared to betoken an attack on the An-ping position from the water. Whilst still in doubt as to what steps to take, the shield-bearing force commenced its flank attack, the result being that the Dutch gave way, and with a loss of half their numbers retreated on the stronghold whence they had issued.1

100. Gingall, jingall, Hind. jangal, a swivel or wallpiece, a word of uncertain origin (see Yule, Hobson-Jobson, a.v. Gingall).

1 The narrator seems to have drawn largely on his imagination for these details.
To this close siege was now laid; but the defenders worked their guns so well, and by constant sallies inflicted such loss on the besiegers, that an advance, or an attempt at storming was impossible.

Cheng continued to hold the only road which communicated with the fort, however; and he now, in order to protect his people, commenced the erection of earth works and of a battery.

During the 8th moon the Dutch Prince organised two expeditions, the one being despatched in the direction of Chih-khan by water, the other against Kwen-shen by land. In opposition to these Cheng commanded afloat in person, whilst the shore forces were handled by one of his generals, Hwang-gan.

The battle raged the whole day, until the Dutch, having lost one ship and three boats, retreated to the fort, which they continued to defend most stoutly.

In the 11th moon the N. E. monsoon having now set in, Cheng ordered his subordinates Cheng-seuen and Cheng-chung to load some ten old boats with saltpetre and other inflammables; and to attempt the destruction of the Dutch ships, whilst a general attack from the shore was simultaneously made on the fort.

In this engagement the Dutch lost three more ships and a number of men, which even caused Prince Kwei to be much cast down. 3

Taking advantage of the victory, Cheng sent a linguist named Li-chung into the Dutch lines with a message. 3

It was to the effect, that the position now held by Kwei-yih was no Dutch possession; nor, owing to the distance from Holland, could he possibly hope to maintain a lasting occupation of it. The neighbourhood had been originally occupied by an Imperialist garrison, and it was Cheng's firm intention to regain possession. Having some pity for the defenders of the fort who had come from afar, he had no desire to injure them, and in consideration of the surrender of the treasury chest, stores, ammunition, &c., he was willing to afford them a loophole for escape with their private effects and valuables.

Failing acceptance of the terms now offered, it was his intention to renew the attack on the morrow from all sides. Their vessels should then be burnt, their stronghold reduced, and their personal annihilation must follow.

Prince Kwei-yih and his staff, on receiving the above message were much moved, and offered to surrender if supplied with provisions for the homeward voyage.

The linguist returning to Cheng gave the reply to the ultimatum, and the surrender was at once completed; the victors taking over, as per list, the contents of the government chest, the military stores, &c. 4

The surviving Dutchmen were then allowed to remove their personal effects on board ship; and on the 3rd of the 1st moon they took their departure for their native land.

[Translation of a Chinese record concerning Coxinga or Koxinga (Cheng-cheng-kung) the celebrated Chinese pirate, by H. E. Hobson (Journal of the North-China Branch of the Royal Asiatic Society, 2nd Series, No. XI, pp. 34-40.)]
CAPTAIN JOHN HALSEY FIGHTS FOUR ENGLISH SHIPS AND TAKES TWO OF THEM, 1707.

Of the European pirates, one of the most humane was Captain John Halsey of the Charles Brigantine, who on the 7th November 1704, received a commission from Governor Cranstone of Rhode Island to cruise against the French on the Banks of Newfoundland. This he considered good enough authority to cover attacks upon native shipping in the Indian Seas, and though at first he refrained from molesting European vessels, that scruple did not long hold good. On the occasion described in the episode narrated below, we find the very unusual fact of a single pirate attacking a number of merchantmen, all apparently ready to defend themselves and to support each other. Halsey's kindness to his prisoners is a matter of history, and the episode in question fully justifies Captain Johnson's eulogy:—"He was brave in his person, courteous to all his prisoners, lived beloved and died regretted by his own people." (History of the Pirates, II, 118.)

A comparison of Johnson's account of the fight with that given by Robert Adams, the East India Company's Chief at Calicut, is useful, as it shows that Johnson, however confused may be his chronology, was fairly accurate in regard to other details.

The Records of the East India Company give further information about Captain Samuel Jago, whose ignominious flight gained him an unenviable notoriety on this occasion. He was employed by the Court of Managers in England and was sent out by them in command of the Bombay Frigate (or Merchant), a ship expressly designed for the defence of Bombay and the neighbouring coast against the attacks of pirates. By the Court's orders, Captain Jago proceeded first to Mocha to land a cargo. There, it seems, he fell in with the Rising Eagle, Essex, Mary and Unity, all country ships from the Coromandel Coast, and together they were sailing towards Bombay when they encountered the pirate.

Captain Jago reached Bombay on the 22nd August 1707 and apparently held his peace regarding his cowardly desertion of his consorts. Even when Robert Adams' account of the affair was received two months later, no notice seems to have been taken of the conduct of Jago, who had meanwhile been sent to Kârwâr. However, disaster was in store for him. On the 11th November 1707 he and some of his crew returned to Bombay in the Prosperous and the Union Frigate. He stated that he sailed from Kârwâr with the Union on the 27th October. "The 28 about 11 Clock in the morning, seeing one Savajee [Maratha] Boat hovering about them, fired their Chase Gunn, after which the Bombay Frigate immediately blew up and Sunk, and ten English and about as many blacks lost, besides what since dyed, and others in a Languishing condition, and near Fifty burnt."

On the 9th December 1707 and 27th January 1708 letters were received from Fort St. George containing "a warm Information and Complaint against Captain Jago for not engaging the Pyratt in his Passage from Mocha hither, but left four of their private Ships, two of which Seized by said Pyratta." Certificates by the supercargoes and commanders of the vessels were enclosed. There is, however, no record of any action taken by the Bombay Government in the matter.

Early in 1708 Captain Jago took the Indian Frigate to Persia, and on his return to Bombay in May of that year, he was permitted to embark in the Aurangzeb for Europe. 6

We have also some account of the subsequent fate of Halsey's crew who, after his death, settled in Madagascar, and survived, some of them at any rate, till 1719.

5 Chase-guns fixed in the chase-ports in the forepart and stern of vessels were known as bow-chase (chasers) and stern-chase guns. Smyth, Sailor's Word Book defines Bow-chasers as "two long chase-guns placed forward in the bow-ports to fire directly ahead."

6 The particulars regarding Captain Samuel Jago are taken from the East India Company's Records, Bombay Public Consultations, Vol. 2.
When the King George, an East India Company's ship commanded by Captain Samuel Lewis, was at St. Mary's, Madagascar, in 1719, her Log, under date 23rd July (Marine Records, India Office), tells us that two Europeans, John Guernsey and Old Nick of Dover, came to see the captain, who writes as follows:

"These I kept on board two nights and entertained them plentifully with liquor, in hopes to sound what might be gathered from them. They faithfully promised me provisions speedily, but I found their tempers much alike (with a downcast eye, not able to look me in the face), very cautious of what they spoke till almost drunk, then they lay themselves open and tell of their loose way of living, bragging in their villainy as braves. They acknowledge of their being in the brigantine [the Charles] that took [killed] Chamberlayne, and at the plundering of three Moors ships and bringing away a fourth, which lay sunk in their harbour. This they called the Fair Chance, and they wanted but one bit more and then to go home, for they were awary of their course of life. Their number was now reduced to 17 with about 10 or 12 Mustees and free negroes. That they live separate on the other side upon the Main, some 20 or 30 miles asunder, each having a town to himself and not less than five or six hundred negroes in their vassals, ready to serve 'em upon any expedition. They do not appear to be in any wise concerned for their former ill actions, only in relation to Sir John Bennett, whom they acknowledged they had not used well in taking his goods and money from him after a fair agreement. Thus freely they would talk when warm with liquor, but always cautious when sober. I likewise ask 'em why they did not accept of the King's pardon [1718] and go home in time. They told me that they believed it was a sham and would not trust to any unless they had the Great Seal to it. Such impudence and ignorance posses them."

1.—Captain Johnson's Account.

Three days after, they spied the 4 ships, which they took at first for the trees of Babel Mandeb; at night they fell in with and kept them company till morning, the trumpets sounding on both sides all the time, for the Pyrate had two on board as well as the English. When it was clear day, the four ships drew into a line, for they had haled the pyrate, who made no ceremony of owning who he was, by answering according to their manner, 'from the Seas.'

The brigantine bore up till she had flung her garf [sic]. One of the ships perceiving this, advised Captain Jago, who led the van in a ship of 24 guns and 70 men to give chase, for the pyrate was on the run, but a mate, who was acquainted with the way of working among the pyrates, answered he would find his mistake, and said he had seen many a warm day, but feared this would be the hottest. The Brigantine turned up again, and coming astern, clapped the Rising Eagle aboard, a ship of 16 guns and the sternmost. Tho' they entered their men, the Rising Eagle held them a warm dispute for three quarters of an hour, in which Captain Chamberlain's mate and several others were killed; the Purser was wounded, jumped overboard and drowned.

In the mean while the other ships called to Captain Jago to board the pyrate, who bearing away to clap him on board, the pyrate gave him a shot, which raked him fore and aft and determined Captain Jago to get out of danger, for he ran away with all the sail he could pack, though he was fitted out to protect the coast against pyrates. His example was followed by the rest, every one steering a different course; thus they became masters of the Rising Eagle.

I can't but take notice that the second mate of the Rising Eagle, after Quarters were called for, fired from out of the Forecastle and killed two of the pyrates, one of whom was the gunner's consort, who would have revenged his death by shooting the Mate, but several

---

1 Mestiços, Portuguese half-caste.
2 i.e., Malagasy.
3 See infra, 2.
Irish and Scots, together with one Thomas White, once a commander amongst the pyrates, but then a private man, interposed and saved him, in regard that he was an Irishman.

They examined the prisoners to know which was the ship came from Juffa [Juddah], for that had money on board, and having learned that it was the Essex, they gave chase, came up with her, hoisted the bloody flag at the mainmast head, fired one single gun, and she struck; though the Essex was fitted for close quarters, there were not on board the Brigantine above 20 hands, and the prize [the Rising Eagle] was astern so far that her topmast scarce appeared out of the water. In chasing this ship they passed the other two who held the fly of their ensigns in their hands ready to strike. When the ship had struck the Captain of her asked who commanded that Brigantine. He was answered, “Captain Halsey.” Asking again who was Quartermaster, he was told “Nathaniel North,” to whom he called as he knew him very well. North, learning his name was Punt, said, “Captain Thomas Punt, I am sorry you are fallen into our hands.” He was civilly treated and nothing belonging to himself or the English gentlemen, who were passengers, touched, though they made bold to lay hands on £40,000 in money belonging to the ship. They had about £10,000 in money out of the Rising Eagle. They discharged the Essex and with the other prize and the brigantine, steered for Madagascar, where they arrived and shared their booty.

[C. Johnson, History of the Pirates, II, 114–115.]

2.—Robert Adams' Account, received per Captain Thomas Punt.

May it please Your Excellency, &c.

Captain Gaywood being wind bound off this Port, have just time to write to your Excellency a few lines, Copies of our last being at Callicut, which were under 30th past, vid Carwarr, per Pattamar, cannot send them. Came from Callicut the 7th Instant to view this place, being advised of its miserable condition, which have found beyond expectation to be laid in no less than five places leavell with the Ground by the great Raines, so that are forced to make Bamboo hedges to keep the Cattell out.

The following relation is the unhappy news received from Captain Punt, who [we] found here at our arrival in the Ship Essex.

They sailed from Mocho the beginning of August, in all 5 sail, viz., The Bombay Merchant from Europe, the Eagle, Essex, Mary and Unity from the Bay and Coast, when fell in with a Brigantine Pyrat. They all drew up with an intention to fight. The Bombay Merchant and Eagle gave him some broad sides, but so soon as boarded Captain Chamberlaine, the Bombay Merchant bore away, which put all the rest to shift for themselves. Captain Chamberlaine, Captain Phillips and all the Stern Quarters were killed, but one French man who cried out quarters. Mr. French, Chief Mate, who was in the Fore Castle, not knowing what was done a baft, fired briskly on the Pyrat and killed 6 and wounded 20 of them, and did not yield up, but kept his arms in his hand till they promised him good quarters. So soon as they got the Eagle, they forced the people to tell them which was the Judda Ship, and immediatly both Brigantine and ship made after her, and went by the others and came up with her and took her, the Passengers and People being so discouraged that they would not let the Captain make any resistance least they should put them all to the Sword, they coming up to them with the Bloody Flagg. After this they detained both ships in their Company, designing for Socatora to take in Refreshments; but the Essex breaking her fore yard and springing her Foretopmast &c., not keeping them Company, Sir John Bennet and several of her people are left on board the Pyrat, and Mr. French is on board Ship, who is gone to Callicut to see if he can get into the River, if not, to go down to Cocheen, but since hear she is in Callicut River.

[Letter from Robert Adams &c. at Tellicherry to the President and Council at Surat, dated, 17th September, 1707 (Factory Records, Surat, Vol. 101).]

[The END.]
The scheme of a mandala of twelve states was, as we have just said, generally accepted, the needs of reference to particular states in a certain special or political correlation, or of description of particular political situations being ordinarily satisfied by the scheme. All the twelve states composing the circle may not, in particular cases, be put to the necessity of siding with the one or the other of the warring parties, the activities being limited say to the second zone. In this case, only a few states of the circle may be noted in calculations of strength or other such forecasts. The list of excellences of the seven constituents of the state furnish the criterion by which those constituents of the required states in the circle have to be judged; and the group of qualities of a particular constituent in the list shows the points with regard to which the enquiries require to be instituted. The final estimate shows the merit or deficiency of each constituent, and the total strength of the states, their weak and vulnerable points being exposed to view for the guidance of the inquirer. It may be mentioned in this connection that the making of such estimates necessarily implies the agency of informants through whom accurate information as to the details of the constituents was procured. The scheme of the mandala, and the analysis of the state into its constituents with an enumeration of their excellences serving as criteria for estimates of strength of states, enabled a sovereign to take the course or courses of action to be detailed presently. These courses were analysed into (1) sandhi (including alliances, treaty of peace etc.), (2) vigraha (war), (3) dasana (halt), (4) yana (attack), (5) samagra (resigning oneself to another's protection), and (6) dvaidhibhava (making alliance with one and fighting with another). They admit of certain combinations and include various sub-courses of action adopted in stated situations.

(B) The six courses of action, including their combinations and sub-courses for particular inter-state situations, are the source of vydydama and dasama, i.e. exertion to create means for the beginnings of undertakings, and exertion to ensure the enjoyment of results of undertakings. In addition to human exertion, there is scope for the operation of providential forces in the creation of the conditions in which a state may be at any particular moment. The causes, therefore, that determine those conditions, are of two kinds, human (manusha) and providential (daiva). The former lies in the pursuit of the right or wrong courses of action (naya and aganaya) and the latter in the favourable or unfavourable circumstances or forces of nature (aya and anaya). The net result of the operation of the two sets of causes is the particular condition of the kingdom at any particular moment, viz. deterioration (kshaya), stagnation (shana), or prosperity (vidhi). In other words, it is the aforesaid causes that bring about the weakness or vigour of each of the sovereign and resource-elements, upon which depends the total strength (jakti) of the state as well as the happiness of its citizens [sukha identified with siddhi (success)]. The prosperity of the state stands as the ideal, and though the immediate result of every undertaking may not be conducive to this ideal—and it is impossible that it should be so—the final aim of persons at the
helm of the state should be this and none other. Hence, temporary deterioration, or stagnation of the state is permissible if the ultimate issue of the actions be gainful.24

With reference to the central state, any other state may be superior (jādayām), equal (sama), or inferior (kīsa) in strength and prosperity. Efforts should be directed by the above state towards the increase of its own strength in order that it might be superior to others in its manālā.

It is mentioned in the Kautiliya that conformity with the advice of treatises on polity leads a self-controlled sovereign to greater and greater power and position, making him ultimately the ruler of the whole earth, while the reverse conduct on the part of even an emperor with dominion from sea to sea reduces him to miserable straits.25 The statement may at first sight sound too much laudatory of treatises on polity and the efficacy of their rules and recommendations, but, yet, on closer observation, it cannot be said to be without a foundation. For, in those days, "jealous rivalry between two or more states, the awakening of ambition, craving for rich colonies, desire of a land-locked state for a sea-coast, endeavour of a hitherto minor state to become a world-power, ambition of dynasties or great politicians to extend and enlarge their influence beyond the boundaries of their own state, and innumerable other factors" were at work to create causes of war in the same way as they do at present. These causes, numerous as they are, must have been more prolific than now in view of the then state of inter-stateal relations regulated by comparatively fewer laws and provided with smaller facilities for the pacific cessation of hostilities by inter-statally constituted means.26 Hence, the outbreaks of hostilities were comparatively greater, furnishing opportunities to an aspiring sovereign for the extension of his territory or for other means of acquisitions. The sovereign, to achieve the great results promised by the treatises on polity, must be ended with the qualities inculcated by their writers. The onerous conditions made necessarily rare the existence of such sovereigns, but nevertheless there is no reason to deny that the recommendations of the writers had no merit by virtue of their applicability to the conditions of internal and inter-stateal politics of those days.

Attack on a state by another merely because the former is weak and the latter strong was not justified by practice, though of course, a pretext put forward as a real cause for war might have been picked up for the opening of hostilities. Conflict must have preceded

24 Kautiliya, Bk. VI, ch. 2, p. 262.
25 Ibid., Bk. VI, ch. 1, p. 257; Bk. I, v, idha-unpyago, p. 11.
26 It should be noted that a state in calamities (vyasan) is called yātāya (lit. assailable, i.e. tottering) by Kautiliya, who includes it in the list of the various kinds of hostile states (Kautiliya, Bk. VI, ch. 2, p. 258). This may lend colour to the supposition that a 'tottering' state was generally thought to be assailable by another state without any preceding conflict. That such a supposition is baseless will be apparent from the following:-

(1) Kautilya says that a state in calamities can be protected or easily attacked. (Kautiliya, Bk. VIII, ch. 1, p. 319.)

(2) A state in calamities is mentioned by Kautiliya as yātāya with reference to another state on the assumption that ill-will exists between the two parties. Should they be friendly, the former would be protected instead of being attacked by the latter.

(3) It is expressly laid down by Kautiliya that writs (implying negotiation) are the root of peace and war between states [Kautiliya, Bk. II (śrāndehikāra), p. 79]; Kautiliya tells us that he wrote the chapter on royal writs not merely in accordance with all the idas (treatises on polity) but also the prevailing practices (pruyoga) of the day. (Ibid., p. 75).

(4) If pratūpa means 'ultimatum' [see Kautiliya, Bk. I (dāta-prasadhā) p. 32], then it is evidence of the existence of negotiation before the declaration of war. Hence, it is not permissible to suppose that a state in calamities could be attacked by another state without any previous conflict. It was preceding conflict alone that justified an attack. A friendly state would, on the other hand, protect it in its sorry plight.
war, and there is, as has been shown already, no ground to suppose otherwise. This supposition is rendered firmer by the fact that there are means at the disposal of a very powerful sovereign to demand submission of other sovereigns far and near for reasons other than existing conflict. These means were provided by the politico-religious ceremonials of ṛāja-prakṛiti and akṣamedha, which could be performed at will with the said political object in view. But they could be utilized by those sovereigns alone, who had already become powerful enough to dare and defy the active oppositions that were sure to follow the celebration of the ceremonies, and served more as ways of asserting power already acquired than as those of acquiring the power itself. The steps leading to world-power at the disposal of the humbler states aspiring to such power are thus described by Kauṭyāya:—

I. (1) The central state should, after subduing the 'enemy,' try to subdue the medium state, and when successful in this attempt, the super state.

(2) The medium and super states being subjugated (by the first step), the central state should, in proportion to the increase of its power, subdue the other states within the first zone. When these states are brought under subjection, the states within the other zones should be dealt with in the same way.

(3) When the whole statal circle has been put under the sway of the central state (by the second step), an amitra (enemy) among the states faced next should be 'squeezed' by a śātrum or a śātrum by a mīra (friend).

II. Or a weak neighbouring state should be subdued; and then with double power, a second, and with triple power, a third.

The processes involve a series of fights, but as the time occupied by them is not in any way limited, there is no reason to suppose that they necessarily imply disregard of such inter-state practices as attacking states without preceding conflict, or friendly states in

28 "Ari-prakṛiti" in the text refers to 'ṛāja-prakṛiti' (sovereign-elements) within the first zone and not to the citizens of the states.
29 "Uttara prakṛiti" refers similarly to the sovereign-elements in the other zones of the statal circle.
30 The subjugation of the sovereign-elements of the statal circle brings the central state face to face with other states, if any, which will be either friendly or hostile, and dealt with in the above process.
31 The word used in the text is sampājana which is thus explained in the Kāmadaṅga sarga VIII, ltr. 58: pujana is more serious than karana (or karaṇa). The latter is effected by the omission of the treasure and army together with the death of the high ministers of state. Pujana being more serious than karana includes acts much more oppressive. Śāntakṛṣṇa explains it by "māla-varja-deśa-vilopaṇam."
32 A śātrum is thus described by Kauṭyāya: "ari-sampad-yuktād admarah śatruḥ" (a neighbouring state endowed with ari-sampats is called śatrum) (Kauṭyāya, Bk. VI, ch. 2, p. 258). The ari-sampats (or amitra-sampats) are those qualities that render a hostile state an easy victim to the central state and are thus enumerated:— "Not born of a royal family, greedy, surrounded by mean persons, having disloyal subjects, unrighteous, silly, addicted to evil passions, devoid of energy, trusting to fate, indiscreet, inconsistent, coward, and injurious" (Kauṭyāya, Bk. VI, ch. 1, pp. 206, 257). Owing to these disabilitas, a śatrum can be easily made an instrument in the hands of the central sovereign. It is implied that the former is helped by the latter in the act of 'squeezing'.
33 The first three mārgas (lit. ways) are but links of a single process, leading to the other. The fourth mārga may be taken either as a link supplementary to the third (in which case, it cannot be called, strictly speaking, the fourth mārga) or as an independent second process standing apart from the first process composed of three links. The words 'dviṣapuṣṭah' and 'triṣapuṣṭas', unless they be taken as used loose by, favour the interpretation of the fourth mārga as an independent second process of conquering the world.

The independent existence of friendly states was not perhaps regarded as a bar to world-conquest, if the central state could subjugate the hostile ones and thereby extend his dominion over a large expanse of territory, say from sea to sea.
disregard of friendship. An aspiring king should abide the opportunities offered by dispute with other states but should not artificially stir them up to create the opportunities. It cannot be asserted that no breaches of salutary practices conducive to inter-state peace occurred in ancient times. An unruly, aggressive sovereign might have set them at naught but not without incurring the displeasure of the other states or even of his own subjects. Whether this displeasure could take shape in steps to bring to justice the infraction of the practices is another question. The displeasure indicates the volume of opinion for the maintenance of the practices and can well be a reason for considering them as the prevailing ones.

The legitimate inference, therefore, stands out to be that an aspiring sovereign should accumulate as much power as possible by a due application of the śāstric injunctions to his personal conduct as well as to his administration of the realm. The increase of vigour of the resource-elements of the state should always be followed up by the pursuit of those measures that remove the obstructions retarding their progress and make them stout and healthy. The steps suggested for the extension of territory and acquisition of power by conquests may lead one to infer that they imply treacherous attacks, without preceding conflict, on friendly states or on those in a miserable plight, but in the light of other evidences there does not appear to be any ground for such supposition. The opportunities for war offered by the disputes that naturally came on were generally enough for the ambition of a royal aspirant able to utilize them fully. Unjustified invasions of states merely to satisfy the earth-hunger of the invader were condemned by the opinion of the sovereigns generally as well as of the citizens. When a king was powerful enough, he could assert and proclaim his power by performing the rājasthāya or the avamāda; but so long as he lacked this power, he had to wait for opportunities, making most of those that actually did present themselves. The advice of the writers of treatises on polity is directed to this full utilization of opportunities, which is possible only by a previous accumulation of strength from careful and diligent internal administration of the realm and a regulation of inter-statal dealings in the light of their instructions and recommendations garnering the political wisdom of the past.

The 'conquest of the earth' may be the goal cherished by the sovereigns but the difficulties besetting it are enormous. The lower the position of a monarch in the comity of states, the more onerous is his attempt to reach the goal. Favourable circumstances play no mean part in the achievement of the object, as also the capacity of the aspirant and his adherents. The task moreover cannot, except rarely, be accomplished by the labour of a single monarch in his life-time. The various usurpations of the throne of comparatively larger kingdoms extended into 'world-powers' by the usurpers may tend to obscure this view of the question; but really the kingdoms acquired by the usurpers were not fabrics of their creation but of their predecessors. Keeping these limitations in mind, we can well endorse the statement of the Kauṭilya, laudatory in a way of the injunctions of the works on polity.

\[
\text{nayajñah pritihīm kriyām jaya-yeva na hīyate.}^{15}
\]

[A self-controlled (king), with even a small territory, but versed in polity and possessed of the 'state-elements' in a flourishing condition, is sure to conquer the world and never decline in power.]

Kauṭilya’s discourse on the courses of action is not meant for the central state alone, but, also for the other components of the mandala; for advice is needed as much for the state centrally situated as for those in different situations. Hence, two aspects of his advice

---

13 See the Kauṭilya, Bk. VII, ch. 13, p. 300; where reference is made to the displeasure incurred by attacks on sovereigns righteous, or friendly.

15 Kauṭilya, Bk. VI, ch. 2, p. 267.
are often noticeable: on the one hand, for instance, he states the circumstances in which to make a treaty of peace with hostages while, on the other, he enumerates the means by which the hostages can escape from the territories to which they have been committed; similarly, he advises a powerful monarch as to when and whom to attack, recording as well the ways by which a weak or distressed monarch should defend himself against the attack; he offers his guidance in the same way to an invader by asking him to take proper precautions against a rear attack, directing at the same time a rear enemy as to when and whom to attack from behind. Thus his advice is meant for the solution of problems arising from different inter-statal situations and has in view the welfare not of a single state in a particular situation in the madhala but of the other states in it as well.

An analysis of the ways by which difficulties in inter-statal situations could be tided over is laid bare to the Hindu statesmen six courses of action,—sandhi, vigraha, dsana, yana, samgraha, and dvaidhitthika. A further analysis may reduce them to the first two, and according to Vatavyādhi, these two are taken as the fundamental courses; but the aforesaid six are generally recognized in view of their applicability to different conditions.

These six courses of action admit of combinations and imply many other measures which need not be named at present. Let us treat of the first course first.

SECTION II.

Sandhi in the sense of treaty of peace represents but one of its uses in the Kautilya.

The different senses of sandhi in the Kautilya.

The other senses have to be carefully distinguished from the first in order to avoid a confusion. The term bears in the Kautilya the following meanings:

1. It is paṇabandha, i.e., a treaty of peace concluding hostilities between the parties to the treaty.

2. It is a compact between powers in their efforts to have friendly state to help them in their needs.

3. It is a compact between powers out on an expedition to divide among themselves the lands that might be acquired by each as the result of their combined efforts against a hostile state.

4. It is a compact to plant a colony.

5. It is a compact to carry out particular works advantageous to the parties to the compact, such as building forts, exploiting mines, constructing trade-routes.

6. It is a settlement of differences between the king and his friend or servant.

It is the first signification alone that has to do with the treaty of peace. The use of the second kind of compact will be realized when it is borne in mind that to secure a friendly state for help in difficulties, specially in war, was not an easy matter; for, as on the one hand, the combined request of two or more states was likely to be more mighty and persuasive than the request of a single state, so on the other, the compact was helpful in the dissension that might have ensued from the rejection of the request. The compact though termed a kind of sandhi was altogether different from the treaty of peace (bhma-sandhi), and might have been in certain cases dissociated from war. The third compact had connection with but preceded the conclusion of the war in which the parties acted as friends, while the fourth and fifth need not have anything to do with war at all. The sixth would be devoid of any

37 See Ibid., Bk. VII, ch. 9 (bhma-sandhi).
38 See Ibid., Bk. VII, ch. 10 (bhma-sandhi).
41 See Ibid., Bk. VIII, ch. 6, pp. 270, 280.
42 Cf. such cases in Ibid., Bk. VII, ch. 7.
direct inter-statal bearing if the mitra instead of signifying a friendly sovereign meant only a courtier or a personal friend of a particular king.

(A) Hina-sandhi.

(A) It is the hina-sandhis alone that constitute the treaty of peace for bringing the hostilities between the belligerents to a close. This is what we ordinarily mean by the term sandhi and will be dealt with at present, relegating the other kinds to subsequent sections.

A treaty of peace should be concluded by a sovereign in view of the fact that the continuance of hostilities will make him gradually weaker than his enemy. It is recommended to be made with states of superior or even equal power, for in the former case, the continuance of war is ruinous to the inferior state, and in the latter, to both. Should a superior power reject an offer of peace, the inferior has no other alternative but to throw itself up to the mercy of the former or have recourse to the methods of defence recommended in dvaritiyasam.

If an offer of peace by a belligerent be rejected by another of equal strength, the former should wage war only so long as the latter sticks to it. An unqualified submission made by an inferior state ought to put a stop to hostilities; for, as on the one hand, the state may grow in fury by further maltreatment, so on the other, it may be helped by the other powers of the statal circle taking pity on its miserable condition. Should a state allied with other states against an enemy find that the states of the adjacent zone naturally hostile to it will not attack (ṁ = opagachchhanti) it, even if they are tempted, weakened, and oppressed by the enemy (trying to win them over to its side) or will not do so through fear of receiving blow for blow from the allied states (pratyadhana-bhayat), then the state in alliance, even if inferior to the enemy individually, should continue the war. When again a state in war with another finds that the states of the adjacent zone will attack it, tempted, weakened, or oppressed by the latter, or through anxieties caused by the war waged next door, it should, even if individually superior to the enemy, make a treaty of peace in the first case, and remove the cause for anxiety to the aforesaid states in the second. If a belligerent sees that he is afflicted with calamities greater than those of his enemy, who will be able to remedy them easily and carry on the war effectively, the former though superior in strength should make peace with the latter.

Kinds of hina-sandhi The various kinds of treaty of peace (hina-sandhi) are:

I. (1) Atmadisha. The defeated sovereign (henceforth abbreviated into DS) agrees to help the conqueror (henceforth abbreviated into C), by going over to him personally with a stipulated number or the flower of his troops. A person of high rank is also given as a hostage.

---

43 In the passage "bhūryena mūraṇa va dushyoparṣṭeṇa . . . " Kautilya, Bk. VII, ch. 6, p. 279.
44 Kautilya, Bk. VII, ch. 1, p. 261, parasamādhiṣṭhāmyah masanaddhiṣṭah.
45 I.e., Bk. XII of the Kautilya.
46 Para-prakriya = ri-prakriya, the reference being to the ṛāja-prakriti and not to the citizens of the state of the enemy.
47 The text (Kautilya, Bk. VII, ch. 3, p. 267) has "mānopagachchhanti" which appears to be an error for maṇḍopagachchhanti.
48 For the texts of this paragraph, see Kautilya, VII, ch. 3, pp. 266, 267.
49 The treaty of peace is also called sama or samādi. See Kautilya, Bk. VII, ch. 17, p. 311.
50 Corresponds to Edaṃdahūya, sarga IX, śāk. 16.
(2) Purushāntara. The DS agrees to help the C by sending the aforesaid troops headed by his son and commander-in-chief. This exempts the personal attendance of the DS and hence its name. A woman is also given to the C as a hostage.

(3) Adiṣṭhapurusha. The DS agrees to help the C by sending the aforesaid troops headed either by himself or by somebody else. In the latter case, the personal attendance of himself, his son or his commander-in-chief is exempted.

The above three kinds of treaty form the class of sandhis called dāṇḍ-oapanata, dāṇḍa (army) being the chief subject-matter of their stipulations.

II. (1) Parikrāya. The DS gives up his treasure to the C as the price of setting free the rest of the state elements.

(2) Skandhopaneya. The indemnity is paid in instalments.

(3) Upāgraha. By it, according to Kāmandaṅka, peace is purchased by the surrender of the entire kingdom to the C.

(4) Svārana. Its foundation lies in friendship and mutual confidence. Hence, it is called Golden.

(5) Kapāla. This form of treaty is of a nature reverse to that of the Golden. Under this, a very large indemnity has to be paid to the C. According to the Kāmandaṅka, the two parties to the treaty are of equal strength, and the peace concluded between them does not produce mutual confidence rendering it the reverse of the Golden.

The five forms of treaty constitute the class called kōś-oapanata, i.e., having kōsa (treasure) as the chief subject-matter of their terms.

III. (1) Adiṣṭha. The DS cedes a part of his territory to the C.

(2) Uchchhīna. It requires the DS to cede to the C all the rich lands in his territory except his capital. The C intends by this form of treaty to bring misery upon his enemy (para).

(3) Apakrāya. The DS releases his dominion by giving up the products of his lands to the C.

---

51 Corresponds to Kāmandaṅka, IX, 13.
52 The kōsa in Kauṭiliya, Bk. VII, ch. 3, p. 268, is as follows:—
"Mukhyaastā, bandhanam kuryast pāravayoh pachime varim, Sādhayaṁ āghāmcitaṁ=ṣṭiḥ=ṣṭiḥ dāṇḍo-paṇaṁ-sandhayaṁ."

53 I have taken mukhya and stri separately in view of the fact that mukhya are stated to have been given as hostages at Kauṭiliya, Bk. VII, ch. 17, p. 312. Arthagīthaśāstra refers perhaps to the over-reaching of the other party by the subsequent secret deliverance of hostages from the C's custody (see Kauṭiliya, Bk. VII, ch. 17, pp. 313, 314). If this meaning be accepted, pachime should be taken in the sense of "subsequently" instead of as referring to the third treaty, in spite of the juxtaposition which at first sight appears to exist between this word and pāravaya.
54 Corresponds to Kāmandaṅka, IX, 14.
55 Corresponds to Ibid., IX, 17.
56 Corresponds to Ibid., IX, 19 (ṣāndhaṣkaṇdhaṁ means, according to Śaṅkarāya, khaṇḍa-khaṇḍaṁ).
57 Corresponds to Ibid., IX, 16. The Kauṭiliya is not so clear on this point, but says nothing that contradicts the above definition.
58 Corresponds to Ibid., IX, 8.
59 Ibid., IX, 5. Śaṅkarāya accounts for the name of the treaty by stating that as the two skullbones (kapāla) of a man appearing similar to each other from a distance show points of dissimilarity when observed closely, so the two belligerents though agreeing so far as to be parties to the sandhi really differ from each other owing to the lurking suspicion of each for the other.
60 Ibid., IX, 15.
61 Kauṭiliya, Bk. VII, ch. 3, p. 269, last śloka.
62 "Āṭa śārddhaṁ" in the text (Kauṭiliya, Bk VII, ch. 3, p. 269) if taken to signify 'denuded of resources,' renders the meaning of the passage opposite to that given above. "Āṭa" may mean 'seized' and 'āṣṭardhāṁ' from āṭaḥ śārāḥ gayaṁ tādāmay be interpreted as 'possessed of resources.' This meaning is in accord with that of the Kāmandaṅka, IX, 18.
63 Pandit R. Shama Sastrī's English rendering of the text puts the term as apakrāya.
(4) Paribhûshâna. The DS has to pay more than his own lands produce.

These four forms of treaty are termed desopanata, the cession of territory (desa) being their special feature.

Kaujjilâ mentions in all twelve kinds of hîna-sandhis of which three belong to the first class, five to the second, and four to the third. Barring slight differences of meaning and taking into account the similarity of names of the treaties, all the hîna-sandhis of the Kaujîlîya are found in the Kâmanda-kîya with the exception of avakrîya alone. As the latter has sixteen altogether, these five, viz., upâhâra, sandîna, upanîsâsa, pratikâra, and samyoga have no equivalents in the former. Of these, the last two appear rather to be alliances and not forms of treaty of peace at all, pratikâra corresponding with alliances like the bhûmi-sandhi and samyoga with alliances like the karma-sandhi of the Kaujjilîya.

(To be continued.)

BOOK-NOTICE.

This new historical study by Mr. Sarkar has come out at an opportune time, and I have no hesitation in saying also in an opportune manner. It relates to a second-birth struggle, as it were, of a nation that subsequently achieved great things, and is at the present day of much importance in the land it occupies, and also to a struggle between peoples dwelling in two totally different atmospheres of religion, thought and emotional feeling, and consequently attached strongly to separate sympathies. It is therefore practically impossible for writers belonging to either party to look at the historical events or the actions of the historical personages concerned without some feeling of partisanship peeping out in any accounts they may severally give of them. A Hindu will involuntarily lean towards Shiva, and his Marathas, a Muhammadan towards Bijapur and Aurangzeb. I may at once therefore say that the great merit of this book by a Hindu lies in the fact that he has tried to be fair, tried to get at the original documents and to relate nothing that cannot in his judgment be supported by the most reliable authorities open to him. Throughout he gives his authorities in such a way that they can be verified. The book is indeed history treated in the right way and in the right spirit.

It was inevitable that in former uncritical times Muhammadan historians should give a version of Shivaji and his doings from their point of view only, and that the outpourings of the Maratha bards and the statements of the bhûshâna should take a similar line from the Hindu side of the story. It is inevitable also that current patriotic emotions should colour present-day rechauffées of the old writers, and so perpetuate false and partisan history. Indeed, one can quite appreciate the national feeling on the part of the Marathas that prompts the modern desire to whitewash Shivaji and blacken Aafa Khan, who was his first serious, and, after all, is said and done, his most important opponent. But in view of the crucial part that these two antagonists played in the revolution of Modern Indian History, it is well worth while to combat legend and get at the truth as nearly as may be after 250 years. This is what I think Mr. Sarkar has tried to do. Consequently, I propose to examine closely the story as he tells it, and to confine myself to the events on which the whole of Shivaji’s great career depended. I make no apology for an examination at length, as so very much has depended on two points: the murder of Chandra Rao More and the assassination of Aafa Khan (Abu’l-lâh Bhatari).

Mr. Sarkar, who places Shivaji’s birth on or about 6th April 1627 (p. 23), tells us (p. 22) that “Shahji Bhosale, a captain of mercenaries, belonged to a Maratha family that had migrated from Daniabahad and entered the service of Ahmadnagar. Some of his kinsmen had joined the Mughals with their retainers and risen to high rank early in Shah Jahan’s reign. Shivaji, the second son of Shahji, was born in the hill-fort of Shivner, which towers over the city of Junnar, in the extreme north of the Puna district. His mother Jija Bai (a daughter of the aristocratic Lukji Jadhav of Sindhkhed) had prayed to the local goddess, Shiva-Bai, for the good of her expected child, and named him after that deity.”

On pp. 23-24 we are told that “We know from the contemporary Persian histories that Shahji led a roving life, subject to frequent change of place and enemy attacks, during much of the period 1530 to 1636. Under these circumstances he would naturally have left his wife and infant son for safety in a stronghold like Shivner. But in reality, he seems to have deserted both.”
We thus get a clear view of Shivaji's origin and upbringing—the son of a wandering commander of Hindu soldiers of fortune, in general conflict with the Muhammadan powers of the day, left in the mountains of the Western Ghats to grow up as best he might, without any literary education and the knowledge that such brings with it, amid the hard and practical surroundings of a highland peasantry. A boy of natural strength and ability would grow up self-reliant and self-seeking in such circumstances.

In October, 1636, when Shivaji was ten and a half years old, his father made peace with the Mughales, but had to cede Shivner. He, however, retained his ancestral jagir of Pune and Supa” (p. 25).

Shivaji and his mother were accordingly moved to Pune, and Dadaji Kohundev, an experienced kulkarni, or land-steward, was appointed guardian. Dadaji was an effective administrator, and until his death in 1647, Shivaji grew up under his tutelage, becoming his own master at the age of 20. Dadaji (p. 35) was "a man of methodical habits, leading a sober blameless and hum-drum life, but quite incapable of lofty ideals, daring ambition or far-off vision. Shivaji's love of adventure and independence appeared to his guardian as the sign of an untutored and wayward spirit, which would ruin his life's chances." The other strong influence on his character is thus described (pp. 33-34): — "Young Shivaji wandered over the hills and forests of the Sahyadri range, and along the mazes of the river valleys, thus hardening himself to a life of privation and strenuous exertion, as well as getting a first-hand knowledge of the country and its people. During his residence at Pune his plastic mind was profoundly influenced by the teachings of the Hindu epics and sacred books given by his guardian and other Brahmans, and still more by the teaching of his mother. The deeply religious, almost ascetic, life that Jija Bai led amidst neglect and solitude imparted by its example, even more than by her precepts, a stoical earnestness mingled with religious fervour to the character of Shiva. He began to love independence and leathe a life of servile luxury in the pay of some Muslim king. It is, however, extremely doubtful if at this time he conceived any general design of freeing his brother Hindus from the insults and outrage of which they were often subjected by the dominant Muslim population. An independent sovereignty for himself he certainly coveted; but he never couched as the liberator of the Hindus in general, at all events not till long afterwards."

Shivaji was now his father's representative in his jagir, and at once took matters in hand himself on the opportunity offering of self-aggrandisement by the illness and consequent incapacity of the Bijapur monarch, Muhammad Adil Shah. He took the Bijapur fort of Torna by a trick and managed to retain it by bribery at Court (p. 38); and by similar means annexed Supa, Chakan, Koodana and Purandhar, and so on, even from his own relatives (pp. 38-41). Katian, Shimi and Raibri (afterwards their capital as Raigarh), and a number of places in the Thans and Kolaba districts and in the Northern Konkan followed into his possession by raids or attacks, seemingly unprompted (pp. 41-43). Al this by 1648 when he was about 21. He was then drawn up with a round turn by the imprisonment of his father in that year at Jingga across the Peninsula by the Bijapur authorities (pp. 44-47). This brought about a crisis in Shivaji's affairs and induced him to negotiate with the Mughal Emperor, and even after the release of Shahji in 1649, it kept him quiet till 1655, spending the interval in consolidating his gains, which can hardly be said to have been well gotten (pp. 46-50). Shivaji was now 28.

Then comes the crucial event of the murder of Chandra Rao More in the year 1655. Here is Mr. Sarkar’s version (pp. 51-56): "A Maratha family named More had received a grant of the State of Javli [Satara District] from the first Sultan of Bijapur early in the 16th century, and made the claim good by their sword. For eight generations they conquered the petty chieftains around and amassed a vast treasure by plunder. They kept 12,000 infantry, mostly sturdy hillmen of the same class as the Manvels, and succeeded in getting possession of the entire district and parts of Konkan.

The head of the family bore the hereditary title of Chandra Rao, conferred by a Bijapur king in recognition of the founder's personal strength and courage. The younger sons enjoyed appanages in the neighbouring villages. Eighth in descent from the founder was Krishnaji Bajii, who succeeded to the lordship of Javli about 1632.

"The State of Javli, by its situation, barred the path of Shivaji's ambition in the south and southwest. As he frankly said to Raghunath Ballal Korde, 'Unless Chandra Rao is killed, the kingdom cannot be secured. None but you can do this deed. I send you to him as envoy.' The Brahman entered into the conspiracy, and went to Javli, attended by an escort of 125 picked men, on a pretended proposal of marriage between Shiva and Chandra Rao's daughter."

"On the first day the envoy made a show of opening marriage negotiations. Finding out that Chandra Rao was fond of drink and usually lived in a careless unguarded manner, Raghunath wrote to his master to come to the neighbourhood in force, in readiness to take advantage of the murder immediately after it was committed. The second interview with Chandra Rao was held in a private chamber. Raghunath talked for some time on the endless details of a Hindu marriage treaty, and then drew his dagger; all of a sudden and stabbed Chandra Rao, who was despatched by a Maratha soldier. The assassins promptly rushed

1 It has not been proved that he could read or write (p. 30).

2 In this, however, he merely followed a very old Indian custom, Hindu and Muhammadan.
out of the gate, cut their way through the alarmed and confused guards, beat back the small and hurrيلي organised band of pursuers and gained a chosen place of hiding in the forest.

"Shivaji had kept himself ready to follow up his agent's crime; according to later accounts he had arrived at Mahaleshwar with an army on the scene of a pilgrimage. Immediately on hearing of the murder of the Mores, he arrived and assaulted Javli. The leaderless garrison defended themselves for six hours and were then overcome. Chandra Rao's two sons and entire family were made prisoners. But his kinman and manager Hanumant Rao More, rallied the partisans of the house and held a neighbouring village in force, menacing Shivaji's new conquest. Shivaji found that unless he murdered Hanumant, the throne would not be removed from Javli." So, he sent a Maratha officer of his household named Shambhooji Kavji with a pretended message to Hanumant Rao, who was then stabbed to death at a private interview (about October 1655). The whole kingdom of Javli now passed into Shivaji's possession and he was free to invade South Konkan with ease or extend his dominion southwards into the Kolhapur district.

The acquisition of Javli was the result of deliberate murder and organised treachery on the part of Shivaji. His power was then in its infancy and he could not afford to be scrupulous in the choice of the means of strengthening himself.

"The only redeeming feature of this dark episode in his life is that the crime was not aggravated by hypocrisy. All his old Hindu biographers are agreed that it was an act of murder for personal gain and not a human sacrifice needed in the cause of religion. Even Shivaji never pretended that the murder of the three Mores was prompted by a desire to found a 'Hindu swaroj.'"

To this remark I would like to add, as an onlooker, that the story shows Shivaji in 1655 in the light of a man cunning, intriguing, tricky, without scruple, and capable of going to any length to gain his ends, and it prepares us for the story four years later of Afsal Khan.

Mr. Sarkar goes on to say (pp. 54-55): "Some Maratha writers have recently discovered what they vaguely call 'an old chronicle,'—written nobody knows when or by whom, preserved nobody knows where, and transmitted nobody knows how,—which asserts that Chandra Rao had tried to seize Shivaji by treachery and hand him over to the vengeance of Bijapur, and that he had at first been pardoned by the latter and had then conspired with Baji Ghorpade to imprison Shivaji. Unfortunately for the credibility of such convenient 'discoveries,' none of the genuine old histories of Shiva could anticipate that this line of defence would be adopted by the twentieth century admirers of the national hero; they have called the murder a murder."

Now let us see what are the authorities on which Mr. Sarkar relies for his version. They are given on pp. 500-502.

(1) Shiva-chhattrapati-chen Charitra by Krishnaji Anant Sahasrad (Sahasrad Bakhar) : 1694.
(3) Shiva-digvijay. Ed. or published by P. R. Nandurkar and L. K. Dandekar 1895.

The second and fourth Mr. Sarkar describes as valueless (pp. 501, 502). He has not a much higher opinion of the third: "but the kernel of the book is some lost Marathi work composed about 1760-1776, and containing, among many loose traditions, a few facts the truth of which we know from contemporary Factory Records." Of the first he has a high opinion, "but [it is] the most valuable Marathi account of Shivaji and our only source of information from the Maratha side. All later biographies in the same language may be dismissed, as they have copied this Sahasrad Bakhar at places word for word." Evidently Mr. Sarkar has gone as far back as he could for the facts of the story of Shivaji's relations with the More family and has given us the best source available, unsatisfactory though that is. When Mr. Kincad, replying to criticism on his and Rao Bahadur Parsarni's History of the Marathas in the Times Literary Supplement, August 14, 1919, states "we acquitted Shivaji of guilt in connection with Chandra Rao's death," he has no such authority to support him, and the probabilities are against him in view of Shivaji's general character and story.

In 1655, when Shivaji was still under 30, there came the great crisis in his life and indeed in Maratha history. He had much enlarged his kingdom and commanded a considerable army, said by Sahasrad, writing from memory, to be some 10,000 cavalry and 10,000 infantry, while he held about 40 forts. In that year Muhammad Adil Shah of Bijapur died, and Shivaji began "to prepare for the invasion of Bijapur" (p. 58). He entered into negotiations with Mutaft Khan, the Mughal Governor of Ahmadnagar, and also with Aurangzeb himself at Aurungabat all against the Bijapur kingdom (p. 59). But in the end he sided for the time being with Bijapur, his officers raiding Mughal territory right up to Aurungabad (p. 59), while he himself captured Junnar. This roused the wrath of Aurangzeb, then besieging Bidar. Shivaji's escapades resulted in his own discomfiture for a time, for Aurangzeb was no fool when it came to organising a campaign or protecting his frontiers. In the end Shivaji had to make his peace by 1658. Then commenced "the War of Succession which kept Aurangzeb busy for the next two years, 1658-1659," and freed Shivaji from all fear of the Mughals (pp. 58-67).

By 1659 Khwas Khan was administering the Bijapur Kingdom with ability and vigour for the
virtual ruler, the Queen Mother Bari Sahibe, and it became necessary to crush Shivaji if possible (pp. 67-68). But "the command of the expedition against him went a-begging at the Bijapur Court, till Afzal Khan accepted it" (p. 68). However, when the push came, he did not feel strong enough (he had no more troops at his command than Shivaji) to openly attack the rebels. "Indeed, he was instructed by the Dowager Queen to effect the capture or murder of Shivaji by 'pretending friendship' with him and offering to secure his pardon from Adil Shah" (p. 69). "He planned to effect his purpose by a combination of 'frightfulness' and diplomacy. From Bijapur the expedition marched due north to Tuljapur, one of the holiest shrines in Maharashtra and the seat of Bhavani, the guardian goddess of the house of Bhonsale. Afzal's strategy was to make a sweep round Shivua's line of southern fortresses and penetrate to Pune through the exposed eastern flank of the Maratha kingdom, or to provoke Shivu, by a gross outrage on his faith, into coming out of his fastnesses and meet the Bijapuri army in the open. At Tuljapur he ordered the stone image of Bhavani to be broken and pounded into dust in a sand-mill" (p. 70). In addition, he plotted to win over Maratha chiefs, and continued his 'frightfulness' by further acts of sacrilege (p. 70). While he was proceeding in this manner, Afzal Khan "sent his land-steward Krishnaji Bhaskar to Shivaji with a very alluring message, saying, 'Your father has long been a great friend of mine, and you are, therefore, not stranger to me. Come and see me, and I shall use my influence to make Adil Shah confirm your possession of Konkan and the forts you now hold. I shall secure for you further distinctions and military equipment from our Government. If you wish to attend the Court, you will be welcomed. Or, if you want to be excused personal attendance there, you will be exempted'" (p. 71).

Shivaji was now much perplexed and his followers seriously alarmed, tales of Afzal Khan's strength and ruthlessness having reached the Maratha camp. "This was the most critical moment in the career of Shivaji," but he appealed to his men's sense of honour and they resolved on war (pp. 72-73).

To get a clear view of Shivaji's subsequent actions and of the story of his murder of Afzal Khan a long quotation from Mr. Sarkar's book is necessary (pp. 74-79):

"Then came Afzal's envoy, Krishnaji Bhaskar, with the invitation to a parley. Shivaji treated him with respect, and at night met him in secrecy and solemnly appealed to him as a Hindu and a priest to tell him of the Khan's real intentions. Krishnaji yielded so far as to hint that the Khan seemed to harbour some plan of mischief. Shivaji then sent the envoy back with Gopinath Pant, his own agent, agreeing to Afzal's proposal of an interview, provided that the Khan gave him a solemn assurance of safety. Gopinath's real mission was to find out the strength of Afzal's army and other useful information about it and learn for himself what the Khan's real aim was. Through Gopinath, Shivaji vowed that no harm would be done to Afzal during the interview, and Afzal, on his part, gave similar assurances of his honesty of purpose. But Gopinath learnt by a liberal use of bribes that Afzal's officers were convinced that he had so arranged matters that Shivaji would be arrested at the interview, as he was too cunning to be caught by open fight. On his return, Gopinath told it all to Shivu and urged him to anticipate the treacherous attack on himself by murdering Afzal at a lonely meeting and then surprising his army. "Shivu', taking the hint from Gopinath, feigned terror and refused to visit Wai, unless the Khan met him nearer home and personally promised him safety and future protection. Afzal agreed to make this concession. By Shivu's orders a path was cut through the dense forest all the way from Wai to Pratapgarh and food and drink were kept ready for the Bijapuri army at various points of it. By way of the Raithodi pass (below 'Bombay Point' of the Mahabaleshwar plateau), Afzal Khan marched to Par, a village lying one mile below Pratapgarh on the south, and his men encamped there in scattered groups, deep down in the valley near every pool of water at the source of the Koyna.

"Gopinath" was sent up the hill to report the Khan's arrival. The meeting was arranged to take place next day. The place chosen for the interview was the crest of an eminence, below the fort of Pratapgarh, and overlooking the valley of the Koyna. On both sides of the forest path leading up the hillside to the pavilion picked soldiers were posted in ambush at intervals by Shivaji. Here he erected tents and set up a richly decorated canopy with gorgeous carpets and cushions worthy of a royal guest. Then he prepared himself for the meeting. Under his turban he wore a coat of chain armour and below his turban he placed a steel cap for the protection of the skull. What offensive arms he had, nobody could see; but concealed in his left hand was a set of steel claws (baghnaak) fastened to the fingers by a pair of rings, and up his right sleeve lay hidden a thin sharp dagger called the scorpion (bichula). His companions were only two, but both men of extraordinary courage and agility.—Jiv Mahala, an expert swordsman, and Shambhuri Kavji, the murderer of Hanumant Rao More. Each of them carried two swords and a shield.

"As the party was about to descend from the fort a saintly female figure appeared in their midst. It was Jija Bai. Shivu bowed to his mother. She blessed him saying, 'Victory be yours!' and solemnly charged his companions to keep him safe; they vowed obedience. Then they walked down to the foot of the fort and waited.

"Meanwhile Afzal Khan had started from his camp at Par, with a strong escort of more than a thousand musketeers. Gopinath objected to it,
saying that such a display of force would scare away Shiva from the interview, and that the Khan should, therefore, take with himself only two bodyguards, exactly as Shiva had done. So, he left his troops some distance behind and made his way up the hillpath in a palanquin, accompanied by two soldiers and a famous swordsman named Sayyid Banda, as well as the two Brahman envoys, Copinath and Krishnaji. Arrived in the tent, Afsal Khan angrily remarked on its princely furniture and decorations as far above the proper style of a jagirdar’s son. But Copinath soothed him by saying that all these rich things would soon go to the Bijapur palace as the first fruits of Shiva’s submission.

Messengers were sent to hurry up Shiva, who was waiting below the fort. He advanced slowly, then halted on seeing Sayyid Banda, and sent to demand that the man should be removed from the tent. This was done, and at last Shivaji entered the pavilion. On each side four men were present—the principal, two armed retainers and an envoy. But Shiva was seemingly unarmed, like a rebel who had come to surrender, while the Khan had his sword by his side.

The attendants stood below. Shiva mounted the raised platform and bowed to Afsal. The Khan rose from his seat, advanced a few steps, and opened his arms to receive Shiva in his embrace. The short slim Maratha only came up to the shoulders of his opponent. Suddenly Afsal tightened his clasp, and held Shiva’s neck in his left arm with an iron grip, while with his right hand he drew his long straight-bladed dagger and struck at the side of Shiva. The hidden armour rendered the blow harmless. Shiva groaned in agony as he felt himself being strangled. But in a moment he recovered from the surprise, passed his left arm round the Khan’s waist and tore his bowels open with a blow of the steel claws. Then with the right hand he drove the bichwa into Afsal’s side. The wounded man relaxed his hold, and Shivaji wrestled himself free, jumped down from the platform, and ran towards his own men outside.

“Treachery! Murder! Help! Help!” The attendants ran up from both sides. Sayyid Banda faced Shiva with his long straight sword and cut his turban in twain, making a deep dint in the steel cap beneath. Shiva quickly took a rapier from Jiv Mahala and began to parry. But Jiv Mahala came round with his other sword, hacked off the right arm of the Sayyid, and then killed him.

Meanwhile the bearers had placed the wounded Khan in his palanquin, and started for his camp. But Shamburji Cavaji slashed at their legs, made them drop the palanquin, and then cut off Afsal’s head, which he carried in triumph to Shiva.

The story is continued thus: “Freed from danger, Shiva and his two comrades then made their way to the summit of Pratapgarh, and fired a cannon. This was the signal for which his troops were waiting in their ambush in the valleys below.
THE HISTORY OF THE NIZĀM SHĀḤI KINGS OF AHMADNAGAR.
BY LIEUT.-COLONEL T. W. HAIG, C.S.I., C.M.G., C.B.E.
(Continued from p. 123.)

XIX.—THE CHARACTER OF AHMAD NIZĀM SHĀḤ.

Ahmad Niẓām Shāḥ was exceedingly chaste and continent. When riding through the city and the bazaars, he never glanced either to the right hand or to the left. One of his intimate companions one day asked him why he never looked around him on these occasions. The king replied that as he and his troops passed by, crowds of people, both men and women, assembled to see them pass, and lined the doors and walls, and crowded the streets and market-places. He could not look upon them without seeing somebody upon whom it was not proper to gaze, and as to let his glance rest on such a one would be unpleasing to the Creator, he thought fit to refrain from looking about him.

Ahmad Niẓām Shāḥ was also noted for his austerity and piety. Once in the early days of his reign, while he was yet a young man, and at the age when the lusts of the flesh are predominant and most violent, he led an army against the fort of Rāwil and took it. Among the captives who fell into the hands of the royal army, was a most beautiful young woman whom Masmad-i-’Āli Malik Naṣīr-ul-Mulk, on hearing of her beauty, summoned before himself. On seeing her, he considered that such a being should adorn none but the royal haram, and wrote to the king, proposing to send her to the haram. The king replied, commanding him to do so. When the king retired to his bedchamber in order to go in unto her, the woman came before him with blandishments and coquetry, but the king, before retiring, asked her whether she had a husband, or a mother, or a father. The woman replied that her husband and her parents were living, and the king at once extinguished the fire of lust and bade the woman be comforted, for he would send for her husband and her parents and hand her over to them. In this case it may be said that Ahmad Niẓām Shāḥ’s chastity and continence excelled those of Joseph, for Zulaichā, being the wife of Joseph’s master, was not lawful to him, whereas this woman being a captive taken in war, was lawful to Ahmad Niẓām Shāḥ. On the following day Masmad-i-’Āli Malik Naṣīr-ul-Mulk came to pay his respects to the king and would have congratulated him on his enjoyment, but the king told him of what had passed, and of his promise to the woman. In accordance with the royal commands, the woman’s husband and parents were produced and, after they had been royally entertained, the king handed the woman over to her husband.

One of Ahmad Niẓām Shāḥ’s wise customs was this. If by chance in the day of battle he saw one of his men behave in a cowardly manner and turn his back on the enemy, he would send for him and ask him, kindly and gently, why he had behaved so. When the coward, in halting phrases, excused himself, the king would give him a quid of betel and allow him to depart to his post. When the fight was over, and those who had distinguished themselves, were brought up to receive robes of honour and royal favours, the king would first enquire for the coward and, when he had been found, would confer on him a robe of honour and other favours, and would afterwards bestow rewards on the brave. One day one of the king’s more intimate associates made so bold as to say that it was not understood why the king thus gave to a coward precedence of those who had borne the burden and heat of the day, and had acquitted themselves valiantly. The king replied that the reason for this practice would be made known to him later. Shortly afterwards it so happened that the king’s army was engaged with the troops of the enemy, and the man who had on a former occasion
fled from the battle, now charged the enemy more valiantly than the bravest of the army. The king, turning towards the courtier who had objected to his kindly treatment of the coward, said, 'Now the reason for my kindness to men of this class is apparent, and you know that to convert the cowards of the army into brave men by this device is wise policy.'

Another of the king's wise actions may be mentioned here. Dalpat Rai, a Brāhman officer in the army, was jealous of Masnad-i-'Āli Malik Naṣir-ul-Mulk, as is often the case with officers whose sole aim and object is the acquisition of wealth, and who cannot bear to see anybody more prosperous than themselves. Dalpat Rai, prompted by his evil passions, forged a memorandum, purporting to be in the handwriting of Masnad-i-'Āli, in order to show that Masnad-i-'Āli received large sums as bribes from the officers and governors of countries on the borders of the king's dominions. Spies reported this matter to Masnad-i-'Āli and he, without thought of denying the charge, said, 'Dalpat Rai does not know the truth of this matter. Those who have given and he who has received the bribes must necessarily know more about the matter than Dalpat Rai.' He then drew up, as a counterblast to Dalpat Rai's memorandum, another memorandum shewing that he had received double the amounts mentioned in Dalpat Rai's memorandum. On the day on which the king held his court, Dalpat Rai came forward and presented to him his memorandum. The king turned to Masnad-i-'Āli and asked him to explain the accusation which had been brought against him by Dalpat Rai. Masnad-i-'Āli, after praying for the king's long life and prosperity, said, 'What can Dalpat Rai know of my outgoings and incomings?' and placed in the king's hand the memorandum which he had himself prepared. The king, on reading this memorandum, found that the sums mentioned therein were greater than the sums mentioned in Dalpat Rai's memorandum. Masnad-i-'Āli then said, 'All this money belongs to your majesty, and I have saved it against this day.' The king then tore up both memoranda and cast them from him and said, 'Men enter the service of kings for the sake of acquiring worldly treasure, not for the sake of laying up treasure in heaven, and as long as Masnad-i-'Āli Naṣir-ul-Mulk is not convicted of treachery in the royal service, nor of extortion from the kingdom and its subjects, I shall be thankful and not displeased if the Sultāns of neighbouring countries send him gifts and presents for the sake of establishing and confirming mutual feelings of friendliness and averting strife, for this will show that God has favoured my servants with the opportunity of acquiring from others the means of power, and has so implanted in the hearts of all men the fear of me that they are willing to ingratiate themselves with my servants by sending them gifts and by comporting themselves with proper humility towards them.' The king then turned to Dalpat Rai and said to him, 'Henceforth do not dare to be guilty of such conduct, or to allow your envy to lead you into acts of enmity against my loyal servants, or you will incur my royal wrath. It is the part of faithful servants to live with one another in peace and amity, having for their object the furtherance of their lord's affairs and not their own personal and selfish ends, which they should put aside, in order that they may receive the rewards due to faithful service.'

Another of the merciful and clement practices of the king was the following. If any person was accused of an offence and the case came before the royal court of justice, the king would ask the prisoner whether he were guilty of the offence charged against him, or not. The object of the question was that the prisoner might deny his guilt and so be freed from imprisonment. If the guilty person divined the object of the question and denied the guilt, he was set at liberty, but if he confessed his guilt, the king, in his mercy and clemency and
in the desire of supporting the panel, would say ‘\textit{mundâbîd paîhara band},’ that is to say, ‘Tie your turban again’ in order that that person might realize the object of the question and thus escape punishment.

The following are the names of some of the officers of state, the 
\textit{amirs}, and the \textit{vazirs} of Ahmad Nizâm Shâh:

(1) Malik Nâṣir-ul-Mulk Gujârâti, \textit{Vakil} and \textit{Pishra}.
(3) Qâsi Khvând-i-Majlisi.
(4) Ustâd Khvâja bin Dabîr. \textit{Vazirs}.
(5) Kâmil Khân.
(6) Zarîf-ul-Mulk the Afghân.
(7) Jalâl Rûmî Khân.
(8) Kadam Khân.
(9) Munir Khân.
(10) Fâlîd Khân.
(11) Malik Râjâ Dastur-ul-Mulk.
(12) Sayyid Mu'izz-ud-dîn.

XX.—The accession of Al-Mu'âyyad Min'indi-'Ilâh Abûl-Mu'âaffar Burhân Nizâm Shâh to the Throne of Sovereignty, and a Brief Account of the Events of His Reign.

When the king Al-Musta'ân bi-'inâyati-'Ilâh Abûl Mu'âaffar Ahmad Shâh (bîn Mu'âmmad Shâh bîn Humâyûn Shâh Bahmani) having cleared the land of his enemies and given fresh lustre to Islâm, died in A.H. 911 (A.D. 1506-06), his son, Abûl Mu'âaffar Burhân Nizâm Shâh in the same year, viz., A.H. 911, adorned with his person the crown and throne of sovereignty, and caused both the currency and the \textit{khu'bah} of the Dakân to run in his name. In his reign the wolf herded the sheep and the hawk guarded the pigeon.

It is well known that the events in the reign of Burhân Nizâm Shâh were so numerous that they cannot easily be narrated, for, according to the best-known accounts, the king reigned for nearly fifty years, and of all those years there was not one in which his armies did not go forth to fight against his enemies; and as no historian has hitherto attempted to give a detailed and systematic account of his reign and many discrepancies are to be found between the accounts of those who lived in that fortunate reign, or shortly after it, especially with regard to the sequence of events, the author of this history trusts that he will not be severely censured for any errors or discrepancies that may appear in his account.

Burhân Nizâm Shâh, at the time of his accession, was not quite seven years of age, and Mukammal Khân, who had held the office of \textit{valîl} and \textit{pishra} since the reign of the late king, Ahmad Shâh Bârî, took the whole administration of the army and the state into his own

\footnote{An expression taken from either Marâthî or Hindi. \textit{Firishta} draws largely on this account of Ahmad Nizâm Shâh's character.}

\footnote{This office was characteristic of the Mu'âammadân kingdoms of the Dakân and Sivasj; followed the example of the Mu'âammadân kings. The powers attached to the officer were much greater than those of an ordinary minister.}

\footnote{\textit{Firishta} (ii, 198) gives the chronogram \textit{ذیسن دیل یزد} for the accession of Burhân Nizâm Shâh I. This gives the date 914 (A.D. 1508-09).}
hands and governed the kingdom almost as an independent king. His son, Jamâl-ud-din, who had received the title of A'llâz-ul-Mulk, had drunk from the cup of place and pomp until he was drunk with power and pride and so enmeshed in the lusts to which youth is prone, that he paid regard to none but himself. Owing to the power of the regent and his son, a party of the amirs and chief men of the Dakan, moved by envy and the desire of stirring up strife, conspired to raise to the throne the king's younger brother, who was known as Râjâji, but since God had decreed the kingdom to Burhân Niğâm Shâh, the plot failed.

When the opponents of the Government realized that it was useless to attempt to reverse the Divine decrees, they submitted and made obeisance at the gate of the royal court.

XXI.—An account of the causes of the quarrel which occurred between Burhân Niğâm Shâh at the beginning of his reign, and Shaikh 'Alâ-ud-din 'Imâd-ul-Mulk.

A.D. 1510-11. Early in the reign of Burhân Niğâm Shâh, the amirs, the officers of state and the subjects generally were discontented, owing to the great power enjoyed by Mukammad Khân and the pride and arrogance of his son, A'llâz-ul-Mulk. 'Imâd-ul-Mulk plunged into all sorts of immorality and wanton pastimes, and used oppressively to violate men's honour, and this tyranny was unbearable to the men of the Dakan, so that a great outcry arose against him. Some of the amirs, such as Rûmi Khân, Qadam Khân, Munir Khân, and others, feared that he entertained designs against them, owing to the part which they had played in the attempt to raise Râjâji to the throne, and for this slight cause, making 'A'llâz-ul-Mulk's enormities their excuse, left the court and took refuge with 'Imâd-ul-Mulk in Berar, where they made every effort to stir up strife. They persuaded 'Imâd-ul-Mulk that the rule of Mukammad Khân and his son, during the king's minority, were hateful to the people, and that the conquest of the country would be an easy matter, adding that it was not the part of a wise king to let slip an opportunity of this nature and give his enemies time. 'Imâd-ul-Mulk was beguiled by their words and was proud of the strength of his army. He collected his troops from all quarters of his country and marched towards Ahmadnagar.

When the news of 'Imâd-ul-Mulk's movements reached the king, he ordered Mukammad Khân to send swift messengers to all parts of the kingdom to summon the army, and to send the royal tents on towards Berar. These orders were carried out. The amirs and officers were summoned with their troops and the royal tents were sent forward towards Berar. When the army was assembled at the capital it marched rapidly towards the town of Râûbârâ, where it encamped. 'Imâd-ul-Mulk also marched from the direction of Berar towards Râûbârâ and encamped over against the royal army.

On the following day, when the sun rose, the two armies were drawn up in battle array, facing one another.

Mukammad Khân divided the royal army into two divisions. The duty of one was to guard and protect the king, and the command of this division was given to Miyân Kâla.

69 Frishta (ii, 199) has Râûbârâ. From the similarity of the names as written in the Persian script, the site of the battle was probably Râûbârâ situated in 19° 22' N. and 74° 40' E. Sayyid 'Allî's account of this campaign does not differ materially from that given by Frishta, but Frishta blames Mukammad Khân and his son A'llâz-ul-Mulk for having by their hostility driven the amirs from Ahmadnagar. The amirs took with them 8,000 horse. The battle of Râûbârâ was fought in a.D. 916 (A.D. 1510-11) and the victory of Burhân Niğâm Shâh's army was even more complete than Sayyid 'Allî represents it to be. 'Allî-ud-din 'Imâd Shâh was so closely pursued through Berar that he fled to Burhânpur, and it was 'Adil Khân III of Khânsâh that made peace between the belligerents.
Ashdar Khan. As the king was too young to be able to manage a charger, Azhdar took him in front of him, and tied a sash round the king's waist and his own, lest the horse should become restive on hearing the noise of battle and unseat the king. The duty of the other division was to attack the enemy.

Imad-ul-Mulk also divided his army into two divisions, and appointed one to repel the attack of the second division of the army of Burchan Nizam Shah, while he led the other division against the division appointed to guard the person of the king.

The royal army marched out of the town of Ranubari and met the enemy, and a fierce battle was fought. While the battle was in progress, two of the fiercest of the king's elephants, named Barkhurdar and Buzurgwahr, were taken by their mahouts to a river which ran near the field of battle in order that they might be watered. At the river they met and fought and, so fighting, being beyond the control of their drivers, moved in the direction of the enemy. When the royal troops saw that two of the king's own elephants were going towards the enemy, they charged after them, fearing lest they might be seized by the enemy. It fortunately happened at this moment that Imad-ul-Mulk was informed that the amirs of Burchan Nizam Shah, who had joined themselves to him, were deserting him and joining the army of Burchan Nizam Shah. When Imad-ul-Mulk heard this news and at the same time saw the bravest of the royal troops charging his army, he lost heart and fled, halting not until he had reached the midst of his own country. The victorious army pursued the enemy and slew very many of them, taking also large quantities of spoil, horses, elephants, arms and tents. It is said that on that day the army of Imad-ul-Mulk was utterly dispersed and fled into all parts of the country, so that most of their horses and elephants fell into the hands of the country people by whom they were brought and presented to the king.

After this victory the king returned to Ahmadrnagar.

XXII—An account of the domination of 'Aziz-ul-Mulk, of the general mischief caused by his elevation to the offices of vakil and fiskh, of his ambitious designs for deposing the king, and of his punishment.

A short time after the defeat of the army of Imad-ul-Mulk and the extinguishing of the fire of war, Mukammal Khan, who had been vakkil and qishk, since the reign of his late majesty Sultan Ahmad Bakri, departed this life. After his death the king bestowed the offices of vakkil and qishk on his son, 'Aziz-ul-Mulk, who had some hereditary claim to them. ‘Aziz-ul-Mulk, who had an evil disposition, soon raised the standard of strife and turbulence, and the banner of tyranny and injustice, and got all power in the administration of the state into his own hands, ruling like an independent king, while to the king was left nothing but the name of a king.

When ‘Aziz-ul-Mulk had thus seized all power, pride and folly established themselves in his disposition, and he conceived in his base heart the design of still further extending his power and of rebelling against the king. Moreover, he devoted the whole of his attention to undermining the foundation of the kingdom, and excluded from the royal service most of those who had been in close attendance upon the throne, and the king's old servants, and admitted to the king's presence nobody except three wet-nurses who had nursed the king and brought him up, and three eunuchs who had been in the service of his late majesty. He also tried to overthrow the state altogether, and one day put some deadly poison into some milk of which the king was extremely fond, and sent it to the king. The king's nurses,
however, were on their guard and would not allow the king to drink the milk. They gave a little of it to a beast, in order to test it, and the moment that the beast drank it, it died. Then they thanked God, Who had spared the young king’s life, and distributed alms to poor and holy men by way of a thankoofering. Thus ‘Aziz-ul-Mulk forgot his duty of loyalty to the king, and became an ungrateful rebel. When a man of base nature attains worldly power, the blackness of his heart and the baseness of his nature become manifest in his acts. The king’s loyal servants, and those who were near his throne, wareied of the dominance and disloyalty of ‘Aziz-ul-Mulk, and consulted together as to how this enemy of the faith and the state could be overthrown, asking assistance in the matter from all loyal servants of the king. At this time Dânayya Chisan Jiýu,68 who was governor of the fort of Antùr, came to court to pay his respects, and had an audience of the king. When he ascertained the course of ‘Aziz-ul-Mulk’s conduct and his ingratitude and disobedience, he represented to the king that he had formed a design for overthrowing ‘Aziz-ul-Mulk, and would disclose it if he had the king’s leave. The king, by the mouth of one of his faithful servants, asked what the nature of his plan was, and he replied that he would return to his fort and there feign to rebel, in order that ‘Aziz-ul-Mulk might be sent in person to quell the rebellion and the king might be relieved of his presence. Dânayya continued saying that he would fight against ‘Aziz-ul-Mulk as the king’s enemy and would do his utmost to remove him, and to relieve the king from his dominance. The king highly approved of this plan and gave Dânayya leave to depart, urging him to use his best endeavours to put ‘Aziz-ul-Mulk out of the way. Dânayya, in accordance with the royal command, returned to Antùr, and there set up the standard of rebellion. When news of this rebellion was brought to ‘Aziz-ul-Mulk, ‘Aziz-ul-Mulk, who trusted none of the amirs of the Dakan, sent his brother, Jahângir Khán, to crush the rebellion, and Jahângir Khán, with a numerous army, of the strength of which he was very proud, marched for Antùr and encamped before the fort. When Dânayya heard of the approach of Jahângir Khán, he closed the fort against him, withdrew his men from the walls and bastions, and made no sign of offering resistance. Jahângir Khán attributed this conduct to Dânayya’s pusillanimity and was emboldened to attack the fort, and with great assurance ordered his troops to attack the fort on all sides at once. The defenders waited until Jahângir Khán’s troops had advanced to within a short distance of the walls, and then poured in upon them a deadly fire of artillery and musketry. The army of Jahângir Khán was broken; many were slain, and some fled. The sons of Jaya Singhji came forth from the fort with their brave army and pursued the fugitives like messengers of death. Jahângir Khán had the ill fortune to be taken prisoner by Dânayya’s troops, but the rest of his army escaped, though with great difficulty. Dânayya ordered that Jahângir Khán should be paraded through his army on an ass, like a thief, as an example to all disloyal men, and that he should then be punished for his ill deeds, that all men might know that this was the reward of treason.

When ‘Aziz-ul-Mulk heard that his brother’s nose had been cut off, he raved like a madman, and went to the king and reported the matter to him, saying that if the king treated this matter lightly and did not set forth in person to put down Dânayya’s rebellion, it would gain head and would soon be beyond repression.

The king, seeing no way out of the difficulty, ordered his army to assemble at the capital and sent his tents forward. ‘Aziz-ul-Mulk, inflamed with pride, ordered the army to assemble from far and near, and the king set out with his troops towards the fort of Antùr.

68 Sic. The correct name is Jaya Singhji, which was Dânayya’s father’s name, following his own, as is usual in the Dakan. The sons of Jaya Singhji, mentioned later, were evidently Dânayya and his brothers.

Antùr was situated in 20° 27’ N. and 76° 8’ E. not far from the spot where the frontiers of Ahmadnagar, orar, and Khândesh met.
In the course of the march, the king’s loyal servants, seizing a favourable opportunity, advised the king to issue to the amirs who had fled from the court for fear of ‘Aziz-ul-Mulk and had taken refuge with ‘Imad-ul-Mulk in Berar, a safe conduct to court, in order that by their aid he might be freed from the domination of disloyal and ungrateful subjects. The king acted on this advice and sent a safe conduct to the amirs who, by great good fortune, joined the royal camp from that direction before the army reached Antūr, and, before they had even paid their respects to the king, entered ‘Aziz-ul-Mulk’s tent, seized him, and blinded him with a red-hot iron, thus freeing the world from the strife and confusion caused by that chief of the lords of oppression and injustice. They then went on to the king’s presence and had the honour of making their obeisance. They were honoured with robes of honour, golden girdles, and other marks of the royal favour, in order that it might be made clear to the world that loyalty and obedience are rewarded and disloyalty and ingratitude punished.

After the blinding of ‘Aziz-ul-Mulk, the king appointed no other person to the office of pishād, but, in spite of his tender age, which was no more than twelve years, took the whole administration of the kingdom into his own hands and so apportioned his time that every moment was devoted to some affair of importance; and he never, for a long time, varied this arrangement. Like the sun, he never rested by day from attending to the wants of the humble and, like his own wakeful fortune, he scarcely slept at night for employment in the affairs of his subjects.

Meanwhile, Mir Rukn-ud-din, who was a faithful and pious man, was vazir of the kingdom of the Dakhan, Shaikh Ja’far and Maulānā Fīr Muḥammad Shirvāna, who were companions of Mir Rukn-ud-din, having been admitted to the king’s presence by the favour of the Mir, were appointed to be his companions.

Since, however, the dealings of Mir Rukn-ud-din with the king’s subjects were not marked by justice and equity, complaints of him reached the royal threshold and he had been vazir for a short time only, when the office was taken from him and given to Shaikh Ja’far.61

XXIII.—AN ACCOUNT OF THE WARFARE BETWEEN Burhān Niẓām Shāh AND ‘Imad-ul-Mulk, AND OF THE DEFEAT OF ‘Imad-ul-Mulk IN THE LAST BATTLE AND HIS FLIGHT TO GUJARĀT.

After ‘Imad-ul-Mulk had fled before the royal troops in the battle which took place in the neighbourhood of the town of Rānūbarā, and had lost most of his elephants, horses and munitions of war, he was constantly overwhelmed with shame at the thought of the disgrace which had befallen him, and was again preparing for war in the hope that he might be able to retrieve his honour. He collected a large army of capable troops and marched for Berar with the object of making war on Burhān Niẓām Shāh.

61 The death of Mukammal Kiān shortly after the battle of Rāhūrī, the appointment of his son ‘Aziz-ul-Mulk as pishād, and Dānayya’s levied rebellion in Antūr are not mentioned by Fīrishta, who says that Mukammal Kiān was still in power in A.H. 924 (A.D. 1516) after the capture of Fāthār by Burhān Niẓām Shāh, when the king was seventeen years of age. Burhān, after his return to Ahmadnagar, became enamoured of a courtesan named Āmana or Amina, and was so infatuated with her that he married her and made her the chief lady of his seraglio. She led him into evil courses and taught him to drink wine, so that he neglected his royal duties and spent his time in riotous living. Mukammal Kiān, now an old man, tendered his resignation of his office on the ground that the king had reached years of discretion. His resignation was accepted and Shaikh Ja’far the Dakhan was appointed voṭāli and pishād. Mukammal Kiān’s son, perhaps ‘Aziz-ul-Mulk, was made an amir, but there is no mention of his being appointed to any particular office. Mukammal Kiān lived henceforth in retirement, only occasionally attending at court. (F. II, 200, 201.)

It is impossible to reconcile these two accounts, but it is more probable that a youth of seventeen should give way to sensuality than that a boy of twelve should administer and rule a kingdom.
Spies reported to Burhân Nişām Shāh the approach of 'Imād-ul-Mulk with a large army, and the king immediately issued orders for the assembling of his forces, and the troops assembled at the capital. The king then summoned his amirs and the officers of his army and took counsel with them regarding the means of repelling the invader. Their reply was a request to be led against the enemy. The king highly approved their decision and set out with his forces to meet 'Imād-ul-Mulk.

The king and his army marched from the capital and met 'Imād-ul-Mulk in the neighbourhood of the town of Borgāon, where a desperate battle took place. The Yamani sword rested not from scattering heads, and Death’s executioner stayed not a moment from cutting off hope of life, until the earth was clad in robes like those of the ‘Abbāsīs. Large numbers were slain on both sides and victory declared for neither. Each commander drew off his forces and made for his own country.

After the lapse of a short time, the two armies again marched against each other and met near the Deonati river, where a battle was fought. The officers who specially distinguished themselves on the Nişām Shāh side were, ‘Ālam Khān, Rāmi Khān, Qadam Khān, Munir Khān, ‘Umdat-ul-Mulk, Khairāt Khān, Fūlād Khān, Miyan Raja, Dānayya Rui Rai, and others.

The battle raged till sunset, when both armies retired to their own camps; and on the following day the two kings, neither having gained the victory, retired to their own countries.

In this warfare the great amirs of the kingdom of the Dākan, who were usually in attendance on the king, were Makhdūm Khvāja Jahān and ‘Ain-ul-Mulk, who were of the number of his servants.

XXIV—An Account of His Majesty’s Third Campaign Against ‘Imād-ul-Mulk. (‘Ala-ud-dīn ‘Imād Shāh).

Since the king had twice taken the field against the enemy, and had on neither occasion been victorious, he was inflamed with the spirit of emulation and with jealousy of his foe, and set himself to improve the condition of his army and to increase its strength. He then set out with a large army against ‘Ala-ud-dīn ‘Imād Shāh of Barar.

When ‘Imād-ul-Mulk heard of the king’s approach, he spared no efforts to collect his army, and, having collected a very numerous and valiant force, marched to meet the king.

The two armies met in the neighbourhood of the village of Vālorān, where they encamped over against one another and threw out outposts for their protection during the night. On the following day they were drawn up in battle array against each other, and the battle began. The fight was fierce and bloody. At length victory declared for the king and the army of ‘Imād-ul-Mulk fled from the field, the king’s troops pursuing them with great slaughter.

52 Borgāon and Bargāon (Waģgāon) are common village names in Berar and I have not been able to identify the Deonati river, mentioned lower down, but the village of Vālorān, mentioned in the following chapter, is Vālor, situated in 19° 29’ N. and 76° 36’ E. Fīrūzhta mentions neither of these campaigns against ‘Ala-ud-dīn ‘Imād Shāh, and according to him the first hostilities between Ahmadnagar and Berar, after the battle of Rāhūri, were those which resulted in the annexation of Pāthri by Burhān Nişām Shāh I in 1518. From Sayyid ‘Ali’s mention, in his account of what he calls the third campaign, of ‘Ala-ud-dīn ‘Imād Shāh’s flight to Gujarāt, it is obvious that he has confused the first and second captures of Pāthri. In 1598-99, as will be hereafter noted, ‘Ala-ud-dīn recaptured Pāthri and Burhān then allied himself with ‘Ali Burki of Bīdar and not only captured Pāthri a second time but drove ‘Ala-ud-dīn and his ally, Muhammad Shāh Fārūq I of Kīrābhā, through Barar in such sorry plight that they were constrained to appeal or help to Bahādur Shāh of Gujarāt.
All 'Imād-ul-Mulk's elephants, horses, arms, tents and camp equipage, and those of his army, both small and great, fell into the hands of the royal troops. 'Imād-ul-Mulk, with great difficulty, and after suffering many hardships, contrived to escape, but was so overcome with shame, that instead of returning to Elehpūr, which was his capital, he made his way to Gujarāt.

The king, when the pursuit had been pressed to the utmost, dismounted and took his seat on a mound in the neighbourhood, while his army presented before him the spoil which had been captured from the enemy, and congratulated him on the victory which had been gained. The king caused all this most abundant spoil, except the elephants, which are the perquisite of royalty, to be divided among his army.

XXV.—An Account of the Capture of the Fortress of Pāthri.

After the defeat of 'Imād-ul-Mulk, the king marched towards Pāthri, which is one of the greatest and strongest fortresses of Berar, and which he straightly besieged. The royal army surrounded the fortress and opened their batteries against it. The besieged made some efforts to defend the fort, but since they were, at the outset, overcome by fear of the besiegers, these efforts were of little avail. When the royal army saw that the spirit of the garrison was already broken, they stormed the fort, pouring into the ditch and mounting the ramparts. Some thus scaled the ramparts and bastions while others entered the fort by means of mines which they had run under its walls, and thus, by God's help, they captured this strong fortress and put the whole garrison, without exception, to the sword. They then proceeded to plunder all the goods in the fort and to make captives of the children, women and men (other than those of the garrison, who had been slain), and took possession not only of their persons, but of all their property, and destroyed their dwellings.

After Pāthri had been captured, the king commanded that the fortress should be razed to the ground, and annexed the district dependent on the fortress, leaving a force there to occupy and protect it.

Some historians have said that the fort of Pāthri was not destroyed as soon as it was captured, but that some time elapsed before the king ordered it to be destroyed. It would however seem that fate decreed that that fortress should be twice destroyed, and nobody has hitherto attempted to rebuild it.

Muḥammad Ghūrī, who had shewn great valour in the capture of the fortress and had distinguished himself above all his fellows, was honoured with the title of Kāmil Khān, and appointed to the government of the conquered district, and the king then returned to his capital, where he administered justice and caused peace and contentment to reign through out the Dakan.

Meanwhile, however, Shaikh Ja'far's power had increased beyond all reasonable limits and complaints of his misconduct were laid before the throne. The king therefore issued an order depriving him of the government and of the office of wazīr, and, since he had observed in Kāhū Nārsī, a Brahman of Shaikh Ja'far's, who had entered the royal service through Shaikh Ja'far's interest, signs of ability and fidelity, he appointed this Brahman to the vacant post of minister. Kāhū Nārsī held the post of minister for a long time and performed his duty faithfully and well. During his tenure of the office, thirty strong fortresses were, in consequence of the plans matured by him, captured by the royal troops. I cannot, without
being tedious, turn aside from my narrative at this point, to describe the capture of these forts or even to give a list of their names, but they will be mentioned, please God, in the summary of the events of this fortunate reign, which I shall give at the conclusion of this record.63

XXVI.—ACCOUNT OF THE ARRIVAL OF SHAH TAHIR IN THE DAKAN.

At this time the learned, pious, and eloquent Shâh's sage, Shâh Tahir, who had formerly been highly honoured by Shâh Ismâ'il bîn Haidar, Safavi,64 was slandered by some persons at Shâh Ismâ'il's court, and was advised by Mirzâ Shâh Husain Ijâfâhâni to leave Persia. Shâh Tahir, accordingly, taking with him his family and dependents, left Kâshân,65 that abode of true believers, in A.H. 926 (A.D. 1520) for Hindûstân. He travelled speedily to the shores of the Indian Ocean and sailed from the island of Jarûn in a ship bound for the port of Goa. It said that that holy man, after having his Friday prayers, embarked, and by God's blessing and help was enabled to say his prayers on the following Friday in the port of Goa, and this was one of the signs of the heavenly blessings which sprang from the visit of that holy man to Hindustan. On arriving in India, he wrote a letter, dated in the early days of Jamâl-ul-Arâf, A.H. 926 (April 19, 1520) to one of his friends, informing him of the voyage which he had undertaken, and of his safe arrival in Goa.

As soon as the news of Shâh Tahir's flight became known, the Shâh of Persia sent horsemen after him with instructions to turn him back wherever they should find him, but since it was God's purpose that the Dakan should profit by the presence of that holy man, he had embarked on his voyage to India before the Shâh's messengers came up with him. The Shâh soon became aware that the reports which he had heard against Shâh Tahir were the fabrications of ill-disposed men and repented of having acted on them. He set himself to make amends to Shâh Tahir, but was overtaken by death before he could carry his designs into effect. His son and successor, Shâh Tahmâsb,66 did his best to make amends to Tahir, as will be seen from the farâms which he issued to him.

After landing at Goa, Shâh Tahir went to Bijâpur but, finding that the conditions of life in that city did not suit him, he went to Gulbarga, which was formerly the capital of the Dakan) under the name of Ahsanabad. After having rested for some time in that city, he formed the design of performing the pilgrimage, and, having set out thence, reached the

63 This account of the Pâthîrî campaign seems to have been utilized by Firâstî (ii, 200), though he does not mention the source of his information. Firâstî, however, recites Burhân Nîfâm Shâh's reasons for desiring to possess Pâthîrî, which Sayîd 'All naturally omits. Burhân's great-grandfather, Eshâ'ara, had been kûkâr or pâstârî of Pâthîrî but had fled to Vijayanagar to escape persecution. After the establishment of the Nîfâm Shâhî dynasty those of their relations who had remained in Vijayanagar returned to their old home. Mukâmmal Khân, by Burhân's orders, wrote to 'Alâ-ud-dîn Imâd Shâh and begged him to cede to Burhân the pârsâns of Pâthîrî, offering in exchange another property more valuable than Pâthîrî. 'Alâ-ud-dîn refused to exchange Pâthîrî and, knowing the consequences of his refusal, fortified the town. Mukâmmal Khân protested against the establishment of a fortress so near the frontier but 'Alâ-ud-dîn completed the work and returned to his capital. The army of Ahsân-nâsar was assembled on the pretext that Burhân wished to tour in the hills above Daulatâbâd, and a forced march was made on Pâthîrî, which was carried by storm, as described.

Pâthîr is situated in 19° 16' N. and 76° 27' E.
64 Shâh Ismâ'il (1502–1524), founder of the Safavi dynasty.
65 The well-known town in Persia, about 90 miles north of Isfahân.
66 There is no island of this name in the Persian Gulf. Sayîd 'All probably means to say that he came to the Persian Gulf and Jahrum, in Fârs, about 90 miles south-east of Shirâz.
67 Shâh Tahmâsb I (1524–1576), son and successor of Ismâ'il I.
town of Purenda which was on his way. Mahdum Khvaja Jahân, who was at that time governor of the fort and town of Purenda, on hearing of the holy man's arrival, made haste to wait on him, and he represented to him that as the rainy season was in progress and travelling was very difficult, he would do well to honour Purenda by staying there for some time. Shâh Tahir accepted this invitation and remained in Purenda in comfort during that rainy season, employing his time in imparting religious instruction.

Meanwhile, Maulana Pir Muhammad Shivrâni, one of the learned men of that age and a companion of Burhân Nişâm Shâh, came from the capital to Purenda on an embassy to Mahdum Khvaja Jahân, and, on learning of Shâh Tahir's presence in the town, waited on him, and daily thereafter attended his lectures, profiting much by the religious instruction which he received. When the period of his embassy had expired, he returned to the capital and acquainted the king with the perfections of Shâh Tahir. When the king heard of his learning and piety, he sent a farman to Mahdum Khvaja Jahân, the contents of which were communicated to Shâh Tahir, who took offence, because a separate farman had not been issued to him, and excused himself from attending at court. As, however, the king's desire to see Shâh Tahir increased daily, he sent Maulana Pir Muhammad Shivrâni again to Purenda with a letter addressed to Shâh Tahir, in which he gave utterance to his great desire of seeing him. Shâh Tahir, on perusing this letter, set out at once for the capital in the months of the year—. On his arrival at Ashmânagar he paid his respects to the king, who found that what he heard fell, in truth, far short of the holy man's perfections, and honoured Shâh Tahir exceedingly.

(To be continued.)

INTER-STATE RELATIONS IN ANCIENT INDIA.

Dr NARENDRA NATH LAW, M.A., B.L., F.R.S.; CALCUTTA.

(Continued from page 152.)

Treaties of peace depending for their strength upon the solemn affirmation or oath of the parties were looked upon by some as mutable, but when accompanied by pratibhâ or pratigrha, as immutable. Kautilya is of opinion that the solemn affirmation or oath made the treaties as much immutable as could be done by any safeguards simultaneously for the purposes of this and the next world. The taking of hostages only added to their strength on their worldly side.

---

88 Blank in the original. The year should be either 927 or 928 (A.D. 1521 or 1522).

Firishta (ii, 213) gives a long account of the descent and antecedents of Shâh Tahir, who claimed descent from the Fatimid Caliphs of Egypt. His family had been settled in Khând, a village in the Qarwin province of northern Persia and on the borders of Gilân, for 300 years. Shâh Ismail I was jealous of Shâh Tahir owing to his illustrious descent and his reputation for sanctity and learning, and lent a ready ear to the accusation that Tahir was a leader of the Ismai'll heretics. A warrant for his execution was about to be issued when he escaped, owing to the timely warning given to him by Mîrzâ Shâh Husain Iskâhâni, mîrzâ of the descendants of Shâh Ismail.

84 Pratibhâ means the giving of great ascetics or nobles as hostage. (Kautilya, Bk. VII, ch. 17, p. 312).

85 In pratigrha, the hostage given by the party suing for peace is a near blood-relation. (Ibid.)

86 Kautilya, Bk. VII, ch. 17, p. 311.
In making a solemn affirmation, the parties only uttered the words "Samhitāsmaḥ" (we are united), while they took oaths by fire, water, plough, wall (say, of a fort), cloud of earth, shoulder of an elephant, horse-back, seat of a chariot, weapons, precious stone, seed of plant, fragrant substance, rasa, gold coin, or bullion, saying this formula on the occasion, "let it or these (naming the thing or things by which the oath is administered) desert and kill me if I transgress the oath."  

The kings of yore who put so much faith in affirmations used to enter into treaties of peace with the simple formula: "we are united." In case of breach of this affirmation, they took the oath; and when this oath was contravened, the hostages were demanded.

Much discrimination had to be used by both the parties in the selection of the hostage, for a good deal depended upon the place occupied by him in the love or religious susceptibilities of the giver or his subjects. It was the interest of the giver to make over the person for whom he cared least or who would prove trouble or ruinous to the taker, while the latter tried to have one to whom an injury, conditioned by a breach of the treaty, would affect the tenderest sentiments of the former or his people.

Keeping these points in view, Kautilya dilates on the subject, which may be summarized as follows:—Advantageous to the giver are the undermentioned hostages: (1) a great ascetic or noble, able to trouble or ruin the foe; (2) a corrupt son; (3) a daughter; (4) a baseborn son; (5) a son devoid of mantra-sakti (who does not follow, or has not at his disposal wise advisers); (6) a son devoid of utsadha-sakti (i.e., capacity for the three kinds of hostilities); (7) a son unskilful in the use of weapons and (8) one of many sons. A king parting with his only son as hostage is unable, as a rule, to risk a breach of the treaty. Should there be no chance of a second son being born to him, he should rather give himself up as hostage, installing his son on the throne.

In ancient inter-state relations, it was the power possessed by a state that determined, to a great extent, its conduct towards the other states. A sovereign submitting to a humiliating treaty of peace might have, sometime after the exhaustion of the war, recouped his power so much as to be superior to the other sovereign to whom he was bound by the treaty under which he was smiting. In such a case, the contrivance resorted to was to secure the escape of the hostage from the custody of the other party. The matter was so managed that outwardly the hostage appeared to escape of his own free will and without any help from his pledger although secret agents in the pay of the latter might actually assist in the matter. The escape of the hostage unsettled the existing treaty, and gave rise to conditions in which

---

67 As it signifies a variety of substances—mercury, poison, milk, &c., it is not clear which of them is meant.
68 Ibid., Bk. VII, ch. 17, p. 312.
69 Kautilya explains 'utsadha-sakti' by 'vikrama-bala' and 'vikrama' by 'prakṛṣṭa-yuddha, kha-yuddha and sākhyā-yuddha (Kautilya, Bk. VII, ch. 2, p. 239; and ch. 6, p. 278).
70 Kautilya distinguishes the relative superiority or inferiority of sons, by virtue of their nobility of extraction (on the mother's side), wisdom (from mantra-sakti), bravery (from utsadha-sakti), skillfulness in the use of weapons, and such other qualities. The last passage at p. 312 appears to be corrupt, and the significance of the expression 'tupa-dayya-saṁśātanāt' as also its consistency with the last passage as it stands, are not evident. (See Kautilya, Bk. VII, ch. 17, pp. 312, 313.)
71 Kautilya, Bk. VII, ch. 17, pp. 312, 313.
72 Although I have spoken of the hostage as masculine the above remarks might also apply to female hostages.
the fresh demands of the pledgee might be either rejected point blank or refused on various grounds. This would lead to friction but as the circumstances are changed inasmuch as the aggrieved party has become inferior in power to the other, he is not likely to declare a war specially as there is no direct proof of the pledgee’s assistance in the escape of the hostage. The act is, in view of the latter’s secret implication in it, really wrongful but concealed under a garb of innocence, and turned to advantage by a shuffling of what to an inferior state would have been brought home as its duty. The only argument that might be adduced in favour of the breach of the treaty is with reference to the exceptional cases in which, for instance, the very existence or the necessary development of the state bound by the treaty are hampered by its terms. The ground for the breach would then be this, that the latter are the primary duties of the state and, any obligations that hinder their fulfilment must be considered null and void. The hostage in effecting his escape took to various dodges and utilized the help provided by secret agents. The dodges were not always of a mild type but included, if needed, violent means that made light of losses of human life for achieving the end in view. A study of the Kautilya leads to the inference that sacrifices of human lives caused through secret agents for state-ends in inter-statal discords, in measures against sedition within the state or against enmity personally to the king and his own were not generally regarded as obstacles at which the state would stick, the interests of the kingdom and the monarch and their self-preservation being regarded as justifying the application of the means. The artifices used by and for the hostage for his deliverance were:

(1) Spies (satriyaḥ) serving in the neighbourhood in the guise of artisans and craftsmen may remove the hostage surreptitiously through a tunnel constructed at night.

(2) Spies disguised as actors, dancers, singers, players of musical instruments, buffoons, bards, acrobats, jugglers, etc., may take service under the enemy and secure for themselves the privilege of free ingress, stay, or egress. They will also serve the hostage who may escape at night in the guise of one of these people. Women spies may also do the same, and the hostage dressed like one of them with a characteristic article in hand may effect his escape.

(3) The hostage may be concealed amidst commodities, clothes, vessels, boxes, beds, seats, and articles of luxury, and removed by spies serving the enemy as suđas (those who cook pulses or vegetables), arālikas (those who boil rice), bathers, shampooers, spreaders of bed-clothes, barbers (kalpaka), toilet-makers, or drawers of water.

This reminds one of the memorable artifice by which Sivaji made his escape from Aurangzeb’s custody.

---

13 The text has “abhuyuchchāḥ-iyamāṇaḥ samādhi-mokshaḥ kārayet” (Kautilya, Bh. VII, ch. 17, p. 313).
15 Sūtras according to the Vdhobapatiya is the same as suđa-kartid. Nilakantha in his comments on the Mahābhārata, Virāta-Parva, ch. 2, ślok. 9, states that a suđaka is one who cooks pulses like mungo (Phaseolus mungo). According to others quoted by him, suđakartid may also be one who cooks vegetables.

As explained by the scholiast in connection with the above passage, an arālik may mean (1) one who plays with or disciplines an infuriated elephant; or (2) one who boils rice. (This passage “arāliko’mmā pāki syāt, suđakartid tu śakrakrit” is quoted as his authority.)
16 These spies are named at p. 211 of the Kautilya, Bh. I (gaśāyupurusha-prāśādhi).
(4) The hostage may hold communion with Varuna at the entrance of a tunnel, or in a reservoir of water, accompanied with nocturnal upahāra, (oblations, or religious services consisting of laughter, song, dance, muttering ḫuduk, adoration and pious ejaculation), and flee away at the opportune moment. Spies in the guise of traders divert the attention of the sentinels by selling them fruits and cooked food.

(5) The hostage may give the sentinels food and drink mixed with poisonous preparation of madana plant on the occasions of offerings to the gods, ĺṛṣāna, or sacrificial rites, and when the sentinels are under its influence, he may flee away.

(6) The sentinels may be incited to set fire to buildings with valuable articles, or spies disguised as citizens, bards, physicians, or vendors of cakes may do the same. The sentinels may be persuaded to set on fire the stores of commercial articles, or spies disguised as traders may do so. In the tumult, the hostage may escape. To avert the chance of being pursued, the house occupied by the hostage may be set on fire and a dead body (procured previously) may be cast into the flames. The hostage may escape by making a breach in the wall, or through an air-passage (vata-surṣula).

(7) The hostage may escape at night in the disguise of a carrier of glassware, pitchers, or other commodities.

(8) He may enter the hermitages of the Shavellings (muṣḍes) and the Braided-haired (jajlana) and escape thence in the guise of one of these hermits. He may also disguise himself as one suffering from a deforming disease, as a forester, or the like, and flee away.

(9) He may be removed as a corpse by spies, or may himself follow, as a widowed wife, a corpse carried by the spies as if to the crematorium.

(10) He may at night fall upon the sentinels with a concealed sword and run away with the secret agents stationed in the neighbourhood.

Spies in the apparel of foresters would misdirect the pursuers. The hostage may conceal himself under the enclosure of a cart driven along the way. The pursuers being near, he may hide himself in a bush. When there is no bush at hand, he may leave on both sides of the way gold coins or poisoned articles of food for the pursuers. If captured, he will apply to the captors conciliation and other means (bribery, dissension, and chastisement), or serve them with poisoned food. In case a corpse, supposed to be that of the hostage, had been put in as a dodge at the place where the aforesaid worship of Varuna was held, or at the house (set on fire) where the hostage stayed, the giver of the hostage may accuse of murder the sovereign who held him.

77 Monier Williams' Sanskrit-English Dictionary.
78 Cf. Kaustīya, Bk. XIII, ch. 1, p. 395. The expression 'varaṇa yuga' bear the implication that it is a trick by which the enemy is overreached.
79 For madana-yoga, see Kaustīya, Bk. XIV, ch. 1, p. 410.
80 The Sanskrit word is 'praharṣa' which seems to be mistakenly put for 'praharṣa.' Pandit R. Śyāmā Śāstri translates it by 'sacrificial rite,' implying that the word should be 'praharṣa.' There seem to be other instances of confusion between the two words in the Kaustīya, e.g. at p. 401 (Bk. XIII, ch. 3).
81 For these classes of hermits, see Dr. Rhys Davids' Buddhist India, p. 145.
82 For the above information about the dodges, see Kaustīya, Bk. VII, ch. 17, pp. 313—315.
(B). Of the several kinds of treaty of peace, the first three have been found to form a group called *dndopanata-Sandhias*, *danda* (army) being the chief subject-matter of their stipulations. The *dandopanata* of the *Kaus̄ilya*, Bk. VII, chs. 15, 16 appears to be a much more helpless sovereign than one who is compelled to sue for a treaty of peace in any of the above three forms. If the disparity in power between a sovereign and his invader be very great and the former sees no other means of saving himself except by throwing himself upon the latter's mercy, he becomes *dandopanata*. This self-submitter owes several obligations to the *dandopandya* (henceforth to be termed "dominator"). These obligations do not appear to be part and parcel of the three *dandopanata* treaties of peace, which points to the inference that the position of a self-submitter is not the outcome of those treaties but is rather caused by self-submission before any fight takes place between him and the invader, who afterwards becomes the dominator.

For one who had enjoyed independence, the position of a self-submitter was no doubt humiliating. He had to demean himself towards his dominator rather like a government servant in the conventional ways, discharging his duties faithfully, but adapting himself to the moods of his master to continue in the latter's good graces. He had, when ordered by the dominator or with his permission, to engage in the construction of forts or other works, invite (other kings), celebrate marriages, hold the installation ceremonies of a son, capture elephants for sale, perform sacrifices, march against foes, or start on excursions for amusement. He could not enter into alliance with any king staying in his kingdom or secretly punish those who had backed out from such alliances. If the citizens in his kingdom were wicked, he could not exchange it for lands with righteous people from another king, punish the wicked with secret punishments, or accept lands offered by a friendly king, without the aforesaid permission. Interviews with the chief councillor, royal priest, commander-in-chief, or heir-apparent without the knowledge of the dominator were prohibited. It was incumbent on the self-submitter to help the dominator to the utmost of his capacity and always express his readiness to do so. On the occasions of invocations of blessings on the dominator before the gods, he should promptly cause the ceremony to be observed in

---

84 Some of the items enumerated above may be on behalf of the dominator. The construction of forts, for instance, may be for the defence of the dominator's kingdom, while several of the remaining items may be intended for him as well.

85 The word in the text is *prakṛti*. The reference is to *rūpa-prakṛti*. For a parallel use of the word, see the heading "*prakṛtiṁ sādāndya-vipaśīramāraṁ" in which "*prakṛtiṁ sādāndya-vipaśīramāraṁ*" means "*rūpa-prakṛtiṁ sādāndya-vipaśīramāraṁ*" (*Kausūlya*, Bk. VII, ch. 5, p. 272).

86 For the treatment of the *opasaṇa*, see *Kausūlya*, Bk. VII, ch. 6, pp. 278—280 where *opasaṇa ariydy* has been dealt with.

87 There has been an omission of a negative particle in the Sanskrit passage for this sentence (*Kausūlya*, Bk. VII, ch. 15, p. 308).
his territory. He had to dissociate himself from people hostile to the dominator and hold his territory virtually as the latter’s “warehouse.”

It seems from the above evidence that the self-submitter was allowed to live in his own territory but had to go over, when needed, to that of the dominator or elsewhere and stay there so long as the work in hand or the dominator’s desire compelled his stay. It is to such stay that the advice embodied in the Kauṭilya applies. The advice is that when he saw the dominator suffering from a fatal disease, or his (dominator’s) kingdom from internal troubles, when the latter’s enemies were growing (in number or prosperity) or his allies unwilling or unable to support him, creating thereby opportunities for the self-submitter to ameliorate his condition, then he (self-submitter) might, under some believable (śaśādhyāya) pretence of a disease or performance of some religious rites, leave the dominator’s kingdom. If already in his own state, he might not, in view of the aforesaid opportunities, come to the dominator suffering as above; or coming nearer, he might strike at the vulnerable points of the dominator’s state.

Just as the self-submitter owed a number of obligations to the dominator, so the latter also did to the former. The dominator’s obligations to the devoted submitter were:

1. To help him to the best of his (dominator’s) power in return for help received;
2. To give him wealth and honour;
3. To help him in calamities;
4. To grant him interviews whenever asked and accede to his requests;
5. To avoid using insulting, offensive, contemptuous, and harshly loud language towards him;

For the above information regarding self-submitter see Kauṭilya, Bk. VII, ch. 16, p. 308.

The ṣāka at p. 308 of the Kauṭilya, Bk. VII, ch. 15, is 

Sanyukta-valavatācārya viruddha-śaśādhyāya, varṣeta-dañj-opanato bhārata-rāvaṇam-saṃsāthaḥ.

The self-submitter should be united with (śaṇyukta) those who fear to mix with people opposed to the dominator (viruddha-śaśādhyāya). Maṅkāṭa quotes this passage from the Kauṭilya in connection with his comments on Rāmāyana in sarga 17, slk. 81. The passage quoted by him shows some variations but the meaning remains unaltered:

Durvalo valavatācārya viruddhāchāchāchaḥ-śaśādhyāya, varṣeta-dañj-opanato bhārata-rāvaṇam-saṃsāthaḥ.

The king who has no other alternative than self-submission, is asked by the Kauṭilya (Bk. VII, ch. 15, p. 308) to greet the envoy of the invader thus: “This (i.e. this kingdom) is the king’s (using of course appropriate expressions such as “His Majesty’s”) warehouse; it belongs to the queen and the princes (using appropriate epithets as before); the existence of this kingdom depends upon the words of the queen and the princes; I am but their reflector.”

The word in the text is ‘chēkāra.’ Saṅkāraḥ, in connection with Kauṭitya, VIII, 65, interprets this term by ‘raśah-śaśādhyāya.’

(6) To show him fatherly kindness, and ask him to feel secure from fear;

(7) Not to lay claim to lands or moveable properties of the submitter deceased, or put to death or injure his wife and children; to allow his distant relations to enjoy their belongings, and his son to succeed to his father’s office after the latter’s death.

It is only such treatment as above that can ensure the devotion of the submitter and his heirs to the dominator and his heirs through generations. Humane treatment of the submitter was required by the opinion, not merely of the sovereigns of the time but also of the people. A warning in the Kautilya, for this reason, especially cautions the dominator against the transgression of the last obligation, which happens to be the most important. Breach of this obligation, says the Kautilya, agitates the whole statal circle to actions for the destruction of the dominator, and even excites his own ministers living within his dominion to attempt his life or deprive him of his kingdom.

A recalcitrant submitter however lost claim to the above treatment. He could be punished by the dominator secretly or openly, his guilt being made public in the latter case. If the open punishment put the dominator to the risk of rousing his enemies and of giving them a handle wherewith to work against him, he should have recourse to the secret means dwelt on in the Kautilya in its chapter Dasa-dakarmikam.

Kautilya, Bk. V, ch. 1.

Kautilya, Bk. VII, ch. 16 (pp. 309—311), headed Dasa-opandyajitam begins rather obscurely with directions to the self-submitter ordered by the dominator to start on a military expedition, as well as with advice as to the use of the four means of conciliation (dana), bribery (dana), dissension (bhadra), and open assault (danda). A classification of the self-submitters comes next, the basis of classification being the nature of help given by him to the dominator.

The classes are thus named:

1. chitra-bhoga.
2. maha-bhoga.
3. sarva-bhoga.
4. ekato-bhoga.
5. ubhaya-bhoga, and
6. sarvaubhoga.

In the first three classes, the help rendered by the self-submitter consists in giving the dominator men and wealth, while in the last three, it accrues from the self-submitter remedying the evil arising to the dominator from his enemies or from the friends of those enemies. The passage bearing on ubhaya-bhoga (p. 310) is corrupt; for unlike the preceding and the succeeding sentences relating to ekato-bhoga and sarvaubhoga respectively, it has the verb “upakorot” instead of “prakorot.”

The paragraph at p. 310, immediately following the above passages, is also intended for the guidance of the self-submitter. Should he have to encounter a rear enemy, or other hostile parties conciliable by gifts of lands during the aforesaid military expedition carried on under the orders of the dominator, the lands given them for the purpose should be such as might put them to trouble or offer them minimum of military or other advantages of which they might be in need. The paragraph has also in view cases in which gifts of lands are to be made to parties like “aparvita,” and “gatapratyagata.” The gift of land to the dominator (bhavisya) alone is advised to be of advantage to the dominator, inasmuch as the land should be free from people inimical to him.
EPIGRAPHIC NOTES.

BY HEMCHANDRA RAYCHAUDHURI, M.A.

1. Pārijāta and Govardhana.

The Daulatābād plates of the Rāṣṭrakūta Saṅkaragana, after referring to Krishṇarāja, I say: "His son was king Govinda-rāja who like Hari snatched away the glory of Šrī Pārijāta and supported Govardhana." The Paurāṇic allusion is clear enough. But the references in the case of king Govinda are not so certain. Professor D. R. Bhandarkar, who edited the plates, has suggested the identification of Govardhana with the province of the same name mentioned in several Nāsik Cave inscriptions. But the identification of Pārijāta is yet uncertain. I propose to identify it with Pārijāta (= Pāriyātra—the Western Vindhyā), mentioned in the Nāsik prājasat of Gautami-putra Śātakarni. The change of 'j' into 'ch' is not unusual in southern India. For instance the Western Ganga king Rājamalla was also called Rāchamalla.

2. Supratishthāhāra.

This name occurs in the Poona plates of the Vākṣāke Queen Prabhāvatī-Guptā, edited by Prof. Pāthak and Mr. Dikshit. The editors do not make any suggestion regarding the identification of the place. In the Kāthā-karitra-dāgara mention is made of a city named Supratisthāhita in Pratisthāhāra (modern Paithan), which was the ancestral home of Guṇākṛtya. There can be no doubt that Supratishthāhāra was the district (ādāra) round the city of Supratishthita. The inclusion of this district within the Vākṣāke territory proves that the Vākṣākas were not merely a dynasty of Berar, but ruled over a considerable part of Mahārāṣṭra. As the dynasty lasted from about A.D. 300 to 500, it is no longer correct to say that "for some three centuries after the extinction of the Andhra dynasty, we have no specific information about the dynasties that ruled over the country," i.e. Mahārāṣṭra.

3. Vīra and Vardhana.

The Deopāra inscription records that Vijayasena impetuously assailed the lord of Gauṇa, put down the prince of Kāmarūpa, defeated Kaliṅga and imprisoned four kings, namely, Nānya, Vīra, Rāghava and Vardhana. Nānya has been correctly identified with Nānyadeva of Tirhut, who lived in A.D. 1697 and afterwards established the Karnāṭaka dynasty in the valley of Nepal. Rāghava is the Kaliṅga prince of that name, who reigned about A.D. 1156. Vīra and Vardhana have, however, not been satisfactorily identified. Dr. Smith suggests that Vīra was a Rājā of Kāmarūpa. Unfortunately the evidence of Sandhyākara Nandi's Rāmacharīśa has not been utilised. In the long list of princes who helped Rāmapāla to recover Varendri we find the following names:

1. Viraguna of Kōṭāṭavi.
2. Vardhana of Kauśāmbī.
3. Vījayarāja of Nīdrāvala.

1 Epigraphic Indica, IX, p. 193.
2 Pārijāta may also refer to the Pārijātra country mentioned by Bāna (Cowell and Thomas, Haracharitra, pp. 210-211).
3 Ep. Ind., VIII, p. 60.
4 rice, Myore and Coor from the Inscriptions, p. 42.
6 Tawney's translation, p. 32.
9 V. A. Smith, The Early History of India, 1914, p. 419.
10 Mem. ASB, III, pp. 28-37.
Let us try to ascertain the date of these princes. We learn from the Tirumalai Rock Inscription\(^1\) of Rājendra Chola I that Mahipāla I was reigning in or about A.D. 1025. The Sārnāth inscription gives a date for him in A.D. 1026.\(^2\) His son Nayapāla ruled for at least 15 years (as we know from the Krishnaprītikā temple inscription).\(^3\) Nayapāla’s son Vigrāhapāla III could not therefore have come to the throne before A.D. 1026+15 = A.D. 1041. He ruled for at least 13 years (see the Amagāchhi Grant\(^4\)) i.e. up to at least A.D. 1054. After him came his sons Mahipāla II and Šūnapāla II, and the Kaiuvaras Divvoka, Rudoka and Bhima, and finally Rāmapāla who ruled for at least 42 years.\(^5\) It is obvious that Rāmapāla reigned towards the close of the eleventh century and early in the twelfth century. The princes Vira, Vardhana and Vijaya who helped him must have flourished about the same time.

We learn from the Naihātī Grant\(^6\) of Vallāla Sēna that his ancestors were ruling in South-west Bengal (Rādhā)\(^7\) long before the establishment of their paramount sovereignty by Vijayasēna’s victory over the Pāla king of Gauda. We know further from the Ćhālā inscription that Vijayasēna was a contemporary of Nānyadeva who flourished about A.D. 1087. There can be no objection in identifying him with Vijayarāja of the Rāmācharita who lived about the same time and ruled over a principality in the Gauda empire.\(^8\) If this identification be correct, then Vira and Vardhana must be Virāguna of Koṭāvim and Vardhana of Kausāmī. It seems reasonable to conclude that during the weak rule of the sons of Rāmapāla, the kinglets of the Gauda Empire who helped Rāmapāla to regain his throne, engaged in a struggle for supremacy\(^9\) in which Vira, Vardhana, the rāja of Kāmarupa and the lord of Gauda himself became worsted, and Vijayasēna established the supremacy of his own family.

The conqueror’s authority was probably next challenged by Nānya and Rāghava, the rulers of the neighbouring kingdoms of Mithilā and Kalīnga, who were also defeated and imprisoned.

---

**CORPORATE LIFE IN ANCIENT INDIA.**

I am thankful to Mr. B. Shamsastry for having kindly reviewed my book *Corporate Life in Ancient India* in the February issue of this Journal and recommended it to the public in rather flattering terms. I may be permitted, however, to offer some remarks in reply to his specific objection to the title of my book, and my inference from, and translation of, some Sanskrit passages contained therein.

Mr. Shamsastry thinks that “Self-governing Institutions in Ancient India” would have been a more suggestive and attractive title.” This very point has been discussed at some length by Mr. Pargiter in the course of his review of my book along with another, dealing with the same subject but entitled *Local Government in Ancient India*. Mr. Pargiter thinks that the title of my book describes its scope rightly, while the other has assumed too ambitious a title, for the title “Local Government” may hold good for large popular councils where they existed, but certainly does not apply to all the other corporate activities, social, economic and religious. I do not, of course, mean that Mr. Pargiter’s opinion finally decides the matter, but I quote his statement as

\(^{11}\) Ep. Ind., IX, pp. 229—232.  
\(^{12}\) Smith, *Early History of India*, 1914, p. 399.  
\(^{14}\) *Mem. ASB.,* V, p. 92.  
\(^{15}\) Pratihāra Rādhākṣaṇa-vikrama-watara-bhūnakṣhantar-nauḍadhāva.  
\(^{16}\) The identification was first suggested by Mr. N. N. Vasu.  
\(^{17}\) The Kānasuli Grant of Vaidyadeva, minister and general of Kūmarapāla, son and successor of Rāmapāla, refers to wars and rebellions in South Bengal and Kāmarupa (see *Goujalekhamāda*, p. 128 et seq.). Vijayasēna’s principality lay in South-west Bengal. Virāguna’s principality also lay in the south of *Mem. ASB.,* V, p. 89.)
it clearly expresses my point of view in the matter. I fully endorse Mr. Shamasnav's view that the title he suggests would have been more attractive, but while writing the book, the sense of historical accuracy has always weighed with me more than any ideas of carrying favour with the public.

As regards the wrong translation of certain Sanskrit passages, Mr. Shamasnav does not quote any specific instance, but refers to pages 16-17; 22; and 89 of my book. Pages 16-17 contain three Sanskrit passages, none of which I have offered any translation. Page 22 again contains three Sanskrit passages. There is no translation of the first of these, while that of the second is mainly based on that given in SBE, Vol. XXXIII, p. 348, with slight modifications such as the substitution of 'guild' for 'company' as an English equivalent of the word dres, to which I believe no exception can be taken. The third is a simple prose passage which offers no difficulty at all. There is no translation of any Sanskrit passage on p. 89, but it appears that Mr. Shamasnav demurs to the interpretation of the word swadhyay as denoting a non-monarchical form of government and takes it to mean foreign rule on the authority of a passage in Arthasastra, p. 323. It must be remembered, however, in the first place, that the responsibility for the particular interpretation attaches to Mr. Jayaswal and not to me, as it is clearly stated in the text that the term swadhyay which has been explained by Mr. Jayaswal as 'King-less state' has been taken by Messrs. Macdonell and Keith as denoting some form of royal authority. In the second place, the use of the term swadhyay in a particular sense in Artha

Mr. Shamasnav thinks that there is no reference in the Cow-hymn, quoted on p. 45, to any assembly, as stated by me. He has apparently overlooked verse 15 of the hymn which contains the word sammih. Both Bloomfield and Whitney have rendered it by 'assembly,' and their translations are given in my book, the passage in question being put in italics (p. 46, 11. 10-11). It is just possible, however, that Mr. Shamasnav takes the word sammih in the passage in a different sense. But, even then, in view of the undeniable fact that sammih is used in other hymns in the sense of assembly and has been rendered as such in the passage in question by scholars like Whitney and Bloomfield, it appears to me to be somewhat dogmatic to assert that 'there is no reference in the Cow-hymn to any assembly.'

Mr. Shamasnav observes that "the word asad was in many places used in the sense of gambling, rather than a political meeting." But I have stated this on p. 47, paragraph 6.

Mr. Shamasnav observes that in noticing the corporate activities in religious life I have confined my attention only to the Buddhist and omitted the Brahmans and other communities. This is not a quite correct statement of facts. On pp. 123-24 I have drawn prominent attention to the fact that religious corporations existed before Buddha's time and have cited evidence to show that religious corporations were already a well-known factor of society in Buddha's time, and the celebrated asanga of the latter was not a new creation but merely a development upon the existing institutions. I have again pointed out on p. 162 that other religious communities too led corporate lives, and have referred to a number of such corporations on pp. 123, 124 and 142. It is true that I selected Buddhist asanga alone for detailed description, but for this I have assigned reasons on pp. 124 and 142.

Lastly, Mr. Shamasnav remarks that my description of the evolution of caste is somewhat confused for want of a clear chronological analysis of the subject. I do not wish to meet such a general charge and shall therefore content myself by merely pointing out that I have arranged the text-bearing upon caste according to distinct literary periods and have fully discussed their chronological order in the Introduction.

In conclusion, I beg to submit, that although it is unusual for an author to reply to the criticisms of his book, it becomes necessary in the present case, the points involved are mainly of scholarly interest and also of general importance to the students of Indian history. Besides, I have a good precedent in the reply of the late Dr. V. A. Smith to Prof. Sten Konow's review of his Early History of India in this Journal (1918, pp. 178, 371).

R. C. Majumdar.
XXVII.—An account of the coming of Sultan Bahadur of Gujarāt to the Dakkan, and of his returning without accomplishing his object.

It has already been mentioned that when Imād-ul-Mulk, the governor of Berar, was defeated by the royal army at Vālor and fled before them, he found it difficult to escape from them, and therefore in his terror fled and took refuge with Sultan Bahadur, the king of Gujarāt, who at that time excelled all the kings of Hindūstān in the strength of his army, and the state which he maintained, and appealed to him for assistance, doing his utmost to stir up strife by representing the conquest of Burhān Nişām Shāh’s dominions as an exceedingly easy matter. For a long time Sultan Bahadur hesitated and neglected to return an answer to ‘Imād-ul-Mulk’s request, or to further his object, but at length he was deceived and beguiled by ‘Imād-ul-Mulk’s tales and the desire of conquering the Dakkan took possession of his heart, and he collected a very numerous army.99

Sultan Bahadur then marched from Gujarāt to Daulatabād and encamped before the fortress. His amirs and officers of state incited him to capture the fortress by saying that as soon as it was in his hands the submission of the Nişām Shāh’s dominions would follow as a matter of course, as Daulatabād was the stronghold and the greatest fortress of that country. Sultan Bahadur accordingly laid siege to the fortress, but though the siege was

---

99 Sayyid ‘All has confused the sequence of events and has thus failed to explain the circumstances which led to the invasion of the Dakkan by Bahādur Shāh of Gujarāt.

In 1526-27 (see note 63) ‘Alā-ud-dīn ‘Imād Shāh of Berar, encouraged by Ismā’īl ‘Adil Shāh of Bijāpur and assisted by Sultan Qoll Qutb Shāh of Golconda, recovered Pāhrī, which he had lost in 1518. Burhān Nişām Shāh allied himself with ‘All Barid of Bīdar and again captured the place, after a siege of two months. They then advanced to Mahīr, captured that fortress, and marched towards Elīchpur. ‘Alā-ud-dīn, who was not strong enough to withstand them, fled to Burhānpūr, and sought help of Muhammad Shāh I of Khāndesh, who joined him and marched with him to meet Burhān and Amīr ‘Ali Barid. A battle was fought in which Muhammad and ‘Alā-ud-dīn were defeated. They fled to Burhānpūr, after losing 300 elephants. From Burhānpūr they sent envoys to Bahādur Shāh of Gujarāt, entreaty him to assist them, and Bahādur, seizing the opportunity of intervening in the affairs of the Dakkan, set out in 1528, marching by way of Nandurbar. He drove Burhān and Amīr ‘Ali Barid out of Berar, but lingered so long in that country as to excite the apprehensions of ‘Alā-ud-dīn, who urged him to hasten on towards the Ahmādnagar dominions.

Burhān was much alarmed and appealed to Ismā’īl ‘Adil Shāh and Sultan Qoll Qutb Shāh to assist him in repelling the invaders. He even wrote to Bābur, who had recently conquered Delhi, for help. Sultan Qoll was too much occupied with a campaign against the Hindus to be able to spare any troops, but Ismā’īl sent 6,000 good cavalry, which force was joined by Amīr ‘Ali Barid of Bīdar with 3,000 horse of his own.

Bahādur advanced, but his objective was Burhān’s army, encamped in the hilly country about Bīr, not Daulatabād. Amīr ‘Ali Barid inflicted two defeats on his army between Pāhrī and Bīr, but he continued to advance, and Burhān retired from Bīr to Pāhrī, and, being pursued thither, to Junār. Bahādur then occupied Ahmādnagar, where he remained for forty days, and built, in this time, the large platform known as the Aṣl Chahāra or ‘black platform.’ Meanwhile, Burhān’s army was engaged in cutting off Bahādur’s supplies and it was when the army in Ahmādnagar had already begun to feel the pinch of hunger that his amirs urged him to complete his conquest by reducing Daulatabād and he accordingly marched thither, and opened the siege. Burhān, who had obtained another contingent of 500 horses from Ismā’īl, and Amīr ‘Ali Barid encamped in the hill above Daulatabād. See Z.W.s, i, 151.

It was now that Shaikh Jafar was dismissed from the office of wāli and pīr and Kāhī Narā, the Brāhmaṇ, perhaps a relation of Burhān, appointed in his place. See ante, p. 185.
prosecuted with the utmost vigour and caution, there appeared to be no prospect of the reduction of the fortress; for Manjan Khan, son of Khairat Khan, who was at that time the Kotwal of the fort, was a valiant and energetic soldier, and devoted all his energies to the defence.

At this time Malik Barid, ruler of the country of Bidar, who was noted among the amirs of the Dakan for his bravery and valour, wrote to Imad Shah, with whom he was connected, saying that although there might be some cause for the quarrel between him and Ni’am Shah, he had shown little wisdom in undermining the foundations of his own house and of his own sovereignty, for it was evident to anybody with any sense, that if Sultan Bahadur conquered the Ni’am Shah kingdom, Imad Shahi would not reign long in Berar. He advised ‘Ala-ud-din Imad Shiah to settle his quarrel with Burhan Ni’am Shah peaceably, so that by this means the enemy might be induced to abandon his design of conquering the Dakan.

‘Ala-ud-din Imad Shiah, on thinking over the matter, realized that his alliance with Sultan Bahadur was not likely to bring him anything in the end but ruin and repentance, and he therefore began to play Sultan Bahadur false. He withdrew his camp to a short distance from that of the Gujaratis and secretly sent a message to Manjan Khan, saying that although he had cause of quarrel with Burhan Ni’am Shah, he would not leave him defenceless, and would never permit the conquest of his dominions by the ruler of Gujarat. He encouraged Manjan Khan to resist the besiegers boldly, promising him that when the time came, the army of Berar would fight for him and not for the Gujaratis.

Manjan Khan was much cheered and encouraged by the receipt of this news and opposed the Gujaratis more stoutly than before, making daily sorties from the fort and killing many of them. At last the Gujaratis grew heartily weary of the siege, and all of them clearly showed that they were disheartened, for they had realized that the attempt to capture that fort could bring them nothing but shame. Sultan Bahadur then summoned ‘Imad-ul-Mulk and all his amirs to his presence, and after they had made their obeisance, he consulted them as to the best method of capturing the fort. ‘Imad-ul-Mulk, who was now most anxious that Sultan Bahadur should retire, said that he had been opposed to the siege from the first, but that as the Sultan had ordered it, he did not like to say anything against it, lest he should be suspected of having some purpose of his own to serve. Now, however, that he was consulted, he made bold to offer his opinion as to what was the best course. He said that nothing was to be gained by allowing the army to waste its strength in attempts to capture the rock-fortress; that the best thing was to abandon the field and bring Burhan Ni’am Shiah to battle, for it was certain that he could not withstand Sultan Bahadur’s army in the field, and his defeat would be sufficient to cause the surrender of all the forts in the Dakan.

As all were sick of the siege, ‘Imad-ul-Mulk’s advice was generally approved, and Sultan Bahadur, by the advice of his amirs and officers, abandoned the siege and turned his attention to the conquest of the district of Bir.\(^\text{16}\)

\(^\text{16}\) Sayyid ‘Ali has placed the campaign in the Br district after the siege of Daulatabad. This is not correct. The amirs of Burhan and Amir ‘Ali Barid descended from the hills on one occasion and attacked the army of Gujarat. They gained an initial advantage, but on the arrival of reinforcements sent by Bahadur were defeated and driven back into the hills. They now opened secret negotiations with ‘Ala-ud-din Imad Shah of Berar and Muhammad Shah of Khadshah. With the former, who already bitterly regretted having brought Bahadur to the Dakan, they had not much difficulty, and he ready agreed to change sides. He first sent large quantities of supplies into Daulatabad and then, leaving his camp standing, retired suddenly into Berar.
‘Imád-ul-Mulk then sent a message to Manjan Khan, saying that he had, by the exercise of no little ingenuity, succeeded in persuading the Gujarátis to abandon the siege, and urging Manjan Khan to sally from the fortress as they departed, attack the rearguard, and plunder the baggage, in order that Sultân Bahádur might be convinced of the bravery of the Dakanis and might abandon the attempt to conquer the Dakan. ‘Imád-ul-Mulk also sent a message to Burhân Nişám Shâh saying that love and friendship had always existed between them and that he was at one with Burhân Nişám Shâh in the endeavour to drive the strangers forth from the Dakan, the rulers of which were, in fact, all of one family. He advised Burhân Nişám Shâh to march, together with Malik Barid, towards the Gujarátis and to attack them, and promised that he could draw his army off from Sultân Bahádur’s and attack the enemy in flank when the battle was at its height, so that the strangers would be overpowered.

When Sultân Bahádur marched from under the walls of Daulatabad, Manjan Khan, with a force from the fortress, fell upon the Gujarátis and put very many of them to the sword; and this daring act created a great impression on Sultân Bahádur and his army.

When the news of Sultân Bahádur’s march reached Burhân Nişám Shâh, who was already apprized, by the letter which he had received and by the news of what had taken place at Daulatabad, of ‘Alá-ud-din ‘Imád Shâh’s change of sides, he summoned Malik Barid and all the amirs and the officers of his army, and ordered them to assemble their troops. A very large army assembled, and the king marched with it to attack the army of the enemy. Burhân Nişám Shâh placed Malik Barid in command of the advanced guard and followed him with the main body of the army.

The armies met in the neighbourhood of Bir, and Malik Barid, with the advanced guard, fell at once on the Gujarátis, and a fierce battle began to rage. Malik Barid drove the advanced guard of the Gujarátis back on their main body; and when he found that the main body under Burhân Nişám Shâh had not arrived, he fell back and joined it, and the whole army then marched against Sultân Bahádur’s army.

A fresh battle now began. Some divisions of the army of Gujarát, which had advanced beyond the rest, could not withstand the attack of the Dakanis and fled crabwise from the field, escaping sideways. One half of the Gujarátis was thus put to flight, and of the Dakanis, ‘Alam Khan the elder, tasted martyrdom on this day. The battle continued until darkness put a stop to the fighting and the two armies retired to their camps.11

It now began to dawn upon Sultân Bahádur that ‘Alá-ud-din ‘Imád Shâh, who had constantly incited him to attempt the conquest of the Dakan by representing that the army of the Dakan was contemptible and of no account, had played him false, for he had seen what havoc the brutal valor of Malik Barid and his small force had wrought among the brave amirs of Gujarát and he bethought himself that if Malik Barid alone could shew such bravery, the whole army of the Dakan under Burhân Nişám Shâh would not be easily dealt with. He began, therefore, to repent of his expedition to the Dakan and thought of laying hands on ‘Imád-ul-Mulk, but ‘Imád-ul-Mulk had anticipated this intention and had withdrawn himself and his army to the distance of one stage from Sultân Bahádur’s camp. He sent a message to Sultân Bahádur, reminding him that he had formerly told him

11 This is evidently a garbled account of the battle fought in the neighbourhood of Daulatabad, in which Burhân and Amir ‘Ali Barid were driven back into the hills. ‘Alam Khan the elder, who was killed, was probably Ahmad Nişám Shâh’s former candidate for the throne of Khandesh.
that if the two armies (that of Burhān Niẓām Shāh and that of Malik Barīd) united, matters would assume a very serious aspect, and that he now, knowing how affairs stood, had purposely withdrawn from Sultān Bahādur’s camp, for he was certain that his presence there could not fail to increase the resentment of the Dakanīs against the invaders. He advised Sultān Bahādur to retreat on Chānak Deo. Sultān Bahādur had no alternative but to march, and when he reached Chānak Deo he heard that ‘Imād-ul-Mulk had retired to his own country. This news caused him much anxiety and he bitterly regretted that he had been deceived by ‘Imād-ul-Mulk’s words and had been induced to invade the Dakan. He now resolved to return to his own country, and prepared to march from the Dakan.

When news of Sultān Bahādur’s movement reached Burhān Niẓām Shāh, he returned with Malik Barīd to his capital.12

XXVIII.—AN ACCOUNT OF THE MEETING BETWEEN BURHĀN NIẒĀM SHĀH AND SULTĀN BAḤĀDUR OF GUJĀRĀT, BROUGHT ABOUT BY SHĀH TĀHIR AND MAḤMŪD SHĀH OF BURHĀNPUR.

It has already been mentioned that Sultān Ahmad Shāh Bahīr went to war with Sultan Mahmūd of Gujarāt in defence of Mahmūd Shāh of Burhānpur, and that the presence of his army prevented any damage from being inflicted on the state of Burhānpur by the Gujarātīs.

Now, therefore, Mahmūd13 Shāh of Burhānpur, who was related to Sultān Bahādur, was impelled by the gratitude which he owed to Ahmadnagar to make peace between Sultān Bahādur and Burhān Niẓām Shāh, and to put an end to the strife and enmity which had been fomented and increased by ‘Imād-ul-Mulk. He therefore sent an envoy to Ahmadnagar and besought Burhān Niẓām Shāh to send a wise, faithful, and experienced ambassador to Sultān Bahādur’s capital for the purpose of strengthening the bonds of peace. In like manner he sent an envoy to Sultān Bahādur, imploring him to terminate the dispute and to open negotiations for peace.

Burhān Niẓām Shāh, with the concurrence of Mahmūd Shāh Fārūqī, sent Shāh Tāhir with numerous and valuable presents as an ambassador to Sultān Bahādur. Before Shāh Tāhir arrived, Sultān Bahādur had heard that he was the most learned man of the age, and that the emperor Humāyūn, when he wrote to him, used to seal his letter on the back of it,

12 This is a very imperfect account of the circumstances in which Bahādur withdrew from the Dakan. His situation there gave him some cause for anxiety. One ally, ‘Alā-ud-dīn ‘Imād Shāh, had deserted him; the other, Muhammad of Khāndesh, had nothing to gain by a continuance of hostilities and was anxious for peace; and the rainy season of 1027 was approaching, so that if he remained where he was, retreat would be difficult, if not impossible, and he would be exposed to a combined attack by the five kings of the Dakan. Muhammad of Khāndesh therefore opened negotiations for peace, and the terms on which it was granted were sufficiently humiliating to Burhān. Both he and ‘Alā-ud-dīn were to cause the Khuṭba to be recited in their dominions in Bahādur’s name; Pāthri and Māhūr were to be returned to Berar, and the elephants captured from ‘Alā-ud-dīn and Muhammad were to be returned. Burhān, in order to rid himself of the invaders, caused the Khuṭba to be recited once in Bahādur’s name, and Bahādur retired; but he fulfilled none of the other conditions. Some time afterwards Muhammad of Khāndesh called upon him to return the elephants, and he returned those which he had taken from Muhammad, but retained ‘Alā-ud-dīn’s. Muhammad, having got all that he wanted; made no further attempt to obtain satisfaction for ‘Alā-ud-dīn, but entered into an alliance with Burhān; and Pāthri, and, for a time, Māhūr remained in the possession of Burhān.

13 Mahmūd appears to be Sāyīd ‘All’s stock name for the Khāns and kings of Khāndesh. Having applied it to Dā’ud he now applies it to his successor Muhammad. Fīrishta says that Shāh Tāhir was sent to Gujarāt in A.H. 936 (A.D. 1529-30).
out of respect for him, and he therefore considered how he could fitly receive so learned a man who was so much honoured by the kings of the earth, for he feared that if he received him in a manner suitable to his eminence in learning, the honours paid to him might be regarded as honours paid to the ambassador of Burhan Nizam Shah; while if Shah Tahir's reception fell short of this, he might be suspected of not paying due respect to learning and excellence. At last he decided to receive Shah Tahir unceremoniously while walking in his garden. 74

After Shah Tahir had thus been honoured with an interview with Sultan Bahadur, he was treated with the highest respect and consideration, and, since Sultan Bahadur delighted in his company, he would not give him leave to depart, and thus Shah Tahir remained for three years, or according to another account, for one year, with Sultan Bahadur, and within this period Sultan Bahadur formed the design of conquering the country of Malwa, and marched for Malwa with a numerous army. Shah Tahir accompanied him. He besieged the fortress of Mandu, but the siege was prolonged and the Gujaratis lay surrounding the fortress, for nearly six months. At length Mandu was captured by Sultan Bahadur, and Shah Tahir then represented to the Sultan that he had been in attendance on him for a long while and had been treated with every kindness, but that the object of his mission was not, as yet, accomplished. Sultan Bahadur asked him what that object was, and he replied that it was to arrange a meeting between him and Burhan Nizam Shah, in order that peace might be firmly established between them. Sultan Bahadur asked whether His Majesty Burhan Nizam Shah would indeed meet him, and Shah Tahir replied that he certainly would, since that had been the object of the embassy. Sultan Bahadur asked where he would meet him, and Shah Tahir replied that he would come as far as Burhanpur. Sultan Bahadur asked Shah Tahir to go at once to Burhan Nizam Shah and conduct him to Burhanpur, promising to proceed thither in a leisurely manner, hunting by the way, so as to meet Burhan Nizam Shah there. 75

Shah Tahir at once set out for Ahmadnagar and, on his arrival, told Burhan Nizam Shah that Sultan Bahadur had promised to meet him in Burhanpur. Some of the courtiers, who were jealous of Shah Tahir, discredited this statement and said that it was not likely that Sultan Bahadur would come to Burhanpur to meet Burhan Nizam Shah. Shah Tahir, however, insisted that his information was correct and urged Burhan Nizam Shah to go to Burhanpur. Burhan Nizam Shah consented, and proceeded to Burhanpur, while Sultan Bahadur approached that city from the opposite direction and encamped in the garden of Mahmud Shah. When Burhan Nizam Shah reached the environs of Burhanpur, Shah Tahir hastened on to wait on Sultan Bahadur. He entered the garden and knocked at the door of the house where Sultan Bahadur lodged. Sultan Bahadur, perceiving who was

---

74 This is not quite a correct account of Shah Tahir's reception. At first Bahadur refused to receive any envoy from Burhan Nizam Shah on the ground that the latter had not fulfilled the terms of the treaty of Daulatabad, but had had the Khuda (recited only once in the name of the king of Gujarat and had then reverted to the practice of having it recited in his own name. Mahamad of Khudkesh made excuses for Burhan, saying that he was bound to consider the susceptibilities of the other kings of the Deccan, and Bahadur then consented to receive Shah Tahir, but showed him scant consideration. It was not until Khuda wasand Khan of Gujarat had warmly eulogized Shah Tahir's piety, learning, and personal merits that Bahadur received him with respect.

75 Firishta says that the meeting between Sultan Bahadur and Burhan Nizam Shah I took place after the capture of Mandu by Sultan Bahadur and at the end of the rainy season. Mandu fell on March 28, 1531, and the two kings met, therefore, in October, 1531. F. ii. 208, 431, 530. *Mahamad* should be read for *Mahmud* throughout this section.
there, asked whether Burhān Niẓām Shāh had arrived. Shāh Ṭāhir replied that he was in the environs of the town and was ready to do homage to Sultan Bahadur. Sultan Bahadur then told Shāh Ṭāhir to tell him that he would receive him that evening and also send a message to Mahmūd Shāh saying that the meeting between himself and Burhān Niẓām Shāh would take place in his dominions, it behoved him to attend to his duties as host, and to prepare a banquet for them in order that they might dine when they met. Mahmūd Shāh then prepared a splendid banquet.

Accordingly near sunset, Burhān Niẓām Shāh set out with a body of his most learned courtiers and a detachment of his army to pay his respects to Sultan Bahadur, as it were the moon approaching the sun, and when they met, Sultan Bahadur received him with all love, friendship, and honour. Burhān Niẓām Shāh then presented his pakhshāsh and gifts, consisting of elephants, horses, and valuable merchandise and stuffs of Khursān and Hindūstān. After that a sumptuous feast was spread for the two kings and food was distributed to all the troops.

According to some accounts, Sultan Bahadur, puffed up with the pride of his royal power and dignity and of the strength of his army, paid but little attention to Burhān Niẓām Shāh at their first meeting and did not even command him to be seated. Burhān Niẓām Shāh, observing the etiquette of the royal court, stood patiently where he was, and Sultan Bahadur requested Shāh Ṭāhir to sit on his right hand. But Shāh Ṭāhir said that it would be improper for him to sit while his master remained standing, and the Sultan then, turning to Burhān Niẓām Shāh, asked him why he did not take his seat. Burhān Niẓām Shāh then sat down beside Sultan Bahadur and entered into conversation, and in a short time all unpleasantness between the two kings was at an end. But this account can hardly be credited.]

After that Sultan Bahadur commanded that a green umbrella and afigurl, such as are only used by kings, should be brought, and bestowed them on his guest, whom he addressed as Niẓām Shāh Bahir. The Sultan’s chief amīrs also praised Burhān Niẓām Shāh Bahir, giving him the royal title, and all the other amīrs and those who were present in the assembly, offered him their congratulations on the honour that had been shewn him. They say that on that day Sultan Bahadur said jestingly to Maulānā Pir Muḥammad ‘Tumhāri bāzān kyā karī hai,’ for the word bāzān often occurs in the speech of the Dakani,—and Maulānā Pir Muḥammad replied in the same vein, ‘Tumhāri ‘andabalt ‘kaun du’d karī hai ?’” 78 Sultan Bahadur was much pleased with Maulānā Pir Muḥammad’s answer.

78 Nevertheless it appears to be the correct one. According to Firištā the ceremonial arranged was that Sultan Bahadur should be seated on his throne and should receive the homage of Burhān Niẓām Shāh. Burhān was minded, when he understood how he was to be humiliated, to turn homewards, regardless of the consequences, but Shāh Ṭāhir counselled patience and submission and told Burhān that he had a device for modifying the most humiliating part of the ceremony. He had, he said, a copy of the Qur’dn in the handwriting of ‘All, the cousin and son-in-law of Muḥammad. He would carry this with him, and Sultan Bahadur would be obliged to rise and descend from his throne in order to do reverence to the sacred book. Accordingly Shāh Ṭāhir carried the copy of the Qur’dn on his head, and when Bahadur, in answer to a question, was told what it was that he was bearing, he at once descended and did reverence to the sacred book.

77 This was apparently regarded, by all present, as a formal investiture of Burhān with the royal title and insignia.

79 Those two questions mean. “What is the meaning of your bāzān ?” and “What prayer do your andwali make ?” Bāzān seems to have been a common Dakani corruption of bād or dā, ‘after that,’ but I have not been able to ascertain the meaning of andwali, which is probably some Gujarātī word or Gujarātī corruption of an Arabic or Persian word.
and rewarded him by giving him two horses, an Arab and a Turki. Burhán Niẓám Shâh then obtained leave to depart and returned to his own camp, but Shâh Tâhir stayed in the assembly for a short time after his departure and Sulṭân Bahādūr said to him, "I dismissed Burhán Niẓám Shâh thus early lest fear should enter his mind." Shâh Tâhir replied, "His Majesty has never in any juncture known fear, nor does he know it now, but out of respect to the royal assembly he would not speak unceremoniously." Sulṭân Bahādūr then asked whether His Majesty Niẓám Shâh could play polo, and Shâh Tâhir replied that whenever Sulṭân Bahādūr took a fancy to see a game of polo, he would see that Burhán Niẓám Shâh excelled all the soldiers and horsemen of the world in soldierly accomplishments, horsemanship, and boldness. Sulṭân Bahādūr then asked him to tell Burhán Niẓám Shâh that he would go out early the next morning to amuse himself by watching some polo and that Burhán Niẓám Shâh should also come out and watch the play of the valiant men. Shâh Tâhir then took his leave, hastened to the presence of Burhán Niẓám Shâh, and told him what had passed between himself and Sulṭân Bahādūr, saying that Sulṭân Bahādūr's object was to make trial of him, and advising him to disregard etiquette and to join manfully in the game and to do his best.

Early the next morning Sulṭân Bahādūr rode out towards the open plain, and Burhán Niẓám Shâh also, mounting his horse, rode out with a band of his warriors towards the plain. Here the two parties met and played polo. Burhán Niẓám Shâh distinguished himself above all others in the game, so that all spectators applauded, and Sulṭân Bahādūr and all his warriors were astonished at his quickness, dexterity and boldness, and, dash, and, withdrawing from the game, watched him in admiration, praising and applauding him loudly.

When the game was over, both Sulṭân Bahādūr and Burhán Niẓám Shâh went to the former's camp and Sulṭân Bahādūr ordered his attendants to bring forth abundant gifts, cash, goods, horses, elephants, and whatever else might be worthy of the acceptance of Burhán Niẓám Shâh. These were produced by Sulṭân Bahādūr's order and were presented to Burhán Niẓám Shâh, who then asked for leave to depart. Sulṭân Bahādūr embraced him and gave him permission to depart, and he returned to his own camp. After his departure, Sulṭân Bahādūr summoned his singers and ordered them to go to Burhán Niẓám Shâh's camp and delight him with their singing, and also to make trial of him and see whether he was of ready understanding and quick in the uptake. They obeyed the order, and when they sang Burhán Niẓám Shâh put questions to them and made apt interpolations in each couplet and each song that they sang; and the singers were astonished at the quickness of his wit and loudly praised him. He then gave them numerous presents and dismissed them. When the singers returned to Sulṭân Bahādūr's camp, they were loud in their praises of the ready wit and the generosity of Burhán Niẓám Shâh. So much did they dilate on them that some of the courtiers rebuked them and told them that it was both disrespectful and foolish to praise another than their master so extravagantly for wit and generosity. But Sulṭân Bahādūr acted justly and said that the singers spoke the truth, and that Burhán Niẓám Shâh excelled him both in understanding and generosity, for his own language was much the same as that of Gwalior, in which the poetry was written, while the language of the Dakan did not so much resemble that of Gwalior, and that his own treasure far exceeded that of Burhán Niẓám Shâh. Therefore, he argued, Burhán Niẓám Shâh's understanding every song and every couplet as it was sung, and his generosity in giving the great gifts which he had bestowed, though his treasure was but small, were sufficient proofs of the quick understanding and great generosity of that great and most generous king.
In truth, in respect of these two matters, the Sultān said no more than justice and truth demanded, and was guilty of no distortion or exaggeration.

Some historians have related that the meeting of these two kings took place in a village near Daulatābād and without the intervention of Shāh Tāhir, but by the advice and intervention of Khvāja Ibrāhīm, the councillor, and Sābājī, and that these two men were rewarded for the service which they had performed, the former with the title of Lājit Khān, and the latter with that of Partāb Rāj; but the story told here at length is the correct account. 79

After this meeting Burhān Nīgām Shāh returned to his capital, and Sultān Bahādur returned to Gujarāt. 80

XXIX.—AN ACCOUNT OF THE ESTABLISHMENT OF THE IMĀM RELIGION BY BURHĀN NĪGĀM SHĀH IN THE DAKAN, IN PLACE OF THE ḤANAFĪ RELIGION.

It has already been mentioned that Burhān Nīgām Shāh spent much of his time with doctors of the faith of Muḥammad and devoted all his attention to acquiring learning and spiritual excellence. He occupied himself in listening to the discussion of religious questions, and to the amending of proofs, in order that he might acquire knowledge of God and an insight into the holy law, and he was ever a seeker after the straight way, which is the means of pleasing God.

His object in thus associating with learned doctors of the faith was discrimination between truth and error, in order that the rust of doubt might be scoured from the mirror

79 Sayyid ‘Ali seems to be confounding two meetings, for it is highly probable that there was a meeting between Bahādur and Burhān before the former retired from the Dakan, and there seems to be no doubt that this meeting took place at Chānpūr after Bahādur’s conquest of Mālwa. Firuṣṭa says (ii, 431) that Bahādur’s object in conciliating Burhān was to obtain him as an ally in a scheme which he had formed for wresting the empire of Dihl from the Taimurids; and this is highly probable. Bahādur had recently added the kingdom of Mālwa to that of Gujarāt, Muḥammad of Khādesh was his vassal, and it would have been strange if ambitious schemes had not been generated by his success. With Burhān and ‘Ala‘ ud-dīn of Berār as his allies, he might not unreasonably hope for the success of such a scheme as he had formed, but a stronger than he was in the field, and Burhān was not won over. Firuṣṭa says that he even instigated Humayūn to attack Gujarāt.

80 Sayyid ‘Ali omits all mention of the events which followed Burhān’s return to his capital, probably because they reflect little lustre on Burhān’s reputation. Amir ‘Alī Barīd had promised to code Khāliyānī and Khandhār to Ismā‘īl ‘Adil Shāh, but had failed to keep his promise. Ismā‘īl accordingly prepared, in 1531-32, to capture the two fortresses by force of arms. Burhān, at Amir ‘Alī Barīd’s request, wrote to Ismā‘īl asking him to desist, and Ismā‘īl replied, with some warmth, that he had not interfered when Burhān had taken Māhūr. He added that he was going to inspect his frontier posts of Nadirūg and Sholāpūr, and trusted that Burhān’s officers would not be alarmed. Burhān’s reply was couched in a haughty and menacing tone: and when Ismā‘īl next wrote, he desired to know the reason for Burhān’s change of tone. Was it the second-hand umbrella and tents of the kings of Mālwa conferred on him by Bahādur, or was it the title of Shāh by which Bahādur had addressed him? If so, let him know that the royalty of the kings of Bijāpūr was recognized by a greater monarch, the King of Kings of Persia. The letter concluded with a challenge.

Burhān and Amir ‘Alī Barīd marched on Nadirūg with an army of 25,000 horse and were utterly defeated by Ismā‘īl, who had but 12,000. Three thousand of Burhān’s army were slain and he fled from the field. In the following year (1532-33) Burhān and Ismā‘īl met on the frontier of their kingdoms and, concluded a treaty, in accordance with the terms of which, Ismā‘īl was to be allowed to annex the kingdom of Golconda and Burhān that of Berār; but Ismā‘īl died in 1534 and the treaty was held to have lapsed. P. ii, 44, 45, 46, 211.
of his heart, which was a repository of divine mysteries. He did not, however, attain this object from association with the learned men who were in the service of the court. On the contrary, the discrepancies between their words and their deeds confused his mind and threw him into great perplexity. Since those learned men had no love for, nor devotion to, the king of saints (All) who is in Madinah the banner of God's prophet and the guide to the path of true guidance, their learning was not profitable to the faith, nor did it raise the pinnacle of assurance, nay rather, in its avoidance of setting forth the truth it was worse than compound ignorance, for their object in following that learning was not the discovery of the way of orthodoxy, and consequently their learning led them many stages away from what should have been their object.

When Shâh Tâhir gained admission to the royal court, he joined in the discussions on religion and the sacred law, in spite of the fact that he was compelled by circumstances to perform taqiyyût and to conceal his true faith, but he would cite Shi'ah authorities and attach all the importance to them that he could. Burhân Nizâm Shâh, by means of his natural acumen, suspected that the faith of Shâh Tâhir was not that of the folk of Sunnât and Jamâdat, and by means of God's guidance began to realize that the religion of that true Sayyid was the true one and acceptable to the prophet of the 'Arabs.' The king therefore called Shâh Tâhir to himself in private and straitly questioned him on all religious questions, and Shâh Tâhir returned such answers as left no doubt in the king's mind as to his religious belief. The king then asked him straight out what his religion was, and Shâh Tâhir at first observed taqiyyût and dissembled, but the king said that it was perfectly evident that he was a Shi'ah and asked what it profited him to conceal the fact. Shâh Tâhir said that he could not reveal a matter, the concealment of which had (in the circumstances in which he was placed) been decreed by the king of the saints, and that on this matter he could not make paper the confidant of the pen. The king then solemnly swore that his question was in no way connected with bigotry or obstinate preference for one form of religion, but was prompted by a sincere desire to discover the way of truth and release from ignorance and strife. He bade Shâh Tâhir to be in no way anxious, as nothing could be said or done that might be in any way distasteful to him. He said that he had long been perplexed by the differences between sects, and that none of the doctors at court had been able to free his mind from his doubts. When Shâh Tâhir had received these assurances he spoke more freely. He said that inquiry after the truth was incumbent on all men, and on none more than kings, who were the shadow of God on earth. On the king's urging him to proceed, Shâh Tâhir revealed all that was in his mind. He reminded the king that Muhammad had said that among all the numerous sects of Islam one should follow the way of salvation and the rest the way of damnation. He then plied the king with arguments to prove that the Shi'ah religion was the way of salvation. He told him that Ali bin Abî Tâlib was the undoubted successor of the prophet, and was followed by his son, Hasan, who was succeeded by his brother, Hussain, and that they were succeeded by 'Ali Zainu-l-'Abidin, and that their descendants followed in succession, the last of them being the lord of the age, Abû-l-Qasim

11 A practice permissible according to the tenets of the Shi'ah sect of Muslims. It consists in concealing one's religious belief in order to avoid persecution or molestation and may, with the same object, extend even to reviling it.

12 "The traditional law and the congregation," in the following of which, orthodoxy, according to Muslims of the Sunni sect, consists.
Muḥammad bin Al-Ḥasan al-Mahdi. He gave the king their names, ʿAlī, Ḥasan, Husayn, Zayn-ul-ʿAbidin, Bāqir, Jaʿfar, Mūsā Kāsim, ʿAlī Musā Riḍā, Taqi, Naṣīr, Ḥasan Askari, Abū-ʾl-Qāsim, al-Mahdi, who is still living. He also set forth the absurdity of the belief of the Sunnis. The king then praised God for having decreed that the truth should be unfolded to him, and God appointed Muṣṭafā, Muṭṭaqa, and the Imāms to reveal to him the true faith.

XXX.—AN ACCOUNT OF THE EVENT WHICH CONFIRMED THE KING IN THE TRUE RELIGION OF THE TWELVE IMĀMS.

When Shāh Tāhir left the king's presence and went to his bedchamber, the king also retired to rest, and saw a vision. He dreamt that he saw Muḥammad with ʿAlī on his right hand and Ḥasan and Husayn on his left with Muḥammad Bāqir, while Shāh Tāhir was standing at a little distance from them, prepared to execute their orders. When Burhān Ni'am Shāh realized in whose presence he was, he made his obeisance, and Muḥammad Bāqir said to him, "The prophet commands that you should follow the guidance of Shāh Tāhir and lay hold on the true faith of love for the prophet's descendants." The king, who was highly pleased at being addressed, bowed his head to the ground in acquiescence, and opened his lips to praise the Imām. Just then the morning broke, and the king awoke, full of joy, and praised God for the vision which he had seen. He then sent for Shāh Tāhir and began to relate to him the dream which he had seen. It so happened that Shāh Tāhir had seen the same dream and had been ordered by the prophet through the mouth of Muḥammad Bāqir, the Imām, to guide Burhān Ni'am Shāh into the path of truth. He stopped the king's narrative and first told his own, thereby convincing the king of the genuineness of his vision. The king then told his story, and Shāh Tāhir said that he ought to be surely convinced of the truth of the Shi'āh religion and ought to regard the hatred of the opponents of the prophet's descendants as a religious duty. The king admitted that all his doubts were removed and that he was a firm believer in the truth of the Shi'āh religion and hater of all his opponents, but said that he could not proceed further in the matter without Shāh Tāhir's help, which would be necessary for the convincing of the doctors of the law about the court of the truth of that faith and for the removal of their opposition and also for leading the people generally into the way of truth. This was, indeed, proof of the king's justice, that he would not proceed violently against such as had not knowledge of the truth. Shāh Tāhir undertook the duty of arguing with the doctors of the faith and of reducing them to silence.

53 These are the names of the "Twelve Imāms" of the Shi'āh sect. The fundamental difference between the Sunnis and the Shi'āhs is well known. The former maintain that the succession to Muḥammad as God's viceregent on earth was properly determined by the popular choice, and that the first four Caliphs, Abu Bakr, ʿUmar, ʿUthmān, and ʿAlī, who were elected, were Muḥammad's lawful successors. The Shi'āhs maintain that the succession depended on natural descent from Muḥammad through his daughter Fāṭimah, who was married to his cousin ʿAlī, that Muḥammad was designated as successor, and that ʿUmar, who was present on the occasion and acknowledged ʿAlī's right to succeed, concealed the fact after Muḥammad's death. They revile the first three Caliphs as usurpers and maintain that ʿAlī's right to the succession depended not upon his election after the death of ʿUthmān, but was inherent in him, so that he should have succeeded on Muḥammad's death. The Imāms, for the Shi'āhs do not use the word Caliph (g/ʿalif) are the lineal descendants of ʿAlī and Fāṭimah, and the last, al-Mahdi, is supposed to be living, but concealed.

Muṣṭafā is an epithet of Muḥammad and Murtaḵ of ʿAlī. Muḥammad Bāqir, mentioned in the next section, is the fifth Imām.
XXXI—An account of the controversy of Shâh Tâhir with the Sunni doctors, and of his victory over them.

By the king's command an assembly, which the king graced with his presence, was convoked, and before that assembly Shâh Tâhir conducted a controversy with the following Sunni doctors:

Shâh Tâhir began by quoting the Ahâdîth to the effect that of the seventy-three sects of Islam, one was in the way of salvation and the rest in the way of damnation. He then twitted the Sunnis successfully with the differences between their four sects and continued his arguments at great length, basing all his arguments on Ahâdîth accepted by the Sunnis or passages from Sunni books, observing that it was useless to cite authorities not accepted by both parties. He concluded this portion of his argument by challenging his opponents to shew that he had misquoted anything or misplaced any quotation, calling for the books, the chief of which was the Sâkhî-i-Bukhârî,44 from the royal library, and promising to desist for ever from upholding the Shi‘ah faith if it could be shewn that the passages quoted by him were not in the books. Qârî Zain-ul-Abidin, however, forbade Sayyid Ishâq, the librarian, to produce the books. It so happened that the king had brought with him a copy of the most important, the Sâkhî-i-Bukhârî, which was produced, and the passages quoted by Shâh Tâhir were found therein, to the shame of the Sunni doctors, who then shifted their ground. The argument continued; and Shâh Tâhir having followed the Sunnis over their change of ground, continued his argument and again beat his opponents on their own ground. They were confuted and, as they could not meet his arguments, had recourse to abuse. Shâh Tâhir then appealed to the king to say whether he had not utterly confuted his opponents, and whether their taking refuge in abuse were not an admission of defeat. The king replied that the confutation of the Sunnis was as clear to him as the sun in the heavens and that all who had ever contended that 'All was not the rightful immediate successor of the prophet were worthy of being cursed, and furthermore that the Imâms after 'All were the infallible and only guides to the truth.

When the king announced his acceptance of the Shi‘ah religion, the Sunni doctors cried out with one accord that it was unworthy of his royal dignity that he should, on the unfounded statements of anybody, abandon the faith of his fathers and the religion which was accepted by so many famous kings, and should accept the arguments of any unauthoritative stranger. When the king heard what they had said, his wrath burst into flame, and he said,

44 The Sâkhî-ul-Bukhârî is the great collection of ahâdîth, the sayings or traditions, of Muhammad, accepted as authentic by the Sunnis. The four sects of the Sunnis here mentioned are the Hanafis, the Hanbalis, the Shâfi‘is, and the Malikis, the followers of the four great doctors of the law, whom the Sunnis call the four Imâms, Abû Hanîfah, Ibn Hanabal, ash-Shâfi‘i, and Malik. The differences between these sects are unimportant and each regards all the others as orthodox.
"O lords of error and insolence. Know that we, in our search after the truth, have set aside all obstinacy and bigotry and have followed the way of truth in sincerity and faith, and but now, by way of proof, we decreed that Shâh Tâhir should hold a controversy with you in order that you might be convinced, and that the people might not say that we have without good grounds and sufficient proof abandoned the faith of our fathers. Now that you have been overcome in argument and are in that respect helpless, you take up a new line, and say that it is not right to forsake the faith of our fathers. But this is unreasonable, and is merely the speech of fools whom God has refuted in the Qur'âns. The excuse that a particular religion was the religion of one's ancestors will never be accepted on the day of resurrection. Now, if you wish for prosperity in this world and salvation in the next, abandon your errors and accept the true Shi'ah faith, or the punishment that we shall decreed for you will empty the cage of the birds of your souls, and the sword of our wrath shall remove your heads to a distance from your bodies."

Notwithstanding the king's efforts to guide these men into the way of truth, fate had decreed that they should obstinately adhere to error, and Qâsi Abrar, the most obstinate bigot of all, was beheaded. Maulâna 'Abdul Awwal was punished with torture and with every species of affliction and was compelled to eat the flesh of dogs, and the others were punished in various ways. The power of the sword in a short time established the true religion of the infallible Imamâs in the remotest part of the country of the Dakan, and love for the family of the prophet was established in the hearts of both enemies and friends, so that the other Sultâns of that land, that is to say 'Adil Shâh and Qub Shâh, followed the king's example and accepted the Shi'ah religion. Thus the Shi'ah religion became the religion of the land; the titles of the Imamâs were heard from the pulpits, and adversaries of the faith were rooted out from the land. After this the king's power and prosperity grew and increased.

(To be continued.)

82 Sayyid 'Ali is most inaccurate here. Sultan Qull Qub Shâh and all his successors in Golconda were Shi'ah. Yusuf 'Adil Shâh, founder of the Bijâipur dynasty, was so zealous a Shi'ah that he nearly lost his throne by prematurely establishing that religion in his kingdom. His son Ismâyil was also a Shi'ah, but 'Abdul Shâh I, Ismâyil's son, who had lately succeeded to the throne of Bijâipur, was a Sunni, but all other kings of this dynasty were Shi'ah. Thus, after the conversion of Burhân, the three principal dynasties in the Dakan, those of Ahmâdnagar, Bijâpur, and Golconda were Shi'ah, while the rulers of the two small kingdoms of Benar and Bidar were Sunnis. But Benar was annexed by Ahmâdnagar in 1574 and Bidar by Bijâpur in 1619, so that the Shi'ah faith became the established religion of the Dakan. This furnished the bigot Aurangzib with a scarcely needed pretext for the annexation of Bijâpur and Golconda.

83 Firishta's account of Burhân's conversion to the Shi'ah religion is similar to this but contains some additional particulars. According to him, Shâh Tâhir first took advantage of a dangerous illness of 'Abdul Qâdir, Burhân's favourite son, to breach the subject of the Shi'ah religion, suggesting that if the king accepted it, the prince would recover. It was while watching by his son's bed that the King fell asleep and dreamed a dream, in which he saw, according to Firishta, Muhammed surrounded by the twelve Imamâs. Muhammed promised him that his son should recover and bade him follow the teaching of Shâh Tâhir. The king's conversion followed as a matter of course. Firishta, who was a Sunni, does not relate the story of the conversion so sympathetically as the Shi'ah, Sayyid 'Ali.
A CHRONOLOGY OF THE PĀLA DYNASTY OF BENGAL.

By Dinesh Chandra Bhattacharyya, M.A.

The history of the great Pāla dynasty of Bengal has during the last ten years cleared up remarkably, and we have now a fairly accurate chronology for it established by the working of a number of happy synchronisms. Scholars however disagree in some of the minor details. In the present article an attempt has been made to show that we can arrive at a definitely certain chronology for a major part of the dynasty from the available materials. The publication of Mr. R. D. Banerji’s elaborate monograph on the Pālas of Bengal which mostly embodies the recent researches on the subject, saves the present article from being burdened with full references.

We start from the reign of Mahāpāla I, for whom we have a certain date in the Sarnath inscription of A.D. 1026. Hitherto the inscription was referred by all scholars to the actual reign of Mahāpāla, but Mr. R. D. Banerji contends that it might have been incised soon after his death. In support of his contention he seems to put forth two facts, viz.: (1) A MS. from Nepal written in 1076 Samvat when a सीतानितिप्रभृती गुप्तगमिको चेदि was reigning in Tīrthu. According to Bendall, this is Gaṅgēya-deva Chedi. The date of the MS., A.D. 1019 (referring it to the Viṣṇu era) fell, therefore, before the brass plates of Mahāpāla from Imādpur in Tīrthu, dated in his 48th year; and as the longest period assigned to Mahāpāla is 52 years (Tarnath), he must have been dead in A.D. 1026. (2) Besides, the absence of any eulogistic epithets before the name of Mahāpāla in the above inscription and the use of the past tense in akṛṣṭa may point to its being a posthumous record. It should however be noted that Mahāpāla was still living in A.D. 1032 when Bājendrandhola invaded Bengal, and even assuming that he died soon after, his 48th year hardly falls before A.D. 1019. Besides, there is no clear reference in the Kalachuri inscriptions of this not very insignificant conquest of Tīrthu (and Gauḍa) by Gaṅgēya-deva.

We are thus inclined, with Mons. Levi, to reject Bendall’s interpretation and to accept Mr. Chanda’s suggestion that the colophon refers to a local māṇḍala.

The Sarnath inscription, again, is in verse, and as such, the single epithet गुप्तगमिको is sufficiently expressive of the king’s life and honour. Moreover, the use of the proximate past tense, नक्तू, very fairly refers the inscription to the actual reign of Mahāpāla I, who may therefore be taken to have been still reigning in December, A.D. 1026.

The date of Mahāpāla’s accession to the throne can now be definitely settled, for fortunately we have a verifiable datum referring to his reign. A MS. of Asthānā-ṭhaṭikā was copied in the sixth year of his reign सद्यक्षक ६ अतिरिक्त कुण्डलिकोम्पत्तिः and the year was “Kṛṣṇa vadi 13” fell on a Tuesday on the following possible dates:

Purāṇimanas—

(1) October 21, A.D. 979.
(2) September 27, A.D. 992.

1 गौड़गमिको: in the Goharwa plate of Karṇa-deva (H.I., XI. p. 143) taken to refer to an invasion of Aṅga, should perhaps more correctly be construed with the previous word, aṅga meaning rather the seven functionaries of a kingdom (of Kṣ̣a).

2 Gaṅgēya-deva, p. 43. It is indeed possible, referring the year to the Śaka era A.D. 1154, that the prince is no other than Gaṅgēya-deva, the son and successor of the famous Nāṇa-deva of Nepal and Tīrthu—an identification which will also explain the otherwise inexplicable connection with Gauḍa conveyed by the epithet gaṅga-deva, though it should be noted at the same time that later Nepalese kings refer the dynasty as of solar lineage.
Amānta.—
(1) November 2, A.D. 986.
(2) November 13, A.D. 990.
(3) November 14, A.D. 993.

We have given both Pārśimānta and Amānta calculations. It is always very difficult to ascertain which particular system was prevalent at that period in particular places. Here fortunately we have a definite epigraphic evidence to show that the Amānta system was prevalent in Bengal about that time. The Bākāmāta Narteśvara image inscription of the reign of Layahachandra gives a date—Āshādha vadi 14 with Thursday and Pushya nakṣatra. Any one verse in Indian chronology will see that the date, making an impossible combination under the Pārśimānta system, clearly refer to the Amānta system. We have ventured, therefore, to make our selection from dates calculated under the Amānta system. Of all the calculated dates, 979 is rather too early, dating Mahipala’s death in A.D. 1025 at the latest, after full 52 years. On the other hand, both A.D. 992 and 993 are somewhat too late, carrying us to about A.D. 1038. We know from Tibetan sources that the celebrated Buddhist missionary Dtpa-skara left for Tibet in A.D. 1042 under King Naya-pala whose association with the Buddhist sage must have extended to a number of years. Of the two dates remaining, 986 is certainly the most convenient one. So Mahipala ascended the throne in A.D. 981, November 981 falling within his first year. His predecessor Vigrahapala II’s date is also hereby settled, dating his accession not later than A.D. 955, a MS. having been copied in his 26th year. The date of Kamboja usurpation (A.D. 966) as gathered from the Dinajpur pillar inscription, fits in well during Vigrahapala’s reign. The date, A.D. 966, however, already falls too early in his reign to admit any later date for Mahipala’s accession than the one we have selected. Mahipala died therefore in circa A.D. 1030 after a reign of about 50 years.

Before settling the dates of the immediate successors of Mahipala I, we shall try next to settle a date which is likely to evoke very far-reaching consequences, namely, that of the Kamauli grant of Vaidyadeva. It records a grant made on a विजयदिन day coinciding with श्रावण (verse 23 वैधानिक निम्नलिखित तथ्यांचे हिंदियात.) Dr. Venis, who first edited the inscription, from the then meagre state of Pala chronology, selected A.D. 1142 from among the possible dates calculated by him. Moreover, he calculated only vadi dates though there was no reason to exclude sudi ones, which equally make a स्वाभाविक. The possible dates for our immediate purpose are the following:—1096, 1100, 1104, 1115, 1119, 1123. Of these, 1096 is too early, as we shall presently see. In 1104 there was वर्षाणि both at sunrise and the moment of Saṅkranti on the Saṅkranti day: it is thus rejected, as is also 1115, when there was श्रावणि at sunrise but प्रतिपदा later on, and such a combination does not make a स्वाभाविक. 1123 is rather too late. So we have only two dates, A.D. 1100 and 1119, for the fourth year of Vaidyadeva. Let us see what comes out of the earlier date. It is clear from the epithets परमेश्वर etc., used in the inscription, that Vaidyadeva became independent, and it has been rightly conjectured that he “declared his independence after the murder of Gopal III,” probably by his uncle Madanapala. The latest inscription of the reign of Rāmapala is dated “Samvat 42 Āshādha dine 30.” That of the reign of Vigrahapala III is dated “Samvat 13 Mārgga
The latest record of Nayapāla is again, from the colophon of a MS., dated "Samvat 14 Chaithra dine 27." We have thus the following scheme worked out:

March 1100 falls within the 4th year of Vaidyadeva.
March 1097 falls within the 1st year of Vaidyadeva.
Allowing only a few months' reign to Kumārapāla and Gopāla III,
June 1095 falls within the 42nd year of Rāmapāla.
Therefore, June 1054 falls within the first year of Rāmapāla.
Allowing again a few months' reign to Sūrapāla II and Mahāpāla II,
November 1053 falls within the 13th year of Vigrahapāla III.
November 1040 falls within the first year of Vigrahapāla III.
Therefore, March 1039 falls within the 14th year of Nayapāla, and
March 1026 falls within the first year of Nayapāla.

Against this apparent agreement of the chronology with 1100 for the date of Vaidyadeva's grant, there are grave and numerous objections. In the first place, all the six kings of the series here are allotted just the minimum lengths of reign as determined by materials hitherto collected, and there is not even a few months' margin left. Secondly, the happy synchronism of Karṇadeva and Nayapāla, which has been accepted from Tibetan sources, has to be rejected under the present scheme, for we now know that Karṇadeva ascended the throne in January A.D. 1041 while Nayapāla, here died before November 1040 at the latest.

Thirdly, Dīpākara addressed a didactic letter "Vimalarataṅkaleha" to King Nayapāla, while the sage was "staying in the plains of Nepal on his way to Tibet" in A.D. 1041 (Dr. Vidyabhū haṇa in the ASB). This also is not possible under the present scheme. Fourthly, Nayapāla's reign here begins in March, 1026 at the latest, but the Sarnath inscription is dated December 1026. Moreover, Karṇadeva's son was still reigning in A.D. 1122. It is but fair then to assume that Karṇadeva was quite a young man when he ascended the throne in A.D. 1041, and Vigrahapāla III, to be consistently a son-in-law of his, must needs be pushed beyond A.D. 1053, (the date of his death under the present scheme) when Vajīṣṭha would be too young if born, at all. Indeed, if the measured words of the Rāmacarita be taken literally, Vigrahapāla must have married the princess at the time when he ascended the throne, ("त्रिपुरा त्रिश्राविनायकस्य श्रीमान् यथ्यायः"-कर्नलेखारसिद्धान्तम् देया) which becomes even more unlikely under the present scheme. We are thus sufficiently justified in rejecting 1100 and accepting 1119 for the date of Vaidyadeva's grant. The only thing that stands in the way is the supposed alliance of Madanapāla with Chandradeva of Kanauj, put forth by M. M. H. P. Sastri in the learned introduction to the Rāmacarita. Here we have to discuss the following connected genealogy:

\[
\begin{align*}
\text{Nayapāla} & \quad \text{Karṇadeva (asc. 1041)} \\
\text{Chandradeva} & \quad \text{Mahanadeva} \quad \text{Vigrahapāla} \quad \text{Vijayāsiri} \quad \text{Yaśāhkarna (1122)} \\
\text{Madanapāla} & \quad \text{Saṅkaradeva} \quad \text{Rāmapāla} \quad \text{Gayakarna (1151)} \\
\text{Govindachandra} & \quad \text{Kumāradeva} \quad \text{Kumārapāla} \quad \text{Madanapāla (1104–1154).}
\end{align*}
\]

11 p. 112. 12 p. 79. 13 p. 77. 14 E.I., XI, p. 146. 15 Dīpākara who brought about a peace between Karṇadeva and Nayapāla, could not therefore have left for Tibet before A.D. 1045. Dīpākara's chronology, which originally appeared in ASB., Vol. X, 1881, p. 227, was in keeping with this synchronism, but it is not known what led the chronology to be shifted later by two years.

A glance at the above genealogy will show that Madanapâla was a contemporary of Govindachandra, and if there was any alliance at all, it was not with Chandra-deva but with Govinda-chandra. The whole question, however, rests on very doubtful grounds, as the Râmacarita is there unelucidated by any commentary. Possibly the campaigns of Madanapâla on the banks of the Yamunâ were against and not on behalf of the king of Kanauj, whoever he may be. Pânâh like Narmâyâ should perhaps better be taken to refer to a king of the “Chandra” dynasty of Bengal.

Thus March 1119 falls within the fourth year of Vaidyadeva, so that the date of Kumârapâla’s death easily works out to be A.D. 1115. Râmâpâla’s date can now be fixed with greater accuracy. In the legendary work called चक्रवति, there occurs the following verse recording the death of Râmâpâla:

शाके व्रजकुरुत्रत्रमुक्तिहि (1) कन्यान पाये भासरे ।
हृदय वाकुपतितार्चे सरसिन्धु वामचे शामरे।
माहंसां चन्द्रकामनाणी भानवर्चे । च च च च च
हा पत्रानुसरणान्यानाथ माणि भीरान्नाथ नृत्तः।

(Vide Gouḍârjâmalâ, Introd., p. 9.)

This fine Śârâvalavikridita stanza occurring in a mass of bad prose and worse Sanskrit has been justly taken by the late Mr. Batavyal to be a genuine record of Râmâpâla’s demise. Besides, the latter part of the stanza bears a remarkable corroboration from the Râmacarita where also Râmâpâla is reported to have drowned himself in the Ganges. Unfortunately, the reading of the year has been corrupt beyond rescue. The details that follow, Āśvin vadi 2 (yama means 2) corresponding with a Thursday, however, yield the following date: September 21, A.D. 1111. The corresponding Śâha year 1033 actually ends in a āśvin (an emendation may accordingly be suggested शाके व्रजकुरुत्रत्रमुक्तिहि etc.) The date moreover fits in marvellously with our determination of Vaidyadeva’s date. Râmâpâla therefore died on September 21, A.D. 1111.

The next date we mean to work out, is, we confess, based on very doubtful assumption, but we have the authority of the late Dr. Kielhorn. The Amsgachhi plate of Vigrahapatra III is dated the ninth day of Chaitra in the 13th year of his reign and grants a village on the occasion of a lunar eclipse. Dr. Kielhorn assumed that the date of the plate was coincident with that of the lunar eclipse and calculated A.D. 1086 as the date in question. This year is now unsuitable. There was, however, a lunar eclipse on March 3, A.D. 1087 corresponding to 10th or 9th Chaitra. As the date does not conflict with our chronology we may be justified in accepting it as marking the last period of Vigrahapatra III’s reign.

The following chronological table may now be placed before scholars:

<table>
<thead>
<tr>
<th>Vigrahapatra II</th>
<th>Date of accession: Circa 955</th>
<th>Date of death: 961</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mahâpatra I</td>
<td>981</td>
<td>Circa 1030</td>
</tr>
<tr>
<td>Nayâpatra</td>
<td>Circa 1030</td>
<td>1054</td>
</tr>
<tr>
<td>Vigrahapatra III</td>
<td>1054</td>
<td>1067</td>
</tr>
</tbody>
</table>

18 Sāhitya, a Bengali monthly, of the year 1301 B. S. pp. 1—10.

19 Ante, XXII, p. 108.

20 The previous Sâkdrâti occurred near about, though not exactly at midnight (7227 after sunrise). If taken practically for midnight, the moment yields 9th Chaitra as the date of the eclipse, by the application of the well-known Bengal rule of counting civil days.
CHRONOLOGY OF THE PÁLA DYNASTY OF BENGAL

<table>
<thead>
<tr>
<th>King</th>
<th>Date of accession</th>
<th>Date of death</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sūrapāla II and Mahipāla II</td>
<td>1067</td>

<tr>
<td>Madanapāla</td>
<td>1115</td>
<td></td>
</tr>
</tbody>
</table>

Except those of the accession of Vigrahapāla II and Nayapāla, all the dates are almost definitely settled.

Of the first seven kings of the dynasty, we have unfortunately no clue to definite dates except in a single inscription of Dharmapāla’s time. A votive inscription from Bodh-Gayā is thus dated

\[\text{मन्दिरविस्तारि}
\text{वर्षे धर्मपाले महीना}
\text{नवाल्यह्यति} युवौनापकारनयानिः।

(Vide JASB, 1908, p. 102.)

Between A.D. 760 and 780 we have arrived at the following possible dates of Dharmapāla’s accession by verifying according to mean calculations the date given above, viz. Bhādra vadi 5, Saturday.

Under the Amānta system—A.D. 764, 768, 771 and 788.

Under the Purāṇamānta system—774, 777, 781 and 784.

The discovery recently of two new inscriptions, one dated in the 54th year of Nārāyanapāla and the other in the 24th year of Rājyapāla, makes it impossible to place Dharmapāla’s accession later than A.D. 788, as the following tentative chronology will show.

<table>
<thead>
<tr>
<th>King</th>
<th>Date of accession/Duration</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dharmapāla</td>
<td>788—920 (just 32 years)</td>
</tr>
<tr>
<td>Devapāla</td>
<td>820—853 (33 years)</td>
</tr>
<tr>
<td>Vigrahapāla I (or Sūrapāla I)</td>
<td>853—880 (7 years)</td>
</tr>
<tr>
<td>Nārāyanapāla</td>
<td>860—915 (55 years)</td>
</tr>
<tr>
<td>Rājyapāla</td>
<td>915—940 (25 years)</td>
</tr>
<tr>
<td>Gopāla II</td>
<td>940—955 (15 years)</td>
</tr>
<tr>
<td>Vigrahapāla II</td>
<td>955—981</td>
</tr>
</tbody>
</table>

Thus, with 788 as the date of Dharmapāla’s accession, the chronology fits in almost too closely with the one fixed above. For it allows only seven years to Sūrapāla I, while, according to Dr. V. Smith, he reigned for at least 13 years. Moreover, according to the Manahali inscription of Madanapāla, Gopāladeva I was “विराजमानमनरंयर्या
\text{वाचकी} नाथ” which means, if anything, that he reigned long enough, if not, literally, longer than his predecessor, Rājyapāla. Fifteen years, on the other hand, make one of the shortest reigns of the dynasty. We are inclined, therefore, to look for the date of Dharmapāla’s accession not later than the sixties of the 8th century, either A.D. 784 or 786.

\[22 \text{See ante, Vol. XLVII, pp. 110-111.} \]
\[23 \text{See ante, Vol. XXXVIII, p. 235.} \]
\[24 \text{We are unable, however, to verify Dr. Smith’s statement.} \]
BOOK-NOTICE.

I should like to say at the outset that within the compass of this short book there is contained philological and religious knowledge of the highest order, which is a credit to the well-known authors and to the Society which has published their very valuable labours.

Lalla or Lal Ded was a female wandering Shaiva ascetic (yojini) of Kashmir in the fourteenth century A.D. and her verses are of extreme value for two reasons. They form the oldest known specimen of the Kashmiri Language and they represent the teaching of the Shaiva Yoga as it presented itself to her from the ordinary Kashmiri followers of that religious system. To anyone therefore who, like myself, endeavours to ascertain the effects of the philosophical teaching of the Hindu sects on the public at any given period, the book is of the highest interest.

One criterion of the importance of this book is shown by a reference to Dr. J. N. Farquhar's admirable Outline of the Religious Literature of India, also dated 1920. At p. 232 all he has to say about "Kashmir Saiva" is: "Kashmir Shaivism still exists, but it shows very little vitality. Yet scholarly pandits are not wanting: their work, clothed in English, may be seen in Chatterji's Kashmir Shaivism. Sir George Grierson refers to "a wise old woman known as Lal Ded who lived in Kashmir in the fourteenth century, "whose aphorisms in short verses are still freely quoted in the happy valley" and he quotes and translates one of her stanzas. Mr. Chatterji names only a single writer belonging to this period (Muslim Influence: 1350-1700). Shivapadhayaya of the eighteenth century, who wrote a commentary on the Vijnana-Bhairava-Tantra." But the Introduction to Lall Vakyani now under consideration goes much further and describes it as giving "an account, often in vivid language, of the actual working out in practice of a religion (Shaivism) previously worked out in theory. As such it is a unique contribution to the body of evidence that must necessarily form the basis of a future history of one of the most important religious systems of India."

On p. 236 Dr. Farquhar, in his bibliography, dates Lal Ded as "c. 14th century", on the faith of Sir George Grierson's article in JRAS, 1918, p. 157. It is therefore with some pride that I note that the editors of Lal Ded's poems resort for a good deal of their legendary and historical information about her to Punjub Notes and Queries, which I started as long ago as 1893 and maintained for some years.

Dr. Farquhar seems to be quite right in describing Lal Ded as belonging to the period of Muslim Influence on Hinduism. She is consistently described by tradition not only as a contemporary, but as a friend of Sayyid 'Ali Hamadani, the Muslim apostle of Kashmir in 1380-1386, and one of her verses (No. 3) runs as follows:

Let Him bear the name of Śiva, or of Kēśava, or of the Jina, or of the Lotus-born Lord—whatever name he bear,

"May He take from me, sick woman that I am, the disease of the world. Whether He be he, or he, or he, or he."

The commentary on this (and how admirable so many of the authors' commentaries are) is:

By whatever name the worshipper may call the Supreme, He is still the Supreme and He alone can give release. Kēśava means Viṣṇu: by the name of 'Jina,' is indicated both a 'Jina,' the Saviour of the Jainas and also the Buddha. I suggest that here it is confused with the Arabic Jinn, the Genius of the Arabian Nights. The Lotus-born Lord is Brahma." I would like to go much further than the author and to state from what follows that the confusion is undoubted, though no doubt the Pandit Rājānaka Bhāskara in his Sanskrit translation of this verse, thought the reference was to the Indian Jina only. The importance of this particular verse is enhanced by the fact that the version given by the editors' authority is practically identical with that in Sir Aurel Stein's Collection at the Oxford Indian Institute, showing the hold it has had on the people.

But is not Lal Ded here forerunning Kabir (1440-1518), who followed and improved on Rāmānanda (1400-1470), who preached "a compromise between theism and strict monism," and the roots of whose teaching go much further back in the then old Hindu doctrine of bhakti or devotional faith, whether the Sects professing it were Śiva or Vaishnavas. Lal Ded could never have heard of Rāmānanda, and his doctrines and she must have died before Kabir was born, but Rāmānanda was not the first, without giving up his caste, to take all castes and conditions of men into his personal following, even Muhammadans, and to be on terms of mutual respect with the last. In fact, in this respect he adopted a fashion that was then springing up among both Hindu and Muhammadan teachers under Muslim influence. What was this influence? Was it not Sufi mysticism? Though a Muhammadan at bottom, the Sufi was not
orthodox and was imbued with outside influences, European and Asiatic, and even Indian thought. He tended to identify himself with God, like the early Hindu, and to lose his individuality after death in eternal companionship with God. His object in this life was to escape from individuality, in order “to realize that God is the only reality.” His practice of this end came near to the Hindu Yoga, and to him all religious systems tended to become unreal and of equal value. It is not difficult to understand that a yogini of the fourteenth century, in contact with Muhammadanism, should quickly absorb such a line of thought. And the interesting point in Lal Ded’s life and popular teaching is that we seem to get a glimpse into the trend of the Hindu mind that gave Râmânananda, and more largely his great pupil Kabir, the enormous sway they have wielded over the religion of India of their own and even the present day.

How deeply the general idea conveyed in Lal Ded’s verse quoted has struck its roots into the every-day Indian mind is shown in a couplet taught to my own children when very small by their nurse, though long completely lost by them.

She was an Outcaste, a Mehtarani—

Râm nâm lajá; Gòpáî nâm gôh ;
Har kà nâm miîârt; ghôl ghôl pû.

The name of Râm is the sweet; Gòpáî’s name is the butter;
Har’s name is the sugar: mix up well and take.

The form of the couplet is purely Hindu, Râm nâm, Gopāl nâm, Har nâm, referring back to the age-old doctrine “of the eternity of sound and the indefeasible connexion between a word and its meaning,” and thence between the attributes of a god and his name; but the sentiment is mediæval Hindu, like Lal Ded’s. In fact, if we take Râm and Gopāl (Krishna) to represent the Viashyavā-herc-gods and Har to represent Śiva, we get very near to Lal Ded’s teaching. If we take the couplet to be of Ramāte origin and to mean that Gopāl and Hari (Krishna) are subordinate to and absorbed in Râm, the verse is Viashyavā but non-sectarian. In the Mehtarani’s mind, however, I feel sure it conveyed the idea of the Supreme by whatsoever name He was called, because she was the wife of the chief priest (as one may say) of the Lalbégī Mehtars of Ambala. This man had a MS. kurvinda or ‘Genealogy’ of his Sect, of which I got the loan about 1880 and published it erbarium in the Lejenda of the Punjab, which, in its turn, led to the subsequent publication in the Indian Antiquary of a somewhat extensive Lalbégī Literature. The ‘Genealogy’ turned out to be hagiological pure and simple—an eclectic worship of anything deemed to be holy, whatever its source—Sectarian Hindu, Muhammadan or Christian—in the form of mantras, i.e.

mystic formules of apparently meaningless sounds—in this case difficult to dissect and more than probably actually meaningless, but no doubt in the minds of the users all the more holy and efficacious on that account. The idea of the equality of all in religion would, however, sink readily and deeply into human beings situated as are the Mehtars.

Lal Ded enforced her doctrines by wandering about singing and dancing in a nude or nearly-nude condition. This was nothing new in Śaiva, or indeed in other forms of Hinduism, or in Judaism or Islam. In verse 94 she defends the practice:

“My teacher spake to me but one precept.

He said unto me ‘from without enter thou

the inmost part.’

That to me became a rule and a precept.

And therefore naked began I to dance’.

The authors’ gloss on this is:

“The Guru or spiritual preceptor, confides to his disciple the mysteries of religion. Lalla’s account is that he taught her to recognize the external world as naught but an illusion, and to restrict her thoughts to meditation on her inner Self. When she had grasped the identity of her Self with the Supreme Self, she learnt to appreciate all externals at their true value. So she abandoned even her dress and took to going about naked... Here she says that she danced in this state. Filled with supreme rapture, she behaved like a madwoman. The dance, called tangâja, of the naked devotees is supposed to be a copy of the dance of Śiva, typifying the course of the cosmos under the god’s rule. It implies that the devotee has wholly surrendered the world, and become united with Śiva.”

Lal Ded was essentially nothing more than the product of her race and time and incapable of founding a Sect or organised following, and it is quite possible that her popularity was founded on her reputation as a dancing ascetic coupled with her capacity for stating in fascinating verse the doctrines taught her. The emotional dancing would draw the necessary attention to her and the quality of her verse would remain in the public memory. A century after her time we have a strong instance of this in a very different Hindu personage, teaching a doctrine in some aspects as poles apart from hers—the Bengali Brahman Veśambhara Miśra (1485—1533), known to fame as Chaitanya. A Vaishnav of the general Bhagavata community, he practised the passionate variety of devotional faith (bhakti), concentrating in his case on the story of the loves of Krishna and Radhā in hymns, and enforcing his doctrine by the public dancing of himself and his followers with extra-
ordinary fervour and emotion. Although in his case he founded an important Sect, he was, like Lal Ded, no organiser, but his religious emotion was real and clean, and he turned the tale of Radha-Krishna, not very savoury from the point of general morality, into something that held the imagination of a vast public to their good. The dancing and the music soon died away after his death, but they had done their work, for they attracted general attention, and the contents of the hymns and the teachings of the Sect, with much deterioration, alas! in certain instances, were left to their inherent value for success and permanence.

Lal Ded purported to popularise the highly anthropomorphistic doctrines of the Śaiva Yoga. This was no easy task, for the Yogic philosophy was so abstruse and difficult to follow and so full of technicalities, that obviously the workaday unlettered population could never grasp it; and the technicalities, which would come to be repeated glibly enough, must have largely appeared to the public like "the blessed word Mesopotamia." In his illuminating discourse on Yāga, Dr. Barnett starts by saying: "The object of the discipline called Yāga is to emancipate the individual soul from its bondage to the material universe" including "the mental organism... The emancipation is effected by a mental and bodily discipline culminating in a spiritual transformation, in which there comes into existence a permanent intuition revealing an essential distinction between the individual soul and the material universe. This is the state of isolation which is salvation." As the bondage of the material universe includes the bondage of the mental organism the Yogi attempts by ascetic exercises, into which metaphysical contemplation largely enters, to attain such power over his own mental organism that "all sense of objectivity disappears from the matter of thought, leaving only the intuition of the distinction between the individual soul and the material universe, wherein the individual soul shines for ever in its perfectly pure still radiance."

Dr. Barnett explains that from the first the Yogic method of gnosis "presupposes certain mystic conceptions of the natural and spiritual world" which "may be classified broadly under two heads: (1) the theory of Nature and of salvation by means thereof; (2) the practice of physical means supposed to be efficacious in attaining the latter object... In Yogic theory the human body is conceived as a miniature copy or replica of the world without it: the forces by which this microcosm is controlled at the same time operate upon the macrocosm outside, and thus by certain physical and mental processes the Yogi can win for himself not only supernatural powers over his own body and mind but also a miraculous control over the universe, culminating in the complete translation of his soul into the highest phase of Being, the Absolute (usually conceived as the Supreme Śiva) for ever and ever." The Yogic theory of the microcosm contained in the human body involves a description thereof which has to be learnt, as it has no counterpart in the ordinarily observable facts of its anatomy.

"As the object of metaphysical contemplation is to merge the individual soul into the absolute All-Spirit, so the object of Yogic contemplation is to absorb [the Creative Force of the Phenomenal Universe, personified as] Kundalini in the microcosm, representing the microcosmic Energy, into [thehighest of the circles supposed to be attached to the spinal cord at the base of the palate and called] Sahasrāra, typifying the Absolute whereby the Cosmos is merged into the infinite bliss of the Supreme (Paramēśvara). While the absorption is being effected there occurs the Elemental Sound in his body audible to the Yogi, the subject of further extremely complicated and obscure theories of cosmic evolution, but they are of importance because, as the Creative Force "reveals herself in sound, Word or Logos, the elements of Speech, namely syllables and their combinations, have a profound mystic significance in Śaiva doctrine."

Teach the details of such a doctrine by a mass of technical terms in, or based on, a conventional tongue, such as Sanskrit has been for a very long time; add to it fragments of other striking doctrines current at the period, and the people will be puzzled; and so it is with some justification that Granny Lal's editors point out the importance of her songs from "the fact that they are not a systematic exposé of Śaivism on the lines laid down by the theologians who preceded her, but illustrate the religion on its popular side." How much Lal Ded actually taught the people of what she herself understood her editors have not worked out, but it would be worth doing.

I have been so absorbed in the philosophical side of this remarkable book that I have almost omitted to mention Sir George Grierson's invaluable Appendices on Lalā's Language and Lalā's Metres and the Vocabulary. Especially would I draw attention to the extremely informing footnote on p. 128, based on the experience gained by the fact that her songs have reached us as handed down by word of mouth from generation to generation, and are therefore now found in practically modern Kashmiri. His footnote says: "So also the Vedic hymns were for centuries handed down by word of mouth and Lalā's songs give a valuable example of the manner in which their language must have changed from generation to generation before their text was finally established."

R. C. Temple.
THE HISTORY OF THE NIZÄM SHÄHÎ KINGS OF AHMADNAGAR.

BY LIEUT.-COLONEL T. W. HAIG, C.S.I., C.M.G., C.B.E.

(Continued from p. 188.)

XXXII—An account of the rising of Moulâna Pir Muhammad, and of what followed.

As the king of the race of Bahman had before this, from the great kindness which he had towards Moulâna Pir Muhammad, sworn that he would never on any account, attempt to injure that foolish man, the Moulâna escaped the punishment which overtook most of the Sunni doctors. He now came forth with 3,000 horse, ready for war, and encamped before Ahmadnagar, his bigotry having led him to entertain the design of dethroning the king. He therefore entered into an undertaking with the officers of his army to take 2,000 cavalry soldiers into the king's court, and seize and imprison the king, and then to raise the young prince, Mirân 'Abdul Qâdir, to the throne, and to crown him king, while the remaining thousand horse surrounded the dwelling of Shâh Tâhir and put him and his family and followers to death. It is, however, useless to plot against what has been decreed by God, or to attempt to overthrow a king He has chosen.87

Husain 'Abdol Rûmî, who was a sincere lover of the family of the prophet and was the king's master of the horse, discovered the plot and informed Shâh Tâhir of it. He at once hastened to the king and informed him of the conspiracy, who asked him for his advice in the matter. Shâh Tâhir said that there was no remedy but the sword, but the king told him of the promise which he had given to Moulâna Pir Muhammad. Shâh Tâhir said that it was necessary that the rebel should at least be imprisoned and the king summoned Pir Muhammad and ordered Čâbiş Khân, sar pardadar, to arrest him when he appeared. Moulâna Pir Muhammad was afterwards confined, under the charge of some trusted officers, in the fortress of Pälli,88 and the rebellion, owing to the imprisonment of its chief soon subsided.

Moulâna Pir Muhammad remained imprisoned in the fortress of Pälli for about a year, when the king, having gone to war with Ibrahim 'Adîl Shâh, gained a victory over him in the neighbourhood of Kutal Hatiyâli and Shâh Tâhir advised him, in gratitude for his victory, to set all prisoners free. The king followed this advice and the prisoners were released, among them Moulâna Pir Muhammad, who was permitted to attend at court, but was not restored to his former rank. Shortly after this Moulâna Pir Muhammad died.

XXXIII—An account of the appointment of Shâh Tâhir as vakil, and minister.

The king considered that it would be to the interest of the kingdom to appoint Shâh Tâhir minister, and he therefore honoured Shâh Tâhir by going to his house to make this proposal to him. On entering the house, Shâh Tâhir led him to a private room where they could talk apart, and the king then asked him to undertake the whole administration of the state. Shâh Tâhir at first declined the honour, but afterwards, seeing that the king had set his heart on his having the appointment, accepted it.

87 According to Firishta, Pir Muhammad's rising was much more serious than it is here represented to be, and he had at his disposal 12,000 horse ready to fight in defence of the Sunni religion, while the king had only 600 horse, 1,600 foot, and five elephants. Most of the army, however, joined the king when summoned to return to their allegiance, and Pir Muhammad fled to his house accompanied by only a small force.

88 A fort in the Western Ghâja, about twenty miles east of Chaul.
The king then proceeded to complain of the perpetual quarrels of the Sultans of the Dakan, saying that they were always plotting against one another and quarrelling among themselves, whence it happened that both their countries and their subjects were ruined; and a land which was by nature an earthly paradise, was being depopulated, while both the armies and the people were suffering.

Historians say that Burhan Nizâm Shâh, in the early days of his reign, observed moderation in his giving of alms and free grants and avoided excessive expenditure. As this policy was not in accordance with the views of those who desired to subsist on alms and free grants, they accused the king of stinginess, and Shâh Tâhir had long been considering how he could represent this matter to the king without giving offence. He now seized the opportunity, and said to the king that God created generous and open-handed rulers for the relief of the poor, the indigent, and the oppressed, and that generosity was wise policy, as it pleased those who had benefited by it and prevented them, by means of the fear of losing what they had gained, from plotting against the state, while it aroused hope in others; while all loved a generous ruler. Charity, he said, covered the multitude of sins.

When Shâh Tâhir had made an end of speaking, the king answered him not a word, but went off to the Bagh-i-Kârî; and remained there for three days, during which time none of the amirs nor officers of state saw him. At the end of three days he sent for Shâh Tâhir and told him that he had for three days been fighting with his own inclinations, and had at last subdued them. He had decided, he said, never to depart from the advice of Shâh Tâhir, and to place in his hands the whole administration of the country and the government of the subjects, giving him complete control over all the treasure. Shâh Tâhir then advised the king to have all alms distributed to the poor and to religious mendicants through the princes, as by this means the princes would be taught to be generous, and would also become objects of love to the people, while Shâh Tâhir himself would not be exposed to the criticism of the people.

The king followed this advice and caused the princes to distribute alms. Of the princes, Mirân Husain and Mirân 'Abdul Qadir were more generous than the rest. Mirân Husain's generosity was such that when he had distributed all of his own share of the alms, he would seize his brother's share and distribute that too, and in this way he so endeared himself to the army and the people, that the crown ultimately came to him. The result of the king's liberality was that peace, prosperity and plenty reigned throughout the land, and the strong no longer oppressed the weak. Deserving men came from all countries and profited by the king's bounty. Every year shiploads of treasure, carpets, lamps, and other offerings were sent to Makkah, Madinah, Najaf, Karbalâ, and other shrines of the infallible Imâms, and the gates of joy were opened before all descendants of the prophet.

One of the results of this policy was that the enemies of the state were everywhere overthrown and rendered powerless while the king's officers were everywhere gladdened by victory, and the glory and prosperity of the kingdom increased day by day. The giving of effect to Shâh Tâhir's advice had its rewards from God, for many Sayyids of high degree and religious leaders of great fame came to the Dakan and met with the fulfiliements of their hopes from the king's bounty. The chief of them was Amir Sayyid 'Ali Shadgham (sic) Husaini Madani who was among the most noble among the descendants of Husain in Madinah and was distinguished by pre-eminence in learning. When he arrived at Ahmadnagar the king sent one of his courtiers to inquire what was the object of his coming, and the Sayyid
replied that he was so desirous of performing a pilgrimage to his grandfather’s tomb that he wished to recite the evening prayer at the head of Mustafá’s grave. The king was much affected by this speech and gave the Sayyid 12,000 hánás. He also bestowed on his son, Sayyid Hasan, in marriage, one of his daughters who, as she had been born at the time when the king gained one of his famous victories, was named Fatih Sháh Begam. Fatih Sháh Begam performed the pilgrimage with her husband, but when the latter wished to return to the Dakan, she refused to accompany him, even to her own country, saying that she was not the woman to leave the prophet’s tomb for the sake of worldly advantage. At length she died there and was buried near Muḥammad’s tomb. After her death, Sayyid Hasan came again to the Dakan, and died and was buried in Junnūr.

Another Sayyid who came to the Dakan was Sayyid Muḥammad Ilūsainī, Madani Wujādī, who was received with honour both by Sháh Tāhir and by the king. Sayyid Muhammad, having gained his object, returned to ‘Iráq, and there made a report to Sháh Iṣṭāmāb, son of Sháh Ismā’īl Ṣafavī, of all that he had seen and heard of Burhán Ni’am Sháh, of his attachment to the Shi‘ah faith, and of the controversy with the Sunni doctors. This report led to the opening of friendly communications, fostered by Sháh Tāhir, and to the bestowal of many favours by Sháh Iṣtaḩāb on Burhán Ni‘ám Sháh, between whom and Sháh Iṣhtāb letters constantly passed. Among these communications was a farmān dated in the month of Muharram, a.h. 949 (April-May 1542) addressed to Shah Tāhir, which, when it was read, infused joy into the hearts of all loyal friends, and grief into the souls of all erring enemies (of the Shi‘ahs).

Sháh Tāhir showed this farmān to the king and represented that it would be advisable to send a reply thereto, by means of an ambassador worthy of the task, but preferably by the hands of one of the princes, in order that the bonds of friendship with the Court of Persia might be more tightly drawn. The king approved of this advice and selected Sáh Haidar, the most learned and accomplished of his sons, as his ambassador to Persia. The prince bore a letter10 to the Sháh of Persia, and when he reached the Persian court and paid his respects to the Sháh, he was received with great honour and special favour and became one of the Sháh’s most intimate courtiers, and devoted all his endeavours to promoting friendship between the Safavi and Ni‘ám Sháhī families, the results of which may be seen in the correspondence which passed between the two kings, for when the Sayyid Mir Ni‘ám-ud-dín ʿAlī Sháh came from the Persian court to India and waited on Burhán Ni‘ám Sháh, he brought a farmān91 from the Sháh of Persia. The farmān was dated Rabi I, a.h. 954 (April-May 1547).

About this time Mihtar Jamál arrived from Persia with another communication from the Sháh, but after his departure from Persia, was found to have been guilty of some unfortifying words and deeds, and some officers were sent after him to arrest him, but he, becoming aware of this, made off before their arrival, and having reached one of the ports, embarked on a ship and thus escaped from danger. Burhán Ni‘ám Sháh then wrote an answer to the letter which Mihtar Jamál had brought, and asked, among other things, that a body of troops might be sent from Persia to the Dakan to help him against his enemies.

98 A gold coin, worth four rupees or eight shillings when the rupee was worth two shillings.
99 Sayyid ‘Alī reproduces this letter. I have not translated it. It is very long, very fulsome, and contains nothing of historical interest.
91 This farmān also is reproduced. I have not translated it, for the reasons given in the preceding note.
XXXIV—An Account of the King’s Expedition to Murhîr, in Order to Conquer It, and an Account of the Expedition to, and Capture of, the Fortress of Gîlina.

As the king was ever desirous of exalting the banner of Islam and of uprooting unbelief, he now determined to capture the fortress of Gîlina, which is one of the famous fortresses of the land of Hind, and is situated in the country of Râja Baharji, which lies between the kingdom of Ahammadnagar and the country of Nandurbâr and Sulûnpûr. He therefore marched against that fortress and laid siege to it. The infidels who garrisoned the fort, made some attempt at defending it, although they had lost heart at the sight of the royal army, but their schemes were like the schemes of a fox against a raging tiger. They, therefore, soon came forth and humbled themselves before the king who had pity on them and granted them their lives, but destroyed all their temples and dwellings, and built mosques where idol-fanes had stood. Large quantities of plunder were seized by the victorious army and the king, having appointed one of his great amirs to the command of the fortress, returned to his capital in triumph.

At this time the king determined to capture the fortress of Murhîr, which is situated in the borders of Gujarât and the Dakkan, and was then held by an infidel named Bhîrdarâ. He therefore assembled a very numerous army and marched on that fortress, which was second only to Khaibar in strength.

When the army reached Murhîr they at once attacked the fortress and drove the garrison from the outer fort into the inner, slaying many of them. They then besieged the inner fort and made several attempts to carry it by escalade, slaying many of the garrison at each attempt.

When Bhîrdarâ perceived that he could not long withstand the royal army he appealed to Sultan Bahâdur of Gujarât for help. Sultan Bahâdur wrote to Bhîrân Nîjâm Shâh, informing him that Bhîrdarâ was a vassal of Gujarât, and requesting him not to proceed to extremities against him. Bhîrân Nîjâm Shâh graciously acceded to Sultan Bahâdur’s request and returned towards his capital.

XXXV—An Account of the Capture of the Fortress of Parenda.

While Bhîrân Nîjâm Shâh was returning from Murhîr towards Ahammadnagar, Ratan Khân, brother of Mahâdâm Khvajâ Jâhan (Dakani), guided by God’s grace, sought refuge at the foot of the king’s throne and complained of his brother’s cruelty to him. The king encouraged Ratan Khân to hope that his wrongs would be righted and marched to capture Parenda.

Footnotes:
92 A fort situated in 20° 46’ N. and 74° 32’ E. It is built on a circular detached hill 2316 feet above sea-level and 800 feet above the surrounding plain.
93 This is the honorific title adopted by the Râthor rajas of Baglâna, a hilly tract now represented by the Baglân and Kâlvân tâlukas of the Nâsik district of the Bombay Presidency.
94 Nandurbâr town is situated in 21° 22’ N. and 74° 14’ E. The district of which it was the capital was always a bone of contention between the three Muhammâdân states of Gujarât, Mâlwa, and Khânâsh. Akbar assigned it tahâs râza or province of Mâlwa.
95 This is the fortress of Mulhor in Baglâna, situated in 20° 46’ N. and 74° 4’ E.
96 This is Fâhar-ul-Mulk the Dakani, entitled Khvajâ Jâhan, to whose lot the fortress and district of Parenda fell at the partition of the Bahmanî dominions. He is often found in alliance with Ahammadnagar but did not regard himself as its vassal. At one time he cherished the design of declaring himself independent; but his neighbours of Ahammadnagar and Bijâpur were too strong for him.
97 This is evidently intended to be an account of the last war between Bhîrân Nîjâm Shâh I and Ismâ’il ‘Adî Shâh, and should have preceded the account of Bhîrân’s conversion. It is incorrect, for that war began and ended with the total defeat of the army of Ahammadnagar near Naldrug and the flight of Bhîrân to his capital.
When Makhdûm Khvâja Jahân heard that Burhân Nisâm Shâh was marching against him, he realized that he could not hope to withstand him, and vacated Parenda and fled to Bijâpûr. Burhân Nisâm Shâh placed a garrison of his own in Parenda and returned to Aâmadnagar.

'Ismâ'il 'Âdil Shâh resolved to assist Makhdûm Khvâja Jahân and sent some troops with him to Parenda, with orders to capture it and to hand it over to him.

When it was reported to Burhân Nisâm Shâh that Makhdûm Khvâja Jahân was coming with an army of Bijâpûris to recapture Parenda, he appointed Hasan and Daulat, the sons of Jîman Khairât Khan and ghulâm-zâdâs of the Nisâm Shâhâ house, to the command of an army to march to Parenda and meet Makhdûm Khvâja Jahân.

When the two armies met, a fiercely contested battle was fought, and the army of Aâmadnagar was at first borne backward, but the fortune of the day changed, and at length Makhdûm Khvâja Jahân and the Bijâpûris were utterly defeated. All their camp equipage and other belongings fell into the hands of the victors, who pursued them with great slaughter. Makhdûm Khvâja Jahân escaped from the field with great difficulty, and since he could no longer, for very shame, show his face in the Dakan, he fled to Gujarât.

The army of Aâmadnagar returned, after this victory, to the capital, and Hasan Khân and Daulat Khân, who had covered themselves with glory in the battle, were royally rewarded.

Makhdûm Khvâja Jahân, after spending a long time in affliction in Gujarât, made interest with some of the courtiers of Burhân Nisâm Shâh and received a safe conduct, which enabled him to come to Aâmadnagar, and pay his respects to the king. He still further assured his position by giving one of his daughters in marriage to Mirân Shâh Haidar, after which marriage the king replaced him in Parenda, as will be related in its place.

XXXVI.—THE DEATH OF 'ISMÂIL 'ÂDIL SHAH, AND AN ACCOUNT OF THE EVENTS WHICH HAPPENED THEREAFTER.

A. D. 1534-35. In this year and while these events were in progress, 'Ismâ'il 'Adil Shâh died, and Mallâ Khân, his eldest son, ascended the throne; but he had scarcely had time to taste the sweets of sovereignty, when Asad Khân, who was the most powerful of the amîrs of Bijâpûr and was ill content that Mallû should be king, with the assistance of the rest of the amîrs and officers of state, deposed Mallû, caused him to be blinded with a hot iron, and threw him into prison, and then raised his younger brother Ibrâhîm to the throne. Asad Khân then made himself regent of the kingdom of Bijâpûr.

A. D. 1537-38. Meanwhile it became known that Râm Râj, vakil of the king of Vijayânagar, had rebelled against, and overcome his lord, and, having imprisoned him, had usurped the kingdom.

98 'Ismâ'il 'Adil Shâh died on Safar 16, A. H. 941 (August 27, 1534). His eldest son, Mallû, was raised to the throne, but so disgusted the people by his shameless debauchery that he was deposed and blinded. His grandmother, Punjî Khâtîm, was the prime mover in his deposition, and Asad Khân LârI merely obeyed her orders. 'Ismâ'il's second son, Ibrâhîm 'Adil Shâh I, was raised to the throne in March, 1535.

99 This is a garbled and misleading account of Ibrâhîm's expedition to Vijayânagar. Venkatarâya, whom Firishta and Sayyid 'Ali call Râmâraj, had attempted to usurp the throne in Vijayânagar, but finding that he was unable to command the allegiance of the leading men of the kingdom, had been obliged to place on the throne, as a puppet king, a scion of the old royal house, appointing the boy's maternal uncle, Hâjî Nirmal Râja, on whom he thought he could rely, tutor to the king. But Hâjî Nirmal, who was a lunatic, put his nephew to death during Venkatarâya's absence from the capital on an expedition, and usurped the throne. His freaks so disgusted his supporters that they turned again towards Venkatarâya, and Hâjî Nirmal, alarmed for his safety, sought help of Ibrâhîm 'Adil Shâh. Venkatarâya's
While the success of Rám Ráj was yet doubtful and the whole of the army of Vijayanagar had not joined his standard, Asad Khán, regarding the state of affairs in Vijayanagar as an opportunity not to be lost, assembled the whole of the army of Bijápúr and, taking Ibhráhirh 'Adil Sháh with him, invaded Vijayanagar with the intention of conquering the country. When Rám Ráj learnt that Ibhráhirh 'Adil Sháh was invading Vijayanagar he, having regard to his own uncertain position in the country, was compelled to seek safety, at the expense of his honour and reputation, in flight.

Ibhráhirh 'Adil Sháh, finding that his enemy had fled before him, encamped in Vijayanagar and remained there for a considerable time. This easy occupation of an enemy's country turned the young king's head, and he several times said, in the presence of Asad Khán and the rest of the amirs, "My house has hitherto been extremely ill served by its slaves, and as soon as I have done with Vijayanagar, I will, by God's grace, see to this matter, and will take vengeance on all who have not done their duty, and will have done with them."

These words made Asad Khán and the other amirs apprehensive, and they sent a messenger to Rám Ráj, charged with this message, "What has come to thee that thou hast brought shame on thyself by flying without striking a blow, and hast thus branded thyself as a coward and a craven? Even now, if thou wilt set forth we will so arrange matters that Ibhráhirh 'Adil Sháh shall avoid a fight and take the road; and even if the affair should end in a battle we will stand aloof so that the day shall be thine. In any case it behoves thee to shake off despondency and come to battle."

XXXVII—An Account of the King's Expedition for the Purpose of Subduing Some of the Tracts about Parenáa, and of the Events Which Happened During That Expedition.

A.D. 1540-41. While Burhán Nigám Sháh had been engaged in his dispute with Sultán Bahádur of Gujárát, which had been fomented by Imád-ul-Mulk, 'Adil Sháh, taking advantage of the opportunity, had annexed some of those districts of the Ahmadnagar kingdom which lay on his frontier and had refused to comply with Burhán Nigám Sháh's request for their restoration. Now that Ibhráhirh 'Adil Sháh had invaded Vijayanagar and was encamped there, suiting the army of Rám Ráj, Asad Khán wrote a letter to Burhán Nigám Sháh, advising him to seize this opportunity of recapturing his lost districts, as Ibhráhirh 'Adil Sháh could not leave Vijayanagar, and the Turks, who were the flower of his army, were friendly towards Burhán Nigám Sháh. Burhán Nigám Sháh therefore assembled his army and marched towards the 'Adil Sháhí dominions. At this time a close alliance existed between the king and Darya Imád Sháh, and the latter was summoned to join the royal camp. He came, but disapproved of the campaign against Bijápúr, telling Burhán Nigám Sháh that the Imád Sháhí and the 'Adil Sháhí families were united both by marriage and by the ties of long-standing friendship, and that he conceived that it would be both ungenerous and unkindly to attack the kingdom of Bijápúr now that Ismá'il 'Adil Sháh was dead and the government was in the hands of a boy. But in spite of the views urged by Darya Imád Sháh, Burhán Nigám Sháh, whose apprehensions had been entirely set at

wrote to Huj Nirmál, pointing out to him the danger of introducing a Muhammádan army into the country and promising to serve him faithfully if he would induce Ibhráhirh to retire. Huj Nirmál paid Ibhráhirh 4,400,000 Ias to retire, and Venkatakráya then marched on Vijayanagar. Huj Nirmál committed suicide and Venkatakráya ascended the throne. Ibhráhirh then sent Asad Khán Ládi to capture Adiví, but Asad Khán was defeated by Venkatakráya, brother of Venkatakráya. He retrieved his defeat by a victory and then, with the approval of Ibhráhirh 'Adil Sháh, made peace. (F. II, 49-52.)
rest by Asad Khan’s letter, continued his march towards Bijapur, moving, however, in a very leisurely manner. Daryā Imād Shāh, who was annoyed by Burhān Niẓām Shāh’s persistence and disregard of his remonstrances, and also strongly disapproved of his change of religion, marched on rapidly and was several stages ahead of the army of Burhān Niẓām Shāh.

When news of the movements of Burhān Niẓām Shāh reached Ibrāhīm ‘Ādil Shāh in Vijayanagar, he was much perturbed, and consulted Asad Khan and his other officers, who had really brought about the invasion,100 as to the best means of meeting the situation. They unanimously advised him that the only wise course was to make peace with Rām Rāj and to return to his own country. This advice was followed, and Ibrāhīm ‘Ādil Shāh, on his return, wrote to Daryā Imād Shāh, imploring his assistance against the powerful army of Burhān Niẓām Shāh. As he had outstripped the army of Burhān Niẓām Shāh in its advance, he was enabled to press on and meet Ibrāhīm ‘Ādil Shāh, and he and Ibrāhīm then marched together against the army of Ahmadnagar.

At the same time the loyalty of some of Burhān Niẓām Shāh’s officers, such as Sayyid ‘Umdat-ul-Mulk, Jiman-i-Khairat Khan, his brothers Hasan Khan and Daulat Khan, who were the sons of Khairat Khan the African, and the other chief officers of the army, who resented the king’s change of religion, was doubtful, and the king was disturbed by the thought that he could not trust them.

At this time the army of Ahmadnagar was encamped at Ghāt Apar Ganga near the Qutb tank and the armies of Ibrāhīm ‘Ādil Shāh and Daryā Imād Shāh were near Bakasi, at a distance of two gāws from the ghāt. Hasan Khan and Daulat Khan, the brothers of Jiman-i-Khairat Khan, who were the best officers in the army, descended the Ghāt and thus excited the suspicions of Burhān Niẓām Shāh, who ordered them to return. They replied that their retreat in the face of the enemy would only serve to encourage him, and offered to attack the enemy and break his spirit. Ibrāhīm ‘Ādil Shāh, having learnt of the dissensions of the army of Ahmadnagar, was anxious to march forward and attack it, but Daryā Imād Shāh restrained him and sent a message to Burhān Niẓām Shāh, telling him that the best thing he could do would be to desist from making war on Bijapur in order that Daryā Imād Shāh might persuade Ibrāhīm ‘Ādil Shāh to surrender the districts about Pavinda and induce him to return to Bijapur. Burhān Niẓām Shāh agreed to make peace, as these districts were the only cause of the quarrel, and then seized Jiman-i-Khairat and blinded him. ‘Umdat-ul-Mulk then fled from the camp and sought refuge with Daryā Imād Shāh.

One night Daryā Imād Shāh came in disguise to the tent of ‘A’in-ul-Mulk Kan‘ān, one of the officers of Burhān Niẓām Shāh who, like the rest, resented the king’s change of religion, and told him that he had come thus as he had a request to make, which he hoped ‘A’in-ul-Mulk would grant. ‘A’in-ul-Mulk replied that it was granted before it was asked, and Daryā Imād Shāh then produced 20,000 roofs and handed them over to ‘A’in-ul-Mulk, promising him other 30,000 for the trouble of joining Ibrāhīm ‘Ādil Shāh’s camp to get them. ‘A’in-ul-Mulk agreed, and marched that night and joined Ibrāhīm ‘Ādil Shāh, whose

100 This accusation is without foundation, and peace had already been concluded with Vijayanagar before Burhān Niẓām Shāh invaded Bijapur. Asad Khan Lāfri, who was on his estates at Belgaum, was in disgrace at Bijapur owing to the slanders of an enemy, Yūsuf the Turk, who with the permission of Ibrāhīm ‘Ādil Shāh, made more than one attempt to have him poisoned or assassinated. Yūsuf told Ibrāhīm that Asad Khan was annoyed at the re-establishment of the Sunni religion and wished to surrender Belgaum to Burhān Niẓām Shāh, who was a Shi‘a king. The accusation was false, but Asad Khan feared to appear at court, and when Burhān Niẓām Shāh reached the neighbourhood of Belgaum, joined him with 6,000 horse, but was afterwards reconciled to his master and deserted Burhān.
army thus became the stronger of the two, for ‘Ain-ul-Mulk had always with him three or four thousand of the best cavalry, and it is evident that a charge of sides by such a commander must always strengthen the side which he joins.

A.D. 1542. As Daryā’ Imād Shāh was anxious to put an end to the strife and wished well to both sides, he went to Ibrāhīm ‘Adil Shāh and did his best to persuade him to surrender the pehrīs of Parenda. These were surrendered to him, and he made them over to Burhān Niẓām Shāh and then persuaded Ibrāhīm ‘Adil Shāh to return to Bijāpūr. After this, Daryā’ Imād Shāh himself returned to his own country, and Burhān Niẓām Shāh set out on his return march. When the army started for Ahmadnagar Burhān Niẓām Shāh considered it unwise to pay any attention to Hasan Khan and to Daulat Khan, who were below the ghāl, and they, being apprehensive of his intentions towards them, went to their jagirs, Parenda and Āshīl, and thence made their way to Gujarāt, where they had been assured of a favourable reception.

According to some historians, Bārī-i-Mamālik (Amir ‘Ali Barīd) who accompanied Burhān Niẓām Shāh on all his expeditions, died on the return march to Ahmadnagar, while some say that his death occurred just after the meeting of Burhān Niẓām Shāh with Sulṭān Bahādur of Gujarāt; but whichever account be true, it is certain that he met his death while serving the king.101

The king grieved sorely for the death of Malik Barīd (Amir ‘Ali Barīd) who had ever been obedient to him and had never for any reason disobeyed him or crossed him, and after his return to Ahmadnagar he honoured his eldest son, who had accompanied his father on his expedition, by bestowing on him one of his daughters in marriage, and granted to him a royal robe of honour, an umbrella, and an ājābāsr, set him up in his father’s place, and distributed both to him and to his army very large rewards both in cash and in kind.

When Malik Barīd (Ali Barīd Shāh I) obtained permission to depart and returned to Bīdar, his two younger brothers, who were in Bīdar, rebelled against him and blinded and imprisoned him, and then took the kingdom for themselves, one of them taking the title of his father and the other that of Khān Jahan. Such is fate.

After this, the sons of Malik Barīd, following the guidance of good fortune, remained loyal for a time to the Niẓām Shāhī house and were honoured accordingly, but afterwars, their enmity and opposition to the royal house bore their own fruit, as will be mentioned hereafter in its proper place.

At this time the love and friendship that existed between the king and Daryā’ Imād Shāh were strengthened by the marriage of one of the daughters of Daryā’ Imād Shāh to Mirān ‘Abdul Qādir, and the two families were long united in the bonds of friendship until the traitor Tufāl Khan rebelled against the children of Daryā’ Imād Shāh and took possession of the country of Berar, until time brought home to him the punishment of his misdeeds.102

(To be continued.)

101 Amir ‘Ali Barīd, the second of the Bārī dynasty of Bīdar, died in 1542 near Daulatābād, whether Burhān Niẓām Shāh had been driven by Ibrāhīm ‘Adil Shāh I. Sayyid ‘Ali’s account of this campaign is most misleading. The true version will be given later. Amfr ‘Ali was succeeded by his son of the same name who, having been the first of his line who ventured to assume the royal title, is known as ‘Ali Barīd Shāh. The statement that his two younger brothers rebelled against him and deposed and blinded him is entirely incorrect. He reigned in Bīdar until his death in A.H. 987 (A.D. 1579) and was succeeded by his eldest son, Ibrāhīm Barīd Shāh.

102 That is to say, the annexation of Berar by Murtaṣa Niẓām Shāh I in 1574 and Tufāl Khan’s imprisonment and death.
ON THE HISTORY OF THE INDIAN CASTE-SYSTEM.

By HERMANN OLDENBERG.

(Translated by H. C. Chaklader, M.A.: Calcutta.)

A sharp reaction has developed against the attitude of unsuspecting confidence with which a past generation of scholars approached the ancient Indian tradition about religion, custom, law and the state. There is an ever-increasing tendency to regard the simplicity and the rigid and straight lines of the picture furnished by that tradition as a product of art, even as a fabrication of ancient theorists; wherever there appears to have been some success in lifting a little of the veil spread by these authorities over the real state of things, it is believed that there may be perceived, instead of that simplicity, an endless complexity of numberless forms crossing one another, intertwining with one another, running into and then again vanishing out of one another. There is nothing more hazardous, so we are told by powerful voices, than when the scholar who is faced by such a chaos, is carried away—to speak with Senart,—"by the anxiety for great clear-cut lines; for a fixed framework;" thus one attains to an "orthodoxy a little too hasty," which at the bottom is nothing but "a perilous illusion and, to speak frankly, somewhat of a pedantry." If I am not mistaken, the above-mentioned tendencies and counter-tendencies that characterise a modern profitable direction of Indian antiquarian research, are strengthened by a second, and no less powerful tendency of modern investigation,—by the predilection for interrogating the India of the later literature, may even the India of the present day, as the best witnesses with regard to the condition of older India. We are now fond of examining, in the light of the Mahābhārata, and even in the light of what is perceived by the present day observer of living Indian life,—the culture of the Rigveda the specific Indian stamp of which, one would fear, might be obliterated by bringing in the accidental point of view: no wonder then, that the inexhaustible diversity and labyrinthine intricacy of present day conditions make the affairs of antiquity—inasmuch as they are illuminated by those of the modern times—appear in quite another light than that in which they would appear to the philologist who had drawn from the ancient sources such a simple, clear picture of the times of the Veda and of Manu. "One is not so clear with impunity." (Senart.)

No doubt the sort of speculation indicated above widens most effectively the narrow, old horizon in a hundred directions, has yielded the most gratifying and profitable results to research, and, we may here set down without hesitation, promises to be still further fruitful. But new branches of science are threatened more than those that are of older standing, and richer in respect of well-attested facts, by the danger that principles and ideas correct in themselves may be strained beyond all measure. So I intend to note here the signs and indications that warn us that we are in danger of running from one extreme, viz., that of unsuspecting reliance on the picture of Indian antiquity which, it had been believed, could be discovered all too easily from a study of the sources—to a hardly less hazardous extreme of mistrust. The ever-growing and ever-strengthening preference for the complicated, the incomprehensible, for the infinite gradations of shades and nuances, hovering in cloudy uncertainty, imposes upon us the duty of emphasizing the claims of positive well-ascertained facts, of fixed and sure lines drawn from tradition—the duty of

* From the ZDMG. Band Ll, pp. 267—290.

1 In his introduction to Minayeff, Recherches sur le Bouddhisme, p. II ff.
emphasizing, in opposition to the dragging in of the incalculable diversity of present day Indian life into investigations about antiquity—the claims of this antiquity itself, so that it may not be deprived of its character of old-world simplicity.

In this sense I would like to make a few observations on a work which, in spite of differences of opinion in which I feel myself opposed to the author, appears to be one of the most prominent works of the new Indian research—Senart’s book, Les Castes dans l’Inde, les faits et le système (Paris 1890). I enjoy a substantial advantage over Senart, inasmuch as I am now in a position to avail myself of the excellent compilations and researches which R. Fick has embodied in his book, The Social Condition in North-Eastern India in Buddha’s Time (Kiel 1897). I can by no means suppress the observation that the sources upon which Fick has drawn, were already accessible before, and that in my opinion, they must, without fail, have been approached for the solution of the questions that Senart has to deal with.

Senart proceeds to describe the modern castes: it is impossible to do this with greater mastery than his. With the picture that he has thus made up, he next approaches the ancient tradition, in order to investigate it thoroughly with regard to the more or less clear traces therein of the same state of things.

We endeavour to reproduce here the substance of his exposition of the subject. 3

The modern caste—if its typical form is kept in sight and the exceptions—numberless, as may easily be conceived, they are—be left out of consideration—represents a corporation, to which the members belong hereditarily, by virtue of their birth. This corporation has its organisation with a chief and a council at the head. It exercises, partly through this organ, partly direct, a certain control over the affairs of its members, a certain jurisdiction; it inflicts penalties and expulsion. They marry—especially so far as it concerns the first marriage which is associated with special sanctity in the regulations about polygamy—inside the caste, because only a mother of the same caste can bear children who inherit the caste of the father. On the other hand they marry outside a certain narrower section of the caste, outside the family or the clan. They avoid community of meals with persons of lower caste, and also other forms of contact, of course under closer restrictions of the most varied kind. Many kinds of special customs, especially in relation to food and married life, serve to characterise the caste and to fix its superior or inferior position in the social order: certain restrictions about food, the abstention from spirituous liquors, the marriage of girls in childhood, the prohibition of widow-marriage, and so forth.

Similarity of occupation and profession amongst the members of a caste is the rule, but this is broken by innumerable exceptions, and also inversely, the followers of the same profession do not in any way belong to one caste but to more or less numerous and distinct castes: thus the Baniyās or traders in the Punjab are split up into sections with geographical names such as the Aggarwals, the Oswals etc., and these sections, characterised by endogamy, must be taken as even so many separate castes. Such castes, larger and smaller, occupy the stage in an immense crowd, in an inextricable tangle. Constantly new castes spring up into existence; now the introduction of a new custom, of a new rule of purity, calls a new caste into being, and now again, religious or even geographical separation has the same

---

3 An apology is necessary that this fresh summary makes its appearance here, after Jolly has already given an excellent résumé of Senart’s book elsewhere in this Journal. Yet it is indispensable for me to give in my own way the necessary foundation for the criticism which follows.
effect; illegitimate children of one caste bind themselves together into a new caste; groups of aborigines, stepping into the sphere of Hinduism and embracing the customs of the Hindus, form new castes; old castes, which renounce this or that lower occupation, take up the names and attributes of castes standing higher. So there prevails a constant transformation into separate units hardly comprehensible in their inestimable diversity, whilst over the whole, as a conservative, stabilising power, rules the hierarchical principle of the supremacy of the Brahman's position which impresses its stamp upon everything.

Here is described the caste as it appears at the present day, and no one can call in question the correctness of the picture drawn by Senart,—so now the question arises how the ancient literature stands in relation to this picture. Senart investigates this as he gradually ascends, with the help of that literature, from the modern strata to the ancient and still more ancient ones; at first he occupies himself with the Dharmaśāstras and the Epics, next with the Sūtras and the Brahmasūtras, and finally with the Hymns of the Rigveda.

The law-books, like that of Manu, draw a picture of a society rigorously organised according to castes (Senart, p. 111 f.). Every caste has certain occupations allotted to it. Marriage has to be concluded, at least for the first wife of a man, within the limits of his caste, and on the other hand, outside the limits of his gotra. Interdining and various other kinds of contact with people of lower castes are strictly prohibited. Spiritual drinks are tabooed; detailed prescriptions separate the permitted food from the unpermitted. The marriage of maidens in infancy is prescribed, widow marriage interdicted. Every serious violation involves the loss of caste.

Thus the data drawn from this literature have a striking agreement with the state of things to be observed at the present day (p. 113). The great difference that strikes the eye lies only in the well-known fourfold division of the ancient castes as against the numberlessness of the modern ones. However, a thorough examination of the ancient ordinances themselves shows us that the simplicity is only apparent. There is no fifth caste, it is said. And yet, beside the four castes, there are the mixed castes and the innumerable mixtures of these mixtures; besides, there are the various categories of the Vṛtyas who have lost their caste, because in their childhood the necessary sacred initiation had not been effected. Even the strict demarcation of the occupations of the four principal castes proves itself to be as illusory as the fourfold enumeration. Every caste is expressly given the right to adopt, in need, the occupation of the next following caste. And the list of Brahmans who are considered to be unworthy of taking part in a funeral feast, includes thieves, butchers, actors and the followers of many other professions; this shows that there was no less diversity of occupations amongst the Brahman-class formerly than there is today. Lastly, the law-book of Manu shows expressly too the elastic character of its own rules, inasmuch as it declares, that the usage of each caste, family and province is to be considered as the decisive and final authority. Thus is revealed the endlessly complicated condition of the actual life behind that apparently so simple system of four castes, which system in reality is only a product of the passion for theorising and schematising in the Indian mind. Everything, however, is intelligible; the inconsistencies are solved by local differences; the improbable symmetry is explained by the endeavour for clear systematisation, if it is taken for granted, that, behind the ancient tradition, there exist circumstances which were perfectly analogous to the modern ones and which are reproduced in that tradition only in a false perspective, with generalisations and distractions which are sure to be produced by the peculiar predisposition of the Indian mind and also by the all-dominating deference to the interests of the Brahmatical class (p. 128).
From the Dharmasásstras the investigation goes back to the Sútras and further back
to the Bráhmana (p. 131, ff.). No doubt this entire literature moves upon the same
ground as the later texts. Here also are the same four castes with the very same fixed limits
as later, the same prestige of the Bráhman caste, the same ordinances about marriage,
about the avoidance of defilement, the same condemnation of the indulgence in spirituous
liquors, and so forth. Here too are the same traces that the real facts of life are not exhausted
by the few simple and straight lines of the system. By the side of the well-known four
castes stand innumerable mixed castes. And, as far as the principal castes are concerned,
have we not reasons to doubt that there ever existed a caste of the Khatriyas or of the
Vaiśyas? Categories like these are certainly much too wide to be consistent with that
corporate organisation with which we are acquainted in the living castes. We should speak,
not of one Brahma caste, but of Brahanical castes. One should be very clear about this
that it is but a generic name which covers innumerable single caste-units, each endowed
with its own individuality. The modern Rajputs who claim to represent the Khatriyas of
the system—do they form one caste? They form innumerable castes, and we see before
our eyes how small castes are ever laying claim anew to one of those great titles, which
means for them an elevation to a higher social standing. Would it not have been exactly so in
ancient times (p. 140)?

Thus have we, infers Senart, arrived at the conclusion, that those four great categories
of the ancient system represent in reality not four castes, but four classes. As such they are
very ancient; they correspond to the four classes of the Aeveta. The old theoretical
doctrine has extended the form of these classes to the true castes—to those castes which
are to be thought equal to, or, at least, analogous to the modern ones. In point of fact
these latter organisms are absolutely distinct in their nature from the former (pp. 140-142).

The four classes Senart finally traces back to the oldest literary monument of India,
the Rigveda (p. 145, ff).

First of all, he proceeds to that well-known hymn RV. X, 90 which makes the Bráhman proceed
from the mouth of the primordial being, the Rájanya from his arms, the Vaiśya
from his loins, and the Śudra from his feet: as is well known it is the only passage in the
Rigveda where are found the later designations of the four varṇas. However, this passage
belongs to a hymn about the late origin of which in comparison with the main body of the
Rigvedic poesy, there can be no doubt.

But how are the relations of the classes represented in the main body of that poem?

In the foreground stands the distinction between the Árya varṇa and the Dása varṇa.
The former corresponds to the first three castes of the later system, and the latter, to the
fourth. It is clear that it has to do with the antagonism of nationalities: Áryan and non-
Áryan,—characterized by the bright and the dark colour of the skin (varṇa). Next, amongst
the Áryans, the Hymns of the Rigveda further distinguish distinctly three great—in the
oldest time not yet called varṇa—categories, the priests, the chieftains and the folk,
with the Vedic words Brahma, Rájan and Vísá. It has to be assumed, that already
in those days the priestly functions were guarded against a far too easy penetration by a
foreign element, and that the military nobility had here, as elsewhere, the tendency to make
itself hereditary (p. 149, ff.). But castes in the proper sense, castes like the modern ones,
those classes in the Rigveda have never been. None of the characteristics that make up
a caste is mentioned about them (p. 150).

4 Senart, p. 196. ’I differ here slightly from the method that Senart has followed.
It is nevertheless evident that those three categories answer to the three higher castes of the Brahmanical theory. But over against the designations Brahma, Rajanya, Vaisya, of this theory, the Rigveda employs the word Brahman mostly and always Rajan and Vaisy. Thus the linguistic usage already discloses—inasmuch as it allows learned derivatives to step in, in place of the old technical words—that the system of the later texts does not represent "the simple prolongation, spontaneous and organic, of the situation reflected in the Veda"; we have to do with a deliberate system adapted to the conditions, either entirely new or at least very different from that whence the primitive triple division originates. "This is to reverse the true relation, to interpret the Vedic evidence by the Brahmanical theory of a more recent age" (p. 152). The gulf between the old and the new conditions betrays itself further in this, that the old texts, beside the Aryan people, speak only of the hostile body of the Dasyus, the Dasa varsa, but the later texts know the Sdras, aborigines by descent, who were on the one hand indeed excluded from the Aryan community, but on the other were united with them by certain bonds—"fresh proof that the system is quite a different thing from the normal development of the Vedic situation" (p. 153).

What has then happened between the oldest and the more recent stages of the tradition? In the Rigveda is represented a primeval class organisation. On the one hand the later texts had before their eyes, the castes standing forth in full living activity, and on the other they were bound up with an inheritance of the old tradition. "Souvenirs of the past and realities of the present were blended together in a hybrid system; the living régime of the castes was inserted into the old divisions of races and classes which tended to produce this effect" (p. 155). Here we have the starting point in Senart's conception of the Vedic conditions and the traditions relating to them: the system of the Brahmana texts and of the law-books—the system of four classes which possess all the characteristics of castes—have proceeded out of an artificial contamination—carried out by an unscrupulous speculation, of the primeval classes and of the modern castes which resemble them in their essence.

I shall not reproduce the disquisitions of Senart upon the origin of the caste institution. If the following discussions succeed in crushing his view of the more ancient history of caste, then the basis for the discussion of that question will be materially removed, so that a detailed criticism going into details will no longer be necessary here.

Our examination of Senart's conceptions may commence with what he says about the relation of the Rigvedic data with those of the Brahmana times. There in the Rigveda we are said to have7 genuine, perfectly valid evidences about the primitive organisation of classes, and here, in the Brahmana, a hybrid system which is founded upon an

---

5 Irrespective, of course, of Hymn X, 90.
6 The question whether these castes go back to the time of the Rigveda, is treated by Senart as a problem unsolved and probably incapable of solution (p. 160, fg.). Evidently X, 90, has not been taken into account (cf. p. 171).
7 I find myself entirely in agreement with Senart with reference to the much-discussed question about the previous existence of the threefold organisation of the Aryans (Brahmans, Kshatriyas, Vaishas) in the Rigveda—whether one prefers to speak of three classes or of three castes (we shall come to it later on). Here I may be permitted to say a few words only on the matter. Just as it has become ever clearer to me that the sacrifice and the sacrificial poetry of the Rigveda represent not the naïve effusions of primitive religious feelings, but that the Soma-rite of the later Vedas was already at that time in agreement with the Rigvedic litanies, at least in the leading and basic features, similarly, in my opinion, it admits of no doubt that the Rigveda has a priestly class which is to be considered as essentially the same as that.
artificial mixture of the class-system and the caste-system. Does this antagonism really exist? Is it not by looking with too suspicious an eye at the tradition that this antagonism is discerned? On my part I must confess my inability to discover anything of moment that would prove its existence.

That in the Rigveda, Brâhman appears more frequently than Brâhmaṇa, that only the names Râjânaḥ and Vîśâḥ are found and not as yet Râjanyâḥ and Vaiśyâḥ—what does it prove at all? Does not the change undergone by these expressions correspond, in the most unobjectionable way, to the passing transformation of the character of the language?

Does the fact that in the Rigveda, besides Dasyu, there is the expression Dâsa varias and not Sâdra, prove in reality that the Brâhmaṇas contain “quite another thing than the normal development of the Vedic situation”? Already in the ancient times of the Rigveda, the dark-skinned aborigines were known not merely as enemies, but also as dependants attached to the Aryan community: this follows from the positive appearance of the word Dâsa in the Rigveda in the sense of “slave” or “menial.” Certainly it is possible, nay, probable, that in the course of time non-Aryan elements of that kind increased in importance, and it is not less probable that with this process is connected the introduction of the new expression Sâdra, whatever might be its origin. However, is there anything here other than a perfectly normal—I would like to say self-evident—development?

of the Brâhmaṇa times; and certainly the priestly craft had already at that time evidently become the property of certain families like the Vasishtas etc., and thus been connected with birth. The difference between the priestly and non-priestly persons or families could not be explained—al least not in the first place—according to the modern idea, by the intricacy of the technical business to be carried out by the priest, but above all, in accordance with the conception of life of the primitive age, by the qualification of having a certain mysterious attribute pervading the whole person and necessary for the hazardous intercourse with gods and spirits, with what is expressed by the Indian word Brahman. The Brahman, however, dwells not in the son of a man, who himself is destitute of it, and as such can communicate to one of him a Brahmanless nature alone; according to the ideas of that time, the life of the individual had not as yet been dissociated from the life of the family in which his whole being lives and moves. No doubt the same conception as in the case of the Brahman held good also for the Kukatra. It is naturally conceivable that in particular cases human arrogance and pride should break through this order, but it is hardly essential for a critical estimate of the order as such. Moreover, I cannot admit as valid the particular proofs that are usually brought forward in favour of the contention that in the olden times the sacred prerogatives of the Brahmanas had not as yet been acknowledged or properly acknowledged. Senart (p. 165) says of the occupation of the Purohitas: “In many cases the sons of the nobles performed this function,” and he refers to Zimmer, Alt-ind, Leben. 196. There I find a single case adduced in support, viz. that of Deväpi; but it does not appear from the Rigveda that this latter came from a royal family; it is based upon nothing better than the authority of an exegetical narrative given by Yaska. Zimmer gives (on p. 185) another case in which “a king managed a sacrifice alone without a Purohitas,” the case of Ait. Bra. VII, 27: it is necessary only to read carefully the passage referred to, in order to see that here there is a mention of a sacrifice without a priest, but of a sacrifice without calling in a particular family that laid claim to participation in it. Further, Senart (p. 165) refers to the well-known testimony which is offered by the fact that several kings were regarded as greater adepts in the sacred science than the Brahmanas, and that Kshatriyas or even Vaiśyas were the authors of Vedic hymns (cf. Zimmer, 100). When Klopstock composed religious songs and Schelling construed the Trinity in a philosophical way, was it really readily acquiesced in, in ecclesiastical circles? Moreover, would the one or the other have been acknowledged as qualified for the performance of the religious duties of an official minister?

9 We may compare also the name Divodana, ZDMG., 49, 175.
In fact everything, in my opinion, speaks in favour of the acceptance of such a development between the Rigveda and the later Vedic literature. One may perhaps follow up the religious data; one may pursue, above all, the history of the ritual—the functions of the priesthood, the composition of the Soma-sacrifice, etc.—one may investigate, in whatever department one likes, the connection between the Rigvedic and the subsequent age, everywhere one will find a continuous development, and nowhere such a gulf, bridged over by a deceitful appearance or by such a curious hybridity, as Senart here assumes. Just as the Hotar or the Adhearyu of the Brāhmaṇa texts is certainly not very different from the Hotar or the Adhearyu of the Rigveda, but stands very close to him and is evolved out of him in a direct line, so have we also every right to consider the Brāhmaṇa or the Vaiṣṇa of the later Vedic texts as developed in a direct line, without the intervention of falsehood and deceit, from the Brahman and the Viṣṇa of the Rigveda. The later materials fit in with the older with the closest conformity and elucidate them as perfectly, as perhaps the Brāhmaṇa and Sūtra texts elucidate the fragmentary ritualistic data of the Rigveda. “This is to reverse the true relation which interprets the Vedic evidences by the Brahmanical theory of an age more recent,” says Senart (p. 152). I believe, however, that such an interpretation is less open to objection than the abrupt importation of present day conditions, without any intermediate links of connection such as Senart has attempted to do.

Moreover, if I am not mistaken, with Senart the real motive for his assumption of that great difference between the Rigveda and the later literature lies in no way in those comparatively non-essential considerations, with the criticism of which we have occupied ourselves, but in something else. Senart conceives, as we have seen, the system of the Brāhmaṇa Sūtra and Dharmasūtra as an artificial veil which has, in the interest of a theory, been spread over a caste-system which is really analogous to that of the present day. On the other hand, he cannot obviously get rid of an impression that the terms, the concepts, in which the Rigveda so apparently approximates those texts, have, on the ground of its being the oldest Veda, a real importance untouched by any artificiality. Hence, according to him, between the one and the other stage of that process of change, must have taken place, it may be said, that falsification of the significance of the respective data—to affirm which the external form alone of these data would hardly have given any occasion.

So we turn to our examination of the point which is obviously at the same time the most questionable and the most conclusive about the whole question, viz., the assumption that in the Brāhmaṇas, the Sūtras and in Manu, behind the four varṇas there was a real and actual fact approximating very closely to the modern caste-system.

Senart points out, as has already been shown here once (cf. above, p. 270), that the laws which regulate the varṇas of the old theory are quite similar to those which govern the life of the modern castes. If, however, the plain and straightforward simplicity of the four great divisions appears to stand in the way of our carrying back to those old times the multiple forms of the modern castes, we have, on the other hand, those ancient statements about the numerous mixed castes, about the Brāhyas, about the great diversity of...
occupations which a Brāhmaṇa could follow and so forth, which show that that simplicity is only artificial, the society being in reality under the domination of a complicated tangle of many castes, as at the present day.\footnote{10}

We begin, on our part, with the last of the points alluded to. When the Brāhmaṇas are asserted by Manu to be the followers of quite diverse professions some of which were hardly honourable, does it follow therefrom that—as Senart concludes (p. 139)—that one should rather have to speak of innumerable Brahmanical castes instead of one caste of Brāhmaṇas? Quite certainly, beside the Brahmaṇas who performed sacrifices and upon whom Veda-study was incumbent, there were, in fact, also such as maintained themselves, for example, by the butcher's trade or by theft. About them Manu says, that they are unworthy of being invited to funeral feasts. Are we to hold that the ancient texts here disclose the existence of a special caste—or rather, perhaps, local separate castes—of thief-Brahmaṇas, butcher-Brahmaṇas, etc., who had their chiefs and councils, who married only among themselves and so forth? It is, I suppose, clear that there are here two quite different things, the one, namely, to state as a fact certain interesting, as well as intelligible deviations in actual life from the ideals of Brahmanical life—and, on the other hand, to discover out of such data the existence of those positive structures which belong peculiarly to the modern times, but which are by no means betrayed in those alleged traces as belonging to antiquity.

Further, the theory of the mixed castes. When by a particular admixture a Vaideha, a Māgadhī, and by others a Chaṇḍāla or Nishāda, is said to have been produced, then everyone naturally sees that here the origin within the caste-system of non-Aryan as also of remote, less important Aryan peoples or tribes depends upon purely fictitious methods. How could these tribal communities standing in different degrees of remoteness outside the fully recognised sphere of culture prove anything at all—and upon this indeed everything depends—in favour of the contention that inside the bounds of this sphere itself there predominated such an intricacy of innumerable castes as Senart has taken to be the groundwork of the modern conditions? And those few other so-called\footnote{11} mixed castes which appear in the law-books and which bear the names of their occupations, such as the Rathakāras, what do they prove? I think only this that outside the fully qualified people of the three Aryan Varnas, be it amongst the non-Aryans, or be it amongst Aryans of no unobjectionable origin, there existed individual groups amongst whom people of a particular extraction had associated themselves more or less closely with one of the distinguished professions which were more or less hereditary;\footnote{12} amongst these groups we see that of the Rathakāras—while their pure Aryan descent was denied, yet perhaps in consequence of the respect which was enjoyed by their craft—possessed privileges of a sacred character by virtue of which they were brought nearer to the position of the fully 

\footnote{10} The name of these true castes in the law books, as against the four great varnas, is said to have been jāti (p. 155). It is true that varga is used regularly as the technical expression for the four great divisions, the dominating categories of the entire system, and only exceptionally for the mixed castes (Jolly, ZDMG, 50, 518). It is therefore but natural that the mixed castes that were founded upon birth and did not represent any vargas were designated by preference as jāti. However, it does not mean that this term corresponded, as against varga, to the "true castes such as we see living and moving," and I could not discover any trace of this. About the use of jāti in the Pāli texts, cf. Fick, 22.

\footnote{11} It is liable to question whether the tracing back of these castes to certain admixtures is to be taken seriously, as in the case of the Māgadhīs etc.—I refer here to p. 282 below, note 4, on the caste-admixtures alluded to in Buddhist literature.

\footnote{12} The way it happened may have been, as surmised by Fick (Die Soziale Gliederung etc. 239, ff.), viz., that the Indian Aryan pushed hard upon an autochthonous tribe, who possessed special skill in coach-building and so forth, and was consequently employed by the conquerors for this craft.
But what a long stride it would be from the formation, on the one hand, of groups of this kind, which to all appearance extended over the whole sphere of culture under discussion, to the breaking up, on the other hand, of the entire people, and in the third place, of the three great Aryan castes, into those multitudes of small locally circumscribed bodies? As regards the offspring of mixed marriages, it has to be taken into consideration that they, through continued marriages inside one of the varṇas which lay at the foundation of the mixture, got back, after a certain number of generations, into that varṇa,14 certainly no intimation this that the children of such mixed marriages formed among themselves a particularly close and compact community.

And lastly the Vṛāyās. If the offspring of the Brāhmaṇas, the Kṣatriya or the Vaiśya could lose their caste through the neglect of certain sacred duties, then does the existence, I might ask, of such a detritus as may fall off from those great castes, entitle us to conceive of the main bodies of those castes in a totally different way from what the tradition indicates? Nothing more natural, than that the actual circumstances in the course of time obliterated the old simplicity of that threefold division where, so to speak, on the border of the structure new formations were annexed to the old stock—and here, beside the actual facts, the Indian passion for theorising has also played its part without question, as Senart so strikingly delineates: however, it is one thing to set in their proper places individual supplements of the ancient structure which annex themselves naturally to it as it progresses, which even grow out of it,—and it is something different to attribute to the entire organisation a new inner structure fundamentally different from the old one.

Moreover, the direct tradition which is comparatively abundant, especially with regard to the Brahman class, has preserved concrete materials that may furnish a means of estimating the worth of the great Senartian transformation of our fundamental principle. Senart would substitute numerous Brahman castes for a single Brahman caste. Now traditions, of which the authenticity is hardly questioned, enable us to find out with the greatest precision the sections into which the Brahman caste really broke up in ancient times. They inform us about the system of the marriage regulations depending upon these classifications, about the endogamous and exogamous circles which had to be taken into account, about the marriage of the Brāhmaṇas. Where is then Senart's dismemberment of the great classes into crowds of endogamous castes?

Any one who takes into consideration the ethnological standpoint here referred to will naturally only find that the varṇas were separated from one another by barriers of the connubium, by rules about cleanliness and so forth.15 No less natural is it that the modern castes should obey a multitude of similar regulations, certainly in part as an inheritance

13 Cf. Indische Studien X, 12 fg.

14 Gaukama IV, 22, etc.

15 Is, however, may I ask in passing, ethnology accepted, in the opinion of Senart, as a probable explanation about the origin of these barriers and limitations? The endogamy of the Indian caste is said to be based upon the "Aryan conception of marriage," upon the community of sacrifice of the "sacrificing couple attached to the fire-altar of the family." I believe, that he who follows up the study of the whole range of the conception of endogamy, throughout the full course of its development, will be led by this study to much remote origins which have to be measured with the logic of the savage and not with that of the Aryan. Similarly I differ from Senart (212) with regard to the prohibition of intermixing with persons of another caste and of taking food prepared by persons of a lower caste. To Senart this is "one of the bizarre usages that take us by surprise," it is explained, he thinks, by the Aryan conception of
of that ancient round of ideas and customs, and partly perhaps as introduced from the aborigines among whom—where on earth are such things not found?—rules of a similar nature might have been in existence. However, should one on that account transfer into ancient times the entire structure of modern caste-intricacy, then I can only hold it for an inference that by no means follows from the premises. If we have proved and established certain points of contact between the ancient and the modern state of things, we do not, indeed, on that account, cease to take into consideration the great divergences also between the old and the new; just as we would not deny to the religious system of the Veda its antique Vedic appearance, even though there were found a number of pious or superstitious customs which the Vedic times have in common with modern Berar or Bengal. In my opinion one has only to look with unprejudiced eyes at the copious evidences, especially of the Brāhmaṇa texts, in order to receive the most convincing impression that here without any lies and frauds, without a hybrid admixture of disparate elements, an unbiased picture of the actual state of things is garnered, pervaded by a breath of the feeling which filled and moved that atmosphere—a picture that gives authentically, although of course not all the elements, yet the broad outlines of the real circumstances.

(To be continued.)

MISCELLANEA.

A JOURNEY IN MONGOLIA IN 1910.

The following anonymous account, in the humble form of a letter to The Times of the 17th September 1913, of what must have been a remarkable journey over a very long stretch of some of the most difficult country in the world, gives a view of the life of the petty Mongol chiefs scattered over it and of its surroundings that is well worth preserving for students of Asiatic peoples. The accompanying map has been specially prepared to illustrate the journey.—En.J.

"Kings o'er their flocks the sceptre wield" is an excellent translation of an extract from the immortal Horace (wherein) to describe the tribal chieftains in Mongolia, chieftains who are dignified with the title of "Prince," or even "King," though their functions are far more limited than those of the ordinary English gentleman.

Let me tell you of three. I will begin with Wushin; the others are called Jassak, Jungar, Ottok, Wang, Hankin, and another whose name I have forgotten, but we need not trouble about them.

It was not easy to find the residence of His Highness of Wushin, but what matters that when there was such excellent sport, after crossing the Yellow River near Kweihsaung, among the antelope, hares, pheasants, partridges, geese, and Mandarin duck which abounded in the labyrinth of sandhills and scrub-covered hillocks through which we and our train of camels meandered.

However, we did arrive—though some of our camels founndered en route—and found a series of low buildings in the Chinese style surrounded by a low wall. Outside the entrance was a line of tall poles from which fluttered strings of mags covered with Tibetan characters—prayer flags. His Highness was away from home, and the population of his camp only consisted of three souls, relatives of His Highness, who allowed us to do exactly as we pleased; so we commandeered the princely "gourt" (or Mongol tent) pitched in the inner courtyard, and stayed two days in order to renew our strength before continuing the journey to (?) Borabolgasson and Ningshaifu.

The "gourt" was unusually comfortable (the average Mongol gourt is filthy). It was lined with, and without with felt (an agreeable change from the community of meal, as the family-union linked together: about the sacred hearth. He goes even so far as to trace back the impurity of the dead, "without doubt in part," to the same cause, that the dead can no more take part in the family-meal and the family-fires (p. 218). I can here only repeat that in my opinion, ethnology leads to an entirely different conclusion about these conceptions—for they are in no way startling peculiarities, and ethnology proves them to have been long anterior to the special development of the family-regulations of the Aryan: it is, of course, not possible here to go into this matter in extenso.
my "gourt," of the night before which had only been lined with semi-liquid camel’s dung), while inside there was an additional lining of thin dark red silk. In summer the felt is all removed so that the breezes may enter freely. The flooring was of stone (as a rule it is of animals’ droppings) covered with a heavy and beautiful Ninghsia carpet, and low cushions of the same make were scattered about profusely, while in front of each was a low, delicately inlaid stool as a table. A few small cabinets and some brass Buddhas completed the furniture. The end farthest from the door was slightly raised to form a dais.

The Prince’s pet Pekingese was scampering about, much distressed at the absence of his master, and was doing great damage to the fine carpets.

My retinue spent the whole of the first day teasing His Highness’s pet monkey, which got a bit of his own back when we retired to rest, for, like an over-exited child, he refused to sleep, and spent the night on the tiles, over which he scampered, dragging a 6-ft. chain behind him. As our only object in halting at this spot “Buckingham Palace” was to get rest from the hardships of the journey, I had to issue an ultimatum respecting the capture of the animal.

And so to Ninghsiafu, and, after climbing the Alashan range, a day’s journey to the west of his town up an exceedingly picturesque pass, which is nothing more than the rocky bed of a stream, and so steep that our camels nearly collapsed during the climb, we enjoyed from the top an extensive view over the Sandy Mongol Kingdom of Alashan, with its capital, Fumafu, or Dinyunung, nesting in a little oasis below us. The town is visible during the whole descent from the top of the range, and the patch of tall trees afforded a pleasant change to the eye from the bleak monotony of the rest of the landscape. But on reaching the town one finds little water trickling below the trees. However, the fact that there is water at all has brought about the cultivation—mostly by Chinese—of a small amount of ground near the town. At the time of my visit there had been a seven years’ drought, caused, according to popular opinion, by the presence at Fumafu of the exiled Prince Tuss, of Boxer notoriety. This drought was causing great uneasiness, and a change of capital had been mooted. The difficulty was that there was no suitable spot in the “kingdom” to which the “capital” could be moved. However, if the Court ever is forced to go, the population will doubtless accompany it, and, in course of time Fumafu will be added to the list of sand-buried cities of Central Asia.

The town is divided into two parts, the smaller portion being surrounded by high walls in an excellent state of repair. In it is the king’s palace, a small collection of ordinary Chinese houses of the meanest description huddled under the southern wall. History has, indeed, shown the necessity for a walled town; for in 1889 the Dungans [Dungans or Jungarins] attacked and destroyed all the buildings outside the walls, but failed to capture the “citadel.” The chief weapons of defence were stones, and to this day piles of these lie at various points on the walls in readiness for another defence. A feature of the walls are the numerous shrines, visited once a year in procession by the Lama priests carrying the sacred books.

The government in 1908 of this capital, the population of which probably consisted of some 4,000 souls, of whom 1,600 were Chinese traders, was carried on by a “King”—so his subjects styled him—and they considered him the strongest potentate on earth. Although he was said to have a violent temper and a strong aversion to foreigners, I craved an audience. His Majesty’s family have married a succession of Manchu princesses, and consider themselves now more Manchu than Mongol: at any rate they prefer to speak Chinese en famille. The arrival of these Manchu consorts had probably much to do with the comparative civilization of the capital, for even the Mongols there live in ordinary houses like the Chinese, and have ceased to be nomads.

The “King” was supposed to visit Peking once in three years, but the visit was so costly (the retinue always included six or a theatre) that it was frequently deferred, and His Majesty would send his annual tribute (in kind) instead, at the hands of his son, the “Duke.”

It was at Fumafu that I met Colonel Konkett’s expedition into Central Asia en route for Kokonoor and Szechuan, and it was here that I was privileged to spend an evening in the company of this distinguished Russian explorer. His party, which consisted of several friends and a small Cossack guard, were lodged in the premises of a Russian Burist, who probably exercised over the King of Alashan as much influence as the famous Dorjfei did at one time over the Dalai Lama. But, although our only language in common was Mongol, I am happy to think that I have nothing but pleasant memories of the gallant colonel, who entertained me in a most friendly manner in a spot far removed from European civilization. I met him again the following year in St. Petersburg, where he lectured on this very journey before the Imperial Geographical Society and opened a small collection of manuscripts, etc., brought back from Central Asia.

And so back to Kweihuaeheng, across the Gobi to Urga, and westwards by caravan to Uliassutai and Kobdo, and over the snows of the Alasaiban to the new Chinese colony of Sharsumá (7). Here we got fresh camels to proceed by Buhontogon to Chingchak, and after a week’s march westwards from Sharsumá arrived at the camp of the Tourgut [Torgot] (Mongol) Prince, lying close under a
mountain range called the Bayinzarkansaderik, from which trickles a small stream past the camp.

This latter consisted of a group of "goura" lying round a tribal temple built half-way up a large natural mound, the latter being surmounted by a "joss" of the ordinary pattern and a large "cho" of sticks to which white and yellow streamers were suspended. The Prince Ochingwang lives in two white "goura" in summer, and in a low mud house behind them in winter; in the latter he is able to have a Russian stove. His Highness sent me his greetings on arrival, and kindly caused two "goura" to be erected specially for us. I called on him in state in the afternoon, and found a fat lad of some 20 years of age, rather shy, but with agreeable manners. He had never been to Peking, and I gathered that the trouble and expense of getting there and back were the reasons. He had visited Chungushak several times to pay homage to the Imperial tablet, and had come into contact with Russians there, which explained why his rooms were full of photographs, watches, clocks, and the inevitable gramophone. He told me that no foreigner had previously visited this his "capital," and seemed very gratified that one had come. He said his favourite amusement was fox-hunting with an eagle, and that he indulged in this sport five days a week in winter. The huge bird was brought into the room during our conversation, and made such a din that I had to beg it should be removed.

The Prince was dressed in a dark red silk robe and wore huge spectacles and the usual Chinese pork-pie hat with peacock feather and red button.

After he had agreed to furnish fresh camels for the six days' journey westwards to Chungushak we spent two idle days at his camp, and were treated with the utmost hospitality possible in those parts. His Highness was indeed almost embarrassing in his attentions from morn till night. He was constantly sending over Tartar koumis and meals from the princely kitchen for myself, whilst rolls of silk and money presents kept arriving for my Chinese boy. As each meal consisted of a whole bucketful of soup and half-a-dozen dishes of meats prepared in different ways, it was difficult to dispose of it without giving offence. However, the two days soon passed, and we were thankful to have found such a comfortable lodging, for "sleep knows no pride and scorns not costs of village hinds," and if the village hinds do assume the semblance and rank of royalty, well, so long as they are prepared to show their neighbour a kindness, nothing else matters.

Map showing Walker's Route.
THE HISTORY OF THE NIZĀM ŠĀHĪ KINGS OF AHMADNAGAR.

BY LIEUT.-COLONEL T. W. HAIG, C.S.I., C.M.G., C.B.E.

(Continued from p. 204.)

XXXVIII.—AN ACCOUNT OF THE BATTLE OF ARCHAN BETWEEN BURHĀN NIŻĀM ŠĀḤ AND IBRĀHĪM ĀDIL ŠĀḤ, AND OF ITS RESULTS.103

It has already been mentioned that Asad Khān, who surpassed all the other Ādil Šāh amirs in power and in strength of the forces under his command, was apprehensive of Ibrāhīm Ādil Šāh's intentions towards him and was therefore ever sedulous in stirring up strife, considering that his safety lay in Ibrāhīm Ādil Šāh's pre-occupation with his enemies. He now stirred up strife between Burhān Niżām Šāh and Ibrāhīm Ādil Šāh until the matter ended in bloodshed. Both kings assembled their armies in order to do battle with one another, and Burhān Niżām Šāh, having sent Mabmūd Naṣīr to summon Malik Barīd and his brother Khān Jāhān, marched rapidly to meet the enemy. Malik Barīd and Khān Jāhān joined the king near the town of Kālam, and the opposing armies met at Arjan, where a fierce battle was fought. The battle raged long with great vehemence and among those slain on the side of Ibrāhīm Ādil Šāh, was 'Ain-ul-Mulk Kan'ānī, who, as he had behaved treacherously on the former occasion by deserting Burhān Niżām Šāh and joining Ibrāhīm Ādil Šāh at the instigation of Dāryā 'Imād Šāh, may be said to have met with the due reward of his treason and ingratitude.

Rām Shiva Deva, a Brāhmaṇ of the court of Burhān Niżām Šāh, who enjoyed great intimacy with the king, left the heaven which he had occupied in this earth for hell. The battle lasted until sunset, but at last victory was declared for Burhān Niżām Šāh and the Bijāpurīs fled, leaving the whole of their baggage, tents, and camp equipage in the hands of the victors. The army of Ahmadnagar pursued the fugitives and put large numbers to the sword, and the survivors made their way, with much difficulty, to Bijāpur.

Burhān Niżām Šāh then marched to Shōlapūr, a very strong fortress situated on the frontier of the Bijāpur kingdom, and then held by an officer for Ibrāhīm Ādil Šāh. Here he encamped while his army besieged the fortress. The garrison, finding themselves unable

103. The accounts of campaigns between Bijāpur and Ahmadnagar in this and the following five sections are incorrect. The causes of the war between Ahmadnagar and Bijāpur was briefly as follows:—In 1640-41 Burhān Niżām Šāh, encouraged by reports of the estrangement between the Sunnī Ibrāhīm Ādil Šāh I and his most powerful subject, the Shī'ah Asad Khān Lāfī, believed that the time had come for the recovery of the Shōlapūr district, which had at one time been a sīf of the Ahmadnagar kingdom, but had been annexed by Bijāpur during the war between Burhān and Bahādur Šāh of Gujarāt. He therefore formed an alliance with Amir 'Ali Barīd and Dāryā 'Imād Šāh of Berar, invaded the Bijāpur kingdom, re-annexed the Shōlapūr district and advanced to Belgaum, the sīf of Asad Khān. Asad Khān was loyal to his master but could not withstand the invaders and was obliged to make a show of complying with Burhān's demands by joining him with his contingent of 6,000 horse. Ibrāhīm, on learning of this accession of strength to Burhān, fled from Bijāpur to Gulbarga while Burhān and Amir 'Ali Barīd entered Bijāpur and besieged the citadel. Dāryā 'Imād Šāh who had disapproved of the expedition from the first and was awaiting an opportunity of changing sides, was employed by Asad Khān Lāfī to make his peace with Ibrāhīm and both he and Dāryā joined Ibrāhīm who was now strong enough to attack Burhān. As Ibrāhīm and Dāryā advanced, Burhān and Amir 'Ali retired, first to Bijāpur, and, on being pursued thereto, to the hills above Daulatabād leaving Ahmadnagar at the mercy of the invaders. Amir 'Ali Barīd died near Daulatabād (see note 101) and Burhān was forced to sue for peace, which he obtained by the re-incession of the Shōlapūr district and a promise never again to molest Bijāpur. The "battle of Archan" was probably a battle of skirmish fought at Charāchān, about 32 miles southwest of Shōlapūr, during Burhān's advance to Belgaum.
to hold the fortress against the besieging army, and being well aware that Ibrāhīm ʿĀdīl Shāh could send them no assistance, resolved to surrender, and the commandant came forth and submitted himself to Burhān Nizām Shāh, to whom he presented the keys of the fortress, thus obtaining exemption from the fate of the garrison of the fortress taken by storm. Burhān Nizām Shāh then appointed one of his officers commandant of the fortress and returned to Ahmadnagar.

Some historians say that Burhān Nizām Shāh, after capturing Sholāpur, marched to Bijāpūr, and besieged Ibrāhīm ʿĀdīl Shāh, who shut himself up in the citadel and sent an envoy to Burhān Nizām Shāh, promising that if the latter would pardon his misdeeds and leave him in peace, he would ever be obedient to him. According to this account, Burhān Nizām Shāh acceded to the request of Ibrāhīm ʿĀdīl Shāh and returned from Bijāpūr to Ahmadnagar. But God knows the truth of the matter.

XXXIX.—AN ACCOUNT OF IBRĀHĪM ʿĀDĪL SHAḤŠS EXPEDITION FOR THE RECOVERY OF SHOLĀPUR AND OF BURHĀN NIZĀM SHAḤŠS MARCH TO MEET HIM.

When Burhān Nizām Shāh had returned to Ahmadnagar after the capture of Sholāpur, or, as other historians say, after the siege of Bijāpūr, Ibrāhīm ʿĀdīl Shāh assembled his army for the purpose of recovering Sholāpur, and, having marched to that fortress, besieged it. He directed his army to throw up lines of contravallation as a defence against the army of Ahmadnagar when it should march to the relief of Sholāpur.

When Burhān Nizām Shāh heard that Ibrāhīm ʿĀdīl Shāh was besieging Sholāpur, he assembled a very large army and sent it to Sholāpur, where it encamped near the ground occupied by the army of Bijāpūr. Every day skirmishes took place and the troops of Ahmadnagar were usually victorious over those of Bijāpūr.

One day about forty valiant horsemen of Ahmadnagar, among whom were Ashraf Khān, Farang Khān, Firūz Khān, Sayyid Muḥammad Qāsim, Miyan Tund, Khāji Khān, Shaikh Muḥtār, Miyan Afghān, Shaikh Khurram, Farhād Khān, Anwar Chata Khān, ʿAẓīz-ul-Mulk, Sayyid Ibrāhīm, Sayyid Uwais and others, while out reconnoitring passed near the larger of Ibrāhīm ʿĀdīl Shāh. Qasim Khān and Muṣṭafā Khān of Bijāpūr, with 3000 horse and several elephants, were employed in constructing this laager, and when they saw how few there were of the army of Ahmadnagar, they lay in wait for them and suddenly attacked them. The forty horsemen, however, threw themselves upon their assailants and at length overcame them and dispersed them, pursuing them nearly as far as Ibrāhīm ʿĀdīl Shāhs tents. Just then Iḥsān Khān, one of Burhān Nizām Shāhs amirs, came up with fifty horse, and when he saw that forty horsemen had defeated a large body of the enemy, he too, fired, with the spirit of emulation, attacked a force under Qābul Khān ʿĀdīlshāhī, which was without the laager, defeated it, and put it to flight.

When Ibrāhīm ʿĀdīl Shāh saw that his army was unable to meet that of Ahmadnagar in the field, he lost heart, left Sholāpur at night and returned to Bijāpūr, whereupon Burhān Nizām Shāh returned to Ahmadnagar.

XL.—AN ACCOUNT OF IBRĀHĪM ʿĀDĪL SHAḤŠS SECOND ATTEMPT TO RECOVER SHOLĀPUR, OF THE EXPEDITION OF BURHĀN NIZĀM SHAḤ TO MEET HIM AND OF THE LATTERS VICTORY.

After a while Ibrāhīm ʿĀdīl Shāh was again moved with the desire to recover Sholāpur, and marched thither with a large army and besieged it as before, constructing lines of contravallation and a strong laager, within which he took up his quarters. Burhān Nizām Shāh then marched from Ahmadnagar with a large army and encamped over against
Ibrahim 'Adil Shah, and, as before, skirmishes took place daily. One day Bahadur Khan, brother of Alam Khan and one of Burhan Nizam Shah's officers, attacked the enemy and performed great feats of valour, but since the enemy greatly outnumbered him, they were able to surround him, and he was very nearly taken prisoner; but reinforcements were sent from the army of Ahmadnagar and freed Bahadur Khan from his perilous position. Afterwards Fir Muhammad Khan, with the small force under his command, attacked the Adilshahi army and fought most bravely, but was at length taken prisoner and carried before Ibrahim 'Adil Shah, who highly praised him for his valour and, giving him a robe of honour and a reward, allowed him to depart.

After that the king commanded Mushir-ul-Mulk the Afghan, to attack the enemy and ordered Firuz Khan to support him, but although Mushir-ul-Mulk displayed great valour on that day, the attack was unsuccessful, and Firuz Khan, who was envious, reported to the king that Mushir-ul-Mulk had not behaved well before the enemy. The king, in his displeasure with Mushir-ul-Mulk the Afghan, deprived him of his command and transferred it to Allah Dad Daulat Khan, but Daulat Khan informed the king that Mushir-ul-Mulk had behaved very bravely in the fight and that Firuz Khan's report was false. The king then sent for Daulat Khan's brothers, who had been with Mushir-ul-Mulk in the battle, and asked them for an account of the fight. They insisted that Mushir-ul-Mulk had shown great bravery, and the king then restored Mushir-ul-Mulk to his command and honoured him before his fellows; but Firuz Khan, who had made a lying report, fell from favour.

One day at about this time Nur Khan 'Adilshahi made an attack on the royal army and Kamil Khan, one of the amirs of Ahmadnagar, was wounded with an arrow. Burhan Nizam Shah sent Shujat Khan, Azhdahah Khan, and Daulat Khan to the assistance of Kamil Khan with instructions to punish Nur Khan. These amirs attacked Nur Khan, who, being unable to withstand them, took to flight. Some of the Ahmadnagars pursued him and slew several Bijapuris, and returned with their horses and arms.

Ibrahim 'Adil Shah again found that his troops were not able to withstand those of Ahmadnagar and, as he had done before, returned to Bijapur by the road by which he had come and thus made an end of the strife. Burhan Nizam Shah then returned in triumph to his capital.

XLI.—AN ACCOUNT OF THE BATTLE OF SAlBA, BETWEEN BURHAN NIZAM SHAH AND IBRAHIM 'ADIL SHAH, AND OF OTHER EVENTS WHICH HAPPENED ABOUT THAT TIME.

Some months after the retreat of Ibrahim 'Adil Shah from Sholapur to Bijapur and the return of Burhan Nizam Shah to his capital, Asad Khan 'Adilshahi, who was always at heart a faithful servant of the kingdom of Ahmadnagar, and showed his fidelity in all campaigns and battles between Ahmadnagar and Bijapur, took ill; and in his sickness it occurred to him that as Ibrahim 'Adil Shah was always suspicious of him, he might take advantage of this opportunity to get rid of him. He therefore wrote secretly to Burhan Nizam Shah, urging him to invade the kingdom of Bijapur, in order that Ibrahim 'Adil Shah, being perturbed by the invasion of his country, might abandon his design against him.

As Ibrahim 'Adil Shah, unlike the rest of the amirs of the Dakan 104 who were usually submissive and obedient to the king, attended at court when called upon, and attended him in his wars (and if occasionally one of them were disloyal or disobedient, he became the object of the king's wrath and speedily met with his deserts), was constantly at enmity

104 This is a very impudent attempt to represent an independent sovereign as one of the amirs of Burhan Nizam Shah's court.
with Ahmednagar and opposed the king on every possible occasion, Burhan Niqam Shah made it his principal object to overthrow this promoter of strife, to take vengeance on him, and to deliver the people of the country from his oppression and tyranny. He also sent Shah Tahir to win over Malik Baird, who was just now not on good terms with Ahmednagar, and with instructions to go on, after he had sent Malik Baird to Ahmednagar, to Telingana and to attempt to induce Sultan Quli Quib-ul-Mulk to enter into an offensive alliance with Ahmednagar, for at this time Sultan Quli Quib-ul-Mulk followed his usual policy of keeping himself to himself, and of avoiding both enmity and alliance with the other Sultans of the Dakhan.

Shah Tahir had an audience of Malik Baird ('Ali Baird Shah) and stated the case to him. It is said that Khan Jaban, the brother of Malik Baird, set himself dexterously to annoy Shah Tahir and uttered words regarding him which bore a contemptuous signification. Shah Tahir was very angry and returned angry answers. Malik Baird was much annoyed at his brother's conduct and did his best to pacify Shah Tahir, and actually punished his brother, but Shah Tahir never forgot the insult. This matter ended in Malik Baird joining Burhan Niqam Shah at Ahmednagar, and Shah Tahir went to Telingana.

When Shah Tahir waited on Sultan Quli Quib Shah he soon persuaded him not to oppose, but to further, the designs of Burhan Niqam Shah. Sultan Quli Quib-ul-Mulk set out with his army to aid Burhan Niqam Shah, and sent on in advance a force which accompanied Shah Tahir. Burhan Niqam Shah, when all his forces had assembled, marched towards Bijapur.

Dary a 'Imad Shah and 'Ali Baird Shah paid their respects to the king at about the same time and the army moved forward and crossed the Bhinur. When the troops thus entered the Bijapur dominions, Burhan Niqam Shah sent his artillery on towards Bijapur by the main road, while he, with the rest of his army, marched rapidly on Bijapur by another and less well-known road.

When Ibrahim 'Adil Shah learnt that Burhan had separated his artillery from the main body of his army, he, with a picked force, moved on the artillery by forced marches. The amirs, who were with the artillery, defended the guns manfully and, since they had a large force with them, they beat off the attacking force and wounded many and made many prisoners. They loaded some of the guns to the muzzles, so that they burst when fired.

Meanwhile the main body of the army, marching rapidly by the other road, had arrived before Bijapur, and the king encamped there and opened the siege. A messenger now came from Asad Khan to say that the prospect of the success of a siege of Bijapur was not very hopeful, and to advise the king to march on Belgaum, as that fortress would more easily all into their hands.

The king then marched from Bijapur, and halted at Miraj, the distance from which place to Belgaum is three guses. Here he heard that Asad Khan had died and that Ibrahim 'Adil Shah had reached Belgaum and was prepared to defend the place. He therefore turned aside and, instead of marching on Belgaum, marched on Panhala, a very high and strong fortress, and besieged that fortress. The army besieged it vigorously for three days, in the course of which Rajan Mahalddar, one of the king's intimate associates, was slain. It soon became manifest that the army would not be able to capture that fortress, and the king

105 Miraj is situated in 16° 49' N. and 74° 41' E. Sayyid 'Ali's geography is as bad as his history. The distance from Miraj to Belgaum is not three guses (twelve miles) but about sixty-eight miles.

106 Panhala is about thirty-five miles west of Miraj. I have not been able to find Panhala, but perhaps we should read "the lower fortress."
abandoned the siege and marched on the fortress of Pāvincia, and laid siege to it. The army of Ahmadnagar, after having laid siege to Pāvincia for no more than a day and a night, took the fortress by storm, and Burhān Nizām Shāh caused its fortifications and the dwellings of its inhabitants to be levelled with the ground.167

Burhān Nizām Shāh then marched to Satāra,1 a very strong fortress situated in the hills, and, in spite of its strength, his troops attacked it resolutely and continued their attempts to take the place by storm for five days, at the end of which time Burhān Nizām Shāh heard that Ibrāhīm ‘Ādil Shāh was marching to attack him. He therefore detached several thousand horse under the command of some of the bravest amirs of his army to advance to meet Ibrāhīm, for the ground about Satāra, where Burhān was encamped, was very hilly and unsuited for battle. The amirs marched to meet Ibrāhīm ‘Ādil Shāh, and when they fell in with his advanced guard, attacked it, and slew many. But the main body of the army of Bijāpur arrived on the field and attacked the amirs, defeated them, and put them to flight.

Then Burhān Nizām Shāh, seeing that he could not fight in the position before Satāra, marched to the ghādi of Sālpa, where he encamped. But the position here also was very cramped, owing to the density of the jungle, and Ibrāhīm ‘Ādil Shāh sent 3,000 infantry of his army into the jungle surrounding Burhān’s camp, in order that they might harass and annoy the army of Ahmadnagar. The enemy’s infantry, trusting to the density of the jungle, carried out these orders, but Burhān Nizām Shāh ordered Dīlāvar Khān and Daryā to attack the infantry and they fell on them and at once slew three hundred of them, and carried the heads to Burhān Nizām Shāh, by whose orders they were built up into pillars.

As Pār168 was too cramped a position for the army, Burhān Nizām Shāh marched on and encamped on the river of Pār. On the following day Ibrāhīm ‘Ādil Shāh descended the ghādi and encamped over against the royal army, and the two armies lay that night opposite to one another.

On the following morning the two armies were drawn up in battle array and the fight began. Ibrāhīm ‘Ādil Shāh fought in person with the utmost valour, and several times threw both the right and the left wings of the army of Ahmadnagar into confusion. Burhān Nizām Shāh was astonished at Ibrāhīm’s bravery and loudly praised it, although parts of his own army were scattered. He himself, however, in the assurance that victory would at last be his, firmly held his ground, and Shāh Tāhir, who was supernaturally enlightened regarding the result of the day, confirmed him in his resolution. The battle lasted till sunset, when Ibrāhīm ‘Ādil Shāh, with two or three thousand of his best cavalry took up his position on some rising ground on the flank of the army of Ahmadnagar. Burhān Nizām Shāh then opened a fire of rockets on the enemy and scattered them, while Kāmil Khān and Zāhir-ul-Mulk, two amirs of the army of Ahmadnagar, attacked Ibrāhīm ‘Ādil Shāh and dispersed the force of cavalry which was with him. Ibrāhīm ‘Ādil Shāh then fled from the field, and the army of Ahmadnagar, pressing forward, pursued and slew many of the fugitives and captured their camp equipage, goods, arms and elephants, and also Ibrāhīm’s umbrella and other insignia of royalty.

Among the spoils were forty elephants, including Asad Khān’s own riding elephant and Ibrāhīm ‘Ādil Shāh’s umbrella and āštāḏīyār and all his insignia of royalty. Burhān Nizām

167 This is the famous fort of Satāra, once Siveji’s capital, and now the headquarters of a British district, situated in 17° 41’ N. and 74° E.

168 The Pār Pass, situated about thirty-four miles north-west of Satāra.
Shah's scribes then wrote accounts of the victory and dispatched them to all places in the
king's dominions.

Burhan Nizam Shah then returned in triumph to his capital and devoted his attention
to the administration of his kingdom and to the needs of his army and his subjects.

XLII.—AN ACCOUNT OF IBRAHIM 'ADIL SHAH'S THIRD EXPEDITION TO SHOLAPUR
AND OF ITS CAPTURE.

After Ibrahim 'Adil Shah had suffered at Salpa such a defeat as he had never in his life
suffered before, he devoted his attention to the strengthening of his army, to collecting
material for war, and to preparing for reprisals. He also, by diplomatic arts, gained over to
his side Barid-i-Mamlik and then marched to Sholapur with a large army. When he
reached Sholapur he opened a regular siege and, in accordance with his usual custom,
constructed lines of contravallation against a counter-attack from the army of Ahmadnagar
and carried a flying sap towards the fortress on all sides.

When Burhan Nizam Shah received news of Ibrahim 'Adil Shah's siege of Sholapur,
he assembled his army and asked Daryä 'Imad Shah for help, and Daryä 'Imad Shah came
to his assistance. He then marched to Sholapur and encamped in the neighbourhood of
the army of Ibrahim 'Adil Shah, and skirmishes took place daily between the two armies.
This intermittent fighting went on for a long time, and meanwhile provisions began to fail
in the fort and the garrison were reduced to great straits, for Ibrahim 'Adil Shah besieged
them so straitly that no communication between those within the fort and those without
was possible. Moreover Daryä 'Imad Shah wearied of the long strife and had no heart for
fighting but devoted all his efforts to attempting to make peace. Meanwhile, the rainy season
became suddenly and caused great hardship in the army of Ahmadnagar. Burhan Nizam Shah
now sent a messenger secretly to Barid-i-Mamlik to detach him by any means
from his alliance with Ibrahim 'Adil Shah, in the hope that his defection would so weaken
the besiegers that they would be compelled to relinquish the siege. Barid-i-Mamlik replied
that the fortress of Sholapur could hardly pass from the possession of Burhan Nizam Shah
and that his defection from Ibrahim 'Adil Shah would make no difference. He also said
that it was not the practice of his kingdom to forsake an ally before a campaign had been
brought to a conclusion, and that if he now abandoned Ibrahim 'Adil Shah he could hardly
hope to be trusted by Burhan Nizam Shah in future. He advised Burhan Nizam Shah to
abandon Sholapur for that year to Ibrahim 'Adil Shah and to return the next year with a
large army to recapture it, promising him his aid in the following year, when he would be
free from his engagement with Bijapur. Daryä 'Imad Shah supported Amir 'Ali Shah and
advised Burhan to make peace with Bijapur. For these reasons, therefore, Burhan Nizam
Shah made peace with Ibrahim 'Adil Shah, surrendered Sholapur to him, and returned to
Ahmadnagar.

XLIII.—AN ACCOUNT OF THE DEATH OF SULTAN QUTB-UL-MULK, AND OF
JAMSHID'SACCESSION TO THE THRONE.

After the affair of Sholapur, Malik Sultan Qutb-ul-Mulk, 109 the governor of the
country of Telengana, was assassinated by one of his courtiers and his eldest son, Jamshid

109 Sultan Qutb-ul-Mulk, the founder of the Qutb-Shahi dynasty of Golconda, declared his
independence in 1512, but had already been virtually independent for twenty-two years. From his
epithet it does not appear that he used the royal title, though his descendants did. He was murdered
on September 3rd, 1543, in the ninety-eighth year of his age, by his second surviving son Jamshid, who
succeeded him. This account of 'Ali Barid Shah's attempt to annex Telengana appears to be entirely
imaginary, for it was only towards the end of Jamshid's reign that his brothers Haidar and Ibrahim fled to
Shāh, who had been imprisoned in Golconda by his father's order, was released by his father's murderer and ascended the throne. His brothers, Haidar Khān and Ibrāhīm Khān, who were not content that he should be king, fled with part of the army and forty elephants and took refuge with 'All Barīd Shāh. 'All Barīd Shāh then conceived the foolish notion of capturing Telingāna for himself, believing that its conquest would be easy with the help of Haidar Khān and Ibrāhīm, who were the heirs to the kingdom, and of the army of Telingāna, most of which was well affected towards them. He therefore assembled his army, marched into Telingāna, besieged Golconda, and entered on a campaign.

Shāh Tahir, in whose heart Khān Jahān's witticisms still rankled, when he heard that 'All Barīd Shāh had invaded Telingāna, warned Burhān Niẓām Shāh that the dissatisfaction of Haidar Khān and Ibrāhīm with the elevation of their brother Jamshīd to the throne, and their taking refuge with 'All Barīd Shāh had inspired the latter with the ambition of becoming king of the whole of the Dakān, and that he had invaded Telingāna as a step towards the attainment of this object. He said that if 'All Barīd Shāh gained possession of Telingāna, his power would be more than doubled and that it behoved the king not to treat this matter as of no importance but to act at once, as 'All Barīd Shāh would certainly plunge the whole of the Dakān into war as soon as he found himself strong enough to be able to do so with a chance of ultimate success, and that it would not be easy to overthrow him after he had conquered Jan shah and annexed Telingāna. The king therefore assembled his army, summoned Daryā Imād Shāh, and marched towards Telingāna to the assistance of Jamshīd Qub Shāh, sending on before him a force under some of his amirs to render immediate aid to Jamshīd.

The road taken by the king with the main body of the army lay by the fortress of Kohr,110 which is in the country of 'All Barīd Shāh, but is near the borders of Telingāna. Here the king halted and besieged the fortress. The garrison, seeing that there was no hope of successfully defending the place and that the fort was surrounded by the army of Ahmād-nagar that no way of escape remained, surrendered, and by the king's order the army refrained from molesting them, their property, or their wives and children.

When the amirs, with the force which had been sent forward to the aid of Jamshīd Qub-ul-Mulk, entered Telingāna, and 'All Barīd Shāh and his brother heard of the fall of Kohr, they were greatly alarmed, and retreated rapidly from Telingāna towards Bījāpur, and took refuge in the dominions of Ibrāhīm 'Adil Shāh. Jamshīd Qub-ul-Mulk then came to pay his respects to the king, and to thank him for the help which he had given, and the king bestowed on him a royal robe, an umbrella and āfābghīr, and honoured him with the title of Qub Shāh. Some historians say that, although the king offered Jamshīd Qub-ul-Mulk an umbrella and āfābghīr, he refused to receive them, saying that all the amirs of the Dakān had assumed umbrellas and āfābghīrs and that it behoved him to serve the king faithfully as a soldier. He also said that he was the loyal slave of the king and would carry out any orders that were given to him, or attack any enemy against whom he was sent, and hoped that he should be able to perform his duties to the king's satisfaction.

Bidar, where all that 'All Barīd Shāh did for them was to give them a safe asylum. Haidar died in Bidar and Ibrāhīm went on to Vijayānagar, whence he started, after Jamshīd's death, on the expedition which gained for him the throne of Golconda. The true course of events after Jamshīd's accession seems to have been as follows. Burhān, eager to recover Shōla, instigated Jamshīd to invade Bījāpur from the east and Sadākhivārāya of Vijayānagar to attack Rāchīrūr, and himself invaded the Shōla district and several times defeated the troops of Ibrāhīm 'Adil Shāh. Ibrāhīm conciliated Burhān by the cession of Shōla, induced Sadākhivārāya to withdraw his troops from Rāchīrūr, and then sent Avaad Khān Lārī against Jamshīd Quṭb Shāh, who was utterly defeated and driven back to Golconda.

110 Kohr, famous for its mangoes, is about twenty-five miles south by east of Bidar.
Although 'Alī Barid Shāh had sought refuge with 'Ībrāhīm 'Adil Shāh, he expressed repentance for his ill-advised action, and by fair words and submissive messages attempted to excuse himself to Burhān Niẓām Shāh. He sent a letter, couched in humble terms, to Shāh Tāhir, expressing his contrition.

When Jamshīd Quṭb Shāh waited on the king before Kohīr and received special honour, Burhān Niẓām Shāh took counsel with Dāryā 'Imād Shāh and Jamshīd Quṭb Shāh regarding the reception of Sholāpur, and then marched, accompanied by them, towards Sholāpur.

When 'Ībrāhīm 'Adil Shāh became aware of Burhān's design and realized that he could not hope to confront him successfully in the field, he and 'Alī Barid Shāh marched to Parenda and besieged it, and when Burhān Niẓām Shāh heard of this, he abandoned the siege of Sholāpur and marched to meet 'Ībrāhīm 'Adil Shāh, encamping at the village of Khāspūrī. 'Ībrāhīm 'Adil Shāh likewise left Parenda and marched on Khāspūrī to meet Burhān Niẓām Shāh, and at that place a battle was fought. The opposing forces were drawn up in the morning and the battle raged till sunset, when victory was declared for Burhān Niẓām Shāh, and 'Ībrāhīm 'Adil Shāh and his army fled from the field, leaving all their camp equipage and 'Ībrāhīm's insignia of royalty in the hands of the victors, who plundered them.

Jamshīd Quṭb Shāh, who had been nursing his wrath against 'Alī Barid Shāh, now seized his opportunity and pursued the army of Bīdar. 'Alī Barid Shāh, in his fear of Jamshīd, fled precipitately, leaving his umbrella and dīrāqīr and all his insignia of royalty in the hands of Jamshīd Quṭb Shāh.

After the armies of 'Ībrāhīm 'Adil Shāh and 'Alī Barid Shāh had been thus defeated, Jamshīd Quṭb Shāh received leave to depart, and returned to Telingāna, and Dāryā 'Imād Shāh returned to Berar. The royal army then returned to Aḥmadnagar.

(To be continued).

ON THE HISTORY OF THE INDIAN CASTE-SYSTEM.

By HERMANN OLDENBERG.

(Translated by H. C. Chaklader, M.A.; Calcutta.)

(Continued from p. 214).

These outlines appear to me, expressed briefly, to be the following:

Amongst the Aryan people, the boundary-line separating whom from the non-Aryans is perceived to be growing sharper and sharper, a twofold aristocracy rises into prominence—the one characterised by the possession of the priestly power of magic and the other by secular dominion. In the third position is the mass of the non-aristocratic Aryans. Then outside the Aryan community, the non-Aryan plebeians and slaves; finally, further outside, the wild or half-wild tribes untouched by civilisation. Evidently there are admixtures of these elements; there is nothing to disprove that those great categories are perceived and recognised as fundamentally governing the social life and demonstrating their power at every step. Shall we find it necessary now to speak here only of "classes" and avoid the word "caste"? But it is just this fixedness, I might say animal fixedness, of character based upon birth and hardly surmountable by human endeavour, that is usually denoted by the word "caste." When Śramaṇas came into being, they formed only a class and not a caste; the class of the Brāhmans, a social organisation of the ancient style, was a caste; the Brāhman might, as economic necessity often enough made him,
carry on other than a priestly profession; he might become a cultivator, a butcher or a thief: then he was perhaps treated with contempt, but he remained a Brähman. 17 Under these great caste-divisions stood the organisation of the gans and of families, but no castes in the sense of the castes of modern India.

I believe that we may point out a number of other considerations, that will fully strengthen and add to the importance, of what has been enunciated above.

"It is not the theory which can account for the facts; it is the facts that help us to see the theory in its true light," says Senart. Now, however, the theory is separated from the facts which are said to elucidate them, by thousands of years: is it necessary to say in such a case what dangers threaten the interpretation? These dangers must impose upon the investigator the categorical duty of not taking a leap from antiquity to modern times, without first of all devoting the most careful attention to the series of positive facts nearer that remote period of antiquity—facts which in reality have the first claim to be taken into account, if it is intended to explain the theory in the light of the facts.

I have already asserted above (p. 268) that to me the information given in Pāli literature and, in particular, in the Jātakas, that "great thesaurus of Indian antiquity both in respect of state-lore and private life" (Bühler) seems to deserve, in connection with the problems before us, a consideration that they have not received from Senart. We endeavour, with the assistance of the excellent work of Fick, to formulate some of the principal points which can be gleaned from them.

At the head may be placed the statements in the canonical Pāli text with the help of which it will be possible to discuss whether they also on their side are not to be taken into account as facts coming within the scope of the theories. I believe, indeed, that they are clearly enough marked by a close correspondence with actual life, and that whatever theory may underlie the social pictures in the Pāli texts, it is so far independent, at least, of the Brähmanical theory, that we shall be entitled throughout to make use of these evidences as a proper authority for checking the other one.

In connection with the prohibition of mutual insults (Suttavibhaiga, Pācittiya II, 2; Vinaya Piṭaka, Vol. IV, p. 6 ff.), it is related how one may insult another by giving him a low, or, in an ironical manner, a high designation. This may be done jātiyā, gotena kammana, sippena and in other ways; and here are specified the principal cases of higher and lower jāti, &c. The lower jātis are enumerated as Candasajāti, Venusjāti, Nesañahjāti, Rahakārajāti, Pukkusañjāti, and the higher ones as Khattiyañjāti and Brāhmaññjāti. No indication is given that any other case of jāti might be looked upon as low or high; the respective possibilities are manifestly looked upon as exhausted, but, of course, the existence of middle jātiyo, that lie between the high and the low cannot be denied. Of gota, there are named several well-known Brāhmānical gotas, some as low (e.g., the Bhiradavajagottam; the horrible Brāhm Jūjaka in the Vessantara story is, for example,

17 Senart (123 ff.) says: "The Brāhm caste pursues its destiny under our eyes. Under what conditions? Not at all as a veritable caste, as we have seen, but as an agglomeration of innumerable castes." And of the Kāprajya and the Vaśya (he says): "Here again we can see nothing but some generic names, a very vast cadre intended to comprise within itself, to conceal, a division into fractions, really infinite." Of this "infinite division into fractions" at least the beginnings may have already existed in reality in the early times. But the respective fractions were neither called castes, nor were they castes. What there was, was a fast increasing break up of the occupations into fragments. This, however, did not hinder the great old castes (vṛṣaṇa, jāti) from continuing to live in the Indian consciousness as expressive of a natural division of the individuals.
a Bhāradvāja; cf. Jāt, Vol. VI, p. 552)—and others as high (e.g. the Gotamagotam to which Buddha belonged). Low Kamma: Kotthakakamaṇṇa, Pupphakhadakakamaṇṇa. High kamma: kasi vāṇijjā gorakkhā. Low sippa: Nalakārasiṇṇa, Kumbhakārasiṇṇa, pesakārasiṇṇa, Chanmakārasiṇṇa, Nashāpasiṇṇa. High sippa: muddā gavand lekhā. \[1\]

With regard to gottā, kamma and sippa, it has to be added that beside the examples mentioned above as high or low, we have to take into consideration what may, teu tenu janapadeesu, be regarded as high or be looked upon with contempt.

Now, does here the jāti—according to Senart the proper word for caste in the sense in which he understands the word, that is, something similiar to the modern caste—appear in any way to differ from the castes or classes of the ancient Brāhmanical system? I confess I am unable to discover anything that might justify Senart's transformation of the concept referred to. One is Brāhmaṇa or Kshatriya by virtue of his jāti, or one belongs by virtue of his jāti to the despised people, the Chāpālas, Nashādas, &c. Everything fully corresponds to the ancient system in the sense in which we are accustomed to understand it from the remotest times. Moreover, that the trade of the Rathakātras consolidated itself as a jāti, or associated itself with a particular jāti, corresponds to what is otherwise known (see above, p. 277 ff.);

Veṣa (Vaiṣṇa) also stands in a line with the Rathakātras in the Dharma literature\[19\]—not, of course, so far as is known to me, in the ritual literature of the Veda. However, apart from such origins whereby several castes assumed the form of jāti, the bulk of the castes are summed up under the category sippa. The merchants also represent not a jāti but a kamma.\[20\] As regards the narrow divisions inside the jāti of the Brāhmaṇa, &c., what are mentioned are not the small, perhaps local, castes in the Senartian sense, but the ancient gotras.

Now what this passage of the Suttavibhaṅga expresses in a theoretical form, appears to me to be confirmed by other data in the Pāli text, so far as I am in a position to see up till now, and especially by the data of the Jātakas so carefully worked out by Fick. Where people are characterised as jāti, they are either Brāhmans or Khatiyas or Chadalas and so forth,\[21\] but we do not find that immense variety of jātis which is peculiar to the caste system at the present day. Often we read\[22\] that there were four kinds of assemblies: assemblies of Khatiyas, Brāhmaṇas, Gahapatis, Samaṇgas—i.e., of the three ancient higher castes\[23\] and beside them, those of the new class of ascetics freed from the bonds of caste. Similarly it is often said\[24\] that there were four kulas: the kulaj of Brāhmaṇa, of Khatiya, of Vessa and of Sudda, or that three kinds of important Kulaj\[25\] were distinguished—the

\[20\] The difference between Kamma and Sippa seems to me to be that the former represents an independent means of living pursued only for one's own benefit, and the latter, on the other hand, denotes work done as a rule for others and dependent upon some manual skill.

\[21\] Mixed castes like those that play an important rôle in the Brāhmaṇical legal literature, appear to be unknown to the Pāli text. Opinions appear to have differed as to whether a child descended from parents of whom one came from the Brāhmaṇa, and the other from the Khatiya caste, was to be allowed to have the quality of a Brāhmaṇa or a Khatiya. I am unable, however, to discover any statement about the proper categories for the children of such marriages. Cf. A sankhīyaṃ, p. 19 (Fischel); Fick, p. 30 ff., 67 ff.

\[22\] E.g., Mahāparinibbānasutt, p. 11 (Children), Mahāvagga, VI, 28, 4, &c.

\[23\] We shall come back to the meaning of the term pahospati.

\[24\] E.g., Suttavibhaṅga, Sarnghādisek, XIII, 2.

\[25\] Chullavagga, VI, 6, 2.
Kula of the Khattiya, of the Brāhmaṇa, and of the Gahapati. Everywhere it is patent that in the period of the Pāli text the old framework did in no way cease to govern the actual life, and to represent its condition adequately. Where the Jātaka stories turn upon questions of cleanliness and defilement, the reference is to the old categories such as Khattiya, Brāhmaṇa (Udichchabrahmaṇa) and Chaṇḍāla. A breaking up of the Brāhmaṇ caste into several sub-castes," says Fick pertinently (p. 125 A. 1), "a coalition of those expelled from caste into new castes, as it exists in modern India, is, I believe, not met with in the older Buddhistic period, because nowhere in the Pāli text do we find a trace of it." There is no reason to suppose that we have to think of a narrow caste-like union of a local nature inside the Brāhma caste, when the expression Udichchabrahmaṇa is used; the word itself signifies nothing more than this, that the Brāhmaṇ families that came from the north-west — as well-known historical circumstances prove easily — were held in particular esteem.

So far as the castes Khattiya, Vessa and Sudda are specially concerned, I believe that Fick (pp. 55, 163, 202) is far too sceptical with reference to their real significance during the period of which the Pāli texts furnish an account. When it is admitted that the families of Gautama, Bhāradvāja, &c., were all grouped together in the caste of Brāhmaṇas, as being pervaded all of them by the mystic potency of the Brahman, I cannot see why, just in the same way and answering to exactly similar modes of expression in the texts, it should not be held that families like those of the Śākyas, Liechehavis, &c., all of whom felt in themselves the potency of the Kshatric nobility, all of whom said "Mayam pi Khattiya," are to be reckoned as belonging to a single caste of the Khattiyas — a single caste of which the members, when they said to each other "I am a Khattiya," knew and acknowledged each other as persons of the same kind and nature.

There might indeed be some hesitation about the real existence of a caste of Vessas in the Buddhistic period. Turns of expression like those, so abundant in the Brāhmaṇa texts, speaking about the relation of the Kshatriya and the Vaisya as the oppressor and the oppressed, are not to be found in the Pāli texts. Again, it could hardly, at least not often, happen that any person who appears in a story as engaged in trade, should be designated as a Vessa, because the denomination Brāhmaṇa actually appears in numberless cases. It is not therefore to be wrongly supposed that here there is a positive withdrawal from our former position. The causes of this apparent anomaly are, methinks, clear as day. In the Rigvedic age the Vaisyas formed a union, which, however comprehensive it might be, was, none the less, a real, tangible union; not a union of Aryans raised above the general level, through spiritual or temporal nobility, by virtue of the inherent potency of the Brahma or Kshatra, but a union, we might say, of the Aryan peasants carrying on agriculture and cattle-breeding. In the Buddhistic period, the advance of civilization had dissolved the ancient union. Big

25 Fick (p. 22, n. 4) deduces wrongly from such passages, that kula there signifies "caste." It everywhere signifies "family," and those passages show that the generic notion of the family is split up into specific ideas like Brāhmaṇ family and so forth.
28 Of. about the rôle of the Vaisyas and the Śādra in Sanskrit literature, the analogous conceptions of Growe in Schlegelstein ZDMG., 33, 554, and L. von Schroeder, Indische Litteratur und Kultur, 419.
29 Mahāprārthikā Būtta, p. 68 ff.
30 See the account by Fick, p. 26. The Buddhistic materials should not be forgotten, if one wishes to appreciate the theory set up by Senart (p. 24) — of course in relation to the literature of the Sanskrit law books — "As regards the Kshatriyas, . . . hardly their name itself has survived in some traces; they are rare."
towns now formed the centre of life. In the towns or before the doors of the towns lay the great, perhaps the greatest, part of the scenes of the transactions that the Buddhist texts relate. In these cities there had grown up a rich and highly respectable merchant class. They were the residences of a highly progressive artisan class ramifying into many branches, and it may be considered as probable that the force of circumstances had driven masses of persons of Aryan descent into the arts and crafts, which at one time probably were as a rule the occupations of the Śūdras. Under such conditions, many of the categories that had governed life in ancient times must have faded under the altered circumstances of the new age. It is natural that where pretensions of spiritual or temporal nobility came into play, as among the Brāhmaṇas and Kṣatriyas, the ancient ways of viewing things held out with a tenacity different from that in the sphere of burgher life. In this sphere, however, guilds or corporations of merchants and artisans—just as in mediæval Europe they acquired a great importance in connection with the flourishing of city life, similarly also in India,—stepped into the foreground as adequately representing the actual situation and its living interests, pushing into the background such concepts as those of the Vaiśya or the Śūdra. Moreover, we are entitled to maintain that although these last mentioned concepts had been pushed into the background in comparison with the others, yet they had by no means gone out of existence. A tradesman was of course in the first place designated a tradesman, but the distinction that the people made between the Vessakula and the Suddakula, makes us adopt the view that on that account, the fact was not lost sight of, that a particular merchant was a Vessa or that an artisan was possibly a Sudda. And the important rôle that the Gāhapati plays in the Pāli text justifies the conclusion that here it represents a still living thing rather than a mere decayed reminiscence of an institution nearing extinction: I believe, in fact, that we may take the Gāhapatikula of the Pāli text as a synonym for Vessakula.

23 I may so express myself, without the fear of being misunderstood, that I deny that there were any merchants in the Piggvedic times.

24 This was not considered as normal in the Buddhist times; a touch of inferiority was always attached to the handicrafts. Cf. the above quoted (p. 252) passage of the Suttavibhaṅga, as also the observations of the Majjhima Nikāya (Vol. I, p. 85, ed. Trencker) about the sippahāñcas which were suitable for the Kulepatī. In this connection we may take into consideration what the Dhammahāpanājātaka says (see Fick. 142) about the Brāhmaṇas who followed agriculture and trade, tended goats and sheep; they resemble the Ambhatikka and Vessa; for the Vessa, even then agriculture, cattle-breeding and trade, and not the handicrafts, were characteristic occupations (yet of the modern Banyas (merchant) says Ibbuton. op. cit., p. 291: he is generally admitted to be of pure Vaiśya descent). It may be observed as singular that the Kumbhakāra appearing in Jāt. I, p. 80 bears the gotra-name Bhagyartha.

25 This is explained very clearly in certain interesting verses of the Bhūrīdattajātaka, Jāt. Vol. VI, p. 208, verses 151, 153.

26 Moreover, as regards the spiritual class, we may, I think, compare this, at least distantly, with the fact that by the side of, partly perhaps in preference to, the spiritual class of the old style—if I may use this expression—the Brāhmaṇa caste which was falling off from its old character, the spiritual class of the new style, corresponding to the ideas of the new age, that is, the sots of the Brāhmaṇas stepped up to the foreground.

27 I here refer in passing to the Vessasm, which is mentioned in Jāt. Vol. VI, p. 435. Cf. also, p. 418, verse 1477, as also p. 142, verse 636: Bhāsadbhākurasu puṃkikhasakurasu vevessu ud.

28 The frequent mention side by side of the three categories of khaṭṭiyā, bhṛṭhaṁṣa and gāhapati shows that we have to think of the gāhapati as a category different from the two higher castes, and yet of the same kind. The conspicuous and respectable position, on the other hand, that is assigned to the Gāhapati (Fick. 184), seems to preclude the idea that suttas were included among them. I cannot admit a mode of expression like the Jātaka passage (II, 241) cited by Fick (op. cit.), as sufficiently adequate for the purpose of establishing a difference between vesu and gāhayāni. This holds good also of Jāt. I, 162.
In the observations made above we have already touched upon the passage in the Pāli text bearing on the concept Sudda. Here also Fick (p. 202) denies the real existence of a caste. And certainly it is correct that endlessly heterogeneous elements were comprised together under that designation, about which the only definite thing was that it denoted the position of these individuals below the three higher castes, and that people had no interest in having a clear comprehension of its proper positive character and no enquiry was made in that direction. However, I would not like to express it as my opinion that the concept Sudda appertained to mere theoretical discussions. No matter what exactly those designated as Sudda were, to the living consciousness of the generality of people as it is reflected in the Pāli text, the Suddas appear, I think, to have been a category of men who were homogeneous at least when looked at from a particular point of view and were united among themselves by this common feature. The Abhaṭṭhasutta (Digha Nikāya) compares the Brāhmaṇa who mechanically repeats the hymns of the ancient ājīvīka to a Sudda (or Suddadāsa) to a man who stations himself at the place from which a king has spoken, who talks in the same words and then fancies himself to be a king; a clear proof, I think, that the concept Sudda had its existence not merely in the theoretical framework of society, but that the Sudda had not vanished out of the daily life, and that people were accustomed to say, 'So and so is a Sudda.'

If we are not yet entitled to contest that the concepts Vaisyā and Śudra had parted with an essential part of their ancient significance in the Buddhist age, even then Pāli literature enables us, I think, an occasional glimpse of the newly-forming organisations which drove them out and installed themselves in their place. I think that here we see before us a bit of the previous history of the modern system of caste, inasmuch as we meet with organisations that were destined later to become castes, at a stage which evidently preceded that development.

A passage in the formulary of confession of the Buddhist order of nuns — as given in one of the oldest texts of the Pāli literature — enumerates the courts, especially the corporate assemblies, which possessed a sort of magisterial dignity. The veil of the nun should not be bestowed upon a Chori, without the authorisation of the respective court; it says, anapaloketūvā rājāvā vasāghāvā gaṇaṁ vā pāṇaṁ vā sengāvā vā. The old commentary observes here: rājā nāma, yathā rājā anuṣuddhi rājā apalokaṭaṁ. Saṅgho nāma bhikkhuṁ saṅgho vuccati, bhikkhuṁ saṅgho apalokaṭaṁ. Gaṇo nāma (then in the same way pāṇaṁ nāma, sengā nāma), yathā gaṇo (pāṇaṁ, sengā) apalokaṭaṁ. It will be seen that in this enumeration there is no mention of caste-associations (jātī). Here probably we meet with

(Fick, 165): when it is said there that one should behave properly to Brāhmaṇas and Gahapati, toward the Negamas and theṇṇapadas, it does not manifestly follow that the negamas and theṇṇapadas stood on the same level as the gahapati.

33 Of course, not to the critical consciousness as it prevailed in the Buddhist monastic order itself, which maintained the essential equality of all men (cf. say, the Āsantīyasanānta) — which consciousness, moreover, was sometimes much wanting in consistency, as when the proposition was started that a Buddha could be born only in a Brāhmaṇ or a Kāshtriya family.

39 Here I refer also to the parable of the man who when hit by an arrow, instead of getting himself attended to by the physician, enquires first of all, who it is that has hit him, whether a Kāshtriya or a Brāhmaṇ, or a Vesā or a Sudda (Majjhima Nikāya, Vol. I, p. 429): in my opinion, a satisfactory evidence that people in their daily life had ceased to mind whether a person was a Vesā or a Sudda.

associations, namely the seṣi[42] in which, to all appearance, the tendency to develop into castes in the modern sense, was inherent. Tradition[43] defines seṣi as an association of people of the same or of different jāti, who carried on the same trade. Thus the legal literature enumerates by way of examples, seṣis of horse-dealers, betel-sellers, weavers and shoemakers.[44] The inscriptions also furnish materials; not infrequently, those of the Buddhist cave temples of Nāsik Junnar, &c., where we find a dhanaśikāseṣi, a talapīśhakāseṣi and so on (see Archaeological Survey of Western India, IV, pp. 94, 96ff, 102, 104). Also an inscription of Gwaliar (Saṃvat 933) mentions a saḥṣi of oil-pressers (taḷikā), as also one of gardeners (maḷika)[45]; this last one appears also in an inscription of Saṃvat 1343 coming from Somanātha in Sorath, and so on. The Epic leaves no doubt that ṇaḥṣi acquired an important political significance.[46] We learn from the legal literature that the ṇaḥṣi had their own ordinances and a certain jurisdiction.[47] Their presidents or elders are mentioned in the Jātakas or in other places.[48] It is said of everyone who calls together an assembly of the people, saḥbd senyo sannipāted;[49] it is, however, quite clear that for the time of which the Jātakas furnish a picture, the conception of caste has to be excluded from the seṣi. Seṣi is neither vāṇa nor jāti; the professions in which the corporation of seṣi is found to exist, fall, as the Suttabhisanga has shown us, under the category of Sippaṇ, perhaps also that of Kammaṇ, never under that of Jāti. On the other hand, however, it is no less clear that there are occasions when the seṣis approach the nature of caste. The hereditary character of the professions is, of course, not an inviolable law,[50] although in fact it is a very important rule.[51] There can be no doubt that the heterogeneous character, the greater or lesser degree of defilement which was associated with particular vocations according to the nature of the work, produced an aloofness mixed with contempt among the members, nay, a split among themselves; the frequent local isolation of particular professions in fixed streets or special villages[52]—perhaps wholly, or in part, in consequence of that defilement—must have contributed to the erection of barriers between them. Now, if from ancient times onwards, the thought and life of the nation, accustomed, to the conception of caste as a natural differentiation by birth, was connected—though not indissolubly and not without exceptions— with difference of occupation with such restrictions as were produced by the fear of defilement by intercourse with persons of lower birth: was it not then perfectly natural that out of these guilds or corporations, there should grow up organisations more and more like the castes, and ultimately the castes themselves.[53] We learn of guilds of the Mālikas from a

[42] Pāya seems not to have been taken into account here; according to the definition quoted by Jolly, ZDMG, 50, 518. n. 2 from the Viṣṇuśodāya, the Pāya is a corporation bhāṇaṇātāṃ bhānaṇātāṁ e keśṭhādānsānām grāmāṇaṇātām adisthānānām. In the Vinaya Pīṭhaka may be compared perhaps Chulalakṣaṭṭha, VIII, 4, 1; Nissaggaśi, 30, 1; Pāchittaṭha, 33, 2; 89, 1; Bhikkhuṇī-Nissaggaśi, 8, 1; cf. also Jolly, Königliche Gewalt, p. 15, n. 1.

[50] Dhammap. Affh., p. 239.

[51] One is here reminded of the parents who pondered upon the question whether they should make their son learn ikhyā, gauḍa or rāga, Mahāṛstra, I, 40.

[52] Fick, 179.

Jātaka and also from inscriptions; at the present day there is a caste of the Māli.\(^5\) This transition from one stage of development to another becomes specially clear, if it be observed that what in one place is a guild, corresponds in another to a caste.\(^6\) So I think there can be no doubt left — and here I find myself fully in agreement with Fick,\(^7\) who has anticipated me in arriving at this conclusion, viz. that the guilds which the Pāli literature shows us to have been in such a flourishing condition, are the predecessors, in a very essential part, of the present day castes; and in as much as we see before us the previous stage of the modern castes in the Buddhist literature, therefore we are again convinced that there is no justification for transferring these modern castes themselves back to the period of the texts referred to.

Though in the course of these observations I have allowed myself to be induced, by the original materials discussed, to cast an occasional glimpse at the origin of modern castes, at least from a particular point of view, yet it will not be possible for me here to attempt a comprehensive treatment of the problem in question, which would evidently have to be approached from a good many different directions.\(^8\) It would require a thorough investigation of sources, practically immeasurable in their dimensions, to enable us to bridge over the wide gulf between antiquity and modern times, so far as it is possible for it to be bridged over.

Senart attributes the blame of the errors which he thinks he has discovered in the traditional conception of ancient Indian caste, to the credulity of the philological school who have been carried away, without question or opposition, by the Brahmanical theory, and it has tended to shroud an unprejudiced vision of the real state of things. I am the last person to pronounce the picture of antiquity which has been built up by the philologists working in their studies from the ancient texts alone, to be the best and the only possible picture that research may succeed in drawing. But it would be a matter of immense regret, if amongst those interested in Indian research, certain narrownesses and one-sided views of the philologists should be made too much of, and so discredit the philological method in general — certainly this is not the intention of Senart; but the danger that his book will actually be utilized for this purpose, cannot be overlooked. The philological method, when rightly understood, imposes upon those who follow it no blind credulity with regard to the sources; nor does it in any way prevent them from observing the living present and thus sharpening their insight for a better comprehension of these sources and of those past times for which these sources furnish evidence. What the philological method is expected really to prevent, is the far too rash, far too unrestrained projection of the picture of the present day into the past, and the over-looking, or the disregard, of all that by which the texts prove, without leaving any room for doubt, the existence of forms of ancient institutions differing from the picture before our eyes. In the investigations of Senart are there not points where one could wish that the distinguished scholar had more closely maintained his connection with the "école philologique?"

---

\(^5\) Ibid. § 188. Attention may be drawn to the fact that (according to L. von Schroeder, Indiens Literatur und Kultur, 429) that Somner did confound the castes directly with the guilds.

\(^6\) Pp. 179, 183, 214 ff.

\(^7\) Beside the castes of the \(ṣṛṣṭi\) character, evidently the "ethnic castes" (Fick, 306) might at the same time be subjected to a specially exhaustive investigation.
BOOK-NOTICE.

The Gopālakelicandrıkä is a Sanskrit play, which has been discovered by Dr. Caland among the manuscripts collected by the late Professor Kern and deposited in Leiden. Other manuscripts of the work are not known to exist. The text is not easy, and the manuscript, which is not quite complete, cannot always be read with certainty. In such circumstances, it is not possible to judge with confidence about every detail, but the main features are clear enough, and as the work itself is of considerable interest, we have every reason for being thankful to the editor for making it known to us. It is superfluous to remark that he has accomplished his task with great skill and in an admirable way. Nobody would expect anything else from a scholar of the rank of Dr. Caland. We may disagree with him and even try to correct him in minor points. On the whole however, every sound critic will acknowledge that he has been successful in his readings and interpretations. Moreover he has added to the usefulness of his work by prefixing a valuable introduction, in which he gives a careful analysis and ably discusses the various problems which this new work raises.

The author of the play was a worshipper of Kṛṣṇa, carrying the not uncommon name Rāmakṛṣṇa. His father the Brahmin Dovajit hailed from Gujarat and was a follower of Rāmānuja. The play mentions the Hanumāntātaka and contains a reference to the Bhāgavata Purāṇa. It is therefore possible to state with confidence that Rāmakṛṣṇa cannot be older than the 12th century. On the other hand, we have nothing to show how much later he should be placed. The only terminus ante quem is offered by the date of the manuscript, which, according to the editor, is about two hundred years old.

The author is not known from other sources, and no other work of his has been preserved. He gives no additional information about himself in the prastāvanā. Here the nāṭ̥ī asks the sattradhārā if Rāmakṛṣṇa hailed from the lineage of Daṅḍin, Bhavabhūti or Bā♭avī, since his work is worthy of being represented before a royal audience.

The Śrātrādharā in his reply does not say anything about any previous literary compositions of the author, and the most probable inference is that the Gopālakelicandrıkä was his earliest, and perhaps his only work.

The play was intended to be acted in the presence of some king, before a nyāpamāṇḍalaka (p. 45). The name of the king is not, however, mentioned. We are further informed that the spectators were not ordinary courtiers (śatdṛṣṭha, p. 44), but devotees of Kṛṣṇa (krśhikala, ibidem). From these and other indications the editor rightly infers that the Gopālakelicandrıkä was prepared for representation on the occasion of the rāṣṭramāṭrā, the autumnal festival in honour of Kṛṣṇa. It is not, however, a popular play, and it is expressly stated that, out of consideration for the high-class audience, it has been written only in Sanskrit. As a matter of fact, there is only one short sentence in Prakrit quite in the beginning where the nāṭī starts addressing the sattradhārā in the usual way in Śauraseni, but is interrupted and told to go on in Sanskrit. We may here compare Bā♭avī's Paśčatarā, where Bā♭avī starts speaking Sanskrit when describing the fight. A similar state of things is also found in Bā♭avī's Ḍētāvākya, where Sanskrit is the only language used, and, as mentioned by the editor, in the Hanumāntātaka.

The contents are in agreement with the occasion of the representation, having been taken from the Kṛṣṇa legend. The play thus belongs to that class of dramas which owes its existence to the later development of Hinduism and especially to the popular cult of Kṛṣṇa and Rādā. In § 108 of my sketch of the Indian drama in the Encyclopaedia Indo-Aryan research I have mentioned a long series of such plays, and also the Gopālakelicandrıkä which I had not, however, then seen, wherefore I wrongly supposed that it may have been a chāyānātaka. I shall have to return to this question later on. In this place I shall only remind the reader of the fact that all the Kṛṣṇa-plays whose date can be ascertained, with the only exception of Bā♭avī's Bā♭acarita, are late works.

On the other hand, the common opinion of Sanskrit scholars used to be that popular representations of various episodes of the Kṛṣṇa legend, such as the slaying of Kaṃsas, were one of the chief

1 Dr. Caland thinks that the mention of Daṅḍin in this connection characterizes him as a playwright and adds probability to Professor Pischel's view that Daṅḍin was the author of the Mṛchakātika. I am unable to see how the mention of Daṅḍin's name should prove anything more than that of Bā♭avī's.
sources from which the classical Indian drama has sprung. This opinion cannot any longer be upheld, since Professor Lüders, in his masterly study on the Śātbhindas, has proved that the famous passage in the Mahābhārata, on which this opinion was based, has been thoroughly misunderstood and does not refer to real dramatic performances but to recitations of epical poems accompanied by shadow pictures or some sort of dumb play.

On the other hand, there can be no doubt that dramatical processions and performances of some sort at an early date played a prominent rôle in the worship of Kṛṣṇa.

At the present day such performances are quite common. Much useful information about them has been brought together in William Ridgeway's highly interesting book, The Dramas and Dramatic Dances of non-European Races. Cambridge 1915. We here learn, among other things, that Brahman actors of the Vallabhaśāra sect in Mathūra, the so-called Rādhārāṇīs, earn their livelihood by giving dramatic performances of Kṛṣṇa's exploits, and that they also go to Gujarāt and perform such episodes there. The language used is Braj.

The performances of the Rādhārāṇīs are also mentioned by Growse in his book on Mathūra (second edition, pp. 76 f.). I regret not to be able to consult that work here in Kristiania. Dr. Caland, however, gives a quotation which is of especial interest. We learn that the real actors are children, who do not, however, speak the dialogue, but only act in a dumb show, while one of the Rādhārāṇīs is declaiming in set recitation.

There can be no doubt about the character of the performances of these Rādhārāṇīs. We have to do with a popular drama, and we may safely add that such plays have their roots in a distant past.

Just the same is the case with the old Yatrās of Bengal. These have been described as "a sort of melodrama, the dialogues being mainly conducted in songs." "The master-singer is generally expert in the theological lore of the Vaishnavas. He comes frequently into the midst of the performers and interprets their love as divine love, making a little commentary aside." "When the singers had sung this song, the master-singer would approach and draw the attention of the audience to the description."

The rôle here played by the master-singer recalls the similar state of things in the so-called "Bhava" or popular drama of Gujarāt, which seems to be the linear descendant of an ancient pri

enters," and the latter recites the introductory verse; the prelude is styled sthāpāna; and there are several traces of likeness in style. As Mahendra-vikramavarman lived in the seventh century and Kālidāsa probably was about a hundred years earlier, these features in the plays of "Bhāsa" are therefore no evidence for a date earlier than that of Kālidāsa; and we are fully justified in holding that both the Mattavilāsa and the plays of "Bhāsa" are products of a south-eastern school of drama that had not accepted the rules of technique which later became universal (probably through the increasing influence of Kālidāsa and his school), and that the works of "Bhāsa" are really anonymous products of some humble poet of the seventh century, who did not introduce his name into his preludes because he carried no weight. Hence it is perhaps not unreasonable to conjecture that the king Rājasimha mentioned in the final verses of the play of "Bhāsa" is the Pāṇḍya Tēr-Māran Rājasimha I (ca. A.D. 673)."

These arguments have failed to convince me. We know from the prose portion of the Śāhityadarpana VI, 25 that there was no concession of opinion about what should be understood under the term nāndi. One author (kācīd) was of opinion that it should be applied to the introductory stanza with which most Indian drama is open. Others, and apparently the majority, held that the nāndi did not form part of the actual play but belonged to the pārvavaiṇya, which was not the work of the author of the individual play. We are further informed that old manuscripts of the Vikramorvāṣī arranged the opening of the drama in the same way as in "Bhāsa" plays. I understand the passage so that the Vikramorvāṣī is only given as an instance of this practice of old manuscripts. And we know from the critical apparatus to Hilbrandt's edition of the Mūdrārākṣasa that one of the very best manuscripts of Viśākhadatta's drama places the words nāndyante tatah pravidi śāra-dāśa before the introductory verse. It is not improbable that the usual opening of most Sanskrit plays is frequently due to a remodelling under the influence of the opinion of the theoretician mentioned in the Śāhityadarpaṇa as kācīd, and that the manuscripts of "Bhāsa"'s plays, of the Mattavilāsa and one of the Mūdrārākṣasa manuscripts, have preserved the older arrangement which was once also found in manuscripts of the Vikramorvāṣī. It is impossible to base any conclusions on such a state of things, the less so because even "Bhāsa" is not quite consistent in this respect, no mention whatever of the nāndi being met with in the Madhyamavaiyogya.

Nor am I able to attach any importance to the use of the term sthāpāna instead of prastāvēm in the Mattavilāsa and in "Bhāsa"'s "plays. In the first place, "Bhāsa" is not consistent in his choice of this term. In one of the manuscripts of the Pratiṣṭāyaugandhārayana we read dūrīka, and in Kannabahāra the common term prastāvēm, which is also alluded to in Dūṭlagatīcakasa, is used. On the other hand, the term sthāpāna occurs in Kūlaśekharavarman's Subhadra-dhanājaya and Tapatsaṅgavāraṇa. No chronological inferences can be drawn from such a state of things.

With regard to the likeness of style, I can certainly see that there is some resemblance between the Mattavilāsa and "Bhāsa"'s "plays. And one might urge that the umattaka-scene is of the same kind as the third act of Pratiṣṭāyaugandhārayaṇa. But there are also many details in which "Bhāsa" makes a decidedly older impression than Mahendra-vikramavarman, and the points of resemblance may very well be accidental, or they may be the result of an imitation of "Bhāsa"'s "plays. The third act of the Pratiṣṭāyaugandhārayaṇa has up to modern times been especially in great favour in Southern India.8

The arguments in favour of Professor Barnett's view are therefore, in my opinion, not conclusive. On the other hand, the non-mentioning of the author's name in the opening of "Bhāsa"'s "plays and the fact, which Professor Barnett does not seem to doubt, that the Ācārakṣa is the source of the first four acts of the Myōrakṣi-kākā make it impossible to assign so late a date to "Bhāsa"'s "plays as suggested by Professor Barnett, and I am still of opinion that they are in fact the work of the famous Bhāsa.

At all events, we may safely ascribe the Bālacaketa to an early date and make use of it in examining the question about old Kṣaṇa-plays on the popular stage of India.

The Bālacaketa is a peculiar play, and it seems to be intimately connected with the popular stage.

---

8 In my Indian Drama, paragraph 71 there is a misprint, the fifth act being mentioned instead of the third. Cf. the introduction to the Pratimāntaka, p. xi. When I wrote my Indian Drama, I did not know the Mattavilāsa.

8 In paragraph 75 of my Indian Drama I have, through an oversight, stated that Daśān, Kāvyakālāpadeśa 2, 322, quotes the stanza kṣamuttātā samāhātā from the Myōrakṣi-kākā. He does not, of course, mention his source.
The various apparitions seen by Kaṇḍaś in his dream were perhaps represented in the pantomimic way of the ancient nāṭās, just as is perhaps the case with the Apabhṛṣṭa verses of the Uṛvāṣī. The chief contents are the feats of Kṛṣṇa during his sojourn among the cowherds, ending with the slaying of Kaṇḍaś.

It is quite certain that these tales and legends must have been quite popular and well-known when the Bālakarita was written, and I have little doubt that Bhāsas has transplanted them from the popular stage to the higher play.

The Kṛṣṇa play did not, however, get a firm footing on the higher stage until much later, Bhāsa did not find successors before those days when the later development of Hinduism and especially of the religion of Bakti had set in, and the Gopālakēśandrikā belongs to this later phase of the development. The popular Kṛṣṇa-drama had no doubt flourished the whole time; its firm establishment on the higher theatre, on the other hand, is comparatively late.

The Gopālakēśandrikā is, as has already been stated, written in Sanskrit, and it does not, accordingly, belong to the popular stage. On the other hand, it differs in some important details from all other known Sanskrit plays.

It is called a nāṭaka. It is not however a nāṭaka in the more specialised sense of this word. The term has, as in several other instances, been used to denote a play in general. It is not possible to register it under any of the various types of drama described by Bhārata and his successors.

The division into acts is apparently incomplete. After the end of the second act there is no further mention of the beginning or end of any act. The end of the third and the beginning of the fourth act seem to be missing. At the end of what the editor takes to be the fourth act, we only read tī nīśkṛdātā, whereupon a pravastha introduces the last, probably fifth act, at the end of which the sūtradhāra again makes his appearance and puts an end to the performance with the formula am ativistareṇa, which we know from the beginning of so many plays, declaring that it will not be possible to give a further representation of the ṝda of bhagyavat, because nobody could do so satisfactorily. Then the actors leave the stage, and finally a blessing and a stanza giving the name of the poet are added, whereupon the colophon follows.

A similar arrangement is not found in any other Sanskrit play. There are however also other peculiarities.

The term pravasthā is not used in the same way as in other dramas. It seems to denote the opening of the first act, after the dialogue between the sūtradhāra and the nāṭ, and also the beginning of the third act. In this second place, the passage that follows immediately after the words tāth pravasthā does not consist of dialogues or monologues, but contains a description of the persons present on the stage. A similar description should perhaps be supplied after the same words at the beginning of the first act.

Then, however, the question presents itself, who can possibly be the speaker of such a pravasthā or introductory description, which does not belong to the actual play of the actors. And the same question must be asked with reference to several other passages, partly in prose, partly in verse, which do not contain any dialogue or monologue, but explain the situation or describe the attitude of the persons represented. Such passages are of frequent occurrence and form a peculiar feature of our play.

In one place such a description is put into the mouth of a person called sūrāca, and we naturally infer that he is the speaker of all such narrative or descriptive passages. Dr. Caland refers us for the explanation of the word sūrāca to Hemacandra अधिकारात्मकार्यांतः स्वाम 336, (cf. Yāvānāroka, ed. Oppert, p. 141, l. 136) and states that sūrāca is there given as a synonym of sūtradhāra. Strictly speaking that is not however the case. Hemacandra simply informs us that the sūrāca, the "indicator" in dramatistical terminology, carries the designation sūtradhāra. That is to say, that sūrāca is the wider, better known term, and it is perhaps allowable to infer that it belongs to the terminology of the popular theatre. In the classical drama the sūrāca, who is there called sūtradhāra, does not "indicate" or "describe" in the same way as in the Gopālakēśandrikā. We shall have to ask ourselves if we find any indications that he does, or did, so in the popular play of the vulgar stage. In that case we should naturally infer that the Gopālakēśandrikā represents an attempt at applying peculiarities of the popular stage to the classical drama.

The editor is inclined to think so. He ably discusses the problems raised by the said peculiarity of our play, and suggests more than one explanation in addition to the supposition that we are face to face with a feature of the popular stage. I shall say a few words on these suggestions, which Dr. Caland himself does not think to be the solution of the difficulty.

We might, he says, think of a chāyā-nāṭaka, a shadow-play, where the dialogue and everything else is spoken by the manager, or in certain cases by the sūrāca. Against such an explanation he rightly
urges that the actors are sometimes said to enter after pushing aside the curtain.

Another possibility which he mentions, is that
the play was a reading drama, not destined for the
stage at all, but only meant to be recited or studied
in writing. Against this, however, it is sufficient
to refer the student to the introduction, where
the nāṭka speaks of nāṭandīya and of abhinayapra-
darśana, and where we hear of the samāja, before
which the play is going to be represented.

We are therefore apparently forced to look for
an explanation in the usages of the popular theatre,
and that is also the view which Dr. Caland favours.
He compares the Krishna plays at Mathurā de-
scribed by Mr. Growse, which I have mentioned
above.

I agree with him that we shall have to look in
that direction, but I do not think that we have to
do with a kind of dumb show, accompanied by
recitation by the stācaka.

So far as I can see the play is a new instance of
the tendency which I think we can follow all through
the history of the Indian drama, to draw on the
rich treasure of popular performances for enlarg-
ing the scope of the high-class drama. In a similar
way this drama itself came into existence, and later
on we can over and over again observe how dra-
matical peculiarities were transferred from the
village stage to the learned theatre, so that new
dramatical types arose and got a firm footing. In
this way the shadow-play has obtained its place
in higher literature, and in this way we must
account for the numerous upārāpakaśa and secondary
species. The theoretical treatises of dramaturgy
have always exercised a strong controlling influence
on development, but they are in their turn based
on the existing literature and had to be enlarged
when new dramatic types came into existence.
Bharata himself could do nothing more than
put together the old rules about the arts of the
stage and register and describe the various kinds
of dramas existing at his time, even if they were
only represented by a single specimen, as in the
case of the Samavakāra. And his successors
have followed in his footsteps.

It is just the same thing which we observe in
India's religious history. Local and popular
cults are raised to the rank of Brahmanical religion.
Śiva has some of his roots in conceptions which
were not from the beginning Aryan. Buddhism
and Jainism gradually came under the influence
of Brahmanical thought. Some of the most pro-
minent reformers of modern Hinduism were Bra-
hmans, and so forth. The Brahmans are of course
the guardians of old traditions and they have often
been described as reactionary enemies of progress
and development. That is, however, only one side
of their physiognomy. At all times they have
also been the pioneers who have assimilated new
ideas and even elements of foreign civilisations,
melted them together with the traditional lore, and
finally given them that Indian stamp which has
the effect that the whole Indian civilisation, in spite
of all differences, imparts an impression of unity
and harmony.

In the case of the drama we know that the oldest
playwright whose works have come down to us,
and the first author of a theoretical treatise on
dramatical act were Brahmans, and poets filled
with Brahmanical spirit have over and over again
assimilated more and more of popular dramatic
genres and raised them to the rank of high
literature.

The Gopālakalideandrikā is a new instance. It
is a new transplanting of the popular plays of
the Kṛṣṇa worshippers to the higher stage, and it
has transferred the activity of the describing and
explaining head-singer or manager into the technical
of the classical theatre.

That is the chief interest that attaches itself
to Rāmakṛṣṇa's play. We may some day find other
plays of the same kind as the Gopālakalideandrikā.
It is, however, just as possible that it represents a
solitary attempt and never found successors. The
discovery of this novel species shows that the
development of the classical Indian drama was
continued up to comparatively modern times, and
if Sanskrit should ever again become the language
of the highest civilisation in India, there is no
doubt that this development will continue. We
already possess an adaptation of Shakespeare in an
Indian Sanskrit play. We may some day find
Indian plays in imitation of Goethe or Ibsen. But
we may rest assured that India will eventually
remodel all such adaptations in her own spirit.
The great importance of India in the history of
human civilisation does not only rest with the
original productions of the Indian mind, but also
with its genius for assimilating new and foreign
elements, and giving them a truly Indian stamp.

SHER KONOW.
