Preface

In the course of my explorations of historical sites in the river valleys of Tamil Nadu, early in my teaching career, I was struck by the size and monumental architecture of Pallava-Cōla centres like Kumbhakōṇam (Kaveri Valley), Kāṇcīpuram (Palar Valley) and Ambasamudram (Tamraparni Valley). Despite some differences, they attracted attention due to their long historical past, development of enduring institutions like the temple and centuries of evolution into huge temple towns in medieval times. A nagging and compelling thought that such centres need to be studied not only for their striking visibility as towns/cities but more importantly as a part of the processes of urban development in pre-modern India, pursued me especially as urban processes had not received the attention that was due. In the late seventies my interest grew and ideas were refined which instigated a close look at urbanization and the city.

Hence began a most stimulating series of exercises in trying to understand the urban processes and the character of the city in early medieval South India (AD 600–1300), starting from Kumbhakōṇam, to Kāṇcīpuram and Taṇjāvūr, their hinterlands and role as prime movers in the shaping of the politico-economic and cultural configurations of this region. Better perspectives on early medieval urbanism emerged when a comparative study was made with the early historical period. (300 BC–AD 300). Early historical urbanism was shown to have significant differences in urban form and experience, with maritime trade and external links dominating the urban process and with urban centres developing along South India’s long coastline but lacking institutional foci like the temple.

This book is the end result of forays into these two periods of urbanization. Of the present collection of eight essays, six are revised and enlarged versions of published ones (see list on p. viii), while the other two have been
written for this volume together with an introduction setting out its aim and formulations.

List of Published Essays

2. 'Urbanization in Medieval Tamil Nadu', in Situating Indian History for Sarvepalli Gopal, Sabyasachi Bhattacharya and Romila Thapar (eds), OUP, Delhi, 1986. (Chapter 4 in this volume).
3. 'Urbanisation in South India: The Role of Ideology and Polity', Presidential Address, Ancient India Section, Indian History Congress, 47th Session, Srinagar, 1986. (Chapter 1 in this volume).
5. 'Urban Configurations of ToṇḍaiMaṇḍalam: The Kāṇcipuram Region, c AD 600-1300', in Urban Form and Meaning in South Asia (Studies in the History of Art, 31), Howard Spodek and Doris Meth Srinivasan (eds), National Gallery of Art, Washington D.C., 1993. (Chapter 7 in this volume).
6. 'Medieval South Indian Guilds: Their Role in Trade and Urbanisation', in Ideology and Society in India, Essays in Honour of Professor R.S. Sharma, D.N. Jha (ed.), Manohar, Delhi, 1996. (Chapter 5 in this volume).
Acknowledgements

It is to Professor Romila Thapar that I owe this book, in which I have put together my essays on urbanization in South India, an endeavour, which I would not have undertaken but for her suggestion and constant assurance that the essays stand together due to their thematic unity and common framework. My thanks are due to Professor Shereen Ratnagar, my friend and colleague, who willingly spared long hours of her time discussing some of my problems in dealing with the concept of urbanism and urban processes. My colleague Dr Neeladri Bhattacharyya has in many ways helped in the organization and presentation of the volume.

My special thanks are due to Professors Atiya Habib Kidwai and K.S. Sivasami of the Centre for the study of Regional Development (CSRD), Jawaharlal Nehru University, for making available to me maps of South India for preparing the base maps for the cartographic illustrations in the book. To Mr Akilesh Mathur, the Cartographer in CSRD, I express my sincere thanks for doing the maps in a remarkably short time for the publication. These maps are based on earlier versions prepared by Messrs A.N. Sharma, Deshpande and Dr Sudhir Malakar. Y. Subbarayalu’s work on the Political Geography of the Chola country has been of immense value in the location of nādus and kōttams in the maps.

For the illustrations in the chapter on Taṅjavūr, I am indebted to the Indira Gandhi National Centre for the Arts, especially its Academic Adviser Dr Kapila Vatsyayan, for providing me with the relevant photographs and slides on the Taṅjavūr temple. Dr M.C. Joshi, Member secretary, IGNCA and Ms Krishna Dutt, in charge of the project on Taṅjavūr were extremely helpful to me in choosing the best in their collection.

The map on the Tamraparni valley urban core (Map 8) is an adaptation from the map of this region published in R. Tirumalai’s book Rajendra Vinnagar. To Mr N. Sethuraman of
Kumbhakonam, I am grateful for the Map of the town in 1980, which has been suitably modified for the chapter (Map 12) on this centre. The ground plan of the Varadarajaswami temple in Kanchipuram follows closely the one published in Dr K.V. Raman’s book Sri Varadarajaswami Temple Kanchi: A study of its History, Art and Architecture.

My grateful thanks are also due to Mr Venkatesh Naik, research student in the centre for Historical Studies, J.N.U., who prepared the index to this volume and to Mrs Choodamani Venugopal and Mrs Kameswari Viswanatham for typing the Manuscript.

It is with great pleasure that I express my thanks to the Oxford University Press, New Delhi, for not only publishing the book with remarkable speed but also for doing it well.
## Contents

Maps and Illustrations  
Abbreviations  
Introduction  

1. Phases of Urbanization: An Overview  
2. Stimulus from Outside: Urbanization in the Early Historical Period c. 300 BC to AD 300  
3. External Trade: Evidence from Early Tamil Texts  
4. Developments Within: Urban Processes in the Early Medieval Period c. AD 600 to 1300  
5. The South Indian Guilds: Their Role in Early Medieval Trade and Urbanization  
6. Imperial Power and Urban Growth: Kuḍamūkku Paḷaiyārai: The Twin Cities of the Cōḷas  
7. The City and the Hinterland: Kāṇcīpuram and Toṇḍaimāṇḍalam  
8. Urbanization from Above: Taṅjavūr, the Ceremonial City of the Cōḷas

Urbanism and the city have been the focus of scholarly attention among social scientists despite the elusive character of urban theory and definition of the city. Attempts have been made to evolve perspectives of urbanism and urbanization from the simplest of explanatory criteria for urban centres to complex theoretical formulations to understand urban processes in their spatial and temporal diversity and in a variety of socio-historical contexts.

One of the major questions which has been posed by these exercises, is whether it is the form of urbanism or the substance which characterizes it that should be the focus of analysis. The tendency of attributing analytical significance to the form at the expense of the substance seems to have been influenced by the powerful impact that the western industrial city has as a 'social form' in which 'the essential properties of larger systems are grossly concentrated and intensified'.

The impact of the western city has also led to a sharp distinction being made in the studies of western and Asian cities, the western cities as symbols of economic vitality and political autonomy, and the Asian cities or urban forms as predominantly political and cultural rather than economic phenomena. Recent research has pointed out that this dichotomy is as hallowed as the contrast between town and country. The second major question often raised in urban studies is that of the validity of the conceptual separation between the town and the country, i.e. that of a dual economy, the rural and the urban. This duality is now being abandoned except as a 'social division of labour in the larger whole'. The inseparability of the town from the larger social environment is stressed and towns are regarded as sites in which the history of larger social systems—states, societies, modes of production, world economies—is partially but crucially worked out.

Similarly, the validity of treating the town as a distinctive
social structure, i.e. a special entity having a structural autonomy or as 'a focus of analysis in its own right', is now largely rejected and instead, urban analysis 'through a broader societal analysis' or as 'a part of the analysis of those broad socio-economic changes with which history is concerned', has gained general acceptance. Hence, in the more recent works on urban history and the city, the central concern has been urbanization, i.e. the processes of urban growth leading to the rise of the city. In other words, urbanism is perceived as the product of societal change, the manifestation of certain economic and social systems at work, as exemplified by the temple cities of South India, which are marked out by their form and role in society as both physical and social objects.

It is the above approach to urban studies that is adopted in the present volume. In addition, other significant and influential concepts relating to the city and urban forms have also been found relevant to the study of urbanization in pre-modern South India.

Typology has been an important though 'orthodox' device in urban analysis both among historians and sociologists. The best known among typologies is the classic distinction made by G. Sjoberg between the industrial and pre-industrial cities, which would seem to coincide with the distinction sociologists make between cities in traditional and modern societies. Sjoberg's is a useful distinction but is only a 'constructed type', no homogeneity or uniformity in structural pattern being implied for the pre-industrial city. There is no 'one basic language' as Fernand Braudel pointed out, 'for all cities of the world within their very depths'.

The orthogenetic and heterogenetic cities, a model introduced by Robert Redfield and Milton Singer, has influenced studies of traditional and colonial/modern cities as seen in Susan Lewandowsky's study of Madurai and Madras. Colonialism has often provided a visible marker for differentiating the cities in Asia as traditional (orthogenetic) and colonial (heterogenetic). The impact of colonialism has been so overrated as to be able to explain a 'drastic' change in the urbanism of India, China and Southeast Asian countries. With colonialism, the western kind of city is believed to have been imported. This would seem
to be an incredibly simple explanation of the emergence of new types of cities, where the physical structure and composition of the city change due to the heterogeneity of ethnic and cultural groups. The real question, however, is how far was it a metamorphosis and how far, if at all, did it affect the internal (core) aspects of the local cultures, i.e. the pre-existing forms and structures. That no uniformity can be recognized in the colonial context is pointed out by studies on colonial towns in South India, which stress the importance of understanding pre-existing forms. Some of these pre-existing structures are the main concern of the present volume.

Furthermore, the orthogenetic and heterogenetic cities are not exclusive to traditional and modern cities respectively, as has been shown by the neo-Weberian approach of Eisenstadt and Shachar, who distinguish between forces of centrality and those of concentration operating in different periods and different socio-historical contexts. A similar distinction is made by Howard Spodek in what he calls a nodal vision or perspective for heterogenetic centres and a palimpsest, i.e. stability within indigenous culture for orthogenetic centres of urban activity. Spodek tries to evolve this distinction on the basis of a study made by several scholars of cities in South Asia ranging from early historical Taxila to modern/colonial Madras.

Typologies or distinctions in city-types are also made within specific historical contexts and are often attributed to factors to which a certain primacy is given as causative or innovative, leading to types such as political/administrative centres, military centres, trade or commercial centres, religious centres and so on. While this is common in the conventional economic histories, it persists in more recent works on urbanism, which lay stress on the causative role of certain factors. However, in the long period of social and economic change generating urban forms, an elaborate complex of factors is mingled in a processual change. Agricultural expansion and intensification is often a necessary pre-condition to change in which improved technology, e.g. irrigation, is a major resource. Social division of labour, productive labour and surplus, storage of surplus, institutional mechanism for surplus extraction, large-scale communal and monumental activity, a complex social organization
and a well-developed power structure contribute to the formation of cities. Population increase, competition for land, warfare and tribute are recognised as outward manifestation of urbanism, particularly in early cities. Stable systems of trade, artisans and merchants as permanent community fixtures, specialization of crafts, transport innovations, all of which are often cited as urban forms, would seem to operate in different degrees and at different levels in the evolution of urban centres. Thus, causative factors may occur in different orders of primacy in creating distinctive types. While economic factors are basic to urban growth, often what is required is a focal point for mobilization and redistributive activities, which, in pre-modern societies, was often provided by an ideology, usually religious. As Paul Wheatley points out:

It is doubtful if any single autonomous causative factor will ever be identified in the nexus of social, economic and political transformations which resulted in the emergence of urban forms, but one activity does seem in a sense to command a sort of priority. Whatever structural changes in social organization were induced by commerce, warfare, or technology, they needed to be validated by some instrument of authority if they were to achieve institutional permanence.

Given the diversity of the phenomena called 'urban' Wheatley’s characterization of the concept of urbanism ‘as compounded of a series of sets of ideal type social, political, economic and other institutions which have combined in different ways in different cultures and at different times’ is significant. In other words, urban studies should be situated in specific socio-historical contexts in terms of their spatial and temporal spread.

Urban sociologists would treat towns as fields of social power as an alternative framework of analysis, i.e. towns as social realization of power, stressing the continuity of social stratification between town and country. Power and the pattern of domination have been the main concerns in the discussion of towns by Weber, Braudel and even Sjoberg, who see the town internally and externally as an institutional expression of power. Following Weber, Philip Abrams uses what he calls the complex of domination for a better understanding of the
nature and functions of towns in a larger social context, i.e. a struggle to constitute and elaborate power.\textsuperscript{23}

Weber’s concept of ‘non-legitimate domination’ appeared crucial for the medieval European town where the burghers usurped power in pursuit of rational economic action, freed from the dependence on the ‘legitimate’ (feudal) authorities and in turn established dominance over artisans and peasants. This, it is believed, was conducive to the building of the cultural and economic base for the emergence of capitalism.\textsuperscript{24} These ‘non feudal islands in the feudal seas’ have been characterized as the primary source of change and economic growth towards capitalism.\textsuperscript{25}

On the contrary, more recent research looks at the rise of towns as a process internal to the feudal system and medieval towns are considered as integral elements of it.\textsuperscript{26} The persistence of feudal patterns of social control within towns, it is argued, acted as a disincentive to economic innovation, pointing out the rural rather than urban origins of capitalism.\textsuperscript{27}

In India, the feudalism theory as applied to the study of the land grant system and polity and society in the early medieval period and the continuing debate on the validity of the concept in the context of several regional studies, especially that of South India, have raised several questions, one of which is related to the emergence of a burgher class creating a situation of ‘non-legitimate domination’. No burgher class seems to have emerged in India which confronted the existing patterns of rural and urban overlordship, as one may recognize in the nature of the nagarattār or merchants of South India, whose market towns were complementary to the agrarian regions, of which they were markets, and not opposed to them.\textsuperscript{28}

In the study of urban processes, another useful distinction is that of primary and secondary urbanization. In primary urbanization the rise of cities is solely the result of internal developments, although not in complete isolation, for external influence in varying degrees could induce such development as in Shang China and to some extent in Mesopotamia and Central America.\textsuperscript{29} Wheatley would see the character of Chinese cities as a distinct independent development—i.e. \textit{sui generis}—or a process of generation and not imposition of urban forms.\textsuperscript{30}
Secondary urbanization is the direct outgrowth of the expansion of empire, wherein forts and regional administrative centres, established for political and economic control, could act as centres of diffusion of metropolitan culture, i.e. technology and other knowledge. The workings of the sophisticated administrative and technological structure of the conquering society provide the skills to the locals, helping them to ultimately to assert their independence. This appears to be directly relevant to colonial history which provides examples of secondary urbanism. Apart from the relevance of secondary urbanization in a colonial context, it would also be interesting and pertinent to see whether the expansion of early empires like that of the Mauryas, characterized as a metropolitan state, induced secondary urbanism in regions like the Deccan and Andhra, where, in the post-Mauryan period, Mauryan influence both in administrative structures and trading networks would seem to have been predominant. It would also appear then that the primary and secondary urbanization are representative of the same processes as those of the formation of pristine and secondary states of Morton Fried. In secondary urbanization there is either a process of generation inspired by the extension of empire, or direct imposition of urban forms, i.e. organizational patterns developed by the conquering state. Wheatley uses this distinction to explain the establishment of early Chinese style settlements in a colonial context in Sine-Viet territories as urban imposition, and the internally induced restructuring of society in the 'Indianized' realms of mainland Southeast Asia as urban generation, although of the secondary form.

The city's role as a locus for change, the city as the focus of power and dominance, and the city as an organizing principle or creator of 'effective space', have been the most influential paradigms in the concept of the ceremonial centre, admirably worked out by Paul Wheatley for early Chinese cities and subsequently applied to Southeast Asia (Angkor) and Sri Lanka (Anurâdhapura).

It is in working out the concept of the ceremonial centre that a religious ideology and the institutions that were evolved to create 'effective space' and to constitute and elaborate power,
became the main issues in the study of 'pre-industrial' or traditional cities. It is by no means implied here that religion was a primary causative factor. Rather it was one which, as in the Mesopotamian case, 'permeated all activities, all institutional change and afforded a consensual focus for social life which manifested itself in all cult centres'. Religion became the focal point for collection and redistribution of resources and religious centres had their granaries and records of accounts. The control over such institutions was taken into the hands of the priestly-cum-ruling elite as economic administrators and, thus, religious authority and political and social power became inseparable. Massive constructions like palaces (China), tombs (Islamic centres) and temples (India) undertaken at the ceremonial centres were beyond the power of local groups. They are symbols of the concentration of social and political power derived from a sacrally sanctioned authority. It may be pointed out that the power structure developed by the brāhmaṇa-ksatriya elite controlling the ceremonial centre in South India, where political and religious authority is poorly discriminated, is an important illustration.

The ceremonial complex receives central importance in the emergence of urban forms and in the shaping of pre-modern (pre-industrial) cities in studies on urban historical geography. In his study of West Asian cities, Harold Carter makes urban history space and period specific, related to locations where urban spatial history and urban historical geography overlap and merge. The approach to urban historical geography is through the city as artefact and spatial patterning as the central theme. Spatial pattern is the consequence rather than the central focus in urban history. However, the city and its patterning can provide the evidence for interpreting attitudes and ideology. Here, religion is not given primacy as the single cause, but as providing a focus, a validating instrument for urban institutions.

Religion does not mean the mere existence of beliefs in the other world and cult practices, which admittedly precede urban beginnings. It is that point of development in which a formalised system of beliefs and practices, with claims to universalism, plays a significant part in the process of transformation, requiring mediation through worship and sacrifice, i.e. through institutional
means, and enables a certain politico-religious elite to command priority and exercise authority. As Eisenstadt points out, in the progression of various technological and other factors, a catalyst led to a metamorphosis of the older kin-structured tribal organization into a class based one—such as the temple, fortress or market place. In South India, such a change may be perceived from the early historical urbanism to the early medieval urbanism, the early medieval temple assuming the institutional focus.

The basic modes of symbolism used in the process of working out the concept of the ceremonial centre are adopted by Wheatley from the work of Mircea Eliade. These are the imitation of celestial archetype, parallelism between macrocosm and microcosm, participation in the symbolism of the centre, technique of orientation to define the sacred territory within the continuum of ‘profane’ space involving an emphasis on the cardinal compass directions.

Some form of centralization of control over labour and land, as well as all kinds of produce, is taken to be an invariable component in the rise of the ceremonial centres. The main functions of such centres were those of redistribution, the movement of commodities being towards the centre, the appropriate role being implicit in the physical disposition, as well as the organization of the shrine. The crystallization of urban forms also brought into existence at the same time the earliest state institutions. To a considerable extent this is illustrated by the early medieval urban forms and state institutions of the Tamil macro region.

II

Three major periods of urbanization have been identified in pre-medieval (pre-Sultanate) India. The first is represented by the proto-historic cities of the Harappan/Indus Valley culture assignable to a long period from the middle of the third millennium to the middle of the second millennium BC. The urban character of this phase is recognizable in a hierarchy of settlement sites, in the planned cities, in the urban infrastructure
provided at Mohenjo-daro, their design, monumental architecture and orientation, apart from other significant archaeological evidence. This culture was, however, confined to the Indus region, spilling over into other geographical regions of the subcontinent and interacting with other cultures. The major part of the subcontinent remained unaffected by this early urbanism, which, in fact, left no legacy beyond the middle of the second millennium BC.

The second period of urbanism, the epicentre of which is located in the Ganges valley, was spread over a long period, from the middle of the first millennium BC to the third century AD, and is often attributed to the maturity of the iron age and the expansion of trade within the Ganges valley, and from the Ganges valley to other parts of India, covering almost the whole of the subcontinent. In the Ganges valley, this phase of urbanism was one of primary generation, i.e. a process of internal development. Its impact in peninsular India may be seen as generating urban forms due to the spread of trade and commercial activities from the Ganges valley. More significant in peninsular India was the impact of maritime trade. In the Deccan and Andhra regions this period is understood to be one of secondary urban generation and secondary state formation, which became two inter-related processes induced by the expansion of the Mauryan empire. While this general assumption appears to be valid in terms of political processes in the Deccan and Andhra in the post-Mauryan times, the generation and nature of secondary urbanism in these regions is yet to be substantiated on the basis of detailed studies of towns from the Mauryan to the Ikṣvāku periods (third century BC to third century AD), both in the Ganges valley and peninsular India. Regional variations in this phase of urbanism are crucial to an understanding of the degree and intensity of secondary urban forms in Tamilakam, where the impact of Indo-Roman trade was greater and the influence of Mauryan polity was minimal.

For peninsular India, this phase represents the first urbanization, which is better understood through regional and sub-regional studies, although commonalities may exist across regions. Only a beginning has been made in this direction, i.e. in the understanding of urban processes in regional contexts.
Much of the Andhra and Deccan areas, studded with various types of settlements, is yet to be researched from the standpoint of urbanization. The study of settlement patterns, i.e. historical geography, is a necessary step towards this understanding and a few works have been undertaken based on such an approach. For Tamilakam, in the early historical period, the study of settlement patterns, ecology and forms of production has demonstrated the need for such an approach and provided useful insights into the nature of economy and urban forms.\textsuperscript{49}

The Deccan and Tamilakam illustrate contrastive urban experiences, particularly in the emergence of trading patterns. Larger networks, guild organization of merchants and craftsmen, which facilitated a more intensive and organized commerce, marked the new economic system of the Deccan, to which were integrated several centres of craft production in a situation where trade was not stimulated by an agricultural surplus but by supply of manufactured items. It was this factor which sustained some of the central Deccan settlements, as a recent study\textsuperscript{50} shows on the basis of archaeological data. The segmented nature of political power of the pre-S\textsc{\textaccenttextsuperscript{a}t}av\textsc{\textaccenttextsuperscript{a}h}ana times changed under the new forces of Ganges valley urbanism and Mauryan polity, enabling interaction between traders and craft production in areas under the control of tribal communities. Attention is drawn to differences in the character of settlements in central, southern and western Deccan and Andhra region (eastern Deccan) in such studies.\textsuperscript{51} Thus, the need for studying sub-regional patterns is partially met by these works. The Andhra region still remains largely unexplored from this point of view.

Notwithstanding such basic differences in the nature of settlements, a major thesis by R.S. Sharma\textsuperscript{52} on urban decay and de-urbanization in post third century AD in the whole of the subcontinent treats the early historical settlements as homogeneous, i.e. makes no distinction between rural or urban basis of economic activities in them, nor tries to identify the functionally different character of crafts and trade centres. That such a homogeneity did not exist may be illustrated with the help of several sites in the Tamil region (as in other regions of the peninsula), where similarity in artefacts/material culture in different contexts, like Megalithic sites, inland and coastal
settlements, cannot be construed as evidence of urbanism or its decline. The problems with this theory of de-urbanization and its consequences in relation to Tamilakam are discussed in greater detail in the next section (Section III).

According to this theory of urban decay, the climax of the early historical urbanism is to be located between 300 BC and AD 300, and an overall decline may be recognized in the archaeological evidence of the early historical sites. A long period of de-urbanization is believed to have set in during the Gupta and post-Gupta times (AD 300 to AD 1000), the first stage, third to sixth centuries AD, representing a transition, and the second stage, seventh to tenth centuries AD, a new socio-economic formation. The prime causal factor in urban decay is traced to the decline of long-distance (maritime) trade, i.e. Indo-Roman trade and trade with Southeast Asia, by the third century AD, and the manifestations of the decline are seen in the absence of Roman coins after third century AD, a general paucity of coins as well as the poor nature of archaeological remains of the Gupta period in the northern sites. Literary and epigraphic evidence is also sought in the lack of references in inscriptions to artisans and traders and the latter's participation in administration, of forecast of bad days for the artisans and merchants in literary texts and references in foreign accounts to desertion of towns, especially Buddhist centres, by travellers like Fa Hsien and Hsuan Tsang. Sharma's emphasis on urban decay is significant especially because an attempt is made to establish a causal link between urban decay and the emergence of feudalism, with a ruralization of the economy. A series of changes is related to this decline, such as ecological changes in the Ganges valley, the social upheaval associated with the Kali age of the Purānas first occurring in the third and fourth centuries and subsequently in the seventh-eighth centuries, land grants or grants of villages and even towns as fiefs in an all pervasive land grant system, which feudalized the economy, including the towns where even merchants and artisans were transferred to the beneficiary of the grant. Other consequences of the decline which are enumerated are the migration of artisans and brāhmaṇas from towns, localization of crafts in rural areas, obliteration of distinction between town and country, demonetization of economy, closed economy, the jajmāni system
and sub-infeudation. The strengthening of the agrarian economy and the regrouping and reorganization of social relationships within the ideological framework of the varṇa system, all occupational groups ossifying into castes, are seen as the social aspect of the change.55

The decline of early historical urban civilization is envisaged in terms of a collapse of the early historical social order, rending the fabric of that 'normative order', the transition to the early medieval period being located in the social upheaval, i.e. the crisis of the Kaliyuga. The crisis and the fall of the early social order is further associated by yet another study by R.N. Nandi, 56 with a change in the nature of brahmanical dāna rites, introduction of new ones by the brāhmaṇas, change from the urban gift exchange of the Grhya texts to the agro-based dāna oriented jajmāni relations of early medieval Smṛti and Purānic literature. The idea of the tīrthayātra linked to expiatory and purificatory rites is said to have helped the brāhmaṇas to build up a new clientele and new avenues of support. What is significant in this connection is the attempt to establish that the decay of early historical towns led to migration of brāhmaṇas from these towns to rural areas and that as a result of the new dāna rites and tīrthayātra concept, these early towns turned into tīrthas or pilgrimage centres.

The historical phenomenon of the decline of urban centres by the third century AD is generally accepted among historians studying early historical urbanism and the new socio-economic order of the early medieval period.57 Yet, researches in early medieval urbanism have raised several questions as to the validity of this generalization for the whole subcontinent and the long period of de-urbanization after the third century AD. Examples of the continuity of inland trade and of urbanization associated with it are found in early medieval centres of the ninth century AD in the Doab and Western Ganges valley in the Gūjara Pratihāra period (ninth to eleventh centuries). Typological differences notwithstanding, these centres, which were not planned townships, appear as central points in local commerce, in which the conglomeration of bhattas (godowns) and residential areas led to initial urbanization, not precluding the effect of long-distance trade.58
In Rajasthan, evidence of the emergence of exchange centres has been found in different pockets as a continuous process in an agrarian context. They appear as nodes among clusters of rural settlements, where commercial levies were collected, some of them also being centres of political power, e.g. Naḍdula or Nadol, a Chāhamāna centre. Although the intensity of commercial exchange was unequally distributed, a complex pattern of trade involving a wide range of goods, agricultural as well as high value items, use of coined money along with other means of exchange and a hierarchy of exchange centres have been identified. The ascendancy of local merchant lineages, like the Oesvālas and Śrīmālas, their interaction with itinerant traders from distant regions in an expanding network of intra-regional and inter-regional trade are other significant aspects of this urbanism.

No definitive studies on early medieval urbanism in the Deccan and Andhra regions are available. Yet, similar patterns are indicated by current research on early medieval urbanization and some aspects of economy in general, which highlight the economic aspects of urban growth in comparative studies of selected sites. It may be noted that the tendency in all these works is to emphasise the importance of trade, both inland and maritime, as the major factor in urban growth, thus assigning primacy to economic factors and ignoring others, including the political. One of the major concerns in the present collection of essays is to study the mingling of several factors, economic, political and ideological, in varying degrees of importance in early medieval urban processes.

Trade, crafts and commercial activities and their institutional organization seem to dominate studies on urbanization, both in the early historical and early medieval periods. Hence, in the attempt to seek overall perspectives, no difference is perceived in the basic nature of early historical and early medieval urbanization.

Economic criteria are no doubt basic, often dominant and uniformly significant in urban genesis and particularly useful in distinguishing spaces allotted for rural and urban functions. Yet, a predilection for economic criteria, as capable of explaining urban forms and patterns in different periods, often results in
a partial understanding of the processes and structures. It has been pointed out that even where direct correlations are found between forms of urbanism, on the one hand, and modes and stages of economic growth, on the other, such relationships cannot be treated as self-explanatory. Cultural and ideological forces could bring about new institutional foci for economic activities and could induce processes different from one phase of urbanism to another, or even play a dominant role in determining the city’s ultimate character and morphology by leading to the genesis of its institutions for creating ‘effective space’, i.e. that organizing and regionalizing principle, which is the essence of urbanism.

It is in the nature of this organizing principle and its institutional forms that the early medieval urbanism differed from that of the early historical period. The distinction lay in the ideology, viz. on the one hand Buddhism and its institutions, in the early historical urban phase facilitated the evolution of urban forms in the trade and commercial centres, and the building of communication networks; on the other, the brahmanical ideology created new institutional means to build up cultural and religious networks, which facilitated trade and commerce in the early medieval period.

The differences go beyond institutional forms to the sphere and pattern of patronage and relations of dominance that developed in the two periods. Buddhism, patronised by rulers and merchant communities alike, initiated a process of change in societal organization by providing institutions like the Sangha and a more universal ethic, at least in theory, and a social thought cutting across caste and creating a sense of community, a community of monks (renouncers) and lay followers, a contrast to the brahmanical ideal of varnāśramadharma. Urban centres being places where people interact, work and have transactions with others not of their own caste or community, the Buddhist ideal of non-caste organization and association would, no doubt, have enabled institutionalized dealings with strangers (non-kin and other caste groups) and with foreigners.

State patronage to Buddhist institutions was more in the interests of promoting trade and networks of resource movement and accumulation and less an act of legitimation of their power.
The complex of domination in those centres of Buddhism was distinct from the political centres, particularly those of the Sātavāhanas and Ikṣvākus. Indeed, the Buddhist Sangha was an alternative source of authority distinct from priestly power and the coercive authority of the state. On the contrary, the early medieval authority structure was created by the state, in which a coercive ruling power and priestly authority combined to bring about a complex of domination, both in the rural and urban centres, and a continuum of social hierarchy, which was more fully enacted in the cities.

The monumental forms like the stūpa were not royal projects but were a result of individual gifts brought together through a religious identity and a more loosely defined social identity. The stūpa became the symbol of the Sangha and its authority. Interestingly, the vihāra or the monastic structure, as well as the stūpa were located in the outskirts of most urban centres and did not form the nucleus of an expanding settlement. Community patronage declined from the middle of the first millennium AD and it was replaced by royal and priestly patronage as well as elite participation in gift-giving. In fact, the early medieval temple was invariably a royal project, both for legitimation of political authority and as an institution of integration, mobilization and redistribution of resources. The pattern of social dominance is reflected in the architectural components of the temple complex, particularly in cities, as centres of politico-cultural regions within the Tamil macro-region, a conclusion which is inevitable as seen in the studies of centres like Taṭājāvūr and Kāṇcīpuram.

III

The present collection of essays aims at providing regional perspectives based on empirical studies of specific urban centres within a socio-historical and cultural context highlighting the major incentives and focal points for urban growth. The region chosen for study is Tamilakam, which in the early historical period covered a larger geographical area than the present Tamil

* From the tip of the peninsula in the south to 13° north latitude would roughly indicate this region.
Nadu or even the early medieval Tamil macro region, i.e. it included present Kerala region as well till about the seventh-eighth centuries AD. The periods covered by these essays are the early historical and the early medieval, i.e. third century BC to third century AD and sixth to thirteenth centuries AD.

In the early historical period, urban forms emerged in restricted zones, i.e. urban enclaves in two eco-zones, viz., the marutam (plains) and neital (coast/littoral) in the form of consumption points and trading ports. Some transit zones like the semi-arid Kongu region, rich in mineral resources, acted not only as route areas but also as craft production enclaves. This early urbanism was not the result of the forces of an inner growth but was of a secondary generation induced by inter-regional trade, mainly coastal, between the Ganges plains, Andhra and Tamil regions and overland between the Deccan and Tamil region. More significantly, it was induced by maritime commerce between South India and the Mediterranean west and subsequently with Southeast Asia. However, unlike in Sātavāhana Deccan, this secondary urban development does not seem to be related to secondary state formation, as Mauryan imperial and cultural influences were less direct than in the Deccan and Andhra regions. In other words, political processes were not functionally related to urban genesis, which was mainly the result of external stimulus and hence were not at the core of the transformation. Early Tamil society did not emerge fully out of its tribal basis to evolve into a full-fledged state-society.

It would seem that ‘urban revolution’ in this period was an almost ‘mysteriously sudden impulse’ to change due to external stimuli, i.e. maritime trade. The withdrawal of the stimuli led to the decline of this phase of urbanism which coincides with the disappearance of the early ruling families of the Cōla-Cēra-Pāṇḍya lineages creating a ‘political vacuum’, i.e. lack of clear political and economic configurations till the rise of the early medieval kingdoms of the Pallavas and Pāṇḍyās by the end of the sixth century AD.

Urban decay, which is believed to be a general historical phenomenon in the subcontinent in the post third century AD, is less clearly attested to in this region both in archaeological records and Tamil literary traditions, the latter being more
concerned with the decline of the ruling families than with the decay of urban centres. Nor do they refer to artisans and merchants falling on bad days or to their migration. On the contrary, the post-Sangam literary works such as the epics, Śilappadikāram and Maṇimēkalai, point to a continuity of trade activities in at least the major centres of the early historical period like Kāñci, Vañci and Madurai apart from Kāvērippūmpaṭṭinam, the major port of entry into the region.

In so far as Tamiḻakam is concerned, the theory of urban decay and the consequences of deurbanization pose several problems. First is the nature of the archaeological data and its interpretation. As pointed out in an earlier section (II) all sites with similar archaeological data were not urban. Sites such as Kunnattūr, Nattamēdu, Alagarai, Tīrukkāmpuliyūr etc., which have come up with archaeological material similar to others like Arikamēdu, Kāvērippūmpaṭṭinam, Körkai, etc., cannot be categorised as urban. There was a general change in the pattern of settlements both with a rural and urban base. No uniformity or homogeneity in the pattern and nature of settlements is attested to by the archaeological data. Monumental remains occur in very few centres, especially those on the coast, while the inland centres hardly equalled them in such remains.

More important, the social upheaval located in the crisis of Kaliyuga has no relevance to early historical Tamil society, where the brahmanical social order of the varṇa had taken no roots and had no validity as the normative basis for social organization. Nor is there evidence of evil days for brāhmaṇas, artisans and others or of brāhmaṇa migration from towns to rural areas in the post-Sangam, i.e. post- third century AD period. The Kaliyuga crisis is adopted in the early medieval land grants (seventh–ninth centuries AD) mainly as a formula to emphasize the need to establish the brahmanical order, to enhance the importance of monarchy as an institution and the role of the kṣatriya or ruling families in the preservation of the ‘normative’ social order, i.e. varṇa order as the theoretical basis of societal organization. The function of the brahmadeva of the early medieval period is mainly as an institution integrating pre-existing pastoral and agricultural settlements into a new agrarian order and as the disseminator of brahmanical ideology.
Early medieval urbanization was one of primary (inner) urban growth and not of secondary generation as in the early historical period. The essays in the present collection are aimed at showing this process in which new urban centres emerged with the temple as the nucleus—a rural-urban continuum in institutional and structural forms. More important, it was a period of re-urbanization for some of the early historical urban centres like Kāṇṭipuram. Kāṇṭipuram’s urban character was mainly due to its commercial importance in the early period, while in the period of transition (third to sixth centuries), it continued to hold its position in an external trade network with Southeast Asia, and was brought into an inland commercial network with an expanding agricultural hinterland in the re-urbanization of the early medieval period.\(^{74}\)

It may also be pointed out that in the early historical period, the religio-political foci for the transformation of the tribal, kinship based communities into stratified, hierarchically organized societies were absent, despite the fact that both the brahmanic and Śramanīc religions were prevalent, especially in the marutam and neital eco-zones, none of them enjoying a predominant status. Significantly, Buddhism had a larger following in the coastal towns, Jainism in the inland centres marking trade routes and both these religions in addition to the brahmanic religions had a significant presence in the larger urban centres like Kāṇṭipuram, Madurai, Uraiyur and Vani.

Such religio-political foci are the major factors of the early medieval period in the emergence of urban forms which created the physical and functional spaces for urban economic activities, for social dominance and political authority.

The present state of empirical research on urban history, the elusive character of urban theory, the limited scope of models and the variety of contexts to be dealt with prevent these essays from aiming at a goal too high to reach, viz. an overall perspective and analytical framework for the two periods of Indian history dealt with here. What is proposed in this collection is to examine the sets of relationships that a town/city establishes with its immediate surroundings or hinterland and the wider network of settlements of a similar nature and of different economic functions. Another major concern is with
the ideological forces behind the development of such centres and the role they play either in perpetuating certain societal norms and values or introducing changes through 'new ideas and new ways of doing things'. A distinction between economic development and cultural change needs to be made, without overstressing the importance of one over the other. Here, the idea of the town as a locus for change or prime mover in change also becomes useful.

If urban studies are made for a given cultural region, wherein historical geography can provide some useful insights, then a necessary step forward would have been taken in making comparative studies possible and towards achieving overall perspectives for urban history in India. These essays, it is hoped, have taken that step forward.

Phases of Urbanization: An Overview

Urban history is an area of comparatively recent interest among historians, particularly historians of India. The central concern in historical research in India has more often been with agrarian systems, peasant history, and the general pattern of socio-economic change, rather than urbanization per se. Growth of urban centres is of marginal interest even to the studies on trade patterns, merchant and craft organizations and the role of the state in the promotion of such activities. For the early historical and early medieval periods in India, even the few available works on urban centres suffer from a woeful lack of clear orientation and a meaningful framework. There is a tendency to follow the notion that ‘a town is a town, wherever it is’, and that, being a visual phenomenon, the town/city should be made an object of study in its own right. As a result, these works are nothing more than compilations of lists of towns under various categories such as market, trade and commercial centres, political and administrative centres, and religious centres. Any attempt to explain the causal factors in the emergence of towns is incidental to this approach. Historians have often succumbed, it would seem, to the tendency of studying the ‘form’ at the expense of the ‘substance’ of the urban characteristics of a place.

In the more recent attempts to understand the range of issues involved in the urbanization of early medieval India, the major concern has understandably been with the processes of urban growth. While their emphasis has been on the need for overall perspectives and analytical framework as against typologies, they also highlight the problems in such exercises due to the inadequacy of empirical research.

The concern with processes rather than typologies also brings us to the central issue in urban history, namely, whether the visual presence of towns is a justification for treating what is ‘essentially a physical object’ as a ‘social object’ to be ‘turned
into a focus of analysis in its own right, i.e. a reified concept of the city as a decisive agency or independent variable in the process of social change, or whether urban history should be pursued as ‘part of the analysis of those broad socio-economic changes with which history is concerned’, i.e. those socio-economic changes which generate urban forms. It has been reiterated that the ‘proper concern should not be with cities as such but with complex societies, in which cities and their hinterlands are interwoven into tight political and economic webs’. In studying the evolution of urban forms, there is the additional hazard of taking a single factor as universal and attributing absolute primacy to it, or overstressing one aspect as innovative or catalytic at the expense of others.

The hazards of searching for a general framework notwithstanding, research available on the ancient and early historical periods in India has shown that there were two major periods of urbanization, to which a third may now be added for the early medieval period. It is also generally accepted that the first urbanization, i.e. the Indus Valley urbanization of the proto-historic period, left no legacy beyond the middle of the second millennium BC. The second or the early historical phase represents a long period of urban growth stretching from the sixth century BC to the third century AD. With its epicentre in the Ganges valley, it spread over the whole of North India by the third century BC, and over Central India, Deccan and the Andhra region between the second century BC and third century AD. It must be stressed, however, that it is the latter part of this long chronological span that witnessed the most clearly visible manifestations of this urbanism.

The end of the second urban phase is a time-marker for the early historical period and provides a starting point for the protagonists of the theory of ‘Indian feudalism’, i.e. a new socio-economic formation, based on a land-grant system.

I

In South India, the second (or, strictly speaking, the earliest) urbanization is represented by its end phases, evidence of its
spread appearing at slightly different chronological points in the Deccan, the Andhra region and the Tamil country. By the beginning of the Christian era, it had become an all-India phenomenon. The beginnings of this urbanization are placed in the sixth century BC with its epicentre in the Ganges valley, where expansion of trade in ripples¹⁰ around the early janapadas assumed significant proportions by the third century BC, with a network all over the north, Central India and the Deccan and with arterial links with Central Asia and West Asia. The spread of this network into the Deccan and Andhra region was undoubtedly brought about by overland trade links from the third century BC and the expansion of the Mauryan state. However, it would be erroneous to assume that without the impact of maritime trade, the phenomenal increase in the trade activities of the Deccan and Andhra regions from about the second century BC to the third century AD could have taken place.

In the extreme south, i.e. Tamil country (including modern Kerala), the effects of this urbanization were only indirectly felt. Visible clues to the contrastive urban experience of this region are the striking absence of trade networks, lack of organizational coherence (i.e. guilds) and the nature of Tamil polity. No less evident is the absence of a dominant religious ideology. The key to the understanding of these differences lay in the distinctive socio-economic milieu of the eco-system called the tinaî,¹¹ within which the emergence of towns and the pace of urbanization have to be viewed.

It is not a matter of coincidence that the earliest ruling families or ‘crowned kings’ (vēnDar), as they are described in early Sangam Tamil literature, emerged in the marutam tinaî, representing the fertile agricultural tracts of the major river valleys. The earliest towns also arose in these tracts as well as in the neitâl or coastal/littoral. Such centres were consciously developed by the ruling families. These two tinais were dominated by the Čēras (Periyr valley), Cōlas (Kaveri valley) and the Pāṇḍyas (Vaigai and Tamraparni valleys). The marutam was marked by an inland town of political and commercial importance and the neitâl by a coastal town of commercial importance, e.g. Uraiýur and Kāvērippumpattīnām (Puhār) of the Cōlas, Madurai and Korkai of the Pāṇḍyas and Vañci (Karuvūr) and
Muciři of the Cēras. These towns in effect represent the development of dual centres of power.\textsuperscript{12}

Located in the rice-producing marutam tracts, the early chiefdoms or potential monarchies with their janapada-like polities\textsuperscript{13} evolved out of earlier tribal organizations. The agricultural potential of the major river valleys attracted settlers from very early times and numerous settlements had emerged by the beginning of the Christian era, the Kaveri delta showing a fair concentration of such settlements.\textsuperscript{14} It is not clear whether and, if so, to what extent, the ruling families helped in this process, although a late tradition attributes an irrigation work on the Kaveri to one of the Cōlas. It is possible that the impact of trade, particularly maritime trade, led to intensification of inter-tinai exchange, which in turn could have provided an incentive for extracting the ‘surplus’ of the agricultural tracts and channelizing it towards trade. However, no direct and organized control appears to have been acquired by any of the ‘crowned kings’ over the agricultural tracts, no regular tax structure having been evolved. The institutional forces, which defined the ‘excess’ requirements, provided for its appropriation and defined its utilization\textsuperscript{15} are not known to have existed under the Cōlas, Cēras and Pāṇḍyas. The hegemony of the vēndar was rather loosely held. Performance of Vedic sacrifice and patronage to brāhmaṇas were not an intrinsic part of the legitimation process in this period,\textsuperscript{16} although evidence of both is available in the Sangam anthologies.\textsuperscript{17} Even at such sacrifices wealth would have got distributed rather than accumulated as a resource. The continuance of inter-tribal warfare\textsuperscript{18} and war loot was perforce the only recourse to supplementing resources, most of which were redistributed in the form of patronage to poets and bards, and some channelized into trade.

The kurinći tinai (hilly areas) was particularly rich in resources such as aromatic wood, which were exported outside the Tamil region. A symbiotic relationship developed between these and the marutam and neital tracts. For, in return for paddy and salt, the people of the marutam and neital acquired the rich resources of the hilly tracts.\textsuperscript{19} Inter-tribal warfare was another means by which the ruling families of marutam obtained such resources. In this context, the wars among the vēndar\textsuperscript{20} or ‘crowned kings’
themselves become significant, as they represent attempts by each of the three rulers to gain control over the resources of the others. The Cōla attempts to gain access to the pearl fisheries of the Pāṇḍya coast and the rich pepper areas of the Cēra Nādu, would be significant as showing their interests in establishing an exchange system.

The mullai tiṇai on the fringes of settled agricultural tracts represented a transitory ecological zone and could gradually have merged with the latter with the expansion of agriculture and irrigation facilities. Some of the mullai tracts were also locations for important routes such as the Kongu region—the Coimbatore and Salem districts—and thus became areas of contention among the vēndar. While inter-tiṇai exchange would have introduced a symbiotic relationship at one level, there still was a natural element of competition and hostility due to the contrasts in the productivity of the different tiṇais. Predatory raids were hence common and references to the razing of the enemies’ fields and despoiling of water tanks show that the kuriṇci and mullai chiefs were no passive observers of the increasing influence of the vēndar, when they fell short of their basic resources.

In the process of establishing inter-tiṇai exchange emerged several settlements, probably as foci of inter-tiṇai contacts, which from the criterion of modern urban centres, cannot be classified as urban. Yet, in contemporary perception, these settlements were distinct from their hinterlands both in size and antiquity. Such settlements may often be recognized from the terms used to denote them, viz., mūdūr (old settlement) and pērū (large settlement), usually found at the junction of inter-tiṇai exchange, bordering on marutam land or, occasionally, as the centres of the chiefs of the kuriṇci and mullai.

The more commercially active and organized towns were the pattinams located on the coast. This accounts for the fewer and sparser urban settlements in the interior and their presence only in the marutam and neital tracts, i.e. the inland capital and coastal port. Even these were no more than trade enclaves, particularly the pattinam on the coast like Puhār or Kāvērip-pāmpatṭinam. The instance of Puhār is striking, for it was an emporium, an entrepot, acting as a collection centre, perhaps
Phases of Urbanization: An Overview / 29

comparable to a gateway city (Puhār means river entrance) to its hinterland, the Cōḷānāḍu. However, evidence of an extensive network connecting this port through subsidiary towns or nodal points does not exist, and the situation was no different in relation to ports like Nīrpeyarru (for Kacci or later Kānçipuram), Arikamēḍu (Vīrai, a vēlir port), Korkai (of the Pāṇḍyan coast) and Muciri (of the Cēra coast). Local exchange was hardly linked to the type of wholesale or bulk activities of such enclaves, for the local exchange system was subsistence-oriented. The deployment of goods from the ports and into them, was in the hands of individual traders and merchant families, guild activities being least attested to in the Tamil region. The emphasis was on luxury and exotic items of import, some of which were prestige goods, or what are called primitive valuables. They could have been of ideo-technic (or socio-technic) value to the ruling families, and hence it is not clear how significant this trade was as a resource potential to the rulers, who were only little more than tribal chiefs. Yet, their interest in this trade is attested to in several ways as, for example, in levying duties on goods (ulgu poruḷ) coming to the port, and in using imported luxuries as an alternative means of supplementing irregular tribute, due to the lack of coercive power to directly tax the people of the rich agricultural tracts, i.e. the farmers. Social distance and a symbolic contrast between the ruler and the ruled may well have been the major advantage.

The inland towns could at best be described as consumption points, although there is some evidence of Uraiyyūr, Kacci and Madurai as textile manufacturing centres, forthcoming mainly from literary evidence and, to a limited extent, from archaeological finds. In most cases, archaeological finds have not proved to be particularly illuminating, except for Puhār, where again harbour facilities are attested to, but manufacturing activities are hardly indicated. Even the ‘monumental’ architecture that has been unearthed in Puhār is chronologically later than the period of intensive commerce. One area of potential archaeological significance is the region of Coimbatore, where a concentration of commercial and artisanal activity is beginning to emerge from the excavations at Koḍumaṇāl, the Koḍumaṇām of Sangam works situated on the banks of the Noyyal river.
provenance and distribution of punch-marked and Roman coins in the Coimbatore region lends additional support to its importance. Details of the archaeological evidence regarding other centres, inland and coastal, the artefactual remains of Roman objects, and the Roman factory site at Arikamēdu, need not detain us here, for these have been highlighted time and again in studies on the Sangam period and on the early Indian trade contracts with the Roman west.34

The major concern in discussing the impact of maritime trade on the Tamil society is to assess the nature of urban development and transformation of society through such impact. The Tamil society, especially of the Cōla region, i.e. Kaveri valley, had reached the level of a farming society from a former position of tribal organization. Survivals of their tribal origins are still echoed in the early anthologies.35 Similar to other traditional ‘peasant societies’, it also retained a high degree of subsistence production which did not find its way to the market place, located at this time only in a few urban centres. The market principle did not govern its exchange and the hinterland people were not dependent for daily requirements on long-distance commerce, which in itself was oriented towards trade in luxury goods. The luxury goods that entered the interiors, circulated through networks of kinship, patronage and clientele, through redistribution and prestation.36 The foci of long-distance trade were the market centres on the coast, the urban clientele being the rulers, members of the elite—the čāṇrōr and uyāṇrōr—who gained social prestige from which flowed other privileges, predominantly political. Not surprisingly, ruling families like the Cōlas, consciously encouraged external trade connections, developed ports and planted their agents or officers to supervise and control the flow of goods.37

The kuriṇci and mullai tracts, as seen earlier, were not directly involved in this commerce, but were brought into the commercial circuit through the marutam rulers. They were largely tracts of relative isolation, and were characterized by simpler forms of socio-political organization. Processes leading to the development of socio-economic diversification were limited in these tracts, which could sustain only ‘segmentary tribes’ in small dispersed settlements.38 Again, as primitive valuables or prestige
goods, the luxury and exotic items could have induced the chieftains of these tracts to encourage the flow of goods, as it gave them the opportunity of enhancing their socio-political status.\textsuperscript{39}

It has been argued on the basis of ethnographic data, that trade alone can rarely bring about the evolution of social stratification from a non-stratified society, since such systems have an in-built mechanism to prevent the equilibrium being destabilised.\textsuperscript{40} In the marutam tìnai a certain degree of diversity seems to have accompanied the agricultural settlements through the evolution of crafts related to agricultural activities, and smiths, carpenters, jewellers, goldsmiths, weavers and metal workers are constantly referred to in literature. Evidence of a broad dual division of society is provided by the reference to the cānror or uyandor and the ilicinar. The position of dominance was occupied by the chiefs or kings and the landed local elite (vērīr, kilēvan or Kilān, talaiwan, entai), collectively referred to as uyandor and cānror (the superior ones), while the lower category, generally termed as ilicinar, were engaged in various ‘inferior’ activities or subsistence production.\textsuperscript{41} It is only in the medieval commentaries on Sangam works that references to the superior vēlālas (land owning group) and inferior vēlālas (cultivators)\textsuperscript{42} occur together with the vērīr chiefs as the dominant land owning groups controlling fairly large areas of agricultural land,\textsuperscript{43} indicating that stratification based on land distribution and control was believed to have existed even in this early period. The vērīr are described in the Sangam works as lesser chiefs, pastoral-cum-agricultural, but next in importance only to the vēndar as a dominant socio-political group and as patrons of the Tamil poets.

The differentiation became more marked in the marutam and neiṭal regions, where the capitals and ports were located, and where an increase in trade ventures introduced a further element of diversification, such as individual traders, vanikaccāṭtu or groups of merchants, king’s officers or customs agents, and warehouse guards in the market and port towns,\textsuperscript{44} leading to a more complex society. The relatively undifferentiated ‘tribal’ society was disintegrating and differentiation had set in.

The chief economic activities in the neiṭal tracts, apart from
trade, were fishing and manufacturing and selling of salt, in which the Valaiñar and paratavar were involved. The paratavar gradually diversified their interests to become pearl fishers and traders, and their increasing participation in coastal trade dealing in expensive items like pearls, gems and horses is indicated in the descriptions of their commerce and life style. Salt manufacture and trade also became a more specialized activity with a group called umanar. However, the evidence, on the whole, suggests that craft specialization was, with the exception of a few spheres, at a rudimentary level. Nor is there any evidence on craft guilds or artisan guilds. Merchant guilds are also not known to have been a regular part of the commercial organization, although there is a single epigraphic reference to a nigama from Tiruvellarai and literary reference to a merchant of Kāvērippūmpatținam as a Māsāttuvān (Sārthavāha). The producer was quite often also the dealer in the commodities manufactured and manufacturing activities were generally on a low level.

Money as an exchange medium was evidently used only in larger transactions and long-distance trade, and perhaps only by itinerant merchants. Numismatics for this period in the Tamil region is one of the most problematic of sources, despite the fact that a large number of hoards of punch-marked and Roman coins, apart from stray pieces from stratified archaeological levels, are available. With the possible exception of a single hoard of punch-marked coins, assignable to the Pāṇḍyas on the basis of the fish sign on the coins, and another attributed to a lesser chief in the North Arcot region, no regular 'dynastic issues' were known, till the recent discovery, in the nineties, of Ėra and Pāṇḍya coins with legends, and some with portraits.

The varna-based organization of society is also not clearly attested to, despite the fact that the priestly brāhmaṇas are often referred to as a distinct social group enjoying a high status. The Tolkāppiyam reference to the four-fold division of society occurs in the Porul atikārām of the work, suggesting a later date for the use of this framework of social stratification for the Tamils. The idea of ritual pollution was, however, prevalent, and groups associated with impure activities are said to have lived separately. This may well have been a survival of the tribal system
even in the marutam region where the varṇa differentiation first emerged.

The spread of Buddhism and Jainism, coinciding with the increase in trade and commercial activity, would also seem to have introduced an element of further diversification, especially in the urban centres. Jainism was, more often, predominantly represented in the inland towns, and Buddhism in the coastal towns, especially Puhār. Their patrons came mainly from the commercial community, i.e. merchants and craftsmen, apart from ruling families. The heterogeneity of the urban population of which the yavanas (people of West Asian and Mediterranean origin) were also a part, shows that people of different ethnic origins and belonging to various religions aggregated in towns, and brahmanical and folk cults were also well represented in most centres. No single dominant religion is attested to in any of them.

There is little by way of archaeological evidence to establish the social complexity. Some indication of it is seen in the Megalithic burials, many of which are coeval with the period of the Sangam classics. Burials containing a variety of war weapons, apart from other agricultural implements, may be associated with the high status warrior and chiefly groups. The five kinds of burial practices mentioned in the Maṇimekālai, one of the two post-Sangam epics, would also suggest a possible differentiation in the rank and status of the groups involved, which, however, can be assessed only on the basis of a study of all the burial types, their distribution and contents.

Thus, the ultimate manifestation of the impact of trade is seen mainly in the marutam and neital eco-zones, with a greater diversity of occupations, i.e. 'a new and more complex division of labour'. However, the pace of social differentiation and urban development was not only slower, but hardly reached the level of a system in which tight networks of institutional forms and relationships could emerge similar to that of the Deccan and Andhra region.

Even within the Tamil country, the nature of urban growth in the Pāṇḍya and Čēra countries differed significantly from that of the Čōla dominated regions. A major thesis on the effect of the coastal sea traffic on the Pāṇḍya coastal region and
of northern Sri Lanka would place the Pānḍyas as pioneers in the promotion of coastal and overseas trade, and attributes to them the introduction of the Brāhmi script in the Tamil country, as the earliest Tamil-Brāhmi inscriptions occur in the Pānḍya region. Seen together with the possible association of the Pānḍyas with the earliest dynastic coinage and their patronage of the Tamil literary academy called the Sangam, it is not a matter of surprise that it was Madurai, the Pānḍya capital, which became the Tamil city *par excellence*. In the Pānḍyan context, it is suggested, the impact of the western sea trade in the ‘urbanization/civilization’ of this part of the peninsula and the Sri Lankan coast was minimal, whereas the initial stimulus is attributed to coastal sea traffic from Gujarat in the west to Bengal in the east in the pre-Mauryan and Mauryan times. Overland traffic is assigned lesser importance through the Mauryan times.\(^{62}\) Equally significant is the fact that the most important transpeninsular route connecting Karnataka and Kerala with Tamil Nadu, passing through the Kongu region, is marked by Brāhmi inscriptions *chronologically later* than those of the Madurai region, once the arid Pudukkottai area is crossed from the south.\(^{63}\) The commercial importance of the Kongu region has been noted earlier, and the route, which passed through it, was popular down to the medieval times among itinerant merchants.\(^{64}\)

At this stage, it may be useful to delineate the major differences, and to recapitulate the contrastive urban experiences, of the Deccan and the Tamil country. As we have seen, they are ultimately traceable to ecological and cultural factors as well as political organization. The river system of the Deccan plateau shows certain restraining factors, making the region conducive only to the growth of relatively smaller areas of agriculture. On the contrary, it was less restrictive and more suitable for the growth of communication and transport networks, with the passes in the Western Ghats linking the coast to the interior and the relatively drier zones helping uninterrupted travel and easier movement.\(^{65}\) The expansion of these routes subsequently to include the Andhra region in a tight commercial network took place when a larger agricultural base in the Krishna Valley was acquired by the Sātavāhanas in the latter part of their period.
The Sātavāhanas adopted brahmanical ideology for legitimating their rule, with their commitment to the varnāśrama ideal probably originating from their earlier priestly affiliations. The advantage of conceding the dominance of Buddhist ideology over merchants, and others involved in commerce and production for trade, both overland and overseas, was also understood by them. In the Deccan the symbiotic relationship which existed between the political structure, the commercial groups and the Buddhist order have been clearly recognised. The power structure which thus evolved, reflects in many ways Mauryan ideological influences or the continuation of Mauryan institutions, in what may be seen as ‘secondary state formation’, and a monetary system controlled to a large extent by the ruling dynasty. Royal patronage of the expanding trade and a dominant Buddhist ideology, which helped evolve institutions such as the monastery and guild to support it, mark the contrastive processes in urban growth in the Deccan and Tamil country. The only common element was overseas trade, evidence of which is overwhelming.

Reference has been made earlier to the importance of the tiṇai in determining the socio-economic development of the Tamil country. Tribute and not tax, warfare for loot and plunder as well as hegemony, use of money in long-distance trade by itinerant traders, and in larger transactions, local exchange remaining out of the circuit of inter-regional commerce, and, more importantly, the absence of institutional forces like the Buddhist monastery and the traders’ guild, marked the urban growth of the Tamil region with a remarkably lesser degree of intensity. Added to this were the absence of a clear varna based social stratification, and the emergence of urban enclaves which left kinship and communal organization relatively untouched over vast agricultural plains and other ecological zones.

Under the vēnda, the chiefdoms, which appeared to mark a transitional stage in the evolution of the state, never passed the transitional to the state level. The reasons for their decline may be sought not only in the sudden arrest of urban growth due to the withdrawal of the western trade, but also in the lack of coercive power and institutional control over the agricultural plains themselves. They seem to have been overtaken by a crisis
caused by decline in trade and, at the same time, by ambitious chiefs of other eco-zones, whose descent into the plains was not a mere predatory raid but, more, a lasting occupation of rice-yielding tracts, over which the control of the vēndar was becoming increasingly tenuous, as their socio-political prestige was at a very low ebb. If urbanization consequent upon long-distance trade could induce the formation of a state society, this did not happen in the Tamil region to the same degree as in other parts of India during the early historical phase. Hence, long-distance trade may be seen both as a cause and an effect of state formation, depending upon factors other than trade itself. In fact, territorial expansion and political unification have been regarded as less indirect consequences of urban genesis than as functionally inter-related processes ‘at the very core of the transformation’.

The cultural ethos of Tamil society given to the ideals of love and war (akam and puram, both implying heroism), generosity and patronage, i.e. a kinship-oriented value system, and the predominant folk component in worship and religion, i.e. an ‘anthropocentric’ worship, would also indicate that social norms had not yet shed their tribal moorings. What was needed was a formalized religious system and its universalization through acculturation, a system which could combine in it many of the folk and popular elements with the Purānic Sanskritic tradition that swept the sub-continent by the end of the sixth century AD.

The so-called Sangam period has often been stretched from 300 BC to AD 300 and even beyond. Hence, the use of the Sangam works as a single corpus of sources for the whole period is hazardous, especially in view of the different internal chronologies suggested for these collections, and the fact that they were collected and systematized much later in the eighth to ninth centuries AD. It would, therefore, be more valid to treat them as representing different layers of poetry, and at least two levels of social organization, i.e. the tribal stage persisting in the mullai and kuriṇci regions, and an incipient stage of urbanism developing in the marutam and neital. Such a change was rather suddenly arrested, both due to the decline of trade and lack of an institutional coherence and resource base to fall back upon in a crisis.
II

The early historical phase of urbanism has thus been shown to be the result of external trade, an ‘urban revolution’ in a restricted locus within which the process was concentrated, leading to the emergence of urban or, more correctly, trade enclaves. The discontinuity caused by the decline of trade around the third century AD, is represented as a period of crisis in Tamil Society of the post-Sangam era, in the later literary and epigraphic records of the seventh to ninth centuries AD. Was it a crisis of urban ‘devolution’? Or, was it a breakdown of earlier tribal forms, followed by a transition towards the genesis of a new socio-economic formation in the later period? This period of socio-political subversion is also attributed by later brahmanical records to the onslaught of evil kings (kali aras or KalabhraS) and the dominance of ‘heterodoxy’. If the later socio-religious developments are any indication, this period, for which no contemporary records exist, may be described as one of flux and instability due to the decline of the three traditional vendar, and a possible clash of interests among new aspirants to social and political authority, including the lesser chiefs, and competition among brahmanical, Buddhist and Jain religions for patronage.

The early medieval urbanization may be located within a broad time span of six centuries (seventh to thirteenth centuries), in which one may see the operation of the ‘ramp process’ applied by Adams for the study of Mesopotamia and Meso-America, two areas of nuclear urbanism, as a metaphor of heuristic value, for it enables one to come to grips with urban revolution as ‘an intelligible sequence of change rather than simply accepting it as an almost mystically sudden impulse’. To understand this phase of urbanization, one of the first essential steps would be to study the major shift in agrarian organization and the remarkable degree of agrarian expansion which characterized the centuries of Pallava-Pandyya rule and which continued well into the Cola period, i.e. ninth to eleventh centuries AD.

The first intelligible records pointing to the genesis of a new socio-economic formation are of the seventh to ninth centuries.
Signs of the change were visible much earlier in the *marutam* region with its tendency to extend agricultural activities. The earliest attempt to introduce large-scale agriculture in non-*marutam* areas or drier localities is evidenced by the Pūlāṅkuricci record of early *brahmadeyas* (datable to the fifth century AD).\(^7^9\) New integrating forces like the *brahmadeya* and the temple under the aegis of the Pallava-Pāṇḍya ruling families, led to the extension of agricultural activities and a more intensive organization of production geared to support large populations in the *brahmadeyas* and temple-centres. Clusters of such settlements emerged as the foci of urban growth by the end of the ninth century AD, showing that an initial search for urban cores among such clusters would result in a better understanding of the processes in this region. Examples of such clusters may be recognised in the Kaveri delta at Kudamūkku-Palaiyārai, the residential seat of the Cōḷas from the ninth century AD, and in the Tamraparanī-Ghatana valley in the two *brahmadeyas*, Rājarājacaturvēdimangalam and Ceravanmahādevi-caturvēdimangalam, from the close of the tenth century AD.\(^8^0\)

The Pallava-Pāṇḍya period would represent a stage of incipient urbanism, when the royal centres or seats of the ruling families show a similar growth around temples, i.e. Kāṅcīpuram and Madurai. These cities had a long historical past as the centres of the Tiraiyar and Pāṇḍyas of the Sangam classics. The nature of these cities and their corresponding ports has been discussed earlier. What is important, however, is to perceive the changing character of these cities in the early medieval period as a result of the new institutional forces of integration, which brought them into a much closer relationship with their hinterlands in the northern and southern parts of the Tamil country, as well as with their ports located on the coast, i.e. Māmallapuram and Korkai respectively. In the process emerged a number of *brahmadeyas* in the hinterland with temples as their nuclei, appended to which were the pre-existing agricultural and pastoral settlements with a certain degree of subsistence production.

The *brahmadeya* and the temple were evolved as institutional forces by the *brāhmaṇa-ksatriya* allies in power and, hence, were products of brahmanical ideology expressed through Vedic and Purāṇic religion, and initially sponsored by the ruling families
claiming ksatriya (or the brahma-ksatriya) status and divine descent. That they developed into institutions of substantial political and social power with economic privileges has been demonstrated in most studies relating to them or based on them.\textsuperscript{81} However, what has not been made clear in these works is the nature of economic advantage, i.e. as a source of revenue, to the kings who sought to establish their sovereignty through them. This may be explained, to a large extent, as due to the problems of interpretation of the sources, both epigraphic and numismatic. One of the ways in which a recent study on the nature of medieval Indian polity has approached this problem is to underscore the need to look at resource mobilization as logically inseparable from the process of redistribution of resources to integrative elements within the state structure.\textsuperscript{82} The failure to understand this interconnection has led to the theory of the ‘politics of plunder’ as a major mechanism of resource acquisition and redistribution.\textsuperscript{83}

Two important spheres in which the brahmadeya and temple may be seen as harbingers of advanced farming methods were the technology of irrigation and the seasonal regulation of the cultivation process. For the introduction of both these steps for improving cultivation, there seems to be reliable evidence from the Pallava-Pândya records, when they are considered in their geographical and ecological setting. With each one of the brahmadeya and temple settlements an irrigation system was invariably established, either in the form of tanks, canals or wells in the Pallava-Pândya regions.\textsuperscript{84} Many of them were initiated by the rulers but managed by the local bodies. Elaborate arrangements for their upkeep were made by the sabhās or assemblies of the brahmadeyas, including maintenance, repair, attention to silting and control of water supply through cesses, and specifying committees (vāriyams) for their supervision and administration. Effective management was indeed the key to the difference in the farming societies of the earlier (Sangam) and later (seventh to ninth centuries) periods.\textsuperscript{85}

The brāhmanas were organizers and managers of production in the brahmadeyas and the vēlas or land-owning peasants in the non-brahmdeya settlements, where the focus of activities was the brahmanical temple. However, it may be surmised that it
was the former, who, on the basis of their specialised knowledge of astronomy, would have introduced an element of predictability in yields, on the basis of seasonal sowing and cropping patterns, as well as effective management of water resources. It may be added here that in the records of this period, demarcation of boundaries, establishment of ‘ownership’ or enjoyment rights, nature and category of land, and the number of crops to be raised become important details.

Brahmadeyas in most cases may have meant the giving away of rights, economic and administrative, to the donees, but instances are not wanting to show that they were not completely exempt from revenue payments to the king. The real advantages lay in integrating older settlements and non-brahmadeya villages (ür) into the new agrarian system, and also in bringing virgin land under cultivation, both waste land and forest (mullai region). There are also examples of several pre-existing settlements being clubbed together into a new brahmadeya or integrated into it. The tax exemptions given to the brahmadeyas do not obviously apply to such villages thus brought into the system, unless otherwise specified. That regular dues reached the royal bhandarás is also clear from the ‘structured’ circulation of resources through the nādu or kūrram and the brahmadeya or temple, to the king. The circulation of resources was effected through the temple as the disseminator of the bhaktī ideal, i.e. through non-economic or extra economic coercion. However, at the local level, the chief beneficiaries of the redistribution process were the locally powerful elite, temples and brāhmanas, apart from temple functionaries and tenants. The co-ordination of production and distribution processes were in the hands of the sabhā and ür, which has been seen as a result of a brāhmaṇa and dominant peasantry alliance and the crystallization of a peasant society. The land grant system has also been interpreted as a feudal one, in so far as it provides evidence of the emergence of intermediaries, both religious and secular, between king and cultivator, and suggests exploitative relations between a land controlling class and labouring class of peasants.

Our concern with either the brāhmaṇa-peasant alliance and the segmentary state theory that it has evoked, or the feudal
polity model for medieval India, is clearly marginal and has particular reference only to the Cōla situation, where urban growth and the direct royal involvement in promoting trade and exchange networks by using the nagaram as one of the agents of a state synthesis, go against any theory of segmentation of power, as will eventually be shown through a discussion of the character of the Tamil city under the Cōlas. Nor is the evidence for a feudal polity clear enough to be applied for the South Indian state until the rise of Vijayanagar. In one of the recent attempts to characterize the early medieval polity as feudal, the rigour of analysis and empirical controls needed for understanding the complex nature of inscriptions evidence on agrarian relations are absent.91 It is also not possible at this stage to see whether the crisis attributed to ranking as the political basis of organization of both local and supra-local structures was a feature of the Cōla state, and whether the shifting nature of territorial and political holdings in other parts of medieval India92 was present in it. For the Cōla state was undoubtedly one of the most stable structures known to pre-colonial India, and we believe that it was a powerful ideology which supported the Cōla efforts to mobilize a huge resource base.

Before we spell out the ideological underpinnings of the Cōla state, which had a distinct influence on the nature of the Cōla city, one other major aspect of this agrarian expansion and integration needs to be understood more clearly than has been done hitherto. This was the evolution of agrarian units like the kōttam, a pastoral-cum-agricultural region, the nādu and kūram,93 which in the main were agricultural regions. By extension, this nomenclature came to be used even for areas of dispersed agricultural settlements, or even those with other resources like salt and pearls (umbala nādu and mutturru kūram), where agriculture was a major occupation in addition to salt manufacture and pearl-diving. All the three units pre-date the Pallava-Pāṇḍya period and yet, they emerged as viable units of socio-economic and political importance only in relation to the new ruling elite of the seventh to ninth centuries AD.94

This intensive process of agrarian integration is reflected in the numerous brahmadeyas and temple centres of the seventh to ninth centuries visibly emerging in the form of religious
period, through centuries of agrarian development, found expression in two categories of centres, the royal centre (capital) and the market or commercial centre. The two royal centres of Kāñcipuram and Madurai will be taken up for discussion in a later section dealing with royal centres. Our immediate concern here is with the market or commercial centres, i.e. nagaram, and as the royal centres were also commercial centres, they were inevitably a part of the expansion of the trade network in the subsequent centuries. In fact, the commerce of this period was organized around these two cities, and the few nagarams that are known from the Pallava-Pāṇḍya records were located only in certain key areas linking the capitals with the rich Kaveri basin and with the coast. The nodal points of such commercial links were at the confluence of rivers and in the delta areas, as seen in the case of Vīrīñcipuram (Seruvālaimangalam), Tirukkōyilūr (Kōvalūr), Tiruvadigai (Adirājamangalyapuram), and Tirukkalukkunram of the Pallava region and Karavandapuram (Ukkiranēkkōttai) and Mānavirappatținam (Tiruchendūr) of the Pāṇḍya region. The ports of Māmallapuram, a mānakaram, and Korkai served the Pallava and Pāṇḍya hinterlands respectively. The commercial importance of the Kaveri region up to the ninth century AD was clearly linked to the Pallava-Pāṇḍya regions and hence the nagarams of this region are relatively fewer, only two having been attested to by epigraphic evidence so far, i.e. Kumaramārttāṇḍapuram (Tirunagēsvaram) and Cirrāmbar oriented to the northern and southern regions respectively. The distribution of the nagaram in the seventh to ninth centuries would hence suggest that there existed no direct link between such market centres and their kōttam or nādu in which they were situated, reflective of a town-hinterland relationship, i.e. in the manner in which the nagaram came to be linked to the nādu from the tenth century AD.\(^{103}\) In other words, the exchange nexus was more oriented towards the commercial needs of the royal centres and less as a regular market for the immediate nādu or kōttam.

The pattern clearly shows that regular marketing facilities became a pressing need from the early Cōla period for every nādu, and led to a spurt in commercial activity which henceforth brought the Tamil region into a larger network of inter-regional
and overseas trade and, above all, to the evolution of a full time trading community, looking after the local exchange nexus, as well as participating in wider commerce. The nagarattār, i.e. members of the nagaram, thus came to be a generic term for all Tamil merchants, a name by which the Ceṭṭiyār community of the Nāṭṭukkoṭṭai region, i.e. Pudukkanottai and Ramanathapuram districts, are known to this day.

The nagaram members sought validation within the existing institutional means, i.e. the temple, by participating in gift-giving and temple management functions. Their status was hardly different from that of the agricultural groups, for they were agriculturists now taking to trade. Yet, the nagaram represents the first ‘secular’ element in society, in so far as the membership of the nagaram, unlike that of the sabbā and ār, was determined by a common profession.¹⁰⁴

The nagaram organization assumed the character of a local body maintaining local markets, supervising the flow of goods, providing a regular link between nādu and itinerant traders, thus breaking the insularity of the nādu (if it continued to exist under the Cōlas) and its ties of kinship. Two institutions which thus brought the nādu closer together in a system of unified political organization and economic exchange were the brāhmaṇadeya and nagaram, both of which were used as interdependent agents of political synthesis under the Cōlas.

The emergence of market centres for all the agrarian regions, and a commercial network linking the four major mandalams or sub-regions known from Cōla records, coincided with the rise of the Cōlas, and the proliferation of the nagaram kept pace with the expansion of Cōla power. The distribution pattern of nagaram in the early, middle and late Cōla phases shows a remarkable increase in the middle phase, not only within the Tamil country but also beyond its cultural frontiers, i.e. in the southern Karnataka and the Andhra region, over which Cōla power extended in the eleventh century AD. The areas giving access to the powerful neighbouring kingdom in Karnataka, i.e. Kongu region and Gangavādi, show a conspicuous increase in nagaram centres. In consolidating their conquests the Cōlas not merely renamed the conquered areas, as for example, Gangavādi into Muḍikonda-Cōḷamanḍalam, but also founded new
nagaram centres like Mudikōṇḍacōḷapuram (Coimbatore district-Kongu region) and Nigarilicōḷapuram (Māḻur-patna in Mysore). This was a practice followed by the Cōlas after every territorial conquest, as seen in case of Rājēndracōḷapuram in the Tirunelveli district after the conquest of the Pāṇḍya region, the eleventh century being a period of the constant movement of Cōla troops into the neighbouring kingdoms of the south and of Karnataka and Andhra. The nagaram thus established crucial inter-regional links and, as a result, acquired enhanced political influence. This is further corroborated by the reference to Tamils holding ranks of officers, administrators, trustees and managers of temples, apart from merchants, artisans and craftsmen residing in various centres in Karnataka, in addition to settlements of Tigulās (Tamils) as far north as Belgaum district in the eleventh to thirteenth centuries AD.105

A marginal increase in nagaram under the late Cōlas, and the rise of new ones in the Pāṇḍya region after Cōla decline and re-emergence of Pāṇḍya power in the thirteenth century AD, demonstrate the importance of royal or political support to the commercial organizations and their activities. Medieval kingship was certainly not a mere ritual or dharmic sovereignty, nor did it preside over a segmentary power structure, when viewed in the context of political and commercial expansion. Resource mobilization, at least under the Cōlas, whose power structure and territorial authority were more stable than any other medieval South Indian dynasty, was carried out under the aegis of the ruling family and its government.

A second important development in the middle Cōla period took place within the nagaram organization in the form of a further diversification in trading activities due to specialization in marketing and trade. There now appeared specialists like the Sāliya nagaram for trading in textiles, Sāttum Pariśatṭa nagaram also specializing in textile trade, and Śāṅkaraśāṇi nagaram as suppliers of oil and ghee, whose activities were, however, confined to specific localities of commercial importance. The Pāṇḍaṅga nagaram was another group representing seafaring merchants, who are seen only in areas marking the trans-peninsular routes. In contrast, the Vāṇiya nagaram refers to a larger organization of oil-mongers which originated in the Tamil country
around the tenth century and became a supra-local trading organization, similar to the Teliki of Andhra region, which arose in the eleventh century AD. The Vāniya nagaram spread out by entering into the inter-regional commercial network, acquiring a viable economic status by the twelfth and thirteenth centuries, so as to be included in important decision making processes involving the merchant community. Horse trading was another specialized occupation of merchants from Malaimandalam (Kerala) throughout the medieval period. Arab trade in horses was conducted mainly through the western ports, and the Kudirai cettis of Kerala procured and transported them to the Côla country and often acquired residential quarters within the Côla heartland and other areas, like the commercially viable Pudukkottai region, linking the Côla land with Tondi on the eastern coast. The movement of traders individually and collectively over long distances within the Tamil country and between the Tamil country and Kerala, Karnataka and Andhra region, represents the continuation of a long tradition of trading in South India, but the frequency with which references to such traders occur in the Côla records would show that this had become a regular phenomenon due to the demands of external trade, of which spices, aromatics, incense, horses, gems and textiles were the most important items.

The impetus to organized commerce came not only from the revival of peninsular trade but, more importantly, as a part of the revival and expansion of South Asian trade from the tenth century AD, involving the South Asian and Southeast Asian kingdoms and China. Together with the nagaram network, the emergence of merchant organizations to look after the long-distance trade proved to be a major factor of urbanization in the eleventh to thirteenth centuries, furthering the process which began in the tenth century AD.\textsuperscript{106}

Organized commerce is one of the more important but less understood areas of economic activity in medieval South India, in which corporate trading communities like the Ayyavole and Nānadesi participated. These communities are often described as guilds, although indisputable evidence of their organization into a well-defined, structured and cohesive body is hard to find. The use of the term ‘guild’ is hence a matter of convenience, rather
than for establishing parallels with the medieval European guilds, the Hang of China in Sung and Yuan times, or the Karimi of Egypt. In their own inscriptive records, they are described as a samaya, i.e. a convention or organization born out of an agreement or contract, and their code of conduct was the banañju dharma, a conventional set of rules and regulations.\textsuperscript{107}

The organizational aspects of these merchant bodies have been inadequately understood due to the inconsistent descriptions and terminology used to denote them. The occurrence of a number of non-merchant groups like craftsmen, agricultural groups and militant groups jointly in the guild records, especially in the twelfth and thirteenth centuries, have added an element of confusion and complexity to their activities. The presence of local bodies like the nagarams and lesser organizations like the Manigrāmam and Anjuvaṇṇam, may also be said to increase the complexity, as it is not easy to determine their individual and collective roles in commercial activities, due to the overlapping spheres of interests.

The obscurity and confusion caused by such overlapping interests implied in their records would disappear, once the context, regional and economic, in which they occur is elucidated. An attempt in this direction has helped, to a great extent, in distinguishing the nature and functioning of these bodies. The inadequacy of all the earlier studies on these guilds is attributable to their failure to recognize the exact relationship of the supralocal to the local bodies and their role in the respective areas. One of the ways in which this may be achieved is to discuss them in the sequential order in which they emerged, and their increasing socio-economic functions and institutional importance \textit{vis-à-vis} other socio-political groups and the state.

As the whole corpus of information on South Indian trade at this time centres round the body, variously called the Ayyāvole Five Hundred, the Aiśnūruva (Five Hundred), the Nānādeśi and Valaṁṭyar, it would be appropriate to start from the Five Hundred and proceed to enquire into the nature of their organization and relationship with other bodies.

The Five Hundred, which originated in Aihole in the Bijapur district of Karnataka in the eighth century AD, was the largest
organization of itinerant merchants of a supra-regional character. They are easily distinguishable from the Manigrāmam of the Tamil country, a merchant organization operating within specific regions, as the designations ‘Uraiyyur Manigrāmam’ and ‘Kodumbāḷur Manigrāmam’ and the distribution of their inscriptive references would show. The Manigrāmam established long-distance trade links early in their history, but subsequently improved them through interaction with the Five Hundred or the moving trade carried on by the Five Hundred in their regions. The Manigrāmam was apparently a descendent of the group of traders from Vanika-grāma in Kāverippūmpaṭṭinam, who, after the decline of external trade in the early period, moved into the interior to places like Uraiyyur and Kodumbāḷur, where they re-emerged as Manigrāmam, an organized group of traders, by the ninth century AD. The Manigrāmam, like the nagaram, retained its unified composition and character, as it was also a part of the local agricultural communities which branched out into the trading profession by controlling the local exchange nexus throughout the period. It is an interesting contrast to note that in early medieval Rajasthan, there emerged a number of merchant families who were either resurgent local merchant lineages or new ones, which established wide intra-regional and inter-regional networks. Their names were derived from the places of their origin, such as the Usvāala-jñātiya, the latter day Oswals.¹⁰⁸

Another body of merchants known as the Anjūvānṇam represented an organization of foreign merchants, who began their commercial activities on the west coast (Kerala) in the eighth and ninth centuries and spread out to the other coastal areas of South India by the eleventh century AD, interacting both with the local merchants and the Five Hundred, a symbiotic relationship being fostered by trade interests. The earliest known record of the Anjūvānṇam refers to a group of Jewish traders who acquired settlements on the west coast from the Venāḍ (South Travancore) rulers. The term Anjūvānṇam, wrongly interpreted as a group of five different communities or castes, may well be derived from Anjumān, perhaps first used by early Arab Muslim traders of the west coast, a name surviving down to the fourteenth and fifteenth centuries on the Kanara coast among Muslim traders as Haṇjumāna.
The founding of the *Ayyavole* (The Five Hundred) in the eighth century AD, may be attributed to a decision of the 500 *mahājana* of the *mahāgrahāra* of Aihole, to provide an institutional base for the commerce of this region. The organization later expanded its activities to other parts of South India. It would be erroneous, therefore, to assume as Kenneth Hall has done, that this organization originated as groups of expeditionary merchants, who serviced less wealthy or isolated communities of the hinterland and found it profitable to band together for mutual protection, and subsequently became powerful merchant organizations. On the contrary, many of the militant groups which accompanied the Five Hundred as protectors of merchandise, may themselves have been absorbed as part of the organization with a stake in the share of the profit. Its origin in Karnataka may also be seen as a survival of the early historical tradition of merchant guilds, which dominated the commerce of the Deccan, a surmise which is further strengthened by the reference to Aihole as *Āryapura* and *Ahicchatra*, thus tracing their origin to *Ahicchatra* in the Ganges valley, which was a major trading centre in the closing centuries of the first millennium BC and beginning of the Christian era. However, the organization did not remain a single unified body, nor was Aihole its permanent headquarters. The number, Five Hundred, also became conventional, for the name was derived from the parent organization and remained so for the rest of its history, despite the fact that it became a much larger one, drawing its members from various regions and communities. It is in this context that the term *Nānādesi*, *Ubbaya Nānādesi* (*svadesi* and *paradesi* merchants) have been used almost interchangeably in their records. The most comprehensive term used for them in Tamil inscriptions is *Nānādesiyai Tiṣai Ayirattu Ainiṟurivar*, meaning literally 'The Five Hundred of different countries from thousand directions'. The *Valaṇjiyar* (*Banaṅgis* = traders) and *Vira Valaṇjiyar*, also denote the same organization, but the emphasis in these terms is on their militant character. The *Vēlaikkāra* group associated with the *Valaṇjiyar*, especially in Sri Lanka, forms another militant component in this organization. The heterogeneous composition of this organization is attested to clearly in the guild inscriptions, which refer to the different castes of the members, as well as regional
and religious associations. Thus, it was a group of people of ‘disparate origins associating together for a common purpose’, i.e. trade.

With the growth of regional kingdoms, the need to protect regional interests probably led to a bifurcation of guild operations as seen in Karnataka and Tamil Nadu. Yet, the commonality of interests in which it was rooted, generally helped to maintain the larger unity of the guild. The impressive *prāśastis* of the guild inscriptions show that it was growing into a powerful organization. Thus arose in South Karnataka, several towns called the southern *Ayyāvole*, in the eleventh and twelfth centuries, especially after the Cōla intrusions into these areas. Into the Andhra region, the organization moved evidently in the wake of Cōla conquests, and after the unification of Vengi with the Cōla kingdom under Kūlottunga I (1070-1120). From its first appearance in the Pudukkottai region in the close of the ninth century, the Five Hundred fanned out into other parts of the Tamil country, covering the Cōla and Pāṇḍya heartlands and areas connecting the two, as well as those routes connecting the Tamil region with Karnataka, moving in wherever the Cōlas stepped in as conquerors, i.e. Kongu and Ganga regions, Andhra and Śri Lanka. They controlled the movement of trade in these areas from important centres of operation like Mudikondān, Taḷakkādu, Viśakhapaṭṭīnām and Polonnaruva, respectively. It was in the link area of Pudukkottai and Ramanathapuram that the greatest concentration of guild inscriptions occurs between the tenth and fourteenth centuries. Here, their interaction with the *nagaram* and *Manigrama* organizations was considerably promoted by the Irukkuvēl chiefs of Koḍumbālūr, the Cōla subordinates of the tenth and eleventh centuries AD.

The close identity of interests between this organization and the Cōlas is particularly seen in the royal policy of encouragement to overseas trade through trade missions, maritime expeditions and abolition of tolls, opening up new avenues of trade through conscious royal effort, which itinerant trade never failed to make use of. In this context, the presence in Nāgappaṭṭīnām of Śrī Vijaya agents making gifts to the local temples, and the erection of the Buddhist *vihara* by a Śrī Vijaya ruler for the *Theravāda* Buddhists, may be seen as a major example of inter-
regional commercial ventures being legitimized by religious grants by the respective ruling families through their political and commercial agents. By far the most significant step in this direction was the institution of royal charters setting up protected mercantile towns called *erivirappattanas* from the eleventh century onwards, on trade routes as well as in areas of settled agriculture. A comparative study of the *banañju-pattanas* of Karnataka and Andhra regions with *erivirappattanas* shows that the nature of these towns was different from the *banañju-pattanas*, in which the administration of the town was carried on by a *pattanasvami*, ‘lord of the town’, with the help of merchant bodies and other local non-commercial groups. *Erivirappattanas* were more in the nature of protected towns for stocking merchandise, and could well have been distribution points protected collectively by the merchant body. This merchant organization also had temporary or permanent residential quarters in several places falling within the trade network. A significant contrast is, however, seen in the royal centres or *mānagarams* like Tañjāvūr, Kāñcipuram and Palaiyārai, where the itinerant merchant body is conspicuously absent, and where the local *nagaram* organizations wielded enormous influence over the exchange nexus. Similarly, the merchant bodies are not seen in Cōla ports like Nāgappatīnām, which were not only developed by the rulers but also directly controlled by Cōla officers and agents. On the contrary, they were active in ports like Viśakhapatīnām and Tondi and also Mayilāppūr (part of Madras city), which were not ‘royal’ ports. In fact, itinerant merchants are seen to be frequenting the coastal route and ports more consistently during the period of Cōla decline and after. The emergence of a number of coastal towns, perhaps as halting stations, both on a coastal land route as well as coastal shipping, was a result of this movement.

In the thirteenth and fourteenth centuries, there was a phenomenal increase in guild activities, with a clear tendency on the part of the Five Hundred to expand its sphere of influence and to show less reliance on royal support and patronage, although some of the guild inscriptions were still dated in the reign periods of the late Cōla and Pāndya rulers. We have rather impressive evidence that in most centres of distribution and
emporia like Pirānmalai, Tirumalai and Toṇḍi, the Five Hundred acted jointly with other organizations like the Cittiramēḷi Periya Nādu or Padinen ṇ Viṣaya, in the levy of maganmai (voluntary contribution) and pāṭṭanappagudi (tolls or shares of the town) on merchandise. It should be noted, however, that in the elaborate prāśasis of these inscriptions, the pride of place is given to the Cittiramēḷi (meaning the beautiful plough) followed by the Five Hundred. The institutionalization of these two organizations through their joint donations to various temples, and the presence of other bodies like the Manigrāmam, Sāmanta Pandasālis (stockists) and nagaram on such occasions, are a conspicuous feature of the thirteenth and fourteenth centuries, marking the decline of the Cōla power and the relative weakness of the re-emerging Pāṇḍyas. However, it would appear that the merchant body had on no occasion the authority to levy and grant such tolls, except in conjunction with the Cittiramēḷi and Pandinen ṇ Viṣaya, which were organizations of agriculturists controlling production and movement of agricultural goods. Presumably, even in the assignment of brokerage (taragu) or monopoly (valaṅjiyattílanicettu) to individuals or groups of traders on certain items, the Five Hundred exercised its authority only jointly with the local nādu, nagaram and the larger Cittiramēḷi organizations. This is so even in Karnataka and Andhra regions, where the okkalu and kāmpulu are constantly present on such occasions, when cesses or tolls were levied or trading rights were assigned. Yet it is undeniable that this organization had become powerful and some of its members were elevated to the status of samaya cakravarti (the king/emperor of the trading organization). This, and the increasing influence of individual members who assumed the title of cakravarti, as seen in Muṭṭam (Pērūr in Coimbatore district) and in Pirānmalai (Ramanathapuram District), would indicate an impending change caused by the accumulation of wealth and power in the hands of individual merchants, subsequently leading to the emergence of merchant entrepreneurs.

The Cittiramēḷi Periya Nādu was an organization of agriculturists appearing quite early in Cōla history, in the latter half of the eleventh century AD, in Tāmaraiippakkam (North Arcot district) known as the Rājendracōḷa Cittiramēḷi Perukkālar. The
commercial links that they established with the Five Hundred by the twelfth century AD have been referred to earlier. Their association would indicate the growing consumption of food grains and pulses etc. in urban areas, enhancing the importance of the agricultural classes, which alone could mobilize grain and other such products for supply to the itinerant traders at the centres of distribution. Like the Five Hundred, the Cittiramēli also moved into the South Karnataka and Andhra regions by the twelfth century AD following the Cōla conquests. They are referred to as Méli Sāsiravaru in Karnataka and Medikūru in Andhra. The attempt to compare the kāmpulu of Andhra and okkalu of Karnataka with the Cittiramēli, does not appear to have any validity, for the kāmpulu and okkalu were local organizations of cultivators, whereas the Cittiramēli was of supra-local character.

The Five Hundred and Cittiramēli were not caste guilds, for they were composed of representatives of all the four castes. Thus we see in both these guilds, an association which was based on occupation, cutting across caste and religious affiliations. The early inscriptions of the Five Hundred in the Pudukkottai region provide clear evidence of the domination of this organization by the Jains, as in Karnataka, while later records indicate that it came to include members from all castes and religions, although the guild deity was called ‘Aiyapolil Parameśvari’. The Cittiramēli praśasti is a rather illuminating record, as it refers to the members as bhūṁiputras (sons of the earth goddess or sons of the soil) whose prosperity is attributed to cow’s milk (living by cow’s milk) and whose profession, the best in the world, was looking after (feeding) the people of the country. It would appear that here we have the first indication of the pastoral-cum-agricultural origins of the organization which took to trading in agricultural commodities.

As seen earlier, these organizations, originating at different points of time and in different cultural regions, acted only in their independent capacity, enacting roles of patronage due to their economic importance. The Cittiramēli however, had a greater stake in local relations of dominance, as it acted also in the capacity of dispenser of justice, settling disputes over land rights and cases of criminal offence. The right of fixing cesses
and tolls was, however, exercised by them only jointly with the Five Hundred, and only towards the end of the Cōla period. Among the other organizations which were also involved in such decision-making processes were the Sāmanta Pandasālis and AṉjuvaṉṆam, who were significantly confined to the ports, and may have participated only in assigning tolls on imports and exports, with which they were directly concerned. Their common eulogy in the guild inscriptions is the first known expression of the ascendancy of trading groups in a predominantly agrarian context. The changing pattern of land ownership in the twelfth and thirteenth centuries also provides an index of the influence wielded by various merchant groups and the weavers, aspiring for a higher social status through acquisition of rights in land and participation in gift giving and temple building activities.

There is one other sphere in which the merchant organization assumed a dominant role, i.e. in relation to craft groups. This is much more directly recorded in the guild inscriptions of Karnataka and Andhra116 than in Tamil Nadu. The closer interaction between the two interdependent sections of the commercial world in these two regions may be traced back to the early historical phase of urbanism. In the early medieval period they were increasingly brought together when the manufacture of goods and production for market came under merchant control through collective investments. A similar development is perhaps indicated in the Tamil region even as early as the eleventh century AD, when, in a slightly different context, the dependence of the craftsmen on the merchant organization is underlined in the role of the merchants providing an asylum to the craftsmen in Erode117 in the Kongu region which, from the early historical period, had been an area of craft production. In such areas the merchants also acted as protectors and managers of temples, as for example in Muḍikondān.

The presence of craft groups with the Five Hundred could also have provided a certain legitimacy to the Ayyāvole’s trade in various articles. This is particularly important in the case of weavers, with whom they appear to have established a close link, for the textile trade was handled practically throughout South India and overseas by the Five Hundred. Sometimes Cilai cettis and Sāliya nagaraṭṭar (weaver-cum-traders?) themselves
took to trading in textiles, especially as this was one of the most important items of trade, having an increasing demand in an ever widening market.

The guild inscriptions refer to a large number of countries traversed by the merchants, including regions outside South India. Their presence in Siam, Sumatra and Burma is attested to by the inscriptions in Takua Pa, Loboe Tiwa and other places. The guild inscriptions also refer to the area of their operation as covering 18 patti nas (emporia), 32 valarpurams (growing markets), and 64 kadigattāvalam (periodic fairs). While the numbers may be treated as conventional, references are available to a number of towns falling in these three categories, although their identification is rendered extremely difficult due to changes in place names or the possibility that many of them declined and, hence, are not recorded in present day reports.  

All the economic development outlined above brought about an important innovation in societal organization, which helped to accommodate the craft groups and artisans, as well as lower categories of agricultural workers within the vertical division of the Right and Left Hand castes (Valangai and Ilangai). This was a root paradigm for social division of all the non-brāhmaṇa and non-velāla occupational groups and other tribal elements brought in as agricultural workers and menial service men. The improvement in the economic status of some of these castes, especially the weavers, produced rivalry for social mobility and enhanced ritual status. This is expressed in their attempts to be upgraded within this paradigm from the left hand (lower) to the right hand (higher) status groups. It is against this background that frequent occasions of conferring special privileges on the artisan communities (the anuloma rathakāras and kammālas) by the merchant organizations, temple authorities and local chiefs have to be viewed.

The major factors in the urbanization of the eleventh to thirteenth centuries, described as `temple urbanization', were thus provided by organized commerce through the nagaram, the Five Hundred, the Cittirameli and other merchant bodies, crafts organizations, initially of a local nature (and later of a supra-local nature from the fourteenth century AD), and a tripartite social stratification (brāhmaṇa, velāla and the Right and Left
hand castes). The context in which these features are highly visible was provided by multiple-temple centres, single large temple centres, some of which were also pilgrimage centres, and finally, the royal centres. It may also be noted that many of these socio-economic groups were accommodated in the *tirumadaivilāgam* of the temple centres in acknowledgment of their economic importance. This is especially so in the case of weavers (-cum-traders) who were economically more powerful than the others.

Assessing the impact of money on the commercial organization and the nature of urbanism in this period is one of the most vexing problems confronting numismatic studies. Available numismatic data is perhaps the least capable of providing clues to the degree and effect of monetization, despite the fact that a fair number of Cōla coins in gold and copper and a few in silver are known and inscriptive references to coins are fairly numerous. In the centuries before the rise of the Cōlas, the evidence of money as a medium of exchange is hardly available. The Pāṇḍya region seems to have used Arab money along with a dynastic issue, of which very few specimens have survived. Money was used sporadically and as one medium of exchange based on equivalence with paddy.

Under the Cōlas, the currency was 'not based on any uniform groups of coins with fixed ratios between different denominations and metals'. The problems in the study of Cōla and Pāṇḍya coins have been succinctly stated in several studies on South Indian coins. Paddy seems to have been the overall basis of an exchange system, in which coins were used at various levels with purely local forms of equivalence. Presumably, the *nagaram* and itinerant trade brought money into more frequent use, but despite the references to money gifts to temples, to cesses being paid in cash, and land prices determined in terms of money in the late Cōla period, no useful analysis of the monetary system can be made at the present state of numismatic studies. On the whole, monetization in the pre-Vijayanagar period was on a low key, and hence its impact on urbanization is difficult to assess.

The processes outlined above fall into two distinct phases. The end of the Pallava-Pāṇḍya period, i.e. mid-ninth century AD,
would represent one level of ‘systemic integration’, and the end of the Cōla period another, the transmutation of these levels involving changes in the structure and patterning of society.\(^{125}\) The *brahmadeya* and the temple in the first phase, with their *sabhā* and *ūr* and the temple in the second phase, with the *nagaram* in addition to the *sabhā* and *ūr*, are the chief instruments which helped in the restructuring of society. The *nagaram* network and the intersection points of the *nagaram* and itinerant trade conducted the intra-regional and inter-regional commerce, resulting in the emergence of several urban centres of different degrees of importance, with temples as their nuclei. They also brought together the royal/political centres and the ports that were consciously developed by royal policy into a tight economic and political web.

### III

The above discussion of the processes of urbanization in early medieval South India has led us to a rather inconclusive state, namely that no single autonomous, causative factor can be identified in the nexus of social, economic and political transformations which resulted in the emergence of urban forms.\(^{126}\) It has also led us to a final question, namely, what was the one curiously persistent factor which seems to permeate all activities, all institutional change and afford a ‘consensual focus for social life’, rural or urban, that which commands a sort of priority? The answer would seem to be that it was the act of validation through an ideology in order to achieve institutional permanence and socio-political dominance. Such an ideology, for early medieval South India, was provided by the concept of *bhakti*, or devotion, and the instrument of authority through which it was expressed was the temple. One may see this ideology and the power structure it sustained as the determinants in the ultimate character of the city and in the ‘specific complexes of domination’, which the cities ‘restlessly express’.\(^{127}\)

Our study of a major urban complex of the Cōla period, *viz.*, Kuḍamūkkku-Palaiyārai, has shown that even where trade and commercial activities were major factors, the presence of
religious institutions was a necessary concomitant of the urban process.\textsuperscript{128} Writing on the economy of Kāñcipuram in the same period, Kenneth R. Hall and George W. Spencer not only called it a sacred centre, but also reached a similar conclusion that Kāñcipuram’s economy did not function in isolation from political and religious institutions (emphasis added), or from the values of the Hindu tradition ‘... the city’s eminence as a religious and political centre enhanced its commercial prestige and rendered its continued prosperity a matter of importance to its Pallava and Cōla suzerains—for as long as they lasted.’\textsuperscript{129} Both these conclusions point to the need for understanding the role of religious ideology in providing an instrument for the creation of ‘effective space’ for urban forms and in determining the nature of the city and its role as the focus of change.

In the early phase of urbanization, we pointed out the absence of a dominant or formal religion, either in helping to evolve the institution of kingship and a coercive apparatus for taxation, or in producing bases of support to an exchange network, although the stimulus for urban growth was present in the form of maritime trade. In the early period, the person of the Sangam chief/king was the object of adulation—a glorious hero whose authority was based on bravery, success in tribal conflict and generosity to kinsmen. Ideas relating to physical power, energy and stature provided the necessary symbols for super-human power which temporal beings invoked for the exercise of power. Hence the comparisons with tribal deities of super-human valour and stature. In the later period, it was more the office of the king that came to be venerated and hence equated with the divine in medieval monarchy. God became the transcendental reference point, and the brāhmaṇa priests the agents of legitimizing temporal sovereignty through divine sanction and fabricated genealogies of divine descent.

It is not just fortuitous that the spread of the Purānic religion in the Tamil country coincided with the assumption of sovereignty by the Pallavas and Pāṇḍyas, and the practice of land grants to brāhmaṇas and temples started off that long process of agrarian development, followed by social and economic differentiation, generating urban forms. Thus, the control over the temple, the most important 'superordinate redistributive
instrument', was in the hands of the brāhmaṇas, who through their sabhā, assumed the role of economic administrators. The creation of such brahmadeyas and temples was an act of validation by some form of divine authority for the ksatriyas to give permanence to their power. This, in fact, led to the forging of a new instrument for the organization of sacred, economic, social and political space.

Purānic religion came to be established as the vehicle for propagating a ‘cosmological world view’. It is an extremely difficult task to trace the processes through which this happened from the end of the Sangam to the beginning of the Pallava-Pāṇḍya period. Two spheres in which it may be traced are the acculturation of all local and popular folk traditions of worship, some of which were imposed on brāhmaṇism and not merely upgraded due to acculturation, like the tiṇai deities, and their absorption into the brahmanical religions of Vaiṣṇavism and Śaivism. Evidence of this process comes from the invocatory verses added to the early Tamil classics, not earlier than the eighth and ninth centuries AD, when the tradition of the Sangam itself and the collection of the verses were systematized. It is only among the later strata of literature like the Paripāṭal and the Tirumurukāṟṟuppattai, composed long after the akam and puram poetry, that the universalization of the two deities Māl (Viṣṇu) and Murukan (Subrahmanya) can be recognized, i.e. the first traces of a formalized religion with the temple as its locus. The temple-religion of Viṣṇu was propagated first by the early ālvārs (sixth and seventh centuries AD) through the intensely personal devotional cult of bhakti, the central theme of which was the transcendental role of religion and central preoccupation, the attainment of salvation or release (mokṣa). The bhakti ideology assisted in the process of enhancing the power of both the divine and the human sovereigns through the symbolism of the cosmos/temple/territory.

The concept of bhakti acted in two distinct ways in establishing the brahmanical temple as the pivot of the enactment of the various roles of society. One was by countering the increasing influence of the ‘heterodox’ religions of Buddhism and Jainism, leading to their ultimate decline or subordination. The symbol of royal conversion was central to this
conflict. In fact, Jainism, which was more widespread in this region than Buddhism, became as much a part of the Purānic religion and temple-based cult as the brahmanical Vaiṣṇavism and Śaivism were. The other was more significant, viz., that it induced messianic expectations among the lower orders of the varna-based society through the ideal of salvation. In fact, it is possible to show that the bhakti ideal emanated in a context of social differentiation, where conflicts centered round such differentiation and social dominance, as, for example, in Kāṇcī and Madurai.

The bhakti ideology contained in itself the seeds of sectarianism. Although initially bhakti, as introduced in its simple form of devotion in the hymns of the ālvaṁś, helped in the propagation of Vaiṣṇavism, it soon changed into a tool of sectarian rivalry as it was perceived in Śaivism. Through the bhakti ideal the latter became a more efficacious instrument of acculturation for acquiring a wider popular base in the hands of the Śaiva nāyanāṁś and, subsequently, because of the royal patrons, i.e. the Cōlas, who developed its propensities systematically. The worship of the linga, as the royal cult of the Cōlas, was of central importance in this acculturation.

The bhakti ideology, with its messianic appeal, also became amplified into an ethical (moral) system capable of sanctioning and integrating new values (which the old norms could not provide) into a coherent and viable synthesis. Correspondingly, this led to the expansion of the temple's role as the innovative focus for restructuring society, and facilitating the advance of those branches of knowledge concerned with ritual display, i.e. science of architecture, sculpture, painting and allied arts and crafts—in short, iconography.

A discussion of the measures through which the Cōlas adopted, elaborated and zealously practised this ideology need not detain us here, because it has been the theme of many studies on the Cōlas and the religious history of this period. More important for our purposes is the direct relation that such a patronage had to the evolution of their power structure and the royal city. This is seen in their direct sponsorship of the stupendous projects of erecting the two distinctive drāvida style temples in Taṅjavūr and Gangaikōndacōḻapuram, as an act of
deliberate royal policy in creating a royal centre, in imitation of the bhakti or sacred centre ‘sung’ by the hymnists. Through these temples Rājarāja I (985-1014) and Rājendrā I (1012-1044) invoked the temple’s superordinate integrative role in order to create, as it were, a ceremonial city, the symbol of a centralizing power.

The focus of political and economic power had shifted conspicuously even under the late Pallavas and early Cōḷas from the brahmadeya to the temple. The Pallavas and Pāṇḍyas initiated the art of temple-building for Purānic religion. But it was the Cōḷas who gave permanence to all cult centres, replicating the temple’s central role in each one of them, through a systematic renovation in stone of old shrines and construction of new ones. The major temple projects were meant, however, only for the royal/ceremonial centres. The paraphernalia of the medieval temple mirrored the royal court. Royal servants and temple servants, the talip-parivāram and the officials kūṟṟamar were identically perceived and had identical duties. Above all, the temple idol was taken out in procession for the benefit of the devotees and the king’s procession, which followed the same path, was meant for the adulation of his people. The ula literature, eulogising the deity as well as the king, which developed as a genre of Tamil poetry under the Cōḷas, was meant to establish this identity. This almost total identity is comparable to the cult of the devarāja, which was of great importance to the medieval kingdoms of Southeast Asia. In contrast, the medieval ruler of Orissa surrendered his sovereignty to god Jagannatha of Puri, and the late medieval kings of South Travancore ruled as representatives of god Padmanābha of Tiruvanantapuram.

The subtle interplay of the social, economic, religious and political roles of these institutions is elusive and hard to interpret in empirical terms, unless the contextual evidence is brought to the fore constantly. It may, perhaps, be done with a certain degree of efficiency in the case of the Cōḷa royal centre, and there can be no better example of it than Tāṅjavērū.

Tāṅjavērū, which is located on the southern bank of the Vaḍavāru (a distributary of the Venṇāru, itself branching off from the Kaveri), stands at the south-western extremity of the
Kaveri delta, just as the second royal centre of Gangaikonda-
colapuram stands on the northern edge of the Kaveri delta
beyond the Kolliham river (Coleroon). It commanded access to
the delta region, the perennial resource base of the Cōlas, thus
affording protection to it, as Gangaikondacolapuram did from
the north. At the time of its capture by Vijayalaya in the middle
of ninth century AD, Taṇjai was not more than the centre of a
few scattered village settlements under the Muttaraiyar. Its oc-
cupation was, therefore, dictated by geographical (location) and
strategic considerations. There is no reference to Taṇjai as the
seat of the Cōla royal family in any other source except the
Cōla copper plates, till it suddenly blossomed into a huge temple
town under Rājarāja I, whose monumental project created the
most prestigious temple of the drāvida style of architecture.
Henceforth, Taṇjavūr became the royal centre on which Rājarāja
and his family bestowed lavish attention.

The city consisted of an internal circuit around the temple
(ullālar) and an outer circuit of residential quarters (purambudi),
the former meant for the residences of the priestly, administra-
tive and other elite groups and the latter for other professional
and service groups, including the two nagaram organizations.
Most of these quarters were named after the king and other
royal members whose retinues lived there.

Royal efforts to ‘create’ this city are recorded on the temple
walls. Over 600 employees were requisitioned for the temple from
villages and towns all over the Cōla kingdom, including the peri-
pheral Pāṇḍya and Tondaimandalams. Within an estimated span
of seven to eight years (though this estimate is questionable) for
the construction of the temple, a veritable colonization of this
centre took place, suggesting the ‘implanting’ of a royal centre
with all its appendages, including a series of army contingents.

The horizontal stratification of the residential areas is said
to be a familiar picture of the ‘so-called pre-industrial city’. In
such a city ‘there was a completely dominant central ceremonial
complex carefully engineered to align the city with cosmic
structures and forces. The rich and the powerful lived at the
centre while the poor lived at the margins. The markets were
neither central nor dominant but a product of the demands
arising from the nucleation by the ceremonial centre’.
The cosmic symbolism of the Taṅjavuṛ temple, i.e. the Rāja-
rājesvara, is revealed by its designation as the Dakṣiṇamēru (the
southern mēru or mountain—the axis of the universe) and that
of the deity Dakṣiṇamēru Viṭṭankar, a symbolism which also
extended to the city as the centre of the territorial authority of
the Cōlas. This is also exemplified by the ritual consecration of
the main shrine (vimāna) as well as the shrines of the regents
of the eight quarters (aṣṭa dīkpalas), situated at the cardinal points
near the gates. The city would thus seem to be organized in
‘the earthly space to replicate and symbolize the order which
pertained to the other world structure and this ensured survival
and prosperity’.139

The economic outreach of the temple is impressive as it
covered the whole Cōla kingdom, villages from all the
mandalams, Malainādu, Gangapādi and Nuḷambapādi, and even
Īlam (Sri Lanka) or Mummudicōḷamanaḍalam, being assigned
for its upkeep. The number of villages outside the Cōla country
is relatively smaller. Nonetheless, the fact that revenues were to
reach Taṅjavuṛ, both in paddy and cash, points to the direct
control exercised over the peripheral regions, including northern
Sri Lanka. So much for the politics of plunder and the segmen-
tation of power. The sabhās of several villages were entrusted
with the gold deposits of the temple, for payment of interest
in the form of provisions, consumable and other articles for
rituals and festivals, thus establishing a reciprocal outflow of
resources for investment.

The peasantry, artisans and shepherds who supplied the ritual
requirements lived in villages in the immediate vicinity of the
city. The huge quantity of recorded livestock donated to the
temple were entrusted to the shepherds for the supply of milk
products. Movement into and out of Taṅjavuṛ was constant, as
some farming activities still continued in the neighbourhood for
the temple. The nagaram and itinerant traders (Kongaṟuḷar
angādi) also conducted a brisk commerce, as is evident from the
four markets (angādis) mentioned in the Taṅjavuṛ inscriptions.

The performance of plays (Rājarājesvara Naṭaka), festivals on
the birth asterisms of the royal family, and similar occasions
for which special endowments were made at the behest of the
rulers, would also substantiate the inseparable nature of the
sacred and secular spheres of interests. Although the Coḷa palace was perhaps located at a place called Vallam, the ceremonial aspects of the city were centred round the temple. The royal processional path and that of the deity coincided outside the main enclosure.

The temple was made into a veritable treasure-house of arts, through its frescoes representing themes from the stories of the bhakti saints, bronze images of various deities and the bhakti saints and sculptures of rich iconographic content. Gangai-konḍacolapuram exhibits all these features to a remarkable degree, although the details of the city’s organization are not available from its records.

These two royal centres, however, did not have sanctified bhakti shrines as their nuclei like the other Coḷa cities, where the city grew around bhakti shrines, interspersed with which were the new shrines erected by the kings both for worship and as sepulchral monuments of royal members, as in Palaiyārai. Hence, the royal builders of these two temples had them sanctified by getting hymns composed in their praise by the royal preceptor. This act points much more clearly to the need for a sacred association and nucleus for a new settlement, in this case the royal centre.

Madurai and Kāṇcipuram, two of the oldest cities of this region, also possess the characteristics of a ceremonial centre. However, their antecedents as royal centres may be traced back to the early historical phase. The poetic imagery of these two centres in the Sangam classics is rich and illustrative of the cosmic symbolism attributed to them from early times. Thus, Kacci (Kāṇci) is described as the pericarp of the lotus which issues from the navel of Viṣṇu and Tiraiyan, its ruler, is said to be of the lineage of Viṣṇu. In fact a Viṣṇu shrine (of the reclining form) is alluded to in the early poems as marking the centre of the city. Similarly, in Madurai stood the shrine of Kṛṣṇa in the heart of the town, which in the early poems is called Kūḍal (centre), where, according to conventional description, different quarters with tall buildings met.

The shrine is identified with the present Kūḍal Alagar temple located in the centre of the city. However, both these cities did not grow into huge complexes until the time of the Pallavas and the later Pāṇḍyas
respectively. While Kânci developed into a dispersed ceremonial centre, Madurai assumed its present form only in the late medieval period under the Nâyakas, when fortifications were added to it and other cities like Tañjâvûr.

A comparative study of the royal/ceremonial centre of the above type with other cities of this period shows that all of them shared the ceremonial aspects to a great degree. However, historical differences provide them with certain traits, on the basis of which typological categories may be distinguished. Among these, Kuḍamûkku-Palaiyârâi and Kâncipuram may be classified as multi-temple centres, evolving after centuries of growth from earlier agrarian clusters, each temple which marked their growth representing the locus of the ceremonial complex at different chronological points, thus leading to the emergence of dispersed ceremonial/sacred centres rather than compact ones.\(^{142}\)

In such centres, the locus of the ceremonial complex shifted from one temple to another, depending upon that temple which was erected or patronized by a particular ruler to legitimate his sovereignty. A third type of urban centre is the sacred centre which originated and evolved around a single cult centre as a tirthâ or sacred spot, later assuming the character of pilgrimage centre. To this category may be assigned Chidambaram, Srîrangam, Tiruvanâmâlai and several other centres, where religion was the major factor in its urban character, which assured its permanence or continuity in a given cultural region. Chidambaram had the added prestige of being the centre of the royal coronation ceremony under the Cûlas, for it was the most sacred temple (Kôyîl) to the Śaivas, just as Srîrangam was to the Vaiṣṇavas. These two latter types usually have a long history and pass through successive stages of growth.

Cûla attempts to develop the agricultural potential of the wet zones of the Tâmraparâṇi valley, also brought into existence a fairly extensive urban complex with two new brâhmaṇa āyas such as Râjarâjacaturvēdimangalam (Mannârkôyîl) and Ceravanmahâdevicaturvēdimangalam (Śêrmâdêvi) in Mulli nadu in the Tirunelveli district. The developmental stages of this complex are attested to by the records of the eleventh and twelfth centuries AD.\(^{143}\) Particularly important was Ceravanmahâdêvi, in
which Rājendra I erected a palace for the Cōla-Pāṇḍya prince, who was appointed to govern the Pāṇḍya region conquered by the Cōlas, and in which arrangements were made for settling 'hundreds' of families by giving them house sites. Together with the taniyūrs like Madurāntakacaturvēdimangalam, Tirukkalukkuṇḍram and others, these centres show a process of agglomeration of a series of settlements around them, similar to the agglomeration designated in tribal societies as sacred territories administrated by the priesthood. Actual physical agglomeration also means that 'citizenship, the crux of belonging, was defined by a specific religious territorial allegiance', also creating a hierarchy based on a sacrally defined order.

None of these early medieval cities or towns were fortified in the sense of being protected by defensive walls, except for the high enclosures of the temple demarcating the sacred precincts. For the role of ensuring safety and security of the people was 'not by walls against physical enemies', but was by religious rites and ritual magic 'against menaces of nature', the mediators between gods and men were the priests, and the communication system was mediated through worship and sacrifice (offering).

Thus, the nagaram and the itinerant merchant organizations were also accommodated in the expanding but effective space created by the temple centres. In physical terms, it was the tirumadaivilāgam around the temple, where separate quarters were assigned to the merchant and crafts groups. In south Indian urbanization, the nagaram was not a commercial city, i.e. the typology adopted by M.I. Finley for Greek cities. Nor were the trade centres on the routes of itinerant merchants similar to the 'burgher' category of medieval Europe, in the sense of a separation between country and town. Hall and Spencer find many essential similarities in the merchant organizations of long-distance trade in South India and medieval Europe. But the main difference, they point out, lies in the absence of the conflicting burgher interests as against the episcopal or seigneurial authority, i.e. no weakening of relationships with the countryside, despite a separate group consciousness. This is attributed to the superordinate integrative character of the sacred centres like Kāṇcipuram. In the medieval south
Indian context, all the emergent institutions and urban forms were merged into a single systemic relationship, for the commercial guilds were accommodated as a substantial component within the same structure, and had to seek validation ‘within the norms of a traditional social order’. In effect, therefore, the network of nagaram, commercial centres and ports brought together into a tight economic and political web, the royal/ceremonial/sacred centres.

The question of dominance in all such centres would seem to be closely related to and clearly reflected in the evolution of large temple structures from the nucleus of a single shrine. Stylistically the most remarkable between the seventh and the eleventh centuries are the royal creations, particularly illustrated in the verticality of the vimāna (shrine), which reached its culmination under the middle Cōlas (985–1044), together with the enclosures and the gateway (gopura). In a sense they represent the apex of the socio-political hierarchy. The fact that authority relationships changed during the twelfth and thirteenth centuries introduced a significant variation in the emphasis on temple architecture, which now shifted to the additional structures, leading to a horizontal magnification of the temple, i.e. structural expansion through a complex of shrines, pillared halls (mandapas) within the enclosures, each marking a further stage in the participation of diverse groups in temple-building and gift-giving activities. The tirumadaivilagam is also a case in point.

Architecturally, the second imposing structure is the gopura which, even in the later period, was mainly the creation of ruling dynasties and their subordinate chieftains, whereas the inner spaces of the enclosures (prākāra) covered with smaller edifices were the handwork of those powerful agricultural and commercial communities seeking validation.

Ceremonial centres are regarded as pre-eminent instruments of orthogenetic transformation. The early medieval city in South India is an example of such transformation, and was evolved in a cultural matrix, of which it became at once the product and the symbol. This culture was itself reared by the state society that emerged under the Cōlas. The Cōla state evolved through a steady process of integrating different sub-cultural zones or pre-existing lineage areas, and became conterminous
with the Tamil macro-region, given the fluctuating cultural frontiers between the Tamil plains and the Deccan plateau and the less easily definable frontier separating the Tamil and Andhra plains, which is more a matter of historical than geographical differences. The city, therefore, to the contemporary Tamil world, albeit a limited geographical and cultural entity, was the one which intensely expressed or epitomized this culture and to which people were drawn by the symbols of its sacred and ceremonial functions.

IV

The thirteenth and fourteenth centuries would seem to mark a watershed in the urban history of South India. To understand how important this divide was and what rendered it so, one has to look at the evidence afresh to see what the new features of the urban landscape were, and what were the connections that one might have failed to see between these developments, and the changing pattern of power relationships that evolved under Vijayanagar. These changes may be seen as the next set of disjunctive processes in the urbanization of South India. The process began with the general trend towards militarization and fragmentation of political power. One aspect of major importance to the study of the role of merchant organization in the emergence of towns is the question whether merchants tended to fortify their settlements, both as a measure of safeguard against loss of merchandise, and as a centre of power and domination. The earliest such fortified town attested to in the Tamil region was Karavandapuram (Ukkirankōṭṭai) in the Tirunelveli district, the home of a Vaidya family, which supplied ministers to the Pāṇḍyas of the eighth and ninth centuries AD. The erection of the fort is credited to an eighth century Pāṇḍya king, and the soldiers on guard at the ramparts are referred to in the tenth century inscriptions of Rājasimha (III), who built a big market (pērangādi) there and left it under the protection of the merchant guild—the Ayyāvole. The temples of this settlement were also left in the charge of armed guards. The practice of stationing armies to protect temples was followed in certain
areas of importance like newly occupied zones and trade routes such as Tiruvāḷiśvaram in Tirunelveli district, in the eleventh century under the Cōlas, and Sangrāmanallūr in Coimbatore district, where the army was required to protect the temple premises.

It is not clear whether the erivirappattanaś were protected by defensive walls, for evidence on these settlements would merely indicate the presence of militant groups of the merchant bodies. The stocking of commodities (for sale or distribution) in places known as cārigaikkottai (literally Toll-fort), seems to have been a regular practice under the late Cōlas and later Pāṇḍyas, as indicated by the Mannārguḍi (Tanjavur district) inscriptions referring to madīgais (is it maligai?—grocery or provision stores). The emergence of cakrabārīs among the merchants has been mentioned earlier, indicating a tendency on the part of some merchants in the thirteenth century to assume titles of superior status and influence. Interestingly, the increasing importance and power of the merchant bodies in the thirteenth century is also reflected, if not in the type of closed towns of western Europe, in the militarily protected (fortified) towns called viradalām and sūradalām, tending to intrude among the traditional power bases of the agrarian elite and chiefly families. Could this be taken to point to a new trend in the rise of urban power groups in the form of merchant entrepreneurs?

There is evidence of a general parcelling out of various regions under petty chiefs by the Pāṇḍyas, both as a measure of counteracting the increasing intrusion of the Hoysaḷas into the Tamil country, as well as promoting the overseas trade, which at this time continued to be on the increase. Thus were created a series of strongholds under Pāṇḍya subordinates near those centres where the Hoysaḷas had established military stations or garrisons. Mali Fatan, the Pāṇḍya port of Devipatiṇam, was assigned to Abdur Rahman, their Muslim political and commercial agent, who was even permitted the kingly privilege of reading the Khutba in his name. Interestingly, many of the Hoysala military stations were centres where the merchant organizations, agricultural guild and their cārigaikkottaiś with madīgais were also located, suggesting that the line of Hoysala
stations had a definite commercial motive behind their establishment. The Vijayanagar militarization was apparently a continuation of the Pāṇḍya reaction to the Hoysala intrusion, as well as a defensive measure against the new technology of defence and warfare brought in by the Muslim rulers. Another element of change was the rise of the monastic tradition among the Vaiṣṇavas and Śaivas with powerful lineages, which acquired control over temple administration and landed property in various strongholds of these two religions. This is traceable to an attempt on the part of both the sects to expand their social base through reforms, with the result that the northern Sanskritic tradition and the southern Tamil tradition created a schism among the Śrīvaiṣṇavas (Vadakalai and Tenkalai) with their separate monastic lineages. The Śaivas established powerful non-brāhmana lineages as custodians of the Śaiva Siddhānta canon, on the basis of the support from the vētālas, the merchant and weaver (kaikkōla) groups.

During the Vijayanagar period the mercantile community seems to have entered into new forms of contractual relationships, especially with the new loci of power, and eventually came to terms with the shift in the major centre of power to the Tungabhadra region in Karnataka under the Vijayanagar rulers. Craft organization strengthened itself by moving out of purely local contexts. The weaver communities, of which the kaikkōlas displaced the sāliyas as the most influential group, now organized themselves into a Mahānādu of supra-local character, with its headquarters at Kāncīpuram. With the emergence of merchant entrepreneurs and master craftsmen favourable conditions for a new form of economic interdependence were created.

Militarization of the state under Vijayanagar also brought into existence a new set of fortified urban centres of the subordinate nāyaka chiefs, generally on hills and in other older political or royal centres, which were now converted into a new kind of militarily viable fortified towns (Madurai and Taṉjavūr). Counterposed to them were the old temple and pilgrimage centres, where power relationships were still established through religious heads and monastic lineages. A new alliance was forged with powerful monastic heads, authority
was shared but dominance remained strictly at the political level of the state, exemplified by its kingship. Some of the sacred centres became supra-regional pilgrimage centres (Tirupati, Tiruvanṇāmalai, Kāṇcipuram and Srīrangam) where the question of dominance was resolved by the re-affirmation of the deity’s supremacy, as evidenced by the Sthalapurāṇas.

The multiple loci of power and militarization, rending the fabric of the unitary culture of the Cōla period, left the old ideological apparatuses incapable of preventing the gradual secularization of political power, although the ceremonial/political centre still retained the traditional symbols of validation. Secularization first appears in the physical demarcation of the royal centre through special ramparts from the sacred complex, the sacred aspects of the earlier ideological tradition dominating the religious complex, and the ceremonial and military aspects of the new urban forms dominating the royal residential or administrative complex, as in Hampi. It is also seen in the greater emphasis laid on ceremonies like Mahānavami centering round the royal person rather than the tutelary deity. The processes are not easy to discern, but the differentiation of political and religious authority is expressed through the increasing dependence of political power on a balance of forces between the secular and sacral leadership. The dichotomy was not between the rulers and ruled, for it was now replaced by a quadripartite division, in which cultural, religious and politico-military elites were opposed to lower rural (peasant) and urban (predominantly artisan and merchant) groups. Hence the differentiation in sacred and secular domains.

The entry of the European companies with their joint stock formation introduced a further element of change in the seventeenth century AD, followed by colonialism, when the factory replaced the temple as the nucleus of a different type of urban centre in the coastal areas.

15. ‘Surpluses are always defined and mobilized in a particular institutional setting’, R. McC. Adams, _The Evolution of Urban Society: Early Mesopotamia and Pre-hispanic Mexico_, Chicago, 1966, 45-7. In other words, surplus is a social product.

16. R.S. Kennedy, ‘King in Early South India as Chieftain and Emperor’, _IHR_, 1976, vol. iii, 2. Patronage and liberality towards bards and minstrels were the most important means of legitimation of the kingly office, so much so that jewels, gold, elephants, chariots and fine clothes were distributed to the pānar, akāvunār and porunār, (minstrels) for praising the qualities of leadership and liberality, thus justifying his position.

18. ‘Tribal conflicts are endemic to non-urbanised societies at all levels of development and are not necessarily self augmenting’. See Paul Wheatley, _The Pivot of the Four Quarters: A Preliminary Enquiry into the Origin and Character of the Ancient Chinese City_, Edinburgh, 1971, 301.
20. *Akanānūrū*, 36, 57, 125, 246, 253 and 345; *Puṟanānūrū*, 7–9, 23, 25, 31–2, 33, 35–6, 39–40, 227, 371ff. *Kuruntokai*, 393. See K.A. Nilakanta Sastri, *The Cōlas*, Madras, 1975, 30. The pearl-rich Pāṇḍya coastal region and the pepper-rich hilly tracts of the Čeras must have been a constant source of conflict among the three ‘crowned kings’. The Cōla interest in these areas is well known.
25. In contrast to the urban centres of marutam and neital, the mūdēr of the other tracts described in the *Malaipāṭṭukatēm*, and *Cirupāṇāṟṟuppattai* seem to have been merely camps of the chief-tains of the hilly-pastoral tracts.
27. Each inland capital undoubtedly had links with its port. The existence of routes connecting the inland towns with the coastal
towns is known from the Cirupānāṛṛuppatai (ll. 142–3) and Perumpānāṛṛuppatai (ll. 319, 371–3). See also N. Subrahmanian, Sangam Polity, 1966, 123. However, a network of routes connecting various other smaller settlements and nodal points with the ports is hardly attested to. See K.V. Soundararajan, ‘Determinant Factors in the Early History of Tamil Nad’, Journal of Indian History (JIH), 1967, part i. Network also means an organized commercial system in which urban institutions develop, which in the Tamil region did not.

29. Pattinappālai, ll. 120–36. The description of Puhār in Paṭṭinappālai suggests an elaborate and fair-sized town with well-defined quarters for merchants and officials, with their shops and offices and residential quarters.

30. Archaeological finds identifiable as remains of dyeing vats are reported from Uraiyyūr and Arikamēdu. Kacci and Madurai, the well known textile centres, have not provided similar finds. For Uraiyyūr, see Indian Archaeology: A Review (IAR), 1964–5, 25–6; 1965–6, 26; 1967–8, 30–1; and for Arikamēdu, R.E.M. Wheeler et al. ‘Arikamedu—An Indo-Roman Trading Station on the East Coast of India’ in Ancient India, 1946, no. 2. Madurai is referred to in the Arthaśāstra, as one of the centres for the best cotton fabrics and ‘Aragritic Muslims’ of the Cōla country, probably from Uraiyyūr, are referred to in the Periplus: 59, see also Champakakshmi, ‘Archaeology’.

35. *Puranānūru*, 29, 123 and 125. See Gurukkal, 'Early Iron Age Economy', 75, for continuity of tribal traditions under the *Vēndar*, 'crowned kings'.

36. The generous gifts to poets and bards included elephants, horses, gold, gems etc. Poets and bards sharing the king's feast and the intimacy of patron-client relationship are a part of this redistribution and prestation economy.

37. *Pattinappalai*, ll. 120-36. The sea-faring interests of the Tamil rulers, which must have led to the special care bestowed by them on the ports, are obviously derived from a remote past hinted at in the poems claiming that the Cōlas were descendants of an ancestor who harnessed the monsoon winds for sea trade. See Nilakanta Sastri, *History of South India*, OUP, 1958, 124; Maloney, 'The Effect of Early Coastal Sea Traffic on the Development of Civilization in South India', Ph.D. thesis (unpublished), University of Pennsylvania, Microfilm xeroxography, 1968, 150, and 'The Beginnings of Civilization in South India', *JAS*, 1970, vol. xxix, no. 3, 615.

39. The bards sought the patronage of the 'crowned kings' as well as the tribal chiefs. The main theme around which the *Arruppatai* works were composed relates to patronage and the lament of the poets about the decline of the patron-client relationship, possibly a reference to the decline of the chiefdoms or a reluctance on the part of the *Vēndar* to give generous gifts. See G.L. Hart, *Poets of the Tamil Anthologies--Ancient Poems of Love and War*, Princeton, 1979, 176.

56-7, *see also* K. Sivaraja Pillai, *Chronology of the Early Tamils*, Madras, 1932, 192-3 for the nature of social differentiation.

42. This is, in fact, what the medieval commentator on Tolkāppiyam makes out from the reference in that work. *See* N. Subrahmanian, 1966, 259.

43. *See* Champakalakshmi, ‘Archaeology’, for areas over which the vēlir exercised control.

44. Groups designated as vambalar, umanar, paratavar, vanikar, vilaiñar and pakarnar, would refer to the itinerant trader or the new comer, salt trader, fisher and trader merchant, seller and hawkers respectively. *See* Tamil Lexicon, iv, 2380 and 2496; v, 2380; vi, 3492, 3586 and 3715.

46. The fact that the paratavar diversified their economic activities and became rich traders (*Akanänűru*, 340; 16-17; 350: 11) and their prosperity as described in the poems may well be a development due to maritime trade. The coastal paratavar who are earlier portrayed as a rustic, happy and simple folk (*Maloney, ‘Early Coastal Sea Traffic’,* 231-2) subsequently enhanced their economic status through extensive trade, and acquired a better life-style. Sea trade was particularly important to them. They worshipped Varuna and the chank (conch) was of special cult significance to them.

47. The earliest craft well attested to as a specialised one was weaving. *Tirumurukāṟṟuppatai;* 138 and *Porunarāṟṟuppatai;* 81-3, of the later strata of Sangam works.

48. I. Mahadevan, ‘Corpus of the Tamil Brahmī Inscriptions’, in Nagaswamy (ed.), *Seminar on Inscriptions*, Madras, 1966 (1968), nos 3 and 6. The term Kāviti is taken to be a guild chief by Sivathamby, ‘The Social and Historical Perspective (of the Early Tamil Poems)’, in Sivathamby, *Drama in Ancient Tamil Society*, New Century Book House, 1981, 172. However, the references to the Kāviti’s position and functions would seem to indicate that he was more a counsellor to the ruling chiefs/kings. This is the meaning attributed to the term by historians like Nilakanta Sastri and N. Subramanian. *See* Sangam Polity, 1966, 86 and 96.

52. The ‘Cengam hoard’ from Āṇḍipāṭṭi in the North Arcot district is assigned to the chief Nanan of Cengam, referred to in the *Malaiapatukatām*.

53. *Tolkāppiyam*, Porul: 625–6, 632 and 635. That this division hardly applied to the whole of the Tamil society or that it was not a well-understood framework, is seen in references to the four categories, which include people like *tudiyar, pāṇar, paraiyar* and *kadambar–Puranānūru*, 335.

56. The present ‘vellaiyan iruppu’ in Kāvērippūmpaṭṭinam is said to be the site of an ancient *yavana* colony. See *Paṭṭinappālai*, II. 214–18; *Śilappadikāram*, v, 6–12; vi, 130–3; 143.

57. Champakalakshmi, ‘Archaeology’. An attempt is made in this essay to correlate archaeological evidence from the Megalithic burials and their distribution with the literary evidence of the anthologies and epics.

60. ‘It is precisely the growth of the collective symbols and institutions of the primitive states that can explain the conversion of peasant leisure into foodstuffs in urban store-houses’, Adams, *Evolution*, 45.

62. Before Kauṭīlya there seems to have been a general preference for
open sea routes, whereas Kauṭilya gives importance to land routes and sea routes that followed the coast. *(Arthaśāstra*, vii, 12).

63. It is doubtful whether at this early stage there were many traversable paths in the intercourse of the Tamil country. *See Sondararajan, ‘Determinant Factors’,* 667.

66. Ibid., chapter 5.

70. Webb uses the term ‘conditional state’ to describe highly developed, sometimes durable chieftdoms which appear to be transitional to the state, and in which the transformation may never take place. ‘The lack of a reliable source of force which may be applied in a crisis’ makes ‘obedience of the separate segments of a society to the leadership’ conditional. It is the element of coercion, which is emphasized here as a distinguishing feature of the state from other elementary forms of political organizations. *See M. Webb, ‘The Flag Follows Trade—An Essay on the Necessary Interaction of Military and Commercial Factors in State Formation’, in Sabloff and Lamberg Karlovsky (eds), *Ancient Civilization and Trade*, Albuquerque, 1975, 156ff. These early Tamil chieftdoms disappeared into oblivion rather suddenly and dramatically, see Champakalakshmi, ‘Urban Processes’, 51. For lack of coercive power among the Vēndar, see Gurukkal, ‘Early Iron Age Economy’, 76.*

73. V. Gordon Childe, ‘The Urban Revolution’, Town Planning Review, 1950, 29, 3-17. Two of the important criteria listed by Gordon Childe, namely, the freeing of a part of the population from subsistence tasks for full-time craft specialization, and the substitution of a politically organized society based on territorial principles—the state—for one based on kin ties, were absent in this phase.

75. See also B. N. S. Yadava, ‘The Accounts of the Kali Age and the Social Transition from Antiquity to the Middle Ages’, IHR (July 1978-Jan. 1979), vol. v, nos 1-2, 61; Also Spencer, ‘Religious Networks and Royal Influence in 11th Century South India’, Journal of the Economic and Social History of the Orient (JESHO), 1969, part i, vol. xii, 47. It has been argued that the decline of trade in the 3rd century AD was followed by the decay of towns in north India, for which archaeological evidence has been cited. (R. S. Sharma, IHR, 33rd Session, Muzaffarpur, 1972, 92-104). These decaying towns, it is suggested, were converted into Nārthas or places of pilgrimage in early medieval times. See R. N. Nandi, ‘Client, Ritual and Conflict in Early Brahmanical Order’, IHR, 1979-80, vol. vi, nos 1 and 2.

76. The Kural, which extols the importance of agriculture, seems to provide a clue by referring to the breakdown of political ethics causing strain on the cultivators due to forcible demands.

77. Adams, Evolution, 18.

78. See Chapters 4 and 6 in this volume.

79. The text of this inscription remains unpublished, but preliminary reports clearly refer to lands ‘granted’ to brāhmaṇas. Pūlāṅkuricci is in the semi-arid Ramanathapuram district. See Nagaswamy, ‘An Outstanding Epigraphical Discovery in Tamil Nadu’, Fifth International Conference Seminar on Tamil Studies, Madurai, 1981.

80. See Chapter 4 in this volume.

81. There is no single monograph to date which has failed to recognize this, yet a major methodological and analytical difference exists between the earlier ‘conventional’ historiography of South India and the recent studies. The difference is also one of static and dynamic, or narrative and analytical frameworks in these two approaches, e.g. C. Minakshi, Administration and Social
Life Under the Pallavas, Rev. 2nd edn, Madras, 1977; Mahalingam, South Indian Polity, Madras, 1955; Nilakanta Sastri, The Colas, Madras, and so on. Contra, Sharma, Indian Feudalism, Calcutta, 1975; Stein, Peasant State and Society in Medieval South India, OUP, 1980; N. Karashima, South Indian History and Society: Studies from Inscriptions AD 850-1800, OUP, 1984, and so on.

83. Stein, Peasant State, Chapter on ‘The State and the Agrarian Order’; Spencer, 1983.

85. It has also been suggested that in this period, there is evidence of inter-societal technology transfer in irrigation between South India and Sri Lanka. Gunawardana, ‘Inter Societal Transfer of Hydraulic Technology in Pre-colonial South Asia: Some Reflections Based on a Preliminary Investigation’, Tonan Ajia Kenkyu (South East Asian Studies), Sept. 1984, vol. 22, no. 2. In both the Pallava and Pandya regions, perennial and inundation techniques were extensively used in areas suitable for such methods, a practice which was prevalent from the Sangam Period. There are literary traditions associating Karikāla Cōla of the Sangam period with a major irrigation work (dam) on the Kaveri near Tiruchirappalli (Uraiyr), and the deforestation of the northern Tamil region in order to settle 48,000 Velāḷa families. Although it may refer to such activities even prior to the brahmadeya period, there is no clear evidence that this irrigation project, believed to have been carried out with slave labour (prisoners of war), was successfully managed by the Cōlas of the Sangam period. In fact, a study of the present site of this dam points to a medieval date for the dam. In this context, the views of D. Ludden may be mentioned. ‘Developing river irrigation was part of building regional political
order. The sangam period technology was rudimentary, based solely on inundation; and, ‘The dam and channel systems in the up-river tracts, were highly productive, but the Tamraparni region near Ambasamudram was the locus of the most dramatic agricultural and political development under the Medieval dynasties’, ‘Patronage and Irrigation in Tamil Nadu, A Long Term View’, IESHR, 1979, vol. xvi, no. 3, 349ff. See also D. Ludden, Peasant History in South India, Princeton, 1985, chapter i. Under the Pandyas of the later period, the strengthening of the bunds of existing tanks and construction of several new ones are recorded in the eighth-ninth century inscriptions. The use of stone for the new bunds and the special technique of sluice construction to regulate water supply are also attested to for the first time in these records as well as in those of the Pallavas. See Gurukkal, ‘Aspects of the Reservoir System of Irrigation in the Early Pandya State’, Studies in History, n.s., vol. ii, no. 2, 155-64; Minakshi, chapter vii; T.M. Srinivasan, ‘Irrigation and Water Supply’, see also D. Ludden, ‘Ecological Zones and the Cultural Economy of Irrigation in Southern Tamil Nadu’, JAS, n.s., 1978, vol. i, no. 1.

86. It may be noted that invariably all the brahmadeya records show an intimate knowledge of astronomy, evidently on the part of the brahmaṇas, the grantees, by their references to eclipses and other astronomical phenomena, apart from the methods of dating, which include precise calendrical details, a boon to chronologists, who have been able to date many such records with great exactitude.

87. When new settlements were brought into existence through brahmadeya or agrahāra grants, the expansion of the revenue base is implied in the phrase that such villages were ‘non-taxable for twelve years’, after which they would be brought under the taxable category. See T.V. Mahalingam, ‘Genesis and Nature of Feudalism under the Pallavas of Kānchi’, Paper presented at the Seminar on Socio-Economic Formation in the Early Middle Ages—AD 600-1200, Allahabad, 1977. This is also illustrated by the references in Karnataka inscriptions recording the settlement of agrahāras. Sometimes, the revenue dues from such agrahāras were also fixed in cash. See S. Leela Shanthakumari, History of the Agrahāras, Karnataka 400-1300, Madras, 1986, 16-17.

88. Gurukkal, ‘The Agrarian Society’, chapter iii, 168ff. Tax terms like puravu-pon, puravu-vari (land tax) āyam, kāṇām, dandam, karai, and kadamai are commonly found in Pallava-Pandyā records. That revenue demands were on the increase in the early medieval
period shows that agricultural surplus sustained the ruling and non-ruling elites of the period. This is much more clearly attested under the Cōlas. See Chattopadhyaya, ‘Political Processes’, 16. It has been argued that the devotional cult of bhakti, the personal devotion to the deity, symbolizes the tenant-lord or cultivator-landlord relationship of a feudal society, or justifies it, perhaps, by providing ‘the delusion of equality among the lower orders which in reality remained beyond their access even in the ritual area’. See R.N. Nandi, ‘Some Social Aspects of Nālāyira Divya Prabandham’, IHC, 37th Session, Calicut, 1976, 118-23; Kesavan Veluthat, ‘The Temple Base of the Bhakti Movement in South India’, IHC, 40th Session, Waltair, 1979, 185-94. Here, bhakti in effect represents the extra-economic coercion or bond enabling the circulation of resources, i.e. devotion to, and a reciprocal protection from, the deity. See for non-economic considerations in social relations, P. Anderson, Passage from Antiquity to Feudalism, London, 1974, 401ff; Maurice Dobb, Capitalism, Development and Planning, The Hague, 1971, 208.

89. This is the main theme in all the works of Stein, the culmination of his researches being his monograph, Peasant State and Society in Medieval South India. There are many influenced by Stein’s theory among American historians of south India, such as Spencer and Hall.

90. The best exposition of this theory is that of Indian Feudalism by Sharma. Despite the fact that it has provoked a continuing debate on the prevalence of a feudal society in India on the European model (Harbans Mukhia, ‘Was There Feudalism in Indian History’, Presidential Address, IHC, Section II, Waltair, 1977; see also Sharma, ‘How Feudal was Indian Feudalism’ and Stein ‘Politics Peasants and Deconstruction of Feudalism in Medieval India’ in Journal of Peasant Studies, Jan/April 1985, vol. 12, nos 2 and 3), there are quite a few proponents of this theory. The series of Presidential addresses in the IHC on this subject are sufficient proof of it. See D.N. Jha, ‘Early Indian Feudalism: A Historiographical Critique’, Presidential Address Ancient India Section, Indian History Congress, 40th Session, Waltair, 1979; B.N.S. Yadava, ‘The Problems of the Emergence of Feudal Relations in Early India’, Presidential Address, Ancient India Section, IHC, 41st Session, Bombay, 1980; Nandi, ‘Growth of Rural Economy in Early Feudal India’, IHC, 45th Session, Annamalai, 1984.

93. The most systematic study of the nādu and kūrram for the Cōla country is that of Y. Subbarayalu, Political Geography of the Cōla Country, Madras, 1973. This work, however, restricts its study to the Kaveri valley and adjacent areas in the north and south. This study also confines itself to the middle Cōla period, which in fact represents the end of the main phase of agrarian expansion of the Cōla region, not the stages of such expansion. The erstwhile Pallava and Pāṇḍya regions need to be taken up for an equally thorough investigation.
94. Studying the political geography of this region may prove to be a very useful method of establishing the chronological sequence of their emergence, which can be done with the help of contemporary inscriptions, providing a remarkable corroboration of the integration of less developed pre-existing settlements, having no irrigation or other facilities, into the newly emerging brāhmaṇeśa and temple nucleated centres, interesting examples of which may be found in Tondaimanḍalam.

The kottam, of which twenty-four are traditionally assigned to the Pallava region, had in it one or more nādus, some of which are for the first time attested to only in early Cōḷa or middle Cōḷa inscriptions, indicating, thereby, that the process of development and integration was continuous. The same process is noticeable in the case of nādu and kūrram in the Cōḷa and Pāṇḍya regions even up to the eleventh century AD when the vaḷaṇādu was introduced as a revenue division under Rājarāja I, after a major land survey and assessment was initiated by him for revenue assessment. Nearly fifty nādu/kūrram localities have been listed so far in the Pāṇḍya region between seventh and tenth centuries AD. The expansion of one of these nādus, viz., mulli nādu in the wet zone of Tamraparni valley, provides an interesting case of deliberate royal choice of a region for development as a resource base under the Cōḷas.
97. It is only in the medieval nigaṇḍu or lexicographic works and commentaries that one comes across references to the Vaiśya and Śūdra categories.
102. See Minakshi, *Administration and Social Life*, part III, chapter xi; Karashima, *South Indian History and Society*, chapter i.
103. Hall believes that nagaram as a market centre for each nādu evolved even in the Pallava times, i.e. before the 10th century AD. Further, he treats the 400 years of Cōla rule as a single undifferentiated unit, failing to see the spatial and chronological increase in the number of nagarams as an important indication of the growth of the commercial network. See *Trade and Statecraft*.

147. Stein’s view is that the temple enclosures with high walls were meant to afford physical protection.

149. Hall and Spencer, 'The Economy of Kâncipuram', 139-40 and 147.

151. The orthogenetic and heterogenetic cities have been proposed as models for studying cities in traditional societies and those which developed in modern (colonial and industrial) societies. This is also related to primary urbanization for the city *sui generis* and secondary urbanization (diffusion and imposition of urban forms) and to the values and world views of the ideology of the Little and Great Traditions and that of the modern west. See Robert Redfield and Milton Singer, 'The Cultural Role of Cities', *Economic Development and Cultural Change*, 1954-5, iii, 53-73. The primary and secondary urbanization follows Morton Fried's distinction of pristine and secondary states in the discussion of Paul Wheatley and, hence, evolution of urbanism and the appearance of the early state institutions are taken to be a simultaneous development.

The concept of the ceremonial centre is admirably worked out by Wheatley, *The Pivot of the Four Quarters*, 311. His study of the Chinese city of the second millennium BC (i.e. Shang, north China) is most interesting from the point of view of 'traditional' societies. Its applicability to the medieval kingdom of Southeast Asia is borne out by the symbolism and structure of the ceremonial centre in the great complex at Angkor in Cambodia. This is also comparable to the process of Synoecism in ancient Greece. However, Wheatley's cross-cultural comparisons with Mesopotamia, Meso-America, Yoruba (Nigeria) and especially the Indus valley, are fraught with great difficulties due to the methodological difficulties in using the kind of archaeological data unearthed in these places.

Following Wheatley, Harold Carter uses the concept of the ceremonial centre to explain the structure of the city in areas of nuclear urbanism as well as secondary urbanism. His methodology, derived as it is from historical geography, is more sound in so far as the structural design and regional variations are capable of being established (Carter, *Urban Historical Geography*, 1983).

In a recent study of Madurai and Madras, Susan Lewandowski tries to analyse the form and function of the ceremonial
city and the colonial port as orthogenetic and heterogenetic cities respectively. She tries to establish a distinction between Madurai as representing a unitary urban form and Madras a tripartite urban form, Madurai representing the traditional ideology, the tripartite division of urban Madras being predicated on a western ideology that allowed for horizontal linkages within the city. See Susan Lawandowsky, 'Changing Form and Function of the Ceremonial and Colonial Port City in India: An Historical Analysis of Madurai and Madras', in K.N. Chaudhuri and C.J. Dewey (eds), Economy and Society, OUP, 1979, 299-329.

152. The implications of such a possibility are relevant to the question whether such towns led to the dissolution of existing social relations between the merchants and the agricultural elite. Emergence of commercial towns (closed towns) and the non-legitimate domination of merchants, it has been argued, led to the dissolution of existing social relations and the decline of feudalism in Europe. It has also been suggested that the merchant groups were alien bodies. Both propositions were found to be difficult to establish and, hence, the question became one of how control over production and towns of productive capacity became an important point of conflict between feudal lords and merchants. See Abrams, 'Towns and Economic Growth'.

163. For a discussion of these changes as part of the increasing autonomy of each institutional sphere of society making the problem of legitimation even more complex, see Wheatley, The Pivot of the Four Quarters, 320-1.
Stimulus from Outside: Urbanization in the Early Historical Period

C. 300 BC to AD 300

The second urbanization in India, which began in the sixth century BC, with its epicentre in the Ganges valley, became a subcontinental phenomenon by the beginning of the Christian era and registered a general decline by the end of the third century AD. Urban processes were conspicuously intensive between the third century BC and the third century AD, i.e. the early historical period, when they spread to peninsular India in the wake of Mauryan political expansion and economic control over peninsular regions with major resource potential, especially minerals. However, the degree of urbanization and the nature of urban forms varied considerably in the Deccan, Andhra region and Tamilakam, the three main geographical and cultural regions of peninsular India.

Tamilakam in the early historical period offers an interesting regional version of the second urbanization in the subcontinent. It points to the need for probing into the diversities and regional variations in the processes and forms of early historical urbanism. The early urbanism of Tamilakam was not induced by forces of an inner growth but was a secondary development due to inter-regional trade, mainly coastal, between the Ganges valley, Andhra and Tamil regions and also presumably between the Gujarat and Kerala coasts. More significantly, it was stimulated by maritime commerce between South India and the Mediterranean west and subsequently between South India and Southeast Asia, in which Sri Lanka was a major entrepôt. Although maritime trade was the major impulse in the urbanization of peninsular India as a whole, important differences exist in the degree and nature of Mauryan influences over the Deccan and Andhra on the one hand, and Tamilakam on the other. Unlike the Satavahana Deccan and Andhra regions, where
Mauryan imperial and cultural influences were more direct in the emergence of state societies in the post-Mauryan period, the impact of Mauryan administrative structures was at best only marginal and less direct over the Tamil tribal polities of the Cēra-Cōla-Pāṇḍya and the lesser Vēlir chiefs. With the exception of references in the Aśokan edicts to the Cēras, Cōlas, Pāṇḍyas and the Satiyaputras, identified with the Atiyamañ chiefs of Takaṭūr (present Dharmapuri) as friendly border peoples, there is no evidence of direct interaction. In other words, political processes and territorial expansion were not functionally interrelated to urban genesis, which in Tamilakam, was the result mainly of external stimulant, and hence were not at the core of the transformation of a non-state society into a state society. The secondary urbanization of Tamilakam, it would seem, was not simultaneous with the emergence of a state society, i.e. state formation.

It may also be pointed out that no religio-political foci for such a transformation had evolved in early Tamilakam. The emergence of religio-political foci has been characterized by S.N. Eisenstadt as ‘one of the most important breakthroughs of development from the relatively closed kinship based primitive community’ and its change into stratified ‘class’ oriented society. Religio-political foci would also assist in the process of creating ‘effective space’ in the form of a territory controlled from and oriented to the cult centre. This would also presuppose the emergence of a centralizing power or development of new social institutions cutting across kinship and clan based organization, for which there is no evidence in early Tamilakam. It is significant that the impact of the varṇa ideology in social stratification is hardly visible in the Tamil region except in its nascent stage and in a restricted zone, viz the eco-zone of marutam (plains/river valleys).

The establishment of the early Tamil polities was preceded by centuries of expansion of what is called the Megalithic culture, the earliest extant archaeological evidence of a uniform material culture in South India, the distinguishing traits of which were the use of iron implements (mainly weapons of war and a limited number of agricultural implements) and the Black and Red Ware pottery. The ‘Sangam’ or the early historical
period would seem to represent the end phases of this culture and the emergence of Tamil civilization, which has been attributed to and was simultaneous with urbanization stimulated by coastal and maritime trade.

Emerging in the main rice-producing regions of the Kaveri, Vaigai, Tamraparni and Periyar, the early ruling lineages of the Cōlas, Pāṇḍyas and Cēras controlled vast tracts of agricultural land in these river valleys. Evidence of irrigation works in these areas, particularly the Kaveri delta, is provided by the Sangam works and later traditions, although archaeological corroboration is at the moment non-existent. Socio-political dominance over early Tamil society was shared by the three major ruling families called the Mū vēndar (usually taken to be 'three crowned kings') and the minor chieftains called the vēlr. Strife among the Mū vēndar was a common feature, presumably for control over one another's riverine plains as well as other resources and over the minor chiefs, each of them with their administrative or political centre. Maritime trade, the crucial and determinant factor in early urbanization, brought the much needed luxury items as resources for socio-political dominance and patronage, and hence it was more important for these rulers to gain control over the coastal region adjacent to their mainland, through which they could regulate the trade with distant lands. Equally important was their attempt to control areas with rich trade and resource potential belonging to the others. Thus, the pearl-rich Pāṇḍya coast and pepper-rich Cēra coast would have been the major targets of Cōla plunder raids.

The Sangam rulers showed a distinct concern with maritime trade and its control, by actively participating in it as major consumers of luxury goods, by consciously developing ports of trade, by levying tolls and customs at the ports and by issuing coins, if the recent discoveries of local coinage is any indication. Hence, we see the emergence of dual centres of power, centres of political and commercial activity in the interior and on the coast respectively—such as Uṟaiyūr and Kāvērippumpattinaṁ (Puhār) for the Cōlas, Madurai and Korkai for the Pāṇḍyas and Karuvūr (Vaṇci) and Muciri for the Cēras. That other chieftains also emulated these ruling families is indicated by the Tiraiyar of Tonḍainādu (northern Tamilakam) with Kacci (later
Kānçipuram) and Nrippeyarru (Vasavasamudram) in the Palar valley and at its mouth and the lesser chiefs Öviyar with Māvilankai (Tindivanam) and Virai (Arikamēḍu/Virāmpaṭṭinam-Poduke of Ptolemy) in the contiguous South Arcot district and Pondicherry.

Thus, urban forms are seen to emerge in certain enclaves, restricted to two eco-zones (tinai), viz. the marutam (plains) and the neital (coastal/littoral). Craft production was similarly confined to areas rich in mineral resources and raw materials as in the Kongu region, i.e. Coimbatore - Erode (now Periyar) districts, a semi-arid zone as well as a transit zone, which also lay significantly in the Cēra land and on the route linking the western coast to the eastern plains and coast, via the Palghat Pass. Crafts like weaving also seem to have developed in centres commanding access to raw materials like cotton such as Uraiyyūr, Madurai and also Arikamēḍu.

II

The above brief survey of urbanism in early Tamilakam may now be elaborated for explaining the regional variations in urban processes and forms, as also the underlying differences between the early historical and early medieval urbanization in Tamilakam.

A useful starting point for the discussion on urbanism would be to provide a general picture of the socio-economic and political configurations of early historical Tamilakam. Society in early Tamilakam was organized on the basis of kinship ties (kudi = clan) with clear perceptions of man=environment relationship, as reflected in the distinctive pattern of economic activities in different eco-zones called the tinai, a dominant theme in Sangam poetry. Five such tinais are described in the Sangam texts. The tinai concept, not a mere poetic convention in the Sangam works, is the reflection of a physiographical reality and points to an understanding of human adaptation to environment and, hence, the most relevant from the historian's point of view. Interspersed with one another, the aintinai or five eco-situations were marked by different forms
of production ranging from primitive subsistence level hunting and gathering (kuriṇci tīnai = hilly backwoods), pastoralism/animal husbandry and shifting cultivation (mullai tīnai = pastoral tract/forest), fishing (neital tīnai = coastal/littoral), to agriculture (marutam = riverine wetland/plains), while plundering and cattle lifting as an occupation characterized the transitory zone of pālai ( parched/arid zone). Blending of tīnais also occurred with mixed forms of subsistence. In effect four major forms of production can be identified, viz. animal husbandry, shifting agriculture, petty commodity production and plough agriculture. Forces of change have been recognized only in the marutam, where plough agriculture appeared in the later phases and new agrarian units emerged such as brāhmaṇa households/settlements and warrior settlements. In the neital, apart from fishing, salt manufacturing and eventually trade also became important economic activities. In the brāhmaṇa households of marutam, the cultivating groups in the service of the brāhmaṇas created new relations of production outside the kinship framework, on which all contemporary production activities were based. Such service groups may point to the beginnings of a new stratification by gradually crystallizing into castes, although at a later stage. The change from a tribal to a peasant society would thus become evident in the marutam, where vast tracts of agricultural land were controlled by the ruling families, who depended on peasant tribute and who paid attention to irrigation and wet cultivation towards the latter part of this period. Although plough agriculture made its appearance in the marutam zone, it was confined to menpulam or pockets of cultivable wet rice land in the plains surrounded by vanpulam or dry land with other kinds of dry crops. Subsistence agriculture was common to all tīnais and plough agriculture had not yet become dominant.

The tīnais, though uneven in their socio-economic milieux, were basically tribal in organization. Kinship was the basis of production relations in all the tīnais, with no social division of labour even in the marutam, where the households increasingly organized and controlled production. Social differentiation, which is the nub of the problem of urbanization, did not develop even in these zones (marutam and neital), beyond a
broad division into two levels the cānīr/uyarndor/mēlōr (the higher ones) and the ilicinar/kilōr (the lower ones).\textsuperscript{12} Despite the presence of brāhmaṇa households there is no evidence of the impact of the varṇa ideology, although a late section of the Tamil grammar Tolkāppiyam, i.e. the Porul atikāram\textsuperscript{13} shows that varṇa norms were imposed at a later stage as a theoretical framework on what was basically a non-stratified, clan or kinship based organization with evidence of ranking only among the chiefs and ruling lineages.

There is enough evidence to show that specialized craft production also developed such as metal working, weaving and salt manufacturing, evidently in response to local exchange as well as inter-regional and long-distance trade. Such specialists are known both from literature and the early Tamil Brāhmi inscriptions. They have, however, been viewed as mere functionaries in a complex system of co-operation based on the network of kinship relations.\textsuperscript{14}

Gifting (kodai) was the main means of redistribution, which itself was based on kinship and inter-personal relationship beyond kinship, e.g. the pulavar or poets receiving gifts from the chief or patron. The institution of gifting was particularly important as a source of legitimation for the ruling lineages and chiefs. Redistribution through gifts was of two kinds, the one of subsistence level goods and the other of prestigious goods. Three levels of redistribution may be identified. Redistribution of subsistence goods seems to have taken place at all the three levels, the vēndar, velir and kilār in a descending order. The vēndar provided subsistence goods on various occasions, at the time of war for their henchmen/fighters and also to the lowly bards (pānar) who sang their praise for their munificence. The vēndar were praised by pānar and pulavar, both for their valour and heroism in war and for their generosity. At a higher level the vēndar also made gifts to the pulavar, such gifts consisting of prestigious items like gold coins and (gold) lotuses, gems and muslin and even horses and elephants. While subsistence goods thus got redistributed at all the three levels, the gift of luxury items became the prestigious form of exchange with an ‘ideo-technic’ or ‘socio-technic’ value,\textsuperscript{15} but only at the higher levels of vēndar and
velir. Plundered resources got redistributed while luxury items of trade entered the gift exchange.

Thus, more than agriculture, the Cēra-Cōla-Pāṇḍya ruling families depended, for socio-political hegemony, on maritime trade which the coastal regions (neital) adjacent to their mainland carried on with distant lands. Socio-political dominance was shared by these three ruling families (Mū vēndar) and the minor chieftains called velir. Strife among the vēndar was a common feature for control over each other's riverine tracts and other rich resources like pearls and pepper. Strife as well as matrimonial alliance were common between the vēndar and velir for hegemony and control over resources of the hilly, forest and other zones. Tribal warfare, endemic to such early societies, is also corroborated by the evidence of archaeology, which shows a predominance of war weapons among the Megalithic burials. More important, however, is the evidence of the ideology of war and heroism that dominates the Sangam poetry, especially the puram collections (war poems).

The absence of a regular system of tax or tribute is underlined by the idealization of war/plunder and different situations (turai) of raids, the glorification of the warrior, the hero and death in battle, the sharing of the great meal by the ruler/chief with his warriors and the reward in the form of land to the warrior, who preferred wet rice cultivating (ūr) or settlement to dry zones for such gifts. Hence, the lack of evidence on institutional mechanisms for appropriating surplus by the rulers characteristic of a developed state system, points to the tribal character of these chiefdoms, which otherwise had the potential of developing into kingdoms or incipient states. They were more akin to the sixth century BC janapada polities of the Ganges valley, with the senior lineages as ruling families with impressive genealogical claims.

It has been pointed out earlier that the impact of Mauryan imperial structures was marginal in Tamilakam in contrast to the Deccan and Andhra under the Sātavāhanas. Under such impact the power structure that evolved in the Deccan was derived from Mauryan ideological influences. This has been seen as a 'secondary state formation' which stands in contrast to the absence of such structures in Tamilakam. It must also be
noted that the Sātavāhanas adopted the brahmanical ideology as a source of legitimation of their rule, committed as they were with their priestly affiliations, to the *varṇāśrama* ideal. The performance of the Vedic sacrifice and the protection of the *varṇāśramadharma* are significant claims made by them in their insessional records.\(^2\) No such claims to be protectors of the *varṇa* ideal are made by the early Tamil lineage polities. Although the performance of Vedic sacrifices, especially the *rājasūya*, by the Cōlas and other major ruling families, i.e. the Cēra and Pāṇḍya, is attested to in the anthologies,\(^2\) *yajña* or sacrifice was not intrinsic to their legitimation process. Another point of difference is in the nature of patronage extended by the Sātavāhanas to Buddhism, the dominant ideology of the early historical period, which brought about a symbiotic relationship among the political structure, the commercial groups and the Buddhist order.\(^2\)

Royal patronage, and more importantly the patronage of a whole community of Buddhist lay followers, representing the trading and artisanal groups, craftsmen as well as economically poorer sections of society, contributed to the building up of institutions like the monastery and the guild in the Deccan and Andhra, with enormous resources. As a result *stūpa* and *vihāra* complexes of huge dimensions, both in the structural and rock-cut styles, came into existence marking the foci urban growth and routes of communication and trade. On the contrary, such networks, which are crucial in establishing links between trade and craft production and a market system, were less developed in Tamilakam, and hence the absence of large-scale patronage to Buddhist institutions like monasteries with the impressive architectural output of the Deccan and Andhra type, and the absence of different sectarian groups of Hīnayāna and Mahāyāna Buddhism, which are so prominently visible in the Deccan and Andhra inscriptions.\(^2\)

Institutional forces like the Buddhist monastery, with their impressive monuments and cohesive guild organizations as foci of urban development are not attested to in the archaeological and epigraphic records of early Tamilakam, thus marking a major point of difference in the nature and forms of urbanism. The only notable Buddhist structures (of brick) have been
unearthed in the port town of Kāverippūrmaṭṭinam, and these are dated to the fourth and fifth centuries AD, while the earlier period has no significant architectural remains.

The references to Buddhism in the earlier poems of the Sangam anthologies indicate that Buddhism and Jainism were among the many religious faiths which had a following in the politico-commercial centres like Puhār, Vañci and Madurai. It is only in the post-Sangam epics Śilappadikāram and Manimekālai that Buddhism and Jainism appear as influential ideologies among the merchant community and craftsmen. Royal patronage to these two Śramanic religions is recorded in the brief donative Tamil Brāhmi inscriptions occurring on the trade route linking the Tamil region with southern Karnataka and with the west coast. These donations hardly reached the level of the stupendous projects of the Deccan and the Andhra regions. They are at best vassa or rainy retreats for the wandering Buddhist and Jain mendicants in the form of natural caverns on hills, made suitable for the monks through provision for stone beds and drip ledges to carry rain water away from the caverns. These caverns with stone beds and Tamil Brāhmi inscriptions occur in the hills around the Pāṇḍya capital Madurai, around the Cēra capital Karūr and near the Cōla centre of Uraiyyūr, but more significantly, they are found on the trade routes, with a concentration in transit zones like the Pudukottai district and Erode (Periyar) district. Here, apart from royal donors of the Pāṇḍya and Cēra families, the Cōlas do not figure in any of the donative records. Again, the individual donors belong to the trading and artisan communities. No guild organization with the exception of a single reference to a niga, is known from these records. In comparison, the Brāhmi inscriptions of the Deccan and Andhra Buddhist centres, record a number of guilds, traders and craftsmen, apart from whole village communities as donors. Most important is the absence of any direct reference in the Tamil inscriptions to householders comparable to the northern gahapati as donors to any of the Buddhist and Jain teachers. The gahapati, who is the most frequently mentioned donor in the Deccan and Andhra and even central Indian Buddhist centres, represents the most important social category, which emerged as an
influential landowning (householder) and trading group in the context of early historical Buddhist centres and urban growth.\textsuperscript{30}

In the Tamil context, the kilān (kilār = plural) would seem to be the landowning householder, the equivalence of the gabapati, who emerges as the third level in the patron-client gift-exchange system of redistribution. The Kilān’s position in this redistribution system was mainly that of a village chief/elder and a landed householder but he is hardly visible in the donative records of the Buddhist and Jain centres, unless it is claimed that some of the names in the Tamil Brāhmī inscriptions ending with the suffix antai\textsuperscript{31} refer to such householders.

The evidence thus points to a situation of multiplicity of religious influences in which neither the Brāhmaṇic nor the Śramanic religion had gained dominance over the others. Again the concept of tinai provides the clue to the nature of Tamil religion, which, in the early historical period was ‘anthropocentric’ with a predominant folk component, intensively sensual and humanistic.\textsuperscript{32} This is evident from the descriptions of the deities of the different tinais (eco-zones) who are invoked for success in love and war. The tribal basis of these deities is reflected in their verbal imagery and their close association with the ecological/environmental background. Thus, Ceyōn/Muru-kan was the god of love and war of the kurići tribes (hunters), Māyōn, the pastoral deity of mullai, Korravai, the war goddess of the hunters and robbers of pālai, Vēndan, the agricultural deity of the marutam and Varuṇan, the sea god of the neital.\textsuperscript{33} None of them had any claims to universality. No formal religious system with an institutional focus is attested to either in literature or in archaeological record.

The spread of Buddhism and Jainism coincided with the increase in trade and commercial activity and introduced an element of heterogeneity in the urban centres. Buddhism registers a significant presence in the coastal towns, while Jainism is confined to the inland centres, both in the political and commercial centres and on trade routes. The heterogeneity of the urban population in the inland and coastal centres shows, however, that people of different ethnic origins, different occupational background and belonging to various religions aggregated in towns, where brahmanical and folk cults were
equally well represented. There is no evidence of a single dominant religion in any of them. Formal religious systems and dominant traditions developed only in the post-Sangam (i.e. post-third century AD) period, when the concept of bhakti and the temple emerged as the innovative focus of socio-cultural organization, transforming a basically tribal folk religion into a formal, universalized brahmanical religious system by the sixth century AD.34

III

Different Levels of Exchange

In a society, wherein reciprocity and redistribution were determined by kinship and inter-personal relations, it would be hard to find evidence of a market system, which was linked directly to land, labour and the production base. Regular local exchange in such a society was mainly based on barter, both in day-to-day transactions and in inter-tinai exchange, i.e. mutual exchange of resources available in the respective tinais, or a straight exchange of goods of different tinais—called notuttal35—hill products like wood, honey, bamboo-rice, etc. in exchange for the marutam paddy or mullai dairy products and the salt of neital for the paddy of marutam. The centres at which they were exchanged could well have become nodal points on trade routes in the process of the expansion of trading networks.

Another informal exchange is indicated by the term kuri etirppai,36 a loan of goods to be paid back (later) in the same kind and quantity. These local exchanges did not involve the concept of profit, as they were governed by the use value of goods. The profit idea does not seem to have operated even in the exchange of craftgoods by specialists at the local exchange centres, where the specialist craftsman was often himself the seller.37

The different levels of exchange thus show a barter or person to person exchange of goods of daily consumption like honey, fish, meat, toddy etc. Paddy and salt entered the larger exchange network, while pepper and other spices, pearls, precious stones
(beryl, gems, etc.) aromatic woods and cotton textiles may have been produced for the overseas exchange markets. While most items traded in were raw materials, goods like textiles, gems and jewels were among the few manufactured products meant for trade. Such commodities were encountered only in a few market centres, which had inter-regional commercial contacts such as Puhār, Madurai and Vaṇci. Vast kurinci and mullai tracts and even parts of marutam would not have been drawn into such exchange systems.

It is this kind of picture that is depicted in the Sangam texts, with which the correlation of archaeological and numismatic evidence becomes difficult and often questionable. Thus, in the context of the numerous Roman coin finds (gold and silver), mainly in hoards, it has been argued that in a redistributive society of prestation and gifts, where no idea of price or profit prevailed, coins would have seldom functioned as money but only as a category of valuables. A second related problem is whether the forms of internal exchange, which indicate a fairly regular economic interaction within Tamilakam, and those of external exchange (with other countries) represent two distinct levels of exchange, or whether there were inter-relationships between them influenced by the expanding trade.

It has been said earlier that the maritime trade of this period had restricted impact in certain zones leading to urbanism and the emergence of trading stations/ports on the coast, which were centres of exchange in long-distance trade, and of consumption points in the inland centres. It is only at such centres that regular buying and selling of goods took place. There were angādis (markets) and āvaṇams (stores?) in places like Puhār, Madurai and Vaṇci (Karūr), which became major commercial centres due to the expansion of trade on the eastern coast of Tamilakam. Significantly, the later works of the Pattupāṭṭu collection and the epics Silappadikāram and Maṉimekalai give more detailed descriptions of these centres and their commercial activities.

Two kinds of markets—the nālangādi or the day market, and the allangādi39 or the evening market—are known, and in Puhār these markets were active in the area between the Maruvūr-pākkam (coastal area) and the Pattinappākkam (residential area).
The volume of trade is indicated by the references to ‘the valuable merchandise stored in million bundles’, i.e. large quantity, and the items were often rare and prestigious goods sought by the urban elite and rulers. Similar descriptions of the market place at Madurai are also found in the Madur- raikkaneti.

The market in Puhâr was well guarded by the officers of the Cōlas and the customs men. Puhâr, being the foremost among the ‘emporia’ on the east coast, the Cōlas would have derived both political and economic advantage by controlling and promoting this port. The merchants of Puhâr, we are told, set a fair price on all goods, probably depending on ‘supply and demand’ for such goods and did not try to get too much in selling their goods nor gave too little when they bought. It is not easy to determine the degree to which the ‘market principle’, guided these transactions.

There appears to have been in general no market principle which determined the acquisition of subsistence goods or allocation of land and labour resources. Hence, how are these market centres to be characterized? Could they have acted as ‘peripheral’ markets? If, as pointed out above, intra-regional and local exchange was ‘subsistence oriented’ and if it was not price but equivalence that determined the exchange of goods, i.e. ‘substitutable goods in prescribed proportions’, then the internal and external forms of exchange must be treated as representing two different levels. Again, it would also mean that maritime trade, as the crucial factor in the urbanism of this period, could well have been a ‘mysteriously sudden impulse’ to change, i.e. ‘urban revolution’. In other words, a market system and a definable power structure, two factors which could cause an inner growth of urbanism percolating down to the production base, were absent in early historical Tamilakam.

It has been pointed out that ‘peripheral markets’ are economically important to those engaged in export and import. To foreign traders such markets are not peripheral, however much they may be for the locals. Hence, a more permanent presence of the jāvanas (a settlement) in such market centres is acknowledged by the texts. Foreigners would have been both buyers and sellers while the local traders (mainly the paratavar),
purchased merchandise in these markets and carried them for sale to Īlam (Sri Lanka), Southeast Asia and other distant lands.\textsuperscript{51} Here, the market principle may have operated in a limited context. Urban elite was another category of buyers of luxury articles, while at the same time they would have been able to obtain items of daily consumption such as corn, grain, cloth, flowers toddy, scents etc. in these market places. The staple produce of the hinterland, with the exception of paddy and salt, did not find their way to the larger exchange market.

The ports and towns that emerged as a result of this expanding commerce, may be classified under different heads as the Graeco-Roman accounts seem to have done. In the \textit{Periplus Maris Erythraei} (of the \textit{Erythraen Sea}) of the first century AD, centres like Naura (Cannanore? Mangalore?) Tyndis (Tōndi, on the west coast) Nelcynda (Kōṭṭayam), Bacare (Porakad) all on the west coast, Camara (Puhār), Poduce (Arikamēdu) and Sopotma (Marakkānām), all on the east coast, have been categorised as ‘marts’ or market towns’.\textsuperscript{52} Subsequently, Ptolemy in his \textit{Geographia} of the second century AD introduced a hierarchy by elevating six of these centres to the status of ‘emporia’\textsuperscript{53}—Muziris (Mucīrī—west coast), Kolkhoi (Korkai), Khaberis (Puhār), Sabouras (Cuddalore?), Podouke (Arikamēdu) and Melange (Mahabalipuram?) all on the east coast. Elangkon(?), Manarpha (is it Mailarpha = Mayilāppūr in Madras?) and Salour (Sāliyūr near Alagankuḷam) were categorised as marts. The inland centres are generally referred to as cities/towns.

The \textit{Pattinappalai} would seem to support the description of Puhār’s status as an emporium, which had its own quay, harbour, warehouses and accommodation for foreign merchants. With the Cōḷas officially approving and promoting it as an anchoring point, (port), Puhār developed as a place ‘where business between people of different nationality may be transacted lawfully, where lawful dues and taxes may be imposed where possibly foreigners reside . . . ’\textsuperscript{54}

The textual references are not as direct as one would wish, because the Sangam heroic poetry uses more often a symbolic language which needs to be decoded through semiotics. However, the terms used in the Sangam texts to designate the merchants and the nature of their organization, also indicate
the prevalence of two distinct levels of exchange, the day-to-day barter, hawking and peddling on the one hand and the larger transactions by specialized merchants dealing in high value goods for the inter-regional and maritime trade. These terms are vilainar (seller), pakinar (hawker) as also the vambalar (itinerant newcomer? wayfarer?) the vanikar (trader), paratavar (fishermen turned traders) and even the umaunar (salt merchants). The seller and hawkers were also present in cities like Madurai where they sold ‘the produce of the hills, the plains and sea’ and even items like ‘gems, pearls and gold’. The diversification of commerce is reflected in the nature of specialist traders in the markets of Puhar and Madurai, some of whom dealt in high value commodities apart from daily consumption goods. Thus, in the markets of Puhar and Madurai, there were pavinar (flower sellers), kodaiyar (garland sellers), cumattar (aromatic powder sellers), nidu kadi ilaiyinar (betel leaf/arecanut sellers), kodu-cudu-nurmirinar (shell lime shell bangle), kadaiar (shop keepers), manikkuyinar (gem or jewel makers), kalingam pakinar (kalingam=cloth sellers), vambu-niraimudinar (fine garment sellers), kal-nodai-attiyar (toddy(?) or wine(?) sellers), the kaica-karar (bronze sellers), cempu-ceyikunar (cooper article sellers) and skilled workers of all sorts. In most cases, the manufacturers or producers of such items were also the sellers.

Occasional caravans (cattu) of itinerant traders such as umaunar and vambalar, carrying goods to the interior (hinterland?), such as paddy, salt and sometimes pepper, are also known. The umaunaccattu (caravan of salt traders) moving their salt to the interior through difficult and inhospitable tracts on their bullock carts is often described in the Sangam texts. Umaunar and others moved with their spare bulls, swords, bows and spears for protection as well as rare and useful things obtained from hills and seas.

The paratavar were the most distinctive of such merchants. They were inhabitants of the neital tract, involved in such activities as fishing, manufacturing salt and making toddy. From the later poems of the Pattuppattu, it is evident that they had become involved in long-distance trade by diversifying from their traditional fishing to diving for pearls and organizing trade
in pearls, chank (conch) bangles, tamarind, fish, gem and horses, which were taken by 'captains of fine ocean vessels' (perunír-occunar) to distant countries. At Nîrppeyar, the paratavar lived in high storied buildings on sandy roads, occupying many streets in the port where 'milk white maned horses arrive with riches from the north, in ships standing out in the cool ocean by the sea front'.

The more prosperous among the traders and merchants who moved on highways or major trade routes, made donations of caves and beds to Jain and Buddhist monks. These donations, it must be noted, do not match the ostentatiousness of the contemporary western Deccan and Andhra donations. The early Tamil Brâhmi inscriptions, recording these donations, indeed mark the trade routes, and in many significant ways confirm the literary references to specialist traders, e.g. uppu vânikan (salt merchant), panita vânikan (toddler seller), kolu-vânikan (ironmonger), aruvai-vânikan (cloth merchant), pon-vânikan (gold merchant), manîy-vannâkkan (lapidary) as donors, apart from the Cêra and Pândya ruling families. Interestingly, some of the poets of the Sangam texts belonged to the merchant community and often carried as a prefix to their names, the names of some major commercial centres to which they belonged and the nature of their trade. Some instances are—Madurai Aruvai Vânikan Ilavëttanâr (Ilavëttanâr, the cloth merchant of Madurai), Madurai Kûla Vânikan Siddalai Sâttanâr (grain merchant), Madurai Òlaikkadaiyattâr Navellaiyâr (palm leaf/jewellery merchant), Uraiyr Ilampon Vânikanâr (gold merchant of Uraiyr) Kâverippumpâçčintattu Ponvânikanâr Makanâr Nappûdanâr (Nappûdanâr, son of a gold merchant of Kâverippumpâçčintam).

Both literature and epigraphs thus refer to the trader and the nature of his trade. In contemporary Deccan the merchants rarely mention the nature of merchandise they specialised in. Leading Tamil merchants engaged in import-export activities were among the wealthier sections of the urban community. In the later poems of the Sangam collection they are depicted as living in 'fine mansions' and as sporting silk raiments and gold jewellery. The later epics Silappadikâram and Manîmêkâlai refer to their affluent life styles. Trade is glorified as one of the two 'esteemed pursuits', the other being agriculture.
The ethical code that the merchants set for themselves is praised in the *Pattinappālai*.68

The early Tamil chiefdoms seem to have been directly involved in this commercial exchange, often as the most important consumers of the goods, and as active participants, by making the native goods available for exchange and also, perhaps, by issuing their own coins. It has been argued that in many early societies, the merchant class emerged from among chiefly families, since the redistributitional mechanism which operated in most chiefdoms, concentrated economic wealth in the hands of those close to the chief.69

Merchants from distant countries settled down in some of these commercial centres. The *yavanas*, it is suggested, had to stay in the Tamil ports for at least a couple of months, due to the pattern of monsoon winds for sailing.70 Separate quarters of *yavanas* are known in places like Puhār,71 while Arikamēdu has been categorised as a Roman trading station. These quarters were, however, not ‘autonomous concessions’ or ‘colonies’ similar to latter-day European factories.72 Similarly, the role of these *yavana* merchants in contemporary trading activities has also been considerably over rated. Filliozat and Maloney73 would suggest that the Greek traders’ activities were generally confined to the major commercial centres, while in the hinterland, the management of production of various commodities and their transportation would have been in the hands of the Tamils. Pliny’s statement74 that pepper was brought for the foreign traders to the port of Bacare in local boats and then loaded on to Greek vessels, and the Vienna papyrus75 recording an agreement between a Tamil merchant and an Alexandrian Greek (?), regarding a large cargo of goods to be sent to Alexandria, would show that Tamils traded on equal footing (terms) with foreign traders.

It also needs to be stressed that no *yavana* is seen making donations to local religious institutions, whereas a single reference to a person from Ílam (Sri Lanka), probably a merchant, donating a cave to Jain monks, is made in a Tamil Brahmī inscription.76 The Sri Lanka-Tamil interaction is much more explicitly illustrated by a number of such donative records in Sri Lanka where Tamil merchants and people of the *vēlir* clan are mentioned in the context of gifts to Buddhists.
The *yavanas* of western Deccan bore sanskritized names and were often assigned a lower rank in the *varna-jāti* hierarchy in the process of their indigenization in this region. Donations of the Indo-Greeks, Śakas etc. were made to local religious establishments as a part of the process of this indigenization and acceptance in the local society. Thus, it may be seen that Indian perceptions of *yavanas* varied in different regions and among different Indian communities. While the attitude of the *bṛāhmanas* of north India was one of hostility, the Buddhists had a greater curiosity towards *yavana* countries (proselytising missions of Aśoka) and also must have shown a more congenial and friendly attitude to them as traders and patrons of Buddhism.

The Sangam texts represent a somewhat ambivalent attitude to the *yavanas*, for while they have very interesting accounts of the beautiful *yavana* ships bringing cool fragrant wine for the chiefs and elite of Tamil society, there are also expressions of their distancing themselves from the *yavanas* who were aliens, barbarous and spoke a harsh tongue. A hostile tone is used in the account of a Cēra chief who captured the barbarous *yavanas* and divested them of their wine and wealth. They are even called *mileca*. The epics repeat this tone of hostility but at the same time refer to *yavanas* employed as city guards and palace guards. The presence of *yavana* craftsmen (carpenters) in cities is also attested in the epics. The Koḍumandal jewel finds as well as the Amaravati river bed finds, in which Graeco-Roman motifs are identified, would also indicate their presence in the craft centre. It has been suggested on the basis of Jewish and Christian legends that Roman craftsmen were shipped to India. A temple of Augustus which is believed to have had two cohorts of Roman soldiers stationed with it, is said to have been located in Muziris. However, there is no conclusive evidence for the identification of the Augustus temple.

Numismatic evidence from Tamilakam would also seem to support the conclusion that two levels of exchange were prevalent, one, at the large-scale exchange of goods for goods and goods for coins (money?) at the big emporia of trade, and the other, at the purely local subsistence level exchange. The distribution of punch-marked and Roman coins shows an interesting pattern. They are found along the trade routes, mostly
in hoards. They occur in negligible quantity in stratified levels, both in the context of trade centres and in the Megalithic context. Hence, it would appear that coins were used in large transactions, i.e. in long-distance commerce, both overland and maritime.

The circulation of Roman coins and their use as money in South India have been the subject of an inconclusive debate, due to the complexity of the evidence. Yet, it has been suggested that their occurrence in a stratified context, however negligible, would indicate a limited circulation, possibly along the routes of trade and rivers of transport. Use of Roman coins as jewellery, mainly confined to the Tamil region, would also suggest a lesser role for Roman coins as exchange media, except in large transactions.

It has also been argued that there need not be a single explanation for the occurrence of Roman coins mainly in hoards and that these coins may have had more than a single function. A coinciding of various factors may have led to the need to hoard, not necessarily as bullion, for gold was available in India, the Kolar gold fields showing evidence of working from Mauryan times to the early centuries AD. Thus, the coins appearing in hoards could have been protection money to ensure safe passage of goods from one coast to the other, or investments in further trade by visiting traders. Considering the large quantities of merchandise that were traded in, the occurrence of such a large number of Roman coin finds need not be surprising as ‘payment for this trade would have required a large monetary outlay’. They were probably required as deposits or sureties. Such a function is supported by the occurrence of countermarks (as identifying marks of the depositor?) on some of the coin finds in hoards, deposited with traders or guilds, particularly the silver denarii, which show the majority of countermarks and are confined to Tamil Nadu and Andhra Pradesh. Yet another function of the Roman coins was as an item of gift in the gift exchange system followed by the Tamil chiefs and ruling families and as symbols of status. The Tamil classics have references to gifts of gold to poets (pulavar), who were patronized by the rulers. This was one form of redistribution, in which prestige items such as horses, elephants and gold figured.
The distribution and chronology of the occurrence of the Roman coins also show a distinct pattern in South India. The earliest Roman coins, i.e. the Republican issues of the first century BC reported from south India are confined to the Kerala region and sites near the Palghat gap (pass), the first region to be visited by the early Mediterranean traders. Roman coins of the pre-Christian era are not only unknown in coastal Tamil Nadu but also in Andhra Pradesh. In the early centuries of the Christian era, they appear in coastal Tamil Nadu and Andhra. An intensification of the trading activities on the east coast seems to have taken place by the first and second century AD, when the circumnavigation of the cape had become common. Byzantine coins of the fourth and fifth centuries AD are also mostly confined to coastal Tamil Nadu, Madurai, Karur and Sri Lanka, pointing to a shift in the regions of intensive trade.

The distribution of the Roman Rouletted Ware suggests a more widespread pattern, though in fewer sites, and points to the rouletting technique travelling from the coast up the rivers to the interior sites on trade routes. The amphora, an expensive item, is found only in selected sites, urban in character, with a prosperous ‘elite’ clientele, i.e. consumers of wine, foodstuffs, olive oil preserved in such jars.88 Vasavasamudram and Kânci-puram are two such sites. In the latter, however, the identification of the conical jars as amphorae is questionable.

The Koḍumaṇal excavations89 would also confirm the trading pattern and routes, particularly the overland route from the western to the eastern coast in the early phases and a continuous trading activity in the later phases between the Cēra land (Karur-Koḍumanal) and the east coast. The Kongu region (Cēra land), with its beryls and other semi-precious stones, was a rich resource area and included important iron ore sites.

Evidence of ‘dynastic’ coinage of the Cōlas, Cēras and Pāṇḍyas is now increasingly available, although not in a stratified context, with the exception of a few Cōla coins (copper) in the Kāvērippumpatținam excavations.90 They are known from private collections and as surface and stray finds. The most significant is the discovery, in the Amaravati river bed near Karur, of silver coins with the ‘portrait’ (bust) of a Cēra king and the legend Mākkōtai.91 Coins with the legend ‘Kuṭṭuvan
Kōtai and ‘Kollippurai’ along with the Cēra symbols of the bow and arrow (and with the double fish and tiger), assignable to the Cēras, have also been found. The ‘portrait’ coins, it is claimed, were influenced by the Roman coins, of which a major concentration of hoards is found in the land of the Cēras (Coimbatore region), which was also a transit zone for traders. Coins with the legend ‘Valuti’ have been assigned to the Pāṇḍyas. If these discoveries are any indication, the Sangam rulers, apart from controlling long-distance trade by levying tolls and customs, could also have been direct participants in the trade. Even some lesser chiefs like the Malaiyamāns and Nannan, (a hill chief mentioned in the Malaipatukatām or Cētan?) seem to have issued coins, of which one important hoard was found in Āṇḍippaṭṭi (Cengam) in the North Arcot district.

The Sangam poems refer to kāsu, pon and kānam, terms, which are used in the early medieval epigraphic records to denote currency units. They have been presumed to be gold coins. However, there is no indication of their metal content or weight, especially in the Sangam texts. No indigenous gold coin has been discovered so far. Kānam and kāsu were often conferred as gifts by patron-rulers on poets and there is some indication that some at least (kānam and pon) were gold coins.

Furthermore, the relationship between the local issues, recently discovered, and the Roman coins is not easy to determine, just as the role of the silver punch-marked coins found in fairly large numbers, vis-à-vis other coins, is difficult to assess. It is, however, contended that the punch-marked coins were used as currency, as quite a few of them have been found in worn-out condition and in stratified levels. This is attributed to the general spread and function of punch-marked coins practically all over the subcontinent. Local issues would also include some punch-marked coin varieties and resemble the janapada coins of the Ganges valley. The Bōdinaikkkanur hoard (near Madurai) represents one such issue, marked out by the double carp (fish) symbol of the Pāṇḍyas on the reverse with the usual punch marks on the obverse. Under Ganges valley influence, it is suggested, die-struck coins were also issued. The Periplus indicates that while at Barygaza the (Roman) specie imported into the port was exchanged partially for ‘native currency’ (of
the Śaka, Kuśāna and Āndhra?), no such reference is made in the context of the Tamil country. This is explained as due to the absence of indigenous coins, an explanation which is no more valid as local issues have been found in considerable numbers.

IV
INTER-REGIONAL TRADE
SHIFTING PATTERNS

Tamilakam was one of several regions in South Asia which traded with Rome. The pattern of trade in each region seems to have varied according to the nature of exchange and local circuits of trade that existed in the period before the Roman trade. The early historical trading patterns within Tamilakam and between Tamilakam and other regions of South Asia show a gradual expansion from the proto-historic Megalithic circuits to the regular exchange networks of the early historical period. While the stages through which the networks emerged are not directly and fully visible in the archaeological contexts, the correlation of the early textual data, epigraphic evidence and numismatic record with the Greek sources enhances our understanding of this trading pattern.

Roman trade with South Asia was spread over a long period and covered the regions from Gujarat down to the Tamil coast and up to the Andhra region and the Bengal coast. Initially, it concentrated on the western coast of early Tamilakam and the ports of this coast (later Kerala) seem to have been active in the second and first centuries BC, the ‘discovery’ of the monsoon winds by Hippalus, often figuring as an important factor in enabling direct sailing from the Red Sea coast to the western coast of South India. From here the trade passed overland

* Although this phase is not the main focus of this essay, a study of the grave goods and pottery of the Megalithic sites in peninsular India reveals the existence of exchange circuits within the three main culture zones—Deccan, Andhra and Tamilakam, which increasingly come into focus in the early historical period.
through the Palghat gap, the mineral-rich Coimbatore region to the eastern plains and coast. Subsequently, the circumnavigation of the peninsula intensified the trade with the east coast in the first and second centuries AD.

In the early phases, a local circuit of trade appears to have existed between South India and Sri Lanka linking the Megalithic peoples of Tamilakam and Sri Lanka. Almost simultaneously, coastal sea traffic linked the Bengal coast (from Tāmralipti) with Sri Lanka, possibly with a looping coastal trade via the Orissan, Andhra and Tamil coasts. Sri Lanka could well have been an early terminal point for this trade from the Mauryan times with contacts resulting in a regular traffic on the east coast.

Early contacts between Tamilakam and Sri Lanka are attested by the Megalithic cultural remains of both the regions. Apart from the use of common graffiti (symbols) on the Megalithic pottery and seals, the occurrence of Tamil vēḷir names in the third and second century BC Brāhmi inscriptions of northern Sri Lanka as important personages and references to Tamil merchants in Sri Lanka are significant pointers to this contact. Merchants from Sri Lanka are also known in early Tamilakam. The presence of Simhala merchants as well as monks and nuns is recorded in the inscriptions also of the Buddhist sites in Andhra, in addition to which the use of Simhalese forms of Brāhmi in the potsherds of the Tamil sites like Arikameţu, attests to their movement via the Tamil coast.

With Mauryan expansion and the opening up of trade routes in peninsular India, these contacts became part of a regular exchange, as indicated by some of the earliest Buddhist structures in Sri Lanka, the epigraphic records, sculptures and structural remains of Andhra region and Tamil coast. The effect of this early coastal sea traffic is assigned a major role in the emergence of Tamil civilization and urbanism, with a particular emphasis on the part played by the Sri Lankan contact.

It is into this early circuit that the western (Roman) trade entered directly in the first and second centuries AD, made possible by the circumnavigation of the cape. Earlier the western coast provided the entry point and outlet for the western trade with Muziris (Mucirī) as the major port of call. The goods passed from and to the west coast overland through the Kongu
highway, i.e. the Coimbatore region and Palghat gap. The
distribution pattern of Roman coins\textsuperscript{108} of the early first cen-
tury BC (Republican coins) on the west coast and the first to
second century AD coins (Augustus, Tiberius, Nero) more pre-
dominantly on the Tamil and Andhra coasts, while coins of the
third-fourth centuries AD occur mainly in Tamil Nadu and Sri
Lanka would provide evidence of this shift, although any con-
clusion based merely on the chronology of the Roman coins
may be questioned. However, there are other significant pointers
to the shifting regional pattern. Thus, while the \textit{Periplus} of the
first century AD is familiar with the western ports, Ptolemy
(second century AD) has more direct knowledge of the eastern
coast, i.e. the Tamil and Andhra coasts upto Masalia (Machlipat-
nam region).\textsuperscript{109}

South India (i.e. Tamilakam) seems to have been drawn into
another circuit, almost simultaneously with the western trade,
with the regions across the Bay of Bengal, i.e. Malaya, Southeast
Asia and as far as China, through an exchange network which
had emerged within the islands of Southeast Asia and China.
This latter circuit became more visible in the centuries after the
beginning of the Christian era, although it could well have
started even by the second century BC.\textsuperscript{110} In this circuit, the
contacts between Tamilakam and Southeast Asia seem to have
intensified in the early centuries and continued to be significant
down to the fourth-fifth centuries AD. The early medieval trade
contacts of the Pallava-Cōla periods were undoubtedly a con-
tinuation of these contacts, although in a different historical
situation.

Evidence of this expansion and intensity of contacts comes
from the epics \textit{Silappadikāram} and \textit{Manimēkalai} and the Bud-
dhist remains at Kāvērippumpattinam dated in the fourth
and fifth centuries AD,\textsuperscript{111} while Kāncipuram comes up with
indirect evidence of its continuous interest in the Southeast
Asian regions. The \textit{Manimēkalai}, in particular, reflects the
importance of this circuit, by locating many of the incidents
in the story of \textit{Manimēkalai}, both in her previous and
present births, in the Tamil cities of Puhār, Vañci, Madurai
and Kānci, and beyond the seas in other regions of South
and Southeast Asia (e.g. Sāvakam = Java and Mañipallavam
A Tamil Brāhmi inscription from Klong Thom (Thailand) of the third and fourth centuries referring to a goldsmith, an early Sanskrit inscription from Laos referring to a Pāṇḍya and a copper coin with the tiger emblem are some of the recent discoveries which provide further evidence of these contacts. The Andhra region also comes up with references to people from these distant lands (China) visiting the Buddhist sites, while it is well known that the Buddhist art of Amaravati influenced the early sculptural art of Champa (Indo China).

These shifts brought the coastal regions into an exchange network of terminal and transit trade and much of the intra-regional exchange in Tamilakam was influenced by them. The inter-tīnai exchange and the plunder mechanism of the early Tamil polities for obtaining the resources for exchange (trade) and gift should be seen as an effect of this sea-borne trade, which brought in valuables, i.e. prestigious goods like wine, gold, horses, camphor, aromatic wood, silk, precious stones etc.

The yavana ships were the main carriers of this trade as described in the classical sources and the early Tamil texts. There is no evidence of Indian ships going to the ports of the Red Sea, nor is there any indigenous account exhibiting knowledge of the geography of the western regions. However, much of the coastal shipping between the west and east coasts of south India and between the Tamil coast to Bengal may well have been carried on in Indian ships. The references in the Periplus to small types of vessels the natives used for coastal traffic and the larger ones called sangara (made by logs fastened together) would also refer to the native boats that carried on the coastal traffic. A much larger vessel called the kolanidiaphonta, meant for high sea voyages, may have been used for transporting spices and woods from the Southeast Asian islands and for journeys to the Ganges delta. The Tamil textual references to kalam, vangam and naṇay may be to larger boats with masts and sails, while the pahri (small strong boats) was perhaps used for river transport down to the mouth of rivers. This is attested by the references in Paṭṭinappālai to the pahri at Puhār.
Individual traders from Tamilakam also appear to have travelled probably in foreign ships, to the ports of the Red Sea coast. The recently discovered Ostracon inscriptions at Quseir-al-Qadim, written in Brāhmī characters, reading Cātan and Kanar,\textsuperscript{118} (Tamil names) point to the presence of Tamil traders at the Red Sea ports and perhaps even Alexandria, which was the focus of much of the South Asian trade, from where the goods reached Rome.

Tamil texts allude to the sea-faring instincts of the Tamils and their rulers in the context of voyages and trade. The sea-girt Pāṇḍya chiefdom\textsuperscript{119} was subject to deluges affecting the Pāṇḍya coast, resulting in the transfer of their ‘capital’ from the coast to the interior. The institution of a sea festival by a Pāṇḍya, and the Cōla’s neglect of the Indra festival causing a deluge submerging the port of Kāverippūmatān, are pointers to the importance of the sea in contemporary beliefs. The Sangam rulers’ ‘mastery’ of the sea is often symbolically described as in the case of the Pāṇḍya who threw a spear to drive back the sea, the sea as the Pāṇḍya’s footstool and the Cōla claims to have descended from an ancestor who harnessed the monsoon winds for sea trade.\textsuperscript{120} The poems often drew their metaphors from the sea. An elephant running amuck is compared to a storm-tossed ship,\textsuperscript{121} while ship-wrecks seem to have been common. The Tamils’ knowledge of boat/ship building is also attested by the references to artisans skilled in the repair and refitting of ships and by descriptions like ‘the timber that swims the great ocean’ (perunkaṭal nūrdiyā maram).\textsuperscript{122}

V

The foregoing discussion on the early Tamil society and economy, with the main focus on the nature of trade, sets the background for situating the urban centres of this period. First, the dual centres of the major chiefdoms, often grandiosely called kingdoms, will be taken up.
The Cēra Centres

1. VAṆCI KARUVŪR (KARŪR, TIRUCHIRAPALLI DISTRICT)

VaṆci/Karuvūr, the ancient political centre of the Sangam Cēras, may be identified with modern Karūr located on the banks of the Amarāvati river, a tributary of the Kāveri, in the middle reaches of the valley. Karuvūr, known to the Sangam classics, the epics and the later didactic works,123 was also called VaṆci and VaṆci Murram.124 The river Ān Porunai (Amarāvati) flowed along this place, which was the capital of the Cēra Kōtai.125

The earlier identification of VaṆci with TiruvaṆcaikkaḷam (Kodungallur or Cranganore) on the west coast was based on the similarity of the names VaṆci and TiruvaṆcaikkaḷam,126 and the occurrence of a place called Karūr near the latter. The identification with Karūr in the interior subsequently proposed by K.A. Nilakanta Sastri and M. Raghava Iyengar127 has been confirmed by explorations and excavations in the region inland, i.e. in and around Karūr. Foreign Notices by Ptolemy would also show that Korura (Karūr) was an inland town.128 A number of references from the Puranānūru, Patiruppattu and the epics may be cited to show that Karuvūr and VaṆci were identical. Later herostone inscriptions from Karūr datable to the eighth century AD refer to the place both as Karūr and VaṆci.129

Attempts made to locate VaṆci in TiruvaṆcaikkaḷam near Mucirī, the Cēra port, have been unsuccessful, as no significant archaeological remains have been found at this site prior to the eighth century AD. That this centre was the capital of the early medieval Cēra kingdom of Mākkōtai (Mahodayapuram) has, however, been established. What is also of interest is that apart from the coastal Mucirī, a small town called Mucirī also exists near the inland town of Karūr, on the route to Tiruchirappalli, the ancient Uraiṟū of the Cōḷas. Unlike the excavations at Kodungallūr, the excavations in the inland Karūr by the Tamil Nadu Department of Archaeology have provided positive clues to its location, such as Roman amphora pieces, local Rouletted Ware, a Roman copper coin in one of the lower strata and BRW, some with graffiti marks.130

Karūr's importance as a political and commercial centre is
also attested by other archaeological finds in and around the town. Apart from the prized Roman aureus of Claudius (AD 41–54) from Karūr, a large number of Roman coins, especially the hoard from nearby Vellalūr, and the recent discovery of Cēra coins in the Amarāvati river bed provide supportive evidence. The occurrence of several silver coins of Mākkōtai, with the bust, apparently of the Cēra ruler, believed to be influenced by the Roman coins with portraits, suggests that Karūr may have been a mint town. The literary references to Karūr as a centre of jewel making are corroborated by the finds of some of the oldest finger rings with intaglio, one being a mithuna of the Amarāvati style, others with Graeco-Roman motifs like cupid, a warrior figure on a prancing lion with Hellenistic attire, with Buddhist symbols like the tri ratna/nandipada and Brāhmī legends with personal names, all assignable to the period between second century BC and first century AD. It is also significant that the Vellalūr hoard of Roman coins contained jewels with Roman intaglios. A gold merchant from Karūr figures as the donor of a stone bed to a Jaina ascetic at Pukalūr, not far from Karūr.

Coins, without portraits, but with symbols like the bow and arrow, the Cēra emblem, a mountain, double fish and a tiger and legends reading ‘Kolli purai’ (meaning Poraiyar, the rulers of the Kolli hills, have also been found in Karūr. This would further support the presence of a mint in this centre. Different lineages of the Cēras with suffixes like the Kōtai (Mākkōtai), Porai (Irumporai) and/or Āṭan (Ceralātan) are known from the Sangam texts and the epigraphic and coin finds confirm that they ruled in and around Karūr. Significantly, the Tamil Brāhmī inscriptions from Pukalūr and Arachchalūr, not far from Karūr on the Kongu highway, recording gifts to the Buddhist and/or Jaina ascetics, by the Cēra ruling family and by merchants, craftsmen etc., refer to three generations of Cēra rulers and point to the influence of the Śrāmanic religions over the trading community and the rulers. Kodumanal, the Kodumān of Patiruppattu, situated nearby, with evidence of a large gem and jewel manufacturing centre, adds to Karūr’s importance as a commercial centre.

The evidence of the epics, which are chronologically later than
the Sangam anthologies, would again point to the development of Karur into a large urban complex and the inclusion in it of Buddhist and Jain establishments. The Maṇimēkalai refers to a caitya in Vaṇci, believed to have been built by a predecessor of Kōvalan (the hero of the Śilappadikāram), who became a monk after giving away his wealth, evidently to the Buddhist institution. He, it is said, was a friend of the contemporary Čēra ruler and the caitya was built 'in brilliant white stucco with its turrets reaching the sky'. At Vaṇci, an Indra vibāra is also said to have been built resembling the one at Puhār. The reference to Indra vibāras suggests that Buddhist establishments came up on the outskirts of big urban centres and it became a common literary tradition to ascribe them to divine authorship or to great kings like Aśoka, by pilgrims and foreign travellers. In some cases, as in Vaṇci and Puhār, they may have been erected by merchants or trading groups, while later tradition provided them with great antiquity. At the time of a famine in Kāncīpuram, we are told, the Buddhist mendicants abandoned the city and settled down in the vibāra at Vaṇci. In the excavations at Karur, however, no such structures or their remains have been unearthed, whereas Puhār has something to offer in the form of remains of caitya and vibāra structures, albeit of the period from fourth to sixth centuries AD.

2. MUCIRI (KODUNGALLUR/CRANGANORE, TRICHUR DISTRICT, KERALA)

Muciri, the first and the earliest major port of call, was the famous Čēra port where the ships of the yavanas called in large numbers, and in exchange for gold took back cargoes of pepper and other products. According to the Periplus, Muziris abounded in ships sent there with cargoes from Ariake (Arabia) and Greek ships from Egypt. Pliny, however, warns that pirates from Nitrias (Cannanore or Mangalore?) make Muziris not a desirable place of call and ships had to anchor at some distance from the shore and the cargoes had to be landed and shipped by employing boats. It was the land of the Coelobothros (Keralaputra?) and pepper came from Cottanara (Kuṭṭanādu). Muziris and Nelcynda are often spoken of together by the
Periplus while listing the imports and exports from this port. Nelcynda was, however, a Pändyan port. The imports were 'a great quantity of coin, topaz, thin clothing—not much, figured linens, antimony, coral, crude glass, copper, tin, lead, wine—not much (?) but as much as at Barygaza, realgar, orpiment, wheat, enough for the sailors, for this is not dealt in by the merchants there'. The exports were 'pepper from Cottanara, great quantities of fine pearls, ivory, silk cloth, spikenard from the Ganges, malabathrum from the places in the interior, transparent stones of all kinds (beryls etc.?), diamonds, sapphires and tortoise shell,—that from Chryse island and that taken among the islands along the coast of Damirica'. What is significant is that many of these items as exports and imports are archaeologically attested in South India, while a trade agreement of the second century AD between a Muciri merchant and a Greek refers to quite a few of them.

Mucirī's importance as a major port of trade remained unaffected from second century BC to second century AD even after the circumnavigation of the peninsula took Greek ships directly to the Coromandel coast, where Puhār developed as the chief port. As late as the second century AD, evidence of trade in bulk goods between Mucirī and Alexandria in Egypt comes from a papyrus in the Vienna Museum recording a trade agreement in Greek between a vanikar from Mucirī and a trader (Greek?) from Alexandria. The agreement was apparently written in Alexandria, according to which certain specified quantities of Gangetic nard (700 to 1700 lb.), ivory items (4700 lb.) and a variety of textiles (790 lb.), whose value was equal to the price of 2400 acres of land in Egypt (one shipment—a single merchant's merchandise) were to be exported from Mucirī, in ships to a Red Sea port, then taken on camel crossing the desert and the Nile, reaching Coptos and then shipped to the Mediterranean town of Alexandria. It was subject to a 25 per cent customs duty on import, the costs covering risks of possible brigandage en route. It is estimated that one ship could carry the merchandise of about one hundred and fifty merchants. What the Muziris contract underlines is that the Indian trade was of a substantial scale by the second century AD with Muziris
continuing to be the emporium for goods even from the east coast, requiring enormous financial outlay.

The Pāṇḍya Centres

5. MADURAI (MADURAI DISTRICT)

Madurai, the political centre of the Pāṇḍyas, was perhaps the most important of the Tamil cities in the early historical period. As the seat of the third Tamil Sangam (literary academy), which the Pāṇḍyas patronized, it was the Tamil city par excellence, where the Tamil cultural traditions were fostered. A whole text of the Sangam collection, viz. Maduraikkāṇci, is devoted to its description, just as Pattinappālai to Puhār. It was the scene of many enlightening episodes and stories connected with the Sangam poets, which later became inscribed in the traditions of the city, and also the second major setting for the story of Kōvalan and Kaṇṇaki of the Śilappadikāram of the fifth to sixth centuries AD, the first being Puhār.

The Maduraikkāṇci, the longest poem in the Pattuppāṭṭu collection, and datable to the second century AD, gives a graphic description of Madurai as a large and beautiful city, with a palace, a number of temples, two large markets (bazaars?) and well laid out streets with lofty mansions. It had protective ramparts (walls) with huge gates and towers, surrounded by a deep moat, with the Vaigai river skirting the city walls forming a natural defence on one side. People of different social strata (?) and speaking different languages lived in different localities, professionals and craftsmen crowding the streets with their wares. Peddlars and petty traders also plied a brisk trade in the shade of the lofty mansions. Vedic/brhamanic and non-Vedic/ non-brahmanic (Śramanic) religious houses or places of worship also existed. The Netunālvātai repeats some of these descriptions and adds that the apartments of the palace were lit by yavana lamps and drunken millecas (yavanas?) roamed about the streets with their dresses hanging loose on the back and front. It is doubtful whether such verbal imagery of the Madurai city and its mansions is a reflection of the reality, for no site of early historical Tamilakam has revealed archaeological remains
commensurate with the conventionalized descriptions in the
texts.

The picture of the market place in Madurai is equally graphic
in Maduraikkāṇci and Netunalvātai and yet need not be set aside
as conventional, for, the artisanal and trading activity as de-
scribed in the text are supported by the nature of vestiges around
Madurai and in other early sites. The texts say that it was a big
market, a converging point for traders, a centre of crafts like
gold jewels, gold statues (?) ivory, inlay work and stucco images.
The gold merchants were specialists who could testify to the
finesse of gold and goldsmiths, well skilled in drawing thin
wires from molten gold. There were traders in pearls and
precious gems who had their shops in the markets. Chank
cutting and bangle making were also important.\textsuperscript{150} That it was
the source of the best cotton is mentioned in the Arthaśāstra,
although whether this text meant the old Madurai on the coast
or the one in the interior is not certain.\textsuperscript{151}

Meaningful archaeological excavations in the present town
of Madurai are virtually impossible due to its continuous
occupation. Yet, the region around Madurai has come up with
interesting epigraphic evidence in the form of the earliest Tamil
Brāhmi inscriptions (second century BC onwards) from Tirup-
parankunram, Alagarmalai, Māṅkulam and other sites. Roman
coins have also been found, some in Madurai itself,\textsuperscript{152} while a
hoard of silver punch-marked coins, from a place called Bod-
nāikkanūr, with the double carp symbol on the reverse (along
with other punch marks on the obverse), has been assigned to
the Pāṇḍyas as their issue.\textsuperscript{153} Square copper coins (with the
elephant and fish symbols) found in the region are also con-
sidered as Pāṇḍya dynastic issue. Recent discoveries of coins
with the legend ‘valūtiy’ or Peruvaluti,\textsuperscript{154} would add support
to the view that local coin issues (of Cēras and Pāṇḍyas) were
influenced by the large maritime commercial transactions of
the period.

4. KORKAI (TIRUNELVELI DISTRICT)

Korkai was another major port and one of the dual centres of
the Sangam Pāṇḍyas. The Pāṇḍyas are often called Korkai
Kōmān and Korkai Vēndu (Vēndu and Kōmān mean the great chief/king). Located on the south-east coast at the mouth of the Tamraparni river, Korkai is now six kilometres to the interior due to the recession of the sea in recent times. The urn burial site of Adichanallur, also on the banks of the Tamraparni, is about fifteen kilometres west of the present village of Korkai. Sawyerpuram, the microlithic site (teri site) is only three kilometres away. Altogether the area is rich in archaeological remains, with an important group of proto-historic sites.

An early occupation of Korkai by the urn-burial folk, i.e. much earlier than the other dated sites of the Megalithic phase in the Tamil country, is indicated by the Adichanallur urn-burials of a large size, the urn-burials of the Megalithic phase and the Radio Carbon dates of the lowest levels of occupation at Korkai, i.e. 785 BC. The occurrence at Korkai, of BRW, Roman Ware, Rouletted Ware of local origin, sherds with graffitti, inscribed potsherds with Brāhmī characters of second century BC to second century AD, and brick structures is consistent with the results so far obtained from other excavated sites in the Tamil country. However, a few sherds identified as of Northern Black Polished Ware (or are they a special fine variety of Rouletted Ware?) takes this site back at least to third century BC (Mauryan period), while the charcoal sample and a piece of wood at the lower levels of KRK-I have given an R.C. date of 785 BC, taking it further back in time. This early date for Korkai, in many ways, points to the growth of early coastal traffic and trade linking the Bay of Bengal coasts from Bengal to northern Sri Lanka, via Andhra and Tamil coasts.

Korkai, according to Sangam literary tradition, was a farfamed port (Pugal mali sirappir Korkai munturai) and reputed for its pearls. Kāyal (meaning salt pans) which is located not far from Korkai, was well known for its salt pans. The Periplus talks of Colchi (Korkai) and its pearl fisheries worked by condemned criminals. To the Greeks the Gulf of Mannar was Colchic gulf.

The occurrence of pearl oysters at various levels in the Korkai excavations provides confirmation of the literary evidence that Korkai was a centre of pearl fishers and trade in pearls. The Arthasastra's reference to the pearls of the Pāṇḍya country and
the number of places where they were obtained also suggests that the whole stretch of coasts of the Indian-Ceylon straits was the source of pearls.\textsuperscript{163}

The Cōla Centres

5. URAIYUR (TIRUCHIRAPALLI DISTRICT)

Uraiyur, at present a part of Tiruchirapalli town, represents the site of the ancient ‘capital’ of the Sangam Cōlas. It was also known as Köli and Vāraṇam.\textsuperscript{164} Descriptions of Uraiyur in the Sangam texts indicate that it was a strongly defended city and its outskirts had burial grounds which were full of stones and hence ‘there were many obstacles to easy movement’.\textsuperscript{165} This description is strongly suggestive of the existence of Megalithic Cairn circles and burials. The earliest levels of the excavated site in Uraiyur have BRW and other early pottery as in other excavated sites and point to the Megalithic antecedents of early Tamil culture.

The Cōla Karikāla is said to have enlarged this town, fortified it and enriched it with beautiful buildings.\textsuperscript{166} It was as important as Puhār or Kāvērippūmpattinam, the port city of the Cōlas and both these centres were developed by the same Cōla ruler, Karikāla.

Excavations at Uraiyur\textsuperscript{167} have established a cultural sequence of three periods. Period I\textsuperscript{168} is represented by BRW, the Russet-coated Painted Ware, the Rouletted Ware, Arretine Ware, together with the associated Red and all-Black Wares. Sherds with graffiti and Brāhmī inscriptions assignable to the first and second centuries AD have also been met with. Period II shows a gradual disuse of BRW and the emergence of the Red Slipped Ware. A rectangular cistern, which the excavators describe as a dyeing vat, also belongs to this period. This, if correct, would confirm the literary evidence on the famous Uraiyur textile industry and the reference in the classical sources to Argaritic, a fine fabric form Argaru, i.e. Uraiyur.

Evidence of flood and waterlogging in one of the cuttings would suggest a disturbance due to the destruction of this site by a flood in the Kāvērī. Reference to a flood which occurred
in the area in c. AD 944 is made in an inscription from Allūr, five kilometres from Uraiyūr. The flood may thus be associated with period III, assigned to the eighth–fourteenth centuries, which is represented by a crude ill-fired Red Ware, Celadon Ware, besides terracotta figurines and beads of semi-precious stones. Uraiyūr, as is well known, continued to be a political centre of the imperial Cōlas of ninth to thirteenth centuries AD. The only epigraphic evidence on the antiquity of this site, taking it back to the early historical period, comes from a Brāhmī inscription at Tiruchirapalli.

Thus, it would appear that archaeological remains in Uraiyūr are not very illuminating for the early historical period and in no way equal to the literary descriptions of the place. The problems that confront the archaeologist here are of the same nature as in other early historical urban centres, i.e. their continuous occupation and the disturbance caused by it. A large urban complex developed here in the medieval and modern periods and Uraiyūr became a part of it.

6. KĀVERIPPŪMPATTINAM/PUHĀR (TĀNJAVŪR DISTRICT)

Kāverippūmpaṭṭinam or Puhār, one of the dual centres of the Cōlas, was the chief port on the east coast in the early historical period and continued to be so till at least the fifth to sixth centuries AD. It was known to the Periplus as Camara and to Ptolemy as Khaberis. Much of our knowledge of this town is derived from the Sangam works and the epics. The Paṭṭinappālai, one of the Sangam collections, is devoted wholly to its description, while the post-Sangam epics, viz the Śilappadikāram and the Manimekalai contain numerous references to the town, its various quarters, religious and secular buildings. Its development into a fairly large urban complex is evident from the Paṭṭinappālai, while the epics show that it included Buddhist and Jain establishments, apart from a number of shrines of the brahmanical and folk deities.

The city was known by several names such as Puhār, Kākandi and Sampāpati. The last name seems to be preserved to this day in the name of the Sampāpati temple, believed to have been the tutelary deity of the town. The city is described in literature
as Perur and Managar (big town/city). No less than forty odd sites may be located near the present site of Kaiverippumpattinam, which once formed part of the city. Some of them are Vanaigiri, Vellaiyaniruppu (the abode of the white men—yavana?). Sayavanam, Manigradam (Vanika-grama) and others, where archaeological digging has brought to light occupational debris belonging to a period ranging from c. third century BC to fifth century AD. The diggings at Vellaiyaniruppu have, contrary to expectations, not revealed any early yavana settlement, but only show a deposit going back to the ninth century AD.

The city had two main parts, the Pattinappakkam or the residential area and the Maruvurpakkam or the coastal area with its harbour. The residential area is also called Akanagar (internal city), which was evidently the prosperous section, where the richer classes lived and where there were residential buildings (of brick), feeding houses, gardens, public meeting places, public baths, tanks and religious structures, etc. The coastal area contained the harbour, customs offices with the tiger emblem (of the Colas) on their doors, storehouses, godowns, merchants’ quarters and a fishermen’s colony. People speaking different tongues, including foreigners, lived there. The nallangadi (day market) and the allangadi (evening market) met in the spacious open area between the two main divisions of the city on the east and the west.

The cemetery and burial ground situated on the outskirts of the city also had their guardian deities such as the deity in the pillar.

Excavations, however, have not revealed relics of early structures of such magnitude and grandeur as described in literature. The only significant finds are of a brick structure in Kilaiyur, identified as a wharf, where boats were anchored with the help of wooden pegs. The wharf is dated to about the fourth to third century BC based on the R.C. date (315 BC) for the wooden sample from this structure, apart from the evidence of the BRW deposits. The size of the wharf would also show that it was probably an anchoring site for boats (pahri) bringing goods from the interior or from large ships halting a little away from the shores, as evidence of a harbour with docking facilities is lacking. The tradition that Kaiverippumpattinam
was submerged in the sea on account of a curse on the city due to the failure of a Cōla king to conduct the Indra festival,\textsuperscript{182} has led to the belief that part of the ancient city is now under water. Efforts are on to check such a possibility through underwater archaeology. A survey conducted on the beach about six kilometres from the water’s edge is reported to have shown indications of buried archaeological remains under the sand (?). As late as 1849, encroachments of the sea are believed to have washed away part of the ancient town.\textsuperscript{183}

Remains of a semi-circular brick structure with an internal diameter of eight metres, have been unearthed at Vāṇagiri, which may represent a water reservoir fed by a wide inlet channel of eighty-three centimetres from the Kaveri. Associated deposits yielded BRW and Rouletted Ware, and, as such, a first century AD date is indicated.\textsuperscript{184}

The most striking remains are those of a Buddhist vihāra at the site called Pallavanesvaram consisting of a full wing of cells and a long verandah on the south. A subsidiary structure, probably of an apsidal caitya, together with other Buddhist objects found here, has been assigned to the fourth to fifth centuries AD, with constructions of a still later phase.\textsuperscript{185} The Buddhist remains generally confirm the evidence of the epics.

The site of Manigrāmam yielded deposits of BRW and Rouletted Ware of different fabrics, in addition to terracotta figurines and square copper coins of the Cōlas, all assignable to the beginning of the Christian era.\textsuperscript{186} The coins bear the figure of a standing tiger (?) on the obverse and an elephant on the reverse. One of the symbols on the coins has also been identified as a fish or kalpavṛkṣa.\textsuperscript{187} The name Manigrāmam (or Vaṇika-grāma) indicates the presence of a merchant quarter. Significantly, Manigrāmam is also the name borne by a famous merchant guild of early medieval South India.\textsuperscript{188} Thus, it would appear that the urban complex of Puhār included in it a merchant colony, which provided the background to the story of the Śilappadikāram.

Puhār, the Cōla port, seems to have superseded all other ports of South India, when, in the perennial conflict among the vēndar for hegemony and control over the resources of one another, the Cōlas emerged more successful and developed their
port as the port of destination and embarkation for the major resources of Tamilakam, Sri Lanka and Southeast Asia, and stationed their officers to oversee the import and export of commodities. Thus, the merchandise that came to Puhār shows a great variety.

War horses that came by sea
Bags of black pepper brought overland by cart
gems and gold from the northern mountain
sandal and akil wood from the western mountain
pearls of the southern and corals of the eastern sea
The produce of the Ganges basin and Kaveri valley
Foodstuffs from Ceylon and luxuries from Kaḍāram

(Paṭṭinappālai ll. 185-191)

What is perhaps more important is that it retained its pre-eminent position at least till the fifth-sixth centuries AD, providing a major outlet and entry point (Puhār = entry point? or does it refer to the Kāvēri entering the sea?) for the commerce with Southeast Asia. It would, therefore, be tempting to characterize it as a gateway189 to Tamilakam till the early medieval period, when it was superseded by Nāgappatṭinam as the major Cōla port.

The Centres of the Tiraiyar (Toṇḍaimān)

7. KACCI (KĀNCIPURAM, CHINGLEPUT DISTRICT)

Kāncipuram, well known in history as the capital of Pallavas as early as mid-fourth century AD,190 was the Kacci of the Sangam texts. In early Tamil literature Kānci is known as Kacci, Kacimiram and Kaccippēdu, the last one probably a suburb, from where a number of Tamil poets hailed. Kānci and Kāncinallūr also refer to the same town.191

The Kāncipuram excavations have been spread over several parts of the city and the relevant ones for the early historical period are those conducted in the premises of the Śankara matha and near the Kāmākṣī temple.192 The first site has indicated three periods of occupation, of which Period IA (second century BC to third century AD?) has BRW in early levels, Black
Slipped Ware and Rouletted Ware and conical jars in the upper levels, apart from a coin of Rudra Satakarni of the second century AD and terracotta figurines. Period IB is assigned to the fourth-ninth centuries AD, i.e. of the Pallavas, and is represented by Bright and Red Slipped Ware, lead and copper coins and moulds. Period II is of early medieval times (Cola period) and period III is of modern occupation.

In the excavations near the Kamaksi temple, a three period stratification has been made, of which the first two are relevant.193 Period I is represented by fine BRW in its lower levels (IA), and Painted Ware assignable to the period from the third century BC to first century BC, and the upper levels (IB) show BRW, Rouletted, Arretine Wares, beads, terracotta objects and iron objects and remains of a baked brick structure identified as a Buddhist shrine. Period II (fourth to ninth centuries AD) is represented by conical jars (miscalled amphorae) or local imitations of amphorae, fine Bright Red and Orange Slipped Wares, glass and other objects. The small 'circular' structure identified as a votive stupa194 cannot conclusively be proven to be a stupa, as, apart from a few courses of brick, neither the outline or plan of the structure nor its shape is traceable. The bricks are, however, of considerable size (50/22/6 cm) and comparable to those of Andhra Buddhist sites.

Traditions regarding the Buddhist associations of Kanci appear only in the post-Sangam texts, no specific references occurring in the Sangam anthologies to Kanci as a Buddhist centre. Buddhist institutions are first mentioned in the Manimukalai. Again, it is only in the accounts of Hsuan Tsang that Kanci's Buddhist associations are stressed and the Chinese pilgrim suggests great antiquity for Buddhism in Kanci by referring to stupas of the Asokan period.195 The Mattavilasa Prahasana, a burlesque attributed to the Pallava king Mahendravaran of early seventh century AD, refers to a Buddhist vihara in Kanci.196 Similarly, with the exception of the Tamil Brahmi inscription from Mamandur the earliest datable evidence of the presence of Jainism also belongs to the fourth-sixth century period, as seen in the Tirunatharkunru epitaph of the fourth century AD, the Jain work called the Lokavibhaga of the fifth century AD and the Pallankoyil copper plates of c. AD 550.197
The *Perumpāṇārṟuppattai* gives a graphic description Kacci as a 'Mūdür' (old town) formed by a number of settlements. It had tall buildings of brick and was fortified by high walls. The palace of Ilamtraiyan, the chief of the Tonḍaiyar, is described with poetic fancy, marked by occasional glimpses of realism. The river Vēghavati (Veṅkā), on which the city stood, comes in for elaborate treatment and its associations with Māl (Viṣṇu) are highlighted. Such descriptions hardly find archaeological corroboration. Archaeological work in cities like Kānci is confronted with problems arising from continuous occupation and a lack of potential areas for digging. However, through trial digging, insights into the antiquity of such sites can be provided. There is thus little doubt that the archaeological record in Kānci goes back to the Megalithic or BRW period.

Kānci's contacts with the world outside may be traced back to at least second century BC, if the work of Pan Kou, a Chinese writer of the first century AD, is to be trusted. Pan Kou's *Ts'ien han Chou* points to contacts between Houang-tche (Kānci) and China, by referring to the exchange of goods and presents between the Chinese emperor P'ing (Yuan-che period) and the king of Houang-tche. According to Pan Kou, the Chinese emperor sent presents to the king of Houang-tche and asked for a return 'embassy' with a live rhinoceros as tribute. People from Houang-tche sent tributes from the time of emperor Wou (140-86 BC). Other goods like shining pearls, glass and rare stones in exchange for gold and silk are also mentioned. The journey from China took about ten months to one year through Pagan (Burma).

With the Roman world, Kānci's contacts seem to have been indirect, perhaps through its port Nirpppeyar. Although no Roman coins have been found in Kānci, the fact that several finds are known from the region around it, i.e. in Tonḍaināḍu—such as Māmallapuram (port), Madurāntakam (a place called Ālamporai), Saidapet and Mambalam (both in present Madras city) would point to the region's participation in the Roman trade. The Rouletted Ware found in Kānci may be of a local variety, with the rouletting technique travelling from the ports (coastal area) to the interior. While the Arretine Ware finds in Kānci are negligible,
the red conical jars were imitations of the amphora, the true amphora finds being confined to Arikamēḍu and Vasavasamudram, apart from a site called Kāraikkāḍu.

8. VASAVASAMUDRAM (NEAR SADRAS, CHINGLEPUT DISTRICT)

Situated at the mouth of the river Palar, this site is about thirteen kilometres south of Māmallapuram. Excavations at this site have unearthed pieces of amphora, Rouleted Ware, double ring wells and other objects like beads. Remains of brick structures, terracotta ovens and heaps of shell lime, all assignable to a single period of occupation (1.92 metres deposit) from the first to third century AD have also been found. Significantly, there is no BRW deposit at the site, although the general assemblage and antiquities correspond to those at Arikamēḍu. Hence, Vasavasamudram represents the later phase of Roman trade, when the east coast’s trade had become intensified. It also seems to have continued to be a part of it when the Roman trade was at its lowest ebb in the Byzantine period.

The real significance of Vasavasamudram lies in its location in relation to Kāṇcī. Situated on the banks of the Veghavati, a tributary of the Palar, Kāṇcī has access to the sea only through Palar and hence some early port at the mouth of the Palar, may well have served as the ancient port of the Tiraiyar of the Sangam texts. Vāyalūr, where a historic inscription of Rājasimha Pallava datable to early eighth century has been found, is located two miles south of Vasavasamudram. The latter could well have been a part of Vāyalūr, which is known as the ‘pilavāyil’—entrance way.

The Perumpānāṟṟuppattai, one of the Sangam works, containing descriptions of Kāṇcī and other places in Tondainādu, refers to a port called Nirppeyarru. Nirppeyarru is described as a big port with a lighthouse (in the days of Tondaimān Iḷamriraiyan, a contemporary of Karikāḷa Cōla), with broad streets, tall houses (of merchants), fishermen’s quarters (paraṭavār), godowns guarded by professional men, and with a harbour full of ships bringing white horses and precious stones. The tall lighthouse on the shore guided the ships. This site
has been identified with Nîruppēr in the Madurântakam taluk of Chingleput district and with Mâmallapuram.²⁰⁴ It is said that Nîrpâyarrurai (turai = ghat = harbour) was later corrupted in to Nîrppeyarru.

It is, however, more in keeping with the archaeological evidence at Vasavasamudram to identify it with Nîrppeyarru, with evidence of its connections with the western trade. Although Mâmallapuram has some evidence in the form of Roman coins, the location of Vasavasamudram is of greater importance in its identification. It may have been superseded by Mâmallapuram even by the fourth and fifth centuries AD, when the Pallavas are known to have occupied Kâncipuram. Hence, the occupational deposit at Vasavasamudram indicates a single period.

Other Centres

9. ALAGANKULAM (RAMANATHAPURAM DISTRICT)

Alagankulam is located at the mouth of the Vaigai river, on its northern bank, now some distance away from the coast, from where the opposite coast of Sri Lanka (north west) can be reached by boat in about twenty-five minutes. It is identified with Sâliyûr of the Sangam works.²⁰⁵ Here, the occupation levels indicate a period from pre-third century BC to the beginning of the sixth century AD. The earliest levels show NBP ware, followed by BRW, silver punch-marked coins of first and second centuries AD, together with Roman Rouletted Ware (local?), amphorae, and a very interesting and rare Pink Ware, of which thousands of sherds have been found. Finally occur the late Roman coins of Valentine II, Theodesius (388-393) and Arcadius (394-408).²⁰⁶ The Pink Ware has been alternatively described as an African Red Slipped Ware or an Afghan Ware and compared to some potsherds of similar fabric from Arikamêdu.²⁰⁷ Beads, semi-precious stones and terracotta objects have also been reported. Square copper coins of the Pândyas with the elephant, fish (?) and auspicious symbols such as wheel and vase (pûrâbhata) are other finds from the site. Some of the BRW sherds have graffiti and Brâhmi inscriptions.
The presence of the NBP may point to its importance in early coastal traffic or trade with the Bengal coast and Andhra coast, while the later levels with Roman antiquities suggest a more direct involvement in the Roman trade from the second to fifth centuries AD. This port is considered to be as important as Puhār, Korkai and Arikamēdu in the early historical trade of Tamilakam with the Mediterranean region, and needs to be carefully explored and mapped out. For, in its vicinity, are located some sites which are identifiable with settlements mentioned in the Sangam works.

The name Alagankulam is evidently a later one for this ancient port. The ancient site may be the same as Marungūr pāṭṭinam mentioned in the Akanānūru. Two parts of this town, viz. Уnūr (Nellin Уnūr), which abounded with paddy, and Marungūr, which was the commercial area on the coast, as described in this work, recall the two divisions of Kāvērippūmpattinam (Puhār), i.e. Pāṭṭinappākkam and Maruvūrpākkam. The Maduraikkānci also refers to a Nellin Īr as a busy port with ships bringing goods from different countries. The waiting ships are compared to a group of mountains about to seize the floods. Nellin Īr and Nellin Уnūr could well have been the same. Between Korkai and Toṇdi (another Pândya port known from early medieval sources) is a village called Marungūr near the coast.

10. ARIKAMEDU (PODUCA/PODOUE), PONDICHERRY

One of the earliest sites to be excavated on the east coast, confirming the Sangam literary evidence on the Roman trade, Arikamēdu, south of Pondicherry town, has been described as an Indo-Roman trading station. The Arikamēdu excavations have often served as a reference point offering ‘a firm datum line from which the classification of pre-medieval South Indian cultures can begin’. The site is assigned to the first and second centuries AD by the early excavators. The associated BRW at this site, it is believed, has been dated with greater precision on the basis of the occurrence of the Arretine and Rouletted Ware and the Roman amphorae. However, more recent excavations have attempted to push back the beginnings of the site to the second century BC, again on the basis of the Rouletted and Arretine
Ware and hence, also to date BRW earlier than the first or second century AD.211

The earlier excavations have also brought to light brick structures, one in the northern sector, identified as a warehouse, and another in the southern sector, a structure with tanks and courtyards, as one used in the preparation of muslin cloth, a notable export from the Tamil region. Bead and glass manufacture has also been identified. In addition, gems with intaglio designs found in the site have been assigned to Graeco-Roman craftsmen, suggesting their presence in Arikamēdu.

Arikamēdu has been identified with Virai, the modern Virampaṭṭinām near the site, which was one of the vēlir strongholds known to Sangam literature. In the Akanānūru, it is described as a harbour of the vēlir, while the Narinai says that it was the centre of the vēlir chieftain Virai Veliyyan Venmān.212 Evidence in support of the vēlir association of this centre has been recognised in a BRW sherd with a Brāhmī inscription of the first century AD reading Yadu Balabhūti-y or Balabhūti of the Yadu Clan.213 The vēlir claimed descent from the Yādavas.214 A Possible derivation of the Poduca/ Podouke of the Periplus and Ptolemy is interesting in this connection. Podouke may be derived from Podikai, a meeting place in a clan settlement. Such Podikais were common among the vēlir settlements of early Tamilakam.215

Arikamēdu’s importance in the Roman trade is generally accepted. That traders from other countries were also regular visitors to this port is suggested by the use of Simhalese characters in the early Brāhmī inscriptions on potsherds, one of which has been read as bū ta śa, using the old Simhalese form śa for the genitive case ending of the personal name būta.216 This would further strengthen the evidence on early coastal sea traffic along the east coast down to Sri Lanka, from where Buddhist monks and nuns are known to have visited the Andhra Buddhist centres.

11. KODUMANAL,7 PERUNDURAI TALUK
       (PERIYAR / ERODE DISTRICT)

Koḍumanal, the ancient Koḍumānām of Patirruppattu, a Sangam work, described as a centre of gem and jewel manufacturing, is
located on the north bank of the Noyyal river about forty kilometres from Erode. Padiyur, with its beryl mines, is about six kilometres south of it. The site's location in the Kongu region (the Coimbatore, Salem and Periyar districts) with a concentration of Roman coin finds in hoards, must have influenced its role as a nodal point on the overland trade route linking the Kerala coast, through the Palghat gap, with the middle and lower reaches of the Kaveri down to the ports of the east coast. Archaeological excavations have confirmed its importance as a jewel manufacturing centre, with a large quartz zone providing semi-precious stones. Due to the absence of chalcedony in this quartz zone, with the exception of carnelian, which was brought probably from Gujarat, all other semi-precious stones are available in the region. A factory site for quartz objects has also been identified in the excavations at the centre. Kodumanal must have been a large supplier of crystal objects to the port of Muciri, possibly in exchange for Roman gold and silver coins and pottery.

The other major industry was of iron, with evidence of a wide range of iron weapons, and other objects like spindles, a large number of rusted iron stirrups, apart from slags along with a factory site—perhaps the earliest iron foundry for melting iron ore. Possibly iron objects were also meant for export. Hardly twenty kilometres from Kodumanal lay an iron belt from the Sennimalai (at present a weaving centre), with its magnetic iron ore, up to Kanjamalai.

The site seems to have been in occupation from at least the second century BC to the fourth century AD, when it was probably abandoned. Two cultural periods have been marked in the occupational layers. Period I is represented by BRW, which continues throughout in the habitation site, RCP in the burials, iron objects, Red Polished and Black Polished Ware, and evidence of artisanal and craft activities, especially gems. BRW Graffiti is a crucial piece of evidence linking the habitation with the burial site, as in both contexts the same graffiti occurs. Each Megalithic burial has a special symbol on its pottery, probably of a specific clan (?). The graffiti is similar to some of the symbols occurring on punch-marked coins and in early Tamil Brāhmī inscriptions. Similar symbols are reported from other Megalithic sites. Graffiti gives place to
more Brāhmī letters in the upper levels. Carnelian predominates in the burials. This period is dated from the second century BC to the second century AD. Period II is assigned to the second and third centuries AD, when BRW and other pottery types continue, but the scratching of letters goes into disuse. Evidence of active iron-working and more agricultural activity is attested to in the second period.

The site would thus seem to have been continuously active in the early trade, both inland and maritime. The whole region of the Amarāvati and Noyyal rivers comes up with evidence of traders constantly moving across. Along with ornaments of gold (24 carat, though gold is limited), silver rings and a copper tiger inlaid with precious stones, are other finds which point to the nature of craft production and trade in jewels. Some of the rings (silver and copper) have symbols, similar to the Megalithic graffiti, and may have been signet rings or seals of traders. The discovery in the river beds of numerous coins of the Cērā rulers, some with portraits and legends giving names like Mākkōtai and Kuṭṭuvan Kōtai would add to the evidence of the Cērā’s interest in promoting this trade. Although very few punch-marked coins and only a single Roman silver coin have been found in the habitation site at Koḍumanal itself, the region around the site, as noted earlier, has the greatest concentration of Roman coin finds in South India, leaving no room for dispute regarding the commercial significance of this centre. The term nigama occurring on a potsherd would also indicate the presence of a merchant guild. However, as guild organization is less conspicuously attested to in the Tamil context, it may be suggested that trading groups from the Deccan and Andhra may have been involved in the commerce of this region. This is further supported by several names of a Prākrit origin like Viśākhi, Varuṇī and Kuvirian (e.g. Varuṇī akal = the vessel of Varuṇi) found on potsherds, in addition to Tamil names.

Koḍumanal is one of the few centres where the links between the Megalithic burial and habitation sites are established by archaeological material, with clear evidence of their contemporaneity. The total area is of about fifty hectares, including a habitation located in ten hectares, and a hundred burials. The
site has rich potential for studying the transitional stage from proto-history to the early history of the region.

12. TIRUKKÖYILÛR (SOUTH ARCOT DISTRICT)

Tirukkōyilûr was known to early Tamil texts as Kövalûr (Köval) and as the centre of the Malaiyamân chiefs of the vêlir clan. Its importance derives from its location on the banks of the South Pennaiyar (Pennar) and on the route from the west coast to the east coast (Arikamëdu) via the Kongu region. Two significant discoveries in recent years have established its nodal importance. One is the early Brāhmî inscription\(^{221}\) from a place called Jambai, near Tirukkōyilûr, recording the gift of a pâli (cave) to a Jaina ascetic by Neṭumam Aṇci, an Atiyamân chieftain (another vêlir chief), who is here called Satiyaputo (=Atiyamân), possibly after he defeated the Malaiyamâns and occupied this region.\(^{222}\) The reference to Satiyaputo has established that the Satiyaputras of the Asokan edicts were the Atikaimân (Atiyamân) of Takaṭûr (Dharmapuri near Salem), who are praised in the Sangam works for their generosity and valour.\(^{223}\) The second discovery is of a very large hoard of Roman aurei in a nearby village (by a local labourer).\(^{224}\) The hoard contained 193 coins and some pieces of jewellery, including a diamond ring. The coins are of Nero (54–68 AD), Domitian (?) (93 AD) and Antonius Pius (138–161 AD). Copper coins, believed to be the issues of the Malaiyamân chiefs, have also been discovered in Tirukkōyilûr and in private collections,\(^{225}\) which may suggest a direct interest shown by these chieftains in the early Roman trade.

Coastal Sites/Towns

At this point it would be useful to follow the classical sources and the coastal sites/towns that they are familiar with, apart from those that have been taken up for description under the dual centres of the early Tamil chiefdoms. While some of them are not known from the Tamil sources, there are quite a few, which can be identified with the help of archaeological material and occasionally, also of literary references.

On the west coast, the Periplus, after enumerating other ports
down the Maharashtra and Konkan coast, starts with the first markets of Damirica (Tamilakam). These are Naura, the Nitra of Ptolemy and Nitrias of Pliny, which is identified with Cannanore, and Tyndis, identified with Ponnāni. Both are located in the kingdom of the Cerobothra. Beyond this, there is no further reference to the nature of these centres, except, that they seem to be no more than villages. After these two comes Muziris, the Mucirī of the Tamil sources.

The next site of some importance is the Neacyndon of Pliny, Nelcynda of the *Periplus* and Melkynda or Nekkunda of Ptolemy, identified with Kōṭṭayam. Nelcynda is given equal status with Muziris as a market of leading importance, but it is stated to be in the Pāṇḍya (Pandion) country. Ptolemy places it in the country of the Aioi, which closely resembles the name of Āy of the vēlir clan, who ruled from Āykkūdi (Potikai), the Bettigo of Ptolemy. The Āys were lesser chiefs under the Pāṇḍyas. Nelcynda must have been a part of the pepper trade of this coast, as pepper was the major item from this port and Muziris. Pepper was carried from Cottanara in canoes to Bacare another small town (?) mentioned by the *Periplus*, identified with Porakad, also at the mouth of the river (Meenchilār) on which Nelcynda is located. Large ships are said to have come to these market towns on account of pepper and malabathrum.

Beyond Bacare is another district, we are told, called Paralia stretching along the coast towards the south around Cape Comorin and as far as Adam’s bridge. On this coast is located Comari (Cape Comorin/Kanyā Kumāri) which had a harbour and a goddess shrine, where people came and offered worship. Balita (Varkkalai) is another village by the shore with a harbour. After Comari is mentioned Colchi or Korkai, the Pāṇḍya port.

Evidence on these sites either from literature or from archaeology, is practically non-existent or, at best, meagre. Hence, it would appear that only those harbours which the major chiefdoms promoted came to attain the status of ports or emporia as they are called in the classical accounts.

The descriptions of Argrau that follow in the *Periplus* are somewhat hazy, for it is said to be a region lying inland from a bay after Colchi. It is from this bay, we are told,
that the pearls gathered on this coast and from an island
called Epiodoros, as well as muslins called ebargareitides (argarik/
argaritic), were exported. While Epiodoros may be identified
with the island of Mannar, Argaru is said to be the same
as Uraiyür. The location of Argaru, however, seems to be
less certain, as it has also been suggested that it lay somewhere
near the Palk Bay, perhaps beyond the mouth of the
Vaigai, where Alagankulam, with its Roman vestiges, stands.
Ptolemy mentions a promontory called Kory, and beyond
it a place called Argeirou, and an emporium called Salour.
Kory is believed to be Köţi of the Tamil sources and is
identified with Dhanuškőţi (in the Ramesvaram promon-
tory). Interestingly, Salour may be the same as Saliyür of
Tamil sources, which is located near Alagankulam. This coast
is opposite to the northwestern coast of Sri Lanka.

Sri Lanka (Ceylon), which, in the classical sources, is known
as Palaesimundu and Taprobane is mentioned along with the
above coast, where Colchi, Kory, Argaru etc. are located. It is
described as a land of large elephants, gold and pearls, precious
stones and marble resembling tortoise shell.

Argaru is followed by Camara (Periplus) or Khaberis (Ptolemy),
the Kāvērippūmpatṉam of the Tamil sources, Poduca or Po-
douke (Arikmēdu) and Sopotma identified with Marakkănam
in the South Arcot district, north of Pondicherry. Then the
description passes on to the sites of the Andhra coast, i.e. Masalia.

45. See Bohannan and Dalton (eds), Markets in Africa, North Western University Press, Illinois, 1962, 7-8, for the concept of the ‘peripheral’ market.

One of the three kinds of societies mentioned by them is the society with peripheral markets, where the institution of the market place is present, but the market principle does not determine the acquisition of subsistence goods or the allocation of land or labour resources. Bohannan and Dalton also prefer to use the term ‘market-place-exchange’ and not ‘market ex-
change', as land and labour transactions are absent in such peripheral markets.

50. People speaking diverse tongues, that come from great and foreign homes mix freely on friendly terms with those who occupy this glorious town, *Pattinappalai*, ll. 214-17; Chelliah, 1962: 41.

In different places of Puhar, the onlooker's attention was arrested by the abodes of *Yavana*, whose prosperity was never on the wane. On the harbour are to be seen sailors who come from distant lands, but for all appearances, they lived as one community. *Silappadikāram*, v: 6-12; V.R.R. Dikshitar, *The Cilappatikāram*, SISWW, Tirunelveli, 1978, 120.

53. According to Polanyi, 'Emporium', in classical Greek terminology, referred to 'that part or sector of a coastal town which was devoted to foreign commerce'. It came to denote 'a large centre of commerce' only at a later date. It was a self-contained unit with its own food, market, harbour, quay, warehouses, administrative buildings, mariners' houses and so on. The reference to a Mahānāviṅka (Navigator) as a donor in the Buddhist centre of Amarāvatī and the ‘ship’ type coins of the Sātavāhanas (ship with one or two masts with a double set of rigging on each) (Maloney, ‘Early Coastal Sea Traffic’, 153) leave no room for doubt regarding the natives embarking on sea voyages.

117. ‘Pegs driven to tie strong boats (pahṛi) that stand like steeds in a stable tied. They, come fully laden with grain by barter brought of salt refined’. Pattinappālai, ii. 28–32; Chelliah, Pattupāṭṭu, 31.

118. See Thapar, ‘Black Gold’, 8–9; Mahadevan, ‘Ancient Tamil Contacts’.

119. D. Devakunji, Madurai Through the Ages, From the Earliest Times to AD 1801, Society for Archaeological, Historical and Epigraphical Research, Madras, 1979 (?), chapter iii.

120. Puranānūṟu, 66: 1–3.

121. Nagaswamy, Tamil Coins, 5.

122. Ibid.

123. Puranānūṟu, 5 Colophon; ll, 32 etc., Paḷamoli Nānūṟu, 62: 1.

124. Puranānūṟu, 372; 24; Šilappadikāram, xxv: 9, 34.

126. Seshaiyai, Cēre Kings of the Sangam Period.

128. See Pillay, A Social History of the Tamils, 269.

130. Initial Report, The Hindu, 26 June 1973. Amphora fragments, Kaolin Ware, Russet coated painted ware have also been reported in the area, especially from Veḷḷalūr.

133. Mahadevan, ‘Corpus’, no. 66.

138. Romila Thapar suggests that Huien Tsang’s informants may have tried to impress the Chinese pilgrim with the antiquity and importance of the places he visited by associating them with Asoka. Huien Tsang does refer to the existence of Asokan stupas in Kanci. See Thapar, Asoka and the Decline of the Mauryas, OUP, 1973, 2nd edn, 133.

140. Muziris was, according to Pliny, the first emporium of India—See Seshai Aiyar, Cēra Kings, 91; Nagaswamy, Tamil Coins, 7.

141. ‘... Cēra’s great river Cullī splashes with white foam where Yavanas bring their well built ships arriving with gold and carrying off pepper from prosperous Mucirī, reverberating with the Ocean.’

Akanāṇiru: 149: 7-11.

142. Periplos: 54; McCrindle, Commerce and Navigation, 132-3.

144. Periplos: 56; Sastri, Foreign Notices, 57-8.

147. See Devakunthari, Madurai, 44ff.

148. Maduraikāṇci, ll. 331-669.

149. Netunalvaṭāi, ll. 31-5; 81-97; 101-5.

150. Maduraikāṇci, ll. 316; 411; 504-6; 512-13. Netunalvaṭāi, l. 110; also Ainkurunūrya, 194: l; Kuruntokai, 189; 365: 1.

152. Nagaswamy, Tamil Coins, 75.

157. In LAR, 1969-70, the R.C. date is given as 805 BC, while the report of the excavations in Damilica, 1, gives the date 785 BC. A sequence of three periods has been marked in Korkai: Period I—Urn burials with Megalithic BRW and Red Ware; Period II—What is called the Pāṇḍya period (?) with Red Ware, Sawed conches, terracotta beads, spouted potsherds;
Period III—Red Ware and Black Ware of a coarse variety—called post-Pāṇḍya period (?).

158. *Akanānūrũ, 27: 9; 350: 13; Ainkurunūrũ, 185: 1; 188: 2; Manimēkalai, xii: 84.*

159. *Akanānūrũ, 366: 5.*

162. *Akanānūrũ, 27; Maduraikkāṇci, 134, 138; Narrinai, 25.*

163. Maloney, 'The Beginnings of Civilization', 605. Pāṇḍyakavāṭa (Kapāṭapuram of legend), Tāmraparni (the river or Śri Lanka), Kōti (Dhanushkoti on the Vaigai delta) Cūrṇi (perhaps Manner in northern Ceylon) Pāśika (a port on the Vaigai mouth) etc.

164. *Śilappadikārām, Uraiperukatturai, 4; x: 248; xi: 11.*

165. *Akanānūrũ, 122: 21.*

166. *Pattinappālai, 1. 285; Cīrupāṇāṇṟappatāi, 1. 83.*

168. The excavators assigned this cultural deposit to a period between third century BC and first to second centuries AD, *LAR, 1964–5, 25.* In a subsequent report, they have given a different time bracket, i.e. first century BC to fourth century AD, *LAR, 1965–6, para 37.* Similarly, period II has been pushed to 4th–7th centuries AD from 2nd–5th centuries AD.

169. There is an earlier literary tradition about floods in the Kāvēri. *Akanānūrũ, 376: 4.*

170. Mahadevan, 'Corpus', no. 68; also Appendix I, no. 10. This is a rather damaged Brāhmi inscription found in the cavern on the Tiruchirapalli rock, and is assigned to about 3rd–4th centuries AD. The reading 'Cenkāyipan' is admittedly doubtful.

172. Shrinres (Kōṭtam) of Kāma (Cupid), Sun, Moon, Indra, Balarāma and Nigantvas, the guardian deity of the market place, i.e. the Catukkattu Bāṭam, Sāttan a folk deity, who had a shrine outside the city. (Śilappadikāram, v: 128; ix: 23; xxviii: 147; Manimēkalai, vii: 78)—Buddhist and Jain shrines and monasteries, of which one was called the Indra vihāra. (Śilappadikāram, x: 14; xxvii: 92; xxviii: 70; Manimēkalai, xxvi: 55).*

173. Puhār—Akanānūrũ, 110: 4; Puranānūrũ, 30: 12; Patiruppattu, 73: 9; Pattinappālai, 173; Śilappadikāram, xvi; Manimēkalai, v: 109; Kākandi—Manimēkalai, xxi: 37. A Barhut inscription refers to Kākandi, i.e. Puhār. See Mahadevan, 'Identification of Kakandi in Bharhut Inscriptions' paper presented at the International

180. *LAR*, 1962-3, 13. Kali—meaning backwaters (Subrahmanian, *Pre-Pallavan Tamil Index*, Madras, 1966) and Aṇai—meaning wooden peg (*Paṭṭinappālai*, ll. 29ff) probably indicate the area where the boats were anchored.

181. The *Paṭṭinappālai* refers to large boats (pahri) which carried white salt and returned laden with paddy in exchange (ll. 29-32). Great ships are said to have sailed straight into the harbour of Puhār without slacking sail, a description that does not apply to any site of the present day in the mouth of the delta on account of changes in the course of the Kāvēri river and the shape of the sea board.

183. Surveys conducted by the Tamil Nadu Department of Archaeology jointly with the National Institute of Oceanography, Goa, are reported to indicate the remains of structures under water about 4.5 kilometres (?) from the shore, apart from evidence of a late eighteenth-century shipwreck. No detailed report or results are so far available. See Natana Kasinathan, *Under Sea Explorations off the Shore of Poompuhar*, Department of Archaeology, Tamil Nadu, 1991, 1-6.

185. *LAR*, 1964-5, para 42; 1965-6, para 35.

188. This Manigrāmam is believed to have later moved to the Pāṇḍya country on the invitation of a Pāṇḍya king. Interestingly, the Nāṭṭukkōṭtai Cheṭṭīārs and the Cheṭṭis of Tiruchirapalli claim that their ancestors originally belonged to Kāvērippūm-paṭṭinam.

189. The concept of the ‘Gateway City’ is discussed by Burghardt in ‘A Hypothesis About Gateway Cities’, *Annals of the Association of Geographers*, vol. lxxi, 1971. Such cities have a ‘dendritic network’
which Puhār does not seem to have had. On the other hand, Puhār may be an ‘exchange gateway’, where ‘there is mature exchange of products in one or more directions’. See J. Bird, Centrality and Cities, Routledge, 1977, 119.

191. Perumpānārruppatāi, 420; Manimēkalai, Patikam, 90; xxviii. Head- ing and sub-heading 152; xxi: 148; 154; 174; Nattirai, 144; 213; 266; Kuruntokai, 10: 4; 30: 172.

192. LAR, 1962-3, 12ff, and relevant plates; 1969-70, 34ff. A later excavation was conducted in the Varadarājasvāmi temple complex.

The periodization proposed on the basis of the Kāñcipuram excavations has generally been uncertain and confusing. On the basis of pottery finds a slightly different periodization has been attempted varying from the one given by the excavations.
Period IA—3rd century BC to 1st century BC.
Period IB—1st century BC to 3rd century AD.
Period II—3rd century AD to 7th century AD.
Period III—8th century AD to 13th century AD.

194. Curiously the same structure is assigned to 2nd–1st centuries BC in a subsequent report pointing to a confusion. See LAR, 1970-1, para 50.

197. Mahadevan, ‘Corpus’, no. 71—Māmandūr and no. 76—Tirunatharkunru; The Lokavibhāga was a translation into Sanskrit of an earlier Prākrit work and is dated in the reign of Pallava Simhavarman of the fifth century AD Pallānkoṭil Copper Plates—T.N. Subramanian, ‘Pallankovil Jaina Copper Plate Grant of the Early Pallavas’, Transactions of the Archaeological Society of South India, 1958-9, 41-83.

198. Perumpānārruppatāi, ll. 371-6; 405ff.

205. Selur, Salur or Salour (Delur) in Ptolemy’s *Geographia*. See Warmington, *The Commerce Between the Roman Empire and India*, Delhi, 1971, 62.

215. For Podikai see Subrahmanian, *Pre-Pallavan Tamil Index*.

216. Mahadevan, ‘An Old Sinhalese Inscription from Arikamedu’,
Seminar on Epigraphy, Kuppuswamy Sastri Birth Centenary, Madras, 1981b (Sanskrit College).

217. I am grateful to Prof. Y. Subbarayalu for making available to me an interim report of the excavations in Koḍuṇamal in several seasons—1986 and 1988-90. This report provides an integrated picture of the entire site and its archaeological material.

218. Koḍuṇamal is praised for its ubiquitous jewel stones, particularly rock-crystal (paḷinku) in the Paṭṭiruppattu. Coral, onyx, amethyst, sapphire, agate, garnet, jasper, beryl, moonstone and crystal are found in this site. See K. Rajan, ‘Iron and Gem Stone Industries as Revealed from Kodumanal Excavations’, Puratattva, 1989-90, no. 20, 111-12.

221. Jambai inscription—from a personal visit to the site and the longest passage taken of the inscription.

222. Puranāṇūru, 99.

227. Periplus: 53 and 54; Nilakanta Sastri, Foreign Notices, 57; McCrindle, 134.

228. McCrindle, Commerce and Navigation, 111-12 and 131.

230. Bammala of Ptolemy? (vii: 1: 9); McCrindle, Ancient India as Prescribed by Ptolemy, 139.

232. McCrindle, Ancient India, 140-2; The place called Qurṇi referred to in the Arthaśāstra has been identified with Mannar. See Maloney, ‘The Beginnings of Civilization’, 605.

234. McCrindle, Ancient India, 142.

External Trade:
Evidence from Early Tamil Texts

One of the major categories of sources for the study of early historic Tamil society and economy is the corpus of Tamil literature known as the ‘Sangam’ literature. It is a remarkable collection of poems containing evidence of early South Indian trade with the West Asian and Mediterranean regions and the Southeast Asian countries.

‘Sangam’ literature was not the product of a particular social or religious group, nor was it sponsored as a court literature by a ruling elite. It was also not intended to be a record of the activities of any one group. Composed at various points of time over a long span of about six hundred years, and authored by people of various levels—princes, chieftains, peasants, merchants, potters, smiths, carpenters and brāhmaṇas, Jains and Buddhists, the poems deal with disparate social groups. Yet, they admittedly provide useful insights into the society and economy of the early Tamils.

To use this corpus as a source of historical evidence, however, clear perspectives on the nature of its poetry need to be evolved, for it represents oral poetry of a heroic age. Being bardic literature in praise of heroes and patrons, its concern with various aspects of society and economy was incidental. Given to conventional, stylized and symbolic language, its preoccupation with stock-phrases and stereotyped expressions makes historical interpretation a hazardous exercise. The need for the use of Semiotics to interpret the signs and symbols of this heroic Tamil poetry has also been stressed in recent writings on early Tamil society and economy. This apart, it defies all attempts at an acceptable chronology, only relative chronologies based on internal evidence being possible within the six hundred years—300 BC to AD 300—for which it serves as the source material. Furthermore, the systematic collection of these poems
into anthologies, with invocatory verses and colophons, took place several centuries after their composition (i.e. c. 7th-8th centuries AD) with the express object of attributing them to a Tamil Sangam of great antiquity and to providing them a legitimacy from the world view of the Purānic religions.

Pioneering works used the disparate references to trade, both internal and external, centres of exchange, items of trade and trading groups, as direct and collective evidence of a single period and structure, as they did for other aspects of society and economy in this period. To them, trade was an isolated phenomenon, not necessarily to be discussed as a part of the socio-economic processes. Much of their interpretation of the ‘Sangam’ poems was heavily dependent on the medieval commentaries, themselves the product of a different social milieu.

The new approaches have adopted a more sophisticated methodology derived from anthropological and ethnographic studies for reconstructing what is generally understood to be a ‘tribal’ society in the process of transformation. Yet, what needs to be emphasised is the fact that the evidence from the ‘Sangam’ works on trade is often impressionistic and quantitatively less significant than on other aspects of society and economy. Hence, it has been found necessary to situate the references in specific contexts, geographic and ecological, and seek corroborative evidence from other sources like classical accounts, epigraphic records, albeit limited, and archaeological evidence, which, in the Tamil region, is not as illuminating as in the Deccan, to arrive at a more meaningful method of synthesising the data on trade and its impact.

The classical accounts, i.e. Graeco-Roman works, it must be admitted, are significant both because they are datable and because they provide us with valuable data on the Indo-Roman trading network and on the ports, marts, exports and imports of the Tamil country. As Maloney points out, ‘the mundane character of the Greek works causes them to be a useful supplement to the Indian literary sources’.

The chronology of the Sangam works, on the other hand, has for long been a keenly debated aspect of Tamil history. Studies in the language and literary forms of these works have made serious attempts to evolve a relative chronology and the
most satisfactory exercise is that of Kamil Zvelebil, which has been used in various studies on early historic society and economy.

What the present essay is concerned with is to analyse the data from this literature from the point of view of the developmental processes of trade, its mechanism and organization and the emergence of exchange networks in such early societies, as a result of contact and interaction with the outside world. The epics, Śilappadikāram and Manimēkalai, which belong to the post-Sangam phase of early Tamil literary activities, also have a very important bearing on early trade and hence are used in this essay to understand the nature of this trade.

As mentioned earlier, the ‘Sangam’ works represent collections of oral poetry of a heroic age whose signs and symbols need to be decoded through semio-logical methods. A contextual application of this method has resulted in some meaningful appraisals of the ecological basis of the socio-economic differences in the zones called tīnai—a concept which dominates the poems and refers to a ‘situation’ which explains the different socio-economic milieux. This approach has led to more successful attempts to provide a basic understanding of the forms of production and economic organization in these eco-zones and the processes of change in some of them, pointing to at least two broad phases of development: from a primitive and archaic to a more advanced stage of farming, the latter phase also marking an incipient urbanism, the processes of urbanization showing that the impetus to the growth of urban centres in certain tīnais or eco-zones (like marutam and neital) was provided by maritime trade activities and interaction with foreign traders.

The concept of the tīnai is in many important ways, a pointer to the nature of early exchange between the subsistence level production systems in these zones. How this inter-tīnai exchange was later brought into a wider system of long distance trade presents an interesting facet of the impact and ramifications of the western trade with South India. The most fruitful exercise would, hence, be an attempt to identify products of different eco-zones which figure in inter-regional and western trade. As a point of illustration, forest and hill products were exchanged for the exotic—luxury items of western trade. To
locate their source or regions of origin and the nature of control over them and their movement to the ports of export should be an important concern of any study which seeks to understand the links between inter-tinai exchange and the wider trading networks in this period.

Before the details of this symbiotic exchange between tinais and the identification of the articles of trade coming from different zones are taken up, it may be pointed out that the nature of the evidence from the ‘Sangam’ works shows that the trade contacts between the Roman empire and Tamilakam cannot be discussed in isolation from the South Indian contacts with the other parts of the South Asian region and with Southeast Asia, all of which participated in these early commercial activities linking the Mediterranean countries with the South Asia and far eastern countries of Asia. Another point that needs to be stressed is the fact that there are hardly any direct references in the Sangam works to the Romans per se and Roman trade. These works make no distinction between Greeks, Romans and West Asians—all of whom were involved in this trade. The term Yavana, which occurs in the context of foreigners and their trade activities, refers to them in general. It also occurs in other contexts, as referring to those Yavanas who were permanently settled in the region as guards of palaces and royal camps, where the ruling chief was guarded by the ‘fierce looking’ and brave ‘Yavanas’. Being ignorant of the local tongue and having no local sympathies they made ideal gatekeepers. The Śilappadikāram says that, impressed by the stern discipline of the Yavana soldiers, the Tamil kings employed them as guards of the fortress gates.

The more significant among the references to Yavanas are those on their settlements in important trading and commercial centres like Puhār and Muciri. That they were most likely Romans is indirectly attested by the Roman pottery and other associate finds in excavations. That such settlements or Yavana suburbs are invariably found on the coast, especially in the big emporia of trade, is no less important in understanding the nature of their contact and interaction. The Yavanas would also seem to have moved across important trade routes, as indicated by the distribution of Roman coins and pottery in areas like Pudukkottai and Coimbatore.
The Roman contact was an important factor in the external trade of the Tamil country from about the times of Augustus (27 BC to AD 14), although a considerable antiquity has been assigned to the commerce between the Tamil country and the west. It perhaps started as a mere ‘trickle’ or sporadic trade or unscheduled exchange, and gradually became a fruitful commerce in which spices, pearls, gems, cotton fabrics and other ‘oriental’ exotics were traded for Roman gold and wine and other assorted articles for well over two centuries.

The Graeco-Roman ‘discovery’ of the secret of the monsoon winds (Hippalos), a ‘discovery’ which was probably made progressively in successive stages, is believed to have introduced a change or spurt in this activity. Traffic based on monsoon winds could have become popular by early first century AD as it is known to both Pliny and the Periplus. Thus, when hopping coastal trade was replaced by direct sailing to the western coasts, i.e. from Egypt to the ports of Kerala coast, these ports would have become centres of direct trade with the west. More significantly, this led to the establishment of Roman trading settlements in a few Tamil ports. Hence, the South Indian ports would seem to have become independent centres of trade ‘free from Borygaza’s economic dominance’, i.e. the dominance of the Gujarat coast, and even led to the dominance of the Malabar ports, at least initially ‘over the commercial network’.

It would seem that the foreign merchants maintained a force of cohorts at Muziris (Muciri) to protect their trade. This is perhaps indirectly confirmed by the Patirruppattu, which refers to a Cēra king, Imayavaramban Neḍuncēralātan punishing the Yavanas by binding ‘their hands behind them’ and ‘pouring ney (ghee/clarified butter) on their head’ and ‘walking them along’. The Peutingerian tables mention Tyndis and Muziris and refer to a temple of Augustus on the West coast. There is, however, no reference to it in the Tamil sources.

The importance of the west coast, particularly Muziris (Muciri) as the main port of activity, is confirmed by the references in the Akanānūru and Puranānūru, which are considered to be the earliest poems. Subsequently, the shift in importance, however gradual, to the Coromandel ports, particularly to Kāvērippūm-paṭṭīnām or Puhār (Camara or Khaberis), is indicated by
Ptolemy’s references of the second century AD and, more significantly, by the Pattinappālai, of a date later than the Akam and Puram collections, describing Puhār. The Coromandel ports thence came to be the major links in the transit trade between the Roman west, Southeast Asia and China. It may also be noted that the transcontinental silk route linking China with the west became inoperative due to the disturbances caused by the movements of Parthians in Central Asia around the first century BC. Thus, many of the goods were being deflected to the Coromandel ports through the Southeast Asian ports. For this, either Indian or Malay vessels must have been used to transport the merchandise from the Malacca straits to the Coromandel coast, from where the Greek ships collected them.

It has been suggested that since Greek vessels called at the various Tamil ports to carry back the trade goods, few Tamil merchants and ships ventured west. The basic reason for Tamil merchants not venturing or ‘pouring over the seas’ to the west lies not so much in the logic of ‘western’ and ‘eastern’ minds, as in that of the terminal transit trading patterns, whereby Tamil merchants organized the collection of goods from within the country and from Southeast Asia and Sri Lanka, and Greek shippers came over to collect and transport them. That the Cērā and Pāṇḍya regions were more directly involved in the terminal trade, whereas the Cōḷa region with its ports was concerned with the transit trade linking the rest of the country with Rome, Sri Lanka (Īlam) and Southeast Asia, is well attested by the Tamil sources with its clues to the nature of goods coming from different eco-zones (tiṇai) and from Southeast Asia.

There are some interesting clues to the seafaring instincts of the Tamils in this early period. The Puram refers to a Pāṇḍya prince who was drowned in the sea (Kaḍalul Māinta Īlam Peruvaludi). A Cōḷa ruler who plied a ‘fleets’ across the seas and controlled the high winds is an oft-repeated legend in the ‘Sangam’ age and in later literature. He was a legendary Cōḷa and an ancestor of Karikāla of the second century AD. The Tamils were familiar with the harrowing experience of being caught in a storm in mid-Ocean. However, the ‘sails of the ships helped the vessels to pierce the stormy waves of the ocean’ and ‘on board the ship drums were beaten and tall flags were
waving from the mast. While at harbour, the ships were anchored by a thick, long rope to the nether end of which a big stone was attached.

The harbour was called Puhār or ‘Kayavō’. The Pattinappalai describes the harbour of Puhār or Kāvēripūmpattinam. The harbour, it is claimed, was generally safe even for bigger vessels. They could enter the harbour without removing cargo or slacking sail and yet be quite stable, steady and safe. Evidence of such a harbour is hardly available in the present Puhār, and the legend of the port’s submersion into the sea may well be based on fact. Warehouses were built on the beach near the quarters of the fishermen (paratavar). The two kinds of goods (exports and imports) were found crowded on the quay. Light houses called kalam karai ilangu cudar—‘the light that beckons the ship’—are referred to.

**Articles of Trade**

Many articles of trade passed through or were directly exported from Tamil ports *en route* to the Roman empire and to other regions of the west. The transit goods, some of which also entered the internal exchange of Tamilakam were spikenard from the Ganges region, silk from China, tortoiseshell from Southeast Asia and the islands near the Kerala coast. The Tamil sources refer to silk as *pattu*. However such references do not indicate the direction or region from which it came to Tamilakam. Early medieval inscriptional evidence would place the region of origin in China. The Periplus points to China as the region from which silk reached the Ganges valley, from where it may have reached Tamilakam down the east coast to the Tamil ports, and then was sent to the west. Silk entered the internal circuit of exchange through gifts by rulers to *pānar* (bards) and as a luxury item of the ruling and urban elite’s attire.

Spices, a major item of export, came predominantly from the western hills of Kerala, particularly pepper and cardamom. However, with the increase in the demand for spices by the first and second centuries AD, spices were also procured from Southeast Asia and sent to the Tamil ports to be shipped on to the
west. Fragrant woods, although available indigenously, were also a part of the transit trade, for they came from Southeast Asia, in addition to those from the hilly regions of South India.

Wheeler's assessment that with Tamilakam the western trade was basically terminal, with a modicum of transit trade, is to be revised in the light of the increase in the movement of spices, pearls, jewel stones and muslins, which came not only from the Tamil region but also from Southeast Asia and Sri Lanka. It is interesting that although 'Argaritic' muslins (from Uraiýûr) were in demand in the Roman world, Tamilakam imported the kālagam and kalingam (two varieties of fine fabric) from Burma and Kalinga respectively. This would also indicate that the trade in textiles grew in volume and Tamil ports exported both locally produced 'Argaritic' fabrics and those for transit. These fabrics also entered the internal circuit of exchange, mainly through gifts to poets and bards. A variety of thin cloth from Egypt (?) is also known to have been imported in addition to kālagam and kalingam.

Cotton fabric was the only manufactured item of export (apart from jewellery), produced both in the Cōla and Pāṇḍya regions. While the Arthaśāstra refers to the fabric from Madurai in the Pāṇḍya region, the Periplus refers to the 'Argaritic' muslins of Uraiýûr in the Cōla land. The Tamil sources refer to several varieties of cotton fabrics. Tuhil was a fine cotton cloth. It was woven in Tamilakam and resembled steam or vapour and had so fine a texture that the threads could not be easily traced. It had floral patterns. It was in great demand among the Romans. The Silappadikāram refers to thirty two varieties of cotton fabrics. Archaeological evidence in this regard is not highly illuminating although the occurrence of terracotta spindle whorls in Kunnattur, Oduagattur and Sanur and in Kodumanal, dyeing vats in Arikamēdu, Uraiýûr and Vasavasamudram seem to indicate their manufacture on a considerable scale.

Two other major items of Tamilakam's trade with the west were undoubtedly pearls and pepper. Although a variety of gems seem to have been exported from the Tamil ports, the evidence on muttu or pearls is direct and indisputable. Of the other gems, beryl is known to be an important item of export, although it
is not mentioned in the Tamil literature itself. The beryl mines of Paḍiyūr in the Coimbatore district are well known. It is located not far from Koḍumanal, on the Noyyal river, the Koḍumanam of ‘Sangam’ works, famous for its jewel craft and goldsmiths. Surface collections and excavations have yielded a large number of precious and semi-precious stones in Koḍumanal, apart from coins, both local and Roman, in the region around Koḍumanal, thus providing evidence of its being an important craft centre. Significantly, this centre falls within the region ruled by the Cēras with their capital at Karūr-Vaṅci, and the reference to Koḍumanam occurs in the Patirrupattu, the ten-tens or poems composed on the Cēras. Beryl mines have also been located in Vāniyambādi in the Salem (North Arcot?) district and additional sources were tapped by the second century AD, perhaps in the days of Ptolemy when Punnata near Melkote in Karnataka and Sri Lanka may also have been exploited.

Excavations in the Coimbatore region have brought to light six-sided beryl prisms, which have been interpreted as evidence of exchange of beryl for Roman coins, for this region abounds in Roman coin finds. It is not clear when and how beryl entered long-distance trade. However, an initial ‘trickle’ in the pre-Christian era seems to have developed into a sustained commerce in the early centuries AD. The Arthaśāstra mentions vaidyūrya (beryl) which, according to the commentators, came from the ‘southern mountains’(?). The term vaidyūrya may well have been of Dravidian origin. It is also probable that the Greek word for it—berullos—is derived from vaidyūrya.

Diamonds, sapphires, rubies and transparent stones of all kinds were exported. Most of them came from Sri Lanka, famed for the best quality gems. And Andhra region (Cuddapah and Kurnool) and Karnataka (the upper Godavari and Kaveri valley) and perhaps even from Gujarat and Kathiawar. The Paṭṭi-nappāḷai says that to Puhār gems came from the ‘northern mountains’, which is generally taken to be the Himalayas, but could really have been Cuddapah and Kurnool system of the Deccan and the Vindhyan range. The references in Tamil literature, to sapphire, ruby, crystal, coral and gems (mani) in general are numerous, but not precise enough to help identify places
of their origin. Except for pearls and beryl, the rest would seem to have come from adjacent and other distant regions. The Sangam literary references to varieties of gems, lapidary (mani-vanjangkan), jeweller (manikuyirrunar) and goldsmiths (por-kollar) etc. would suggest that a direct result of this movement in gem trade was the high degree of skills that the Tamils acquired in jewel-making, and jewels seem to have been an important item of export, especially from the Pāṇḍya country. To the Pāṇḍyan coast came 'horses and other precious things' which were presumably exchanged for gems.

Muttu or pearls, from which the Sanskrit mukta is derived, in fact heads the categories of gems exported from the eastern waters. South Indian pearls were rated among the best and highly valued in the ancient world, as borne out by Sanskrit, Greek and Tamil sources.

They found their way to Southeast Asia, China and Andhra and Ganges regions in India. They also reached in considerable quantity the Malabar ports of Muziris (Muciri) and Nelcynda (Kottayam) from where they were exported to Rome. They could have reached the western ports either by the circumpeninsular route or by coastal shipping or even by the transpeninsular route through the Palghat gap. They were used by the ruling elite both in adorning themselves and as gifts to bards. References to their place in the internal trade, however, are few and ambiguous.

There are hardly any significant finds in excavations except for Korkai, which has come up with oyster shells. The Cōḷas and Pāṇḍyas, not surprisingly, laid claims to the pearl coast—from the Tamraparni basin to Tondi in the Ramanathapuram district—and it would appear that the Cōḷas were particularly interested in controlling the pearl-rich Pāṇḍya coast as much as the pepper-rich Cēra coast, both pearls and pepper being major items of export. Plunder mechanism was one of the most conspicuous and successful means of acquiring such valuables for exchange and consumption.

Gems (mani—a generic term) and jewellery made out of them were a part of the decorative paraphernalia associated with the ruling and urban elite and, both as trade items and elite symbols, they are frequently mentioned in Tamil sources. However, excavations, with the exception of Koḍumanaḷ, have yielded a rather limited number of crystal, chalcedony, agate, carnelian
and other semi-precious stones, while pearls are the least represented in archaeology.\textsuperscript{58} It would appear from literary references and archaeological evidence that the main impact of the gem trade was in the area of manufacturing jewels and trading in this finished product, a concentration of archaeological evidence coming from Koḍumaṇal.

It may be suggested that, unlike for pepper and beryl, of which the Tamils had exclusive monopoly, for carnelian, agate and other gems the Tamil merchants would have faced competition from the northern merchants, especially those of Bharukaccha (Barygaza), where these figure as important exports,\textsuperscript{59} and also from Sri Lanka, to which the western traders may have turned directly by the second century AD after the ‘discovery’ of the monsoons, which enabled Greek ships to sail to the island’s coasts and the eastern coast of Tamilakam. By the third century AD, or immediately after, the ports of the island seem to have become important entrepots, as the evidence of the \textit{Cosmos Indicopleustus} of the sixth century AD\textsuperscript{60} indicates, and the focus of trade in the Indian Ocean shifted from the Tamil country to the island.\textsuperscript{61}

Thus, at least during the early centuries of the Christian era, the Tamil merchants seem to have acted as middlemen for the Sri Lankan articles exported to the west, and hence faced competition from the indigenous Īlam (Sri Lanka) merchants. This could well have been the reason behind the several conflicts between the peoples of the island and those of the Tamil mainland.\textsuperscript{62} The presence of Tamil merchants in Īlam making donations to Buddhist shrines\textsuperscript{63} and a few Īlam merchants in the Tamil region,\textsuperscript{64} is attested to by inscriptive records of this period. The initiative may have come from the Tamil merchants and later shifted, after competition, to the Sri Lankan merchants.

Spices, not necessarily a luxury item, formed the other major item of export. Among them, in terms of quantity, pepper (\textit{kari}) ranked the highest, especially to the Roman empire. Pepper perhaps made up three-fourths of the total bulk of the average Rome-bound cargo,\textsuperscript{65} or more than half.\textsuperscript{66} The \textit{Periplus}\textsuperscript{67} says that the ships which visited the western (Malabar) ports in the first century AD were of a large size, on account of the pepper...
that was being carried. Common black pepper was exported from Kuṭṭa nāḍu (Cotanara—the region around Quilon and Kōṭṭayam), where the climate was most conducive to its growth. Thus it is said:

. . . Cēra’s great river Cuḷḷi splashes with white foam where Yavanas bring their well built ships, arriving with gold and carrying pepper from the prosperous Muciri, reverberating with the Ocean.68

The *Paṭṭinappāla*69 refers to sacks of black pepper reaching the Cōla port of Kāverippūmpaṭṭiṇam by carts, presumably by the circumpeninsular route from the west coast. The references to pepper or other spices going to north India are few, but evidence of its entering the internal exchange system in Tamilakam is available. The Cōlas and Pāṇḍyas would have attempted to control the west coast, the only region where pepper was available, and hence the Cēras having a virtual monopoly over it. The ports of Muziris (Muciri) and Nelcynda (Kōṭṭayam) owed much of their prosperity to the pepper trade and became prominent commercial centres. It is possible that Toṇḍi (Tyndis) was also involved in a small way in this trade through the Ponnani river, whose tributaries would have brought down the pepper from the Malabar hills.

About Muciri we are told:

Paddy heaped up, traded for fish makes it difficult to distinguish tall ships from the houses.

Sacks of pepper, piled beside the buildings become confusing on the bustling sea front. Articles of gold brought by sea vessels are carried to the shore by boats in the estuary. Products of his (Cēra’s) mountains and products of his seas, he brings together to bestow on his visitors, with toddy like a river, the gold mountain Kuṭṭuvan, his noisy Muciri throbs as the Ocean.70

Cardamom, yet another important spice exported to the west, is found in Travancore, Malabar and the highlands bordering the districts of Madurai, Tirunelveli and Dindigul.71 However, strangely enough, there is hardly any direct reference to cardamom in the Tamil sources, although it is well known to the classical accounts. Malabathrum ‘from the interiors’72 was another export from the west coast and has been identified as betel leaf or cinnamon bark(?)73 although it is said to be
of inferior quality when compared to that (cinnamon) from China, Sri Lanka, Southeast Asia and the Himalayas.

Nard (Nardus), yet another item of export which figures along with malabathrum, seems to be a grass or leaf (lemon grass?), found in the Cēra region. It was used to extract an oil, a fragrant one, for cosmetic purposes (Cymbopogan Nardus), and the Seleucids are believed to have attempted to naturalize it in their country. It was known to Pliny and the Periplus as the sweet-smelling oil of the Nard—the word probably derived from Narantam in Tamil.

It has already been noted that, under the impetus of the lucrative spice trade, the early Tamil merchants sought new sources for the spices and turned to the spice rich Southeast Asian islands.

Among the forest products, woods of all sorts—ornamental and aromatic—entered this commercial network. The most notable were sandalwood, teak, ebony and eaglewood, most of which grew in the hilly tracts of Coimbatore–Salem, Malabar and Karnataka. None of them, however, is listed among the exports from the Tamil ports by the Periplus. Though the forests of Central India could have been tapped, the forests of Tamilakam may also have been a major source. They were also brought, along with spices, from the Southeast Asian islands, presumably in response to increasing demands from the west.

The Śilappadikārām says:

The broad rayed sun ascends from the South. White clouds start to form in the early cool season. Only after this time, across the dark bellowing ocean, the rulers of Toŋdi dispatch vessels loaded with akhil wood (eaglewood), silk, sandal and spices and all sorts of camphor.

These are wafted with the wind from the east.

The imports to South India, several of which are known from the Periplus, consisted of coin, topaz, coral, thin clothing and figured linens, antimony, copper, tin and lead, wine, realgar and orpiment and also wheat, the last mentioned probably for the Graeco-Romans in the Tamil ports. Of these, wine is by far the most conspicuously mentioned item in the Sangam works in a variety of contexts, particularly
in connection with the ruling and urban elite. Roman wine was very popular with the Tamils, who were familiar with its quality and fragrance. In the Puranānūru, a poet lauds a Pāṇḍya king:

O Māra, whose sword is ever victorious, spend thou thy days in peace and joy drinking daily out of golden cups presented by the handmaids...

the cool and fragrant wine (tēral) brought by the Yavanas in their good ships...

Amphorae sherds have been excavated from Arikamēḍu, Vasavasamudram and Kāraikkādu, while those reported from Kāncipuram do not appear to be amphorae, but, rather, imitations in the form of conical jars. Some of them show traces of incrustation on the inside caused by wine resin.

The Yavana lamp, whose wick was capable of giving out a steady flame without a flicker, was also an item of considerable demand in Tamilakam. It was a novelty to the Tamils. Some of them were like statues bearing in their folded palms the takali or the container for the lamp. The pāvai vilakku, a female statue holding a lamp in its hands, is a common sight in most temples and households in Tamilakam even today. Although there are no references to it in the Periplus, the fact that different metals are mentioned as imports, would suggest that some at least would be finished products like lamps. While copper and bronze articles including jewellery are found in Megalithic burials, no evidence of lamps has so far been found in excavations.

Roman coins came in large quantities, in exchange for pepper, beryl and cotton fabrics and a concentration of these coins occurs in major trade routes like the Coimbatore district and the Pudukkottai area. As discussed in a previous essay (chapter), their circulation and use as a medium of exchange have been one of the major points of dispute among scholars. Their value as exchange-medium being indeterminable in the South Indian context, it has often been suggested that they were generally used as bullion, although some, at least, were turned into jewellery, as seen in the pierced coins used as pendants.

The Tamil sources have very little to offer by way of evidence
on Roman coins. Even at the level of larger transactions involved in import and export of goods, it is mainly for pepper that Roman gold is said to have been exchanged. There is also no reference to exchange of specie (foreign) at ports with native currency as in the *Periplus*\(^\text{86}\) for Barygaza. The term *kāsu*, *pon* and *kānam* occurring in the Tamil poems and mentioned as currency units in early medieval inscriptions\(^\text{87}\) have been presumed to be gold coins.\(^\text{88}\) Nothing is known about their metal content or weight. On the other hand, the *kānam* and *kāsu* were conferred as gifts by patron rulers on poets. Thus, Ariśil Kilār received a gift of 900,000 *kānam* (gold) and Kākkaippāḍiniyār Nacceḷḷaiyār 100,000 *kānam* (gold).\(^\text{89}\) Such references occur in the *padikams* of the *Pattirruppattu*,\(^\text{90}\) which are generally believed to be later additions to the main body of the poems.

Tamilākam had access to the gold from Karnataka, i.e. Raichur-Bellary plateau which is presumably the region referred to as the northern hills (*vädāmalai*) in the Tamil texts.\(^\text{91}\) The gold mines in Karnataka have provided evidence of ancient workings. Gold articles and jewellery figure prominently among gifts conferred by chieftains on bards\(^\text{92}\) and are generally found to be associated with the ruling and urban elite.\(^\text{93}\) Goldsmiths and traders in gold (*ponsey-kollam* and *pon-vāṅgar*) are mentioned in *Nāriṇai*\(^\text{94}\) and in Tamil Brāhmi inscriptions.\(^\text{95}\) However, there are no major finds of gold in the archaeological levels of this period, except for some exquisite pieces of jewellery at Sūttukkeni, three gold beads at Arikamēdu, what has been reported as a ‘goldsmith’s mould’ from Paiyampaḷḷi,\(^\text{96}\) and a few pieces from Koḍumaṇal.

Horses, for the breeding of which the southern climate was not conducive, have always been imported into South India, mainly from the Arab countries. The *Pattinappāḷai* refers to milk white steeds imported into *Puhār*, while the *Maduraikkāṇci* makes a reference to their import to the Pāṇḍyan ports.\(^\text{97}\) The Tondai-nādu port of Nirpeyar received horses in ships.\(^\text{98}\) Strangely, horses were also gifted by rulers to bards.\(^\text{99}\) References to horses as gifts are fewer than to other items, perhaps due to their military importance to the rulers.\(^\text{100}\) Nonetheless, what is interesting is that to the bards or poets, such gifts as those of horses and elephants, appear to be of no immediate use or value.
Horsebits or articles associated with the use of horses are reported in the early levels of excavations at Sânûr, Kunnattûr and Ádichanallûr but the correctness of their identification has been questioned.

The majority of the exports would thus seem to be raw materials, with the exception of cotton fabrics and jewellery made of gold and gems. The impact of such an exchange on the manufacturing activities of Tamilakam is hard to assess. The evidence points only to a minimal range of craft production—fabrics and jewels—and their being located at key centres—the consumption points in the interior, the areas where mines were located (beryl—Coimbatore) and the ports where commercial activities were concentrated.

The stress was undoubtedly on the export and import of elite and luxury goods such as horses, gold, gems etc., which were meant for elite consumption and not for local exchange. Chiefly families acquired and used them for enhancing their status and prestige and legitimized it by conferring gifts on poets and bards. The importance of primitive valuables has been stressed for their socio-political significance in early societies. Thus, 'rare and precious things' were gifted away by the Pâñdyâ king. The Čēra ruler is lauded for bringing together products of the seas to bestow on visitors. In return for the valuable gifts, the bards and kinsmen played an important role in legitimizing and sustaining the position of their patron rulers.

The nature of commodities exported (pearls, pepper and textiles) indicates that the Čēra and Pâñdyâ regions, which were in possession of these resources, would have been the chief beneficiaries of this trade, and one could expect a positive impact on the productive system of both these areas. The Cōla region (lower Kâverī valley), which had greater agricultural potential, was not in possession of any of these commodities, with the exception of cotton muslins. They did not directly control any of the hill resources. Their control over the Palk Bay and the beryl mines of the Kongu plateau (which strictly speaking falls within the Cēra region around Karūr-Vañcī) and over the routes to the western coast and southern Karnataka, was fluctuating, as it was the result of temporary raids and successes over the Čēras. Yet all the sources, particularly Tamil
works like *Pattinappālai*, indicate that most of these commodities produced in the Tamil country and in the neighbouring regions, reached the early Cōla port of Kāverippūmpattinam and were subsequently exported. The Cōlas seem to have acquired a sort of hegemonic control over Tamiḻakam by constantly exhibiting their superior prowess over the other two of the traditional Tamil trio (chiefly families or kingdoms?) and over the major routes facilitating the internal movement of goods to the ports of embarkation/export, i.e. over the commerce between Tamiḻakam, Roman west, Sri Lanka and Southeast Asian countries.

It is in this context that the *tinai* concept of eco-zones of the Tamil works hold a valuable clue to the resources of various regions and to the base that the Cōlas were able to build up—by way of paddy or agricultural production—and, thereby, possibly promote the acquisition of other resources through paddy and salt. It is significant that the Cēra, Cōla and Pândya ports were located at the mouths of the major rivers of these regions. Of these, which figure prominently in the classical accounts, it is significant that some seem to have been more active in the first centuries BC and AD like Muzirīs (Muciri) and Korkai (Colchi), while the Cōla port Khaberis (Camara or Kāverippāṭṭinam) was active in the second c. AD. In the time of the *Periplus*, which sets out in detail the ports and commerce of the western coast, the eastern Coromandel coast and the Cōla ports seem to have been beyond the bounds of the Greek vessels. Later, by the second century AD, under better incentives, and even to the point of doing away with Tamil intermediaries, the Greeks seem to have surmounted the difficulties of the straits and circumnavigating Sri Lanka and established direct contact with the Cōla ports, and even navigated up to the Bengal coast. This is not only reflected in Ptolemy’s geography (AD 150), which gives a detailed list of ports and marts along the eastern coast of the sub-continent, but is more directly attested to by the *Pattinappālai*, a work datable to this period, and a work composed with the specific purpose of describing the port city of Kāverippūmpattinam, which was built and developed by the Cōla Karikāla. Similar works describing the other major ports do not exist. In fact, it would appear that the Cōlas had a clear objective in
developing a port, a harbour (Puhār) of this kind, which, in many ways, acted like a ‘gateway city’ in the early centuries, particularly in the second century AD when the trade in that city was at its peak.106

Kāvērippūmpāṭṭinam, as portrayed in this work, had well organized markets—nālangādi (day) and allangādi (night)—quarters for various social and economic groups in the two major sections called the Pattinappākkam (the city or residential area) and the maruvūrppākkam (port area) and the major commercial area being located between the two. Excavations conducted here have shown its occupation and use at least from the third century BC to the fourth-fifth centuries AD, and the wharf remains etc. show facilities needed for a harbour. It is located at the mouth of the Kāvērī, where the river itself becomes a rather shallow stream hardly reaching the sea, perhaps as a result of the damming up of the river at Talakaveri and the flow of water controlled so as to channel it towards the Kolli- đam and the distribution of the delta.

While Tamil literature distinctly uses the term pattinam for a port, all coastal towns are not referred to as such with the exception of Kāvērippūmpāṭṭinam (Puhār). To a large extent this port fits in with the description of an emporium. Polanyi107 points out that in classical Greek terminology, the emporium was that part or sector of a coastal town which was devoted to foreign commerce. However, the emporium was much more than that. It was a self-contained unit with its own food, market, harbour, quay, warehouses, administrative building, mariner’s houses and so on. In Puhār the Cōḷa officers with the tiger stamp oversaw all activities, collected tolls/customs etc. As a gateway city, Puhār overshadowed, by its importance, all other entry points to South India.

In another sphere, the impact of maritime trade may be recognized in the changing fortunes of the Paratavar, who became the most distinctive merchant group in the latter part of this period of intensive trade. According to the traditional tinai scheme, they were inhabitants of the neital tract, simple rustic folk, following occupations such as fishing, manufacturing salt and making toddy.108 The later poems of the Pattuppattu collection, however, depict them as being involved in
long-distance commerce and also pearl fishing. Under the influence of commercial activities, they diversified from these traditional pursuits and took to organizing trade in pearls, conches, chank bangles, tamarind, fish, gems, horses and other riches. Here trade seems to have been a dynamic intrusive element leading to the development of this tract and its people. Many other types of merchants were also involved in the buying of goods from the hills and from the sea (coast), and carrying them to various centres within the Tamil region. Specialist merchants operated within the precincts of large commercial cities such as Madurai, Uraiyur and Puhar, where market facilities (angadi) were available. Their names invariably carried as a prefix the place of their origins, e.g. Madurai Aruvai Vânikan (the cloth trader from Madurai), Uraiyur Ilampon Vânikan (the young gold trader from Uraiyur) etc.

The occasional caravans (cattu) of itinerant traders carried goods to the hinterlands from ports, and perhaps also returned with goods to be shipped from such ports. Evidence on guild organization is tenuous and not comparable to that of the Deccan. The Silappadikâram is the story of the son of a great caravan leader (Masattuvan), and hence of considerable value in understanding the nature of trade and trading patterns, both internal and external.

One of the most interesting consequences of the commercial interaction between Tamilakam and other regions was the arrival of foreign merchants at the Tamil ports and commercial centres.

In Puhar, different kinds of goods (were) brought in ships by foreign merchants (Pulam-Pevar-mâkkal) who have left their native homes and settled here. There is very little information about the regions from where these foreign merchants hailed, but certainly they included people from Rome, Southeast Asia, Ilam (Sri Lanka) and even other parts of the subcontinent. Separate quarters existed for the Yavanas in the emporia, as indicated by the later evidence of the Silappadikâram. However, to conclude that these quarters were
‘autonomous concessions’ or ‘territorial acquisitions’ similar to latter day European ‘factories’, is going beyond the evidence.\textsuperscript{117}

Did the Greeks (and Romans) play the most active role in this commerce as is held by various scholars,\textsuperscript{118} or did they confine their activities to the major commercial centres, while in the hinterlands, the production and transportation to the waiting ships, were in the hands of local traders and craftsmen? The accounts of Pliny and the \textit{Periplus}\textsuperscript{120} would seem to support the latter contention. The Tamil sources, would, much more clearly, indicate the active role of Tamil merchants, a flourishing indigenous mercantile community, while, as Filliozat puts it, the foreigners had probably nothing more to do than load their vessels from the ready-made warehouses, and increase the activities of warehouses, without either having to organize or administer them.\textsuperscript{121} No foreigners are seen making donations to local religious organizations as in the Deccan, where they were absorbed into the indigenous social organization. Indeed, such large-scale and impressive monumental religious institutions and the ostentatious gifts as found in the Deccan, are absent in the Tamilakam of this period. Tamil literature is silent on such gifts, although references are made to some cult centres and shrines, which were not part of an organized and institutionalized religious system.

The life style of the native merchants points to affluence, as the merchants are depicted in later poems as living in ‘fine mansions’ and sporting silk raiments and gold jewellery,\textsuperscript{122} and the later epics \textit{Silappadikāram} and \textit{Maṇimekālai} focus on their prosperity and affluent life style. That they followed a self-imposed code of behaviour is known from the general attributes which the \textit{Paṭṭinappālai}\textsuperscript{123} speaks of:

They speak the truth and deem it a shame to lie  
For others’ goods they have the same regard as for their own in trade  
Nor do they try to get too much in selling their own goods  
Nor give too little when they buy  
They set a fair price on all things  
Their ancient wealth was thus acquired.

Tamil traders in general seem to have followed different
religious faiths, unlike in the Deccan and Andhra regions, where
the trading community’s affiliation to the Buddhist (and per-
haps also Jain) religion was predominant. While the early Tamil
poems reflect the predominance of tribal forms of worship and
cult deities specific to different eco-zones as well as the influence
of brahmanical religions in the marutam zone, the post Sangam
epics, viz. Silappadhikaram and Manimekalai, show the increasing
influence of Buddhism and Jainism over the trading community
and, in an urban context, both in coastal towns and interior
politico-commercial centres. The Tamil Brähmi inscriptions124
would also support the Buddhist and Jain bias of the merchants,
who are seen making gifts to these two sects.

The emergence and crystallization of a merchant community
with well organized guilds as in the Deccan and Andhra are
not clearly attested to in the literary sources. The Tamil
anthologies mention several kinds of traders, including hawkers,
peddlers (vambalar, vilaiñar, pakarnar) and big traders (vani-
gar), as well as those who traded in specific items (umanar—salt
merchants). In the market places (angādis) of big centres like
Puhār and Madurai, several specialist traders selling particular
wares are known.125 Most of them were, however, producers as
well as sellers of such articles. They were, in general, different
from those involved in trade with distant regions and foreign
traders. It would be rather difficult to rank the different traders
on the basis of the volume of trade which they conducted.
Such evidence is not easy to find in the texts. However, the
epics, while referring to the merchants and their influence,
would seem to point to wealthy merchants, whose presence in
the commercial and port towns was significant. They would
most likely be those who conducted large-scale trading and
commercial activities and possibly also controlled the move-
ment of goods within the region. Thus, guild organization
would have been important in regulating such movement. The
references to Māsāttuvan (caravan leader) in the Silappadi-
kāram, to Kāviti and nigama in Tamil Brähmi inscriptions,126
interpreted as guild chief (or, more correctly, counsellor) and
guild respectively, would indicate the prevalence of such or-
ganization. However, organized guilds and trading networks
coinciding with the important Buddhist centres with huge
monastic establishments of the kind found in Deccan and Andhra regions, are certainly not visible in Tamilakam.

The early Tamil poems are generally silent on the origin of merchants, although in early societies merchants are said to have emerged from among chiefly families, since the redistributitional mechanism, which operated in most chiefdoms, led to concentration of economic wealth in the hands of those close to the chief.\textsuperscript{127} One may recall in this connection the circulation of wealth through gifts among kinsmen close to the Sangam chiefs, both the \textit{Vendar} and the \textit{Vēlir}. Virai was as much a port of the \textit{Vēlir} chief,\textsuperscript{128} as Puhār was of the Cōlas, Korkai of the Pāṇḍyas and Mucirī of the Čeras, all of which point to the direct involvement of the ruling elite in the promotion of trade.

In early societies, under the influence of trade and the consequent development of a market and its organization, it is believed that an emergent state system resorted to minting coins to facilitate long-distance trade.\textsuperscript{129} Yet, in early Tamilakam, long-distance trade does not seem to have had any significant impact over the emergence of a state society, for trade and urban processes were not built into the core of the transformation of a non-state to state society in early Tamilakam. At the same time, recent finds of local coin issues suggest a direct impact of inter-regional and maritime trade.

Developments Within: Urban Processes in the Early Medieval Period AD 600 c. to 1300

In recent years much of the historical research on medieval South India has concerned itself with agrarian structures, peasant settlements and the general pattern of socio-economic changes. Problems in the interpretation of epigraphic records, the confused state of numismatic evidence and the inadequacy of statistical data have deterred scholars from reconstructing the history of urban development, despite their interest in trade patterns, merchant and craft organizations, and state participation in such activities.

Conventional historical works\textsuperscript{1} abound in references to urban centres and trade organizations, but fail to provide any meaningful framework, conceptual or chronological, for understanding urban processes. One of the major flaws from which such works suffer is purely methodological and lies mainly in their isolated treatment of agrarian and urban institutions—and their development—as entirely unrelated aspects, as also in covering wide spans of time without pausing to recognize and demarcate the phases indicating change or progress.

The study of the Cōla state by Burton Stein\textsuperscript{2} introduces a new conceptual model for the medieval South Indian state, namely the segmentary state. This work makes serious efforts to provide a framework for the empirical data on South India, rather ambitiously attempting to cover a vast span of time, a 'longitudinal interest' of about seventeen centuries. Notwithstanding the interest that it has aroused and the critiques that it has provoked, the work has little to offer on urban institutions. It takes passing note of the nagaram as an organization of merchants and makes oblique references to 'temple urbanization' of the twelfth—thirteenth centuries as an inevitable part of the changing scene at the decline of Cōla power. The
author's treatment of the nagaram is cursory and incidental to his major concern, namely peasant society and the agrarian order.

Some useful investigation in the direction has been made by Kenneth R. Hall, whose works are mainly devoted to the study of the nagaram as a marketing centre. The works of both Stein and Hall have undoubtedly been inspired by and draw largely upon the scientific study of the agrarian unit called the nādu and its assembly, the Nādu, by Y. Subbarayalu, the nādu being the segment in Stein's analysis of the Cōla state and the nagaram its marketing centre in Hall's interpretation. While Hall's works are admittedly more relevant to the study of urban processes, they also exhibit the same tendency as the others in treating the whole of the Cōla period (AD 850-1278) as an undifferentiated unit, particularly in using epigraphic data of widely divergent dates for the study of urban institutions like the nagaram and merchant guilds. His main work, Trade and Statecraft in the Age of the Cōlas, however, lays emphasis on the role of the Periya nādu and the increasing role of merchants, the latter in collusion with warlords, as a contributory factor in the decline of the Cōla state.

Hall's major concern is the nagaram and its interaction with other local institutions like the brahmādeya and ār and what he, like Stein, calls the supra-local assembly, i.e. the Periya nādu. His study of the Tiruvidaimarudur urban complex is an attempt to view 'the peasant state and society of Cōla times' from the vantage point of an urban centre near the core of the Cōla region. This is partly a critique of Stein's theory of a powerful nāṭṭār and nādu autonomy. It posits the idea that Cōla policy favouring the nagaram as much as the Brahmadeya—in opposition to the primacy of nādu institutions—was aimed at reducing nādu autonomy and discouraging the mutually supportive interactions among local assemblies through the temple. These, in Hall's view, were the centralizing efforts of the Cōlas, in response to which the nāṭṭār created the Periya nādu as a supra-local unit of societal integration to protect their self-interest vis-à-vis the Cōlas.

It is not my direct concern here to show the incorrectness of the assessment made by both Stein and Hall of the role of
the Periya nādu. It may however be emphasized that the Periya nādu was a different kind of organization meant to serve as a guild of agriculturists, or, more correctly, of dealers in agricultural commodities, a development of great significance in the urban activities of medieval Tamil Nadu. Hall's study of the economy of Kāncipuram is, on the other hand, of greater interest to urban historians, for it provides some comparisons between urban experiences in medieval South India and medieval northern Europe.

This essay aims to identify some areas of fruitful research and promising lines of investigation in relation to urban processes in medieval Tamil Nadu. Two major periods of urbanization can be recognized in Tamil Nadu, the first coinciding with the early centuries of the Christian era, i.e. the Sangam period, and the second with the period of Cōḷas, i.e. from the ninth to the thirteenth centuries AD. The intervening period provides through fairly large-scale agrarian expansion the basis for the growth of urban centres in the Cōḷa period. These two periods represent different kinds of urban experience, characteristic respectively of a tribal society in the process of development and an agrarian society with well organized institutions.

The predominant factor in the urbanization of the Sangam period would appear to be maritime trade, in which the early chiefdoms actively participated. (There is a need to rethink the nature of the polities of the Sangam Cēras, Cōḷas and Pāṇḍyas, which may at best be described as chiefdoms or potential monarchies—although the term Vēndar used in Sangam works for rulers has been interpreted as 'kings'). The decline in overseas trade led to the decline of urban centres, most of which were ports or emporia of trade. It also partially explains the sudden disappearance of the early chiefdoms.

Early medieval South India, Tamil Nadu in particular, provides a conspicuous example of rural-urban continuum without a clearcut demarcation of rural-urban boundaries. In this context it is relevant to raise certain crucial questions relating to pre-industrial societies. For example, what are the links between agricultural production and urban growth and the degree to which agricultural growth and the availability of a surplus is a necessary precondition to urban development? Does an increase
in commerce and overseas trade, and the consequent emergence of centres of commodity exchange or an entrepot market, stimulate agricultural production? To what extent do towns develop as centres of commodity production or distribution centres in relation to the internal economy, as opposed to the growth of towns in response to the demands of overseas trade?

In the South Indian context, answers to these questions may be sought first in the agrarian development which preceded and continued through the Cōla period. In the pre-Cōla period, Pallava dominance over the region north of the Kāvēri and the revival of Pāṇḍya power in Madurai (sixth to ninth centuries AD) marked a major shift in agrarian organization through the introduction of new elements as integrative forces, namely, the brāhmadeya and the temple. Land grants to brāhmaṇas (brāhmadeyas) and the (devadānas) by ruling classes (and subsequently by socially important groups like the veḷāla landowners) were initiated by the Pallavas and Pāṇḍyas, marking the extension of cultivation, an increase in agricultural activities, and a more intensive agrarian organization. This was followed by the emergence of trade centres, initially in key areas, leading subsequently to the evolution in the Cōla period of a network of such centres dependent on a degree of agrarian expansion.

A further step towards this process was the development of organized trade through merchant guilds, specialization in the marketing of specific local commodities through the nagaram, and exotic and luxury goods through itinerant guilds. Trade and commercial activity were consciously promoted by royal policy through conquests, the development of ports, and the encouragement of production centres and guild activity. In response to this constant demand and encouragement, specialization of crafts followed and production centres catering to an expanding market—internal and external—through organized commerce, emerged. A conspicuous shift in the emphasis from agricultural to non-agricultural economic activities and commercial agriculture in some centres was also a part of this process.

Urban growth in the Cōla period relates mainly to the expansion of existing rural settlements. Clusters of such settlements emerged in the core areas or delta regions, forming the
nuclei of medieval kingdoms. They may be described as ‘pluralistic’ settlements, with several temples as centres of different socio-religious groups pursuing various economic activities.

The temple as the institutional base for socio-economic and political integration assumes great significance from the period of the Bhakti Movement (seventh to ninth centuries AD).6 Under the Cōlas some of the bhakti centres became leading political, sacred or pilgrimage centres and evolved into huge urban complexes, either around a single large temple or with multiple temples together forming parts of an urban complex. Such temples were built by the major ruling dynasties and their subordinates, either to legitimize their sovereignty or to bring various socio-economic groups within the orbit of bhakti centres. Temples became landed magnates, with tenants and temple servants remunerated through land. They also received gold and money endowments from the ninth century and invested such grants again in land, or occasionally in trade.

The growth in the economic activities of such temples led to urban development. There was also a corresponding expansion in the architectural structure of the temple from a small nuclear shrine into huge horizontal temple complexes with several enclosures and towering gateways, encompassing many shrines, halls of educational and cultural activities, hospitals, and monastic establishments with lineages of religious heads controlling temple administration.

The rural-urban continuum is best illustrated by such centres, which had a dependable hinterland where agricultural output was assuredly above subsistence level. The trade in agricultural commodities and local goods as well as luxuries and exotic items from distant lands that such centres attracted must be seen as a complementary factor in this development. The demand generated by the local elite and the temple for locally unavailable goods brought itinerant trade to these markets and encouraged the large-scale settlement of craftsmen and artisans, who were eventually accommodated in the temple centre.

The process was slow and spread over a span of four centuries. Thus, initially one could look for urban growth among core regions where clusters of brahmadeyas and devadānas emerged (Table II, pp. 258-9). One of the leading examples of such urban
growth is Kuđamūkku-Palaiyārai, the residential capital and twin city of the Cōlas.  

This twin city came up on the banks of the Aṛisilāru and Muḍikonḍān, distributaries in the Kāvēri delta (See Map 10), which was the resource base of the Cōlas both in the early period (the second century BC to the second century AD) and later, when they re-emerged as the most powerful South Indian dynasty in the ninth century. The resource potential of this region is indicated by the numerous peasant settlements dating from the early historical period and also by the tendency of early brahmadeyas to cluster together and proliferate rapidly in this area. Statistical data shows that the brahmadeyas were densest around Kumbhakonam (ancient Kuđamūkku). During the seventh to the ninth centuries the Pallavas and Pāṇḍyas attempted to colonize the Kāvēri delta through brahmadeyas and, in the process, were drawn into a series of armed conflicts with each other, before the re-emergence of the Cōlas with the same region as their nucleus. The river system in the delta was carefully built up into an irrigation network from the ninth century by the Cōlas, and thus came to represent a rich source of revenue, with a large surplus capable of supporting a major concentration of population. The foundation of Taṇjavūr and Gangaikonda-
cōlapuram as the capitals was perhaps determined by Cōla anxiety to protect this resource base.

Two early nagarams called Tiraimūr and Kumaramārtṭanḍanda-
puram served as market centres for this region after the ninth century, apart from a colony of merchants called Nandipuram in Palaiyārai. Kuđamūkku represented the religious or sacred complex and Palaiyārai the palace complex. In both the complexes, temples came up at different points of time between the ninth and thirteenth centuries, each with a settlement around it, akin to a modern colony in a large city.

The major economic activities centring around these temples are reflected through endowments in the form of land, cows, goats, gold, and money for a variety of purposes such as religious festivals, the feeding of brāhmaṇas and other ascetics, the burning of lamps, reconstruction and renovation of temple structures, ornaments to the deities, religious discourses, and educational institutions. The temples had their treasuries, archives and
administrative machinery usually controlled by the landed groups, particularly *brähmanas* and high-caste non-*brähmanas* or *vēlālas*.

The social groups involved in these activities were members of the royal family, Cōla officials of high rank, palace servants, personal retinues of the royal members, members of elephant corps, leading landowners from other parts of the Cōla kingdom, local merchants, horse traders from the distant Kerala region, merchants from other districts of Tamil Nadu and the itinerant merchant guilds. In order to look after the temple's movable property, such as cows and goats, there was a special class of shepherds called *maurādis*. The *Kaikkōlas* (part-time soldiers and weavers) were another important community involved in the gift-making processes.

Gifts of land came mainly from the landowning groups, while gold and monetary gifts came more often from merchants, local and itinerant. Coined money as a medium of exchange became regular from the tenth century onwards. The Cōla mint was located in Kudamākku.

With intensive architectural and sculptural activity between the ninth and thirteenth centuries, regular colonies of architects and sculptors must have existed here throughout the Cōla period and after. Two of the major industries of the Cōla period, metalware and textiles, were located in this complex. Apart from the making of copper and brass vessels, the ritual needs of the temples led to the evolution of a big centre for the art of casting bronze images for the temples, a craft in which Cōla artists achieved unparalleled skill and excellence. To this day the Kumbakonam region remains a major centre of bronze-casting and vessel-making. Weaving was the second major industry and was so renowned that in the sixteenth and seventeenth centuries weavers from Saurashtra (western India) migrated and settled in Kumbakonam.

With the decline of the Cōlas, the administrative and political importance of the city as a nerve centre of Cōla administration also declined, and Paḻaiyārai, or the palace or residential complex, disintegrated into small villages and hamlets which are at present suburbs of modern Kumbakonam, a *taluk* headquarters. In the post-Cōla period, Kumbakonam survived
as an urban centre due largely to its continuance as a sacred centre.

Apart from the core region of the Cōlas, situations of a similar nature led to urban growth in other areas, although the pace and extent of growth differed in various degrees.

Two major brahmadeyas of the Tiruṇelveli district became the nuclei of a huge urban complex with the occupation of the Pāṇḍya country by the imperial Cōlas in the eleventh century. Rājarājacakurvēdimangalam, the present Mannārkōyil, which grew around a Viṣṇu temple built early in the eleventh century by the Cēra subordinate of the Cōlas, developed into an urban centre by the beginning of the twelfth century. The present Tiruvālīśvaram and Ambāsamudram (Ilangōykkudi), north and south of Mannārkōyil respectively, were also parts of this centre. In Brahmadeśam, east of Mannārkōyil, one may recognize its origin as a brahmadeya. Rājēndracōḷapuram was the first nagaram or marketing centre of this urban complex and dates from the period of Rājēndra I (1018–44), after whom it was named. The Cōla-Pāṇḍya viceroys had their residential quarters in Rājēndracōḷapuram. A second nagaram called Vīndanūr also came up by the twelfth century in the vicinity of Mannārkōyil. Merchants from the Kumbhakonam region, i.e. from the distant town of Kumaramārttāṇḍapuram and the itinerant merchant guild called the Nānādeśī Tiśai Āyirattu Aśvinīṛṛuvvar participated in the trade and commercial activities of this city from the eleventh century onwards.

The Śiva temple at Tiruvālīśvaram was entrusted to the care of the Cōla army called Mūнстukai Mahāsenai, a feature of great significance in temple management and protection, when considered along with the fact that Tiruvālīśvaram acquired the status of an Erivērappaṭṭaṇa, a merchant town protected by armed troops.

The part played by the Goḷakī maṭha in the urban development of Tiruvālīśvaram in the thirteenth century was no less important, for such maṭhas attracted itinerant trade on account of their organizational network.

Lying between the Tamraparṇi and Gatana rivers (called Muḍikōṇḍacōḷappērāru and Rājājappērāru in Cōla inscriptions) the Mannārkōyil urban centre is located in the picturesque
amphitheatre that descends from the Podiyil hills commanding entry into the Pāṇḍya country from the Cēra land (Kerala) (See Map 8). The whole area between the two rivers forms a rich agricultural tract, which the Cōlas selected as their base in the Pāṇḍya region, creating new brahmadeyas and nagarams. The size of this urban complex was about 6.44 kilometres/4.83 kilometres, comparable to the Kuḍamūkku complex in the core of the Cōla heartland.

Further east was Cēravanmādēvicuturuvedimangalam (Śērmadēvi) on the south bank of the Tamraparni, dating back to the period of Rājarāja I (985-1014), with a concentration of small settlements around it, linked to the main brahmadeya. Among its more important hamlets are Karisūndamangalam or Kailāsamangalam or Ten Tiruvēngaḍam and Pattalmaḍai, with huge Viśṇu temples in addition to the major Viśṇu and Śiva temples of the main centre. The nagaram of Rājendracōlapuram with its palace also served as the major market centre of this region from the eleventh century.

The merchant corporation of the Five Hundred patronized the Viśṇu temple of Nigarilicōla Viṇṇagaram in this centre. Kakikkōla and Sāliya weavers and terinda-kaikkōla army men, sculptors and merchants, both local and from other towns, were among the many socio-economic groups involved in the commercial activities of this centre. Śaiva and Vaiṣṇava mathas and a Sarasvati bhaṅḍāra or library attached to one of the Viśṇu temples are the other institutional forces which contributed to the urban growth of this centre in the twelfth-thirteenth centuries.

The location of the Cōla palace in this region and the concerted efforts of the Cōlas towards the development of the region in the eleventh century would seem to have been greatly influenced by their trade policy, as also their interests, which are visibly heightened in this period, in the northern part of Sri Lanka.

Madurāntakam (Madurāntakacuturvedimangalam) in Chingleput district became the nucleus of an urban centre from the time of Parāntaka I (907-55), its various quarters developing around Vaiṣṇava and Śaiva temples built by the imperial Cōlas in the tenth-eleventh centuries. It acquired several hamlets through
endowments and a market called Viracölappērangādi. In comparison with the huge urban complexes in the core region of the Cōlas and Pāṇḍyas of the eleventh-twelfth centuries, this centre appears to be a small town. Nonetheless, urban features were present in varying degrees in several such small towns, many of which attained the status of a taniyūr (tan-kura) due to an increase in size, population and economic functions (Table III, pp. 260–3). Madurāntakam was a taniyūr in Kaḷattūr Kōṭṭam. Uittiramērūr, an early brahmaṇeya, also acquired the status of a taniyūr in Kāliyūr-Kōṭṭam by the tenth century. Ennāyiram (also called Brahmaṇeśam) and Tribhuvani (Tribhuvanamādevī catuervedimangalam) in South Arcot district also belong to the same category. The former had a huge Vedic college and a hostel attached to the temple, which attracted Vaḷaṇjīyar merchants, who traded in articles required by the hostel in return for money deposited with them. Tirukkalukkuṟam, also a taniyūr in Kaḷattūr Kōṭṭam with three temples—one of which dates from Pallava times—had its own nagaram or marketing centre by the eleventh century.

Bāhūr (Vāgūr or Alagiyacōḷa Caturvēdimangalam) in Pondicherry, Udaiyārkudi, Villupuram (Janaṇātha Caturvēdimangalam) and Chidambaram, all in South Arcot district, and Tiruvanṇāmalai in North Arcot district, are some of the other taniyūrs of the Cōla period. They became fairly numerous from the middle Cōla period and had dependable hinterlands to meet the demands of a sizeable town and an occasionally mobile population.

A major consequence of the earlier agrarian expansion of the seventh–ninth centuries was an increase in commercial activity after the ninth century. Large-scale commercial activity was confined to a few areas in the pre-Cōla period. Kacchi of the Sangam period assumes the role of the premier city in South India from Pallava times, both as a seat of political power and as the largest textile production and commercial centre, apart from its character as a Ghaṭikāsthāna or seat of learning. It became a sacred centre by acquiring, both under the Pallavas and Cōlas, a large number of Śaiva and Vaiṣṇava temples. Kacchi was sanskritized into Kaṃcīpura and Kaṃcimānagara, the latter nomenclature being indicative of its commercial growth into a great or more prestigious market.
Such a māṇagaram more often owed its creation to state sponsorship than did a mere nagaram or market centre. The other māṇagaram of the Pallavas was the port of Māmallapuram on the coast (Table IV, pp. 264–87). Both acted as centres of a large network of maritime commerce which connected Tondai-maṇḍalam with the outside world. While Māmallapuram is on the coast, Kāṇcipuram’s location on the banks of the Veghabati (a tributary of the Palar) provided easy access to the port of Māmallapuram, as also to Vāyalūr, another important Pallava centre on the coast at the mouth of the Palar.

Using the networks and centres model in his study of the nagaram as a market centre in South India in the Pallava-Cōla period, Hall has argued that Kāṇcī’s economic growth was also linked to the development of inland commerce, in which it played a dominant role. This model, derived from that of Skinner for rural China, suggests the existence of market centres (i.e. nagaram) serving networks of villages, i.e. the nagaram as a well developed system even in the Pallava period, with Kāṇcipuram as a māṇagaram at the apex of a pyramid of different levels of exchange. This system, according to Hall, linked the villages with market centres or nagaram, and the nagaram in turn with māṇagaram. However, there is no clear evidence of such a link in the Pallava period, for the earliest datable reference to a nagaram, which served as the nuclear marketing centre of the agrarian unit called the nādu (which was its local marketing territory) is of the early Cōla period in the tenth century. In Pallava inscriptions very few nagarams are met with and their relation to the pastoral-agrarian unit called kōttam of the Pallava period cannot be ascertained. In all, there are four nagarams (Table IV, pp. 264–87) known from Pallava inscriptions, apart from Kāṇcī and Māmallapuram as māṇagarams, namely Vīrāṇcipuram in North Arcot district on the south bank of the Palar (Seruvālaimangalam in inscriptions) of the eighth century, Tiruvadigai near Cuddalore on the coast in South Arcot district of the late ninth century, Kīlūr (Tirukkōvalūr) in South Arcot district, an inland market centre on the banks of the Ponnaiyar, and Tirunāgeśvaram (Kumara-mārttāṇḍapuram in inscriptions) in Tanjavur district on the banks of the Ariśil, a distributory in the Kāvēri delta. Twenty
four kōttams are traditionally assigned to the Tonḍaimandalam or Pallava region, of which only a few are known from Pallava records. Such a network-centre model is hence not useful in the context of the Pallava period. On the other hand, Hall’s study of the nagaram of the Cōla period is consistent with this marketing system, into which the itinerant merchant guilds were drawn from the eleventh century onwards. Itinerant merchant guilds which traded with Southeast Asia and Sri Lanka are visible in the Pallava records only in the ninth century. The Manigrāmam is the only such guild known to Pallava inscriptions and from Takua Pa on the Isthmus of Kra in Southeast Asia.

Kāncīpuram became a secondary political centre under the Cōlas, but its commercial character continued as before. Even when it lost its importance as a political centre at the end of the Cōla period, its sacred character has helped to retain its vitality as a commercial centre down to modern times. Māmallapuram was superseded by Nāgapattinam as the chief port of the Cōlas. Yet it continued to be a part of the huge commercial network till about the thirteenth century.

The nagarams of Tiruvadi, Tirukkōvalur (Kilūr) and Virinići-puram continued as market centres under the Cōlas. In addition, their sacred and political associations kept alive their urban character even beyond the Cōla period.

The emergence and proliferation of the nagaram kept pace with the increase in commercial activity under the Cōlas (Table IV, pp. 264-87). The pattern of their distribution led Hall to treat them as marketing centres, a maximum of one per nādu, each nādu serving as the local marketing territory for the nagaram. While this appears to be generally true, there is evidence of more than one nagaram in some nādus, which may perhaps be attributed to a greater density of settlements in those nādus. Eventually, the nagarams became points of intersection for the exchange of local goods with exotic and locally unavailable goods in which the itinerant merchant corporations traded. Thus, the nagarams were brought into a wider network of international trade. Hall’s model of networks-centres links the villages of the nādu to the nagaram, the nagaram in turn to ‘the higher marketing centres’ or trade
centres called erivirappattinam and managaram, where the guilds, it is suggested, controlled a major part of the trade and commercial activity. The suggestion of a hierarchy of relationships implied in this network model cannot be overlooked and needs to be more closely examined. Further, commerce in the managarams was organized and controlled by the local nagaram members rather than by itinerant merchant groups.

Nagarams undoubtedly represented potential centres of urban growth. It must, however, be emphasized that not all nagarams became huge urban centres, nor were they consistently drawn into this network of inter-regional and overseas trade irrespective of their location. Most of them were no more than a common market for the nādu villages and helped in the exchange only of local goods. Some, like Tanjāvūr, had powerful nagaram organizations over which the itinerant traders had no influence. In a few places, where the demand for goods to and from distant regions created a market for the itinerant merchant groups traversing parts of South India irrespective of political boundaries, the urban growth was rapid and at times phenomenal.

The history of the nagaram shows that at least three major phases of its activity can be demarcated in the Cōla period (see Table IV, pp. 264–87), corresponding to the early (850–985), middle (985–1150) and late Cōla periods (1150–1279). The role of the nagaram comes into sharp focus in the reign of Parāntaka I (907–55) with a visible change in the medium of religious gifts to metal (gold and silver) and money, in addition to land and cattle (including goats), and in the quantity of such gifts in the early Cōla period, compared to the earlier and later periods. Gold and other expensive gifts increase in the middle Cōla period, i.e. under Rājarāja I, Rājendra I and Kulottunga I (between 985 and 1120), but dwindle considerably in the late Cōla period. Invariably, such gifts came from rulers, elite groups and nagaram members.

The evidence of Cōla numismatics is not beyond dispute regarding the identification and attribution of coin issues, yet the beginnings of regular coinage are assignable to the early Cōla period, particularly to Parāntaka I, whose inscriptions abound in reference to gold and silver coins. A partial
monetization of the economy from this period contributed to a greater involvement of the nagaram in commercial ventures. Contacts with the larger mercantile organizations is as yet minimal in the delta region and more clearly visible only in certain areas like Pudukkottai, Salem, Uraiyūr, the northwestern parts Tiruchirapalli district, Tirunelveli district and South Arcot—i.e. the peripheral regions and route areas. As yet there is also no clear evidence of a deliberate royal policy directed towards active encouragement of overseas trade or the development of new ports. Kāvērippaṭṭinam seems to have continued to be the major outlet for Cōla commerce.

The middle Cōla period is marked by a conspicuous increase in nagarams, which now cover not only the whole of the Cōla heartland but also appear in areas giving access to powerful neighbouring kingdoms and in areas newly conquered by the Cōlas. In consolidating their conquests the Cōlas not merely renamed the conquered areas, as for example Gangavāḍi into Mudikondacōlamandālam, but also founded brahmadeyas and nagarams such as Mudikondacōlapuram (after Rājēndra I), Nigarilicōlapuram (after Rājarāja I) and Rājēndracōlapuram (after Rājēndra I), after the conquest of the Ganga and Pāṇḍya regions. This was a practice followed right through the Cōla period, particularly in the reigns of Kulōttunga I and Vikrama Cōla—a period of constant movement of Cōla troops into Karnataka and Andhra. Thus, the nagarams were used as much as the brahmadeya as interdependent agents of political synthesis under the Cōlas.

As a result, the nagarams became part of a wider network of inter-regional and overseas trade from the eleventh century, with enhanced political influence in areas of crucial links. Erīvīrapaṭṭanās, or chartered mercantile towns, also begin to appear only from the eleventh century (Table VI, pp. 291-303), pointing to the need for creating protected warehouses for merchant groups on major trade routes.

The pattern of nagaram distribution shows only a marginal increase in the late Cōla period in the areas controlled by the Cōlas, whereas with the re-establishment of Pāṇḍya power early in the thirteenth century, new nagarams emerged in the Madurai, Ramanathapuram and Tirunelveli districts. This helped to
intensify to a large extent commercial ventures and itinerant trade in the southern region.

A second important development in the middle Cōla period due to increased commercial activity relates to specialization in marketing and trade. While nagaram refers merely to an organization of local merchants, the increasing specialization in marketing led to the rise of special merchant organizations—such as the Sāliya Nagarattār for marketing textiles and Śankarappādi Nagarattār for supplying oil and ghee—whose activities seem to have been confined to a specific locality. In both cases, the nagaram would appear to be composed of people who had been practising professions like weaving and oil-producing, but who had turned into merchants. Similar groups like the Sāttum Pariśaṭṭa Nagaram and Pāraga Nagaram refer to organized suppliers of cloth and seafaring merchants (Table IV, last column, pp. 264-87).

The Vāṇiya Nagaram, also dealing in oil, was a wider organization of oil-mongers, which, like the larger merchant organizations, seems to have been composed of merchants from various regions, frequently referred to as Vāṇiya Nagarattār of the eighteen Viśaya (regions). They often figure conspicuously, along with other merchant organizations, in inscriptions granting maganmaī (tolls) to temples, particularly in the thirteenth and fourteenth centuries (Table VI, pp. 291-303). They are comparable to the Teliki of Vijayavada, a huge organization of oil merchants known from the close of the eleventh century in the Andhra region.

Horse trading was yet another specialized occupation and was entirely in the hands of merchants from Malaimandalām (Kerala) throughout the medieval period. Arab trade in horses was conducted mainly through the western ports and the Cōḷa depended on Kerala merchants to procure and transport them into the Tamil areas. Settlements of people from Malaimandalam known as Malaiyāḷuṇḍu existed in the heart of the Cōḷa country and in the Pudukkottai region (Table V, pp. 288-90). Even Pārasikas (Persians) figure in a Gangaikondacolapuram inscription of Kulōttunga I.

The nagaram organizations and specialization in the marketing of specific commodities thus proved to be a major factor
in the urbanization of the eleventh-thirteenth centuries, and is often characterized as ‘temple urbanization’, for the temples, particularly the large ones, were the biggest consumers, apart from the ruling classes, of goods both local and foreign. The simultaneous appearance of a large number of diverse occupational groups, i.e. non-agricultural groups, in such centres resulted in an elaboration of the temple town, with separate quarters for merchants, artisans and weavers in particular, most of whom were accommodated in the Tirumadaivilāgam of the temple. The highly complex social stratification of the twelfth-thirteenth centuries, with the dual division of the Right and Left Hand castes—distinct from the brāhmaṇa and high-caste non-brāhmaṇa (or Vēḷāḷa) groups—would seem to be another notable feature of this urbanization. This division has baffled all attempts at a clear definition of caste groupings, but its connection with the emergence of specialized crafts and artisan groups is undeniable.

Traders, individually and collectively, are mentioned in inscriptions throughout the Čōla period. Organized trade, especially long-distance trade, can be dated from the ninth century. The Pudukkottai region (Munisandai) of Tamil Nadu was involved in this trade for the first time through the Ayyāvole guild, known to Tamil inscriptions variously as the Aiṇṇūṟuvur or Nānādesiya Tiśai Āyirattu Aiṇṇūṟuvur (the Five Hundred of the thousand directions of several countries). The Maṇigrāmam of Koḍumbālur (also in Pudukkottai) and Uraiyūr (Tiruchirappalli) is another group which, like the Five Hundred, conducted organized trade in the early Čōla period. The Valaṇṭiyar is the third such organization seemingly a militant component of the larger itinerant organization/corporation, seen in the Čōla country from at least the tenth country. The area covered by their movement was initially confined to the peripheral districts of Pudukkottai, the western part of Tiruchirappalli and Tirunelveli, and by the middle Čōla period their activities extended over the whole of Tamil Nadu (Table VI, pp. 291-303), although a concentration of the Five Hundred and Maṇigrāmam inscriptions is still to be found in the Pudukkottai region, marking a major trade route. It is also at this point, as mentioned earlier, that the Ėrivarappatṭañas begin to appear.
Erivirappāṭṭanas (Table II, IV, VI, last columns, pp. 258ff) have been described as ‘inland ports’ and are believed to have come up only in remote and inhospitable areas. 76 This view is based on the fact that the Ramanathapuram region has been classified as a tribal area, where the martial tribe of Maṟavars was predominant even from the Sangam age. It would, however, be more correct to look at these as centres on trade routes used as warehouses by itinerant merchants. These merchants often had such centres converted into specially protected warehouses with royal sanction—or sometimes on their own, in the absence of a recognizable political overlord—and defended them with their own troops. ‘Erivīra’, which Hall interprets as ‘heroes of the road’, has earlier been translated as ‘mercenary soldiers armed with spears’, 77 and, hence, is associated with armed protection. The militant character of these merchant guilds, whose caravans moved with armed protection, is well attested to by epigraphic references to their use of force in some centres. 78 Erivirappāṭṭanas on such trade routes were Basinikoṇḍa (Sirāvallī) in Chittoor district, 79 Aiyapoli Kāṭṭur (Chingleput district), 80 Tirumālagan-dārkōṭṭai (Ramanathapuram district), 81 and Vikramacōlapuram (eleventh-century Vēmbaṭṭi, Coimbatore district). 82 The reference to an Erivirappāṭṭana in Tirunelveli district 83 is particularly significant as it was part of a large urban settlement where the temple, its treasury and temple servants had been placed under the protection of the army called Mūnrukaī Mahāśēnai, 84 taken to be the Cōla army stationed there after the Pāṇḍya country was conquered and placed under Cōla-Pāṇḍya viceroys.

In the period of Kulöttunga I and Vikrama Cōla (1070–1133) the guild activities extended to the Andhra region, with new avenues of trade linking Andhra ports like Kulöttunga Cōlan paṭṭinam (Viśākhapāṭṭinam), Cōlapāṇḍya paṭṭinam (Ghaṇṭa-sāla) and Dēsi Uyyakkoṇḍa paṭṭanā (later Mōṭupāḷḷi). 85 Almost simultaneously, the Citramēli Periyanādu, an organization of Tamil agriculturists, also makes its appearance in Andhra and Karnataka. 86 In the late Cōla period and under the later Pāṇḍyas, i.e. in the late twelfth, thirteenth and early fourteenth centuries, not only do we find a phenomenal increase in their activity but also an attempt to acquire greater control over the movement of
goods by the different merchant bodies coming together and jointly fixing the rates of maganmai (tolls) and pattanappagudi (the share of the town) (Table VI, last column, pp. 291-303). 

Invariably, the inscriptions recording such joint decisions are found in coastal towns other than those directly controlled by the royal families, but which later assumed importance due to the absence of any single political authority.

More important, however, is the association of the Citramelī Periyanaḍu with other merchant bodies (Table VI, pp. 291-303), where the Citramelī organization seems to assume a position of primacy in the decision-making process. The joint praśasti (eulogy) evolved by them for such occasions gives the place of importance to this organization by mentioning it at the head of the praśasti. The Citramelī organization of agriculturists dates from the middle-Cōla times but is hardly mentioned together with other groups till the thirteenth century. In fact all these organizations acted only in their independent capacity and also as mere participants in gift-making, temple-building and allied functions associated with donors. The right of fixing the tolls, commission, share of the town, etc. was exercised by them only in a joint capacity, and, more conspicuously, towards the close of the Cōla period when royal authority became virtually ineffective in regions beyond the core area. The Vāṇiya Nagarattār, Manigrāmam, Aṇjuvaṇṇam and Sāmanta Pāṇḍasālis were also involved in such joint donations out of the income from taxes on import and exports. This in effect represents the institutionalization of the relationship between different bodies which acted independently at first and later in a joint capacity. Their common eulogy is the first known expression of the ascendancy of trading groups in a predominantly agrarian society.

The composition of some of these organizations makes an interesting study. Recent work on the Ayyāvoḷe guild has shown that such guilds were controlled not by any one religious community but various groups, including the agrahāra brāhmaṇas, who were either collectively or individually landowners. Similarly the Citramelī Periyaṇāḍu, which originated in Tamil Nadu and later extended its activities to other parts of South India, was evidently an organization of landowners drawn from
various social groups and which wielded great economic and political influence from the twelfth century onwards. Consisting of many non-brāhmaṇa landlords (Vēḷāḷas), this body, as seen above, joined with merchant guilds in controlling trade in certain areas, particularly urban centres. In addition to textiles, fragrant woods, spices, incense, etc., in which the merchant guilds traded, a number of agricultural commodities are also found mentioned in inscriptions referring to both these organizations. There is some indication that the agricultural surplus was mobilized and brought from rural areas to urban settlements through nagaram members. Presumably, the Citramelī were in control of this movement by virtue of their position as grain dealers at the centres where merchant bodies met. The marked development of such centres from the twelfth century would indicate that mobilization of agricultural surplus made possible the expansion of urban activities.

A significant change in the pattern of land ownership may also be perceived from the twelfth century, when non-agricultural groups figure more prominently in the control of land, exercising, at the same time, commercial influence. The rise in the power of these landowning groups, such as the weavers (Kaikkōḷas) and merchants, apart from the Vēḷāḷas, also indicates a greater sharing of authority between brāhmaṇa and non-brāhmaṇa caste groups and increasing social mobility, as opposed to the dominance of brāhmaṇas and a small ruling elite in the earlier period.

The revival in South India of long-distance trade in the tenth century as part of the increase in South Asian trade, involved not only the merchant guilds but considerably influenced the external policy of the Cōḷas. The Cōḷa wars in South Karnataka may be described as an attempt to establish trade links and to control the major trade route between Karnataka and Tamil Nadu, facilitating the easy movement of the Ayyāvołe or Nānādesis. Their attacks on northern Sri Lanka and their occupation of it for nearly eight decades in the eleventh century, were not mere pillaging or plundering attacks, as held by Spencer, but a deliberate policy of encouraging new trade ventures by enabling already existing pockets of Tamil culture dominated by merchants to engage in lucrative
commercial ventures. Presumably, mutual benefit rather than tight political control over trade and trading communities was the motivating force behind such ventures. The same motive led to the two major maritime expeditions of Rājendra I and Kulottunga I in Southeast Asia ending up in Śrīvijaya,\(^94\) obviously to establish trading rights in these regions, and over the much coveted Isthmus of Kra to reach China. Cōla missions to China in the eleventh century and Kulottunga’s physical presence in Cambodia, his coins,\(^95\) exchange of gifts—including the ‘tribute missions’ mentioned in the smaller Leiden Grant—, grants of lands and villages to the Buddhist *vibāra* at Nāgappattinam,\(^96\) and the abolition of tolls,\(^97\) are all part of the trade policy of this early medieval dynasty. It is significant that in the wake of these military expeditions the South Indian trade guilds begin to appear in Burma, Malaysia, and Java. The recent excavations in Takua Pa indicate a great deal of Tamil influence between the ninth and twelfth centuries. Recent work on the dynamics of South Asian trade shows that trade overtures or agreements acquired some form of legitimacy through religious donations to temples and *vibāras*. This is clearly illustrated in the elaboration of the port of Nāgappattinam, where a Buddhist *vibāra* of considerable size and importance was erected by the Sāilendra king. To this *vibāra* the Cōla rulers made liberal endowments in the eleventh century.\(^98\) Earlier, Nāgappattinam is known through literary references as a *bhakti* centre of the Śaiva and Vaiṣṇava creeds. It was drawn into the huge network of overseas trade with the active trade policy of Rājarāja I and Rājendra, and later Kulottunga I in the eleventh-twelfth centuries. The persistence of Buddhist influence in Nāgappattinam—particularly the *Theravāda* influence—in the eleventh-twelfth centuries may be attributed to the trade relationships of Southeast Asian countries with the South Coromandel coast. Through Śrīvijaya, first China and later Burma and Sri Lanka were involved in this activity. Reference has been made to the tribute missions from Southeast Asian islands. Chinese gold came into the port in the eleventh century through the agents of the Śrīvijaya kings.\(^99\) At least three hoards of Chinese copper coins ranging in date from 142 BC to AD 1252 have been found in the Pattukkottai
taluk of Tanjavur district.\textsuperscript{100} Cōla missions to China during the period of Rājēndra I and Kulōttunga I are recorded in Chinese annals.\textsuperscript{101}

With Kulōttunga’s accession to the Cōla throne, much of the trade in the Andhra region was also regulated by the Cōla kings through the itinerant guilds. Viśākhapāṭṭīnām, also called Kulōttunga Cōlan paṭṭīnām, became a leading port, where the Ayyāvole acted jointly with the Aṇjuvaṇṇam\textsuperscript{102} or Arab merchant organization which is known to have traded even in the ninth century on the Kerala coast.\textsuperscript{103} Tamil merchants settled in Andhra ports and visited other interior trade centres.\textsuperscript{104}

State patronage of the Ayyāvole and other major guilds is increasingly attested to by several inscriptions of the Cōlas and Pāṇḍyas, and oral traditions refers to a specific invitation by the Pāṇḍyas to a Vaiśya community, which was part of the guild, to settle in their kingdom.\textsuperscript{105}

The location of some regions such as Pudukkottai = Ramanathapuram and Salem-Coimbatore, facilitating trade routes, was a stimulant to urbanization. The Pudukkottai region, which was a buffer between the Cōla Pāṇḍya heartlands, assumed great significance from the tenth century, when the Cōlas entered into a close alliance through matrimonial ties with the Irukkuvēḷ chiefs of Kodumbālūr\textsuperscript{106} in order to gain control over the trade that passed through it to Sri Lanka, and also to extend political control over Madurai and the surrounding region. Being a buffer zone between the Cōlas and Pāṇḍyas, the major battles between these two powers were fought in or on the outskirts of this region. Its commercial importance in the earlier Sangam age is recognized through numismatic and epigraphic evidence, such as the hoard of Roman coins probably deposited there in the late-first or early-second century AD,\textsuperscript{107} and the early Tamil Brāhmī inscriptions in Śittānṇavāśal in the Pudukkottai district. Śittānṇavāśal was a major centre of the Jains,\textsuperscript{108} and the pattern of distribution of early Jain centres\textsuperscript{109} shows that they tended to be located along old trade routes.

In this region commerce was not directly linked with a concentration of population and the generation of local demand for goods from outside, nor with the development of a regular exchange system as in the rich Kāvēri valley. The major factor
in its commercial importance was its access to the coastal towns through which trade between South India and other countries was carried on. The nearby port of Tondi received in the early period products such as aloeswood, silk and sandal, which are known from the same region even as late as in the thirteenth century under the Pāṇḍyas. The Maṇigrāmam of Kaśeippūmpattinam migrated and settled in this region around the tenth to eleventh centuries, perhaps due to the supersession of Kaśeippūmpattinam by other Cōla ports. The marked increase in commerce from the tenth to the thirteenth centuries is reflected in their activity as well as that of the Ayyāvolē or Aiňñūruvur guild, both of which appeared here around the tenth century and became extremely active in the Pudukkottai and Ramanathapuram areas, the latter being known as Chettinad in modern times.

Kodumbalur (Table IV, pp. 264-87) was a nagaram of considerable size, where the Maṇigrāmam was active, apart from being the political or administrative centre of the Irukkuvelś of Kōnādu. Nārattāmalai or Nagarattārimalai (Table IV, pp. 264-87) on the way to Koджumbrālur was a major nagaram with which the Tiśai Ayirattu Aiňñūruvur, or the merchant corporation of the Five Hundred, had active links in the eleventh century.

South of Pudukkottai in Ramanathapuram district two major centres of merchant activity were Kamudi and Pirānmalai (Table VI, pp. 291-303), where, in the tenth and thirteenth centuries, members of several merchant organizations met and recorded their endowments to the local deities in a joint donation. In both the records reference is made to 18 paṭṭinams, 32 vaḷarpurams (veḷārpuram) and 64 kaṭigaiṭṭaṭaṭvalams from which members hailed. While a few of these places can be identified with well-known towns, quite a large number of them cannot be located. Tāvaḷam would seem to represent a fair, while paṭṭinam was undoubtedly a town of considerable commercial importance and more often a port. Vaḷarpuram would perhaps be a growing trade centre.

In the twelfth-thirteenth centuries the merchant corporation of the Five Hundred and the Vaḷaṇjiyar of Sri Lanka are seen making endowments at the temples of Śivapuri, Tirunelvēli and Aruppukkōṭṭai, and also in the Ramanathapuram district
(Table VI, pp. 291-303) during the period of the Pāṇḍyas, who gradually recovered this region from the Cōḷas by the end of the twelfth century.

Several nagarams (Table IV, pp. 264-87) of this region are known to have interacted with the itinerant guilds. They are Vānavaṃśaṇḍapura (Sāttūr), Kulaśekharapura (Devadānā), Rājanārāyaṇapura (Pillaiyarpaṭṭi), and Vēlangudi (Vāṇiyanagaram). A late thirteenth-century inscription from Tittāṇḍatānāpuram (Toṇḍi) records an agreement made by several merchant groups like the Aṇjuvaṇṇam, Maṇigrāmam and the Sāmanta Pāṇḍaśālis, on the levy of certain taxes on commodities sold and purchased for the rebuilding expenses of the local Śiva temple (Table VI, pp. 291-303). An Erīvērāppattānam was located at Idaivali (Tirumālagāndārkoṭṭai, Ramānathapuram district Table VI, pp. 291-303).

The Salem-Coimbatore region (ancient Kongunāḍu) lay along an ancient trade route linking Tamil Nadu with Kerala and Karnataka. The route may be traced with the help of early Jain centres, as in the Pudukkottai region. This region also shown a concentration of early Roman coin-finds and punch-marked coins. Along the same route, once again, merchants of medieval South India travelled constantly, bringing horses from the western ports and perhaps taking textiles back. Seafaring merchants, cloth merchants and merchant guilds frequently used this route, leaving a trail of trading centres behind. Bērikai and Kāvanappalli in Hosur taluk of Dharmapuri district, were two such horse-trading centres mentioned in twelfth-century inscriptions (Table V, pp. 288-90).

The road to Puramale Nāḍ bordering Mysore is referred to in an early-tenth-century Nolamba inscription from Dharmapuri. The Atiyamān Peruvāli (highway) passed through Pāpinyaṇyakaraṇi near Dharmapuri or Tagadūr, the capital of the Atiyamānś. Nāvartāvālam, where trade fairs were held, was at a distance of twenty-nine kādam from Pāpinyaṇyakaraṇi.

Traders from Mayilārppil, Palaiyarai and other places in Tamil Nadu constantly figure in the inscriptions of Salem, Erode, and Coimbatore districts. Perhaps the most remarkable of the trading centres of the Cōḷa period was Muḍikōṇḍān in Coimbatore district (Table IV, pp. 264-87). Founded by Rājendra I
after the conquest of Gangavādi, it was known variously as Mudikondacōlapuram, alias Dēśī Uyyakondaṭapattana. The merchants of the eighteen towns north of the Kāvēri, including Tālaikkāḍu (ancient Ganga capital), alias Rājarājapura, and those of the eighteen towns south of the Kāvēri, including Muḍi-konḍacōlapuram, made several grants to the Viṣṇu temple of this place in the period of Hoysala Viṣṇuvardhana. It was also used as a military station by Ballāla II after the withdrawal of Cōla power from this region.

Vikrama Pallavapuram (modern Vēmbaṭṭi) in Bhavani taluk, Coimbatore district (Table VI, pp. 291-303) was made into an Erīvīrappattana in the reign of Kulōttunga I, and a militant group of Vira Vaḷaṇjiyar is known to have resided at this centre.

Among the many nagarams established in this region during the Kongu-Cōla period (twelfth-thirteenth centuries), mention must be made of Pērūr in the Coimbatore district (Table IV, pp. 264-87), where merchants who had the title ‘Cakrvartin’ resided.

The merchant corporations of Nānadeśi Tiṣai Āyirattu Aiñ-ñūrruvur and Maṅigrāmam of Koḍumbāḷur were active in the Kongu region from the tenth to the thirteenth centuries.

Areas of economic importance in medieval Tamil Nadu have not been clearly defined. Production and craft centres are equally difficult to locate, as inscriptions present a great many problems of interpretation. It has, however, been possible to identify centres of textile production, the earliest known industry in South India. Traditional weaving centres have more or less continued down to the modern times, as shown by a comparison, in a recent survey, of modern textile centres with the geographical distribution of weaving centres in medieval India. The right type of soil for the cultivation of cotton, the availability of raw material, especially dyes, and the proximity of ports seems to have been the major factors determining their location.

Of the modern districts of Chingleput, Coimbatore, Madurai, Salem, Tanjavur, Tiruchirapalli and Tirunelveli, with the exception of Coimbatore and Madurai, the other districts have fairly numerous records relating to weaving centres of the Cōla period.
It is only after the migration of Dēvāṅga weavers from Karnataka and weavers from Saurāstra in the Vijayanagar and post-Vijayanagar periods, that Coimbatore and Madurai became major textile producing regions.

Weaving as an industry was systematically promoted by the rulers of South India from pre-Cōla times. The Cōlas bestowed special care on old centres of textile production and also encouraged the settlement of weavers in new areas. Kāncī was the centre of one of the major cotton-producing regions of Tamil Nadu, the other being Madurai. However, it is only for Kāncīpuram that evidence of Cōla patronage is clear, particularly from the time of Uttama Cōla. The demand, both internal and foreign, for the cotton textiles of South India encouraged production, and Kāncī developed into a premier weaving centre even in pre-Cōla times. Although Pallava inscriptions hardly provide detailed evidence of this process of growth, the early Cōla records, particularly of Uttama Cōla, make special provisions for the weaver communities, indicating that by the tenth century, this city had become the most prestigious textile production centre, with its weavers specially chosen for producing royal garments. By the end of the Cōla period, several centres came up around Kāncīpuram, and eventually, the city came to represent the venue of the Mahānādu or corporate organization of weavers, which controlled production and marketing of cloth and its trade.

Regular settlements of weavers were encouraged in other centres as well, in the Tirumādaivilāgam of the temple, from the late eleventh century, through special privileges or tax concessions. Sirkali, Arantangi, Kumbhakonam and Nannilam taluks in Tanjavur district and Chidambaram taluk in South Arcot district had several weaving centres under the Cōlas from the eleventh century, to which many more were added under the Pāṇḍyas in the thirteenth to fourteenth centuries.

Under the Pāṇḍyas, weaver settlements appeared in Olagāpuram, Śrīmuśnam, Chidambaram and Nerkunram, all in South Arcot district, Tīllaiyādi in Tanjavur district, Pūśankudi (Rādhāpuram) and Śērmādevī in Tirunelveli district, indicating the growing importance of this industry. Weavers-cum-traders formed themselves into Śāliya Nagarattār, as at Chidambaram.
and Tirukkoiyilur, and enjoyed the rights and privileges usually extended to other nagarams like the Sankarappadi and Vaniya Nagarattar.

In the Kongu region (i.e. Dharmapuri, Salem, Erode and Coimbatore districts) several such weaver settlements were established in the twelfth to fourteenth centuries under the Kongu-Colas and Kongu-Pandyas. Some of them were Kadagattur (Dharmapuri district), Vijayamangalam and Tirumuruganpundi (Coimbatore district) and Aragalur (Salem district). Through this region the rich trade in textiles passed into Karnataka and Kerala, as Cilai Feetiyars and merchants from Mayilappur, an old weaving centre in Madras, are seen moving across the area into Karnataka and other parts of South India.

Fairly detailed references to varieties of silk and cotton textiles, techniques of weaving, printing and dyeing are found in literature and occasionally in inscriptions, indicating the high degree of specialization attained by this craft. Commercial taxes levied on cotton, yarn and woven fabrics, as well as professional taxes on weavers and dyers, progressively increased in the Cola period, showing that the industry was developed to such a degree that the revenue from these taxes was considerable. Not surprisingly, the most frequently mentioned articles of merchandise in the inscriptions of the merchant guilds are cotton and textiles. Comments of foreign travellers like Abdul Feda and Chau-Ju-Kua (thirteenth century) provide a very clear idea of the variety of Coromandel textiles and their popularity abroad.

The development of this highly productive craft led to the enhancement of the economic and social status of the weavers, some of whom rose to the rank of merchants and, perhaps, also master weavers. This is also reflected in the increasing participation of weavers in gift-making, temple rituals and acquisition of land control in the twelfth to thirteenth centuries.

Craft production was perhaps more intensive in the Kongu region, where twelfth to fourteenth century inscriptions indicate large-scale artisan activity, and participation in important civic duties, which conferred special privileges upon them. Privileges were collectively granted to the Kanmalar (artisan) communities in Kanickkurvalnado (Pariyur inscriptions of the thirteenth century), of Vengala Nadu (Karuvur and Modakkur inscriptions
of the thirteenth century),\textsuperscript{143} of Kāṅgēya nādu and Pūndurāi nādu (Veḷḷōdu inscription of the fourteenth century)\textsuperscript{144} under the Kongu-Cōlaś and Kongu-Pāṇdyas. Agreements among artisan communities for various purposes also became common during this period. Some kind of craft organization, at least among the artisans of a specific region, was perhaps emerging by the thirteenth century (Table VIII, pp. 309–10). However, their dependence on the merchant organizations is underlined in an inscription of the late eleventh century from Erode, where the Nānādeśi organization set up a ‘refugee’ centre for the artisans (Table VI, pp. 291–303).\textsuperscript{145} Erode and Muḍikonḍān were specially noted for merchant domination over local temples, particularly in the latter.\textsuperscript{146}

It is also important to note that the Right and Left Hand divisions are more prominently mentioned in the records from areas in which the merchants assumed control and management of temples and even acted as protectors of the craftsmen and artisans, obviously due to the interdependence of these two sections of the commercial world. Rules regarding the Valangai and Iḍangai sects were sometimes framed by the Ayyāvole guild as seen in the thirteenth-century inscription of Teṅkarai, Madurai district (Table VI, pp. 291–303).\textsuperscript{147} The artisan community, as participants in gift-making processes, is seen to be coming to its own only after the twelfth century, i.e. in the late Cōla and Pāṇdyya periods. In a predominantly agrarian set up, the artisans were attached to the locality, i.e. to the temple and to landed brāhmaṇas and Vēḷāḷas through interdependent land tenures. However, the demand for their services both by local landed groups and itinerant merchant organizations, particularly in temple-building and allied activities, resulted in their receiving concessions and privileges, conferred sometimes by the temple authorities and local chiefs, and sometimes by the merchant organizations. Thus, in Puṅjai (Kidārankoṇḍacōlapuram, Tanjavur district) the temple authorities granted privileges to certain members of the anuloma Rathakāra castes—blacksmiths, goldsmiths, carpenters and stone masons—in the late Cōla period (late twelfth century).\textsuperscript{148} Under the Pāṇdyas, such instances were more frequent, as seen in the thirteenth-century inscription of Noḍiyūr (Tanjavur district) where the Kanmāḷas of several places
met and agreed to assign a tithe collected from among themselves to the local temple, and to get differences settled conjointly with the temple trustees and local chief. The Right and Left Hand divisions are thus more visible in the thirteenth-fourteenth-century inscriptions, claiming privileges which were directed towards the improvement of their social position.

The revival of South India’s active participation in Asian trade from the ninth century, once again saw the emergence of coastal towns (Table VII, pp. 304–8), with a shift in the location of major ports now oriented to serve new hinterlands, as, for example, Nāgappattinam at the mouth of the Kaveri serving the core region of the Cōlas. Special importance was attached to ports developed by ruling families, such as Māmallapuram under the Pallavas and Nāgappattinam under the Cōlas.

Nāgappattinam superseded Māmallapuram, the latter still the outlet for the Kāncipuram hinterland but subordinate to the Cōla port. Kāveripattinam continued to be used under the early Cōlas, but it gave place to Nāgappattinam in the eleventh century. Of the Sangam (early historical) ports, Marakkān (Sopatma) north of Pondicherry, and Tondi and Korkai on the Pāndya coast were still in use. However, a series of secondary towns once more dot the coast-line, starting from Tiruppālaivanam (Chingleput district), the northernmost on the Tamil coast, down south to the coast of the Tirunelveli district where Korkai and Kāyal are located.

Tiruppālaivanam and Mayilāppil (now a part of Madras) served the region north of Kāncipuram between the eleventh and thirteenth centuries. Kōvalam (Viracōlapattinam) in the twelfth century, Tiruvadandai (and Taiyūr) in the thirteenth century—all located north of Māmallapuram—Sadras (Sadurangapattinam) and Pudupattaṇam south of Māmallapuram (both in the thirteenth–fourteenth centuries), Pallava Paṭṭinam (Kūdalūr), Cuddalore (Nissankamallan Paṭṭinam) and Tiruvēndippuram in the thirteenth century, show the increase, towards the end of the thirteenth century, in coastal towns where the constant presence of the merchant groups suggests that most of them served as halting places for the itinerant traders on a coastal road, or perhaps for coastal shipping right through. It is also significant that the merchant
bodies exercised the right of fixing tolls and duties on articles of merchandise in their joint capacity in these towns,\textsuperscript{157} apart from some interior markets. Maññaiṅkōndacōḷapattīnām (Tirukkarugāvūr) and Saḍāṅganpāḍi (Tranquebar) north of Nāgappattīnām, were new towns added in the twelfth and thirteenth centuries respectively.\textsuperscript{158} Several such towns came up also to the south of Nāgappattinām in the late Cōḷa period.

The salt manufacturing centres (pērāḷam) of the Cōḷa period are located near these coastal towns. From Marakkāṇam in South Arcot district down south to Vēdaranyam near the salt swamps of Umbāḷa Nāḍu, were a series of salt manufacturing centres established by the Cōḷas from the eleventh century. Named after their royal founders, these were invariably under the care of royal officials who, on the basis of the income from salt, organized the scale of expenses in the local temples.\textsuperscript{159} Salt was a major item of exchange in local and inter-regional trade, as indicated by the reference to assignments of salt in Mahipāḷa-Kulakāḷapērāḷam (Āchchāpuram in Sirkali taluk) to the Śiva temple at Nallūr Tirupperumaṇam for requirements of sandal paste, incense etc.\textsuperscript{160} Salt was carefully excluded from the jurisdiction of the nagaram, which had the right of fixing and assigning taxes on all commodities except salt.\textsuperscript{161}

It would seem superfluous to speak of the religious factors in the development and sustenance of urban centres, for most certainly religion provides the most constant denominator of all, i.e. the legitimization of all ventures, political, economic and social. However, sacred associations have been the most active determinant of the urban character and survival of centres like Śrīrangaś, Tirupati, Chidambaram, Tiruvaṅṅāmalai and many more such temple towns, whose umland extended not merely to the immediate neighbourhood or cultural region, but sometimes over long distances which pilgrims traversed at periodic intervals.

Discussing the pattern of urbanization in South India, particularly in relation to Kāṅcīpuram, Hall and Spencer highlight the contrasting urban experiences of medieval northern Europe with those of South India.\textsuperscript{162} As against the conflicting episcopal and burgher interests of medieval Europe, they emphasize the integrative aspects of Kāṅcīpuram's political,
religious and cultural institutions, which helped to preserve its urban character and vitality, although primacy must be assigned to economic factors. The latter, discussed by them at length, stress the importance of Kāṇcipuram as a weaving and commercial centre, a true mānagaram whose economic outreach, as indicated by Cōṇa epigraphic evidence, conveys the impression that Kāṇcipuram was a logical meeting place for the merchants of its hinterland.\textsuperscript{163}

Kāṇcipuram’s role of ‘superordinate’ integration among political, religious and economic activities was not unique, for similar roles may also be recognized in other multiple temple centres like Kumbhakonam, single temple centres like Taṅjāvūr, Chidambaram and others. The difference, however, lay in the accent on and ascendancy of either the political, commercial or religious factor in its urbanization and survival.

Terminology, as seen in place names, is an indicator of the prevalence of urban features, as, for example, when a puram, nagaram or pattinam suffix, or a new name with such suffixes, is given to an expanding centre or to new quarters within an expanding centre, as in Kuḍamūkkku-Palaiyārai. Palaiyārai was also known by names ending with the puram suffix, such as Nandipuram and Muḍikondacōlapuram. Paṭṭinam usually refers to a coastal town or port, but interior towns with names ending in pattinam are also known.\textsuperscript{164}

It would perhaps be more useful to look for a hierarchy among urban centres and the nature of inter-relationships, for urban activity invariably tended to move towards core regions where capitals and administrative centres (Table I, pp. 256-7) were located, and all important traffic converged on them, as indicated by medieval highways.\textsuperscript{165}

50. Tiraimūr Nādu had two *nagarams*, namely, Tiraimūr nagaram and Kumaramārttiṇḍapuram; Umbāḷa Nādu had two *nagarams*—Irumbicōḷapuram and Rājēndrasingapuram (26A of 1961-2); T.N. Subramaniam, ‘Pallankovil Fragmentary Copper Plate Grant of Early Chola Period’, *Transactions of the Archaeological Society of South India*, 1958-9, 84ff; Subbarayalu, map 12. 119; 3. *See* Table IV for *nagaram* location.
51. Hall, chapter 5.

52. Taṇjāvūr was a royal creation, particularly the Rājarājeśvara temple around which the merchant quarters were located. It had two nagarams which organized the trade of the city and administered the markets. The personal involvement of the king and members of the royal family in Taṇjāvūr’s commerce was also a major factor in the city special status.

53. Terms like kalanjū, māḍai, tulaippon and Ilakkāśu mentioned in inscriptions suggest the use of coins. Regular gold currency seems to have emerged by the middle of the tenth century. This is attributed to contact with Ceylon. A large number of coins known as the Ceylon (man) coins has survived. See B.D. Chattopadhyaya, *Coins and Currency Systems in South India*, New Delhi, 1977, 52ff, 122ff, 136ff.

54. 52 of 1928-9; *SII*, iv, 147; 288 of 1964-5; 304 of 1964-5; 439 of 1917.

55. Parāntaka’s alliance with the Irukkuvēls of Koḍumbālur, his conquest of the Pāṇḍya country and the not very successful Ceylon war, may indicate an attempt in this direction, but the Cōla hold over regions beyond Pudukkottai was quite clearly tenuous.

56. Muḍikondacōlapuram (Muḍikondan in the Coimbatore district) and Tālaiikkādu (Talakkad), south and north of the Kāvēri respectively, were located in the Kongu country and Gangavādi. Tālaiikkādu came to be called Rājarājanpur, evidently after Rājarāja I’s conquest of this region. The Kongu country gave access both to the Kanara districts and Mysore area. See Nilakanta Satari, *The Colas*, 174ff. The appointment of Viceroyss with Cōla-Ganga and Cōla-Pāṇḍya titles in these regions is additional evidence of direct control.

59. The earliest attested mercantile towns are those of Sirāvalli (Basinikonda in the Chittoor district) and Kāṭṭūr (in the Chingleput district), both dated to the eleventh century, 256 and 342 of 1912.

60. *SII*, vii, 901.

61. The Śankarapāḍi nagarattār were not merely suppliers of oil and ghee, but were also administrators of endowments of lamps in several temples, e.g. Vālikanḍapuram (Tiruchirapalli district), 299,
300 and 310 of 1964-5; 241, 247, 251, 252 and 288 of 1943-4. Most donations to the temple at Vālikāṇdapuram were managed by the Śānkarappāḍi nagarattār. They seem to have enjoyed a fairly high status as merchants. See Hall, 54-5.

</table>
A Note on the Tables

1. The geographical location of the centres is given only in Tables I and II.
2. The centres are listed alphabetically under their present names and district-wise, both the present names and modern district names appearing in brackets.
3. The centres are listed under different periods to show the chronological increase or variation in their number.
4. The mark * indicates either that the concerned centre had already come into existence in a previous period but assumed the relevant or specific character only in the period under which it is listed, or that it continued to retain its character in the subsequent periods.
5. Period I, i.e. AD 600-850, represents the pre-Cōla period when the Pallavas of Kāṇcipuram and the Pāṇḍyas of Madurai were the ruling powers.

   Period II, i.e. AD 850-985, represents the Early Cōla period.

   Period III, i.e. AD 985-1150, represents the Middle Cōla period with two phases (Phase 1 = AD 985-1070 and Phase 2 = AD 1070-1150), as shown in Tables IV and VI.

   Period IV, i.e. AD 1150-1250, represents the Late Cōla period.

   Period V, i.e. AD 1250-1350, represents the post-Cōla period, when the Pāṇḍyas re-emerged as a major power, before Vijayanagar became the dominating factor in South India.

See Table IV, nos 21 and 43 for *nagaram* with artisan communities.
See Table VI, no. 15 for refugee centre for artisans.
One of the more important but less understood areas of economic activity in medieval South India is that of the corporate trading communities often called 'guilds'. The term 'guild' immediately conjures up the image of an association of professionals with a well defined structure, a carefully framed code of conduct of rules and membership governed by certain regulations and qualifications. It is hard to get indisputable evidence of such an organization from the South Indian records, although the term Baṇanj pa dharm a is the nearest to a code of rules that existed and was adhered to by the itinerant merchant bodies. Hence, it is rather a matter of convenience that the term 'guild' has been used to denote these merchant bodies, and hardly any parallel to the European merchant guilds, or the Hang of China in Sung and Yuan times, or the Karimi of Egypt, is meant. It would perhaps be more appropriate to use the term organization/association which is the nearest equivalent to the term Samaya(m) used in their inscriptions.

A second important aspect of the problem is the nature of the organization and its membership. Names of several groups occur in the epigraphic records all over South India and it is not always easy to identify them and determine their relationship to one another. To illustrate the point, one notices conspicuous references to the Ayyāvole or Aiṅṅūṛṛuvar, Valaṅjiyar, Nānādesī and Nagarattār, apart from various other groups like the Maṅi-grāmam and Anjuevaṇṇam, in the records ranging from the eighth to the seventeenth centuries AD—more specifically between the eighth and fourteenth centuries, both in South India and Sri Lanka. With the exception of Nagarattār, all these terms refer to itinerant merchant bodies. While the Aiṅṅūṛṛuvar, or the Five Hundred, figure prominently in most of them, some 46 different groups are noticed in association with them at various centres
and in different contexts. Listing all these groups, K. Indrapala expresses the difficulties in determining the nature of their relationship with the Five Hundred, and dismisses as untenable the views that the Five Hundred was a federation of all these bodies, or that the latter were sub-divisions of the Five Hundred. Some of these groups were non-mercantile in character, as they refer to occupational groups like the Pañcālas, Kumbhalikas etc., and to groups of fighters taken to be mercenaries accompanying the Five Hundred.

From the late twelfth to the fourteenth centuries, there is yet another major organization called Cittirameḷi Periya Nādu, or the Padinenbhūmi or Viṣaya of the Seventy Nine Nāduś, appearing jointly with the Five Hundred in a position of prime importance in the praśāstis of the inscriptions recording joint donations of tolls and cesses on merchandise. The pride of place is here given to the Cittirameḷi, and the Five Hundred a secondary position, with their respective emblems, viz. the Šengöl and mêli (the staff and the plough) of the first, and the pasumpai (money bag) of the second. There can hardly be any doubt as to the commercial and urban context in which these joint donations occur. This is to be seen as a result of the revival of long-distance trade in South India in the tenth century AD, which was itself a part of the increase in South Asian trade involving such distant regions as Egypt and West Asia, and Southeast Asia and China.

The whole corpus of information of South Indian trade at this time centres mainly round the Five Hundred, and to a lesser extent, on the Manigrāmam and Aṉiṉvaṇṇam and other such organizations. It would, therefore, be appropriate to start from the Five Hundred and proceed to enquire into the nature of their organization and relationship with other bodies. Only then can the complexity of inscriptive data be converted into useful categories of evidence. For reasons which would become apparent in the course of this essay, it would also be useful to distinguish between the Five Hundred on the one hand, and the Manigrāmam, Aṉiṉvaṇṇam and the Nagaram on the other. The Five Hundred was a large organization of itinerant merchants, of a supra-regional character, the Manigrāmam a localized merchant body operating within specific regions, as their designations like Uraiṉ Ṣanṉtigrāmam and
Kodumbālur Maṇigrāmam would show, although they had inter-regional and long-distance trade links, and interacted with the Five Hundred or the moving trade carried on by the Five Hundred in their regions. The Aṇjyaṇṇam refers to an organization of foreigners who seem to have begun their commercial activities on the west coast, particularly Kerala, in the eighth and ninth centuries and spread out to the other coastal areas of South India from the eleventh century AD, interacting with both local merchants and the Five Hundred. Initially, Aṇjyaṇṇam seems to have referred to Jewish traders who came to the west coast and acquired settlements. Later, however, it was also used for Arab Muslim traders.

The Nagaram is a much more specific organization of merchants found in every market centre, collection and distribution centre, where local trade and itinerant trade met and exchanged items of trade. The designations of these bodies remain the same throughout the period of their activity. Nagaram being a mercantile organization evolving from local groups organizing and controlling local trade, Nagarattār became a generic term for all the traders and the trading community, particularly in Tamil Nadu, and hence is used even today by the Nāṭukkōṭṭai Chettiers.

The Five Hundred, as an organization of merchants, originated in the eighth century AD in Aihole in the Hungund Taluk of the Bijapur district of Karnataka. The founding of the Ayyavole Five Hundred may be seen as the result of a decision of a group of Mahājanas or brahmanas (caturvēdis), also called the Five Hundred Svāmis of the Mahāgrahāra of Aihole, to institutionalize control of the existing commerce of that region, thus providing an institutional base for organized commerce. Hence, it would be erroneous to trace the origin of the itinerant merchant organization, as Kenneth R. Hall has done, to small groups of expeditionary merchants who serviced less wealthy or isolated communities of the hinterland, and found it profitable to band together for mutual protection, and to assume that the itinerant merchant organizations of the Cōla age developed from such bands of expeditionary traders into quite powerful commercial associations.

Aihole, also known as Aryapura and Ahicchatra in their inscriptions, was, thus, both the progenitor and birth place of the corporation. However, the organization did not remain a single unified
body throughout its history, nor was Aihole its permanent headquarters. The number Five Hundred was a conventional one and remained so for the rest of the history of the itinerant traders, who derived their name from the parent organization, despite the fact that the organization became a much larger one, drawing its members from various regions and communities. Other terms like Nānādesi, Urbaya-nānādesi, Valaṁjiyar or Vira Valaṁjiyar, Baṇajiga etc., were of a descriptive or adjectival nature, used to denote the itinerant merchants following the trading profession or the Baṇanju dharma. Hence, these terms are found sometimes used interchangeably in many of their records. Among the other groups who are mentioned along with the Five Hundred, were mercenary fighters who protected their merchandise, probably in lieu of a share in the profit. The militant character of their mercantile organization derives mainly from these groups, whose personal valour and ferocity are indicated by such epithets as Ilancingam, Cittiravali, Erivira, Munaivirar, Kongavalar, Virakośṭiyar etc. The militant component of the itinerant trading organization is visible in many of the South Indian epigraphs, but most conspicuously in the Kongu nādu inscriptions, where the sculptural representations of weapons, horses and elephants accompany some of the records mentioning attikōśattār (elephant corps) and Virakośattār (cavalry). ¹⁷ Some of them became traders through long association with the organization. Crafts groups are also sometimes mentioned with the Five Hundred,¹⁸ probably due to the links established between the two for the marketing of commodities, particularly textiles, metalware and pottery. Being the largest itinerant merchant organization covering distant regions and divergent commercial areas, the Five Hundred was the only organization to have mercenaries to protect their goods and to set up protected mercantile towns (with warehouses) called Erivirappattanas.¹⁹

The name Ayyāvole,²⁰ became, in Tamil, Aiyapolil and Dannapolil, and was often used as a descriptive epithet of their towns and the deities they worshipped, e.g. Aiyapolil Paramēsvari. But the term Five Hundred is more commonly used to denote the group, and is sometimes stretched into Nanadesiya Tiṣai Āyirattu Aiyirattu Aiṇninuruvav.

¹ Meaning—The Five Hundred of a thousand directions and several countries/regions.
It has been pointed out earlier that the Five Hundred cannot be treated as a single unified body of merchants throughout its history, nor did it function as one cohesive whole. In the very early days of the organization, there seems to have been some unity and common purpose in the manner in which they functioned, both in Karnataka and in Tamil Nadu. But with the growing development of regional kingdoms and regional interests, there appears a bifurcation between the guild as it operated in the Kannada speaking areas, and as it functioned in the Tamil region. Within these broad divisions the association appears to have functioned at times in large units.

In Karnataka, from the eleventh century onwards, the Ayyāvole acquired new bases and established several towns as 'Southern Ayyāvole', both under the patronage of the Western Caḷukyas of Kalyāṇi and the Hoysalas of Dvārakamudra. Interestingly, in an inscription of AD 1267 from Dodballapur, the Ayyāvole merchants claim descent from the Cōlas and Caḷukyas. The 'Southern Ayyāvole' towns are believed to be named after the Ayyāvole in northern Karnataka. However, most of these towns came up in South Karnataka only after regular interaction between Karnataka and Tamil Nadu was established following Cōla inroads and a possible movement of the Tamil merchant organization into the link areas and Karnataka. It would, hence, be tempting to see a connection and argue that these towns represent an expansion of the Tamil Five Hundred into Karnataka.

In Tamil Nadu the Aiṇṇūṟṟuvar (Five Hundred) acquired the character of a composite body of itinerant traders who came from different parts of the Tamil speaking areas. One of the most remarkable inscriptions, from the point of view of its composition, comes from Tirumalai in the Sivaganga taluk of Ramanathapuram district. After the usual praśasti, it provides a list of the people who belonged the organization and who met at Tirumalai in the Aiṇṇūṟṟuvar Tirukkāvāṉam of the local Śiva temple. The members hailed from different places and are called by their respective regions, like the Tiśai Āyirattu Aiṇṇūṟṟuvar
of Vaḍakalavali nādu, of Tirukōṭṭiyur Maṉiyambalam, of Vēmbarrūr, of Malaimandalam, of Alagaimānagaram, and many other places. Terms like Aiṅṅūruva Bhaṭṭan and names like Aiṅṅūruva Inban Deva Ceṭṭi would also indicate the heterogeneous caste composition of this body. The Five Hundred was, thus, a group of people of ‘disparate origins associating together for a common purpose’ (trade), i.e. of several castes, religions and regions.

The first appearance of the Five Hundred in Tamil Nadu is in the Pudukkottai region towards the close of the ninth century, and their presence here and in the Ramanathapuram district is almost continuously attested to down to the fourteenth century AD. Their sudden appearance in the distant Tamil region of Pudukkottai, after Aihoḷe, may be attributed to the established commercial importance of this region from the beginning of the Christian era, and also to the link that this region provided between the trading emporium of Tōṇḍi with the Kaveri Valley and the Vaigai region, the Cōḷa and Pāṇḍya heartlands respectively. There is, indeed, a concentration of the ‘Five Hundred’ inscriptions in the Pudukkottai and Ramanathapuram districts throughout the period under consideration. In this region, the Five Hundred appears to have interacted with the Koḍumbāḻur Maṉigrāmam and the local Nagarattār, some of whom may well have become local representatives of the itinerant merchant organization.

The route that the Five Hundred used to reach Tamil Nadu so early (ninth century–Munisandai) after its foundation in Aihoḷe in Karnataka, is not clearly attested to. It has, however, been suggested that they moved into Tamil Nadu through the Chittoor region and Palar valley southwards, a route that was probably used by the Kurumbar tribes, who are still to be seen in the Pudukkottai area. This was the route followed by the invading Rāṣṭrakūṭa armies under Kṛṣṇa III in the tenth century AD. Equal claims to have been the regular route of migration or movement between Karnataka and Tamil Nadu may be made for the Kongu region, i.e. from the Ganga country north of the Kaveri through Kongu into the Kaveri valley and further south. This route is better attested to from very early times through the line of Tamil Brāhmi inscriptions (Pugalīyūr, Arachalūr,
Tiruchirapalli and Śittaṇṇavāsāl) and the discovery of hoards of Roman coins also marking the same route, apart from the tradition of the Digambara Jaina Migration. However, in both these areas, i.e. Palar Valley and Kongu, the inscriptions of the Aiṇṇūrruvar appear only from the eleventh century AD. A second wave of Jaina influence in the eighth and ninth centuries, under Rāṣṭrakūṭa patronage, is also indicated by a series of Jaina epigraphs, marking a line of sites in the North Arcot, South Arcot, Tiruchirapalli, Pudukkottai, Ramanathapuram, Madurai and Tirunelveli, leading on to South Kerala. These migrations may well have followed ancient and early medieval trade routes linking the different cultural regions of South India.

The spatial and chronological distribution of the Aiṇṇūrruvar inscriptions also makes an interesting study. In the Pudukkottai region, their activities in the ninth to eleventh centuries AD were encouraged by the early and middle Cōlas and their feudatories, the Irukkuvēls of Kodumbālūr. The close matrimonial ties between the Cōlas and Irukkuvēls may well have been inspired by the strategic location of the region, linking areas of commercial importance. A rather close identity of interests between this commercial organization and the Cōlas may be recognised, not only in the fostering of trade in this region, but also in other regions conquered by the Cōlas in the eleventh and twelfth centuries AD.

The Five Hundred moved in wherever the Cōlas stepped in as conquerors. Into the region south and north of the upper Kaveri valley, i.e. the Kongu and Ganga countries respectively, the Aiṇṇūrruvar moved in the wake of the Cōla conquests under Rājarāja I and Rājendra I (AD 985-1044). Taḷakkādu, north of the Kaveri, and Muḍikōṇḍan (Muḍikōnda-cōḻapuram), south of the Kaveri, marked the two major centres of merchant activity. In Muḍikōṇḍan, the merchants of the 18 pattanas north of the Kaveri and of the 18 pattanas south of the Kaveri made huge endowments to the local Viṣṇu temple and exercised control over the temple management. In the eleventh century, Aiyapolil Kāṭṭūr and Basinikōṇḍa (Śirāvalli) in the Chingleput and Chittoor districts, respectively became Erivirappattanas or protected mercantile towns under special charters from the Cōla rulers for the Toṇḍaimanḍalam region, also called
Jayankondacolamandalam. In Sri Lanka, following the Cola conquests of the eleventh century AD, the Five Hundred became active in the organized commerce and movement of trade in the northern parts, i.e. Rajarata, with Polonnaruwa as an important centre. After the political unification of Vengi with the Cola kingdom under Kulottunga I (accession AD 1070) the Five Hundred are seen as far north as Visakhapatnam (Kulottungacolan pattinam) and other coastal towns upto Draksharama in the Ganjam district of Orissa. Under the Cola royal patronage, Tamil traders moved more frequently into the Andhra region and Cola mandalamuna Vyapari are referred to in a few interior trade centres, while Ghantasala or Colapandiyapattinam on the coast became an important emporium of trade. Trade, in fact, was much more directly regulated under the middle Colas, Rajaraja I to Kulottunga I (AD 985-1118), whose interest in developing the Cola port of Nagappattinam is well known. Their trade missions to China, maritime expeditions to Srivijaya (1025) and abolition of tolls by Kulottunga I, undoubtedly encouraged the movement of itinerant traders, and helped in establishing trade links with China. Their continuing interest in foreign trade is indicated by the Canton inscription of Kulottunga I’s reign, detailing attempts made to establish a trading presence at that port.

In the heart of the Cola kingdom, i.e. the Kaveri delta, the Five Hundred began its activity in the tenth century in Tirupurumbiyam, Tiruvdivamarudur and various other centres such as Tiruvellikkudi, Tirunallaru, Tiruccengodu, Koyil Teverayanpetta and Tiruccorutturai. They are seen as far south as Ukkirankottai (Karavandapuram), a fortified town in the Tirunelveli district in the same period. In the middle Cola period, they fanned out into Tondaimandalam, Kongu Nadu and Panchinadu, the most notable example in the Pandya region being the Erivirappattana at Tiruvallivasaram in the Ambasamudram taluk (the newly developed Mulli nado) of the Tirunelveli district, with direct access to South Kerala through the Aramboli pass, and also control over the southern Pandya region of the Tamraparni.

The Erivirappattanas of this period are seen coming up mainly in the trade routes, and even in the region of settled agriculture,
like the wet zone of Tamraparni.\textsuperscript{40} The participation of local traders and nagaram members in itinerant trade reached an unprecedented degree and, hence, a series of settlements named after the Ainnurruvar or Valañjīyar were established as semi-permanent or permanent residential quarters in various centres.\textsuperscript{41} It must, however, be pointed out that in the capitals of Tañjavur and Gangaikonda Colapuram and the imperial port city of Nāgapattīnām, and even in Kāncipuram and Māmallapuram, the mānagarams or local nagarams wielded greater influence, while the Five Hundred and other merchant groups were more or less confined to the routes linking all other outlying regions (peripheral areas) with the Cōla heartland, and to the commercially important areas like Pudukkottai and Ramanathapuram districts, and Kongu nādu, i.e. Salem, Erode (Periyar) and Coimbatore districts.

In the period of the later Cōlas (twelfth and thirteenth centuries) and the Pāṇḍyas of the thirteenth and fourteenth centuries, we notice a phenomenal increase in the activities of the Five Hundred, with a clear tendency to expand its sphere of influence and to show less reliance on royal support and patronage, although many of the guild inscriptions are still dated in the reign periods of the late Cōla and Pāṇḍya rulers. We have rather impressive evidence that in most centres of distribution and emporia the Five Hundred acted jointly with other organized groups like the Cittiramēli or Padinen Visaya organization in the levy of maganmai and pattanappagudi (tolls and shares or cesses of towns). In the elaborate prāśastis of these inscriptions mentioning the two organizations, the Cittiramēli is given the pride of place, followed by the Five Hundred. Notable among these are the records from Tirumalai and Piranmalai in Ramanathapuram district and Anbil, Korramangalam, Tuvarankurici and Kōvilpatī in Tiruchirapalli district.\textsuperscript{42} Here they exercised their joint authority to levy and grant cesses and tolls to the local temples on merchandise passing through the region. The institutionalization of the coming together of several organizations and their exercising joint authority is a conspicuous feature of the thirteenth and early fourteenth centuries AD. However, it would appear that merchant bodies, particularly the Five Hundred, had on no occasion the authority to levy
and grant such tolls, except in conjunction with the Cittirameli or the Padinen Visaya, which refer to organizations of agriculturists and local elite groups controlling production of agricultural and other goods. Presumably, in the assignment of brokerage and monopoly to individuals or groups of traders on certain items of trade, the Five Hundred exercised its authority jointly with the local nadu, nagaram members and the larger agricultural organization of the 18 Visaya or Cittirameli.

The Cittirameli Periya nadu was an organization of agriculturists, whose inscriptions appear in important trade and urban centres. It has been described as an agricultural guild by K.G. Krishnan, who has analysed the evidence of inscriptions, not only from Tamil Nadu, but also from Karnataka and Andhra, where the Cittirameli appears from about twelfth century AD. The Okkalu of Karnataka, it is suggested, was a similar organization. The evidence on the Okkalu, however, does not point to an organization of the Cittirameli type, but more to a group of agriculturists in specific localities.

Dominant agricultural organizations jointly mentioned in the ‘guild’ inscriptions, probably had commercial transactions with the Five Hundred, exchanging agricultural products for exotic and nonagricultural items. The growth in the power of landowning classes is a marked development of the twelfth century AD, both in South India and Sri Lanka. The links that developed between the merchant guild and associations of agriculturists were mainly due to the increase in the importance of agricultural commodities in trade from the twelfth century onwards. The urban development of this period, and the growing food needs of urban settlements, enhanced the influence of the agricultural classes, for such needs could be satisfied only by powerful peasant groups, who could mobilise grain and other products for supply to itinerant traders through the local markets.

In the late thirteenth and early fourteenth centuries, particularly under the Pandyas, the joint presence of the weavers with trading communities like the Five Hundred also suggests a closer link between textile production and trade, and a certain legitimacy derived from the presence of the crafts groups. It would appear that weavers gradually took to trading in textiles,
or worked for the itinerant merchant body by organizing production for a wider market. At this point, references to Čilai Ceṭṭis in the northern Tamil region (Kañcipuram) and in Kongu (Dharmapuri) may be noticed in the thirteenth and fourteenth century inscriptions. The largest craft organization which came to be set up by the fourteenth century AD was that of the weavers, whose Mahānādu organization had its headquarters in Kañcipuram, the most ancient textile centre of South India. The Sāliyas and Kaikkolās, two weaver communities of South India, came to be classified among the Right and Left Hand caste division, which arose in Tamil Nadu in the twelfth century AD as a paradigmatic division, to determine the social and caste status of the artisans and craftsmen apart from new ethnic and economic groups. Craft groups other than the weavers also came to be organized largely under this division. With the urbanization of the twelfth and thirteenth centuries, urban social stratification invariably tended to use the three categories of brāhmaṇa, Vēḷāḷa and the Right and Left Hand castes. With the increase in organized commerce and itinerant trade and the demand for textiles and other products, the artisan communities also obtained special privileges, either from local chiefs or temple authorities, and sometimes also through the good offices of the merchant organizations.

In a slightly different context, the dependence of the craftsmen on the merchant organizations is underlined, as seen in the role of the merchants providing asylum to the craftsmen in Erode as early as the eleventh century AD. The merchant body sometimes framed rules for the Valangai (Right Hand) and Idangai (Left Hand), or granted them privileges, emphasising the interdependence of these two sections of the commercial world, especially in areas where the merchants assumed control and management of temples and acted as protectors and patrons of artisanal groups, as in the Kongu region. The artisan community is seen to be coming into its own after the twelfth century AD, i.e. in the late Cōla and Pāṇḍya periods. In the predominantly agrarian set-up of Tamil Nadu, the artisans were more often attached to the locality, i.e. to the temple, the land-owning brāhmaṇas and Vēḷāḷas through inter-dependent land tenures. However, changes in the agrarian organization, in
the pattern of land ownership and the introduction of an economy based on inter-regional trade, the demand for their services both by local landed groups and by the itinerant merchant organizations, acquired for them certain concessions and privileges meant to improve their social position. In the late twelfth century, the anuloma rathakāras in Puñjai had special privileges conferred on them. The artisan community became participants in the gift-making processes, as seen in the thirteenth century inscriptions from Nodiyūr (Tanjavur district) where the Kannālas of several places met and agreed to assign to tithe collected from among themselves to the local temple, and to get differences settled jointly with the temple trustees and local chief.

Craft production was perhaps more intensive in the Kongu region, where the twelfth to sixteenth century inscriptions refer to large-scale artisan activity and their participation in important civic duties, for which special privileges were conferred on them. Privileges were collectively granted to the Kannālar communities in Kāncikkūval nādu (thirteenth century), Vengāla nādu (thirteenth century), Kangēya nādu and Pundurai nādu (fourteenth century), under the Kongu Cōlas and Kongu Pāṇḍyas. Agreements among artisan communities for various purposes also became common during this period.

Thus, organized commerce by Nagarams, manigrāmam and long-distance trade through itinerant merchant bodies, accelerated the process of urban development, crafts organization, a tripartite social stratification in an urban context in multi-temple centres and single large temple centres, some of which became pilgrimage centres; and also in administrative centres. Many of these newly emerging socio-economic groups were accommodated in the tirumadai vilāgam of the temple centres.

The dominant role of the Five Hundred in inter-regional trade and commerce in South India is established beyond doubt by the continuous occurrence of guild records in the three major regions, i.e. Tamil Nadu, Karnataka and Andhra Pradesh. Furthermore, their participation in overseas trade is also attested to by the presence of guild inscriptions in northern Sri Lanka, Siam (South Thailand), Sumatra and Burma. One of these inscriptions, which is found in Barus (Loboe Toewa), Sumatra,
is particularly significant, as it refers to Barus as Varōca in Tamil, and describes it as Mātangari Valla Deśi Uyyakkonda Paṭṭīnām and Velāpuram as a part of that paṭṭīnām, in which the Five Hundred made arrangements in AD 1088–89, for a regular income or gift in gold to the local chiefs of merchants, to be paid by the Marakkala nāyakan and others from South India who came to that port.56 This inscription points to the importance of the Southeastern trade in the eleventh century, in which the Five Hundred not only played a dominant role, but even had control of port towns.

The overseas trade links and the itinerant traders’ role in establishing these links are attested to by the long lists of expensive imported commodities given in their inscriptions. Notable among them are the Shikarpur inscription in the Shimoga district of Karnataka,57 and the Pirānmalai inscriptions in the Ramanathapuram district of Tamil Nadu.58 The Shikarpur inscription talks of the merchants as travelling by land routes, water routes, covering six continents, with superior elephants, well-bred horses, large sapphires, moonstones, pearls, rubies, diamonds, lapis lazuli, onyx, topaz, carbuncles, bdellium, sandal, camphor, musk, saffron . . . selling wholesale or hawking about on their shoulders etc. Through this trade the royal treasury was filled with gold and the royal family encouraged this trade by being the greatest consumers of luxury items. The imported items mentioned in the famous Pirānmalai inscription are of a different kind, like aloeswood (akhil), sandalwood, silk, rosewater, camphor oil and perfume, apart from elephants and horses, which are common in most inscriptions of South India. Aloeswood, camphor, sandalwood, horses (and perhaps even camels?) are mentioned in the Kōvilpaṭṭi inscription of about AD 1305.59 Most of these items came from Southeast Asia, except horses which came from Arabia. Significantly, the Barus inscription referring to the Five Hundred and dated in AD 1088–89 comes from the heart of the camphor growing area of Sumatra.60 Silk may have come from China, although whether it reached the Cōla-Pāṇḍya coast is not clear. Elephants from Burma and horses from Arabia came both into the ports of the Western coast and into Kāyal paṭṭīnām on the Pāṇḍya coast, and rosewater from West Asia. South India was both on the transit
trade and terminal trade from West Asia to China, through Sri Lanka and Southeast Asia. Tōndi and Kulaśekharappaṭṭinām were the ports at which many of the items were unloaded and distributed. An interesting record from Tōndi dated in AD 1269, registers an agreement by the Anjusvanam, Manigrāmam, Sāmanta-Pandasālis (probably stockists of commodities at the port) and others residing there, to levy certain taxes on commodities sold and purchased at the port, in order to meet the rebuilding expenses of the mandapa of the local Śiva temple. Spices, pepper in particular, and incense, were some of the other important items meant both for local consumption and onward trade. The temples and mathas or monasteries of the Tamil region were, next to the royal family, the greatest consumers of most of the articles mentioned above.

Many other commodities mentioned in the Pirānmalai and other Tamil inscriptions, as well as the Chintapalle inscription of about AD 1240 from Andhra, refer to agricultural products like paddy, sesame, pulses, betel-nuts and leaves, salt and raw materials like cotton. Metals like copper, zinc, lead and iron also figure among the items of trade. In fact, the only manufactured good requiring technological skill and organized production was textile (local cloth), and it is for South Indian textiles that there was an ever-growing demand. Hence, the weaver community gradually acquired a position of great social and economic importance. This is attested to by the references to Kaikkolās and Sāliya Nagarattār, who not only controlled production and marketing of cloth, but participated in temple services, donations, conduct of festivals, administration and management. There is also a noticeable change in the pattern of land ownership, both weavers and merchants becoming important land-owning communities and wielding considerable influence in the localities where they hailed from.

If the presence of the guild inscriptions with their praśasti and lists of items of trade may be taken as a direct indication of distribution centres, most of them may be located in the Pudukkottai, Ramanathapuram districts and along the trade routes where Erivirappattanas were established. The guild inscriptions often refer to the 18 pattanas, 32 Vēḷā (or Vēḷār) purams, 64 Kadigai-t-tāvalāms from where the traders came. Though it
would be difficult to identify and locate all of them, it is quite likely that some of the major centres with guild inscriptions and the ports constantly used by traders are included among them, such as Vañcimānāgaram (Karūr), Kodumbāḷur, Kulaśekharappāṭṭīnām, Alagaimānāgaram, Nārttāmalai, Toṇḍi and Pirānmalai. There also emerged a series of coastal towns starting from Tiruppālaivanaṁ (Pulicat), the northernmost point in Tamil Nadu, down to Kōrkai and Kāyal in the mouth of the Tamraparni, marking a coastal route with halting stations and distribution points used by the itinerant traders. Kovalam, Sadras and Tranquebar were some of these towns which emerged into prominence in the thirteenth and fourteenth centuries AD.\(^\text{65}\)

Organized commerce in this period followed exchange by barter and also the use of money, although monetization in medieval South India, at least down to the fourteenth century AD, was mostly on a low key, particularly in Tamil Nadu. The Vijayanagar period saw many important changes, including greater monetization and emergence of individual traders and master craftsmen, which indirectly affected itinerant trading communities and their Samayam or organization.

The towns of Tamil Nadu, including the ones with guild activities, differed in their administrative organization from those of Karnataka. The latter had their pattanasvāmis, who were heads of towns and who presided over or participated in the meetings of the merchant bodies and other local groups\(^\text{66}\) (Shikarpur). No such ‘lords’ of towns are known to have presided over the nagarams or market centres or towns with guild inscriptions in Tamil Nadu. There are, however, references to pattanasvāmi, who along with members of the Padinen Viṣaya, levied cesses on merchandise as in Pirānmalai.\(^\text{67}\) The nagarams of Tamil Nadu were administered by the nagaram members with the help of accountants (nagarakkanakku) and other employees, the market governed by a specific set of rules and regulations and maintained through cesses and levies like angādippattam.\(^\text{68}\) The merchant bodies were subject to the common rules framed by the nādu, nagaram padinēnḥhūmi and cittiramēli organizations, acting jointly in the form of an institutionalized forum, exercising authority through levying cesses and tolls and controlling the distribution of goods.
Localized groups like Maṇigrāmam and Nagaram were powerful bodies, which diversified their activities by marketing special items, as for example by forming sub-nagarams like the vāniya nagaram, Śankarappādi nagaram, sāliya nagaram and sāttum pariśaṭṭa nagaram dealing in oil and cloth respectively at various centres like Vālikāṇḍapuram, Śengālipuram, Tirukkōyilūr and other places. The Pāraganagaram or sea-faring merchants were active in the region of Salem (Pullūr) even as early as the early Cōḷa period. Kudirai Cēṭṭis from Malaimanḍalām or Kerala were horse dealers, who catered to the needs of the Cōḷa kingdom from the ninth to the thirteenth centuries.

The Vāniya nagaram organized itself into a supra-local body called the Vāniya nagaram of several regions or Padinen Viṣaya, somewhat like the Telikis of Andhra. Individual traders sometimes used the title of Cakravartī, indicating the emergence of merchant princes, as seen in the thirteenth and fourteenth century inscriptions of Muṭṭam (in Pēṟūr, Coimbatore) and Śivāyam or Ratnagiri (ancient Tiruvātipōkkī) in the Tiruchirapalli district. Among the signatories to the Pirāmalai guild inscription, mention is made of a Samaya Cakravartī. Political stability disappeared with the decline of Cōḷa power in the beginning of the thirteenth century AD. References to Viradalam and Sūradalam in the guild inscriptions of this period probably indicate the usurpation of authority by powerful merchants and local chiefs, taking advantage of the declining Cōḷa power and the relatively weaker Pāṇḍya power of the thirteenth and fourteenth centuries, in order to protect themselves and their newly gained wealth and status from other rivals for power and position. At any rate, the fourteenth century would seem to mark the end of the powerful merchant organizations in Tamil Nadu, although a temporary revival was brought about under Vijayanagar in Karnataka and Andhra regions.

Imperial Power and Urban Growth
Kuṭamūkku-Palaiyārai, the Twin Cities of the Cōlas

Problems of interpretation of epigraphic records, the main source for the study of ancient and medieval South Indian history, and the inadequacy of statistical data, have generally deterred scholars from reconstructing the history of urban development, despite their interest in the evolution of temple complexes, peasant settlements and changes in the socioeconomic structure. However, epigraphic sources, when supplemented with traditional and legendary accounts and archaeological data, provide fairly useful, though not exhaustive, information about the nature and evolution of urban centres and the various factors contributing to the urbanization process in the period from the seventh to the thirteenth centuries AD, especially for the areas under the administration of the Cōlas. This essay is an attempt to study the twin-city of Kuṭamūkku-Palaiyārai, which developed as an urban centre, mainly during the Cōla period in the Cōla heartland.

Kuṭamūkku (Map 3-1), alternately known as Kuḍandai, is first mentioned as Kuḍandai in the Sangam works of the first three centuries of the Christian era, and represents one of the earliest Cōla settlements in the delta region of the Kaveri valley. It came to be known as Kumbhakonam from the fourteenth century AD,¹ when a general tendency to Sanskritize all ancient Tamil place-names evidently led to the change from Kuṭamūkku into Kumbhakonam.

Palaiyārai (Map 3-13), the second part of this urban complex, dates from the period of the Śaiva-Vaiṣṇava religious development of the seventh to ninth centuries AD.² The name Palaiyārai has two components—Palaiya + ārai (= ārrūr), meaning ‘an old settlement on the banks of a river.’ It was also known as
Nandipuram, Áyirattli, Muḍikondacōlapuram and Áhavamalakulakālapuram at various points of time.

The geographical location of both Kuḍamūkku and Palaiyārai contributed in a large measure to their early development into a rich source of revenue for the Cōlas. Situated between the Kaveri and the Ariśilāru (now called Araśalāru), Kuḍamūkku occupies a central position in the most fertile part of the delta region, where the distributaries are close to one another. South of Kuḍamūkku, on either banks of the Tirumalarājan and Muḍikondān rivers, the city of Palaiyārai grew around the palace of the imperial Cōlas.

The Ariśilāru, one of the major distributaries of this river system, is perhaps also the oldest. Among the others, the Viraccōḷanāru, running north of Kuḍamūkku, apparently owes its origin to Parāntaka I (c. AD 907-55), one of whose titles was Viracōla. The Muḍikondān may be dated from the period of Rājendra I, who was also known as Muḍikondacōla, a title which provided Palaiyārai with the alternate name of Muḍikondacōlapuram. The Tirumalarājan also seems to have come into existence in the imperial Cōla period, for it flows through Nandanmeḍu, an ancient urn-burial and Black-and-Red Ware site near Palaiyārai. The Veṭṭāru and Vadavāru, running south of this urban complex, may also be dated back to the same period, although no clear evidence of their origins can be found. The existence of a series of canals (vaṭṭkkāl) in this region would further point to the efforts of the Cōlas to build and maintain a fairly good irrigation network in this area as well as in other parts of Cōlamanḍalam. At the same time, it may be noted that the maintenance of small canals was often the concern of the local assemblies like the Sabha and Ûr and also the Mūlapariśad looking after temple administration.

Kuḍamūkku in the Pre-Imperial Cōla Period

The antiquity of Kuḍamūkku is indicated by the early Sangam references to Kuḍandaivai (and also Kuḍandaivayil or Kuḍavaiyil), where the Korra Cōlas kept their treasure strongly guarded. The Cōla king Cenganān kept his Cērā rival Kanakkāl Irumporai imprisoned in Kuḍavaiyir-Kōṭtam, pointing to Kuḍandaiv as a
Cola stronghold from the Sangam period. Besides Kuḍandai, several other settlements must have emerged before the beginning of the Christian era, for the Sangam literary descriptions of the Cola country clearly attest to the early colonization of the Kaveri valley, 'marked by rows of settlements of numerous clans, who lived amicably with one another'. This is further substantiated by archaeological evidence coming from the Megalithic urn-burial site of Nandannēdu, where the urn-burials and Black-and-Red Ware occur in the exposed sections of the Tirumalarājan river. Black-and-Red Ware is also found in the lower levels of Sōlamāligai (Map 3-16), the site of the old Cola palace. The Sangam settlements would seem to represent the end phases of the Megalithic culture in Tamil Nadu and the beginnings of the earliest well-attested pastoral-cum-peasant habitations, as shown by the uniformity with which Black-and-Red pottery occurs in the lowermost levels of every site so far excavated in Tamil Nadu.

Very little is known about Kuḍandai and its environs in the post-Sangam period (the fourth to seventh centuries AD). A general political vacuum set in after the Sangam Cōlas were defeated by a 'tribe' or 'clan' called the Kalabhras who were, from various literary and epigraphic descriptions, a non-orthodox people with strong predilections towards the Buddhist and Jain religions. The Cōlas remained in obscurity till their re-emergence to power in the middle of the ninth century AD. The importance of the Kuḍamūkku region as a resource base, was, however, so great that the Pallavas of Kāṅcipuram and the Pāṇḍyas of Madurai, the leading powers of the period between the seventh and ninth centuries, were drawn into a series of major struggles for its dominance. Some of the important battles between the two powers were fought on the banks of the Arisilāru (or Aricit) and near Kuḍamūkku itself. The Pallava Nandivarman II was besieged by his Cōla-Pāṇḍya opponents at Nandipuram (Map 3-18—a part of Palaiyārai city), from where he was released after a serious struggle by his general Udayacandra. Nandivarman III (c. AD 846–69) is described as the conqueror of Palaiyārai, where the 'six armies' fell in a mighty onslaught. Tiruppurambiyan, north of Kuḍamūkku (Map 3-7), was the battlefield which signalled the decline
of the Pallavas and Pândyas and the rise of the Côlas under Aditya I (c. AD 871-907).\textsuperscript{14}

It has often been suggested that the Côlas of this period were the subordinates of the Pallavas and Pândyas alternately,\textsuperscript{15} consequent upon the nature and results of the Pallava-Pândya conflicts for a hold over this region. It may be further suggested that the Kuḍamükku region formed the nucleus of the rising power of the Vijayálaya line of Côlas. There can be little doubt that the descendants of the Sangam Côlas acquired their main resources from this area, which continued to be their stronghold even after the decline of Uraiyūr and Kāvērippūmpaṭṭiṇam. The choice of the imperial Côlas fell on Taṇḍjavūr (Tanjore, Map 3) as their new capital, and the capture of Taṇḍjavūr by Vijayálaya from the Muttaraiyar chieftains\textsuperscript{16} was certainly not without significance, considering the geographical situation of the new capital. Located on the south bank of the Vaḍavaru, Taṇḍjavūr commanded access to the delta region, thus affording protection to the perennial resource base of the Côlas, represented by the Kuḍamükku-Palaiyārai region.

The resource potential of this region is indicated not merely by the numerous peasant settlements dating from the Sangam period, but also by the tendency of all early brahmadeyas to be clustered together and to proliferate rapidly in this area in the period between the seventh and ninth centuries. Two of these early brahmadeyas known as Simhaviṣṇu-caturvedimangalam (Kañcanūr) and Mahendramangalam,\textsuperscript{17} may be dated back to the period of the early Pallavas, i.e. Simhaviṣṇu (c. AD 550-90) and Mahendravarman I (c. AD 590-630). One more brahmadeya was created in the period of Nandivarman II Pallavamalla (c. AD 731-96), viz., Dayāmukhamangalam near Taṇḍantōṭṭam (Map 3-8)\textsuperscript{18} located immediately south-east of Kuḍamükku. A few towns also came into existence by the ninth century AD. Kumaramārt-tanḍapuram near Tirunāgēsvaram (Map 3-2) was a nagaram (town), which probably owed its existence to Nandivarman III, one of whose titles was Kumaramārttāṇḍa.\textsuperscript{19} Tiraimūr, after which the Tiraimūr nāḍu was evidently named, was a nagaram of considerable importance,\textsuperscript{20} and seems to have been a part of a larger settlement, including Tiruvvidaimarudūr (Map 3-6), located about five miles east-north-east of Kuḍamükku.
The Kumbhakonam taluk had twenty-five out of a total of ninety-three brahmadeyas in the Tanjavur district, the highest number of a single taluk in the whole of Tamil Nadu, as seen from an estimate made from the inscriptions of this region collected up to the year 1915. Further work in this direction has already yielded evidence of many more brahmadeyas in the same taluk, particularly in the environs of Kuḍamūkku, emerging at different stages between the tenth and thirteenth centuries AD.

II

The successive stages in the evolution of the Kuḍamūkku-Palaiyārāi urban complex from the seventh to the thirteenth centuries may be discussed in two parts, the first relating to Kuḍamūkku proper and its dependent settlements like Tirunāgēśvaram, Tiruvalamculi (Map 3-3) and Tirukkarugāvūr (Map 3-4), and the second dealing with the palace complex of Palaiyārāi and its environs. In each part, an attempt will be made to show the expansion of the city during two broad periods, the first representing the period between the seventh and ninth centuries AD, and the second covering the imperial Cōla period (ninth to thirteenth centuries). The latter has been further subdivided into three phases: the early Cōla (AD 850-985), the middle Cōla (AD 985-1120) and the late Cōla (AD 1120-1279), for each temple-centred settlement, in order to maintain, as far as possible, a chronological sequence.

The Kuḍamūkku Complex

The evolution of the Kuḍamūkku complex between the seventh and ninth centuries AD is marked by the rise of temple settlements, both Śaiva and Vaiṣṇava, celebrated in religious tradition as the centres visited by the exponents of the bhakti cult—the Śaiva nāyanārs and Vaiṣṇava ālvārs. The modern town of Kumbhakonam has eight Śiva temples and twelve Viṣṇu temples, of which two Śiva temples and one major Viṣṇu temple date from this period, viz., the Kuḍandai Kilkkōṭṭam
(the Nāgēśvara temple) and the Kāyāvarohaṇa (the Kāśi Viṣṇu-nātha temple) representing the Śaiva settlements and the Sārangapāṇi temple representing the Vaiṣṇava settlement. The Tevāram and Divyaprābhandham references to these temples are mainly devoted to their religious importance and to the glorification of the respective deities enshrined in them.

Architecturally, these shrines were unpretentious brick structures later converted into stone vimānas (central shrines with towers), forming the nuclei of huge temple complexes, which grew steadily in size, from the early Cōla period, gaining additions of subsidiary shrines and enclosures and ending with the tall towers (gopuras) of the Vijayanagar-Nāyak period.

To the same period may be assigned the emergence of three other temple centres in Tirunāgēśvaram, Tiruvalamculi and Tirukkarugāvūr, although their inclusion in the Kuḍamukku complex is known only from the early Cōla inscriptions. Their architectural development is similar to the temples of Kuḍamukku proper and points to a progressive growth in size and importance throughout the Cōla period. Thus, it would appear that by the time of the rise of the Cōlas, Kuḍamukku and its environs came into prominence with five temple-centred settlements, the majority of which were populated by the followers of Śaivism.

Kuḍamukku, under the imperial Cōlas, covered a much larger area than the present town of Kumbhakonam. It extended over the whole of Pāmbūr nādu (Map 2), which contained a cluster of three brahmadeya-devadānas, viz., the main Kuḍamukku (or Kuḍamukkil), Tirunāgēśvaram, a pāl (=literally 'in the vicinity of') of Kuḍamukku, and Tiruvalamculi. To this group of settlements a fourth one called Tirukkarugāvūr may be added, as it is described as a part of Kuḍamukkil, although it was not situated within Pāmbūr nādu. The nādu was evidently not an administrative division created by the Cōlas, but was distinctly an agrarian unit which pre-dates the imperial Cōlas. This may be seen from the fact that Kuḍamukku and Pālaiyārai were located in different nādus, the former in Pāmbūr nādu between the Kāvēri and the Āriśilāru and the latter in Tirunaraiyūr nādu, covering the regions watered by the Muḍikonḍān and Tirumalarājan (Map 2). The immediate hinterland commanded by
this twin-city covered the whole area from the Kolliñdam (Cole-
roon) river in the north to the Vañavaru in the south.

During the early Cōla period, the expansion of Kuñdamūkku reveals a steady growth, not only in the initial reconstruction in stone of the traditionally important temples and their architectural elaboration, but also in the increasing role they played in the socio-economic and political activities of the centre. The Nāgēśvara temple may be described as the main institutional force through which the early Cōlas, starting from Parāntaka I, projected their growing power. The royal family was directly involved in its reconstruction and elaboration, and its maintenance through land grants and other gifts. The major economic activity of Kuñdamūkku was centred round this temple, as seen in the nature of the endowments made to it, in the form of land, cows, sheep, gold and money for a variety of purposes like festivals, feeding of brāhmanas and other ascetics (Śivayogins), daily rituals and burning of perpetual lamps. Apart from the royal family, the other social groups involved in these activities were Cōla officials of high rank, servants of the palace, personal retinues of the royal members (Vēlams), local merchants and traders from distant lands like Malai nādu (Kerala). While land endowments were common, money and gold gifts are found to be equally numerous, the donors in the latter case being usually merchants, and, occasionally, leading landowners (Vēlālas) from various parts of the Cōla kingdom. The manrādis (shepherds) represented another class of people who were closely associated with the administration of endowments, particularly of sheep, while the Mūlapariṣad of the temple, consisting mostly of brāhmanas, had control over the entire range of the temple’s activity, including sale and purchase of landed property. Members of the Kaikkōla or weaver community, many of whom served as members of the army, as teriñja kaikkōlas (chosen Kaikkōlas) offered gifts of sheep and also, occasionally, land, gold and money.

The monetary gifts and transactions of the temple would show that, apart from lumps of gold, weighed by the kalanjju standard, gold was also used in the form of money for purchase of land, or as gifts for feeding brāhmanas and ascetics. In fact,
it would appear from various such instances that, in the early Cōla period, the use of kalanjju as coined money was coming into vogue and was perhaps gradually replacing the use of metal by weight. This is implied in the reference to a gift of one hundred and five pieces of tulaippon in the reign of Parāntaka I, by a native of Ayirattali (Kaṇḍiyūr) in Kilār Kūṟṟam for festivals.\(^3\) The fact that the earliest known Cōla gold coin belongs to Uttama Cōla\(^4\) (c. AD 965–85), would lend additional support to the supposition that use of coined money was known in this period, although the practice of donating lumps of gold continued. In another transaction, the assembly of Kuḍamūkku raised 500 kalanjju of gold by sale of land, in order to pay an impost of 3,000 kalanjju levied on it by Parāntaka I,\(^5\) perhaps in an attempt to raise funds for his Pāṇḍya wars, which plagued the early Cōlas constantly till the virtual annexation of the Pāṇḍya region by Rājarāja I and Rājendra I (c. AD 985–1044).\(^6\)

The Nāgēśvara temple continued to be the centre of all major activities in Kuḍamūkku till the Kumbheśvara temple assumed precedence in the post-Cōla period on account of its religious importance. References to the Āvanakkalam (archives?) and Śṛṅ Bhaṇḍāram (treasury and storehouse)\(^7\) of the Nāgēśvara temple would attest to its extensive functions of collection and redistribution.

The second dēvadāna settlement in Kuḍamūkku grew up around the Somēśvara temple, which dates from the middle Cōla period, for the earliest recorded land grant to this temple is dated in the fifth regnal year of Rājarāja I (c. AD 970).\(^8\) It played a relatively less important role in the major activities of this centre, as practically nothing is known about it after the period of Rājarāja I till the late Cōla period, when it acquired independent status under the name Somanāthamangalam and came to be separated from Pāmbūr nāḍu.\(^9\) At the same time, lands in distant regions were either gifted or sold to this temple and the number of such transactions far exceeded the land endowments to any other temple in Kuḍamūkku during this period. These lands were situated in the northern parts of Tamil Nādu (Jayankōṇḍacōḻamāndālam), and also in other parts of the Cōla country, such as Tiraimūr nāḍu, Mirai Kūṟṟam and Kilar Kūṟṟam. Two major structural additions were also made
to it in the form of shrines dedicated to Śiva as Nataraja and Vināyaka.\(^{46}\)

In the post-Cōla period this temple suffered neglect due to the shift in importance to the Vaiṣṇava sections of the Kudamukku complex under Vijayanagar patronage. Hence its present nickname, ‘elai Somanātha’ (‘poor Somanātha’).\(^{47}\)

The Sārangapāni temple formed the nucleus of a large Vaiṣṇava settlement in Kudamukku. Traditional accounts and the Divyaprābandham references would assign its origins to the pre-Cōla period, although no corresponding evidence comes forth from other sources. Perhaps an indirect reference to it is made in one of the early Cōla inscriptions of the Nāgēśvara temple, mentioning the temple of Jalaśayana,\(^{48}\) an assumption which is strengthened by the fact that the Sārangapāni temple enshrines the reclining form of Viṣṇu-Nārāyana, to which seven of the āḻvārs have referred in their verses.\(^{49}\) However, in the thirteenth century it was certainly an important part of Kudamukku, as seen from the reference to the deity Ārāvamudu (i.e. the name of the deity as given in traditional literature) in a fragmentary inscription, palaeographically assignable to the thirteenth century.\(^{50}\) Of the original shrine of the earlier period, there is no trace, for the temple seems to have undergone major structural elaboration twice, first under the late Cōlas, and later under the Vijayanagar rulers. The architectural style and sculptural decorations of the main vimāna and the inner enclosures show distinct characteristics of the late Cōla style. An additional evidence of this date is provided by the sculptures representing Bharatanātya Karanas (poses) with label inscriptions datable to the twelfth century on palaeographic grounds.\(^{51}\)

The second major centre, i.e. Tirunāgēśvaram, forming a part of the Kudamukku complex, is about three miles east of modern Kumbhakonam, situated outside the limits of the present town. Its origins are assignable to the period of the Śaiva nāyanārs, but it developed as an important Śaiva centr under the early Cōlas. It appears to have replaced an earlier Jain settlement around a palli (Jain temple or monastery), which was patronized by the perunāgarattār (merchants of a big township) of Kumaramārttāndapuram in Tiraimūr nādu, who made provisions for renovating parts of it in the close of the ninth century AD.\(^{52}\)
The nagaram of Kumaramārttāndapuram was closely associated with the economic activities of Tiruvidaimarudūr, and also of the Jain settlement at Tirunāgēśvaram.

Under the early Cōlas, the Nāganātha temple which replaced the Jain pālli at Tirunāgēśvaram was the recipient of land and money endowments from members of the royal family. The direct involvement of the Mūlaparudai (executive committee) of Kuḍamūkku in the temple administration of Tirunāgēśvaram, is seen in its supervisory role in utilizing a money endowment on behalf of the Nāganātha temple for repairing damages caused by floods to an irrigation channel. The interest of this money endowment was paid in the form of paddy for the exposition of Śivadhārma at Tirunāgēśvaram.

The royal family continued to be personally associated with the grants to this temple under Rājēndra I. Senior officials and members of the vēlams also participated in such activities. Members of the elephant corps of Rājēndra’s army (ilaiya Kuṇjira mallar = junior elephant mahouts) also figure as donors. The accumulated wealth of the temple in terms of jewels, gold, silver vessels etc., were carefully registered by a temple servant, probably under the royal orders of Rājēndra I. The use of gold, both in the form of money and by the weight standard of kalaṇju, was a regular feature at this centre in the early and middle Cōla periods.

This temple settlement receded into the background due to the withdrawal of active royal patronage after Rājēndra I, although it remained an important part of this urban complex down to the end of the Cōla period, and continued to acquire more lands in the twelfth century in the reign of Rājēndra II (c. AD 1146–73).

Tiruvalamculi, now located outside the Kumbhakonam town, at a distance of about two miles west, was perhaps the largest of the temple settlements in this urban complex. Its history is traceable, almost continuously, from the pre-Cōla to the Vijayanagar periods. The Śiva temple of Kapardiśvara, around which this centre grew up, shares with other temples of this region the ‘honour’ of being visited by the Śaiva nāyanār, and hence acquired great religious importance under the Cōlas. The temple passed through successive stages of
enlargement under the Cōlas, and provides a remarkable example of horizontal magnification, a late Cōla phenomenon in the architectural history of Tamil Nadu.

In the early Cōla period, this temple acquired lands in Innambark nādu. It is, however, in the middle Cōla period, especially under Rājarāja I and Rājendra I, that it became the centre of major activities. While numerous tax-free land grants were made by the royal family in Tiraimūr nādu, Innambar nādu and Veṇnādu, a rich variety of gold ornaments was also presented to it by the Cōla princesses in the reign of Rājarāja I. An institution of higher learning called the Māligaik Mēlaikkallūrī in Tukkālivallam (not identifiable) was established under Rājarāja I as a part of this temple centre and provisions were made by the king for its maintenance, evidently through the temple.

Two new agrahāras were added to this settlement in the late Cōla period. The first was the Vellaivanīyaka-caturvēdimangalam (Map 3-12), which was established for the maintenance of the Vellaivanīyaka shrine, constructed in the late Cōla period in the outer enclosure of the temple. The second agaram, known as the Akhilanāyaka-caturvēdimangalam, is described as an agaram of Tiruvalamculi.

The majority of the land grants of the late Cōla period were intended for the Vellaivanīyaka shrine and were located in distant regions. Some of these grants were also made to the main deity of the temple during the troubled period of the Cōla-Pāṇḍya wars of the early thirteenth century, both ‘for the welfare of the inhabitants of this centre and for the success of Rājarāja III’. The lands and house sites donated to both the shrines were located in Innambar nādu, Nallūr nādu, and Tirunaraiviyūr nādu. The increase in the land grants to this temple in the late Cōla period may be attributed to an attempt to restore its original status to this centre, which became depopulated due to constant wars and great political disturbance. Land and house sites in Korrangudi, a hamlet of Akhilanayaka-caturvēdimangalam, were made over to the temple even under Köpperuṅjinga, the Kādava feudatory, who temporarily gained control over the Cōlas early in the thirteenth century.

Horse dealers (Kudirai cettis) from Malaimanḍalam (Kerala)
still frequented this region in the thirteenth century and made gifts of land to the temple. The existence in Tiruvalamculi of a group of Malaiyalar from Malaimandlam is also evidenced by the reference to some defaulters of land revenue raising loans from them and from the temple treasury.

Apart from land and gold, gifts of goats for lamp endowments were the most frequent at this temple, and the mantradis figure prominently, as in other temples, in the maintenance of such grants.

Tirukkarugaivur (also called Tirukkalavur), situated about thirteen miles south-west of modern Kumbhakonam, represents the third major settlement outside the present town, which is described as a part of Tirukku damukku in Pambur naidu. It contained three temples dedicated to Siva, Vishnu and Piḍāri, a local deity accepted in the brahmanical fold as an aspect of Sakti. The Siva temple assumed the dominant role in the evolution of this settlement, and may be dated from the period of Saiva nayanars. Originating as a small structure, without great architectural merit, this temple rose to prominence under the early Cōla. The endowments made in this period consisted mostly of land grants from a variety of people, i.e. members of the royal vēlams at Taṇjavur, women servants attached to temples, officers, elephant mahouts, and also merchants from Nandipuram. Under a royal order from Parāntaka I, the land owned by this temple, together with those of the Viṣṇu and Kaḷa Piḍāri temples, were listed and carefully recorded.

This centre ceased to be an important part of this urban complex after the tenth century AD, although its religious character persisted, due to its association with the Tevaram hymnists. The withdrawal of royal patronage perhaps led to its neglect by the other social groups in the urban milieu of Kuḍamukku-Palaiyārai.

Post-Cōla Developments in Kuḍamukku

In the post-Cōla, i.e. Vijayanagar-Nāyak, periods Kuḍamukku proper underwent a series of changes, resulting in a general decline of the temples of the Cōla period and the emergence of new centres of religious importance. There was a clear shift
in royal patronage from Šaiva to Vaišnava religious institutions, although the Šaiva temples continued to be centres of worship as they did not lose their hold entirely over the religious sentiments of the people. The Ādi Kumbhešvara gained precedence over the rest of the Šaiva shrines and two new Višnu temples, viz., the Rāmasvāmī and Cakrapāṇi temples, arose and vied with the older Sārangapāṇi temple for royal favour and religious importance.

The Kumbhešvara temple may be dated from the Vijayanagar period, both on the basis of its architectural style and the Vijayanagar inscriptions recording the earliest land grants to the temple. The Mahāmākam tank, considered to be the most sacred tank and of great ritual significance, also came to be associated with the festival of Māsi Magha (in February) celebrated in the Kumbhešvara temple, thus enhancing the sanctity of the latter. A ritual bath in this tank is believed to be equivalent to a holy dip in all the sacred rivers of India. This event takes place once in twelve years on the Mahāmākam day, representing the South Indian counterpart of the Kumbhamela of Prayāga. A series of sculptures representing all the river goddesses of India is found near this tank, in the precincts of the Kāsi Viśvanātha temple. On stylistic grounds, they may be assigned to the early Cōla period, thereby indicating the probable sacred associations of Kuṭamūkku with the river goddesses as early as the tenth century AD. The tank and the festival are referred to by the twelfth century Šaiva hagiological work, viz. the Periya Purāṇam, while narrating the story of the Šaiva saint Sambandar and his visit to the Šiva temples at Kuṭamūkku. Presumably, the festival is much older than its specific connections with the Kumbhešvara temple in the Vijayanagar period.

The Sārangapāṇi temple owes its renovation and architectural elaboration, including five tall towers (gopuras), to the Vijayanagar rulers. Beginning from Virūpana Uḍaiyār in AD 1385, when the name Kumbhakonam appears for the first time in the temple inscriptions, many members of this ruling family extended their patronage to it. Kṛṣṇadevarāya chose to make provisions for special worship after setting up a record of his achievements in the temple. Merchants from the Telugu region also began to visit this sacred centre and make land and money endowments.
A Vaiṣṇava maṭha came to be attached to this temple in the period of Raghunātha Nāyaka (seventeenth century), and it has served ever since as an important pontifical seat of the South Indian Vaiṣṇavas. It was, perhaps, also in the same period that a separate agaram was formed west of the Sārangapaṇī temple, after a gift of house-sites in the main street was made by Kacciyarāyar, a high official residing at Gangai-kōṇḍacōlapuram.

The Rāmasvāmi temple was one of the new Vaiṣṇava centres which came up in this period, and its construction is assigned to Raghunātha Nāyaka of Taṉjāvūr. It represents a unique instance of a Rāma temple enshrining in its sanctum sanctorum the brothers of Rāma, apart from the usual Rāma group consisting of Rāma, Sītā and Lakṣmaṇa. The huge mandapas of this temple carry on their composite pillars interesting iconographic forms of Viṣṇu, apart from secular figures representing members of the Nāyak family.

A large part of west Kumbhakonam, not far from the Sārangapaṇī temple, is occupied by the Cakrapaṇi temple and its residential area, which seem to have come into existence in the Vijayanagar-Nāyak period. The present Viṣṇu temple has evidently replaced an earlier Śiva shrine, as suggested by a thirteenth century inscription built into the madappalli (kitchen) of this temple, recording a gift to the shrine of Tirukkōḷiśvaram Uḍaiyār. A Śrī Vaiṣṇava religious head, known as Kōyil Kandādai Nāyan Ālvār Jiyar, made provisions in Ś. 1427 (AD 1505) for offerings to the deity and their redistribution among Śrī Vaiṣṇava pilgrims, thus controlling the redistributive functions of the temple in the sixteenth century AD.

Apart from the Śrī Vaiṣṇava religious organizations mentioned above, Kumbhakonam also became the centre of two other monastic establishments, viz. the Śankarācārya maṭha and the Vīra Śaiva maṭha (Hiriya maṭha). The former seems to have been established as early as the thirteenth century. Endowments were made to it under the late Vijayanagar ruler Vēṅkaṭa V in Ś. 1632 (AD 1710). The latter came into existence during the reign of king Vīra Narasimha in early sixteenth century AD. All these monastic establishments exercised considerable influence over the religious life of Kumbhakonam in the Vijayanagar and Nāyak
periods, and some of them, like the Śankaracārya matha and the Vaiṣṇava matha attached to the Śrāngapāni temple, continue to play a significant role in the religious activities of South India even today.

The general trend towards Vaiṣṇava dominance may perhaps be attributed not merely to royal patronage, but also to a gradual intensification of the Vaiṣṇava movement after Rāmānuja, i.e. after the twelfth-thirteenth centuries AD. The sectarian split into the Vaḍakalai and Tenkalai among the Vaiṣṇavas due to the liberalization of Vaiṣṇava ideology initiated by Rāmānuja, led to an increase in Vaiṣṇava mathas.94

The Palaiyārai Complex: Seventh–Ninth Centuries AD

The Palaiyārai complex, situated in Tirunaṟaiyūr nādu, extended over the banks of the Tirumalarājan and Muḍikondān. During the course of the seventh–ninth centuries AD it developed as a large city with 'wide streets and tall structures'95 consisting of a palace of the Cōlas96 and the residence of administrative officers. This complex grew around a large number of religious settlements and the administrative and military establishments of the Cōlas.

The earliest settlement of this region was located at Vaḍaṭalī or Vallaḷārkōyil near Mulaḷiyūr (Map 3-17), which was the scene of a major religious conflict between the Śaivas and Jains,97 which led to the decline of the Jain settlement which originally existed here. The Jains appear to have settled at various parts of the Kuḍamūkku-Palaiyārai region in this period. Quite a few Jain settlements are known from references in the inscription of this region. The Tirunāgēśvara inscriptions, mentioned earlier, and an inscription of the ninth–tenth century AD built into a doorjamb of the Kumbheśvara temple,98 which points to the existence of a Jain palli at Dīpankudi in the Nannilam taluk, and also the reference to the visit of Jain nuns from Palaiyārai to the sacred Jain hill at Kalugumalai in the Tirunelveli district,99 are sufficient proof of the influence that the Jains wielded here before the Śaiva revival.

The second important settlement of this region was Nandi puram (present Nāthankōyil, Map 3-18) which grew around a
Viṣṇu temple referred to in the hymns of Tirumangai Āḻvār as Nandipura Viṇṇagaram. The construction of this temple is attributed to Nandivarman II, the Pallava ruler of the eighth century AD. Amar Niti Nāyanār, one of the sixty three Śaiva saints of Periya Purāṇam, who has been assigned to this period, was a rich merchant who traded in cloth, gold and gems. It may be presumed that he lived in Nandipuram, which was a regular colony of merchants.

A third settlement, which emerged in the same period, was Tiruccattimurram in Paṭṭīśvaram (Map 3-14). It was the scene of a miraculous episode connected with Tiruṅjañanasambandar, who received a ‘pearl canopy’ by ‘divine grace’ when he visited the temple. Evidently, the temple was originally a small shrine, later renovated and enlarged under the Cōlas.

Palaiyārai in the Cōla Period

The earliest settlement assignable to the Cōla period is the Arumolideviśvaram (the present Sōmanātha temple at Kilpalaiyārai) erected by Rājarāja I, whose personal name was Arumolideva. It is located at a distance of about half a mile from Nandipuram. The present structure hardly contains any evidence of its date, due to large-scale renovations in the Vijayanagar period, but its existence in the middle Cōla period is established by a reference to a dīvadāna village belonging to this temple in an inscription of Rājarāja I from Tirunaraiyūr (Map 3-9).

Next in the chronological sequence of the emergence of settlements in Palaiyārai may be placed a pallippadai, a sepulchral monument (present Rāmanāthan Kōyil in Paṭṭīśvaram), built by Rājendra I for one of the queens by the name of Paṅcavanmahādevi. This temple seems to have been a centre of the Pāṣupata sect of Śaivism, as indicated by a reference to Lakulīsa Paṇḍita, a Pāṣupata teacher, in its foundation inscription. The considerable influence that the Pāṣupatas wielded in Palaiyārai is further attested to by the presence of 108 sculptured figures of Śaivācāryas belonging to this sect, with label inscriptions, in the Dārāsuram temple, built in another part of Palaiyārai in the twelfth century AD.

Two more temple settlements, which came up in Palaiyārai
in the twelfth century AD, were centred round the Śiva temple called Virudarajabhayankarēśvaram Udaiyār, and the remarkable late Cōla edifice known as Rājarājēśvaram, now called Dārāsura (Map 3-19). The former temple is located between the sites of Sōlamāḷigai and Nandanmēdu, and is in a highly dilapidated state. The inscriptions of this temple date from about the twelfth century AD and record various grants made by the late Cōla rulers. It was replaced by a Viṣṇu temple called Gōpinātha Perumāḷkōyil under the Vijayanagar rulers.\footnote{108}

The Rājarājēśvara temple at Dārāsura was built in the reign of Rājarāja II (c. AD 1146–73).\footnote{109} Architecturally the most remarkable of the temples of Palaiyārai, it represents a rare example of Cāḷukya influence over the temple architecture of Tamil Nadu, and may perhaps point to the existence of Cāḷukya architects and sculptors in this centre, especially after Rājadhirāja I’s victory over Kalyāṇapura, the Cāḷukya capital, from where he brought back as war trophy a dvārapāla image\footnote{110} found at the entrance to the main enclosure of this temple. The pillared mandapas of this temple, it may be added, carry madanikā figures typical of the Cāḷukya style.\footnote{111}

Land and other endowments to this temple was fairly numerous and included a fruit garden.\footnote{112} Even in the thirteenth century AD the Pāṇḍyas of the ‘second empire’ are seen making grants of land to this temple for repairs and renovation and for the celebration of festivals.\footnote{113}

The major factor in the urban development of Palaiyārai was obviously its choice by the Cōlas as their residential capital. The political disturbances of the post-Sangam period kept the Cōlas in obscurity till they reappear in the same region in the seventh–ninth centuries AD, still in a state of subordination to the Pallavas and Pāṇḍyas. Their re-emergence to political power under Vijayālaya in the ninth century AD was evidently facilitated by their hold over the delta region. All the early inscriptions of Āditya I and Parāntaka I show that their activities were mainly centred round this area. The preference of the imperial Cōlas for Palaiyārai is seen in the way every Cōla ruler, starting from Āditya I, not only used it as his residential stronghold, but also personally contributed to its development by erecting temples, either in the Kuḍamūkku or
Palaiyārai section and their environs, and making rich endowments of land and gold.

A series of army cantonments also seems to have surrounded the palace area, as is revealed by the names of several small villages and hamlets at present bearing names ending in padaiyūr or padaividu (Map 3-20 to 23).114 Frequent references to the members of the army (teriṇja Kaikkōlas) and elephant mahouts participating in the gift-making processes of various temples have already been noted. A section of the army called the Pāṇḍippa-
dai is mentioned in an inscription of Parāntaka I in the Nāgēśvara temple. A whole group of army men (sēnaiyār) was entrusted with the protection of temple endowments at Tiruvidaimarudū.115 One of the padaividus at Āyirattali (Palaiyārai) is mentioned in the Pallavarāyapēṭṭai inscription of the eighth year of Rājādhirāja II (c. AD 1171), which refers to the removal of the two infant sons of Rājarāja II from the padaividu to a place of safety,116 probably on account of the threat to their lives from rival claimants to the Cōla throne.

In spite of the fact that the more successful Cōlas, viz., Rājarāja I and Rājendra I, either chose Taṇjavūr for their monumental edifices and rich benefactions, or founded an entirely new administrative centre like Gangaikōndacōlapuram, Palai-
yāra never ceased to function as an administrative centre. The Cōla family continued to live in Palaiyārai. Sundara Cōla’s preference for Palaiyārai is implied in a statement found in the commentary on Virāsoliyam, a Buddhist work on grammar, that he was the king of Nandipuram or Palaiyārai.117 Rājarāja I himself drew a large number of his employees to the Taṇjavūr temple from various parts of his kingdom, and many of them were originally employed as dancers and musicians at Palaiyārai and other early Cōla centres near Kuḍamūkku.118 Members of the vēlams at Taṇjavūr are frequently seen at Kuḍamūkku and its environs making endowments to and worshipping at the various temples of this area, evidently due to their personal associations with it. Rājendra I issued his Tiruvālangadu grant from a secret apartment (maraividam) in Muḍikōndacōlapuram, i.e. Palaiyārai.119 In the reign of Kulottunga I (c. AD 1070–1118), envoys from Kadāram (the Śri Vijaya kingdom of Sumatra and Malaysia) submitted their petition to the king seated in his
coronation hall at Āyirattali (Palaiyārai), for the issue of a grant to the Cūḍāmanivarma Vihāra at Nāgappaṭṭinām.120 Tribute bearers from the ‘island kingdoms of the wide ocean’ waited at the gates of Kulōttunga palace at Āyirattali.121

Thus, the position of Palaiyārai as the nerve-centre of the Cōla administration remained unchanged throughout the Cōla period. The Pāṇḍyas of early thirteenth century AD clearly recognized the importance of Palaiyārai when they celebrated their victory over the Cōlas by performing vīra and vijaya abhiṣekas in Palaiyārai.122 Following this, the rapid decline of the Cōlas by the second half of the thirteenth century and their disappearance from the political scene, led to the disintegration of Palaiyārai into small villages and hamlets representing the sites of the old settlements.

Post-Cōla Developments in Palaiyārai

One of the major developments of the Vijayanagar period was the revival and enhancement of the religious importance of this centre through the renovation and architectural elaboration of the older temples and the erection of new ones. Two of them, in particular, received special attention due to their association with the Tēvāram hymnists. Tirucattimurram was the recipient of land grants during the reigns of Praudhadēva Mahārāya (c. AD 1447)123 and Dēvāraya Mahārāya (c. 1450).124 A towering gopura was erected for the temple by a mahāmandalēśvara of this period by the name of Goppayadēva Mahārāya.125

A colony of Saurāṣṭra weavers called the Paṭṭunulkāras came up around the Paṭṭisvaram temple during the Nāyak period. This community was, perhaps, the dominant social group in this centre, since an agreement made between them and the cettis (merchants?) provided for their ritual precedence in the matter of receiving betel and nut on marriage occasions and offering of cloth, betel leaves and nuts to the goddess of the temple.126 Subsequently, this temple came to be classified as one of the most sacred Śaiva tīrthas, along with Vṛiddhācala (South Arcot district), Tiruvārūr, Tiruvenkādu and Chāyāvana (Tānjāvūr district).127

Paṭṭisvaram also became the centre of three Śaiva mathas
named after the Śaiva saints Tirumūlar, Nāvukkaraśar and Sambandar. Existence of these mathas is known only from a late inscription, perhaps of the Nāyak period, although their origins may be traced back to the late Cōla and Pāṇḍya periods, i.e. thirteenth century.

Tiruvidiśaimarudūr

Tiruvidiśaimarudūr, located about five miles east-north-east of Kumbhakonam, was an outlying town, the development of which had close links with the urban complex of Kuḍamukku-Palaiyārai and also with Taṅjavūr and Gangaikondačōḷapuram. The nucleus of this large temple complex was a Śiva shrine which belongs to the period of the Tevāram. The earliest datable structure, i.e. the main shrine, however, seems to have been constructed in brick by the late Pallava ruler Nandivarman III and rebuilt in stone in the early Cōla period.

The Sabha or the brāhmaṇa assembly of Tiruvidiśaimarudūr and the nāgarattār of Tiraimūr jointly administered the temple endowments, and evidently also managed the affairs of the two major parts of this settlement, the brahmadeya of Tiruvidiśaimarudūr and the nāgaram (town) of Tiraimūr. A large contingent of the Cōla army (senaiyār) was stationed in this centre and was entrusted with the protection of all major endowments to the temple.

Throughout the Cōla period, members of the royal family visited the temple and personally offered worship. However, the most significant period of its activity was under the early Cōlas, when, apart from the royal family, officers of high rank, the Kaikkōla army and other leading landowners were associated with the temple and its religious functions.

Local merchants, merchants from Kumaramārttaṇḍapuram, Nandipuram, Tiruviśalūr (in the Kumbhakonam taluk) and Mayilāppil (Mayilappūr—one of the oldest parts of Madras city) visited the temple and made various gifts in kind and money. The gold and money endowments in the form of kalanju, kāśu and ilakkāśu (silver coins?) would indicate frequent monetary exchanges in the early and middle Cōla periods by local traders and itinerant merchants. The itinerant merchants' guild
called the Tigai (Tiṣai) Āyirattaiṅṅūruvūr, seems to have erected a manḍapa in the temple which was named after the guild.\(^{137}\)

A Śālai of brāhmanas (educational institution) was attached to the temple, to which several grants were made in the reign of a Parakesari, one of the early Cōla rulers.\(^{138}\) The Kāvaṇam of the temple provided the venue of the meetings of the naga-rattār.\(^{139}\) A nātakaśālai (theatre) also came to be established, with its own troupe of musicians, dancers and a dance master. Special grants of land were made for the maintenance of the theatre and its artists.\(^{140}\) A separate residential area was set up for the Uvaccas (drummers?) of the temple and permission was granted to them to construct houses with tiled roofs,\(^{141}\) a rare privilege given to such low-caste groups.

The Tai Pūṣam (Pusya day in the month of January-February) was the biggest festival at the centre and attracted a large crowd of pilgrims, who offered various gifts, especially of pots made of copper and silver,\(^{142}\) which is believed to bestow great religious merit on the donor. The festival drew pilgrims from Taṅjavūr, Gangaikondacōḻapuram (G.K. Cōḻapuram-Map 3), Kuḍamūkku, Tiruvellārai (Tiruchirapalli district), Ānaimangalam, near Nāgappattīnām, and other parts of the Cōla country, and also from Kāncipuram in the northern part of Tamil Nadu.\(^{143}\)

The urban development of this centre was mainly the result of religious and commercial activities throughout the Cōla period. Its proximity to the residential capital of the Cōlas considerably enhanced its importance, apart from its geographical location on the routes connecting the delta region to the coast and to the northern parts of Tamil Nadu. In the post-Cōla period, its religious importance remained as the sole factor in maintaining its urban activities, though on a much smaller scale than before.

III

The most important factor in this process of urbanization would be the geographical situation of Kuḍamūkku in the fertile delta region of the Kāvēri. Numerous peasant settlements arose in
this region from the Sangam period down to the thirteenth century, forming the main resource base of the Cōlas. The crucial stage in its development into an urban centre would be the period of the proliferation of the *brahmādeya-dēvadānas*, the seventh to ninth centuries AD, henceforth a continuous phenomenon, showing the availability of sufficient resources for supporting a large population. For every *brahmādeya* settlement there were about ten to twenty non-*brahmādeya* or peasant settlements, which is seen in the number of places mentioned in the grants recorded in the temples. The non-*brahmādeya* villages pre-dated the emergence of *brahmādeyas*, and would represent the later *vellān-vagai* villages, a classification brought in by the Cōlas. Burton Stein’s description of such *brahmādeyas* as large pluralistic centres with sacred and economic functions would be relevant to Kuḍamūkku also.

The importance of the geographical factor is enhanced by the links that Kuḍamūkku established between the interior and the coastal regions. Under the Cōlas, a large communication network came to be established in Tamil Nadu, and Kuḍamūkku served as the point of convergence of all major routes which passed through the core region of the Cōla kingdom. Of ancient highways, there is a single but nonetheless important reference to the Tānjāvūr Peruvali (the great road to Tānjāvūr) which passed through Muniyūr (Munniyūr in inscriptions), south-west of Kumbhakonam. If modern roads are any indication, Kuḍamūkku may be seen to connect the roads from Tānjāvūr and Uṟaiyūr to Nāgappaṭṭinam, the Cōla port, and from GangaiKondacōlapuram to the coast. The road to Chidambaram in the South Arcot district, which was a major *brahmaṇa* settlement and religious centre, dating from pre-Cōla times, and where many of the imperial Cōlas preferred to celebrate their anointment ceremony, evidently started from Tānjāvūr and passed through Kuḍamūkku and Śirkāli. From Śirkāli, a road branched off to the earliest Cōla port of the Kāvēripūmpaṭṭinam, a route which the Sangam Cōlas may well have used.

It would be difficult to ascertain the importance of rivers in the transport system of the Cōla period, for on the navigability of the rivers of this region, there is no contemporary evidence. Yet, it may be surmised that for shorter distances the Kāvēri
and its distributaries provided safe transport facilities for goods and people. The Ariśilāru, it may be pointed out, reaches the sea near Kāraikkāl, north of Nāgappatṭīnām, and could have, at various points, served in a relay transport between the delta and the coast.

The second dominant factor in the urban development of this region was the choice of Kudandai by the Sangam Cōlas as their stronghold for ‘guarding their treasure’, and of Palaiyārai as the residential capital by the imperial Cōlas. This becomes fairly clear also from the fact that the decline of the Cōlas, and their total disappearance as a political force in the thirteenth century, resulted in the disintegration of Palaiyārai into a number of small villages and hamlets, which became suburbs of the modern Kumbhakonam town (Map 4). Similarly, Tiruvalamcūli and Tirunāgēsvaram also fell out of Kuḍamūkku, and became separate villages centring round their respective temples. The main centre of Kuḍamūkku alone survived as the remnant of this large urban complex, its modern status as the headquarters of a taluk being largely due to its position as the focal point of a large urban centre.

The changing complexion of this region is already seen in the large-scale renovations and structural additions to the temples and the erection of new ones in the post-Cōla period, in an attempt to restore the sacred character of Kuḍamūkku. Thus, under the Vijayanagar-Nāyak rulers (fifteenth to eighteenth centuries) the religious factor persisted as the underlying force retaining the urban character of Kumbhakonam.

Trade was, to begin with, incidental in this process of urbanization. However, it soon acquired a dominant role, as the presence of the royal family, its vēlams, military cantonments and administrative officers, together with its intensive religious activity, inevitably attracted trade, sufficiently lucrative, to draw traders from distant parts of Tamil Nadu like Mayilappūr and from Kerala. Money exchange was becoming a regular feature from the early Cōla period, although the use of lumps of metal by a certain weight appears to have continued. The Cōla mint is believed to have been located in Kuḍamūkku, and the site of the mint is represented by the Kambaṭṭa-Viśvanātha temple in Rājendranpetṭai. In the same area are also located two streets
known as the Nāṇayakkāra Cheṭṭi street (the street of moneyers?) and the grain dealers’ street.

Much of the trade and commercial activity was controlled by local merchants of Kuṭamūkku and Nandipuram, who must have been in close contact with the itinerant merchant guilds and traders from outside the Cōla country. Although no direct evidence is available of the presence of the larger merchant corporations within the city, there are enough indications of their constant movement in this area. References to the Valaṇjīyar of Tiruppurāmbiyam,147 the Tiṣai Āyirattaiṇūruvvar at Tiruvidaimarudūr, the nagarattār of Kumaramārttāṇḍapuram and Tiraimūr are too numerous to be devoid of any significance. The last two were local merchant organizations, while the first two were the larger merchant guilds known to have been active in medieval South India, Ceylon and Southeast Asia.

Articles of trade must have included cloth (silk and cotton), gems, and other luxury items, coconuts, fruits, flowers, arecanuts and betel, incense, oil and ghee. Kuṭamūkku itself was a major centre of betel and areca cultivation, as it still continues to be renowned for both the products throughout South India. The temples were the biggest consumers of such goods, representing the religious counterparts of the royal establishment in Palaiyārai. Horses and elephants were obviously in great demand in the palace and cantonment area.

Textile and metal-ware were evidently the two major industries which developed in this urban centre. The Kāikkōḷas, who were temporarily engaged in military activities in the Cōla period, were a weaver community who carried on their profession as weavers simultaneously. They ceased to serve as members of the army in the post-Cōla period and confined themselves to weaving, and have, to this day, remained the major weaver community of Tamil Nadu. The evolution of a Paṭṭunūlkār settlement in Paṭṭisvaram, and the probable emergence of a Saurāśtra colony around the Cakrapāṇi temple in Kumbhakonam in the Nāyak period, would also show that a fairly large weaver population was attracted to this region in the seventeenth century AD, evidently due to its reputation as an important weaving centre. Kumbhakonam continues to manufacture cotton and silk textiles to this day,148
Vessel-making was apparently the second major craft of this urban centre, both in the Cōla and post-Cōla periods. The survival of this traditional craft, which remains unsurpassed in Tamil Nadu, is attested by the rows of vessel-shops in modern Kumbhakonam and 'Kumbhakonam vessel-shops' located all over Tamil Nadu, providing a rich variety of copper and brass vessels. Kumbhakonam vessels are a household feature in Tamil Nadu, particularly in the Tanjavur district.

Bronze-casting by the *cire perdue* process was yet another flourishing craft of this urban centre. The demand for the craft was continuous, as bronze images were set up constantly for processional and ritual purposes and for religious merit, requiring the services of *sthapatis* skilled in this art. The *sthapatis* involved in this activity seem to have had a major centre at Svāmimalai near Tiruvalamculi, where generations of artisans executed bronze images of exceptional beauty, in a technique in which they attained a remarkable degree of perfection. Svāmimalai is even today the major centre of this craft in the Tanjavur district.

This huge urban complex consisted of various social and occupational groups, among whom a fairly large group of architects and stone-sculptors must be included. The continuous presence of architects, stone masons and sculptors is clearly indicated by the incessant temple-building activity from about the ninth century AD to the Vijayanagar-Nāyak periods. Temples began as small 'nuclear' shrines (*garbha-grha*), and expanded in size, both vertically and horizontally, in successive stages, thereby requiring constant designing, sculpting and supervising agencies. Such agencies are hardly known from contemporary epigraphic sources, as artists and craftsmen of ancient and medieval India have generally remained anonymous. Their work may be described as more of a collective art than one of individual artistic expression.

IV

The present study brings forth certain interesting possibilities in the directions of enquiry for an understanding of the processes
of urbanization and location of urban centres in medieval South India. Four major criteria emerge as determinant factors in urban development, leading to the evolution of four main categories of urban centres. Initially, areas of urban activity may be looked for among the clusters of brahmadeyas and devadānas forming the nuclei of the core regions of early kingdoms. Conscious attempts to establish new political and administrative centres such as Taṅjāvūr and Gangaiakoṇḍacōlapuram, perhaps due to their strategic location, would provide a second criterion for identifying them. Kāṇcipuram and Madurai served as political and administrative centres throughout South Indian history, although their religious importance continued to be an underlying factor in keeping alive their urban character.

Sacred associations from very early times, providing special sanctity to religious centres like Śrirangam (Tiruchirapalli district), Chidambaram (South Arcot district) and Tirupati (now in Andhra Pradesh), would form a third factor towards the development of urban centres. An interesting sub-variety of such sacred centres may also be recognized among the taniyūn, where urban activity was confined to the religious and economic functions of the temples around which centres developed. A number of smaller villages and rural settlements came to be attached to them.

Trade and commercial activities, which were not the dominant factor in the development of Kuṭamūkku-Palaiyārai, would represent the fourth criterion in locating urban centres like ports and market towns, where their role in urban development would be the dominant one. In such centres religious institutions were established mainly to cater to the needs of the various communities involved in such activity. An obvious example of this group of urban centres would be the port of Nāgappattinam, where, apart from a Śiva temple of some antiquity, a large Buddhist vibāra came to be established in the eleventh century AD, evidently to provide for the large population of Buddhist traders, both indigenous and foreign. To this category of urban centres one must add the virappattanās and evirvirappattanās, which were market towns protected by mercenary troops attached to big trading guilds like the Nānādēśis or Tiṣai Āyi-rattaiḍūrūvur or the Ayyavoḻe Five Hundred. Such centres
came up along major trade routes connecting different parts of South India, and their emergence in Tamil Nadu may be dated back to the tenth century AD, or not later than the reign of Rajendra I (c. AD 1014-44).\textsuperscript{153}

The above categorization of urban centres would show that in most cases, while trade was a secondary factor, religious activity was a dominant and persistent, though not necessarily the sole, factor. For the sacred functions of a temple or a brahmadeya should also be accompanied by major economic activity, in situations where dense peasant settlements and intensive agriculture permitted the mobilization of a large surplus.

It would seem that political factors hastened the processes of urban development. Whereas their withdrawal inevitably led to a diminution in the size and complexity of an urban centre, the continuation and increase of religious activities helped to retain its urban character. Trade and commercial activities could be the main factor in the development of some urban centres; yet even here the presence of religious institutions was a necessary concomitant of the urban process.

1. The name Kumbhakonam appears for the first time in a record of the Vijayanagar ruler Virupaṇa Uḍaiyār from the Sāranga-pañi temple dated in Ś. 1307 (AD 1385). See 415 of 1954-5 (i.e. inscription number 415 of the Annual Report on (South) Indian Epigraphy for the year 1954-5). Kudam means pot and mūkku is spout or nose (also corner?) and hence Kumbha + Konam. But kudam also denotes nagaram or town, according to an early Tamil nigaṇtu or lexicographic work called the Pingalandai of about the eighth-ninth centuries AD (verse 3381). It is not clear whether this work mentions kudam as a town in general or as a particular town. Kuda in Tamil means a hollow or cavity. See Tamil Lexicon.

2. Tirunāvukkarāsaṇ’s Tevāram, Tirumurai v and vi; Sambandar’s Tevāram, Tirumurai ii and iii; Sundaramūrti’s Tevāram, Tirumurai vii. The Nandikkalambakam, a ninth century literary work, praises the Pallava King Nandivarman III on his victory over Palaiyārai–Padaiyārū sāya Palaiyārai venrān, i.e., he conquered Palaiyārai after defeating six armies.

19. SII, iii, part iii, 91; xiii, 13. The inscription referring to Kumara- martyrthapuram is dated in the reign of a Rājakēsari identified with Āditya I.

20. SII, iii, 72; v, 716, 721.

22. The author has located several other brahmadeya-dēvadānas mentioned in the inscriptions of the Kumbhakonam region. For instance at least 30 brahmadeya-dēvadānas are mentioned in the inscriptions from Tiruvidaimarudūr, Tiruvalamculi, Tirunāgēśvaram and Kumbhakonam apart from the earlier brahmadeyas of the Pallava period.

23. Tēvāram of Sambandar, Tirumurai I: verse 72; Tirunāvukkarasār, Tirumurai VI, verse 289.

24. Divyaaprabandham: The seven āḻvārs who refer to Kuḍandai are Pūdam (70-97), Pēy (30, 62), Tirumāḷiśai (Nānmuṅgan Tiruvandādi, 36; Tiruccandaviruttam 56-67), Tirumangai (Tirumoli, I-1-2; 7; I-1-4; II-4-1 etc.), Nammāḻvār (Tiruvāyomoli, 5-8), Periyāḻvār (Tirumoli, I-6-2; 6-6) and Andal (Nāciyār Tirumoli, 13-2).

25. For example, the Nāgēśvara temple at Kuḍamūkku, the Śiva temples at Tirunāgēśvaram, Tiruvalamculi, Tirukkarugāvūr and Tiruvidaimarudūr were rebuilt in stone in the early Cōla period.

26. See Y. Subbarayalu, Political Geography of the Chola Country, Madras, 1973, Map 7, which is followed for nādu divisions in this essay. For the nādu and kūrrams between Coleroon and Vādavāru, i.e. around Kumbhakonam, mentioned in the present paper, see Map 7 of this essay.

27. The nādu seems to be basically an agrarian region, representing a grouping of agricultural settlements whose formation was influenced by natural factors conducive to agriculture. Each group of such settlements probably consisted mostly of kinsfolk, i.e. a cohesive group of agricultural people and tied together by marriage and blood relationships. See Y. Subbarayalu, Political Geography, 33, 36.

28. Mahalingam 'The Nāgēśvarasvāmi Temple, Kumbhakonam', Journal of Indian History, April 1967, vol. xiv, part i, no. 133, 20ff. For a description of the architectural features of the vimāṇa, assignable to the early-Cōla style. Some of the royal patrons are portrayed in the sculptures on the vimāṇa walls, and such portrait sculptures belong to a rare series found mostly in early-Cōla temples. Ibid., Figures 8-17. Apart from the Cōla royal family (SII, iii, 137; xix, 323), a gift of 138 cows and 100 kāśu for two lamps was made by the Pāṇḍya king Māranjadaiyān (Varaguna II—accession AD 862)—13 of 1908; SII, xiv, no. 8.

29. 230, 231 and 233 of 1911: SII, iii, 200.

30. 226 of 1911: SII, iii, 201; 225 of 1911: SII, iii, 204; 245 of 1911: SII, xix, 95; 234 A of 1911: SII, xix, 131.

32. 248 of 1911: SII, xix, 50.
33. 246 of 1911: SII, xix, 431; 254 of 1911.
34. 243 of 1911: SII, xix, 132; 244 of 1911: SII, xix, 133; 234 of 1911: SII, xix, 205.
35. 255 of 1911 (1911-12), part ii, para 15.
36. 228 of 1911: SII, 45; 236 of 1911: SII, xiii, 108; 251 of 1911: SII, xix, 8; 229 of 1911: SII, iii, 131; xix, 204.
37. 247 of 1911: SII, xix, 96.
39. 254 of 1911 (1911-12). The term kalanju may be taken to refer usually to a weight and, occasionally, to a coin. Tulaippon, meaning 'punched gold', has been described as a piece of gold, 'burnt, melted, cooled and found current, i.e. neither wanting in purity nor in weight' (1911-12, part ii, para 21). This term occurs in the Nāgēśvara temple, Tirunāgēśvaram and Tirukkarugāvūr inscriptions in addition to kalanju. Kāśu is obviously a piece of metal (gold or copper) of a particular weight and fabric. The term ilakāsu, which is also common in the inscriptions of this area, may well be a silver coin (ilam = silver), although it has been interpreted as 'Ceylon coin' (ilam = Ceylon). Hence the term ilakkaran-kāsu (242 of 1907: SII, xix, 38) may also be taken as a 'base silver' coin.
41. 255 of 1911.
43. 245 of 1911.
44. 3 of 1915. The origin of this temple may, however, go back to the early Cōla times, for a much damaged inscription in ninth-century characters seems to record some grant for food offerings to the same deity—299 of 1965-6.
45. 295 of 1927 of the 19th year of Kulottunga III.
46. 296 of 1927; 301 of 1927; 299 of 1927; 294 of 1927.
47. 1926-7, ii, para 84. As a result of an enlargement of the Viśṇu temple of Sārangapāṇī, the additions made to the Viśṇu temple took away a large portion of the precincts of the Sōmēśvara temple.
48. 255 of 1911 (1911-12), part ii, para 15.
49. Divyaprābhandham. See note 4.
50. 278 of 1964-5.

52. 222 of 1911: SII, xiii, 13. The nāgarattār made provisions for the renovation of the tiruccurralai (veranda) and gopura (gateway) of the Milāṭuṇḍaiyāṟpaḷḷi.

53. 215 of 1911: SII, xiii, 197; 218 of 1911.

85. 293 of 1927 (1926-7).
86. The matha is described as mabhā matha in which Govinda Diksita, the pradhāni of the king, built the ācāravāsal (gateway) and anantakalyānamanḍapa—290 of 1927 (1926-7); also 320 of 1955-6.
87. 416 of 1954-5.
89. 306 of 1965-6.
90. 301 of 1965-6. Kandādai is even today the name of an important Śrī Vaiṣṇava family whose ritual status is equal to that of religious heads of the Śrī Vaiṣṇava sect.
91. A Telugu Cōda Copper plate grant of the period of Vijayagandaṇḍagopāla (thirteenth century AD) records provisions made for its maintenance, A-62 of 1956-7; Epigraphia Indica, xiii, 194ff.
94. The emergence of the two major divisions, the Vādacalai (northern) and Tenkalai (southern), among the Vaiṣṇavas with their different lineages of heads and ritual practices, was, in the main, a result of the incorporation of a large śūdra element into the Vaiṣṇava fold, leading to the formation of the Tenkalai. The Tenkalais insisted on the importance of the Tamil canonical literature over the Sanskrit tradition, and the Vādacalai continued to preserve the northern element in the Vaiṣṇava organization. Both the organizations vied with each other for religious supremacy and royal patronage. The Vijayanagar rulers, most of whom were followers of Vaiṣṇavism, extended their largesse in equal measure to both the sects. Kumbhakonam is still one of important centres of the Vādacalai tradition. The precedence of the non-brāhmaṇa element in religious organization can be seen among the Śaivas much earlier, for their mathas were headed by non-brāhmaṇa teachers, and the Tiruccattimurram (in Paṭṭiśvaram) lineage of Śaiva teachers, the ‘Mudaliyārs’ as they are called, established branches at various other centres in the thirteenth century AD (see note 128).

The Śankarācārya mathas, which also began to proliferate in the post-Cōla period, represent another major preserve of the
Sanskrit tradition. Thus, the Vadakalais and the followers of the Śankara tradition stood for the continuous ‘sanskritization’, while the non-brāhmaṇa Śaiva mathas and the Tenkalais championed the Tamil tradition.

96. The site of Sōlamālīgai, where trial excavations were conducted both by the Archaeological Survey of India and the University of Madras, has brought to light remains of early structures built of well-sized brick measuring 16” × 11” × 3”.

97. The story of this conflict, as narrated by the Periya Purāṇam, accuses the Jains of having hidden the linga and appropriated the Vaṭatali, from where the local Cōla ruler retrieved the linga at the instance of the saint Tirunāvukkarāsaṅ and forced the Jains to leave the centre. Tirunāvukkarāsaṅ himself describes Vaṭatali as full of Jains who practised false doctrines. K. Vel-laivaranan, Panniru Tirumurug Varalāru, part 1, Annamalainagar, 1972, 235ff.

98. This inscription mentions Ārambhanandi, a Jain teacher of the Tiyankūḍi (Dipankūḍi) pāḷi in Inga(l) nāḍu—297 of 1965–6.

100. Desiyaprabandham, Periya Tirumoli, v. 10.

102. A number of merchants from Nandipuram are known from the early Cōla inscriptions of Kuḍamukku, Tirukkaragāvūr, Tiruchiḍairudrūr, Tiruvīsālur and Tirukkōḍikkāval (31 of 1931; SII, xiii, 259).

103. K. Vel-laivaranan, Panniru, 98.

104. The earliest inscriptions of the temple belong to the late Cōla period and date from about the middle of the twelfth century AD. 265, 266, 267 and 270 of 1927 (1926–7). They record land and money endowments.

105. 157 of 1908 (1908–9).

106. 271 of 1927 (1926–7).

107. 2 of 1915 (1914–15).

108. 524 to 528 of 1921 (1920–1).

109. 17 of 1908 (1907–8); 256 of 1927 (1926–7).
110. 24 of 1908 (1907–8). The image is now kept in the Tanjavur Art Gallery.

111. The sculptures of this temple are a veritable treasurehouse of Śaiva iconography and include, among others, representations of the stories of the Śaiva nāyanārś as narrated in the twelfth century Śaiva hagiological work, the Periya Purānam. See 1919–20, part ii, for illustrations and descriptions. The Tribhuvanavīrēsvara temple in Tribhuvanam (Map 10–5), built by Kulōttunga III, is similar in architectural design and sculptural style.

112. 24 of 1908 (1907–8).

113. 21 and 23 of 1908 (1907–8).

114. Āriyappadaiyūr (also paḍaiyūḍu), Maṇappadaiyūr, Puduppadaiyūr and Pampappadaiyūr are four villages around Paḷaiyārī representing the sites of the old cantonments, all located within a radius of about two miles. Paḍaiyūḍu or paḍaiyūr means a place where an army is stationed.

115. 239 of 1907: SII, xiii, 7.

127. 260 of 1927.

128. 261 of 1927.

129. The non-brāhmaṇa Śaiva religious heads of these mathas and their lineage are mentioned in the thirteenth–fourteenth century inscriptions. 218, 392 and 586 of 1908; 1908, part ii, 104–5; 108 and 109 of 1911, part ii, 75; 1915, part ii, 113.

130. 199 of 1907: SII, xix, 91: iii, 124. The inscriptions of Nandivarman III, believed to be kept in an underground cellar, were re-engraved at the time of the reconstruction in stone by the early Cōlas.

131. SII, iii, 202; v, 716; xiii, 270; xix, 91 etc.

132. SII, xiii, 7.

133. 208 of 1907: SII, xix, 390; 261 of 1907 (1907–8) etc.
134. 132 of 1895: SII, iii, 72; 228 and 257 of 1907; 148 of 1895: SII, v, 772; SII, v, 719; 216 of 1907: SII, xiii, 270: 244, 253 of 1907.
137. 253 of 1907 (1907–8).
138. 150 of 1895: SII, v, 714.
139. 208 of 1907: SII, xix, 300.
140. 154 of 1895: SII, v, 718; 214 of 1907: SII, iii, 202, 203; 233 and 306 of 1907.
141. 221 of 1907: SII, xix, 344.
142. 246–8 of 1907 (1907–8).
143. 219 of 1907: SII, xix, 224; 279, 281 and 294 of 1907; 133 of 1895: SII, v, 697 and 698; 270 of 1907; 259 of 1907: SII, v, 701.
145. I am thankful to N. Sethuraman of Kumbhadakonam for providing me with this map.
146. This belief is strengthened by the fact that till recently copper coins of the Cōlas could be purchased by the weight in the vessel shops of Kumbhadakonam.
147. 71 of 1897: Nilakanta Sastri, The Cōlas, 595.
148. A large co-operative association of weavers is located at Dārāsūram.
149. The bronzes under worship in the temples of Kumbhadakonam and other centres of this urban complex are mainly of the Cōla period, and occasionally their consecration is referred to in the temple inscriptions.
150. The major groups are the royal family and the elite, represented by the officers, vēlams, leading vēlās, and caste groups like brāhmaṇas attached to various temples, religious groups like Jains, Śaivas and Vaishñavas, occupational groups like the Kai-kōlas and maṇḍādis, and a host of other groups attached to the temple in the capacity of tenants, temple servants, dancers, musicians, drummers, etc. Even the Malaiyāḷar and Simhāḷas are known to have been in residence in Tiruvalamcuḷi and Tirunāgēśvaram respectively (215 of 1911: SII, xiii, 197).
151. Nuclear areas as relatively autonomous economic units, where human and material resources were mobilized to satisfy not only the basic requirements of subsistence, but also of sophisticated
and complex political, religious and social institutions, particularly in the Cōla period, are highlighted by B. Stein in 'Integration of the Agrarian System of South India', in R.E. Frykenberg (ed.), *Land Control and Social Structure in India*, Wisconsin, 1969, 186ff.

152. *Taniyūr* (*tan-kūru*) means a separate settlement or village. Several such *taniyūrs* are known to have been created mainly due to their expanding economic activities. Quite a few of them, like Tribhuvani (Pondicherry), Mannārguḍi (Tanjavur district) and Chidambaram (South Arcot district), were centres of considerable importance, where urban development centred round the local temples or an original *brahmadeya*. To such centres, many smaller villages came to be attached as *pidāgais*. See Y. Subbarayalu, *Political Geography*, 92-4.

Map 9: The Kaveri Delta - The Hinterland of Kudamukku-Palaiyārai
Map 10: Kuḍamūkku-Palaiyārai - The Urban Core
The City and the Hinterland: Kāñcipuram and Toṇḍaimanḍalam

Pre-modern Kāñcipuram and Madras represent two variants of an urban process, a regional manifestation of the larger processes of early medieval urbanization in the whole of the subcontinent.¹ Their urbanism—form and meaning—needs to be situated within a well-defined regional, historical and cultural context, and can be best understood through the pursuit of urban history as a processual change or development, i.e., economic diversification and social stratification, representing different levels of systemic integration through coherent institutional means. Such a regional context for Kāñcipuram and Madras is provided by Toṇḍaimanḍalam, which was a politico-geographic and cultural sub-region of the Tamil macro-region in the early medieval period.

Cities like Kāñcipuram in Toṇḍaimanḍalam, Tañjavūr in Cōlamanḍalam and Madurai in Pāṇḍimānḍalam, were at once products and symbols of a distinctive socio-political culture which evolved through the centuries of Pallava-Pāṇḍya (sixth to ninth centuries) and Cōla (ninth to thirteenth centuries) rule, representing two levels of systemic integration through forces, which led to the emergence of institutions, i.e. organized institutional space, and established hierarchical relations of social dominance. To the people of this cultural milieu, the city was where these institutional developments were most conspicuous, most clearly ordered and articulated.² Evidence of these developments, as also of the emergence of urban hierarchies, together with typological categories of urban centres, is found in the rich inscriptive records and the powerful bhakti (devotional) literature of the Pallava-Cōla periods.

Peninsular India passed through two phases of urbanization in the pre-Vijayanagar period, the early historic and the early medieval, each distinct from the other.
It is the second urbanization, i.e. of the early medieval phase (AD 600-1300) with which we are concerned here, the processes being well and clearly reflected in the region of our study. Being significantly different from the early historic urbanization, it marks a processual change, i.e. an intelligible sequence of change, rather than a result of an almost mystically 'sudden impulse' like that of the earlier phase.

The historian's interest in processes and the sociologist's preoccupation with models supplement each other in studying 'traditional' and 'modern' (pre-industrial and 'colonial and/or industrial') societies and the urban forms generated by them. The model of the 'orthogenetic' and 'heterogenetic' cities proposed by Robert Redfield and Milton Singer, and the closely allied concept of the ceremonial centre, an orthogenetic form, which has been admirably worked out by Paul Wheatley in his study of the Chinese city of the second millennium BC, are most interesting and useful from the point of view of 'traditional' societies.

A variant of this model, with a neo-Weberian, comparative civilizational approach, offers the alternative concept of the processes of centrality and concentration, to analyze various aspects of the urban phenomena, and to understand the character of the pre-modern city, by bringing together sociological, anthropological and geographical perspectives.

Centrality has been defined as the process whereby the symbolic and political centres of a society, through which it transcends its daily routine of existence, are constructed and crystallized. It implies the crystallization and symbolization in a specially defined space and ecological setting, of the cultural, political and moral order of a society and the domination of a society by such a centre. The two most important characteristics of the forces of centrality were the religious and politico-administrative manifestations, that appeared sometimes simultaneously. Concentration is the concentration of population, usually as a result of demographic and economic processes that lead to such concentration in a specific area, generating processes of social differentiation and division of labour and growing interaction between various groups, and the emergence of crafts and services. In both processes, there are a number
of variations within the internal structure, in the extent and intensity of socio-economic manifestations. A combination of both processes may also occur. The strong emphasis, in the above concept, on cultural dimensions and the possibilities of the transformation of forces of concentration into those of centrality, are of special interest to our understanding of medieval South Indian urbanization, and its applicability to the cultural and regional context of Tondaimandalam, without, however, going into its merits in cross-cultural comparisons of urban phenomena, particularly the city.

**Tondaimandalam: The Region**

The concept of the *mandalam* was evolved by the Colas under Râjarâja I (AD 985–1014) and was applied to the different politico-cultural sub-regions of the Tamil country, unified under Cola hegemony through common politico-cultural formulae. Each of them, however, had a long historical past, and retained, to a large extent, its distinctive character as a sub-cultural zone. Hence, the urbanism of Kâncipuram to which the Madras region was linked both politically and culturally, needs to be discussed within the context of the urban configurations of Tondaimandalam, which forms a backdrop, as it were, to the central role that Kâncipuram played. It is to the processes of the urbanization of this region that one should turn in order to explicate this role.

The name Tondaimandalam is used here to denote the older region called Tondainâdu, which was renamed Jayankondağolamandalam under Râjarâja I (AD 1001), when an officer called Tondai nâdu vâgai šeida udaiyâr surveyed and resettled Tondainâdu, making several additions to it to form Jayankondağolamandalam. The latter region is important as a larger territorial unit created by the will of a political authority for administrative convenience. However, the heart of the pre-Colâ cultural region, dominated by the Pallavas, lay in Tondai nâdu, i.e. the northern parts, wherein Kâncipuram and Madras are located.

+ See Map 13, Tondaimandalam AD 1300–Urban Configurations
In geographic terms, Tondainādu is the region drained from north to south by the Arni and Kortallaiyar rivers and the Palar-Cheyyar-Veghavati rivers. In historical-geographic terms, it covers the area of the traditional twenty-four kōttams, now represented by the Chingleput district, a major part of the North Arcot district, the northernmost part of the South Arcot district, and even parts of the Chittoor and Nellur districts, now in Andhra Pradesh. Thus, the north-western portions of Tondai-maṇḍalam are represented by the ancient Bāṇa chieftainty of Perumbāṇappāḍi and parts of Pangaḷa-nāḍu located between Perumbāṇappāḍi and another chieftaincy called Vāṇa-kōppāḍi in the North Arcot district.

Tondai nāḍu, in the early historic phase, was marked largely by tracts of relative isolation—kuriṇci (hilly) and mullai (forest/pastoral)—while the marudam (plains) and neital (coastal/littoral) eco-zones were confined to the Palar-Cheyyar valley, the extent of which was in no way as significant as the Kaveri plains. They could sustain only small communities or segmentary tribes in small dispersed settlements. The descriptions of the region in one of the Sangam works also points to large tracts of unsettled land, forest and hilly regions, with few settlements and fewer still of big ones (pērū) like Kāncīpuram and its port, Nīrppeyarru.

The tradition recorded in the Tondaimaṇḍala-Ṣatakam of the twenty-four kōttams and of the Kurumbar, a pastoral tribe, which occupied them, is also indicative of an agriculturally less developed region. The Megalithic remains, associated in popular tradition and belief with this tribe, further points to the pastoral-cum-agricultural organization of the proto-historic and early historic cultures of the region. The kōttam as reflected in the Pallava-Cōla inscriptions, in fact, holds a clue to the relatively small subsistence-oriented and dispersed nature of agricultural settlements, pastoralism being the dominant occupation, a feature which is also confirmed by the large number of cattle raids recorded in the hero-stones of the North Arcot district between the sixth and tenth centuries AD, and the predominantly numerous gifts of cattle to the temples of the Pallava and early-Cōla periods, i.e. sixth to tenth centuries AD.

The integration of the kōttams of Tondaimaṇḍalam under the Pallavas marks the beginnings of early medieval urbanization in
the region, the chief instruments of integration being the brab-
madeya or brahman settlement and the temple, which turned the
subsistence-level agricultural settlements into surplus-oriented
ones (ūr), grouped into nādus within the kōṭṭams. Thus, the
kōṭṭam and the nādu emerged as viable socio-economic and poli-
tical units only in relation to the new ruling families (Pallavas)
and the landed elite, i.e. the brāhmaṇas and superior vēḷālus
(agricultural community) of the seventh to ninth centuries.\(^{15}\)

The brabmadeya and the temple were products of brahmanical
ideology. Sponsored and promoted by the ruling families claim-
ing ksātriya status and divine descent, they developed into
institutions of substantial political power and social dominance
with economic privileges, as demonstrated by most studies.\(^{16}\)
While it is hard to spell out in precise empirical terms the
nature of the economic advantages to the rulers who sought to
establish their sovereignty through them,\(^{17}\) there is little doubt,
however, that they led to a more intensive organization of
production, geared to support large populations in brabmadeya
and temple centres. The real advantage lay in integrating older
settlements and non-brabmadeya villages (ūr) into the new agrar-
ian system and bringing virgin land under cultivation (both
waste and forest). Examples of several pre-existing settlements
being clubbed together into a new brabmadeya are also known.\(^{18}\)

The process was spread over three phases, continuing well
into the Cōla period. The initial phase is marked by the
brabmadeya as the chief integrative force, and in the second
phase, i.e. ninth to tenth centuries, the temple assumed a major
role. The third phase represents the culmination of the process
in the eleventh century, the revenue assessment and reorganiza-
tion of revenue units under Rājarāja I (AD 1003)\(^{19}\) marking the
height of political and ideological levels of integration and the
emergence of a distinctive socio-political culture.

Under the Pallavas, i.e. seventh to eighth centuries, agrarian
expansion through brabmadeyas took place in certain key areas
in the Palar-Cheyyar valleys, invariably accompanied by irriga-
tion works (tatāka = reservoir or ēri = lake), the region around
Kāncīpuram receiving greater attention. By mid-ninth century,
Pallava brabmadeyas had come into existence in six kōṭṭams. Most
of them remained predominantly rural/agrarian centres, while
some, at a later stage, developed into nuclei of urban activities. In the second half of the ninth century, Pallava rulers like Nṛpatunga and Kampavarman, whose period coincided with the rise of Cōla power under Vijayālaya and Āditya I, initiated several irrigation works, which were later elaborated or improved under the early Cōla king Parāntaka I (907–55), when new irrigation works appeared in almost every köttam, and existing ones were augmented with a simultaneous increase in nādus within the köttams. Elaborate arrangements for their upkeep by sabhās or brāhmaṇa assemblies, provision for maintenance and management by vāriyams (committees) construction of tūmbu (sluice), waste weir and channels, desilting and repair, become important details in the Pallava-Cōla inscriptions. Demarcation of boundaries of land, ownership or enjoyment rights, nature and category of land, and the number of crops to be raised, are invariably and increasingly recorded. Thus, it was not a case of mere demographic growth and extension of cultivated area, but a restructuring of the agrarian economy through large-scale irrigation works and effective management of resources, which was indeed the very key to the difference in the farming societies of the early (Sangam) and the later (Pallava-Cōla) periods. For, viewed in their geographical and ecological setting, the brabmanda and the temple may be seen as harbingers of advance farming methods such as irrigation technology and seasonal regulation of the cultivation process through proper management of resources.

In this process, construction of large-scale reservoirs begun by the Pallavas and continued under the Cōlas would hence appear to be a major factor in agrarian expansion. Interestingly, there is a general correspondence between the steady increase in irrigation works mentioned in the inscriptions of the seventh to eleventh centuries and the increase in the nādus during the same period.

At least a minimum of seventy-two nādus are known to have had at least one important irrigation source each.

The correlation is particularly striking in the period of Parāntaka I (907–55), with new nādu units appearing for the first time in inscriptions, a phenomenon common to all the Cōla dominated regions. This was the foundation on which
the restructuring of the economy reached its culmination under the middle Cōla ruler Rājarāja I and Rājendra I, creating an extensive resource base in the river valleys and a widening agricultural hinterland for Kāṇcipuram. As a major centre of urban concentration, Kāṇcipuram’s economic reach in the twelfth century AD covered all the nāḍus of the Palar-Cheyyar valleys and even beyond.

---

The organization of agrarian relations around the brahmadeva and the temple led to the emergence of the brāhmaṇa (priestly caste), vēlāla (non-brāhmaṇa) landowners and the temple, administered by brāhmaṇas and vēlālas as landed elite and to a re-structuring of society within the varna or caste framework, the regional specificities of the Tamil country producing a variant of the caste system, which was expressed through two broad categories, the brāhmaṇa and non-brāhmaṇa or śūdra. Within the second category, most of the occupational and service groups (jātis) were placed. Social differentiation through diversification of economic activities and occupational differences in the form of different categories of temple functionaries, craftsmen in the service of agriculture and agricultural labourers, i.e. division of labour, was interwoven in this process.

With the gradual expansion of the exchange nexus among the agricultural settlements within the nāḍus and the revival of
long-distance trade by the ninth century AD, another important dimension to the complexity of societal organization was added, viz., the Nagarattār or a full-fledged trading community. The nagaram came to be the third major institutional force, the Nagarattār controlling local and intra-regional trade.

Purānic religion and the bhakti cult provided the ideological premises and the institutional means, i.e. the temple, to create effective space—rural and urban—for the emerging complexity of social organization.23 In the medieval South Indian context all the emergent groups—rural and urban—were merged into a single systemic relationship, as substantial components within the same structure, ‘seeking validation within the norms of a traditional social order’. The acts of validation mainly centered round the temple, its construction, participation in gift-giving and ritual activities in a ranked hierarchy.

Urban nuclei: 1. Tan-Kūru

By the tenth to eleventh centuries, urban nuclei emerged in the major brahmadeyas and temple centres, which were mainly royal creations, located near large irrigation projects. Such brahmadeyas came to be organized as separate revenue units and designated as tan-kūru and later as tani-ūr (independent unit). In terms of revenue administration, the tan-kūru is comparable to the vala-nādu, a larger revenue unit, comprising of several nādu created in the eleventh century by Rājarāja I. While the vala-nādu organization dominated the Cōla heartland and newly conquered chieftaincies in Naṉuvil nādu and Pāṇḍi nādu, tan-kūrus were more numerous and more systematically introduced in Tondai-nādu and a few areas south of it, but rarely in Cōla nādu proper.26 The vala-nādu nomenclature was used occasionally for the kōttams in Tondai nādu.27

The tan-kūru increased in size and population with the addition of several pidāgai (hamlets) and puram (full fledged revenue village) as dēvadānas or grants to temples between the tenth and twelfth centuries.28 This is also suggestive of a defining and redefining of economic and socio-political units within the kōttam, for when older brahmadeyas became taniyūrs under the Cōlas, their nādu affiliation ceased to operate and their kōttam
location alone is mentioned, as also in the case of newly-created *taniyürs*. Such restructuring would also seem to be an act of deliberate royal policy for creating agencies of a state synthesis under the Cōlas. In effect, it introduced a virtual hierarchy among *brahmadeyas* and different levels of urbanization, the *taniyürs* being capable of widening the orbit of their economic functions, with markets developing within and attracting traders from outside, a *nagaram* sometimes being attached to them or created for them, taxes assessed independently and direct links established with the king’s government.

The *taniyürs* show a distinct pattern of socio-political dominance, economic and administrative functions with a higher status than other *brahmadeyas* and temple centres. Members of the royal family bestowed special attention on them, extending their direct patronage to temples, closely interacting with the local elite and priestly groups in the socio-religious sphere, with a direct politico-economic control. Temples in the *taniyür* were invariably royal foundations. The *taniyürs* were named and renamed after the founder kings and their successors. More importantly, they were internally so structured as to have several *cēris* or quarters demarcated for elite groups in the centre of the inner square (main streets around the temple), for professional groups in the immediate neighbourhood (i.e. outer square), and for those at the fringes of society in the outskirts. The *cēris* were also named either after royal members (Madurāntakam) or after the patron deity (Uttaramērūr). The main roads and markets (*pērangādi* and *angādi*—big and small markets) were also similarly named. The markets, which were located at central points, where commerce was a regular activity, attracted traders from *mānagarams* like Kāncipuram and royal ports like Māmallapuram, as well as from the distant Cōla and Pāṇḍya regions. Highways linked them to other *nagarams*, *mānagarams* and to royal centres. The standard weights and measures used in the *taniyür* were often those prevalent in royal centres, e.g. Kāncipuram. Monetary transactions are also found to be more frequent in these centres. Land owning elite from other regions also figure as donors in the *taniyūrs*.

Social dominance in these centres was expressed through the construction of the temple and its precincts with subsidiary
shrines, as well as by the nature and volume of endowments. The main shrine (vimāna) was invariably a royal foundation or, occasionally, the work of chiefly families like the Bānas in Tondai nādu. Additional shrines and structures were built by officers and dignitaries like the Mūvenda vēlār.

The Taniyūr acted as an information channel, especially for royal orders. Rules regarding the organization of the sabhā and its functioning through elected vāriyams (committees) are recorded in such centres. More importantly, royal orders relating to defaulters of land revenue affecting the whole region or several regions, were invariably recorded and publicized through these centres. The high visibility of royal officers, civil and military, both as donors and officials discharging executive functions, convening the sabhā and executing royal orders, is another notable feature indicating the central place functions of the taniyūr. A similar role is also recognizable in the late-Cōla and post-Cōla periods, i.e. thirteenth-fourteenth centuries, when the Telugu Cōlas, Pāṇḍyas and Śambhuvāyas chose to record their orders relating to refixing, remission or revision of taxes on traders, weavers, oil-mongers and other professional groups in the same taniyūrs as well as nagarams.

Major craft production centres like weaving centres, centres of oil production and salt manufacture, were often attached as dēvadānas to the taniyūrs, and it is of great significance that such centres were sometimes located in other kōṭṭams or at considerable distances. A combination of the taniyūr and nagaram is illustrated by Tirukkalukkunram, a nagaram in Kalattūr Kōṭṭam, which was linked to Vānavanmahādēvicaturvedimangalam, a tan-kūru in Āmūr Kōṭṭam in the eleventh century AD. Taniyūrs inevitably became multi-temple centres of more than one or two religious affiliations. Each of these components was structured on the same pattern, showing a general concentration of population, sometimes covering an area of five or six square kilometres and more.

The evolution of the tirumadai vilāgam, i.e. the temple square with house sites and streets aligned at right angles, is conspicuously illustrated in the taniyūr. Temple priests (Śiva-brāhmaṇas and Vaikhānasas), sevaccar or musicians and tapasvins (ascetics), resided in the inner square as also the landed elite,
while professional communities like weavers, oil-mongers and ḍevaṇaṭīvaḥ (temple servants) were permitted to settle down in the outer premises, and areas were set aside for mixed castes known as the Śankarāppādi, showing the careful demarcation of effective space in these centres. Mathas (monasteries) of various lineages, Śaiva and Vaiṣṇava, which were attached to the temples, were accommodated as a major component in the temple precincts even from the twelfth century, contributing to the increase in urban activities of these centres.

The horizontal stratification of residential areas in the 'pre-industrial' city characterized as a ceremonial centre has been referred to earlier. Here the ceremonial centre is so planned as to align the city with cosmic structures and forces, where the elite lived at the centre and the others at the margins. Markets were neither central nor dominant, but a product of the demands arising from the nucleation by the ceremonial centre. The āṇīyūr would seem to represent a smaller and less compact version of such a centre, and cities like Kāṇcipuram, the enlarged version. The āṇīyūr is also a supreme example of rural-urban continuum.

It is hard to find evidence of a āṇīyūr in each kōṭṭam, but its emergence in key areas, and the distribution of āṇīyūrs in ten kōṭṭams (so far identified) would perhaps indicate the possibility of their occurrence in the ratio of at least one to a kōṭṭam. This, together with the fact that some chiefly centres like Tiruvallam also became a āṇīyūr under Rājarāja I, is a feature of considerable importance in revenue administration and political linkages.

Urban nuclei: 2. Nagaram or Market Centre

The urban forms generated by the end of Pallava rule, i.e. ninth century AD, found expression only in two categories of centres, the royal or administrative centre, and the market or commercial centre. As Kāṇcipuram, apart from being a royal centre, was also a major commercial centre in the expanding trade network under the Cōlas, it is the nagaram or market centre, which is of immediate concern here. Commerce in the Pallava period was organized around Kāṇcipuram, the capital and Māmallapuram, the royal port. The other Pallava nagarams (four) were located at
nodal points linking the capital with other regions, particularly the Kaveri Valley. The distribution of nagarams in the seventh to ninth centuries does not show any direct correlation with the kōttams or nādus reflective of a town-hinterland relationship or that of a market to its marketing areas. The exchange nexus, in other words, was oriented more towards the commercial needs of the royal centre and less as a regular market for each agrarian unit.

The proliferation of the nagaram from the tenth century shows that the need for marketing facilities increased with the agrarian expansion of the seventh to ninth centuries. Its distribution pattern shows a steady increase in the early Cōla period, a remarkable increase in the middle Cōla period, and a marginal increase in the late Cōla period, keeping pace with the rise, expansion and decline of Cōla power. As a local body, the nagaram maintained local markets (angādi), supervising the flow of goods, providing a regular link among the nādus and with itinerant traders. There is some indication that each of the twenty-four kōttams of Toṇḍai nādu ultimately acquired at least one nagaram, for a late Cōla inscription from Tirukkakkūr refers, among other things, to the twenty-four nagarams of the region and the Vāniyar or oil-mongers, who met in Kāncipuram to make decisions regarding certain levies on oil mills to be endowed to the Tirukkakkūr Śiva temple.

In the tenth and eleventh centuries, a further diversification in markets and trading pattern is attested to by the emergence of specialized trading groups like the Sāliya nagaram (weaver-traders). Śankarappādi nagaram (supplies of oil and ghee) and the Vāniya nagaram (oil mongers). The role of the nagarams in the commerce of Toṇḍai nādu and inter-regional trade was significant, reflecting to a great degree the level of monetization in the Cōla period. The volume of gold deposits and gifts to the temple was considerably larger in the early Cōla period (the reign of Parāntaka I and Uttama Cōla, i.e. the tenth century), when compared to the Pallava period, while gold and money gifts show an increase in the period of Rājarāja I and Rājendra I (985–1044). In Kulōttunga’s reign (1070–1118), due to the royal policy of encouraging trade through abolition of tolls and the extension of trade ventures
into all conceivable areas in South India, Southeast Asia and China, a more regular use of money is attested to by the constant inscriptive references to coins, as well as by the issue of a new currency by Kulōttunga I, modelled on the gold issues of the Eastern Cālukyas. These would show not only a quantitative increase, but also a higher level of monetization, as interest rates were now calculated in terms of money and differentiation was made between old currency in use and new ones as legal tender. After a temporary lull under the successors of Kulōttunga I, new currencies came into use in Tōṇḍai nādu with the coin issues of the Telugu Cōḷas (Nellūr Pudū Mādai, Gandagopālan- mādai) and the Pāṇḍyas in the thirteenth century AD. Land prices show an upward trend in the late Cōḷa period (1150–1279) and commodity production went up, considerably enhancing the economic status of traders. However, the level of monetization under the Cōḷas was, on the whole, considerably low when compared to the Vijayanagar period, and its impact on rural exchange was minimal.

The outward flow of the gold and money deposits from the nagarams to the hinterland is attested to by the fact that they were entrusted to the sabhās and urs of the hinterland, bringing in a reciprocal flow of interest in paddy, ghee and other ritual requirements to the nagaram and mānagaram temples. While initially the rates of interest were in kind, money interests became regular from the period of Kulōttunga I.

Individual merchants show a great deal of mobility between different regions (maṇḍalams) from the early Cōḷa period, as seen from the references to Māyilaṭṭis and Ceṭṭis travelling from Cōḷa and Pāṇḍya regions to the Tōṇḍai nādu nagarams and making individual donations to temples. However, it was through collective action and patronage, as well as supportive political roles, as in Kaṇcipuram, that the merchant class established its social prestige and economic status in the early and middle Cōḷa periods.

Itinerant trade and its organization

With the increase in peninsular trade and the revival and expansion of South Asian trade, commercial ventures came to
be organized and conducted by larger trading groups (samaya), usually described as guilds or corporations, like Ayyāvole or Tiśai Āyirāṭṭu Aiṅnūrrevar, Nāṇādeśi and Valaṅjiyar, the Manīgrāmam (local traders) and Aṅjuvaṇṇam (foreign traders). The last mentioned was active only in the coastal areas of Tondaimandalam, whereas in the Cōla, Kongu and Pāṇḍya regions, the Manīgrāmam controlled prestigious markets in Kāverippūm-paṭṭinam, Uraiyyūr and Kodumbāḷūr, showing greater mobility in the commercially important link areas like the Pudukkottai region.

The interaction of these merchant bodies with the nagarams, some of which were intersection points in itinerant trade, was a factor of great importance in early medieval urbanization, especially due to the Cōla policy of encouragement to overseas trade, through trade missions, maritime expeditions and abolition of tolls, which facilitated their movement both inland and overseas. Protected merchant towns called eririrappattanas were established under royal charters from the eleventh century AD, such towns appearing on trade routes, commercially important areas and distribution points. Kāṭṭūr in the Chingleput district (near Madras) and Basinikonda (Sīrāvallī) in the Chittoor district were two such centres of the eleventh century in Tondai-nādu. The Nāṇādeśis of Mayilappūr formulated rules of conduct for the traders and controlled Kāṭṭūr, which they were instrumental in converting into a protected merchant town.

The itinerant merchant body is less conspicuous in the capitals (royal centres) and ports, which were mānagarams, where it is visible only in the capacity of a trader or donor extending patronage to temples or setting up mathas as in Kāṇcīpuram, but hardly exercised any political or social influence. Here, the local mānagaram or nagaram organization wielded enormous socio-political influence as administrators of commercial ventures, patrons and managers of local temples, i.e. as high prestige groups, in the hierarchy of local relations of dominance. In Tondaimandalam, this merchant body does not appear to have had temporary or permanent residential quarters in major centres as in Cōlamandalam and Pāṇḍimandalam, except presumably in the eririrappattanas or in coastal towns like Mayilappūr, which was not a royal port.
By the end of the eleventh century, i.e. the reign of Kulo- 
ttunga I, whose interests in promoting trade are well known, the 
whole coastal region (later called Coromandel) from the Pāṇḍya 
coast in the south to Viṣakhapāṭṭīnām in the north (Andhra 
region), came to be linked through itinerant trade and, perhaps, 
also by coastal shipping and coastal land routes. The Toṇḍai-
manḍalam coast, henceforth, assumed great importance, as seen 
in the series of coastal trading centres appearing between the 
twelfth and fourteenth centuries, from Tiruppālaivanam (Pulicat) 
in the north to Marakkāṇam in the south.64

**Trade, Craft Production and Māṭha**

_Nagaram_ and craft-production centres provide interesting con-
textual evidence, which would indicate a close relationship be-
tween the increase in trade activities, craft-production—especially 
oil and textiles—and the institution of Śaiva māṭhas (monasteries) 
of various sects and lineages, starting from the Kālāmukha 
(Pāṣupata) māṭhas of the ninth and tenth centuries in centres like 
Mayilāppūr and Tiruvorriyūr (the Madras region), the bhakti 
māṭhas named after Śaiva saints in the eleventh and twelfth 
centuries,66 and the well organized māṭhas of the Gollā/Gōlakī 
or Lakṣādhyāyi lineages of the twelfth to fourteenth centuries 
AD, tracing descent from the Gollā māṭha of Vārāṇāsi (Banaras).67 
They are invariably located in trade and craft centres. Itinerant 
traders are also often found to be patrons of māṭhas, some of 
which are named after them as Nānādēśī, Valaṅjīya and Dan-
madāvala māṭha.68 The monastic network seems to have provided 
a great impetus to trade and craft production in Toṇḍaimanḍa-
lam, as in other parts of Tamil Nadu.

South Indian textiles had a growing demand and widening 
market in the medieval period, and, hence, the weaver com-
munities of Toṇḍaimanḍalam (especially of the Kāṇciapuram 
region) acquired a special importance in the commerce of this 
region. The sāliyas (pattasālin) and the kaikkōlas were two weaver 
communities producing varieties of silk and cotton cloth for 
inland and overseas markets. The sāliyas gained considerable 
influence in Kāṇciapuram, as the chosen weavers of royal gar-
ments and temple administrators from the tenth century AD.69
while the *kaikkōlas*, the larger community, are not visible as an influential group till the twelfth century AD. Early records refer to them more often as warriors, some of them with high ranks as commanders (*senāpatis*) and chiefs (*mudalis*), participating in gift-giving activities. The *kaikkōlas* without such status titles were apparently weavers who had no economic influence, being dependent on traders for organizing the marketing of textiles. However, by the twelfth century AD, the *kaikkōlas* are seen making expensive gifts like jewels, land, etc., the volume of gifts indicating an enhanced economic status, which ultimately gave them avenues of upward social mobility through temple management as trustees of endowments and members of the temple executive. Their aspirations to higher status took different forms of seeking validation—through setting up images and dedicating members of their family as *devarādiyār* (temple servants and perhaps also dancing girls), to whom house sites were allotted or sold in the thirteenth century in the *tirumadaivilāgām* of the temple. Their status, both ritually and socially, was lesser than the merchants or *Sāliya nagaram*, though they were also entitled to temple honours in the later period.

The change in their economic status, however, was also accompanied by increase in taxes on weavers and their looms, a feature noticeable even from the period of Kulōttunga I, which led to severe tax burdens, forcing the weavers to abandon various centres. They were induced to stay on or return by remission or revision of taxes under the Śambhuvarāyas and Pāṇḍyas in the thirteenth and fourteenth centuries. This became one of the major issues in the Vijayanagar period, when the demand for South Indian textiles was on the increase.

The interdependence of trade and craft is further emphasised in the records of the same period, when collective gifts through voluntary levies were made by merchants and weavers. Merchants, weavers, oil-mongers and other professional groups are increasingly mentioned together in the thirteenth and fourteenth centuries, in *nagaram* and craft centres, where such remissions or revisions of taxes were recorded.

The twelfth century innovation in societal organization, which helped to accommodate the craft groups, artisans, as well as lower categories of agricultural workers, within the vertical
division of the Right and Left Hand (Valangai and Idangai) castes,\textsuperscript{75} is not recorded in the Tondaimandalam inscriptions till the fourteenth and fifteenth centuries AD. Presumably, this division was known, as seen in the assignment of Right Hand status to sāliyas and Left Hand status to the kaikkōlas,\textsuperscript{76} which points to the fact that criteria other than occupation played an important part in such classification, traceable to their economic and political influence even in the early Cōla period.\textsuperscript{77} Status enhancement was achieved only through upward ritual mobility. Even the Right and Left Hand division introduced only a new basis, ‘a root paradigm’ for caste grouping, but still functioned within the traditional norms of validation, i.e. temple ritual and social privileges through such ranking.

Kaikkōla aspirations to enhanced ritual status were thus confined, in the later period, to attempts to be upgraded within this ‘root paradigm’ from the Left to the Right Hand. Right and Left Hand caste rivalries, however, became a regular feature only in the Vijayanagar and post-Vijayanagar periods.

**Supra-local Organizations**

An organization of agriculturists known as the Cittiraměli Periyanādu appears in inscriptive records of Tondaimandalam from the middle of the eleventh century AD in the reign of Rājendra Cōla II (1052-1064).\textsuperscript{78} It has often been described as a Periya nādu (larger nādu) assembly formed by the nāṭṭār (vēḷāḷa) to resist the centralizing efforts of the Cōlas.\textsuperscript{79} It would appear, however, that the need for such an organization was created more by the growing consumption of food grains and pulses in urban areas and the efforts of agriculturists to control the movement of grains and other agricultural products, which they alone could have mobilized for exchange with itinerant traders. A more logical assumption would be that it was an agricultural guild,\textsuperscript{80} which established commercial links with the Five Hundred by the twelfth century AD. A close interaction between these organizations is indicated by the presence of the Tisai Āyirattu Ainnūrruvvar or Nānādeli in centres where the Cittiraměli inscriptions are found, either mentioned separately as in Tāmaraippākkam (North Arcot district),\textsuperscript{81} or as jointly
making donations in other parts of Tamil Nadu, particularly in the commercially important Pudukkottai-Ramanathapuram region, and in the Cōla heartland.82

On the basis of the earliest occurrence and the spatial and chronological distribution of the Cittiramēli inscriptions, it would be tempting to assign the origins of this organization to the conscious efforts of the Tonḍainādu agriculturists, later spreading to other parts of the Tamil country, and even into South Karnataka and Andhra. In Tāmaraippākkam, the nāttār of several kōṭtams and other areas included in Jayakonḍa-cōlamanḍalam, assembled to discuss common problems of the vēlāla community. Yet, the praśasti of this organization, which is an illuminating record, shows that its members, who claimed to be Bhūmiputras, were drawn from all the four varṇas and that it was not a caste organization. It also appears to have had greater stakes in local relations of dominance than other supra-local bodies, for it acted as a dispenser of justice, settling land disputes and cases of criminal offence.83 Later, in the twelfth and thirteenth centuries, the Cittiramēli exercised the right of fixing cesses and tolls on merchandise passing through distribution points and coastal towns of Tonḍaimanḍalam, jointly with the Five Hundred and other bodies like the Vāniya nagaram,84 at the time of the decline of Cōla power, and in the post-Cōla period.

The pre-fix Padinenbhūmi and/or Eluppatonpadu nādu (eighteen countries and/or seventy-nine nādu) is also used to designate this organization, as well as the Vāniya and Vaiśya organizations in the thirteenth and fourteenth centuries.85 It is not easy to define the geographical region covered by this description, and presumably, the 'eighteen countries' had become a traditional nomenclature for the whole of South India, although the 'seventy-nine nādu' could originally have referred only to Tonḍaimanḍalam.86

The Cittiramēli's importance is further confirmed by the fact that it founded brahmadeyas, pattanams and built temples, apart from consecrating images and even dedicating temple servants, including dancing girls.87

The common eulogy of the Cittiramēli and merchant bodies represents the first institutional expression of the ascendancy of
traders in the predominantly agrarian set up. This is reiterated by the coming together of nagaram or Vaiśya organizations and Cittrameli for various purposes, including fixing tolls and cesses (maganmai), commission or share of the town (pattanappagudi), conspicuously towards the close of the Cōla period, when royal authority became virtually ineffective in the peripheral regions like Toṇḍaimanḍalam, and receded to the core area, and also in the post-Cōla period, when new chieftaincies like the Telugu Cōlas and Śambhuvarāyas emerged in Toṇḍaimanḍalam, and found it profitable to encourage their autonomy and movement. These chieftaincies extended special concessions and support to merchant organizations and also migrant traders from the Cōla heartland, residing in the coastal towns of Toṇḍaimanḍalam. Kerala merchants trading in Kāṇcipuram and other nagarams, and the Nellūr traders who constantly moved into Toṇḍaimanḍalam with the ascendancy of Telugu Cōlas over Kāṇcipuram in the thirteenth century, conducted active commerce in this region, and even identified themselves with the larger trading community of Toṇḍaimanḍalam by making joint endowments to temples and participating in temple construction.

In the thirteenth century, yet another supra-local forum emerged in Toṇḍaimanḍalam, when the Tiruvāyppādi Nāttavar (cattle keepers/shepherds) of the ‘eighteen countries’, assembled at Tiruvattiyūr near Kāṇcipuram and assigned a voluntary levy of cattle and sheep to the local temple for favours received by their ‘caste’ and ‘clan’(?) In their eulogy, they called themselves, significantly, Nandaputraś of the Yādava lineage, descendants of the lord of Dvāraka, i.e. Kṛṣṇa, settled in Toṇḍaimanḍalam. This appears to be a unique organization of the pastoral families of Toṇḍaimanḍalam.

Kāṇcipuram in the Early Historic Phase

Kāncī, the Kāṇcipuram/Kāncimāṇagaram of the early medieval period, was one of the restricted loci of major urban concentration in the early centuries of the Christian era, with access to maritime trade through its port Nirppeyarru, which, on the basis of archaeological evidence, may be identified with
Vasavasamudram near Vāyalar, at the mouth of the Palar.² Tiraiyar (people of the waves), the name of the early rulers of Kacci, would suggest a possible association with the sea and sea-faring, and indicate their interest in trading ventures overseas and in establishing socio-political dominance through control over external trade. Like the other Tamil powers such as the Cōlas, Cēras and Pāṇḍyas, the Tiraiyar encouraged the flow of luxury goods, and founded dual centres of power—Kāncipuram (Kacci) and its port—as a consumption point in the interior and a port on the coast. Kānci was, however, more than a mere consumption point, for it was the major weaving centre in Tonḍaimandalam, being located in one of the cotton producing regions, like Uraiyur in Cōlanādu and Madurai in Pāṇdinādu.

The antiquity of Kāncipuram’s commerce and external trade is also established by archaeological evidence in the form of remains of Roman pottery and the ‘ship’ type coins of the Sātavāhanas (first and second centuries AD),³ and on the basis of early Chinese references to Houang-tche and its trade.⁴ Evidence of its urban character is also provided by the Manimēkalai,⁵ a Buddhist work of the post-Sangam period, whose locale was Kāncipuram, and by its description as a mānagaram (big city) in all subsequent literary works and inscriptions. Its status as a mānagaram was enhanced by the multiple roles that it acquired by the time of the rise of the Simhaviṣṇu line of Pallavas in the sixth century AD, as a royal centre, as well as a commercial and craft centre, with a heterogeneous population composed of Buddhists, Jains and followers of the brahmanical religions of Vaiṣṇavism and Śaivism. Its continuous importance in inter-regional trade was sustained even in the period of crisis following the decline of Roman and West Asian trade, when Kānci revitalized its commerce by turning to Southeast Asia, where Indianized kingdoms and colonies had emerged by the fourth and fifth centuries AD. By the sixth century Māmal-lapuram had also developed as the major outlet for Kānci-puram’s trade.

Kānci’s early Buddhist connections⁶ are attested to not only by the Manimēkalai, but also by the seventh century accounts of Hsuan Tsang⁷ and the Mattavilāśa Prabhasana,⁸ the Sanskrit
farce of Mahendravarman I, the Pallava ruler (575-630). The Jain associations of Kāñcī are at least as old as AD 550, the date of the Paḷḷankōyil copper plates of Simhavarman, referring to Jina-Kāñcī or Tirupparuttikkunṟam and its Jain temple. Above all, Kāñcī's associations with Vedic brāhmaṇism and Purāṇic religion are of greater antiquity, and date back to the second century AD, the probable date of Perumpānāṟṟuppaṭai, a Sangam work, referring to Kāñcī. The Ghatikā of Kāñcī, a brahmanical institution of higher learning referred to in the copper plates and inscriptions of the Pallavas and Kadambas, also proclaimed the dominance of brāhmaṇas and ksatriyas, even from the fourth and fifth centuries AD. Thus, Kāñcī was truly heterogeneous in its socio-religious affiliations even before the rise of the Pallavas, and tended to evolve four major sectors in its internal structure by the seventh century AD, viz., Buddhist, Jain, Vaiṣṇava and Śaiva.

The Early Medieval Phase

Kāñcipuram's urban character underwent significant changes when it was drawn into the reurbanization process of the early medieval period, which began with the agrarian integration of Toṇḍainādu. The agricultural hinterland, which sustained the city's population, was initially confined to Eyil Kōṭṭam in which Kāñcipuram was located. Its expansion beyond Eyil Kōṭṭam began with the Pallava land grants of the seventh to ninth centuries, but more significantly from the ninth century, when a higher level of agrarian integration began under the Cōlas. Correspondingly, the Śaiva, Vaiṣṇava and Jain sectors of the city came to expand, so as to cover almost the whole area of modern Kāñcipuram. From the tenth to thirteenth centuries, under the Cōlas, the city's growth was continuous, the expansion of its hinterland 'corresponding to the city's expansion' in the form of new temples, or rebuilding and elaboration of existing ones, to all of which grants of land and dēvadāna villages were made in various Kōṭṭams. By the mid-thirteenth century, over sixty

* See map on Kancipuram, the Hinterland, Map 14.
** See map of Kancipuram City, Map 15.
devadāna villages, two pallicandam (Jain) villages for Jina-Kānci and lands in several other brahmadeya and non-brahmadeya centres, were made over to the Kāncipuram temples, covering fourteen kottams and over eighteen nādus in Tōṇḍaimanḍalam, from which agricultural and other products reached Kāncipuram. Over fifty per cent of these grants were made by the end of the eleventh century, and the rest by mid-thirteenth century, a major share being assigned to the largest Viṣṇu temple, that of Varadarājāsvāmī+ in Attiyūr, which had become an integral part of the city by the end of the eleventh century AD.

Under the Pallavas, Kāncipuram’s commercial hinterland was confined to three major points, i.e. Kāncipuram, Mallai (Māmallapuram) and Mayilai (Mayilāppūr), representing an exchange nexus limited to the needs of the royal centre of Kāncipuram, which had external links of greater importance till the eighth century AD than internal links with a trade network. The few market centres of the period known from Pallava records do not provide evidence of such a regional network.

Kāncipuram’s commerce came to be linked to the nagaram network only with the emergence of the inland exchange nexus through the centuries of Cōla rule, i.e. ninth to thirteenth centuries. This was achieved through the reciprocal flow of funds (gold and money deposits) from Kāncipuram to different brahmadeyas and nagarams of Tōṇḍainādu,102 where the local sabhā and nagaram were entrusted with the deposits on payment of interests, in the form of paddy, service and other commodities as ritual requirements which reached Kānci. Temple funds were thus invested in both urban and rural enterprises and perhaps also in cotton production, as Kānci was the biggest weaving centre. Kāncipuram’s umland extended even into Poysaḷa (Hoysaḷa) rājya in South Karnataka, where several gavundas, pradhāna mudalis of Iḍai nādu gifted land for the supply of cardamom to the Varadarāja temple in the thirteenth century.103

Kāncipuram’s commercial importance is also reflected in the enormous influence and prestige wielded by the mahanagara-rattār, even from the period of Dantivarman Pallava (796–846),104 as executors of royal orders and managers of temples.

+ See ground plan of Varadarajasvami temple, Map 17.
Kāñci’s relegation to the position of a secondary political centre under the Cōlas, however, did not affect its commercial supremacy. The Cōlas, were, in fact, more directly interested in promoting its weaving industry and textile trade. This is illustrated by the detailed financial arrangements made for the Üragam temple by Uttama Cōla in late tenth century AD, in which the mahānagarattār, sāliyar or paṭṭasālins (weavers) and other groups were involved, the nāgarattār, in a managerial and supervisory role and the sāliyar, the weavers of royal garments, as temple accountants and administrators. The kaikkōlas looked after the cultivation and reclamation of lands of the Üragam temple during the reign of Uttama Cōla, and subsequently, under Kulōttunga I.

The city’s commercial area was marked by several big streets where merchants lived, two big streets, where the weavers resided, apart from the four weavers’ quarters and another site called Sōlaniyamam, which are mentioned in the copper plate grant of Uttama Cōla. These weavers’ quarters were associated with the Üragam temple and its management. All these streets and quarters seem to fall within the ancient Kacci, the nucleus around which Kāñcipuram grew into a big city. They would also indicate a well defined commercial and craft production area within the city.

In the hierarchy of social dominance, the nāgarattār, in general, occupied a position next to the landed elite, and contributed in a large measure to the establishment of economic links. The Kāñcipuram mānagarattār, however, enjoyed a more prestigious status than other nāgarams, and greater autonomy vis-à-vis other professional groups, as politically powerful elite. More importantly, they were also involved in large-scale land transactions and gifts to the Kāñcipuram temples, especially during the early and middle Cōla periods, with a conspicuous increase in the volume of gifts under Rājarāja I, Rājādhirāja I and Kulōttunga I, in terms of land, gold and money.

The presence of itinerant trading organizations like the Nānādesi or Tīsai Āyirattu Aṁnūṟṟuvar in the same period (eleventh to twelfth centuries), further confirms the increase in Kāñcipuram participation in South Indian trade. The period of Kulōttunga I (1070-1118) witnessed not only a spurt in
commercial ventures, but also the movement of itinerant traders into other parts of South India. Special attention was paid to the textile trade and weaver’s craft by the introduction of a series of regulatory measures in the form of cesses on looms and weavers, for controlling the production and distribution of cotton and textiles. The Kâñcipuram region received a major share of the attention bestowed upon textile trade and promotion of the weaving industry.

The volume of trade further increased in the thirteenth century under the late Cōlas and Telugu Cōlas, with the movement of Nellūr (Andhra) traders and Kerala merchants, who became major participants in Kâñcipuram’s commerce in the thirteenth and fourteenth centuries. A general weakening of the nagaratā’s hold over Kâñci is seen in the changing pattern of patronage and the nature and volume of gifts made by traders from Andhra and Kerala. It may also be attributed to the tendency for increased monetization, which inevitably broke the nagaram’s autonomy and enviable status in the commercial hierarchy. Another factor which led to the breaking of the nagaram’s independence was the use of the several currencies introduced by the Telugu Cōlas and Pāṇḍyas, which the traders from outside Tōṇḍainādu used in commercial transactions, as well as land endowments to temples by purchase.

Kâñcipuram became the major destination in South India, a point of convergence for South Indian trade in the thirteenth and fourteenth centuries, i.e. before the rise of Vijayanagar. Chinese and Arab trade increasingly concentrated on the Kerala coast (Kollam = Quilon) and the Pāṇḍya coast (Tōṇḍi). The merchants of Malaimanḍalam (Kerala) brought horses, spices and other commodities to Tōṇḍainādu and presumably returned with textiles. Cilai Ceṭṭis (cloth merchants) also moved out of Kâñcipuram and Mayilāppūr to the west through the Kongu highway, i.e. Salem-Coimbatore region.

Kâñcipuram had also become the headquarters of the supralocal organization of the Vâniya nagaram by the end of the twelfth century AD. Although the mahānādu (supralocal) organization of the kaikkōlas, with Kâñcipuram as its logical meeting place, is not known from inscriptions prior to the Vijayanagar period, i.e. fifteenth century, there are strong
indications of the existence of such a forum for the weavers even by the thirteenth century AD.

Kāncīpuram’s urbanism also derives from its role as the political centre of Toṇḍaimanḍalam from the commencement of the Christian era. However, direct political control over Toṇḍaimanḍalam was established only under the Pallavas of the Simhaṇīṣṭu line in the sixth century AD. Kāncīpuram’s role as an administrative centre continued with equal vigour under the Cōḷas, although it had been relegated to the position of a secondary capital. Kāṇcī served as the base of military operations under the early and middle Cōḷas, particularly during the Cōḷa-Rāṣṭrakūṭa (tenth century) and Cōḷa-Cāḻukya (eleventh and twelfth centuries) conflicts. Later, under Kulōttunga I and his successors, Cōḷa commanders from Kāncīpuram led expeditions as far as Kalinga (Orissa). Cōḷa royal officers, both civil and military, are highly visible in Kāncīpuram’s inscriptions, as donors, administrators and military leaders. The auditing of temple accounts in various centres of Toṇḍaimanḍalam was carried out from Kāncīpuram, and occasionally from Tiruvorriyūr, another centre of direct control exercised by the Cōḷa government over the city and its hinterland. The royal palace of the Cōḷas in Kāncīpuram is referred to in a number of inscriptions from the period of Sundara Cōḷa (c. AD 956-73).

Cultural Role of Kāncīpuram

Kāncīpuram’s role in socio-religious changes and cultural creativity in Toṇḍaimanḍalam, in fact the whole of South India, was more significant than that of any other medieval city. Kāṇcī’s autonomy, as well as its very heterogeneity, as a centre of different religious affiliations and urban concentration, led to serious socio-religious conflict in the early medieval period. Under the Pallavas, it was the major centre for the propagation of the Purānic religions of Śaivism and Vaiṣṇavism, and the scene of the religious conflict between the brahmanical sects on the one hand and the Buddhists and Jain sects on the other, leading to the decline of Buddhism and the subordination of Jainism. The symbol of royal conversion was central to this conflict, and the bhaktī (devotion) cult was the chief instrument through which
the dominance of the Purânic religion was achieved. Often characterized as a protest against caste hierarchy, the bhakti movement was, in reality, pitched against the ‘heterodox’ Buddhist and Jain sects. It is significant that the early Vaisnava (Poygai ālvār) and Śaiva Saints (Appar) of the bhakti cult are associated with Kâñcipuram region. The bhakti hymns derived their content from the epic, Purânic, and Āgamic tradition fostered by the Pallavas.

The bhakti ideal emanated in a context of social differentiation, where conflicts centred round social dominance, influence and patronage, as in Kâñcipuram under the Pallavas and in Madurai under the Pâñḍyas. Initially, the Pallavas succeeded in projecting the Purânic world view, and expressed their Purânic (brahmanical) ideology through their exquisite rock-cut and structural temples in dravidā style in Kâñcipuram, Mâmalapuram and other parts of Toṇḍaimândalam.

Under the Cōlas, i.e. the second phase, the bhakti ideology was more systematically used by the ruling family, with a conspicuous shift in the focus of political and economic power from the brahmadayā to the temple. Stories of the religious conflict were narrated in the hagiographic works like the Periya Purânam of the eleventh and twelfth centuries, when the Cōlas encouraged the collection of hymns and composition of hagiographic works, in order to revitalize the bhakti ideology. The Cōlas, indeed, gave permanence to all cult centres sanctified by bhakti hymns, replicating the temple’s role as the superordinate instrument of integration in each of them and in the newly emerging agrarian centres and urban nuclei. This was achieved through renovation in stone of old shrines and construction of new ones. Architecturally, the major temple projects were meant, however, only for the royal/ceremonial centres like Kâñcipuram.

The above process is reflected, to a remarkable degree, in the expansion of the city of Kâñcipuram, where all the major shrines, Vaisnava and Śaiva, glorified by the bhakti hymns, with the exception of the Paramesvaravinñāgaram, evolved as temple centres under the Cōlas. The process is repeated in the whole of Toṇḍaimândalam, where not a single temple of the bhakti cult was constructed earlier than the early Cōla period (AD 850–985).

Sectarianism and conflict were inherent in the bhakti cult,
and even within the Purāṇic religions, it led to a serious rivalry between Śaivism and Vaiṣṇavism and a societal crisis in the twelfth century, the former having consolidated itself under the Cōḷas and the latter seeking a wider popular base. Rāmānuja, the Vaiṣṇava teacher-reformer, spent his formative years in Kāṇcipuram, where he imbibed the ideals of Viśiṣṭa-advaita (qualified monism) and founded the Śri-Vaiṣṇava religion. The most eventful phase of his activities was more fully enacted in Śrīrangam, the greatest of the Vaiṣṇava centres, and subsequently, in Tirupati and Melkote (Mysore region). Rāmānuja’s liberal measures to widen the social base of Vaiṣṇavism involved a reorganization of rituals in Śrīrangam and the incorporation of non-brāhmaṇa (śūdra) elements into Vaiṣṇava worship, thus creating avenues of status enhancement for the artisanal and other lower caste groups, the weavers (kaikkōḷas) being one of the chief beneficiaries. The Śrī Vaiṣṇava community later split on this issue into the Vaḍakalai (northern and Sanskritic) and the Tenkalai (Southern and Tamil Prabandhic) sects. Although Viśnu worship in Kāṇcipuram was as old as the ‘Sangam age’, the period after Rāmānuja saw the most remarkable shift in Kāṇcipuram’s ceremonial centre to the Viśnu temple at Attiyūr, the Vaiṣṇava section of Kāṇcipuram. The shift had its reverberations in the hinterland, where in most Cōḷa centres Viśnu temples were either newly constructed or older ones revived. Many of them linked themselves with Kāṇcipuram by following the ritual traditions of the Varadarāja temple. The reformist zeal of Rāmānuja seems to have precipitated the Śaiva-Vaiṣṇava rivalry for patronage, when looked at from the evidence of the Vaiṣṇava texts referring to Rāmānuja’s persecution by a Cōḷa ruler, possibly Kulöttunga II. The Śaiva protagonists not only resorted to a harking back to the bhakti tradition by composing hagiologies, but also organized Śaiva mathas as custodians of the hymnal literature, the Śaiva Siddhānta canon evolving from this period. The Śaiva propagatory measures are well articulated through the proliferation of monastic lineages all over the Tamil country, a number of mathas coming up in the weaving and trading centres of Toṇḍaimanḍalam, particularly around Kāṇcipuram.

Two important connections may be made in retrospect, which
are relevant to the Kāñcipuram region. In the earlier conflict, the Jains and Buddhists suffered a general decline, and, judging by later history and traditions, many of the Jain centres around Kāñcipuram, which appear to have been weaving centres, were converted into Śaiva ones dominated by the Kālāmukhas (-Pāṣupatas). The second is the near total decline of Buddhism, although a later thirteenth century reference to the Bauddhapalli (Buddhist monastery) in Kāñcipuram along with the streets of merchants, would indicate its survival despite the traditional belief that Śankara, the Advaita philosopher, rooted out Buddhism from Kāñcipuram when he established the Śaiva Pitha (the present Kāmakṣi temple) in this centre. The Buddhist sector in Kānci thus merged with the Śaiva one. Jainism, however, survived in Jina-Kānci and other centres in Toṇḍaimanḍa-lam, and this should be attributed to the adoption of the Purānic tradition and the temple-based worship by the Jains.

Kāñcipuram’s multiple roles as a dynastic, commercial and cultural centre, would show that it is its urban context, i.e. as a city of heterogeneous population of different socio-religious affiliations, that generated conflict and tension. However, constant shifts in the ideological base by politically powerful elite, and new societal alliances, helped to resolve such conflicts in medieval South India, as reflected in the growth of Kāñcipuram into a multi-temple complex. In its role as a centre of cultural creativity, especially art, religion and literature, Kāñcipuram surpassed all other medieval cities of South India. Its continuous importance as a prime mover in the ideological shifts, cultural changes and the reorganization or restructuring of Tamil Society and patterns of patronage, was not shared even by Madurai, which was the Tamil city par excellence in the early historical period. Taṉjavūr, on the other hand, was a ceremonial centre created entirely by the political will of the Cōlas.

The Madras Region*

The modern city of Madras did not develop, like Kāñcipuram, as a unified, compact centre of urban concentration in the

* See Map 16.
pre-modern period. It developed out of several clusters of settlements, the inter-relationships of which are not easy to trace, due to large-scale renovations and changes in modern times. These clusters are distributed mainly in two köttams, the Puliyūr and Pulal köttams.

Mayilāppūr (Mayilarppil) on the Madras coast was the major centre of trade in Puliyūr Köttam. The antiquity of its commerce is attested by Ptolemy’s reference to Mailarphan, identified with Mayilāppūr,\textsuperscript{132} and the Mambalam hoard of punch-marked coins,\textsuperscript{133} datable to the second century AD. Along with Mallai and Kānci, it formed part of an early exchange nexus dominated by external trade. During the early medieval urbanization, it came to be linked with the network of nagarams and inland commerce from the ninth century AD. The presence of two major bhakti temples, the Śiva temple in Mayilāppūr and the Viṣṇu temple in Tiruvallikkēni, which was a part of Mayilāppūr, and a Jain section of the same centre, which was apparently located in the Santhome area,\textsuperscript{134} suggest an early urban concentration in this centre. All traces of Pallava-Cōla constructions have been obliterated in the large-scale renovations of the temples of this area. From the ninth and tenth centuries, the commerce of Mayilāppūr was handled by the Nānādesi or Valaṇjīyar, with their mercantile town at Kāṭṭūr, and later by the Manigrāmam and Aṉjovanaṉram.\textsuperscript{135} Traders from Mayilāppūr travelled to Cōla centres in the distant Kāvēri delta and Tamraparni valley, where fairly large urban complexes had developed under the Cōlas.\textsuperscript{136} Mayilāppūr, as a weaving centre, was linked to the larger Kānci-puram region,\textsuperscript{137} which had a concentration of weaving communities.

In the eleventh century, a cluster of settlements emerged with Tiruvāṇmiyūr, a bhakti centre on the coast, south of Ādayārū (i.e. south of Mayilāppūr), and Veliccēri or Dinacinṭāmaṇi Caturvēdimangalam, as the two Śaiva dominated centres in Köṭṭūr nādu in Puliyūr Köṭṭam.\textsuperscript{138} A second cluster of settlements grew up around modern Pallavaram (ancient Pallavapuram) with Tiruccuram (Triśūlam) Vānavanmahādevi Caturvēdimangalam (Pallavaram) in Surattūr nādu, Tirunīrmalai and Ādamppākkam,\textsuperscript{139} the last mentioned becoming a puram or revenue village assigned to Tiruvorriyūr in Pulal Köttam. Māṅgādu, Pūndamallī and
Tirumaliśai, located on the highway to Kāncipuram, represent the third cluster of settlements. Pūndamalli, a nagaram, was a centre of oil trade with the Vāniya traders participating in the meetings of the larger body of oil-mongers in Kāncipuram.

Pulal Kōṭṭam, now represented by the northern and northwestern parts of Madras city, also had several settlements, of which Pādi (Tiruvalidiyam), Tirumullaiyil and Tiruvērkādu were the most important, as their interaction with the other centres in the two kōttams is attested to by their inscriptive records.

The major centre in Pulal Kōṭṭam, however, was Tiruvorriyūr which served as the nucleus of the second urbanization of this region, achieving a high level of integration among Pulal, Puliyūr and Paiyūr Kōṭṭams, between the tenth and thirteenth centuries AD, linking the northernmost point of the Tamil coast, i.e. Tiruppalaivanam, an important trading centre, with the interior and with other nagaram centres.

Tiruvorriyūr was itself linked to the brahmadeya of Manali or Simhaviśṇu Caturvēdimangalam, which was a puram of Tiruvorriyūr. The latter’s sabbā was instrumental in founding the Śiva temple of Tiruvorriyūr in the ninth century AD. Tiruvorriyūr’s importance arises from its association with an ancestor of the Cōlas called Orriyūran, the father of Vijayālaya, the founder of Cōla power, and from its sectarian affiliations with Kālāmukha-Kāpāلika Śaivism. As an ancestral trust, every Cōla ruler bestowed his attention on this centre, beginning from the reign of Parāntaka I. It developed all the characteristics of a taniyūr, without being designated as such, and assumed multiple roles, politico-economic, commercial and religious. Next to Kāncipuram, it was the chief centre from which royal officials supervised and audited the income and expenditure of other temples in the region, as also that of the Tiruvorriyūr temple.

Tiruvorriyūr acquired over ten dēvadāna villages and lands in twenty other centres, all located in the three kōttams mentioned above. The nagaratār of this centre were a powerful body entrusted with the huge gold and money endowments of royal members, and managing temple lands. It was, in addition, a weaving centre with a Śāliya nagaram looking after its trade in textiles.
In medieval South India and in the region of our study in particular, the processes of centrality would seem to have been predominantly at work in the emergence of urban hierarchies and the shaping of the contours of the city. However, a subtle but important distinction exists between Kāncipuram and other areas in Tondaimandalam, including Tiruvorriyūr and Mayilāppūr. The latter would seem to be more directly shaped by the processes of centrality. Kāncipuram offers a significant variation, in that it evolved its urban contours and hierarchies through a combination of both these processes of centrality and concentration. Kāncipuram's individuality or distinctive character lies in its relative autonomy as a city, a politico-cultural and commercial centre, in which the forces of centrality furthered the processes of concentration and vice-versa.

21. Evidence of the increase in irrigation works or their elaboration under the middle Cōla rulers Rājarāja I, Rājendra I (985-1044) and even under Kulottunga I (1070-1118), together with new nāduş, indicates that the process was continuous. Interpretations of the epigraphic data on the nāduş differ considerably. Subbarayalu’s view that the data indicates the evolutionary character of the nādu under the Cōlas (Subbarayalu, Political Geography, chapter v) is contradicted by Stein, who takes the position that the first mention of a nādu in inscriptions does not mean a new appearance but a new recognition of the nādu by the Cōlas. (Stein, Peasant State, 97-9). A careful examination of the contextual evidence of irrigation works and nādu names derived from them, especially in Toṇḍaimandalam (e.g. Ambattūr ēri kīl nādu) would strengthen Subbarayalu’s assumption. 26. Mannārgudi was the only taniyūr in Cōla nādu. A variation of the tan-kūru or tan-i-ūr occurs in Naḍuvilnādu, where Chidambaram in the South Arcot district, designated as a taniyūr, became the centre of a fairly large urban complex, with an immediate hinterland marked by several pērilamai nāduş, representing an agglomeration of existing and newly created agricultural settlements. In all these cases, the tan-kūru represents the agglomeration of such settlements around an urban nucleus, a process similar to the agglomeration designated in tribal societies as sacred territories administered by priesthood and also creating a hierarchy based on a sacrally defined order.

77. It would appear that the Kaikkōlas had also come to be graded as superior and subordinate strata, based on the acquisition of economic status and influence.
82. Piranmalai—SII, viii, 442. Anbil etc.—Champakalakshmi, 1986-a, Table VI.
85. Champakalakshmi. See Chapter 4, Table VI.
86. See Subbarayalu, Political Geography, 30 for the traditional account of the division of Tonḍaimandalam into 24 Kōṭṭams and 79 nādus.
87. Cittirammēlacaturvēdimangalam (Eluvāmpadi)—91 of 1941-2; Cittirammēlipadinenbhumi Paṭṭanām (Sakkaramallūr)—40 of 1940-1; Cittirammēli Nangai (Kuṇṛattūr).
89. Urāiyūr merchants in Puduppatṭīnām—102 of 1932-3.
90. Tiruppāccūr inscription—120 of 1929-30.

95. *Maṇimēkalai*, Canto XXVIII. See also T.N. Vasudeva Rao, *Buddhism in the Tamil Country*, Annamalainagar, 1979, chapter 2. This author, however, favours an early date, i.e. second century AD for the *Maṇimēkalai*, which is better assigned to the post-Sangam period.

96. Buddhism, which was more or less confined to the coastal regions of Tamil Nadu from the ‘Sangam’ period, is well represented in the coastal towns, in which the impact of the Andhra coastal trade links was considerable and art impulses of the Amarāvati-Navārjunakoṇḍa schools of Buddhist art were strong. Kāṇcipuram was likewise influenced by ‘Andhra’ Buddhism and may well have been oriented outward due to its importance as a weavine centre.

97. T. Watters, *Yuan Ch'uang’s Travels in India*, vol. II, 1905, 227. Hsuan Tsang refers to Buddhism, which was on the decline, to the Nirgrantha (Jain) sect, which was still influential, and to the brahmanical (deva) temples, which had become dominant.

98. The heterogeneity of Kāṇci in terms of religious groups and sectarian affiliations is also attested to by the *Mattavilāśa*, wherein the Kāpālikas and Buddhist bhikṣus (monks) are ridiculed. The Rājavihāra, probably the Buddhist monastery referred to by Hsuan Tsang, is also mentioned. See Mahalingam, *Kāṇci puram*, 74–5.

100. The Ghatikā’s capture is attributed to the early Pallavas of the fourth–fifth centuries AD by the Copper plate records of the later Pallavas. See Veḷūrpālaiyam Copper plates of Nandivarman III–ninth century AD. T.N. Subramaniam, *Thirty Pallava Copper Plates* (The Tamil History Academy, Madras); see T.G. Aravamuthan, ‘The Early Pallavas of Kāṇci’, *Silver Jubilee Volume of the Archaeological Society of South India* (1962), 63. Also, Tālāgundā Pillar Inscription of the Kadamba Kākutthavarman, *Epigraphia Indica*, ...
for the importance of the Ghaṭikā as a brahmanical institution.

101. Not a single brahma-deya of the Pallava period is so far known from Eyil Kōṭṭam, wherein Kāṅcī was located, the only exception being Pulvēḷūr, referred to in a late ninth century inscription from Tiruvāḷangādu. Kāṅcī itself does not seem to have originated as a brahma-deya, although it is called so in a later inscription (AD 1030, SII, viii, 5). Pallava records refer mainly to gifts of gold and sheep for various services in the temples, their land grants to the Kāṅcī temples being negligible, the only dēvadāna village (Nāyivaṭṭi Kulattūr) was the one granted to the Vaikuṇṭha Perumāḷ temple by Nandivarman II (SII, iv, 827).

102. SII, i, 146, 147, 149; SII, iii, 128 (Madras Museum Copper Plates); SII, iv, 828, 867; 428 of 1919; 17, 18 and 19 of 1921. ARE, 1920-1; Śivapuram—227 to 232 of 1961-2; Vēppangulam—SII, viii, 3 and 5.

103. 562 of 1919, ARE, 1919-20.

104. For Dantivarman, see SII, iv, 132. For Nandivarman II’s accession, see Mahalingam, Kāṅcīpuram, 142. For the role of the Mahānagarattār of Kāṅcīpuram, see also Hall and George W. Spencer, ‘The Economy of Kāṅcīpuram: A Sacred Centre in Early South India’, Journal of Urban History, February 1980, vol. 6, no. 2, 127-51.

105. The Madras Museum Copper Plates of Uttama Cōla, SII, iii, part iii, no. 128.

106. 39 and 46 of 1921, ARE, 1920-1.

107. Kūrāivāṅigapperunteru and Ravikulamāṅikkapparunteru were the streets where weavers lived. Arumolidevapperunteru, Rājarājapparunteru, Nigarilisölapparunteru and Gaṅdāgapāḷapparunteru were the four streets where merchants lived.

110. A large number of Kerala traders, some of them with impressive titles of high social rank (e.g. Nāyakar), made huge donations
in the Telugu Côla period. They hailed from several centres, including Kollânam (Quilon) in Kerala.

111. Large sums of money, e.g. 1750 Nellûr Pudu Mâdai, were paid for repurchasing land for gift by merchants from outside. See 447 of 1919, ARE, 1919-20.

112. 165 of ARE 1968-9; 259; 272 and 279 of 1969-70.

120. K. Vellaivaranan, Paṇmiru Tirumurai Varalâru, part 1, Annamalai University, 1972, 60-171; 172-253.

121. This temple was built during the reign of Nandivarman II (731-96) and glorified by the hymns of Tirumangai Álvâr.

122. This is true of all the bhakti centres in the whole of Toṇdai-mandalam. A rather curious exception is Kuranganîlmuttâm, also a bhakti centre, where a cave temple assignable to Mahêndra-varman I (575-630) exists. Similarly, the Râjasimheswara at Kâncî also came to be linked with the story of Kaḷârsîngan, a bhakti saint, identified with Râjasimha Pallava.

125. In most of the Vaiṣṇava bhakti centres like Tirunîrimalai, Tiruvallikkēni, Tirumaljîsai, etc.

128. Tiruvöttür (Tiruvattiyür)—115 of 1939-40; Tiruvänakköyil—352, 360 of 1911, ARE, 1911-12.
129. Tiruvöttür, Māgarāl, Perunagar around Kāncīpuram, and perhaps even Mayilāppūr.

146. 132 of 1912; ARE, 1912-13.
Appendix

Kāncīpuram’s Expansion Through Temples

From Kacci of the Sangam period, which had a single Viṣṇu shrine of central importance, Kāncīpuram grew into a huge multi-temple centre, comparable to Kuḍamūkku-Palaiyārai (Kumbhakonam) in the Kāvēri delta. The successive stages of its growth are marked by the appearance of several temples dedicated to Viṣṇu, Śiva and Śakti and their elaboration under the Pallavas and Cōḷas. This multi-temple complex evolved through centuries of growth from earlier agrarian clusters, the temples which marked its growth representing the loci of the ceremonial complex at different chronological points, leading to the emergence of a dispersed ceremonial centre. The locus of the ceremonial complex shifted from one temple of major importance to another, depending upon the changing pattern of patronage of the ruling families and the new temple projects, which were royal creations for legitimation. Such multi-temple centres differed from the sacred/pilgrimage centres, where the locus of the ceremonial complex remained unchanged, as in Chidambaram of Śrīrangam.

The following table attempts to show the growth of Kāncīpuram through a tentative chronological sequence of the origin and elaboration of its temples based on epigraphic, architectural and literary data. Although tradition, as recorded in the Kāncīmahātmya*, assigns seventy-two temples (including small shrines within larger temples) to Kāncīpuram by the seventeenth and eighteenth centuries, evidence of only about thirty odd temples is available for the period ending AD 1300.

Map 13: Tondaimandalam AD 1300: Urban Configurations
Map 14: Kanchipuram: The Hinterland AD 1300
The Madras Region: 1300 A.D.

Map 16: The Madras Region AD 1300
Urbanization from Above: Tañjāvūr, The Ceremonial City of the Cōlas

The Cōla city of Tañjāvūr, like many other cities of early medieval South India, was a temple city. It was, however, different in many significant ways from others, both as a ceremonial and political centre. The distinctive character of Tañjāvūr lies in the fact that it was not only a royal/ceremonial centre, but was created by a deliberate act of royal policy, in imitation of a sacred bhakti centre with the temple as its nucleus and, hence, was at once a product and symbol of the socio-cultural milieu of the Cōla period. As a political centre, it represented a state which evolved through a steady process of integrating different pre-existing politico-cultural zones such as the Pallava, Pāṇḍya and Kongu (Cēra) regions, each given a new nomenclature such as Jayankonḍacōlāmanḍalam, Rājarāja Pāṇḍimāṇḍalam and Mudikonḍacōlāmanḍalam respectively, the manḍalam zone being a new creation of the Cōlas to demonstrate their territorial expansion.

As the authors of one of the most stable state-structures of pre-colonial South India, the Cōlas established a powerful monarchy, which was exemplified in their royal/ceremonial centres like Tañjāvūr and Gangaikonḍacōlāpuram. The role of the bhakti ideology and its chief institutional force, viz. the temple, was crucial in the emergence of such centres, and to the political visibility of Cōla monarchy.

From the ninth century AD, under the Cōlas, there is substantial evidence of the systematic pursuit of the bhakti ideology by the rulers through temple building, institution of grants for ritual singing of bhakti hymns, apotheosis of the bhakti saints, especially the Śaiva nāyanaṅ, and the development of the sciences of architecture, sculpture, painting, as well as the allied arts of music and dance. Another sphere in which there was involvement of royalty in the propagation of the bhakti cult was in the
collection of hymns under Rājarāja I (AD 985-1014) and the composition of the twelfth century hagiographical works like the Periya Purāṇam, narrating the stories of the bhakti saints, at the behest of Kulōttunga II, and the inclusion of members of the royal family among the sixty-three nāyanār such as Köcchen-gañnan, the ancestor of Vijayālaya, the founder of the Cōla power, and Gaṇḍarāditya, one of the early Cōla kings.\(^4\) It is also reflected in the sacred and secular spheres of royal functions, which became almost indistinguishable in those centres which were founded by an act of deliberate royal policy, i.e. a project in imitation of the bhakti or sacred centre ‘sung’ by the hymnists. Notable illustrations are the temples at Taṇjavūr and Gaṇgaikonṭacōlāpuram,\(^5\) founded by Rājarāja I and Rājendra I (AD 985-1044), where they had to invoke the temple’s integrative role to create a royal/ceremonial city.

Taṇjavūr, known as Taṇjai in the Cōla inscriptions of late tenth century and early eleventh century, was the centre of a kūram, i.e. a collection of village/rural settlements,\(^6\) which the Muttaraiyars of this region controlled before it was captured by Cōla Vijayālaya in the middle of the ninth century AD. There is no reference to Taṇjai, except in the Cōla copper plates\(^7\) as the prize capture of Vijayālaya, who built a temple for the goddess Nisumbasūdhanī, till it suddenly blossomed into a huge temple town under Rājarāja I, whose stupendous project, i.e. the Rājarājeśvaram (the Brhadīśvara temple) created the most prestigious temple of the dṛavīḍa style of architecture.

It was the strategic location of Taṇjavūr on a relatively higher ground at the south-western extremity, i.e. at the start of the distributary system of the Kāvēri delta, that dictated its choice as a royal centre by the Cōlas, just as Gangaikonṭacōlāpuram, north of the Koḷligad river (Coleroon), subsequently became one such chosen site for a new ‘capital’. Together they protected the delta, or the core resource base of the Cōlas. Capitals are elusive in medieval South India, for the Cōlas themselves had their residential centre at Palaiyāraikā, while Urāiyūr, the Sangam Cōla ‘capital’, continued to be another headquarters. Thus, it would seem that Cōla political needs, ideological forces and the protection of the core resource base, viz. the delta, brought into existence the Taṇjavūr temple and the city.
As the nucleus of a city created by the Cōḷas, the Taṅjavūr temple represents a ceremonial complex around which urban forms grew. The concept of the ceremonial centre applied to cities in pre-modern/traditional societies, is best exemplified in the studies on imperial cities of China, of Southeast Asia and Sri Lanka. Such a city was organized on earthly space to replicate or symbolize the order which pertained to the other world structure, and this ensured survival and prosperity. The cosmic symbolism of the Taṅjavūr temple, as revealed by its designation ‘Dakṣiṇamēru’ (the southern Mēru as the axis of the universe) and that of its lord as ‘Dakṣiṇamēruviṭankar’, also extended to the city as the centre of the territorial authority of the Cōḷas. This is further supported by the ritual consecration, along with that of the main shrine, also of the shrines of the regents of the eight quarters (aṭṭadikpālas), viz., Indra, Agni, Yama, Nīṛṛti, Varuṇa, Vāyu, Soma and Īśāna, situated at the cardinal points. Thus, the Rājarājēśvara temple was the central ceremonial complex dominating the city, and was carefully engineered to align the city with cosmic structures and forces. One may see here the impact of the bhakti ideology, which assisted in the process of enhancing the power of both the divine and human sovereigns through the symbolism of the cosmos/temple/territory. The performance of a play called Rājarājēśvara Nāṭaka in the Taṅjavūr temple, festivals and offerings on the birth asterisms of the royal family etc., for which special endowments were made by royalty, would also substantiate the inseparable nature of the sacred and secular spheres of interests. Although a palace site has been located at Vallam, seven miles on the road to Tiruchirapalli, the main activities, ceremonial and political, were centred round the temple.

Architecture, sculpture and other arts served as metaphors to convey the different levels of meaning behind the obvious religious function of the temple, signifying changing world views and interrelationships between religious and political functions. The main features of these art forms, i.e. architecture, sculpture and painting, in Taṅjavūr may be presented here to provide an integrated view of the form and meaning of the temple and its synthesizing role.
The architecture of the Räjaräjëśvaram was planned and designed to represent cosmic structures, in keeping with the Cöla ideology of equating temple/cosmos/territory (Map 18). Conceived as a mäddakköyil of the uttama variety, the temple is a sändhara-präsäda (double walled vimäna) standing on a high terrace (mädam), unequalled by any other Cöla monument, including the one at Gangaikonḍacölapuram. The total height of the vimäna is 63.41 metres from the floor of the courtyard. The temple complex covers an area (rectangle) of 240.79 metres east to west and 121.92 metres north to south. According to one estimate, the built-up stone of the vimäna and ardhamaṇḍapa alone covers 5144 sq. metres, not taking into account the tiruccurrālai (corridor around the court), parivāra (attendant deities) shrines, the two gopuras and the shrines in the courtyard. The whole temple complex is compact, laid out and designed simultaneously. A perfect balance between architecture and sculpture is achieved.

The main shrine, i.e. Dakşinamēru, stands in the centre of a huge courtyard, conveying its symbolic position as the axis of the universe. The dikpäla shrines at the three cardinal points and four corners of the currālai (corridor around the court), with Indra’s shrine merged into the northern flank of the Räjaräjan tiruvāsai (entrance), emphasize this symbolism. Each of these shrines is a dvitāla vimäna (two storeyed shrine) with an ardhamaṇḍapa in front, forming a continuous line with the cloistered currālai, itself a double-storeyed construction. Thus, ritual consecration was performed not only of the main shrine but also of the shrines of these regents of the eight quarters. The Caṇḍēśvara shrine, a dvitāla vimäna, north of the ardhamaṇḍapa, is coeval with the main shrine, and the Amman (goddess) shrine, is a late Cöla addition. The Caṇḍēśvara shrine, with its position north of the ardhamaṇḍapa, was an invariable feature of a Śiva temple. The shrines of Subrahmanya, Gaṇapatī and even Karuvur Dēvar are later structures.

The consecration of Caṇḍēśvara as the mūlabhṛtya (the chief servant/officer) of Śiva, is an important aspect of Räjarāja’s innovations in the temple’s iconography, which acquired greater prominence in the Gangaikonḍacölapuram temple built by Rājendra I, where, apart from a shrine for Caṇḍēśa, the theme
is executed in a sculptured panel of great beauty at the northern entrance to the ardhamandapa.

Structural experiments in the Taṇjavūr temple are significant from the point of view of architectural stability, balance and aesthetic impact. Some of these are a new type of potikai (T. potikai) a new upāna (upa-pitha), an innovative kāl and the kumbhapaṇjara in the vimāna recesses. The antarāla, which was initially a false one in the early Cōla phase, and which turned into a true one at Śrīnivāsanallur, assumes great architectural and aesthetic value in Taṇjavūr, as it now acquires a new structural element, i.e. the staircase on the north and south, leading to the ardhamandapa (antarāla) and additions like the most imposing dvārapāla figures, whose size and volume are a metaphor in stone for power. They seem to underline the fact that the Cōla Śilpācārya (architect) Rājarāja perumṭacan (great mason) had a more imposing size, design and form in mind for the temple.

The designers of the temple sought and achieved solutions to several problems such as instability inherent in the principle of corbelling, the solution being the vimāna tower’s height (Fig. 1) being in a ratio of 2 : 1 to its width, and the ingenious system of inward corbelling to reduce space starting at the transition from the basal square talas (storeys) to the pyramidal superstructural talas—a cellular mode of construction. The oversized cupola is also the result of experiments carried out to find a permanent solution to the stability of the roof.

Cōla architectural style derived its forms and features from Pallava, Pāṇḍya and even Cālukya temples, but made significant innovations, as pointed out above, the designing of the devakosthas (niches) being the greatest contribution. It evolved into its mature phase under Rājarāja I and Rājendra I. The most skilled craftsmen and sthapatīs were brought to Taṇjavūr and the major inspiration was perhaps provided by the atelier of the Śembiyamahādevi temples.

* Potikai—base moulding; upāna—subsidiary base; kāl—pillar/pilaster; kumbhapaṇjara—motif of a pilaster with a pot base; vimāna—shrine with a tower; antarāla—inner passage between shrine and pillared hall; dvārapāla—door-keeper.
The spires of the two royal temples at Tañjāvūr and Gangaikondaṭapalapuram represent striking features. The pyramid profile at Tañjāvūr is steep, the relation between height and width being 2:1. The Gangaikondaṭapalapuram superstructure is lower by six metres but shows a remarkably concave curvature. The sthapatis (architects) seem to have applied the square and circle as fundamental concepts underlying the Tañjāvūr and Gangaikondaṭapalapuram spires respectively. This mature phase is clearly marked by the vertical ascent of the sikhara (tower), the innovations and solutions to architectural problems and decorative aspects showing a high technical advance. Well conceived, balanced and majestic, the temple’s architecture is the product of an imperial vision.

The iconographic programme of the Tañjāvūr temple marks the most creative period in Cōla art and in South Indian iconography. In addition to the traditionally inherited iconographic forms of Śiva, the Tañjāvūr sculptors introduced other forms for which they invented a new layout in the double-tiered vimāna wall with a double row of niches and the ardhamandapa. These forms include Bhikṣāṭana, Virabhadra, Dakṣināmūrti, Kālāntaka, Naṭarāja, Harihara, Lingodbhava, Candrasekhara, Ardhanārisvara and Bhairava, apart from other deities such as Sarasvati, Gajalakṣmī, Viṣṇu, Ganeśa and Durgā, and, above all, the Tripurāntaka form of Śiva, relatively less known in the earlier temple vimānas. It is this icon which is of considerable significance in Tañjāvūr.

The Tripurāntaka form is repeated in two postures in all the niches of the upper portion of the vimāna wall (Fig. 2). So far no satisfactory explanation of such a repetition has been provided. K.R. Srinivasan initially dismissed it as due to the upper level not being visible, while the lower level niches carry different forms. Subsequently he related it to the analogy of the Buddha and Viṣṇu as representing the concept of Cakravartin and, hence, used by earlier dynasts and suggested that the Cōla, Rājarāja, adopted Tripurāntaka as his favourite choice as the Śaiva counterpart of the Cakravartin ideal. Other explanations emphasize the warrior aspect of Tripurāntaka and the Cōla Rājarāja’s choice of this form, as indicating his prowess as a warrior.

Garry J. Schwindler, in an attempt to interpret this repetitive
use of the Tripurântaka form (there are, in addition to the images on the vimâna walls, two sculptured panels of this theme and a huge fresco panel of Tripurântaka in the inner ambulatory), counts thirty such representations, and includes the metal image of Taṇjai Alagar, identified by Nagaswamy as Tripurântaka, (Fig. 3) and now housed in the Taṇjavûr Art Gallery, carrying the same characteristics as the others. He further argues that the Tripurântaka motif has an additional and certainly more profound significance than being a ‘portrait’ of the king as warrior. Strangely, he ends up by saying that this form of Śiva was Râjarâja’s personal deity, a model and patron, īṣṭadevata, and that he used its unique iconographic symbology to restore to his lineage the honour and dignity damaged by their defeat by the Râṣṭrakûtas at Takkôlam. It is, he says, evidence of the king’s conscious assimilation of the divine and royal roles.

Schwindler does not accept the explanation of the warrior and military aspects of the Cōla king, as he follows the theory of the American scholars B. Stein and G.W. Spencer in characterizing the Cōla state as ‘a weakly organised polity’, and the temple as not indicating the glorification of a powerful despotic ruler’s patronage, but as ‘a method adopted by an ambitious ruler to enhance his very uncertain power’.27

The real significance of the Tripurântaka motif and its dominant presence in the Taṇjavûr temple, cannot be understood, unless one looks at the temple’s programme of iconography as a whole. The temple being a symbol of royal power, the Tripurântaka form needs to be related to the ideology of the Cōla state under Râjarâja I, who was instrumental in shaping the ideological apparatuses for establishing the superiority of Śaivism and Śaivism as the state religion. To start with the Têvâram hymns, which Râjarâja ‘rediscovered’, and the bhakti ideology which was derived from these hymns, the Tripurântaka episode is one of the dominant myths constantly referred to by the hymnists, the number of hymns being six hundred and four. Other forms of Śiva deliberately chosen for description by the hymnists28 are the Lingodbhava and Dakṣinâmûrti, which had become a part of the iconographic layout even before Râjarâja. However, Tripurântaka, equally significant for Śaivism
in establishing its superiority over other religions like Buddhism and Jainism, was hitherto not chosen for prominent representation. Hence, its repetition in the upper niches would appear to be a conscious act to emphasize its importance. Tripurāntaka also symbolized the warrior aspect in which he was served by Brahma as charioteer, Agni as the arrow and other deities in a supportive but subsidiary role in the battle against the three asuras (fresco in chamber 11—Fig. 4). The Vedas became the four wheels of Śiva’s chariot and the Mandara mountain his bow. Viṣṇu as Māyāmoha deluded the asuras into following a ‘heterodox’ faith, but the asuras remained staunch devotees of Śiva. Hence, after destroying their three puras, Śiva accepted two of them as his doorkeepers and the third as the drummer playing the kudamulā. This whole episode represents not only a comprehensive attempt to make every other faith subordinate to Śaivism, as there is a veiled attempt to subordinate Viṣṇu as Māyāmoha, but also is known in all its details to the Tēvāram hymnists and the Kallādam29 in a southern version. By using this myth and the iconographic form in the temple’s art in a dominant position and in the narrative paintings, Rājarāja achieved his aim of consolidating Śaivism and subordinating other faiths. He may have been inspired by Gaṇḍarāditya and Śebiyanmahādevi and, hence, the grand plan could well have begun even at the time of his accession in AD 985.

If the Taṉjai Alagar of the Taṉjavūr inscriptions30 represents the metal image of Tripurāntaka, as suggested by Nagaswamy, it would be an additional supportive evidence to show that Tripurāntaka was only next in importance to Dākṣiṇāmūrti, the chief idol, and with Ādavallān (Naṭarāja), who is prominently represented in the frescoes (chamber 9) and metal images of the temple, Tripurāntaka would be one of the three dominant forms of the Taṉjavūr temple.

As for the bhakti hymnists, the most significant fact is their apotheosis and representation in metal images in Taṉjavūr, where the mūvar or Tēvāram trio,31 Śiruttonḍar and MeipporunṆayānār (Milāduṇaiyār) and, above all, Caṇḍēśvara, the mūlabhrtya, are depicted. Interestingly, the stories of Śiruttonḍar, Caṇḍēśvara, and Meipporuḷ Nāyānār are alluded to in the groups of copper images set up by various royal officers in the
The importance given to the Tevāram hymns and the nāyanār is also indicated by the reference to the metal image of Candraśekhara as Dēvāradēvar, and the special arrangements for patikam (hymn) singing in the temple.

The iconic programme of Taṉjavūr was indeed the political iconography of Rājarāja, whose reign saw the most significant efforts at centralization of power through various measures like revenue surveys, assessment, redefining nādus, introducing valanādus and a revenue department, and conscious efforts to promote trade and nagaram organization, for which the institutional means were the temple and its art and ritual, i.e. the ideological apparatuses. The Taṉjavūr temple itself was the recipient of revenues from several villages located, not only in Cōḷamandalam, but also in Jayankondacōḷamandalam, Gangaṟē, Nuḷambapādi, Malainādu, Pāṇḍinādu and Ilamandalam.

The economic outreach of the temple was impressive, as it covered the whole kingdom. The sabha, ār, nagaram of several centres, where lands or whole villages were granted to the temple, and which were entrusted with the gold deposits of the temple for payment of interest in the form of provisions, i.e. consumable and other articles for rituals and festivals, fastened to fulfil these requirements, establishing a reciprocal flow of resources. From northern Sri Lanka came paddy, money, as well as oil seeds from a tree, the bania longifolia, the last item for burning lamps.

The gifts of a wide variety of ornaments to the various images by the royal family were made out of the enormous booty from the wars against the Cēras, Pāṇḍyas and Cāḷukyas, apart from out of the temple treasury.

Contrary to a weakly centralized polity of a segmentary state, as suggested in the works of B. Stein and G.W. Spencer, and even Kenneth R. Hall, a theory which has influenced many recent studies on the Cōḷa state, it is possible to show through an integrated study of the Taṉjavūr temple, that political elements cannot be distinguished from ritual elements in Cōḷa polity, political and ritual sovereignty coincided, and the divine and temporal realms were conterminous.

One may also add here that Kundavai set up images of her father Ponmalligaittuṉjinadēvar (Sundara Cōḷa) and his queen,
and the images are referred to as *tirumeni* (sacred body), as in the case of the images of deities. This may indicate the practice of setting up ancestors' images as a part of temple worship, recalling to mind the *Devakula* set up in Mathurā by the Kuśānas of the early centuries of the Christian era.

Turning to the frescoes, the themes of these murals, from the point of view of the royal author's intentions in sponsoring this huge temple project, are also well suited to the context in which they occur.

The narrative panels in chambers 5, 7, 9 and 11 hold the key to the symbolism of these frescoes. The themes have been taken from Śaiva mythology and the stories of the Śaiva saints, which were popular even before their final redaction in the hagiographical *Periya Purāṇam* of the twelfth century AD. They are meant to glorify the royal centre through its association with Śiva as the cosmic dancer, the lord of the famous Tillai (chamber 9), the most sacred of the Śaiva centres, i.e. the *Kōyil*, apart from Daksināmūrti (chamber 5) and Tripurāntaka (chamber 11). An earlier study of the frescoes made by me has led to interestingly fresh identifications of the murals.

Starting from chamber 5, the panel on the north wall represents Daksināmūrti as the central figure, preaching the 'highest knowledge' to the sages, dispelling their ignorance. The figure of Daksināmūrti is highly mutilated. Yet, the identification is made possible with the help of two seated figures, a *pītī* and his royal disciple (?), to the right of Daksināmūrti. These figures are crucial, as they are very much akin to the painted figures of Rājarāja and Karuvūr Dēvar in chamber 10, and also resemble the two sculpted figures often represented to the right of Daksināmūrti on the south wall of the *vimāna*. Hence, it represents an attempt to show that the royal author was an ardent devotee of Śiva and had himself portrayed in the sculptures (on the south wall) and the murals.

As a background to the central figure, is a huge forest with an eight armed Bhairava on the left, accompanied by a dog and a seated devotee, and the sages of the forest and their wives in their cave dwellings. The presence of Bhairava and the forest background with sages cannot be explained, unless we see an attempt here to introduce the Dārukāvana myth associated with
Bhairava, who after cutting off one of Brahma’s heads, atoned for *brahmahatyā* as Bhikṣāṭana.

The whole scene recalls Sundarar’s hymn on Tiruninriyur, which describes in detail, how Sundarar, one of the nāyanār, himself heard the great truth revealed by Śiva to the kinnaras, tigers, venomous serpents, ferocious lions, blameless *tapasyas* (sages), while the god was seated under the beautiful banyan tree. The saint attained eternal happiness and Śiva’s gracious feet. What is of great interest is a group of metal images set up in the temple by Rājarāja, which consisted of Dakṣiṇāmūrti, a mountain and tree with branches, animals etc. of the forest, as recorded in an inscription of the temple.38

In chamber 7 is the remarkable panel of Sundara ascending to Kailāsa on the elephant, after his wedding is stopped by the intervention of Śiva as Taḍuttātkonḍadeva, and a Cēramān Perumāḷ, his friend, preceding him on horseback. This narrative is important, as it contains a depiction of Cēramān Perumāḷ worshipping Naṭarāja in a shrine, probably in Tiruvaṇcaikkalām or Tillai. The top portion of this panel represents Śiva and Pārvati in Kailāsa with the two saints seated in front.

The friendship of Sundarar and Cēramān Perumāḷ, Sundarar’s visit to the Cērā capital Tiruvaṇcaikkalām and Cēramān’s visit to Tillai, and their ascent to Kailāsa are known, not only from the later *Periya Purāṇam*, but even from their own hymns and Nambi Āndār Nambi’s *Tiruttondar Tiruvandadi* of the period of Rājarāja I. The choice of this theme by Rājarāja was again meant to extol Śiva’s greatness, particularly as the cosmic dancer, destroyer of *apasmāra* and protector of devotees. Interestingly, the king did not show a preference for the stories of Appar and Sambandar, evidently because they were more of crusaders against ‘heterodoxy’, whereas the stories of Sundarar and Cēramān had the unique character of revealing Śiva’s greatness as Ādavallān, who was being invoked by Rājarāja as Śivapādaśekhara. At the same time, the tradition attributing to Rājarāja the ‘rediscovery’ of the *bhakti* hymns from a secret chamber at Tillai, for which he brought the images of the *Tevāram* trio, is also attested by the metal images (*pratimā*) of the trio set up in the Taṅjāvūr temple.

Chamber 9 has the most interesting panel of Cēramān
Perumāḷ's visit to Tillai and worship of Nātarāja, whose dance he longed to witness in person while he was still in his capital Tiruvanācaikkālam. His wish was fulfilled during his sojourn to the Tamil region and visit to Tillai. That the earlier identification of the royal worshipper as that of Rājarāja I with his queens is incorrect, is clearly indicated by the fact that the figure of the royal worshipper is exactly similar to the figure of Cēramān in chamber 7, and, further, the 'portraits' of Rāja-
råja with his preceptor in chamber 10 hardly bear any resemblance to the royal figure in the Naṭarāja panel of chamber 9. Cēramān also sang the Pontvanṇattândādi in Tillai during this visit, in praise of Naṭarāja. The whole scene contains details which, in every respect, follow the description of the episode in the Periya Purāṇam. Tillai is the central stage of this panel, for the sage had journeyed all the way from his kingly abode in Kerala to witness Śiva's cosmic dance. In chamber 11, the two themes depicted in the frescoes are Rāvanānugrahamūrti and Tripurāntaka. While the latter has been discussed in detail earlier, the Rāvanānugraha can also be traced to the descriptions in the Tēvāram hymns.39

It may be added here that Tillai (Chidambaram) was also the most sacred Śaiva centre, where the Cōla rulers chose to crown themselves, the coronation being performed by the brāhmanas of Tillai, a supreme act of legitimization of Cōla sovereignty. Here one may also recall the story of Kūrruva Nāyanār,40 who sought the legitimacy of being crowned by the Tillai brāh-
manas, but was denied the privilege as he was not a Cōla.

Turning to the administrative and ritual arrangements of the temple, a comparison with the royal court would be useful. The paraphernalia of the Cōla temple mirrored the royal court. Royal and temple servants—the talipparivāram and kōyirramar—were identically perceived and had similar duties. The Śri-
kāryam (the chief manager) of the temple and of the royal court had comparable functions to discharge. It is interesting that, like the king, the temple images also had army groups separately assigned to them.41 The role of Caṇḍēśvara as the mūlabhṛtya looking after the accounts of the temple, assigning revenues, investing through deposits, receiving paddy and other forms of interest and ritual requirements, would also indicate
an imitation of the royal court. It would even appear that here the king himself acts through Caṇḍesvara.

The Cōla king would thus seem to have acquired a near total identity with divinity, comparable to the cult of devarāja in Kambuja, the medieval kingdom of Southeast Asia. In medieval India the king of Orissa surrendered his sovereignty to god Jagannāth of Puri, and the king of Travancore ruled as the representative of god Padmanābha.

The interplay of the temple’s role in religious, political, economic and social aspects of the Cōla period is extremely difficult to grasp without the contextual evidence being highlighted and correlated. For Taṇjāvūr this has been found possible only with an integrated approach to various aspects such as architecture, sculpture and painting, which act as metaphors and symbols of great significance.

With the temple as its centre, the city of Taṇjāvūr emerged in the following pattern. It consisted of an ullalai (inner quadrangle around the temple) and a puramādi (an outer circuit), demarcated respectively (1) for the residences of the priestly, administrative and other elite groups, and (2) for the living quarters (streets) of other professional groups, including the nagarams and their angādis, for the palace servants (veḷams), retinues of the royal family (parivāra), all of which were named after the king and members of the royal family.

Royalty requisitioned employees from various parts of the kingdom (Cōlamandalam and other mandalam) to serve the temple and thereby colonize the city. Musicians numbering forty-eight to recite/sing the hymns (patikam), dancing girls (talipendu) numbering four hundred, dance masters, drummers, parasol bearers, lamp lighters, and craftsmen like tailors, braziers, goldsmiths and even astrologers, were brought to Taṇjāvūr. Brāhmanas as temple servants and accountants also came from various centres. By the time the temple construction reached its final stages, a veritable colonization had taken place, indicating the implanting of a royal city, including a series of army contingents. Many were given house sites and lands for their maintenance.42

The peasantry and artisans who supplied the city with ritual furniture and services in general lived in the villages in the
surrounding countryside. Many shepherd families of Tañjavûr and other centres were entrusted with the huge livestock donated to the temple. The brisk commerce of Tañjavûr was conducted by the four markets (angâdis) and nagarattâr, while itinerant traders like the Kongavâlar interacted with them.43

The distinctive character of Tañjavûr as a city derives from the fact that it was a planted city—that it was created by a deliberate act of royal polity in imitation of a sacred bhakti centre with the temple as its nucleus, to sanctify which the royal author got hymns composed by the royal preceptor, and, finally, that it was at once the product and symbol of the socio-cultural milieu of the Cõla period.

A comparison of the royal/ceremonial centre of the type of Tañjavûr with the other cities shows that all of them shared the ceremonial aspects. GangaiKoṇâlaçâpuram also possessed similar features of a city implanted by an act of royalty, beautified by its temple arts, in this case to commemorate the expedition of Râjendra I to the Ganges region. While these cities had a single dominant ceremonial complex, others such as Kuḍâmukku-Pâlaiyârai and Kâncîpuram may be classified as multi-temple centres evolving after centuries of growth from earlier agrarian clusters, each temple, which marked their growth, representing the locus of the ceremonial complex at different chronological points, thus leading to the emergence of dispersed ceremonial/sacred centres, rather than compact ones like Tañjavûr.

A third type of city was the sacred centre, which, in its origin and survival down the centuries, is centered round a single cult centre or a tîrtha, later assuming the character of a pilgrimage centre. To this category may be assigned Chidambaram,44 Šrîrangam, Tiruvaṅkâmâlai and others, which usually have a long history passing through successive stages of growth, reflected in the horizontal magnification of the temple structure.

23. Commenting on the iconographic accent in the Taṅjavūr temple, K.V. Soundararajan would suggest an affiliation with Māheśvara Śaivism and the design of the Paṅcārāma temples of Andhradesa and as characterised by the Aghora, Sadyojāta and Vāmadeva manifestations of the niche sculptures. He would also see here a clash as well as co-existence of the Tēvāram (Śaiva bhakti hymns) and the Māheśvara brand of Śaivism. The clash, according to him, led to the decrepitude of an earlier Śiva temple, ‘sung’ by Sambandar of the Tēvāram trio. Contrary to this assessment of the iconographic thrust of the Taṅjavūr temple, one can see a closer link with the Tēvāram, and in fact its dominance over other canonical injunctions. See K.V. Soundararajan, ‘Iconographic Accent and Inflexion in the Rājarājēśvaram, Taṅjavūr’, paper presented at the seminar on Bṛhadisvara. The Monument and the Living Tradition, IGNCA, Madras, 1993.
