An Examination of a Hoard of 1171 Silver Punch-marked Coins of the Older Class, Long-Bar Coins and Minute Coins found in the Bhir-Mound at Taxila in 1924 and a Hoard of 167 Debased Silver Punch-marked Coins of the Later Class found in the Bhir-Mound at Taxila in 1912.

PREFACE

TWO Separate Hoards of Silver Punch-marked Coins are described in this Memoir. They were both found in the Bhir-Mound at Taxila, the Larger Find of 1171 silver coins of the Older Class in 1924, which are described in Part I and the Smaller Find of 167 debased-silver coins of the Later Class in 1912, which are described in Part II. In each case the date of the deposit of the hoard is fixed by an extraneous coin which it contained; the Larger Bhir-Mound Find by two gold coins of Alexander the Great and one of Philip Aridaeus, in mint condition, at about 317 B.C., and the Smaller Bhir-Mound Find, by a coin of Diodotus, at 248 B.C.

I took up the Examination of the Larger Find of the Older coins in 1928. The examination was made from the photographs of the coins on the 38 Plates, (Plates IV-XLI) now published. The coins had been arranged in the serial order given on the Plates, and photographed by the Archaeological Survey of India. The arrangement of the coins had been made according to whether they were rectangular (Nos. 113 to 926. Plates IV-XXXII) or round (Nos. 927 to 1171. Plates XXXII-XLI) and the coins included in each of these classes were arranged serially according to whether the reverse was blank and to the number of marks on their reverse.

Neither of these considerations is a scientific or actual basis for the classification of Punch-marked coins; the first, because Punch-marked coins bearing the same fixed group of marks and therefore constituting an identical coinage occur in both the rectangular and the round form, and the second because the difference in the number of the marks on the reverse is merely an indication of the length of time that the particular coin had been in active circulation. The classification of the coins, which is based on the fixed groups of the marks on their Obverse, is therefore entirely independent of and differs from their serial order on the Plates, which is as though the coins had all been thrown into two heaps, those that are rectangular or polygonal in shape into the one, and those that are "round" into the other, and, in each case, irrespective of the different classes of the coins themselves contained in those heaps, so that any two consecutive coins in their order in the list, may have no connection whatever with each other.

In the List of the Coins, in which the serial number of the coins on the Plates is followed, I have noted the Obverse Marks and the Reverse Marks on each coin, and have also given the Class of the Coins to which each coin belongs. The different Classes of the coins are given in Appendix C; and in Appendix D, is given the serial number of each coin comprised in each Class. Also in Appendix E, is given the serial number of each coin on which each of the Obverse Marks occurs. From these Appendices, every coin in each Class can be referred to on the Plates of the coins.

My object in these detailed particulars in these and the other Appendices has been, in conjunction with the Plates of the Coins, to place the reader in the position of having the actual coins before him, so that he can draw his own inferences, and every conclusion I have arrived at can be tested independently.

I made the examination of the Larger Find of the Older Coins in 1928. The List of the Coins and most of the Appendices were completed in that year, and the remainder, were completed in the following year, with the exception of Appendix H on the Resemblances of certain of the Marks on the Coins to Figures and Signs on the Indus Seals found at Mohenjo-daro and Harappa, which was done later. Since then, two important works on Punch-marked coins have appeared, the first by Mr. Durgā Prasād¹ in 1935, and the second, Mr. Allan's Catalogue of the Coins of Ancient India in the British Museum, in 1936. Neither of these, however, has necessitated the alteration in any respect of the Classification which I had made of the coins, nor of any of the conclusions which I had arrived at. I have referred to both these works and to other subsequent writers on the subject, where necessary.

The Find of the Older Coins will furnish a future Standard of Reference for the Older Class of Punch-marked Coins, as the coins extend over a longer period and contain more varieties, and are in every respect more complete than the British Museum specimens of the Older Coins.

The coins bear a group of *five* marks on the Obverse. There is another class of the Early Punch-marked coins which only bear *four* marks on the Obverse. They have been found in an area suggesting their connection with the ancient Pre-Mauryan Kingdom of Kōśala. I examined a hoard of 1014 of those coins which were found at Paila, in the Kheri District of the United Provinces, in 1912. I classified and forwarded them, with a Note on them, to the Lucknow Museum in 1928, where they now are. Mr. Durga Prasad refers to several coins of that Type, in his work referred to above.

I received the Photographs of the Smaller Find of 176 of the Later Coins, described in Part II, in 1936, and made the examination of this Find in that year. These coins are of two Classes only. Five coins, though of the same locality as the others are of a different character and appear to be a different "coinage" of that locality. The remaining 171 coins are of one Class, and are chiefly of interest on account of their abnormally high weight, (due probably to the debased metal,) and from the different varieties, mostly debased and crude imitations, of the "Taxila Mark" on the Reverse.

It was originally intended that the description of both these Finds should be included in Sir John Marshall's Work on Taxila. But the mass of the materials proved too great for inclusion, and I have therefore written a separate Resumé of the conclusions which I have arrived at, which will be included in that Work.

E. H. C. WALSH.

10th February 1938.

PUNCH-MARKED COINS

PART I

The two Hoards of Silver Punch-marked Coins which are examined in this Memoir were both found in the Bhir-Mound at Taxila, and in each case the date of the deposit of the hoard is fixed by other coins which were contained in them. The most important is the hoard of 1167 Silver Coins found in 1924, of which 33 are Long-Bar Coins, 79 are Minute Coins of a kind which were hitherto unknown, and 1055 Silver Punch-marked Coins of the Older Class. The date of the deposit of this hoard is fixed, from a coin of Philip Aridaeus, contained in the hoard, at about 317 B.C.

The other Hoard of 176 debased Silver Punch-marked Coins of the Later Type was also found in the Bhir-Mound in 1912. The date of the deposit of this hoard is fixed from a coin of Diodotos, contained in the hoard at about 248 B.C.

These two dates are of great importance, as fixing the relative dates of the Older and Later Class of Punch-marked Coins.

THE HOARD OF 1167 SILVER PUNCH-MARKED COINS OF THE OLDER CLASS, FOUND IN THE BHIR-MOUND AT TAXILA IN 1924.

The hoard of Punch-marked Coins of the Older Class found in the Bhir-Mound at Taxila is of outstanding importance, owing to the fact that, it is possible to affix a definite date to the deposit of this hoard, and, from it, to assign the date of the latest Punch-marked Coins in the hoard, and from them to estimate the dates of the other coins contained in it.

The coins were found in an earthenware *ghara* near the eastern limits of the Excavations on the Bhir-Mound, about 6 feet below the present surface, that is, in association with the second stratum, which had already been judged to belong to the 3rd or 4th Century B.C. They are of various shapes and sizes. Thirty-three are oblong bent bars, from $1\frac{1}{4}$ to 2 inches in length, seventy-nine are tiny circular pieces punched on one side only, and so small that one wonders how they could ever have passed from hand to hand and been used as an effective currency. The remaining 1055 coins are the usual type of Punch-marked Coins of square, rectangular, polygonal, round and oval shape. In the hoard were also three Greek gold coins fresh from the mint, two of Alexander the Great, and one of Philip Aridaeus, besides a well worn Daric of the Persian Empire. The issues of Alexander and Philip bear on the obverse a head of Alexander wearing the lion-skin, and, on the reverse, Zeus seated on a throne

with eagle on his right hand and sceptre in left. Thus they closely resemble one another, though the legends and monograms on the reverse differ. The special interest attaching to the find of these freshly minted coins of Alexander and Philip Aridaeus is that, apart from the fact that it is the first recorded find of these coins in India, it definitely confirms the previous conclusions as to the period when Indian Punch-marked issues were in circulation. It also shows the oblong bars to have been in use simultaneously with the square, round and polygonal pieces.¹

Philip Aridaeus died in 317 B.C. That date may therefore be taken approximately as the date of the most recent of the present Punch-marked Coins. The coins in the hoard, however, vary considerably in age, as is shown by their wear, the marks in some being almost worn out, by the great number of Marks on the reverse of certain coins and by loss of weight.

THE LONG-BAR COINS.

There are 33 Long-Bar Coins, from 1½ to 2 inches long. They all bear the same mark on the obverse, which is impressed twice on each coin, one at each end of the bar. This symbol, (Fig. A at the bottom of Plate I) consists of six *Vajras*, "Thunderbolts", or Tridents, *Trisula*, round a central circle, from which a straight line also projects, which would appear to be a pole for carrying the emblem, and the mark would, thus, appear to represent a standard. This mark does not occur on any of the other coins. The reverses of these coins are blank, but small marks of the same character as the reverse marks on the punch-marked coins, have been punched as counter-marks on the obverse of 11 of the coins (Nos. 1, 3, 4, 6, 11, 13, 14, 20, 28, 30 and 33) on the blank part of the coin between the two obverse marks. These are shown in Figs. i to xvi, below the Reverse Marks, on Plate III. It is interesting to note that seven of them correspond to some of the counter-marks on a hoard of Persian Darics, obtained by Mr. J. C. Milne in Asia Minor.²

There is one of the coins that weighs 169.5 grains, three weigh 172.3 grains, two weigh 173 grains, twenty-four vary from 174.9 to 177.9 grains, two are over 178 grains and one coin (No. 16) weighs 179.4 grains. Their metrology is considered later on.

There are nine coins of this Bar-type in Mr. Allan's Catalogues of the Coins of Ancient India in the British Museum³ and nine in the India Museum⁴. As all of these coins which are of known provenance come from the area over which Persian influence extended, Mr. Allan considers that the date of their issue may well fall within the period of Persian influence in India or in Afghanistan, and would suggest that they belong to the fourth or even fifth century B.C., and considers them to be double sigloi or 'Persic Staters'.

³ Catalogue of the Coins of Ancient India. By John Allan, M.A., F.S.A., 1936, pp. xv-xvii, clxi, and 1, 2.

⁴ Catalogue of the Coins in the Indian Museum, Calcutta, Vol. I, p. 136. Nos. 4-6 and six in the Supplementary Catalogue (1923), p. 8.

In the British Museum there are also two smaller coins (p. 2, Nos. 10, 11) which bear a similar mark, of weights 43.5 and 38.5 grains which may be Half-Sigloi and six of from 19.0 to 19.9 grains (pp. 2-3), which may be Quarter-Sigloi.

The similarity of weight with the Persian standard, however, is not, of itself, sufficient evidence to attribute these coins to a Persian coinage, as the Śatapatha Brāhmaṇa refers to an ancient Indian coin the *śatamāna*, the weight of which was 100 *ratis*,¹ which, at 1.8 grains for the *rati*, gives a weight of 180 grains. The Bar-Coins may, therefore, be indigenous Indian coins of the Indian Standard.

THE MINUTE COINS.

There are 79 Minute Coins (Coins No. 34-112). They are of a type which had not, up to then, been found. Coins of this type have been subsequently found at Thathari in the Central Provinces in 1925, from which there are four coins of this kind in the British Museum.²

They vary in size from .15 to .2 of an inch, and their weights vary from 2.3 to 2.86 grains. The theoretical weight of the silver *Kārshāpaṇa* or *Purāṇa*, the silver Punch-marked Coin, based on Cunningham's estimate of the weight of the *rati*, is 58.56 grains, which is 20.47 times 2.86 grains, the maximum weight of these minute coins. The Nārada-smṛiti (App. 57 ff.) states that in the South the *kārshāpaṇa* is a silver coin and in the East is equal to 20 *pañas*. It also gives the following equations:—4 *kākaṇṣ*=1 *māsha* or *pala*, 20 *māshas*=1 *kārshāpaṇa* or *añḍikā*.³ These coins, therefore, appear to be silver *pañas* or *māshas* of 2 *ratis*. The Arthaśāstra also states that 16 silver *māshas* are equal to one *dharāṇa*.⁴

The coins bear a single mark on the obverse and are blank on the reverse. The obverse marks are shown in Figs. B-K, at the foot of Plate I. In most cases it is a variety of the Six-Armed-Symbol of the Punch-marked Coins (Figs. 1a-1v on Plate I). Owing to the minute size of the coins, only a portion of the mark appears on the coin, but, as far as they are decipherable, there are five varieties of this mark (Figs. B-F). It is not possible to say what the object, indented towards the centre, in variety D may be. It may possibly be the tail of a fish, as a fish forms a part of the Symbol in the varieties Figs. 1h, 1hh, 1q, 1s, and 1v. The variety on each coin, as far as decipherable, is noted in the List of the Coins. The varieties are as follows B—Three Arrows and three Pellets alternately, best seen on coins 48 and 49; C—Arrow, Pellet, Taurine, Pellet, Arrow, Pellet, best seen on coins 59 and 104; D—Arrow, Fish [?], Square, Pellet, Fish [?] Pellet, best seen on coin 60; E—Arrow, Taurine, Taurine, Pellet, ××, on coin 96; F—Arrow, Oval, Arrow, Taurine, Oval, Taurine, on coin 99. The 'Caduceus' occurs in two varieties, H, with the central Bar plain, on coin 56;

¹ "Ancient Indian Numismatics" by D. R. Bhandarkar (Calcutta 1921), pp. 56-57.

² Allan, *op. cit.* pp. lii, 286-7, Pl. XVI, Nos. 18, 19.

³ Antiquities of India, by L. D. Barnett (1913), p. 207.

⁴ Kautilya's Arthaśāstra, translated by R. Shamasastry, p. 127.

and I, with the Bar scalloped, on coins 42, 53, and 64. G—Six Pellets round the centre, on coins 84 and 112. Also a mark which appears as an Oyal above a Crescent, J, on coin 34 and an Arrow above a Crescent, K, on coin 110, though the two last may be portions of the Six-Armed Symbol, which alone appear on the coin.

The fact that these minute coins bear the Six-Armed-Symbol the characteristic symbol of the Punch-marked Coins definitely links them as a constituent part of that coinage.

THE GENERAL CHARACTERISTICS OF PUNCH-MARKED COINS.

Before considering the significance of the marks on the present coins, it is necessary to consider briefly the general characteristics of punch-marked coins.¹

The term "punch-marked coins" has been adopted by general consent to denote the flat pieces of silver and copper which are marked with various devices impressed on them with a punch, and which formed the earliest coinage of India. They were coined both in silver and in copper, the standard of their weights being different in the two cases. By far the greater number of those that have been found are in silver. The silver coins were cut out of a sheet of metal with a chisel. The copper were, in the same way, cut out of a thicker bar. In this respect they differ from the earliest coins of Asia Minor and of Greece, which were a globule of metal, which must have been specially cast for the purpose, impressed with a punch. In shape they are either oblong, square, oval, or rounded. They are known by the names of *kārshāpaṇa*, *kāhāpaṇa*, *dharaṇa*, and *purāṇa* (= "ancient"). The Jataka stories, although they are of later date, speak of these coins being current in the lifetime of Buddha, which would carry them back to 600 B.C.

The oblong, square and round forms of the coin were current at the same time and there was no distinction between them, as is shown by the occurrence of both forms together in previous finds and in the various classes of the present coins.

As silver is not found in India, it must have been imported from the West, and probably in the form of beaten-out plates, as Jeremiah (c. 629. B.C.) says that "silver spread (*viz.*, beaten) into plates is brought from Tarshish."² It seems probable that this form of the imported silver may account for the form of this coinage. Herodotus mentions this import of silver and the rate of its exchange with the Indian Gold-dust.³

The essential part of the coinage was the *rūpa*, or marks stamped on them. It is these marks, stamped on the obverse side of the coin, which constituted the coinage.⁴

¹ Indian Punch-marked Coins—A Public Coinage issued by Authority, by E. H. C. Walsh, J. R. A. S. Centenary Supplement, 1924, pp. 175-189.

² Jeremiah X, v. 9; C. A. I. p. 6.

³ C. A. I., p. 9.

⁴ Dr. D. R. Bhandarkar refers to the expressions such as *rūpam cchinditvā kala māśako*, or *rūpam sāmuffhāpetvā kala māśako*, used by the Commentary *Sāmanta pādīkā* on the *Niaggiya pācitiya*. 2. "Excavations at Benagar," by D. R. Bhandarkar, M.A., *A.S.I.R.*, 1913-14, p. 210.

The case of the marks on the reverse of these coins is different, and will be considered later. As will be seen, they would appear to be the private marks of moneyers, or in some cases, where they correspond to obverse marks, to be the mark of locality in which the coin was recognized for circulation.

The Artha Śāstra¹ in referring to the duties of the Collector General of Revenue, mentions *rūpika*, the meaning of which appears to be premia or seignorage on coins. It also enumerates in detail the duties of the Superintendent of the Mint.

As the Artha Śāstra, deals with matters of the Mauryan age, coinage was then a royal prerogative carried on in the royal mints. The marks on the coins would therefore primarily be royal or state marks and not the marks of individual moneyers through whose hands the coins passed.

It would also appear, from the duties of the "Examiner of Coins," that besides the royal mints there were other authorities who were authorized to issue coinage. Such authorities may have been the *Sanghas*, Communities of groups of villages, *Gaṇas*, tribes or clans or *Janapadas*, self-governing provinces, or *Naigamas*, either self-governing towns, or guilds of merchants. Professor D. R. Bhandarkar has fully examined this point in his Lectures on Ancient Indian Numismatics,² and refers to Pāṇini's Sūtra *Janapada lup*, according to which the name of a tribe or people serves also the name of the country occupied by them.

As will be seen later, such coins would also appear to bear the royal marks as well as the separate marks indicating the special coinage.

It may be suggested, to account for a constant group of marks, that one mark, may represent the state, one the king, or local Government, one the place where the coin was struck, and perhaps one a religious mark recognizing the presiding deity; also the master of the mint may have had his mark, which would fix his responsibility for the coin, and the additional varying marks may have been those of the *saṅghas*, village communities, or *Janapadas* or *naigamas* in which the coin was current.

A sūtra of Pāṇini runs as follows: "*Sangh-āṅka-lakṣaṇeshv-añ-yañiñām-añ*," the meaning of which is "*añ*-suffix takes place in nouns ending in *añ*, *yañ* *añ* in the case of (i.e., to denote) *aṅkas* and *lakṣaṇas* of *saṅghas*"; which shows that a *Sangha* had its *aṅka* or *lakṣaṇa*, which latter Mr. Jayaswal would identify with the *lāñchhana*, or heraldic crest of later Sanskrit.

The word *Rāj-āṅka*, "the royal mark," or the "King's arms", occurs in the Artha Śāstra, and would therefore appear to be the personal mark of the ruler. In the same way, while each *saṅgha* had its own *lakṣaṇa*, the elected body of rulers for the time being may have had its own personal *aṅka*, which remained in use during its term of office and was given up when that body went out of office. This would account for the large number of the varying fifth mark which are found on punch-marked coins.

With reference to the signification of the marks, Mr. Bhandarkar quotes a passage from the *Vissuddhimagga* of *Buddhaghosha* on the subject, which shows

¹ Kautilya's *Artha Śāstra*, translated by R. Shamasastry, B.A., M.R.A.S., Government Oriental Library Series. *Bibliotheca Sanskrita*, No. 37, pt. ii, Bangalore Government Press, 1915.

² Lectures on Ancient Indian Numismatics by D. R. Bhandarkar, 1921, pp. 5-11.

that a shroff would be able after examining the coins to decide "which of them were struck at which village, borough, town, mountain, and river bank, and also by what mint master. It is thus clear that every place whose coinage was issued had its own distinguishing mark stamped on it, and in confirmation of it may be noted that on the majority of *kārshāpaṇas* unearthed at Besnagar the device of the river is prominently noticeable, indicative probably of the Vetravati (Betwā). Consequently, we may safely conclude that these *kārshāpaṇas* which have the mountain or the river on them were struck at those places, and in order that the different mountains and rivers may be distinguished we find them differently figured. Figs. 46-52 on plate VIII of Mr. Theobald's article (*JBAS.*, Volume LIX, Plate I), *e.g.*, shows how an attempt is made to distinguish one mountain from another on *kārshāpaṇas*."¹

The *Vissuddhimagga* was written in Ceylon at some date before A.D. 450, and may therefore refer to punch-marked coins of a much later date, as this form of coinage continued in Southern India much later than in other parts of India. The principles of the marks, however, would be continuous from the earlier coins.

The animals, which occur on punch-marked coins may be the *lakṣhaṇas* or emblems of the *saṅghas*, *gaṇas janapadas* or *naigamas*, or be the *aṅkas* of particular rulers or governing bodies; for instance, the *Mahābhārata* says that the standard of the Brihadratha dynasty of Magadha, which came to an end about 727 B.C., bore a bull on it. They may also indicate the names of places.

If the early Punch Marked Coinage was the outcome of the early Dravidian civilization, there may, possibly, be a connexion between the animals adopted as *lakṣhaṇas* and the totems of tribes or clans.

The designs of the punch-marks are in relief on a sunk incuse. The Marks on the Obverse are punched much deeper into the coin than those on the reverse, and, on coins that are unworn, the edges of the marks and of the incuse is distinctly different from that of the reverse marks, being more rounded, and they would appear to have been stamped in the metal when heated, whereas the reverse marks were stamped in the coin when current.

THE OBVERSE MARKS—THE GREAT NUMBER OF OBVERSE MARKS.

The number of different Obverse Marks which occur on Punch-marked coins is very great, and each new find adds some fresh ones.² The number of Obverse Marks on the present coins, shown on Plate I, is 137.

¹ D. R. Bhandarkar, M.A., "Excavations at Besnagar," *ASIR*, 1913-14, p. 212.

[NOTE.—Hill marks, such as those figured by Theobald, occur on the Garho Ghat coins, Pl. XIX, Figs. 3-5c. They do not occur on the Patna coins, which is as might be expected, as there are no hills anywhere near Patna.]

² W. Theobald recorded 227 Obverse Marks which occur on the various punch-marked coins collected by Sir Alexander Cunningham—Though some of them are, actually, Reverse-Marks.

Notes on some of the symbols found on the Punch-marked Coins of Hindustan, and their relationship to the archaic symbolism of other races and distant lands—By W. Theobald. J. A. S. B. Part I, No. 3, 1890, pp. 182-268. Plates VIII to XI, and J. A. S. B. Part I, No. 2, 1901.

And Mr. Durga Prasad has recently illustrated 244 Marks—in a very complete review of the subject. *Classification and Significance of the Symbols on the Silver Punch-marked Coins of Ancient India.* Numismatic Supplement No. XLV, J. R. A. S., 1934, No. 3. Plates 22 to 24. Though 178 of these are Reverse-Marks, Plate 25. Many of these marks, in each case, occur on the present coins.

The number of different marks which occur on reverse is far greater than the obverse marks. On the present coins, including definite varieties of the same mark, there are 510, as shown on Plates II and III.

A GROUP OF FOUR CONSTANT MARKS AND A FIFTH MARK WHICH VARIES.

As in the case of all punch-marked coins, the marks on the Obverse of the present coins are in fixed groups. And, as in the case of most punch-marked coins, the groups consist of four constant marks with a fifth mark, which varies. From this it may be inferred that coins bearing the same constant group of marks are the coinage of one area.

I only know of one find of punch-marked coins in which a constant group of four marks only occur without the fifth varying mark. This is a find of 1245 silver punch-marked coins found at Paila in the Kheri district of the United Provinces in 1912.¹ Of these, 1014 were subsequently sent to me by Government for examination, and after their classification I forwarded them, with full description in 1928, to the Lucknow Museum, where they now are.

THE SIX-ARMED SYMBOL.

There are two marks which occur on every one of the present coins. These are shown as Figs. 1 and 2 on Plate I.² The first is a mark consisting generally of three arrows, alternately with three other symbols round a central ring with a boss in the centre; the varieties of this mark on the present coins are shown in Figs. 1a to 1v. Several varieties of this symbol are given by Theobald, who notes that its great antiquity is shown by the fact that it was found by Schliemann in the lowest stratum at Troy, where it occurred on Terracotta whorls mixed with stone implements.³ In previous papers⁴ I have, for this reason called this Mark, for distinction, the "Troy Mark," without thereby implying any connection between Troy and the Punch-marked coins. A more suitable name, however, is "The Six-Armed Symbol," which is given to it by Mr. J. Allan in his Catalogue of these coins in the British Museum,⁵ and which should now be generally adopted. The other Mark, Fig. 2, is the Sun, which is represented as a circle with a Pellet in the centre, and with rays round it. These two marks are found on almost all Punch-marked coins of the Older Class and on most of those of the Later Class, at present known. These two Marks, therefore, indicate something inherent in this coinage generally.

I only know of one find of the Older Class of Punch-marked coins on which they do not occur, namely the find of 1014 coins found at Paila, already referred to, on which neither of these marks occur, but in their place there are two marks

¹ Since then, Mr. Durga Prasad, has noted and illustrated 25 coins of that type, which have also been found in an area which appears to suggest their connection with the ancient Kingdom of Kosala. *Op. cit.* Numismatic Supplement XLV. J. A. S. B., 1934. Plate 31.

² Mark 1, is omitted on four of the coins, viz., Nos. 188, 209, 264 and 1079. But in each case the remaining four marks on the coin are the same as those of their Class, and the absence of Mark 1, would appear to be an omission.

³ J. A. S. B., Part I, 1900, pp. 215-217 and Plate IX, Figs. 91-98. Schliemann's Troy, p. 80, Pl. XLIII, Fig. 458, and p. 313, Fig. 227.

⁴ J. B. O. R. S., 1919, pp. 16-72; J. B. O. R. S., 1919, pp. 403-404; J. R. A. S., 1924 (*Centenary Supplement*), pp. 175-189.

⁵ Catalogue of the Coins of Ancient India in the British Museum by J. Allan, 1936.

which occur on every one of those coins, namely (1) a mark of three curved objects round a central boss, and (2) a Taurine, either enclosed in a shield, or plain. The Paila coins, as already noted, are also unlike other Punch-marked Coins in having only four constant marks on the obverse.

With regard to the varieties of the Six-Armed Symbol, mark 1, it is to be noted that the varieties of the Mark are not promiscuous or interchangeable, but that the particular variety which occurs on each class of coins is as a rule constant on that class of coins, as will be seen from the Table C of the classes of the coins. Where it varies on the same class of coins, it therefore indicates a different issue of that coinage.

The different variety of the Six-Armed Symbol has been noted in the List of the Coins in every case in which it is identifiable; where the particular variety is not identifiable, owing to only a part of the mark being on the coin, or its being over stamped or too worn, the Mark is entered as 1, which indicates that it is one of the varieties, though which it is cannot be determined.

THE VARIETIES OF THE SIX-ARMED SYMBOL.

Twenty-five varieties of this Mark occur on the coins, as shown on the Plate of Obverse Marks, (Marks 1a to 1v) and another variety, 1w, which is not shown on the Plate, which is similar to 1a, but with a Triskelis in the Ovals in place of the Taurine. They are described in Table B (Appendix II). The classes of the coins, to which each variety specially belongs are given in Table D (Appendix IV.) Several of these varieties occur on only a small number of the coins. Thus, varieties 1d, and 1l, occur on only 8 coins; 1e and 1s, on 7 coins; 1b, and 1m, on 5 coins; 1g, on 4 coins; 1t, on 3 coins; 1gg, 1kk, 1p, and 1v on 2 coins; and 1hh, 1j, 1n, 1q, 1r, and 1w, on only single coins. The forms which occur on the largest number of coins are 1a, 1o, 1h, 1f, and 1u.

Variety 1a, occurs on 642 of the coins, of which 449 are coins of the "Hare-Hill" area, Class A; and on 41 of the coins which bear other "Hare" Marks, Class B; and on 100 coins of the "Bull-Hill" area, Class C; and on 38 coins of the "Island-Tank" area, Class M, and some smaller Classes.

Variety 1o, occurs on 148 coins of the "Beetle" Tank area, Class D; variety 1h occurs on 55 coins of various Classes; Variety 1f, on 43 coins, 1c, on 37 coins, and 1u, on 22 coins of various Classes. Variety 1b, occurs on only five coins—namely one coin, Class P. I., one coin, Class Q. 7, and on the Later Obverse of three of the Double-Obverse coins. This is the form of the Symbol which continued in use on the Later Coins, nearly all of which bear this form. The Classes of the coins on which each variety occurs are shown in Table E.

In cases where a different variety of the Symbol occurs on certain of the coins of any Class, it therefore, shows a separate issue of that coinage. Certain varieties occur on Classes of Coins which are clearly older than other Classes. The variety of the Symbol on a particular class of coins may therefore provide a means of fixing the relative age of different Classes of the coins, as in the case of Britannia on the penny, on which the particular variety fixes the date of the coin from the time of Charles II to the present day.

THE "BEETLE"

In variety 1*d*, an object resembling a beetle, takes the place of the Taurines or Ovals in Varieties 1*a*, 1*b*, and 1*c*. This object also occurs in several other marks on the coins, *viz.*, Marks 8*a*, 8*b*, 8*c*, 8*d*, 9*b*, 9*c*, 9*d*, 17*f*, 27, 48, and 49, in which it is larger and clearer than in Mark 1*d*. It can be clearly seen, for instance, in Mark 8*a*, on coins 252 and 328 and Mark 8*c*, on coin 605 and in Marks 8*b* and 8*d* on coins 1131 and 1150. It differs from a fish, which appears in Varieties 1*h*, 1*q*, 1*s*, and 1*r*, and in other Marks, Nos. 25, 38, 39*a*, 39*b*, 51*a*, and 51*b*, as the fish is always pointed at the head and has a pointed forked tail, and the fins slope backwards. In the object, on the other hand, the two excrescences at the one end are rounded, the opposite end is not pointed, and the "legs" stand out at right angles. Also, where the fish occurs in the three varieties of Mark 1, its head is always pointing outwards, and its tail to the centre, so, by analogy, the head of this object would point outwards and the two rounded excrescences are at its head. It appears to be an aquatic creature, from the Marks in which it occurs—; in Marks representing Tanks, and in Marks 8*c*, and 8*d*, together with an object which would appear to from the fins on its tail, to be an eel. I have called this object a "Beetle," by which name it is referred to throughout. The difference in the form of the Fish can be clearly seen in Mark 38 on coin 833.

THE ORDER OF STAMPING THE MARKS ON THE COIN.

The order of the stamping of the marks can be seen from which marks are stamped over others. From this it can be seen that marks 1 and 2 were stamped on the coin before the other marks. Mark 1 is stamped over another Mark on eleven coins, of various classes, but in no case is it stamped over Mark 2. Mark 2 is stamped over another mark on 35 coins, of various classes, as is noted in the List of the Coins; and on eleven of these it is stamped over Mark 1. Thus these two marks are only rarely found stamped over another mark.¹

Mark 2, is stamped twice on two coins, Nos. 643 and 799.

THE MARKS OF THE BULL, AND THE ELEPHANT.

There are also two other marks which are of very general occurrence on all punch-marked coins, and therefore must be of general significance. These are the Elephant, fig. 7. and the Humped Bull, fig. 3.

The Humped Bull by itself, Mark 3, must be distinguished from the Humped Bull standing on a Hill, Fig. 3*b*, which is a Hill-Mark, and which indicates some hill or group of hills, specially designated by the Bull. It may be a religious Mark, indicating the worship of Shiva, with whom the Bull is associated.

As the elephant, which is the vehicle of Indra, is a mark of sovereignty, this mark may indicate the coinage of the king, as distinguished from that of the other authorities who had the right of coinage.

¹ Mark 1 is stamped over another mark on the following eleven coins: Over mark 3, on coins 767 and 1055; over 3*b*, on 141, 295 and 708; over 4, on 324; over 7, on 833; over 8*a*, on 146; over 12*a*, on 750 and 1049; over 34, on 1133; over 38, on 833.

Mark 2 is stamped over Mark 1, on the following eleven coins: Nos. 208, 246, 263, 452, 685, 750, 852, 976 and Double-Obverse Coins 852-A, 877-A, 883-B, and in eight cases over Mark 7, the Elephant.

The above supposition is supported by the fact that the elephant occurs on 988 of the Paila coins, and the Bull on 23, on 19 of which it is in conjunction with the elephant; and no other of the Obverse marks on the present coins appear on those coins.

The Elephant appears on 500 of the coins, as shown in Table E (Appendix V), on the coins of 28 different Classes. It appears on the Oldest Obverses of the Double-Obverse Coins, viz., coins of an older issue which have been subsequently re-stamped and re-issued, a list of which is given in Table A, as well as on the latest coins of the find, which from their appearance, weight, and the absence of reverse marks, were in mint condition when they were placed in the hoard, a period that may well cover hundreds of years.

The Elephant follows the same general type, Mark 7, except on one coin, No. 869, on which it is as shown in Mark 7b. For the above reasons the Elephant and the Bull cannot be taken as distinguishing marks indicating the area in which the coins were current, as they appear on coins from all localities.

The horns of the Bull on the older class punch-marked coins *always* curve forwards, namely, since the Bull faces to the right, *curve to the right*. There appears to be a reason for this. The tusks of the Elephant, curve upwards, namely, since the Elephant faces to the right, *curve to the left*. For this reason the marks of the Bull and the Elephant can be unmistakeably distinguished, when, as is frequently the case, only a part of the Mark is distinguishable on the coins, and is often the only means of distinguishing which of these two Marks it is that appears on the coins. It would seem that this may be the reason for this invariable convention.

THE ELEPHANT.

That the Mark occurs as a Fifth-Mark is shown by the fact that 391 coins of class A, (of "Hare-Hill" area) have a fixed group of four marks:—The Six-Armed-Symbol, the Sun, the Locality Mark of a Hill designated by a Hare on it, and the Bull. Of these 207 have also the elephant, whereas the remaining 184, while having the above fixed group of four marks, have varying fifth marks in place of the Elephant. Similarly 101 coins constituting Class C, (of "Bull-Hill" area) bear a fixed group of four marks, the Six-Armed-Symbol, the Sun, the Locality Mark of a Hill designated by a Bull on the top of it, and the Mark Fig. 21. Seventy of these have the Elephant as the Fifth-mark, while the remaining 31 coins have four different Marks in its place. Similarly, the 147 coins which constitute Class D ("Beetle Tank-Hill" area) have a fixed group of four marks, the Six-Armed-Symbol, the Sun, the Locality Mark of a Hill designated by a Tank below it containing two aquatic creatures; and the "Hour-Glass" Mark, Fig. 5, above. Seventeen of these have the Elephant as the fifth mark, but the remaining 130 coins, while bearing the same fixed groups of four marks, have other marks in place of the Elephant. The same applies in the case of other Classes in which the Elephant occurs.

THE DOUBLE OBLVERSE COINS.

Amongst the present coins there are 64 coins which bear a group of Obverse Marks on each face of the coins. The group of Marks on the one face are older

and more worn than on the other. There are also Reverse Marks or faint traces of them on each face. From this it appears that these coins were originally, issued with the older of the two Obverses, the other side being its Reverse, was blank, on which successive Reverse Marks were impressed. After these coins had become worn from long use they were re-issued, the Obverse Marks of the Second issue being stamped on the Reverse of the original coin, over such worn Reverse Marks as it bore. This was the Obverse of the Second Issue and the Obverse of the former coin became the Reverse of the subsequent coin, and the Reverse Marks of that coin were subsequently stamped on it.

A List of these coins is given in Appendix I, Table A, and their Obverses which occur on the Plates of the Reverses of the coins are marked with a star to distinguish them.

As shown by their very worn appearance and by their weights these were all very old coins at the time of being placed in the hoard, probably some hundreds of years, and are of importance in this respect as showing the long continuance of the marks which occur on the Older Face of the coin.

The Six-Armed-Symbol and the Sun, Marks 1 and 2 occur on all those coins, and had therefore been the universal marks for hundreds of years. Also the Elephant Mark 7 occurs on 25 of the 64 coins, among the marks that can still be identified, and is possibly worn out on others. Some Marks occur only on those coins and not on the later coins.

The earlier and later Obverses of these coins can be judged, apart from their relatively worn condition, by the fact that the Marks of the later Obverse are stamped over the Reverse marks of the earlier issue, while the Obverse Marks of the earlier issue are over stamped by reverse marks of the later re-issue. The length of wear of these coins is shown by their weight; only two coins (Nos. 838 and 839) weigh 52 grains, the others vary from 47 grains upwards, fifty of them being under 50.5 grains.

For Example, the *Bow-and-Arrow* on coin 919A, is the Reverse Mark No. 157 as is clear from its form and from its design and its smaller size (one-half of the Obverse Mark) and, as it is *overstamped by Mark 1*, it was certainly a Mark on the old Reverse of that coin before it was re-stamped as its present Obverse. The Obverse Mark of the Bow-and-Arrow Mark No. 64 occurs only on the older Obverses, on coins, 877 B and 892 B and this mark was a *small-size* Obverse Mark stamped on the original Reverse of that coin, to authorise its circulation in the Bow-and-Arrow-Area-represented by coins 877 B and 892 B. It proves the great antiquity of this Mark in coinage, which continued to be used until much later dates than the Punch-marked Coins, as on the Andhra Copper coins (C. A. I, Plate XII and C. C. I. M. C. Plate XXIII).

The Sun, Mark 2 occurs twice on coin 892 B. The one Mark is nearly worn off, and is much older than the other. This shows that there was an even older Obverse to this coin, which had been over stamped by the present older Obverse, and of which the faint remains of Mark 2 is the only Mark which had not been worn off the coin before it was over stamped by the present older Obverse. This fact carries the antiquity of this coin back probably to some hundred years before the date of the present hoard.

The Elephant, Mark 7, appears on the older Obverses of 25 of the double Obverse coins, and may have been on others on which the Marks are worn off, or are so worn as to be undecipherable. It is, therefore, a very ancient Mark of long continuance. In every case in which it so appears, (except two), it also appears on the later Obverse of the same coin, which shows that those Royal-issue coins were again struck and issued as Royal coins.

Different varieties of the Hare-Mark (4a to 4i) also occur on the older as well as on the later Obverses, which would show that those coins were restruck for the areas in which they previously circulated.

These coins also show that the round and square forms of the coins were in circulation together, even from that early date.

A SIXTH MARK ON CERTAIN OF THE COINS.

In addition to the fixed group of five Marks, a Sixth Mark, Mark No. 52, occurs on 19 coins as noted below:—

No. of the Coin.	Class.	Number of Marks on Reverse.	No. of the Coin.	Class.	Number of Marks on Reverse.	No. of the Coin.	Class.	Number of Marks on Reverse.
302	J. 2	Blank	843	M. 1	14	1142	N. 2	10
540	I. 1	3	853	Q. 3	10	1146	L. 2	10
548	Un. 6	3	862A	B. b. 1	Double Obverse.	1149	M. 1	10
691	A. 31	5	877A	B. b. 1	Do.	1160	G. 1	14
739	N. 2	5	888	L. 1	7	1171	B. b. 7	9
747	B. a. 1	4	918	L. 2	5
836	M. 1	7	1132	M. 6	6

In every case the Mark has been punched near the edge of the coin, and in consequence, generally only a part of it appears on the coin, which would appear to be with the object of not overstepping the other Marks already on the coin. The Mark is clear on coins Nos. 739 and 843. The coins on which it appears are of different classes and of various ages, as shown by the number of Marks on their Reverse. That this Mark is not a Reverse Mark punched on the Obverse is shown by its size, and by fact that it does not occur among the Reverse Marks. It would therefore appear to be a Mark of an Authority, adopting or authorising those coins of those various classes for circulation in its area.

OBVERSE MARKS WHICH OCCUR ON THE REVERSE.

Certain of the Obverse Marks also occur on the Reverse of some of the coins. This is also the case in one of the Marks of the Golakhpur coins¹ and three of the Marks of the Gorho-Ghat Coins².

¹ J. B. O. R. S. 1919, pp. 16-72. Plate IV, figs. 8 and 77.

² J. B. O. R. S. 1919, pp. 463-494. Plate III, figs. 3 and 65; 3e and 66; and, 4 and 63.

These marks on the Reverse are always smaller than the corresponding mark on the Obverse, generally about half the size. The Marks which so appear on the present coins are as follows:—

- (1) Mark 3. The Bull, Reverse Mark 195, occurs on the reverse of one coin, 629; and Mark 3c. Bull facing left, (Reverse Mark 195b) on one coin, 347.
- (2) Mark 15a. Tree and Rail (Reverse Mark 69a) occurs on 3 coins, Nos. 382, Class Un. 13; 440, Class Un. 1; and 746, Class A. 1.
- (3) Mark 8b. Two "Beetles", (Reverse Mark 217) occurs on the Reverse of one coin, 726.
- (4) Mark 24b. Two Taurines in a square (Reverse Mark 11b) on 3 coins 627, Class A. 2; 709, class A. 32; 1105, Double Obverse.
- (5) Mark 26. Triskalis with 3 Taurines, (Reverse Mark 139b), Triskalis with 3 dots, on coin 566 class C. 1.
- (6) Mark 28. *Ankus* in on Oval. (Reverse Mark 155b), coin 747; (155c), coin 739; (155d), coins 1143; (155e) coin 918 (variety) and 1147; (156) coin 865.
- (7) Mark 37. Fish swallowing a smaller fish. (Reverse Mark 210), 872 B.
- (8) Mark 42a, Undulating Mark-River Mark (?), (Reverse Mark 135a), coin 1103; Mark 42b. Angular Undulating Mark, (Reverse Mark 135b) coin 1124.
- (9) Mark 64a. Bow and Arrow, (Reverse Mark 157) coins 704, and 919 A.

In no case do these Marks occur on the Reverse of a coin which has that same Mark on its Obverse. It would therefore seem that these marks may have been stamped on the Reverse of coins of another area, for the purpose of authorising their circulation in the area which that mark indicated.

THE RELATIVE AGE OF THE CLASSES OF THE COINS.

The Examination of the coins has been made from their photographs, I have not handled the coins themselves. But the photographs are so clear and distinct that the sharpness of the edges of the Marks of the New coins and the relative wear of the older coins, longer in circulation is clearly shown, and taken together with the respective weights, and also the number of the Marks on the Reverse, showing the length of their circulation, enables their condition, and their relative age to be judged. From these considerations it can be said that there is a very considerable period of time between the oldest and the newest of the coins.

On the Reverses of many of the coins which are blank or only bear one or two Reverse Marks, there are raised protuberances, which would appear to have been caused by indentations in the surface on which the coins were beaten out. I also found similar protuberances on the reverses of some of the Golakhpur coins and of the Paila coins, in which the Examination was made from the coins themselves. These show that the coin has had very little circulation, as otherwise they would have been worn level as in the coins of longer circulation. In some cases these might appear from their shape to be Reverse Marks, but whereas the Reverse Marks are punched into the coin, these marks protrude from the surface. The difference between the two can be clearly seen, for example, on

the Reverse of Coins 317 and 339 (Class D 3) on Plate XI of the coins, and coins 496 (Class D 2) and 519 (Class D 1) on Plate XVII.

The Double-Obverse Coins appear to be the oldest. This will also be seen from the Plates XXVIII-XXXIII on which the rectangular coins are shown, and Plates XXXVIII-XLI on which the round coins are shown, and on which these coins are marked with an asterisk.

On the basis of the length of their circulation, as shown by the number of marks on the reverse, the following Classes appear to be older than the others.

The number of marks on the reverse of the coins of each Class are shown in the Table C of the Classes of the Coins, Appendix III, and the Serial number of each coin comprised in each Class, with the number of mark on its reverse is given in Table D of the list of coins comprised in Each Class, Appendix IV.

Class M. contains 24 coins of which 4 bear 8 marks on the reverse, 4 bear 9 marks, and 11 bear 10 marks or more. These coins were certainly old coins at the time when they were placed in the hoard. But even in this Class there are 6 with only one mark on the reverse, and one coin, sub-class M. 5 of which the reverse is blank. This however does not contradict the long continuance of this class, as owing to the Indian system of hoarding, these particular coins may have been hoarded for a long time, from the time when they were new. This remark also applies to coins of a similar nature among the other classes which appears to have been old when placed in the hoard.

The coins of class N. were also old when placed in the hoard. Out of the 8 coins of this class one has 8 marks on the reverse, two have 9 and four have 10, one has 12, and one has 13 marks.

Class L1 and L2 were also old coins when deposited in the hoard. Out of the 24 coins in these sub-classes, three have 7 marks on the reverse, one has 8, and four have ten or more.

Class Q. 10a, is also one of the oldest, one of the two coins (No. 895) has 16 marks on the reverse, and the Older Obverse of one of the Double-Obverse coins (No. 896A.) also belongs to this class.

Class Q. 10c. :—The single coin of this class has 10 marks on the reverse. Sub-class B (b) 1 of class B were also old coins. Out of 18 coins, other than the restruck Double-Obverse coins in this class, two have 7 marks on the reverse, one has 8, one has 9, one has 10, one has 11, and one (coin No. 1152) has 15 marks.

Also the single coins which compose Class B (b) 6, has 12 marks on the reverse, Class B (b) 8, has 12 marks, and B (b) 9, has 13 marks.

The coins which bear the different varieties of the Hare-Mark (Marks 4b to 4h) have been grouped in different sub-classes, under Class B. These sub-classes are, however, of different dates, as shown by the number of marks on the reverse, as already noted. Thus, the coins which bear Mark 4h, of a Hare carrying a Leveret in its mouth, are amongst the most recent of all the coins, as of these 21 coins in sub-classes B (e) 1, and B (e) 2, only one has a single reverse Mark, and the other 20 have the reverse blank. That this was a current coinage at the time of its deposit in the hoard is also supported by the fact that this Mark also occurs

as a distinguishing mark on coins of the Later Class in the British Museum. (Class 2, group VII, varieties *a* to *f* of those coins.)

This Mark, which I have called "Hare with Leveret", on account of the prevalence of the Hare on the coins, and have, therefore, placed after the Hare-Marks, may, however, be intended for some other animal seizing another animal. It has not got the raised quarters of the Hare as in the other Hare-Marks, and the ears are different, being represented by loops.

Class D, "Beetle-Tank-Hill" Area, sub-classes D 1 to D 6 (Marks 9*b* and 9*c*) which include 149 coins were also current coins at the time of their deposit in the hoard. The reverse is blank on 106 of the coins, 27 coins have one reverse mark, 14 have two, and only two coins have more than two marks, one having three and one, four. Sub-classes D 7 and D 8 which bear Mark 9*d* which would be an older variety of the Mark, of which there are two coins only, is older, and one coin bears 6 marks and the other (coin 911) bears 16 marks, and is an old coin.

Class A, "Hare-Hill" Area, which includes 485 coins, and is the largest class in the hoard, also appears to have been current at the time of deposit, from the fact that 100 of the coins have blank reverse, 100 have only one reverse mark, 102 have two reverse marks, 72 have three marks, making a total of 374 coins. The remaining 111 coins have more marks on the reverse, but this would appear to show the long continuance of this class.

Class C, "Bull-Hill" Area contains 101 coins, of these 20 have the reverse blank, 17 have one mark only, 20 have two marks a total of 57 coins, of little circulation. These coins would therefore appear to have been current at the time of their deposit. The remaining coins of this Class have more marks on the reverse, five have 7 marks, two have 8 marks, and one (coin 769), has 12 marks which shows the long continuance of this Class.

The above remarks are, of course, subject to the consideration that the present hoard may have been of long standing and the coins have been put into it at different periods.

THE WEIGHTS OF THE COINS.

The Indian system of weights is based on the weight of certain indigenous seeds and beans. The weight of the silver Punch-Marked coins is based on the well known passage in Manu (Code VIII, 131, ff) which gives the weight of the *Kārshāpaṇa*, *Dharaṇa*, or *Purāṇa* as 32 *raktikās*. The *raktikā*, the modern *rati*, is the seed of the *gunja* or *Abrus Precatorius*. It is used up to the present time in India for weighing silver and gold. It is hard red seed with a black spot at one end from which comes its name *raktika*, "red," and it is also known as *krishṇalā*, "black". Sir Alexander Cunningham estimated "its weight as determined by myself by many weighments of thousands of seeds from all parts of India is 1.8 grain"; and he thus estimated the weight of the *karshāpaṇa* as 58.56 grains or 3.79 grammes (C. A. 1, p. 44 and p. 47).

This theoretical weight of 58.56 grains, however, is scarcely ever attained in the known specimens. The average weight obtained by Sir Walter Elliott by weighment of a large number of these coins from Southern India was 47.10 grains; by Edward Thomas 47.69 grains; and by Cunningham himself 47.82

grains from upwards of 800 coins, and out of 2,000 coins which he had examined in his career only 20 gave an average of 55 grains of which 10 average 55·6 grains and one reached 56·5 grains (C. A. 1, p. 44).

As regards these latter it may therefore safely be said that they were abnormally above the standard weight, and not that the others were below it.

I have also examined the weights of over 2,000 of these coins.¹ The difference in the weight is not only due to wear, but that the above theoretical weight is fixed too high. Owing to the Indian practice of continuous hoarding, many coins in the hoards have been hoarded when new and have had little or no circulation and are practically in mint-condition. Such coins seldom exceed 54 grains, and do not approach to the theoretical standard.

The *rati* seed (the seed of the *gunjā*, or *Abrus precatorius*, the wild liquorice) grows in a pod and, therefore, varies in size, the seeds nearer the extremities of the pod being smaller than those in the centre. The weight of the *rati* therefore depends on the particular seed selected as a weight. I obtained a number of these seeds from the pods, which after several years drying, gave the following results. After excluding all small seeds, 400 average seeds weighed 673 grains, giving an average weight of 1·68 grains. Picking out the fifty largest seeds, they weighed 93 grains, giving an average weight of 1·86 grains, which corresponds with Cunningham's "full weight". I also obtained thirty-two seeds from various Indian goldsmiths in different places, which were actually in use by them at the time as weights. These thirty-two seeds weighed 58·6 grains, giving an average weight of 1·86 grains, which also agrees with, Cunningham's "full weight". It is, therefore, clear that at the present time only the largest seeds are used as weights, and Cunningham's "full weight" is correct, and, on present practice, the theoretical and actual weight of these coins cannot be reconciled.

The standard weight of the *rati* has also been considered more recently by Mr. S. H. Hodivala in connection with the metrology of the coins of the Mughal emperors,² and by Mr. H. Nelson Wright and Mr. H. R. Neville in connection with that of the early Sultans of Delhi.³ Mr. Hodivala (pp. 107-114), after considering the evidence of contemporary and subsequent writers in reference to the weight of the *Tank* and the *Tolā*, concludes that, in Mughal coinage, the weight of the goldsmith's *rati* was 1·92 grains. Fryer, who was in India in the service of the East India Company, between A.D. 1672 and 1681, states that the *tolā* was equal to 96 goldsmith's *ratīs*, which makes the *rati* 1·93 grains. Sir Thomas Roe (A.D. 1616) gives the weight of the *tolā* as 192 grains, which would make the weight of the goldsmith's *rati* 2 grains.

² Historical Studies in Mughal Numismatics, by S. H. Hodivala, Occasional Memoirs of the Numismatic Society of India, No. II, 1923.

³ "Some Observations on the Metrology of the Early Sultans of Delhi," by H. Nelson Wright and H. R. Neville, J.A.S.B., vol. xx, 1924, Numismatic Supplement xxxviii, and The Coinage and Metrology of the Sultans of Delhi, by H. Nelson Wright, 1936, pp. 391-402.

Mr. Nelson Wright and Mr. Neville come to the conclusion that, as regards the coinage of the early Sultans of Delhi, the weight of the *rati* was 1·8 grains.

From this it will be seen that the standard weight of the *rati* has varied at different times. As Mr. Hodivala notes: "The Tola was founded on the *rati*, and the *rati* on rice-grains. No two *ratis* or rice-grains are, at any time or in any place, exactly alike in weight, and they were, besides, subject to capricious alterations by Governmental decree".¹

As regards the difference between the actual weight of the *purāṇas* and the weight laid down for them in the *Manu-Smṛti*, it is possible that, if these coins were actually following the ancient Indus standard, it was attempted to link them up with the system of weights of the period of the *Manu-Smṛti* by assigning to them the nearest approximate weight in that system.

There is a remarkable exception to the usual standard of weight in the case of the Hoard of 176 debased silver coins of the later class which was found in the Bhir-Mound in 1912-13, which are discussed further on in a separate Chapter. Those coins are of the smaller thicker type which is later than the present coins the weights of several of those coins are abnormally high, sixteen coins weigh from 55 to 56 grains; seven from 56 to 57 grains; three from 57 to 58 grains; two from 58 to 59 grains; and there is one coin of 59 grains and one of 59·3 grains. The remaining 123 coins, however, are of the usual weights varying from 45 grains (one coin) up to 54 grains. These coins are of a debased metal, containing more copper than silver, which may account for their Excess in weight. These coins are of later date, and their weights are also abnormal for coins of the later class. Their Excess of weight does not therefore affect the standard of weight of the Coins of the Older Class.

Out of the 347 newest specimens of the present coins (Nos. 113-460) with the Reverse blank or with only one Reverse Mark, many of which are in mint condition, only 44 weigh 54 grains—and there is one coin, (No. 350) which weighs 55·16 grains. It can, therefore, definitely be said that the standard weight of the silver Punch-Marked coins is not the standard weight given by Manu. This point is of importance, as various writers,² proceeding on that standard, together with various theoretical adjustments, have sought to derive the early Indian coinage from the Babylonian shekel and the Persian siglos. A number of weights have been found at Mohenjo-daro and Harappa. Mr. A. S. Hemmy³ has shown that these weights belong to a definite system, and by a comparison with the weights found at different time and places in Iraq and at Susa, that the system is not connected with and is entirely distinct from the Babylonian system. It would therefore appear that from the earliest times there was in India an independent indigenous system of weight.

MARKS WHICH INDICATE THE AUTHORITY ISSUING THE COIN.

It would appear that the Obverse Marks are of three kinds, (1) marks having a GENERAL SIGNIFICANCE, namely, the Six-Armed-Symbol, the Sun and the Bull, (2) marks indicating the AUTHORITY issuing the Coinage, and (3) marks indicating the LOCALITY for which it was struck.

As already mentioned, the Elephant may indicate a Royal coinage, issued by the King. There are 391 of the coins (Class A) which bear a fixed group of four Marks, 1a, 2, 3, 4 and a fifth Mark which varies. Mark 4, (A Hill with a Hare on it), as will be noticed later, is a Locality Mark of the Area. The fifth Mark, on 151 of those coins is the Elephant, which I assume represents the Royal coinage, issued by the king. The 14 other corresponding marks on this class of coins, which have accordingly been divided into sub-classes (A. 2 to A. 17) would appear to represent the other Authorities *Sanghas*, *Ganas*, *Janapadas*, etc.) or persons entitled to issue the coinage. The number of the fifth varying marks is so great that they cannot all represent Authorities (*Ganas*, etc.) whose mark would probably not change, but may be the Personal Mark of the head of the *Gana*, etc., for the time being, or the person authorised by them to issue the coinage. Some of the marks, which appear to be emblems on a pole, and therefore to be carried, appear to represent Banners or Standards, and as these were a well known insignia of corporate Authority in ancient times, these would appear to be the marks of the Issuing Authority. Such marks are Nos. 13, 21, 22a, b, c, 41, 42, 43a, b, 45, 54, 59 and 60; and the mark on the Bar-Coins.

MARKS WHICH INDICATE LOCALITY.

(1) HILLS.

The following marks appear to indicate locality:—(1) The mark consisting of two, or three arches with other arches superimposed on them, which is now generally accepted as representing a Hill.¹ Such are Mark 3b, 4, 4a and Marks 9aa to 12b. This mark is frequently associated with some other mark which distinguishes the particular Hill or group of hills which the Mark represents. Thus Mark 3, represents a hill associated with a bull; Mark 4 with a hare; mark 9b, 9c and 9d with two objects resembling beetles or crabs, and, in the case of 9c. also with an object in addition resembling an hour-glass, which may be the *damaru*, the small Indian hand-drum, this mark also occurs in Mark 11b. In Marks 12a. and 12b. the Hill is associated with a tree.

[NOTE.—Mark 9a (Three Adjacent Arches) is a separate Mark and is not a Hill-Mark. It was included in number 9 by an oversight.]

(2) TANKS.

Another mark which indicates locality is a TANK. Sacred tanks were a marked feature in ancient as in modern India. Mark 38 is a Tank-Mark, where the fishes indicate water, and it appears to have an island with a temple on it in the centre, as is frequently the case. Marks 51a. and 51b. are also Tank-Marks, as shown by the fish which, in this case is associated with lotuses. Simi-

¹ The Evidence for this identification, i.e., that it is not a stupa or 'chaitya', is summed up by Ananda Coomaraswamy in *Orientalische Zeitschrift* N. F., iv, pp. 175-9, which is referred to in Mr. Allan's Catalogue of coins of Ancient India, in the British Museum (= C. A. I. B. M.), p. xxiv.

larly, Mark 25, represents a round tank, with an island in the centre. Marks 8a. and 8b. are similar square enclosures and would appear to be tanks, but they contain the "beetles" or "crabs" already referred to in place of fish. These creatures appear to be aquatic, as in Marks 8c. and 8d. They occur together with a watersnake or eel. Marks 8a and 8b therefore appear to be tanks, and also the lower part of the Hill-Marks 9b. and 9c. appear to be tanks, or water, associated with that hill.

Mark No. 23, though it bears a general resemblance in form to the Tank-Marks No. 38, must be distinguished. It does not bear fish or other indication of water, but only protective Taurines. This Mark, as is shown in Table H, also occurs on the Mohenjo-daro Seals.

The passage in the *Visuddhimagga*, already referred to, states that a shroff would know from examining the coin "which of them were struck at which village, borough, town, mountain, and river bank, and also by what mint master." And thus we find that each particular Hill is designated by some distinguishing Mark. Thus Mark 3 is a Hill designated by a Bull on the top of it, Mark 4, by a Hare on the top of it, Marks 9b and 9c by a Tank containing aquatic creatures at its foot, and, in case of 9c with the "Hour-Glass", which would appear to be a *damaru* drum. This latter mark, like the Taurine, occurs in the composition of so many marks, that in each case they appear to be merely auspicious or protective symbols.

We therefore find the following Localities indicated on the coins, according to which they fall into the following classes, being in each case the coinage of the area so indicated.

HARE-HILL AREA (CLASS A).

The HARE-HILL-MARK, Mark 4, occurs together with the general marks 1, 2, 3 and 7, forming a constant group of five marks, on 207 of the coins, which I have shown as Class A 1—in the Table of classes. And, with another mark, which varies, substituted for Mark 7, on a further 184 of the coins which are shown, arranged under those different marks as classes A 2 to A 17.

If, as already noted the Elephant, Mark 7, indicates the coins struck by the king, *viz.*, coins of the royal mint, the other marks which occur in its place on other coins would appear to indicate the other authorities authorised to issue coinage. The Hare-Hill Mark also occurs together with a different mark, which varies, in place of the general Mark 3, the Bull, on a further 92 of the coins which are shown, arranged under those different marks as classes A. 18 to A. 33. The Hare-Hill mark, therefore, appears on 483 of the coins. The above Coins would, therefore, appear to be all of one area, the "Hare-Hill Area", as indicated by that Mark.

It would appear that the Mark of the Hare, by itself, Mark 4. b., may have same significance on these coins as the Hare-Hill. This is shown by the fact that three coins (Class A. 12) bear the group of five marks 1., 2., 3., 4., 43. and six coins (Class B.(a). 1.) bear this same group, with Mark 4. b. in place of Mark 4. Also on another coin No. 731, Mark 4. b. occurs together with the plain Hill-Mark, Mark 9. aa., which associates this mark with a hill. If this be the case, a further

96 coins may be ascribed to the Hare-Hill area, making a total of 579. This large number would appear to show that these were local coins of the neighbourhood of Taxila, and were the current coins at the time of the deposit of the hoard.

The Hare also occurs on Punch-Marked Coins of other localities as will be seen in the Table. It is also figured by Theobald, in whose case it was probably taken from coins found in the neighbourhood of Taxila.

The Hare, *Saśa*, in Indian mythology is associated with the moon, as the figure seen in the moon is supposed to be a hare, and *Saśi* and *Saśadhara* "holder of the hare" are names of the moon, which may account for the prevalence of this mark.

BULL-HILL AREA (CLASS C).

The mark of a BULL ON A HILL, Mark 3.b., occurs in a fixed group of marks 1.a., 2., 3.b., 21. and another mark, which varies on 101 coins, which are shown as Class C. As in the case of the Hare-Hill coins the fifth mark on the majority, 70 of these coins (Class C. 1) is the elephant royal mark, the corresponding Mark in the other coins being as shown in Classes C. 2. to C. 6. These coins therefore appear to be of one area. The bull is associated with the worship of Śiva, and this may be its significance in association with this hill.

TANK-HILL AREA (CLASS D).

The mark of a HILL WITH A TANK WITH THE "BEETLES" OR "CRABS" below it, and with the *damaru* mark above. Mark 9. c., occurs in the fixed group of marks 10., 2., 9.c., 5. and another mark on 147 coins, which are shown as Class D. In this case the fifth mark is the Elephant on 17 of the coins, Class D. 1, but the majority of these coins, viz., 90, bear in its place Mark 15.a, Tree in Rail, Class D. 2, and 38, coins bear a Double-Trident, Mark 13, which are shown as Class D. 3. These 90 coins which have the Tree and Rail mark, Mark 15.a., (Class D. 2), are the same as the hoard of 61 coins found at Peshawar in 1906. which is referred to farther on, and in Table G.

This Mark also occurs in the form of 9.b. (viz., without the *damaru*), on 2 coins, Classes D. 5. and D. 6., and in the form of 9. d. on 2 coins, Classes D. 7. and D. 8., making a total of 151 coins of this area. It is noticeable that the coin, Class D. 8., also bears the Hare-Mark, 4b, which may, perhaps, connect these coins with that area.

The similar mark of a Tank with the "beetles" or "crabs", without the Hill, Mark 8. a, is referred to separately in Class O.

There are other designated Hill-Marks which occur only on a few of the coins. These are:—

SMALL UNDESIGNATED HILL.

This Mark, No. 9. e. occurs on 2 coins, Nos. 190 and 215, Class G. 1. and G. 2.

SMALL HILL-WITH-HOUR-GLASS.

This Mark, No. 9. f. occurs on one coin only, which also bears the Hare-Hill Mark, and therefore belongs to that class in which it is included. This coin was originally noted as Class H, which has, consequently been excluded.

LARGE UNDESIGNATED HILL.

This Mark, No. 10, appears on 12 coins, which constitute Class I.

HILL WITH TAURINES.

This Mark, No. 11. *a*, occurs on 17 coins, Class J. 1. to J. 4.

HILL WITH TAURINES AND DAMARU.

This Mark, No. 11. *b*. occurs on 3 coins, Class K. 1. and K. 2.

HILL WITH SINGLE TAURINE.

This Mark, No. 11. *c*. occurs on two of the *Double-Obverse* Coins Nos. 850A and 1148A.

HILL WITH TREE ON THE TOP.

This Mark, No. 12*a*., Occurs on 27 coins, Class L. 1. to L. 4. And the similar Mark, No. 12. *b*. on one coin, Class L. 5.

These Marks are referred to under those classes.

ISLAND-TANK AREA (CLASS M).

The Mark of a Tank with fish and with an Island in the centre, Mark 38., occurs in a fixed group of marks, 1., 2., 38., 34. and another varying mark on 52. coins and with Mark 73. in place of Mark 54. on one coin, in all 53 coins, Class M. 1. to M. 6. As in the case of the Hare-Hill and Bull-Hill coins, the Elephant, Mark 7, is the chief of the fifth marks, occurring on 38 of the coins, its place being taken by 4 other marks in the remaining 14 coins.

BEETLE-TANK AREA.

The Tank with the "beetles" or "crabs" Mark 8*a*., similar to the Tank connected with the Hill, Marks 9*b*., 9*c*., and 9*d*., occurs in a fixed group of marks on 4 coins, Class O. 1. to O. 3.

LOTUS-TANK AREA.

The Tank with Lotuses Marks 51*a*. and 51*b*. occurs on two coins, Class P.

A CITY-AREA. [?]

This Mark, No. 23, consists of a Square Enclosure with a small enclosure at each corner, and a six-spoked Wheel in the centre, surrounded by Taurines. It occurs in a fixed group of four marks 1., 2., 23., 37. and a fifth mark on 8 coins (Class N. 1. to N. 3), on 4 of which the fifth mark is the Elephant, and two other marks on the remaining coins. The spokes of the wheel are not shown, by oversight, in the drawing of this Mark on Plate I, but it is correctly shown in Table H, p. 94.

From the absence of fish or other indication of water, this Symbol does not appear to represent a Tank. But it appears to be the Locality Mark in the group of Marks on those coins on which it occurs. Exactly the same Figure occurs on some of the Mohenjo-daro Seals, as noted in Table H. Professor Langdon writes "This sign probably means 'City',¹ as does the corresponding

¹ Mohenjo-daro, Vol. II, p. 441.

Egyptian determ for city; it is totally different from the Sumarian pictograph for city". It is therefore possible that the mark on the coins has also that significance.

TREE-WITH-TANK AREA.

The Tree as shown in Marks 17. *a.* to *f.* would also appear to be a locality Mark, as in its full form, most clearly seen on the Double Obverse Coin 1163A, it stands between two upright supports, and has what appears to be a Tank at its foot, as shown by a fish in an enclosure. The entire mark does not appear on any one coin, Marks 17. *a.* to *e.* show different varieties of the upper part of the Tree while the lower part appears on three Double-Obverse coins 905A, 925A and 1163A. This is a very old Mark, Mark 17. *a.* occurs on coin No. 1078, class Q. 6. *a.* and on two of the Double-Obverse Coins; Mark 17. *b.* on coin 1093 and on a Double-Obverse Coin; Mark 17. *c.* on 2 Double-Obverse Coins, on the older face; 17. *d.* on the older face of a Double-Obverse coin; 17. *e.* on 4 of those coins, including the older face; and 17. *f.* on 3 of those coins, on Double-Obverse coin 905, Mark 17. *e.* occurs on the one face and 17. *f.* on the other, which shows that the coin was re-struck for the original area.

This tree is not an ordinary one, as Taurines, ovals and other symbolical marks take the place of leaves. There are well known sacred trees in many parts of India, to which people come to worship and make vows, not only from the neighbourhood, but from a distance. Such a tree would be a well known object of any area, and be a suitable mark to indicate that area. This Mark occurs on 14 coins.

THE PESHAWAR COINS.

A hoard of 61 coins of the later class was found at Peshawar in 1906 and was described by Dr. D. B. Spooner.¹ I am unable to agree with Dr. Spooner's description of the marks on those coins, which was based on the assumption that they all represented symbols of the Buddhist religion. Dr. Spooner's Mark *e*, which he describes as "a chaitya", is Fig. 9e of the present coins, "Beetle-Tank-Hill", Class D. Forty-four of the coins bear this mark and they are, therefore, the coinage of that area. The coins are all of the later class, and bear the Taxila-Mark on the reverse, and therefore show the long continuance of this Locality-Mark. The mark of a Tank, *pushkara*, either in connection with a hill or by itself, may, as Cunningham suggested,² refer to the famous city of Pushkara or Pushkalāvati (Peukelaotis) near Peshawar. The coins of Class D may therefore be the coins of that area.

THE CLASSIFICATION OF THE COINS.

As already noted, the coins fall into definite classes, which bear the same group of four fixed marks together with a fifth, varying mark. These classes are shown in Table C, and the numbers of the coins which constitute each class are

¹ A. S. I. R. 1905-6, pp. 150-164.

² C. A. I., p. 57.

shown in Table D. This is necessary as the coins have been arranged on the Plates according to the number of marks on their Reverse; beginning with those with their Reverse blank, than one mark, etc.; first, the square coins, Nos. 113-925, Plates 2-30; followed similarly by the round coins Nos. 926-1171, Plates 30-39, and therefore have no relation to their fixed groups of Obverse Marks.

The number of marks on the reverse of each coin is also given in the Table, as indicating the length of circulation of the coin.

The fixed group of marks on the coins place 979 of the coins in 13 separate classes, which I have designated as A. to P., and 25 coins, Class Q, which do not fall under any of the above classes, and the marks on which vary, so that they do not fall into fixed classes.

There are no Classes E, F, and H, as the few coins which were originally assigned to those classes were subsequently found to belong to one or other of the remaining classes. The designations of the subsequent classes, however, have not been altered, as that would have entailed altering the references to them in the List of the Coins and in the various Tables in which reference is made to them.

There are also 55 coins on which the marks are so worn that only a single mark, or two marks in the case of two of the coins, can be deciphered. These are consequently shown in Table C as unclassifiable.

It will be seen from Table C that 391 of the coins bear the fixed group of Marks 1, 2, 3, 4, together with a fifth Mark. Marks 1, 2, 3, as already noted, are of general significance, the distinguishing mark of these coins is therefore Mark 4 (A Hare on a Hill) a Locality Mark, and these coins may therefore be taken to be the coins of the area indicated by that mark. In the case of 207 of these coins the fifth mark is the Elephant, No. 7, which may show that they are the King's Coinage for that area.

Assuming that Mark 7 represents the King's Coinage, the fifth mark on the other coins may be taken to indicate the respective issuing authority of those coins, and to be either the mark of the *Gana*, etc., or the personal mark of person issuing on their behalf. As there are more coins of this class than there are of any of the others, it is shown as Class A; those bearing Mark 7. as A. 1. and those bearing another Mark in its place as A. 2. to A. 17.

There are also 92 coins, which bear Mark 4. and therefore come under that Area, but have other marks in place of Mark 3. These are shown as Classes A. 18. to A. 34. There are therefore altogether 483 coins bearing the Hare-Hill Mark. These coins would therefore appear to be local coins of the Taxila neighbourhood.

There are also 91 coins which, though not bearing Mark 4. bear varieties of the Hare Mark. Of these, 59 (including the Newer Obverse of 22 of the Double-Obverse Coins) bear Mark 4*f*; 21, bear Mark 4*h*; 6 bear Mark 4*b*; and 5 bear Mark 4*g*. As these may have some connection with Mark 4 (Hare-Hill) they are shown as Class B and are shown in their sub-classes.

A group of 101 coins bear the four Marks, 1*a*., 2., 3*b*., 21. together with a fifth Mark. Of these Marks, the Locality mark is 3*b*. a Hill with a Bull on it, and

these coins may be taken to be the coins of the Area which that mark indicates. On 70 of these the fifth Mark is the Elephant, indicating the king's coinage for that area, and the other corresponding marks may therefore be taken as the marks of the other authorities issuing those coins. These are shown as Class C.

A group of 147 coins bear the four Marks 1. *a.*, 2. *9.c.*, 5. together with a fifth Mark. Of these, the Locality Mark is *9.c.* a Hill with a Tank at its foot, as shown by the "Beetles" "Crabs" or Fish in it and with an "Hour Glass" or a *Damaru* (Hand-drum), on the top of the Hill, and these coins may be taken to be the Coins of the Area which that mark indicates. Of these, 17 have the Elephant as the fifth Mark, and 89 have, in its place, Mark 15. (Tree with Rail) and 38 have Mark 13., which may therefore be taken to be the marks of the other Authorities issuing those coins. Two other coins bear this Tank Mark of the variety *9.b.* and two of *9.d.* making a total of 151 coins. These are shown as Class D.

As already mentioned, a hoard of 61 coins was found at Peshawar in 1906. Of these, 20 coins bear the Marks 1., 2., 3., 9., 15. and Class D. 2. of the present coins are of the same area, which, as Cunningham considered may be those of the famous city of Pushkara or Pushkalāvati (Peukelaotis), near Peshawar. The particulars of that find are therefore given for reference in TABLE G.

There are also 7 coins which contain an undesignated Hill, Mark 10, and a separate mark of a Tank with "Beetles", Mark 8.*b.*, shown as Class I. 1., which may therefore also indicate the above area. Also 4 coins, shown as Class O., on which Mark 8.*a.* occurs, but no Hill-Mark. Marks 8.*c.* and 8.*d.* in which the same "Beetles" occurs together with what appears to be an eel may also be connected with this area.

Another Hill-Mark is designated by a Tree on the top of it, Marks 12*a.* and 12.*b.* This occurs on 27 coins, which bear a fixed group of marks. 1., 2., 3., 12*a.*, and one 1., 2., 3., 12.*b.*, making a total of 28 coins. This mark appears to indicate a distinct Hill, and these coins to be of the area indicated by that Hill. The elephant appears as the fifth Mark on 18 of the coins. These are shown as Class L.

Another Hill Mark is Mark 9.*f.* a Hill with a "*damaru*" in each of its arches. This occurs on one coin only, No. 1089 which also bears Mark 4, Hare-Hill, and is therefore a coin of that area.

This Hill may be the Mark of a sub-area contained within it.

A Tank-Mark, Mark 38, shows a Tank, as is indicated by the fish, with an island in the centre. Such Tanks, with a temple of the God to whom the Tank is dedicated, on an island in the centre are frequent in India. There are 51 coins which bear this fixed group of Marks 1, 2, 38, 34 (a rhinoceros) together with a fifth mark, which in the case of 35 coins is the Elephant, these may be taken to be the coins of the area indicated by that Tank. These coins are shown as Class M.

Another Tank-Mark is Mark 51*a* and 51*b* a square enclosure with two Lotus leaves and a Lotus bud, and two fish to indicate water. Each of these Marks occurs on one coin only, of the area indicated by that Tank. These are shown as Class P.

A Mark of a Square-Enclosure with a Wheel in the centre, which on the analogy of this same Mark on the Mohenjo-daro Seals, as already noted, may indicate a City or Town, occurs on 8 coins, which are shown as Class N.

The Mark of a tree in a rail or enclosure, of which Marks 15a, b, c, d are varieties, is of general occurrence on Punch-Marked coins, and is not a Locality Mark; the usual form is Mark 15a. Some writers have considered it to be a Buddhist symbol, representing the *Bodhi*-Tree at Gaya. Cunningham held this view, and also that the Hill-Mark represented a Buddhist Chaitya (C. A. 1., p. 59) and others followed him. But the Mark is long anterior to the time of Chandra Gupta and Asoka, and of Buddhist symbols.

The other obverse Marks are referred to in the Table in Appendix B.

There are 25 coins on which the group of Marks only occurs on a single coin. These are shown under Class Q.

The number of these separate coins, whose marks do not correspond with the group of marks on any of the other coins would show that they are coins from different outside areas. The Punch-Marked coins travelled far, Coins of Taxila have been found amongst coins in a hoard at Gorho Ghat in Behar (J. B. O. R. S. 1919, pp. 463-494), and these coins also may have come from distant areas.

There are also, as already mentioned, 55 old coins, on which, owing to wear, only one, or in two cases, two marks are decipherable. These are shown at the end of the List of classes as Unclassifiable.

THE REVERSE MARKS.

The Reverse Marks are of an entirely different character to the Obverse Marks. They are much smaller and are punched less deeply into the coin, which would naturally be the case if the Obverse Marks were punched into the metal when heated, as would appear to have been the case. The devices also are of a different character. They were the private marks of bankers or money changers through whose hands the coins passed, as a mark of their having tested its weight or fineness in case the coin came into their hands again or for the information of others. This practice continued till modern times in the case of the coinage of the various Indian States, whose coinage was of varying and uncertain weight or fineness. That these marks also had that significance in ancient times is shown by the fact that marks similar to many of these Reverse Marks have been found stamped on Persian Sigloi.¹

As they were the personal marks of individuals, their number and diversity is very great. Some may be the Rebus of a name, as Cunningham suggested "thus: the 'Sun' for Surjya Das; a 'Snake' for Nāga Sen; and an 'Elephant' for Gaja Singh. Bir Deo might have had a 'soldier', Gopal a 'Bull', and Khajura Varma a 'Palm' tree (*Khajura*)."

Also some of the Marks of trees, plants, flowers, animals and birds may have been "Totems," which still survive in connection with present castes, and may

¹ A Hoard of Persian Sigloi by J. C. Milne—The Numismatic Chronicle. (Fourth Series, Vol. XVI) 1916—in which 72 of such marks stamped on those coins are figured.

indicate the Tribe or Clan to which its owner belonged. Others are Brahmi letters, which may represent the initials of names. But, as will be seen from the Plates, the great majority appear to be purely impersonal marks adopted by the individual as his sign. Thus, the most common mark is the Taurine, a protective or propitious mark, like the horse-shoe in Europe. There are 34 varieties of this mark. Marks 1 to 13 and this Mark appears on a greater number of the coins than any of the others. The Reverse Marks on each coin are shown in the List of the Coins.

As will be seen from the Plates II and III, the marks may be grouped roughly as follows:—Taurine, Nos. 1 to 13; Ball and Crescent, Nos. 14 to 18; Crescent, Nos. 19, 20; "Almond", No. 21; Rings, 22 to 25; Dots, 26; Squares, Wedges and Stars, Nos. 27 to 37 (these Marks are punched *into* the coin, and are not a raised design in an incuse as in the case of the other marks); Groups and Circles of Dots, 38 to 47; Flowers or Stars, 48 to 50; Flowers or a Stem, or Plants, 52 to 57; Tridents (?), 58, 59; Leaves, 60; Fruits (?), 61 to 68; Three varieties of **Obverse Mark No. 15**, Tree in Rail, No. 69 (the significance of these marks on the reverse has been already referred to (pp. 12-13)); Trees of the Fir-Tree Type 70, 71; Trees of other types 72 to 80; and 87 to 98. Plants growing in a Pot (?) 81 to 86; Crosses, 102 to 109; Squares, 110 to 115; Triangle, 116; Figures possibly Phallic, 117 to 126; Figures, as *shown* 127 to 131; Serpentine, 132 to 134; Three forms of **Obverse Mark Nos. 42, 135, 136**; Curves, 137, 138; Triskelis, 139 to 141; Curved-rayed Stars, 142, 143; Tau and "Crutch" Marks 144 to 150; Figures, as shown 151 to 153; **Implements**: Ladder (?), 154; Elephant-Goad (*Ankus*), 155, 156; Bow and Arrow, 157; Spear-Head (?), 158 to 164; Standard (?), 165 to 170; **Homo Signs**—Man, 171; Arm holding a Club, 172; Bent knee, 173, 174; Foot prints, 175, 176; Hand 177 to 180 (No. 178 is misplaced among these marks); Figures as shown, 181 to 194; **Animals**—Bull or Cow, 195; Horse, 196; Uncertain Animals 197, 198, 199, 201, 203; Hare 200, 202; Tortoise (?) 205; Peacock, 206, Snake with its Egg (?), 207 and Snake, 208; Fish, 209 to 216; **Obverse Mark No. 37**, 210; Part of **Obverse Mark No. 8a or 8b**, 217; Insects, 218 to 220; Varieties of **Obverse Mark No. 9e**, 221 to 223; Doorways (?), 224 to 228; Figures resembling Brāhmi letters, 229 to 250 and 297 and 326; Various Figures, as shown, some of them of elaborate design, 251 to 320, of which 288 may be a Steelyard; and Ovals, 351 and 352.

The marks which resemble Brāhmi letters are: 229=KO; 230=KE; 231=KO; 232=KH or P, according to which way up it is read; 233=T; 234=DH; 235=N; 236=O; 237=ON; 238=O.-; 239=G-N (this may be the word *Gaṇa*); 240=?; 242=G; 243=G; 245=G; 246=G; 247=G; 249=VE; 250=VE; 255, possibly, D; 289=CHH; 297=S in reverse direction; 301=G; 326=S.

The number of the Reverse Marks is very great. Including the varieties of the same mark, there are 505 marks shown on the Plates. As will be seen from Table F, there are 328 marks which occur on a single coin only; sixty-nine which occur on two coins only; forty which occur on three coins only; twenty-two which occur on four coins only; and only 37, which occur on more than four coins. The serial numbers of the coins on which each Mark occurs is

given in Appendix VI. **Table F.** Besides the marks which can be deciphered and are shown on the Plates, there are many other marks on the coins which are too worn or too confused by other marks punched over them to be decipherable. It is possible that some of these might be of still further varieties.

The variety of the Reverse Marks is so great that where the number of a Reverse Mark is entered in the List of the Coins it merely indicates that the mark is of the **same type** as the mark shown, and not, unless it is specially stated, that the punches of those marks are identical, and does not in the case of the more common marks, such as the Taurines, necessarily imply that those coins have passed through the hands of the same banker or money-changer.

The following Marks on the coins are identical and appear to be of the same punch:—Mark 2i, twice on coin 904, but this mark on coins 812 and 814 are both different from coin 904 and from each other; mark 6 on coins 1077 and 1078; Mark 44 on coins 720 and 721; Mark 132b, twice on coin 803; Mark 204, on coins 700 and 865B; Mark 215 on coins 1063 and 1078.

The great number of different Reverse Marks may appear to present a difficulty that there were not likely to be so many bankers or money-changers in a few areas. But, as already mentioned, the Punch-Marked coins travelled far and into many areas, and the marks would be those of money-changers in such areas. Judging from the practice which continued in regard to the coins of the "Native States" until modern times, it was the coins of a different State which required testing or obsolete coins of the State itself. Though in the case of Punch-Marked coins, the current coins of the State itself might need testing for weight, in case of clipping.

The most general mark is the Taurine, which in its different varieties, occurs on a great number of the coins—The plain Taurine, Mark 1a, occurs on 58 coins, on some of them more than once; for example, on coin 1168B, on which the one Mark is old and worn, and the other recent. The plain Taurine with the horns long and vertical, Mark 1b, occurs on 25 coins. The Taurine of the other different varieties, Marks 1c to 7, occurs on 55 coins, a total of 138 coins.

The other Marks which occur on several coins are:—Mark 14c, Ball and Crescent, on 16 coins; Mark 33.a, Circle of Wedges, on 27 coins; Mark 47.b, Six Dots round a central Dot on 21 coins; Mark 47.e, Eight Dots round a Central Dot, on 16 coins; and Mark 154.a, "Ladder" on 16 coins. This last Mark appears on the old coins and is very worn. In its shorter form, Mark 154.b, it is evidently a more recent Mark, and shows that this mark must have continued in use over a very long period.

RESEMBLANCE OF SOME OF THE MARKS TO THOSE ON THE SEALS FOUND AT MOHENJO-DARO.

Several of the marks are identical with those on the seals, and also on the small copper plates found at Mohenjo-daro, and therefore appear to show a derivation from the early Indus Valley Civilization. This resemblance has been fully discussed, and illustrated together with the derivation of the Brahmi Character from the characters on the Indus Valley seals, by Ernest Mackay in

Sir John Marshall's "Mohenjo-daro and the Indus Civilization" (pp. 370-405) and also by C. J. Gadd (pp. 406-414) and Professor Langdon (pp. 423-455); also by Dr. Prān Nāth in J. R. A. S. 1931 (pp. 671-674) and in "The Indian Historical Quarterly", Vol. VII, 1931 and Vol. VIII, 1932, and by Mr. Durga Prasad in Numismatic Supplement, XLV of J. A. S. B., 1934, and by Mr. K. N. Dikshit in his address to the Numismatic Society of India, at Allahabad in 1934, and by Dr. C. L. Fabri in J. R. A. S., 1935 (pp. 307-318).

The marks on the present coins which correspond to the Figures and Signs on the Mohenjo-daro Seals or Copper Plates, are shown in Table H in Appendix VIII.

COMPARISON OF THE BHIR MOUND COINS OF THE OLDER CLASS WITH THE COINS IN THE BRITISH MUSEUM.

A selection of the coins from Bhīr Mound were illustrated (*A. S. R.*, 1924-25, Pl. IX) and, as Mr. Allan notes (Catalogue of the Coins of Ancient India, p. xlii), they correspond with several groups of the British Museum coins. The comparison can now be completed, as shown in the Table below, which I have already published in J. R. A. S., 1937, p. 616:—

Serial No.	BRITISH MUSEUM COINS.		BHIR MOUND COINS.	
		No. of Coins.		No. of Coins.

In the case of Serial Nos. 1, 2, 4, 13, 15, 16, 17, 18, 19 and 23, the British Museum coins have on the reverse the mark of a Hill-with-Crescent. This mark does not appear on any of the Bhir Mound coins. This mark is distinctive of the coins of the Mauryan Empire, and would appear to have been stamped on the reverse of those coins at a later date to authorise their continued circulation at that date.

It is not however the case that all the specimens in the British Museum of the varieties mentioned above as having been re-stamped later with the Mauryan Marks, bear those marks, but only certain specimens in each of them. Thus as regards Serial 15 of the List (British Museum, Class 2, Group III, Variety C), there are 26 coins of that variety, of which only six coins bear the Hill-with-Crescent; only one out of the three coins in Serial 16; only one out of the four coins in Serial 17; only one out of the nine coins in Serial 19; and only one of the two coins in serial 23.

This re-stamping of coins of the Older Class for later circulation is material, Mr. Allan observes (B. M. C., p. lxxii) "The association of finds of Class 2" (*viz.* the Later Class of Coins) "with significant reverse symbols with Class 6" (the older class of coin) "with numerous small punches like shroff marks and no definite symbol is another puzzle. The latter may be the earlier issues before the adoption of a regular reverse mint-mark." Mr. Allan's supposition is no doubt correct, as is shown by the re-stamping, as noted, of the older coins—and the fact that they were so re-stamped with Mauryan Marks for later circulation, accounts for coins of the Older Class being found together with coins of the Later Class.

The British Museum Coins have been obtained at various times within the last 150 years, and from various sources, including the collections of Eden, Prinsep, Elliot, Cunningham and Theobald, and later acquisitions up to the present time, and are therefore derived from various localities. Except in the case of recently obtained coins, their provenance in most cases is not known. Out of the 116 coins included in the above Table, the provenance of only 18 coins, in various of the varieties mentioned, is noted as known. There are 6 from Mirzapur, one from Rājghat, Benares, 2 from Keron-dih, one from Shahpur, 4 from Palanpur State in Bombay, 2 from Chiriyakot in the Central Provinces, and 2 from the Madras Government. This shows the wide circulation of the Punch-Marked coins of the Older Class. Besides circulating to other parts in the course of trade, they would also be carried about by pilgrims.

REMARKS ON THE APPENDICES.

Full particulars of the coins will be found in the appendices. The List of the Coins gives the marks on the Obverse and the Reverse of each coin, giving the number of the mark on the Plates in every case in which the mark is decypherable. In the case where a mark occurs, but is not decypherable on account of wear, or of only a small portion of the mark appearing on the coin, or of being confused by over stamping with another mark, it is shown by an X. Every mark decypherable on the coins is shown in the Plates. This does not mean that the complete mark as shown on the Plates will appear on every coin on which it is

shown, as, frequently only a portion of a mark appears on a particular coin. But where an essential portion of a complete mark that has been ascertained, which does not also form a portion of any other mark, occurs, it can be definitely said that it represents the presence of that mark on the coin. For example where portions only of the mark of the Bull and of the Elephant appear on a coin, it would be difficult in many cases to say which mark it is, if it were not that, as already noted, the horns of the Bull invariably curve forward, so that, as the Bull on these coins faces right, they curve to the right; while the tusks of the Elephant curve upwards, and as the elephant also faces to the right, they curve to the left. This may be the only means of distinguishing where only a portion of these marks appear on the coin.

Similarly with regard to mark 1; where any three of the six component figures of this mark appear consecutively, it can be said, in most cases, which variety of that mark is on the coin. Where this cannot be determined, "Mark 1" is entered in the List of the Coins, and in the List of the Classes of the Coins, without any variety added. The coins on which each mark most clearly appears are given in the Description of the Obverse Mark in **Table B**.

The particulars of the Double-Obverse coins are given in **Table A**, in which it is noted which of the two Obverses appears, from the amount of worn condition of the marks on it, and other considerations, to be the older. These coins are among the oldest of this hoard.

The Different Classes of the coins bearing the same constant group of four marks, which constitutes a "coinage," are given in **Table C** together with the total number of coins in each class. The number of the Square and Round coins in each Class is also given, and shows that the Square and Round coins circulated together. The number of Reverse Marks on the coins is also noted, for the purpose of estimating and comparing the relative age of the different classes.

The serial number of every coin comprised in each Class is given in **Table D**, so that coins of any given class can be referred to on the Plates and in the List of the coins. The number of Reverse Marks on the coin is also given, as indicating the comparative length of currency of each coin.

The number of coins on which each Obverse Mark occurs and also the different classes to which they belong, from which can be seen the prevalence and extent of each mark, is given in **Table E**.

The List of the Reverse Marks, and the coins on which each mark appears is given in **Table F**.

The particulars of the coins found at Peshawar in 1906, already referred to, which are the same as Class D-2 of the present coins, are given for reference in **Table G**.

The Marks on the present coins which are similar to Figures and Signs on the Indus Seals found at Mohenjo-daro are given in **Table H**.

PART II.

**AN EXAMINATION OF A HOARD OF 167 DEBASED-SILVER
PUNCH-MARKED COINS OF THE LATER CLASS FOUND IN
THE BHIR MOUND AT TAXILA IN 1912-13.**

One hundred and seventy-five Punch-Marked coins were found in a single deposit, on the Bhīr Mound, at Taxila. The great majority of them are of copper with an admixture of silver, and most of them bear on the reverse the so-called Taxila symbol. In the same hoard was a gold coin of Diodotus and some jewellery of a distinctively Mauryan character, which point to the latter half of the 3rd Century B. C. as the date of their currency (A. S. I. R. 1912-13, p. 42).

Photographs of one hundred and sixty-seven of the above coins (Serially Numbered 17 to 183) were received from India, and constitute Plates XLII—XLVIII. These are here described. As will be seen from the Plates, these Later Coins are photographed with the Obverse and Reverse together, and not with the Obverse and Reverse on separate Plates, as in the case of the Older Coins.

As in the case of the coins considered in the previous Chapter, the present hoard of Punch-Marked coins contains an independent coin of fixed date, a gold coin of Diodotus. From the consideration of the coins themselves, it can be said with confidence that, whereas the coins of Alexander the Great and of Philip Aridaeus found with those coins, **FIX THE LATEST DATE OF THE EARLIER HOARD** at 317 B. C., the coin of Diodotus fixes the **CURRENT DATE** of the find now under consideration, at 248 B. C. The value of this fixed date is the confirmation which it gives to the already accepted conclusion that the Punch-Marked coins of the small square thick type, from which the subsequent square cast-coins were derived, are of a later period than the larger thin type of coin.

There are five coins of the hoard, Nos. 17, 179, 180, 181 and 182 on the Plates of the Photographs of the coins, which, though they are of the same locality as the others, are of a different character and appear to be a different "coinage" of that locality. These will, therefore be considered separately.

The remaining 162 coins out of the 167 shown on the Plates are all of one type, and all bear on the reverse, the so-called Taxila Symbol, though in many cases, it is in a very debased form, as will be seen from figures A to Q on Plate III. This Mark appears in its clearest form, A on coins Nos. 25 and 31. On most of the others the Mark appears in the various debased varieties B to Q.

There are two points of special note with regard to these coins; (1) the indistinctness of the Obverse Marks, on all the coins, and (2) the unusually heavy weight of several of the coins, which may be due to the alloy in their debased composition.

It is difficult to account for the indistinctness of the Marks on the Obverse of these coins. The examination of the coins has been made from the photographs,

I have not handled the coins themselves; but, from the photographs, it is clear that the indistinctness is not due to wear; as, from their appearance, the coins were all new at the time of their deposit in the hoard, as is shown by the excrescences on the surface of the Reverse of several of the coins, which would have been worn down by circulation. These excrescences are particularly apparent in the Plates on coins 30a, 48a, 86a, 93a, 123a, 149a, 159a, 172a, and 177a. Also, the hollows made in the coins by the Marks are deep and the coin is not worn round them. But the edges of the punch are blurred, and from their appearance, it would seem as if the metal was soft at the time, possibly from overheating, or possibly that the punched in portions flaked off in punching owing to imperfect fusion of the alloy. The Taxila-Mark on the Reverse is, in all cases, sharper and clearer than the Obverse Marks.

That these coins had had very little circulation is also shown by the fact that additional "Reverse Marks" other than the "Taxila Mark" and the "Caduceus," which are fixed Marks on these Later Coins, only appear on three of the coins, namely one mark on coins Nos. 181 and 182 and two on No. 179.

THE WEIGHTS OF THE COINS.

Although the majority of the coins are of the usual weight, several of them are unusually heavy. Omitting the five coins of a separate coinage, the weights of the 162 coins vary as follows:—Fifteen coins are under 50 grains; fourteen coins from 50 to 51 grains; thirty-three coins from 51 to 52 grains; thirty-two coins from 52 to 53 grains; twenty-three from 53 to 54 grains; sixteen from 54 to 55 grains; sixteen from 55 to 56 grains; seven from 56 to 57 grains; three from 57 to 58 grains; two from 58 to 59 grains; and two coins are 59 grains, viz., No. 97=59 grains, and No. 141=59·3 grains. Thus, while 117 coins, the great majority, are under 54 grains, there are 45 coins over that weight, and some of them considerably more.

The coins are an alloy of silver and copper. The metallic composition of two of the coins, taken as examples has been determined by the Archaeological Chemist in India, who "is of the opinion that they are composed of an alloy of silver and copper and contain 40·3 and 75·3 per cent. of silver and copper respectively. It is obvious that their composition is very irregular." It may be due to this fact that the weights of some of these coins vary so much from the usual weight of the Punch-Marked coins.

THE TAXILA MARK.

The special feature of these coins is that they bear on the Reverse, the Mark which Sir Alexander Cunningham found on several coins at Taxila and therefore "conjectured to be the mark or sign of Taxila". This Mark in its perfect and complete form, is shown on coins Nos. 1 and 2, and on a small gold coin, No. 18 on Plate II of "Coins of Ancient India". On most of the present coins, however it appears in various very debased forms.

The various Types of the Mark which occur on the present coins are shown on the Plate as figures A to Q. All the different types of this Mark have been shown

so that they may be available for indentifying this Mark on other coins on which it may occur. The variation from the standard form of the Mark by many of these debased types is so great that if they occurred by themselves they would not be taken to have any connection with that Mark. Considered together, however, their affinity can be traced.

The Taxila Mark in its complete form, Type A, is composed of a central boss with a crescent on each side, and an object which appears to be a double-barbed arrow-head at the top and bottom. This, the perfect form of the Mark, is clear on Coin 25. Most of the debased types indicate these component parts. Except in the case of variety A, which has a circular incuse, the Mark is in an oval incuse.

Thus, Type B follows the outline of Type A, but shows it all as a single object. In Type C the projecting horns of the crescent disappear and the projections appear to be the double barbs of the arrow-heads. In Type D the projections are both the crescents and the arrow-heads. In Type E, the projections appear to be the crescents, as there is a separate arrow-head. Type F, shows the crescent on either side, and a crescent at the top and a rounded projection at the bottom, these two therefore represent the arrow-heads. Similarly, the other Types show different forms of distortion of the Mark. Type G bears a similarity to Type F, but is still more crude. In Type H, the arrow-head is shown single-barbed. In Type I one arrow-head is shown single and the other double, and the crescent on the right becomes a circle. In Type J, too, one arrow-head is single and one double, and they are attached to the horns of the crescents. Type N, O, and P bear a more debased resemblance in their outline to Type G. Type P which occurs on two coins of the separate coinage, Nos. 17 and 179 is the most debased of all. In Types K, L, M, and Q, the Mark would be unrecognisable but for the fact that they all contain constituent portions of the Mark.

The Numbers of the coins on which each of the Types appear are given in Table I (Appendix IX). Type A occurs on 17 coins; it is clear on coins 25, 31 and 35. Type B on 24 coins; it is clear on coins 34 and 183. Type C on 5 coins; it is clear on coin 43. Type D on 2 coins; it is clear on coin 70. Type E on 5 coins; it is clear on coin 39. Type F on 5 coins; it is clear on coin 82. Type G on 3 coins; it is clear on coin 132. Type H on 3 coins; it is clear on coin 95. Type I on 4 coins; it is clear on coin 170. Type J on 8 coins; it is clear on coin 40. Type K on 5 coins; it is clear on coin 21. Type L on one coin, No. 110. Type M on one coin, No. 121. Type N on one coin, No. 182. Type O on 2 coins; it is clear on coin, No. 23. Type P on one coin, No. 179, and Type Q on one coin, No. 112.

The Marks of each Type, however, are not identical, but only follow the Type given; and no two Marks appear to have been made by an identical punch.

The Taxila Mark also occurs on the Reverse of a group of twenty coins, which all bear the same group of Obverse Marks, which formed part of a hoard of sixty-one coins of the small thick type, like the present coins, which was found at Peshawar in 1906.¹ These have been considered in the previous Chapter.

¹ A. S. I. A. R., 1905, pp. 150-164.

The Mark also occurs on the Reverse of eleven coins which formed part of a hoard of fifty-eight coins found at Gorho Ghat, in Behar, in 1917.¹ Those coins would appear to have been deposited in a *Stupa*. The Mark was of Type A, on six of the coins, and of Type B on three coins. The Mark on the other two was indistinct.

THE OBLVERSE MARKS.

With the exception of the five coins which are of a separate coinage, referred to later on, it is not possible to say what Group of Marks occur on any of the coins, owing to the indistinctness of the Marks. The following Marks, or portions of them, can be made out on the coins, as is shown in Table I. The Six-Armed-Symbol, Mark 1b, on 14 coins; the Sun, Mark 2, on 21 coins; Mark *a* on 14 coins; Mark *b* on 5 coins; Marks *c* and *d*, each on 3 coins; and each of the remaining Marks, *e-l*, on one coin only.

(1) From the general occurrence of the Six-Armed-Symbol and the Sun on Punch-Marked coins, it may be presumed that they were on all these 162 coins, as the coins are all of the same character.

Mark *a*, a Hill with a Crescent on the top, has been shown by Mr. Jayaswal,² from an examination of more than a thousand Cast coins found at Patna (the ancient Pataliputra), and from a number of coins of the Mauryan Dynasty, found at other places in Northern India, to be the distinctive personal mark (*rājanka*) of Chandra Gupta, and adopted as a distinctive Mark on his coins throughout the empire, and continued by all his successors. The present coins, from their date, would therefore be Provincial coins of Aśoka or of Daśaratha, his grandson and successor, whose date Mr. Jayaswal fixes at 240 B. C. This Mark is therefore not a locality Mark as is the case with other Hill-Marks.

The Mark, Hill-with-Crescent does not occur on any coins of the Older Class, but it is a prevailing Mark on the Later Class of coins, both as an Obverse Mark and also of a smaller size as a Reverse Mark, and it appears in both these forms on a great number of the British Museum coins of the Later Class. It also occurs as a distinguishing Obverse Mark on 32 of the Gorho Ghat Coins, and as a Reverse Mark on five others of those coins.

Besides the Six-Armed-Symbol and the Sun, only Twelve Obverse Marks, figs. *a-l*, can be made out on the present general coins. The remaining seven Marks, figs. *m* to *s* occur on the five coins of the separate coinage. The following Marks may be noticed.

(2) Humped-Bull with Taurine; fig. *f* occurs on one coin, No. 18. This Mark occurs on 38 of the British Museum coins of the Later Class (B. M. C. A. I., pp. 17-20, and 21) and also on 6 of the Gorho Ghat Coins, together with the Hill-with-Crescent.

(3) Three arches in a Row, figure *i*:—in this mark, as it appears on the coin, the three Arches are of the same height, as shown in Plate III, but the Mark is

¹ An Examination of Fifty-eight silver Punch-Marked coins found at Gorho Ghat—by E. H. C. Walsh. J. B. O. R. S., 1919, pp. 463-494.

² Epigraphia Indica XXI; Some unpublished Mauryan Seals J. B. O. R. S., 1934, p. 2; Early Signed Coins of India, J. B. O. R. S., pp. 282, 288 and 288.

on to the edge of the coin, and the centre Arch is probably higher than the others, which is the usual form of this Mark, in which it occurs on 44 coins in the British Museum (B. M. C. A. I., pp. 46-52).

THE REVERSE MARKS.

There is only one Reverse Mark, on these coins, other than the Taxila Mark, namely a small Mark punched partly over the Taxila Mark on one coin. The absence of Reverse Marks on these coins, supports the conclusion arrived at from other considerations that they were of recent issue when placed in the hoard.

The Obverse Marks on the Later smaller thick type of coin are necessarily smaller than the Marks on the Older larger coins. There is an example of this on coin No 17, on which the Six-Armed-Symbol, fig. 1*b* occurs twice, the one larger than the other, the larger being about 9 millimetres in diameter, and the smaller 7 millimetres. The size of this Mark on Older coins, *e.g.*, on coin 455 is about 10 millimetres. As the Six-Armed-Symbol never occurs twice on a coin, it would seem as if an old punch for the Older coins had been first used on this coin, and that, finding the mistake, the smaller punch for these coins had then been used. Mark *o*, a centipede on coin 180, of the separate coinage, resembles Mark 40 of the Older Coins.

THE SEPARATE COINAGE.

There are five coins, Nos. 17, 179, 180, 181 and 182, which are of a different character to the others, and are evidently a different coinage. The Obverse Marks on them are sharp and clear, and their surface is even and smooth and has no excrescences, such as occur on the other coins. Although a different coinage, they appear to be of the same neighbourhood, as coin 17 bears Mark *m*, (which is the same as Mark 8*a* of the Older coins) which is a locality Mark, and the Taxila Mark occurs, on the Reverse of coins 17, 179 and 181, in Type P, and on coin, 182 in Type N.

The Obverse Marks on these coins are shown in figures *m* to *s* on Plate III. The Mauryan Mark of a Hill-surmounted by a Crescent occurs on coins 17 and 180; and the Swastika, Mark *n*, occurs on coin 179. Mr. Jayaswal has shown that this latter mark also was adopted as a distinctive Symbol of the Mauryan Empire on their coins. It does not occur on any of the Older coins. Mark *o* is clearly a centipede, *vriśchika*. Mark *t*, the "Caduceus" (Mark 6 of the Older coins) occurs on the Reverse of coins 180 and 181, but does not occur as an Obverse Mark on any of these coins. All the Marks which are decipherable are given in the List of the Coins. The numbers of the coins on which each of the Marks occur are given in the Table in Appendix IX, Table I.

APPENDIX I.

TABLE A.

LIST OF THE DOUBLE-OBVERSE COINS.

Coin. (On the Plates of Obverses.)	Weight.	Class.	Marks.	Coin. (On the Plates of Reverses.)	Class.	Marks.

APPENDIX II.

TABLE B.

DESCRIPTION OF THE OBERSE MARKS.

Mark No.	Six-Armed Symbol.
1. a.	Round a Central disc, three Arrows, alternately with three ovals, with a Taurine in each oval. On 642 coins; clear on coins, 328, 606 and 901.
1. b.	Round a Central disc, three Arrows, alternately with three Taurines. On 5 coins; clear on coins, 470 and 689.
1. c.	Round a Central disc, three Arrows, alternately with three ovals with a symbol resembling an hour glass, the <i>damaru</i> , hand-drawn, in each oval. On 37 coins; clear on coins, 379 and 558.
1. d.	Round a Central disc, three Arrows, alternately with three objects resembling a beetle or Crab. On 4 coins; clear on coin, 641.
1. e.	Round a Central disc, three Arrows, alternately with three ovals, with a dot in each oval. On 5 coins; clear on coin, 858.
1. f.	Round a Central disc, three Arrows, alternately with three ovals, which are plain. On 43 coins; clear on coins, 646, 766. 872A, 1148A.
1. g.	(In sequence) Arrow, Taurine, Taurine, Arrow, Taurine, Taurine. On 4 coins; clear on coins, 739 and 1142.
1. gg.	(In sequence) Arrow, Straight Bar, Straight Bar, Arrow, Straight Bar, Straight Bar. On 2 coins; clear on coin, 592.
1. h.	(In sequence) Arrow, Taurine, Fish, Arrow, Taurine, Fish. On 38 coins; clear on D-O coin, 898A, 1146.
1. hh.	(In sequence) Arrow, Fish, Oval with dot in it, Arrow, Fish, Oval with dot in it. On one Double-Obverse coin, 1155B.
1. i.	(In sequence) Arrow, Oval with dot, Taurine, Arrow, Oval with dot, Taurine. On 16 coins; clear on coin, 1148B.
1. j.	(In sequence) Arrow, Arrow, Taurine, Arrow, Arrow, Taurine. On one coin, 914B.
1. k.	(In sequence) Arrow, Oval, Taurine, Arrow, Oval, Taurine. On 12 coins; clear on coins, 902 and 917.
1. kk.	(In sequence) Arrow, "Lance-head," Taurine, Arrow, "Lance-head," Taurine. On two Double-Obverse coins, 1154B, 1163B. More distinct on coin, 1163B. (This Mark is not shown on Plate I.)
1. l.	(In sequence) Arrow, Arrow, Oval, Arrow, Arrow, Oval. On 5 coins; clear on coins, 1165A and 873A.
1. m.	(In sequence) Six Arrows. On 5 coins; clear on coins, 913 and 1153A.
1. n.	(In sequence) Three Arrows and three figures of an arrow point on a ball, alternately. On one coin, 981.
1. o.	(In sequence) Arrow, Oval containing Taurine, Arrow, Oval containing "hour-glass," arrow, and an object resembling a "Mug with a Handle". On 148 coins; parts clear on coins, 740 and 1022 and 1029.
1. p.	(In sequence) Object resembling the Sign of "Aries", Curve-to-the-left, Barbed-Arrow, Curve-to-the-left, "Crutch", Curve-to-the-left. On 2 coins; 911 and 909B. On 2 very old coins. An Ancient Mark.
1. q.	(In sequence) Fish Arrow, Curve-to-left, "Fish". On one coin, 1098.
1. r.	(In sequence) Arrow, Arrow, Oval Boss, Curve-to-right, Arrow Oval Boss, Curve-to-right. On one coin, 846A (part showing).
1. s.	(In sequence) Arrow, Fish, Fish, Arrow, Fish, Fish. On 7 coins. This is an old and worn Mark but is clearest on coins, 861B, 1159B and 1166B. It is an Ancient Mark occurring on the older obverses of Double-Obverse coins and on one other coin, 1097.
1. t.	(In sequence) Arrow, Oval-with-Taurine, Boss, Arrow, Oval-with-Taurine, Boss. On 3 coins; clear on coin, 864A and 918A.
1. u.	(In sequence) Arrow, Taurine, Arrow, Taurine, Arrow,  —Object resembling a Capital letter I. On 22 coins; clear on coins, 151 and 979.
1. v.	(In sequence) Arrow, Fish (<i>swunting, swunting, swunting</i>) Fish. On 2 coins, 427 and 763 (partly showing).

TABLE B—*contd.*

Mark No.	Six-Armed Symbol.
1. w.	(In sequence) Arrow, Oval-with-Triskelis, Arrow, Oval-with-Triskelis, Arrow, Oval-with-Triskelis. On one coin, 533. (This Mark is not shown on Plate I.)
2.	Disk surrounded by a Circle, surrounded by Rays. The Sun. On all the coins.
3.	Bull facing to right. On 435 coins; clear on many, for example, 338, 973, 1049, 1089.
3. b.	Three arches with two arches superimposed on them, representing a Hill, with a Bull facing to right on the top of it. A Locality-Mark, representing a Hill associated with a Bull—On 101 coins; clear on coins, 631, 934.
3. c.	Bull facing to left. On one coin, No. 123.
4.	Three arches with two arches superimposed on them, representing a Hill, with a Hare facing to right on the top of it. A Locality-Mark, represented a Hill associated with the Hare. On 485 coins; clear on 226, 311.
4. a.	Hare facing to right on two Arches and in front of it a symbol of a Boss with a crescent-trident on it. A Hill Locality-Mark similar to Mark 4. On 2 coins; clear on coins, 834, 953.
4. b.	Hare facing to right. On 9 coins; clear on coin, 980.
4. c.	Hare facing to right within a circular enclosure. On 3 coins; clear on coins 842B. and 1097. This Mark occurs only on the older faces of the Double-Obverse Coins, and is a very ancient Mark.
4. d. and 4. e.	} Omitted. They are each a portion of 4. h.
4. f.	Hare facing to right, with a Taurine below, behind, and above it. On 61 coins; clear on coins, 827A., 1168A.
4. g.	Hare within a circular enclosure, with four Taurines alternately with four Dots round the enclosure. On 7 coins; clear on coins, 434, 721 and 735.
4. h.	Hare facing to right with a Leveret in its mouth. On 21 coins; clear on coins, 139, 264, 948.
4. i.	Hare facing to right within a square enclosure. On one coin, 846. B.
5.	Object resembling a flattened capital M over a Spear, with five Taurines round it. On 149 coins; clear on coins, 162, 206, 283, 935.
6.	Three Ovals one above another with a Vertical Line running through them. This has been called the "Caduceus," or the "Cotton-Bale" Mark. On 71 coins; clear on coin, 226.
6. b.	An Elaboration of Mark 6 with two semicircles added on each side of it. On one coin, 553, on which it is clear.
7.	Elephant facing to right. A Mark denoting Royalty and probably indicating that the coin is of the Royal Mint, in distinction from the coins issued by other Authorities. On 500 of the coins, clear on many. See Coins, 463, 950, 966, 973, 1049.
7. b.	Elephant facing to right. A variety of Mark 7. On one coin only, No. 869.
8. a.	Four objects resembling "Beetles" or "Crabs" in a Square Enclosure. These appear to be aquatic animals, and the Mark may indicate a Tank. On 29 coins; clear on coins, 252, 328.
8. b.	Two "Beetles" or "Crabs" in a Square Enclosure. On 7 coins; clear on coins, 749, 1090, 1131, 1150.
8. c.	Incomplete Mark, a portion of Mark 8. d. On coin 605 and others
8. d.	Two "Beetles" or "Crabs" in the curves of an S-shaped Snake. On 7 coins; clear on coins, 1131, 1150; part, on coin, 605.
9. a.	Three Arches in a row, the centre Arch being higher. On 22 coins; clear on coins, 280, 959.
9. b.	Two Arches with an Arch superimposed on them (=A Hill) enclosed in a semi-circle, and an Oblong Enclosure containing two "Beetles" or "Crabs" beneath it, indicating a Tank. The Mark is a Locality-Mark, indicating a Hill associated with a Tank. On 2 coins; clear on coin, 533.
9. c.	The same as Mark 9. b., with a symbol resembling an Hour-Glass on the top of it. On 17 coins; clear on coins, 226 and 1003.
9. d.	Hill-Mark in an Oblong Enclosure with a "Beetle" on either side of it. On 2 coins, 721 and 911; clear on 911.
9. dd.	The same as Mark 9. d. but with Two "Beetles" on either side of the Hill. On one coin, 816. (This Mark is not shown on Plate I.)
9. e.	A Hill of Three Arches. This Mark only occurs on three coins, 1160, (class G. 1.), and 190 and 215 (class G. 2.).
9. f.	Two Arches with an Arch superimposed on them (A Hill) with an object resembling an Hour-Glass within each Arch. On one coin, 1089.

TABLE B—*contd.*

Mark No.	Six-Armed Symbol.
10.	Hill-Mark on Three Arches. On 13 coins; clear on coins, 540 and 1090.
11. a.	Hill-Mark on Three Arches, with 5 Taurines over it. On 17 coins; clear on coin, 1063.
11. b.	Hill-Mark on Three Arches, with an "Hour-Glass" over it and 2 Taurines. On 3 coins, clear on coin, 541.
11. c.	Hill-Mark on Three Arches, with a single Taurine over it. On 2 coins; clear on coin, 1148A.
12. a.	Hill-Mark on Three Arches, with a Tree on the top of it. On 28 coins; clear on coins, 570, 866A, 878.
12. b.	Variety of Mark 12. a. with 2 Taurine-Trident one on either side of the Tree. On 3 coins; clear on coin, 613.
13.	Double-Trident. On 44 coins; clear on coins, 140 and 953.
14.	Five Branches round a Central Disk, one branch longer than the others and an oval boss, apparently a fruit, between the branches. On 59 coins, of which 22 are the later Obverse of Double-Obverse coins, clear on coins, 442, 606, 766.
15. a.	Tree with straight branches standing on a Square "Rail." On 110 coins; clear on coin, 304. The long continuance of this Mark is shown by its appearing on the Older Obverse of Double-Obverse coins, 838B and 860B, as well as on the latest of the coins e.g., coin, 127, 139, 304, etc.
15. b.	Tree with a Rail on either side with each branch ending in a boss and with a dot between each branch. On 5 coins; clear on coin, 115.
15. c.	The same as Mark 15. b, without the dot between each branch. On 2 coins; clear on coin, 420.
15. d.	Tree with leaf branches standing in a Square Rail, similar to the Rail of Mark 15. a. On one coin, 931.
16. a.	Tree, or Branch, bending over to the right. On one coin, 853.
16. b.	Tree, or Branch, bending over to the left. On one coin, 1164. (This Mark is not separately shown on Plate I.)
17. a.	Upper Part of a Tree with Taurines between the branches. A variety of the upper part of Mark 17. f. see below. On 4 coins; clear on coin, 1079. These Marks 17 occur only on the oldest coins.
17. b.	Upper portion of a Tree with a Taurine on the top, and Taurines between the branches. A variety of the upper part of Mark 17. f. On one coin, 1093.
17. c.	Upper portion of a Tree with the branches ending in Taurines and Taurine-Tridents. A variety of the upper part of Mark 17. f. On 2 coins, 850A and 866B.
17. d.	Upper portion of a Tree with two branches ending in Ovals, and an "Hour-Glass" and an Arrow between the branches. A variety of the upper part of Mark 17. f. On one coin, 862B.
17. e.	Upper portion of a Tree with the branches ending in Ovals. A variety of the upper portion of Mark 17. f. On 2 coins, 884B. and 905B.
17. f.	Tree with two of the branches ending in Taurines, and with Taurines between the other branches, in a Rail, and, beneath it, an Oblong Enclosure with a "Beetle" in it, representing a Tank. A very old Locality-Mark. On 3 coins, 905A, 925A and 1163A.
18. a.	Tree with the branches ending in "Almonds." On 3 coins, clear on coins, 292.
18. b.	Upper part of a Tree, with Tri-fid ends to the branches. On 3 coins; clear on coin, 156.
19. a.	Four circles and Four Taurines between them. On one coin, 328.
19. b.	Square with Four circles round it, and Four Taurines between them. On one coin, 427.
19. c.	Two circles with eight Taurines round them. On one coin, 248.
20. a.	Disk with Four Taurines round it. Clear on coins, 144, 382.
20. b.	Square with Four Taurines round it. Clear on coin, 235. Either this mark on Mark 20. a. occur on 18 coins.
20. c.	Object resembling an Hour-Glass with Four Taurines round it. Occurs on one coin, 533.
21.	A Horizontal-Bar Superimposed on a Vertical-Bar with two Taurines on either side, and on the top, an Object of the shape of a cup with two projections on the right. It is not clear what the Mark is intended for—it may be a Standard or Banner. On 112 coins; the mark is complete on coins, 520 and 539.
22. a.	On a staff, a Crossbar with two pendants on either sides, and above it a Plume or Branch bending to the right. The Mark may be a Standard. On 3 coins; complete on coin, 691.

TABLE B—contd.

Mark No.	Six-Armed Symbol.
22. b.	Part of Mark 22. a. with a Taurine on either side, the Plume outside the coin. On one coin, 846.A.
22. c.	Similar to Mark 22. b., with the ends of the Cross-bar, Trifid. On one coin, 926.A.
23.	Square Enclosure, with an Arc in each corner, and in the centre a Wheel and four Taurines round it. On 9 coins; clear on coins, 773, 869. A Wheel, <i>chakra</i> , is the symbol of Vishnu. As there is no sign to indicate water, the Enclosure may be a Temple, and the Mark may indicate a Temple of Vishnu, and be a Locality-Mark. The Mark is, by oversight, not correctly drawn on Plate I; the circle in the centre should be a wheel with spokes, as will be seen on the coins. The Mark is correctly shown in Table H, p. 94. This Mark occurs on the Mohenjo-Daro Seals, and Professor Langdon has noted:— "This sign probably means 'City'." It may, therefore, be a Locality-Mark on the coins.
24. a.	Two Taurines with a Circle between them. On 47 coins; clear on coin, 301.
24. b.	Two Taurines in an Oblong Enclosure. On 2 coins; clear on coin, 877.B.
25.	Circular Enclosure with a circle in the Centre and Four Fish round it. The Mark appears to represent a Circular Tank with an Island in the Centre and to be a Locality-Mark. On one coin, 865.A. The Mark is probably a variety of Mark 38 in which the Enclosure is Square.
26.	Triakela, with three Taurines round it. On one coin, 148.
27.	Footprint with Two "Beetles," one on either side. On one coin, 470.
28.	Elephant-Goad, <i>Atkusa</i> , with a line on the left and a Trident-Crescent on the right and a Taurine below. All within an Oval-Enclosure. On 5 Double-Obverse coins; clear on coins 905.A, 1079, 1163.A. This is an Ancient Mark.
29.	Animal facing to the right, resembling a Civet Cat (<i>Viverra Civetta</i>). This animal is not the Hare, as the tail comes down vertically behind the body, the hind legs are not longer than the fore legs, as in the Hare Mark, and the jaws are open. On 2 coins; 689, 865.B.
30.	Animal with long ears, and no tail, facing to the left. This is not the Hare which always faces to the right, and the hind legs are not longer than the forelegs. On one coin, 763.
31.	Object, the meaning of which is not apparent; it may possibly be intended for an animal facing to the left. On one Double-Obverse Coin, 865.B.
32.	Animal facing to the right, with a hump and straight horns, or long ears; with three dots above it, and one below the head, and some object in front of it. On one coin, 846.A.
33.	Animal with short straight horns facing to the right; a Nilgai, "Blue Bull" (<i>Bocelaphus Tragusmelus</i>), a large Antelope, which is common in Northern India, where it causes much damage to the crops. The short horns are clearly shown. On one coin, 907.A.
34.	One horned Rhinoceros (Sk. <i>Gajdaṭṭa</i>), facing to the right. On 38 coins. (Class M-1. and 2 Double Obverse coins, 894.B and 900.A.) Clear on coins, 827 and 916. The one-horned Rhinoceros was probably found throughout the whole of India at the time of these coins. It was hunted up to Akbar's time in the Punjab, where it has long since been exterminated. The Two-Horned Rhinoceros does not appear on Punch-marked coins.*
35.	Frog (Sk. <i>Bheka</i>) In Vedic Mythology the Frog represented the clouds. If may, perhaps, here represent a proper-name "Bheka," in which case it would be a Personal-Mark. On 34 coins; clear on coin, 274.
36.	Fish. On 7 coins; clear on coins, 235 and 844.
37.	Fish with a smaller Fish in its Mouth. On 8 coins; clear on coin, 1143.†
38.	Square Enclosure with a Square in the centre with a dot inside it, and four fish round it. This Mark represents a Tank with an Island in the centre, and is a Locality-Mark. On 38 coins; clear on coins, 833, 922.
39. a.	Fish between Two Taurines. On 4 of the Oldest coins; clear on coin, 897.B.
39. b.	Fish between Two Triangles, with a dot in them, and a Crescent above it. On one Double-Obverse coin, 1149.A.
40.	Centipede. On 18 of the Oldest Coins; clear on coins, 759, 898.B, 1098.
41.	Figure consisting of a Semicircle on a Cross-Bar on a staff with Two Taurines, one on each side. This Mark is, probably, a Standard. On 20 coins; clear on coins, 372, 751.
42. a.	Thick Undulating Line. On 34 coins; clear on coin, 202.
42. b.	A Thick Zig-Zag Line. A variety of Mark 42a, but the undulations are angular. On one coin, 1086.
43. a.	On a scalloped staff, a Cross-Bar curving upwards and on it a Plume or Branch curving to the Right. On 12 coins; clear on coin, 981. This Mark may be a Standard.

* V. A. Smith attributes a Two-Horned Rhinoceros on a cast copper coin of Avanti in the India Museum, Calcutta (C. C. I. M. C., Vol. I, p. 154). But, from his sketch of it, the Mark to which he refers is clearly an Elephant.

† Theobald illustrates this Mark, which he mistakenly describes as a "Gharial" seizing a "Ailes" (Theobald Plate IV, fig. 30, and p. 253. J. A. S. B., 1890). He mistook it for a Fish-eating-Crocodile (*Gharial*) as probably on his coin the entire mark showing the tail, did not appear.

TABLE B—*concl'd.*

Mark No.	Six-Armed Symbol.
43. b.	The same as Mark 43. a., but with the Plume or Branch curving to the Left. On 6 coins.
44.	Figure, which may be a part of Mark 43.
45.	Figure on a Pole. It would appear to be a Standard. May be a part of Mark 43.
46.	Three Objects, the shape of a Hand-Mirror, with a Taurine in each the middle one pointing in one direction, the two outer ones in the other. On 3 coins, 481, 906.A. and 917; clear on 917.
47.	Similar to Mark 46, without the Taurine in the outside figures
48.	Three "Beetles" pointing outwards round a circle. On 3 old coins; clear on coins, 778, 917.
49.	Four "Beetles" pointing outwards round a circle in a circular Enclosure. On 2 old coins; 897.A. 992 clear on coin, 992.
50.	Figure consisting of Two Squares. On 3 coins; clear on coin, 592.
51. a.	Three Lotus-Leaves with a Fish over them. Represents a Tank. On one old coin, 850.B.
51. b.	Three Lotus-Leaves with Two Fish over them in a Square Enclosure. Represents a Tank. On one coin 689.
52.	Four circles in a row, with a Dot in the centre of each, in an Oblong Enclosure. This Mark, as already noticed, occurs as a Sixth Mark on the edge of 19 coins, of various Classes, and in consequence generally only a part of it appears on the coin. Clear on coins, 739, 843. See the reference to this Mark on page 12.
53.	Figure of the shape of a narrow-waisted pear ending in a point. It is not apparent what it is intended to represent. On one coin, 837.
54.	Figure consisting of an upright with three 'spines' on either side, and a Cross-Bar, with a Lozenge above it with the ends of its sides projecting. It may be a Standard. On one very old coin, 848; clear.
55.	This Mark is omitted from Plate I. It was originally thought to be a separate Mark, but was subsequently found to be two separate Marks, stamped together.
56.	Three Arches on a Thick Curved Base ending in a bifid. On one coin, 838.A.
57.	Tortoise, with open mouth, and a small round object behind it, perhaps intended for an egg. On 2 coins, 892.A. and 1104.A.; clear.
58. a.	Wheel with Four Taurines and Four Crescents round it. On one coin, 340; clear.
58. b.	Wheel with Cogs projecting from it. On 2 old coins, 912.B. and 920.B.
59.	Cross-Bar supported on a staff with supports terminating in 'almonds', and on it a large Trifid object with Four Small Trifids, two on either side, apparently representing branches or leaves. This Mark may be a Standard. On 2 very old coins; clear on coin, 890.
60.	The same as Mark 59., but with only Four Small Trifids on the Cross-Bar. On 5 very old coins is clear on coin 895.
61.	Branch of Three Leaves within a Rail. On one coin, 1151.B.
62.	Crocodile or Lizard. On one coin, 846.B.
63.	Undulating Cross-Bar pointing down to the right, with a small projection on the Top, on an upright resting on a Rail, with Two Taurines, one on either side. On 6 old coins; clear on coin, 898.A.
64.	Bow and Arrow. On 2 very old coins, 877.B. and 892.B.
65.	Object, the shape of a curved "Hour-Glass" with Three Taurines, one on each side, and one below. On one coin, 1105.
66.	Disk surrounded by Four Convex Arcs. On one old Double-Obverse coin, 860.B.
67.	Cross-shaped Enclosure with a circle in the centre and Four Taurines, one in each arm, and four Dots, round the outside. On one coin, 853.
68.	Incomplete Mark, as shown in the figure. On one coin, 853.
69.	Four spheres Joined together on a Bar. On 2 very old coins, 920.B. 1164.
70.	Four Ovoids in a Square Enclosure. On 4 very old coins; clear on coin, 908.B. (Partly over stamped by a Reverse-Mark).
71.	Design as shown in the Plate. On one very old coin, 903.
72.	Large Disk with Eight pointed Trepoils projecting round it, and Two similar Foliated Objects, one on each side. On 3 very old coins; complete on coin, 838.B.
73.	Part of a Mark consisting of Dots and Taurines round a central Boss. The Mark occurs on only one coin, 1132. (class M. 6). The Mark is incomplete, and is therefore not shown on Plate I

APPENDIX III.

TABLE G.

IDENTITY OF THE MARKS ON CLASS D. 2 OF THE PRESENT COINS WITH COINS OF THE LATER CLASS FOUND AT PESHAWAR.

In 1906 a hoard of 61 Punch-marked coins were found at Peshawar which were examined and described by Dr. D. B. Spooner.* Dr. Spooner found that all the coins contained 5 marks on the obverse, as is the case in most of the finds of Punch-marked coins that have been examined, and that the same group of five marks occurs on 20 of the coins, showing that they constitute the same coinage. Dr. Spooner noted 23 different marks on the obverse of the coins, 7 of which occur only once. It would naturally be expected that the marks on those coins of a neighbourhood so near to Taxila would be of the same nature as those on the present coins. And such is the fact. I have examined the marks on the Peshawar coins so far as they can be distinguished on the coins on Dr. Spooner's Plate and find that, with the exception of two, viz. "l. peacock" and "m. human figures", every one of the Obverse marks on those coins corresponds with some one of the marks on the present coins. Marks 1 and 2 (Dr. Spooner's "a" and "d") occur on all the coins except in one or two cases in which all the Marks are not apparent. I am not able to agree with the meanings which Dr. Spooner attributes to several of the Marks, on the ground that he considered them to be symbols of the Buddhist religion. But what is material is that the Obverse marks on those coins are the same as the marks on the present coins. Thus, the fixed group "a, b, c, d, e" on 19 of those coins corresponds to Marks 1b, 3, 15, 2, 9, or transposing them, to 1b, 2, 3, 9, 15 of the present coins. This is the more interesting as on some of the coins the mark 9 is the upper part of 9c and we have a similar group to Class D 2 of the present coins with mark 3 (bull) in place of No. 5. Class D 2 comprises 90 coins.

With regard to the 20 coins on which these 5 symbols occur, Dr. Spooner found that "in every case where the punch-mark on the reverse was decipherable it was found to be what Cunningham called the "Taxila mark", we have an invariable concomitance established between a particular group of symbols on the obverse and a particular "mint mark" on the reverse, which cannot conceivably be lacking in significance and which points decidedly to these coins having been the regular coinage of some one accepted central authority and the symbols on their selection the recognised insignia of the same."†

The occurrence of a fixed mark, such as the Taxila mark, on the reverse, is a characteristic of the Later Class of Punch-marked coins. It occurs, in the case of that particular Mark, on the coins found at Taxila, which Cunningham describes (C. A. I. p. 60), and on the Peshawar coins and on a hoard of 167 coins, also of the same Later small thick type, which were found at Taxila in 1912, which are described in Part II. That fact is of importance as a means of dating those coins of the small thick type as being of a later date than the present coins.

Although all the fixed group of those five marks occur on one Class (D 2) of the present coins, the Taxila mark does not occur on any of the present coins. As in the case of other punch-marked coins of the Older thin type, they have no fixed mark on the reverse. Had the Taxila mark been a known mark at the time of the present coins, it is reasonable to suppose that it would occur on some, at least, of the present coins, and the fact that it does not, would lead to the conclusion that it was not then a known mark, but was of subsequent date, and that the Peshawar coins are later than the present coins, though of the same area as the coins of Class D 2. The Peshawar coins are of the smaller and thicker type of punch-marked coins. Independently of the later date (248 B. C.) which is now fixed for the Smaller thick type of coin, by the hoard of 167 coins of that Class found at Taxila in 1912, the smaller thicker type of punch-marked coins would appear to be the later type, from the resemblance to their form to that of the later cast-coins, which succeeded the punch-marked coins, and for other reasons. The fact that the "Taxila Mark" occurs on those coins, and not on the present coins, which are of the large thin type, is, also, a strong confirmation of that theory.

* A. S. I. R., 1905-06, pp. 150-164.

† A. S. I. R., 1905-6, p. 153.

APPENDIX VIII.

TABLE H.

THE MARKS* ON THE COINS WHICH CORRESPOND TO FIGURES AND SIGNS ON THE SEALS FOUND AT MOHENJO-DARO AND HARAPPA.

As already mentioned, several of the Marks on Punch-marked coins correspond to Figures and Signs on the Seals found at Mohenjo-daro and Harappā. Those which occur on the present coins are shown in the Table below.

OBVERSE MARKS.

ANIMALS WHICH OCCUR ON THE SEALS.

The Animals which occur on the Seal and on the Copper Tablets are, the Bull, the Elephant, the Rhinoceros, the Tiger, the Leopard, and the Crocodile and the Hare occurs on the Copper Tablets only. The impressions of 595 seals are given in Plates CIII-CXVI and CXVIII of Vol. III, and 22 Copper Tablets are given on Plates CXVII and CXVIII. The Bull appears in five different Types which are shown below as typical Examples of the Seals.

Type A occurs on 315 of the Seals and on two of the Copper Tablets; Type B, which from its horns appears more to resemble a Buffalo, on 3 seals; Type C, on 10 of the Copper Tablets; Type D, with Garlands round its neck, on 4 seals; and Type E, the Humped-Bull on 14 seals, but not on the Copper Tablets.

The Elephant occurs on 11 seals and on one of the Copper Tablets. The Rhinoceros occurs on 14 seals and on two of the Copper Tablets. The Tiger occurs on 7 seals and one Copper Tablet. The Leopard on one seal only; the Crocodile on 3 seals. The Hare only occurs on two of the Copper Tablets.

The animals on the Coins which also appear on the Seals are given below. The Birds, and signs that may be intended for birds, occur in the script on eleven of the Mohenjo-daro and

three of the Harappā Seals (Sign-Manual 354-6 and 359-364). There are twelve varieties; one of these, on Seal 207 (Sign-Manual 355), from its crest and tail may be intended for a

peacock, but there is no reason to connect a peacock on the seals with the Peacock on the Later Coins, on which it was a distinctive mark (*mayurā, maur*) of the Mauryan Empire.

On most of the seals there is an animal with an inscription above it, as in the Examples shown above, but there are 72 seals shown (Pls. CXIII and CXIV), which contain an inscription only. Almost all the seals are square, but there are nine round seals. These are smaller. One of these is given here as an Example, as its resemblance to a punch-marked coin, though accidental, and not implying any direct connection between the two, is striking, the more so as the Bull on it has the horns curving forward as on the coins.

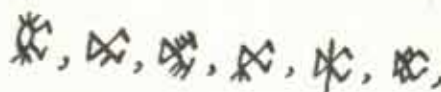

309.

Eighty-eight copper tablets were found; they have the design and the inscription cut into the copper. Forty-seven of them have an animal or human figure on the one side and the inscription on the other, the remainder being illegible. They are of varying thickness. They chiefly belong to the later period. Mr. Mackay considers that they were amulets.

The Signs in the Pictographic Script on the Seals which correspond with Marks on the coins are given in the Table below. Professor Langdon gives a list of 288 of the Signs in his "Sign List of the Indus Script" (Vol. II, pp. 434-452). The reference to this List is given in Column 6 of the Table. And a complete list containing 396 Signs, and showing against each Sign the numbers of all the seals on which that Sign occurs, together with the complete inscription on each of those seals, is given in the "Sign Manual" (Vol. III, Plates CXIX-CXXIX). The reference to the Sign Manual is given in Column 7 of the Table. The serial numbers in the Sign Manual are given in Roman figures, but, for convenience, are shown in ordinary figures in the Table. Both the List and the Sign Manual are rough sketches of the Signs. The Signs shown in Column 3 of the Table below, have been accurately drawn from the seals themselves. The number of the seal, selected in each case on which the sign is distinct, is given in Column 4. As will be seen from the Table, the order of the signs in the List and in the Sign Manual is not the same. The Sign Manual also includes the Seals found at Harappā which are not illustrated in the Mohenjo-daro Plates.

In the comparison of the Marks with the Signs, it must be borne in mind that the Taurines in Marks 5, 23, and 58a are merely protective or lucky symbols, and are not an essential part of the symbol.

The Six-Armed-Symbol and the Sun do not occur on the Seals, nor does the Taurine. Dr. Fabri (J. R. A. S. 1935, p. 313) shows the Taurine as equivalent to the Sign  (Sign-

Manual 99), but the varieties in which this Sign appears.  (Sign-Manual 101, 103, 104, 105, 106, 107, respectively) would show that this is not the same sign as the Taurine.

Professor Langdon considers this sign to be the Brāhmī character *m*. From its form, it would appear to be intended for a crab.

The Frog, (Obverse Mark 35), also does not occur on the Seals. Mr. Durgā Prasād¹ shows the Frog as occurring on Seal 10, Pl. CXVIII; but a reference to that Seal shows that the figure to which he refers, which forms part of a number of animals and which only partly occurs on the edge of the seal, is not a frog.

The Swastika does not occur in the Signs, but, as shown in the Table, occurs as the sole design on 16 seals. The Swastika, however, does not occur on the Older Punch-marked coins.

¹ J. A. S. B., 1935, *Num. Sup.*, XLV, Pl. 29

SIGNS RESEMBLING BRĀHMĪ CHARACTERS.

Certain of the Signs on the Seals resemble Brāhmī characters. Professor Langdon (Vol. II, p. 433) gives a List of 36 such resemblances, and notes "There are many other Characters of the Brāhmī script which are strikingly similar to signs of the Indus Script, but, to avoid misleading material for future research, they are omitted." He notes that the Indus Valley Script corresponds to the earlier form of the Sumerian pictographic script (p. 454), as "the Indus Valley system still retains many traces of its pictographic origin, remained true to its original principle, the writing still runs from right to left and the signs still retain their upright position." Professor Langdon considers (p. 426) that "the Brāhmī script, from which all later characters were derived, is most probably a survival of the early pictographic system of the Indus Valley. But even though future discoveries confirm this thesis, it does not follow that the language of the early Indus Valley is Indo-Germanic; the Babylonians borrowed the Sumerian ideographic and syllabic script for writing their Semitic language and the same circumstance may have obtained in India."

The Marks on the coins which appears to be Brāhmī characters have been already mentioned. Professor Langdon's equations of the signs and the Brāhmī characters are given at the end of the Table.

TABLE H—*contd.*
OBVERSE MARKS.

PUNCH-MARK.		MOHENJO-DARO SEALS.					8
1	2	3	4	5	6	7	
Plate I No.	Mark.	Sign.	Seal No.	Plate.	Indus- script No.	Sign- Manual No.	REMARKS.

APPENDIX XII.

LIST OF THE LATER COINS.

The Hoard of 176 Silver Punch-Marked Coins Found in the Bhir-Mound at Taxila in 1912-13.

(The Weight is the Grains, the Size is in Inches.)

Serial No.	Weight.	Size.	Obverse Marks decypherable (Plate III).	Reverse Marks (Plate III).
17	50.0	.60 × .55	The Six-Armed-Symbol, Fig. 1b, twice, of different size, and Figs. a, and m, and part of an incomplete mark.	Taxila Mark, Type P.
18	54.2	.60 × .55	Figs. 1b, a, f and j	Ditto Type A.
19	52.8	.60 × .55	Figs. b and d	Ditto indefinite.
20	55.5	.67 × .35	Figs. b (clear), and h	Ditto Type B.
21	49.5	.60 × .55	Figs. 2, a, b	Ditto Type K.
22	47.0	.60 × .47	Indistinct	Ditto Type C.
23	54.0	.60 × .55	Figs. 2, a, d, g	Ditto Type O.
24	55.5	.68 × .50	Fig. a	Ditto Type B.
25	49.8	.55 × .55	Fig. 2	Ditto Type A.
26	49.8	.62 × .50	Figs. b and k	Ditto Type C.
27	52.1	.57 × .55	Fig. a, (Part)	Ditto Type A.
28	56.8	.55 × .55	Indistinct	Ditto ditto.
29	57.1	.65 × .62	Ditto	Ditto Type K.
30	55.2	.55 × .53	Figs. 1b, and 2	Ditto Type B.
31	50.6	.53 × .48	Indistinct	Ditto Type A.
32	54.1	.80 × .46	Ditto	Ditto Type B.
33	54.0	.53 × .48	Ditto	Ditto Type F.
34	56.8	.58 × .57	Fig. 1b	Ditto Type B.
35	54.6	.65 × .52	Indistinct	Ditto Type A.
36	55.0	.55 × .45	Ditto	Ditto indefinite.
37	50.9	.57 × .56	Ditto	Ditto Type H.
38	50.2	.55 × .55	Fig. a	Ditto indefinite.
39	53.0	.50 × .47	Indistinct	Ditto Type E.
40	55.5	.65 × .50	Fig. f	Ditto Type J.
41	51.2	.55 × .47	Indistinct	Ditto Type B.
42	51.0	.56 × .52	Figs. 1b, a	Ditto Type J.
43	53.9	.65 × .50	Fig. l	Ditto Type C.
44	51.2	.50 × .48	Indistinct	Ditto Type B.

LIST OF THE LATER COINS—*contd.*

Serial No.	Weight.	Size.	Obverse Marks decypherable (Plate III).	Reverse Marks (Plate III).
45	50.6	·50 × ·50	Fig. 1b	Taxila Mark, Type A.
46	55.6	·55 × ·50	Indistinct	Ditto indefinite.
47	50.3	·60 × ·52	Fig. 2	Ditto ditto.
48	50.5	·55 × ·47	Fig. 2	Ditto ditto.
49	55.3	·58 × ·45	Indistinct	Ditto ditto.
50	53.6	·55 × ·50	Fig. a	Ditto Type J.
51	52.0	·63 × ·40	Indistinct	Ditto indefinite.
52	51.2	·50 × ·47	Ditto	Ditto ditto.
53	48.4	·60 × ·45	Ditto	Ditto ditto.
54	51.8	·55 × ·50	Fig. a (clear)	Ditto Type C.
55	50.0	·63 × ·40	Fig. a	Ditto Type J.
56	50.6	·55 × ·47	Fig. a	Ditto indefinite.
57	56.6	·58 × ·48	Indistinct	Ditto ditto.
58	55.6	·57 × ·53	Ditto	Ditto ditto.
59	50.3	·70 × ·40	Ditto	Ditto ditto.
60	51.0	·57 × ·47	Ditto	Ditto ditto.
61	53.8	·56 × ·52	Figs. 2, a,	Ditto Type A.
62	52.4	·48 × ·48	Figs. 1b, 2	Ditto indefinite.
63	54.6	·54 × ·48	Fig. 1b	Ditto ditto.
64	53.0	·52 × ·50	Fig. a	Ditto Type B.
65	51.7	·70 × ·45	Fig. 2	Ditto indefinite.
66	53.3	·63 × ·45	Indistinct	Ditto Type J.
67	49.4	·55 × ·45	Fig. a	Ditto Ditto.
68	53.0	·52 × ·47	Indistinct	Ditto Type B.
69	53.8	·60 × ·47	Ditto	Ditto indefinite.
70	54.2	·58 × ·47	Fig. c	Ditto Type D.
71	52.4	·60 × ·52	Indistinct	Ditto Type E.
72	55.2	·65 × ·52	Ditto	Ditto Type A.
73	51.2	·70 × ·45	Fig. 2	Ditto Type I.
74	52.0	·63 × ·50	Indistinct	Ditto indefinite.
75	51.0	·56 × ·56	Fig. 1b	Ditto Type A.
76	55.8	·56 × ·45	Fig. 2	Ditto ditto.
77	51.8	·60 × ·55	Indistinct	Ditto Type G.

LIST OF THE LATER COINS—*contd.*

Serial No.	Weight.	Size.	Obverse Marks decypherable (Plate III).	Reverse Marks (Plate III).
78	47.3	.52 × .50	Fig. 2	Taxila Mark, Type J.
79	52.6	.52 × .50	Indistinct	Ditto Type H.
80	51.4	.60 × .51	Ditto	Ditto Type B.
81	53.6	.55 × .50	Fig. c	Ditto Type A.
82	56.2	.55 × .52	Indistinct	Ditto Type F.
83	54.4	.60 × .50	Ditto	Ditto Type B.
84	54.2	.60 × .50	Ditto	Ditto Type F.
85	48.6	.63 × .60	Ditto	Ditto indefinite.
86	52.3	.55 × .43	Ditto	Ditto ditto.
87	52.4	.50 × .45	Ditto	Ditto ditto.
88	53.7	.50 × .50	Ditto	Ditto Type B.
89	52.8	.50 × .45	Ditto	Ditto ditto.
90	49.7	.50 × .48	Figs. c and e	Ditto ditto.
91	52.0	.58 × .45	Fig. 2	Ditto indefinite.
92	53.0	.65 × .51	Fig. 2	Ditto Type E.
93	54.6	.60 × .55	Indistinct	Ditto Type B.
94	51.8	.75 × .55	Fig. 2	Ditto Type K.
95	52.0	.55 × .52	Indistinct	Ditto Type H.
96	51.2	.55 × .48	Fig. b	Ditto indefinite.
97	59.0	.70 × .46	Indistinct	Ditto ditto.
98	51.0	.75 × .40	Ditto	Ditto ditto.
99	55.5	.55 × .45	Ditto	Ditto Type F.
100	49.7	.56 × .45	Ditto	Ditto Type D.
101	52.6	.70 × .50	Ditto	Ditto Type O.
102	49.8	.60 × .53	Figs. 1b, and 2	Ditto Type E.
103	55.4	.52 × .46	Indistinct	Ditto Type B.
104	50.9	.55 × .50	Ditto	Ditto Type I.
105	51.6	.55 × .50	Ditto	Ditto indefinite.
106	53.6	.52 × .50	Ditto	Ditto ditto
107	52.0	.60 × .50	Fig. 2	Ditto ditto.
108	53.0	.60 × .50	Indistinct	Ditto ditto.
109	52.5	.55 × .50	Fig. 2	Ditto ditto.
110	51.9	.55 × .55	Indistinct	Ditto Type L.

LIST OF THE LATER COINS—*contd.*

Serial No.	Weight.	Size.	Obverse Marks decypherable (Plate III).	Reverse Marks (Plate III).
111	51.0	55 × 40	Indistinct	Taxila Mark, indefinite.
112	55.0	60 × 50	Ditto	Ditto Type Q.
113	58.3	55 × 50	Ditto	Ditto indefinite.
114	51.9	60 × 35	Ditto	Ditto Type K.
115	55.4	57 × 50	Ditto	Ditto Type B.
116	54.6	60 × 45	Ditto	Ditto indefinite.
117	50.4	55 × 47	Ditto	Ditto Type F.
118	52.0	60 × 57	Ditto	Ditto indefinite.
119	54.4	52 × 47	Ditto	Ditto Type B.
120	49.6	64 × 45	Ditto	Ditto indefinite.
121	51.1	60 × 50	Ditto	Ditto Type M.
122	53.6	55 × 55	Fig. 1b	Ditto Type C.
123	53.2	62 × 60	Indistinct	Ditto indefinite.
124	51.4	48 × 45	Ditto	Ditto Type B.
125	50.0	60 × 50	Ditto	Ditto indefinite.
126	53.4	55 × 42	Ditto	Ditto ditto.
127	52.4	57 × 48	Ditto	Ditto ditto.
128	52.3	55 × 50	Ditto	Ditto Type B.
129	54.2	56 × 47	Ditto	Ditto indefinite.
130	51.0	53 × 52	Ditto	Ditto ditto.
131	51.4	57 × 55	Ditto	Ditto ditto.
132	50.6	60 × 50	Figs. 1b, and i	Ditto Type G.
133	51.4	62 × 47	Indistinct	Ditto Type A.
134	51.2	58 × 50	Fig. 2	Ditto indefinite.
135	56.2	60 × 60	Indistinct	Ditto ditto.
136	51.9	55 × 50	Ditto	Ditto Type B.
137	51.6	57 × 55	Ditto	Ditto Type A.
138	51.8	54 × 45	Ditto	Ditto ditto.
139	56.2	57 × 45	Ditto	Ditto indefinite.
140	57.8	50 × 45	Ditto	Ditto ditto.
141	59.3	50 × 40	Ditto	Ditto Type G.
142	53.3	32 × 50	Ditto	Ditto Type A.
143	51.4	55 × 45	Ditto	Ditto indefinite.

LIST OF THE LATER COINS—*contd.*

Serial No.	Weight.	Size.	Obverse Marks decypherable (Plate III).	Reverse Marks (Plate III).
144	54.4	55 × 50	Indistinct	Taxila Mark, indefinite.
145	52.7	55 × 53	Ditto	Ditto Type B.
146	52.7	52 × 47	Ditto	Ditto indefinite.
147	53.3	52 × 50	Ditto	Ditto Type A (Part).
148	52.4	50 × 48	Ditto	Ditto indefinite.
149	52.4	67 × 47	Ditto	Ditto ditto.
150	46.7	60 × 45	Ditto	Ditto ditto.
151	51.0	50 × 50	Ditto	Ditto ditto.
152	53.4	75 × 38	Ditto	Ditto Type I.
153	52.0	75 × 42 52 × 50	Ditto	Ditto indefinite.
154	52.2	55 × 50	Ditto	Ditto ditto.
155	55.4	60 × 50	Ditto	Ditto ditto.
156	51.5	61 × 40	Ditto	Ditto ditto.
157	55.0	57 × 40	Ditto	Ditto Type E.
158	57.5	52 × 46	Ditto	Ditto indefinite.
159	53.1	65 × 40	Ditto	Ditto ditto.
160	45.5	64 × 55	Fig. d	Ditto ditto.
161	54.0	82 × 27 (irregular shape).	Fig. d	Ditto ditto.
162	51.4	70 × 40	Indistinct	Ditto Type J.
163	51.8	52 × 45	Ditto	Ditto Type K.
164	51.4	50 × 48	Ditto	Ditto indefinite.
165	52.6	65 × 45	Ditto	Ditto Type A.
166	52.4	57 × 45	Fig. 2	Ditto indefinite.
167	56.2	53 × 50	Indistinct	Ditto ditto.
168	52.0	58 × 50	Ditto	Ditto ditto.
169	52.1	62 × 42	Ditto	Ditto Type A.
170	54.2	56 × 42	Ditto	Ditto Type I.
171	52.2	50 × 45	Ditto	Ditto indefinite
172	50.4	57 × 55	Ditto	Ditto ditto.
173	52.7	55 × 50	Ditto	Ditto ditto.
174	54.5	60 × 50	Fig. 2	Ditto Type B.
175	58.2	55 × 50	Indistinct	Ditto indefinite.

LIST OF THE LATER COINS—*concl.*

Serial No.	Weight.	Size.	Obverse Marks decypherable (Plate III).	Reverse Marks (Plate III).

Gold Coin of Diodotus.	129.5			

INDEX

- Age of the different classes of punch-marked coins 59, 13-15
- Allan, J. — on date and standard of Bar coins 59, 2
- Alexander the Great, coin of — found along with Bhir-mound punch-marked coins 59, 1
- Almond, reverse mark 59, 83
- Ankusa*, Mark No. 28 59, 43
- on Mohenjodaro seals 59, 94
- reverse mark 59, 86
- Arches, reverse mark 59, 86
- Aridaeus, Philip, coin of, found with Bhir-mound punch-marked coins 59, 1
- Arm with club, reverse mark 59, 87
- Arrow-head, reverse mark 59, 86
- Arthasāstra*, — on measure of weight 59, 3
- on Collector General of Revenue 59, 5
- on Superintendent of Mint 59, 5
- Asia Minor, earliest coin of — stamped metal globule 59, 4
- Aśoka, coins of 59, 34
- Authority issuing coin, marks which indicate the 59, 17
- Balls, reverse marks 59, 84
- Balls, joined — reverse mark 59, 84
- Circle of, round a centre — reverse mark 59, 84
- Ball on a stem, reverse mark 59, 86
- Ball and ring, reverse mark 59, 83
- Banners, marks which may be 59, 42
- Bar-coins, indigenous coins of Indian Standard 59, 3
- Beetle on punch-marked coins 59, 9, 41, 43, 44
- Beetle-Tank mark — a mark of locality 59, 21
- Besnagar *kārshāpanas*, device of river on — indicative of *Vetravati* 59, 6
- Bhandarkar, D. R. — on the authorities other than the royal mints authorised to issue coinage 59, 5
- Bheka*, frog, Mark No. 35 — may represent a proper name and so be a personal mark 59, 43
- Bhir-mound, coins found at 59, 1, 31
- Bocelaphus *Tragacamelus*, Mark No. 33 59, 43
- Bow and arrow — Mark No. 64 59, 44
- on Mohenjodaro and Harappa seals 59, 94
- reverse mark 59, 86
- Brāhmī* letters on reverse of punch-marked coins 59, 26
- resemblance with signs on seals of Mohenjodaro 59, 27-28, 93
- Table of — showing their derivation from the Indus Script 59, 97
- Brihadratha dynasty of Magadha, standard of 59, 6
- Buddhaghosha, on experience of shroffs in his time 59, 5-6
- Bull Mark 59, 9
- Bull-Hill mark — a mark of locality 59, 20, 41
- Bull, reverse mark 59, 87
- Caduceus 59, 41
- Centepede, Mark No. 40 59, 43
- reverse mark 59, 87
- Characteristics, general, of punch-marked coins 59, 4
- City mark, Mark No. 23 — a locality mark 59, 21
- on Mohenjodaro seals 59, 43, 94
- Civet Cat, mark 59, 43
- Classification of punch-marked coins 59, 22-25
- Coinage, a royal prerogative in the Mauryan age 59, 5
- Collector General of Revenue — mentioned in the *Arthasāstra* 59, 5

- Composition of later class punch-marked coins from Bhira-mound . . . 59, 32
- Crabs, marks of, on punch-marked coins 59, 41
- Crescent, reverse mark 59, 82
- Crocodile, Mark No. 62 59, 44
- Cross, reverse mark 59, 85
- curved, reverse mark 59, 86
- Crutch, reverse mark 59, 86
- Curved rays, reverse mark 59, 86
- Dagger, reverse mark 59, 86
- Daric, Persian — found with Bhira-mound punch-marked coins 59, 1
- found in Asia Minor 59, 2
- Daśaratha, coins of 59, 34
- Diodotos, coins of, found with Bhira-mound punch-marked coins 59, 1, 31
- Door (?), reverse mark 59, 87
- Dots, reverse mark 59, 83
- Double-obverse coins 59, 10-12
- Elephant mark 59, 9-10
- a mark of sovereignty 59, 9, 17
- indicates that the coin is of Royal Mint, in distinction from the coins issued by other authorities 59, 41
- Fish, Marks 36-39b 59, 43
- on Mohenjodaro and Harappa seals 59, 94
- swallowing a fish, reverse mark 59, 87
- Flowers and stars — reverse mark 59, 84
- Foot, reverse mark 59, 87
- Frog, Mark No. 35, represents clouds in Vedic Mythology 59, 43
- Fruits or leaves, reverse marks 59, 84-85
- Ganas* or tribes, authorised to issue coinage 59, 5
- Greece, the earliest coins of — stamped metal globules 59, 4
- Greek, gold coins found with Bhira-mound punch-marked coins 59, 1
- Hand, reverse mark 59, 87
- mirror, Mark No. 46 59, 44
- Harappa, marks on punch-marked coins which correspond to figures and signs on the seals found at 59, 91-93
- Hare-Hill, a mark of locality 59, 19, 41
- Hemmy, A. S. — on ancient Indian system of weight 59, 17
- Herodotus — on import of silver and rate of exchange with Indian gold dust 59, 4
- Hill marks — indicate locality 59, 18
- different varieties of 59, 19-21
- Hill with Hour-glass, a mark 59, 20
- Horse, reverse mark 59, 87
- Hour-glass, Mark No. 65 59, 40, 41, 42, 44
- reverse mark 59, 86
- House (?), reverse mark 59, 87
- Island-Tank mark, a mark of locality 59, 21
- Issuing authority, marks indicating 59, 17
- Janapadas*, self-governing provinces — authorised to issue coinage 59, 5
- Jātaka*, allusions to coins in the 59, 4
- Jeremiah — on Indian import of silver from the West 59, 4
- Ladder, reverse mark 59, 86
- Lance-head 59, 40
- Langdon, Prof. — on Mark No. 23, as meaning 'City' 59, 43
- on Brāhmī script 59, 93
- on Brāhmī characters derived from the Indus script 59, 97
- Later class debased silver punch-marked coins found at Bhira-mound 59, 31-32
- Leaves or fruits — reverse marks 59, 84
- Lizard — Mark No. 62 59, 44
- Locality — marks which indicate 59, 18
- Long-Bar coins 59, 2
- of indigenous Indian Standard 59, 3
- Lotus leaves, marks 51a and 51b 59, 44

- Lotus-Tank mark, a mark of locality 59, 21
- Man (?), reverse mark 59, 87
- Marks of issuing authority 59, 17
- Measures of weight — in *Nārada Smṛiti* 59, 3
- in *Arthasāstra* 59, 3
- Milne, J. C. — Persian Darics found in Asia Minor by 59, 2
- Minute coins — with a single mark on obverse and blank reverse 59, 1, 3
- Mohenjodaro — resemblance of some of the marks on punch-marked coins to those on the seals of 59, 27, 91-93
- Naigamas, self-governing towns, authorised to issue coinage 59, 5
- Nārada Smṛiti* — measure of weight given in 59, 3
- Obverse marks — general remarks on 59, 6-7
- description of 59, 40-44
- on later class punch-marked coins 59, 34
- which occur also on the reverse of punch-marked coins 59, 12-13
- Order of stamping the marks 59, 9
- Oval, reverse mark 59, 83
- Paila, punch-marked coins found at 59, 7
- Palm tree, reverse mark 59, 85
- Pāṇini* on *aṅkas* or *lakṣaṇas* of *Saṅghas* 59, 5
- Peacock, reverse mark 59, 87
- Personal mark — Mark No. 35, frog 59, 43
- Peshawar, punch-marked coins from 59, 22
- the mark of a Tank refers to the city of *Puṣhkara* or *Puṣhkalāvati* near Peshawar 59, 22
- Phallus (?), reverse mark 59, 86
- Pillar, reverse mark 59, 86
- Rāj-aṅka* — King's arms or royal mark 59, 5
- Rays, circle of — reverse mark 59, 83
