P R E F A C E

A programme of conducting archaeological surveys in the Punjab, Sindh and North-West Frontier Provinces has been in progress for the last few years by the Department of Archaeology and Museums in collaboration with the Culture Department of the Government of Sindh, Shah Abdul Latif University at Khairpur and the University of Peshawar. The amount of information so far collected has added new dimensions to the archaeological heritage of Pakistan. A full publication on the results of new field works usually takes a long time and therefore, new data remains inaccessible to the interested public and scholars. The present volume of the journal contains preliminary results of the surveys carried out in the Punjab Province which are currently in progress. It is hoped that the results of the remaining part of the surveys in Punjab and other provinces will also be published.

I am grateful, in particular to Mr. Niaz Rasool, Director of Archaeology to edit this report and to bring it in its present shape. The help and cooperation of Mr. Nusrat Baig, the Field Officers of the Exploration Branch and the Punjab Survey is greatly appreciated.

Muhammad Rafique Mughal

1. INTRODUCTION:

The Punjab Province of the South Asian sub-continent has been a cradle of civilizations from the early Bronze Age to the historical period, witnessing the origin, development and decline of many cultures during the last six thousand years. These traces of history are now represented by innumerable settlements and surviving buildings in the Punjab. This region was not only a melting pot of political, religious and social movements and developments but due to its vast agricultural plains, has also been the bread basket of South Asia.

The contemporary histories of various dynastic rulers, epigraphical and other evidence have been the primary sources of information on mostly the political history of Punjab and to some extent, on social and religious developments. The material culture of the people, development of arts and crafts, architecture and aesthetic history are not available in the written sources and in detail. However, a wealth of information is lying scattered throughout Punjab, some of which is known to some extent but most of which remains undocumented and therefore, unknown. A few major archaeological sites such as Harappa and Taxila have been excavated and a few groups of monuments in the major cities like those in Lahore and Multan have been studied.

A number of archaeological surveys have been carried out in Punjab since the last century. Sir Alexander Cunningham, Sir Aurel Stein, and staff of the Archaeological

Survey of British India carried out extensive field works which was promptly published with fullest possible details on surviving monuments and archaeological sites. Their reports are still the basic sources of information for research. After Independence in 1947, a number of foreign teams from England, Italy, Japan, USA and Pakistan have remained active in the field for documentation of the sites. The Department of Archaeology & Museums of the Federal Government has been carrying out field surveys periodically in the districts of Bahawalpur, Sahiwal, Multan, Dera Ghazi Khan and Rawalpindi.

The need for comprehensive explorations and documentation of all kinds of the monuments and sites in the Punjab Province was very strongly felt. A scheme was prepared by the principal author while posted at Lahore which was approved by the Federal Government at a capital cost of more than 6 million rupees. An almost similar scheme was already operative in the Gandhara region of North-Western Frontier Province and therefore, it was not considered appropriate to duplicate the efforts. The scheme in the Frontier Province was aimed at salvage work at the plundered sites of Buddhist period including documentation of unrecorded sites in collaboration with the University of Peshawar. However, another scheme for the Sindh Province was also approved and the field work started simultaneously.

2. THE SURVEY

Nearly two years before launching of actual field surveys under a separate scheme, the work had already started under the leadership of the principal author with financial support from the regular budget of the Exploration Branch of the Department of Archaeology. The subsequent surveys have incorporated all the information gathered during the previous surveys in 1992 specially of Lahore and Kasur districts. A large number of young officers of the Department of Archaeology and Museums, Department of Culture, Government of Sindh and Universities of Shah Abdul Latif and Punjab were associated with the field programme as part of their training. From the Department of Archaeology and Museums, the Assistant Curators/Field Officers who have participated in the field work are Muhammad Bahadur Khan, Mehmood ul Hassan, Muhammad Ishaq, Muhammad Yousef, Muhammad Hassan, Muhammad Afzal Khan, Shabir Hussain and Badshah Sardar. From the Quaid-I-Azam University, Islamabad, Dr. Muhammad Saleem was invited to be with us in documenting sites of the Palaeolithic period in the Potohar region for a few days. Abdul Haq Bhambro joined us from Provincial Museum at Hyderabad while Shah Abdul Latif University at Khairpur nominated Hanif Leghari. These are in addition to the staff recruited under the Punjab Archaeological Survey project. The field staff of the Punjab Survey included Gulzar Muhammad Khan, Senior Archaeologist; Farooq Iqbal, an architect designated as Assistant Archaeological Engineer; Khawaja Shahid, Attique Ahmed, Muhammad Rauf, Aasim Dogar who were

appointed as Field Officers; Shoukat Ali Shad, Pottery Recorder and several university students who worked from time to time. The success of the survey project rests entirely on the dedicated and tireless efforts of so many participants. The contributions of Farooq Iqbal who prepared accurate maps and drawings of the monuments and sites on computer, and of Muhammad Hassan, Muhammad Afzal Khan and Muhammad Rauf who mostly worked both in the field and at the survey office at Lahore, have been by all means significant and very commendable indeed.

The Punjab Survey team emerged as a national team as it represented different institutions of the country and participants from different provinces. It worked under the direct supervision and overall directions of the principal author from the very beginning when he was Director posted at Lahore and later on when he held the post of Director General at Karachi. It was not possible for him to remain with the team all the time. However, he was frequently in the field for leading the survey and giving instructions to the team and for checking their work of documentation both in the field and at the Survey office. The listing and documentation, and collection of data on monuments and sites, tabulation and analyses of entire data description and compilation of results of the surveys were exclusively carried out under the supervision and direction of the principal author who is the official Project Director.

3. DOCUMENTATION AND ORGANIZATION OF DATA

Although the data is presented here according to the new district names, the old district boundaries of Punjab as existing before Independence have been retained regardless of the new districts carved out of the old district boundaries. Therefore, the monuments and sites are grouped according to the old districts but the names of new districts are also written. It was also found to be convenient for reference purpose to group the sites and monuments according to the old districts.

The data was recorded in the field on two sets of pre-designed data sheets or "proformas," one each for the monuments and sites by officers individually and then combined into one data sheet for tabulation and analysis. The same set was also used in the survey of Sindh province. The entire data was finally recorded by computers specially that on the sites and monuments. The detailed drawings of the structural remains and maps of various categories of sites were prepared by Farooq Iqbal using an auto-CAD programme. It was the first time that computers were used to document architectural and ancient remains in the Department of Archaeology. The maps which accompany the text were prepared by him. Two draftsmen kept on preparing drawings of pottery and artifacts and are still busy. Selected pottery of the Early Historical and Mediaeval periods is illustrated and grouped according to the cultural periods.

The results of surveys came out to be much more significant and revealing than expected. Since the objective was to document all kinds of cultural wealth from the earliest (Palaeolithic) to the British colonial times, the combined data on the monuments and sites so far assembled runs into a long but impressive list of various categories of cultural relics in Punjab, all totaling to 1,183 in which 454 sites of the surveys in Bahawalpur by the principal author can be added. The data on all the sites and monuments in the districts so far surveyed is as follows:

| | 1992-96 Surveys | Previous Surveys |
|---------------------------|--------------------|---------------------|
| Prehistoric sites | 19 | - |
| Hakra sites | 1 | 122 |
| Early Harappan sites | 56 | 59 |
| Mature Harappan sites | 31 | 176 |
| Late Harappan sites | 5 | 50 |
| Painted Grey Ware sites | 5 | 20 |
| 5th Century BC-7th AD | 226 | - |
| 8th-11th AD Early Muslim | 145 | 27 |
| Sultanate 1200-1500 AD | 195 | - |
| Mughal 1526-1800 AD | 324 | - |
| Sikh/British 1801-1947 AD | 176 | - |
| Totals: | 1183 | 454 |

The scheme of periodization of sites and monuments is based on the ceramic and other evidence such as, inscriptions and coins and stylistic consideration of the monuments. The time-range or cultural horizon represented by the monuments and ancient settlements in the Punjab Province has not been a problem to us except in certain cases of mounds marking ancient settlement sites of the historical period. The monuments so far recorded were distinguished by their characteristic architectural style already familiar to us some of which were dated by inscriptions, and in few cases, by historical references to them. In case of monuments, the style of architecture and details of decorative motifs provided an indication for an approximate time-range or cultural period by comparison with other monuments. In few cases, buildings constructed in later time by retaining some of the earlier or older traditions in style, could not be precisely dated but a general time-range could be suggested. In any case, these architectural remains represent landmarks of history, social and cultural environment and artistic traditions of Pakistan.

In case of archaeological sites of diverse kinds such as those representing the Palaeolithic and later periods, the tools found from the surface of the sites indicated their

relative date by comparison with similar material found on the contemporary sites which are already dated and published. The Bronze Age sites representing various developmental stages of the Indus and Harappan Civilization, were very easy to date because the ceramic materials could be compared with those already known.

The sites representing the Hindu (Brahmanical), Buddhist, the early historic, Sultanate and Mughal periods were not very easy to date because of lack of sufficient comparable data and limited number of dateable evidence such as coins and inscriptions found at the sites. In the Punjab Province, few sites represent a long spectrum of history from the 5th century B.C. to 19th century A.D. but these are not excavated. The excavations carried out at Lahore Fort, Mian Ali Faqiran and Tulamba were limited mostly to vertical trenching for reconstructing chronological sequence. Tulamba in the central Punjab is the only site where such stratigraphic evidence of occupations was published which represents the early historical and mediaeval periods of Pakistan's history ranging in date approximately from the first century B.C. to the 18th century A.D.. Several sites recorded during the current surveys were possible to compare with the chronological sequence of Tulamba and assign relative dates to the mounds where similar materials were found. For example, a group of ceramic materials with a variety of stamped designs on the external surface and glazes found during the surveys were possible to place in chronological brackets with reference to Tulamba. However, there were some difficulties in dating ancient mounds of 18th-19th centuries because of distinctive types of ceramics found on them which were not reported before. Coins of later periods, associated structural remains, and glazed wares provided indications of an approximate date which is fairly valid. The following is the chronological scale or archaeological and historical periodization of the Punjab in this report.

| | |
|--------------------------------------------------------|----------------------------------|
| Palaeolithic/Mesolithic/Neolithic | circa 1 million - 7000B.C. |
| Hakra and Early Harappan | 3300 - 2500 B.C. |
| Mature Harappan | 2500 - 2000 B.C. |
| Late Harappan (cemetery-H) | 2000 - 1400 B.C. |
| Gandhara Grave Culture and Painted Grey Wares (PGW) | 1300 - 600 B.C. |
| Hindu - Buddhist | 5th B.C. - 7th centuries A.D. |
| Early Muslim | 8th - 11th centuries A.D. |
| Sultanate/Pre-Mughal | 12th - 15th centuries A.D. |
| Mughal (including Suris) | 16th - 18th centuries A.D. |
| Sikh/British | 19th - early 20th centuries A.D. |
| Unidentified | |

It has been quite an effort to select ceramic materials for illustration because of very large quantities of ceramics found on the surface of the mounds of all periods. Even

the material which is already well known had to be listed in support of their cultural identification. The present report does not include illustration of the Palaeolithic, Harappan and Gandhara Grave Culture sites because it is already well known. Instead, an effort has been made to highlight the ceramics of later periods from 5th century to the early 20th century A.D. found in Kasur and Lahore districts. The implication would be that the identification of sites in other districts would be made with reference to the illustrated material of Lahore and Kasur without repeating similar materials so that only the new ceramics will be illustrated. In the present context, it was considered necessary that the materials should be presented from each site even if it is of selective nature to facilitate further identification, study and comparison. In order to eliminate subjectivity, all the sites of one period were not grouped together and various types and categories of ceramics were not selected randomly at such an initial state of knowledge of later historical and Mediaeval periods. The purpose is to present the basic types from such sites even if these are repeated from site to site to strengthen our periodization of the historic period. The ceramic types of the Harappan culture and the Palaeolithic materials, will be published later when a large group of sites are discovered and studied together.

The ceramics from the sites in Lahore and Kasur districts have been illustrated and a brief catalogue given at the end of this report. The following ceramics (with numbers given with each) are grouped under various cultural periods:

Hindu-Buddhist Period

5th century B.C. to 7th century A.D.

Pottery nos. 637 to 644

Early Muslim Period

8th - 11th centuries A.D.

Pottery nos. 1 to 5; 65 to 74; 89 to 96; 130 to 137; 168 to 175; 201 to 206; 285 to 295; 405 to 423; 461 to 483; 501 to 562; 588 to 590.

Sultanate/Pre-Mughal Period

12th - 15th centuries A.D.

Pottery nos. 29-42; 142 to 156; 262 to 275; 328 to 340; 496 to 500; 666 to 673.

Mughal including Suris

16th - 18th centuries A.D.

Pottery nos. 13 to 28; 43 to 64; 75 to 88; 97 to 129; 138 to 141; 162 to 200; 207 to 213; 221 to 261; 296 to 327; 358 to 363; 369 to 390; 448 to 460; 484 to 495; 563 to 587; 600 to 636; 645 to 665; 692 to 721; 744 to 753.

Sikh/British

19th - early 20th centuries A.D.

Pottery nos. 157 to 161; 364 to 368.

There are pottery specimens which are difficult to place within the above time-brackets. An approximate date is proposed as given below:

Pottery nos.

722 to 730 8th - 15th centuries A.D.

731 to 743 8th - 18th centuries A.D.

431 to 447 8th - 20th centuries A.D.

341 to 357 12th - 20th centuries A.D.

6 to 12; 214 to 220;

277 to 284; 391 to

404; 424 to 430;

591 to 599; 674 to 691;

754 to 761 16th - 20th centuries A.D.

The districts of Rawalpindi and Jhelum remain to be surveyed fully. Likewise, ancient sites and monuments in Sargodha, Khushab, Gujrat, Mandi Bahauddin and Bhakkar districts have not yet been documented. It is hoped that an archaeological map of the Punjab Province will be completed soon. Meanwhile, preliminary results of the work already completed are presented for information prior to the publication of detailed reports on various districts.

4. THE MONUMENTS AND ANCIENT SITES IN THE SURVEYED DISTRICTS OF PUNJAB

- a. Lahore and Kasur Districts
- b. Sahiwal, Okara and Pakpattan Districts
- c. Multan, Khanewal, Lodhran and Vehari Districts
- d. Muzaffargarh and Leiah Districts
- e. Dera Ghazi Khan and Rajanpur Districts
- f. Bahawalpur, Bahawalnagar and Rahimyar Khan Districts
- g. Jhang District
- h. Faisalabad and Toba Tek Sing Districts
- i. Gujranwala, Sheikhupura and Hafizabad Districts
- j. Sialkot and Narowal Districts
- k. Rawalpindi, Jhelum and Attock Districts

a. Lahore and Kasur Districts

LAHORE AND KASUR DISTRICTS

Sites and Monuments

| Site or Monument | Site # | District | Tehsil | Time Range |
|-------------------------|--------|----------|-----------------|---------------------------|

BRIEF DESCRIPTION OF SELECTED MONUMENTS IN LAHORE AND KASUR DISTRICTS

Site No. 66: Pany Shah (Pl. I A)

This tomb of Baba Pany Shah has been constructed on a ten feet high artificial square platform with burnt bricks and lime mortar. Each corner of the platform is strengthened with bastions. Red sandstone staircase has been provided on the western side to reach the platform. A rectangular entrance of the tomb is located on the western side within a deeply recessed large multicusped arch. Spandrel of the arch is decorated with beautiful arabesque designs. The main arch is flanked with recessed rectangular frames having multifoil recessed arches in them, while above the main frame, multicusped designs are provided. The tomb is crowned with an onion shaped dome resting on a circular drum. The dome and the frame around the main entrance arch are painted dark-green colour. The interior of the tomb is decorated in different painted designs. It has four small arched panels below the drum and three small windows have also been provided.

Site No. 69: Gaggar Marhi (A) (Pl. I B)

It is constructed with small burnt bricks and kanker lime mortar. It is octagonal at the base with circular drum and dome. The entrance of the building is on the southern side which is crowned with a segmented arch. The dome is plastered with lime mortar and has eight ribs and inverted lotus and a finial on top.

Site No. 69-B: Gaggar Marhi (B)

It is built with small burnt bricks and mud mortar and plastered with lime. It has an octagonal structure with recessed multifoil arches within rectangular frames. The drum is circular and the dome above it is low one with invert lotus.

Site No. 82: Dera Choubara (Fig. 5, Pl. II A & B; Pl. III A)

This monument is constructed with small bricks (size 14 x 12 x 2.5 cm) and kanker lime mortar and then plastered with lime on the exterior and interior sides. It is a complex of three buildings. One is square in plan while the other two structures are rectangular having vaulted roofs. All the three structures are raised on an elevated burnt brick platform. The main structure is square in plan and is located in the centre of the platform. It belongs to the Mughal period (Shah Jahan) while the remaining two structures are

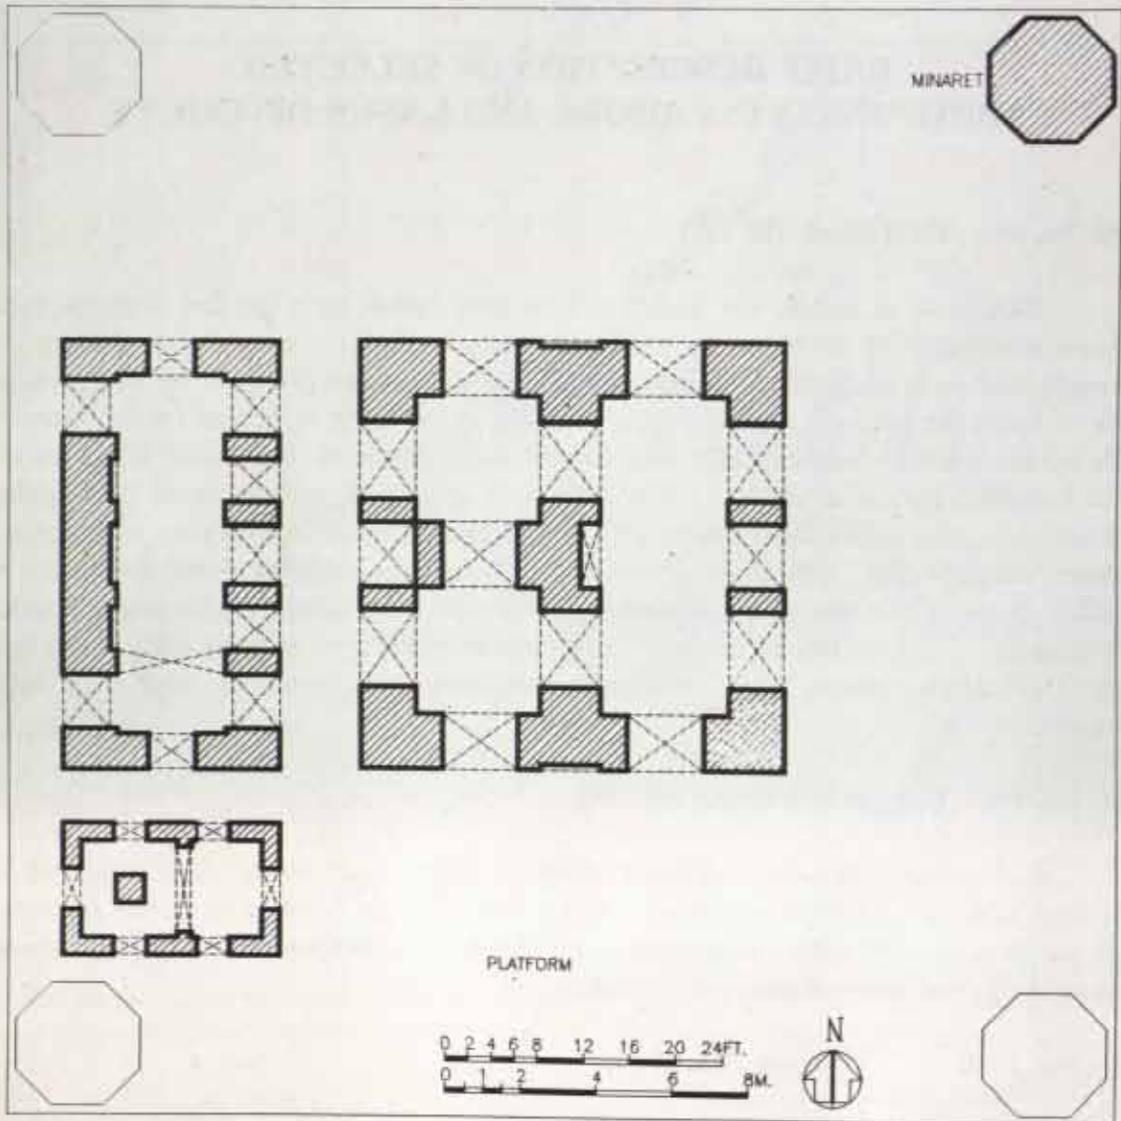

Fig. 5. Plan of Dera Choubara, Kasur

additions made during the Sikh period. The platform is in plan measuring on each side, 95 feet long and has an octagonal minaret at each corner, among which three have vanished completely while the remains of fourth one are in an extremely dilapidated condition. The floor of the platform has been designed in geometrical pattern with bricks on edge separated by thin black stone lining.

The main building which is square in plan, is an original structure of the complex. It has nine arched openings, three on eastern side and two each on the other three sides.

The western side also has an entrance between the two openings. All entrances are through four centered arches with beautiful designs decorated with fresco on the soffies. The entablature is decorated with floral designs in the form of rectangular frame between the brackets supporting an eave (*chhajja*).

The interior of the building comprises three chambers with vaulted roof covered with lime plaster and decorated with fresco painting showing floral motifs. The pendentives comprise arched frames crowned by stalactite designs. Arched frames and stalactites are filled with beautiful floral motifs done in fresco. Arches are also flanked with rectangular recessed frames with fresco painting of floral designs. The spandrels of arches are decorated with arabesque painted motifs.

The second building (recorded as B) is on rectangular plan and erected on the western side of the main building (A). It has nine arched entrances five on the eastern side, one each on the northern and southern sides, and two on the western side. The northern and southern entrances are flanked with blind arches made within recessed rectangular frames while on the western side, three blind arches of the same type are located between the two entrances. The entablature, brackets, eaves and parapets are the same as in main building except that it is devoid of any plaster or decoration. The interior has vaulted roof and is without any plaster or decoration.

The third building (C) is rectangular in plan, built of small bricks and having six arched entrance openings, two each on the northern and southern sides, while one each on the other sides. All the entrances are flanked by large recessed frame having blind arches in them. Rectangular recessed frames are also provided on the entablature just below the eaves. The interior of the building comprises two small chambers separated by an arched opening. The eastern chamber is smaller one and rectangular in shape while the western chamber is square in plan. In the western chamber, a square platform of bricks marking probably a place for deity is constructed. The building is devoid of any plaster or decoration.

Site No. 89: Maulapur Temple Complex (Pl. III B)

This complex comprises three temples erected in a row in east to west direction. All are built of burnt bricks in lime kanker mortar and lime plastered. Temple A (Rignath) is octagonal in plan with pilaster on each corners. Projected blind arches with curved eaves and false dome within rectangular frames have been provided on each side. The southern side has an entrance with wooden door. The interior of the temple is painted with floral and bird designs. The drum of the monument is circular with a fluted bulbous dome on it and the dome is crowned with inverted lotus design with an iron replacing the finial. The interior comprises a single rectangular chamber each side measuring four feet with a

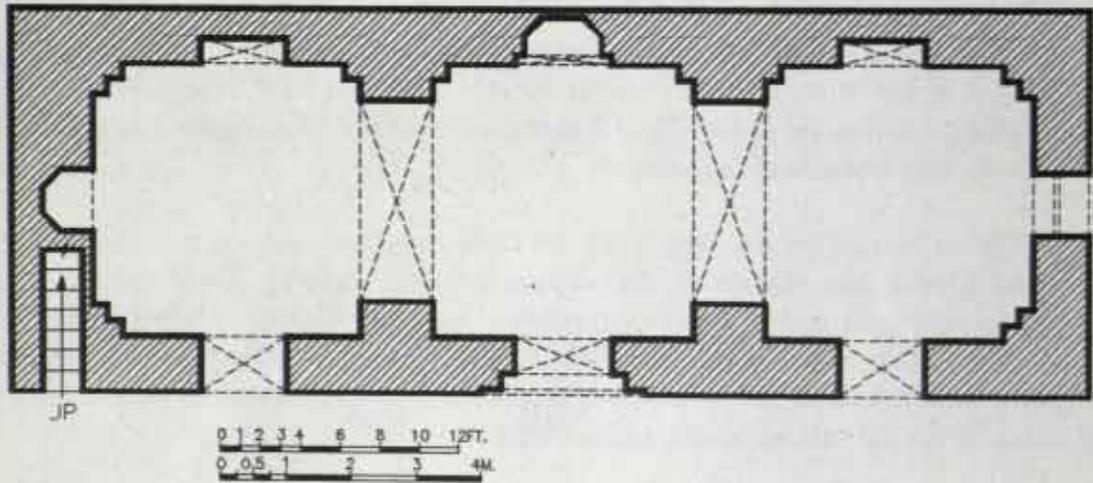

Fig. 6. Plan of Begpur Mosque, Kasur

niche in it. Niches and their eaves are richly decorated with fresco painting. The dome is decorated with a net design in blue colour showing petal and sun designs.

The temple B (Dail) is also octagonal in plan with pilasters at each corner. Each side is crowned by curved eaves and projecting false domes. An entrance is located on the southern side within a rectangular opening. The dome is cyprus shaped on a circular drum with a finial on top. The surface is plastered with lime. The temple is octagonal from inside without any decorations. The temple C (Devi) is also octagonal in plan with pilasters in each corner. An eave has been provided above the entablature all around the temple. Curved support to eaves is decorated with painting showing floral designs. The dome has been erected on the small circular drum in fluted design crowned with inverted lotus and a broken finial. The interior is rectangular. All sides are provided with blind arches. Small niches are also provided in these arches for keeping oil lamps. Arches are decorated with fresco work.

Site No. 98: Begpur Mosque (Fig. 6, Pl. IV A)

The Begpur mosque being rectangular in plan, is built of small bricks with mud mortar. It has three entrances through arched openings with wooden frame and doors, created within large arched recessed panels. At the top of the central arched entrance, a marble *jali* has been provided for ventilation. The facade is decorated with recessed square and rectangular panels. The central dome is raised on an octagonal drum while the flanking domes are erected directly on the square structures. Exterior of the mosque is plastered with lime. All decorations appear to have been made in recent times.

The interior of the mosque is a single rectangular chamber, divided into three portions by two arches. Squinches are created at the corners to support the base of high dome which is crowned with a finial and flanked by two other domes which are erected directly on square structure by creating pendentive in the corners. The interior of the mosque is lime plastered and white washed. The mehrab in the centre of the western wall in half-octagon in plan.

Site No. 99: Saidpur Smadh

The Saidpur Smadh is square in plan, built of small bricks and mortar and plastered with stucco. The eastern and western facades have recessed arches superimposed by small recessed rectangular frames up to the eaves. The main entrance is from the southern side which has cusped arched panels. The southern facade has also recessed arches within rectangular frame topped by fresco paintings. The spandrels of arch are decorated with floral pattern while a band of floral paintings run below the parapet and eaves. The top of eaves is provided with ten small turrets on each side to enhance beauty of the monument. The circular low drum is painted and decorated with stucco leaf pattern in relief and crowned by a double dome with inverted lotus and pinnacles. The dome is lime plastered and painted with floral design in the colour combinations of red, blue and yellow. The interior is decorated with human figures and three recessed cusped arched panels with vaulted roof.

Site No. 102: Gandi Hithar Marhi (Fig. 7)

It is constructed with small burnt bricks and lime kanker mortar. It is plastered on the exterior and interior sides. The monument being square in plan is erected on a platform of a basement of the building consisting of nine small square rooms interlinked with arched openings. The marhi is in the centre of platform within a boundary wall which is now collapsed. It has four entrances which are provided through rectangular openings created within multicusped recessed panels. The facades are decorated with cusped arched panels and raised (tracery) floral motifs. A multi-curve eaves runs all along the square structure. It is fully lime plastered. All corners are provided with turrets. The square chamber is surmounted with circular drum and water melon shaped ribbed dome which is springing from leaves in relief and crowned with inverted lotus on the top but its finial is missing. A staircase to reach the platform is provided on the eastern side.

The interior of the monument is a single square but small chamber with fresco decorations showing floral designs and mural paintings on rectangular and cusped arched panels. A zone of transition is created with the help of corner squinches, thus converting its top into an octagon to support the dome above. The interior is lavishly decorated with floral motifs and human figural representations. Hindi inscriptions are on the squinches.

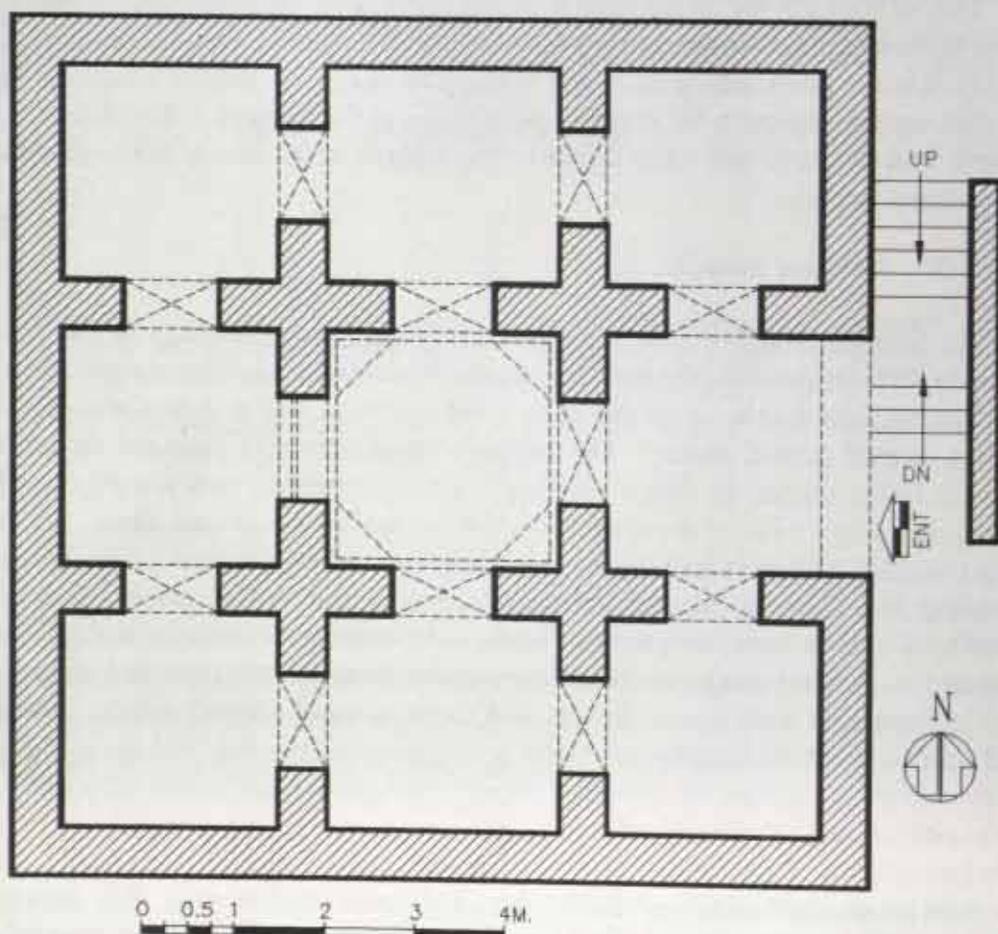

Fig. 7. Plan of Gandhi Hithar Marhi, Kasur

Site No. 104: Bhai Natha Marhi

The Marhi is square in plan and constructed with small bricks laid in mud mortar. The perpendicular walls rise to a flat roof which is surmounted by a circular drum over which a bulbous dome has been erected which is crowned with inverted lotus base and finial in the middle of the dome. On the southern side of the drum, ventilation hole has been provided. The main entrance is provided from the east. After the cement plaster, the monument has been white washed in recent years. The interior contains two niches.

Site No. 105-A: Poleke Marhi (A) & (B)

Poleke Marhi is square in plan and constructed with small bricks laid in kanker lime mortar and covered with stucco plaster. Recessed cusped arched panels within recessed rectangular frame are provided on each side. The main entrance is from the

south. The walls with corner turrets on each sides rise up to the parapet which is topped by a circular drum and ribbed dome crowned with inverted lotus leaves pattern in relief on each rib made with stucco. Internally, a blind arch is provided on each side in square chamber and decorated with fresco paintings.

Site No. 105-B: Poleke Marhi (B)

It is square in plan and constructed with small bricks laid in kanker lime mortar and stucco plastered. There are recessed cusped arches within recessed rectangular frames on each side. The main entrance has been provided from the south through a cusped arch. The spandrel of the cusped arches above the doorway is decorated with stucco in relief depicting floral patterns. Perpendicular walls with turrets on each side rise up to eaves. A circular drum supports a water melon shaped and ribbed dome having stucco leaves pattern in relief on each rib. Internally, blind arch is provided on each side of the square chamber and decorated with fresco paintings.

Site No. 106-A: Ram Mal Marhis(A) & (B) (Pl. IV B)

The monument locally known as Ram Mal represents two Marhis. (For the purposes of recording data, they have been designated as 106-A and 106-B). The Ram Mal monuments are square in plan and erected on raised platform about 1 m in height. The raised platform is rectangular in shape measuring 11.7 m in length and 9.30 m in breadth. The monument is constructed with small bricks laid in kanker lime mortar and coated with stucco plaster. On the exterior, the surface treatment is similar except on the eastern side which is pierced with the main entrance. There is a recessed central arch within sunken rectangular panel flanked by niches on each side. The main entrance from the east is adorned with cusped arched panels crowned with small turrets and blue ribbed dome topped by inverted lotus base and a finial. Perpendicular walls with four corner turrets rise up to the parapet level. A high bulbous dome is built on a raised drum and adorned with ribbed designs in stucco. The interior is profusely decorated with fresco paintings depicting fairies and various types of musical instruments being played.

Site No. 106-B: Ram Mal Marhi (B)

It is octagonal in plan and a rectangular vestibule is provided along the eastern wall. It is constructed with small bricks, kanker lime mortar and stucco plaster. It is located adjacent to Marhi - A (mentioned above) on a raised platform. The main entrance is from the eastern side within recessed and cusped arched panel and rectangular frame. The walls are raised up to eaves where a high drum which supports a bulbous dome. The interior of the marhi is profusely decorated with fresco paintings.

Site No. 107: Taj Din Tomb

Square in plan, the tomb of Taj Din is constructed on a raised platform within an enclosure. The entire structure is built with small bricks laid in kanker lime and then stucco plastered. The plain surface of the square chamber is relieved by sunk panels in the centre, flanked on both sides by rectangular superimposed panels. The corners are adorned with turrets crowned with a cupola on each. The main entrance has been provided from the southern side in the form of a multicused arched opening. On either side of the wooden frame of the door, a niche for oil lamp is provided. The frame shows a rectangular sunk panel above decorated with fresco paintings and floral motifs. The square chamber is surmounted by a drum and melon shape ribbed dome, painted in green and crowned with inverted lotus and finial. The neck of the drum is decorated with stucco merlons. The interior is identical in surface treatment on all sides. Each wall is occupied by recessed multicused arches within recessed rectangular frames. In the central part of walls are multicused arched panels above which run horizontal bands around, superimposed by corner squinches and recessed multicused arches. There are several Arabic and Persian inscriptions.

Site No. 108: Fatmal Marhi (Fig. 8, Pl. V A)

The marhi known as Fatmal, is octagonal in plan at the base and constructed on a raised platform about 1m in height. The platform is square in shape, and is constructed with small bricks laid in kanker lime mortar and also plastered in kanker lime. The platform shows the use of cut bricks in geometric pattern. The main entrance is on the eastern side in the form of multicused arched panels, flanked by octagonal turrets with cupolas on top. Two staircases from northern and southern sides lead to the cupolas which are profusely decorated with fresco paintings on the interior and exterior. Each sides of octagon of the marhi has uniform surface treatment and is divided into two parts. At the lower level, there are four entrances within cusped arched panels. The upper half is treated with cusped arched panels with pigeon hole in the centre on each octagon. The structure has superimposed circular drum and melon shape ribbed dome topped by inverted lotus base. The exterior is profusely decorated with fresco paintings on each side.

Site No. 109: Jajal Marhi

The Jajal Marhi is square in plan and constructed with small bricks laid in kanker lime mortar and plastered. Originally, it had four entrances but now the main entrance is from the south and the remaining are closed. There are three recessed cusped arches within recessed rectangular panels flanked by small rectangular panels on all sides except the southern side. There are three rectangular recessed panels above the door level. The spandrels of arches and panels are decorated with fresco paintings. The building is

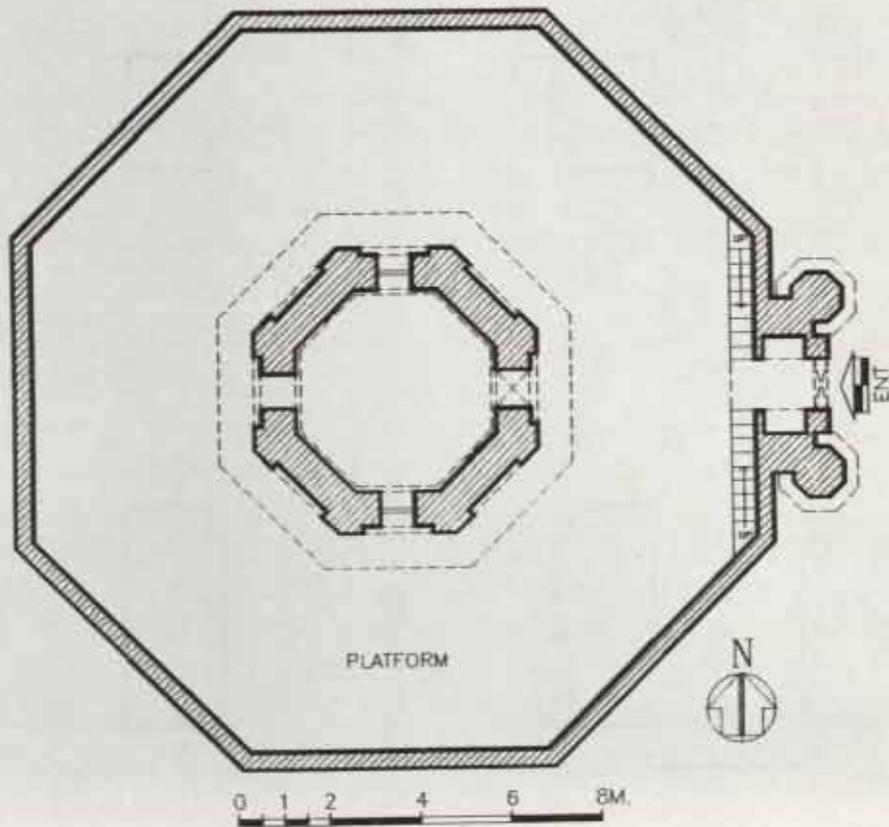

Fig 8. Plan of Fatmal Marhi, Kasur

superimposed by a circular drum and a dome above, the external surface of which is ribbed, topped by an inverted lotus base and finial. Each rib is also decorated with leaves pattern in relief. The interior is profusely decorated with fresco paintings.

On the interior, four corner squinches with four blind arches are provided. The upper parts of arches are decorated with scene of wars, hunting scenes, court of kings, kings on elephant, goats, deer, lions and different kinds of birds.

Site No. 112: Wan Radha Ram (baoli)

It is circular in plan with dia 8.20 m (exterior) and 6.80 m (interior) and constructed with small bricks and kanker lime mortar. It has two pillars on the eastern edge which are used taking out water. The interior of the well has 12 recessed arched panels superimposed by rectangular recessed frames having niches in each panels and arches. According to the local people, its steps leading down to the well were recently closed by the Forest Department.

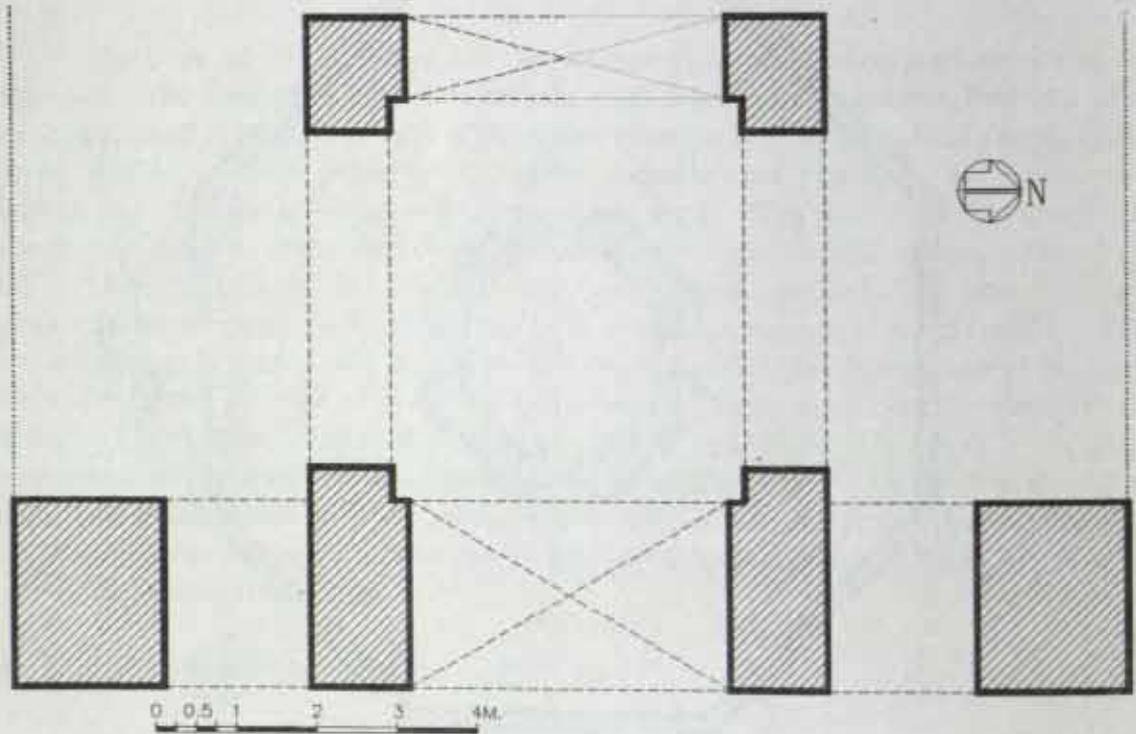

Fig. 9. Plan of Entrance Gate of Sarai Mughal, Kasur

Site No. 117: Sarai Mughal (Fig. 9)

The Mughal Sarai is square in plan, measuring 166.40 m on one side and constructed with small bricks in kanker lime mortar and plastered. The main gate of the Sarai is located on the western side which is 8.3 m wide and 7.5 m in height flanked by blind arches on either side. With the passage of time, half of the dome of the main entrance has collapsed. A mosque and well are also located in the centre of Sarai. The rooms of the Sarai are square in plan measuring 3.25 m across. The Sarai is disturbed by brick robbers and now it is in very poor condition.

Site No. 120: Jambar Kalan Temple

The temple at Jambar Kalan is a double-storeyed building, square in plan and it is constructed with small bricks laid in kanker lime mortar and plastered. The verandahs of ground floor and first storey have five cusped arches. The flat roof has a circular drum and ribbed dome topped with inverted lotus base. The main ground floor is square in plan measuring 5.70 m across. There are four openings into the main chamber.

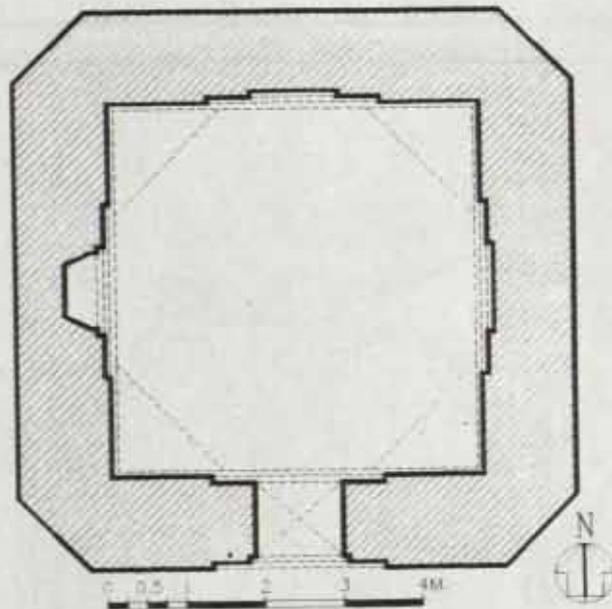

Fig. 10. Plan of Sarai Tomb, Kasur

Site No. 121: Sarai Tomb (Fig. 10, Pl. V B)

The tomb looks octagonal in plan measuring with 5.30 m and 1.40 m on sides but actually, it is raised on a square which has chamfered corners like the tombs of Daud Kirmani at Sher Garh in Okara or Mir Chakar's tomb at Satgara, Okara. It is constructed with small bricks with kanker lime mortar and plastered. Externally, the four sides with less width have sunk arched panels superimposed by rectangular arched panels. The large sides also have sunk panels among which the central panel is flanked by three pairs of superimposed panels. The main entrance is from south made through an arched opening. A circular drum supports a low dome. Internally, the chamber is square in plan and profusely decorated with fresco paintings in various colours and showing geometrical designs, chain designs, cypress, and date trees, flowers and flower vases. Recessed arches flank the mehrab and the corners show squinches which are decorated with Ghalib Kari and Quranic verses, Arabic and Persian inscriptions. The interior of the dome is also decorated with fresco paintings, depicting floral and geometric designs.

Site No. 170: Tomb of Baba Darvesh (Fig. 11)

The octagonal tomb of Baba Darvesh is erected on one metre high square platform built with modern bricks, mud and cement mortar. It has two entrances through its

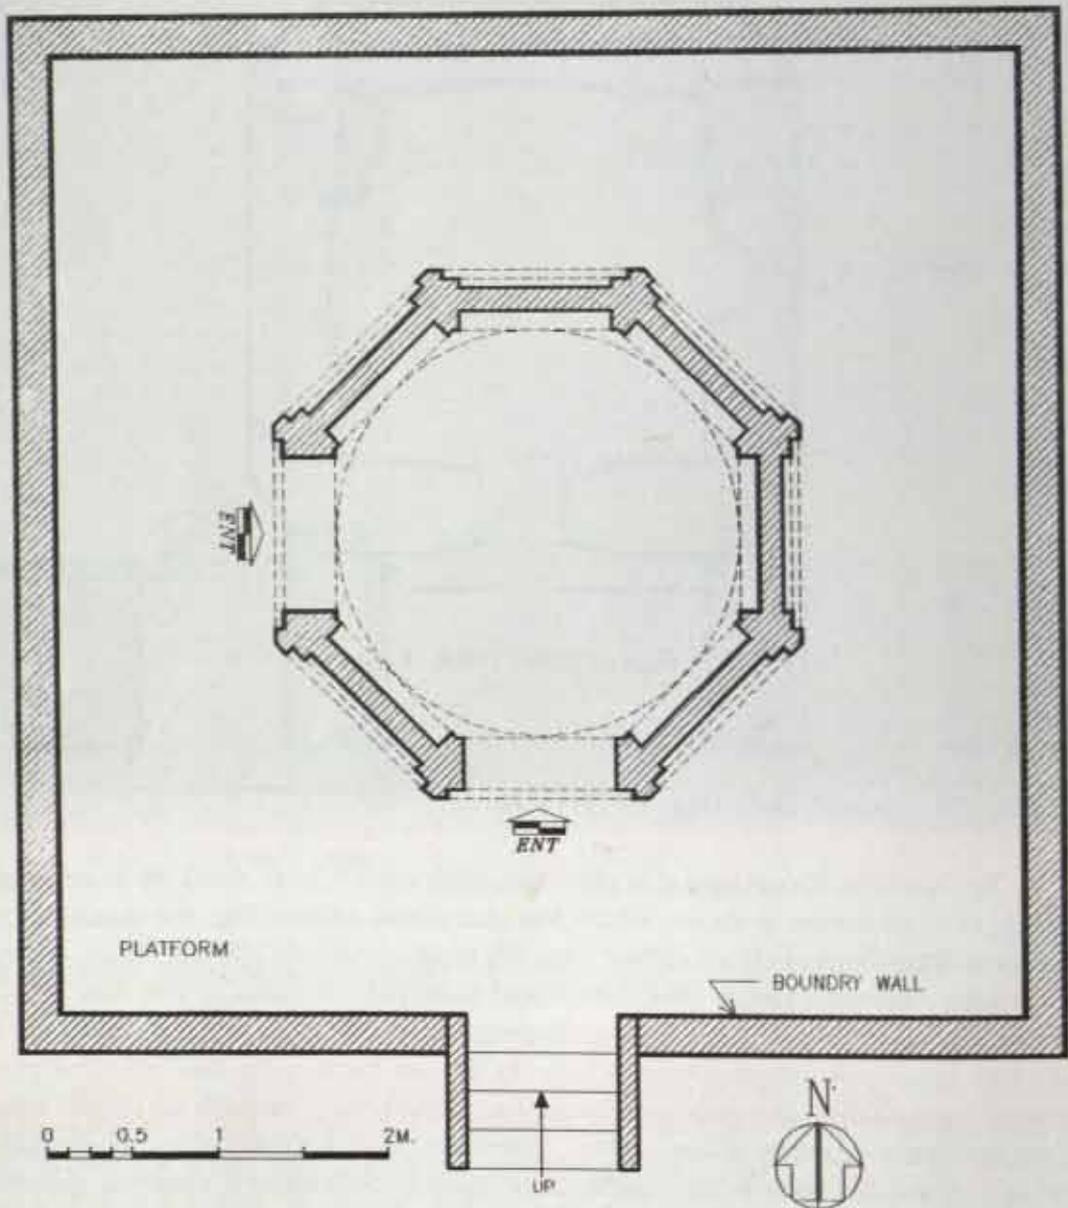

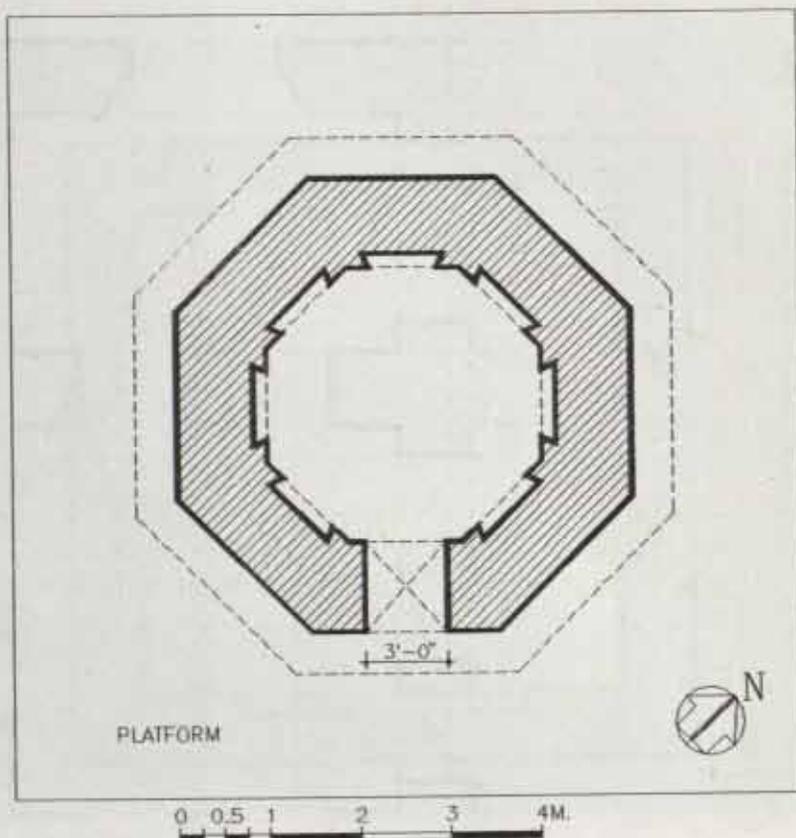

Fig. 11. Plan of Baba Darvesh Tomb, Lahore

western and southern walls. A large dome plastered with cement and painted in green color is erected directly on the octagonal structure.

Site No. 171: Baba Ghian Chand (Fig. 12)

It is a smadh, octagonal in plan, measuring 1.75 m on each side and built on 1m high square platform, measuring 9.50 x 9.50 m. Externally, each octagon has recessed

Fig 12. Plan of Baba Ghian Chand, Lahore

cusped arched panels which are also painted. The main entrance is on the eastern side. A circular drum and dome topped by inverted lotus base and finial are constructed on the building. Internally, each side has recessed arched panels and four corner squinches.

Site No. 172: Chathanwala Gurduara (Fig. 13)

It is erected on a raised square platform, measuring 13 m, built with small bricks in kanker lime mortar and plastered. The main building consists of two stories. The ground floor of the main hall has two multicusped arched openings on each side. There are large arched entrances on the southern and eastern sides. The interior of the ground floor hall is decorated with fresco paintings. The first floor is square in plan. It is surmounted with circular drum and double dome which is ribbed or fluted. The interior of room and vaulted roof are decorated with fresco paintings showing floral and birds motifs.

Site No. 173: Shahabad Gurduara (Fig. 14)

It is square in plan measuring 3.90 m and constructed with brick tiles and mud mortar and then stucco plastered. Externally, each side has turrets at the corners and

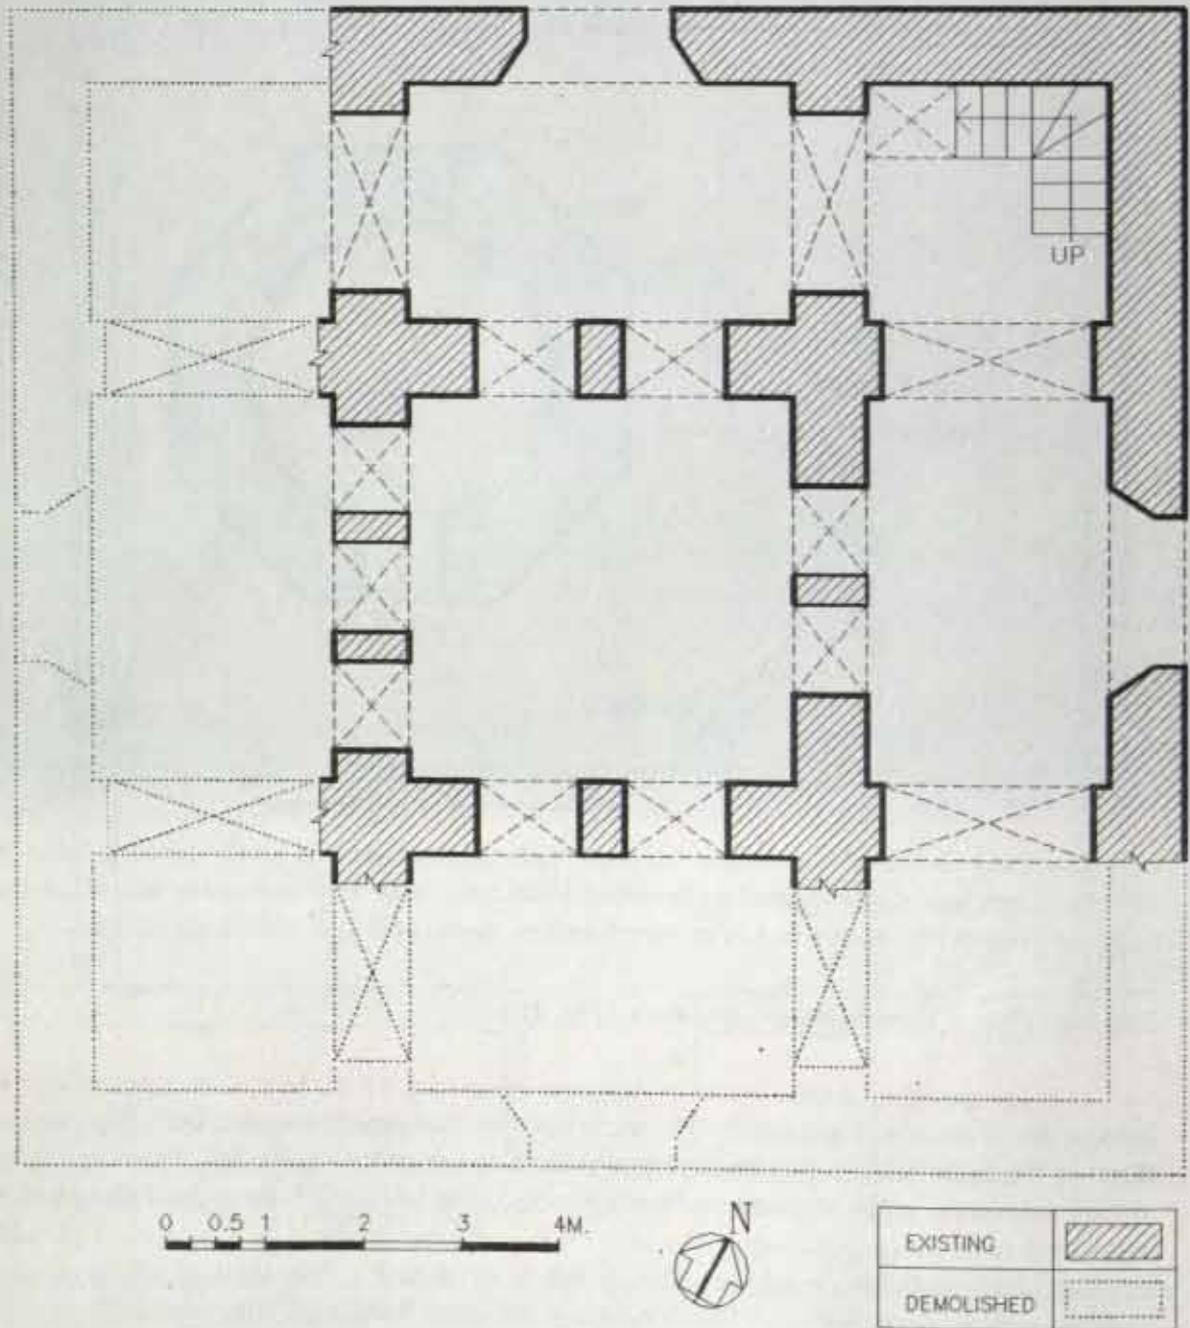

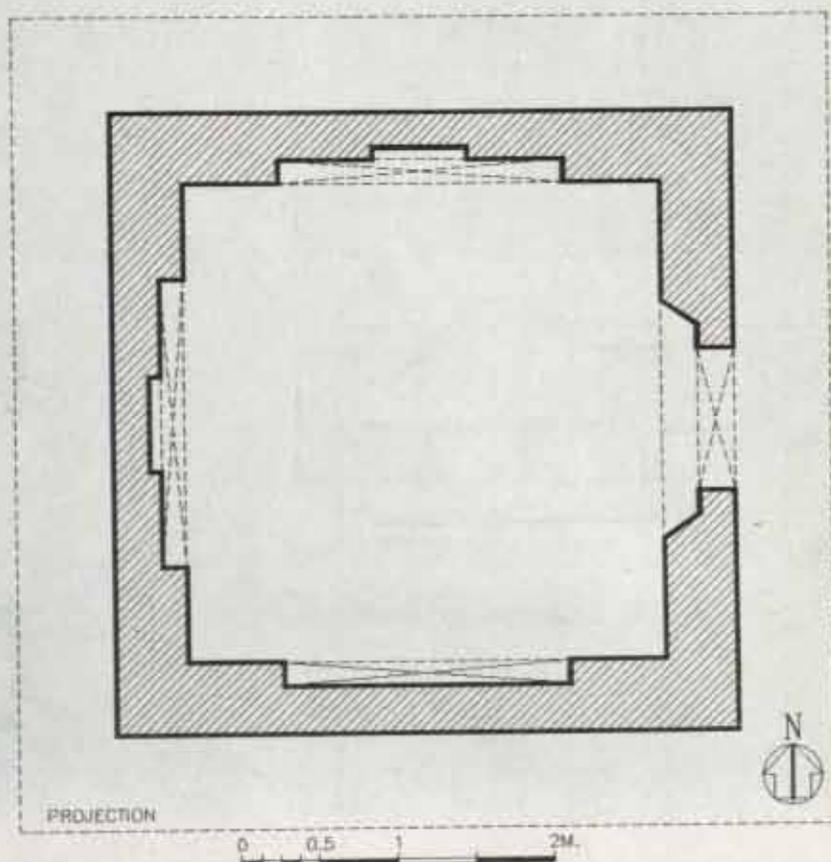

Fig. 13. Plan of Chathanwala Gurdwara, Lahore

Fig. 14. Plan of
Shahabad
Gurduara,
Lahore

recessed cusped arched panels. The main entrance is from the east. A circular drum with dome crown the building.

Site No. 174: Brahmanabad Baoli (Fig. 15, 16 & 17, Pl. VI A)

The baoli lies in north-south orientation, measuring 51.2 m, and constructed with small bricks in kanker lime mortar and plastered. The main entrance of the stepped well is from the southern side where a square room measuring 5.2 m, is constructed having an arched entrance. There is a circular drum and low dome on the structure. The interior side is octagonal in plan having four corner squinches and four arched panels. The steps from the room lead to the well measuring 5.8 m in diameter. The steps have cut brick geometric designs. The steps are covered with roof supported by six arches. Two ventilation holes are also provided on each side in the centre of the arches.

Site No. 175: Kohrian Smadh (Fig. 18)

It is square in plan and constructed with small brick tiles in kanker lime mortar and plastered. On the exterior, there are three recessed and cusped arched panels within

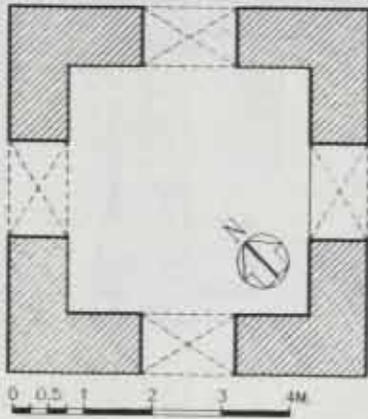

Fig. 15. Brahmanabad Baoli, Lahore

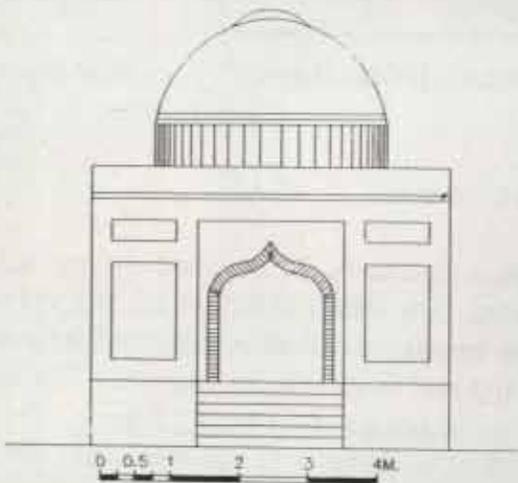

Fig. 16. Elevation of Brahmanabad Baoli, Lahore

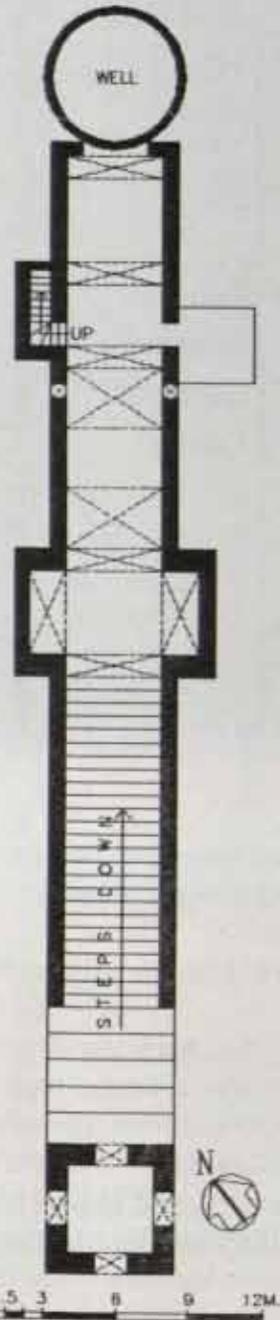

Fig. 17. Plan of Brahmanabad Baoli, Lahore

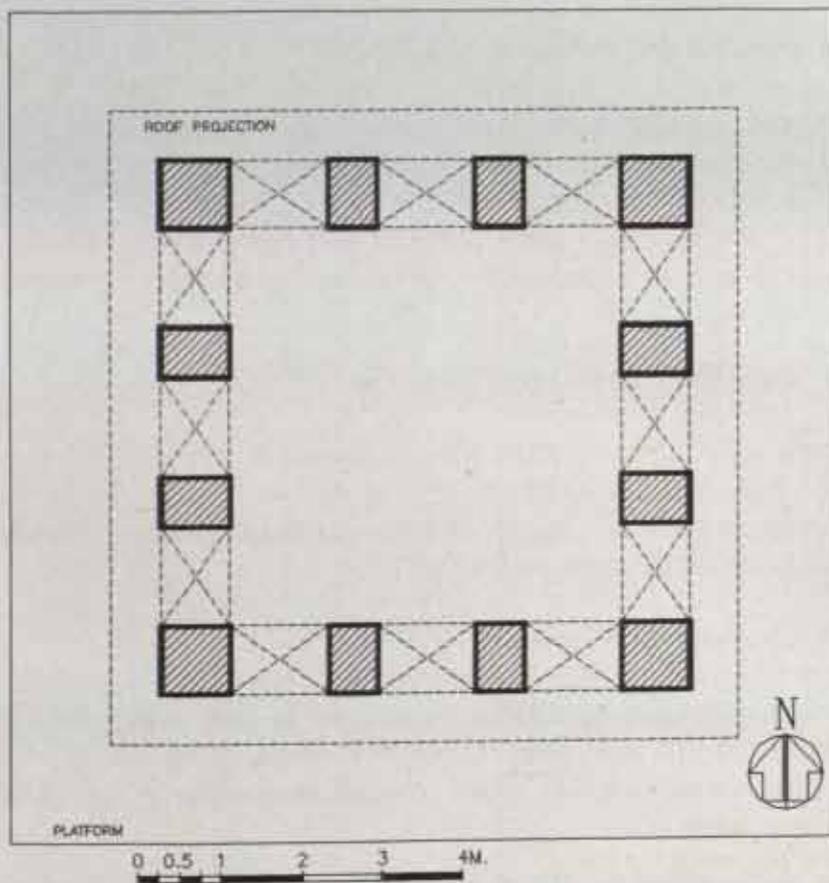

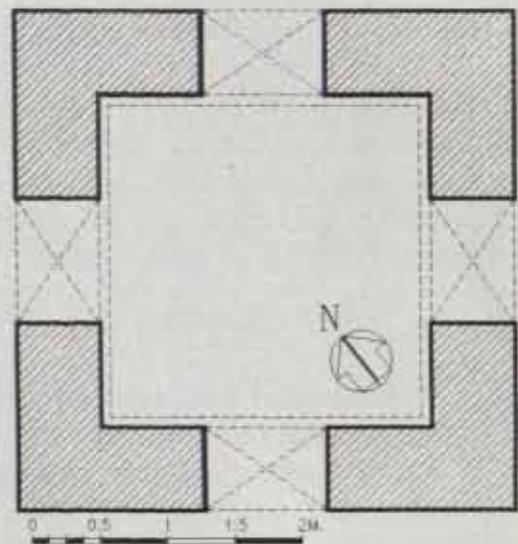

Fig. 19. Plan of Hir Baradari, Lahore

recessed rectangular frames, superimposed by three horizontal rectangular frames. There are four arched entrances flanked by recessed arches on both sides. The horizontal panels on the walls are decorated with fresco paintings. A dome is built on drum which has inverted lotus base. On the interior, it is square in plan and there are four corner squinches within multicused arched panels which are decorated with fresco paintings depicting different human scenes and floral patterns, birds and trees. There are Gurmukhi inscriptions within each arched panel.

Site No. 176: Hir Baradari (Fig. 19)

The baradari is square in plan erected over a raised platform built with small bricks set in kanker lime mortar and plastered. It has three multicused arched openings on each side and there are traces of fresco paintings on the exterior walls. The roof of the baradari has collapsed. Internally, there are traces of fresco paintings showing floral and geometrical motifs on the walls.

Site No. 177: Dera Chahl Gurduara (Fig. 20 & 21)

It is erected on a rectangular platform measuring 32 x 20.7 m but the main building is constructed with modern bricks of standard size with kanker lime mortar. The building consists of three stories. The ground floor has four door openings. The door frames are made of marble. The first floor has a series of windows within recessed arched frames. The floor of the first floor is plastered with cement. A circular drum and ribbed dome stand on an inverted lotus base.

Site No. 178: Baba Noor Shah Tomb (Fig. 22)

The tomb of Baba Noor Shah being octagonal in plan is erected on 1.5 m high square platform with each side measuring 10.5 m. It is built of modern bricks and cement. It has two entrances from the eastern and western sides through rectangular openings within large multicused recessed arched panel.

Site No. 179: Chathan Wala Smadh (Fig. 23, Pl. VI B)

These are two adjoining smadhs, rectangular in plan, measuring 32 x 17 and 21 high feet, constructed with small brick, kanker lime mortar and plastered. Each smadh has four arched entrances on each side within recessed rectangular frame. Both have domes with inverted lotus base.

Site No. 180: Jamit Singh Gurduara (Fig. 24)

It is a double storey building, square in plan, erected on a low platform and with

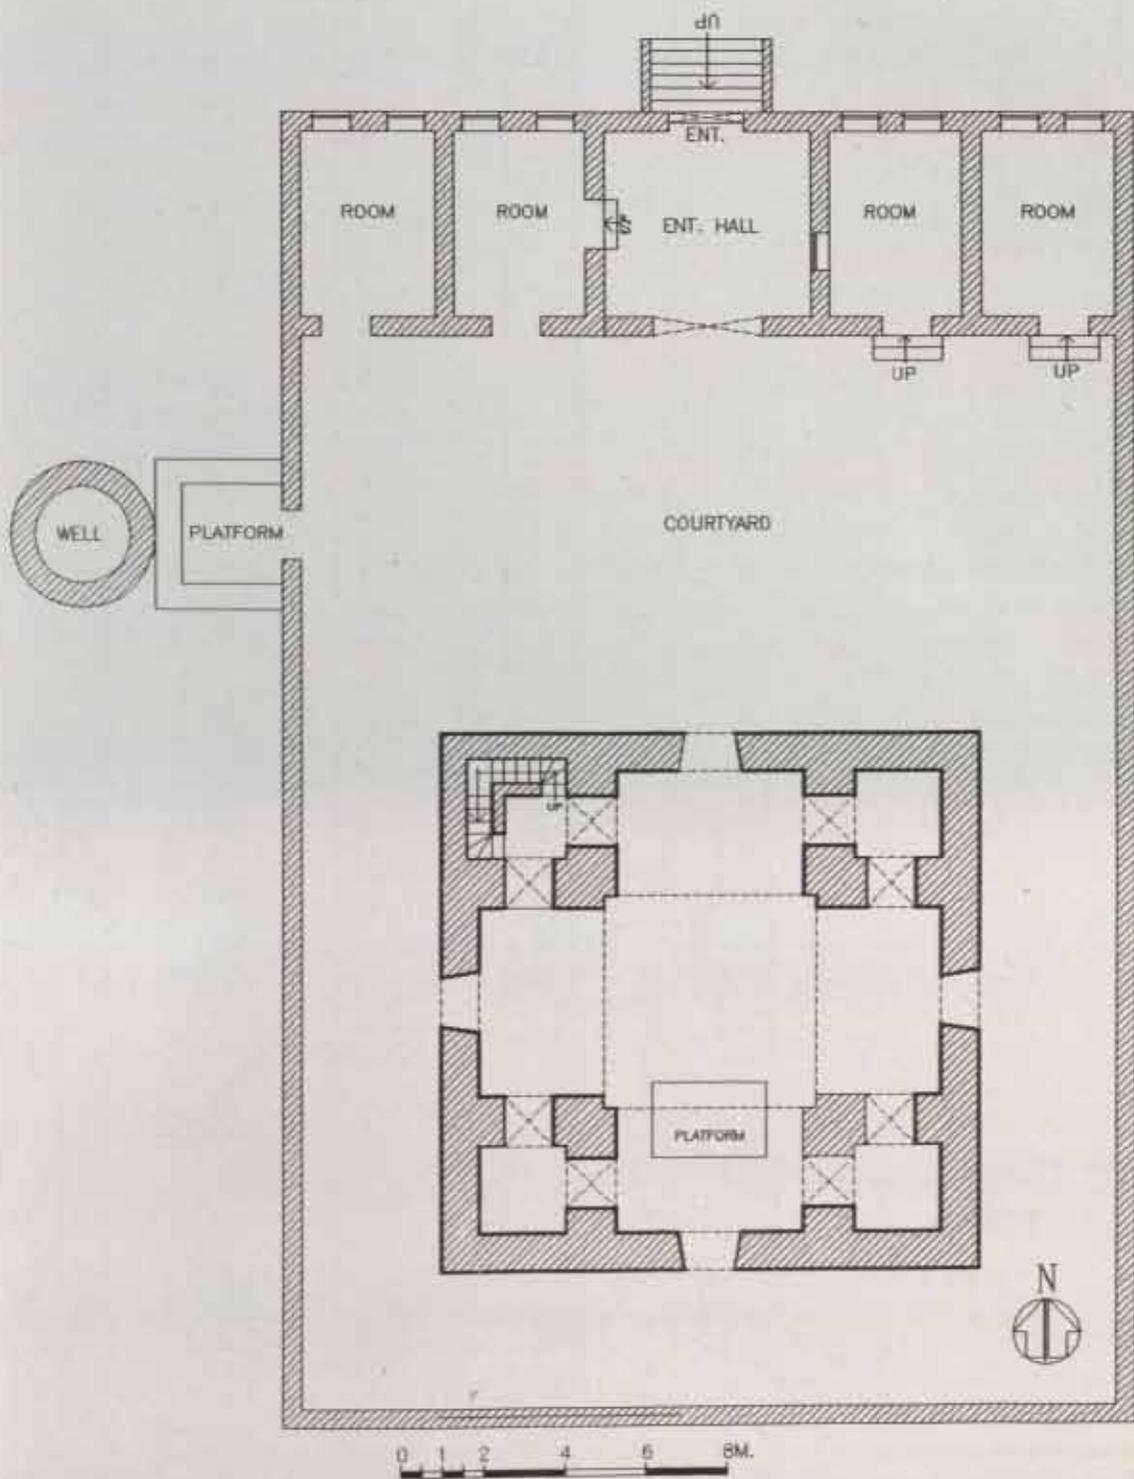

Fig. 20. Plan of Dera Chahl Gurduara, Lahore

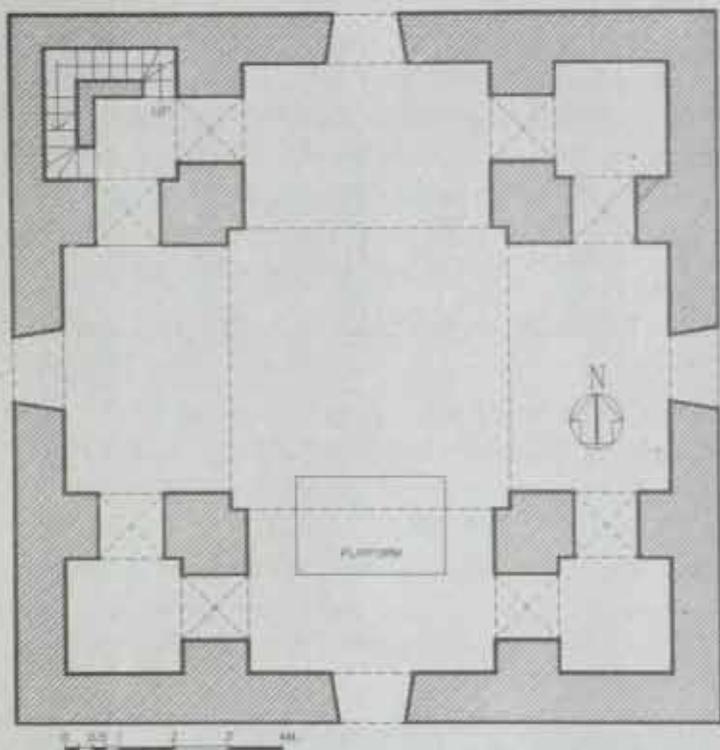

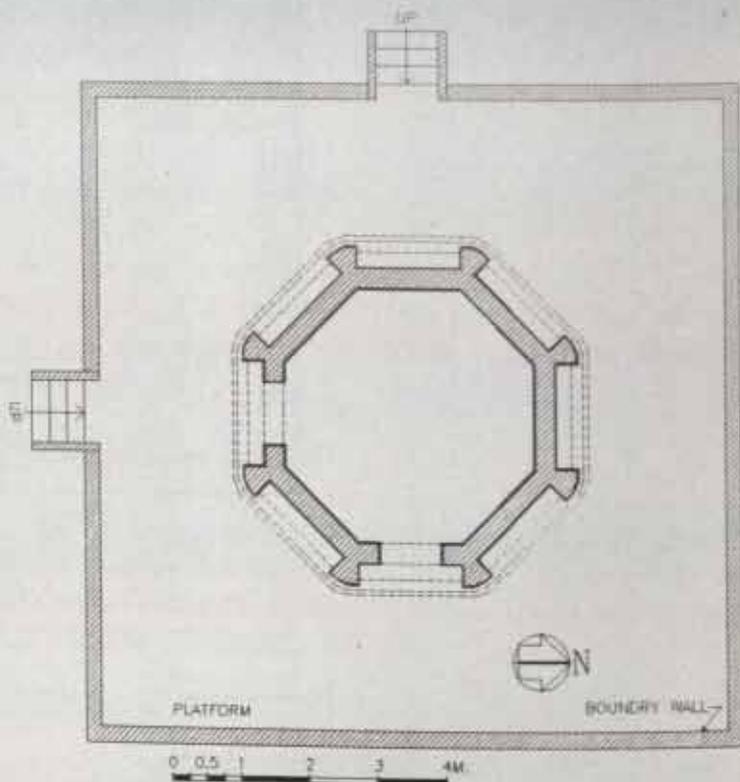

Fig. 21. Plan of Dera Chahl
Gurdwara, Lahore

Fig. 22. Plan of the tomb
of Baba Noor
Shah, Lahore

small brick tiles and kanker lime mortar. The entrance has a marble and wooden door within recessed multifoil arched panel. There are Punjabi, Urdu and Gurmakhi inscriptions on the slabs inside the room. There are also traces of fresco paintings on external sides which are now white washed. The building has a double dome.

Fig. 23. Plan of Chathanwala Smadh, Kasur

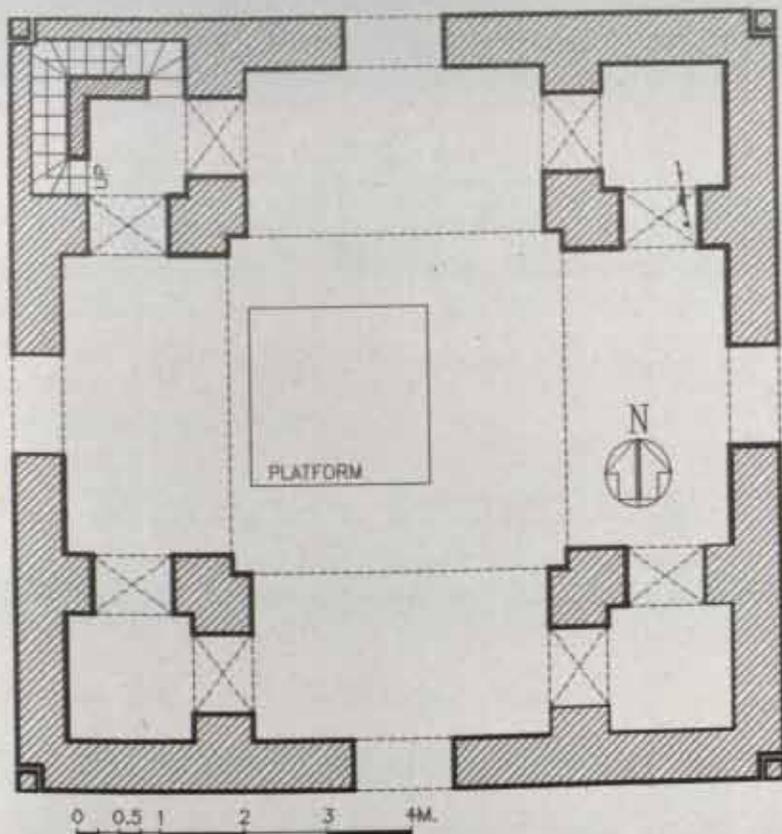

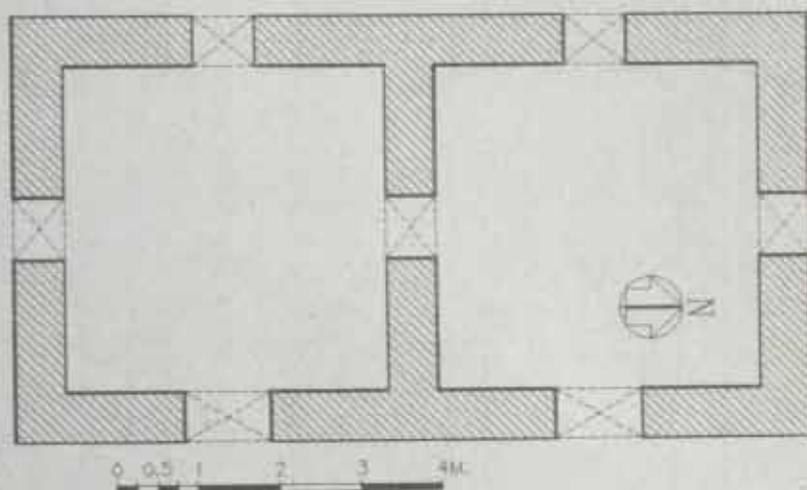

Fig. 24. Plan of Jamit Singh Gurdwara, Lahore

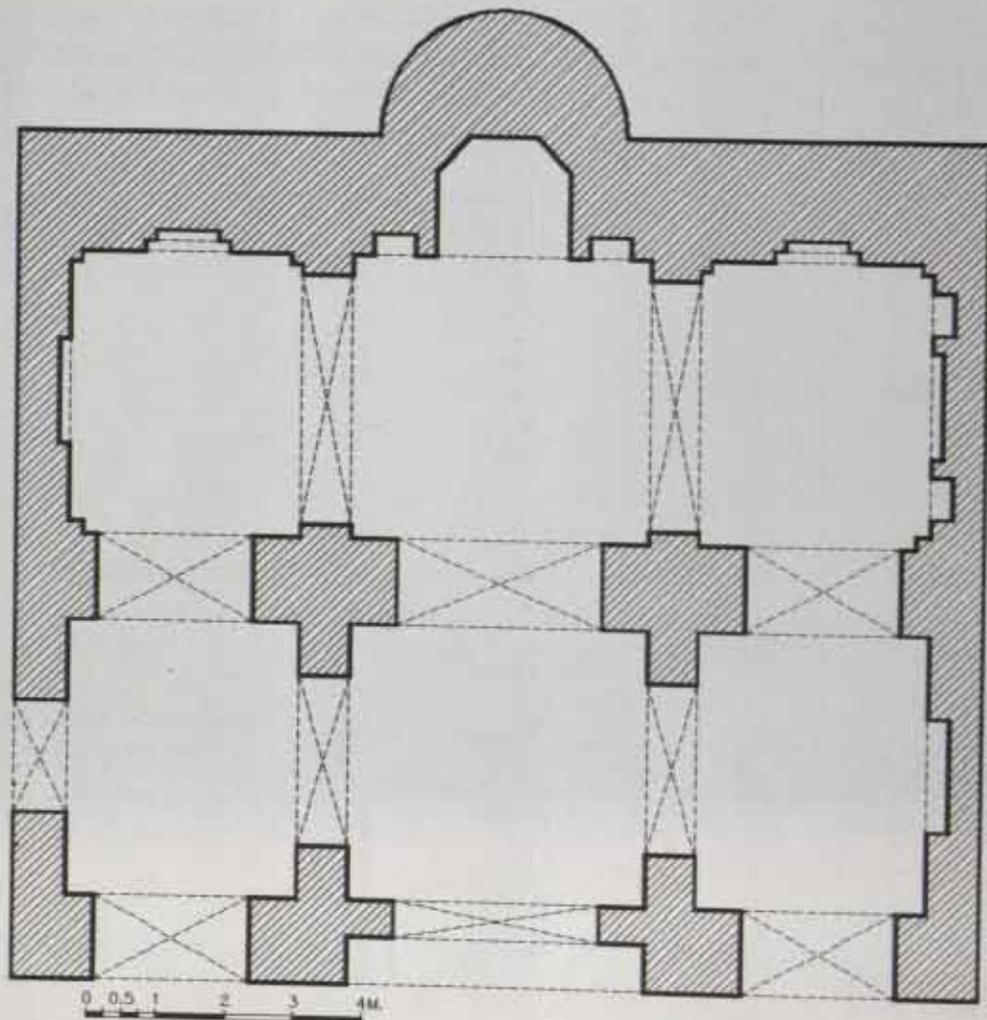

Fig. 25. Plan of the Mosque of Syed Makhdoom Abdul Khalique, Kasur

Site No. 707: Baba Dhaya Shah

The mausoleum of Nawab Wakil Khan has been built on a square plan with small bricks in mud mortar. It has two openings on the southern and northern sides. The structure is topped by a single dome on a high drum. On the outer side, it has oblong and square recessed panels. It is plastered with kanker lime mortar on the interior and exterior surface.

A high wall of the Sikh period is also attached to the northern opening. In 1848, when Punjab was annexed by the British, it was made a residence of the first Additional District Magistrate of the region. He built a large number of rooms along the sides. Then

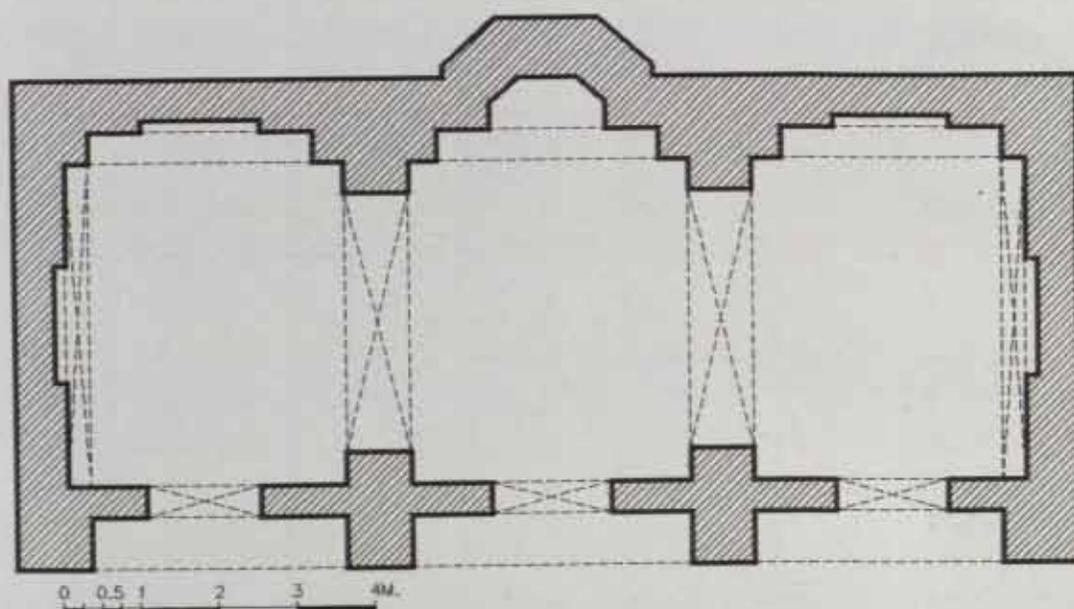

Fig. 26. Plan of Jinnanwali Masjid, Kasur

the tomb was also used as a court of the Assistant Commissioner before, it was converted into Deputy Commissioner's office. Now-a-days it is being re-used for the proposed Kasur Museum.

Site No. 708: Abdul Khalique Mosque (Fig. 25)

The mosque of Syed Makhdoom Abdul Khalique is almost square in plan and built with brick tiles in mud mortar. It has three arched entrances in the eastern facade within large arched frames. The central entrance is larger than those flanking it. A window has been provided in the southern wall. The western wall has a circular projection to accommodate the mehrab. The exterior is plastered with cement in recent years. Three low domes crown the structure.

The interior of the mosque consists of six chambers separated by arched bays. The central chamber on the western side has a mehrab flanked by two niches. The side chambers also have niches in the western wall. The north-western and north-eastern chambers have false arches flanked by niches. Three domes are built on the vaulted roof.

Site No. 709: Jinnan Wali Masjid (Fig. 26)

The Jinnan Wali Masjid is constructed on a rectangular plan with brick tiles and mud mortar. It has three arched entrances in the eastern wall. The columns are treated with recessed rectangular frames. The western wall has a projection to accommodate the

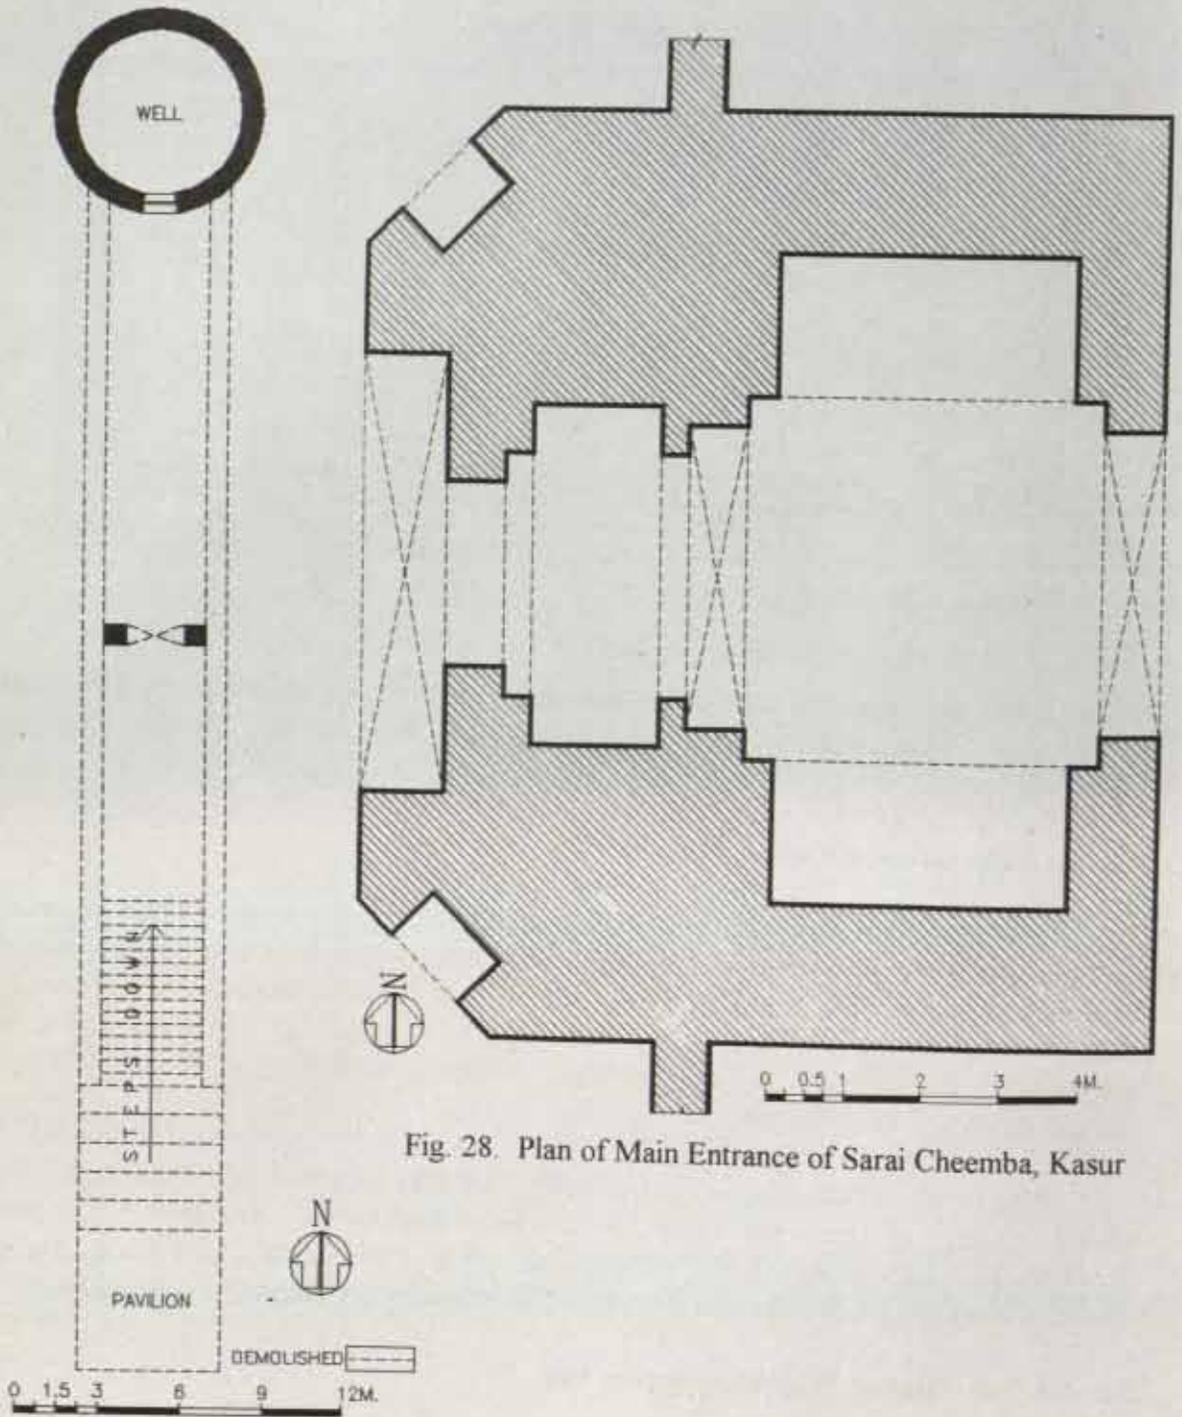

Fig. 28. Plan of Main Entrance of Sarai Cheemba, Kasur

Fig. 27. Baoli of Abdul Khaliq, Kasur

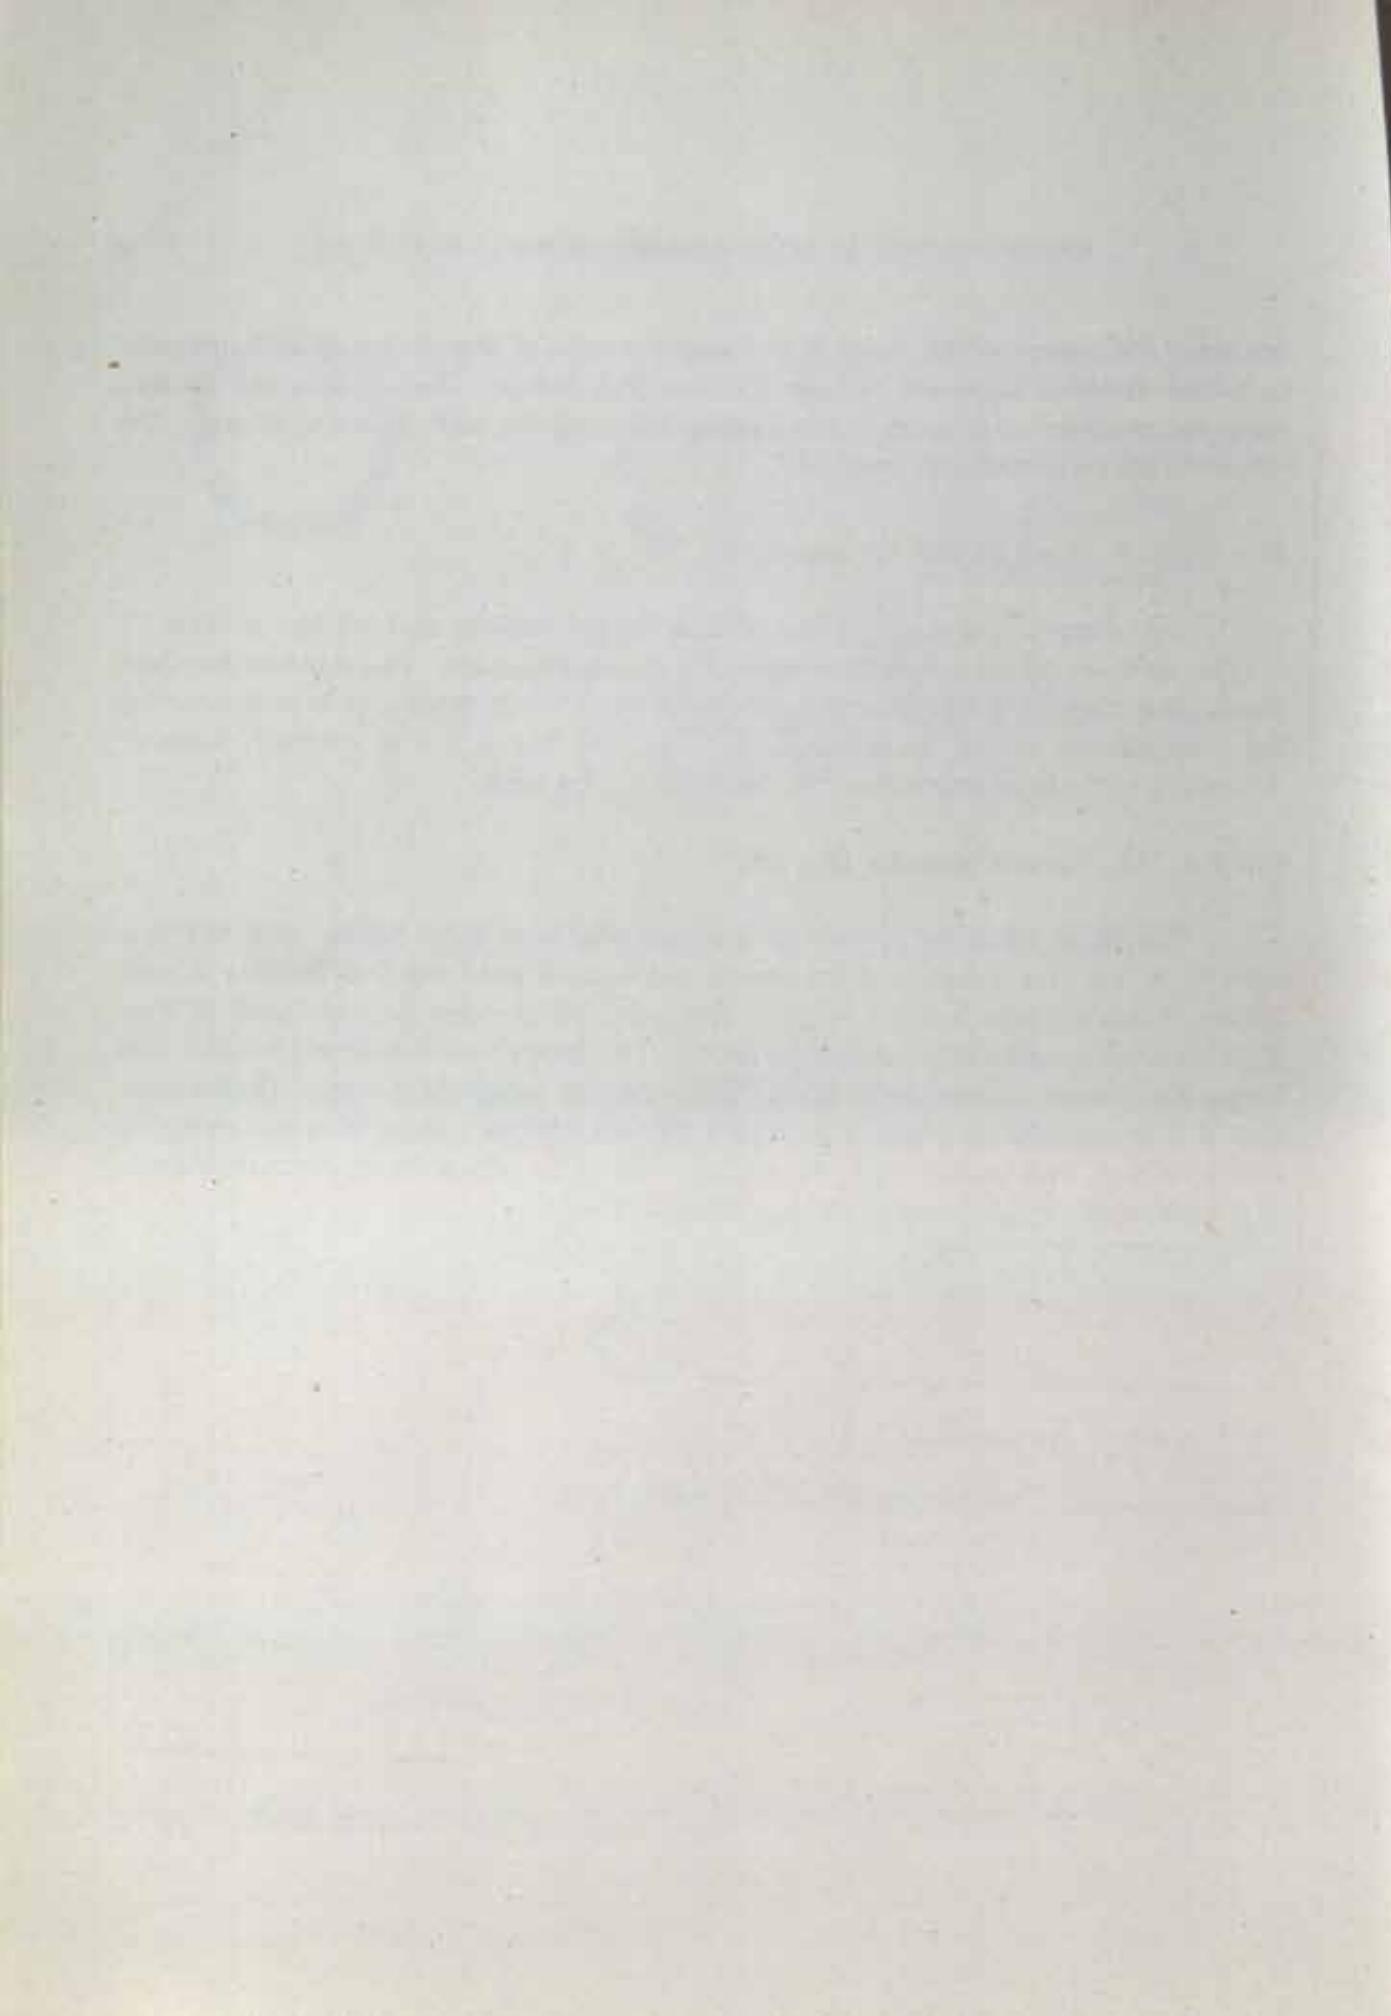

mehrab. The interior of the Jinnal Wali Mosque consists of three rectangular chambers in east-west direction separated by large four centered arches. The southern and western walls are provided with large arched niches, balancing the mehrab in the centre. The interior is plastered and white washed.

Site No. 710: Baoli (Abdul Khalique) (Fig. 27)

This stepped well (baoli) is built of brunt bricks, lime and mud mortar. It has a 5.2 m wide stairway on top which narrows to 3.7 m after few steps. The staircase has been demolished completely and filled with debris and earth. Only remains of an arch covering the staircase are visible on the surface. The well has a 7.6 m external diameter. According to the local information, the baoli was 22.9 m deep.

Site No. 711: Sarai Chhamba (Fig. 28)

The Sarai Chhamba is built on a square plan with burnt bricks, mud and lime mortar. It has two entrances at the eastern and western sides and four bastions at each corner. Each entrance has two turrets. The facade of the main gate measures 11.9 m. Each gate has a vaulted roof and dome above. The parapet wall has been plastered with kanker lime mortar. From the exterior, the bastions are octagonal in shape. On the inner side, it is completely disturbed by modern settlement. It has a series of rooms along the interior of wall with vaulted roof. Around the sides of the central court, there are a series of compartments which are used for residential purpose.

BRIEF DESCRIPTION OF SELECTED MONUMENTS IN SAHIWAL, OKARA AND PAKPATTAN DISTRICTS

Site No. 124: Qadirabad Marhi

The building is octagonal in plan, raised on one metre high plinth and is built with small size bricks, laid in lime kanker mortar and plastered with lime. The entrance is provided from an arched opening on the west side. The exterior has arched panels while the interior is decorated with fresco paintings.

Site No. 125: Sohniwal Marhi

Like other buildings of contemporary age, this Marhi is also constructed with small size bricks in kanker lime mortar, on a square plan above 0.5 m high plinth. The entrance on the eastern side, has pointed arches flanked by two small niches and recessed panels. The building is surmounted with a bulbous dome raised on a circular drum. The exterior of the dome has averted lotus flower finial while the interior is decorated with floral motifs and geometric designs.

Site No. 131: Qila Dev Singh Marhi

The building is square in plan, built with small size bricks and is comparable with other contemporary buildings in this area as regards architectural features and decoration of the exterior and interior.

Site No. 132: Kashi Ram Marhi

The Marhi is constructed with small bricks laid in mud mortar and plastered with kanker lime. The lower portion of the monument has been plastered with cement recently. It is square in plan and has a low semi-pyramidal dome. The doorway is on the southern side. The facade above the door is adorned with two foiled multicusped arched panels within a high rectangular frame flanked by small niches. The other sides of the structure have recessed arched panels. The facade is also decorated with fresco paintings, depicting sun flowers and other floral motifs.

Site No. 134: Qila Suraj Singh Smadh

The structure is built on square plan with small size burnt bricks in lime mortar. The main entrance has multicusped arched panels within a rectangular frame, flanked by two small niches. It is surmounted by a low dome raised on a high drum. The interior chamber is decorated with panels.

Site No. 135 - A: Smadh Bhai Raoke (A)

The Smadh is built on circular plan and has pyramidal dome. In style, it resembles other smadhis in the area.

Site No. 135-B: Smadh Bhai Raoke (B)

It has usual square plan and differs from the other smadhis in having decorated interior with paintings of flowers.

Site No. 136: Bhuman Shah Talab

The water tank is square in plan built with small burnt bricks with kanker lime mortar and is provided with steps. At the time of visits, its length up to 3.78 m was visible. The water tank is approached by two entrances flanked by semi-octagon bastions. The water was provided by three arched water channels. There is a separate enclosure for women.

Site No. 141 - A: Magandas Smadh

In plan, building material and surface decoration, it is similar to other contemporary smadhis. The interior, however, is profusely painted and has floriated designs in relief made with stucco.

Site No. 141 - B: Magandas Smadh

This smadh is richly decorated with fresco paintings on the external surface depicting floral and geometric designs, birds, animals, supernatural elements, female figures, riding bulls and an elephant. A female is also shown offering wine to a religious person. The legend of Radha and Krishna is also depicted.

Site No. 141 - C: Magandas Marhi (C)

The structure was constructed in 1937 A. D. as inscribed on a slab. The architectural features are similar to those present in the region of Okara.

Site No. 142: Bhuman Shah (Complex of Monuments A-J)

A group of monuments at Buhman Shah consisting of seven Marhis (cremation places) and three Gurdwara have been designated A, B, C, D, E, F, G, H, I, J. All are located in the centre of village of the same name amidst residential houses.

A: The Gurduara designated (A), is rectangular in plan and constructed with small burnt bricks laid in mud mortar and plastered with kanker lime. It measures 29 x 11.5 x 9 m. The Gurduara consists of an oblong hall and verandah. The verandah has ten multicuspded arched openings supported by double pillars. The northern and southern openings of the hall are closed for converting them as corner rooms. The arches have vertical and horizontal sunken panels with decorations in relief depicting wine cups, *surahi* and birds, snakes and monkeys. Two small rooms have been constructed on either side of the verandah. The verandah ceiling is decorated with fresco and mirror work. The facade of the monument is painted with golden colour and spandrels are decorated with perforated screen. The facade is richly decorated with stucco tracery work, depicting wild beasts like lion, fox, snakes, monkey, birds, swans, hens, hawks and a row of peacocks running below the parapet wall. Different gods and goddesses and decorative pots in rectangular and square panels are also shown. A marble slab showing date and name of the builder has been fixed above the central arched opening.

The interior of the building has also been profusely decorated, especially the wooden ceiling of the verandah and the main hall which are beautifully painted with floral designs. The upper portion of the walls of verandah have fresco paintings. The walls of the main hall are plain but three arches which divide the hall from southern side, have tracery work in relief above the curves. Arches have paintings in geometric design in the colour combination of blue and white. The interior comprises an oblong hall which has seven semi-circular arched openings through the verandah. These openings have been provided with wooden doors. The main hall has been divided into two parts by three segmented arches on the southern side. The main hall and verandah have flat wooden ceiling supported by iron beams. The Gurduara is in good state of preservation as it was constructed in 1910.

B: The Gurduara (B) is a double storeyed, low building, square in plan, with hemispherical dome and constructed with modern bricks laid in kanker lime mortar and plastered. It measures 8.20 x 8.20 x 9.50 m. It consist of two parts.

(a) The lower building comprises a verandah all around having five multicuspded arched openings on each side. Outer side of arches are decorated with sunken panels depicting hunting, worship and dancing scenes, whereas the arches and spandrel are decorated with scroll border. There is one marble step in front of central opening. The plinth is lined with marble. The verandah is richly decorated with flower plants. The interior of the panels depicts kings, queens, riding of kings on horses and elephant wearing cloth, hunting and garden scenes. The ceiling is divided into wooden panels with geometrical designs and mirror work. The inner or worship room is square measuring 4.30 x 4.30 m. A pillar is standing in the centre which is octagonal in shape.

(b) The upper portion consists of a square room measuring 4.30 x 4.30 m. The main opening is towards the western side. The entire monument is plastered with kanker lime. Each side shows three blind arches. The central arches are closed with terracotta screen (*jali*). The building has peacock shaped brackets and four small turrets. The square plan on the ground has been converted into octagonal drum for the construction of dome, supported by squinches below. All sides of the octagonal are in the forms of floral turrets. Above the drum is the pinnacle of dome, now disappeared. Originally, the interior was decorated with fresco paintings but now, only traces are visible. It is in a poor state of preservation.

C: The monument (C) is square in plan and constructed with small burnt bricks in lime mortar and cement. It measures 4 x 4 x 3 m. The main entrance is on the southern side. There are two blind arches on the facade and the other three sides have the same features. There is no decoration and inscriptions on it.

D: The monument (D) is octagonal and constructed with small burnt bricks in lime mortar and cement. It measures 1.60 x 1.60 x 6.50 m. The main entrance is on the southern side with two pilasters and raised moulding. Each side has blind arches and above the arches, there are sunken panels on each side. There is no decoration on the external sides except the main entrance where "Hindi" inscription is visible. The dome is melon shaped with everted flower design on it. On the inner side of the dome, there are fresco painting showing different floral designs. The interior of the room is octagonal in shape.

E: The monument (E) is constructed with burnt brick, lime mortar with kanker and white washed. The size of the bricks is 24 x 12 x 7 cm. It measures 10.80 x 6.10 x 6.4 m. The main entrance is on the western side which is of wood. The door is decorated with square and rectangular designs of copper sheet. The panels of door are made with marble slabs. The facade of the door is in multicusp arched design. Three blind arches are decorated with square panels with flower designs. On the inner side, there are three verandahs and one room. It has three entrances with multicusp arched designs and pillar shaped pilasters with lime kanker and then white washed. The ceiling is of wooden panels and is partially damaged. The central verandah has panels and lime plastered. This building was built on raised platform in 1910 A.D.

F: The monument (F) is square and constructed with small burnt bricks with lime mortar. It measures 4.90 x 4.90 x 2 m. The main wooden entrance is from the northern side through an arch which is painted with peacock and geometrical designs. In addition, panels are painted with small floral and human designs. The northern entrance has inscription in Hindi. Inside the dome, are painted winged holy figures with followers and flowers and chain designs.

G: The monument (G) is octagonal in plan and is constructed with bricks and kanker lime. It measures 1.50 x 1.50 x 3.50 m. An inscription in Hindi is fixed on the entrance on the northern side. There are panels on each side of this Marhi which are coloured.

H: The monument (H) is another Marhi constructed with small burnt bricks in kanker lime. It measures 2.15 x 2.15 x 3 m. The structure is plastered with kanker lime. There are no decorations.

I: The Gurduara (I) is square in shape, built with burnt bricks in lime mortar. It measures 5.50 x 2.50 m. It is surrounded by a verandah supported on rows of double pillars with 12 openings. The verandah has multicusped arches on all the four sides. The dome of this monument is melon shaped. On the inner side, the building is decorated with blue colour painting and tracery work. The dome is decorated with mirror and Ghalib Kari work.

J: This is a Marhi, square in plan and constructed with small burnt bricks and mud mortar and plastered over with kanker lime. It measures 3.50 x 3.50 x 5 m. It has four entrances on all the sides which are closed by modern bricks except the eastern side. Multicusped recessed panels are made on each door. A melon shape dome is erected on the circular high drum.

Site No. 149: Satghara Marhi

It is built on square plan with small burnt bricks. The original arched opening on the eastern side has been blocked with modern bricks and of a rectangular door with wooden frame has been fixed. The dome is square in shape resting on drum. The Marhi is erected on a platform measuring 1.50 m in height. The exterior is decorated with recessed square and rectangular panels. Most of the fresco work within the panels has faded and colours are lost due to the passage of time. On the inner side, it has arched panels on all sides. The dome is erected on four squinches at the corners. Square ventilators have been created on all the walls except the eastern side.

Site No. 191: Shah Madar Mosque

It is constructed with small brick in kanker lime mortar. It is rectangular in plan consisting of a courtyard and a prayer chamber with three multicusped arched openings, two of which has been closed recently. The facade of the mosque is decorated with sunken rectangular and arched panels. On the northern and southern sides, square minarets have been raised which are topped by umbrella shaped cupolas. It has three bulbous domes crowned with pinnacles. The interior of the mosque is decorated with floral designs which are now covered with white wash.

Site No. 200: Kot Devamal Smadh

It is constructed with small bricks in mud mortar and plastered with kanker lime. The building, square in plan, has panelled facade. A door in the middle of the southern side leads to the interior. There is another door pierced through northern side but has been closed with modern bricks. The external sides of the Smadh are decorated with arched and rectangular panels. The interior of the Smadh is decorated with fresco painting, rectangular, square and arched panels. The fresco paintings depict human figures in different postures, flowers, trees, war scenes and plant leaves. The interior of the dome is decorated with serpent head design. The internal side has rectangular and square panelled and multicusp double arches.

Site No. 203: Baba Dharmdas Smadh

It is constructed with standard size modern bricks laid in mud mortar and plastered with cement. This Smadh, square in plan, measures 2.35m x 2.35m and rises to a height of about 11m. Access to the inner chamber is provided through the northern door built with a rectangular frame of scrolled border. A screen is fixed above the door in the middle of which, a rectangular tablet bearing inscription of Baba Dharmdas is recorded.

Site No. 213: Bakhshi Khana Fort (Fig. 33)

The fort is constructed with small bricks laid in mud mortar and plastered with lime kanker. It is square in an overall plan and enclosed by a massive wall with circular bastions at each corner. A square structure has been built in the centre of the fort.

Site No. 214: Gugera Khas Smadh

The Smadh of Gugera Khas is square in plan, built of small burnt bricks laid in mud mortar and plastered with kanker lime. It has one opening on the eastern side, measuring 1 x 1.4 m, flanked by two rectangular panels. The interior of the Smadh consists of a single chamber, supporting a dome on four squinches and an octagonal drum.

Site No. 216: Qamar Shah Tomb (Fig. 34)

The tomb of Baba Shah Qamar is erected on an ancient mound with small bricks in mud mortar and plastered with lime. The main entrance is from the eastern side and the thickness of walls is 1.6 m. It has three arched panels above the door which have an inscription. The entire facade of the tomb is decorated with square and rectangular panels and glazed tiles. The dome is erected on a high drum created with help of four squinches

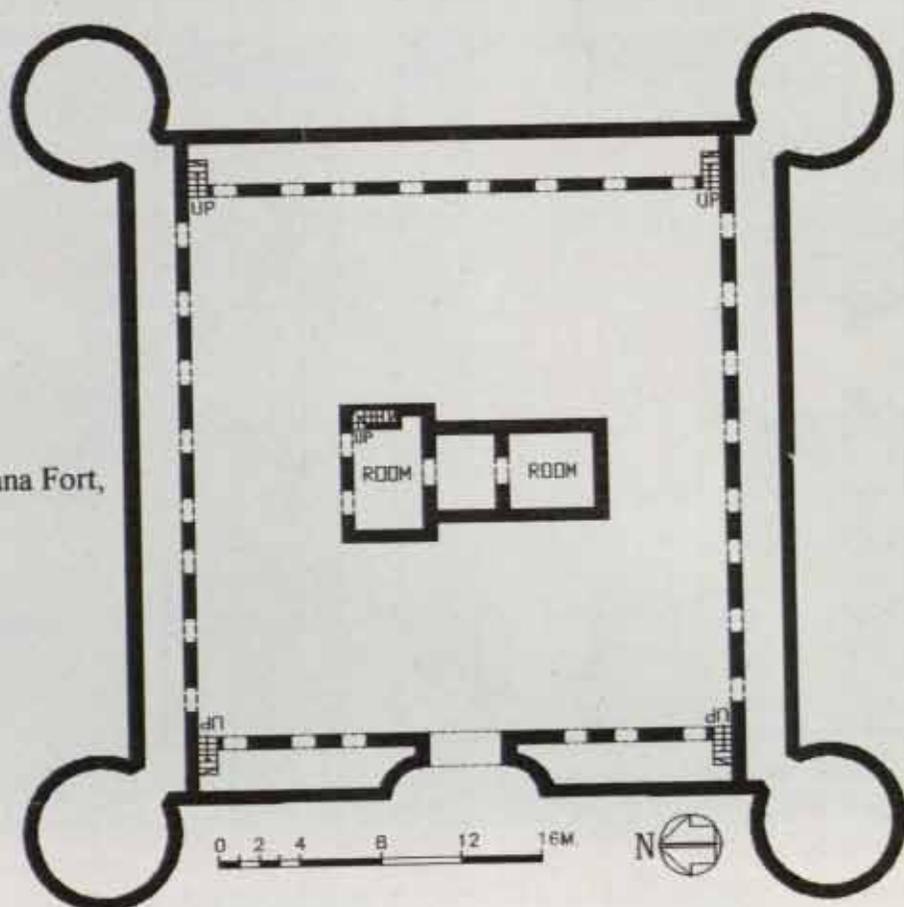

Fig. 33.
Plan of Bakhshi Khana Fort,
Okara

on four corners and four arched panels on each side. There are some traces of stucco tracery work.

Site No. 221: Gurduara Jati Usman

This Gurduara is square in plan and built with burnt bricks laid in lime mortar. It is double storeyed with a hall measuring 9.4 x 9.4 m, raised on a platform measuring 11.6 m x 11.6 x 1m. The hall has twenty openings. The upper storey which is accessible through a staircase on the south-western corner, has a gallery around with twenty slightly projecting balconies. The actual building which is surrounded by a verandah is square in plan and is rendered octagonal at the second storey. The square buildings has four openings with marble frame within multicused arches. The pride of the monument is fluted dome with flower pinnacles.

Site No. 227: Drugra Burj (Kos Minar)

The Burj is erected on a small ancient mound with mud bricks and is square in

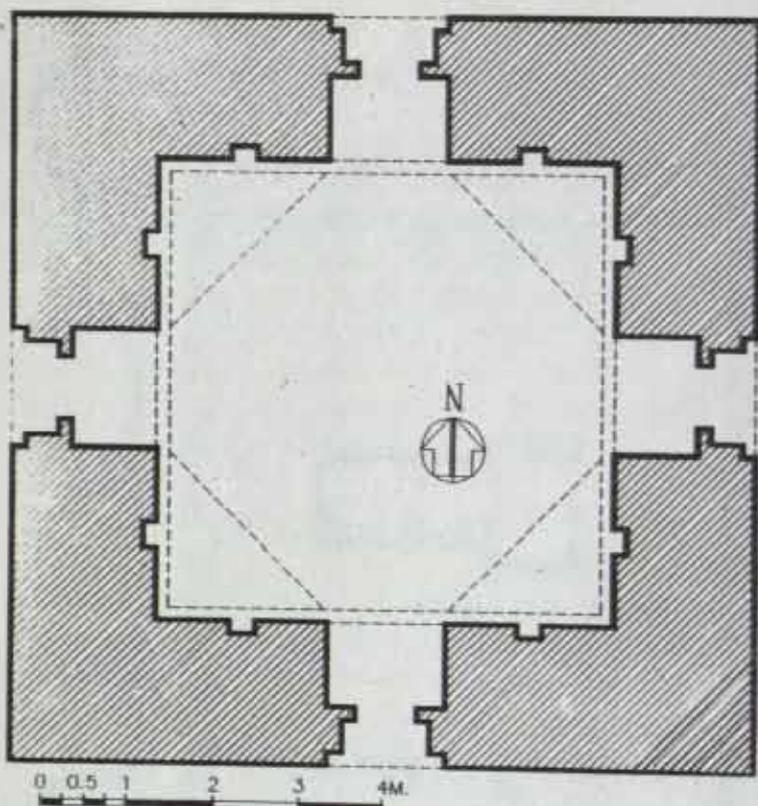

Fig. 34.
Plan of the tomb of Baba
Qamar Shah, Sahiwal

plan. It has a small burnt brick arched opening. A square is pierced through the ceiling probably to allow natural light. Actually the Kos Minar is erected by burnt bricks and supported with mud bricks. Originally, a staircase was provided for approaching the roof.

Site No. 236 - A, B, C, D: Chajan Wali Wan (Fig. 35)

It is a group of four Smadhis locally known as Chajan Wali Wan Smadhis. The main two smadh A & B are erected with small bricks laid in lime mortar and plastered with kankar lime. These are octagonal at the base. The smadh 'A', octagonal in plan, has been erected north of smadh 'B'. It has been built with small bricks and kankar lime and plastered with kanker lime. Each side is decorated with raised arched panels and domes. The monument has two openings on the eastern and western sides while northern and southern sides have screens. Internally, it is decorated with fresco paintings depicting human figures and panels. The monument has a fluted dome with a towering pinnacle raised on a drum. It is decorated at the base with serpent design. On each side of the octagon, is an iron rod. Internally it is decorated with designs of circles and sunflowers.

The smadh 'B' is situated to the south of smadh 'A' and is octagonal in plan. Its name is Diorama. It has only one opening in the middle of the eastern side which is decorated with multicuspded arched and floral design.

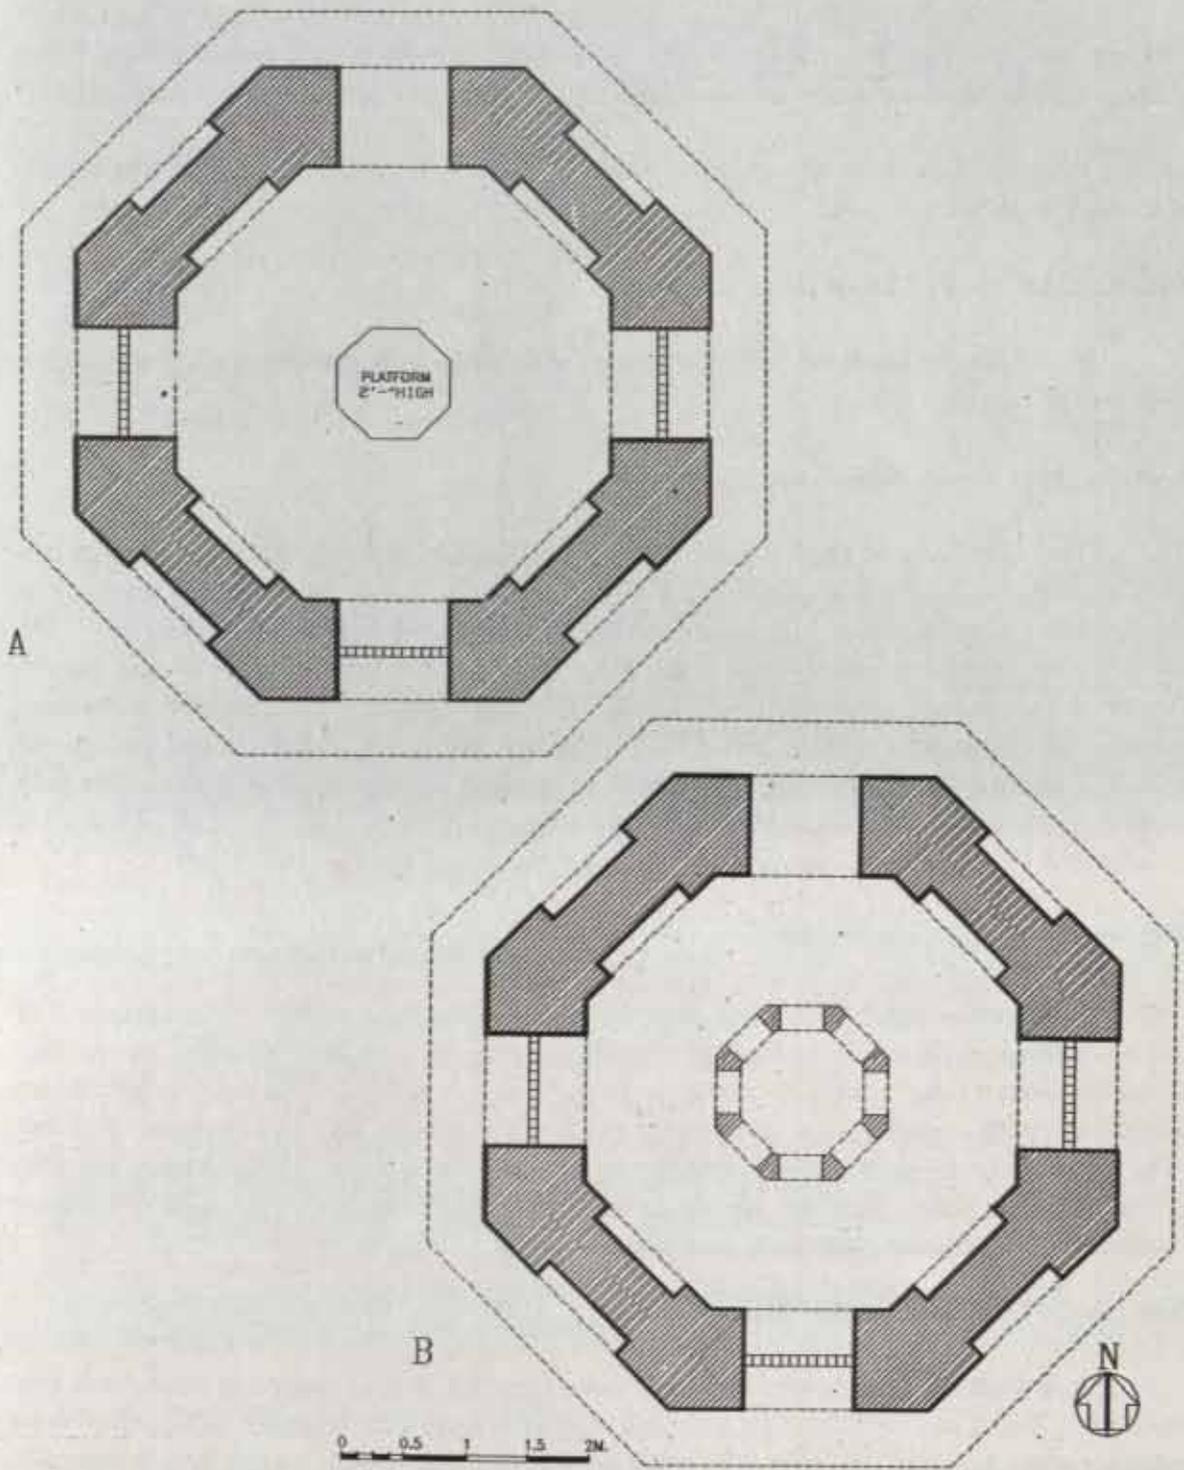

Fig. 35. Plan of Chajan Wali Wan Smadh, Pakpattan

An octagonal Smadh 'C' called Gomand Ram Smadh is built with large size bricks and has four openings. It is plastered with cement and decorated with arched panels. It has a small parapet wall and water melon shaped drum. The interior has four square niches.

Another Smadh 'D' in octagonal shape is marked by umbrella shaped dome. It is also made with bricks.

Site No. 238: Burj Malka Hans

It is a square burnt brick burj (bastion) supported with mud bricks. A staircase is built on the northern side.

Site No. 241: Guru Nanak Gurduara

The Gurduara of Guru Nanak is built with small bricks in lime and is square in plan, raised on a platform about 1m in height. Originally, it had three arched openings at the northern, southern and western sides which been closed with mud bricks now. The openings are provided within large horse shoe arches and decorated with square panels. Above the openings, Gurmukhi inscriptions are still legible. The interior decoration consists of rectangular panels and fresco paintings depicting, floral design and parrot motifs. Internally, squinches have been built to support the dome. The fluted dome with towering pinnacles raised on a drum is the main feature of the Gurduara. The Gurduara is surrounded by the modern houses and tomb of grandson of Hazrat Baba Farid.

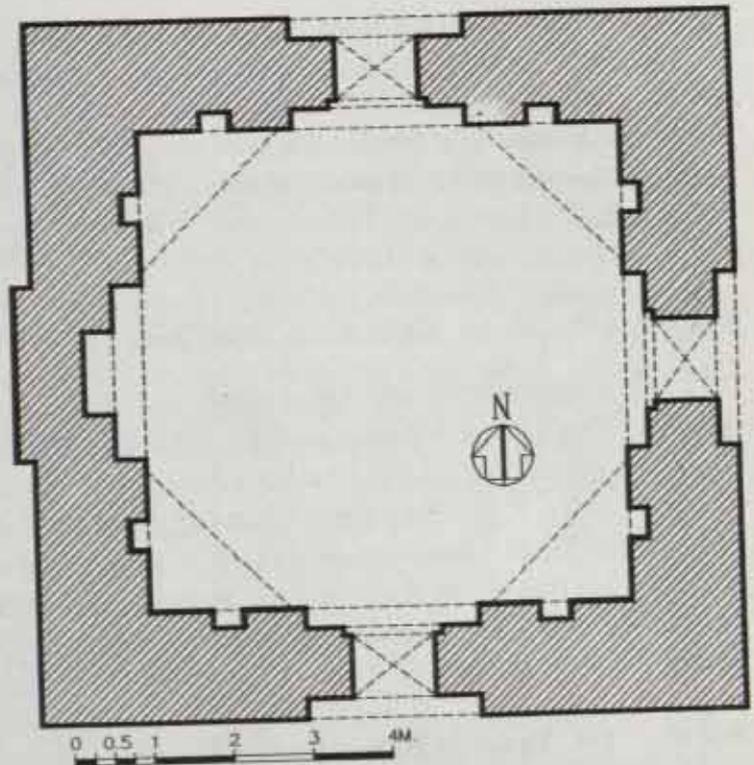

Site No. 242: Kaliana Marhi

It is built of small bricks and plastered with kanker lime mortar. It is octagonal at the base and is built on a 1m high plinth. The interior is accessible through an opening from the eastern side. Each side of the smadh has been decorated with multicused arches and panels with raised dome. Internally, the Kaliana Smadh has an octagonal chamber which is decorated with sunken arched and rectangular panels. These panels are also decorated with fresco paintings depicting birds and human figures. The main features of the Smadh is its double dome crowned with pinnacles.

Site No. 244: Pakka Sidhar Smadh

It is built of small bricks and lime kanker mortar and is square in plan, each side measuring 4.5 m and is located on a natural mound. The square chamber of Smadh has an entrance from the southern side. The monument is decorated with square and rectangular panels within multicused arched panels externally. Four turrets on corners are built and the parapet of the Smadh has been completed in the small merlon design. On the inner

Fig. 36.
Plan of the tomb of Pir
Panju, Sahiwal

side, the domed ceiling is supported by four squinch arches. It is decorated with three multicusped sunken arches and square and rectangular panels. The painted decoration is decaying. It is crowned with a single dome which is umbrella shaped.

Site No. 257: Pir Panju Tomb (Fig. 36)

The tomb is built with small bricks and mud mortar. The dome and drum are plastered with kanker lime mortar. In plan, it is square and made octagonal at the base of the dome. It has two arched openings measuring 1.5 m and fitted with wooden door. On each side, it has arched panels within square frame. The thickness of wall is 1.50 m. The walls of the interior chamber have pointed arched panels within squares. The second storey is raised on squinches and further sub-divided into 16 sided structure before erecting a dome above. The main grave of Pir Panju is built with bricks whereas the remaining graves are in mud bricks. With the exception of panels and arches, there is no other decoration.

Site No. 265: Gurduara Chichawatni

It is constructed with modern bricks and plastered with cement. It is square in plan, erected on a low platform and has three entrances on the northern, eastern sides.

All the wooden doors are fitted in cement frame. Four burjis (cupolas) are standing at the four corners. The dome is umbrella shaped. Gurmakhi script has been inscribed on northern and western sides of the chamber. On the eastern side there is an inscription in Punjabi language. The interior has been provided with one deity place in front of northern door. It is decorated with fresco painting all over the interior, depicting dancing couples, parrots, peacocks and an ascetic figure. Two niches have been provided in the southern wall.

Site No. 644 - A: Shahi Mosque at Chak 116 / 7CR

It is constructed with small bricks laid in kanker lime mortar and plastered. It is rectangular in plan and surmounted by three domes, among which one is missing. The Shahi Mosque is built on the southern edge of an ancient mound about 500 m northeast of the Chak 116 / 7CR. The mound covers approximately an area measuring 180 x 130 m. The ancient Shahi Mosque measures 18 x 29 m. The northern side of the mosque has collapsed but two out of three original openings have survived. The facade of the mosque has vertical and square panels and pointed arches. The interior has three pointed arches among which the central one contains the mehrab. A cornice runs under the squinches.

Site No. 712: Tomb of Hazrat Daood Kirmani

The tomb is octagonal in plan with hemispherical dome and built of small bricks and kanker lime plaster. Each side of the octagonal has a deep recessed arch originally covered with kanker lime plaster but in recent years, it is white washed. It has two entrances on the southern and northern sides. The interior and exterior of the tomb up to dado level have been covered with marble over the brick masonry. The exterior is decorated with fresco painting within the border of Quranic verses in the rectangular and square sunken panels.

The interior of the tomb is accessible through wooden doors provided on the northern and southern sides. The interior of the tomb is decorated with fresco floral and geometrical designs. The Quranic verses and Persian poetry is also used for decoration. The western wall has a mehrab while the eastern side has a deep recessed arch closed with *jali* (screen). In the centre, the cenotaph of Ibrahim Daud Bandagi is surrounded by other unknown graves. The tomb is erected on a high octagonal platform.

A tomb of an unidentifiable lady is on the southern side which is square in plan and externally decorated with square, rectangular and arched sunken panels. The tomb has shallow dome with a finial. It is plastered with kanker lime and subsequently white washed. The interior of the tomb is square and a zone of transition has been created with the help of squinches which convert its square plan into an octagon. The interior is decorated with fresco floral motifs. It is in good state of preservation.

Site No. 713: Muhammad Sher Tomb

The tomb of Hazrat Muhammad Sher is square in plan and built with burnt brick and kanker lime mortar. The exterior of the tomb is decorated with cut bricks and incised floral designs. It has only one entrance on the southern side. The facade is decorated with rectangular and arched recessed panels. The dome is crowned with a finial resting over an octagonal drum the surface of which is plastered. The lower portion of the monument has been recently repaired by modern bricks and cement. The interior consists of a square plan. The zone of transition from the square base is created with squinches. Above the square, wooden beams are used to create a low, single dome. There are four ventilators. The interior of tomb is bare with surface decoration except creation of square and arched panels. In centre of the square hall are two graves of Syed Muhammad Hussain Gilani and Muhammad Sher and a grave of Sheikh Allah Ditta (Metwali). The entrance is provided through a wooden door.

Site No. 714: Hazrat Baba Mauj Darya

The entire tome is constructed with small burnt bricks laid in mud mortar. It is square in plan but octagonal below the dome. The tomb has three arched opening on the southern, eastern and northern sides, while the western side is closed to accommodate the *Mehrab*. It has one entrance to the south which has a slightly projecting rectangular frame, the surface of which has been divided into three decorative bands of fine cut brick work running along the sides and on top. It has wooden door frame and a wooden frieze which has been carved with verses from the holy Quran. The spandrels have lozenge shaped ornamentation made of cut brick in high relief. The tomb has hemispherical dome raised on an octagonal drum. Each octagon is decorated with merlons, while the space below has a moulding and other decorative motifs. On each angle of the octagon of the drum, there is a high turret which is crowned with a *miniature* pavilion covered with a small void dome.

The interior and exterior of the tomb are decorated with cut brick work, cut brick panels, horizontal bands, panels, geometrical designs and Quranic verses. The comparable decorative motifs can also be seen at Shah Ruken-e-Alam's tomb at Multan.

In the interior of the square chamber and below the squinches, a wooden beam has been set horizontally in the masonry all along the four walls. It rests at the lower frame of wood consisting of three beams set obliquely on which a squinch is made. The wooden beams set at the base of squinches are carved with floral motifs and Quranic inscriptions. The *mehrab* has also elaborate decorative floral designs. There are 16 graves in the centre of the tomb.

BRIEF DESCRIPTION OF SELECTED MONUMENTS IN MULTAN, KHANEWAL, LODHRAN AND VEHARI DISTRICTS

Site No. 251: Pakka Gurduara Gru Nanak

It is built with small bricks in lime kanker mortar and plastered over with lime. It is square at the base. In the centre of the monument is a seat (of Grunanak). It is decorated profusely with fresco painting. A dome and cupolas add to the religious sanctity of the building.

Site No. 277: Abu Bakar Waraq (Fig. 41)

It is erected with small bricks and painted over with green on the interior and exterior surfaces. It is square in plan and has flat roof. The front of the tomb is decorated with glaze tiles. It has Arabic and Persian inscriptions on both sides of the entrance door. The interior having flat wooden roof is decorated with geometrical designs and Persian inscriptions.

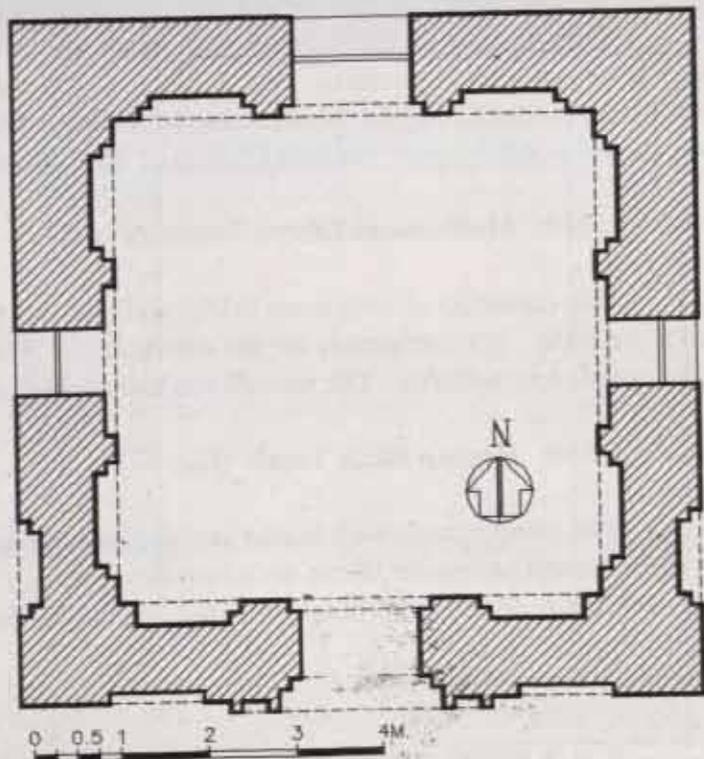

Fig. 41.
Plan of the tomb of Abu Bakar
Waraq, Vehari

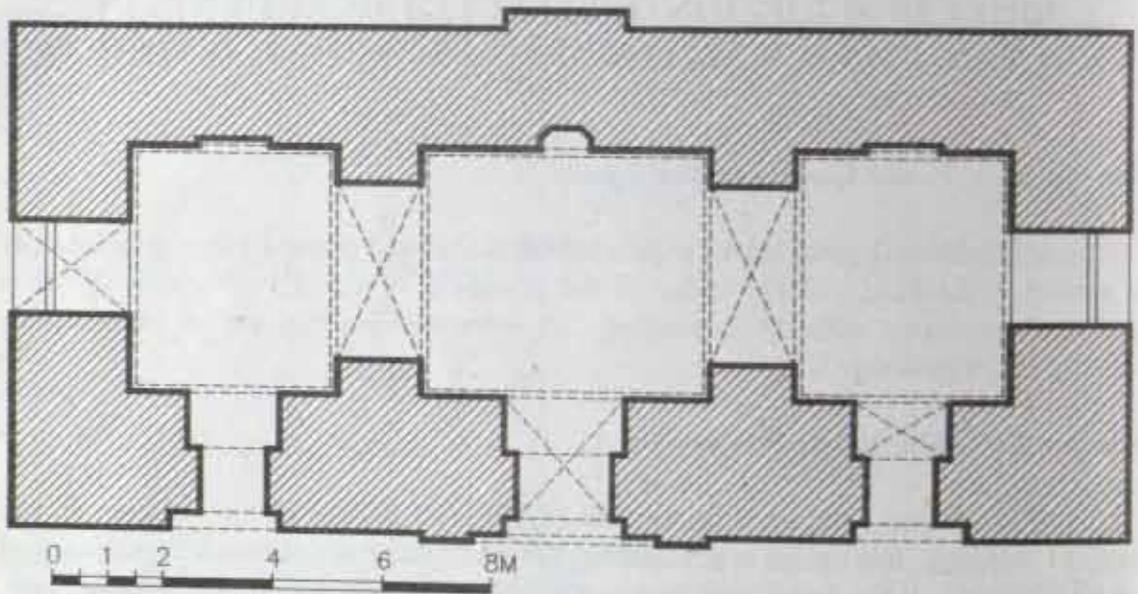

Fig. 42. Plan of Shahi Masjid Malik Wahan, Vehari

Site No. 278: Shahi Masjid Malik Wahan (Fig. 42)

This mosque is constructed with small bricks set in lime kanker. It stands on a high platform which measures 2.40 m high. It has three openings. Above the entrance, *Kalma Tayyaiba* and other inscriptions are visible. The facade is decorated with Quranic verses and floral designs. Near the parapets, blue glazed tiles are fixed.

Site No. 279: Makhdoom Zikrya Tomb (Fig. 43)

It is constructed with small bricks and lime mortar. It is square in shape and stands on a platform. Its entrance is on the eastern side. The exterior is decorated with glazed tiles in different patterns. The interior has elaborate fresco paintings.

Site No. 280: Hassan Shah Tomb (Fig. 44)

The tomb is built with bricks and mud mortar and plastered with lime. It is square at the base and octagonal above on which dome is built. It stands on an elevated platform. The interior is divided into recessed panels except on the main entrance.

Site No. 284: Sakhi Dalail (Fig. 45)

It is a square shaped tomb of bricks, measuring 20 x 13 x 3 cms., laid in mud

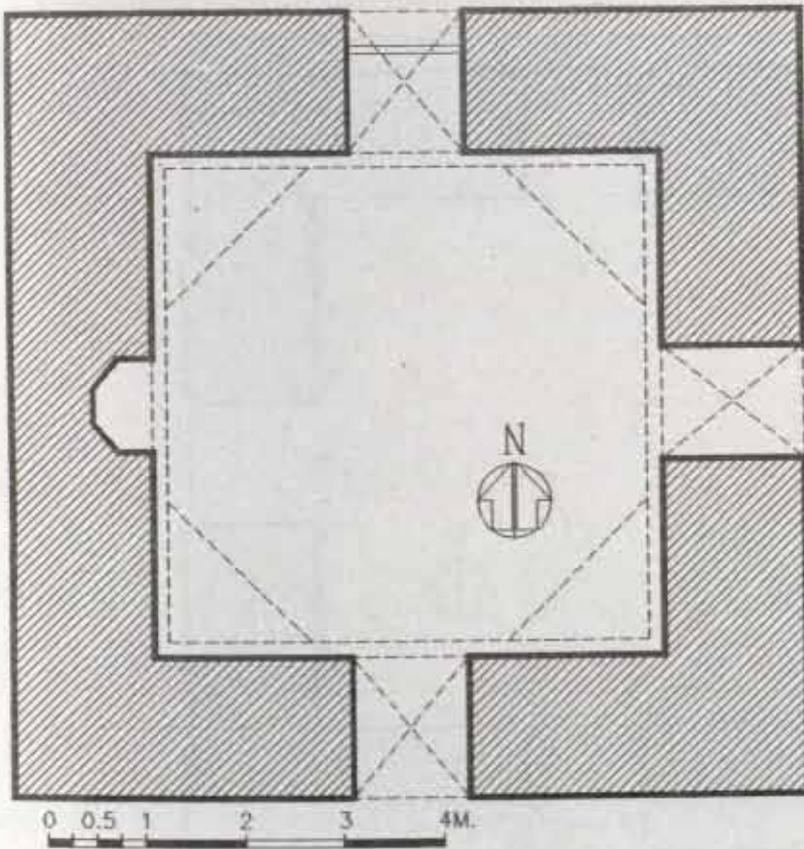

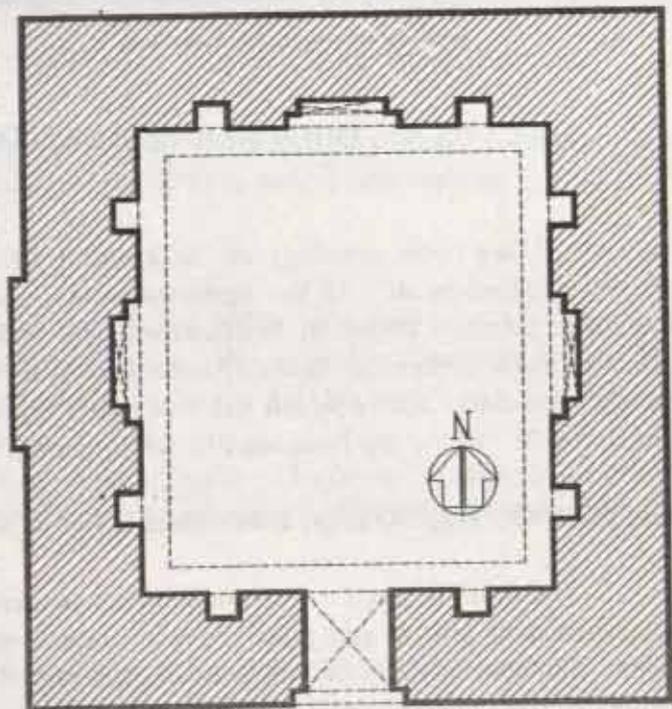

Fig. 43.
Plan of the tomb of
Makhdoom Shah Zikrya,
Vehari

Fig. 44.
Plan of the tomb of Hassan Shah,
Vehari

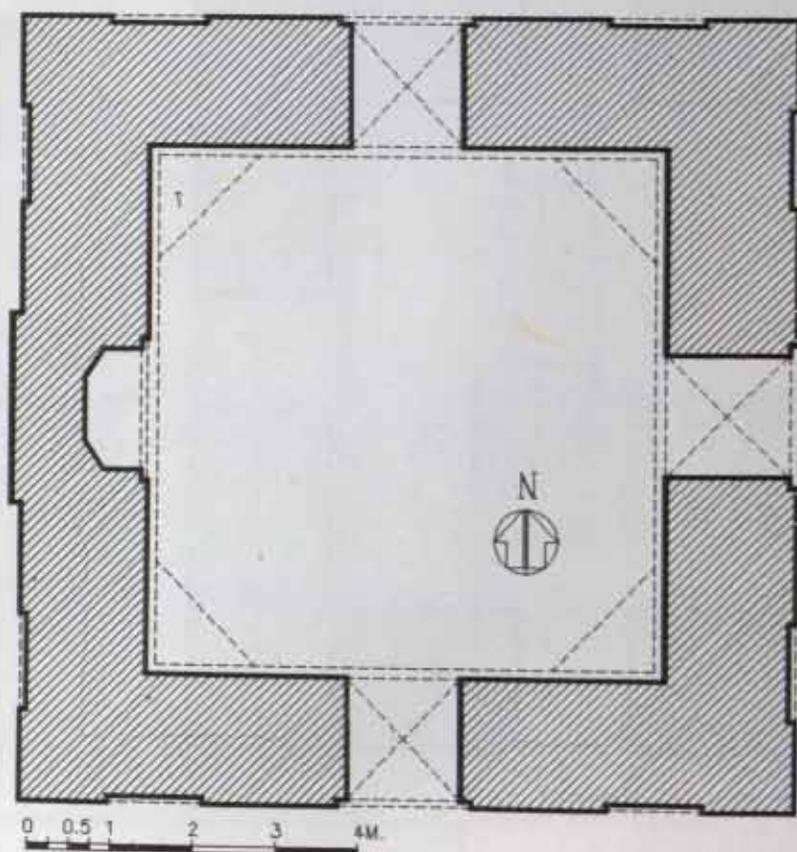

Fig. 45. Plan of the tomb of Sakhi Dalail, Vehari

mortar. It has three openings on the eastern, northern and southern sides set within a square recessed panel. All the openings have wooden doors and frames. Each opening measures 1.43 x 1.20 m. It is decorated with glazed tiles. At the north-east corner, a stairway leads to the first storey. At the level of first storey, an octagonal drum is built to support the dome above which has collapsed. Internally, it has a arched mehrab on the western side. Wood has been used in the body of brick structure.

Site No. 289: Haji Rehmat Ullah Shah (Fig. 46,47)

The tomb is erected with small bricks measuring 22 x 15 x 3 cms. and 21 x 14 x 4 cms with mud mortar and plastered with lime kanker on both the interior and exterior sides. The base of the tomb is square shaped while the upper part supporting the dome is octagonal. A mehrab is built on the western side and measures 2.30 x 3 m.

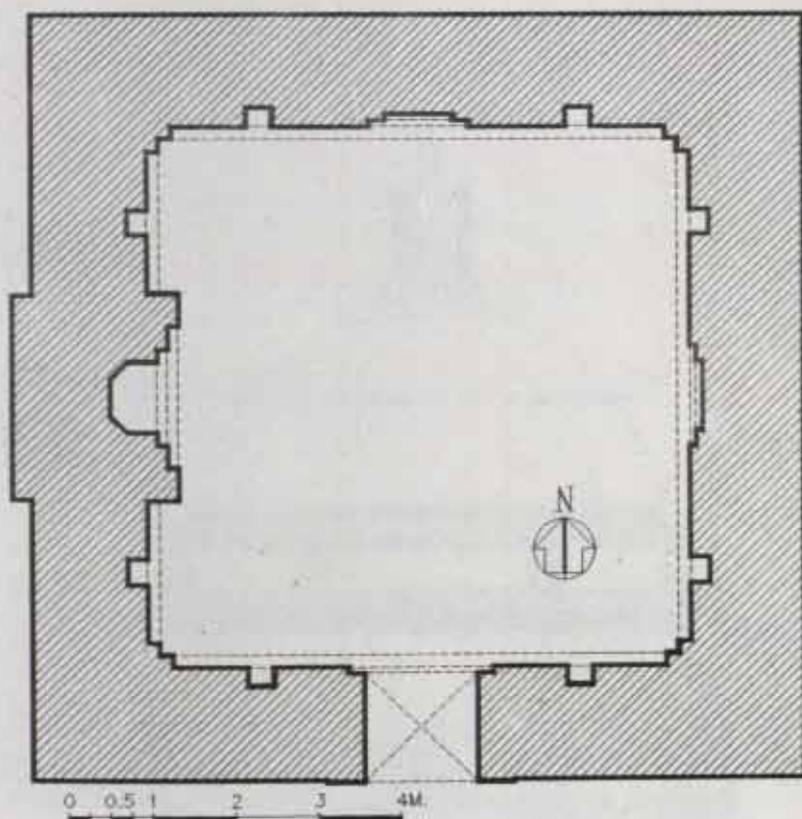

Fig. 46. Plan of the tomb of Haji Rehmat Ullah Shah, Khanewal

The interior shows the use of wood like other contemporary buildings. The entrance door is provided on the southern side which has carved decorations.

Site No. 290: Darbar Pir Muhammad Shah (Fig. 48)

The tomb is built on square plan with burnt bricks changing to octagonal shape above to support the dome. It has two openings on the eastern and western sides. The facade of both the openings has glazed tiles with flower designs and Arabic inscriptions. At the height of about 3.30 m, wood has also been used in the walls which is visible on all the sides. There are four ventilation holes in the octagon. The dome is plastered with lime mortar. The interior has four squinches above where a course of wooden beams runs.

Site No. 293: Shah Yousaf (Fig. 49)

It is a tomb located in the midst of a graveyard. It is built on a high octagon which rises up to the base of dome above. At each corner, are turrets or engaged bastions like

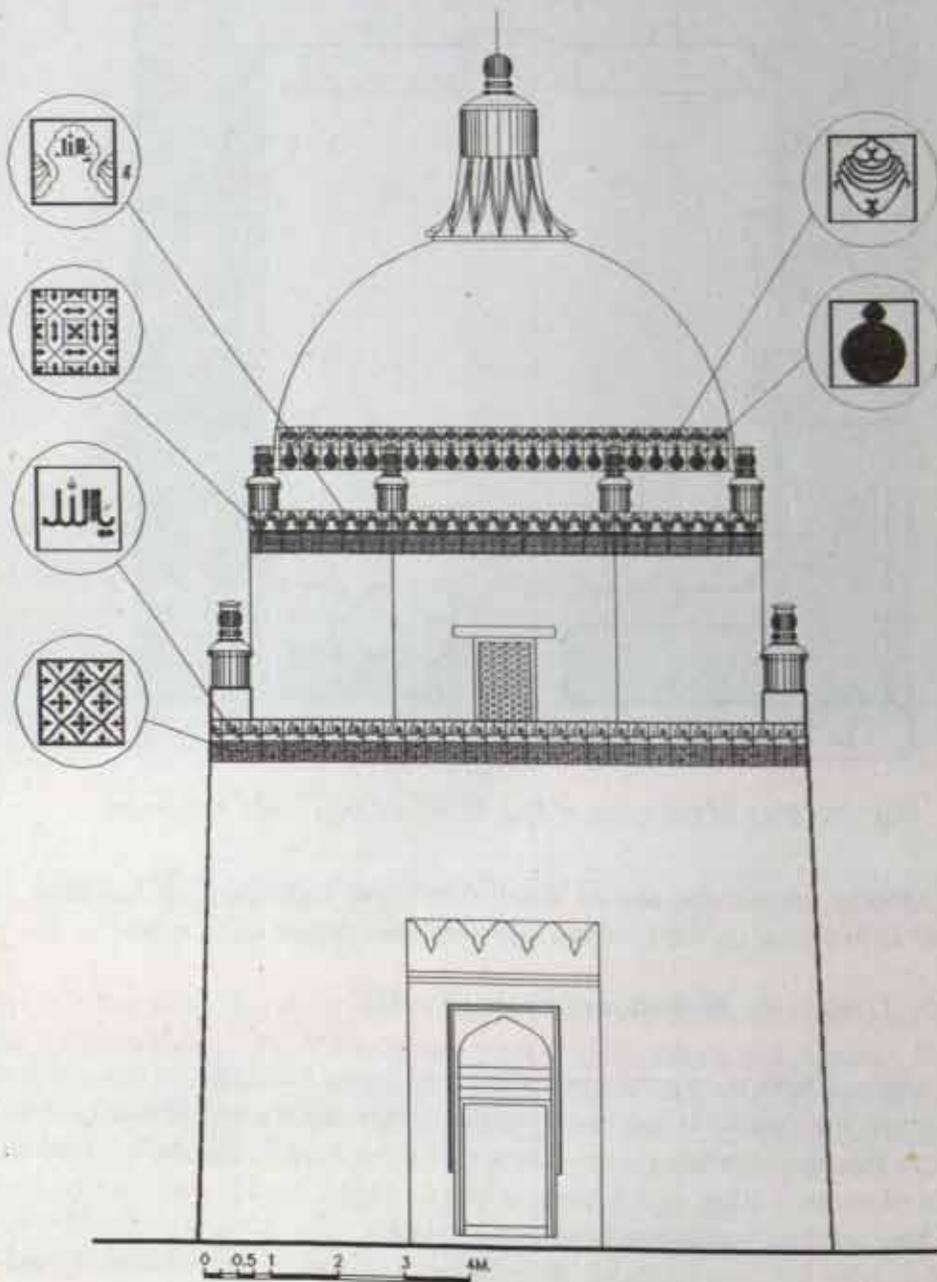

Fig. 47. Elevation of the tomb of Haji Rehmat Ullah Shah, Khanewal

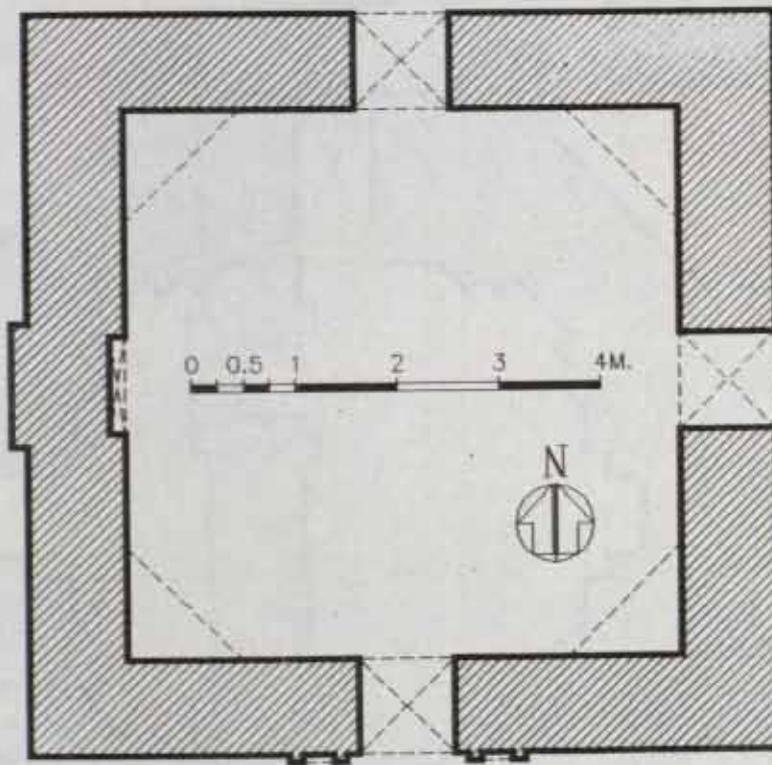

Fig. 48. Plan of the tomb of Pir Mahmood Shah, Vehari

the pre-Mughal (Sultanate) tombs in Multan and Uchchh. Its entrance on the southern side has a wooden door frame.

The interior is octagonal in shape. Each side, has square and double arched panels. A mehrab is built in the western wall. A line containing verses from the Holy Quran runs around. Windows are also provided on each side in which screens made of wood are fixed.

Site No. 297: Qutab Shah (Fig. 50)

It is a square brick tomb with four entrances and decorated with glazed tile work. The single dome is supported over octagonal drum resting on the square base.

Site No. 301: Pir Charage Shah

The monument is square in shape and have two entrances on eastern and northern sides. It is built of bricks with mud mortar. The transitional zone is made octagonal to support a bulbous dome above. The interior is decorated with painted floral designs.

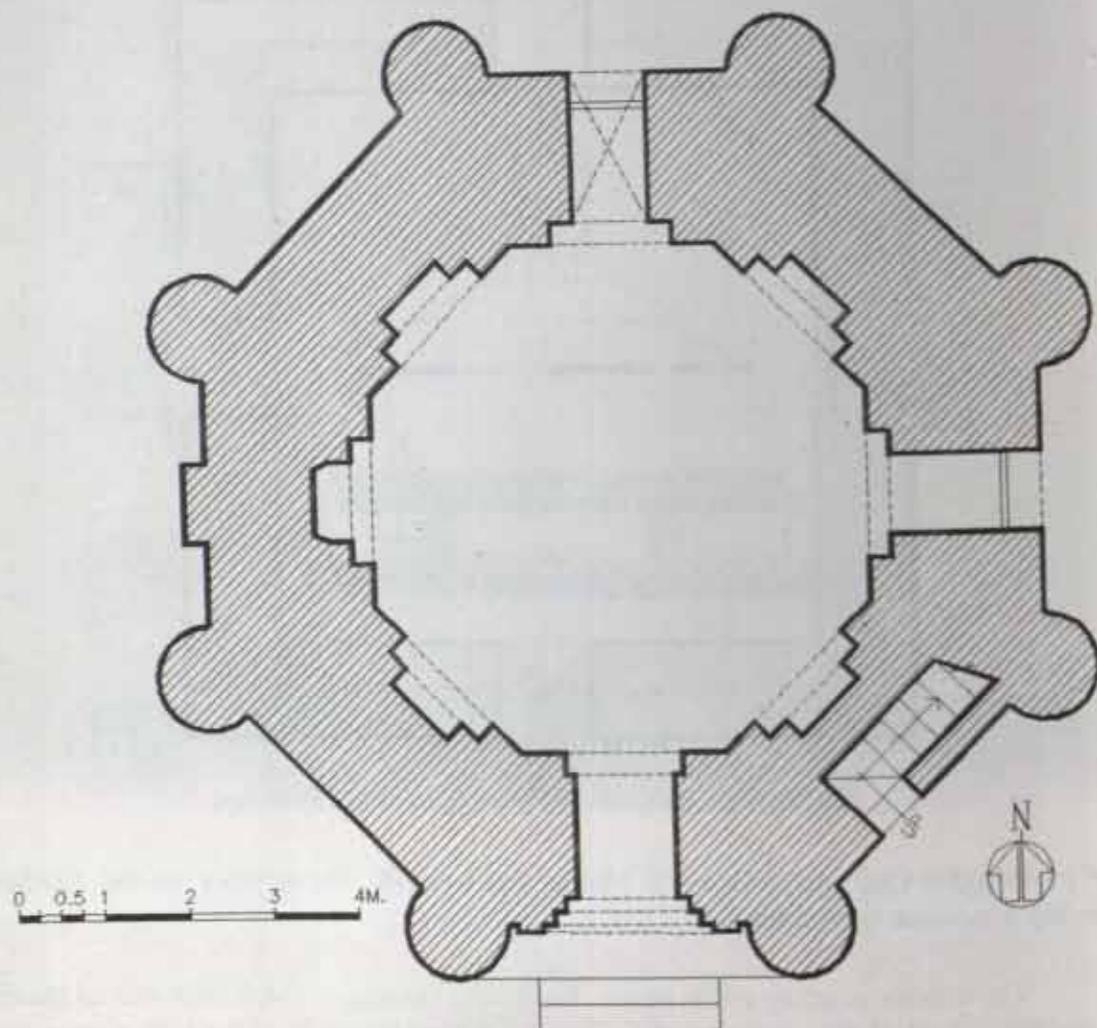

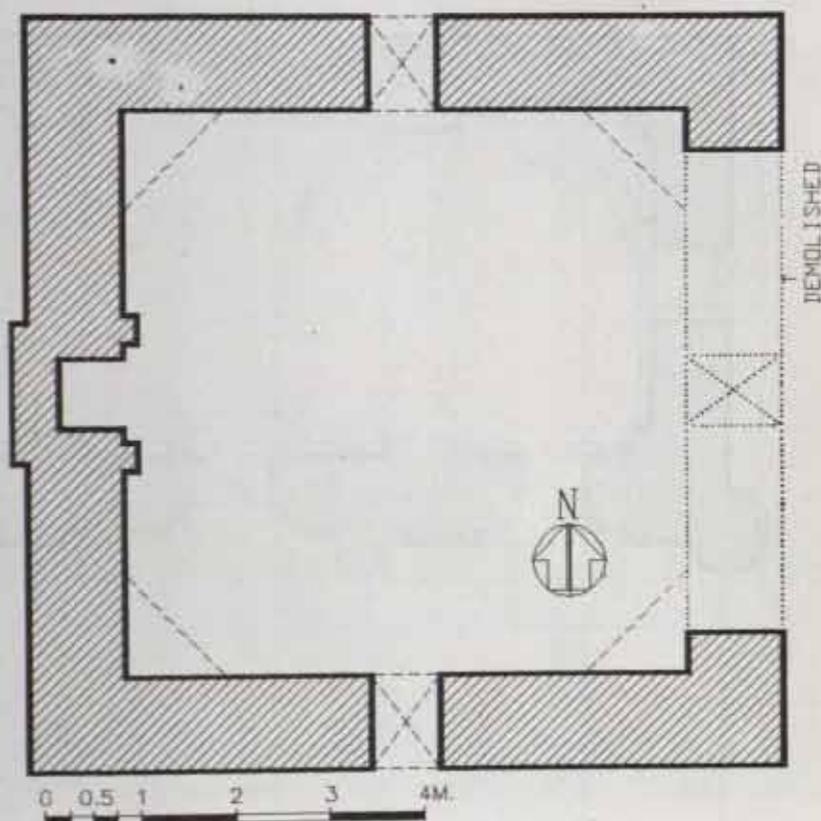

Fig. 49. Plan of the tomb of Shah Yousaf, Khanewal

Site No. 336: Sakhi Said Mosque (Fig. 51)

The mosque is built with small bricks and mud mortar in rectangular shape. The facade shows Persian and Arabic inscriptions rendered with glazed tiles in square and rectangular panels. The flanking openings in the facade are also bordered with glazed tile work. The openings are multicusped. Small minarets are built on the parapet wall. There are three domes on the prayer chamber. The central dome is larger than the two flanking ones.

Fig. 50.
Plan of the tomb of
Qutab Shah, Multan

Site No. 383: Sultan Ahmed Qatal Tomb (Fig. 52)

It is a beautiful tomb of brick laid in Surkhi mortar on square plan with octagonal drum to support the dome above. Its entrance is on the southern side. The external walls are ornamented with a variety of glazed tile designs. Internally, the tomb is octagon, an unusual feature and is decorated with glazed tiles.

Site No. 397: Dukhran Wali Masjid (Fig. 53)

This mosque has three entrances on the eastern side. The facade of the mosque is decorated with cut brick work, arched panels and rectangular recessed panels. All the panels are decorated with chess board design. It is built of brick tiles. The roof has collapsed.

Site No. 398: Saiyid Kabir Tomb (Fig. 54)

This square tomb of brick, crowned with a dome resting on circular drum, has four arched openings. The construction reflects pre-Mughal architectural traditions in brick.

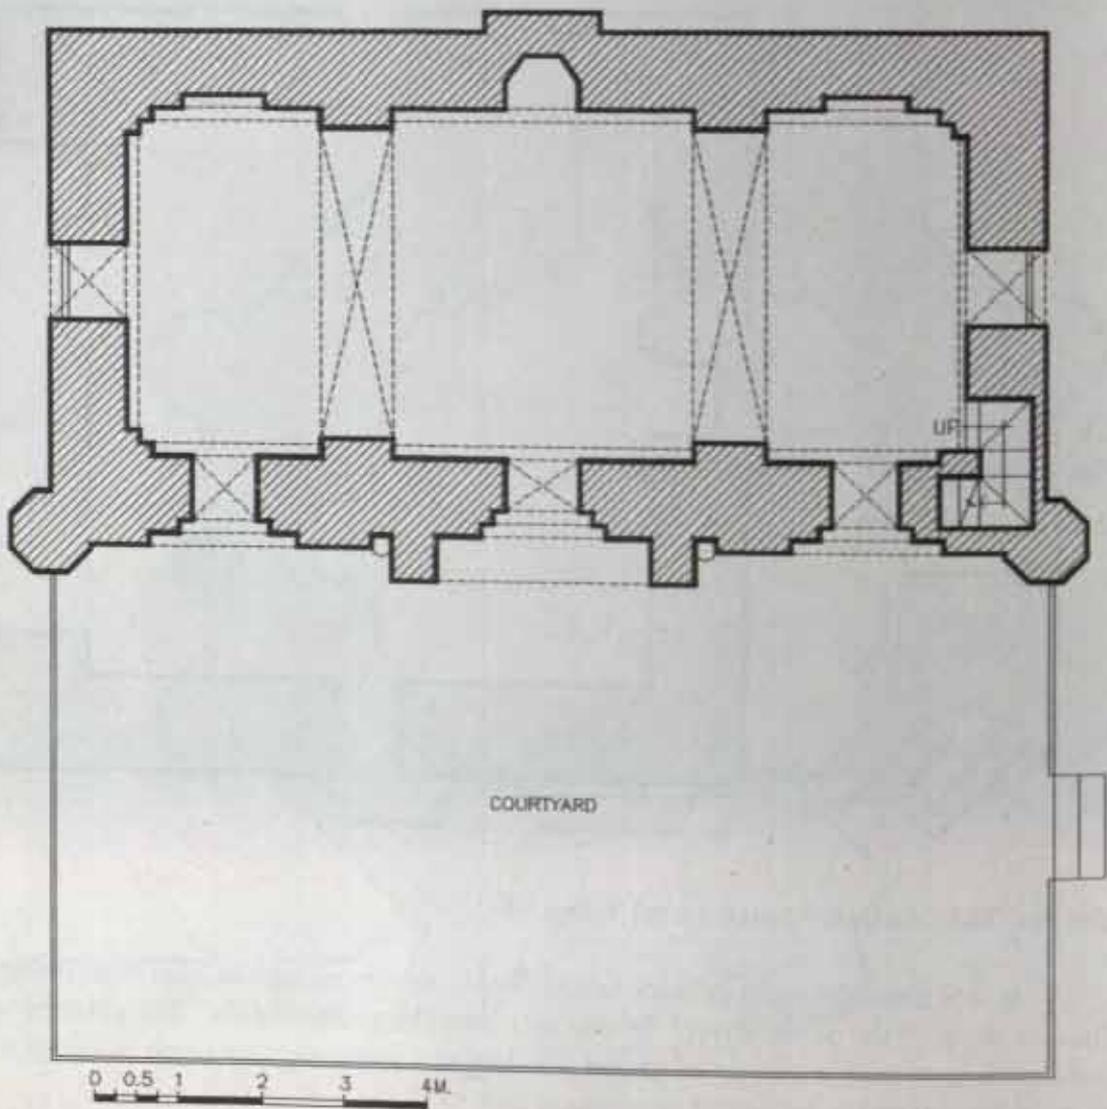

Fig. 51. Plan of Sakhi Said Mosque, Khanewal

The exterior is decorated with glazed tiles showing Arabic inscription and other designs. The cut brick work decoration enhances the beauty of otherwise simple construction.

Site No. 403: Makhdoom Ali Sarwar (Fig. 55)

The tomb is built with brick tiles set in mud mortar, on a square base, rising to a considerable height and supporting a dome built on an octagonal drum. There are three openings except on the western side. Wood is used in the brick fabric of the tomb. The external surface is decorated with glazed tiles and panels.

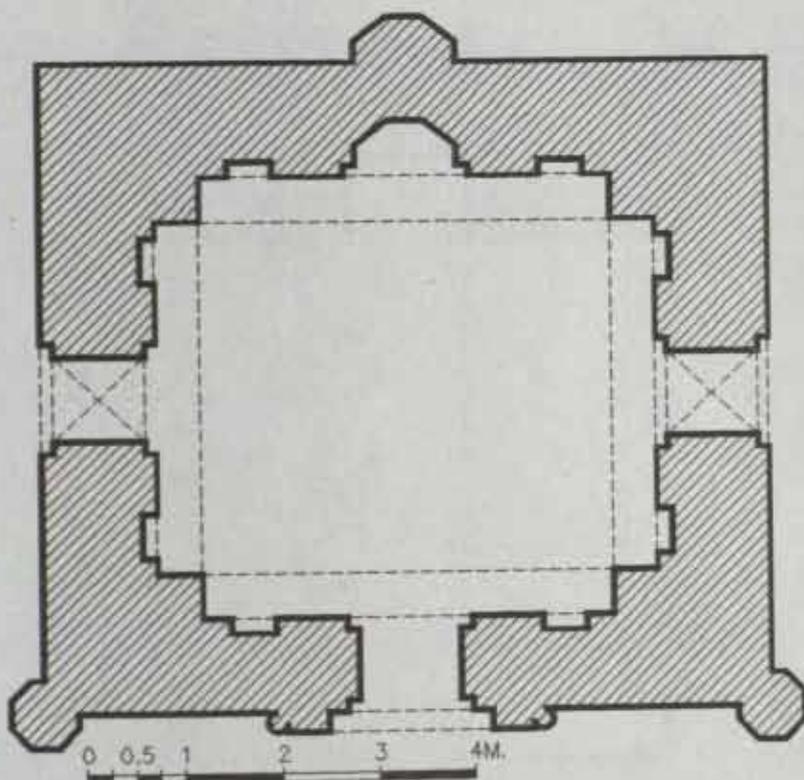

Fig. 56. Plan of Qadirpur Chimna Mosque, Lodhran

Site No. 414: Qadirpur Chimna Mosque (Fig. 56, Pl. VII A)

The facade of the mosque on eastern side is decorated with brick work showing arched, rectangular and square panels and other geometric patterns. The main entrance has wooden frame set into multicusped arch. The structure has a single dome and small minarets. The interior has multicusped mehrab. Quranic verses are inscribed on the wall.

Site No. 419: Hazrat Daud Gardazi Tomb (Fig. 57, Pl. VII B)

The tomb is square at the base and octagonal below the dome. The entrance is provided on the eastern side. Interior shows recessed arches and decorative elements. Wood is used in the brick structure.

Site No. 425 : Sultan Ayub Qatal Tomb (Fig. 58, Pl. IX A & B)

The tomb is built on an elevated ground with brick tiles and mud mortar. It is square in shape with four minarets at each corner. It has three multicusped arched openings except the eastern side. The thickness of the walls is 1.5 m. The structure and

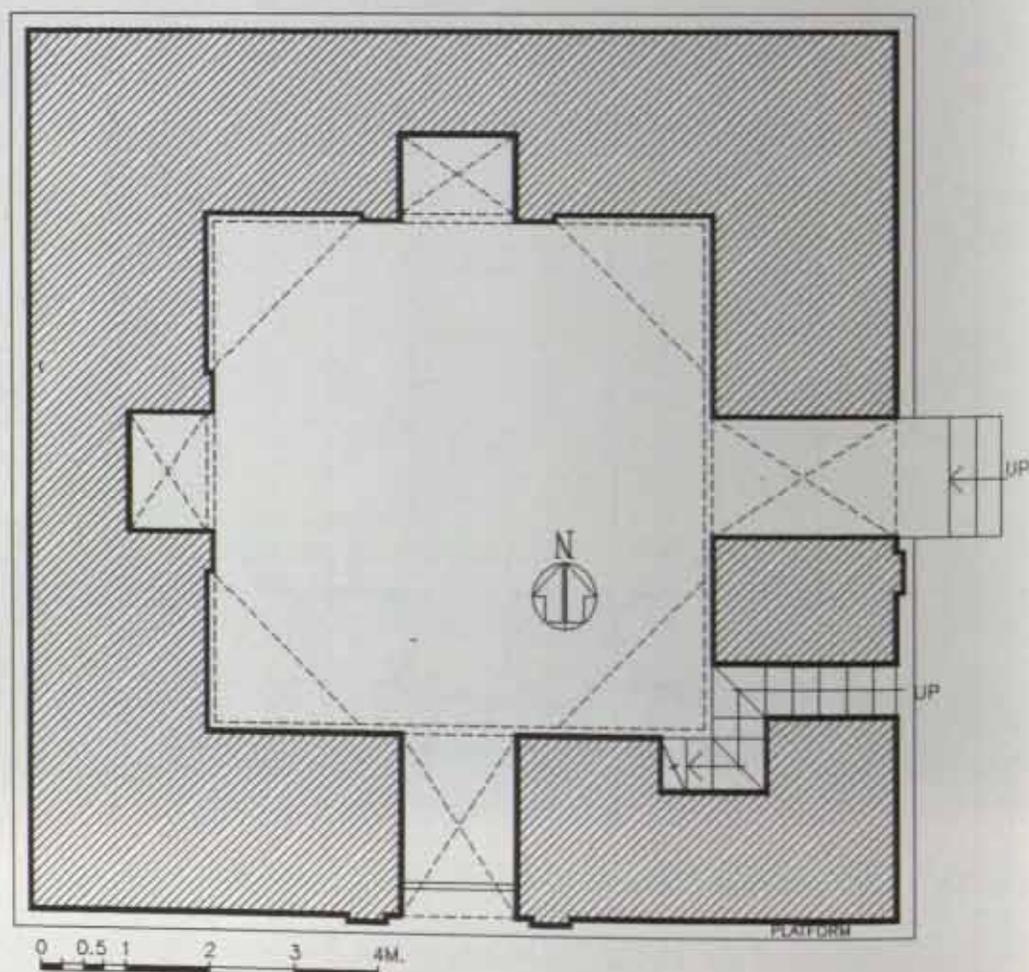

Fig. 57. Plan of the tomb of Hazrat Daud Gardazi, Lodhran

dome are marked by the simplicity of construction. A row of glazed tiles runs at the upper portion of wall inscribed with the name of Allah. The interior is painted.

Site No. 428: Maqbara Joiwan Da (Fig. 59, Pl. X A & B)

The tomb is built of brick in mud mortar and plastered with lime. It is raised on square base and is made octagonal before constructing dome over it. There are three openings on each side except the western one. Each opening has painted arch and glaze tile work above. A line of glaze tiles runs below the parapet wall. The walls are 91 cms. thick.

Plan of Maqbara Joiwan Da,
Vehari

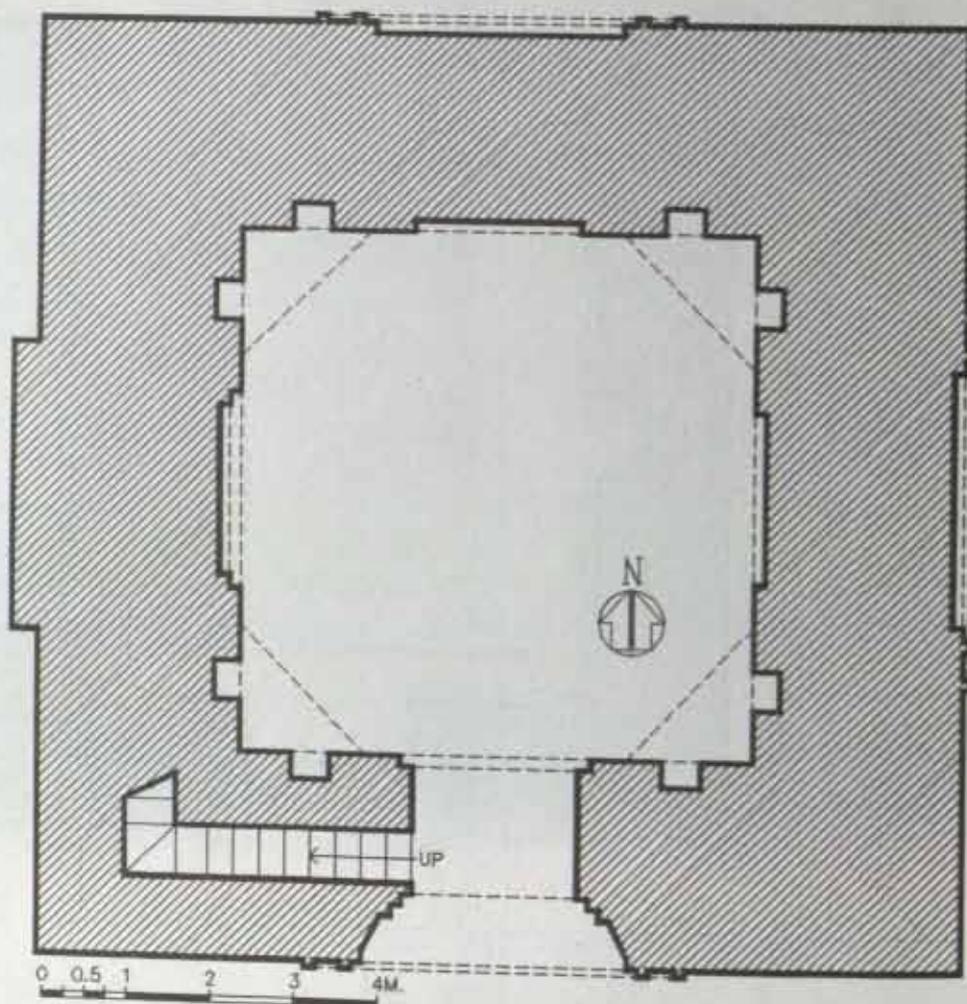

Fig. 60. Plan of the tomb of Abu Bakar Sher, Vehari

Site No. 430: Abu Bakar Sher Tomb (Fig. 60, Pl. XI)

The tomb is built with small bricks in mud mortar. It is square in plan but the dome is built on octagonal base above. It has an entrance on the southern side only where a wooden door frame and glazed tiles decoration are prominent. A stairway leads to a second storey which is octagonal in shape with eight attached minarets and small cupolas. An Arabic inscription reads "Ya Allah". The dome is umbrella shaped.

Site No. 432: Khalid Walid Tomb

It is a well known tomb reportedly of the Gaznavide period on which considerable

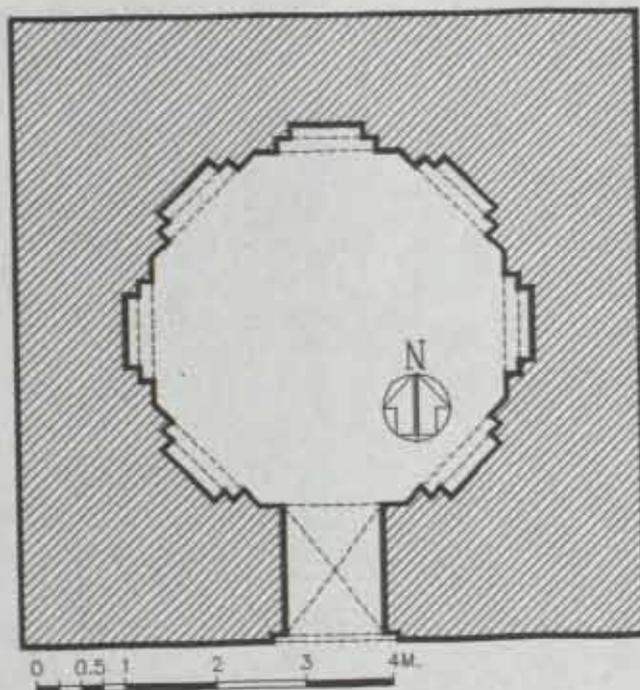

Fig. 61. Plan of the tomb of Shah Hussain, Khanewal

literature is available. It is constructed with special size burnt bricks measuring 33 x 20 x 5 cms, with mud mortar. It is roughly square in plan, strengthened with turrets and engaged bastions at the four corners and in the center of the walls. It looks like a fortress about 26.5 m east to west and 33.53 m from north to south. The height is about 9.1 m. It has an opening on the northern side where stairs providing access to the tomb are located. A passage runs around the main tomb. On the western side, the outer wall has a mehrab adorned with cut bricks, recalling the decorations of the pre - Mughal times.

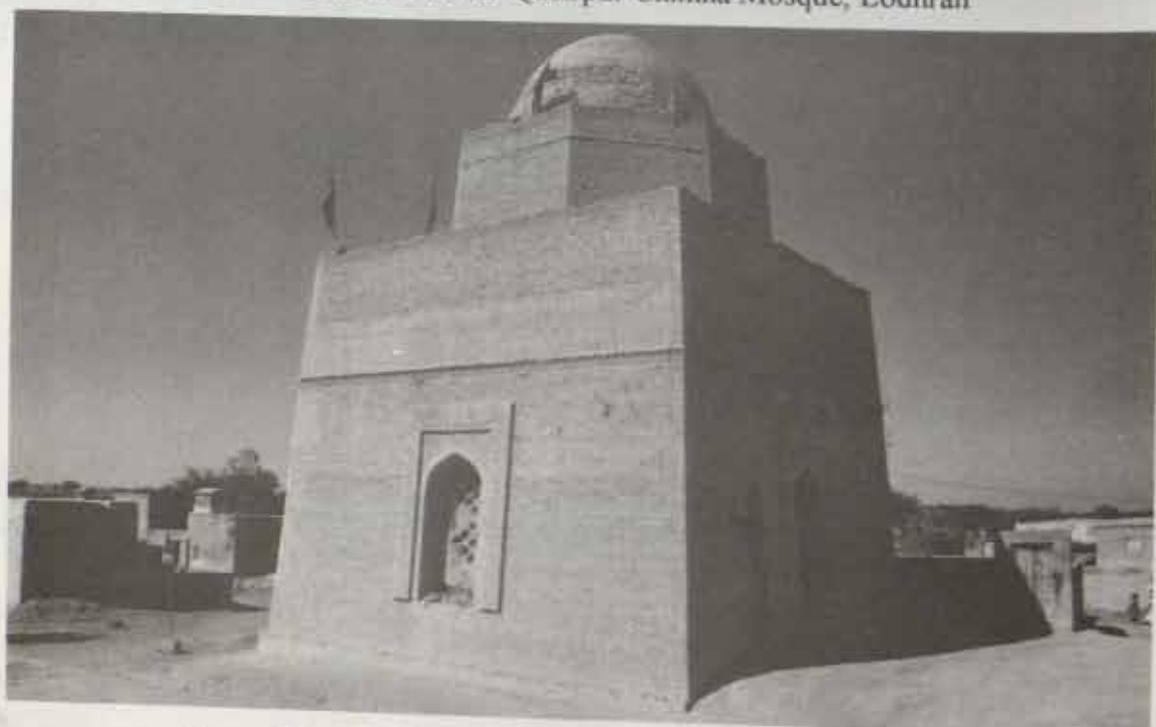

Site No. 433: Shah Hussain Tomb(Fig. 61)

It is built with burnt bricks and mud mortar and has square plan surmounted with a dome. The dome has four ventilators or clestory windows. The entrance is from south. The burnt bricks measure 20 x 13 x 3 cms.

BRIEF DESCRIPTION OF SELECTED MONUMENTS IN MUZAFFARGARH AND LEIAH DISTRICTS

Site No. 434: Pir Manjhan Sultan (Fig. 66)

The tomb is built of small bricks with mud mortar and some wood. It is square at the base but made octagonal under the drum of the dome. Inscriptions in Arabic are painted inside the tomb.

Site No. 435: Kunal Sharif Tomb (Fig. 67)

This tomb has been raised on a square plan which is converted into an octagon in the upper part. It is built of burnt bricks laid with lime mortar. It has three entrances except on the western side. The door opening has wooden frame built into pointed arched panel. There is no decoration either on the inner side or on the external surface.

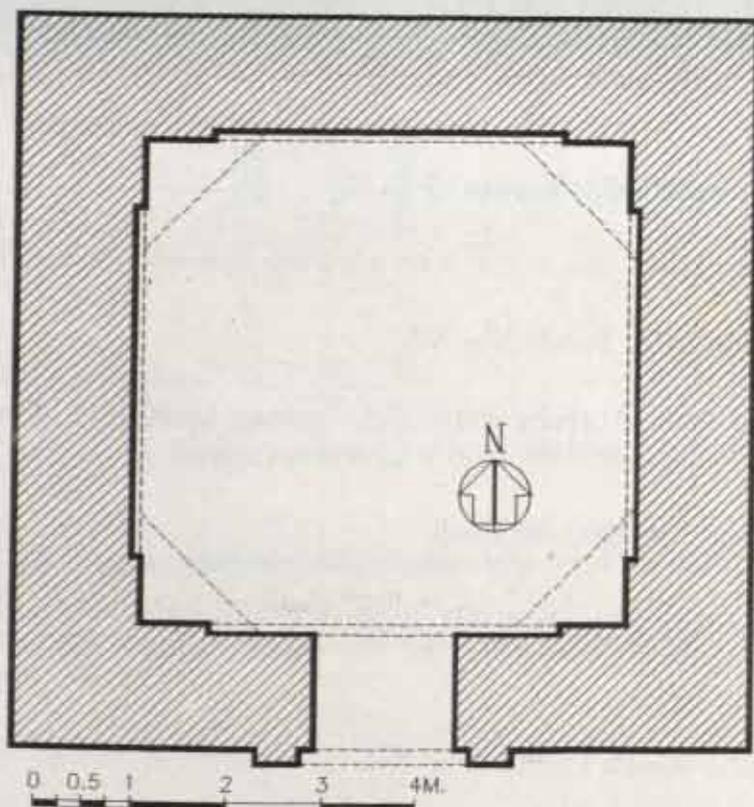

Fig. 66. Plan of the tomb of Pir Manjhan Sultan, Muzaffargarh

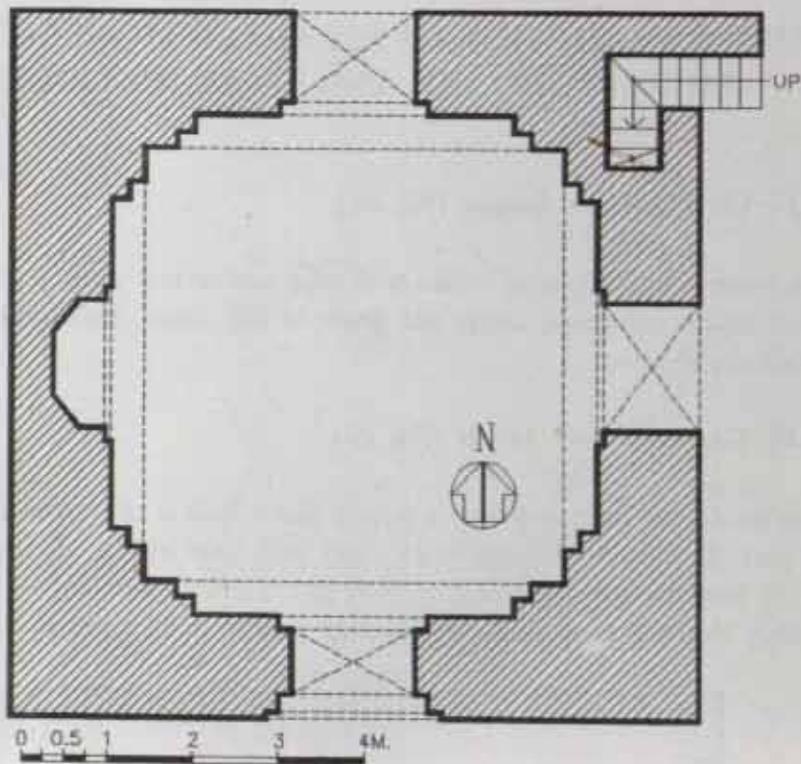

Fig. 67. Plan of the tomb of Kunal Sharif, Muzaffargarh

Site No. 437 : Hazarat Sheikh Sandan (Fig. 68)

Built of burnt bricks and mud mortar, it is a square tomb. The roof has collapsed.

Site No. 439: Tahir Zahir Tomb (Fig. 69)

The ground floor is square and slightly tapering upwards. It is made octagonal above before placing dome on it. Small size brick tiles are used.

Site No. 440 : Ziarat Nur Shah Bukhari

This tomb is also like other square tombs structures built of burnt bricks with mud mortar and made octagonal below the dome. The main entrance is on the eastern side. It has fresco painting inside.

Site No. 441: Ziarat Sheikh Ladhu (Fig. 70)

It is a square tomb and made octagonal under a circular drum and topped with a dome. It is built of bricks but wood is also used. It has been repaired in modern times.

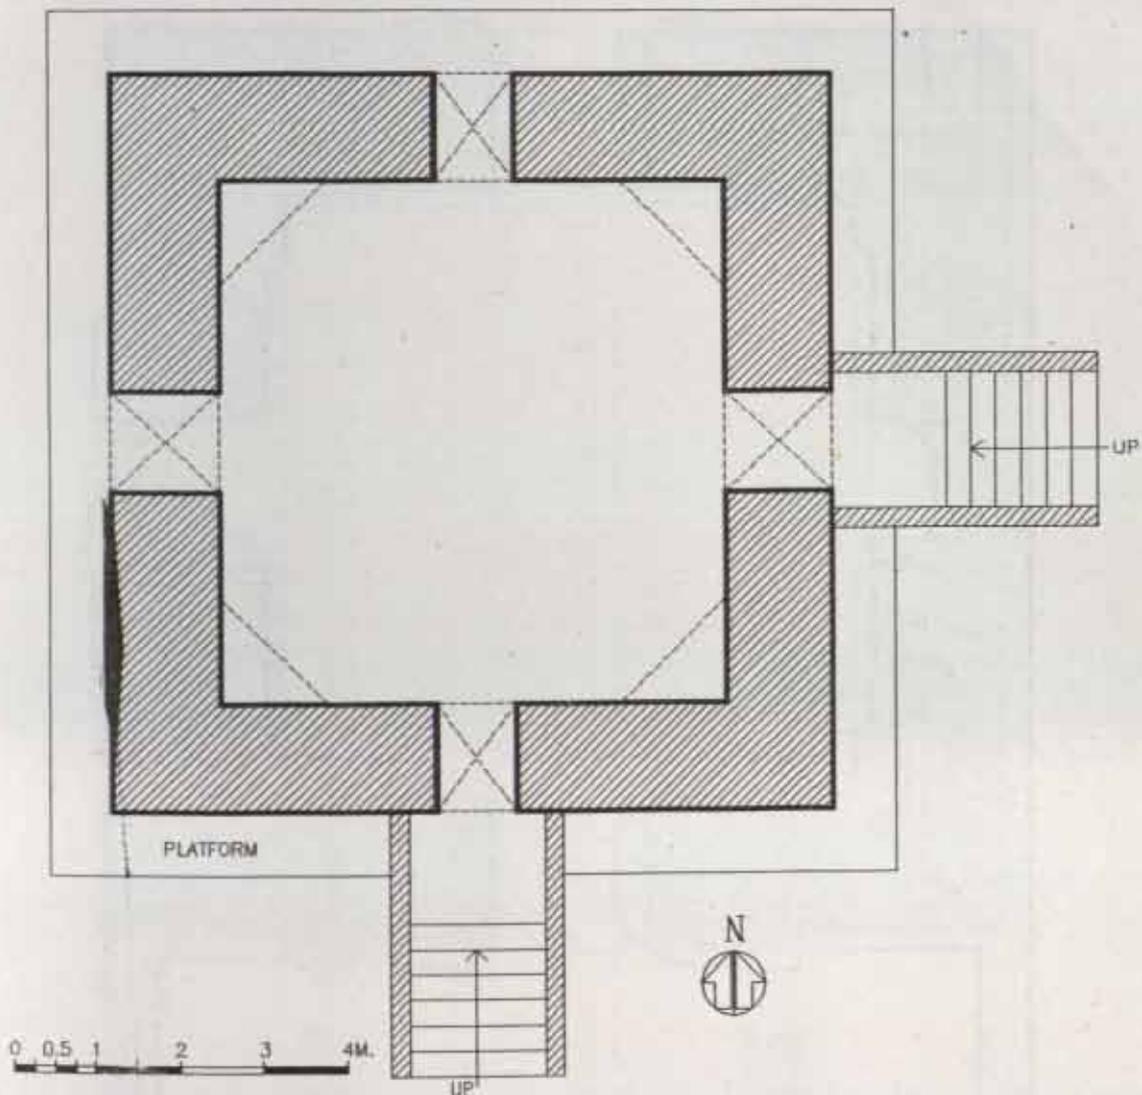

Fig. 68. Plan of the tomb of Sheikh Sandan, Muzaffargarh

Site No. 446 : Khawaja Muhammad Hussain (Fig. 71, Pl. XII A)

It is a square tomb at the base and octagonal above below the dome. A mehrab is created on the western side.

Site No. 460 : Daira Din Panah (Fig. 72)

This is a famous tomb built in a typical northern Punjab style which originated during the Sultanate period. It is octagonal at the base and has three entrances except on

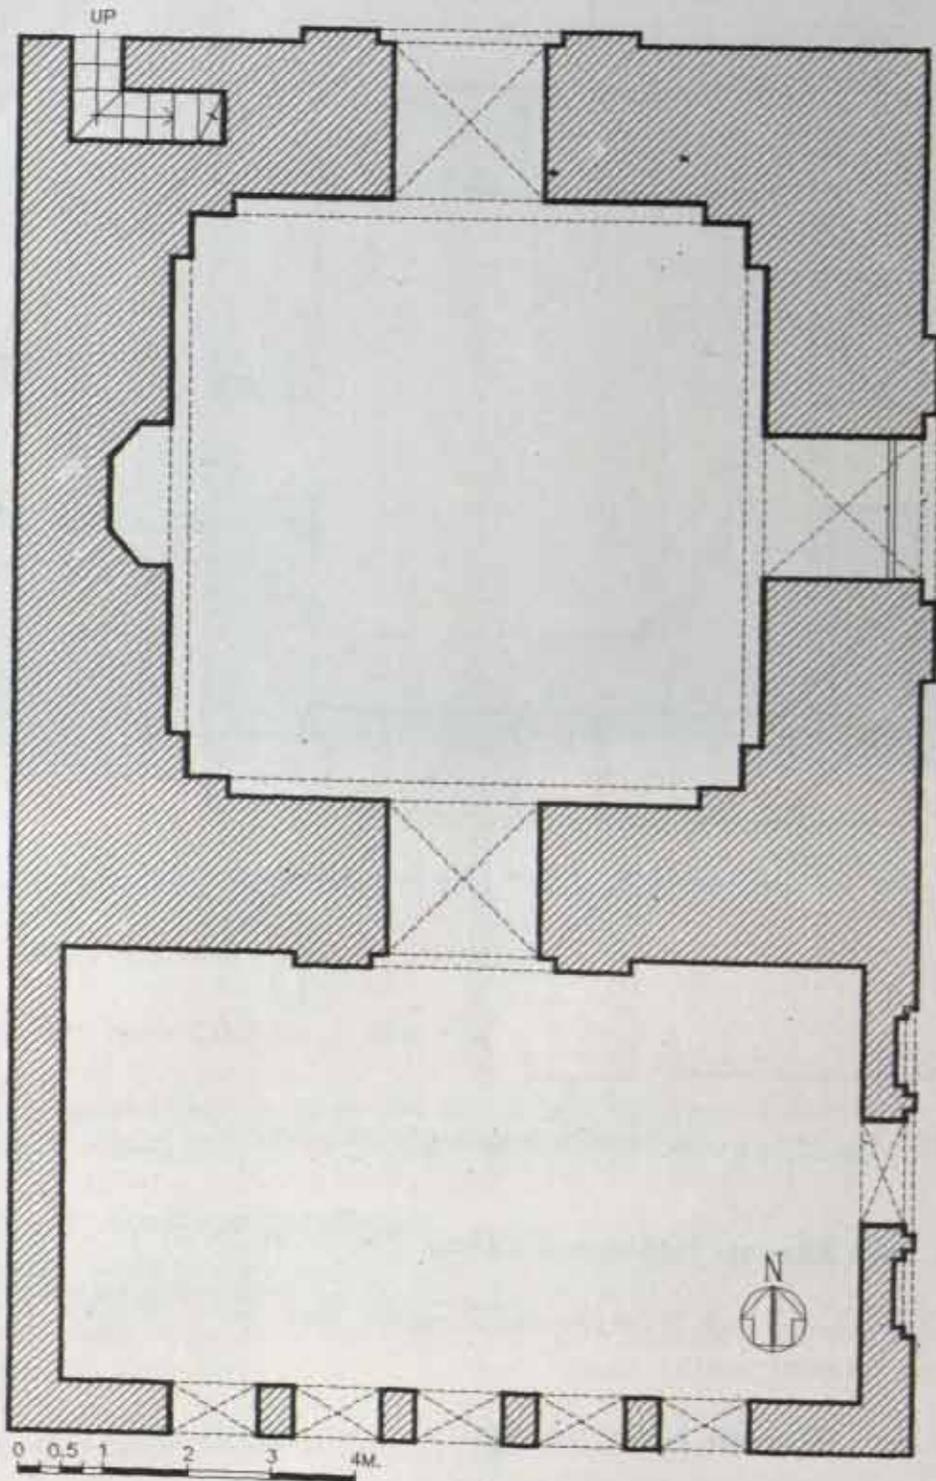

Fig. 69. Plan of the tomb of Tahir Zahir, Muzaffargarh

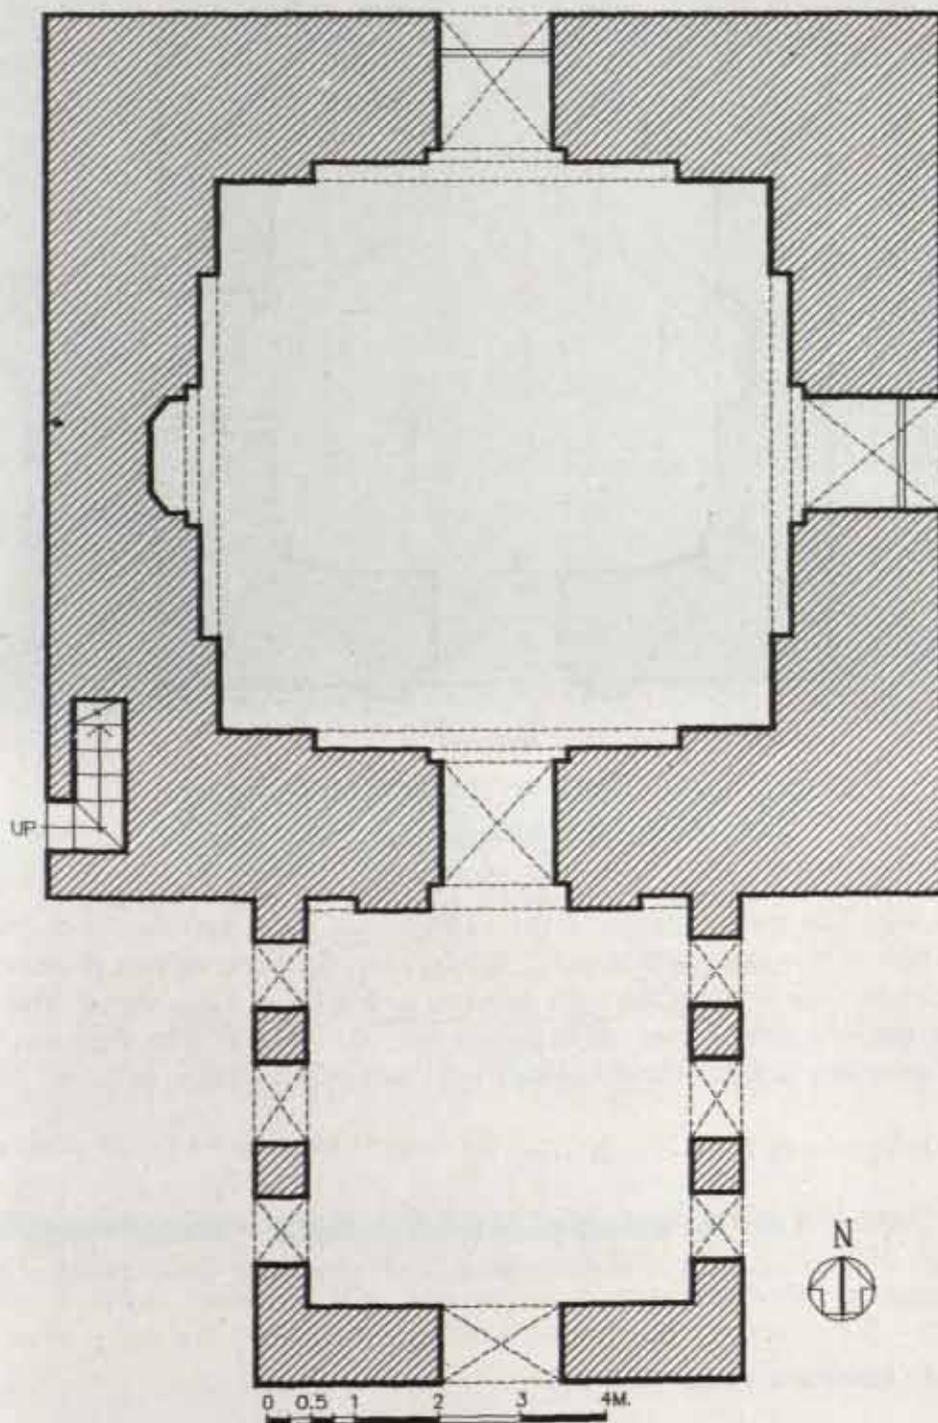

Fig. 70. Plan of the tomb of Sheikh Ladhu, Muzaffargarh

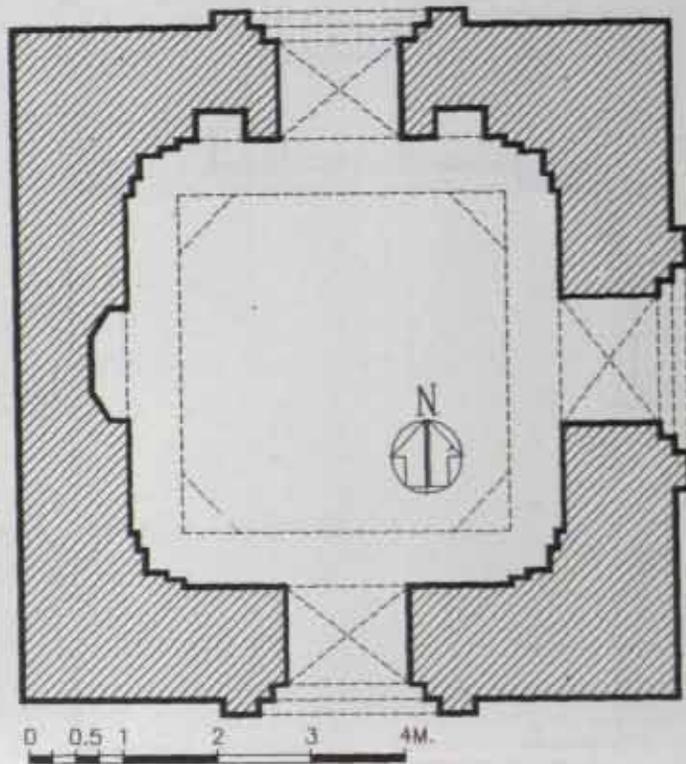

Fig. 71. Plan of the tomb of Khawaja Muhammad Hussain, Muzaffargarh

the western side. The main entrance on the southern side has a corridor. It is decorated with glazed tiles of blue and green colours. Attributes of Allah are written all around with floral decorations. The octagon has eight minarets with a large dome above. There is an attached mosque with three domes which gives a date of 1306 A.H. The tomb was built in 1011 A.H. according to a Persian inscription.

Site No. 462: Mahboob Khan Tomb (Fig. 73)

It is a square at the base and octagonal below the dome. It is built of bricks and has two openings on the southern and northern sides. The interior has four squinches to erect a zone of transition.

Site No. 463 : Handara Tomb (Fig. 74)

It is square in plan with a dome above. It is built of small bricks and has three openings except on the western side where a mehrab is provided. The glaze tile work is done on the parapet wall.

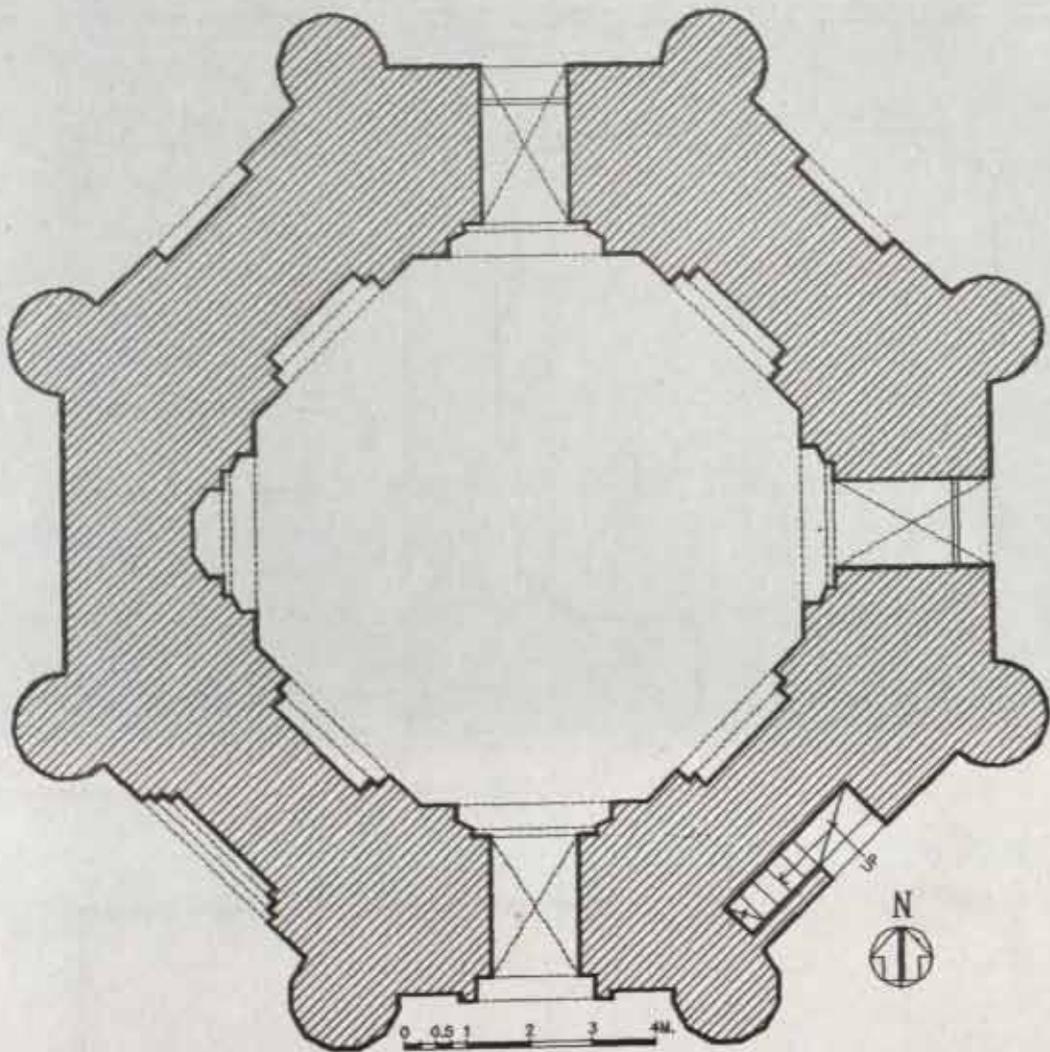

Fig. 72. Plan of the tomb of Daira Din Panah, Muzaffargarh

Site No. 464: Thatha Gurmani Mosque (Fig. 75)

The mosque was built in 1311 A.H. with small bricks and mud mortar and plastered with lime. It is rectangular in shape with façade decorated with blue tiles and floral motifs. It has three openings. The interior is decorated with fresco paintings and Arabic and Persian inscriptions. The central dome is flanked by two small domes on each side.

Site No. 465: Sheikh Haji Banga Tomb (Fig. 76)

Square in plan with a dome, it is built of small bricks with mud mortar. Originally,

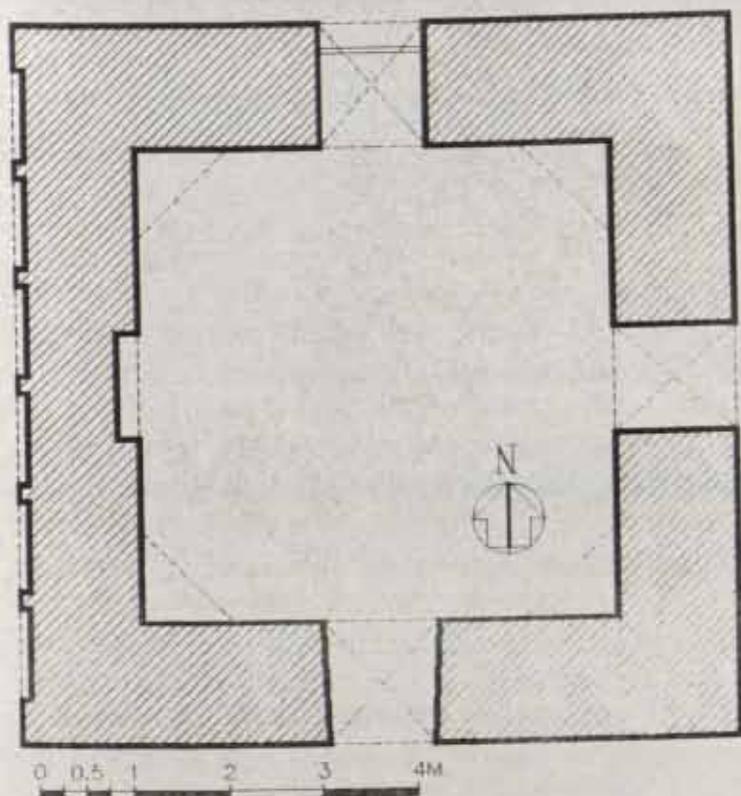

Fig 76.
Plan of the tomb of Sheikh
Haji Banga, Muzaffargarh

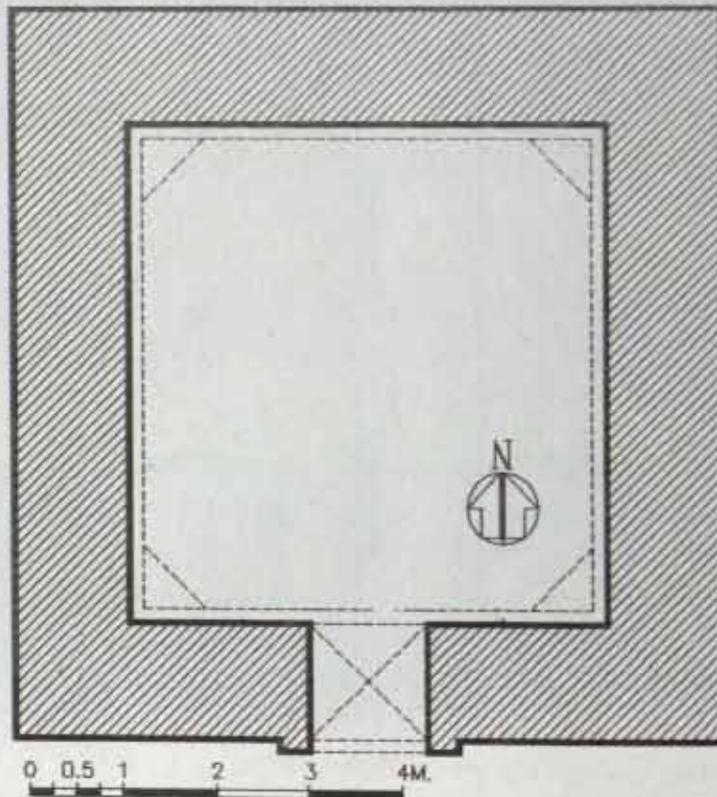

Fig. 77. Plan of the tomb of Pir Qasimuddin Shah, Muzaffargarh

it had three entrances but the eastern and northern openings have been closed and used as a windows. The southern opening has wooden doors. Four cusped arched panels are also provided. Decorations of chain design with glazed tiles run all around the tomb.

Site No. 466: Qasimuddin Shah (Fig. 77)

The tomb is square at the base and octagonal above, crowned with a low dome. It is built of burnt bricks.

Site No. 473 : Bet Mir Hazari Mosque (Fig. 78, Pl. XII B)

The mosque is square in plan and built of burnt bricks. The main entrance is on the eastern side. Two windows on the northern and southern sides and square and rectangular panels are also provided. In front of the opening, the *Kalima* is inscribed. In the upper part, it is made octagonal on the squinches. It has two attached square panels with small cupolas above the octagonal parapet wall. The interior of the mosque is painted with floral and Arabic inscriptions on panels. A cornice runs all around the mosque.

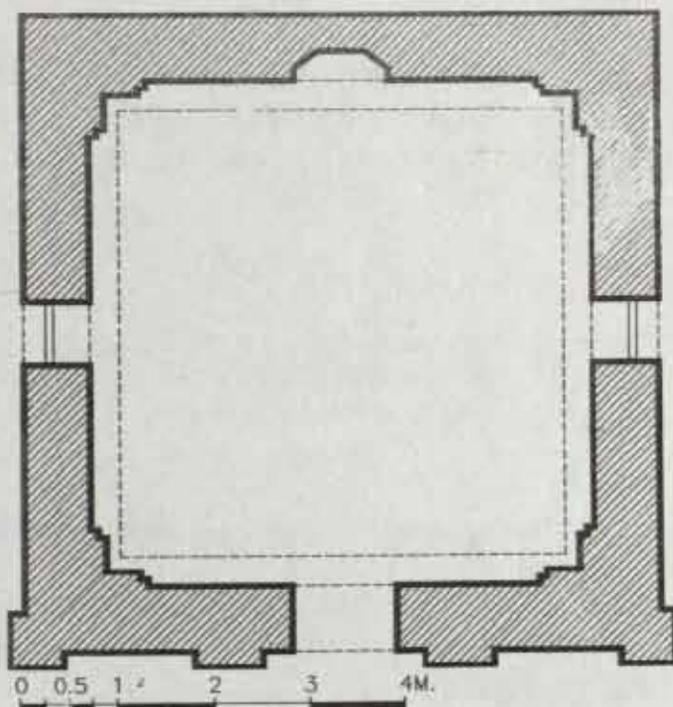

Fig. 78. Plan of Bet Mir Hazari Mosque, Muzaffargarh

Site No. 474: Sontara Mosque (Fig. 79)

The mosque is built of small bricks and has one opening on the eastern side. The facade is decorated with arched panels. It is a square in plan and crowned with a dome raised above the corner squinches.

Site No. 476: Nur Shah Tomb (Fig. 80, Pl. XIII A)

The tomb is built of bricks with mud mortar on a square plan and changed to octagon above. It has three entrances to the eastern, northern and southern sides. The main opening has thick wooden door frame which is decorated with curved floral work. There is a verandah around the roof of which is made of wood having geometric and floral decorations. Below the roof, rectangular arched panels have Persian inscriptions. There are turrets at the corners. The interior is decorated with floral designs. The western side has a mehrab. The date of 1304 A. H. is inscribed on the entrance door.

Site No. 481: Muhammad Rajan Shah (Pl. XIII B)

The tomb is built on an octagonal plan with small bricks and mud mortar. The

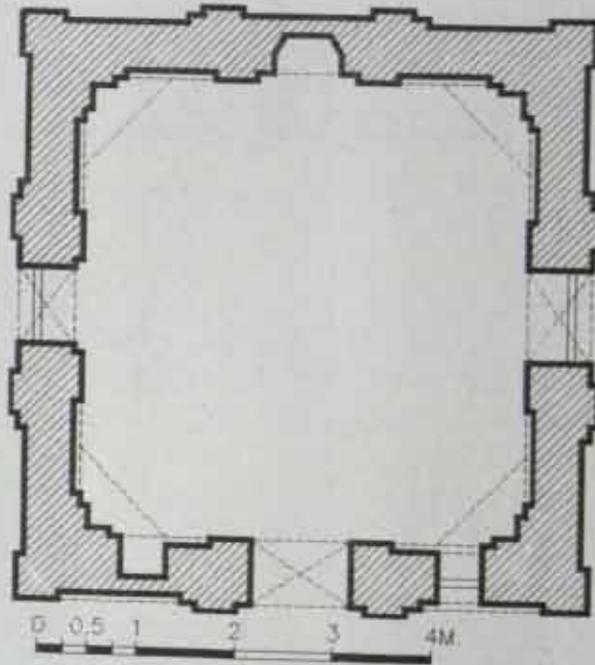

Fig. 79. Plan of Sontara Mosque, Muzaffargarh

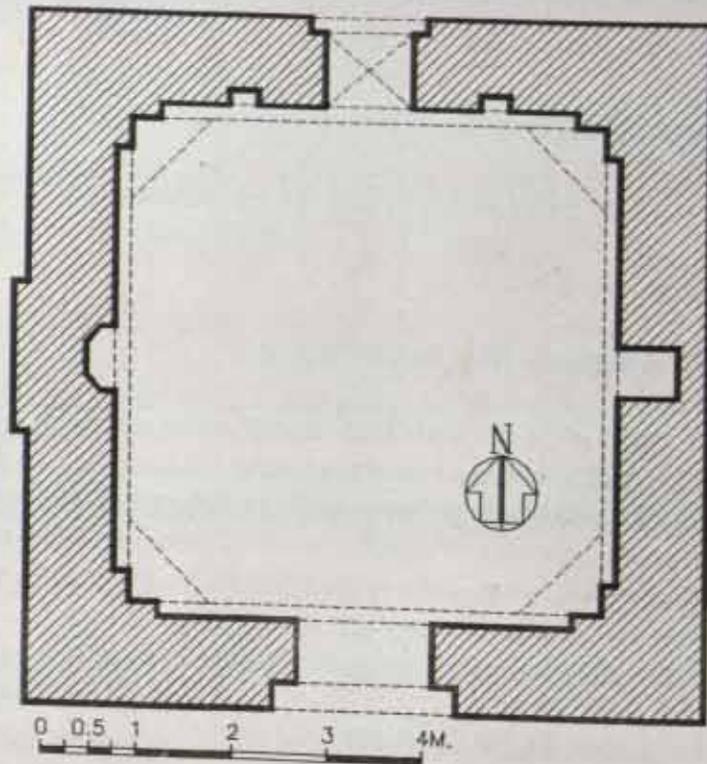

Fig. 80. Plan of the tomb of Nur Shah Bukhari, Muzaffargarh

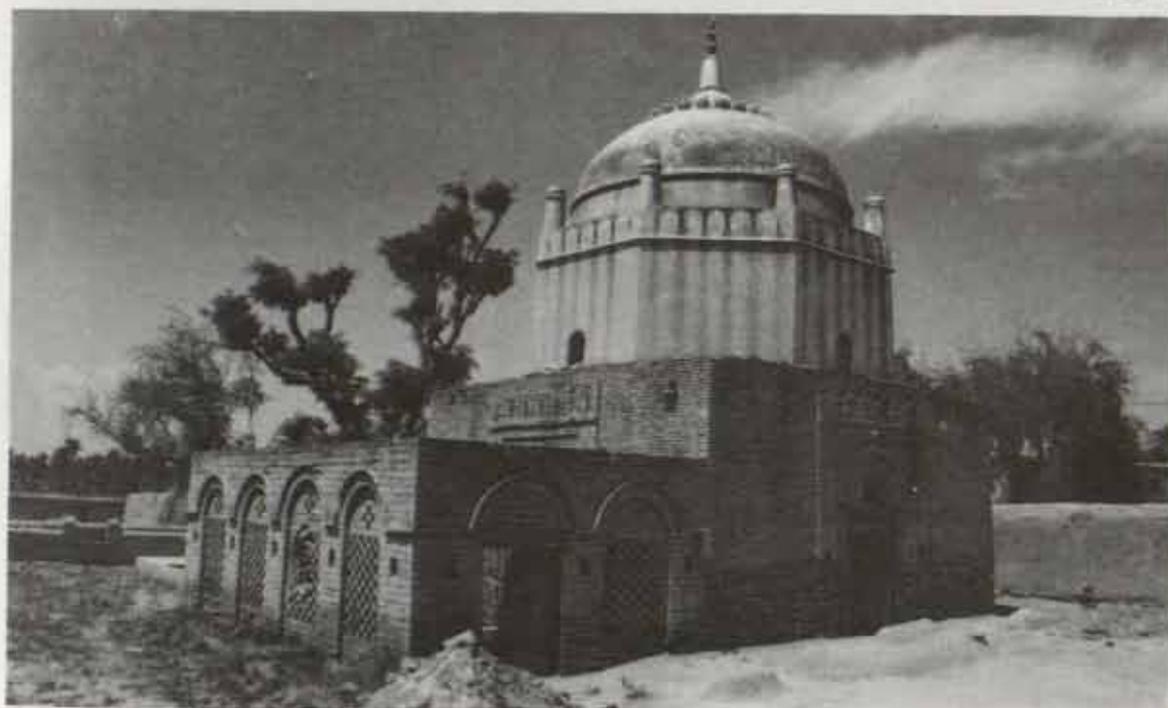

main entrance is on the eastern side. A verandah, decorated with floral design and Arabic inscriptions runs around the tomb structure. The dome has facing of modern tiles. Wood has been used in the brick walls. Another tomb of Zainal Abideen on the south-west side is square in shape and octagonal above. This has been renovated by local people with modern and white washed.

Site No. 482: Sri Garo Lal Gee Temple

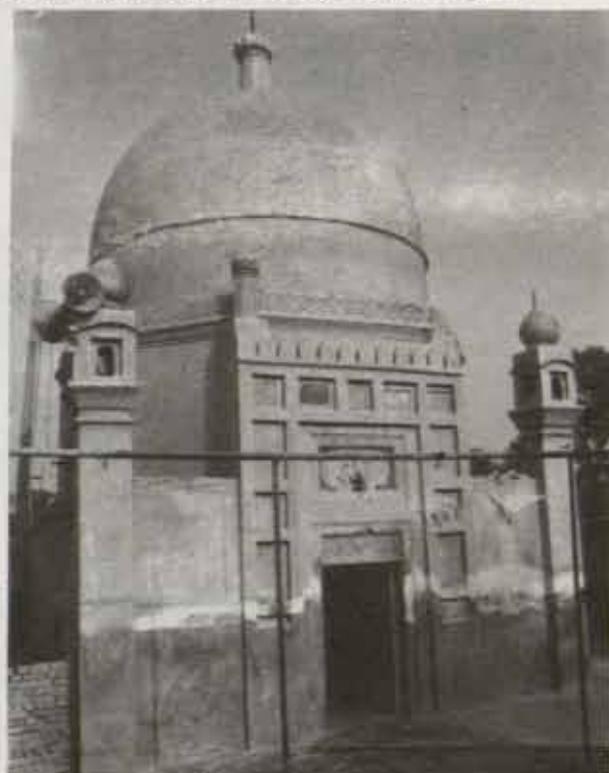

The building is constructed on a platform in the centre of fortified enclosure with small bricks and lime mortar. It is square in plan and there is only one entrance from the southern side. The interior is decorated with fresco paintings showing floral designs, human and animal figurines and figures of gods.

Site No. 483 Kot Mehray Wala

It is a square fort constructed with small mud bricks. It has four large bastions with one entrance on the eastern side. In the eastern and southern sides, it is occupied by a modern settlement.

BRIEF DESCRIPTION OF SELECTED MONUMENTS IN DERA GHAZI KHAN AND RAJANPUR DISTRICTS

Site No. 514: Umar Kot

It is a square fort of mud brick which has been completely demolished except one section. A modern settlement has covered almost the whole area of the fort (Kot). According to the local people, it was the birth place of Akbar son of Humayun (which is in fact at Umar Kot (Sindh)).

Site No. 515: Khwaja Ghulam Farid's Tomb (Pl. XIV A & B)

Khwaja Ghulam Farid's tomb is built of small bricks in lime mortar crowned with a beautiful dome. Closeby, is a small tomb and mosque on the southern side. The attached verandah is decorated with Persian inscriptions and glazed tile work. It has 12 openings except on the western side. The entire monument is famous for its decorations of glazed tile work, fresco paintings, Persian inscriptions and floral designs on the interior and exterior. The tomb with attached mosque covers a rectangular space. The interior of the tomb is square and has multicuspded arched panels and squinches at each corner. It is decorated with floral designs.

Site No. 517: Ziarat Mian Saral (Fig. 85, Pl. XV A)

The tomb is built with small bricks on a square plan. It has two openings on the southern and eastern sides. Externally, it has four turrets on each corner. From the square base, it is made octagonal supported on squinches, on top of which is a dome painted with green colour. There is no decoration. The exterior is lime plastered. Wooden beams have been used in the brick core.

Site No. 519: Harrand Fort (Pl. XV and Pl. XVI A)

An almost circular fort is built of small bricks and mud mortar. It has 16 bastions at a distance of 56 m from each other. Each bastion measures 10 x 6 m across and is octagonal in shape. It has two main entrances on the western and eastern sides. During the British period, a mosque and Police Check Post were built. The main entrance measures 4.35 m with height of 4 m. The size of bricks are 23 x 15 x 2.5 cms and 20 x 13 x 2.5 cms. The fort has a circumference of about 1 km.

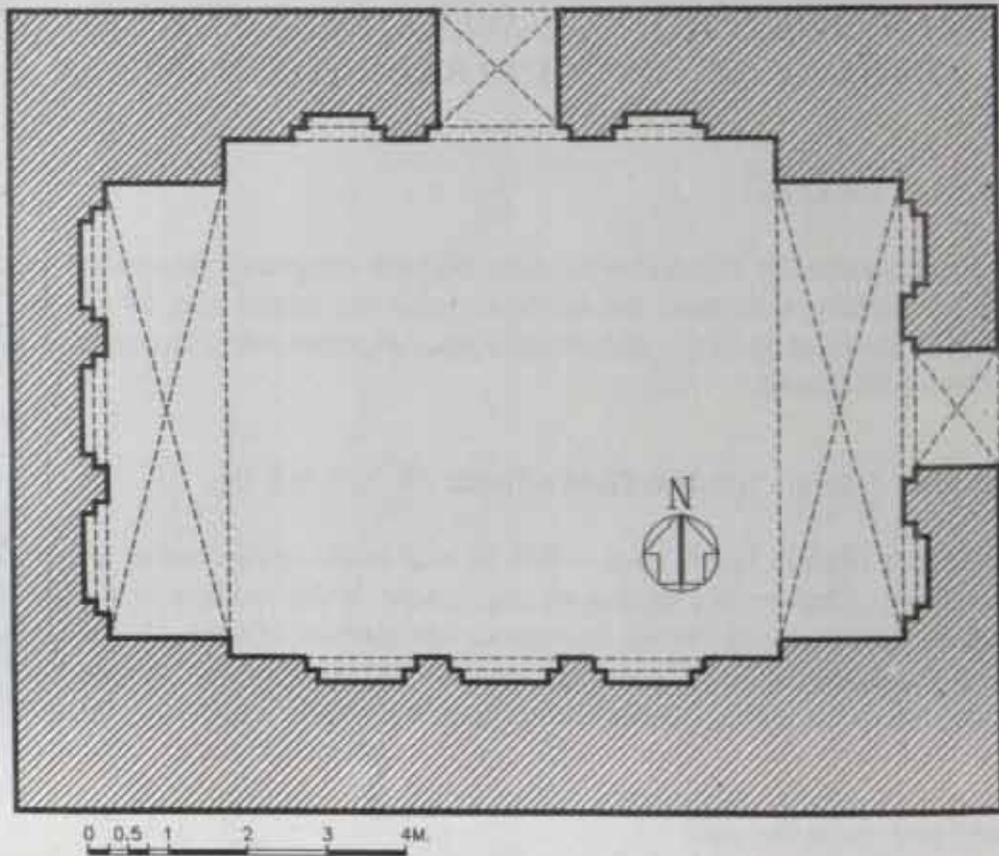

Fig. 85. Plan of the tomb of Mian Saral, Rajanpur

Site No. 523: Choti Hidira (Fig. 86)

The tomb is built of small bricks in mud mortar on a square plan. It is octagonal on the inner side and then further sub-divided into 16 sides. There are two openings on the southern and eastern sides. It has four attached minarets which have collapsed. Glazed tile work decorates the squinches and spandrels. There is a mehrab in the western wall.

Site No. 524: Haji Akram Sahib Tomb (Pl. XVI B)

The tomb is octagonal, built with small bricks and mud mortar and then crowned with a dome. The main entrance on the eastern side has a wooden door frame with floral designs. Above it, there is a multicusp arch panel with a wooden screen. The interior is square in shape and measures 6.31 m across. Each side has a pointed arch panel within a square panel. In the western wall is a mehrab.

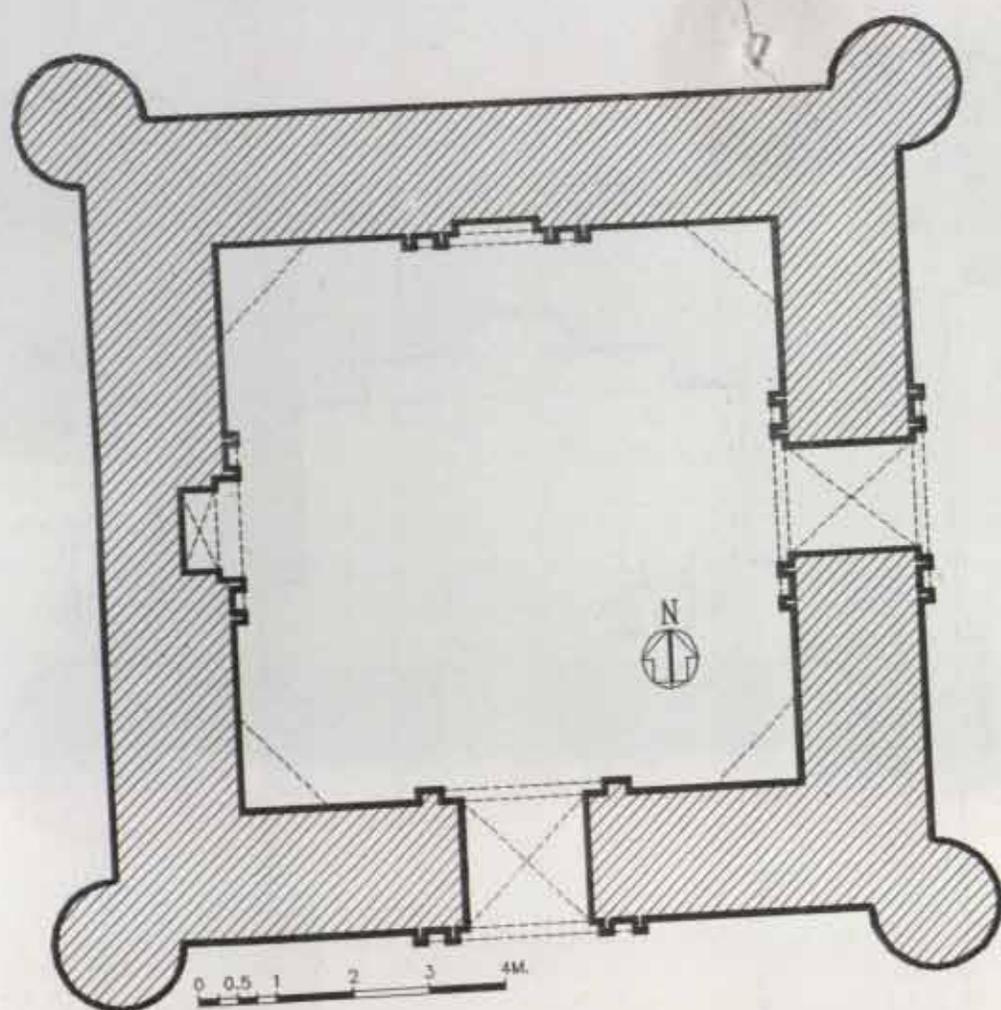

Fig. 86. Plan of Choti Hindira, D.G. Khan

Site No. 525: Khwaja Karmal Tomb (Pl. XVII A)

The ground plan of the tomb is square but made octagonal below the dome. It is built of bricks with mud mortar. It has two entrances on the southern and eastern sides. The main entrance on the east is plastered with lime mortar. There is no decoration externally. The interior has large painted panels on the four sides. The lower portion has been repaired with modern brick and cement.

Site No. 526: Pir Adil Tomb (Fig. 87, Pl. XVII B and Pl. XVIII A)

The tomb is built of small bricks and mud mortar. It is square below and octagonal above below the dome. Four turrets at the corner taper upwards. It has two

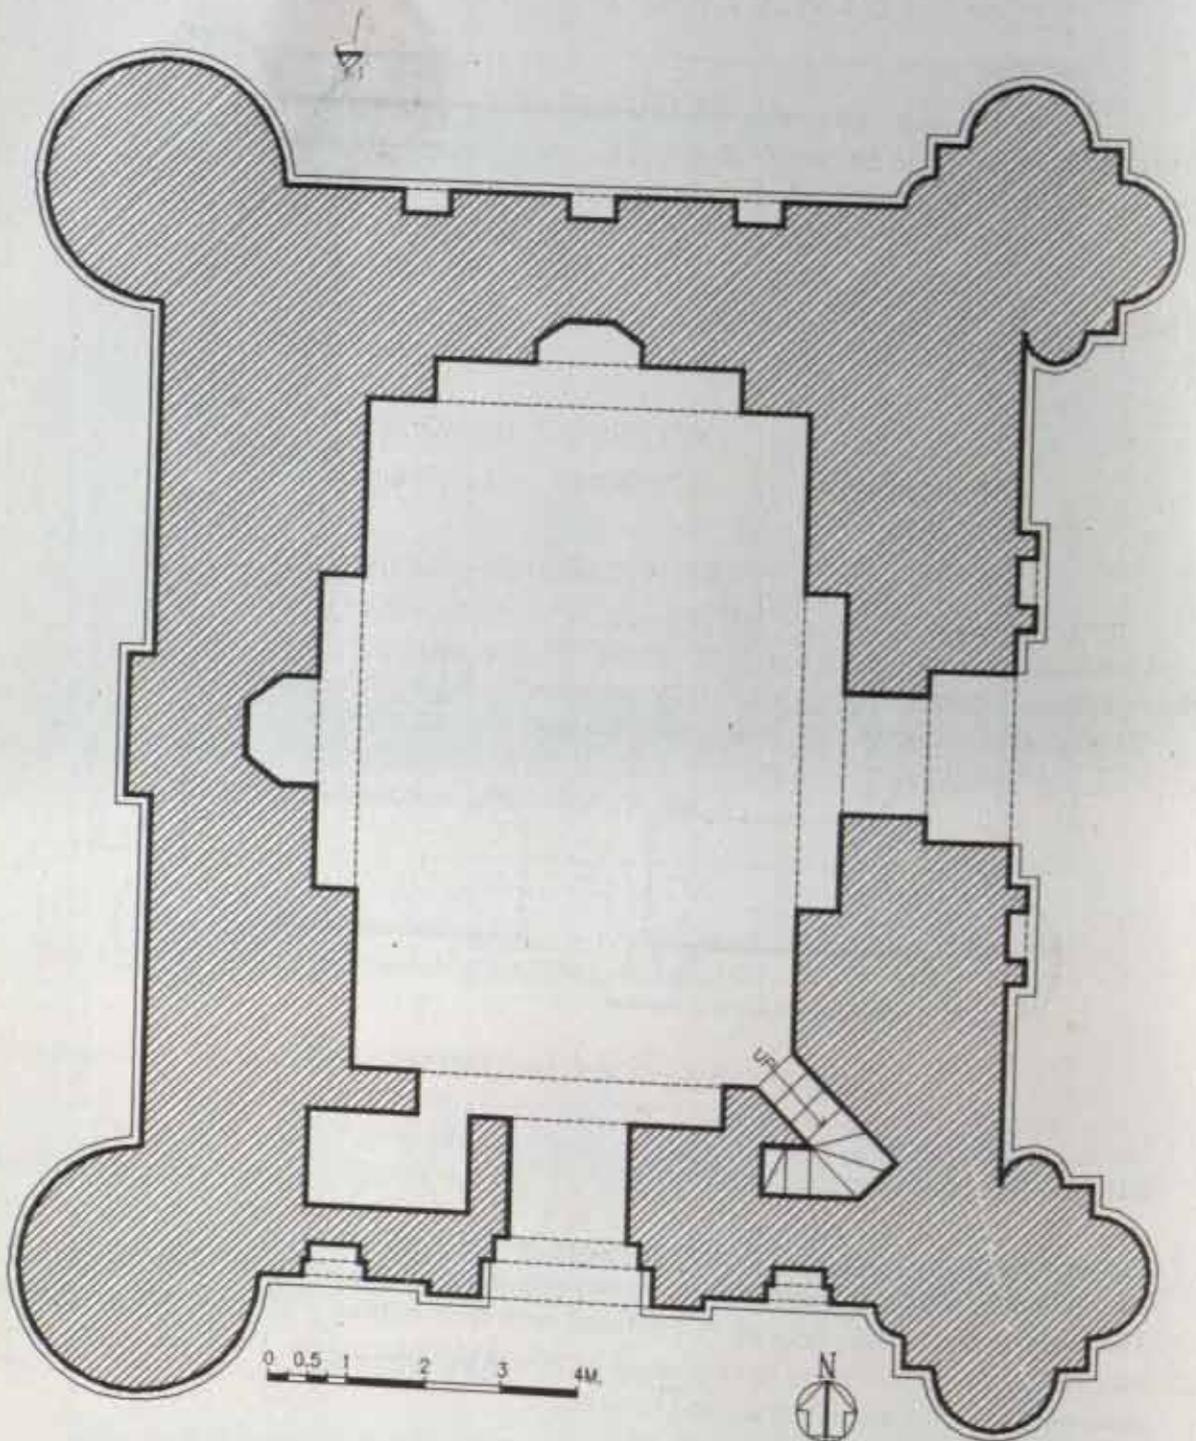

Fig. 87. Plan of the tomb of Pir Adil Shah, D.G. Khan

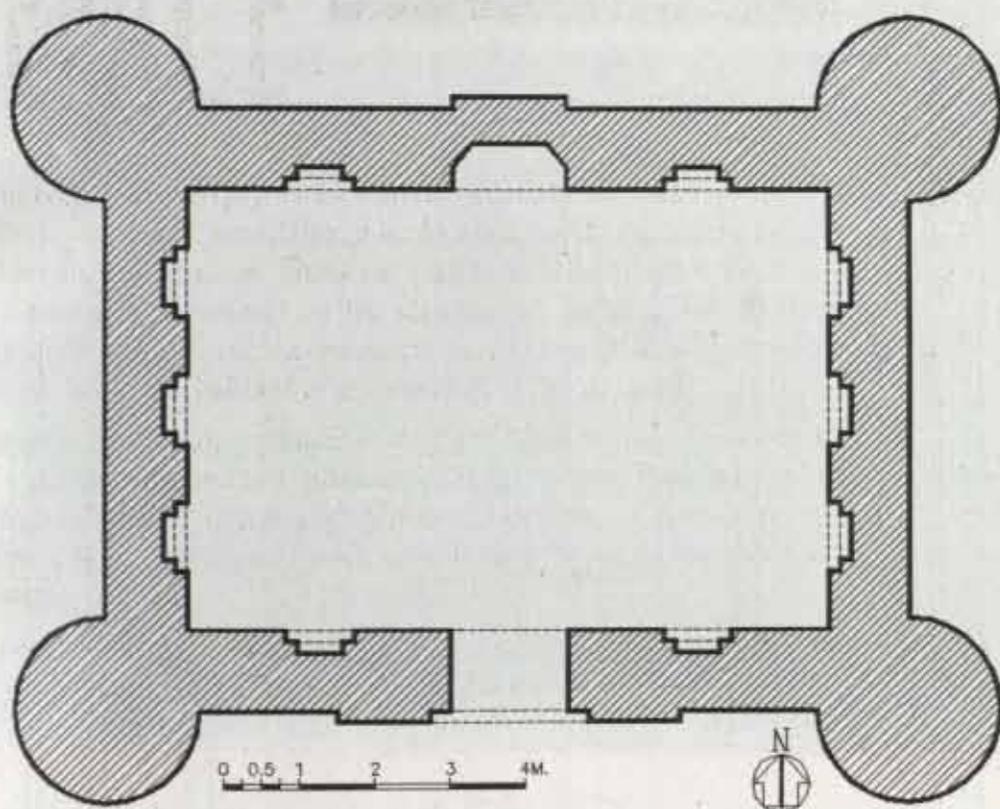

Fig. 88. Plan of the tomb of Syed Ali Akbar, D.G. Khan

openings on the eastern and southern sides. The walls are decorated with glaze tile work and cut brick work in different designs. The exterior is decorated with glazed tiles.

On the inner side, there are four arched panels on each side with mehrab on the western side decorated with glazed tiles. There are two Persian inscriptions on the top of mehrab. Four squinches at each corner are made to make the base octagonal and the further sub-divided into 16 sides, on which a dome is placed. In the centre of the tomb is the grave of Adil Pir with wooden canopy above. The interior is also decorated with glaze tile work.

Site No. 527: Syed Ali Akbar Tomb (Fig. 88)

The tomb is built with burnt bricks and mud mortar on a rectangular plan having engaged bastions (turrets) of 3.5 m. in diameter at each corner. Wood is also used in the main brick structure.

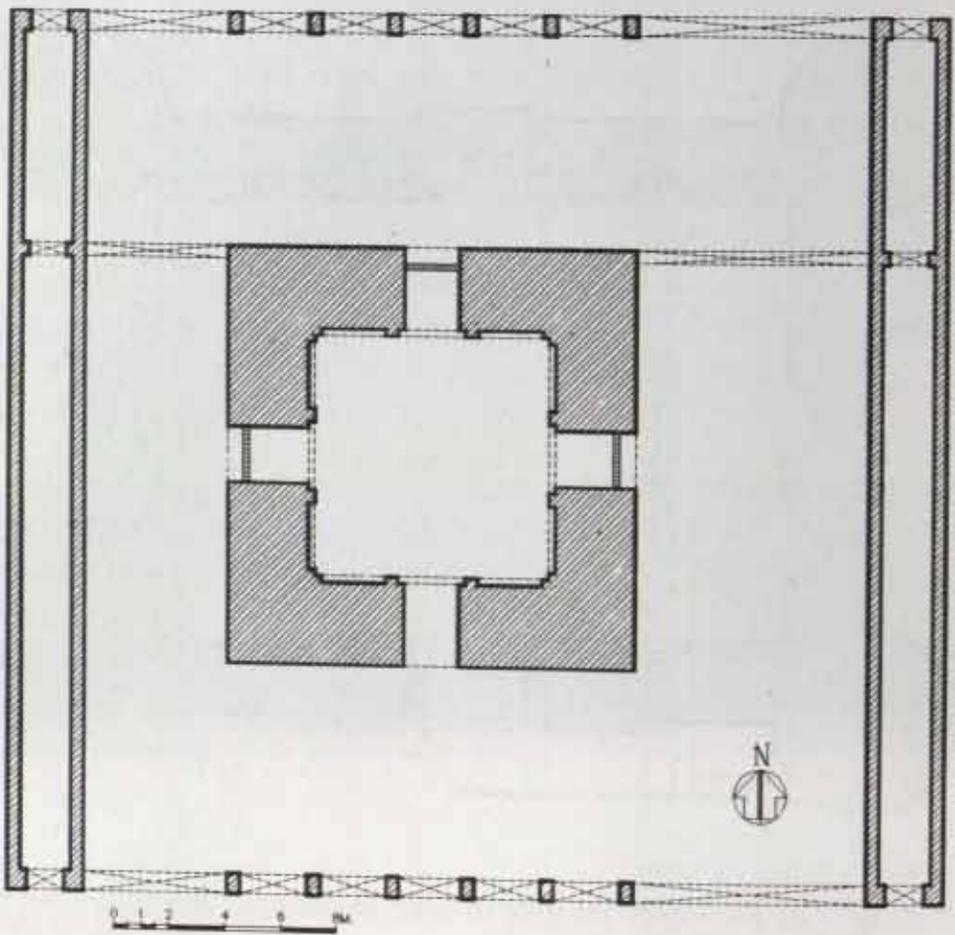

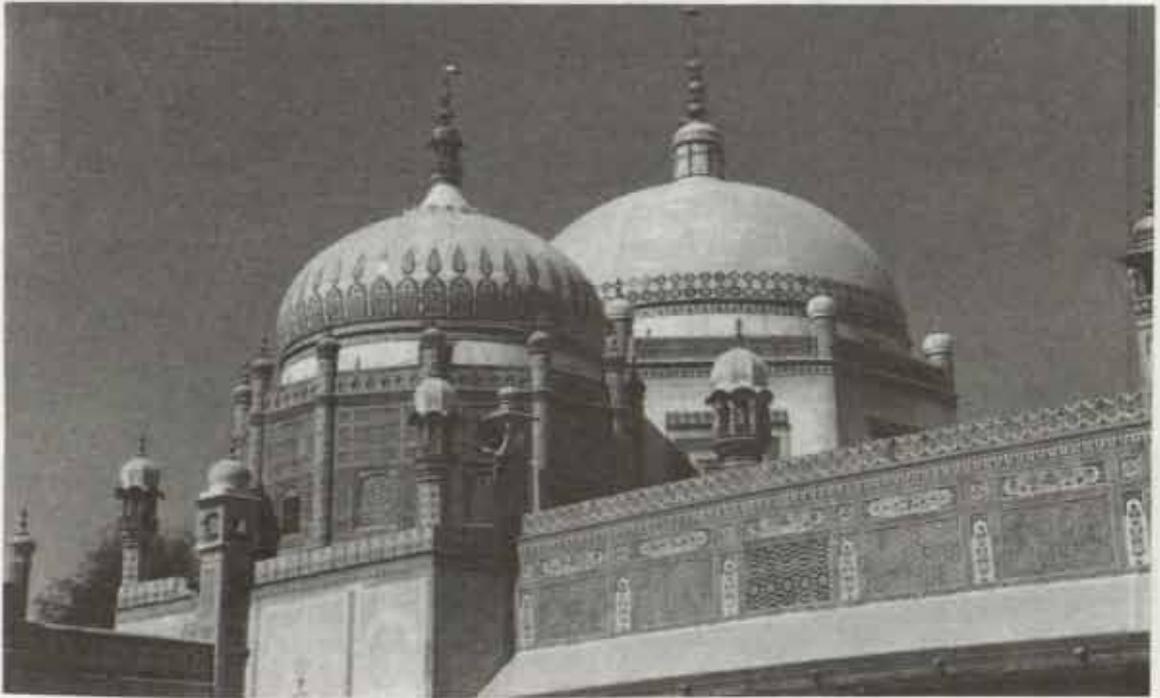

Fig. 89. Hazrat Shah Muhammad Suleman Taunsa, D.G. Khan

Site No. 531: Kot Mahoi Wala Fort (Pl. XVIII B)

It is a mud brick fort, square in shape and having eight bastions. The main entrance is on the eastern side.

Site No. 536: Hazrat Shah Muhammad Suleman Taunsa (Fig. 89)

The tomb is built with small bricks laid in mud mortar and plastered with lime. It is square at the base and the made octagonal below the dome. The first storey of tomb is surrounded by a corridor. It has fresco paintings on the interior and exterior. The upper storey is octagonal in shape and has glazed tile work and floral designs. A mosque is attached to the tomb.

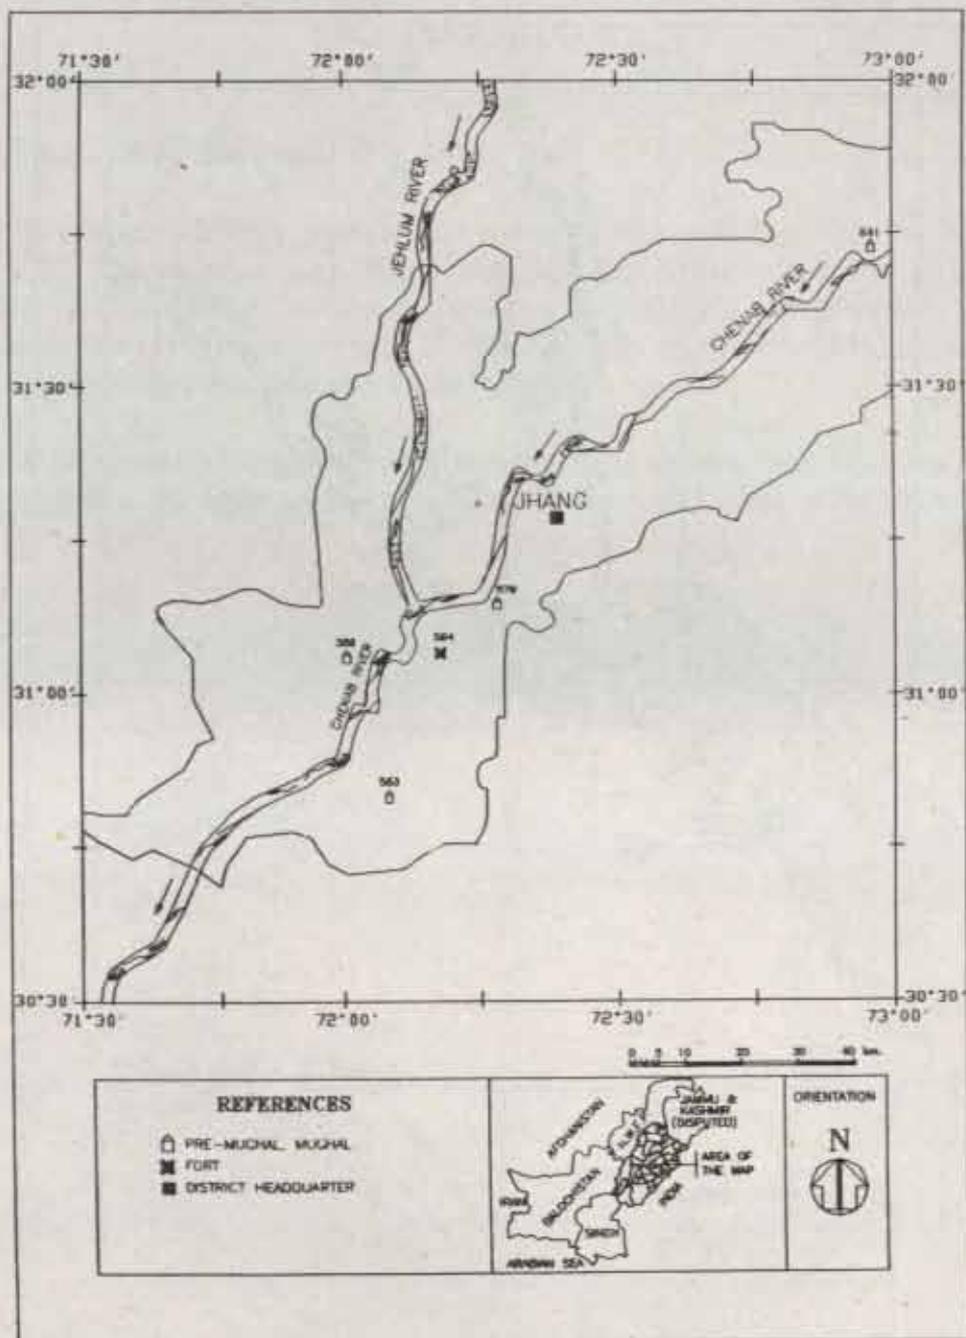

Fig. 93 Monuments in Jhang District

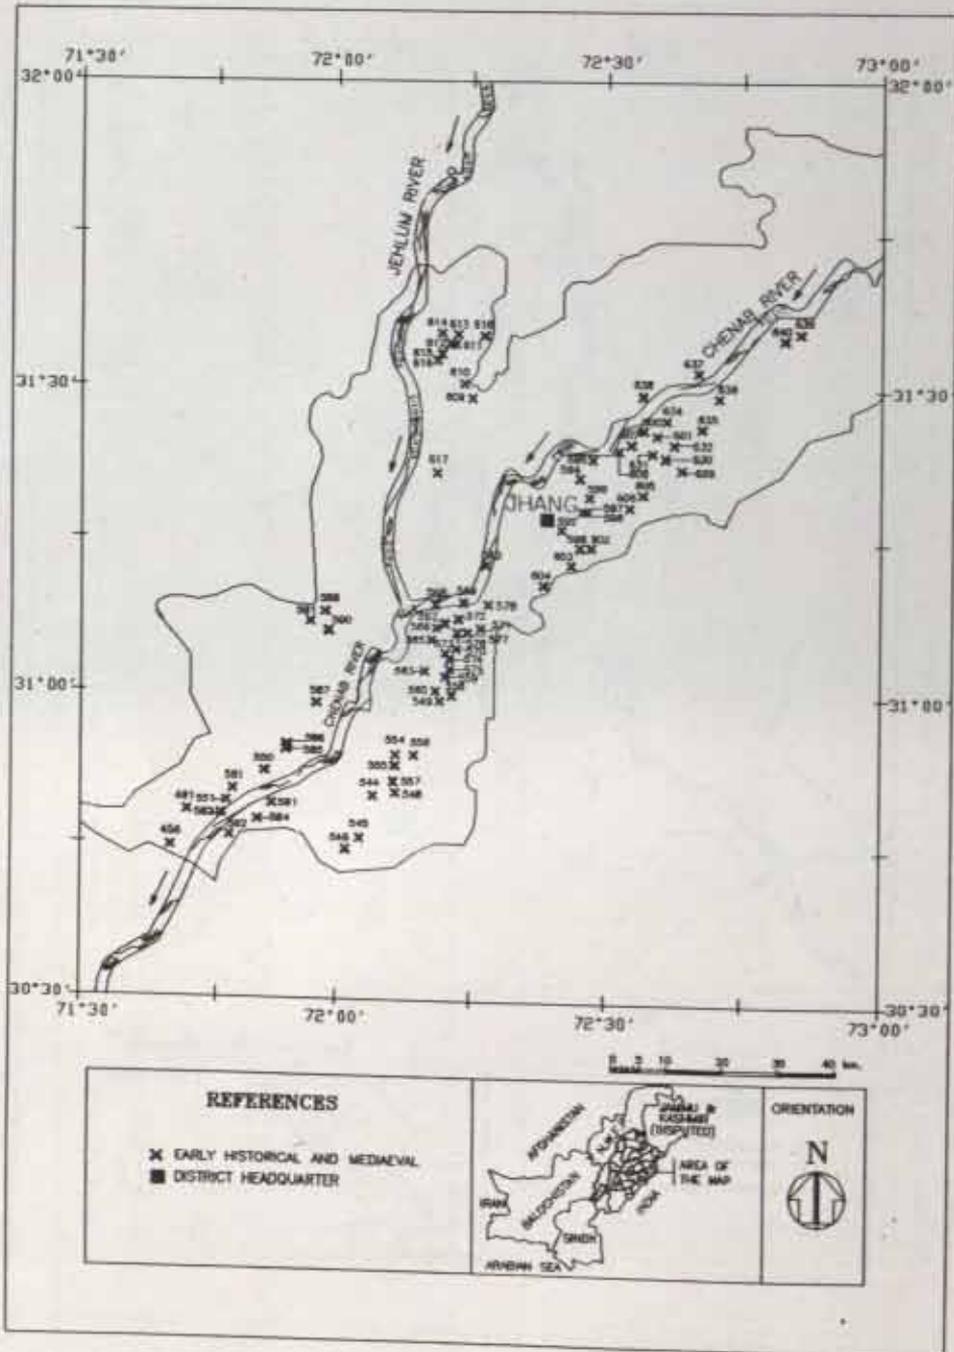

Fig. 94. Sites in Jhang District

BRIEF DESCRIPTION OF SELECTED MONUMENTS IN JHANG DISTRICT

Site No. 553 : Ghazi Pir Tomb (Fig. 95)

This octagonal tomb structure has a high drum and is built of burnt bricks with lime mortar. The main entrance is provided from the southern side and is fitted with wooden door. It has a large bulbous dome with a pinnacle. It is lime plastered. Originally, it was decorated with fresco paintings of which only traces survive. Both the interior and exterior surfaces are decorated with fresco paintings.

On the inner side, the zone of transition is created with the help of corner squinches making the upper part sixteen sided. On the western side of the tomb but within

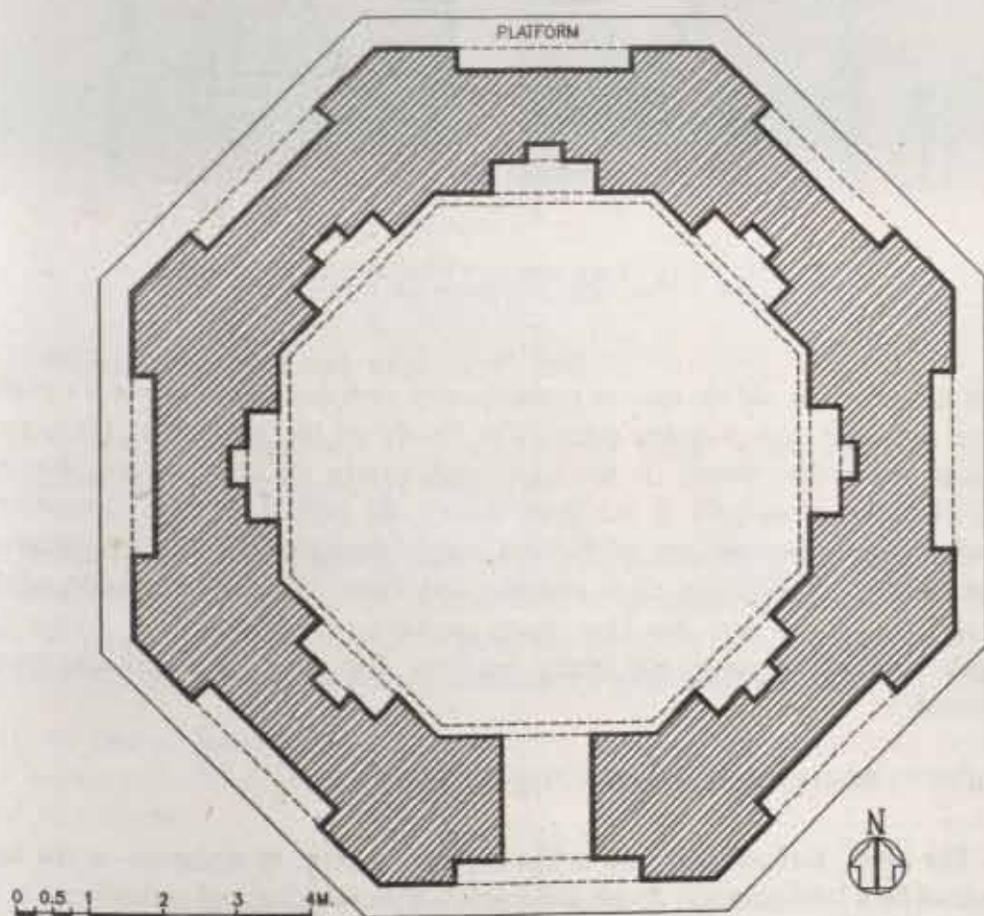

Fig. 95. Plan of the tomb of Ghazi Pir, Jhang

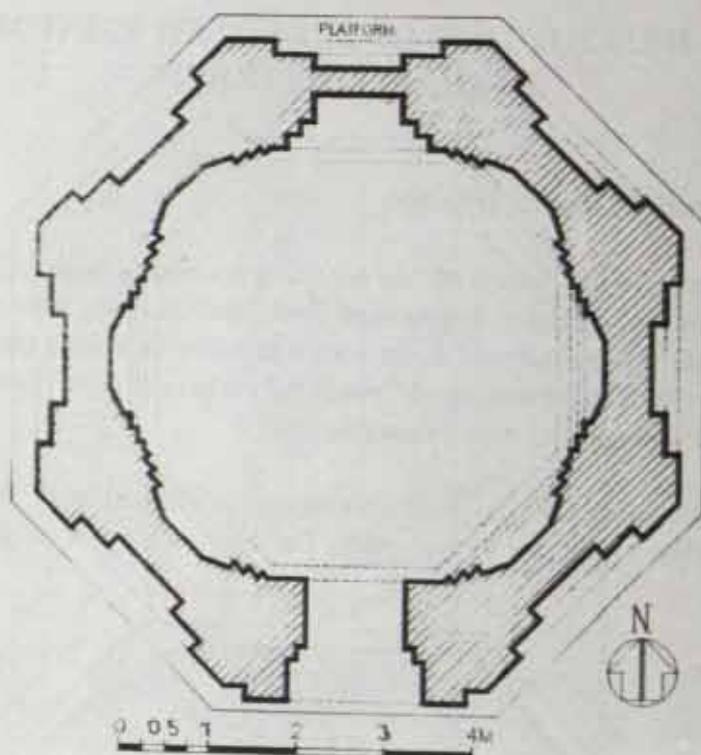

Fig 96 Plan of the tomb of Maddu Kawan, Jhang

a walled enclosure, an old mosque of contemporary period survives in good condition. It has three openings with wooden doors. The facade of the mosque is decorated with rectangular and arched panels. It has four small turrets on four corners. The parapet consists of a row of merlons. It has three domes, the central dome is hemispherical in shape while the other two are of bulbous type. Internally, it has rectangular prayer chamber which is divided into three portions with bays. The central portion which is a square and the largest one, has four corner squinches. It is internally decorated with rectangular and arched panels and fresco paintings. The other two small chambers have vaulted roof.

Site No. 579 : Maddu Kawan Tomb (Fig. 96, Pl XIX A)

The tomb, built of small size bricks and lime mortar, is octagonal at the base and surmounted by a hemispherical dome. Each side has rectangular and arched panels and the main entrance is on western side. The lower part is left bare while the drum and the dome are lime plastered.

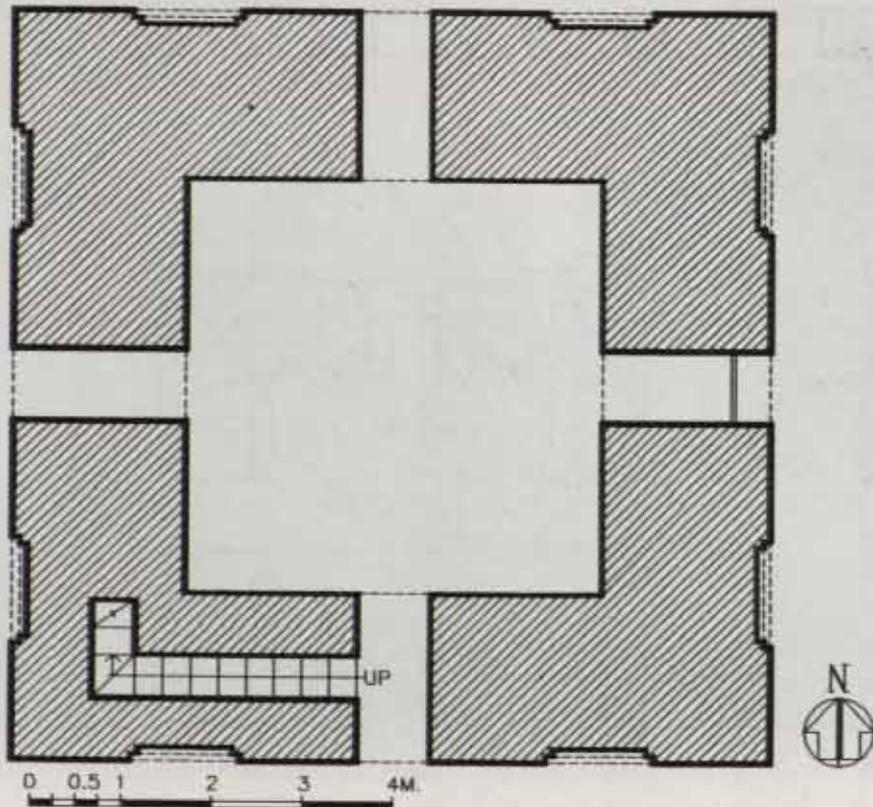

Fig. 97. Plan of the tomb of Rodu Sultan, Jhang

Site No. 589: Rodu Sultan Tomb (Fig. 97, Pl. XIX B)

There are two monuments (I) Radu Sultan's Tomb which is square and the octagonal above with a dome and (II) Ladies Tomb.

(I) The main entrance of Radu Sultan's tomb is on the southern side. The first storey has four minarets on each corner. The second storey is octagonal in shape which supports the dome with a pinnacle. The exterior is plastered with lime kanker. Four squinches are constructed at the corners and the interior is decorated with fresco painting.

(II) To the east of Radu Sultan's tomb, another tomb considered to be of women is built on a square plan and resembles that of Radu Sultan. It is also constructed with small bricks and mud mortar.

To the southern side of both the tombs is a mosque. The facade of mosque has cut brick work decoration. The interior of the mosque is decorated with fresco painting showing floral designs.

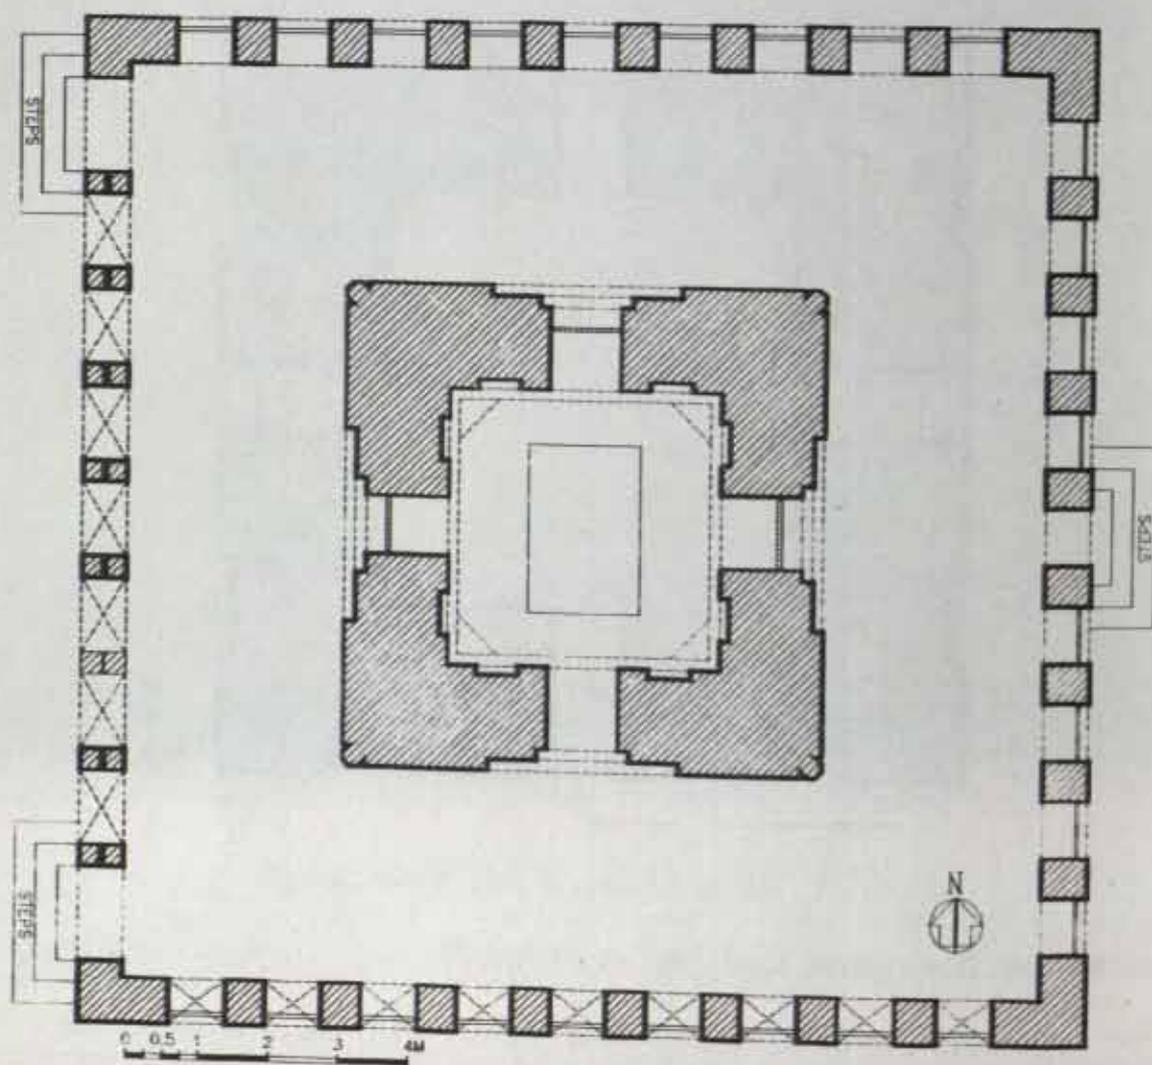

Fig. 98. Plan of the tomb of Shah Burhan, Jhang

Site No. 641: Shah Burhan Tomb (Fig 98)

It is a well known monument of dark gray stone and white marble, built with lime kankar mortar. At the base, it is square but changed to octagonal on which a large dome of white marble rests. The main door is on the southern side while the other sides are closed with screen. The floor is made of white marble. The tomb is enclosed with a boundary wall.

BRIEF DESCRIPTION OF SELECTED MONUMENTS IN GUJRANWALA, SHEIKHUPURA AND HAFIZABAD DISTRICTS

Site No. 652 : Baba Shah Munabar (Fig. 104)

The tomb is built of bricks and mud mortar. It has a double dome on octagonal base. The lower part of the tomb is decorated with recessed arched panels on all sides. The interior shows four squinches at the corners.

Site No. 654 : Marhi Baba Dhyghana Singh (Fig. 105)

It is octagonal in plan, built of burnt bricks and crowned with a double dome and has one opening on the eastern side. The interior has panels on each side of octagon.

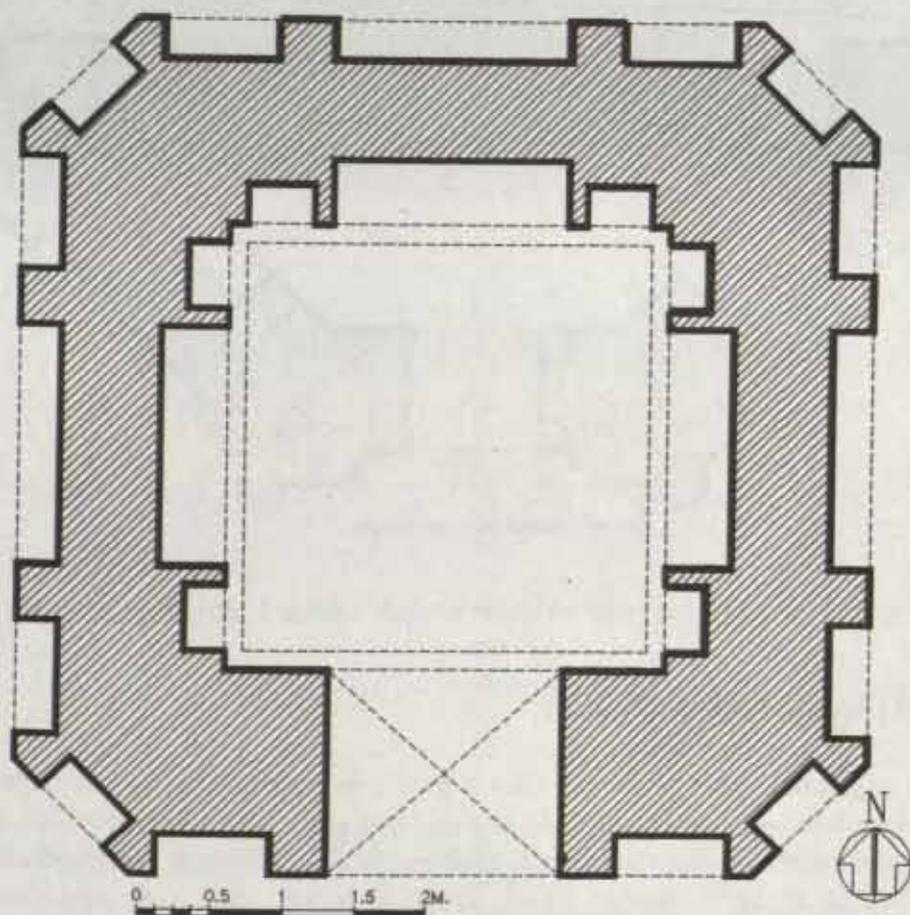

Fig. 104. Base Map of Punjab Province showing Sialkot and Narowal Districts

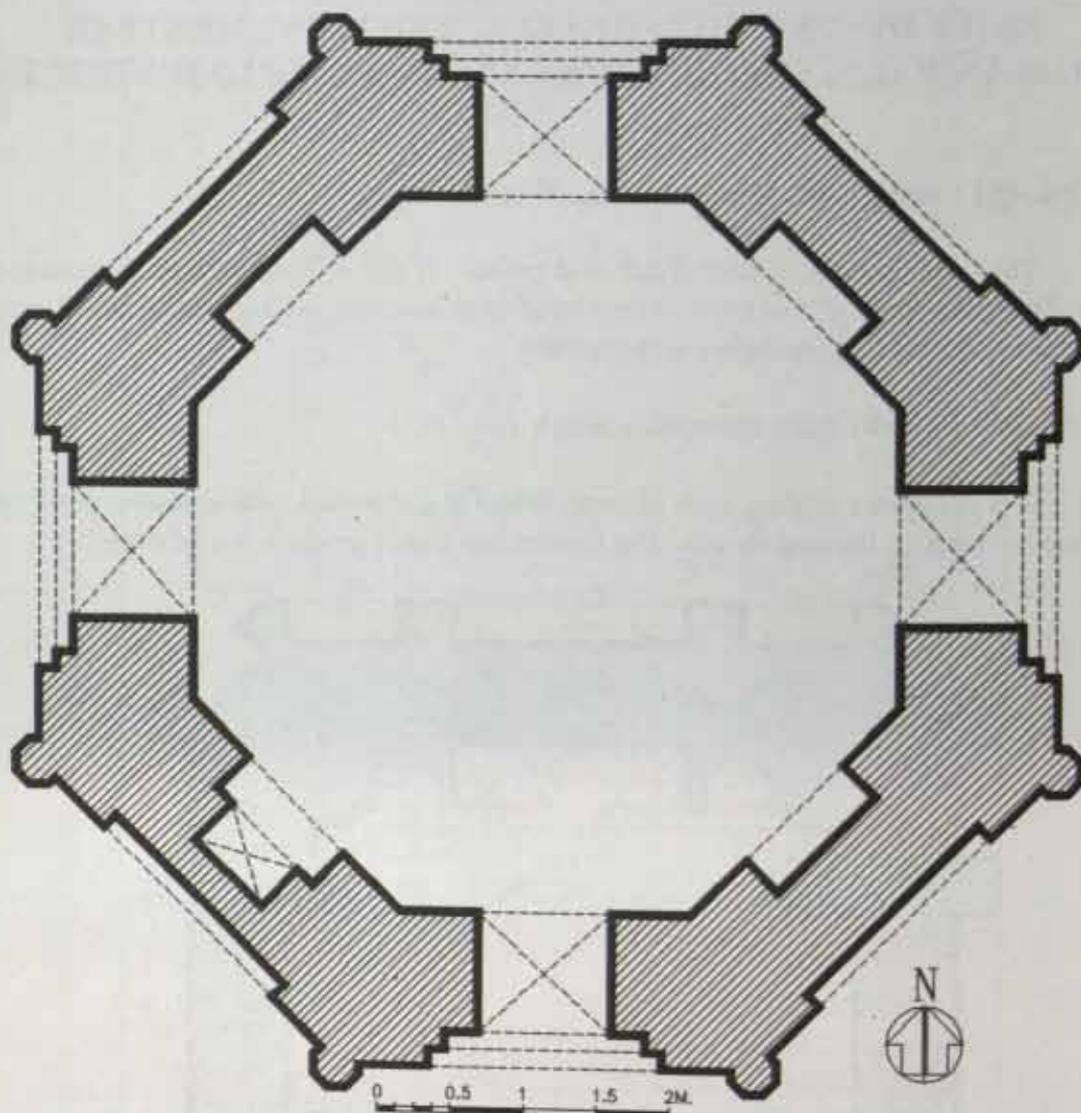

Fig. 105. Plan of the tomb of Baba Shah Munabar Buksh, Sheikhupura

Site No. 769 : Kotli Maqbra (Pl. XX)

This huge monument of burnt bricks is square in plan and has two storeys above a basement which has two ventilating windows and one entrance on the southern side. The main building is square in plan with four entrances provided through rectangular openings created within an arched recessed panel. These openings have red sandstone border frames. The facade of the tomb is decorated with rectangular and square recessed arched panels on each side. These arched panels are internally decorated with honey-combed

designs. The tomb has four octagonal minarets with domed cupolas at each corner. The domes of the cupolas are decorated with glazed tiles with floral and geometrical motifs. A high circular drum marks the second stage which supports a huge hemispherical dome. The body of the dome is lime plastered. The upper portion of the dome is decorated with glazed tiles and crowned with a marble finial. The monument is built on a high platform.

The interior of tomb has a single octagonal chamber. Each side of the octagon measures 13.5 ft. The chamber is decorated with arched, rectangular and square panels. The zone of transition is created with the help of corner squinches which converts its top into hexagon to accommodate the base of a huge hemispherical dome. The interior and exterior of the structure are left naked except the decorative arched panels and the dome. It has four arched windows above the rectangular openings. It is lime plastered above the octagon. The tomb is ascribed to one Abdul Nabi.

BRIEF DESCRIPTION OF SELECTED MONUMENTS IN SIALKOT AND NAROWAL DISTRICTS

Site No. 753 : Sikh Temple Kalas Wala (Pl. XXI A)

The temple is built of small burnt bricks with lime mortar on a 1.3 m. high platform. It is square at the base but made octagonal above below the dome. Access to the inner chamber is provided through a rectangular opening which is created within arched panels in the southern wall and fitted with a wooden door. The facade is decorated with rectangular, multicused arched panels and floral designs and other figures. The interior is octagonal decorated with arched and rectangular panels. A zone of transition is created with the help of four squinches which converts its top into a hexagon to accommodate the base of a huge double dome. The drum and dome are lime plastered and is crowned with a finial. Another structure, square in plan and with a flat roof is on the eastern side of the temple while a square tank, measuring 49.39 x 49.39 m, is built on the eastern side.

Site No. 754 : Marhis Kalas Wala

There are two Marhis, octagonal in plan while the other two are square and have fluted domes. All are built of small burnt bricks in lime mortar. Multicused arched panels are created on the exterior walls.

Site No. 756 : Bari Masjid

The mosque is built of small bricks in lime mortar and plastered with lime kanker. It is rectangular in shape with an open courtyard, measuring 12.2 m by 50.2 m. Access to the inner prayer chamber is provided through three multicused arched openings. The facade of the mosque is decorated with square and rectangular panels. There are two octagonal minarets with cupolas at the northern and southern corners.

Besides, arched, rectangular and square panels in recess are provided on the external surface, where fresco paintings are also done. Internally, the Quranic verses decorate the walls in addition to motifs created in relief. The prayer chamber measures 14 x 3.96 m. It is divided into three sections by two arches balancing the mehrab in the western wall. At the roof level, a zone of transition is created with squinches at the corners to convert its top into an octagonal to accommodate the base of the huge bulbous dome above. The dome is lime plastered and crowned with a finial. It is flanked by two small domes which are also raised on drums. The domes are painted with green colour.

Site no. 757 : Markazi Eidgah

Built of small burnt bricks with lime kanker mortar, it is a square structure consisting of an open courtyard with 15.24 m high boundary wall. It has three entrances provided through arched openings.

Site No. 758 : Pasrur Talab

It is an octagonal water tank built with small burnt bricks laid in lime kanker mortar and plastered. Two covered entrances are provided which are 10 m. square. Steps are built in the centre of the of octagon. Two water channels are provided on both sides of the northern entrances.

Site No. 759 : Marhis Kotli Fareed

There is a group of Marhis designated A - D. They present a basic plan of a square at the base, crowned with single dome, bare exterior without decoration but marked with recessed panels. All are built with small burnt bricks.

Site No. 774 : Hindu Temple (Pl. XXI B)

It is built of small bricks in mud mortar and plastered with lime kanker. It is square in plan with entrance on the east. It is gradually made octagonal and then divided into 16 sides as it rises upwards. The interior has fresco paintings.

Site No. 816 : Hindu Temple (Pl. XXII A)

This temple is built with small bricks laid in sand and lime mortar. It is square in plan and has a pyramidal dome which is decorated with representation of lotus leaves. Monkeys are shown climbing on each side of the dome.

Site No. 825 : Masjid Bokhari Sunkhatra

The mosque is built on a rectangular plan with small size bricks laid in lime mortar. The courtyard of the mosque is rectangular, measuring 7.62 x 4.57 m. The main entrance is on the eastern side. Entrance to the main prayer chamber is through a wooden door in a multicusp arch which is a later addition. The dome is melon shaped erected on four squinches. The roof is vaulted.

Site No. 836 : Hindu Temple A (Pl. XXII B)

The temple is three storeyed, built of small bricks and lime mortar on a square plan. The site marks a religious complex of several buildings. The temple has a corridor running around the main chamber which has vaulted roof and multicused arches on each side. The main entrance is on the eastern side which has a wooden door. The facade and other sides are painted and shows decorative arched panels. Both the external and internal sides are decorated with fresco paintings depicting Hindu legends and supernatural elements.

Site No. 841 : Jamia Masjid Muhammadi

The mosque being rectangular in plan has an open courtyard. It is built of small burnt bricks and lime mortar. Access to the inner chamber is provided through three arched openings which are built within a large cusped arches in the facade. The front of the mosque is decorated with rectangular and arched panels. The facade of the mosque has four octagonal minarets with domed cupolas at four corners.

Internally, the prayer chamber measures 7.62 x 3.04 m. The prayer chamber is divided into three portions by two arches. The prayer chamber is crowned with a low dome with pinnacles, flanked by two small domes which are raised on drums. The zones of transitions are created with the help of corner squinches to place the domes above. The interior of the structure is left bare without decoration.

Site No. 892 : Mitranwali Hindu Temple A

This temple, being square in plan, has one entrance through its southern wall. It is built of small bricks with mud and lime mortar. The facade is decorated with motifs created in relief. The interior of the temple is a single square chamber decorated with fresco paintings. Corner squinches are created to accommodate the dome which is crowned with a finial. It is lime plastered.

Site No. 893 : Mitranwali Hindu Temple B

Like Temple A, it is also built with small bricks in lime and mud mortar. It is raised on a square plan and one metre high platform. A corridor measuring 6.4 x 6.4 m. is running around the main chamber. The main entrance is on the eastern side built through an arched way. Yoni and Lingum are placed in the south-eastern corner of the corridor. A pyramidal dome consisting of three steps, has been constructed on a low circular drum. The monument is plastered with lime. Fresco paintings depict geometrical designs on the walls and roof of the main chamber.

| 39 | Rashid Ka Thah | Dull - red ware | Dusted with mica | Two black bands on rim |
| 40 | Rashid Ka Thah | Red ware | Mud wash | Plain rim |
| 41 | Rashid Ka Thah | Dull - red ware | Red slip | Wavy, crossed lines and horizontal black bands |
| 42 | Rashid Ka Thah | Light - red ware | Light red slip, dusted with mica | Wavy lines in between horizontal black bands |
| 43 | Bilian Khil | Dull - red ware | Rough | Externally grooved |
| 44 | Bilian Khil | Dull - red ware | Rough | Knobbed lid |
| 45 | Bilian Khil | Pale - red ware | Rough | Plain rim |
| 46 | Bilian Khil | Grey - red ware | Rough | Plain pointed base |
| 47 | Bilian Khil | Pale - red ware | Dusted with mica | Wavy lines in relief |
| 48 | Bilian Khil | Dull - red ware | Mud wash | Plain rim |
| 49 | Bilian Khil | Pale - red ware | Red slip | Plain rim |
| 50 | Bilian Khil | Dull - red ware | Rough | Disc base |
| 51 | Ahlu | Red ware | Red slip | Finger grooves |
| 52 | Ahlu | Grey ware | Mud wash | Fragment of spout |
| 53 | Ahlu | Red-ware | Red slip | Black band on rim |
| 54 | Ahlu | Dull-red ware | Light-red slip | Two parallel horizontal black bands on red slip |
| 55 | Ahlu | Pale - red ware | Rough | Painted black bands and solid triangles on rim |
| 56 | Ahlu | Pale - red ware | Rough | Finger grooves. Bowl - fragments |
| 57 | Ahlu | Dull - red / grey ware | Dusted | Carinated lid-fragments. Under-fired |
| 58 | Kot Shah | Dull - red ware | Mud wash | Grooved lines below the rim, horizontal line of incised marks and stamped flower design |
| 59 | Kot Shah | Pale - red ware | Mud wash | Handled cup with disc base |
| 60 | Kot Shah | Red ware | Red slip | Net design on red slip |
| 61 | Kot Shah | Red ware | Mud wash | Incised dots below grooves |

| | | | | |
|----|----------|------------------|-------------------------------|-----------------------------------------------------------------------|
| 62 | Kot Shah | Red ware | Red slip | Black painted design on red slip |
| 63 | Kot Shah | Red ware | Mud wash | Black wavy thick lines on rim |
| 64 | Kot Shah | Red ware | Mud wash | Black bands and loop design painted in black on red slip |
| 65 | Tattla | Red ware | Mica and mud wash | Painted black band attached with solid wavy line |
| 66 | Tattla | Pale-red ware | Rough | Plain rim |
| 67 | Tattla | Pale-red ware | Rough | Plain rim of a miniature pot |
| 68 | Tattla | Red ware | Red slip | Painted net design and loops on rim |
| 69 | Tattla | Red ware | Red slip | Incised strokes |
| 70 | Tattla | Dull - red ware | Mud wash | Incised vertical lines and notches on a smoking pot |
| 71 | Tattla | Red ware | Red slip | Black triangles and squares making chess pattern and few cross lines |
| 72 | Tattla | Red ware | Red slip | Painted black band and stamped oval shaped lines |
| 73 | Tattla | Dull - red ware | Mud wash | Carinated lid - fragment |
| 74 | Tattla | Dull - red ware | Rough | Pointed base |
| 75 | Hir | Red ware | Red slip | Black band on rim and incised wavy lines and internally carinated rim |
| 76 | Hir | Dull - red ware | Rough | Base and rim |
| 77 | Hir | Dull - red ware | Mud wash | Black band on shoulder |
| 78 | Hir | Pale - red ware | Dusted with mica | Ring base of a miniature pot |
| 79 | Hir | Dull - red ware | Mud wash | Lid - fragment |
| 80 | Hir | Red ware | Mud wash | Knobbed lid-fragment |
| 81 | Hir | Dull - red ware | Rough | Plain |
| 82 | Hir | Light - red ware | Red slip and dusted with mica | Painted black bands |
| 83 | Hir | Pale - red ware | Red slip/ dusted with mica | Painted black bands, and birds motifs |

| | | | | |
|-----|-----------|-------------------------|-----------------------------------|------------------------------------------------------------------|
| 84 | Mallian | Dark - red / brown ware | Mica dust / chocolate colour slip | Wavy relief line on rim |
| 85 | Mallian | Pale - red ware | Rough | Plain rim |
| 86 | Mallian | Dull - red ware | Rough | Finger grooves |
| 87 | Mallian | Pale - red ware | Dusted with mica and red slip | Wavy line in between parallel, horizontal bands |
| 88 | Mallian | Dull - red ware | Red slip and dusted with mica | Painted wavy lines and horizontal bands |
| 89 | Harpalike | Chocolate / brown ware | Chocolate slip | Incised horizontal lines below the rim |
| 90 | Harpalike | Brown ware | Red slip | Perforated |
| 91 | Harpalike | Pale - red ware | Dusted with mica / rough | Carinated lid, broken |
| 92 | Harpalike | Pale - red ware | Dusted with mica / mud wash | Wavy line in between horizontal bands painted in black |
| 93 | Harpalike | Dull - red ware | Rough | Base of a miniature pot |
| 94 | Harpalike | Pale - red ware | Red slip | Painted black bands on rim and shoulder |
| 95 | Harpalike | Pale - red ware | Red slip | Painted black bands, net design and incised notches |
| 96 | Harpalike | Red ware | Red slip | Floral motif painted in black on red slip in between black bands |
| 97 | Bhalar | Pale - red ware | Mud wash | Incised dots in between horizontal incised wavy lines |
| 98 | Bhalar | Pale - red ware | Light red slip | - |
| 99 | Bhalar | Pale - red ware | Rough | Ring base of a miniature pot |
| 100 | Bhalar | Pale - red ware | Mud wash | - |
| 101 | Bhalar | Pale - red ware | Mud wash | Black band on rim and also below the rim |
| 102 | Bhalar | Pale - red ware | Dusted with mica / mud wash | Knobbed lid |
| 103 | Bhalar | Pale - red ware | Dusted with mica / rough | Plain lid with pointed base |
| 104 | Bhalar | Pale - red ware | Red slip | Horizontal incised lines below the rim and black bands |

| | | | | |
|-----|-------------|-----------------|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| 105 | Bhalar | Red ware | Red slip | Black painted net design in between black horizontal bands and wavy line painted in black |
| 106 | Bhalar | Pale - red ware | Rough | Incised wavy lines in between horizontal incised lines |
| 107 | Raja Bole | Pale - red ware | Plain | |
| 108 | Raja Bole | Dull - red ware | Rough | |
| 109 | Raja Bole | Pale - red ware | Mud wash | Disc base |
| 110 | Raja Bole | Red ware | Dusted with mica / mud wash | Plain rim |
| 111 | Raja Bole | Red ware | Rough | Plain disc base |
| 112 | Raja Bole | Pale - red ware | Rough | Knobbed lid |
| 113 | Dullu Kalan | Pale - red ware | Rough | A bowl with finger grooves on the base |
| 114 | Dullu Kalan | Red ware | Light - red slip | Carination below the rim and black band on light - red slip |
| 115 | Dullu Kalan | Pale - red ware | Dusted with mica / red slip | Incised dots making horizontal line below the rim and black painting between black bands. Leaf design and black band on the rim internally |
| 116 | Dullu Kalan | Red ware | Red slip | Leaf motif and black bands on the rim internally |
| 117 | Dullu Kalan | Pale - red ware | Rough | Base and rim of a miniature pot |
| 118 | Dullu Kalan | Red ware | Red slip | Cut marks on the rim and horizontal black painted lines with small vertical lines and loops below the black bands |
| 119 | Dullu Kalan | Red ware | Mud wash | A broken carinated lid |
| 120 | Dullu Kalan | Red ware | Red slip | Red painted wavy lines on white surface in between black bands |

| | | | | |
|-----|-------------|-----------------|-------------------------------------|--------------------------------------------------------------------------|
| 121 | Dullu Kalan | Red ware | Dusted with mica / red slip | Incised applique in between black painted bands |
| 122 | Dullu Kalan | Red ware | Dusted with mica / red slip | White bands in between black bands and stamped leaf design |
| 123 | Dullu Kalan | Dull - red ware | Red slip | Incised vertical strokes on the rim and leaf motif painted in black |
| 124 | Rai Kalan | Pale - red ware | Rough | Base and rim of a bowl |
| 125 | Rai Kalan | Red ware | Red slip | Horizontal black bands on the rim |
| 126 | Rai Kalan | Pale - red ware | Red slip | Painted black bands, semi-circle and net designs in black |
| 127 | Rai Kalan | Dull - red ware | Red slip | Incised oblique lines |
| 128 | Rai Kalan | Dull - red ware | Dusted with mica / light - red slip | Black painted zigzag and crossed lines below black bands |
| 129 | Rai Kalan | Pale - red ware | Rough | Stamped four - lined eyes motif |
| 130 | Kahana | Pale - red ware | Mud wash | |
| 131 | Kahana | Red ware | Red slip | Black painted wavy lines and bird motif |
| 132 | Kahana | Pale - red ware | Mud wash | Horizontal band of incised lines |
| 133 | Kahana | Red ware | Red slip | Wavy lines in between horizontal black bands |
| 134 | Kahana | Red ware | Rough | |
| 135 | Kahana | Dull - red ware | Red slip | Hatches and diamond shape designs in between black bands |
| 136 | Kahana | Red ware | Mud wash | Wavy lines and animal figures painted in black |
| 137 | Kahana | Red ware | Red slip | Incised dots on the rim |
| 138 | Kamhahan | Dull - red ware | Black slip | Grooved lines below the rim |
| 39 | Kamhahan | Dull - red ware | Rough | - as above - |
| 140 | Kamhahan | Pale - red ware | Mud wash | Incised wavy lines and cross hatches in between incised horizontal lines |
| 141 | Kamhahan | Dull - red ware | Rough | Finger tipped on the rim and carination below |

| | | | | |
